#### 13.4.8.5 Test requirements

At step 7 the UE shall send the IE "Establishment cause" in the RRC CONNECTION REQUEST message set to "emergency call".

At step 12 the UE shall send the IE "Establishment cause" in the RRC CONNECTION REQUEST message set NOT to "emergency call".

At step 22 the UE shall send the IE "Establishment cause" in the RRC CONNECTION REQUEST message set to "emergency call".

At step 32 the UE shall send the IE "Establishment cause" in the RRC CONNECTION REQUEST message set NOT to "emergency call".

### 13.4.9 Attach for emergency bearer services / Rejected / No suitable cells in location area / Emergency call using the CS domain

#### 13.4.9.1 Definition

This test case is applicable to Rel-9 or later UEs that support IMS emergency services and establishing the emergency call using the CS domain in case the attach request for emergency bearer services cannot be accepted by the network.

#### 13.4.9.2 Conformance requirement

If the attach request for emergency bearer services cannot be accepted by the network, an ATTACH REJECT message is transferred to the MS. The ATTACH REJECT message includes GMM cause #5 "IMEI not accepted" or one of the GMM cause values as described in subclause 4.7.3.1.4.

Upon receiving the ATTACH REJECT message including GMM cause #5, the MS shall enter the state GMM-DEREGISTERED.NO-IMSI.

Upon receiving the ATTACH REJECT message including one of the other GMM cause values, the MS shall perform the actions as described in subclause 4.7.3.1.4 with the following addition: upon request from upper layers a CS voice capable MS may establish the emergency call using the CS domain.

Reference

TS 24.008 clause 4.7.3.1.4a

#### 13.4.9.3 Test purpose

To verify that the UE will establish the emergency call using the CS domain after its attach request for emergency bearer services was rejected with GMM cause “No Suitable Cells in Location Area".

#### 13.4.9.4 Method of test

Initial condition

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE is in state “MM idle” with valid TMSI and CKSN.
- The UE is not attached for emergency bearer services.

Related ICS/IXIT statements

- UE supports IMS emergency services yes/no
- UE supports establishing the emergency call using the CS domain if the attach request for emergency bearer services cannot be accepted by the network yes/no

Test Procedure

a) The UE is caused to originate a call to send user data related to emergency call.

b) The UE transmits an ATTACH REQUEST message for emergency bearer services.

c) The attach request for emergency bearer services is rejected by the SS with cause #15 “No Suitable Cells In Location Area”.

d) The RRC Connection is released.

e) If the UE supports establishing the emergency call using the CS domain upon receiving the ATTACH REJECT message with cause #15, the UE initiates a CS emergency call.

f) The CS emergency call is set up.

Expected Sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | The UE is caused to originate a call to send user data related to Emergency call. |
| 2 | --> | | ATTACH REQUEST | The UE transmits an ATTACH REQUEST message to attach for emergency bearer services. |
| 3 | <-- | | ATTACH REJECT | The SS transmits an ATTACH REJECT message, EMM cause = “No Suitable Cells In Location Area”. |
| 4 | <-- | | RRC CONNECTION RELEASE | |
| 5 | --> | | RRC CONNECTION RELEASE COMPLETE | |
| 6 | --> | | RRC CONNECTION REQUEST | Within [60] sec of Step 5, the UE transmits an RRC CONNECTION REQUEST message with Establishment cause: Emergency Call. |
| 7 | <-- | | RRC CONNECTION SETUP | |
| 8 | --> | | RRC CONNECTION SETUP COMPLETE | |
| 9 | --> | | CM SERVICE REQUEST | The UE transmits a CM SERVICE REQUEST with CM service type IE indicating “Emergency call establishment”, |
| 10 | <-- | | AUTHENTICATION REQUEST | |
| 11 | --> | | AUTHENTICATION RESPONSE | |
| 12 | --> | | EMERGENCY SETUP | |
| 13-17 | - | | - | Steps 11 to 15 of the generic test procedure in TS 34.108 subclause 7.2.3.2.3 are performed to complete the CS call setup. |

Specific Message Contents

None.

13.4.9.5 Test requirements

Within [60] sec of Step 5, the UE shall transmit an RRC CONNECTION REQUEST with Establishment cause: Emergency Call.

At Step 9, the UE shall transmit a CM SERVICE REQUEST with CM service type IE indicating “Emergency call establishment”.

At Step 12, the UE shall transmit an EMERGENCY SETUP message.

## 13.4.10 Emergency bearer services / CSG cell / LIMITED-SERVICE / Attach / Security mode control procedure without prior authentication / PDN connect / Service request / PDN disconnect / Detach upon UE switched off / Temporary storage of GMM information

### 13.4.10.1 Definition

This test case is applicable to Rel-9 or later UEs that support IMS emergency services.

### 13.4.10.2 Conformance requirement

When the GPRS capability in an activated MS has been enabled, the selection of the GMM-DEREGISTERED substate depends on the MM state and the GPRS update status.

The substate chosen after PLMN-SEARCH, in case of power on or after enabling of the GPRS capability is:

- if the cell is not supporting GPRS, the substate shall be NO-CELL-AVAILABLE;
- if no SIM/USIM is present the substate shall be NO-IMSI;
- if a suitable cell supporting GPRS has been found and the PLMN or LA is not in the forbidden list, then the substate shall be NORMAL-SERVICE;
- if the selected cell supporting GPRS is in a forbidden PLMN, is in a forbidden LA, or is a CSG cell with a CSG ID that is not in Allowed CSG list or in the Operator CSG list stored in the MS , then the MS shall enter the substate LIMITED-SERVICE;
- if the MS is in manual network selection mode and no cell supporting GPRS of the selected PLMN has been found, the MS shall enter the substate NO-CELL-AVAILABLE.

...

The MS:

- shall initiate GPRS attach when a cell is entered which may provide normal service (e.g. location area is not in one of the forbidden lists); and
- may initiate GPRS attach for emergency bearer services (UTRAN Iu mode only).

...

After the completion of application for which the emergency services were invoked, in order to regain normal services, an MS attached for emergency bearer services may perform a detach procedure, followed by a subsequent re-attach, if the MS moves to a new cell that provides normal service.

In A/Gb mode, if the GPRS detach procedure is performed, the PDP contexts and the MBMS contexts, if any, are deactivated locally without peer to peer signalling between the SM and LLC entities in the MS and the network.

In Iu mode, if the GPRS detach procedure is performed, the PDP contexts and the MBMS contexts, if any, are deactivated locally without peer to peer signalling between the SM entities in the MS and the network.

...

If the SERVICE REQUEST message was sent in PMM-CONNECTED mode, then the reception of the SERVICE ACCEPT message shall be treated as a successful completion of the procedure. The timer T3317 shall be stopped and the MS remains in PMM-CONNECTED mode.

If the SERVICE REQUEST message was sent in a CSG cell and the CSG subscription has expired or was removed for a MS, but the MS has a PDN connection for emergency bearer services established, the network shall accept the SERVICE REQUEST message and deactivate all non-emergency PDP contexts by initiating PDP context deactivation procedure. The PDP contexts for emergency services shall not be deactivated.

...

The last GPRS attach or routing area updating attempt was correctly performed, but the answer from the network was negative (because of roaming or subscription restrictions).

In this case, the SIM/USIM may contain the RAI of the routing area (RA) to which the subscriber was attached, and possibly also a valid P-TMSI, GPRS GSM ciphering key, GPRS UMTS ciphering key, GPRS UMTS integrity key or GPRS ciphering key sequence number. For compatibility reasons, all these fields shall be set to the value "deleted" if the RAI is deleted. However, the presence of other values shall not be considered an error by the MS. Furthermore, if the ME supports any GEA ciphering algorithm that requires a 128-bit ciphering key and a USIM is in use, then the ME shall delete the GPRS GSM $Kc_{128}$ stored if the RAI is deleted.

If the MS is attached for emergency bearer services, the MS shall not store the GMM parameters described in this subclause on the SIM/USIM or in non-volatile memory. Instead the MS shall temporarily store these parameters locally in the ME and the MS shall delete these parameters when the MS is detached.

...

For emergency call establishment and re-establishment the mobile station shall select the mobile identity type with the following priority:

1- TMSI: The TMSI shall be used if it is available and if the location update status is UPDATED, and the stored LAI is equal to the one received on the BCCH from the current serving cell.

2- IMSI: The IMSI shall be used in cases where no TMSI is available or TMSI is available but either the update status is different from UPDATED, or the stored LAI is different from the one received on the BCCH from the current serving cell.

3- IMEI: The IMEI shall be used in cases where no SIM/USIM is available or the SIM/USIM is considered as not valid by the mobile station or no IMSI or TMSI is available.

...

If an MS has a PDN connection for emergency bearer services established or is establishing such a PDN connection when timer T3318 or T3320 expires, the MS shall not deem that the network has failed the authentication check and not behave as described in subclause 4.7.7.6.1. Instead the MS shall continue using the current security context, if any. The MS shall deactivate all non-emergency PDP contexts, if any, by initiating a PDP context deactivation procedure. If there is an ongoing session management procedure, the MS shall deactivate all non-emergency PDP contexts upon completion of the session management procedure. The MS shall consider itself to be attached for emergency bearer services only.

Reference

TS 24.008 clauses 4.2.4.1.1, 4.2.4.2.3, 4.7.4, 4.7.13.3, 4.1.3.2, 10.5.1.4, 10.5.1.4

### 13.4.10.3 Test purpose

To verify that when the user originates a call to send user data related to Emergency call:

1) the UE performs an Attach for emergency bearer on non-Allowed CSG cell if only suitable cell is non-allowed CSG cell,

2) the UE transmits a SERVICE REQUEST on the non-allowed CSG cell.

3) Upon detach, the UE deletes the GMM parameters stored temporarily while attached for emergency bearer services.

### 13.4.10.4 Method of test

Initial condition

System Simulator:

- Cell 1, Serving non CSG cell, default parameters
- Cell 2, CSG cell

User Equipment:

- The UE is in state “MM idle” with valid TMSI and CKSN.
- The UE is not attached for emergency bearer services.
- If pc_CSG, then UE has Allowed CSG list empty.

Related ICS/IXIT statements

- UE supports IMS emergency services yes/no

Test Procedure

a) The serving cell Cell 1 is switched off and Cell 2 is set as Serving cell.

a) After [2] min the UE is caused to originate a call to send user data related to emergency call on the CSG cell.

c) The UE transmits an ATTACH REQUEST message for emergency bearer services.

d) The attach request procedure for emergency bearer services is completed.

e) The RRC Connection is released.

f) The UE transmits a SERVICE REQUEST.

g) The UE transmits an ACTIVATE PDP CONTEXT REQUEST with Request type set to “emergency”.

h) Radio Access Bearer is set up.

i) The SS transmits an ACTIVATE PDP CONTEXT ACCEPT.

j) The UE is switched off.

k) The UE transmits a DETACH REQUEST

l) Cell 2 is switched off and Cell 1 is set as Serving cell.

m) The UE is switched on.

n) The UE transmits an ATTACH REQUEST message.

Expected Sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | SS | | | Set the cell type of Cell 1 to the "Non-suitable off cell".<br>Set the cell type of Cell 2 to the "Serving cell". |
| 2 | SS | | | SS waits for [2] min to ensure the UE is in limited service on Cell 2. |
| 3 | UE | | | The UE is caused to originate a call to send user data related to Emergency call. |
| 4 | --> | | ATTACH REQUEST | The UE transmits an ATTACH REQUEST message to attach for emergency bearer services. |
| 5 | <-- | | ATTACH ACCEPT | |
| 6 | --> | | ATTACH COMPLETE | |
| 7 | SS | | | The SS releases the RRC connection. |
| 8 | --> | | SERVICE REQUEST | |
| 9 | --> | | ACTIVATE PDP CONTEXT REQUEST | The UE transmits an ACTIVATE PDP CONTEXT REQUEST message with Request type set to “emergency” |
| 10 | SS | | | Radio Access Bearer is set up. |
| 11 | <-- | | ACTIVATE PDP CONTEXT ACCEPT | |
| 12 | UE | | | The UE is switched off or power is removed |
| 13 | --> | | DETACH REQUEST | The UE transmits a DETACH REQUEST containing cause "power off". |
| 14 | SS | | | Set the cell type of cell 1 to the "Serving cell".<br>Set the cell type of cell 2 to the "Non-suitable off cell". |
| 15 | UE | | | The UE is switched on. |
| 16 | --> | | ATTACH REQUEST | The UE transmits an ATTACH REQUEST message |

Specific Message Contents

None.

13.4.10.5 Test requirements

At Step 4, the UE shall transmit an ATTACH REQUEST with Request type set to “emergency” on Cell 2.

At Step 8, the UE shall transmit a SERVICE REQUEST on Cell 2.

At Step 9, the UE shall transmit an ACTIVATE PDP CONTEXT REQUEST with Request type set to “emergency” on Cell 2.

At Step 16, the UE shall transmit an ATTACH REQUEST on Cell 1 with GMM parameters not reflecting previous ATTACH on cell 2.

# 14 Interoperability Radio Bearer Tests

## 14.1 General information for interoperability radio bearer tests

The purpose of the interoperability radio bearer test cases are to ensure interoperability of UE's in different regions and networks. For this purpose representative radio bearer configurations that will be used in real network implementations have been defined in TS 34.108 [9], clause 6.10.

The applicability of radio bearer tests is dependent on the UE uplink and downlink radio access capabilities and UE support tele- and bearer-services.

For radio bearer combinations which are representative to multiple traffic classes, such as “Interactive or Background”, “Streaming or Interactive or Background” etc, then it is only required to execute the radio bearer test procedure once using one of the applicable traffic class for the UE under test.

NOTE: As the purpose of the radio bearer test cases is to functionally verify that the UE is able to establish the radio bearer combination, and to verify correct data transfer using the different transport formats, then the necessary test coverage is achieved by performing the radio bearer test procedure once for one of the applicable traffic classes.

### 14.1.1 Generic radio bearer test procedure for single RB configurations

This procedure is used to test single radio bearer configurations and speech only radio bearers. For testing of multiple radio bearer combinations as well as for testing simultaneous transmission and reception of user data and signalling data then the procedure as specified in 14.1.2 should be used.

#### Initial conditions

UE in idle mode

#### Test procedure

a) The SS establish setup the reference radio bearer configuration as specified in TS 34.108, clause 6.10 for the actual radio bearer test.

b) The SS limits the UE allowed uplink transport format combinations according to the "Restricted UL TFCIs", as specified for the sub-test of the actual radio bearer test, using the RRC transport format combination control procedure. See note 1.

c) The SS closes the test loop using UE test loop mode 1 and setting the UL RLC SDU size parameter, for all radio bearers under test, according to the "UL RLC SDU size" value as specified for the sub-test of the actual radio bearer test. See note 2.

d) The SS transmits, for all radio bearers under test, one or more RLC SDUs having the size equal to the "Test data size" as specified for the sub-test of the actual radio bearer test. See note 3.

e) The SS checks that, for all radio bearers under test, the content of the received RLC SDU has the correct content and is received having the correct transport format. See TS 34.109 [10] clause 5.3.2.6.2 for details regarding the UE loopback of RLC SDUs.

f) The SS opens the UE test loop.

g) Steps b) to f) are repeated for all sub-tests

h) The SS may optionally release the radio bearer.

i) The SS may optionally deactivate the radio bearer test mode.

NOTE 1: The restricted set of TFCIs shall contain all possible TFCI that could happen in a sub-test. The actual TTI of the different radio bearers and signalling radio bearers as well as the possible UE processing delays shall be taken into consideration. The restricted set of TFCIs must comply with the minimum set of TFCIs as specified in TS 25.331, clause 8.6.5.2. This message is transmitted only for cell DCH state.

NOTE 2: Selection of UL RLC SDU size parameter:
For the case when the reference radio bearer configuration under test uses RLC transparent mode in downlink and is not configured for segmented operation then the radio bearer test case shall set the UL RLC SDU size equal to the UL RLC PDU size. See [7] TS 25.322 for details regarding UE operation in RLC transparent mode. In case the reference radio bearer configuration under test does not use RLC transparent mode then the UL RLC SDU size parameter shall be selected to achieve loop back of all test data received in the DL RLC SDU, i.e. the UL RLC SDU size is set to the nearest multiple of the payload size of the UL TF under test minus the size of the length indicator and expansion bit which is equal or bigger than the test data size. For some reference radio bearer configurations this may cause the UE to return the UL RLC SDU in more than one TTI, i.e. in case no UL TF is available to cover the UL RLC SDU size. However, as the test procedure only send downlink test data once there is no risk for the UE transmission buffer to become full even if the returned RLC SDUs need to be transmitted in more than one TTI.

NOTE 3: Selection of test data size:
For the case when the reference radio bearer configuration under test uses RLC transparent mode in downlink and is not configured for segmented operation then the radio bearer test case shall use a DL RLC SDU size (defined by the "Test data size" parameter) equal to the DL RLC PDU size. See [7] TS 25.322 for details regarding UE operation in RLC transparent mode. In case the reference radio bearer configuration under test does not use RLC transparent mode in downlink, the DL RLC SDU size/ test data size shall be set equal to the payload size of the DL TF under test minus the size of the length indicator and the expansion bit.

Expected sequence

**CS paging procedure**

## 14.1.1a Generic radio bearer test procedure for standalone AMR RB configurations using SRB#5 for TFC control

This procedure is used to test single AMR radio bearer configurations that use SRB#5 for TFC control.

Initial conditions

UE in idle mode

Test procedure

a) The SS establish the AMR reference radio bearer configuration as specified in TS 34.108, clause 6.10 for the actual radio bearer test. As part of the RADIO BEARER SETUP the TFC subsets as defined for the actual radio bearer configuration is setup.

b) The SS signals the "TFC subset identity" in the TRANSPORT FORMAT COMBINATION CONTROL message on SRB#5 as specified for the sub-test of the actual AMR radio bearer test. See note 1.

c) The SS closes the test loop using UE test loop mode 1 and setting the UL RLC SDU size parameter, for all radio bearers under test, according to the "UL RLC SDU size" value as specified for the sub-test of the actual radio bearer test. See note 2.

d) The SS transmits, for all radio bearers under test, one or more RLC SDUs having the size equal to the "Test data size" as specified for the sub-test of the actual radio bearer test. See note 3.

e) The SS checks that, for all radio bearers under test, the content of the received RLC SDU has the correct content and is received having the correct transport format. See TS 34.109 [10] clause 5.3.2.6.2 for details regarding the UE loopback of RLC SDUs.

f) The SS opens the UE test loop.

g) Steps b) to f) are repeated for all sub-tests

h) The SS may optionally release the radio bearer.

i) The SS may optionally deactivate the radio bearer test mode.

NOTE 1: The TFC subset associated with the signalled “TFC subset identity” in the TRANSPORT FORMAT COMBINATION CONTROL message is defined by the actual AMR reference radio bearer under test.

NOTE 2: Selection of UL RLC SDU size parameter:
The UL RLC SDU size parameter is set equal to the UL RLC PDU size.

NOTE 3: Selection of test data size:
The test data size is set equal to the DL RLC PDU size.

Expected sequence

## 14.1.2 Generic test procedure for testing multi-RB combinations and simultaneous signalling

This procedure is used to test multiple radio bearer combinations. This procedure is also used to verify simultaneous transmission and reception of user data and signalling data.

Initial conditions

UE in idle mode

Test procedure

a) The SS establish the reference radio bearer configuration as specified in TS 34.108, clause 6.10 for the actual radio bearer test. For the case when the reference radio bearer configuration includes radio bearers for both CS and PS domain then the radio bearer setup procedure has to be performed once per domain. The first radio bearer setup procedure shall perform configuration of the physical channel for the radio bearer combination under test as well as the transport channels for the CS radio bearer(s),also the transport format combination set for only CS

radio bearers has to provided. The second radio bearer procedure shall perform the configuration for the transport channel for the PS radio bearers . The Physical channel configuration shall be done for both CS and PS radio bearers combined. Here the transport format combination set for both CS and PS radio bearers shall be provided.

b) The SS limits the UE allowed uplink transport format combinations according to the "Restricted UL TFCIs", as specified for the sub-test of the actual radio bearer test, using the RRC transport format combination control procedure. See note 1.

c) The SS closes the test loop using UE test loop mode 1 and setting the UL RLC SDU size parameter, for all radio bearers under test, according to the "UL RLC SDU size" value as specified for the sub-test of the actual radio bearer test. See note 2.

d) The SS starts transmitting continuous test data for all radio bearers under test. The number of RLC SDUs to transmit every TTI and the size "Test data size" is specified for each sub-test of the actual radio bearer test. See note 3.

e) The SS waits to receive an UL RLC SDU on each RB. The SS waits a maximum time of T1 for this to occur, where T1 is equal to 12 times the largest TTI. See note 4

f) SS transmits a MEASUREMENT CONTROL message requesting periodic reporting with a period of T2.

g) SS waits the time equal to 4 times T2

h) During step e) to g) the SS checks that, for all radio bearers under test, the content of the received RLC SDUs have the correct content and is received having the correct transport format. See TS 34.109 [10] clause 5.3.2.6.2 for details regarding the UE loopback of RLC SDUs.

i) The SS opens the UE test loop.

j) Steps b) to i) are repeated for all sub-tests

h) The SS may optionally release the radio bearer.

i) The SS may optionally deactivate the radio bearer test mode.

NOTE 1: The restricted set of TFCIs shall contain all possible TFCI that could happen in a sub-test. The actual TTI of the different radio bearers and signalling radio bearers as well as the possible UE processing delays shall be taken into consideration. The restricted set of TFCIs must comply with the minimum set of TFCIs as specified in TS 25.331, clause 8.6.5.2.

NOTE 2: Selection of UL RLC SDU size parameter:
For the case when the reference radio bearer configuration under test uses RLC transparent mode in downlink and is not configured for segmented operation then the radio bearer test case shall set the UL RLC SDU size equal to the UL RLC PDU size. See [7] TS 25.322 for details regarding UE operation in RLC transparent mode. In case the reference radio bearer configuration under test does not use RLC transparent mode then, as the test procedure is based on continuous downlink transmission of test data in sub-sequent TTIs, the UL RLC SDU size parameter shall be selected to adopt to the uplink data rate and to the uplink/downlink TTI ratio. Selection of UL RLC SDU size for the different radio bearers under test should be such that the UE returns data in sub-sequent TTIs without causing the UE transmission buffer to become full. To achieve this the UL RLC SDU size shall be set to UL TF payload size under test, divided by the ratio between downlink and uplink TTI , minus the size of length indicator and expansion bit, . E.g. for a AM radio bearer having the uplink RLC payload size equal to 320, the downlink TTI equal to 10 ms, and the uplink TTI equal to 20 ms, then for the transport format 4x336 (TF payload size = 4x320=1280 bits) the UL RLC SDU size parameter should be set to 632 bits (=(1280bits/(20ms/10ms))- 8 bits).

NOTE 3: Selection of test data size:
For the case when the reference radio bearer configuration under test uses RLC transparent mode in downlink and is not configured for segmented operation then the radio bearer test case shall use a DL RLC SDU size (defined by the "Test data size" parameter) equal to the DL RLC PDU size. See [7] TS 25.322 for details regarding UE operation in RLC transparent mode. In case the reference radio bearer configuration under test does not use RLC transparent mode in downlink, the DL RLC SDU size/ test data size shall be set equal to the payload size of the DL TF under test minus the size of the length indicator and the expansion bit.

NOTE 4: [10] TS 34.109 clause 5.3.2.9 defines the loopback delay requirement for UE test loop mode 1 to be max 10 times actual TTI of a radio bearer when RLC and MAC is operated in transparent mode. As RLC/MAC may be operated in non-transparent modes depending on the actual reference radio bearer configuration to be tested an additional 2 TTI have been added to secure that UE starts transmitting data in uplink before SS transmit the MEASUREMENT CONTROL message.

## 14.1.2a Generic test procedure for testing multi-RB combinations and simultaneous signalling in case of DSCH

This procedure is used to test multiple radio bearer combinations where PS data goes on the DSCH. This procedure is also used to verify simultaneous transmission and reception of user data and signalling data.

### Initial conditions

UE in idle mode

### Test procedure

a) The SS establish the reference radio bearer configuration as specified in TS 34.108, clause 6.10 for the actual radio bearer test. For the case when the reference radio bearer configuration includes radio bearers for both CS and PS domain then the radio bearer setup procedure has to be performed once per domain. The first radio bearer setup procedure shall perform configuration of the physical channel for the radio bearer combination under test as well as the transport channels for the CS radio bearer(s), also the transport format combination set for only CS radio bearers has to be provided. The second radio bearer procedure shall perform the configuration for the transport channel for the PS radio bearers.

b) The SS limits the UE allowed uplink transport format combinations according to the "Restricted UL TFCIs", as specified for the sub-test of the actual radio bearer test, using the RRC transport format combination control procedure. Here first time only the TFCs for the data on CS RAB and the data on PS RAB are restricted.

c) The SS closes the test loop using UE test loop mode 1 and setting the UL RLC SDU size parameter, for all radio bearers under test, according to the "UL RLC SDU size" value as specified for the sub-test of the actual radio bearer test. See note 1.

d) The SS transmits test data on all radio bearers under test. The number of RLC SDUs to transmit every TTI and the size "Test data size" is specified for each sub-test of the actual radio bearer test. See note 2.

e) The SS checks that UE has looped back the data on the CS and PS Radio bearer.

f) The SS opens the UE test loop.

g) SS uses the RRC transport format combination control procedure. And now restricts the TFCs for the data on CS RAB and the data on PS RAB and also on SRB.

h) The SS closes the test loop using UE test loop mode 1 and setting the UL RLC SDU size parameter, for all radio bearers under test, according to the "UL RLC SDU size" value as specified for the sub-test of the actual radio bearer test. See note 2.

i) SS transmit data on the CS RAB a MEASUREMENT CONTROL message requesting periodic reporting with a period of T2.

j) SS transmits the data on PS RAB.

k) SS waits the time equal to 4 times T2

l) SS checks that, for all radio bearers under test, the content of the received RLC SDUs have the correct content and is received having the correct transport format. See TS 34.109 [10] clause 5.3.2.6.2 for details regarding the UE loop back of RLC SDUs.

m) The SS opens the UE test loop.

n) (Void)

o) Steps b) to m) are repeated for all sub-tests

p) The SS may optionally release the radio bearer.

q) The SS may optionally deactivate the radio bearer test mode.

NOTE 1: Selection of UL RLC SDU size parameter:
For the case when the reference radio bearer configuration under test uses RLC transparent mode in downlink and is not configured for segmented operation then the radio bearer test case shall set the UL RLC SDU size equal to the UL RLC PDU size. See [7] TS 25.322 for details regarding UE operation in RLC transparent mode. Selection of UL RLC SDU size for the different radio bearers under test should be such that the UE returns data in sub-sequent TTIs without causing the UE transmission buffer to become full. To achieve this the UL RLC SDU size shall be set to UL TF payload size under test, minus the size of length indicator and expansion bit, and divided by the ratio between downlink and uplink TTI. E.g. for a AM radio bearer having the uplink RLC payload size equal to 320, the downlink TTI equal to 10 ms, and the uplink TTI equal to 20 ms, then for the transport format 4x336 (TF payload size = 4x320=1280 bits) the UL RLC SDU size parameter should be set to 632 bits (=1280bits/(20ms/10ms)- 8 bits).

NOTE 2: Selection of test data size:
For the case when the reference radio bearer configuration under test uses RLC transparent mode in downlink and is not configured for segmented operation then the radio bearer test case shall use a DL RLC SDU size (defined by the "Test data size" parameter) equal to the DL RLC PDU size. See [7] TS 25.322 for details regarding UE operation in RLC transparent mode. In case the reference radio bearer configuration under test does not use RLC transparent mode in downlink, the DL RLC SDU size/ test data size shall be set equal to the payload size of the DL TF under test minus the size of the length indicator and the expansion bit.

NOTE 3: The restricted set of TFCIs shall contain all possible TFCI that could happen in a sub-test. The actual TTI of the different radio bearers and signalling radio bearers as well as the possible UE processing delays shall be taken into consideration. The restricted set of TFCIs must comply with the minimum set of TFCIs as specified in TS 25.331, clause 8.6.5.2.

| Note: | For case B (CS+PS radio bearers) the second security mode procedure is needed to enable testing of ciphering on the PS radio bearers. For the CS domain the security mode procedure is performed as part of the CS paging procedure. | | | |

NOTE 1: Here using the test steps 11 to 14d, the simultaneous data on the CS and PS RAB can be tested.

And using the steps 15a to 15f, the simultaneous data on CS RAB, PS RAB and SRB can be tested.

For testing the simultaneous data on CS RAB, PS RAB and SRB, following procedure is used.

First data on the CS RAB is sent. Then in the next step Measurement Control message is sent.

In the Downlink the restricted transport format combination will be (1 1), that SS MAC has to send the data on CS RAB and the measurement control message on SRB simultaneously.

Here it is assumed that, since the transport format combination (1, 0) (that is send only data) will not be available in the DL, the MAC has to wait until it gets something to transmit on the SRB.

Then data on the PS RAB is sent.

With this on the UE UL Side, the data will be available on both CS and PS RAB and also on the SRB. With this the transport format combination (1,1, 1) that is simultaneous data on RAB and SRB can be tested in the uplink.

## 14.1.3 General information interoperability radio bearer tests for HS-DSCH

### 14.1.3.1 HS-DSCH radio bearer test parameters

In the radio bearer tests on radio bearers mapped on HS-DSCH, the following UE specific parameters should be used.

**Table 14.1.3.1.1: FDD HS-DSCH physical layer parameters for FDD HS-DSCH physical layer categories**

| HS-DSCH category | Maximum number of HS-DSCH codes received | Minimum inter-TTI interval | Maximum number of bits of an HS-DSCH transport block received within an HS-DSCH TTI NOTE 1 | Total number of soft channel bits | Supported modula-tions without MIMO operation or dual cell operation | Supported modula-tions with MIMO operation and without dual cell operation | Supported modula-tions with dual cell operation | Supported modula-tions with simulta-neous dual cell and MIMO operation |
|---|---|---|---|---|---|---|---|---|
| Category 1 | 5 | 3 | 7298 | 19200 | QPSK, 16QAM | Not applicable (MIMO not supported) | Not applicable (dual cell operation not supported) | Not applicable (simultaneous dual cell and MIMO operation |
| Category 2 | 5 | 3 | 7298 | 28800 | | | | |
| Category 3 | 5 | 2 | 7298 | 28800 | | | | |
| Category 4 | 5 | 2 | 7298 | 38400 | | | | |
| Category 5 | 5 | 1 | 7298 | 57600 | | | | |
| Category 6 | 5 | 1 | 7298 | 67200 | | | | |

| HS-DSCH category | Maximum number of HS-DSCH codes received | Minimum inter-TTI interval | Maximum number of bits of an HS-DSCH transport block received within an HS-DSCH TTI NOTE 1 | Total number of soft channel bits | Supported modula-tions without MIMO operation or dual cell operation | Supported modula-tions with MIMO operation and without dual cell operation | Supported modula-tions with dual cell operation | Supported modula-tions with simulta-neous dual cell and MIMO operation |
|---|---|---|---|---|---|---|---|---|
| Category 7 | 10 | 1 | 14411 | 115200 | | | | not supported) |
| Category 8 | 10 | 1 | 14411 | 134400 | | | | |
| Category 9 | 15 | 1 | 20251 | 172800 | | | | |
| Category 10 | 15 | 1 | 27952 | 172800 | | | | |
| Category 11 | 5 | 2 | 3630 | 14400 | QPSK | | | |
| Category 12 | 5 | 1 | 3630 | 28800 | | | | |
| Category 13 | 15 | 1 | 35280 | 259200 | QPSK, 16QAM, 64QAM | | | |
| Category 14 | 15 | 1 | 42192 | 259200 | | | | |
| Category 15 | 15 | 1 | 23370 | 345600 | QPSK, 16QAM | | | |
| Category 16 | 15 | 1 | 27952 | 345600 | | | | |
| Category 17 NOTE 2 | 15 | 1 | 35280 | 259200 | QPSK, 16QAM, 64QAM | – | | |
| | | | 23370 | 345600 | – | QPSK, 16QAM | | |
| Category 18 NOTE 3 | 15 | 1 | 42192 | 259200 | QPSK, 16QAM, 64QAM | – | | |
| | | | 27952 | 345600 | – | QPSK, 16QAM | | |
| Category 19 | 15 | 1 | 35280 | 518400 | QPSK, 16QAM, 64QAM | | | |
| Category 20 | 15 | 1 | 42192 | 518400 | | | | |
| Category 21 | 15 | 1 | 23370 | 345600 | - | - | QPSK, 16QAM | |
| Category 22 | 15 | 1 | 27952 | 345600 | | | | |
| Category 23 | 15 | 1 | 35280 | 518400 | | | QPSK, 16QAM, 64QAM | |
| Category 24 | 15 | 1 | 42192 | 518400 | | | | |
| Category 25 | 15 | 1 | 23370 | 691200 | - | - | - | QPSK, 16QAM |
| Category 26 | 15 | 1 | 27952 | 691200 | | | | |
| Category 27 | 15 | 1 | 35280 | 1036800 | - | - | - | QPSK, 16QAM, 64QAM |
| Category 28 | 15 | 1 | 42192 | 1036800 | | | | |

NOTE 1: Depending on the HS-DSCH configuration, the indicated maximum number of bits of an HS-DSCH transport block does not have to correspond exactly to an entry in the transport block size table to be applied [9].

NOTE 2: A UE of category 17 supports the physical capabilities of categories 13 and 15, but not simultaneously. The first row of category 17 in table 5.1a specifies the capabilities when MIMO is not configured and the capabilities of category 13 apply, the second row specifies the capabilities when MIMO is configured and the capabilities of category 15 apply.

NOTE 3: A UE of category 18 supports the physical capabilities of categories 14 and 16, but not simultaneously. The first row of category 18 in table 5.1a specifies the capabilities when MIMO is not configured and the capabilities of category 14 apply, the second row specifies the capabilities when MIMO is configured and the capabilities of category 16 apply.

## 14.1.3.2 Selecting TFRC test points

### 14.1.3.2.1 Principle for non-enhanced Layer 2

The transport format and resource combination (TFRC) is identified by the UE by the type of modulation, number of channalisation codes and the transport format and resource identifier (TFRI) signalled on the HS-SCCH.

For the HSDPA radio bearer test cases the principle for selecting typical test points for TFRC is:

1. Select one TFRC per modulation scheme and number of MAC-d PDUs.
2. For each number of MAC-d PDUs select the TFRC minimizing padding.
3. Any TFRC that would cause turbo coder irregularities should be avoided.

The problem with turbo coder regularities appears at certain coding rates. The coding rate for a certain TFCR is:

$Coding_rate = (TB_{size} + N_{CRC}) / (N_{codes} \cdot N_{phy_bits})$, where

$TB_{size}$ is the selected transport block,

$N_{CRC}$ is the number of CRC bits,

$N_{codes}$ is the number of channelistion codes, and

$N_{phy_bits}$ is the number physical bits per code (960 for QPSK, 1920 for 16QAM and 2880 for 64 QAM).

Table 14.1.3.2.1 lists the coding rates that cause turbo coder irregularities. In case a candidate TFRC value is causing turbo coder irregularities then the closest higher TFRI value, which do not cause any turbo coder irregularities, is selected.

**Table 14.1.3.2.1: Coding rates causing degradation due to turbo coder irregularities**

| Coding rate | Comment |
|---|---|
| 0.77-0.79 | Cause loss up to 3.5 dB |
| 0.835-0.84 | Cause loss up to 1.5 dB |
| 0.871-0.878 | Cause loss up to 2 dB |
| 0.91-0.914 | Cause loss up to 2 dB |

NOTE The coding rates in Table 14.2.3.2.1 is based on the simulations as described in RAN WG1 document R1-030444 (Turbo-coding and puncturing interactions on HS-DSCH in R5 HSDPA)

The selection algorithm for the TFRC test points for a certain UE category and MAC-d PDU size is:

1. Set the number of MAC-d PDUs, N_PDU, to 1
2. Calculate the minimum transport block size to fit the number of MAC-d PDUs.
3. If the transport block size is less or equal to the UE capability for “Maximum number of bits of an HS-DSCH transport block received within an HS-DSCH TTI” in Table 14.1.3.1.1 then continue with step 4 else there is no more testing points.
4. Select the QPSK test point:
   If it, for the actual UE category and for the selected transport block size, exists a TFRI for QPSK then select the TFRI that maximises the number of codes.
5. Select the 16QAM test point:
   If it, for the actual UE category and for the selected transport block size, exists a TFRI for 16QAM then select the TFRI that maximises the number of codes.
6. Check that the coding rate for the selected TFRC does not cause turbo coder irregularities, see Table 14.1.3.2.1. If the coding rate is ok then accept the testing point and continue with step 8 else continue with step 7.
7. If the coding rate is not ok then select the next higher TFRI value that corresponds to an acceptable coding rate. Calculate the transport block size correspondent to the modified TFRI values and if it is less or equal to the UE capability for “Maximum number of bits of an HS-DSCH transport block received within an HS-DSCH TTI” in Table 14.1.3.1.1 then accept the testing point else skip it.
8. Increment N_PDUs. If N_PDU is less or equal to 70 then repeat from step 2 else there are no more testing points.

#### 14.1.3.2.1a Principle for enhanced Layer 2

For the combination of MAC-ehs and Fixed RLC then the same principle to select test points as for the non-enhanced Layer 2 case as described in sub-clause 14.1.3.2.1 is used (MAC-d PDU size 336 and 656 bits).

For the combination of MAC-ehs and Flexible RLC then the same TFRI test points as for the fixed MAC-d PDU size=656 bits case are used.

### 14.1.3.3 TFRC test points for MAC-d PDU size=336

**Table 14.1.3.3.1: TFRC test points for UE category 1 to UE category 6 for MAC-d PDU size=336**

| Number of MAC-d PDUs | Selected transport block size [bits] | Modulation scheme | Number of codes | TFRI | Comments |
|---|---|---|---|---|---|
| 1 | 365 | QPSK | 1 | 19 | |
| 2 | 699 | QPSK | 2 | 8 | |
| 2 | 699 | 16QAM | 1 | 8 | |
| 3 | 1036 | QPSK | 3 | 7 | |
| 3 | 1036 | 16QAM | 1 | 30 | |
| 4 | 1380 | QPSK | 4 | 7 | |
| 4 | 1380 | 16QAM | 2 | 7 | |
| 5 | 1711 | QPSK | 5 | 6 | |
| 5 | 1711 | 16QAM | 2 | 19 | |
| 6 | 2046 | QPSK | 5 | 16 | |
| 6 | 2046 | 16QAM | 3 | 6 | |
| 7 | 2404 | QPSK | 5 | 25 | |
| 7 | 2404 | 16QAM | 3 | 15 | |
| 8 | 2726 | QPSK | 5 | 32 | |
| 8 | 2726 | 16QAM | 4 | 6 | |
| 9 | 3090 | QPSK | 5 | 39 | |
| 9 | 3090 | 16QAM | 5 | 0 | |
| 10 | 3440 | QPSK | 5 | 45 | |
| 10 | 3440 | 16QAM | 5 | 6 | |
| 11 | 3830 | QPSK | 5 | 51 | TFRI = 50 would have minimised padding but is not acceptable as the coding rate (0.78875) would have given 3.5 dB due to turbo coder irregularities. TFRI=51 is selected. |
| 11 | 3762 | 16QAM | 5 | 11 | |
| 12 | 4115 | QPSK | 5 | 55 | |
| 12 | 4115 | 16QAM | 5 | 16 | |
| 13 | 4420 | QPSK | 5 | 59 | |
| 13 | 4420 | 16QAM | 5 | 20 | |
| 14 | 4748 | 16QAM | 5 | 24 | |

| 40 | 26490 | 16QAM | 15 | 59 | |
| 41 | 26969 | 16QAM | 15 | 60 | |
| 42 | 27952 | 16QAM | 15 | 62 | |

**Table 14.1.3.4.5: TFRC test points for UE category 11 and UE category 12 for MAC-d PDU size=656**

| Number of MAC-d PDUs | Selected transport block size [bits] | Modulation scheme | Number of codes | TFRI | Comments |
|---|---|---|---|---|---|
| 1 | 686 | QPSK | 2 | 7 | |
| 2 | 1356 | QPSK | 4 | 6 | |
| 3 | 2010 | QPSK | 5 | 15 | |
| 4 | 2677 | QPSK | 5 | 31 | |
| 5 | 3319 | QPSK | 5 | 43 | |

## 14.1.3.4b TB test points for enhanced Layer 2

### 14.1.3.4b.1 TFRC test points for MAC-ehs and QPSK with fixed MAC-d PDU size=336

NOTE 1 For M= QPSK then table 14.1.3.4b.1.1 is used. For M= 16QAM then table 14.1.3.4b.1.2 is used. For M= 64QAM then table 14.1.3.4b.1.3 is used.

NOTE 2 Column “Applicable Physical HS-DSCH UE categories” defines the applicability of test points vs. Physical HS-DSCH UE categories.

**Table 14.1.3.4b.1.1: Test points for QPSK and fixed MAC-d PDU size=336**

| # MAC-d PDUs | Selected TBS | Modulation scheme | Number of codes | TFRI | Applicable Physical HS-DSCH UE categories | Comments |
|---|---|---|---|---|---|---|
| 1 | 360 | QPSK | 1 | 30 | 1 to 20 | |
| 2 | 712 | QPSK | 2 | 9 | 1 to 20 | |
| 3 | 1072 | QPSK | 3 | 9 | 1 to 20 | |
| 4 | 1432 | QPSK | 4 | 9 | 1 to 20 | |
| 5 | 1776 | QPSK | 5 | 9 | 1 to 20 | |
| 6 | 2128 | QPSK | 5 | 19 | 1 to 6,11 and 12 | |
| 6 | 2128 | QPSK | 7 | 0 | 7 to 10 and 13 to 20 | |
| 7 | 2496 | QPSK | 5 | 28 | 1 to 6,11 and 12 | |
| 7 | 2496 | QPSK | 8 | 1 | 7 to 10 and 13 to 20 | |
| 8 | 2832 | QPSK | 5 | 35 | 1 to 6,11 and 12 | |
| 8 | 2832 | QPSK | 9 | 2 | 7 to 10 and 13 to 20 | |
| 9 | 3208 | QPSK | 5 | 42 | 1 to 6,11 and 12 | |
| 9 | 3208 | QPSK | 10 | 3 | 7 to 10 and 13 to 20 | |
| 10 | 3576 | QPSK | 5 | 48 | 1 to 6,11 and 12 | |
| 10 | 3576 | QPSK | 10 | 9 | 7 and 8 | |
| 10 | 3576 | QPSK | 11 | 4 | 9 to 10 and 13 to 20 | |
| 11 | 3912 | QPSK | 5 | 53 | 1 to 6 | |
| 11 | 3912 | QPSK | 10 | 14 | 7 and 8 | |
| 11 | 3912 | QPSK | 12 | 4 | 9 to 10 and 13 to 20 | |
| 12 | 4272 | QPSK | 5 | 58 | 1 to 6 | |
| 12 | 4272 | QPSK | 10 | 19 | 7 and 8 | |
| 12 | 4272 | QPSK | 14 | 0 | 9 to 10 and 13 to 20 | |
| 13 | 4592 | QPSK | 5 | 62 | 1 to 6 | |
| 13 | 4592 | QPSK | 10 | 23 | 7 and 8 | |
| 13 | 4592 | QPSK | 15 | 0 | 9 to 10 and 13 to 20 | |
| 14 | 4936 | QPSK | 10 | 27 | 7 and 8 | |
| 14 | 4936 | QPSK | 15 | 4 | 9 to 10 and 13 to 20 | |
| 15 | 5296 | QPSK | 10 | 31 | 7 and 8 | |
| 15 | 5296 | QPSK | 15 | 8 | 9 to 10 and 13 to 20 | |
| 16 | 5688 | QPSK | 10 | 35 | 7 and 8 | |
| 16 | 5688 | QPSK | 15 | 12 | 9 to 10 and 13 to 20 | |
| 17 | 6008 | QPSK | 10 | 38 | 7 and 8 | |
| 17 | 6008 | QPSK | 15 | 15 | 9 to 10 and 13 to 20 | |
| 18 | 6448 | QPSK | 10 | 42 | 7 and 8 | |
| 18 | 6448 | QPSK | 15 | 19 | 9 to 10 and 13 to 20 | |
| 19 | 6808 | QPSK | 10 | 45 | 7 and 8 | |
| 19 | 6808 | QPSK | 15 | 22 | 9 to 10 and 13 to 20 | |
| 20 | 7056 | QPSK | 10 | 47 | 7 and 8 | |
| 20 | 7056 | QPSK | 15 | 24 | 9 to 10 and 13 to 20 | |
| 21 | 7576 | QPSK | 10 | 51 | 7 and 8 | TFRI = 50 would have minimised padding but is not acceptable as the coding rate (0.777) would have given 3.5 dB due to turbo coder irregularities. TFRI=51 is selected. |
| 21 | 7440 | QPSK | 15 | 27 | 9 to 10 and 13 to 20 | |
| 22 | 7856 | QPSK | 10 | 53 | 7 and 8 | |
| 22 | 7856 | QPSK | 15 | 30 | 9 to 10 and 13 to 20 | |

| | | | | | | |

| 21 | 7440 | 64QAM | 8 | 1 | 13, 14, 17 non-MIMO, 18 non-MIMO, 19, 20 | |
| 22 | 7856 | 64QAM | 8 | 4 | 13, 14, 17 non-MIMO, 18 non-MIMO, 19, 20 | |
| 23 | 8136 | 64QAM | 8 | 6 | 13, 14, 17 non-MIMO, 18 non-MIMO, 19, 20 | |
| 24 | 8592 | 64QAM | 9 | 2 | 13, 14, 17 non-MIMO, 18 non-MIMO, 19, 20 | |
| 25 | 8904 | 64QAM | 9 | 4 | 13, 14, 17 non-MIMO, 18 non-MIMO, 19, 20 | |
| 26 | 9224 | 64QAM | 10 | 1 | 13, 14, 17 non-MIMO, 18 non-MIMO, 19, 20 | |

### 14.1.3.4b.2 TFRC test points for MAC-ehs and fixed MAC-d PDU size=656 or flexible MAC-d PDU size; or for radio bearer combinations with mix of fixed and flexible MAC-d PDU sizes

NOTE 1 For M= QPSK then table 14.1.3.4b.2.1 is used. For M= 16QAM then table 14.1.3.4b.2.2 is used. For M= 64QAM then table 14.1.3.4b.2.3 is used. For the case of Dual Cell or MIMO and mix of QPSK and 16QAM for MIMO data flow#1 and MIMO data flow#2 then table 14.1.3.4b.2.4 is used. For the case of 3C-HSDPA without MIMO or 4C-HSDPA without MIMO and M=QPSK then table 14.1.3.4b.2.1 is used. For the case of 3C-HSDPA without MIMO or 4C-HSDPA without MIMO and M=16QAM then table 14.1.3.4b.2.2 is used. For the case of 3C-HSDPA without MIMO or 4C-HSDPA without MIMO and M=64QAM then table 14.1.3.4b.2.3 is used.

NOTE 2 Column “Applicable Physical HS-DSCH UE categories” defines the applicability of test points vs. Physical HS-DSCH UE categories.

NOTE 3 For the case a configuration with flexible MAC-d PDU size is under test then the parameter as denoted $N_{PDUs}$ is only used to index the test points. For the case of configuration with fixed MAC-d PDU size=656 then this parameter also indicates the number of MAC-d PDUs the SS use when transmitting the test data in downlink.

**Table 14.1.3.4b.2.1: Test points for QPSK, fixed MAC-d PDU size=656 or flexible MAC-d PDU size; or for radio bearer combinations with mix of fixed and flexible MAC-d PDU sizes**

| # MAC-d PDUs# MAC-d PDUs for the fixed RLC case | Selected TBS | Modulation scheme | Number of codes | TFRI | Applicable Physical HS-DSCH UE categories | Comments |
|---|---|---|---|---|---|---|
| 1 | 688 | QPSK | 2 | 7 | 1 to 24 | |
| 2 | 1360 | QPSK | 4 | 6 | 1 to 24 | |
| 3 | 2048 | QPSK | 5 | 17 | 1 to 6,11 and 12 | |
| 3 | 2048 | QPSK | 6 | 7 | 7 to 10 and 13 to 24 | |
| 4 | 2736 | QPSK | 5 | 33 | 1 to 6,11 and 12 | |
| 4 | 2736 | QPSK | 9 | 0 | 7 to 10 and 13 to 24 | |
| 5 | 3384 | QPSK | 5 | 45 | 1 to 6,11 and 12 | |
| 5 | 3384 | QPSK | 10 | 6 | 7 and 8 | |
| 5 | 3384 | QPSK | 11 | 1 | 9 to 10 and 13 to 24 | |
| 6 | 4048 | QPSK | 5 | 55 | 1 to 6 | |
| 6 | 4048 | QPSK | 10 | 16 | 7 and 8 | |
| 6 | 4048 | QPSK | 13 | 1 | 9 to 10 and 13 to 24 | |
| 7 | 4760 | QPSK | 10 | 25 | 7 and 8 | |
| 7 | 4760 | QPSK | 15 | 2 | 9 to 10 and 13 to 24 29 and 31 | |
| 8 | 5392 | QPSK | 10 | 32 | 7 and 8 | |
| 8 | 5392 | QPSK | 15 | 9 | 9 to 10 and 13 to 24 29 and 31 | |
| 9 | 6112 | QPSK | 10 | 39 | 7 and 8 | |
| 9 | 6112 | QPSK | 15 | 16 | 9 to 10 and 13 to 24 29 and 31 | |
| 10 | 6808 | QPSK | 10 | 45 | 7 and 8 | |
| 10 | 6808 | QPSK | 15 | 22 | 9 to 10 and 13 to 24 29 and 31 | |
| 11 | 7576 | QPSK | 10 | 51 | 7 and 8 | TFRI = 50 would have minimised padding but is not acceptable as the coding rate (0.777) would have given 3.5 dB due to turbo coder irregularities. TFRI=51 is selected. |
| 11 | 7440 | QPSK | 15 | 27 | 9 to 10 and 13 to 24 29 and 31 | |
| 12 | 8136 | QPSK | 10 | 55 | 7 and 8 | |
| 12 | 8136 | QPSK | 15 | 32 | 9 to 10 and 13 to 24 29 and 31 | |
| 13 | 8904 | QPSK | 10 | 60 | 7 and 8 | TFRI = 59 would have minimised padding but is not acceptable as the coding rate (0.913) would have given 2 dB due to turbo coder irregularities. TFRI=60 is selected. |
| 13 | 8744 | QPSK | 15 | 36 | 9 to 10 and 13 to 24 29 and 31 | |
| 14 | 9560 | QPSK | 15 | 41 | 9 to 10 and 13 to 24 29 and 31 | |
| 15 | 10088 | QPSK | 15 | 44 | 9 to 10 and 13 to 24 29 and 31 | |

| | | | | | | |
|---|---|---|---|---|---|---|
| 16 | 10840 | QPSK | 15 | 48 | 9 to 10 and 13 to 24<br>29 and 31 | |

| Note 1: This test point is not applicable for the fixed RLC case as the number of MAC-d PDUs would have exceeded the maximum limit of 26 as specified by TS 25.321 clause 9.1.4. When flexible MAC-d PDU size is under test then the parameter as denoted (x) is only used to index the test points | | | | | | |

**Table 14.1.3.4b.2.3: Test points for 64QAM, fixed MAC-d PDU size=656 or flexible MAC-d PDU size; or for radio bearer combinations with mix of fixed and flexible MAC-d PDU sizes**

| # MAC-d PDUs# MAC-d PDUs for the fixed RLC case | Selected TBS | Modulation scheme | Number of codes | TFRI | Applicable Physical HS-DSCH UE categories | Comments |

| 35 | | | | | | | | | | | | | | | Void |

Note 1: The test point index is included to provide a unique reference to the different test points for the Three-Cell mixed modulation case.
Note 2: This test point is not applicable for the fixed RLC case as the number of MAC-d PDUs would have exceeded the maximum limit of 26 as specified by TS 25.321 clause 9.1.4.

### 14.1.3.5 Generic test procedure for HS-DSCH radio bearer combinations with non-enhanced Layer 2

This procedure is used to test HS-DSCH radio bearer combinations with non-enhanced layer 2. The procedure is run once for each sub-test of the actual HS-DSCH radio bearer test case.

Definition of test variables:

| | |
|---|---|
| $N_{\underline{codes}}$ | Number of HS-DSCH codes (1..15, maximum number dependent on UE category) |
| $M$ | Type of modulation scheme (QPSK, 16QAM, 64QAM) |
| $TB_{size}$ | Transport Block size |
| $N_{PDUs}$ | Number of MAC-d PDUs |
| $H_{\underline{ID}}$ | HARQ process identifier (0..7) |

Initial conditions

UE in idle mode

Test procedure

a) The SS establish the reference radio bearer configuration as specified in TS 34.108, clause 6.10 for the actual radio bearer test. For the case when the reference radio bearer configuration includes radio bearers for both CS and PS domain then the radio bearer setup procedure has to be performed once per domain. The first radio bearer setup procedure shall perform configuration of the physical channel for the radio bearer combination under test as well as the transport channels for the CS radio bearer(s). The second radio bearer procedure shall perform the configuration for the transport channel for the PS radio bearers . The Physical channel configuration shall be done for both CS and PS radio bearers combined. Here the transport format combination set for both CS and PS radio bearers shall be provided. See note 1 and note 3.

b) The SS limits the UE allowed uplink transport format combinations according to the "Restricted UL TFCIs", as specified for the sub-test of the actual radio bearer test, using the RRC transport format combination control procedure. See note 2.

c) The SS closes the test loop using UE test loop mode 1 and setting the UL RLC SDU size parameter, for all radio bearers under test, according to the "UL RLC SDU size" value as specified for the sub-test of the actual radio bearer test.

d) The SS selects the first TFRC test point ($N_{PDUs}$ , $M$, $N_{\underline{codes}}$ and TFRI) according to the applicable table in sub-clauses 14.1.3.3 (MAC-d PDU size=336) or 14.1.3.4 (MAC-d PDU size=656).

e) The SS sets $H_{\underline{ID}}$ = 0.

f) The SS creates 4 DL RLC SDUs of size ($N_{PDUs}$ * MAC-d PDU payload size) / 4 minus 8 bits (size of 7 bit length indicator and expansion bit). See note 4.

g) The SS transmits, for each DTCH mapped to HS-DSCH, 4 DL RLC SDUs concatenated into a MAC-hs PDU using the selected TFRC and $H_{\underline{ID}}$. If the radio bearer combination under test includes downlink DTCHs mapped to DCH then the SS transmits, for all DTCHs mapped to DCH, one or more RLC SDUs having the size equal to the "Test data size" as specified for the sub-test of the actual radio bearer test case.

h) The SS checks that the content of the UE returned RLC SDUs have the correct content and are received having the correct transport format. See TS 34.109 [10] clause 5.3.2.6.2 for details regarding the UE loopback of RLC SDUs.

i) The SS sets $H_{\underline{ID}}$ = ($H_{\underline{ID}}$ + 1) modulo $Max_H_{\underline{ID}}$, where $Max_H_{\underline{ID}}$ equals the number of HARQ processes to be verified by the actual sub-test

j) The SS repeats steps f) to i) for the remaining TFRC test point ($N_{PDUs}$ , $M$, $N_{\underline{codes}}$ and TFRI) according to the applicable table in sub-clauses 14.1.3.3 (MAC-d PDU size=336) or 14.1.3.4 (MAC-d PDU size=656) for the UE category and MAC-d PDU size under test.

k) The SS opens the UE test loop.

l) The SS release the radio bearer. See note 5.

m) Steps a) to l) are repeated for all sub-tests. See note 6.

n) The SS may optionally deactivate the radio bearer test mode.

NOTE 1: The SS configures the physical channel parameters according to the actual UE category under test. The number of soft channel bits per HARQ process is split equally among the number of HARQ processes configured for the actual sub-test - i.e. “Total number of soft channel bits” for the UE category according to table 14.1.3.1.1 divided by the number of HARQ processes under test. The number of reordering queues is 1 for single HS-DSCH radio bearer configurations. The MAC-hs window size, RLC Transmission window size and RLC Receiving window size shall be configured as specified for the actual sub-test.

NOTE 2: The restricted set of uplink TFCIs shall contain all possible TFCI that could happen in a sub-test. The actual TTI of the different radio bearers and signalling radio bearers as well as the possible UE processing delays shall be taken into consideration. The restricted set of TFCIs must comply with the minimum set of TFCIs as specified in TS 25.331, clause 8.6.5.2.

NOTE 3: The MAC-hs window size and RLC Receiver and transmitter window sizes need to be chosen such that the UE capability for “Minimum total RLC AM and MAC-hs buffer size” is not exceeded for the UE category under test.

NOTE 4: The test data for DTCHs mapped on HS-DSCH is divided into 4 RLC SDUs to keep the maximum SDU size below or equal to 1500 octets (1500 octets is the limit of QoS parameter “Max SDU size” in SM).

NOTE 5: The Secondary scrambling code in the RADIO BEARER RELEASE message is set to the same value used in the RADIO BEARER SETUP MESSAGE.

NOTE 6: CS radio bearer is setup once during the first sub-test.

Expected sequence (repeated for each sub-test, see note 3)

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| Case A: PS radio bearers only | | | | |

| 16 | SS | | | For each DTCHs mapped on HS-DSCH the SS creates test data for the first TFRC . The test data shall be dived into 4 RLC SDUs of size ($N_{PDUs}$ * MAC-d PDU payload size) / 4 - 8 bits. The SS sets *H*ID = 0. |

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 17 | <-- | | DOWNLINK MAC-hs PDU (HS-DSCH#1)<br>…<br>DOWNLINK MAC-hs PDU (HS-DSCH#N)<br><br>DL RLC SDU (DL DCH#1)<br>…<br>DL RLC SDU (DL DCH#M) | For each DTCH mapped on HS-DSCH the SS sends test data divided into 4 RLC SDUs for HARQ processed *H*ID.<br>For each DTCH mapped on DCH the SS sends test data using the downlink transport format combination under test. |
| 18 | --> | | UPLINK RLC SDUs | The SS checks, for each DTCH, that the content and transport format of the received UL RLC SDUs are correct. |
| 19 | SS | | | The SS sets *H*ID = (*H*ID + 1) modulo *Max_H*ID. The SS creates test data for the next TFRC and repeat steps 17 to 18 until all TFRCs have been tested. |
| 20 | <-- | | OPEN UE TEST LOOP (DCCH) | TC |
| 21 | --> | | OPEN UE TEST LOOP COMPLETE (DCCH) | TC |
| 22 | | | RB RELEASE | RRC |
| 23 | <-- | | DEACTIVATE RB TEST MODE | TC<br>Optional step |
| 24 | --> | | DEACTIVATE RB TEST MODE COMPLETE | TC<br>Optional step |

NOTE 1: In addition to activate integrity protection Step 6 and Step 7 are inserted in order to stop T3317 timer in the UE, which starts after transmitting SERVICE REQUEST message.

NOTE 2: For case B (CS+PS radio bearers) the second security mode procedure is needed to enable testing of ciphering on the PS radio bearers.

NOTE 3: For case A (PS radio bearers) steps A1 to A10 will be executed once during first sub-test. For case B (CS+PS radio bearers) steps B1 to B12 will be executed once during first sub-test.

### 14.1.3.5a Generic test procedure for HS-DSCH radio bearer combinations with enhanced Layer 2

This procedure is used to test HS-DSCH radio bearer combinations with enhanced Layer 2. The procedure is run once for each sub-test of the actual HS-DSCH radio bearer test case.

Definition of test variables common for both the flexible and fixed RLC cases:

| | |
|---|---|
| $N_{\underline{codes}}$ | Number of HS-DSCH codes (1..15, maximum number dependent on UE category) |
| *M* | Type of modulation scheme (QPSK, 16QAM, 64QAM) |
| *M1* | Type of modulation scheme for MIMO or Dual-Cell data flow#1 for the case different modulations schemes are used for the different data flows (QPSK, 16QAM, 64QAM) |
| *M2* | Type of modulation scheme for MIMO or Dual-Cell data flow#2 for the case different modulations schemes are used for the different data flows (QPSK, 16QAM, 64QAM) |
| *M3* | Type of modulation scheme for MIMO or Dual-Cell data flow#3 for the case different modulations schemes are used for the different data flows (QPSK, 16QAM, 64QAM) |
| *M4* | Type of modulation scheme for MIMO or Dual-Cell data flow#4 for the case different modulations schemes are used for the different data flows (QPSK, 16QAM, 64QAM) |
| $TB_{size}$ | Transport Block size |
| $TB_{size1}$ | Transport Block size for M1 modulation scheme. Applicable for Mimo or Dual Cell or combination of Dual Cell with MIMO |
| $TB_{size2}$ | Transport Block size for M2 modulation scheme. Applicable for Mimo or Dual Cell or combination of Dual Cell with MIMO |
| $TB_{size3}$ | Transport Block size for M3 modulation scheme. Applicable for combination of Dual Cell with MIMO |
| $TB_{size4}$ | Transport Block size for M4 modulation scheme. Applicable for combination of Dual Cell with MIMO |
| $H_{\underline{ID}}$ | HARQ process identifier (0..7 when MIMO is not supported or when Dual-Cell is supported 0..15 when MIMO is supported) |

| | |
|---|---|
| $H_{\underline{CONF}}$ | Configured number of HARQ processes for the subtest |

Definition of additional test variables for the fixed RLC case:

| | |
|---|---|
| $N_{PDUs}$ | Number of MAC-d PDUs. |

Initial conditions

UE in idle mode

Test procedure

NOTE The test case should specify if the test procedure is to be executed for the MIMO case, Dual-Cell case or the combination Dual-Cell with MIMO case. If nothing is stated in the test case then the test procedure is to be executed for the non-MIMO or non-Dual-Cell case. The test case should also specify which modulation scheme M the testing is intended for, i.e. if more than one modulation schemes are to be tested then the test case need to specify multiple test executions, one for each modulation scheme. If nothing is specified in the test case then M=QPSK shall be assumed.

a) The SS establish the reference radio bearer configuration as specified in TS 34.108, clause 6.10 for the actual radio bearer test. For the case when the reference radio bearer configuration includes radio bearers for both CS and PS domain then the radio bearer setup procedure has to be performed once per domain. The first radio bearer setup procedure shall perform configuration of the physical channel for the radio bearer combination under test as well as the transport channels for the CS radio bearer(s). The second radio bearer procedure shall perform the configuration for the transport channel for the PS radio bearers . The Physical channel configuration shall be done for both CS and PS radio bearers combined. Here the transport format combination set for both CS and PS radio bearers shall be provided. See note 1 and note 3.

b) The SS limits the UE allowed uplink transport format combinations according to the "Restricted UL TFCIs", as specified for the sub-test of the actual radio bearer test, using the RRC transport format combination control procedure. See note 2.

c) The SS closes the test loop using UE test loop mode 1 and setting the UL RLC SDU size parameter, for all radio bearers under test, according to the "UL RLC SDU size" value as specified for the sub-test of the actual radio bearer test.

d) For the non-MIMO or non-Dual-Cell case: The SS selects the first TFRC test point ($N_{PDUs}$ , *M*, $N_{\underline{codes}}$ and TFRI) according to the applicable table in sub-clauses 14.1.3.4b.1 (MAC-d PDU size=336) or 14.1.3.4b.2 (MAC-d PDU size=656 or Flexible MAC-d PDU size).

For the MIMO or the Dual-Cell case and M1=M2=QPSK: The SS selects the first TFRC test point ($N_{PDUs}$ , *M*, $N_{\underline{codes}}$ and TFRI) according to table 14.1.3.4b.2.1. Same TFRC test point is used for both data flows and $TB_{size1}$= $TB_{size2}$.

For the MIMO or the Dual-Cell case and M1=M2=16QAM: The SS selects the first TFRC test point ($N_{PDUs}$ , *M*, $N_{\underline{codes}}$ and TFRI) according to table 14.1.3.4b.2.2. Same TFRC test point is used for both data flows and $TB_{size1}$= $TB_{size2}$.

For the MIMO or the Dual-Cell case and M1=M2=64QAM: The SS selects the first TFRC test point ($N_{PDUs}$ , *M*, $N_{\underline{codes}}$ and TFRI) according to table 14.1.3.4b.2.3. Same TFRC test point is used for both data flows and $TB_{size1}$= $TB_{size2}$.

For the MIMO or the Dual-Cell case and M1=16QAM and M2=QPSK: The SS selects the first TFRC test points for data flows#1 ($N_{PDUs1}$ , *M1*, $N_{\underline{codes}}$ , $TB_{size1}$ and TFRI1) and data flows#2 ($N_{PDUs2}$ , *M2*, $N_{\underline{codes}}$ , $TB_{size2}$ and TFRI2) according to table 14.1.3.4b.2.4.

For the MIMO or the Dual-Cell case and M1=64QAM and M2=QPSK: The SS selects the first TFRC test points for data flows#1 ($N_{PDUs1}$ , *M1*, $N_{\underline{codes}}$ , $TB_{size1}$ and TFRI1) and data flows#2 ($N_{PDUs2}$ , *M2*, $N_{\underline{codes}}$ , $TB_{size2}$ and TFRI2) according to table 14.1.3.4b.2.5.

For the MIMO or the Dual-Cell case and M1=64QAM and M2=16QAM: The SS selects the first TFRC test points for data flows#1 ($N_{PDUs1}$ , *M1*, $N_{\underline{codes}}$ , $TB_{size1}$ and TFRI1) and data flows#2 ($N_{PDUs2}$ , *M2*, $N_{\underline{codes}}$ , $TB_{size2}$ and TFRI2) according to table 14.1.3.4b.2.6.

For the MIMO and Dual-Cell case and M1=M2=M3=M4=16QAM: The SS selects the first TFRC test point ($N_{PDUs}$ , $N_{\underline{code, s}}$,$TB_{size1}$ and TFRI) according to table 14.1.3.4b.2.2. The Same TFRC test point is used for all four data flows.

For the MIMO and Dual-Cell case and M1=M3=64QAM and M2=M4=16QAM: The SS selects the first TFRC test point for data flow#1 and data flow#3 in accordance to first 64QAM test point ($N_{PDUs}$ , $N_{\underline{codes}}$, $TB_{size}$ and TFRI) in table 14.1.3.4b.2.6. The SS selects the first TFRC test point for data flow#2 and data flow#4 in accordance to first 16QAM test point ($N_{PDUs}$ , $N_{\underline{codes}}$, $TB_{size}$ and TFRI) in table 14.1.3.4b.2.6.

For the MIMO and Dual-Cell case and M1=M2=M3=M4=64QAM: The SS selects the first TFRC test point ($N_{PDUs}$ , *M*, $N_{\underline{codes}}$ and TFRI) according to table 14.1.3.4b.2.3. The Same TFRC test point is used for all four data flows.

e) The SS sets $H_{\underline{ID}} = 0$.

f) For the fixed MAC-d PDU size case when neither MIMO nor Dual Cell is used: The SS creates 4 DL RLC SDUs of size ($N_{PDUs}$ * MAC-d PDU payload size) / 4 minus 8 bits (size of 7 bit length indicator and expansion bit). See note 4.

For the fixed MAC-d PDU size case when MIMO or Dual-Cell is used: The SS creates 8 DL RLC SDUs of size ($N_{PDUs1} + N_{PDUs2}$ )* MAC-d PDU payload size) / 8 minus 8 bits (size of 7 bit length indicator and expansion bit). See note 4.

For the fixed MAC-d PDU size case when MIMO combined with Dual-Cell is used: The SS creates 16 DL RLC SDUs of size ($N_{PDUs1} + N_{PDUs2} + N_{PDUs3} + N_{PDUs4}$)* MAC-d PDU payload size) / 16 minus 8 bits (size of 7 bit length indicator and expansion bit). See note 4.

For the flexible MAC-d PDU size case when neither MIMO nor Dual Cell is used: If the transport block size $TB_{size}$ is >12032 bits the SS creates 4 DL RLC SDUs of size 8*FLOOR (($TB_{size}$ – 136 bit)/32). If the transport block size $TB_{size}$ is ≤ 12032 bits the SS creates 1 DL RLC SDUs of size 8*FLOOR(($TB_{size}$ – 40 bit)/8). The SS creates a DL RLC PDU for each DL RLC SDU using the special value of HE field ('10') in the RLC PDU header. See note 4 and note 7.

For the flexible MAC-d PDU size case when MIMO or Dual-Cell is used and M1=M2: If the transport block size ($TB_{size1+}$ $TB_{size2}$) is >12032 bits the SS creates 8 DL RLC SDUs of size 8*FLOOR ((($TB_{size1}$ + $TB_{size2}$)– 272 bit)/64). If the transport block size ($TB_{size1+}$ $TB_{size2}$) is ≤ 12032 bits the SS creates 2 DL RLC SDUs of size 8*FLOOR((($TB_{size1}$ + $TB_{size2}$)– 80 bit)/16). The SS creates a DL RLC PDU for each DL RLC SDU using the special value of HE field ('10') in the RLC PDU header. See note 4 and note 7.

For the flexible MAC-d PDU size case when MIMO or Dual-Cell is used and M1 is different from M2: If the transport block size ($TB_{size1+}$ $TB_{size2}$) is >12032 bits the SS creates 8 DL RLC SDUs of size 8*FLOOR ((($TB_{size1}$ + $TB_{size2}$)– 288 bit)/64). If the transport block size ($TB_{size1+}$ $TB_{size2}$) is ≤ 12032 bits the SS creates 2 DL RLC SDUs of size 8*FLOOR((($TB_{size1}$ + $TB_{size2}$)– 96 bit)/16). The SS creates a DL RLC PDU for each DL RLC SDU using the special value of HE field ('10') in the RLC PDU header. See note 4 and note 7.

For the flexible MAC-d PDU size case when MIMO combined with Dual-Cell is used and M1=M2 and M3=M4: For Cell 1: If the transport block size ($TB_{size1+}$ $TB_{size2}$) is >12032 bits the SS creates 8 DL RLC SDUs of size 8*FLOOR ((($TB_{size1}$ + $TB_{size2}$)– 272 bit)/64). If the transport block size $TB_{size}$ is ≤ 12032 bits the SS creates 2 DL RLC SDUs of size 8*FLOOR((($TB_{size1}$ + $TB_{size2}$)– 80 bit)/16). For Cell 2: If the transport block size ($TB_{size3+}$ $TB_{size4}$) is >12032 bits the SS creates 8 DL RLC SDUs of size 8*FLOOR ((($TB_{size3}$ + $TB_{size4}$)– 272 bit)/64). If the transport block size ($TB_{size3+}$ $TB_{size4}$) is ≤ 12032 bits the SS creates 2 DL RLC SDUs of size 8*FLOOR((($TB_{size3}$ + $TB_{size4}$)– 80 bit)/16). The SS creates a DL RLC PDU for each DL RLC SDU using the special value of HE field ('10') in the RLC PDU header. See note 4.

For the flexible MAC-d PDU size case when MIMO combined with Dual-Cell is used and M1 is different from M2 and M3 is different from M4: For Cell 1: If the transport block size ($TB_{size1+}$ $TB_{size2}$) is >12032 bits the SS creates 8 DL RLC SDUs of size 8*FLOOR ((($TB_{size1}$ + $TB_{size2}$)– 288 bit)/64). If the transport block size ($TB_{size1+}$ $TB_{size2}$) is ≤ 12032 bits the SS creates 2 DL RLC SDUs of size 8*FLOOR((($TB_{size1}$ + $TB_{size2}$)– 96 bit)/16). For Cell 2: If the transport block size ($TB_{size3+}$ $TB_{size4}$) is >12032 bits the SS creates 8 DL RLC SDUs of size 8*FLOOR ((($TB_{size3}$ + $TB_{size4}$)– 288 bit)/64). If the transport block size ($TB_{size3+}$ $TB_{size4}$) is ≤ 12032 bits the SS

creates 2 DL RLC SDUs of size 8*FLOOR(((TB$_{size3}$ + TB$_{size4}$)– 96 bit)/16). The SS creates a DL RLC PDU for each DL RLC SDU using the special value of HE field ('10') in the RLC PDU header. See note 4.

g) If neither MIMO nor Dual-Cell is used, then the SS transmits in one TTI, for each DTCH mapped to HS-DSCH, all the DL RLC PDUs generated in step f) concatenated into a MAC-ehs PDU using the selected TFRC and $H_{\underline{ID}}$.

If Dual-Cell is used then the SS transmits in one TTI, for each DTCH mapped to HS-DSCH, all the DL RLC PDUs generated in step f) concatenated into two MAC-ehs PDU using the selected TFRC and $H_{\underline{ID}}$.

If the radio bearer combination under test includes downlink DTCHs mapped to DCH then the SS transmits, for all DTCHs mapped to DCH, one or more RLC SDUs having the size equal to the "Test data size" as specified for the sub-test of the actual radio bearer test case. Goto step i).

h) If MIMO for non Dual-Cell case is used then the SS transmits in one TTI, for each DTCH mapped to HS-DSCH, the DL RLC PDUs generated in step f) concatenated into two MAC-ehs PDUs using the selected TFRC and the HARQ processes $H_{\underline{ID}}$ and ($H_{\underline{ID}}$ + $H_{\underline{CONF}}$/2) mod $H_{\underline{CONF}}$ respectively.

If MIMO combined with Dual Cell is used then the SS transmits in one TTI, for each DTCH mapped to HS-DSCH, the DL RLC PDUs generated in step f) concatenated into two MAC-ehs PDUs per cell using the selected TFRC and the HARQ processes $H_{\underline{ID}}$ , ($H_{\underline{ID}}$ + $H_{\underline{CONF}}$/4) mod $H_{\underline{CONF}}$ , ($H_{\underline{ID}}$ + $H_{\underline{CONF}}$/2) mod $H_{\underline{CONF}}$ and ($H_{\underline{ID}}$ + 3*$H_{\underline{CONF}}$/4) mod $H_{\underline{CONF}}$ respectively.

If the radio bearer combination under test includes downlink DTCHs mapped to DCH then the SS transmits, for all DTCHs mapped to DCH, one or more RLC SDUs having the size equal to the "Test data size" as specified for the sub-test of the actual radio bearer test case.

i) The SS checks that the content of the UE returned RLC SDUs have the correct content and are received having the correct transport format. See TS 34.109 [10] clause 5.3.2.6.2 for details regarding the UE loopback of RLC SDUs.

j) The SS sets $H_{\underline{ID}}$ = ($H_{\underline{ID}}$ + 1) modulo $H_{\underline{CONF}}$ where $H_{\underline{CONF}}$ is the configured number of processes and equals the number of HARQ processes to be verified by the actual sub-test

k) The SS repeats steps e) to j) for the remaining TFRC test points according to the applicable table in sub-clause 14.1.3.2.1a (principle for Enhanced Layer 2)

l) The SS repeats steps e) to j) for the remaining TFRC test point ($N_{\underline{PDUs}}$ , $M$, $N_{\underline{codes}}$ and TFRI) according to the applicable table in sub-clauses 14.1.3.4b.1 (MAC-d PDU size=336) or 14.1.3.4b.2 (MAC-d PDU size=656 or Flexible MAC-d PDU size). m) The SS opens the UE test loop.

n) The SS release the radio bearer. See note 5.

o) Steps a) to n) are repeated for all sub-tests. See note 6.

p) The SS may optionally deactivate the radio bearer test mode.

NOTE 1: The SS configures the physical channel parameters according to the actual UE category under test. The number of soft channel bits per HARQ process is split equally among the number of HARQ processes configured for the actual sub-test - i.e. "Total number of soft channel bits" for the UE category according to table 14.1.3.1.1 divided by the number of HARQ processes under test. The number of reordering queues is 1 for single HS-DSCH radio bearer configurations. The MAC-hs window size, RLC Transmission window size and RLC Receiving window size shall be configured as specified for the actual sub-test.

NOTE 2: The restricted set of uplink TFCIs shall contain all possible TFCI that could happen in a sub-test. The actual TTI of the different radio bearers and signalling radio bearers as well as the possible UE processing delays shall be taken into consideration. The restricted set of TFCIs must comply with the minimum set of TFCIs as specified in TS 25.331, clause 8.6.5.2. Not applicable for Cell-FACH state.

NOTE 3: The MAC-hs window size and RLC Receiver and transmitter window sizes need to be chosen such that the UE capability for "Minimum total RLC AM and MAC-hs buffer size" is not exceeded for the UE category under test.

NOTE 4: The test data for DTCHs mapped on HS-DSCH is divided into multiple RLC SDUs to keep the maximum SDU size below or equal to 1500 octets (1500 octets is the limit of QoS parameter "Max SDU size" in SM). To allow for testing of the smallest TB sizes a single RLC PDU is used when the TB size is equal or below 12032 bits to reduce the L2 header overhead. 12032 bits corresponds to maximum RLC SDU size of 1500 octets (12000 bits) plus MAC-ehs header size of 24 bits and minimum possible RLC PDU header (8 bits for UM RLC). The actual maximum RLC SDU size to be used will depend of the RLC configuration for the radio bearer under test. For UM radio bearer the maximum RLC SDU will be 1500 octets for the case UMD PDU header of 8 bits. For AM radio bearers the maximum RLC SDU size will be 1499 octets for AMD PDU header of 16 bits.

NOTE 5: The Secondary scrambling code in the RADIO BEARER RELEASE message is set to the same value used in the RADIO BEARER SETUP MESSAGE.

NOTE 6: CS radio bearer is setup once during the first sub-test.

NOTE 7: The formulas for calculating the largest possible RLC SDU sizes take into account the required MAC-ehs headers and maximum RLC PDU AM headers to concatenate the RLC PDUs into MAC-ehs PDU(s). For the case when two MAC-ehs PDUs are used (MIMO or Dual-Cell) and the transport block sizes for the two data streams are different then additional space is reserved for the MAC-ehs header due to the MAC-ehs SDU segmentation between the two MAC-ehs PDUs (additional 16 bit LCH-ID+L+F MAC-ehs header). In the test procedure this will happen when the different data streams use different modulation schemes (M1 and M2 not equal).

Expected sequence (repeated for each sub-test, see note 3)

NOTE 1: In addition to activate integrity protection Step 6 and Step 7 are inserted in order to stop T3317 timer in the UE, which starts after transmitting SERVICE REQUEST message.

NOTE 2: For case B (CS+PS radio bearers) the second security mode procedure is needed to enable testing of ciphering on the PS radio bearers.

NOTE 3: For case A (PS radio bearers) steps A1 to A10 will be executed once during first sub-test. For case B (CS+PS radio bearers) steps B1 to B12 will be executed once during first sub-test.

Specific Message Content:

Use the same RADIO BEARER SETUP message as specified in 34.108 with the following exceptions for step A11, B12a :

| Information Element | Value/remark | Version |
|---|---|---|
| HS-DSCH TB size table | octet aligned | Rel-7 |

## 14.1.3.5b Generic test procedure for HS-DSCH radio bearer combinations with enhanced Layer 2 for Three-Cell case

This procedure is used to test HS-DSCH radio bearer combinations with enhanced Layer 2 for three-cell case. The procedure is run once for each sub-test of the actual HS-DSCH radio bearer test case.

Definition of test variables common for both the flexible and fixed RLC cases:

| | |
|---|---|
| $N_{codes}$ | Number of HS-DSCH codes (1..15, maximum number dependent on UE category) |
| M | Type of modulation scheme (QPSK, 16QAM, 64QAM) |
| M1 | Type of modulation scheme for Three-Cell data flow#1 for the case different modulations schemes are used for the different data flows (QPSK, 16QAM, 64QAM) |
| M2 | Type of modulation scheme for Three-Cell data flow#2 for the case different modulations schemes are used for the different data flows (QPSK, 16QAM, 64QAM) |
| M3 | Type of modulation scheme for Three-Cell data flow#3 for the case different modulations schemes are used for the different data flows (QPSK, 16QAM, 64QAM) |
| $TB_{size}$ | Transport Block size |
| $TB_{size1}$ | Transport Block size for M1 modulation scheme. Applicable for Three-Cell |
| $TB_{size2}$ | Transport Block size for M2 modulation scheme. Applicable for Three-Cell |
| $TB_{size3}$ | Transport Block size for M3 modulation scheme. Applicable for Three-Cell |
| $H_{ID}$ | HARQ process identifier (0..7) |
| $H_{CONF}$ | Configured number of HARQ processes for the subtest |

Definition of additional test variables for the fixed RLC case:

| | |
|---|---|
| $N_{PDUs}$ | Number of MAC-d PDUs. |

Initial conditions

UE in idle mode

Test procedure

NOTE The test case should specify if the test procedure is to be executed for Three-Cell case. If nothing is stated in the test case then the test procedure is to be executed for the non-Three-Cell case. The test case should also specify which modulation scheme M the testing is intended for, i.e. if more than one modulation schemes are to be tested then the test case need to specify multiple test executions, one for each modulation scheme. If nothing is specified in the test case then M=QPSK shall be assumed.

a) The SS establish the reference radio bearer configuration as specified in TS 34.108, clause 6.10 for the actual radio bearer test. For the case when the reference radio bearer configuration includes radio bearers for both CS and PS domain then the radio bearer setup procedure has to be performed once per domain. The first radio bearer setup procedure shall perform configuration of the physical channel for the radio bearer combination under test as well as the transport channels for the CS radio bearer(s). The second radio bearer procedure shall perform the configuration for the transport channel for the PS radio bearers. The Physical channel configuration shall be done for both CS and PS radio bearers combined. Here the transport format combination set for both CS and PS radio bearers shall be provided. See NOTE 1 and NOTE 3.

b) The SS limits the UE allowed uplink transport format combinations according to the "Restricted UL TFCIs", as specified for the sub-test of the actual radio bearer test, using the RRC transport format combination control procedure. See NOTE 2.

c) The SS closes the test loop using UE test loop mode 1 and setting the UL RLC SDU size parameter, for all radio bearers under test, according to the "UL RLC SDU size" value as specified for the sub-test of the actual radio bearer test.

d) For the non-Three-Cell case: The SS selects the first TFRC test point ($N_{PDUs}$, $M$, $N_{\underline{codes}}$ and TFRI) according to the applicable table in sub-clauses 14.1.3.4b.1 (MAC-d PDU size=336) or 14.1.3.4b.2 (MAC-d PDU size=656 or Flexible MAC-d PDU size).

For the Three-Cell case and M1=M2=M3=QPSK: The SS selects the first TFRC test point ($N_{PDUs}$, $M$, $N_{\underline{codes}}$ and TFRI) according to table 14.1.3.4b.2.1. Same TFRC test point is used for all data flows and $TB_{size1}$=$TB_{size2}$=$TB_{size3}$.

For the Three-Cell case and M1=M2=M3=16QAM: The SS selects the first TFRC test point ($N_{PDUs}$, $M$, $N_{\underline{codes}}$ and TFRI) according to table 14.1.3.4b.2.2. Same TFRC test point is used for all data flows and $TB_{size1}$=$TB_{size2}$=$TB_{size3}$.

For the Three-Cell case and M1=M2=M3=64QAM: The SS selects the first TFRC test point ($N_{PDUs}$, $M$, $N_{\underline{codes}}$ and TFRI) according to table 14.1.3.4b.2.3. Same TFRC test point is used for all data flows and $TB_{size1}$=$TB_{size2}$=$TB_{size3}$.

For the Three-Cell case and M1=M2=64QAM and M3=16QAM: The SS selects the first TFRC test points for data flows#1 ($N_{PDUs1}$, $M1$, $N_{\underline{codes}}$, $TB_{size1}$ and TFRI1) and data flows#2 ($N_{PDUs2}$, $M2$, $N_{\underline{codes}}$, $TB_{size2}$ and TFRI2) and data flows#3 ($N_{PDUs2}$, $M3$, $N_{\underline{codes}}$, $TB_{size3}$ and TFRI3) according to table 14.1.3.4b.2.7.

For the Three-Cell case and M1= 64QAM and M2=16QAM and M3=QPSK: The SS selects the first TFRC test points for data flows#1 ($N_{PDUs1}$, $M1$, $N_{\underline{codes}}$, $TB_{size1}$ and TFRI1) and data flows#2 ($N_{PDUs2}$, $M2$, $N_{\underline{codes}}$, $TB_{size2}$ and TFRI2) and data flows#3 ($N_{PDUs3}$, $M3$, $N_{\underline{codes}}$, $TB_{size3}$ and TFRI3) according to table 14.1.3.4b.2.8.

e) The SS sets $H_{\underline{ID}}$ = 0.

f) For the fixed MAC-d PDU size case when no Three-Cell is used: The SS creates 4 DL RLC SDUs of size ($N_{PDUs}$ * MAC-d PDU payload size) / 4 minus 8 bits (size of 7 bit length indicator and expansion bit). See NOTE 4.

For the fixed MAC-d PDU size case when Three-Cell is used: The SS creates 12 DL RLC SDUs of size ($N_{PDUs1}$ + $N_{PDUs2}$ + $N_{PDUs3}$)* MAC-d PDU payload size) / 12 minus 8 bits (size of 7 bit length indicator and expansion bit). See NOTE 4.

For the flexible MAC-d PDU size case when no Three-Cell is used: If the transport block size $TB_{size}$ is >12032 bits the SS creates 4 DL RLC SDUs of size 8*FLOOR (($TB_{size}$ – 136 bit)/32). If the transport block size $TB_{size}$ is ≤ 12032 bits the SS creates 1 DL RLC SDUs of size 8*FLOOR(($TB_{size}$ – 40 bit)/8). The SS creates a DL RLC

PDU for each DL RLC SDU using the special value of HE field ('10') in the RLC PDU header. See NOTE 4 and NOTE 7.

For the flexible MAC-d PDU size case Three-Cell is used and M1=M2=M3: If the transport block size ($TB_{size1}$+$TB_{size2}$+$TB_{size3}$)is >12032 bits the SS creates 12 DL RLC SDUs of size 8*FLOOR ((($TB_{size1}$ + $TB_{size2}$+$TB_{size3}$)– 408 bit)/96). If the transport block size ($TB_{size1}$+$TB_{size2}$+$TB_{size3}$) is ≤ 12032 bits the SS creates 3 DL RLC SDUs of size 8*FLOOR((($TB_{size1}$ + $TB_{size2}$ +$TB_{size3}$)– 120 bit)/24). The SS creates a DL RLC PDU for each DL RLC SDU using the special value of HE field ('10') in the RLC PDU header. See NOTE 4 and NOTE 7.

For the flexible MAC-d PDU size case Three-Cell is used and M1= M2 but different to M3: If the transport block size ($TB_{size1}$+$TB_{size2}$+$TB_{size3}$)is >12032 bits the SS creates 12 DL RLC SDUs of size 8*FLOOR ((($TB_{size1}$ + $TB_{size2}$+$TB_{size3}$)– 440 bit)/96). If the transport block size ($TB_{size1}$+$TB_{size2}$+$TB_{size3}$) is ≤ 12032 bits the SS creates 3 DL RLC SDUs of size 8*FLOOR((($TB_{size1}$ + $TB_{size2}$ +$TB_{size3}$)– 152 bit)/24). The SS creates a DL RLC PDU for each DL RLC SDU using the special value of HE field ('10') in the RLC PDU header. See NOTE 4 and NOTE 7.

For the flexible MAC-d PDU size case Three-Cell is used and M1, M2 and M3 are different: If the transport block size ($TB_{size1}$+$TB_{size2}$+$TB_{size3}$)is >12032 bits the SS creates 12 DL RLC SDUs of size 8*FLOOR ((($TB_{size1}$ + $TB_{size2}$+$TB_{size3}$)– 456 bit)/96). If the transport block size ($TB_{size1}$+$TB_{size2}$+$TB_{size3}$) is ≤ 12032 bits the SS creates 3 DL RLC SDUs of size 8*FLOOR((($TB_{size1}$ + $TB_{size2}$ +$TB_{size3}$)– 168 bit)/24). The SS creates a DL RLC PDU for each DL RLC SDU using the special value of HE field ('10') in the RLC PDU header. See NOTE 4 and NOTE 7

g) If no Three-Cell is used, then the SS transmits in one TTI, for each DTCH mapped to HS-DSCH, all the DL RLC PDUs generated in step f) concatenated into a MAC-ehs PDU using the selected TFRC and $H_{ID}$.

If Three-Cell is used then the SS transmits in one TTI, for each DTCH mapped to HS-DSCH, all the DL RLC PDUs generated in step f) concatenated into two MAC-ehs PDU using the selected TFRC and $H_{ID}$.

If the radio bearer combination under test includes downlink DTCHs mapped to DCH then the SS transmits, for all DTCHs mapped to DCH, one or more RLC SDUs having the size equal to the "Test data size" as specified for the sub-test of the actual radio bearer test case. Goto step i).

h) The SS checks that the content of the UE returned RLC SDUs have the correct content and are received having the correct transport format. See TS 34.109 [10] clause 5.3.2.6.2 for details regarding the UE loopback of RLC SDUs.

i) The SS sets $H_{ID}$ = ($H_{ID}$ + 1) modulo $H_{CONF}$ where $H_{CONF}$ is the configured number of processes and equals the number of HARQ processes to be verified by the actual sub-test

j) The SS repeats steps e) to i) for the remaining TFRC test points according to the applicable table in sub-clause 14.1.3.2.1a (principle for Enhanced Layer 2)

k) The SS repeats steps e) to j) for the remaining TFRC test point ($N_{PDUs}$ , $M$, $N_{codes}$ and TFRI) according to the applicable table in sub-clauses 14.1.3.4b.1 (MAC-d PDU size=336) or 14.1.3.4b.2 (MAC-d PDU size=656 or Flexible MAC-d PDU size).

l) The SS opens the UE test loop.

m) The SS release the radio bearer. See NOTE 5.

n) Steps a) to m) are repeated for all sub-tests. See NOTE 6.

o) The SS may optionally deactivate the radio bearer test mode.

NOTE 1: The SS configures the physical channel parameters according to the actual UE category under test. The number of soft channel bits per HARQ process is split equally among the number of HARQ processes configured for the actual sub-test - i.e. "Total number of soft channel bits" for the UE category according to table 14.1.3.1.1 divided by the number of HARQ processes under test. The number of reordering queues is 1 for single HS-DSCH radio bearer configurations. The MAC-hs window size, RLC Transmission window size and RLC Receiving window size shall be configured as specified for the actual sub-test.

NOTE 2: The restricted set of uplink TFCIs shall contain all possible TFCI that could happen in a sub-test. The actual TTI of the different radio bearers and signalling radio bearers as well as the possible UE processing delays shall be taken into consideration. The restricted set of TFCIs must comply with the minimum set of TFCIs as specified in TS 25.331, clause 8.6.5.2. Not applicable for Cell-FACH state.

NOTE 3: The MAC-hs window size and RLC Receiver and transmitter window sizes need to be chosen such that the UE capability for "Minimum total RLC AM and MAC-hs buffer size" is not exceeded for the UE category under test.

NOTE 4: The test data for DTCHs mapped on HS-DSCH is divided into multiple RLC SDUs to keep the maximum SDU size below or equal to 1500 octets (1500 octets is the limit of QoS parameter "Max SDU size" in SM). To allow for testing of the smallest TB sizes a single RLC PDU is used when the TB size is equal or below 12032 bits to reduce the L2 header overhead. 12032 bits corresponds to maximum RLC SDU size of 1500 octets (12000 bits) plus MAC-ehs header size of 24 bits and minimum possible RLC PDU header (8 bits for UM RLC). The actual maximum RLC SDU size to be used will depend of the RLC configuration for the radio bearer under test. For UM radio bearer the maximum RLC SDU will be 1500 octets for the case UMD PDU header of 8 bits. For AM radio bearers the maximum RLC SDU size will be 1499 octets for AMD PDU header of 16 bits.

NOTE 5: The Secondary scrambling code in the RADIO BEARER RELEASE message is set to the same value used in the RADIO BEARER SETUP MESSAGE.

NOTE 6: CS radio bearer is setup once during the first sub-test.

NOTE 7: The formulas for calculating the largest possible RLC SDU sizes take into account the required MAC-ehs headers and maximum RLC PDU AM headers to concatenate the RLC PDUs into MAC-ehs PDU(s). For the case when three MAC-ehs PDUs are used (Three-Cell) and the transport block sizes for the three data streams are different then additional space is reserved for the MAC-ehs header due to the MAC-ehs SDU segmentation between the three MAC-ehs PDUs (additional 16 bit LCH-ID+L+F MAC-ehs header). In the test procedure this will happen when the different data streams use different modulation schemes (M1 and M2 and M3 not equal).

Expected sequence (repeated for each sub-test, see note 3)

### 14.1.3.6 Generic test procedure for HS-DSCH radio bearer combinations with AMR RB configurations using SRB#5 for TFC control

This procedure is used to test AMR radio bearer using SRB#5 for TFC control in combination with HS-DSCH radio bearers. The procedure is run once for each sub-test of the actual HS-DSCH radio bearer test case.

Definition of test variables:

| | |
|---|---|
| $N_{codes}$ | Number of HS-DSCH codes (1..15, maximum number dependent on UE category) |
| $M$ | Type of modulation scheme (QPSK, 16QAM) |
| $TB_{size}$ | Transport Block size |
| $N_{PDUs}$ | Number of MAC-d PDUs |
| $H_{ID}$ | HARQ process identifier (0..7) |

Initial conditions

UE in idle mode

Test procedure

a) The SS establish the reference radio bearer configuration as specified in TS 34.108, clause 6.10 for the actual radio bearer test. As part of the RADIO BEARER SETUP the TFC subsets as defined for the actual radio bearer configuration is setup. The radio bearer setup procedure has to be performed once per domain. The first radio bearer setup procedure shall perform configuration of the physical channel for the radio bearer combination under test as well as the transport channels for the CS radio bearer(s). The second radio bearer procedure shall perform the configuration for the transport channel for the PS radio bearers . The Physical channel configuration shall be done for both CS and PS radio bearers combined. Here the transport format combination set for both CS and PS radio bearers shall be provided. See note 1 and note 3.

b) The SS signals the "TFC subset identity" in the TRANSPORT FORMAT COMBINATION CONTROL message on SRB#5 as specified for the sub-test of the actual AMR radio bearer test. See note 6.

c) The SS closes the test loop using UE test loop mode 1 and setting the UL RLC SDU size parameter, for all radio bearers under test, according to the "UL RLC SDU size" value as specified for the sub-test of the actual radio bearer test.

d) The SS selects the first TFRC test point ($N_{PDUs}$ , $M$, $N_{\underline{codes}}$ and TFRI) according to the applicable table in sub-clauses 14.1.3.3 (MAC-d PDU size=336) or 14.1.3.4 (MAC-d PDU size=656).

e) The SS sets $H_{\underline{ID}} = 0$.

f) The SS creates 4 DL RLC SDUs of size ($N_{PDUs}$ * MAC-d PDU payload size) / 4 minus 8 bits (size of 7 bit length indicator and expansion bit). See note 4.

g) The SS transmits, for each DTCH mapped to HS-DSCH, 4 DL RLC SDUs concatenated into a MAC-hs PDU using the selected TFRC and $H_{\underline{ID}}$. If the radio bearer combination under test includes downlink DTCHs mapped to DCH then the SS transmits, for all DTCHs mapped to DCH, one or more RLC SDUs having the size equal to the "Test data size" as specified for the sub-test of the actual radio bearer test case.

h) The SS checks that the content of the UE returned RLC SDUs have the correct content and are received having the correct transport format. See TS 34.109 [10] clause 5.3.2.6.2 for details regarding the UE loopback of RLC SDUs.

i) The SS sets $H_{\underline{ID}} = (H_{\underline{ID}} + 1)$ modulo $Max_H_{\underline{ID}}$, where $Max_H_{\underline{ID}}$ equals the number of HARQ processes to be verified by the actual sub-test

j) The SS repeats steps f) to i) for the remaining TFRC test point ($N_{PDUs}$ , $M$, $N_{\underline{codes}}$ and TFRI) according to the applicable table in sub-clauses 14.1.3.3 (MAC-d PDU size=336) or 14.1.3.4 (MAC-d PDU size=656) for the UE category and MAC-d PDU size under test.

k) The SS opens the UE test loop.

l) The SS release the radio bearer. See note 5.

m) Steps a) to l) are repeated for all sub-tests. See note 7.

n) The SS may optionally deactivate the radio bearer test mode.

NOTE 1: The SS configures the physical channel parameters according to the actual UE category under test. The number of soft channel bits per HARQ process is split equally among the number of HARQ processes configured for the actual sub-test - i.e. "Total number of soft channel bits" for the UE category according to table 14.1.3.1.1 divided by the number of HARQ processes under test. The number of reordering queues is 1 for single HS-DSCH radio bearer configurations. The MAC-hs window size, RLC Transmission window size and RLC Receiving window size shall be configured as specified for the actual sub-test.

NOTE 2: Void

NOTE 3: The MAC-hs window size and RLC Receiver and transmitter window sizes need to be chosen such that the UE capability for "Minimum total RLC AM and MAC-hs buffer size" is not exceeded for the UE category under test.

NOTE 4: The test data for DTCHs mapped on HS-DSCH is divided into 4 RLC SDUs to keep the maximum SDU size below or equal to 1500 octets (1500 octets is the limit of QoS parameter "Max SDU size" in SM).

NOTE 5: The Secondary scrambling code in the RADIO BEARER RELEASE message is set to the same value used in the RADIO BEARER SETUP MESSAGE.

NOTE 6: The TFC subset associated with the signalled “TFC subset identity” in the TRANSPORT FORMAT COMBINATION CONTROL message is defined by the actual AMR reference radio bearer under test.

NOTE 7: CS radio bearer is setup once during the first sub-test.

Expected sequence (repeated for each sub-test, see note 3)

NOTE 3: Steps 1 to 12 will be executed once during first sub-test.

## 14.1.4 General information interoperability radio bearer tests for E-DCH and HS-DSCH combinations

### 14.1.4.1 Generic test procedure for HS-DSCH and E-DCH radio bearer combinations

This procedure is used to test E-DCH radio bearer combinations. The procedure is run once for each sub-test of the actual E-DCH radio bearer test case.

NOTE: This test procedure is based on the generic test procedure for radio bearer combinations on HS-DSCH and DCH in section 14.1.3.5. As the testing of DTCH mapped to HS-DSCH is considered well covered by the radio bearer test cases for radio bearer combinations on HS-DSCH and DCH then the focus in this test procedure is on the uplink DTCH mapped to E-DCH. The main difference compared to the generic test procedure in 14.1.3.5 is that for DTCH mapped to HS-DSCH only one TFRC test point and one HARQ process alternative is tested.

Definition of test variables:

| | |
|---|---|
| $N_{\underline{codes}}$ | The number of HS-DSCH codes (1..15, maximum number dependent on UE category) as specified by the sub-test. |
| $M$ | The type of modulation scheme (QPSK, 16QAM) as specified by the sub-test. |
| $N_{PDUs}$ | The number of MAC-d PDUs for the DTCH(s) mapped on HS-DSCH as specified by the sub-test. |
| $H_{\underline{ID}}$ | The HARQ process identifier (0..7) as specified by the sub-test. |

Initial conditions

UE in idle mode

Test procedure

a) The SS establish the reference radio bearer configuration as specified in TS 34.108, clause 6.10 for the actual radio bearer test. For the case when the reference radio bearer configuration includes radio bearers for both CS and PS domain then the radio bearer setup procedure has to be performed once per domain. The first radio bearer setup procedure shall perform configuration of the physical channel for the radio bearer combination under test as well as the transport channels for the CS radio bearer(s). The second radio bearer procedure shall perform the configuration for the transport channel for the PS radio bearers . The Physical channel configuration shall be done for both CS and PS radio bearers combined. Here the transport format combination set for both CS and PS radio bearers shall be provided. See note 1 and note 3.

b) For DTCH mapped to DCH in uplink the SS limits the UE allowed uplink transport format combinations according to the "Restricted UL TFCIs", as specified for the sub-test of the actual radio bearer test, using the RRC transport format combination control procedure. See note 2.

c) The SS closes the test loop using UE test loop mode 1 and set the UL RLC SDU size parameter, for all radio bearers under test, according to the "UL RLC SDU size" value as specified for the sub-test of the actual radio bearer test.

d) The SS issues an absolute grant that allows the UE to send at maximum bit rate (index 31).

e) The SS sets the HS-DSCH TFRC test point as specified for the sub-test using table 9.2.3.1 in [6] ($N_{PDUs}$ , $M$, $N_{\underline{codes}}$ and *TFRI*).

f) The SS sets $H_{\underline{ID}}$ to the number of HARQ processes specified for the sub-test.

h) The SS transmits, for each DTCH mapped to HS-DSCH, a DL RLC SDUs having the size equal the to the “Test data size” as specified for the sub-test concatenated into a MAC-hs PDU using the selected TFRC and $H_{\underline{ID}}$. If the radio bearer combination under test includes downlink DTCHs mapped to DCH then the SS transmits, for all DTCHs mapped to DCH, one or more RLC SDUs having the size equal to the "Test data size" as specified for the sub-test.

i) The SS checks that the content of the UE returned RLC SDUs have the correct content and are received having the correct transport format. See TS 34.109 [10] clause 5.3.2.6.2 for details regarding the UE loopback of RLC SDUs.

j) The SS opens the UE test loop.

l) The SS release the radio bearer. See note 4.

m) Steps a) to l) are repeated for all sub-tests. See note 5.

n) The SS may optionally deactivate the radio bearer test mode.

NOTE 1: The SS configures the physical channel parameters according to the actual UE category under test. The number of soft channel bits per HARQ process is split equally among the number of HARQ processes configured for the actual sub-test - i.e. “Total number of soft channel bits” for the UE category according to table 14.1.3.1.1 divided by the number of HARQ processes under test. The number of reordering queues is 1 for single HS-DSCH radio bearer configurations. The MAC-hs window size, RLC Transmission window size and RLC Receiving window size shall be configured as specified for the actual sub-test.

NOTE 2: The restricted set of uplink TFCIs shall contain all possible TFCI that could happen in a sub-test. The actual TTI of the different radio bearers and signalling radio bearers as well as the possible UE processing delays shall be taken into consideration. The restricted set of TFCIs must comply with the minimum set of TFCIs as specified in TS 25.331, clause 8.6.5.2.

NOTE 3: The MAC-hs window size and RLC Receiver and transmitter window sizes need to be chosen such that the UE capability for “Minimum total RLC AM and MAC-hs buffer size” is not exceeded for the UE category under test.

NOTE 4: The Secondary scrambling code in the RADIO BEARER RELEASE message is set to the same value used in the RADIO BEARER SETUP MESSAGE.

NOTE 5: CS radio bearer is setup once during the first sub-test.

Expected sequence (repeated for each sub-test, see note 3)

NOTE 1: In addition to activate integrity protection Step 6 and Step 7 are inserted in order to stop T3317 timer in the UE, which starts after transmitting SERVICE REQUEST message.

NOTE 2: For case B (CS+PS radio bearers) the second security mode procedure is needed to enable testing of ciphering on the PS radio bearers.

NOTE 3: For case A (PS radio bearers) steps A1 to A10 will be executed once during first sub-test. For case B (CS+PS radio bearers) steps B1 to B12 will be executed once during first sub-test.

### 14.1.4.1a Generic test procedure for HS-DSCH and E-DCH radio bearer combinations with downlink enhanced Layer 2

This procedure is used to test HS-DSCH and E-DCH radio bearer combinations for the case of downlink enhanced Layer 2 is used. The procedure is run once for each sub-test of the actual HS-DSCH and E-DCH radio bearer test case.

This procedure is the same as the procedure in 14.1.4.1 with the exception that MAC-ehs is used in step h) instead of MAC-hs and table 9.2.3.2 in [6] is used for TFRC calculation in step e instead of table 9.2.3.1.

Specific Message Content:

Use the same RADIO BEARER SETUP message as specified in 34.108 with the following exceptions for step A11, B12a :

| Information Element | Value/remark | Version |
|---|---|---|
| HS-DSCH TB size table | octet aligned | Rel-7 |

### 14.1.4.1b Generic test procedure for HS-DSCH and E-DCH radio bearer combinations with downlink and uplink enhanced Layer 2

This procedure is used to test HS-DSCH and E-DCH radio bearer combinations for the case of downlink and uplink enhanced Layer 2. The procedure is run once for each sub-test of the actual HS-DSCH and E-DCH radio bearer test case.

This procedure is the same as the procedure in 14.1.4.1 with the exception that MAC-ehs and MAC-i/is are used in step h) instead of MAC-hs and MAC-e/es; and that table 9.2.3.2 in [6] is used for TFRC calculation in step e) instead of table 9.2.3.1.

Specific Message Content:

Use the same RADIO BEARER SETUP message as specified in 34.108 with the following exceptions for step A11, B12a :

| Information Element | Value/remark | Version |
|---|---|---|
| HS-DSCH TB size table | octet aligned | Rel-7 |

### 14.1.4.1c Generic test procedure for Dual-Cell HS-DSCH and Dual-Cell E-DCH radio bearer combinations

This procedure is used to test Dual-Cell HS-DSCH and E-DCH radio bearer combinations. The procedure is run once for each sub-test of the actual radio bearer test case.

NOTE: This test procedure is based on the generic test procedure for radio bearer combinations on HS-DSCH and DCH in section 14.1.3.5. As the testing of DTCH mapped to HS-DSCH is considered well covered by the radio bearer test cases for radio bearer combinations on HS-DSCH and DCH then the focus in this test procedure is on the uplink DTCH mapped to E-DCH. The main difference compared to the generic test procedure in 14.1.3.5 is that for DTCH mapped to HS-DSCH only one TFRC test point and one HARQ process alternative is tested. For testing of radio bearer combinations for DC-HSDPA and DC-HSUPA then the test procedure is only specified for the DL 16QAM modulation case as other radio bearer test cases for DC-HSDPA in clause 14.6 provide test coverage of other modulation schemes in downlink.

Definition of test variables:

| | |
|---|---|
| $N_{\underline{codes}}$ | The number of HS-DSCH codes (1..15, maximum number dependent on UE category) as specified by the sub-test. |
| $M$ | The type of modulation scheme (QPSK, 16QAM) as specified by the sub-test. |
| $N_{PDUs}$ | The number of MAC-d PDUs for the DTCH(s) mapped on HS-DSCH as specified by the sub-test. |
| $H_{\underline{ID}}$ | The HARQ process identifier (0..7) as specified by the sub-test. |

Initial conditions

UE in idle mode

Test procedure

a) The SS establish the reference radio bearer configuration as specified in TS 34.108, clause 6.10 for the actual radio bearer test. See note 1 and note 2.

b) The SS closes the test loop using UE test loop mode 1 and set the UL RLC SDU size parameter, for all radio bearers under test, according to the "UL RLC SDU size" value as specified for the sub-test of the actual radio bearer test.

c) I = 1 (first iteration)

d) If I= 1 then the SS issues an absolute grant for the cell on the primary uplink frequency that allows the UE to send at maximum bit rate (index 31); and no grant is issued for the secondary uplink frequency.

Else if I = 2 then the SS issues an absolute grant for the cell on the secondary uplink frequency that allows the UE to send at maximum bit rate (index 31); and no grant is issued for the primary uplink frequency.

e) The SS selects the HS-DSCH TFRC test point as specified for the sub-test using table 9.2.3.2 in [6] ($N_{PDUs}$ , *16QAM*, $N_{codes}$ and *TFRI*). Same TFRC test point is used for both data flows.

f) The SS sets $H_{ID}$ to the number of HARQ processes specified for the sub-test.

h) The SS transmits, for each DTCH on the Serving and Secondary Serving HS.DSCH cells mapped to HS-DSCH, a DL RLC SDUs having the size equal the to the "Test data size" as specified for the sub-test concatenated into a MAC-ehs PDU using the selected TFRC and $H_{ID}$.

i) If I=1 then the SS checks that the content of the UE returned RLC SDUs are received on the primary uplink frequency cell and have the correct content and are received having the correct transport format.

Else If I=2 then the SS checks that the content of the UE returned RLC SDUs are received on the secondary uplink frequency cell and have the correct content and are received having the correct transport format.

See TS 34.109 [10] clause 5.3.2.6.2 for details regarding the UE loopback of RLC SDUs.

j) I = 2 (second iteration)

k) The SS repeats steps d) to i).

l) The SS opens the UE test loop.

m) The SS release the radio bearer. See note 3.

n) Steps a) to l) are repeated for all sub-tests. See note 4.

o) The SS may optionally deactivate the radio bearer test mode.

NOTE 1: The SS configures the physical channel parameters according to the actual UE category under test. The number of soft channel bits per HARQ process is split equally among the number of HARQ processes configured for the actual sub-test - i.e. "Total number of soft channel bits" for the UE category according to table 14.1.3.1.1 divided by the number of HARQ processes under test. The number of reordering queues is 1 for single HS-DSCH radio bearer configurations. The MAC-ehs window size, RLC Transmission window size and RLC Receiving window size shall be configured as specified for the actual sub-test.

NOTE 2: The MAC-ehs window size and RLC Receiver and transmitter window sizes need to be chosen such that the UE capability for "Minimum total RLC AM and MAC-hs buffer size" is not exceeded for the UE category under test.

NOTE 3: The Secondary scrambling code in the RADIO BEARER RELEASE message is set to the same value used in the RADIO BEARER SETUP MESSAGE.

NOTE 4: CS radio bearer is setup once during the first sub-test.

Expected sequence (repeated for each sub-test, see note 3)

### 14.1.4.2 Generic test procedure for HS-DSCH and E-DCH radio bearer combinations with AMR RB configurations using SRB#5 for TFC control

This procedure is used to test AMR radio bearer using SRB#5 for TFC control in combination with HS-DSCH/E-DCH radio bearers. The procedure is run once for each sub-test of the actual E-DCH radio bearer test case.

Definition of test variables:

| | |
|---|---|
| $N_{\underline{codes}}$ | The number of HS-DSCH codes (1..15, maximum number dependent on UE category) as specified by the sub-test. |
| $M$ | The type of modulation scheme (QPSK, 16QAM) as specified by the sub-test. |
| $N_{PDUs}$ | The number of MAC-d PDUs for the DTCH(s) mapped on HS-DSCH as specified by the sub-test. |
| $H_{\underline{ID}}$ | The HARQ process identifier (0..7) as specified by the sub-test. |

Initial conditions

UE in idle mode

Test procedure

a) The SS establish the reference radio bearer configuration as specified in TS 34.108, clause 6.10 for the actual radio bearer test. The radio bearer setup procedure has to be performed once per domain. The first radio bearer setup procedure shall perform configuration of the physical channel for the radio bearer combination under test as well as the transport channels for the CS radio bearer(s). The second radio bearer procedure shall perform the configuration for the transport channel for the PS radio bearers . The Physical channel configuration shall be done for both CS and PS radio bearers combined. Here the transport format combination set for both CS and PS radio bearers shall be provided. See note 1 and note 2.

b) The SS signals the “TFC subset identity” in the TRANSPORT FORMAT COMBINATION CONTROL message on SRB#5 as specified for the sub-test of the actual AMR radio bearer test. See note 4.

c) The SS closes the test loop using UE test loop mode 1 and set the UL RLC SDU size parameter, for all radio bearers under test, according to the "UL RLC SDU size" value as specified for the sub-test of the actual radio bearer test.

d) The SS issues an absolute grant that allows the UE to send at maximum bit rate (signalling value 29).

e) The SS sets the HS-DSCH TFRC test point as specified for the sub-test ($N_{PDUs}$ , $M$, $N_{\underline{codes}}$ and *TFRI*).

f) The SS sets $H_{\underline{ID}}$ to the number of HARQ processes specified for the sub-test.

h) The SS transmits, for each DTCH mapped to HS-DSCH, a DL RLC SDUs having the size equal the to the “Test data size” as specified for the sub-test concatenated into a MAC-hs PDU using the selected TFRC and $H_{\underline{ID}}$. If the radio bearer combination under test includes downlink DTCHs mapped to DCH then the SS transmits, for all DTCHs mapped to DCH, one or more RLC SDUs having the size equal to the "Test data size" as specified for the sub-test.

i) The SS checks that the content of the UE returned RLC SDUs have the correct content and are received having the correct transport format. See TS 34.109 [10] clause 5.3.2.6.2 for details regarding the UE loopback of RLC SDUs.

j) The SS opens the UE test loop.

l) The SS release the radio bearer. See note 3.

m) Steps a) to l) are repeated for all sub-tests. See note 5.

n) The SS may optionally deactivate the radio bearer test mode.

NOTE 1: The SS configures the physical channel parameters according to the actual UE category under test. The number of soft channel bits per HARQ process is split equally among the number of HARQ processes configured for the actual sub-test - i.e. “Total number of soft channel bits” for the UE category according to table 14.1.3.1.1 divided by the number of HARQ processes under test. The number of reordering queues is 1 for single HS-DSCH radio bearer configurations. The MAC-hs window size, RLC Transmission window size and RLC Receiving window size shall be configured as specified for the actual sub-test.

NOTE 2: The MAC-hs window size and RLC Receiver and transmitter window sizes need to be chosen such that the UE capability for “Minimum total RLC AM and MAC-hs buffer size” is not exceeded for the UE category under test.

NOTE 3: The Secondary scrambling code in the RADIO BEARER RELEASE message is set to the same value used in the RADIO BEARER SETUP MESSAGE.

NOTE 4: The TFC subset associated with the signalled “TFC subset identity” in the TRANSPORT FORMAT COMBINATION CONTROL message is defined by the actual AMR reference radio bearer under test.

NOTE 5: CS radio bearer is setup once during the first sub-test.

Expected sequence (repeated for each sub-test, see note 3)

| Step | Direction | | Message | Comments |

NOTE 1: In addition to activate integrity protection Step 6 and Step 7 are inserted in order to stop T3317 timer in the UE, which starts after transmitting SERVICE REQUEST message.

NOTE 2: The second security mode procedure is needed to enable testing of ciphering on the PS radio bearers.

NOTE 3: Steps 1 to 18 will be executed once during first sub-test.

### 14.1.4.3 Generic test procedure for HS-DSCH and E-DCH radio bearer combinations for enhanced uplink in CELL_FACH

This procedure is used to test Enhanced UL and DL in CELL_FACH radio bearer combinations. The procedure is run once for each sub-test of the actual E-DCH radio bearer test case.

NOTE: This test procedure is based on the generic test procedure for radio bearer combinations on HS-DSCH and DCH in section 14.1.4.1. As the testing of DTCH mapped to HS-DSCH is considered well covered by the radio bearer test cases for radio bearer combinations on HS-DSCH and DCH then the focus in this test procedure is on the uplink DTCH mapped to E-DCH in CELL_FACH. The main difference compared to the generic test procedure in 14.1.4.1 is that for DTCH mapped to HS-DSCH only one TFRC test point and one HARQ process alternative is tested.

Definition of test variables:

| | |
|---|---|
| $N_{\underline{codes}}$ | The number of HS-DSCH codes (1..15, maximum number dependent on UE category) as specified by the sub-test. |
| $M$ | The type of modulation scheme (QPSK, 16QAM) as specified by the sub-test. |
| $N_{PDUs}$ | The number of MAC-d PDUs for the DTCH(s) mapped on HS-DSCH as specified by the sub-test. |
| $H_{\underline{ID}}$ | The HARQ process identifier (0..7) as specified by the sub-test. |

Initial conditions

UE in idle mode

System Information Block type 5 (FDD)

Use the default parameter values for the system information block 5 with the same type specified in clause

6.1.1 of TS 34.108 for common E-DCH and HS-DSCH reception in CELL_FACH, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Common E-DCH system info | |
| - Initial Serving grant value | 37 |

Test procedure

a) The SS establish the reference radio bearer configuration as specified in TS 34.108, clause 6.10 for the actual radio bearer test. For the case when the reference radio bearer configuration includes radio bearers for both CS and PS domain then the radio bearer setup procedure has to be performed once per domain. The first radio bearer setup procedure shall perform configuration of the physical channel for the radio bearer combination under test as well as the transport channels for the CS radio bearer(s). The second radio bearer procedure shall perform the configuration for the transport channel for the PS radio bearers . The Physical channel configuration shall be done for both CS and PS radio bearers combined. Here the transport format combination set for both CS and PS radio bearers shall be provided. See note 1 and note 3.

b) The SS closes the test loop using UE test loop mode 1 and set the UL RLC SDU size parameter, for all radio bearers under test, according to the "UL RLC SDU size" value as specified for the sub-test of the actual radio bearer test.

c) The SS sets the HS-DSCH TFRC test point as specified for the sub-test using table 9.2.3.1 in [6] ($N_{PDUs}$ , $M$, $N_{\underline{codes}}$ and *TFRI*).

d) The SS sets $H_{\underline{ID}}$ to the number of HARQ processes specified for the sub-test.

e) If HS-DSCH DRX is not configured, the SS transmits, for each DTCH mapped to HS-DSCH, a DL RLC SDUs having the size equal the to the “Test data size” as specified for the sub-test concatenated into a MAC-ehs PDU using the selected TFRC and $H_{\underline{ID}}$.

If HS-DSCH DRX is configured in SIB5 the SS transmits, for each DTCH mapped to HS-DSCH, DL RLC SDUs having the size equal the to the "Test data size" as specified for the sub-test concatenated into a MAC-ehs PDU using the selected TFRC and $H_{ID}$ at SFN value fulfilling the following inequality, refer to 25.331 [8]:

(SFN – H-RNTI) mod DRX_cycle < Rx_burst

f) The SS checks that the content of the UE returned RLC SDUs have the correct content. See TS 34.109 [10] clause 5.3.2.6.2 for details regarding the UE loopback of RLC SDUs.

g) The SS opens the UE test loop.

h) The SS release the radio bearer. See note 4.

i) Steps a) to i) are repeated for all sub-tests.

j) The SS may optionally deactivate the radio bearer test mode.

NOTE 1: The SS configures the physical channel parameters according to the actual UE category under test. The number of soft channel bits per HARQ process is split equally among the number of HARQ processes configured for the actual sub-test - i.e. "Total number of soft channel bits" for the UE category according to table 14.1.3.1.1 divided by the number of HARQ processes under test. The number of reordering queues is 1 for single HS-DSCH radio bearer configurations. The MAC-hs window size, RLC Transmission window size and RLC Receiving window size shall be configured as specified for the actual sub-test.

NOTE 2: The MAC-ehs window size and RLC Receiver and transmitter window sizes need to be chosen such that the UE capability for "Minimum total RLC AM and MAC-ehs buffer size" is not exceeded for the UE category under test.

NOTE 3: The Secondary scrambling code in the RADIO BEARER RELEASE message is set to the same value used in the RADIO BEARER SETUP MESSAGE.

Expected sequence (repeated for each sub-test)

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |

NOTE 1: In addition to activate integrity protection Step 7 and Step 8 are inserted in order to stop T3317 timer in the UE, which starts after transmitting SERVICE REQUEST message.

## 14.1.5 Generic test procedure for radio bearers on MTCH

Initial conditions

System Simulator: 1 MBMS cell

The UE is in CELL_FACH state as specified in clause 7.6 of TS 34.108.

The UE has selected the broadcast service or joined the multicast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Test procedure

a) The UE is in the CELL_FACH state. The SS notifies on MICH and MCCH about the start of an MBMS session and waits for the UE to activate MTCH reception.

b) The SS closes the test loop using UE test loop mode 3.

c) The SS broadcast 10 RLC SDUs on the MTCH configured on the concerned MBMS radio bearer. The MBMS data is broadcasted using RLC SDU size and transport format as specified for sub-test 1.

d) The SS retrieves the number of RLC SDUs on MTCH counted by the UE by sending the UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST message. The SS checks that the UE has received at least one RLC SDU and records the reported value.

e) Repeat steps f) and g) for the remaining sub-tests.

f) The SS broadcast 10 RLC SDUs on the MTCH configured on the concerned MBMS radio bearer. The MBMS data is broadcasted using RLC SDU size and transport format as specified for the sub-test under test.

g) The SS retrieves the number of RLC SDUs on MTCH counted by the UE by sending the UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST message. The SS checks that the UE has received at least one RLC SDU of the MBMS data sent in step f). The SS records the reported value. See note 1.

h) The SS deactivates the UE test loop mode 3.

NOTE 1: For UE in UE test loop mode 3 then the RLC SDU counter value is only reset upon reception of CLOSE UE TEST LOOP message configuring UE test loop mode 3. To enable the SS to measure the number of received RLC SDUs for the different sub-tests then the SS needs to record the reported values for each sub-test and make the checking of the reported value relative to the previously reported value.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | ACTIVATE RB TEST MODE | |
| 2 | → | | ACTIVATE RB TEST MODE COMPLETE | |
| 3 | ← | | MBMS MODIFIED SERVICES INFORMATION | MBMS session start. The SS also sets the Notification Indicator on MICH. The SS waits for the UE to establish the MTCH according to the activation time. |
| 4 | ← | | CLOSE UE TEST LOOP | |
| 5 | → | | CLOSE UE TEST LOOP COMPLETE | Loop back mode 3 on MTCH is activated. |
| 6 | | SS | | The SS transmits 10 RLC SDUs on the MTCH. The MBMS data is broadcasted using RLC SDU size and transport format as specified for sub-test 1. |
| 7 | ← | | UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST | |
| 8 | → | | UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE | The SS checks that the number of reported RLC PDUs is greater than zero and records the value. |
| 9 | | SS | | The SS repeats steps 10 to 12 for the remaining sub-tests (sub-test 2 etc.). |
| 10 | | SS | | The SS transmits 10 RLC SDUs on the MTCH. The MBMS data is broadcasted using RLC SDU size and transport format as specified for the current sub-test under test. |
| 11 | ← | | UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST | |
| 12 | → | | UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE | The SS checks that the number of reported RLC PDUs is greater than the recorded value from the previous sub-test. The SS records the reported value. |
| 13 | ← | | OPEN UE TEST LOOP | |
| 14 | → | | OPEN UE TEST LOOP COMPLETE | |
| 15 | ← | | DEACTIVATE RB TEST MODE | |
| 16 | → | | DEACTIVATE RB TEST MODE COMPLETE | |

Specific Message Contents

## 14.1.5m Generic test procedure for radio bearers on MTCH in MBSFN Mode

### Initial conditions

System Simulator:

- MBSFN carrier: 1 cell, Cell 31 (PLMN1). In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C1 and Default1 MCCH scheduling (No ongoing session) according to subclause 11.2 of TS 34.108.
- Unicast carrier: 1 cell, Cell 1 with default parameters.

User Equipment:

- On the unicast carrier cell the UE is in registered Idle Mode on PS (state 3) if the UE only supports PS domain or registered Idle Mode on CS/PS (state 7) if the UE supports both CS and PS domains, as specified in clause 7.2.2 of TS 34.108.
- The UE is in MBSFN Idle mode with one activated service as specified in clause 7.6.4 of TS 34.108. The UE has selected (i.e. it is included in MBMS_ACTIVATED_SERVICES variable) a national service for which a session will start on MBSFN Cell 31 (see TS 34.108 clause 11.2.4) during the test.

### Test procedure

a) The UE is camping on Cell 1 and Cell 31. In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C1 (no session ongoing) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108.

b) The SS sends ACTIVATE RB TEST MODE on the unicast carrier and the UE responds with ACTIVATE RB TEST MODE COMPLETE.

c) The SS sends CLOSE UE TEST LOOP to activate RLC SDU counting on Cell 31 MTCH (Transmission identity indicating the MBMS activated service).

d) The SS notifies on MCCH about the start of an MBMS session for one modification period. MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C4 (one PTM session starting) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108.

e) From the first SFN of the next modification period the SS transmits MCCH messages on Cell 31 using MBMS configuration C2 (one PTM session ongoing) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108; and the SS broadcasts 10 RLC SDUs on the MTCH configured on the MBMS p-t-m radio bearer for the activated service.

f) The UE establishes the p-t-m radio bearer for the activated service according to the specified service activation time (i.e. the first SFN of the modification period following the notification (step d). The UE closes the test loop and starts counting successfully received RLC PDUs on the MTCH. The UE will send CLOSE UE TEST LOOP COMPLETE.

g) The SS broadcast 10 RLC SDUs on the MTCH configured on the concerned MBMS radio bearer. The MBMS data is broadcasted using RLC SDU size and transport format as specified for sub-test 1.

h) The SS retrieves the number of RLC SDUs on MTCH counted by the UE by sending the UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST message. The SS checks that the UE has received at least one RLC SDU and records the reported value.

i) Repeat steps f) and g) for the remaining sub-tests.

j) The SS broadcast 10 RLC SDUs on the MTCH configured on the concerned MBMS radio bearer. The MBMS data is broadcasted using RLC SDU size and transport format as specified for the sub-test under test.

k) The SS retrieves the number of RLC SDUs on MTCH counted by the UE by sending the UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST message. The SS checks that the UE has received at least one RLC SDU of the MBMS data sent in step f). The SS records the reported value. See note 1.

l) The Test Loop is opened and RB Test Mode is deactivated.

NOTE 1: For UE in UE test loop mode 3 then the RLC SDU counter value is only reset upon reception of CLOSE UE TEST LOOP message configuring UE test loop mode 3. To enable the SS to measure the number of received RLC SDUs for the different sub-tests then the SS needs to record the reported values for each sub-test and make the checking of the reported value relative to the previously reported value.

Expected sequence

| Step | Direction | | Carrier | Message | Comment |
|---|---|---|---|---|---|
| | UE | SS | | | |
| 1 | ← | | U | ACTIVATE RB TEST MODE | |
| 2 | → | | U | ACTIVATE RB TEST MODE COMPLETE | |
| 3 | ← | | U | CLOSE UE TEST LOOP | Loop back mode 3 is activated on Cell 31 for the selected national service on MTCH. |
| 4 | ← | | M | MBMS MCCH Message Configuration C4 | Includes the national service activated at UE in the modified services list for one modification period. Activation time is the start of the next modification period. |
| 5 | ← | | M | MBMS MCCH Message Configuration C2 | No modified services. One ongoing service corresponding to that activated at the UE a PS RAB |
| 6 | → | | U | CLOSE UE TEST LOOP COMPLETE | The UE shall establish the indicated p-t-m radio bearer and close the test loop. |
| 7 | SS | | | | The SS transmits 10 RLC SDUs on the MTCH. The MBMS data is broadcasted using RLC SDU size and transport format as specified for sub-test 1. |
| 8 | ← | | M | UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST | |
| 9 | → | | M | UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE | The SS checks that the number of reported RLC PDUs is greater than zero and records the value. |
| 10 | SS | | | | The SS repeats steps 10 to 12 for the remaining sub-tests (sub-test 2 etc.). |
| 11 | SS | | | | The SS transmits 10 RLC SDUs on the MTCH. The MBMS data is broadcasted using RLC SDU size and transport format as specified for the current sub-test under test. |

|---|---|
| RLC SDU Counter Value | Check that the number is greater than the value reported at the previous sub-test. |

## 14.1.6 Generic test procedure for MBMS PTP radio bearers for HS-DSCH combinations

This procedure is used to test MBMS PTP radio bearer combinations for HS-DSCH. The procedure is run once for each sub-test of the actual MBMS PTP radio bearer test case. The generic test procedure has two branches: one for the MBMS Selective Service case and one for the MBMS Multicast Service case. The branch to use is specified in the specific test cases.

NOTE The testing of MBMS PTP radio bearer combinations on DPCH and HS-PDSCH is focusing on verifying that the UE is capable to establish the radio bearer combination and to verify correct data transfer using all the possible uplink TFS for transport channels mapped on DCH. This test procedure is based on the generic test procedure for radio bearer combinations on HS-DSCH and DCH in section 14.1.3.5. The main difference compared to the generic test procedure in 14.1.3.5 is that for DTCH mapped to HS-DSCH only one TFRC test point and one HARQ process alternative is tested.

Initial conditions

System Simulator: 1 MBMS cell

The UE is in idle mode state as specified in clause 7.6 of TS 34.108.

The UE has selected the broadcast service or joined the multicast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Test procedure

a) The UE is in the idle mode state.

b) The UE shall detect the available MBMS services by acquiring the MBMS MODIFIED SERVICES INFORMATION (including IE “MBMS required UE action” set to “Request PTP RB”) and the MBMS GENERAL INFORMATION.

c) The UE shall request a p-t-p RB establishment.

d) The SS transmits a RADIO BEARER SETUP message to the UE. This message requests the establishment of a radio access bearer. The UE shall establish this radio bearer. Then the UE transmits a RADIO BEARER SETUP COMPLETE message using AM RLC. See note 1 and note 3.

e) The SS limits the UE allowed uplink transport format combinations according to the "Restricted UL TFCIs", as specified for the sub-test of the actual radio bearer test, using the RRC transport format combination control procedure. See note 2.

f) The SS closes the test loop using UE test loop mode 1 and setting the UL RLC SDU size parameter, for all radio bearers under test, according to the "UL RLC SDU size" value as specified for the sub-test of the actual radio bearer test.

g) The SS selects the first TFRC test point ($N_{PDUs}$ , $M$, $N_{\underline{codes}}$ and TFRI) according to the applicable table in sub-clauses 14.1.3.3 (MAC-d PDU size=336) or 14.1.3.4 (MAC-d PDU size=656).

h) The SS sets $H_{\underline{ID}} = 0$.

i) (void)

j) The SS transmits, for each DTCH mapped to HS-DSCH, a DL RLC SDU having the size equal the to the “Test data size” as specified for the sub-test concatenated into a MAC-hs PDU using the selected TFRC and $H_{ID}$. If the radio bearer combination under test includes downlink DTCHs mapped to DCH then the SS transmits, for all DTCHs mapped to DCH, one or more RLC SDUs having the size equal to the "Test data size" as specified for the sub-test of the actual radio bearer test case.

k) The SS checks that the content of the UE returned RLC SDUs have the correct content and are received having the correct transport format. See TS 34.109 [10] clause 5.3.2.6.2 for details regarding the UE loopback of RLC SDUs.

l) The SS opens the UE test loop.

m) Steps e) to l) are repeated for all sub-tests.

n) The SS release the radio bearer. See note 5.

o) The SS may optionally deactivate the radio bearer test mode.

NOTE 1: The SS configures the physical channel parameters according to the actual UE category under test. The number of soft channel bits per HARQ process is split equally among the number of HARQ processes configured for the actual sub-test - i.e. “Total number of soft channel bits” for the UE category according to table 14.1.3.1.1 divided by the number of HARQ processes under test. The number of reordering queues is 1 for single HS-DSCH radio bearer configurations. The MAC-hs window size, RLC Transmission window size and RLC Receiving window size shall be configured as specified for the actual sub-test.

NOTE 2: The restricted set of uplink TFCIs shall contain all possible TFCI that could happen in a sub-test. The actual TTI of the different radio bearers and signalling radio bearers as well as the possible UE processing delays shall be taken into consideration. The restricted set of TFCIs must comply with the minimum set of TFCIs as specified in TS 25.331, clause 8.6.5.2.

NOTE 3: The MAC-hs window size and RLC Receiver and transmitter window sizes need to be chosen such that the UE capability for “Minimum total RLC AM and MAC-hs buffer size” is not exceeded for the UE category under test.

NOTE 4: (void)

NOTE 5: The Secondary scrambling code in the RADIO BEARER RELEASE message is set to the same value used in the RADIO BEARER SETUP MESSAGE.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | Void | |
| 2 | → | | Void | |
| 3 | ← | | MBMS MODIFIED SERVICES INFORMATION | "MBMS required UE action" set to Request PTP RB. |
| 4 | | | | The UE shall continue acquiring the above messages until it has received a consistent set of MCCH information in the same modification period. |
| 5 | ← | | MBMS GENERAL INFORMATION | |
| 6 | → | | RRC CONNECTION REQUEST | The UE transmits the message with Establishment cause set to “MBMS ptp RB request” and with the “MBMS Selected Services Short” IE referring to the concerned MBMS Selected service and the corresponding Modification period identity. |
| 7 | ← | | RRC CONNECTION SETUP | RRC state indicator set to Cell_DCH |
| 8 | → | | RRC CONNECTION SETUP COMPLETE | |
| 9 | → | | MBMS MODIFICATION REQUEST | Only for the MBMS broadcast case: The UE completing the RRC Connection Setup procedure shall initiate the MBMS MODIFICATION REQUEST procedure. This message may be received at any point after step 8 and before step 24. |
| 10 | SS | | | The SS verifies that the IE "Service type" in the received SERVICE REQUEST message is set to “MBMS Broadcast Service Reception” or “MBMS service used by the test case” respectively depending on the MBMS service used by the test case. |
| 11 | ← | | SECURITY MODE COMMAND | |
| 12 | → | | SECURITY MODE COMPLETE | |
| 12a | ← | | ACTIVATE RB TEST MODE | |
| 12b | → | | ACTIVATE RB TEST MODE COMPLETE | |
| 13 | ← | | RADIO BEARER SETUP | |
| 14 | → | | RADIO BEARER SETUP COMPLETE | |
| 15 | | | Void | |
| 16 | | | Void | |
| 17 | <-- | | TRANSPORT FORMAT COMBINATION CONTROL (DCCH) | RRC Transport format combinations is limited to "Restricted UL TFCIs", as specified for the sub-test |
| 18 | <-- | | CLOSE UE TEST LOOP (DCCH) | The SS sets the HS-DSCH TFRC test point and the number of HARQ processes as specified for the sub-test. |
| 19 | --> | | CLOSE UE TEST LOOP COMPLETE (DCCH) | TC |
| 20 | SS | | | For each DTCHs mapped on HS-DSCH the SS creates test data for the first TFRC . The test data shall be dived into 4 RLC SDUs of size ($N_{PDUs}$ * MAC-d PDU payload size) / 4 - 8 bits. The SS sets $H_{ID}$ = 0. |
| 21 | <-- | | DOWNLINK MAC-hs PDU (HS-DSCH#1)<br>…<br>DOWNLINK MAC-hs PDU (HS-DSCH#N)<br><br>DL RLC SDU (DL DCH#1)<br>…<br>DL RLC SDU (DL DCH#M) | For each DTCH mapped on HS-DSCH the SS sends test data.<br>For each DTCH mapped on DCH the SS sends test data using the downlink transport format combination under test. |
| 22 | --> | | UPLINK RLC SDUs | The SS checks, for each DTCH, that the content and transport format of the received UL RLC SDUs are correct. |

| | | | |

# 14.2 Combinations on DPCH

## 14.2.1 Stand-alone UL:1.7 DL:1.7 kbps SRBs for DCCH

Test to verify establishment and signalling of stand-alone signalling reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.1.

The test case is performed by running test case 9.4.1 (Location updating / accepted) using the stand-alone signalling reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.1.

## 14.2.2 Stand-alone UL:3.4 DL:3.4 kbps SRBs for DCCH

Test to verify establishment and signalling of stand-alone signalling reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.2.

The test case is performed by running test case 9.4.1 (Location updating / accepted) using the stand-alone signalling reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.2.

## 14.2.3 Stand-alone UL:13.6 DL:13.6 kbps SRBs for DCCH

Implicitly tested.

NOTE The stand-alone UL:13.6 DL:13.6 kbps SRBs for DCCH in TS 34.108, clause 6.10.2.4.1.3 is the default signalling radio bearer used in the generic setup procedure as specified in TS 34.108 clause 7.

## 14.2.4 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

### 14.2.4.1 Conformance requirement

The UE shall be able to establish the UTRAN requested radio bearers within the UE's signalled radio access capabilities.

The UE shall correctly transfer user data from peer to peer RLC entities according to the requested radio bearer configuration.

Reference(s)

3GPP TS 25.331, clause 8.2.1

3GPP TS 25.2xx series (Physical Layer)

3GPP TS 25.321 (MAC)

3GPP TS 25.322 (RLC)

### 14.2.4.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.4.

### 14.2.4.3 Method of test

See 14.1.1 for test procedure. However, in this test the RM attribute values used shall be derived separately in the UL and DL as the mid-values of the RM attribute value ranges as specified by the reference radio bearer configuration

Uplink TFS:

See 14.1.1 for test procedure.

### 14.2.4.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x39).
   - for sub-test 2: RB5/TF2 (1x81); RB6/TF1 (1x103); and RB7/TF1 (1x60).
3. At step 15 the UE shall return
   - for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6 or RB7.
   - for sub-test 2: an RLC SDU on each of RB5, RB6 and RB7 having the same content as sent by SS

# 14.2.4a Conversational / speech / UL:(12.2 7.95 5.9 4.75) DL:(12.2 7.95 5.9 4.75) kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

## 14.2.4a.1 Conformance requirement

See clause 14.2.4.1.

## 14.2.4a.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.4a.

## 14.2.4a.3 Method of test

See 14.1.1 for test procedure. However, in this test the RM attribute values used shall be derived separately in the UL and DL as the mid-values of the RM attribute value ranges as specified by the reference radio bearer configuration.

NOTE 1: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3, UL_TFC4, UL_TFC5 and UL_TFC6 are part of minimum set of TFCIs.
NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

See clause 14.1.1 for test procedure.

#### 14.2.4a.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x39).
   - for sub-test 2: RB5/TF2 (1x42) and RB6/TF1 (1x53)
   - for sub-test 3: RB5/TF3 (1x55) and RB6/TF2 (1x63)
   - for sub-test 4: RB5/TF4 (1x75) and RB6/TF3 (1x84)
   - for sub-test 5: RB5/TF5 (1x81), RB6/TF4 (1x103) and RB7/TF1 (1x60)
3. At step 15 the UE shall return
   - for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6 or RB7.
   - for sub-test 2,3 and 4: an RLC SDU on RB5 and RB6 having the same content as sent by SS; and no data shall be received on RB7.
   - for sub-test 5: an RLC SDU on each of RB5, RB6 and RB7 having the same content as sent by SS.

NOTE 1: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3, UL_TFC4, UL_TFC5 and UL_TFC6 are part of minimum set of TFCIs.
NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

See clause 14.1.1 for test procedure.

### 14.2.5a.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x39).
   - for sub-test 2: RB5/TF2 (1x42) and RB6/TF1 (1x53)
   - for sub-test 3: RB5/TF3 (1x55) and RB6/TF2 (1x63)
   - for sub-test 4: RB5/TF4 (1x58) and RB6/TF3 (1x76)
   - for sub-test 5: RB5/TF5 (1x65), RB6/TF4 (1x99) and RB7/TF1 (1x40)

3. At step 15 the UE shall return

   - for sub-test 1: an RLC SDU on RB5 having the same content as sent by the SS; and no data shall be received on RB6 or RB7.

   - for sub-test 2, 3 and 4: an RLC SDU on RB5 and RB6 having the same content as sent by the SS; and no data shall be received on RB7.

   - for sub-test 5: an RLC SDU on each of RB5, RB6 and RB7 having the same content as sent by the SS.

See clause 14.1.1 for test procedure.

### 14.2.11.4 Test requirements

See clause 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 15 the UE transmitted transport format shall be

   - for sub-test 1: RB5/TF1 (1x39).

   - for sub-test 2: RB5/TF2 (1x42) and RB6/TF1 (1x53).

3. At step 15 the UE shall return

   - for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

   - for sub-test 2: an RLC SDU on each of RB5 and RB6 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

## 14.2.12 Conversational / unknown / UL:28.8 DL:28.8 kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

### 14.2.12.1 Conformance requirement

See 14.2.4.1.

### 14.2.12.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.12.

### 14.2.12.3 Method of test

Initial Conditions

The following RLC Info parameter values shall be set by the SS:

| | |
|---|---|
| Uplink RLC<br>TM RLC<br>Transmission RLC discard<br>CHOICE SDU Discard Mode<br>Timer based no explicit<br>Timer_discard<br>Segmentation indication | <br><br><br><br><br>100ms<br>FALSE |
| Downlink RLC<br>TM RLC<br>Segmentation indication | <br><br>FALSE |
| NOTE: 'Timer based discard without explicit signalling' is configured in uplink to secure that the UE will be able to return data in uplink for the case when the UE test loop function, due to processing delays, will not deliver the SDUs in one and the same TTI, but instead in two subsequent TTIs. | |

Uplink TFS:

| | TFI | RB5 (28.8 kbps) | DCCH |
|---|---|---|---|
| TFS | TF0, bits | 0x576 | 0x148 |

See 14.1.1 for test procedure.

#### 14.2.14.1.4 Test requirements

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x640).
3. At step 15 the UE shall return
   - for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS.

### 14.2.14.2 Conversational / unknown / UL:32 DL:32 kbps / CS RAB / 40 ms TTI

#### 14.2.14.2.1 Conformance requirement

See 14.2.4.1.

#### 14.2.14.2.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.14 for the 40 ms TTI case.

#### 14.2.14.2.3 Method of test

Initial Conditions

The following RLC Info parameter values shall be set by the SS:

| | |
|---|---|
| Uplink RLC<br>TM RLC<br>Transmission RLC discard<br>CHOICE SDU Discard Mode<br>Timer based no explicit<br>Timer_discard<br>Segmentation indication | <br><br><br><br><br>100ms<br>FALSE |
| Downlink RLC<br>TM RLC<br>Segmentation indication | <br><br>FALSE |
| NOTE: Timer based discard without explicit signalling is used in uplink to secure that the UE will be able to return data for the case when the UE test loop function will not deliver all the SDUs in one and the same TTI . | |

#### 14.2.23a.1.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x336).
3. At step 15 the UE shall return
   - for sub-test 1: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.

### 14.2.23a.2 Interactive or background / UL:8 DL:8 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / TC

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.23a, for a turbo coding case.

See test case 14.2.23a.1 for test procedure and test requirement.

## 14.2.23b Interactive or background / UL:16 DL:16 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH.

#### 14.2.23b.1 Conformance requirement

See clause 14.2.4.1.

#### 14.2.23b.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.23b.

See 14.1.1 for test procedure.

#### 14.2.25.2.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x336).
   - for sub-test 2: RB5/TF2 (2x336).
   - for sub-test 3: RB5/TF1 (1x336).
   - for sub-test 4: RB5/TF2 (2x336).
3. At step 15 the UE shall return
   - for sub-test 1 to 4: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.

### 14.2.25.3 Interactive or background / UL:32 DL:64 kbps / PS RAB / (CC, 10 ms TTI)

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.25 for the uplink convolutional channel coding and 10 ms TTI case.

See test case 14.2.25.1 for test procedure and test requirement.

### 14.2.25.4 Interactive or background / UL:32 DL:64 kbps / PS RAB / (CC, 20 ms TTI)

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.25 for the uplink convolutional channel coding and 20 ms TTI case.

See test case 14.2.25.2 for test procedure and test requirement.

## 14.2.26 Interactive or background / UL:64 DL: 64 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

### 14.2.26.1 Conformance requirement

See 14.2.4.1.

### 14.2.26.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.26.

### 14.2.26.3 Method of test

Uplink TFS:

NOTE 1: UL_TFC0, UL_TFC1 and UL_TFC5 are part of minimum set of TFCIs.
NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). The UL RLC SDU size parameter has been set to achieve verification of all test data sent by SS in downlink, i.e. UL RLC SDU size is set to nearest multiple of the payload size of the UL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit) which is equal or bigger than the test data size.

See 14.1.1 for test procedure.

### 14.2.26.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x336).
   - for sub-test 2: RB5/TF2 (2x336) or RB5/TF1 (1x336).
   - for sub-test 3: RB5/TF3 (3x336) or RB5/TF1 (1x336).
   - for sub-test 4: RB5/TF4 (4x336) or RB5/TF1 (1x336).
3. At step 15 the UE shall return

- for sub-test 1 to 4: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.

## 14.2.27 Interactive or background / UL:64 DL:128 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

### 14.2.27.1 Conformance requirement

See 14.2.4.1.

### 14.2.27.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.27.

| 5 | DL_TFC5 | UL_TFC5 | DL_TFC0, DL_TFC6, UL_TFC0, UL_TFC6 | UL_TFC0, UL_TFC1, UL_TFC5, UL_TFC6, UL_TFC11 | RB5: 2872 | RB5: 2872 |

NOTE1: UL_TFC0, UL_TFC1 and UL_TFC6 are part of minimum set of TFCIs.
NOTE2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). The UL RLC SDU size parameter has been set to achieve verification of all test data sent by SS in downlink, i.e. UL RLC SDU size is set to nearest multiple of the payload size of the UL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit) which is equal or bigger than the test data size.

See 14.1.1 for test procedure.

#### 14.2.30.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x336).
   - for sub-test 2: RB5/TF2 (2x336).
   - for sub-test 3: RB5/TF3 (4x336).
   - for sub-test 4: RB5/TF4 (8x336).
   - for sub-test 5: RB5/TF5 (9x336).
3. At step 15 the UE shall return
   - for sub-test 1 to 5: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.

## 14.2.31 Interactive or background / UL:64 DL:256 kbps / PS RAB + UL:3.4 DL: 3.4 kbps SRBs for DCCH

### 14.2.31.1 Interactive or background / UL:64 DL:256 kbps / PS RAB / 10 ms TTI

#### 14.2.31.1.1 Conformance requirement

See 14.2.4.1.

#### 14.2.31.1.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.31 for the downlink 10 ms TTI case.

#### 14.2.31.1.3 Method of test

| 8 | DL_TFC8 | UL_TFC4 | DL_TFC0, DL_TFC9, UL_TFC0, UL_TFC5 | UL_TFC0, UL_TFC1, UL_TFC4, UL_TFC5, UL_TFC9 | RB5: 7672 | RB5: 7672 |

NOTE1: UL_TFC0, UL_TFC1 and UL_TFC5 are part of minimum set of TFCIs.
NOTE2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). The UL RLC SDU size parameter has been set to achieve verification of all test data sent by SS in downlink, i.e. UL RLC SDU size is set to nearest multiple of the payload size of the UL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit) which is equal or bigger than the test data size.

See 14.1.1 for test procedure.

#### 14.2.32.2.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x336).
   - for sub-test 2: RB5/TF2 (2x336).
   - for sub-test 3: RB5/TF3 (3x336).

- for sub-test 4 to 8: RB5/TF4 (4x336).

3. At step 15 the UE shall return

   - for sub-tests 1, 2, and 4 to 8: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.

   - for sub-test 3: an RLC SDU on RB5 having the first 1272 bits equal to the content of the test data sent by the SS in downlink.

## 14.2.33 Interactive or background / UL:128 DL:384 kbps / PS RAB + UL:3.4 DL: 3.4 kbps SRBs for DCCH

### 14.2.33.1 Interactive or background / UL:128 DL:384 kbps / PS RAB / 10 ms TTI

#### 14.2.33.1.1 Conformance requirement

See 14.2.4.1.

#### 14.2.33.1.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.33 for the 10 ms TTI case.

#### 14.2.33.1.3 Method of test

See 14.1.1 for test procedure.

#### 14.2.34.2.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x336).
   - for sub-test 2: RB5/TF2 (2x336).
   - for sub-test 3: RB5/TF3 (4x336).
   - for sub-test 4: RB5/TF4 (8x336).
   - for sub-test 5: RB5/TF5 (12x336).

- for sub-test 6: RB5/TF6 (16x336).
- for sub-test 7: RB5/TF7 (20x336).
- for sub-test 8: RB5/TF8 (24x336).

3. At step 15 the UE shall return
   - for sub-test 1 to 8: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.

## 14.2.35 Interactive or background / UL:64 DL:2048 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

### 14.2.35.1 Interactive or background / UL:64 DL:2048 kbps / PS RAB / 10 ms TTI

#### 14.2.35.1.1 Conformance requirement

See 14.2.4.1.

#### 14.2.35.1.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.35 for the 10 ms TTI case.

#### 14.2.35.1.3 Method of test

NOTE 1: UL_TFC0, UL_TFC1 and UL_TFC5 are part of minimum set of TFCIs.
NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
The UL RLC SDU size have been chosen such that the UE will return all data received in downlink and that the UL RLC SDU will fill up the uplink transport format set under test over one or several transmission time intervals.
RB5: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). The UL RLC SDU size is set to nearest multiple of the payload size of the UL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit) which is equal or bigger than the test data size

See 14.1.1 for test procedure.

#### 14.2.35.1.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x336).
   - for sub-test 2: RB5/TF2 (2x336).
   - for sub-test 3: RB5/TF3 (3x336).
   - for sub-test 4 to 10: RB5/TF4 (4x336).
3. At step 15 the UE shall return
   - for sub-tests 1, 2 and 4 to 10: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.
   - for sub-test 3: an RLC SDU on RB5 having the first 2552 bits equal to the content of the test data sent by the SS in downlink.

### 14.2.35.2 Interactive or background / UL:64 DL:2048 kbps / PS RAB / 20 ms TTI

#### 14.2.35.2.1 Conformance requirement

See 14.2.4.1.

#### 14.2.35.2.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.35 for the 20 ms TTI case.

#### 14.2.35.2.3 Method of test

NOTE 1: UL_TFC0, UL_TFC1 and UL_TFC5 are part of minimum set of TFCIs.
NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
The UL RLC SDU size have been chosen such that the UE will return all data received in downlink and that the UL RLC SDU will fill up the uplink transport format set under test over one or several transmission time intervals.
RB5: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). The UL RLC SDU size is set to nearest multiple of the payload size of the UL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit) which is equal or bigger than the test data size.

See 14.1.1 for test procedure.

#### 14.2.35.2.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x336).
   - for sub-test 2: RB5/TF2 (2x336).
   - for sub-test 3: RB5/TF3 (3x336).
   - for sub-test 4 to 18: RB5/TF4 (4x336).
3. At step 15 the UE shall return
   - for sub-tests 1, 2 and 4 to 18: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.

- for sub-test 3: an RLC SDU on RB5 having the first 2552 bits equal to the content of the test data sent by the SS in downlink.

### 14.2.38.1 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:32 DL:8 kbps / PS RAB / (TC, 20 ms TTI)

#### 14.2.38.1.1 Conformance requirement

See 14.2.4.1.

#### 14.2.38.1.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.38 for the turbo channel coding and 20 ms TTI case.

#### 14.2.38.1.3 Method of test

See 14.1.2 for test procedure.

| NOTE 1: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3 and UL_TFC9 are part of minimum set of TFCIs.<br>NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.<br>RB8: Test data size has been set to DL TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit). As the uplink TTI for RB8 is 20 ms while the downlink TTI is 40 ms then, to achieve continuous data transmission in uplink the size of the uplink RLC SDU has been set such that it will be transmitted over two subsequent TTIs, i.e. UL RLC SDU SIZE has been set to two times the uplink TFS size minus 8 (the size of a 7 bit length indicator and expansion bit). | | | | | | |

#### 14.2.38.1.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub test.
3. At step 15 the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
   - for sub-test 3 and 6: RLC SDUs on RB8 having the first 312 bits equal to the content sent by the SS in the downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 4 and 7: RLC SDUs on RB5 having the same content as sent by SS and on RB8 having the first 312 bits equal to the content sent by the SS in the downlink; and no data shall be received on RB6 and RB7.
   - for sub-test 5 and 8: RLC SDUs on RB5, RB6, RB7 having the same content as sent by SS and on RB8 having the first 312 bits equal to the content sent by the SS in the downlink.
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

### 14.2.38.2 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:32 DL:8 kbps / PS RAB / (TC, 10 ms TTI)

#### 14.2.38.2.1 Conformance requirement

See 14.2.4.1.

#### 14.2.38.2.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.38 for the turbo channel coding and 10 ms TTI case.

#### 14.2.38.2.3 Method of test

See 14.1.2 for test procedure.

NOTE 1: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3 and UL_TFC6 are part of minimum set of TFCIs.
NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB8: Test data size has been set to DL TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit). As the uplink TTI for RB8 is 10 ms while the downlink TTI is 40 ms then, to achieve continuous data transmission in uplink the size of the uplink RLC SDU has been set such that it will be transmitted over four subsequent TTIs, i.e. UL RLC SDU SIZE has been set to four times the uplink TFS size minus 8 (the size of a 7 bit length indicator and expansion bit).

#### 14.2.38.2.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub test.
3. At step 15 the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
   - for sub-test 3: RLC SDUs on RB8 having the first 312 bits equal to the content sent by the SS in the downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 4: RLC SDUs on RB5 having the same content as sent by SS and on RB8 having the first 312 bits equal to the content sent by the SS in the downlink; and no data shall be received on RB6 and RB7.
- for sub-test 5: RLC SDUs on RB5, RB6, RB7 having the same content as sent by SS and on RB8 having the first 312 bits equal to the content sent by the SS in the downlink.

4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

### 14.2.38.3 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:32 DL:8 kbps / PS RAB / (CC, 20 ms TTI)

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.38 for the convolutional channel coding and 20 ms TTI case.

See test case 14.2.38.1 for test procedure and test requirement.

### 14.2.38.4 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:32 DL:8 kbps / PS RAB / (CC, 10 ms TTI)

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.38 for the convolutional channel coding and 10 ms TTI case.

See test case 14.2.38.2 for test procedure and test requirement.

## 14.2.38a Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:0 DL:0 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH.

#### 14.2.38a.1 Conformance requirement

See 14.2.4.1.

#### 14.2.38a.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.38a.

#### 14.2.38a.3 Method of test

See 14.1.2 for test procedure. However, in this test the RM attribute values used shall be derived separately in the UL and DL as the mid-values of the RM attribute value ranges as specified by the reference radio bearer configuration.

### 14.2.38a.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15a and step 15b the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

| Sub-test | Downlink TFCS Under Test | Uplink TFCS Under test | Implicitly tested | Restricted UL TFCIs (note 1) | UL RLC SDU size (bits) (note 2) | Test data size (bits) (note 2) |
|---|---|---|---|---|---|---|
| 14 | DL_TFC14, DL_TFC29 | UL_TFC14, UL_TFC29 | DL_TFC0, DL_TFC3, DL_TFC15, UL_TFC0, UL_TFC5, UL_TFC15 | UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3, UL_TFC5, UL_TFC12, UL_TFC14, UL_TFC15, UL_TFC17, UL_TFC27, UL_TFC29 | RB5: 81<br>RB6: 103<br>RB7: 60<br>RB8: 1272 | RB5: 81<br>RB6: 103<br>RB7: 60<br>RB8: 1272 |

NOTE 1: UL_TFC0, UL_TFC1, UL_TFC2, , UL_TFC3 and UL_TFC15 are part of minimum set of TFCIs.
NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB8: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). The UL RLC SDU size has been set equal to the size of the payload size of the UL TF under test minus 8 bits (the size of 7 bit length indicator and expansion bit).

### 14.2.38c.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15a and step 15b the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
   - for sub-test 3, 6, 9 and 12: RLC SDUs on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 4, 7, 10 and 13: RLC SDUs on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 5, 8, 11 and 14: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as sent by SS.
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

### 14.2.38d.1 Conformance requirement

See 14.2.4.1.

### 14.2.38d.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.38d.

14.2.38d.3 Method of test

See 14.1.2 for test procedure.

The UL RLC SDU size has been set equal to the size of the payload size of the UL TF under test minus 8 bits (the size of 7 bit length indicator and expansion bit). |

#### 14.2.38d.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15a and step 15b the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7, RB8 or RB9.
   - for sub-test 2: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8 or RB9.
   - for sub-test 3, 6, 9 and 12: RLC SDUs on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6, RB7 or RB9.
   - for sub-test 4, 7, 10 and 13: RLC SDUs on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6, RB7 or RB9.
   - for sub-test 5, 8, 11 and 14: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as sent by SS. No data shall be received on RB9.
   - for sub-test 15: RLC SDUs on RB5, RB6, RB7 and RB9 having the same content as sent by SS; and no data shall be received on RB8.
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

### 14.2.38e Conversational / speech / UL:(12.2 7.95 5.9 4.75) DL:(12.2 7.95 5.9 4.75) kbps / CS RAB + Interactive or background / UL:0 DL:0 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH.

#### 14.2.38e.1 Conformance requirement

See 14.2.4.1.

#### 14.2.38e.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.38e.

#### 14.2.38e.3 Method of test

See 14.1.2 for test procedure. However, in this test the RM attribute values used shall be derived separately in the UL and DL as the mid-values of the RM attribute value ranges as specified by the reference radio bearer configuration.

### 14.2.38e.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15a and step 15b the UE shall return

- for sub-test 1: RLC SDUs on RB5 having the same content as sent by the SS; and no data shall be received on RB6, RB7 and RB8.
- for sub-test 2,3 and 4: RLC SDUs on RB5 and RB6 having the same content as sent by the SS; and no data shall be received on RB7 and RB8.
- for sub-test 5: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by the SS; and no data shall be received on RB8.

4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

NOTE 1: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3, UL_TFC4, UL_TFC5, UL_TFC6 and UL_TFC12 are part of minimum set of TFCIs.

NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB8: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). The UL RLC SDU size parameter has been set equal to the size of the payload size of the UL TF under test minus 8 bits (the size of 7 bit length indicator and expansion bit).

#### 14.2.38f.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15 the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by the SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2,3 and 4: RLC SDUs on RB5 and RB6 having the same content as sent by the SS; and no data shall be received on RB7 and RB8.
   - for sub-test 5: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by the SS; and no data shall be received on RB8.
   - for sub-test 6: RLC SDUs on RB8 having the same content as sent by the SS; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 7: RLC SDUs on RB5 and RB8 having the same content as sent by the SS; and no data shall be received on RB6 and RB7.
   - for sub-test 8,9 and 10: RLC SDUs on RB5, RB6 and RB8 having the same content as sent by the SS; and no data shall be received on RB7.
   - for sub-test 11: RLC SDUs on RB5, RB6 , RB7 and RB8 having the same content as sent by the SS.
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

## 14.2.38g Conversational / speech / UL:(12.2 7.95 5.9 4.75) DL:(12.2 7.95 5.9 4.75) kbps / CS RAB + Interactive or background / UL:16 DL:16 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH.

#### 14.2.38g.1 Conformance requirement

See clause 14.2.4.1.

#### 14.2.38g.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.38g.

#### 14.2.38g.3 Method of test

See clause 14.1.2 for test procedure.

The UL RLC SDU size parameter has been set equal to the size of the payload size of the UL TF under test minus 8 bits (the size of 7 bit length indicator and expansion bit). | | | | | | |

### 14.2.38g.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15 the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by the SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2,3 and 4: RLC SDUs on RB5 and RB6 having the same content as sent by the SS; and no data shall be received on RB7 and RB8.
   - for sub-test 5: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by the SS; and no data shall be received on RB8.
   - for sub-test 6: RLC SDUs on RB8 having the same content as sent by the SS; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 7: RLC SDUs on RB5 and RB8 having the same content as sent by the SS; and no data shall be received on RB6 and RB7.
   - for sub-test 8: RLC SDUs on RB5 having the first 42 bits equal to the content of the test data sent by the SS in downlink ; RLC SDUs on RB6 having the first 53 bits equal to the content of the test data sent by the SS in downlink ; RLC SDUs on RB8 having the same content as sent by the SS; and no data shall be received on RB7.
   - for sub-test 9 and 10: RLC SDUs on RB5, RB6 and RB8 having the same content as sent by the SS; and no data shall be received on RB7.
   - for sub-test 11: RLC SDUs on RB5, RB6 , RB7 and RB8 having the same content as sent by the SS.

- for sub-test 12: RLC SDUs on RB8 having the same content as sent by the SS; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 13: RLC SDUs on RB5 and RB8 having the same content as sent by the SS; and no data shall be received on RB6 and RB7.
- for sub-test 14: RLC SDUs on RB5 having the first 42 bits equal to the content of the test data sent by the SS in downlink ; RLC SDUs on RB6 having the first 53 bits equal to the content of the test data sent by the SS in downlink ; RLC SDUs on RB8 having the same content as sent by the SS; and no data shall be received on RB7.
- for sub-test 15 and 16: RLC SDUs on RB5, RB6 and RB8 having the same content as sent by the SS; and no data shall be received on RB7.
- for sub-test 17: RLC SDUs on RB5, RB6 , RB7 and RB8 having the same content as sent by the SS.

4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

## 14.2.38h Conversational / speech / UL:(12.2 7.95 5.9 4.75) DL:(12.2 7.95 5.9 4.75) kbps / CS RAB + Interactive or background / UL:32 DL:32 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH.

### 14.2.38h.1 Conformance requirement

See clause 14.2.4.1.

### 14.2.38h.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.38h.

### 14.2.38h.3 Method of test

See clause 14.1.2 for test procedure.

The UL RLC SDU size parameter has been set equal to the size of the payload size of the UL TF under test minus 8 bits (the size of 7 bit length indicator and expansion bit). | | | | | | |

### 14.2. 38h.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15 the UE shall return
   - for sub-test 1,2 and 3: RLC SDUs on RB8 having the same content as sent by the SS; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 4: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by the SS; and no data shall be received on RB8.
   - for sub-test 5, 6 and 7: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as sent by the SS.
   - for sub-test 8: RLC SDUs on RB5 and RB6 having the same content as sent by the SS; and no data shall be received on RB7 and RB8.
   - for sub-test 9: RLC SDUs on RB5, RB6 and RB8 having the same content as sent by the SS; and no data shall be received on RB7.
   - for sub-test 10 and 11: RLC SDUs on RB5 and RB6 having the same content as sent by the SS; RLC SDUs on RB8 having the same content as the first 312 bits of the test data sent by the SS in downlink; and no data shall be received on RB7.

- for sub-test 12: RLC SDUs on RB5 and RB6 having the same content as sent by the SS; and no data shall be received on RB7 and RB8.

- for sub-test 13: RLC SDUs on RB5 having the first 55 bits equal to the content of the test data sent by the SS in downlink; RLC SDUs on RB6 having the first 63 bits equal to the content of the test data sent by the SS in downlink; RLC SDUs on RB8 having the same content as sent by the SS; and no data shall be received on RB7.

- for sub-test 14 and 15: RLC SDUs on RB5 having the first 55 bits equal to the content of the test data sent by the SS in downlink; RLC SDUs on RB6 having the first 63 bits equal to the content of the test data sent by the SS in downlink; RLC SDUs on RB8 having the same content as the first 312 bits of the test data sent by the SS in downlink; and no data shall be received on RB7.

- for sub-test 16: RLC SDUs on RB5 and RB6 having the same content as sent by the SS; and no data shall be received on RB7 and RB8.

- for sub-test 17: RLC SDUs on RB5 having the first 42 bits equal to the content of the test data sent by the SS in downlink; RLC SDUs on RB6 having the first 53 bits equal to the content of the test data sent by the SS in downlink; RLC SDUs on RB8 having the same content as sent by the SS; and no data shall be received on RB7.

- for sub-test 18 and 19: RLC SDUs on RB5 having the first 42 bits equal to the content of the test data sent by the SS in downlink; RLC SDUs on RB6 having the first 53 bits equal to the content of the test data sent by the SS in downlink; RLC SDUs on RB8 having the same content as the first 312 bits of the test data sent by the SS in downlink; and no data shall be received on RB7.

- for sub-test 20: RLC SDUs on RB5 having the same content as sent by the SS; and no data shall be received on RB6, RB7 and RB8.

- for sub-test 21, 22 and 23: RLC SDUs on RB5 and RB8 having the same content as sent by the SS; and no data shall be received on RB6 and RB7.

4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

## 14.2.38i Conversational / speech / UL:(12.2 7.95 5.9 4.75) DL:(12.2 7.95 5.9 4.75) kbps / CS RAB + Interactive or background / UL:64 DL:64 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH.

### 14.2.38i.1 Conformance requirement

See clause 14.2.4.1.

### 14.2.38i.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.38i.

### 14.2.38i.3 Method of test

See clause 14.1.2 for test procedure.

NOTE 1: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3, UL_TFC4, UL_TFC5, UL_TFC6 and UL_TFC24 are part of minimum set of TFCIs.

NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB8: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). The UL RLC SDU size parameter has been set equal to the size of the payload size of the UL TF under test minus 8 bits (the size of 7 bit length indicator and expansion bit).

### 14.2.38i.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.

3. At step 15 the UE shall return

   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by the SS; and no data shall be received on RB6, RB7 and RB8.

   - for sub-test 2,3 and 4: RLC SDUs on RB5 and RB6 having the same content as sent by the SS; and no data shall be received on RB7 and RB8.

   - for sub-test 5: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by the SS; and no data shall be received on RB8.

- for sub-test 6: RLC SDUs on RB8 having the same content as sent by the SS; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 7: RLC SDUs on RB5 and RB8 having the same content as sent by the SS; and no data shall be received on RB6 and RB7.
- for sub-test 8,9 and 10: RLC SDUs on RB5, RB6 and RB8 having the same content as sent by the SS; and no data shall be received on RB7.
- for sub-test 11: RLC SDUs on RB5, RB6 , RB7 and RB8 having the same content as sent by the SS.
- for sub-test 12: RLC SDUs on RB8 having the same content as sent by the SS; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 13: RLC SDUs on RB5 and RB8 having the same content as sent by the SS; and no data shall be received on RB6 and RB7.
- for sub-test 14,15 and 16: RLC SDUs on RB5, RB6 and RB8 having the same content as sent by the SS; and no data shall be received on RB7.
- for sub-test 17: RLC SDUs on RB5, RB6 , RB7 and RB8 having the same content as sent by the SS.
- for sub-test 18: RLC SDUs on RB8 having the first 952 bits equal to the content of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 19: RLC SDUs on RB5 having the same content as sent by the SS; RLC SDUs on RB8 having the first 952 bits equal to the content of the test data sent by the SS in downlink; and no data shall be received on RB6 and RB7.
- for sub-test 20,21 and 22: RLC SDUs on RB5 and RB6 having the same content as sent by the SS; RLC SDUs on RB8 having the first 952 bits equal to the content of the test data sent by the SS in downlink; and no data shall be received on RB7.
- for sub-test 23: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by the SS; and RLC SDUs on RB8 having the first 952 bits equal to the content of the test data sent by the SS in downlink.
- for sub-test 24: RLC SDUs on RB8 having the same content as sent by the SS; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 25: RLC SDUs on RB5 and RB8 having the same content as sent by the SS; and no data shall be received on RB6 and RB7.
- for sub-test 26,27 and 28: RLC SDUs on RB5, RB6 and RB8 having the same content as sent by the SS; and no data shall be received on RB7.
- for sub-test 29: RLC SDUs on RB5, RB6 , RB7 and RB8 having the same content as sent by the SS.

4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

## 14.2.38j Conversational / speech / UL:(12.2 7.95 5.9 4.75) DL:(12.2 7.95 5.9 4.75) kbps / CS RAB + Interactive or background / UL:64 DL:128 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH.

### 14.2.38j.1 Conformance requirement

See clause 14.2.4.1.

### 14.2.38j.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.38j.

### 14.2.38j.3 Method of test

See clause 14.1.2 for test procedure.

NOTE 1: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3, UL_TFC4, UL_TFC5, UL_TFC6 and UL_TFC24 are part of minimum set of TFCIs.

NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB8: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). The UL RLC SDU size parameter has been set equal to the size of the payload size of the UL TF under test minus 8 bits (the size of 7 bit length indicator and expansion bit).

### 14.2.38j.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15 the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by the SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2,3 and 4: RLC SDUs on RB5 and RB6 having the same content as sent by the SS; and no data shall be received on RB7 and RB8.
   - for sub-test 5: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by the SS; and no data shall be received on RB8.

- for sub-test 6: RLC SDUs on RB8 having the same content as sent by the SS; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 7: RLC SDUs on RB5 and RB8 having the same content as sent by the SS; and no data shall be received on RB6 and RB7.
- for sub-test 8,9 and 10: RLC SDUs on RB5, RB6 and RB8 having the same content as sent by the SS; and no data shall be received on RB7.
- for sub-test 11: RLC SDUs on RB5, RB6 , RB7 and RB8 having the same content as sent by the SS.
- for sub-test 12: RLC SDUs on RB8 having the same content as sent by the SS; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 13: RLC SDUs on RB5 and RB8 having the same content as sent by the SS; and no data shall be received on RB6 and RB7.
- for sub-test 14,15 and 16: RLC SDUs on RB5, RB6 and RB8 having the same content as sent by the SS; and no data shall be received on RB7.
- for sub-test 17: RLC SDUs on RB5, RB6 , RB7 and RB8 having the same content as sent by the SS.
- for sub-test 18: RLC SDUs on RB8 having the same content as sent by the SS; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 19: RLC SDUs on RB5 and RB8 having the same content as sent by the SS; and no data shall be received on RB6 and RB7.
- for sub-test 20,21 and 22: RLC SDUs on RB5, RB6 and RB8 having the same content as sent by the SS; and no data shall be received on RB7.
- for sub-test 23: RLC SDUs on RB5, RB6 , RB7 and RB8 having the same content as sent by the SS.
- for sub-test 24: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 25: RLC SDUs on RB5 having the same content as sent by the SS; RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; and no data shall be received on RB6 and RB7.
- for sub-test 26,27 and 28: RLC SDUs on RB5 and RB6 having the same content as sent by the SS; RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; and no data shall be received on RB7.
- for sub-test 29: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by the SS; and RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink.

4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

## 14.2.39 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:32 DL:64 kbps / PS RAB+ UL:3.4 DL: 3.4 kbps SRBs for DCCH

### 14.2.39.1 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:32 DL:64 kbps / PS RAB / (TC, 10 ms TTI)

#### 14.2.39.1.1 Conformance requirement

See 14.2.4.1.

#### 14.2.39.1.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.39 for the uplink turbo channel coding and 10 ms TTI case.

14.2.39.1.3 Method of test

See 14.1.2 for test procedure.

Uplink TFS:

| | TFI | RB5 (RAB subflow #1) | RB6 (RAB subflow #2) | RB7 (RAB subflow #3) | RB8 (32 kbps, 10 ms TTI) | DCCH |

NOTE1: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3 and UL_TFC6 are part of minimum set of TFCIs
NOTE2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB8: Test data size has been set to DL TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit). As the uplink TTI for RB8 is 10 ms while the downlink TTI is 20 ms then, to achieve continuous data transmission in uplink the size of the uplink RLC SDU has been set such that it will be transmitted over two subsequent TTIs, i.e. UL RLC SDU SIZE has been set to two times the uplink TFS size minus 8 bits (size of 7 bit length indicator and expansion bit).

#### 14.2.39.1.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.

3. At step 15a and step 15b the UE shall return

   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.

   - for sub-test 2: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.

   - for sub-test 3: RLC SDUs on RB8 having the first 312 bits equal to the content of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

   - for sub-test 4: RLC SDUs on RB8 having the first 312 bits equal to the content of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

   - for sub-test 5: RLC SDUs on RB8 having the first 312 bits equal to the content of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

   - for sub-test 6: RLC SDUs on RB8 having the content equal to the content of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

   - for sub-test 7: RLC SDUs on RB8 having the content equal to the content of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

   - for sub-test 8: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as sent by SS.

   - for sub-test 9: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

   - for sub-test 10: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

   - for sub-test 11: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

   - for sub-test 12: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

   - for sub-test 13: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

   - for sub-test 14: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

## 14.2.39.2 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:32 DL:64 kbps / PS RAB / (TC, 20 ms TTI)

### 14.2.39.2.1 Conformance requirement

See 14.2.4.1.

### 14.2.39.2.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.39 for the uplink turbo channel coding and 20 ms TTI case.

14.2.39.2.3 Method of test

See 14.1.2 for test procedure.

|---|---|---|---|---|---|---|
| NOTE 1: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3 and UL_TFC9 are part of minimum set of TFCIs<br>NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.<br>RB8: Test data size has been set to DL TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit). As the TTI for RB8 is the same for both downlink and uplink then UL RLC SDU size has been set to achieve UE to return one SDU per TTI, i.e. the UL RLC SDU size has been set equal to the uplink TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit). | | | | | | |

#### 14.2.39.2.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15a and step 15b the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
   - for sub-test 3: RLC SDUs on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 4: RLC SDUs on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 5: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as sent by SS.
   - for sub-test 6: RLC SDUs on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 7: RLC SDUs on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 8: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as sent by SS.
   - for sub-test 9: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 10: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 11: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.
   - for sub-test 12: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 13: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 14: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

### 14.2.39.3 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:32 DL:64 kbps / PS RAB / (CC, 10 ms TTI)

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.39 for the uplink convolutional channel coding and 10 ms TTI case.

See test case 14.2.39.1 for test procedure and test requirement.

### 14.2.39.4 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:32 DL:64 kbps / PS RAB / (CC, 20 ms TTI)

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.39 for the uplink convolutional channel coding and 20 ms TTI case.

See test case 14.2.39.2 for test procedure and test requirement.

## 14.2.40 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:64 DL:64 kbps / PS RAB+ UL:3.4 DL: 3.4 kbps SRBs for DCCH

#### 14.2.40.1 Conformance requirement

See 14.2.4.1.

#### 14.2.40.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.40.

#### 14.2.40.3 Method of test

See 14.1.2 for test procedure.

| Sub-test | Downlink TFCS Under Test | Uplink TFCS Under test | Implicitly tested | Restricted UL TFCIs (note 1) | UL RLC SDU size (bits) (note 2) | Test data size (bits) (note 2) |
|---|---|---|---|---|---|---|
| NOTE 1: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3 and UL_TFC15 are part of minimum set of TFCIs.<br>NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.<br>RB8: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). As the TTI for RB8 is the same for both downlink and uplink then UL RLC SDU size has been set to achieve UE to return one SDU per TTI, i.e. the UL RLC SDU size has been set equal to the payload size of the UL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). | | | | | | |

#### 14.2.40.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15a and step 15b the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
   - for sub-test 3, 6, 9 and 12: RLC SDUs on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 4, 7, 10 and 13: RLC SDUs on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 5, 8, 11 and 14: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as sent by SS.
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

### 14.2.41 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:64 DL:128 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

#### 14.2.41.1 Conformance requirement

See 14.2.4.1.

#### 14.2.41.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.41.

14.2.41.3 Method of test

See 14.1.2 for test procedure.

### 14.2.41.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15a and step 15b the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
   - for sub-test 3: RLC SDUs on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 4: RLC SDUs on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 5: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as sent by SS.
   - for sub-test 6: RLC SDUs on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 7: RLC SDUs on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 8: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as sent by SS.
   - for sub-test 9: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 10: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 11: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.
   - for sub-test 12: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 13: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 14: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

## 14.2.42 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:64 DL:256 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

### 14.2.42.1 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:64 DL:256 kbps / PS RAB / 10 ms TTI

#### 14.2.42.1.1 Conformance requirement

See 14.2.4.1.

#### 14.2.42.1.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.42 for the downlink 10 ms TTI case.

#### 14.2.42.1.3 Method of test

See 14.1.2 for test procedure.

|---|---|---|---|---|---|---|
| NOTE1: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3 and UL_TFC15 are part of minimum set of TFCIs<br>NOTE2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.<br>RB8: Test data size has been set to DL TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit). As the uplink TTI for RB8 is 20 ms while the downlink TTI is 10 ms then, to achieve continuous data transmission in uplink the size of the uplink RLC SDU has been set such that it will be transmitted over each TTIs, i.e. UL RLC SDU SIZE has been set to the uplink TFS size under test minus 8 (the size of a 7 bit length indicator and expansion bit). | | | | | | |

#### 14.2.42.1.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15 the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
   - for sub-test 3: RLC SDUs on RB8 having the first 312 bits equal to the content of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 4: RLC SDUs on RB8 having the first 312 bits equal to the content of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 5: RLC SDUs on RB8 having the first 312 bits equal to the content of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.
   - for sub-test 6: RLC SDUs on RB8 having the content equal to the content of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 7: RLC SDUs on RB8 having the content equal to the content of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 8: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as sent by SS.
   - for sub-test 9: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 10: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 11: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.
   - for sub-test 12: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 13: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 14: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

## 14.2.42.2 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:64 DL:256 kbps / PS RAB / 20 ms TTI

### 14.2.42.2.1 Conformance requirement

See 14.2.4.1.

### 14.2.42.2.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.42 for the downlink 20 ms TTI case.

### 14.2.42.2.3 Method of test

See 14.1.2 for test procedure.

NOTE1: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3 and UL_TFC15 are part of minimum set of TFCIs
NOTE2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB8: Test data size has been set to DL TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit). As the TTI for RB8 is the same for both downlink and uplink then UL RLC SDU size has been set to achieve UE to return one SDU per TTI, i.e. the UL RLC SDU size has been set equal to the uplink TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit).

#### 14.2.42.2.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15 the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
   - for sub-test 3: RLC SDUs on RB8 having the content equal to the content of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 4: RLC SDUs on RB5 and RB8 having the content equal to the content of the test data sent by the SS in downlink; and no data shall be received on RB6 and RB7.
   - for sub-test 5: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as sent by SS.
   - for sub-test 6: RLC SDUs on RB8 having the content equal to the content of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 7: RLC SDUs on RB5 and RB8 having the content equal to the content of the test data sent by the SS in downlink; and no data shall be received on RB6 and RB7.
   - for sub-test 8: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as sent by SS.
   - for sub-test 9: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 10: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 11: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.
   - for sub-test 12: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 13: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 14: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.
   - for sub-test 15: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 16: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 17: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.
   - for sub-test 18: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 19: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 20: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

## 14.2.43 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:64 DL:384 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

### 14.2.43.1 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:64 DL:384 kbps / PS RAB / 10 ms TTI

#### 14.2.43.1.1 Conformance requirement

See 14.2.4.1.

#### 14.2.43.1.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.43 for the downlink 10 ms TTI case.

#### 14.2.43.1.3 Method of test

See 14.1.2 for test procedure.

For the PS DL:384/UL:64 kbps radio bearer the downlink TTI is 10ms while the uplink TTI is 20ms. As the SS will send one DL SDU every 10 ms then the UE test loop function will return 2 UL SDUs per uplink TTI. To not cause uplink transmission buffer overflow then the UL RLC SDU size should be chosen such that the UE will transmit 2 RLC SDUs per uplink TTI. For the case when the transport format under test does not allow for 2 SDUs to fit into the transport format size without requiring concatenation then the UL RLC SDU size shall be chosen such that one SDU is returned per uplink TTI.

The following RLC parameter value is used in the RADIO BEARER SETUP message used to setup the PS DL:384/UL:64 kbps radio bearer:

| | |
|---|---|
| Uplink RLC<br>Transmission window size | 512 |

| | |
|---|---|
| Downlink RLC<br>Receiving window size | 512 |

NOTE The transmission and receiving window size values have been chosen to avoid that UE transmission and reception buffers become full during the test.

Uplink TFS:

NOTE 1: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB8: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit).
NOTE 2: RB8 (TF1/TF3): For sub-tests where uplink transport format TF1 (1x336) or TF3 (3x336) are used then no adaptation to the difference in downlink TTI (10 ms) and uplink TTI (20ms) is possible as this would require the UE to concatenate 2 SDUs into one PDU for TF1; or into three PDUs for TF3. For these sub-tests the UL RLC SDU size is set equal to the payload size of the UL TF under test minus 8 bits (the size of 7 bit length indicator and expansion bit).
NOTE 3: RB8 (TF2/TF4): For sub-tests where uplink transport formats TF2 (2x336) or TF4 (4x336) is used then to adopt to the difference in downlink TTI (10 ms) and uplink TTI (20ms) the UL RLC SDU size has been chosen such that 2 SDUs will be returned per uplink TTI. I.e. the UL RLC SDU size is set equal to half the payload size of the UL TF under test minus 8 bits (the size of 7 bit length indicator and expansion bit).
NOTE 4: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3 and UL_TFC15 are part of minimum set of TFCIs.
NOTE 5: DL_TFC1 for subtests 4, 7, 10, 13 and 16 and DL_TFC2 for subtests 5, 8, 11, 14 and 17 are necessary to cope with the effect of the acknowledge PDUs in AM mode.

#### 14.2.43.1.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15a and step 15b the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by the SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by the SS; and no data shall be received on RB8.
   - for sub-test 3: RLC SDUs on RB8 having the same content as sent by the SS; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 4: RLC SDUs on RB5 and RB8 having the same content as sent by the SS; and no data shall be received on RB6 and RB7.
- for sub-test 5: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as sent by the SS.
- for sub-test 6: RLC SDUs on RB8 having the content equal to the first 312 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 7: RLC SDUs on RB5 having the same content as sent by the SS; RLC SDUs on RB8 having the content equal to the first 312 bits of the test data sent by the SS in downlink; and no data shall be received on RB6 and RB7.
- for sub-test 8: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by the SS; and RLC SDUs on RB8 having the content equal to the first 312 bits of the test data sent by the SS in downlink.
- for sub-test 9: RLC SDUs on RB8 having the same content as sent by the SS; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 10: RLC SDUs on RB5 and RB8 having the same content as sent by the SS; and no data shall be received on RB6 and RB7.
- for sub-test 11: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as sent by the SS.
- for sub-test 12: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 13: RLC SDUs on RB5 having the same content as sent by the SS; RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; and no data shall be received on RB6 and RB7.
- for sub-test 14: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by the SS; and RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink.
- for sub-test 15: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 16: RLC SDUs on RB5 having the same content as sent by the SS; RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; and no data shall be received on RB6 and RB7.
- for sub-test 17: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by the SS; and RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink.

4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

## 14.2.43.2 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:64 DL:384 kbps / PS RAB / 20 ms TTI

### 14.2.43.2.1 Conformance requirement

See 14.2.4.1.

### 14.2.43.2.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.43 for the downlink 20 ms TTI case.

The following RLC parameter value is used in the RADIO BEARER SETUP message used to setup the PS DL:384/UL:64 kbps radio bearer:

| | |
|---|---|
| Uplink RLC<br>Transmission window size | 512 |

| | |
|---|---|
| Downlink RLC<br>Receiving window size | 512 |

NOTE: The transmission and receiving window size values have been chosen to avoid that UE transmission and reception buffers become full during the test.

14.2.43.2.3 Method of test

See 14.1.2 for test procedure.

NOTE1: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3 and UL_TFC15 are part of minimum set of TFCIs
NOTE2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB8: Test data size has been set to DL TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit). As the TTI for RB8 is the same for both downlink and uplink then UL RLC SDU size has been set to achieve UE to return one SDU per TTI, i.e. the UL RLC SDU size has been set equal to the uplink TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit).
NOTE 3: DL_TFC1 for subtests 4, 7, 10, 13, 16, 18, 21 and 24 and DL_TFC2 for subtests and 5, 8, 11, 14, 17, 20, 23 and 26 are necessary to cope with the effect of the acknowledge PDUs in AM mode.

### 14.2.43.2.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 15a and 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.

3. At step 15 the UE shall return

   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.

   - for sub-test 2: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.

   - for sub-test 3: RLC SDUs on RB8 having the content equal to the content of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

   - for sub-test 4: RLC SDUs on RB5 and RB8 having the content equal to the content of the test data sent by the SS in downlink; and no data shall be received on RB6 and RB7.

   - for sub-test 5: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as sent by SS.

   - for sub-test 6: RLC SDUs on RB8 having the content equal to the content of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

   - for sub-test 7: RLC SDUs on RB5 and RB8 having the content equal to the content of the test data sent by the SS in downlink; and no data shall be received on RB6 and RB7.

   - for sub-test 8: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as sent by SS.

   - for sub-test 9: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

   - for sub-test 10: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

   - for sub-test 11: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

   - for sub-test 12: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

   - for sub-test 13: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

   - for sub-test 14: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

   - for sub-test 15: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

   - for sub-test 16: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

   - for sub-test 17: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

   - for sub-test 18: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

   - for sub-test 19: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

   - for sub-test 20: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 21: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 22: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 23: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 24: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 25: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 26: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

## 14.2.44 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:128 DL:2048 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

### 14.2.44.1 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:128 DL:2048 kbps / PS RAB / 10 ms TTI

#### 14.2.44.1.1 Conformance requirement

See 14.2.4.1.

#### 14.2.44.1.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.44 for the downlink 10 ms TTI case.

#### 14.2.44.1.3 Method of test

See 14.1.2 for test procedure.

NOTE 1: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3 and UL_TFC15 are part of minimum set of TFCIs.
NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB8: Test data size has been set to DL TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit). As the uplink TTI for RB8 is 20 ms while the downlink TTI is 10 ms then, to achieve continuous data transmission in uplink the size of the uplink RLC SDU has been set such that it will be transmitted over each TTI, i.e. the uplink TFS size minus 8 bits (size of 7 bit length indicator and expansion bit).

#### 14.2.44.1.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.

3. At step 15 the UE shall return

   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.

   - for sub-test 2: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.

- for sub-test 3: RLC SDUs on RB8 having the content equal to the first 312 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 4: RLC SDUs on RB8 having the content equal to the first 312 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 5: RLC SDUs on RB8 having the content equal to the first 312 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 6: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 7: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 8: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 9: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 10: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 11: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 12: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 13: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 14: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 15: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 16: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 17: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 18: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 19: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 20: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 21: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 22: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 23: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.
- for sub-test 24: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 25: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
- for sub-test 26: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.
- for sub-test 27: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 28: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
- for sub-test 29: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.
- for sub-test 30: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 31: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
- for sub-test 32: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

## 14.2.44.2 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:128 DL:2048 kbps / PS RAB / 20 ms TTI

### 14.2.44.2.1 Conformance requirement

See 14.2.4.1.

### 14.2.44.2.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.44 for the downlink 20 ms TTI case.

### 14.2.44.2.3 Method of test

See 14.1.2 for test procedure.

| Sub-test | Downlink TFCS under test | Uplink TFCS Under test | Implicitly tested | Restricted UL TFCIs (note 1) | UL RLC SDU size (bits) (note 2) | Test data size (bits) (note 2) |
|---|---|---|---|---|---|---|
| NOTE 1: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3 and UL_TFC15 are part of minimum set of TFCIs.<br>NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.<br>RB8: Test data size has been set to DL TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit). As the TTI for RB8 is the same for both downlink and uplink then UL RLC SDU size has been set to achieve UE to return one SDU per TTI, i.e. the UL RLC SDU size has been set equal to the uplink TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit). | | | | | | |

#### 14.2.44.2.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15 the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
   - for sub-test 3: RLC SDUs on RB8 having the content equal to the first 312 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 4: RLC SDUs on RB8 having the content equal to the first 312 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 5: RLC SDUs on RB8 having the content equal to the first 312 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.
   - for sub-test 6: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 7: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 8: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.
   - for sub-test 9: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 10: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 11: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.
   - for sub-test 12: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 13: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 14: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 15: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 16: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 17: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 18: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 19: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 20: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 21: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 22: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 23: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 24: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 25: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 26: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 27: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 28: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 29: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 30: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 31: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 32: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 33: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 34: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 35: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 36: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 37: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 38: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 39: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 40: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 41: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 42: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 43: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 44: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 45: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 46: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 47: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 48: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 49: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 50: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 51: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 52: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 53: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 54: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 55: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 56: RLC SDUs on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

## 14.2.45 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Streaming / unknown / UL:57.6 DL:57.6 kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

### 14.2.45.1 Conformance requirement

See 14.2.4.1.

### 14.2.45.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.45.

### 14.2.45.3 Method of test

See 14.1.2 for test procedure.

Initial Conditions

The following RLC Info parameter values shall be set by the SS for the Streaming / unknown / UL:57.6 DL:57.6 kbps / CS RAB (RB8):

| | |
|---|---|
| Uplink RLC<br>TM RLC<br>Transmission RLC discard<br>CHOICE SDU Discard Mode<br>Timer based no explicit<br>Timer_discard<br>Segmentation indication | <br><br><br><br><br>100ms<br>FALSE |
| Downlink RLC<br>TM RLC<br>Segmentation indication | <br><br>FALSE |
| NOTE: Timer based discard without explicit signalling is used in uplink to secure that the UE will be able to return data for the case when the UE test loop function will not deliver all the SDUs in one and the same TTI . | |

Uplink TFS:

#### 14.2.45.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified in the actual sub test.
3. At step 15 the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
   - for sub-test 3, 6, 9 and 12: RLC SDUs on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 4, 7, 10 and 13: RLC SDUs on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 5, 8, 11 and 14: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as sent by SS.
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

## 14.2.46 Void

## 14.2.47 Void

## 14.2.48 Void

## 14.2.49 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Conversational / unknown / UL:64 DL:64 kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

### 14.2.49.1 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Conversational / unknown / UL:64 DL:64 kbps / CS RAB / 20 ms TTI

#### 14.2.49.1.1 Conformance requirement

See 14.2.4.1.

#### 14.2.49.1.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.49 for the 20 ms TTI case.

#### 14.2.49.1.3 Method of test

See 14.1.2 for test procedure. However, in this test the RM attribute values used shall be derived separately in the UL and DL as the mid-values of the RM attribute value ranges as specified by the reference radio bearer configuration.

Initial Conditions

The following RLC Info parameter values shall be set by the SS for the Conversational / unknown / UL:64 DL:64 kbps / CS RAB (RB8):

| | |
|---|---|
| Uplink RLC<br>TM RLC<br>Transmission RLC discard<br>CHOICE SDU Discard Mode<br>Timer based no explicit<br>Timer_discard<br>Segmentation indication | <br><br><br><br><br>100ms<br>FALSE |
| Downlink RLC<br>TM RLC<br>Segmentation indication | <br><br>FALSE |
| NOTE: Timer based discard without explicit signalling is used in uplink to secure that the UE will be able to return data for the case when the UE test loop function will not deliver all the SDUs in one and the same TTI . | |

Uplink TFS:

| | TFI | RB5 (RAB subflow #1) | RB6 (RAB subflow #2) | RB7 (RAB subflow #3) | RB8 (64 kbps, 20 ms TTI) | DCCH |

### 14.2.49.1.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15a and step 15b the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by the SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by the SS; and no data shall be received on RB8.
   - for sub-test 3: RLC SDUs on RB8 having the same content as sent by the SS; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 4: RLC SDUs on RB5 and RB8 having the same content as sent by the SS; and no data shall be received on RB6 and RB7.
   - for sub-test 5: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as sent by the SS.
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

## 14.2.49.2 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Conversational / unknown / UL:64 DL:64 kbps / CS RAB / 40 ms TTI

### 14.2.49.2.1 Conformance requirement

See 14.2.4.1.

### 14.2.49.2.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.49 for the 40 ms TTI case.

### 14.2.49.2.3 Method of test

Initial Conditions

The following RLC Info parameter values shall be set by the SS for the Conversational / unknown / UL:64 DL:64 kbps / CS RAB (RB8):

| | |
|---|---|
| Uplink RLC<br>TM RLC<br>Segmentation indication<br>Transmission RLC discard<br>CHOICE SDU Discard Mode<br>Timer based no explicit<br>Timer_discard | <br><br>FALSE<br><br><br><br>100ms |
| Downlink RLC<br>TM RLC<br>Segmentation indication | <br><br>FALSE |
| NOTE: Timer based discard without explicit signalling is used in uplink to secure that the UE will be able to return data for the case when the UE test loop function will not deliver all the SDUs in one and the same TTI . | |

See 14.1.2 for test procedure.

NOTE1: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3 and UL_TFC6 are part of minimum set of TFCIs.
NOTE2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
As the TTI for RB8 is the same for both downlink and uplink then UL RLC SDU size has been set to achieve UE to return one SDU per TTI, i.e. the UL RLC SDU size has been set equal to the uplink TB size.

#### 14.2.49.2.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual subtest.
3. At step 15 the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
   - for sub-test 3: four RLC SDUs on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 4: RLC SDUs on RB5 and four RLC SDUs on RB8 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
- for sub-test 5: RLC SDUs on RB5, RB6 and RB7; and four RLC SDUs on RB8 having the same content as sent by SS.

4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

NOTE1: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3, UL_TFC4, UL_TFC5, UL_TFC6 and UL_TFC12 are part of minimum set of TFCIs.

NOTE2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
As the TTI for RB8 is the same for both downlink and uplink then UL RLC SDU size has been set to achieve UE to return one SDU per TTI, i.e. the UL RLC SDU size has been set equal to the uplink TB size.

#### 14.2.49a.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15a and step 15b the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2, 3, 4: RLC SDUs on RB5, RB6 having the same content as sent by SS; and no data shall be received on RB7 and RB8.
   - for sub-test 5: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
   - for sub-test 6: RLC SDUs on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 7: RLC SDUs on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6, RB7.
   - for sub-test 8, 9, 10: RLC SDUs on RB5, RB6 and RB8 having the same content as sent by SS; and no data shall be received on RB7.
   - for sub-test 11: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as sent by SS.
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

### 14.2.49a.1 Conversational / speech / UL:(12.2 7.95 5.9 4.75) DL(12.2 7.95 5.9 4.75) kbps / CS RAB + Conversational / unknown / UL:64 DL:64 kbps / CS RAB+ UL:3.4 DL: 3.4 kbps SRBs for DCCH (40ms TTI)

#### 14.2.49a.1.1 Conformance requirement

See 14.2.4.1.

#### 14.2.49a.1.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.49a for 40 ms TTI case .

#### 14.2.49a.1.3 Method of test

See 14.1.2 for test procedure.

Initial Conditions

The following RLC Info parameter values shall be set by the SS for the Conversational / unknown / UL:64 DL:64 kbps / CS RAB (RB8):

| | |
|---|---|
| Uplink RLC<br>TM RLC<br>Segmentation indication<br>Transmission RLC discard<br>CHOICE SDU Discard Mode<br>Timer based no explicit<br>Timer_discard | <br><br>FALSE<br><br><br><br>100ms |
| Downlink RLC<br>TM RLC<br>Segmentation indication | <br><br>FALSE |
| NOTE: Timer based discard without explicit signalling is used in uplink to secure that the UE will be able to return data for the case when the UE test loop function will not deliver all the SDUs in one and the same TTI . | |

NOTE1: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3, UL_TFC4, UL_TFC5, UL_TFC6 and UL_TFC12 are part of minimum set of TFCIs

NOTE2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
As the TTI for RB8 is the same for both downlink and uplink then UL RLC SDU size has been set to achieve UE to return one SDU per TTI, i.e. the UL RLC SDU size has been set equal to the uplink TB size.

#### 14.2.49a.1.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15a and step 15b the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2, 3, 4: RLC SDUs on RB5, RB6 having the same content as sent by SS; and no data shall be received on RB7 and RB8.
   - for sub-test 5: RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
   - for sub-test 6: RLC SDUs on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 7: RLC SDUs on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6, RB7.
   - for sub-test 8, 9, 10: RLC SDUs on RB5, RB6 and RB8 having the same content as sent by SS; and no data shall be received on RB7.
   - for sub-test 11: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as sent by SS.
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

## 14.2.50 Conversational / unknown / UL:64 DL:64 kbps / CS RAB + Conversational / unknown / UL:64 DL:64 kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

### 14.2.50.1 Conversational / unknown / UL:64 DL:64 kbps / CS RAB + Conversational / unknown / UL:64 DL:64 kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / 20 ms TTI

#### 14.2.50.1.1 Conformance requirement

See 14.2.4.1.

#### 14.2.50.1.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.50 for the 20 ms TTI case.

14.2.50.1.3 Method of test

Initial Conditions

The following RLC Info parameter values shall be set by the SS for the Conversational / unknown / UL:64 DL:64 kbps / CS RAB (RB5 and RB6):

| | RB5 (64 kbps) | RB6 (64 kbps) |
|---|---|---|
| Uplink RLC<br>TM RLC<br>Segmentation indication<br>Transmission RLC discard<br>CHOICE SDU Discard Mode<br>Timer based no explicit<br>Timer_discard | <br><br>FALSE<br><br><br><br>100ms | <br><br>FALSE<br><br><br><br>100ms |
| Downlink RLC<br>TM RLC<br>Segmentation indication | <br><br>FALSE | <br><br>FALSE |
| NOTE: Timer based discard without explicit signalling is used in uplink to secure that the UE will be able to return data for the case when the UE test loop function will not deliver all the SDUs in one and the same TTI . | | |

See 14.1.2 for test procedure.

The UL RLC SDU size parameter has been set equal to the size of the payload size of the UL TF under test minus 8 bits (the size of 7 bit length indicator and expansion bit). | | | | | | |

#### 14.2.51.1.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15a and step 15b the UE shall return
   - for sub-test 1, 2, 3, 4: RLC SDUs on RB6 having the same content as sent by the SS; and no data shall be received on RB5.
   - for sub-test 5: RLC SDUs on RB5 having the same content as sent by the SS; and no data shall be received on RB6.
   - for sub-test 6, 7, 8 and 9: RLC SDUs on RB5 and RB6 having the same content as sent by the SS.
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

### 14.2.51.2 Conversational / unknown / UL:64 DL:64 kbps / CS RAB / 40 ms TTI + Interactive or background / UL:64 DL:64 kbps / PS RAB

#### 14.2.51.2.1 Conformance requirement

See 14.2.4.1.

#### 14.2.51.2.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.51 for the 40 ms TTI case.

14.2.51.2.3 Method of test

Initial Conditions

The following RLC Info parameter values shall be set by the SS for the Conversational / unknown / UL:64 DL:64 kbps / CS RAB (RB5):

| | RB5 (Conv. 64 kbps) |
|---|---|
| Uplink RLC<br>TM RLC<br>Segmentation indication<br>Transmission RLC discard<br>CHOICE SDU Discard Mode<br>Timer based no explicit<br>Timer_discard | <br><br>FALSE<br><br><br><br>100ms |
| Downlink RLC<br>TM RLC<br>Segmentation indication | <br><br>FALSE |
| NOTE: Timer based discard without explicit signalling is used in uplink to secure that the UE will be able to return data for the case when the UE test loop function will not deliver all the SDUs in one and the same TTI . | |

See 14.1.2 for test procedure.

Uplink TFS:

| | TFI | RB5 (Conv. 64 kbps) | RB6 (I/B 64 kbps) | DCCH |
|---|---|---|---|---|

As the TTI for RB5 and RB6 is the same for both downlink and uplink then UL RLC SDU size has been set to achieve UE to return one SDU per TTI, i.e. the UL RLC SDU size for RB6 has been set equal to the uplink TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit).and .the UL RLC SDU size for RB5 has been set equal to the uplink TB size . | | | | | | |

#### 14.2.51.2.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual subtest.
3. At step 15 the UE shall return
   - for sub-test 1, 2, 3, 4: RLC SDUs on RB6 having the same content as sent by SS; and no data shall be received on RB5.
   - for sub-test 5: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6.
   - for sub-test 6, 7, 8 and 9: RLC SDUs on RB5 and RLC SDUs on RB6 having the same content as sent by SS.
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

## 14.2.51a Conversational / unknown / UL:64 DL:64 kbps / CS RAB + Interactive or Background / UL:8 DL:8 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH.

### 14.2.51a.1 Conversational / unknown / UL:64 DL:64 kbps / CS RAB / 20 ms TTI + Interactive or background / UL:8 DL:8 kbps / PS RAB

#### 14.2.51a.1.1 Conformance requirement

See 14.2.4.1.

#### 14.2.51a.1.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.51a for the 20 ms TTI case.

14.2.51a.1.3 Method of test

Initial Conditions

The following RLC Info parameter values for the Conversational / unknown / UL:64 DL:64 kbps / CS RAB shall be set by the SS:

| | |
|---|---|
| Uplink RLC<br>TM RLC<br>Transmission RLC discard<br>CHOICE SDU Discard Mode<br>Timer based no explicit<br>Timer_discard<br>Segmentation indication | <br><br><br><br><br>100ms<br>FALSE |
| Downlink RLC<br>TM RLC<br>Segmentation indication | <br><br>FALSE |
| NOTE: 'Timer based discard without explicit signalling' is configured in uplink to secure that the UE will be able to return data in uplink for the case when the UE test loop function, due to processing delays, will not deliver the SDUs in one and the same TTI, but instead in two subsequent TTIs. | |

See 14.1.2 for test procedure.

|---|---|---|---|---|---|---|
| 1 | DL_TFC1 DL_TFC5, | UL_TFC1 UL_TFC5 | DL_TFC0, DL_TFC4, UL_TFC0, UL_TFC4, | UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC4, UL_TFC5 | RB5: 640 RB6: 312 | RB5: No data RB6: 312 |
| 2 | DL_TFC2 DL_TFC5, | UL_TFC2 UL_TFC6 | DL_TFC0, DL_TFC4, UL_TFC0, UL_TFC4, | UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC4, UL_TFC6 | RB5: 640 RB6: 312 | RB5: 4x640 RB6: No data |
| 3 | DL_TFC3 DL_TFC5, | UL_TFC3 UL_TFC7 | DL_TFC0, DL_TFC4, UL_TFC0, UL_TFC4, | UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3, UL_TFC4, UL_TFC5, UL_TFC6, UL_TFC7 | RB5: 640 RB6: 312 | RB5: 4x640 RB6: 312 |

NOTE1: UL_TFC0, UL_TFC1, UL_TFC2_and UL_TFC4 are part of minimum set of TFCIs
NOTE2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB6: Test data size has been set to DL TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit). As the TTI for RB6 is the same for both downlink and uplink then UL RLC SDU size has been set to achieve UE to return one SDU per TTI, i.e. the UL RLC SDU size has been set equal to the uplink TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit).

### 14.2.51a.2.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15a and step 15b the UE shall return
   - for sub-test 1: RLC SDUs on RB6 having the same content as sent by SS; and no data shall be received on RB5.
   - for sub-test 2: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6.
   - for sub-test 3: RLC SDUs on RB5 and RB6 having the same content as sent by SS.
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

# 14.2.51b Conversational / unknown / UL:64 DL:64 kbps / CS RAB + Interactive or Background / UL:16 DL:64 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH.

## 14.2.51b.1 Conversational / unknown / UL:64 DL:64 kbps / CS RAB / 20 ms TTI + Interactive or background / UL:16 DL:64 kbps / PS RAB

### 14.2.51b.1.1 Conformance requirement

See 14.2.4.1.

### 14.2.51b.1.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.51b for the 20 ms TTI case.

### 14.2.51b.1.3 Method of test

Initial Conditions

The following RLC Info parameter values for the Conversational / unknown / UL:64 DL:64 kbps / CS RAB shall be set by the SS:

| | |
|---|---|
| Uplink RLC<br>TM RLC<br>Transmission RLC discard<br>CHOICE SDU Discard Mode<br>Timer based no explicit<br>Timer_discard<br>Segmentation indication | <br><br><br><br><br>100ms<br>FALSE |
| Downlink RLC<br>TM RLC<br>Segmentation indication | <br><br>FALSE |
| NOTE: 'Timer based discard without explicit signalling' is configured in uplink to secure that the UE will be able to return data in uplink for the case when the UE test loop function, due to processing delays, will not deliver the SDUs in one and the same TTI, but instead in two subsequent TTIs. | |

See 14.1.2 for test procedure.

For the PS UL:16/DL:64 kbps radio bearer the downlink TTI is 20ms while the uplink TTI is 40ms. As the SS will send one DL SDU every 20 ms then the UE test loop function will return 2 UL SDUs per uplink TTI. To not cause uplink transmission buffer overflow then the UL RLC SDU size should be chosen such that the UE will transmit 2 RLC SDUs per uplink TTI. For the case when the transport format under test does not allow for 2 SDUs to fit into the transport format size without requiring concatenation then the UL RLC SDU size shall be chosen such that one SDU is returned per uplink TTI.

Uplink TFS:

| 8 | DL_TFC8, DL_TFC18 | UL_TFC5, UL_TFC11 | DL_TFC0, DL_TFC1, DL_TFC5, DL_TFC6, DL_TFC10, UL_TFC0, UL_TFC4, UL_TFC6 | UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3, UL TFC4, UL_TFC5, UL_TFC6, UL_TFC8, UL_TFC9, UL_TFC11 | RB5: 640 RB6: 312 (note 4) | RB5: 2x640 RB6: 952 |

| Sub-test | Downlink TFCS Under Test | Uplink TFCS Under test | Implicitly tested | Restricted UL TFCIs (note 1) | UL RLC SDU size (bits) (note 2) | Test data size (bits) (note 2) |
|---|---|---|---|---|---|---|
| 9 | DL_TFC9, DL_TFC19 | UL_TFC5, UL_TFC11 | DL_TFC0, DL_TFC1, DL_TFC5, DL_TFC6, DL_TFC10, UL_TFC0, UL_TFC4, UL_TFC6 | UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3, UL_TFC4, UL_TFC5, UL_TFC6, UL_TFC8, UL_TFC9, UL_TFC11 | RB5: 640 RB6: 312 (note 4) | RB5: 2x640 RB6: 1272 |

NOTE 1: UL_TFC0, UL_TFC1, UL_TFC3 and UL_TFC6 are part of minimum set of TFCIs.
NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB6: Test data size has been set to DL TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit).
NOTE 3: RB6 (TF1): For sub-tests where uplink transport format TF1 (1x336) is used then no adaptation to the difference in downlink TTI (20 ms) and uplink TTI (40ms) is possible as this would require the UE to concatenate 2 SDUs into one PDU. For these sub-tests the UL RLC SDU size is set equal to the payload size of the UL TF under test minus 8 bits (the size of 7 bit length indicator and expansion bit).
NOTE 4: RB6 (TF2): For sub-tests where uplink transport formats TF2 (2x336) is used then to adopt to the difference in downlink TTI (20 ms) and uplink TTI (40ms) the UL RLC SDU size has been chosen such that 2 SDUs will be returned per uplink TTI. I.e. the UL RLC SDU size is set equal to half the payload size of the UL TF under test minus 8 bits (the size of 7 bit length indicator and expansion bit).

#### 14.2.51b.1.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15a and step 15b the UE shall return
   - for sub-test 1: RLC SDUs on RB6 having the same content as sent by SS; and no data shall be received on RB5.
   - for sub-test 2: RLC SDUs on RB6 having the first 312 bits equal to the content of the test data sent by the SS in downlink; and no data shall be received on RB5.
   - for sub-test 3, 4: RLC SDUs on RB5 having the same content as sent by SS; and RLC SDUs on RB6 having the content equal to the first 312 bits of the test data sent by the SS in downlink
   - for sub-test 5: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6.
   - for sub-test 6 : RLC SDUs on RB5 and RB6 having the same content as sent by SS
   - for sub-test 7 : RLC SDUs on RB5 having the same content as sent by SS; and RLC SDUs on RB6 having the content equal to the first 312 bits of the test data sent by the SS in downlink
   - for sub-test 8 , 9 : RLC SDUs on RB5 having the same content as sent by SS; and RLC SDUs on RB6 having the content equal to the first 312 bits of the test data sent by the SS in downlink
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

### 14.2.51b.2 Conversational / unknown / UL:64 DL:64 kbps / CS RAB / 40 ms TTI + Interactive or background / UL:16 DL:64 kbps / PS RAB

#### 14.2.51b.2.1 Conformance requirement

See 14.2.4.1.

14.2.51b.2.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.51b for the 40 ms TTI case.

14.2.51b.2.3 Method of test

Initial Conditions

The following RLC Info parameter values for the Conversational / unknown / UL:64 DL:64 kbps / CS RAB shall be set by the SS:

| | |
|---|---|
| Uplink RLC<br>TM RLC<br>Transmission RLC discard<br>CHOICE SDU Discard Mode<br>Timer based no explicit<br>Timer_discard<br>Segmentation indication | <br><br><br><br><br>100ms<br>FALSE |
| Downlink RLC<br>TM RLC<br>Segmentation indication | <br><br>FALSE |
| NOTE: Timer based discard without explicit signalling' is configured in uplink to secure that the UE will be able to return data in uplink for the case when the UE test loop function, due to processing delays, will not deliver the SDUs in one and the same TTI, but instead in two subsequent TTIs. | |

See 14.1.2 for test procedure.

For the PS UL:16/DL:64 kbps radio bearer the downlink TTI is 20ms while the uplink TTI is 40ms. As the SS will send one DL SDU every 20 ms then the UE test loop function will return 2 UL SDUs per uplink TTI. To not cause uplink transmission buffer overflow then the UL RLC SDU size should be chosen such that the UE will transmit 2 RLC SDUs per uplink TTI. For the case when the transport format under test does not allow for 2 SDUs to fit into the transport format size without requiring concatenation then the UL RLC SDU size shall be chosen such that one SDU is returned per uplink TTI.

NOTE 1: UL_TFC0, UL_TFC1, UL_TFC3 and UL_TFC6 are part of minimum set of TFCIs.
NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB6: Test data size has been set to DL TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit).
NOTE 3: RB6 (TF1): For sub-tests where uplink transport format TF1 (1x336) is used then no adaptation to the difference in downlink TTI (20 ms) and uplink TTI (40ms) is possible as this would require the UE to concatenate 2 SDUs into one PDU. For these sub-tests the UL RLC SDU size is set equal to the payload size of the UL TF under test minus 8 bits (the size of 7 bit length indicator and expansion bit).
NOTE 4: RB6 (TF2): For sub-tests where uplink transport formats TF2 (2x336) is used then to adopt to the difference in downlink TTI (20 ms) and uplink TTI (40ms) the UL RLC SDU size has been chosen such that 2 SDUs will be returned per uplink TTI. I.e. the UL RLC SDU size is set equal to half the payload size of the UL TF under test minus 8 bits (the size of 7 bit length indicator and expansion bit).

#### 14.2.51b.2.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15a and step 15b the UE shall return
   - for sub-test 1: RLC SDUs on RB6 having the same content as sent by SS; and no data shall be received on RB5.
   - for sub-test 2: RLC SDUs on RB6 having the first 312 bits equal to the content of the test data sent by the SS in downlink; and no data shall be received on RB5.
   - for sub-test 3, 4: RLC SDUS on RB5 having the same content as sent by SS; and RLC SDUs on RB6 having the content equal to the first 312 bits of the test data sent by the SS in downlink
   - for sub-test 5: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6.
   - for sub-test 6 : RLC SDUs on RB5 and RB6 having the same content as sent by SS
   - for sub-test 7 : RLC SDUs on RB5 having the same content as sent by SS; and RLC SDUs on RB6 having the content equal to the first 312 bits of the test data sent by the SS in downlink
   - for sub-test 8 , 9 : RLC SDUs on RB5 having the same content as sent by SS ; and RLC SDUs on RB6 having the content equal to the first 312 bits of the test data sent by the SS in downlink
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

## 14.2.52 Conversational / unknown / UL:64 DL:64 kbps / CS RAB + Interactive or background / UL:64 DL:128 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

### 14.2.52.1 Conversational / unknown / UL:64 DL:64 kbps / CS RAB / 20 ms TTI + Interactive or background / UL:64 DL:128 kbps / PS RAB

#### 14.2.52.1.1 Conformance requirement

See 14.2.4.1.

#### 14.2.52.1.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.52 for the 20 ms TTI case.

14.2.52.1.3 Method of test

Initial Conditions

The following RLC Info parameter values shall be set by the SS for the Conversational / unknown / UL:64 DL:64 kbps / CS RAB (RB5):

| | RB5 (Conv. 64 kbps) |
|---|---|
| Uplink RLC<br>TM RLC<br>Segmentation indication<br>Transmission RLC discard<br>CHOICE SDU Discard Mode<br>Timer based no explicit<br>Timer_discard | <br><br>FALSE<br><br><br><br>100ms |
| Downlink RLC<br>TM RLC<br>Segmentation indication | <br><br>FALSE |
| NOTE: Timer based discard without explicit signalling is used in uplink to secure that the UE will be able to return data for the case when the UE test loop function will not deliver all the SDUs in one and the same TTI . | |

See 14.1.2 for test procedure.

As the TTI for RB5 and RB6 is the same for both downlink and uplink then UL RLC SDU size has been set to achieve UE to return one SDU per TTI, i.e. the UL RLC SDU size for RB6 has been set equal to the uplink TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit).and .the UL RLC SDU size for RB5 has been set equal to the uplink TB size. | | | | | | |

#### 14.2.52.1.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual subtest.
3. At step 15 the UE shall return
   - for sub-test 1, 2, 3, 4: RLC SDUs on RB6 having the same content as sent by SS; and no data shall be received on RB5.
   - for sub-test 5: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6.
   - for sub-test 6: RLC SDUs on RB5 and RLC SDUs on RB6 having the same content as sent by SS.
   - For sub-test 3: RLC SDUs on RB6 having the content equal to the first 952 bits of the test data sent by the SS in downlink;
   - For sub-test 4: RLC SDUs on RB6 having the content equal to the first 1272 bits of the test data sent by the SS in downlink;
   - for sub-test 8: RLC SDUs on RB6 having the content equal to the first 952 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS.
   - for sub-test 9: RLC SDUs on RB6 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS.
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

### 14.2.52.2 Conversational / unknown / UL:64 DL:64 kbps / CS RAB / 40 ms TTI + Interactive or background / UL:64 DL:128 kbps / PS RAB

#### 14.2.52.2.1 Conformance requirement

See 14.2.4.1.

#### 14.2.52.2.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.51 for the 40 ms TTI case.

14.2.52.2.3 Method of test

Initial Conditions

The following RLC Info parameter values shall be set by the SS for the Conversational / unknown / UL:64 DL:64 kbps / CS RAB (RB5):

| | RB5 (Conv. 64 kbps) |
|---|---|
| Uplink RLC<br>TM RLC<br>Segmentation indication<br>Transmission RLC discard<br>CHOICE SDU Discard Mode<br>Timer based no explicit<br>Timer_discard | <br><br>FALSE<br><br><br><br>100ms |
| Downlink RLC<br>TM RLC<br>Segmentation indication | <br><br>FALSE |
| NOTE: Timer based discard without explicit signalling is used in uplink to secure that the UE will be able to return data for the case when the UE test loop function will not deliver all the SDUs in one and the same TTI . | |

See 14.1.2 for test procedure.

#### 14.2.52.2.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual subtest.
3. At step 15 the UE shall return
   - for sub-test 1, 2, 3, 4: RLC SDUs on RB6 having the same content as sent by SS; and no data shall be received on RB5.
   - for sub-test 5: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6.
   - for sub-test 6: RLC SDUs on RB5 and RLC SDUs on RB6 having the same content as sent by SS.
   - For sub-test 3: RLC SDUs on RB6 having the content equal to the first 652 bits of the test data sent by the SS in downlink;
   - For sub-test 4: RLC SDUs on RB6 having the content equal to the first 1272 bits of the test data sent by the SS in downlink;
   - for sub-test 8: RLC SDUs on RB6 having the content equal to the first 652 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS.
   - for sub-test 9: RLC SDUs on RB6 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS.
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

## 14.2.53 Conversational / unknown / UL:64 DL:64 kbps / CS RAB + Interactive or background / UL:128 DL:128 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

### 14.2.53.1 Conversational / unknown / UL:64 DL:64 kbps / CS RAB / 20 ms TTI + Interactive or background / UL:128 DL:128 kbps / PS RAB

#### 14.2.53.1.1 Conformance requirement

See 14.2.4.1.

#### 14.2.53.1.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.53 for the 20 ms TTI case.

14.2.53.1.3 Method of test

Initial Conditions

The following RLC Info parameter values shall be set by the SS for the Conversational / unknown / UL:64 DL:64 kbps / CS RAB (RB5):

| | RB5 (Conv. 64 kbps) |
|---|---|
| Uplink RLC<br>TM RLC<br>Segmentation indication<br>Transmission RLC discard<br>CHOICE SDU Discard Mode<br>Timer based no explicit<br>Timer_discard | <br><br>FALSE<br><br><br><br>100ms |
| Downlink RLC<br>TM RLC<br>Segmentation indication | <br><br>FALSE |
| NOTE: Timer based discard without explicit signalling is used in uplink to secure that the UE will be able to return data for the case when the UE test loop function will not deliver all the SDUs in one and the same TTI . | |

See 14.1.2 for test procedure.

Uplink TFS:

| | TFI | RB5 (Conv. 64 kbps) | RB6 (I/B 128 kbps) | DCCH |
|---|---|---|---|---|

| NOTE1: UL_TFC0, UL_TFC1, UL_TFC5_and UL_TFC10 are part of minimum set of TFCIs<br>NOTE2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.<br>RB6: Test data size has been set to DL TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit). As the TTI for RB5 and RB6 is the same for both downlink and uplink then UL RLC SDU size has been set to achieve UE to return one SDU per TTI, i.e. the UL RLC SDU size for RB6 has been set equal to the uplink TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit).and .the UL RLC SDU size for RB5 has been set equal to the uplink TFS size under test. | | | | | | |

#### 14.2.53.1.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual subtest.
3. At step 15 the UE shall return
   - for sub-test 1, 2, 3, 4: RLC SDUs on RB6 having the same content as sent by SS; and no data shall be received on RB5.
   - for sub-test 5: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6.
   - for sub-test 6, 7, 8 and 9: RLC SDUs on RB5 and RLC SDUs on RB6 having the same content as sent by SS.
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

### 14.2.53.2 Conversational / unknown / UL:64 DL:64 kbps / CS RAB / 40 ms TTI + Interactive or background / UL:128 DL:128 kbps / PS RAB

#### 14.2.53.2.1 Conformance requirement

See 14.2.4.1.

#### 14.2.53.2.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.53 for the 40 ms TTI case.

14.2.53.2.3 Method of test

Initial Conditions

The following RLC Info parameter values shall be set by the SS for the Conversational / unknown / UL:64 DL:64 kbps / CS RAB (RB5):

| | RB5 (Conv. 64 kbps) |
|---|---|
| Uplink RLC<br>TM RLC<br>Segmentation indication<br>Transmission RLC discard<br>CHOICE SDU Discard Mode<br>Timer based no explicit<br>Timer_discard | <br><br>FALSE<br><br><br><br>100ms |
| Downlink RLC<br>TM RLC<br>Segmentation indication | <br><br>FALSE |
| NOTE: Timer based discard without explicit signalling is used in uplink to secure that the UE will be able to return data for the case when the UE test loop function will not deliver all the SDUs in one and the same TTI . | |

See 14.1.2 for test procedure.

RB5 and RB6: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). The UL RLC SDU size has been set equal to the size of the payload size of the UL TF under test minus 8 bits (the size of 7 bit length indicator and expansion bit).

### 14.2.56.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.

3. At step 15a and step 15b the UE shall return

   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6.

   - for sub-test 2: RLC SDUs on RB6; and no data shall be received on RB5.

4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

## 14.2.57 Interactive or background / UL:64 DL:64 kbps / PS RAB + Interactive or background / UL:64 DL:64 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH.

### 14.2.57.1 Conformance requirement

See 14.2.4.1.

### 14.2.57.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.57.

### 14.2.57.3 Method of test

See 14.1.2 for test procedure. However, in this test the RM attribute values used shall be derived separately in the UL and DL as the mid-values of the RM attribute value ranges as specified by the reference radio bearer configuration.

Specific Message Content:

Use the RADIO BEARER SETUP message as defined in [9] TS 34.108 clause 9, with the following exceptions:

NOTE 1: UL_TFC0, UL_TFC1, UL_TFC2 and UL_TFC4 are part of minimum set of TFCIs.
NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). As the uplink TTI for RB5 is 20 ms while the downlink TTI is 40 ms then, to achieve continuous data transmission in uplink the size of the uplink RLC SDU has been set such that it will be transmitted over two subsequent TTIs, i.e. UL RLC SDU size has been set to two times the payload size of the UL TF under test minus 8 bits (the size of a 7 bit length indicator and expansion bit).
RB6: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). The UL RLC SDU size has been set equal to the uplink TFS size minus 8 bits (the size of a 7 bit length indicator and expansion bit).

#### 14.2.58.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15a and step 15b the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as sent by the SS; and no data shall be received on RB6.
   - for sub-test 2 and 3: RLC SDUs on RB5 having the first 632 bits equal to the content of the test data sent by the SS in downlink; and no data shall be received on RB6.
   - for sub-test 4: RLC SDUs on RB6 having the same content as sent by the SS; and no data shall be received on RB5.
   - for sub-test 5: RLC SDUs on RB5 and RB6 having the same content as sent by the SS.
   - for sub-test 6 and 7: RLC SDUs on RB5 having the first 632 bits equal to the content of the test data sent by the SS in downlink; and RLC SDUs on RB6 having the same content as sent by the SS.
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

### 14.2.58a Streaming / unknown / UL:16 DL:128 kbps / PS RAB + Interactive or background / UL:8 DL:8 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH.

#### 14.2.58a.1 Conformance requirement

See 14.2.4.1.

#### 14.2.58a.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.58a.

#### 14.2.58a.3 Method of test

See 14.1.2 for test procedure. However, in this test the RM attribute values used shall be derived separately in the UL and DL as the mid-values of the RM attribute value ranges as specified by the reference radio bearer configuration.

#### 14.2.58a.4 Test requirements

See 14.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15a and step 15b the UE shall return
   - for sub-test 1, 2, 3 and 4: RLC SDUs on RB5 having the first 312 bits equal to the content of the test data sent by the SS in downlink; and no data shall be received on RB6.
   - for sub-test 5: RLC SDUs on RB6 having the same content as sent by the SS; and no data shall be received on RB5.
   - for sub-test 6, 7, 8 and 9: RLC SDUs on RB5 having the first 312 bits equal to the content of the test data sent by the SS in downlink; and RLC SDUs on RB6 having the same content as sent by the SS.
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

#### 14.2.62.1 Conformance requirement

See clause 14.2.4.1.

#### 14.2.62.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.62.

14.2.62.3 Method of test

Uplink TFS:

See clause 14.1.1a for test procedure.

#### 14.2.62.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x40).
   - for sub-test 2: RB5/TF2 (1x54) and RB6/TF1 (1x78)
   - for sub-test 3: RB5/TF3 (1x64) and RB6/TF2 (1x113)
   - for sub-test 4: RB5/TF4 (1x72) and RB6/TF3 (1x181)
3. At step 15 the UE shall return
   - for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 2,3 and 4: an RLC SDU on RB5 and RB6 having the same content as sent by SS; and no data shall be received on RB7.

## 14.2.63 Interactive or background / UL:64 DL:768 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

### 14.2.63.1 Interactive or background / UL:64 DL:768 kbps / PS RAB + UL:3.4 DL: 3.4 kbps SRBs for DCCH/ 10 ms TTI

#### 14.2.63.1.1 Conformance requirement

See 14.2.4.1.

#### 14.2.63.1.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.63 for the downlink 10 ms TTI case.

14.2.63.1.3 Method of test

NOTE 1: UL_TFC0, UL_TFC1 and UL_TFC5 are part of minimum set of TFCIs.
NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). The UL RLC SDU size parameter has been set to achieve verification of all test data sent by SS in downlink, i.e. UL RLC SDU size is set to nearest multiple of the payload size of the UL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit) which is equal or bigger than the test data size.

See 14.1.1 for test procedure.

#### 14.2.63.1.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x336).
   - for sub-test 2: RB5/TF2 (2x336).

- for sub-test 3: RB5/TF3 (3x336).
- for sub-test 4 to 8: RB5/TF4 (4x336).

3. At step 15 the UE shall return
   - for sub-test 1, 2 and 4 to 8: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.
   - for sub-test 3: an RLC SDU on RB5 having the first 1272 bits equal to the content of the test data sent by the SS in downlink.

## 14.2.63.2 Interactive or background / UL:64 DL:768 kbps / PS RAB + UL:3.4 DL: 3.4 kbps SRBs for DCCH / 20 ms TTI

### 14.2.63.2.1 Conformance requirement

See 14.1.1 for test procedure.

#### 14.3.2.2.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x336).
   - for sub-test 2: RB5/TF2 (2x336).
   - for sub-test 3: RB5/TF3 (3x336).
   - for sub-test 4, 5, 6, 7 and 8: RB5/TF4 (4x336).
3. At step 15 the UE shall return
   - for sub-test 1 , 2, 4, 5, 6, 7 and 8: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.
   - for sub-test 3: an RLC SDU on RB5 having the first 1272 bits equal to the content of the DL RLC SDU sent by the SS.

## 14.3.3 Interactive or background / UL:64 DL:2048 kbps / PS RAB + UL:3.4 DL: 3.4 kbps SRBs for DCCH

### 14.3.3.1 Interactive or background / UL:64 DL:2048 kbps / PS RAB / 10 ms TTI

#### 14.3.3.1.1 Conformance requirement

See 14.2.4.1.

#### 14.3.3.1.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.2.3 for the downlink 10 ms TTI case.

#### 14.3.3.1.3 Method of test

Uplink TFS:

#### 14.3.3.1.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x336).
   - for sub-test 2: RB5/TF2 (2x336).
   - for sub-test 3: RB5/TF3 (3x336).
   - for sub-test 4, 5, 6, 7, 8, 9 and 10: RB5/TF4 (4x336).
3. At step 15 the UE shall return
   - for sub-test 1, 2, 4 to 10: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.
   - for sub-test 3: an RLC SDU on RB5 having the first 2552 bits equal to the content of the DL RLC SDU sent by the SS.

### 14.3.3.2 Interactive or background / UL:64 DL:2048 kbps / PS RAB / 20 ms TTI

#### 14.3.3.2.1 Conformance requirement

See 14.2.4.1.

#### 14.3.3.2.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.2.3 for the downlink 20 ms TTI case.

#### 14.3.3.2.3 Method of test

| 17 | DL_DSCH_TFC17 | UL_TFC4 | DL_DSCH_TFC0, DL_DCH_TFC0, DL_DCH_TFC1, UL_TFC0, UL_TFC5 | UL_TFC0, UL_TFC1, UL_TFC4, UL_TFC5, UL_TFC9 | RB5: 38392 | RB5: 38392 |
| 18 | DL_DSCH_TFC18 | UL_TFC4 | DL_DSCH_TFC0, DL_DCH_TFC0, DL_DCH_TFC1, UL_TFC0, UL_TFC5 | UL_TFC0, UL_TFC1, UL_TFC4, UL_TFC5, UL_TFC9 | RB5: 40952 | RB5: 40952 |

NOTE 1: UL_TFC0, UL_TFC1 and UL_TFC5 are part of minimum set of TFCIs.
NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5: the UL RLC SDU size have been chosen such that the UE will return all data received in downlink and that the UL RLC SDU will fill up the uplink transport format set under test over one or several transmission time intervals.

See 14.1.1 for test procedure.

#### 14.3.3.2.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
   - for sub-test 1: RB5/TF1 (1x336).
   - for sub-test 2: RB5/TF2 (2x336).
   - for sub-test 3: RB5/TF3 (3x336).
   - for sub-test 4 to 18: RB5/TF4 (4x336).
3. At step 15 the UE shall return
   - for sub-test 1, 2, 4 to 18: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.
   - for sub-test 3: an RLC SDU on RB5 having the first 2552 bits equal to the content of the DL RLC SDU sent by the SS.

NOTE 1: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3, and UL_TFC15 are part of minimum set of TFCIs.
NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB8: Test data size has been set to DL TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit). The size of the uplink RLC SDU is set to the uplink TFS size minus 8 bits (size of 7 bit length indicator and expansion bit).

#### 14.3.5.1.4 Test requirements

See 14.1.2a for definition of step B10 and step 15.

1. At step B10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15e and 15f the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15e and 15f the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as the DL RLC SDUs sent by the SS; and no data shall be received on RB6, RB7 and RB8
   - for sub-test 2: RLC SDUs on RB5, RB6 and RB7 having the same content as the DL RLC SDUs sent by the SS; and no data shall be received on RB8.
   - for sub-test 3 and 6: RLC SDUs on RB8 having the same content as the DL RLC SDUs sent by the SS; no data shall be received on RB5, RB6 and RB7.
   - for sub-test 4 and 7: RLC SDUs on RB5 and RB8 having the same content as the DL RLC SDUs sent by the SS.
   - for sub-test 5 and 8: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as the DL RLC SDUs sent by the SS.
   - for sub-test 9: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 10: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 11: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 12: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 13 and 15: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 14 and 16: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

4. At step 15f UE shall send at least one MEASUREMENT REPORT message.

## 14.3.5.2 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:64 DL:384 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / 20 ms TTI

### 14.3.5.2.1 Conformance requirement

| | | | | | | |

NOTE 1: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3, and UL_TFC15 are part of minimum set of TFCIs.
NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB8: Test data size has been set to DL TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit). The UL RLC SDU size has been set equal to the uplink TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit).

#### 14.3.5.2.4 Test requirements

See 14.1.2a for definition of step B10 and step 15.

1. At step B10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15e and 15f the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15e and 15f the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as the DL RLC SDUs sent by the SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2: RLC SDUs on RB5, RB6 and RB7 having the same content as the DL RLC SDUs sent by the SS; and no data shall be received on RB8.
   - for sub-test 3 and 6: RLC SDUs on RB8 having the same content as the DL RLC SDUs sent by the SS; no data shall be received on RB5, RB6 and RB7.
   - for sub-test 4 and 7: RLC SDUs on RB5 and RB8 having the same content as the DL RLC SDUs sent by the SS.
   - for sub-test 5 and 8: RLC SDUs on RB5, RB6, RB7 and RB8 having the same content as the DL RLC SDUs sent by the SS.
   - for sub-test 9: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 10: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 11: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.
   - for sub-test 12: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-tests 13, 15, 17, 19 and 21: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-tests14, 16, 18, 20 and 22: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.
4. At step 15f UE shall send at least one MEASUREMENT REPORT message.

## 14.3.6 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:64 DL:2048 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

### 14.3.6.1 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:64 DL:2048 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / 10 ms TTI

#### 14.3.6.1.1 Conformance requirement

See 14.2.4.1

#### 14.3.6.1.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.2.6 for the downlink 10 ms TTI case.

#### 14.3.6.1.3 Method of test

The size of the uplink RLC SDU has been set such that it will be transmitted over each TTI, i.e. the uplink TFS size minus 8 bits (size of 7 bit length indicator and expansion bit). | | | | | | |

#### 14.3.6.1.4 Test requirements

See 14.1.2a for definition of step B10 and step 15.

1. At step B10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15e and 15f the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15e and 15f the UE shall return
   - for sub-test 1: RLC SDUs on RB5 having the same content as the DL RLC SDUs sent by the SS; and no data shall be received on RB6, RB7 and RB8.
   - for sub-test 2: RLC SDUs on RB5, RB6 and RB7 having the same content as the DL RLC SDUs sent by the SS; and no data shall be received on RB8.
   - for sub-test 3: RLC SDUs on RB8 having the content equal to the first 312 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 4: RLC SDUs on RB8 having the content equal to the first 312 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 5: RLC SDUs on RB8 having the content equal to the first 312 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.
   - for sub-test 6: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
   - for sub-test 7: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
   - for sub-test 8: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.
   - for sub-test 9: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 10: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 11: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 12: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-tests 13, 15, 17, 19, 21, 23 and 25: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-tests 14, 16, 18, 20, 22, 24 and 26: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

4. At step 15f UE shall send at least one MEASUREMENT REPORT message.

## 14.3.6.2 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:64 DL:2048 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / 10 ms TTI

### 14.3.6.2.1 Conformance requirement

See 14.2.4.1

### 14.3.6.2.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.2.6 for the downlink 20 ms TTI case.

### 14.3.6.2.3 Method of test

Uplink TFS:

| | TFI | RB5 (RAB subflow #1) | RB6 (RAB subflow #2) | RB7 (RAB subflow #3) | RB8 (64 kbps, 20 ms TTI) | DCCH |
|---|---|---|---|---|---|---|
| TFS | TF0, bits | 0x81(alt. 1x0) | 0x103 | 0x60 | 0x336 | 0x148 |
| | TF1, bits | 1x39 | 1x103 | 1x60 | 1x336 | 1x148 |
| | TF2, bits | 1x81 | N/A | N/A | 2x336 | N/A |
| | TF3, bits | N/A | N/A | N/A | 3x336 | N/A |
| | TF4, bits | N/A | N/A | N/A | 4x336 | N/A |

Uplink TFCS:

| TFCI | (RB5, RB6, RB7, RB8, DCCH) |
|---|---|
| UL_TFC0 | (TF0, TF0, TF0, TF0, TF0) |
| UL_TFC1 | (TF1, TF0, TF0, TF0, TF0) |

The UL RLC SDU size has been set equal to the uplink TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit). | | | | | | |

14.3.6.2.4 Test requirements

See 14.1.2a for definition of step B10 and step 15.

1. At step B10 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 15e and 15f the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.

3. At step 15e and 15f the UE shall return

   - for sub-test 1: RLC SDUs on RB5 having the same content as the DL RLC SDUs sent by the SS; and no data shall be received on RB6, RB7 and RB8.

   - for sub-test 2: RLC SDUs on RB5, RB6 and RB7 having the same content as the DL RLC SDUs sent by the SS; and no data shall be received on RB8.

   - for sub-test 3: RLC SDUs on RB8 having the content equal to the first 312 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

   - for sub-test 4: RLC SDUs on RB8 having the content equal to the first 312 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

   - for sub-test 5: RLC SDUs on RB8 having the content equal to the first 312 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

   - for sub-test 6: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

   - for sub-test 7: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

   - for sub-test 8: RLC SDUs on RB8 having the content equal to the first 632 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

   - for sub-test 9: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 10: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 11: RLC SDUs on RB8 having the content equal to the first 952 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 12: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-tests 13, 15, 17, 19, 21, 23, 25, 27, 29, 31, 33, 35, 37, 39 and 41: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-tests 14, 16, 18, 20, 22, 24, 26, 28, 30, 32, 34, 36, 38, 40 and 42: RLC SDUs on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; RLC SDUs on RB5, RB6 and RB7 having the same content as sent by SS.

4. At step 15f UE shall send at least one MEASUREMENT REPORT message.

# 14.4 Combinations on SCCPCH

## 14.4.1 Stand-alone signalling RB for PCCH

Void

## 14.4.2 Interactive/Background 32 kbps PS RAB + SRBs for CCCH + SRB for DCCH + SRB for BCCH

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.3.2.

This radio bearer configuration is tested with three different SYSTEM INFORMATION (BCCH) configurations:

1. The contents of System Information Block type 5 / System Information Block type 5bis shall be as per the specific message content.

   Two SCCPCHs are used in this SYSTEM INFORMATION configuration. The first SCCPCH carries the PCH and the second SCCPCH carries the FACH for Interactive/Background 32 kbps PS RAB and the FACH for SRBs on CCCH/ DCCH/ BCCH.

   This configuration is verified in test case 14.4.2.1.

2. The contents of System Information Block type 5 / System Information Block type 5bis as specified in TS 34.108, clause 6.1.3.

   Three SCCPCHs are used in this SYSTEM INFORMATION configuration. The first SCCPCH carries the PCH and both the second and third SCCPCHs carry the FACH for Interactive/Background 32 kbps PS RAB and the FACH for SRBs on CCCH/ DCCH/ BCCH.

   This configuration is verified in test case 14.4.2.2.

3. The contents of System Information Block type 5 / System Information Block type 5bis and 6 as specified in TS 34.108, clause 6.1.2.

   Three SCCPCHs are used in this SYSTEM INFORMATION configuration. The first SCCPCH carries the PCH. The second SCCPCH carries the FACH for CTCH (Cell Broadcast Service) and the FACH for SRBs on CCCH/ BCCH for idle mode UEs. The third SCCPCH carries the FACH for Interactive/Background 32 kbps PS RAB and the FACH for SRBs on CCCH/ DCCH/ BCCH for connected mode UEs.

   This configuration is verified in test case 14.4.2.3.

### 14.4.2.1 One SCCPCH: Interactive/Background 32 kbps PS RAB + SRBs for CCCH + SRB for DCCH + SRB for BCCH

#### 14.4.2.1.1 Conformance requirement

See 14.2.4.1.

#### 14.4.2.1.2 Test purpose

To verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clauses 6.10.2.4.3.2 and 6.10.2.4.4.1 for the case when two SCCPCHs are used in this SYSTEM INFORMATION configuration. The first SCCPCH carries the PCH and the second SCCPCH carries the FACH for Interactive/Background 32 kbps PS RAB and the FACH for SRBs on CCCH/ DCCH/ BCCH.

To be able to test the downlink radio bearer using the UE loopback function, the reference radio bearer configuration according to TS 34.108, clause 6.10.2.4.4.1 (Interactive/Background 32 kbps PS RAB + SRB for CCCH + SRB for DCCH on PRACH) is used in uplink.

#### 14.4.2.1.3 Method of Test

The contents of System Information Block type 5 / System Information Block type 5bis shall be as per the specific message content.

Uplink TFS:

| | **TFI** | **RB7+SRB (32kbps on RACH)** |
|---|---|---|
| TFS | TF0, bits | 1x168 |
| | TF1, bits | 1x360 |

Uplink TFCS:

| **TFCI** | **RB7+SRB** |
|---|---|
| UL_TFC0 | TF0 |
| UL_TFC1 | TF1 |

Downlink TFS:

| | | **SRBs** | **RB7 (32 kbps)** |
|---|---|---|---|
| TFS | TF0, bits | 0x168 | 0x360 |
| | TF1, bits | 1x168 | 1x360 |
| | TF2, bits | 2x168 | N/A |
| | | | |

Downlink TFCS:

| **TFCI** | **(SRB, RB7)** |
|---|---|
| DL_TFC0 | (TF0, TF0) |
| DL_TFC1 | (TF1, TF0) |
| DL_TFC2 | (TF2, TF0) |
| DL_TFC3 | (TF0, TF1) |
| DL_TFC4 | (TF1, TF1) |

Sub-tests:

| Sub-test | Downlink TFCS Under test | Uplink TFCS Under test | Implicitly tested | UL RLC SDU size (note) | Test data size (note) |
|---|---|---|---|---|---|
| 1 | DL_TFC3 | UL_TFC1 | DL_TFC0, UL_TFC0 | RB7: 312 bits | RB7: 312 bits |
| NOTE: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. RB7: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). The UL RLC SDU size parameter has been set to the payload size of the UL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). | | | | | |

See 14.1.1 for test procedure.

Specific Message Contents

Use the default parameter values for the system information block 5 with the same type specified in clause

6.1.1 of TS 34.108, with the following exceptions

| Information Element | Value/remark |
|---|---|
| - SIB6 indicator | FALSE |

#### 14.4.2.1.4 Test Requirements

See 14.1.1 for definition of step 15

1. At step 15 the UE transmitted transport format shall be RB7/TF1 (1x360).
2. At step 15 the UE shall return an RLC SDU on RB7 having the same content as sent by SS

### 14.4.2.2 Two SCCPCHs: Interactive/Background 32 kbps PS RAB + SRBs for CCCH + SRB for DCCH + SRB for BCCH

#### 14.4.2.2.1 Conformance requirement

See 14.2.4.1.

#### 14.4.2.2.2 Test purpose

To verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clauses 6.10.2.4.3.2 and 6.10.2.4.4.1 for the case when three SCCPCHs are used in this SYSTEM INFORMATION configuration. The first SCCPCH carries the PCH and both the second and third SCCPCHs carry the FACH for Interactive/Background 32 kbps PS RAB and the FACH for SRBs on CCCH/ DCCH/ BCCH.

To be able to test the downlink radio bearer using the UE loopback function, the reference radio bearer configuration according to TS 34.108, clause 6.10.2.4.4.1 (Interactive/Background 32 kbps PS RAB + SRB for CCCH + SRB for DCCH on PRACH) is used in uplink.

#### 14.4.2.2.3 Method of Test

The contents of System Information Block type 5 / System Information Block type 5bis shall be as specified in TS 34.108, clause 6.1.3.

Uplink TFS:

| | TFI | RB7+SRB (32kbps on RACH) |
|---|---|---|
| TFS | TF0, bits | 1x168 |
| | TF1, bits | 1x360 |

Uplink TFCS:

| TFCI | RB7+SRB |
|---|---|
| UL_TFC0 | TF0 |
| UL_TFC1 | TF1 |

Downlink TFS:

| | | SRBs | RB7 (32 kbps) |
|---|---|---|---|
| TFS | TF0, bits | 0x168 | 0x360 |
| | TF1, bits | 1x168 | 1x360 |
| | TF2, bits | 2x168 | N/A |
| | | | |

Downlink TFCS:

| TFCI | (SRB, RB7) |
|---|---|
| DL_TFC0 | (TF0, TF0) |
| DL_TFC1 | (TF1, TF0) |
| DL_TFC2 | (TF2, TF0) |
| DL_TFC3 | (TF0, TF1) |
| DL_TFC4 | (TF1, TF1) |

Sub-tests:

| Sub-test | Downlink TFCS under test | Uplink TFCS Under test | Implicitly tested | UL RLC SDU size (note) | Test data size (note) |
|---|---|---|---|---|---|
| 1 | DL_TFC3 | UL_TFC1 | DL_TFC0, UL_TFC0 | RB7: 312 bits | RB7: 312 bits |
| NOTE: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. RB7: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). The UL RLC SDU size parameter has been set to the payload size of the UL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). | | | | | |

See 14.1.1 for test procedure.

#### 14.4.2.2.4 Test Requirements

See 14.1.1 for definition of step 15

1. At step 15 the UE transmitted transport format shall be RB7/TF1 (1x360).
2. At step 15 the UE shall return an RLC SDU on RB7 having the same content as sent by SS

### 14.4.2.3 One SCCPCH/connected mode: Interactive/Background 32 kbps PS RAB + SRBs for CCCH + SRB for DCCH + SRB for BCCH

#### 14.4.2.3.1 Conformance requirement

See 14.2.4.1.

#### 14.4.2.3.2 Test purpose

To verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clauses 6.10.2.4.3.2 and 6.10.2.4.4.1 for the case when three SCCPCHs are used in this SYSTEM INFORMATION configuration. The first SCCPCH carries the PCH. The second SCCPCH carries the FACH for CTCH (Cell Broadcast Service) and the FACH for SRBs on CCCH/ BCCH for idle mode UEs. The third SCCPCH carries the FACH for Interactive/Background 32 kbps PS RAB and the FACH for SRBs on CCCH/ DCCH/ BCCH for connected mode UEs.

To be able to test the downlink radio bearer using the UE loopback function, the reference radio bearer configuration according to TS 34.108, clause 6.10.2.4.4.1 (Interactive/Background 32 kbps PS RAB + SRB for CCCH + SRB for DCCH on PRACH) is used in uplink.

#### 14.4.2.3.3 Method of Test

The contents of System Information Block type 5 / System Information Block type 5bis and 6 shall be as specified in TS 34.108, clause 6.1.2.

Uplink TFS:

| | TFI | RB7+SRB (32kbps on RACH) |
|---|---|---|
| TFS | TF0, bits | 1x168 |
| | TF1, bits | 1x360 |

Uplink TFCS:

| TFCI | RB7+SRB |
|---|---|
| UL_TFC0 | TF0 |
| UL_TFC1 | TF1 |

Downlink TFS:

| | | SRBs | RB7 (32 kbps) |
|---|---|---|---|
| TFS | TF0, bits | 0x168 | 0x360 |
| | TF1, bits | 1x168 | 1x360 |
| | TF2, bits | 2x168 | N/A |
| | | | |

Downlink TFCS:

| TFCI | (SRB, RB7) |
|---|---|
| DL_TFC0 | (TF0, TF0) |
| DL_TFC1 | (TF1, TF0) |
| DL_TFC2 | (TF2, TF0) |
| DL_TFC3 | (TF0, TF1) |
| DL_TFC4 | (TF1, TF1) |

Sub-tests:

| Sub-test | Downlink TFCS Under test | Uplink TFCS Under test | Implicitly tested | UL RLC SDU size (note) | Test data size (note) |
|---|---|---|---|---|---|
| 1 | DL_TFC3 | UL_TFC1 | DL_TFC0, UL_TFC0 | RB7: 312 bits | RB7: 312 bits |
| NOTE: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. RB7: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). The UL RLC SDU size parameter has been set to the payload size of the UL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). | | | | | |

See 14.1.1 for test procedure.

#### 14.4.2.3.4 Test Requirements

See 14.1.1 for definition of step 15

1. At step 15 the UE transmitted transport format shall be RB7/TF1 (1x360).

2. At step 15 the UE shall return an RLC SDU on RB7 having the same content as sent by SS

## 14.4.2a Interactive/Background 32 kbps PS RAB + Interactive/Background 32 kbps PS RAB + SRBs for CCCH + SRB for DCCH + SRB for BCCH

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.3.2a.

This radio bearer configuration is tested with three different SYSTEM INFORMATION (BCCH) configurations:

1. The contents of System Information Block type 5 / System Information Block type 5bis shall be as per the message specific content.

   Two SCCPCHs are used in this SYSTEM INFORMATION configuration. The first SCCPCH carries the PCH and the second SCCPCH carries the FACH for two Interactive/Background 32 kbps PS RABs and the FACH for SRBs on CCCH/ DCCH/ BCCH.

   This configuration is verified in test case 14.4.2a.1.

2. The contents of System Information Block type 5 / System Information Block type 5bis as specified in TS 34.108, clause 6.1.3.

   Three SCCPCHs are used in this SYSTEM INFORMATION configuration. The first SCCPCH carries the PCH and both the second and third SCCPCHs carry the FACH for two Interactive/Background 32 kbps PS RABs and the FACH for SRBs on CCCH/ DCCH/ BCCH.

   This configuration is verified in test case 14.4.2a.2.

3. The contents of System Information Block type 5 / System Information Block type 5bis and 6 as specified in TS 34.108, clause 6.1.2.

   Three SCCPCHs are used in this SYSTEM INFORMATION configuration. The first SCCPCH carries the PCH. The second SCCPCH carries the FACH for CTCH (Cell Broadcast Service) and the FACH for SRBs on CCCH/ BCCH for idle mode UEs. The third SCCPCH carries the FACH for two Interactive/Background 32 kbps PS RABs and the FACH for SRBs on CCCH/ DCCH/ BCCH for connected mode UEs.

   This configuration is verified in test case 14.4.2a.3.

Specific Message Content for Radio Bearer Setup message to be used for these test cases:

Use the RADIO BEARER SETUP message as defined in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - RAB information for setup | |
| - RAB info | (AM DTCH for PS domain) |

## 14.4.2a.1 One SCCPCH: Interactive/Background 32 kbps PS RAB + Interactive/Background 32 kbps PS RAB + SRBs for CCCH + SRB for DCCH + SRB for BCCH

### 14.4.2a.1.1 Conformance requirement

See 14.2.4.1.

### 14.4.2a.1.2 Test purpose

To verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.3.2a and 6.10.2.4.4.2 for the case when two SCCPCHs are used in this SYSTEM INFORMATION configuration. The first SCCPCH carries the PCH and the second SCCPCH carries the FACH for two Interactive/Background 32 kbps PS RABs and the FACH for SRBs on CCCH/ DCCH/ BCCH.

To be able to test the downlink radio bearer using the UE loopback function, the reference radio bearer configuration according to TS 34.108, clause 6.10.2.4.4.2 (Interactive/Background 32 kbps PS RAB + Interactive/Background 32 kbps PS RAB + SRB for CCCH + SRB for DCCH on PRACH) is used in uplink.

### 14.4.2a.1.3 Method of Test

The contents of System Information Block type shall be as per the specific message content below.

See 14.1.1 for test procedure.

NOTE The test procedure for single radio bearer configurations is used as there are no uplink transport format combination for simultaneous data transmission on the PS radio bearers, nor any transport format combination for simultaneous data transmission and signalling.

Uplink TFS:

| | TFI | RB7+RB8+SRB (2x32 kbps on RACH) |
|---|---|---|
| TFS | TF0, bits | 1x168 |
| | TF1, bits | 1x360 |

Uplink TFCS:

| NOTE: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.<br>RB7 and RB8: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). The UL RLC SDU size parameter has been set to the payload size of the UL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). | | | | | |

Specific Message Contents

Use the default parameter values for the system information block 5 with the same type specified in clause

6.1.1 of TS 34.108, with the following exceptions

| Information Element | Value/remark |
|---|---|
| - SIB6 indicator | FALSE |

#### 14.4.2a.1.4 Test Requirements

See 14.1.1 for definition of step 15

1. At step 15 the UE transmitted transport format shall be TF1 (1x360).
2. At step 15 the UE shall return
   - for sub test 1: RLC SDUs on RB7 having the same content as sent by SS
   - for sub test 2: RLC SDUs on RB8 having the same content as sent by SS

### 14.4.2a.2 Two SCCPCHs: Interactive/Background 32 kbps PS RAB + Interactive/Background 32 kbps PS RAB + SRBs for CCCH + SRB for DCCH + SRB for BCCH

#### 14.4.2a.2.1 Conformance requirement

See 14.2.4.1.

#### 14.4.2a.2.2 Test purpose

To verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clauses 6.10.2.4.3.2 and 6.10.2.4.4.2 for the case when three SCCPCHs are used in this SYSTEM INFORMATION configuration. The first SCCPCH carries the PCH and both the second and third SCCPCHs carry the FACH for two Interactive/Background 32 kbps PS RABs and the FACH for SRBs on CCCH/ DCCH/ BCCH.

To be able to test the downlink radio bearer using the UE loopback function, the reference radio bearer configuration according to TS 34.108, clause 6.10.2.4.4.2 (Interactive/Background 32 kbps PS RAB + Interactive/Background 32 kbps PS RAB + SRB for CCCH + SRB for DCCH on PRACH) is used in uplink.

### 14.4.2a.2.3 Method of Test

The contents of System Information Block type 5 / System Information Block type 5bis shall be as specified in TS 34.108, clause 6.1.3.

See 14.1.1 for test procedure.

NOTE The test procedure for single radio bearer configurations is used as there are no uplink transport format combination for simultaneous data transmission on the PS radio bearers, nor any transport format combination for simultaneous data transmission and signalling.

Uplink TFS:

| | TFI | RB7 + RB8 (2x32 kbps on RACH) |

| NOTE: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.<br>RB7 and RB8: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). The UL RLC SDU size parameter has been set to the payload size of the UL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). | | | | | |

#### 14.4.2a.2.4 Test Requirements

See 14.1.1 for definition of step 15

1. At step 15 the UE transmitted transport format shall be TF1 (1x360).
2. At step 15 the UE shall return
   - for sub test 1: RLC SDUs on RB7 having the same content as sent by SS
   - for sub test 2: RLC SDUs on RB8 having the same content as sent by SS

### 14.4.2a.3 One SCCPCH/connected mode: Interactive/Background 32 kbps PS RAB + Interactive/Background 32 kbps PS RAB + SRBs for CCCH + SRB for DCCH + SRB for BCCH

#### 14.4.2a.3.1 Conformance requirement

See 14.2.4.1.

#### 14.4.2a.3.2 Test purpose

To verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clauses 6.10.2.4.3.2 and 6.10.2.4.4.2 for the case when three SCCPCHs are used in this SYSTEM INFORMATION configuration. The first SCCPCH carries the PCH. The second SCCPCH carries the FACH for CTCH (Cell Broadcast Service) and the FACH for SRBs on CCCH/ BCCH for idle mode UEs. The third SCCPCH carries the FACH for two Interactive/Background 32 kbps PS RABs and the FACH for SRBs on CCCH/ DCCH/ BCCH for connected mode UEs.

To be able to test the downlink radio bearer using the UE loopback function, the reference radio bearer configuration according to TS 34.108, clause 6.10.2.4.4.2 (Interactive/Background 32 kbps PS RAB + Interactive/Background 32 kbps PS RAB + SRB for CCCH + SRB for DCCH on PRACH) is used in uplink.

#### 14.4.2a.3.3 Method of Test

The contents of System Information Block type 5 / System Information Block type 5bis and 6 shall be as specified in TS 34.108, clause 6.1.2.

See 14.1.1 for test procedure.

NOTE The test procedure for single radio bearer configurations is used as there are no uplink transport format combination for simultaneous data transmission on the PS radio bearers, nor any transport format combination for simultaneous data transmission and signalling.

Uplink TFS:

The UL RLC SDU size parameter has been set to the payload size of the UL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). | | | | | |

#### 14.4.2a.3.4 Test Requirements

1. At step 15 the UE transmitted transport format shall be TF1 (1x360).
2. At step 15 the UE shall return
   - for sub test 1: RLC SDUs on RB7 having the same content as sent by SS
   - for sub test 2: RLC SDUs on RB8 having the same content as sent by SS

### 14.4.3 Interactive/Background 32 kbps RAB + SRBs for PCCH + SRB for CCCH + SRB for DCCH + SRB for BCCH

#### 14.4.3.1 Conformance requirement

See 14.2.4.1.

#### 14.4.3.2 Test purpose

To verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clauses 6.10.2.4.3.3 and 6.10.2.4.4.1 for the case when one SCCPCH is used in this SYSTEM INFORMATION (BCCH) configuration. The SCCPCH carries the PCH, the FACH for Interactive/Background 32 kbps PS RAB and the FACH for SRBs on CCCH/ DCCH/ BCCH.

To be able to test the downlink radio bearer using the UE loopback function, the reference radio bearer configuration according to TS 34.108, clause 6.10.2.4.4.1 (Interactive/Background 32 kbps PS RAB + SRB for CCCH + SRB for DCCH on PRACH) is used in uplink.

### 14.4.3.3 Method of Test

The contents of System Information Block type 5 / System Information Block type 5bis and 6 shall be as specified in TS 34.108, clause 6.1.

Uplink TFS:

| | TFI | RB8 (32kbps on RACH) |
|---|---|---|
| TFS | TF0, bits | 1x168 |
| | TF1, bits | 1x360 |

Sub-tests:

| Sub-test | Downlink TFCS under test | Uplink TFCS Under test | Implicitly tested | UL RLC SDU size (note) | Test data size (note) |
|---|---|---|---|---|---|
| 1 | DL_TFC6 | UL_TFC1 | DL_TFC0, UL_TFC0 | RB8: 312 bits | RB8: 312 bits |
| NOTE: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. RB8: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). The UL RLC SDU size parameter has been set to the payload size of the UL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit). | | | | | |

See 14.1.1 for test procedure.

### 14.4.3.4 Test requirements

See 14.1.1 for definition of step 15

1. At step 15 the UE transmitted transport format shall be RB8/TF1 (1x360).
2. At step 15 the UE shall return an RLC SDU on RB8 having the same content as sent by SS

## 14.4.4 RB for CTCH + SRB for CCCH +SRB for BCCH

### 14.4.4.1 Definition and applicability

Applicable only for a UE supporting Cell Broadcast Services (CBS) as a type of Broadcast/Multicast Services.

It shall be possible to indicate the reception of certain CBS message contents carried with certain activated CG message types in a clear way on UE side.

### 14.4.4.2 Conformance Requirement

See 14.2.4.1 and 7.4.2.1.2.

### 14.4.4.3 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.3.4 for the case when three SCCPCHs are used in this SYSTEM INFORMATION configuration. The first SCCPCH carries the PCH. The second SCCPCH carries the FACH for CTCH (Cell Broadcast Service) and the FACH for SRBs on CCCH/ BCCH for idle mode UEs. The third SCCPCH carries the FACH for Interactive/Background 32 kbps PS RAB and the FACH for SRBs on CCCH/ DCCH/ BCCH for connected mode UEs.

To verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clauses 6.10.2.4.3.3. Data transfer on CTCH is tested similar to testing BMC for a UE in idle mode as specified in TS 34.123-1, clause 7.4.2, data transfer on CCCH is tested by establishing a RRC connection.

### 14.4.4.4 Method of Test

Initial conditions:

The contents of System Information Block type 1 shall be as per the specific message content.

The contents of System Information Block type 5 / System Information Block type 5bis and 6 shall be as specified in TS 34.108, clause 6.1.2.

The UE is RRC idle mode, the BMC entity is established.

The CB message ID stored on the SIM shall be known for this test (parameter for CBS PDUs). The CBS data type shall be allocated and activated in the UE.

Related ICS/IXIT Statement(s)

As in clause 7.4.2.1.4

Uplink TFS:

| | **TFI** | **RB7+SRB (32 kbps on RACH)** |
|---|---|---|
| TFS | TF0, bits | 1x168 |
| | TF1, bits | 1x360 |

Uplink TFCS:

| **TFCI** | **RB7+SRB** |
|---|---|
| UL_TFC0 | TF0 |
| UL_TFC1 | TF1 |

Downlink TFS:

| | | RB7 (32 kbps on CTCH) | SRBs |
|---|---|---|---|
| TFS | TF0, bits | 0x168 | 0x168 |
| | TF1, bits | 1x168 | 1x168 |

Downlink TFCS:

| TFCI | (RB7, SRB) |
|---|---|
| DL_TFC0 | (TF0, TF0) |
| DL_TFC1 | (TF1, TF0) |
| DL_TFC2 | (TF0, TF1) |

Test Procedure:

a) The UE in RRC Idle mode is triggered to wait for the next system information. The UE is activated to receive CBS messages.

b) The UE and the SS have configured their RLC, MAC, and PHYs layers with all CB related system information.

c) The SS sends the CVS message containing an activated CGS message type according to CB-Data 1 to the UE; this shall be repeated for CPREP times (indicated by the parameter "repetition period").

d) The UE indicates in an unambiguous way, that this message was received.

e) Steps 1 – 4 in the Expected sequence are followed by the steps 2 – 6 of the test procedure according to clause 14.1.1.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | SYSTEM INFORMATION | |
| 2 | | | | The SS waits for about 10 s to make sure, that the UE is configured to receive CBS data |
| 3 | ← | | BMC CBS Message | Activated CBS message with CB Data 1 message content as described by the manufacturer. This message shall be repeated "CPREP" times, Parameter:<br>- Message_ID,<br>- Serial-No,<br>- Data coding scheme,<br>- CB-Data 1, |
| 4 | | | | After having received the BMC CBS message the UE shall indicate the reception of CB Data 1 in a clear way. |

Specific Message Contents

Use the default parameter values for the System Information Block type 1 with the same type specified in clause 6.1.0b of TS 34.108, with the following exceptions

| Information Element | Conditions | Value/remark |
|---|---|---|
| - CN domain identity | | PS |
| - CHOICE CN Type | | GSM-MAP |
| - CN domain specific NAS system information | | |
| - GSM-MAP NAS system information | | 05 00H |
| - CN domain specific DRX cycle length coefficient | | 9 |
| - CN domain identity | | CS |
| - CHOICE CN Type | | GSM-MAP |
| - CN domain specific NAS system information | | |
| - GSM-MAP NAS system information | | 1E 01H |
| - CN domain specific DRX cycle length coefficient | | 9 |

#### 14.4.4.5 Test Requirements

At step 4 in the Expected sequence, the UE shall store and decode a received activated CBS message.

At step e of the test procedure according to clause 14.1.1 the RRC Connection shall be established.

### 14.4.5 64.8kbps RB for MTCH with 80 ms TTI / MBMS Broadcast Service

#### 14.4.5.1 Conformance Requirement

The UE shall correctly receive user data on the MTCH from the peer to peer RLC entity according to the configured MTCH.

Reference(s)

3GPP TS 25.2xx series (Physical Layer)

3GPP TS 25.321 (MAC)

3GPP TS 25.322 (RLC)

3GPP TS 25.331 (RRC)

#### 14.4.5.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.3.5.

#### 14.4.5.3 Method of Test

Initial Condition

The UE is interested in the broadcast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).Related ICS/IXIT statements

MBMS Broadcast service application available on UE Yes / No

Test Procedure

See 14.1.5 for test procedure.

#### 14.4.5.4 Test Requirements

See 14.1.5 for definition of steps 8 and 12.

1. For the first sub-test: At step 8 the UE shall send a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE with a RLC SDU counter value greater than zero.

2. For the second and following sub-tests: At step 12 the UE shall send a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE with a RLC SDU counter value greater than the reported value at previous sub-test.

NOTE: For UE in UE test loop mode 3 then the RLC SDU counter value is only reset upon reception of CLOSE UE TEST LOOP message configuring UE test loop mode 3. As the generic test procedure in section 14.1.5 runs through all sub-tests without deactivating the UE test mode then the SS needs to check the reported counter value against the value reported at the previous sub-test.

## 14.4.5m 64.8kbps RB for MTCH with 80 ms TTI / MBMS Multicast Service

#### 14.4.5m.1 Conformance Requirement

Same conformance requirement as in clause 14.4.5.1.

#### 14.4.5m.2 Test purpose

Same test purpose as in clause 14.4.5.2.

14.4.5m.3 Method of Test

Initial Condition

The UE has joined the multicast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

MBMS Multicast service application available on UE Yes / No

Test Procedure

Same test procedure as in clause 14.4.5.3

14.4.5m.4 Test Requirements

Same test requirements as in clause 14.4.5.4.

## 14.4.5n 64.8kbps RB for MTCH with 80 ms TTI / MBMS Multicast Service in MBSFN mode

14.4.5n.1 Conformance Requirement

Same conformance requirement as in clause 14.4.5.1.

14.4.5n.2 Test purpose

Same test purpose as in clause 14.4.5.2.

14.4.5n.3 Method of Test

Initial conditions

System Simulator:

- MBSFN carrier: 1 cell, Cell 31 (PLMN1). In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C1 and Default1 MCCH scheduling (No ongoing session) according to subclause 11.2 of TS 34.108.
- Unicast carrier : 1 cell, Cell 1 with default parameters.

User Equipment:

- On the unicast carrier cell the UE is in registered Idle Mode on PS (state 3) if the UE only supports PS domain or registered Idle Mode on CS/PS (state 7) if the UE supports both CS and PS domains, as specified in clause 7.2.2 of TS 34.108.
- The UE is in MBSFN Idle mode with one activated service as specified in clause 7.6.4 of TS 34.108. The UE has selected (i.e. it is included in MBMS_ACTIVATED_SERVICES variable) a national service for which a session will start on MBSFN Cell 31 (see TS 34.108 clause 11.2.4) during the test.

Related ICS/IXIT statements

- MBMS Broadcast services in MBSFN mode application available on UE Yes/No.
- Support of transmit and receive functions available on UE Yes/No.
- Support of MBSFN receive only function available on UE Yes/No.

Test Procedure

### 14.4.7n.1 Conformance Requirement

Same conformance requirement as in clause 14.4.7.1.

### 14.4.7n.2 Test purpose

Same test purpose as in clause 14.4.7.2.

### 14.4.7n.3 Method of Test

Initial conditions

System Simulator:

- MBSFN carrier: 1 cell, Cell 31 (PLMN1). In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C1 and Default1 MCCH scheduling (No ongoing session) according to subclause 11.2 of TS 34.108.
- Unicast carrier : 1 cell, Cell 1 with default parameters.

User Equipment:

- On the unicast carrier cell the UE is in registered Idle Mode on PS (state 3) if the UE only supports PS domain or registered Idle Mode on CS/PS (state 7) if the UE supports both CS and PS domains, as specified in clause 7.2.2 of TS 34.108.
- The UE is in MBSFN Idle mode with one activated service as specified in clause 7.6.4 of TS 34.108. The UE has selected (i.e. it is included in MBMS_ACTIVATED_SERVICES variable) a national service for which a session will start on MBSFN Cell 31 (see TS 34.108 clause 11.2.4) during the test.

Related ICS/IXIT statements

- MBMS Broadcast services in MBSFN mode application available on UE Yes/No.
- Support of transmit and receive functions available on UE Yes/No.
- Support of MBSFN receive only function available on UE Yes/No.

Test Procedure

See 14.1.5m for test procedure.

Same Downlink TFS, Downlink TFCS and Sub-tests as in clause 14.4.7.3

#### 14.4.7n.4 Test Requirements

Same test requirements as in clause 14.4.7.4.

## 14.5 Combinations on PRACH

### 14.5.1 Interactive/Background 32 kbps PS RAB + SRB for CCCH + SRB for DCCH

The reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.4.1 is implicitly tested by the test cases 14.4.2.1, 14.4.2.2, 14.4.2.3 and 14.4.3.

### 14.5.2 Interactive/Background 32 kbps PS RAB + Interactive/Background 32 kbps PS RAB + SRB for CCCH + SRB for DCCH

The reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.4.2 is implicitly tested by the test cases 14.4.2a.1, 14.4.2a.2 and 14.4.2a.3.

### 14.5.3 Interactive/Background / UL:32 DL: [max bit rate depending on UE category] with fixed RLC and MAC-ehs / PS RAB + SRBs for DCCH on RACH and SRB with fixed RLC and MAC-ehs on HS-DSCH / DL:QPSK

#### 14.5.3.1 Conformance requirement

See 14.2.4.1.

#### 14.5.3.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clauses 6.10.2.4.7.1 for QPSK using the downlink enhanced Layer 2 configuration with Fixed RLC and MAC-ehs

#### 14.5.3.3 Method of Test

The contents of System Information Block type 5 / System Information Block type 5bis and 6 shall be as specified in TS 34.108, clause 6.1.2.

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-7 IE “HS-DSCH physical layer category extension”. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is configured.

The following parameters are specific for this test case:

| Parameter | Value |
|---|---|
| Radio bearer | TS 34.108, clause 6.10.2.4.4.3 using downlink MAC-d flow parameters |
| MAC-ehs receiver window size | 16 |
| RLC Transmission window size | See sub-test table |
| RLC Receiving window size | See sub-test table |

The generic test procedure in 14.1.3.5a is run for each sub-test with QPSK and non-MIMO case using condition A24 for Radio Bearer Setup.

Uplink TFS:

| | TFI | RB7+SRB (32kbps on RACH) |
|---|---|---|
| TFS | TF0, bits | 1x168 |
| | TF1, bits | 1x360 |

Uplink TFCS:

| TFCI | RB7+SRB |
|---|---|
| UL_TFC0 | TF0 |
| UL_TFC1 | TF1 |

Sub-tests:

| Sub-test | UE Category | Number of HARQ processes | RLC Receiving window size (note 1) | RLC Trans-mission window size (note 1) | MAC-d PDU size bits | Uplink TFCS Under test | Implicitly tested | Restricted UL TFCIs (note 2) | UL RLC SDU size bits (note 3) |
|---|---|---|---|---|---|---|---|---|---|
| 1 | 5 | 6 | 512 | 256 | 336 | UL_TFC1 | UL_TFC0 | UL_TFC0, UL_TFC1 | RB7: 312 |
| | 6 | 6 | 512 | 256 | | | | | |
| | 7 | 6 | 1536 | 512 | | | | | |
| | 8 | 6 | 1536 | 512 | | | | | |
| | 9 | 6 | 2047 | 512 | | | | | |
| | 10 | 6 | 2047 | 512 | | | | | |
| | 12 | 6 | 1024 | 128 | | | | | |
| | 13 | 6 | 2047 | 512 | | | | | |
| | 14 | 6 | 2047 | 512 | | | | | |
| | 15 | 6 | 2047 | 512 | | | | | |
| | 16 | 6 | 2047 | 512 | | | | | |
| | 17 | 6 | 2047 | 512 | | | | | |
| | 18 | 6 | 2047 | 512 | | | | | |

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.
NOTE 2: UL_TFC0, UL_TFC1 are part of minimum set of TFCIs.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit), where N is the number of transport blocks for the UL transport format under test. This will enable the UE to return the data within one UL TTI.

#### 14.5.3.4 Test Requirements

See 14.1.3.5a for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 18 the UE transmitted transport format shall be RB7/TF1 (1x1360)
3. At step 18 and for each TFRC test point:

   The UE shall for each radio bearer return the equal number of RLC SDUs on RB7 as sent by the SS in downlink. If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return RLC SDUs where the SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

   NOTE: The generic test procedure as specified in 14.1.3.5a sends either 1 SDU or 4 SDUs depending on the transport block size under tests. For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

## 14.6 Combinations on DPCH and HS-PDSCH

### 14.6.1 Interactive or background / UL:64 DL: [max bit rate depending on UE category] / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

#### 14.6.1.1 Conformance requirement

For all transmissions of a transport block, the transport block size is derived from the TFRI value as specified below, except only in those cases of retransmissions where the Node-B selects a combination for which no mapping exists between the original transport block size and the selected combination of channelisation Code set and modulation type. In such cases, the transport block size index value signalled to the UE shall be set to 111111, i.e., $k_i$=63.

Let $k_i$ be the TFRI signalled on the HS-SCCH value and let $k_{0,i}$ be the value in the table 9.2.3.1 corresponding to the modulation and the number of codes signalled on the HS-SCCH. Let $k_t$ be the sum of the two values: $k_t = k_i + k_{0,i}$. The transport block size $L(k_t)$ can be obtained by accessing the position $k_t$ in the table in Annex A (normative) or by using the formula below (informative):

If $k_t < 40$

$$L(k_t) = 125 + 12 \cdot k_t$$

else

$$L(k_t) = \lfloor L_{\min} p^{k_t} \rfloor$$
$$p = 2085/2048$$
$$L_{\min} = 296$$

End

**Table 9.2.3.1: Values of $k_{0,i}$ for different numbers of channelization codes and modulation schemes**

| Combination *i* | Modulation scheme | Number of channelization codes | $k_{0,i}$ |
|---|---|---|---|
| 0 | QPSK | 1 | 1 |
| 1 | | 2 | 40 |
| 2 | | 3 | 63 |
| 3 | | 4 | 79 |
| 4 | | 5 | 92 |
| 5 | | 6 | 102 |
| 6 | | 7 | 111 |
| 7 | | 8 | 118 |
| 8 | | 9 | 125 |
| 9 | | 10 | 131 |
| 10 | | 11 | 136 |
| 11 | | 12 | 141 |

Reference(s)

3GPP TS 25.321, 9.2.3.1 and Annex A

### 14.6.1.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.1.

### 14.6.1.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-5 IE “HS-DSCH physical layer category” (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

The following parameters are specific for this test case:

| Parameter | Value |
|---|---|
| MAC-hs receiver window size | 16 |
| RLC Transmission window size | See sub-test table |
| RLC Receiving window size | See sub-test table |

The generic test procedure in 14.1.3.5 is run for each sub-test.

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.
NOTE 2: UL_TFC0, UL_TFC1 and UL_TFC5 are part of minimum set of TFCIs.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit), where N is the number of transport blocks for the UL transport format under test. This will enable the UE to return th data within one UL TTI.

#### 14.6.1.4 Test requirements

See 14.1.3.5 for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 18 the UE transmitted transport format shall be
   - for sub-test 1: TF1 (1x336).
   - for sub-test 2: TF2 (2x336).
   - for sub-test 3: TF3 (3x336).
   - for sub-test 4: TF4 (4x336)
3. At step 18 and for each TFRC test point:

   If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return 4 RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return 4 RLC SDUs where each SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

   NOTE The generic test procedure as specified in 14.1.3.5.2 sends 4 SDUs of size ($N_{PDUs}$ * MAC-d PDU payload size) / 4 minus 8 bits (size of 7 bit length indicator and expansion bit). For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

| | 11 | 3 | 512 | 128 | | | | | |
| | 12 | 8 | 512 | 128 | | | | | |

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.
NOTE 2: UL_TFC0, UL_TFC1 and UL_TFC5 are part of minimum set of TFCIs.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit), where N is the number of transport blocks for the UL transport format under test. This will enable the UE to return th data within one UL TTI.

#### 14.6.1a.4 Test requirements

See 14.1.3.5.2 for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 18 the UE transmitted transport format shall be
   - for sub-test 1: TF1 (1x336).
   - for sub-test 2: TF2 (2x336).
   - for sub-test 3: TF3 (4x336).
   - for sub-test 4: TF4 (8x336).
3. At step 18 and for each TFRC test point:

   If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return 4 RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return 4 RLC SDUs where each SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

   NOTE: The generic test procedure as specified in 14.1.3.5.2 sends 4 SDUs of size ($N_{PDUs}$ * MAC-d PDU payload size) / 4 minus 8 bits (size of 7 bit length indicator and expansion bit). For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

## 14.6.1b Interactive or background / UL:64 DL: [max bit rate depending on UE category] with Fixed RLC and MAC-ehs PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / DL: QPSK and 16QAM

#### 14.6.1b.1 Conformance requirement

See 14.6.1.1.

#### 14.6.1b.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.1 for the QPSK, 16QAM and non-MIMO case using the downlink enhanced Layer 2 configuration with Fixed RLC and MAC-ehs .

#### 14.6.1b.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-7 IE “HS-DSCH physical layer category extension”. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is configured.

The following parameters are specific for this test case:

| Parameter | Value |
|---|---|
| Radio bearer | TS 34.108, clause 6.10.2.4.5.1 using downlink MAC-d flow parameters according to Alt 2 (Fixed RLC and MAC-ehs) |
| MAC-ehs receiver window size | 16 |
| RLC Transmission window size | See sub-test table |
| RLC Receiving window size | See sub-test table |

The generic test procedure in 14.1.3.5a is run for each sub-test for test execution 1 and 2.

| Execution counter | Downlink Modulation Scheme (M) | MIMO |
|---|---|---|
| 1 | QPSK | No |
| 2 | 16QAM | No |

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.
NOTE 2: UL_TFC0, UL_TFC1 and UL_TFC5 are part of minimum set of TFCIs.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit), where N is the number of transport blocks for the UL transport format under test. This will enable the UE to return th data within one UL TTI.

#### 14.6.1b.4 Test requirements

See 14.1.3.5a for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 18 the UE transmitted transport format shall be
   - for sub-test 1: TF1 (1x336).
   - for sub-test 2: TF2 (2x336).
   - for sub-test 3: TF3 (3x336).
   - for sub-test 4: TF4 (4x336)
3. At step 18 and for each TFRC test point:

   The UE shall for each radio bearer return the equal number RLC SDUs as sent by the SS in downlink. If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return RLC SDUs where the SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

   NOTE: The generic test procedure as specified in 14.1.3.5a sends either 1 SDU or 4 SDUs depending on the transport block size under tests. For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

### 14.6.1c Interactive or background / UL:64 DL: [max bit rate depending on UE category] with Flexible RLC and MAC-ehs PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / DL: 64QAM

#### 14.6.1c.1 Conformance requirement

See 14.6.1.1.

#### 14.6.1c.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.1 for the 64QAM and non-MIMO case using the downlink enhanced Layer 2 configuration with Flexible RLC and MAC-ehs .

#### 14.6.1c.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-7 IE “HS-DSCH physical layer category extension”. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is configured.

The following parameters are specific for this test case:

| Parameter | Value |
|---|---|
| Radio bearer | TS 34.108, clause 6.10.2.4.5.1 using downlink MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-ehs) |

| 1 | 15 to 20 | 12 | 2047 | 512 | Flexible | UL_TFC1 | UL_TFC0, UL_TFC5 | UL_TFC0, UL_TFC1, UL_TFC5, UL_TFC6 | RB5: 312 |
| 2 | 15 to 20 | 12 | 1024 | 1024 | Flexible | UL_TFC2 | UL_TFC0, UL_TFC5 | UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC5, UL_TFC7 | RB5: 632 |
| 3 | 15 to 20 | 16 | 2047 | 1024 | Flexible | UL_TFC3 | UL_TFC0, UL_TFC5 | UL_TFC0, UL_TFC1, UL_TFC3, UL_TFC5, UL_TFC8 | RB5: 952 |
| 4 | 15 to 20 | 12 | 1024 | 1024 | Flexible | UL_TFC4 | UL_TFC0, UL_TFC5 | UL_TFC0, UL_TFC1, UL_TFC4, UL_TFC5, UL_TFC9 | RB5: 1272 |

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.
NOTE 2: UL_TFC0, UL_TFC1 and UL_TFC5 are part of minimum set of TFCIs.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit), where N is the number of transport blocks for the UL transport format under test. This will enable the UE to return th data within one UL TTI.
NOTE 4: For Subtest 3, when 16QAM/16QAM modulation is executed, test points 33 and above are not applicable.

### 14.6.1d.4 Test requirements

See 14.1.3.5a for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 18 the UE transmitted transport format shall be
   - for sub-test 1: TF1 (1x336).
   - for sub-test 2: TF2 (2x336).

- for sub-test 3: TF3 (3x336).
- for sub-test 4: TF4 (4x336)

3. At step 18 and for each TFRC test point:

   The UE shall for each radio bearer return the equal number RLC SDUs as sent by the SS in downlink. If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return RLC SDUs where the SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

   NOTE: The generic test procedure as specified in 14.1.3.5a sends either 2 SDU or 8 SDUs depending on the transport block size under tests. For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

## 14.6.1e Interactive or background / UL:64 DL: [max bit rate depending on UE category] with Flexible RLC and MAC-ehs PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / DL: 64QAM and MIMO

### 14.6.1e.1 Conformance requirement

See 14.6.1.1.

### 14.6.1e.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.1 for the 64QAM and MIMO case using the downlink enhanced Layer 2 configuration with Flexible RLC and MAC-ehs .

### 14.6.1e.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-7 IE “HS-DSCH physical layer category extension”. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is configured.

The following parameters are specific for this test case:

| Parameter | Value | Comments |
|---|---|---|
| Radio bearer | TS 34.108, clause 6.10.2.4.5.1 using downlink MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-ehs). | |
| MIMO N_cqi_typeA/M_cqi ratio | 1/1 | 25.331, 10.3.6.41a |
| Second CPICH pattern | Antenna1 S-CPICH | 25.331, 10.3.6.41b |
| S-CPICH Channelisation code | 12 | |
| precodingWeight2 | 00 | 25.212, Table 14A |
| MAC-ehs receiver window size | 16 | |
| RLC Transmission window size | See sub-test table | |
| RLC Receiving window size | See sub-test table | |

The generic test procedure in 14.1.3.5a is run for each sub-test for test execution 1 to 3.

| Execution counter | Downlink Modulation Scheme (M1) MIMO data flow#1 | Downlink Modulation Scheme (M2) MIMO data flow#2 | Number of HARQ processes | MIMO |
|---|---|---|---|---|
| 1 | 64QAM | QPSK | 12 | Yes |
| 2 | 64QAM | 16QAM | 12 | Yes |
| 3 | 64QAM | 64QAM | 12 | Yes |

Uplink TFS:

Sub-tests:

| Sub-test | UE Category | RLC Receiving window size (note 1) | RLC Trans-mission window size (note 1) | MAC-d PDU size (bits) | Uplink TFCS Under test | Implicitly tested | Restricted UL TFCIs (note 2) | UL RLC SDU size (bits) (note 3) | Test dat size (bit (note 4 |
|---|---|---|---|---|---|---|---|---|---|
| 1 | 19 and 20 | 2047 | 1024 | Flexible | UL_TFC4 | UL_TFC0, UL_TFC5 | UL_TFC0, UL_TFC1, UL_TFC4, UL_TFC5, UL_TFC9 | RB5: 1272 | See note |

NOTE 1: The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.
NOTE 2: UL_TFC0, UL_TFC1 and UL_TFC5 are part of minimum set of TFCIs.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit) where N is the number of transport blocks for the UL transport format under test. This will enable the UE to return one complete UL RLC SDU per UL TTI.
NOTE 4: The test data size and number of DL RLC SDUs for RB5 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5a.

### 14.6.1e.4 Test requirements

See 14.1.3.5a for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 18 the UE transmitted transport format shall be
   - for sub-test 1: TF4 (4x336)
3. At step 18 and for each TFRC test point:

   The UE shall for each radio bearer return the equal number RLC SDUs as sent by the SS in downlink. If the

downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return RLC SDUs where the SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

NOTE: The generic test procedure as specified in 14.1.3.5a sends either 2 SDU or 8 SDUs depending on the transport block size under tests.

## 14.6.1f Interactive or background / UL:64 DL: [max bit rate depending on UE category] with Flexible RLC and MAC-ehs PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / DL: QPSK, 16QAM and Dual-Cell

### 14.6.1f.1 Conformance requirement

See 14.6.1.1.

### 14.6.1f.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.1 for the QPSK, 16QAM and Dual-Cell case using the downlink enhanced Layer 2 configuration with Flexible RLC and MAC-ehs .

### 14.6.1f.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-8 IE “HS-DSCH physical layer category extension 2”. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is configured.

The following parameters are specific for this test case:

| Parameter | Value | Comments |
|---|---|---|
| Radio bearer | TS 34.108, clause 6.10.2.4.5.1 using downlink MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-ehs). | |
| MAC-ehs receiver window size | 16 | |
| RLC Transmission window size | See sub-test table | |
| RLC Receiving window size | See sub-test table | |

The generic test procedure in 14.1.3.5a is run for each sub-test for test execution 1 to 3.

| Execution counter | Downlink Modulation Scheme (M1) Dual-Cell data flow#1 | Downlink Modulation Scheme (M2) Dual-Cell data flow#2 | Number of HARQ processes | Dual-Cell |
|---|---|---|---|---|
| 1 | QPSK | QPSK | 6 | Yes |

Sub-tests:

| Sub-test | UE Category | RLC Receiving window size (note 1) | RLC Trans-mission window size (note 1) | MAC-d PDU size (bits) | Uplink TFCS Under test | Implicitly tested | Restricted UL TFCIs (note 2) | UL RLC SDU size (bits) (note 3) | Test data size (bits) (note 4) |
|---|---|---|---|---|---|---|---|---|---|
| 1 | 21 to 24 | 2047 | 1024 | Flexible | UL_TFC4 | UL_TFC0, UL_TFC5 | UL_TFC0, UL_TFC1, UL_TFC4, UL_TFC5, UL_TFC9 | RB5: 1272 | See note 4 |

NOTE 1: The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.
NOTE 2: UL_TFC0, UL_TFC1 and UL_TFC5 are part of minimum set of TFCIs.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit), where N is the number of transport blocks for the UL transport format under test. This will enable the UE to return the data within one UL TTI.
NOTE 4: The test data size and number of DL RLC SDUs for RB5 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5a.

### 14.6.1f.4 Test requirements

See 14.1.3.5a for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 18 the UE transmitted transport format shall be
   - for sub-test 1: TF4 (4x336)
3. At step 18 and for each TFRC test point:

   The UE shall for each radio bearer return the equal number RLC SDUs as sent by the SS in downlink. If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return RLC SDUs where the SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

   NOTE: The generic test procedure as specified in 14.1.3.5a sends either 2 SDU or 8 SDUs depending on the transport block size under tests.

# 14.6.1g Interactive or background / UL:64 DL: [max bit rate depending on UE category] with Flexible RLC and MAC-ehs PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / DL: 64QAM and Dual-Cell

## 14.6.1g.1 Conformance requirement

See 14.6.1.1.

## 14.6.1g.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.1 for the 64QAM and Dual-Cell case using the downlink enhanced Layer 2 configuration with Flexible RLC and MAC-ehs .

## 14.6.1g.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-8 IE "HS-DSCH physical layer category extension 2". This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is configured.

The following parameters are specific for this test case:

| Parameter | Value | Comments |
|---|---|---|
| Radio bearer | TS 34.108, clause 6.10.2.4.5.1 using downlink MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-ehs). | |
| MAC-ehs receiver window size | 16 | |
| RLC Transmission window size | See sub-test table | |
| RLC Receiving window size | See sub-test table | |

The generic test procedure in 14.1.3.5a is run for each sub-test for test execution 1 to 3.

| Execution counter | Downlink Modulation Scheme (M1) Dual-Cell data flow#1 | Downlink Modulation Scheme (M2) Dual-Cell data flow#2 | Number of HARQ processes | Dual-Cell |
|---|---|---|---|---|
| 1 | 64QAM | QPSK | 6 | Yes |

Sub-tests:

| Sub-test | UE Category | RLC Receiving window size (note 1) | RLC Trans-mission window size (note 1) | MAC-d PDU size (bits) | Uplink TFCS Under test | Implicitly tested | Restricted UL TFCIs (note 2) | UL RLC SDU size (bits) (note 3) | Test data size (bits) (note 4) |
|---|---|---|---|---|---|---|---|---|---|
| 1 | 23 and 24 | 2047 | 1024 | Flexible | UL_TFC4 | UL_TFC0, UL_TFC5 | UL_TFC0, UL_TFC1, UL_TFC4, UL_TFC5, UL_TFC9 | RB5: 1272 | See note 4 |

NOTE 1: The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.
NOTE 2: UL_TFC0, UL_TFC1 and UL_TFC5 are part of minimum set of TFCIs.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit), where N is the number of transport blocks for the UL transport format under test. This will enable the UE to return the data within one UL TTI.
NOTE 4: The test data size and number of DL RLC SDUs for RB5 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5a.

### 14.6.1g.4 Test requirements

See 14.1.3.5a for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 18 the UE transmitted transport format shall be
   - for sub-test 1: TF4 (4x336)
3. At step 18 and for each TFRC test point:

   The UE shall for each radio bearer return the equal number RLC SDUs as sent by the SS in downlink. If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return RLC SDUs where the SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

   NOTE: The generic test procedure as specified in 14.1.3.5a sends either 2 SDU or 8 SDUs depending on the transport block size under tests.

# 14.6.1h Interactive or background / UL:64 DL: [max bit rate depending on UE category] with Flexible RLC and MAC-ehs PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / DL: 16QAM, Dual-Cell and MIMO

## 14.6.1h.1 Conformance requirement

See 14.6.1.1.

## 14.6.1h.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.1 for the 16QAM, MIMO and Dual-Cell case using the downlink enhanced Layer 2 configuration with Flexible RLC and MAC-ehs .

## 14.6.1h.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-9 IE "HS-DSCH physical layer category extension 3". This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is configured.

The following parameters are specific for this test case:

| Parameter | Value | Comments |
|---|---|---|
| Radio bearer | TS 34.108, clause 6.10.2.4.5.1 using downlink MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-ehs). | |
| MAC-ehs receiver window size | 64 | |

| RLC Receiving window size | See sub-test table | |

| Execution counter | Dual-Cell#1 | | Dual-Cell#2 | | Number of HARQ processes |
|---|---|---|---|---|---|
| | Downlink Modulation Scheme (M1) For Cell#1 data flow#1 | Downlink Modulation Scheme (M2) For Cell#1 data flow#2 | Downlink Modulation Scheme (M3) For Cell#2 data flow#1 | Downlink Modulation Scheme (M4) For Cell#2 data flow#2 | |
| 1 | 16QAM | 16QAM | 16QAM | 16QAM | 12 |

Uplink TFS:

| | TFI | RB5 (64 kbps, 20 ms TTI) | DCCH |
|---|---|---|---|
| TFS | TF0, bits | 0x336 | 0x148 |
| | TF1, bits | 1x336 | 1x148 |
| | TF2, bits | 2x336 | N/A |
| | TF3, bits | 3x336 | N/A |
| | TF4, bits | 4x336 | N/A |

Uplink TFCS:

| TFCI | (RB5, DCCH) |
|---|---|
| UL_TFC0 | (TF0, TF0) |
| UL_TFC1 | (TF1, TF0) |
| UL_TFC2 | (TF2, TF0) |
| UL_TFC3 | (TF3, TF0) |
| UL_TFC4 | (TF4, TF0) |
| UL_TFC5 | (TF0, TF1) |
| UL_TFC6 | (TF1, TF1) |
| UL_TFC7 | (TF2, TF1) |
| UL_TFC8 | (TF3, TF1) |
| UL_TFC9 | (TF4, TF1) |

The generic test procedure in 14.1.3.5a is run for each sub-test.

Sub-tests:

| Sub-test | UE Category | RLC Receiving window size (note 1) | RLC Trans-mission window size (note 1) | MAC-d PDU size (bits) | Uplink TFCS Under test | Implicitly tested | Restricted UL TFCIs (note 2) | UL RLC SDU size (bits) (note 3) | Test data size (bits) (note 4) |
|---|---|---|---|---|---|---|---|---|---|
| 1 | 25 to 28 | 2047 | 1024 | Flexible | UL_TFC4 | UL_TFC0, UL_TFC5 | UL_TFC0, UL_TFC1, UL_TFC4, UL_TFC5, UL_TFC9 | RB5: 1272 | See note 4 |

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.
NOTE 2: UL_TFC0, UL_TFC1 and UL_TFC5 are part of minimum set of TFCIs.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit), where N is the number of transport blocks for the UL transport format under test. This will enable the UE to return th data within one UL TTI.
NOTE 4: The test data size for RB5 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5a.

### 14.6.1h.4 Test requirements

See 14.1.3.5a for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 18 the UE transmitted transport format shall be TF1 (1x336).
3. At step 18 and for each TFRC test point:

   The UE shall for each radio bearer return the equal number RLC SDUs as sent by the SS in downlink. If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return RLC SDUs where the SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

   NOTE: The generic test procedure as specified in 14.1.3.5a sends either 2 SDU or 8 SDUs depending on the transport block size under tests. For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

# 14.6.1i Interactive or background / UL:64 DL: [max bit rate depending on UE category] with Flexible RLC and MAC-ehs PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / DL: 64QAM, Dual-Cell and MIMO

## 14.6.1i.1 Conformance requirement

See 14.6.1.1.

## 14.6.1i.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.1 for the combination of 16QAM/64QAM, MIMO and Dual-Cell case using the downlink enhanced Layer 2 configuration with Flexible RLC and MAC-ehs .

## 14.6.1i.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-9 IE "HS-DSCH physical layer category extension 3". This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is configured.

The following parameters are specific for this test case:

| Parameter | Value | Comments |
|---|---|---|
| Radio bearer | TS 34.108, clause 6.10.2.4.5.1 using downlink MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-ehs). | |
| MAC-ehs receiver window size | 64 | |
| precodingWeight2 | 00 | 25.212, Table 14A |
| RLC Transmission window size | See sub-test table | |
| RLC Receiving window size | See sub-test table | |

The generic test procedure in 14.1.3.5a is run for each sub-test for test execution 1 to 3.

Sub-tests:

| Sub-test | UE Category | RLC Receiving window size (note 1) | RLC Trans-mission window size (note 1) | MAC-d PDU size (bits) | Uplink TFCS Under test | Implicitly tested | Restricted UL TFCIs (note 2) | UL RLC SDU size (bits) (note 3) | Test data size (bits) (note 4) |
|---|---|---|---|---|---|---|---|---|---|
| 1 | 27 to 28 | 2047 | 1024 | Flexible | UL_TFC4 | UL_TFC0, UL_TFC5 | UL_TFC0, UL_TFC1, UL_TFC4, UL_TFC5, UL_TFC9 | RB5: 1272 | See note 4 |

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.
NOTE 2: UL_TFC0, UL_TFC1 and UL_TFC5 are part of minimum set of TFCIs.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit), where N is the number of transport blocks for the UL transport format under test. This will enable the UE to return th data within one UL TTI.
NOTE 4: The test data size for RB5 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5a.

### 14.6.1i.4 Test requirements

See 14.1.3.5a for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 18 the UE transmitted transport format shall be TF1 (1x336).
3. At step 18 and for each TFRC test point:

   The UE shall for each radio bearer return the equal number RLC SDUs as sent by the SS in downlink. If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return RLC SDUs where the SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

   NOTE: The generic test procedure as specified in 14.1.3.5a sends either 2 SDU or 8 SDUs depending on the transport block size under tests. For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

## 14.6.1j Interactive or background / UL: 64 DL: [max bit rate depending on UE category] with Flexible RLC and MAC-ehs PS RAB + UL: 3.4 DL: 3.4 kbps SRBs for DCCH / DL: QPSK, 16QAM, 64QAM and 3C - 3C on Single Band (3-0)

### 14.6.1j.1 Definition and applicability

UE categories (Cat 29, 30, 31 and 32) which support combination of 3C-HSDPA or 4C-HSDPA and 64QAM, QPSK and 16QAM

UE supports FDD.

### 14.6.1j.2 Conformance requirement

The UE shall be able to establish the UTRAN requested radio bearers within the UE's signalled radio access capabilities.

The UE shall correctly transfer user data from peer to peer RLC entities according to the requested radio bearer configuration.

#### Reference(s)

3GPP TS 25.331, clause 8.2.1

3GPP TS 25.2xx series (Physical Layer)

3GPP TS 25.321 (MAC)

3GPP TS 25.322 (RLC)

### 14.6.1j.3 Test purpose

When the reference radio bearer configuration as specified in TS 34.108 [9], clause 6.10.2.4.5.1 is configured for 3C-HSDPA, with downlink 16QAM, flexible RLC and MAC-ehs:

1. Verify that the UE is able to establish the radio bearer combination on Anchor And both Secondary cells.
2. Verify correct data transfer of the established radio bearer combination on Anchor And both Secondary cells.

### 14.6.1j.4 Method of test

#### Initial Condition

System Simulator: 3 cells –Cell 1/2/3 3C-HSDPA cell(s) with Cell 1 (f1) (Anchor Carrier), Cell 2 (f2) and Cell 3 (f3) (Secondary Carriers) – Three Carriers (One Anchor Carrier and Two Secondary Carriers) on DL Band A and no Carriers on DL Band B (Single Band 3C-HSDPA) where f1, f2 and f3 are adjacent frequencies.

SS: Table 5.0aB of TS 25.101

#### Related ICS/IXIT statement(s)

- UE supports FDD
- UE category supports combined 64QAM, Multi-Cell (3 Cells) (UE Category 29, 30, 31 or 32)

NOTE: The reference to HS-DSCH Categories refers to the UE capability as signalled in the Rel-10 IE “HS-DSCH physical layer category extension 4” or IE “HS-DSCH physical layer category extension 5”. This IE corresponds to the HS-DSCH category supported by the UE when Dual-Cell 3C and MAC-ehs is configured.

The following parameters are specific for this test case:

**Table 14.6.1j-1: Radio Bearer Parameters**

| Parameter | Value |
|---|---|
| Radio bearer | TS 34.108 [9], clause 6.10.2.4.5.1 using downlink MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-ehs) |
| MAC-ehs receiver window size | 64 |
| HS-DSCH MAC-d PDU size | Flexible |

The generic test procedure in 14.1.3.5b is run for each sub-test for test execution 1 to 5.

**Table 14.6.1j-2: Table of Execution Counter**

| Execution counter | Downlink Modulation Scheme (M1) Anchor Carrier-Cell data flow#1 | Downlink Modulation Scheme (M2) Secondary Carrier 1-Cell data flow#2 | Downlink Modulation Scheme (M3) Secondary Carrier 2-Cell data flow#3 | Number of HARQ processes |
|---|---|---|---|---|
| 1 | QPSK | QPSK | QPSK | 6 |

This will enable the UE to return th data within one UL TTI. | | | | | | | | | |

#### 14.6.2.4 Test requirements

See 14.1.3.5.2 for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 18 the UE transmitted transport format shall be
   - for sub-test 1: TF1 (1x336).
   - for sub-test 2: TF2 (2x336).
   - for sub-test 3: TF3 (4x336).
   - for sub-test 4: TF4 (8x336).
   - for sub-test 5: TF5 (12x336).
3. At step 18 and for each TFRC test point:

   If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return 4 RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return 4 RLC SDUs where each SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

   NOTE: The generic test procedure as specified in 14.1.3.5.2 sends 4 SDUs of size ($N_{PDUs}$ * MAC-d PDU payload size) / 4 minus 8 bits (size of 7 bit length indicator and expansion bit). For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

### 14.6.3 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:384 DL:[Bit rate depending on the UE category] / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

#### 14.6.3.1 Conformance requirement

See 14.6.1.1.

#### 14.6.3.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.3.

#### 14.6.3.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-5 IE “HS-DSCH physical layer category” (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

The following parameters are specific for this test case:

| Parameter | Value |
|---|---|
| MAC-hs receiver window size | 16 |
| RLC Transmission window size | See sub-test table |
| RLC Receiving window size | See sub-test table |

The generic test procedure in 14.1.3.5 is run for each sub-test.

Sub-tests:

The principle used to select sub-tests has been to cover all uplink and downlink TFS for the Speech and Interactive Background radio bearer. As the Interactive Background UL:384 kbps radio bearer (RB8) has the highest number of transport formats (5 for TTI=10 ms and excluding TF0) then 5 sub-tests has been defined. The selected UL TFCI to achieve test coverage of TF1 to TF5 for RB8 and for the different speech transport formats is: UL_TFC4 for TF1, UL_TFC8 for TF2, UL_TFC11 for TF3, UL_TFC13 for TF4 and UL_TFC17 for TF5.

| Sub-tes | UE Category | Number of HARQ processes | RLC Receiving window size (note 1) | RLC Trans-mission window size (note 1) | MAC-d PDU size (bits) | Downlink TFCS Under test | Uplink TFCS Under test | Implicitly tested | Restricted UL TFCIs (note 2) | UL RLC SDU size (bits) (note 3) | Test data size (bits) (note 4) |

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.
NOTE 2: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3 and UL_TFC18 are part of minimum set of TFCIs.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB8: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit) , where N is the number of transport blocks for the UL transport format under test. This will make the UE to return one RLC SDU per UL TTI.
NOTE 4: The test data size for RB8 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5.

#### 14.6.3.4 Test requirements

See 14.1.3.5 for definition of the referenced step numbers.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At steps 17 to 20 the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 18 and for each TFRC test point:

   If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return 4 RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return 4 RLC SDUs where each SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

   NOTE: The generic test procedure as specified in 14.1.3.5.2 sends 4 SDUs of size ($N_{PDUs}$ * MAC-d PDU payload size) / 4 minus 8 bits (size of 7 bit length indicator and expansion bit). For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

## 14.6.3a Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL: 64 DL:[Bit rate depending on the UE category] / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

#### 14.6.3a.1 Conformance requirement

See 14.6.1.1.

#### 14.6.3a.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.3a for the uplink 64 kbps case.

#### 14.6.3a.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-5 IE "HS-DSCH physical layer category" (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

The following parameters are specific for this test case:

| Parameter | Value |
|---|---|
| MAC-hs receiver window size | 16 |
| RLC Transmission window size | See sub-test table |
| RLC Receiving window size | See sub-test table |

The generic test procedure in 14.1.3.5 is run for each sub-test.

| | 11 | 3 | 512 | 128 | | | | | | | |
| | 12 | 8 | 512 | 128 | | | | | | | |

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.
NOTE 2: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3 and UL_TFC15 are part of minimum set of TFCIs.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB8: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit) , where N is the number of transport blocks for the UL transport format under test. This will make the UE to return one RLC SDU per UL TTI.
NOTE 4: The test data size for RB8 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5.

#### 14.6.3a.4 Test requirements

See 14.1.3.5 for definition of the referenced step numbers.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At steps 17 to 20 the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 18 and for each TFRC test point:

   If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return 4 RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return 4 RLC SDUs where each SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

NOTE: The generic test procedure as specified in 14.1.3.5.2 sends 4 SDUs of size ($N_{PDUs}$ * MAC-d PDU payload size) / 4 minus 8 bits (size of 7 bit length indicator and expansion bit). For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

### 14.6.4 Conversational / unknown / UL:64 DL:64 kbps / CS RAB + Interactive or background / UL:384 DL:[Bit rate depending on the UE category] / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

#### 14.6.4.1 Conformance requirement

See 14.6.1.1.

#### 14.6.4.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.4.

#### 14.6.4.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-5 IE "HS-DSCH physical layer category" (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

Initial Conditions

The following RLC Info parameter values shall be set by the SS for the Conversational / unknown / UL:64 DL:64 kbps / CS RAB (RB5):

| | **RB5 (Conv. 64 kbps)** |
|---|---|
| Uplink RLC | |
| TM RLC | |
| Segmentation indication | FALSE |
| Transmission RLC discard | |
| CHOICE *SDU Discard Mode* | |
| Timer based no explicit | |
| Timer_discard | 100ms |
| Downlink RLC | |
| TM RLC | |
| Segmentation indication | FALSE |
| NOTE: Timer based discard without explicit signalling is used in uplink to secure that the UE will be able to return data for the case when the UE test loop function will not deliver all the SDUs in one and the same TTI . | |

The generic test procedure in 14.1.3.5 is run for each sub-test.

Uplink TFS:

| | TFI | RB5 (Conv. 64 kbps, 20 ms TTI) | RB6 (I/B 384 kbps, 10 ms TTI) | DCCH |
|---|---|---|---|---|
| TFS | TF0, bits | 0x640 | 0x336 | 0x148 |
| | TF1, bits | 2x640 | 1x336 | 1x148 |
| | TF2, bits | N/A | 2x336 | N/A |
| | TF3, bits | N/A | 4x336 | N/A |
| | TF4, bits | N/A | 8x336 | N/A |
| | TF5, bits | N/A | 12x336 | N/A |

Uplink TFCS:

| TFCI | (RB5, RB6, DCCH) |
|---|---|
| UL_TFC0 | (TF0,TF0,TF0) |
| UL_TFC1 | (TF1,TF0,TF0) |
| UL_TFC2 | (TF0,TF1,TF0) |
| UL_TFC3 | (TF1,TF1,TF0) |
| UL_TFC4 | (TF0,TF2,TF0) |
| UL_TFC5 | (TF1,TF2,TF0) |
| UL_TFC6 | (TF0,TF3,TF0) |
| UL_TFC7 | (TF1,TF3,TF0) |
| UL_TFC8 | (TF0,TF4,TF0) |
| UL_TFC9 | (TF1,TF4,TF0) |
| UL_TFC10 | (TF0,TF5,TF0) |
| UL_TFC11 | (TF1,TF5,TF0) |
| UL_TFC12 | (TF0,TF0,TF1) |
| UL_TFC13 | (TF1,TF0,TF1) |
| UL_TFC14 | (TF0,TF1,TF1) |
| UL_TFC15 | (TF1,TF1,TF1) |
| UL_TFC16 | (TF0,TF2,TF1) |

| | TFI | RB5 (Conv. 64 kbps, 20 ms TTI) | DCCH |
|---|---|---|---|
| TFS | TF0, bits | 0x640 | 0x148 |
| | TF1, bits | 2x640 | 1x148 |

Downlink TFCS:

| TFCI | (RB5, DCCH) |
|---|---|
| DL_TFC0 | (TF0, TF0) |
| DL_TFC1 | (TF1, TF0) |
| DL_TFC2 | (TF0, TF1) |
| DL_TFC3 | (TF1, TF1) |

Sub-tests:

The principle used to select sub-tests has been to cover all uplink and downlink TFS for the Conversational CS and Interactive Background PS radio bearer. As the Interactive Background UL:384 kbps radio bearer (RB6) has the highest number of transport formats (5 for TTI=10 ms and excluding TF0) then 5 sub-tests have been defined. The selected UL TFCI to achieve test coverage of TF1 to TF5 for RB6 and for TF1 for RB5 is: UL_TFC3 for TF1, UL_TFC5 for TF2, UL_TFC7 for TF3, UL_TFC9 for TF4 and UL_TFC11 for TF5.

| Sub-tes | UE Category | Number of HARQ processes | RLC Receiving window size (note 1) | RLC Trans-mission window size (note 1) | MAC-d PDU size (bits) | Downlink TFCS Under test | Uplink TFCS Under test | Implicitly tested | Restricted UL TFCIs (note 2) | UL RLC SDU size (bits) (note 3) | Test data size (bits) (note 4) |

| | 6 | 8 | 256 | 256 | | | | | | | |
| | 7 | 8 | 512 | 512 | | | | | | | |
| | 8 | 8 | 512 | 512 | | | | | | | |
| | 9 | 8 | 1024 | 512 | | | | | | | |
| | 10 | 5 | 1024 | 1024 | | | | | | | |
| | 11 | 3 | 256 | 256 | | | | | | | |
| | 12 | 8 | 256 | 256 | | | | | | | |

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.
NOTE 2: UL_TFC0, UL_TFC1, UL_TFC2, and UL_TFC12 are part of minimum set of TFCIs.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB6: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit) , where N is the number of transport blocks for the UL transport format under test. This will make the UE to return one RLC SDU per UL TTI.
NOTE 4: The test data size for RB6 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5.

#### 14.6.4.4 Test requirements

See 14.1.3.5 for definition of the referenced step numbers.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At steps 17 to 20 the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 18 and for each TFRC test point:

   If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return 4 RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return 4 RLC SDUs where each SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

   NOTE: The generic test procedure as specified in 14.1.3.5.2 sends 4 SDUs of size ($N_{PDUs}$ * MAC-d PDU payload size) / 4 minus 8 bits (size of 7 bit length indicator and expansion bit). For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

## 14.6.4a Conversational / unknown / UL:64 DL:64 kbps / CS RAB + Interactive or background / UL:64 DL:[Bit rate depending on the UE category] / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

#### 14.6.4a.1 Conformance requirement

See 14.6.1.1.

#### 14.6.4a.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.4a.

#### 14.6.4a.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-5 IE "HS-DSCH physical layer category" (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

##### Initial Conditions

The following RLC Info parameter values shall be set by the SS for the Conversational / unknown / UL:64 DL:64 kbps / CS RAB (RB5):

| | **RB5 (Conv. 64 kbps)** |
|---|---|
| Uplink RLC | |
| TM RLC | |
| Segmentation indication | FALSE |
| Transmission RLC discard | |
| CHOICE *SDU Discard Mode* | |
| Timer based no explicit | |
| Timer_discard | 100ms |
| Downlink RLC | |
| TM RLC | |
| Segmentation indication | FALSE |
| NOTE: Timer based discard without explicit signalling is used in uplink to secure that the UE will be able to return data for the case when the UE test loop function will not deliver all the SDUs in one and the same TTI . | |

The generic test procedure in 14.1.3.5 is run for each sub-test.

Uplink TFS:

| | TFI | RB5 (Conv. 64 kbps, 20ms TTI) | RB6 (I/B 64 kbps) | DCCH |
|---|---|---|---|---|
| TFS | TF0, bits | 0x640 | 0x336 | 0x148 |
| | TF1, bits | 2x640 | 1x336 | 1x148 |
| | TF2, bits | N/A | 2x336 | N/A |
| | TF3, bits | N/A | 3x336 | N/A |
| | TF4, bits | N/A | 4x336 | N/A |

Uplink TFCS:

| TFCI | (RB5, RB6, DCCH) |

| | 11 | 3 | 512 | 128 | | | | | | | |
| | 12 | 8 | 512 | 128 | | | | | | | |

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.
NOTE 2: UL_TFC0, UL_TFC1, UL_TFC2, and UL_TFC10 are part of minimum set of TFCIs.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB6: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit) , where N is the number of transport blocks for the UL transport format under test. This will make the UE to return one RLC SDU per UL TTI.
NOTE 4: The test data size for RB6 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5.

#### 14.6.4a.4 Test requirements

See 14.1.3.5 for definition of the referenced step numbers.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At steps 17 to 20 the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 18 and for each TFRC test point:

   If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return 4 RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return 4 RLC SDUs where each SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

NOTE: The generic test procedure as specified in 14.1.3.5.2 sends 4 SDUs of size ($N_{PDUs}$ * MAC-d PDU payload size) / 4 minus 8 bits (size of 7 bit length indicator and expansion bit). For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

### 14.6.5 Interactive or background / UL:384 DL:[Bit rate depending on the UE category] / PS RAB + Interactive or background / UL:384 DL:[Bit rate depending on the UE category] / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

#### 14.6.5.1 Conformance requirement

See 14.6.1.1.

#### 14.6.5.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.5.

#### 14.6.5.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-5 IE “HS-DSCH physical layer category” (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

The generic test procedure in 14.1.3.5 is run for each sub-test.

Sub-tests:

The principle used to select sub-tests has been to cover all uplink and downlink TFS for the 2 x Interactive Background PS radio bearer. As the 2 x Interactive Background UL:384 kbps radio bearer (RB5+RB6) have 5 transport formats then 5 sub-tests have been defined. The selected UL TFCI to achieve test coverage of TF1 to TF5 for RB5+RB6 is: UL_TFC1 for TF1, UL_TFC2 for TF2, UL_TFC3 for TF3, UL_TFC4 for TF4 and UL_TFC5 for TF5.

| | 11 | 3 | 256 | 256 | | | | | | | |
| | 12 | 8 | 256 | 256 | | | | | | | |

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.
NOTE 2: UL_TFC0, UL_TFC1 and UL_TFC6 are part of minimum set of TFCIs.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5 and RB6: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit) , where N is the number of transport blocks for the UL transport format under test. This will make the UE to return one RLC SDU per UL TTI.
NOTE 4: The test data size for RB5 and RB6 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5.

#### 14.6.5.4 Test requirements

See 14.1.3.5 for definition of the referenced step numbers.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At steps 17 to 20 the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 18 and for each TFRC test point:

   If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return 4 RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return 4 RLC SDUs where each SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

   NOTE: The generic test procedure as specified in 14.1.3.5.2 sends 4 SDUs of size ($N_{PDUs}$ * MAC-d PDU payload size) / 4 minus 8 bits (size of 7 bit length indicator and expansion bit). For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

| | 11 | 3 | 512 | 128 | | | | | | | |
| | 12 | 8 | 512 | 128 | | | | | | | |

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.
NOTE 2: UL_TFC0, UL_TFC1, UL_TFC2, and UL_TFC10 are part of minimum set of TFCIs.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB6: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit) , where N is the number of transport blocks for the UL transport format under test. This will make the UE to return one RLC SDU per UL TTI.
NOTE 4: The test data size for RB6 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5.

#### 14.6.5a.4 Test requirements

See 14.1.3.5 for definition of the referenced step numbers.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At steps 17 to 20 the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 18 and for each TFRC test point:

   If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return 4 RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return 4 RLC SDUs where each SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

   NOTE: The generic test procedure as specified in 14.1.3.5.2 sends 4 SDUs of size ($N_{PDUs}$ * MAC-d PDU payload size) / 4 minus 8 bits (size of 7 bit length indicator and expansion bit). For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

### 14.6.6 Streaming / unknown / UL:128 DL: [guaranteed 128, max bit rate depending on UE category] kbps / PS RAB + Interactive or background / UL:128 DL: [max bit rate depending on UE category] / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

#### 14.6.6.1 Conformance requirement

See 14.6.1.1.

#### 14.6.6.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.6.

#### 14.6.6.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-5 IE "HS-DSCH physical layer category" (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

The generic test procedure in 14.1.3.5 is run for each sub-test.

Sub-tests:

The principle used to select sub-tests has been to cover all uplink and downlink TFS for the Streaming + Interactive Background PS radio bearer. The Streaming UL:128 kbps + Interactive Background UL:128 kbps radio bearer (RB5+RB6) have 40 transport format combinations. As the transport formats where RB5, RB6 or DCCH has no data (TF0 for RB5, RB6 or DCCH) is considered as implicitly tested when the transport format combinations with data is tested then no specific sub-tests for those transport format combinations have been specified. The selected UL TFCI to achieve test coverage of TF1 to TF3 for RB5 and TF1 to TF4 for RB6 is: UL_TFC5 to UL_TFC7, UL_TFC9 to UL_TFC11, UL_TFC13 to UL_TFC15 and UL_TFC17 to UL_TFC19.

| | 11 | 3 | 512 | 128 | | | | | | | |
| | 12 | 8 | 512 | 128 | | | | | | | |

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.

NOTE 2: UL_TFC0, UL_TFC1, UL_TFC4 and UL_TFC20 are part of minimum set of TFCIs. Also the transport format combinations UL_TFC21 and UL_TFC24 using TF1 on either RB5 or RB6 and TF1 on DCCH has been included in the allowed TFCs as those could happen during the sub-test.

NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5 and RB6: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit) , where N is the number of transport blocks for the UL transport format under test. This will make the UE to return one RLC SDU per UL TTI.

NOTE 4: The test data size for RB5 and RB6 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5.

#### 14.6.6.4 Test requirements

See 14.1.3.5 for definition of the referenced step numbers.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At steps 17 to 20 the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 18 and for each TFRC test point:

   If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return 4 RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return 4 RLC SDUs where each SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

   NOTE: The generic test procedure as specified in 14.1.3.5.2 sends 4 SDUs of size ($N_{PDUs}$ * MAC-d PDU payload size) / 4 minus 8 bits (size of 7 bit length indicator and expansion bit). For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

## 14.6.6a Streaming / unknown / UL:128 DL: [guaranteed 128, max bit rate depending on UE category] with Fixed RLC and MAC-ehs / PS RAB + Interactive or background / UL:128 DL: [max bit rate depending on UE category] with Flexible RLC and MAC-ehs / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / DL: QPSK and 16QAM

#### 14.6.6a.1 Conformance requirement

See 14.6.1.1.

#### 14.6.6a.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.6 for the QPSK, 16QAM and non-MIMO case using the downlink enhanced Layer 2 configuration with MAC-ehs and combination of Fixed and Flexible RLC.

#### 14.6.6a.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-7 IE “HS-DSCH physical layer category extension”. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is configured.

The Streaming / unknown / UL:128 DL: [guaranteed 128, max bit rate depending on UE category] with Fixed RLC and MAC-ehs / PS RAB is referred to as RB5. The Interactive or background / UL:128 DL: [max bit rate depending on UE category] with Flexible RLC and MAC-ehs / PS RAB is referred to as RB6.

The following parameters are specific for this test case and RB5 and RB6:

| Parameter | Value |
|---|---|
| Radio bearer | TS 34.108, clause 6.10.2.4.5.6 using downlink MAC-d flow parameters according to Alt 2 (Fixed RLC and MAC-ehs) for RB5 and MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-ehs) for RB6 |
| MAC-ehs receiver window size | 16 |
| RLC Transmission window size | See sub-test table |
| RLC Receiving window size | See sub-test table |

The generic test procedure in 14.1.3.5a is run for each sub-test for test execution 1 and 2.

| Execution counter | Downlink Modulation Scheme (M) | MIMO |
|---|---|---|
| 1 | QPSK | No |
| 2 | 16QAM | No |

Sub-tests:

The principle used to select sub-tests has been to cover all uplink and downlink TFS for the Streaming + Interactive Background PS radio bearer. The Streaming UL:128 kbps + Interactive Background UL:128 kbps radio bearer (RB5+RB6) have 40 transport format combinations. As the transport formats where RB5, RB6 or DCCH has no data (TF0 for RB5, RB6 or DCCH) is considered as implicitly tested when the transport format combinations with data is tested then no specific sub-tests for those transport format combinations have been specified. The selected UL TFCI to achieve test coverage of TF1 to TF3 for RB5 and TF1 to TF4 for RB6 is: UL_TFC5 to UL_TFC7, UL_TFC9 to UL_TFC11, UL_TFC13 to UL_TFC15 and UL_TFC17 to UL_TFC19.

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.

NOTE 2: UL_TFC0, UL_TFC1, UL_TFC4 and UL_TFC20 are part of minimum set of TFCIs. Also the transport format combinations UL_TFC21 and UL_TFC24 using TF1 on either RB5 or RB6 and TF1 on DCCH has been included in the allowed TFCs as those could happen during the sub-test.

NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5 and RB6: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit) , where N is the number of transport blocks for the UL transport format under test. This will make the UE to return one RLC SDU per UL TTI.

NOTE 4: The test data size for RB5 and RB6 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5a.

#### 14.6.6a.4 Test requirements

See 14.1.3.5a for definition of the referenced step numbers.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At steps 17 to 20 the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 18 and for each TFRC test point:

   The UE shall for each radio bearer return the equal number RLC SDUs as sent by the SS in downlink. If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return RLC SDUs where the SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

   NOTE: The generic test procedure as specified in 14.1.3.5a sends either 1 SDU or 4 SDUs depending on the transport block size under tests. For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

### 14.6.6b Streaming / unknown / UL:128 DL: [guaranteed 128, max bit rate depending on UE category] with Fixed RLC and MAC-ehs / PS RAB + Interactive or background / UL:128 DL: [max bit rate depending on UE category] with Flexible RLC and MAC-ehs / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / DL: 64QAM

#### 14.6.6b.1 Conformance requirement

See 14.6.1.1.

#### 14.6.6b.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.6 for the QPSK, 16QAM and non-MIMO case using the downlink enhanced Layer 2 configuration with MAC-ehs and combination of Fixed and Flexible RLC.

#### 14.6.6b.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-7 IE “HS-DSCH physical layer category extension”. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is configured.

The Streaming / unknown / UL:128 DL: [guaranteed 128, max bit rate depending on UE category] with Fixed RLC and MAC-ehs / PS RAB is referred to as RB5. The Interactive or background / UL:128 DL: [max bit rate depending on UE category] with Flexible RLC and MAC-ehs / PS RAB is referred to as RB6.

The following parameters are specific for this test case and RB5 and RB6:

| Parameter | Value |
|---|---|
| Radio bearer | TS 34.108, clause 6.10.2.4.5.6 using downlink MAC-d flow parameters according to Alt 2 (Fixed RLC and MAC-ehs) for RB5 and MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-ehs) for RB6 |
| MAC-ehs receiver window size | 16 |
| RLC Transmission window size | See sub-test table |
| RLC Receiving window size | See sub-test table |

The generic test procedure in 14.1.3.5a is run for each sub-test with M=64QAM and non-MIMO case.

Sub-tests:

The principle used to select sub-tests has been to cover all uplink and downlink TFS for the Streaming + Interactive Background PS radio bearer. The Streaming UL:128 kbps + Interactive Background UL:128 kbps radio bearer (RB5+RB6) have 40 transport format combinations. As the transport formats where RB5, RB6 or DCCH has no data (TF0 for RB5, RB6 or DCCH) is considered as implicitly tested when the transport format combinations with data is tested then no specific sub-tests for those transport format combinations have been specified. The selected UL TFCI to achieve test coverage of TF1 to TF3 for RB5 and TF1 to TF4 for RB6 is: UL_TFC5 to UL_TFC7, UL_TFC9 to UL_TFC11, UL_TFC13 to UL_TFC15 and UL_TFC17 to UL_TFC19.

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.

NOTE 2: UL_TFC0, UL_TFC1, UL_TFC4 and UL_TFC20 are part of minimum set of TFCIs. Also the transport format combinations UL_TFC21 and UL_TFC24 using TF1 on either RB5 or RB6 and TF1 on DCCH has been included in the allowed TFCs as those could happen during the sub-test.

NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5 and RB6: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit) , where N is the number of transport blocks for the UL transport format under test. This will make the UE to return one RLC SDU per UL TTI.

NOTE 4: The test data size for RB5 and RB6 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5a.

#### 14.6.6b.4 Test requirements

See 14.1.3.5a for definition of the referenced step numbers.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At steps 17 to 20 the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 18 and for each TFRC test point:

   The UE shall for each radio bearer return the equal number RLC SDUs as sent by the SS in downlink. If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return RLC SDUs where the SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

   NOTE: The generic test procedure as specified in 14.1.3.5a sends either 1 SDU or 4 SDUs depending on the transport block size under tests. For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

### 14.6.6c Streaming / unknown / UL:128 DL: [guaranteed 128, max bit rate depending on UE category] with Fixed RLC and MAC-ehs / PS RAB + Interactive or background / UL:128 DL: [max bit rate depending on UE category] with Flexible RLC and MAC-ehs / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / DL: QPSK, 16QAM and MIMO

#### 14.6.6c.1 Conformance requirement

See 14.6.1.1.

#### 14.6.6c.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.6 for the QPSK, 16QAM and MIMO case using the downlink enhanced Layer 2 configuration with MAC-ehs and combination of Fixed and Flexible RLC.

#### 14.6.6c.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-7 IE “HS-DSCH physical layer category extension”. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is configured.

The Streaming / unknown / UL:128 DL: [guaranteed 128, max bit rate depending on UE category] with Fixed RLC and MAC-ehs / PS RAB is referred to as RB5. The Interactive or background / UL:128 DL: [max bit rate depending on UE category] with Flexible RLC and MAC-ehs / PS RAB is referred to as RB6.

The following parameters are specific for this test case and RB5 and RB6:

| Parameter | Value | Comments |
|---|---|---|
| Radio bearer | TS 34.108, clause 6.10.2.4.5.6 using downlink MAC-d flow parameters according to Alt 2 (Fixed RLC and MAC-ehs) for RB5 and MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-ehs) for RB6 | |
| MAC-ehs receiver window size | 16 | |
| MIMO N_cqi_typeA/M_cqi ratio | 1/1 | 25.331, 10.3.6.41a |
| Second CPICH pattern | Antenna1 S-CPICH | 25.331, 10.3.6.41b |
| S-CPICH Channelisation code | 12 | |
| precodingWeightIndicator, W2 | 00 | 25.212, Table 14A |
| RLC Transmission window size | See sub-test table | |
| RLC Receiving window size | See sub-test table | |

The generic test procedure in 14.1.3.5a is run for each sub-test for test execution 1 and 2.

| Execution counter | Downlink Modulation Scheme (M1) MIMO data flow#1 | Downlink Modulation Scheme (M2) MIMO data flow#2 | MIMO |
|---|---|---|---|
| 1 | QPSK | QPSK | Yes |
| 2 | 16QAM | 16QAM | Yes |
| 3 | 16QAM | QPSK | Yes |

Sub-tests:

The principle used to select sub-tests has been to cover all uplink and downlink TFS for the Streaming + Interactive Background PS radio bearer. The Streaming UL:128 kbps + Interactive Background UL:128 kbps radio bearer (RB5+RB6) have 40 transport format combinations. As the transport formats where RB5, RB6 or DCCH has no data (TF0 for RB5, RB6 or DCCH) is considered as implicitly tested when the transport format combinations with data is tested then no specific sub-tests for those transport format combinations have been specified. The selected UL TFCI to achieve test coverage of TF1 to TF3 for RB5 and TF1 to TF4 for RB6 are: UL_TFC5 to UL_TFC7, UL_TFC9 to UL_TFC11, UL_TFC13 to UL_TFC15 and UL_TFC17 to UL_TFC19.

| Sub-tes | UE Category | Number of HARQ processes | RLC Receiving window size (note 1) | RLC Trans-mission window size (note 1) | MAC-d PDU size (bits) | Downlink TFCS Under test | Uplink TFCS Under test | Implicitly tested | Restricted UL TFCIs (note 2) | UL RLC SDU size (bits) (note 3) | Test data size (bits) (note 4) |

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.

NOTE 2: UL_TFC0, UL_TFC1, UL_TFC4 and UL_TFC20 are part of minimum set of TFCIs. Also the transport format combinations UL_TFC21 and UL_TFC24 using TF1 on either RB5 or RB6 and TF1 on DCCH has been included in the allowed TFCs as those could happen during the sub-test.

NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5 and RB6: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit) , where N is the number of transport blocks for the UL transport format under test. This will make the UE to return one RLC SDU per UL TTI.

NOTE 4: The test data size for RB5 and RB6 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5a.

NOTE 5: For Subtest 3, when 16QAM/16QAM modulation is executed, test points 33 and above are not applicable.

#### 14.6.6c.4 Test requirements

See 14.1.3.5a for definition of the referenced step numbers.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At steps 17 to 20 the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 18 and for each TFRC test point:

   The UE shall for each radio bearer return the equal number RLC SDUs as sent by the SS in downlink. If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return RLC SDUs where the SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

   NOTE: The generic test procedure as specified in 14.1.3.5a sends either 2 SDU or 8 SDUs depending on the transport block size under tests. For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

### 14.6.6d Streaming / unknown / UL:128 DL: [guaranteed 128, max bit rate depending on UE category] with Fixed RLC and MAC-ehs / PS RAB + Interactive or background / UL:128 DL: [max bit rate depending on UE category] with Flexible RLC and MAC-ehs / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / DL: 64QAM and MIMO

#### 14.6.6d.1 Conformance requirement

See 14.6.1.1.

#### 14.6.6d.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.6 for the 64QAM and MIMO case using the downlink enhanced Layer 2 configuration with MAC-ehs and combination of Fixed and Flexible RLC.

#### 14.6.6d.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-7 IE “HS-DSCH physical layer category extension”. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is configured.

The Streaming / unknown / UL:128 DL: [guaranteed 128, max bit rate depending on UE category] with Fixed RLC and MAC-ehs / PS RAB is referred to as RB5. The Interactive or background / UL:128 DL: [max bit rate depending on UE category] with Flexible RLC and MAC-ehs / PS RAB is referred to as RB6.

The following parameters are specific for this test case and RB5 and RB6:

| Parameter | Value | Comments |
|---|---|---|
| Radio bearer | TS 34.108, clause 6.10.2.4.5.6 using downlink MAC-d flow parameters according to Alt 2 (Fixed RLC and MAC-ehs) for RB5 and MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-ehs) for RB6 | |
| MAC-ehs receiver window size | 16 | |
| MIMO N_cqi_typeA/M_cqi ratio | 1/1 | 25.331, 10.3.6.41a |
| Second CPICH pattern | Antenna1 S-CPICH | 25.331, 10.3.6.41b |
| S-CPICH Channelisation code | 12 | |
| precodingWeight2 | 00 | 25.212, Table 14A |
| RLC Transmission window size | See sub-test table | |
| RLC Receiving window size | See sub-test table | |

The generic test procedure in 14.1.3.5a is run for each sub-test for test execution 1 to 3.

| Execution counter | Downlink Modulation Scheme (M1) MIMO data flow#1 | Downlink Modulation Scheme (M2) MIMO data flow#2 | Number of HARQ processes | MIMO |
|---|---|---|---|---|
| 1 | 64QAM | QPSK | 12 | Yes |

Sub-tests:

The principle used to select sub-tests has been to cover all uplink and downlink TFS for the Streaming + Interactive Background PS radio bearer. The Streaming UL:128 kbps + Interactive Background UL:128 kbps radio bearer (RB5+RB6) have 40 transport format combinations. As the transport formats where RB5, RB6 or DCCH has no data (TF0 for RB5, RB6 or DCCH) is considered as implicitly tested when the transport format combinations with data is tested then no specific sub-tests for those transport format combinations have been specified.

| Sub-tes | UE Category | RLC Receiving window size (note 1) | RLC Trans-mission window size (note 1) | MAC-d PDU size (bits) | Uplink TFCS Under test | Implicitly tested | Restricted UL TFCIs (note 2) | UL RLC SDU size (bits) (note 3) | Test data size (bits) (note 4) |
|---|---|---|---|---|---|---|---|---|---|
| 1 | 19 and 20 | 2047 | 1024 | RB5: 656<br>RB6: Flexible | UL_TFC19 | UL_TFC0,<br>UL_TFC3,<br>UL_TFC16,<br>UL_TFC4,<br>UL_TFC20,<br>UL_TFC6 | UL_TFC0,<br>UL_TFC1,<br>UL_TFC3,<br>UL_TFC4,<br>UL_TFC16,<br>UL_TFC19,<br>UL_TFC20,<br>UL_TFC21,<br>UL_TFC24,<br>UL_TFC39 | RB5: 2552<br>RB6: 2552 | See note 4 |

NOTE 1: The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.
NOTE 2: UL_TFC0, UL_TFC1, UL_TFC4 and UL_TFC20 are part of minimum set of TFCIs. Also the transport format combinations UL_TFC21 and UL_TFC24 using TF1 on either RB5 or RB6 and TF1 on DCCH has been included in the allowed TFCs as those could happen during the sub-test.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5 and RB6: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit) , where N is the number of transport blocks for the UL transport format under test. This will enable the UE to return one complete UL RLC SDU per UL TTI.
NOTE 4: The test data size and number of DL RLC SDUs for RB5 and RB6 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5a.

#### 14.6.6d.4 Test requirements

See 14.1.3.5a for definition of the referenced step numbers.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At steps 17 to 20 the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 18 and for each TFRC test point:

   The UE shall for each radio bearer return the equal number RLC SDUs as sent by the SS in downlink. If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return RLC SDUs where the SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

   NOTE: The generic test procedure as specified in 14.1.3.5a sends either 2 SDU or 8 SDUs depending on the transport block size under tests.

## 14.6.6e Streaming / unknown / UL:128 DL: [guaranteed 128, max bit rate depending on UE category] with Fixed RLC and MAC-ehs / PS RAB + Interactive or background / UL:128 DL: [max bit rate depending on UE category] with Flexible RLC and MAC-ehs / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / DL: QPSK, 16QAM and Dual-Cell

#### 14.6.6e.1 Conformance requirement

See 14.6.1.1.

#### 14.6.6e.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.6 for the QPSK, 16QAM and Dual-Cell case using the downlink enhanced Layer 2 configuration with MAC-ehs and combination of Fixed and Flexible RLC.

#### 14.6.6e.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-8 IE “HS-DSCH physical layer category extension 2”. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is configured.

The Streaming / unknown / UL:128 DL: [guaranteed 128, max bit rate depending on UE category] with Fixed RLC and MAC-ehs / PS RAB is referred to as RB5. The Interactive or background / UL:128 DL: [max bit rate depending on UE category] with Flexible RLC and MAC-ehs / PS RAB is referred to as RB6.

The following parameters are specific for this test case and RB5 and RB6:

| Parameter | Value | Comments |
|---|---|---|
| Radio bearer | TS 34.108, clause 6.10.2.4.5.6 using downlink MAC-d flow parameters according to Alt 2 (Fixed RLC and MAC-ehs) for RB5 and MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-ehs) for RB6 | |
| MAC-ehs receiver window size | 16 | |
| RLC Transmission window size | See sub-test table | |
| RLC Receiving window size | See sub-test table | |

The generic test procedure in 14.1.3.5a is run for each sub-test for test execution 1 to 3.

| Execution counter | Downlink Modulation Scheme (M1) Dual-Cell data flow#1 | Downlink Modulation Scheme (M2) Dual-Cell data flow#2 | Number of HARQ processes | Dual-Cell |
|---|---|---|---|---|
| 1 | QPSK | QPSK | 6 | Yes |
| 2 | 16QAM | 16QAM | 8 | Yes |
| 3 | 16QAM | QPSK | 8 | Yes |

Uplink TFS:

| | TFI | RB5 (Streaming 128 kbps, 20ms) | RB6 (I/B 128 kbps, 20ms) | DCCH |
|---|---|---|---|---|
| TFS | TF0, bits | 0x656 | 0x336 | 0x148 |

Sub-tests:

The principle used to select sub-tests has been to cover all uplink and downlink TFS for the Streaming + Interactive Background PS radio bearer. The Streaming UL:128 kbps + Interactive Background UL:128 kbps radio bearer (RB5+RB6) have 40 transport format combinations. As the transport formats where RB5, RB6 or DCCH has no data (TF0 for RB5, RB6 or DCCH) is considered as implicitly tested when the transport format combinations with data is tested then no specific sub-tests for those transport format combinations have been specified.

| Sub-tes | UE Category | RLC Receiving window size (note 1) | RLC Trans-mission window size (note 1) | MAC-d PDU size (bits) | Uplink TFCS Under test | Implicitly tested | Restricted UL TFCIs (note 2) | UL RLC SDU size (bits) (note 3) | Test data size (bits) (note 4) |
|---|---|---|---|---|---|---|---|---|---|
| 1 | 21 to 24 | 2047 | 1024 | RB5: 656<br>RB6: Flexible | UL_TFC19 | UL_TFC0,<br>UL_TFC3,<br>UL_TFC16,<br>UL_TFC20, | UL_TFC0,<br>UL_TFC1,<br>UL_TFC3,<br>UL_TFC4,<br>UL_TFC16,<br>UL_TFC19,<br>UL_TFC20,<br>UL_TFC21,<br>UL_TFC24,<br>UL_TFC39 | RB5: 2552<br>RB6: 2552 | See note 4 |

NOTE 1: The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.
NOTE 2: UL_TFC0, UL_TFC1, UL_TFC4 and UL_TFC20 are part of minimum set of TFCIs. Also the transport format combinations UL_TFC21 and UL_TFC24 using TF1 on either RB5 or RB6 and TF1 on DCCH has been included in the allowed TFCs as those could happen during the sub-test.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5 and RB6: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit) , where N is the number of transport blocks for the UL transport format under test. This will make the UE to return one RLC SDU per UL TTI.
NOTE 4: The test data size for RB5 and RB6 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5a.

#### 14.6.6e.4 Test requirements

See 14.1.3.5a for definition of the referenced step numbers.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At steps 17 to 20 the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 18 and for each TFRC test point:

   The UE shall for each radio bearer return the equal number RLC SDUs as sent by the SS in downlink. If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return RLC SDUs where the SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

   NOTE: The generic test procedure as specified in 14.1.3.5a sends either 2 SDU or 8 SDUs depending on the transport block size under tests.

### 14.6.6f Streaming / unknown / UL:128 DL: [guaranteed 128, max bit rate depending on UE category] with Fixed RLC and MAC-ehs / PS RAB + Interactive or background / UL:128 DL: [max bit rate depending on UE category] with Flexible RLC and MAC-ehs / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / DL: 64QAM and Dual-Cell

#### 14.6.6f.1 Conformance requirement

See 14.6.1.1.

#### 14.6.6f.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.6 for the 64QAM and Dual-Cell case using the downlink enhanced Layer 2 configuration with MAC-ehs and combination of Fixed and Flexible RLC.

#### 14.6.6f.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-8 IE “HS-DSCH physical layer category extension 2”. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is configured.

The Streaming / unknown / UL:128 DL: [guaranteed 128, max bit rate depending on UE category] with Fixed RLC and MAC-ehs / PS RAB is referred to as RB5. The Interactive or background / UL:128 DL: [max bit rate depending on UE category] with Flexible RLC and MAC-ehs / PS RAB is referred to as RB6.

The following parameters are specific for this test case and RB5 and RB6:

| Parameter | Value | Comments |
|---|---|---|
| Radio bearer | TS 34.108, clause 6.10.2.4.5.6 using downlink MAC-d flow parameters according to Alt 2 (Fixed RLC and MAC-ehs) for RB5 and MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-ehs) for RB6 | |
| MAC-ehs receiver window size | 16 | |
| RLC Transmission window size | See sub-test table | |
| RLC Receiving window size | See sub-test table | |

The generic test procedure in 14.1.3.5a is run for each sub-test for test execution 1 to 3.

| Execution counter | Downlink Modulation Scheme (M1) Dual-Cell data flow#1 | Downlink Modulation Scheme (M2) Dual-Cell data flow#2 | Number of HARQ processes | Dual-Cell |
|---|---|---|---|---|
| 1 | 64QAM | QPSK | 6 | Yes |
| 2 | 64QAM | 16QAM | 6 | Yes |
| 3 | 64QAM | 64QAM | 6 | Yes |

Uplink TFS:

Sub-tests:

The principle used to select sub-tests has been to cover all uplink and downlink TFS for the Streaming + Interactive Background PS radio bearer. The Streaming UL:128 kbps + Interactive Background UL:128 kbps radio bearer (RB5+RB6) have 40 transport format combinations. As the transport formats where RB5, RB6 or DCCH has no data (TF0 for RB5, RB6 or DCCH) is considered as implicitly tested when the transport format combinations with data is tested then no specific sub-tests for those transport format combinations have been specified.

| Sub-tes | UE Category | RLC Receiving window size (note 1) | RLC Trans-mission window size (note 1) | MAC-d PDU size (bits) | Uplink TFCS Under test | Implicitly tested | Restricted UL TFCIs (note 2) | UL RLC SDU size (bits) (note 3) | Test data size (bits) (note 4) |
|---|---|---|---|---|---|---|---|---|---|
| 1 | 27 and 28 | 2047 | 1024 | RB5: 656 RB6: Flexible | UL_TFC19 | UL_TFC0, UL_TFC3, UL_TFC16, UL_TFC20 | UL_TFC0, UL_TFC1, UL_TFC3, UL_TFC4, UL_TFC16, UL_TFC19, UL_TFC20, UL_TFC21, UL_TFC24, UL_TFC39 | RB5: 2552 RB6: 2552 | See note 4 |

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category.
NOTE 2: UL_TFC0, UL_TFC1, UL_TFC4 and UL_TFC20 are part of minimum set of TFCIs. Also the transport format combinations UL_TFC21 and UL_TFC24 using TF1 on either RB5 or RB6 and TF1 on DCCH has been included in the allowed TFCs as those could happen during the sub-test.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5 and RB6: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit) , where N is the number of transport blocks for the UL transport format under test. This will make the UE to return one RLC SDU per UL TTI.
NOTE 4: The test data size for RB5 and RB6 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5a.

### 14.6.6h.4 Test requirements

See 14.1.3.5a for definition of the referenced step numbers.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At steps 17 to 20 the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.

3. At step 18 and for each TFRC test point:
The UE shall for each radio bearer return the equal number RLC SDUs as sent by the SS in downlink. If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return RLC SDUs where the SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

NOTE: The generic test procedure as specified in 14.1.3.5a sends either 4 SDU or 16 SDUs depending on the transport block size under tests.

## 14.6.7 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Streaming / unknown / UL:128 DL: [guaranteed 128, max bit rate depending on UE category] kbps / PS RAB + Interactive or background / UL:128 DL: [max bit rate depending on UE category] / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

### 14.6.7.1 Conformance requirement

See 14.6.1.1.

### 14.6.7.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.7.

### 14.6.7.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-5 IE “HS-DSCH physical layer category” (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

The generic test procedure in 14.1.3.5 is run for each sub-test.

Sub-tests:

The principle used to select sub-tests has been to cover all uplink and downlink TFS for the Speech + Streaming + Interactive Background PS radio bearer. The CS speech 12.2 kbps + Streaming UL:128 kbps + Interactive Background UL:128 kbps radio bearer (RB5+RB6+RB7+RB8+RB9) have 62 transport format combinations. As the transport formats where RB5, RB6, RB7, RB8, RB9 or DCCH has no data (TF0 for RB5, RB6, RB7, RB8, RB9 or DCCH) is considered as implicitly tested when the transport format combinations with data is tested then no specific sub-tests for those transport format combinations have been specified. The selected UL TFCI to achieve test coverage of TF1 to TF3 for RB8 and TF1 to TF4 for RB9 are: UL_TFC3, UL_TFC6 to UL_TFC7, UL_TFC9 to UL_TFC10, UL_TFC11 to UL_TFC12, UL_TFC15 to UL_TFC16, UL_TFC18 to UL_TFC19, UL_TFC21 to UL_TFC22, UL_TFC24 to UL_TFC25, UL_TFC27 to UL_TFC28 and UL_TFC30 to UL_TFC31.

| | 12 | 8 | 512 | 128 | | | | | | | |

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.
NOTE 2: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3, UL_TFC4 and UL_TFC32 are part of minimum set of TFCIs.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB5 and RB6: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit) , where N is the number of transport blocks for the UL transport format under test. This will make the UE to return one RLC SDU per UL TTI.
NOTE 4: The test data size for RB5 and RB6 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5.

#### 14.6.7.4 Test requirements

See 14.1.3.5 for definition of the referenced step numbers.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At steps 17 to 20 the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 18 and for each TFRC test point:

   If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return 4 RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return 4 RLC SDUs where each SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

NOTE: The generic test procedure as specified in 14.1.3.5.2 sends 4 SDUs of size ($N_{PDUs}$ * MAC-d PDU payload size) / 4 minus 8 bits (size of 7 bit length indicator and expansion bit). For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

### 14.6.8 Conversational / speech / UL:(12.65 8.85 6.6) DL:(12.65 8.85 6.6) kbps / CS RAB + Interactive or Background / UL:384 DL:[Bit rate depending on the UE category] / PS RAB+ UL:3.4 DL:3.4 kbps SRBs for DCCH + DL:0.15 kbps SRB#5 for DCCH

#### 14.6.8.1 Conformance requirement

See 14.6.1.1.

#### 14.6.8.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.8.

#### 14.6.8.3 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-5 IE "HS-DSCH physical layer category" (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

The generic test procedure in 14.1.3.6 is run for each sub-test.

Sub-tests:

The principle used to select sub-tests has been to cover all uplink and downlink TFS for the Speech and Interactive Background radio bearer. As the Interactive Background UL:384 kbps radio bearer (RB8) has the highest number of transport formats (5 for TTI=10 ms and excluding TF0) then 5 sub-tests has been defined. The selected UL TFCI to achieve test coverage of TF1 to TF5 for RB8 and for the different speech transport formats are: UL_TFC11 for TF1, UL_TFC22 for TF2, UL_TFC33 for TF3, UL_TFC44 for TF4 and UL_TFC54 for TF5.

| Sub-tes | UE Category | Number of HARQ processes | RLC Receiving window size (note 1) | RLC Trans-mission window size (note 1) | MAC-d PDU size (bits) | Downlink TFCS Under test | Uplink TFCS Under test | Implicitly tested | TFC subset identity (note 5) | UL RLC SDU size (bits) (note 3) | Test data size (bits) (note 4) |

| | 11 | 3 | 256 | 256 | | | | | | | |
| | 12 | 8 | 256 | 256 | | | | | | | |

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.
NOTE 2: Void.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB8: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit) , where N is the number of transport blocks for the UL transport format under test. This will make the UE to return one RLC SDU per UL TTI.
NOTE 4: The test data size for RB8 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.6.
NOTE 5: TFC subset identity shall be signalled by the SS on the downlink SRB#5, see generic test procedure in clause 14.1.3.6.

#### 14.6.8.4 Test requirements

See 14.1.3.6 for definition of the referenced step numbers.

1. At step B12b the UE shall send RADIO BEARER SETUP COMPLETE.
2. At steps 17 to 20 the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 18 and for RB5 and RB6 the UE shall return an RLC SDU having the same content as sent by SS. No data shall be received on RB7.
4. At step 18 and for each TFRC test point:

   If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return 4 RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return 4 RLC SDUs where each SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

   NOTE: The generic test procedure as specified in 14.1.3.5.2 sends 4 SDUs of size ($N_{PDUs}$ * MAC-d PDU payload size) / 4 minus 8 bits (size of 7 bit length indicator and expansion bit). For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

### 14.6.9 Streaming MBMS PTP / unknown / UL:16 DL: [max bit rate depending on UE category] kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / MBMS Selected Service

NOTE: The testing of MBMS PTP radio bearer combinations on DPCH and HSPDSCH is focusing on verifying that the UE is capable to establish the radio bearer combination and to verify correct data transfer using all the possible uplink TFS for transport channels mapped on DCH. The verification of MAC-hs transport block size selection and that the UE is capable of transmitting all the possible transport block sizes within the UE capability is tested in the MAC-hs test case 7.1.5.6.

#### 14.6.9.1 Conformance requirement

The UE shall be able to establish the UTRAN requested MBMS PTP radio bearers within the UE's signalled radio access capabilities.

The UE shall correctly transfer user data from peer to peer RLC entities according to the requested MBMS PTP radio bearer configuration.

Reference(s)

3GPP TS 25.2xx series (Physical Layer)

3GPP TS 25.321 (MAC)

3GPP TS 25.322 (RLC)

3GPP TS 25.331 (RRC)

#### 14.6.9.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.9:

#### 14.6.9.3 Method of test

NOTE: The reference to HS-DSCH Category refers to the UE capability as signalled in the Rel-5 IE “HS-DSCH physical layer category” (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

The following parameters are specific for this test case:

| Parameter | Value |
|---|---|
| MAC-hs receiver window size | 16 |
| RLC Transmission window size | See sub-test table |
| RLC Receiving window size | See table for parameters for different HS-DSCH Categories |

| HS-DSCH Category | HS-PDSCH Number of HARQ processes | RLC Receiving window size (note 1) | RLC Trans-mission window size (note 1) | HS-PDSCH TFRC (note 2) | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| | | | | Max MAC-d PDU size | Minimum TBS | Number of MAC-d PDUs | Modulation scheme | Number of codes | TFRI |
| 1 | 2 | 256 | 128 | 656 | 677 | 1 | QPSK | 2 | 7 |
| 2 | 2 | 256 | 128 | 656 | 677 | 1 | QPSK | 2 | 7 |
| 3 | 3 | 256 | 128 | 656 | 677 | 1 | QPSK | 2 | 7 |
| 4 | 3 | 256 | 128 | 656 | 677 | 1 | QPSK | 2 | 7 |
| 5 | 6 | 256 | 256 | 656 | 677 | 1 | QPSK | 2 | 7 |
| 6 | 6 | 256 | 256 | 656 | 677 | 1 | QPSK | 2 | 7 |
| 7 | 6 | 512 | 512 | 656 | 677 | 1 | QPSK | 2 | 7 |
| 8 | 6 | 512 | 512 | 656 | 677 | 1 | QPSK | 2 | 7 |
| 9 | 6 | 1024 | 512 | 656 | 677 | 1 | QPSK | 2 | 7 |
| 10 | 6 | 1024 | 1024 | 656 | 677 | 1 | QPSK | 2 | 7 |
| 11 | 3 | 512 | 128 | 656 | 677 | 1 | QPSK | 2 | 7 |
| 12 | 6 | 512 | 128 | 656 | 677 | 1 | QPSK | 2 | 7 |

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.

NOTE 2: The HS-PDSCH TFRC should be selected to enable all test data on DTCH on HS-DSCH to be transmitted in one TTI, i.e. such that the MAC-hs transport block size is bigger than the maximum MAC-d PDU size under test + MAC-hs header size (21 bits). See 14.1.3.4 (MAC-d PDU size=656) for recommended TFRC values for different transport block size.

Uplink TFS:

| | TFI | RB5 (16 kbps, 20 ms TTI) | DCCH |
|---|---|---|---|
| TFS | TF0, bits | 0x336 | 0x148 |
| | TF1, bits | 1x336 | 1x148 |

Uplink TFCS:

| TFCI | (RB5, DCCH) |
|---|---|
| UL_TFC0 | (TF0, TF0) |
| UL_TFC1 | (TF1, TF0) |
| UL_TFC2 | (TF0, TF1) |
| UL_TFC3 | (TF1, TF1) |

The generic test procedure in 14.1.6, using the MBMS Selected Service branch, is run for each sub-test.

Sub-tests:

| Sub-test | Uplink TFCS Under test | Implicitly tested | Restricted UL TFCIs (note 1) | UL RLC SDU size (bits) (note 2) |
|---|---|---|---|---|
| 1 | UL_TFC1 | UL_TFC0, UL_TFC2 | UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3 | RB5: 312 |
| NOTE 1: UL_TFC0, UL_TFC1 and UL_TFC2 are part of minimum set of TFCIs.<br>NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. RB5: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit), where N is the number of transport blocks for the UL transport format under test. This will enable the UE to return th data within one UL TTI. | | | | |

#### 14.6.9.4 Test requirements

See 14.1.6 for definition of step 14 and step 22.

1. At step 14 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 22 the UE shall return a RLC SDU where the first 312 bits has the same content as the RLC SDUs sent by the SS in downlink.

## 14.6.9m Streaming MBMS PTP / unknown / UL:16 DL: [max bit rate depending on UE category] kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / MBMS Multicast Service

This test case is identical to test case 14.6.9 with the exception that the SS shall use the MBMS Multicast Service branch in the generic test procedure in 14.1.6.

## 14.6.10 Streaming MBMS PTP / unknown / UL:16 DL: [max bit rate depending on UE category] kbps / PS RAB + Interactive or background / UL:64 DL: [max bit rate depending on UE category] / PS RAB + Interactive or background / UL:64 DL: [max bit rate depending on UE category] / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / MBMS Selected Service

NOTE: The testing of MBMS PTP radio bearer combinations on DPCH and HSPDSCH is focusing on verifying that the UE is capable to establish the radio bearer combination and to verify correct data transfer using all the possible uplink TFS for transport channels mapped on DCH. The verification of MAC-hstransport block size selection and that the UE is capable of transmitting all the possible transport block sizes within the UE capability is tested in the MAC-hs test case 7.1.5.6.

#### 14.6.10.1 Conformance requirement

The UE shall be able to establish the UTRAN requested MBMS PTP radio bearers within the UE's signalled radio access capabilities.

The UE shall correctly transfer user data from peer to peer RLC entities according to the requested MBMS PTP radio bearer configuration.

Reference(s)

3GPP TS 25.2xx series (Physical Layer)

3GPP TS 25.321 (MAC)

3GPP TS 25.322 (RLC)

3GPP TS 25.331 (RRC)

14.6.10.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.5.10:

14.6.10.3 Method of test

NOTE: The reference to HS-DSCH Categories refers to the UE capability as signalled in the Rel-5 IE "HS-DSCH physical layer category" (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

The following parameters are specific for this test case:

| Parameter | Value |
|---|---|
| MAC-hs receiver window size | 16 |
| RLC Transmission window size | See sub-test table |
| RLC Receiving window size | See table for parameters for different HS-DSCH Categories |

| HS-DSCH Category | HS-PDSCH Number of HARQ processes | RLC Receiving window size (note 1) | RLC Trans-mission window size (note 1) | HS-PDSCH TFRC (note 2) | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| | | | | Max MAC-d PDU size | Minimum TBS | Number of MAC-d PDUs | Modulation scheme | Number of codes | TFRI |
| 1 | 2 | 256 | 128 | 656 | 677 | 1 | QPSK | 2 | 7 |
| 2 | 2 | 256 | 128 | 656 | 677 | 1 | QPSK | 2 | 7 |
| 3 | 3 | 256 | 128 | 656 | 677 | 1 | QPSK | 2 | 7 |
| 4 | 3 | 256 | 128 | 656 | 677 | 1 | QPSK | 2 | 7 |
| 5 | 6 | 256 | 256 | 656 | 677 | 1 | QPSK | 2 | 7 |
| 6 | 6 | 256 | 256 | 656 | 677 | 1 | QPSK | 2 | 7 |
| 7 | 6 | 512 | 512 | 656 | 677 | 1 | QPSK | 2 | 7 |
| 8 | 6 | 512 | 512 | 656 | 677 | 1 | QPSK | 2 | 7 |
| 9 | 6 | 1024 | 512 | 656 | 677 | 1 | QPSK | 2 | 7 |
| 10 | 6 | 1024 | 1024 | 656 | 677 | 1 | QPSK | 2 | 7 |
| 11 | 3 | 512 | 128 | 656 | 677 | 1 | QPSK | 2 | 7 |
| 12 | 6 | 512 | 128 | 656 | 677 | 1 | QPSK | 2 | 7 |

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.

NOTE 2: The HS-PDSCH TFRC should be selected to enable all test data on DTCH on HS-DSCH to be transmitted in one TTI, i.e. such that the MAC-hs transport block size is bigger than the maximum MAC-d PDU size under test + MAC-hs header size (21 bits). See 14.1.3.4 (MAC-d PDU size=656) for recommended TFRC values for different transport block size.

Uplink TFS:

| NOTE 1: | UL_TFC0, UL_TFC1, UL_TFC2 and UL_TFC10 are part of minimum set of TFCIs. |
| NOTE 2: | See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.<br>RB5: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit), where N is the number of transport blocks for the UL transport format under test. This will enable the UE to return th data within one UL TTI. |

#### 14.6.10.4 Test requirements

See 14.1.6 for definition of step 14 and step 22.

1. At step 14 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 22 the UE shall return
   - for sub-test 1: RLC SDU on RB5 where the first 312 bits has the same content as the RLC SDUs sent by the SS in downlink and no data on RB6 and RB7.
   - for sub-test 2: RLC SDU on RB6 where the first 312 bits has the same content as the RLC SDUs sent by the SS in downlink and no data on RB5 and RB7.
   - for sub-test 3: RLC SDU on RB5 and RB6 where the first 312 bits has the same content as the RLC SDUs sent by the SS in downlink and no data on RB7.
   - for sub-test 4: RLC SDU on RB6 where the first 632 bits has the same content as the RLC SDUs sent by the SS in downlink and no data on RB5 and RB7.
   - for sub-test 5: RLC SDU on RB5 and RB6 where the first 312 bits for RB5 and the .first 632 bits for RB6 has the same content as the RLC SDUs sent by the SS in downlink and no data on RB7.
   - for sub-test 6: RLC SDU on RB6 where the first 952 bits has the same content as the RLC SDUs sent by the SS in downlink and no data on RB5 and RB7.
   - for sub-test 7: RLC SDU on RB5 and RB6 where the first 312 bits for RB5 and the first 952 bits for RB6 has the same content as the RLC SDUs sent by the SS in downlink and no data on RB7.
   - for sub-test 8: RLC SDU on RB6 where the first 1272 bits has the same content as the RLC SDUs sent by the SS in downlink and no data on RB5 and RB7.
   - for sub-test 9: RLC SDU on RB5 and RB6 where the first 312 bits for RB5 and the first 1272 bits for RB6 has the same content as the RLC SDUs sent by the SS in downlink and no data on RB7.
   - for sub-test 10: RLC SDU on RB5 and RB7 where the first 312 bits for RB5 and the first 1272 bits for RB7 has the same content as the RLC SDUs sent by the SS in downlink and no data on RB6.

### 14.6.10m Streaming MBMS PTP / unknown / UL:16 DL: [max bit rate depending on UE category] kbps / PS RAB + Interactive or background / UL:64 DL: [max bit rate depending on UE category] / PS RAB + Interactive or background / UL:64 DL: [max bit rate depending on UE category] / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / MBMS Multicast Service

This test case is identical to test case 14.6.10 with the exception that the SS shall use the MBMS Multicast Service branch in the generic test procedure in 14.1.6.

# 14.7 Combinations on DPCH, HS-PDSCH and E-DPDCH

NOTE: The testing of radio bearer combinations on DPCH, HSPDSCH and E-DPDCH is focusing on verifying that the UE is capable to establish the radio bearer combination and to verify correct data transfer using all the possible uplink TFS for transport channels mapped on DCH and all the configured MAC-d PDU sizes for the transport channel mapped to E-DCH. The verification of MAC-e/es transport block size selection and that the UE is capable of transmitting all the possible transport block sizes within the UE capability is tested in the MAC-e/es test case 7.1.6.3.2. (UL QPSK), 7.1.6.3.2a (UL 16QAM), 7.1.7.4 (UL QPSK and MAC-i/is) and 7.1.7.5 (UL 16 QAM and MAC-i/is)

## 14.7.1 Streaming or interactive or background / UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH on DCH

### 14.7.1.1 Conformance requirement

The UE shall be able to establish the UTRAN requested radio bearers within the UE's signalled radio access capabilities.

The UE shall correctly transfer user data from peer to peer RLC entities according to the requested radio bearer configuration.

Reference(s)

3GPP TS 25.331, clause 8.2.1

3GPP TS 25.2xx series (Physical Layer)

3GPP TS 25.321 (MAC)

3GPP TS 25.322 (RLC)

### 14.7.1.2 Test purpose

For the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.6.1:

1. To verify that the UE is able to establish the radio bearer combination.
2. To verify correct data transfer using all the possible MAC-d PDU sizes of the transport channel mapped to E-DCH.

### 14.7.1.3 Method of test

NOTE: The reference to E-DCH Category refers to the UE capability as signalled in the Rel-6 IE “E-DCH physical layer category”. All UEs supporting E-DCH should signal a category between 1 and 6 for this IE even if the UE physical capability category is above 6.

NOTE: The reference to HS-DSCH Categories refers to the UE capability as signalled in the Rel-5 IE “HS-DSCH physical layer category” (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

The following parameters are specific for this test case:

| Parameter | Value |
|---|---|
| MAC-hs receiver window size | 16 |
| HS-DSCH MAC-d PDU size | 336 |

| E-DCH Category | RLC Transmission window size |
|---|---|
| 1 | 512 |
| 2 | 512 |
| 3 | 512 |
| 4 | 512 |
| 5 | 1536 |
| 6 | 1536 |

| HS-DSCH Category | HS-PDSCH Number of HARQ processes | RLC Receiving window size | HS-PDSCH TFRC (note 1) | | | | | |
|---|---|---|---|---|---|---|---|---|
| | | | Max MAC-d PDU size | Minimum TBS | Number of MAC-d PDUs | Modulation scheme | Number of codes | TFRI |
| 1 | 2 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 2 | 2 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 3 | 3 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 4 | 3 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 5 | 6 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 6 | 6 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 7 | 6 | 1536 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 8 | 6 | 1536 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 9 | 6 | 2047 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 10 | 6 | 2047 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 11 | 3 | 1024 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 12 | 6 | 1024 | 336 | 357 | 1 | QPSK | 1 | 19 |
| NOTE 1: The HS-PDSCH TFRC should be selected to enable all test data on DTCH on HS-DSCH to be transmitted in one TTI, i.e. such that the MAC-hs transport block size is bigger than the maximum MAC-d PDU size under test + MAC-hs header size (21 bits). See 14.1.3.3 (MAC-d PDU size=336) for recommended TFRC values for different transport block size. | | | | | | | | |

The generic test procedure in 14.1.4.1 is run for each sub-test.

Sub-tests:

| Sub-test | Applicable E-DCH Category | E-DPDCH TTI and E-TFCI Table (note 1) | E-DPDCH Number of HARQ processes | UL RLC SDU size (note 2) | Test data size (note 3) |
|---|---|---|---|---|---|
| 1 | 1 to 6 | 10ms, Table 0 | 4 | 312 | 312 |
| 2 | 2,4 and 6 | 2ms, Table 0 | 8 | 312 | 312 |
| NOTE 1: E-DPDCH TTI and E-TFCI table according to TS 25.321 Annex B.<br>NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. The UL RLC SDU size is set to UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit). This will enable the UE to return the data within one UL TTI.<br>NOTE 3: The test data size is for DTCH mapped to E-DCH selected according to the MAC-d PDU size to be tested. | | | | | |

### 14.7.1.4 Test requirements

See 14.1.4.1 for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 18 the UE shall return a RLC SDU with same content as sent in downlink.

## 14.7.1a Streaming or interactive or background / UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] / PS RAB + UL: [max bit rate depending on UE category and TTI] DL:3.4 kbps SRBs for DCCH on E-DCH and DL DCH/ UL 16QAM

### 14.7.1a.1 Conformance requirement

The UE shall be able to establish the UTRAN requested radio bearers within the UE's signalled radio access capabilities.

The UE shall correctly transfer user data from peer to peer RLC entities according to the requested radio bearer configuration.

Reference(s)

3GPP TS 25.331, clause 8.2.1

3GPP TS 25.2xx series (Physical Layer)

3GPP TS 25.321 (MAC)

3GPP TS 25.322 (RLC)

### 14.7.1a.2 Test purpose

For the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.6.2:

1. To verify that the UE is able to establish the radio bearer combination.
2. To verify correct data transfer using all the possible MAC-d PDU sizes of the transport channel mapped to E-DCH.

### 14.7.1a.3 Method of test

NOTE: The reference to E-DCH Category refers to the UE capability as signalled in the Rel-6 IE “E-DCH physical layer category”. All UEs supporting E-DCH should signal a category between 1 and 6 for this IE even if the UE physical capability category is above 6.

NOTE: The reference to HS-DSCH Categories refers to the UE capability as signalled in the Rel-5 IE “HS-DSCH physical layer category” (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

The following parameters are specific for this test case:

| Parameter | Value |
|---|---|
| MAC-hs receiver window size | 16 |
| HS-DSCH MAC-d PDU size | 336 |

| E-DCH Category | RLC Transmission window size |
|---|---|
| 7 | 1536 |

| HS-DSCH Category | HS-PDSCH Number of HARQ processes | RLC Receiving window size | HS-PDSCH TFRC (note 1) | | | | | |
|---|---|---|---|---|---|---|---|---|
| | | | Max MAC-d PDU size | Minimum TBS (note 2) | Number of MAC-d PDUs | Modulation scheme | Number of codes | TFRI |
| 1 | 2 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 2 | 2 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 3 | 3 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 4 | 3 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 5 | 6 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 6 | 6 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 7 | 6 | 1536 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 8 | 6 | 1536 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 9 | 6 | 2047 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 10 | 6 | 2047 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 11 | 3 | 1024 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 12 | 6 | 1024 | 336 | 357 | 1 | QPSK | 1 | 19 |
| NOTE 1: The HS-PDSCH TFRC should be selected to enable all test data on DTCH on HS-DSCH to be transmitted in one TTI, i.e. such that the MAC-hs transport block size is bigger than the maximum MAC-d PDU size under test + MAC-hs header size (21 bits). See 14.1.3.3 (MAC-d PDU size=336) for recommended TFRC values for different transport block size. | | | | | | | | |

The generic test procedure in 14.1.4.1 is run for each sub-test.

Sub-tests:

| Sub-test | Applicable E-DCH Category | E-DPDCH TTI and E-TFCI Table (note 1) | E-DPDCH Number of HARQ processes | UL RLC SDU size (note 2 &4) | Test data size (note 3) |
|---|---|---|---|---|---|
| 1 | 7 | 2ms, Table 2 | 8 | 7992 | 312 |
| NOTE 1: E-DPDCH TTI and E-TFCI table according to TS 25.321 Annex B.<br>NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. The UL RLC SDU size is set to UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit). This will enable the UE to return the data within one UL TTI.<br>NOTE 3: The test data size is for DTCH mapped to E-DCH selected according to the MAC-d PDU size to be tested.<br>NOTE 4: The UL RLC SDU size is calculated as 25*320-8= 7992, such that TB size 8450 corresponding to E-TFCI 103 will be selected. With PLnon-max = 0.84, [(8450+24[CRC] ) *3 [TC] ]= 25422 bits. 25422* PLnon-max =21355 , this guarantees as per algorithm in 25.212 clause 4.8.4.1,16QAM to be selected [$2\times M_2+2\times M_4$] | | | | | |

14.7.1a.4 Test requirements

See 14.1.4.1 for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 18 the UE shall return a RLC SDU with first 312 bits equal to the content of the DL RLC SDU sent by the SS.

## 14.7.2 Streaming or interactive or background / UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] / PS RAB + UL:[max bit rate depending on UE category and TTI] DL:3.4 kbps SRBs for DCCH on E-DCH and DL DCH

14.7.2.1 Conformance requirement

See 14.7.1.1.

14.7.2.2 Test purpose

For the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.6.2:

1. To verify that the UE is able to establish the radio bearer combination.

2 To verify correct data transfer using all the possible MAC-d PDU sizes of the transport channel mapped to E-DCH.

14.7.2.3 Method of test

See 14.7.1.3.

14.7.2.4 Test requirements

See 14.7.1.4.

## 14.7.3 Streaming or interactive or background / UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] / PS RAB + UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] SRBs for DCCH on E-DCH and HS-DSCH

14.7.3.1 Conformance requirement

See 14.7.1.1.

14.7.3.2 Test purpose

For the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.6.3:

1. To verify that the UE is able to establish the radio bearer combination.

2 To verify correct data transfer using all the possible MAC-d PDU sizes of the transport channel mapped to E-DCH.

14.7.3.3 Method of test

See 14.7.1.3.

14.7.3.4 Test requirements

See 14.7.1.4.

## 14.7.3a Streaming or interactive or background / UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] with Flexible RLC, MAC-ehs and MAC-i/is / PS RAB + UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] SRBs for DCCH on E-DCH and HS-DSCH with MAC-ehs and MAC-i/is

14.7.3a.1 Conformance requirement

See 14.7.1.1.

14.7.3a.2 Test purpose

For the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.6.3 and for the case when Flexible RLC and MAC-i/is is configured:

1. To verify that the UE is able to establish the radio bearer combination.

2 To verify correct data transfer using all the possible MAC-d PDU sizes of the transport channel mapped to E-DCH.

14.7.3a.3 Method of test

NOTE: The reference to E-DCH Category refers to the UE capability as signalled in the Rel-6 IE "E-DCH physical layer category". All UEs supporting E-DCH should signal a category between 1 and 6 for this IE even if the UE physical capability category is above 6.

NOTE: The reference to HS-DSCH Categories refers to the UE capability as signalled in the Rel-7 IE "HS-DSCH physical layer category extension". This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is configured.

The following parameters are specific for this test case:

| Parameter | Value |
|---|---|
| Radio bearer | TS 34.108, clause 6.10.2.4.6.3 using downlink MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-ehs) and uplink MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-i/is) and using downlink Alt 2 (Fixed RLC and MAC-ehs) and uplink Alt 2 (Fixed RLC and MAC-i/is) for the SRB#1 to SRB#4. |
| MAC-ehs receiver window size | 16 |
| HS-DSCH MAC-d PDU size | 336 |

| E-DCH Category | RLC Transmission window size |

| 12 | 6 | 1024 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 13 to 20 | 6 | 2047 | 336 | 360 | 1 | QPSK | 1 | 30 |
| NOTE 1: The HS-PDSCH TFRC should be selected to enable all test data on DTCH on HS-DSCH to be transmitted in one TTI considering all sub-tests. i.e. such that the MAC-ehs transport block size is bigger than the "Minimum TBS" that equals maximum MAC-d PDU size under test + the MAC-ehs header size (24 bits). | | | | | | | | |

The generic test procedure in 14.1.4.1b is run for each sub-test.

Sub-tests:

| Sub-test | Applicable E-DCH Category | E-DPDCH TTI and E-TFCI Table (note 1) | E-DPDCH Number of HARQ processes | UL MAC-d PDU size under test | DL MAC-d PDU size under test | UL RLC SDU size (note 2) | Test data size (note 3) |
|---|---|---|---|---|---|---|---|
| 1 | 1 to 6 | 10ms, Table 0 | 4 | Flexible | Flexible | 320 | 320 |
| 2 | 2,4 and 6 | 2ms, Table 0 | 8 | Flexible | Flexible | 320 | 320 |

NOTE 1: E-DPDCH TTI and E-TFCI table according to TS 25.321 Annex B.
NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
The UL RLC SDU size is set to UL RLC payload size. This will enable the UE to return the data within one UL TTI ("Use special value of HE field" is configured).
NOTE 3: The test data size is for DTCH mapped to E-DCH is selected according to the MAC-d PDU size to be tested = DL RLC payload size for the MAC-d PDU size.

#### 14.7.3a.4 Test requirements

See 14.1.4.1b for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 18 the UE shall return a RLC SDU with same content as sent in downlink.

## 14.7.3b Streaming or interactive or background / UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] with Flexible RLC, MAC-ehs and MAC-i/is / PS RAB + UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] SRBs for DCCH on E-DCH and HS-DSCH with MAC-ehs and MAC-i/is / UL: QPSK and Dual-Cell DL: 16QAM and Dual-Cell

#### 14.7.3b.1 Conformance requirement

See 14.7.1.1.

#### 14.7.3b.2 Test purpose

When the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.6.3 is configured for Dual-cell E-DCH and Dual-cell HSDPA, with uplink QPSK, Flexible RLC and MAC-i/is and downlink 16QAM, flexible RLC and MAC-ehs:

1. Verify that the UE is able to establish the radio bearer combination on both cells.
2 Verify correct data transfer of the established radio bearer combination on both cells.

#### 14.7.3b.3 Method of test

NOTE: The reference to E-DCH Category refers to the UE capability as signalled in the Rel-9 IE "E-DCH physical layer category extension 2".

NOTE: The reference to HS-DSCH Categories refers to the UE capability as signalled in the Rel-8 IE "HS-DSCH physical layer category extension 2". This IE corresponds to the HS-DSCH category supported by the UE when Dual-Cell and MAC-ehs is configured.

The following parameters are specific for this test case:

| Parameter | Value |
|---|---|
| Radio bearer | TS 34.108, clause 6.10.2.4.6.3 using downlink MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-ehs) and uplink MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-i/is) and using downlink Alt 2 (Fixed RLC and MAC-ehs) and uplink Alt 2 (Fixed RLC and MAC-i/is) for the SRB#1 to SRB#4. |
| MAC-ehs receiver window size | 16 |
| HS-DSCH MAC-d PDU size | 336 |

| E-DCH Category | RLC Transmission window size |
|---|---|
| 8 | 1536 |
| 9 | 1536 |

| HS-DSCH Category | HS-PDSCH Number of HARQ processes | RLC Receiving window size | HS-PDSCH TFRC (note 1) | | | | | |
|---|---|---|---|---|---|---|---|---|

### 14.7.3b.4 Test requirements

See 14.1.4.1c for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 18 the UE shall return a RLC SDU with same content as sent in downlink.

# 14.7.3c Streaming or interactive or background / UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] with Flexible RLC, MAC-ehs and MAC-i/is / PS RAB + UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] SRBs for DCCH on E-DCH and HS-DSCH with MAC-ehs and MAC-i/is / UL: 16QAM and Dual-Cell DL: 16QAM and Dual-Cell

## 14.7.3c.1 Conformance requirement

See 14.7.1.1.

## 14.7.3c.2 Test purpose

When the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.6.3 is configured for Dual-cell E-DCH and Dual-cell HSDPA, with uplink 16QAM, Flexible RLC and MAC-i/is and downlink 16QAM, flexible RLC and MAC-ehs:

1. Verify that the UE is able to establish the radio bearer combination on both cells.

2 Verify correct data transfer of the established radio bearer combination on both cells.

## 14.7.3c.3 Method of test

NOTE 1: The reference to E-DCH Category refers to the UE capability as signalled in the Rel-9 IE "E-DCH physical layer category extension 2".

NOTE 2: The reference to HS-DSCH Categories refers to the UE capability as signalled in the Rel-8 IE "HS-DSCH physical layer category extension 2". This IE corresponds to the HS-DSCH category supported by the UE when Dual-Cell and MAC-ehs is configured.

The following parameters are specific for this test case:

| Parameter | Value |
|---|---|
| Radio bearer | TS 34.108, clause 6.10.2.4.6.3 using downlink MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-ehs) and uplink MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-i/is) and using downlink Alt 2 (Fixed RLC and MAC-ehs) and uplink Alt 2 (Fixed RLC and MAC-i/is) for the SRB#1 to SRB#4. |
| MAC-ehs receiver window size | 16 |
| HS-DSCH MAC-d PDU size | 336 |

| E-DCH Category | RLC Transmission window size |
|---|---|
| 9 | 1536 |

| HS-DSCH Category | HS-PDSCH Number of HARQ processes | RLC Receiving window size | HS-PDSCH TFRC (note 1) | | | | | |
|---|---|---|---|---|---|---|---|---|
| | | | Max MAC-d PDU size | Minimum TBS | Number of MAC-d PDUs | Modulation scheme | Number of codes | TFRI |
| 21 to 24 | 6 | 2047 | 336 | 360 | 1 | 16QAM | 1 | 0 |
| NOTE 1: The HS-PDSCH TFRC should be selected to enable all test data on DTCH on HS-DSCH to be transmitted in one TTI considering all sub-tests. i.e. such that the MAC-ehs transport block size is bigger than the "Minimum TBS" that equals maximum MAC-d PDU size under test + the MAC-ehs header size (24 bits). | | | | | | | | |

The generic test procedure in 14.1.4.1c is run for each sub-test.

Sub-tests:

| Sub-test | Applicable E-DCH Category | E-DPDCH TTI and E-TFCI Table (note 1) | E-DPDCH Number of HARQ processes | UL MAC-d PDU size under test | DL MAC-d PDU size under test | UL RLC SDU size (note 2 & 4) | Test data size (note 3) |
|---|---|---|---|---|---|---|---|
| 1 | 9 | 2ms, Table 0 | 8 | Flexible | Flexible | 7992 | 312 |
| NOTE 1: E-DPDCH TTI and E-TFCI table according to TS 25.321 Annex B.<br>NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. The UL RLC SDU size is set to UL RLC payload size. This will enable the UE to return the data within one UL TTI ("Use special value of HE field" is configured).<br>NOTE 3: The test data size is for DTCH mapped to E-DCH is selected according to the MAC-d PDU size to be tested = DL RLC payload size for the MAC-d PDU size.<br>NOTE 4: The UL RLC SDU size is calculated as 25*320-8= 7992, with the UL RLC ACK (status) PDU of 336 bits and 32 bits of MAC-is, MAC-i headers such that TB size 8810 corresponding to E-TFCI 104 will be selected. With PLnon-max = 0.84, [((8810+24[CRC] )/2[numblocks] ) *3 [TC] +12[Trellis bits]*2[numblocks] = 26526 bits. 26526 * PLnon-max = 22281.84, this guarantees as per algorithm in 25.212 clause 4.8.4.1,16QAM to be selected [$2\times M_2+2\times M_4$] | | | | | | | |

#### 14.7.3c.4 Test requirements

See 14.1.4.1c for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 18 the UE shall return a RLC SDU with same content as sent in downlink.

## 14.7.4 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Streaming or interactive or background / UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

#### 14.7.4.1 Conformance requirement

See 14.7.1.1.

#### 14.7.4.2 Test purpose

For the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.6.4:

1. To verify that the UE is able to establish the radio bearer combination.
2 To verify correct data transfer using all the possible MAC-d PDU sizes of the transport channel mapped to E-DCH in combination with the possible TFCI of the conversional speech radio bearer.

#### 14.7.4.3 Method of test

NOTE: The reference to E-DCH Category refers to the UE capability as signalled in the Rel-6 IE "E-DCH physical layer category". All UEs supporting E-DCH should signal a category between 1 and 6 for this IE even if the UE physical capability category is above 6.

NOTE: The reference to HS-DSCH Categories refers to the UE capability as signalled in the Rel-5 IE "HS-DSCH physical layer category" (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

The following parameters are specific for this test case:

Uplink TFS:

| | | RB5 (RAB subflow #1) | RB6 (RAB subflow #2) | RB7 (RAB subflow #3) | DCCH |
|---|---|---|---|---|---|
| TFS | TF0, bits | 1x0 | 0x103 | 0x60 | 0x148 |
| | TF1, bits | 1x39 | 1x103 | 1x60 | 1x148 |
| | TF2, bits | 1x81 | N/A | N/A | N/A |

Uplink TFCS:

| TFCI | (RB5, RB6, RB7, DCCH) |
|---|---|
| UL_TFC0 | (TF0, TF0, TF0, TF0) |
| UL_TFC1 | (TF1, TF0, TF0, TF0) |
| UL_TFC2 | (TF2, TF1, TF1, TF0) |
| UL_TFC3 | (TF0, TF0, TF0, TF1) |
| UL_TFC4 | (TF1, TF0, TF0, TF1) |
| UL_TFC5 | (TF2, TF1, TF1, TF1) |

Downlink TFS:

| | | RB5 (RAB subflow #1) | RB6 (RAB subflow #2) | RB7 (RAB subflow #3) | DCCH |
|---|---|---|---|---|---|
| TFS | TF0, bits | 1x0 | 0x103 | 0x60 | 0x148 |
| | TF1, bits | 1x39 | 1x103 | 1x60 | 1x148 |
| | TF2, bits | 1x81 | N/A | N/A | N/A |

Downlink TFCS:

| TFCI | (RB5, RB6, RB7, DCCH) |
|---|---|
| DL_TFC0 | (TF0, TF0, TF0, TF0) |
| DL_TFC1 | (TF1, TF0, TF0, TF0) |

| 3 | 2, 4 and 6 | 2ms, Table 0 | 8 | DL_TFC1 | UL_TFC1 | DL_TFC0, DL_TFC3, UL_TFC0, UL_TFC3 | UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3 UL_TFC4 | RB5: 39<br>RB6: 103<br>RB7: 60<br>RB8: 312 | RB5: 39<br>RB6: No data<br>RB7: No data<br>RB8: 312 |
| 4 | 2, 4 and 6 | 2ms, Table 0 | 8 | DL_TFC2 | UL_TFC2 | DL_TFC0, DL_TFC3, UL_TFC0, UL_TFC3 | UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3, UL_TFC5 | RB5: 81<br>RB6: 103<br>RB7: 60<br>RB8: 312 | RB5: 81<br>RB6: 103<br>RB7: 60<br>RB8: 312 |

NOTE 1: E-DPDCH TTI and E-TFCI table according to TS 25.321 Annex B.
NOTE 2: UL_TFC0, UL_TFC1, UL_TFC2 and UL_TFC3 are part of minimum set of TFCIs.
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit), where N is the number of transport blocks for the UL transport format under test. This will enable the UE to return th data within one UL TTI.
NOTE 4: The test data size is for DTCH mapped to E-DCH selected according to the MAC-d PDU size to be tested.

#### 14.7.4.4 Test requirements

See 14.1.4.1 for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At steps 17 to 20 the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the sub-test.
3. At step 18 and for each radio bearer where test data is sent in downlink the UE shall return a RLC SDU with same content as sent in downlink. For radio bearers where no data is sent in downlink then no data shall be received in uplink.

### 14.7.5 Streaming or interactive or background / UL:[max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] kbps / PS RAB + Streaming or interactive or background / UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] / PS RAB + UL:[max bit rate depending on UE category and TTI] DL:3.4 kbps SRBs for DCCH on E-DCH and DL DCH

#### 14.7.5.1 Conformance requirement

See 14.7.1.1.

#### 14.7.5.2 Test purpose

For the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.6.5:

1. To verify that the UE is able to establish the radio bearer combination.
2 To verify correct data transfer using all the possible MAC-d PDU sizes of the transport channel mapped to E-DCH.

#### 14.7.5.3 Method of test

NOTE: The reference to E-DCH Category refers to the UE capability as signalled in the Rel-6 IE “E-DCH physical layer category”. All UEs supporting E-DCH should signal a category between 1 and 6 for this IE even if the UE physical capability category is above 6.

NOTE: The reference to HS-DSCH Categories refers to the UE capability as signalled in the Rel-5 IE “HS-DSCH physical layer category” (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

The first Streaming or background or interactive / UL:[max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] kbps / PS RAB is referred to as RB5 and the second Streaming or interactive or background UL:[max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] kbps / PS RAB is referred to RB6.

The following parameters are specific for this test case and RB5 and RB6:

| Parameter | Value |
|---|---|
| MAC-hs receiver window size | 16 |
| HS-DSCH MAC-d PDU size | 336 |

| E-DCH Category | RLC Transmission window size |
|---|---|
| 1 | 512 |
| 2 | 512 |
| 3 | 512 |
| 4 | 512 |
| 5 | 1536 |
| 6 | 1536 |

| HS-DSCH Category | HS-PDSCH Number of HARQ processes | RLC Receiving window size | HS-PDSCH TFRC (note 1) | | | | | |
|---|---|---|---|---|---|---|---|---|
| | | | Max MAC-d PDU size | Minimum TBS | Number of MAC-d PDUs | Modulation scheme | Number of codes | TFRI |
| 1 | 2 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 2 | 2 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 3 | 3 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 4 | 3 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 5 | 6 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 6 | 6 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 7 | 6 | 1536 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 8 | 6 | 1536 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 9 | 6 | 2047 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 10 | 6 | 2047 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 11 | 3 | 1024 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 12 | 6 | 1024 | 336 | 357 | 1 | QPSK | 1 | 19 |

NOTE 1: The HS-PDSCH TFRC should be selected to enable all test data on DTCH on HS-DSCH to be transmitted in one TTI, i.e. such that the MAC-hs transport block size ("Minimum TBS") is bigger than the maximum MAC-d PDU size under test + the MAC-hs header size (21 bits). See 14.1.3.3 (MAC-d PDU size=336) for recommended TFRC values for different transport block size.

The generic test procedure in 14.1.4.1 is run for each sub-test.

Sub-tests:

| Sub-test | E-DCH Category | E-DPDCH TTI and E-TFCI Table (note 1) | E-DPDCH Number of HARQ processes | UL RLC SDU size (note 2) | Test data size (note 2) |
|---|---|---|---|---|---|
| 1 | 1 to 6 | 10ms, Table 0 | 4 | RB5:312<br>RB6:312 | RB5:312<br>RB6:312 |
| 2 | 2,4 and 6 | 2ms, Table 0 | 8 | RB5:312<br>RB6:312 | RB5:312<br>RB6:312 |

NOTE 1: E-DPDCH TTI and E-TFCI table according to TS 25.321 Annex B.
NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
The UL RLC SDU size is set to UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit). This will enable the UE to return the data within one UL TTI.
NOTE 3: The test data size is for DTCH mapped to E-DCH selected according to the MAC-d PDU size to be tested.

### 14.7.5.4 Test requirements

See 14.1.4.1 for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 18 the UE shall return a RLC SDU on RB5 and RB6 with same content as sent in downlink.

## 14.7.6 Conversational / unknown or speech / UL:[max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] kbps / PS RAB + Streaming or Interactive or background / UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] / PS RAB + UL:[max bit rate depending on UE category and TTI] DL: :[max bit rate depending on UE category] SRBs for DCCH on E-DCH and HS-DSCH

### 14.7.6.1 Conformance requirement

See 14.7.1.1.

### 14.7.6.2 Test purpose

For the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.6.6:

1. To verify that the UE is able to establish the radio bearer combination.

2 To verify correct data transfer using all the possible MAC-d PDU sizes of the transport channel mapped to E-DCH.

### 14.7.6.3 Method of test

NOTE: The reference to E-DCH Category refers to the UE capability as signalled in the Rel-6 IE "E-DCH physical layer category". All UEs supporting E-DCH should signal a category between 1 and 6 for this IE even if the UE physical capability category is above 6.

NOTE: The reference to HS-DSCH Categories refers to the UE capability as signalled in the Rel-5 IE "HS-DSCH physical layer category" (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

The Conversational / unknown or speech / UL:[max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] kbps / PS RAB is referred to as RB5 and the Streaming or interactive or background UL:[max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] kbps / PS RAB is referred to RB6

The following parameters are specific for this test case and RB5 and RB6:

| Parameter | Value |
|---|---|
| MAC-hs receiver window size | 16 |
| RB5: HS-DSCH MAC-d PDU size | See sub-test table |
| RB6: HS-DSCH MAC-d PDU size | 336 |

| E-DCH Category | RLC Transmission window size |
|---|---|
| 1 | 512 |
| 2 | 512 |
| 3 | 512 |
| 4 | 512 |
| 5 | 1536 |
| 6 | 1536 |

| HS-DSCH Category | HS-PDSCH Number of HARQ processes | RLC Receiving window size | HS-PDSCH TFRC (note 1) | | | | | |
|---|---|---|---|---|---|---|---|---|
| | | | Max MAC-d PDU size | Minimum TBS (note 2) | Number of MAC-d PDUs | Modulation scheme | Number of codes | TFRI |
| 1 | 2 | 512 | 344 | 365 | 1 | QPSK | 1 | 19 |
| 2 | 2 | 512 | 344 | 365 | 1 | QPSK | 1 | 19 |
| 3 | 3 | 512 | 344 | 365 | 1 | QPSK | 1 | 19 |
| 4 | 3 | 512 | 344 | 365 | 1 | QPSK | 1 | 19 |
| 5 | 6 | 512 | 344 | 365 | 1 | QPSK | 1 | 19 |
| 6 | 6 | 512 | 344 | 365 | 1 | QPSK | 1 | 19 |
| 7 | 6 | 1536 | 344 | 365 | 1 | QPSK | 1 | 19 |
| 8 | 6 | 1536 | 344 | 365 | 1 | QPSK | 1 | 19 |
| 9 | 6 | 2047 | 344 | 365 | 1 | QPSK | 1 | 19 |
| 10 | 6 | 2047 | 344 | 365 | 1 | QPSK | 1 | 19 |
| 11 | 3 | 1024 | 344 | 365 | 1 | QPSK | 1 | 19 |
| 12 | 6 | 1024 | 344 | 365 | 1 | QPSK | 1 | 19 |

NOTE 1: The HS-PDSCH TFRC should be selected to enable all test data on DTCH on HS-DSCH to be transmitted in one TTI considering all sub-tests. i.e. such that the MAC-hs transport block size (“Minimum TBS”) is bigger than the maximum MAC-d PDU size under test + the MAC-hs header size.

NOTE 2: For RB5 (UM) the maximum MAC-d PDU size is 344 and the MAC-hs header size is 21 bits, this result in the maximum required TBS for RB5 of 365 bits. For RB6 (AM) the maximum MAC-d PDU size is 336 and the MAC-hs header size is 21 bits, this result in the maximum required TBS for RB6 of 357 bits. The HS-PDSCH TFRC need to be selected for a TBS bigger or equal to 365.

The generic test procedure in 14.1.4.1 is run for each sub-test.

Sub-tests:

| Sub-test | Applicable E-DCH Category | E-DPDCH TTI and E-TFCI Table (note 1) | E-DPDCH Number of HARQ processes | UL MAC-d PDU size under test | DL MAC-d PDU size under test | UL RLC SDU size (note 2) | Test data size (note 3) |

NOTE 1: E-DPDCH TTI and E-TFCI table according to TS 25.321 Annex B.
NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
The UL RLC SDU size is set to UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit). This will enable the UE to return th data within one UL TTI.
NOTE 3: The test data size is for DTCH mapped to E-DCH is selected according to the MAC-d PDU size to be tested = DL RLC payload size for the MAC-d PDU size minus 8 bits (size of 7 bit length indicator and expansion bit).

### 14.7.6.4 Test requirements

See 14.1.4.1 for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 18 the UE shall return a RLC SDU on RB5 and RB6 with same content as sent in downlink. For the case the returned UL RLC SDU size under test is smaller than the sent DL RLC SDU size then the payload of the received UL RLC SDU shall have the same content as the first N bits of the DL RLC SDU payload, where N equals the payload size of the UL RLC SDU.

## 14.7.6a Conversational / unknown or speech / UL:[max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] kbps / PS RAB + Streaming or Interactive or background / UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] / PS RAB + UL:[max bit rate depending on UE category and TTI] DL: :[max bit rate depending on UE category] SRBs for DCCH on E-DCH and HS-DSCH/ UL 16QAM

### 14.7.6a.1 Conformance requirement

See 14.7.1.1.

### 14.7.6a.2 Test purpose

For the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.6.6:

1. To verify that the UE is able to establish the radio bearer combination.

2 To verify correct data transfer using all the possible MAC-d PDU sizes of the transport channel mapped to E-DCH.

### 14.7.6a.3 Method of test

NOTE: The reference to E-DCH Category refers to the UE capability as signalled in the Rel-7 IE “E-DCH physical layer category extension”.

NOTE: The reference to HS-DSCH Categories refers to the UE capability as signalled in the Rel-5 IE “HS-DSCH physical layer category” (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

The Conversational / unknown or speech / UL:[max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] kbps / PS RAB is referred to as RB5 and the Streaming or interactive or background UL:[max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] kbps / PS RAB is referred to RB6

The following parameters are specific for this test case and RB5 and RB6:

| Parameter | Value |
|---|---|
| MAC-hs receiver window size | 16 |
| RB5: HS-DSCH MAC-d PDU size | See sub-test table |
| RB6: HS-DSCH MAC-d PDU size | 336 |

| E-DCH Category | RLC Transmission window size |
|---|---|
| 7 | 1536 |

| HS-DSCH Category | HS-PDSCH Number of HARQ processes | RLC Receiving window size | HS-PDSCH TFRC (note 1) | | | | |
|---|---|---|---|---|---|---|---|
| | | | Max MAC-d PDU size | Max MAC-d PDU size | Max MAC-d PDU size | Max MAC-d PDU size | Max MAC-d PDU size |
| 1 | 2 | 512 | 344 | 365 | 1 | QPSK | 1 |
| 2 | 2 | 512 | 344 | 365 | 1 | QPSK | 1 |
| 3 | 3 | 512 | 344 | 365 | 1 | QPSK | 1 |
| 4 | 3 | 512 | 344 | 365 | 1 | QPSK | 1 |
| 5 | 6 | 512 | 344 | 365 | 1 | QPSK | 1 |
| 6 | 6 | 512 | 344 | 365 | 1 | QPSK | 1 |
| 7 | 6 | 1536 | 344 | 365 | 1 | QPSK | 1 |
| 8 | 6 | 1536 | 344 | 365 | 1 | QPSK | 1 |
| 9 | 6 | 2047 | 344 | 365 | 1 | QPSK | 1 |
| 10 | 6 | 2047 | 344 | 365 | 1 | QPSK | 1 |
| 11 | 3 | 1024 | 344 | 365 | 1 | QPSK | 1 |
| 12 | 6 | 1024 | 344 | 365 | 1 | QPSK | 1 |

NOTE 1: The HS-PDSCH TFRC should be selected to enable all test data on DTCH on HS-DSCH to be transmitted in one TTI considering all sub-tests. i.e. such that the MAC-hs transport block size ("Minimum TBS") is bigger than the maximum MAC-d PDU size under test + the MAC-hs header size.

NOTE 2: For RB5 (UM) the maximum MAC-d PDU size is 344 and the MAC-hs header size is 21 bits, this result in the maximum required TBS for RB5 of 365 bits. For RB6 (AM) the maximum MAC-d PDU size is 336 and the MAC-hs header size is 21 bits, this result in the maximum required TBS for RB6 of 357 bits. The HS-PDSCH TFRC need to be selected for a TBS bigger or equal to 365.

The generic test procedure in 14.1.4.1 is run for each sub-test.

Sub-tests:

| Sub-test | Applicable E-DCH Category | E-DPDCH TTI and E-TFCI Table (note 1) | E-DPDCH Number of HARQ processes | UL MAC-d PDU size under test | DL MAC-d PDU size under test | UL RLC SDU size (note 2) | Test data size (note 3) |
|---|---|---|---|---|---|---|---|

| 10 | 7 | 2ms, Table 2 | 8 | RB5:296<br>RB6:336 | RB5:296<br>RB6:336 | RB5:280<br>RB6: 7992 | RB5:280<br>RB6:312 |
| 11 | 7 | 2ms, Table 2 | 8 | RB5:312<br>RB6:336 | RB5:344<br>RB6:336 | RB5:296<br>RB6: 7992 | RB5:328<br>RB6:312 |
| 12 | 7 | 2ms, Table 2 | 8 | RB5:344<br>RB6:336 | RB5:344<br>RB6:336 | RB5:328<br>RB6: 7992 | RB5:328<br>RB6:312 |

NOTE 1: E-DPDCH TTI and E-TFCI table according to TS 25.321 Annex B.
NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
The UL RLC SDU size is set to UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit). This will enable the UE to return th data within one UL TTI.
NOTE 3: The test data size is for DTCH mapped to E-DCH is selected according to the MAC-d PDU size to be tested = DL RLC payload size for the MAC-d PDU size minus 8 bits (size of 7 bit length indicator and expansion bit).
NOTE 4: The UL RLC SDU size is calculated as 25*320-8= 7992, such that TB size 8450 corresponding to E-TFCI 103 will be selected. With PLnon-max = 0.84, [(8450+24[CRC] ) *3 [TC] ]= 25422 bits. 25422* PLnon-max =21355 , this guarantees as per algorithm in 25.212 clause 4.8.4.1,16QAM to be selected [$2\times M_2+2\times M_4$]

### 14.7.6a.4 Test requirements

See 14.1.4.1 for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 18 the UE shall return a RLC SDU on RB5 with same content as sent in downlink and on RB6 with first 312 bits equal to the content of the DL RLC SDU sent by the SS. For the case the returned UL RLC SDU size under test is smaller than the sent DL RLC SDU size then the payload of the received UL RLC SDU shall have the same content as the first N bits of the DL RLC SDU payload, where N equals the payload size of the UL RLC SDU.

## 14.7.6b Conversational / unknown or speech / UL:[max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] kbps with Flexible RLC and MAC-ehs / PS RAB + Streaming or Interactive or background / UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] with Fixed RLC and MAC-ehs / PS RAB + UL:[max bit rate depending on UE category and TTI] DL: :[max bit rate depending on UE category] SRBs for DCCH on E-DCH and SRBs with Fixed RLC and MAC-ehs on HS-DSCH / UL: QPSK and DL: QPSK

### 14.7.6b.1 Conformance requirement

See 14.7.1.1.

### 14.7.6b.2 Test purpose

For the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.6.6 for the case for the QPSK and non-MIMO case using the downlink enhanced Layer 2 configuration with MAC-ehs and Fixed and Flexible RLC configured:

1. To verify that the UE is able to establish the radio bearer combination.

2 To verify correct data transfer using all the possible MAC-d PDU sizes of the transport channel mapped to E-DCH.

### 14.7.6b.3 Method of test

NOTE: The reference to E-DCH Category refers to the UE capability as signalled in the Rel-6 IE "E-DCH physical layer category". All UEs supporting E-DCH should signal a category between 1 and 6 for this IE even if the UE physical capability category is above 6.

NOTE: The reference to HS-DSCH Categories refers to the UE capability as signalled in the Rel-7 IE "HS-DSCH physical layer category extension". This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is configured.

The Conversational / unknown or speech / UL:[max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] kbps / PS RAB is referred to as RB5 and the Streaming or interactive or background UL:[max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] kbps / PS RAB is referred to RB6

The following parameters are specific for this test case and RB5 and RB6:

| Parameter | Value |
|---|---|
| Radio bearer | TS 34.108, clause 6.10.2.4.6.6 using downlink MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-ehs) for RB5; using downlink MAC-d flow parameters according to Alt 2 (Fixed RLC and MAC-ehs) for RB6; and using Alt 2 (Fixed RLC and MAC-ehs) for the SRB#1 to SRB#4. |
| MAC-ehs receiver window size | 16 |
| Alternative E-bit interpretation | TRUE |
| RB5: HS-DSCH MAC-d PDU size | See sub-test table |
| RB6: HS-DSCH MAC-d PDU size | 336 |
| RB5: DL UM RLC LI size | 7 |

| E-DCH Category | RLC Transmission window size |
|---|---|
| 1 | 512 |
| 2 | 512 |
| 3 | 512 |
| 4 | 512 |
| 5 | 1536 |
| 6 | 1536 |

| HS-DSCH Category | HS-PDSCH Number of HARQ processes | RLC Receiving window size | HS-PDSCH TFRC (note 1) | | | | | |
|---|---|---|---|---|---|---|---|---|
| | | | Max MAC-d PDU size | Minimum TBS (note 2) | Number of MAC-d PDUs | Modulation scheme | Number of codes | TFRI |
| 1 | 2 | 512 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 2 | 2 | 512 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 3 | 3 | 512 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 4 | 3 | 512 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 5 | 6 | 512 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 6 | 6 | 512 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 7 | 6 | 1536 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 8 | 6 | 1536 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 9 | 6 | 2047 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 10 | 6 | 2047 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 11 | 3 | 1024 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 12 | 6 | 1024 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 13 to 20 | 6 | 2047 | 344 | 368 | 1 | QPSK | 1 | 31 |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |

NOTE 1: The HS-PDSCH TFRC should be selected to enable all test data on DTCH on HS-DSCH to be transmitted in one TTI considering all sub-tests. i.e. such that the MAC-hs transport block size ("Minimum TBS") is bigger than the maximum MAC-d PDU size under test + the MAC-ehs header size.

NOTE 2: For RB5 (UM) the maximum MAC-d PDU size is 344 and the MAC-ehs header size is 24 bits, this result in the maximum required TBS for RB5 of 368 bits. For RB6 (AM) the maximum MAC-d PDU size is 336 and the MAC-ehs header size is 24 bits, this result in the maximum required TBS for RB6 of 360 bits. The HS-PDSCH TFRC need to be selected for a TBS bigger or equal to 368.

The generic test procedure in 14.1.4.1a is run for each sub-test.

Sub-tests:

| Sub-test | Applicable E-DCH Category | E-DPDCH TTI and E-TFCI Table (note 1) | E-DPDCH Number of HARQ processes | UL MAC-d PDU size under test | DL MAC-d PDU size under test | UL RLC SDU size (note 2) | Test data size (note 3) |

NOTE 1: E-DPDCH TTI and E-TFCI table according to TS 25.321 Annex B.
NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
The UL RLC SDU size is set to UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit). This will enable the UE to return the data within one UL TTI.
NOTE 3: The test data size is for DTCH mapped to E-DCH is selected according to the MAC-d PDU size to be tested = DL RLC payload size for the MAC-d PDU size minus 8 bits (size of 7 bit length indicator and expansion bit).

### 14.7.6b.4 Test requirements

See 14.1.4.1a for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 18 the UE shall return a RLC SDU on RB5 and RB6 with same content as sent in downlink. For the case the returned UL RLC SDU size under test is smaller than the sent DL RLC SDU size then the payload of the received UL RLC SDU shall have the same content as the first N bits of the DL RLC SDU payload, where N equals the payload size of the UL RLC SDU.

## 14.7.6c Conversational / unknown or speech / UL:[max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] kbps with Flexible RLC, MAC-ehs and MAC-i/is / PS RAB + Streaming or Interactive or background / UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] with Fixed RLC, MAC-ehs and MAC-i/is / PS RAB + UL:[max bit rate depending on UE category and TTI] DL: :[max bit rate depending on UE category] SRBs for DCCH on E-DCH and HS-DSCH with MAC-ehs and MAC-i/is / UL: QPSK and DL: QPSK

### 14.7.6c.1 Conformance requirement

See 14.7.1.1.

### 14.7.6c.2 Test purpose

For the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.6.6 for the case QPSK and non-MIMO case when MAC-ehs and MAC-i/is and the mix of Fixed and Flexible RLC is configured:

1. To verify that the UE is able to establish the radio bearer combination.

2 To verify correct data transfer using all the possible MAC-d PDU sizes of the transport channel mapped to E-DCH.

### 14.7.6c.3 Method of test

NOTE: The reference to E-DCH Category refers to the UE capability as signalled in the Rel-6 IE “E-DCH physical layer category”. All UEs supporting E-DCH should signal a category between 1 and 6 for this IE even if the UE physical capability category is above 6.

NOTE: The reference to HS-DSCH Categories refers to the UE capability as signalled in the Rel-7 IE “HS-DSCH physical layer category extension”. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is configured.

The Conversational / unknown or speech / UL:[max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] kbps / PS RAB is referred to as RB5 and the Streaming or interactive or background UL:[max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] kbps / PS RAB is referred to RB6

The following parameters are specific for this test case and RB5 and RB6:

| Parameter | Value |
|---|---|
| Radio bearer | TS 34.108, clause 6.10.2.4.6.6 using downlink MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-ehs) and uplink MAC-d flow parameters according to Alt 2 (Flexible RLC and MAC-i/is) for RB5; using downlink MAC-d flow parameters according to Alt 2 (Fixed RLC and MAC-ehs) and uplink MAC-d flow parameters according to Alt 2 (Fixed RLC and MAC-i/is) for RB6; and using downlink Alt 2 (Fixed RLC and MAC-ehs) and uplink Alt 2 (Fixed RLC and MAC-i/is) for the SRB#1 to SRB#4. |
| MAC-ehs receiver window size | 16 |
| RB5: Alternative E-bit interpretation | TRUE |
| RB5: HS-DSCH MAC-d PDU size | See sub-test table |
| RB6: HS-DSCH MAC-d PDU size | 336 |

| E-DCH Category | RLC Transmission window size |
|---|---|
| 1 | 512 |
| 2 | 512 |
| 3 | 512 |
| 4 | 512 |
| 5 | 1536 |
| 6 | 1536 |

| HS-DSCH Category | HS-PDSCH Number of HARQ processes | RLC Receiving window size | HS-PDSCH TFRC (note 1) | | | | | |
|---|---|---|---|---|---|---|---|---|
| | | | Max MAC-d PDU size | Minimum TBS (note 2) | Number of MAC-d PDUs | Modulation scheme | Number of codes | TFRI |
| 1 | 2 | 512 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 2 | 2 | 512 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 3 | 3 | 512 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 4 | 3 | 512 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 5 | 6 | 512 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 6 | 6 | 512 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 7 | 6 | 1536 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 8 | 6 | 1536 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 9 | 6 | 2047 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 10 | 6 | 2047 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 11 | 3 | 1024 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 12 | 6 | 1024 | 344 | 368 | 1 | QPSK | 1 | 31 |
| 13 to 20 | 6 | 2047 | 344 | 368 | 1 | QPSK | 1 | 31 |

NOTE 1: The HS-PDSCH TFRC should be selected to enable all test data on DTCH on HS-DSCH to be transmitted in one TTI considering all sub-tests. i.e. such that the MAC-ehs transport block size ("Minimum TBS") is bigger than the maximum MAC-d PDU size under test + the MAC-ehs header size.

NOTE 2: For RB5 (UM) the maximum MAC-d PDU size is 344 and the MAC-ehs header size is 24 bits, this result in the maximum required TBS for RB5 of 368 bits. For RB6 (AM) the maximum MAC-d PDU size is 336 and the MAC-ehs header size is 24 bits, this result in the maximum required TBS for RB6 of 360 bits. The HS-PDSCH TFRC need to be selected for a TBS bigger or equal to 368.

The generic test procedure in 14.1.4.1b is run for each sub-test.

Sub-tests:

| 24 | 2,4,6 | 2ms, Table 0 | 8 | RB5:Flexible RB6:336 | RB5:Flexible RB6:336 | RB5:336 RB6:320 | RB5:336 RB6:320 |

NOTE 1: E-DPDCH TTI and E-TFCI table according to TS 25.321 Annex B.

NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
The UL RLC SDU size is set to UL RLC payload size to be tested.. This will enable the UE to return the data within one UL TTI ("Alternative E-bit interpretation" is configured for RB5 (UM) and "Use special value of HE field" is configured for RB6 (AM)). The selected UL RLC SDU sizes for the flexible case (RB5) are the same as specified for the UL fixed case (Alt 1) of the reference radio bearer configuration in TS 34.108, clause 6.10.2.4.6.6 (88, 104, 136, 152, 168, 184, 200, 216, 280, 288, 304 and 336).

NOTE 3: The test data size is for DTCH mapped to E-DCH is selected according to the MAC-d PDU size to be tested = DL RLC payload size for the MAC-d PDU size. The selected DL test data sizes for RB5 are the same as specified for the DL fixed case (Alt 2) of the reference radio bearer configuration in TS 34.108, clause 6.10.2.4.6.6 (104, 136, 152, 168, 184, 216, 288 and 336).

#### 14.7.6c.4 Test requirements

See 14.1.4.1b for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 18 the UE shall return a RLC SDU on RB5 and RB6 with same content as sent in downlink. For the case the returned UL RLC SDU size under test is smaller than the sent DL RLC SDU size then the payload of the received UL RLC SDU shall have the same content as the first N bits of the DL RLC SDU payload, where N equals the payload size of the UL RLC SDU.

### 14.7.7 Conversational / unknown or speech / UL:[max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] kbps / PS RAB + Streaming or Interactive or background / UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] / PS RAB + Streaming or Interactive or background / UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] / PS RAB + UL:[max bit rate depending on UE category and TTI] DL: :[max bit rate depending on UE category] SRBs for DCCH on E-DCH and HS-DSCH

#### 14.7.7.1 Conformance requirement

See 14.7.1.1.

#### 14.7.7.2 Test purpose

For the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.6.7:

1. To verify that the UE is able to establish the radio bearer combination.

2 To verify correct data transfer using all the possible MAC-d PDU sizes of the transport channel mapped to E-DCH.

#### 14.7.7.3 Method of test

NOTE: The reference to E-DCH Category refers to the UE capability as signalled in the Rel-6 IE “E-DCH physical layer category”. All UEs supporting E-DCH should signal a category between 1 and 6 for this IE even if the UE physical capability category is above 6.

NOTE: The reference to HS-DSCH Categories refers to the UE capability as signalled in the Rel-5 IE “HS-DSCH physical layer category” (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

The Conversational / unknown or speech / UL:[max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] kbps / PS RAB is referred to as RB5, the first Streaming or interactive or background UL:[max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] kbps / PS RAB is referred to RB6 and the second the first Streaming or interactive or background UL:[max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] kbps / PS RAB is referred to RB7.

The following parameters are specific for this test case and RB5, RB6 and RB7:

| Parameter | Value |
|---|---|
| MAC-hs receiver window size | 16 |
| RB5: HS-DSCH MAC-d PDU size | See sub-test table |
| RB6: HS-DSCH MAC-d PDU size | 336 |
| RB7: HS-DSCH MAC-d PDU size | 336 |

| E-DCH Category | RLC Transmission window size |
|---|---|
| 1 | 512 |
| 2 | 512 |
| 3 | 512 |
| 4 | 512 |
| 5 | 1536 |
| 6 | 1536 |

| HS-DSCH Category | HS-PDSCH Number of HARQ processes | RLC Receiving window size | HS-PDSCH TFRC (note 1) | | | | | |
|---|---|---|---|---|---|---|---|---|
| | | | Max MAC-d PDU size | Minimum TBS (note 2) | Number of MAC-d PDUs | Modulation scheme | Number of codes | TFRI |
| 1 | 2 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 2 | 2 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 3 | 3 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 4 | 3 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 5 | 6 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 6 | 6 | 512 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 7 | 6 | 1536 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 8 | 6 | 1536 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 9 | 6 | 2047 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 10 | 6 | 2047 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 11 | 3 | 1024 | 336 | 357 | 1 | QPSK | 1 | 19 |
| 12 | 6 | 1024 | 336 | 357 | 1 | QPSK | 1 | 19 |

NOTE 1: The HS-PDSCH TFRC should be selected to enable all test data on DTCH on HS-DSCH to be transmitted in one TTI considering all sub-tests. i.e. such that the MAC-hs transport block size ("Minimum TBS") is bigger than the maximum MAC-d PDU size under test + the MAC-hs header size.

NOTE 2: For RB5 (UM) the maximum MAC-d PDU size is 336 and the MAC-hs header size is 21 bits, this result in the maximum required TBS for RB5 of 357 bits. For RB6 and RB7 the maximum MAC-d PDU size is 336 and the MAC-hs header size is 21 bits, this result in the maximum required TBS for RB6 of 357 bits. The HS-PDSCH TFRC need to be selected for a TBS bigger or equal to 357.

The generic test procedure in 14.1.4.1 is run for each sub-test.

Sub-tests:

| Sub-test | Applicable E-DCH Category | E-DPDCH TTI and E-TFCI Table (note 1) | E-DPDCH Number of HARQ processes | UL MAC-d PDU size under test | DL MAC-d PDU size under test | UL RLC SDU size (note 2) | Test data size (note 3) |

#### 14.7.7.4 Test requirements

See 14.1.4.1 for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 18 the UE shall return a RLC SDU on RB5, RB6 and RB7 with same content as sent in downlink. For the case the returned UL RLC SDU size under test is smaller than the sent DL RLC SDU size then the payload of the received UL RLC SDU shall have the same content as the first N bits of the DL RLC SDU payload, where N equals the payload size of the UL RLC SDU.

### 14.7.8 Conversational / speech / UL:(12.65 8.85 6.6) DL:(12.65 8.85 6.6) kbps / CS RAB + Streaming or interactive or background / UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH + DL:0.15 kbps SRB#5 for DCCH

#### 14.7.8.1 Conformance requirement

See 14.7.1.1.

#### 14.7.8.2 Test purpose

For the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.6.8:

1. To verify that the UE is able to establish the radio bearer combination.
2 To verify correct data transfer using all the possible MAC-d PDU sizes of the transport channel mapped to E-DCH.

14.7.8.3 Method of test

NOTE: The reference to E-DCH Category refers to the UE capability as signalled in the Rel-6 IE "E-DCH physical layer category". All UEs supporting E-DCH should signal a category between 1 and 6 for this IE even if the UE physical capability category is above 6.

NOTE: The reference to HS-DSCH Categories refers to the UE capability as signalled in the Rel-5 IE "HS-DSCH physical layer category" (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

The following parameters are specific for this test case:

Uplink TFS:

| | TFI | RB5 (RAB subflow #1) | RB6 (RAB subflow #2) | RB7 (RAB subflow #3) | DCCH 3.4 |
|---|---|---|---|---|---|
| TFS | TF0, bits | 0x72 | 0x181 | 0x60 | 0x148 |
| | TF1, bits | 1x40 | 1x78 | N/A | 1x148 |
| | TF2, bits | 1x54 | 1x113 | N/A | N/A |
| | TF3, bits | 1x64 | 1x181 | N/A | N/A |
| | TF4, bits | 1x72 | N/A | N/A | N/A |

Uplink TFCS:

| 12 | 6 | 1024 | 336 | 357 | 1 | QPSK | 1 | 19 |
| NOTE 1: The HS-PDSCH TFRC should be selected to enable all test data on DTCH on HS-DSCH to be transmitted in one TTI, i.e. such that the MAC-hs transport block size (“Minimum TBS”) is bigger than the maximum MAC-d PDU size under test data + RLC, MAC-d and MAC-hs header size (21 bits). See 14.1.3.3 (MAC-d PDU size=336). | | | | | | | | |

The generic test procedure in 14.1.4.2 is run for each sub-test.

Sub-tests:

The principle used to select sub-tests has been to cover all uplink and downlink TFS for the Speech radio bearer.

| Sub-test | Applicable E-DCH Category | E-DPDCH TTI and E-TFCI Table (note 1) | E-DPDCH Number of HARQ processes | DCH | | | | UL RLC SDU size (note 3) | Test data size (note 4) |
|---|---|---|---|---|---|---|---|---|---|
| | | | | DL TFCS Under test | UL TFCS Under test | Implicitly tested | TFC subset identity (note 5) | | |
| 1 | 1 to 6 | 10ms, Table 0 | 4 | DL_TFC1 | UL_TFC1 | DL_TFC0, DL_TFC5, DL_TFC6, DL_TFC10, UL_TFC0, UL_TFC5, UL_TFC6 | 0 | RB5: 40<br>RB6: 181<br>RB7: 60<br>RB8: 312 | RB5: 40<br>RB6: No data<br>RB7: No data<br>RB8: 312 |
| 2 | 1 to 6 | 10ms, Table 0 | 4 | DL_TFC2 | UL_TFC2 | DL_TFC0, DL_TFC5, DL_TFC7, DL_TFC10, UL_TFC0, UL_TFC5, UL_TFC7 | 0 | RB5: 54<br>RB6: 78<br>RB7: 60<br>RB8: 312 | RB5: 54<br>RB6: 78<br>RB7: No data<br>RB8: 312 |
| 3 | 2,4 and 6 | 2ms, Table 0 | 8 | DL_TFC3 | UL_TFC3 | DL_TFC0, DL_TFC5, DL_TFC8, DL_TFC10, UL_TFC0, UL_TFC5, UL_TFC8 | 1 | RB5: 64<br>RB6: 113<br>RB7: 60<br>RB8: 312 | RB5: 64<br>RB6: 113<br>RB7: No data<br>RB8: 312 |
| 4 | 2,4 and 6 | 2ms, Table 0 | 8 | DL_TFC4 | UL_TFC4 | DL_TFC0, DL_TFC5, DL_TFC9, DL_TFC10, UL_TFC0, UL_TFC5, UL_TFC9 | 2 | RB5: 72<br>RB6: 181<br>RB7: 60<br>RB8: 312 | RB5: 72<br>RB6: 181<br>RB7: No data<br>RB8: 312 |

NOTE 1: E-DPDCH TTI and E-TFCI table according to TS 25.321 Annex B.
NOTE 2: Void
NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit), where N is the number of transport blocks for the UL transport format under test. This will enable the UE to return th data within one UL TTI.
NOTE 4: The test data size is for DTCH mapped to E-DCH selected according to the MAC-d PDU size to be tested.
NOTE 5: TFC subset identity shall be signalled by the SS on the downlink SRB#5, see generic test procedure in clause 14.1.4.2.

#### 14.7.8.4 Test requirements

See 14.1.4.2 for definition of step numbers. For each sub-test:

1. At step 20 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At steps 26 the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the sub-test.
3. At step 26 and for each radio bearer where test data is sent in downlink the UE shall return a RLC SDU with same content as sent in downlink. For radio bearers where no data is sent in downlink then no data shall be received in uplink.

### 14.7.9 Conversational / speech / UL:(12.2, 7.95, 5.9, 4.75) kbps DL: (12.2, 7.95, 5.9, 4.75) kbps / CS RAB on E-DCH and HS-DSCH + UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] SRBs for DCCH on E-DCH and HS-DSCH

#### 14.7.9.1 Conformance requirement

See 14.7.1.1.

#### 14.7.9.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.6.9 (Alt.2)

#### 14.7.9.3 Method of test

The following parameters are specific for this test case:

| E-DCH Category | RLC Transmission window size | Modulation Scheme |
|---|---|---|
| 1 | 512 | QPSK |
| 2 | 512 | |
| 3 | 512 | |
| 4 | 512 | |
| 5 | 1536 | |
| 6 | 1536 | |
| 7 | 1536 | |

This will enable the UE to return the data within one UL TTI.<br>NOTE 3: The test data size is for DTCH mapped to E-DCH selected according to the MAC-d PDU size to be tested. | | | | | | |

### 14.7.9.4 Test requirements

See 14.1.4.1a for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 18 the UE shall return a RLC SDU on RB5 with same content as sent in downlink.

## 14.7.10 Conversational / speech / UL:(12.65, 8.85, 6.6) kbps DL: (12.65, 8.85, 6.6) kbps / CS RAB on E-DCH and HS-DSCH + UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] SRBs for DCCH on E-DCH and HS-DSCH

### 14.7.10.1 Conformance requirement

See 14.7.1.1.

14.7.10.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.6.10 (Alt.2)

14.7.10.3 Method of test

The following parameters are specific for this test case:

| E-DCH Category | RLC Transmission window size | Modulation Scheme |
|---|---|---|
| 1 | 512 | QPSK |
| 2 | 512 | |
| 3 | 512 | |
| 4 | 512 | |
| 5 | 1536 | |
| 6 | 1536 | |
| 7 | 1536 | |

| HS-DSCH Category | Number of HARQ processes | RLC Receiving window size |
|---|---|---|
| 1 | 2 | 512 |
| 2 | 2 | 512 |
| 3 | 3 | 512 |
| 4 | 3 | 512 |
| 5 | 6 | 512 |
| 6 | 6 | 512 |
| 7 | 6 | 1536 |
| 8 | 6 | 1536 |
| 9 | 6 | 2047 |
| 10 | 6 | 2047 |
| 11 | 3 | 1024 |
| 12 | 6 | 1024 |
| 13 to 20 | 6 | 2047 |

| HS-PDSCH TFRC for mac-ehs (note 1) | | | | | |
|---|---|---|---|---|---|
| Max MAC-d PDU size | Minimum TBS | Number of MAC-d PDUs | Modulation scheme | Number of codes | TFRI |
| 56 | 80 | 1 | QPSK | 1 | 0 |
| 152 | 176 | 1 | QPSK | 1 | 7 |
| 200 | 224 | 1 | QPSK | 1 | 13 |
| 272 | 296 | 1 | QPSK | 1 | 22 |
| NOTE 1: The HS-PDSCH TFRC should be selected to enable all test data on DTCH on HS-DSCH to be transmitted in one TTI, i.e. such that the MAC-ehs transport block size is equal to or bigger than the maximum MAC-d PDU size under test + MAC-ehs header size (24 bits). | | | | | |

The generic test procedure in 14.1.4.1a is run for each sub-test using condition A23 for radio bearer setup, as specified in 34.108.

Testing of UE supporting UE HS-DSCH physical layer category 13 to 20 shall be performed in accordance to test parameters, sub-tests and test points for UE HS-DSCH physical layer category 10.

Testing of UE supporting UE E-DCH category 7 shall be performed in accordance to test parameters, sub-tests and test points for E-DCH category 6.

Sub-tests:

| Sub-test | Applicable E-DCH Category | E-DPDCH TTI and E-TFCI Table (note 1) | E-DPDCH Number of HARQ processes | MAC-d PDU size under test ( UL and DL ) | UL RLC SDU size (note 2) | Test data size (note 3) |
|---|---|---|---|---|---|---|
| 1 | 1 to 7 | 10ms, Table 0 | 4 | 56 | 40 | 40 |
| 2 | 1 to 7 | 10ms, Table 0 | 4 | 152 | 136 | 136 |
| 3 | 1 to 7 | 10ms, Table 0 | 4 | 200 | 184 | 184 |
| 4 | 1 to 7 | 10ms, Table 0 | 4 | 272 | 256 | 256 |

| 6 | 2,4, 6, 7 | 2ms, Table 0 | 8 | 152 | 136 | 136 |
| 7 | 2,4, 6, 7 | 2ms, Table 0 | 8 | 200 | 184 | 184 |
| 8 | 2,4, 6, 7 | 2ms, Table 0 | 8 | 272 | 256 | 256 |

NOTE 1: E-DPDCH TTI and E-TFCI table according to TS 25.321 Annex B.
NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
The UL RLC SDU size is set to UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit). This will enable the UE to return the data within one UL TTI.
NOTE 3: The test data size is for DTCH mapped to E-DCH selected according to the MAC-d PDU size to be tested.

#### 14.7.10.4 Test requirements

See 14.1.4.1a for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 18 the UE shall return a RLC SDU on RB5 with same content as sent in downlink.

### 14.7.11 Streaming or interactive or background / UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] / PS RAB + UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] SRBs for DCCH on E-DCH and HS-DSCH for enhanced uplink/downlink in CELL_FACH

#### 14.7.11.1 Conformance requirement

Conformance requirement

See 14.7.1.1

#### 14.7.11.2 Test purpose

For the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.6.3:

1. To verify that the UE is able to establish the radio bearer combination.
2 To verify correct data transfer using all the possible MAC-d PDU sizes of the transport channel mapped to common E-DCH in CELL_FACH.

#### 14.7.11.3 Method of test

NOTE 1: The reference to E-DCH Category refers to the UE capability as signalled in the Rel-6 IE "E-DCH physical layer category". All UEs supporting E-DCH should signal a category between 1 and 6 for this IE even if the UE physical capability category is above 6.

NOTE 2: The reference to HS-DSCH Categories refers to the UE capability as signalled in the Rel-7 IE "HS-DSCH physical layer category extension". This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is configured.

The following parameters are specific for this test case:

| Parameter | Value |
|---|---|
| Radio bearer | TS 34.108, clause 6.10.2.4.6.3 using downlink MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-ehs) and uplink MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-i/is) and using downlink Alt 2 (Fixed RLC and MAC-ehs) and uplink Alt 2 (Fixed RLC and MAC-i/is) for the SRB#1 to SRB#4. |
| MAC-ehs receiver window size | 16 |
| HS-DSCH MAC-d PDU size | 336 |

| E-DCH Category | RLC Transmission window size |
|---|---|
| 1 | 512 |
| 2 | 512 |
| 3 | 512 |
| 4 | 512 |
| 5 | 1536 |
| 6 | 1536 |

| HS-DSCH Category | HS-PDSCH Number of HARQ processes | RLC Receiving window size | HS-PDSCH TFRC (note 1) | | | | | |
|---|---|---|---|---|---|---|---|---|
| | | | Max MAC-d PDU size | Minimum TBS | Number of MAC-d PDUs | Modulation scheme | Number of codes | TFRI |
| 1 | 2 | 512 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 2 | 2 | 512 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 3 | 3 | 512 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 4 | 3 | 512 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 5 | 6 | 512 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 6 | 6 | 512 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 7 | 6 | 1536 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 8 | 6 | 1536 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 9 | 6 | 2047 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 10 | 6 | 2047 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 11 | 3 | 1024 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 12 | 6 | 1024 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 13 to 20 | 6 | 2047 | 336 | 360 | 1 | QPSK | 1 | 30 |
| NOTE 1: The HS-PDSCH TFRC should be selected to enable all test data on DTCH on HS-DSCH to be transmitted in one TTI considering all sub-tests. i.e. such that the MAC-ehs transport block size is bigger than the "Minimum TBS" that equals maximum MAC-d PDU size under test + the MAC-ehs header size (24 bits). | | | | | | | | |

The generic test procedure in 14.1.4.3 is run for each sub-test.

Sub-tests:

| Sub-test | Applicable E-DCH Category | E-DPDCH TTI and E-TFCI Table (note 1) | E-DPDCH Number of HARQ processes | UL MAC-d PDU size under test | DL MAC-d PDU size under test | UL RLC SDU size (note 2) | Test data size (note 3) |
|---|---|---|---|---|---|---|---|
| 1 | 1 to 6 | 10ms, Table 0 | 4 | Flexible | Flexible | 320 | 320 |
| 2 | 2,4 and 6 | 2ms, Table 0 | 8 | Flexible | Flexible | 320 | 320 |
| NOTE 1: E-DPDCH TTI and E-TFCI table according to TS 25.321 Annex B.<br>NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. The UL RLC SDU size is set to UL RLC payload size. This will enable the UE to return the data within one UL TTI ("Use special value of HE field" is configured).<br>NOTE 3: The test data size is for DTCH mapped to E-DCH is selected according to the MAC-d PDU size to be tested = DL RLC payload size for the MAC-d PDU size. | | | | | | | |

#### 14.7.11.4 Test requirements

See 14.1.5.1 for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 18 the UE shall return a RLC SDU with same content as sent in downlink.

### 14.7.11a Streaming or interactive or background / UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] / PS RAB + UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] SRBs for DCCH on common E-DCH and HS-DSCH for enhanced CELL_FACH with DRX configured

#### 14.7.11a.1 Conformance requirement

Conformance requirement

See 14.7.1.1

#### 14.7.11a.2 Test purpose

For the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.6.3:

1. To verify that the UE is able to establish the radio bearer combination.
2 To verify correct data transfer corresponding to Enhanced DRX reception pattern by UE when transport channel is mapped to common E-DCH in CELL_FACH.

#### 14.7.11a.3 Method of test

NOTE 1: The reference to E-DCH Category refers to the UE capability as signalled in the Rel-6 IE "E-DCH physical layer category". All UEs supporting E-DCH should signal a category between 1 and 6 for this IE even if the UE physical capability category is above 6.

NOTE 2: The reference to HS-DSCH Categories refers to the UE capability as signalled in the Rel-7 IE "HS-DSCH physical layer category extension". This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is configured.

The following parameters are specific for this test case:

| Parameter | Value |
|---|---|
| Radio bearer | TS 34.108, clause 6.10.2.4.6.3 using downlink MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-ehs) and uplink MAC-d flow parameters according to Alt 3 (Flexible RLC and MAC-i/is) and using downlink Alt 2 (Fixed RLC and MAC-ehs) and uplink Alt 2 (Fixed RLC and MAC-i/is) for the SRB#1 to SRB#4. |
| MAC-ehs receiver window size | 16 |
| HS-DSCH MAC-d PDU size | 336 |

| E-DCH Category | RLC Transmission window size |
|---|---|
| 1 | 512 |
| 2 | 512 |
| 3 | 512 |
| 4 | 512 |
| 5 | 1536 |
| 16 | 1536 |

| HS-DSCH Category | HS-PDSCH Number of HARQ processes | RLC Receiving window size | HS-PDSCH TFRC (note 1) | | | | | |
|---|---|---|---|---|---|---|---|---|
| | | | Max MAC-d PDU size | Minimum TBS | Number of MAC-d PDUs | Modulation scheme | Number of codes | TFRI |
| 1 | 2 | 512 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 2 | 2 | 512 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 3 | 3 | 512 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 4 | 3 | 512 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 5 | 6 | 512 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 6 | 6 | 512 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 7 | 6 | 1536 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 8 | 6 | 1536 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 9 | 6 | 2047 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 10 | 6 | 2047 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 11 | 3 | 1024 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 12 | 6 | 1024 | 336 | 360 | 1 | QPSK | 1 | 30 |
| 13 to 20 | 6 | 2047 | 336 | 360 | 1 | QPSK | 1 | 30 |
| NOTE 1: The HS-PDSCH TFRC should be selected to enable all test data on DTCH on HS-DSCH to be transmitted in one TTI considering all sub-tests. i.e. such that the MAC-ehs transport block size is bigger than the "Minimum TBS" that equals maximum MAC-d PDU size under test + the MAC-ehs header size (24 bits). | | | | | | | | |

The generic test procedure in 14.1.4.3 is run for each sub-test.

Sub-tests:

| Sub-test | Applicable E-DCH Category | E-DPDCH TTI and E-TFCI Table (note 1) | E-DPDCH Number of HARQ processes | UL MAC-d PDU size under test | DL MAC-d PDU size under test | UL RLC SDU size (note 2) | Test data size (note 3) |
|---|---|---|---|---|---|---|---|
| 1 | 1 to 6 | 10ms, Table 0 | 4 | Flexible | Flexible | 320 | 320 |
| 2 | 2,4 and 6 | 2ms, Table 0 | 8 | Flexible | Flexible | 320 | 320 |
| NOTE 1: E-DPDCH TTI and E-TFCI table according to TS 25.321 Annex B.<br>NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. The UL RLC SDU size is set to UL RLC payload size. This will enable the UE to return the data within one UL TTI ("Use special value of HE field" is configured).<br>NOTE 3: The test data size is for DTCH mapped to E-DCH is selected according to the MAC-d PDU size to be tested = DL RLC payload size for the MAC-d PDU size. | | | | | | | |

Specific Message Contents

Use the default parameter values for the system information block 5 with the same type specified in clause

6.1.1 of TS 34.108 for common E-DCH and HS-DSCH reception in CELL_FACH, with the following exceptions

| Information Element | Value/remark |
|---|---|
| HS-DSCH DRX in CELL_FACH Information | |
| -T321 | 200ms |
| - HS-DSCH DRX $cycle_{FACH}$ | 4 |
| - HS-DSCH Rx $burst_{FACH}$ | 1 |
| - DRX Interruption by HS-DSCH data | FALSE |

14.7.11a.4 Test requirements

See 14.1.5.1 for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 18 the UE shall return a RLC SDU with same content as sent in downlink.

# 15 Supplementary Services

## 15.1 CLIP

### 15.1.1 CLIP / Normal operation

#### 15.1.1.1 Definition

To test that the UE correctly presents to the user the calling number.

#### 15.1.1.2 Conformance requirements

The calling line identity consists of a calling party BCD number and optionally, a calling party subaddress and/or a cause of no CLI.

The calling party BCD number information element is made up of a number of information units as indicated in 3GPP TS 24.008.

In addition to or instead of the calling party's digits, the subscriber may be given the following information:

- screening indicator;
- presentation indicator.

Indicator values are given in 3GPP TS 24.008.

The calling party subaddress information element is made up of a number of information units as indicated in 3GPP TS 24.008.

The cause of no CLI information element is made up of a detailed cause of no CLI as indicated in TS 24.008.

A called mobile subscriber subscribing to calling line identification presentation service receives the call with the information indicated above, see figure 1.1.

MSb Network

SETUP

<----------

Calling party BCD number (screening indicator, presentation indicator, calling party digits),
Calling party subaddress, Cause of No CLI

NOTE: The calling party subaddress is passed to MSb if it is received from the originating network.

**Figure 1.1: Notification by the network to the called mobile subscriber**

When the calling line identity is not available, the presentation indicator which is given to the called mobile subscriber takes the value of "number not available".

Reference

3GPP TS 24.081 clause 1.1.

#### 15.1.1.3 Test purpose

To verify the ability of a UE to receive and decode the calling number in the incoming SETUP message.

#### 15.1.1.4 Method of test

Initial Conditions

- System simulator:

- 1 cell, default parameters.

- User Equipment:
  - the UE shall be in MM-state "Idle, updated";

Related ICS/IXIT Statements

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of MT circuit switched basic service Yes/No.

Support of Calling Line Identification Presentation Yes/No.

Description of display for CLIP.

Test procedure

a) A mobile terminated call is initiated.

b) The UE receives a SETUP message that includes a valid calling party BCD number.

c) The UE shall display the calling party BCD number.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Mobile terminated establishment of Radio Resource Connection | See TS 34.108 clause 7.1.2 Establishment cause: Terminating Conversational Call |
| 2 | -> | | PAGING RESPONSE | |
| 3 | <- | | AUTHENTICATION REQUEST | |
| 4 | -> | | AUTHENTICATION RESPONSE | |
| 5 | <- | | SECURITY MODE COMMAND | |
| 6 | -> | | SECURITY MODE COMPLETE | |
| 7 | <- | | SETUP | Include a valid calling party BCD number |
| 8 | -> | | CALL CONFIRMED | |
| 9 | -> | | ALERTING | |
| 10 | UE | | | The UE shall display the calling party BCD number |

Specific Message Contents

SETUP

| Information element | Comment Value |
|---|---|
| Calling Party BCD Number | |
| Type of number | international number |
| Numbering plan identification | ISDN/telephony numbering plan |
| Presentation indicator | Presentation allowed |
| Screening indicator | Network provided |
| Number | 12345667890 |

### 15.1.1.5 Test requirements

In step 10 the UE shall display the correct calling party BCD number.

# 15.2 CLIR

## 15.2.1 CLIR / Normal operation - requesting presentation of CLI

### 15.2.1.1 Definition

To test that when the CLIR presentation mode is temporary (presentation restricted), it is possible for the subscriber to present his CLI on a per call basis.

### 15.2.1.2 Conformance requirements

When the CLIR presentation mode is temporary (presentation restricted), it is possible for the subscriber to present his CLI on a per call basis. The MS shall send a CLIR suppression information element to the network.

If the subscriber tries to override CLIR (i.e. requests that the CLI is displayed), when he has subscribed to permanent mode a NotifySS shall be sent to the MS in order to inform that the override has not been performed and the call set-up shall continue.

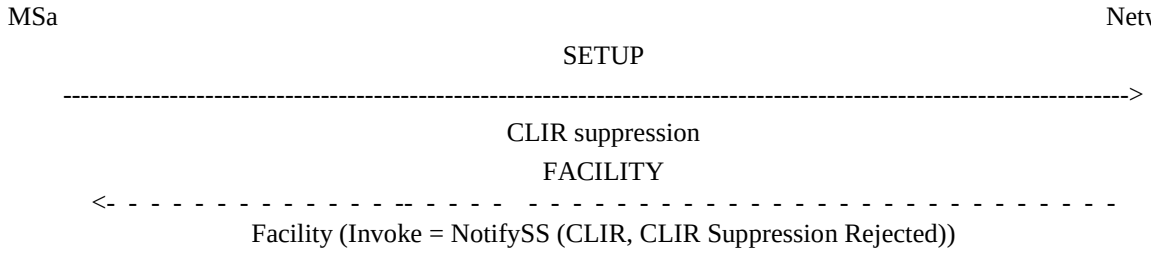

**Figure 2.1: Requesting presentation of CLI**

Reference

3GPP TS 24.081 clause 2.2.

### 15.2.1.3 Test purpose

To verify the ability of a UE to present his CLI on a per call basis when the CLIR presentation mode is temporary (presentation restricted).

### 15.2.1.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in MM-state "Idle, updated";

Related ICS/IXIT Statements

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of MO circuit switched basic service Yes/No.

Support of Calling Line Identification Restriction Yes/No.

Test procedure

a) An MO CS (speech) service is selected that is supported by the UE.

b) Using MMI commands, the UE is made to initiate an outgoing call with CLI presented.

c) The UE after SECURITY MODE COMPLETE message shall send a SETUP message containing the CLIR suppression information element.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | -> | | RRC CONNECTION REQUEST | Establishment cause: Originating Conversational Call. |
| 2 | <- | | RRC CONNECTION SETUP | |
| 3 | -> | | RRC CONNECTION SETUP COMPLETE | |
| 4 | -> | | CM SERVICE REQUEST | |
| 5 | <- | | AUTHENTICATION REQUEST | |
| 6 | -> | | AUTHENTICATION RESPONSE | |
| 7 | <- | | SECURITY MODE COMMAND | |
| 8 | -> | | SECURITY MODE COMPLETE | |
| 9 | -> | | SETUP | with CLIR suppression IE |

Specific Message Contents

SETUP

| Information element | CommentValue |
|---|---|
| CLIR Suppression IE | The IE is present with the IE Identifier (TS 24.008 clause 10.5.4.11a) |

#### 15.2.1.5 Test requirements

In step 9 UE Shall include the CLIR suppression IEI.

### 15.2.2 CLIR / Normal operation - requesting restriction of CLI presentation

#### 15.2.2.1 Definition

To test that when the CLIR presentation mode is temporary (presentation allowed), it is possible for the subscriber to present the CLI on a per call basis.

#### 15.2.2.2 Conformance requirements

When the CLIR presentation mode is temporary (presentation allowed), it is possible for the subscriber to restrict the CLI on a per call basis. The MS shall send a CLIR invocation information element to the network.

If the subscriber has not subscribed to CLIR and tries to invoke CLIR (i.e. requests that the CLI is not displayed), the SETUP shall be rejected. The MS and the network shall act in accordance with 3GPP TS 24.008 network initiated call clearing procedure, see figure 2.2.

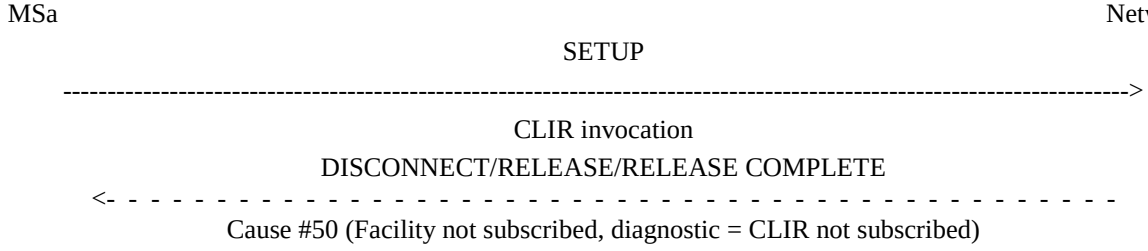

**Figure 2.2: Requesting restriction of CLI presentation**

Reference

3GPP TS 24.081 clause 2.3.

15.2.2.3 Test purpose

To verify the ability of a UE to restrict the CLI on a per call basis when the presentation mode is temporary (presentation allowed).

15.2.2.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in MM-state "Idle, updated";

Related ICS/IXIT Statements

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of MO circuit switched basic service Yes/No.

Support of Calling Line Identification Restriction Yes/No.

Test procedure

a) An MO CS (speech) service is selected that is supported by the UE.

b) Using MMI commands, the UE is made to initiate an outgoing call with CLI restricted.

c) The UE after SECURITY MODE COMPLETE message shall send a SETUP message containing the CLIR invocation information element.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | -> | | RRC CONNECTION REQUEST | Establishment cause: Originating Conversational Call. |
| 2 | <- | | RRC CONNECTION SETUP | |
| 3 | -> | | RRC CONNECTION SETUP COMPLETE | |
| 4 | -> | | CM SERVICE REQUEST | |
| 5 | <- | | AUTHENTICATION REQUEST | |
| 6 | -> | | AUTHENTICATION RESPONSE | |
| 7 | <- | | SECURITY MODE COMMAND | |
| 8 | -> | | SECURITY MODE COMPLETE | |
| 9 | -> | | SETUP | CLIR invocation IE present |

Specific Message Contents

SETUP

| Information element | CommentValue |
|---|---|
| CLIR invocation IE | The IE is present with the IE Identifier (TS 24.008 clause 10.5.4.11b) |

#### 15.2.2.5 Test requirements

In step 9 UE Shall include the CLIR invocation IEI.

## 15.3 CNAP

### 15.3.1 CNAP/Normal Operation – Name indication contained in Setup message

#### 15.3.1.1 Definition

To check that the UE presents the calling name identity correctly when name indication is sent in SETUP message to UE.

#### 15.3.1.2 Conformance requirement

The calling name identity is made up of calling party's name - up to 80 characters.

The UE shall be given one of the following in the name indicator:

- calling name identity;
- presentation indicator of presentation restricted;
- presentation indicator of name unavailable; or
- calling name identity and presentation restricted (for the case where the CNAP override category is provisioned).

If the network has received a non-zero SS screening indicator from the MS, then calling name information indicated above shall be sent to the MS as defined in figure 15.3.1-1. If the network did not receive a non-zero SS screening indicator form the MS, then calling name information shall not be sent to the MS.

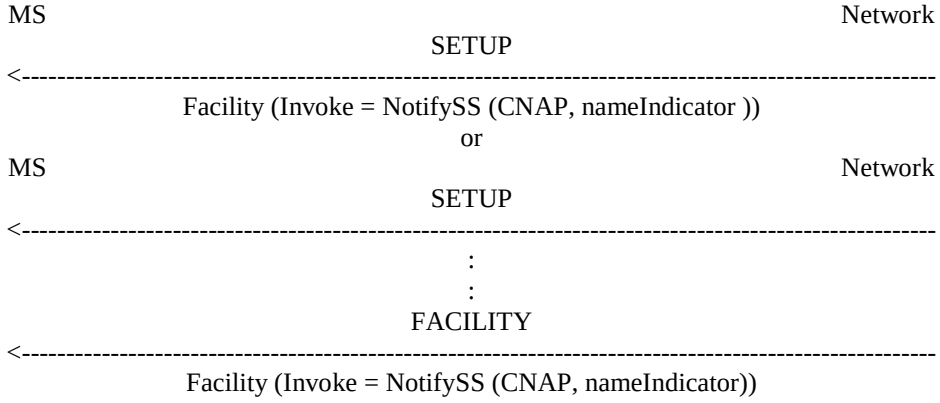

**Figure 15.3.1-1: Notification by the network to the called mobile subscriber**

References

TS 24.096 clause 4.1.

#### 15.3.1.3 Test purpose

To verify that the UE presents to the user the name information of the calling party at call setup time, when name indication is sent in SETUP message, for all incoming calls.

15.3.1.4 Method of test

Related ICS/IXIT statements

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of MT circuit switched basic service Yes/No.

Support Calling name presentation Yes/No.

Description of display for CNAP.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state “idle, updated”.

Test procedure

A mobile terminated call is initiated. The UE receives a SETUP message that includes Signal IE, and the Facility IE with Name Indication.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Mobile terminated establishment of Radio Resource Connection | See TS 34.108 clause 7.1.2<br>Establishment cause: Terminating Conversational Call. |
| 2 | -> | | PAGING RESPONSE | |
| 3 | <- | | AUTHENTICATION REQUEST | |
| 4 | -> | | AUTHENTICATION RESPONSE | |
| 5 | <- | | SECURITY MODE COMMAND | |
| 6 | -> | | SECURITY MODE COMPLETE | |
| 7 | <- | | SETUP | Includes FACILITY (*Invoke* = NotifySS (CNAP, nameIndicator))<br>Signal IE included |
| 8 | -> | | CALL CONFIRMED | |
| 9 | -> | | ALERTING | |
| 10 | UE | | | The UE shall display the calling nameIndicator |

Specific message contents:

SETUP (Step 7)

| Information Element | Value/remark |
|---|---|
| Facility | |
| Invoke component | |
| Operation Code | notifySS |
| Parameters | |
| NotifySS-Arg | |
| SS-code | '00011001'B |
| nameIndicator | |
| callingName | |
| namePresentationAllowed | |
| nameString | “TESTNAME” |
| Signal | |
| Signal Value | ‘00000000’B (Dial Tone ON) |

#### 15.3.1.5 Test requirements

In step 10 the UE displays the calling name Indicator received at step 7.

## 15.3.2 CNAP/Normal Operation – Name indication contained in Facility message

### 15.3.2.1 Definition

To check that the UE presents the calling name identity correctly when name indication is sent in FACILITY message to UE.

### 15.3.2.2 Conformance requirement

The calling name identity is made up of calling party's name - up to 80 characters.

The UE shall be given one of the following in the name indicator:

- calling name identity;
- presentation indicator of presentation restricted;
- presentation indicator of name unavailable; or
- calling name identity and presentation restricted (for the case where the CNAP override category is provisioned).

If the network has received a non-zero SS screening indicator from the MS, then calling name information indicated above shall be sent to the MS as defined in figure 15.3.2-1. If the network did not receive a non-zero SS screening indicator form the MS, then calling name information shall not be sent to the MS.

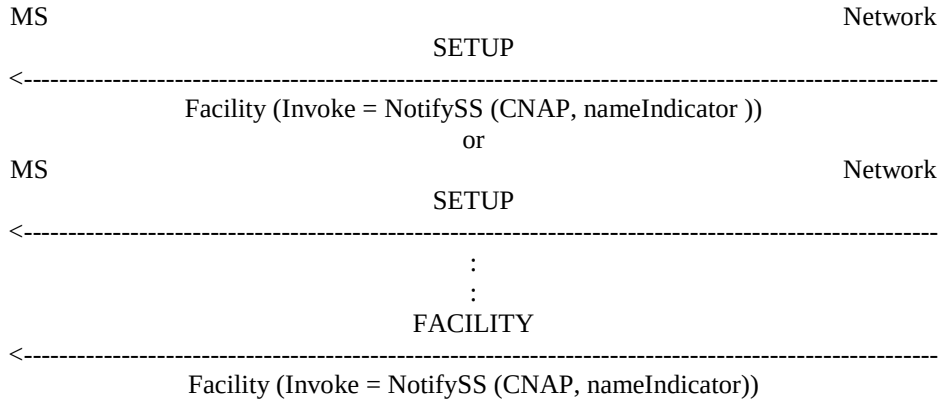

**Figure 15.3.2-1: Notification by the network to the called mobile subscriber**

#### References

TS 24.096 clause 4.1.

### 15.3.2.3 Test purpose

To verify that the UE presents to the user the name information of the calling party at call setup time, when name indication is sent in FACILITY message, for all incoming calls.

### 15.3.2.4 Method of test

#### Related ICS/IXIT statements

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of MT circuit switched basic service Yes/No.

Support Calling name presentation Yes/No.

Description of display for CNAP.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state “idle, updated”.

Test procedure

A mobile terminated call is initiated.

The CC entity of the UE is brought to the state U9 by using a SETUP message containing signal information element

The UE sends an ALERTING message and enters the state U7

The SS sends Facility message includes the Name Indication.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Mobile terminated establishment of Radio Resource Connection | See TS 34.108 clause 7.1.2<br>Establishment cause: Terminating Conversational Call. |
| 2 | -> | | PAGING RESPONSE | |
| 3 | <- | | AUTHENTICATION REQUEST | |
| 4 | -> | | AUTHENTICATION RESPONSE | |
| 5 | <- | | SECURITY MODE COMMAND | |
| 6 | -> | | SECURITY MODE COMPLETE | |
| 7 | <- | | SETUP | Signal IE included |
| 8 | -> | | CALL CONFIRMED | |
| 9 | -> | | ALERTING | |
| 10 | <- | | FACILITY | FACILITY (*Invoke* = NotifySS (CNAP, nameIndicator)) |
| 11 | UE | | | The UE shall display the calling nameIndicator |

Specific message contents:

FACILITY (Step 10)

| Information Element | Value/remark |
|---|---|
| Facility | |
| Invoke component | |
| Operation Code | notifySS |
| Parameters | |
| NotifySS-Arg | |
| SS-code | '00011001'B |
| nameIndicator | |
| callingName | |
| namePresentationAllowed | |
| nameString | “TESTNAME” |

### 15.3.2.5 Test requirements

In step 11 the UE displays the calling name Indicator received at step 10.

## 15.3.3 CNAP/Interrogation accepted

### 15.3.3.1 Definition

To check that the UE requests the status of CNAP from SS by interrogate procedure and displays the response received from SS.

### 15.3.3.2 Conformance requirement

The mobile subscriber can request the status of the supplementary service by interrogation procedure and be informed if the service is provided to him/her.

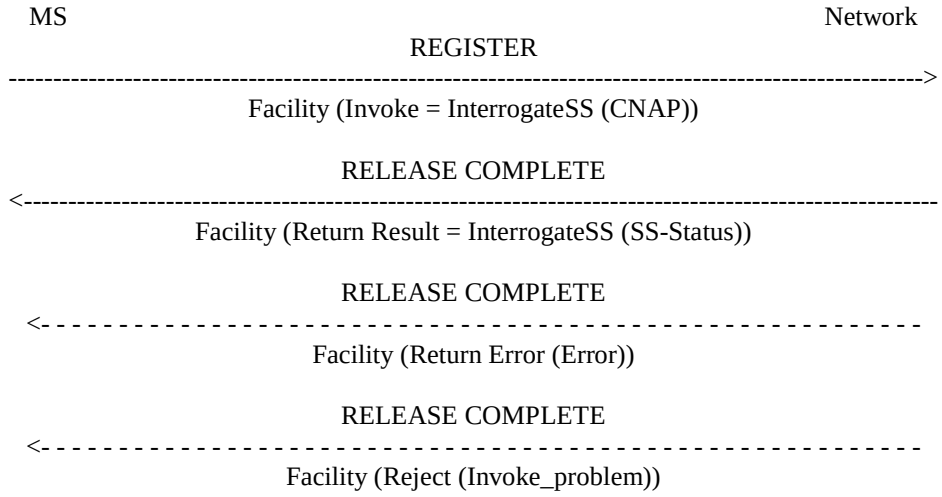

**Figure 15.3.3-1: Interrogation of calling name identification presentation**

#### References

TS 24.096 clause 4.2

### 15.3.3.3 Test purpose

To test the correct operation of the interrogation procedure and in case of successful interrogation, verify correct display of the response from the SS.

### 15.3.3.4 Method of test

#### Related ICS/IXIT statements

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of MO circuit switched basic service Yes/No.

Support Calling name presentation Yes/No.

Description of the user's commands and of display of the answers from the network for interrogation of CNAP.

#### Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in MM-state “idle, updated”.

Test procedure

The UE is made to initiate interrogation of CNAP for all basic service groups.

Upon receipt of the interrogate operation in REGISTER message, the SS answers with a RELEASE COMPLETE message with the Facility information element containing the return result of the InterrogateSS operation.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | The UE is made to initiate an interrogation of CNAP (all basic service groups). |
| 2 | -> | | CM SERVICE REQUEST | The UE sends CM SERVICE REQUEST with the IE "CM service type" set to "supplementary service activation". |
| 2A | <- | | AUTHENTICATION REQUEST | |
| 2B | -> | | AUTHENTICATION RESPONSE | |
| 3 | | | | The SS starts integrity protection |
| 4 | -> | | REGISTER | Includes FACILITY (*Invoke* = InterrogateSS (CNAP)) |
| 5 | <- | | RELEASE COMPLETE | Includes FACILITY (*Return Result* = InterrogateSS (ss-status)) |
| 5A | SS | | | The SS releases the RRC connection |
| 6 | UE | | | The UE shall display the return result of the Interrogate operation |
| 7 | SS | | Void | |

Specific message contents:

REGISTER (Step 4)

| Information Element | Value/remark |
|---|---|
| Facility | |
| Invoke Component | |
| Operation Code | InterrogateSS |
| Parameters | |
| SS-ForBS-Code | |
| ss-Code | '00011001'B |
| SS version | |
| SS version indicator | not checked |

RELEASE COMPLETE with *Return result* component (Step 5)

| Information Element | Value/remark |
|---|---|
| Facility | |
| Invoke Component | |
| Operation Code | InterrogateSS |
| Parameters | |
| InterrogateSS-Res | |
| ss-Status | '00000100'B |

### 15.3.3.5 Test requirements

In step 6 the UE displays the return result received at step 5.

## 15.3.4 CNAP/Interrogation rejected

### 15.3.4.1 Definition

To check that the UE requests the status of CNAP from SS by interrogate procedure and displays the response received from SS in case of an error or an invoke problem.

### 15.3.4.2 Conformance requirement

The mobile subscriber can request the status of the supplementary service by interrogation procedure and be informed if the service is provided to him/her.

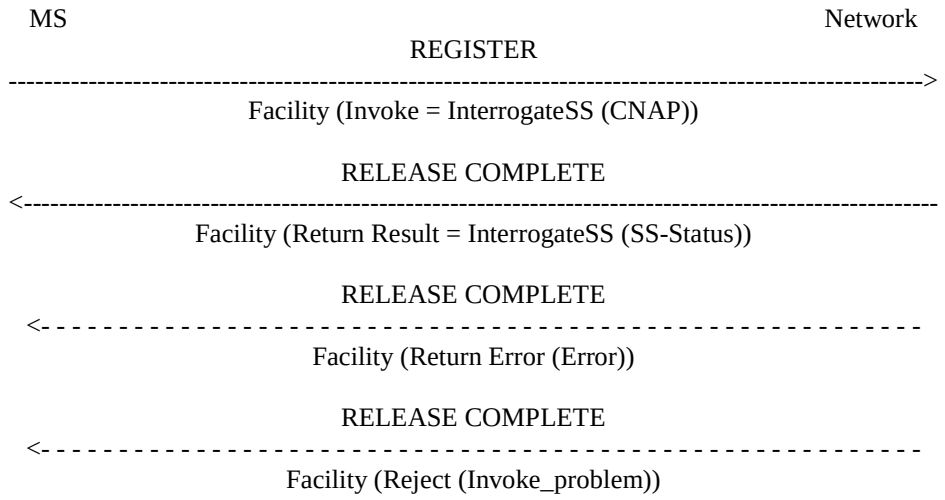

**Figure 15.3.4-1: Interrogation of calling name identification presentation**

#### References

TS 24.096 clause 4.2

### 15.3.4.3 Test purpose

To test the correct operation of the interrogation procedure, and correct display of the response from the SS in RELEASE COMPLETE message in case of an error response and an invoke problem.

### 15.3.4.4 Method of test

#### Related ICS/IXIT statements

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of MO circuit switched basic service Yes/No.

Support Calling name presentation Yes/No.

Description of the user's commands and of display of the answers from the network for interrogation of CNAP.

#### Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in CC state U10.

#### Test procedure

The UE is made to request interrogation of CNAP for all basic service groups.

Upon receipt of the interrogate operation in REGISTER message, the SS answers with a RELEASE COMPLETE message with the Facility information element containing a Return Error (return_error: SS not available) of the InterrogateSS operation.

The SS sends STATUS ENQUIRY, the UE responds with STATUS message indicating CC state U10.

Then again, the user requests interrogation of CNAP for all basic service groups.

Upon receipt of the REGISTER message, the SS answers with the RELEASE COMPLETE message (same PD and TI that in the REGISTER message) with the Facility information element containing a Reject (invoke_problem: resource limitation) of the InterrogateSS operation.

The SS sends STATUS ENQUIRY, the UE responds with STATUS message indicating CC state U10.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | The UE is made to initiate an interrogation for CNAP (all). |
| 2 | -> | | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 3 | <- | | CM SERVICE ACCEPT | |
| 4 | -> | | REGISTER | Includes FACILITY (*Invoke* = InterrogateSS (CNAP)) |
| 5 | <- | | RELEASE COMPLETE | Includes FACILITY (*Return_error= SS not available*) |
| 6 | UE | | | The UE shall display the response from SS |
| 7 | <- | | STATUS ENQUIRY | |
| 8 | -> | | STATUS | CC state U10 |
| 9 | UE | | | The UE is made to initiate an interrogation of CNAP (all) |
| 10 | -> | | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 11 | <- | | CM SERVICE ACCEPT | |
| 12 | -> | | REGISTER | Includes FACILITY (*Invoke* = InterrogateSS (CNAP)) |
| 13 | <- | | RELEASE COMPLETE | Includes FACILITY (*Invoke_problem = Resource Limitation)* |
| 14 | UE | | | The UE shall display the response from SS |
| 15 | <- | | STATUS ENQUIRY | |
| 16 | -> | | STATUS | CC state U10 |

Specific message contents:

REGISTER (Step 4, 12)

| Information Element | Value/remark |
|---|---|
| Facility | |
| Invoke component | |
| Operation Code | Interrogation |
| Parameters | |
| SS-ForBS-Code | |
| SS-Code | '00011001'B |
| SS version | |
| SS version indicator | not checked |

RELEASE COMPLETE with *Return error* component (Step 5)

| Information Element | Value/remark |
|---|---|
| Cause | |
| location | user |
| Cause value | '0110010' B (Requested facility not subscribed) |
| Facility | |
| Invoke ID | Same ID as in the invoke of the InterrogateSS operation |
| Error code | ss-NotAvailable |

RELEASE COMPLETE with *Reject* component (Step 13)

| Information Element | Value/remark |
|---|---|
| Cause | |
| location | user |
| Cause value | '0101111' B (Resources unavailable, unspecified) |
| Facility | |
| Invoke ID | Same ID as in the invoke of the InterrogateSS operation |
| Problem code | resourceLimitation |

#### 15.3.4.5 Test requirements

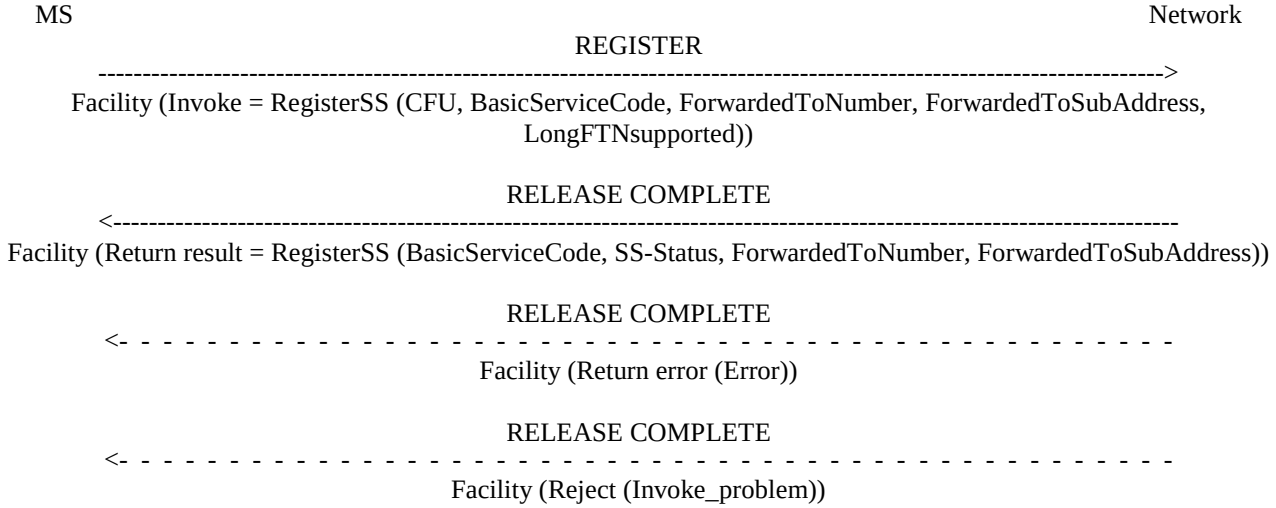
In step 6 the UE displays the response from SS at step 5.

In step 14 the UE displays the response from SS at step 13.

# 15.4 Call forwarding

## 15.4.1 Call forwarding supplementary services, Registration accepted

#### 15.4.1.1 Definition



#### 15.4.1.2 Conformance requirements

A CFU registration request from a mobile user shall include the SS-Code of the forwarding service to be registered and possibly the BasicServiceCode the request applies to. If the BasicServiceCode is not included, the request applies to all basic services.

If the registration is successful, the CFU service will be registered and activated. The network will then send a return result indicating acceptance of the request including the ForwardedToNumber and possibly the BasicService (group) Code to which CFU is registered. If the request applied to a single elementary basic service group, the ForwardedToNumber may be accompanied by a ForwardedToSubAddress. In other cases, the result shall not contain a ForwardedToSubAddress. The result may also contain an SS-Status parameter. If the MS does not send an SS Version Indicator in the invocation request then the network shall send an SS-Status in the result. If the MS does send an SS Version Indicator in the invocation request then the inclusion of SS-Status in the result is optional. If the SS-Status is included the network shall set it to reflect the state of the service. The MS shall ignore the contents of the SS-Status parameter if one is received. See figure 1.4.

Note that the use of SS-Status is to provide backwards compatibility with phase 1.

If the system cannot accept a registration request, a corresponding error indication is returned to the served mobile subscriber that CFU registration was not successful. Error values are specified in 3GPP TS 24.080.

NOTE: If BasicServiceCode is not included it applies to all basic services. The ForwardedToNumber may be accompanied by a ForwardedToSubAddress. The SS-Status may not be included in all cases, see text.

**Figure 1.4: Registration of call forwarding unconditional**

When registering call forwarding, the SS-Code may indicate the code for "all forwarding SS". In this case, if the subscriber has CFU provisioned, the return result shall contain the information for CFU. If the subscriber does not have CFU provisioned, the return result shall contain the information for any conditional call forwarding services which the subscriber has provisioned. The condition for the presence of longFTNsupport is specified in 3GPP TS 23.082 [15].

…

A CFNRy registration request from a mobile user shall include the SS-Code of the forwarding service to be registered and possibly the applicable BasicServiceCode and NoReplyConditionTime. If the BasicServiceCode is not included, the request applies to all basic services. If the NoReplyConditionTime is not included, the previous value set by the mobile user or network operator applies.

If the registration is successful, the CFNRy service will be registered and activated. The network will then send a return result indicating acceptance of the request, including the ForwardedToNumber and possibly the applicable BasicService (group) code and NoReplyConditionTime. If the request applied to a single elementary basic service group, the ForwardedToNumber may be accompanied by a ForwardedToSubAddress. In other cases the result shall not contain a ForwardedToSubAddress. The result may also contain an SS-Status parameter. If the MS does not send an SS Version Indicator in the invocation request then the network shall send an SS-Status in the result. If the MS does send an SS Version Indicator in the invocation request then the inclusion of SS-Status in the result is optional. If the SS-Status is included the network shall set it to reflect the state of the service. The MS shall ignore the contents of the SS-Status parameter if one is received. See figure 3.5.

Reference

3GPP TS 24.082 clauses 1.2.1 and 3.2.1

### 15.4.1.3 Test purpose

1) To check that the UE correctly requests a supplementary service transaction for registration of call forwarding in the CM SERVICE REQUEST.

2) To check that the UE sends a REGISTER message containing the invoke of the RegisterSS operation with the expected parameter values for registration of call forwarding.

3) To check that upon receipt of the result of the operation (in a RELEASE COMPLETE message), the UE provides the appropriate user indication (as described by the manufacturer).

These checks are done for:

a) CFNRy, for basic service group speech.

b) CFU, for basic service group speech.

### 15.4.1.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in MM-state "Idle, updated";

Related ICS/IXIT Statements

Support of FDD Yes/No.

Support of CS speech Yes/No.

Description of the user's commands and of display of the answers from the network for call forwarding

Support of Call Forwarding on No Reply Yes/No.

Support of Call Forwarding Unconditional Yes/No.Test procedure

By means of appropriate user actions, the user requests registration of CFNRy for Speech, to a number arbitrarily selected and with a no reply time value arbitrarily selected.

Upon receipt of the operation (in a REGISTER message), the system simulator answers with a RELEASE COMPLETE message with the Facility information element containing the return result of the RegisterSS operation.

The SS transaction is released and the RRC connection is released.

Then again, by means of appropriate user actions, the user requests registration of CFU for Speech, to a number arbitrarily selected.

Upon receipt of the REGISTER message, the system simulator answers with the RELEASE COMPLETE message with the Facility information element containing the return result of the RegisterSS operation.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| | | | | If UE supports CFNRy, then step 1 to 10 are executed |
| 1 | | | | The UE is made to initiate a registration of call forwarding service for CFNRy (Speech) The SS verifies that the IE “Establishment cause” in the received RRC CONNECTION REQUEST message is set to “Originating High Priority Signalling”. |
| 2 | -> | | CM SERVICE REQUEST | CM service type: "Supplementary service activation" |
| 3 | <- | | AUTHENTICATION REQUEST | |
| 4 | -> | | AUTHENTICATION RESPONSE | |
| 5 | <- | | SECURITY MODE COMMAND | |
| 6 | -> | | SECURITY MODE COMPLETE | |
| 7 | -> | | REGISTER | |
| 8 | <- | | RELEASE COMPLETE | RegisterSS operation Return result |
| 9 | SS | | | The SS releases the RRC connection. |
| 10 | UE | | | Provide user indication |
| | | | | If UE supports CFU, then step 11 to 20 are executed |
| 11 | UE | | | The UE is made to initiate a registration of call forwarding service for CFU (Speech). “Establishment cause” in the received RRC CONNECTION REQUEST message is set to “Originating High Priority Signalling”. |
| 12 | -> | | CM SERVICE REQUEST | CM service type: "supplementary service activation" |
| 13 | <- | | AUTHENTICATION REQUEST | Steps 13 and 14 are not executed if steps 3 and 4 were executed. |

RELEASE COMPLETE with *Return result* component with operation code (Step 18)

| Information Element | Value/remark | Condition |
|---|---|---|
| Invoke ID | the same Invoke ID as in the REGISTER in Step 17 | |
| Operation code | registerSS | |
| BasicServiceCode | TeleService AllSpeechTransmissionServices (TS10) or Telephony (TS 11), no Bearerservice present | |
| ForwardedToNumber | Same number as in step 17 | |
| SS-Status | '1100' Provisioned and Registered | |

#### 15.4.1.5 Test requirements

In Step 2, the UE sends the CM SERVICE REQUEST message with the service type: "Supplementary service activation".

In Step 7, the UE sends the REGISTER message with correct parameters for registration of CFNRy.

In Step 10, the UE provides the appropriate user indication.

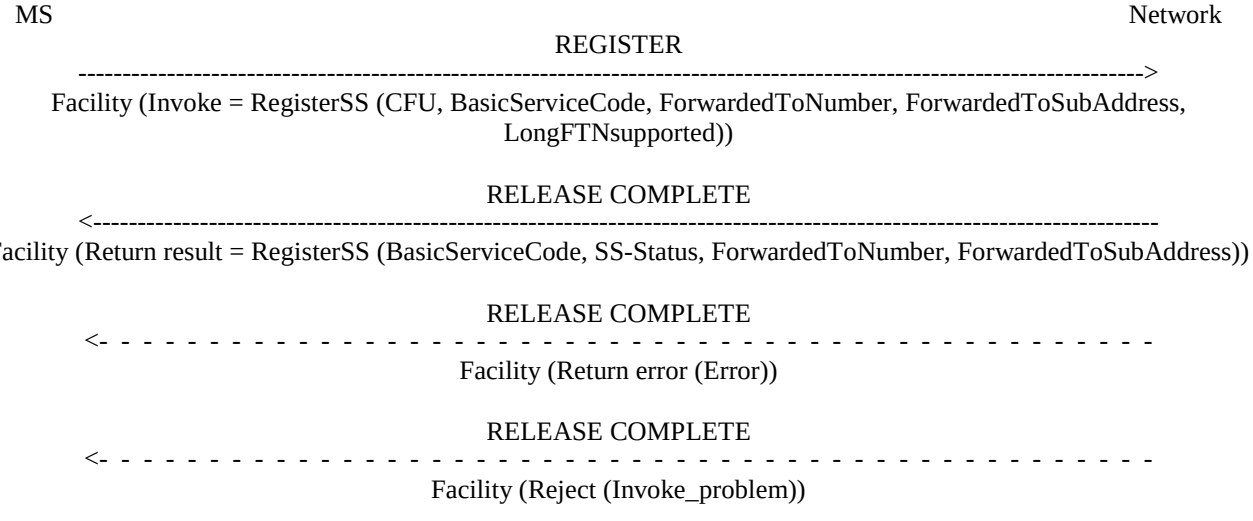
In Step 12, the UE sends the CM SERVICE REQUEST message with the service type: "Supplementary service activation".

In Step 17, the UE sends the REGISTER message with the correct parameters for registration of CFU.

In Step 20, the UE provides the appropriate user indication.

### 15.4.2 Call forwarding supplementary services, Registration rejected

#### 15.4.2.1 Definition



#### 15.4.2.2 Conformance requirements

A CFU registration request from a mobile user shall include the SS-Code of the forwarding service to be registered and possibly the BasicServiceCode the request applies to. If the BasicServiceCode is not included, the request applies to all basic services.

If the registration is successful, the CFU service will be registered and activated. The network will then send a return result indicating acceptance of the request including the ForwardedToNumber and possibly the BasicService (group) Code to which CFU is registered. If the request applied to a single elementary basic service group, the ForwardedToNumber may be accompanied by a ForwardedToSubAddress. In other cases, the result shall not contain a ForwardedToSubAddress. The result may also contain an SS-Status parameter. If the MS does not send an SS Version Indicator in the invocation request then the network shall send an SS-Status in the result. If the MS does send an SS Version Indicator in the invocation request then the inclusion of SS-Status in the result is optional. If the SS-Status is included the network shall set it to reflect the state of the service. The MS shall ignore the contents of the SS-Status parameter if one is received. See figure 1.4.

Note that the use of SS-Status is to provide backwards compatibility with phase 1.

If the system cannot accept a registration request, a corresponding error indication is returned to the served mobile subscriber that CFU registration was not successful. Error values are specified in 3GPP TS 24.080.

NOTE: If BasicServiceCode is not included it applies to all basic services. The ForwardedToNumber may be accompanied by a ForwardedToSubAddress. The SS-Status may not be included in all cases, see text.

**Figure 1.4: Registration of call forwarding unconditional**

When registering call forwarding, the SS-Code may indicate the code for "all forwarding SS". In this case, if the subscriber has CFU provisioned, the return result shall contain the information for CFU. If the subscriber does not have CFU provisioned, the return result shall contain the information for any conditional call forwarding services which the subscriber has provisioned. The condition for the presence of longFTNsupport is specified in 3GPP TS 23.082 [15].

…

A CFNRy registration request from a mobile user shall include the SS-Code of the forwarding service to be registered and possibly the applicable BasicServiceCode and NoReplyConditionTime. If the BasicServiceCode is not included, the request applies to all basic services. If the NoReplyConditionTime is not included, the previous value set by the mobile user or network operator applies.

If the registration is successful, the CFNRy service will be registered and activated. The network will then send a return result indicating acceptance of the request, including the ForwardedToNumber and possibly the applicable BasicService (group) code and NoReplyConditionTime. If the request applied to a single elementary basic service group, the ForwardedToNumber may be accompanied by a ForwardedToSubAddress. In other cases the result shall not contain a ForwardedToSubAddress. The result may also contain an SS-Status parameter. If the MS does not send an SS Version Indicator in the invocation request then the network shall send an SS-Status in the result. If the MS does send an SS Version Indicator in the invocation request then the inclusion of SS-Status in the result is optional. If the SS-Status is included the network shall set it to reflect the state of the service. The MS shall ignore the contents of the SS-Status parameter if one is received. See figure 3.5.

Reference

3GPP TS 24.082 clauses 1.2.1 and 3.2.1

#### 15.4.2.3 Test purpose

1) To check that the UE correctly requests the establishment of a parallel MM transaction for supplementary service transaction for registration of call forwarding, sending a CM SERVICE REQUEST.

2) To check that the UE sends a REGISTER message containing the invoke of the RegisterSS operation with the expected parameter values for registration of call forwarding.

3) To check that upon receipt of the RELEASE COMPLETE message related to the present SS transaction, the first transaction remains unaffected.

4) To check that upon receipt of the RELEASE COMPLETE message, the UE provides the appropriate user indication (as described by the Manufacturer).

These checks are done for:

a) CFNRy, for basic service group speech.

b) CFU, for basic service group speech.

#### 15.4.2.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in CC state U10.

Related ICS/IXIT Statements

Support of FDD Yes/No.

Support of CS speech Yes/No.

- Description of the user's commands and of display of the answers from the network for call forwarding
- Support of Call Forwarding on No Reply Yes/No

- Support of Call Forwarding Unconditional Yes/No

Test procedure

By means of appropriate user actions, the user requests registration of CFNRy for Speech, to a number arbitrarily selected and with a no reply time value arbitrarily selected.

Upon receipt of the operation (in a REGISTER message), the system simulator answers with a RELEASE COMPLETE message with the Facility information element containing a Return_error(error: BearerService not provisioned) of the RegisterSS operation.

The system simulator sends STATUS ENQUIRY, the UE responds with STATUS message indicating CC state U10.

Then again, by means of appropriate user actions, the user requests registration of CFU for Speech, to a number arbitrarily selected.

Upon receipt of the REGISTER message, the system simulator answers with the RELEASE COMPLETE message with the Facility information element containing a reject(invoke_problem: resource limitation) of the RegisterSS operation.

The system simulator sends STATUS ENQUIRY, the UE responds with STATUS message indicating CC state U10.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| | | | | If UE supports CFNRy, then step 1 to 8 are executed |
| 1 | | | | The UE is made to initiate a registration of call forwarding service for CFNRy (Speech) |
| 2 | -> | | CM SERVICE REQUEST | CM service type: "Supplementary service activation" |
| 3 | <- | | CM SERVICE ACCEPT | |
| 4 | -> | | REGISTER | |
| 5 | <- | | RELEASE COMPLETE | RegisterSS operation Return error component with BearerService not provisioned |
| 6 | UE | | | Provide user indication |
| 7 | <- | | STATUS ENQUIRY | |
| 8 | -> | | STATUS | CC state U10 |
| | | | | If UE supports CFU, then step 9 to 16 are executed |
| 9 | UE | | | The UE is made to initiate a registration of call forwarding service for CFU (Speech) |
| 10 | -> | | CM SERVICE REQUEST | CM service type: "supplementary service activation" |
| 11 | <- | | CM SERVICE ACCEPT | |
| 12 | -> | | REGISTER | |
| 13 | <- | | RELEASE COMPLETE | RegisterSS operation Reject component with cause “resource limitation” |
| 14 | UE | | | Provide user indication |
| 15 | <- | | STATUS ENQUIRY | |
| 16 | -> | | STATUS | CC state U10 |

#### 15.4.2.5 Test requirements

In Step 2, the UE sends the CM SERVICE REQUEST message with the service type: "Supplementary service activation".

In Step 4, the UE sends the REGISTER message with correct parameters for registration of CFNRy.

In Step 6, the UE provides the appropriate user indication.

In Step 8, the UE sends the STATUS message with the correct parameters.

In Step 10, the UE sends the CM SERVICE REQUEST message with the service type: "Supplementary service activation".

In Step 12, the UE sends the REGISTER message with the correct parameters for registration of CFU.

In Step 14, the UE provides the appropriate user indication.

In Step 16, the UE sends the STATUS message with the correct parameters.

## 15.4.3 Call forwarding supplementary services, Erasure accepted

#### 15.4.3.1 Definition

#### 15.4.3.2 Conformance requirements

For erasure of any type of call forwarding, the UE shall transmit successively:

1) a CM SERVICE REQUEST with CM service type indicating "supplementary service activation";
2) and then the REGISTER message containing a facility that includes an invoke of the EraseSS operation with the expected parameter values according to the user request (MMI action);
3) Upon receipt of the RELEASE COMPLETE message, the MS shall provide the appropriate user indication (which is to be described by the manufacturer).

Reference

3GPP TS 24.082 clauses 2.3.1 and 4.3.1

#### 15.4.3.3 Test purpose

1) To check that the UE correctly requests a supplementary service transaction for erasure of call forwarding in the CM SERVICE REQUEST.
2) To check that the UE sends a REGISTER message containing the invoke of the EraseSS operation with the expected parameter values for erasure of call forwarding.
3) To check that upon receipt of the result of the operation (in a RELEASE COMPLETE message), the UE provides the appropriate user indication (as described by the manufacturer).

These checks are done for:

a) CFB, for all basic service groups.

b) CFNRc, for all basic service groups.

#### 15.4.3.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in MM-state "Idle, updated";

Related ICS/IXIT Statements

#### 15.4.3.5 Test requirements

In Step 2, the UE sends the CM SERVICE REQUEST message with the service type: "Supplementary service activation".

In Step 7, the UE sends the REGISTER message with correct parameters for erasure of CFB.

In Step 10a, the UE provides the appropriate user indication.

In Step 12, the UE sends the CM SERVICE REQUEST message with the service type: "Supplementary service activation".

In Step 17, the UE sends the REGISTER message with the correct parameters for erasure of CFNRc.

In Step 20, the UE provides the appropriate user indication.

### 15.4.4 Call forwarding supplementary services, Erasure rejected

#### 15.4.4.1 Definition

#### 15.4.4.2 Conformance requirements

For erasure of any type of call forwarding, the UE shall transmit successively:

1) a CM SERVICE REQUEST with CM service type indicating "supplementary service activation";

2) and then the REGISTER message containing a facility that includes an invoke of the EraseSS operation with the expected parameter values according to the user request (MMI action);

3) Upon receipt of the RELEASE COMPLETE message, the UE shall provide the appropriate user indication (which is to be described by the manufacturer).

Reference

3GPP TS 24.082 clauses 2.3.1 and 4.3.1

### 15.4.4.3 Test purpose

1) To check that the UE correctly requests the establishment of a parallel MM transaction for supplementary service transaction of erasure of call forwarding, sending a CM SERVICE REQUEST.

2) To check that the UE sends a REGISTER message containing the invoke of the EraseSS operation with the expected parameter values for erasure of call forwarding.

3) To check that upon receipt of the RELEASE COMPLETE message related to the present SS transaction, the first transaction remains unaffected.

4) To check that upon receipt of the RELEASE COMPLETE message, the UE provides the appropriate user indication (as described by the Manufacturer).

These checks are done for:

a) CFB, for speech.

b) CFNRc, for all basic service groups.

### 15.4.4.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in CC state U10

Related ICS/IXIT Statements

Support of FDD Yes/No.

Support of CS speech Yes/No.

- Description of the user's commands and of display of the answers from the network for call forwarding
- Support of Call Forwarding on Mobile Subscriber Busy Yes/No
- Support of Call Forwarding on Mobile Subscriber Not Reachable Yes/No

Test procedure

By means of appropriate user actions, the user requests erasure of CFB for speech.

Upon receipt of the operation (in a REGISTER message), the system simulator answers with a RELEASE COMPLETE message with the Facility information element containing a Return_error(error: TeleService not provisioned) of the EraseSS operation.

The system simulator sends STATUS ENQUIRY, the UE responds with STATUS message indicating CC state U10.

Then again, by means of appropriate user actions, the user requests erasure of CFNRc for all basic service groups..

Upon receipt of the REGISTER message, the system simulator answers with the RELEASE COMPLETE message with the Facility information element containing a Reject(invoke_problem: resource limitation) of the EraseSS operation.

The system simulator sends STATUS ENQUIRY, the UE responds with STATUS message indicating CC state U10.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| | | | | If UE supports CFB, then steps 1 to 8 are executed |
| 1 | | | | The UE is made to initiate erasure of call forwarding for CFB (speech) |
| 2 | -> | | CM SERVICE REQUEST | CM service type: "Supplementary service activation" |
| 3 | <- | | CM SERVICE ACCEPT | |
| 4 | -> | | REGISTER | |
| 5 | <- | | RELEASE COMPLETE | EraseSS operation Return_error |
| 6 | UE | | | Provide user indication |
| 7 | <- | | STATUS ENQUIRY | |
| 8 | -> | | STATUS | CC state U10 |
| | | | | If UE supports CFNRc, then steps 9 to 16 are executed |
| 9 | UE | | | The UE is made to initiate erasure of call forwarding service for CFNRc (all basic services) |
| 10 | -> | | CM SERVICE REQUEST | CM service type: "supplementary service activation" |
| 11 | <- | | CM SERVICE ACCEPT | |
| 12 | -> | | REGISTER | |
| 13 | <- | | RELEASE COMPLETE | EraseSS operation Reject |
| 14 | UE | | | Provide user indication |
| 15 | <- | | STATUS ENQUIRY | |
| 16 | -> | | STATUS | CC state U10 |

| Problem Code | Resource Limitation | |

STATUS (Step 16)

| Information Element | Value/remark | Condition |
|---|---|---|
| Cause | 30 “Response to STATUS ENQUIRY” | |
| Call state | U10- active | |

#### 15.4.4.5 Test requirements

In Step 2, the UE sends the CM SERVICE REQUEST message with the service type: "Supplementary service activation".

In Step 4, the UE sends the REGISTER message with correct parameters for erasure of CFB.

In Step 6, the UE provides the appropriate user indication.

In Step 8, the UE sends the STATUS message with the correct parameters.

In Step 10, the UE sends the CM SERVICE REQUEST message with the service type: "Supplementary service activation".

In Step 12, the UE sends the REGISTER message with the correct parameters for erasure of CFNRc.

In Step 14, the UE provides the appropriate user indication.

In Step 16, the UE sends the STATUS message with the correct parameters.

## 15.4.5 Call forwarding supplementary services, Activation

#### 15.4.5.1 Definition

#### 15.4.5.2 Conformance requirements

For activation of any type of call forwarding with any parameters, the MS shall transmit successively

1) a CM SERVICE REQUEST with CM service type indicating "supplementary service activation";

2) and then the REGISTER message containing a facility IE that includes an invoke of the ActivateSS operation with parameter values according to the user's request (MMI action);

3) upon receipt of the RELEASE COMPLETE message, the MS shall provide the appropriate user indication (which is to be described by the manufacturer).

Reference

3GPP TS 24.082 clauses 1.4 and 2.4

### 15.4.5.3 Test purpose

1) To check that the UE correctly requests a supplementary service transaction for activation of call forwarding in the CM SERVICE REQUEST.

2) To check that the UE sends a REGISTER message containing the invocation of the ActivateSS operation with the expected parameter values for activation of call forwarding.

3) To check that upon receipt of the result of the operation (in a RELEASE COMPLETE message), the UE provides the appropriate user indication (as described by the manufacturer).

These checks are done for:

a) CFB, for basic service group "all synchronous services".

b) CFU, for all basic service groups.

### 15.4.5.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in MM-state "Idle, updated";

Related ICS/IXIT Statements

Support of FDD Yes/No.

Support of CS speech Yes/No.

Description of the user's commands and of display of the answers from the network for call forwarding

Support of Call Forwarding on Mobile Subscriber Busy Yes/No.

Support of Call Forwarding Unconditional Yes/No.

Test procedure

By means of appropriate user actions, the user requests activation of CFB for all synchronous services.

Upon receipt of the operation (in a REGISTER message), the system simulator answers with the FACILITY message with the Facility information element containing the return result of the ActivateSS operation.

The SS transaction and the RRC connection are released.

Then again, by means of appropriate user actions, the user requests activation of CFU for all basic service groups.

Upon receipt of the REGISTER message, the system simulator answers with the RELEASE COMPLETE message with the Facility information element containing the return result of the ActivateSS operation.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| | | | | If UE supports CFB, then step 1 to 10 are executed. |
| 1 | | | | The UE is made to initiate an activation of call forwarding service for CFB (all synchronous services). The SS verifies that the IE “Establishment cause” in the received RRC CONNECTION REQUEST message is set to “Originating High Priority Signalling”. |
| 2 | -> | | CM SERVICE REQUEST | CM service type: "Supplementary service activation" |
| 3 | <- | | AUTHENTICATION REQUEST | |
| 4 | -> | | AUTHENTICATION RESPONSE | |
| 5 | <- | | SECURITY MODE COMMAND | |
| 6 | -> | | SECURITY MODE COMPLETE | |
| 7 | -> | | REGISTER | |
| 8 | <- | | RELEASE COMPLETE | ActivateSS operation Return result |
| 9 | SS | | | The SS releases the RRC connection. |
| 10 | UE | | | Provide user indication |
| | | | | If UE supports CFU, then step 11 to 20 are executed |
| 11 | UE | | | The UE is made to initiate an activation of call forwarding service for CFU (all basic service groups). The SS verifies that the IE “Establishment cause” in the received RRC CONNECTION REQUEST message is set to “Originating High Priority Signalling”. |
| 12 | -> | | CM SERVICE REQUEST | CM service type: "supplementary service activation" |
| 13 | <- | | AUTHENTICATION REQUEST | Steps 13 and 14 are not executed if steps 3 and 4 were executed. |
| 14 | -> | | AUTHENTICATION RESPONSE | |
| 15 | <- | | SECURITY MODE COMMAND | |
| 16 | -> | | SECURITY MODE COMPLETE | |
| 17 | -> | | REGISTER | |
| 18 | <- | | RELEASE COMPLETE | ActivateSS operation Return result |
| 19 | SS | | | The SS releases the RRC connection. |
| 20 | UE | | | Provide user indication |

| Invoke ID | the same Invoke ID as in the REGISTER in Step 17 | |
| Operation code | activateSS | |
| SS-Status | '1110' Provisioned, Registered and Activated | |

#### 15.4.5.5 Test requirements

In Step 2, the UE sends the CM SERVICE REQUEST message with the service type: "Supplementary service activation".

In Step 7, the UE sends the REGISTER message with correct parameters for activation of CFB.

In Step 10, the UE provides the appropriate user indication.

In Step 12, the UE sends the CM SERVICE REQUEST message with the service type: "Supplementary service activation".

In Step 17, the UE sends the REGISTER message with the correct parameters for activation of CFU.

In Step 20, the UE provides the appropriate user indication.

### 15.4.6 Call forwarding supplementary services, Deactivation

#### 15.4.6.1 Definition

#### 15.4.6.2 Conformance requirements

For deactivation of any type of call forwarding with any parameters, the MS shall transmit successively:

1) a CM SERVICE REQUEST with CM service type indicating "supplementary service activation";

2) and then the REGISTER message containing a facility IE that includes an invoke of the DeactivateSS operation with parameter values according to the user's request (MMI action);

3) upon receipt of the RELEASE COMPLETE message, the MS shall provide the appropriate user indication (which is to be described by the manufacturer).

Reference

3GPP TS 24.082 clauses 2.5 and 4.5

### 15.4.6.3 Test purpose

1) To check that the UE correctly requests a supplementary service transaction for deactivation of call forwarding in the CM SERVICE REQUEST.

2) To check that the UE sends a REGISTER message containing the invoke of the DeactivateSS operation with the expected parameter values for deactivation of call forwarding.

3) To check that upon receipt of the result of the operation (in a RELEASE COMPLETE message), the UE provides the appropriate user indication (as described by the manufacturer).

These checks are done for:

a) CFB, for basic service group speech.

b) CFNRc, for basic service group speech.

### 15.4.6.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in MM-state "Idle, updated";

Related ICS/IXIT Statements

Support of FDD Yes/No.

Support of CS speech Yes/No.

Description of the user's commands and of display of the answers from the network for call forwarding

Support of Call Forwarding on Mobile Subscriber Busy Yes/No.

Support of Call Forwarding on Mobile Subscriber Not Reachable Yes/No.

Test procedure

By means of appropriate user actions, the user requests deactivation of CFB for speech.

Upon receipt of the operation (in a REGISTER message), the system simulator answers with a RELEASE COMPLETE message with the Facility information element containing the return result of the DeactivateSS operation.

The SS transaction and the RRC connection are released.

Then again, by means of appropriate user actions, the user requests deactivation of CFNRc for speech.

Upon receipt of the REGISTER message, the system simulator answers with the RELEASE COMPLETE message with the Facility information element containing the return result of the DeactivateSS operation.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| | | | | If UE supports CFB, then step 1 to 10 are executed. |
| 1 | | | | The UE is made to initiate a deactivation of call forwarding service for CFB (speech). The SS verifies that the IE “Establishment cause” in the received RRC CONNECTION REQUEST message is set to “Originating High Priority Signalling”. |

| SS-Status | '1100' Provisioned and Registered | |

#### 15.4.6.5 Test requirements

In Step 2, the UE sends the CM SERVICE REQUEST message with the service type: "Supplementary service activation".

In Step 7, the UE sends the REGISTER message with correct parameters for deactivation of CFB.

In Step 10, the UE provides the appropriate user indication.

In Step 12, the UE sends the CM SERVICE REQUEST message with the service type: "Supplementary service activation".

In Step 17, the UE sends the REGISTER message with the correct parameters for deactivation of CFNRc.

In Step 20, the UE provides the appropriate user indication.

### 15.4.7 Call forwarding supplementary services, Interrogation accepted

#### 15.4.7.1 Definition

#### 15.4.7.2 Conformance requirements

For interrogation of any specific call forwarding service (not applicable to a group of services) with any parameters, the UE shall transmit successively:

1) a CM SERVICE REQUEST with CM service type indicating "supplementary service activation";

2) and then the REGISTER message containing a facility IE that includes an invoke of the InterrogateSS operation with parameter values according to the user's request (MMI action);

3) upon receipt of the RELEASE COMPLETE message, the UE shall provide the appropriate user indication (which is to be described by the manufacturer).

Reference

3GPP TS 24.082 clauses 2.6 and 3.6

### 15.4.7.3 Test purpose

1) To check that the UE correctly requests a supplementary service transaction for interrogation of call forwarding in the CM SERVICE REQUEST.

3) To check that the UE sends a REGISTER message containing the invoke of the InterrogateSS operation with the expected parameter values for interrogation of call forwarding.

4) To check that upon receipt of the result of the operation (in a RELEASE COMPLETE message), the UE provides the appropriate user indication (as described by the manufacturer).

These checks are done for:

a) CFB, for all basic service groups.

b) CFNRy, for basic service group speech.

### 15.4.7.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in MM-state "Idle, updated";

Related ICS/IXIT Statements

Support of FDD Yes/No.

Support of CS speech Yes/No.

Description of the user's commands and of display of the answers from the network for call forwarding

Support of Call Forwarding on Mobile Subscriber Busy Yes/No.

Support of Call Forwarding on No Reply Yes/No.

Test procedure

By means of appropriate user actions, the user requests interrogation of CFB for all basic service groups.

Upon receipt of the operation (in a REGISTER message), the system simulator answers with a RELEASE COMPLETE message with the Facility information element containing the return result of the InterrogateSS operation.

The SS transaction and the RRC connection are released.

Then again, by means of appropriate user actions, the user requests interrogation of CFNRy for speech.

Upon receipt of the REGISTER message, the system simulator answers with the RELEASE COMPLETE message with the Facility information element containing the return result of the InterrogateSS operation.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| | | | | If UE supports CFB, then step 1 to 10 are executed |
| 1 | | | | The UE is made to initiate an interrogation of call forwarding service for CFB (all). The SS verifies that the IE “Establishment cause” in the received RRC CONNECTION REQUEST message is set to “Originating High Priority Signalling”. |

#### 15.4.7.5 Test requirements

In Step 2, the UE sends the CM SERVICE REQUEST message with the service type: "Supplementary service activation".

In Step 7, the UE sends the REGISTER message with correct parameters for interrogation of CFB.

In Step 10, the UE provides the appropriate user indication.

In Step 12, the UE sends the CM SERVICE REQUEST message with the service type: "Supplementary service activation".

In Step 17, the UE sends the REGISTER message with the correct parameters for interrogation of CFNRy.

In Step 20, the UE provides the appropriate user indication.

## 15.4.8 Call forwarding supplementary services, Interrogation rejected

#### 15.4.8.1 Definition

#### 15.4.8.2 Conformance requirements

For interrogation of any specific call forwarding service (not applicable to a group of services) with any parameters, the UE shall transmit successively:

1) a CM SERVICE REQUEST with CM service type indicating "supplementary service activation";

2) and then the REGISTER message containing a facility IE that includes an invoke of the InterrogateSS operation with parameter values according to the user's request (MMI action);

3) upon receipt of the RELEASE COMPLETE message, the UE shall provide the appropriate user indication (which is to be described by the manufacturer).

Reference

3GPP TS 24.082 clauses 2.6 and 3.6

#### 15.4.8.3 Test purpose

1) To check that the UE correctly requests the establishment of a parallel MM transaction for supplementary service transaction of interrogation of a specific call forwarding service, sending a CM SERVICE REQUEST.

2) To check that the UE sends a REGISTER message containing the invoke of the InterrogateSS operation with the expected parameter values for interrogation of call forwarding.

3) To check that upon receipt of the RELEASE COMPLETE message related to the present SS transaction, the first transaction remains unaffected.

4) To check that upon receipt of the RELEASE COMPLETE message, the UE provides the appropriate user indication (as described by the Manufacturer).

These checks are done for:

a) CFB, for all basic service groups.

b) CFNRy, for basic service group speech.

#### 15.4.8.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in CC state U10

Related ICS/IXIT Statements

Support of FDD Yes/No.

Support of CS speech Yes/No.

- Description of the user's commands and of display of the answers from the network for call forwarding
- Support of Call Forwarding on Mobile Subscriber Busy Yes/No
- Support of Call Forwarding on No Reply Yes/No

Test procedure

By means of appropriate user actions, the user requests interrogation of CFB for all basic service groups.

Upon receipt of the operation (in a REGISTER message),the system simulator answers with a RELEASE COMPLETE message with the Facility information element containing a Return_error(error: SS not available) of the InterrogateSS operation.

The system simulator sends STATUS ENQUIRY, the UE responds with STATUS message indicating CC state U10.

Then again, by means of appropriate user actions, the user requests interrogation of CFNRy for speech.

Upon receipt of the REGISTER message, the system simulator answers with the RELEASE COMPLETE message (same PD and TI that in the REGISTER message) with the Facility information element containing a Reject(invoke_problem: resource limitation) of the InterrogateSS operation.

The system simulator sends STATUS ENQUIRY, the UE responds with STATUS message indicating CC state U10.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| | | | | If UE supports CFB, then step 1 to 8 are executed |
| 1 | | | | The UE is made to initiate an interrogation of call forwarding service for CFB (all) |
| 2 | -> | | CM SERVICE REQUEST | CM service type: "Supplementary service activation" |
| 3 | <- | | CM SERVICE ACCEPT | |
| 4 | -> | | REGISTER | |
| 5 | <- | | RELEASE COMPLETE | InterrogateSS operation Return_error |
| 6 | UE | | | Provide user indication |
| 7 | <- | | STATUS ENQUIRY | |
| 8 | -> | | STATUS | CC state U10 |
| | | | | If UE supports CFNRy, then step 9 to 16 are executed |
| 9 | UE | | | The UE is made to initiate an interrogation of call forwarding service for CFNRy(speech) |
| 10 | -> | | CM SERVICE REQUEST | CM service type: "supplementary service activation" |
| 11 | <- | | CM SERVICE ACCEPT | |
| 12 | -> | | REGISTER | |
| 13 | <- | | RELEASE COMPLETE | InterrogateSS operation Reject |
| 14 | UE | | | Provide user indication |
| 15 | <- | | STATUS ENQUIRY | |

### 15.4.8.5 Test requirements

In Step 2, the UE sends the CM SERVICE REQUEST message with the service type: "Supplementary service activation".

In Step 4, the UE sends the REGISTER message with correct parameters for interrogation of CFB.

In Step 6, the UE provides the appropriate user indication.

In Step 8, the UE sends the STATUS message with the correct parameters.

In Step 10, the UE sends the CM SERVICE REQUEST message with the service type: "Supplementary service activation".

In Step 12, the UE sends the REGISTER message with the correct parameters for interrogation of CFNRy.

In Step 14, the UE provides the appropriate user indication.

In Step 16, the UE sends the STATUS message with the correct parameters.

# 15.5 Call waiting

NOTE: In this subclause Subscriber B is the UE under test, and subscribers A, C and D are distant parties to the calls made during the tests.

## 15.5.1 Call completion supplementary services, Waiting call indication and confirmation

### 15.5.1.1 Definition

### 15.5.1.2 Conformance requirement

When this service is activated for the controlling subscriber B and the B-subscriber has calls only in states U10 (Active) or U26 (MO Modify) as defined in 3GPP TS 24.008, the arrival of an incoming call from subscriber C shall, if no other call is waiting be signalled to the mobile station B by a normal call indication. In that case the network and the mobile station shall act in accordance with 3GPP TS 24.008. The transaction identifier shall be the transaction identifier (C-B) allocated to the waiting call and must not be the same as the transaction identifier (A-B) for the already existing call (see figure 1.1). In the CALL CONFIRMED message sent to the network the Cause information element shall be included with cause #17 "user busy" (see figure 1.1). When the ALERTING message is received by the network the call waiting timer T2 shall be started or if call forwarding on no reply is activated for the B-subscriber the no reply condition timer T3 shall be started.

If the network received a non-zero SS Screening indicator from the calling users mobile station the ALERTING/FACILITY message sent to a calling mobile user shall include the Facility information element with an invoke of the Notification operation indicating that the call is waiting (see figure 1.2). If the network did not receive a non-zero SS Screening indicator from the calling users mobile station it shall not send a notification, i.e. either the ALERTING message does not include the Notification operation or the FACILITY message is omitted.

NOTE: If possible, the ALERTING message shall be used as the carrier message for the Call Waiting notification. Otherwise the FACILITY message shall be used.

**Figure 1.2: Notification to a calling mobile station that the call is in the waiting state**

Reference(s)

TS 24.083 clause 1.1.

15.5.1.3 Test purpose

1) To check that with an active call and when receiving a Mobile Terminated call, the UE shall include Cause #17 "user busy" in the CALL CONFIRMED message sent to the SS, and indicate the waiting call to the calling subscriber.

15.5.1.4 Method of test

Initial conditions:

- System Simulator:
  - one cell, default parameters
- User Equipment:
  - the UE is "Circuit Switched Connect" for speech on cell A as per the Generic call set up procedure for mobile terminating circuit switched calls found in TS 34.108 clause 7.2.3.1 (call A-B).

Related ICS/IXIT statement(s)

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of Call Waiting Yes/No.

Test Procedure

The SS shall initiate a new call C-B by sending a SETUP message to the UE. The UE shall respond with a CALL CONFIRMED message including cause #17 "user busy", followed by an ALERTING message.

The UE shall remain in state U10 in respect of the call A-B, and enter state U7 "Call received" in respect of call C-B. The UE shall indicate the existence of the waiting call to the user by a method defined by the manufacturer. The SS shall verify the call states by sending a STATUS ENQUIRY message to the UE and checking the transaction identifier and call state of each call in the received STATUS messages.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |

Specific message contents

SETUP (Step 1)

| Information Element | Value/remark |
|---|---|
| Signal | |
| Signal Value | '00000111'B (call waiting tone on) |

15.5.1.5 Test requirement

At step 2 the UE shall send CALL CONFIRMED message with cause #17 "user busy".

At step 4 the UE shall give a waiting call indication to the user.

## 15.5.2 Call completion supplementary services, Waiting call accepted; existing call released

15.5.2.1 Definition

15.5.2.2 Conformance requirement

If the mobile user B before expiry of timer T2 determines to accept the waiting call and release the existing call the mobile station shall release the existing call firstly and accept the waiting call secondly.

For the release of the existing call the mobile station and the network shall act in accordance with 3GPP TS 24.008. The transaction identifier shall be the transaction identifier (A-B) of the already existing call. The Cause information element in the first clearing message shall indicate cause #16 "normal clearing".

For the acceptance of the waiting call the mobile station and the network shall act in accordance with 3GPP TS 24.008. The transaction identifier shall be the transaction identifier (C-B) of the waiting call.

When the network receives the CONNECT message the timer T2 or if applicable the timer T3 shall be stopped.

Reference(s)

TS 24.083 clause 1.2.1.

15.5.2.3 Test purpose

1) To check that with an active call and when the user accepts to receive a new Mobile Terminated call, the UE shall first release the existing call and then accept the waiting call.

15.5.2.4 Method of test

Initial conditions:

- System Simulator:
  - one cell, default parameters
- User Equipment:
  - the UE is "Circuit Switched Connect" for speech on cell A as per the Generic call set up procedure for mobile terminating circuit switched calls found in TS 34.108 clause 7.2.3.1 (call A-B).

Related ICS/IXIT statement(s)

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of Call Waiting Yes/No.

Test Procedure

The SS shall initiate a new call C-B by sending a SETUP message to the UE. Using suitable user action the UE shall clear call A-B and then answer call C-B.

The UE shall send a DISCONNECT message with the transaction identifier of call A-B, and then respond to a RELEASE message from the SS with a RELEASE COMPLETE message, and then enter state U0 "Null" for call A-B.

The UE shall then send a CONNECT in respect of call C-B, and enter state U10 "Active" on receipt of a CONNECT ACKNOWLEDGE message. The SS shall verify the call states by the sending a STATUS ENQUIRY message to the UE. For call A-B the UE shall respond with a RELEASE COMPLETE message with cause #81 "invalid transaction identifier value" and for call C-B with a STATUS message indicating the appropriate call state.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | <- | SETUP | |
| 2 | | -> | CALL CONFIRMED | |
| 3 | | -> | ALERTING | U7, call received |
| 4 | UE | | | Call A-B is cleared using suitable user action |
| 5 | | -> | DISCONNECT | Transaction identifier of call A-B |
| 6 | | <- | RELEASE | Transaction identifier of call A-B |
| 7 | | -> | RELEASE COMPLETE | Transaction identifier of call A-B |
| 8 | UE | | | Call C-B is answered using suitable user action |
| 9 | | -> | CONNECT | Transaction identifier of call C-B |
| 10 | | <- | CONNECT ACKNOWLEDGE | Transaction identifier of call C-B |
| 11 | | <- | STATUS ENQUIRY | Transaction identifier of call A-B |
| 12 | | -> | RELEASE COMPLETE | Transaction identifier of call A-B, with cause #81 "invalid transaction identifier value" |
| 13 | | <- | STATUS ENQUIRY | Transaction identifier of call C-B |
| 14 | | -> | STATUS | Transaction identifier of call C-B, state U10 |

Specific message contents

SETUP (Step 1)

| Information Element | Value/remark |
|---|---|
| Signal | |
| Signal Value | '00000111'B (call waiting tone on) |

15.5.2.5 Test requirement

At step 5 the UE shall send DISCONNECT message with the transaction identifier of call A-B.

At step 9 the UE shall send CONNECT message with the transaction identifier of call C-B.

At step 12 the UE shall send RELEASE COMPLETE message with cause #81 "invalid transaction identifier value" as the response to the STATUS ENQUIRY message using TI of call A-B.

## 15.5.3 Call completion supplementary services, Waiting call accepted; existing call on hold, no additional calls

15.5.3.1 Definition

15.5.3.2 Conformance requirement

If the mobile user B before expiry of timer T2 or if applicable timer T3 determines to accept the waiting call and put the existing call on hold the mobile station shall put the existing call on hold firstly and accept the waiting call secondly.

In case there is one active call (A-B) and another call (D-B) on hold and call (C-B) waiting, and the mobile user B wants to accept the waiting call (C-B) and put the active call (A-B) on hold, the held call (D-B) has to be released first, either by user B or user D, in accordance with 3GPP TS 24.008.

To put the existing call on hold the mobile station and the network shall act in accordance with clause 2. The hold function shall be initiated by the mobile station and the transaction identifier shall be the transaction identifier (A-B) of the existing call (see figure 1.3).

For the acceptance of the waiting call the mobile station and the network shall act in accordance with 3GPP TS 24.008. The transaction identifier shall be the transaction identifier (C-B) of the waiting call (see figure 1.3).

When the network receives the CONNECT message the timer T2 or if applicable the timer T3 shall be stopped.

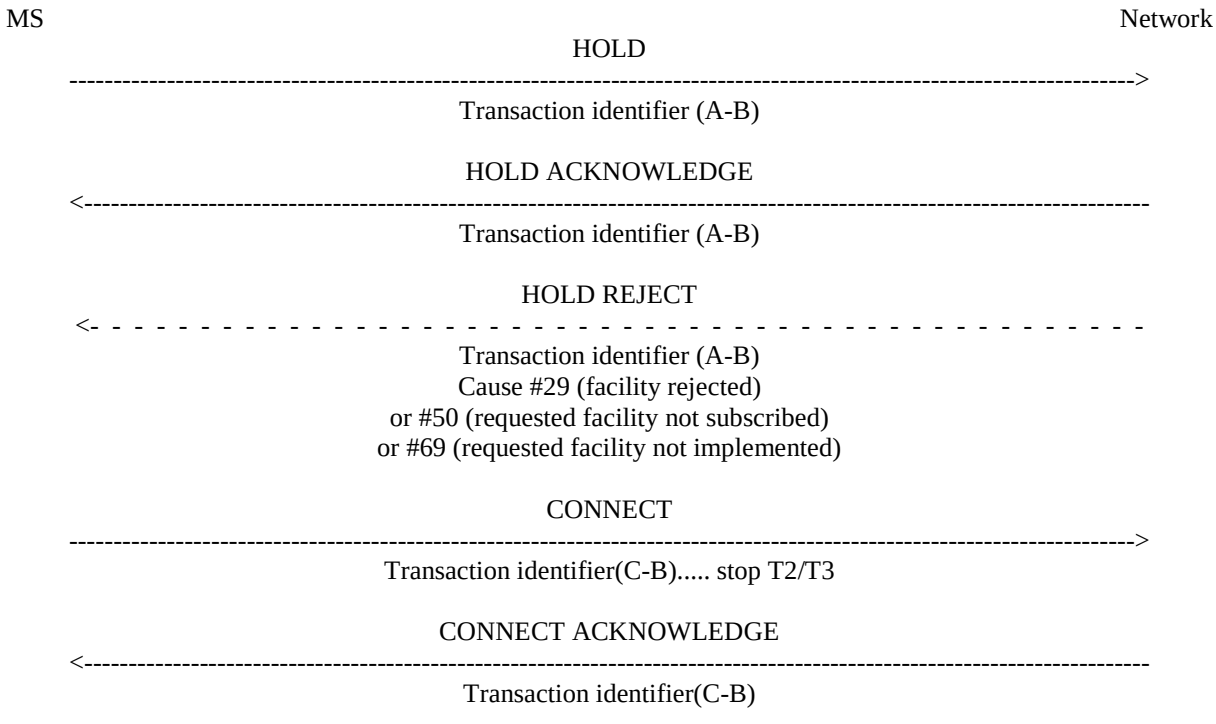

**Figure 1.3: Existing call on hold and acceptance of waiting call by the mobile station**

…

The hold and retrieve functions are performed on the same MM-connection.

The hold function is used to put an existing call which is in the active phase in the Call held auxiliary state. By default, it retains the MM-connection in use and the transaction identifier of the held call for possible subsequent call retrieval.

On receipt of a HOLD message the network shall return a HOLD ACKNOWLEDGE message, provided that the requested function can be performed. The network disconnects any user information path allocated to the active call when putting that call in the Call held auxiliary state. The mobile station disconnects any user information path to the active call and retains the transaction identifier and the MM-connection when putting that call in the Call held auxiliary state.

The HOLD ACKNOWLEDGE message puts the call in the Call held auxiliary state and indicates that the hold function has been performed. The HOLD REJECT message indicates that the hold request was denied and returns the call to the condition it was in prior to the hold request. The HOLD REJECT message contains the Cause information element with e.g.:

- cause #29 "Facility rejected";
- cause #50 "Requested facility not subscribed";
- cause #69 "Requested facility not implemented".

The retrieve function reconnects the mobile station to the requested user information path. The RETRIEVE message requests that a call be retrieved. The RETRIEVE ACKNOWLEDGE message indicates that the retrieve function has been performed. The RETRIEVE REJECT message indicates that the retrieve request was denied. The RETRIEVE REJECT message contains the Cause information element with e.g.:

- cause #34 "No channel available".

TS 24.083 clause 1.2.2 and clause 2.1.1.

#### 15.5.3.3 Test purpose

1) To check that with an active call and when the user accepts to receive a new Mobile Terminated call, the UE shall place the existing call on hold and then accept the waiting call.

#### 15.5.3.4 Method of test

Initial conditions:

- System Simulator:
  - one cell, default parameters
- User Equipment:
  - the UE is "Circuit Switched Connect" for speech on cell A as per the Generic call set up procedure for mobile terminating circuit switched calls found in TS 34.108 clause 7.2.3.1 (call A-B).

Related ICS/IXIT statement(s)

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of Call Waiting Yes/No.

Support of Call Hold Yes/No.

Test Procedure

The SS shall initiate a new call C-B by sending a SETUP message to the UE. Using suitable user action the UE shall place the active call A-B on hold and then answer call C-B.

The UE shall send a HOLD message to the SS using the transaction identifier of call A-B and enter state U10 "Active" with auxiliary state "Call hold request". The SS shall respond with a HOLD ACKNOWLEDGE message and the UE shall enter state U10 "Active" with auxiliary state "Call held".

The UE shall then send a CONNECT message to the SS, using the transaction identifier of call C-B, and on receipt of a CONNECT ACKNOWLEDGE message, shall enter state U10 "Active". The SS shall verify the call states by sending a STATUS ENQUIRY message to the UE. For both calls the UE shall respond with a STATUS message indicating the appropriate transaction identifier and call state.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | <- | SETUP | |
| 2 | | -> | CALL CONFIRMED | |
| 3 | | -> | ALERTING | U7, call received |
| 4 | UE | | | Call A-B is placed on hold using suitable user action |
| 5 | | -> | HOLD | Transaction identifier of call A-B |
| 6 | | <- | HOLD ACKNOWLEDGE | Transaction identifier of call A-B |
| 7 | UE | | | Call C-B is answered using suitable user action |
| 8 | | -> | CONNECT | Transaction identifier of call C-B |
| 9 | | <- | CONNECT ACKNOWLEDGE | Transaction identifier of call C-B |
| 10 | | <- | STATUS ENQUIRY | Transaction identifier of call A-B |
| 11 | | -> | STATUS | Transaction identifier of call A-B, state U10, auxiliary state "Call Held" |
| 12 | | <- | STATUS ENQUIRY | Transaction identifier of call C-B |
| 13 | | -> | STATUS | Transaction identifier of call C-B, state U10 |

Specific message contents

SETUP (Step 1)

| Information Element | Value/remark |
|---|---|
| Signal | |
| Signal Value | '00000111'B (call waiting tone on) |

15.5.3.5 Test requirement

At step 5 the UE shall send HOLD message with the transaction identifier of call A-B.

At step 8 the UE shall send CONNECT message with the transaction identifier of call C-B.

## 15.5.4 Call completion supplementary services, Existing call released by user A; waiting call accepted

15.5.4.1 Definition

15.5.4.2 Conformance requirement

If user A before the expiry of timer T2 or if applicable timer T3 determines to release the existing call then the existing call shall be released by the network firstly and the waiting call may be accepted by the mobile station secondly.

For the release of the existing call the network and the mobile station shall act in accordance with 3GPP TS 24.008. The transaction identifier shall be the transaction identifier (A-B) of the existing call.

For the acceptance of the waiting call the mobile station and the network shall act in accordance with 3GPP TS 24.008. The transaction identifier shall be the transaction identifier (C-B) of the waiting call.

When the network receives the CONNECT message the timer T2 or if applicable the timer T3 shall be stopped.

Reference(s)

TS 24.083 clause 1.2.3.

15.5.4.3 Test purpose

1) To check that, UE on receipt of the Disconnect message from the active call is able to complete the call clearance procedure and accept the waiting call.

15.5.4.4 Method of test

Initial conditions:

- System Simulator:
  - one cell, default parameters
- User Equipment:
  - the UE is "Circuit Switched Connect" for speech on cell A as per the Generic call set up procedure for mobile terminating circuit switched calls found in TS 34.108 clause 7.2.3.1 (call A-B).

Related ICS/IXIT statement(s)

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of Call Waiting Yes/No.

Test Procedure

The SS shall initiate a new call C-B by sending a SETUP message to the UE.

The SS shall initiate the release of the active call A-B and on receipt of a DISCONNECT message using the transaction identifier of call A-B, the UE shall respond with a RELEASE message. On receipt of a RELEASE COMPLETE message, the UE shall enter state U0 "Null".

If necessary, suitable user action shall be made to accept call C-B. The UE shall then send a CONNECT message using the transaction identifier of call C-B, and on receipt of a CONNECT ACKNOWLEDGE message, the UE shall enter state U10 "Active". The SS shall verify the call states by sending a STATUS ENQUIRY message to the UE. For call A-B the UE shall respond with a RELEASE COMPLETE message with cause #81 "invalid transaction identifier value" and for call C-B with a STATUS message indicating the appropriate call state.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | <- | SETUP | |
| 2 | | -> | CALL CONFIRMED | |

| Signal | |
| Signal Value | '00000111'B (call waiting tone on) |

15.5.4.5 Test requirement

At step 5 the UE shall send RELEASE message with the transaction identifier of call A-B.

At step 8 the UE shall send CONNECT message with the transaction identifier of call C-B.

At step 11 the UE shall send RELEASE COMPLETE message with cause #81 "invalid transaction identifier value" as the response to the STATUS ENQUIRY message using TI of call A-B.

## 15.5.5 Call completion supplementary services, Waiting call released by subscriber B

15.5.5.1 Definition

15.5.5.2 Conformance requirement

For the release of the waiting call the mobile station and the network shall act in accordance with 3GPP TS 24.008. The transaction identifier shall be the transaction identifier (C-B) of the waiting call.

* If the B subscriber indicates UDUB by the sending of the first clearing message with cause information element #17 (User Busy), and call forwarding on mobile subscriber busy is activated for the B subscriber the call shall be forwarded by the network. If call forwarding is not active the call will be cleared.

* If any other causes are given in the first clearing message the call will be released.

Reference(s)

## 15.5.7 Call completion supplementary services, Activation

#### 15.5.7.1 Definition

#### 15.5.7.2 Conformance requirement

Activation of the supplementary service call waiting will be performed by the subscriber. The network will send a return result indication of acceptance of the request (see figure 1.4).

If the network cannot accept an activation request, an error indication is returned to the served mobile subscriber. Error values are specified in 3GPP TS 24.080 (see figure 1.4).

If the mobile subscriber does not indicate a specific basic service group the activation of call waiting is valid for all applicable basic services (see figure 1.4).

Normal outgoing call procedures apply when this service is activated.

15.5.7.3 Test purpose

To check the correct operation of the activation procedure and that the UE correctly displays the response from the network in the following cases:

1) Successful activation.

2) Error response (reject).

3) Activation reject (Invoke problem).

15.5.7.4 Method of test

Initial conditions:

- System Simulator:
  - one cell, default parameters
- User Equipment:
  - The UE is in the MM-state "idle updated".

Related ICS/IXIT statement(s)

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of Call Waiting Yes/No.

Description of the user's commands and display of the answers from the network for activation of call waiting.

Test Procedure

Using suitable action, the user requests activation of call waiting for a basic service group speech.

Upon receipt of the operation (in a REGISTER message), the SS shall answer with the RELEASE COMPLETE message with the Facility information element containing the return result of the ActivateSS operation.

Then again, using suitable action, the user requests activation of call waiting for all basic service groups.

Upon receipt of the operation (in a REGISTER message), the SS shall answer with the RELEASE COMPLETE message with the Facility information element containing the return result of the ActivateSS operation.

Using suitable action, the user requests activation of call waiting for a basic service group speech.

Upon receipt of the operation (in a REGISTER message), the SS shall answer with the RELEASE COMPLETE message with the Facility information element containing a Return error component with Error code: shortTermDenial.

Then again, using suitable action, the user requests activation of call waiting for all basic service groups.

Upon receipt of the operation (in a REGISTER message), the SS shall answer with the RELEASE COMPLETE message with the Facility information element containing a Return error component with Error code: longTermDenial.

Using suitable action, the user requests activation of call waiting for a basic service group speech.

Upon receipt of the operation (in a REGISTER message), the SS shall answer with the RELEASE COMPLETE message with the Facility information element containing a Reject component with Invoke problem (Resource limitation).

Then again, using suitable action, the user requests activation of call waiting for all basic service groups.

Upon receipt of the operation (in a REGISTER message), the system simulator answers with the RELEASE COMPLETE message with the Facility information element containing a Reject component with Invoke problem (Initiating Release).

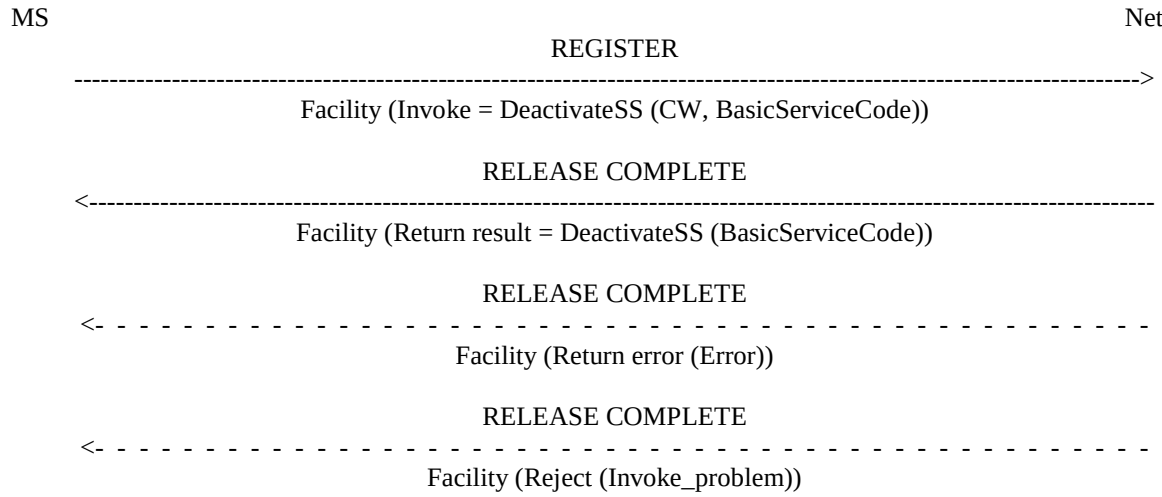
### 15.5.8 Call completion supplementary services, Deactivation



#### 15.5.8.1 Definition

#### 15.5.8.2 Conformance requirement

Deactivation of the supplementary service call waiting will be performed by the subscriber. The network will send a return result indication of acceptance of the request (see figure 1.5).

If the network cannot accept a deactivation request, an error indication is returned to the served mobile subscriber. Error values are specified in 3GPP TS 24.080 (see figure 1.5).

If the subscriber does not indicate a specific basic service group the deactivation of call waiting is valid for all applicable basic services (see figure 1.5).

NOTE: If the BasicServiceCode is not included the deactivation is valid for all applicable basic services.

**Figure 1.5: Deactivation of call waiting**

Reference(s)

TS 24.083 clause 1.5.

15.5.8.3 Test purpose

To check the correct operation of the deactivation procedure and that the UE correctly displays the response from the network in the following cases:

1) Successful deactivation.
2) Error response (reject).
3) Deactivation reject (Invoke problem).

15.5.8.4 Method of test

Initial conditions:

- System Simulator:
  - one cell, default parameters
- User Equipment:
  - The UE is in the MM-state "idle updated".

Related ICS/IXIT statement(s)

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of Call Waiting Yes/No.

Description of the user's commands and display of the answers from the network for deactivation of call waiting.

Test Procedure

Using suitable action, the user requests deactivation of call waiting for a basic service group speech.

Upon receipt of the operation (in a REGISTER message), the SS shall answer with the RELEASE COMPLETE message with the Facility information element containing the return result of the DeactivateSS operation.

Then again, using suitable action, the user requests deactivation of call waiting for all basic service groups.

Upon receipt of the operation (in a REGISTER message), the SS shall answer with the RELEASE COMPLETE message with the Facility information element containing the return result of the DeactivateSS operation.

Using suitable action, the user requests deactivation of call waiting for a basic service group speech.

Upon receipt of the operation (in a REGISTER message), the SS shall answer with the RELEASE COMPLETE message with the Facility information element containing a Return error component with Error code: shortTermDenial.

Then again, using suitable action, the user requests deactivation of call waiting for all basic service groups.

Upon receipt of the operation (in a REGISTER message), the SS shall answer with the RELEASE COMPLETE message with the Facility information element containing a Return error component with Error code: longTermDenial.

Using suitable action, the user requests deactivation of call waiting for a basic service group speech.

Upon receipt of the operation (in a REGISTER message), the SS shall answer with the RELEASE COMPLETE message with the Facility information element containing a Reject component with Invoke problem (Resource limitation).

Then again, using suitable action, the user requests deactivation of call waiting for all basic service groups.

Upon receipt of the operation (in a REGISTER message), the system simulator answers with the RELEASE COMPLETE message with the Facility information element containing a Reject component with Invoke problem (Initiating Release).

Expected sequence

#### 15.5.8.5 Test requirement

At steps 6, 13, 20, 27, 34 and 41 the UE shall display the correct user indication.

## 15.6 Call Hold supplementary services

General

In this subclause, subscriber A is the UE under test, and subscribers B and C are distant parties in the calls used in the test cases.

### 15.6.1 Call completion supplementary services, Hold invocation

#### 15.6.1.1 Definition

#### 15.6.1.2 Conformance requirement

1) The served mobile subscriber indicates to the network that communication on the interface is to be interrupted.

   The hold function should be invoked in association with an existing active call.

The invocation of the hold function does not affect the existing 3GPP TS 24.008 call states, but does affect the auxiliary state. The request for placing a call on hold places the auxiliary state in the hold request state. The responding entity will acknowledge this request with a HOLD ACKNOWLEDGE message if this operation was successful (see figure 2.1). This will result in the auxiliary state being put in the Call held state.

If the requested hold function cannot be obtained, then a HOLD REJECT message will be returned with the appropriate cause (see figure 2.1). This will result in the auxiliary state returning to the Idle state. The served mobile subscriber A may initiate an active MultiParty call from an active call C and a held call B.

2) It is possible to place a call on hold in the Active state. The concept of dimensioned state space is being introduced to ensure state synchronization between the mobile station and the network. This concept suggests dimensioning the call state machine into two dimensions. In other words, there would be two states associated with each call. The first would be a 3GPP TS 24.008 call state and the second would be an auxiliary state associated with hold. Suppose the dimensioned state space is represented by two co-ordinates: one is a 3GPP TS 24.008 call state co-ordinate and the other is a hold co-ordinate. If a 3GPP TS 24.008 call state transition occurs, the former co-ordinate is updated. If a call is put on hold, the hold co-ordinate is updated. When the held call is reconnected, the hold co-ordinate is again updated.

   There are four auxiliary states associated with the hold and retrieve functions:

   - Idle;
   - Hold request;

     A request has been made for the hold function.

   - Call held;

     The call is held and the user information path has been reserved.

   - Retrieve request;

     A request has been made for the retrieve function.

Reference(s)

TS 24.083 clauses 2.1.2 and 2.1.5.

#### 15.6.1.3 Test purpose

1) To verify the ability of a UE to invoke the Call Hold service when it has an active call.
2) To verify the ability of a UE to apply the auxiliary states for hold and retrieve correctly during an unsuccessful invocation of the Call Hold service when the response from the SS is a HOLD REJECT message.
3) To verify the ability of a UE to apply the auxiliary states for hold and retrieve correctly during a successful invocation of the Call Hold service when the response from the SS is a HOLD ACKNOWLEDGE message.

#### 15.6.1.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - The UE shall have Call A-B in state U10 "Active". The call shall be of telecommunication service TS11. This state is achieved by the procedure in section 7.2.3.2 of TS 34.108.

Related ICS/IXIT Statements

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of Call Hold Yes/No.

Method of placing an active call on hold.

Test procedure

Using suitable user action, the UE shall request that the call is placed on hold. The UE shall send a HOLD message and enter auxiliary state "hold request". On receipt of a HOLD REJECT message from the SS the UE shall return the call to the original call state U10 "Active". The call state shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of the call, and receiving a STATUS message indicating the appropriate call state and auxiliary state. The SS verifies that the UE has through connected the DTCH in both directions.

Using suitable user action, the UE shall request that the call is placed on hold. The UE shall send a HOLD message and enter auxiliary state "hold request". On receipt of a HOLD ACKNOWLEDGE message from the SS the UE shall enter the state U10 "Active" with auxiliary state "Call held". The call state shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of the call, and receiving a STATUS message indicating the appropriate call state and auxiliary state.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | Make the UE to put Call A-B on hold | |
| 2 | --> | | HOLD | |
| 3 | <-- | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 4 | --> | | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Hold request" |
| 5 | <-- | | HOLD REJECT | |
| 6 | <-- | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 7 | --> | | STATUS | Transaction identifier of Call A-B, state U10, no auxiliary state |
| 8 | | SS | | The DTCH is through connected in both directions. |
| 9 | UE | | Make the UE to put Call A-B on hold | |
| 10 | --> | | HOLD | |
| 11 | <-- | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 12 | --> | | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Hold request " |
| 13 | <-- | | HOLD ACKNOWLEDGE | |
| 14 | <-- | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 15 | --> | | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call held" |

Specific Message Contents

HOLD (Step 2 and Step 10)

| Information Element | Value/remark |
|---|---|

| - octet 4 | |
| - Extension bit | 1 B |
| - cause value | 010 1001 B (Temporary failure) |

HOLD ACKNOWLEDGE (Step 13)

| Information Element | Value/remark |
|---|---|
| Protocol discriminator | 0011 B (call control; call related SS messages) |
| Transaction identifier | The same value that has been used in Call A-B |
| Message type | 0001 1001 B |

#### 15.6.1.5 Test requirements

1) At step 2 and step 10 the UE shall send a HOLD message with the transaction identifier of Call A-B.

2) At step 4 and the UE shall send a STATUS message with the call state set to "U10 - active", the hold auxiliary state set to "Hold request" and the multi party auxiliary state set to "Idle". At step 7 the UE shall send a STATUS message with the call state set to "U10 - active" and the auxiliary state IE is omitted.

3) At step 12 the UE shall send a STATUS message with the call state set to "U10 - active", the hold auxiliary state set to "Hold request" and the multi party auxiliary state set to "Idle". At step 15 the UE shall send a STATUS message with the call state set to "U10 - active", the hold auxiliary state set to "Call held" and the multi party auxiliary state set to "Idle".

## 15.6.2 Call completion supplementary services, Retrieve procedure

#### 15.6.2.1 Definition

#### 15.6.2.2 Conformance requirement

1) When the mobile subscriber that invoked the call hold service indicates that the call is to be retrieved, the network shall re establish communication and send an acknowledgement to the served mobile subscriber (see figure 2.3).

   If the network received a non zero SS Screening indicator from the remote party's mobile station the network shall send a notification to the remote party indicating that the call has been retrieved (see figure 2.4). If the network did not receive a non zero SS Screening indicator from the remote party's mobile station it shall not send a notification.

   The retrieve function is requested by sending a RETRIEVE message. This message may be sent while the auxiliary state is in the Call held state.

   Upon the sending of the RETRIEVE message the auxiliary state of the initiator's terminal would be the retrieve request state.

   If the retrieve request is successful, the RETRIEVE ACKNOWLEDGE message will be returned. The initiator should not assume that call retrieval has occurred until it receives this message. The auxiliary state would then return to the Idle state.

   If the retrieve request is not successful, the RETRIEVE REJECT message will be returned with an appropriate cause. The auxiliary state machine would then remain to the Call held state. The served mobile subscriber indicates to the network that communication on the interface is to be interrupted.

2) It is possible to place a call on hold in the Active state. The concept of dimensioned state space is being introduced to ensure state synchronization between the mobile station and the network. This concept suggests dimensioning the call state machine into two dimensions. In other words, there would be two states associated with each call. The first would be a 3GPP TS 24.008 call state and the second would be an auxiliary state associated with hold. Suppose the dimensioned state space is represented by two co-ordinates: one is a 3GPP TS 24.008 call state co-ordinate and the other is a hold co-ordinate. If a 3GPP TS 24.008 call state transition occurs,

the former co-ordinate is updated. If a call is put on hold, the hold co-ordinate is updated. When the held call is reconnected, the hold co-ordinate is again updated.

There are four auxiliary states associated with the hold and retrieve functions:

- Idle;
- Hold request;

  A request has been made for the hold function.

- Call held;

  The call is held and the user information path has been reserved.

- Retrieve request;

  A request has been made for the retrieve function.

Reference(s)

TS 24.083 clauses 2.1.3 and 2.1.5.

15.6.2.3 Test purpose

1) To verify the ability of a UE to retrieve a held call.
2) To verify the ability of a UE to apply the auxiliary states for hold and retrieve correctly during an unsuccessful retrieve procedure for a held call when the response from the SS is a RETRIEVE REJECT message.
3) To verify the ability of a UE to apply the auxiliary states for hold and retrieve correctly during a successful retrieve procedure for a held call when the response from the SS is a RETRIEVE ACKNOWLEDGE message.

15.6.2.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - The UE shall have Call A-B in state U10 "Active" with auxiliary state "Call held". The call shall be of telecommunication service TS11. This state is achieved by the procedure in section 7.2.3.3.1.2 of TS 34.108.

Related ICS/IXIT Statements

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of Call Hold Yes/No.

Method of retrieving a held call.

Test procedure

Using suitable user action, the UE shall request that the held call is retrieved. The UE shall send a RETRIEVE message and enter auxiliary state "retrieve request". On receipt of a RETRIEVE REJECT message from the SS, the UE shall return the call to the original call state U10 "Active" with auxiliary state "Call held". The call state shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of call, and receiving a STATUS message indicating the appropriate call state and auxiliary state.

Using suitable user action, the UE shall request that the held call is retrieved. The UE shall send a RETRIEVE message and enter auxiliary state "retrieve request". On receipt of a RETRIEVE ACKNOWLEDGE message from the SS, the UE shall enter the state U10 "Active". The call state shall be verified by the SS sending a STATUS ENQUIRY message

in respect of the transaction identifier of call, and receiving a STATUS message indicating the appropriate call state and auxiliary state. The SS verifies that the UE has through connected the DTCH in both directions.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | Make the UE to retrieve the held call | |
| 2 | --> | | RETRIEVE | |
| 3 | <-- | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 4 | --> | | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Retrieve request" |
| 5 | <-- | | RETRIEVE REJECT | |
| 6 | <-- | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 7 | --> | | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call held" |
| 8 | UE | | Make the UE to retrieve the held call | |
| 9 | --> | | RETRIEVE | |
| 10 | <-- | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 11 | --> | | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Retrieve request" |
| 12 | <-- | | RETRIEVE ACKNOWLEDGE | |
| 13 | <-- | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 14 | --> | | STATUS | Transaction identifier of Call A-B, state U10, no auxiliary state |
| 15 | SS | | | The DTCH is through connected in both directions. |

Specific Message Contents

| Transaction identifier | The same value that has been used in Call A-B |
| Message type | 0001 1101 B |

#### 15.6.2.5 Test requirements

1) At step 2 and step 9 the UE shall send a RETRIEVE message with the transaction identifier of Call A-B.

2) At step 4 the UE shall send a STATUS message with the call state set to "U10 - active", the hold auxiliary state set to "Retrieve request" and the multi party auxiliary state set to "Idle". At step 7 the UE shall send a STATUS message with the call state set to "U10 - active", the hold auxiliary state set to "Call held" and the multi party auxiliary state set to "Idle".

3) At step 11 the UE shall send a STATUS message with the call state set to "U10 - active", the hold auxiliary state set to "Retrieve request" and the multi party auxiliary state set to "Idle". At step 14 the UE shall send a STATUS message with the call state set to "U10 - active" and the auxiliary state IE is omitted.

## 15.6.3 Call completion supplementary services, Alternate from one call to the other

#### 15.6.3.1 Definition

#### 15.6.3.2 Conformance requirement

1) If the served mobile subscriber is connected to an active call and a call on hold, he can alternate from one call to the other. This results in the previously active call being held and the previously held call becoming retrieved. This is achieved by sending a HOLD message for the active call, followed by a RETRIEVE message for the held call (see figure 2.5). These requests place the auxiliary state for the held and active calls in the retrieve request and hold request states respectively.

   If this alternate procedure is successful the HOLD ACKNOWLEDGE message will be returned, followed by the RETRIEVE ACKNOWLEDGE message. The initiator should not assume that the held call is retrieved and the active call is held until it receives both these messages.

   If the alternate procedure is not successful the HOLD REJECT message will be returned followed by the RETRIEVE REJECT message. This will result in the auxiliary state for the held and active calls returning to the previous states.

   If the network received a non-zero SS Screening indicator from the remote party's mobile station the network shall send a notification towards the previously held party that the call has been retrieved (see figure 2.4) and towards the previously active party that the call has been on hold (see figure 2.2). If the network did not receive a non-zero SS Screening indicator from the remote party's mobile station it shall not send a notification.

2) It is possible to place a call on hold in the Active state. The concept of dimensioned state space is being introduced to ensure state synchronization between the mobile station and the network. This concept suggests dimensioning the call state machine into two dimensions. In other words, there would be two states associated with each call. The first would be a 3GPP TS 24.008 call state and the second would be an auxiliary state associated with hold. Suppose the dimensioned state space is represented by two co-ordinates: one is a 3GPP TS 24.008 call state co-ordinate and the other is a hold co-ordinate. If a 3GPP TS 24.008 call state transition occurs, the former co-ordinate is updated. If a call is put on hold, the hold co-ordinate is updated. When the held call is reconnected, the hold co-ordinate is again updated.

   There are four auxiliary states associated with the hold and retrieve functions:

   - Idle;
   - Hold request;

     A request has been made for the hold function.

   - Call held;

     The call is held and the user information path has been reserved.

   - Retrieve request;

     A request has been made for the retrieve function.

Reference(s)

TS 24.083 clauses 2.1.4 and 2.1.5.

15.6.3.3 Test purpose

1) To verify the ability of a UE to alternate between one call and the other, by placing the active call on hold, and retrieving the previously held call.

2) To verify the ability of a UE to apply the auxiliary states for hold and retrieve correctly during a successful alternation from one call to another when the response from the SS is a RETRIEVE ACKNOWLEDGE message.

3) To verify the ability of a UE to apply the auxiliary states for hold and retrieve correctly during an unsuccessful alternation from one call to another when the response from the SS is a RETRIEVE REJECT message.

15.6.3.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - The UE shall have Call A-B in state U10 "Active" with Auxiliary state "Call held" and Call A-C in state U10 "Active". Both calls shall be of telecommunication service TS11. This state is achieved by the procedure in section 7.2.3.3.1.4 of TS 34.108.

Related ICS/IXIT Statements

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of Call Hold Yes/No.

Method of alternating between an active call and a held call.

Test procedure

Using suitable user action, the UE shall alternate between Call A-B and Call A-C. The UE shall send a HOLD message with the transaction identifier for Call A-C and enter auxiliary state "hold request", and send a RETRIEVE message with the transaction identifier for Call A-B and enter auxiliary state "retrieve request". On receipt of a HOLD ACKNOWLEDGE and RETRIEVE ACKNOWLEDGE message, the UE shall have Call A-B in state U10 "Active" and Call A-C in state U10 "Active" with auxiliary state "Call held". The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state and auxiliary state.

Using suitable user action, the UE shall alternate between Call A-B and Call A-C. The UE shall send a HOLD message with the transaction identifier for Call A-B and enter auxiliary state "hold request", and send a RETRIEVE message with the transaction identifier for Call A-C and enter auxiliary state "retrieve request". On receipt of a HOLD REJECT and RETRIEVE REJECT message, the UE shall have Call A-B in state U10 "Active" and Call A-C in state U10 "Active" with auxiliary state "Call held". The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state and auxiliary state.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | Make the UE to alternate between the active call and the held call | |
| 2 | --> | | HOLD | |
| 3 | --> | | RETRIEVE | |
| 4 | <-- | | STATUS ENQUIRY | Transaction identifier of Call A-B |

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 5 | --> | | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Retrieve request" |
| 6 | <-- | | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 7 | --> | | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Hold request" |
| 8 | <-- | | HOLD ACKNOWLEDGE | |
| 9 | <-- | | RETRIEVE ACKNOWLEDGE | |
| 10 | <-- | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 11 | --> | | STATUS | Transaction identifier of Call A-B, state U10, no auxiliary state |
| 12 | <-- | | STATUS ENQUIRY | Transaction identifier of Call A-C |

Specific Message Contents

HOLD (Step 2)

| Information Element | Value/remark |
|---|---|
| Protocol discriminator | 0011 B (call control; call related SS messages) |
| Transaction identifier | The same value that has been used in Call A-C |
| Message type | xx01 1000 B (bits 7 and 8 are not checked, these bits are reserved for the send sequence number) |

RETRIEVE (Step 3)

| Information Element | Value/remark |
|---|---|
| Protocol discriminator | 0011 B (call control; call related SS messages) |
| Transaction identifier | The same value that has been used in Call A-B |
| Message type | xx01 1100 B (bits 7 and 8 are not checked, these bits are reserved for the send sequence number) |

HOLD ACKNOWLEDGE (Step 8)

| Information Element | Value/remark |
|---|---|
| Protocol discriminator | 0011 B (call control; call related SS messages) |
| Transaction identifier | The same value that has been used in Call A-C |
| Message type | 0001 1001 B |

RETRIEVE ACKNOWLEDGE (Step 9)

| Information Element | Value/remark |
|---|---|
| Protocol discriminator | 0011 B (call control; call related SS messages) |
| Transaction identifier | The same value that has been used in Call A-B |

| Information Element | Value/remark |
|---|---|
| Message type | 0001 1101 B |

HOLD (Step 15)

| Information Element | Value/remark |
|---|---|
| Protocol discriminator | 0011 B (call control; call related SS messages) |
| Transaction identifier | The same value that has been used in Call A-B |
| Message type | xx01 1000 B (bits 7 and 8 are not checked, these bits are reserved for the send sequence number) |

RETRIEVE (Step 16)

| Information Element | Value/remark |
|---|---|
| Protocol discriminator | 0011 B (call control; call related SS messages) |
| Transaction identifier | The same value that has been used in Call A-C |
| Message type | xx01 1100 B (bits 7 and 8 are not checked, these bits are reserved for the send sequence number) |

HOLD REJECT (Step 21)

| Information Element | Value/remark |
|---|---|
| Protocol discriminator | 0011 B (call control; call related SS messages) |
| Transaction identifier | The same value that has been used in Call A-B |
| Message type | 0001 1010 B |
| Cause IE | |
| - Length of Cause IE contents | 2 |
| - octet 3 | |
| - Extension bit | 1 B |
| - coding standard | 11 B (GSM PLMNs) |
| - spare | 0 B |
| - location | 0010 B (public network serving the local user) |
| - octet 4 | |
| - Extension bit | 1 B |
| - cause value | 010 1001 B (Temporary failure) |

RETRIEVE REJECT (Step 22)

| Information Element | Value/remark |
|---|---|
| Protocol discriminator | 0011 B (call control; call related SS messages) |
| Transaction identifier | The same value that has been used in Call A-C |
| Message type | 0001 1110 B |
| Cause IE | |
| - Length of Cause IE contents | 2 |
| - octet 3 | |
| - Extension bit | 1 B |
| - coding standard | 11 B (GSM PLMNs) |
| - spare | 0 B |
| - location | 0010 B (public network serving the local user) |
| - octet 4 | |
| - Extension bit | 1 B |
| - cause value | 010 1001 B (Temporary failure) |

### 15.6.3.5 Test requirements

1) At step 2 the UE shall send a HOLD message with the transaction identifier of Call A-C. At step 3 the UE shall send a RETRIEVE message with the transaction identifier of Call A-B. At step 15 the UE shall send a HOLD message with the transaction identifier of Call A-B. At step 16 the UE shall send a RETRIEVE message with the transaction identifier of Call A-C.

2) At step 5 the UE shall send a STATUS message with the call state set to "U10 - active", the hold auxiliary state set to "Retrieve request" and the multi party auxiliary state set to "Idle". At step 7 the UE shall send a STATUS

message with the call state set to "U10 - active", the hold auxiliary state set to "Hold request" and the multi party auxiliary state set to "Idle". At step 11 the UE shall send a STATUS message with the call state set to "U10 - active" and the auxiliary state IE is omitted. At step 13 the UE shall send a STATUS message with the call state set to "U10 - active", the hold auxiliary state set to "Call held" and the multi party auxiliary state set to "Idle".

3) At step 18 the UE shall send a STATUS message with the call state set to "U10 - active", the hold auxiliary state set to "Hold request" and the multi party auxiliary state set to "Idle". At step 20 the UE shall send a STATUS message with the call state set to "U10 - active", the hold auxiliary state set to "Retrieve request" and the multi party auxiliary state set to "Idle". At step 24 the UE shall send a STATUS message with the call state set to "U10 - active" and the auxiliary state IE is omitted. At step 26 the UE shall send a STATUS message with the call state set to "U10 - active", the hold auxiliary state set to "Call held" and the multi party auxiliary state set to "Idle".

# 15.7 Multi-party supplementary services

General

In this subclause, subscriber A is the UE under test, and subscribers B, C, D and E are distant parties in the calls used in the test cases.

## 15.7.1 Multi-party supplementary services, Beginning the MultiParty service, successful case

### 15.7.1.1 Definition

### 15.7.1.2 Conformance requirement

1) The served mobile subscriber A may initiate an active MultiParty call from an active call C and a held call B.

   The mobile station invokes the service by sending a FACILITY message to the network containing the BuildMPTY request. This BuildMPTY request indicates to the network that the mobile subscriber wishes all his calls to be connected together in a MultiParty call. The network will normally accept the request and connect the mobile subscriber with the other existing connections (active call C and held call B). If the request is not accepted, the network will indicate the error to the served mobile (see figure 1.1). The network confirms with the same transaction identifier. Error values are specified in 3GPP TS 24.080.

2) In the call hold service (3GPP TS 24.083), a two dimensional state space is defined, where the first dimension corresponds to the 3GPP TS 24.008 call control state and the second dimension corresponds to the call hold state (Idle, Hold Request, Call Held, Retrieve Request). For the purposes of the MPTY service, it is necessary to introduce another dimension to this state space, i.e. the MultiParty state.

   There are four auxiliary states associated with the MPTY service:

   - Idle;
   - MPTY request;

     A request has been made to add this call to the MPTY.

   - Call in MPTY;

     This call is in the MPTY.

   - Split request;

     A request has been made to remove this call from the MPTY.

   These Auxiliary states apply in addition to the 3GPP TS 24.008 call control states and the 3GPP TS 24.083 call hold states. Thus for example, an active call in a held MPTY has the state (Active, Call held, Call in MPTY). Not all states are allowed, for example an MPTY cannot be split while it is held, so (Active, Call held, Split request) is forbidden.

Reference(s)

TS 24.084 clauses 1.1 and 1.6.

### 15.7.1.3 Test purpose

1) To verify the ability of a UE to start the MultiParty service when it has an active call and a held call, and reacts correctly to a response from the SS indicating success.

2) To verify the ability of a UE to apply the auxiliary states for MPTY correctly during a successful beginning of the MultiParty service.

### 15.7.1.4 Method of test

#### Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - The UE shall have Call A-B in state U10 "Active" with Auxiliary state "Call held" and Call A-C in state U10 "Active". Both calls shall be of telecommunication service TS11. This state is achieved by the procedure in section 7.2.3.3.1.4 of TS 34.108.

#### Related ICS/IXIT Statements

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of Multi Party Service Yes/No.

Method of joining two calls into a MultiParty call.

#### Test procedure

Using suitable user action, the UE shall join the two calls in a MultiParty call. The UE shall send a FACILITY message containing an invoke component set to BuildMPTY, and with the transaction identifier for either Call A-B or Call A-C. Both calls shall enter auxiliary state "MPTY request". The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

On receipt of a FACILITY message including a Return Result component, the UE shall enter the state U10 "Active" with auxiliary state "Call in MPTY". The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state. The SS verifies that the UE has through connected the DTCH in both directions.

#### Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | Make the UE to join Call A-B and Call A-C | |
| 2 | --> | | FACILITY | BuildMPTY Invoke component |
| 3 | <-- | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 4 | --> | | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "MPTY request, call held" |
| 5 | <-- | | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 6 | --> | | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "MPTY request " |
| 7 | <-- | | FACILITY | Return Result component |
| 8 | <-- | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 9 | --> | | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY" |
| 10 | <-- | | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 11 | --> | | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY" |
| 12 | SS | | | The DTCH is through connected in both directions. |

Specific Message Contents

FACILITY with Invoke component (Step 2)

| Information Element | Value/remark |
|---|---|
| Protocol discriminator | 0011 B (call control; call related SS messages) |
| Transaction identifier | The same value that has been used in Call A-B or Call A-C |
| Message type | xx11 1010 B (bits 7 and 8 are not checked, these bits are reserved for the send sequence number) |
| Facility IE | |
| - Length of Facility IE contents | 8 |
| - Component type tag | 1010 0001 B (invoke) |
| - Component length | 6 |
| - Invoke ID tag | 0000 0010 B (invoke ID) |
| - Invoke ID length | 1 |
| - Invoke ID | arbitrary integer value. |
| - Operation Code tag | 0000 0010 B |
| - Operation Code length | 1 |
| - Operation Code | 0111 1100 B (BuildMPTY) |
| - Parameters | not present |

FACILITY with Return Result component (Step 7)

| Information Element | Value/remark |
|---|---|
| Protocol discriminator | 0011 B (call control; call related SS messages) |
| Transaction identifier | The same value that has been used in step 2 |
| Message Type | 0011 1010 B |
| Facility IE | |
| - Length of Facility IE contents | 5 |
| - Component type tag | 1010 0010 B (return result) |
| - Component length | 3 |
| - Invoke ID tag | 0000 0010 B (invoke ID) |
| - Invoke ID length | 1 |
| - Invoke ID | The same value that has been used in step 2 |
| - Operation Code tag | not present |
| - Operation Code length | not present |
| - Operation Code | not present |
| - Parameters | not present |

#### 15.7.1.5 Test requirements

1) At step 2 the UE shall send a FACILITY message with the transaction identifier of either Call A-B or Call A-C, the Facility IE shall contain an invoke component wherein the operation code is set to "buildMPTY".

2) At step 4 the UE shall send a STATUS message with the call state set to "U10 - active", the hold auxiliary state set to "Call held" and the multi party auxiliary state set to "MPTY request". At step 6 the UE shall send a STATUS message with the call state set to "U10 - active", the hold auxiliary state set to "Idle" and the multi party auxiliary state set to "MPTY request". At step 9 and step 11 the UE shall send a STATUS message with the call state set to "U10 - active", the hold auxiliary state set to "Idle" and the multi party auxiliary state set to "Call in MPTY".

## 15.7.2 Multi-party supplementary services, Beginning the MultiParty service, unsuccessful case

#### 15.7.2.1 Definition

#### 15.7.2.2 Conformance requirement

1) The served mobile subscriber A may initiate an active MultiParty call from an active call C and a held call B.

   The mobile station invokes the service by sending a FACILITY message to the network containing the BuildMPTY request. This BuildMPTY request indicates to the network that the mobile subscriber wishes all his calls to be connected together in a MultiParty call. The network will normally accept the request and connect the

mobile subscriber with the other existing connections (active call C and held call B). If the request is not accepted, the network will indicate the error to the served mobile (see figure 1.1). The network confirms with the same transaction identifier. Error values are specified in 3GPP TS 24.080.

2) In the call hold service (3GPP TS 24.083), a two dimensional state space is defined, where the first dimension corresponds to the 3GPP TS 24.008 call control state and the second dimension corresponds to the call hold state (Idle, Hold Request, Call Held, Retrieve Request). For the purposes of the MPTY service, it is necessary to introduce another dimension to this state space, i.e. the MultiParty state.

   There are four auxiliary states associated with the MPTY service:

   - Idle;
   - MPTY request;

     A request has been made to add this call to the MPTY.

   - Call in MPTY;

     This call is in the MPTY.

   - Split request;

     A request has been made to remove this call from the MPTY.

   These Auxiliary states apply in addition to the 3GPP TS 24.008 call control states and the 3GPP TS 24.083 call hold states. Thus for example, an active call in a held MPTY has the state (Active, Call held, Call in MPTY). Not all states are allowed, for example an MPTY cannot be split while it is held, so (Active, Call held, Split request) is forbidden.

Reference(s)

TS 24.084 clauses 1.1 and 1.6.

### 15.7.2.3 Test purpose

1) To verify the ability of a UE to start the MultiParty service when it has an active call and a held call, and reacts correctly to the response from the SS indicating no success.

2) To verify the ability of a UE to apply the auxiliary states for MPTY correctly during an unsuccessful beginning of the MultiParty service when the response from the SS is a Return Error component.

3) To verify the ability of a UE to apply the auxiliary states for MPTY correctly during an unsuccessful beginning of the MultiParty service when the response from the SS is a Reject component.

### 15.7.2.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - The UE shall have Call A-B in state U10 "Active" with Auxiliary state "Call held" and Call A-C in state U10 "Active". Both calls shall be of telecommunication service TS11. This state is achieved by the procedure in section 7.2.3.3.1.4 of TS 34.108.

Related ICS/IXIT Statements

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of Multi Party Service Yes/No.

Method of joining two calls into a MultiParty call.

Test procedure

Using suitable user action, the UE shall initiate a MultiParty call. The UE shall send a FACILITY message containing an invoke component set to BuildMPTY, and with the transaction identifier for either Call A-B or Call A-C. Both calls shall enter auxiliary state "MPTY request". The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

On receipt of a FACILITY message including a Return Error component, the UE shall return both calls to their original call states. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Using suitable user action, the UE shall initiate a MultiParty call. The UE shall send a FACILITY message containing an invoke component set to BuildMPTY, and with the transaction identifier for either Call A-B or Call A-C. Both calls shall enter auxiliary state "MPTY request". The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

On receipt of a FACILITY message including a Reject component, the UE shall return both calls to their original call states. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | Make the UE to join Call A-B and Call A-C | |
| 2 | --> | | FACILITY | BuildMPTY Invoke component |
| 3 | <-- | | STATUS ENQUIRY | Transaction identifier of Call A-B |

### 15.7.2.5 Test requirements

1) At step 2and step 13 the UE shall send a FACILITY message with the transaction identifier of either Call A-B or Call A-C, the Facility IE shall contain an invoke component wherein the operation code is set to "buildMPTY".

2) At step 4 the UE shall send a STATUS message with the call state set to "U10 - active", the hold auxiliary state set to "Call held" and the multi party auxiliary state set to "MPTY request". At step 6 the UE shall send a

STATUS message with the call state set to "U10 - active", the hold auxiliary state set to "Idle" and the multi party auxiliary state set to "MPTY request". At step 9 the UE shall send a STATUS message with the call state set to "U10 - active", the hold auxiliary state set to "Call held" and the multi party auxiliary state set to "Idle". At step 11 the UE shall send a STATUS message with the call state set to "U10 - active" and the auxiliary state IE is omitted.

3) At step 15 the UE shall send a STATUS message with the call state set to "U10 - active", the hold auxiliary state set to "Call held" and the multi party auxiliary state set to "MPTY request". At step 17 the UE shall send a STATUS message with the call state set to "U10 - active", the hold auxiliary state set to "Idle" and the multi party auxiliary state set to "MPTY request". At step 20 the UE shall send a STATUS message with the call state set to "U10 - active", the hold auxiliary state set to "Call held" and the multi party auxiliary state set to "Idle". At step 22 the UE shall send a STATUS message with the call state set to "U10 - active" and the auxiliary state IE is omitted.

## 15.7.3 Multi-party supplementary services, Beginning the MultiParty service, expiry of timer T(BuildMPTY)

### 15.7.3.1 Definition

### 15.7.3.2 Conformance requirement

1) The served mobile subscriber A may initiate an active MultiParty call from an active call C and a held call B.

   The mobile station invokes the service by sending a FACILITY message to the network containing the BuildMPTY request. This BuildMPTY request indicates to the network that the mobile subscriber wishes all his calls to be connected together in a MultiParty call. The network will normally accept the request and connect the mobile subscriber with the other existing connections (active call C and held call B). If the request is not accepted, the network will indicate the error to the served mobile (see figure 1.1). The network confirms with the same transaction identifier. Error values are specified in 3GPP TS 24.080.

   During the BuildMPTY operation the MS shall run a timer T(BuildMPTY). This timer is started when the operation is sent, and stopped when a response is received from the network. If this timer expires the MS shall assume that the operation has failed, locally release the invokeID, and may re-attempt the operation or inform the user of the failure.

2) In the call hold service (3GPP TS 24.083), a two dimensional state space is defined, where the first dimension corresponds to the 3GPP TS 24.008 call control state and the second dimension corresponds to the call hold state (Idle, Hold Request, Call Held, Retrieve Request). For the purposes of the MPTY service, it is necessary to introduce another dimension to this state space, i.e. the MultiParty state.

   There are four auxiliary states associated with the MPTY service:

   - Idle;
   - MPTY request;

     A request has been made to add this call to the MPTY.

   - Call in MPTY;

     This call is in the MPTY.

   - Split request;

     A request has been made to remove this call from the MPTY.

   These Auxiliary states apply in addition to the 3GPP TS 24.008 call control states and the 3GPP TS 24.083 call hold states. Thus for example, an active call in a held MPTY has the state (Active, Call held, Call in MPTY). Not all states are allowed, for example an MPTY cannot be split while it is held, so (Active, Call held, Split request) is forbidden.

Reference(s)

TS 24.084 clauses 1.1 and 1.6.

### 15.7.3.3 Test purpose

1) To verify the ability of a UE to start the MultiParty service when it has an active call and a held call.

2) To verify the ability of a UE to react correctly on expiry of timer T(BuildMPTY).

3) To verify the ability of a UE to apply the auxiliary states for MPTY correctly on expiry of timer T(BuildMPTY).

### 15.7.3.4 Method of test

#### Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - The UE shall have Call A-B in state U10 "Active" with Auxiliary state "Call held" and Call A-C in state U10 "Active". Both calls shall be of telecommunication service TS11. This state is achieved by the procedure in section 7.2.3.3.1.4 of TS 34.108.

#### Related ICS/IXIT Statements

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of Multi Party Service Yes/No.

Method of joining two calls into a MultiParty call.

#### Test procedure

Using suitable user action, the UE shall initiate a MultiParty call. The UE shall send a FACILITY message containing an invoke component set to BuildMPTY, and with the transaction identifier for either Call A-B or Call A-C. Both calls shall enter auxiliary state "MPTY request". The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Not less than 5s and not more than 30s after sending the FACILITY message, one of the following shall have occurred:

- both calls shall be in their original call states and the UE shall have indicated the failure to the user; or
- the UE shall have sent another FACILITY message with the same contents.

The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

#### Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | Make the UE to join Call A-B and Call A-C | |
| 2 | --> | | FACILITY | BuildMPTY Invoke component |
| 3 | <-- | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 4 | --> | | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "MPTY request, call held" |
| 5 | <-- | | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 6 | --> | | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "MPTY request" |
| 7 | SS | | | The SS checks that there isn't any further FACILITY to re-attempt the BuildMPTY operation from the UE during 5 seconds after step 2. |

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 8 | | SS | | The SS waits for 25 seconds to check if the UE re-attempts the BuildMPTY operation. If the UE re-attempts the BuildMPTY operation then branch A, i.e. steps A9 to A13 are executed, else branch B, i.e. steps B9 to B13 are executed. |
| A9 | | --> | FACILITY | BuildMPTY Invoke component |
| A10 | | <-- | STATUS ENQUIRY | Transaction identifier of Call A-B |
| A11 | | --> | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "MPTY request, call held" |
| A12 | | <-- | STATUS ENQUIRY | Transaction identifier of Call A-C |
| A13 | | --> | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "MPTY request" |
| B9 | UE | | | It is checked that the UE has provided an appropriate user indication of the failure. |
| B10 | | <-- | STATUS ENQUIRY | Transaction identifier of Call A-B |
| B11 | | --> | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call held" |
| B12 | | <-- | STATUS ENQUIRY | Transaction identifier of Call A-C |
| B13 | | --> | STATUS | Transaction identifier of Call A-C, state U10, no auxiliary state |

Specific Message Contents

FACILITY with Invoke component (Step 2 and Step A9)

| Information Element | Value/remark |
|---|---|
| Protocol discriminator | 0011 B (call control; call related SS messages) |
| Transaction identifier | The same value that has been used in Call A-B or Call A-C |
| Message type | xx11 1010 B (bits 7 and 8 are not checked, these bits are reserved for the send sequence number) |
| Facility IE | |
| - Length of Facility IE contents | 8 |
| - Component type tag | 1010 0001 B (invoke) |
| - Component length | 6 |
| - Invoke ID tag | 0000 0010 B (invoke ID) |
| - Invoke ID length | 1 |
| - Invoke ID | arbitrary integer value. |
| - Operation Code tag | 0000 0010 B |
| - Operation Code length | 1 |
| - Operation Code | 0111 1100 B (BuildMPTY) |
| - Parameters | not present |

### 15.7.3.5 Test requirements

1) At step 2 the UE shall send a FACILITY message with the transaction identifier of either Call A-B or Call A-C, the Facility IE shall contain an invoke component wherein the operation code is set to "buildMPTY". At step 4 the UE shall send a STATUS message with the call state set to "U10 - active", the hold auxiliary state set to "Call held" and the multi party auxiliary state set to "MPTY request". At step 6 the UE shall send a STATUS message with the call state set to "U10 - active", the hold auxiliary state set to "Idle" and the multi party auxiliary state set to "MPTY request".

2) At step 7 the UE shall not send a FACILITY message, At step A9 the UE shall (only if branch A is executed) send a FACILITY message with the transaction identifier of either Call A-B or Call A-C, the Facility IE shall contain an invoke component wherein the operation code is set to "buildMPTY". At step B9 the UE shall (only if branch B is executed) provide an indication of the failure.

3) At step A11 the UE shall (only if branch A is executed) send a STATUS message with the call state set to "U10 - active", the hold auxiliary state set to "Call held" and the multi party auxiliary state set to "MPTY request". At step A13 the UE shall (only if branch A is executed) send a STATUS message with the call state set to "U10 - active", the hold auxiliary state set to "Idle" and the multi party auxiliary state set to "MPTY request". At step B11 the UE shall (only if branch B is executed) send a STATUS message with the call state set to "U10 - active", the hold auxiliary state set to "Call held" and the multi party auxiliary state set to "idle". At step B13 the

UE shall (only if branch B is executed) send a STATUS message with the call state set to "U10 - active" and the auxiliary state IE is omitted.

## 15.7.4 Multi-party, Managing an active MultiParty call, Put the MultiParty call on hold, successful case

### 15.7.4.1 Definition

### 15.7.4.2 Conformance requirement

1) Put the MultiParty call on hold

   This is achieved by sending a FACILITY message to the network with any transaction identifier corresponding to a call within the MultiParty call. This requests the network to place the mobile subscriber's connection to the MultiParty call on hold. The network confirms with another message containing the same transaction identifier (see figure 1.4).

2) In the call hold service (3GPP TS 24.083), a two dimensional state space is defined, where the first dimension corresponds to the 3GPP TS 24.008 call control state and the second dimension corresponds to the call hold state (Idle, Hold Request, Call Held, Retrieve Request). For the purposes of the MPTY service, it is necessary to introduce another dimension to this state space, i.e. the MultiParty state.

   There are four auxiliary states associated with the MPTY service:

   - Idle;
   - MPTY request;

     A request has been made to add this call to the MPTY.

   - Call in MPTY;

     This call is in the MPTY.

   - Split request;

     A request has been made to remove this call from the MPTY.

   These Auxiliary states apply in addition to the 3GPP TS 24.008 call control states and the 3GPP TS 24.083 call hold states. Thus for example, an active call in a held MPTY has the state (Active, Call held, Call in MPTY). Not all states are allowed, for example an MPTY cannot be split while it is held, so (Active, Call held, Split request) is forbidden.

Reference(s)

TS 24.084 clauses 1.2.1.1 and 1.6.

### 15.7.4.3 Test purpose

1) To verify the ability of a UE to put an active MultiParty call on hold and react correctly to a response from the SS indicating success.

2) To verify the ability of a UE to apply the auxiliary states for MPTY correctly after an active MultiParty call is put on hold successfully.

### 15.7.4.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:

- The UE shall have a MultiParty call to two destinations (Call A-B and Call A-C) active. Both call states shall be U10 "Active" with auxiliary state "Call in MPTY". The call shall be of telecommunication service TS11. This state is achieved by the procedure in section 7.2.3.3.1.5 of TS 34.108.

Related ICS/IXIT Statements

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of Multi Party Service Yes/No.

Method of placing a MultiParty call on hold.

Test procedure

Using suitable user action, the UE shall place the MultiParty call on hold. The UE shall send a FACILITY message containing one of the transaction identifiers of the call, and containing an invoke component HoldMPTY. Both calls shall enter the auxiliary state "Call in MPTY, hold request". The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

On receipt of a FACILITY message with the same transaction identifier and containing a return result component, the UE shall enter the state U10 "Active" with auxiliary state "Call in MPTY, call held" for both transaction identifiers. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | Make the UE to put the MultiParty call on hold | |
| 2 | --> | | FACILITY | HoldMPTY Invoke component |
| 3 | <-- | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 4 | --> | | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY, hold request" |
| 5 | <-- | | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 6 | --> | | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY, hold request" |
| 7 | <-- | | FACILITY | Return Result component |
| 8 | <-- | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 9 | --> | | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY, call held" |
| 10 | <-- | | STATUS ENQUIRY | Transaction identifier of Call A-C |

#### 15.7.4.5 Test requirements

1) At step 2 the UE shall send a FACILITY message with the transaction identifier of either Call A-B or Call A-C, the Facility IE shall contain an invoke component wherein the operation code is set to "holdMPTY".

2) At step 4 and step 6 the UE shall send a STATUS message with the call state set to "U10 - active", the hold auxiliary state set to "Hold request" and the multi party auxiliary state set to "Call in MPTY". At step 9 and step 11 the UE shall send a STATUS message with the call state set to "U10 - active", the hold auxiliary state set to "Call held" and the multi party auxiliary state set to "Call in MPTY".

### 15.7.5 Multi-party, Managing an active MultiParty call, Put the MultiParty call on hold, unsuccessful case

#### 15.7.5.1 Definition

#### 15.7.5.2 Conformance requirement

1) Put the MultiParty call on hold

   This is achieved by sending a FACILITY message to the network with any transaction identifier corresponding to a call within the MultiParty call. This requests the network to place the mobile subscriber's connection to the MultiParty call on hold. The network confirms with another message containing the same transaction identifier (see figure 1.4).

2) In the call hold service (3GPP TS 24.083), a two dimensional state space is defined, where the first dimension corresponds to the 3GPP TS 24.008 call control state and the second dimension corresponds to the call hold state (Idle, Hold Request, Call Held, Retrieve Request). For the purposes of the MPTY service, it is necessary to introduce another dimension to this state space, i.e. the MultiParty state.

   There are four auxiliary states associated with the MPTY service:

   - Idle;

   - MPTY request;

     A request has been made to add this call to the MPTY.

   - Call in MPTY;

     This call is in the MPTY.

- Split request;

  A request has been made to remove this call from the MPTY.

These Auxiliary states apply in addition to the 3GPP TS 24.008 call control states and the 3GPP TS 24.083 call hold states. Thus for example, an active call in a held MPTY has the state (Active, Call held, Call in MPTY). Not all states are allowed, for example an MPTY cannot be split while it is held, so (Active, Call held, Split request) is forbidden.

Reference(s)

TS 24.084 clauses 1.2.1.1 and 1.6.

### 15.7.5.3 Test purpose

1) To verify the ability of a UE to put an active MultiParty call on hold and react correctly to a response from the SS indicating no success.

2) To verify the ability of a UE to apply the auxiliary states for MPTY correctly during an unsuccessful attempt to put an active MultiParty call on hold when the response from the SS is a Return Error component.

3) To verify the ability of a UE to apply the auxiliary states for MPTY correctly during an unsuccessful attempt to put an active MultiParty call on hold when the response from the SS is a Reject component.

### 15.7.5.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - The UE shall have a MultiParty call to two destinations (Call A-B and Call A-C) active. Both call states shall be U10 "Active" with auxiliary state "Call in MPTY". The call shall be of telecommunication service TS11. This state is achieved by the procedure in section 7.2.3.3.1.5 of TS 34.108.

Related ICS/IXIT Statements

#### 15.7.5.5 Test requirements

1) At step 2 and step 13 the UE shall send a FACILITY message with the transaction identifier of either Call A-B or Call A-C, the Facility IE shall contain an invoke component wherein the operation code is set to "holdMPTY".

2) At step 4 and step 6 the UE shall send a STATUS message with the call state set to "U10 - active", the hold auxiliary state set to "Hold request" and the multi party auxiliary state set to "Call in MPTY". At step 9 and step 11 the UE shall send a STATUS message with the call state set to "U10 - active", the hold auxiliary state set to "Idle" and the multi party auxiliary state set to "Call in MPTY".

3) At step 15 and step 17 the UE shall send a STATUS message with the call state set to "U10 - active", the hold auxiliary state set to "Hold request" and the multi party auxiliary state set to "Call in MPTY". At step 20 and step 22 the UE shall send a STATUS message with the call state set to "U10 - active", the hold auxiliary state set to "Idle" and the multi party auxiliary state set to "Call in MPTY".

### 15.7.6 Multi-party, Managing an active MultiParty call, Put the MultiParty call on hold, expiry of timer T(HoldMPTY)

#### 15.7.6.1 Definition

#### 15.7.6.2 Conformance requirement

1) Put the MultiParty call on hold

This is achieved by sending a FACILITY message to the network with any transaction identifier corresponding to a call within the MultiParty call. This requests the network to place the mobile subscriber's connection to the

MultiParty call on hold. The network confirms with another message containing the same transaction identifier (see figure 1.4).

During the HoldMPTY operation the MS shall run a timer T(HoldMPTY). This timer is started when the operation is sent, and stopped when a response is received from the network. If this timer expires the MS shall assume that the operation has failed, locally release the invokeID, and may re-attempt the operation or inform the user of the failure.

2) In the call hold service (3GPP TS 24.083), a two dimensional state space is defined, where the first dimension corresponds to the 3GPP TS 24.008 call control state and the second dimension corresponds to the call hold state (Idle, Hold Request, Call Held, Retrieve Request). For the purposes of the MPTY service, it is necessary to introduce another dimension to this state space, i.e. the MultiParty state.

   There are four auxiliary states associated with the MPTY service:

   - Idle;
   - MPTY request;

     A request has been made to add this call to the MPTY.

   - Call in MPTY;

     This call is in the MPTY.

   - Split request;

     A request has been made to remove this call from the MPTY.

   These Auxiliary states apply in addition to the 3GPP TS 24.008 call control states and the 3GPP TS 24.083 call hold states. Thus for example, an active call in a held MPTY has the state (Active, Call held, Call in MPTY). Not all states are allowed, for example an MPTY cannot be split while it is held, so (Active, Call held, Split request) is forbidden.

Reference(s)

TS 24.084 clauses 1.2.1.1 and 1.6.

### 15.7.6.3 Test purpose

1) To verify the ability of a UE to put an active MultiParty call on hold.
2) To verify the ability of a UE to react correctly on expiry of timer T(HoldMPTY).
3) To verify the ability of a UE to apply the auxiliary states for MPTY correctly on expiry of timer T(HoldMPTY).

### 15.7.6.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - The UE shall have a MultiParty call to two destinations (Call A-B and Call A-C) active. Both call states shall be U10 "Active" with auxiliary state "Call in MPTY". The call shall be of telecommunication service TS11. This state is achieved by the procedure in section 7.2.3.3.1.5 of TS 34.108.

Related ICS/IXIT Statements

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of Multi Party Service Yes/No.

Method of placing a MultiParty call on hold.

Test procedure

Using suitable user action, the UE shall place the MultiParty call on hold. The UE shall send a FACILITY message containing one of the transaction identifiers of the call, and containing an invoke component HoldMPTY. Both calls shall enter the auxiliary state "Call in MPTY, hold request". The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Not less than 5s and not more than 30s after sending the FACILITY message, one of the following shall have occurred:

- both calls shall be in their original call states and the UE shall have indicated the failure to the user; or
- the UE shall have sent another FACILITY message with the same contents.

The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | Make the UE to put the MultiParty call on hold | |
| 2 | --> | | FACILITY | HoldMPTY Invoke component |
| 3 | <-- | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 4 | --> | | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY, hold request" |
| 5 | <-- | | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 6 | --> | | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY, hold request" |
| 7 | SS | | | The SS checks that there isn't any further FACILITY to re-attempt the HoldMPTY operation from the UE during 5 seconds after step 2. |
| 8 | SS | | | The SS waits for 25 seconds to check if the UE re-attempts the HoldMPTY operation. If the UE re-attempts the HoldMPTY operation then branch A, i.e. steps A9 to A13 are executed, else branch B, i.e. steps B9 to B13 are executed. |
| A9 | --> | | FACILITY | HoldMPTY Invoke component |
| A10 | <-- | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| A11 | --> | | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY, hold request" |
| A12 | <-- | | STATUS ENQUIRY | Transaction identifier of Call A-C |
| A13 | --> | | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY, hold request" |
| B9 | UE | | | It is checked that the UE has provided an appropriate user indication of the failure. |
| B10 | <-- | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| B11 | --> | | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY" |
| B12 | <-- | | STATUS ENQUIRY | Transaction identifier of Call A-C |
| B13 | --> | | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY" |

| - Operation Code tag | 0000 0010 B |
| - Operation Code length | 1 |
| - Operation Code | 0111 1011 B (HoldMPTY) |
| - Parameters | not present |

#### 15.7.6.5 Test requirements

1) At step 2 the UE shall send a FACILITY message with the transaction identifier of either Call A-B or Call A-C, the Facility IE shall contain an invoke component wherein the operation code is set to "holdMPTY". At step 4 and step 6 the UE shall send a STATUS message with the call state set to "U10 - active", the hold auxiliary state set to "Hold request" and the multi party auxiliary state set to "Call in MPTY".

2) At step 7 the UE shall not send a FACILITY message, At step A9 the UE shall (only if branch A is executed) send a FACILITY message with the transaction identifier of either Call A-B or Call A-C, the Facility IE shall contain an invoke component wherein the operation code is set to "holdMPTY". At step B9 the UE shall (only if branch B is executed) provide an indication of the failure.

3) At step A11 and step A13 the UE shall (only if branch A is executed) send a STATUS message with the call state set to "U10 - active", the hold auxiliary state set to "Hold request" and the multi party auxiliary state set to "Call in MPTY". At step B11 and step B13 the UE shall (only if branch B is executed) send a STATUS message with the call state set to "U10 - active", the hold auxiliary state set to "Idle" and the multi party auxiliary state set to "Call in MPTY".

### 15.7.7 Multi-party, Managing an active MultiParty call, Create a private communication with one of the remote parties, successful case

#### 15.7.7.1 Definition

The operation of splitting a call from the active MPTY call is successfully accepted by the network.

#### 15.7.7.2 Conformance requirement

To create a private communication with one of the remote parties, the served mobile will send a SplitMPTY within a FACILITY message to the network. Then the network returns a Return Result within a FACILITY message to accept the splitting operation. The call state with the prior remote parties are changed accordingly.

Reference(s)

3GPP TS 24.084 subclause 1.2.1.2.

#### 15.7.7.3 Test purpose

To test that the UE correctly splits an active MultiParty call, and reacts correctly to a response from the SS indicating success.

#### 15.7.7.4 Method of test

Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
- The UE shall have a MultiParty call to two destinations (Call A-B and Call A-C) active. Both call states shall be U10 "Active" with auxiliary state "Call in MPTY". The call shall be of a basic service supported by the UE and relevant to the MultiParty supplementary service as stated in 3GPP TS 22.004 table A.1.

NOTE: The MultiParty call may be setup using the procedure specified in clause 7.2.3.3.1.5 of TS 34.108.

Related ICS/IXIT statement(s)

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of Multi Party Service Yes/No.

Test Procedure

Using suitable MMI or AT commands, the UE shall request a private communication with Call A-B. The UE shall send a FACILITY message containing the transaction identifier for Call A-B and an invoke component SplitMPTY. Call A-B shall enter the auxiliary state "split request" and call A-C shall remain in state "Call in MPTY". The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

On receipt of a FACILITY message containing the same transaction identifier and a return result component, Call A-B shall enter the state U10 "Active", and Call A-C shall enter the state U10 "Active" with auxiliary state "Call held". The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | Using MMI or AT commands, request a private communication with Call A-B |
| 2 | -> | | FACILITY | TI for Call A-B, SplitMPTY Invoke component |
| 3 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 4 | -> | | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Split request" |
| 5 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 6 | -> | | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY" |
| 7 | <- | | FACILITY | Return Result component |
| 8 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 9 | -> | | STATUS | Transaction identifier of Call A-B, state U10, no auxiliary state |
| 10 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 11 | -> | | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call held" |
| 12 | SS | | | Check that the TCH is through-connected |

Specific message contents

FACILITY (Step 2)

| Information Element | Value/remark |
|---|---|
| Protocol discriminator | 0011B (call control; call related SS messages) |
| Transaction identifier | TI for Call A-B |

| SS Version Indicator | Not checked. |

FACILITY (Step 7)

Use the same message content found in clause 9.1.5.2.2 of TS 34.108.

#### 15.7.7.5 Test requirements

At step 9 and 11, the UE shall have Call A-B entering state U10 with no auxiliary state, and Call A-C entering state U10 with auxiliary state "Call Held".

### 15.7.8 Multi-party, Managing an active MultiParty call, Create a private communication with one of the remote parties, unsuccessful case

#### 15.7.8.1 Definition

The operation of splitting a call from the active MPTY call is rejected by the network.

#### 15.7.8.2 Conformance requirement

To create a private communication with one of the remote parties, the served mobile will send a SplitMPTY within a FACILITY message to the network. Then the network returns a Return Error or Reject within a FACILITY message to reject the splitting operation. The call states with the prior remote parties are returned to their initial states.

Reference(s)

3GPP TS 24.084 subclause 1.2.1.2.

#### 15.7.8.3 Test purpose

To test that the UE correctly splits an active MultiParty call, and reacts correctly to a response from the SS indicating success.

#### 15.7.8.4 Method of test

Initial conditions

- System Simulator:
  - 1 cell, default parameters.

FACILITY (Step 18)

Use the same message content found in clause 9.1.5.2.2 of TS 34.108.

#### 15.7.8.5 Test requirements

At step 9 and step 11, the UE shall have Call A-B entering state U10 with auxiliary state “Call in MPTY”, and Call A-C entering state U10 with auxiliary state "Call in MPTY". At step 20 and step 22, the UE shall have Call A-B entering state U10 with auxiliary state “Call in MPTY”, and Call A-C entering state U10 with auxiliary state "Call in MPTY".

### 15.7.9 Multi-party, Managing an active MultiParty call, Create a private communication with one of the remote parties, expiry of timer T(SplitMPTY)

#### 15.7.9.1 Definition

The operation of splitting a call from the active MPTY call is not responded by the network until the timer T(SplitMPTY) expires.

#### 15.7.9.2 Conformance requirement

To create a private communication with one of the remote parties, the served mobile will send a SplitMPTY within a FACILITY message to the network. Then the network does not response with any message until the timer T(SplitMPTY) expires. The call states with the prior remote parties are returned to their initial states.

Reference(s)

3GPP TS 24.084 subclause 1.2.1.2.

#### 15.7.9.3 Test purpose

To test that the UE correctly splits an active MultiParty call, and on expiry of T(SplitMPTY) returns the call to the auxiliary state "Call in MPTY".

#### 15.7.9.4 Method of test

Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
- The UE shall have a MultiParty call to two destinations (Call A-B and Call A-C) active. Both call states shall be U10 "Active" with auxiliary state "Call in MPTY". The call shall be of a basic service supported by the UE and relevant to the MultiParty supplementary service as stated in 3GPP TS 22.004 table A.1.

NOTE: The MultiParty call may be setup using the procedure specified in clause 7.2.3.3.1.5 of TS 34.108.

Related ICS/IXIT statement(s)

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of Multi Party Service Yes/No.

Test Procedure

Using suitable MMI or AT commands, the UE shall request a private communication with Call A-B. The UE shall send a FACILITY message containing the transaction identifier for Call A-B and an invoke component SplitMPTY. Call A-B shall enter the auxiliary state "Split request" and call A-C shall remain in state "Call in MPTY". The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

After not less than 5s and not more than 30s, the UE shall either:

- return both calls to their original states; or
- send another FACILITY message with the same contents.

The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | Using MMI or AT commands, request a private communication with Call A-B |
| 2 | -> | | FACILITY | TI for Call A-B, SplitMPTY Invoke component |
| 3 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 4 | -> | | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Split request" |
| 5 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 6 | -> | | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY" |
| 7 | | SS | | Wait 30 s from receiving FACILITY message |
| | | | | Take this branch if no message is received within 30 s |
| A8 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| A9 | -> | | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY" |
| A10 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-C |
| A11 | -> | | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY" |
| | | | | Take this branch if a message is received within 30 s |
| B8 | -> | | FACILITY | Same as Step 2. Message shall not be received less than 5 s after the first FACILITY message |
| B9 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| B10 | -> | | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Split request" |
| B11 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-C |
| B12 | -> | | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY" |

Specific message contents

FACILITY (Step 2 and B8)

| Information Element | Value/remark |
|---|---|
| Protocol discriminator | 0011B (call control; call related SS messages) |
| Transaction identifier | TI for Call A-B |
| Message Type | xx11 1010B |
| Facility IE | |
| - Length of Facility IE contents | 8 |
| - Component type tag | 1010 0001B (invoke) |
| - Component length | 6 |
| - Invoke ID tag | 0000 0010B (invoke ID) |
| - Invoke ID length | 1 |
| - Invoke ID | An arbitrary integer value. |
| - Operation Code tag | 0000 0010B (Operation Code) |
| - Operation Code length | 1 |
| - Operation Code | 0111 1001B (SplitMPTY) |

#### 15.7.9.5 Test requirements

Branch A, at step A9 and step A11 the UE shall have Call A-B entering state U10 with auxiliary state "Call in MPTY", and Call A-C entering state U10 with auxiliary state "Call in MPTY".

Branch B, at step B10 and step B12 the UE shall have Call A-B entering state U10 with auxiliary state "Split request", and Call A-C entering state U10 with auxiliary state "Call in MPTY".

### 15.7.10 Multi-party supplementary services, Terminate the entire MultiParty call

#### 15.7.10.1 Definition

The operation of terminating the entire MPTY call is performed by the UE sending a DISCONNECT message with each TI corresponding to the remote parties consequently.

#### 15.7.10.2 Conformance requirement

The MultiParty call is terminated by disconnecting all individual parties by initiation of call clearing as defined in 3GPP TS 24.008 with each transaction identifier corresponding to the remote parties.

Reference(s)

3GPP TS 24.084 subclause 1.2.1.3.

#### 15.7.10.3 Test purpose

To test that the UE correctly terminates an entire MultiParty call by implementing the call clearance procedure for each call in turn.

#### 15.7.10.4 Method of test

Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
- The UE shall have a MultiParty call to two destinations (Call A-B and Call A-C) active. Both call states shall be U10 "Active" with auxiliary state "Call in MPTY". The call shall be of a basic service supported by the UE and relevant to the MultiParty supplementary service as stated in 3GPP TS 22.004 table A.1.

NOTE: The MultiParty call may be setup using the procedure specified in clause 7.2.3.3.1.5 of TS 34.108.

Related ICS/IXIT statement(s)

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of Multi Party Service Yes/No.

Test Procedure

Using suitable MMI or AT commands, the UE shall initiate a clearance of the entire MultiParty call. The UE shall send a DISCONNECT message in respect of each of the transaction identifiers of the call. On receipt of a RELEASE message in respect of each transaction identifier, the UE shall respond with a RELEASE COMPLETE message, and enter state U0 "Null". The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a RELEASE COMPLETE message with cause #81 "invalid transaction identifier value".

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | Using MMI or AT commands, terminate the entire MultiParty call |
| | | | | Steps 2 and 3 may occur in any order |
| 2 | -> | | DISCONNECT | Transaction identifier of Call A-B |
| 3 | -> | | DISCONNECT | Transaction identifier of Call A-C |
| 4 | <- | | RELEASE | Transaction identifier of Call A-B |
| 5 | -> | | RELEASE COMPLETE | Transaction identifier of Call A-B |
| 6 | <- | | RELEASE | Transaction identifier of Call A-C |
| 7 | -> | | RELEASE COMPLETE | Transaction identifier of Call A-C |
| 8 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 9 | -> | | RELEASE COMPLETE | Transaction identifier of Call A-B, with cause #81 "invalid transaction identifier value" |
| 10 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 11 | -> | | RELEASE COMPLETE | Transaction identifier of Call A-C, with cause #81 "invalid transaction identifier value" |

Specific message contents

None.

15.7.10.5 Test requirements

At step 9 and step 11, the UE shall return a RELEASE COMPLETE message with cause #81 “invalid transaction identifier value” as the response of the STATUS ENQUIRY message sent by the SS.

## 15.7.11 Multi-party supplementary services, Explicitly disconnect a remote party

15.7.11.1 Definition

The operation of terminating a remote party from the MPTY call is performed by the UE sending a DISCONNECT message with the corresponding TI of the remote party.

15.7.11.2 Conformance requirement

Any remote party may be individually disconnected by initiation of call clearing as defined in 3GPP TS 24.008 with the same transaction identifier corresponding to that party.

Reference(s)

3GPP TS 24.084 subclause 1.2.1.4.

15.7.11.3 Test purpose

To test that the UE correctly disconnects a single remote party by implementing the call clearance procedure for that party.

15.7.11.4 Method of test

Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
- The UE shall have a MultiParty call to two destinations (Call A-B and Call A-C) active. Both call states shall be U10 "Active" with auxiliary state "Call in MPTY". The call shall be of a basic service supported by the UE and relevant to the MultiParty supplementary service as stated in 3GPP TS 22.004 table A.1.

NOTE: The MultiParty call may be setup using the procedure specified in clause 7.2.3.3.1.5 of TS 34.108.

Related ICS/IXIT statement(s)

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of Multi Party Service Yes/No.

Test Procedure

Using suitable MMI or AT commands, the UE shall initiate a clearance of the Call A-B. The UE shall send a DISCONNECT message containing the transaction identifier of Call A-B. On receipt of a RELEASE message the UE shall respond with a RELEASE COMPLETE message, and enter state U0 "Null" for Call A-B. Call A-C shall enter state U10 "Active" with, auxiliary state "Call in MPTY". The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating state U10, with auxiliary state "Call in MPTY" for Call A-C, and receiving a RELEASE COMPLETE message with cause #81 "invalid transaction identifier value" for Call A-B.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | Using MMI or AT commands, clear call A-B |
| 2 | -> | | DISCONNECT | Transaction identifier of Call A-B |
| 3 | <- | | RELEASE | Transaction identifier of Call A-B |
| 4 | -> | | RELEASE COMPLETE | Transaction identifier of Call A-B |
| 5 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 6 | -> | | RELEASE COMPLETE | Transaction identifier of Call A-B, with cause #81 "invalid transaction identifier value" |
| 7 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 8 | -> | | STATUS | Transaction identifier of Call A-C, state U10, with auxiliary state "Call in MPTY" |

Specific message contents

None.

15.7.11.5 Test requirements

At step 6, the UE shall return a RELEASE COMPLETE message with cause #81 “invalid transaction identifier value” as the response of the STATUS ENQUIRY message using TI of Call A-B.

At step 8, the UE shall return a STATUS message with call state U10 as the response of the STATUS ENQUIRY message using TI of Call A-C, and have the Call A-C entering state U10 with auxiliary state "Call in MPTY".

## 15.7.12 Multi-party supplementary services, Release from the MultiParty call

15.7.12.1 Definition

One of the remote parties release from the MPTY call by sending a DISCONNECT message with the corresponding TI.

15.7.12.2 Conformance requirement

Any remote party may be individually disconnected by initiation of call clearing as defined in 3GPP TS 24.008 with the same transaction identifier corresponding to that party.

Reference(s)

3GPP TS 24.084 subclause 1.2.1.4.

15.7.12.3 Test purpose

To test that the UE responds correctly to a call clearance from one of the remote parties.

### 15.7.12.4 Method of test

#### Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
- The UE shall have a MultiParty call to two destinations (Call A-B and Call A-C) active. Both call states shall be U10 "Active" with auxiliary state "Call in MPTY". The call shall be of a basic service supported by the UE and relevant to the MultiParty supplementary service as stated in 3GPP TS 22.004 table A.1.

NOTE: The MultiParty call may be setup using the procedure specified in clause 7.2.3.3.1.5 of TS 34.108.

#### Related ICS/IXIT statement(s)

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of Multi Party Service Yes/No.

#### Test Procedure

On receipt of a DISCONNECT message containing the transaction identifier of Call A-B, the UE shall send a RELEASE message. On receipt of a RELEASE COMPLETE message the UE shall enter state U0 "Null" for Call A-B. Call A-C shall enter state U10 "Active", with auxiliary state "Call in MPTY". The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating state U10, with auxiliary state "Call in MPTY" for Call A-C, and receiving a RELEASE COMPLETE message with cause #81 "invalid transaction identifier value" for Call A-B.

#### Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | <- | DISCONNECT | Transaction identifier of Call A-B |
| 2 | | -> | RELEASE | Transaction identifier of Call A-B |
| 3 | | <- | RELEASE COMPLETE | Transaction identifier of Call A-B |
| 4 | | <- | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 5 | | -> | RELEASE COMPLETE | Transaction identifier of Call A-B, with cause #81 "invalid transaction identifier value" |
| 6 | | <- | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 7 | | -> | STATUS | Transaction identifier of Call A-C, state U10, with auxiliary state "Call in MPTY" |

#### Specific message contents

None.

### 15.7.12.5 Test requirements

At step 5, the UE shall return a RELEASE COMPLETE message with cause #81 “invalid transaction identifier value” as the response of the STATUS ENQUIRY message using TI of Call A-B.

At step 7, the UE shall return a STATUS message with call state U10 as the response of the STATUS ENQUIRY message using TI of Call A-C, and have the Call A-C entering state U10 with auxiliary state "Call in MPTY".

## 15.7.13 Multi-party supplementary services, Retrieve the held MultiParty call, successful case

### 15.7.13.1 Definition

### 15.7.13.2 Conformance requirement

1) Retrieve the held MultiParty call

   To retrieve the held MultiParty call, a FACILITY message is sent to the network with a transaction identifier corresponding to any call in the MPTY. The network confirms the retrieval with another message containing the same transaction identifier (see figure 1.6).

2) In the call hold service (3GPP TS 24.083), a two dimensional state space is defined, where the first dimension corresponds to the 3GPP TS 24.008 call control state and the second dimension corresponds to the call hold state (Idle, Hold Request, Call Held, Retrieve Request). For the purposes of the MPTY service, it is necessary to introduce another dimension to this state space, i.e. the MultiParty state.

   There are four auxiliary states associated with the MPTY service:

   - Idle;
   - MPTY request;

     A request has been made to add this call to the MPTY.

   - Call in MPTY;

     This call is in the MPTY.

   - Split request;

     A request has been made to remove this call from the MPTY.

   These Auxiliary states apply in addition to the 3GPP TS 24.008 call control states and the 3GPP TS 24.083 call hold states. Thus for example, an active call in a held MPTY has the state (Active, Call held, Call in MPTY). Not all states are allowed, for example an MPTY cannot be split while it is held, so (Active, Call held, Split request) is forbidden.

Reference(s)

TS 24.084 clauses 1.3.1.1 and 1.6.

### 15.7.13.3 Test purpose

1) To verify the ability of a UE to retrieve a held MultiParty call and react correctly to a response from the SS indicating success.

2) To verify the ability of a UE to apply the auxiliary states for MPTY correctly after a held MultiParty call is retrieved successfully.

### 15.7.13.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - The UE shall have a held MultiParty call to two destinations (Call A-B and Call A-C). Both call states shall be U10 "Active" with auxiliary state "Call in MPTY, call held". The call shall be of telecommunication service TS11. This state is achieved by the procedure in section 7.2.3.3.1.6 of TS 34.108.

Related ICS/IXIT Statements

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of Multi Party Service Yes/No.

Method of retrieving a held MultiParty call.

Test procedure

Using suitable user action, the UE shall retrieve the MultiParty call. The UE shall send a FACILITY message containing one of the transaction identifiers of the call, and containing an invoke component RetrieveMPTY. Both calls shall enter the auxiliary state "Call in MPTY, retrieve request". The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

On receipt of a FACILITY message with the same transaction identifier and containing a return result component, the UE shall enter the state U10 "Active" with auxiliary state "Call in MPTY" for both transaction identifiers. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | Make the UE to retrieve the held MultiParty call | |
| 2 | --> | | FACILITY | RetrieveMPTY Invoke component |
| 3 | <-- | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 4 | --> | | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY, retrieve request" |
| 5 | <-- | | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 6 | --> | | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY, retrieve request" |
| 7 | <-- | | FACILITY | Return Result component |
| 8 | <-- | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 9 | --> | | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY" |
| 10 | <-- | | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 11 | --> | | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY" |

Specific Message Contents

FACILITY with Invoke component (Step 2)

#### 15.7.13.5 Test requirements

1) At step 2 the UE shall send a FACILITY message with the transaction identifier of either Call A-B or Call A-C, the Facility IE shall contain an invoke component wherein the operation code is set to "retrieveMPTY".

2) At step 4 and step 6 the UE shall send a STATUS message with the call state set to "U10 - active", the hold auxiliary state set to "Retrieve request" and the multi party auxiliary state set to "Call in MPTY". At step 9 and step 11 the UE shall send a STATUS message with the call state set to "U10 - active", the hold auxiliary state set to "Idle" and the multi party auxiliary state set to "Call in MPTY".

## 15.7.14 Multi-party supplementary services, Retrieve the held MultiParty call, unsuccessful case

#### 15.7.14.1 Definition

#### 15.7.14.2 Conformance requirement

1) Retrieve the held MultiParty call

   To retrieve the held MultiParty call, a FACILITY message is sent to the network with a transaction identifier corresponding to any call in the MPTY. The network confirms the retrieval with another message containing the same transaction identifier (see figure 1.6).

2) In the call hold service (3GPP TS 24.083), a two dimensional state space is defined, where the first dimension corresponds to the 3GPP TS 24.008 call control state and the second dimension corresponds to the call hold state (Idle, Hold Request, Call Held, Retrieve Request). For the purposes of the MPTY service, it is necessary to introduce another dimension to this state space, i.e. the MultiParty state.

   There are four auxiliary states associated with the MPTY service:

   - Idle;
   - MPTY request;

     A request has been made to add this call to the MPTY.

   - Call in MPTY;

     This call is in the MPTY.

   - Split request;

     A request has been made to remove this call from the MPTY.

   These Auxiliary states apply in addition to the 3GPP TS 24.008 call control states and the 3GPP TS 24.083 call hold states. Thus for example, an active call in a held MPTY has the state (Active, Call held, Call in MPTY).

Not all states are allowed, for example an MPTY cannot be split while it is held, so (Active, Call held, Split request) is forbidden.

Reference(s)

TS 24.084 clauses 1.3.1.1 and 1.6.

### 15.7.14.3 Test purpose

1) To verify the ability of a UE to retrieve a held MultiParty call and react correctly to a response from the SS indicating no success.

2) To verify the ability of a UE to apply the auxiliary states for MPTY correctly during an unsuccessful attempt to retrieve a held MultiParty call when the response from the SS is a Return Error component.

3) To verify the ability of a UE to apply the auxiliary states for MPTY correctly during an unsuccessful attempt to retrieve a held MultiParty call when the response from the SS is a Reject component.

### 15.7.14.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - The UE shall have a held MultiParty call to two destinations (Call A-B and Call A-C). Both call states shall be U10 "Active" with auxiliary state "Call in MPTY, call held". The call shall be of telecommunication service TS11. This state is achieved by the procedure in section 7.2.3.3.1.6 of TS 34.108.

#### 15.7.14.5 Test requirements

1) At step 2 and step 13 the UE shall send a FACILITY message with the transaction identifier of either Call A-B or Call A-C, the Facility IE shall contain an invoke component wherein the operation code is set to "retrieveMPTY".

2) At step 4 and step 6 the UE shall send a STATUS message with the call state set to "U10 - active", the hold auxiliary state set to "Retrieve request" and the multi party auxiliary state set to "Call in MPTY". At step 9 and step 11 the UE shall send a STATUS message with the call state set to "U10 - active", the hold auxiliary state set to "Call held" and the multi party auxiliary state set to "Call in MPTY".

3) At step 15 and step 17 the UE shall send a STATUS message with the call state set to "U10 - active", the hold auxiliary state set to " Retrieve request" and the multi party auxiliary state set to "Call in MPTY". At step 20 and step 22 the UE shall send a STATUS message with the call state set to " U10 - active", the hold auxiliary state set to "Call held" and the multi party auxiliary state set to "Call in MPTY".

### 15.7.15 Multi-party supplementary services, Retrieve the held MultiParty call, expiry of timer T(RetrieveMPTY)

#### 15.7.15.1 Definition

#### 15.7.15.2 Conformance requirement

1) Retrieve the held MultiParty call

To retrieve the held MultiParty call, a FACILITY message is sent to the network with a transaction identifier corresponding to any call in the MPTY. The network confirms the retrieval with another message containing the same transaction identifier (see figure 1.6).

During the RetrieveMPTY operation the MS shall run a timer T(RetrieveMPTY). This timer is started when the operation is sent, and stopped when a response is received from the network. If this timer expires the MS shall assume that the operation has failed, locally release the invokeID, and may re-attempt the operation or inform the user of the failure.

2) In the call hold service (3GPP TS 24.083), a two dimensional state space is defined, where the first dimension corresponds to the 3GPP TS 24.008 call control state and the second dimension corresponds to the call hold state (Idle, Hold Request, Call Held, Retrieve Request). For the purposes of the MPTY service, it is necessary to introduce another dimension to this state space, i.e. the MultiParty state.

   There are four auxiliary states associated with the MPTY service:

   - Idle;
   - MPTY request;

     A request has been made to add this call to the MPTY.

   - Call in MPTY;

     This call is in the MPTY.

   - Split request;

     A request has been made to remove this call from the MPTY.

   These Auxiliary states apply in addition to the 3GPP TS 24.008 call control states and the 3GPP TS 24.083 call hold states. Thus for example, an active call in a held MPTY has the state (Active, Call held, Call in MPTY). Not all states are allowed, for example an MPTY cannot be split while it is held, so (Active, Call held, Split request) is forbidden.

Reference(s)

TS 24.084 clauses 1.3.1.1 and 1.6.

### 15.7.15.3 Test purpose

1) To verify the ability of a UE to retrieve a held MultiParty call.
2) To verify the ability of a UE to react correctly on expiry of timer T(RetrieveMPTY).
3) To verify the ability of a UE to apply the auxiliary states for MPTY correctly on expiry of timer T(RetrieveMPTY).

### 15.7.15.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - The UE shall have a held MultiParty call to two destinations (Call A-B and Call A-C). Both call states shall be U10 "Active" with auxiliary state "Call in MPTY, call held". The call shall be of telecommunication service TS11. This state is achieved by the procedure in section 7.2.3.3.1.6 of TS 34.108.

Related ICS/IXIT Statements

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of Multi Party Service Yes/No.

Method of retrieving a held MultiParty call.

Test procedure

Using suitable user action, the UE shall retrieve the MultiParty call. The UE shall send a FACILITY message containing one of the transaction identifiers of the call, and containing an invoke component RetrieveMPTY. Both calls shall enter the auxiliary state "Call in MPTY, retrieve request". The call states shall be verified by the SS sending a

STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Not less than 5s and not more than 30s after sending the FACILITY message, one of the following shall have occurred:

- both calls shall be in their original call states and the UE shall have indicated the failure to the user; or
- the UE shall have sent another FACILITY message with the same contents.

The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | Make the UE to retrieve the held MultiParty call | |
| 2 | --> | | FACILITY | RetrieveMPTY Invoke component |
| 3 | <-- | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 4 | --> | | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY, retrieve request" |
| 5 | <-- | | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 6 | --> | | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY, retrieve request" |
| 7 | SS | | | The SS checks that there isn't any further FACILITY to re-attempt the RetrieveMPTY operation from the UE during 5 seconds after step 2. |
| 8 | SS | | | The SS waits for 25 seconds to check if the UE re-attempts the RetrieveMPTY operation. If the UE re-attempts the RetrieveMPTY operation then branch A, i.e. steps A9 to A13 are executed, else branch B, i.e. steps B9 to B13 are executed. |
| A9 | --> | | FACILITY | RetrieveMPTY Invoke component |
| A10 | <-- | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| A11 | --> | | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY, retrieve request" |
| A12 | <-- | | STATUS ENQUIRY | Transaction identifier of Call A-C |
| A13 | --> | | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY, retrieve request" |
| B9 | UE | | | It is checked that the UE has provided an appropriate user indication of the failure. |
| B10 | <-- | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| B11 | --> | | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY, call held" |
| B12 | <-- | | STATUS ENQUIRY | Transaction identifier of Call A-C |
| B13 | --> | | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY, call held" |

Specific Message Contents

|---|---|
| - Operation Code length | 1 |
| - Operation Code | 0111 1010 B (RetrieveMPTY) |
| - Parameters | not present |

#### 15.7.15.5 Test requirements

1) At step 2 the UE shall send a FACILITY message with the transaction identifier of either Call A-B or Call A-C, the Facility IE shall contain an invoke component wherein the operation code is set to "retrieveMPTY". At step 4 and step 6 the UE shall send a STATUS message with the call state set to "U10 - active", the hold auxiliary state set to "Retrieve request" and the multi party auxiliary state set to "Call in MPTY".

2) At step 7 the UE shall not send a FACILITY message, At step A9 the UE shall (only if branch A is executed) send a FACILITY message with the transaction identifier of either Call A-B or Call A-C, the Facility IE shall contain an invoke component wherein the operation code is set to "retrieveMPTY". At step B9 the UE shall (only if branch B is executed) provide an indication of the failure.

3) At step A11 and step A13 the UE shall (only if branch A is executed) send a STATUS message with the call state set to "U10 - active", the hold auxiliary state set to "Retrieve request" and the multi party auxiliary state set to "Call in MPTY". At step B11 and step B13 the UE shall (only if branch B is executed) send a STATUS message with the call state set to " U10 - active", the hold auxiliary state set to "Call held" and the multi party auxiliary state set to "Call in MPTY".

### 15.7.16 Multi-party supplementary services, Initiate a new call

#### 15.7.16.1 Definition

The initiation of a new call with a held MPTY call is achieved by a normal call set-up procedure.

#### 15.7.16.2 Conformance requirement

To initiate a new call as there is already a held MultiParty call, the UE performs a normal MO call set-up procedure.

Reference(s)

3GPP TS 24.084 subclause 1.3.1.2.

#### 15.7.16.3 Test purpose

To test that the UE can set up a new outgoing call with a held MultiParty call.

#### 15.7.16.4 Method of test

Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
- The UE shall have a held MultiParty call to two destinations (Call A-B and Call A-C). Both call states shall be U10 "Active" with auxiliary state "Call in MPTY, call held". The call shall be of a basic service supported by the UE and relevant to the MultiParty supplementary service as stated in 3GPP TS 22.004 table A.1.

NOTE: The MultiParty call may be setup using the procedure specified in clause 7.2.3.3.1.6 of TS 34.108.

Related ICS/IXIT statement(s)

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of Multi Party Service Yes/No.

Test Procedure

Using suitable MMI or AT commands, the UE shall initiate a new outgoing call A-D. The UE shall send a SETUP message with a new transaction identifier and enter state U1 "Call initiated". On receipt of a CONNECT message followed by an ALERTING message, the UE shall send a CONNECT ACKNOWLEDGE message and enter state U10 "Active". The call state of the MultiParty call shall not be affected. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | Using MMI or AT commands, make a new call |
| 2 | -> | | CM SERVICE REQUEST | |
| 3 | <- | | CM SERVICE ACCEPT | |
| 4 | -> | | SETUP | TI different from Call A-B or Call A-C (new Call A-D) |
| 5 | <- | | ALERTING | Transaction identifier of Call A-D |
| 6 | <- | | CONNECT | Transaction identifier of Call A-D |
| 7 | -> | | CONNECT ACKNOWLEDGE | Transaction identifier of Call A-D |
| 8 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 9 | -> | | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY, call held" |
| 10 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 11 | -> | | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY, call held" |
| 12 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-D |
| 13 | -> | | STATUS | Transaction identifier of Call A-D, state U10, no auxiliary state. |

Specific message contents

None.

15.7.16.5 Test requirements

At step 9, step 11 and step 13, the UE shall have the Call A-B entering state U10 with auxiliary state "Call in MPTY, call held", Call A-C entering state U10 with auxiliary state "Call in MPTY, call held" and Call A-D entering state U10 with no auxiliary state.

## 15.7.17 Multi-party supplementary services, Process a call waiting request

15.7.17.1 Definition

The MultiParty call is put on hold before the Call Waiting request is answered.

15.7.17.2 Conformance requirement

To answer the Call Waiting request, the UE places the existing MultiParty call on hold by sending a FACILITY message.

Reference(s)

3GPP TS 24.084 subclause 1.3.1.3.

15.7.17.3 Test purpose

To test that the UE can correctly process a Call Waiting request with a held MultiParty call.

15.7.17.4 Method of test

Initial conditions

- System Simulator:
  - 1 cell, default parameters.

- User Equipment:

- The UE shall have a MultiParty call to two destinations (Call A-B and Call A-C) active. Both calls states shall be U10 "Active" with auxiliary state "Call in MPTY". The UE shall also have a Call A-D in state U7 "Call received". The Multiparty call shall be of a basic service supported by the UE and relevant to the MultiParty supplementary service as stated in 3GPP TS 22.004 table A.1.

NOTE: The MultiParty call may be setup using the procedure specified in clause 7.2.3.3.1.10 of TS 34.108.

Related ICS/IXIT statement(s)

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of Multi Party Service Yes/No.

Test Procedure

Using suitable MMI or AT commands, the UE shall place the MultiParty on hold, and answer Call A-D.

The UE shall send a FACILITY message to the SS using any one of the transaction identifiers of the MultiParty call and containing an invoke component HoldMPTY, and shall enter state U10 "Active", with auxiliary state "call in MPTY, hold request" in respect of each of the transaction identifiers.

On receipt of a FACILITY message using the same transaction identifier and containing a return result component, the UE shall enter state U10 "Active" with auxiliary state "Call in MPTY, call held" for each of the transaction identifiers.

The UE shall then send a CONNECT message to the SS, using the transaction identifier of Call A-D, and on receipt of a CONNECT ACKNOWLEDGE message, shall enter state U10 "Active". The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | Using MMI or AT commands, place the multiparty call on hold and answer the waiting call |
| 2 | -> | | FACILITY | Transaction identifier of Call A-B or A-C, HoldMPTY invoke component |
| 3 | <- | | FACILITY | Same TI as step 2, Return Result component |
| 4 | -> | | CONNECT | Transaction identifier of Call A-D |
| 5 | <- | | CONNECT ACKNOWLEDGE | Transaction identifier of Call A-D |
| 6 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 7 | -> | | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY, call held" |
| 8 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 9 | -> | | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY, call held" |
| 10 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-D |
| 11 | -> | | STATUS | Transaction identifier of Call A-D, state U10, no auxiliary state. |

Specific message contents

FACILITY (Step 2)

| Information Element | Value/remark |
|---|---|
| Protocol discriminator | 0011B (call control; call related SS messages) |
| Transaction identifier | TI for Call A-B or A-C |
| Message Type | xx11 1010B |
| Facility IE | |
| - Length of Facility IE contents | 8 |
| - Component type tag | 1010 0001B (invoke) |
| - Component length | 6 |
| - Invoke ID tag | 0000 0010B (invoke ID) |
| - Invoke ID length | 1 |
| - Invoke ID | An arbitrary integer value. |
| - Operation Code tag | 0000 0010B (Operation Code) |
| - Operation Code length | 1 |
| - Operation Code | 0111 1011B (HoldMPTY) |
| SS Version Indicator | Not checked. |

FACILITY (Step 3)

Use the same message content found in clause 9.1.5.2.2 of TS 34.108.

#### 15.7.17.5 Test requirements

At step 7, step 9 and step 11, the UE shall have the Call A-B entering state U10 with auxiliary state "Call in MPTY, call held", Call A-C entering state U10 with auxiliary state "Call in MPTY, call held" and Call A-D entering state U10 with no auxiliary state.

## 15.7.18 Multi-party supplementary services, Terminate the held MultiParty call

#### 15.7.18.1 Definition

The operation of terminating the held MPTY call is performed by the UE sending a DISCONNECT message with each TI corresponding to the remote parties consequently.

#### 15.7.18.2 Conformance requirement

The held MultiParty call is terminated by disconnecting all individual parties by initiation of call clearing as defined in 3GPP TS 24.008 with each transaction identifier corresponding to the remote parties.

Reference(s)

3GPP TS 24.084 subclause 1.3.1.4.

#### 15.7.18.3 Test purpose

To test that the UE correctly terminates a held MultiParty call by initiating call clearance for each party in turn.

#### 15.7.18.4 Method of test

Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
- The UE shall have a held MultiParty call to two destinations (Call A-B and Call A-C). Both call states shall be U10 "Active" with auxiliary state "Call in MPTY, call held". The call shall be of a basic service supported by the UE and relevant to the MultiParty supplementary service as stated in 3GPP TS 22.004 table A.1.

NOTE: The MultiParty call may be setup using the procedure specified in clause 7.2.3.3.1.6 of TS 34.108.

Related ICS/IXIT statement(s)

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of Multi Party Service Yes/No.

Test Procedure

Using suitable MMI or AT commands, the UE shall initiate a clearance of the entire held MultiParty call. The UE shall send a DISCONNECT message in respect of each of the transaction identifiers of the call. On receipt of a RELEASE message in respect of each transaction identifier, the UE shall respond with a RELEASE COMPLETE message, and enter state U0 "Null". The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call and receiving a RELEASE COMPLETE message with cause #81 "invalid transaction identifier value" for each call.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | Using MMI or AT commands, terminate the entire MultiParty call<br>The DISCONNECT messages (steps 2 and 3 ) may occur in parallel. SS shall respond to each DISCONNECT independently as soon as it is received |
| | | | | Steps 2 and 3 may occur in any order |
| 2 | -> | | DISCONNECT | Transaction identifier of Call A-B |
| 3 | -> | | DISCONNECT | Transaction identifier of Call A-C |
| 4 | <- | | RELEASE | Transaction identifier of Call A-B |
| 5 | -> | | RELEASE COMPLETE | Transaction identifier of Call A-B |
| 6 | <- | | RELEASE | Transaction identifier of Call A-C |
| 7 | -> | | RELEASE COMPLETE | Transaction identifier of Call A-C |
| 8 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 9 | -> | | RELEASE COMPLETE | Transaction identifier of Call A-B, with cause #81 "invalid transaction identifier value" |
| 10 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 11 | -> | | RELEASE COMPLETE | Transaction identifier of Call A-C, with cause #81 "invalid transaction identifier value" |

Specific message contents

None.

15.7.18.5 Test requirements

At step 9 and step 11, the UE shall return a RELEASE COMPLETE message with cause #81 “invalid transaction identifier value” as the response of the STATUS ENQUIRY message sent by the SS.

## 15.7.19 Multi-party, Managing a single call and a MultiParty call, Disconnect the single call, single call active

15.7.19.1 Definition

The operation of terminating the active single call besides a held MPTY call is performed by the UE sending a DISCONNECT message with the corresponding TI.

15.7.19.2 Conformance requirement

The active single call, besides the held MultiParty call, is terminated by initiation of call clearing as defined in 3GPP TS 24.008 with the transaction identifier corresponding to the remote party.

Reference(s)

3GPP TS 24.084 subclause 1.4.1.1.

15.7.19.3 Test purpose

To test that the UE correctly clears the single call when the single call is active and the MultiParty call is held.

15.7.19.4 Method of test

Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
- The UE shall have a MultiParty call to two destinations (A-B and A-C) both in state U10 "Active" with auxiliary state "Call in MPTY, call held". The UE shall have in addition a single call (A-D) in state U10 "Active" with no auxiliary state. Both calls shall be of a basic service supported by the UE and relevant to the MultiParty supplementary service as stated in 3GPP TS 22.004 table A.1.

NOTE: The MultiParty call may be setup using the procedure specified in clause 7.2.3.3.1.7 of TS 34.108.

Related ICS/IXIT statement(s)

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of Multi Party Service Yes/No.

Test Procedure

Using suitable MMI or AT commands, the UE shall clear Call A-D. The UE shall send a DISCONNECT message with the transaction identifier for Call A-D. On receipt of a RELEASE message the UE shall send a RELEASE COMPLETE message and enter state U0 "Null" for Call A-D.

Within 5 s of sending the RELEASE COMPLETE message, the UE may send a FACILITY message to retrieve the Held Call. The SS must reject this request. The call state and auxiliary state for Call A-B and Call A-C shall not change. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state for Calls A-B and A-C, and receiving a RELEASE COMPLETE message with cause #81 "invalid transaction identifier value" for Call A-D.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | Using MMI or AT commands, clear call A-D |
| 2 | -> | | DISCONNECT | Transaction identifier of Call A-D |
| 3 | <- | | RELEASE | Transaction identifier of Call A-D |
| 4 | -> | | RELEASE COMPLETE | Transaction identifier of Call A-D |
| 5 | SS | | | Wait 5 s from receiving a RELEASE COMPLETE |
| | | | | Take this branch if no message is received within 5s |
| A1 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| A2 | -> | | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY, call held" |
| A3 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-C |
| A4 | -> | | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY, call held" |
| A5 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-D |
| A6 | -> | | RELEASE COMPLETE | Transaction identifier of Call A-D, with cause #81 "invalid transaction identifier value" |
| | | | | Take this branch if a message is received within 5s |
| B1 | -> | | FACILITY | TI for Call A-B, RetrieveMPTY Invoke component |
| B2 | <- | | FACILITY | TI for Call A-B, Reject component |
| B3 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| B4 | -> | | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY, call held" |
| B5 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-C |
| B6 | -> | | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY, call held" |
| B7 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-D |
| B8 | -> | | RELEASE COMPLETE | Transaction identifier of Call A-D, with cause #81 "invalid transaction identifier value" |

Specific message contents

FACILITY (Step B1)

| Information Element | Value/remark |
|---|---|
| Protocol discriminator | 0011B (call control; call related SS messages) |
| Transaction identifier | TI for Call A-B |
| Message Type | xx11 1010B |
| Facility IE | |
| - Length of Facility IE contents | 8 |
| - Component type tag | 1010 0001B (invoke) |
| - Component length | 6 |
| - Invoke ID tag | 0000 0010B (invoke ID) |
| - Invoke ID length | 1 |
| - Invoke ID | An arbitrary integer value. |
| - Operation Code tag | 0000 0010B (Operation Code) |
| - Operation Code length | 1 |
| - Operation Code | 0111 1010B (RetrieveMPTY) |
| SS Version Indicator | Not checked. |

FACILITY (Step B2)

Use the same message content found in clause 9.1.5.2.2 of TS 34.108.

15.7.19.5 Test requirements

At step A2, step A4 and step A6, or step B4, step B6 and step B8, the UE shall have the Call A-B entering state U10 with auxility state "Call in MPTY, call held", Call A-C entering state U10 with auxiliary state "Call in MPTY, call held" and Call A-D entering State U0 (return a RELEASE COMPLETE message with cause #81 “invalid transaction identifier value” as the response of the STATUS ENQUIRY message sent by the SS).

## 15.7.20 Multi-party, Managing a single call and a MultiParty call, Disconnect the single call, single call held

### 15.7.20.1 Definition

The operation of terminating the held single call besides an active MPTY call is performed by the UE sending a DISCONNECT message with the corresponding TI.

### 15.7.20.2 Conformance requirement

The held single call, besides an active MultiParty call, is terminated by initiation of call clearing as defined in 3GPP TS 24.008 with the transaction identifier corresponding to the remote party.

#### Reference(s)

3GPP TS 24.084 subclause 1.4.1.1.

### 15.7.20.3 Test purpose

To test that the UE correctly clears the single call when the single call is held and the MultiParty call is active.

### 15.7.20.4 Method of test

#### Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
- The UE shall have a MultiParty call to two destinations (A-B and A-C) both in state U10 "Active" with auxiliary state "Call in MPTY". The UE shall have in addition a single call (A-D) in state U10 "Active" with auxiliary state "Call held". Both calls shall be of a basic service supported by the UE and relevant to the MultiParty supplementary service as stated in 3GPP TS 22.004 table A.1.

NOTE: The MultiParty call may be setup using the procedure specified in clause 7.2.3.3.1.8 of TS 34.108.

#### Related ICS/IXIT statement(s)

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of Multi Party Service Yes/No.

#### Test Procedure

Using suitable MMI or AT commands, the UE shall clear Call A-D. The UE shall send a DISCONNECT message with the transaction identifier for Call A-D. On receipt of a RELEASE message the UE shall send a RELEASE COMPLETE message and enter state U0 "Null" for Call A-D. The call state and auxiliary state for Call A-B and Call A-C shall not change. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state for Calls A-B and A-C, and receiving a RELEASE COMPLETE message with cause #81 "invalid transaction identifier value" for Call A-D.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | Using MMI or AT commands, clear call A-D |
| 2 | -> | | DISCONNECT | Transaction identifier of Call A-D |
| 3 | <- | | RELEASE | Transaction identifier of Call A-D |
| 4 | -> | | RELEASE COMPLETE | Transaction identifier of Call A-D |
| 5 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 6 | -> | | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY" |
| 7 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 8 | -> | | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY" |
| 9 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-D |
| 10 | -> | | RELEASE COMPLETE | Transaction identifier of Call A-D, with cause #81 "invalid transaction identifier value" |

Specific message contents

None.

15.7.20.5 Test requirements

At step 6, step 8 and step 10, the UE shall have the Call A-B entering state U10 with auxility state "Call in MPTY", Call A-C entering state U10 with auxiliary state "Call in MPTY" and Call A-D entering State U0 (return a RELEASE COMPLETE message with cause #81 “invalid transaction identifier value” as the response of the STATUS ENQUIRY message sent by the SS).

## 15.7.21 Clear all parties of held MultiParty call

15.7.21.1 Definition

The operation of terminating the entire held MPTY call is performed by the UE sending the DISCONNECT message with the corresponding TI of all remote parties consequently.

15.7.21.2 Conformance requirement

The held MultiParty call is terminated by initiation of call clearing as defined in 3GPP TS 24.008 with the transaction identifiers corresponding to the remote parties.

Reference(s)

3GPP TS 24.084 subclause 1.4.1.2.

15.7.21.3 Test purpose

To test that the UE correctly clears the MultiParty call by clearing all remote parties to a held MultiParty call.

15.7.21.4 Method of test

Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
- The UE shall have a MultiParty call to two destinations (A-B and A-C) both in state U10 "Active" with auxiliary state "Call in MPTY, Call held". The UE shall have in addition a single call (A-D) in state U10 "Active" with no auxiliary state. Both calls shall be of a basic service supported by the UE and relevant to the MultiParty supplementary service as stated in 3GPP TS 22.004 table A.1.

NOTE: The MultiParty call may be setup using the procedure specified in clause 7.2.3.3.1.7 of TS 34.108.

Related ICS/IXIT statement(s)

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of Multi Party Service Yes/No.

Test Procedure

Using suitable MMI or AT commands, the UE shall clear the MultiParty call. The UE shall send DISCONNECT messages with the transaction identifier for Call A-B and A-C. On receipt of a RELEASE message to each DISCONNECT the UE shall send a RELEASE COMPLETE message and enter state U0 "Null. Call A-B and Call A-C shall enter state U0 "Null". The call state and auxiliary state for Call A-D shall not change. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state for Call A-D, and receiving a RELEASE COMPLETE message with cause #81 "invalid transaction identifier value" for Calls A-B and A-C.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | Using MMI or AT commands, terminate the entire MultiParty call<br>The DISCONNECT messages (steps 2 and 3 ) may occur in parallel. SS shall respond to each DISCONNECT independently as soon as it is received |
| | | | | Steps 2 and 3 may occur in any order |
| 2 | -> | | DISCONNECT | Transaction identifier of Call A-B |
| 3 | -> | | DISCONNECT | Transaction identifier of Call A-C |
| 4 | <- | | RELEASE | Transaction identifier of Call A-B |
| 5 | -> | | RELEASE COMPLETE | Transaction identifier of Call A-B |
| 6 | <- | | RELEASE | Transaction identifier of Call A-C |
| 7 | -> | | RELEASE COMPLETE | Transaction identifier of Call A-C |
| 8 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 9 | -> | | RELEASE COMPLETE | Transaction identifier of Call A-B, with cause #81 "invalid transaction identifier value" |
| 10 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 11 | -> | | RELEASE COMPLETE | Transaction identifier of Call A-C, with cause #81 "invalid transaction identifier value" |
| 12 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-D |
| 13 | -> | | STATUS | Transaction identifier of Call A-D, state U10 |

Specific message contents

None.

### 15.7.21.5 Test requirements

At step 9, step 11 and step 13, the UE shall return a RELEASE COMPLETE message with cause #81 “invalid transaction identifier value” as the response of the STATUS ENQUIRY message using TI of Call A-B or A-C sent by the SS, and have Call A-D entering state U10 with no auxiliary state.

## 15.7.22 Clear all parties of active MultiParty call

### 15.7.22.1 Definition

The operation of terminating the entire active MPTY call is performed by the UE sending the DISCONNECT message with the corresponding TI of all remote parties consequently.

### 15.7.22.2 Conformance requirement

The active MultiParty call is terminated by initiation of call clearing as defined in 3GPP TS 24.008 with the transaction identifiers for all the remote parties.

Reference(s)

3GPP TS 24.084 subclause 1.4.1.2.

### 15.7.22.3 Test purpose

To test that the UE correctly clears the MultiParty call by clearing all remote parties to an active MultiParty call.

### 15.7.22.4 Method of test

Initial conditions

- System Simulator:

- 1 cell, default parameters.

- User Equipment:

- The UE shall have a MultiParty call to two destinations (A-B and A-C) both in state U10 "Active" with auxiliary state "Call in MPTY". The UE shall have in addition a single call (A-D) in state U10 "Active" with auxiliary state "Call held". Both calls shall be of a basic service supported by the UE and relevant to the MultiParty supplementary service as stated in 3GPP TS 22.004 table A.1.

NOTE: The MultiParty call may be setup using the procedure specified in clause 7.2.3.3.1.8 of TS 34.108.

Related ICS/IXIT statement(s)

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of Multi Party Service Yes/No.

Test Procedure

Using suitable MMI or AT commands, the UE shall clear the MultiParty call. The UE shall send DISCONNECT messages with the transaction identifier for Call A-B and A-C. On receipt of a RELEASE message to each DISCONNECT the UE shall send a RELEASE COMPLETE message and enter state U0 "Null. Call A-B and Call A-C shall enter state U0 "Null". Within 5 s of sending the RELEASE COMPLETE message, the UE may send a RETRIEVE message to retrieve the Held Call. The SS shall reject this request. The call state and auxiliary state for Call A-D shall not change. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state. for Call A-D, and receiving a RELEASE COMPLETE message with cause #81 "invalid transaction identifier value" for Calls A-B and A-C.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | Using MMI or AT commands, terminate the entire MultiParty call<br>The DISCONNECT messages (steps 2 and 3 ) may occur in parallel. SS shall respond to each DISCONNECT independently as soon as it is received |
| | | | | Steps 2 and 3 may occur in any order |
| 2 | -> | | DISCONNECT | Transaction identifier of Call A-B |
| 3 | -> | | DISCONNECT | Transaction identifier of Call A-C |
| 4 | <- | | RELEASE | Transaction identifier of Call A-B |
| 5 | -> | | RELEASE COMPLETE | Transaction identifier of Call A-B |
| 6 | <- | | RELEASE | Transaction identifier of Call A-C |
| 7 | -> | | RELEASE COMPLETE | Transaction identifier of Call A-C |
| 8 | SS | | | Wait 5 s from receiving a RELEASE COMPLETE |
| | | | | Take this branch if no message is received within 5s |
| A9 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| A10 | -> | | RELEASE COMPLETE | Transaction identifier of Call A-B, with cause #81 "invalid transaction identifier value" |
| A11 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-C |
| A12 | -> | | RELEASE COMPLETE | Transaction identifier of Call A-C, with cause #81 "invalid transaction identifier value" |
| A13 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-D |
| A14 | -> | | STATUS | Transaction identifier of Call A-D, state U10, auxiliary state "Call Held" |
| | | | | Take this branch if a message is received within 5s |
| B9 | -> | | RETRIEVE | Transaction identifier of Call A-D |
| B10 | <- | | RETRIEVE REJECT | |
| B11 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| B12 | -> | | RELEASE COMPLETE | Transaction identifier of Call A-B, with cause #81 "invalid transaction identifier value" |
| B13 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-C |
| B14 | -> | | RELEASE COMPLETE | Transaction identifier of Call A-C, with cause #81 "invalid transaction identifier value" |
| B15 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-D |
| B16 | -> | | STATUS | Transaction identifier of Call A-D, state U10, auxiliary state "Call Held" |

Specific message contents

None.

15.7.22.5 Test requirements

At step A10, step A12 and step A14, or step B12, step B14 and step B16, the UE shall return a RELEASE COMPLETE message with cause #81 “invalid transaction identifier value” as the response of the STATUS ENQUIRY message using TI of Call A-B or A-C sent by the SS, and have Call A-D entering state U10 with auxiliary state "Call Held".

## 15.7.23 Multi-party supplementary services, Disconnect all calls

15.7.23.1 Definition

The operation of terminating all calls is performed by the UE sending the DISCONNECT message with the corresponding TI of all remote parties consequently.

15.7.23.2 Conformance requirement

All calls are terminated by initiation of call clearing as defined in 3GPP TS 24.008 with the transaction identifiers for all the remote parties.

Reference(s)

3GPP TS 24.084 subclause 1.4.1.3.

### 15.7.23.3 Test purpose

To test the UE correctly clears all calls, by clearing in turn each connected party.

### 15.7.23.4 Method of test

#### Initial conditions

- System Simulator:
- 1 cell, default parameters.
- User Equipment:
- The UE shall have a MultiParty call to two destinations (A-B and A-C) both in state U10 "Active" with auxiliary state "Call in MPTY". The UE shall have in addition a single call (A-D) in state U10 "Active" with auxiliary state "Call held". Both calls shall be of a basic service supported by the UE and relevant to the MultiParty supplementary service as stated in 3GPP TS 22.004 table A.1.

NOTE: The MultiParty call may be setup using the procedure specified in clause 7.2.3.3.1.8 of TS 34.108.

#### Related ICS/IXIT statement(s)

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of Multi Party Service Yes/No.

#### Test Procedure

Using suitable MMI or AT commands, the UE shall clear all calls. The UE shall send DISCONNECT messages with the transaction identifier for Call A-B, Call A-C and Call A-D. On receipt of a RELEASE message to each DISCONNECT the UE shall send a RELEASE COMPLETE message and enter state U0 "Null". Call A-B, Call A-C Call A-D shall enter state U0 "Null". The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a RELEASE COMPLETE message with cause #81 "invalid transaction identifier value" for each call.

#### Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | Using MMI or AT commands, terminate all calls |
| | | | | The DISCONNECT messages (steps 2, 3 and 4) may occur in parallel. SS shall respond to each DISCONNECT independently as soon as it is received. |
| 2 | -> | | DISCONNECT | Transaction identifier of Call A-B |
| 3 | -> | | DISCONNECT | Transaction identifier of Call A-C |
| 4 | -> | | DISCONNECT | Transaction identifier of Call A-D |
| 5 | <- | | RELEASE | Transaction identifier of Call A-B |
| 6 | -> | | RELEASE COMPLETE | Transaction identifier of Call A-B |
| 7 | <- | | RELEASE | Transaction identifier of Call A-C |
| 8 | -> | | RELEASE COMPLETE | Transaction identifier of Call A-C |
| 9 | <- | | RELEASE | Transaction identifier of Call A-D |
| 10 | -> | | RELEASE COMPLETE | Transaction identifier of Call A-D |
| 11 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 12 | -> | | RELEASE COMPLETE | Transaction identifier of Call A-B, with cause #81 "invalid transaction identifier value" |
| 13 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 14 | -> | | RELEASE COMPLETE | Transaction identifier of Call A-C, with cause #81 "invalid transaction identifier value" |
| 15 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-D |
| 16 | -> | | RELEASE COMPLETE | Transaction identifier of Call A-D, with cause #81 "invalid transaction identifier value" |

Specific message contents

None.

15.7.23.5 Test requirements

At step 12, step 14 and step 16, the UE shall return a RELEASE COMPLETE message with cause #81 “invalid transaction identifier value” as the response of the STATUS ENQUIRY message using TI of Call A-B, A-C or A-D sent by the SS.

## 15.7.24 Multi-party supplementary services, Add the single call to the MPTY, successful case

15.7.24.1 Definition

The operation of adding a single held call into the active MPTY call is performed by the UE sending the FACILITY message with the TI of any remote party, and successfully accepted the network.

15.7.24.2 Conformance requirement

The UE may request the connection of all calls, held and active, into an active MultiParty call at any time by sending a FACILITY message with the transaction identifier corresponding to any remote party and containing the BuildMPTY invoke component.

Reference(s)

3GPP TS 24.084 subclause 1.4.1.4.

15.7.24.3 Test purpose

To test that the UE correctly adds a single held call to an active MultiParty call, and reacts correctly to a response from the SS indicating success.

15.7.24.4 Method of test

Initial conditions

- System Simulator:- 1 cell, default parameters.

- User Equipment:

- The UE shall have a MultiParty call to two destinations (A-B and A-C) both in state U10 "Active" with auxiliary state "Call in MPTY". The UE shall have in addition a single call (A-D) in state U10 "Active" with auxiliary state "Call held". Both calls shall be of a basic service supported by the UE and relevant to the MultiParty supplementary service as stated in 3GPP TS 22.004 table A.1.

NOTE: The MultiParty call may be setup using the procedure specified in clause 7.2.3.3.1.8 of TS 34.108.

Related ICS/IXIT statement(s)

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of Multi Party Service Yes/No.

Test Procedure

Using suitable MMI or AT commands, the UE shall add the single call to the MultiParty call. The UE shall send a FACILITY message containing one of the transaction identifiers A-B, A-C or A-D and containing a BuildMPTY invoke component. Calls A-B and A-C shall remain in state U10 "Active" with auxiliary state "Call in MPTY". Call A-D shall enter state U10 "Active" with auxiliary state "MPTY request, call held". The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

On receipt of a FACILITY message containing a return result component, all calls shall enter state U10 "Active" with auxiliary state "Call in MPTY". The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | Using MMI or AT commands, join the single call to the MultiParty call |
| 2 | -> | | FACILITY | TI for Call A-B, Call A-C or call A-D, BuildMPTY Invoke component |
| 3 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 4 | -> | | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY" |
| 5 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 6 | -> | | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY" |
| 7 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-D |
| 8 | -> | | STATUS | Transaction identifier of Call A-D, state U10, auxiliary state "MPTY request, Call held" |
| 9 | <- | | FACILITY | Same TI as step 2, Return Result component |
| 10 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 11 | -> | | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY" |
| 12 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 13 | -> | | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY" |
| 14 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-D |
| 15 | -> | | STATUS | Transaction identifier of Call A-D, state U10, auxiliary state "Call in MPTY" |
| 16 | SS | | | Check that the TCH is through-connected |

Specific message contents

FACILITY (Step 2)

15.7.24.5 Test requirements

At step 4, step 6 and step 8, the UE shall have Call A-B and A-C entering state U10 with auxiliary state "Call in MPTY", and have Call A-D entering state U10 with auxiliary state "MPTY request, Call held".

At step 11, step 13 and step 15, the UE shall have Call A-B, A-C or A-D all entering state U10 with auxiliary state "Call in MPTY".

## 15.7.25 Multi-party supplementary services, Add the single call to the MPTY, maximum number of participants exceeded

### 15.7.25.1 Definition

The operation of adding a single held call into the active MPTY call is performed by the UE sending the FACILITY message with the TI of any remote party, but rejected by the network with error as the maximum number of remote parties has already been reached.

### 15.7.25.2 Conformance requirement

The UE may request the connection of all calls, held and active, into an active MultiParty call at any time by sending a FACILITY message with the transaction identifier corresponding to any remote party and containing the BuildMPTY invoke component.

If the request is unsuccessful e.g. because the maximum number of remote parties has already been reached, then an error is returned to the served mobile subscriber. Error values are specified in 3GPP TS 24.080.

#### Reference(s)

3GPP TS 24.084 subclause 1.4.1.4.

### 15.7.25.3 Test purpose

To test that the UE correctly adds a single held call to an active MultiParty call, and reacts correctly to a response from the SS indicating maximum number of participants exceeded.

### 15.7.25.4 Method of test

#### Initial conditions

- System Simulator:
- 1 cell, default parameters.
- User Equipment:
- The UE shall have a MultiParty call to three destinations (A-B, A-C and A-D) all in state U10 "Active" with auxiliary state "Call in MPTY". The UE shall have in addition a single call (A-E) in state U10 "Active" with auxiliary state "Call held". Both calls shall be of a basic service supported by the UE and relevant to the MultiParty supplementary service as stated in 3GPP TS 22.004 table A.1.

NOTE: The MultiParty call may be setup using the procedure specified in clause 7.2.3.3.1.9 of TS 34.108.

#### Related ICS/IXIT statement(s)

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of Multi Party Service Yes/No.

#### Test Procedure

Using suitable MMI or AT commands, the UE shall add the single call to the MultiParty call. The UE shall send a FACILITY message containing any one of the transaction identifiers and containing a BuildMPTY invoke component. Calls A-B to A-D shall remain in state U10 "Active" with auxiliary state "Call in MPTY". Call A-E shall enter state U10 "Active" with auxiliary state "MPTY request, call held". The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

On receipt of a FACILITY message containing a return error component "MaxNumberOfMPTY-ParticipantsExceeded", then all calls shall return to their original states. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | Using MMI or AT commands, join the single call to the MultiParty call |
| 2 | -> | | FACILITY | TI for Call A-B, Call A-C, Call A-D or Call A-E, BuildMPTY Invoke component |

#### 15.7.25.5 Test requirements

At step 4, step 6, step 8 and step 10, the UE shall have Call A-B, A-C and A-D all entering state U10 with auxiliary state "Call in MPTY", and have Call A-E entering state U10 with auxiliary state "MPTY request, Call Held".

At step 13, step 15, step 17 and step 19, the UE shall have Call A-B, A-C and A-D all entering state U10 with auxiliary state "Call in MPTY", and have Call A-E entering state U10 with auxiliary state "Call Held".

### 15.7.26 Multi-party supplementary services, Alternate between the MPTY call and the single call

#### 15.7.26.1 Definition

The operation of alternating between a single call and a MPTY call is successfully accepted by the network.

#### 15.7.26.2 Conformance requirement

The UE may request to alternate between a single held call and a active MPTY call is performed by the UE sending the FACILITY message with HoldMPTY component and a RETRIEVE message with the corresponding TI, then the network successfully accept the hold and retrieve operations.

The UE may request to alternate between a single active call and a held MPTY call is performed by the UE sending the HOLD message with the corresponding TI and a FACILITY message with RetrieveMPTY component, then the network successfully accept the hold and retrieve operations.

Reference(s)

3GPP TS 24.084 subclause 1.4.1.5.

#### 15.7.26.3 Test purpose

To test that the UE correctly alternates between the single call and the MultiParty call, by proper use of the hold and retrieve procedures.

#### 15.7.26.4 Method of test

- Initial conditionsSystem Simulator:
- - 1 cell, default parameters. User Equipment:
- The UE shall have a MultiParty call to two destinations (A-B and A-C) both in state U10 "Active" with auxiliary state "Call in MPTY". The UE shall have in addition a single call (A-D) in state U10 "Active" with auxiliary state "Call held". Both calls shall be of a basic service supported by the UE and relevant to the MultiParty supplementary service as stated in 3GPP TS 22.004 table A.1.

NOTE: The MultiParty call may be setup using the procedure specified in clause 7.2.3.3.1.8 of TS 34.108.

Related ICS/IXIT statement(s)

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of Multi Party Service Yes/No.

Test Procedure

Using suitable MMI or AT commands, the UE shall alternate between the single call and the MultiParty call. The UE shall send a FACILITY message containing one of the transaction identifiers of the MultiParty call, and containing an invoke component HoldMPTY. The UE shall then send a RETRIEVE message with the transaction identifier for Call A-D. Call A-B and Call A-C shall enter the auxiliary state "Call in MPTY, hold request". Call A-D shall enter auxiliary state "retrieve request". The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

The SS shall send a FACILITY message with a return result component and then send a RETRIEVE ACKNOWLEDGE message. On receipt of these messages, Calls A-B and A-C shall enter auxiliary state "Call in MPTY, call held", and Call A-D shall enter state U10 "Active" with no auxiliary state. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Using suitable MMI or AT commands, the UE shall again alternate between the single call and the MultiParty call. The UE shall send a FACILITY message containing one of the transaction identifiers of the MultiParty call, and containing an invoke component RetrieveMPTY. The UE shall also send a HOLD message with the transaction identifier for Call A-D. Call A-B and Call A-C shall enter the auxiliary state "Call in MPTY, retrieve request". Call A-D shall enter auxiliary state "hold request". The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state. The SS shall send a FACILITY message with a return result component and shall also send a HOLD ACKNOWLEDGE message. On receipt of these messages, Call A-B and A-C shall enter auxiliary state "Call in MPTY", and Call A-D shall enter state U10 "Active" with auxiliary state "Call held". The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | Using MMI or AT commands, alternate between the active and held calls |
| 2 | -> | | FACILITY | TI for Call A-B or call A-C, HoldMPTY Invoke component |
| 3 | -> | | RETRIEVE | Transaction identifier of Call A-D |
| 4 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-B |

### 15.7.26.5 Test requirements

At step 5, step 7 and step 9, the UE shall have Call A-B and A-C entering state U10 with auxiliary state "Call in MPTY, Hold Request", and have Call A-D entering state U10 with auxiliary state "Retrieve request".

At step 13, step 15 and step 17, the UE shall have Call A-B and A-C entering state U10 with auxiliary state "Call in MPTY, Call held", and have Call A-D entering state U10 with no auxiliary state.

At step 23, step 25 and step 27, the UE shall have Call A-B and A-C entering state U10 with auxiliary state "Call in MPTY, Retrieve Request", and have Call A-D entering state U10 with auxiliary state "Hold request".

At step 31, step 33 and step 35, the UE shall have Call A-B and A-C entering state U10 with auxiliary state "Call in MPTY", and have Call A-D entering state U10 with auxiliary state "Call held".

## 15.7.27 Multi-party supplementary services, Adding extra remote parties

### 15.7.27.1 Definition

The operation of adding extra remote party into the MPTY call is successfully accepted by the network.

### 15.7.27.2 Conformance requirement

Extra remote parties are added by placing the MultiParty call on hold and setting up a new connection (either a new call or a waiting call) and then sending a FACILITY message to the network requesting that the active call be joined with the MPTY, using the same signalling as for invocation. This results in an active MultiParty call.

#### Reference(s)

3GPP TS 24.084 subclause 1.5.

### 15.7.27.3 Test purpose

To test that the UE adds extra remote parties to the MultiParty call.

### 15.7.27.4 Method of test

#### Initial conditions

- System Simulator:
- 1 cell, default parameters.
- User Equipment:
- The UE have a MultiParty call to two destinations (Call A-B and Call A-C) active. Both call states shall be U10 "Active" with auxiliary state "Call in MPTY". The call shall be of a basic service supported by the UE and relevant to the MultiParty supplementary service as stated in 3GPP TS 22.004 table A.1.

NOTE: The MultiParty call may be setup using the procedure specified in clause 7.2.3.3.1.5 of TS 34.108.

#### Related ICS/IXIT statement(s)

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of Multi Party Service Yes/No.

#### Test Procedure

Using suitable MMI or AT commands, the UE requests to establish a new call to remote party. Then the active MultiParty call is put on hold before the call setup procedure. Later the new active call is added to the MultiParty call with successful result.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | Using MMI or AT commands, put the MultiParty call on Hold to establish a new call |
| 2 | -> | | FACILITY | TI for Call A-B or call A-C, HoldMPTY Invoke component |
| 3 | <- | | FACILITY | Same TI as step 2, Return Result component |
| 3A | UE | | | Using MMI or AT commands, new active call is added to the MultiParty call |
| 3B | -> | | CM SERVICE REQUEST | |
| 3C | | | CM SERVICE ACCEPT | |
| 4 | -> | | SETUP | TI different from Call A-B or Call A-C (new Call A-D) |
| 5 | <- | | ALERTING | Transaction identifier of Call A-D |
| 6 | <- | | CONNECT | Transaction identifier of Call A-D |
| 7 | -> | | CONNECT ACKNOWLEDGE | Transaction identifier of Call A-D |
| 7A | UE | | | Using MMI or AT commands, add the 'Multiparty call on Hold' to the conversation |
| 8 | -> | | FACILITY | TI for Call A-B, Call A-C or call A-D, BuildMPTY Invoke component |
| 9 | <- | | FACILITY | TI same as step 8, Return Result component |
| 10 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 11 | -> | | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY" |
| 12 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 13 | -> | | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY" |
| 14 | <- | | STATUS ENQUIRY | Transaction identifier of Call A-D |
| 15 | -> | | STATUS | Transaction identifier of Call A-D, state U10, auxiliary state "Call in MPTY" |
| 16 | SS | | | Check that the TCH is through-connected |

#### 15.7.27.5 Test requirements

At step 11, step 13 and step 15, the UE shall have Call A-B, A-C and A-D entering state U10 with auxiliary state "Call in MPTY".

## 15.8 Call restriction

### 15.8.1 Registration accepted

#### 15.8.1.1 Definition

To check that the UE correctly handles the successful password registration for all barring services.

#### 15.8.1.2 Conformance requirement

If the served mobile subscriber is given the possibility to control the service by the use of a password, the service provider had to register a password at provision time. The served mobile subscriber can change the call barring password at any time.

If the entity that uses the supplementary support procedures wants to send a REGISTER message, the supplementary service support entity shall first request the establishment of an MM-connection.

...

The supplementary service support entity shall send the REGISTER message as the first CM-message on the MM-connection.

…

At the end of each call independent supplementary service procedure the established supplementary service support is released.

The side closing the transaction shall release the transaction by sending the RELEASE COMPLETE message to its corresponding peer entity.

Both supplementary service support entities release the MM-connection locally.

…

When the mobile subscriber wants to register a new password the old password, the new password and the repeat of the new password shall be entered into the UE. Then the UE sends to the network an invoke component of the operation "register password".

The common SS-code for call restriction services shall be used, but if the service code is not entered by the user the UE shall include the SS-code referring to all supplementary services.

References

TS 24.010 clauses 3.2.1, 3.4 and 4.2.1.

15.8.1.3 Test purpose

1) To check that the UE correctly requests a supplementary service transaction for registration of a password for all barring services in the CM SERVICE REQUEST message.

3) To check that the UE sends a REGISTER message containing an *Invoke* component of the operation "register password" with the expected parameter values for registration of a password for all barring services when a password change operation is initiated.

4) To check that when the mobile subscriber wants to register a new password, the old password, the new password and the repeat of the new password shall be entered into the UE before the UE sends a CM SERVICE REQUEST message.

4) To check that upon receipt of FACILITY message requesting the password, the UE is able to send a password by sending a FACILITY message with a *Return result* component.

5) To check that upon receipt of the result of the procedure contained in the RELEASE COMPLETE or FACILITY message, the UE provides the indication for successful password registration for all barring services..

15.8.1.4 Method of test

Related ICS/IXIT statements

Support of FDD Yes/No.

Support of one barring supplementary service Yes/No.

Support of CS speech Yes/No.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in registered idle state on cell 1.

Test procedure

The UE is made to initiate the registration of a password for all barring supplementary services.

Upon receipt of the REGISTER message, the system simulator answers with the FACILITY message with the *Facility* information element containing an *Invoke* with the GetPassword operation requesting the old password.

The UE sends a FACILITY message with a *Return result* component containing the old password.

The system simulator answers with a FACILITY message with the *Facility* information element containing an *Invoke* with the GetPassword operation requesting a new password.

The UE sends a FACILITY message with a *Return result* component containing the new password.

The system simulator answers with a FACILITY message with the *Facility* information element containing an *Invoke* with the GetPassword operation requesting the new password again.

The UE sends a FACILITY message with a *Return result* component containing the new password again.

Upon receipt of the FACILITY message, the system simulator answers with the RELEASE COMPLETE message with the Facility information element containing a *Return result* component with the return result of the operation "register password", with the new password as mandatory information element, which indicates successful registration.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | The UE is made to initiate the registration of new password for all barring supplementary services. The old password, new password, and new password again, are requested. |
| 2 | -> | | CM SERVICE REQUEST | CM service type = 'Supplementary service activation' |
| 2A | <- | | AUTHENTICATION REQUEST | |
| 2B | -> | | AUTHENTICATION RESPONSE | |
| 3 | | | | The SS starts integrity protection. |

| Operation code | registerPassword | |

#### 15.8.1.5 Test requirements

In Step 2 the UE sends the CM SERVICE REQUEST message with the CM service type ‘Supplementary service activation’.

In Steps 4, 6, 8 and 10 the UE populates the messages with the correct values.

In Step 14 the UE provides indication of successful password registration for all barring services.

### 15.8.2 Rejection after invoke of the operation “register password” with subscription violation

#### 15.8.2.1 Definition

To check that the UE correctly handles the password change attempt for the Call Barring supplementary service when the new password registration fails as the subscription option “control of services” is set to “by the service provider”.

#### 15.8.2.2 Conformance requirement

If the served mobile subscriber at provision time has selected the subscription option "control of supplementary service by the service provider" an attempt to register a password will be denied and the served mobile subscriber should receive a notification..

If the entity that uses the supplementary support procedures wants to send a REGISTER message, the supplementary service support entity shall first request the establishment of an MM-connection.

...

The supplementary service support entity shall send the REGISTER message as the first CM-message on the MM-connection.

At the end of each SS procedure, the established MM connection should be released

The side closing the transaction shall release the transaction by sending the RELEASE COMPLETE message to its corresponding peer entity.

Both supplementary service support entities release the MM-connection locally.

When the mobile subscriber wants to register a new password the old password, the new password and the repeat of the new password shall be entered into the UE. Then the UE sends to the network an invoke component of the operation "register password".

The common SS-code for call restriction services shall be used, but if the service code is not entered by the user the UE shall include the SS-code referring to all supplementary services.

#### 15.8.4.3 Test purpose

1) To check that the UE correctly requests a supplementary service transaction for activation of call restriction service in the subsequent CM SERVICE REQUEST.

2) To check that the UE sends a REGISTER message containing an *Invoke* component of the ActivateSS operation with the expected parameter values for activation of a specific call restriction service.

3) To check that upon receipt of FACILITY message requesting the password, the UE is able to send a password by sending a FACILITY message with a *Return result* component.

#### 15.8.4.4 Method of test

##### Related ICS/IXIT statements

Support of FDD Yes/No.

Support of BAOC supplementary service Yes/No

Support of BICRoam supplementary service Yes/No

Support of CS speech Yes/No

##### Initial conditions

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE is in registered idle state on cell 1.

##### Test procedure

The UE is made to initiate the activation of the BAOC (barring of outgoing calls) supplementary service if supported by UE.

Upon receipt of the REGISTER message, the system simulator answers with the FACILITY message with the *Facility* information element containing an *Invoke* with the GetPassword operation requesting the password.

The UE sends a FACILITY message with a *Return result* component containing the password.

Upon receipt of the FACILITY message, the system simulator answers with the RELEASE COMPLETE message with the Facility information element containing a *Return result* component with the BAOC supplementary code indicating successful activation.

The above procedure is repeated for BICRoam (barring of incoming calls when roaming outside home PLMN Country) supplementary service if supported by UE.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | The UE is made to initiate the activation of the BAOC (barring of outgoing calls) supplementary service if UE supports BAOC supplementary service, otherwise goto step 10. |

#### 15.8.4.5 Test requirements

In Steps 2 and 11, the UE sends the CM SERVICE REQUEST message with the CM service type ‘Supplementary service activation’.

In Steps 4, 6, 13 and 15 the UE populates the messages with the correct values.

In steps 9a and 18a the UE provides the indications of successful activation of the relevant supplementary service (BAOC or BICRoam).

### 15.8.5 Rejection after invoke of ActivateSS operation

#### 15.8.5.1 Definition

To check that an attempt to activate a supplementary service with transgressing the subscription restrictions will be denied, the served mobile subscriber receives an error indication and the first call transaction remains unaffected.

#### 15.8.5.2 Conformance requirement

If the entity that uses the supplementary support procedures wants to send a REGISTER message, the supplementary service support entity shall first request the establishment of an MM-connection.

...

The supplementary service support entity shall send the REGISTER message as the first CM-message on the MM-connection.

…

If (according to the rules specified in 3GPP TS 29.002 [45]) a supplementary service operation is to be rejected the operation will be denied, and provided the transaction is still in progress, an appropriate reject component will be returned in a Facility Information Element.

…

If the served mobile subscriber at provision time has selected the subscription option "control of barring service: by subscriber using password", the supplementary service is activated for a basic service if the subscriber has requested so by means of an activation procedure for that basic service.

...

If the served mobile subscriber at provision time has selected the subscription option "control of barring service: by service provider", an attempt to activate the service will be denied and the served mobile subscriber receives an error indication (see figure 1.3).

Error values are specified in 3GPP TS 24.080.

…

### 15.8.5.3 Test purpose

1) To check that, when a call transaction is already established, the UE correctly requests the establishment of a parallel MM transaction for supplementary service transaction of specific call barring service, sending a CM SERVICE REQUEST.

2) To check that the UE sends a REGISTER message containing the invoke of the ActivateSS operation with the expected parameter values for specific call barring service.

3) To check that upon receipt of the RELEASE COMPLETE message related to the present SS transaction, the first transaction remains unaffected.

4) To check that upon receipt of the RELEASE COMPLETE message, the UE provides the appropriate user indication (as described by the Manufacturer).

Those checks are performed with a call transaction already established for:

- BOIC, the RELEASE COMPLETE message being sent at the beginning of the procedure with a facility IE containing a return_error(error) where error is "SS subscription violation".

15.8.5.4 Method of test

Related ICS/IXIT statements

Support of BOIC supplementary service Yes/No.

Support of FDD Yes/No.

Support of CS speech Yes/No.

Initial conditions

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE is brought into the CC state U10 by using table 10.1.2/3.

Test procedure

The UE is made to initiate the activation of the BOIC (Barring of outgoing international calls) supplementary service.

Upon receipt of the operation (in a REGISTER message), the system simulator answers with the RELEASE COMPLETE (PD and TI of the SS transaction) message with the Facility information element containing a Return_error(error: SS subscription violation) of the ActivateSS operation.

The system simulator then sends STATUS ENQUIRY, and the UE responds with STATUS message indicating CC state U10.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | The UE is made to initiate an activation of BOIC (Barring of outgoing international calls) supplementary service. |
| 2 | -> | | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 3 | <- | | CM SERVICE ACCEPT | |
| 4 | -> | | REGISTER | |
| 5 | <- | | RELEASE COMPLETE | Return_error(error: SS subscription violation) |
| 6 | UE | | | The UE provides an appropriate user indication about failure of the supplementary service activation |
| 7 | <- | | STATUS ENQUIRY | |
| 8 | -> | | STATUS | CC state U10 |

Specific message contents:

REGISTER (Step 4)

| Information Element | Value/remark | Condition |
|---|---|---|
| Facility | | |
| Invoke component | | |
| Operation Code | activateSS | |
| Parameters | | |
| SS-ForBS-Code | | |
| ss-Code | BOIC | |
| basicService | Optionally present and not checked | |

| Information Element | Value/remark |
|---|---|
| Cause | omitted |
| Facility | |
| Invoke ID | Same Invoke ID that has been used in step 4 |
| Error code | SS subscription violation. |

#### 15.8.5.5 Test requirements

1) In Steps 4 and 8 the UE populates the messages with the correct values.

2) In Steps 6 the UE provides an appropriate user indication about failure of the supplementary service deactivation.

## 15.8.6 Deactivation accepted

#### 15.8.6.1 Definition

To check that the UE correctly handles the supplementary service deactivation for all speech restrictions.

#### 15.8.6.2 Conformance requirement

If the entity that uses the supplementary support procedures wants to send a REGISTER message, the supplementary service support entity shall first request the establishment of an MM-connection.

...

The supplementary service support entity shall send the REGISTER message as the first CM-message on the MM-connection.

...

At the end of each call independent supplementary service procedure the established supplementary service support is released.

The side closing the transaction shall release the transaction by sending the RELEASE COMPLETE message to its corresponding peer entity.

Both supplementary service support entities release the MM-connection locally.

...

If the served mobile subscriber at provision time has selected the subscription option "control of barring service: by subscriber using password", the supplementary service is deactivated for a basic service if the subscriber has requested deactivation by means of a deactivation procedure for that basic service.

The deactivation request of a barring program may specify the basic service. If the subscriber does not indicate a specific basic service, the deactivation applies to all basic services.

If the deactivation is successful, the service will be deactivated. The network will then send a return result indicating acceptance of the request.

...

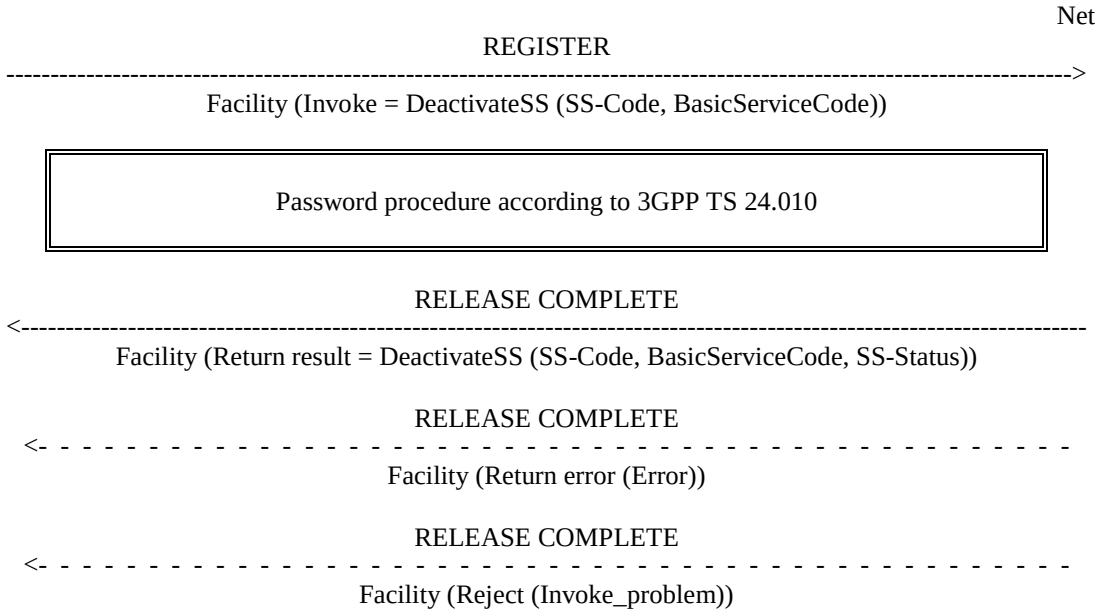

**Figure 15.8.6.2-1: Deactivation of a barring program**

References

TS 24.010 clauses 3.2.1 and 3.4.

| BasicServiceCode | the same BasicServiceCode as in the REGISTER in Step 4 |

#### 15.8.6.5 Test requirements

In Step 2 the UE sends the CM SERVICE REQUEST message with the CM service type ‘Supplementary service activation’.

In Steps 4 and 6 the UE populates the messages with the correct values.

In Step 10 the UE provides the indication of successful deactivation of all supplementary services restriction for speech.

### 15.8.7 Rejection after invoke of DeactivateSS operation

#### 15.8.7.1 Definition

To check that an attempt to deactivate a supplementary service with transgressing the subscription restrictions will be denied, the served mobile subscriber receives an error indication and the first call transaction remains unaffected.

#### 15.8.7.2 Conformance requirement

If the entity that uses the supplementary support procedures wants to send a REGISTER message, the supplementary service support entity shall first request the establishment of an MM-connection.

...

The supplementary service support entity shall send the REGISTER message as the first CM-message on the MM-connection.

…

If (according to the rules specified in 3GPP TS 29.002 [45]) a supplementary service operation is to be rejected the operation will be denied, and provided the transaction is still in progress, an appropriate reject component will be returned in a Facility Information Element.

…

If the served mobile subscriber at provision time has selected the subscription option "control of barring service: by subscriber using password", the supplementary service is deactivated for a basic service if the subscriber has requested deactivation by means of a deactivation procedure for that basic service. The subscriber may use the call barring password at deactivation (see figure 1.3).

...

If the deactivation is successful, the service will be deactivated. The network will then send a return result indicating acceptance of the request. The result is formatted according to the options shown below:

...

If the served mobile subscriber at provision time has selected the subscription option "control of barring service: by service provider", an attempt to deactivate the supplementary service will be denied and the served mobile subscriber receives an error indication (see figure 1.3). Error values are specified in 3GPP TS 24.080.

### 15.8.7.3 Test purpose

1) To check that, when a call transaction is already established, the UE correctly requests the establishment of a parallel MM transaction for supplementary service transaction of a group of call barring services, sending a CM SERVICE REQUEST.

2) To check that the UE sends a REGISTER message containing the invoke of the DeactivateSS operation with the expected parameter values for a group of call barring services.

3) To check that upon receipt of the RELEASE COMPLETE message related to the present SS transaction, the first transaction remains unaffected.

4) To check that upon receipt of the RELEASE COMPLETE message, the UE provides the appropriate user indication (as described by the Manufacturer).

These checks are performed with a call transaction already established for:

BAIC (Barring of all incoming calls), the RELEASE COMPLETE message being sent at the beginning of the procedure with a facility IE containing a return_error(error) where error is "SS subscription violation".

### 15.8.7.4 Method of test

Related ICS/IXIT statements

- support of BAIC supplementary service Yes/No.
- support of FDD Yes/No.

- support of CS speech Yes/No.

Initial conditions

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE is brought into the CC state U10 by using table 10.1.2/3.

Test procedure

The UE is made to initiate a deactivation of barred all incoming calls.

Upon receipt of the operation (in a REGISTER message), the system simulator answers with the RELEASE COMPLETE (PD and TI of the SS transaction) message with the Facility information element containing a Return_error(error: SS subscription violation) of the DeactivateSS operation.

The system simulator then sends STATUS ENQUIRY, and the UE responds with STATUS message indicating CC state U10.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | The UE is made to initiate a deactivation for BAIC (barring of all incoming calls). |
| 2 | -> | | CM SERVICE REQUEST | CM service type: "supplementary service activation" |
| 3 | <- | | CM SERVICE ACCEPT | |
| 4 | -> | | REGISTER | |
| 5 | <- | | RELEASE COMPLETE | DeactivateSS operation Return_error |
| 6 | UE | | | The UE provides an appropriate indication about failure of the supplementary service deactivation |
| 7 | <- | | STATUS ENQUIRY | |
| 8 | -> | | STATUS | CC state U10 |

Specific message contents:

REGISTER (Step 4)

|---|---|
| Cause | Omitted |
| Facility | |
| Invoke ID | Same Invoke ID that has been used in step 4 |
| Error code | SS subscription violation. |

15.8.7.5 Test requirements

1) In Steps 6 the mobile subscriber is notified about the deactivation failure.

## 15.8.8 Rejection after use of password procedure

### 15.8.8.1 Definition

To check that an attempt to deactivate a supplementary service with unsuccessful password procedure will be denied, the served mobile subscriber receives an error indication and the first call transaction remains unaffected.

### 15.8.8.2 Conformance requirement

If the entity that uses the supplementary support procedures wants to send a REGISTER message, the supplementary service support entity shall first request the establishment of an MM-connection.

...

The supplementary service support entity shall send the REGISTER message as the first CM-message on the MM-connection.

…

If (according to the rules specified in 3GPP TS 29.002 [45]) a supplementary service operation is to be rejected the operation will be denied, and provided the transaction is still in progress, an appropriate reject component will be returned in a Facility Information Element.

…

If the served mobile subscriber at provision time has selected the subscription option "control of barring service: by subscriber using password", the supplementary service is deactivated for a basic service if the subscriber has requested deactivation by means of a deactivation procedure for that basic service. The subscriber may use the call barring password at deactivation (see figure 1.3).

...

If the deactivation is successful, the service will be deactivated. The network will then send a return result indicating acceptance of the request. The result is formatted according to the options shown below:

...

If the served mobile subscriber at provision time has selected the subscription option "control of barring service: by service provider", an attempt to deactivate the supplementary service will be denied and the served mobile subscriber receives an error indication (see figure 1.3). Error values are specified in 3GPP TS 24.080.

### 15.8.8.3 Test purpose

1) To check that, when a call transaction is already established, the UE correctly requests the establishment of a parallel MM transaction for supplementary service transaction of a group of call barring services, sending a CM SERVICE REQUEST.

2) To check that the UE sends a REGISTER message containing the invoke of the DeactivateSS operation with the expected parameter values for deactivation of a group of call restriction service.

3) To check that upon receipt of the RELEASE COMPLETE message related to the present SS transaction, the first transaction remains unaffected.

4) To check that upon receipt of the RELEASE COMPLETE message, the UE provides the appropriate user indication (as described by the Manufacturer).

These checks are performed with a call transaction already established for:

BOICExHC, the RELEASE COMPLETE message being sent at the end of the procedure with a facility IE containing a return_error(error) where error is "NegativePasswordCheck".

### 15.8.8.4 Method of test

Related ICS/IXIT statements

Support of BOICExHC supplementary service Yes/No.

Support of FDD Yes/No.

Support of CS speech Yes/No.

Initial conditions

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE is brought into the CC state U10 by using table 10.1.2/3.

Test procedure

The UE is made to initiate a deactivation of a group of call restriction services.

Upon receipt of the REGISTER message, the system simulator answers with the FACILITY message with the Facility information element containing an invoke of the DeactivateSS operation requiring the current password.

If the manufacturer defined MMI has been used to request the deactivation of a group of call restriction services, then the UE may, by means of appropriate manufacturer defined MMI functions, prompt the user to give a password, depending on the implementation of the manufacturer defined MMI functions.

Upon receipt of the FACILITY message, the system simulator sends RELEASE COMPLETE message (PD and TI of the SS transaction) with the Facility information element containing a Return_error(error: NegativePasswordCheck) of the GetPassword operation.

The system simulator then sends STATUS ENQUIRY, and the UE responds with STATUS message indicating CC state U10.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | The UE is made to initiate a deactivation of BoicExHC |
| 2 | -> | | CM SERVICE REQUEST | CM service type: "supplementary service activation" |
| 3 | <- | | CM SERVICE ACCEPT | |
| 4 | -> | | REGISTER | |
| 5 | <- | | FACILITY | Invoke = GetPassword (password) |
| 6 | -> | | FACILITY | *Return result* = GetPassword (<password>) |
| 7 | <- | | RELEASE COMPLETE | *Return error* component with NegativePasswordCheck |
| 8 | UE | | | The UE provides an appropriate indication about failure of the supplementary service deactivation |
| 9 | <- | | STATUS ENQUIRY | |
| 10 | -> | | STATUS | CC state U10 |

Specific message contents:

RELEASE COMPLETE with *Return error* component (Step 7)

| Information Element | Value/remark |
|---|---|
| Cause | Omitted |
| Facility | |
| Invoke ID | Same Invoke ID that has been used in step 4 |
| Error code | NegativePasswordCheck. |

15.8.8.5 Test requirements

1) In Steps 4, 6 and 10 the UE sends the correct message.

2) In step 8 the mobile subscriber is notified about the deactivation failure.

## 15.8.9 Normal operation

### 15.8.9.1 Definition

To check that the UE correctly handles the incoming call barred.

### 15.8.9.2 Conformance requirement

When a barring program relating to incoming calls is active and operative for a basic service, each incoming call set-up related to that basic service and not allowed by the barring program will be refused by the network. In this case a NotifySS operation containing the SS-Status indicating that a barring program relating to incoming calls is currently active and operative will be sent to the calling mobile subscriber in a clearing message.

References

TS 24.088 clause 2.1.

### 15.8.9.3 Test purpose

1) To check that upon receipt of the RELEASE COMPLETE message the UE provides the indication of call not allowed due to active incoming call barring.

### 15.8.9.4 Method of test

Related ICS/IXIT statements

Support of FDD Yes/No.

Support of CS speech Yes/No.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in registered idle state on cell 1.

Test procedure

The UE is made to initiate a call.

Upon receipt of the SETUP message, the system simulator answers with the negative acknowledgement RELEASE COMPLETE (to simulate a case where call barring is activated).

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | The UE is made to initiate a call. |
| 2 | -> | | CM SERVICE REQUEST | CM service type = '**Mobile originating call establishment or packet mode connection establishment**' |
| 2A | <- | | AUTHENTICATION REQUEST | |
| 2B | -> | | AUTHENTICATION RESPONSE | |
| 3 | | | | The SS starts integrity protection. |
| 4 | -> | | SETUP | |
| 5 | <- | | RELEASE COMPLETE | |
| 6 | UE | | | The UE provides indication of call not allowed due to incoming call barring active for the called party. |
| | | SS | | The RRC connection is released by the SS |

Specific message contents:

RELEASE COMPLETE (Step 5)

| Information Element | Value/remark | Condition |
|---|---|---|
| Cause | cause is set to "operator determined barring" | |
| Facility | | |
| Invoke component | | |
| Operation Code | NotifySS | |
| Parameters | | |
| SS-Code | '10011001'B (barring of incoming calls) | |
| SS-Status | | |
| Q bit | "Operative" | |
| P bit | "Provisioned" | |
| R bit | "Registered" | |
| A bit and Q bit | "Active and Operative" | |

#### 15.8.9.5 Test requirements

In Step 2 the UE sends the CM SERVICE REQUEST message with the CM service type 'Mobile originating call establishment or packet mode connection establishment'.

In Step 6 the UE provides the indication of call not allowed due to incoming call barring active for the called party.

# 15.9 USSD

## 15.9.1 ProcessUnstructuredSS-request/accepted

#### 15.9.1.1 Definition

#### 15.9.1.2 Conformance requirements

1) The MS invokes an USSD request by sending a REGISTER message to the network containing a ProcessUnstructuredSS-Request invoke component.

   …

   When the application terminates the dialogue, the network shall clear the transaction by sending a RELEASE COMPLETE message containing a return result component. The MS may also clear the transaction at any time by sending a RELEASE COMPLETE message upon request of the user.

   …

   The MS shall not initiate USSD operations in parallel to any call independent supplementary service transaction. Only one transaction for USSD operations per user is allowed at a time. However, the MS is allowed to initiate USSD operations in parallel to call related transactions.

2) If the user enters an MMI string that, according to TS 22.030 [3], should be treated as USSD, the UE shall send this string to the network using the appropriate operation from TS 24.080 [5].

   The mobile initiated operation shall contain an alphabet indicator and language indicator. The alphabet indicator shall indicate the alphabet used in the operation. The selection of values for these indicators is a matter for the user.

   The UE may initiate an USSD operation either during a call or out of call.

3) For supplementary service procedures independent of any call, the initiating side must establish a MM-connection between the network and the MS according to the rules given in 3GPP TS 24.007 and 3GPP TS 24.008. The call independent supplementary service procedures shall apply to both CS and PS domain for some specific services. On PS domain, a PS-signalling connection shall be established between the network and the MS instead of a MM-connection. Throughout this specification, the term MM-connection is used to denote a MM-connection for CS domain or PS-signalling connection for PS domain, as appropriate. The MS or the

network starts the transaction by transferring a REGISTER message across the radio interface. This transaction is identified by the transaction identifier associated with the REGISTER message, and the Invoke identifier present in the component part of the Facility information element. Following the REGISTER message one or more FACILITY messages may be transmitted, all of them related by the use of the same transaction identifier. If the transaction is no longer used, it shall be released by sending a RELEASE COMPLETE message. This procedure is specified in detail in clause 3, and the text in clause 3 takes precedence over this introduction.

To convey the supplementary service invocation, the Facility information element is used. The Facility information element present either in the REGISTER message or a subsequent message identifies the supplementary service involved and the type of component (i.e. Invoke, Return result, Return error or Reject component).

When the REGISTER or FACILITY message contains a Facility information element and the requested service is available, a FACILITY message containing a Facility information element may be returned. One or more exchanges of FACILITY messages may subsequently occur. To terminate the service interaction and release the transaction identifier value, a RELEASE COMPLETE message is sent as specified for the specific supplementary service procedure. The RELEASE COMPLETE message may also contain the Facility information element.

4) The following sequence of functions shall be used for the control of Supplementary Services:

SELECT: Entry of the procedure information (may be a digit or a sequence of characters).

SEND: Transmission of the information to the network.

INDICATION: Call progress indications.

The UE shall support the MMI procedure specified as:

Activation: *SC*SI#

Deactivation : #SC*SI#

Interrogation : *#SC*SI#

Registration : *SC*SI# and **SC*SI#

Erasure : ##SC*SI#

This structure consists of the following parts:

- Service Code, SC( (2 or 3 digits);
- Supplementary Information, SI (variable length).

The procedure always starts with *, #, **, ## or *# and is finished by #. Each part within the procedure is separated by *.

The service code uniquely specifies the Supplementary Service, either as a defined Supplementary Service or as a spare service code. All spare service codes shall be reserved for future use.

The UE shall determine from the context whether, an entry of a single *, activation or registration was intended.

For example, a call forwarding request with a single * would be interpreted as registration if containing a forwarded-to number, or an activation if not.

The supplementary information (SI) may comprise e.g. a PIN code or Directory Number. Where a particular service request does not require any SI, "*SI" is not entered, e.g. Activation becomes *SC#SEND. Where further supplementary information is required this is again entered as *SI, e.g. *SC*SIA*SIB#SEND. SIB may be used to specify the tele or bearer service expressed as a Basic Service Group to which this supplementary service request applies, SIC may be used to specify the value of the "No Reply Condition Timer".

Use of SIA, SIB, SIC for a particular procedure is optional. The procedure to be adopted where these are not all used is as follows:

*SI# shall be entered in any of the following formats:

* SIA * SIB * SIC #

* SIA * SIB #

* SIA * * SIC #

* SIA #

* * SIb * SIC #

* * SIB #

* * * SIC #

#

The denotation of the Supplementary Information and the order of entry are specified in annex B. Supplementary Information Codes for the Teleservices and Bearer Services are given in annex C.

The following procedures shall be used for application of supplementary services to the call set-up procedure:

*SCn*SI#DN SEND;

where SC is the service code defined in annex B and *SI is an optional field which may be applicable to service SC. The "n" is a single digit used to indicate the numbering plan, profile, priority, etc. according to the service being applied. For simplicity of presentation, the leading * is shown on the assumption that the action is to activate (switch on) the required service. However, for a deactivation (or switch off), this would become:

#SCn*SI#DN SEND;

It is assumed that the *# (interrogation) will not apply to call set-up.

Where more than one supplementary service is applicable to the call set-up, these shall be concatenated with any applicable supplementary information immediately following the applicable service code.

For example, if SCn and SI refer to one applicable supplementary service and scn and si to another, then the generic procedure becomes:

*SCn*SI#scn*si#DN SEND.

NOTE 1: The order of entry of SC and sc is a user option, provided that any supplementary information follows immediately after the relevant SC.

Where SI is not applicable according to the definition of the supplementary service, then *SI is omitted. Where its use is optional, but not selected for a particular call set-up, it may be omitted or entered as an extra * if this is necessary to avoid ambiguity of interpretation.

NOTE 2: By using the # as a separator, most cases are expected to be unambiguous.

5) When the user or the application in the MS makes a request which the MS determines is to make use of USSD, the MS shall set up a transaction to the network, send the request to the MSC and await a response. When the MS receives the response, it shall display the information contained to the user or relay the message to the application in the MS.

While awaiting the response, the MS may receive a network initiated USSD request or notification on the same transaction. If this occurs, the MS shall process that operation (see section 1) and continue to await the response to the mobile initiated request.

If, when the MS determines that a user request is to make use of USSD, the MS is already involved in a USSD or a non-call related supplementary service transaction, the MS shall reject the request.

### 15.9.1.3 Test Purpose

1) To verify that the mobile station invokes an USSD request by sending a REGISTER message to the network containing a ProcessUnstructuredSS-Request invoke component. This message will contain the alphabet indicator set to "SMS default alphabet" and the language indicator set to "language unspecified". The ussd-string parameter shall contain the following digits and symbols depending on the operation initiated:

| | |
|---|---|
| Activation | *NN(N)# (no supplementary information included) |
| | *NN(N)*SI# (one field of supplementary information included) |
| | *NN(N)*SIA*SIB# (two fields of supplementary information included) |
| Deactivation | #NN(N)# |
| | #NN(N)*SI# |
| | #NN(N)*SIA*SIB# |
| Interrogation | *#NN(N)# |
| | *#NN(N)*SI# |
| | *#NN(N)*SIA*SIB# |
| Registration | **NN(N)# |
| | **NN(N)*SI# |
| | **NN(N)*SIA*SIB# |
| Erasure | ##NN(N)# |
| | ##NN(N)*SI# |
| | ##NN(N)*SIA*SIB# |
| Operations not yet | see 2) |
| defined in 3GPP TS 22.030 | |

NN(N) features a set of service codes which have not yet been allocated for GSM supplementary services (see GSM 02.30 for service codes already specified).

N is a digit within 1..9 and SI, SIA, SIB strings of characters.

2) To check that the entry of 1 or 2 characters defined in the 3GPP TS 23.038 default alphabet followed by "SEND" shall be interpreted by the UE as an USSD request unless the UE is not engaged in a call and the first of the two character entry followed by "SEND" is a "1".

3) To verify that, for supplementary service procedures independent of any call, the initiating side must establish a MM-connection between the network and the mobile station according to the rules given in 3GPP TS 24.007 and 3GPP TS 24.008.

4) To verify that, within a call the UE shall transmit a USSD request if any. See 3GPP TS 24.007 and 3GPP TS 24.008 for the handling of multiple MM connections.

5) To check that upon receipt of the RELEASE COMPLETE message, the UE shall display the information contained to the user in a way described by the manufacturer.

#### 15.9.1.4 Method of test

##### Related PICS/PIXIT Statements

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of USSD Yes/No.

Description of the user's commands and of display of USSD.

##### Initial Conditions

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE is in the MM-state "idle updated".

##### Test Procedure

By means of appropriate user action the mobile is made to initiate an Unstructured SS data operation. The mobile first establishes a MM-connection with the SS, and sends a REGISTER message. Upon receipt of this message, the system simulator answers with the RELEASE COMPLETE message.

The mobile station is triggered to originate a call. After the UE has sent a CONNECT ACKNOWLEDGE, the mobile is triggered to initiate an Unstructured SS data operation. Then a REGISTER message is sent to the SS. Upon receipt of this message, the system simulator answers with the RELEASE COMPLETE message. Finally, the main signalling link is released by transferring a RELEASE COMPLETE message to the UE.

Expected Sequence

The sequence is executed for execution counters c=1,..,17.

Counter c determines the ussd-string selected by the user and sent by the UE (see specific message contents concerning the REGISTER message).

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | UE is triggered to initiate the unstructured SS data operation.<br>The SS verifies that the IE “Establishment cause” in the received RRC CONNECTION REQUEST message is set to “Originating High Priority Signalling”. |

RELEASE COMPLETE (steps 7 and 27)

| Contents | Value/remark |
|---|---|
| Protocol Discriminator | set to "Supplementary service (call independent)" |
| Transaction identifier | the transaction value is the same as REGISTER transaction value but the transaction flag is different |
| Release Complete message type | '00101010'B |
| Cause | Omitted |
| Facility Information Element | See below |

Facility information element with Return Result = ProcessUnstructuredSS-Request component type as defined in GSM 04.80 section 3.6.1 table 3.4.

| Contents | Value/remark |
|---|---|
| Facility IE identifier | '00011100'B |
| Length of IE contents | |
| Component type tag | '10100001'B |
| Component length | depending on the length of the ussd-string |
| Invoke ID tag | '00000010'B |
| Invoke ID length | 1 |
| Invoke ID | The same as the invoke of the ProcessUnstructuredSS-Request |
| Operation Code tag | '00000010'B |
| Operation Code length | 1 |
| Operation Code | ProcessUnstructuredSS-Request |
| ussd-dataCodingScheme | 1 octet long. Alphabet indicator set to "default alphabet" Language indicator set to "undefined" |
| ussd-string | chosen at random |

RELEASE COMPLETE (Step 32)

| Contents | Value/remark |
|---|---|
| Protocol Discriminator | set to "**call control; call related SS messages**" |
| Transaction identifier | Same as current call. |
| Release Complete message type | '00101010'B |

#### 15.9.1.5 Test requirements

1) At steps 6 and 26, the UE shall send a REGISTER message with the Invoke component ProcessUnstructuredSS-Request.

2) At steps 9 and 29, the UE shall send display the ussd string to the user.

3) At step 24, the UE shall send a CM SERVICE REQUEST message with the service type "Supplementary service activation".

## 15.9.2 ProcessUnstructuredSS-request/cross phase compatibility and error handling

#### 15.9.2.1 Definition

#### 15.9.2.2 Conformance requirements

1) If a mobile initiated USSD request using protocol version 2 is rejected by the network, and the reason for the rejection is indicated either by the problem code "unrecognized operation" or a cause "Facility rejected", the MS shall assume that the network only supports protocol version 1 of USSD operations. The MS shall re-attempt the request by using the appropriate protocol version 1 USSD operation without a SS version indicator if the unstructured data entered by the user can be coded as an IA5 string.

2) Upon receipt of the RELEASE COMPLETE message, the UE shall provide the appropriate user indication (which is to be described by the manufacturer). If ussd-String information is included this shall be given to the user (in a way described by the manufacturer).

References

Conformance requirement1: 3GPP TS 24.090 subclause 6.2.1.

Conformance requirement2: 3GPP TS 23.090.

#### 15.9.2.3 Test purpose

1) To verify that If a mobile initiated USSD request using protocol version 2 is rejected by the network, and the reason for the rejection is indicated either by the problem code "unrecognized operation" or a cause "facility rejected", the mobile station shall assume that the network only supports protocol version 1 of USSD operations. The mobile station shall re-attempt the request by using the appropriate protocol version 1 USSD operation without a SS version indicator if the unstructured data entered by the user can be coded as an IA5 string.

2) To check that, upon receipt of the RELEASE COMPLETE message, the UE shall provide the appropriate user indication (which is to be described by the manufacturer). If ussd-String information is included this shall be given to the user (in a way described by the manufacturer).

#### 15.9.2.4 Method of test

##### Initial Conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The UE is in the MM-state "idle updated".

##### Foreseen final state of the UE

MM-state "idle updated".

##### Related ICS/IXIT Statements

- Support of FDD Yes/No.
- Support of CS speech Yes/No.
- Support of USSD.
- Description of the user's commands and of display of USSD.
- Full rate supported.
- Supported teleservices.
- Support of active state of the call control protocol (U10).

##### Test Procedure

With appropriate MMI or AT command, UE is triggered to activate an USSD service. The mobile first establishes a MM-connection with the SS. Then, a REGISTER message is sent to the SS. Upon receipt of this message, the system simulator answers with the RELEASE COMPLETE message with the problem code set to "unrecognized operation", the RRC signalling connection is released. Then the SS checks that the UE re-establishes a MM-connection and re-attempts the request by using a REGISTER message containing an invoke of the ProcessUnstructuredData operation. The SS answers with a normal RELEASE COMPLETE to terminate the transaction. Finally the signalling link is released.

With appropriate MMI or AT command, UE is triggered to activate an USSD service. The mobile first establishes a MM-connection with the SS. Then, a REGISTER message is sent to the SS. Upon receipt of this message, the system simulator answers with the RELEASE COMPLETE message with the cause element set to "Facility rejected", the main signalling link is released. Then the SS checks that the UE re-establishes a MM-connection and re-attempts the request by using a REGISTER message containing an invoke of the ProcessUnstructuredData operation. Then the SS answers with a normal RELEASE COMPLETE to terminate the transaction. Finally the signalling link is released.

The mobile station is forced to originate a call. After the UE has sent a CONNECT ACKNOWLEDGE, With appropriate MMI or AT command, UE is triggered to activate an USSD service. A REGISTER message is sent to the SS. Upon receipt of this message, the system simulator answers with the RELEASE COMPLETE message containing a return error with an error or a reject with a problem. Then the radio link is release by transferring to the UE a RRC CONNECTION RELEASE message. This subtest is repeated with different errors and problems in the RELEASE COMPLETE message.

Expected Sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | Trigger UE to initiate the ProcessUnstructuredSS-Request undefined supplementary service operation using appropriate MMI or AT commands |
| 2 | | SS | | The SS verifies that the IE “Establishment cause” in the received RRC CONNECTION REQUEST message is set to “Originating High Priority Signalling”. |
| 3 | --> | | CM SERVICE REQUEST | "Supplementary service activation". |
| 3A | <- | | AUTHENTICATION REQUEST | |
| 3B | -> | | AUTHENTICATION RESPONSE | |
| 4 | | SS | | The SS starts integrity protection. |
| 5 | --> | | REGISTER | Operation code set to "ProcessUnstructuredSS-Request" |
| 6 | <-- | | RELEASE COMPLETE | Reject - Unrecognized operation |
| 7 | | SS | | The SS releases the RRC connection. |
| 8 | | SS | | The SS verifies that the IE “Establishment cause” in the received RRC CONNECTION REQUEST message is set to “Originating High Priority Signalling”. |
| 9 | --> | | CM SERVICE REQUEST | "Supplementary service activation". |
| 10 | | SS | | The SS starts integrity protection. |
| 11 | --> | | REGISTER | Operation code set to "ProcessUnstructuredSS-Data" |
| 12 | <-- | | RELEASE COMPLETE | normal release of the transaction |
| 13 | | SS | | The SS releases the RRC connection. |
| 14 | | SS | | It is checked that the ussd string is displayed by the UE using appropriate user action |
| 15 | | SS | | Trigger UE to initiate the ProcessUnstructuredSS-Request undefined supplementary service operation using appropriate MMI or AT commands |
| 16 | | SS | | The SS verifies that the IE “Establishment cause” in the received RRC CONNECTION REQUEST message is set to “Originating High Priority Signalling”. |
| 17 | --> | | CM SERVICE REQUEST | "Supplementary service activation". |
| 18 | | SS | | The SS starts integrity protection. |
| 19 | --> | | REGISTER | Operation code set to "ProcessUnstructuredSS-Request" |
| 20 | <-- | | RELEASE COMPLETE | |
| 21 | | SS | | The SS releases the RRC connection. |
| 22 | | SS | | The SS verifies that the IE “Establishment cause” in the received RRC CONNECTION REQUEST message is set to “Originating High Priority Signalling”. |
| 23 | --> | | CM SERVICE REQUEST | "Supplementary service activation". |
| 24 | | SS | | The SS starts integrity protection. |
| 25 | --> | | REGISTER | Operation code set to "ProcessUnstructuredSS-Data" |
| 26 | <-- | | RELEASE COMPLETE | normal release of the transaction |
| 27 | | SS | | The SS releases the RRC connection. |
| 28 | | SS | | It is checked that the ussd string is displayed by the UE using appropriate user action |
| 29 | | | | For k=1 to 10, go through steps 30 to 39. Counter k deals with different kinds of general and invoke problems in step 35. |
| 30 | UE | | | The UE is brought to CC state U10 by initiating a Mobile originating speech call |

| | | | |
|---|---|---|---|
| 31 | | | Trigger UE to initiate the ProcessUnstructuredSS-Request undefined supplementary service operation using appropriate MMI or AT commands |
| 32 | --> | CM SERVICE REQUEST | "Supplementary service activation". |
| 33 | <-- | CM SERVICE ACCEPT | |
| 34 | --> | REGISTER | The operation code is set to "ProcessUnstructuredSS-Request". |
| 35 | <-- | RELEASE COMPLETE | different errors and problems are sent. See specific message contents iiib) and iiic). |
| 36 | <-- | DISCONNECT | Disconnect CC call |
| 37 | --> | RELEASE | CC |
| 38 | <-- | RELEASE COMPLETE | CC |
| 39 | SS | | The SS releases the RRC connection |

Specific message contents.

#### 15.9.2.5 Test requirements

1) At steps 11 and 25, the UE shall send a REGISTER message with the Invoke component “ProcessUnstructuredSS-Data”.

2) At step 34, the UE shall send a REGISTER message with the Invoke component operation code is set to "ProcessUnstructuredSS-Request".

### 15.9.3 UnstructuredSS-Notify/accepted

#### 15.9.3.1 Definition

#### 15.9.3.2 Conformance requirements

1) The network invokes an USSD notification by sending a REGISTER message to the MS containing a UnstructuredSS-Notify invoke component.

   The MS shall acknowledge the operation by sending a FACILITY message containing an empty result component to the network. The application may either continue or terminate the dialogue.

   When the application continues the dialogue, it may initiate another USSD operation by sending a FACILITY message (see figure 5.4). The operation may either be an USSD request (see subclause 5.1.1) or notification.

   When the application terminates the dialogue, the network shall clear the transaction by sending a RELEASE COMPLETE message. The MS may also clear the transaction at any time by sending a RELEASE COMPLETE message upon request of the user.

   If the MS is unable to process the request received from the network, it shall return an error indication by sending a FACILITY message containing a return error component. Error values are specified in 3GPP TS 24.080.

   When the MS receives an USSD operation in parallel to any call independent supplementary service transaction, it shall respond with a return error component in a RELEASE COMPLETE message, containing the "USSD-Busy" error as specified in 3GPP TS 24.080, to indicate the failure in handling a parallel USSD operation. However, the network is allowed to initiate USSD operations in parallel to call related transactions.

2) The UE shall include alphabet and language indicators in the response to the network (if any).

3) At any stage while the UE is registered with a network, the network may send an unstructured string to the UE. This string contains operator determined information that is relevant to the user. If the network is unable to successfully reach the UE, then an error shall be returned to the node that originated the operation.

   The network initiated USSD operation shall contain an alphabet indicator and language indicator. The alphabet indicator shall indicate the alphabet used in the operation. The selection of values for these indicators is a matter for the network operator.

TS 24.090 subclause 5.2.1.

TS 22.090 subclause 5.2.2.

TS 22.090 subclause 5.2.1.

#### 15.9.3.3 Test purpose

1) To verify that for a USSD notification, the MS shall display the text provided and await user input. If the user enters a response, the MS shall acknowledge the operation by sending a FACILITY message containing an empty result component to the network.

2) To verify that the MS shall include alphabet and language indicators in the response to the network. The alphabet indicator shall indicate "SMS default alphabet". The language indicator shall indicate "language unspecified".

3) To check that the MS shall be able to process the operation during a call or out of a call.

#### 15.9.3.4 Method of test

##### Initial Conditions

System Simulator:

1 cell, default parameters.

Use Equipment:

The UE is in the MM-state "idle updated".

##### Related PICS/PIXIT Statements

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of USSD Yes/No.

##### Test Procedure

- The UE is paged and a RR-connection is established. Then, the SS sends a REGISTER message containing a facility information element with operation code set to ProcessUnstructuredSS-Notify. The user checks that the ussd string sent by the SS is correctly displayed by the UE. The UE has to send a FACILITY message with an empty return result component.

- Then the SS originates a call to the UE. When the UE is in the U10 state, the SS releases the transaction identifier concerning USSD transaction by sending a RELEASE COMPLETE. The SS initiates a new ussd transaction by sending a REGISTER message containing a facility information element with operation code set to UnstructuredSS-Notify. The user checks that the ussd string sent by the SS is correctly displayed by the UE. The UE has to send a FACILITY message with an empty return result component. Finally the SS releases both MM connections and the radio link.

Expected Sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS 34.108. The IE “Paging cause” in the PAGING TYPE 1 message is set to “Terminating Low Priority Signalling”. The SS verifies that the IE “Establishment cause” in the received RRC CONNECTION REQUEST message is set to “Terminating Low Priority Signalling”. |
| 2 | -> | | PAGING RESPONSE | |
| 3 | <-- | | AUTHENTICATION REQUEST | |
| 4 | --> | | AUTHENTICATION RESPONSE | |
| 5 | SS | | | The SS starts integrity protection |
| 6 | <-- | | REGISTER | initiation of the transaction concerning the USSD notification operation |
| 7 | | | Void | |
| 8 | --> | | FACILITY | signalling message sent by the UE as the response |
| 8a | UE | | | Check that the UE displays the USSD string sent from the network |
| 9 | <-- | | SETUP | Incoming call. |
| 10 | --> | | CALL CONFIRMED | |
| 11 | --> | | ALERTING | |
| 11A | UE | | | Call is answered using suitable user action |
| 12 | --> | | CONNECT | |
| 13 | <-- | | CONNECT ACKNOWLEDGE | |
| 14 | <-- | | RELEASE COMPLETE | This message releases the transaction concerning the USSD operation. |
| 15 | <-- | | REGISTER | Initiation of a USSD request operation during a call. |
| 16 | | | Void | |
| 17 | --> | | FACILITY | |
| 17a | UE | | | Check that the UE displays the USSD string received from the SS. |
| 18 | <-- | | RELEASE COMPLETE | It releases the transaction identifier of the ussd operation. |
| 19 | <-- | | DISCONNECT | |
| 20 | --> | | RELEASE | |
| 21 | <-- | | RELEASE COMPLETE | |

#### 15.9.3.5 Test requirements

At steps 8 and 17 the UE shall send a FACILITY message with an empty return result.

## 15.9.4 UnstructuredSS-Notify/rejected on user busy

### 15.9.4.1 Definition

### 15.9.4.2 Conformance requirement

1) When the MS receives an USSD operation in parallel to any call independent supplementary service transaction, it shall respond with a return error component in a RELEASE COMPLETE message, containing the "USSD-Busy" error as specified in 3GPP TS 24.080, to indicate the failure in handling a parallel USSD operation. However, the network is allowed to initiate USSD operations in parallel to call related transactions.

References

3GPP TS 24.090 subclause 5.1.1.

### 15.9.4.3 Test purpose

1) To verify that when the mobile receives an USSD operation in parallel to any call independent supplementary transaction, it responds with a return error component in a RELEASE COMPLETE message, containing the "USSD-Busy" error.

### 15.9.4.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in MM-state "Idle, updated".

Related ICS/IXIT Statements

- Support of FDD Yes/No.
- Support of CS speech Yes/No
- Support of USSD.
- Description of the user's commands and of display of USSD.
- Full rate supported.
- Supported teleservices.
- Support of active state of the call control protocol (U10).

Test procedure

The UE is paged and an RRC signalling connection is established. Then, the SS sends a REGISTER message containing a facility information element with operation code set to UnstructuredSS-Notify. The SS initiates another USSD transaction by sending a REGISTER message with transaction identifier different form the previous one. The SS checks that the UE answers with a RELEASE COMPLETE message with an error component set to "USSD busy". Then the SS releases the signalling connection.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | <- | PAGING TYPE 1 | Mobile identity = TMSI-1<br>Paging order is for CS services.<br>Paging cause = "terminatingLowPrioritySignalling" |
| 2 | | SS | | SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Terminating Low Priority Signalling". |
| 3 | | -> | PAGING RESPONSE | |
| 3A | | <- | AUTHENTICATION REQUEST | |
| 3B | | -> | AUTHENTICATION RESPONSE | |
| 4 | | SS | | The SS starts integrity protection. |
| 5 | | <- | REGISTER | Initiation of the transaction concerning the USSD notification operation. |
| 6 | | | Void | |
| 7 | | -> | FACILITY | |
| 7a | | UE | | Checks that the ussd-string sent by the SS is correctly displayed by the UE |
| 8 | | <- | REGISTER | Initiation of another USSD notification. The transaction identifier is different from that in step 5 |
| 9 | | -> | RELEASE COMPLETE | Return error set to "USSD busy". Transaction initiated in step 8 by the network is rejected by the UE. |
| 10 | | <- | RELEASE COMPLETE | normal release of transaction initiated in step 5. |
| 11 | | SS | | SS releases the RRC connection |

Specific message contents.

| InvokeID tag | From 3GPP TS 24.080 |
| Invoke ID length | 1 |
| Invoke ID | Arbitrary (1 octet) |
| Operation Code tag | From 3GPP TS 24.080 |
| Operation Code length | 1 |
| Operation Code | UnstructuredSS-Notify |
| ussd-dataCodingScheme | 1 octet long. Alphabet indicator set to "default alphabet".<br>Language indicator set to "undefined" |
| ussd-string | arbitrary chosen by the SS |

Facility (step 7)

| Contents | Value/remark |
|---|---|
| Protocol Discriminator | set to "Supplementary service (call independent)" |
| Transaction identifier | the transaction value is the same as REGISTER transaction value but the transaction flag is different |
| Facility message type | As 3GPP TS 24.080 |
| Facility Information Element | |
| Facility IE identifier | As 3GPP TS 24.008 |
| Length of FIE contents | |
| Component type tag | Return Result from 3GPP TS 24.080 |
| Component length | |
| InvokeID tag | From 3GPP TS 24.080 |
| Invoke ID length | 1 |
| Invoke ID | The same as the invoke of the UnstructuredSS-Notify |

RELEASE COMPLETE (step 9)

| Contents | Value/remark |
|---|---|
| Protocol Discriminator | Set to "Supplementary service (call independent)" |
| Transaction identifier | Same as REGISTER (step 8) transaction value but the transaction flag is different. |
| Release complete message type | As 3GPP TS 24.080 |
| Facility Information Element | |
| Facility IE identifier | As 3GPP TS 04.08 |
| Length of FIE contents | |
| Component type tag | Return Error from 3GPP TS 24.080 |
| Component length | |
| InvokeID tag | From 3GPP TS 24.080 |
| Invoke ID length | 1 |
| Invoke ID | The same as the invoke of the UnstructuredSS-Notify in step 8 |
| Error Code tag | As 3GPP TS 24.080 |
| Error Code length | |
| Error Code | USSD Busy |

#### 15.9.4.5 Test requirements

In step 9 the UE sends RELEASE COMPLETE with Return error set to "USSD busy".

## 15.9.5 UnstructuredSS-Request/accepted

### 15.9.5.1 Definition

### 15.9.5.2 Conformance requirement

1) For a USSD request, the MS shall display the text provided and await user input. If the user enters a response, the MS shall return the response to the network, maintaining the transaction.

2) The MS shall include alphabet and language indicators in the response to the network. The alphabet indicator shall indicate "SMS default alphabet". The language indicator shall indicate "language unspecified".

3) At any stage while the MS is registered with a network, the network may send an unstructured string to the MS. So, the MS shall be able to process the operation during a call or out of a call.

References

Conformance requirement 1: 3GPP TS 23.090 subclause 5.2.5.

Conformance requirement 2: 3GPP TS 22.090 subclause 4.2.2.

Conformance requirement 3: 3GPP TS 22.090 subclause 4.2.1.

#### 15.9.5.3 Test purpose

1) To test that, for a USSD request, the UE shall display the text provided and await user input. if the user enters a response, the UE shall return the response to the network, maintaining the transaction.

2) To verify that the UE shall include alphabet and language indicators in the response to the network. The alphabet indicator shall indicate "SMS default alphabet". The language indicator shall indicate "language unspecified".

3) To check that the UE shall be able to process the operation during a call or out of a call.

#### 15.9.5.4 Method of test

##### Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in MM-state "Idle, updated".

##### Related ICS/IXIT Statements

- Support of FDD Yes/No.
- Support of CS speech Yes/No
- Support of USSD.
- Full rate supported.
- Supported teleservices.
- Support of active state of the call control protocol (U10).

##### Test procedure

- The UE is paged and the RRC connection is established. Then, the SS sends a REGISTER message containing a facility information element with operation code set to ProcessUnstructuredSS-Request. The user checks that the ussd string sent by the SS is correctly displayed by the UE and answers the request using appropriate MMI/AT commands. Then the UE sends a FACILITY message with ussd string exactly containing the digits and symbols contained in AT/MMI commands.
- Then the SS originates a call to the UE. When the UE is in the U10 state, the SS releases the transaction identifier concerning USSD transaction by sending a RELEASE COMPLETE. The SS initiates a new ussd transaction by sending a REGISTER message containing a facility information element with operation code set to UnstructuredSS-Request. The user checks that the ussd string sent by the SS is correctly displayed by the UE and answers the request using appropriate MMI/AT commands. Then the UE has to send a FACILITY message with ussd string exactly containing the digits and symbols expressed on the mobile equipment keypad. Finally the SS releases both MM connections and the radio link.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | <- | | PAGING TYPE 1 | Mobile identity = TMSI-1<br>Paging order is for CS services.<br>Paging cause = "terminatingLowPrioritySignalling" |
| 2 | SS | | | SS checks that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Terminating Low Priority Signalling". |
| 3 | -> | | PAGING RESPONSE | |
| 3A | <- | | AUTHENTICATION REQUEST | |
| 3B | -> | | AUTHENTICATION RESPONSE | |
| 4 | SS | | | The SS starts integrity protection. |
| 5 | <- | | REGISTER | Initiation of the transaction concerning the USSD notification operation. |
| 6 | SS | | | The UE has to display the USSD string received from the SS.<br>Trigger UE to answer using appropriate MMI/AT commands. |
| 7 | -> | | FACILITY | Return Result |
| 8 | <- | | SETUP | Incoming call |
| 9 | --> | | CALL CONFIRMED | |
| 10 | --> | | ALERTING | |
| 11 | --> | | CONNECT | |
| 12 | <-- | | CONNECT ACKNOWLEDGE | |
| 13 | <-- | | RELEASE COMPLETE | This message releases the transaction concerning the USSD operation. |
| 14 | <-- | | REGISTER | initiation of a USSD request operation during a call. |
| 15 | SS | | | Check that the UE displays the USSD string received from the SS.<br>Trigger UE to answer using appropriate MMI/AT commands. |
| 16 | --> | | FACILITY | Return Result |
| 17 | <-- | | RELEASE COMPLETE | It releases the transaction identifier concerning the ussd operation. |
| 18 | <-- | | DISCONNECT | CC call |
| 19 | --> | | RELEASE | CC call |
| 20 | <-- | | RELEASE COMPLETE | |
| 21 | SS | | | SS releases the RRC connection |

Specific message contents.

REGISTER (steps 5 and 14)

| Contents | Value/remark |
|---|---|
| Protocol Discriminator | set to "Supplementary service (call independent)" |
| Transaction identifier | |
| Register message type | As 3GPP TS 24.080 |
| Facility Information Element | |
| Facility IE identifier | As 3GPP TS 24.080 / 3GPP TS 24.008 |
| Length of FIE contents | |
| Component type tag | Invoke from 3GPP TS 24.080 |
| Component length | depending on the length of ussd-string |
| InvokeID tag | From 3GPP TS 24.080 |
| Invoke ID length | 1 |
| Invoke ID | Arbitrary (1 octet) |
| Operation Code tag | From 3GPP TS 24.080 |
| Operation Code length | 1 |
| Operation Code | UnstructuredSS-Request |
| ussd-dataCodingScheme | 1 octet long. Alphabet indicator set to "default alphabet".<br>Language indicator set to "undefined" |
| ussd-string | arbitrary chosen by the SS |

FACILITY (Steps 7 and 16)

| Contents | Value/remark |
|---|---|
| Protocol Discriminator | set to "Supplementary service (call independent)" |
| Transaction identifier | the transaction identifier value is the same as REGISTER transaction value but the transaction flag is different. |
| Facility message type | As 3GPP TS 24.080 |
| Facility Information Element | |
| Facility IE identifier | As 3GPP TS 24.080 / 3GPP TS 24.008 |
| Length of FIE contents | |
| Component type tag | Return Result from 3GPP TS 24.080 |
| Component length | depending on the length of ussd-string |
| InvokeID tag | From 3GPP TS 24.080 |
| Invoke ID length | 1 |
| Invoke ID | The same as the invoke of the UnstructuredSS-Request |
| Sequence tag | |
| Sequence length | |
| Operation Code tag | From 3GPP TS 24.080 |
| Operation Code length | 1 |
| Operation Code | UnstructuredSS-Request |
| ussd-dataCodingScheme | 1 octet long. Alphabet indicator set to "default alphabet". Language indicator set to "undefined" |
| ussd-string | contains exactly the digits and symbols expressed on the mobile equipment keypad. |

RELEASE COMPLETE (steps 13 and 17)

| Contents | Value/remark |
|---|---|
| Protocol Discriminator | set to "Supplementary service (call independent)" |
| Transaction identifier | same as REGISTER transaction identifier |
| Release Complete message type | As 3GPP TS 24.080 |
| Facility Information Element | omitted |

#### 15.9.5.5 Test requirements

In steps 6 and 15, the UE shall display the received USSD string.

In steps 7 and 16, UE shall send the FACILITY message with the return result component.

## 15.9.6 MMI input for USSD

### 15.9.6.1 Definition

### 15.9.6.2 Conformance requirements

The UE shall act in accordance with figure 3.5.3.2 when digits are entered to the UE to determine whether to interpret these as call set-up requests or supplementary service control procedures etc. This may involve a mechanism, referred to as Unstructured SS Data, which allows the support of SS services which are not implemented by means of the specified functional signalling. See also 3GPP TS 22.090 [7].

…

The following definitions are applicable to the interpretation of figure 3.5.3.2:

1) In a call:

   A UE is "in a call" from the time that signalling related to the establishment or attempted establishment of a MO or MT call commences and before the call or call attempt ends, and (if applicable) the ME has stopped generating tones related to this call to the user.

2) UE manufacturer defined procedure:

   The term "UE manufacturer defined procedure" shall not include the following two cases:

(i) input which can be interpreted as being of the following form, whether or not in a call:

CX [string]# followed by SEND;

where

string is any combination of numeric digits, *, #;

and

C comprises 1, 2 or 3 digits from the set (*,#);

and

X comprises 1, 2 or 3 numeric digits or the fourth numeric digit is non-zero;

(ii) input of the following form in a call (as defined above):

"Entry of 1 or 2 characters defined in the 3GPP TS 23.038 [8] Default Alphabet followed by SEND".

3) #-string:

Input of the form.

"Entry of any characters defined in the 3GPP TS 23.038 [8] Default Alphabet (up to the maximum defined in 3GPP TS 24.080 [10]), followed by #SEND".

4) Short string:

"Entry of 1 or 2 characters defined in the 3GPP TS 23.038 [8] Default Alphabet followed by SEND".

5) Call setup string:

MMI input in accordance with the call set-up procedures as defined in 3GPP TS 24.008 [9] and terminated by SEND.

References

3GPP TS 22.030 subclause 6.5.3.2.

### 15.9.6.3 Test purpose

To check that the entry of 2 digits in the form 1X (X in the set 0,...9) followed by SEND is accepted by the mobile station in idle mode as a normal call establishment for the 1X number.

### 15.9.6.4 Method of test

Initial conditions

- System Simulator:
  - one cell, default parameters.
- User Equipment:
  - the UE has valid TMSI (= TMSI1), CKSN, CK, IK. It is "idle updated"

Related ICS/IXIT statement(s)

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of USSD Yes/No.

Support of MO circuit switched basic service Yes/No.

Test Procedure

The user requests call establishment with 2 digit phone number of the 1X form (X in the set 0,...9) followed by SEND. The UE request a MM-connection, sends CM SERVICE REQUEST message, the SS performs authentication and starts integrity. The UE then sends the SETUP message containing the '1X 'phone number as called number (after having received the CM SERVICE ACCEPT message).

The procedure is executed 10 times with different phone number.

Expected Sequence

The following sequence is executed for execution counter k = 1 to 10.

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| | | | | |
| 1 | UE | | | The MS is made to initiate call establishment for phone number 1X (where X = k-1) |
| 2 | SS | | | The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Originating Conversational Call" |
| 3 | -> | | CM SEVICE REQUEST | "Mobile originating call establishment" |
| 4 | <- | | AUTHENTICATION REQUEST | |
| 5 | -> | | AUTHENTICATION RESPONSE | |
| 6 | SS | | | The SS starts integrity protection |
| 7 | -> | | SETUP | Called number set to '1X ' |
| 8 | <- | | RELEASE COMPLETE | |
| 9 | SS | | | SS releases the RRC connection |
| 10 | SS | | | Wait for 10 seconds and repeat steps 1 to 10 until k=10 |

Specific message contents.

None.

15.9.6.5 Test requirements

At step 7 the UE shall send a SETUP message specifying the Called party BCD number that was entered into the UE.

# 15.10 Explicit Call Transfer (ECT)

## 15.10.1 Explicit Call Transfer invocation, successful case, both calls active, clearing using DISCONNECT

15.10.1.1 Definition

15.10.1.2 Conformance requirement

The Mobile Station (MS) invokes the service by sending a FACILITY message to the network containing the ECT request (ECT request). This ECT request indicates to the network that the mobile subscriber wishes the two calls to be connected together. The MS shall not change the basic call state or the auxiliary state of either call when sending ECT request.

the call control entity of the network shall initiate clearing by: sending a DISCONNECT message; and entering the "disconnect indication" state. The DISCONNECT message is a local invitation to clear the call.

References:

3GPP TS 24.091 sub clauses 4.1 and 4.2.

3GPP TS 24.008 sub clause 5.4.4

15.10.1.3 Test purpose

To test that the UE invokes explicit call transfer between two active calls by sending a FACILITY message with the correct invoke component, and reacts correctly on receipt of a DISCONNECT response from the network.

15.10.1.4 Method of test

Related ICS/IXIT Statements

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of Explicit Call Transfer service Yes/No.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE shall have Call A-B in state U10 "Active" with auxiliary state "Call held" and Call A-C in state U10 "Active" with no auxiliary state as specified in TS 34.108 clause 7.2.3.3.1.4.

The CM Service Type used by the UE upon initiation of Call A-C shall be “MO Call or packet mode connection establishment”.

Test Procedure

The UE is triggered to invoke an explicit call transfer between the two calls. The UE shall send a FACILITY message with a transaction identifier for either call A-B or call A-C and containing an ExplicitCT invoke component. The call state of both calls shall be unchanged. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

On receipt of a DISCONNECT message with respect to one of the calls containing a return result component, followed by a DISCONNECT message for the other call, the UE shall respond with a RELEASE message for each call. On receipt of a RELEASE COMPLETE message for each call, the UE shall enter state U0 "Null". The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a RELEASE COMPLETE message with cause #81 "invalid transaction identifier value".

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | SS | | UE is triggered to perform an explicit call transfer |
| 2 | → | | FACILITY | TI for Call A-B or Call A-C |
| 3 | ← | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 4 | → | | STATUS | Transaction identifier of Call A-B |
| 5 | ← | | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 6 | → | | STATUS | Transaction identifier of Call A-C |
| 7 | ← | | DISCONNECT | Transaction identifier of Call A-B (explicitCT operation Return result) |
| 8 | → | | RELEASE | Transaction identifier of Call A-B |
| 9 | ← | | DISCONNECT | Transaction identifier of Call A-C |
| 10 | → | | RELEASE | Transaction identifier of Call A-C |
| 11 | ← | | RELEASE COMPLETE | Transaction identifier of Call A-B |
| 12 | ← | | RELEASE COMPLETE | Transaction identifier of Call A-C |
| 13 | ← | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 14 | → | | RELEASE COMPLETE | Transaction identifier of Call A-B |
| 15 | ← | | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 16 | → | | RELEASE COMPLETE | Transaction identifier of Call A-C |

15.10.1.5 Test requirement

In Step 2, UE sends the FACILITY message with correct *Invoke* component.

In Step 4, UE sends the STATUS message with the correct Call state and Auxiliary state.

In Step 6, UE sends the STATUS message with the correct Call state.

In Step 14, UE sends the RELEASE COMPLETE message with the correct Cause.

In Step 16, UE sends the RELEASE COMPLETE message with the correct Cause.

## 15.10.2 Explicit Call Transfer invocation, successful case, both calls active, clearing using RELEASE

### 15.10.2.1 Definition

### 15.10.2.2 Conformance requirement

The Mobile Station (MS) invokes the service by sending a FACILITY message to the network containing the ECT request (ECT request). This ECT request indicates to the network that the mobile subscriber wishes the two calls to be connected together. The MS shall not change the basic call state or the auxiliary state of either call when sending ECT request.

The call control entity of the mobile station in any state except the "null" state and the "release request" state, shall, upon receipt of a RELEASE message: stop all running call control timers; send a RELEASE COMPLETE message; release the MM connection; and return to the "null" state.

3GPP TS 24.091 subclauses 4.1 and 4.2.

3GPP TS 24.008 sub clause 5.4.3.3

### 15.10.2.3 Test purpose

To test that the UE invokes explicit call transfer between two active calls by sending a FACILITY message with the correct invoke component, and reacts correctly on receipt of a RELEASE response from the network.

### 15.10.2.4 Method of test

#### Related ICS/IXIT Statements

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of Explicit Call Transfer service Yes/No.

#### Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE shall have Call A-B in state U10 "Active" with auxiliary state "Call held" and Call A-C in state U10 "Active" with no auxiliary state as specified in TS 34.108 clause 7.2.3.3.1.4.

The CM Service Type used by the UE upon initiation of Call A-C shall be “MO Call or packet mode connection establishment”.

#### Test Procedure

The UE is triggered to invoke an explicit call transfer between the two calls. The UE shall send a FACILITY message with a transaction identifier for either call A-B or call A-C and containing an ExplicitCT invoke component. The call state of both calls shall be unchanged. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

On receipt of a RELEASE message with respect to one of the calls containing a return result component, followed by a RELEASE message for the other call, the UE shall respond with a RELEASE COMPLETE message for each call and shall enter state U0 "Null". The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a RELEASE COMPLETE message with cause #81 "invalid transaction identifier value".

15.10.2.5 Test requirement

In Step 2, UE sends the FACILITY message with correct *Invoke* component.

In Step 4, UE sends the STATUS message with the correct Call state and Auxiliary state

In Step 6, UE sends the STATUS message with the correct Call state.

In Step 12, UE sends the RELEASE COMPLETE message with the correct Cause

In Step 14, UE sends the RELEASE COMPLETE message with the correct Cause

## 15.10.3 Explicit Call Transfer invocation, successful case, both calls active, clearing using RELEASE COMPLETE

### 15.10.3.1 Definition

### 15.10.3.2 Conformance requirements

The Mobile Station (MS) invokes the service by sending a FACILITY message to the network containing the ECT request (ECT request). This ECT request indicates to the network that the mobile subscriber wishes the two calls to be connected together. The MS shall not change the basic call state or the auxiliary state of either call when sending ECT request.

A call control entity of the network in any call control state shall, upon receipt of a RELEASE COMPLETE message from its peer entity in the mobile station: stop all running call control timers; release the MM connection; and return to the "null" state.

3GPP TS 24.091 subclauses 4.1 and 4.2.

3GPP TS 24.008 sub clause 5.4.3.4

### 15.10.3.3 Test purpose

To test that the UE invokes explicit call transfer between two active calls by sending a FACILITY message with the correct invoke component, and reacts correctly on receipt of a RELEASE COMPLETE response from the network.

### 15.10.3.4 Method of test

#### Related ICS/IXIT Statements

#### 15.10.3.5 Test Requirements

In Step 2, UE sends the FACILITY message with correct *Invoke* component.

In Step 4, UE sends the STATUS message with the correct Call state and Auxiliary state

In Step 6, UE sends the STATUS message with the correct Call state.

In Step 10, UE sends the RELEASE COMPLETE message with the correct Cause

In Step 12, UE sends the RELEASE COMPLETE message with the correct Cause

### 15.10.4 Explicit Call Transfer invocation, successful case, second call alerting

#### 15.10.4.1 Definition

#### 15.10.4.2 Conformance requirement

The Mobile Station (MS) invokes the service by sending a FACILITY message to the network containing the ECT request (ECT request). This ECT request indicates to the network that the mobile subscriber wishes the two calls to be connected together. The MS shall not change the basic call state or the auxiliary state of either call when sending ECT request.

The call control entity of the network shall initiate clearing by: sending a DISCONNECT message; and entering the "disconnect indication" state. The DISCONNECT message is a local invitation to clear the call.

3GPP TS 24.091 subclauses 4.1 and 4.2.

3GPP TS 24.008 subclause 5.4.4

#### 15.10.4.3 Test purpose

To test that the UE invokes explicit call transfer between an active held call and an alerting call by sending a FACILITY message with the correct invoke component, and reacts correctly on receipt of clearing messages from the network

#### 15.10.4.4 Method of test

##### Related ICS/IXIT Statements

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of Explicit Call Transfer service Yes/No.

##### Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE shall have Call A-B in state U10 "Active" with auxiliary state "Call held" and Call A-C in state U4 "Call Delivered" with no auxiliary state as specified in TS 34.108 clause 7.2.3.3.1.3.

The CM Service Type used by the UE upon initiation of Call A-C shall be “MO Call or packet mode connection establishment”.

Test Procedure

The UE is triggered to invoke an explicit call transfer between the two calls. The UE shall send a FACILITY message with a transaction identifier for either call A-B or call A-C and containing an ExplicitCT invoke component. The call state of both calls shall be unchanged. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

On receipt of a DISCONNECT message with respect to one of the calls containing a return result component, followed by a DISCONNECT message for the other call, the UE shall respond with a RELEASE message for each call. On receipt of a RELEASE COMPLETE message for each call, the UE shall enter state U0 "Null". The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a RELEASE COMPLETE message with cause #81 "invalid transaction identifier value".

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | SS | | The UE is triggered to perform an explicit call transfer |
| 2 | → | | FACILITY | TI for Call A-B or Call A-C |
| 3 | ← | | STATUS ENQUIRY | Transaction identifier of Call A-B (explicitCT operation Return result) |
| 4 | → | | STATUS | Transaction identifier of Call A-B |
| 5 | ← | | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 6 | → | | STATUS | Transaction identifier of Call A-C |
| 7 | ← | | DISCONNECT | Transaction identifier of Call A-B |
| 8 | → | | RELEASE | Transaction identifier of Call A-B |
| 9 | ← | | DISCONNECT | Transaction identifier of Call A-C |
| 10 | → | | RELEASE | Transaction identifier of Call A-C |
| 11 | ← | | RELEASE COMPLETE | Transaction identifier of Call A-B |
| 12 | ← | | RELEASE COMPLETE | Transaction identifier of Call A-C |
| 13 | ← | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 14 | → | | RELEASE COMPLETE | Transaction identifier of Call A-B |
| 15 | ← | | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 16 | → | | RELEASE COMPLETE | Transaction identifier of Call A-C |

Specific message contents:

FACILITY with *Invoke* component (Step 2)

| Information Element | Value/remark |
|---|---|
| Protocol discriminator | 0011 B (call control; call related SS messages) |
| Facility | |
| Operation Code | ExplicitCT |

STATUS (Step 4)

| Information Element | Value/remark |
|---|---|
| Status | |
| Cause | Normal event |
| Call State | U10- active |
| Auxiliary states | Call held |

STATUS (Step 6)

| Information Element | Value/remark |
|---|---|
| Status | |
| Cause | Normal event |
| Call State | U4 - call delivered |

DISCONNECT with *Return result* component with operation code (Step 7)

| Information Element | Value/remark |
|---|---|
| Invoke ID | the same Invoke ID as in the FACILITY in Step 2 |
| Operation Code | explicitCT |

RELEASE COMPLETE (Step 14)

| Information Element | Value/remark |
|---|---|
| Release complete | |
| Cause | Invalid transaction identifier value |

RELEASE COMPLETE (Step 16)

| Information Element | Value/remark |
|---|---|
| Release complete | |
| Cause | Invalid transaction identifier value |

#### 15.10.4.5 Test requirement

In Step 2, UE sends the FACILITY message with correct *Invoke* component.

In Step 4, UE sends the STATUS message with the correct Call state and Auxiliary state.

In Step 6, UE sends the STATUS message with the correct Call state.

In Step 14, UE sends the RELEASE COMPLETE message with the correct Cause.

In Step 16, UE sends the RELEASE COMPLETE message with the correct Cause.

## 15.10.5 Explicit Call Transfer invocation, expiry of T(ECT)

#### 15.10.5.1 Definition

#### 15.10.5.2 Conformance requirement

The Mobile Station (MS) invokes the service by sending a FACILITY message to the network containing the ECT request (ECT request). This ECT request indicates to the network that the mobile subscriber wishes the two calls to be connected together. The MS shall not change the basic call state or the auxiliary state of either call when sending ECT request.

During the ECT operation the MS shall run a timer $T_{ECT}$. This timer is started when the operation is sent, and stopped when a response is received from the network. If this timer expires the MS shall assume that the operation has failed, locally release the invokeID, and may re-attempt the operation or inform the user of the failure.

3GPP TS 24.091 subclauses 4.1 and 4.2.

3GPP TS 24.080 subclause 4.2.

#### 15.10.5.3 Test purpose

To test that the UE invokes explicit call transfer between an active held call and an alerting call by sending a FACILITY message with the correct invoke component, and returns both calls to their original states on expiry of T(ECT).

Method of test

Related ICS/IXIT Statements

Support of FDD Yes/No.

Support of CS speech Yes/No.

Support of Explicit Call Transfer service Yes/No.

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE shall have Call A-B in state U10 "Active" with auxiliary state "Call held" and Call A-C in state U10 "Active" with no auxiliary state as specified in TS 34.108 clause 7.2.3.3.1.4.

The CM Service Type used by the UE upon initiation of Call A-C shall be “MO Call or packet mode connection establishment”.

### 15.10.5.4 Test Procedure

The UE is triggered to invoke an explicit call transfer between the two calls. The UE shall send a FACILITY message with a transaction identifier for either call A-B or call A-C and containing an ExplicitCT invoke component. The call state of both calls shall be unchanged. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Between 5s and 15s after sending the FACILITY message, the UE shall either:

- remain in the same call states and indicate failure to the user; or
- send another FACILITY message with the same contents.

The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | SS | | The UE is triggered to perform an explicit call transfer |
| 2 | → | | FACILITY | TI for Call A-B or Call A-C |
| 3 | ← | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 4 | → | | STATUS | Transaction identifier of Call A-B |
| 5 | ← | | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 6 | → | | STATUS | Transaction identifier of Call A-C |
| 7 | | SS | | Wait 15 s from receiving FACILITY message |
| | | | | Take this branch if no message is received within 15 s |
| A7 | | | | The UE provides indication of failure to the user |
| A8 | ← | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| A9 | → | | STATUS | Transaction identifier of Call A-B |
| A10 | ← | | STATUS ENQUIRY | Transaction identifier of Call A-C |
| A11 | → | | STATUS | Transaction identifier of Call A-C |
| | | | | Take this branch if a message is received within 15 s |
| B8 | → | | FACILITY | Same as Step 2. Message shall not be received less than 5 s after the first FACILITY message |
| B9 | ← | | STATUS ENQUIRY | Transaction identifier of Call A-B |
| B10 | → | | STATUS | Transaction identifier of Call A-B |
| B11 | ← | | STATUS ENQUIRY | Transaction identifier of Call A-C |
| B12 | → | | STATUS | Transaction identifier of Call A-C |

Specific message contents:

FACILITY with *Invoke* component (Step 2, Step B8)

| Information Element | Value/remark |
|---|---|
| Protocol discriminator | 0011 B (call control; call related SS messages) |
| Facility | |
| Operation Code | ExplicitCT |

STATUS (Step 4, Step A9, Step B10)

| Information Element | Value/remark |
|---|---|
| Status | |
| Cause | Normal event |
| Call State | U10- active |
| Auxiliary states | Call held |

STATUS (Step 6, Step A11, Step B12)

| Information Element | Value/remark |
|---|---|
| Status | |
| Cause | Normal event |
| Call State | U10 - active |

### 15.10.5.5 Test Requirements

In Step 2, UE sends the FACILITY message with correct *Invoke* component.

In Step 4, UE sends the STATUS message with the correct Call state and Auxiliary state

In Step 6, UE sends the STATUS message with the correct Call state.

In Step A9, UE sends the STATUS message with the correct Call state and Auxiliary state

In Step A11, UE sends the STATUS message with the correct Call state.

In Step B10, UE sends the STATUS message with the correct Call state and Auxiliary state

In Step B12, UE sends the STATUS message with the correct Call state.

# 16 Short message service (SMS)

Ref.: 3GPP TS 23.040, 3GPP TS 24.011 (point to point)
3GPP TS 23.041, (cell broadcast)

General

The purpose of these tests is to verify that the UE can handle Iu mode system functions when submitting or receiving Short Messages (SM) between UE and a short message service centre as described in 3GPP TS 23.040.

The procedures are based upon services provided by the Mobility Management (MM) sublayer and GPRS Mobility Management (GMM) sublayer which are not tested in this case.

The SMS comprises three basic services; SMS point to point services on CS mode, on PS mode and SMS cell broadcast service. The SMS point to point services on CS mode shall work in an active UE at any time independent of whether or not there is a speech or data call in progress. The SMS point to point services on PS mode shall work in an active UE at any time independent of whether or not there is a PDP context in progress. The SMS cell broadcast service only works when the UE is in idle mode.

Since the timer TC1M currently is not standardized, the value of TC1M shall be declared by the manufacturer (to be used in clauses 16.1.1 and 16.1.2).

The manufacturer shall declare whether SMS messages are stored in the USIM and/or the ME. This shall be referred to as the SMS message store in the following tests.

Unless otherwise stated default message contents from 3GPP TS 34.108 applies for following tests.

## 16.1 Short message service point to point on CS mode

All of test cases in this clause are applied to UE supporting CS mode.

### 16.1.1 SMS mobile terminated

#### 16.1.1.1 Definition

#### 16.1.1.2 Conformance requirements

An active UE shall be able to receive short message TPDU (SMS-DELIVER) at any time, independently of whether or not there is a speech or data call in progress. A report will always be returned to the SC, confirming that the UE has received the short message.

Reference

3GPP TS 23.040 clause 3.1.

#### 16.1.1.3 Test purpose

To verify the ability of a UE to receive and decode the SMS where provided for the point to point service.

#### 16.1.1.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in MM-state "Idle, updated";
  - the SMS message storage shall be empty.

Related ICS/IXIT Statements

Support for Short message MT/PP.

The value of timer TC1M.

Whether SMS messages are stored in the USIM and/or the ME.

Support for call control state U10.

Maximum number of retransmissions of an unacknowledged CP-DATA message.

Test procedure

a) The UE terminates the establishment of Radio Resource Connection. After the completion of the RRC Connection the SS authenticates the UE.

After the SS receives SECURITY MODE COMPLETE, the SS sends a CP-DATA message. The information element of the CP-DATA message will be RP-DATA RPDU (SMS DELIVER TPDU).

b) The SS waits a maximum of 25 s for the CP-ACK message and then a maximum of 60 s for the CP-DATA message containing the RP-ACK RPDU.

c) The SS sends a CP-ACK to the UE within TC1M with no further CP-DATA messages and the SS initiates RRC Connection release.

d) Steps a), b) and c) are repeated but the first CP-DATA message from the UE is not acknowledged. The second CP-DATA message from the UE is acknowledged by a CP-ACK within a time TC1M.

e) Steps a) and b) are repeated. The SS is configured not to send CP-ACK. Then maximum 3 CP-DATA retransmissions may occur. After a duration of 4 times TC1M + 10 s (Maximum of T3240) SS initiates the RRC connection release. This is the appropriate time to wait to verify that the UE does not send more than the maximum allowed (3) CP-DATA retransmissions.

f) The SMS message store shall be cleared manually by the operator.

g) A data or speech call is established on a DTCH with the SS and the state U10 of call control is entered.

The SS sends a CP-DATA message. The information element of the CP-DATA message will be RP-DATA RPDU (SMS DELIVER TPDU). The SS waits a maximum of 25 s for the CP-ACK message and then a maximum of 60 s for the CP-DATA message containing the RP-ACK RPDU.

h) The SS sends a CP-ACK to the UE within TC1M with no further CP-DATA messages. SS will wait for a period of 120ms. for the UE to send acknowledgement to the CP-ACK prior to the SS initiating the DISCONNECT. The SS initiates RRC Connection release. The SMS message store shall be cleared manually by the operator.

i) Steps g) and h) are repeated but the first CP-DATA message from the UE is not acknowledged. The second CP-DATA message from the UE is acknowledged by a CP-ACK within a time TC1M.

j) Step g) is repeated. The SS is configured not to send CP-ACK. Then maximum 3 CP-DATA retransmissions may occur. After a duration of 4 times TC1M + 10 s (Maximum of T3240) SS initiates the RRC connection release. This is the appropriate time to wait to verify that the UE does not send more than the maximum allowed (3) CP-DATA retransmissions (during a call in progress).

k) A data or speech call is established on a DTCH with the SS and the state U10 of call control shall be entered. The speech call is cleared by the SS with a disconnect message. (The call clearing is continued on the DCCH in parallel to the following exchange of messages related to SMS).

The SS sends a CP-DATA RPDU (SMS DELIVER TPDU) message. The information element of the CP-DATA message is RP-DATA.

The SS waits a maximum of 25 s for the CP-ACK message and then a maximum of 60 s for the CP-DATA message containing the RP-ACK RPDU.

The SS sends a CP-ACK to the UE within TC1M with no further CP-DATA messages and the SS initiates RRC connection release.

The SMS message store shall be cleared manually by the operator.

l) A data or speech call is established with the SS and the state U10 of call control is entered. The speech call shall be cleared from the UE. (The call clearing is continued in parallel to the following exchange of messages related to SMS).

The SS sends a CP-DATA message. The information element of the CP-DATA message is RP-DATA RPDU (SMS DELIVER TPDU).

The SS waits a maximum of 25 s for the CP-ACK message and then a maximum of 60 s for the CP-DATA message containing the RP-ACK RPDU.

The SS sends a CP-ACK to the UE within TC1M with no further CP-DATA messages and the SS initiates RRC Connection release.

The SMS message store shall be cleared manually by the operator.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS 34.108. The IE “Paging cause” in the PAGING TYPE 1 message is set to “Terminating Low Priority Signalling”. The SS verifies that the IE “Establishment cause” in the received RRC CONNECTION REQUEST message is set to “Terminating Low Priority Signalling”. |
| 2 | --> | | PAGING RESPONSE | |
| 3 | <-- | | AUTHENTICATION REQUEST | |
| 4 | --> | | AUTHENTICATION RESPONSE | |
| 5 | | SS | | The SS starts integrity protection |
| 6 | | | (void) | |
| 7 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU) |
| 8 | | SS | | Waits max 25 s for CP-ACK |
| 9 | --> | | CP-ACK | |
| 10 | | SS | | Waits max 60 s for RP-ACK RPDU |
| 11 | --> | | CP-DATA | Contains RP-ACK RPDU |
| 12 | <-- | | CP-ACK | |
| 13 | | SS | | The SS releases the RRC connection |
| 14 | UE | | | The UE shall indicate that an SM has arrived. |
| 15 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS 34.108. The IE “Paging cause” in the PAGING TYPE 1 message is set to “Terminating Low Priority Signalling”. The SS verifies that the IE “Establishment cause” in the received RRC CONNECTION REQUEST message is set to “Terminating Low Priority Signalling”. |

| 88 | | | (void) | |
| 89 | SS | | | The SS releases the RRC connection after a duration of 4*TC1M + 10 s (Maximum of T3240) from step 83. |
| 90 | UE | | | The UE shall indicate that an SM has arrived. |
| 91 | UE | | | Clear the SMS message store |
| 92 | SS | | | A data or speech call is established on a DTCH and the state U10 of call control is entered. |
| 93 | | | (void) | |
| 94 | <-- | | DISCONNECT | The speech call is cleared by the SS. The call clearing is continued in parallel to the following exchange of messages related to SMS. |
| 95 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU) |
| 96 | | | void | |
| 96a | → | | RELEASE | UE releases the connection |
| 96b | ← | | RELEASE COMPLETE | SS completes the connection release (Step 96a and 96b may be executed after step 97) |
| 97 | --> | | CP-ACK | |
| | | | Void | |
| 98 | SS | | | Waits max 60 s for RP-ACK RPDU |
| 99 | --> | | CP-DATA | Contains RP-ACK RPDU |
| 100 | <-- | | CP-ACK | |
| 101 | SS | | | The SS releases the RRC connection. |
| 102 | UE | | | The UE shall indicate that an SM has arrived. |
| 103 | UE | | | Clear the SMS message store |
| 104 | SS | | | A data or speech call is established on a DTCH and the state U10 of call control is entered. |
| 105 | | | (void) | |
| 106 | --> | | DISCONNECT | The speech call is cleared from the UE. The call clearing is continued in parallel to the following exchange of messages related to SMS. |
| 107 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU) |
| 108 | <-- | | RELEASE | This message is likely to be sent before all of the CP-DATA message has been sent on the DCCH. |

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 109 | --> | | RELEASE COMPLETE | |
| 110 | --> | | CP-ACK | shall be sent before 25 s after the start of step 107 |
| 111 | SS | | | Waits max 60 s for RP-ACK RPDU |
| 112 | --> | | CP-DATA | Contains RP-ACK RPDU |
| 113 | <-- | | CP-ACK | |
| 114 | SS | | | The SS releases the RRC connection |
| 115 | UE | | | The UE shall indicate that an SM has arrived. |
| 116 | UE | | | Clear the SMS message store |
| NOTE: Time values for SS wait time are chosen sufficiently high to be sure that the UE has enough time to respond to the different messages. | | | | |

Specific Message Contents

SMS DELIVER TPDU (not containing a type 0 message)

| Information element | CommentValue |
|---|---|
| TP-PID | Different from Type 0: “01000000”B |
| TP-UDL | 160 |
| TP-UD (140 octets) | text of message (160 characters) |
| NOTE: The 160 characters in TP-UD shall include at least one occurrence of each character in the default alphabet (see 3GPP TS 23.038, clause 6.2.1). | |

### 16.1.1.5 Test requirements

After step 7 UE shall receive SMS-DELIVER TPDU and send CP-ACK within 25 s and CP-DATA containing RP-ACK within 60 s after sending CP-ACK.

After step 14 UE shall indicate that an SM has arrived.

After step 25 UE shall retransmit CP-DATA containing RP-ACK within twice TC1M.

After step 30 UE shall indicate that an SM has arrived.

After step 43 UE shall repeat CP-DATA retransmissions and the maximum number of retransmissions must not exceed three.

After step 48 UE shall indicate that an SM has arrived.

After step 51 UE shall receive SMS-DELIVER TPDU and send CP-ACK within 25 s and CP-DATA containing RP-ACK within 60 s after sending CP-ACK.

After step 59 UE shall indicate that an SM has arrived.

After step 67 UE shall retransmit CP-DATA containing RP-ACK within twice TC1M.

After step 75 UE shall indicate that an SM has arrived.

After step 79 UE shall repeat CP-DATA retransmissions and the maximum number of retransmissions must not exceed three.

After step 90 UE shall indicate that an SM has arrived.

After step 95 UE shall receive SMS-DELIVER TPDU and send CP-ACK within 25 s and CP-DATA containing RP-ACK within 60 s after sending CP-ACK.

After step 102 UE shall indicate that an SM has arrived.

After step 107 UE shall receive SMS-DELIVER TPDU and send CP-ACK within 25 s and CP-DATA containing RP-ACK within 60 s after sending CP-ACK.

After step 115 UE shall indicate that an SM has arrived.

## 16.1.2 SMS mobile originated

### 16.1.2.1 Definition

### 16.1.2.2 Conformance requirements

An active UE shall be able to submit short message TPDU (SMS-SUBMIT) at any time, independently of whether or not there is a speech or data call in progress.

Reference

3GPP TS 23.040 clause 3.1.

### 16.1.2.3 Test purpose

To verify that the UE is able to correctly send a short message where the SMS is provided for the point to point service.

### 16.1.2.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in MM-state "Idle, updated";
  - the SMS message storage shall be empty.

Related ICS/IXIT Statements

Support for Short message MO/PP.

Support for state U10 of call control.

The value of timer TC1M.

Whether SMS messages are stored in the USIM and/or the ME.

Maximum number of retransmissions of an unacknowledged CP-DATA message.

Test procedure

a) The UE shall be set up to send an SM to the SS. The UE establishes successfully an RRC connection.

b) The SS performs authentication and after that, the SS starts integrity protection.

c) The SS responds to the CP-DATA containing RP-DATA RPDU (SMS SUBMIT TPDU) from the UE with a CP-ACK message within TC1M followed by a CP-DATA message containing the correct RP-ACK RPDU. The SS waits a maximum of 25 s for the CP-ACK message.

d) The SS sends a RRC connection release message to the UE.

e) Steps a) and b) are repeated. The SS is configured not to send the CP-ACK message. Then maximum 3 CP-DATA retransmissions may occur. After a duration of 4 times TC1M + 10 s (Maximum of T3240) the SS initiates RRC connection release. This is the appropriate time to wait to verify that the UE does not send more than the maximum CP-DATA retransmissions.

f) Steps a) and b) are repeated. On receipt of the CP-DATA from the UE the SS sends a CP-ERROR message within TC1M containing a "Network Failure" cause. Then the SS initiates RRC connection release.

g) A data or speech call is established with the SS and the state U10 of call control is entered. The UE is set up to send an SM to the SS. After the reception of the CM SERVICE REQUEST, the SS sends a CM SERVICE ACCEPT message.

h) The SS responds to the CP-DATA containing RP-DATA RPDU (SMS SUBMIT TPDU) from the UE with a CP-ACK message within TC1M followed by a CP-DATA message containing the correct RP-ACK RPDU. The SS waits a maximum of 25 s for the CP-ACK message. Then the SS sends a RRC connection release message to the UE.

i) Step g) is repeated. The SS is configured not to send the CP-ACK message. Then maximum 3 CP-DATA retransmissions may occur. After a duration of 4 times TC1M + 10 s (Maximum of T3240) the SS initiates RRC connection release. This is the appropriate time to wait to verify that the UE does not send more than the maximum CP-DATA retransmissions (during a call in progress).

j) (void)

k) The UE is set up to send an SM to the SS. On receipt of the CM SERVICE REQUEST the SS sends a CM SERVICE REJECT message with the reject cause set to "Service Option not supported" or "Service Option temporarily out of order". After 5 s the SS initiates RRC connection release.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | The UE is set up to send an SM |
| 2 | SS | | | The SS verifies that the IE “Establishment cause” in the received RRC CONNECTION REQUEST message is set to “Originating Low Priority Signalling”. |
| 3 | <-- | | Void | |
| 4 | --> | | Void | |
| 5 | --> | | CM SERVICE REQUEST | CM service type set to "Short Message Service" |
| 6 | <-- | | AUTHENTICATION REQUEST | |
| 7 | --> | | AUTHENTICATION RESPONSE | |
| 8 | SS | | | The SS starts integrity protection |
| 9 | | | Void | |
| 10 | --> | | CP-DATA | Contains RP-DATA RPDU (SMS SUBMIT TPDU) |
| 11 | <-- | | CP-ACK | Sent within TC1M after step 10 |
| 12 | <-- | | CP-DATA | Contains RP-ACK RPDU |
| 13 | SS | | | Waits max 25 s for CP-ACK |
| 14 | --> | | CP-ACK | |
| 15 | SS | | | The SS releases the RRC connection. |
| 16 | UE | | | The UE is set up to send an SM |
| 17 | SS | | | The SS verifies that the IE “Establishment cause” in the received RRC CONNECTION REQUEST message is set to “Originating Low Priority Signalling”. |
| 18 | | | Void | |
| 19 | | | Void | |
| 20 | | | Void | |
| 21 | | | Void | |
| 22 | --> | | CM SERVICE REQUEST | CM service type set to "Short Message Service" |
| 23 | <-- | | AUTHENTICATION REQUEST | |
| 24 | --> | | AUTHENTICATION RESPONSE | |
| 25 | <-- | | SECURITY MODE COMMAND | |
| 26 | --> | | SECURITY MODE COMPLETE | |
| 27 | --> | | CP-DATA | Contains RP-DATA RPDU (SMS SUBMIT TPDU) |
| 28 | SS | | | SS configured not to send CP-ACK |
| 29 | --> | | CP-DATA | Retransmitted CP-DATA message within twice TC1M after step 27 |
| 30 | UE | | | Depending on the maximum number of CP-DATA retransmissions implemented, step 29 may be repeated. The maximum number of retransmissions may however not exceed three. The UE may also send less than 3 re-transmissions. The same RRC connection shall be used for CP-DATA retransmissions. |
| 30aa | UE | | | The UE may send a Signalling Connection Release Indication message immediately when TC1M has run out. This is according to TS 24.011 clause 5.3.2.1. |
| 30a | SS | | | The SS releases the RRC connection after a duration of 4*TC1m + 10 s (Maximum of T3240) from step 27. |
| 30b | | | Void | |

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 31 | | | Void | |
| 32 | UE | | | The UE is set up to send an SM |
| 33 | SS | | | The SS verifies that the IE “Establishment cause” in the received RRC CONNECTION REQUEST message is set to “Originating Low Priority Signalling”. |

| 82 | --> | | CM SERVICE REQUEST | CM service type set to "Short Message Service" |
| 83 | <-- | | CM SERVICE REJECT | Reject cause set to "Service Option not supported" or "Service Option temporarily out of order" |
| 84 | | | (void) | |
| 85 | SS | | | The SS releases the RRC connection. 5 s after CM SERVICE REJECT |
| 86 | | | (void) | |

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| NOTE: Time values for SS wait times are chosen sufficiently high to be sure that the UE has enough time to respond to the different messages. | | | | |

Specific Message Contents

SMS SUBMIT TPDU

| Information element | CommentValue |
|---|---|
| TP-UDL | as applicable |
| TP-UD (140 octets) | 160 ASCII characters |

#### 16.1.2.5 Test requirements

After step 10 UE shall send a CP-DATA containing RP-data. The RP-DATA shall contain SMS SUBMIT TPDU.

After step 27 UE shall retransmit a CP-DATA containing RP-data and the maximum number of retransmissions must not exceed three. The RP-DATA shall contain SMS SUBMIT TPDU.

After step 50 UE shall send a CP-DATA containing RP-data. The RP-DATA shall contain SMS SUBMIT TPDU.

After step 62 UE shall retransmit a CP-DATA containing RP-data and the maximum number of retransmissions must not exceed three. The RP-DATA shall contain SMS SUBMIT TPDU.

After step 85 UE shall not send any CP-DATA.

### 16.1.3 Test of memory full condition and memory available notification:

The Memory Available Notification provides a means for the UE to notify the network that it has memory available to receive one or more short messages. The SMS status field in the USIM contains status information on the "memory available" notification flag.

#### 16.1.3.1 Definition

#### 16.1.3.2 Conformance requirement

1. When a mobile terminated message is Class 2, the UE shall ensure that the message has been transferred to the SMS data field in the USIM before sending an acknowledgement to the SC. The UE shall return a protocol error message if the short message cannot be stored in the USIM and there is other short message storage available in the UE. If all the short message storage in the UE is already in use, the UE shall return "memory capability exceeded".

2. When the UE rejects a short message due to lack of available memory capability the need to transfer notification shall be stored in the USIM.

3. If the memory capability becomes available because memory is cleared, the value of the memory capability exceeded notification flag in the USIM is read. If the flag is set, the UE notifies the network that memory capability is now available. After a positive acknowledgement from the network, the ME unsets the memory capability exceeded notification flag in the USIM.

References

- 3GPP TS 23.038 clause 4

- 3GPP TS 23.040 clauses 9.2.3.10, 10.3 (operation 14)..

#### 16.1.3.3 Test purpose

1. To verify that the UE sends the correct acknowledgement when its memory in the USIM becomes full.

2. To verify that the UE sends the correct acknowledgement when its memory in the ME and the USIM becomes full, and sets the "memory exceeded" notification flag in the USIM.

3. To verify that the UE performs the "memory available" procedure when its message store becomes available for receiving short messages, and only at this moment.

#### 16.1.3.4 Method of test

##### Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in MM-state "Idle, updated";
  - the SMS message storage shall be empty;
  - the UE shall be connected to the USIM simulator. The following shall be present in the USIM simulator:
    - $EF_{SMS}$ with at least one record;
    - $EF_{SMSS}$, with SMS "Memory Cap. Exceed" notification flag set to "memory available";
    - Service no. 10 (SMS) in $EF_{UST}$ set to allocated and activated.
  - for storing of Class 1 Short Messages the UE shall be set up to store Short Messages in the ME memory (by way of MMI, as described in ICS/IXIT statement).

##### Related ICS/IXIT Statements

Support for Short message MT/PP.

Whether SMS messages are stored in the USIM and/or the ME.

The value of timer TC1M.

##### Test procedure

a) step a) of clause 16.1.5.3 (test of Class 2 Short Messages) is repeated until the UE sends a negative acknowledgement (RP-ERROR). The USIM simulator shall indicate if the "memory capability exceeded" notification flag has been set on the USIM.

b) a Class 1 Short Message is sent to the UE.

c) step b) is repeated until the UE sends a negative acknowledgement (RP-ERROR). The USIM simulator shall indicate if the "memory capability exceeded" notification flag has been set on the USIM.

d) a Short Message is sent to the UE with the DCS field of the SMS-DELIVER TPDU set to 0.

e) the SS prompts the operator to read a short message and to remove it from the message store of the UE.

f) the SS waits for a RRC CONNECTION REQUEST from the UE, and sends a RRC CONNECTION SETUP.

g) after the SS receives a RRC CONNECTION SETUP COMPLETE, the SS authenticates the UE and activates ciphering.

h) the SS answers to the RP-SMMA from the UE with a CP-DATA containing a RP-ACK RPDU.

i) after the UE has acknowledged the CP-DATA with a CP-ACK, the SS releases the RRC connection. The USIM simulator shall indicate if the "memory capability exceeded" notification flag has been unset on the USIM.

j) step e) is repeated.

##### Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 2 | --> | | PAGING RESPONSE | |
| 3 | <-- | | AUTHENTICATION REQUEST | |
| 4 | --> | | AUTHENTICATION RESPONSE | |
| 5 | <-- | | SECURITY MODE COMMAND | |
| 6 | --> | | SECURITY MODE COMPLETE | |
| 7 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), Class 2 Short Message |
| 8 | | SS | | Waits max 25 s for CP-ACK |
| 9 | --> | | CP-ACK | |
| 10 | | SS | | Waits max 60 s for RP-ACK RPDU |
| 11 | --> | | CP-DATA | Contains RP-ACK RPDU |
| 12 | <-- | | CP-ACK | Within TC1M after step 11 |
| 13 | <-- | | RRC CONNECTION RELEASE | RRC connection is released. Step 1-13 is repeated until UE sends a negative acknowledgement (RP-ERROR) in step 11. The RP-ERROR RPDU cause field shall be "Protocol error, unspecified" if there is message capability in the USIM, or "Memory capability exceeded" if there is no message capability in the USIM. If the total memory store of the UE is full, the ME shall set the "memory capability exceeded" notification flag on the USIM. |
| 14 | --> | | RRC CONNECTION RELEASE COMPLETE | |
| 15 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 16 | --> | | PAGING RESPONSE | |
| 17 | <-- | | AUTHENTICATION REQUEST | |
| 18 | --> | | AUTHENTICATION RESPONSE | |
| 19 | <-- | | SECURITY MODE COMMAND | |
| 20 | --> | | SECURITY MODE COMPLETE | |
| 21 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), Class 1 Short Message |
| 22 | | SS | | Waits max 25 s for CP-ACK |
| 23 | --> | | CP-ACK | |
| 24 | | SS | | Waits max 60 s for RP-ACK RPDU |
| 25 | --> | | CP-DATA | Shall contain RP-ACK RPDU if there is memory capability in the ME. If not it shall contain RP-ERROR RPDU which cause field shall be "memory capability exceeded". If the total memory store of the UE now becomes full at this step, the ME shall set the "memory cap. exceed" notification flag on the USIM. |
| 26 | <-- | | CP-ACK | Within TC1M after step 25 |
| 27 | <-- | | RRC CONNECTION RELEASE | RRC connection is released. Step 15-27 is repeated until the UE sends an RP-ERROR. The USIM simulator shall indicate if the "memory capability exceeded" notification flag has been set on the USIM. |
| 28 | --> | | RRC CONNECTION RELEASE COMPLETE | |
| 29 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 30 | --> | | PAGING RESPONSE | |
| 31 | <-- | | AUTHENTICATION REQUEST | |
| 32 | --> | | AUTHENTICATION RESPONSE | |
| 33 | <-- | | SECURITY MODE COMMAND | |
| 34 | --> | | SECURITY MODE COMPLETE | |
| 35 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU) with TP-DCS set to 0 |
| 36 | | SS | | Waits max 25 s for CP-ACK |
| 37 | --> | | CP-ACK | |
| 38 | | SS | | Waits max 60 s for RP-ACK RPDU |
| 39 | --> | | CP-DATA | Shall contain RP-ERROR RPDU with error cause "memory capability exceeded". |
| 40 | <-- | | CP-ACK | Within TC1M after step 39 |
| 41 | <-- | | RRC CONNECTION RELEASE | RRC connection is released. |

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 42 | --> | | RRC CONNECTION RELEASE COMPLETE | |
| 43 | SS | | | Prompts the operator to remove one of the short messages from the message store of the UE. |
| 44 | <-- | | SYSTEM INFORMATION | BCCH |
| 45 | --> | | RRC CONNECTION REQUEST | CCCH |
| 46 | <-- | | RRC CONNECTION SETUP | CCCH |
| 47 | --> | | RRC CONNECTION SETUP COMPLETE | DCCH |
| 48 | --> | | CM SERVICE REQUEST | CM service type information element is set to "Short message transfer". |
| 49 | <-- | | CM SERVICE ACCEPT | |
| 50 | --> | | CP-DATA | Contains RP-SMMA RPDU |
| 51 | <-- | | CP-ACK | |
| 52 | <-- | | CP-DATA | Contains RP-ACK RPDU |
| 53 | --> | | CP-ACK | Acknowledge of CP-DATA containing the RP-ACK RPDU. The ME shall unset the "memory capability exceeded" notification flag on the USIM. |
| 54 | <-- | | RRC CONNECTION RELEASE | RRC connection is released. The USIM simulator shall indicate if the "memory capability exceeded" notification flag has been unset on the USIM. |
| 55 | --> | | RRC CONNECTION RELEASE COMPLETE | |
| 56 | SS | | | Prompts the operator to remove one of the short messages from the message store of the UE. |
| 57 | UE | | | Shall not attempt to send a RP-SMMA RPDU. This is verified by checking that the UE does not send a CHANNEL REQUEST message with the establishment cause "Other services which can be completed with an SDCCH" |
| NOTE: Time values for SS wait time are chosen sufficiently high to be sure that the UE has enough time to respond to the different messages. | | | | |

### 16.1.3.5 Test requirements

After UE sends a negative acknowledgement (RP-ERROR) in step 11, the USIM simulator shall indicate if the "memory capability exceeded" notification flag has been set on the USIM.

After UE sends a negative acknowledgement (RP-ERROR) in step 25, the USIM simulator shall indicate if the "memory capability exceeded" notification flag has been set on the USIM.

After step 53 the ME shall unset the "memory capability exceeded" notification flag on the USIM.

After step 57 UE shall not attempt to send a RP-SMMA RPDU.

## 16.1.4 Test of the status report capabilities and of SMS-COMMAND:

This test applies to UEs which support the status report capabilities.

### 16.1.4.1 Definition

### 16.1.4.2 Conformance requirement

The SMS offers the SC the capabilities of informing the UE of the status of a previously sent mobile originated short message. This is achieved by the SC returning a status report TPDU (SMS-STATUS-REPORT) to the originating UE.

SMS-COMMAND enables an UE to invoke an operation at the SC.

The UE shall increment TP-MR by 1 for each SMS-SUBMIT or SMS-COMMAND being submitted.

References

- 3GPP TS 23.040 clause 3.2.9.
- 3GPP TS 23.040 clauses 9.2.3.2, 9.2.3.4, 9.2.3.5, 9.2.3.6, 9.2.3.14, 9.2.3.18, 9.2.3.19, 9.2.3.26.

### 16.1.4.3 Test purpose

1) To verify that the UE is able to accept a SMS-STATUS-REPORT TPDU.
2) To verify that the UE is able to use the SMS-COMMAND functionality correctly and sends an SMS-COMMAND TPDU with the correct TP-Message-Reference.

### 16.1.4.4 Method of test

Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in MM-state "Idle, updated".

Related ICS/IXIT Statements

Support of SMS MO/PP and MT/PP.

Test procedure

a) The UE is made to send a Mobile Originated short message setting TP-SRR as in steps a) to d) of test 16.1.2 (SMS Mobile originated).

b) The SS sends a CP-DATA message containing a RP-DATA RPDU itself containing an SMS-STATUS-REPORT TPDU.

c) The SS sends a RRC CONNECTION RELEASE message.

d) The UE is made to send an SMS-COMMAND message enquiring about the previously submitted short message.

e) void.

f) The SS acknowledges the CP-DATA message from the UE with a CP-ACK followed by a CP-DATA message containing an RP-ACK RPDU

g) After receiving the CP-ACK from the UE, the SS releases the RRC connection by using a RRC CONNECTION RELEASE message.

h) The UE is made to send an SMS-COMMAND message requiring to delete the previously submitted short message.

i) steps e) to g) are repeated.

| 56 | <-- | | CP-DATA | Contains RP-ACK RPDU |
| 57 | --> | | CP-ACK | |
| 58 | <-- | | RRC CONNECTION RELEASE | RRC connection is released. |
| 59 | --> | | RRC CONNECTION RELEASE COMPLETE | |

Specific Message Contents

SMS SUBMIT TPDU

| Information element | Comment Value |
|---|---|
| TP-SRR | status report is requested "1"B |

SMS-STATUS-REPORT TPDU (SS to UE in step 23):

| Information element | Comment Value |
|---|---|
| TP-MR | same as previous SMS-SUBMIT |
| TP-MMS | no more messages "1"B |
| TP-SRQ | result of SMS-SUBMIT "0"B |
| TP-RA | same as the Destination address of the SMS-SUBMIT |
| TP-ST | SM received "00000000"B |

first SMS-COMMAND TPDU (UE to SS in step 39)

| Information element | Comment Value |
|---|---|
| TP-MR | TP-MR in previous SMS-SUBMIT plus "1" |
| TP-SRR | status report requested "1"B |
| TP-CT | Enquiry relating to previously submitted short message "00000000"B |
| TP-MN | not checked (TP-MR in previous SMS-SUBMIT) |

second SMS-COMMAND TPDU (UE to SS in step 54)

| Information element | Comment Value |
|---|---|
| TP-MR | TP-MR in previous SMS-COMMAND plus "1" |
| TP-CT | Delete previously submitted short message "00000010"B |
| TP-MN | not checked (TP-MR in previous SMS-SUBMIT) |

#### 16.1.4.5 Test requirements

After step 23 UE accept a SMS-STATUS-REPORT TPDU.

After step 39 UE shall send a SMS-COMMAND TPDU with the correct TP-Message-Reference.

After step 54 UE shall send a SMS-COMMAND TPDU with the correct TP-Message-Reference.

## 16.1.5 Test of message class 0 to 3

### 16.1.5.1 Short message class 0

#### 16.1.5.1.1 Definition

#### 16.1.5.1.2 Conformance requirement

When a mobile terminated message is class 0 and the UE has the capability of indicating short messages, the UE shall indicate the message immediately and send an acknowledgement to the SC when the message has successfully reached

the UE irrespective of whether there is memory available in the USIM or ME. The message shall not be automatically stored in the USIM or ME.

Reference

3GPP TS 23.038 clause 4.

#### 16.1.5.1.3 Test purpose

To verify that the UE will accept and indicate but not store a class 0 message, and that it will accept and indicate a class 0 message if its message store is full.

NOTE: failure of this test in a UE could cause it to reject a class 0 message when its SMS memory becomes full. This could lead to unwanted repetitions between the UE and the service centre.

#### 16.1.5.1.4 Method of test

Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in MM-state "Idle, updated";
  - the UE message store shall be empty.

Related ICS/IXIT Statements

Support for Short message MT/PP.

The value of timer TC1M.

Whether SMS messages are stored in the USIM and/or the ME.

Test procedure

a) The SS sends a class 0 message by using the method described in step a) of clause 16.1.1 but with the TPDU described in this clause.

b) The UE message store shall be filled (for example by using the method of clause 16.1.3 test of the memory available notification) with the same SMS-DELIVER TPDU except that TP-DCS is set to class 1.

c) The SS sends a class 0 message as in step a).

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 2 | --> | | PAGING RESPONSE | |
| 3 | <-- | | AUTHENTICATION REQUEST | |
| 4 | --> | | AUTHENTICATION RESPONSE | |
| 5 | <-- | | SECURITY MODE COMMAND | |
| 6 | --> | | SECURITY MODE COMPLETE | |
| 7 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), Class 0 Short Message |
| 8 | --> | | CP-ACK | |
| 9 | --> | | CP-DATA | Contains RP-ACK RPDU. |
| 10 | <-- | | CP-ACK | |
| 11 | <-- | | RRC CONNECTION RELEASE | |
| 12 | --> | | RRC CONNECTION RELEASE COMPLETE | |
| 13 | UE | | | The content of the short message shall be indicated by the ME. The UE shall not store the message. This can be checked by verifying that it is impossible to retrieve any short messages from the UE message store. |
| 14 | SS | | | The UE message store shall be filled (for example by using the method of 16.1.3) with Class 1 SMS-DELIVER TPDU. |
| 15 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 16 | --> | | PAGING RESPONSE | |
| 17 | <-- | | AUTHENTICATION REQUEST | |
| 18 | --> | | AUTHENTICATION RESPONSE | |
| 19 | <-- | | SECURITY MODE COMMAND | |
| 20 | --> | | SECURITY MODE COMPLETE | |
| 21 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), Class 0 Short Message |
| 22 | --> | | CP-ACK | |
| 23 | --> | | CP-DATA | Contains RP-ACK RPDU. |
| 24 | <-- | | CP-ACK | |
| 25 | <-- | | RRC CONNECTION RELEASE | |
| 26 | --> | | RRC CONNECTION RELEASE COMPLETE | |
| 27 | UE | | | The content of the short message shall be indicated by the ME. |

Specific Message Contents

SMS-DELIVER TPDU (containing a class 0 message) (SS to UE)

| Information element | Comment | Value |
|---|---|---|
| TP-DCS | default alphabet, class 0 | "1111 0000"B |

SMS-DELIVER TPDU (containing a class 1 message to fill the UE message store) (SS to UE)

| Information element | Comment | Value |
|---|---|---|
| TP-DCS | default alphabet, class 1 | "1111 0001"B |

#### 16.1.5.1.5 Test requirements

After step 7 UE shall accept and indicate but not store a class 0 message.

After step 21 UE shall accept and indicate a class 0 message.

### 16.1.5.2 Test of class 1 short messages

This test shall apply to UEs which support:

- storing of received Class 1 Short Messages; and
- indicating of stored Short Messages.

#### 16.1.5.2.1 Definition

#### 16.1.5.2.2 Conformance requirement

When a mobile terminated message is class 1, the UE shall send an acknowledgement to the SC when the message has successfully reached the UE and can be stored, either in the ME or in the USIM.

##### Reference

3GPP TS 23.038 clause 4.

#### 16.1.5.2.3 Test purpose

This procedure verifies that the UE acts correctly on receiving a class 1 message, i.e. that it stores the message in the ME or USIM and sends an acknowledgement (at RP and CP-Layer).

#### 16.1.5.2.4 Method of test

##### Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in MM-state "Idle, updated";
  - the UE message store shall be empty;
  - for storing of class 1 Short Messages, the UE shall be set up to store Short Messages in the ME memory (by way of MMI, as described in ICS/IXIT statement).

##### Related ICS/IXIT Statements

Support for Short message MT/PP.

The value of timer TC1M.

Whether SMS messages are stored in the USIM and/or the ME.

##### Test procedure

a) The SS delivers a Short Message of class 1 to the UE as specified in clause 16.1.1, step a).

b) The Short Message is recalled (e.g. by means of the MMI).

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 2 | --> | | PAGING RESPONSE | |
| 3 | <-- | | AUTHENTICATION REQUEST | |
| 4 | --> | | AUTHENTICATION RESPONSE | |
| 5 | <-- | | SECURITY MODE COMMAND | |
| 6 | --> | | SECURITY MODE COMPLETE | |
| 7 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), Class 1 Short Message |
| 8 | --> | | CP-ACK | |
| 9 | --> | | CP-DATA | Contains RP-ACK RPDU. |
| 10 | <-- | | CP-ACK | |
| 11 | <-- | | RRC CONNECTION RELEASE | |
| 12 | --> | | RRC CONNECTION RELEASE COMPLETE | |
| 13 | UE | | | The short message shall be recalled and indicated at the UE. |

Specific Message Contents

SMS-DELIVER TPDU (containing a class 1 message) (SS to UE)

| Information element | CommentValue | |
|---|---|---|
| TP-DCS | default alphabet, class 1 | "1111 0001"B |

#### 16.1.5.2.5 Test requirements

After step 7 UE shall store the message in the ME or USIM and send an acknowledgement.

### 16.1.5.3 Test of class 2 short messages

#### 16.1.5.3.1 Definition

Class 2 Short Messages are defined as USIM specific, and the UE shall ensure that a message of this class is stored on the USIM.

#### 16.1.5.3.2 Conformance requirement

When a mobile terminated message is Class 2, the UE shall ensure that the message has been correctly transferred to the SMS data field in the USIM before sending an acknowledgement to the SC. The UE shall return a "protocol error, unspecified" error message if the short message cannot be stored in the USIM and there is other short message storage available at the UE. If all the short message storage at the UE is already in use, the UE shall return "memory capacity exceeded".

References

- 3GPP TS 23.040 clause 9.2.3.10.
- 3GPP TS 23.038 clause 4.
- 3GPP TS 34.108 clause 8.3.2.28.

#### 16.1.5.3.3 Test purpose

This procedure verifies that the UE acts correctly on receiving a class 2 message, i.e. that it stores the message correctly in the USIM, and if this is not possible, returns a protocol error message, with the correct error cause, to the network.

There are 2 cases:

1) if the UE supports storing of short messages in the USIM and in the ME, and storage in the ME is not full, and the short message cannot be stored in the USIM, the error cause shall be "protocol error, unspecified";

2) if the UE supports storing of short messages in the USIM and not in the ME, and storage in the ME is not full, and the short message cannot be stored in the USIM, the error cause shall be "memory capacity exceeded".

NOTE: If the UE supports storing of short messages in the USIM and the ME, and storage in the ME is full, and the short message cannot be stored in the USIM, the error cause shall be "memory capacity exceeded". This case is not tested in this test.

#### 16.1.5.3.4 Method of test

##### Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in MM-state "Idle, updated";
  - the ME message store shall be empty;
  - the ME shall be connected to the USIM simulator. The following shall be present in the USIM simulator:
    - $EF_{SMS}$ with at least two free records and one full record;
    - $EF_{SMSS}$, with SMS "Memory Cap. Exceed" notification flag set to "memory available";
    - Service no. 10 (SMS) in $EF_{UST}$ set to allocated and activated;
    - for storing of Class 1 Short Messages the UE shall be set up to store Short Messages in the ME memory (by way of MMI, as described in ICS/IXIT statement).

##### Related ICS/IXIT Statements

Support for Short message MT/PP.

The value of timer TC1M.

Whether SMS messages are stored in the USIM and/or the ME.

##### Test procedure

a) The SS delivers a Short Message of class 2 to the UE as specified in clause 16.1.1, step b).

b) Following an attempt by the ME to store the short message in a free record of $EF_{SMS}$ in the USIM, the USIM simulator returns the status response "OK" ("90 00").

c) Step a) is repeated.

d) Following an attempt by the ME to store the short message in a free record of $EF_{SMS}$ in the USIM, the USIM simulator returns the status response "memory problem" ("92 40").

e) The USIM simulator indicates if an attempt was made in steps a) and c) to store the messages and if the messages are stored according to the requirement.

##### Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | < | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 2 | --> | | PAGING RESPONSE | |
| 3 | <-- | | AUTHENTICATION REQUEST | |
| 4 | --> | | AUTHENTICATION RESPONSE | |
| 5 | <-- | | SECURITY MODE COMMAND | |
| 6 | --> | | SECURITY MODE COMPLETE | |
| 7 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), Class 2 Short Message |

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 8 | --> | | CP-ACK | |
| 9 | ME | | | The ME shall correctly store the short message in a free record of EFSMS in the USIM, i.e.<br>- the ME shall use a free record<br>- the first byte of the record shall indicate "message received by UE from network"<br>- the TS-Service-Centre-Address shall be correctly stored<br>- the TPDU shall be identical to that sent by the SS<br>- bytes following the TPDU shall be set to "FF" |
| 10 | USIM | | | The USIM simulator returns the status response "OK" ("90 00"). The USIM simulator shall indicate if an attempt was made by the ME to store the short message in the USIM. |
| 11 | --> | | CP-DATA | Contains RP-ACK RPDU. |
| 12 | <-- | | CP-ACK | |
| 13 | <-- | | RRC CONNECTION RELEASE | |
| 14 | --> | | RRC CONNECTION RELEASE COMPLETE | |
| 15 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 16 | --> | | PAGING RESPONSE | |
| 17 | <-- | | AUTHENTICATION REQUEST | |
| 18 | --> | | AUTHENTICATION RESPONSE | |
| 19 | <-- | | SECURITY MODE COMMAND | |
| 20 | --> | | SECURITY MODE COMPLETE | |
| 21 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), Class 2 Short Message |
| 22 | --> | | CP-ACK | |
| 23 | ME | | | The ME shall attempt to store the short message in a free record of EFSMS in the USIM. |
| 24 | USIM | | | The USIM simulator returns the status response "memory problem" ("92 40"). The USIM simulator shall indicate if an attempt was made by the ME to store the short message in the USIM. |
| 25 | --> | | CP-DATA | Contains RP-ERROR RPDU with error cause "protocol error, unspecified" if the UE supports storing of short messages in the ME, or error cause "memory capacity exceeded" if not. |
| 26 | <-- | | CP-ACK | |
| 27 | <-- | | RRC CONNECTION RELEASE | |
| 28 | --> | | RRC CONNECTION RELEASE COMPLETE | |

Specific Message Contents

SMS-DELIVER TPDU (containing a class 2 message) (SS to UE)

| Information element | Comment | Value |
|---|---|---|
| TP-DCS | default alphabet, class 2 | "1111 0010"B |

16.1.5.3.5 Test requirements

After step 10 UE shall confirm that the short message is stored in the USIM and send CP-DATA containing RP-ACK RPDU.

After step 25 UE shall confirm that the short message cannot be stored in the USIM and send CP-DATA containing RP-ERROR RPDU. If UE supports storing of short message in the ME, the error cause of RP-ERROR RPDU shall be "protocol error, unspecified", and if not the error cause of RP-ERROR RPDU shall be "memory capacity exceeded"

#### 16.1.5.4 Test of class 3 short messages

For further study.

### 16.1.6 Test of short message type 0 (R99 and REL-4 UE)

#### 16.1.6.1 Definition and applicability

This tests that the UE correctly acknowledges the receipt of the short message type 0 to the SC in Circuit Switched mode. It is highly recommended that the UE discards the contents of the short message type 0.

This test shall apply to all R99 and REL-4 UEs supporting receipt of short messages in CS mode.

#### 16.1.6.2 Conformance requirement

When a mobile terminated message is type 0, the UE shall acknowledge receipt of the short message to the SC but may discard its contents.

Note: It is highly recommended that the UE discards the type 0 short message. This means that the UE is able to receive the type 0 short message irrespective of whether there is memory available in the (U)SIM or ME or not, the UE does not indicate the receipt of the type 0 short message to the user, and the message is not stored in the (U)SIM or ME.

Reference(s)

3GPP TS 23.040, 9.2.3.9.

#### 16.1.6.3 Test purpose

To verify that the UE will acknowledge receipt of the short message to the SC. The UE should discard its contents.

NOTE: failure of this test in a UE could cause it to reject a type 0 message when the network is trying to reach the UE. This could lead to unwanted repetitions between the UE and the service centre.

#### 16.1.6.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

the UE shall be in MM-state "Idle, updated".

Related ICS/IXIT Statements

Support for Short Message MT/PP.

The value of timer TC1M.

Foreseen Final State of UE

Idle, updated.

Test Procedure

The SS sends a type 0 message by using the method described in step a) of section 16.1.1 but with the TPDU described in this section.

Maximum Duration of Test

1 minute

Expected Sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 2 | --> | | PAGING RESPONSE | |
| 3 | <-- | | AUTHENTICATION REQUEST | |
| 4 | --> | | AUTHENTICATION RESPONSE | |
| 5 | <-- | | SECURITY MODE COMMAND | |
| 6 | --> | | SECURITY MODE COMPLETE | |
| 7 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), type 0 Short Message |
| 8 | --> | | CP-ACK | |
| 9 | --> | | CP-DATA | Contains RP-ACK TP-Protocol-Identifier (TP-PID). |
| 10 | <-- | | CP-ACK | |
| 11 | <-- | | RRC CONNECTION RELEASE | |
| 12 | --> | | RRC CONNECTION RELEASE COMPLETE | |
| 13 | UE | | | It is highly recommended that the UE discards the type 0 short message. This means that the UE is able to receive the type 0 short message irrespective of whether there is memory available in the (U)SIM or ME or not, the UE does not indicate the receipt of the type 0 short message to the user, and the message is not stored in the (U)SIM or ME. |

Specific Message Contents:

SMS-DELIVER TPDU (containing a type 0 message) (SS to UE):

| Information element | Comment Value |
|---|---|
| TP-MTI | SMS-DELIVER "00"B |
| TP-MMS | more messages are waiting in SC "0"B |
| TP-RP | no reply path "0"B |
| TP-UDHI | TP-UD contains only the SM"0"B |
| TP-SRI | no status report returned0 |
| TP-OA | an international number coded E.164 |
| TP-PID | Type 0: "01000000"B |
| TP-DCS | default alphabet "0000 0000"B |
| TP-SCTS | any legal value (cf. 3GPP TS 23.040) |
| TP-UDL | 160 |
| TP-UD (140 octets) | text of message (160 characters) |

## 16.1.6a Test of short message type 0 (≥ REL-5 UE)

### 16.1.6a.1 Definition and applicability

This tests that the UE correctly acknowledges the receipt of the short message type 0 to the SC in Circuit Switched mode. The UE shall discard the contents of the short message type 0.

This test shall apply to all ≥ REL-5 UEs supporting receipt of short messages in CS mode.

### 16.1.6a.2 Conformance requirement

When a mobile terminated message is type 0, the UE shall acknowledge receipt of the short message to the SC but shall discard its contents. This means that

- the UE shall be able to receive the type 0 short message irrespective of whether there is memory available in the (U)SIM or ME or not,
- the UE shall not indicate the receipt of the type 0 short message to the user,
- the short message shall neither be stored in the (U)SIM nor ME.

References

3GPP TS 23.040 9.2.3.1, 9.2.3.2, 9.2.3.4, 9.2.3.7, 9.2.3.9, 9.2.3.10, 9.2.3.11, 9.2.3.16, 9.2.3.17, 9.2.3.23.

16.1.6a.3 Test purpose

To verify that the UE will acknowledge receipt of the short message to the SC. The UE shall discard its contents. This means that

- the UE shall be able to receive the type 0 short message irrespective of whether there is memory available in the (U)SIM or ME or not,
- the UE shall not indicate the receipt of the type 0 short message to the user,
- the short message shall neither be stored in the (U)SIM nor ME.

NOTE: Failure of this test in a UE could cause it to reject a type 0 message when the network is trying to reach the UE. This could lead to unwanted repetitions between the US and the service centre. In addition service affecting restrictions could happen to the customer.

16.1.6a.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

the UE shall be in MM-state "Idle, updated".

the ME- and (U)SIM message store shall be empty.

Related ICS/IXIT Statements

Support for Short Message MT/PP.

The value of timer TC1M.

Foreseen Final State of UE

Idle, updated.

Test Procedure

a) The SS sends a type 0 short message by using the method described in step a) of clause 16.1.1 but with the TPDU described in this section.

b) The ME- and (U)SIM short message store shall be filled (for example by using the method of clause 16.1.3 test of the memory available notification).

c) The SS sends a type 0 short message as in step a).

Maximum Duration of Test

5 minutes

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 2 | --> | | PAGING RESPONSE | |
| 3 | <-- | | AUTHENTICATION REQUEST | |
| 4 | --> | | AUTHENTICATION RESPONSE | |
| 5 | <-- | | SECURITY MODE COMMAND | |
| 6 | --> | | SECURITY MODE COMPLETE | |
| 7 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), type 0 Short Message |
| 8 | --> | | CP-ACK | |
| 9 | --> | | CP-DATA | Contains RP-ACK RPDU. |
| 10 | <-- | | CP-ACK | |
| 11 | <-- | | RRC CONNECTION RELEASE | |
| 12 | --> | | RRC CONNECTION RELEASE COMPLETE | |
| 13 | UE | | | The UE shall discard the type 0 short message. This means that the UE does not indicate the receipt of the type 0 short message to the user. The UE shall not store the message in the (U)SIM or ME. This can be checked by verifying that it is impossible to retrieve any short messages from the ME- and (U)SIM message store. |
| 14 | SS | | | The ME- and (U)SIM message store shall be filled (for example by using the method of 16.1.3). |
| 15 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 16 | --> | | PAGING RESPONSE | |
| 17 | <-- | | AUTHENTICATION REQUEST | |
| 18 | --> | | AUTHENTICATION RESPONSE | |
| 19 | <-- | | SECURITY MODE COMMAND | |
| 20 | --> | | SECURITY MODE COMPLETE | |
| 21 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), type 0 Short Message |
| 22 | --> | | CP-ACK | |
| 23 | --> | | CP-DATA | Contains RP-ACK RPDU. |
| 24 | <-- | | CP-ACK | |
| 25 | <-- | | RRC CONNECTION RELEASE | |
| 26 | --> | | RRC CONNECTION RELEASE COMPLETE | |
| 27 | UE | | | The UE shall discard the type 0 short message. This means that the UE does not indicate the receipt of the type 0 short message to the user. The UE shall not store the message in the (U)SIM or ME. This can be checked by verifying that it is impossible to retrieve any short messages from the ME- and (U)SIM message store. |

Specific Message Contents:

SMS-DELIVER TPDU (containing a type 0 message) (SS to UE):

| Information element | Comment | Value |
|---|---|---|
| TP-MTI | SMS-DELIVER | "00"B |
| TP-MMS | more messages are waiting in SC | "0"B |
| TP-RP | no reply path | "0"B |
| TP-UDHI | TP-UD contains only the SM | "0"B |
| TP-SRI | no status report returned | "0"B |
| TP-OA | an international number coded E.164 | |
| TP-PID | Type 0: | "01000000"B |
| TP-DCS | default alphabet | “0000 0000"B |
| TP-SCTS | any legal value (cf. 3GPP TS 23.040) | |
| TP-UDL | | 160 |
| TP-UD (140 octets) | text of message (160 characters) | |

#### 16.1.6a.5 Test requirements

After step 9 (ME- and (U)SIM message store not filled) UE shall send CP-DATA containing RP-ACK RPDU (TP-Protocol-Identifier: type 0 Short Message).

After step 13 UE shall discard the type 0 short message (it is impossible to retrieve any short messages from the ME- and (U)SIM message store).

After step 23 (ME- and (U)SIM message store filled) UE shall send CP-DATA containing RP-ACK RPDU (TP-Protocol-Identifier: type 0 Short Message).

After step 27 UE shall discard the type 0 short message (it is impossible to retrieve any short messages from the ME- and (U)SIM message store).

### 16.1.7 Test of the replace mechanism for SM type 1-7

#### 16.1.7.1 Definition

#### 16.1.7.2 Conformance requirement

On receipt of a short message, the UE shall check to see if the associated Protocol Identifier contains a Replace Short Message Type code. If such a code is present, then the UE will check the associated originating address (TP-OA) and replace any existing stored message having the same Protocol Identifier code and originating address with the new short message.

References

3GPP TS 23.040 clause 9.2.3.2, 9.2.3.9.

#### 16.1.7.3 Test purpose

This procedure verifies the correct implementation of the replace mechanism for Replace Short Messages.

#### 16.1.7.4 Method of test

Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in MM-state "Idle, updated";
  - the UE message store shall be empty.

Related ICS/IXIT Statements

Support for Short message MT/PP.

The value of timer TC1M.

Test procedure

a) Two different numbers n and m are drawn randomly between 1 and 7. Two different addresses for TP-Originating-Address (TPOA1 and TPOA2) are drawn.

b) The SS delivers a short message to the UE as specified in clause 16.1.1 step a). In the SMS-DELIVER TPDU, the TP-Protocol-Identifier parameter is "Replace Short Message Type n", the TP-Originating-Address is TPOA1, and the RP-Originating-Address is RPOA.

c) Step b) is repeated but with a different TP-Originating-Address (TPOA2), and different contents of TP-User-Data in the SMS-DELIVER TPDU. The other parameters are the same as in step b).

d) Void

e) Step c) is repeated but with the TP-Protocol-Identifier equal to "Replace Short Message Type m", and contents of TP-User-Data different from the former two messages. The other parameters are the same as in step c).

f) Step e) is repeated but the contents of TP-User-Data are different from that used in step e).

g) The SS prompts the operator to indicate the Short Messages stored in the UE.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |

| 61 | SS | | | Prompts the operator to indicate the Short Messages stored in the UE. Only the Short Messages delivered in step 7, 19 and 55 shall be retrievable and indicated |

Specific Message Contents

SMS-DELIVER TPDU

| Information element | CommentValue |
|---|---|
| TP-MMS | no more messages are waiting in SC "1"B |
| TP-PID | binary 01000xxx, xxx represents n resp. m (see test method description) |

#### 16.1.7.5 Test requirements

After step 61 only the Short Messages delivered in step 7, 19 and 55 shall be retrieved and indicated.

### 16.1.8 Test of the reply path scheme

#### 16.1.8.1 Definition

#### 16.1.8.2 Conformance requirement

When a replying UE receives an original mobile terminated short message it has:

- originating SME = TP-Originating Address in the SMS-DELIVER TPDU;
- original SC = RP-Originating Address in the RP-MT-DATA.

When submitting the reply mobile originated short message, the replying UE should use parameters as follows:

- TP-Destination Address in SMS-SUBMIT TPDU = originating SME;
- RP-Destination Address in RP-MO-DATA = original SC.

NOTE: Annex D of 3GPP TS 23.040 is only informative.

16.1.8.3 Test purpose

This procedure verifies that the UE is able to send a Reply Short Message back to the correct originating SME even if in the meantime it receives another Short Message.

16.1.8.4 Method of test

Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in MM-state "Idle, updated";
  - the UE message store shall be empty.

Related ICS/IXIT Statements

Support for Short message MT/PP.

Support for Short message MO/PP.

The value of timer TC1M.

Test procedure

a) The SS delivers a Short Message as specified in clause 16.1.1, step b) with TP-Reply-Path set to 1.

b) Step a) is repeated but with:
   - different TP-Originating-Address for the originating SME;
   - different RP-Originating-Address for the original SC; and
   - different message contents TP-User-Data.

c) UE sends the Reply Short Message corresponding to one of two received Short Messages (e.g. by means of the MMI).

d) step c) is repeated for the other Short Message.

16.1.8.5 Test requirements

After step 35 UE shall send the Reply Short Message corresponding to one of two previously received short messages.

After step 51 UE shall send the Reply Short Message corresponding to the other of two previously received short messages.

## 16.1.9 Multiple SMS mobile originated

### 16.1.9.1 UE in idle mode

This test applies to UE supporting the ability of sending multiple short messages on the same RRC connection when there is no call in progress.

16.1.9.1.1 Definition

16.1.9.1.2 Conformance requirements

Release 1999:

If another short message or a memory available notification is to be sent, an originating SMR entity in the UE may choose to continue to use the same RRC connection. When the UE chooses to use the same RRC connection, then:

- the UE shall transmit a CM SERVICE REQUEST for the new CM connection before the final CP-ACK (e.g. the one that acknowledges the CP-DATA that carried the RP-ACK) for the old MM connection is transmitted;
- before transmission of the first CP-DATA on the new MM connection, the UE shall transmit the CP-ACK for the old MM connection;
- the Transaction Identifier used on the new MM connection shall be different to that used on the old MM connection; and
- the UE shall not initiate establishment of the new MM connection before the final CP-DATA (e.g. the one carrying the RP-ACK) has been received.

Release 4 or later release:

In the case of a SMS transfer via the CS domain, when the UE chooses to use the same RR or CS signalling connection, then:

- the UE shall transmit a CM SERVICE REQUEST for the new CM connection before the final CP-ACK (i.e. the one that acknowledges the CP-DATA that carried the RP-ACK) for the old MM connection is transmitted;
- before transmission of the first CP-DATA on the new MM connection, the UE may transmit the CP-ACK for the old MM connection; the UE shall not transmit the final CP-ACK after the new CP-DATA;
- the Transaction Identifier used on the new MM connection shall be different to that used on the old MM connection; and
- the UE shall not initiate establishment of the new MM connection before the final CP-DATA (e.g. the one carrying the RP-ACK) has been received.

References

- 3GPP TS 23.040 clause 3.1.
- 3GPP TS 24.011 clause 5.4.

#### 16.1.9.1.3 Test purpose

To verify that the UE is able to correctly concatenate multiple short messages on the same RRC connection when using a DCCH.

#### 16.1.9.1.4 Method of test

##### Initial conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in MM-state "Idle, updated";
  - the SMS message storage shall be empty.

##### Related ICS/IXIT statements

Support for concatenation of multiple short messages MO/PP on the same RRC connection.

Description of how to enter multiple SMS.

Whether SMS messages are stored in the USIM and/or the ME.

##### Foreseen final state of UE

Idle, updated.

##### Test procedure

a) The UE shall be set up to send 3 short messages as multiple SM to the SS. The UE establishes successfully an RRC connection and then the SS performs the authentication.

b) The SS starts integrity protection.

c) The SS responds to the CP-DATA containing RP-DATA RPDU (SMS SUBMIT TPDU) from the UE with a CP-ACK message followed by a CP-DATA message containing the correct RP-ACK RPDU. The Transaction Identifier used on this MM connection is 'x'.

d) The UE shall transmit a CM SERVICE REQUEST for the new CM connection (for the second short message) before the final CP-ACK (the one that acknowledges the CP-DATA that carried the RP-ACK before) for the old MM connection is transmitted. The UE shall not initiate establishment of the new MM connection before the final CP-DATA (i.e. the one carrying the RP-ACK for the first short message) has been received. Before transmission of the first CP-DATA on the new MM connection:

   - For R99: The UE shall transmit the CP-ACK for the old MM connection. The Transaction Identifier used on the new MM connection shall be y, where y <> x (see step c)). Thereby, the UE can transmit the final CP-ACK after either the sending of the CM SERVICE REQUEST for the new CM connection or the reception of the CM SERVICE ACCEPT for the new CM connection, thus two branches for the transmission of the final CP-ACK are possible which are specified in the expected sequence table like A and B respectively. The SS waits for the UE to transmit the final CP-ACK. If received within 5 s then the SS transmits the CM SERVICE ACCEPT and waits for the UE to transmit the first CP-DATA on the new MM connection (branch A). If the final CP-ACK is not received within 5 s then the SS transmits the CM SERVICE ACCEPT and waits for the UE to send the final CP-ACK followed by the first CP-DATA on the new MM connection (branch B).

   - For Rel-4 or later release: The UE may transmit the CP-ACK for the old MM connection. The Transaction Identifier used on the new MM connection shall be y, where y <> x (see step c)). Thereby, the UE can transmit the final CP-ACK after either the sending of the CM SERVICE REQUEST for the new CM connection or the reception of the CM SERVICE ACCEPT for the new CM connection or not to send a CP-ACK at all, thus three cases are possible. These cases are specified using two branches for the transmission of the final CP-ACK where the transmission of the final CP-ACK for the old MM connection is optional. The two branches are specified in the expected sequence table like A and B respectively. The SS waits for the UE

to transmit the final CP-ACK. If received within 5 s then the SS transmits the CM SERVICE ACCEPT and waits for the UE to transmit the first CP-DATA on the new MM connection (branch A). If the final CP-ACK is not received within 5 s then the SS transmits the CM SERVICE ACCEPT and then waits for the UE to send the final CP-ACK (optional) and/or the first CP-DATA on the new MM connection (branch B).

e) Void.

f) The SS responds to the CP-DATA containing RP-DATA RPDU (SMS SUBMIT TPDU) from the UE with a CP-ACK message followed by a CP-DATA message containing the correct RP-ACK RPDU.

g) The UE shall transmit a CM SERVICE REQUEST for the new CM connection (for the third short message) before the final CP-ACK (the one that acknowledges the CP-DATA that carried the RP-ACK before) for the old MM connection is transmitted. Before transmission of the first CP-DATA on the new MM connection:

- For R99: The UE shall transmit the CP-ACK for the old MM connection. The Transaction Identifier used on the new MM connection shall be z, where z <> y (see step d)). The UE shall not initiate establishment of the new MM connection before the final CP-DATA (i.e. the one carrying the RP-ACK for the second short message) has been received. Thereby, the UE can transmit the final CP-ACK after either the sending of the CM SERVICE REQUEST for the new CM connection or the reception of the CM SERVICE ACCEPT for the new CM connection, thus two branches for the transmission of the final CP-ACK are possible which are specified in the expected sequence table like A and B respectively. The SS waits for the UE to transmit the final CP-ACK. If received within 5 s then the SS transmits the CM SERVICE ACCEPT and waits for the UE to transmit the first CP-DATA on the new MM connection (branch A). If the final CP-ACK is not received within 5 s then the SS transmits the CM SERVICE ACCEPT and waits for the UE to send the final CP-ACK followed by the first CP-DATA on the new MM connection (branch B).

- For Rel-4 or later release: The UE may transmit the CP-ACK for the old MM connection. The Transaction Identifier used on the new MM connection shall be z, where z <> y (see step d)). Thereby, the UE can transmit the final CP-ACK after either the sending of the CM SERVICE REQUEST for the new CM connection or the reception of the CM SERVICE ACCEPT for the new CM connection or not to send a CP-ACK at all, thus three cases are possible. These cases are specified using two branches for the transmission of the final CP-ACK where the transmission of the final CP-ACK for the old MM connection is optional. The two branches are specified in the expected sequence table like A and B respectively. The SS waits for the UE to transmit the final CP-ACK. If received within 5 s then the SS transmits the CM SERVICE ACCEPT and waits for the UE to transmit the first CP-DATA on the new MM connection (branch A). If the final CP-ACK is not received within 5 s then the SS transmits the CM SERVICE ACCEPT and then waits for the UE to send the final CP-ACK (optional) and/or the first CP-DATA on the new MM connection (branch B).

h) Void.

i) The SS responds to the CP-DATA containing RP-DATA RPDU (SMS SUBMIT TPDU) from the UE with a CP-ACK message followed by a CP-DATA message containing the correct RP-ACK RPDU.

j) The SS waits a maximum of 5 s after sending CP-DATA for the CP-ACK message from the UE.

k) The SS sends a RRC CONNECTION RELEASE to the UE.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | The UE is set up to send 3 short messages as multiple SM |
| 2 | SS | | | The SS verifies that the IE “Establishment cause” in the received RRC CONNECTION REQUEST message is set to “Originating Low Priority Signalling”. |
| 3 | | | (void) | |
| 4 | | | (void) | |
| 5 | --> | | CM SERVICE REQUEST | CM service type set to "Short Message Service". |
| 6 | <-- | | AUTHENTICATION REQUEST | |
| 7 | --> | | AUTHENTICATION RESPONSE | |
| 8 | SS | | | The SS starts integrity protection |
| 9 | | | Void | |
| 10 | --> | | CP-DATA | Contains RP-DATA RPDU (SMS SUBMIT TPDU). The Transaction Identifier used in steps 10, 11, 12 and 14 shall be x. |

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 11 | <-- | | CP-ACK | |
| 12 | <-- | | CP-DATA | Contains RP-ACK RPDU |
| 13 | --> | | CM SERVICE REQUEST | CM service type set to "Short Message Service". |
| 14 | --> | | CP-ACK | The one that acknowledges the CP-DATA which carried the RP-ACK RPDU.<br>If CP-ACK received then continue at A15<br>If CP-ACK is not received within 5 s from the CM SERVICE REQUEST was sent in step 13 then goto step B15a.<br>(See note 1 and note 2) |
| Branch A | | | | |
| A15 | <-- | | CM SERVICE ACCEPT | After having sent the CM SERVICE ACCEPT then goto step 16. |
| Branch B | | | | |
| B15a | <-- | | CM SERVICE ACCEPT | |
| B15b | --> | | CP-ACK | The one that acknowledges the CP-DATA which carried the RP-ACK RPDU.<br>For Rel-4 or later release UE: Optional step (See note 2) |
| 16 | --> | | CP-DATA | Contains RP-DATA RPDU (SMS SUBMIT TPDU). The Transaction Identifier used in steps 16, 17, 18 and 20 shall be y where y <> x (see step 10). |
| 17 | <-- | | CP-ACK | |
| 18 | <-- | | CP-DATA | Contains RP-ACK RPDU |
| 19 | --> | | CM SERVICE REQUEST | CM service type set to "Short Message Service". |
| 20 | --> | | CP-ACK | The one that acknowledges the CP-DATA which carried the RP-ACK RPDU.<br>If CP-ACK received then continue at A21<br>If CP-ACK is not received within 5 s from the CM SERVICE REQUEST was sent in step 19 then goto step B21a.<br>(See note 1 and note 2) |
| Branch A | | | | |
| A21 | <-- | | CM SERVICE ACCEPT | After having sent the CM SERVICE ACCEPT then goto step 22. |
| Branch B | | | | |
| B21a | <-- | | CM SERVICE ACCEPT | |
| B21b | --> | | CP-ACK | The one that acknowledges the CP-DATA which carried the RP-ACK RPDU.<br>For Rel-4 or later release UE: Optional step (See note 2) |
| 22 | --> | | CP-DATA | Contains RP-DATA RPDU (SMS SUBMIT TPDU). The Transaction Identifier used in steps 22, 23, 24 and 25 shall be z, where z <> y (see step 16). |
| 23 | <-- | | CP-ACK | |
| 24 | <-- | | CP-DATA | Contains RP-ACK RPDU |
| 25 | --> | | CP-ACK | Shall be sent within 5 s of step 24 |
| 26 | SS | | | The SS releases the RRC connection |
| NOTE 1: 5 s have been agreed to be a reasonable value to secure that the UE have enough time to respond to the different messages. | | | | |
| NOTE 2: The CP-ACK for the old MM connection can be received either before or after the reception of the CM SERVICE ACCEPT message. For Release 4 or later release the UE transmission of the final CP-ACK is optional. | | | | |

#### 16.1.9.1.5 Test requirements

In step 13 the UE shall transmit a CM SERVICE REQUEST for the new CM connection (for the second short message) before the final CP-ACK for the old MM connection is transmitted.

In step 19 the UE shall transmit a CM SERVICE REQUEST for the new CM connection (for the third short message) before the final CP-ACK for the old MM connection is transmitted.

### 16.1.9.2 UE in active mode

This test applies to UE supporting the ability of sending concatenated multiple short messages when there is a call in progress.

16.1.9.2.1 Definition

16.1.9.2.2 Conformance requirements

Release 1999:

If another short message or a memory available notification is to be sent, an originating SMR entity in the UE may choose to continue to use the same RRC connection. When the UE chooses to use the same RRC connection, then:

- the UE shall transmit a CM SERVICE REQUEST for the new CM connection before the final CP-ACK (e.g. the one that acknowledges the CP-DATA that carried the RP-ACK) for the old MM connection is transmitted;
- before transmission of the first CP-DATA on the new MM connection, the UE shall transmit the CP-ACK for the old MM connection;
- the Transaction Identifier used on the new MM connection shall be different to that used on the old MM connection; and
- the UE shall not initiate establishment of the new MM connection before the final CP-DATA (e.g. the one carrying the RP-ACK) has been received.

Release 4 or later release:

In the case of a SMS transfer via the CS domain, when the UE chooses to use the same RR or CS signalling connection, then:

- the UE shall transmit a CM SERVICE REQUEST for the new CM connection before the final CP-ACK (i.e. the one that acknowledges the CP-DATA that carried the RP-ACK) for the old MM connection is transmitted;
- before transmission of the first CP-DATA on the new MM connection, the UE may transmit the CP-ACK for the old MM connection; the UE shall not transmit the final CP-ACK after the new CP-DATA;
- the Transaction Identifier used on the new MM connection shall be different to that used on the old MM connection; and
- the UE shall not initiate establishment of the new MM connection before the final CP-DATA (e.g. the one carrying the RP-ACK) has been received.

16.1.9.2.3 Test purpose

To verify that the UE is able to correctly concatenate multiple short messages on the same RRC connection when sent parallel to a call.

16.1.9.2.4 Method of test

Initial conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in MM-state "Idle, updated";
  - the SMS message storage shall be empty.

Related ICS/IXIT statements

Support for concatenation of multiple short messages MO/PP on the same RRC connection.

Description of how to enter multiple SMS.

Support for state U10 of call control.

Whether SMS messages are stored in the USIM and/or the ME.

Foreseen final state of UE

Idle, updated.

Test procedure

a) A data or speech call is established on a DTCH with the SS and the state U10 of call control is entered. The UE is set up to send 3 short messages as multiple SM to the SS. After the reception of the CM SERVICE REQUEST, the SS sends a CM SERVICE ACCEPT message.

b) Steps c) to k) of the test procedure in clause 16.1.9.1.4 are repeated.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | SS | | A data or speech call is established on a DTCH and the state U10 of call control is entered. |
| 2 | UE | | | The UE is set up to send 3 short messages as multiple SM |
| 3 | --> | | CM SERVICE REQUEST | Sent in a layer 2 frame on the DCCH. CM service type set to "Short Message Service" |
| 4 | <-- | | CM SERVICE ACCEPT | |
| 7 | --> | | CP-DATA | Contains RP-DATA RPDU (SMS SUBMIT TPDU). The Transaction Identifier used in steps 7, 8, 9 and 11 shall be x. |
| 8 | <-- | | CP-ACK | |
| 9 | <-- | | CP-DATA | Contains RP-ACK RPDU |
| 10 | --> | | CM SERVICE REQUEST | Sent in a layer 2 frame on the DCCH. CM service type set to "Short Message Service" |

| A18 | <-- | | CM SERVICE ACCEPT | |
| Branch B | | | | |
| B17 | <-- | | CM SERVICE ACCEPT | |

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| B18 | --> | | CP-ACK | The one that acknowledges the CP-DATA which carried the RP-ACK RPDU.<br>For Rel-4 or later release UE: Optional step (See note 2) |
| 19 | --> | | CP-DATA | Contains RP-DATA RPDU (SMS SUBMIT TPDU). The Transaction Identifier used in steps 19, 20, 21 and 22 shall be z, where z <> y (see step 13). |
| 20 | <-- | | CP-ACK | |
| 21 | <-- | | CP-DATA | Contains RP-ACK RPDU |
| 22 | --> | | CP-ACK | Shall be sent within 5 s of step 21 |
| 23 | SS | | | The SS releases the RRC connection |
| NOTE 1: 5 s have been agreed to be a reasonable value to secure that the UE have enough time to respond to the different messages. | | | | |
| NOTE 2: The CP-ACK for the old MM connection can be received either before or after the reception of the CM SERVICE ACCEPT message. For Release 4 or later release the UE transmission of the final CP-ACK is optional. | | | | |

#### 16.1.9.2.5 Test requirements

In step 10 the UE shall transmit a CM SERVICE REQUEST for the new CM connection (for the second short message) before the final CP-ACK for the old MM connection is transmitted.

In step 16 the UE shall transmit a CM SERVICE REQUEST for the new CM connection (for the third short message) before the final CP-ACK for the old MM connection is transmitted.

### 16.1.10 Test of capabilities of simultaneously receiving a short message whilst sending a mobile originated short message

#### 16.1.10.1 Definition

#### 16.1.10.2 Conformance requirements

An active UE shall be able to receive a short message TPDU (SMS-DELIVER) at any time, independently of whether or not there is an SMS mobile originated call (SMS-SUBMIT or SMS-COMMAND) in progress.

References

3GPP TS 23.040 clauses 3.1, 9.2.3.16.

3GPP TS 24.011 clause 3.2.

#### 16.1.10.3 Test purpose

The test verifies that the UE is capable of simultaneously receiving a network originated SM whilst sending a mobile originated SM.

#### 16.1.10.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in MM-state "Idle, updated";
  - the SMS message storage shall be empty.

Related ICS/IXIT Statements

Support for Short message MO/PP and MT/PP.

Support for state U10 of call control.

The value of timer TC1M.

Whether SMS messages are stored in the USIM and/or the ME.

Test procedure

a) The SS is configured to receive a mobile originated SM. In clause 16.1.2 steps a) and b) are repeated and, using the end of the CP-DATA message from the UE as a trigger, the SS sends a SM to the UE. In this case a new transaction identifier shall be used in the CP messages of SMS mobile terminated.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | The UE is set up to send an SM |
| 2 | SS | | | The SS verifies that the IE "Establishment cause" in the received RRC CONNECTION REQUEST message is set to "Originating Low Priority Signalling". |
| 3 | | | (void) | |
| 4 | | | (void) | |
| 5 | --> | | CM SERVICE REQUEST | CM service type set to "Short Message Service" |
| 6 | <-- | | AUTHENTICATION REQUEST | |
| 7 | --> | | AUTHENTICATION RESPONSE | |
| 8 | SS | | | The SS starts integrity protection |
| 9 | | | (void) | |
| 10 | --> | | CP-DATA | Contains RP-DATA RPDU (SMS SUBMIT TPDU) |
| 11 | SS | | | The SS sends an SM to the UE triggered by the end of the CP-DATA message from the UE |
| 12 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU) |
| 13 | UE | | | The UE shall correctly receive the SM and indicate that a message has arrived. In the MO case the UE shall send the CP-ACK message with transaction identifier assigned to this transfer. In the MT case the UE shall send a CP-ACK message and a CP-DATA message containing the RP-ACK RPDU. The transaction identifier shall be the same as chosen by the SS for the MT transfer. |
| NOTE: Time values for SS wait times are chosen sufficiently high to be sure that the UE has enough time to respond to the different messages. | | | | |

Specific Message Contents

SMS SUBMIT TPDU

| Information element | CommentValue |
|---|---|
| TP-UDL | as applicable |
| TP-UD (140 octets) | 160 ASCII characters |

16.1.10.5 Test requirements

After step 12 UE shall correctly receive the SM and indicate that a message has arrived.

# 16.2 Short message service point to point on PS mode

All of test cases in this clause are applied to the UE supported PS mode.

## 16.2.1 SMS mobile terminated

16.2.1.1 Definition

16.2.1.2 Conformance requirements

An active UE shall be able to receive short message TPDU (SMS-DELIVER) at any time, independently of whether or not there is a PDP context in progress. A report will always be returned to the SC, confirming that the UE has received the short message.

References

3GPP TS 23.040 clauses 3.1, 9.2.3.16.

16.2.1.3 Test purpose

To verify the ability of a UE to receive and decode the SMS where provided for the point to point service.

16.2.1.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in GMM-state "GMM-REGISTERED";
  - the SMS message storage shall be empty.

Related ICS/IXIT Statements

Support for Short message MT/PP.

The value of timer TC1M.

Whether SMS messages are stored in the USIM and/or the ME.

Support for session management state "PDP-ACTIVE".

Maximum number of retransmissions of an unacknowledged CP-DATA message.

Test procedure

a) Mobile terminates establishment of Radio Resource Connection. After the completion of RRC Connection the SS authenticates the UE and activates ciphering.

   After the SS receives SECURITY MODE COMPLETE, the SS sends a CP-DATA message. The information element of the CP-DATA message will be RP-DATA RPDU (SMS DELIVER TPDU).

b) The SS waits a maximum of 25 s for the CP-ACK message and then a maximum of 60 s for the CP-DATA message containing the RP-ACK RPDU.

c) The SS sends a CP-ACK to the UE within TC1M with no further CP-DATA messages and the SS initiates RRC connection release.

d) Steps a), b) and c) are repeated but the first CP-DATA message from the UE is not acknowledged. The second CP-DATA message from the UE is acknowledged by a CP-ACK within a time TC1M.

e) Steps a) and b) are repeated. The SS is configured not to send CP-ACK. Then maximum 3 CP-DATA retransmissions may occur. After a duration of 4 times TC1M + 10 s (Maximum for T3317) SS initiates the RRC connection release. This is the appropriate time to wait to verify that the UE does not send more than the maximum allowed (3) CP-DATA retransmissions.

f) The SMS message store shall be cleared manually by the operator.

g) A PDP context is established with the SS and the state PDP-ACTIVE of session management is entered.

   The SS sends a CP-DATA message. The information element of the CP-DATA message will be RP-DATA RPDU (SMS DELIVER TPDU). The SS waits a maximum of 25 s for the CP-ACK message and then a maximum of 60 s for the CP-DATA message containing the RP-ACK RPDU.

h) The SS sends a CP-ACK to the UE within TC1M with no further CP-DATA messages and the SS initiates RRC connection release. The SMS message store shall be cleared manually by the operator.

i) Steps g) and h) are repeated but the first CP-DATA message from the UE is not acknowledged. The second CP-DATA message from the UE is acknowledged by a CP-ACK within a time TC1M.

j) Step g) is repeated. The SS is configured not to send CP-ACK. Then maximum 3 CP-DATA retransmissions may occur. After a duration of 4 times TC1M + 10 s (Maximum for T3317) SS initiates the RRC connection release. This is the appropriate time to wait to verify that the UE does not send more than the maximum allowed (3) CP-DATA retransmissions (during PDP context in progress).

k) A PDP context is established with the SS and the state PDP-ACTIVE of session management is entered. The PDP context is cleared by the SS with a disconnect message. (The PDP context deactivating is continued in parallel to the following exchange of messages related to SMS).

The SS sends a CP-DATA RPDU (SMS DELIVER TPDU) message. The information element of the CP-DATA message is RP-DATA.

The SS waits a maximum of 25 s for the CP-ACK message and then a maximum of 60 s for the CP-DATA message containing the RP-ACK RPDU.

The SS sends a CP-ACK to the UE within TC1M with no further CP-DATA messages and the SS initiates RRC connection release.

The SMS message store shall be cleared manually by the operator.

l) A PDP context is established with the SS and the state PDP-ACTIVE of session management is entered. The PDP context shall be cleared from the UE. (The PDP context deactivating is continued in parallel to the following exchange of messages related to SMS).

The SS sends a CP-DATA message. The information element of the CP-DATA message is RP-DATA RPDU (SMS DELIVER TPDU).

The SS waits a maximum of 25 s for the CP-ACK message and then a maximum of 60 s for the CP-DATA message containing the RP-ACK RPDU.

The SS sends a CP-ACK to the UE within TC1M with no further CP-DATA messages and the SS initiates RRC connection release.

The SMS message store shall be cleared manually by the operator.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108. The IE “Paging cause” in the PAGING TYPE 1 message is set to “Terminating Low Priority Signalling”. The SS verifies that the IE “Establishment cause” in the received RRC CONNECTION REQUEST message is set to “Terminating Low Priority Signalling”. |

| 114 | UE | | | Clear the SMS message store |
| NOTE: Time values for SS wait time are chosen sufficiently high to be sure that the UE has enough time to respond to the different messages. | | | | |

Specific Message Contents

SMS DELIVER TPDU (not containing a type 0 message)

| Information element | Comment Value |
|---|---|
| TP-PID | Different from Type 0: “01000000”B |
| TP-UDL | 160 |
| TP-UD (140 octets) | text of message (160 characters) |
| NOTE: The 160 characters in TP-UD shall include at least one occurrence of each character in the default alphabet (see 3GPP TS 23.038, clause 6.2.1). | |

### 16.2.1.5 Test requirements

After step 7 UE shall receive SMS-DELIVER TPDU and send CP-ACK within 25 s and CP-DATA containing RP-ACK within 60 s.

After step 14 UE shall indicate that an SM has arrived.

After step 27 UE shall retransmit CP-DATA containing RP-ACK within twice TC1M.

After step 30 UE shall indicate that an SM has arrived.

After step 43 UE shall repeat CP-DATA retransmissions and the maximum number of retransmissions must not exceed three.

After step 48 UE shall indicate that an SM has arrived.

After step 51 UE shall receive SMS-DELIVER TPDU and send CP-ACK within 25 s and CP-DATA containing RP-ACK within 60 s.

After step 59 UE shall indicate that an SM has arrived.

After step 69 UE shall retransmit CP-DATA containing RP-ACK within twice TC1M.

After step 74 UE shall indicate that an SM has arrived.

After step 84 UE shall repeat CP-DATA retransmissions and the maximum number of retransmissions must not exceed three.

After step 89 UE shall indicate that an SM has arrived.

After step 94 UE shall receive SMS-DELIVER TPDU and send CP-ACK within 25 s and CP-DATA containing RP-ACK within 60 s.

After step 101 UE shall indicate that an SM has arrived.

After step 106 UE shall receive SMS-DELIVER TPDU and send CP-ACK within 25 s and CP-DATA containing RP-ACK within 60 s.

After step 113 UE shall indicate that an SM has arrived.

## 16.2.2 SMS mobile originated

### 16.2.2.1 Definition

### 16.2.2.2 Conformance requirements

An active UE shall be able to submit short message TPDU (SMS-SUBMIT) at any time, independently of whether or not there is a PDP context in progress.

References

3GPP TS 23.040 clause 3.1, 9.2.3.16.

### 16.2.2.3 Test purpose

To verify that the UE is able to correctly send a short message where the SMS is provided for the point to point service.

### 16.2.2.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in GMM-state "GMM-REGISTERED";
  - the SMS message storage shall be empty.

Related ICS/IXIT Statements

Support for Short message MO/PP.

Support for state PDP-ACTIVE of session management.

The value of timer TC1M.

Whether SMS messages are stored in the USIM and/or the ME.

Maximum number of retransmissions of an unacknowledged CP-DATA message.

Test procedure

a) The UE shall be set up to send an SM to the SS. The UE establishes successfully an RRC connection.

b) The SS performs authentication and after that, the SS starts integrity protection.

c) The SS responds to the CP-DATA containing RP-DATA RPDU (SMS SUBMIT TPDU) from the UE with a CP-ACK message within TC1M followed by a CP-DATA message containing the correct RP-ACK RPDU. The SS waits a maximum of 25 s for the CP-ACK message.

d) The SS sends a RRC connection release message to the UE.

e) Steps a) and b) are repeated. The SS is configured not to send the CP-ACK message. Then maximum 3 CP-DATA retransmissions may occur. After a duration of 4 times TC1M + 10 s (Maximum for T3317) SS initiates RRC connection release. This is the appropriate time to wait to verify that the UE does not send more than the maximum CP-DATA retransmissions.

f) Steps a) and b) are repeated. On receipt of the CP-DATA from the UE the SS sends a CP-ERROR message within TC1M containing a "Network Failure" cause. Then the SS initiates RRC connection release.

g) A PDP context is established with the SS and the state PDP-ACTIVE of session management is entered. The UE is set up to send an SM to the SS.

h) The SS responds to the CP-DATA containing RP-DATA RPDU (SMS SUBMIT TPDU) from the UE with a CP-ACK message within TC1M followed by a CP-DATA message containing the correct RP-ACK RPDU. The

SS waits a maximum of 25 s for the CP-ACK message. Then the SS sends a RRC connection release message to the UE.

i) Step g) is repeated. The SS is configured not to send the CP-ACK message. Then maximum 3 CP-DATA retransmissions may occur. After a duration of 4 times TC1M + 10 s (Maximum for T3317) the SS initiates RRC connection release. This is the appropriate time to wait to verify that the UE does not send more than the maximum CP-DATA retransmissions (during a PDP context in progress).

j) (void)

k) The UE is set up to send an SM to the SS. On receipt of the SERVICE REQUEST the SS sends a SERVICE REJECT message with the reject cause set to "GPRS services not allowed". After 5 s the SS initiates RRC connection release.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | The UE is set up to send an SM |
| 2 | SS | | | The SS verifies that the IE “Establishment cause” in the received RRC CONNECTION REQUEST message is set to “Originating Low Priority Signalling”. |
| 3 | | | (void) | |
| 4 | | | (void) | |

SMS SUBMIT TPDU

| Information element | CommentValue |
|---|---|
| TP-UDL | as applicable |
| TP-UD (140 octets) | 160 ASCII characters |

#### 16.2.2.5 Test requirements

After step 10 UE shall send a CP-DATA containing RP-data. The RP-DATA shall contain SMS SUBMIT TPDU.

After step 26 UE shall retransmit a CP-DATA containing RP-data. The RP-DATA shall contain SMS SUBMIT TPDU.

After step 49 UE shall send a CP-DATA containing RP-data. The RP-DATA shall contain SMS SUBMIT TPDU.

After step 61 UE shall repeat CP-DATA retransmissions and the maximum number of retransmissions must not exceed three.

After step 82 UE shall not send CP-DATA.

## 16.2.3 Test of memory full condition and memory available notification:

The Memory Available Notification provides a means for the UE to notify the network that it has memory available to receive one or more short messages. The SMS status field in the USIM contains status information on the "memory available" notification flag.

#### 16.2.3.1 Definition

#### 16.2.3.2 Conformance requirement

1. When a mobile terminated message is Class 2, the UE shall ensure that the message has been transferred to the SMS data field in the USIM before sending an acknowledgement to the SC. The UE shall return a protocol error message if the short message cannot be stored in the USIM and there is other short message storage available in the UE. If all the short message storage in the UE is already in use, the UE shall return "memory capability exceeded".

2. When the UE rejects a short message due to lack of available memory capability the need to transfer notification shall be stored in the USIM.

3. If the memory capability becomes available because memory is cleared, the value of the memory capability exceeded notification flag in the USIM is read. If the flag is set, the UE notifies the network that memory capability is now available. After a positive acknowledgement from the network, the ME unsets the memory capability exceeded notification flag in the USIM.

References

- 3GPP TS 23.038 clause 4.

- 3GPP TS 23.040 clauses 9.2.3.10, 10.3 (operation 14).

#### 16.2.3.3 Test purpose

1. To verify that the UE sends the correct acknowledgement when its memory in the USIM becomes full.
2. To verify that the UE sends the correct acknowledgement when its memory in the ME and the USIM becomes full, and sets the "memory exceeded" notification flag in the USIM.
3. To verify that the UE performs the "memory available" procedure when its message store becomes available for receiving short messages, and only at this moment.

#### 16.2.3.4 Method of test

##### Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in GMM-state "GMM-REGISTERED";
  - the SMS message storage shall be empty;
  - the UE shall be connected to the USIM simulator. The following shall be present in the USIM simulator:
    - $EF_{SMS}$ with at least one record;
    - $EF_{SMSS}$, with SMS "Memory Cap. Exceed" notification flag set to "memory available";
    - Service no. 10 (SMS) in $EF_{UST}$ set to allocated and activated.
  - for storing of Class 1 Short Messages the UE shall be set up to store Short Messages in the ME memory (by way of MMI, as described in ICS/IXIT statement).

##### Related ICS/IXIT Statements

Support for Short message MT/PP.

Whether SMS messages are stored in the USIM and/or the ME.

The value of timer TC1M.

##### Test procedure

a) step a) of clause 16.2.5.3 (test of Class 2 Short Messages) is repeated until the UE sends a negative acknowledgement (RP-ERROR). The USIM simulator shall indicate if the "memory capability exceeded" notification flag has been set on the USIM.

b) a Class 1 Short Message is sent to the UE.

c) step b) is repeated until the UE sends a negative acknowledgement (RP-ERROR). The USIM simulator shall indicate if the "memory capability exceeded" notification flag has been set on the USIM.

d) a Short Message is sent to the UE with the DCS field of the SMS-DELIVER TPDU set to 0.

e) the SS prompts the operator to read a short message and to remove it from the message store of the UE.

f) the SS waits for a RRC CONNECTION REQUEST from the UE, and sends a RRC CONNECTION SETUP.

g) after the SS receives a RRC CONNECTION SETUP COMPLETE, the SS authenticates the UE and activates ciphering.

h) the SS answers to the RP-SMMA from the UE with a CP-DATA containing a RP-ACK RPDU.

i) after the UE has acknowledged the CP-DATA with a CP-ACK, the SS releases the RRC connection. The USIM simulator shall indicate if the "memory capability exceeded" notification flag has been unset on the USIM.

j) step e) is repeated.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 2 | --> | | SERVICE REQUEST | |
| 3 | <-- | | AUTHENTICATION AND CIPHERING REQUEST | |
| 4 | --> | | AUTHENTICATION AND CIPHERING RESPONSE | |
| 5 | <-- | | SECURITY MODE COMMAND | |
| 6 | --> | | SECURITY MODE COMPLETE | |
| 7 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), Class 2 Short Message |
| 8 | | SS | | Waits max 25 s for CP-ACK |
| 9 | --> | | CP-ACK | |
| 10 | | SS | | Waits max 60 s for RP-ACK RPDU |
| 11 | --> | | CP-DATA | Contains RP-ACK RPDU |
| 12 | <-- | | CP-ACK | Within TC1M after step 11 |
| 13 | <-- | | RRC CONNECTION RELEASE | RRC connection is released. Step 1-13 is repeated until UE sends a negative acknowledgement (RP-ERROR) in step 11. The RP-ERROR RPDU cause field shall be "Protocol error, unspecified" if there is message capability in the USIM, or "Memory capability exceeded" if there is no message capability in the USIM. If the total memory store of the UE is full, the ME shall set the "memory capability exceeded" notification flag on the USIM. |
| 14 | --> | | RRC CONNECTION RELEASE COMPLETE | |
| 15 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 16 | --> | | SERVICE REQUEST | |
| 17 | <-- | | AUTHENTICATION AND CIPHERING REQUEST | |
| 18 | --> | | AUTHENTICATION AND CIPHERING RESPONSE | |
| 19 | <-- | | SECURITY MODE COMMAND | |
| 20 | --> | | SECURITY MODE COMPLETE | |
| 21 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), Class 1 Short Message |
| 22 | | SS | | Waits max 25 s for CP-ACK |
| 23 | --> | | CP-ACK | |
| 24 | | SS | | Waits max 60 s for RP-ACK RPDU |
| 25 | --> | | CP-DATA | Shall contain RP-ACK RPDU if there is memory capability in the ME. If not it shall contain RP-ERROR RPDU which cause field shall be "memory capability exceeded". If the total memory store of the UE now becomes full at this step, the ME shall set the "memory cap. exceed" notification flag on the USIM. |
| 26 | <-- | | CP-ACK | Within TC1M after step 25 |
| 27 | <-- | | RRC CONNECTION RELEASE | RRC connection is released. Step 16-27 is repeated until the UE sends an RP-ERROR. The USIM simulator shall indicate if the "memory capability exceeded" notification flag has been set on the USIM. |
| 28 | --> | | RRC CONNECTION RELEASE COMPLETE | |
| 29 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 30 | --> | | SERVICE REQUEST | |
| 31 | <-- | | AUTHENTICATION AND CIPHERING REQUEST | |
| 32 | --> | | AUTHENTICATION AND CIPHERING RESPONSE | |
| 33 | <-- | | SECURITY MODE COMMAND | |
| 34 | --> | | SECURITY MODE COMPLETE | |

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 35 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU) with TP-DCS set to 0 |
| 36 | | SS | | Waits max 25 s for CP-ACK |
| 37 | --> | | CP-ACK | |
| 38 | | SS | | Waits max 60 s for RP-ACK RPDU |
| 39 | --> | | CP-DATA | Shall contain RP-ERROR RPDU with error cause "memory capability exceeded". |
| 40 | <-- | | CP-ACK | Within TC1M after step 39 |
| 41 | <-- | | RRC CONNECTION RELEASE | RRC connection is released. |
| 42 | --> | | RRC CONNECTION RELEASE COMPLETE | |
| 43 | | SS | | Prompts the operator to remove one of the short messages from the message store of the UE. |
| 44 | <-- | | SYSTEM INFORMATION | BCCH |
| 45 | --> | | RRC CONNECTION REQUEST | CCCH |
| 46 | <-- | | RRC CONNECTION SETUP | CCCH |
| 47 | --> | | RRC CONNECTION SETUP COMPLETE | DCCH |
| 48 | --> | | SERVICE REQUEST | |
| 49 | <-- | | SERVICE ACCEPT | |
| 50 | --> | | CP-DATA | Contains RP-SMMA RPDU |
| 51 | <-- | | CP-ACK | |
| 52 | <-- | | CP-DATA | Contains RP-ACK RPDU |
| 53 | --> | | CP-ACK | Acknowledge of CP-DATA containing the RP-ACK RPDU. The ME shall unset the "memory capability exceeded" notification flag on the USIM. |
| 54 | <-- | | RRC CONNECTION RELEASE | RRC connection is released. The USIM simulator shall indicate if the "memory capability exceeded" notification flag has been unset on the USIM. |
| 55 | --> | | RRC CONNECTION RELEASE COMPLETE | |
| 56 | | SS | | Prompts the operator to remove one of the short messages from the message store of the UE. |
| 57 | UE | | | Shall not attempt to send a RP-SMMA RPDU. This is verified by checking that the UE does not send a CHANNEL REQUEST message with the establishment cause "Other services which can be completed with an SDCCH" |
| NOTE: Time values for SS wait time are chosen sufficiently high to be sure that the UE has enough time to respond to the different messages. | | | | |

### 16.2.3.5 Test requirements

After UE sends a negative acknowledgement (RP-ERROR) in step 11, the USIM simulator shall indicate if the "memory capability exceeded" notification flag has been set on the USIM.

After UE sends a negative acknowledgement (RP-ERROR) in step 25, the USIM simulator shall indicate if the "memory capability exceeded" notification flag has been set on the USIM.

After step 53 the ME shall unset the "memory capability exceeded" notification flag on the USIM.

After step 57 UE shall not attempt to send a RP-SMMA RPDU.

## 16.2.4 Test of the status report capabilities and of SMS-COMMAND:

This test applies to UEs which support the status report capabilities.

### 16.2.4.1 Definition

### 16.2.4.2 Conformance requirement

The SMS offers the SC the capabilities of informing the UE of the status of a previously sent mobile originated short message. This is achieved by the SC returning a status report TPDU (SMS-STATUS-REPORT) to the originating UE.

SMS-COMMAND enables an UE to invoke an operation at the SC.

The UE shall increment TP-MR by 1 for each SMS-SUBMIT or SMS-COMMAND being submitted.

References

- 3GPP TS 23.040 clauses 3.2.9, 9.2.3.2, 9.2.3.4, 9.2.3.5, 9.2.3.6, 9.2.3.14, 9.2.3.18, 9.2.3.19, 9.2.3.26.

### 16.2.4.3 Test purpose

1) To verify that the UE is able to accept a SMS-STATUS-REPORT TPDU.

2) To verify that the UE is able to use the SMS-COMMAND functionality correctly and sends an SMS-COMMAND TPDU with the correct TP-Message-Reference.

### 16.2.4.4 Method of test

Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in GMM-state "GMM-REGISTERED".

Related ICS/IXIT Statements

Support of SMS MO/PP and MT/PP.

Test procedure

a) The UE is made to send a Mobile Originated short message setting TP-SRR as in steps a) to d) of test 16.2.2 (SMS Mobile originated).

b) The SS sends a CP-DATA message containing a RP-DATA RPDU itself containing an SMS-STATUS-REPORT TPDU.

c) The SS sends a RRC CONNECTION RELEASE message.

d) The UE is made to send an SMS-COMMAND message enquiring about the previously submitted short message.

e) Void.

f) The SS acknowledges the CP-DATA message from the UE with a CP-ACK followed by a CP-DATA message containing an RP-ACK RPDU.

g) After receiving the CP-ACK from the UE, the SS releases the RRC connection by using a RRC CONNECTION RELEASE message.

h) The UE is made to send an SMS-COMMAND message requiring to delete the previously submitted short message.

i) steps e) to g) are repeated.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | <-- | | SYSTEM INFORMATION | BCCH |

Specific Message Contents

SMS SUBMIT TPDU

| Information element | Comment Value |
|---|---|
| TP-SRR | status report is requested "1"B |

SMS-STATUS-REPORT TPDU (SS to UE in step 23):

| Information element | Comment Value |
|---|---|
| TP-MR | same as previous SMS-SUBMIT |
| TP-MMS | no more messages "1"B |
| TP-SRQ | result of SMS-SUBMIT "0"B |
| TP-RA | same as the Destination address of the SMS-SUBMIT |
| TP-ST | SM received "00000000"B |

first SMS-COMMAND TPDU (UE to SS in step 39)

| Information element | Comment Value |
|---|---|
| TP-MR | TP-MR in previous SMS-SUBMIT plus "1" |
| TP-SRR | status report requested "1"B |
| TP-CT | Enquiry relating to previously submitted short message "00000000"B |
| TP-MN | not checked (TP-MR in previous SMS-SUBMIT) |

second SMS-COMMAND TPDU (UE to SS in step 54)

| Information element | Comment Value |
|---|---|
| TP-MR | TP-MR in previous SMS-COMMAND plus "1" |
| TP-CT | Delete previously submitted short message "00000010"B |
| TP-MN | not checked (TP-MR in previous SMS-SUBMIT) |

### 16.2.4.5 Test requirements

After step 23 UE accept a SMS-STATUS-REPORT TPDU.

After step 39 UE shall send a SMS-COMMAND TPDU with the correct TP-Message-Reference.

After step 54 UE shall send a SMS-COMMAND TPDU with the correct TP-Message-Reference.

## 16.2.5 Test of message class 0 to 3

### 16.2.5.1 Short message class 0

#### 16.2.5.1.1 Definition

#### 16.2.5.1.2 Conformance requirement

When a mobile terminated message is class 0 and the UE has the capability of indicating short messages, the UE shall indicate the message immediately and send an acknowledgement to the SC when the message has successfully reached the UE irrespective of whether there is memory available in the USIM or ME. The message shall not be automatically stored in the USIM or ME.

Reference

3GPP TS 23.038 clause 4.

#### 16.2.5.1.3 Test purpose

To verify that the UE will accept and indicate but not store a class 0 message, and that it will accept and indicate a class 0 message if its message store is full.

NOTE: failure of this test in a UE could cause it to reject a class 0 message when its SMS memory becomes full. This could lead to unwanted repetitions between the UE and the service centre.

#### 16.2.5.1.4 Method of test

Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in GMM-state "GMM-REGISTERED";
  - the UE message store shall be empty.

Related ICS/IXIT Statements

Support for Short message MT/PP.

The value of timer TC1M.

Whether SMS messages are stored in the USIM and/or the ME.

Test procedure

a) The SS sends a class 0 message by using the method described in step a) of clause 16.2.1 but with the TPDU described in this clause.

b) The UE message store shall be filled (for example by using the method of clause 16.2.3 test of the memory available notification) with the same SMS-DELIVER TPDU except that TP-DCS is set to class 1.

c) The SS sends a class 0 message as in step a).

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 2 | --> | | SERVICE REQUEST | |
| 3 | <-- | | AUTHENTICATION AND CIPHERING REQUEST | |
| 4 | --> | | AUTHENTICATION AND CIPHERING RESPONSE | |
| 5 | <-- | | SECURITY MODE COMMAND | |
| 6 | --> | | SECURITY MODE COMPLETE | |
| 7 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), Class 0 Short Message |
| 8 | --> | | CP-ACK | |

| 23 | --> | | CP-DATA | Contains RP-ACK RPDU. |
| 24 | <-- | | CP-ACK | |
| 25 | <-- | | RRC CONNECTION RELEASE | |
| 26 | --> | | RRC CONNECTION RELEASE COMPLETE | |
| 27 | UE | | | The content of the short message shall be indicated by the ME. |

Specific Message Contents

SMS-DELIVER TPDU (containing a class 0 message) (SS to UE)

| Information element | Comment | Value |
|---|---|---|
| TP-DCS | default alphabet, class 0 | "1111 0000"B |

SMS-DELIVER TPDU (containing a class 1 message to fill the UE message store) (SS to UE)

| Information element | Comment | Value |
|---|---|---|
| TP-DCS | default alphabet, class 1 | "1111 0001"B |

16.2.5.1.5 Test requirements

After step 7 UE shall accept and indicate but not store a class 0 message.

After step 21 UE shall accept and indicate a class 0 message.

## 16.2.5.2 Test of class 1 short messages

This test shall apply to UEs which support:

- storing of received Class 1 Short Messages; and
- indicating of stored Short Messages.

### 16.2.5.2.1 Definition

### 16.2.5.2.2 Conformance requirement

When a mobile terminated message is class 1, the UE shall send an acknowledgement to the SC when the message has successfully reached the UE and can be stored, either in the ME or in the USIM.

#### Reference

3GPP TS 23.038 clause 4.

### 16.2.5.2.3 Test purpose

This procedure verifies that the UE acts correctly on receiving a class 1 message, i.e. that it stores the message in the ME or USIM and sends an acknowledgement (at RP and CP-Layer).

### 16.2.5.2.4 Method of test

#### Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in GMM-state "GMM-REGISTERED";
  - the UE message store shall be empty;
  - for storing of class 1 Short Messages, the UE shall be set up to store Short Messages in the ME memory (by way of MMI, as described in ICS/IXIT statement).

#### Related ICS/IXIT Statements

Support for Short message MT/PP.

The value of timer TC1M.

Whether SMS messages are stored in the USIM and/or the ME.

#### Test procedure

a) The SS delivers a Short Message of class 1 to the UE as specified in clause 16.2.1, step a).

b) The Short Message is recalled (e.g. by means of the MMI).

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 2 | --> | | SERVICE REQUEST | |
| 3 | <-- | | AUTHENTICATION AND CIPHERING REQUEST | |
| 4 | --> | | AUTHENTICATION AND CIPHERING RESPONSE | |
| 5 | <-- | | SECURITY MODE COMMAND | |
| 6 | --> | | SECURITY MODE COMPLETE | |
| 7 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), Class 1 Short Message |
| 8 | --> | | CP-ACK | |
| 9 | --> | | CP-DATA | Contains RP-ACK RPDU. |
| 10 | <-- | | CP-ACK | |
| 11 | <-- | | RRC CONNECTION RELEASE | |
| 12 | --> | | RRC CONNECTION RELEASE COMPLETE | |
| 13 | UE | | | The short message shall be recalled and indicated at the UE. |

Specific Message Contents

SMS-DELIVER TPDU (containing a class 1 message) (SS to UE)

| Information element | Comment | Value |
|---|---|---|
| TP-DCS | default alphabet, class 1 | "1111 0001"B |

16.2.5.2.5 Test requirements

After step 7 UE shall store the message in the ME or USIM and send an acknowledgement.

## 16.2.5.3 Test of class 2 short messages

16.2.5.3.1 Definition

Class 2 Short Messages are defined as USIM specific, and the UE shall ensure that a message of this class is stored on the USIM.

16.2.5.3.2 Conformance requirement

When a mobile terminated message is Class 2, the UE shall ensure that the message has been correctly transferred to the SMS data field in the USIM before sending an acknowledgement to the SC. The UE shall return a "protocol error, unspecified" error message if the short message cannot be stored in the USIM and there is other short message storage available at the UE. If all the short message storage at the UE is already in use, the UE shall return "memory capacity exceeded".

References

3GPP TS 23.040 clause 9.2.3.10.

3GPP TS 23.038 clause 4.3

3GPP TS 34.108 clause 8.3.2.28.

16.2.5.3.3 Test purpose

This procedure verifies that the UE acts correctly on receiving a class 2 message, i.e. that it stores the message correctly in the USIM, and if this is not possible, returns a protocol error message, with the correct error cause, to the network.

There are 2 cases:

1) if the UE supports storing of short messages in the USIM and in the ME, and storage in the ME is not full, and the short message cannot be stored in the USIM, the error cause shall be "protocol error, unspecified";

2) if the UE supports storing of short messages in the USIM and not in the ME, and storage in the ME is not full, and the short message cannot be stored in the USIM, the error cause shall be "memory capacity exceeded".

NOTE: If the UE supports storing of short messages in the USIM and the ME, and storage in the ME is full, and the short message cannot be stored in the USIM, the error cause shall be "memory capacity exceeded". This case is not tested in this test.

#### 16.2.5.3.4 Method of test

##### Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in GMM-state "GMM-REGISTERED";
  - the ME message store shall be empty;
  - the ME shall be connected to the USIM simulator. The following shall be present in the USIM simulator:
    - $EF_{SMS}$ with at least two free records and one full record;
    - $EF_{SMSS}$, with SMS "Memory Cap. Exceed" notification flag set to "memory available";
    - Service no. 10 (SMS) in $EF_{UST}$ set to allocated and activated;
    - for storing of Class 1 Short Messages the UE shall be set up to store Short Messages in the ME memory (by way of MMI, as described in ICS/IXIT statement).

##### Related ICS/IXIT Statements

Support for Short message MT/PP.

The value of timer TC1M.

Whether SMS messages are stored in the USIM and/or the ME.

##### Test procedure

a) The SS delivers a Short Message of class 2 to the UE as specified in clause 16.2.1, step b).

b) Following an attempt by the ME to store the short message in a free record of $EF_{SMS}$ in the USIM, the USIM simulator returns the status response "OK" ("90 00").

c) Step a) is repeated.

d) Following an attempt by the ME to store the short message in a free record of $EF_{SMS}$ in the USIM, the USIM simulator returns the status response "memory problem" ("92 40").

e) The USIM simulator indicates if an attempt was made in steps a) and c) to store the messages and if the messages are stored according to the requirement.

##### Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 2 | --> | | SERVICE REQUEST | |

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 3 | <-- | | AUTHENTICATION AND CIPHERING REQUEST | |
| 4 | --> | | AUTHENTICATION AND CIPHERING RESPONSE | |
| 5 | <-- | | SECURITY MODE COMMAND | |
| 6 | --> | | SECURITY MODE COMPLETE | |
| 7 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), Class 2 Short Message |
| 8 | --> | | CP-ACK | |
| 9 | ME | | | The ME shall correctly store the short message in a free record of EFSMS in the USIM, i.e.<br>- the ME shall use a free record<br>- the first byte of the record shall indicate "message received by UE from network"<br>- the TS-Service-Centre-Address shall be correctly stored<br>- the TPDU shall be identical to that sent by the SS<br>- bytes following the TPDU shall be set to "FF" |
| 10 | USIM | | | The USIM simulator returns the status response "OK" ("90 00"). The USIM simulator shall indicate if an attempt was made by the ME to store the short message in the USIM. |
| 11 | --> | | CP-DATA | Contains RP-ACK RPDU. |
| 12 | <-- | | CP-ACK | |
| 13 | <-- | | RRC CONNECTION RELEASE | |
| 14 | --> | | RRC CONNECTION RELEASE COMPLETE | |
| 15 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 16 | --> | | SERVICE REQUEST | |
| 17 | <-- | | AUTHENTICATION AND CIPHERING REQUEST | |
| 18 | --> | | AUTHENTICATION AND CIPHERING RESPONSE | |
| 19 | <-- | | SECURITY MODE COMMAND | |
| 20 | --> | | SECURITY MODE COMPLETE | |
| 21 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), Class 2 Short Message |
| 22 | --> | | CP-ACK | |
| 23 | ME | | | The ME shall attempt to store the short message in a free record of EFSMS in the USIM. |
| 24 | USIM | | | The USIM simulator returns the status response "memory problem" ("92 40"). The USIM simulator shall indicate if an attempt was made by the ME to store the short message in the USIM. |
| 25 | --> | | CP-DATA | Contains RP-ERROR RPDU with error cause "protocol error, unspecified" if the UE supports storing of short messages in the ME, or error cause "memory capacity exceeded" if not. |
| 26 | <-- | | CP-ACK | |
| 27 | <-- | | RRC CONNECTION RELEASE | |
| 28 | --> | | RRC CONNECTION RELEASE COMPLETE | |

Specific Message Contents

SMS-DELIVER TPDU (containing a class 2 message) (SS to UE)

| Information element | Comment | Value |
|---|---|---|
| TP-DCS | default alphabet, class 2 | "1111 0010"B |

#### 16.2.5.3.5 Test requirements

After step 10 UE shall confirm that the short message is stored in the USIM and send CP-DATA containing RP-ACK RPDU.

After step 24 UE shall confirm that the short message cannot be stored in the USIM and send CP-DATA containing RP-ERROR RPDU. If UE supports storing of short message in the ME, the error cause of RP-ERROR RPDU shall be "protocol error, unspecified", and if not the error cause of RP-ERROR RPDU shall be "memory capacity exceeded"

### 16.2.5.4 Test of class 3 short messages

For further study.

## 16.2.6 Test of short message type 0 (R99 and REL-4 UE)

### 16.2.6.1 Definition and applicability

This tests that the UE correctly acknowledges the receipt of the short message type 0 to the SC in Packet Switched mode. It is highly recommended that the UE discards the contents of the short message type 0.

This test shall apply to all R99 and REL-4 UEs supporting receipt of short messages in PS mode.

### 16.2.6.2 Conformance requirement

When a mobile terminated message is type 0, the UE shall acknowledge receipt of the short message to the SC but may discard its contents.

Note: It is highly recommended that the UE discards the type 0 short message. This means that the UE is able to receive the type 0 short message irrespective of whether there is memory available in the (U)SIM or ME or not, the UE does not indicate the receipt of the type 0 short message to the user, and the message is not stored in the (U)SIM or ME.

Reference(s)

3GPP TS 23.040, 9.2.3.9.

### 16.2.6.3 Test purpose

To verify that the UE will acknowledge receipt of the short message to the SC. The UE should discard its contents.

NOTE: failure of this test in a UE could cause it to reject a type 0 message when the network is trying to reach the UE. This could lead to unwanted repetitions between the UE and the service centre.

### 16.2.6.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

the UE shall be in GMM-state "GMM-REGISTERED";

Related ICS/IXIT Statements

Support for Short Message MT/PP.

The value of timer TC1M.

Foreseen Final State of UE

Idle, updated.

Test Procedure

The SS sends a type 0 message by using the method described in step a) of section 16.2.1 but with the TPDU described in this section.

Maximum Duration of Test

1 minute

Expected Sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 2 | --> | | SERVICE REQUEST | |
| 3 | <-- | | AUTHENTICATION AND CIPHERING REQUEST | |
| 4 | --> | | AUTHENTICATION AND CIPHERING RESPONSE | |
| 5 | <-- | | SECURITY MODE COMMAND | |
| 6 | --> | | SECURITY MODE COMPLETE | |
| 7 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), type 0 Short Message |
| 8 | --> | | CP-ACK | |
| 9 | --> | | CP-DATA | Contains RP-ACK TP-Protocol-Identifier (TP-PID). |
| 10 | <-- | | CP-ACK | |
| 11 | <-- | | RRC CONNECTION RELEASE | |
| 12 | --> | | RRC CONNECTION RELEASE COMPLETE | |
| 13 | UE | | | It is highly recommended that the UE discards the type 0 short message. This means that the UE is able to receive the type 0 short message irrespective of whether there is memory available in the (U)SIM or ME or not, the UE does not indicate the receipt of the type 0 short message to the user, and the message is not stored in the (U)SIM or ME. |

Specific Message Contents:

SMS-DELIVER TPDU (containing a type 0 message) (SS to UE):

| Information element | Comment Value |
|---|---|
| TP-MTI | SMS-DELIVER "00"B |
| TP-MMS | more messages are waiting in SC "0"B |
| TP-RP | no reply path "0"B |
| TP-UDHI | TP-UD contains only the SM"0"B |
| TP-SRI | no status report returned0 |
| TP-OA | an international number coded E.164 |
| TP-PID | Type 0: "01000000"B |
| TP-DCS | default alphabet “0000 0000"B |
| TP-SCTS | any legal value (cf. 3GPP TS 23.040) |
| TP-UDL | 160 |
| TP-UD (140 octets) | text of message (160 characters) |

## 16.2.6a Test of short message type 0 (≥ REL-5 UE)

### 16.2.6a.1 Definition and applicability

This tests that the UE correctly acknowledges the receipt of the short message type 0 to the SC in Packet Switched mode. The UE discards the contents of the short message type 0.

This test shall apply to all ≥ REL-5 UEs supporting receipt of short messages in PS mode.

### 16.2.6a.2 Conformance requirement

When a mobile terminated message is type 0, the UE shall acknowledge receipt of the short message to the SC but shall discard its contents. This means that

- the UE shall be able to receive the type 0 short message irrespective of whether there is memory available in the (U)SIM or ME or not,
- the UE shall not indicate the receipt of the type 0 short message to the user,
- the short message shall neither be stored in the (U)SIM nor ME.

References

3GPP TS 23.040 9.2.3.2, 9.2.3.4, 9.2.3.7, 9.2.3.9, 9.2.3.10, 9.2.3.11, 9.2.3.16, 9.2.3.17, 9.2.3.23.

### 16.2.6a.3 Test purpose

To verify that the UE will acknowledge receipt of the short message to the SC. The UE shall discard its contents. This means that

- the UE shall be able to receive the type 0 short message irrespective of whether there is memory available in the (U)SIM or ME or not,
- the UE shall not indicate the receipt of the type 0 short message to the user,
- the short message shall neither be stored in the (U)SIM nor ME.

NOTE: failure of this test in a UE could cause it to reject a type 0 message when the network is trying to reach the UE. This could lead to unwanted repetitions between the US and the service centre. In addition service affecting restrictions could happen to the customer.

### 16.2.6a.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

the UE shall be in GMM-state "GMM-REGISTERED";

the ME- and (U)SIM message store shall be empty.

Related ICS/IXIT Statements

Support for Short Message MT/PP.

The value of timer TC1M.

Foreseen Final State of UE

Idle, updated.

Test Procedure

a) The SS sends a type 0 short message by using the method described in step a) of clause 16.2.1 but with the TPDU described in this section.

b) The ME- and (U)SIM short message store shall be filled (for example by using the method of clause 16.2.3 test of the memory available notification).

c) The SS sends a type 0 short message as in step a).

Maximum Duration of Test

5 minutes

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 2 | --> | | SERVICE REQUEST | |
| 3 | <-- | | AUTHENTICATION AND CIPHERING REQUEST | |
| 4 | --> | | AUTHENTICATION AND CIPHERING RESPONSE | |
| 5 | <-- | | SECURITY MODE COMMAND | |
| 6 | --> | | SECURITY MODE COMPLETE | |
| 7 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), type 0 Short Message |
| 8 | --> | | CP-ACK | |
| 9 | --> | | CP-DATA | Contains RP-ACK RPDU. |
| 10 | <-- | | CP-ACK | |
| 11 | <-- | | RRC CONNECTION RELEASE | |
| 12 | --> | | RRC CONNECTION RELEASE COMPLETE | |
| 13 | UE | | | The UE shall discard the type 0 short message. This means that the UE does not indicate the receipt of the type 0 short message to the user. The UE shall not store the message in the (U)SIM or ME. This can be checked by verifying that it is impossible to retrieve any short messages from the ME- and (U)SIM message store. |
| 14 | SS | | | The ME- and (U)SIM message store shall be filled (for example by using the method of 16.1.3). |
| 15 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 16 | --> | | SERVICE REQUEST | |
| 17 | <-- | | AUTHENTICATION AND CIPHERING REQUEST | |
| 18 | --> | | AUTHENTICATION AND CIPHERING RESPONSE | |
| 19 | <-- | | SECURITY MODE COMMAND | |
| 20 | --> | | SECURITY MODE COMPLETE | |
| 21 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), type 0 Short Message |
| 22 | --> | | CP-ACK | |
| 23 | --> | | CP-DATA | Contains RP-ACK RPDU. |
| 24 | <-- | | CP-ACK | |
| 25 | <-- | | RRC CONNECTION RELEASE | |
| 26 | --> | | RRC CONNECTION RELEASE COMPLETE | |
| 27 | UE | | | The UE shall discard the type 0 short message. This means that the UE does not indicate the receipt of the type 0 short message to the user. The UE shall not store the message in the (U)SIM or ME. This can be checked by verifying that it is impossible to retrieve any short messages from the ME- and (U)SIM message store. |

Specific Message Contents:

SMS-DELIVER TPDU (containing a type 0 message) (SS to UE):

| Information element | Comment | Value |
|---|---|---|
| TP-MTI | SMS-DELIVER | "00"B |
| TP-MMS | more messages are waiting in SC | "0"B |
| TP-RP | no reply path | "0"B |
| TP-UDHI | TP-UD contains only the SM | "0"B |
| TP-SRI | no status report returned | "0"B |
| TP-OA | an international number coded E.164 | |
| TP-PID | Type 0: | "01000000"B |
| TP-DCS | default alphabet | “0000 0000"B |
| TP-SCTS | any legal value (cf. 3GPP TS 23.040) | |
| TP-UDL | | 160 |
| TP-UD (140 octets) | text of message (160 characters) | |

#### 16.2.6a.5 Test requirements

After step 9 (ME- and (U)SIM message store not filled) UE shall send CP-DATA containing RP-ACK RPDU (TP-Protocol-Identifier: type 0 Short Message).

After step 13 UE shall discard the type 0 short message (it is impossible to retrieve any short messages from the ME- and (U)SIM message store).

After step 23 (ME- and (U)SIM message store filled) UE shall send CP-DATA containing RP-ACK RPDU (TP-Protocol-Identifier: type 0 Short Message).

After step 27 UE shall discard the type 0 short message (it is impossible to retrieve any short messages from the ME- and (U)SIM message store).

### 16.2.7 Test of the replace mechanism for SM type 1-7

#### 16.2.7.1 Definition

#### 16.2.7.2 Conformance requirement

On receipt of a short message, the UE shall check to see if the associated Protocol Identifier contains a Replace Short Message Type code. If such a code is present, then the UE will check the associated originating address (TP-OA) and replace any existing stored message having the same Protocol Identifier code and originating address with the new short message.

References

3GPP TS 23.040 clause 9.2.3.2, 9.2.3.9.

#### 16.2.7.3 Test purpose

This procedure verifies the correct implementation of the replace mechanism for Replace Short Messages.

#### 16.2.7.4 Method of test

Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in GMM-state "GMM-REGISTERED";
  - the UE message store shall be empty.

Related ICS/IXIT Statements

Support for Short message MT/PP.

The value of timer TC1M.

Test procedure

a) Two different numbers n and m are drawn randomly between 1 and 7. Two different addresses for TP-Originating-Address (TPOA1 and TPOA2) are drawn.

b) The SS delivers a short message to the UE as specified in clause 16.2.1 step a). In the SMS-DELIVER TPDU, the TP-Protocol-Identifier parameter is "Replace Short Message Type n", the TP-Originating-Address is TPOA1, and the RP-Originating-Address is RPOA.

c) Step b) is repeated but with a different TP-Originating-Address (TPOA2), and different contents of TP-User-Data in the SMS-DELIVER TPDU. The other parameters are the same as in step b).

d)

e) Step c) is repeated but with the TP-Protocol-Identifier equal to "Replace Short Message Type m", and contents of TP-User-Data different from the former two messages. The other parameters are the same as in step c).

f) Step e) is repeated but the contents of TP-User-Data are different from that used in step e).

g) The SS prompts the operator to indicate the Short Messages stored in the UE.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |

| 57 | --> | | CP-DATA | Contains RP-ACK RPDU. |
| 58 | <-- | | CP-ACK | |
| 59 | <-- | | RRC CONNECTION RELEASE | |
| 60 | --> | | RRC CONNECTION RELEASE COMPLETE | |
| 61 | SS | | | Prompts the operator to indicate the Short Messages stored in the UE. Only the Short Messages delivered in step 7, 19 and 55 shall be retrievable and indicated |

Specific Message Contents

SMS-DELIVER TPDU

| Information element | CommentValue |
|---|---|
| TP-MMS | no more messages are waiting in SC "1"B |
| TP-PID | binary 01000xxx, xxx represents n resp. m (see test method description) |

#### 16.2.7.5 Test requirements

After step 61 only the Short Messages delivered in step 7, 19 and 55 shall be retrieved and indicated.

### 16.2.8 Test of the reply path scheme

#### 16.2.8.1 Definition

#### 16.2.8.2 Conformance requirement

When a replying UE receives an original mobile terminated short message it has:

- originating SME = TP-Originating Address in the SMS-DELIVER TPDU;
- original SC = RP-Originating Address in the RP-MT-DATA.

When submitting the reply mobile originated short message, the replying UE should use parameters as follows:

- TP-Destination Address in SMS-SUBMIT TPDU = originating SME;
- RP-Destination Address in RP-MO-DATA = original SC.

3GPP TS 23.040 3.2.10, 9.2.3.2, 9.2.3.17, Annex D clauses D.5 and D.6.

NOTE: Annex D of 3GPP TS 23.040 is only informative.

#### 16.2.8.3 Test purpose

This procedure verifies that the UE is able to send a Reply Short Message back to the correct originating SME even if in the meantime it receives another Short Message.

#### 16.2.8.4 Method of test

Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in GMM-state "GMM-REGISTERED";
  - the UE message store shall be empty.

Related ICS/IXIT Statements

Support for Short message MT/PP.

Support for Short message MO/PP.

The value of timer TC1M.

Test procedure

a) The SS delivers a Short Message as specified in clause 16.2.1, step b) with TP-Reply-Path set to 1.

b) Step a) is repeated but with:
   - different TP-Originating-Address for the originating SME;
   - different RP-Originating-Address for the original SC; and
   - different message contents TP-User-Data.

c) UE sends the Reply Short Message corresponding to one of two received Short Messages (e.g. by means of the MMI).

d) step c) is repeated for the other Short Message.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 2 | --> | | SERVICE REQUEST | |
| 3 | <-- | | AUTHENTICATION AND CIPHERING REQUEST | |
| 4 | --> | | AUTHENTICATION AND CIPHERING RESPONSE | |
| 5 | <-- | | SECURITY MODE COMMAND | |
| 6 | --> | | SECURITY MODE COMPLETE | |
| 7 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU) TP-RP set to 1 |
| 8 | --> | | CP-ACK | Sent within TC1M after step 7 |
| 9 | --> | | CP-DATA | Contains RP-ACK RPDU. |
| 10 | <-- | | CP-ACK | |
| 11 | <-- | | RRC CONNECTION RELEASE | |
| 12 | --> | | RRC CONNECTION RELEASE COMPLETE | |
| 13 | | | Mobile terminated establishment of Radio Resource Connection | See 3GPP TS34.108 |
| 14 | --> | | SERVICE REQUEST | |
| 15 | <-- | | AUTHENTICATION AND CIPHERING REQUEST | |
| 16 | --> | | AUTHENTICATION AND CIPHERING RESPONSE | |
| 17 | <-- | | SECURITY MODE COMMAND | |
| 18 | --> | | SECURITY MODE COMPLETE | |
| 19 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU) TP-OA, RP-OA and TP-UD different from step 7 |
| 20 | --> | | CP-ACK | Sent within TC1M after step 7 |
| 21 | --> | | CP-DATA | Contains RP-ACK RPDU. |
| 22 | <-- | | CP-ACK | |
| 23 | <-- | | RRC CONNECTION RELEASE | |

Specific Message Contents

SMS-DELIVER TPDU

| Information element | Comment | Value |
|---|---|---|
| TP-MMS | no more messages are waiting in SC | "1"B |
| TP-RP | Reply Path exists | "1"B |

#### 16.2.8.5 Test requirements

After step 35 UE shall send the Reply Short Message corresponding to one of two previously received short messages.

After step 52 UE shall send the Reply Short Message corresponding to the other of two previously received short messages.

## 16.2.9 Multiple SMS mobile originated

### 16.2.9.1 UE in idle mode

This test is not applicable for R99.

### 16.2.9.2 UE in active mode

This test is not applicable for R99.

## 16.2.10 Test of capabilities of simultaneously receiving a short message whilst sending a mobile originated short message

#### 16.2.10.1 Definition

#### 16.2.10.2 Conformance requirements

An active UE shall be able to receive a short message TPDU (SMS-DELIVER) at any time, independently of whether or not there is an SMS mobile originated call (SMS-SUBMIT or SMS-COMMAND) in progress.

References

3GPP TS 23.040 clause 3.1, 9.2.3.16.

3GPP TS 24.011 clause 3.2.

### 16.2.10.3 Test purpose

The test verifies that the UE is capable of simultaneously receiving a network originated SM whilst sending a mobile originated SM.

### 16.2.10.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in GMM-state "GMM-REGISTERED";
  - the SMS message storage shall be empty.

Related ICS/IXIT Statements

Support for Short message MO/PP and MT/PP.

Support for state PDP-ACTIVE of session management.

The value of timer TC1M.

Whether SMS messages are stored in the USIM and/or the ME.

Test procedure

a) The SS is configured to receive a mobile originated SM. In clause 16.2.2 steps a) and b) are repeated and, using the end of the CP-DATA message from the UE as a trigger, the SS sends a SM to the UE. In this case a new transaction identifier shall be used in the CP messages of SMS mobile terminated.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | The UE is set up to send an SM |
| 2 | SS | | | The SS verifies that the IE “Establishment cause” in the received RRC CONNECTION REQUEST message is set to “Originating Low Priority Signalling”. |
| 3 | | | (void) | |
| 4 | | | (void) | |
| 5 | --> | | SERVICE REQUEST | |
| 6 | <-- | | AUTHENTICATION AND CIPHERING REQUEST | |
| 7 | --> | | AUTHENTICATION AND CIPHERING RESPONSE | |
| 8 | SS | | | The SS starts integrity protection |
| 9 | | | | |
| 10 | --> | | CP-DATA | Contains RP-DATA RPDU (SMS SUBMIT TPDU) |
| 11 | SS | | | The SS sends an SM to the UE triggered by the end of the CP-DATA message from the UE |
| 12 | <-- | | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU) |

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 13 | UE | | | The UE shall correctly receive the SM and indicate that a message has arrived. In the MO case the UE shall send the CP-ACK message with transaction identifier assigned to this transfer. In the MT case the UE shall send a CP-ACK message and a CP-DATA message containing the RP-ACK RPDU. The transaction identifier shall be the same as chosen by the SS for the MT transfer. |
| NOTE: Time values for SS wait times are chosen sufficiently high to be sure that the UE has enough time to respond to the different messages. | | | | |

Specific Message Contents

SMS SUBMIT TPDU

| Information element | CommentValue |
|---|---|
| TP-UDL<br>TP-UD (140 octets) | as applicable<br>160 ASCII characters |

#### 16.2.10.5 Test requirements

After step 12 UE shall correctly receive the SM and indicate that a message has arrived.

## 16.3 Short message service cell broadcast

### 16.3.1 Definition

### 16.3.2 Conformance requirements

In idle mode, the UE has the ability to ignore repeated broadcasts of CBS messages already received (the message has not changed since it was last broadcast i.e. sequence number has not changed within the message's indicated geographical area);

A UE supporting Cell Broadcast Service (CBS) shall be capable to receive BMC messages in the Idle mode.

References

- 3GPP TS 23.041 clause 8.
- 3GPP TS 25.324 clause 11.

### 16.3.3 Test purpose

This test verifies that an UE supporting SMS-CB is able to receive SMS-CB messages and is able to ignore repeated broadcasts of CBS messages.

### 16.3.4 Method of test

Initial conditions

- System Simulator:
  - 1 cell, default parameters;
  - the SS provides a BCCH/CCCH to support the UE in idle mode;
  - periodic location updating is disabled.
- User Equipment:
  - the UE shall be in the idle updated state.

Related ICS/IXIT Statements

Support for short message transmission cell broadcast.

Test procedure

Three Cell Broadcast (CB) messages are sent by the SS on the CTCH with message codes 0,1,1 in serial number fields respectively.

NOTE: If the UE fails the test because of a failure to receive the message due to collision of CTCH and paging occasion, then the operator may re-run the test.

Expected sequence

Since the SMS-CB messages are sent continuously, a table is not applicable in this test.

Specific Message Contents:

Use the default parameter values for the system information block 1 with the same type specified in clause 6.1.0b of TS 34.108, with the following exceptions:

Cell broadcast test message content

| Information element | Comment Value |
|---|---|
| Message Type | CBS Message "1"B (see 3GPP TS 25.324, clause 11.1) |
| Message ID | |
| Serial Number | |
| - Geographical scope | "01"B |
| - Message code | see test procedure "0000000000"B or "0000000001"B |
| - Update number | as applicable |
| Data Coding Scheme | Default alphabet, English "00000001"B |
| CB Data | max 1246 octets |

### 16.3.5 Test requirements

In consequence of test the UE shall ignore third message and store two messages.

## 16.3a Short message service cell broadcast Discontinuous Reception (DRX)

### 16.3a.1 Definition

### 16.3a.2 Conformance requirements

A UE supporting Cell Broadcast Service (CBS) shall be capable to receive BMC messages in the Idle mode.

In idle mode, the UE will enter CBS DRX mode based upon received Schedule Messages.

References

- 3GPP TS 25.324 clause 9.1.
- 3GPP TS 23.041 clause 8.

### 16.3a.3 Test purpose

This test verifies that a UE supporting SMS-CB and SMS-CB DRX is able to receive SMS-CB messages in DRX..

16.3a.4 Method of test

Initial conditions

- System Simulator:
  - 1 cell, default parameters;
  - the SS provides a BCCH/CCCH to support the UE in idle mode;
  - Cell Broadcast Service DRX is enabled.
  - periodic location updating is disabled.
- User Equipment:
  - the UE shall be in the idle updated state.
  - the UE shall be configured, not to opt-out of presentation of Cell Broadcast messages with Message ID 4371 and 4379.

Related ICS/IXIT Statements

Support for short message transmission cell broadcast.

Support for short message transmission cell broadcast DRX.

**Figure 16.3a.4-1: CTCH Transmission pattern of the Schedule and Test messages**

a) The SS sends CELL BROADCAST SCHEDULE #1 message (1 CTCH-BS) on the CTCH.

b) The SS waits for 6 CTCH-BS after Step a), then sends CELL BROADCAST TEST #1 message (3 CTCH-BS), followed by CELL BROADCAST SCHEDULE #2 message (1 CTCH-BS). (Note 1)

c) The SS waits for 9 CTCH-BS after Step b), then sends CELL BROADCAST SCHEDULE#3 message (1 CTCH-BS), followed by CELL BROADCAST TEST #2 message (3 CTCH-BS). (Note 2)

d) The SS waits for 10 CTCH-BS after Step c), then sends CELL BROADCAST TEST #3 message (3 CTCH-BS). (Note 3)

NOTE 1: CELL BROADCAST TEST#1 and CELL BROADCAST SCHEDULE #2 are situated at the beginning of the Scheduling period referred to by CELL BROADCAST SCHEDULE #1.

NOTE 2: CELL BROADCAST SCHEDULE #3 and CELL BROADCAST TEST#2 and are situated in the middle of the Scheduling period referred to by CELL BROADCAST SCHEDULE #2.

NOTE 3: CELL BROADCAST TEST#3 is situated at the end of the Scheduling period referred to by CELL BROADCAST SCHEDULE #3.

NOTE 4: If the UE fails the test because of a failure to receive the message due to collision of CTCH and paging occasion, then the operator may re-run the test.

| Data Coding Scheme | “00000001"B (GSM 7-bit default alphabet, English) |
| CB Data | 90 characters i.e. 79 octets |

16.3a.5 Test requirements

1. After Step 3 the UE shall receive the CELL BROADCAST TEST #1.
2. After Step 8 the UE shall receive the CELL BROADCAST TEST #2.
3. After Step 11 the UE shall receive the CELL BROADCAST TEST #3.

# 16.4 Default message contents:

## 16.4.1 Default message contents for SM-CP protocol

CP-DATA

| Information element | Comment Value |
|---|---|
| Protocol Discriminator | SMS messages ("1001"B) |
| Transaction Identifier | |
| TIO | any value from the set {0, ..., 6} |
| TI flag | 0 |
| Message type | 00000001 |
| CP-User data | |
| length indicator | |
| RPDU | max 248 octets |

CP-ACK

| Information element | Comment Value |
|---|---|
| Transaction Identifier | |
| TIO | |
| TI flag | |
| Message type | 00000100 |

CP-ERROR

| Information element | Comment Value |
|---|---|
| Transaction Identifier | |
| TIO | |
| TI flag | |
| Message type | 00010000 |
| CP-Cause | |
| Cause value | see 3GPP TS 24.011, clause 8.1.4.2 |

## 16.4.2 Default message contents for SM-RP protocol

RP-DATA

| Information element | Comment Value |
|---|---|
| RP-Message Type | "001"B (SS->UE) or "000"B(UE->SS) |
| RP-Message Reference | see 3GPP TS 24.011, clause 8.2.3 |
| RP-Originator Address | see 3GPP TS 24.011, clause 8.2.5.1 |
| RP-Destination Address | see 3GPP TS 24.011, clause 8.2.5.2 |
| RP-User Data | see 3GPP TS 24.011, clause 8.2.5.3 |

| Length indicator | |
| TP-Data | max 232 octets |

RP-SMMA (UE->SS)

| Information element | Comment Value |
|---|---|
| RP-Message Type | "110"B (UE->SS) |
| RP-Message Reference | see 3GPP TS 24.011, clause 8.2.3 |

## 16.4.3 Default message contents for SM-TP protocol

SMS DELIVER TPDU

| Information element | Comment Value |
|---|---|
| TP-MTI | SMS DELIVER "00"B |
| TP-MMS | more messages are waiting in SC "0"B |
| TP-RP | no reply path "0"B |
| TP-UDHI | TP-UD contains only the SM"0"B |
| TP-SRI | no status report returned"0"B |
| TP-OA | an international number coded E.164 |
| TP-PID | default"00000000"B |
| TP-DCS | default alphabet "00000000"B |
| TP-SCTS | any legal value (cf. 3GPP TS 23.040) |
| TP-UDL | |
| TP-UD | max 140 octets |

SMS SUBMIT TPDU

| Information element | Comment | Value |
|---|---|---|
| TP-MTI | SMS SUBMIT | "01"B |
| TP-RD | SC shall accept same SMS-SUBMIT | "0"B |
| TP-VPF | TP-VP field not present | "00"B |
| TP-RP | no reply path | "0"B |
| TP-UDHI | TP-UD contains only the SM | "00"B |
| TP-SRR | no request of status report | "00"B |
| TP-MR | | |
| TP-DA | an international number coded E164 | |
| TP-PID | default | "00000000"B |
| TP-DCS | default alphabet | "00000000"B |
| TP-VP | | |
| TP-UDL | | |
| TP-UD | max 140 octets | |

SMS COMMAND TPDU

| Information element | Comment | Value |
|---|---|---|
| TP-MTI | SMS-COMMAND | "10"B |
| TP-UDHI | TP-UD contains only the SM | "00"B |
| TP-SRR | status report not requested | "0"B |
| TP-MR | | |
| TP-PID | default | "00000000"B |
| TP-CT | | |
| TP-MN | | |
| TP-DA | an international number coded E164 | |
| TP-CDL | | |
| TP-CD | | |

SMS STATUS REPORT TPDU

| Information element | Comment Value |
|---|---|
| TP-MTI | SMS-STATUS-REPORT"10"B |
| TP-MMS | no more messages "1"B |
| TP-SRQ | result of SMS-SUBMIT "0"B |
| TP-MR | |
| TP-RA | the destination address of the previous SM MO |
| TP-SCTS | any legal value (cf. 3GPP TS 23.040, clause 9.2.3.11) |
| TP-DT | any legal value (cf. 3GPP TS 23.040, clause 9.2.3.13) |
| TP-ST | see 3GPP TS 23.040, clause 9.2.3.15 |

# 17 Specific features

## 17.1 Test of autocalling restrictions

### 17.1.1 General

It is essential that all autocalling apparatus is prevented from continuously dialling a given number, to avoid machines repeatedly disturbing PSTN subscribers in error, or numerous repeat attempts to unobtainable numbers which cause waste of valuable network resources. Therefore autocalling restrictions are defined by TS 22.001.

The tests shall be performed using all of the call methods specified by the supplier in the IXIT statement TS 34.123-2. The supplier shall state any autocalling procedures implemented and how many times they can be repeated to a single number and the minimum re-attempt interval(s), i.e. the complete re-try schedule or algorithm with parameter values. The supplier shall further describe any automatic methods for making repeated calls to a single number. The supplier shall also state in the IXIT statement the number of B-party numbers that can be stored on the list of blacklisted numbers as described in TS 22.001, annex E.

For an external R-interface the supplier shall state in the IXIT statement the procedure for autocalling restrictions for that interface and the possible parameter settings for the number of times the LTE can make a re-attempt and the minimum accepted time between re-attempts accepted by the UE. The conditions for clearing the autocalling constraints shall be stated in the IXIT statement.

For external interfaces the LTE must be programmed so that it clearly attempts to violate the autocalling constraints.

For all the tests in this clause the call setup procedure uses the Generic Setup Procedure for Circuit Switched connection as specified in TS 34.108 clause 7. A Radio Access Bearer to set up shall be selected from one of the speech or CS data bearers within the capability of the UE as specified in the ICS statement. Unless otherwise indicated, this procedure shall only run to the transmission by the SS or UE of the SETUP message (CC).

### 17.1.2 Constraining the access to a single number (TS 22.001 category 3)

#### 17.1.2.1 Definition

This test checks that when an auto-dialled call to a B-party number fails due to a category 3 cause, only one retry to that number is permitted.

During this test the SETUP messages shall contain the same B-party number.

No manual intervention shall be performed except to initiate and end the test.

#### 17.1.2.2 Conformance requirement

A repeat call attempt may be made when a call attempt is unsuccessful for the reasons listed below (as defined in TS 24.008).

These reasons are classified in three major categories:

1. "Busy destination";
2. "Unobtainable destination - temporary";
3. "Unobtainable destination - permanent/long term".

NOTE: Cause values for each category are defined in TS 22.001, annex E.

The table below describes a repeat call restriction pattern to any B number. This pattern defines a maximum number (n) of call repeat attempts; when this number n is reached, the associated B number shall be blacklisted by the UE until a manual re-set at the UE is performed in respect of that B number. When a repeat attempt to any one B number fails, or is blacklisted, this does not prevent calls being made to other B numbers.

For the categories 1 and 2 above, n shall be 10; for category 3, n shall be 1.

| Call attempt | Minimum duration between call attempts |
|---|---|
| Initial call attempt | - |
| 1st repeat attempt | 5 s |
| 2nd repeat attempt | 1 min |
| 3rd repeat attempt | 1 min |
| 4th repeat attempt | 1 min |
| 5th repeat attempt | 3 min |
| . | |
| . | |
| nth repeat attempt | 3 min |

Reference:

3GPP TS 22.001 annex E.

17.1.2.3 Test purpose

To ensure the correct behaviour of the UE to TS 22.001 Category 3.

17.1.2.4 Method of test

Initial condition.

There shall be no numbers in the list of blacklisted numbers in the UE. The time set between the first re-attempt and the next re-attempt is set to the minimum value possible. The number of re-attempts is set to the lowest possible number, greater than 1, that is supported by the UE. The autocalling function is invoked for the B-party number to be used during the test.

Related ICS/IXIT Statement(s)

ICS: TBD.

IXIT: Description of auto calling management:

- selection of the auto calling;
- indication that the call failed and a re-try is attempted;
- indication that a call finally failed.

Test Procedure

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | "called number" entered |
| 2 | → | | GENERIC SETUP PROCEDURE MOBILE ORIGINATED, CS (Up to SETUP) | Establishment cause indicates "originating call". |
| 3 | ← | | RELEASE COMPLETE | Cause value from category 3 of TS 22.001, Annex E. |
| 4 | ← | | RRC CONNECTION RELEASE | |
| 5 | → | | RRC CONNECTION RELEASE COMPLETE | The signalling link is released |
| 6 | | | | The UE is invoking the auto calling function. The time between step 4 and 7 must be minimum 5 sec. |
| 7 | → | | GENERIC SETUP PROCEDURE MOBILE ORIGINATED, CS (Up to SETUP) | Establishment cause indicates "originating call". |
| 8 | ← | | RELEASE COMPLETE | Cause value from category 3 of TS 22.001, Annex E. |
| 9 | ← | | RRC CONNECTION RELEASE | |
| 10 | → | | RRC CONNECTION RELEASE COMPLETE | The main signalling link is released |
| 11 | UE | | | Clear the auto calling constraint after a minimum of 2 minutes from step 9. |

#### 17.1.2.5 Test requirements

The time between step 4 and 7 must be minimum 5 s.

No further call attempt shall be made after step 9.

### 17.1.3 Constraining the access to a single number (TS 22.001 categories 1 and 2)

#### 17.1.3.1 Definition

This test checks that when an auto-dialled call to a B-party number fails due to a category 2 cause, the time between of retries complies with the requirements, and the number of retries does not exceed that declared by the UE manufacturer, and is never more than 10.

During this test the SETUP messages shall contain the same B-party number.

No manual intervention shall be performed except to initiate and end the test.

#### 17.1.3.2 Conformance requirement

The UE must fulfil the requirements for category 1 and 2, see clause 17.1.2.2.

Reference:

3GPP TS 22.001 annex E.

#### 17.1.3.3 Test purpose

To ensure the correct behaviour of the UE to TS 22.001 Categories 1 and 2.

#### 17.1.3.4 Method of test

Initial condition

There shall be no numbers in the list of blacklisted numbers in the UE. The re-try scheme is set to give the shortest possible intervals between re-tries. The number of re-attempts is set to the maximum possible number (N), that is supported by the UE. The autocalling function is invoked for the B-party number to be used during the test.

Related ICS/IXIT Statement(s)

ICS: TBD

IXIT: Description of auto calling management:

- selection of the auto calling;
- indication that the call failed and a re-try is attempted;
- indication that a call finally failed.

Test Procedure

A, UE originated, generic call setup is performed up to the SETUP message. The SS then releases the establishment with a cause value from category 1 or 2 (TS 22.001, annex E).

The UE is continuously making new generic call setup attempts invoked by the auto calling function after each RRC CONNECTION RELEASE from the SS.

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | "called number" entered |
| 2 | → | | GENERIC SETUP PROCEDURE MOBILE ORIGINATED, CS (Up to SETUP) | Establishment cause indicates "originating call". |
| 3 | ← | | RELEASE COMPLETE | Cause value from category 1 or 2 of TS 22.001, Annex E. This shall be chosen randomly, from both categories. Cause no. 27 shall be excluded if the UE has implemented in category 3 of TS 22.001, as declared in IXIT statement |
| 4 | ← | | RRC CONNECTION RELEASE | |
| 5 | | | | The UE is invoking the auto calling function. 1: At the first re-attempt the time between step 4 and 7 must be minimum 5 sec. 2: At the 2nd, 3rd and 4th re-attempt the time between step 4 and 7 must be minimum 1 min. 3: At the 5th to 10th re-attempt the time between step 4 and 7 must be minimum 3 min. |
| 6 | → | | RRC CONNECTION RELEASE COMPLETE | The signalling link is released |
| 7 | → | | GENERIC SETUP PROCEDURE MOBILE ORIGINATED, CS (Up to SETUP) | Establishment cause indicates "originating call". |
| 8 | ← | | RELEASE COMPLETE | Cause value from category 1 or 2 of TS 22.001, Annex E. This shall be chosen randomly, from both categories. Cause no. 27 shall be excluded if the UE has implemented in category 3 of TS 22.001, as declared in PIXIT statement |
| 9 | ← | | RRC CONNECTION RELEASE | |
| 10 | → | | RRC CONNECTION RELEASE COMPLETE | The signalling link is released. |
| 11 | | | | The auto calling function shall repeat step 5 to 9 (N-1) times. The UE shall not make more than maximum 10 re-attempts. |
| 12 | UE | | | Clear the auto calling constraint by manual intervention after a minimum of 4 minutes from step 11. Following the final completion of step 11 the UE initiate a call prior to manual intervention. |

#### 17.1.3.5 Test requirements

1: At the first re-attempt the time between step 4 and 7 must be minimum 5 sec. 2: At the 2nd, 3rd and 4th re-attempt the time between step 4 and 7 must be minimum 1 min. 3: At the 5th to 10th re-attempt the time between step 4 and 7 must be minimum 3 min.

The UE shall not make more than maximum 10 re-attempts.

### 17.1.4 Behaviour of the UE when its list of blacklisted numbers is full

#### 17.1.4.1 Definition and applicability

This tests that the UE does not allow autocalling when its list of blacklisted numbers is full.

The number of B-party numbers that can be stored in the list of blacklisted numbers, as stated in the IXIT statement, is M.

This test shall only apply to UE that are capable of autocalling more than M B-party numbers.

#### 17.1.4.2 Conformance requirement

The number of B numbers that can be held in the blacklist is at the manufacturers discretion but there shall be at least 8. However, when the blacklist is full the UE shall prohibit further automatic call attempts to any one number until the blacklist is manually cleared at the UE in respect of one or more B numbers.

Reference

TS 22.001, Annex E.

#### 17.1.4.3 Test purpose

To ensure the correct behaviour of the UE when its list of blacklisted numbers is full.

#### 17.1.4.4 Method of test

Initial condition

The list of blacklisted numbers, in the UE, shall be full. This may be achieved as described in the procedure in clause 17.1.2, applied to M B-party numbers.

Related ICS/IXIT Statement(s)

PICS: TBD.

PIXIT: Description of auto calling management:

- selection of the auto calling;
- indication that the call failed and a re-try is attempted;
- indication that a call finally failed.

Test Procedure

The autocalling function is invoked for a B-party number that is not in the list of blacklisted numbers.

Clear the autocalling constraint by manual intervention after a minimum of 10 s.

#### 17.1.4.5 Test requirements

The UE must not initiate a call.

## 17.2 Location Services

The test cases for Location Services (LCS) are provided in 3GPP TS 37.571-2 [49], clause 6..

### 17.2.1 Void

### 17.2.2 Assisted GPS Network Induced Tests

#### 17.2.2.1 LCS Network Induced location request/ UE-Based GPS/ Emergency Call / with USIM

This test case is provided in 3GPP TS 37.571-2 [49], sub-clause 6.1.1.1.

#### 17.2.2.2 LCS Network Induced location request/ UE-Based GPS/ Emergency Call / without USIM

This test case is provided in 3GPP TS 37.571-2 [49], sub-clause 6.1.1.2.

#### 17.2.2.3 LCS Network induced location request/ UE-Assisted GPS/ Emergency call/ With USIM

This test case is provided in 3GPP TS 37.571-2 [49], sub-clause 6.1.1.3.

#### 17.2.2.4 LCS Network induced location request/ UE-Assisted GPS/ Emergency call/ Without USIM

This test case is provided in 3GPP TS 37.571-2 [49], sub-clause 6.1.1.4.

## 17.2.3 Assisted GPS Mobile Originated Tests

### 17.2.3.1 Void

### 17.2.3.2 LCS Mobile originated location request/ UE-Based GPS/ Position estimate request/ Success

This test case is provided in 3GPP TS 37.571-2 [49], sub-clause 6.1.2.1.

### 17.2.3.3 LCS Mobile originated location request/ UE-Based or UE-Assisted GPS/ Assistance data request/ Success

This test case is provided in 3GPP TS 37.571-2 [49], sub-clause 6.1.2.2.

### 17.2.3.4 LCS Mobile originated location request/ UE-Assisted GPS/ Position Estimate/ Success

This test case is provided in 3GPP TS 37.571-2 [49], sub-clause 6.1.2.3.

### 17.2.3.5 Void

### 17.2.3.6 LCS Mobile originated location request/ UE-Based GPS/ Transfer to third party/ Success

This test case is provided in 3GPP TS 37.571-2 [49], sub-clause 6.1.2.4.

### 17.2.3.7 LCS Mobile originated location request/ UE-Assisted GPS/ Transfer to third party/ Success

This test case is provided in 3GPP TS 37.571-2 [49], sub-clause 6.1.2.5.

### 17.2.3.8 LCS Mobile originated location request/ UE-Based or UE-Assisted GPS/ Assistance data request/ Failure

This test case is provided in 3GPP TS 37.571-2 [49], sub-clause 6.1.2.6.

### 17.2.3.9 LCS Mobile originated location request/ UE-Based GPS/ Position estimate request/ Failure

This test case is provided in 3GPP TS 37.571-2 [49], sub-clause 6.1.2.7.

## 17.2.4 Assisted GPS Mobile Terminated Tests

### 17.2.4.1 LCS Mobile terminated location request/ UE-Based GPS

This test case is provided in 3GPP TS 37.571-2 [49], sub-clause 6.1.3.1.

### 17.2.4.2 LCS Mobile-terminated location request/UE-Based GPS/ Request for additional assistance data/ Success

This test case is provided in 3GPP TS 37.571-2 [49], sub-clause 6.1.3.2.

### 17.2.4.3 LCS Mobile-terminated location request/UE-Based GPS/ Failure – Not Enough Satellites

This test case is provided in 3GPP TS 37.571-2 [49], sub-clause 6.1.3.3.

### 17.2.4.4 LCS Mobile terminated location request/ UE-Assisted GPS/ Success

This test case is provided in 3GPP TS 37.571-2 [49], sub-clause 6.1.3.4.

#### 17.2.4.5 LCS Mobile terminated location request/ UE-Assisted GPS/ Request for additional assistance data/ Success

This test case is provided in 3GPP TS 37.571-2 [49], sub-clause 6.1.3.5.

#### 17.2.4.6 LCS Mobile terminated location request/ UE-Based GPS/ Privacy Verification/ Location Allowed if No Response

This test case is provided in 3GPP TS 37.571-2 [49], sub-clause 6.1.3.6.

#### 17.2.4.7 LCS Mobile terminated location request/ UE-Based GPS/ Privacy Verification/ Location Not Allowed if No Response

This test case is provided in 3GPP TS 37.571-2 [49], sub-clause 6.1.3.7.

#### 17.2.4.8 LCS Mobile terminated location request/ UE-Assisted GPS/ Privacy Verification/ Location Allowed if No Response

This test case is provided in 3GPP TS 37.571-2 [49], sub-clause 6.1.3.8.

#### 17.2.4.9 LCS Mobile terminated location request/ UE-Assisted GPS/ Privacy Verification/ Location Not Allowed if No Response

This test case is provided in 3GPP TS 37.571-2 [49], sub-clause 6.1.3.9.

#### 17.2.4.10 LCS Mobile terminated location request/ UE-Based or UE-Assisted GPS/ Configuration Incomplete

This test case is provided in 3GPP TS 37.571-2 [49], sub-clause 6.1.3.10.

### 17.2.5 Void

### 17.2.6 Void

### 17.2.7 Void

## 17.3 Mobility between 3GPP WLAN Interworking and 3GPP Systems

### 17.3.1 Discovery of the Home Agent via DNS

#### 17.3.1.1 Definition and applicability

This test case is applicable for all UEs which support mobility between 3GPP WLAN Interworking and 3GPP Systems, and discovery of the Home Agent via DNS.

#### 17.3.1.2 Conformance requirement

From TS 24.327 clause 5.1.2.2

The first procedure the UE needs to perform for DSMIPv6 initial attach is the discovery of the node acting as the HA.

The UE discovers the IPv6 address and optionally the IPv4 address of the HA in one of the three following ways:

- via DNS as defined in 3GPP TS 24.303 [3];
- during the PDP context activation procedure in GERAN or UTRAN accesses via the Protocol Configuration Options as defined in 3GPP TS 24.008 [4] if the HA IP address is available in the GGSN; or
- via IKEv2 during tunnel setup with PDG for 3GPP I-WLAN as defined in annex B if the HA IP address is available in the PDG.

From TS 24.303 clause 5.1.2.1.2

A UE performing Home Agent discovery based on DNS shall support the implementation of standard DNS mechanisms.

The UE shall perform DNS Lookup by Home Agent Name as specified in IETF RFC 5026 [10].The QNAME shall be set to the requested HA-APN. The HA-APN shall be constructed as specified in 3GPP TS 23.003 [17]. If a HA has both an IPv4 and an IPv6 address, the corresponding DNS record should be configured with both 'AAAA' and 'A' records. Accordingly the UE should perform one DNS lookup procedure to retrieve both 'AAAA' and 'A' records. The DNS server replies with one 'AAAA' and one 'A' record.

Reference(s)

3GPP TS 24.327 clause 5.1.2.2

3GPP TS 24.303 clause 5.1.2.1.2

### 17.3.1.3 Test purpose

The purpose of this test case is to verify that when the UE is configured to discover the IP address of the Home Agent via DNS, it transmits a DNS Query with QNAME set to the FQDN of the Home Agent.

### 17.3.1.4 Method of test

Initial Conditions

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - The UE shall be in MM-state "Idle, updated".
  - The UE is configured to discover the Home Agent address via DNS.
  - The UE is configured with a DNS server address.
  - The UE is configured with the HA-APN Network Identifier.
  - The UE has acquired an IP address.

Related ICS/IXIT Statements

Support of mobility between 3GPP WLAN Interworking and 3GPP Systems

Support for being configured to discover the Home Agent address via DNS

Test procedure

a) The UE transmits a DNS Query message with QNAME set to the FQDN of the Home Agent (derived from HA-APN Network Identifier and PLMN information).
