| - CHOICE event result | Check to see if it's set to 'Intra-frequency measurement event results |
| - Intra-frequency event identity | Check to see if this IE is set to '1e' |
| - Cell measurement event results | |
| - Primary CPICH info | |
| - Primary scrambling code | Check to see if it's the same code for cell 2 |

MEASUREMENT CONTROL (Step 16)

| Information Element | Value/remark |
|---|---|
| Measurement Identity | 12 |
| Measurement Command | Release |
| Measurement Reporting Mode | Not Present |
| Additional measurements list | Not Present |
| CHOICE Measurement type | Not Present |
| DPCH compressed mode status info | Not Present |

System Information Block type 11 for cell 2 (Step 21)

All messages content below shall use the same content as described in default message content specified in clause 6.1 of TS 34.108, with the following exception:

| Information Element | Value/Remark |
|---|---|
| SIB12 indicator | TRUE |
| FACH measurement occasion info | Not Present |
| Measurement control system information | |
| - Use of HCS | Not used |
| - Cell selection and reselection quality measure | CPICH RSCP |
| - Intra-frequency measurement system information | |
| - Intra-frequency measurement identity | Not present |
| - Intra-frequency cell info list | |
| - CHOICE intra-frequency cell removal | Not Present |
| - New intra-frequency cells | |
| - Intra-frequency cell id | 2 |
| - Cell info | |
| - Cell individual offset | Not Present |
| - Reference time difference to cell | Not present |
| - Read SFN indicator | FALSE |
| - CHOICE mode | FDD |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1.4 |
| - Primary CPICH Tx power | Not present |
| - TX Diversity indicator | FALSE |
| - Cell Selection and Re-selection info | Not present |
| - Intra-frequency cell id | 1 |
| - Cell info | |
| - Cell individual offset | Not Present |
| - Reference time difference to cell | Not present |
| - Read SFN indicator | TRUE |
| - CHOICE mode | FDD |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1.4 |
| - Primary CPICH Tx power | Not present |
| - TX Diversity indicator | FALSE |
| - Cell Selection and Re-selection info | Not present |
| - Intra-frequency cell id | 3 |
| - Cell info | |
| - Cell individual offset | Not Present |
| - Reference time difference to cell | Not present |
| - Read SFN indicator | TRUE |
| - CHOICE mode | FDD |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.3 (FDD)" in clause 6.1.4 |
| - Primary CPICH Tx power | Not present |
| - TX Diversity indicator | FALSE |
| - Cell Selection and Re-selection info | Not present |
| - Cells for measurement | Not present |
| - Intra-frequency measurement quantity | |
| - Filter coefficient | Not Present |
| - CHOICE mode | FDD |
| - Measurement quantity | CPICH RSCP |
| - Intra-frequency reporting quantity for RACH reporting | Not present |
| - Maximum number of reported cells on RACH | Not present |
| - Reporting information for state CELL_DCH | Not present |

System Information Block type 12 for cell 2 (Step 21)

| Information Element | Value/Remark |
|---|---|
| FACH measurement occasion info | Not Present |
| Measurement control system information | |
| - Use of HCS | Not used |
| - Cell selection and reselection quality measure | CPICH RSCP |
| - Intra-frequency measurement system information | |
| - Intra-frequency measurement identity | Not present |
| - Intra-frequency cell info list | Not Present |
| - Intra-frequency measurement quantity | |
| - Filter coefficient | Not Present |
| - CHOICE mode | FDD |
| - Measurement quantity | CPICH RSCP |
| - Intra-frequency reporting quantity for RACH reporting | Not present |
| - Maximum number of reported cells on RACH | Not present |
| - Reporting information for state CELL_DCH | |
| - Intra-frequency reporting quantity | |
| - Reporting quantities for active set cells | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell identity reporting indicator | TRUE |
| - CHOICE mode | FDD |
| - CPICH Ec/N0 reporting indicator | FALSE |
| - CPICH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for monitored set cells | |
| - Cell synchronisation information reporting indicator | TRUE |
| - Cell identity reporting indicator | TRUE |
| - CHOICE mode | FDD |
| - CPICH Ec/N0 reporting indicator | FALSE |
| - CPICH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for detected set cells | Not Present |
| - Measurement reporting mode | |
| - Measurement Report Transfer Mode | Acknowledged mode RLC |
| - Periodic Reporting/Event Trigger Reporting Mode | Event trigger |
| - CHOICE report criteria | Intra-frequency measurement reporting criteria |
| - Intra-frequency measurement reporting criteria | |
| - Intra-frequency event identity | 1a |
| - Triggering condition 2 | Monitored set cells |
| - Reporting Range Constant | 10 (5dB) |
| - Cells forbidden to affect Reporting range | Not Present |
| - W | 0 |
| - Hysteresis | 0 (0 dB) |
| - Threshold Used Frequency | Not Present |
| - Reporting deactivation threshold | 2 |
| - Replacement activation threshold | Not Present |
| - Time to trigger | 640 |
| - Amount of reporting | 4 |
| - Reporting interval | 4000 |
| - Reporting cell status | |
| - CHOICE reported cell | Report cell within active set and/or monitored set cells on used frequency |
| - Maximum number of reported cells | 3 |
| - Inter-frequency measurement system information | Not present |
| - Inter-RAT measurement system information | Not present |
| - Traffic volume measurement system information | Not Present |
| - UE internal measurement system information | Not Present |

CELL UPDATE (Step 22)

| Information Element | Value/remark |
|---|---|
| U-RNTI | Check to see if set to the previous assigned U-RNTI value |
| START List | Check to see if it is present |
| AM_RLC error indication(RB2, RB3 or RB4) | Checked to see if it is set to FALSE |
| AM_RLC error indication(RB>4) | Checked to see if it is set to FALSE |
| Cell Update Cause | Check to see if set to "Cell Reselection" |
| RB timer indicator | |
| - T314 expired | Checked to see if it is set to 'FALSE' |
| - T315 expired | Checked to see if it is set to 'FALSE' |
| Measured results on RACH | Check to see if it is absent |

CELL UPDATE CONFIRM (Step 23)

Use the default message content of the same message type in Annex A, with the following exceptions.

| Information Element | Value/Remarks |
|---|---|
| New C-RNTI | '1010 1010 1010 1010' |

UTRAN MOBILITY INFORMATION CONFIRM (Step 23a)

Only the message type is checked.

MEASUREMENT REPORT (Step 26)

| Information Element | Value/Remarks |
|---|---|
| Measurement identity | Check to see if set to 1 |
| Measured Results | |
| - CHOICE measurement | Check to see if set to "Intra-frequency measured results list" |
| - Intra-frequency measurement results | |
| - Cell measured results | |
| - Cell Identity | Check to see if this IE is absent |
| - Cell synchronisation information | Check to see if this IE is absent |
| - Primary CPICH Info | |
| - Primary Scrambling Code | Check to see if it's the same code for cell 2 |
| - CPICH Ec/No | Check to see if this IE is absent |
| - CPICH RSCP | Check to see if this IE is present |
| - Pathloss | Check to see if this IE is absent |
| - Cell Identity | Check to see if this IE is absent |
| - Cell synchronisation information | Check to see if this IE is present |
| - Primary CPICH Info | |
| - Primary Scrambling Code | Check to see if it's the same code for cell 3 |
| - CPICH Ec/No | Check to see if this IE is absent |
| - CPICH RSCP | Check to see if this IE is present |
| - Pathloss | Check to see if this IE is absent |
| - Cell Identity | Check to see if this IE is absent |
| - Cell synchronisation information | Check to see if this IE is present |
| - Primary CPICH Info | |
| - Primary Scrambling Code | Check to see if it's the same code for cell 1 |
| - CPICH Ec/No | Check to see if this IE is absent |
| - CPICH RSCP | Check to see if this IE is present |
| - Pathloss | Check to see if this IE is absent |
| Measured Results on RACH | Check to see if this IE is absent |
| Additional measured results | Check to see if this IE is absent |
| Event Results | |
| - CHOICE event result | Check to see if it's set to 'Intra-frequency measurement event results' |
| - Intra-frequency event identity | Check to see if this IE is set to '1a' |
| - Cell measurement event results | |
| - CHOICE mode | FDD |
| - Primary CPICH info | |
| - Primary scrambling code | Check to see if it's the same code for cell 3 |

NOTE: Cells 2 and 3 can be received in any order

MEASUREMENT CONTROL (Step 27)

| Information Element | Value/remark |
|---|---|
| Measurement Identity | 1 |
| Measurement Command | Setup |
| Measurement Reporting Mode | |
| - Measurement Reporting Transfer Mode | Acknowledged Mode RLC |
| - Periodic Reporting / Event Trigger Reporting Mode | Event Trigger |
| Additional measurements list | Not Present |
| CHOICE measurement type | Intra-frequency measurement |
| - Intra-frequency cell info list | |
| - CHOICE intra-frequency cell removal | Remove no intra-frequency cells |
| - New intra-frequency info list | Not present |
| - Cells for measurement | |
| - Intra-frequency cell id | 3 |
| - Intra-frequency measurement quantity | |
| - Filter Coefficient | Not Present |
| - Measurement quantity | CPICH RSCP |
| - Intra-frequency reporting quantity | |
| - Reporting quantities for active set cells | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell identity reporting indicator | FALSE |
| - CPICH Ec/No reporting indicator | FALSE |
| - CPICH RSCP reporting indicator | FALSE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for monitored set cells | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell identity reporting indicator | TRUE |
| - CPICH Ec/No reporting indicator | FALSE |
| - CPICH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for detected cells | Not present |
| - Reporting cell status | Not present |
| - Measurement validity | Not present |
| - CHOICE report criteria | Intra-frequency measurement criteria |
| - Parameters required for each event | |
| - Intra-frequency event identity | 1e |
| - Triggering condition 1 | Not Present |
| - Triggering condition 2 | Monitored set cells |
| - Hysteresis | 0 (0 dB) |
| - Threshold used frequency | -90 dBm |
| - Time to Trigger | 0 |
| - Amount of reporting | Not Present |
| - Reporting interval | Not Present |
| - Reporting cell status | |
| - CHOICE reported cells | Report cells within monitored set cells on used frequency |
| - Maximum number of reported cells | 1 |
| DPCH compressed mode status info | Not Present |

MEASUREMENT REPORT (Step 28)

| Information Element | Value/remark |
|---|---|
| Measurement identity | Check to see if set to 1 |
| Measured Results | |
| - CHOICE measurement | Check to see if set to "Intra-frequency measured results list" |
| - Intra-frequency measurement results | |
| - Cell measured results | |
| - Cell Identity | Check to see if this IE is absent |
| - Cell synchronisation information | Check to see if this IE is absent |
| - CHOICE mode | FDD |
| - Primary CPICH Info | |
| - Primary Scrambling Code | Check to see if it's the same code for cell 3 |
| - CPICH Ec/No | Check to see if this IE is absent |
| - CPICH RSCP | Check to see if this IE is present |
| - Pathloss | Check to see if this IE is absent |
| Measured Results on RACH | Check to see if this IE is absent |
| Additional measured results | Check to see if this IE is absent |
| Event Results | |
| - CHOICE event result | Check to see if it's set to 'Intra-frequency measurement event results' |
| - Intra-frequency event identity | Check to see if this IE is set to '1e' |
| - Cell measurement event results | |
| - Primary CPICH info | |
| - Primary scrambling code | Check to see if it's the same code for cell 3 |

### 8.4.1.7.5 Test Requirement

After step 3 the UE shall report cell 2's CPICH RSCP value by transmitting MEASUREMENT REPORT messages.

After step 5 the UE shall transmit two MEASUREMENT REPORT messages which contain measured results of cell 3's CPICH RSCP value only, one for measurement identity 10 and one for measurement identity 11.

After step 9 and step 11 the UE shall not transmit MEASUREMENT REPORT messages, which pertain to intra-frequency type measurement reporting.

After step 9b, the UE shall transmit a MEASUREMENT REPORT according to what is broadcast in SIB 11 and 12 of cell 1, and MEASUREMENT REPORT message pertaining to the MEASUREMENT CONTROL message that it had received in step 5.

After steps 13 and 14e, the UE shall resume the measurement and reporting activities as specified in MEASUREMENT CONTROL message received in step 10. The UE shall transmit MEASUREMENT REPORT messages, containing measured results of cell 2's CPICH RSCP value.

After step 16 the UE shall stop measurement activities pertaining to event triggered reporting of cell 2's CPICH RSCP, no MEASUREMENT REPORT messages shall be detectable by the SS on the uplink DCCH with “measurement identity” = 12.

After step 17, the UE shall transmit a MEASUREMENT REPORT message to the SS as specified in the MEASUREMENT CONTROL message received in step 17.

After step 21 the UE shall re-select to cell 2 and initiate a cell update procedure. SS shall receive a CELL UPDATE message on the uplink CCCH of cell 2, with the "cell update cause" IE stated as "cell re-selection".

After step 23, the UE shall transmit UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH AM RLC.

After step 25, UE shall not send MEASUREMENT REPORT message with “measurement identity” = ‘12’.

After step 25a the UE shall report cell 3's CPICH RSCP value by transmitting MEASUREMENT REPORT messages.

After step 27, UE shall send MEASUREMENT REPORT message with “measurement identity” = ‘1’.

## 8.4.1.7a Measurement Control and Report: Intra-frequency measurement for transition from CELL_FACH to CELL_DCH state (TDD)

### 8.4.1.7a.1 Definition

### 8.4.1.7a.2 Conformance requirement

Upon transition from CELL_FACH to CELL_DCH state:

1> if intra-frequency measurements applicable to CELL_DCH state are stored in the variable MEASUREMENT_IDENTITY:

2> if the cell in which the UE transited from CELL_FACH state is included in the active set for the CELL_DCH state, the UE shall:

3> resume the measurement reporting.

2> otherwise:

3> the UE should not resume the measurement reporting. If the UE does not resume the measurement reporting, the measurement shall be restarted when a MEASUREMENT CONTROL message is received with the corresponding measurement identity.

…

Upon cell reselection while in CELL_FACH/CELL_PCH/URA_PCH state and the cell reselection has occurred after the measurement control information was stored, the UE shall:

1> delete all measurements of type intra-frequency, inter-frequency, and inter-RAT associated with the variable MEASUREMENT_IDENTITY;

…

1> delete the traffic volume measurements that have not been set up or modified through a MEASUREMENT CONTROL message.

…

Upon reception of a MEASUREMENT CONTROL message the UE shall perform actions specified in subclause 8.6 unless otherwise specified below.

The UE shall:

1> read the IE "Measurement command";

1> if the IE "Measurement command" has the value "setup":

2> store this measurement in the variable MEASUREMENT_IDENTITY according to the IE "measurement identity", first releasing any previously stored measurement with that identity if that exists;

2> if the measurement type is quality, UE internal, intra-frequency, inter-frequency or inter-RAT:

3> if the UE is in CELL_FACH state:

4> the UE behaviour is not specified.

2> for measurement types "inter-RAT measurement" or "inter-frequency measurement" that require measurements on a frequency other than the actually used frequency:

…

2> for measurement type "inter-frequency measurement" that requires measurements only on the same frequency as the actually used frequency:

…

2> for measurement type "UE positioning measurement":

…

2> for any other measurement type:

3> if the measurement is valid in the current RRC state of the UE:

4> begin measurements according to the stored control information for this measurement identity.

1> if the IE "Measurement command" has the value "modify":

2> for all IEs present in the MEASUREMENT CONTROL message:

3> if a measurement was stored in the variable MEASUREMENT_IDENTITY associated to the identity by the IE "measurement identity":

4> if the measurement type is quality, UE internal, intra-frequency, inter-frequency or inter-RAT:

5> if the UE is in CELL_FACH state:

6> the UE behaviour is not specified.

4> if measurement type is set to "intra-frequency measurement", for any of the optional IEs "Intra-frequency measurement objects list", "Intra-frequency measurement quantity", "Intra-frequency reporting quantity", "Measurement Validity", "report criteria" and "parameters required for each event" (given "report criteria" is set to "intra-frequency measurement reporting criteria") that are present in the MEASUREMENT CONTROL message:

…

5> replace the corresponding information (the IEs listed above and all their children) stored in variable MEASUREMENT_IDENTITY associated to the identity indicated by the IE "measurement identity" with the one received in the MEASUREMENT CONTROL message;

5> leave all other stored information elements unchanged in the variable MEASUREMENT_IDENTITY.

1> if the IE "measurement command" has the value "release":

2> terminate the measurement associated with the identity given in the IE "measurement identity";

2> clear all stored measurement control information related associated to this measurement identity in variable MEASUREMENT_IDENTITY.

If the IE "Reporting Cell Status" is received, the UE shall set the IE "Measured Results" in MEASUREMENT REPORT as follows. The UE shall:

1> for intra-frequency measurement and inter-frequency measurement:

2> include the IE "Cell Measured Results" for cells (excluding cells of another RAT) that satisfy the condition (such as "Report cells within active set") specified in the IE "Reporting Cell Status", in descending order by the measurement quantity"

If the IE "Cells for measurement" has been included in a MEASUREMENT CONTROL message, only monitored set cells explicitly indicated for a given intra-frequency (resp. inter-frequency, interRAT) measurement by the IE "Cells for measurement" shall be considered for measurement. If the IE "Cells for measurement" has not been included in a MEASUREMENT CONTROL message, all of the intra-frequency (resp. inter-frequency, inter RAT) cells stored in the variable CELL_INFO_LIST shall be considered for measurement. The IE "Cells for measurement" is not applicable to active set cells or virtual active set cells e.g. when the triggering condition refers to active set cells, the UE shall consider all active set cells in the CELL_INFO_LIST for measurement irrespective if these cells are explicitly indicated by the IE "Cells for measurement".

Reference

3GPP TS 25.331, clause 8.4.1.3, 8.4.1.6a, 8.4.1.7.1, 8.4.0 and 8.6.7.9

8.4.1.7a.3 Test Purpose

- To confirm that UE retrieves stored measurement control information for intra-frequency measurement type with "measurement validity" assigned to "CELL_DCH", after it enters CELL_DCH state from CELL_FACH state.
- To confirm that the UE continues to monitor the neighbouring cells listed "intra-frequency cell info" IE in the System Information Block type 11 or 12 messages, if no intra-frequency measurements applicable to CELL_DCH are stored.
- To confirm that the UE transmits MEASUREMENT REPORT messages if reporting criteria stated in IE "intra-frequency measurement reporting criteria" in System Information Block type 11 or 12 messages are fulfilled.
- To confirm that a MEASUREMENT CONTROL message received in CELL_DCH state overrides the measurement and associated reporting contexts maintained in the UE by virtue of System Information Block type 11 or 12 messages only if the measurement identities defined within the MEASUREMENT CONTROL message and System Information Block type 11 or 12 are identical.
- To confirm that the UE delete all measurements of type intra-frequency upon cell reselection while in CELL_FACH.

8.4.1.7a.4 Method of test

Initial Condition

System Simulator: 3 cells – Cell 1, cell 2 and cell 3 are active.

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS-DCCH+DTCH_FACH (state 6-11).

Test Procedure

Table 8.4.1.7a-1 illustrates the downlink power to be applied for the 3 cells at various time instants of the test execution. Column marked "T0" denotes the initial conditions, while columns marked "T1" are to be applied subsequently. The exact instants on which these values shall be applied are described in the text in this clause.

**Table 8.4.1.7a-1**

| Parameter | Unit | Cell 1 | | | | | | | Cell 2 | | | | | | | Cell 3 | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T3 | T4 | T5 | T6 | T0 | T1 | T2 | T3 | T4 | T5 | T6 | T0 | T1 | T2 | T3 | T4 | T5 | T6 |
| UTRA RF Channel Number | | | | | | | | | Mid Range Test Frequency | | | | | | | Mid Range Test Frequency | | | | | | |
| PCCPCH Ec | dBm/ 1.28 MHz | -60 | -70 | -60 | -70 | -60 | -73 | -78 | -70 | -60 | -70 | -60 | -70 | -60 | -73 | -75 | -75 | -75 | -75 | -75 | -78 | -60 |

The UE is brought to CELL_FACH state in cell 1. (step 1) SS sends SYSTEM INFORMATION CHANGE INDICATION message to UE to inform UE of the modification in the system information.

SS sends a RADIO BEARER RECONFIGURATION message to UE (step2), and configures dedicated physical channels on both uplink and downlink directions. The UE shall move to CELL_DCH state and then return RADIO BEARER RECONFIGURATION COMPLETE message (step3). SS reconfigures the downlink transmission power settings for cells 1 to 3 according to column "T1" in table 8.4.1.7a .The UE shall send a MEASUREMENT REPORT message containing IE “Measured results” to report cell 2’s PCCPCH RSCP value and IE “event results” to report triggering of event type “1g” (step 4). After receiving the MEASUREMENT REPORT message, SS transmits a MEASUREMENT CONTROL message with cell 3 included in the IE “new intra-frequency cell info” (step 5). After receiving such a message, the UE shall transmit another set of MEASUREMENT REPORT message for measurement identity = 11. SS verifies that measurement readings for cell 1,2,3 ‘s PCCPCHCH RSCP are reported in IE “cell measured results” in this message (step 6). SS modifies the downlink transmission power of the respect cells according to the settings in columns “T2” in table 8.4.1.7a-1. The UE shall send a MEASUREMENT REPORT message containing IE “Measured results” to report cell 1’s PCCPCH RSCP value and IE “event results” to report triggering of event type “1g” (step 6b).Next, SS sends a PHYSICAL CHANNEL RECONFIGURATION message (step 7). SS configures common physical channels for both the uplink and the downlink directions. The UE shall transit to CELL_FACH state and then reply with a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message (step 8). SS waits and checks the uplink RACH to confirm that no MEASUREMENT REPORT messages are received (step 9).

SS transmits then a RADIO BEARER RECONFIGURATION message to the UE, to move it to CELL_DCH state (step 9a). The UE shall move to that state, and transmit a RADIO BEARER RECONFIGURATION COMPLETE message to SS (step 9b). SS modifies the downlink transmission power of the respect cells according to the settings in columns “T3” in table 8.4.1.7a-1.Shortly after, a MEASUREMENT REPORT message shall be received which has been triggered by cell 2, i.e. the UE shall have deleted the measurement configured through the MEASUREMENT CONTROL message of step 5, and instead apply the measurement configured in SIB12: a MEASUREMENT REPORT message with measurement identity 10 shall be received while no such message with measurement identity 11 shall be sent by the UE (step 9c). SS modifies the downlink transmission power of the respect cells according to the settings in columns “T4” in table 8.4.1.7a-1. The UE shall send a MEASUREMENT REPORT message containing IE “Measured results” to report cell 1’s PCCPCH RSCP value and IE “event results” to report triggering of event type “1g”.

SS transmits MEASUREMENT CONTROL message on the downlink DCCH, to configure periodic intra-frequency measurements with validity CELL_DCH (step 10). The UE shall send a MEASUREMENT REPORT message (with IE “Measurement identity” = 12) to the SS (step 14).

SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE to move it to CELL_FACH state (step 14a). The UE shall move to that state and transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to SS (step 14b). SS shall wait and check that no MEASUREMENT REPORT messages are detected on the uplink DCCH (step 14c).

SS transmits a RADIO BEARER RECONFIGURATION message to the UE, to move it to CELL_DCH state (step 14d). The UE shall move to that state, and transmit a RADIO BEARER RECONFIGURATION COMPLETE message to SS (step 14e). Shortly after, a MEASUREMENT REPORT message shall be received, i.e. the UE shall have retrieved the measurement configured through the MEASUREMENT CONTROL message of step 10, instead of the ones that are broadcast in SIB12 (step 14f).

Following the reception of the MEASUREMENT REPORT message, SS commands the UE using MEASUREMENT CONTROL message to release measurement control information stored in “measurement identity” = 12 (step 15). Thereafter, SS verifies that no MEASUREMENT REPORT messages are detected on the uplink DCCH (step 16). After this requirement is satisfied, SS sends MEASUREMENT CONTROL on the downlink DCCH once more (step 17). This message is identical to the one sent in step 10 (see specific message content). A periodical MEASUREMENT REPORT message shall be received from the UE (step 17a).

SS transmits a PHYSICAL CHANNEL RECONFIGURATION message on the downlink DCCH and configures common physical channel (step 18). The UE shall transit to CELL_FACH state and then respond with a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message (step 19). SS monitors the uplink DCCH once more to verify that no MEASUREMENT REPORT messages are detected (step 20). System information block type 11 and System Information Block type 12 for cell 2 shall be different from the default settings according to what is defined in the specific message content part of this section (step 21). SS modifies the downlink transmission power of the respect cells according to the settings in columns “T5” in table 8.4.1.7a-1. The UE shall initiate a cell re-selection procedure. This is verified in the SS when a CELL UPDATE message is received on the uplink CCCH with the “cell update cause” IE set to “cell reselection” (step 22). SS transmits a CELL UPDATE CONFIRM message, which includes “New C-RNTI”, on the DCCH (step 23). Then the UE shall reply with UTRAN MOBILITY INFORMATION CONFIRM message (step 23a). Next, SS sends a RADIO BEARER RECONFIGURATION message on the downlink DCCH, assigning dedicated physical channels in both uplink and downlink directions (step 24). The UE shall respond with a RADIO BEARER RECONFIGURATION COMPLETE message and then return to CELL_DCH state (step 25). SS modifies the downlink transmission power of all cells according to the settings in columns “T6” in table 8.4.1.7a-1. UE shall then send MEASUREMENT REPORT messages reporting cell 3’s PCCPCH RSCP according to the content in System Information Block type 12 messages broadcasted in cell 2 (step 21).SS transmits a MEASUREMENT CONTROL message (step 27) whereby the measurement identity is set to the same value as that in the SIB type 12 messages (step 21). UE shall send MEASUREMENT REPORT message (step 28) reporting cell 1,2,3’s PCCPCH RSCP according to the MEASUREMENT CONTROL message (step 27).

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | System Information Block type 11 and 12 | UE is initially in PS-DCCH+DTCH_FACH (state 6-11) in cell 1. System Information Block type 11 and 12 messages are changed with respect to the default contents according to the descriptions in “Specific Message Contents” clause. |
| 1a | ← | | SYSTEM INFORMATION CHANGE INDICATION | |
| 2 | ← | | RADIO BEARER RECONFIGURATION | SS configures dedicated physical channels. |
| 3 | → | | RADIO BEARER RECONFIGURATION COMPLETE | UE shall move to CELL_DCH state. |
| 3a | | | | SS reconfigures the downlink transmission power settings for cells 1 to 3 according to column "T1" in table 8.4.1.7a |
| 4 | → | | MEASUREMENT REPORT | Reports cell 2's PCCPCH RSCP measurement value, with “measurement identity” IE set to “10”. |
| 5 | ← | | MEASUREMENT CONTROL | A periodic measurement is setup with measurement identity of 11. Cell 3 is added to the list of monitored set of the UE. |
| 6 | → | | MEASUREMENT REPORT | SS shall receive a MEASUREMENT REPORT message after the period set in step 5 in which the report for cell 1,cell 2 and cell 3 are included. |
| 6a | | | | SS reconfigures the downlink transmission power settings for cells 1 to 3 according to column "T2" in table 8.4.1.7a |
| 6b | → | | MEASUREMENT REPORT | Cell 1 shall trigger the event 1g and a MEASUREMENT REPORT message shall be sent to SS with the measurement identity 10. |
| 7 | ← | | PHYSICAL CHANNEL RECONFIGURATION | SS configures PRACH and S-CCPCH physical channels. |
| 8 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | UE shall move to CELL_FACH state. |
| 9 | | | | SS waits and checks that no MEASUREMENT REPORT messages are sent by UE. |
| 9a | ← | | RADIO BEARER RECONFIGURATION | SS configures dedicated physical channels. |
| 9b | → | | RADIO BEARER RECONFIGURATION COMPLETE | UE shall move to CELL_DCH state. |
| 9b1 | | | | SS reconfigures the downlink transmission power settings for cells 1 to 3 according to column "T3" in table 8.4.1.7a |
| 9c | → | | MEASUREMENT REPORT | Cell 2 shall trigger the event 1g and a MEASUREMENT REPORT message shall be sent to SS with the measurement identity 10. |

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 9d | | | | SS reconfigures the downlink transmission power settings for cells 1 to 3 according to column "T4" in table 8.4.1.7a |
| 9e | → | | MEASUREMENT REPORT | Cell 1 shall trigger the event 1g and a MEASUREMENT REPORT message shall be sent to SS with the measurement identity 10. |
| 10 | ← | | MEASUREMENT CONTROL | SS instructs the UE to setup intra-frequency measurement with measurement identity of 12. Measurement validity" IE is set to CELL_DCH state. |
| 11 | | | Void | |
| 12 | | | Void | |
| 13 | | | Void | |
| 14 | → | | MEASUREMENT REPORT | UE reports cell 1 and cell 2's measured results for PCCPCH RSCP, with “measurement identity” IE set to “12”. |
| 14a | ← | | PHYSICAL CHANNEL RECONFIGURATION | SS configures PRACH and S-CCPCH physical channels. |
| 14b | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | UE shall move to CELL_FACH state. |
| 14c | | | | SS waits and check that no MEASUREMENT REPORT messages are sent by the UE. |
| 14d | ← | | RADIO BEARER RECONFIGURATION | SS configures dedicated physical channels. |
| 14e | → | | RADIO BEARER RECONFIGURATION COMPLETE | UE shall move to CELL_DCH state. |
| 14f | → | | MEASUREMENT REPORT | UE shall have retrieved and resumed the measurement set up through the MEASUREMENT CONTROL of step 10.The “measurement identity” IE shall be set to “12”. |
| 15 | ← | | MEASUREMENT CONTROL | Terminate all the intra-frequency measurement and reporting activities related to "measurement identity" = 12. |
| 16 | | | | SS waits and verifies that UE stop transmitting MEASUREMENT REPORT messages. |
| 17 | ← | | MEASUREMENT CONTROL | This message is the same as in step 10. |
| 17a | → | | MEASUREMENT REPORT | UE shall transmit a MEASUREMENT REPORT message with “measurement identity” IE set to “12”. |
| 18 | ← | | PHYSICAL CHANNEL RECONFIGURATION | Allocates common physical channels. |
| 19 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | UE shall move to CELL_FACH state. |
| 20 | | | | SS checks that no MEASUREMENT REPORT messages are received. |

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 21 | ← | | System Information Block type 11<br>System Information Block type 12 | SS sends SIB11 and SIB12 with specific values to Cell2. SS reconfigures the downlink transmission power settings for cells 1 to 3 according to column "T5" in table 8.4.1.7a. |
| 22 | → | | CELL UPDATE | UE shall re-selects to cell 2 and then perform a cell update procedure. |
| 23 | ← | | CELL UPDATE CONFIRM | UE shall stay in CELL_FACH state. |
| 23a | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 24 | ← | | RADIO BEARER RECONFIGURATION | Dedicated physical channels are assigned to the UE in this message. |
| 25 | → | | RADIO BEARER RECONFIGURATION COMPLETE | UE shall return to CELL_DCH state. UE shall not send Measurement Report message with "measurement identity" = '12'. |
| 25a | | | | SS reconfigures the downlink transmission power settings of all cells according to column "T6" in table 8.4.1.7a-1. |
| 26 | → | | MEASUREMENT REPORT | UE begins to report cell 3's measured results for PCCPCH RSCP, with "measurement identity" IE set to "1",event is 1g. |
| 27 | ← | | MEASUREMENT CONTROL | SS instructs the UE to setup period intra-frequency measurement. "measurement identity" IE set to "1" |
| 28 | → | | MEASUREMENT REPORT | UE shall transmit a period MEASUREMENT REPORT message, with "measurement identity" IE set to "1". |

Specific Message Content

System Information Block type 1 (TDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

Master Information Block (Step 1)

| Information Element | Value/Remarks |
|---|---|
| MIB Value Tag | A valid MIB value tag as defined in TS 25.331 that is different from the previous value |

System Information Block type 11 for cell 1 (Step 1)

All messages content below shall use the same content as described in default message content specified in clause 6.1 of TS 34.108, with the following exception:

| Information Element | Value/remark |
|---|---|
| SIB12 indicator | TRUE |
| FACH measurement occasion info | Not Present |
| Measurement control system information | |
| - Use of HCS | Not used |
| - Cell selection and reselection quality measure | PCCPCH RSCP |
| - Intra-frequency measurement system information | |
| - Intra-frequency measurement identity | Not present |
| - Intra-frequency cell info list | |
| - CHOICE intra-frequency cell removal | Not present |
| - New intra-frequency cells | |
| - Intra-frequency cell id | 1 |
| - Cell info | |
| - Cell individual offset | Not present |
| - Reference time difference to cell | Not present |
| - Read SFN indicator | FALSE |
| - CHOICE mode | TDD |
| - Primary CCPCH info | |
| - TSTD indicator | FALSE |
| - Cell parameters Id | Refer to clause titled "Default settings for cell No.1 (TDD)" in clause 6.1.4 of TS34.108 |
| - SCTD indicator | FALSE |
| - Primary CCPCH Tx power | Not present |
| - timeslot info list | Not present |
| - Cell Selection and Re-selection info | Not present |
| - Cells for measurement | Not present |
| - Intra-frequency measurement quantity | Not present |
| - Intra-frequency reporting quantity for RACH reporting | Not present |
| - Maximum number of reported cells on RACH | Not present |
| - Reporting information for state CELL_DCH | Not present |

System Information Block type 12 for cell 1 (Step 1)

| Information Element | Value/remark |
|---|---|
| FACH measurement occasion info | Not Present |
| Measurement control system information | |
| - Use of HCS | Not used |
| - Cell selection and reselection quality measure | PCCPCH RSCP |
| - Intra-frequency measurement system information | |
| - Intra-frequency measurement identity | 10 |
| - Intra-frequency cell info list | |
| - CHOICE intra-frequency cell removal | Not present |
| - New intra-frequency cells | |
| - Intra-frequency cell id | 2 |
| - Cell info | |
| - Cell individual offset | Not present |
| - Reference time difference to cell | Not present |
| - Read SFN Indicator | FALSE |
| - CHOICE mode | TDD |
| - Primary CCPCH Info | |
| - TSTD indicator | FALSE |
| - Cell parameters Id | Refer to clause titled "Default settings for cell No.2 (TDD)" in clause 6.1.4 of TS34.108 |
| - SCTD indicator | FALSE |
| - Primary CCPCH Tx power | Not present |
| - timeslot info list | Not present |
| - Cell selection and Re-selection info | Not Present |
| - Cells for measurement | Not Present |
| - Intra-frequency measurement quantity | |
| - Filter Coefficient | Not present |
| - CHOICE mode | TDD |
| - Measurement quantity | PCCPCH RSCP |
| - Intra-frequency reporting quantity for RACH reporting | Not present |
| - Maximum number of reported cells on RACH | No report |
| - Reporting information for state CELL_DCH | |
| - Intra-frequency reporting quantity | |
| - Reporting quantities for active set cells | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell identity reporting indicator | FALSE |
| - CHOICE mode | TDD |
| - Timeslot ISCP reporting indicator | FALSE |
| - Proposed TGSN Reporting required | FALSE |
| - PCCPCH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for monitored set cells | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell identity reporting indicator | FALSE |
| - CHOICE mode | TDD |
| - Timeslot ISCP reporting indicator | FALSE |
| - Proposed TGSN Reporting required | FALSE |
| - PCCPCH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for detected cells | Not present |
| - Measurement Reporting Mode | |
| - Measurement Reporting Transfer Mode | Acknowledged mode RLC |
| - Periodic Reporting/Event Trigger Reporting Mode | Event trigger |
| - CHOICE report criteria | Intra-frequency measurement reporting criteria |
| - Parameter required for each event | |
| - Intra-frequency event identity | 1g |
| - Reporting range constant | Not present |
| - W | Not present |
| - Hysteresis | 2 (1 dB) |
| - Time to trigger | 0 |
| - Amount of reporting | Not Present |
| - Reporting Interval | Not Present |
| - Reporting cell status | |

| Information Element | Value/remark |
|---|---|
| - CHOICE reported cells | Report cells within active and monitored set cells on used frequency |
| - Maximum number of reported cells | 3 |
| - Inter-frequency measurement system information | Not Present |
| - Inter-RAT measurement system information | Not Present |
| - Traffic volume measurement system information | Not Present |

SYSTEM INFORMATION CHANGE INDICATION (Step 1a)

| Information Element | Value/Remarks |
|---|---|
| BCCH modification info | |
| - MIB Value Tag | A valid MIB value tag as defined in TS 25.331 that is different from the previous value |
| - BCCH modification time | Not Present |

RADIO BEARER RECONFIGURATION (Step 2, Step 9a, Step 14d and Step 24)

Use the same message type found in Annex A, with condition set to A4.

MEASUREMENT REPORT (Steps 4 and 9c)

| Information Element | Value/remark |
|---|---|
| Measurement identity | Check to see if set to 10 |
| Measured Results | |
| - CHOICE measurement | Check to see if set to "Intra-frequency measured results list" |
| - Intra-frequency measurement results | |
| - Cell measured results | |
| - Cell Identity | Check to see if this IE is absent |
| - Cell synchronisation information | Check to see if this IE is absent |
| - CHOICE mode | TDD |
| - cell parameters identity | Check to see if it's the same code for cell 1 |
| - proposed TGSN | Check to see if this IE is absent |
| - PCCPCH RSCP | Check to see if this IE is present |
| - Pathloss | Check to see if this IE is absent |
| - timeslotISCP_List | Check to see if this IE is absent |
| - Cell measured results | |
| - Cell Identity | Check to see if this IE is absent |
| - Cell synchronisation information | Check to see if this IE is absent |
| - CHOICE mode | TDD |
| - cell parameters identity | Check to see if it's the same code for cell 2 |
| - proposed TGSN | Check to see if this IE is absent |
| - PCCPCH RSCP | Check to see if this IE is present |
| - Pathloss | Check to see if this IE is absent |
| - timeslotISCP_List | Check to see if this IE is absent |
| Measured Results on RACH | Check to see if this IE is absent |
| Additional measured results | Check to see if this IE is absent |
| Event Results | |
| - CHOICE event result | Check to see if it's set to 'Intra-frequency measurement event results' |
| - Intra-frequency event identity | Check to see if this IE is set to '1g' |
| - Cell measurement event results | |
| - Cell parameters Id | Check to see if it's the same code for cell 2 |

MEASUREMENT CONTROL (Step 5).

| Information Element | Value/remark |
|---|---|
| Measurement Identity | 11 |
| Measurement Command | Setup |
| Measurement Reporting Mode | |
| - Measurement Reporting Transfer Mode | Acknowledged Mode RLC |
| - Periodic Reporting / Event Trigger Reporting Mode | Periodical Reporting |
| Additional measurements list | Not Present |
| CHOICE measurement type | Intra-frequency measurement |
| - Intra-frequency cell info list | |
| - CHOICE intra-frequency cell removal | Remove no intra-frequency cells |
| - New intra-frequency info list | |
| - Intra-frequency cell id | 3 |
| - Cell info | |
| - Cell individual offset | 0 dB |
| - Reference time difference to cell | Not Present |
| - Read SFN Indicator | FALSE |
| - CHOICE mode | TDD |
| - Primary CCPCH Info | |
| - TSTD indicator | FALSE |
| - Cell parameters Id | Refer to clause titled "Default settings for cell No.2 (TDD)" in clause 6.1.4 of TS34.108 |
| - SCTD indicator | FALSE |
| - Primary CCPCH Tx power | Not present |
| - timeslot info list | Not present |
| - Cells selection and Re-selection info | Not Present |
| - Cells for measurement | Not Present |
| - Intra-frequency measurement quantity | |
| - Filter Coefficient | Not Present |
| - Measurement quantity | PCCPCH RSCP |
| - Intra-frequency reporting quantity | |
| - Reporting quantities for active set cells | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell identity reporting indicator | FALSE |
| - CHOICE mode | TDD |
| - Timeslot ISCP reporting indicator | FALSE |
| - Proposed TGSN Reporting required | FALSE |
| - PCCPCH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for monitored set cells | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell identity reporting indicator | FALSE |
| - CHOICE mode | TDD |
| - Timeslot ISCP reporting indicator | FALSE |
| - Proposed TGSN Reporting required | FALSE |
| - PCCPCH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for detected cells | Not present |
| - Reporting cell status | Not present |
| - Measurement validity | Not present |
| - CHOICE report criteria | Periodical reporting criteria |
| - reporting amount | infinity |
| - reportingInterval | 64s |
| DPCH compressed mode status info | Not Present |

MEASUREMENT REPORT (Steps 6)

| Information Element | Value/remark |
|---|---|
| Measurement identity | Check to see if set to 11 |
| Measured Results | |
| - CHOICE measurement | Check to see if set to "Intra-frequency measured results list" |
| - Intra-frequency measurement results | |
| - Cell measured results | |
| - Cell Identity | Check to see if this IE is absent |
| - Cell synchronisation information | Check to see if this IE is absent |
| - CHOICE mode | TDD |
| - cell parameters identity | Check to see if it's the same code for cell 2 |
| - proposed TGSN | Check to see if this IE is absent |
| - PCCPCH RSCP | Check to see if this IE is present |
| - Pathloss | Check to see if this IE is absent |
| - timeslotISCP_List | Check to see if this IE is absent |
| - Cell measured results | |
| - Cell Identity | Check to see if this IE is absent |
| - Cell synchronisation information | Check to see if this IE is absent |
| - CHOICE mode | TDD |
| - cell parameters identity | Check to see if it's the same code for cell 1 |
| - proposed TGSN | Check to see if this IE is absent |
| - PCCPCH RSCP | Check to see if this IE is present |
| - Pathloss | Check to see if this IE is absent |
| - timeslotISCP_List | Check to see if this IE is absent |
| - Cell measured results | |
| - Cell Identity | Check to see if this IE is absent |
| - Cell synchronisation information | Check to see if this IE is absent |
| - CHOICE mode | TDD |
| - cell parameters identity | Check to see if it's the same code for cell 3 |
| - proposed TGSN | Check to see if this IE is absent |
| - PCCPCH RSCP | Check to see if this IE is present |
| - Pathloss | Check to see if this IE is absent |
| - timeslotISCP_List | Check to see if this IE is absent |
| Measured Results on RACH | Check to see if this IE is absent |
| Additional measured results | Check to see if this IE is absent |
| Event Results | Check to see if this IE is absent |

MEASUREMENT REPORT (Steps 6b)

| Information Element | Value/remark |
|---|---|
| Measurement identity | Check to see if set to 10 |
| Measured Results | |
| - CHOICE measurement | Check to see if set to "Intra-frequency measured results list" |
| - Intra-frequency measurement results | |
| - Cell measured results | |
| - Cell Identity | Check to see if this IE is absent |
| - Cell synchronisation information | Check to see if this IE is absent |
| - CHOICE mode | TDD |
| - cell parameters identity | Check to see if it's the same code for cell 1 |
| - proposed TGSN | Check to see if this IE is absent |
| - PCCPCH RSCP | Check to see if this IE is present |
| - Pathloss | Check to see if this IE is absent |
| - timeslotISCP_List | Check to see if this IE is absent |
| - Cell measured results | |
| - Cell Identity | Check to see if this IE is absent |
| - Cell synchronisation information | Check to see if this IE is absent |
| - CHOICE mode | TDD |
| - cell parameters identity | Check to see if it's the same code for cell 2 |
| - proposed TGSN | Check to see if this IE is absent |
| - PCCPCH RSCP | Check to see if this IE is present |
| - Pathloss | Check to see if this IE is absent |
| - timeslotISCP_List | Check to see if this IE is absent |
| - Cell measured results | |
| - Cell Identity | Check to see if this IE is absent |
| - Cell synchronisation information | Check to see if this IE is absent |
| - CHOICE mode | TDD |
| - cell parameters identity | Check to see if it's the same code for cell 3 |
| - proposed TGSN | Check to see if this IE is absent |
| - PCCPCH RSCP | Check to see if this IE is present |
| - Pathloss | Check to see if this IE is absent |
| Measured Results on RACH | Check to see if this IE is absent |
| Additional measured results | Check to see if this IE is absent |
| Event Results | |
| - CHOICE event result | Check to see if it's set to 'Intra-frequency measurement event results' |
| - Intra-frequency event identity | Check to see if this IE is set to '1g' |
| - Cell measurement event results | |
| - Cell parameters Id | Check to see if it's the same code for cell 1 |

PHYSICAL CHANNEL RECONFIGURATION (Steps 7, 14a and 18)

Use the same message sub-type found in clause 9 of TS 34.108, which is entitled "Packet to CELL_FACH from CELL_DCH in PS".

MEASUREMENT REPORT (Steps 9e)

| Information Element | Value/remark |
|---|---|
| Measurement identity | Check to see if set to 10 |
| Measured Results | |
| - CHOICE measurement | Check to see if set to "Intra-frequency measured results list" |
| - Intra-frequency measurement results | |
| - Cell measured results | |
| - Cell Identity | Check to see if this IE is absent |
| - Cell synchronisation information | Check to see if this IE is absent |
| - CHOICE mode | TDD |
| - cell parameters identity | Check to see if it's the same code for cell 1 |
| - proposed TGSN | Check to see if this IE is absent |
| - PCCPCH RSCP | Check to see if this IE is present |
| - Pathloss | Check to see if this IE is absent |
| - timeslotISCP_List | Check to see if this IE is absent |
| - Cell measured results | |
| - Cell Identity | Check to see if this IE is absent |
| - Cell synchronisation information | Check to see if this IE is absent |
| - CHOICE mode | TDD |
| - cell parameters identity | Check to see if it's the same code for cell 2 |
| - proposed TGSN | Check to see if this IE is absent |
| - PCCPCH RSCP | Check to see if this IE is present |
| - Pathloss | Check to see if this IE is absent |
| - timeslotISCP_List | Check to see if this IE is absent |
| Measured Results on RACH | Check to see if this IE is absent |
| Additional measured results | Check to see if this IE is absent |
| Event Results | |
| - CHOICE event result | Check to see if it's set to 'Intra-frequency measurement event results' |
| - Intra-frequency event identity | Check to see if this IE is set to '1g' |
| - Cell measurement event results | |
| - Cell parameters Id | Check to see if it's the same code for cell 1 |

MEASUREMENT CONTROL (Step 10 and 17).

| Information Element | Value/remark |
|---|---|
| Measurement Identity | 12 |
| Measurement Command | Setup |
| Measurement Reporting Mode | |
| - Measurement Reporting Transfer Mode | Acknowledged Mode RLC |
| - Periodic Reporting / Event Trigger Reporting Mode | Periodical Reporting |
| Additional measurements list | Not Present |
| CHOICE measurement type | Intra-frequency measurement |
| - Intra-frequency cell info list | |
| - CHOICE intra-frequency cell removal | Remove no intra-frequency cells |
| - New intra-frequency info list | Not Present |
| - Cells for measurement | Not Present |
| - Intra-frequency measurement quantity | |
| - Filter Coefficient | Not Present |
| - Measurement quantity | PCCPCH RSCP |
| - Intra-frequency reporting quantity | |
| - Reporting quantities for active set cells | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell identity reporting indicator | FALSE |
| - CHOICE mode | TDD |
| - Timeslot ISCP reporting indicator | FALSE |
| - Proposed TGSN Reporting required | FALSE |
| - PCCPCH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for monitored set cells | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell identity reporting indicator | FALSE |
| - CHOICE mode | TDD |
| - Timeslot ISCP reporting indicator | FALSE |
| - Proposed TGSN Reporting required | FALSE |
| - PCCPCH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for detected cells | Not present |
| - Reporting cell status | Not present |
| - Measurement validity | CELL DCH |
| - CHOICE report criteria | Periodical reporting criteria |
| - reporting amount | infinity |
| - reportingInterval | 64s |
| DPCH compressed mode status info | Not Present |

MEASUREMENT REPORT (Steps 14, 14f and 17a)

| Information Element | Value/remark |
|---|---|
| Measurement identity | Check to see if set to 12 |
| Measured Results | |
| - CHOICE measurement | Check to see if set to "Intra-frequency measured results list" |
| - Intra-frequency measurement results | |
| - Cell measured results | |
| - Cell Identity | Check to see if this IE is absent |
| - Cell synchronisation information | Check to see if this IE is absent |
| - CHOICE mode | TDD |
| - cell parameters identity | Check to see if it's the same code for cell 1 |
| - proposed TGSN | Check to see if this IE is absent |
| - PCCPCH RSCP | Check to see if this IE is present |
| - Pathloss | Check to see if this IE is absent |
| - timeslotISCP_List | Check to see if this IE is absent |
| - Cell measured results | |
| - Cell Identity | Check to see if this IE is absent |
| - Cell synchronisation information | Check to see if this IE is absent |
| - CHOICE mode | TDD |
| - cell parameters identity | Check to see if it's the same code for cell 2 |
| - proposed TGSN | Check to see if this IE is absent |
| - PCCPCH RSCP | Check to see if this IE is present |
| - Pathloss | Check to see if this IE is absent |
| - timeslotISCP_List | Check to see if this IE is absent |
| Measured Results on RACH | Check to see if this IE is absent |
| Additional measured results | Check to see if this IE is absent |
| Event Results | Check to see if this IE is absent |

MEASUREMENT CONTROL (Step 15)

| Information Element | Value/remark |
|---|---|
| Measurement Identity | 12 |
| Measurement Command | Release |
| Measurement Reporting Mode | Not Present |
| Additional measurements list | Not Present |
| CHOICE Measurement type | Not Present |
| DPCH compressed mode status info | Not Present |

System Information Block type 11 for cell 2 (Step 21)

All messages content below shall use the same content as described in default message content specified in clause 6.1 of TS 34.108, with the following exception:

| Information Element | Value/Remark |
|---|---|
| SIB12 indicator | TRUE |
| FACH measurement occasion info | Not Present |
| Measurement control system information | |
| - Use of HCS | Not used |
| - Cell selection and reselection quality measure | PCCPCH RSCP |
| - Intra-frequency measurement system information | |
| - Intra-frequency measurement identity | Not present |
| - Intra-frequency cell info list | |
| - CHOICE intra-frequency cell removal | Not Present |
| - New intra-frequency cells | |
| - Intra-frequency cell id | 2 |
| - Cell info | |
| - Cell individual offset | Not Present |
| - Reference time difference to cell | Not present |
| - Read SFN indicator | FALSE |
| - CHOICE mode | TDD |
| - Primary CCPCH info | |
| - TSTD indicator | FALSE |
| - Cell parameters Id | Refer to clause titled "Default settings for cell No.1 (TDD)" in clause 6.1.4 of TS34.108 |
| - SCTD indicator | FALSE |
| - Primary CCPCH Tx power | Not present |
| - timeslot info list | Not present |
| - Cell Selection and Re-selection info | Not present |
| - Intra-frequency cell id | 1 |
| - Cell info | |
| - Cell individual offset | Not Present |
| - Reference time difference to cell | Not present |
| - Read SFN indicator | TRUE |
| - CHOICE mode | TDD |
| - Primary CCPCH info | |
| - TSTD indicator | FALSE |
| - Cell parameters Id | Refer to clause titled "Default settings for cell No.1 (TDD)" in clause 6.1.4 of TS34.108 |
| - SCTD indicator | FALSE |
| - Primary CCPCH Tx power | Not present |
| - timeslot info list | Not present |
| - Cell Selection and Re-selection info | Not present |
| - Intra-frequency cell id | 3 |
| - Cell info | |
| - Cell individual offset | Not Present |
| - Reference time difference to cell | Not present |
| - Read SFN indicator | TRUE |
| - CHOICE mode | TDD |
| - Primary CCPCH info | |
| - TSTD indicator | FALSE |
| - Cell parameters Id | Refer to clause titled "Default settings for cell No.1 (TDD)" in clause 6.1.4 of TS34.108 |
| - SCTD indicator | FALSE |
| - Primary CCPCH Tx power | Not present |
| - timeslot info list | Not present |
| - Cell Selection and Re-selection info | Not present |
| - Cells for measurement | Not present |
| - Intra-frequency measurement quantity | |
| - Filter coefficient | Not Present |
| - CHOICE mode | TDD |
| - Measurement quantity | PCCPCH RSCP |
| - Intra-frequency reporting quantity for RACH reporting | Not present |
| - Maximum number of reported cells on RACH | Not present |
| - Reporting information for state CELL_DCH | Not present |

System Information Block type 12 for cell 2 (Step 21)

| Information Element | Value/Remark |
|---|---|
| FACH measurement occasion info | Not Present |
| Measurement control system information | |
| - Use of HCS | Not used |
| - Cell selection and reselection quality measure | PCCPCH RSCP |
| - Intra-frequency measurement system information | |
| - Intra-frequency measurement identity | Not present |
| - Intra-frequency cell info list | Not Present |
| - Intra-frequency measurement quantity | |
| - Filter coefficient | Not Present |
| - CHOICE mode | TDD |
| - Measurement quantity | PCCPCH RSCP |
| - Intra-frequency reporting quantity for RACH reporting | Not present |
| - Maximum number of reported cells on RACH | Not present |
| - Reporting information for state CELL_DCH | |
| - Intra-frequency reporting quantity | |
| - Reporting quantities for active set cells | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell identity reporting indicator | FALSE |
| - CHOICE mode | TDD |
| - Timeslot ISCP reporting indicator | FALSE |
| - Proposed TGSN Reporting required | FALSE |
| - PCCPCH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for monitored set cells | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell identity reporting indicator | FALSE |
| - CHOICE mode | TDD |
| - Timeslot ISCP reporting indicator | FALSE |
| - Proposed TGSN Reporting required | FALSE |
| - PCCPCH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for detected set cells | Not Present |
| - Measurement reporting mode | |
| - Measurement Report Transfer Mode | Acknowledged mode RLC |
| - Periodic Reporting/Event Trigger Reporting Mode | Event trigger |
| - CHOICE report criteria | Intra-frequency measurement reporting criteria |
| - Intra-frequency measurement reporting criteria | |
| - Intra-frequency event identity | 1g |
| - W | 0 |
| - Hysteresis | 2 (1dB) |
| - Threshold Used Frequency | Not Present |
| - Reporting deactivation threshold | 2 |
| - Replacement activation threshold | Not Present |
| - Time to trigger | 0 |
| - Amount of reporting | Not Present |
| - Reporting interval | Not Present |
| - Reporting cell status | |
| - CHOICE reported cell | Report cell within active set and/or monitored set cells on used frequency |
| - Maximum number of reported cells | 3 |
| - Inter-frequency measurement system information | Not present |
| - Inter-RAT measurement system information | Not present |
| - Traffic volume measurement system information | Not Present |
| - UE internal measurement system information | Not Present |

CELL UPDATE (Step 22)

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - SRNC Identity | Check to see if set to '0000 0000 0001' |
| - S-RNTI | Check to see if set to '0000 0000 0000 0000 0001' |
| START List | Check to see if it is present |
| AM_RLC error indication(RB2, RB3 or RB4) | Checked to see if it is set to FALSE |
| AM_RLC error indication(RB>4) | Checked to see if it is set to FALSE |
| Cell Update Cause | Check to see if set to 'Cell Re-selection' |
| RB timer indicator | |
| - T314 expired | Checked to see if it is set to 'FALSE' |
| - T315 expired | Checked to see if it is set to 'FALSE' |
| Measured results on RACH | Check to see if it is absent |

CELL UPDATE CONFIRM (Step 23)

Use the default message content of the same message type in Annex A, with the following exceptions.

| Information Element | Value/Remarks |
|---|---|
| New C-RNTI | '1010 1010 1010 1010' |

UTRAN MOBILITY INFORMATION CONFIRM (Step 23a)

Only the message type is checked.

MEASUREMENT REPORT (Step 26)

| Information Element | Value/Remarks |
|---|---|
| Measurement identity | Check to see if set to 1 |
| Measured Results | |
| - CHOICE measurement | Check to see if set to "Intra-frequency measured results list" |
| - Intra-frequency measurement results | |
| - Cell measured results | |
| - Cell Identity | Check to see if this IE is absent |
| - Cell synchronisation information | Check to see if this IE is absent |
| - CHOICE mode | TDD |
| - cell parameters identity | Check to see if it's the same code for cell 3 |
| - proposed TGSN | Check to see if this IE is absent |
| - PCCPCH RSCP | Check to see if this IE is present |
| - Pathloss | Check to see if this IE is absent |
| - timeslotISCP_List | Check to see if this IE is absent |
| - Cell Identity | Check to see if this IE is absent |
| - Cell synchronisation information | Check to see if this IE is present |
| - CHOICE mode | TDD |
| - cell parameters identity | Check to see if it's the same code for cell 2 |
| - proposed TGSN | Check to see if this IE is absent |
| - PCCPCH RSCP | Check to see if this IE is present |
| - Pathloss | Check to see if this IE is absent |
| - timeslotISCP_List | |
| - Cell Identity | Check to see if this IE is absent |
| - Cell synchronisation information | Check to see if this IE is present |
| - CHOICE mode | TDD |
| - cell parameters identity | Check to see if it's the same code for cell 1 |
| - proposed TGSN | Check to see if this IE is absent |
| - PCCPCH RSCP | Check to see if this IE is present |
| - Pathloss | Check to see if this IE is absent |
| - timeslotISCP_List | |
| Measured Results on RACH | Check to see if this IE is absent |
| Additional measured results | Check to see if this IE is absent |
| Event Results | |
| - CHOICE event result | Check to see if it's set to 'Intra-frequency measurement event results' |
| - Intra-frequency event identity | Check to see if this IE is set to '1g' |
| - Cell measurement event results | |
| - CHOICE mode | TDD |
| - Cell parameters Id | Check to see if it's the same code for cell 3 |

NOTE: Cells 2 and 3 can be received in any order

MEASUREMENT CONTROL (Step 27)

| Information Element | Value/remark |
|---|---|
| Measurement Identity | 1 |
| Measurement Command | Setup |
| Measurement Reporting Mode | |
| - Measurement Reporting Transfer Mode | Acknowledged Mode RLC |
| - Periodic Reporting / Event Trigger Reporting Mode | Period |
| Additional measurements list | Not Present |
| CHOICE measurement type | Intra-frequency measurement |
| - Intra-frequency cell info list | |
| - CHOICE intra-frequency cell removal | Remove no intra-frequency cells |
| - New intra-frequency info list | Not Present |
| - Cells for measurement | Not Present |
| - Intra-frequency measurement quantity | |
| - Filter Coefficient | Not Present |
| - Measurement quantity | PCCPCH RSCP |
| - Intra-frequency reporting quantity | |
| - Reporting quantities for active set cells | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell identity reporting indicator | FALSE |
| - CHOICE mode | TDD |
| - Timeslot ISCP reporting indicator | FALSE |
| - Proposed TGSN Reporting required | FALSE |
| - PCCPCH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for monitored set cells | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell identity reporting indicator | FALSE |
| - CHOICE mode | TDD |
| - Timeslot ISCP reporting indicator | FALSE |
| - Proposed TGSN Reporting required | FALSE |
| - PCCPCH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for detected cells | Not present |
| - Reporting cell status | Not present |
| - Measurement validity | Not present |
| - CHOICE report criteria | period measurement criteria |
| - reporting amount | infinity |
| - reportingInterval | 64s |
| DPCH compressed mode status info | Not Present |

MEASUREMENT REPORT (Step 28)

| Information Element | Value/Remarks |
|---|---|
| Measurement identity | Check to see if set to 1 |
| Measured Results | |
| - CHOICE measurement | Check to see if set to "Intra-frequency measured results list" |
| - Intra-frequency measurement results | |
| - Cell measured results | |
| - Cell Identity | Check to see if this IE is absent |
| - Cell synchronisation information | Check to see if this IE is absent |
| - CHOICE mode | TDD |
| - cell parameters identity | Check to see if it's the same code for cell 3 |
| - proposed TGSN | Check to see if this IE is absent |
| - PCCPCH RSCP | Check to see if this IE is present |
| - Pathloss | Check to see if this IE is absent |
| - timeslotISCP_List | Check to see if this IE is absent |
| - Cell Identity | Check to see if this IE is absent |
| - Cell synchronisation information | Check to see if this IE is present |
| - CHOICE mode | TDD |
| - cell parameters identity | Check to see if it's the same code for cell 2 |
| - proposed TGSN | Check to see if this IE is absent |
| - PCCPCH RSCP | Check to see if this IE is present |
| - Pathloss | Check to see if this IE is absent |
| - timeslotISCP_List | |
| - Cell Identity | Check to see if this IE is absent |
| - Cell synchronisation information | Check to see if this IE is present |
| - CHOICE mode | TDD |
| - cell parameters identity | Check to see if it's the same code for cell 1 |
| - proposed TGSN | Check to see if this IE is absent |
| - PCCPCH RSCP | Check to see if this IE is present |
| - Pathloss | Check to see if this IE is absent |
| - timeslotISCP_List | |
| Measured Results on RACH | Check to see if this IE is absent |
| Additional measured results | Check to see if this IE is absent |
| Event Results | Check to see if this IE is absent |

### 8.4.1.7a.5 Test Requirement

After step 3 the UE shall report cell 2's PCCPCH RSCP value by transmitting MEASUREMENT REPORT messages.

After step 9 and step 11 the UE shall not transmit MEASUREMENT REPORT messages, which pertain to intra-frequency type measurement reporting.

After step 9b, the UE shall transmit a MEASUREMENT REPORT according to what is broadcast in SIB 11 and 12 of cell 1, and MEASUREMENT REPORT message pertaining to the MEASUREMENT CONTROL message that it had received in step 5.

After steps 13 and 14e, the UE shall resume the measurement and reporting activities as specified in MEASUREMENT CONTROL message received in step 10. The UE shall transmit MEASUREMENT REPORT messages, containing measured results of cell 2's PCCPCH RSCP value.

After step 15 the UE shall stop measurement activities pertaining to periodic reporting of cell 2's PCCPCH RSCP, no MEASUREMENT REPORT messages shall be detectable by the SS on the uplink DCCH.

After step 17, the UE shall transmit a MEASUREMENT REPORT message to the SS as specified in the MEASUREMENT CONTROL message received in step 17.

After step 21 the UE shall re-select to cell 2 and initiate a cell update procedure. SS shall receive a CELL UPDATE message on the uplink CCCH of cell 2, with the "cell update cause" IE stated as "cell re-selection".

After step 23, the UE shall transmit UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH AM RLC.

After step 25, UE shall not send MEASUREMENT REPORT message with “measurement identity” = ‘12’.

After step 25a the UE shall report cell 3's PCCPCH RSCP value by transmitting MEASUREMENT REPORT messages.

After step 27, UE shall send MEASUREMENT REPORT message with “measurement identity” = ‘1’.

### 8.4.1.8 Measurement Control and Report: Inter-frequency measurement for transition from CELL_FACH to CELL_DCH state (FDD)

#### 8.4.1.8.1 Definition

#### 8.4.1.8.2 Conformance requirement

Upon transition from CELL_FACH to CELL_DCH state, the UE shall:

1> if inter-frequency measurements applicable to CELL_DCH state are stored in the variable MEASUREMENT_IDENTITY:

2> if the cell in which the UE transited from CELL_FACH state is included in the active set for the CELL_DCH state, the UE shall:

3> resume the measurement reporting.

2> otherwise, the UE shall:

3> not resume the measurement reporting. The measurement shall be restarted when a MEASUREMENT CONTROL message is received with the corresponding measurement identity.

…

If the IE "DPCH compressed mode info" is included, and if the IE group "transmission gap pattern sequence configuration parameters" is included, the UE shall for each transmission gap pattern sequence perform the following consistency checks:

1> if UE, according to its measurement capabilities, and for the measurement purpose indicated by IE "TGMP", requires UL compressed mode for measurements on any of the cells to be measured according to UE variable CELL_INFO_LIST, and CHOICE 'UL/DL mode' indicates 'DL only':

2> set the variable INVALID_CONFIGURATION to TRUE.

1> if UE, according to its measurement capabilities, and for the measurement purpose indicated by IE "TGMP", requires DL compressed mode for measurements on any of the cells to be measured according to UE variable CELL_INFO_LIST, and CHOICE 'UL/DL mode' indicates 'UL only':

2> set the variable INVALID_CONFIGURATION to TRUE.

1> if UE already has an active transmission gap pattern sequence that, according to IE "TGMP", has the same measurement purpose, and both patterns will be active after the new configuration has been taken into use:

2> set the variable INVALID_CONFIGURATION to TRUE.

If variable INVALID_CONFIGURATION has value FALSE after UE has performed the checks above, the UE shall:

1> if pattern sequence corresponding to IE "TGPSI" is already active (according to "TGPS Status Flag"):

2> deactivate this pattern sequence at the beginning of the frame, indicated by IE "Activation time" received in this message, when the new configuration received in this message is taken into use.

1> update each pattern sequence to the variable TGPS_IDENTITY according to the IE "TGPSI";

1> update into the variable TGPS_IDENTITY the configuration information defined by IE group" transmission gap pattern sequence configuration parameters ";

1> after the new configuration has been taken into use:

2> activate the stored pattern sequence corresponding to each IE "TGPSI" for which the "TGPS status flag" is set to "activate" at the time indicated by IE "TGCFN"; and

2> begin the inter-frequency corresponding to the pattern sequence measurement purpose of each activated pattern sequence;

2> if the new configuration is taken into use at the same CFN as indicated by IE "TGCFN":

3> start the concerned pattern sequence immediately at that CFN.

1> monitor if the parallel transmission gap pattern sequences create an illegal overlap, and in case of overlap, take actions as specified in TS 25.331 subclause 8.2.11.2.

Reference

3GPP TS 25.331 clause 8.4.1.7.2, 8.6.6.15

### 8.4.1.8.3 Test Purpose

1. To confirm that the UE resumes inter-frequency measurements and reporting stored for which the measurement control information has IE "measurement validity" assigned to the value "CELL_DCH", after it re-enters CELL_DCH state from CELL_FACH state.

2. To confirm that the UE resumes inter-frequency measurement and reporting activities after it has received a MEASUREMENT CONTROL message specifying that a stored compressed mode pattern sequence be re-activated.

### 8.4.1.8.4 Method of test

Initial Condition

System Simulator: 2 cells – Cell 1, cell 5 are active.

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS-DCCH+DTCH_DCH (State 6-10) in cell 1 as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statements

- Compressed mode required yes/no

Table 8.4.1.8-1 illustrates the downlink power to be applied for the 2 cells in this test.

**Table 8.4.1.8-1**

| Para-meter | Unit | Cell 1 | Cell 5 |
|---|---|---|---|
| UTRA RF Channel Number | | Mid Range Test Frequency | High Range Test Frequency |
| CPICH Ec | dBm/3.84 MHz | -60 | -75 |

The UE is in CELL_DCH state in cell 1 (step 1). SS transmits MEASUREMENT CONTROL message to add cell 5 into the IE "inter-frequency cell info" (step 2). If UE requires compressed mode, SS checks that no MEASUREMENT REPORT messages are detected on the uplink DCCH after it has transmitted the MEASUREMENT CONTROL message. (step 3). SS checks that the UE sends a MEASUREMENT REPORT message on the uplink DCCH only if UE does not require compressed mode.

SS sends a PHYSICAL CHANNEL RECONFIGURATION message on the downlink DCCH to move the UE to CELL_FACH state (step 4). The UE shall reconfigure itself to receive and transmit using the common physical channels assigned, and send PHYSICAL CHANNEL RECONFIGURATION COMPLETE on the uplink DCCH (step 5). SS modifies the content of Master Information Block and System Information Block type 12 messages, including cell 5 in the IE "inter-frequency cell info" (step 6) and providing FACH Measurement Occasion Info. SS transmits SYSTEM INFORMATION CHANGE INDICATION message to UE. Once again, SS verifies that the UE does not transmit MEASUREMENT REPORT messages in the uplink direction (step 7).

SS sends PHYSICAL CHANNEL RECONFIGURATION message, and configures dedicated physical. If UE requires compressed mode, in this message, SS commands the UE to start applying compressed mode mechanism for DPCH. The UE shall move to CELL_DCH state and then reply with PHYSICAL CHANNEL RECONFIGURATION COMPLETE message (step 9). The UE shall transmit 1 MEASUREMENT REPORT message, containing the selected frequency quality estimate (in this case CPICH RSCP) of cell 5. The UE shall also report the triggering of event '2c' in the IE "Event results" of MEASUREMENT REPORT message (step 10).

SS transmits a MEASUREMENT CONTROL message on the downlink DCCH using AM-RLC (step 11). The UE shall transmit MEASUREMENT REPORT messages at 2 seconds interval (step 12).

If UE requires compressed mode, SS transmits a PHYSICAL CHANNEL RECONFIGURATION message and deactivates the compressed mode pattern sequence with "TGPSI" IE set to 1 (step 13). The UE shall respond by sending PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and also either stop the periodic reporting activities or continue the periodic measurement reporting without any measured results (step 14).

Following this if UE requires compressed mode, SS sends a MEASUREMENT CONTROL message and re-activates the compressed mode pattern sequence by using the "DPCH compressed mode status info" IE (step 15). SS confirms that the UE has reconfigured itself to start measurement reporting with measured results included again. The SS shall receive MEASUREMENT REPORT messages continuously at 2 seconds interval (step 16). The SS then sends a MEASUREMENT CONTROL ordering the UE to release the measurement corresponding to identity 14, and to stop compressed mode (step 17). At reception of that message, the UE shall stop compressed mode and delete the measurement corresponding to that identity (step 18). The SS then transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE to order the UE to start compressed mode once again (step 19). The UE answers with a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message, and starts compressed mode (step 20). SS checks then that it does not receive any MEASUREMENT REPORT message from the UE after that point (step 21).

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The initial state of UE is in CELL_DCH state of cell 1. |
| 2 | ← | | MEASUREMENT CONTROL | SS specifies inter-frequency measurement and reporting parameters for cell 5, with "measurement validity" IE present and "UE state" set to "CELL_DCH". |
| 3 | → | | MEASUREMENT REPORT | If compressed mode is not required (refer ICS/IXIT), SS checks that UE transmit this message, or else SS checks that no MEASUREMENT REPORT messages are detected on the uplink DCCH. |
| 4 | ← | | PHYSICAL CHANNEL RECONFIGURATION | SS moves the UE to CELL_FACH state. |
| 5 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | UE shall move to CELL_FACH state. |
| 6 | ← | | Master Information Block, Scheduling Block 1 System Information Block type 12 | SS modifies MIB and SIB 12 including cell 5 in "inter-frequency cell info", and providing FACH Measurement occasion info. |
| 7 | ← | | SYSTEM INFORMATION CHANGE INDICATION | After SS transmits this message, SS confirms that there are no transmissions of MEASUREMENT REPORT message in the uplink direction. |
| 8 | ← | | PHYSICAL CHANNEL RECONFIGURATION | See specific message content below. |
| 9 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 10 | → | | MEASUREMENT REPORT | UE shall resume inter-frequency measurement task for cell 5 and report the measured CPICH RSCP value for cell 5. (See Specific Message Contents) |
| 11 | ← | | MEASUREMENT CONTROL | SS changes the reporting criteria for cell 5 to 'periodic reporting' |
| 12 | → | | MEASUREMENT REPORT | UE shall begin to transmit this message at 2 seconds interval. If compressed mode is not required (refer ICS/IXIT), the test ends here. |
| 13 | ← | | PHYSICAL CHANNEL RECONFIGURATION | SS deactivates the currently used pattern sequence for compressed mode operation. |
| 14 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | UE stays in CELL_DCH state. SS verifies that either no MEASUREMENT REPORT messages are received, or MEASUREMENT REPORTS are received every 2s with IE “Measured results” not included. |
| 15 | ← | | MEASUREMENT CONTROL | SS activates the pattern sequence stored by the UE. |

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 16 | → | | MEASUREMENT REPORT | SS checks that MEASURE-MENT REPORT messages with IE “Measured results” included are received at 2 seconds interval. |
| 17 | ← | | MEASUREMENT CONTROL | SS orders the UE to release the measurement with identity 14, and to stop compressed mode. |
| 18 | | | | SS waits for 5s to check that UE does not send MEASUREMENT REPORT. This verifies that the UE has stopped compressed mode. |
| 19 | ← | | PHYSICAL CHANNEL RECONFIGURATION | SS orders the UE to start compressed mode again. |
| 20 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE transmits the response message and starts compressed mode |
| 21 | | | | SS wait for 5s to check that the UE does not send any MEASUREMENT REPORT. |

### Specific Message Content

Unless explicitly stated, the messages below shall be used.

### System Information Block type 1 (FDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

MEASUREMENT CONTROL (Step 2)

| Information Element | Value/remark |
|---|---|
| Measurement Identity | 14 |
| Measurement Command | Setup |
| Measurement Reporting Mode | |
| - Measurement Reporting Transfer Mode | Acknowledged Mode RLC |
| - Periodic Reporting / Event Trigger Reporting Mode | Event Trigger |
| Additional measurements list | Not Present |
| CHOICE measurement type | Inter-frequency measurement |
| - Inter-frequency cell info list | |
| - CHOICE inter-frequency cell removal | No inter-frequency cells removed |
| - New inter-frequency info list | |
| - Inter-frequency cell id | 5 |
| - Frequency info | |
| - UARFCN uplink (Nu) | Not present<br>Absence of this IE is equivalent to applying the default duplex distance defined for the operating frequency according to 3GPP TS 25.101 [21] |
| - UARFCN downlink (Nd) | UARFCN of the downlink frequency for cell 5 |
| - Cell info | |
| - Cell individual offset | 0 dB |
| - Reference time difference to cell | Not Present |
| - Read SFN Indicator | FALSE |
| - CHOICE Mode | FDD |
| - Primary CPICH Info | |
| - Primary Scrambling Code | Set to same code as used for cell 5 |
| - Primary CPICH TX power | Not Present |
| - TX Diversity Indicator | FALSE |
| - Cells for measurement | Not Present |
| - Inter-frequency measurement quantity | |
| - CHOICE reporting criteria | Inter-frequency reporting criteria |
| - Filter Coefficient | 0 |
| - Measurement quantity for frequency quality estimate | CPICH RSCP |
| - Inter-frequency reporting quantity | |
| - UTRA Carrier RSSI | FALSE |
| - Frequency quality estimate | FALSE |
| - Non frequency related cell reporting quantities | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell Identity reporting indicator | TRUE |
| - CPICH Ec/No reporting indicator | FALSE |
| - CPICH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting cell status | Not present |
| - Measurement validity | |
| - UE State | CELL_DCH |
| - Inter-frequency set update | |
| -UE autonomous update | On with no reporting |
| - Non autonomous update mode | Not Present |
| - CHOICE report criteria | Inter-frequency measurement reporting criteria |
| - Parameters required for each event | |
| - Inter-frequency event identity | 2c |
| - Threshold used frequency | Not Present |
| - W used frequency | Not Present |
| - Hysteresis | 2 (1 dB) |
| - Time to trigger | 10 ms |
| - Reporting cell status | |
| - CHOICE reported cell | Report cells within active and/or monitored set on used frequency or within active and/or monitored set on non-used frequency |
| - Maximum number of reported cells | 2 |
| - Parameters required for each non-used frequency | |
| - Threshold non used frequency | -85 dBm |
| - W non-used frequency | 0.0 |
| DPCH compressed mode status info | Not Present |

PHYSICAL CHANNEL RECONFIGURATION (Step 4)

Use the same message sub-type found in [9] TS 34.108 clause 9 titled "(Packet to CELL_FACH from CELL_DCH in PS)".

| Information Element | Value/Remark | Version |
|---|---|---|
| - Downlink information for each radio link | | |
| - Choice mode | FDD | |
| - Primary CPICH info | | |
| - Primary scrambling code | Scrambling code for cell 1. Ref. to the Default setting in TS34.108 clause 6.1 (FDD) | |
| - PDSCH with SHO DCH info | Not Present | |
| - PDSCH code mapping | Not Present | |
| - Downlink DPCH info for each RL | Not Present | |
| - SCCPCH Information for FACH | Not Present | R99 and Rel-4 only |

Master Information Block (Step 6)

| Information Element | Value/Remark |
|---|---|
| MIB Value Tag | A valid MIB value tag as defined in TS 25.331 that is different from the previous value |
| SB 1 Cell Value tag | Set to (Current SB1 value tag + 1) |

Scheduling Block 1 (Step 6)

| Information Element | Value/remark |
|---|---|
| SIB 12 Cell Value tag | Set to (Current SIB 12 value tag + 1) |

System Information Block type 12 (Step 6)

| Information Element | Value/remark |
|---|---|
| FACH measurement occasion info | |
| - FACH Measurement occasion cycle length coefficient | 3 |
| - Inter-frequency FDD measurement indicator | TRUE |
| - Inter-frequency TDD measurement indicator | FALSE |
| - Inter-RAT measurement indicators | Not Present |
| Measurement control system information | |
| -Use of HCS | Not used |
| -Cell selection and reselection quality measure | CPICH RSCP |
| - Intra-frequency measurement system information | Not Present |
| - Inter-frequency measurement system information | |
| - Inter-frequency cell info list | |
| - CHOICE inter-frequency cells removal | Not Present |
| - New inter-frequency info list | |
| - Inter-frequency cell id | Set to id of cell 5 |
| - Cell info | |
| - Cell individual offset | Not Present |
| - Reference time difference to cell | Not Present |
| - Read SFN Indicator | FALSE |
| - CHOICE Mode | FDD |
| - Primary CPICH Info | |
| - Primary Scrambling Code | Refer to clause titled "Default settings for cell No.5 (FDD)" in clause 6.1.4 |
| - Primary CPICH TX power | Not Present |
| - TX Diversity Indicator | FALSE |
| - Cell selection and Re-selection info | Not Present – use default values |
| - Inter-RAT measurement system information | Not Present |
| - Traffic volume measurement system information | Not Present |

PHYSICAL CHANNEL RECONFIGURATION (Step 8)

Use the same message sub-type found in [9] TS 34.108 clause 9 titled ("Packet to CELL_DCH from CELL_FACH in PS")

| Information Element | Value/Remark | Version |
|---|---|---|
| New U-RNTI | Not Present | |
| New C-RNTI | Not Present | |
| New DSCH-RNTI | Not Present | |
| RRC State indicator | CELL_DCH | |
| UTRAN DRX cycle length coefficient | Not Present | |
| CN information info | Not Present | |
| URA identity | Not Present | |
| Downlink counter synchronisation info | Not Present | |
| Frequency info | Not Present | |
| Maximum allowed UL TX power | Not Present | |
| CHOICE *mode* | FDD | |
| - Downlink PDSCH information | Not Present | |
| Downlink information common for all radio links | | |
| - CHOICE mode | FDD | |
| - DPCH compressed mode info | | |
| - TGPSI | 1 | |
| - TGPS Status Flag | Activate | |
| - TGCFN | (Current CFN+(256 – TTI/10msec)) mod 256 | |
| - Transmission gap pattern sequence configuration parameters | | |
| - TGMP | FDD Measurement | |
| - TGPRC | Infinity | |
| - TGSN | 4 | |
| - TGL1 | 7 | |
| - TGL2 | Not Present | |
| - TGD | undefined | |
| - TGPL1 | 3 | |
| - TGPL2 | Not Present | R99 and REL-4 only |
| - RPP | Mode 0 | |
| - ITP | Mode 0 | |
| - CHOICE UL/DL Mode | UL and DL, UL only or DL only (depending on the UE capability) | |
| - Downlink compressed mode method | SF/2 (or not sent, depending on the UE capability) | |
| - Uplink compressed mode method | SF/2 (or not sent, depending on the UE capability) | |
| - Downlink frame type | B | |
| - DeltaSIR1 | 20 (2.0) | |
| - DeltaSIRAfter1 | 10 (1.0) | |
| - DeltaSIR2 | Not Present | |
| - DeltaSIRAfter2 | Not Present | |
| - N identify abort | Not Present | |
| - T Reconfirm abort | Not Present | |
| - TX Diversity mode | Not Present | |
| - SSDT information | Not Present | R99 and Rel-4 only |
| - Default DPCH Offset Value | Not Present | |

MEASUREMENT REPORT (Step 3)

| Information Element | Value/remark |
|---|---|
| Measurement identity | Check to see if set to 14 |
| Measured Results | |
| - CHOICE measurement | Check to see if set to "Inter-frequency measured results list" |
| - Inter-frequency measurement results | |
| - Frequency info | |
| - UARFCN uplink | The presence of this IE is not checked |
| - UARFCN downlink | Check that the value of this IE is set to UARFCN for the downlink corresponding to $f_5$ |
| - UTRA carrier RSSI | Check to see if it is absent |
| - Inter-frequency cell measurement results | |
| - Cell measured results | |
| - Cell Identity | Check to see if it is absent |
| - Cell synchronisation information | Check to see if it is absent |
| - Primary CPICH Info | |
| - Primary Scrambling Code | Check to see if set to the same code for cell 5 |
| - CPICH Ec/No | Check to see if it is absent |
| - CPICH RSCP | Check to see if it is present |
| - Pathloss | Check to see if it is absent |
| Measured Results on RACH | Check to see if it is absent |
| Event Results | |
| - CHOICE event result | Inter-frequency event results |
| - Inter-frequency event identity | Check to see if it's set to '2c' |
| - Inter-frequency cells | |
| - Frequency Info | |
| - UARFCN uplink | The presence of this IE is not checked |
| - UARFCN downlink | Check that the value of this IE is set to UARFCN for the downlink corresponding to $f_5$ |
| - Non frequency related measurement event results | |
| - Primary CPICH Info | |
| - Primary Scrambling Code | Check to see if set to the same code for cell 5 |

MEASUREMENT CONTROL (Step 11)

| Information Element | Value/remark |
|---|---|
| Measurement Identity | 14 |
| Measurement Command | Set up |
| Measurement Reporting Mode | |
| - Measurement Reporting Transfer Mode | Acknowledged Mode RLC |
| - Periodic Reporting / Event Trigger Reporting Mode | Periodical reporting |
| Additional measurements list | Not Present |
| CHOICE measurement type | Inter-frequency measurement |
| - Inter-frequency cell info list | |
| - CHOICE inter-frequency cell removal | No inter-frequency cells removed |
| - New inter-frequency info list | |

| - DL channelisation code | | |
| - Secondary scrambling code | 5 | |
| - Spreading factor | Reference to TS34.108 clause 6.10 Parameter Set | |
| - Code number | Same as the code currently allocated to the UE | |
| - Scrambling code change | Code change | |
| - TPC combination index | 0 | |
| - SSDT cell identity | Not present | R99 and Rel-4 only |
| - Closed loop timing adjustment mode | Not present | |

#### 8.4.1.8.5 Test Requirement

After step 2, if UE requires compressed mode the UE shall not send any MEASUREMENT REPORT messages on the uplink DCCH of cell 1. If UE do not require compressed mode, the UE shall send a MEASUREMENT REPORT message on the uplink DCCH of cell 1.

After step 4 and 8, UE shall transmit PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

After step 8, the UE shall start compressed mode using the method specified in the PHYSICAL CHANNEL RECONFIGURATION message sent in step 8.

After step 9 the UE shall transmit a MEASUREMENT REPORT message, containing the IE "measured results" reporting cell 5's CPICH RSCP. The UE shall also report the triggering of event '2c' by including IE "Event results" in the MEASUREMENT REPORT message.

After step 11 the UE shall send MEASUREMENT REPORT messages, containing cell 5's CPICH RSCP measured value in IE "Measured results" at 2 seconds interval. The "Event results" IE shall be omitted in these messages.

If UE requires compressed mode, after step 14, the UE shall either not transmit any MEASUREMENT REPORT messages at all, or continue to transmit MEASUREMENT REPORT messages every 2s, but without including IE “Measured results”.

If UE requires compressed mode, after step 15, the UE shall start compressed mode and resume the transmission of MEASUREMENT REPORT messages with identical contents as in those received after step 11.

After step 17, the UE shall deactivate compressed mode.

After step 20, the UE shall not transmit any MEASUREMENT REPORT message to SS.

### 8.4.1.8a Measurement Control and Report: Inter-frequency measurement for transition from CELL_FACH to CELL_DCH state (TDD)

#### 8.4.1.8a.1 Definition

#### 8.4.1.8a.2 Conformance requirement

Upon transition from CELL_FACH to CELL_DCH state, the UE shall:

if inter-frequency measurements applicable to CELL_DCH state are stored in the variable MEASUREMENT_IDENTITY:

2> if the cell in which the UE transited from CELL_FACH state is included in the active set for the CELL_DCH state, the UE shall:

3> resume the measurement reporting.

2> otherwise, the UE shall:

3> not resume the measurement reporting. The measurement shall be restarted when a MEASUREMENT CONTROL message is received with the corresponding measurement identity.

Reference

3GPP TS 25.331 clause 8.4.1.7.2

### 8.4.1.8a.3 Test Purpose

1. To confirm that the UE resumes inter-frequency measurements and reporting stored for which the measurement control information has IE "measurement validity" assigned to the value "CELL_DCH", after it re-enters CELL_DCH state from CELL_FACH state.

### 8.4.1.8a.4 Method of test

Initial Condition

System Simulator: 2 cells – Cells 1 and cell 5 are active.

UE: PS-DCCH+DTCH_DCH (State 6-10) in cell 1 as specified in clause 7.4 of TS 34.108.

Test Procedure

Table 8.4.1.8a-1 illustrates the downlink power to be applied for the 2 cells in this test.

**Table 8.4.1.8a-1**

| Para-meter | Unit | Cell 1 | Cell 5 |
|---|---|---|---|
| UTRA RF Channel Number | | Mid Range Test Frequency | High Range Test Frequency |
| PCCPCH RSCP | dBm | -60 | -75 |

Test procedure when the initial condition is that the UE is connected to the PS domain:

The UE is in CELL_DCH state in cell 1 (step 1). SS transmits MEASUREMENT CONTROL message to add cell 5 into the IE "inter-frequency cell info" (step 2). SS checks that UE transmit this message, or else SS checks that the UE sends a MEASUREMENT REPORT messages on the uplink DCCH (step 3).

SS sends a PHYSICAL CHANNEL RECONFIGURATION message on the downlink DCCH to move the UE to CELL_FACH state (step 4). The UE shall reconfigure itself to receive and transmit using the common physical channels assigned, and send PHYSICAL CHANNEL RECONFIGURATION COMPLETE on the uplink DCCH (step 5). SS modifies the content of Master Information Block and System Information Block type 12 messages, including cell 5 in the IE "inter-frequency cell info" (step 6) and providing FACH Measurement Occasion Info. SS transmits SYSTEM INFORMATION CHANGE INDICATION message to UE. Once again, SS verifies that the UE does not transmit MEASUREMENT REPORT messages in the uplink direction (step 7).

SS sends PHYSICAL CHANNEL RECONFIGURATION message, and configures dedicated physical (step 8). The UE shall move to CELL_DCH state and then reply with PHYSICAL CHANNEL RECONFIGURATION COMPLETE message (step 9). The UE shall transmit 1 MEASUREMENT REPORT message, containing the selected frequency quality estimate (in this case PCCPCH RSCP) of cell 5. The UE shall also report the triggering of event '2c' in the IE "Event results" of MEASUREMENT REPORT message (step 10).

SS transmits a MEASUREMENT CONTROL message on the downlink DCCH using AM-RLC (step 10). The UE shall transmit MEASUREMENT REPORT messages at 2 seconds interval (step 12).

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The initial state of UE is in CELL_DCH state of cell 1. |
| 2 | ← | | MEASUREMENT CONTROL | SS specifies inter-frequency measurement and reporting parameters for cell 5, with "measurement validity" IE present and "UE state" set to "CELL_DCH". |
| 3 | → | | MEASUREMENT REPORT | SS checks that UE transmit this message. |
| 4 | ← | | PHYSICAL CHANNEL RECONFIGURATION | SS moves the UE to CELL_FACH state. |
| 5 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | UE shall move to CELL_FACH state. |
| 6 | ← | | Master Information Block<br>System Information Block type 12 | SS modifies MIB and SIB 12 including cell 5 in the list of cells in IE "inter-frequency cell info", and providing FACH Measurement occasion info. |
| 7 | ← | | SYSTEM INFORMATION CHANGE INDICATION | After SS transmits this message, SS confirms that there are no transmissions of MEASUREMENT REPORT message in the uplink direction. |
| 8 | ← | | PHYSICAL CHANNEL RECONFIGURATION | SS moves the UE to CELL_DCH state. |
| 9 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | UE shall move to CELL_DCH state. |
| 10 | → | | MEASUREMENT REPORT | UE shall resume inter-frequency measurement task for cell 5 and report the measured PCCPCH RSCP value for cell 5. |
| 11 | ← | | MEASUREMENT CONTROL | SS changes the reporting criteria for cell 5 to 'periodic reporting' |
| 12 | → | | MEASUREMENT REPORT | UE shall begin to transmit this message at 2 seconds interval. |

Specific Message Content

Unless explicitly stated, the messages below shall be used for both the CS case and the PS case.

MEASUREMENT CONTROL (Step 2)

| Information Element | Value/remark |
|---|---|
| Measurement Identity | 14 |
| Measurement Command | Setup |
| Measurement Reporting Mode | |
| - Measurement Reporting Transfer Mode | Acknowledged Mode RLC |
| - Periodic Reporting / Event Trigger Reporting Mode | Event Trigger |
| Additional measurements list | Not Present |
| CHOICE measurement type | Inter-frequency measurement |
| - Inter-frequency cell info list | |
| - CHOICE inter-frequency cell removal | No inter-frequency cells removed |
| - New inter-frequency info list | |
| - Inter-frequency cell id | 5 |
| - Frequency info | |
| - CHOICE mode | TDD |
| - UARFCN (Nt) | UARFCN of the frequency for cell 5 |
| - Cell info | |
| - Cell individual offset | 0 dB |
| - Reference time difference to cell | Not Present |
| - Read SFN Indicator | FALSE |
| - CHOICE Mode | TDD |
| - Primary CCPCH Info | Set to same code as used for cell 5 |
| - Cells for measurement | Not Present |
| - Inter-frequency measurement quantity | |
| - CHOICE reporting criteria | Inter-frequency reporting criteria |
| - Filter Coefficient | 0 |
| - Measurement quantity for frequency quality estimate | PCCPCH RSCP |
| - Inter-frequency reporting quantity | |
| - UTRA Carrier RSSI | FALSE |
| - Frequency quality estimate | FALSE |
| - Non frequency related cell reporting quantities | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell Identity reporting indicator | TRUE |
| - CHOICE mode | TDD |
| - Timeslot ISCP reporting indicator | FALSE |
| - Proposed TGSN Reporting required | FALSE |
| - Primary CCPCH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Measurement validity | |
| - UE State | CELL_DCH |
| - Inter-frequency set update | |
| -UE autonomous update | On with no reporting |
| - Non autonomous update mode | Not Present |
| - CHOICE report criteria | Inter-frequency measurement reporting criteria |
| - Parameters required for each event | |
| - Inter-frequency event identity | 2c |
| - Threshold used frequency | Not Present |
| - W used frequency | Not Present |
| - Hysteresis | 2 (1 dB) |
| - Time to trigger | 10 seconds |
| - Reporting cell status | |
| - CHOICE reported cell | Report cells within active and/or monitored set on used frequency or within active and/or monitored set on non-used frequency |
| - Maximum number of reported cells | 2 |
| - Parameters required for each non-used frequency | |
| - Threshold non used frequency | -85 dBm |
| - W non-used frequency | 0.0 |
| DPCH compressed mode status info | Not Present |

PHYSICAL CHANNEL RECONFIGURATION (Step 4)

Use the same message sub-type found in TS 34.108 clause 9 titled "(Packet to CELL_FACH from CELL_DCH in PS)".

| Information Element | Value/Remark | Version |
|---|---|---|
| - Downlink information for each radio link | | |
| - Choice mode | TDD | |
| - Primary CCPCH info | For cell 1. Ref. to the Default setting in TS34.108 clause 6.1 (TDD) | |
| - PDSCH with SHO DCH info | Not Present | |
| - PDSCH code mapping | Not Present | |
| - Downlink DPCH info for each RL | Not Present | |
| - SCCPCH Information for FACH | Not Present | R99 and Rel-4 only |

Master Information Block (Step 6)

| Information Element | Value/Remark |
|---|---|
| MIB Value Tag | A valid MIB value tag as defined in TS 25.331 that is different from the previous value |

System Information Block type 12 (Step 6)

| Information Element | Value/remark |
|---|---|
| FACH measurement occasion info | |
| - FACH Measurement occasion cycle length coefficient | 3 |
| - Inter-frequency FDD measurement indicator | FALSE |
| - Inter-frequency TDD measurement indicator | TRUE |
| - Inter-RAT measurement indicators | Not Present |
| Measurement control system information | |
| -Use of HCS | Not used |
| - Intra-frequency measurement system information | Not Present |
| - Inter-frequency measurement system information | |
| - Inter-frequency cell info list | |
| - CHOICE inter-frequency cells removal | Not Present |
| - New inter-frequency info list | |
| - Inter-frequency cell id | Set to id of cell 5 |
| - Cell info | |
| - Cell individual offset | Not Present |
| - Reference time difference to cell | Not Present |
| - Read SFN Indicator | FALSE |
| - CHOICE Mode | TDD |
| - Primary CCPCH Info | Refer to clause titled "Default settings for cell No.5 (TDD)" in clause 6.1.4 |
| - Primary CCPCH TX power | Not Present |
| - Timeslot list | Not Present |
| - Cell selection and Re-selection info | Not Present – use default values |
| - Inter-RAT measurement system information | Not Present |
| - Traffic volume measurement system information | Not Present |

PHYSICAL CHANNEL RECONFIGURATION (Step 8 only for the PS case)

UE will use the same message sub-type found in [9] TS 34.108 clause 9, which is entitled "(Packet to CELL_DCH from CELL_FACH in PS)".

MEASUREMENT REPORT (Step 3, 10)

| Information Element | Value/remark |
|---|---|
| Measurement identity | Check to see if set to 14 |
| Measured Results | |
| - CHOICE measurement | Check to see if set to "Inter-frequency measured results list" |
| - Inter-frequency measurement results | |
| - Frequency info | |
| - CHOICE mode | TDD |
| - UARFCN | Check to see if set to the UARFCN of the frequency for cell 5 |
| - UTRA carrier RSSI | Check to see if it is absent |
| - Inter-frequency cell measurement results | |
| - Cell measured results | |
| - Cell Identity | Check to see if it is absent |
| - SFN-SFN observed time difference | Check to see if it is absent |
| - Cell synchronisation information | Check to see if it is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Check to see if it's the same for cell 5 |
| - Timeslot ISCP | Check to see if it is absent |
| - Proposed TGSN | Check to see if it is absent |
| - Primary CCPCH Info | Check to see if set to the same code for cell 5 |
| - PCCPCH RSCP | Check to see if it is present |
| - Pathloss | Check to see if it is absent |
| Measured Results on RACH | Check to see if it is absent |
| Event Results | |
| - CHOICE event result | Inter-frequency event results |
| - Inter-frequency event identity | Check to see if it's set to '2c' |
| - Inter-frequency cells | |
| - Frequency Info | |
| - CHOICE mode | TDD |
| - UARFCN | Check to see if set to the UARFCN of the frequency for cell 5 |
| - Non frequency related measurement event results | |
| - Primary CCPCH Info | Check to see if set to the same for cell 5 |

MEASUREMENT CONTROL (Step 11)

| Information Element | Value/remark |
|---|---|
| Measurement Identity | 14 |
| Measurement Command | Set up |
| Measurement Reporting Mode | |
| - Measurement Reporting Transfer Mode | Acknowledged Mode RLC |
| - Periodic Reporting / Event Trigger Reporting Mode | Periodical reporting |
| Additional measurements list | Not Present |
| CHOICE measurement type | Inter-frequency measurement |
| - Inter-frequency cell info list | |
| - CHOICE inter-frequency cell removal | No inter-frequency cells removed |
| - New inter-frequency info list | |
| - Inter-frequency cell id | 5 |
| - Frequency info | |
| - CHOICE mode | TDD |
| - UARFCN uplink (Nt) | UARFCN of the frequency for cell 5 |
| - Cell info | |
| - Cell individual offset | 0 dB |
| - Reference time difference to cell | Not Present |
| - Read SFN Indicator | FALSE |
| - CHOICE Mode | TDD |
| - Primary CCPCH Info | Set to same as used for cell 5 |
| - Cells for measurement | |
| - Inter-frequency cell id | 5 |
| - Inter-frequency measurement quantity | |
| - CHOICE reporting criteria | Inter-frequency reporting criteria |
| - Filter Coefficient | 0 |
| - Measurement quantity for frequency quality estimate | PCCPCH RSCP |
| - Inter-frequency reporting quantity | |
| - UTRA Carrier RSSI | FALSE |
| - Frequency quality estimate | FALSE |
| - Non frequency related cell reporting quantities | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell Identity reporting indicator | TRUE |
| - CHOICE mode | TDD |
| - Timeslot ISCP reporting indicator | FALSE |
| - Proposed TGSN Reporting required | FALSE |
| - PCCPCH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting cell status | |
| - CHOICE reported cell | Report cells within active and/or monitored set on used frequency or within active and/or monitored set on non-used frequency |
| - Maximum number of reported cells | 2 |
| - Measurement validity | Not Present |
| - Inter-frequency set update | Not Present |
| - CHOICE report criteria | Periodic reporting criteria |
| - Amount of reporting | Infinity |
| - Reporting interval | 2000 milliseconds |
| DPCH compressed mode status info | Not Present |

MEASUREMENT REPORT (Step 12)

| Information Element | Value/remark |
|---|---|
| Measurement identity | Check to see if set to 14 |
| Measured Results | |
| - CHOICE measurement | Check to see if set to "Inter-frequency measured results list" |
| - Inter-frequency measurement results | |
| - Frequency info | |
| - UARFCN | Check to see if set to the UARFCN of the frequency for cell 5 |
| - UTRA carrier RSSI | Check to see if it is absent |
| - Inter-frequency cell measurement results | |
| - Cell measured results | |
| - Cell Identity | Check to see if is absent |
| - Cell synchronisation information | Check to see if it is absent |
| - CHOICE mode | TDD |
| - Cell parameters Id | Check to see if it's the same for cell 5 |
| - Timeslot ISCP | Check to see if it is absent |
| - Proposed TGSN | Check to see if it is absent |
| - Primary CCPCH Info | Check to see if set to the same for cell 5 |
| - PCCPCH RSCP | Check to see if it is present |
| - Pathloss | Check to see if it is absent |
| - CFN-SFN observed time difference | Check to see if it is absent |
| Measured Results on RACH | Check to see if it is absent |
| Event Results | Check to see if it is absent |

#### 8.4.1.8a.5 Test Requirement

After step 2,. UE shall send a MEASUREMENT REPORT message on the uplink DCCH of cell 1.

After step 4 and 8, UE shall transmit PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

After step 9 the UE shall transmit a MEASUREMENT REPORT message, containing the IE "measured results" reporting cell 5's PCCPCH RSCP. The UE shall also report the triggering of event '2c' by including IE "Event results" in the MEASUREMENT REPORT message.

After step 11 the UE shall send MEASUREMENT REPORT messages, containing cell 5's PCCPCH RSCP measured value in IE "Measured results" at 2 seconds interval. The "Event results" IE shall be omitted in these messages.

### 8.4.1.9 Measurement Control and Report: Unsupported measurement in the UE

#### 8.4.1.9.1 Definition

#### 8.4.1.9.2 Conformance requirement

If UTRAN instructs the UE to perform a measurement that is not supported by the UE, the UE shall:

1> retain the measurement configuration that was valid before the MEASUREMENT CONTROL message was received;

1> set the IE "RRC transaction identifier" in the MEASUREMENT CONTROL FAILURE message to the value of "RRC transaction identifier" in the entry for the MEASUREMENT CONTROL message in the table "Accepted transactions" in the variable TRANSACTIONS; and

1> clear that entry.

1> set the cause value in IE "failure cause" to "unsupported measurement";

1> submit the MEASUREMENT CONTROL FAILURE message to lower layers for transmission on the DCCH using AM RLC;

1> continue with any ongoing processes and procedures as if the invalid MEASUREMENT CONTROL message has not been received;

1> and the procedure ends.

Reference

3GPP TS 25.331 clause 8.4.1.4

### 8.4.1.9.3 Test purpose

1. To confirm that the UE transmits a MEASUREMENT CONTROL FAILURE message, with the value "unsupported measurement" in IE "failure cause" when the SS instructs the UE to perform an unsupported measurement by sending a MEASUREMENT CONTROL message. To confirm that the UE retains its existing valid measurement configuration, after receiving a MEASUREMENT CONTROL message containing an unsupported measurement.

### 8.4.1.9.4 Method of test

Initial Condition

System Simulator: 1cell
UE: CS-DCCH+DTCH_DCH (State 6-9) or PS-DCCH+DTCH_DCH (State 6-10) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE.

[Editor's note: It is assumed in this test that the UE under test does not possess any inter-RAT measurement capability. The mandatory type(s) of measurement capability that shall be implemented by the UE is to be discussed]

Test Procedure

The UE is in the CELL_DCH state. SS sends MEASUREMENT CONTROL message to command the UE to perform internal measurement and reporting for UE transmitted power. The UE shall transmit MEASUREMENT REPORT messages on DCCH at 1 second interval. The SS transmits a MEASUREMENT CONTROL message to configure inter-RAT measurements. The UE hall transmit a MEASUREMENT CONTROL FAILURE message on the uplink DCCH using AM RLC. SS verifies that the UE continues to transmit MEASURMENT REPORT messages on uplink DCCH.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is in the CELL_DCH state. |
| 2 | ← | | MEASUREMENT CONTROL | UE internal measurement and reporting is requested. |
| 3 | → | | MEASUREMENT REPORT | Contains estimated reading for UE transmitted power. |
| 4 | ← | | MEASUREMENT CONTROL | Inter-RAT measurements are requested in this message |
| 5 | → | | MEASUREMENT CONTROL FAILURE | The value "unsupported measurement" is set in IE "failure cause". |
| 6 | → | | MEASUREMENT REPORT | SS verifies that UE continue to send this message on uplink DCCH. |

Specific Message Content

MEASUREMENT CONTROL (Step 2)

| Information Element | Value/remark |
|---|---|
| Measurement Identity | 1 |
| Measurement Command | Setup |
| Measurement Reporting Mode | |
| - Measurement Reporting Transfer Mode | Acknowledged Mode RLC |
| - Periodic Reporting / Event Trigger Reporting Mode | Periodical Reporting |
| Additional measurements list | Not Present |
| CHOICE measurement type | UE internal measurement |
| - UE internal measurement quantity | |
| - CHOICE mode | FDD |
| - Measurement quantity | UE Transmitted Power |
| - Filter Coefficient | 0 |
| - UE internal reporting quantity | |
| - UE Transmitted Power | TRUE |
| - CHOICE mode | FDD |
| - UE Rx-Tx time difference | FALSE |
| - CHOICE report criteria | Periodical reporting criteria |
| - Amount of reporting | Infinity |
| - Reporting interval | 1000 msec |
| DPCH compressed mode status info | Not present |

MEASUREMENT REPORT (Step 3 and Step 6)

| **Information Element** | **Value/remark** |
|---|---|
| Measurement Identity number | Check to see if it's set to '1' |
| Measured Results | |
| - CHOICE measurement | Check to see if it's set to "UE internal measured results" |
| - CHOICE mode | Check to see if it's set to "FDD" |
| - UE Transmitted Power | Check to see if the reported power is compatible with RF class |
| - UE Rx-Tx report entries | Check to see if it is absent |
| Measured Results on RACH | Check to see if it is absent |
| Additional Measured results | Check to see if it is absent |
| Event results | Check to see if it is absent |

MEASUREMENT CONTROL (Step 4)

| Information Element | Value/remark | Version |
|---|---|---|
| RRC transaction identifier | Select an arbitrary an integer between 0 and 3 | |
| Measurement Identity | 2 | |
| Measurement Command | Setup | |
| Measurement Reporting Mode | | |
| - Measurement Reporting Transfer Mode | Acknowledged Mode RLC | |
| Additional measurements list | Not Present | |
| CHOICE measurement type | Inter-RAT measurement | |
| - Inter-RAT cell info list | | |
| - CHOICE inter-RAT cell removal | Remove no inter-RAT cells | |
| - New inter-RAT cells | | |
| - Inter-RAT cell id | 1 | |
| - CHOICE Radio Access Technology | GSM | |
| - Cell individual offset | 0 | |
| - Cell selection and re-selection info | Not Present | |
| - BSIC | Set to the BSIC code of cell 2 | |
| - BSIC ARFCN | Set to the ARFCN assigned to cell 2 | |
| - Output power | Not Present | |
| - Cells for measurement | | |
| - Inter-RAT cell id | 2 | |
| - Inter-RAT measurement quantity | | |
| - CHOICE system | GSM | |
| - Measurement quantity | GSM Carrier RSSI | |
| - Filter Coefficient | 0 | |
| - BSIC verification required | Not required | |
| - Inter-RAT reporting quantity | | |
| - UTRAN estimate quantity | FALSE | |
| - CHOICE system | GSM | |
| - Pathloss | FALSE | |
| - Observed time difference to GSM cell | FALSE | R99 and Rel-4 only |
| Reporting indicator | | |
| - GSM Carrier RSSI | TRUE | |
| - Reporting cell status | Not Present | |
| - CHOICE report criteria | No reporting | |
| DPCH compressed mode status info | Not Present | |

MEASUREMENT CONTROL FAILURE (Step 5)

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | Check if it is set to the same value of the same IE in the MEASUREMENT CONTROL message sent in Step 4. |
| Failure cause | Check if it is set to "Unsupported measurement" |

### 8.4.1.9.5 Test requirement

After step 2 the UE shall transmit a MEASUREMENT REPORT messages at 1 second interval. In these messages, the IE "CHOICE measurement" shall be set to "UE internal measured results", and it shall contain the measured UL transmitted power reading in IE "UE Transmitted Power".

After step 4 the UE shall transmit a MEASUREMENT CONTROL FAILURE message. In this message, the value "unsupported measurement" shall be specified in IE "failure cause".

After step 5 the UE shall continue to transmit MEASUREMENT REPORT messages on the uplink DCCH, with the contents of the messages identical to that received by SS after step 2.

## 8.4.1.10 Measurement Control and Report: Failure (Invalid Message Reception)

### 8.4.1.10.1 Definition

### 8.4.1.10.2 Conformance requirement

If the MEASUREMENT CONTROL message contains a protocol error causing the variable PROTOCOL_ERROR_REJECT to be set to TRUE according to TS 25.331 clause 9, the UE shall perform procedure specific error handling as follows. The UE shall:

1> set the IE "RRC transaction identifier" in the MEASUREMENT CONTROL FAILURE message to the value of "RRC transaction identifier" in the entry for the MEASUREMENT CONTROL message in the table "Rejected transactions" in the variable TRANSACTIONS; and

1> clear that entry.

1> set the IE "failure cause" to the cause value "protocol error";

1> include the IE "Protocol error information" with contents set to the value of the variable PROTOCOL_ERROR_INFORMATION;

1> submit the MEASUREMENT CONTROL FAILURE message to lower layers for transmission on the DCCH using AM RLC;

1> continue with any ongoing processes and procedures as if the invalid MEASUREMENT CONTROL message has not been received;

1> and the procedure ends.

#### Reference

3GPP TS 25.331 clauses 8.4.1.5 and 9.2

### 8.4.1.10.3 Test Purpose

1. To confirm that the UE continues its ongoing processes and procedures after it has received an invalid MEASUREMENT CONTROL message.

2. To confirm that the UE transmits MEASUREMENT CONTROL FAILURE message, after it has received an invalid MEASUREMENT CONTROL message.

### 8.4.1.10.4 Method of test

#### Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH+DTCH_DCH (State 6-9) or PS-DCCH+DTCH_DCH (State 6-10) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE.

#### Test Procedure

The UE is initially brought to CELL_DCH. SS transmits a MEASUREMENT CONTROL message to the UE, commanding it to start transmitting report messages for the reporting quantity "UE Transmitted Power". SS waits for the UE to transmit MEASUREMENT RERORT message on the uplink DCCH. After the MEASUREMENT REPORT message is received, SS transmits an invalid MEASUREMENT CONTROL message again. The UE shall reply with MEASURMENT CONTROL FAILURE message as it has detected a protocol error. It shall continue to report its UL transmission power level using MEASUREMENT REPORT messages.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is CELL_DCH state in cell 1. |
| 2 | ← | | MEASUREMENT CONTROL | SS transmits this message on downlink DCCH to instruct UE to start reporting the quantity "UE transmitted power". |
| 3 | → | | MEASUREMENT REPORT | UE shall send this message periodically at 32 seconds interval |
| 4 | ← | | MEASURMENT CONTROL | See message content. |
| 5 | → | | MEASUREMENT CONTROL FAILURE | UE shall continue its current measurement and reporting processes and procedures after sending this message. |
| 6 | → | | MEASUREMENT REPORT | UE shall continue to transmit this message to the SS at 32 seconds interval. |

Specific Message Content

MEASUREMENT CONTROL (Step 2)

| Information Element | Value/remark |
|---|---|
| Measurement Identity | 3 |
| Measurement Command | Setup |
| Measurement Reporting Mode | |
| - Measurement Reporting Transfer Mode | Acknowledged Mode RLC |
| - Periodic Reporting / Event Trigger Reporting Mode | Periodical Reporting |
| Additional measurements list | Not Present |
| CHOICE measurement type | UE internal measurement |
| - UE internal measurement quantity | |
| - Measurement quantity | UE Transmitted Power |
| - Filter coefficient | 0 |
| - UE internal reporting quantity | |
| - UE Transmitted Power | TRUE |
| - UE Rx-Tx time difference | FALSE |
| CHOICE report criteria | Periodical reporting criteria |
| - Amount of reporting | Infinity |
| - Reporting interval | 32 seconds |
| DPCH compressed mode status info | Not Present |

MEASUREMENT REPORT (Step 3 and Step 6)

| Information Element | Value/remark |
|---|---|
| Measurement identity | Check to see if set to 3 |
| Measured Results | |
| CHOICE measurement | Check to see if set to "UE internal measurement results" |
| - CHOICE mode | Check to see if it's set to "FDD" |
| - UE Transmitted Power | Check to see if the reported power is compatible with RF class |
| - UE Rx-Tx report entries | Check to see if this IE is absent |
| Measured Results on RACH | Check to see if this IE is absent |
| Additional Measured results | Check to see if this IE is absent |
| Event Results | Check to see if this IE is absent |

MEASUREMENT CONTROL (Step 4)

Use the MEASUREMENT CONTROL message as defined in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/Remark |
|---|---|
| Critical extensions | 'FF'H |

MEASUREMENT CONTROL FAILURE (Step 5)

| Information Element | Value/remark |
|---|---|
| Failure cause<br>Protocol error information | Check to see if set to "protocol error"<br>Check to see if set to " Message extension not comprehended " |

#### 8.4.1.10.5 Test Requirement

After step 4 the UE shall transmit MEASUREMENT CONTROL FAILURE message, stating the IE "failure cause" as "protocol error" and IE "protocol error information" as "Message extension not comprehended".

After step 5 the UE shall continue to send MEASUREMENT REPORT, with the measurement identity number set to 3 and "measured results" IE containing measured readings of UE Tx power, at 32 seconds interval.

### 8.4.1.11 Void

### 8.4.1.12 Void

### 8.4.1.13 Void

### 8.4.1.14 Measurement Control and Report: Cell forbidden to affect reporting range (FDD)

#### 8.4.1.14.1 Definition

#### 8.4.1.14.2 Conformance requirement

The reporting range affects the reporting events 1A and 1B. The reporting range is defined as a function of all the Primary CPICHs in the active set. If the parameter W is set to 0, the reporting range is defined relative to the best Primary CPICH. However, there could be cases where it is good to forbid a specific Primary CPICH to affect the reporting range. This mechanism could be effective if the operator knows by experience that the quality of a Primary CPICH is very unstable in a specific area and therefore should not affect the reporting of the other Primary CPICHs.

The UE shall ignore that a Primary CPICH is forbidden to affect the reporting range if all of the following conditions are fulfilled:

- the Primary CPICH is included in active set; and
- all cells in active set are defined as Primary CPICHs forbidden to affect the reporting range.

Reference

3GPP TS 25.331 clause 14.1.2.1, 14.1.2.2, clause 14.1.5.4

#### 8.4.1.14.3 Test Purpose

1. To confirm that the UE reports the triggering of event 1A to the SS, if a primary CPICH currently measured by the UE enters the reporting range.
2. To confirm that the UE reports the triggering of event 1B to the SS, if a primary CPICH currently measured by the UE leaves the reporting range.
3. To confirm that the UE use the forbidden cell indicated in the MEASUREMENT CONTROL message to affect the reporting range.
4. To confirm that the UE ignores that a primary CPICH is forbidden to affect the reporting range when (a) the primary CPICH concerned is included in active set and (b) all cells in the active set are defined as primary CPICHs forbidden to affect the reporting range.

8.4.1.14.4 Method of test

Initial Condition

System Simulator: 3 cells – Cell 1, cell 2 and cell 3 are active. SCH_Ec is set to 0 dB relative to CPICH_Ec.

UE: CS-DCCH+DTCH _DCH (State 6-9) or PS-DCCH+DTCH_DCH (State 6-10) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE.

Test Procedure

Table 8.4.1.14-1 illustrates the downlink power to be applied for the 3 cells at various time instants of the test execution. Column marked "T0" denotes the initial conditions. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.4.1.14-1**

| Parameter | Unit | Cell1 | | | | Cell2 | | | | Cell3 | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T3 | T0 | T1 | T2 | T3 | T0 | T1 | T2 | T3 |
| UTRA RF Channel | | Mid Range Test Frequency | | | | Mid Range Test Frequency | | | | Mid Range Test Frequency | | | |
| CPICH Ec | dBm/3.84 MHz | -55 | -55 | -60 | -60 | -60 | -63 | -67 | -67 | -68 | -66 | -66 | -74 |

The UE is initially in CELL_DCH state of cell 1.

SS sends a MEASUREMENT CONTROL message with cell 1, cell 2 and cell 3 listed in IE "intra-frequency cell info list". In this message the IE "CHOICE reporting criteria" is set to "intra-frequency measurement report criteria", with the IE "intra-frequency event identity" set to "1A". The IE "reporting range" is set to 9 dB in the MEASUREMENT CONTROL message. The UE shall send a MEASUREMENT REPORT on the uplink DCCH, which contains the IE "Event results" to report that intra-frequency event 1A is triggered by cell 2.

SS executes the active set update procedure, requesting that cell 2 be added to the active set. The UE shall respond with ACTIVE SET UPDATE COMPLETE message on the uplink DCCH and then include cell 2 into its current active set. SS sends a MEASUREMENT CONTROL message to command that cell 1 in the active set is forbidden to affect the reporting range for event 1A. SS reconfigures the downlink transmission power settings according to values in column "T1" in table 8.4.1.14-1. The UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH to report the triggering of intra-frequency event 1A. In this message, the IE "Events results" shall indicate that intra-frequency event 1A is triggered by cell 3. SS executes the active set update procedure, requesting that cell 3 be added to the active set. The UE shall respond with ACTIVE SET UPDATE COMPLETE message on the uplink DCCH and then include cell 3 into its current active set. SS sends a MEASUREMENT CONTROL message to command that cell 1 in the active set is forbidden to affect the reporting range for event 1B. The IE "reporting range" is set to 7 dB in the MEASUREMENT CONTROL message. SS checks that no measurement report is sent by the UE. SS reconfigures the downlink transmission power settings according to values in column "T2" in table 8.4.1.14-1. SS sends a MEASUREMENT CONTROL message to command that cell 1 in the active set to be removed from the "forbidden to affect the reporting range for event 1B" cell list. SS reconfigures the downlink transmission power settings according to values in column "T3" in table 8.4.1.14-1. The UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH to report the triggering of intra-frequency event 1B. In this message, the IE "Events results" shall indicate that intra-frequency event 1B is triggered by cell 3. SS reconfigures the downlink transmission power settings according to values in column "T2" in table 8.4.1.14-1. SS sends a MEASUREMENT CONTROL message to command that all cells in the active set are forbidden to update the reporting range for event 1B. SS reconfigures the downlink transmission power settings according to values in column "T3" in table 8.4.1.14-1. The UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH to report the triggering of intra-frequency event 1B. In these messages, the IE "Events results" shall indicate that intra-frequency event 1B is triggered by cell 3.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | MEASUREMENT CONTROL | UE is initially in CELL_DCH state in cell 1. Cell 1, cell 2 and cell 3 are listed in IE "Intra-frequency cell info list". The IE "CHOICE reporting criteria" is set to "Intra-frequency measurement reporting criteria" and IE "Intra-frequency event identity" is set to "1A", with IE "reporting range" set to 9 dB. |
| 2 | → | | MEASUREMENT REPORT | Measurement made on cell 2 shall trigger event 1A |
| 3 | ← | | ACTIVE SET UPDATE | SS requests UE to add cell 2 into active set. |
| 4 | → | | ACTIVE SET UPDATE COMPLETE | |
| 5 | ← | | MEASUREMENT CONTROL | SS request UE to monitor cell 3 for event '1A'. SS set cell 1 to be forbidden to affect reporting range. IE “Reporting Range” set to 7 dB. |
| 5a | | | | SS configures the downlink power according to column 'T1' of table 8.4.1.14-1. |
| 6 | → | | MEASUREMENT REPORT | Measurement made on cell 3 shall trigger event 1A |
| 6a | ← | | ACTIVE SET UPDATE | SS requests UE to add cell 3 into active set. |
| 6b | → | | ACTIVE SET UPDATE COMPLETE | |
| 7 | ← | | MEASUREMENT CONTROL | SS set cell 1 to be forbidden to affect reporting range for event '1B'. |
| 7a | | | | SS checks that no measurement report is sent by the UE for 20 seconds. |
| 7b | | | | SS configures the downlink power according to column 'T2' of table 8.4.1.14-1. |
| 7c | ← | | MEASUREMENT CONTROL | Cell 1 shall not be forbidden to affect event '1B'. |

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 7d | | | | SS configures the downlink power according to column 'T3' of table 8.4.1.14-1. |
| 8 | → | | MEASUREMENT REPORT | Measurement made on cell 3 shall trigger event 1B. |
| 8a | | | | SS configures the downlink power according to column 'T2' of table 8.4.1.14-1. |
| 9 | | | Void | |
| 9a | | | Void | |
| 10 | → | | Void | |
| 11 | ← | | MEASUREMENT CONTROL | SS request UE to monitor cell 3 for event '1B'. SS forbids all cells in active list to affect the reporting range. The SS requests UE to report the CPICH RSCP value of the active set cells. |
| 11a | | | | SS configures the downlink power according to column 'T3' of table 8.4.1.14-1. |
| 12 | → | | MEASUREMENT REPORT | |

Specific Message Contents

MEASUREMENT CONTROL (Step 1)

The contents of MEASUREMENT CONTROL message for this test step is identical to the same message found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 1 |
| Measurement Identity | 1 |
| Measurement Command | Setup |
| Measurement Reporting Mode | |
| - Measurement Reporting Transfer Mode | Acknowledged Mode RLC |
| - Periodic Reporting / Event Trigger Reporting Mode | Event Trigger |
| Additional measurements list | Not Present |
| CHOICE measurement type | Intra-frequency measurement |
| - Intra-frequency cell info list | |
| - CHOICE intra-frequency cell removal | Remove no intra-frequency |
| - New intra-frequency info list | |
| - Intra-frequency cell id | 1 |
| - Cell info | |
| - Cell individual offset | Not present<br>Absence of this IE is equivalent to default value 0dB |
| - Reference time difference to cell | Not Present |
| - Read SFN Indicator | FALSE |
| - CHOICE Mode | FDD |
| - Primary CPICH Info | |
| - Primary Scrambling Code | Set to same code as used for cell 1 |
| - Primary CPICH TX power | Not Present |
| - TX Diversity Indicator | FALSE |
| - Intra-frequency cell id | 2 |
| - Cell info | |
| - Cell individual offset | Not present<br>Absence of this IE is equivalent to default value 0dB |
| - Reference time difference to cell | Not Present |
| - Read SFN Indicator | TRUE |
| - CHOICE Mode | FDD |
| - Primary CPICH Info | |
| - Primary Scrambling Code | Set to same code as used for cell 2 |
| - Primary CPICH TX power | Not Present |
| - TX Diversity Indicator | FALSE |
| - Intra-frequency cell id | 3 |
| - Cell info | |
| - Cell individual offset | Not present<br>Absence of this IE is equivalent to default value 0dB |
| - Reference time difference to cell | Not Present |
| - Read SFN Indicator | TRUE |
| - CHOICE Mode | FDD |
| - Primary CPICH Info | |
| - Primary Scrambling Code | Set to same code as used for cell 3 |
| - Primary CPICH TX power | Not Present |
| - TX Diversity Indicator | FALSE |
| - Cell for measurement | |
| - Intra-frequency cell id | 1, 2 and 3 |
| - Intra-frequency measurement quantity | |
| - Filter Coefficient | 0 |
| - Measurement quantity | CPICH RSCP |
| - Intra-frequency reporting quantity | |
| - Reporting quantities for active set cells | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell identity reporting indicator | FALSE |
| - CPICH Ec/No reporting indicator | FALSE |
| - CPICH RSCP reporting indicator | FALSE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for monitored set cells | |
| - Cell synchronisation information reporting indicator | TRUE |

| Information Element | Value/remark |
|---|---|
| - Cell identity reporting indicator | FALSE |
| - CPICH Ec/No reporting indicator | FALSE |
| - CPICH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for detected cells | Not present |
| - Reporting cell status | Not present |
| - Measurement validity | Not present |
| - CHOICE report criteria | Intra-frequency measurement reporting criteria |
| - Parameters required for each events | |
| - Intra-frequency event identity | 1a |
| - Triggering conditions 1 | Not Present |
| - Triggering conditions 2 | monitored set cells |
| - Reporting range | 18 (9.0 dB) |
| - Cells forbidden to affect reporting range | Not Present |
| - W | 0 |
| - Hysteresis | 0 (0 dB) |
| - Threshold used frequency | Not Present |
| - Reporting deactivation threshold | 3 |
| - Replacement activation threshold | Not Present |
| - Time to trigger | 0 msec |
| - Amount of reporting | Infinity |
| - Reporting interval | 4000 |
| - Reporting cell status | |
| - CHOICE reported cells | Report cells within monitored set on used frequency |
| - Maximum number of reported cells | 3 |
| DPCH compressed mode status info | Not Present |

MEASUREMENT REPORT (Step 2)

NOTE 1: Cell measured results for cell 3 may or may not be present (depends upon the capability of the UE and test uncertainties in power level)

| Information Element | Value/remark |
|---|---|
| Measurement identity | Check to see if set to 1 |
| Measured Results | |
| - CHOICE measurement | Check to see if set to "Intra-frequency measured results list" |
| - Intra-frequency measurement results | |
| - Cell measured results | |
| - Cell Identity | Check to see if it is absent |
| - Cell synchronisation information | Check to see if this IE is present and includes IE COUNT-C-SFN frame difference |
| - Primary CPICH Info | |
| - Primary Scrambling Code | Check to see if it's the same code for cell 2 |
| - CPICH Ec/No | Check to see if this IE is absent |
| - CPICH RSCP | Check to see if this IE is present |
| - Pathloss | Check to see if this IE is absent |
| - Cell measured results | |
| - Cell Identity | Check to see if it is absent |
| - Cell synchronisation information | Check to see if this IE is present and includes IE COUNT-C-SFN frame difference |
| - Primary CPICH Info | |
| - Primary Scrambling Code | Check to see if it's the same code for cell 3 |
| - CPICH Ec/No | Check to see if this IE is absent |
| - CPICH RSCP | Check to see if this IE is present |
| - Pathloss | Check to see if this IE is absent |
| Measured Results on RACH | Check to see if this IE is absent |
| Additional Measured Results | Check to see if this IE is absent |
| Event Results | Check to see if set to 'Intra-frequency measurement event results' |
| - Intra-frequency event identity | Check to see if set to '1a' |
| - Cell measurement event results | |
| - CHOICE Mode | Check to see if set to 'FDD' |
| - Primary CPICH info | |
| - Primary Scrambling Code | Check to see if set to the same code for cell 2 |

ACTIVE SET UPDATE (Step 3)

The contents of ACTIVE SET UPDATE message for this test step is identical to the same message found in Clause 9 of TS 34.108 with the following exceptions:

| Information Element | Value/remark | Version |
|---|---|---|
| RRC transaction identifier | 0 | |
| Radio link addition information | | |
| - Primary CPICH Info | | |
| - Primary Scrambling Code | Set to same code as assigned for cell 2 | |
| - Downlink DPCH info for each RL | | |
| - CHOICE mode | FDD | |
| - Primary CPICH usage for channel estimation | P-CPICH can be used. | |
| - DPCH frame offset | Calculated value from Cell synchronisation information | |
| - Secondary CPICH info | Not Present | |
| - DL channelisation code | This IE is repeated for all existing downlink DPCHs allocated to the UE | |
| - Secondary scrambling code | 1 | |
| - Spreading factor | Refer to TS 34.108 clause 6.10.2.4 "Typical radio parameter sets" | |
| - Code Number | For each DPCH, assign the same code number in the current code given in cell 1. | |
| - Scrambling code change | Not Present | |
| - TPC Combination Index | 0 | |
| - SSDT Cell Identity | Not Present | R99 and Rel-4 only |
| - Close loop timing adjustment mode | Not Present | |
| - TFCI Combining Indicator | FALSE | |
| - SCCPCH information for FACH | Not Present | R99 and Rel-4 only |
| Radio link removal information | Not Present | |

ACTIVE SET UPDATE COMPLETE (Step 4 and 6b)

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | Check to see if it is set to 0 |

MEASUREMENT CONTROL (Step 5)

The contents of MEASUREMENT CONTROL message for this test step is identical to the same message found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 1 |
| Measurement Identity | 1 |
| Measurement Command | Modify |
| Measurement Reporting Mode | |
| - Measurement Reporting Transfer Mode | Acknowledged Mode RLC |
| - Periodic Reporting / Event Trigger Reporting Mode | Event Trigger |
| Additional measurements list | Not Present |
| CHOICE measurement type | Intra-frequency measurement |
| - Intra-frequency cell info list | Not Present |
| - Intra-frequency measurement quantity | Not Present |
| - Intra-frequency reporting quantity | Not Present |
| - CHOICE report criteria | Intra-frequency measurement reporting criteria |
| - Parameters required for each events | |
| - Intra-frequency event identity | 1a |
| - Triggering conditions 1 | Not Present |
| - Triggering conditions 2 | monitored set cells |
| - Reporting range | 14 (7.0 dB) |
| - Cells forbidden to affect reporting range | |
| - CHOICE Mode | FDD |
| - Primary CPICH info | |
| - Primary scrambling code | Set to the same code as in cell 1 |
| - W | 0 |
| - Hysteresis | 0 (0 dB) |
| - Threshold used frequency | Not Present |
| - Reporting deactivation threshold | 3 |
| - Replacement activation threshold | Not Present |
| - Time to trigger | 0 msec |
| - Amount of reporting | Infinity |
| - Reporting interval | 4000 |
| - Reporting cell status | |
| - CHOICE reported cells | Report cells within monitored set on used frequency |
| - Maximum number of reported cells | 3 |
| DPCH compressed mode status info | Not Present |

MEASUREMENT REPORT (Step 6)

| Information Element | Value/remark |
|---|---|
| Measurement identity | Check to see if set to 1 |
| Measured Results | |
| - CHOICE measurement | Check to see if set to "Intra-frequency measured results list" |
| - Intra-frequency measurement results | |
| - Cell measured results | |
| - Cell Identity | Check to see if it is absent |
| - Cell synchronisation information | Check to see if this IE is present and includes IE COUNT-C-SFN frame difference |
| - Primary CPICH Info | |
| - Primary Scrambling Code | Check to see if it's the same code for cell 3 |
| - CPICH Ec/No | Check to see if this IE is absent |
| - CPICH RSCP | Check to see if this IE is present |
| - Pathloss | Check to see if this IE is absent |
| Measured Results on RACH | Check to see if this IE is absent |
| Additional Measured Results | Check to see if this IE is absent |
| Event Results | Check to see if set to 'Intra-frequency measurement event results' |
| - Intra-frequency event identity | Check to see if set to '1a' |
| - Cell measurement event results | |
| - CHOICE Mode | Check to see if set to 'FDD' |
| - Primary CPICH info | |
| - Primary Scrambling Code | Check to see if set to the same code for cell 3 |

ACTIVE SET UPDATE (Step 6a)

The contents of ACTIVE SET UPDATE message for this test step is identical to the same message found in Clause 9 of TS 34.108 with the following exceptions:

| Information Element | Value/remark | Version |
|---|---|---|
| RRC transaction identifier | 0 | |
| Radio link addition information | | |
| - Primary CPICH Info | | |
| - Primary Scrambling Code | Set to same code as assigned for cell 3 | |
| - Downlink DPCH info for each RL | | |
| - CHOICE mode | FDD | |
| - Primary CPICH usage for channel estimation | P-CPICH can be used. | |
| - DPCH frame offset | Calculated value from Cell synchronisation information | |
| - Secondary CPICH info | Not Present | |
| - DL channelisation code | This IE is repeated for all existing downlink DPCHs allocated to the UE | |
| - Secondary scrambling code | 2 | |
| - Spreading factor | Refer to TS 34.108 clause 6.10.2.4 "Typical radio parameter sets" | |
| - Code Number | For each DPCH, assign the same code number in the current code given in cell 1. | |
| - Scrambling code change | Not Present | |
| - TPC Combination Index | 0 | |
| - SSDT Cell Identity | Not Present | R99 and Rel-4 only |
| - Close loop timing adjustment mode | Not Present | |
| - TFCI Combining Indicator | FALSE | |
| - SCCPCH information for FACH | Not Present | R99 and Rel-4 only |
| Radio link removal information | Not Present | |

MEASUREMENT CONTROL (Step 7)

The contents of MEASUREMENT CONTROL message for this test step is identical to the same message found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 1 |
| Measurement Identity | 1 |
| Measurement Command | Modify |
| Measurement Reporting Mode | |
| - Measurement Reporting Transfer Mode | Acknowledged Mode RLC |
| - Periodic Reporting / Event Trigger Reporting Mode | Event Trigger |
| Additional measurements list | Not Present |
| CHOICE measurement type | Intra-frequency measurement |
| - Intra-frequency cell info list | Not Present |
| - Intra-frequency measurement quantity | Not Present |
| - Intra-frequency reporting quantity | Not Present |
| - CHOICE report criteria | Intra-frequency measurement reporting criteria |
| - Parameters required for each events | |
| - Intra-frequency event identity | 1b |
| - Triggering conditions 1 | Active set cells |
| - Triggering conditions 2 | Not Present |
| - Reporting range | 14 (7.0 dB) |
| - Cells forbidden to affect reporting range | |
| - CHOICE Mode | FDD |
| - Primary CPICH info | |
| - Primary scrambling code | Set to the same code as in cell 1 |
| - W | 0 |
| - Hysteresis | 0 (0 dB) |
| - Time to trigger | 0 msec |
| - Reporting cell status | |
| - CHOICE reported cells | Report cells within monitored set on used frequency |
| - Maximum number of reported cells | 3 |
| DPCH compressed mode status info | Not Present |

MEASUREMENT CONTROL (Step 7c)

The contents of MEASUREMENT CONTROL message for this test step is identical to the same message found in [9] TS 34.108 clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 1 |
| Measurement Identity | 1 |
| Measurement Command | Modify |
| Measurement Reporting Mode | |
| - Measurement Reporting Transfer Mode | Acknowledged Mode RLC |
| - Periodic Reporting / Event Trigger Reporting Mode | Event Trigger |
| Additional measurements list | Not Present |
| CHOICE measurement type | Intra-frequency measurement |
| - Intra-frequency cell info list | Not Present |
| - Intra-frequency measurement quantity | Not Present |
| - Intra-frequency reporting quantity | Not Present |
| - CHOICE report criteria | Intra-frequency measurement reporting criteria |
| - Parameters required for each events | |
| - Intra-frequency event identity | 1b |
| - Triggering conditions 1 | Active set cells |
| - Triggering conditions 2 | Not Present |
| - Reporting range | 21 (10.5 dB) |
| - Cells forbidden to affect reporting range | Not Present |
| - W | 0 |
| - Hysteresis | 0 (0 dB) |
| - Time to trigger | 0 msec |
| - Reporting cell status | |
| - CHOICE reported cells | Report cells within monitored set on used frequency |
| - Maximum number of reported cells | 3 |
| DPCH compressed mode status info | Not Present |

MEASUREMENT REPORT (Step 8)

| Information Element | Value/remark |
|---|---|
| Measurement identity | Check to see if set to 1 |
| Measured Results | Not Present |
| Measured Results on RACH | Check to see if this IE is absent |
| Additional Measured Results | Check to see if this IE is absent |
| Event Results | Check to see if set to 'Intra-frequency measurement event results' |
| - Intra-frequency event identity | Check to see if set to '1b' |
| - Cell measurement event results | |
| - CHOICE Mode | Check to see if set to 'FDD' |
| - Primary CPICH info | |
| - Primary Scrambling Code | Check to see if set to the same code for cell 3 |

MEASUREMENT CONTROL (Step 11)

The contents of MEASUREMENT CONTROL message for this test step is identical to the same message found in Clause 9 of TS 34.108 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 1 |
| Measurement Identity | 1 |
| Measurement Command | Modify |
| Measurement Reporting Mode | |
| - Measurement Reporting Transfer Mode | Acknowledged Mode RLC |
| - Periodic Reporting / Event Trigger Reporting Mode | Event Trigger |
| Additional measurements list | Not Present |
| CHOICE measurement type | Intra-frequency measurement |
| - Intra-frequency cell info list | Not Present |
| - Intra-frequency measurement quantity | Not Present |
| - Intra-frequency reporting quantity | |
| - Reporting quantities for active set cells | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell identity reporting indicator | FALSE |
| - CPICH Ec/No reporting indicator | FALSE |
| - CPICH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for monitored set cells | |
| - Cell synchronisation information reporting indicator | TRUE |
| - Cell identity reporting indicator | FALSE |
| - CPICH Ec/No reporting indicator | FALSE |
| - CPICH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for detected cells | Not present |
| - CHOICE report criteria | Intra-frequency measurement reporting criteria |
| - Parameters required for each events | |
| - Intra-frequency event identity | 1b |
| - Triggering conditions 1 | Active set cells |
| - Triggering conditions 2 | Not Present |
| - Reporting range | 21 (10.5 dB) |
| - Cells forbidden to affect reporting range | |
| - CHOICE Mode | FDD |
| - Primary CPICH info | |
| - Primary scrambling code | Set to the same code as in cell 1 |
| - CHOICE Mode | FDD |
| - Primary CPICH info | |
| - Primary scrambling code | Set to the same code as in cell 2 |
| - CHOICE Mode | FDD |
| - Primary CPICH info | |
| - Primary scrambling code | Set to the same code as in cell 3 |
| - W | 0 |
| - Hysteresis | 0 (0 dB) |
| - Time to trigger | 0 msec |
| - Reporting cell status | |
| - CHOICE reported cells | Report cells within active set |
| - Maximum number of reported cells | 3 |
| DPCH compressed mode status info | Not Present |

MEASUREMENT REPORT (Step 12)

| Information Element | Value/remark |
|---|---|
| Measurement identity | Check to see if set to 1 |
| Measured Results | |
| - CHOICE measurement | Check to see if set to "Intra-frequency measured results list" |
| - Intra-frequency measurement results | |
| - Cell measured results | |
| - Cell Identity | Check to see if it is absent |
| - Cell synchronisation information | Check to see if it is absent |
| - Primary CPICH Info | |
| - Primary Scrambling Code | Check to see if it's the same code for cell 1 |
| - CPICH Ec/No | Check to see if this IE is absent |
| - CPICH RSCP | Check to see if this IE is present |
| - Pathloss | Check to see if this IE is absent |
| - Cell measured results | |
| - Cell Identity | Check to see if it is absent |
| - Cell synchronisation information | Check to see if it is absent |
| - Primary CPICH Info | |
| - Primary Scrambling Code | Check to see if it's the same code for cell 2 |
| - CPICH Ec/No | Check to see if this IE is absent |
| - CPICH RSCP | Check to see if this IE is present |
| - Pathloss | Check to see if this IE is absent |
| - Cell measured results | |
| - Cell Identity | Check to see if it is absent |
| - Cell synchronisation information | Check to see if it is absent |
| - Primary CPICH Info | |
| - Primary Scrambling Code | Check to see if it's the same code for cell 3 |
| - CPICH Ec/No | Check to see if this IE is absent |
| - CPICH RSCP | Check to see if this IE is present |
| - Pathloss | Check to see if this IE is absent |
| Measured Results on RACH | Check to see if this IE is absent |
| Additional Measured Results | Check to see if this IE is absent |
| Event Results | Check to see if set to 'Intra-frequency measurement event results' |
| - Intra-frequency event identity | Check to see if set to '1b' |
| - Cell measurement event results | |
| - CHOICE Mode | Check to see if set to 'FDD' |
| - Primary CPICH info | |
| - Primary Scrambling Code | Check to see if set to the same code for cell 3 |

### 8.4.1.14.5 Test requirement

After step 1, the UE shall send a MEASUREMENT REPORT message on the uplink DCCH. The message shall contain the IE "Event results" to report that cell 2 has triggered intra-frequency event 1A.

After step 3, the UE shall send a ACTIVE SET UPDATE COMPLETE message on the uplink DCCH.

After step 5a, the UE shall transmit MEASUREMENT REPORT message on the uplink DCCH. The message shall contain IE "Event results" to report that cell 3 has triggered intra-frequency event 1A.

After step 6a, the UE shall send a ACTIVE SET UPDATE COMPLETE message on the uplink DCCH.

After step 7d, the UE shall transmit MEASUREMENT REPORT message on the uplink DCCH. The message shall contain IE "Event results" to report that cell 3 has triggered intra-frequency event 1B.

After step 11a, the UE shall send a MEASUREMENT REPORT message on the uplink DCCH. The message shall contain IE "Event results" to report that cell 3 has triggered intra-frequency event 1B.

## 8.4.1.15 Measurement Control and Report: Configuration Incomplete

### 8.4.1.15.1 Definition

### 8.4.1.15.2 Conformance requirement

If IE "Traffic volume measurement" is received by the UE in a MEASUREMENT CONTROL message, where IE "measurement command" has the value "setup", but IE "Traffic volume measurement quantity" or IE "Traffic volume reporting quantity" is not received, the UE shall:

1> clear all stored measurement control information related associated to this measurement identity in variable MEASUREMENT_IDENTITY;

1> set the variable CONFIGURATION_INCOMPLETE to TRUE.

…

If IE "Measurement Reporting Mode" is not received by the UE in MEASUREMENT CONTROL message, where IE "measurement command" has the value "setup", the UE shall:

1> clear all stored measurement control information related associated to this measurement identity in variable MEASUREMENT_IDENTITY;

1> set the variable CONFIGURATION_INCOMPLETE to TRUE.

…

If IE "Inter-frequency measurement" is received by the UE in a MEASUREMENT CONTROL message, where IE "measurement command" has the value "setup", but IE "Inter-frequency measurement quantity", IE "Inter-frequency reporting quantity" or "CHOICE Report criteria" is not received, the UE shall:

1> clear all stored measurement control information related associated to this measurement identity in variable MEASUREMENT_IDENTITY;

1> set the variable CONFIGURATION_INCOMPLETE to TRUE;

…

If IE "Intra-frequency measurement" is received by the UE in a MEASUREMENT CONTROL message, where IE "measurement command" has the value "setup", but IE "Intra-frequency measurement quantity", IE "Intra-frequency reporting quantity" or "CHOICE Report criteria" is not received, the UE shall:

1> clear all stored measurement control information related associated to this measurement identity in variable MEASUREMENT_IDENTITY;

1> set the variable CONFIGURATION_INCOMPLETE to TRUE.

…

If IE "Quality measurement" is received by the UE in a MEASUREMENT CONTROL message, where IE "measurement command" has the value "setup", but IE "Quality reporting quantity" is not received, the UE shall:

1> clear all stored measurement control information related associated to this measurement identity in variable MEASUREMENT_IDENTITY;

1> set the variable CONFIGURATION_INCOMPLETE to TRUE.

…

If IE "UE internal measurement" is received by the UE in a MEASUREMENT CONTROL message, where IE "measurement command" has the value "setup", but IE "UE internal measurement quantity" or IE "UE internal reporting quantity" is not received, the UE shall:

1> clear all stored measurement control information related associated to this measurement identity in variable MEASUREMENT_IDENTITY;

1> set the variable CONFIGURATION_INCOMPLETE to TRUE.

…

If the variable CONFIGURATION_INCOMPLETE is set to TRUE, the UE shall:

1> retain the measurement configuration that was valid before the MEASUREMENT CONTROL message was received;

1> set the IE "RRC transaction identifier" in the MEASUREMENT CONTROL FAILURE message to the value of "RRC transaction identifier" in the entry for the MEASUREMENT CONTROL message in the table "Accepted transactions" in the variable TRANSACTIONS and clear that entry;

1> clear the variable CONFIGURATION_INCOMPLETE;

1> set the cause value in IE "failure cause" to "Configuration incomplete";

1> submit the MEASUREMENT CONTROL FAILURE message to lower layers for transmission on the DCCH using AM RLC;

1> continue with any ongoing processes and procedures as if the invalid MEASUREMENT CONTROL message has not been received;

1> and the procedure ends.

Reference

3GPP TS 25.331 clause 8.4.1.4a, 8.6.7.10, 8.6.7.13, 8.6.7.14, 8.6.7.16, 8.6.7.17, 8.6.7.18

### 8.4.1.15.3 Test Purpose

1. To confirm that the UE sends a MEASUREMENT CONTROL FAILURE message, after receiving a MEASUREMENT CONTROL message with IE "Measurement command" set to "Setup" and the following contents:
   - "CHOICE measurement type" IE is set to "Intra-frequency measurement" and "Intra-frequency measurement quantity" is omitted; or
   - "CHOICE measurement type" IE is set to "Inter-frequency measurement" and "Inter-frequency reporting quantity" is omitted; or
   - "Reporting mode" IE is omitted. or
   - "CHOICE measurement type" IE is set to "Quality measurement" and IE "Quality reporting quantity" is omitted or
   - "CHOICE measurement type" IE is set to "UE internal measurement" and IE "UE internal measurement quantity" is omitted or
   - "CHOICE measurement type" IE is set to "UE internal measurement" and IE "UE internal reporting quantity" is omitted or
   - "CHOICE measurement type" IE is set to "Traffic volume measurement" and IE "Traffic volume measurement quantity" is omitted or
   - "CHOICE measurement type" IE is set to "Traffic volume measurement" and IE "Traffic volume reporting quantity" is omitted
2. To confirm that the UE set the "failure cause" IE to value "incomplete configuration" in the uplink MEASUREMENT CONTROL FAILURE message.

### 8.4.1.15.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH+DTCH_DCH (State 6-9) or PS-DCCH+DTCH_DCH (State 6-10) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE.

Test Procedure

The UE is initially brought to CELL_DCH. SS then send a MEASUREMENT CONTROL message to UE. The UE shall perform periodical traffic volume measurement according to this message and then transmit MEASUREMENT REPORT message back to SS.

SS transmits a MEASUREMENT CONTROL message to the UE, commanding it to start an intra-frequency measurement and reporting task. However, IE "Intra-frequency measurement quantity" is absent in the message. The UE shall not establish the intra-frequency measurement. It shall send a MEASUREMENT CONTROL FAILURE message to report that a "configuration incomplete" error has been detected.

Next, SS sends the MEASUREMENT CONTROL message once more. In this message, SS commands the establishment of an inter-frequency measurement and reporting task, but IE "Inter-frequency reporting quantity" is omitted in this message. The UE shall not establish the intra-frequency measurement. It shall send a MEASUREMENT CONTROL FAILURE message to report that a "configuration incomplete" error has been detected.

Next, SS sends a third MEASUREMENT CONTROL message. In this message, SS commands the establishment of an intra-frequency measurement and reporting task, but IE "Measurement reporting mode" is omitted in this message. The UE shall not establish the intra-frequency measurement. It shall send a MEASUREMENT CONTROL FAILURE message to report that a "configuration incomplete" error has been detected.

Next, SS sends a fourth MEASUREMENT CONTROL message. In this message, SS commands the establishment of a quality measurement and reporting task, but IE "Quality reporting quantity" is omitted in this message. The UE shall not establish the quality measurement. It shall send a MEASUREMENT CONTROL FAILURE message to report that a "configuration incomplete" error has been detected.

Next, SS sends a fifth MEASUREMENT CONTROL message. In this message, SS commands the establishment of UE internal measurement and reporting task, but IE "UE internal measurement quantity" is omitted in this message. The UE shall not establish the UE internal measurement. It shall send a MEASUREMENT CONTROL FAILURE message to report that a "configuration incomplete" error has been detected.

Next, SS sends a sixth MEASUREMENT CONTROL message. In this message, SS commands the establishment of UE internal measurement and reporting task, but IE "UE internal reporting quantity" is omitted in this message. The UE shall not establish the UE internal measurement. It shall send a MEASUREMENT CONTROL FAILURE message to report that a "configuration incomplete" error has been detected.

Next, SS sends a seventh MEASUREMENT CONTROL message. In this message, SS commands the establishment of a traffic volume measurement and reporting task, but IE "Traffic volume measurement quantity" is omitted in this message. The UE shall not establish the traffic volume measurement. It shall send a MEASUREMENT CONTROL FAILURE message to report that a "configuration incomplete" error has been detected.

In the final sequence, SS sends an eight MEASUREMENT CONTROL message. In this message, SS commands the establishment of a traffic volume measurement and reporting task, but IE "Traffic volume reporting quantity" is omitted in this message. The UE shall not establish the traffic volume measurement. It shall send a MEASUREMENT CONTROL FAILURE message to report that a "configuration incomplete" error has been detected. UE shall continue its traffic volume measurement and send MEASUREMENT REPORT messages back to SS periodically. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is CELL_DCH state in cell 1. |
| 1a | ← | | MEASUREMENT CONTROL | SS requests UE to perform periodical traffic volume measurement. |
| 1b | → | | MEASUREMENT REPORT | |
| 2 | ← | | MEASUREMENT CONTROL | SS commands the start of an intra-frequency measurement and reporting task. IE "Intra-frequency measurement quantity" is absent. |
| 3 | → | | MEASUREMENT CONTROL FAILURE | UE reports the occurrence of "incomplete configuration" |
| 4 | ← | | MEASUREMENT CONTROL | SS commands the start of an inter-frequency measurement and reporting task. IE "Inter-frequency reporting quantity" is absent. |
| 5 | → | | MEASUREMENT CONTROL FAILURE | UE reports the occurrence of "incomplete configuration" |
| 6 | ← | | MEASUREMENT CONTROL | SS commands the start of an inter-frequency measurement and reporting task. IE "Measurement reporting mode" is absent. |
| 7 | → | | MEASUREMENT CONTROL FAILURE | UE reports the occurrence of "incomplete configuration" |
| 8 | ← | | MEASUREMENT CONTROL | SS commands the start of a Quality measurement and reporting task. IE "Quality reporting quantity" is absent. |
| 9 | → | | MEASUREMENT CONTROL FAILURE | UE reports the occurrence of "incomplete configuration" |
| 10 | ← | | MEASUREMENT CONTROL | SS commands the start of an UE internal measurement and reporting task. IE "UE internal measurement quantity" is absent. |
| 11 | → | | MEASUREMENT CONTROL FAILURE | UE reports the occurrence of "incomplete configuration" |
| 12 | ← | | MEASUREMENT CONTROL | SS commands the start of an UE internal measurement and reporting task. IE "UE internal reporting quantity" is absent. |
| 13 | → | | MEASUREMENT CONTROL FAILURE | UE reports the occurrence of "incomplete configuration" |
| 14 | ← | | MEASUREMENT CONTROL | SS commands the start of a Traffic volume measurement and reporting task. IE "Traffic volume measurement quantity" is absent. |
| 15 | → | | MEASUREMENT CONTROL FAILURE | UE reports the occurrence of "incomplete configuration" |
| 16 | ← | | MEASUREMENT CONTROL | SS commands the start of a Traffic volume measurement and reporting task. IE "Traffic volume reporting quantity" is absent. |
| 17 | → | | MEASUREMENT CONTROL FAILURE | UE reports the occurrence of "incomplete configuration" |

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 18 | → | | MEASUREMENT REPORT | |
| 19 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Content

MEASUREMENT CONTROL (Step 1a)

Use the MEASUREMENT CONTROL message as defined in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/Remark |
|---|---|
| Measurement Identity | 1 |
| Measurement Command | Setup |
| Measurement reporting mode | |
| - Measurement Report Transfer Mode | Acknowledged mode RLC |
| - Periodical Reporting / Event Trigger Reporting Mode | Periodical Reporting |
| Additional measurement list | Not Present |
| CHOICE measurement type | Traffic Volume Measurement |
| - Traffic volume measurement object list | |
| - Uplink transport channel type | DCH |
| - UL Target Transport Channel ID | 5 |
| - Traffic volume measurement quantity | |
| - Measurement quantity | RLC Buffer Payload |
| - Time Interval to take an average or a variance | Not Present |
| - Traffic volume reporting quantity | |
| - RLC Buffer Payload for each RB | True |
| - Average of RLC Buffer Payload for each RB | False |
| - Variance of RLC Buffer Payload for each RB | False |
| - Measurement validity | |
| - UE state | All states |
| - CHOICE Reporting criteria | Periodical Reporting Criteria |
| - Amount of reporting | Infinity |
| - Reporting interval | 8000 |
| DPCH compressed mode status | Not Present |

MEASUREMENT REPORT (Step 1b and 18)

Check to see if the same message type found in [9] TS 34.108 Clause 9 is received, with the following exceptions:

| Information Element | Value/Remarks |
|---|---|
| Measurement identity | 1 |
| Measured Results | |
| - CHOICE measurement | Traffic volume measured results list |
| - Traffic volume measurement results | |
| - RB identity | 1 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 2 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 3 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 4 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional measured results | Check to see if this IE is absent |
| Event results | Check to see if this IE is absent |

MEASUREMENT CONTROL (Step 2)

| Information Element | Value/remark |
|---|---|
| Measurement Identity | 1 |
| RRC transaction Identifier | Arbitrarily selected between 0 and 3 |
| Measurement Command | Setup |
| Measurement Reporting Mode | |
| - Measurement Report Transfer Mode | Acknowledged mode RLC |
| - Periodical Reporting/Event Trigger Reporting Mode | Periodical reporting |
| Additional measurements list | Not Present |
| CHOICE measurement type | Intra-frequency measurement |
| - Intra-frequency cell info list | |
| - CHOICE intra-frequency cell removal | Remove no intra-frequency cells |
| - New intra-frequency cell | Not Present |
| - Cell for measurement | |
| - Intra-frequency cell id | Set to id of cell 1 |
| - Intra-frequency measurement quantity | Not Present |
| - Intra-frequency reporting quantity | |
| - Reporting quantities for active set cells | |
| - SFN-SFN observed time difference reporting indicator | No report |
| - Cell synchronization information reporting indicator | FALSE |
| - Cell identity reporting indicator | FALSE |
| - CHOICE mode | FDD |
| - CPICH Ec/No reporting indicator | FALSE |
| - CPICH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for monitored set cells | |
| - SFN-SFN observed time difference reporting indicator | No report |
| - Cell synchronization information reporting indicator | FALSE |
| - Cell identity reporting indicator | FALSE |
| - CHOICE mode | FDD |
| - CPICH Ec/No reporting indicator | FALSE |
| - CPICH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting cell status | |
| - CHOICE reported cell | Report cells within active set |
| - Maximum number of reported cells | 1 |
| - Measurement validity | CELL_DCH |
| - CHOICE report criteria | Periodical reporting criteria |
| - Amount of reporting | Infinity |
| - Reporting interval | 32 seconds |
| DPCH compressed mode status info | Not Present |

MEASUREMENT CONTROL FAILURE (Step 3)

| **Information Element** | **Value/remark** |
|---|---|
| RRC transaction identifier | Check if it is set to the same value of the same IE in the MEASUREMENT CONTROL message sent in Step 2 |
| Failure cause | Check to see if set to "incomplete configuration" |

MEASUREMENT CONTROL (Step 4) (Note 1)

| Information Element | Value/remark |
|---|---|
| Measurement Identity | 2 |
| RRC transaction Identifier | Arbitrarily selected between 0 and 3 |
| Measurement Command | Setup |
| Measurement Reporting Mode | |
| - Measurement Report Transfer Mode | Acknowledged mode RLC |
| - Periodical Reporting/Event Trigger Reporting Mode | Periodical reporting |
| Additional measurements list | Not Present |
| CHOICE measurement type | Inter-frequency measurement |
| - Inter-frequency cell info list | |
| - CHOICE inter-frequency cell removal | No inter-frequency cells removed |
| - New inter-frequency cell | |
| - Inter-frequency cell id | Set to id of cell 4 |
| - Frequency info | |
| - CHOICE Mode | FDD |
| - UARFCN uplink (Nu) | Set to the same UARFCN as cell 4 in clause 6.1 of TS 34.108 |
| - UARFCN downlink (Nu) | Set to the same UARFCN as cell 4 in clause 6.1 of TS 34.108 |
| - Cell info | |
| - Cell individual offset | 0 dB |
| - Reference time difference to cell | 0 chips |
| - Read SFN Indicator | FALSE |
| - CHOICE mode | FDD |
| - Primary CPICH Info | |
| - Primary Scrambling Code | Set to same code as used for cell 4 |
| - Primary CPICH TX power | Not Present |
| - TX Diversity Indicator | FALSE |
| - Cell selection and re-selection info | Not Present |
| - Cell for measurement | |
| - Inter-frequency cell id | Set to id of cell 4 |
| - Inter-frequency measurement quantity | |
| - CHOICE reporting criteria | Inter-frequency reporting criteria |
| - Filter coefficients | 0 |
| - CHOICE mode | FDD |
| - Measurement quantity for frequency quality estimate | CPICH RSCP |
| - Inter-frequency reporting quantity | Not Present |
| - Reporting cell status | |
| - CHOICE reported cell | Report cells within monitored set on non-used frequency |
| - Maximum number of reported cells | 1 |
| - Measurement validity | CELL_DCH |
| - CHOICE report criteria | Periodical reporting criteria |
| - Amount of reporting | Infinity |
| - Reporting interval | 32 seconds |
| - Inter-frequency set update | Not Present |
| DPCH compressed mode status info | Not Present |

MEASUREMENT CONTROL FAILURE (Step 5)

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | Check if it is set to the same value of the same IE in the MEASUREMENT CONTROL message sent in Step 4 |
| Failure cause | Check to see if set to "incomplete configuration" |

MEASUREMENT CONTROL (Step 6)

| Information Element | Value/remark |
|---|---|
| Measurement Identity | 3 |
| RRC transaction Identifier | Arbitrarily selected between 0 and 3 |
| Measurement Command | Setup |
| Measurement Reporting Mode | Not Present |
| Additional measurements list | Not Present |
| CHOICE measurement type | Intra-frequency measurement |
| - Intra-frequency cell info list | |
| - CHOICE intra-frequency cell removal | Remove no intra-frequency cells |
| - New intra-frequency cell | Not Present |
| - Cell for measurement | |
| - Intra-frequency cell id | Set to id of cell 1 |
| - Intra-frequency measurement quantity | |
| - Filter coefficient | 0 |
| - CHOICE mode | FDD |
| - Measurement quantity | CPICH RSCP |
| - Intra-frequency reporting quantity | |
| - Reporting quantities for active set cells | |
| - SFN-SFN observed time difference reporting indicator | No report |
| - Cell synchronization information reporting indicator | FALSE |
| - Cell identity reporting indicator | FALSE |
| - CHOICE mode | FDD |
| - CPICH Ec/No reporting indicator | FALSE |
| - CPICH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for monitored set cells | |
| - SFN-SFN observed time difference reporting indicator | No report |
| - Cell synchronization information reporting indicator | No report |
| - Cell identity reporting indicator | FALSE |
| - CHOICE mode | FDD |
| - CPICH Ec/No reporting indicator | FALSE |
| - CPICH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting cell status | |
| - CHOICE reported cell | Report cells within active set |
| - Maximum number of reported cells | 1 |
| - Measurement validity | CELL_DCH |
| - CHOICE report criteria | Periodical reporting criteria |
| - Amount of reporting | Infinity |
| - Reporting interval | 32 seconds |
| DPCH compressed mode status info | Not Present |

MEASUREMENT CONTROL FAILURE (Step 7)

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | Check if it is set to the same value of the same IE in the MEASUREMENT CONTROL message sent in Step 6 |
| Failure cause | Check to see if set to "incomplete configuration" |

MEASUREMENT CONTROL (Step 8)

| Information Element | Value/remark |
|---|---|
| Measurement identity | 16 |
| Measurement command | Setup |
| - CHOICE measurement type | Quality measurement |
| - Quality reporting quantity | Not present |
| - Reporting criteria | Periodical reporting criteria |
| - Reporting amount | Infinity |
| - Reporting interval | 64 sec |
| Measurement reporting mode | |
| - Transfer Mode | Acknowledged mode |
| - Periodical or event trigger | Periodic |
| Additional measurement list | Not Present |
| DPCH compressed mode status | Not Present |

MEASUREMENT CONTROL FAILURE (Step 9)

MEASUREMENT CONTROL FAILURE (Step 17)

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | Check if it is set to the same value of the same IE in the MEASUREMENT CONTROL message sent in Step 16 |
| Failure cause | Check to see if set to "incomplete configuration" |

NOTE: For the MEASUREMENT CONTROL message in step 4, cell 4 is signalled to be added as a new cell into the UE's inter-frequency cell list. However, SS does not need to transmit cell 4 in the downlink, as the UE is not expected to perform measurement and reporting for this cell.

#### 8.4.1.15.5 Test Requirement

After step 1a, the UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH, reporting the RLC buffer payload of each RBs mapped on DCH at every 8s interval.

After step 2, 4, 6, 8, 10, 12, 14 and step 16, the UE shall transmit MEASUREMENT CONTROL FAILURE message, stating the IE "failure cause" as "incomplete configuration". The UE shall not transmit any MEASUREMENT REPORT messages during the execution of this test case.

After step 17, the UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH, reporting the RLC buffer payload of each RBs mapped on DCH at every 8s interval.

### 8.4.1.16 Measurement Control and Report: Traffic volume measurement for transition from idle mode to CELL_FACH state

#### 8.4.1.16.1 Definition

#### 8.4.1.16.2 Conformance requirement

Upon transition from idle mode to CELL_FACH state, the UE shall:

1> store the measurement control information from the IE "Traffic volume measurement system information" received in System Information Block type 12 (or System Information Block type 11, according to subclause 8.1.1.6.11) in the variable MEASUREMENT_IDENTITY;

1> begin traffic volume measurement reporting according to the assigned information.

Upon reception of a MEASUREMENT CONTROL message the UE shall perform actions specified in TS 25.331 subclause 8.6 unless otherwise specified below.

The UE shall:

1> read the IE "Measurement command";

1> if the IE "Measurement command" has the value "setup":

2> store this measurement in the variable MEASUREMENT_IDENTITY according to the IE "measurement identity", first releasing any previously stored measurement with that identity if that exists;

2> for measurement types "inter-RAT measurement" or "inter-frequency measurement":

…

2> for measurement type "UE positioning measurement":

…

2> for any other measurement type:

3> if the measurement is valid in the current RRC state of the UE:

4> begin measurements according to the stored control information for this measurement identity.

Reference

3GPP TS 25.331 clause 8.4.1.9.4, 3GPP TS 25.331 clause 8.4.1.3.

### 8.4.1.16.3 Test Purpose

1. To confirm that after a state transition from idle mode to CELL_FACH state, the UE shall begin a traffic volume type measurement, as specified in System Information Block type 11 or 12 messages on BCCH.
2. To confirm that in CELL_FACH state, the UE shall send a MEASUREMENT REPORT message when reporting criteria is satisfied. During CELL_FACH state, if the UE receives a MEASUREMENT CONTROL message, it shall perform the measurement and reporting tasks based on the MEASUREMENT CONTROL message received.

### 8.4.1.16.4 Method of test

Initial Condition

System Simulator: 1cell

UE: "Registered idle mode on PS" (state 3) in cell 1 as specified in clause 7.4 of TS 34.108. If the UE supports both CS and PS domains, the initial UE state shall be "Registered idle mode on CS/PS" (state 7).

Test Procedure

The UE is initially in idle mode. The System Information Block type 11 message is modified with respect to the default settings to request UE to perform traffic volume measurements. Key measurement parameters are as follows: measurement quantity = "RLC Buffer Payload", report criteria = "periodic reporting criteria", reporting interval = "6 seconds", reporting amount = 'infinity'. The System Information type 12 message is not broadcasted.

SS prompts the operator to make an outgoing call for one of the traffic classes supported by the UE. SS and UE shall execute procedure P6. Then the UE shall begin traffic volume measurements, and shall send MEASUREMENT REPORT message after completing first measurement. Next SS and UE shall execute procedure P10. Then SS and UE shall execute procedure P14.

UE shall continue to send MEASUREMENT REPORT messages at 6 seconds interval.

SS sends MEASUREMENT CONTROL message to the UE. This message overwrites measurement information saved from System information type 11. Key measurement parameters are as follow: measurement type = "traffic volume measurement", measurement quantity = "RLC Buffer Payload", report criteria = "Event triggered, event 4B: Transport Channel Traffic Volume becomes smaller than an absolute threshold ", Time to trigger = "5 seconds", pending time after trigger = "16 seconds", "reporting threshold = '4K'. Since there is no uplink traffic, UE shall send MEASUREMENT REPORT message after 5 seconds (time to trigger interval). SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | System Information Block type 11 | The UE is idle mode and camped onto cell 1. System Information Block type 11 to be transmitted is different from the default settings (see specific message contents) |
| 2 | ↔ | | SS executes procedure P6 (clause 7.4.2.2.2) specified in TS 34.108. | SS prompts the test operator to make an outgoing call. |
| 2a | → | | MEASUREMENT REPORT | The UE shall send the first MEASUREMENT REPORT message, as specified in SIB11. |
| 3 | ↔ | | SS executes procedure P10 (clause 7.4.2.4.2) specified in TS 34.108. | |
| 4 | ↔ | | SS executes procedure P14 (clause 7.4.2.6.2) specified in TS 34.108. | |
| 5 | → | | Void | |
| 6 | → | | MEASUREMENT REPORT | The report is received within 6 seconds (reporting interval) |
| 7 | → | | MEASUREMENT REPORT | Time difference between any two consecutive MEASUREMENT REPORT messages should be 6 Seconds. |
| 8 | ← | | MEASUREMENT CONTROL | Traffic volume measurement reporting is requested if measurement is below threshold. |
| 9 | | | | SS monitors the uplink DCCH to confirm that no MEASUREMENT REPORT messages are received in 5 seconds. |
| 10 | → | | MEASUREMENT REPORT | Measurement report because event 4b is triggered |
| 11 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional measured results | Check to see if this IE is absent |
| Event results | Traffic Volume Measurement Event Results |
| - Uplink transport channel type causing the event | Rach |
| - UL Transport Channel identity | Not Present |
| - Traffic volume event identity | 4B |

#### 8.4.1.16.5 Test Requirement

After step 5 the UE shall send MEASUREMENT REPORT messages on the uplink DCCH contain RLC buffer payload information for all SRBs. After 6 seconds UE shall send second MEASUREMENT REPORT messages contain RLC buffer payload information for all SRBs and RAB.

After step 8 the UE shall overwrite measurement information received from system information type 11 with measurement information in MEASUREMENT CONTROL message. The UE shall not send MEASUREMENT REPORT message within time to trigger interval. After step 9 the UE shall transmit MEASUREMENT REPORT messages with event identity 4B.

### 8.4.1.17 Measurement Control and Report: Traffic volume measurement for transition from idle mode to CELL_DCH state

#### 8.4.1.17.1 Definition

#### 8.4.1.17.2 Conformance requirement

Upon transition from idle mode to CELL_DCH state, the UE shall:

1> begin a traffic volume type measurement, assigned in System Information Block type 11 (or System Information Block type 12.

Upon reception of a MEASUREMENT CONTROL message the UE shall perform actions specified in TS 25.331 subclause 8.6 unless otherwise specified below.

The UE shall:

1> read the IE "Measurement command";

1> if the IE "Measurement command" has the value "setup":

2> store this measurement in the variable MEASUREMENT_IDENTITY according to the IE "measurement identity", first releasing any previously stored measurement with that identity if that exists;

2> for measurement types "inter-RAT measurement" or "inter-frequency measurement":

…

2> for measurement type "UE positioning measurement":

…

2> for any other measurement type:

3> if the measurement is valid in the current RRC state of the UE:

4> begin measurements according to the stored control information for this measurement identity.

Reference

3GPP TS 25.331 clause 8.4.1.8.4, 3GPP TS 25.331 clause 8.4.1.3.

#### 8.4.1.17.3 Test Purpose

1. To confirm that after a state transition from idle mode to CELL_DCH state, the UE begin a traffic volume type measurement, as specified in System Information Block type 11 or 12 messages on BCCH. When entering CELL_DCH state, the UE shall send a MEASUREMENT REPORT message when reporting criteria is satisfied.

2. During CELL_DCH state, if the UE receives a MEASUREMENT CONTROL message, it shall perform the measurement and reporting tasks based on the MEASUREMENT CONTROL message received.

#### 8.4.1.17.4 Method of test

Initial Condition

System Simulator: 1cell

UE: "Registered idle mode on CS" (state 2) or "Registered idle mode on PS" (state 3) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE. If the UE supports both CS and PS domains, the initial UE state shall be "Registered idle mode on CS/PS" (state 7).

### Test Procedure

The UE is initially in idle mode. The System Information Block type 11 message is modified with respect to the default settings to request UE to perform traffic volume measurements. Key measurement parameters are as follows: measurement quantity = "Average RLC Buffer Payload", report criteria = "Event triggered, event 4B", reporting threshold = "8K", report transfer mode = "Unacknowledged mode". The System Information type 12 message is not broadcasted.

SS prompts the operator to make an outgoing call of a supported traffic class. SS and UE shall execute procedure P3 (for CS service) or P5 (for PS service). Next SS and UE shall execute procedure P7 (for CS service) or P9 (for PS service). Then SS and UE shall execute procedure P11 (for CS service) or P13 (for PS service).

UE shall begin traffic volume measurements after entering in CELL_DCH state. The UE shall send MEASUREMENT REPORT message because uplink traffic is below threshold.

SS sends MEASUREMENT CONTROL message to the UE. This message reconfigures measurement information saved from System information type 11. Key measurement parameters are as follow: measurement type = "traffic volume measurement", measurement quantity = "RLC Buffer Payload", report criteria = "Periodic reporting criteria", reporting interval = "8 seconds", reporting amount = "8". The UE shall periodically send MEASUREMENT REPORT message to report RLC Buffer Payload for each RB.

SS sends MEASUREMENT CONTROL message to release traffic volume measurement. UE shall not send measurement report after receiving this message. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | System Information Block type 11 | The UE is idle mode and camped onto cell 1. System Information Block type 11 to be transmitted is different from the default settings (see specific message contents) |
| 2 | ↔ | | SS executes procedure P3 (clause 7.4.2.1.2) or P5 (clause 7.4.2.2.2) specified in TS 34.108. | |
| 3 | ↔ | | SS executes procedure P7 (clause 7.4.2.3.2) or P9 (clause 7.4.2.4.2) specified in TS 34.108. | |
| 4 | ↔ | | SS executes procedure P11 (clause 7.4.2.5.2) or P13 (clause 7.4.2.6.2) specified in TS 34.108. | |
| 5 | → | | Void | |
| 6 | → | | MEASUREMENT REPORT | Event 4B is triggered on DCH 5. This message should come on RB1. |
| 6a | → | | MEASUREMENT REPORT | Event 4B is triggered on DCH 1. This message should come on RB1 (only for PS) |
| 7 | ← | | MEASUREMENT CONTROL | Periodic Traffic volume measurement reporting is requested. |
| 8 | → | | MEASUREMENT REPORT | This message should come on RB2.This MEASUREMENT REPORT shall be received on or before 8 Seconds. |
| 9 | → | | MEASUREMENT REPORT | Time difference between earlier and this MEASUREMENT REPORT message should be 8 Seconds. |
| 10 | ← | | MEASUREMENT CONTROL | Release traffic volume measurement. |
| 11 | | | | Wait for 8 Seconds to confirm that UE does not send measurement report message. |
| 12 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

| - RLC buffer payload | Check to see if this IE is absent |
| - RLC buffer payload average | Check to see if this IE is present |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 20 (for the PS case only) |
| - RLC buffer payload | Check to see if this IE is absent |
| - RLC buffer payload average | Check to see if this IE is present |
| - RLC buffer payload variance | Check to see if this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional measured results | Check to see if this IE is absent |
| Event results | |
| - UL transport channel type causing the event | DCH |
| - UL Transport Channel identity | 5 (step 6), 1(step 6a) |
| - Traffic volume event identity | 4B |

MEASUREMENT CONTROL (Step 7)

| Information Element | Value/remark |
|---|---|
| Measurement Identity | 2 |
| Measurement Command | Set up |
| Measurement reporting mode | |
| - Transfer Mode | Acknowledged mode |
| - Periodical or event trigger | Periodic |
| Additional measurement list | Not Present |
| CHOICE measurement type | Traffic Volume Measurement |
| - Traffic volume measurement object list | |
| - Uplink transport channel type | DCH |
| - UL Target Transport Channel ID | 5 |
| - Traffic volume measurement quantity | |
| - Measurement quantity | RLC Buffer Payload |
| - Time Interval to take an average or a variance | Not Present |
| - Traffic volume reporting quantity | |
| - RLC Buffer Payload for each RB | True |
| - Average of RLC Buffer Payload for each RBe | False |
| - Variance of RLC Buffer Payload for each RB | False |
| - Measurement validity | Not Present |
| - CHOICE Reporting criteria | Periodical Reporting Criteria |
| - Amount of reporting | 8 |
| - Reporting interval | 8 Sec |
| DPCH compressed mode status | Not Present |

MEASUREMENT REPORT (Step 8,9)

The order in which the RBs are reported is not checked.

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measured Results | |
| - CHOICE measurement | Traffic volume measured results list |
| - Traffic volume measurement results | |
| - RB identity | 1 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 2 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 3 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 4 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional measured results | Check to see if this IE is absent |
| Event results | Check to see if this IE is absent |

MEASUREMENT CONTROL (Step 10)

| Information Element | Value/remark |
|---|---|
| Measurement Identity | 2 |
| Measurement Command | Release |
| Measurement reporting mode | Not Present |
| Additional measurement list | Not Present |
| DPCH compressed mode status | Not Present |

#### 8.4.1.17.5 Test Requirement

After step 5, due to triggering of event 4B, the UE shall send MEASUREMENT REPORT message using unacknowledged mode of RLC. After step 7, UE shall send MEASUREMENT REPORT message using Acknowledged mode of RLC. After 8 seconds UE shall send second MEASUREMENT REPORT message. After step 10, the UE shall not send MEASUREMENT REPORT message.

### 8.4.1.18 Measurement Control and Report: Traffic volume measurement for transition from CELL_FACH state to CELL_DCH state

#### 8.4.1.18.1 Definition

#### 8.4.1.18.2 Conformance requirement

Upon transition from CELL_FACH to CELL_DCH state, the UE shall:

- retrieve each set of measurement control information of measurement type "traffic volume" stored;
  - if the optional IE "measurement validity" for this measurement has not been included:
    - delete the measurement;
  - if the IE "measurement validity" for the measurement has been included, and the IE "UE state" has been assigned to value "all states except CELL_DCH":
    - stop measurement reporting; and
    - save the measurement to be used after the next transition to CELL_FACH state;
  - if the IE "measurement validity" for the measurement has been included, and the IE "UE state" has been assigned to value "all states":

- continue measurement reporting;

- if the IE "measurement validity" has been included and the IE "UE state" has been assigned to value "CELL_DCH":

  - resume this measurement and associated reporting;

- if no traffic volume type measurement has been assigned to the UE with a MEASUREMENT CONTROL message when transiting to CELL_DCH state:

  - continue an ongoing traffic volume type measurement, assigned in System Information Block type 11 or System Information Block type 12.

Reference

3GPP TS 25.331 clause 8.4.1.7.4

### 8.4.1.18.3 Test Purpose

1. To confirm that the UE performs traffic volume measurements and the associated reporting when it enters CELL_DCH state from CELL_FACH state, and that such measurement contexts (and optionally, the reporting context) valid for CELL_DCH state have been previously stored.

2. To confirm that the UE shall continue to perform traffic volume measurement listed in the System Information Block type 11 or 12 messages, if no previously assigned measurements are present. The UE shall transmit MEASUREMENT REPORT messages if reporting conditions stated in System Information Block type 11 or 12 messages have been satisfied.

### 8.4.1.18.4 Method of test

Initial Condition

System Simulator: 1 cell

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108

Test Procedure

Initially the UE is in CELL_FACH state. MEASUREMENT CONTROL message is sent to the UE to establish traffic volume measurement context with optional IE "measurement validity" is not present. The UE shall perform measurement and reporting as assigned in MEASUREMENT CONTROL message. RADIO BEARER RECONFIGURATION procedure is used to take the UE from CELL_FACH state to CELL_DCH state. While entering CELL_DCH state from CELL_FACH state, the UE shall delete traffic volume measurement contexts if optional IE "measurement validity" is not present. So, in CELL_DCH state UE shall not perform traffic volume measurement and reporting. UE is taken to the CELL_FACH state from CELL_DCH state using RADIO BEARER RECONFIGURATION procedure. The UE shall not send MEASUREMENT REPORT message as measurement context is already deleted.

The behaviour of the UE when moved from CELL_FACH state to CELL_DCH state and assigned traffic volume measurement context is present with IE "measurement validity" is set to "All But CELL_DCH state" or "CELL_DCH state" or "All states" is tested in a similar way.

When the UE is in CELL_FACH state, System Information is modified to assign traffic volume measurement and reporting to the UE. No previously assigned traffic volume measurement contexts are present in the UE. A SYSTEM INFORMATION CHANGE INDICATION is sent on FACH to inform the UE about the change. The UE is taken to CELL_DCH state from CELL_FACH state using RADIO BEARER RECONFIGURATION procedure. In CELL_DCH state the UE shall continue traffic volume measurement and reporting as assigned in System Information. Traffic volume measurement and reporting is released by sending MEASUREMENT CONTROL message.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | MEASUREMENT CONTROL | Optional IE "measurement validity" is not included. |
| 2 | → | | MEASUREMENT REPORT | |
| 3 | ← | | RADIO BEARER RECONFIGURATION | |
| 4 | → | | RADIO BEARER RECONFIGURATION COMPLETE | While entering in CELL_DCH state from CELL_FACH state UE shall delete measurement context setup by MEASUREMENT CONTROL message (Step 1). |
| 5 | | | | SS waits for 8 seconds to confirm that there is no MEASUREMENT REPORT message from UE. |
| 6 | ← | | RADIO BEARER RECONFIGURATION | |
| 7 | → | | RADIO BEARER RECONFIGURATION COMPLETE | UE is in CELL_FACH state. |
| 8 | | | | SS waits for 8 seconds to confirm that there is no MEASUREMENT REPORT message from UE. |
| 9 | ← | | MEASUREMENT CONTROL | IE "measurement validity" is set to "All But CELL_DCH". |
| 10 | → | | MEASUREMENT REPORT | . |
| 11 | ← | | RADIO BEARER RECONFIGURATION | |
| 12 | → | | RADIO BEARER RECONFIGURATION COMPLETE | While entering in CELL_DCH state from CELL_FACH state UE shall stop traffic volume measurement setup by MEASUREMENT CONTROL message (Step 9). |
| 13 | | | | SS waits for 8 seconds to confirm that there is no MEASUREMENT REPORT message from UE. |
| 14 | ← | | MEASUREMENT CONTROL | UE shall release measurement context setup by MEASUREMENT CONTROL message (Step 9). |
| 15 | ← | | RADIO BEARER RECONFIGURATION | |
| 16 | → | | RADIO BEARER RECONFIGURATION COMPLETE | UE is in CELL_FACH state. |
| 17 | ← | | MEASUREMENT CONTROL | IE "measurement validity" is set to "CELL_DCH". |
| 18 | | | | SS waits for 8 seconds to confirm that there is no MEASUREMENT REPORT message from UE. |
| 19 | ← | | RADIO BEARER RECONFIGURATION | |
| 20 | → | | RADIO BEARER RECONFIGURATION COMPLETE | While entering in CELL_DCH state from CELL_FACH state UE shall start traffic volume measurement setup by MEASUREMENT CONTROL message (Step 17). |
| 21 | → | | MEASUREMENT REPORT | |

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 22 | ← | | MEASUREMENT CONTROL | UE shall release measurement context setup by MEASUREMENT CONTROL message (Step 17) |
| 23 | ← | | RADIO BEARER RECONFIGURATION | |
| 24 | → | | RADIO BEARER RECONFIGURATION COMPLETE | UE is in CELL_FACH state. |
| 25 | ← | | MEASUREMENT CONTROL | IE "measurement validity" is set to "All states". |
| 26 | → | | MEASUREMENT REPORT | |
| 27 | ← | | RADIO BEARER RECONFIGURATION | |
| 28 | → | | RADIO BEARER RECONFIGURATION COMPLETE | While entering in CELL_DCH state from CELL_FACH state UE shall continue traffic volume measurement setup by MEASUREMENT CONTROL message (Step 25). |
| 29 | → | | MEASUREMENT REPORT | |
| 30 | ← | | MEASUREMENT CONTROL | UE shall release measurement context setup by MEASUREMENT CONTROL message (Step 25) |
| 31 | ← | | RADIO BEARER RECONFIGURATION | |
| 32 | → | | RADIO BEARER RECONFIGURATION COMPLETE | UE is in CELL_FACH state. |
| 33 | ← | | MIB, Scheduling Block 1, and SIB12 modified | Traffic volume measurements and reporting is assigned to UE |
| 33a | ← | | SYSTEM INFORMATION CHANGE INDICATION | |
| 34 | → | | MEASUREMENT REPORT | |
| 35 | ← | | RADIO BEARER RECONFIGURATION | |
| 36 | → | | RADIO BEARER RECONFIGURATION COMPLETE | While entering in CELL_DCH state from CELL_FACH state UE shall continue traffic volume measurement assigned in System Information (Step 33). |
| 37 | → | | MEASUREMENT REPORT | |
| 38 | ← | | MEASUREMENT CONTROL | UE shall release measurement context assigned in System Information (Step 33). |

Specific Message Content

System Information Block type 1 (FDD or 1.28Mcps TDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

MEASUREMENT CONTROL (Step 1)

| Information Element | Value/remark |
|---|---|
| Measurement Identity | 1 |
| Measurement Command | Setup |
| - CHOICE measurement type | Traffic Volume Measurement |
| - Traffic volume measurement object list | Not Present |
| - Traffic volume measurement quantity | RLC Buffer Payload |
| - Traffic volume reporting quantity | |
| - RB buffer payload | True |
| - RB buffer payload average | False |
| - RB buffer payload variance | False |
| - Measurement validity | Not Present |
| - Report criteria | Periodical Reporting Criteria |
| - Reporting amount | 8 |
| - Reporting interval | 8 Sec |
| Measurement reporting mode | |
| - Transfer Mode | Acknowledged mode |
| - Periodical or event trigger | Periodic |
| Additional measurement list | Not Present |
| DPCH compressed mode status | Not Present |

MEASUREMENT REPORT (Step 2)

The order in which the RBs are reported is not checked.

| **Information Element** | **Value/remark** |
|---|---|
| Measurement identity | 1 |
| Measured Results | |
| - CHOICE measurement | Traffic volume measured results list |
| - Traffic volume measurement results | |
| - RB identity | 1 |

#### 8.4.1.18.5 Test Requirement

The UE shall send MEASUREMENT REPORT message in steps 21, 29 and 37. The UE shall not send MEASUREMENT REPORT message in steps 5, 8, and 13.

### 8.4.1.18a Measurement Control and Report: Traffic volume measurement for transition from Enhanced CELL_FACH state (common E-DCH in UL and HS-DSCH DL) to CELL_DCH state

#### 8.4.1.18a.1 Definition

#### 8.4.1.18a.2 Conformance requirement

Upon transition from CELL_FACH to CELL_DCH state, the UE shall:

1> retrieve each set of measurement control information of measurement type "traffic volume" stored in the variable MEASUREMENT_IDENTITY;

2> if the optional IE "measurement validity" for this measurement has not been included:

3> delete the measurement associated with the variable MEASUREMENT_IDENTITY.

2> if the IE "measurement validity" for the measurement has been included, and the IE "UE state" has been assigned to value "all states except CELL_DCH":

3> stop measurement reporting; and

3> save the measurement associated with the variable MEASUREMENT_IDENTITY to be used after the next transition to CELL_FACH/CELL_PCH/URA_PCH state.

2> if the IE "measurement validity" for the measurement has been included, and the IE "UE state" has been assigned to value "all states":

3> if variable READY_FOR_COMMON_EDCH is set to FALSE before state transition:

4> continue measurement reporting.

3> else:

4> for FDD:

5> resume this measurement and associated reporting.

4> for 1.28 Mcps TDD:

5> continue measurement reporting.

2> if the IE "measurement validity" has been included and the IE "UE state" has been assigned to value "CELL_DCH":

3> resume this measurement and associated reporting.

1> if no traffic volume type measurement has been assigned to the UE with a MEASUREMENT CONTROL message that is valid in CELL_DCH and has the same identity as the one indicated in the IE "Traffic volume measurement system information":

2> store the measurement control information from the IE "Traffic volume measurement system information" received in System Information Block type 12 (or System Information Block type 11, according to subclause 8.1.1.6.11) in the variable MEASUREMENT_IDENTITY;

2> begin traffic volume measurement reporting according to the assigned information.

When a traffic volume measurement is set up, the UE shall:

1> for FDD, if variable READY_FOR_COMMON_EDCH is set to TRUE:

2> if one transport channel that is referenced in the IE "Traffic volume measurement object" as "DCH" and IE "measurement validity" is set to "all states except CELL_DCH":

3> the uplink transport channel on which the UE is supposed to report in CELL_FACH state is of type E-DCH.

1> for 1.28 Mcps TDD, if one transport channel that is referenced in the IE "Traffic volume measurement object" as "USCH" and the IE "UL target transport channel id" is set to 32 and IE "measurement validity" is set to "all states" or "all states except CELL_DCH":

2> the uplink transport channel on which the UE is supposed to report is of type E-DCH.

[…]

Reference

3GPP TS 25.331 clause 8.4.1.7.4, 14.4.2

### 8.4.1.18a.3 Test Purpose

1. To confirm that the UE performs traffic volume measurements and the associated reporting when it enters CELL_DCH state from enhanced CELL_FACH state (common E-DCH in UL), and that such measurement contexts (and optionally, the reporting context) valid for CELL_DCH state have been previously stored.

2. To confirm that the UE shall continue to perform traffic volume measurement listed in the System Information Block type 11 or 12 messages, if no previously assigned measurements are present. The UE shall transmit MEASUREMENT REPORT messages if reporting conditions stated in System Information Block type 11 or 12 messages have been satisfied.

### 8.4.1.18a.4 Method of test

Initial Condition

System Simulator: 1 cell

SYSTEM INFORMATION BLOCK TYPE 1 and 5 (see specific message contents).

UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

- UE supports FDD or 1.28Mcps TDD

- UE supports common E-DCH

Test Procedure

Initially the UE is in Enhanced CELL_FACH state (common E-DCH in UL). MEASUREMENT CONTROL message is sent to the UE to establish traffic volume measurement context with optional IE "measurement validity" is not present. The UE shall perform measurement and reporting as assigned in MEASUREMENT CONTROL message. RADIO BEARER RECONFIGURATION procedure is used to take the UE from Enhanced CELL_FACH state (common E-DCH in UL) to CELL_DCH state. While entering CELL_DCH state from Enhanced CELL_FACH state (common E-DCH in UL), the UE shall delete traffic volume measurement contexts if optional IE "measurement validity" is not present. So, in CELL_DCH state UE shall not perform traffic volume measurement and reporting. UE is taken to the Enhanced CELL_FACH state (common E-DCH in UL) from CELL_DCH state using RADIO BEARER RECONFIGURATION procedure. The UE shall not send MEASUREMENT REPORT message as measurement context is already deleted.

The behaviour of the UE when moved from Enhanced CELL_FACH state (common E-DCH in UL) to CELL_DCH state and assigned traffic volume measurement context is present with IE "measurement validity" is set to "All But CELL_DCH state" or "CELL_DCH state" or "All states" is tested in a similar way.

When the UE is in Enhanced CELL_FACH state (common E-DCH in UL), System Information is modified to assign traffic volume measurement and reporting to the UE. No previously assigned traffic volume measurement contexts are present in the UE. A SYSTEM INFORMATION CHANGE INDICATION is sent on FACH to inform the UE about the change. The UE is taken to CELL_DCH state from Enhanced CELL_FACH state (common E-DCH in UL) using RADIO BEARER RECONFIGURATION procedure. In CELL_DCH state the UE shall continue traffic volume measurement and reporting as assigned in System Information. Traffic volume measurement and reporting is released by sending MEASUREMENT CONTROL message.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | MEASUREMENT CONTROL | Optional IE "measurement validity" is not included. |
| 2 | → | | MEASUREMENT REPORT | |
| 3 | ← | | RADIO BEARER RECONFIGURATION | |
| 4 | → | | RADIO BEARER RECONFIGURATION COMPLETE | While entering in CELL_DCH state from Enhanced CELL_FACH state (common E-DCH in UL) UE shall delete measurement context setup by MEASUREMENT CONTROL message (Step 1). |
| 5 | | | | SS waits for 8 seconds to confirm that there is no MEASUREMENT REPORT message from UE. |
| 6 | ← | | RADIO BEARER RECONFIGURATION | |
| 7 | → | | RADIO BEARER RECONFIGURATION COMPLETE | UE is in Enhanced CELL_FACH state (common E-DCH in UL). |
| 8 | | | | SS waits for 8 seconds to confirm that there is no MEASUREMENT REPORT message from UE. |
| 9 | ← | | MEASUREMENT CONTROL | IE "measurement validity" is set to "All But CELL_DCH". |
| 10 | → | | MEASUREMENT REPORT | . |
| 11 | ← | | RADIO BEARER RECONFIGURATION | |
| 12 | → | | RADIO BEARER RECONFIGURATION COMPLETE | While entering in CELL_DCH state from Enhanced CELL_FACH state (common E-DCH in UL) UE shall stop traffic volume measurement setup by MEASUREMENT CONTROL message (Step 9). |
| 13 | | | | SS waits for 8 seconds to confirm that there is no MEASUREMENT REPORT message from UE. |
| 14 | ← | | MEASUREMENT CONTROL | UE shall release measurement context setup by MEASUREMENT CONTROL message (Step 9). |
| 15 | ← | | RADIO BEARER RECONFIGURATION | |
| 16 | → | | RADIO BEARER RECONFIGURATION COMPLETE | UE is in Enhanced CELL_FACH state (common E-DCH in UL). |
| 17 | ← | | MEASUREMENT CONTROL | IE "measurement validity" is set to "CELL_DCH". |
| 18 | | | | SS waits for 8 seconds to confirm that there is no MEASUREMENT REPORT message from UE. |
| 19 | ← | | RADIO BEARER RECONFIGURATION | |
| 20 | → | | RADIO BEARER RECONFIGURATION COMPLETE | While entering in CELL_DCH state from Enhanced CELL_FACH state (common E-DCH in UL) UE shall start traffic volume measurement setup by MEASUREMENT CONTROL message (Step 17). |
| 21 | → | | MEASUREMENT REPORT | |

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 22 | ← | | MEASUREMENT CONTROL | UE shall release measurement context setup by MEASUREMENT CONTROL message (Step 17) |
| 23 | ← | | RADIO BEARER RECONFIGURATION | |
| 24 | → | | RADIO BEARER RECONFIGURATION COMPLETE | UE is in Enhanced CELL_FACH state (common E-DCH in UL). |
| 25 | ← | | MEASUREMENT CONTROL | IE "measurement validity" is set to "All states". |
| 26 | → | | MEASUREMENT REPORT | |
| 27 | ← | | RADIO BEARER RECONFIGURATION | |
| 28 | → | | RADIO BEARER RECONFIGURATION COMPLETE | While entering in CELL_DCH state from Enhanced CELL_FACH state (common E-DCH in UL) UE shall continue traffic volume measurement setup by MEASUREMENT CONTROL message (Step 25). |
| 29 | → | | MEASUREMENT REPORT | |
| 30 | ← | | MEASUREMENT CONTROL | UE shall release measurement context setup by MEASUREMENT CONTROL message (Step 25) |
| 31 | ← | | RADIO BEARER RECONFIGURATION | |
| 32 | → | | RADIO BEARER RECONFIGURATION COMPLETE | UE is in Enhanced CELL_FACH state (common E-DCH in UL). |
| 33 | ← | | MIB, Scheduling Block 1, and SIB12 modified | Traffic volume measurements and reporting is assigned to UEs |
| 33a | ← | | SYSTEM INFORMATION CHANGE INDICATION | |
| 34 | → | | MEASUREMENT REPORT | |
| 35 | ← | | RADIO BEARER RECONFIGURATION | |
| 36 | → | | RADIO BEARER RECONFIGURATION COMPLETE | While entering in CELL_DCH state from Enhanced CELL_FACH state (common E-DCH in UL) UE shall continue traffic volume measurement assigned in System Information (Step 33). |
| 37 | → | | MEASUREMENT REPORT | |
| 38 | ← | | MEASUREMENT CONTROL | UE shall release measurement context assigned in System Information (Step 33). |

Specific Message Content

System Information Block type 1 (FDD or 1.28Mcps TDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

SYSTEM INFORMATION BLOCK TYPE 5 (FDD)

Use the same message type found in clause 6.1 of TS 34.108 condition B3 “Only for cells which configure common E-DCH and HS-DSCH reception in CELL_FACH”..

SYSTEM INFORMATION BLOCK TYPE 5 (1.28Mcps TDD)

Use the same message type found in clause 6.1 of TS 34.108 condition B1 “Only for cells which configure common E-DCH and HS-DSCH reception in CELL_FACH”..

MEASUREMENT CONTROL (Step 1)

| Information Element | Value/remark |
|---|---|
| Measurement Identity | 1 |
| Measurement Command | Setup |
| - CHOICE measurement type | Traffic Volume Measurement |
| - Traffic volume measurement object list | Not Present |
| - Traffic volume measurement quantity | RLC Buffer Payload |
| - Traffic volume reporting quantity | |
| - RB buffer payload | True |
| - RB buffer payload average | False |
| - RB buffer payload variance | False |
| - Measurement validity | Not Present |
| - Report criteria | Periodical Reporting Criteria |
| - Reporting amount | 8 |
| - Reporting interval | 8 Sec |
| Measurement reporting mode | |
| - Transfer Mode | Acknowledged mode |
| - Periodical or event trigger | Periodic |
| Additional measurement list | Not Present |
| DPCH compressed mode status | Not Present |

MEASUREMENT REPORT (Step 2)

The order in which the RBs are reported is not checked.

| **Information Element** | **Value/remark** |
|---|---|
| Measurement identity | 1 |
| Measured Results | |
| - CHOICE measurement | Traffic volume measured results list |
| - Traffic volume measurement results | |
| - RB identity | 1 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 2 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 3 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 4 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 25 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional measured results | Check to see if this IE is absent |
| Event results | Check to see if this IE is absent |

RADIO BEARER RECONFIGURATION (Step 3, 11, 19, 27, and 35) (FDD)

Use the same message type found in TS 34.108 clause 9 with condition set to A4.

| Information Element | Value/remark |
|---|---|
| - RB information to be affected | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A30 for SRB1, 2, 3 and 4 and RB25 |
| - Added or Reconfigured UL TrCH information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A30 |
| - Added or Reconfigured DL TrCH information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A30 |
| - Uplink DPCH info | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A30 |
| - E-DCH info | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A30 |
| - Downlink HS-PDSCH Information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A30 |
| - Downlink information common for all radio links | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A30 |
| - Downlink information for each radio link list | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A30 |

RADIO BEARER RECONFIGURATION (Step 3, 11, 19, 27, and 35)(1.28Mcps TDD)

Use the same message type found in TS 34.108 clause 9 with condition set to A4.

| Information Element | Value/remark |
|---|---|
| - RB information to be affected | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A24 for SRB1, 2, 3 and 4 and RB25 |
| - Added or Reconfigured UL TrCH information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A24 |
| - Added or Reconfigured DL TrCH information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A24 |
| - Uplink DPCH info | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A24 |
| - E-DCH info | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A24 |
| - Downlink HS-PDSCH Information | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A24 |
| - Downlink information common for all radio links | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A24 |
| - Downlink information for each radio link list | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A24 |

RADIO BEARER RECONFIGURATION (Step 6, 15, 23, and 31)

Use the same message as specified for "Packet to CELL_FACH from CELL_DCH in PS" (condition A5) in TS 34.108 clause 9, except for the following, except for the following:

| Information Element | Value/remark |
|---|---|
| - New C-RNTI | '1010 1010 1010 1011' |
| - New H-RNTI | '1010 1010 1010 1011' |
| - New Primary E-RNTI | '1010 1010 1010 1011' |
| - RB information to be affected | |
| - RB identity | 1 |
| - RB mapping info | |
| - Information for each multiplexing option | 1 RB Mux Option |
| - RLC logical channel mapping indicator | Not Present |
| - Number of Uplink RLC logical channels | 1 |

| - DL HS-DSCH MAC-ehs Queue Id | 0 |
| - Logical channel identity | 7 |
| Deleted UL TrCH information | |
| - Uplink transport channel type | E-DCH |
| - E-DCH MAC-d flow identity | 3 |
| Deleted DL TrCH information | |
| - Downlink transport channel type | HS-DSCH |
| - Downlink transport channel type | HS-DSCH |
| - DL HS-DSCH MAC-ehs reordering queue | 3 |

MEASUREMENT CONTROL (Step 9)

The contents of this message are identical to MEASUREMENT CONTROL (Step 1) message with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Measurement Identity | 2 |
| Measurement Command | Setup |
| - CHOICE measurement type | Traffic Volume Measurement |
| - Measurement validity | All But CELL_DCH |

MEASUREMENT REPORT (Step 10)

The contents of this message are identical to MEASUREMENT REPORT (Step 2) message with the following exceptions:

| Information Element | Value/Remarks |
|---|---|
| Measurement identity | 2 |

MEASUREMENT CONTROL (Step 14)

| Information Element | Value/remark |
|---|---|
| Measurement Identity | 2 |
| Measurement Command | Release |
| Measurement reporting mode | Not Present |
| Additional measurement list | Not Present |
| DPCH compressed mode status | Not Present |

MEASUREMENT CONTROL (Step 17)

The contents of this message are identical to MEASUREMENT CONTROL (Step 1) message with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Measurement Identity | 3 |
| Measurement Command | Setup |
| - CHOICE measurement type | Traffic Volume Measurement |
| - Measurement validity | CELL_DCH |

MEASUREMENT REPORT (Step 21)

The contents of this message are identical to MEASUREMENT REPORT (Step 2) message with the following exceptions:

| Information Element | Value/Remarks |
|---|---|
| Measurement identity | 3 |

MEASUREMENT CONTROL (Step 22)

The contents of this message are identical to MEASUREMENT CONTROL (Step 14) message with the following exceptions:

| Information Element | Value/Remark |
|---|---|
| Measurement Identity | 3 |

MEASUREMENT CONTROL (Step 25) (FDD)

The contents of this message are identical to MEASUREMENT CONTROL (Step 1) message with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Measurement Identity | 4 |
| Measurement Command | Setup |
| - CHOICE measurement type | Traffic Volume Measurement |
| - Traffic volume measurement object list | |
| - UL transport channel type | DCH |
| - UL transport channel identity | 1 (Not used as common E-DCH resource used in CELL_FACH state and E-DCH used in CELL_DCH but value must be supplied for ASN.1 backwards compatibility) |
| - Measurement validity | All States |

MEASUREMENT CONTROL (Step 25)(1.28Mcps TDD)

The contents of this message are identical to MEASUREMENT CONTROL (Step 1) message with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Measurement Identity | 4 |
| Measurement Command | Setup |
| - CHOICE measurement type | Traffic Volume Measurement |
| - Traffic volume measurement object list | |
| - UL transport channel type | USCH |
| - UL transport channel identity | 1 (Not used as common E-DCH resource used in CELL_FACH state and E-DCH used in CELL_DCH but value must be supplied for ASN.1 backwards compatibility) |
| - Measurement validity | All States |

MEASUREMENT REPORT (Step 26, and 29)

The contents of this message are identical to MEASUREMENT REPORT (Step 2) message with the following exceptions:

| Information Element | Value/Remarks |
|---|---|
| Measurement identity | 4 |

MEASUREMENT CONTROL (Step 30)

The contents of this message are identical to MEASUREMENT CONTROL (Step 14) message with the following exceptions:

| Information Element | Value/Remark |
|---|---|
| Measurement Identity | 4 |

Master Information Block (Step 33)

| Information Element | Value/Remarks |
|---|---|
| MIB Value Tag | A valid MIB value tag as defined in TS 25.331 that is different from the previous value |
| SB 1 Cell Value tag | Set to (Current SB 1 value tag + 1) |

Scheduling Block 1 (Step 33)

| Information Element | Value/remark |
|---|---|
| SIB 12 Cell Value tag | Set to (Current SIB 12 value tag + 1) |

System Information Block type 12 (Step 33)

| Information Element | Value/remark |
|---|---|
| FACH measurement occasion info | Not Present |
| Measurement control system information | |
| - Use of HCS | Not used |
| - Cell selection and reselection quality measure | CPICH RSCP |
| - Intra-frequency measurement system information | |
| - Intra-frequency measurement identity | Not Present |
| - Intra-frequency cell info list | |
| - CHOICE intra-frequency cell removal | Remove no intra-frequency cells |
| - New intra-frequency cells | |
| - Intra-frequency cell id | 1 |
| - Cell info | |
| - Cell individual offset | 0 dB |
| - Reference time difference to cell | Not Present |
| - Read SFN indicator | TRUE |
| - CHOICE mode | FDD |
| - Primary CPICH info | |
| - Primary scrambling code | Set to same code as used for cell 1 |
| - Primary CPICH Tx power | Not Present |
| - TX Diversity indicator | FALSE |
| - Cells for measurement | Not Present |
| - Intra-frequency measurement quantity | Not Present |
| - Intra-frequency reporting quantity for RACH reporting | Not Present |
| - Maximum number of reported cells on RACH | Not Present |
| - Reporting information for state CELL_DCH | Not Present |
| - Inter-frequency measurement system information | Not Present |
| - Inter-RAT measurement system information | Not Present |
| - Traffic volume measurement system information | |
| - Traffic volume measurement ID | 5 |
| - Traffic volume measurement object list | |
| - UL transport channel type | DCH |
| - UL transport channel identity | 1 (Not used as common E-DCH resource used in CELL_FACH state and E-DCH used in CELL_DCH but value must be supplied for ASN.1 backwards compatibility) |
| - Traffic volume measurement quantity | RLC Buffer Payload |
| - Traffic volume reporting quantity | |
| - RB buffer payload | True |
| - RB buffer payload average | False |
| - RB buffer payload variance | False |
| - Traffic volume measurement reporting criteria | Not Present |
| - Measurement validity | All states |
| - Measurement reporting mode | |
| - Measurement report transfer mode | Acknowledged Mode |
| - Periodical or event trigger | Periodical |
| - Report criteria system Information | Periodical reporting criteria |
| - Reporting amount | Infinity |
| - Reporting interval | 8 seconds |

System Information Block type 12 (Step 33)(1.28Mcps TDD)

| Information Element | Value/remark |
|---|---|
| FACH measurement occasion info | Not Present |
| Measurement control system information | |
| - Use of HCS | Not used |
| - Cell selection and reselection quality measure | CPICH RSCP |
| - Intra-frequency measurement system information | |
| - Intra-frequency measurement identity | Not Present |
| - Intra-frequency cell info list | |
| - CHOICE intra-frequency cell removal | Remove no intra-frequency cells |
| - New intra-frequency cells | |
| - Intra-frequency cell id | 1 |
| - Cell info | |
| - Cell individual offset | 0 dB |
| - Reference time difference to cell | Not Present |
| - Read SFN indicator | TRUE |
| - CHOICE mode | TDD |
| - Primary CCPCH info | |
| - CHOICE *mode* | TDD |
| - CHOICE *TDD option* | 1.28 Mcps TDD |
| - TSTD indicator | FALSE |
| - Cell parameters ID | Set to same code as used for cell 1 |
| - SCTD indicator | FALSE |
| - Primary CCPCH Tx power | Not Present |
| - Timeslot list | Not Present |
| - Cells for measurement | Not Present |
| - Intra-frequency measurement quantity | Not Present |
| - Intra-frequency reporting quantity for RACH reporting | Not Present |
| - Maximum number of reported cells on RACH | Not Present |
| - Reporting information for state CELL_DCH | Not Present |

| - Traffic volume reporting quantity | |
| - RB buffer payload | True |
| - RB buffer payload average | False |
| - RB buffer payload variance | False |
| - Traffic volume measurement reporting criteria | Not Present |
| - Measurement validity | All states |
| - Measurement reporting mode | |
| - Measurement report transfer mode | Acknowledged Mode |
| - Periodical or event trigger | Periodical |
| - Report criteria system Information | Periodical reporting criteria |
| - Reporting amount | Infinity |
| - Reporting interval | 8 seconds |

SYSTEM INFORMATION CHANGE INDICATION (Step 33a)

| Information Element | Value/Remarks |
|---|---|
| Paging record list | Not Present |
| BCCH modification info | |
| - MIB Value Tag | A valid MIB value tag as defined in TS 25.331 that is different from the previous value |
| - BCCH modification time | Not Present |

MEASUREMENT REPORT (Step 34, and 37)

The contents of this message are identical to MEASUREMENT REPORT (Step 2) message with the following exceptions:

| Information Element | Value/Remarks |
|---|---|
| Measurement identity | 5 |

MEASUREMENT CONTROL (Step 38)

The contents of this message are identical to MEASUREMENT CONTROL (Step 14) message with the following exceptions:

| Information Element | Value/Remark |
|---|---|
| Measurement Identity | 5 |

#### 8.4.1.18a.5 Test Requirement

The UE shall send MEASUREMENT REPORT message in steps 21, 29 and 37. The UE shall not send MEASUREMENT REPORT message in steps 5, 8, and 13.

### 8.4.1.19 Measurement Control and Report: Traffic volume measurement for transition from CELL_DCH to CELL_FACH state

#### 8.4.1.19.1 Definition

#### 8.4.1.19.2 Conformance requirement

Upon transition from CELL_DCH to CELL_FACH or CELL_PCH or URA_PCH state, the UE shall:

1> retrieve each set of measurement control information of measurement type "traffic volume" stored in the variable MEASUREMENT_IDENTITY; and

2> if the optional IE "measurement validity" for this measurement has not been included:

3> delete the measurement associated with the variable MEASUREMENT_IDENTITY.

2> if the IE "measurement validity" for the measurement has been included, and the IE "UE state" has been assigned to value "CELL_DCH":

3> stop measurement reporting;

3> store the measurement associated with the variable MEASUREMENT_IDENTITY to be used after the next transition to CELL_DCH state.

2> if the IE "measurement validity" for the measurement has been included, and the IE "UE state" has been assigned to value "all states":

3> continue measurement reporting.

2> if the IE "measurement validity" has been included and the IE "UE state" has been assigned to value "all states except CELL_DCH":

3> resume this measurement and associated reporting.

1> if no traffic volume type measurement has been assigned to the UE with a MEASUREMENT CONTROL message that is valid in CELL_FACH or CELL_PCH or URA_PCH states (stored in the variable MEASUREMENT_IDENTITY), which has the same identity as the one indicated in the IE "Traffic volume measurement system information":

2> store the measurement control information from the IE "Traffic volume measurement system information" received in System Information Block type 12 (or System Information Block type 11, according to subclause 8.1.1.6.11) in the variable MEASUREMENT_IDENTITY;

2> begin traffic volume measurement reporting according to the assigned information.

Reference

3GPP TS 25.331 clauses 8.4.1.6.6.

8.4.1.19.3 Test Purpose

1. The UE shall performs traffic volume measurements and the associated reporting when it enters CELL_FACH state from CELL_DCH state, and that such measurement contexts (and optionally, the reporting context) valid for CELL_FACH state have been previously stored.

2. The UE shall perform traffic volume measurement listed in the System Information Block type 11 or 12 messages, if no previously assigned measurements are present. The UE shall transmit MEASUREMENT REPORT messages if reporting conditions has been satisfied.

Reference

3GPP TS 25.331 clause 8.4.1.6.6

8.4.1.19.4 Method of test

Initial Condition

System Simulator: 1 cell

SYSTEM INFORMATION BLOCK TYPE 1 (see specific message contents).

UE: PS-DCCH+DTCH_DCH (state 6-10) as specified in clause 7.4 of TS 34.108

Test Procedure

Initially the UE is in CELL_DCH state. MEASUREMENT CONTROL message is sent to the UE to establish traffic volume measurement context with optional IE "measurement validity" is not present. The UE shall perform measurement and reporting as assigned in MEASUREMENT CONTROL message. RADIO BEARER RECONFIGURATION procedure is used to take the UE from CELL_DCH state to CELL_FACH state. While entering CELL_FACH state from CELL_DCH state, the UE shall delete traffic volume measurement contexts if optional IE "measurement validity" is not present. So, in CELL_FACH state UE shall not perform traffic volume measurement and reporting. UE is taken to the CELL_DCH state from CELL_FACH state using RADIO BEARER RECONFIGURATION procedure. The UE shall not send MEASUREMENT REPORT message as measurement context is already deleted.

The behaviour of the UE when moved from CELL_DCH state to CELL_FACH state and assigned traffic volume measurement context is present with IE "measurement validity" is set to "All But CELL_DCH state" or "CELL_DCH state" or "All states" is tested in a similar way.

When the UE is in CELL_DCH state, System Information is modified to assign traffic volume measurement and reporting to the UE. No previously assigned traffic volume measurement contexts are present in the UE. The UE is taken to CELL_FACH state from CELL_DCH state using RADIO BEARER RECONFIGURATION procedure. In CELL_FACH state the UE shall perform traffic volume measurement and reporting as assigned in System Information. Traffic volume measurement and reporting is released by sending MEASUREMENT CONTROL message.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | MEASUREMENT CONTROL | Optional IE "measurement validity" is not included. |
| 2 | → | | MEASUREMENT REPORT | |
| 3 | ← | | RADIO BEARER RECONFIGURATION | |
| 4 | → | | RADIO BEARER RECONFIGURATION COMPLETE | While entering in CELL_FACH state from CELL_DCH state UE shall delete measurement context setup by MEASUREMENT CONTROL message (Step 1). |
| 5 | | | | SS waits for 8 seconds to confirm that there is no MEASUREMENT REPORT message from UE. |
| 6 | ← | | RADIO BEARER RECONFIGURATION | |
| 7 | → | | RADIO BEARER RECONFIGURATION COMPLETE | UE is in CELL_DCH state. |
| 8 | | | | SS waits for 8 seconds to confirm that there is no MEASUREMENT REPORT message from UE. |
| 9 | ← | | MEASUREMENT CONTROL | IE "measurement validity" is set to "All But CELL_DCH". |
| 10 | | | | SS waits for 8 seconds to confirm that there is no MEASUREMENT REPORT message from UE. |
| 11 | ← | | RADIO BEARER RECONFIGURATION | |
| 12 | → | | RADIO BEARER RECONFIGURATION COMPLETE | While entering in CELL_FACH state from CELL_DCH state UE shall start traffic volume measurement setup by MEASUREMENT CONTROL message (Step 9). |
| 13 | → | | MEASUREMENT REPORT | |
| 14 | ← | | MEASUREMENT CONTROL | UE shall release measurement context setup by MEASUREMENT CONTROL message (Step 9). |
| 15 | ← | | RADIO BEARER RECONFIGURATION | |
| 16 | → | | RADIO BEARER RECONFIGURATION COMPLETE | UE is in CELL_DCH state. |
| 17 | ← | | MEASUREMENT CONTROL | IE "measurement validity" is set to "CELL_DCH". |
| 18 | → | | MEASUREMENT REPORT | |
| 19 | ← | | RADIO BEARER RECONFIGURATION | |
| 20 | → | | RADIO BEARER RECONFIGURATION COMPLETE | While entering in CELL_FACH state from CELL_DCH state UE shall stop traffic volume measurement setup by MEASUREMENT CONTROL message (Step 17). |
| 21 | | | | SS waits for 8 seconds to confirm that there is no MEASUREMENT REPORT message from UE. |
| 22 | ← | | MEASUREMENT CONTROL | UE shall release measurement context setup by MEASUREMENT CONTROL message (Step 17) |
| 23 | ← | | RADIO BEARER RECONFIGURATION | |
| 24 | → | | RADIO BEARER RECONFIGURATION COMPLETE | UE is in CELL_DCH state. |

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 25 | ← | | MEASUREMENT CONTROL | IE "measurement validity" is set to "All states". |
| 26 | → | | MEASUREMENT REPORT | |
| 27 | ← | | RADIO BEARER RECONFIGURATION | |
| 28 | → | | RADIO BEARER RECONFIGURATION COMPLETE | While entering in CELL_FACH state from CELL_DCH state UE shall continue traffic volume measurement setup by MEASUREMENT CONTROL message (Step 25). |
| 29 | → | | MEASUREMENT REPORT | |
| 30 | ← | | MEASUREMENT CONTROL | UE shall release measurement context setup by MEASUREMENT CONTROL message (Step 25) |
| 31 | ← | | RADIO BEARER RECONFIGURATION | |
| 32 | → | | RADIO BEARER RECONFIGURATION COMPLETE | UE is in CELL_DCH state. |
| 33 | ← | | SIB12 modified | Traffic volume measurements and reporting is assigned to UEs |
| 34 | ← | | RADIO BEARER RECONFIGURATION | |
| 35 | → | | RADIO BEARER RECONFIGURATION COMPLETE | While entering in CELL_FACH state from CELL_DCH state UE shall start traffic volume measurement as assigned in System Information (Step 33). |
| 36 | → | | MEASUREMENT REPORT | |
| 37 | ← | | MEASUREMENT CONTROL | UE shall release measurement context assigned in System Information (Step 33). |

Specific Message Content

System Information Block type 1 (FDD or 1.28Mcps TDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in connected mode | |
| - T312 | 2 |

MEASUREMENT CONTROL (Step 1)

| Information Element | Value/remark |
|---|---|
| Measurement Identity | 1 |
| Measurement Command | Setup |
| - CHOICE measurement type | Traffic Volume Measurement |
| - Traffic volume measurement object list | Not Present |
| - Traffic volume measurement quantity | RLC Buffer Payload |
| - Traffic volume reporting quantity | |
| - RB buffer payload | True |
| - RB buffer payload average | False |
| - RB buffer payload variance | False |
| - Measurement validity | Not Present |
| - Report criteria | Periodical Reporting Criteria |
| - Reporting amount | 8 |
| - Reporting interval | 8 Sec |
| Measurement reporting mode | |
| - Transfer Mode | Acknowledged mode |
| - Periodical or event trigger | Periodic |
| Additional measurement list | Not Present |
| DPCH compressed mode status | Not Present |

MEASUREMENT REPORT (Step 2)

The order in which the RBs are reported is not checked.

| Information Element | Value/remark |
|---|---|
| Measurement identity | 1 |
| Measured Results | |
| - CHOICE measurement | Traffic volume measured results list |
| - Traffic volume measurement results | |
| - RB identity | 1 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 2 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 3 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 4 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| - RB identity | 20 |
| - RLC buffer payload | Check to see if this IE is present |
| - RLC buffer payload average | Check to see if this IE is absent |
| - RLC buffer payload variance | Check to see if this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional measured results | Check to see if this IE is absent |
| Event results | Check to see if this IE is absent |

RADIO BEARER RECONFIGURATION (Step 3, 11, 19, 27, and 34)

Use the same message type found in TS 34.108 clause 9 with condition set to A5.

RADIO BEARER RECONFIGURATION (Step 6, 15, 23, and 31)

Use the same message type found in TS 34.108 clause 9 with condition set to A4.

MEASUREMENT CONTROL (Step 9)

The contents of this message are identical to MEASUREMENT CONTROL (Step 1) message with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Measurement Identity | 2 |
| Measurement Command | Setup |
| - CHOICE measurement type | Traffic Volume Measurement |
| - Measurement validity | All But CELL_DCH |

MEASUREMENT REPORT (Step 13)

The contents of this message are identical to MEASUREMENT REPORT (Step 2) message with the following exceptions:

| Information Element | Value/Remarks |
|---|---|
| Measurement identity | 2 |

MEASUREMENT CONTROL (Step 14)

| Information Element | Value/remark |
|---|---|
| Measurement Identity | 2 |
| Measurement Command | Release |
| Measurement reporting mode | Not Present |
| Additional measurement list | Not Present |
| DPCH compressed mode status | Not Present |

MEASUREMENT CONTROL (Step 17)

The contents of this message are identical to MEASUREMENT CONTROL (Step 1) message with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Measurement Identity | 3 |
| Measurement Command | Setup |
| - CHOICE measurement type | Traffic Volume Measurement |
| - Measurement validity | CELL_DCH |

MEASUREMENT REPORT (Step 18)

The contents of this message are identical to MEASUREMENT REPORT (Step 2) message with the following exceptions:

| Information Element | Value/Remarks |
|---|---|
| Measurement identity | 3 |

MEASUREMENT CONTROL (Step 22)

The contents of this message are identical to MEASUREMENT CONTROL (Step 14) message with the following exceptions:

| Information Element | Value/Remark |
|---|---|
| Measurement Identity | 3 |

MEASUREMENT CONTROL (Step 25)

The contents of this message are identical to MEASUREMENT CONTROL (Step 1) message with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Measurement Identity | 4 |
| Measurement Command | Setup |
| - CHOICE measurement type | Traffic Volume Measurement |
| - Traffic volume measurement object list | |
| - UL transport channel identity | RACH |
| - UL transport channel identity | DCH :1 |
| - UL transport channel identity | DCH : 5 |
| - Measurement validity | All States |

MEASUREMENT REPORT (Step 26, and 29)

The contents of this message are identical to MEASUREMENT REPORT (Step 2) message with the following exceptions:

| Information Element | Value/Remarks |
|---|---|
| Measurement identity | 4 |

MEASUREMENT CONTROL (Step 30)

The contents of this message are identical to MEASUREMENT CONTROL (Step 14) message with the following exceptions:

| Information Element | Value/Remark |
|---|---|
| Measurement Identity | 4 |

System Information Block type 12 (Step 33) (FDD)

| Measurement Identity | 5 |

#### 8.4.1.19.5 Test Requirement

The UE shall send MEASUREMENT REPORT message in steps 13, 29 and 36. The UE shall not send MEASUREMENT REPORT message in steps 5, 8, and 21.

### 8.4.1.20 Void

### 8.4.1.21 Void

### 8.4.1.22 Measurement Control and Report: Quality measurements

#### 8.4.1.22.1 Definition

#### 8.4.1.22.2 Conformance requirement

Upon reception of a MEASUREMENT CONTROL message the UE shall perform actions specified in TS 25.331 subclause 8.6 unless otherwise specified below.

The UE shall:

1> read the IE "Measurement command";

1> if the IE "Measurement command" has the value "setup":

2> store this measurement in the variable MEASUREMENT_IDENTITY according to the IE "measurement identity", first releasing any previously stored measurement with that identity if that exists;

2> for measurement types "inter-RAT measurement" or "inter-frequency measurement":

…

2> for measurement type "UE positioning measurement":

…

2> for any other measurement type:

3> if the measurement is valid in the current RRC state of the UE:

4> begin measurements according to the stored control information for this measurement identity.

Reference

3GPP TS 25.331 clause 8.4.1.3

#### 8.4.1.22.3 Test Purpose

1. To confirm that the UE performs quality measurement as specified in MEASUREMENT CONTROL message received. In CELL_DCH state, the UE shall send MEASUREMENT REPORT message when the reporting criteria is fulfilled for any ongoing quality measurement.

#### 8.4.1.22.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: CS-DCCH+DTCH_DCH (State 6-9) or PS-DCCH+DTCH_DCH (State 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Test Procedure

The UE is in CELL_DCH state. MEASUREMENT CONTROL message is sent to UE to assign quality measurement and reporting. As assigned in MEASUREMENT CONTROL message, the UE shall periodically send MEASUREMENT REPORT message reporting BLER of downlink transport channel(s). SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | MEASUREMENT CONTROL | The UE is requested to perform "Quality measurements" |
| 2 | → | | MEASUREMENT REPORT | |
| 3 | → | | MEASUREMENT REPORT | UE shall send second MEASUREMENT REPORT message after 64 seconds. |
| 4 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Content

MEASUREMENT CONTROL (Step 1) (FDD)

| Information Element | Value/remark |
|---|---|
| Measurement identity | 16 |
| Measurement command | Setup |
| Measurement reporting mode | |
| - Measurement Report Transfer Mode | Acknowledged mode RLC |
| - Periodical Reporting / Event Trigger Reporting Mode | Periodical reporting |

| - CHOICE measurement type | Quality measurement |
| - Quality reporting quantity | |
| - DL transport channel BLER | True |
| - Transport channels for BLER reporting | Not present |
| - CHOICE mode | FDD |
| - CHOICE report criteria | Periodical reporting criteria |
| - Reporting amount | Infinity |
| - Reporting interval | 64 sec |
| DPCH compressed mode status | Not Present |

MEASUREMENT CONTROL (Step 1) (1.28 Mcps TDD)

| Information Element | Value/remark |
|---|---|
| Measurement identity | 16 |
| Measurement command | Setup |
| - CHOICE measurement type | Quality measurement |
| - Quality reporting quantity | |
| - DL transport channel BLER | True |
| - Transport channels for BLER reporting | Not present |
| - CHOICE mode | TDD |
| - SIR measurement list | |
| - TFCS ID | Not present |
| - CHOICE Reporting criteria | Periodical reporting criteria |
| - Reporting amount | Infinity |
| - Reporting interval | 64 sec |
| Measurement reporting mode | |
| - Transfer Mode | Acknowledged mode |
| - Periodical or event trigger | Periodic |
| Additional measurement list | Not Present |
| DPCH compressed mode status | Not Present |

MEASUREMENT REPORT (Step 2,3) (FDD)

In case of CS speech call,

| **Information Element** | **Value/remark** |
|---|---|
| Measurement identity | 16 |
| Measured Results | |
| - CHOICE measurement | Quality measurement |
| - BLER measurement results list | |
| - Transport channel identity | 6 |
| - DL transport channel BLER | Check to see if this IE is present |
| - Transport channel identity | 7 |
| - DL transport channel BLER | Check to see if this IE is present |
| - Transport channel identity | 8 |
| - DL transport channel BLER | Check to see if this IE is present |
| - Transport channel identity | 10 |
| - DL transport channel BLER | Check to see if this IE is present |
| - CHOICE mode | FDD |
| Measured results on RACH | Check to see if this IE is absent |
| Additional measured results | Check to see if this IE is absent |
| Event results | Check to see if this IE is absent |

MEASUREMENT REPORT (Step 2,3) (1.28 Mcps TDD)

| Information Element | Value/remark |
|---|---|
| Measurement identity | 16 |
| Measured Results | |
| - CHOICE measurement | Quality measurement |
| - BLER measurement results list | |
| - DL Transport channel identity | 10 |
| - DL transport channel BLER | Check to see if this IE is present |
| - CHOICE Mode | TDD |
| - SIR measurement results | Check to see if this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional measured results | Check to see if this IE is absent |
| Event results | Check to see if this IE is absent |

In any cases except CS speech call:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 16 |
| Measured Results | |
| - CHOICE measurement | Quality measurement |
| - BLER measurement results list | |
| - Transport channel identity | 6 |
| - DL transport channel BLER | Check to see if this IE is present |
| - Transport channel identity | 10 |
| - DL transport channel BLER | Check to see if this IE is present |
| - CHOICE *mode* | FDD |
| Measured results on RACH | Check to see if this IE is absent |
| Additional measured results | Check to see if this IE is absent |
| Event results | Check to see if this IE is absent |

#### 8.4.1.22.5 Test Requirement

In step 2 and 3, the UE shall send MEASUREMENT REPORT message to report BLER for downlink DCH transport channel.

### 8.4.1.23 Measurement Control and Report: Intra-frequency measurement for events 1C and 1D

#### 8.4.1.23.1 Definition

#### 8.4.1.23.2 Conformance requirement

1. When event 1C is configured in the UE, the UE shall:

   1> if "Measurement quantity" is "pathloss" and Equation 1 below is fulfilled for one or more primary CPICHs, or if "Measurement quantity" is "CPICH Ec/N0" or "CPICH RSCP", and Equation 2 below is fulfilled for one or more primary CPICHs, for each of these primary CPICHs:

      2> if all required reporting quantities are available for that cell; and

      2> if the equations have been fulfilled for a time period indicated by "Time to trigger", and if the primary CPICH that is better is not included in the active set but the other primary CPICH is any of the primary CPICHs included in the active set, and if that first primary CPICH is not included in the "cells triggered" in the variable TRIGGERED_1C_EVENT:

         3> include that primary CPICH in the "cells recently triggered" in the variable TRIGGERED_1C_EVENT.

   1> if the value of "Replacement activation threshold" for this event is less than or equal to the current number of cells in the active set or equal to 0 and if any primary CPICHs are stored in the "cells recently triggered" in the variable TRIGGERED_1C_EVENT:

      2> if "Reporting interval" for this event is not equal to 0:

         3> if the IE "Periodical reporting running" in the variable TRIGGERED_1C_EVENT is set to FALSE:

            4> start a timer for with the value of "Reporting interval" for this event and set the IE "Periodical reporting running" in the variable TRIGGERED_1C_EVENT to TRUE.

         3> set "sent reports" for that primary CPICH in the variable TRIGGERED_1C_EVENT to 1.

      2> send a measurement report with IEs set as below:

         3> set in "intra-frequency measurement event results": "Intrafrequency event identity" to "1c"; and

3> include in "cell measurement event results" all entries of the "cells recently triggered" in the variable TRIGGERED_1C_EVENT not in the active set as well as the "primary CPICH info" of all the primary CPICHs in the active set for which the measured value is worse (i.e. greater for pathloss and less for the other measurement quantities) than the one of the entry in "cell recently triggered" that has the best measured value. The "primary CPICH info" for those cells shall be ordered according to their measured value taking into account their cell individual offset, beginning with the best cell to the worst one;

3> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset for each cell.

2> ….

2. This section applies to R99 & Rel-4 releases:

When an intra-frequency measurement configuring event 1d is set up, the UE shall:

1> create a variable TRIGGERED_1D_EVENT related to that measurement, which shall initially contain the best cell in the active set when the measurement is initiated;

1> delete this variable when the measurement is released.

When event 1D is configured in the UE, the UE shall:

1> if "Measurement quantity" is "pathloss" and Equation 1 below is fulfilled for a primary CPICH that is not stored in "Best cell" in variable BEST_CELL_1D_EVENT, or if "Measurement quantity" is "CPICH Ec/N0" or "CPICH RSCP", and Equation 2 below is fulfilled for a primary CPICH that is not stored in "Best cell" in variable BEST_CELL_1D_EVENT:

NOTE: If the equations are simultaneously fulfilled for more than one primary CPICH, the UE should report only one event 1D, triggered by the best primary CPICH.

2> if all required reporting quantities are available for that cell, and if the equations have been fulfilled for a time period indicated by "Time to trigger":

3> set "best cell" in the variable BEST_CELL_1D_EVENT to that primary CPICH that triggered the event;

3> send a measurement report with IEs set as below:

4> set in "intra-frequency measurement event results"; "Intrafrequency event identity" to "1d" and "cell measurement event results" to the CPICH info of the primary CPICH that triggered the report, not taking into account the cell individual offset for each cell.

4> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset for each cell.

NOTE: Event 1D can be triggered by an active or by a non-active CPICH.

3. This section applies from Rel-5 releases onwards:

When an intra-frequency measurement configuring event 1d is set up, the UE shall:

1> create a variable TRIGGERED_1D_EVENT related to that measurement, which shall initially contain the best cell in the active set when the measurement is initiated;

1> delete this variable when the measurement is released.

1> As soon as the best cell in the active set has been evaluated by the UE (and stored in the TRIGGERED_1D_EVENT variable) and provided that there is more than one cell in the active set, trigger an immediate measurement report with IEs set as below:

2> set in "intra-frequency measurement event results"; "Intrafrequency event identity" to "1d" and "cell measurement event results" to the CPICH info of the primary CPICH stored in the TRIGGERED_1D_EVENT variable;

2> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2

When event 1D is configured in the UE, the UE shall:

1> if IE "useCIO" is present and its value is TRUE, take into account the Cell Individual Offset for evaluation of the Equation 1 and 2, otherwise do not take it into account.

1> if "Measurement quantity" is "pathloss" and Equation 1 below is fulfilled for a primary CPICH that is not stored in "Best cell" in variable BEST_CELL_1D_EVENT, or if "Measurement quantity" is "CPICH Ec/N0" or "CPICH RSCP", and Equation 2 below is fulfilled for a primary CPICH that is not stored in "Best cell" in variable BEST_CELL_1D_EVENT:

NOTE: If the equations are simultaneously fulfilled for more than one primary CPICH, the UE should report only one event 1D, triggered by the best primary CPICH.

2> if all required reporting quantities are available for that cell, and if the equations have been fulfilled for a time period indicated by "Time to trigger" and if IE "Triggering condition 2" is absent or if it is present and that primary CPICH is part of cells allowed to trigger the event according to "Triggering condition 2":

3> set "best cell" in the variable BEST_CELL_1D_EVENT to that primary CPICH that triggered the event;

3> send a measurement report with IEs set as below:

4> set in "intra-frequency measurement event results"; "Intrafrequency event identity" to "1d" and "cell measurement event results" to the CPICH info of the primary CPICH that triggered the report.

4> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2.

Reference

3GPP TS 25.331 clause 14.1.2.3, 14.1.2.4.

### 8.4.1.23.3 Test Purpose

1.A To confirm that the UE sends MEASUREMENT REPORT message if event 1C is configured, and number of cells in active set is greater than or equal to 'Replacement activation threshold' parameter, and if monitored or detected primary CPICH on same frequency becomes better than a primary CPICH in active set.

1.B To confirm that the UE does not send MEASUREMENT REPORT message indicating event 1C if number of cells in active set is less than 'Replacement activation threshold' parameter, and if monitored or detected primary CPICH on same frequency becomes better than a primary CPICH in active set.

1.C To confirm that the UE stops periodic reporting of event 1C if the cell that triggered event 1C is added into active set.

2.A To confirm that from Rel-5 onwards the UE sends a MEASUREMENT REPORT message as soon as event 1D is configured, when there is more than one cell in the active set.

2.B To confirm that the UE sends MEASUREMENT REPORT message if event 1D is configured and intra-frequency measurement indicates change in best cell.

### 8.4.1.23.4 Method of test

Initial Condition

System Simulator: 3 cells – The initial configurations of the 3 cells in the SS shall follow the values indicated in the column marked "T0" in table 8.4.1.23-1. The table is found in "Test Procedure" clause.

UE: CS-DCCH+DTCH_DCH (State 6-9) or PS-DCCH+DTCH_DCH (State 6-10) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE.

Test Procedure

Table 8.4.1.23-1 illustrates the downlink power to be applied for the 3 cells at various time instants of the test execution. Column marked "T0" denotes the initial conditions, while columns marked "T1", "T2", “T3” and “T4” are to be applied subsequently. The exact instants on which these values shall be applied are described in the text in this clause.

**Table 8.4.1.23-1**

| Parameter | Unit | Cell 1 | | | | | Cell 2 | | | | | Cell 3 | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T3 | T4 | T0 | T1 | T2 | T3 | T4 | T0 | T1 | T2 | T3 | T4 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | | | | Mid Range Test Frequency | | | | | Mid Range Test Frequency | | | | |
| CPICH Ec | dBm | -60 | -60 | -60 | -60 | -66 | -80 | -60 | -70 | -70 | OFF | -80 | -60 | OFF | -70 | -60 |

The UE is initially in CELL_DCH state of cell 1 and has received the default broadcast information from SIB11/12 in Cell 1.

SS configures its downlink transmission power settings according to columns "T1" in table 8.4.1.**23**-1. UE shall be triggered to transmit a MEASUREMENT REPORT message, which includes the primary scrambling code for cell 2.

SS then performs a soft handover procedure by sending ACTIVE SET UPDATE message on the downlink DCCH. The UE shall reply with an ACTIVE SET UPDATE COMPLETE message on the uplink DCCH, and include cell 2 to the active set when the activation time specified has elapsed.

SS configures its downlink transmission power settings according to columns "T2" in table 8.4.1.23-1

SS then ask the UE to perform Intra-frequency measurement and report event 1C and event 1D. In MEASUREMENT CONTROL message, IE 'Replacement activation threshold' is set to 3 and IE 'Cell individual offset' is set to +6 dBm for Cell 3. From Rel-5 onwards the UE will send an initial measurement report containing the best cell due to event 1D configuration (R99 & Rel-4 UE releases shall not send a MESUREMENT REPORT). SS configures itself according to the values in columns "T3" shown above. Cell 3 becomes better than Cell 2 that is in active set of the UE, due to parameter 'Cell Individual offset' for Cell 3. However the UE shall not send MEASUREMENT REPORT message indicating event 1C because number of cells in active set is less than parameter 'Replacement Activation Threshold'.

SS then sends MEASUREMENT CONTROL message to the UE to modify earlier configured intra-frequency measurement. Now, IE 'Replacement activation threshold' is set to 1. MEASUREMENT CONTROL message contains only those IEs that are modified and the UE shall continue to use current values of parameters that are not modified. The UE sends MEASUREMENT REPORT message reporting event 1C, monitored Cell 3 is better than Cell 2 that is in active set. The UE sends second MEASUREMENT REPORT message reporting event 1C after 4 seconds, equals to parameter 'Reporting interval'.

SS then performs soft handover procedure by sending ACTIVE SET UPDATE message on the downlink DCCH. In this message SS commands UE to add Cell 3 and remove Cell 2 from active set. The UE shall reply with an ACTIVE SET UPDATE COMPLETE message. The UE shall also stop periodic reporting of event 1C because the Cell that triggered it is added into active set. SS then configures itself according to the values in columns "T4" shown above. This triggers event 1D and the UE sends MEASUREMENT REPORT message indicating Cell 3 as a best cell. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | | | | UE is initially in CELL_DCH state in cell 1. |
| 0a | | | | SS configures its downlink transmission power settings according to columns "T1" in table 8.4.1.23-1 |
| 0b | → | | MEASUREMENT REPORT | See specific message contents for this message. |
| 0c | | | | SS configures its downlink transmission power settings according to columns "T2" in table 8.4.1.23-1 |
| 1 | ← | | ACTIVE SET UPDATE | SS command the UE to add Cell 2 in active set. |
| 2 | → | | ACTIVE SET UPDATE COMPLETE | |
| 3 | ← | | MEASUREMENT CONTROL | Event 1C and 1D are configured. IE "Replacement activation threshold" is set to 3. R99 & Rel-4 UE's will go directly to step 4 |
| 3a | → | | MEASUREMENT REPORT (Rel-5 onwards) | Event 1D is triggered. The UE shall report that Cell 1 is the best cell. |
| 4 | | | | SS re-adjusts the downlink transmission power settings according to columns "T3" in table 8.4.1.23-1. |
| 5 | | | | Check for 10 seconds, the UE shall not send MEASUREMENT REPORT message. |
| 6 | ← | | MEASUREMENT CONTROL | Measurement configured in step 3 is modified to set parameter 'replacement activation threshold' to 1. |
| 7 | → | | MEASUREMENT REPORT | Event 1C is triggered. The UE shall report that Cell 3 is better than Cell 2. The report is received within 4 seconds (reporting interval) |
| 8 | → | | MEASUREMENT REPORT | The UE shall send second report after 4 seconds (Reporting interval) |
| 9 | ← | | ACTIVE SET UPDATE | SS command the UE to replace Cell 2 in active set by Cell 3. |
| 10 | → | | ACTIVE SET UPDATE COMPLETE | |
| 11 | | | | Check for 10 seconds, the UE shall not send MEASUREMENT REPORT message. |
| 12 | | | | SS re-adjusts the downlink transmission power settings according to columns "T4" in table 8.4.1.23-1. |
| 13 | → | | MEASUREMENT REPORT | The UE shall report event 1D change of best cell |
| 14 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

All messages indicated below shall use the same content as described in default message content, with the following exceptions:

MEASUREMENT REPORT (Step 0b)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 1 |
| Measured Results | |
| - Intra-frequency measured results | Check to see if measurement results for 3 cells are included (the order in which the different cells are reported is not important) |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is present and includes IE COUNT-C-SFN frame difference |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is present and includes IE COUNT-C-SFN frame difference |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.3 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| Measured results on RACH | Checked that this IE is absent |
| Additional measured results | Checked that this IE is absent |
| Event results | |
| - Intra-frequency measurement event results | |
| - Intra-frequency event identity | 1a |
| - Cell measurement event results | |
| - Primary CPICH info | The UE may include either or both of the following cells.(the order in which the different cells are reported is not important) |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.3 (FDD)" in clause 6.1 of TS 34.108 |

ACTIVE SET UPDATE (Step 1)

| Information Element | Value/remark | Version |
|---|---|---|
| Radio link addition information | | |
| - Primary CPICH Info | | |
| - Primary scrambling code | Primary scrambling code of Cell 2 | |
| - Downlink DPCH info for each RL | | |
| - CHOICE mode | FDD | |
| - Primary CPICH usage for channel estimation | P-CPICH may be used. | |
| - DPCH frame offset | Calculated value from Cell synchronisation information | |
| - Secondary CPICH info | Not present | |
| - DL channelisation code | This IE is repeated for all existing downlink DPCHs allocated to the UE | |
| - Secondary scrambling code | 1 | |
| - Spreading factor | Refer to the parameter set in TS 34.108 | |
| - Code number | For each DPCH, assign the same code number in the current code given in cell 1. | |
| - Scrambling code change | Not present | |
| - TPC combination index | 0 | |
| - SSDT cell identity | Not present | R99 and Rel-4 only |
| - Close loop timing adjustment mode | Not present | |
| - TFCI combining indicator | TRUE | |
| - SCCPCH information for FACH | Not present | R99 and Rel-4 only |

MEASUREMENT CONTROL (Step 3)

| Information Element | Value/remark |
|---|---|
| Measurement identity | 1 |
| Measurement command | Setup |
| - CHOICE measurement type | Intra-frequency measurement |
| - Intra-frequency cell info list | |
| - Intra-frequency cell removal | Remove no intra-frequency cells |
| - New intra-frequency info list | |
| - Intra-frequency cell id | Id of Cell 3 |
| - Cell info | |
| - Cell individual offset | 6 dBm |
| - Reference time difference to cell | Not present |
| - Read SFN indicator | FALSE |
| - CHOICE mode | FDD |
| - Primary CPICH Info | |
| - Primary scrambling code | Primary scrambling code of Cell 3 |
| - Primary CPICH TX power | Not present |
| - TX Diversity Indicator | FALSE |
| - Cell selection and Re-selection Info | Not Present |
| - Cell for measurement | |
| - Intra-frequency cell id list | Set to id of cell 1, 2 and 3. |
| - Intra-frequency measurement quantity | |
| - Filter Coefficient | 0 |
| - Measurement quantity | CPICH RSCP |
| - Intra-frequency reporting quantity | |
| - Reporting quantities for active set cells | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell identity reporting indicator | FALSE |
| - CPICH Ec/No reporting indicator | FALSE |
| - CPICH RSCP reporting indicator | FALSE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for monitored set cells | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell identity reporting indicator | FALSE |
| - CPICH Ec/No reporting indicator | FALSE |
| - CPICH RSCP reporting indicator | FALSE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for detected cells | Not present |
| - Reporting cell status | Not present |
| - Measurement validity | Not present |
| - CHOICE report criteria | Intra-frequency measurement reporting criteria |
| - Parameters required for each events | |
| - Intra-frequency event identity | 1C |
| - Replacement activation threshold | 3 |
| - Reporting amount | 16 |
| - Reporting interval | 4 seconds |
| - Hysteresis | 4 (2dB) |
| - Time to trigger | 10 mSec |
| - Reporting cell status | Not present |
| - Intra-frequency event identity | 1D |
| - Hysteresis | 4(2dB) |
| - Time to trigger | 10 mSec |
| - Reporting cell status | Not present |
| Measurement reporting mode | |
| - Measurement reporting transfer mode | Acknowledged mode RLC |
| - Periodic reporting / Event trigger reporting mode | Event trigger |
| Additional measurement list | Not present |
| DPCH compressed mode status info | Not present |

MEASUREMENT REPORT (Step 3a)

| Information Element | Value/remark |
|---|---|
| Measurement identity | 1 |
| Measured results | Check to see if this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional Measured results | Check to see if this IE is absent |
| Event results | Check to see if set to "Intra-frequency event results" |
| - Event ID | Check to see if set to "1D" |
| - Cell measurement event results | |
| - Primary scrambling code | Check to see if set to "Primary scrambling code of Cell 1" |

MEASUREMENT CONTROL (Step 6)

| Information Element | Value/remark |
|---|---|
| Measurement identity | 1 |
| Measurement command | Modify |
| - CHOICE measurement type | Intra-frequency measurement |
| - Intra-frequency cell info list | Not present |
| - Intra-frequency measurement quantity | Not present |
| - Intra-frequency reporting quantity | Not present |
| - Reporting cell status | Not present |
| - Measurement validity | Not present |
| - CHOICE report criteria | Intra-frequency measurement reporting criteria |
| - Parameters required for each events | |
| - Intra-frequency event identity | 1C |
| - Replacement activation threshold | 1 |
| - Reporting amount | 16 |
| - Reporting interval | 4 seconds |
| - Hysteresis | 4 (2dB) |
| - Time to trigger | 10 mSec |
| - Reporting cell status | Not present |
| - Intra-frequency event identity | 1D |
| - Hysteresis | 4(2dB) |
| - Time to trigger | 10 mSec |
| - Reporting cell status | Not present |
| Measurement reporting mode | Not present |
| Additional measurement list | Not present |
| DPCH compressed mode status info | Not present |

MEASUREMENT REPORT (Step 7 and 8)

| Information Element | Value/remark |
|---|---|
| Measurement identity | 1 |
| Measured results | Check to see if this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional Measured results | Check to see if this IE is absent |
| Event results | Checked to see if set to "Intra Frequency Event results" |
| - Event ID | Check to see if set to "1C" |
| - Cell measurement event results | |
| - Primary scrambling code | Check to see if set to Primary scrambling code of Cell 3 |
| - Primary scrambling code | Check to see if set to Primary scrambling code of Cell 2 |

ACTIVE SET UPDATE (Step 9)

| Information Element | Value/remark | Version |
|---|---|---|
| Radio link addition information | | |
| - Primary CPICH Info | | |
| - Primary scrambling code | Primary scrambling code of Cell 3 | |
| - Downlink DPCH info for each RL | | |
| - CHOICE mode | FDD | |
| - Primary CPICH usage for channel estimation | P-CPICH may be used. | |
| - DPCH frame offset | Calculated value from Cell synchronisation information | |
| - Secondary CPICH info | Not present | |
| - DL channelisation code | This IE is repeated for all existing downlink DPCHs allocated to the UE | |
| - Secondary scrambling code | 1 | |
| - Spreading factor | Refer to the parameter set in TS 34.108 | |
| - Code Number | For each DPCH, assign the same code number in the current code given in cell 1. | |
| - Scrambling code change | No code change | |
| - TPC Combination Index | 0 | |
| - SSDT Cell Identity | Not present | R99 and Rel-4 only |
| - Close loop timing adjustment mode | Not present | |
| - TFCI Combining Indicator | FALSE | |
| - SCCPCH information for FACH | Not present | R99 and Rel-4 only |
| Radio link removal information | | |
| - Primary CPICH Info | | |
| - Primary scrambling code | Primary scrambling code of Cell 2 | |

MEASUREMENT REPORT (Step 13)

| Information Element | Value/remark |
|---|---|
| Measurement identity | 1 |
| Measured results | Check to see if this IE is absent |
| Measured results on RACH | Check to see if this IE is absent |
| Additional Measured results | Check to see if this IE is absent |
| Event results | Check to see if set to "Intra-frequency event results" |
| - Event ID | Check to see if set to "1D" |
| - Cell measurement event results | |
| - Primary scrambling code | Check to see if set to "Primary scrambling code of Cell 3" |

8.4.1.23.5 Test Requirement

2.A In step 3a a R99 or Rel-4 UE shall not send MEASUREMENT REPORT message, but a Rel-5 and onwards UE shall send a MEASUREMENT REPORT message indicating event 1D.

1.A In steps 7 and 8 the UE shall send MEASUREMENT REPORT message indicating event 1C. IE 'Cell measurement event results' in MEASUREMENT REPORT message shall contain primary scrambling code of Cell 3 and Cell 2 in that order.

1.B In step 5 the UE shall not send MEASUREMENT REPORT message.

1.C In step 11 the UE shall not send MEASUREMENT REPORT message.

2.B In step 13 the UE shall send MEASUREMENT REPORT message indicating event 1D. IE 'Cell measurement event results' in MEASUREMENT REPORT message shall contain primary scrambling code of Cell 3.

## 8.4.1.24 Measurement Control and Report: Inter-frequency measurement for event 2A

### 8.4.1.24.1 Definition

### 8.4.1.24.2 Conformance requirement

When event 2a is configured in the UE within a measurement, the UE shall:

1> when the measurement is initiated or resumed:

2> store the used frequency in the variable BEST_FREQUENCY_2A_EVENT.

1> if equation 1 below has been fulfilled for a time period indicated by "Time to trigger" for a frequency included for that event and which is not stored in the variable BEST_FREQUENCY_2A_EVENT:

2> send a measurement report with IEs set as below:

3> set in "inter-frequency measurement event results":

4> "inter-frequency event identity" to "2a"; and

4> "Frequency info" to the frequency that triggered the event; and

4> "Non frequency related measurement event results" to the "Primary CPICH info" of the best primary CPICH for FDD cells or "Primary CCPCH info" to the "Cells parameters ID" of the best primary CCPCH for TDD cells on that frequency, not taking into account the cell individual offset;

3> if a non-used frequency triggered the measurement report:

4> set the IE "measured results" and the IE "additional measured results" according to TS 25.331 subclause 8.4.2, not taking into account the cell individual offset;

3> if the used frequency triggered the measurement report:

4> do not include the IE "Inter-frequency measured results list" in the measurement report;

2> update the variable BEST_FREQUENCY_2A_EVENT with that frequency.

Equation 1:

$$Q_{NotBest} \geq Q_{Best} + H_{2a} / 2$$

The variables in the formula are defined as follows:

$Q_{Not\ Best}$ is the quality estimate of a frequency not stored the "best frequency" in the variable BEST_FREQUENCY_2A_EVENT.

$Q_{Best}$ is the quality estimate of the frequency stored in "best frequency" in the variable BEST_FREQUENCY_2A_EVENT.

$H_{2a}$ is the hysteresis parameter for the event 2a in that measurement.

Reference

3GPP TS 25.331 clause 14.2.1.1

### 8.4.1.24.3 Test Purpose

1.A To confirm that the UE sends MEASUREMENT REPORT message if event 2A is configured, and if any of the non- used frequencies quality estimate becomes better than the currently used frequency quality estimate.

1.B To confirm that the UE does not send MEASUREMENT REPORT message indicating event 2A if hysteresis condition is not fulfilled.

1.C To confirm that the UE does not send MEASUREMENT REPORT message indicating event 2A if time to trigger condition is not fulfilled.

8.4.1.24.4 Method of test

Initial Condition

System Simulator: 2 cells – The initial configurations of the 2 cells in the SS shall follow the values indicated in the column marked "T0" in table 8.4.1.24-1. The table is found in "Test Procedure" clause.

UE: CS-DCCH+DTCH_DCH (State 6-9) or PS-DCCH+DTCH_DCH (State 6-10) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE.

Related ICS/IXIT statements

- Compressed mode required yes/no

Test Procedure

Table 8.4.1.24-1 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Column marked "T0" denotes the initial conditions, while columns marked "T1", "T2", "T3", "T4" and "T5" are to be applied subsequently. The exact instants on which these values shall be applied are described in the text in this clause.

**Table 8.4.1.24-1**

| Parameter | Unit | Cell 1 | | | | | | Cell 4 | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T3 | T4 | T5 | T0 | T1 | T2 | T3 | T4 | T5 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | | | | | High Range Test Frequency | | | | | |
| CPICH Ec (FDD) | dBm/ 3.84 Mhz | -65 | -63 | -65 | -70 | -65 | -70 | -75 | -60 | -75 | -55 | -75 | -55 |
| P-CCPCH RSCP (TDD) | dBm | -65 | -63 | -65 | -70 | -65 | -70 | -75 | -60 | -75 | -55 | -75 | -55 |
| P-CCPCH TS (3.84Mcps TDD and 7.68Mcps TDD) | | TS 0 | | | | | | TS 4 | | | | | |

The UE is initially in CELL_DCH state of cell 1. SS commands the UE to perform measurements of transmitted power using MEASUREMENT CONTROL message. This measurement is setup to confirm that while sending MEASUREMENT REPORT message, the UE sets IE "Additional measured results" correctly. If UE requires compressed mode (for FDD only), SS performs PHYSICAL CHANNEL RECONFIGURATION procedure to activate compressed mode. SS then commands the UE to perform Inter-frequency measurements and report event 2A by sending MEASUREMENT CONTROL message. In MEASUREMENT CONTROL message, IE "Hysteresis" is set to 14.5 dB and IE "Additional measurement list" is set to id of "UE Internal measurements" configured earlier. SS then configures itself according to the values in columns "T1" shown above. Even though quality estimate for Cell 4 has become better than that of Cell 1, event 2A will not be triggered since hysteresis condition is not fulfilled. SS then configures itself according to the values in columns "T2" shown above.

SS sends MEASUREMENT CONTROL message to modify parameter "Hysteresis" of Inter-frequency measurements to 1 dB. SS then configures Cell 1 and Cell 4 according to columns "T3" for short duration (less than 5 seconds), and then configures itself according to columns "T4" shown above. The UE will not send MEASUREMENT REPORT message because time to trigger condition is not fulfilled. SS then configures itself according to the values in columns "T5" shown above. The UE sends MEASUREMENT REPORT message reporting even 2A as well as measurement of transmitted power.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Important Note: Duration between time instant "T3" and "T4" (between steps 9 and 10 of expected sequence) must be less than 5 seconds.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | MEASUREMENT CONTROL | To setup UE Internal measurement. If Compressed Mode not required (refer ICS/IXIT) go to step 4 |
| 2 | ← | | PHYSICAL CHANNEL RECONFIGURATION | SS instructs UE to begin compressed mode operation. (for FDD only) |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | (for FDD only) |
| 4 | ← | | MEASUREMENT CONTROL | SS commands the UE to perform Inter-frequency measurements and to report event 2A. |
| 5 | | | | SS re-adjusts the downlink transmission power settings according to columns "T1" in table 8.4.1.24-1. |
| 6 | | | | Check for 10 seconds, the UE shall not send MEASUREMENT REPORT message, as hysteresis condition is not fulfilled. |
| 7 | | | | SS re-adjusts the downlink transmission power settings according to columns "T2" in table 8.4.1.24-1. |
| 8 | ← | | MEASUREMENT CONTROL | Modify hysteresis parameter for event 2A. |
| 9 | | | | SS re-adjusts the downlink transmission power settings according to columns "T3" in table 8.4.1.24-1. |
| 10 | | | | SS re-adjusts the downlink transmission power settings according to columns "T4" in table 8.4.1.24-1. This step should be completed within 5 seconds after completing step 9. |
| 11 | | | | Check for 10 seconds, the UE shall not send MEASUREMENT REPORT message, as time to trigger condition is not fulfilled. |
| 12 | | | | SS re-adjusts the downlink transmission power settings according to columns "T5" in table 8.4.1.24-1. |
| 13 | → | | MEASUREMENT REPORT | This message should come at least 5 seconds later after changing power setting of Cell 4. |
| 14 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

PHYSICAL CHANNEL RECONFIGURATION (Step 2) (FDD)

Use the same message sub-type found in clause 9 of TS 34.108, which is entitled "(Packet to CELL_DCH from CELL_DCH in PS)FDD", with the following exceptions in the IE(s) concerned:

| Information Element | Value/remark | Version |
|---|---|---|
| Downlink information common for all radio links | | |
| - Downlink DPCH info common for all RL | | |
| - Timing Indication | Maintain | |
| - Downlink DPCH power control information | | |
| - DPC mode | 0 (Single) | |
| - CHOICE Mode | FDD | |
| - Power offset PPilot-DPDCH | 0 | |
| - DL rate matching restriction information | Not present | |
| - Spreading factor | Refer to the parameter set in TS 34.108 | |
| - Fixed or flexible position | Flexible | |
| - TFCI existence | TRUE | |
| - Number of bits for Pilot bits (SF=128, 256) | Not present | |
| - DPCH compressed mode info | | |
| - TGPSI | 1 | |
| - TGPS status flag | Activate | |
| - TGCFN | (Current CFN+(256 – TTI/10msec)) mod 256 | |
| - Transmission gap pattern sequence configuration parameters | | |
| - TGMP | FDD Measurement | |
| - TGPRC | Infinity | |
| - TGSN | 4 | |
| - TGL1 | 7 | |
| - TGL2 | Not Present | |
| - TGD | Undefined | |
| - TGPL1 | 3 | |
| - TGPL2 | Not Present | R99 and REL-4 only |
| - RPP | Mode 0 | |
| - ITP | Mode 0 | |
| - CHOICE UL/DL mode | UL and DL or DL only or UL only depending on UE capability | |
| - Downlink compressed mode method | SF/2 | |
| - Uplink compressed mode method | SF/2 or Not present depending on UE capability | |
| - Downlink frame type | B | |
| - DeltaSIR1 | 20 (2.0) | |
| - DeltaSIRAfter1 | 10 (1.0) | |
| - DeltaSIR2 | Not present | |
| - DeltaSIRAfter2 | Not present | |
| - N identify abort | Not present | |
| - T Reconfirm abort | Not present | |
| - TX diversity mode | None | |
| - SSDT information | Not present | R99 and Rel-4 only |
| - Default DPCH offset value | Not present | |

MEASUREMENT CONTROL (Step 4) (FDD)

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measurement command | Setup |
| - CHOICE measurement type | Inter-frequency measurement |
| - Inter-frequency cell info list | |
| - Inter-frequency cell removal | Not present |
| - New inter-frequency info list | |

| - Cell parameters ID | Check to see if set to Cell parameter ID of Cell 4 |
| - SCTD indicator | Check to see if set to “FALSE” |

#### 8.4.1.24.5 Test Requirement

1.A In step 13 the UE shall send MEASUREMENT REPORT message indicating event 2A. IE ' Inter-frequency Cells ' in MEASUREMENT REPORT message shall contain frequency information and primary scrambling code (for FDD) or Cell parameters ID (forTDD) of Cell 4.

1.B In step 6, the UE shall not send MEASUREMENT REPORT message.

1.C In step 11, the UE shall not send MEASUREMENT REPORT message.

### 8.4.1.24a Measurement Control and Report: Inter-band measurement for event 2A

#### 8.4.1.24a.1 Definition

This test case is identical to test case 8.4.1.24 except that the cells belong to different frequency bands.

#### 8.4.1.24a.2 Conformance requirement

Same conformance requirement as in clause 8.4.1.24.2.

#### 8.4.1.24a.3 Test Purpose

Same test purpose as in clause 8.4.1.24.3 except that the cells belong to different frequency bands.

#### 8.4.1.24a.4 Method of test

Initial Condition

Same initial conditions as in clause 8.4.1.24.4 except that cell1 and cell4 use URAFCNs selected from different frequency band.

Related ICS/IXIT statements

- Compressed mode required yes/no
- UE supports multiple bands simultaneously yes/no

Test Procedure

Same test procedure as in clause 8.4.1.24.4.

Note: If the UE supports more than 2 frequency bands, the test may be executed for various band combinations.

Expected Sequence

Same expected sequence as in clause 8.4.1.24.4.

Specific Message Content

Same specific message content as in clause 8.4.1.24.4.

#### 8.4.1.24a.5 Test Requirement

Same test requirement as in clause 8.4.1.24.5.

### 8.4.1.25 Measurement Control and Report: Inter-frequency measurement for events 2B and 2E

#### 8.4.1.25.1 Definition

#### 8.4.1.25.2 Conformance requirement

When event 2b is configured in the UE within a measurement, the UE shall:

1> if equations 1 and 2 below have been fulfilled for a time period indicated by "Time to Trigger" from the same instant, respectively for one or several non-used frequencies included for that event and for the used frequency:

2> if any of those non-used frequency is not stored in the variable TRIGGERED_2B_EVENT:

3> store the non-used frequencies that triggered the event and that were not previously stored in the variable TRIGGERED_2B_EVENT into that variable;

3> send a measurement report with IEs set as below:

4> set in "inter-frequency measurement event results":

5> "inter-frequency event identity" to "2b"; and

5> for each non-used frequency that triggered the event, beginning with the best frequency:

6> "Frequency info" to that non-used frequency; and

6> "Non frequency related measurement event results" to the "Primary CPICH info" of the best primary CPICH for FDD cells or "Primary CCPCH info" to the "Cell parameters ID" of the best primary CCPCH for TDD cells on that non-used frequency, not taking into account the cell individual offset;

4> set the IE "measured results" and the IE "additional measured results" according to TS 25.331 subclause 8.4.2, not taking into account the cell individual offset;

1> if equation 3 below is fulfilled for a non-used frequency stored in the variable TRIGGERED_2B_EVENT:

2> remove that non-used frequency from the variable TRIGGERED_2B_EVENT.

1> if equation 4 below is fulfilled for the used frequency:

2> clear the variable TRIGGERED_2B_EVENT.

Triggering conditions:

Equation 1:

$$Q_{Non\ used} \geq T_{Non\ used\ 2b} + H_{2b} / 2$$

The variables in the formula are defined as follows:

$Q_{Non\ used}$ is the quality estimate of a non-used frequency that becomes better than an absolute threshold.

$T_{Non\ used\ 2b}$ is the absolute threshold that applies for this non-used frequency in that measurement.

$H_{2b}$ is the hysteresis parameter for the event 2b.

Equation 2:

$$Q_{Used} \leq T_{Used\ 2b} - H_{2b} / 2$$

The variables in the formula are defined as follows:

$Q_{Used}$ is the quality estimate of the used frequency.

$T_{Used\ 2b}$ is the absolute threshold that applies for the used frequency in that measurement.

$H_{2b}$ is the hysteresis parameter for the event 2b.

Leaving triggered state condition:

Equation 3:

$$Q_{Non\ used} < T_{Non\ used\ 2b} - H_{2b} / 2$$

The variables in the formula are defined as follows:

$Q_{Non\ used}$ is the quality estimate of a non-used frequency that is stored in the variable TRIGGERED_2B_EVENT.

$T_{Non\ used\ 2b}$ is the absolute threshold that applies for this non-used frequency in that measurement.

$H_{2b}$ is the hysteresis parameter for the event 2b.

Equation 4:

$$Q_{Used} > T_{Used\ 2b} + H_{2b} / 2$$

The variables in the formula are defined as follows:

$Q_{Used}$ is the quality estimate of the used frequency.

$T_{Used\ 2b}$ is the absolute threshold that applies for the used frequency in that measurement.

$H_{2b}$ is the hysteresis parameter for the event 2b.

…

When event 2e is configured in the UE within a measurement, the UE shall:

1> if equation 1 below has been fulfilled for one or several non-used frequencies included for that event during the time "Time to trigger":

2> if any of those non-used frequencies is not stored in the variable TRIGGERED_2E_EVENT:

3> store the non-used frequencies that triggered the event and that were not previously stored in the variable TRIGGERED_2E_EVENT into that variable;

3> send a measurement report with IEs set as below:

4> set in "inter-frequency measurement event results":

5> "inter-frequency event identity" to "2e"; and

5> for each non-used frequency that triggered the event, beginning with the best frequency:

6> "Frequency info" to that non-used frequency; and

6> "Non frequency related measurement event results" to the "Primary CPICH info" of the best primary CPICH for FDD cells or "Primary CCPCH info" to the "Cell parameters ID" of the

best primary CCPCH for TDD cells on that non-used frequency, not taking into account the cell individual offset;

4> set the IE "measured results" and the IE "additional measured results" according to TS 25.331 subclause 8.4.2, not taking into account the cell individual offset;

1> if equation 2 below is fulfilled for a non-used frequency stored in the variable TRIGGERED_2E_EVENT:

2> remove that non-used frequency from the variable TRIGGERED_2E_EVENT.

Triggering condition:

Equation 1:

$$Q_{Non\ used} \leq T_{Non\ used\ 2e} - H_{2e} / 2$$

The variables in the formula are defined as follows:

$Q_{Non\ used}$ is the quality estimate of a non-used frequency that becomes worse than an absolute threshold.

$T_{Non\ used\ 2e}$ is the absolute threshold that applies for that non-used frequency for that event.

$H_{2e}$ is the hysteresis parameter for the event 2e.

Leaving triggered state condition:

Equation 2:

$$Q_{Non\ used} > T_{Non\ used\ 2e} + H_{2e} / 2$$

The variables in the formula are defined as follows:

$Q_{Non\ used}$ is the quality estimate of a non-used frequency stored in the variable TRIGGERED_2E_EVENT.

$T_{Non\ used\ 2e}$ is the absolute threshold that applies for that non-used frequency for that event.

$H_{2e}$ is the hysteresis parameter for the event 2e.

### Reference

3GPP TS 25.331 clause 14.2.1.2, 14.2.1.5.

### 8.4.1.25.3 Test Purpose

1. To confirm that the UE sends MEASUREMENT REPORT message when event 2E is configured and the estimated quality of a non-used frequency is below the value of the IE "Threshold non-used frequency". This MEASUREMENT REPORT message shall contain at least the best primary CPICH info (for FDD) or primary CCPCH info (for TDD) on the non-used frequency that triggered the event.

2. To confirm that the UE sends MEASUREMENT REPORT message when event 2B is configured and estimated quality of the currently used frequency is below the value of the IE "Threshold used frequency" and the estimated quality of a non-used frequency is above the value of the IE "Threshold non-used frequency". This MEASUREMENT REPORT message shall contain at least the best primary CPICH info (for FDD) or primary CCPCH info (for TDD)on the non-used frequency that triggered the event.

### 8.4.1.25.4 Method of test

#### Initial Condition

System Simulator: 2 cells – The initial configurations of the 2 cells in the SS shall follow the values indicated in the column marked "T0" in table 8.4.1.25-1. The table is found in "Test Procedure" clause.

UE: CS-DCCH+DTCH_DCH (State 6-9) or PS-DCCH+DTCH_DCH (State 6-10) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE.

Related ICS/IXIT statements

- Compressed mode required yes/no

Test Procedure

Table 8.4.1.25-1 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Column marked "T0" denotes the initial conditions, while columns marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the text in this clause.

**Table 8.4.1.25-1**

| Parameter | Unit | Cell 1 | | | Cell 4 | | |
|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T0 | T1 | T2 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | | High Range Test Frequency | | |
| CPICH Ec (FDD) | dBm/3.84 MHz | -55 | -55 | -85 | -85 | -55 | -55 |
| P-CCPCH RSCP(TDD) | dBm | -60 | -60 | -80 | -80 | -60 | -60 |
| P-CCPCH TS (3.84 Mcps TDD) and 7.68 Mcps TDD | | TS 0 | | | TS 4 | | |

The UE is initially in CELL_DCH state of cell 1. SS commands the UE to perform Inter-frequency measurements and report event 2B and event 2E by sending MEASUREMENT CONTROL message. Note that the Filter Coefficient IE has a value of 4 so Layer 3 Filtering applies in this case.

If UE requires compressed mode, SS performs PHYSICAL CHANNEL RECONFIGURATION procedure to activate compressed mode (for FDD only).

Since quality estimate of non-used frequency is below threshold, the UE sends MEASUREMENT REPORT message indicating event 2E.

SS then configures itself according to the values in columns "T1" shown above. Now quality estimate of used and non-used frequency is above threshold and hence neither event 2B nor event 2E will be triggered. SS then configures itself according to the values in columns "T2" shown above. Quality estimate for used frequency is now below threshold, while that of non-used frequency is above threshold, the UE sends MEASUREMENT REPORT message to report event 2B.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | MEASUREMENT CONTROL | SS commands the UE to perform Inter-frequency measurements and to report event 2B and 2E. If Compressed Mode not required (refer ICS/IXIT) go to step 4 |
| 2 | ← | | PHYSICAL CHANNEL RECONFIGURATION | SS instructs UE to begin compressed mode operation. (for FDD only) |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | (for FDD only) |
| 4 | → | | MEASUREMENT REPORT | The UE shall report event 2E. Time duration between activation of compressed mode and reception of this message should be at least 5 seconds. Layer 3 Filtering causes an additional delay. |
| 5 | | | | SS re-adjusts the downlink transmission power settings according to columns "T1" in table 8.4.1.25-1. |
| 6 | | | | Check for 10 seconds the UE shall not send measurement report message. |
| 7 | | | | SS re-adjusts the downlink transmission power settings according to columns "T2" in table 8.4.1.25-1. |
| 8 | → | | MEASUREMENT REPORT | The UE shall report event 2B. Time duration between changing power levels according to columns "T2" and reception of this message should be at least 5 seconds. Layer 3 Filtering causes an additional delay. For Cell 1 the CPICH Ec value of -80 dBm(for FDD)or the P-CCPCH RSCP value of -75 dBm (for TDD) would have to be reported at least three times from the Physical Layer to cause the Cell 1 frequency threshold to be reached. Depending on tolerance values this number will be greater (CPICH Ec (for FDD) or P-CCPCH RSCP(for TDD) is +/- 3 dBm, SS set Hysteresis value is +/- 2dB) |
| 9 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

All messages indicated below shall use the same content as described in default message content, with the following exceptions:

MEASUREMENT CONTROL (Step 1)(FDD)

PHYSICAL CHANNEL RECONFIGURATION (Step 2)

Use the same message sub-type found in Annex A, which is entitled "(Packet to CELL_DCH from CELL_DCH in PS)", with the following exceptions in the IE(s) concerned:

| Information Element | Value/remark | Version |
|---|---|---|
| Downlink information common for all radio links | | |
| - Downlink DPCH info common for all RL | | |
| - Timing Indication | Maintain | |
| - Downlink DPCH power control information | | |
| - DPC mode | 0 (Single) | |
| - CHOICE Mode | FDD | |
| - Power offset PPilot-DPDCH | 0 | |
| - DL rate matching restriction information | Not present | |
| - Spreading factor | Refer to the parameter set in TS 34.108 | |
| - Fixed or flexible position | Flexible | |
| - TFCI existence | TRUE | |
| - Number of bits for Pilot bits (SF=128, 256) | Not present | |
| - DPCH compressed mode info | | |
| - TGPSI | 1 | |
| - TGPS status flag | Activate | |
| - TGCFN | (Current CFN+(256 – TTI/10msec)) mod 256 | |
| - Transmission gap pattern sequence configuration parameters | | |
| - TGMP | FDD Measurement | |
| - TGPRC | Infinity | |
| - TGSN | 4 | |
| - TGL1 | 7 | |
| - TGL2 | Not Present | |
| - TGD | Undefined | |
| - TGPL1 | 3 | |
| - TGPL2 | Not Present | R99 and REL-4 only |
| - RPP | Mode 0 | |
| - ITP | Mode 0 | |
| - CHOICE UL/DL mode | UL and DL or DL only or UL only depending on UE capability | |
| - Downlink compressed mode method | SF/2 | |
| - Uplink compressed mode method | SF/2 or Not present depending on UE capability | |
| - Downlink frame type | A | |
| - DeltaSIR1 | 20 (2.0) | |
| - DeltaSIRAfter1 | 10 (1.0) | |
| - DeltaSIR2 | Not present | |
| - DeltaSIRAfter2 | Not present | |
| - N identify abort | Not present | |
| - T Reconfirm abort | Not present | |
| - TX diversity mode | None | |
| - SSDT information | Not present | R99 and Rel-4 only |
| - Default DPCH offset value | Not present | |

MEASUREMENT REPORT (Step 4) (FDD)

| Information Element | Value/remark |
|---|---|
| Measurement identity | Check to see if set to 4 |
| Measured results | Check to see if it is absent |
| Measured results on RACH | Check to see if it is absent |
| Additional measured results | Check to see if it is absent |
| Event results | Inter-frequency measurement event results, |
| - Inter-frequency event identity | 2E |
| - Cell measurement event results | |
| - Frequency info | |
| - UARFCN uplink (Nu) | The presence of this IE is not checked |
| - UARFCN downlink (Nd) | Check that the value of this IE is set to UARFCN for the downlink corresponding to $f_4$ |
| - Primary CPICH info | |
| - Primary scrambling code | Primary scrambling code of Cell 4 |

MEASUREMENT REPORT (Step 4) (1.28 Mcps TDD)

| Information Element | Value/remark |
|---|---|
| Measurement identity | Check to see if set to 4 |
| Measured results | Check to see if it is absent |
| Measured results on RACH | Check to see if it is absent |
| Additional measured results | Check to see if it is absent |
| Event results | |

#### 8.4.1.25.5 Test Requirement

1. In step 4 the UE shall send MEASUREMENT REPORT message indicating event 2E. IE "Cell measurement event results" in this message shall contain frequency information and primary scrambling code(for FDD) or Cell parameters ID (TDD) of Cell 4.

2. In step 8 the UE shall send MEASUREMENT REPORT message indicating event 2B. IE "Cell measurement event results" in this message shall contain frequency information and primary scrambling code (for FDD) or Cell parameters ID (TDD) of Cell 4.

### 8.4.1.25a Measurement Control and Report: Inter-band measurement for events 2B and 2E

#### 8.4.1.25a.1 Definition

This test case is identical to test case 8.4.1.25 except that the cells belong to different frequency bands.

#### 8.4.1.25a.2 Conformance requirement

Same conformance requirement as in clause 8.4.1.25.2.

#### 8.4.1.25a.3 Test Purpose

Same test purpose as in clause 8.4.1.25.3 except that the cells belong to different frequency bands.

#### 8.4.1.25a.4 Method of test

Initial Condition

Same initial conditions as in clause 8.4.1.25.4 except that cell1 and cell4 use URAFCNs selected from different frequency bands.

Related ICS/IXIT statements

- Compressed mode required yes/no
- UE supports multiple bands simultaneously yes/no

Test Procedure

Same test procedure as in clause 8.4.1.25.4.

Note: If the UE supports more than 2 frequency bands, the test may be executed for various band combinations.

Expected Sequence

Same expected sequence as in clause 8.4.1.25.4.

Specific Message Content

Same specific message content as in clause 8.4.1.25.4.

#### 8.4.1.25a.5 Test Requirement

Same test requirement as in clause 8.4.1.25.5.

### 8.4.1.26 Measurement Control and Report: Measurement for events 2D and 2F

#### 8.4.1.26.1 Definition

#### 8.4.1.26.2 Conformance requirement

When event 2d is configured in the UE within a measurement, the UE shall:

1> if equation 1 below has been fulfilled for the used frequency during the time "Time to trigger":

2> if the variable TRIGGERED_2D_EVENT is set to FALSE:

3> set the variable TRIGGERED_2D_EVENT to TRUE;

3> send a measurement report with IEs set as below:

4> set in "inter-frequency event results": "inter-frequency event identity" to "2d" and no IE "Inter-frequency cells";

4> set the IE "measured results" and the IE "additional measured results" according to TS 25.331 subclause 8.4.2.

1> if the variable TRIGGERED_2D_EVENT is set to TRUE and if equation 2 is fulfilled for the used frequency:

2> set the variable TRIGGERED_2D_EVENT to FALSE.

Triggering condition:

Equation 1:

$$Q_{Used} \leq T_{Used\ 2d} - H_{2d} / 2$$

The variables in the formula are defined as follows:

$Q_{Used}$ is the quality estimate of the used frequency.

$T_{Used\ 2d}$ is the absolute threshold that applies for the used frequency and event 2d.

$H_{2d}$ is the hysteresis parameter for the event 2d.

Leaving triggered state condition:

Equation 2:

$$Q_{Used} > T_{Used\ 2d} + H_{2d} / 2$$

The variables in the formula are defined as follows:

$Q_{Used}$ is the quality estimate of the used frequency.

$T_{Used\ 2d}$ is the absolute threshold that applies for the used frequency and event 2d.

$H_{2d}$ is the hysteresis parameter for the event 2d.

…

When event 2f is configured in the UE within a measurement, the UE shall:

1> if equation 1 below has been fulfilled for the used frequency during the time "Time to trigger":

2> if the variable TRIGGERED_2F_EVENT is set to FALSE:

3> set the variable TRIGGERED_2F_EVENT to TRUE;

3> send a measurement report with IEs set as below:

4> set in "inter-frequency event results": "inter-frequency event identity" to "2f", and no IE "Inter-frequency cells";

4> set the IE "measured results" and the IE "additional measured results" according to TS 25.331 subclause 8.4.2.

1> if the variable TRIGGERED_2F_EVENT is set to TRUE and if equation 2 is fulfilled for the used frequency:

2> set the variable TRIGGERED_2F_EVENT to FALSE.

Triggering condition:

Equation 1:

$$Q_{Used} \geq T_{Used\ 2f} + H_{2f} / 2$$

The variables in the formula are defined as follows:

$Q_{Used}$ is the quality estimate of the used frequency.

$T_{Used\ 2f}$ is the absolute threshold that applies for the used frequency and event 2f.

$H_{2f}$ is the hysteresis parameter for the event 2f.

Leaving triggered state condition:

Equation 2:

$$Q_{Used} < T_{Used\ 2f} - H_{2f} / 2$$

The variables in the formula are defined as follows:

$Q_{Used}$ is the quality estimate of the used frequency.

$T_{Used\ 2f}$ is the absolute threshold that applies for the used frequency and event 2f.

$H_{2f}$ is the hysteresis parameter for the event 2f.

Reference

3GPP TS 25.331 clause 14.2.1.4, 14.2.1.6

### 8.4.1.26.3 Test Purpose

1. To confirm that the UE sends MEASUREMENT REPORT message when event 2F is configured and estimated quality of the currently used frequency is above the value of the IE "Threshold used frequency".

2. To confirm that the UE sends MEASUREMENT REPORT message when event 2D is configured and estimated quality of the currently used frequency is below the value of the IE "Threshold used frequency".

### 8.4.1.26.4 Method of test

Initial Condition

System Simulator: 1 cells – The initial configurations of the cell in the SS shall follow the values indicated in the column marked "T0" in table 8.4.1.26-1. The table is found in "Test Procedure" clause.

UE: CS-DCCH+DTCH_DCH (State 6-9) or PS-DCCH+DTCH_DCH (State 6-10) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE.

Test Procedure

Table 8.4.1.26-1 illustrates the downlink power to be applied for the cell at various time instants of the test execution. Column marked "T0" denotes the initial conditions, while columns marked "T1" is to be applied subsequently. The exact instant on which these values shall be applied is described in the text in this clause.

**Table 8.4.1.26-1**

| Parameter | Unit | Cell 1 | |
|---|---|---|---|
| | | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84 MHz | -55 | -75 |
| P-CCPCH RSCP(TDD) | dBm | -60 | -75 |

The UE is initially in CELL_DCH state of cell 1. SS commands the UE to perform Inter-frequency measurements and report event 2D and/or event 2F by sending MEASUREMENT CONTROL message. Since quality estimate of used frequency is above threshold, the UE sends MEASUREMENT REPORT message indicating event 2F. SS then configures itself according to the values in columns "T1" shown above. Quality estimate for used frequency is now below threshold, the UE sends MEASUREMENT REPORT message to report it. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | Void | |
| 2 | | | Void | |
| 3 | | | Void | |
| 4 | ← | | MEASUREMENT CONTROL | SS commands the UE to perform Inter-frequency measurements and to report event 2D and 2F. |
| 5 | → | | MEASUREMENT REPORT | The UE shall report event 2F |
| 6 | | | | SS re-adjusts the downlink transmission power settings according to columns "T1" in table 8.4.1.26-1. |
| 7 | → | | MEASUREMENT REPORT | The UE shall report event 2D. |
| 8 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

All messages indicated below shall use the same content as described in default message content, with the following exceptions.

| - Inter-frequency event identity | Check to see if set to 2D |

#### 8.4.1.26.5 Test Requirement

1. In step 5 the UE shall send MEASUREMENT REPORT message indicating event 2F.
2. In step 7 the UE shall send MEASUREMENT REPORT message indicating event 2D.

### 8.4.1.27 Measurement Control and Report: UE internal measurement for events 6A and 6B

#### 8.4.1.27.1 Definition

#### 8.4.1.27.2 Conformance requirement

When event 6A is ordered by UTRAN in a measurement control message, the UE shall send a measurement report when the UE transmission power (for TDD within a single TS) becomes larger than a predefined threshold. The corresponding report identifies the threshold that was exceeded.

When event 6B is ordered by UTRAN in a measurement control message, the UE shall send a measurement report when the UE transmission power (for TDD within a single TS) becomes less than a predefined threshold. The corresponding report identifies the threshold that the UE Tx power went below.

Reference

3GPP TS 25.331, clauses 14.6.2.1 and 14.6.2.2.

8.4.1.27.3 Test Purpose

1. To confirm that the UE performs UE internal measurements and reporting for events 6A and 6B, when requested by the UTRAN to do so in the MEASUREMENT CONTROL message.

8.4.1.27.4 Method of test

Initial Condition

System Simulator: 1 cell, cell 1.

UE: CS-DCCH+DTCH_DCH (State 6-9) or PS-DCCH+DTCH_DCH (State 6-10) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE.

Test Procedure

The UE is in CELL_DCH state in cell 1, after successfully executing procedures P11 or P13 as specified in clause 7.4 of TS 34.108. Next, SS transmits MEASUREMENT CONTROL message to request the UE to perform UE internal measurements and reporting for events 6A and 6B.

SS increases the UE Tx power above the threshold set to event 6A. After 'time to trigger' UE sends MEASUREMENT REPORT, triggered by event 6A, to SS.

SS decreases the UE Tx power below the threshold set to event 6B. After 'time to trigger' UE sends MEASUREMENT REPORT, triggered by event 6B, to SS. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | UE is initially in CELL_DCH state in cell 1. |
| 2 | ← | | MEASUREMENT CONTROL | SS requests for measurement and reporting of events 6A and 6B. |
| 3 | | | | SS sets the UE transmission power above 18 dBm. |
| 4 | → | | MEASUREMENT REPORT | UE shall send 6A event measurement report. |
| 5 | | | | SS sets the UE transmission power below 15 dBm. |
| 6 | → | | MEASUREMENT REPORT | UE shall send 6B event measurement report. |
| 7 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

MEASUREMENT REPORT (Step 6)(1.28 Mcps TDD)

| Information Element | Value/remark |
|---|---|
| Measurement identity | Check to see if set to 5 |
| Measured Results | |
| - CHOICE measurement | Check to see if set to "UE Internal measured results" |
| -CHOICE *mode* | Check to see if set to "TDD" |
| - UE Transmitted Power | Check to see if present and value is reasonable |
| Measured Results on RACH | Check to see if this IE is absent |
| Event results | |
| -CHOICE *event result* | Check to see if set to "UE internal measurement event results" |
| -UE internal event identity | Check to see if set to "6B" |

#### 8.4.1.27.5 Test Requirement

After step 3, the UE shall transmit MEASUREMENT REPORT message, containing measured results for UE transmitted power. The 'Event results' IE contains event identity 6A.

After step 5, the UE shall transmit MEASUREMENT REPORT message, containing measured results for UE transmitted power. The 'Event results' IE contains event identity 6B.

### 8.4.1.28 Measurement Control and Report: UE internal measurement for events 6F (FDD) and 6G

#### 8.4.1.28.1 Definition

#### 8.4.1.28.2 Conformance requirement

When event 6F is ordered by UTRAN in a MEASUREMENT CONTROL message, the UE shall send a MEASUREMENT REPORT message when the UE Rx-Tx time difference becomes larger than the threshold defined by the IE "UE Rx-Tx time difference threshold".

When event 6G is ordered by UTRAN in a MEASUREMENT CONTROL message, the UE shall send a MEASUREMENT REPORT when the UE Rx-Tx time difference becomes less than the threshold defined by the IE "UE Rx-Tx time difference threshold".

Reference

3GPP TS 25.331, clauses 14.6.2.6 and 14.6.2.7.

#### 8.4.1.28.3 Test Purpose

1. To confirm that the UE performs UE internal measurements and reporting for events 6F and 6G, when requested by the UTRAN to do so in the MEASUREMENT CONTROL message.

#### 8.4.1.28.4 Method of test

Initial Condition

System Simulator: 2 cells – The initial configuration of the cells in the SS shall follow the values indicated in table 6.1.2 of TS 34.108.

UE: CS-DCCH+DTCH_DCH (State 6-9) or PS-DCCH+DTCH_DCH (State 6-10) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE.

Test Procedure

Table 8.4.1.28 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Columns marked "T0" denote the initial conditions, while columns marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.4.1.28**

| Parameter | Unit | Cell 1 | | | Cell 2 | | |
|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T0 | T1 | T2 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | | Mid Range Test Frequency | | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -60 | -60 | -75 | -60 | -70 |

The UE is in CELL_DCH state in cell 1, after successfully executing procedures P11 or P13 as specified in clause 7.4 of TS 34.108.

SS configures its downlink transmission power settings according to columns "T1" in table 8.4.128. UE shall be triggered to transmit a MEASUREMENT REPORT message, which includes the primary scrambling code for cell 2.

After the MEASUREMENT REPORT message is received, SS then performs an active set update procedure by sending ACTIVE SET UPDATE REQUEST message on the downlink DCCH. Cell 2 is to be added to the active set, according to the content of this downlink message. The UE shall reply with an ACTIVE SET UPDATE COMPLETE message on the uplink DCCH, and include cell 2 to the active set when the activation time specified has elapsed. SS then configures its downlink transmission power settings according to columns "T2" in table 8.4.1.28.. SS sets the initial timing of cell 2 to be the timing of cell 1 - 5 chips.

Next, SS transmits MEASUREMENT CONTROL message to request the UE to perform UE internal measurements and reporting for events 6F and 6G.

SS adjusts the Tx timing of cell 2 above the threshold set to event 6F. After 'time to trigger' UE sends MEASUREMENT REPORT, triggered by event 6F, to SS.

SS adjusts the Tx timing of cell 2 below the threshold set to event 6G. After 'time to trigger' UE sends MEASUREMENT REPORT, triggered by event 6G, to SS. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | UE is initially in CELL_DCH state in cell 1. |
| 1a | | | | SS configures its downlink transmission power settings according to columns "T1" in table 8.4.1.28. |
| 1b | → | | MEASUREMENT REPORT | See specific message contents for this message. |
| 2 | ← | | ACTIVE SET UPDATE | SS asks UE to add cell 2 into the active set. |
| 3 | → | | ACTIVE SET UPDATE COMPLETE | |
| 3a | | | | SS configures its downlink transmission power settings according to columns "T2" in table 8.4.1.28 |
| 4 | ← | | MEASUREMENT CONTROL | SS requests for measurement and reporting of events 6F and 6G. |
| 5 | | | | SS switches the Tx timing of Cell 2, with respect to Cell 1 to a delay of – 19 chips. |
| 6 | → | | MEASUREMENT REPORT | UE shall send 6F event measurement report. |
| 7 | | | | SS switches the Tx timing of Cell 2 with respect to Cell 1 to a delay of 19 chips. |
| 8 | → | | MEASUREMENT REPORT | UE shall send 6G event measurement report. |
| 9 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Content

MEASUREMENT REPORT (Step 1b)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 1 |
| Measured Results | |
| - Intra-frequency measured results | Check to see if measurement results for 2 cells are included (the order in which the different cells are reported is not important) |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is present and includes IE COUNT-C-SFN frame difference |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| Measured results on RACH | Checked that this IE is absent |
| Additional measured results | Checked that this IE is absent |
| Event results | |
| - Intra-frequency measurement event results | |
| - Intra-frequency event identity | 1a |
| - Cell measurement event results | |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 |

ACTIVE SET UPDATE (Step 2)

The contents of ACTIVE SET UPDATE message for this test step is identical to the same message found in Annex A with the following exceptions:

| Information Element | Value/remark | Version |
|---|---|---|
| RRC transaction identifier | 0 | |
| Activation Time | [256+Current CFN-[current CFN mod 8 + 8 ]]MOD 256 | |

| DPCH compressed mode status info | Not Present |

MEASUREMENT REPORT (Step 6)

| Information Element | Value/remark |
|---|---|
| Measurement identity | Check to see if set to 5 |
| Measured Results | |
| - CHOICE measurement | Check to see if set to "UE Internal measured results" |
| - UE internal measured results | |
| -CHOICE *mode* | Check to see if set to "FDD" |
| UE Rx-Tx report entries | |
| - Primary CPICH info | |
| -Primary scrambling code | Check to see if set to codes assigned for cell 1 & cell 2. UE may report the measured results for the cells in any order. |
| -UE Rx-Tx time difference type 1 | Check to see if present and value is reasonable |
| Measured Results on RACH | Check to see if this IE is absent |
| Event results | |
| -CHOICE *event result* | Check to see if set to "UE internal measurement event results" |
| -UE internal event identity | Check to see if set to "6F" |
| -CHOICE *mode* | Check to see if set to "FDD" |
| -Primary CPICH info | |
| -Primary scrambling code | Check to see if set to code assigned for cell 2. |

MEASUREMENT REPORT (Step 8)

| Information Element | Value/remark |
|---|---|
| Measurement identity | Check to see if set to 5 |
| Measured Results | |
| - CHOICE measurement | Check to see if set to "UE Internal measured results" |
| - UE internal measured results | |
| -CHOICE *mode* | Check to see if set to "FDD" |
| UE Rx-Tx report entries | |
| - Primary CPICH info | |
| -Primary scrambling code | Check to see if set to codes assigned for cell 1 & cell 2. UE may report the measured results for the cells in any order. |
| -UE Rx-Tx time difference type 1 | Check to see if present and value is reasonable |
| Measured Results on RACH | Check to see if this IE is absent |
| Event results | |
| -CHOICE *event result* | Check to see if set to "UE internal measurement event results" |
| -UE internal event identity | Check to see if set to "6G" |
| -CHOICE *mode* | Check to see if set to "FDD" |
| -Primary CPICH info | |
| -Primary scrambling code | Check to see if set to code assigned for cell 2 |

#### 8.4.1.28.5 Test Requirement

After step 5, the UE shall transmit MEASUREMENT REPORT message, containing measured results for UE Rx-Tx time difference. The 'Event results' IE contains event identity 6F.

After step 7, the UE shall transmit MEASUREMENT REPORT message, containing measured results for UE Rx-Tx time difference. The 'Event results' IE contains event identity 6G.

### 8.4.1.28a Measurement Control and Report: UE internal measurement for event 6F (1.28 Mcps TDD)

#### 8.4.1.28a.1 Definition

#### 8.4.1.28a.2 Conformance requirement

When event 6F is ordered by UTRAN in a MEASUREMENT CONTROL message, the UE shall send a MEASUREMENT REPORT message when the absolute value of the difference between the measured $T_{ADV}$ and the

$T_{ADV}$ stored in the variable TRIGGERED_6F_EVENT becomes larger than the threshold defined by the IE " $T_{ADV}$ Threshold ".

Reference

3GPP TS 25.331, clauses 14.6.2.6a

### 8.4.1.28a.3 Test Purpose

1. To confirm that the UE performs UE internal measurements and reporting for event 6F, when requested by the UTRAN to do so in the MEASUREMENT CONTROL message.

### 8.4.1.28a.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: CS-DCCH+DTCH_DCH (State 6-9) or PS-DCCH+DTCH_DCH (State 6-10) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE.

Test Procedure

The UE is in CELL_DCH state.

SS transmits MEASUREMENT CONTROL message to request the UE to perform UE internal measurements and reporting for event 6F.

SS adjusts the Tx timing of cell 1 until the time difference indicated by $T_{ADV}$ becomes above the threshold set to event 6F. After 'time to trigger' UE sends MEASUREMENT REPORT, triggered by event 6F, to SS.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | UE is initially in CELL_DCH state in cell 1. |
| 2 | ← | | MEASUREMENT CONTROL | SS requests for measurement and reporting of event 6F. |
| 3 | | | | SS adjusts the Tx timing of cell 1 until the time difference indicated by $T_{ADV}$ becomes above a certain threshold. |
| 4 | → | | MEASUREMENT REPORT | UE shall send 6F event measurement report. |
| 5 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Content

MEASUREMENT CONTROL (Step 2)

| Information Element | Value/remark |

| Measured Results on RACH | Check to see if this IE is absent |
| Event results | |
| -CHOICE *event result* | Check to see if set to "UE internal measurement event results" |
| -UE internal event identity | Check to see if set to "6F" |

### 8.4.1.28a.5 Test Requirement

After step 3, the UE shall transmit MEASUREMENT REPORT message, containing measured results for $T_{ADV}$. The 'Event results' IE contains event identity 6F.

## 8.4.1.29 Measurement Control and Report: Event based Traffic Volume measurement in CELL_FACH state.

### 8.4.1.29.1 Definition

### 8.4.1.29.2 Conformance requirement

Upon reception of a MEASUREMENT CONTROL message the UE shall perform actions specified in TS 25.331 subclause 8.6 unless otherwise specified below.

The UE shall:

1> read the IE "Measurement command";

1> if the IE "Measurement command" has the value "setup":

2> store this measurement in the variable MEASUREMENT_IDENTITY according to the IE "measurement identity", first releasing any previously stored measurement with that identity if that exists;

2> for measurement types "inter-RAT measurement" or "inter-frequency measurement":

…

2> for measurement type "UE positioning measurement":

…

2> for any other measurement type:

3> if the measurement is valid in the current RRC state of the UE:

4> begin measurements according to the stored control information for this measurement identity.

…

For traffic volume measurements in the UE only one quantity is compared with the thresholds. This quantity is Transport Channel Traffic Volume (which equals the sum of Buffer Occupancies of RBs multiplexed onto a transport channel) in number of bytes. Every TTI, UE measures the Transport Channel Traffic Volume for each transport channel and compares it with the configured thresholds. If the monitored Transport Channel Traffic Volume exceeds an absolute threshold, i.e. if TCTV>Reporting threshold, this is an event (event 4a) that could trigger a report. The corresponding report specifies at least which measurement ID the event that triggered the report belongs to.

In CELL_FACH state, the UE shall:

1> transmit a MEASUREMENT REPORT message on the uplink DCCH when the reporting criteria stored in variable MEASUREMENT_IDENTITY are met for any ongoing traffic volume measurement or UE positioning measurement that is being performed in the UE;

1> include a measurement report in the IE "Measured results on RACH", as specified in the IE "Intra-frequency reporting quantity for RACH reporting" and the IE "Maximum number of reported cells on RACH" in System Information Block type 12 (or "System Information Block Type 11" if "System Information Block Type 12" is not being broadcast);

1> include in the IE "Measured results on RACH" all requested reporting quantities for cells for which measurements are reported.

Reference

3GPP TS 25.331, clause 14.4.2.1, 3GPP TS 25.331, clause 8.4.1.3, 8.4.2.2.

### 8.4.1.29.3 Test Purpose

1. To verify that in CELL_FACH state when event 4a triggered at TVM set up UE sends Measurement Report with correct measurement identity and indication of UL transport channel type, radio bearer identities and corresponding RLC buffer payloads in number of bytes.

2 To verify that in CELL_FACH state when event 4a triggered after TVM set up UE sends Measurement Report with correct measurement identity and indication of UL transport channel type, radio bearer identities and corresponding RLC buffer payloads in number of bytes.

3. To confirm that the UE sends MEASUREMENT REPORT message, with measurement report in IE "Measurement results on RACH" as specified in System Information Block type 12.

### 8.4.1.29.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: Idle state (State 3 or State 7) as specified in clause 7.4 of TS 34.108.

System Information Block type 11 or 12 does not include Traffic Volume measurement system information.

Test Procedure

The UE is brought to the CELL_FACH state after a successful incoming call attempt. The SS follows the procedure in TS 34.108 clause 7.1.3 (Mobile Terminated), to set up a user RAB, but with the default RAB replaced by the one described in 34.108, clause 6.10.2.4.3.2(for FDD) , clause 6.10.3.4.4.2(for 3.84 Mcps TDD), clause 6.11.5.4.4.2(for 1.28 Mcps TDD) or clause 6.11.6.4.4.2(for 7.68 Mcps TDD): Interactive/Background 32 kbps PS RAB + SRBs for CCCH + SRB for DCCH + SRB for BCCH for DL and 6.10.2.4.4.1: Interactive/Background 32 kbps PS RAB + SRB for CCCH + SRB for DCCH (for FDD), 6.10.2.4.4.1: Interactive/Background 12.8 kbps PS RAB + SRB for CCCH + SRB for DCCH (for 3.84 Mcps TDD), clause 6.11.5.4.5.2 Interactive/Background 32 kbps PS RAB + SRB for CCCH + SRBs for DCCH for UL(for 1.28Mcps TDD) or 6.11.6.4.4.1: Interactive/Background 12.8 kbps PS RAB + SRB for CCCH + SRB for DCCH (for 7.68 Mcps TDD) for DL. The radio bearer is placed into UE test loop mode 1 described in 34.109 clause 5.3. The System Information Block type 12 is modified compared to the default settings so that CPICH RSCP (for FDD) or P-CCPCH RSCP (for TDD) is reported for intra-frequency reporting when transmitting RACH messages. After this modification, SS configures transport channel traffic volume so as to exceed threshold and then sends to UE MEASUREMENT CONTROL message, which includes traffic volume measurement control parameters e.g. uplink transport channel type and reporting threshold. Transport channel traffic volume exceeds threshold and after 'time to trigger' UE sends MEASUREMENT REPORT to SS. SS does not respond and after 'pending time after trigger' UE sends the same MEASUREMENT REPORT again. SS configures UE's transport channel load decreases to zero and UE sends no MEASUREMENT REPORT message. SS configures transport channel traffic volume so as to exceed threshold again and after 'time to trigger' UE sends MEASUREMENT REPORT message to SS. After 'pending time after trigger' UE sends again same MEASUREMENT REPORT message. SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PAGING TYPE1 | The SS transmits the message, which includes a allocated identity (P-TMSI). |

| - Uplink transport channel type causing the event | Check to see if set to "RACH" |
| - UL transport channel identity | Check to see that is not set |
| - Traffic volume event identity | Check to see if set to "4a" |

#### 8.4.1.29.5 Test Requirement

In step 3 UE sends MEASUREMENT REPORT with correct measurement identity indication. RB identity and RLC buffers payload has reasonable values. The IE "measured results on RACH", containing the measurement value for cell 1's CPICH RSCP (for FDD) or P-CCPCH RSCP (for TDD) shall be included in this message.

In step 4, 4d and 4e UE repeats message sent in step 3.

After step 3 UE is not allowed to send user data during the 'Tx interruption after trigger' timer is running.

### 8.4.1.30 Measurement Control and Report: Event based Traffic Volume measurement in CELL_DCH state.

#### 8.4.1.30.1 Definition

#### 8.4.1.30.2 Conformance requirement

Upon reception of a MEASUREMENT CONTROL message the UE shall perform actions specified in TS 25.331 subclause 8.6 unless otherwise specified below.

The UE shall:

1> read the IE "Measurement command";

1> if the IE "Measurement command" has the value "setup":

2> store this measurement in the variable MEASUREMENT_IDENTITY according to the IE "measurement identity", first releasing any previously stored measurement with that identity if that exists;

2> for measurement types "inter-RAT measurement" or "inter-frequency measurement":

…

2> for measurement type "UE positioning measurement":

…

2> for any other measurement type:

3> if the measurement is valid in the current RRC state of the UE:

4> begin measurements according to the stored control information for this measurement identity.

…

For traffic volume measurements in the UE only one quantity is compared with the thresholds. This quantity is Transport Channel Traffic Volume (which equals the sum of Buffer Occupancies of RBs multiplexed onto a transport channel) in number of bytes. Every TTI, UE measures the Transport Channel Traffic Volume for each transport channel and compares it with the configured thresholds.

If the monitored Transport Channel Traffic Volume exceeds an absolute threshold, i.e. if TCTF>Reporting threshold, this is an event (event 4a) that could trigger a report. The corresponding report specifies at least which measurement ID the event that triggered the report belongs to.

If the monitored Transport Channel Traffic Volume becomes smaller than an absolute threshold, i.e. if TCTF<Reporting threshold, this is an event (4b) that could trigger a report. The corresponding report specifies at least which measurement ID the event that triggered the report belongs to.

Reference

3GPP TS 25.331, clause 14.4.2.2, 3GPP TS 25.331, clause 8.4.1.3.

### 8.4.1.30.3 Test Purpose

1. To verify that in CELL_DCH state when event 4a or 4b triggered at setup TVM UE sends RRC: Measurement Report with correct measurement identity and indication of uplink transport channel type and identity, radio bearer identities and corresponding RLC buffer payloads in number of bytes.

2. To verify that in CELL_DCH state when event 4a or 4b triggered after setup TVM UE sends RRC: Measurement Report with correct measurement identity and indication of uplink transport channel type and identity, radio bearer identities and corresponding RLC buffer payloads in number of bytes.

### 8.4.1.30.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: Idle state (State 3 or State 7) as specified in clause 7.4 of TS 34.108.

System Information Block type 11 nor 12 does not include Traffic Volume measurement system information.

Test Procedure

The UE is brought to the CELL_DCH state after a successful incoming call attempt. The SS follows the procedure in TS 34.108 clause 7.1.3 (Mobile Terminated), to set up a user RAB, but with the default RAB replaced by the one described in 34.108, clause 6.10.2.4.1.26: Interactive or background / UL: 64 DL: 64 kbps / PS RAB + UL: 3.4 DL: 3.4 kbps SRBs for DCCH. The SS limits the UE allowed Uplink transport format combinations according to the ‘Restricted UL TFCIs’, using the RRC Transport Format Combination control procedure. The radio bearer is placed into UE test

loop mode 1 described in TS 34.109 clause 5.3. SS configures UE's transport channel traffic volume to exceeds threshold. SS sends to UE RRC: MEASUREMENT CONTROL messages, which includes in addition to measurement identity traffic volume measurement control parameters e.g. uplink transport channel type and identity and reporting threshold for events 4a, and after 'time to trigger' UE sends RRC: MEASUREMENT REPORT message to SS. SS does not respond and after 'pending time after trigger' UE sends again same RRC: MEASUREMENT REPORT message. SS configures UE's transport channel load decreases to zero and sends UE RRC: MEASUREMENT CONTROL messages, which includes in addition to measurement identity traffic volume measurement control parameters e.g. uplink transport channel type and identity and reporting threshold for event 4b. Event 4b triggers and after 'time to trigger' UE sends RRC: MEASUREMENT REPORT message to SS. SS does not respond and after 'pending time after trigger' UE sends again same RRC: MEASUREMENT REPORT message. SS increases transport channel traffic volume to exceeds threshold. Event 4a is triggered and after 'time to trigger' UE sends RRC: MEASUREMENT REPORT message to SS. SS decreases transport channel traffic volume to zero. Event 4b is triggered and after 'time to trigger' UE sends RRC: MEASUREMENT REPORT message to SS. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PAGING TYPE1 | The SS transmits the message, which includes a allocated identity (P-TMSI). |
| 1a | → | | RRC CONNECTION REQUEST | |
| 1b | ← | | RRC CONNECTION SETUP | |
| 1c | → | | RRC CONNECTION SETUP COMPLETE | |
| 1d | → | | SERVICE REQUEST | |

| 1f | → | | AUTHENTICATION AND CIPHERING RESPONSE | |
| 1g | ← | | SECURITY MODE COMMAND | |
| 1h | → | | SECURITY MODE COMPLETE | |
| 1i | ← | | ACTIVATE RB TEST MODE | TC |
| 1j | → | | ACTIVATE RB TEST MODE COMPLETE | |
| 1k | ← | | RADIO BEARER SETUP | RRC RAB SETUP<br>See specific message contents for this message |
| 1l | → | | RADIO BEARER SETUP COMPLETE | |
| 1la | ← | | TRANSPORT FORMAT COMBINATION CONTROL (DCCH) | The SS transmits the message, to setup the needed traffic for the test purpose. |
| 1m | ← | | CLOSED UE TEST LOOP | TC<br>UE Test Loop Mode1 |
| 1n | → | | CLOSED UE TEST LOOP COMPLETE | TC |
| 1o | | | | SS configures transport channel traffic volume so as to exceed threshold |
| 2 | ← | | MEASUREMENT CONTROL | SS provides Traffic Volume measurement criteria (event 4a) to UE. |
| 3 | | | Void | |
| 4 | → | | MEASUREMENT REPORT | UE's transport channel is loaded. UE reports that Traffic Volume measurement event 4A is triggered. |
| 5 | → | | MEASUREMENT REPORT | UE repeats message after 2100 ms. |
| 5a | | | | UE's transport channel traffic volume decreases to zero. |
| 5b | ← | | MEASUREMENT CONTROL | SS provides Traffic Volume measurement criteria (event 4b) to UE. |
| 6 | → | | MEASUREMENT REPORT | UE reports that Traffic Volume measurement event 4B is triggered. |
| 7 | → | | MEASUREMENT REPORT | UE repeats message after 2100 ms. |
| 7a | | | | SS increases transport channel traffic volume so as to exceed threshold |
| 7b | → | | MEASUREMENT REPORT | IE "Measurement Identity" is set to "15". |
| 7c | | | | UE's transport channel traffic volume decreases to zero. |
| 7d | → | | MEASUREMENT REPORT | IE "Measurement Identity" is set to "14". |
| 8 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Content

PAGING TYPE 1 (Step 1)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| Paging record list | Only 1 entry |
| Paging record | |
| CHOICE Used paging identity | CN identity |
| - Paging cause | Terminating Call with one of the supported services |
| - CN domain identity | PS Domain |
| - CHOICE UE Identity | p-TMSI |
| - p-TMSI | Allocated identity during the attach procedure |
| BCCH modification info | Not Present |

RRC CONNECTION REQUEST (Step 1a)

| Information Element | Value/remark |
|---|---|
| Message type | |
| Initial UE identity | Same as the IMSI stored in the TEST USIM card, or the registered TMSI or P-TMSI |
| Establishment Cause | Check to see if it is set to the same value as "Paging Cause" IE in the PAGING TYPE 1 message transmitted on step 1 |
| Protocol Error Indicator | Check to see if it is set to FALSE |
| Measured results on RACH | Not checked. |

TRANSPORT FORMAT COMBINATION CONTROL (Step 1 la )

| **Information Element** | **Value/remark** |
|---|---|
| TrCH information elements | |
| -DPCH/PUSCH TFCS uplink in uplink | |
| - Allowed TFI | 0,1,5,6 |

MEASUREMENT CONTROL (Step 2)

| **Information Element** | **Value/remark** |
|---|---|
| Measurement Identity | 15 |
| Measurement Command | Setup |
| Measurement Reporting Mode | |
| - Measurement Reporting Transfer Mode | Acknowledged Mode RLC |
| - Periodic Reporting / Event Trigger Reporting Mode | Event Trigger |
| Additional measurements list | Not Present |
| CHOICE measurement type | |
| - Traffic volume measurement objects | |
| - Uplink transport channel type | DCH |
| - UL target transport channel ID | 1 |
| - Traffic volume measurement quantity | |
| - Measurement quantity | RLC buffer payload |
| - Traffic volume reporting quantity | |
| - RLC Buffer Payload for each RB | TRUE |
| - Average of RLC Buffer Payload for each RB | FALSE |
| - Variance of RLC Buffer Payload for each RB | FALSE |
| - Measurement validity | |
| - UE state | CELL_DCH |
| - Traffic volume measurement reporting criteria | |
| - Uplink transport channel type | Not present |
| - UL Transport Channel ID | Not present |
| - Traffic volume event identity | 4a |
| - Reporting threshold | 256 |
| - Time to trigger | 100 |
| - Pending time after trigger | 2000 |
| - Tx interruption after trigger | Not present |

MEASUREMENT CONTROL (Step 5b)

| Information Element | Value/remark |
|---|---|
| Measurement Identity | 14 |
| Measurement Command | Setup |
| Measurement Reporting Mode | |
| - Measurement Reporting Transfer Mode | Acknowledged Mode RLC |
| - Periodic Reporting / Event Trigger Reporting Mode | Event Trigger |
| Additional measurements list | Not Present |
| CHOICE measurement type | |
| - Traffic volume measurement objects | |
| - Uplink transport channel type | DCH |
| - UL target transport channel ID | 1 |
| - Traffic volume measurement quantity | |
| - Measurement quantity | RLC buffer payload |
| - Traffic volume reporting quantity | |
| - RLC Buffer Payload for each RB | TRUE |
| - Average of RLC Buffer Payload for each RB | FALSE |
| - Variance of RLC Buffer Payload for each RB | FALSE |
| - Measurement validity | |
| - UE state | CELL_DCH |
| - Traffic volume measurement reporting criteria | |
| - Uplink transport channel type | Not present |
| - UL Transport Channel ID | Not present |
| - Traffic volume event identity | 4b |
| - Reporting threshold | 32 |
| - Time to trigger | 100 |
| - Pending time after trigger | 2000 |
| - Tx interruption after trigger | Not present |

MEASUREMENT REPORT (Step 4, step 5 and step 7b)

| **Information Element** | **Value/remark** |
|---|---|
| Measurement identity | Check to see if set to 15 |
| Measured Results | |
| - CHOICE measurement | Check to see if set to "Traffic volume measured results list" |
| - Traffic volume measurement results | |
| - RB Identity | 20 |
| - RLC Buffers Payload | Check to see if the value is above the threshold |
| - Average of RLC Buffer Payload | Check to see if this IE is absent |
| - Variance of RLC Buffer Payload | Check to see if this IE is absent |
| Measured Results on RACH | Not checked |
| Additional Measured results | Not checked |
| Event Results | |
| - Uplink transport channel type causing the event | Check to see if set to "DCH" |
| - UL transport channel identity | Check to see if set to "1" |
| - Traffic volume event identity | Check to see if set to "4a" |

MEASUREMENT REPORT (Step 6, step 7 and 7d)

| Information Element | Value/remark |
|---|---|
| Measurement identity | Check to see if set to 14 |
| Measured Results | |
| - CHOICE measurement | Check to see if set to "Traffic volume measured results list" |
| - Traffic volume measurement results | |
| - RB identity | Check that value is 20 |
| - RLC buffers payload | Check that value is below the threshold |
| Measured Results on RACH | Not checked |
| Additional Measured results | Not checked |
| Event Results | |
| - Uplink transport channel type causing the event | Check to see if set to "DCH" |
| - UL transport channel identity | Check to see if set to "1" |
| - Traffic volume event identity | Check to see if set to "4b" |

#### 8.4.1.30.5 Test Requirement

In steps 4, 5, 6, 7, 7b and 7d UE sends RRC: MEASUREMENT REPORT with correct measurement identity indication. RB identity and RLC buffers payload has correct values. Measurement identity, transport channel type, transport channel identity and event identity has to match with set values.

### 8.4.1.31 Measurement Control and Report: Inter-RAT measurement in CELL_DCH state.

#### 8.4.1.31.1 Definition

#### 8.4.1.31.2 Conformance requirement

A UE supporting both FDD (or TDD) and GSM shall be able to perform the GSM RSSI measurement and the GSM Initial BSIC identification measurement.

If, according to its capabilities, the UE requires compressed mode to perform GSM RSSI measurements, the UE shall perform GSM RSSI measurements in the gaps of a compressed mode pattern sequence specified for GSM RSSI measurement purpose.

If, according to its capabilities, the UE requires compressed mode to perform GSM Initial BSIC identification measurements, the UE shall perform GSM Initial BSIC identification in a compressed mode pattern sequence specified for Initial BSIC identification measurement purpose.

Reference

3GPP TS 25.133, clause 8.1.2.5; 3GPP TS 25.331, clauses 8.6.7.6, 14.3.2.

#### 8.4.1.31.3 Test Purpose

Purpose of this test is to verify that UE is capable to perform GSM RSSI and GSM Initial BSIC identification measurements.

#### 8.4.1.31.4 Method of test

Initial Condition

System Simulator: 1 UTRAN FDD cell (or TDD cell) and 2 GSM cells.

| Parameter | Unit | Cell 1 (GSM) | Cell 2 (GSM) |
|---|---|---|---|
| Test Channel | # | 1 | 2 |
| RF Signal Level | dBm | -70 | -85 |
| BCCH ARFCN | # | Value according to the GSM band under test (see 3GPP 34.123-1 table 6.5 for details on the ARFCN) | Value according to the GSM band under test (see 3GPP 34.123-1 table 6.5 for details on the ARFCN) |
| CELL identity | # | 0 | 1 |
| BSIC | # | BSIC1 | BSIC2 |

UE: CELL_DCH state, state 6-9 as specified in clause 7.4 of TS 34.108.

System Information Block type 11 nor 12 does not include Inter-RAT measurement system information.

### Related ICS/IXIT statements

- Compressed mode required yes/no
- UE supports GSM-P, GSM-E, GSM-DCS, GSM-450, GSM-480, GSM-PCS, GSM-850.

### Test Procedure

The UE is brought to the CELL_DCH state after a successful outgoing call attempt. If the UE requires compressed mode (refer ICS/IXIT), the SS sends a PHYSICAL CHANNEL RECONFIGURATION message to the UE to configure the compressed mode pattern sequence parameters. Two compressed mode patterns are configured, according to the message specified below. When the PHYSICAL CHANNEL RECONFIGURATION COMPLETE is received from the UE, the SS sends a MEASUREMENT CONTROL message.

The first RRC: MEASUREMENT CONTROL message is used to provide measurement control parameters (GSM RSSI) to the UE and to start compressed mode for the measurement if required according to the UE capabilities. The UE replies according to request by sending RRC: MEASUREMENT REPORT messages periodically to SS. Reporting period is 4000 ms.

After two RRC: MEASUREMENT REPORT messages, the SS sends a second RRC: MEASUREMENT CONTROL message to start GSM Initial BSIC identification measurement. The UE replies similarly as in GSM RSSI measurement case but now with a period of 12000ms.

The SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is brought to the CELL_DCH state in the cell 1. If the UE does not require compressed mode (refer ICS/IXIT), then goto step 4. |
| 2 | ← | | PHYSICAL CHANNEL RECONFIGURATION | Compressed mode pattern sequence parameters are loaded to UE. |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 4 | ← | | MEASUREMENT CONTROL | SS provides GSM RSSI measurement control parameters to UE. If the UE requires compressed mode (refer ICS/IXIT), compressed mode for GSM RSSI measurement is started. |
| 5 | → | | MEASUREMENT REPORT | UE reports measurement results of GSM RSSI measurement to SS. |
| 6 | → | | MEASUREMENT REPORT | Next periodical measurement report. |
| 7 | ← | | MEASUREMENT CONTROL | SS provides GSM Initial BSIC identification measurement control parameters to UE. If the UE requires compressed mode (refer ICS/IXIT),compressed mode for GSM Initial BSIC identification measurement is started. |
| 8 | → | | MEASUREMENT REPORT | UE reports measurement results of GSM Initial BSIC identification measurement to SS. |
| 9 | → | | MEASUREMENT REPORT | Next periodical measurement report. |
| 10 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Content

PHYSICAL CHANNEL RECONFIGURATION (Step 2)

Use the same message sub-type as in TS 34.108 titled "Speech in CS", with Scrambling code change set to Default1 and with the following exceptions:

| Information Element | Value/remark | Version |
|---|---|---|
| Downlink information common for all radio links | | |
| - DPCH compressed mode info | | |

| - Observed time difference to GSM cell | Check that not present | R99 and Rel-4 only |
| Event results | Check that not present | |

MEASUREMENT REPORT (Step 9)

Either:

| Information Element | Value/remark | Version |
|---|---|---|
| Measurement identity | Check to see if set to 15 | |
| Measured Results | | |
| - CHOICE measurement | Check to see if set to "Inter-RAT measured results list" | |
| - Inter-RAT measured result list | | |
| - CHOICE system | GSM | |
| - Measured GSM cells | | |
| - GSM carrier RSSI | Not checked | |
| CHOICE BSIC | Verified BSIC | |
| - Inter-RAT cell id | Check that is set to "0" or “1” | |
| - Observed time difference to GSM cell | Check that not present | R99 and Rel-4 only |
| - GSM carrier RSSI | Not checked | |
| CHOICE BSIC | Verified BSIC | |
| - Inter-RAT cell id | Check that is set to "1" or “0” (the cell id shall be different from the first reported cell id) | |
| - Observed time difference to GSM cell | Check that not present | R99 and Rel-4 only |
| Measured results on RACH | Check that not present | |
| Additional Measured results | Check that not present | |
| Event results | Check that not present | |

Or:

| Information Element | Value/remark | Version |
|---|---|---|
| Measurement identity | Check to see if set to 15 | |
| Measured Results | Check that not present | |
| Measured results on RACH | Check that not present | |
| Additional Measured results | Check that not present | |
| Event results | Check that not present | |

MEASUREMENT REPORT (Step 9) (1.28 Mcps TDD)

Either:

| Information Element | Value/remark | Version |
|---|---|---|
| Measurement identity | Check to see if set to 15 | |
| Measured Results | Check that not present | |
| Measured results on RACH | Check that not present | |
| Additional Measured results | Check that not present | |
| Non Critical Extensions | | |
| - Additional Measured results - LCR | | |
| - CHOICE measurement | Check to see if set to "Inter-RAT measured results list" | |
| - Inter-RAT measured result list | | |
| - CHOICE system | GSM | |
| - Measured GSM cells | | |
| - GSM carrier RSSI | Not checked | |
| CHOICE BSIC | Verified BSIC | |
| - Inter-RAT cell id | Check that is set to "0" or “1” | |
| - Observed time difference to GSM cell | Check that not present | R99 and Rel-4 only |
| - GSM carrier RSSI | Not checked | |
| CHOICE BSIC | Verified BSIC | |
| - Inter-RAT cell id | Check that is set to "1" or “0” (the cell id shall be different from the first reported cell id) | |
| - Observed time difference to GSM cell | Check that not present | R99 and Rel-4 only |
| Event results | Check that not present | |

Or:

| Information Element | Value/remark | Version |
|---|---|---|
| Measurement identity | Check to see if set to 15 | |
| Measured Results | Check that not present | |
| Measured results on RACH | Check that not present | |
| Additional Measured results | Check that not present | |
| Event results | Check that not present | |

#### 8.4.1.31.5 Test Requirement

In step 5 and step 6 UE reports correctly GSM RSSI values.

In step 8 UE reports correctly BSIC values.

In step 9 UE sends the next periodical report.

Reporting period is the requested one.

### 8.4.1.32 Void

### 8.4.1.33 Measurement Control and Report: Inter-RAT measurement, event 3a

#### 8.4.1.33.1 Definition

#### 8.4.1.33.2 Conformance requirement

1. When this event is ordered by UTRAN in a MEASUREMENT CONTROL message the UE shall send a report when the estimated quality of the currently used frequency is below the value of the IE "Threshold own system" and the hysteresis and time to trigger conditions are fulfilled and the estimated quality of the other system is above the value of the IE "Threshold other system" and the hysteresis and time to trigger conditions are fulfilled.

2. If the IE "DPCH Compressed Mode Status Info" is present, [in the MEASUREMENT CONTROL message]:

   - after the time indicated by IE "TGPS reconfiguration CFN" has elapsed:

     - activate the pattern sequence stored in the variable TGPS_IDENTITY corresponding to each IE "TGPSI" for which the "TGPS status flag" is set to "activate" at the time indicated by IE "TGCFN"; and

     - begin the inter-frequency and/or inter-RAT measurements corresponding to the pattern sequence measurement purpose of each activated pattern sequence;

     - if the values of IE "TGPS reconfiguration CFN" and IE "TGCFN" are equal:

       - start the concerned pattern sequence immediately at that CFN;

   - not alter pattern sequences stored in variable TGPS_IDENTITY, but not identified in IE "TGPSI"

Alternative 3 for R99 and Rel-4 only:

3. The UE shall perform GSM RSSI measurements in the gaps of compressed mode pattern sequence specified for GSM RSSI measurement purpose. The UE shall perform Initial BSIC identification in compressed mode pattern sequence specified for Initial BSIC identification measurement purpose. The UE shall be able to measure the "Observed time difference to GSM cell" during a compressed mode pattern sequence configured for this purpose. The UE shall perform BSIC re-confirmation in compressed mode pattern sequence specified for BSIC re-confirmation measurement purpose.

Alternative 3a for Rel-5 onwards:

3a. The UE shall perform GSM RSSI measurements in the gaps of compressed mode pattern sequence specified for GSM RSSI measurement purpose. The UE shall perform Initial BSIC identification in compressed mode pattern sequence specified for Initial BSIC identification measurement purpose. The UE shall perform BSIC re-confirmation in compressed mode pattern sequence specified for BSIC re-confirmation measurement purpose.

4. If the IE "Inter-RAT measurement quantity" is received in a MEASUREMENT CONTROL message and CHOICE system is GSM, the UE shall:

- if IE "BSIC verification required" is set to "required", for cells that match any of the BCCH ARFCN and BSIC combinations in the list of inter-RAT cells that the UE has received in IE "Inter-RAT cell info list", and that has a "verified" BSIC:
  - report measurement quantities according to IE "inter-RAT reporting quantity" taking into account the restrictions defined in TS 25.331 clause 8.6.7.6;
  - trigger inter-RAT events according to IE "inter-RAT measurement reporting criteria"; and
- perform event evaluation for event-triggered reporting after BSIC has been verified for a GSM cell
- indicate non-verified BSIC for a GSM cell in the "Inter-RAT measured results list" IE

5. The UE shall include measured results in MEASUREMENT REPORT as specified in the IE "Inter-RAT reporting quantity".

Alternative 6 for R99 and Rel-4 only:

6. If IE "Observed time difference to GSM cell Reporting indicator " is set to "TRUE" [, the UE shall]:

   include optional IE "Observed time difference to GSM cell" with the value set to the time difference to that GSM cell for the GSM cells that have a BSIC that is "verified", and that match any of the BCCH ARFCN and BSIC combinations in the list of inter-RAT cells that the UE has received in IE "Inter-RAT cell info list".

   - if IE "GSM Carrier RSSI" is set to "TRUE"[, the UE shall]:
     - include optional IE "GSM Carrier RSSI" with a value set to the measured RXLEV to that GSM cell in IE "Inter-RAT measured results list".
   - if the BSIC of reported GSM cell is "verified"[, the UE shall]:
     - set the CHOICE BSIC to "Verified BSIC" and IE "inter-RAT cell id" to the value that GSM cell had in the IE "Inter-RAT cell info list";

Alternative 6a for Rel-5 onwards:

6a. If

- IE "GSM Carrier RSSI" is set to "TRUE"[, the UE shall]:
  - include optional IE "GSM Carrier RSSI" with a value set to the measured RXLEV to that GSM cell in IE "Inter-RAT measured results list".
- if the BSIC of reported GSM cell is "verified"[, the UE shall]:
  - set the CHOICE BSIC to "Verified BSIC" and IE "inter-RAT cell id" to the value that GSM cell had in the IE "Inter-RAT cell info list";

7. If the IE "Reporting Cell Status" is received, the UE shall set the IE "Measured Results" in MEASUREMENT REPORT as follows.
   - the maximum number of the IE "Cell Measured Results" to be included in the IE "Measured Results" is the number specified in "Reporting Cell Status".

Reference

3GPP TS 25.331 clauses 8.4.1.3, 8.6.7.5, 8.6.7.6, 8.6.7.9, 14.3.1.1, 14.3.2.1, 14.3.2.2, 14.3.2.3.

### 8.4.1.33.3 Test Purpose

1. To confirm that the UE starts compressed mode and inter-RAT measurements when so required by the network in a MEASUREMENT CONTROL message.
2. To confirm that the UE sends MEASUREMENT REPORT message if event 3a is configured, if the quality of the currently used UTRAN frequency is below a given threshold and the estimated quality of the other system is above a certain threshold.

3. To confirm that the hysteresis and time to trigger behaviours for event 3a are correctly implemented.

4. To confirm that the UE verifies the BSIC of the cell triggering the event if so required by UTRAN and if the proper compressed mode patterns have been configured in the UE by UTRAN.

5. To confirm that the content of the MEASUREMENT REPORT sent by the UE is according to what was required by UTRAN.

NOTE: Test purpose 1 verifies conformance requirement 1 and 2.

NOTE: Test purpose 2 and 3 verifies conformance requirement 1.

NOTE: Test purpose 4 verifies conformance requirement 2, 3 and 4.

NOTE: Test purpose 5 verifies conformance requirement 4, 5, 6 and 7.

### 8.4.1.33.4 Method of test

#### Initial Condition

System simulator: 1 UTRAN FDD cell (or TDD cell) and 3 GSM cells. The initial configurations of the 3 cells in the SS shall follow the values indicated in the column marked T0. The table is found in "Test procedure". The UTRAN FDD cell shall use UARFCN according to the band under test except in the case of where FDD band VIII is tested and GSM900 is used for the Inter-RAT cells, then “High Range” test frequency for Band VIII is used instead, to avoid the test channels overlapping.

UE: CS-DCCH+DTCH_DCH (State 6-9) or PS-DCCH+DTCH_DCH (State 6-10) in cell 1 (UTRA) as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE.

#### Related ICS/IXIT statements

- Compressed mode required yes/no

- UE supports GSM-P, GSM-E, GSM-DCS, GSM-450, GSM-480, GSM-PCS, GSM-850.

#### Test procedure

**Table 8.4.1.33.4-1**

| Parameter | Unit | Cell 1 (GSM) | | | | | Cell 2 (GSM) | | | | | Cell 3 (GSM) | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T3 | T4 | T0 | T1 | T2 | T3 | T4 | T0 | T1 | T2 | T3 | T4 |
| Test Channel | # | GSM Ch.1 | | | | | GSM Ch.2 | | | | | GSM Ch.3 | | | | |
| BCCH ARFCN | # | Value according to the GSM band under test (see 3GPP 34.123-1 table 6.5 for details on the ARFCN) | | | | | Value according to the GSM band under test (see 3GPP 34.123-1 table 6.5 for details on the ARFCN) | | | | | Value according to the GSM band under test (see 3GPP 34.123-1 table 6.5 for details on the ARFCN) | | | | |
| CELL identity | # | 0 | | | | | 1 | | | | | 2 | | | | |
| BSIC | # | BSIC 1 | | | | | BSIC 2 | | | | | BSIC 3 | | | | |
| RF Signal Level | dBm | -85 | -85 | -70 | -76 | -70 | -85 | -85 | -85 | -84 | -84 | -90 | -90 | -90 | -90 | -90 |

**Table 8.4.1.33.4-2**

| Parameter | Unit | Cell 1 (UTRA) | | | | |
|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T3 | T4 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | | | |
| CPICH Ec (FDD) | dBm/3.84Mhz | -60 | -80 | -80 | -80 | -60 |
| P-CCPCH (TDD) | dBm | -60 | -80 | -80 | -80 | -60 |

The two tables above illustrate the downlink power to be applied for the two cells at various instants of the test execution. Column marked "T0" denotes the initial conditions, while columns marked "T1", "T2", "T3" and "T4" indicate the values to be applied subsequently.

The UE is initially in CELL_DCH state as specified in clause 7.4 of TS 34.108. UTRA cell 1 is the only cell in the active set of the UE. If the UE requires compressed mode (refer ICS/IXIT), the SS sends a PHYSICAL CHANNEL RECONFIGURATION message to the UE to configure the compressed mode pattern sequence parameters to the UE. Three compressed mode patterns are configured, according to the message specified below. When the PHYSICAL CHANNEL RECONFIGURATION COMPLETE is received from the UE, the SS sends a MEASUREMENT CONTROL message to the UE, to set up inter-RAT measurements. Event 3a is set up in this message, and if the UE requires compressed mode (refer ICS/IXIT), compressed mode is activated.

At instant T1, the CPICH Ec drops as described in table 8.4.1.33.4-2.

At instant T2, the RF signal for GSM cell 1 increases, and crosses the threshold for the other system defined for event 3a.

After reception of the MEASUREMENT REPORT message, at instant T3, the RF signal strength for GSM cell 2 increases but remains below the threshold for the other system for event 3a. During that time, the RF signal strength for GSM cell 1 decreases, but remains above the releasing condition for event 3a.

At instant T4, the RF signal strength for GSM cell 1 increases above the threshold for the other system for event 3a+hysteresis. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is brought to the CELL_DCH state in the cell 1. If the UE does not require compressed mode (refer ICS/IXIT), then goto step 4. |
| 2 | ← | | PHYSICAL CHANNEL RECONFIGURATION | Compressed mode pattern sequence parameters are loaded to UE. |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 4 | ← | | MEASUREMENT CONTROL | SS configures event 3a in the UE. If the UE requires compressed mode (refer ICS/IXIT), compressed mode is started. |
| 5 | | | | SS re-adjusts the downlink transmission power settings according to columns "T1" in tables 8.4.1.33.4-1 and 8.4.1.33.4-2. |
| 6 | | | | SS waits for approximately 10 seconds and verifies that no MEASUREMENT REPORT messages are detected on uplink DCCH. |
| 7 | | | | SS re-adjusts the downlink transmission power settings according to columns "T2" in tables 8.4.1.33.4-1 and 8.4.1.33.4-2. |
| 8 | → | | MEASUREMENT REPORT | After about 2s, the UE sends a MEASUREMENT REPORT to SS triggered by event 3a. |
| 9 | | | | SS re-adjusts the downlink transmission power settings according to columns "T3" in tables 8.4.1.33.4-1 and 8.4.1.33.4-2. |
| 10 | | | | SS waits for approximately 10 seconds and verifies that no MEASUREMENT REPORT messages are detected on uplink DCCH. |
| 11 | | | | SS re-adjusts the downlink transmission power settings according to columns "T4" in tables 8.4.1.33.4-1 and 8.4.1.33.4-2. |
| 12 | | | | SS waits for approximately 10 seconds and verifies that no MEASUREMENT REPORT messages are detected on uplink DCCH. |
| 13 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Content

PHYSICAL CHANNEL RECONFIGURATION (Step 2)

Use the same message sub-type in clause 9 of TS 34.108 titled "Non speech in CS" or "Speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS, with Scrambling code change set to Default1 and with the following exceptions:

| Information Element | Value/remark | Version |

#### 8.4.1.33.5 Test requirement

The UE shall not send any measurement report between instants T1 and T2.

Event 3a shall be triggered in the UE (i.e. the transmission of the MEASUREMENT REPORT) after instant T2.

Between instants T2 and T3, no MEASUREMENT REPORT message shall be received from the UE (since the hysteresis condition for triggering event 3a is not fulfilled).

No MEASUREMENT REPORT message shall be received from the UE after instant T4 (since the signal strength for cell 1 has not dropped under Threshold for event 3a-hysteresis).

### 8.4.1.34 Measurement Control and Report: Inter-RAT measurement, event 3b

#### 8.4.1.34.1 Definition

#### 8.4.1.34.2 Conformance requirement

If the IE "Inter-RAT cell info list" is received in a MEASUREMENT CONTROL message, the UE shall update the variable CELL_INFO_LIST accordingly and in the following order. The UE shall:

- if the IE "Removed Inter-RAT cells" is received, at the position indicated by the IE "Inter-RAT cell id":
  - clear the cell information stored in the variable CELL_INFO_LIST; and
  - mark the position "vacant";

- if the IE "New Inter-RAT cells" is received, for each cell, and in the same order as the cells appear in the IE:
  - update the variable CELL_INFO_LIST as follows:
    - if the IE "Inter-RAT cell id" is received:
      - store received cell information at this position in the Inter-RAT cell info list in the variable CELL_INFO_LIST, possibly overwriting any existing information in this position; and
      - mark the position "occupied";
    - if the IE "Inter-RAT cell id" is not received:
      - store the received cell information at the first vacant position in ascending order in the Inter-RAT cell info list in the variable CELL_INFO_LIST; and
- mark the position as "occupied";

When event 3b is configured in the UE within a measurement, the UE shall:

1> if the other RAT is GSM, and if IE "BSIC verification required" is set to "required":

2> if equation 1 below has been fulfilled for a time period indicated by "time to trigger" for one or several GSM cells that match any of the BCCH ARFCN and BSIC combinations considered in that inter-RAT measurement:

3> if the inter-RAT cell id of any of those GSM cell is not stored in the variable TRIGGERED_3B_EVENT:

4> store the inter-RAT cell ids of the GSM cells that triggered the event and that were not previously stored in the variable TRIGGERED_3B_EVENT into that variable;

4> send a measurement report with IEs set as below:

5> set in "inter-RAT measurement event result": "inter-RAT event identity" to "3b", "CHOICE BSIC" to "verified BSIC" and "Inter-RAT cell id" to the GSM cells that triggered the event (worst one first);

5> set the IE "measured results" and the IE "additional measured results" according to TS 25.331 subclause 8.4.2 , not taking into account the cell individual offset;

2> if equation 2 below is fulfilled for a GSM cell whose inter-RAT cell id is stored in the variable TRIGGERED_3B_EVENT:

3> remove the inter-RAT cell id of that GSM cell from the variable TRIGGERED_3B_EVENT.

1> if the other RAT is GSM, and if IE "BSIC verification required" is set to "not required":

2> if equation 1 below has been fulfilled for a time period indicated by "time to trigger" for one or several of the BCCH ARFCNs considered in that inter-RAT measurement:

3> if any of those BCCH ARFCN is not stored into the variable TRIGGERED_3B_EVENT:

4> store the BCCH ARFCNs that triggered the event and that were not previously stored in the variable TRIGGERED_3B_EVENT into that variable;

4> send a measurement report with IEs set as below:

5> set in "inter-RAT measurement event result": "inter-RAT event identity" to "3b", "CHOICE BSIC" to "non verified BSIC" and "BCCH ARFCN" to BCCH ARFCNs that triggered the event (worst one first);

5> set the IE "measured results" and the IE "additional measured results" according to 8.4.2, not taking into account the cell individual offset;

2> if equation 2 below is fulfilled for a BCCH ARFCN that is stored in the variable TRIGGERED_3B_EVENT:

3> remove that BCCH ARFCN from the variable TRIGGERED_3B_EVENT.

Triggering condition:

Equation 1:

$$M_{Other\ \ RAT} + CIO_{Other\ \ RAT} \leq T_{Other\ \ RAT} - H_{3b} / 2$$

The variables in the formula are defined as follows:

$M_{Other\ RAT}$ is the measurement quantity for the cell of the other system.

$CIO_{Other\ RAT}$ is the cell individual offset for the cell of the other system.

$T_{Other\ RAT}$ is the absolute threshold that applies for the other system in that measurement.

$H_{3b}$ is the hysteresis parameter for event 3b.

Leaving triggered state condition:

Equation 2:

$$M_{Other\ \ RAT} + CIO_{Other\ \ RAT} > T_{Other\ \ RAT} + H_{3b} / 2$$

The variables in the formula are defined as follows:

$M_{Other\ RAT}$ is the measurement quantity for the cell of the other system. $M_{Other\ RAT}$ is expressed in dBm.

$CIO_{Other\ RAT}$ is the cell individual offset for the cell of the other system.

$T_{Other\ RAT}$ is the absolute threshold that applies for the other system in that measurement.

$H_{3b}$ is the hysteresis parameter for event 3b.

### Reference

3GPP TS 25.331 clause 8.6.7.3, 14.3.1.2

### 8.4.1.34.3 Test Purpose

1 To confirm that the UE sends MEASUREMENT REPORT message if event 3b is configured, if the estimated quality of the other system is below a given threshold.

2 To confirm that the hysteresis and time to trigger behaviours for event 3b are correctly implemented. To confirm that the UE updates the list of inter-RAT cells it stores according to what is ordered in the MEASUREMENT CONTROL messages received from UTRAN.

### 8.4.1.34.4 Method of test

### Initial Condition

System simulator: 1 UTRAN FDD cell (or TDD cell) and 3 GSM cells. The initial configurations of the 3 GSM cells in the SS shall follow the values indicated in the column marked T0. The table is found in "Test procedure". The UTRAN FDD cell shall use UARFCN according to the band under test except in the case of where FDD band VIII is tested and GSM900 is used for the Inter-RAT cells, then “High Range” test frequency for Band VIII is used instead, to avoid the test channels overlapping.

UE: CS-DCCH+DTCH_DCH (State 6-9) or PS-DCCH+DTCH_DCH (State 6-10) in cell 1 (UTRA) as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE.

### Related ICS/IXIT statements

- Compressed mode required yes/no

- UE supports GSM-P, GSM-E, GSM-DCS, GSM-450, GSM-480, GSM-PCS, GSM-850.

Test procedure

**Table 8.4.1.34.4-1**

| Parameter | Unit | Cell 1 (GSM) | | Cell 2 (GSM) | | Cell 3 (GSM) | |
|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 | T0 | T1 |
| Test Channel | # | GSM Ch.1 | | GSM Ch.2 | | GSM Ch.3 | |
| BCCH ARFCN | # | Value according to the GSM band under test (see 3GPP 34.123-1 table 6.5 for details on the ARFCN) | | Value according to the GSM band under test (see 3GPP 34.123-1 table 6.5 for details on the ARFCN) | | Value according to the GSM band under test (see 3GPP 34.123-1 table 6.5 for details on the ARFCN) | |
| CELL identity | # | 0 | | 1 | | 2 | |
| BSIC | # | BSIC 1 | | BSIC 2 | | BSIC 3 | |
| RF Signal Level | dBm | -70 | -90 | -70 | -70 | -90 | -90 |

The table above illustrate the downlink power to be applied for the cells at various instants of the test execution. Column marked "T0" denotes the initial conditions, while column marked "T1" indicates the values to be applied subsequently.

The UE is initially in CELL_DCH state as specified in clause 7.4 of TS 34.108. UTRA cell 1 is the only cell in the active set of the UE. If the UE requires compressed mode (refer ICS/IXIT), the SS sends a PHYSICAL CHANNEL RECONFIGURATION message to the UE to configure the compressed mode pattern sequence parameters to the UE. Three compressed mode patterns are configured, according to the message specified below. When the PHYSICAL CHANNEL RECONFIGURATION COMPLETE is received from the UE, the SS sends a MEASUREMENT CONTROL message to the UE, to set up inter-RAT measurements. Event 3b is set up in this message, and if the UE requires compressed mode (refer ICS/IXIT), compressed mode is activated. The monitored GSM cells at measurement establishment are GSM cells 1 and 2.

At instant T1, the RF signal strength for GSM cell 1 drops as described in table 8.4.1.34.4-1.

When the MEASUREMENT REPORT has been received by the SS, a MEASUREMENT CONTROL message is sent to the UE, to add GSM cell 3 to the monitored GSM cells.

A second MEASUREMENT REPORT triggered by event 3b shall be received shortly after by the SS. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is brought to the CELL_DCH state in the cell 1. If the UE does not require compressed mode (refer ICS/IXIT), then goto step 4. |
| 2 | ← | | PHYSICAL CHANNEL RECONFIGURATION | Compressed mode pattern sequence parameters are loaded to UE. |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 4 | ← | | MEASUREMENT CONTROL | SS configures event 3b in the UE. If the UE requires compressed mode (refer ICS/IXIT), compressed mode is started. |
| 5 | | | | SS waits for approximately 10 seconds and verifies that no MEASUREMENT REPORT messages are detected on uplink DCCH. |
| 6 | | | | SS re-adjusts the downlink transmission power settings according to columns "T1" in tables 8.4.1.34.4-1. |
| 7 | → | | MEASUREMENT REPORT | After about 1020m s, the UE sends a MEASUREMENT REPORT to SS triggered by event 3b. |
| 8 | ← | | MEASUREMENT CONTROL | SS adds GSM cell 3 to the list of the monitored GSM cells. |
| 9 | → | | MEASUREMENT REPORT | After about 5.8 s, the UE sends a MEASUREMENT REPORT to SS triggered by event 3b. |
| 10 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Content

PHYSICAL CHANNEL RECONFIGURATION (Step 2)

Use the same message sub-type in clause 9 of TS 34.108 titled "Non speech in CS" or "Speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS, with Scrambling code change set to Default1 and with the following exceptions:

| Event results | Check that the IE is included | |
| - CHOICE event result | Check that this is set to inter-RAT measurement event results | |
| - Inter-RAT event identity | Check that this is set to 3b | |
| - Cells to report (1 to <maxCellMeas>) | Check that <maxCellMeas> is set to 1 | |
| - CHOICE BSIC | Check that this is set to verified BSIC | |
| - Inter-RAT cell id | Check that this is set to 0. | |

MEASUREMENT CONTROL (Step 8)

| Information Element | Value/remark |
|---|---|
| Measurement Identity | 3 |
| Measurement Command | Modify |
| Measurement Reporting Mode | |
| - Measurement Reporting Transfer Mode | Not present |
| - Periodic Reporting / Event Trigger Reporting Mode | Not present |
| Additional measurements list | Not Present |
| CHOICE measurement type | |
| - inter-RAT measurement | |
| - inter-RAT measurement object list | |
| CHOICE Inter-RAT Cell Removal | Remove no inter-RAT cells |
| New inter-RAT cells (1 to <MaxCellMeas>) | |
| - inter-RAT cell id | Not present |
| CHOICE Radio Access Technology | GSM |
| - Cell individual offset | 0 |
| - Cell selection and re-selection info | Not present |
| - BSIC | BSIC3 |
| - Band indicator | GSM/DCS-1800 or GSM/PCS-1900 (dependent on band used) |
| - BCCH ARFCN | Value according to the GSM band under test (see 3GPP 34.123-1 table 6.5 for details on the ARFCN) |
| - Cell for measurement | Not present |
| - inter-RAT measurement quantity | Not present |
| CHOICE report criteria | |
| - Inter-RAT measurements reporting criteria | |
| - Parameters required for each event (1 to<maxMeasEvent>) | Not Present |
| Physical channel information elements | Not present |

MEASUREMENT REPORT (Step 9)

| Information Element | Value/remark | Version |
|---|---|---|
| Measurement identity | Check to see if set to 3 | |
| Measured Results | | |
| - CHOICE measurement | Check to see if set to "Inter-RAT measured results list" | |
| - Inter-RAT measured result list | | |
| - CHOICE system | GSM | |
| - Measured GSM cells | Check that measurement results for three GSM cells are included | |
| - GSM carrier RSSI | Check that measurement result is reasonable. RXLEV is mapped to a value between 0 and 63. The RSSI bits are numbered b0 to b5, where b0 is the least significant bit. When mapping the RXLEV value to the RSSI bit string, the first/ leftmost bit of the bit string contains the most significant bit. | |
| CHOICE BSIC | Check it is set to verified BSIC | |
| - inter-RAT cell id | Check that it is set to 1 | |
| - Observed time difference to GSM cell | Check that the IE is not included | R99 and Rel-4 only |
| - GSM carrier RSSI | Check that measurement result is reasonable | |
| CHOICE BSIC | Verified BSIC | |
| - inter-RAT cell id | Check that is set to 0 or 2. | |
| - Observed time difference to GSM cell | Check that the IE is not present | R99 and Rel-4 only |
| - GSM carrier RSSI | Check that measurement result is reasonable | |
| CHOICE BSIC | Verified BSIC | |
| - inter-RAT cell id | Check that is set to 0 or 2 and that this inter-RAT cell id is different from the two previous inter-RAT cell id. | |
| - Observed time difference to GSM cell | Check that the IE is not present | R99 and Rel-4 only |
| Measured results on RACH | Check that not present | |
| Additional Measured results | Check that not present | |
| Event results | Check that the IE is included | |
| - CHOICE event result | Check that this is set to inter-RAT measurement event results | |
| - Inter-RAT event identity | Check that this is set to 3b | |
| - Cells to report (1 to <maxCellMeas>) | Check that <maxCellMeas> is set to 1 | |
| - CHOICE BSIC | Check that this is set to verified BSIC | |
| - Inter-RAT cell id | Check that this is set to 2. | |

MEASUREMENT REPORT (Step 9) (1.28 Mcps TDD)

| Information Element | Value/remark | Version |
|---|---|---|
| Measurement identity | Check to see if set to 3 | |
| Measured Results | Check that not present | |
| Measured results on RACH | Check that not present | |
| Additional Measured results | Check that not present | |
| Non Critical Extensions | | |
| - Additional Measured results - LCR | | |
| - CHOICE measurement | Check to see if set to "Inter-RAT measured results list" | |
| - Inter-RAT measured result list | | |
| - CHOICE system | GSM | |
| - Measured GSM cells | Check that measurement results for three GSM cells are included | |
| - GSM carrier RSSI | Check that measurement result is reasonable. RXLEV is mapped to a value between 0 and 63. The RSSI bits are numbered b0 to b5, where b0 is the least significant bit. When mapping the RXLEV value to the RSSI bit string, the first/ leftmost bit of the bit string contains the most significant bit. | |
| CHOICE BSIC | Check it is set to verified BSIC | |
| - inter-RAT cell id | Check that it is set to 1 | |
| - Observed time difference to GSM cell | Check that the IE is not included | R99 and Rel-4 only |
| - GSM carrier RSSI | Check that measurement result is reasonable | |
| CHOICE BSIC | Verified BSIC | |
| - inter-RAT cell id | Check that is set to 0 or 2. | |
| - Observed time difference to GSM cell | Check that the IE is not present | R99 and Rel-4 only |
| - GSM carrier RSSI | Check that measurement result is reasonable | |
| CHOICE BSIC | Verified BSIC | |
| - inter-RAT cell id | Check that is set to 0 or 2 and that this inter-RAT cell id is different from the two previous inter-RAT cell id. | |
| - Observed time difference to GSM cell | Check that the IE is not present | R99 and Rel-4 only |
| Event results | Check that the IE is included | |
| - CHOICE event result | Check that this is set to inter-RAT measurement event results | |
| - Inter-RAT event identity | Check that this is set to 3b | |
| - Cells to report (1 to <maxCellMeas>) | Check that <maxCellMeas> is set to 1 | |
| - CHOICE BSIC | Check that this is set to verified BSIC | |
| - Inter-RAT cell id | Check that this is set to 2. | |

### 8.4.1.34.5 Test requirement

Between instants T0 and T1, the UE shall not send any MEASUREMENT REPORT message to the SS.

Event 3b shall be triggered in the UE (i.e. the transmission of the first MEASUREMENT REPORT message shall begin) after instant T1.

After the reception by the UE of the second MEASUREMENT CONTROL message, the UE shall begin to transmit the second MEASUREMENT REPORT message (since the signal strength for GSM cell 3 is below the threshold for triggering event 3b).

## 8.4.1.35 Measurement Control and Report: Inter-RAT measurement, event 3c

### 8.4.1.35.1 Definition

### 8.4.1.35.2 Conformance requirement

When event 3c is configured in the UE within a measurement, the UE shall:

1> if the other RAT is GSM, and if IE "BSIC verification required" is set to "required":

2> if equation 1 below has been fulfilled for a time period indicated by "time to trigger" for one or several GSM cells that match any of the BCCH ARFCN and BSIC combinations considered in that inter-RAT measurement:

3> if the inter-RAT cell id of any of those GSM cell is not stored in the variable TRIGGERED_3C_EVENT:

4> store the Inter-RAT cell ids of the GSM cells that triggered the event and that were not previously stored in the variable TRIGGERED_3C_EVENT into that variable;

4> send a measurement report with IEs set as below:

5> set in "inter-RAT measurement event result": "inter-RAT event identity" to "3c", "CHOICE BSIC" to "verified BSIC" and "Inter-RAT cell id" to the GSM cells that triggered the event (best one first);

5> set the IE "measured results" and the IE "additional measured results" according to 8.4.2, not taking into account the cell individual offset;

2> if equation 2 below is fulfilled for a GSM cell whose inter-RAT cell id is stored in the variable TRIGGERED_3C_EVENT:

3> remove the inter-RAT cell id of that GSM cell from the variable TRIGGERED_3C_EVENT.

1> if the other RAT is GSM, and if IE "BSIC verification required" is set to "not required":

2> if equation 1 below has been fulfilled for a time period indicated by "time to trigger" for one or several of the BCCH ARFCNs considered in that inter-RAT measurement:

3> if any of those BCCH ARFCN is not stored into the variable TRIGGERED_3C_EVENT:

4> store the BCCH ARFCNs that triggered the event and that were not previously stored in the variable TRIGGERED_3C_EVENT into that variable;

4> send a measurement report with IEs set as below:

5> set in "inter-RAT measurement event result": "inter-RAT event identity" to "3c", "CHOICE BSIC" to "non verified BSIC" and "BCCH ARFCN" to BCCH ARFCNs that triggered the event (best one first);

5> set the IE "measured results" and the IE "additional measured results" according to TS 25.331 subclause 8.4.2, not taking into account the cell individual offset;

2> if equation 2 is fulfilled for a BCCH ARFCN that is stored in the variable TRIGGERED_3C_EVENT:

3> remove that BCCH ARFCN from the variable TRIGGERED_3C_EVENT.

Triggering condition:

Equation 1:

$$M_{Other\ \ RAT} + CIO_{Other\ \ RAT} \geq T_{Other\ \ RAT} + H_{3c} / 2$$

The variables in the formula are defined as follows:

$M_{Other\ RAT}$ is the measurement quantity for the cell of the other system. $M_{Other\ RAT}$ is expressed in dBm.

$CIO_{Other\ RAT}$ is the cell individual offset for the cell of the other system.

$T_{Other\ RAT}$ is the absolute threshold that applies for the other system in that measurement.

$H_{3c}$ is the hysteresis parameter for event 3c.

Leaving triggered state condition:

Equation 2:

$$M_{Other\ \ RAT} + CIO_{Other\ \ RAT} < T_{Other\ \ RAT} - H_{3c}/2$$

The variables in the formula are defined as follows:

$M_{Other\ RAT}$ is the measurement quantity for the cell of the other system. $M_{Other\ RAT}$ is expressed in dBm.

$CIO_{Other\ RAT}$ is the cell individual offset for the cell of the other system.

$T_{Other\ RAT}$ is the absolute threshold that applies for the other system in that measurement.

$H_{3c}$ is the hysteresis parameter for event 3c.

Reference

3GPP TS 25.331 clauses 14.3.1.3, 8.4.2.2.

### 8.4.1.35.3 Test Purpose

1 To confirm that the UE sends MEASUREMENT REPORT message if event 3c is configured, and if the quality of the other system becomes better than the given threshold for event 3c.

2 To confirm that no other UE MEASUREMENT REPORT message is sent by the UE for a cell that has already triggered event 3c as long as the hysteresis condition for triggering once again event 3c has not been fulfilled.

### 8.4.1.35.4 Method of test

Initial Condition

System simulator: 1 UTRAN FDD cell (or TDD cell) and 2 GSM cells. The initial configurations of the 2 GSM cells in the SS shall follow the values indicated in the column marked T0. The table is found in "Test procedure".

UE: CELL CS-DCCH+DTCH_DCH (State 6-9) or PS-DCCH+DTCH_DCH (State 6-10) in cell 1 (UTRA) as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE.

Related ICS/IXIT statements

- Compressed mode required yes/no
- UE supports GSM-P, GSM-E, GSM-DCS, GSM-450, GSM-480, GSM-PCS, GSM-850.

Test procedure

**Table 8.4.1.35.4-1**

| Parameter | Unit | Cell 1 (GSM) | | | | Cell 2 (GSM) | | | |
|---|---|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T3 | T0 | T1 | T2 | T3 |
| Test Channel | # | GSM Ch.1 | | | | GSM Ch.2 | | | |
| BCCH ARFCN | # | Value according to the GSM band under test (see 3GPP 34.123-1 table 6.5 for details on the ARFCN) | | | | Value according to the GSM band under test (see 3GPP 34.123-1 table 6.5 for details on the ARFCN) | | | |
| CELL identity | # | 0 | | | | 1 | | | |
| BSIC | # | BSIC 1 | | | | BSIC 2 | | | |
| RF Signal Level | dBm | -90 | -75 | -80 | -75 | -75 | -75 | -75 | -75 |

The table above illustrate the downlink power to be applied for the two cells at various instants of the test execution. Column marked "T0" denotes the initial conditions, while column marked "T1", "T2" and "T3" indicate the values to be applied subsequently.

The UE is initially in CELL_DCH state as specified in clause 7.4 of TS 34.108. UTRA cell 1 is the only cell in the active set of the UE. If the UE requires compressed mode (refer ICS/IXIT), the SS sends a PHYSICAL CHANNEL RECONFIGURATION message to the UE to configure the compressed mode pattern sequence parameters to the UE. Three compressed mode patterns are configured, according to the message specified below. When the PHYSICAL CHANNEL RECONFIGURATION COMPLETE is received from the UE, the SS sends a MEASUREMENT CONTROL message to the UE, to set up inter-RAT measurements. Event 3c is set up in this message, and if the UE requires compressed mode (refer ICS/IXIT), compressed mode is activated.

At instant T1, the RF signal strength for GSM cell 1 increases as described in table 8.4.1.35.4-1.

At instant T2, the RF signal strength for GSM cell 1 drops as described in table 8.4.1.35.4-1, and at instant T3, it increases again to its previous level. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is brought to the CELL_DCH state in the cell 1. If the UE does not require compressed mode (refer ICS/IXIT), then goto step 4. |
| 2 | ← | | PHYSICAL CHANNEL RECONFIGURATION | Compressed mode pattern sequence parameters are loaded to UE. |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 4 | ← | | MEASUREMENT CONTROL | SS configures event 3c in the UE. If the UE requires compressed mode (refer ICS/IXIT), compressed mode is started. |
| 5 | | | | SS waits for approximately 10 seconds and verifies that no MEASUREMENT REPORT messages are detected on uplink DCCH. |
| 6 | | | | SS re-adjusts the downlink transmission power settings according to columns "T1" in table 8.4.1.35.4-1. |
| 7 | → | | MEASUREMENT REPORT | After about 0.9 s, the UE sends a MEASUREMENT REPORT to SS triggered by event 3c. |
| 8 | | | | SS re-adjusts the downlink transmission power settings according to columns "T2" in table 8.4.1.35.4-1. |
| 9 | | | | SS re-adjusts the downlink transmission power settings according to columns "T3" in table 8.4.1.35.4-1. |
| 10 | | | | SS waits for approximately 10 seconds and verifies that no MEASUREMENT REPORT messages are detected on uplink DCCH. |
| 11 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Content

PHYSICAL CHANNEL RECONFIGURATION (Step 2)

Use the same message sub-type in clause 9 of TS 34.108 titled "Non speech in CS" or "Speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS, with Scrambling code change set to Default1 and with the following exceptions:

| Information Element | Value/remark | Version |

| - Parameters required for each event (1 to<maxMeasEvent>) | |
| - Inter-RAT event identity | 3c |
| - Threshold own system | Not included |
| - W | Not included |
| - Threshold other system | -74 |
| - Hysteresis | 5 (2.5 dB) |
| - Time to Trigger | 100 ms |
| - Reporting cell status | Report cells within active set or within virtual active set or of the other RAT |
| - Maximum number of reported cells | 2 |

MEASUREMENT REPORT (Step 7)

| Information Element | Value/remark | Version |
|---|---|---|
| Measurement identity | Check to see if set to 3 | |
| Measured Results | | |
| - CHOICE measurement | Check to see if set to "Inter-RAT measured results list" | |
| - Inter-RAT measured result list | | |
| - CHOICE system | GSM | |
| - Measured GSM cells | Check that measurement results for two GSM cells are included | |
| - GSM carrier RSSI | Check that measurement result is reasonable. RXLEV is mapped to a value between 0 and 63. The RSSI bits are numbered b0 to b5, where b0 is the least significant bit. When mapping the RXLEV value to the RSSI bit string, the first/ leftmost bit of the bit string contains the most significant bit. | |
| CHOICE BSIC | Check it is set to verified BSIC | |
| - inter-RAT cell id | Check that it is set to either 0 or 1 | |
| - Observed time difference to GSM cell | Check that the IE is not included | R99 and Rel-4 only |
| - GSM carrier RSSI | Check that measurement result is reasonable | |
| CHOICE BSIC | Verified BSIC | |
| - inter-RAT cell id | Check that is set to 1 if the previous inter-RAT cell id was set to 0 or to 0 if the previous cell if was set to 1. | |
| - Observed time difference to GSM cell | Check that the IE is not present | R99 and Rel-4 only |
| Measured results on RACH | Check that not present | |
| Additional Measured results | Check that not present | |
| Event results | Check that the IE is included | |
| - CHOICE event result | Check that this is set to inter-RAT measurement event results | |
| - Inter-RAT event identity | Check that this is set to 3c | |
| - Cells to report (1 to <maxCellMeas>) | Check that <maxCellMeas> is set to 1 | |
| - CHOICE BSIC | Check that this is set to verified BSIC | |
| - Inter-RAT cell id | Check that this is set to 0. | |

MEASUREMENT REPORT (Step 7) (1.28 Mcps TDD)

| Information Element | Value/remark | Version |
|---|---|---|
| Measurement identity | Check to see if set to 3 | |
| Measured Results | Check that not present | |
| Measured results on RACH | Check that not present | |
| Additional Measured results | Check that not present | |
| Non Critical Extensions | | |
| - Additional Measured results - LCR | | |
| - CHOICE measurement | Check to see if set to "Inter-RAT measured results list" | |
| - Inter-RAT measured result list | | |
| - CHOICE system | GSM | |
| - Measured GSM cells | Check that measurement results for two GSM cells are included | |
| - GSM carrier RSSI | Check that measurement result is reasonable. RXLEV is mapped to a value between 0 and 63. The RSSI bits are numbered b0 to b5, where b0 is the least significant bit. When mapping the RXLEV value to the RSSI bit string, the first/ leftmost bit of the bit string contains the most significant bit. | |
| CHOICE BSIC | Check it is set to verified BSIC | |
| - inter-RAT cell id | Check that it is set to either 0 or 1 | |
| - Observed time difference to GSM cell | Check that the IE is not included | R99 and Rel-4 only |
| - GSM carrier RSSI | Check that measurement result is reasonable | |
| CHOICE BSIC | Verified BSIC | |
| - inter-RAT cell id | Check that is set to 1 if the previous inter-RAT cell id was set to 0 or to 0 if the previous cell if was set to 1. | |
| - Observed time difference to GSM cell | Check that the IE is not present | R99 and Rel-4 only |
| Event results | Check that the IE is included | |
| - CHOICE event result | Check that this is set to inter-RAT measurement event results | |
| - Inter-RAT event identity | Check that this is set to 3c | |
| - Cells to report (1 to <maxCellMeas>) | Check that <maxCellMeas> is set to 1 | |
| - CHOICE BSIC | Check that this is set to verified BSIC | |
| - Inter-RAT cell id | Check that this is set to 0. | |

#### 8.4.1.35.5 Test requirement

After instant T1, since the cell individual offset for GSM cell 1 is +10 dB, event 3c shall be triggered in the UE, i.e. the UE shall begin to transmit a MEASUREMENT REPORT to the SS. Note that GSM cell 2 has not triggered event 3c even though the RF signal strength for GSM cell 2 is the same as for cell 1, because the cell individual offset for GSM cell 2 is -3 dB.

After instant T2, no MEASUREMENT REPORT shall be received from the UE, since GSM cell 1 has already triggered event 3c, and since the RF signal strength has not dropped enough for the leaving condition to be met.

### 8.4.1.36 Measurement Control and Report: Inter-RAT measurement, event 3d

#### 8.4.1.36.1 Definition

-

#### 8.4.1.36.2 Conformance requirement

When event 3d is configured in the UE within a measurement, the UE shall:

1> if the other RAT is GSM, and if IE "BSIC verification required" is set to "required":

2> when the measurement is initiated or resumed:

3> store in the variable BEST_CELL_3D_EVENT the Inter-RAT cell id of the GSM cell that has the best measured quantity among the GSM cells that match any of the BCCH ARFCN and BSIC combinations considered in that inter-RAT measurement

3> send a measurement report with IE set as below:

4> set in "inter-RAT measurement event result": "inter-RAT event identity" to "3d", "CHOICE BSIC" to "verified BSIC" and "Inter-RAT cell id" to the GSM cell that is stored in the variable BEST_CELL_3D_EVENT;

4> set the IE "measured results" and the IE "additional measured results" according to TS 25.331 subclause 8.4.2, not taking into account the cell individual offset;

2> if equation 1 has been fulfilled for a time period indicated by "time to trigger" for a GSM cell that is different from the one stored in BEST_CELL_3D_EVENT and that matches any of the BCCH ARFCN and BSIC combinations considered in that inter-RAT measurement:

3> store the Inter-RAT cell id of that GSM cell in the variable BEST_CELL_3D_EVENT;

3> send a measurement report with IEs set as below:

4> set in "inter-RAT measurement event result": "inter-RAT event identity" to "3d", "CHOICE BSIC" to "verified BSIC" and "Inter-RAT cell id" to the GSM cell is now stored in BEST_CELL_3D_EVENT;

4> set the IE "measured results" and the IE "additional measured results" according to TS 25.331 subclause 8.4.2, not taking into account the cell individual offset;

1> if the other RAT is GSM, and if IE "BSIC verification required" is set to "not required":

2> when the measurement is initiated or resumed:

3> store in the variable BEST_CELL_3D_EVENT the BCCH ARFCN of the GSM cell that has the best measured quantity among the BCCH ARFCNs considered in that inter-RAT measurement;

3> send a measurement report with IE set as below:

4> set in "inter-RAT measurement event result": "inter-RAT event identity" to "3d", "CHOICE BSIC" to "non verified BSIC" and "BCCH ARFCN" to the BCH ARFCN that is stored in the variable BEST_CELL_3D_EVENT;

4> set the IE "measured results" and the IE "additional measured results" according to TS 25.331 subclause 8.4.2, not taking into account the cell individual offset;

2> if equation 1 below has been fulfilled for a time period indicated by "time to trigger" for one of the BCCH ARFCNs considered in that inter-RAT measurement and different from the one stored in BEST_CELL_3D_EVENT:

3> store the BCCH ARFCN of that GSM cell in the variable BEST_CELL_3D_EVENT;

3> send a measurement report with IEs set as below:

4> set in "inter-RAT measurement event result": "inter-RAT event identity" to "3d", "CHOICE BSIC" to "non verified BSIC" and "BCCH ARFCN" to the BCCH ARFCN that is now stored in the variable BEST_CELL_3D_EVENT;

4> set the IE "measured results" and the IE "additional measured results" according to TS 25.331 subclause 8.4.2, not taking into account the cell individual offset;

Equation 1:

$$M_{New} \geq M_{Best} + H_{3d} / 2$$

The variables in the formula are defined as follows:

$M_{New}$ is the measurement quantity for a GSM cell that is not stored in the variable BEST_CELL_3D.

$M_{Best}$ is the measurement quantity for a GSM cell that is stored in the variable BEST_CELL_3D.

$H_{3d}$ is the hysteresis parameter for event 3d.

Reference

3GPP TS 25.331 clause 14.3.1.4.

### 8.4.1.36.3 Test Purpose

1. To confirm that the UE sends MEASUREMENT REPORT message if event 3d is configured, and if the best cell changes in the other system. To confirm that no other UE MEASUREMENT REPORT message is sent by the UE for a cell that has already triggered event 3d as long as the hysteresis condition for triggering once again event 3d has not been fulfilled.

### 8.4.1.36.4 Method of test

Initial Condition

System simulator: 1 UTRAN FDD cell (or TDD cell) and 2 GSM cells. The initial configurations of the 2 GSM cells in the SS shall follow the values indicated in the column marked T0. The table is found in "Test procedure".

UE: CS-DCCH+DTCH_DCH (State 6-9) or PS-DCCH+DTCH_DCH (State 6-10) in cell 1 (UTRA) as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE.

Related ICS/IXIT statements

- Compressed mode required yes/no
- UE supports GSM-P, GSM-E, GSM-DCS, GSM-450, GSM-480, GSM-PCS, GSM-850.

Test procedure

**Table 8.4.1.36.4-1**

| Parameter | Unit | Cell 1 (GSM) | | Cell 2 (GSM) | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| Test Channel | # | GSM Ch.1 | | GSM Ch.2 | |
| BCCH ARFCN | # | Value according to the GSM band under test (see 3GPP 34.123-1 table 6.5 for details on the ARFCN) | | Value according to the GSM band under test (see 3GPP 34.123-1 table 6.5 for details on the ARFCN) | |
| CELL identity | # | 0 | | 1 | |
| BSIC | # | BSIC 1 | | BSIC 2 | |
| RF Signal Level | dBm | -70 | -90 | -90 | -70 |

The table above illustrate the downlink power to be applied for the two cells at various instants of the test execution. Column marked "T0" denotes the initial conditions, while column marked "T1"indicates the values to be applied subsequently.

The UE is initially in CELL_DCH state as specified in clause 7.4 of TS 34.108. UTRA cell 1 is the only cell in the active set of the UE. If the UE requires compressed mode (refer ICS/IXIT), the SS sends a PHYSICAL CHANNEL RECONFIGURATION message to the UE to configure the compressed mode pattern sequence parameters to the UE. Three compressed mode patterns are configured, according to the message specified below. When the PHYSICAL CHANNEL RECONFIGURATION COMPLETE is received from the UE, the SS sends a MEASUREMENT CONTROL message to the UE, to set up inter-RAT measurements. Event 3d is set up in this message, and if the UE requires compressed mode (refer ICS/IXIT), compressed mode is activated.

At instant T1, the RF signal strength for GSM cell 1 increases while the RF signal strength for GSM cell 2 decreases as described in table 8.4.1.36.4-1.

A MEASUREMENT CONTROL is then sent to the UE that releases the inter-RAT measurement, and deactivates compressed mode. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is brought to the CELL_DCH state in the cell 1. If the UE does not require compressed mode (refer ICS/IXIT), then goto step 4. |
| 2 | ← | | PHYSICAL CHANNEL RECONFIGURATION | Compressed mode pattern sequence parameters are loaded to UE. |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 4 | ← | | MEASUREMENT CONTROL | SS configures event 3d in the UE. If the UE requires compressed mode (refer ICS/IXIT), compressed mode is started. |
| 5 | → | | MEASUREMENT REPORT | The UE sends a MEASUREMENT REPORT to UTRAN indicating which is/are the best GSM cell/Cells just after the initiation of the measurement<br>SS should wait long enough for the reception of this message as UE that needs compressed mode takes time to activate compressed mode patterns as well as complete BSIC verification before sending the report |
| 6 | | | | SS re-adjusts the downlink transmission power settings according to columns "T1" in tables 8.4.1.36.4-1. |
| 7 | → | | MEASUREMENT REPORT | The UE sends a MEASUREMENT REPORT to SS triggered by event 3d. SS should wait long enough for the reception of this message as UE that needs compressed mode takes time to complete BSIC verification before sending the report |
| 8 | ← | | MEASUREMENT CONTROL | SS releases the inter-RAT measurements, and, if the UE requires compressed mode (refer ICS/IXIT), deactivates compressed mode. |
| 9 | | | | If the UE requires compressed mode (refer ICS/IXIT), SS checks that the UE has deactivated compressed mode. |
| 10 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Content

PHYSICAL CHANNEL RECONFIGURATION (Step 2)

Use the same message sub-type in clause 9 of TS 34.108 titled "Non speech in CS" or "Speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS, with Scrambling code change set to Default1 and with the following exceptions:

| Additional Measured results | Check that not present | |
| Event results | Check that the IE is included | |
| - CHOICE event result | Check that this is set to inter-RAT measurement event results | |
| - Inter-RAT event identity | Check that this is set to 3d | |
| - Cells to report (1 to <maxCellMeas>) | Check that <maxCellMeas> is set to 1 | |
| - CHOICE BSIC | Check that this is set to verified BSIC | |
| - Inter-RAT cell id | Check that this is set to 1. | |

MEASUREMENT REPORT (Step 7) (1.28 Mcps TDD)

| Information Element | Value/remark | Version |
|---|---|---|
| Measurement identity | Check to see if set to 3 | |
| Measured Results | Check that not present | |
| Measured results on RACH | Check that not present | |
| Additional Measured results | Check that not present | |
| Non Critical Extensions | | |
| - Additional Measured results - LCR | | |
| - CHOICE measurement | Check to see if set to "Inter-RAT measured results list" | |
| - Inter-RAT measured result list | | |
| - CHOICE system | GSM | |
| - Measured GSM cells | Check that measurement results for two GSM cells are included | |
| - GSM carrier RSSI | Check that measurement result is reasonable. RXLEV is mapped to a value between 0 and 63. The RSSI bits are numbered b0 to b5, where b0 is the least significant bit. When mapping the RXLEV value to the RSSI bit string, the first/ leftmost bit of the bit string contains the most significant bit. | |
| CHOICE BSIC | Check it is set to verified BSIC | |
| - inter-RAT cell id | Check that it is set to 1 | |
| - Observed time difference to GSM cell | Check that the IE is not included | R99 and Rel-4 only |
| - GSM carrier RSSI | Check that measurement result is reasonable | |
| CHOICE BSIC | Verified BSIC | |
| - inter-RAT cell id | Check that it is set to 0. | |
| - Observed time difference to GSM cell | Check that the IE is not present | R99 and Rel-4 only |
| Event results | Check that the IE is included | |
| - CHOICE event result | Check that this is set to inter-RAT measurement event results | |
| - Inter-RAT event identity | Check that this is set to 3d | |
| - Cells to report (1 to <maxCellMeas>) | Check that <maxCellMeas> is set to 1 | |
| - CHOICE BSIC | Check that this is set to verified BSIC | |
| - Inter-RAT cell id | Check that this is set to 1. | |

| - TGCFN | Not present |

### 8.4.1.36.5 Test requirement

Shortly after the UE has received the first MEASUREMENT CONTROL message it shall transmit a MEASUREMENT REPORT to the SS.

After instant T1, the UE shall begin to transmit a MEASUREMENT REPORT triggered by event 3d to the SS.

After receiving the second MEASUREMENT CONTROL message, the UE shall then stop running compressed mode.

## 8.4.1.37 Measurement Control and Report: UE internal measurement, event 6c

### 8.4.1.37.1 Definition

### 8.4.1.37.2 Conformance requirement

When this event is ordered by UTRAN in a measurement control message, the UE shall send a measurement report when the UE Tx power reaches its minimum value.

Reference

3GPP TS 25.331 clause 14.6.2.3.

### 8.4.1.37.3 Test Purpose

1. To confirm that the UE sends a measurement report for event 6c when the UE Tx power reaches its minimum value when event 6c has been configured in the UE through a MEASUREMENT CONTROL message.

### 8.4.1.37.4 Method of test

Initial Condition

System simulator: 1 UTRAN cell.

UE: CS-DCCH+DTCH_DCH (State 6-9) or PS-DCCH+DTCH_DCH (State 6-10) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE.

Test procedure

The UE is initially in CELL_DCH state as specified in clause 7.4 of TS 34.108.

The SS sends a MEASUREMENT CONTROL message to the UE that configures event 6c.

For FDD and 1.28 Mcps TDD: The SS sends TPC_cmd equal to -1 until the transmitter power of the UE reaches its minimum value.

For 3.84 Mcps TDD and 7.68 Mcps TDD: The SS sets the ISCP reported for the timeslot containing the uplink DPCH to the minimum reportable value (< -120)

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is brought to the CELL_DCH state in the cell 1. |
| 2 | ← | | MEASUREMENT CONTROL | SS configures event 6c in the UE. |
| 3 | ← | | | For FDD and 1.28 Mcps TDD: The SS sends TPC_cmd equal to -1 until the transmitter power of the UE reaches its minimum value, which shall be below –50 dBm. |
| 3a | ← | | | For 3.84 Mcps TDD and 7.68 Mcps: The SS sets the ISCP reported for the timeslot containing the uplink DPCH to the minimum reportable value (< -120) |
| 4 | → | | MEASUREMENT REPORT | After about 10 ms, the UE sends a MEASUREMENT REPORT to SS triggered by event 6c. |
| 5 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

#### 8.4.1.37.5 Test requirement

The UE shall then begin transmitting a MEASUREMENT REPORT message to SS triggered by event 6c when its transmit power has reached its minimum output power. The minimum transmitted power of the UE shall be less than –50dBm.(for FDD), -49dBm (for 1.28 Mcps TDD), and -45dBm (for 3.84 Mcps TDD and 7.68 Mcps TDD)

### 8.4.1.38 Measurement Control and Report: UE internal measurement, event 6d

#### 8.4.1.38.1 Definition

#### 8.4.1.38.2 Conformance requirement

When this event is ordered by UTRAN in a measurement control message, the UE shall send a measurement report when the UE Tx power reaches its maximum value.

Reference

3GPP TS 25.331 clause 14.6.2.4

#### 8.4.1.38.3 Test Purpose

1. To confirm that the UE sends a measurement report for event 6d when the UE Tx power reaches its maximum value when event 6d has been configured in the UE through a MEASUREMENT CONTROL message.

8.4.1.38.4 Method of test

Initial Condition

System simulator: 1 UTRAN cell.

UE: CS-DCCH+DTCH_DCH (State 6-9) or PS-DCCH+DTCH_DCH (State 6-10) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE.

Test procedure

The UE is initially in CELL_DCH state as specified in clause 7.4 of TS 34.108.

For FDD and 1.28 Mcps TDD: The SS sends TPC_cmd equal to +1 until the transmitter power of the UE reaches its maximum value.

For 3.84 Mcps TDD and 7.68 Mcps TDD: The SS sets the ISCP reported for the timeslot containing the uplink DPCH to the maximum reportable.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is brought to the CELL_DCH state in the cell 1. |
| 2 | ← | | MEASUREMENT CONTROL | SS configures event 6d in the UE. |
| 3 | ← | | | For FDD and 1.28 Mcps TDD: The SS sends TPC_cmd equal to +1 until the transmitter power of the UE reaches its maximum value. |
| 3a | ← | | | For 3.84 Mcps TDD and 7.68 Mcps TDD: The SS sets the ISCP reported for the timeslot containing the uplink DPCH to the maximum reportable. |
| 4 | → | | MEASUREMENT REPORT | After about 200 ms, the UE sends a MEASUREMENT REPORT to SS triggered by event 6d. |
| 5 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

MEASUREMENT CONTROL (Step 2) (FDD)

| CHOICE *event result* | Check that this IE is set to UE internal measurement event results |
| UE internal event identity | Check that this IE is set to 6d |

#### 8.4.1.38.5 Test requirement

The UE shall then begin transmitting a MEASUREMENT REPORT message to SS triggered by event 6d when its transmit power has reached its maximum. The maximum transmitted power of the UE shall be according to the class of the UE.

### 8.4.1.39 Measurement Control and Report: UE internal measurement, event 6e

#### 8.4.1.39.1 Definition

#### 8.4.1.39.2 Conformance requirement

When this event is ordered by UTRAN in a measurement control message, the UE shall send a measurement report when the UE RSSI reaches the UE's dynamic receiver range.

Reference

3GPP TS 25.331 clause 14.6.2.5

#### 8.4.1.39.3 Test Purpose

1. To confirm that the UE sends a measurement report for event 6e when the UE RSSI reaches the UE's dynamic receiver range when event 6e has been configured in the UE through a MEASUREMENT CONTROL message.

8.4.1.39.4 Method of test

Initial Condition

System simulator: 1 UTRAN cell.

UE: CS-DCCH+DTCH_DCH (State 6-9) or PS-DCCH+DTCH_DCH (State 6-10) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE.

Test procedure

The UE is initially in CELL_DCH state as specified in clause 7.4 of TS 34.108.

The SS increases its output power by 1dB step until the UE RSSI reaches the UE's receiver dynamic range. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is brought to the CELL_DCH state in the cell 1. |
| 2 | ← | | MEASUREMENT CONTROL | SS configures event 6e in the UE. |
| 3 | ← | | | The SS increases its output power by 1 dB steps until the UE RSSI reaches the UE's receiver dynamic range. |
| 4 | → | | MEASUREMENT REPORT | The UE sends a MEASUREMENT REPORT to SS triggered by event 6e. |
| 5 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

MEASUREMENT CONTROL (Step 2) (FDD)

| Information Element | Value/remark |
|---|---|
| Measurement Identity | 6 |
| Measurement Command | Setup |

MEASUREMENT REPORT (Step 4) (TDD)

| Information Element | Value/remark |
|---|---|
| Measurement identity | Check to see if set to 6 |
| Measured Results | Check that this IE is not included |
| Measured results on RACH | Check that this IE is not included |
| Additional measured results | Check that this IE is not included |
| Event Results | |
| CHOICE event result | Check that this IE is set to UE internal measurement event results |
| UE internal event identity | Check that this IE is set to 6e |

### 8.4.1.39.5 Test requirement

The UE shall then begin transmitting a MEASUREMENT REPORT message to SS triggered by event 6e when the UE RSSI reaches the UE's receiver dynamic range.

## 8.4.1.40 Measurement Control and Report: Inter-RAT measurement, event 3C, in CELL_DCH state using sparse compressed mode pattern

### 8.4.1.40.1 Definition

### 8.4.1.40.2 Conformance requirement

1. Upon reception of a MEASUREMENT CONTROL message the UE shall perform actions specified in 3GPP TS 25.331 clause 8.6 unless otherwise specified below.

   The UE shall:

   - read the IE "Measurement command";
   - if the IE "measurement command" has the value "setup":
     - store this measurement in the variable MEASUREMENT_IDENTITY according to the IE "measurement identity", possibly overwriting the measurement previously stored with that identity;
     - for measurement types "inter-RAT measurement" or "inter-frequency measurement":
       - if, according to its measurement capabilities, the UE requires compressed mode to perform the measurements and a compressed mode pattern sequence with an appropriate measurement purpose is simultaneously activated by the IE "DPCH compressed mode status info"; or
       - if, according to its measurement capabilities, the UE does not require compressed mode to perform the measurements:
         - begin measurements according to the stored control information for this measurement identity;

2. Event 3c: The estimated quality of other system is above a certain threshold. When this event is ordered by UTRAN in a measurement control message the UE shall send a report when the estimated quality of the other system is above the value of the IE "Threshold other system" and the hysteresis and time to trigger conditions are fulfilled. The corresponding report contains information specific for the other system.

Reference

3GPP TS 25.331 clause 8.4.1.3, 14.3.1.3.

### 8.4.1.40.3 Test Purpose

This test case is only applicable to UEs supporting both FDD and GSM, and which require compressed mode to perform the GSM related measurements.

1. To verify that the UE performs Inter-RAT measurement using a sparse compressed mode pattern as specified in the MEASUREMENT CONTROL message.
2. To verify that the UE send MEASUREMENT REPORT message when event 3C is triggered, and if the quality of the other system becomes better than the given threshold for event 3c.
3. To confirm that no other UE MEASUREMENT REPORT message is sent by the UE for a cell that has already triggered event 3c as long as the hysteresis condition for triggering once again event 3c has not been fulfilled.

8.4.1.40.4 Method of test

**Table 8.4.1.40.4-1 Sparse compressed mode pattern for Inter RAT measurement**

| TGMP | TGCFN | TGSN | TGL1 | TGL2 | TGD | TGPL | TGPRC | Comment |
|---|---|---|---|---|---|---|---|---|
| GSM carrier RSSI measurement | Note 1 | Inf. | 4 | 7 | Not sent | undefined | 16 | See note 2 | Set-up to monitor 12 GSM neighbours every second measurement period, i.e. every second 480ms period. |
| GSM Initial BSIC identification | Note 1 | Inf. | 8 | 14 | Not sent | undefined | 24 | See note 2 | Equal to Pattern 6 in TS 25.133 table 8.7. |
| GSM BSIC re-confirmation | Note 1 | Inf. | 8 | 14 | Not sent | undefined | 24 | See note 2 | Equal to Pattern 12 in TS 25.133 table 8.8. |

NOTE 1: TGCFN can be found in the MEASUREMENT CONTROL message.

NOTE 2: For R99 and Rel-4: TGPL2 is not sent. For Rel-5 and later releases: Not applicable.

Initial Condition

System simulator: 1 UTRAN FDD cell and 2 GSM cells. The initial configurations of the cells in the SS shall follow the values indicated in the column marked T0 in table 8.4.1.40-2. The UTRAN FDD cell shall use UARFCN according to the band under test except in the case of where FDD band VIII is tested and GSM900 is used for the Inter-RAT cells, then “High Range” test frequency for Band VIII is used instead, to avoid the test channels overlapping.

UE: CS-DCCH+DTCH_DCH (State 6-9) or PS-DCCH+DTCH_DCH (State 6-10) in cell 1 (UTRA) as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE.

Related ICS/IXIT statements

- UE supports GSM-P, GSM-E, GSM-DCS, GSM-450, GSM-480, GSM-PCS, GSM-850.

Test procedure

**Table 8.4.1.40.4-2 Inter-RAT cell specific data**

| Parameter | Unit | Cell 1 (GSM) | | | | Cell 2 (GSM) | | | |
|---|---|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T3 | T0 | T1 | T2 | T3 |
| Test Channel | # | GSM Ch.1 | | | | GSM Ch.2 | | | |
| BCCH ARFCN | # | Value according to the GSM band under test (see 3GPP 34.123-1 table 6.5 for details on the ARFCN) | | | | Value according to the GSM band under test (see 3GPP 34.123-1 table 6.5 for details on the ARFCN) | | | |
| CELL identity | # | 0 | | | | 1 | | | |
| BSIC | # | BSIC 1 | | | | BSIC 2 | | | |
| RF Signal Level | dBm | -90 | -75 | -80 | -75 | -75 | -75 | -75 | -75 |

GSM cell 3 to 12 as indicated in the a MEASUREMENT CONTROL message shall not be active in the test, i.e. no BCCH carrier shall be transmitted for GSM cell 3 to 12 in this test.

The table above illustrate the downlink power to be applied for the two cells at various instants of the test execution. Column marked "T0" denotes the initial conditions, while column marked "T1", "T2" and "T3" indicate the values to be applied subsequently.

The UE is initially in CELL_DCH state as specified in clause 7.4 of TS 34.108. UTRA cell 1 is the only cell in the active set of the UE. The SS sends a PHYSICAL CHANNEL RECONFIGURATION message to the UE to configure the compressed mode pattern sequence parameters to the UE. Three compressed mode patterns are configured, according to the message specified below. When the PHYSICAL CHANNEL RECONFIGURATION COMPLETE is received from the UE, the SS sends a MEASUREMENT CONTROL message to the UE, to set up inter-RAT measurements on 12 GSM cells. Event 3c is set up in this message, and compressed mode is activated.

At instant T1, the RF signal strength for GSM cell 1 increases as described in table 8.4.1.40.4-2, since the cell individual offset for GSM cell 1 is 10 dB, event 3c shall be triggered in the UE. A MEASUREMENT REPORT shall be sent to the SS. Note that GSM cell 2 has not triggered event 3c even though the RF signal strength for GSM cell 2 is the same as for cell 1, because the cell individual offset for GSM cell 2 is -3 dB.

At instant T2, the RF signal strength for GSM cell 1 drops as described in table 8.4.1.40.4-2, and at instant T3, it increases again to its previous level. No MEASUREMENT REPORT shall be received from the UE, since GSM cell 1 has already triggered event 3c, and since the RF signal strength has not dropped enough for the leaving condition to be met. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is brought to the CELL_DCH state in the cell 1. |
| 2 | ← | | PHYSICAL CHANNEL RECONFIGURATION | Compressed mode pattern sequence parameters are loaded to UE. |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 4 | ← | | MEASUREMENT CONTROL | SS configures event 3c in the UE, compressed mode is started. |
| 5 | | | | SS waits for approximately 10 seconds and verifies that no MEASUREMENT REPORT messages are detected on uplink DCCH. |
| 6 | | | | SS re-adjusts the downlink transmission power settings according to columns "T1" in table 8.4.1.40.4-2. |
| 7 | → | | MEASUREMENT REPORT | After about 1.6 s, the UE sends a MEASUREMENT REPORT to SS triggered by event 3c. |
| 8 | | | | SS re-adjusts the downlink transmission power settings according to columns "T2" in table 8.4.1.40.4-2. |
| 9 | | | | SS re-adjusts the downlink transmission power settings according to columns "T3" in table 8.4.1.40.4-2. |
| 10 | | | | SS waits for approximately 10 seconds and verifies that no MEASUREMENT REPORT messages are detected on uplink DCCH. |
| 11 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

MEASUREMENT REPORT (Step 7)

| Information Element | Value/remark | Version |
|---|---|---|
| Measurement identity | Check to see if set to 3 | |
| Measured Results | | |
| - CHOICE measurement | Check to see if set to "Inter-RAT measured results list" | |
| - Inter-RAT measured result list | | |
| - CHOICE system | GSM | |
| - Measured GSM cells | Check that measurement results for two GSM cells are included | |
| - GSM carrier RSSI | Check that measurement result is reasonable. RXLEV is mapped to a value between 0 and 63. The RSSI bits are numbered b0 to b5, where b0 is the least significant bit. When mapping the RXLEV value to the RSSI bit string, the first/ leftmost bit of the bit string contains the most significant bit. | |
| CHOICE BSIC | Check it is set to verified BSIC | |
| - inter-RAT cell id | Check that it is set to either 0 or 1 | |
| - Observed time difference to GSM cell | Check that the IE is not included | R99 and Rel-4 only |
| - GSM carrier RSSI | Check that measurement result is reasonable | |
| CHOICE BSIC | Verified BSIC | |
| - inter-RAT cell id | Check that is set to 1 if the previous inter-RAT cell id was set to 0 or to 0 if the previous cell if was set to 1. | |
| - Observed time difference to GSM cell | Check that the IE is not present | R99 and Rel-4 only |
| Measured results on RACH | Check that not present | |
| Additional Measured results | Check that not present | |
| Event results | Check that the IE is included | |
| - CHOICE event result | Check that this is set to inter-RAT measurement event results | |
| - Inter-RAT event identity | Check that this is set to 3c | |
| - Cells to report (1 to <maxCellMeas>) | Check that <maxCellMeas> is set to 1 | |
| - CHOICE BSIC | Check that this is set to verified BSIC | |
| - Inter-RAT cell id | Check that this is set to 0. | |

#### 8.4.1.40.5 Test Requirement

After instant T1, since the cell individual offset for GSM cell 1 is +10 dB, event 3c shall be triggered in the UE, i.e. the UE shall begin to transmit a MEASUREMENT REPORT to the SS. Note that GSM cell 2 has not triggered event 3c even though the RF signal strength for GSM cell 2 is the same as for cell 1, because the cell individual offset for GSM cell 2 is -3 dB.

After instant T2, no MEASUREMENT REPORT shall be received from the UE, since GSM cell 1 has already triggered event 3c, and since the RF signal strength has not dropped enough for the leaving condition to be met.

### 8.4.1.41 Measurement Control and Report: Additional Measurements list

#### 8.4.1.41.1 Definition

#### 8.4.1.41.2 Conformance requirement

For the measurement, which triggered the MEASUREMENT REPORT message, the UE shall:

…..

1> set the IE "Measured results" in the IE "Additional measured results" according to the IE "reporting quantity" for all measurements associated with the measurement identities included in the "Additional measurements list" stored in variable MEASUREMENT_IDENTITY of the measurement that triggered the measurement report; and

2> if more than one additional measured results are to be included:

3> include only the available additional measured results, and sort them in ascending order according to their IE "measurement identity" in the MEASUREMENT REPORT message.

……

If the IE "Additional Measurement List" is received in a MEASUREMENT CONTROL message, the UE shall:

1> if the received measurement configuration in this MEASUREMENT CONTROL message, or any measurement referenced in the "Additional Measurement List" do not all have the same validity (for this consistency check the UE should assume "CELL_DCH" as the measurement validity for measurements of type "inter-RAT", "UE internal", and "quality"):

2> set the variable CONFIGURATION_INCOMPLETE to TRUE.

1> if any of the measurements referenced in the "Additional Measurement List" is an intra-frequency, inter-frequency or inter-RAT measurement, and this measurement is configured with event based reporting:

2> the UE behaviour is not specified.

1> if the result of this MEASUREMENT CONTROL message is such that more than one additional measurement of the same type will be referenced in the IE "Additional Measurement List" in the MEASUREMENT_IDENTITY variable:

2> the UE behaviour is not specified.

…

If the measurement configured with the MEASUREMENT CONTROL message triggers a measurement report, the UE shall also include the reporting quantities for the measurements referenced by the additional measurement identities. The contents of the IE "Additional Measured results" is completely determined by the measurement configuration of the referenced additional measurement.

…..

Reference

3GPP TS 25.331, clause 8.4.2.2, 8.6.7.22

### 8.4.1.41.3 Test Purpose

1. To confirm that the UE reports measured results for a referenced additional measurement.
2. To confirm that the UE transmits MEASUREMENT REPORT messages for a measurement, also if this measurement is referenced as an additional measurement by another measurement.

### 8.4.1.41.4 Method of test

Initial Condition

System Simulator: 1 cell, cell 1.

UE: CS-DCCH+DTCH_DCH (State 6-9) or PS-DCCH+DTCH_DCH (State 6-10) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE.

Test Procedure

The UE is in CELL_DCH state in cell 1, after successfully executing procedures P11 or P13 as specified in clause 7.4 of TS 34.108. Next, SS transmits MEASUREMENT CONTROL message to request the UE to perform UE internal measurements and reporting for events 6A and 6B, followed by a MEASUREMENT CONTROL message to request the UE to perform a periodic intra-frequency measurement. The intra-frequency measurement configuration references as an additional measurement the measurement defined by the first MEASUREMENT CONTROL message.

The UE will start to periodically send MEASUREMENT REPORT messages for the intra-frequency measurement. The reports shall include the UE Tx power as an additional measurement result.

After two MEASUREMENT REPORT messages, the SS increases the UE Tx power above the threshold set to event 6A. After 'time to trigger' the UE sends MEASUREMENT REPORT, triggered by event 6A, to the SS.

Next the SS decreases the UE Tx power below the threshold set for event 6B. After 'time to trigger' UE sends MEASUREMENT REPORT, triggered by event 6B, to the SS.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | void | |
| 2 | ← | | MEASUREMENT CONTROL | SS requests for measurement and reporting for events 6A and 6B. |
| 3 | ← | | MEASUREMENT CONTROL | SS requests a periodic intra-frequency measurement. |
| 3a | → | | MEASUREMENT REPORT | UE shall send a periodical measurement report. Check the current transmission power of UE from the IE transmitted power FDD or TDD of measurement report. |
| 3b | | | | SS sets the UE transmission power between 6dbm and 18 dBm. |
| 4 | → | | MEASUREMENT REPORT | |
| 5 | → | | MEASUREMENT REPORT | Time difference between earlier and this MEASUREMENT REPORT message should be 32 seconds. |
| 6 | | | | SS sets the UE transmission power above 18 dBm. |
| 7 | → | | MEASUREMENT REPORT | UE shall send 6A event measurement report. |
| 8 | | | | SS sets the UE transmission power below 6 dBm. |
| 9 | → | | MEASUREMENT REPORT | UE shall send 6B event measurement report. |

| -CHOICE *event result* | Check to see if set to "UE internal measurement event results" |
| -UE internal event identity | Check to see if set to "6B" |
| -CHOICE *mode* | Check to see if set to "TDD" |

### 8.4.1.41.5 Test Requirement

After step 3, the UE shall periodically transmit a MEASUREMENT REPORT message for measurement identity 5. In addition to the CPICH RSCP, these reports shall also include the UL Tx power with a reasonable value.

After step 6, the UE shall transmit a MEASUREMENT REPORT message, containing measured results for UE transmitted power. The 'Event results' IE contains event identity 6A.

After step 8, the UE shall transmit a MEASUREMENT REPORT message, containing measured results for UE transmitted power. The 'Event results' IE contains event identity 6B.

## 8.4.1.42 Measurement Control and Report: Change of Compressed Mode Method

### 8.4.1.42.1 Definition

### 8.4.1.42.2 Conformance requirement

If variable INVALID_CONFIGURATION has value FALSE after UE has performed the checks above, the UE shall:

1> if pattern sequence corresponding to IE "TGPSI" is already active (according to "Current TGPS Status Flag") in the variable TGPS_IDENTITY):

2> if the "TGPS Status Flag" in this message is set to "deactivate" for the corresponding pattern sequence:

3> deactivate this pattern sequence at the beginning of the frame, indicated by IE "Activation time"(see subclause 8.6.3.1) received in this message, when the new configuration received in this message is taken into use.

3> set the "Current TGPS Status Flag" for this pattern sequence in the variable TGPS_IDENTITY to "inactive" at the frame, indicated by IE "Activation time" (see subclause 8.6.3.1) received in this message, when the new configuration received in this message is taken into use.

2> if the "TGPS Status Flag" in this message is set to "activate" for the corresponding pattern sequence:

3> deactivate this pattern sequence at the beginning of the frame, indicated by IE "Activation time"(see subclause 8.6.3.1) received in this message, when the new configuration received in this message is taken into use.

NOTE1: The temporary deactivation of pattern sequences for which the status flag is set to "activate" can be used by the network to align the timing of already active patterns with newly activated patterns.

NOTE2: The deactivation of pattern sequences only occurs as a result of RRC messages received by the UE, i.e. the UE does not set the "Current TGPS Status Flag" to "inactive" after the final gap of a finite length pattern sequence.

1> update each pattern sequence to the variable TGPS_IDENTITY according to the IE "TGPSI";

1> update into the variable TGPS_IDENTITY the configuration information defined by IE group" transmission gap pattern sequence configuration parameters ";

1> after the instant in which the message is to be executed, as specified in subclause 8.6.3.1:

2> activate the stored pattern sequence corresponding to each IE "TGPSI" for which the "TGPS status flag" in the variable TGPS_IDENTITY is set to "activate" at the time indicated by IE "TGCFN"; and

2> set the "Current TGPS Status Flag" for this pattern sequence in the variable TGPS_IDENTITY to "active".

NOTE1: If the pattern is activated with a message that includes the IE "Activation time", and if the CFN value indicated by the IE "Activation Time" and the CFN value indicated by the TGCFN are included in the same TTI (but not at the TTI boundary) common to all the transport channels that are multiplexed onto the reference CCTrCh (as defined in subclause 8.6.3.1), and if the CFN value indicated by the TGCFN is equal or higher than the CFN value indicated by the IE "Activation Time" (as defined in subclause 8.6.3.1) value, the UE behaviour is not specified.

NOTE2: If the pattern is activated with a message used to perform timing re-initialised hard handover, the UE can start evaluating the activation of the pattern (i.e. compare the value of the CFN in the new configuration with the value of the TGCFN) at any time between the message activation time and the completion of the synchronisation procedure A.

2> if the IE "DPCH compressed mode info" is included in a message used to perform a Hard Handover with change of frequency (see subclause 8.3.5); or

2> if the IE "DPCH compressed mode info" is included in a message used to transfer the UE from Cell_FACH to Cell_DCH, and the cell in which the UE transited from CELL_FACH state is not included in the active set for the CELL_DCH state (see subclause 8.4.1.7.2):

3> not begin the inter-frequency measurement reporting corresponding to the pattern sequence measurement purpose of each activated pattern sequence.

2> else:

3> begin the inter-frequency measurement reporting corresponding to the pattern sequence measurement purpose of each activated pattern sequence.

2> begin the inter-RAT measurement reporting corresponding to the pattern sequence measurement purpose of each activated pattern sequence;

2> if the new configuration is taken into use at the same CFN as indicated by IE "TGCFN":

3> start the concerned pattern sequence immediately at that CFN.

1> monitor if the parallel transmission gap pattern sequences create an illegal overlap, and in case of overlap, take actions as specified in subclause 8.2.11.2.

….

Uplink and downlink compressed mode methods are described in TS 25.212. For UL "higher layer scheduling" compressed mode method and transport format combination selection, see TS 25.321.

Reference

3GPP TS 25.331 clause 8.6.6.15.

### 8.4.1.42.3 Test purpose

To confirm that the UE supports change of compressed mode method included in a RADIO BEARER SETUP message.

To confirm that the UE supports change of compressed mode method included in a RADIO BEARER RELEASE message.

### 8.4.1.42.4 Method of test

Initial Condition

System Simulator: 3 cells – Cell 1 on frequency $f_1$, cell 4 on frequency $f_2$ and cell 5 on frequency $f_3$.

UE: "PS-DCCH_DCH" (state 6-7) as specified in clause 7.4 of TS 34.108.

This test case applies only for UEs requiring compressed mode to perform inter- frequency measurements and supporting both PS and CS domains.

Test Procedure

Table 8.4.1.42-1 illustrates the downlink power to be applied for the 3 cells, as well as the frequency and scrambling code for each cell.

**Table 8.4.1.42-1a**

| Parameter | Unit | Cell 1 | | | | | |
|---|---|---|---|---|---|---|---|
| Frequency | | $f_1$ | | | | | |
| Scrambling code | | Scrambling code 1 | | | | | |
| | | T0 | T1 | T2 | T3 | T4 | T5 |
| CPICH Ec | dBm/3.84 MHz | -60 | -70 | -70 | -60 | -70 | -70 |

**Table 8.4.1.42-1b**

| Parameter | Unit | Cell 4 | | | | | | Cell 5 | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Frequency | | $f_2$ | | | | | | $f_3$ | | | | | |
| Scrambling code | | Scrambling code 3 | | | | | | Scrambling code 2 | | | | | |
| | | T0 | T1 | T2 | T3 | T4 | T5 | T0 | T1 | T2 | T3 | T4 | T5 |
| CPICH Ec | dBm/3.84 MHz | -95 | -60 | -60 | -95 | -60 | -60 | -95 | -95 | -60 | -95 | -95 | -60 |

The UE is initially in CELL_DCH, and has only cell 1 in its active set.

The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to download compressed mode parameters in the UE but without activating compressed mode. The UE shall answer with a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message.

The SS then sets up inter-frequency measurements (event 2b), by sending a MEASUREMENT CONTROL message to the UE.

The SS waits for 2560 ms for the UE to activate compressed mode.

At instant T1, the downlink power is changed according to what is shown in table 8.4.1.42-1. Frequency $f_2$ shall then trigger event 2b, and the UE shall transmit a MEASUREMENT REPORT message to the SS.

The SS establishes PS domain RAB and changes compressed mode method (from SF/2 to HLS) by sending a RADIO BEARER SETUP message on DCCH using AM-RLC. The UE shall answer with a RADIO BEARER SETUP COMPLETE message.

At instant T2, the downlink power is changed according to what is shown in table 8.4.1.42-1. Frequency $f_3$ shall then trigger event 2b, and the UE shall transmit a MEASUREMENT REPORT message to the SS.

At instant T3, the downlink power is changed according to what is shown in table 8.4.1.42-1.The increased quality of the used frequency should result in clearing of the concerning TRIGGERED_2B_EVENT.

The SS initiates an MT CS call, establishes a CS domain RAB and changes the compressed mode method to (from HLS to SF/2), by sending a RADIO BEARER SETUP message on DCCH using AM-RLC. The UE shall answer with a RADIO BEARER SETUP COMPLETE message.

At instant T4, the downlink power is changed according to what is shown in table 8.4.1.42-1. Frequency $f_2$ shall then trigger event 2b, and the UE shall transmit a MEASUREMENT REPORT message to the SS.

Next, the SS releases the CS domain RAB and changes compressed mode method (from SF/2 to HLS) by sending a RADIO BEARER RELEASE message on DCCH using AM-RLC. The UE shall answer with a RADIO BEARER RELEASE COMPLETE message.

At instant T5, the downlink power is changed according to what is shown in table 8.4.1.42-1. Frequency $f_3$ shall then trigger event 2b, and the UE shall transmit a MEASUREMENT REPORT message to the SS.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | SS downloads compressed mode parameters (using SF/2 method) without activating compressed mode |
| 2 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE acknowledges the downloading of compressed mode parameters |
| 3 | ← | | MEASUREMENT CONTROL | The SS configures inter-frequency measurements in the UE and activates compressed mode |
| 4 | | | | The SS changes the power of the cells according to column T1 in table 8.4.1.42-1. |
| 5 | → | | MEASUREMENT REPORT | Frequency $f_2$ triggers event 2b in the UE, which sends a MEASUREMENT REPORT message to the SS. |
| 5a | ← | | RADIO BEARER SETUP | SS establishes PS domain RAB and changes compressed mode method to HLS. |
| 5b | → | | RADIO BEARER SETUP COMPLETE | The UE acknowledges the establishment of the RAB and the compressed mode method change. |
| 5c | | | | The SS changes the power of the cells according to column T2 in table 8.4.1.42-1. |
| 5d | → | | MEASUREMENT REPORT | Frequency $f_3$ triggers event 2b in the UE, which sends a MEASUREMENT REPORT message to the SS. |
| 5e | | | | The SS changes the power of the cells according to T3 in table 8.4.1.42-1 (so the UE can trigger event 2b again for both frequencies if suitable conditions arise) |
| 5f | ← | | PAGING TYPE 2 | Initiates MT CS call |
| 5g | → | | INITIAL DIRECT TRANSFER (PAGING RESPONSE) | RR |
| 5h | ← | | DOWNLINK DIRECT TRANSFER (AUTHENTICATION REQUEST) | MM |
| 5i | → | | UPLINK DIRECT TRANSFER (AUTHENTICATION RESPONSE) | MM |
| 5j | ← | | SECURITY MODE COMMAND | |
| 5k | → | | SECURITY MODE COMPLETE | |
| 5l | ← | | DOWNLINK DIRECT TRANSFER (SET UP) | CC |
| 5m | → | | UPLINK DIRECT TRANSFER (CALL CONFIRMED) | CC |
| 6 | ← | | RADIO BEARER SETUP | SS establishes CS domain RAB and changes to SF/2 compressed mode method |
| 7 | → | | RADIO BEARER SETUP COMPLETE | The UE acknowledges the establishment of the RAB and the compressed mode method change. |
| 7a | → | | UPLINK DIRECT TRANSFER (ALERTING) | CC (This message is optional) |
| 7b | → | | UPLINK DIRECT TRANSFER (CONNECT) | CC |

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 7c | ← | | DOWNLINK DIRECT TRANSFER (CONNECT ACKNOWLEDGE) | CC |
| 8 | | | | The SS changes the power of the cells according to column T4 in table 8.4.1.42-1. |
| 9 | → | | MEASUREMENT REPORT | Frequency $f_2$ triggers event 2b in the UE, which sends a MEASUREMENT REPORT message to the SS. |
| 10 | | | Void | |
| 11 | | | Void | |
| 12 | | | Void | |
| 13 | | | Void | |
| 14 | | | Void | |
| 15 | ← | | RADIO BEARER RELEASE | SS releases the CS domain RAB and changes compressed mode method toHLS. |
| 16 | → | | RADIO BEARER RELEASE COMPLETE | The UE acknowledges the release of the RAB and the compressed mode method change. |
| 17 | | | | The SS changes the power of the cells according to column T5 in table 8.4.1.42-1. |
| 18 | → | | MEASUREMENT REPORT | Frequency $f_3$ triggers event 2b in the UE, which sends a MEASUREMENT REPORT message to the SS. |

Specific Message Content

All messages shall use the same content as defined in [9] TS 34.108 clause 9, with the following exceptions:

PHYSICAL CHANNEL RECONFIGURATION MESSAGE (Step 1)

| - Downlink DPCH info common for all RL | Not Present | |
| - DPCH compressed mode info | | |
| - TGPSI | 1 | |
| - TGPS Status Flag | Deactivate | |
| - TGCFN | Not present | |
| - Transmission gap pattern sequence configuration parameters | | |
| - TGMP | FDD Measurement | |
| - TGPRC | Infinity | |
| - TGSN | 4 | |
| - TGL1 | 7 | |
| - TGL2 | Not Present | |
| - TGD | undefined | |
| - TGPL1 | 3 | |
| - TGPL2 | Not Present | R99 and REL-4 only |
| - RPP | Mode 0 | |
| - ITP | Mode 0 | |
| - CHOICE UL/DL Mode | UL and DL, UL only or DL only (depending on the UE capability) | |
| - Downlink compressed mode method | SF/2 (or not sent, depending on the UE capability) | |
| - Uplink compressed mode method | SF/2 (or not sent, depending on the UE capability) | |
| - Downlink frame type | B | |
| - DeltaSIR1 | 20 (2.0) | |
| - DeltaSIRAfter1 | 10 (1.0) | |
| - DeltaSIR2 | Not Present | |
| - DeltaSIRAfter2 | Not Present | |
| - N identify abort | Not Present | |
| - T Reconfirm abort | Not Present | |
| - TX Diversity mode | Not Present | |
| - SSDT information | Not Present | R99 and Rel-4 only |
| - Default DPCH Offset Value | Not Present | |
| Downlink information for each radio link | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A3. | |

MEASUREMENT CONTROL (Step 3)

| Information Element | Value/Remark |
|---|---|
| Measurement Identity | 2 |
| Measurement Command | Setup |
| Measurement Reporting Mode | |
| - Measurement Reporting Transfer Mode | Acknowledged Mode RLC |
| - Periodical Reporting / Event Trigger Reporting Mode | Event Trigger |
| Additional measurements list | Not Present |
| CHOICE measurement type | Inter-frequency measurement |
| - Inter-frequency cell info list | |
| - CHOICE inter-frequency cell removal | No inter-frequency cells removed |
| - New inter-frequency info list | 2 inter-frequency cells |
| - Inter-frequency cell id | 4 |
| - Frequency info | |
| - UARFCN uplink (Nu) | Not present<br>Absence of this IE is equivalent to applying the default duplex distance defined for the operating frequency according to 3GPP TS 25.101 [21] |
| - UARFCN downlink (Nd) | UARFCN for the downlink corresponding to $f_2$ |
| - Cell info | |
| - Cell individual offset | 0 dB |
| - Reference time difference to cell | Not present |
| - Read SFN Indicator | FALSE |
| - CHOICE Mode | FDD |
| - Primary CPICH Info | |
| - Primary Scrambling Code | Scrambling code 3 |
| - Primary CPICH TX power | Not Present |
| - TX Diversity Indicator | FALSE |
| - Inter-frequency cell id | 5 |
| - Frequency info | |
| - UARFCN uplink (Nu) | Not present<br>Absence of this IE is equivalent to applying the default duplex distance defined for the operating frequency according to 3GPP TS 25.101 [21] |
| - UARFCN downlink (Nd) | UARFCN for the downlink corresponding to $f_3$ |
| - Cell info | |
| - Cell individual offset | 0 dB |
| - Reference time difference to cell | Not present |
| - Read SFN Indicator | FALSE |
| - CHOICE Mode | FDD |
| - Primary CPICH Info | Not present |
| - Primary Scrambling Code | Scrambling code 2 |
| - Primary CPICH TX power | Not Present |
| - TX Diversity Indicator | FALSE |
| - Cells for measurement | Not present |
| - Inter-frequency measurement quantity | |
| - CHOICE reporting criteria | Inter-frequency reporting criteria |
| - Filter Coefficient | 0 |
| - Measurement quantity for frequency quality estimate | CPICH RSCP |
| - Inter-frequency reporting quantity | |
| - UTRA Carrier RSSI | FALSE |
| - Frequency quality estimate | FALSE |
| - Non frequency related cell reporting quantities | |
| - SFN-SFN observed time difference reporting indicator | No report |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell Identity reporting indicator | TRUE |
| - CPICH Ec/No reporting indicator | FALSE |
| - CPICH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting cell status | Not present |
| - Measurement validity | |

| | |
|---|---|
| - UE State | CELL_DCH |
| - Inter-frequency set update | |
| - UE autonomous update | On with no reporting |
| - Non autonomous update mode | Not present |
| - CHOICE report criteria | Inter-frequency measurement reporting criteria |
| - Parameters required for each event | |
| - Inter-frequency event identity | 2b |
| - Threshold used frequency | -65 dBm |
| - W used frequency | 0.0 |
| - Hysteresis | 2 (1 dB) |
| - Time to trigger | 100 ms |
| - Reporting cell status | Report cells within monitored and/or virtual active set on non-used frequency |
| - Maximum number of reported cells per reported non-used frequency | 2 |
| - Parameters required for each non-used frequency | |
| - Threshold non used frequency | -68 dBm |
| - W non-used frequency | 0 |
| DPCH compressed mode status info | |
| - TGPS reconfiguration CFN | (Current CFN + (256 – TTI/10msec))mod 256 |
| - Transmission gap pattern sequence | |
| - TGPSI | 1 |
| - TGPS Status Flag | Activate |
| - TGCFN | (Current CFN + (256 – TTI/10msec))mod 256 |

MEASUREMENT REPORT (Step 5,9)

| Information Element | Value/Remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 2 |
| Measured Results | |
| - Inter-frequency measured results list | |
| - Frequency info | |
| -CHOICE mode | FDD |
| - UARFCN uplink | The presence of this IE is not checked |
| - UARFCN downlink | Check that the value of this IE is set to UARFCN for the downlink corresponding to $f_2$ |
| - UTRA carrier RSSI | Check that this IE is absent |
| - Inter-frequency cell measurement results | Check that the value of this IE is set to 1 cell reported |
| - Cell measured results | |
| - Cell Identity | Check that this IE is absent |
| - SFN-SFN observed time difference | Check that this IE is absent |
| - Cell synchronisation information | Check that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Check that the value of this IE is set to Scrambling code 3 |
| - CPICH Ec/N0 | Check that this IE is absent |
| - CPICH RSCP | Check that this IE is present |
| - Pathloss | Check that this IE is absent |
| Measured results on RACH | Check that this IE is absent |
| Additional measured results | Check that this IE is absent |
| Event results | |
| - Inter-frequency measurement event results | |
| - Inter-frequency event identity | 2b |
| - Inter-frequency cells | |
| - Frequency info | |
| -CHOICE mode | FDD |
| - UARFCN uplink | The presence of this IE is not checked |
| - UARFCN downlink | Check that the value of this IE is set to UARFCN for the downlink corresponding to $f_2$ |
| - Non freq related measurement event results | |
| - Primary CPICH info | |
| - Primary scrambling code | Check that the value of this IE is set to Scrambling code 3 |

RADIO BEARER SETUP (Step 5a)

Use the same message sub-type found in TS 34.108 clause 9, which is entitled "Packet to CELL_DCH from CELL_DCH in PS", with Scrambling code change set to Default1 and with the following modifications:

| Information Element | Value/Remark | Version |
|---|---|---|
| - DPCH compressed mode info | | |
| - TGPSI | 1 | |
| - TGPS Status Flag | Activate | |
| - TGCFN | (Current CFN + (256 – TTI/10msec))mod 256 | |
| - Transmission gap pattern sequence configuration parameters | | |
| - TGMP | FDD Measurement | |
| - TGPRC | Infinity | |
| - TGSN | 4 | |
| - TGL1 | 7 | |
| - TGL2 | Not Present | |
| - TGD | undefined | |
| - TGPL1 | 3 | |
| - TGPL2 | Not Present | R99 and REL-4 only |
| - RPP | Mode 0 | |
| - ITP | Mode 0 | |
| - CHOICE UL/DL Mode | UL and DL, UL only or DL only (depending on the UE capability) | |
| - Downlink compressed mode method | HLS(or not sent, depending on the UE capability) | |
| - Uplink compressed mode method | HLS(or not sent, depending on the UE capability) | |
| - Downlink frame type | B | |
| - DeltaSIR1 | 20 (2.0) | |
| - DeltaSIRAfter1 | 10 (1.0) | |
| - DeltaSIR2 | Not Present | |
| - DeltaSIRAfter2 | Not Present | |
| - N identify abort | Not Present | |
| - T Reconfirm abort | Not Present | |
| Downlink information for each radio link list | | |
| - Downlink information for each radio link | | |
| - Choice mode | FDD | |
| - Primary CPICH info | | |
| - Primary scrambling code | Ref. to the Default setting in clause 6.1 (FDD) | |
| - PDSCH with SHO DCH info | Not Present | R99 and Rel-4 only |
| - PDSCH code mapping | Not Present | R99 and Rel-4 only |
| - Serving HS-DSCH radio link indicator | FALSE | Rel-5 |
| - Downlink DPCH info for each RL | | |
| - Primary CPICH usage for channel estimation | Primary CPICH may be used | |
| - DPCH frame offset | Set to value Default DPCH Offset Value (as currently stored in SS) mod 38 400 | |
| - Secondary CPICH info | Not Present | |
| - DL channelisation code | | |
| - Secondary scrambling code | 1 | |
| - Spreading factor | Reference to clause 6.10 Parameter Set | |
| - Code number | 0 | |
| - Scrambling code change | Set to value Default1: No code change (if the UE has a compressed mode pattern sequence configured in variable TGPS_IDENTITY or included in the message including IE "Downlink DPCH info for each RL", which is using compressed mode method "SF/2") | |
| - TPC combination index | 0 | |
| - SSDT Cell Identity | Not Present | R99 and Rel-4 only |
| - Closed loop timing adjustment mode | Not Present | |

| | | |
|---|---|---|
| - SCCPCH information for FACH | Not Present | R99 and Rel-4 only |
| Downlink information for each radio link list | | |
| - Downlink information for each radio link | | |
| - Choice mode | FDD | |
| - Primary CPICH info | | |
| - Primary scrambling code | Ref. to the Default setting in clause 6.1 (FDD) | |
| - PDSCH with SHO DCH info | Not Present | R99 and Rel-4 only |
| - PDSCH code mapping | Not Present | R99 and Rel-4 only |
| - Serving HS-DSCH radio link indicator | FALSE | Rel-5 |
| - Downlink DPCH info for each RL | Not present | |
| - SCCPCH information for FACH | Not Present | R99 and Rel-4 only |

PAGING TYPE 2 (Step 5f)

Use the same message type found in TS 34.108 clause 9.

RADIO BEARER SETUP (Step 6)

Use the same message sub-type found in TS 34.108 clause 9, which is entitled "Non speech to CELL_DCH from CELL_DCH in CS" or "Speech to CELL_DCH from CELL_DCH in CS", with Scrambling code change set to Default1 and with the following modifications:

| Information Element | Value/Remark | Version |
|---|---|---|
| - DPCH compressed mode info | | |
| - TGPSI | 1 | |
| - TGPS Status Flag | Activate | |
| - TGCFN | (Current CFN + (256 – TTI/10msec))mod 256 | |
| - Transmission gap pattern sequence configuration parameters | | |
| - TGMP | FDD Measurement | |
| - TGPRC | Infinity | |
| - TGSN | 4 | |
| - TGL1 | 7 | |
| - TGL2 | Not Present | |
| - TGD | undefined | |
| - TGPL1 | 3 | |
| - TGPL2 | Not Present | R99 and REL-4 only |
| - RPP | Mode 0 | |
| - ITP | Mode 0 | |
| - CHOICE UL/DL Mode | UL and DL, UL only or DL only (depending on the UE capability) | |
| - Downlink compressed mode method | SF/2(or not sent, depending on the UE capability) | |
| - Uplink compressed mode method | SF/2(or not sent, depending on the UE capability) | |
| - Downlink frame type | B | |
| - DeltaSIR1 | 20 (2.0) | |
| - DeltaSIRAfter1 | 10 (1.0) | |
| - DeltaSIR2 | Not Present | |
| - DeltaSIRAfter2 | Not Present | |
| - N identify abort | Not Present | |
| - T Reconfirm abort | Not Present | |
| Downlink information for each radio link list | | |
| - Downlink information for each radio link | | |
| - Choice mode | FDD | |
| - Primary CPICH info | | |
| - Primary scrambling code | Ref. to the Default setting in clause 6.1 (FDD) | |
| - PDSCH with SHO DCH info | Not Present | R99 and Rel-4 only |
| - PDSCH code mapping | Not Present | R99 and Rel-4 only |
| - Serving HS-DSCH radio link indicator | FALSE | Rel-5 |
| - Downlink DPCH info for each RL | | |
| - Primary CPICH usage for channel estimation | Primary CPICH may be used | |
| - DPCH frame offset | Set to value Default DPCH Offset Value (as currently stored in SS) mod 38 400 | |
| - Secondary CPICH info | Not Present | |
| - DL channelisation code | | |
| - Secondary scrambling code | 1 | |
| - Spreading factor | Reference to clause 6.10 Parameter Set | |
| - Code number | 0 | |
| - Scrambling code change | Set to value Default1: No code change (if the UE has a compressed mode pattern sequence configured in variable TGPS_IDENTITY or included in the message including IE "Downlink DPCH info for each RL", which is using compressed mode method "SF/2") | |
| - TPC combination index | 0 | |
| - SSDT Cell Identity | Not Present | R99 and Rel-4 only |
| - Closed loop timing adjustment mode | Not Present | |
| - SCCPCH information for FACH | Not Present | R99 and Rel-4 only |
| Downlink information for each radio link list | | |
| - Downlink information for each radio link | | |
| - Choice mode | FDD | |
| - Primary CPICH info | | |
| - Primary scrambling code | Ref. to the Default setting in clause 6.1 (FDD) | |

| | | |
|---|---|---|
| - PDSCH with SHO DCH info | Not Present | R99 and Rel-4 only |
| - PDSCH code mapping | Not Present | R99 and Rel-4 only |
| - Serving HS-DSCH radio link indicator | FALSE | Rel-5 |
| - Downlink DPCH info for each RL | Not present | |
| - SCCPCH information for FACH | Not Present | R99 and Rel-4 only |

MEASUREMENT REPORT (Step 5d,18)

NOTE: Due to ambiguity in 25.331 clause 14.2.1.2 – two interpretations can be given for MEASUREMENT REPORT

| Information Element | Value/Remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 2 |
| Measured Results | |
| - Inter-frequency measured results list | |
| - Frequency info | |
| -CHOICE mode | FDD |
| - UARFCN uplink | The presence of this IE is not checked |
| - UARFCN downlink | Check that the value of this IE is set to UARFCN for the downlink corresponding to $f_3$ |
| - UTRA carrier RSSI | Check that this IE is absent |
| - Inter-frequency cell measurement results | Check that the value of this IE is set to 1 cell reported |
| - Cell measured results | |
| - Cell Identity | Check that this IE is absent |
| - SFN-SFN observed time difference | Check that this IE is absent |
| - Cell synchronisation information | Check that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Check that the value of this IE is set to Scrambling code 2 (on $f_3$) |
| - CPICH Ec/N0 | Check that this IE is absent |
| - CPICH RSCP | Check that this IE is present |
| - Pathloss | Check that this IE is absent |
| Measured results on RACH | Check that this IE is absent |
| Additional measured results | Check that this IE is absent |
| Event results | |
| - Inter-frequency measurement event results | |
| - Inter-frequency event identity | 2b |
| - Inter-frequency cells | |
| - Frequency info | |
| -CHOICE mode | FDD |
| - UARFCN uplink | The presence of this IE is not checked |
| - UARFCN downlink | Check that the value of this IE is set to UARFCN for the downlink corresponding to $f_3$ |
| - Non freq related measurement event results | |
| - Primary CPICH info | |
| - Primary scrambling code | Check that the value of this IE is set to Scrambling code 2 (on $f_3$) |

OR:

| Information Element | Value/Remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 2 |
| Measured Results | |
| - Inter-frequency measured results list | Check to see if measurement results for 2 cells are included (the order in which the different cells are reported is not important) |
| - Frequency info | |
| -CHOICE mode | FDD |
| - UARFCN uplink | Check that the value of this IE is set to UARFCN for the uplink corresponding to $f_2$ (Could be absent in case the duplex distance is the default duplex distance) |
| - UARFCN downlink | Check that the value of this IE is set to UARFCN for the downlink corresponding to $f_2$ |
| - UTRA carrier RSSI | Check that this IE is absent |
| - Inter-frequency cell measurement results | Check that the value of this IE is set to 2 cells reported |
| - Cell measured results | |
| - Cell Identity | Check that this IE is absent |
| - SFN-SFN observed time difference | Check that this IE is absent |
| - Cell synchronisation information | Check that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Check that the value of this IE is set to Scrambling code 3 (on $f_2$) |
| - CPICH Ec/N0 | Check that this IE is absent |
| - CPICH RSCP | Check that this IE is present |
| - Pathloss | Check that this IE is absent |
| - Frequency info | |
| -CHOICE mode | FDD |
| - UARFCN uplink | Check that the value of this IE is set to UARFCN for the uplink corresponding to $f_3$(Could be absent in case the duplex distance is the default duplex distance) |
| - UARFCN downlink | Check that the value of this IE is set to UARFCN for the downlink corresponding to $f_3$ |
| - UTRA carrier RSSI | Check that this IE is absent |
| - Inter-frequency cell measurement results | |
| - Cell measured results | |
| - Cell Identity | Check that this IE is absent |
| - SFN-SFN observed time difference | Check that this IE is absent |
| - Cell synchronisation information | Check that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Check that the value of this IE is set to Scrambling code Scrambling code 2 (on $f_3$) |
| - CPICH Ec/N0 | Check that this IE is absent |
| - CPICH RSCP | Check that this IE is present |
| - Pathloss | Check that this IE is absent |
| Measured results on RACH | Check that this IE is absent |
| Additional measured results | Check that this IE is absent |
| Event results | |
| - Inter-frequency measurement event results | Check to see if event results for 2 cells are included (the order in which the different cells are reported is not important) |
| - Inter-frequency event identity | 2b |
| - Inter-frequency cells | |
| - Frequency info | |
| -CHOICE mode | FDD |
| - UARFCN uplink | Check that the value of this IE is set to UARFCN for the uplink corresponding to $f_2$ (Could be absent in case the duplex distance is the default duplex distance) |
| - UARFCN downlink | Check that the value of this IE is set to UARFCN for the |

| Information Element | Value/Remark |
|---|---|
| | downlink corresponding to $f_2$ |
| - Non freq related measurement event results | |
| - Primary CPICH info | |
| - Primary scrambling code | Check that the value of this IE is set to Scrambling code 3 (on $f_2$) |
| - Frequency info | |
| -CHOICE mode | FDD |
| - UARFCN uplink | Check that the value of this IE is set to UARFCN for the uplink corresponding to $f_3$(Could be absent in case the duplex distance is the default duplex distance) |
| - UARFCN downlink | Check that the value of this IE is set to UARFCN for the downlink corresponding to $f_3$ |
| - Non freq related measurement event results | |
| - Primary CPICH info | |
| - Primary scrambling code | Check that the value of this IE is set to Scrambling code 2 (on $f_3$) |

RADIO BEARER RELEASE (Step 15)

Use the same message sub-type found in TS 34.108 clause 9, which is entitled “Non speech in CS” or "Speech in CS", with Scrambling code change set to Default1 and with the following modifications

| Information Element | Value/Remark | Version |
|---|---|---|
| - DPCH compressed mode info | | |
| - TGPSI | 1 | |
| - TGPS Status Flag | Activate | |
| - TGCFN | (Current CFN + (256 – TTI/10msec))mod 256 | |
| - Transmission gap pattern sequence configuration parameters | | |
| - TGMP | FDD Measurement | |
| - TGPRC | Infinity | |
| - TGSN | 4 | |
| - TGL1 | 7 | |
| - TGL2 | Not Present | |
| - TGD | undefined | |
| - TGPL1 | 3 | |
| - TGPL2 | Not Present | R99 and REL-4 only |
| - RPP | Mode 0 | |
| - ITP | Mode 0 | |
| - CHOICE UL/DL Mode | UL and DL, UL only or DL only (depending on the UE capability) | |
| - Downlink compressed mode method | HLS(or not sent, depending on the UE capability) | |
| - Uplink compressed mode method | HLS(or not sent, depending on the UE capability) | |
| - Downlink frame type | B | |
| - DeltaSIR1 | 20 (2.0) | |
| - DeltaSIRAfter1 | 10 (1.0) | |
| - DeltaSIR2 | Not Present | |
| - DeltaSIRAfter2 | Not Present | |
| - N identify abort | Not Present | |
| - T Reconfirm abort | Not Present | |
| Downlink information for each radio link list | | |
| -Downlink information for each radio link | | |
| - Choice mode | FDD | |
| - Primary CPICH info | | |
| - Primary scrambling code | Ref. to the Default setting in clause 6.1 (FDD) | |
| - PDSCH with SHO DCH info | Not Present | R99 and Rel-4 only |
| - PDSCH code mapping | Not Present | R99 and Rel-4 only |
| - Serving HS-DSCH radio link indicator | FALSE | Rel-5 |
| - Serving E-DCH radio link indicator | FALSE | Rel-6 |
| - Downlink DPCH info for each RL | | |
| - Primary CPICH usage for channel estimation | Primary CPICH may be used | |
| - DPCH frame offset | Set to value Default DPCH Offset Value (as currently stored in SS) mod 38 400 | |
| - Secondary CPICH info | Not Present | |
| - Secondary scrambling code | | |
| - channelisation code | | |
| - DL channelisation code | | |
| - Secondary scrambling code | 3 | |
| - Spreading factor | Reference to clause 6.10 Parameter Set | |
| - Code number | 0 | |
| - Scrambling code change | Set to value Default1: No code change (if the UE has a compressed mode pattern sequence configured in variable TGPS_IDENTITY or included in the message including IE "Downlink DPCH info for each RL", which is using compressed mode method "SF/2") | Default2 |
| | Set to value: OMIT (otherwise) | |
| - TPC combination index | 0 | |

| | | |
|---|---|---|
| - SSDT Cell Identity | Not Present | R99 and Rel-4 only |
| - Closed loop timing adjustment mode | Not Present | |
| - E-AGCH Info | Not present | Rel-6 |
| - E-HICH Information | Not present | Rel-6 |
| - E-RGCH Information | Not present | Rel-6 |
| - SCCPCH information for FACH | Not Present | R99 and Rel-4 only |

#### 8.4.1.42.5 Test Requirement

After step 1, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to the SS to acknowledge the downloading of compressed mode parameters that were included in the PHYSICAL CHANNEL RECONFIGURATION message of step 1.

After step 4, the UE shall transmit a MEASUREMENT REPORT message triggered by frequency $f_2$. That message shall only include cell 4 within the IE event results.

After step 5a, the UE shall send a RADIO BEARER SETUP COMPLETE message to the SS to acknowledge the establishment of the RAB and the change of compressed mode method that were included in the RADIO BEARER SETUP message of step 5a.

After step 5c, the UE shall transmit a MEASUREMENT REPORT message triggered by frequency $f_3$.

After step 6, the UE shall send a RADIO BEARER SETUP COMPLETE message to acknowledge the establishment of the RAB and the compressed mode method change that were included in the RADIO BEARER SETUP message of step 6.

After step 8, the UE shall transmit a MEASUREMENT REPORT message triggered by frequency $f_2$. That message shall only include cell 4 within the IE event results.

After step 15, the UE shall send a RADIO BEARER RELEASE COMPLETE message to acknowledge the release of the RAB and the compressed mode method change that were included in the RADIO BEARER RELEASE message of step 15.

After step 17, the UE shall transmit a MEASUREMENT REPORT message triggered by frequency $f_3$.

### 8.4.1.43 Measurement Control and Report: Compressed Mode Reconfiguration

#### 8.4.1.43.1 Definition

#### 8.4.1.43.2 Conformance requirement

If variable INVALID_CONFIGURATION has value FALSE after UE has performed the checks above, the UE shall:

1> if pattern sequence corresponding to IE "TGPSI" is already active (according to "Current TGPS Status Flag") in the variable TGPS_IDENTITY):

2> if the "TGPS Status Flag" in this message is set to "deactivate" for the corresponding pattern sequence:

3> deactivate this pattern sequence at the beginning of the frame, indicated by IE "Activation time"(see subclause 8.6.3.1) received in this message, when the new configuration received in this message is taken into use.

3> set the "Current TGPS Status Flag" for this pattern sequence in the variable TGPS_IDENTITY to "inactive" at the frame, indicated by IE "Activation time" (see subclause 8.6.3.1) received in this message, when the new configuration received in this message is taken into use.

2> if the "TGPS Status Flag" in this message is set to "activate" for the corresponding pattern sequence:

3> deactivate this pattern sequence at the beginning of the frame, indicated by IE "Activation time"(see subclause 8.6.3.1) received in this message, when the new configuration received in this message is taken into use.

NOTE 1: The temporary deactivation of pattern sequences for which the status flag is set to "activate" can be used by the network to align the timing of already active patterns with newly activated patterns.

NOTE 2: The deactivation of pattern sequences only occurs as a result of RRC messages received by the UE, i.e. the UE does not set the "Current TGPS Status Flag" to "inactive" after the final gap of a finite length pattern sequence.

1> update each pattern sequence to the variable TGPS_IDENTITY according to the IE "TGPSI";

1> update into the variable TGPS_IDENTITY the configuration information defined by IE group" transmission gap pattern sequence configuration parameters ";

1> after the instant in which the message is to be executed, as specified in subclause 8.6.3.1:

2> activate the stored pattern sequence corresponding to each IE "TGPSI" for which the "TGPS status flag" in the variable TGPS_IDENTITY is set to "activate" at the time indicated by IE "TGCFN"; and

2> set the "Current TGPS Status Flag" for this pattern sequence in the variable TGPS_IDENTITY to "active".

NOTE 1: If the pattern is activated with a message that includes the IE "Activation time", and if the CFN value indicated by the IE "Activation Time" and the CFN value indicated by the TGCFN are included in the same TTI (but not at the TTI boundary) common to all the transport channels that are multiplexed onto the reference CCTrCh (as defined in subclause 8.6.3.1), and if the CFN value indicated by the TGCFN is equal or higher than the CFN value indicated by the IE "Activation Time" (as defined in subclause 8.6.3.1) value, the UE behaviour is not specified.

NOTE 2: If the pattern is activated with a message used to perform timing re-initialised hard handover, the UE can start evaluating the activation of the pattern (i.e. compare the value of the CFN in the new configuration with the value of the TGCFN) at any time between the message activation time and the completion of the synchronisation procedure A.

2> if the IE "DPCH compressed mode info" is included in a message used to perform a Hard Handover with change of frequency (see subclause 8.3.5); or

2> if the IE "DPCH compressed mode info" is included in a message used to transfer the UE from Cell_FACH to Cell_DCH, and the cell in which the UE transited from CELL_FACH state is not included in the active set for the CELL_DCH state (see subclause 8.4.1.7.2):

3> not begin the inter-frequency measurement reporting corresponding to the pattern sequence measurement purpose of each activated pattern sequence.

2> else:

3> begin the inter-frequency measurement reporting corresponding to the pattern sequence measurement purpose of each activated pattern sequence.

2> begin the inter-RAT measurement reporting corresponding to the pattern sequence measurement purpose of each activated pattern sequence;

2> if the new configuration is taken into use at the same CFN as indicated by IE "TGCFN":

3> start the concerned pattern sequence immediately at that CFN.

1> monitor if the parallel transmission gap pattern sequences create an illegal overlap, and in case of overlap, take actions as specified in subclause 8.2.11.2.

If the IE "DPCH compressed mode info" is included, and if the IE group "transmission gap pattern sequence configuration parameters" is not included, the UE shall:

1> if, as the result of this message, UE will have more than one transmission gap pattern sequence with the same measurement purpose active (according to IEs "TGMP" and "Current TGPS Status Flag" in variable TGPS_IDENTITY):

2> set the variable CONFIGURATION_INCOMPLETE to TRUE.

1> if there is any pending "TGPS reconfiguration CFN" or any pending "TGCFN":

2> the UE behaviour is unspecified.

1> if pattern sequence corresponding to IE "TGPSI" is already active (according to "Current TGPS Status Flag" in the variable TGPS_IDENTITY):

2> if the "TGPS Status Flag" in this message is set to "deactivate" for the corresponding pattern sequence:

3> deactivate this pattern sequence at the beginning of the frame, indicated by IE "Activation time"(see subclause 8.6.3.1) received in this message, when the new configuration received in this message is taken into use;

3> set the "Current TGPS Status Flag" for this pattern sequence in the variable TGPS_IDENTITY to "inactive" at the frame, indicated by IE "Activation time"(see subclause 8.6.3.1) received in this message, when the new configuration received in this message is taken into use.

2> if the "TGPS Status Flag" in this message is set to "activate" for the corresponding pattern sequence:

3> deactivate this pattern sequence at the beginning of the frame, indicated by IE "Activation time"(see subclause 8.6.3.1) received in this message, when the new configuration received in this message is taken into use.

NOTE 1: The temporary deactivation of pattern sequences for which the status flag is set to "activate" can be used by the network to align the timing of already active patterns with newly activated patterns.

NOTE 2: The deactivation of pattern sequences only occurs as a result of RRC messages received by the UE, i.e. the UE does not set the "Current TGPS Status Flag" to "inactive" after the final gap of a finite length pattern sequence.

1> after the instant in which the message is to be executed, as specified in subclause 8.6.3.1:

2> activate the stored pattern sequence corresponding to each IE "TGPSI" for which the "TGPS status flag" is set to "activate" at the time indicated by IE "TGCFN"; and

NOTE 1: If the pattern is activated with a message that includes the IE "Activation time", and if the CFN value indicated by the IE "Activation Time" and the CFN value indicated by the TGCFN are included in the same TTI (but not at the TTI boundary) common to all the transport channels that are multiplexed onto the reference CCTrCh (as defined in subclause 8.6.3.1), and if the CFN value indicated by the TGCFN is equal or higher than the CFN value indicated by the IE "Activation Time" (as defined in subclause 8.6.3.1) value, the UE behaviour is not specified.

NOTE 2: If the pattern is activated with a message used to perform timing re-initialised hard handover, the UE can start evaluating the activation of the pattern (i.e. compare the value of the CFN in the new configuration with the value of the TGCFN) at any time between the message activation time and the completion of the synchronisation procedure A.

2> set the "Current TGPS Status Flag" for this pattern sequence in the variable TGPS_IDENTITY to "active".

2> if the IE "DPCH compressed mode info" is included in a message used to perform a Hard Handover with change of frequency (see subclause 8.3.5); or

2> if the IE "DPCH compressed mode info" is included in a message used to transfer the UE from Cell_FACH to Cell_DCH, and the cell in which the UE transited from CELL_FACH state is not included in the active set for the CELL_DCH state (see subclause 8.4.1.7.2):

3> not begin the inter-frequency measurement reporting corresponding to the pattern sequence measurement purpose of each activated pattern sequence.

2> else:

3> begin the inter-frequency measurement reporting corresponding to the pattern sequence measurement purpose of each activated pattern sequence.

2> begin the inter-RAT measurement reporting corresponding to the pattern sequence measurement purpose of each activated pattern sequence;

2> if the new configuration is taken into use at the same CFN as indicated by IE "TGCFN":

3> start the concerned pattern sequence immediately at that CFN.

For transmission gap pattern sequences stored in variable TGPS_IDENTITY, but not identified in IE "TGPSI" (either due to the absence of the IE "DPCH compressed mode info" in the received message or due to not receiving the corresponding TGPSI value in the IE "DPCH compressed mode info"), the UE shall:

1> if the received message implies a timing re-initialised hard handover (see subclause 8.3.5.1):

2> deactivate such transmission gap pattern sequences at the beginning of the frame, indicated by IE "Activation time" (see subclause 8.6.3.1) received in this message; and

2> set IE "Current TGPS Status Flag" in corresponding UE variable TGPS_IDENTITY to 'inactive'.

1> if the received message not implies a timing re-initialised hard handover (see subclause 8.3.5.1):

2> continue such transmission gap pattern sequence according to IE "Current TGPS Status Flag" in the corresponding UE variable TGPS_IDENTITY.

Uplink and downlink compressed mode methods are described in [27]. For UL "higher layer scheduling" compressed mode method and transport format combination selection, see [15].

Reference

3GPP TS 25.331 clause 8.6.6.15.

### 8.4.1.43.3 Test purpose

To confirm that the UE supports de- activation of compressed mode included in a RADIO BEARER SETUP message.

To confirm that the UE supports reconfiguration of transport channel parameters (rate reduction PS RAB) and change of compressed mode method included in a TRANSPORT CHANNEL RECONFIGURATION message.

To confirm that the UE supports change of compressed mode included in a RADIO BEARER RELEASE message.

To confirm that the UE supports reconfiguration of transport channel parameters (rate increase PS RAB) without performing hard handover included in a TRANSPORT CHANNEL RECONFIGURATION message.

### 8.4.1.43.4 Method of test

Initial Condition

System Simulator: 3 cells – Cell 1 on frequency $f_1$, cell 4 on frequency $f_2$ and cell 5 on frequency $f_3$.

UE: "CS-DCCH + DTCH_DCH" (state 6-9) as specified in clause 7.4 of TS 34.108.

This test case applies only for UEs requiring compressed mode to perform inter- frequency measurements and supporting both PS and CS domains.

Test Procedure

Table 8.4.1.43-1 illustrates the downlink power to be applied for the 3 cells, as well as the frequency and scrambling code for each cell.

**Table 8.4.1.43-1a**

| Parameter | Unit | Cell 1 | | | | | |
|---|---|---|---|---|---|---|---|
| Frequency | | $f_1$ | | | | | |
| Scrambling code | | Scrambling code 1 | | | | | |
| | | T0 | T1 | T2 | T3 | T4 | T5 |
| CPICH Ec | dBm/3.84 MHz | -60 | -70 | -70 | -60 | -70 | -70 |

**Table 8.4.1.43-1b**

| Parameter | Unit | Cell 4 | | | | | | Cell 5 | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Frequency | | $f_2$ | | | | | | $f_3$ | | | | | |
| Scrambling code | | Scrambling code 3 | | | | | | Scrambling code 2 | | | | | |
| | | T0 | T1 | T2 | T3 | T4 | T5 | T0 | T1 | T2 | T3 | T4 | T5 |
| CPICH Ec | dBm/3.84 MHz | -95 | -60 | -60 | -95 | -60 | -60 | -95 | -95 | -60 | -95 | -95 | -60 |

The UE is initially in CELL_DCH, and has only cell 1 in its active set.

Next, SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to download compressed mode parameters in the UE without activating compressed mode. The UE shall answer with a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message.

The SS then sets up inter-frequency measurements (event 2b) and activates compressed mode, by sending a MEASUREMENT CONTROL message to the UE.

The SS waits for 2560 ms for the UE to activate compressed mode.

The test operator is prompted to setup a PS call. The SS establishes a PS domain RAB and de-activates compressed mode, by sending a RADIO BEARER SETUP message on DCCH using AM-RLC. The UE shall answer with a RADIO BEARER SETUP COMPLETE message.

At instant T1, the downlink power is changed according to what is shown in table 8.4.1.43-1. The SS shall then verify that the UE does not transmit a MEASUREMENT REPORT message.

Next the SS downloads compressed mode parameters and activates compressed mode (using HLS method) by sending a PHYSICAL CHANNEL RECONFIGURATION message on DCCH using AM-RLC. The UE shall answer with a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message.

Frequency $f_2$ shall then trigger event 2b, and the UE shall transmit a MEASUREMENT REPORT message to the SS.

Next, SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to reconfigure transport channel parameters (rate reduction PS RAB) and to change compressed mode method (to SF/2). The UE shall answer with a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message.

At instant T2, the downlink power is changed according to what is shown in table 8.4.1.43-1. Frequency $f_3$ shall then trigger event 2b, and the UE shall transmit a MEASUREMENT REPORT message to the SS.

At instant T3, the downlink power is changed according to what is shown in table 8.4.1.43-1.The increased quality of the used frequency should result in clearing of the concerning TRIGGERED_2B_EVENT.

Next, SS transmits a RADIO BEARER RELEASE message to release the CS domain RAB and change compressed mode method (from SF/2 to HLS). The UE shall answer with a RADIO BEARER RELEASE COMPLETE message.

At instant T4, the downlink power is changed according to what is shown in table 8.4.1.43-1. Frequency $f_2$ shall then trigger event 2b, and the UE shall transmit a MEASUREMENT REPORT message to the SS.

Next, SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to reconfigure transport channel parameters (rate increase PS RAB) – without performing hard handover. The UE shall answer with a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message.

At instant T5, the downlink power is changed according to what is shown in table 8.4.1.43-1. Frequency $f_3$ shall then trigger event 2b, and the UE shall transmit a MEASUREMENT REPORT message to the SS.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PHYSICAL CHANNEL RECONFIGURATION | SS downloads compressed mode parameters (using SF/2 method) without activating compressed mode. |
| 2 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE acknowledges the downloading of compressed mode parameters. |
| 3 | ← | | MEASUREMENT CONTROL | The SS configures inter-frequency measurements in the UE and activates compressed mode. |
| 3a | | | | SS waits for 2560 ms. |
| 3b | → | | INITIAL DIRECT TRANSFER (SERVICE REQUEST) | GMM ( PS session setup is initiated from the UE side). |
| 3c | ← | | DOWNLINK DIRECT TRANSFER (AUTHENTICATION AND CIPHERING REQUEST) | GMM |
| 3d | → | | UPLINK DIRECT TRANSFER (AUTHENTICATION AND CIPHERING RESPONSE) | GMM |
| 3e | ← | | SECURITY MODE COMMAND | |
| 3f | → | | SECURITY MODE COMPLETE | |
| 3g | → | | UPLINK DIRECT TRANSFER (ACTIVATE PDP CONTEXT REQUEST) | SM |
| 4 | ← | | RADIO BEARER SETUP | SS establishes PS domain RAB and de- activates compressed mode. |

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 5 | → | | RADIO BEARER SETUP COMPLETE | The UE acknowledges the establishment of the RAB and the de- activation of compressed mode |
| 5a | ← | | DOWNLINK DIRECT TRANSFER (ACTIVATE PDP CONTEXT ACCEPT) | SM |
| 6 | | | | The SS changes the power of the cells according to column T1 in table 8.4.1.43-1. |
| 7 | | | | SS verifies that the UE does not transmit a MEASUREMENT REPORT message to the SS. |
| 8 | ← | | PHYSICAL CHANNEL RECONFIGURATION | SS downloads compressed mode parameters (using HLS method) and activates compressed mode. |
| 9 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE acknowledges the downloading of compressed mode parameters and the activation of compressed mode. |
| 10 | → | | MEASUREMENT REPORT | Frequency f2 triggers event 2b in the UE, which sends a MEASUREMENT REPORT message to the SS. |
| 11 | ← | | TRANSPORT CHANNEL RECONFIGURATION | SS reconfigures transport channel parameters (rate reduction PS RAB) and changes compressed mode method to SF/2.<br>Rate should be reduced to 0 kbps – no PS RAB room left to use for gap. |
| 12 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | The UE acknowledges the transport channel reconfiguration and the change of compressed mode method |
| 13 | | | | The SS changes the power of the cells according to column T2 in table 8.4.1.43-1. |
| 14 | → | | MEASUREMENT REPORT | Frequency $f_3$ triggers event 2b in the UE, which sends a MEASUREMENT REPORT message to the SS. |
| 15 | | | | The SS changes the power of the cells according to T3 in table 8.4.1.43-1 (so the UE can trigger event 2b again for both frequencies). |
| 16 | ← | | RADIO BEARER RELEASE | SS releases the CS domain RAB and changes compressed mode method to HLS. |
| 17 | → | | RADIO BEARER RELEASE COMPLETE | The UE acknowledges the release of the RAB and the compressed mode method change. |
| 18 | | | | The SS changes the power of the cells according to column T4 in table 8.4.1.43-1. |
| 19 | → | | MEASUREMENT REPORT | Frequency $f_2$ triggers event 2b in the UE, which sends a MEASUREMENT REPORT message to the SS. |

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 20 | ← | | TRANSPORT CHANNEL RECONFIGURATION | SS reconfigures transport channel parameters (rate increase PS RAB) – without performing hard handover. |
| 21 | → | | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | The UE acknowledges the transport channel parameters change. |
| 22 | | | | The SS changes the power of the cells according to column T5 in table 8.4.1.43-1. |
| 23 | → | | MEASUREMENT REPORT | Frequency $f_3$ triggers event 2b in the UE, which sends a MEASUREMENT REPORT message to the SS. |

Specific Message Content

All messages shall use the same content as defined in [9] TS 34.108 clause 9, with the following exceptions:

PHYSICAL CHANNEL RECONFIGURATION MESSAGE (Step 1)

| Information Element | Value/Remark | Version |
|---|---|---|
| Activation time | Not Present | |
| New U-RNTI | Not Present | |
| New C-RNTI | Not Present | |
| New DSCH-RNTI | Not Present | |
| RRC State indicator | CELL_DCH | |
| UTRAN DRX cycle length coefficient | Not Present | |

| - TGCFN | (Current CFN + (256 – TTI/10msec))mod 256 |

RADIO BEARER SETUP (Step 4)

Use the same message sub-type found in TS 34.108 clause 9, which is entitled " Packet RAB Setup after Speech RAB Setup in CELL_DCH ", with the following modifications:

| Information Element | Value/Remark |
|---|---|
| - DPCH compressed mode info | |
| - TGPSI | 1 |
| - TGPS Status Flag | De-activate |
| - TGCFN | Not present |

PHYSICAL CHANNEL RECONFIGURATION MESSAGE (Step 8)

| Information Element | Value/Remark | Version |
|---|---|---|
| Activation time | Not Present | |
| New U-RNTI | Not Present | |
| New C-RNTI | Not Present | |
| New DSCH-RNTI | Not Present | |
| RRC State indicator | CELL_DCH | |
| UTRAN DRX cycle length coefficient | Not Present | |
| CN information info | Not Present | |
| URA identity | Not Present | |
| Downlink counter synchronisation info | Not Present | |
| Frequency info | Not Present | |
| Maximum allowed UL TX power | Not Present | |

| - Downlink compressed mode method | HLS(or not sent, depending on the UE capability) | |
| - Uplink compressed mode method | HLS(or not sent, depending on the UE capability) | |
| - Downlink frame type | B | |
| - DeltaSIR1 | 20 (2.0) | |
| - DeltaSIRAfter1 | 10 (1.0) | |
| - DeltaSIR2 | Not Present | |
| - DeltaSIRAfter2 | Not Present | |
| - N identify abort | Not Present | |
| - T Reconfirm abort | Not Present | |
| - TX Diversity mode | Not Present | |
| - SSDT information | Not Present | R99 and Rel-4 only |
| - Default DPCH Offset Value | Not Present | |
| Downlink information for each radio link | Not Present | |

MEASUREMENT REPORT (Step 10,19)

| Information Element | Value/Remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 2 |
| Measured Results | |
| - Inter-frequency measured results list | |
| - Frequency info | |
| -CHOICE mode | FDD |
| - UARFCN uplink | The presence of this IE is not checked |
| - UARFCN downlink | Check that the value of this IE is set to UARFCN for the downlink corresponding to $f_2$ |
| - UTRA carrier RSSI | Check that this IE is absent |
| - Inter-frequency cell measurement results | Check that the value of this IE is set to 1 cell reported |
| - Cell measured results | |
| - Cell Identity | Check that this IE is absent |
| - SFN-SFN observed time difference | Check that this IE is absent |
| - Cell synchronisation information | Check that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Check that the value of this IE is set to Scrambling code 3 |
| - CPICH Ec/N0 | Check that this IE is absent |
| - CPICH RSCP | Check that this IE is present |
| - Pathloss | Check that this IE is absent |
| Measured results on RACH | Check that this IE is absent |
| Additional measured results | Check that this IE is absent |
| Event results | |
| - Inter-frequency measurement event results | |
| - Inter-frequency event identity | 2b |
| - Inter-frequency cells | |
| - Frequency info | |
| -CHOICE mode | FDD |
| - UARFCN uplink | The presence of this IE is not checked |
| - UARFCN downlink | Check that the value of this IE is set to UARFCN for the downlink corresponding to $f_2$ |
| - Non freq related measurement event results | |
| - Primary CPICH info | |
| - Primary scrambling code | Check that the value of this IE is set to Scrambling code 3 |

TRANSPORT CHANNEL RECONFIGURATION (Step 11)

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 [9], with the following exceptions:

| Information Element | Value/remark | Version |
|---|---|---|
| UL Transport channel information for all transport channels | Do not include TFCs with TF's other than TF0 for PS RAB | |
| Added or Reconfigured UL TrCH information | Reconfigure PS RAB TFS, only include TF0 and UL Transport channel identity as 4 | |
| DL Transport channel information common for all transport channel | Do not include TFCs with TF's other than TF0 for PS RAB | |
| Added or Reconfigured DL TrCH information | Reconfigure PS RAB TFS, only include TF0 and DL Transport channel identity as 9 | |
| Frequency info | Not Present | |
| Maximum allowed UL TX power | Not Present | |
| Downlink information common for all radio links | | |
| - DPCH compressed mode info | | |
| - TGPSI | 1 | |
| - TGPS Status Flag | Activate | |
| - TGCFN | (Current CFN + (256 – TTI/10msec))mod 256 | |
| - Transmission gap pattern sequence configuration parameters | | |
| - TGMP | FDD Measurement | |
| - TGPRC | Infinity | |
| - TGSN | 4 | |
| - TGL1 | 7 | |
| - TGL2 | Not Present | |
| - TGD | undefined | |
| - TGPL1 | 3 | |
| - TGPL2 | Not Present | R99 and REL-4 only |
| - RPP | Mode 0 | |
| - ITP | Mode 0 | |
| - CHOICE UL/DL Mode | UL and DL, UL only or DL only (depending on the UE capability) | |
| - Downlink compressed mode method | SF/2(or not sent, depending on the UE capability) | |
| - Uplink compressed mode method | SF/2(or not sent, depending on the UE capability) | |
| - Downlink frame type | B | |

MEASUREMENT REPORT (Step 14,23)

NOTE: Due to ambiguity in 25.331 clause 14.2.1.2 – two interpretations can be given for MEASUREMENT REPORT

| Information Element | Value/Remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 2 |
| Measured Results | |
| - Inter-frequency measured results list | |
| - Frequency info | |
| -CHOICE mode | FDD |
| - UARFCN uplink | Check that the value of this IE is set to UARFCN for the uplink corresponding to $f_3$ (Could be absent in case the duplex distance is the default duplex distance) |
| - UARFCN downlink | Check that the value of this IE is set to UARFCN for the downlink corresponding to $f_3$ |
| - UTRA carrier RSSI | Check that this IE is absent |
| - Inter-frequency cell measurement results | Check that the value of this IE is set to 1 cell reported |
| - Cell measured results | |
| - Cell Identity | Check that this IE is absent |
| - SFN-SFN observed time difference | Check that this IE is absent |
| - Cell synchronisation information | Check that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Check that the value of this IE is set to Scrambling code 2 (on $f_3$) |
| - CPICH Ec/N0 | Check that this IE is absent |
| - CPICH RSCP | Check that this IE is present |
| - Pathloss | Check that this IE is absent |
| Measured results on RACH | Check that this IE is absent |
| Additional measured results | Check that this IE is absent |
| Event results | |
| - Inter-frequency measurement event results | |
| - Inter-frequency event identity | 2b |
| - Inter-frequency cells | |
| - Frequency info | |
| -CHOICE mode | FDD |
| - UARFCN uplink | Check that the value of this IE is set to UARFCN for the uplink corresponding to $f_3$ (Could be absent in case the duplex distance is the default duplex distance) |
| - UARFCN downlink | Check that the value of this IE is set to UARFCN for the downlink corresponding to $f_3$ |
| - Non freq related measurement event results | |
| - Primary CPICH info | |
| - Primary scrambling code | Check that the value of this IE is set Scrambling code 2 (on $f_3$) |

OR:

| - T Reconfirm abort | Not Present | |

TRANSPORT CHANNEL RECONFIGURATION (Step 20)

The content of the TRANSPORT CHANNEL RECONFIGURATION message at this step is identical to the message sub-type titled "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 [9].

#### 8.4.1.43.5 Test Requirement

After step 1, the UE shall send a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to the SS to acknowledge the downloading of the compressed mode parameters without activating compressed mode that were included in the PHYSICAL CHANNEL RECONFIGURATION message of step 1.

After step 4, the UE shall send a RADIO BEARER SETUP COMPLETE message to acknowledge the establishment of the PS domain RAB and the de- activation of compressed mode that were included in the RADIO BEARER SETUP message of step 4.

After step 6, the UE shall not transmit a MEASUREMENT REPORT message.

After step 8, the UE shall send a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to the SS to acknowledge the downloading of the compressed mode parameters and the activation of compressed mode that were included in the PHYSICAL CHANNEL RECONFIGURATION message of step 8.

After step 9, the UE shall transmit a MEASUREMENT REPORT message triggered by frequency $f_2$. That message shall only include cell 4 within the IE event results.

After step 11, the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message to the SS to acknowledge the change of transport channel parameters and the change of compressed mode method that were included in the TRANSPORT CHANNEL RECONFIGURATION message of step 11.

After step 13, the UE shall transmit a MEASUREMENT REPORT message triggered by frequency $f_3$.

After step 17, the UE shall transmit a RADIO BEARER RELEASE COMPLETE message to the SS to acknowledge the release of the RAB and the change of compressed mode method that were included in the RADIO BEARER RELEASE message of step 17.

After step 18, the UE shall transmit a MEASUREMENT REPORT message triggered by frequency $f_2$. That message shall only include cell 4 within the IE event results.

After step 20, the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message to the SS to acknowledge the change of transport channel parameters that were included in the TRANSPORT CHANNEL RECONFIGURATION message of step 20.

After step 22, the UE shall transmit a MEASUREMENT REPORT message triggered by frequency $f_3$.

## 8.4.1.44 Measurement Control and Report: Intra-frequency measurement for events 1H and 1I (TDD)

### 8.4.1.44.1 Definition

### 8.4.1.44.2 Conformance requirement

When event 1h is configured in the UE, the UE shall:

1> if equation 1 is fulfilled for a time period indicated by "Time to trigger" and if that P-CCPCH is not included in the IE "cells triggered" in the variable TRIGGERED_1H_EVENT:

2> include that P-CCPCH in the IE "cells triggered" in the variable TRIGGERED_1H_EVENT;

2> send a measurement report with the IEs set as below:

3> set in "intra-frequency measurement event results": "Intrafrequency event identity" to "1h" and in "cell measurement event results" the "Cell parameters ID" of the P-CCPCH that triggered the report;

3> include in "Cell measured results" the "Timeslot ISCP" of those cells that are included in the variable TRIGGERED_1H_EVENT.

1> if a primary CCPCH is included in the "cells triggered" in the variable TRIGGERED_1H_EVENT:

2> send a measurement report with IEs set as below:

3> set in "intra-frequency measurement event results": "Intrafrequency event identity" to "1h" and "cell measurement event results" to the "Cell parameters ID" of the P-CCPCH that triggered the report;

3> set in "measured results " the "Timeslot ISCP" of those cells that are included in the variable TRIGGERED_1H_EVENT and "additional measured results" according to subclause 8.4.2 in TS 25.331, not taking into account the cell individual offset for each cell.

1> if Equation 2 below is fulfilled for a primary CCPCH:

2> if a primary CCPCH is included in the "cells triggered" in the variable TRIGGERED_1H_EVENT:

3> remove the entry of that primary CCPCH from "cells triggered" in the variable TRIGGERED_1H_EVENT.

The UE shall use the equations below for evaluation of reporting event 1h:

Equation 1

$$10 \cdot LogM_i + H_{1h} + O_i < T_{1h},$$

Equation 2

$$10 \cdot LogM_i - H_{1h} + O_i > T_{1h},$$

The variables in the formula are defined as follows:

$M_i$ is the Timeslot ISCP of the currently evaluated cell $i$ expressed in mW

$O_i$ is the cell individual offset of the currently evaluated cell $i$

$T_{1h}$ is the Threshold for event 1h

$H_{1h}$ is the hysteresis parameter for the event 1h.

Before any evaluation is done, the Timeslot ISCP expressed in mW is filtered according to subclause 8.6.7.2. in TS 25.331

When event 1i is configured in the UE, the UE shall:

1> if equation 1 is fulfilled for a time period indicated by "Time to trigger" and if that P-CCPCH is not included in the IE "cells triggered" in the variable TRIGGERED_1I_EVENT:

2> include that P-CCPCH in the IE "cells triggered" in the variable TRIGGERED_1I_EVENT;

2> send a measurement report with the IEs set as below:

3> set in "intra-frequency measurement event results": "Intrafrequency event identity" to "1i" and in "cell measurement event results" to the "Cell parameters ID" of the P-CCPCH that triggered the report;

3> include in "measured results" the "Timeslot ISCP" of those cells that are included in the variable TRIGGERED_1I_EVENT and "additional measured results" according to 8.4.2 in TS 25.331, not taking into account the cell individual offset for each cell.

1> if a primary CCPCH is included in the "cells triggered" in the variable TRIGGERED_1I_EVENT:

2> if Equation 2 below is fulfilled for a primary CCPCH:

3> if a primary CCPCH is included in the "cells triggered" in the variable TRIGGERED_1I_EVENT:

4> remove the entry of that primary CCPCH from "cells triggered" in the variable TRIGGERED_1I_EVENT.

The UE shall use the equation below for evaluation of reporting event 1i:

Equation 1

$$10 \cdot LogM_i - H_{1i} + O_i > T_{1h},$$

Equation 2

$$10 \cdot LogM_i + H_{1i} + O_i < T_{1h},$$

The variables in the formula are defined as follows:

$M_i$ is the Timeslot ISCP of the currently evaluated cell ***i*** expressed in mW

$O_i$ is the cell individual offset of the currently evaluated cell ***i***

$T_{1i}$ is the Threshold for event 1i

$H_{1i}$ is the hysteresis parameter for the event 1i.

Before any evaluation is done, the Timeslot ISCP expressed in mW is filtered according to subclause 8.6.7.2. in TS 25.331

Reference

3GPP TS 25.331 clause 14.1.3.2, 14.1.3.3.

8.4.1.44.3 Test Purpose

1. To confirm that the UE sends MEASUREMENT REPORT message if event 1I is configured and intra-frequency measurement indicates that Timeslot ISCP is above a certain threshold

2. To confirm that the UE sends MEASUREMENT REPORT message if event 1H is configured, and intra-frequency measurement indicates that Timeslot ISCP is below a certain threshold

8.4.1.44.4 Method of test

8.4.1.44.4.1 3.84 Mcps option

<FFS>

8.4.1.44.4.2 1.28 Mcps option

Initial Condition

System Simulator: 1 cell – The initial configurations of the cell in the SS shall follow the values indicated in the column marked "T1" in table 8.4.1.44.4.2-1. Threshold for events 1H and 1I are specified in table 8.4.1.44.4.2-2

UE: CS-DCCH+DTCH_DCH (State 6-9) or PS-DCCH+DTCH_DCH (State 6-10) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE.

The test consists of four successive time periods, with a time duration of T1, T2, T3 and T4 respectively. Two cells shall be present in the test, being cell 1 the current serving cell. Timeslot ISCP values are specified for the cell, to check against a certain threshold.

Test Procedure

Table 8.4.1.44.4.2-1 illustrates the Cell 1 specific test parameters for correct event 1H and 1I reporting in AWGN propagation condition. The other RF values needed for the test are referred to section 8 in TS 34.122

Column marked "T1" denotes the initial conditions, while columns marked "T2", "T3" and "T4" are to be applied subsequently. The exact instants on which these values shall be applied are described in the text below.

**Table 8.4.1.44.4.2-1**

| Parameter | Unit | Cell 1 | | | |
|---|---|---|---|---|---|
| | | T1 | T2 | T3 | T4 |
| **UTRA RF Channel Number** | | Channel 1 | | | |
| DL timeslot number | | 6 | | | |
| PCCPCH RSCP | dBm | n.a. | | | |
| TS ISCP, Note 1 | | -74 | -64 | -74 | -64 |
| $I_{oc}$ | dBm / 1.28 MHz | -70 | | | |
| NOTE 1: The TS ISCP level is a calculated value. | | | | | |

**Table 8.4.1.44.4.2-2**

| Parameter | Unit | Value | Comment |
|---|---|---|---|
| Threshold used frequency | dBm | -69 | Applicable for event 1H, cell 1 timeslot 6 |
| Threshold used frequency | dBm | -69 | Applicable for event 1I, cell 1 timeslot 6 |

The UE is initially in CELL_DCH state of cell 1. System Information Block type 11 is configured according to allow measurement for intra-frequency, 1 Cell is defined and Timeslot 6 is defined for measurements. SS then sends MEASUREMENT CONTROL message to the UE to modify earlier configured intra-frequency measurement and a primary CCPCH is included in the "cells triggered" in the variable TRIGGERED_1I_EVENT and TRIGGERED_1H_EVENT.

UE shall report TRIGGERED_1H_EVENT or TRIGGERED_1I_EVENT in the different time periods during the test. SS re-adjusts the downlink transmission power settings according to columns "T2", "T3" and "T4" successively in table 8.4.1.44.4.2-1

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | System Information Block type 11 | The UE is in CELL_DCH and camped onto cell 1. The System Information Block type 11 messages to be transmitted are different from the default settings |
| 2 | ← | | MEASUREMENT CONTROL | Event 1I and 1H are configured. IEs and threshold values are included |
| 3 | → | | MEASUREMENT REPORT | Event 1H is triggered. The UE shall report that for cell 1 timeslot 6, ISCP is below than threshold |
| 4 | | | | SS re-adjusts the downlink transmission power settings according to columns "T2" in table 8.4.1.44.4.2-1. |
| 5 | → | | MEASUREMENT REPORT | Event 1I is triggered. The UE shall report that for cell 1 timeslot 6 ISCP is above threshold |
| 6 | | | | SS re-adjusts the downlink transmission power settings according to columns "T3" in table 8.4.1.44.4.2-1. |
| 7 | → | | MEASUREMENT REPORT | Event 1H is triggered. The UE shall report that for cell 1 timeslot 6, ISCP is below than threshold |
| 8 | | | | SS re-adjusts the downlink transmission power settings according to columns "T4" in table 8.4.1.44.4.2-1. |
| 9 | → | | MEASUREMENT REPORT | Event 1I is triggered. The UE shall report that for cell 1 timeslot 6 ISCP is above threshold |
| 10 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails |

Specific Message Contents

All messages indicated below shall use the same content as described in default message content, with the following exceptions.

System Information Block type 11 (Step 1)

| Information Element | Value/remark |
|---|---|
| SIB12 indicator | FALSE |
| FACH measurement occasion info | Not Present |
| Measurement control system information | |
| - Use of HCS | Not used |
| - Cell selection and reselection quality measure | CPICH RSCP |
| - Intra-frequency measurement system information | |
| - Intra-frequency measurement identity | Not Present<br>Absence of this IE is equivalent to default value 1 |
| - Intra-frequency cell info list | |
| - CHOICE intra-frequency cell removal | Not present<br>(This IE shall be ignored by the UE for SIB11) |
| - New intra-frequency cells | |
| - Intra-frequency cell id | 1 |
| - Cell info | |
| - Cell individual offset | Not present<br>Absence of this IE is equivalent to default value 0 dB |
| - Reference time difference to cell | Not Present |
| - Read SFN Indicator | FALSE |
| - CHOICE Mode | TDD |
| - Primary CCPCH Info | Refer to clause titled "Default settings for cell No.1 (TDD)" in clause 6.1.4 of TS 34.108 |
| - Primary CCPCH TX Power | Not present |
| - Timeslot List | |
| - Timeslot Number | 6 |
| - Burst Type | Type 1 |
| - Cell selection and Re-selection | Not Present (The IE shall be absent as this is the serving cell) |
| - Intra-frequency measurement quantity | Not present |
| - Intra-frequency measurement for RACH reporting | Not Present |
| - Maximum number of reported cells on RACH | Not Present |
| - Reporting information for state CELL_DCH | Not Present |
| - Inter-frequency measurement system information | Not present |
| - Inter-RAT measurement system information | Not Present |
| - Traffic volume measurement system information | Not Present |

MEASUREMENT CONTROL (Step 2)

| Information Element | Value/remark |
|---|---|
| Measurement Identity | 1 |
| Measurement Command | Setup |
| Measurement Reporting Mode | |
| - Measurement Reporting Transfer Mode | Acknowledged Mode RLC |
| - Periodic Reporting / Event Trigger Reporting Mode | Event Trigger |
| Additional measurements list | Not Present |
| CHOICE measurement type | Intra-frequency measurement |
| - Intra-frequency cell info list | Not present |
| - Intra-frequency measurement quantity | |
| - Filter Coefficient | 0 |
| - CHOICE Mode | TDD |
| - Measurement quantity | PCCPCH RSCP |
| - Intra-frequency reporting quantity | |
| - Reporting quantities for active set cells | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell identity reporting indicator | FALSE |
| - Timeslot ISCP reporting indicator | TRUE |
| - Proposed TGSN reporting indicator | FALSE |
| - PCCPCH RSCP reporting indicator | FALSE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for monitored set cells | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell identity reporting indicator | FALSE |
| - Timeslot ISCP reporting indicator | FALSE |
| - Proposed TGSN reporting indicator | FALSE |
| - PCCPCH RSCP reporting indicator | FALSE |
| - Pathloss reporting indicator | FALSE |
| - Measurement validity | Not present |
| - CHOICE report criteria | Intra-frequency measurement reporting criteria |
| - Parameters required for each events | |
| - Intra-frequency event identity | 1h |
| - Threshold used frequency | -69 dB |
| - Hysteresis | 0 (0 dB) |
| - Time to Trigger | 0 |
| - Intra-frequency event identity | 1i |
| - Threshold used frequency | -69 dB |
| - Hysteresis | 0 (0 dB) |
| - Time to Trigger | 0 |

MEASUREMENT REPORT (Step 3)

| Information Element | Value/remark |
|---|---|
| Measurement identity | Check to see if set to 1 |
| Measured Results | |
| - CHOICE measurement | Check to see if set to "Intra-frequency measured results list" |
| - Cell measured results | |
| - Cell Identity | Check to see if it is absent |
| - Cell synchronisation information | Check to see if this IE is absent |
| - Cell parameters ID | Check to see if it's the same for cell 1 |
| - PCCPCH RSCP | Check to see if this IE is absent |
| - Pathloss | Check to see if this IE is absent |
| - Timeslot ISCP | Check to see if this IE is present |
| Measured Results on RACH | Check to see if this IE is absent |
| Additional Measured Results | Check to see if this IE is absent |
| Event Results | |
| - CHOICE event result | Check to see if this IE is set to "Intra-frequency measurement event results" |
| - Intra-frequency event identity | Check to see if this IE is set to "1H" |

MEASUREMENT REPORT (Step 5)

| Information Element | Value/remark |
|---|---|
| Measurement identity | Check to see if set to 1 |
| Measured Results | |
| - CHOICE measurement | Check to see if set to "Intra-frequency measured results list" |
| - Cell measured results | |
| - Cell Identity | Check to see if it is absent |
| - Cell synchronisation information | Check to see if this IE is absent |
| - Cell parameters ID | Check to see if it's the same for cell 1 |
| - PCCPCH RSCP | Check to see if this IE is absent |
| - Pathloss | Check to see if this IE is absent |

| - Pathloss | Check to see if this IE is absent |
| - Timeslot ISCP | Check to see if this IE is present |
| Measured Results on RACH | Check to see if this IE is absent |
| Additional Measured Results | Check to see if this IE is absent |
| Event Results | |
| - CHOICE event result | Check to see if this IE is set to "Intra-frequency measurement event results" |
| - Intra-frequency event identity | Check to see if this IE is set to "1I" |

#### 8.4.1.44.5 Test Requirement

The UE shall send one event 1H triggered measurement report, with a measurement reporting delay less than 400 ms from the beginning of time period T2.

The UE shall send one event 1I triggered measurement report, with a measurement reporting delay less than 400 ms from the beginning of time period T3.

The UE shall send one event 1H triggered measurement report, with a measurement reporting delay less than 400 ms from the beginning of time period T4.

The UE shall not send event 1H or 1I triggered measurement reports, as long as the reporting criteria are not fulfilled.

### 8.4.1.45 Measurement Control and Report: Intra-frequency measurement for event 1G (TDD)

#### 8.4.1.45.1 Definition

#### 8.4.1.45.2 Conformance requirement

When event 1G is configured in the UE, the UE shall:

1> if the equation 1 is fulfilled for a P-CCPCHs during the time "Time to trigger" and if that P-CCPCH is not included in the "primary CCPCH info" in the variable TRIGGERED_1G_EVENT:

2> include that P-CCPCH in "cells triggered" in the variable TRIGGERED_1G_EVENT;

2> send a measurement report with IEs set as below:

3> set in "intra-frequency measurement event results": "Intrafrequency event identity" to "1g";

3> set the first entry in "cell measurement event results" to the "Cell parameters ID" of the P-CCPCH which was stored in the variable TRIGGERED_1G_EVENT;

3> include all entries in "cells triggered" in variable TRIGGERED_1G_EVENT in "cell measurement event results" in the measurement report in descending order according to:

$$10 \cdot LogM + O$$

where ***M*** is the P-CCPCH RSCP and ***O*** the individual offset of a cell;

3> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset for each cell.

1> if Equation 2 below is fulfilled for a primary CCPCH:

2> if a primary CCPCH is included in the "cells triggered" in the variable TRIGGERED_1G_EVENT:

3> remove the entry of that primary CCPCH from "cells triggered" in the variable TRIGGERED_1G_EVENT;

The UE shall use the equations below for evaluation of reporting event 1g:

Equation 1

$$10 \cdot LogM_i + O_i - H_{1g} > 10 \cdot LogM_{previous_best} + O_{previous_best}$$

The variables in the formula are defined as follows:

$M_{previous_best}$ is the current P-CCPCH RSCP of the previous best cell expressed in mW

$O_{previous_best}$ is the cell individual offset of the previous best cell

$M_i$ is the current P-CCPCH RSCP of the currently evaluated cell ***i*** expressed in mW

$O_i$ is the cell individual offset of the currently evaluated cell ***i***

$H_{1g}$ is the hysteresis parameter for the event 1g.

Equation 2

$$10 \cdot LogM_i + O_i + H_{1g} < 10 \cdot LogM_{previous_best} + O_{previous_best}$$

The variables in the formula are defined as follows:

$M_{previous_best}$ is the current P-CCPCH RSCP of the previous best cell expressed in mW

$O_{previous_best}$ is the cell individual offset of the previous best cell

$M_i$ is the current P-CCPCH RSCP of the currently evaluated cell ***i*** expressed in mW

$O_i$ is the cell individual offset of the currently evaluated cell ***i***

$H_{1g}$ is the hysteresis parameter for the event 1g.

Reference

3GPP TS 25.331, clauses 14.1.3.1

### 8.4.1.45.3 Test Purpose

1. To confirm that the UE sends MEASUREMENT REPORT message if event 1G is configured and intra-frequency measurement indicates change of best cell.

### 8.4.1.45.4 Method of test

Initial Condition

System Simulator: 2 cell(cell 1 and cell 2 are active).The initial configurations of the 2 cells in the SS shall follow the values indicated in the column marked "T0" in table 8.4.1.45-1. The table is found in "Test Procedure" clause.

UE: CS-DCCH+DTCH_DCH (State 6-9) or PS-DCCH+DTCH_DCH (State 6-10) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE.

Test Procedure

Table 8.4.1.45-1 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Column marked "T0" denotes the initial conditions, while column marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the text in this clause.

**Table 8.4.1.45-1**

| Parameter | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RFChannel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| P-CCPCH RSCP | dBm | -65 | -65 | -70 | -60 |
| P-CCPCH TS (3.84 Mcps TDD and 7.68 Mcps TDD) | | TS 0 | | TS 0 | |

The UE is initially in CELL_DCH state of cell 1.

SS transmits MEASUREMENT CONTROL message to request the UE to perform intra-frequency measurement. The key measurement parameters are as follow: measurement type = "intra-frequency measurement", measurement quantity = "PCCPCH RSCP", report criteria = "periodic reporting criteria", reporting interval = "64 seconds". UE shall transmit a MEASUREMENT REPORT message and another after 64 seconds.

SS transmits a new MEASUREMENT CONTROL message to request UE to perform intra-frequency measurement and report Event 1G. All intra-frequency cells are removed, and Cell 2 is included as new intra-frequency cell. SS checks to see that no MEASUREMENT REPORT messages are sent within the next 64 seconds (which is due to periodic reporting).

SS reconfigures the downlink transmission power settings according to values in column "T1" in table 8.4.1.45-1. The UE shall transmit a MEASUREMENT REPORT message when it detects that the PCCPCH RSCP of cell 2 and indicating Cell 2 as a best cell. SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | | | | The UE is in CELL_DCH of cell 1. |
| 1 | ← | | MEASUREMENT CONTROL | Intra-frequency measurement is configured. |
| 2 | → | | MEASUREMENT REPORT | The message should be repeated after 64 seconds |
| 3 | → | | MEASUREMENT REPORT | |
| 4 | ← | | MEASUREMENT CONTROL | Event 1G is configured |
| 5 | | | | SS wait for 64seconds to verify that no MEASUREMENT REPORTmessage is received |
| 6 | | | | SS re-adjusts the downlink transmission power settings according to columns "T1" in table 8.4.1.45-1. |
| 7 | → | | MEASUREMENT REPORT | UE report that Event 1G is triggered and cell 2 is the best cell |
| 8 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

#### 8.4.1.45.5 Test Requirement

After step 1, the UE shall transmit MEASUREMENT REPORT message periodically with the interval of 64 seconds.

After step 4, the UE shall not transmit any MEASUREMENT REPORT message.

After step 6, the UE shall transmit MEASUREMENT REPORT message, containing measured results for P-CCPCH RSCP. The 'Event results' IE contains event identity 1G.

### 8.4.1.46 Void

### 8.4.1.47 Measurement Control and Report: Event triggered periodic measurement for event 1B (FDD)

#### 8.4.1.47.1 Definition

#### 8.4.1.47.2 Conformance requirement

When an intra-frequency measurement configuring event 1b is set up, the UE shall:

1> create a variable TRIGGERED_1B_EVENT related to that measurement, which shall initially be empty;

1> delete this variable when the measurement is released.

When event 1B is configures in the UE, the UE shall:

1> if "Measurement quantity" is "pathloss" and Equation 1 below is fulfilled for one or more primary CPICHs, or if "Measurement quantity" is "CPICH Ec/N0" or "CPICH RSCP", and Equation 2 below is fulfilled for one or more primary CPICHs, for each of these primary CPICHs:

2> if all required reporting quantities are available for that cell, and if the equations have been fulfilled for a time period indicated by "Time to trigger", and if that primary CPICH is part of cells allowed to trigger the event according to "Triggering condition 1", and if that primary CPICH is not included in the "cells triggered" in the variable TRIGGERED_1B_EVENT:

3> include that primary CPICH in the "cells recently triggered" in the variable TRIGGERED_1B_EVENT.

1> if any primary CPICHs are stored in the "cells recently triggered" in the variable TRIGGERED_1B_EVENT:

2> if "Periodic reporting info-1b" is present, and "Reporting interval" for this event is not equal to 0:

3> if the IE "Periodical reporting running" in the variable TRIGGERED_1B_EVENT is set to FALSE:

4> start a timer with the value of "Reporting interval" for this event and set the IE "Periodical reporting running" in the variable TRIGGERED_1B_EVENT to TRUE;

3> set "sent reports" for the primary CPICHs in "cells recently triggered" in the variable TRIGGERED_1B_EVENT to 1.

2> send a measurement report with IEs set as below:

3> set in "intra-frequency measurement event results": "Intrafrequency event identity" to "1b"; and

3> include in "cell measurement event results" all entries of "cells recently triggered" in the variable TRIGGERED_1B_EVENT in ascending order according to the configured measurement quantity taking into account the cell individual offset for each of those cells;

3> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset for each cell.

2> move all entries from IE "cells recently triggered" to "cells triggered" in the variable TRIGGERED_1B_EVENT.

1> if the timer for the periodical reporting has expired:

2> if any primary CPICH is included in the "cells triggered" in the variable TRIGGERED_1B_EVENT:

3> if "Periodic reporting info-1b" is present:

4> if "Reporting interval" is not equal to 0, and if "Amount of reporting" is greater than "sent reports" stored for any of these primary CPICHs, in "cells triggered" in the variable TRIGGERED_1B_EVENT:

5> increment the stored counter "sent reports" for all CPICHs in "cell triggered" in variable TRIGGERED_1B_EVENT;

5> start a timer with the value of "Reporting interval-1b" for this event;

5> send a measurement report with IEs set as below:

6> set in "intra-frequency measurement event results": "Intrafrequency event identity" to "1b"; and

6> include in "cell measurement event results" all entries of the variable TRIGGERED_1B_EVENT with value of IE "sent reports" smaller than value of "Amount of reporting" in ascending order according to the configured measurement quantity taking into account the cell individual offset for each of those cells;

6> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset for each cell.

5> if "sent reports" in variable TRIGGERED_1B_EVENT is greater than "Amount of reporting" for all entries:

6> set the IE "Periodical Reporting running" in the variable TRIGGERED_1B_EVENT to FALSE and disable the timer for the periodical reporting.

1> if "Measurement quantity" is "pathloss" and Equation 3 below is fulfilled for a primary CPICH, or if "Measurement quantity" is "CPICH Ec/N0" or "CPICH RSCP", and Equation 4 below is fulfilled for a primary CPICH; or

1> if a primary CPICH is no longer part of the cells allowed to trigger the event according to the "Triggering condition 1":

2> if that primary CPICH is included in the "cells triggered" in the variable TRIGGERED_1B_EVENT:

3> remove the entry of that primary CPICH from "cells triggered" in the variable TRIGGERED_1B_EVENT.

---

When a cell enters the removal range and triggers event 1B, the UE shall transmit a MEASUREMENT REPORT to the UTRAN and typically this may result in the removal of the weakest active cell. If the UTRAN is unable to receive MEASUREMENT REPORT after the maximum retransmission, it is beneficial to receive continuous reports in this case as well.

The UE shall revert to periodical measurement reporting if the UTRAN does not update the active set after the transmission of the measurement report. This is illustrated in Figure 14.1.4.1a. During periodic reporting the UE shall transmit MEASUREMENT REPORT messages to the UTRAN at predefined intervals.

Event-triggered periodic measurement reporting shall be terminated if:

1> there are no longer any monitored cell(s) within the removal range; or

1> the UTRAN has removed cells from the active set so that there are no longer the minimum amount of active cells for event 1B to be triggered; or

1> the UE has sent the maximum number of MEASUREMENT REPORT messages (defined by the "amount of reporting" parameter).

The reporting period is assigned by the UTRAN (with the "Reporting interval" parameter). If the reporting interval is set to zero, event-triggered periodic measurement reporting shall not be applied.

Reference

3GPP TS 25.331 clause 14.1.2.2, clause 14.1.4.1a

### 8.4.1.47.3 Test Purpose

1. To confirm that the UE reverts to periodical measurement reporting of event 1B, after event 1B has been initially triggered, when primary CPICH currently measured by the UE leaves the reporting range.
2. To confirm that the event triggered periodic measurement reporting is terminated after UE no longer finds any monitored cell within the removal range.
3. To confirm that the event triggered periodic measurement reporting is terminated after UTRAN has removed cells from the active set so that there is no longer the minimum amount of active cells for event 1B to be triggered.
4. To confirm that the event triggered periodic measurement is no longer triggered if the reporting interval is set to zero.
5. To confirm that the event-triggered periodic measurement reporting is terminated after UE has sent the maximum number of MEASUREMENT REPORT messages (defined by the "amount of reporting" parameter).

### 8.4.1.47.4 Method of test

Initial Condition

System Simulator: 2 Cells – Cell 1, Cell 2 are active.

UE: CS-DCCH+DTCH_DCH (State 6-9) or PS-DCCH+DTCH_DCH (State 6-10) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE.

Test Procedure

**Table 8.4.1.47-1**

| Parameter | Unit | Cell1 | | Cell2 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| CPICH Ec | dBm/3.84MHz | -60 | -60 | -66 | -75 |

Table 8.4.1.47-1 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution.

The UE is initially in CELL_DCH state in Cell 1 with the downlink transmission power settings according to values in column “T0” in table 8.4.1.47-1.
SS sends a MEASUREMENT CONTROL message to set up events 1A & 1B. In this message the IE “periodicReportingInfo-1b” is included with “reportingInterval” set to a non-zero value. The IE "reporting range" is set to 9dB. The UE shall send a MEASUREMENT REPORT on the uplink DCCH, which contains the IE "Event results" to report that event 1A has been triggered by Cell 2.
SS executes the ACTIVE SET UPDATE procedure, requesting Cell 2 to be added to the active set. When the UE receives this message, it shall configure layer 1 to begin reception without affecting the current uplink and downlink activities of existing radio links. The UE shall transmit an ACTIVE SET UPDATE COMPLETE message to the SS on the uplink DCCH using AM RLC.

SS reconfigures the downlink transmission power settings according to values in column “T1” in table 8.4.1.47-1. The UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH to report the triggering of event 1B. In this message, the IE "Events results" shall indicate that event 1B has been triggered by Cell 2. SS does not respond to the first report and waits for a few more reports, say half the number of the value as defined by the IE "amount of reporting" in the MEASUREMENT CONTROL message.

SS now reconfigures the downlink transmission power settings according to values in column “T0” in table 8.4.1.47-1 so as to get the power levels of Cell 2 go above event 1B reporting range threshold. UE now stops triggering any more event 1B measurement reports.

SS reconfigures the downlink transmission power settings according to values in column “T1” in table 8.4.1.47-1. UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH to report the triggering of event 1B. In this message, the IE "Events results" shall indicate that event 1B has been triggered by Cell 2. SS waits for a few reports, say half the number of the value as defined by the IE "amount of reporting" in the MEASUREMENT CONTROL message.

SS executes the ACTIVE SET UPDATE procedure, requesting Cell 2 to be removed from the active set. The UE shall respond with ACTIVE SET UPDATE COMPLETE message on the uplink DCCH indicating the successful removal of Cell 2 from the current active set. . The UE should however stop transmitting Measurement Reports for event 1B for Cell 2, as Cell 1 is now the only active cell. SS waits for 10s to make sure that no further measurement reports for event 1B are triggered.

SS sends a MEASUREMENT CONTROL message to modify the configuration of event 1B. The IE “reporting interval” is now set to zero.

SS executes the ACTIVE SET UPDATE procedure, requesting Cell 2 to be added to the active set. When the UE receives this message, the UE shall configure layer 1 to begin reception without affecting the current uplink and downlink activities of existing radio links. The UE shall transmit an ACTIVE SET UPDATE COMPLETE message to the SS on the uplink DCCH using AM RLC.

The UE shall send a MEASUREMENT REPORT on the uplink DCCH, which contains the IE "Event results" to report that intra-frequency event 1B is triggered by Cell 2. SS waits for 10s to make sure that no further Measurement Reports are triggered for event 1B.

SS reconfigures the downlink transmission power settings according to values in column “T0” in table 8.4.1.47-1 and sends a MEASUREMENT CONTROL message to modify the configuration of event 1B. The IE “reportingInterval” is set back to a non-zero value.

SS reconfigures the downlink transmission power settings according to values in column “T1” in table 8.4.1.47-1.
The UE shall transmit a MEASUREMENT REPORT message on the uplink DCCH to report the triggering of event 1B. In this message, the IE "Events results" shall indicate that event 1B is triggered by Cell 2. SS waits to receive the full number of reports as defined by the IE "amount of reporting" in the last received MEASUREMENT CONTROL message. SS waits for 10s to make sure that no further measurement reports are triggered.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | MEASUREMENT CONTROL | UE is initially in CELL_DCH state in Cell 1.<br>SS set up events 1A & 1B in the UE. The IE "PeriodicReportingInfo-1b" is present with "reportingInterval" set to a non zero value. |
| 2 | → | | MEASUREMENT REPORT | Measurement made on Cell 2 shall trigger event 1A. |
| 3 | ← | | ACTIVE SET UPDATE | SS requests UE to add Cell 2 into the active set. |
| 4 | → | | ACTIVE SET UPDATE COMPLETE | |
| 5 | | | | SS configures the downlink power according to column "T1" of table 8.4.1.47-1. |
| 6 | → | | MEASUREMENT REPORT | Measurement made on Cell 2 shall trigger event 1B and should be repeated every 8s. |
| 7 | | | | SS waits for half the number of event 1B reports, i.e. half to that mentioned in the IE "amount of reporting". |
| 8 | | | | SS configures the downlink power according to column "T0" of table 8.4.1.47-1. |
| 9 | | | | SS waits for 10s to verify that no MEASUREMENT REPORT for Event 1B message is received. |
| 10 | | | | SS configures the downlink power according to column "T1" of table 8.4.1.47-1. |
| 11 | → | | MEASUREMENT REPORT | Measurement made on Cell 2 shall trigger event 1B & should be repeated every 8s. SS waits for half the number of reports, i.e. half to that mentioned in the IE "amount of reporting". |
| 12 | ← | | ACTIVE SET UPDATE | SS requests UE to remove Cell 2 from the active set. |
| 13 | → | | ACTIVE SET UPDATE COMPLETE | Only Cell 1 is in the active set now. |
| 14 | | | Void | |
| 15 | | | | .<br>SS checks that no measurement report for Event 1B is sent by the UE for 10s. |
| 16 | ← | | MEASUREMENT CONTROL | Event 1B configuration is modified, "reporting Interval" is now set to 'no periodical reporting'. |
| 17 | ← | | ACTIVE SET UPDATE | SS requests UE to add Cell 2 to the active set. |
| 18 | → | | ACTIVE SET UPDATE COMPLETE | Cell 1 & Cell 2 are in the active set now. |
| 19 | → | | MEASUREMENT REPORT | Triggers just one measurement report indicating event 1B (periodic event triggered measurements terminated) |
| 20 | | | | SS checks that no measurement report is sent by the UE for 10s. |
| 21 | | | | SS configures the downlink power according to column "T0" of table 8.4.1.47-1. |

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 22 | ← | | MEASUREMENT CONTROL | Event 1B configuration is modified, “reporting Interval” is now set back to a non-zero value. |
| 23 | | | | SS configures the downlink power according to column “T1” of table 8.4.1.47-1. |
| 24 | → | | MEASUREMENT REPORT | Measurement made on cell 2 shall trigger event 1B |
| 25 | | | | SS waits to receive the full number of reports as defined in the IE "amount of reporting" in Measurement Control |
| 26 | | | | SS checks that no measurement report is sent by the UE for 10s. |
| 27 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

All messages indicated below shall use the same content as described in default message content found in [9] TS 34.108 clause 9, with the following exceptions:

MEASUREMENT CONTROL (Step 1)

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 1 |

MEASUREMENT REPORT (Step 2)

| Information Element | Value/remark |
|---|---|
| Measurement identity | Check to see if set to 1 |
| Measured Results | |
| - CHOICE measurement | Check to see if set to "Intra-frequency measured results list" |
| - Intra-frequency measurement results | |
| - Cell measured results | |
| - Cell Identity | Check to see if it is absent |
| - Cell synchronisation information | Checked that this IE is present and includes IE COUNT-C-SFN frame difference |
| - Primary CPICH Info | |
| - Primary Scrambling Code | Check to see if it's the same code for Cell 2 |
| - CPICH Ec/No | Check to see if this IE is absent |
| - CPICH RSCP | Check to see if this IE is present |
| - Pathloss | Check to see if this IE is absent |
| Measured Results on RACH | Check to see if this IE is absent |
| Additional Measured Results | Check to see if this IE is absent |
| Event Results | Check to see if set to 'Intra-frequency measurement event results' |
| - Intra-frequency event identity | Check to see if set to '1a' |
| - Cell measurement event results | |
| - CHOICE Mode | Check to see if set to 'FDD' |
| - Primary CPICH info | |
| - Primary Scrambling Code | Check to see if set to the same code for Cell 2 |

ACTIVE SET UPDATE (Step 3 & 17)

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Radio link addition information | |
| - Primary CPICH Info | |
| - Primary Scrambling Code | Set to same code as assigned for Cell 2 |
| - Downlink DPCH info for each RL | |
| - CHOICE mode | FDD |
| - Primary CPICH usage for channel estimation | P-CPICH can be used |
| - DPCH frame offset | Calculated value from Cell synchronisation information |
| - Secondary CPICH info | Not Present |
| - DL channelisation code | This IE is repeated for all existing downlink DPCHs allocated to the UE |
| - Secondary scrambling code | 1 |
| - Spreading factor | Refer to TS 34.108 clause 6.10.2.4 "Typical radio parameter sets" |
| - Code Number | For each DPCH, assign the same code number in the current code given in Cell 1. |
| - Scrambling code change | Not Present |
| - TPC Combination Index | 0 |
| - SSDT Cell Identity | Not Present |
| - Close loop timing adjustment mode | Not Present |
| - TFCI Combining Indicator | FALSE |
| - SCCPCH information for FACH | Not Present |
| Radio link removal information | Not Present |

ACTIVE SET UPDATE COMPLETE (Steps 4, 13 & 18)

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | Check to see if it is set to 0 |

MEASUREMENT REPORT (Steps 6, 7, 11, 19, 24 & 25)

| Information Element | Value/remark |
|---|---|
| Measurement identity | Check to see if set to 1 |
| Measured Results | Check to see if this IE is absent |
| Measured Results on RACH | Check to see if this IE is absent |
| Additional Measured Results | Check to see if this IE is absent |
| Event Results | Check to see if set to 'Intra-frequency measurement event results' |
| - Intra-frequency event identity | Check to see if set to '1b' |
| - Cell measurement event results | |
| - CHOICE Mode | Check to see if set to 'FDD' |
| - Primary CPICH info | |
| - Primary Scrambling Code | Check to see if set to the same code for Cell 2 |

ACTIVE SET UPDATE (Step 12)

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 0 |
| Radio link removal information | |
| - Primary CPICH Info | |
| - Primary Scrambling Code | Set to same code as assigned for Cell 2 |

MEASUREMENT CONTROL (Step 16)

| Information Element | Value/remark |
|---|---|
| RRC transaction identifier | 1 |
| Measurement Identity | 1 |
| Measurement Command | Modify |
| Measurement Reporting Mode | Not Present |
| Additional measurements list | Not Present |
| CHOICE measurement type | Intra-frequency measurement |

| - Amount of reporting | 16 |
| - Reporting interval | 8000 |
| DPCH compressed mode status info | Not Present |

### 8.4.1.47.5 Test requirement

After step 1, the UE shall send a MEASUREMENT REPORT message on the uplink DCCH. The message shall contain the IE "Event results" to report that Cell 2 has triggered intra-frequency event 1A.

After step 3, the UE shall send an ACTIVE SET UPDATE COMPLETE message on the uplink DCCH indicating the successful addition of Cell 2 to the active set.

After step 5, the UE shall transmit a number of MEASUREMENT REPORTS on the uplink DCCH. The message shall contain IE "Event results" to report that Cell 2 has triggered intra-frequency event 1B.

After step 10, the UE shall start to transmit a number of MEASUREMENT REPORTS on the uplink DCCH. The message shall contain IE "Event results" to report that Cell 2 has triggered intra-frequency event 1B.

After step 12, the UE shall send an ACTIVE SET UPDATE COMPLETE message on the uplink DCCH indicating the successful removal of Cell 2 from the active set.

After step 17, UE shall send an ACTIVE SET UPDATE COMPLETE message on the uplink DCCH indicating the successful addition of Cell 2 to the active set.

After step 18, the UE shall transmit just one MEASUREMENT REPORT message on the uplink DCCH indicating that the periodic event-triggered reporting is now terminated for event 1B. The message shall contain IE "Event results" to report that Cell 2 has triggered intra-frequency event 1B.

After step 23, the UE shall start to transmit a series of MEASUREMENT REPORTs equal to the number as mentioned in the IE ‘ amount of reports’, on the uplink DCCH with the IE "Event results” indicating that Cell 2 has triggered intra-frequency event 1B.

SS waits to see that no further Measurement reports are received in addition to what is mentioned in the IE ’amount of reporting’.

## 8.4.1.48 Measurement Control and Report: Combined Inter-frequency measurement for event 2b and Inter-RAT measurement, event 3a (FDD)

### 8.4.1.48.1 Definition

-

### 8.4.1.48.2 Conformance requirement

When event 2b is configured in the UE within a measurement, the UE shall:

1> if equations 1 and 2 below have been fulfilled for a time period indicated by "Time to Trigger" from the same instant, respectively for one or several non-used frequencies included for that event and for the used frequency:

2> if any of those non-used frequency is not stored in the variable TRIGGERED_2B_EVENT:

3> store the non-used frequencies that triggered the event and that were not previously stored in the variable TRIGGERED_2B_EVENT into that variable;

3> send a measurement report with IEs set as below:

4> set in "inter-frequency measurement event results":

5> "inter-frequency event identity" to "2b"; and

5> for each non-used frequency that triggered the event, beginning with the best frequency:

6> "Frequency info" to that non-used frequency; and

6> "Non frequency related measurement event results" to the "Primary CPICH info" of the best primary CPICH for FDD cells or "Primary CCPCH info" to the "Cell parameters ID" of the best primary CCPCH for TDD cells on that non-used frequency, not taking into account the cell individual offset;

4> set the IE "measured results" and the IE "additional measured results" according to TS 25.331 subclause 8.4.2, not taking into account the cell individual offset;

1> if equation 3 below is fulfilled for a non-used frequency stored in the variable TRIGGERED_2B_EVENT:

2> remove that non-used frequency from the variable TRIGGERED_2B_EVENT.

1> if equation 4 below is fulfilled for the used frequency:

2> clear the variable TRIGGERED_2B_EVENT.

Triggering conditions:

Equation 1:

$$Q_{Non\ used} \geq T_{Non\ used\ 2b} + H_{2b} / 2$$

The variables in the formula are defined as follows:

***Q*Non used** is the quality estimate of a non-used frequency that becomes better than an absolute threshold.

***T*Non used 2b** is the absolute threshold that applies for this non-used frequency in that measurement.

***H*2b** is the hysteresis parameter for the event 2b.

Equation 2:

$$Q_{Used} \leq T_{Used\ 2b} - H_{2b} / 2$$

The variables in the formula are defined as follows:

***Q*Used** is the quality estimate of the used frequency.

***T*Used 2b** is the absolute threshold that applies for the used frequency in that measurement.

***H*2b** is the hysteresis parameter for the event 2b.

Leaving triggered state condition:

Equation 3:

$$Q_{Non\ used} < T_{Non\ used\ 2b} - H_{2b} / 2$$

The variables in the formula are defined as follows:

***Q*Non used** is the quality estimate of a non-used frequency that is stored in the variable TRIGGERED_2B_EVENT.

***T*Non used 2b** is the absolute threshold that applies for this non-used frequency in that measurement.

***H*2b** is the hysteresis parameter for the event 2b.

Equation 4:

$$Q_{Used} > T_{Used\ 2b} + H_{2b} / 2$$

The variables in the formula are defined as follows:

***Q*Used** is the quality estimate of the used frequency.

***T*Used 2b** is the absolute threshold that applies for the used frequency in that measurement.

***H*2b** is the hysteresis parameter for the event 2b.

…..

When an inter-RAT measurement configuring event 3a is set up, the UE shall:

1> create a variable TRIGGERED_3A_EVENT related to that measurement, which shall initially be empty;

1> delete this variable when the measurement is released.

When event 3a is configured in the UE within a measurement, the UE shall:

1> if the other RAT is GSM, and if IE "BSIC verification required" is set to "required":

2> if equations 1 and 2 below have both been fulfilled for a time period indicated by "Time to trigger" from the same instant, respectively for the used UTRAN frequency and for one or several GSM cells that match any of the BCCH ARFCN and BSIC combinations considered in that inter-RAT measurement:

3> if the Inter-RAT cell id of any of those GSM cells is not stored in the variable TRIGGERED_3A_EVENT:

4> store the Inter-RAT cell ids of the GSM cells that triggered the event and that were not previously stored in the variable TRIGGERED_3A_EVENT into that variable.

4> send a measurement report with IEs set as below:

5> in "inter-RAT measurement event result": "inter-RAT event identity" to "3a", "CHOICE BSIC" to "verified BSIC" and "Inter-RAT cell id" to the GSM cells that triggered the event (best one first), taking into account the cell individual offset of the GSM cells;

5> "measured results" and possible "additional measured results" according to subclause 8.6.7.5 and 8.4.2, respectively, not taking into account the cell individual offset.

2> if equation 4 is fulfilled for a GSM cell whose inter-RAT cell id is stored in the variable TRIGGERED_3A_EVENT:

3> remove the inter-RAT cell id of that GSM cell from the variable TRIGGERED_3A_EVENT.

2> if equation 3 is fulfilled for the used frequency in UTRAN:

3> clear the variable TRIGGERED_3A_EVENT.

1> if the other RAT is GSM, and if IE "BSIC verification required" is set to "not required":

2> if equations 1 and 2 below have been fulfilled for a time period indicated by "Time to trigger" from the same instant, respectively for the used UTRAN frequency and for one or several BCCH ARFCNs considered in that inter-RAT measurement:

3> if any of those BCCH ARFCNs is not stored into the variable TRIGGERED_3A_EVENT:

4> store the BCCH ARFCNs that triggered the event and that were not previously stored in the variable TRIGGERED_3A_EVENT into that variable;

4> send a measurement report with IEs set as below:

5> in "inter-RAT measurement event result": "inter-RAT event identity" to "3a", "CHOICE BSIC" to "non verified BSIC" and "BCCH ARFCN" to BCCH ARFCNs that triggered the event (best one first), taking into account the cell individual offset of the GSM cells;

5> "measured results" and possible "additional measured results" according to subclause 8.6.7.5 and 8.4.2, respectively, not taking into account the cell individual offset.

2> if equation 4 is fulfilled for a BCCH ARFCN that is stored in the variable TRIGGERED_3A_EVENT:

3> remove that BCCH ARFCN from the variable TRIGGERED_3A_EVENT.

2> if equation 3 is fulfilled for the used frequency in UTRAN:

3> clear the variable TRIGGERED_3A_EVENT.

Triggering conditions:

Equation 1:

$$Q_{Used} \leq T_{Used} - H_{3a}/2$$

The variables in the formula are defined as follows:

$Q_{Used}$ is the quality estimate of the used UTRAN frequency.

$T_{Used}$ is the absolute threshold that applies for the used frequency in that measurement.

$H_{3a}$ is the hysteresis parameter for event 3a.

Equation 2:

$$M_{Other\ RAT}+CIO_{OtherRAT} \geq T_{Other\ RAT}+H_{3a}/2$$

The variables in the formula are defined as follows:

$M_{Other\ RAT}$ is the measurement quantity for the cell of the other system.

$CIO_{Other\ RAT}$ is the cell individual offset for the cell of the other system.

$T_{Other\ RAT}$ is the absolute threshold that applies for the other system in that measurement.

$H_{3a}$ is the hysteresis parameter for event 3a.

Leaving triggered state conditions:

Equation 3:

$$Q_{Used} > T_{Used}+H_{3a}/2$$

The variables in the formula are defined as follows:

$Q_{Used}$ is the quality estimate of the used UTRAN frequency.

$T_{Used}$ is the absolute threshold that applies for the used frequency in that measurement.

$H_{3a}$ is the hysteresis parameter for event 3a.

Equation 4:

$$M_{Other\ RAT}+CIO_{OtherRAT} < T_{Other\ RAT}-H_{3a}/2$$

The variables in the formula are defined as follows:

$M_{Other\ RAT}$ is the measurement quantity for the cell of the other system. $M_{Other\ RAT}$ is expressed in dBm.

$CIO_{Other\ RAT}$ is the cell individual offset for the cell of the other system.

$T_{Other\ RAT}$ is the absolute threshold that applies for the other system in that measurement.

$H_{3a}$ is the hysteresis parameter for event 3a.

$H_{3c}$ is the hysteresis parameter for event 3c.

Reference

3GPP TS 25.331 clauses 14.2.1.2, 14.3.1.1.

### 8.4.1.48.3 Test Purpose

1. To confirm that the UE sends MEASUREMENT REPORT message when event 2b and 3a are configured and estimated quality of the currently used frequency is below the value of the IE "Threshold used frequency" and the estimated quality of a non-used frequency is above the value of the IE "Threshold non-used frequency". This MEASUREMENT REPORT message shall contain at least the best primary CPICH info of the non-used frequency that triggered the event.
2. To confirm that the UE sends MEASUREMENT REPORT message when event 2b and 3a are configured and estimated quality of the currently used UTRAN frequency is below the value of the IE "Threshold own system" and the estimated quality of the other system is above the value of the IE "Threshold other system".

This MEASUREMENT REPORT message shall contain the inter-RAT cell id of the GSM cell that triggered the event.

8.4.1.48.4 Method of test

Initial Condition

System Simulator: 2 UTRAN FDD cells and 1 GSM cell. The initial configurations of the 3 cells in the SS shall follow the values indicated in the column marked "T0" in table 8.4.1.48-1. The table is found in "Test Procedure" clause.

The UTRAN FDD cell 4 shall use UARFCN according to the band under test except in the case of where FDD band II is tested and GSM1900 is used for the Inter-RAT cell, then “Low Range” test frequency for Cell 4 in band II is used instead, to avoid the test channels overlapping.

UE: CS-DCCH+DTCH_DCH (State 6-9) or PS-DCCH+DTCH_DCH (State 6-10) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE.

Related ICS/IXIT statements

- Compressed mode required yes/no

Test Procedure

Table 8.4.1.48-1 and 8.4.1.48-2 illustrates the downlink power to be applied for the 3 cells at various time instants of the test execution. Column marked "T0" denotes the initial conditions, while columns marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the text in this clause.

**Table 8.4.1.48-1**

| Parameter | Unit | Cell 1 | | | Cell 4 | | |
|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T0 | T1 | T2 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | | High Range Test Frequency | | |
| CPICH Ec (FDD) | dBm/3.84 Mhz | -60 | -80 | -80 | -80 | -60 | -80 |
| Qrxlevmin | dBm | -115 (Note) | | | | | |
| Note Qrxlevmin is set to minimum value (-115) to avoid that cell trigger “out of service” condition. | | | | | | | |

**Table 8.4.1.48-2**

| Parameter | Unit | Cell 9 (GSM) | | |
|---|---|---|---|---|
| | | T0 | T1 | T2 |
| Test Channel | - | GSM Ch.1 | | |
| BCCH ARFCN | - | Value according to the GSM band under test (see 3GPP 34.123-1 table 6.5 for details on the ARFCN) | | |
| CELL identity | - | 0 | | |
| BSIC | - | BSIC 1 | | |
| RF Signal Level | DBm | -90 | -90 | -70 |

The UE is initially in CELL_DCH on Cell1. UTRA cell 1 is the only cell in the active set of the UE. If the UE requires compressed mode (refer ICS/IXIT), the SS sends a PHYSICAL CHANNEL RECONFIGURATION message to the UE to configure the compressed mode pattern sequence parameters to the UE. Four compressed mode patterns: one for inter-frequency handover and three for inter-RAT handover (RSSI, BSIC decoding and BSIC reconfirmation) are configured, according to the message specified below. When the PHYSICAL CHANNEL RECONFIGURATION COMPLETE is received from the UE, the SS sends two MEASUREMENT CONTROL messages to the UE, to set up inter-frequency and inter-RAT measurements respectively. Event 2b and 3a is set up in these message, and if the UE requires compressed mode (refer ICS/IXIT), compressed mode is activated.

The SS then configures the UTRA cells Cell1 and Cell4 and the GSM cell Cell9 according to the values in columns "T1" in table 8.4.1.48-1 and table 8.4.1.48-2. As the estimate for the used frequency is below the threshold configured

by the IE " Threshold used frequency " (-70dBm) and the estimate for the non-used frequency is above the threshold configured by the IE "Threshold non-used frequency" (-70dBm) then event 2b is triggered by the UE. The SS waits for the MEASUREMENT REPORT message from the UE reporting event 2b.

The SS then configures the UTRA cells Cell1 and Cell4 and the GSM cell Cell9 according to the values in columns "T2" in table 8.4.1.48-1 and table 8.4.1.48-2. As the estimated quality of the currently used UTRAN frequency is below the value of the IE "Threshold own system" (-70dBm) and the estimated quality of the other system is above the value of the IE "Threshold other system" (-80 dBm) then event 3a is triggered by the UE. The SS waits for a MEASUREMENT REPORT message from the UE reporting event 3a.

The SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | ← | | The UE is brought to the CELL_DCH state in cell 1.<br>If Compressed Mode not required (refer ICS/IXIT) go to step 4 |
| 2 | | ← | PHYSICAL CHANNEL RECONFIGURATION | SS instructs UE to configure compressed mode patterns for inter-frequency and inter-RAT. |
| 3 | | → | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 4 | | ← | MEASUREMENT CONTROL | SS sets measurement parameters for event 2b . |
| 5 | | ← | MEASUREMENT CONTROL | If UE require compressed mode (refer ICS/IXIT) then SS activates compressed mode operation for Inter-RAT and Inter-frequency.<br>SS commands the UE to perform Inter-RAT measurements and Inter-frequency to report event 3a and event 2b. |
| 6 | | | | SS re-adjusts the downlink transmission power settings according to columns "T1" in table 8.4.1.48-1 and table 8.4.1.48-2. |
| 7 | | → | MEASUREMENT REPORT | Measurement report indicating event 2b. This message should come at least 640 ms later after changing power setting of Cell 4. Layer 3 Filtering causes an additional delay. |
| 8 | | | | SS re-adjusts the downlink transmission power settings according to columns "T2" in table 8.4.1.48-1 and table 8.4.1.48-2. |
| 9 | | → | MEASUREMENT REPORT | Measurement report indicating event 3a. This message should come at least 640 ms later after changing power setting of Cell 9. |
| 10 | | ←→ | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

All messages indicated below shall use the same content as described in default message content, with the following exceptions:

PHYSICAL CHANNEL RECONFIGURATION (Step 2)

Use the same message sub-type found in clause 9 of TS 34.108, which is entitled "(Packet to CELL_DCH from CELL_DCH in PS)", with Scrambling code change set to Default1 and with the following exceptions in the IE(s) concerned:

Four compressed mode patterns: one for inter-frequency handover and three for inter-RAT handover (RSSI, BSIC decoding and BSIC reconfirmation) are configured, based on the compressed mode pattern in clause 6.8.2.2 of 34.108

MEASUREMENT REPORT (Step 7)

| Information Element | Value/remark |
|---|---|
| Measurement identity | Check to see if set to 2 |
| Measured results | |
| - Frequency info | |
| - UARFCN uplink | The presence of this IE is not checked |
| - UARFCN downlink | Check that the value of this IE is set to UARFCN for the downlink corresponding to $f_4$ |
| - UTRA carrier RSSI | Check to see if it is not present |
| - Inter-frequency cell measured results | |
| - Cell Identity | Check to see if it is not present |
| - Cell synchronisation information | Check to see if it is not present |
| - Mode Specific Info | FDD |
| - Primary CPICH Info | |
| - Primary scrambling code | Primary scrambling code for cell 4 |
| - CPICH Ec/No | Check to see if it is not present |
| - CPICH RSCP | Check that measurement result is present |
| - Pathloss | Check to see if it is not present |
| Measured results on RACH | Check to see if it is not present |
| Additional measured results | Check to see if it is not present |
| Event results | Inter-frequency measurement event results, |
| - Inter-frequency event identity | 2b |
| - Cell measurement event results | |
| - Frequency info | |
| - UARFCN uplink | The presence of this IE is not checked |
| - UARFCN downlink | Check that the value of this IE is set to UARFCN for the downlink corresponding to $f_4$ |
| - Primary CPICH info | |
| - Primary scrambling code | Primary scrambling code of Cell 4 |

MEASUREMENT REPORT (Step 9)

| Information Element | Value/remark | Version |
|---|---|---|
| Measurement identity | Check to see if set to 3 | |
| Measured Results | | |
| - CHOICE measurement | Check to see if set to "Inter-RAT measured results list" | |
| - Inter-RAT measured result list | | |
| - CHOICE system | GSM | |
| - Measured GSM cells | Check that measurement results for one GSM cells is included | |
| - GSM carrier RSSI | Check that measurement result is present | |
| CHOICE BSIC | Check it is set to verified BSIC | |
| - inter-RAT cell id | Check that it is set to Cell id for Cell9 | |
| - Observed time difference to GSM cell | Check to see if it is not present | R99 and Rel-4 only |
| Measured results on RACH | Check to see if it is not present | |
| Additional Measured results | Check to see if it is not present | |
| Event results | Check that the IE is present | |
| - CHOICE event result | Check that this is set to inter-RAT measurement event results | |
| - Inter-RAT event identity | Check that this is set to 3a | |
| - Cells to report (1 to <maxCellMeas>) | Check that <maxCellMeas> is set to 1 | |
| - CHOICE BSIC | Check that this is set to verified BSIC | |
| - Inter-RAT cell id | Check that this is set to Cell id of Cell 9. | |

#### 8.4.1.48.5 Test Requirement

1. In step 7 the UE shall send a MEASUREMENT REPORT message indicating event 2b. IE 'Inter-frequency Cells' in MEASUREMENT REPORT message shall contain frequency information and primary scrambling code of Cell 4.

2 In step 9 the UE shall send a MEASUREMENT REPORT message indicating event 3a with IE “Inter-RAT cell id” indicating Cell 9.

### 8.4.1.48a Measurement Control and Report: Combined Inter-frequency measurement for event 2b and Inter-RAT measurement, event 3a (TDD)

#### 8.4.1.48a.1 Definition

#### 8.4.1.48a.2 Conformance requirement

When event 2b is configured in the UE within a measurement, the UE shall:

1> if equations 1 and 2 below have been fulfilled for a time period indicated by "Time to Trigger" from the same instant, respectively for one or several non-used frequencies included for that event and for the used frequency:

2> if any of those non-used frequency is not stored in the variable TRIGGERED_2B_EVENT:

3> store the non-used frequencies that triggered the event and that were not previously stored in the variable TRIGGERED_2B_EVENT into that variable;

3> send a measurement report with IEs set as below:

4> set in "inter-frequency measurement event results":

5> "inter-frequency event identity" to "2b"; and

5> for each non-used frequency that triggered the event, beginning with the best frequency:

6> "Frequency info" to that non-used frequency; and

6> "Non frequency related measurement event results" to the "Primary CPICH info" of the best primary CPICH for FDD cells or "Primary CCPCH info" to the "Cell parameters ID" of the best primary CCPCH for TDD cells on that non-used frequency, not taking into account the cell individual offset;

4> set the IE "measured results" and the IE "additional measured results" according to TS 25.331 subclause 8.4.2, not taking into account the cell individual offset;

1> if equation 3 below is fulfilled for a non-used frequency stored in the variable TRIGGERED_2B_EVENT:

2> remove that non-used frequency from the variable TRIGGERED_2B_EVENT.

1> if equation 4 below is fulfilled for the used frequency:

2> clear the variable TRIGGERED_2B_EVENT.

Triggering conditions:

Equation 1:

$$Q_{Non\ used} \geq T_{Non\ used\ 2b} + H_{2b} / 2$$

The variables in the formula are defined as follows:

$Q_{Non\ used}$ is the quality estimate of a non-used frequency that becomes better than an absolute threshold.

$T_{Non\ used\ 2b}$ is the absolute threshold that applies for this non-used frequency in that measurement.

$H_{2b}$ is the hysteresis parameter for the event 2b.

Equation 2:

$$Q_{Used} \leq T_{Used\ 2b} - H_{2b} / 2$$

The variables in the formula are defined as follows:

$Q_{Used}$ is the quality estimate of the used frequency.

$T_{Used\ 2b}$ is the absolute threshold that applies for the used frequency in that measurement.

$H_{2b}$ is the hysteresis parameter for the event 2b.

Leaving triggered state condition:

Equation 3:

$$Q_{Non\ used} < T_{Non\ used\ 2b} - H_{2b} / 2$$

The variables in the formula are defined as follows:

$Q_{Non\ used}$ is the quality estimate of a non-used frequency that is stored in the variable TRIGGERED_2B_EVENT.

$T_{Non\ used\ 2b}$ is the absolute threshold that applies for this non-used frequency in that measurement.

$H_{2b}$ is the hysteresis parameter for the event 2b.

Equation 4:

$$Q_{Used} > T_{Used\ 2b} + H_{2b} / 2$$

The variables in the formula are defined as follows:

$Q_{Used}$ is the quality estimate of the used frequency.

$T_{Used\ 2b}$ is the absolute threshold that applies for the used frequency in that measurement.

$H_{2b}$ is the hysteresis parameter for the event 2b.

…..

When an inter-RAT measurement configuring event 3a is set up, the UE shall:

1> create a variable TRIGGERED_3A_EVENT related to that measurement, which shall initially be empty;

1> delete this variable when the measurement is released.

When event 3a is configured in the UE within a measurement, the UE shall:

1> if the other RAT is GSM, and if IE "BSIC verification required" is set to "required":

2> if equations 1 and 2 below have both been fulfilled for a time period indicated by "Time to trigger" from the same instant, respectively for the used UTRAN frequency and for one or several GSM cells that match any of the BCCH ARFCN and BSIC combinations considered in that inter-RAT measurement:

3> if the Inter-RAT cell id of any of those GSM cells is not stored in the variable TRIGGERED_3A_EVENT:

4> store the Inter-RAT cell ids of the GSM cells that triggered the event and that were not previously stored in the variable TRIGGERED_3A_EVENT into that variable.

4> send a measurement report with IEs set as below:

5> in "inter-RAT measurement event result": "inter-RAT event identity" to "3a", "CHOICE BSIC" to "verified BSIC" and "Inter-RAT cell id" to the GSM cells that triggered the event (best one first), taking into account the cell individual offset of the GSM cells;

5> "measured results" and possible "additional measured results" according to subclause 8.6.7.5 and 8.4.2, respectively, not taking into account the cell individual offset.

2> if equation 4 is fulfilled for a GSM cell whose inter-RAT cell id is stored in the variable TRIGGERED_3A_EVENT:

3> remove the inter-RAT cell id of that GSM cell from the variable TRIGGERED_3A_EVENT.

2> if equation 3 is fulfilled for the used frequency in UTRAN:

3> clear the variable TRIGGERED_3A_EVENT.

1> if the other RAT is GSM, and if IE "BSIC verification required" is set to "not required":

2> if equations 1 and 2 below have been fulfilled for a time period indicated by "Time to trigger" from the same instant, respectively for the used UTRAN frequency and for one or several BCCH ARFCNs considered in that inter-RAT measurement:

3> if any of those BCCH ARFCNs is not stored into the variable TRIGGERED_3A_EVENT:

4> store the BCCH ARFCNs that triggered the event and that were not previously stored in the variable TRIGGERED_3A_EVENT into that variable;

4> send a measurement report with IEs set as below:

5> in "inter-RAT measurement event result": "inter-RAT event identity" to "3a", "CHOICE BSIC" to "non verified BSIC" and "BCCH ARFCN" to BCCH ARFCNs that triggered the event (best one first), taking into account the cell individual offset of the GSM cells;

5> "measured results" and possible "additional measured results" according to subclause 8.6.7.5 and 8.4.2, respectively, not taking into account the cell individual offset.

2> if equation 4 is fulfilled for a BCCH ARFCN that is stored in the variable TRIGGERED_3A_EVENT:

3> remove that BCCH ARFCN from the variable TRIGGERED_3A_EVENT.

2> if equation 3 is fulfilled for the used frequency in UTRAN:

3> clear the variable TRIGGERED_3A_EVENT.

Triggering conditions:

Equation 1:

$$Q_{Used} \leq T_{Used} - H_{3a}/2$$

The variables in the formula are defined as follows:

$\boldsymbol{Q_{Used}}$ is the quality estimate of the used UTRAN frequency.

$\boldsymbol{T_{Used}}$ is the absolute threshold that applies for the used frequency in that measurement.

$\boldsymbol{H_{3a}}$ is the hysteresis parameter for event 3a.

Equation 2:

$$M_{Other\ RAT} + CIO_{OtheRAT} \geq T_{Other\ RAT} + H_{3a}/2$$

The variables in the formula are defined as follows:

$\boldsymbol{M_{Other\ RAT}}$ is the measurement quantity for the cell of the other system.

$\boldsymbol{CIO_{Other\ RAT}}$ is the cell individual offset for the cell of the other system.

$\boldsymbol{T_{Other\ RAT}}$ is the absolute threshold that applies for the other system in that measurement.

$\boldsymbol{H_{3a}}$ is the hysteresis parameter for event 3a.

Leaving triggered state conditions:

Equation 3:

$$Q_{Used} > T_{Used} + H_{3a}/2$$

The variables in the formula are defined as follows:

***$Q_{Used}$*** is the quality estimate of the used UTRAN frequency.

***$T_{Used}$*** is the absolute threshold that applies for the used frequency in that measurement.

***$H_{3a}$*** is the hysteresis parameter for event 3a.

Equation 4:

$$M_{Other\ RAT} + CIO_{OtherRAT} < T_{Other\ RAT} - H_{3a}/2$$

The variables in the formula are defined as follows:

***$M_{Other\ RAT}$*** is the measurement quantity for the cell of the other system. ***$M_{Other\ RAT}$*** is expressed in dBm.

***$CIO_{Other\ RAT}$*** is the cell individual offset for the cell of the other system.

***$T_{Other\ RAT}$*** is the absolute threshold that applies for the other system in that measurement.

***$H_{3a}$*** is the hysteresis parameter for event 3a.

***$H_{3c}$*** is the hysteresis parameter for event 3c.

### Reference

3GPP TS 25.331 clauses 14.2.1.2, 14.3.1.1.

### 8.4.1.48a.3 Test Purpose

1. To confirm that the UE sends MEASUREMENT REPORT message when event 2b and 3a are configured and estimated quality of the currently used frequency is below the value of the IE "Threshold used frequency" and the estimated quality of a non-used frequency is above the value of the IE "Threshold non-used frequency". This MEASUREMENT REPORT message shall contain at least the best primary CCPCH info of the non-used frequency that triggered the event.

2. To confirm that the UE sends MEASUREMENT REPORT message when event 2b and 3a are configured and estimated quality of the currently used UTRAN frequency is below the value of the IE "Threshold own system" and the estimated quality of the other system is above the value of the IE "Threshold other system". This MEASUREMENT REPORT message shall contain the inter-RAT cell id of the GSM cell that triggered the event.

### 8.4.1.48a.4 Method of test

#### Initial Condition

System Simulator: 2 UTRAN TDD cells and 1 GSM cell. The initial configurations of the 3 cells in the SS shall follow the values indicated in the column marked "T0" in table 8.4.1.48a-1. The table is found in "Test Procedure" clause.

UE: CS-DCCH+DTCH_DCH (State 6-9) or PS-DCCH+DTCH_DCH (State 6-10) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE.

#### Related ICS/IXIT statements

- Compressed mode required yes/no

#### Test Procedure

Table 8.4.1.48a-1 and 8.4.1.48a-2 illustrates the downlink power to be applied for the 3 cells at various time instants of the test execution. Column marked "T0" denotes the initial conditions, while columns marked "T1" and "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the text in this clause.

**Table 8.4.1.48a-1**

| Parameter | Unit | Cell 1 | | | Cell 4 | | |
|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T0 | T1 | T2 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | | High Range Test Frequency | | |
| P-CCPCH (TDD) | dBm | -60 | -80 | -80 | -80 | -60 | -80 |
| Qrxlevmin | dBm | -115 (Note) | | | | | |
| Note: Qrxlevmin is set to minimum value (-115) to avoid that cell trigger “out of service” condition. | | | | | | | |

**Table 8.4.1.48a-2**

| Parameter | Unit | Cell 9 (GSM) | | |
|---|---|---|---|---|
| | | T0 | T1 | T2 |
| Test Channel | - | GSM Ch.1 | | |
| BCCH ARFCN | - | Value according to the GSM band under test (see 3GPP 34.123-1 table 6.5 for details on the ARFCN) | | |
| CELL identity | - | 0 | | |
| BSIC | - | BSIC 1 | | |
| RF Signal Level | DBm | -90 | -90 | -70 |

The UE is initially in CELL_DCH on Cell1. UTRA cell 1 is the only cell in the active set of the UE. the SS sends two MEASUREMENT CONTROL messages to the UE, to set up inter-frequency and inter-RAT measurements respectively. Event 2b and 3a is set up in these message.

The SS then configures the UTRA cells Cell1 and Cell4 and the GSM cell Cell9 according to the values in columns "T1" in table 8.4.1.48a-1 and table 8.4.1.48a-2. As the estimate for the used frequency is below the threshold configured by the IE " Threshold used frequency " (-70dBm) and the estimate for the non-used frequency is above the threshold configured by the IE "Threshold non-used frequency" (-70dBm) then event 2b is triggered by the UE. The SS waits for the MEASUREMENT REPORT message from the UE reporting event 2b.

The SS then configures the UTRA cells Cell1 and Cell4 and the GSM cell Cell9 according to the values in columns "T2" in table 8.4.1.48a-1 and table 8.4.1.48a-2. As the estimated quality of the currently used UTRAN frequency is below the value of the IE "Threshold own system" (-70dBm) and the estimated quality of the other system is above the value of the IE "Threshold other system" (-80 dBm) then event 3a is triggered by the UE. The SS waits for a MEASUREMENT REPORT message from the UE reporting event 3a.

The SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | | The UE is brought to the CELL_DCH state in cell 1. |
| 2 | ← | | MEASUREMENT CONTROL | SS sets measurement parameters for event 2b . |
| 3 | ← | | MEASUREMENT CONTROL | SS commands the UE to perform Inter-RAT measurements and Inter-frequency to report event 3a and event 2b. |
| 4 | | | | SS re-adjusts the downlink transmission power settings according to columns "T1" in table 8.4.1.48a-1 and table 8.4.1.48a-2. |
| 5 | → | | MEASUREMENT REPORT | Measurement report indicating event 2b. This message should come at least 640 ms later after changing power setting of Cell 4. Layer 3 Filtering causes an additional delay. |
| 6 | | | | SS re-adjusts the downlink transmission power settings according to columns "T2" in table 8.4.1.48a-1 and table 8.4.1.48a-2. |
| 7 | → | | MEASUREMENT REPORT | Measurement report indicating event 3a. This message should come at least 640 ms later after changing power setting of Cell 9. |
| 8 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |
| 9 | | | | |
| 10 | | | | |

Specific Message Contents

All messages indicated below shall use the same content as described in default message content, with the following exceptions:

MEASUREMENT CONTROL (Step 2)

| - Threshold other system | -80 dBm |
| - Hysteresis | 2 (1 dB) |
| - Time to Trigger | 640 ms |
| - Reporting cell status | Report cells within active set or within virtual active set or of the other RAT |
| - Maximum number of reported cells | 1 |

MEASUREMENT REPORT (Step 5)

| Information Element | Value/remark |
|---|---|
| Measurement identity | Check to see if set to 2 |
| Measured results | Check to see if it set to “Inter-frequency measured results list” |
| - Frequency information | Check to see if set to Frequency of Cell 4 |
| - UTRA carrier RSSI | Check to see if it is absent |
| - Inter-frequency cell measured results | |
| - Cell measurement results | |
| - Cell Identity | Check to see if it is absent |
| - Cell synchronisation information | Check to see if this IE is absent |
| - CHOICE mode | Check to see if set to “TDD” |
| - Cell parameters ID | Check to see if set to Cell parameters ID for cell 4 |
| - Proposed TGSN | Check to see if it is absent |
| - Primary CCPCH RSCP | Check to see if it is present |
| - Pathloss | Check to see if it is absent |
| - Timeslot List/ISCP | Check to see if it is absent |
| Measured results on RACH | Check to see if it is absent |
| Additional measured results | Check to see if it is absent |
| Event results | |
| - CHOICE event results | Check to see if set to “Inter-frequency measurement event results” |
| - Inter-frequency event identity | Check to see if set to “2B” |
| - Inter-frequency cells | |
| - Frequency info | Check to see if set to Frequency of Cell 4 |
| - Non-frequency related measurement event results | |
| - CHOICE mode | Check to see if set to “TDD” |
| - Primary CCPCH info | |
| - CHOICE mode | Check to see if set to “TDD” |
| - CHOICE mode option | Check to see if set to “1.28 Mcps TDD” |
| - TSTD Indicator | Check to see if set to “FALSE” |
| - Cell parameters ID | Check to see if set to Cell parameters ID of Cell 4 |
| - SCTD Indicator | Check to see if set to “FALSE” |

MEASUREMENT REPORT (Step 7)

| Information Element | Value/remark | Version |
|---|---|---|
| Measurement identity | Check to see if set to 3 | |
| Measured Results | | |
| - CHOICE measurement | Check to see if set to "Inter-RAT measured results list" | |
| - Inter-RAT measured result list | | |
| - CHOICE system | GSM | |
| - Measured GSM cells | Check that measurement results for one GSM cells is included | |
| - GSM carrier RSSI | Check that measurement result is present | |
| CHOICE BSIC | Check it is set to verified BSIC | |
| - inter-RAT cell id | Check that it is set to Cell id for Cell9 | |
| - Observed time difference to GSM cell | Check to see if it is not present | R99 and Rel-4 only |
| Measured results on RACH | Check to see if it is not present | |
| Additional Measured results | Check to see if it is not present | |
| Event results | Check that the IE is present | |
| - CHOICE event result | Check that this is set to inter-RAT measurement event results | |
| - Inter-RAT event identity | Check that this is set to 3a | |
| - Cells to report (1 to <maxCellMeas>) | Check that <maxCellMeas> is set to 1 | |
| - CHOICE BSIC | Check that this is set to verified BSIC | |
| - Inter-RAT cell id | Check that this is set to Cell id of Cell 9. | |

### 8.4.1.48a.5 Test Requirement

1. In step 7 the UE shall send a MEASUREMENT REPORT message indicating event 2b. IE 'Inter-frequency Cells' in MEASUREMENT REPORT message shall contain frequency information and primary scrambling code of Cell 4.

2 In step 9 the UE shall send a MEASUREMENT REPORT message indicating event 3a with IE “Inter-RAT cell id” indicating Cell 9.

## 8.4.1.49 Measurement Control and Report: Intra-frequency measurement for event 1J

### 8.4.1.49.1 Definition

### 8.4.1.49.2 Conformance requirement

When an intra-frequency measurement configuring event 1j is set up, the UE shall:

1> create a variable TRIGGERED_1J_EVENT related to that measurement, which shall initially be empty;

1> delete this variable when the measurement is released.

When event 1J is configured in the UE, the UE shall:

1> if "Measurement quantity" is "pathloss" and Equation 1 below is fulfilled for one or more primary CPICHs, or if "Measurement quantity" is "CPICH Ec/N0" or "CPICH RSCP", and Equation 2 below is fulfilled for one or more primary CPICHs, for each of these primary CPICHs:

2> if all required reporting quantities are available for that cell; and

2> if the equations have been fulfilled for a time period indicated by "Time to trigger", and if the primary CPICH that is better is not included in the E-DCH active set but included in DCH active set and the other primary CPICH is any of the primary CPICHs included in the E-DCH active set, and if that first primary CPICH is not included in the "cells triggered" in the variable TRIGGERED_1J_EVENT:

3> include that primary CPICH in the "cells recently triggered" in the variable TRIGGERED_1J_EVENT.

1> if the value of "Replacement activation threshold" for this event is less than or equal to the current number of cells in the E-DCH active set or equal to 0 and if any primary CPICHs are stored in the "cells recently triggered" in the variable TRIGGERED_1J_EVENT:

2> if "Reporting interval" for this event is not equal to 0:

3> if the IE "Periodical reporting running" in the variable TRIGGERED_1J_EVENT is set to FALSE:

4> start a timer for with the value of "Reporting interval" for this event and set the IE "Periodical reporting running" in the variable TRIGGERED_1J_EVENT to TRUE.

3> set "sent reports" for that primary CPICH in the variable TRIGGERED_1J_EVENT to 1.

2> send a measurement report with IEs set as below:

3> set in "intra-frequency measurement event results": "Intrafrequency event identity" to "1J"; and

3> include in "cell measurement event results" all entries of the "cells recently triggered" in the variable TRIGGERED_1J_EVENT not in the E-DCH active set but included in DCH active set as well as the "primary CPICH info" of all the primary CPICHs in the E-DCH active set for which the measured value is worse (i.e. greater for pathloss and less for the other measurement quantities) than the one of the entry in "cell recently triggered" that has the best measured value taking into account their cell individual offset. The "primary CPICH info" for those cells shall be ordered according to their measured value taking into account their cell individual offset, beginning with the best cell to the worst one;

3> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset for each cell.

2> …

### Reference

3GPP TS 25.331 clause 14.1.2.7

#### 8.4.1.49.3 Test Purpose

1. To confirm that the UE sends MEASUREMENT REPORT message if event 1J is configured, and the number of cells in the E-DCH active set is greater than or equal to 'Replacement activation threshold' parameter, and if the primary CPICH that is not included in the E-DCH active set but included in the DCH active set becomes better than any of the primary CPICHs included in the E-DCH active set.

2. To confirm that the UE does not send MEASUREMENT REPORT message indicating event 1J if the number of cells in the active E-DCH set is less than 'Replacement activation threshold' parameter, even if the primary CPICH that is not included in the E-DCH active set but included in the DCH active set becomes better than any of the primary CPICHs included in the E-DCH active set.

3. To confirm that the UE does not send MEASUREMENT REPORT message indicating event 1J, even if the cell that is not in the DCH active set becomes better than any of the primary CPICHs included in the E-DCH active set.

4. To confirm that the UE stops periodic reporting of event 1J when the "sent reports" in variable TRIGGERED_1J_EVENT is greater than "Amount of reporting".

#### 8.4.1.49.4 Method of Test

##### Initial Condition

System Simulator: 3 cells – The initial configuration of the 3 cells in the SS shall follow the values indicated in the column marked "T0" in table 8.4.1.49-1. The table is found in "Test Procedure" clause

UE: PS-DCCH +DTCH_HS-DSCH +DTCH_E-DCH (state 6-18) under condition A12 in Cell 1 as specified in clause 7.4 of TS 34.108

##### Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports HS-PDSCH
- UE supports E-DPDCH

##### Test Procedure

Table 8.4.1.49-1 illustrates the downlink power to be applied for the 3 cells at various instants of the test execution. Columns marked "T0" denotes the initial conditions, while "T1", "T2", "T3", "T4", and "T5" are to be applied subsequently. The exact instants on which these values shall be applied are described in the text in this clause.

**Table 8.4.1.49-1**

| Parameter | Unit | Cell 1 | | | | | |
|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T3 | T4 | T5 |
| UTRA RF Channel Number | | Ch.1 | | | | | |
| CPICH Ec (FDD) | dBm/3.84Mhz | -60 | -60 | -60 | -60 | -66 | -66 |

| Parameter | Unit | Cell 2 | | | | | |
|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T3 | T4 | T5 |
| UTRA RF Channel Number | | Ch.1 | | | | | |
| CPICH Ec (FDD) | dBm/3.84Mhz | -80 | -60 | -72 | -72 | -78 | -60 |

| Parameter | Unit | Cell 3 | | | | | |
|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T3 | T4 | T5 |
| UTRA RF Channel Number | | Ch.1 | | | | | |
| CPICH Ec (FDD) | dBm/3.84Mhz | -80 | -60 | -78 | -66 | -60 | -60 |

The UE is in the CELL_DCH state and has a radio bearer mapped on E-DCH and HS-DSCH established with active E-DCH transmission and HS-DSCH reception.

SS configures its downlink transmission power settings according to columns "T1" in table 8.4.1.49-1. UE shall be triggered to transmit a MEASUREMENT REPORT message, which includes the primary scrambling code for cell 2.

SS performs a soft handover by sending ACTIVE SET UPDATE on the DL DCCH. The UE shall respond with ACTIVE SET UPDATE COMPLETE on the uplink DCCH and include Cell 2 and Cell 3 in the DCH active set.

SS configures its downlink transmission power settings according to columns "T2" in table 8.4.1.49-1.Setup event 1J by MEASUREMENT CONTROL with IE. 'Replacement activation threshold' set to 1.

SS configures itself according to the values in columns "T3" by increasing the power of Cell 3 (but not above Cell 1 and outside the reporting range for Cell 1). There shall be no measurement reports generated for this condition.

SS configures itself according to the values in columns "T4" to trigger event 1J and waits for 10 seconds. There shall be 2 measurement reports reporting event 1J. The "cell measurement event" of the measurement report contains the information of primary CPICH for Cell 3 and Cell 1.

SS removes Cell 2 from the DCH active set by sending ACTIVE SET UPDATE on the DL DCCH. The UE shall respond with ACTIVE SET UPDATE COMPLETE on the uplink DCCH

SS configures itself according to the values in the columns "T5". Cell 2 is better than Cell 1, however the UE shall not send a MEASUREMENT REPORT message indicating event 1J as the event is only triggered for cells in the DCH active set.

The SS then sends MEASUREMENT CONTROL message to the UE to modify the earlier configured 1J measurement. Now IE 'Replacement activation threshold' is set to 2. MEASUREMENT CONTROL messages contain only those IEs that are modified and the UE shall continue to use current values of parameters that are not modified. Add Cell 2 to the DCH active set by sending ACTIVE SET UPDATE on the DL DCCH. The UE shall respond with ACTIVE SET UPDATE COMPLETE. Now Cell 2 is better than Cell 1 and is in the DCH active set. However the UE shall not send MEASUREMENT REPORT message indicating 1J because the number of cells in the E-DCH active set is less than parameter "Replacement Activation Threshold". The SS then sends MEASUREMENT CONTROL message to set the IE ‘Replacement activation threshold’ back to 1 and wait 10 seconds. There shall be 2 measurement reports reporting event 1J. The “cell measurement event” of the measurement report contains the information of primary CPICH for Cell 2,3 and 1.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | | | | UE is initially in CELL_DCH state in cell 1. |
| 0a | | | | SS configures its downlink transmission power settings according to columns "T1" in table 8.4.1.49-1 |
| 0b | → | | MEASUREMENT REPORT | See specific message contents for this message. |
| 0c | | | | SS configures its downlink transmission power settings according to columns "T2" in table 8.4.1.49-1 |
| 1 | ← | | ACTIVE SET UPDATE | SS command the UE to add Cell 2 and Cell 3 in the DCH active set. |
| 2 | → | | ACTIVE SET UPDATE COMPLETE | |
| 3 | ← | | MEASUREMENT CONTROL | Event 1J is setup. IE "Replacement activation threshold" is set to 1. |
| 4 | | | | SS re-adjusts the downlink transmission power settings according to columns "T3" in table 8.4.1.49-1. |
| 5 | | | | Check for 10 seconds, the UE shall not send MEASUREMENT REPORT message. |
| 6 | | | | SS re-adjusts the downlink transmission power settings according to columns "T4" in table 8.4.1.49-1. |
| 7 | → | | MEASUREMENT REPORT | Event 1J is triggered. The UE report contains the information of primary CPICH for Cell 3 and Cell 1. |
| 8 | → | | MEASUREMENT REPORT | The UE shall send a second report. Check for 10 seconds, the UE shall send no further measurement reports |
| 9 | ← | | ACTIVE SET UPDATE | SS command the UE to remove Cell 2 from the DCH active set |
| 10 | → | | ACTIVE SET UPDATE COMPLETE | |
| 11 | | | | SS re-adjusts the downlink transmission power settings according to columns "T5" in table 8.4.1.49-1. |
| 12 | | | | Check for 10 seconds, the UE shall not send MEASUREMENT REPORT MESSAGE (Cell 2 is not in the active DCH set) |
| 13 | ← | | MEASUREMENT CONTROL | Event 1J is setup to set IE "Replacement activation threshold" is set to 2. |
| 14 | ← | | ACTIVE SET UPDATE | SS commands the UE to add Cell 2 back to the DCH active set |
| 15 | → | | ACTIVE SET UPDATE COMPLETE | |
| 16 | | | | Check for 10 seconds, the UE shall not send MEASUREMENT REPORT MESSAGE (number of cells in the E-DCH active set is less than threshold) |
| 17 | ← | | MEASUREMENT CONTROL | Event 1J is setup to set IE "Replacement activation threshold" back to 1. |
| 18 | → | | MEASUREMENT REPORT | Event 1J is triggered. The UE report contains the information of primary CPICH for cell3, Cell 2 and Cell 1. |

| | | | |
|---|---|---|---|
| 19 | → | MEASUREMENT REPORT | The UE shall send second report. Check for 10 seconds, the UE shall send no further measurement reports |
| 20 | ←→ | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

All messages indicated below shall use the same content as described in TS 34.108 clause 9, with the following exceptions:

MEASUREMENT REPORT (Step 0b)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 1 |
| Measured Results | |
| - Intra-frequency measured results | Check to see if measurement results for 3 cells are included (the order in which the different cells are reported is not important) |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is absent |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is present and includes IE COUNT-C-SFN frame difference |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| - Cell measured results | |
| - Cell Identity | Checked that this IE is absent |
| - Cell synchronisation information | Checked that this IE is present and includes IE COUNT-C-SFN frame difference |
| - Primary CPICH info | |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.3 (FDD)" in clause 6.1 of TS 34.108 |
| - CPICH Ec/N0 | Checked that this IE is absent |
| - CPICH RSCP | Checked that this IE is present |
| - Pathloss | Checked that this IE is absent |
| Measured results on RACH | Checked that this IE is absent |
| Additional measured results | Checked that this IE is absent |
| Event results | |
| - Intra-frequency measurement event results | |
| - Intra-frequency event identity | 1a |
| - Cell measurement event results | |
| - Primary CPICH info | The UE may include either or both of the following cells.(the order in which the different cells are reported is not important) |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108 |
| - Primary scrambling code | Refer to clause titled "Default settings for cell No.3 (FDD)" in clause 6.1 of TS 34.108 |

ACTIVE SET UPDATE (Step 1)

| Information Element | Value/remark | Version |
|---|---|---|
| Radio link addition information | | |
| - Primary CPICH info | | |
| - Primary scrambling code | Primary scrambling code of Cell 2 | |
| - Downlink DPCH info for each RL | | |
| - CHOICE MODE | FDD | |
| - Primary CPICH usage for channel estimation | Primary CPICH may be used | |
| - DPCH frame offset | Calculated value from Cell synchronisation information | |
| - Secondary CPICH info | Not Present | |
| - DL channelisation code | This IE is repeated for all existing downlink DPCHs allocated to the UE on Cell 2 | |
| - Secondary scrambling code | 1 | |
| - Spreading factor | Reference to TS34.108 clause 6 Parameter Set | |
| - Code number | For each DPCH, assign the same code number in the current code given in cell 1 | |
| - Scrambling code change | Not Present | |
| - TPC combination index | 0 | |
| - Closed loop timing adjustment mode | Not Present | |
| - Primary CPICH info | | |
| - Primary scrambling code | Primary scrambling code of Cell 3 | |
| - Downlink DPCH info for each RL | | |
| - CHOICE MODE | FDD | |
| - Primary CPICH usage for channel estimation | Primary CPICH may be used | |
| - DPCH frame offset | Calculated value from Cell synchronisation information | |
| - Secondary CPICH info | Not Present | |
| - DL channelisation code | This IE is repeated for all existing downlink DPCHs allocated to the UE on Cell 3 | |
| - Secondary scrambling code | 1 | |
| - Spreading factor | Reference to TS34.108 clause 6 Parameter Set | |
| - Code number | For each DPCH, assign the same code number in the current code given in cell 1 | |
| - Scrambling code change | Not Present | |
| - TPC combination index | 0 | |
| - SSDT cell identity | Not Present | |
| - Closed loop timing adjustment mode | Not Present | |

MEASUREMENT CONTROL (Steps 3 and 17)

| Information Element | Value/remark |
|---|---|
| Measurement Identity | 1 |
| Measurement Command | Setup |
| Measurement Reporting Mode | |
| - Measurement Report Transfer Mode | Acknowledged mode RLC |
| - Periodical Reporting/Event Trigger Reporting Mode | Periodical reporting |
| CHOICE Measurement type | Intra-frequency measurement |
| - Intra-frequency measurement | |
| - Intra-frequency cell info list | |
| - CHOICE intra-frequency cell removal | Remove no intra-frequency cells |
| - New intra-frequency cells | |
| - Intra-frequency cell-id | Id of Cell 2 |
| - Cell info | |
| - Cell individual offset | 0 (0dB) |
| - Reference time difference to cell | Not Present |
| - Read SFN number | FALSE |
| - CHOICE mode | FDD |
| - Primary CPICH info | |
| - Primary scrambling code | Primary scrambling code of Cell 2 |
| - Primary CPICH Tx power | Not Present |
| - TX Diversity indicator | FALSE |
| - Cell Selection and Re-selection Info | Not Present |
| - Intra-frequency cell-id | Id of Cell 3 |
| - Cell info | |
| - Cell individual offset | 0 (0dB) |
| - Reference time difference to cell | Not Present |
| - Read SFN number | FALSE |
| - CHOICE mode | FDD |
| - Primary CPICH info | |
| - Primary scrambling code | Primary scrambling code of Cell 3 |
| - Primary CPICH Tx power | Not Present |
| - TX Diversity indicator | FALSE |
| - Cell Selection and Re-selection Info | Not Present |
| - Cells for measurement | |
| - Intra-frequency cell id list | Set to id of cell 1, 2 and 3 |
| - Intra-frequency measurement quantity | |
| - Filter coefficient | 0 |
| - Measurement quantity | CPICH RSCP |
| - Intra-frequency reporting quantity | |
| - Reporting quantities for active set cells | |
| - Cell synchronization information reporting indicator | FALSE |
| - Cell Identity reporting indicator | FALSE |
| - CPICH Ec/N0 reporting indicator | FALSE |
| - CPICH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for monitored set cells | |
| - Cell synchronization information reporting indicator | FALSE |
| - Cell Identity reporting indicator | FALSE |
| - CPICH Ec/N0 reporting indicator | FALSE |
| - CPICH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Reporting quantities for detected set cells | Not Present |
| - Reporting cell status | Not Present |
| - Measurement validity | Not Present |
| - CHOICE report criteria | Intra-frequency measurement reporting criteria |
| - Parameters required for each event | |
| - Intra-frequency event identity | 1J |
| - Hysteresis | 0 |
| - Replacement activation threshold | 1 |
| - Time to trigger | 200 ms |
| - Amount of reporting | 2 |
| - Reporting interval | 500 ms |
| - Reporting cell status | |
| - Report cells within active set and/or monitored set cells on used frequency | |

| | |
|---|---|
| - Maximum number of reported cells | 3 |
| DPCH Compressed mode status info | Not Present |

MEASUREMENT REPORT (Step 7 and 8)

| Information Element | Value/remark |
|---|---|
| Measurement identity | 1 |
| Measured Results | |
| - CHOICE measurement | Check to see if set to "Intra-frequency measured results list" |
| - Intra-frequency measurement results | Check to see if measurement results for 3 cells are included |
| - Cell measured results | |
| - Cell Identity | Check to see if it is absent |
| - Cell synchronisation information | Check to see if this IE is absent |
| - Primary CPICH Info | |
| - Primary Scrambling Code | Check to see if it's the same code for cell 3 |
| - CPICH Ec/No | Check to see if this IE is absent |
| - CPICH RSCP | Check to see if this IE is present |
| - Pathloss | Check to see if this IE is absent |
| - Cell measured results | |
| - Cell Identity | Check to see if it is absent |
| - Cell synchronisation information | Check to see if this is absent |
| - Primary CPICH Info | |
| - Primary Scrambling Code | Check to see if it's the same code for cell 1 |
| - CPICH Ec/No | Check to see if this IE is absent |
| - CPICH RSCP | Check to see if this IE is present |
| - Pathloss | Check to see if this IE is absent |
| - Cell measured results | |
| - Cell Identity | Check to see if it is absent |
| - Cell synchronisation information | Check to see if this is absent |
| - Primary CPICH Info | |
| - Primary Scrambling Code | Check to see if it's the same code for cell 2 |
| - CPICH Ec/No | Check to see if this IE is absent |
| - CPICH RSCP | Check to see if this IE is present |
| - Pathloss | Check to see if this IE is absent |
| Additional Measured results | Check to see if this IE is absent |
| Event results | Check to see if set to “Intra-frequency measurement event results“ |
| - Intra-frequency event identity | Check to see if set to “1J” |
| - Cell measurement event results | |
| - Primary CPICH info | Check to see if set to “Primary scrambling code of Cell 3 |
| - Primary CPICH info | Check to see if set to “Primary scrambling code of Cell 1 |

ACTIVE SET UPDATE (Step 9)

| Information Element | Value/remark | Version |
|---|---|---|
| Radio link removal information | | |
| - Primary CPICH info | | |
| - Primary scrambling code | Primary scrambling code of Cell 2 | |

MEASUREMENT CONTROL (step 13)

Use the same message as defined for steps 3 and 17 with the exception of the following IE

| Information Element | Value/remark |
|---|---|
| CHOICE report criteria | Intra-frequency measurement reporting criteria |
| - Parameters required for each event | |
| - Intra-frequency event identity | 1J |
| - Hysteresis | 0 |
| - Replacement activation threshold | 2 |
| - Time to trigger | 200 ms |
| - Amount of reporting | 2 |
| - Reporting interval | 500 ms |
| - Reporting cell status | |
| - Report cells within active set and/or monitored set cells on used frequency | |
| - Maximum number of reported cells | 3 |

ACTIVE SET UPDATE (Step 14)

| Information Element | Value/remark | Version |
|---|---|---|
| Radio link addition information | | |
| - Primary CPICH info | | |
| - Primary scrambling code | Primary scrambling code of Cell 2 | |
| - Downlink DPCH info for each RL | | |
| - CHOICE MODE | FDD | |
| - Primary CPICH usage for channel estimation | Primary CPICH may be used | |
| - DPCH frame offset | Calculated value from Cell synchronisation information | |
| - Secondary CPICH info | Not Present | |
| - DL channelisation code | This IE is repeated for all existing downlink DPCHs allocated to the UE on Cell 2 | |
| - Secondary scrambling code | 1 | |
| - Spreading factor | Reference to TS34.108 clause 6 Parameter Set | |
| - Code number | For each DPCH, assign the same code number in the current code given in cell 1 | |
| - Scrambling code change | Not Present | |
| - TPC combination index | 0 | |
| - Closed loop timing adjustment mode | Not Present | |
| - TPC combination index | 0 | |
| - SSDT cell identity | Not Present | |
| - Closed loop timing adjustment mode | Not Present | |

MEASUREMENT REPORT (Step 18 and 19)

| Information Element | Value/remark |
|---|---|
| Measurement identity | 1 |
| Measured Results | Check to see if this IE is present |
| - CHOICE measurement | Check to see if set to "Intra-frequency measured results list" |
| - Intra-frequency measurement results | Check to see if measurement results for 3 cells are included (the order in which cells 2 and 3 are reported is not important) |
| - Cell measured results | |
| - Cell Identity | Check to see if it is absent |
| - Cell synchronisation information | Check to see if this IE is absent |
| - Primary CPICH Info | |
| - Primary Scrambling Code | Check to see if it's the same code for cell 2 |
| - CPICH Ec/No | Check to see if this IE is absent |
| - CPICH RSCP | Check to see if this IE is present |
| - Pathloss | Check to see if this IE is absent |
| - Cell measured results | |
| - Cell Identity | Check to see if it is absent |
| - Cell synchronisation information | Check to see if this is absent |
| - Primary CPICH Info | |
| - Primary Scrambling Code | Check to see if it's the same code for cell 3 |
| - CPICH Ec/No | Check to see if this IE is absent |
| - CPICH RSCP | Check to see if this IE is present |
| - Pathloss | Check to see if this IE is absent |
| - Cell measured results | |
| - Cell Identity | Check to see if it is absent |
| - Cell synchronisation information | Check to see if this is absent |
| - Primary CPICH Info | |
| - Primary Scrambling Code | Check to see if it's the same code for cell 1 |
| - CPICH Ec/No | Check to see if this IE is absent |
| - CPICH RSCP | Check to see if this IE is present |
| - Pathloss | Check to see if this IE is absent |
| Measured Results on RACH | Check to see if this IE is absent |
| Additional Measured results | Check to see if this IE is absent |
| Event results | Check to see if set to “Intra-frequency measurement event results“ |
| - Intra-frequency event identity | Check to see if set to “1J” |
| - Cell measurement event results | Check to see if measurement results for 3 cells are included (the order in which cells 2 and 3 are reported is not important) |
| - Primary CPICH info | Check to see if set to “Primary scrambling code of Cell 3” |
| - Primary CPICH info | Check to see if set to “Primary scrambling code of Cell 2 |
| - Primary CPICH info | Check to see if set to “Primary scrambling code of Cell 1 |

#### 8.4.1.49.5 Test Requirement

In steps 7, 8, 18 and 19 the UE shall send a MEASUREMENT REPORT indicating event 1J. For steps 7 and 8 the IE ‘Cell measurement event results’ in the MEASUREMENT REPORT message should contain primary scrambling codes of Cell 3 and Cell 1. For steps 18 and 19 the IE ‘Cell measurement event results’ in the MEASUREMENT REPORT message should contain primary scrambling codes of Cell 2 and Cell 1.

In step 16 the UE shall not send a MEASUREMENT REPORT message.

In step 12 the UE shall not send a MEASUREMENT REPORT message.

In steps 7 and 8 the UE shall send 2 measurement reports only.

### 8.4.1.50 Measurement reporting when moving from CELL_PCH to CELL_FACH

#### 8.4.1.50.1 Definition and applicability

All UEs which support FDD and HS-PDSCH in CELL_PCH and URA_PCH.

#### 8.4.1.50.2 Conformance requirement

In CELL_PCH or URA_PCH state, the UE shall:

1> if the measurement reporting is not initiated according to subclause 8.5.40:

2> first perform the cell update procedure according to subclause 8.3.1, using the cause "uplink data transmission", in order to transit to CELL_FACH state; and then

2> transmit a MEASUREMENT REPORT message on the uplink DCCH when the reporting criteria stored in variable MEASUREMENT_IDENTITY are fulfilled for any ongoing UE positioning measurement which is being performed in the UE.

For FDD, the UE in CELL_PCH state shall:

1> if variable H_RNTI is set:

2> if the measurement reporting is initiated according to subclause 8.5.40:

3> set the IE "measurement identity" to "16";

3> not set the IE "measured results";

3> include the IE "measured results on RACH";

3> if an event triggered traffic volume measurement has been configured:

4> if the TCTV is larger than the threshold in the IE "Reporting threshold" for a traffic volume measurement stored in the MEASUREMENT_IDENTITY variable and that traffic volume measurement has "measurement identity" equal to 4, "Traffic volume event identity" equal to "4a", "Measurement validity" equal to "all states" or "all states except CELL_DCH":

5> set the IE "Traffic volume event identity" to "4a";

3> and then transmit the MEASUREMENT REPORT message on the uplink DCCH using AM RLC; when the MEASUREMENT REPORT message has been submitted to lower layers for transmission the procedure ends.

…

When the IE "HS-DSCH paging system information" is included in System Information Block type 5 or System Information Block type 5bis and the UE is in CELL_PCH or URA_PCH state, the UE shall:

1> set the variable HS_DSCH_RECEPTION_GENERAL to TRUE;

1> if variable H_RNTI and variable C_RNTI are set:

2> if the UE is in CELL_PCH state:

3> use the value of the variable H_RNTI as UE identity in the HS-SCCH reception procedure in the physical layer for DCCH or DTCH reception; and

3> for BCCH reception perform HS-DSCH reception procedures by listening to the first indexed HS-SCCH code listed in the IE "HS-SCCH channelisation code" with "BCCH specific H-RNTI" as received in IE "HS-DSCH common system information" from System Information Block type 5 or System Information Block type 5bis.

3> if the UE detects the value of the variable H_RNTI in the HS-SCCH reception procedure:

4> initiate the measurement report procedure as specified in subclause 8.4.2:

5> if the UE has an uplink RLC PDU on RB1 or upwards to transmit:

6> move to CELL_FACH;

6> stop timer T319 if it is running.

3> if the UE has uplink RLC data PDU or uplink RLC control PDU on RB1 or upwards to transmit:

4> initiate the measurement report procedure as specified in subclause 8.4.2:

4> move to CELL_FACH state;

4> stop timer T319 if it is running.

Reference

3GPP TS 25.331 clause 8.5.40 and 8.4.2

### 8.4.1.50.3 Test purpose

1. To confirm that the UE performs measurements reporting on SRB2 when moving from Cell PCH state to Cell FACH state when HS-DSCH is configured with dedicated H-RNTI

2. To confirm that the UE performs measurements reporting with a cell update procedure when moving from Cell PCH state to Cell FACH state when HS-DSCH is configured with no dedicated H-RNTI.

### 8.4.1.50.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: CELL_FACH state as specified in clause 7.4 of TS 34.108, with a valid H-RNTI

The UE is registered in both CS and PS domains.

Test Procedure

The UE is in the CELL_FACH state with HS-DSCH reception enabled. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message with IE "RRC State Indicator" set to "CELL_PCH " and assigns a dedicated H_RNTI. The UE shall reply with PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and move to CELL_PCH state. The SS transmits a UE CAPABILITY ENQUIRY message. This triggers the UE to move to CELL_FACH state and transmit a MEASUREMENT REPORT and UE CAPABILITY INFORMATION message on the uplink DCCH using RLC-AM mode. SS completes the procedure by transmitting a UE CAPABILITY INFORMATION CONFIRM message. The UE shall remain in CELL_FACH state.

The SS then transmits a PHYSICAL CHANNEL RECONFIGURATION message with IE "RRC State Indicator" set to "CELL_PCH " and with no dedicated H_RNTI. The UE shall reply with PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and move to CELL_PCH state. The SS transmits a PAGING TYPE 1 message which includes a matched identifier and the optional IE "CN originated page to connected mode UE" The UE then moves to CELL_FACH state and transmits a CELL UPDATE message to the SS on the uplink CCCH, with the IE "Cell update cause" set to value "uplink data transmission" and IE ‘Measurement Results on RACH’ containing the measured CPICH RSCP for cell 1 . After receiving such a message, SS transmits a CELL UPDATE CONFIRM message on downlink DCCH mapped to HS-DSCH. Then the UE shall transmit an UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH to acknowledge the receipt of the new UE identities. The UE shall stay in CELL_FACH state and transmit an INITIAL DIRECT TRANSFER message using AM RLC on DCCH.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is brought to CELL_FACH state. |
| 2 | ← | | PHYSICAL CHANNEL RECONFIGURATION | IE "RRC State Indicator" set to "CELL_PCH" and dedicated H-RNTI |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | UE moves to CELL_PCH state. |
| 4 | ← | | UE CAPABILITY ENQUIRY | |
| 5 | → | | MEASUREMENT REPORT | This message shall contain IE "Measured results on RACH" reporting the measured CPICH RSCP for cell 1 and the "Measurement identity" to "16 |
| 6 | → | | UE CAPABILITY INFORMATION | The order of MEASUREMENT REPORT and UE CAPABILITY INFORMATION is not important. |
| 6a | ← | | UE CAPABILITY INFORMATION CONFIRM | |
| 7 | ← | | PHYSICAL CHANNEL RECONFIGURATION | IE "RRC State Indicator" set to "CELL_PCH" and no dedicated H-RNTI |
| 8 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | UE moves to CELL_PCH state. |
| 9 | ← | | PAGING TYPE 1 | Includes Matched identifier and optional IE “CN originated page to connected mode UE" |
| 10 | → | | CELL UPDATE | The UE moves to CELL FACH state and transmit this message which is set to "uplink data transmission" in IE "Cell update cause". This message shall contain IE "Measured results on RACH" reporting the measured CPICH RSCP for cell 1 |
| 11 | ← | | CELL UPDATE CONFIRM | See message content . |
| 12 | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 13 | → | | INITIAL DIRECT TRANSFER | Response to the paging message sent in step 9 |
| 14 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 11 (Step 1)

Use the same System Information Block Type 11 message as found in clause 6.1.0b of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Intra-frequency reporting quantity for RACH reporting | |
| - SFN-SFN observed time difference reporting indicator | No report |
| - CHOICE mode | FDD |
| - Measurement quantity | CPICH RSCP |
| - Maximum number of reported cells on RACH | Current cell |

PHYSICAL CHANNEL RECONFIGURATION (Step 2)

Use the same message sub-type found in TS 34.108 clause 9, which is entitled "Packet to CELL_FACH from CELL_FACH in PS", with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | '1010 1010 1010 1010' |
| New H-RNTI | Set to an arbitrary string different from '1010 1010 1010 1010' |
| RRC State Indicator<br>UTRAN DRX cycle length coefficient | CELL_PCH<br>3 |

UE CAPABILITY ENQUIRY (Step 4)

Use the same message sub-type found in TS 34.108 clause 9.1.

PAGING TYPE 1 (Step 9)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| Paging record list | Only 1 entry |
| Paging record | |
| - CHOICE Used paging identity | UTRAN identity |
| - U-RNTI | |
| - SRNC Identity | Set to the previously assigned SRNC identity |
| - S-RNTI | Set to previously assigned S-RNTI |
| - CN originated page to connected mode UE | |
| -Paging cause | Terminating Conversational Call |
| -CN domain identity | CS Domain |
| -Paging record type identifier | Set to "TMSI (GSM-MAP)/P-TMSI" for UEs supporting GSM-MAP core network type or "TMSI (DS-41)" for UEs supporting ANSI-41 core network type. |
| BCCH modification info | Not Present |

MEASUREMENT REPORT (Step 5)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Measurement identity | 16 |
| Measured Results | NOT PRESENT |
| Measured results on RACH | Checked that this IE is present |
| Additional measured results | Checked that this IE is absent |
| Event results | Checked that this IE is absent |
| GSM OTD reference cell | Checked that this IE is absent |
| Inter-RAT cell info indication | Checked that this IE is absent |

UE CAPABILITY INFORMATION (Step 6)

Use the same message sub-type found in TS 34.108 clause 9.

UE CAPABILITY INFORMATION CONFIRM (Step 6a)

Use the same message sub-type found in TS 34.108 clause 9.1.

PHYSICAL CHANNEL RECONFIGURATION (Step 7)

Use the same message sub-type found in TS 34.108 clause 9, which is entitled "Packet to CELL_FACH from CELL_FACH in PS", with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New H-RNTI | NOT PRESENT |
| RRC State Indicator | CELL_PCH |
| UTRAN DRX cycle length coefficient | 3 |

CELL UPDATE (Step 10)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - SRNC Identity | Check to see if set to '0000 0000 0001' |
| - S-RNTI | Check to see if set to '0000 0000 0000 0000 0001' |
| Cell Update Cause | Check to see if set to ‘uplink data transmission' |
| Measured results on RACH | Checked that this IE is present |

CELL UPDATE CONFIRM (Step 11)

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New H-RNTI | Set to an arbitrary string different from '1010 1010 1010 1010' |

INITIAL DIRECT TRANSFER (Step13) – for UEs supporting GSM-MAP core networks

Check to see if the same message type found in TS 34.108 clause 9 is received, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| CN domain identity | CS domain |
| Intra Domain NAS Node Selector | |
| - CHOICE version | R99 |
| -- CHOICE CN type | GSM |
| --- CHOICE Routing basis | Local(P)TMSI |
| ---- Routing parameter | This bit string is set to bits b14 through b23 of the TMSI. The TMSI consists of 4 octets (32bits). This can be represented by a string of bits numbered from b0 to b31, with bit b0 being the least significant. The "Routing parameter" bit string consists of bits b14 through b23 of the TMSI. The first/ leftmost/ most significant bit of the bit string contains bit b23 of the TMSI |
| --- Entered parameter | Not checked |
| NAS message | Not checked |

INITIAL DIRECT TRANSFER (Step13) – for UEs supporting ANSI-41 core networks

| Information Element | Value/remark |
|---|---|
| CN domain identity | CS Domain |
| Intra Domain NAS Node Selector | |
| - CHOICE version | ANSI-41: Bitstring(14), all bits set to 0 |
| NAS message | Not checked |
| START | Not checked |
| Measured results on RACH | Not checked |

#### 8.4.1.50.5 Test requirement

After step 2, UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and move to CELL_PCH state.

After step 4, the UE shall move to CELL_FACH state and transmits a RRC STATUS message and MEASUREMENT REPORT message on SRB2 containing the IE "Measured results on RACH" reporting the measured CPICH RSCP for cell 1 and the IE "Measurement identity" set to "16".

After step 7, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and move to CELL_PCH state.

After step 10, the UE shall move to CELL_FACH state and initiate a cell update procedure and transmits a CELL UPDATE message on RACH containing the IE "Measured results on RACH" reporting the measured CPICH RSCP for cell 1.

After step 12, the UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH using AM RLC.

After step 13, UE shall transmit a INITIAL DIRECT TRANSFER message to SS using AM RLC on DCCH.

### 8.4.1.51 Measurement Control and Report: Inter-frequency measurement for events 2C for CSG cells

#### 8.4.1.51.1 Definition

Test to verify the UE can report the 2c events for CSG cells.

#### 8.4.1.51.2 Conformance requirement

1. Event 2c: The estimated quality of a non-used frequency is above a certain threshold

When an inter-frequency measurement configuring event 2c is set up, the UE shall:

1> create a variable TRIGGERED_2C_EVENT related to that measurement, which shall initially be empty;

1> delete this variable when the measurement is released.

When event 2c is configured in the UE within a measurement, the UE shall:

1> if equation 1 below has been fulfilled for one or several non-used frequencies included for that event during the time "Time to trigger":

2> if any of those non-used frequencies is not stored in the variable TRIGGERED_2C_EVENT:

2> if the CSG virtual active set has been updated, since the last measurement report for this event associated with CSG measurement, for any of those non-used frequency which are stored in the variable TRIGGERED_2C_EVENT:

3> store the non-used frequencies that triggered the event and that were not previously stored in the variable TRIGGERED_2C_EVENT into that variable;

3> send a measurement report with IEs set as below:

4> set in "inter-frequency measurement event results":

5> "inter-frequency event identity" to "2c"; and

5> for each non-used frequency that triggered the event, beginning with the best frequency:

6> "Frequency info" to that non-used frequency; and

6> "Non frequency related measurement event results" to the "Primary CPICH info" of the best primary CPICH for FDD cells or "Primary CCPCH info" to the "Cell parameters ID" of the best primary CCPCH for TDD cells on that non-used frequency, not taking into account the cell individual offset.

4> include in IE "Inter-frequency measured results list" the measured results for each non-used frequency that triggered the event, not taking into account the cell individual offset;

4> set the IE "additional measured results" according to subclause 8.4.2 not taking into account the cell individual offset.

1> if equation 1 below has been fulfilled but the CSG virtual active set is updated for a non-used frequency included for that event:

2> restart evaluation of this event for this frequency.

1> if equation 2 below is fulfilled for a non-used frequency stored in the variable TRIGGERED_2C_EVENT:

2> remove that non-used frequency from the variable TRIGGERED_2C_EVENT.

Triggering condition:

Equation 1:

$$Q_{Nonused} \geq T_{Nonused2c} + H_{2c}/2$$

The variables in the formula are defined as follows:

$Q_{Non\ used}$ is the quality estimate of a non-used frequency that becomes better than an absolute threshold.

$T_{Non\ used\ 2c}$ is the absolute threshold that applies for this non-used frequency in that measurement.

$H_{2c}$ is the hysteresis parameter for the event 2c.

Leaving triggered state condition:

Equation 2:

$$Q_{Nonused} < T_{Nonused2c} - H_{2c}/2$$

The variables in the formula are defined as follows:

$Q_{Non\ used}$ is the quality estimate of a non-used frequency stored in the variable TRIGGERED_2C_EVENT.

$T_{Non\ used\ 2c}$ is the absolute threshold that applies for this non-used frequency in that measurement.

$H_{2c}$ is the hysteresis parameter for the event 2c.

Reference

1: 3GPP TS 25.331 clause 14.2.1.3.

### 8.4.1.51.3 Test purpose

1. To confirm that the UE sends MEASUREMENT REPORT message when event 2c is configured and a non-used frequency is above a certain threshold. This MEASUREMENT REPORT message shall contain at least the best primary CPICH info (for FDD) on the non-used frequency that triggered the event and the best primary CPICH info is of the CSG cell present in CSG virtual active set.

2. To confirm that event 2C triggered for a non-used frequency when another CSG cell becomes stronger than the CSG cell in CSG virtual active set.

3. To confirm that evaluation of event 2C is re-started when CSG virtual active set is updated.

### 8.4.1.51.4 Method of test

Initial Condition

System Simulator:

4 cells: Cell 1, cell 4, cell 6 and cell5 are used. Column marked "T0" in table 8.4.1.51-1 found in "Test Procedure" clause denotes the initial power conditions.

The CSG id of the Cell 5 is 2 and cell 6 is 3. Cell 4 does not broadcast CSG ID.

Cell1 is on f1.

Cell 4, cell 6 and cell 5 are on f2.

User Equipment:

The UE's Allowed CSG List contains CSG Ids 2 & 3. UE's operator CSG list is empty.

The UE is PS-DCCH+DTCH_DCH (state 6-10) or CS-DCCH+DTCH_DCH (state 6-9) or PS+CS-DCCH+DTCH_DCH (state 6-14) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports compressed mode
- UE supports inter-frequency SI acquisition for HO.

Test Procedure

Table8.4.1.51-1 illustrates the downlink power to be applied for the 4 cells.

**Table 8.4.1.51-1**

| Parameter | Unit | Cell 1 | | | Cell4 | | | Cell 5 | | | Cell 6 | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Test Channel | | 1 | | | 2 | | | | | | 2 | | |
| | | T0 | T1 | T2 | T0 | T1 | T2 | T0 | T1 | T2 | T0 | T1 | T2 |
| CPICH_Ec | dBm/3.84MHz | -65 | -65 | -65 | -75 | -55 | OFF | -75 | -65 | -65 | OFF | OFF | -55 |

The UE is initially in CELL_DCH and has a radio bearer with the cell 1.

At instant T0, the downlink is according to what is shown in table 8.4.1.51-1. The SS then sets up an intra-frequency measurement (event 1c) and an inter-frequency CSG measurement (event 2c), by sending separate MEASUREMENT CONTROL messages to the UE. Configuration of event 1c is important for the UE to construct CSG VAS active set.

The SS configures then compressed mode (if required), to prepare the UE for inter-frequency measurements, by sending a PHYSICAL CHANNEL RECONFIGURATION message on DCCH using AM-RLC. The UE shall answer with a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message.

At instant T1, the downlink power is changed according to what is shown in table 8.4.1.51-1. The UE shall thus send a MEASUREMENT REPORT with 2c event to the SS. The MEASUREMENT REPORT message contains PSC of Cell-5 (which is a CSG cell) and not PSC of Cell-4 (which is a non-CSG cell), since event 2c is configured for CSG cells.

At instant T2, the downlink power is changed according to what is shown in table 8.4.1.51-1. The UE shall thus send a MEASUREMENT REPORT with 2c event to the SS with PSC of Cell-6. This happens due to Cell-6 being stronger CSG cell than Cell-5. However, this measurement report is not sent before summation of time-to-triggers of both event 1c and 2c.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The SS maintains the power of the three cells according to column T0 in table 8.4.1.51 -1 |
| 2 | ← | | MEASUREMENT CONTROL | The SS configures an intra-frequency measurement to the UE. Event 1c is configured. |
| 3 | ← | | MEASUREMENT CONTROL | The SS configures an inter-frequency measurement to the UE. Event 2c is configured. If Compressed Mode not required (refer ICS/IXIT) go to step 6 |
| 4 | ← | | PHYSICAL CHANNELRECONFIGURATION | The SS instructs UE to begin compressed mode operation. (for FDD only) |
| 5 | → | | PHYSICAL CHANNELRECONFIGURATION COMPLETE | (for FDD only) |
| 6 | | | | The SS re-adjusts the downlink transmission power settings of the cells according to columns "T1" in table8.4.1.51 -1. |
| 7 | → | | MEASUREMENT REPORT | The UE sends a measurement report including the measured PSC for cell 5 and event 2c. |
| 8 | | | | The SS re-adjusts the downlink transmission power settings of the cells according to columns "T2" in table 8.4.1.51-1. |
| 9 | → | | MEASUREMENT REPORT | The UE sends a measurement report including the PSC for cell 6 and event 2c. Check that this measurement report should not come before 10 sec (i.e., 5000ms TTT of event 1c + 5000ms TTT of event 2c) |

Specific Message Contents

MEASUREMENT CONTROL (Step 2)

Use the same message sub-type found in TS 34.108, clause 9, with the following exceptions

| Information Element | Value/remark |
|---|---|
| Measurement identity | 1 |
| Measurement command | Setup |
| Measurement reporting mode | |
| - Measurement reporting transfer mode | Acknowledged mode RLC |
| - Periodic reporting / Event trigger reporting mode | Event trigger |
| CHOICE measurement type | Intra-frequency measurement |
| - intra-frequency measurement | |
| - Intra-frequency cell info list | |
| - Cells for measurement | |
| - Intra-frequency cell id | Set to same code as used for cell 1 |
| - Cell info | |
| - Cell individual offset | 0 (0dB) |
| - Reference time difference to cell | Not Present |
| - Read SFN number | FALSE |
| - CHOICE mode | FDD |
| - Primary CPICH info | |
| - Primary scrambling code | 100 |
| - Primary CPICH Tx power | Not Present |
| - TX Diversity indicator | FALSE |
| - Intra-frequency measurement quantity | |
| - Filter Coefficient | 0 |
| - CHOICE mode | |
| - FDD | |
| - Measurement quantity | CPICH RSCP |
| - CHOICE report criteria | Intra-frequency measurement reporting criteria |
| - Intra-frequency measurement reporting criteria | |
| - Parameters required for each events | |
| - Intra-frequency event identity | 1c |
| - Hysteresis | 4 (2dB) |
| - Replacement activation threshold | 3 |
| - Time to trigger | 5000 ms |
| - Amount of reporting | 16 |
| - Reporting interval | 4000ms |
| - Reporting cell status | Not present |

MEASUREMENT CONTROL (Step 3)

| Information Element | Value/remark |
|---|---|
| Measurement identity | 2 |
| Measurement command | Setup |
| Measurement reporting mode | |
| - Measurement reporting transfer mode | Unacknowledged Mode RLC |
| - Periodic reporting / Event trigger reporting mode | Event trigger |
| Additional measurement list | Not present |
| CHOICE measurement type | Inter-frequency measurement |
| - inter-frequency measurement | |
| - Inter-frequency cell info list | |
| - Inter-frequency cell removal | Not Present |
| - New inter-frequency cells | |
| - Inter-frequency cell id | 4 |
| - Frequency info | Set to same code as used for cell 4 |
| - cell info | |

| - Frequency quality estimate | FALSE |
| - Non frequency related quantities | |
| - Cell synchronisation information reporting indicator | FALSE |
| - Cell identity reporting indicator | FALSE |
| - CPICH Ec/No reporting indicator | FALSE |
| - CPICH RSCP reporting indicator | TRUE |
| - Pathloss reporting indicator | FALSE |
| - Measurement validity | CELL_DCH state |
| - inter-frequency set update | |
| - UE autonomous update mode | On with no reporting |
| - CHOICE report criteria | |
| - Inter-frequency measurement reporting criteria | |
| - Parameters required for each event | |
| - Inter-frequency event identity | 2c |
| - Hysteresis | 2(1dB) |
| - Time to trigger | 5000 mSec |
| - Reporting cell status | Not present |
| - Parameters required for each non-used frequency | |
| - Threshold non used frequency | -70 dBm |
| - W non used frequency | 0 |
| DPCH compressed mode status info | Not present |

PHYSICAL CHANNEL RECONFIGURATION (Step 4)

Use the same message sub-type found in Annex A, which is entitled "(Packet to CELL_DCH from CELL_DCH in PS)", with the following exceptions in the IE(s) concerned:

| Information Element | Value/remark | Version |
|---|---|---|
| Downlink information common for all radio links | | |
| - Downlink DPCH info common for all RL | | |
| - Timing Indication | Maintain | |
| - Downlink DPCH power control information | | |
| - DPC mode | 0 (Single) | |
| - CHOICE Mode | FDD | |
| - Power offset PPilot-DPDCH | 0 | |
| - DL rate matching restriction information | Not present | |
| - Spreading factor | Refer to the parameter set in TS 34.108 | |
| - Fixed or flexible position | Flexible | |
| - TFCI existence | TRUE | |
| - Number of bits for Pilot bits (SF=128, 256) | Not present | |
| - DPCH compressed mode info | | |
| - TGPSI | 1 | |
| - TGPS status flag | Activate | |
| - TGCFN | (Current CFN+(256 – TTI/10msec)) mod 256 | |
| - Transmission gap pattern sequence configuration parameters | | |
| - TGMP | FDD Measurement | |
| - TGPRC | Infinity | |
| - TGSN | 4 | |
| - TGL1 | 7 | |
| - TGL2 | Not Present | |
| - TGD | Undefined | |
| - TGPL1 | 3 | |
| - TGPL2 | Not Present | R99 and Rel-4 only |
| - RPP | Mode 0 | |
| - ITP | Mode 0 | |
| - CHOICE UL/DL mode | UL and DL or DL only or UL only depending on UE capability | |
| - Downlink compressed mode method | SF/2 | |
| - Uplink compressed mode method | SF/2 or Not present depending on UE capability | |
| - Downlink frame type | A | |
| - DeltaSIR1 | 20 (2.0) | |
| - DeltaSIRAfter1 | 10 (1.0) | |
| - DeltaSIR2 | Not present | |
| - DeltaSIRAfter2 | Not present | |
| - N identify abort | Not present | |
| - T Reconfirm abort | Not present | |
| - TX diversity mode | None | |
| - SSDT information | Not present | R99 and Rel-4 only |
| - Default DPCH offset value | Not present | |

MEASUREMENT REPORT (Step 7)

| Information Element | Value/remark |
|---|---|
| Measurement identity | Check to see if set to 2 |
| Measured results | Check to see if it is absent |
| Additional measured results | Check to see if it is absent |
| Event results | Inter-frequency measurement event results, |
| - CHOICE event result | |
| - Inter-frequency measurement event results | |
| - Inter-frequency event identity | 2c |
| - Inter-frequency cells | |
| - Frequency info | Set to same code as used for cell 5 |
| - Non frequency related measurement event results | |
| - CHOICE mode | |
| - FDD | |
| - Primary CPICH info | |
| - Primary scrambling code | Set to same code as used for cell 5 |

MEASUREMENT REPORT (Step 9)

| Information Element | Value/remark |
|---|---|
| Measurement identity | Check to see if set to 2 |
| Measured results | Check to see if it is absent |
| Additional measured results | Check to see if it is absent |
| Event results | Inter-frequency measurement event results, |
| - CHOICE event result | |
| - Inter-frequency measurement event results | |
| - Inter-frequency event identity | 2c |
| - Inter-frequency cells | |
| - Frequency info | Frequency of cell 6 |
| - Non frequency related measurement event results | |
| - CHOICE mode | |
| - FDD | |
| - Primary CPICH info | |
| - Primary scrambling code | Set to same code as used for cell 6 |

#### 8.4.1.51.5 Test requirement

1. At step 7, the UE sends 2c event to the SS. IE "Inter-frequency measurement event results" in this message shall contain frequency information and primary scrambling code of Cell 5.

2. At step 9, the UE sends 2c event to the SS. IE "Inter-frequency measurement event results " in this message shall contain frequency information and primary scrambling code of Cell 6. This message shall only be sent after 10 secs of SS adjusting its power as per Step 8.

### 8.4.1.52 Measurement Control and Report: Inter-frequency measurement for events 2B for CSG cells

#### 8.4.1.52.1 Definition

Test to verify the UE can report the 2b events for CSG cells.

#### 8.4.1.52.2 Conformance requirement

1: Event 2b: The estimated quality of the currently used frequency is below a certain threshold **and** the estimated quality of a non-used frequency is above a certain threshold.

When an inter-frequency measurement configuring event 2b is set up, the UE shall:

1> create a variable TRIGGERED_2B_EVENT related to that measurement, which shall initially be empty;

1> delete this variable when the measurement is released.

When event 2b is configured in the UE within a measurement, the UE shall:

1> if equations 1 and 2 below have been fulfilled for a time period indicated by "Time to Trigger" from the same instant, respectively for one or several non-used frequencies included for that event and for the used frequency:

2> if any of those non-used frequency is not stored in the variable TRIGGERED_2B_EVENT:

2> if the CSG virtual active set has been updated, since the last measurement report for this event associated with CSG measurement, for any of those non-used frequency which are stored in the variable TRIGGERED_2B_EVENT:

3> store the non-used frequencies that triggered the event and that were not previously stored in the variable TRIGGERED_2B_EVENT into that variable;

3> send a measurement report with IEs set as below:

4> set in "inter-frequency measurement event results":

5> "inter-frequency event identity" to "2b"; and

5> for each non-used frequency that triggered the event, beginning with the best frequency:

6> "Frequency info" to that non-used frequency; and

6> "Non frequency related measurement event results" to the "Primary CPICH info" of the best primary CPICH for FDD cells or "Primary CCPCH info" to the "Cell parameters ID" of the best primary CCPCH for TDD cells on that non-used frequency, not taking into account the cell individual offset.

4> include in IE "Inter-frequency measured results list" the measured results for each non-used frequency that triggered the event, not taking into account the cell individual offset;

4> set the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset.

1> if this equations 1 and 2 below have been fulfilled but the CSG virtual active set is updated for a frequency included for that event:

2> restart evaluation of this event for this frequency.

1> if equation 3 below is fulfilled for a non-used frequency stored in the variable TRIGGERED_2B_EVENT:

2> remove that non-used frequency from the variable TRIGGERED_2B_EVENT.

1> if equation 4 below is fulfilled for the used frequency:

2> clear the variable TRIGGERED_2B_EVENT.

Triggering conditions:

Equation 1:

$$Q_{Non used} \geq T_{Non used 2b} + H_{2b}/2$$

The variables in the formula are defined as follows:

$Q_{Non\ used}$ is the quality estimate of a non-used frequency that becomes better than an absolute threshold.

$T_{Non\ used\ 2b}$ is the absolute threshold that applies for this non-used frequency in that measurement.

$H_{2b}$ is the hysteresis parameter for the event 2b.

Equation 2:

$$Q_{Used} \leq T_{Used 2b} - H_{2b}/2$$

The variables in the formula are defined as follows:

$Q_{Used}$ is the quality estimate of the used frequency.

$T_{Used\ 2b}$ is the absolute threshold that applies for the used frequency in that measurement.

$H_{2b}$ is the hysteresis parameter for the event 2b.

Leaving triggered state condition:

Equation 3:

$$Q_{Non used} < T_{Non used 2b} - H_{2b}/2$$

The variables in the formula are defined as follows:

$Q_{Non\ used}$ is the quality estimate of a non-used frequency that is stored in the variable TRIGGERED_2B_EVENT.

$T_{Non\ used\ 2b}$ is the absolute threshold that applies for this non-used frequency in that measurement.

$H_{2b}$ is the hysteresis parameter for the event 2b.

Equation 4:

$$Q_{Used} > T_{Used 2b} + H_{2b}/2$$

The variables in the formula are defined as follows:

$Q_{Used}$ is the quality estimate of the used frequency.

$T_{Used\ 2b}$ is the absolute threshold that applies for the used frequency in that measurement.

$H_{2b}$ is the hysteresis parameter for the event 2b.

Reference

1: 3GPP TS 25.331 clause 14.2.1.2.

### 8.4.1.52.3 Test purpose

1. To confirm that the UE sends MEASUREMENT REPORT message when event 2B is configured and estimated quality of the currently used frequency is below the value of the IE "Threshold used frequency" and the estimated quality of a non-used frequency is above the value of the IE "Threshold non-used frequency". This MEASUREMENT REPORT message shall contain at least the best primary CPICH info (for FDD) on the non-used frequency that triggered the event and the best primary CPICH info is of the CSG cell present in CSG virtual active set.

2. To confirm that event 2B triggered for a non-used frequency when another CSG cell becomes stronger than the CSG cell in CSG virtual active set.

3. To confirm that evaluation of event 2B is re-started when CSG virtual active set is updated.

### 8.4.1.52.4 Method of test

Initial Condition

System Simulator:

4 cells: Cell 1, cell 4, cell 6 and cell 5 are used. Column marked "T0" in table 8.4.1.52-1 found in "Test Procedure" clause denotes the initial power conditions.

The CSG id of the Cell5 is 2 and cell 6 is 3. Cell 4 does not broadcast CSG ID.

Cell1 is on f1.

Cell 4, cell 6 and cell 5 are on f2.

User Equipment:

The UE’s Allowed CSG List contains CSG Ids 2 & 3. UE’s operator CSG list is empty.

The UE is PS-DCCH+DTCH_DCH (state 6-10) or CS-DCCH+DTCH_DCH (state 6-9) or PS+CS-DCCH+DTCH_DCH (state 6-14) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports compressed mode
- UE supports inter-frequency SI acquisition for HO.

Test Procedure

Table 8.4.1.52-1 illustrates the downlink power to be applied for the 4 cells.

**Table 8.4.1.52-1**

| Parameter | Unit | Cell 1 | | | Cell4 | | | Cell 5 | | | Cell 6 | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Test Channel | | 1 | | | 2 | | | | | | 2 | | |
| | | T0 | T1 | T2 | T0 | T1 | T2 | T0 | T1 | T2 | T0 | T1 | T2 |
| CPICH_Ec | dBm/3.84MHz | -55 | -75 | -75 | -55 | -55 | OFF | -65 | -65 | -65 | OFF | OFF | -55 |

The UE is initially in CELL_DCH and has a radio bearer with the cell 1.

At instant T0, the downlink is according to what is shown in table 8.4.1.52-1. The SS then sets up an intra-frequency measurement (event 1c) and an inter-frequency CSG measurement (event 2b), by sending separate MEASUREMENT CONTROL messages to the UE. Configuration of event 1c is important for the UE to construct CSG VAS active set.

The SS configures then compressed mode (if required), to prepare the UE for inter-frequency measurements, by sending a PHYSICAL CHANNEL RECONFIGURATION message on DCCH using AM-RLC. The UE shall answer with a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message.

At instant T1, the downlink power is changed according to what is shown in table 8.4.1.52-1. The UE shall thus send a MEASUREMENT REPORT with 2b event to the SS. The MEASUREMENT REPORT message contains PSC of Cell-5 (which is a CSG cell) and not PSC of Cell-4 (which is a non-CSG cell), since event 2b is configured for CSG cells.

At instant T2, the downlink power is changed according to what is shown in table 8.4.1.52-1. The UE shall thus send a MEASUREMENT REPORT with 2b event to the SS with PSC of Cell-6. This happens due to Cell-6 being stronger CSG cell than Cell-5. However, this measurement report is not sent before summation of time-to-triggers of both event 1c and 2b.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The SS maintains the power of the cells according to column T0 in table 8.4.1.52-1 |
| 2 | ← | | MEASUREMENT CONTROL | The SS configures an intra-frequency measurement to the UE. Event 1c is configured. |
| 3 | ← | | MEASUREMENT CONTROL | The SS configures an inter-frequency CSG measurement to the UE. Event 2b is configured. If Compressed Mode not required (refer ICS/IXIT) go to step 6 |
| 4 | ← | | PHYSICAL CHANNELRECONFIGURATION | The SS instructs UE to begin compressed mode operation. (for FDD only) |
| 5 | → | | PHYSICAL CHANNELRECONFIGURATION COMPLETE | (for FDD only) |
| 6 | | | | The SS re-adjusts the downlink transmission power settings of the cells according to columns "T1" in table 8.4.1.52-1. |
| 7 | → | | MEASUREMENT REPORT | The UE sends a measurement report including the PSC for cell 5 and event 2b. |
| 8 | | | | The SS re-adjusts the downlink transmission power settings of the cells according to columns "T2" in table 8.4.1.52-1. |
| 9 | → | | MEASUREMENT REPORT | The UE sends a measurement report including the PSC for cell 6 and event 2b. Check that this measurement report should not come before 10 sec (i.e., 5000ms TTT of event 1c + 5000ms TTT of event 2b) |

Specific Message Contents

MEASUREMENT CONTROL (Step 2)

Use the same message sub-type found in TS 34.108, clause 9, with the following exceptions

| Information Element | Value/remark |
|---|---|
| Measurement identity | 1 |

| - FDD | |
| - Primary CPICH info | |
| - Primary scrambling code | Set to same code as used for cell 6 |

#### 8.4.1.52.5 Test requirement

1. At step 7, the UE sends 2b event to the SS. IE "Inter-frequency measurement event results" in this message shall contain frequency information and primary scrambling code of Cell 5.

2. At step 9, the UE sends 2b event to the SS. IE "Inter-frequency measurement event results" in this message shall contain frequency information and primary scrambling code of Cell 6. This message shall only be sent after 10 secs of SS adjusting its power as per Step 8.

### 8.4.1.53 Measurement Control and Report: Application layer measurement

#### 8.4.1.53.1 Definition

#### 8.4.1.53.2 Conformance requirement

25.331[8] clause 8.4.1 and clause 8.4.2 RRC MEASUREMENT procedure.

Upon reception of a MEASUREMENT CONTROL message the UE shall perform actions specified in TS 25.331 subclause 8.4.1 and 8.4.2 unless otherwise specified below.

The UE shall:

1> read the IE "Measurement command";

1> if the IE "Measurement command" has the value "setup":

2> store this measurement in the variable MEASUREMENT_IDENTITY according to the IE "measurement identity", first releasing any previously stored measurement with that identity if that exists;

…

2> for measurement type "Application layer measurement configuration":

3> if the UE is not in CELL_DCH or CELL_FACH state:

4> the UE behaviour is unspecified.

3> else:

4> forward the content of the IE "Application layer measurement configuration" to upper layers.

…

…

25.331[8] subclause 8.4.1 TP2

1> if any configured application layer measurement configuration is to be released, the UE shall:

2> inform upper layers to clear the stored "Application layer measurement configuration".

…

25.331[8] subclause 8.4.2 TP1

Measurement Report

In CELL_DCH state, the UE shall:

1> transmit a MEASUREMENT REPORT message on the uplink DCCH when the reporting criteria stored in variable MEASUREMENT_IDENTITY are met for any ongoing measurements that are being performed in the UE.

…

The reporting criteria are fulfilled if either:

- a periodic MEASUREMENT REPORT message shall be sent according to the IE "Periodical Reporting Criteria"; or
- an event in stored IE "Measurement reporting criteria" was triggered. Events and triggering of reports for different measurement types are described in detail in clause 14.
- a "Container for application layer measurement reporting" is received from upper layers.

For the measurement, which triggered the MEASUREMENT REPORT message, the UE shall:

1> if measurement type "Application layer measurement configuration" is configured and the UE is in CELL_DCH state:

2> set the IE "Application layer measurement reporting" to include measurements according to the IE "Application layer measurement configuration" of that measurement stored in variable MEASUREMENT_IDENTITY.

The UE shall:

1> transmit the MEASUREMENT REPORT message on the uplink DCCH using either AM or UM RLC according to the stored IE "measurement reporting mode" associated with the measurement identity that triggered the report.

25.331[8] clause 6.3 Signalling Radio Bearers TP1

The Radio Bearers (RB) available for transmission of RRC messages are defined as "signalling radio bearers" and are specified in the following. The UE and UTRAN shall select the signalling radio bearers for RRC messages using RLC-TM, RLC-UM or RLC-AM on the DCCH and CCCH, according to the following:

- Signalling radio bearer RB0 shall be used for all messages sent on the CCCH (UL: RLC-TM, DL: RLC-UM).

- Signalling radio bearer RB1 shall be used for all messages sent on the DCCH, when using RLC unacknowledged mode (RLC-UM).
- Signalling radio bearer RB2 shall be used for all messages sent on the DCCH, when using RLC acknowledged mode (RLC-AM), except for the RRC messages carrying higher layer (NAS) signalling and the MEASUREMENT REPORT message carrying the IE "Application layer measurement reporting".
- Signalling radio bearer RB3 and optionally Signalling radio bearer RB4 shall be used for the RRC messages carrying higher layer (NAS) signalling and sent on the DCCH in RLC acknowledged mode (RLC-AM), as specified in subclauses 8.1.8., 8.1.9 and 8.1.10.
- Signalling radio bearer RB4 shall be used for UE INFORMATION RESPONSE message and the MEASUREMENT REPORT message carrying the IE "Application layer measurement reporting".
- Additionally, RBs whose identities shall be set between 5 and 32 may be used as signalling radio bearer for the RRC messages on the DCCH sent in RLC transparent mode (RLC-TM).
- RRC messages on the SHCCH are mapped either on RACH or on the USCH in the uplink using TM and either on FACH or on the DSCH using RLC-UM. These messages are only specified for TDD mode.
- RRC messages on the MCCH are mapped on FACH using RLC-UM. The transport channel configuration for MCCH is indicated on BCCH. For this signalling radio bearer no identity is applied.
- RRC messages on the MSCH are mapped on FACH using RLC-UM. The transport channel configuration for MSCH is indicated on MCCH. For this signalling radio bearer no identity is applied.

Reference 3GPP TS 25.331[8] clauses 8.4.1.3 and 8.4.2 and 6.3

#### 8.4.1.53.3 Test Purpose

1. To confirm that UE in CELL_DCH, if receives Application layer measurement configuration, it shall forward the Application layer measurement report received from the upper layer in the uplink DCCH, and to confirm that UE transmit Application layer measurement over SRB4.
2. To confirm that UE won’t forward the Application layer measurement report received from the upper layer unless it’s configured.

#### 8.4.1.53.4 Method of test

##### Initial Condition

Radio environment: Static Channel: Normal propagation condition described in 34.108 [9] clause 5.2.2, ideal channel quality to ensure reliable data transfer in air interface;

System Simulator: 1 cell

UE:

- The UE shall be operated under normal test conditions.
- Registered Idle Mode on PS (state3).

##### Test Procedure

The UE is initially in Registered Idle Mode on PS (state3), and then the procedure P5 specified in TS 34.108 [9] clause7 is called to make the UE to transit to CELL_DCH. To execute procedure P5, all specific message contents are used as specified in TS 34.108[9] clause 9 with the exception in step 3. For step3, the message of the same type titled “RRC CONNECTION SETUP message: UM (Transition to CELL_DCH or in CELL_FACH)” including Signalling RB information to setup titled (AM DCCH for NAS_DT Low priority) under condition A2.

Cause UE upper layer to send an APPLICATION LAYER MEASUREMENT REPORT to UE RRC layer.

SS is not expected to receive an APPLICATION LAYER MEASUREMENT REPORT from UE because APPLICATION LAYER MEASUREMENT is not setup previously;

SS sends MEASUREMENT CONTROL message to UE to setup APPLICATION LAYER MEASUREMENT;

Cause UE upper layer to provide 3 APPLICATION LAYER MEASUREMENT REPORTs to UE RRC layer successively every 5 seconds, the lengths of which are 1000, 4000 and 8000 bytes respectively;

SS is expected to receive 3 APPLICATION LAYER MEASUREMENT REPORTs forwarded by UE within less than 30 seconds.

SS sends MEASUREMENT CONTROL message to UE to release APPLICATION LAYER MEASUREMENT;

Cause UE upper layer to provide one APPLICATION LAYER MEASUREMENT REPORTs, the length of which are 1000 bytes;

SS is not expected to receive any the APPLICATION LAYER MEASUREMENT REPORT due to the measurement is released.

Expected Sequence

| Step | Direction | | Message(Control Plane) | Comments |
|---|---|---|---|---|
| | UE | SS | | |

| | | | |
|---|---|---|---|
| 0 | | | Call the procedure P5 specified in TS 34.108 [9] clause7 to make the UE to transit to CELL_DCH |
| 1 | | Cause UE high layer to provide APPLICATION LAYER MEASUREMENT REPORT with 1000 bytes "Container for application layer measurement reporting" (Note1) | |
| 2 | | | WAIT 20 seconds No MEASUREMENT REPORT |
| 3 | ← | MEASUREMENT CONTROL(setup Application layer measurement) | RRC Setup Application layer measurement |
| 4 | | | |
| 5 | | Cause UE high layer to provide APPLICATION LAYER MEASUREMENT REPORT with 1000 bytes "Container for application layer measurement reporting" (Note1) | |
| 6 | | | SS waits 5 seconds from step3 |
| 7 | | Cause UE high layer to provide APPLICATION LAYER MEASUREMENT REPORT with 4000 bytes "Container for application layer measurement reporting" (Note1) | |
| 8 | | | SS waits 5 seconds from step5 |
| 9 | | Cause UE high layer to provide APPLICATION LAYER MEASUREMENT REPORT with 8000 bytes "Container for application layer measurement reporting" (Note1) | |
| 10.1 | → | APPLICATION LAYER MEASUREMENT REPORT with 1000 bytes "Container for application layer measurement reporting" | It could happen in parallel to steps 6-9 |
| 10.2 | → | APPLICATION LAYER MEASUREMENT REPORT with 4000 bytes "Container for application layer measurement reporting" | It could happen in parallel to steps 6-9 |
| 10.3 | → | APPLICATION LAYER MEASUREMENT REPORT with 8000 bytes "Container for application layer measurement reporting" | It could happen in parallel to steps 6-9 |
| 11 | | | Timer expiration 30 seconds after step6 SS should have received 3 Application measurement reports each corresponding to previously transmitted Generate Application Layer Measurement Report command, and all the MEASUREMENT REPORTs must be transmitted on SRB4. |
| 12 | ← | MEASUREMENT CONTROL (release Application layer measurement) | |
| 13 | | Cause UE high layer to provide APPLICATION LAYER MEASUREMENT REPORT with 1000 bytes "Container for application layer measurement reporting" (Note1) | |
| 14 | | | Wait 20 seconds and verify that no further MEASUREMENT REPORT messages are detected on the uplink DCCH. |

| Note1: This indication may be triggered with the AT command +CAPPLEVMR specified in TS 27.007 clause 8.79 or any alternative way |
|---|

Specific Message Contents

MEASUREMENT CONTROL (Step 3) (FDD)

| Information Element | Value/remark |
|---|---|
| Measurement identity | 16 |
| Measurement command | Setup |
| - CHOICE measurement type | Application layer measurement configuration |
| -Container for application layer measurement configuration | Octet string (1…1000) |
| Additional measurement list | Not Present |

MEASUREMENT REPORT (Step10) (FDD)

#### 8.4.1.53.5 Test Requirement

In step2 SS is not expected to receive any APPLICATION LAYER MEASUREMENT REPORT from UE;

In step10 SS is expected to receive all the MEASUREMENT REPORTs received on SRB4 and each of the container is identical to the one in the corresponding GENERATE APPLICATION LAYER MEASUREMENT REPORT;

In step14 SS is not expected to receive any APPLICATION LAYER MEASUREMENT REPORT from UE

### 8.4.1.54 Void

### 8.4.1.55 Void

### 8.4.1.56 Introduction of Cell Update: Application layer measurement report available in URA_PCH

#### 8.4.1.56.1 Definition

#### 8.4.1.56.2 Conformance requirement

A UE shall initiate the cell update procedure in the following cases:

1> Uplink data transmission:

…

1> Transfer of application layer measurement report:

2> if the UE is in URA_PCH, CELL_PCH or CELL_FACH state; and

2> if the UE has received a "Container for application layer measurement reporting" which has not yet been sent:

3> perform cell update using the cause "application layer measurement report available".

NOTE: If the UE is not transferred to CELL_DCH after having successfully performed cell update using the cause "application layer measurement report available", the UE shall discard the application layer measurement report.

Reference 3GPP TS 25.331 clause 8.3.1

### 8.4.1.56.3 Test purpose

1. To confirm that the UE executes a cell update procedure when the UE has received a “Container for application layer measurement reporting” data which has not yet been sent if the UE is in URA_PCH state.

### 8.4.1.56.4 Method of test

#### Initial Condition

System Simulator: 1cell

UE: Registered Idle Mode on PS (state3)

#### Test Procedure

The UE is initially in Registered Idle Mode on PS (state3), and then the procedure P5 specified in TS 34.108 [9] clause7 is called to make the UE to transit to CELL_DCH. To execute procedure P5, all specific message contents are used as specified in TS 34.108[9] clause 9 with the exception in step 3. For step3, the message of the same type titled “RRC CONNECTION SETUP message: UM (Transition to CELL_DCH or in CELL_FACH)” including Signalling RB information to setup titled (AM DCCH for NAS_DT Low priority) under condition A2.

Then SS sends MEASUREMENT CONTROL message to UE to setup APPLICATION LAYER MEASUREMENT;

The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message with IE "RRC State Indicator" set to "URA_PCH". The UE shall reply with PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and move to URA_PCH state. Cause UE upper layer to send a "Container for application layer measurement reporting" to UE RRC layer, The UE then moves to CELL_FACH state and transmits a CELL UPDATE message to the SS on the uplink CCCH, with the IE "Cell update cause" set to value " Application layer measurement report available ". After receiving such a message, SS transmits CELL UPDATE CONFIRM message on downlink DCCH. Then the UE shall transmit “RADIO BEARER RECONFIGURATION COMPLETE” message to SS. The UE shall stay in CELL_DCH state and sent a MEASUREMENT REPORT message on the uplink DCCH to indicating “Application layer measurement reporting" using AM RLC on DCCH.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | | | | Call the procedure P5 specified in TS 34.108 [9] clause7 to make the UE to transit to CELL_DCH |
| 1 | ← | | MEASUREMENT CONTROL(setup Application layer measurement) | RRC<br>Setup Application layer measurement |
| 2 | | | | Wait 1 second for the measurement procedure to take effect. |
| 3 | ← | | PHYSICAL CHANNEL RECONFIGURATION | IE "RRC State Indicator" set to "URA_PCH" |
| 4 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | UE moves to URA_PCH state. |
| 5 | | | | Cause UE high layer to provide APPLICATION LAYER MEASUREMENT REPORT with 1000 bytes "Container for application layer measurement reporting"<br>(Note1) |
| 6 | → | | CELL UPDATE | The UE shall move to CELL FACH state and initiate cell update with the message set to “application layer measurement report available" in IE "Cell update cause". |
| 7 | ← | | CELL UPDATE CONFIRM | See message content. |
| 8 | → | | RADIO BEAR RECONFIGURATION COMPLETE | See message content. |
| 9 | → | | MEASUREMENT REPORT | Indicating “Application layer measurement reporting |
| 10 | ← | | RRC CONNECTION RELEASE | SS send RRC connection release to UE |
| 11 | → | | RRC CONNECTION RELEASE COMPLETE | |
| Note1: This indication may be triggered with the AT command +CAPPLEVMR specified in TS 27.007 clause 8.79 or any alternative way | | | | |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 3)

Use the same message sub-type found in TS 34.108 clause 9, which is entitled "Packet to URA_PCH from CELL_DCH in PS ", with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | Not Present |
| RRC State Indicator | URA_PCH |

CELL UPDATE (Step 6)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| Cell Update Cause | Check to see if set to 'Application layer measurement report available ' |

CELL UPDATE CONFIRM (Step 7)

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State indicator | CELL_DCH |
| RB information to reconfigure list | Note1 |
| DL Transport channel information common for all transport channels | Note1 |
| Added or Reconfigured DL TrCH information | Note1 |
| UL Transport channel information common for all transport channels | Note1 |
| Added or Reconfigured UL TrCH information | Note1 |
| Uplink DPCH info | Note1 |
| Downlink information common for all radio links | Note1 |
| Downlink information per radio link list | Note1 |
| Note1: The according message contents of RADIO BEARER RECONFIGURATION message: AM or UM in TS 34.108 clause 9 entitled “Packet to CELL_DCH from CELL_FACH in PS” | |

RADIO BEARER RECONFIGURATION COMPLETE (Step 8)

Use the same message sub-type found in TS 34.108 clause 9.

MEASUREMENT REPORT (Step 9)

Check to see if the same message type found in TS 34.108 clause 9 is received, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 16 |
| Measured Results | |
| - CHOICE measurement | Application layer measurement report |
| Container for application layer measurement reporting | Octets string (1…8000) |

#### 8.4.1.56.5 Test requirement

After step 6, the UE shall move to CELL_FACH state to initiate a cell update procedure and transmits a CELL UPDATE message which is set to “Container for application layer measurement reporting “in IE "Cell update cause".

After step 8, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

After step 9, UE shall transmit MEASUREMENT REPORT message to SS using AM RLC on DCCH SRB4.

### 8.4.1.57 Introduction of Cell Update: Application layer measurement report available in CELL_PCH

#### 8.4.1.57.1 Definition

#### 8.4.1.57.2 Conformance requirement

A UE shall initiate the cell update procedure in the following cases:

1> Uplink data transmission:

…

1> Transfer of application layer measurement report:

2> if the UE is in URA_PCH, CELL_PCH or CELL_FACH state; and

2> if the UE has received a "Container for application layer measurement reporting" which has not yet been sent:

3> perform cell update using the cause "application layer measurement report available".

NOTE: If the UE is not transferred to CELL_DCH after having successfully performed cell update using the cause "application layer measurement report available", the UE shall discard the application layer measurement report.

Reference 3GPP TS 25.331 clause 8.3.1

#### 8.4.1.57.3 Test purpose

1. To confirm that the UE executes a cell update procedure when the UE has received a “Container for application layer measurement reporting” data which has not yet been sent if the UE is in CELL_PCH state.

#### 8.4.1.57.4 Method of test

##### Initial Condition

System Simulator: 1cell

UE: Registered Idle Mode on PS (state3).

##### Test Procedure

The UE is initially in Registered Idle Mode on PS (state3), and then the procedure P5 specified in TS 34.108 [9] clause7 is called to make the UE to transit to CELL_DCH. To execute procedure P5, all specific message contents are used as specified in TS 34.108[9] clause 9 with the exception in step 3. For step3, the message of the same type titled “RRC CONNECTION SETUP message: UM (Transition to CELL_DCH or in CELL_FACH)” including Signalling RB information to setup titled (AM DCCH for NAS_DT Low priority) under condition A2.

Then SS sends MEASUREMENT CONTROL message to UE to setup APPLICATION LAYER MEASUREMENT;

The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message with IE "RRC State Indicator" set to "CELL_PCH". The UE shall reply with PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and move to CELL_PCH state. Cause UE upper layer to send a "Container for application layer measurement reporting" to UE RRC layer, The UE then moves to CELL_FACH state and transmits a CELL UPDATE message to the SS on the uplink CCCH, with the IE "Cell update cause" set to value " Application layer measurement report available ". After receiving such a message, SS transmits CELL UPDATE CONFIRM message on downlink DCCH. Then the UE shall transmit “RADIO BEARER RECONFIGURATION COMPLETE” message to SS. The UE shall stay in CELL_DCH state and sent a MEASUREMENT REPORT message on the uplink DCCH to indicating “Application layer measurement reporting" using AM RLC on DCCH.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | | | | Call the procedure P5 specified in TS 34.108 [9] clause7 to make the UE to transit to CELL_DCH |
| 1 | ← | | MEASUREMENT CONTROL(setup Application layer measurement) | RRC<br>Setup Application layer measurement |

| Note1: This indication may be triggered with the AT command +CAPPLEVMR specified in TS 27.007 clause 8.79or any alternative way | | | | |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 3)

Use the same message sub-type found in TS 34.108 clause 9, which is entitled "Packet to CELL_PCH from CELL_DCH in PS", with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | Not Present |
| RRC State Indicator | CELL_PCH |

CELL UPDATE (Step 6)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| Cell Update Cause | Check to see if set to 'Application layer measurement report available ' |

CELL UPDATE CONFIRM (Step 7)

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State indicator | CELL_DCH |
| RB information to reconfigure list | Note1 |
| DL Transport channel information common for all transport channels | Note1 |
| Added or Reconfigured DL TrCH information | Note1 |
| UL Transport channel information common for all transport channels | Note1 |
| Added or Reconfigured UL TrCH information | Note1 |
| Uplink DPCH info | Note1 |
| Downlink information common for all radio links | Note1 |
| Downlink information per radio link list | Note1 |
| Note1: Reconfiguration of transport channels and physical channels refer to the contents of RADIO BEARER RECONFIGURATION message: AM or UM in TS 34.108 clause 9 entitled Packet to “CELL_DCH from CELL_FACH in PS” | |

RADIO BEARER RECONFIGURATION COMPLETE (Step 8)

Use the same message sub-type found in TS 34.108 clause 9.

MEASUREMENT REPORT (step 9)

Check to see if the same message type found in TS 34.108 clause 9 is received, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 16 |
| Measured Results | |
| - CHOICE measurement | Application layer measurement report |
| Container for application layer measurement reporting | Octets string (1…8000). |

#### 8.4.1.57.5 Test requirement

After step 6, the UE shall move to CELL_FACH state to initiate a cell update procedure and transmits a CELL UPDATE message which is set to “Container for application layer measurement reporting “in IE "Cell update cause".

After step 8, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

After step 9, UE shall transmit MEASUREMENT REPORT message to SS using AM RLC on DCCH SRB4.

### 8.4.1.58 Introduction of Cell Update: Application layer measurement report available in CELL_FACH

#### 8.4.1.58.1 Definition

#### 8.4.1.58.2 Conformance requirement

A UE shall initiate the cell update procedure in the following cases:

1> Uplink data transmission:

…

1> Transfer of application layer measurement report:

2> if the UE is in URA_PCH, CELL_PCH or CELL_FACH state; and

2> if the UE has received a "Container for application layer measurement reporting" which has not yet been sent:

3> perform cell update using the cause "application layer measurement report available".

NOTE: If the UE is not transferred to CELL_DCH after having successfully performed cell update using the cause "application layer measurement report available", the UE shall discard the application layer measurement report.

Reference 3GPP TS 25.331 clause 8.3.1

#### 8.4.1.58.3 Test purpose

1. To confirm that the UE executes a cell update procedure when the UE has received a “Container for application layer measurement reporting” data which has not yet been sent if the UE is in CELL_FACH state.

#### 8.4.1.58.4 Method of test

##### Initial Condition

System Simulator: 1cell

UE: Registered Idle Mode on PS (state3).

##### Test Procedure

The UE is initially in Registered Idle Mode on PS (state3), and then the procedure P5 specified in TS 34.108 [9] clause7 is called to make the UE to transit to CELL_DCH. To execute procedure P5, all specific message contents are used as specified in TS 34.108[9] clause 9 with the exception in step 3. For step3, the message of the same type titled “RRC CONNECTION SETUP message: UM (Transition to CELL_DCH or in CELL_FACH)” including Signalling RB information to setup titled (AM DCCH for NAS_DT Low priority) under condition A2.

Then SS sends MEASUREMENT CONTROL message to UE to setup APPLICATION LAYER MEASUREMENT;

UE is initially in CELL_FACH state. Cause UE upper layer to send a "Container for application layer measurement reporting" to UE RRC layer, The UE then transmits a CELL UPDATE message to the SS on the uplink CCCH, with the IE "Cell update cause" set to value " Application layer measurement report available ". After receiving such a message, SS transmits CELL UPDATE CONFIRM message on downlink DCCH. Then the UE shall transmit “RADIO BEARER RECONFIGURATION COMPLETE” message to SS. The UE shall stay in CELL_DCH state and sent a MEASUREMENT REPORT message on the uplink DCCH to indicating “Application layer measurement reporting" using AM RLC on DCCH.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | | | | Call the procedure P5 specified in TS 34.108 [9] clause7 to make the UE to transit to CELL_DCH |
| 1 | | | MEASUREMENT CONTROL(setup Application layer measurement) | RRC<br>Setup Application layer measurement |
| 2 | | | | Wait 1 second for the measurement procedure to take effect. |
| 3 | ← | | PHYSICAL CHANNEL RECONFIGURATION | IE "RRC State Indicator" set to "CELL_FACH" |
| 1 | | | | Cause UE high layer to provide APPLICATION LAYER MEASUREMENT REPORT with 1000 bytes "Container for application layer measurement reporting".<br>Note1 |
| 5 | → | | CELL UPDATE | The UE shall move to CELL FACH state and initiate cell update with the message set to “application layer measurement report available" in IE "Cell update cause". |

Specific Message Contents

CELL UPDATE (Step 5)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| Cell Update Cause | Check to see if set to 'Application layer measurement report available ' |

CELL UPDATE CONFIRM (Step 6)

Use the same message sub-type found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State indicator | CELL_DCH |
| RB information to reconfigure list | Note1 |
| DL Transport channel information common for all transport channels | Note1 |
| Added or Reconfigured DL TrCH information | Note1 |
| UL Transport channel information common for all transport channels | Note1 |
| Added or Reconfigured UL TrCH information | Note1 |
| Uplink DPCH info | Note1 |
| Downlink information common for all radio links | Note1 |
| Downlink information per radio link list | Note1 |
| Note1: Reconfiguration of transport channels and physical channels refer to the contents of RADIO BEARER RECONFIGURATION message: AM or UM in TS 34.108 clause 9 entitled “Packet to CELL_DCH from CELL_FACH in PS” | |

RADIO BEARER RECONFIGURATION COMPLETE (Step 7)

Use the same message sub-type found in TS 34.108 clause 9.

MEASUREMENT REPORT (Step 8)

Check to see if the same message type found in TS 34.108 clause 9 is received, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Measurement identity | 16 |
| Measured Results | |
| - CHOICE measurement | Application layer measurement report |
| Container for application layer measurement reporting | Octets string (1…8000). |

8.4.1.58.5 Test requirement

After step 5, the UE shall move to CELL_FACH state to initiate a cell update procedure and transmits a CELL UPDATE message which is set to “Container for application layer measurement reporting “in IE "Cell update cause".

After step 7, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

After step 8, UE shall transmit MEASUREMENT REPORT message to SS using AM RLC on DCCH SRB4.

# 8.5 MBMS Specific Procedures

## 8.5.1 MBMS Session Start

### 8.5.1.1 MBMS PTP Session Start at MCCH Acquisition in Idle mode / MBMS Selected Service

#### 8.5.1.1.1 Definition

This test is applicable for all UEs that support MBMS broadcast services.

#### 8.5.1.1.2 Conformance requirement

The UE applies the MCCH acquisition procedure to determine the MBMS services available in the cell and to initiate reception of the services that the UE has joined. The procedure applies to all UEs supporting MBMS, irrespective of their state (idle, URA_PCH, CELL_PCH, CELL_FACH and CELL_DCH).

…

If the variable MBMS_ACTIVATED_SERVICES is not empty, the UE shall apply the MCCH acquisition procedure upon selecting (e.g. upon power on) or re- selecting a cell supporting MBMS, upon change of MBMS controlling cell (e.g. due to an active set update or hard handover), upon entering UTRA from another RAT, upon release of a MBMS PTP RB for the purpose of changing transfer mode, upon return from loss of coverage and upon receiving an indication from upper layers that the set of activated services has changed.

…

The UE shall detect the available MBMS services by acquiring the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3.

The UE shall immediately acquire the MBMS ACCESS INFORMATION and the MBMS GENERAL INFORMATION messages i.e. it shall not delay reception of these messages until it has completed the acquisition of the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages. Likewise, the UE should immediately acquire the MBMS CURRENT CELL P-T-M RB INFORMATION and MBMS NEIGHBOURING CELL P-T-M RB INFORMATION messages.

The UE shall continue acquiring the above messages until it has received a consistent set of MCCH information e.g. both the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION message should be acquired in the same modification period.

…

When requested to acquire MBMS control information other than the MBMS ACCESS INFORMATION message , the UE shall:

1> if requested to start reading MCCH at the next modification period:

2> start reading MCCH at the beginning of the next modification period.

1> otherwise

2> start reading MCCH at the beginning of the next repetition period.

1> if requested to stop reading MCCH at the end of the modification period:

2> continue reading MCCH until the required MBMS control information is received or until the UE detects a TTI in which no MCCH information is transmitted, whichever is first;

2> continue reading MCCH in this manner at every subsequent repetition period, until the information is received correctly or until the end of the modification period.

1> otherwise:

2> continue reading MCCH until the required MBMS control information is received or until the UE detects a TTI in which no MCCH information is transmitted, whichever is first;

2> continue reading MCCH in this manner at every subsequent repetition period, until the information is received correctly.

NOTE 1: The UE may combine information received at different repetition periods within a modification period.

When requested to acquire the MBMS ACCESS INFORMATION message, the UE shall:

1> if requested to start reading MCCH at the next modification period:

2> start reading MCCH at the beginning of the next modification period.

1> otherwise:

2> start reading MCCH at the beginning of the next access info period.

1> continue reading MCCH in this manner at every subsequent access info period, until the message is received correctly or until the end of the modification period.

If the UE is CELL_DCH and has a compressed mode pattern that overlaps with the period in which it needs to read MCCH, the UE may temporarily refrain from receiving MCCH unless it is capable of simultaneous operation. If the UE is CELL_FACH and has a measurement occasion that overlaps with the period in which it needs to read MCCH, the UE may temporarily refrain from receiving MCCH unless it is capable of simultaneous operation. A UE in CELL_FACH may omit performing measurements during a measurement occasion in order to receive MCCH provided that this does not prevent it from fulfilling the measurement performance requirements as specified in [19]. In Idle mode as well as in CELL_PCH and URA_PCH states the UE may temporarily refrain from receiving MCCH if needed to fulfil the measurements performance requirements as specified in [19].

NOTE 2: The UTRAN should endeavour to ensure that for each UE in CELL_FACH the assigned measurement occasions do not overlap constantly with the periodic MCCH transmissions.

If the UE selects to another cell, the UE shall re-establish the RLC entity used for MCCH reception.

…

The UE may:

1> if in idle mode, URA_PCH, CELL_PCH or CELL_FACH state; and

1> if not receiving an MBMS service provided via a p-t-m radio bearer:

2> monitor the MBMS notification Indicator Channel (MICH).

2> if a notification on the MICH for one or more of the MBMS services included in the variable MBMS_ACTIVATED_SERVICES is detected:

3> acquire the MBMS MODIFIED SERVICES INFORMATION message with delaying the reading of MCCH until the next modification period and with stopping at the end of the modification period, in accordance with subclause 8.7.1.3;

3> handle the MBMS MODIFIED SERVICES INFORMATION message as specified in subclause 8.7.3.4.

The UE shall:

1> if in idle mode, URA_PCH, CELL_PCH or CELL_FACH state:

2> if receiving an MBMS service that is provided via a p-t-m radio bearer; or

2> if not receiving an MBMS service that is provided via a p-t-m radio bearer and not monitoring MICH:

3> acquire the MBMS MODIFIED SERVICES INFORMATION message from MCCH at the start of every modification period, in accordance with subclause 8.7.1.3;

3> handle the MBMS MODIFIED SERVICES INFORMATION message as specified in subclause 8.7.3.4.

…

If the IE "MBMS required UE action" is included and concerns an MBMS activated service the UE shall:

…

1> if the IE "MBMS required UE action" is set to 'Request PTP RB':

2> if the UE is in idle mode:

3> indicate to upper layers that establishment of a PS signalling connection is required to receive the concerned MBMS service [5], unless the UE has already requested p-t-p RB establishment in the current modification period, and use the establishment cause set to 'MBMS ptp RB request' in the RRC connection establishment procedure.

…

The UE shall, in the transmitted RRC CONNECTION REQUEST message:

…

1> if the UE performs connection establishment for MBMS ptp radio bearer request as specified in subclause 8.6.9.6; and

1> if one or more of the MBMS services for which the UE initiates the ptp radio bearer request concerns an MBMS Selected Service:

2> for each MBMS Selected Service that is indicated on MCCH and for which the UE initiates the ptp radio bearer request:

3> order the MBMS Selected Services such that those selected with a higher priority are listed in the IE "MBMS Selected Services Short" before those selected with a lower priority;

3> include the IE "MBMS Selected Service ID" within the IE "MBMS Selected Services Short" and set it to a value in accordance with subclause 8.6.9.8.

…

In the UE, the initial direct transfer procedure shall be initiated, when the upper layers request establishment of a signalling connection. This request also includes a request for the transfer of a NAS message.

Upon initiation of the initial direct transfer procedure the UE shall:

1> set the variable ESTABLISHMENT_CAUSE to the cause for establishment indicated by upper layers.

Upon initiation of the initial direct transfer procedure when the UE is in idle mode, the UE shall:

1> perform an RRC connection establishment procedure, according to subclause 8.1.3;

NOTE: If an RRC connection establishment is ongoing, this procedure continues unchanged, i.e. it is not interrupted.

1> if the RRC connection establishment procedure was not successful:

2> if the establishment cause for the failed RRC connection establishment was set to "MBMS reception" and a different cause value is stored in the variable "ESTABLISHMENT_CAUSE":

3> UE-AS (RRC) initiates a new RRC connection establishment procedure, using the establishment cause as contained in the variable ESTABLISHMENT_CAUSE.

2> otherwise:

3> indicate failure to establish the signalling connection to upper layers and end the procedure.

1> when the RRC connection establishment procedure is completed successfully:

2> continue with the initial direct transfer procedure as below.

Upon initiation of the initial direct transfer procedure when the UE is in CELL_PCH or URA_PCH state, the UE shall:

1> perform a cell update procedure, according to subclause 8.3.1, using the cause "uplink data transmission";

1> when the cell update procedure completed successfully:

2> continue with the initial direct transfer procedure as below.

The UE shall, in the INITIAL DIRECT TRANSFER message:

1> set the IE "NAS message" as received from upper layers; and

1> set the IE "CN domain identity" as indicated by the upper layers; and

1> set the IE "Intra Domain NAS Node Selector" as follows:

2> derive the IE "Intra Domain NAS Node Selector" from TMSI/PMTSI, IMSI, or IMEI; and

2> provide the coding of the IE "Intra Domain NAS Node Selector" according to the following priorities:

1. derive the routing parameter for IDNNS from TMSI (CS domain) or PTMSI (PS domain) whenever a valid TMSI/PTMSI is available;

2. base the routing parameter for IDNNS on IMSI when no valid TMSI/PTMSI is available;

3. base the routing parameter for IDNNS on IMEI only if no (U)SIM is inserted in the UE.

1> if the UE, on the existing RRC connection, has received a dedicated RRC message containing the IE "Primary PLMN Identity" in the IE "CN Information Info":

2> set the IE "PLMN identity" in the INITIAL DIRECT TRANSFER message to the latest PLMN information received via dedicated RRC signalling. If NAS has indicated the PLMN towards which a signalling connection is requested, and this PLMN is not in agreement with the latest PLMN information received via dedicated RRC signalling, then the initial direct transfer procedure shall be aborted, and NAS shall be informed.

1> if the UE, on the existing RRC connection, has not received a dedicated RRC message containing the IE "CN Information Info" , and if the IE "Multiple PLMN List" was broadcast in the cell where the current RRC connection was established:

2> set the IE "PLMN identity" in the INITIAL DIRECT TRANSFER message to the PLMN chosen by higher layers [5, 25] amongst the PLMNs in the IE "Multiple PLMN List" broadcast in the cell where the RRC connection was established.

1> if the IE "Activated service list" within variable MBMS_ACTIVATED_SERVICES includes one or more MBMS services with the IE "Service type" set to "Multicast" and;

1> if the IE "CN domain identity" as indicated by the upper layers is set to "CS domain" and;

1> if the variable ESTABLISHED_SIGNALLING_CONNECTIONS does not include the CN domain identity 'PS domain':

2> include the IE "MBMS joined information";

2> include the IE "P-TMSI" within the IE "MBMS joined information" if a valid PTMSI is available.

1> if the variable ESTABLISHMENT_CAUSE_ is initialised:

2> set the IE "Establishment cause" to the value of the variable ESTABLISHMENT_CAUSE;

2> clear the variable ESTABLISHMENT_CAUSE.

1> calculate the START according to subclause 8.5.9 for the CN domain as set in the IE "CN Domain Identity"; and

1> include the calculated START value for that CN domain in the IE "START".

The UE shall:

1> transmit the INITIAL DIRECT TRANSFER message on the uplink DCCH using AM RLC on signalling radio bearer RB3;

1> when the INITIAL DIRECT TRANSFER message has been submitted to lower layers for transmission:

2> confirm the establishment of a signalling connection to upper layers; and

2> add the signalling connection with the identity indicated by the IE "CN domain identity" in the variable ESTABLISHED_SIGNALLING_CONNECTIONS.

1> when the successful delivery of the INITIAL DIRECT TRANSFER message has been confirmed by RLC:

2> the procedure ends.

When not stated otherwise elsewhere, the UE may also initiate the initial direct transfer procedure when another procedure is ongoing, and in that case the state of the latter procedure shall not be affected.

A new signalling connection request may be received from upper layers during transition to idle mode. In those cases, from the time of the indication of release to upper layers until the UE has entered idle mode, any such upper layer request to establish a new signalling connection shall be queued. This request shall be processed after the UE has entered idle mode.

…

The UE shall:

1> if the IE "Secondary CCPCH system information MBMS" is included:

2> apply the Secondary CCPCH and FACH indicated by the IE "FACH carrying MCCH" for receiving MCCH.

1> otherwise, if the IE "Secondary CCPCH system information" includes the IE "MCCH configuration information":

2> apply the Secondary CCPCH and FACH indicated by the IE “MCCH configuration information” for receiving MCCH.

…

The UE shall select the Secondary CCPCH for acquiring MCCH information according to the following rules:

1> if System Information Block type 5 or System Information Block type 5bis is defined and includes an S-CCPCH within the IE "Secondary CCPCH system information" including a FACH for which the IE "MCCH configuration information" is included:

2> select that S-CCPCH and FACH for receiving MCCH.

1> otherwise if System Information Block type 5 or System Information Block type 5bis is defined and includes an SCCPCH within the IE "Secondary CCPCH system information MBMS" for which the IE "FACH carrying MCCH" is included:

2> select that S-CCPCH and FACH for receiving MCCH.

Reference

3GPP TS 25.331 clauses 8.7.2, 8.7.1.3, 8.7.3.3.1, 8.6.9.6, 8.1.3.3, 8.1.8.2, 8.1.1.6.5, 8.5.19a.

### 8.5.1.1.3 Test purpose

To verify that the UE receives the MBMS info in idle mode state and to verify that the UE starts the reception of MBMS services at MCCH acquisition.

### 8.5.1.1.4 Method of test

Initial condition

System Simulator:

2 MBMS cells, Cell 21 and Cell 22.

User Equipment:

The UE is in Idle Mode as specified in clause 7.6 of TS 34.108.

The UE is interested in the selected service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Broadcast service application available on UE Yes/No.

Test procedure

**Table 8.5.1.1**

| Parameter | Unit | Cell 21 | | Cell 22 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | OFF | -70 | -60 |
| P-CCPCH RSCP (TDD) | dBM | -60 | OFF | -70 | -60 |

Table 8.5.1.1 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution.

1) The UE is camping on cell 21, the SS configures its downlink transmission power settings according to columns "T1" in table 8.5.1.1, the UE re-selects to cell 22 supporting MBMS (MBMS_ACTIVATED_SERVICES is not empty). The SS transmits SYSTEM INFORMATION BLOCK TYPE 5 or 5bis messages including the MCCH configuration specified within the IE "Secondary CCPCH system information" (there is only one S-CCPCH in this cell, SS uses S-CCPCH combination from TS34.108 clause 6.10.2.4.3.9 Interactive/Background 32 kbps RAB + SRB for PCCH + SRB for CCCH + SRB for DCCH + SRB for BCCH + SRB for MCCH) mapped on to an S-CCPCH also used for non-MBMS purposes. The UE shall perform the MCCH acquisition procedure:

2) The UE shall detect the available MBMS services by acquiring the MBMS MODIFIED SERVICES INFORMATION, the MBMS UNMODIFIED SERVICES INFORMATION (including both IEs “MBMS required UE action” set to “Request PTP RB”) and the MBMS GENERAL INFORMATION.

3) The UE shall request a p-t-p RB establishment.

4) The SS transmits a RADIO BEARER SETUP message to the UE. This message requests the establishment of a radio access bearer. The UE shall establish this radio bearer. Then the UE transmits a RADIO BEARER SETUP COMPLETE message using AM RLC.

5) SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| | | | | The UE re-selects to cell 22 supporting MBMS (MBMS service already activated). |
| 1 | ← | | SYSTEM INFORMATION BLOCK TYPE 5 / SYSTEM INFORMATION BLOCK TYPE 5bis | |
| 2 | ← | | MBMS MODIFIED SERVICES INFORMATION | |
| 3 | | | | The UE shall continue acquiring the above messages until it has received a consistent set of MCCH information in the same modification period. |
| 4 | ← | | MBMS UNMODIFIED SERVICES INFORMATION | "MBMS required UE action" set to Request PTP RB. |
| 5 | ← | | MBMS GENERAL INFORMATION | |

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 6 | → | | RRC CONNECTION REQUEST | The UE transmits the message with Establishment cause set to “MBMS ptp RB request” and with the “MBMS Selected Services Short” IE referring to the concerned MBMS Selected service and the corresponding Modification period identity. |
| 7 | ← | | RRC CONNECTION SETUP | RRC state indicator set to Cell_FACH |
| 8 | → | | RRC CONNECTION SETUP COMPLETE | |
| 8a | → | | MBMS MODIFICATION REQUEST | The UE completing the RRC Connection Setup procedure shall initiate the MBMS MODIFICATION REQUEST procedure. This message may be received at any point after step 8 and before step 14. |
| 9 | UE | | | UE transmits SERVICE REQUEST, with IE "Service type" set to "MBMS Broadcast service Reception”. |
| 10 | ← | | SECURITY MODE COMMAND | |
| 11 | → | | SECURITY MODE COMPLETE | |
| 12 | ← | | RADIO BEARER SETUP | |
| 13 | → | | RADIO BEARER SETUP COMPLETE | |
| 14 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific message contents

All messages have the same content as defined in 34.108 clause 9.1.1 with the following exceptions:

MBMS MODIFIED SERVICES INFORMATION (Step 2)

| Information Element | Value/remark |
|---|---|
| Modified services list<br>- MBMS Transmission identity<br><br>- MBMS required UE action | Only 1 entry<br>MBMS Transmission identity (different from the MBMS activated service)<br>request PTP RB |

MBMS UNMODIFIED SERVICES INFORMATION (Step 4)

| Information Element | Value/remark |
|---|---|
| Unmodified services list<br>- MBMS Transmission identity<br><br>MBMS required UE action | Only 1 entry<br>MBMS Transmission identity indicating MBMS activated service<br>Request PTP RB |

RRC CONNECTION REQUEST (Step 6)

| Information Element | Value/remark |
|---|---|
| Message type | |
| Initial UE identity | Same as the registered TMSI or P-TMSI |
| Establishment Cause | MBMS ptp RB request |
| Domain indicator | PS domain |
| MBMS Selected Services | |
| - MBMS Selected Services | Only 1 entry |
| - MBMS Selected Service ID | MBMS short transmission identity referring to the service the UE has selected |
| - Modification period identity | Indicates the modification period the MBMS short transmission identities refer to |

RRC CONNECTION SETUP (Step 7)

| Information Element | Value/remark |
|---|---|
| Message type | |
| Initial UE identity | Set to same value as received in Step 6 |
| RRC State Indicator | Cell_FACH |

MBMS MODIFICATION REQUEST (Step 8a)

| Information Element | Value/remark |
|---|---|
| MBMS preferred frequency request | Check that the IE is not present |
| MBMS RB list requested to be released | Check that the IE is not present |
| MBMS Selected Service Info | |
| - CHOICE Status | Some |
| - MBMS Selected Services Full | |
| - MBMS Selected Service ID | Only 1 entry |
| - MBMS Service ID | MBMS service ID of the activated MBMS service |
| - CHOICE PLMN identity | Check to see that one of the below choice element is present |
| - SameAs-MIB | (no data) |
| - explicitPLMN_Id | Check to see if it is set to the same value as "PLMN ID" in the Master Information block transmitted for the current serving cell. |

RADIO BEARER SETUP (Step 12)

Use the same message as the one specified for "MBMS PtP" in TS 34.108 clause 9, with the condition B2.

SYSTEM INFORMATION BLOCK TYPE 5 and 5bis (Step1)

As specified in TS 34.108 clause 6.1 and by using condition M2 for SYSTEM INFORMATION BLOCK TYPE 5 message.

#### 8.5.1.1.5 Test requirements

After step 2, after the UE has received a MBMS modified services Information message, the UE continues acquiring the MBMS information.

At step 4, after the UE has received an MBMS unmodified services Information message including the IE “MBMS required UE action” set to Request PTP RB, the UE shall indicate to upper layers that the establishment of an RRC connection is required to receive the concerned MBMS service with the establishment cause set to “MBMS ptp RB request”.

At step 13, the UE shall send a RADIO BEARER SETUP COMPLETE message.

### 8.5.1.1m MBMS PTP Session Start at MCCH Acquisition in Idle mode / MBMS Multicast Service

#### 8.5.1.1m.1 Definition

This test is applicable for all UEs that support MBMS multicast services.

#### 8.5.1.1m.2 Conformance requirement

Same conformance requirement as in clause 8.5.1.1.2 except there is no reference to 3GPP TS 25.331 clause 8.1.3.3.

Reference

3GPP TS 25.331 clauses 8.7.2, 8.7.1.3, 8.7.3.3.1, 8.6.9.6, 8.1.8.2, 8.1.1.6.5, 8.5.19a.

#### 8.5.1.1m.3 Test purpose

Same test purpose as in clause 8.5.1.1.3.

8.5.1.1m.4 Method of test

Initial condition

System Simulator:

2 MBMS cells, Cell 21 and Cell 22.

User Equipment:

The UE is in Idle Mode as specified in clause 7.6 of TS 34.108.

The UE has joined the multicast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Multicast service application available on UE Yes/No.

Test procedure

Same test procedure as in clause 8.5.1.1.4.

Expected sequence

Same expected sequence as in clause 8.5.1.1.4 except for RRC CONNECTION REQUEST message content (step 6) and MODIFICATION REQUEST procedure not required.

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| | | | | The UE re-selects to cell 22 supporting MBMS (MBMS service already activated). |
| 1 | ← | | SYSTEM INFORMATION BLOCK TYPE 5 / SYSTEM INFORMATION BLOCK TYPE 5bis | |
| 2 | ← | | MBMS MODIFIED SERVICES INFORMATION | |
| 3 | | | | The UE shall continue acquiring the above messages until it has received a consistent set of MCCH information in the same modification period. |
| 4 | ← | | MBMS GENERAL INFORMATION | |
| 5 | ← | | MBMS UNMODIFIED SERVICES INFORMATION | "MBMS required UE action" set to Request PTP RB. |
| 6 | → | | RRC CONNECTION REQUEST | The UE transmits the message with Establishment cause set to “MBMS ptp RB request”. |
| 7 | ← | | RRC CONNECTION SETUP | RRC state indicator set to Cell_FACH |
| 8 | → | | RRC CONNECTION SETUP COMPLETE | |
| 9 | UE | | | UE transmits SERVICE REQUEST, with IE "Service type" set to "MBMS Multicast service Reception”. |
| 10 | ← | | SECURITY MODE COMMAND | |
| 11 | → | | SECURITY MODE COMPLETE | |
| 12 | ← | | RADIO BEARER SETUP | |
| 13 | → | | RADIO BEARER SETUP COMPLETE | |
| 14 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific message contents

Same specific messages contents as in clause 8.5.1.1.4 except for RRC CONNECTION REQUEST message content (step 6).

RRC CONNECTION REQUEST (Step 6)

| Information Element | Value/remark |
|---|---|
| Message type | |
| Initial UE identity | Same as the registered TMSI or P-TMSI |
| Establishment Cause | MBMS ptp RB request |
| Domain indicator | PS domain |

#### 8.5.1.1m.5 Test requirements

Same test requirement as in clause 8.5.1.1.5.

### 8.5.1.2 MBMS PTP Session Start at MCCH Notification in CELL_PCH / MBMS Selected Service

#### 8.5.1.2.1 Definition

This test is applicable for all UEs that support MBMS broadcast services.

#### 8.5.1.2.2 Conformance requirement

The MBMS notification procedure is used by the UE to respond to a notification provided by UTRAN, indicating a change applicable for one or more MBMS services the UE has joined. The procedure applies to all UEs supporting MBMS, irrespective of their state (idle and connected mode: URA_PCH, CELL_PCH, CELL_FACH and CELL_DCH). The actual notification mechanism to be used depends on the UE state.

…

The UE shall:

1> if in idle mode, URA_PCH, CELL_PCH or CELL_FACH state:

2> if receiving an MBMS service that is provided via a p-t-m radio bearer; or

2> if not receiving an MBMS service that is provided via a p-t-m radio bearer and not monitoring MICH:

3> acquire the MBMS MODIFIED SERVICES INFORMATION message from MCCH at the start of every modification period, in accordance with subclause 8.7.1.3;

3> handle the MBMS MODIFIED SERVICES INFORMATION message as specified in subclause 8.7.3.4.

….

If the IE "MBMS required UE action" is included and concerns an MBMS activated service the UE shall:

…

1> if the IE "MBMS required UE action" is set to 'Request PTP RB':

…

2> if the UE is in URA_PCH, Cell_PCH, or CELL_FACH states:

3> perform a cell update procedure with cause "MBMS ptp RB request", as specified in subclause 8.3.1.2, unless the UE has already requested p-t-p RB establishment in the current modification period.

…

A UE shall initiate the cell update procedure in the following cases:

....

1> MBMS ptp RB request:

2> if none of the criteria for performing cell update with the causes specified above in the current subclause is met; and

2> if the UE is in URA_PCH, Cell_PCH or Cell_FACH state; and

2> if the UE should perform cell update for MBMS ptp radio bearer request as specified in 8.6.9.6:

3> perform cell update using the cause "MBMS ptp RB request".

…

The UE shall set the IEs in the CELL UPDATE message as follows:

…

1> if the UE performs cell update for MBMS ptp radio bearer request as specified in subclause 8.6.9.6; and

1> if one or more of the MBMS services for which the UE initiates the ptp radio bearer request concerns an MBMS Selected Service:

2> for each MBMS Selected Service that is indicated on MCCH and for which the UE initiates ptp radio bearer request:

3> include the IE "MBMS Selected Service ID" within the IE "MBMS Selected Services Short" and set it to a value in accordance with subclause 8.6.9.8.

1> otherwise, if the UE performs cell update for MBMS counting as specified in subclause 8.7.4; and

1> if one or more of the MBMS services for which the UE initiates the counting response concerns an MBMS Selected Service:

2> for each MBMS Selected Service that is indicated on MCCH and for which the UE initiates the counting response:

3> include the IE "MBMS Selected Service ID" within the IE "MBMS Selected Services Short" and set it to a value in accordance with subclause 8.6.9.8.

1> if the UE included one or more "MBMS Selected Service ID" IEs:

2> include the IE "MBMS Modification Period identity" and set it to a value in accordance with subclause 8.5.29.

Reference

3GPP TS 25.331 clauses 8.7.3.1, 8.7.3.3.1, 8.6.9.6, 8.3.1.2, 8.3.1.3.

### 8.5.1.2.3 Test purpose

To verify that the UE in Cell_PCH state, correctly handle the Notification procedure after receiving the MODIFIED SERVICES INFORMATION message via MCCH.

### 8.5.1.2.4 Method of test

Initial condition

System Simulator:

1 MBMS cell

User Equipment:

The UE is in CELL_PCH state as specified in clause 7.6 of TS 34.108.

The UE is interested in the selected service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Broadcast service application available on UE Yes/No.

Test procedure

1) The UE in Cell_PCH, shall detect the available MBMS services by acquiring the MBMS MODIFIED SERVICES INFORMATION including the IE “MBMS required UE action” set to “Request PTP RB”.

2) The UE shall perform a cell update procedure with cause "MBMS ptp RB request". The UE transmits a CELL UPDATE message including the IE "MBMS Selected Service ID" of the concerned MBMS Selected service within the IE "MBMS Selected Services Short" and the IE "MBMS Modification Period identity".

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| | | | | The UE is in Cell_PCH state. |
| 1 | ← | | MBMS MODIFIED SERVICES INFORMATION | "MBMS required UE action" set to Request PTP RB". |
| 2 | → | | CELL UPDATE | The UE enters the CELL_FACH state. UE performs cell update procedure. The CELL UPDATE message shall contain the value "Cell Update Cause" set to "MBMS ptp RB request" and the “MBMS Selected Services Short” IE referring to the concerned MBMS Selected service and the corresponding Modification period identity. |
| 3 | ← | | CELL UPDATE CONFIRM | |
| 3a | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 4 | ← | | RADIO BEARER SETUP | |
| 5 | → | | RADIO BEARER SETUP COMPLETE | |
| 5a | → | | MBMS MODIFICATION REQUEST | This message may be received at any point after step 4 and before step 6. |
| 6 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific message contents

All messages have the same content as defined in 34.108 clause 9.1.1 with the following exceptions:

MBMS MODIFIED SERVICES INFORMATION (Step 1)

| Information Element | Value/remark |
|---|---|
| Modified services list<br>- MBMS Transmission identity<br><br>- MBMS required UE action | Only 1 entry<br>MBMS Transmission identity indicating MBMS activated service<br>request PTP RB |

CELL UPDATE (Step 2)

| Information Element | Value/remark |
|---|---|
| Cell update cause<br>MBMS Selected Services<br>- MBMS Selected Services<br>- MBMS Selected Service ID<br><br>- Modification period identity | MBMS ptp RB request<br><br>Only 1 entry<br>MBMS short transmission identity referring to the service the UE has activated<br>Indicates the modification period the MBMS short transmission identities refer to |

CELL UPDATE CONFIRM (Step 3)

| Information Element | Value/remark |
|---|---|
| New C-RNTI | '1010 1010 1010 1010' |
| | |

RADIO BEARER SETUP (Step 4)

Use the same message as the one specified for "MBMS PtP" in TS 34.108 clause 9, with the condition B4.

MBMS MODIFICATION REQUEST (step 5a)

| Information Element | Value/remark |
|---|---|
| MBMS preferred frequency request | Check that the IE is not present |
| MBMS RB list requested to be released | Check that the IE is not present |
| MBMS Selected Service Info<br>- CHOICE Status<br>- MBMS Selected Services Full<br>- MBMS Selected Service ID<br>- MBMS Service ID<br>- CHOICE PLMN identity<br><br>- SameAs-MIB<br>- explicitPLMN_Id | <br>Some<br><br><br>MBMS service ID of the activated MBMS service<br>Check to see that one of the below choice element is present<br>(no data)<br>Check to see if it is set to the same value as "PLMN ID" in the Master Information block transmitted for the current serving cell. |

#### 8.5.1.2.5 Test requirements

At step 2, the UE shall initiate a cell update procedure for MBMS ptp radio bearer request.

### 8.5.1.2m MBMS PTP Session Start at MCCH Notification in CELL_PCH / MBMS Multicast Service

#### 8.5.1.2m.1 Definition

This test is applicable for all UEs that support MBMS multicast services.

#### 8.5.1.2m.2 Conformance requirement

Same conformance requirement as in clause 8.5.1.2.2 except there is no reference to 3GPP TS 25.331 clause 8.3.1.3.

#### 8.5.1.2m.3 Test purpose

Same test purpose as in clause 8.5.1.2.3.

#### 8.5.1.2m.4 Method of test

Initial condition

System Simulator:

1 MBMS cell

User Equipment:

The UE is in CELL_PCH state as specified in clause 7.6 of TS 34.108.

The UE has joined the multicast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Multicast service application available on UE Yes/No.

Test procedure

1) The UE in Cell_PCH, shall detect the available MBMS services by acquiring the MBMS MODIFIED SERVICES INFORMATION including the IE “MBMS required UE action” set to “Request PTP RB”.

2) The UE shall perform a cell update procedure with cause "MBMS ptp RB request".

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| | | | | The UE is in Cell_PCH state. |
| 1 | ← | | MBMS MODIFIED SERVICES INFORMATION | "MBMS required UE action" set to Request PTP RB". |
| 2 | → | | CELL UPDATE | The UE enters the CELL_FACH state. UE performs cell update procedure. The CELL UPDATE message shall contain the value "Cell Update Cause" set to "MBMS ptp RB request" |
| 3 | ← | | CELL UPDATE CONFIRM | |
| 4 | ← | | RADIO BEARER SETUP | |
| 5 | → | | RADIO BEARER SETUP COMPLETE | |
| 6 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific message contents

Same specific messages contents as in clause 8.5.1.2.4 except for CELL UPDATE message content (step 2).

CELL UPDATE (Step 2)

| Information Element | Value/remark |
|---|---|
| Cell update cause | MBMS ptp RB request |

#### 8.5.1.2m.5 Test requirements

Same test requirement as in clause 8.5.1.2.5.

### 8.5.1.3 MBMS PTM Session Start at MCCH Acquisition in CELL_FACH state / MBMS Broadcast Service

#### 8.5.1.3.1 Definition and applicability

This test case is applicable for all UEs that support MBMS broadcast services.

#### 8.5.1.3.2 Conformance requirement

If the variable MBMS_ACTIVATED_SERVICES is not empty, the UE shall apply the MCCH acquisition procedure upon selecting (e.g. upon power on) or re-selecting a cell supporting MBMS, upon change of MBMS controlling cell (e.g. due to an active set update or hard handover), upon entering UTRA from another RAT, upon release of a MBMS PTP RB for the purpose of changing transfer mode, upon return from loss of coverage and upon receiving an indication from upper layers that the set of activated services has changed.

…

The UE shall detect the available MBMS services by acquiring the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3 of TS 25.331.

The UE shall immediately acquire the MBMS ACCESS INFORMATION and the MBMS GENERAL INFORMATION messages i.e. it shall not delay reception of these messages until it has completed the acquisition of the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION

messages. Likewise, the UE should immediately acquire the MBMS CURRENT CELL P-T-M RB INFORMATION and MBMS NEIGHBOURING CELL P-T-M RB INFORMATION messages.

The UE shall continue acquiring the above messages until it has received a consistent set of MCCH information e.g. both the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION message should be acquired in the same modification period.

…

1> if the IE "MBMS required UE action" is set to 'Acquire PTM RB info'; or

1> if the IE "MBMS required UE action" is set to 'Acquire counting info– PTM RBs unmodified' and the UE is not receiving a p-t-m RB for the concerned service:

2> continue acquiring the MBMS COMMON P-T-M RB INFORMATION, MBMS CURRENT CELL P-T-M RB INFORMATION and the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3

2> act upon the MBMS COMMON P-T-M RB INFORMATION, MBMS CURRENT CELL P-T-M RB INFORMATION and the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION message, if received, in accordance with subclause 8.7.5;

Reference

3GPP TS 25.331 clauses 8.7.2.2, 8.7.2.3, 8.6.9.6.

#### 8.5.1.3.3 Test purpose

1. To verify that the UE receives the MBMS information on MCCH in CELL_FACH state.
2. To verify that the UE correctly handles the notification procedure after receiving the MBMS MODIFIED SERVICES INFORMATION message via MCCH if no ongoing MBMS p-t-m session (MICH supported/not supported by the UE).
3. To verify that the UE starts the reception of MBMS services according to notification via MICH/MCCH when the UE is in CELL_FACH state.

#### 8.5.1.3.4 Method of test

Initial Condition

System Simulator:

2 MBMS cells, Cell 21 and Cell 22.

User Equipment:

The UE is in CELL_FACH state as specified in clause 7.6 of TS 34.108.

The UE is interested in the broadcast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statement(s)

- MBMS Broadcast service application available on UE Yes/No

Test Procedure

**Table 8.5.1.3**

| Parameter | Unit | Cell 21 | | Cell 22 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | OFF | -70 | -60 |
| P-CCPCH RSCP (TDD) | dBM | -60 | OFF | -70 | -60 |

Table 8.5.1.3 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution.

The UE is in the CELL_FACH state in Cell 21 and is interested in the broadcast service to be provided by the SS.

The SS applies the power settings of “T1” in table 8.5.1.3. The UE shall reselect to Cell 22 and send a CELL UPDATE message. The UE shall perform the MCCH acquisition procedure. The UE shall continue acquiring the MBMS information messages until it has received a consistent set of MCCH information. The UE received an MBMS UNMODIFIED SERVICES INFORMATION message including IE “MBMS required UE action” set to “Acquire PTM RB info”.

The SS waits for the UE to start reception of the MBMS data on MTCH.

The MBMS radio bearer on MTCH is put into loopback mode 3.

The SS sends 10 RLC SDUs of MBMS data on MTCH on the concerned MBMS radio bearer, then retrieves the number of RLC SDUs on MTCH counted by the UE by sending the UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST message. The number of received RLC SDUs reported by the UE shall be at least one.

The loopback mode 3 in the UE is deactivated.

SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| | | | | The UE is in Cell_FACH in Cell 21 |
| 1 | ← | | ACTIVATE RB TEST MODE | |
| 2 | → | | ACTIVATE RB TEST MODE COMPLETE | |
| | | | | SS reconfigures itself according to the settings stated in column "T1" of table 8.5.3.5-1. |
| 3 | → | | CELL UPDATE | This message is transmitted in Cell 22 |
| 4 | ← | | CELL UPDATE CONFIRM | |
| 5 | ← | | MBMS UNMODIFIED SERVICES INFORMATION | MBMS required UE action set to ‘Acquire PTM info’ |
| 6 | ← | | CLOSE UE TEST LOOP | |
| 7 | → | | CLOSE UE TEST LOOP COMPLETE | Loop back mode 3 on MTCH is activated. |
| 8 | | SS | | The SS broadcasts 10 RLC SDUs of MBMS data on MTCH on the concerned MBMS radio bearer. |
| 9 | ← | | UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST | |
| 10 | → | | UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE | The SS checks that the UE has received MBMS data. |
| 11 | ← | | OPEN UE TEST LOOP | |
| 12 | → | | OPEN UE TEST LOOP COMPLETE | |
| 13 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

MBMS UNMODIFIED SERVICES INFORMATION (Step 5)

| Information Element | Value/remark |
|---|---|
| Unmodified service list | |
| - MBMS Transmission identity | MBMS Transmission identity indicating MBMS activated service |
| - MBMS required UE action | Acquire PTM RB info |

UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE (Step 10)

| Information Element | Value/remark |
|---|---|
| RLC SDU Counter Value | Check that the number is greater than zero. |

#### 8.5.1.3.5 Test requirement

After step 9, the UE shall transmit a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message with the number of reported RLC SDUs shall be greater than zero.

### 8.5.1.3m MBMS PTM Session Start at MCCH Acquisition in CELL_FACH state / MBMS Multicast Service

#### 8.5.1.3m.1 Definition

This test is applicable for all UEs that support MBMS multicast services.

#### 8.5.1.3m.2 Conformance requirement

Same conformance requirement as in clause 8.5.1.3.2.

#### 8.5.1.3m.3 Test purpose

Same test purpose as in clause 8.5.1.3.3.

#### 8.5.1.3m.4 Method of test

Initial condition

System Simulator:

2 MBMS cells, Cell 21 and Cell 22.

User Equipment:

The UE is in CELL_FACH state as specified in clause 7.6 of TS 34.108.

The UE has joined the multicast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Multicast service application available on UE Yes/No.

Test procedure

Same test procedure as in clause 8.5.1.3.4.

Specific message contents

Same specific messages contents as in clause 8.5.1.3.4.

#### 8.5.1.3m.5 Test requirements

Same test requirement as in clause 8.5.1.3.5.

## 8.5.1.4 MBMS PTM Session Start at MCCH Notification in CELL_DCH state / MBMS Broadcast Service

### 8.5.1.4.1 Definition

This test case is applicable for all UEs that support MBMS broadcast services and support MBMS p-t-m reception in CELL_DCH state.

### 8.5.1.4.2 Conformance requirement

The UE shall detect the available MBMS services by acquiring the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3 of TS 25.331.

The UE shall immediately acquire the MBMS ACCESS INFORMATION and the MBMS GENERAL INFORMATION messages i.e. it shall not delay reception of these messages until it has completed the acquisition of the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages. Likewise, the UE should immediately acquire the MBMS CURRENT CELL P-T-M RB INFORMATION and MBMS NEIGHBOURING CELL P-T-M RB INFORMATION messages.

The UE shall continue acquiring the above messages until it has received a consistent set of MCCH information e.g. both the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION message should be acquired in the same modification period.

…

1> if the IE "MBMS required UE action" is set to 'Acquire PTM RB info'; or

1> if the IE "MBMS required UE action" is set to 'Acquire counting info– PTM RBs unmodified' and the UE is not receiving a p-t-m RB for the concerned service:

2> continue acquiring the MBMS COMMON P-T-M RB INFORMATION, MBMS CURRENT CELL P-T-M RB INFORMATION and the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3

2> act upon the MBMS COMMON P-T-M RB INFORMATION, MBMS CURRENT CELL P-T-M RB INFORMATION and the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION message, if received, in accordance with subclause 8.7.5;

Reference

3GPP TS 25.331 clauses 8.7.2.3, 8.7.3.3.1, 8.6.9.6.

### 8.5.1.4.3 Test purpose

1 To verify that the UE handles reading of MCCH during compressed mode measurements in CELL_DCH state if the UE requires compressed mode.

2. To verify that the UE correctly handles the notification procedure after receiving the MBMS MODIFIED SERVICES INFORMATION message via MCCH in CELL_DCH state.

3. To verify that the UE starts the p-t-m reception of MBMS services according to notification via MCCH when the UE is in CELL_DCH state.

### 8.5.1.4.4 Method of test

Initial Condition

System Simulator:

2 MBMS cells, Cell 21 and Cell 24

User Equipment:

The UE is in CELL_DCH state as specified in clause 7.6 of TS 34.108.

The UE is interested in the broadcast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statement(s)

- MBMS Broadcast service application available on UE Yes/No
- UE supports MBMS p-t-m reception in CELL_DCH state Yes/No
- Compressed mode required Yes/No

Test Procedure

**Table 8.5.1.4**

| Parameter | Unit | Cell 21 | | Cell 24 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -70 | -70 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -70 | -70 | -60 |

The UE is in the CELL_DCH state in cell 21 and has selected the broadcast service to be provided by the SS.

The SS configures then compressed mode (if required), to prepare the UE for inter-frequency measurements, by sending a PHYSICAL CHANNEL RECONFIGURATION message on DCCH using AM-RLC. The UE shall answer with a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message.

The SS then sets up inter-frequency measurements (event 2b), by sending a MEASUREMENT CONTROL message to the UE. Compressed mode is started at the same time in that message (if required).

The SS notifies on MCCH about the start of an MBMS session. The SS waits for the UE to start reception of the MBMS data on MTCH and then the MBMS radio bearer on MTCH is put into loopback mode 3.

The SS sends 10 RLC SDUs of MBMS data on MTCH on the concerned MBMS radio bearer. The SS then applies the power settings according to column “T1” in table 8.5.1.4. The UE transmits a MEASUREMENT REPORT message to the SS.

The SS retrieves the number of RLC SDUs on MTCH counted by the UE by sending the UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST message. The number of received RLC SDUs reported by the UE shall be at least one.

The loopback mode 3 in the UE is deactivated.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | ACTIVATE RB TEST MODE | |
| 2 | → | | ACTIVATE RB TEST MODE COMPLETE | If compressed mode is not required (refer ICS/IXIT), goto step 5. |
| 3 | ← | | PHYSICAL CHANNEL RECONFIGURATION | The SS downloads the compressed mode parameters in the UE. |
| 4 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE acknowledges the downloading of the compressed mode parameters. |
| 5 | ← | | MEASUREMENT CONTROL | The SS configures inter-frequency measurements in the UE, and If compressed mode is required (refer ICS/IXIT) activates compressed mode. |
| 6 | ← | | MBMS MODIFIED SERVICES INFORMATION | MBMS session start. |
| 7 | SS | | | The SS waits for the UE to start MTCH reception according to the activation time. |
| 8 | ← | | CLOSE UE TEST LOOP | |
| 9 | → | | CLOSE UE TEST LOOP COMPLETE | Loop back mode 3 on MTCH is activated. |
| 10 | SS | | | The SS sends 10 RLC SDUs of MBMS data on MTCH on the concerned MBMS radio bearer. |
| 11 | | | | The SS changes the power of the cells according to column T1 in table 8.5.1.4. |
| 12 | → | | MEASUREMENT REPORT | Cell 24 triggers event 2b in the UE, which sends a MEASUREMENT REPORT message to the SS. |
| 13 | ← | | UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST | |
| 14 | → | | UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE | The SS checks that the UE has received MBMS data. |
| 15 | ← | | OPEN UE TEST LOOP | |
| 16 | → | | OPEN UE TEST LOOP COMPLETE | |
| 17 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 3)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Packet to CELL_DCH from CELL_DCH in PS" as found in [9] TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/Remark | Version |
|---|---|---|
| Downlink information common for all radio links | | |
| - Downlink DPCH info common for all RL | Not Present | |
| - DPCH compressed mode info | | |
| - TGPSI | 1 | |
| - TGPS Status Flag | Deactivate | |
| - TGCFN | Not present | |
| - Transmission gap pattern sequence configuration parameters | | |
| - TGMP | FDD Measurement | |
| - TGPRC | Infinity | |
| - TGSN | 8 | |

UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE (Step 14)

| Information Element | Value/remark |
|---|---|
| RLC SDU Counter Value | Check that the number is greater than zero. |

8.5.1.4.5 Test requirement

After step 3, if compression is required, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message.

After step 11, the UE shall transmit a MEASUREMENT REPORT message with cell 24 as the reported cell. After step 13, the UE shall transmit a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message with the number of reported RLC SDUs shall be greater than zero.

## 8.5.1.4m MBMS PTM Session Start at MCCH Notification in CELL_DCH state / MBMS Multicast Service

### 8.5.1.4m.1 Definition

This test is applicable for all UEs that support MBMS multicast services and support MBMS p-t-m reception in CELL_DCH state.

### 8.5.1.4m.2 Conformance requirement

Same conformance requirement as in clause 8.5.1.4.2

### 8.5.1.4m.3 Test purpose

Same test purpose as in clause 8.5.1.4.3.

### 8.5.1.4m.4 Method of test

#### Initial condition

System Simulator:

2 MBMS cells, Cell 21 and Cell 24.

User Equipment:

The UE is in CELL_DCH state as specified in clause 7.6 of TS 34.108.

The UE has joined the multicast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

#### Related ICS/IXIT statements

- MBMS Multicast service application available on UE Yes/No.
- UE supports MBMS p-t-m reception in CELL_DCH state Yes/No

#### Test procedure

Same test procedure as in clause 8.5.1.4.4.

#### Specific message contents

Same specific messages contents as in clause 8.5.1.4.4

### 8.5.1.4m.5 Test requirements

Same test requirement as in clause 8.5.1.4.5.

## 8.5.1.5 MBMS PTM Session Start at MCCH Acquisition in CELL_DCH (for a non-MBMS service) when entering into an MBMS cell (UE capable of MBMS p-t-m reception in CELL_DCH) / MBMS Broadcast Service

### 8.5.1.5.1 Definition and applicability

This test case is applicable for all UEs that support MBMS broadcast services and support MBMS p-t-m reception in CELL_DCH state.

### 8.5.1.5.2 Conformance requirement

The UE shall detect the available MBMS services by acquiring the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3 of TS 25.331.

The UE shall immediately acquire the MBMS ACCESS INFORMATION and the MBMS GENERAL INFORMATION messages i.e. it shall not delay reception of these messages until it has completed the acquisition of

the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages. Likewise, the UE should immediately acquire the MBMS CURRENT CELL P-T-M RB INFORMATION and MBMS NEIGHBOURING CELL P-T-M RB INFORMATION messages.

The UE shall continue acquiring the above messages until it has received a consistent set of MCCH information e.g. both the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION message should be acquired in the same modification period.

…

1> if the IE "MBMS required UE action" is set to 'Acquire PTM RB info'; or

1> if the IE "MBMS required UE action" is set to 'Acquire counting info– PTM RBs unmodified' and the UE is not receiving a p-t-m RB for the concerned service:

2> continue acquiring the MBMS COMMON P-T-M RB INFORMATION, MBMS CURRENT CELL P-T-M RB INFORMATION and the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3

2> act upon the MBMS COMMON P-T-M RB INFORMATION, MBMS CURRENT CELL P-T-M RB INFORMATION and the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION message, if received, in accordance with subclause 8.7.5;

Reference

3GPP TS 25.331 clauses 8.7.2.3, 8.7.3.3.1, 8.6.9.6.

### 8.5.1.5.3 Test purpose

1. To verify that the UE receives the MBMS information on MCCH in CELL_DCH state.
2. To verify that the UE, when entering into an MBMS cell in CELL_DCH state, starts the p-t-m reception of MBMS services according to the information on MCCH.

### 8.5.1.5.4 Method of test

Initial Condition

System Simulator:

2 MBMS cells, Cell 21 and Cell 24.

User Equipment:

The UE is in CELL_DCH state as specified in clause 7.6 of TS 34.108.

The UE is interested in the broadcast service be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statement(s)

- MBMS Broadcast service application available on UE Yes/No
- UE supports MBMS p-t-m reception in CELL_DCH state Yes/No

Test Procedure

**Table 8.5.1.5**

| Parameter | Unit | Cell 21 | | Cell 24 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -70 | -70 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -70 | -70 | -60 |

Table 8.5.1.5 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution.

The UE is in the CELL_DCH state in cell 21 and has selected the broadcast service or joined the multicast service to be provided by the SS. The SS has configured its downlink transmission power setting according to columns "T0" in table 8.5.1.5.

The SS then configures its downlink transmission power setting according to columns "T1" in table 8.5.1.5 and transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE ordering the UE to change to Cell 24 on frequency Ch 2. At the activation time the UE changes to Cell 24 and transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC.

The SS waits for the UE to start reception of the MBMS data on MTCH and then the MBMS radio bearer on MTCH is put into loopback mode 3.

The SS sends 10 RLC SDUs of MBMS data on MTCH on the concerned MBMS radio bearer. The SS retrieves the number of RLC SDUs on MTCH counted by the UE by sending the UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST message. The number of received RLC SDUs reported by the UE shall be at least one.

The loopback mode 3 in the UE is deactivated.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

NOTE: If the UE fails the test because of a failure to reselect to a right cell, then the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | ACTIVATE RB TEST MODE | |
| 2 | → | | ACTIVATE RB TEST MODE COMPLETE | |
| 3 | | | | The SS changes the power of the cells according to column T1 in table 8.5.1.5. |
| 4 | ← | | PHYSICAL CHANNEL RECONFIGURATION | The SS instructs the UE to change to Cell 24. |
| 5 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 6 | SS | | | The SS waits for the UE to activate MTCH reception in cell 24. |
| 7 | ← | | CLOSE UE TEST LOOP | |
| 8 | → | | CLOSE UE TEST LOOP COMPLETE | Loop back mode 3 on MTCH is activated. |
| 9 | SS | | | The SS broadcasts 10 RLC SDUs of MBMS data on MTCH on the concerned MBMS radio bearer. |
| 10 | ← | | UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST | |
| 11 | → | | UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE | The SS checks that the UE has received MBMS data. |
| 12 | ← | | OPEN UE TEST LOOP | |
| 13 | → | | OPEN UE TEST LOOP COMPLETE | |
| 14 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 4) (FDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark | Version |
|---|---|---|
| Frequency info | Set to the frequency of cell 24 | |
| Downlink information per radio link list | 1 radio link | |
| Downlink information for each radio link | | |
| - CHOICE mode | FDD | |
| - Primary CPICH info | Set to the scrambling code for cell 24 | |

PHYSICAL CHANNEL RECONFIGURATION (Step 4) (3.84Mcps, 1.28Mcps and 7.68Mcps TDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark | Version |
|---|---|---|
| Frequency info | Set to the frequency of cell 24 | |
| Downlink information per radio link list | 1 radio link | |
| - Downlink information for each radio link | | |
| - CHOICE mode | TDD | |
| - Primary CCPCH info | Set to same code as used for cell 24 | |

UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE (Step 11)

| Information Element | Value/remark |
|---|---|
| RLC SDU Counter Value | Check that the number is greater than zero. |

#### 8.5.1.5.5 Test requirement

After step 4, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message in cell 24.

After step 10, the UE shall transmit a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message with the number of reported RLC SDUs shall be greater than zero.

### 8.5.1.5m MBMS PTM Session Start at MCCH Acquisition in CELL_DCH (for a non-MBMS service) when entering into an MBMS cell (UE capable of MBMS p-t-m reception in CELL_DCH) / MBMS Multicast Service

#### 8.5.1.5m.1 Definition

This test is applicable for all UEs that support MBMS multicast services and support MBMS p-t-m reception in CELL_DCH state.

#### 8.5.1.5m.2 Conformance requirement

Same conformance requirement as in clause 8.5.1.5.2

#### 8.5.1.5m.3 Test purpose

Same test purpose as in clause 8.5.1.5.3.

#### 8.5.1.5m.4 Method of test

Initial condition

System Simulator:

2 MBMS cells, Cell 21 and Cell 24.

User Equipment:

The UE is in CELL_DCH state as specified in clause 7.6 of TS 34.108.

The UE has joined the multicast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Multicast service application available on UE Yes/No.

Test procedure

Same test procedure as in clause 8.5.1.5.4.

Specific message contents

Same specific messages contents as in clause 8.5.1.5.4

8.5.1.5m.5 Test requirements

Same test requirement as in clause 8.5.1.5.5.

## 8.5.1.6 Void

## 8.5.1.7 Void

## 8.5.1.7m Void

## 8.5.1.8 Void

## 8.5.1.9 MBMS PTM Session Start at MCCH Notification in Idle Mode / MBMS Broadcast Service

### 8.5.1.9.1 Definition and applicability

This test case is applicable for all UEs that support MBMS broadcast services.

### 8.5.1.9.2 Conformance requirement

The UE shall detect the available MBMS services by acquiring the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3.

The UE shall immediately acquire the MBMS ACCESS INFORMATION and the MBMS GENERAL INFORMATION messages i.e. it shall not delay reception of these messages until it has completed the acquisition of the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages. Likewise, the UE should immediately acquire the MBMS CURRENT CELL P-T-M RB INFORMATION and MBMS NEIGHBOURING CELL P-T-M RB INFORMATION messages.

The UE shall continue acquiring the above messages until it has received a consistent set of MCCH information e.g. both the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION message should be acquired in the same modification period.

…

The UE may:

1> monitor the MBMS notification Indicator Channel (MICH);

1> if a notification on the MICH for one or more of the MBMS services included in the variable MBMS_ACTIVATED_SERVICES is detected:

2> acquire the MBMS MODIFIED SERVICES INFORMATION message with delaying the reading of MCCH until the next modification period and with stopping at the end of the modification period, in accordance with subclause 8.7.1.3;

2> handle the MBMS MODIFIED SERVICES INFORMATION message as specified in subclause 8.7.3.4.

The UE shall:

1> if in idle mode, URA_PCH, CELL_PCH or CELL_FACH state:

2> if not monitoring MICH:

3> acquire the MBMS MODIFIED SERVICES INFORMATION message from MCCH at the start of every modification period, in accordance with subclause 8.7.1.3;

3> handle the MBMS MODIFIED SERVICES INFORMATION message as specified in subclause 8.7.3.4.

…

1> if the IE "MBMS required UE action" is set to 'Acquire PTM RB info'; or

1> if the IE "MBMS required UE action" is set to 'Acquire counting info– PTM RBs unmodified' and the UE is not receiving a p-t-m RB for the concerned service:

2> continue acquiring the MBMS COMMON P-T-M RB INFORMATION, MBMS CURRENT CELL P-T-M RB INFORMATION and the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3;

2> act upon the MBMS COMMON P-T-M RB INFORMATION, MBMS CURRENT CELL P-T-M RB INFORMATION and the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION message, if received, in accordance with subclause 8.7.5.

Reference

3GPP TS 25.331 clause 8.7.2.3, 8.7.3.3.1, 8.6.9.6.

#### 8.5.1.9.3 Test purpose

1. To verify that the UE receives the MBMS information on MCCH in Idle Mode.
2. To verify that the UE correctly handles the notification procedure after receiving the MBMS MODIFIED SERVICES INFORMATION message via MCCH if no ongoing MBMS p-t-m session (MICH supported/not supported by the UE).
3. To verify that the UE starts the reception of MBMS services according to notification via MICH/MCCH when the UE is in Idle Mode.

#### 8.5.1.9.4 Method of test

Initial Condition

System Simulator:

- 1 MBMS cell.

User Equipment:

- The UE is in Idle mode as specified in clause 7.6 of TS 34.108.
- The UE is interested in the broadcast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statement(s)

- MBMS Broadcast service application available on UE Yes/No

Test Procedure

UE is moved to CELL_DCH for RB Test Mode to be activated and then the RRC Connection is released to move UE back to Idle Mode.

The SS notifies on MICH and MCCH about the start of an MBMS session. The SS waits for the UE to start reception of the MBMS data on MTCH.

UE is moved to CELL_DCH for the UE Test Loop Mode 3 to be closed and then the RRC Connection is released to move UE back to Idle Mode.

The SS sends 10 RLC SDUs of MBMS data on MTCH on the concerned MBMS radio bearer.

UE is moved to CELL_DCH then retrieves the number of RLC SDUs on MTCH counted by the UE by sending the UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST message. The number of received RLC SDUs reported by the UE shall be at least one.

The UE Test Loop is opened and RB Test Mode in the UE is deactivated.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | PAGING TYPE1 | Paging (PS domain, P-TMSI) |
| 2 | → | | RRC CONNECTION REQUEST | |
| 3 | ← | | RRC CONNECTION SETUP | |
| 4 | → | | RRC CONNECTION SETUP COMPLETE | |
| 5 | → | | SERVICE REQUEST | |
| 6 | ← | | AUTHENTICATION AND CIPHERING REQUEST | |
| 7 | → | | AUTHENTICATION AND CIPHERING RESPONSE | |
| 8 | ← | | SECURITY MODE COMMAND | |
| 9 | → | | SECURITY MODE COMPLETE | |
| 10 | ← | | ACTIVATE RB TEST MODE | |
| 11 | → | | ACTIVATE RB TEST MODE COMPLETE | |
| 12 | ← | | RRC CONNECTION RELEASE | |
| 13 | → | | RRC CONNECTION RELEASE COMPLETE | |
| 14 | ← | | MBMS MODIFIED SERVICES INFORMATION | MBMS session start. The SS also sets the Notification Indicator on MICH. The SS waits for the UE to establish the MTCH according to MBMS p-t-m activation time set to the first TTI of the next modification period. |
| 15 | ← | | PAGING TYPE1 (PCCH) | Paging (PS domain, P-TMSI) |
| 16 | → | | RRC CONNECTION REQUEST | |
| 17 | ← | | RRC CONNECTION SETUP | |

| 36 | ← | | SECURITY MODE COMMAND | |
| 37 | → | | SECURITY MODE COMPLETE | |
| 38 | ← | | UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST | |
| 39 | → | | UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE | The SS checks that the UE has received MBMS data. |
| 40 | ← | | OPEN UE TEST LOOP | |
| 41 | → | | OPEN UE TEST LOOP COMPLETE | |
| 42 | ← | | DEACTIVATE RB TEST MODE | |
| 43 | → | | DEACTIVATE RB TEST MODE COMPLETE | |

Specific Message Contents

UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE (Step 39)

| Information Element | Value/remark |
|---|---|
| RLC SDU Counter Value | Check that the number is greater than zero. |

#### 8.5.1.9.5 Test requirement

After step 38, the UE shall transmit a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message with the number of reported RLC SDUs shall be greater than zero.

### 8.5.1.9m MBMS PTM Session Start at MCCH Notification in Idle Mode / MBMS Multicast Service

#### 8.5.1.9m.1 Definition

This test is applicable for all UEs that support MBMS multicast services.

#### 8.5.1.9m.2 Conformance requirement

Same conformance requirement as in clause 8.5.1.9.2

#### 8.5.1.9m.3 Test purpose

Same test purpose as in clause 8.5.1.9.3.

#### 8.5.1.9m.4 Method of test

Initial Condition

System Simulator:

- 1 MBMS cell.

User Equipment:

- The UE is in Idle Mode as specified in clause 7.6 of TS 34.108.
- The UE has joined the multicast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Multicast service application available on UE Yes/No.

Test procedure

Same test procedure as in clause 8.5.1.9.4.

Specific message contents

Same specific messages contents as in clause 8.5.1.9.4

#### 8.5.1.9m.5 Test requirements

Same test requirement as in clause 8.5.1.9.5.

### 8.5.1.10 Void

### 8.5.1.11 MBMS PTP Session Start at MCCH Notification in Idle Mode / MBMS Selected Service

#### 8.5.1.11.1 Definition

This test is applicable for all UEs that support MBMS broadcast services.

8.5.1.11.2 Conformance requirement

If the IE "MBMS required UE action" is included and concerns an MBMS activated service the UE shall:

…

1> if the IE "MBMS required UE action" is set to 'Request PTP RB':

2> if the UE is in idle mode:

3> indicate to upper layers that establishment of a PS signalling connection is required to receive the concerned MBMS [5], unless the UE has already requested p-t-p RB establishment in the current modification period, and use the establishment cause set to 'MBMS ptp RB request' in the RRC connection establishment procedure.

…

The UE shall, in the transmitted RRC CONNECTION REQUEST message:

1> set the IE "Establishment cause" to the value of the variable ESTABLISHMENT_CAUSE;

1> set the IE "Initial UE identity" to the value of the variable INITIAL_UE_IDENTITY;

1> set the IE "Protocol error indicator" to the value of the variable PROTOCOL_ERROR_INDICATOR; and

1> include the IE "Predefined configuration status information" and set this IE to true if the UE has all pre-configurations stored with the same value tag as broadcast in the cell in which the RRC connection establishment is initiated.

1> if the UE is attempting to establish the signalling connection to PS-domain:

2> include the IE "Domain Indicator" and set it to "PS domain".

1> else if the UE is attempting to establish the signalling connection to CS domain:

2> include the IE "Domain Indicator" and set it to "CS domain".

1> if the UE only supports HS-DSCH but not E-DCH:

2> include the IE "UE capability indication" and set it to the "HS-DSCH" value.

1> if the UE supports HS-DSCH and E-DCH:

2> include the IE "UE capability indication" and set it to the "HS-DSCH+E-DCH" value.

1> if the UE performs connection establishment for MBMS ptp radio bearer request as specified in subclause 8.6.9.6; and

1> if one or more of the MBMS services for which the UE initiates the ptp radio bearer request concerns an MBMS Selected Service:

2> for each MBMS Selected Service that is indicated on MCCH and for which the UE initiates the ptp radio bearer request:

3> include the IE "MBMS Selected Service ID" within the IE "MBMS Selected Services Short" and set it to a value in accordance with subclause 8.6.9.8.

1> otherwise if the UE performs connection establishment for MBMS counting as specified in subclause 8.7.4; and

1> if one or more of the MBMS services for which the UE initiates the counting response concerns an MBMS Selected Service:

2> for each MBMS Selected Service that is indicated on MCCH and for which the UE initiates the counting response:

3> include the IE "MBMS Selected Service ID" within the IE "MBMS Selected Services Short" and set it to a value in accordance with subclause 8.6.9.8.

1> if the UE included one or more "MBMS Selected Service ID" IEs:

2> include the IE "MBMS Modification Period identity" and set it to a value in accordance with subclause 8.5.29.

The UE shall not include the IE "UE Specific Behaviour Information 1 idle".

…

If the IE "MBMS short transmission ID" is included the UE shall:

1> if the value of the "MBMS short transmission ID" is less than or equal to the number of services identified by the IE "Modified services list" included in the MBMS MODIFIED SERVICES INFORMATION message acquired in the same modification period as the one in which the "MBMS short transmission ID" is received:

2> consider the "MBMS short transmission ID" to be an index to the list of services contained in the IE "Modified services list" and apply the MBMS transmission identity specified for this entry.

1> otherwise:

2> compile a list of available MBMS services, as included in the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages acquired in the same modification period as the one in which the "MBMS short transmission ID" is received:

3> concatenate the services contained in IE "Modified services list" included in the MBMS MODIFIED SERVICES INFORMATION and the services contained in IE "Unmodified services list" included in the MBMS UNMODIFIED SERVICES INFORMATION.

2> consider the "MBMS short transmission ID" to be the index of the entry in the list of available services and apply the MBMS transmission identity specified for this entry.

…

The UE shall calculate the identity of a Modification period as follows:

*MP identity= (SFNMP div MPlen) mod 2*

With $SFN_{MP}$ being the SFN corresponding with the frame in which the concerned Modification Period starts

$MP_{len}$ being the length of the Modification Period, that is indicated by the IE "Modification period coefficient" that is included in System Information Block type 5 and 5bis.

Reference

3GPP TS 25.331 clauses 8.6.9.6, 8.1.3.3, 8.6.9.8, 8.5.29.

### 8.5.1.11.3 Test purpose

To verify that the UE receives the MBMS info in idle mode state and correctly triggers the P-t-p request procedure.

### 8.5.1.11.4 Method of test

Initial condition

System Simulator:

1 MBMS cell

User Equipment:

The UE is in Idle Mode as specified in clause 7.6 of TS 34.108.

The UE is interested in the selected service to be provided by the SS (included in the MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Broadcast service application available on UE Yes/No.

Test procedure

1) The UE camping on Cell 21, receives an MBMS MODIFIED SERVICES INFORMATION messages including IEs “MBMS required UE action” set to “Request PTP RB”.

2) The UE shall request a p-t-p RB establishment. The UE transmits a RRC CONNECTION REQUEST message including the IE "MBMS Selected Service ID" of the concerned MBMS selected services within the IE "MBMS Selected Services Short" and the IE "MBMS Modification Period identity".

3) The SS transmits a RADIO BEARER SETUP message to the UE. This message requests the establishment of a radio access bearer. The UE shall establish this radio bearer. Then the UE transmits a RADIO BEARER SETUP COMPLETE message using AM RLC.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | MBMS MODIFIED SERVICES INFORMATION | "MBMS required UE action" set to Request PTP RB. |
| 2 | → | | RRC CONNECTION REQUEST | The UE transmits the message with Establishment cause set to “MBMS ptp RB request” and with the “MBMS Selected Services Short” IE referring to the concerned MBMS Selected service and the corresponding Modification period identity. |
| 3 | ← | | RRC CONNECTION SETUP | RRC state indicator set to Cell_DCH |
| 4 | → | | RRC CONNECTION SETUP COMPLETE | |
| 5 | → | | MBMS MODIFICATION REQUEST | The UE completing the RRC connection Setup procedure shall initiate the MBMS MODIFICATION REQUEST procedure. This message may be received at any point after step 5 and before step 11. |
| 6 | UE | | | UE transmits SERVICE REQUEST, with IE "Service type" set to "MBMS Broadcast service Reception”. |
| 7 | ← | | SECURITY MODE COMMAND | |
| 8 | → | | SECURITY MODE COMPLETE | |
| 9 | ← | | RADIO BEARER SETUP | |
| 10 | → | | RADIO BEARER SETUP COMPLETE | |
| 11 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes otherwise it fails. |

Specific message contents

All messages have the same content as defined in 34.108 clause 9.1.1 with the following exceptions:

MBMS MODIFIED SERVICES INFORMATION (Step 1)

| Information Element | Value/remark |
|---|---|
| Modified service list<br>- MBMS Transmission identity<br><br>- MBMS required UE action<br>- Continue MCCH reading | Only 1 entry<br>MBMS Transmission identity indicating MBMS activated service<br>Request PTP RB<br>FALSE |

RRC CONNECTION REQUEST (Step 2)

| Information Element | Value/remark |
|---|---|
| Message type | |
| Initial UE identity | Same as the registered TMSI or P-TMSI. |
| Establishment Cause | MBMS ptp RB request |
| Protocol Error Indicator | Check to see if it is set to FALSE |
| Measured results on RACH | Not checked. |
| MBMS Selected Services | |
| MBMS Selected Services | Only 1 entry |
| - MBMS Selected Service ID | MBMS short transmission identity referring to the service the UE has selected |
| - Modification period identity | Indicates the modification period the MBMS short transmission identities refer to |

RRC CONNECTION SETUP (Step 3)

| Information Element | Value/remark |
|---|---|
| Message type | |
| RRC State Indicator | Cell_DCH |

MBMS MODIFICATION REQUEST (steps 5)

| Information Element | Value/remark |
|---|---|
| MBMS preferred frequency request | Check that the IE is not present |
| MBMS RB list requested to be released | Check that the IE is not present |
| MBMS Selected Service Info | |
| - CHOICE Status | Some |
| - MBMS Selected Services Full | |
| - MBMS Selected Service ID | Only 1 entry |
| - MBMS Service ID | MBMS service ID of the activated MBMS service |
| - CHOICE PLMN identity | Check to see that one of the below choice element is present |
| - SameAs-MIB | (no data) |
| - explicitPLMN_Id | Check to see if it is set to the same value as "PLMN ID" in the Master Information block transmitted for the current serving cell. |

RADIO BEARER SETUP (Step 9)

Use the same message as the one specified for "MBMS PtP" in TS 34.108 clause 9 with the condition B1.

#### 8.5.1.11.1.5 Test requirements

At step 2, the UE shall transmit a RRC CONNECTION REQUEST message with Establishment cause set to “MBMS ptp RB request”. The UE shall include the IE "MBMS Selected Service ID" within the IE "MBMS Selected Services Short" and the IE "MBMS Modification Period identity".

## 8.5.1.11m MBMS PTP Session Start at MCCH Notification in Idle Mode / MBMS Multicast Service

### 8.5.1.11m.1 Definition

This test is applicable for all UEs that support MBMS multicast services.

### 8.5.1.11m.2 Conformance requirement

Same conformance requirement as in clause 8.5.1.11.2 except there is no reference to 3GPP TS 25.331 clause 8.1.3.3..

Reference

3GPP TS 25.331 clauses 8.6.9.6, 8.6.9.8, 8.5.29.

8.5.1.11m.3 Test purpose

Same test purpose as in clause 8.5.1.11.3.

8.5.1.11m.4 Method of test

Initial condition

System Simulator:

1 MBMS cell

User Equipment:

The UE is in Idle Mode as specified in clause 7.6 of TS 34.108.

The UE has joined the multicast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Multicast service application available on UE Yes/No.

Test procedure

Same test procedure as in clause 8.5.1.11.4 except for the point 2:

2) The UE shall request a p-t-p RB establishment. The UE transmits a RRC CONNECTION REQUEST message.

Expected sequence

Same expected sequence as in clause 8.5.5.11.4 except for RRC CONNECTION REQUEST message content (step 2) and MODIFICATION REQUEST procedure not required.

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | MBMS MODIFIED SERVICES INFORMATION | "MBMS required UE action" set to Request PTP RB. |
| 2 | → | | RRC CONNECTION REQUEST | The UE transmits the message with Establishment cause set to “MBMS ptp RB request” |
| 3 | ← | | RRC CONNECTION SETUP | RRC state indicator set to Cell_DCH |
| 4 | → | | RRC CONNECTION SETUP COMPLETE | |
| 5 | UE | | | UE transmits SERVICE REQUEST, with IE "Service type" set to "MBMS Multicast service Reception”. |
| 6 | ← | | SECURITY MODE COMMAND | |
| 7 | → | | SECURITY MODE COMPLETE | |
| 8 | ← | | RADIO BEARER SETUP | |
| 9 | → | | RADIO BEARER SETUP COMPLETE | |
| 10 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes otherwise it fails. |

Specific message contents

Same specific messages contents as in clause 8.5.1.11.4 except for RRC CONNECTION REQUEST message content (step 2)

RRC CONNECTION REQUEST (Step 2)

| Information Element | Value/remark |
|---|---|
| Message type | |
| Initial UE identity | Same as the registered TMSI or P-TMSI. |
| Establishment Cause | MBMS ptp RB request |
| Protocol Error Indicator | Check to see if it is set to FALSE |
| Measured results on RACH | Not checked. |
| MBMS Selected Services | Not Present |

#### 8.5.1.11m.5 Test requirements

At step 2, the UE shall transmit a RRC CONNECTION REQUEST message with Establishment cause set to “MBMS ptp RB request”.

### 8.5.1.12 MBMS PTP Session Start at MCCH Notification in URA_PCH / MBMS Selected Service

#### 8.5.1.12.1 Definition

This test is applicable for all UEs that support MBMS broadcast services.

#### 8.5.1.12.2 Conformance requirement

The MBMS notification procedure is used by the UE to respond to a notification provided by UTRAN, indicating a change applicable for one or more MBMS services the UE has joined. The procedure applies to all UEs supporting MBMS, irrespective of their state (idle and connected mode: URA_PCH, CELL_PCH, CELL_FACH and CELL_DCH). The actual notification mechanism to be used depends on the UE state.

…

The UE shall:

1> if in idle mode, URA_PCH, CELL_PCH or CELL_FACH state:

2> if not monitoring MICH:

3> acquire the MBMS MODIFIED SERVICES INFORMATION message from MCCH at the start of every modification period, in accordance with subclause 8.7.1.3;

3> handle the MBMS MODIFIED SERVICES INFORMATION message as specified in subclause 8.7.3.4.

….

If the IE "MBMS required UE action" is included and concerns an MBMS activated service the UE shall:

…

1> if the IE "MBMS required UE action" is set to 'Request PTP RB':

…

2> if the UE is in URA_PCH, Cell_PCH or CELL_FACH states:

3> indicate to upper layers to initiate a service request procedure [5] to receive the concerned MBMS service;

3> perform the cell update procedure with cause "MBMS ptp RB request", as specified in subclause 8.3.1.2, unless the UE has already requested p-t-p RB establishment in the current modification period.

…

A UE shall initiate the cell update procedure in the following cases:

....

1> MBMS ptp RB request:

2> if none of the criteria for performing cell update with the causes specified above in the current subclause is met; and

2> if the UE is in URA_PCH, Cell_PCH or Cell_FACH state; and

2> if the UE should perform cell update for MBMS ptp radio bearer request as specified in 8.6.9.6:

3> perform cell update using the cause "MBMS ptp RB request".

…

The UE shall set the IEs in the CELL UPDATE message as follows:

…

1> if the UE performs cell update for MBMS ptp radio bearer request as specified in subclause 8.6.9.6; and

1> if one or more of the MBMS services for which the UE initiates the ptp radio bearer request concerns an MBMS Selected Service:

2> for each MBMS Selected Service that is indicated on MCCH and for which the UE initiates ptp radio bearer request:

3> order the MBMS Selected Services such that those selected with a higher priority are listed in the IE "MBMS Selected Services Short" before those selected with a lower priority;

3> include the IE "MBMS Selected Service ID" within the IE "MBMS Selected Services Short" and set it to a value in accordance with subclause 8.6.9.8.

1> otherwise, if the UE performs cell update for MBMS counting as specified in subclause 8.7.4; and

1> if one or more of the MBMS services for which the UE initiates the counting response concerns an MBMS Selected Service:

2> for each MBMS Selected Service that is indicated on MCCH and for which the UE initiates the counting response:

3> order the MBMS Selected Services such that those selected with a higher priority are listed in the IE "MBMS Selected Services Short" before those selected with a lower priority;

3> include the IE "MBMS Selected Service ID" within the IE "MBMS Selected Services Short" and set it to a value in accordance with subclause 8.6.9.8.

1> if the UE included one or more "MBMS Selected Service ID" IEs:

2> include the IE "MBMS Modification Period identity" and set it to a value in accordance with subclause 8.5.29.

…

If the IE "MBMS short transmission ID" is included the UE shall:

1> if the value of the "MBMS short transmission ID" is less than or equal to the number of services identified by the IE "Modified services list" included in the MBMS MODIFIED SERVICES INFORMATION message acquired in the same modification period as the one in which the "MBMS short transmission ID" is received:

2> consider the "MBMS short transmission ID" to be an index to the list of services contained in the IE "Modified services list" and apply the MBMS transmission identity specified for this entry.

1> otherwise:

2> compile a list of available MBMS services, as included in the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages acquired in the same modification period as the one in which the "MBMS short transmission ID" is received:

3> concatenate the services contained in IE "Modified services list" included in the MBMS MODIFIED SERVICES INFORMATION and the services contained in IE "Unmodified services list" included in the MBMS UNMODIFIED SERVICES INFORMATION.

2> consider the "MBMS short transmission ID" to be the index of the entry in the list of available services and apply the MBMS transmission identity specified for this entry.

…

The UE shall calculate the identity of a Modification period as follows:

*MP identity= (SFNMP div MPlen) mod 2*

With $SFN_{MP}$ being the SFN corresponding with the frame in which the concerned Modification Period starts

$MP_{len}$ being the length of the Modification Period, that is indicated by the IE "Modification period coefficient" that is included in System Information Block type 5 and 5bis.

Reference

3GPP TS 25.331 clauses 8.7.3.1, 8.7.3.3.1, 8.6.9.6, 8.3.1.2, 8.3.1.3, 8.6.9.8, 8.5.29.

### 8.5.1.12.3 Test purpose

To verify that the UE receives the MBMS info in URA_PCH state and correctly triggers the P-t-p request procedure.

### 8.5.1.12.4 Method of test

Initial condition

System Simulator:

1 MBMS cell.

User Equipment:

The UE is in URA_PCH state as specified in clause 7.6 of TS 34.108

The UE is interested in the selected service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Broadcast service application available on UE Yes/No.

Test procedure

1) The UE is in URA_PCH state, shall detect the available MBMS services by acquiring the MBMS MODIFIED SERVICES INFORMATION including the IE “MBMS required UE action” set to “Request PTP RB”.

2) The UE shall perform a cell update procedure with cause "MBMS ptp RB request". In case of MBMS Selected service, the UE transmits a CELL UPDATE message including the IE "MBMS Selected Service ID" of the concerned MBMS Selected service within the IE "MBMS Selected Services Short" and the IE "MBMS Modification Period identity".

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | MBMS MODIFIED SERVICES INFORMATION | "MBMS required UE action" set to Request PTP RB". |
| 1a | | | | The UE enters the CELL_FACH state(Test procedure 2 and 3 only). |
| 2 | → | | CELL UPDATE | UE performs cell update procedure. The CELL UPDATE message shall contain the value "Cell Update Cause" set to "MBMS ptp RB request" |
| 3 | ← | | CELL UPDATE CONFIRM | RRC State Indicator is set to CELL_FACH |
| 3a | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 4 | UE | | | UE transmits SERVICE REQUEST, with IE "Service type" set to "MBMS Broadcast service Reception". |
| 5 | SS | | | SS transmits the SERVICE ACCEPT message to the UE. |
| 6 | ← | | RADIO BEARER SETUP | RRC State Indicator is set to CELL_DCH |
| 7 | → | | RADIO BEARER SETUP COMPLETE | |
| 7a | → | | MBMS MODIFICATION REQUEST | This message may be received at any point after step 6 and before step 8. |
| 8 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific message contents

MBMS MODIFIED SERVICES INFORMATION (Step 1)

| Information Element | Value/remark |
|---|---|
| Modified services list<br>- MBMS Transmission identity<br><br>- MBMS required UE action | Only 1 entry<br>MBMS Transmission identity indicating MBMS activated service<br>request PTP RB |

#### 8.5.1.12.5 Test requirements

At step 2, the UE shall initiate a cell update procedure for MBMS ptp radio bearer request. The UE shall include in the transmitted CELL_UPDATE message the IE "MBMS Selected Service ID" within the IE "MBMS Selected Services Short" and the IE "MBMS Modification Period identity" in case of MBMS Selected service.

### 8.5.1.12m MBMS PTP Session Start at MCCH Notification in URA_PCH / MBMS Multicast Service

#### 8.5.1.12m.1 Definition

This test is applicable for all UEs that support MBMS multicast services.

#### 8.5.1.12m.2 Conformance requirement

Same conformance requirement as in clause 8.5.1.12.2.

#### 8.5.1.12m.3 Test purpose

Same test purpose as in clause 8.5.1.12.3.

#### 8.5.1.12m.4 Method of test

##### Initial condition

System Simulator:

1 MBMS cell

User Equipment:

The UE is in URA_PCH state as specified in clause 7.6 of TS 34.108

The UE has joined the multicast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

##### Related ICS/IXIT statements

- MBMS Multicast service application available on UE Yes/No.

##### Test procedure

Same test procedure as in clause 8.5.1.12.4, except that at step 4 UE transmits Service Request, with IE "Service type" set to "MBMS Multicast service Reception".

##### Specific message contents

Same specific messages contents as in clause 8.5.1.12.4 except for CELL UPDATE (Step 2) and Service Request (Step 4)

CELL UPDATE (Step 2)

| Information Element | Value/remark |
|---|---|
| Cell update cause | MBMS ptp RB request |
| MBMS Selected Services | Not present |

#### 8.5.1.12m.5 Test requirements

At step 2, the UE shall initiate a cell update procedure for MBMS ptp radio bearer request .

### 8.5.1.13 MBMS PTP Session Start at MCCH Notification in CELL_FACH / MBMS Selected Service

#### 8.5.1.13.1 Definition

This test is applicable for all UEs that support MBMS broadcast services.

#### 8.5.1.13.2 Conformance requirement

The MBMS notification procedure is used by the UE to respond to a notification provided by UTRAN, indicating a change applicable for one or more MBMS services the UE has joined. The procedure applies to all UEs supporting MBMS, irrespective of their state (idle and connected mode: URA_PCH, CELL_PCH, CELL_FACH and CELL_DCH). The actual notification mechanism to be used depends on the UE state.

…

The UE shall:

1> if in idle mode, URA_PCH, CELL_PCH or CELL_FACH state:

2> if not monitoring MICH:

3> acquire the MBMS MODIFIED SERVICES INFORMATION message from MCCH at the start of every modification period, in accordance with subclause 8.7.1.3;

3> handle the MBMS MODIFIED SERVICES INFORMATION message as specified in subclause 8.7.3.4.

….

If the IE "MBMS required UE action" is included and concerns an MBMS activated service the UE shall:

…

1> if the IE "MBMS required UE action" is set to 'Request PTP RB':

…

2> if the UE is in URA_PCH, Cell_PCH or CELL_FACH states:

3> indicate to upper layers to initiate a service request procedure [5] to receive the concerned MBMS service;

3> perform the cell update procedure with cause "MBMS ptp RB request", as specified in subclause 8.3.1.2, unless the UE has already requested p-t-p RB establishment in the current modification period.

…

A UE shall initiate the cell update procedure in the following cases:

....

1> MBMS ptp RB request:

2> if none of the criteria for performing cell update with the causes specified above in the current subclause is met; and

2> if the UE is in URA_PCH, Cell_PCH or Cell_FACH state; and

2> if the UE should perform cell update for MBMS ptp radio bearer request as specified in 8.6.9.6:

3> perform cell update using the cause "MBMS ptp RB request".

…

The UE shall set the IEs in the CELL UPDATE message as follows:

…

1> if the UE performs cell update for MBMS ptp radio bearer request as specified in subclause 8.6.9.6; and

1> if one or more of the MBMS services for which the UE initiates the ptp radio bearer request concerns an MBMS Selected Service:

2> for each MBMS Selected Service that is indicated on MCCH and for which the UE initiates ptp radio bearer request:

3> order the MBMS Selected Services such that those selected with a higher priority are listed in the IE "MBMS Selected Services Short" before those selected with a lower priority;

3> include the IE "MBMS Selected Service ID" within the IE "MBMS Selected Services Short" and set it to a value in accordance with subclause 8.6.9.8.

1> otherwise, if the UE performs cell update for MBMS counting as specified in subclause 8.7.4; and

1> if one or more of the MBMS services for which the UE initiates the counting response concerns an MBMS Selected Service:

2> for each MBMS Selected Service that is indicated on MCCH and for which the UE initiates the counting response:

3> order the MBMS Selected Services such that those selected with a higher priority are listed in the IE "MBMS Selected Services Short" before those selected with a lower priority;

3> include the IE "MBMS Selected Service ID" within the IE "MBMS Selected Services Short" and set it to a value in accordance with subclause 8.6.9.8.

1> if the UE included one or more "MBMS Selected Service ID" IEs:

2> include the IE "MBMS Modification Period identity" and set it to a value in accordance with subclause 8.5.29.

…

If the IE "MBMS short transmission ID" is included the UE shall:

1> if the value of the "MBMS short transmission ID" is less than or equal to the number of services identified by the IE "Modified services list" included in the MBMS MODIFIED SERVICES INFORMATION message acquired in the same modification period as the one in which the "MBMS short transmission ID" is received:

2> consider the "MBMS short transmission ID" to be an index to the list of services contained in the IE "Modified services list" and apply the MBMS transmission identity specified for this entry.

1> otherwise:

2> compile a list of available MBMS services, as included in the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages acquired in the same modification period as the one in which the "MBMS short transmission ID" is received:

3> concatenate the services contained in IE "Modified services list" included in the MBMS MODIFIED SERVICES INFORMATION and the services contained in IE "Unmodified services list" included in the MBMS UNMODIFIED SERVICES INFORMATION.

2> consider the "MBMS short transmission ID" to be the index of the entry in the list of available services and apply the MBMS transmission identity specified for this entry.

…

The UE shall calculate the identity of a Modification period as follows:

*MP identity= (SFNMP div MPlen) mod 2*

With $SFN_{MP}$ being the SFN corresponding with the frame in which the concerned Modification Period starts

$MP_{len}$ being the length of the Modification Period, that is indicated by the IE "Modification period coefficient" that is included in System Information Block type 5 and 5bis.

Reference

3GPP TS 25.331 clauses 8.7.3.1, 8.7.3.3.1, 8.6.9.6, 8.3.1.2, 8.3.1.3, 8.6.9.8, 8.5.29.

### 8.5.1.13.3 Test purpose

To verify that the UE receives the MBMS info in Cell_FACH state and correctly triggers the P-t-p request procedure.

### 8.5.1.13.4 Method of test

Initial condition

System Simulator:

1 MBMS cell.

User Equipment:

The UE is in CELL_FACH state as specified in clause 7.6 of TS 34.108.

The UE is interested in the selected service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Broadcast service application available on UE Yes/No.

Test procedure

1) The UE is in Cell_FACH state, shall detect the available MBMS services by acquiring the MBMS MODIFIED SERVICES INFORMATION including the IE “MBMS required UE action” set to “Request PTP RB”.

2) The UE shall perform a cell update procedure with cause "MBMS ptp RB request". In case of MBMS Selected service, the UE transmits a CELL UPDATE message including the IE "MBMS Selected Service ID" of the concerned MBMS Selected service within the IE "MBMS Selected Services Short" and the IE "MBMS Modification Period identity".

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | MBMS MODIFIED SERVICES INFORMATION | "MBMS required UE action" set to Request PTP RB". |
| 2 | → | | CELL UPDATE | UE performs cell update procedure. The CELL UPDATE message shall contain the value "Cell Update Cause" set to "MBMS ptp RB request" |
| 3 | ← | | CELL UPDATE CONFIRM | RRC State Indicator is set to CELL_FACH |
| 4 | UE | | | UE transmits SERVICE REQUEST, with IE "Service type" set to "MBMS Broadcast service Reception". |
| 5 | SS | | | SS transmits the SERVICE ACCEPT message to the UE. |
| 6 | ← | | RADIO BEARER SETUP | RRC State Indicator is set to CELL_DCH |
| 7 | → | | RADIO BEARER SETUP COMPLETE | |
| 7a | → | | MBMS MODIFICATION REQUEST | This message may be received at any point after step 6 and before step 8. |
| 8 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific message contents

MBMS MODIFIED SERVICES INFORMATION (Step 1)

| Information Element | Value/remark |
|---|---|
| Modified services list<br>- MBMS Transmission identity<br><br>- MBMS required UE action | Only 1 entry<br>MBMS Transmission identity indicating MBMS activated service<br>request PTP RB |

CELL UPDATE (Step 2)

| Information Element | Value/remark |

#### 8.5.1.13.5 Test requirements

At step 2, the UE shall initiate a cell update procedure for MBMS ptp radio bearer request. The UE shall include in the transmitted CELL_UPDATE message the IE "MBMS Selected Service ID" within the IE "MBMS Selected Services Short" and the IE "MBMS Modification Period identity" in case of MBMS Selected service.

### 8.5.1.13m MBMS PTP Session Start at MCCH Notification in CELL_FACH / MBMS Multicast Service

#### 8.5.1.13m.1 Definition

This test is applicable for all UEs that support MBMS multicast services.

#### 8.5.1.13m.2 Conformance requirement

Same conformance requirement as in clause 8.5.1.13.2.

#### 8.5.1.13m.3 Test purpose

Same test purpose as in clause 8.5.1.13.3.

#### 8.5.1.13m.4 Method of test

##### Initial condition

System Simulator:

1 MBMS cell

User Equipment:

The UE is in CELL_FACH state as specified in clause 7.6 of TS 34.108.

The UE has joined the multicast service to be provided by the SS (included in the MBMS_ACTIVATED_SERVICES variable).

##### Related ICS/IXIT statements

- MBMS Multicast service application available on UE Yes/No.

##### Test procedure

Same test procedure as in clause 8.5.1.13.4, except that at step 4 UE transmits Service Request, with IE "Service type" set to "MBMS Multicast service Reception".

##### Specific message contents

Same specific messages contents as in clause 8.5.1.13.4 except for CELL UPDATE (Step 2) and Service request(step 4)

CELL UPDATE (Step 2)

| Information Element | Value/remark |
|---|---|
| Cell update cause | MBMS ptp RB request |
| MBMS Selected Services | Not present |

#### 8.5.1.13m.5 Test requirements

At step 2, the UE shall initiate a cell update procedure for MBMS ptp radio bearer request.

### 8.5.1.14 MBMS PTM Session Start at MCCH Acquisition / MBSFN mode

#### 8.5.1.14.1 Definition

This test is applicable for UEs that support MBMS broadcast services in MBSFN mode and which support either both transmit and receive functions or MBSFN receive only function.

#### 8.5.1.14.2 Conformance requirement

The UE applies the MCCH acquisition procedure to determine the MBMS services available in the cell and to initiate reception of the services that the UE has activated. The procedure applies to all UEs supporting MBMS, irrespective of their state (idle, URA_PCH, CELL_PCH, CELL_FACH and CELL_DCH).

For 1.28 Mcps TDD, if the cell is operating in MBSFN mode, the MCCH will be deployed on the MBSFN Special Timeslot [30].

…

If the variable MBMS_ACTIVATED_SERVICES is not empty, the UE shall apply the MCCH acquisition procedure upon selecting (e.g. upon power on) or re- selecting a cell supporting MBMS or an MBSFN cluster, upon change of MBMS controlling cell (e.g. due to an active set update or hard handover), upon entering UTRA from another RAT, upon release of a MBMS PTP RB for the purpose of changing transfer mode, upon return from loss of coverage and upon receiving an indication from upper layers that the set of activated services has changed.

…

The UE shall detect the available MBMS services by acquiring the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3.

...

For cells operating in MBSFN mode as indicated in subclause 8.1.1.6.3 the UE shall immediately acquire the MBMS GENERAL INFORMATION messages i.e. it shall not delay reception of these messages until it has completed the acquisition of the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages. Likewise for cells operating in MBSFN mode as indicated in subclause 8.1.1.6.3, the UE should immediately acquire the MBMS CURRENT CELL P-T-M RB INFORMATION.

The UE shall continue acquiring the above messages until it has received a consistent set of MCCH information e.g. both the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION message should be acquired in the same modification period.

…

When requested to acquire MBMS control information other than the MBMS ACCESS INFORMATION message , the UE shall:

1> if requested to start reading MCCH at the next modification period:

2> start reading MCCH at the beginning of the next modification period.

1> otherwise

2> start reading MCCH at the beginning of the next repetition period.

1> if requested to stop reading MCCH at the end of the modification period:

2> continue reading MCCH until the required MBMS control information is received or until the UE detects a TTI in which no MCCH information is transmitted, whichever is first;

2> continue reading MCCH in this manner at every subsequent repetition period, until the information is received correctly or until the end of the modification period.

1> otherwise:

2> continue reading MCCH until the required MBMS control information is received or until the UE detects a TTI in which no MCCH information is transmitted, whichever is first;

2> continue reading MCCH in this manner at every subsequent repetition period, until the information is received correctly.

NOTE 1: The UE may combine information received at different repetition periods within a modification period.

…

If the IE "MBMS required UE action" is included and concerns an MBMS activated service the UE shall:

…

1> if the IE "MBMS required UE action" is set to 'Acquire PTM RB info'; or

1> if the IE "MBMS required UE action" is set to 'Acquire counting info– PTM RBs unmodified' and the UE is not receiving a p-t-m RB for the concerned service:

2> continue acquiring the MBMS COMMON P-T-M RB INFORMATION, MBMS CURRENT CELL P-T-M RB INFORMATION and the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3

2> act upon the MBMS COMMON P-T-M RB INFORMATION, MBMS CURRENT CELL P-T-M RB INFORMATION and the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION message, if received, in accordance with subclause 8.7.5;

…

Upon completing the reception of the MBMS COMMON P-T-M RB INFORMATION and the MBMS CURRENT CELL P-T-M RB INFORMATION messages for an activated MBMS service, the UE shall:

1> if the UE is already receiving an MTCH and does not have the capability to receive the new service in addition:

2> the UE behaviour is undefined.

NOTE: In this case, the UE may request upper layers to prioritise the services and only receive the service(s) prioritised by upper layers.

1> act upon all received information elements as specified in subclause 8.6, unless specified otherwise in the following;

1> if the UE previously received the service by means of a p-t-m radio bearer from a cell belonging to another MBMS cell group:

2> re-establish RLC;

2> re-initialise PDCP.

1> start immediately to use the indicated configuration unless specified otherwise;

1> start or continue receiving the indicated p-t-m radio bearers depending on its UE capabilities.

The UE shall continue acquiring the above messages until it has received a consistent set of MCCH information i.e. the MBMS MODIFIED SERVICES INFORMATION message, MBMS UNMODIFIED SERVICES INFORMATION

message, MBMS COMMON P-T-M RB INFORMATION and the MBMS CURRENT CELL P-T-M RB INFORMATION message should be acquired in the same modification period.

…

The UE shall:

1> if the IE "Secondary CCPCH system information MBMS" is included:

2> apply the Secondary CCPCH and FACH indicated by the IE "FACH carrying MCCH" for receiving MCCH.

1> otherwise, if the IE "Secondary CCPCH system information" includes the IE "MCCH configuration information":

2> apply the Secondary CCPCH and FACH indicated by the IE “MCCH configuration information” for receiving MCCH.

1> for TDD, if the IE "TDD MBSFN Information" is included:

2> apply the scrambling codes (as referenced by the "Cell parameters ID") to each timeslot indicated by "TDD MBSFN Information".

…

The UE shall select the Secondary CCPCH for acquiring MCCH information according to the following rules:

1> if System Information Block type 5 or System Information Block type 5bis is defined and includes an S-CCPCH within the IE "Secondary CCPCH system information" including a FACH for which the IE "MCCH configuration information" is included:

2> select that S-CCPCH and FACH for receiving MCCH.

1> otherwise if System Information Block type 5 or System Information Block type 5bis is defined and includes an SCCPCH within the IE "Secondary CCPCH system information MBMS" for which the IE "FACH carrying MCCH" is included:

2> select that S-CCPCH and FACH for receiving MCCH.

Reference

3GPP TS 25.331 clauses 8.7.2.1, 8.7.2.2, 8.7.2.3, 8.7.1.3, 8.6.9.6, 8.7.5.3, 8.1.1.6.5, 8.5.19a.

### 8.5.1.14.3 Test purpose

1. To verify that the UE acquires the MBMS information on MCCH after selecting the MBSFN cluster.
2. To verify that the UE, after acquiring the MBMS information on MCCH, starts the p-t-m reception of MBMS services according to the information on MCCH.

### 8.5.1.14.4 Method of test

Initial condition

System Simulator:

- MBSFN carrier: 2 cells, Cell 31 (PLMN1) and Cell 33 (PLMN1). Cell 33 is powered off. In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C1 and Default1 MCCH scheduling (No ongoing session) according to subclause 11.2 of TS 34.108.
- Unicast carrier : 1 cell, Cell 1 with default parameters.

User Equipment:

- On the unicast carrier cell the UE is in registered Idle Mode on PS (state 3) if the UE only supports PS domain or registered Idle Mode on CS/PS (state 7) if the UE supports both CS and PS domains, as specified in clause 7.2.2 of TS 34.108.

- The UE is in MBSFN Idle mode with no services activated as specified in clause 7.6.3 of TS 34.108.

Related ICS/IXIT statements

- MBMS Broadcast services in MBSFN mode application available on UE Yes/No.
- Support of transmit and receive functions available on UE Yes/No.
- Support of MBSFN receive only function available on UE Yes/No.

Test procedure

**Table 8.5.1.14**

| Parameter | Unit | Cell 1 | | Cell 31 | | Cell 33 | |
|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Ch. 1 | | Ch. 2 | | Ch. 3 | |
| CPICH Ec (FDD) | dBm / 3.84MHz | -60 | -60 | -60 | OFF | OFF | -60 |
| P-CCPCH RSCP (TDD) | dBM | -60 | -60 | -60 | OFF | OFF | -60 |

Table 8.5.1.14 illustrates the downlink power to be applied for the 3 cells at various time instants of the test execution.

a) The UE is camping on Cell 1 and Cell 31. SS requests the UE to activate a local service for which there will be a session ongoing on MBSFN Cell 33 (see TS 34.108 clause 11.2.4) when the UE selects that MBSFN cell.

b) The SS sends ACTIVATE RB TEST MODE on the unicast carrier and the UE responds with ACTIVATE RB TEST MODE COMPLETE.

c) The SS then sends CLOSE UE TEST LOOP to activate RLC SDU counting on the MTCH of Cell 33 (Transmission identity corresponding to the activated local service).

d) The SS switches off Cell 31 and powers on Cell 33.

e) The UE camps on Cell 33 on the MBSFN carrier. The SS transmits the SYSTEM INFORMATION BLOCK TYPE 5 message indicating the configuration of the S-CCPCH carrying MCCH within the IE " Secondary CCPCH system information MBMS". In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 33 using MBMS configuration C2 (one PTM session ongoing) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108. The service is carried on a 129.6kbps RB for MTCH with 80 ms TTI as specified in clause 6.10.3.4.4.6(FDD) or a 124 kbps RB for MBSFN MTCH with 80ms TTI as specified in clause 6.10.3.4.4.9 (3.84 Mcps TDD) or clause 6.11.6.4.4.9 (7.68 Mcps TDD) or clause 6.11.5.4.4.9 (1.28 Mcps TDD).

f) The UE shall perform the MCCH acquisition procedure. The UE shall detect the available MBMS services by acquiring the MBMS MODIFIED SERVICES INFORMATION, the MBMS UNMODIFIED SERVICES INFORMATION, the MBMS GENERAL INFORMATION, the MBMS COMMON P-T-M RB INFORMATION and the MBMS CURRENT CELL P-T-M INFORMATION.

g) The UE shall continue acquiring the above MBMS messages until it has received a consistent set of MCCH information in the same modification period. The UE shall start receiving the p-t-m radio bearer for the ongoing activated MBMS service indicated in the MBMS UNMODIFIED SERVICES INFORMATION message according to the configuration defined in the MBMS CURRENT CELL P-T-M INFORMATION (one ongoing session corresponding to the service activated at the UE. The UE closes the test loop and starts counting successfully received RLC PDUs on the MTCH. The UE will send CLOSE UE TEST LOOP COMPLETE.

h) The SS broadcasts 10 RLC SDUs on the MTCH configured on the MBMS p-t-m radio bearer for the activated service.

i) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST and waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is > 0.

Expected sequence

| Step | Direction | | Carrier | Message | Comment |
|---|---|---|---|---|---|
| | UE | SS | | | |
| 1 | | | | | SS requests the UE to activate a local service. |
| 2 | ← | | U | ACTIVATE RB TEST MODE | |
| 3 | → | | U | ACTIVATE RB TEST MODE COMPLETE | |
| 4 | ← | | U | CLOSE UE TEST LOOP | Loop back mode 3 is activated. Short Transmission Identity for the selected local service on Cell 33. |
| 5 | SS | | | | The SS powers off Cell 31 and powers on Cell 33. |
| 6 | ← | | M | SYSTEM INFORMATION BLOCK TYPE 5 | |
| 7 | ← | | M | MBMS MCCH Message Configuration C2 | No modified services. One ongoing service corresponding to that activated at the UE 129.6(FDD) or 124(TDD) kbps PS RAB |
| 8 | UE | | M | | The UE shall continue acquiring the above MBMS messages until it has received a consistent set of MCCH information in the same modification period. |
| 9 | → | | U | CLOSE UE TEST LOOP COMPLETE | The UE shall establish the indicated p-t-m radio bearer and close the test loop. |
| 10 | SS | | M | | The SS transmits 10 RLC SDUs on the MTCH. |
| 11 | ← | | U | UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST | |
| 12 | → | | U | UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE | The SS checks that the number of reported RLC SDUs received on the MTCH is greater than zero. |
| 13 | ← | | U | OPEN UE TEST LOOP | |
| 14 | → | | U | OPEN UE TEST LOOP COMPLETE | |
| 15 | ← | | U | DEACTIVATE RB TEST MODE | |
| 16 | → | | U | DEACTIVATE RB TEST MODE COMPLETE | |

Specific message contents

All messages have the same content as defined in 34.108 clause 9.1 with the following exceptions:

There are no exceptions for this test case.

#### 8.5.1.14.5 Test requirements

1) After step 12, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number > 0 for Cell 33 MTCH.

### 8.5.1.15 MBMS PTM Session Start at MCCH Notification / MBSFN mode

#### 8.5.1.15.1 Definition

This test is applicable for UEs that support MBMS broadcast services in MBSFN mode and which support either both transmit and receive functions or MBSFN receive only function.

#### 8.5.1.15.2 Conformance requirement

The UE applies the MCCH acquisition procedure to determine the MBMS services available in the cell and to initiate reception of the services that the UE has activated. The procedure applies to all UEs supporting MBMS, irrespective of their state (idle, URA_PCH, CELL_PCH, CELL_FACH and CELL_DCH).

For 1.28 Mcps TDD, if the cell is operating in MBSFN mode, the MCCH will be deployed on the MBSFN Special Timeslot [30].

…

The UE shall detect the available MBMS services by acquiring the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages without delaying reading of MCCH until the

next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3.

...

For cells operating in MBSFN mode as indicated in subclause 8.1.1.6.3 the UE shall immediately acquire the MBMS GENERAL INFORMATION messages i.e. it shall not delay reception of these messages until it has completed the acquisition of the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages. Likewise for cells operating in MBSFN mode as indicated in subclause 8.1.1.6.3, the UE should immediately acquire the MBMS CURRENT CELL P-T-M RB INFORMATION.

The UE shall continue acquiring the above messages until it has received a consistent set of MCCH information e.g. both the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION message should be acquired in the same modification period.

…

When requested to acquire MBMS control information other than the MBMS ACCESS INFORMATION message , the UE shall:

1> if requested to start reading MCCH at the next modification period:

2> start reading MCCH at the beginning of the next modification period.

1> otherwise

2> start reading MCCH at the beginning of the next repetition period.

1> if requested to stop reading MCCH at the end of the modification period:

2> continue reading MCCH until the required MBMS control information is received or until the UE detects a TTI in which no MCCH information is transmitted, whichever is first;

2> continue reading MCCH in this manner at every subsequent repetition period, until the information is received correctly or until the end of the modification period.

1> otherwise:

2> continue reading MCCH until the required MBMS control information is received or until the UE detects a TTI in which no MCCH information is transmitted, whichever is first;

2> continue reading MCCH in this manner at every subsequent repetition period, until the information is received correctly.

NOTE 1: The UE may combine information received at different repetition periods within a modification period.

…

The MBMS notification procedure is used by the UE to respond to a notification provided by UTRAN, indicating a change applicable for one or more MBMS services the UE has activated. The procedure applies to all UEs supporting MBMS, irrespective of their state (idle and connected mode: URA_PCH, CELL_PCH, CELL_FACH and CELL_DCH). The actual notification mechanism to be used depends on the UE state.

…

The UE may:

1> monitor the MBMS notification Indicator Channel (MICH);

1> if a notification on the MICH for one or more of the MBMS services included in the variable MBMS_ACTIVATED_SERVICES is detected:

2> acquire the MBMS MODIFIED SERVICES INFORMATION message with delaying the reading of MCCH until the next modification period and with stopping at the end of the modification period, in accordance with subclause 8.7.1.3;

2> handle the MBMS MODIFIED SERVICES INFORMATION message as specified in subclause 8.7.3.4.

The UE shall:

1> if in idle mode, URA_PCH, CELL_PCH or CELL_FACH state:

2> if not monitoring MICH during the current or the previous modification period:

3> acquire the MBMS MODIFIED SERVICES INFORMATION message from MCCH at the start of every modification period, in accordance with subclause 8.7.1.3;

3> handle the MBMS MODIFIED SERVICES INFORMATION message as specified in subclause 8.7.3.4.

…

If the IE "MBMS required UE action" is included and concerns an MBMS activated service the UE shall:

…

1> if the IE "MBMS required UE action" is set to 'Acquire PTM RB info'; or

1> if the IE "MBMS required UE action" is set to 'Acquire counting info– PTM RBs unmodified' and the UE is not receiving a p-t-m RB for the concerned service:

2> continue acquiring the MBMS COMMON P-T-M RB INFORMATION, MBMS CURRENT CELL P-T-M RB INFORMATION and the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3

2> act upon the MBMS COMMON P-T-M RB INFORMATION, MBMS CURRENT CELL P-T-M RB INFORMATION and the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION message, if received, in accordance with subclause 8.7.5;

…

Upon completing the reception of the MBMS COMMON P-T-M RB INFORMATION and the MBMS CURRENT CELL P-T-M RB INFORMATION messages for an activated MBMS service, the UE shall:

1> if the UE is already receiving an MTCH and does not have the capability to receive the new service in addition:

2> the UE behaviour is undefined.

NOTE: In this case, the UE may request upper layers to prioritise the services and only receive the service(s) prioritised by upper layers.

1> act upon all received information elements as specified in subclause 8.6, unless specified otherwise in the following;

1> if the UE previously received the service by means of a p-t-m radio bearer from a cell belonging to another MBMS cell group:

2> re-establish RLC;

2> re-initialise PDCP.

1> start immediately to use the indicated configuration unless specified otherwise;

1> start or continue receiving the indicated p-t-m radio bearers depending on its UE capabilities.

The UE shall continue acquiring the above messages until it has received a consistent set of MCCH information i.e. the MBMS MODIFIED SERVICES INFORMATION message, MBMS UNMODIFIED SERVICES INFORMATION message, MBMS COMMON P-T-M RB INFORMATION and the MBMS CURRENT CELL P-T-M RB INFORMATION message should be acquired in the same modification period.

…

The UE shall:

1> if the IE "Secondary CCPCH system information MBMS" is included:

2> apply the Secondary CCPCH and FACH indicated by the IE "FACH carrying MCCH" for receiving MCCH.

1> otherwise, if the IE "Secondary CCPCH system information" includes the IE "MCCH configuration information":

2> apply the Secondary CCPCH and FACH indicated by the IE “MCCH configuration information” for receiving MCCH.

1> for TDD, if the IE "TDD MBSFN Information" is included:

2> apply the scrambling codes (as referenced by the "Cell parameters ID") to each timeslot indicated by "TDD MBSFN Information".

Reference

3GPP TS 25.331 clauses 8.7.2.1, 8.7.2.3, 8.7.1.3, 8.7.3.1, 8.7.3.3.1, 8.6.9.6, 8.7.5.3, 8.1.1.6.5

### 8.5.1.15.3 Test purpose

1. To verify that the UE receives updated MBMS information on MCCH of the MBSFN cluster.
2. To verify that the UE correctly handles the notification procedure after receiving the MBMS MODIFIED SERVICES INFORMATION message via MCCH if there is no ongoing MBMS p-t-m session (MICH supported/not supported by the UE).
3. To verify that the UE starts the reception of MBMS services according to notification via MICH/MCCH.

### 8.5.1.15.4 Method of test

Initial condition

System Simulator:

- MBSFN carrier: 1 cell, Cell 31 (PLMN1). In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C1 and Default1 MCCH scheduling (No ongoing session) according to subclause 11.2 of TS 34.108.
- Unicast carrier : 1 cell, Cell 1 with default parameters.

User Equipment:

- On the unicast carrier cell the UE is in registered Idle Mode on PS (state 3) if the UE only supports PS domain or registered Idle Mode on CS/PS (state 7) if the UE supports both CS and PS domains, as specified in clause 7.2.2 of TS 34.108.
- The UE is in MBSFN Idle mode with one activated service as specified in clause 7.6.4 of TS 34.108. The UE has selected (i.e. it is included in MBMS_ACTIVATED_SERVICES variable) a national service for which a session will start on MBSFN Cell 31 (see TS 34.108 clause 11.2.4) during the test.

Related ICS/IXIT statements

- MBMS Broadcast services in MBSFN mode application available on UE Yes/No.
- Support of transmit and receive functions available on UE Yes/No.
- Support of MBSFN receive only function available on UE Yes/No.

Test procedure

a) The UE is camping on Cell 1 and Cell 31. In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C1 (no session ongoing) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108.

b) The SS sends ACTIVATE RB TEST MODE on the unicast carrier and the UE responds with ACTIVATE RB TEST MODE COMPLETE.

c) The SS sends CLOSE UE TEST LOOP to activate RLC SDU counting on Cell 31 MTCH (Transmission identity indicating the MBMS activated service).

d) The SS notifies on MCCH about the start of an MBMS session for one modification period. MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C4 (one PTM session starting) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108.

e) From the first SFN of the next modification period the SS transmits MCCH messages on Cell 31 using MBMS configuration C2 (one PTM session ongoing) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108; and the SS broadcasts 10 RLC SDUs on the MTCH configured on the MBMS p-t-m radio bearer for the activated service. The service is carried on a 129.6kbps RB for MTCH with 80 ms TTI as specified in clause 6.10.3.4.4.6(FDD) or a 124 kbps RB for MBSFN MTCH with 80ms TTI as specified in clause 6.10.3.4.4.9 (3.84 Mcps TDD) or clause 6.11.6.4.4.9 (7.68 Mcps TDD) or clause 6.11.5.4.4.9 (1.28 Mcps TDD).

f) The UE establishes the p-t-m radio bearer for the activated service according to the specified service activation time (i.e. the first SFN of the modification period following the notification (step d). The UE closes the test loop and starts counting successfully received RLC PDUs on the MTCH. The UE will send CLOSE UE TEST LOOP COMPLETE.

g) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST and waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is > 0.

Expected sequence

| Step | Direction | | Carrier | Message | Comment |
|---|---|---|---|---|---|
| | UE | SS | | | |
| 1 | ← | | U | ACTIVATE RB TEST MODE | |
| 2 | → | | U | ACTIVATE RB TEST MODE COMPLETE | |
| 3 | ← | | U | CLOSE UE TEST LOOP | Loop back mode 3 is activated on Cell 31 for the selected national service on MTCH. |
| 4 | ← | | M | MBMS MCCH Message Configuration C4 | Includes the national service activated at UE in the modified services list for one modification period. Activation time is the start of the next modification period. |
| 5 | ← | | M | MBMS MCCH Message Configuration C2 | No modified services. One ongoing service corresponding to that activated at the UE 129.6(FDD) or 124(TDD) kbps PS RAB |
| 6 | → | | U | CLOSE UE TEST LOOP COMPLETE | The UE shall establish the indicated p-t-m radio bearer and close the test loop. |
| 7 | | SS | M | | The SS transmits 10 RLC SDUs on the MTCH starting at the indicated activation time. |
| 8 | ← | | U | UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST | |
| 9 | → | | U | UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE | The SS checks that the number of reported RLC SDUs received on the MTCH is greater than zero. |
| 10 | ← | | U | OPEN UE TEST LOOP | |
| 11 | → | | U | OPEN UE TEST LOOP COMPLETE | |
| 12 | ← | | U | DEACTIVATE RB TEST MODE | |
| 13 | → | | U | DEACTIVATE RB TEST MODE COMPLETE | |

Specific message contents

All messages have the same content as defined in 34.108 clause 9.1 with the following exceptions:

There are no exceptions for this test case.

#### 8.5.1.15.5 Test requirements

1) After step 9, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number > 0 for the identified MTCH RB on Cell 33.

## 8.5.2 MBMS Session Reconfiguration

### 8.5.2.1 MBMS PTP Session Reconfiguration – Change of Activated Service / MBMS Selected Service

#### 8.5.2.1.1 Definition

This test is applicable for all UEs that support MBMS broadcast services and MBMS service change for a ptp RB and capable of reading MCCH in CELL_DCH state.

#### 8.5.2.1.2 Conformance requirement

If the UE has included the IE "Support of MBMS service change for a ptp RB" in a previous MBMS MODIFICATION REQUEST message and if the IE "RAB information for MBMS ptp bearer" is included then the UE shall:

1> if an entry for the radio access bearer identified by the IE "RB Identity" already exists in the variable ESTABLISHED_RABS and a value of the IE "MBMS Service Identity" is stored in this entry of the variable ESTABLISHED_RABS:

2> notify upper layers that the radio access bearer characterised by the parameters currently stored in this entry of the variable ESTABLISHED_RABS is released;

2> reuse this entry of the variable ESTABLISHED_RABS and update it with the received value of IE "MBMS Service Identity" and, if included, with the received value of IE "MBMS Session Identity";

2> notify upper layers that the radio access bearer characterised by the updated parameters in this entry is established.

1> else:

2> set the variable INVALID_CONFIGURATION to TRUE.

…

The UE may:

1> if not receiving an MBMS service provided via a p-t-m radio bearer; or

1> if receiving an MBMS service provided via a p-t-m radio bearer that has scheduling information for that service on MSCH:

2> monitor the MBMS notification Indicator Channel (MICH).

2> if a notification on the MICH for one or more of the MBMS services included in the variable MBMS_ACTIVATED_SERVICES is detected:

3> acquire the MBMS MODIFIED SERVICES INFORMATION message with delaying the reading of MCCH until the next modification period and with stopping at the end of the modification period, in accordance with subclause 8.7.1.3;

3> handle the MBMS MODIFIED SERVICES INFORMATION message as specified in subclause 8.7.3.4.

…

The UE shall:

…

1> if in CELL_DCH state:

2> if receiving an MBMS service that is provided via a p-t-m radio bearer:

3> acquire the MBMS MODIFIED SERVICES INFORMATION message from MCCH at the start of every modification period, in accordance with subclause 8.7.1.3;

3> handle the MBMS MODIFIED SERVICES INFORMATION message as specified in subclause 8.7.3.4.

…

If the IE "MBMS required UE action" is included and concerns an MBMS activated service the UE shall:

1> if the IE "MBMS required UE action" is set to 'Acquire PTM RB info'; or

1> if the IE "MBMS required UE action" is set to 'Acquire counting info– PTM RBs unmodified' and the UE is not receiving a p-t-m RB for the concerned service:

2> continue acquiring the MBMS COMMON P-T-M RB INFORMATION, MBMS CURRENT CELL P-T-M RB INFORMATION and the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3;

2> act upon the MBMS COMMON P-T-M RB INFORMATION, MBMS CURRENT CELL P-T-M RB INFORMATION and the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION message, if received, in accordance with subclause 8.7.5

…

The UE shall set the contents of the MBMS MODIFICATION REQUEST message as follows:

…

1> if there is a change in selection of one or more of the MBMS Selected Services:

2> if the UE has not selected any MBMS Selected Service:

3> include the IE "MBMS Selected Service Info" and set the Status to 'None'.

2> otherwise:

3> include the IE "MBMS Selected Service Info" and set the Status to 'Some';

3> if the UE supports the actions specified upon reception of the IE "RAB information for MBMS ptp bearer":

4> include the IE "Support of MBMS service change for a ptp RB";

3> for each MBMS Selected Service:

4> order the MBMS Selected Services such that those selected with a higher priority are listed in the IE "MBMS Selected Services Full" before those selected with a lower priority;

4> include the IE "MBMS Selected Service ID" within the IE "MBMS Selected Services Full".

Reference

3GPP TS 25.331 clauses 8.6.4.2b, 8.7.3.3.1, 8.6.9.6, 8.7.6.2a.

### 8.5.2.1.3 Test purpose

To verify that the UE in Cell_DCH, stops the reception of an MBMS service and starts the reception of a new MBMS service.

### 8.5.2.1.4 Method of test

Initial condition

System Simulator:

2 MBMS cells, Cell 21 and Cell 24

User Equipment:

The UE is in Idle Mode as specified in clause 7.6 of TS 34.108.

The UE has selected the broadcast service to be provided by the SS (MBMS Selected Services: Service_1 included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Broadcast service application available on UE Yes/No
- UE supports MCCH reception in CELL_DCH state Yes/No
- UE Supports MBMS service change for a ptp RB Yes/No

Test procedure

1) The UE camping on cell 21, receives an MBMS UNMODIFIED SERVICES INFORMATION message including the IE “MBMS required UE action” set to “Request PTP RB”.

2) The UE shall request a p-t-p RB establishment. The UE transmits a RRC CONNECTION REQUEST message including the IE “MBMS Selected Service ID” of the concerned MBMS selected services within the IE “MBMS Selected Services Short” and the IE “MBMS Modification Period identity”.

3) Upon reception of the RADIO BEARER SETUP message, the UE shall establish this radio bearer. Then the UE transmits a RADIO BEARER SETUP COMPLETE message and starts receiving the MBMS service provided by the p-t-p RB. The variable ESTABLISHED_RABS contains the RB Identity and the MBMS Service Identity of MBMS Selected Service Service_1.

4) The UE selects the MBMS Service_2 and indicates there is a change in selection of the MBMS Selected Services by transmitting an MBMS MODIFICATION REQUEST message including the IE “Support of MBMS service change for a ptp RB” to indicate it supports the actions upon reception of IE “RAB information for MBMS ptp bearer”.

5) The SS transmits a RADIO BEARER RECONFIGURATION including IE "RAB information for MBMS ptp bearer list " with RAB information for MBMS Selected Service Service_2:

   - The radio access bearer for MBMS Service_1 is released, the UE stops the reception of MBMS Service_1.
   - The ESTABLISHED_RABS is updated with the parameters for MBMS Selected Service Service_2. The radio access bearer for MBMS Selected Service Service_2 is established.

6) The UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on Cell 24.

Expected Sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| | | | | Service_1 is available in Cell 21 |
| 1 | ← | | MBMS MODIFIED SERVICES INFORMATION | |
| 2 | ← | | MBMS GENERAL INFORMATION | |
| 3 | ← | | MBMS UNMODIFIED SERVICES INFORMATION | "MBMS required UE action" set to Request PTP RB. |
| 4 | → | | RRC CONNECTION REQUEST | The UE transmits the message with Establishment cause set to “MBMS ptp RB request” and with the “MBMS Selected Services Short” IE referring to the concerned MBMS Selected service and the corresponding Modification period identity. |
| 5 | ← | | RRC CONNECTION SETUP | RRC state indicator set to Cell_FACH |
| 6 | → | | RRC CONNECTION SETUP COMPLETE | |

| | | | |
|---|---|---|---|
| 6a | → | MBMS MODIFICATION REQUEST | The UE completing the RRC Connection Setup procedure shall initiate the MBMS MODIFICATION REQUEST procedure. This message may be received at any point after step 6 and before step 12. |
| 7 | UE | | UE transmits SERVICE REQUEST, with IE "Service type" set to "MBMS Broadcast service Reception". |
| 8 | ← | SECURITY MODE COMMAND | |
| 9 | → | SECURITY MODE COMPLETE | |
| 10 | ← | RADIO BEARER SETUP | |
| 11 | → | RADIO BEARER SETUP COMPLETE | |
| 12 | UE | | The UE is receiving the MBMS service provided by the p-t-p RB.<br>RB Identity and MBMS Service Identity of MBMS Service_1<br>stored in ESTABLISHED_RABS |
| 13 | UE | | The UE selects the MBMS Service_2 and de-selects MBMS Service_1 ( via MMI command) |
| 14 | → | MBMS MODIFICATION REQUEST | The UE transmits the message with IE “Support of MBMS service change for a ptp RB” set to TRUE. |
| 15 | ← | RADIO BEARER RECONFIGURATION | IE "RAB information for MBMS ptp bearer list" with RAB information for MBMS Selected Service_2. |
| 16 | UE | | -RAB for MBMS Selected Service_1 is released. The UE stops receiving the MBMS service 1.<br>-ESTABLISHED_RABS is updated with RB Identity and MBMS Service Identity of MBMS Service_2.<br>-RAB for MBMS Selected Service_2 is established.<br>The UE shall move to the Cell 24 where Service_2 is available |
| 17 | → | RADIO BEARER RECONFIGURATION COMPLETE | |
| 18 | UE | | The UE is receiving the MBMS Selected Service_2 provided by the p-t-p RB. |
| 19 | ←→ | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific message contents

All messages have the same content as defined in 34.108 clause 9.1.1 with the following exceptions:

MBMS UNMODIFIED SERVICES INFORMATION (Step 3)

| Information Element | Value/remark |
|---|---|
| Unmodified services list<br>- MBMS Transmission identity<br><br>MBMS required UE action | Only 1 entry<br>MBMS Transmission identity indicating MBMS activated service<br>Request PTP RB |

RRC CONNECTION REQUEST (Step 4)

| Information Element | Value/remark |
|---|---|
| Message type | |
| Initial UE identity | Same as the registered TMSI or P-TMSI |
| Establishment Cause | MBMS ptp RB request |
| Domain indicator | PS domain |
| MBMS Selected Services | |
| - MBMS Selected Services | Only 1 entry |
| - MBMS Selected Service ID | MBMS short transmission identity referring to the service the UE has selected |
| - Modification period identity | Indicates the modification period the MBMS short transmission identities refer to |

RRC CONNECTION SETUP (Step 5)

| Information Element | Value/remark |
|---|---|
| Message type | |
| Initial UE identity | Set to same value as received in Step 4 |
| RRC State Indicator | Cell_FACH |

MBMS MODIFICATION REQUEST (Step 6a)

| Information Element | Value/remark |
|---|---|
| MBMS preferred frequency request | Check that the IE is not present |
| MBMS RB list requested to be released | Check that the IE is not present |
| MBMS Selected Service Info | |
| - CHOICE Status | Some |
| - MBMS Selected Services Full | |
| - MBMS Selected Service ID | Only 1 entry |
| - MBMS Service ID | MBMS service ID of the activated MBMS service |
| - CHOICE PLMN identity | Check to see that one of the below choice element is present |
| - SameAs-MIB | (no data) |
| - explicitPLMN_Id | Check to see if it is set to the same value as "PLMN ID" in the Master Information block transmitted for the current serving cell. |

RADIO BEARER SETUP (Step 10)

Use the same message as the one specified for "MBMS PtP" in TS 34.108 clause 9, with the condition B2.

MBMS MODIFICATION REQUEST (Step 14)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| MBMS Selected Service Info | |
| MBMS RB list requested to be released | |
| - RB information to release | |
| - RB identity | RB identity for MBMS service1 provided via ptp RB |
| MBMS Selected Service Info | |
| - MBMS Selected Service ID | Only 1entry |
| - MBMS Service ID | MBMS short transmission identity referring to the service the UE has selected Service_2 |
| Support of MBMS service change for a ptp RB | TRUE |

RADIO BEARER RECONFIGURATION (Step 15)

| Information Element | Value/remark |
|---|---|
| RB information elements<br>- RAB information for MBMS ptp bearer list<br>- RAB information for MBMS ptp bearer<br>- RB Identity<br>- MBMS Service Identity<br><br>- MBMS Session Identity | <br>Only 1 entry<br><br>RBid_1<br>Coded as octets 3 to 5 of the IE *Temporary Mobile Group Identity* for Service_2<br>Session_id_2 |

#### 8.5.2.1.5 Test requirements

At step 4, the UE shall transmit a RRC CONNECTION REQUEST message with Establishment cause set to “MBMS reception” and with the IE “MBMS Selected Service ID” within the IE “MBMS Selected Services Short” and the IE “MBMS Modification Period identity”.

After step 6, the UE shall transmit a RADIO BEARER SETUP COMPLETE message.

At step 13, the UE shall request MBMS P-T-P Modification Request.

After step 15, upon reception of a RADIO BEARER RECONFIGURATION message, the radio access bearer for ptp transmission of MBMS Selected Service Service_1 is released and the radio access bearer used for ptp transmission of MBMS Selected Service Service_2 is established. The UE stops receiving the MBMS Selected Service Service_1 and moves to cell 24.

At step 17, the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

### 8.5.2.1m MBMS PTM Session Reconfiguration - Change of Activated Service / MBSFN mode (FDD)

#### 8.5.2.1m.1 Definition

This test is applicable for UEs that support MBMS broadcast services in MBSFN mode and which support either both transmit and receive functions or MBSFN receive only function.

#### 8.5.2.1m.2 Conformance requirement

The UE applies the MCCH acquisition procedure to determine the MBMS services available in the cell and to initiate reception of the services that the UE has activated. The procedure applies to all UEs supporting MBMS, irrespective of their state (idle, URA_PCH, CELL_PCH, CELL_FACH and CELL_DCH).

If the variable MBMS_ACTIVATED_SERVICES is not empty, the UE shall apply the MCCH acquisition procedure upon selecting (e.g. upon power on) or re- selecting a cell supporting MBMS or an MBSFN cluster, upon change of MBMS controlling cell (e.g. due to an active set update or hard handover), upon entering UTRA from another RAT, upon release of a MBMS PTP RB for the purpose of changing transfer mode, upon return from loss of coverage and upon receiving an indication from upper layers that the set of activated services has changed.

…

The UE shall detect the available MBMS services by acquiring the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3.

...

For cells operating in MBSFN mode as indicated in subclause 8.1.1.6.3 the UE shall immediately acquire the MBMS GENERAL INFORMATION messages i.e. It shall not delay reception of these messages until it has completed the acquisition of the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages. Likewise for cells operating in MBSFN mode as indicated in subclause 8.1.1.6.3, the UE should immediately acquire the MBMS CURRENT CELL P-T-M RB INFORMATION.

The UE shall continue acquiring the above messages until it has received a consistent set of MCCH information e.g. Both the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION message should be acquired in the same modification period.

…

When requested to acquire MBMS control information other than the MBMS ACCESS INFORMATION message, the UE shall:

1> if requested to start reading MCCH at the next modification period:

2> start reading MCCH at the beginning of the next modification period.

1> otherwise

2> start reading MCCH at the beginning of the next repetition period.

1> if requested to stop reading MCCH at the end of the modification period:

2> continue reading MCCH until the required MBMS control information is received or until the UE detects a TTI in which no MCCH information is transmitted, whichever is first;

2> continue reading MCCH in this manner at every subsequent repetition period, until the information is received correctly or until the end of the modification period.

1> otherwise:

2> continue reading MCCH until the required MBMS control information is received or until the UE detects a TTI in which no MCCH information is transmitted, whichever is first;

2> continue reading MCCH in this manner at every subsequent repetition period, until the information is received correctly.

NOTE 1: The UE may combine information received at different repetition periods within a modification period.

…

If the IE "MBMS required UE action" is included and concerns an MBMS activated service the UE shall:

…

1> if the IE "MBMS required UE action" is set to 'Acquire PTM RB info'; or

1> if the IE "MBMS required UE action" is set to 'Acquire counting info– PTM RBs unmodified' and the UE is not receiving a p-t-m RB for the concerned service:

2> continue acquiring the MBMS COMMON P-T-M RB INFORMATION, MBMS CURRENT CELL P-T-M RB INFORMATION and the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3

2> act upon the MBMS COMMON P-T-M RB INFORMATION, MBMS CURRENT CELL P-T-M RB INFORMATION and the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION message, if received, in accordance with subclause 8.7.5;

…

Upon completing the reception of the MBMS COMMON P-T-M RB INFORMATION and the MBMS CURRENT CELL P-T-M RB INFORMATION messages for an activated MBMS service, the UE shall:

1> if the UE is already receiving an MTCH and does not have the capability to receive the new service in addition:

2> the UE behaviour is undefined.

NOTE: In this case, the UE may request upper layers to prioritise the services and only receive the service(s) prioritised by upper layers.

1> act upon all received information elements as specified in subclause 8.6, unless specified otherwise in the following;

1> if the UE previously received the service by means of a p-t-m radio bearer from a cell belonging to another MBMS cell group:

2> re-establish RLC;

2> re-initialise PDCP.

1> start immediately to use the indicated configuration unless specified otherwise;

1> start or continue receiving the indicated p-t-m radio bearers depending on its UE capabilities.

The UE shall continue acquiring the above messages until it has received a consistent set of MCCH information i.e. the MBMS MODIFIED SERVICES INFORMATION message, MBMS UNMODIFIED SERVICES INFORMATION message, MBMS COMMON P-T-M RB INFORMATION and the MBMS CURRENT CELL P-T-M RB INFORMATION message should be acquired in the same modification period.

…

The UE shall:

1> if the IE "Secondary CCPCH system information MBMS" is included:

2> apply the Secondary CCPCH and FACH indicated by the IE "FACH carrying MCCH" for receiving MCCH.

1> otherwise, if the IE "Secondary CCPCH system information" includes the IE "MCCH configuration information":

2> apply the Secondary CCPCH and FACH indicated by the IE “MCCH configuration information” for receiving MCCH.

1> for TDD, if the IE "TDD MBSFN Information" is included:

2> apply the scrambling codes (as referenced by the "Cell parameters ID") to each timeslot indicated by "TDD MBSFN Information".

…

The UE shall select the Secondary CCPCH for acquiring MCCH information according to the following rules:

1> if System Information Block type 5 or System Information Block type 5bis is defined and includes an S-CCPCH within the IE "Secondary CCPCH system information" including a FACH for which the IE "MCCH configuration information" is included:

2> select that S-CCPCH and FACH for receiving MCCH.

1> otherwise if System Information Block type 5 or System Information Block type 5bis is defined and includes an SCCPCH within the IE "Secondary CCPCH system information MBMS" for which the IE "FACH carrying MCCH" is included:

2> select that S-CCPCH and FACH for receiving MCCH.

Reference

3GPP TS 25.331 clauses 8.7.2.1, 8.7.2.2, 8.7.2.3, 8.7.1.3, 8.6.9.6, 8.7.5.3, 8.1.1.6.5, 8.5.19a.

### 8.5.2.1m.3 Test purpose

To verify that on indication from upper layers that there has been a change to the activated service the UE stops the reception of the currently received MBMS service.

To verify that the UE starts the reception of the new MBMS service now available on the same MBSFN cluster.

8.5.2.1m.4 Method of test

Initial condition

System Simulator:

- MBSFN carrier: 1 cell, Cell 31.

User Equipment:

- On the unicast carrier cell the UE is in registered Idle Mode on PS (state 3) if the UE only supports PS domain or registered Idle Mode on CS/PS (state 7) if the UE supports both CS and PS domains, as specified in clause 7.2.2 of TS 34.108.
- The UE is in MBSFN Idle mode with no services activated as specified in clause 7.6.3 of TS 34.108.

Related ICS/IXIT statements

- MBMS Broadcast services in MBSFN mode application available on UE Yes/No.
- Support of transmit and receive functions available on UE Yes/No.
- Support of MBSFN receive only function available on UE Yes/No.

Test procedure

a) The UE is camping on cell 31, receives an MBMS UNMODIFIED SERVICES INFORMATION message including the IE “MBMS required UE action” set to “Acquire PTM RB”.

b) The UE start reception of the MBMS data on MTCH.

c) A new session is setting up by up layer. The SS then notifies on the MCCH the change in services. The SS transmits an MBMS MODIFIED SERVICES INFORMATION including new IE "Service Identity " and “required UE action” Selected Service Service_2

d) The UE selects the MBMS Service_2.:

- The UE stops the reception of MBMS Service_1.
- The ESTABLISHED_RABS is updated with the parameters for MBMS Selected Service Service_2. The UE establish to receive MBMS Service_2

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| | | | | Service_1 is available in Cell 31 |
| 1 | | ← | MBMS MODIFIED SERVICES INFORMATION | |
| 2 | | ← | MBMS COMMON P-T-M RB INFORMATION | |
| 3 | | ← | MBMS UNMODIFIED SERVICES INFORMATION | "MBMS required UE action" set to ‘Acquire PTM RB’. |
| 4 | UE | | | The UE establish to receive Service_1 |
| 5 | | ← | MBMS MODIFIED SERVICES INFORMATION | When a new session is set up the SS notifies on the MCCH the change in the MBMS service at another modification period. |
| 6 | | ← | MBMS COMMON P-T-M RB INFORMATION | |
| 7 | | ← | MBMS UNMODIFIED SERVICES INFORMATION | Service_2 is available in Cell 31 |
| 8 | UE | | | The UE selects the MBMS Service_2 |
| 9 | UE | | | The UE stop to receive Service_1 |
| 10 | UE | | | The UE establish to receive Service_2 |
| 11 | | ← | CLOSE UE TEST LOOP | |
| 12 | | → | CLOSE UE TEST LOOP COMPLETE | Loop back mode 3 on MTCH is activated. |
| 13 | | | | The SS broadcasts MBMS data 10 RLC SDUs of on MTCH on the concerned MBMS radio bearer. |

| | | | |
|---|---|---|---|
| 14 | ← | UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST | The SS checks that the UE has received MBMS data. |

| 6 | ← | | UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST | |
| 7 | → | | UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE | The SS checks that the number of reported RLC PDUs is greater than zero and records the value. |
| 8 | ← | | MBMS MODIFIED SERVICES INFORMATION | SS indicates a change in the MBMS Broadcast Service for Service ID 1 with MBMS p-t-m activation time set to the first TTI of the next modification period.<br>SS: MCCH message combination C4 for 1 modification period, then combination C2 |
| 9 | | | MBMS COMMON P-T-M RB INFORMATION | UE begins reception of the MBMS service using the 128kbps radio bearer configuration as specified in TS 34.108 clause 6.10.2.4.3.6(FDD) or clause 6.11.5.4.4.6 (1.28 Mcps TDD). |
| 10 | | | | The SS broadcasts 10 RLC SDUs of MBMS data on MTCH on the concerned MBMS radio bearer, starting at MBMS p-t-m activation time. |
| 11 | ← | | UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST | |
| 12 | → | | UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE | The SS checks that the number of reported RLC PDUs is greater than the reported value at step 9, |
| 13 | ← | | OPEN UE TEST LOOP | |
| 14 | → | | OPEN UE TEST LOOP COMPLETE | |

Specific Message Contents.

MBMS MODIFIED SERVICES INFORMATION (Step 1)

| Information Element | Value/remark |
|---|---|
| Modified service list | |
| - MBMS Transmission identity | MBMS Transmission identity indicating MBMS activated service |
| - MBMS required UE action | Acquire PTM RB info |

MBMS MODIFIED SERVICES INFORMATION (Step 8)

| Information Element | Value/remark |
|---|---|
| Modified service list | |
| - MBMS Transmission identity | MBMS Transmission identity indicating MBMS activated service |
| - MBMS required UE action | Acquire PTM RB info |
| MBMS p-t-m activation time | Set to the first TTI of the next modification period. |

UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE (Step 7)

| Information Element | Value/remark |
|---|---|
| RLC SDU Counter Value | Check that the number is greater than zero. |

#### 8.5.1.15.5 Test requirements

At step 7 the UE shall send a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE with a RLC SDU counter value greater than zero.

At step 12 the UE shall send a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE with a RLC SDU counter value greater than the reported value at previous sub-test.

NOTE: For UE in UE test loop mode 3 then the RLC SDU counter value is only reset upon reception of CLOSE UE TEST LOOP message configuring UE test loop mode 3. As the test runs without deactivating the UE test mode then the SS needs to check the reported counter value against the value reported at previous check.

### 8.5.2.2 MBMS PTM Session Reconfiguration – Transfer Mode Change to PTP / MBMS Selected Service

#### 8.5.2.2.1 Definition

This test is applicable for all UEs supporting MBMS broadcast services.

#### 8.5.2.2.2 Conformance requirement

The UE shall:

1> if in idle mode, URA_PCH, CELL_PCH or CELL_FACH state:

2> if receiving an MBMS service that is provided via a p-t-m radio bearer; or

2> if not receiving an MBMS service that is provided via a p-t-m radio bearer and not monitoring MICH:

3> acquire the MBMS MODIFIED SERVICES INFORMATION message from MCCH at the start of every modification period, in accordance with subclause 8.7.1.3;

3> handle the MBMS MODIFIED SERVICES INFORMATION message as specified in subclause 8.7.3.4.

1> if in CELL_DCH state:

2> if receiving an MBMS service that is provided via a p-t-m radio bearer:

3> acquire the MBMS MODIFIED SERVICES INFORMATION message from MCCH at the start of every modification period, in accordance with subclause 8.7.1.3;

3> handle the MBMS MODIFIED SERVICES INFORMATION message as specified in subclause 8.7.3.4.

….

1> if the IE "MBMS required UE action" is set to 'Request PTP RB':

2> if the UE is in idle mode:

3> indicate to upper layers that establishment of a PS signalling connection is required to receive the concerned MBMS service [5], unless the UE has already requested p-t-p RB establishment in the current modification period, and use the establishment cause set to 'MBMS ptp RB request' in the RRC connection establishment procedure.

2> if the UE is in URA_PCH, Cell_PCH, or CELL_FACH states:

3> indicate to upper layers to initiate a service request procedure [5] to receive the concerned MBMS service;

3> perform the cell update procedure with cause "MBMS ptp RB request", as specified in subclause 8.3.1.2, unless the UE has already requested p-t-p RB establishment in the current modification period.

1> if the IE "MBMS required UE action" is set to 'Release PTM RB':

2> stop receiving the concerned MBMS service;

2> if the UE is in a state other than CELL_DCH (for FDD) or if the UE is in Idle mode, URA_PCH or CELL_PCH state (for TDD); and

2> if the UE does not decide to receive an MBMS service for which a preferred frequency applies; and

2> if the IE ‘MBMS dispersion indicator’ is set to TRUE; and

2> if the variable MBMS_PREV_FREQUENCY_INFO is not empty:

3> if any frequency in SIB11 or SIB12 has the same frequency stored in the variable MBMS_PREV_FREQUENCY_INFO:

4> select a suitable UTRA cell in that frequency.

4> if no suitable UTRA cell in that frequency is found:

5> select a suitable UTRA cell in another frequency.

3> if no frequency in SIB11 or SIB12 has the same frequency stored in the variable MBMS_PREV_FREQUENCY_INFO.

4> select a frequency randomly among the inter-frequencies indicated in SIB11 or SIB12.

5> select a suitable UTRA cell in the selected frequency

5> if no suitable UTRA cell in the selected frequency is found:

6> select a suitable UTRA cell in another frequency.

3> clear the variable MBMS_PREV_FREQUENCY_INFO.

2> clear all service specific information applicable for the concerned service.

NOTE: The UE is only required to acquire the relevant SIB11 or SIB12, according to what is specified in subclauses 8.1.1.6.11 and 8.1.1.6.12.

…

1> if the UE performs cell update for MBMS ptp radio bearer request as specified in subclause 8.6.9.6; and

1> if one or more of the MBMS services for which the UE initiates the ptp radio bearer request concerns an MBMS Selected Service:

2> for each MBMS Selected Service that is indicated on MCCH and for which the UE initiates ptp radio bearer request:

3> order the MBMS Selected Services such that those selected with a higher priority are listed in the IE "MBMS Selected Services Short" before those selected with a lower priority;

3> include the IE "MBMS Selected Service ID" within the IE "MBMS Selected Services Short" and set it to a value in accordance with subclause 8.6.9.8.

Reference

3GPP TS 25.331, clauses 8.7.3.3.1, 8.6.9.6, 8.3.1.3.

8.5.2.2.3 Test purpose

To verify UE correctly handles the transfer mode change from MBMS PTM RB to MBMS PTP RB.

8.5.2.2.4 Method of test

Initial condition

System Simulator:

1 MBMS cell, Cell 21

User Equipment:

The UE is in Cell_FACH state as specified in clause 7.6 of TS 34.108.

The UE is interested in the selected service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Broadcast service application available on UE Yes/No

Test procedure

1) The UE in Cell_FACH state, receives an MBMS MODIFIED SERVICES INFORMATION messages including IEs “MBMS required UE action” set to “Acquire PTM RB info”. The UE starts receiving the indicated p-t-m radio bearer.

2) The SS waits for the UE to start reception of the MBMS data on MTCH and then the MBMS radio bearer on MTCH is put into loopback mode 3.

3) The SS starts broadcasting MBMS data on MTCH on the new concerned MBMS radio bearer. The SS continues to transmit MBMS data for 5s and then the SS retrieves the number of RLC SDUs on MTCH counted by the UE by sending the UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST message. The number of received RLC SDUs reported by the UE shall be at least one.

4) The UE receives an MBMS MODIFIED SERVICES INFORMATION message including IE “MBMS required UE action” set to “Request PTP RB” for the same concerned MBMS.

5) The UE releases the MBMS PTM RB and shall request a p-t-p RB establishment. The UE shall perform a cell_update procedure with cause “MBMS ptp RB request”.

6) The UE requests reception of the PTP service by transmitting a SERVICE REQUEST message.

7) The SS initiates establishment of a pt-p radio bearer by sending a RADIO BEARER SETUP message to the UE. The UE returns a RADIO BEARER SETUP COMPLETE to confirm that the p-t-p MBMS bearer is established.

8) SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected Sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| | | | | The UE is in cell_FACH. |
| 0a | ← | | ACTIVATE RB TEST MODE | |
| 0b | → | | ACTIVATE RB TEST MODE COMPLETE | |
| 1 | ← | | MBMS MODIFIED SERVICES INFORMATION | “MBMS required UE action” IE is set to "Acquire PTM RB info". |
| 2 | | | VOID | |
| 3 | | | VOID | |
| 4 | | | VOID | |
| 5 | → | | | The SS waits a few seconds for the UE to activate MTCH reception |
| 6 | ← | | CLOSE UE TEST LOOP | |
| 7 | → | | CLOSE UE TEST LOOP COMPLETE | Loop back mode 3 on MTCH is activated. |
| 8 | ← | | | The SS broadcasts MBMS data 10 RLC SDUs of on MTCH on the concerned MBMS radio bearer. |
| 9 | ← | | UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST | The SS checks that the UE has received MBMS data. |
| 10 | → | | UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE | |
| 11 | SS | | OPEN UE TEST LOOP | |
| 12 | ← | | OPEN UE TEST LOOP COMPLETE | |
| 13 | ← | | MBMS MODIFIED SERVICES INFORMATION | “MBMS required UE action” IE is set to "Request PTP RB”. |
| 14 | → | | CELL UPDATE | The UE transmits the message with cell update cause set to “MBMS ptp RB request” and with the “MBMS Selected Services Short” IE referring to the concerned MBMS Selected service and the corresponding Modification period identity. |
| 15 | ← | | CELL UPDATE CONFIRM | RRC State Indicator is set to CELL-FACH |
| 16 | UE | | | UE transmits SERVICE REQUEST, with IE "Service type" set to "MBMS Broadcast service Reception”. |
| 17 | SS | | | SS transmits the SERVICE ACCEPT message to the UE. |
| 18 | ← | | RADIO BEARER SETUP | RRC State Indicator set to CELL-DCH |
| 19 | → | | RADIO BEARER SETUP COMPLETE | |
| 20 | → | | MBMS MODIFICATION REQUEST | This message may be received at any point after step 18 and before step 21. |
| 21 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails |

Specific message contents

All messages have the same content as defined in 34.108 clause 9.1.1 with the following exceptions:

MBMS MODIFIED SERVICES INFORMATION (Step 1)

| Information Element | Value/remark |
|---|---|
| Modified service list<br>- MBMS Transmission identity<br><br>MBMS required UE action | Only 1 entry<br>MBMS Transmission identity indicating MBMS activated service<br>Acquire PTM RB info |

MBMS MODIFIED SERVICES INFORMATION (Step 13)

| Information Element | Value/remark |
|---|---|
| Modified service list<br>- MBMS Transmission identity<br><br>MBMS required UE action | Only 1 entry<br>MBMS Transmission identity indicating MBMS activated service<br>Request PTP RB |

CELL UPDATE (Step 14)

#### 8.5.2.2.5 Test requirements

At step 11, the UE shall transmit a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message with the number of reported RLC SDUs shall be greater than zero.

At step 14, the UE shall send a CELL UPDATE message with Cell update cause set to “MBMS ptp RB request”.

At step 19, the UE shall transmit RADIO BEARER SETUP COMPLETE message.

### 8.5.2.2m MBMS PTM Session Reconfiguration - Transfer Mode Change to PTP / MBMS Multicast Service

#### 8.5.2.2m.1 Definition

This test is applicable for all UEs that support MBMS multicast services.

#### 8.5.2.2m.2 Conformance requirement

Same conformance requirement as in clause 8.5.2.2.2.

#### 8.5.2.2m.3 Test purpose

Same test purpose as in clause 8.5.2.2.3.

8.5.2.2m.4 Method of test

Initial condition

System Simulator:

1 MBMS cell, Cell 21.

User Equipment:

The UE is in Cell_FACH as specified in clause 7.6 of TS 34.108.

The UE has joined the multicast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Multicast service application available on UE Yes/No.

Test procedure

Same test procedure as in clause 8.5.2.2.4.

Expected Sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| | | | | The UE is in cell_FACH. |
| 0a | ← | | ACTIVATE RB TEST MODE | |
| 0b | → | | ACTIVATE RB TEST MODE COMPLETE | |
| 1 | ← | | MBMS MODIFIED SERVICES INFORMATION | “MBMS required UE action” IE is set to "Acquire PTM RB info". |

| 3 | ← | | MBMS COMMON P-T-M RB INFORMATION | |
| 4 | ← | | MBMS CURRENT CELL P-T-M RB INFORMATION | |
| 5 | | | | The SS waits a few seconds for the UE to activate MTCH reception |
| 6 | ← | | CLOSE UE TEST LOOP | |
| 7 | → | | CLOSE UE TEST LOOP COMPLETE | Loop back mode 3 on MTCH is activated. |
| 8 | ← | | | The SS broadcasts MBMS data 10 RLC SDUs of on MTCH on the concerned MBMS radio bearer. |
| 9 | ← | | UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST | The SS checks that the UE has received MBMS data. |
| 10 | → | | UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE | |
| 11 | ← | | OPEN UE TEST LOOP | |
| 12 | → | | OPEN UE TEST LOOP COMPLETE | |
| 13 | ← | | MBMS MODIFIED SERVICES INFORMATION | “MBMS required UE action” IE is set to "Request PTP RB”. |
| 14 | → | | CELL UPDATE | The UE transmits the message with cell update cause set to “MBMS ptp RB request” and with the “MBMS Selected Services Short” IE referring to the concerned MBMS Selected service and the corresponding Modification period identity. |
| 15 | ← | | CELL UPDATE CONFIRM | RRC State Indicator is set to CELL-FACH |
| 16 | UE | | | UE transmits SERVICE REQUEST, with IE "Service type" set to "MBMS Multicast service Reception”. |
| 17 | SS | | | SS transmits the SERVICE ACCEPT message to the UE. |
| 18 | ← | | RADIO BEARER SETUP | RRC State Indicator set to CELL-DCH |

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 19 | → | | RADIO BEARER SETUP COMPLETE | |
| 20 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails |

Specific message contents

Same specific messages contents as in clause 8.5.2.2.4 except for CELL UPDATE message content (step 14).

CELL UPDATE (Step 14)

| Information Element | Value/remark |
|---|---|
| Cell update cause | MBMS ptp RB request |

#### 8.5.2.2m.5 Test requirements

Same test requirement as in clause 8.5.2.2.5.

### 8.5.2.3 MBMS PTP Session Reconfiguration - Transfer mode change to PTM / MBMS Selected Service

#### 8.5.2.3.1 Definition

This test is applicable for all UEs that support MBMS broadcast services and capable of reading MCCH in CELL_DCH state.

#### 8.5.2.3.2 Conformance requirement

If the variable MBMS_ACTIVATED_SERVICES is not empty, the UE shall apply the MCCH acquisition procedure upon selecting (e.g. upon power on) or re- selecting a cell supporting MBMS, upon change of MBMS controlling cell (e.g. due to an active set update or hard handover), upon entering UTRA from another RAT, upon release of a MBMS PTP RB for the purpose of changing transfer mode, upon return from loss of coverage and upon receiving an indication from upper layers that the set of activated services has changed.

…

A UE entering CELL_DCH shall initiate the MBMS modification request procedure in the following cases:

1> if the UE has any MBMS Selected Service; and

1> if the IE "MCCH configuration information" was received in System Information Block Type 5 or System Information Block Type 5bis prior to entering CELL_DCH.

A UE completing an RRC Connection Setup procedure shall initiate the MBMS modification request procedure in the following cases:

1> if the UE has any MBMS Selected Service; and

1> if the IE "MCCH configuration information" was received in System Information Block Type 5 or System Information Block Type 5bis prior to completing the RRC Connection Setup procedure.

A UE in CELL_DCH shall initiate the MBMS modification request procedure in the following cases:

1> the preferred frequency applicable for the MBMS service prioritised by upper layers is different from the currently used frequency;

1> upper layers request to discontinue reception of an MBMS service provided via a p-t-p radio bearer e.g. because this inhibits reception of a higher priority service;

1> upon a change in selection of the MBMS Selected Services.

NOTE: The above case may occur upon receiving a dedicated notification or in other cases e.g. a change of transfer mode from p-t-p to p-t-m for the UE's highest priority MBMS service.

…

If the IE "MBMS RB list released to change transfer mode" is included the UE shall:

1> perform the service prioritisation procedure as specified in subclause 8.5.26, taking into account that the MBMS service(s) for which the radio bearers are released will be provided via p-t-m radio bearer(s).

…

A UE in CELL_DCH shall initiate the MBMS modification request procedure in the following cases:

1> the preferred frequency applicable for the MBMS service prioritised by upper layers is different from the currently used frequency;

1> upper layers request to discontinue reception of an MBMS service provided via a p-t-p radio bearer e.g. because this inhibits reception of a higher priority service;

1> upon a change of the MBMS Selected Services.

NOTE: The above case may occur upon receiving a dedicated notification or in other cases e.g. a change of transfer mode from p-t-p to p-t-m for the UE's highest priority MBMS service.

…

1> if the IE "MBMS required UE action" is set to 'Request PTP RB':

2> if the UE is in idle mode:

3> indicate to upper layers that establishment of a PS signalling connection is required to receive the concerned MBMS service [5], unless the UE has already requested p-t-p RB establishment in the current modification period, and use the establishment cause set to 'MBMS ptp RB request' in the RRC connection establishment procedure.

…

If the IE "MBMS RB list released to change transfer mode" is included the UE shall:

1> perform the service prioritisation procedure as specified in subclause 8.5.26, taking into account that the MBMS service(s) for which the radio bearers are released will be provided via p-t-m radio bearer(s).

Reference

3GPP TS 25.331 clauses 8.7.2.2, 8.7.6.2, 8.6.9.5, 8.6.9.6, 8.6.9.5.

#### 8.5.2.3.3 Test purpose

To verify that the UE shall apply the MCCH acquisition procedure upon release of a MBMS PTP RB for the purpose of changing transfer mode.

#### 8.5.2.3.4 Method of test

Initial condition

System Simulator: 1 MBMS cell, Cell 21.

User Equipment:

The UE has a valid IMSI.

The UE is interested in the selected service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

The UE is in Idle Mode as specified in clause 7.6 of TS 34.108.

Related ICS/IXIT statements

- MBMS Broadcast service application available on UE Yes/No
- UE supports MCCH reception in CELL_DCH Yes/No

Test procedure

1) The UE camping on cell A, receives an MBMS MODIFIED SERVICES INFORMATION message including IE “MBMS required UE action” set to “Request PTP RB”.
2) The UE shall request a p-t-p RB establishment. The UE transmits a RRC CONNECTION REQUEST message including the IE "MBMS Selected Service ID" of the concerned MBMS selected services within the IE "MBMS Selected Services Short" and the IE "MBMS Modification Period identity".
3) Upon reception of the RADIO BEARER SETUP message, the UE shall establish this radio bearer. Then the UE transmits a RADIO BEARER SETUP COMPLETE message and start receiving the MBMS service provided by the p-t-p RB.
4) Upon reception of the RADIO BEARER RELEASE message including the IE “MBMS RB list released to change transfer mode”, the UE shall release the MBMS p-t-p radio bearer for the purpose of changing transfer mode.
5) The UE shall apply the MCCH acquisition procedure. The UE receives a MBMS UNMODIFIED SERVICES INFORMATION message with “MBMS required UE action” IE set to “Acquire PTM RB info”. The UE start receiving the indicated p-t-m radio bearer.
6) The SS waits for the UE to start reception of the MBMS data on MTCH and then the MBMS radio bearer on MTCH is put into loopback mode 3.
7) The SS starts broadcasting MBMS data on MTCH on the new concerned MBMS radio bearer. The SS continues to transmit MBMS data for 5s and then the SS retrieves the number of RLC SDUs on MTCH counted by the UE by sending the UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST message. The number of received RLC SDUs reported by the UE shall be at least one.
8) The loopback mode 3 in the UE is deactivated and SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

Expected Sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| | | | | UE in Idle mode on Cell 21. |
| 1 | ← | | MBMS MODIFIED SERVICES INFORMATION | "MBMS required UE action" set to Request PTP RB. |
| 2 | | | void | |
| 3 | | | void | |
| 4 | → | | RRC CONNECTION REQUEST | The UE transmits the message with Establishment cause set to “MBMS ptp RB request” and with the “MBMS Selected Services Short” IE referring to the concerned MBMS Selected service and the corresponding Modification period identity. |
| 5 | ← | | RRC CONNECTION SETUP | RRC state indicator set to Cell_FACH |
| 6 | → | | RRC CONNECTION SETUP COMPLETE | |
| 6a | → | | MBMS MODIFICATION REQUEST | The UE completing the RRC Connection Setup procedure shall initiate the MBMS MODIFICATION REQUEST procedure. This message may be received at any point after step 6 and before step 12 |
| 7 | UE | | | UE transmits SERVICE REQUEST, with IE "Service type" set to "MBMS Broadcast service Reception”. |

|---|---|
| Message type | |
| Initial UE identity | Same as the registered TMSI or P-TMSI |
| Establishment Cause | MBMS ptp RB request |
| Domain indicator | PS domain |
| MBMS Selected Services | |
| - MBMS Selected Services | Only 1 entry |
| - MBMS Selected Service ID | MBMS short transmission identity referring to the service the UE has selected |
| - Modification period identity | Indicates the modification period the MBMS short transmission identities refer to |

RRC CONNECTION SETUP (Step 5)

| Information Element | Value/remark |
|---|---|
| Message type | |
| Initial UE identity | Set to same value as received in Step 4 |
| RRC State Indicator | Cell_FACH |

MBMS MODIFICATION REQUEST (steps 6a)

| Information Element | Value/remark |
|---|---|
| MBMS preferred frequency request | Check that the IE is not present |
| MBMS RB list requested to be released | Check that the IE is not present |
| MBMS Selected Service Info | |
| - CHOICE Status | Some |
| - MBMS Selected Services Full | |
| - MBMS Selected Service ID | Only 1 entry |
| - MBMS Service ID | MBMS service ID of the activated MBMS service |
| - CHOICE PLMN identity | Check to see that one of the below choice element is present |
| - SameAs-MIB | (no data) |
| - explicitPLMN_Id | Check to see if it is set to the same value as "PLMN ID" in the Master Information block transmitted for the current serving cell. |

RADIO BEARER SETUP (Step 10)

Use the same message as the one specified for "MBMS PtP" in TS 34.108 clause 9, with the condition B2.

RADIO BEARER RELEASE (Step 13)

| Information Element | Value/remark |
|---|---|
| MBMS RB list released to change transfer mode | Only 1 entry |
| - RB information to release | |
| - RB identity | RB identity for MBMS service1 provided via ptp RB |

MBMS MODIFIED SERVICES INFORMATION (Step 18)

| Information Element | Value/remark |
|---|---|
| Modified service list | Only 1 entry |
| - MBMS Transmission identity | MBMS Transmission identity indicating MBMS activated service |
| - MBMS required UE action | Acquire PTM RB info |

#### 8.5.2.3.5 Test requirements

At step 6, the UE shall send a RRC CONNECTION SETUP COMPLETE message.

At step 11, the UE shall send a RADIO BEARER SETUP COMPLETE message.

At step 14, the UE shall send a RADIO BEARER RELEASE COMPLETE message.

At step 28, the UE shall transmit a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message with the number of reported RLC SDUs shall be greater than zero.

## 8.5.2.3m MBMS PTP Session Reconfiguration - Transfer mode change to PTM / MBMS Multicast Service

### 8.5.2.3m.1 Definition

This test is applicable for all UEs that support MBMS multicast services and capable of reading MCCH in CELL_DCH state.

### 8.5.2.3m.2 Conformance requirement

Same conformance requirement as in clause 8.5.2.3.2

### 8.5.2.3m.3 Test purpose

Same test purpose as in clause 8.5.2.3.3.

### 8.5.2.3m.4 Method of test

#### Initial condition

System Simulator:

1 MBMS cell

User Equipment:

The UE is in Idle Mode as specified in clause 7.6 of TS 34.108.

The UE has joined the multicast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

#### Related ICS/IXIT statements

- MBMS Multicast service application available on UE Yes/No.
- UE supports MCCH reception in CELL_DCH Yes/No

#### Test procedure

Same test procedure as in clause 8.5.2.2.4 except for the point 2:

2) The UE shall request a p-t-p RB establishment. The UE transmits a RRC CONNECTION REQUEST message.

#### Expected Sequence

Same expected sequence as in clause 8.5.2.3.4 except for RRC CONNECTION REQUEST message content (step 4) and MODIFICATION REQUEST procedure not required.

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| | | | | UE in Idle mode on Cell 21. |
| 1 | ← | | MBMS MODIFIED SERVICES INFORMATION | |
| 2 | ← | | MBMS GENERAL INFORMATION | |
| 3 | ← | | MBMS UNMODIFIED SERVICES INFORMATION | "MBMS required UE action" set to Request PTP RB. |
| 4 | → | | RRC CONNECTION REQUEST | The UE transmits the message with Establishment cause set to “MBMS ptp RB request” |
| 5 | ← | | RRC CONNECTION SETUP | RRC state indicator set to Cell_FACH |
| 6 | → | | RRC CONNECTION SETUP COMPLETE | |

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 7 | UE | | | UE transmits SERVICE REQUEST, with IE "Service type" set to "MBMS Multicast service Reception". |
| 8 | ← | | SECURITY MODE COMMAND | |
| 9 | → | | SECURITY MODE COMPLETE | |
| 10 | ← | | RADIO BEARER SETUP | |
| 11 | → | | RADIO BEARER SETUP COMPLETE | |
| 12 | UE | | | The UE is receiving the MBMS service provided by the p-t-p RB. |
| 13 | ← | | RADIO BEARER RELEASE | IE "RAB information for MBMS ptp bearer list " with RAB information for MBMS Service_1 |
| 14 | → | | RADIO BEARER RELEASE COMPLETE | the UE releases the MBMS p-t-p radio bearer for the purpose of changing transfer mode. |
| 15 | ← | | ACTIVATE RB TEST MODE | The SS activates the RB TEST MODE |
| 16 | → | | ACTIVATE RB TEST MODE COMPLETE | |
| 17 | SS | | | The following messages are sent on the next MP. |
| 18 | ← | | MBMS MODIFIED SERVICES INFORMATION | “MBMS required UE action” IE is set to "Acquire PTM RB info". |
| 19 | ← | | MBMS UNMODIFIED SERVICES INFORMATION | |
| 20 | ← | | MBMS GENERAL INFORMATION | |
| 21 | ← | | MBMS COMMON P-T-M RB INFORMATION | |
| 22 | ← | | MBMS NEIGHBOURING CELL P-T-M RB INFORMATION | |
| 23 | SS | | | The SS waits a few seconds for the UE to activate MTCH reception |
| 24 | ← | | CLOSE UE TEST LOOP | |
| 25 | → | | CLOSE UE TEST LOOP COMPLETE | Loop back mode 3 on MTCH is activated. |
| 26 | | | | The SS broadcasts MBMS data 10 RLC SDUs of on MTCH on the concerned MBMS radio bearer. |
| 27 | ← | | UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST | The SS checks that the UE has received MBMS data. |
| 28 | → | | UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE | |
| 29 | ← | | OPEN UE TEST LOOP | |
| 30 | → | | OPEN UE TEST LOOP COMPLETE | |
| 31 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific message contents

Same specific messages contents as in clause 8.5.2.3.4 except for RRC CONNECTION REQUEST message content (step 4).

RRC CONNECTION REQUEST (Step 4)

| Information Element | Value/remark |
|---|---|
| Message type | |
| Initial UE identity | Same as the registered TMSI or P-TMSI |
| Establishment Cause | MBMS ptp RB request |
| Domain indicator | PS domain |

### 8.5.2.3m.5 Test requirements

Same test requirement as in clause 8.5.2.3.5.

### 8.5.2.4 MBMS PTM Session Reconfiguration – MTCH data rate change / MBMS Broadcast Service

#### 8.5.2.4.1 Definition and applicability

This test case is applicable for all UEs that support MBMS broadcast services.

#### 8.5.2.4.2 Conformance requirement

The UE shall detect the available MBMS services by acquiring the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3.

The UE shall immediately acquire the MBMS ACCESS INFORMATION and the MBMS GENERAL INFORMATION messages i.e. it shall not delay reception of these messages until it has completed the acquisition of the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages. Likewise, the UE should immediately acquire the MBMS CURRENT CELL P-T-M RB INFORMATION and MBMS NEIGHBOURING CELL P-T-M RB INFORMATION messages.

The UE shall continue acquiring the above messages until it has received a consistent set of MCCH information e.g. both the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION message should be acquired in the same modification period.

…

The UE may:

1> monitor the MBMS notification Indicator Channel (MICH);

1> if a notification on the MICH for one or more of the MBMS services included in the variable MBMS_ACTIVATED_SERVICES is detected:

2> acquire the MBMS MODIFIED SERVICES INFORMATION message with delaying the reading of MCCH until the next modification period and with stopping at the end of the modification period, in accordance with subclause 8.7.1.3;

2> handle the MBMS MODIFIED SERVICES INFORMATION message as specified in subclause 8.7.3.4.

The UE shall:

1> if in idle mode, URA_PCH, CELL_PCH or CELL_FACH state:

2> if not monitoring MICH:

3> acquire the MBMS MODIFIED SERVICES INFORMATION message from MCCH at the start of every modification period, in accordance with subclause 8.7.1.3;

3> handle the MBMS MODIFIED SERVICES INFORMATION message as specified in subclause 8.7.3.4.

…

1> if the IE "MBMS required UE action" is set to 'Acquire PTM RB info'; or

1> if the IE "MBMS required UE action" is set to 'Acquire counting info– PTM RBs unmodified' and the UE is not receiving a p-t-m RB for the concerned service:

2> continue acquiring the MBMS COMMON P-T-M RB INFORMATION, MBMS CURRENT CELL P-T-M RB INFORMATION and the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3;

2> act upon the MBMS COMMON P-T-M RB INFORMATION, MBMS CURRENT CELL P-T-M RB INFORMATION and the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION message, if received, in accordance with subclause 8.7.5.

Reference

3GPP TS 25.331 clauses 8.7.2.3, 8.7.3.3.1, 8.6.9.6.

8.5.2.4.3 Test purpose

To verify that the UE shall receive the MBMS notification information while receiving an ongoing MBMS service via a p-t-m radio bearer, and apply the new p-t-m radio bearer configuration.

8.5.2.4.4 Method of test

Initial Condition

System Simulator:

1 MBMS cell.

User Equipment:

The UE is in CELL_FACH state as specified in clause 7.6 of TS 34.108.

The UE is interested in the broadcast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statement(s)

- MBMS Broadcast service application available on UE Yes/No

Test Procedure

The UE is in the CELL_FACH state and has selected the broadcast service or joined the multicast service to be provided by the SS..

The SS notifies on MICH and MCCH about the start of an MBMS session. The SS waits for the UE to start reception of the MBMS data on MTCH.

The MBMS radio bearer on MTCH is put into loopback mode 3.

The SS sends 10 RLC SDUs of MBMS data on MTCH on the concerned MBMS radio bearer, then retrieves the number of RLC SDUs on MTCH counted by the UE by sending the UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST message. The number of received RLC SDUs reported by the UE shall be at least one.

The SS then notifies on the MCCH the change in the MBMS session . The UE reconfigures the radio bearer to new configuration. The SS sends 10 RLC SDUs of MBMS data on the MTCH on the concerned MBMS radio bearer, then retrieves the number of RLC SDUs on MTCH counted by the UE by sending the UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST message. The number reported by the UE shall be one more than the value reported at the previous check.

The loopback mode 3 in the UE is deactivated.

SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | ACTIVATE RB TEST MODE | |
| 2 | → | | ACTIVATE RB TEST MODE COMPLETE | |
| 3 | ← | | MBMS MODIFIED SERVICES INFORMATION | MBMS session start. The SS also sets the Notification Indicator on MICH. The SS waits for the UE to establish the MTCH.<br>SS: MCCH message combination C4 for 1 modification period, then combination C2 |
| 4 | ← | | MBMS COMMON P-T-M RB INFORMATION | UE begins reception of the MBMS service using the 259.2kbps radio bearer configuration as specified in TS 34.108 clause 6.10.2.4.3.7(FDD) or clause 6.11.5.4.4.7 (1.28 Mcps TDD). |
| 5 | ← | | CLOSE UE TEST LOOP | |
| 6 | → | | CLOSE UE TEST LOOP COMPLETE | Loop back mode 3 on MTCH is activated. |
| 7 | SS | | | The SS broadcasts 10 RLC SDUs of MBMS data on MTCH on the concerned MBMS radio bearer. |
| 8 | ← | | UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST | |
| 9 | → | | UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE | The SS checks that the number of reported RLC PDUs is greater than zero and records the value. |
| 10 | ← | | MBMS MODIFIED SERVICES INFORMATION | SS indicates a change in the MBMS Broadcast Service for Service ID 1 with MBMS p-t-m activation time set to the first TTI of the next modification period.<br>SS: MCCH message combination C4 for 1 modification period, then combination C2 |
| 11 | | | MBMS COMMON P-T-M RB INFORMATION | UE begins reception of the MBMS service using the 129.6kbps radio bearer configuration as specified in TS 34.108 clause 6.10.2.4.3.6(FDD) or clause 6.11.5.4.4.6 (1.28 Mcps TDD). |
| 12 | | | | The SS broadcasts 10 RLC SDUs of MBMS data on MTCH on the concerned MBMS radio bearer, starting at MBMS p-t-m activation time. |
| 13 | ← | | UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST | |
| 14 | → | | UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE | The SS checks that the number of reported RLC PDUs is greater than the reported value at step 9, |
| 15 | ← | | OPEN UE TEST LOOP | |
| 16 | → | | OPEN UE TEST LOOP COMPLETE | |
| 17 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

MBMS MODIFIED SERVICES INFORMATION (Step 3)

| Information Element | Value/remark |
|---|---|
| Modified service list | |
| - MBMS Transmission identity | MBMS Transmission identity indicating MBMS activated service |
| - MBMS required UE action | Acquire PTM RB info |

MBMS MODIFIED SERVICES INFORMATION (Step 10)

| Information Element | Value/remark |
|---|---|
| Modified service list | |
| - MBMS Transmission identity | MBMS Transmission identity indicating MBMS activated service |
| - MBMS required UE action | Acquire PTM RB info |
| MBMS p-t-m activation time | Set to the first TTI of the next modification period. |

UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE (Step 9)

| Information Element | Value/remark |
|---|---|
| RLC SDU Counter Value | Check that the number is greater than zero. |

#### 8.5.2.4.5 Test requirement

At step 9 the UE shall send a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE with a RLC SDU counter value greater than zero.

At step 14 the UE shall send a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE with a RLC SDU counter value greater than the reported value at previous sub-test.

Note For UE in UE test loop mode 3 then the RLC SDU counter value is only reset upon reception of CLOSE UE TEST LOOP message configuring UE test loop mode 3. As the test runs without deactivating the UE test mode then the SS needs to check the reported counter value against the value reported at previous check.

### 8.5.2.4m MBMS PTM Session Reconfiguration – MTCH data rate change / MBMS Multicast Service

#### 8.5.2.4m.1 Definition

This test is applicable for all UEs that support MBMS multicast services.

#### 8.5.2.4m.2 Conformance requirement

Same conformance requirement as in clause 8.52.4.2

#### 8.5.2.4m.3 Test purpose

Same test purpose as in clause 8.5.2.4.3

#### 8.5.2.4m.4 Method of test

Initial condition

System Simulator:

1 MBMS cell

User Equipment:

The UE is in CELL_FACH state as specified in clause 7.6 of TS 34.108.

The UE has joined the multicast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Multicast service application available on UE Yes/No.

Test procedure

Same test procedure as in clause 8.5.2.4.4

Specific message contents

Same specific messages contents as in clause 8.5.2.4.4

#### 8.5.2.4m.5 Test requirements

Same test requirement as in clause 8.5.2.4.5

### 8.5.2.5 MBMS PTM Session Reconfiguration - MTCH Data Rate Change / MBSFN mode

#### 8.5.2.5.1 Definition

This test is applicable for UEs that support MBMS broadcast services in MBSFN mode and which support either both transmit and receive functions or MBSFN receive only function.

#### 8.5.2.5.2 Conformance requirement

The UE shall detect the available MBMS services by acquiring the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3.

...

For cells operating in MBSFN mode as indicated in subclause 8.1.1.6.3 the UE shall immediately acquire the MBMS GENERAL INFORMATION messages i.e. it shall not delay reception of these messages until it has completed the acquisition of the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages. Likewise for cells operating in MBSFN mode as indicated in subclause 8.1.1.6.3, the UE should immediately acquire the MBMS CURRENT CELL P-T-M RB INFORMATION.

The UE shall continue acquiring the above messages until it has received a consistent set of MCCH information e.g. both the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION message should be acquired in the same modification period.

…

The UE may:

1> monitor the MBMS notification Indicator Channel (MICH);

1> if a notification on the MICH for one or more of the MBMS services included in the variable MBMS_ACTIVATED_SERVICES is detected:

2> acquire the MBMS MODIFIED SERVICES INFORMATION message with delaying the reading of MCCH until the next modification period and with stopping at the end of the modification period, in accordance with subclause 8.7.1.3;

2> handle the MBMS MODIFIED SERVICES INFORMATION message as specified in subclause 8.7.3.4.

The UE shall:

1> if in idle mode, URA_PCH, CELL_PCH or CELL_FACH state:

2> if not monitoring MICH during the current or the previous modification period:

3> acquire the MBMS MODIFIED SERVICES INFORMATION message from MCCH at the start of every modification period, in accordance with subclause 8.7.1.3;

3> handle the MBMS MODIFIED SERVICES INFORMATION message as specified in subclause 8.7.3.4.

…

If the IE "MBMS required UE action" is included and concerns an MBMS activated service the UE shall:

…

1> if the IE "MBMS required UE action" is set to 'Acquire PTM RB info'; or

1> if the IE "MBMS required UE action" is set to 'Acquire counting info– PTM RBs unmodified' and the UE is not receiving a p-t-m RB for the concerned service:

2> continue acquiring the MBMS COMMON P-T-M RB INFORMATION, MBMS CURRENT CELL P-T-M RB INFORMATION and the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3

2> act upon the MBMS COMMON P-T-M RB INFORMATION, MBMS CURRENT CELL P-T-M RB INFORMATION and the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION message, if received, in accordance with subclause 8.7.5;

…

Upon completing the reception of the MBMS COMMON P-T-M RB INFORMATION and the MBMS CURRENT CELL P-T-M RB INFORMATION messages for an activated MBMS service, the UE shall:

1> if the UE is already receiving an MTCH and does not have the capability to receive the new service in addition:

2> the UE behaviour is undefined.

NOTE: In this case, the UE may request upper layers to prioritise the services and only receive the service(s) prioritised by upper layers.

1> act upon all received information elements as specified in subclause 8.6, unless specified otherwise in the following;

1> if the UE previously received the service by means of a p-t-m radio bearer from a cell belonging to another MBMS cell group:

2> re-establish RLC;

2> re-initialise PDCP.

1> start immediately to use the indicated configuration unless specified otherwise;

1> start or continue receiving the indicated p-t-m radio bearers depending on its UE capabilities.

The UE shall continue acquiring the above messages until it has received a consistent set of MCCH information i.e. the MBMS MODIFIED SERVICES INFORMATION message, MBMS UNMODIFIED SERVICES INFORMATION message, MBMS COMMON P-T-M RB INFORMATION and the MBMS CURRENT CELL P-T-M RB INFORMATION message should be acquired in the same modification period.

Reference

3GPP TS 25.331 clauses 8.7.2.3, 8.7.3.3.1, 8.6.9.6, 8.7.5.3

### 8.5.2.5.3 Test purpose

To verify that the UE receives the MBMS notification information while receiving an ongoing MBMS service via a p-t-m radio bearer, and applies the new p-t-m radio bearer configuration.

8.5.2.5.4 Method of test

Initial condition

System Simulator:

- MBSFN carrier: 1 cell, Cell 31 (PLMN1). In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C1 and Default1 MCCH scheduling (No ongoing session) according to subclause 11.2 of TS 34.108.

- Unicast carrier : 1 cell, Cell 1 with default parameters.

User Equipment:

- On the unicast carrier cell the UE is in registered Idle Mode on PS (state 3) if the UE only supports PS domain or registered Idle Mode on CS/PS (state 7) if the UE supports both CS and PS domains, as specified in clause 7.2.2 of TS 34.108.

- The UE is in MBSFN Idle mode with one activated service as specified in clause 7.6.4 of TS 34.108. The UE has selected (i.e. it is included in MBMS_ACTIVATED_SERVICES variable) a national service for which a session will start on MBSFN Cell 31 (see TS 34.108 clause 11.2.4) during the test.

Related ICS/IXIT statements

- MBMS Broadcast services in MBSFN mode application available on UE Yes/No.

- Support of transmit and receive functions available on UE Yes/No.

- Support of MBSFN receive only function available on UE Yes/No.

Test procedure

a) The UE is camping on Cell 1 and Cell 31. In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C1 (no session ongoing) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108.

b) The SS sends ACTIVATE RB TEST MODE on the unicast carrier and the UE responds with ACTIVATE RB TEST MODE COMPLETE.

c) The SS sends CLOSE UE TEST LOOP to activate RLC SDU counting on Cell 31 MTCH (Transmission identity indicating the MBMS activated service).

d) The SS notifies on MCCH about the start of an MBMS session for one modification period. MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C4 (one PTM session starting) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108.

e) MCCH messages are then transmitted by the SS on Cell 31 using MBMS configuration C2 (one PTM session ongoing) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108.

f) The UE establishes the p-t-m radio bearer for the activated service according to the specified service activation time (i.e. the first SFN of the modification period following the notification (step d). The UE closes the test loop and starts counting successfully received RLC PDUs on the MTCH. The UE will send CLOSE UE TEST LOOP COMPLETE.

g) The SS broadcasts 10 RLC SDUs on the MTCH configured on the MBMS p-t-m radio bearer for the activated service. The service is carried on a 129.6kbps RB for MTCH with 80 ms TTI as specified in clause 6.10.3.4.4.6(FDD) or a 124 kbps RB for MBSFN MTCH with 80ms TTI as specified in clause 6.10.3.4.4.9 (3.84 Mcps TDD) or clause 6.11.5.4.4.9 (1.28 Mcps TDD) or clause 6.11.6.4.4.9 (7.68 Mcps TDD).

h) The SS shall then send UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST. The UE shall respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is > 0. The SS shall store the counter value.

i) The SS notifies on MCCH about the modification of the MBMS session for one modification period. MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C4 (service modification indicated) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108.

j) MCCH messages are then transmitted by the SS on Cell 31 using MBMS configuration C2 (one PTM session ongoing) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108.

k) The UE reconfigures the p-t-m radio bearer for the activated service according to the received MBMS COMMON P-T-M RB INFORMATION at the specified service activation time (i.e. the first SFN of the modification period following the notification (step i).

l) The SS broadcasts 10 RLC SDUs on the modified MTCH configured on the MBMS p-t-m radio bearer for the activated service. The service is carried on a 259.2 kbps RB for MTCH with 80 ms TTI as specified in clause 6.10.3.4.4.7(FDD) or a 497.6 kbps RB for MBSFN MTCH with 80ms TTI as specified in clause 6.10.3.4.4.11 (3.84 Mcps TDD) or clause 6.11.5.4.4.11 (1.28 Mcps TDD) or clause 6.11.6.4.4.11 (7.68 Mcps TDD).

m) The SS shall then send UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST. The UE shall respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE corresponds to > 0 received RLC SDUs

Expected sequence

| Step | Direction | | Carrier | Message | Comment |
|---|---|---|---|---|---|
| | UE | SS | | | |
| 1 | ← | | U | ACTIVATE RB TEST MODE | |
| 2 | → | | U | ACTIVATE RB TEST MODE COMPLETE | |
| 3 | ← | | U | CLOSE UE TEST LOOP | Loop back mode 3 is activated on Cell 31 for the selected national service on MTCH. |
| 4 | ← | | M | MBMS MCCH Message Configuration C4 | Includes the national service activated at UE in the modified services list for one modification period. |
| 5 | ← | | M | MBMS MCCH Message Configuration C2 | No modified services. One ongoing service corresponding to that activated at the UE 129.6(FDD) or 124(TDD) kbps PS RAB |
| 6 | → | | U | CLOSE UE TEST LOOP COMPLETE | The UE shall establish the indicated p-t-m radio bearer and close the test loop. |
| 7 | | SS | M | | The SS transmits 10 RLC SDUs on the MTCH starting at the indicated activation time. |
| 8 | ← | | U | UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST | |
| 9 | → | | U | UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE | The SS checks that the number of reported RLC PDUs received on the MTCH is greater than zero. SS stores value. |
| 10 | ← | | M | MBMS MCCH Message Configuration C4 | Includes the ongoing national service in the modified services list for one modification period. New data rate is 259.2 (FDD) or 496(TDD) kbps. |
| 11 | ← | | M | MBMS MCCH Message Configuration C2 | No modified services. One ongoing service corresponding to that activated at the UE. |
| 12 | | SS | M | | The SS waits for the UE to reconfigure reception of the modified MTCH according to the activation time. Then the SS transmits 10 RLC SDUs on the MTCH. |
| 13 | ← | | U | UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST | |
| 14 | → | | U | UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE | The SS checks that the number of reported RLC SDUs received on the MTCH is greater than zero. |
| 15 | ← | | U | OPEN UE TEST LOOP | |
| 16 | → | | U | OPEN UE TEST LOOP COMPLETE | |
| 17 | ← | | U | DEACTIVATE RB TEST MODE | |
| 18 | → | | U | DEACTIVATE RB TEST MODE COMPLETE | |

Specific message contents

All messages have the same content as defined in 34.108 clause 9.1 with the following exceptions:

There are no exceptions for this test case.

8.5.2.5.5 Test requirements

1) After step 9, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number > 0 for the service/session activated on the Cell 33 MTCH.

1) After step 14, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number > 0 for the service/session activated on the Cell 33 MTCH.

## 8.5.3 MBMS Frequency Layer Convergence and Dispersion

### 8.5.3.1 MBMS Session Start (Frequency Layer Convergence)/Session Stop (Frequency Layer Dispersion) in Idle mode / MBMS Selected Service

#### 8.5.3.1.1 Definition

This test is applicable for all UEs supporting MBMS broadcast services.

#### 8.5.3.1.2 Conformance requirement

The UE shall perform the MBMS frequency layer selection procedure upon receiving the IE "MBMS Preferred frequency information" or when specified explicitly e.g. as in subclause 8.6.9.2, or when the priority for an MBMS service as indicated by upper layers changes.

The UE shall:

1> if there exist two or more preferred frequencies for services included in variable MBMS_ACTIVATED_SERVICES:

2> request from upper layers the priorities of the different MBMS services included in variable MBMS_ACTIVATED_SERVICES for which a preferred frequency has been received.

1> if the UE is in idle mode:

2> if a preferred frequency layer applies for a service included in variable MBMS_ACTIVATED_SERVICES:

3> select the preferred frequency indicated for the MBMS service(s) prioritised most by upper layers for which a preferred frequency exists as the preferred frequency.

….

1> if a preferred frequency has been selected:

2> if the UE is not in CELL_DCH state:

3> apply the cell-reselection procedure as described in [4], using the received "MBMS Preferred frequency information" applicable to the selected frequency:

4> if HCS is not used, and the IE "Qoffmbms" is not present for the MBMS preferred frequency:

5> consider the cells on the MBMS preferred frequency having a Qoffmbms equal to "infinity".

4> if HCS is used, and the IE "HCS_OFFmbms" is not present for the MBMS preferred frequency:

5> consider the cells on the MBMS preferred frequency having the highest HCS priority level.

3> if the UE re-selects to a cell on the indicated preferred frequency:

4> if the UE is in CELL_FACH, CELL_PCH or URA_PCH:

5> act according to subclause 8.3.1.2.

4> store the frequency information of the frequency on which the UE was operating prior to cell-reselection to the preferred frequency in the variable MBMS_PREV_FREQUENCY_INFORMATION.

4> apply the MCCH acquisition procedure, as specified in subclause 8.7.2.

…

If the IE "MBMS required UE action" is included and concerns an MBMS activated service the UE shall:

1> if the "MBMS required UE action" is set to 'None':

2> take no action with respect to this IE.

1> if the IE "MBMS required UE action" is set to 'Acquire counting info' or set to 'Acquire counting info– PTM RBs unmodified':

2> perform the MBMS counting procedure as specified in subclause 8.7.4;

NOTE: If upper layers indicate that an MBMS transmission has already been received correctly, the UE will continue as if the information about the concerned MBMS transmission was not included in the message. This implies that the UE does not respond to counting for a transmission already received correctly.

1> if the IE "MBMS required UE action" is set to 'Acquire PTM RB info'; or

1> if the IE "MBMS required UE action" is set to 'Acquire counting info– PTM RBs unmodified' and the UE is not receiving a p-t-m RB for the concerned service:

2> continue acquiring the MBMS COMMON P-T-M RB INFORMATION, MBMS CURRENT CELL P-T-M RB INFORMATION and the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3

2> act upon the MBMS COMMON P-T-M RB INFORMATION, MBMS CURRENT CELL P-T-M RB INFORMATION and the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION message, if received, in accordance with subclause 8.7.5;

…

1> if the IE "MBMS required UE action" is set to 'Release PTM RB':

2> stop receiving the concerned MBMS service;

2> if the UE is in a state other than CELL_DCH (for FDD) or if the UE is in Idle mode, URA_PCH or CELL_PCH state (for TDD); and

2> if the UE does not decide to receive an MBMS service; and

2> if the variable MBMS_PREV_FREQUENCY_INFO is not empty:

3> if any frequency in SIB11 or SIB12 has the same frequency stored in the variable MBMS_PREV_FREQUENCY_INFO:

4> select a suitable UTRA cell in that frequency.

4> if no suitable UTRA cell in that frequency is found:

5> select a suitable UTRA cell in another frequency.

3> if no frequency in SIB11 or SIB12 has the same frequency stored in the variable MBMS_PREV_FREQUENCY_INFO.

4> select a frequency randomly among the inter-frequencies indicated in SIB11 or SIB12.

5> select a suitable UTRA cell in the selected frequency

5> if no suitable UTRA cell in the selected frequency is found:

6> select a suitable UTRA cell in another frequency.

3> clear the variable MBMS_PREV_FREQUENCY_INFO.

2> clear all service specific information applicable for the concerned service.

NOTE: The UE is only required to acquire the relevant SIB11 or SIB12, according to what is specified in subclauses 8.1.1.6.11 and 8.1.1.6.12.

…

If the UE is receiving an MBMS service that is not included in variable MBMS_ACTIVATED_SERVICES and that is using a p-t-m radio bearer, the UE shall:

1> stop receiving the concerned MBMS service and clear all service specific information applicable for the concerned service.

Upon completing the reception of the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages, the UE shall

1> act as follows for each of the services included in these messages provided that the service is included in variable MBMS_ACTIVATED_SERVICES and upper layers indicate that the session has not yet been received correctly (referred to as 'applicable services');

1> act upon all received information elements as specified in subclause 8.6, unless specified otherwise in the following;

1> if one or more preferred frequency applies for the applicable services:

2> delay acting upon the "MBMS Preferred frequency information" until receiving the relevant MCCH information i.e. the MBMS GENERAL INFORMATION message;

2> act upon the "MBMS Preferred frequency information" as specified in subclause 8.6.9.4 for the service(s) that upper layers indicate to have highest priority.

1> perform MBMS frequency selection procedure as specified in subclause 8.5.27;

1> if the UE receives an MBMS service using a p-t-m radio bearer and the received messages do not contain an IE "MBMS required UE action" set to "Acquire PTM RB info" or set to "Acquire counting info– PTM RBs unmodified" for that service then the UE shall:

2> stop receiving the concerned MBMS service and clear all service specific information applicable for the concerned service.

…

The UE shall, in the transmitted RRC CONNECTION REQUEST message:

1> otherwise if the UE performs connection establishment for MBMS counting as specified in subclause 8.7.4; and

1> if one or more of the MBMS services for which the UE initiates the counting response concerns an MBMS Selected Service:

2> for each MBMS Selected Service that is indicated on MCCH and for which the UE initiates the counting response:

3> order the MBMS Selected Services such that those selected with a higher priority are listed in the IE "MBMS Selected Services Short" before those selected with a lower priority;

3> include the IE "MBMS Selected Service ID" within the IE "MBMS Selected Services Short" and set it to a value in accordance with subclause 8.6.9.8.

Reference

3GPP TS 25.331 clauses 8.5.27, 8.6.9.6, 8.7.2.4, 8.1.3.3.

#### 8.5.3.1.3 Test purpose

To verify that in idle mode, the UE at session start, re-selects to the preferred Frequency Layer for the MBMS services it has activated.

To verify that at session stop the UE re-selects to the frequency where it has previously camped.

#### 8.5.3.1.4 Method of test

Initial condition

System Simulator:

2 MBMS (Cell 21, Cell 24).

User Equipment:

The UE is in Idle Mode as specified in clause 7.6 of TS 34.108.

The UE is interested in the broadcast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Broadcast service application available on UE Yes/No.

Test procedure

The UE receives, at notification via MCCH, an MBMS MODIFIED SERVICES INFORMATION message including a preferred frequency in the IE "MBMS preferred frequency".

The UE shall consider this frequency as the preferred frequency layer for cell re-selection and re-select to Cell 24 at session start for the MBMS service it has activated. The UE shall store the frequency information of the frequency on which the UE was operating prior to cell-reselection to the preferred frequency in the variable MBMS_PREV_FREQUENCY_INFORMATION.

The UE shall perform the MCCH acquisition procedure on the new cell.

The SS transmits an MBMS MODIFIED SERVICE INFORMATION message which includes in the "Modified service list" for the MBMS activated service "MBMS required UE action" set to "Acquire counting info" and MBMS ACCESS INFORMATION message, which includes the MBMS Short Transmission ID associated to the MBMS activated service and "Access probability factor – Idle" set to 0 (corresponds to an actual Probability Factor = 1).

The UE shall transmit an RRC CONNECTION REQUEST message, with "Establishment cause" set to "MBMS reception". The SS transmits a RRC CONNECTION SETUP. The UE establishes an RRC connection and transmits an RRC CONNECTION SETUP COMPLETE message.

The UE receives an MBMS MODIFIED SERVICES INFORMATION message "MBMS required UE action" IE set to "Acquire PTM RB info". The UE shall apply the MBMS p-t-m radio bearer configuration procedure to acquire the radio bearer configuration for the MBMS service provided by the SS.

The UE starts receiving the indicated p-t-m radio bearer.

The UE receives an MBMS MODIFIED SERVICES INFORMATION message with IE "MBMS required UE action" set to "Release PTM RB". The UE shall stop receiving the concerned MBMS service. The variable MBMS_PREV_FREQUENCY_INFO is not empty, and any frequency in SIB11 or SIB12 has the same frequency stored in the variable MBMS_PREV_FREQUENCY_INFO, therefore the UE shall select Cell 21 (suitable UTRA cell in that frequency).

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| **Step** | **Direction** | | **Message** | **Comments** |
| | **UE** | **SS** | | |
| 1 | | | | The UE is in Idle mode on cell 21. |
| 2 | ← | | MBMS MODIFIED SERVICES INFORMATION | Service_id = service activated "MBMS required UE action is set to "none (FLC)" and PFL index is set to the index of the frequency of f2 in the preferred frequency list in MBMS GENERAL INFORMATION. |
| 3 | ← | | MBMS GENERAL INFORMATION | MBMS preferred frequency information is set to f2. |
| 4 | | | | The UE re-selects to cell 24. The SS allows 2 modification periods for the UE to reselect before sending the following messages on cell 24. |

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| Step | Direction | | Message | Comments |
| | UE | SS | | |
| 5 | ← | | MBMS MODIFIED SERVICES INFORMATION | "MBMS required UE action" IE is set to "Acquire counting info". |
| 6 | ← | | MBMS GENERAL INFORMATION | MBMS preferred frequency information set without index into SIB11 neighbour list. |
| 7 | ← | | MBMS ACCESS INFORMATION | "MBMS short transmission ID" IE set to 1, "Access probability factor – Idle" set to 0 (corresponding to the actual probability factor value 1). SS sends MBMS ACCESS INFORMATION throughout the modification period as defined in 34.108 clause 11.1.2 |
| 8 | → | | RRC CONNECTION REQUEST | The UE transmits the message with Establishment cause set to "MBMS reception" and in case of MBMS Selected service with the "MBMS Selected Services Short" IE referring to the concerned MBMS Selected service and the corresponding Modification period identity. |
| 9 | ← | | RRC CONNECTION SETUP | |
| 10 | → | | RRC CONNECTION SETUP COMPLETE | |
| 10a | → | | MBMS MODIFICATION REQUEST | The UE completing the RRC connection Setup procedure shall initiate the MBMS MODIFICATION REQUEST procedure in case of MBMS Selected service. This message may be received at any point after step 10 and before step 12. |
| 11 | UE | | | UE transmits SERVICE REQUEST, with IE "Service type" set to "MBMS Broadcast service Reception". |
| 12 | ← | | RRC CONNECTION RELEASE | |
| 13 | → | | RRC CONNECTION RELEASE COMPLETE | The UE shall enter idle mode. |
| 14 | SS | | | The following MBMS messages sent on the MCCH will be received in the next Modification Period. |
| 15 | ← | | MBMS MODIFIED SERVICES INFORMATION | "MBMS required UE action" IE is set to "Acquire PTM RB info". |
| 16 | ← | | MBMS GENERAL INFORMATION | MBMS preferred frequency information set without index into SIB11 neighbour list. |
| 17 | SS | | | The following MBMS messages sent on the MCCH will be received in a new Modification Period. |
| 18 | ← | | VOID | |
| 19 | ← | | MBMS MODIFIED SERVICES INFORMATION | "MBMS required UE action" IE is set to "Release PTM RB". |
| 20 | | | | The UE stops receiving the concerned MBMS service and reselects to Cell 21. |
| 21 | ←→ | | CALL C.1 | If the test result of C.1 indicates that UE is in Idle Mode state, the test passes, otherwise it fails. |

Specific message contents

All messages have the same content as defined in 34.108 clause 9.1.1 with the following exceptions:

MBMS MODIFIED SERVICES INFORMATION (Step 2)

| Information Element | Value/remark |
|---|---|
| Modified service list | Only 1 entry |
| - MBMS Transmission identity | MBMS Transmission identity indicating MBMS activated service |
| - MBMS required UE action | None (FLC) |
| - MBMS preferred frequency | |
| - PFL index | Index of the frequency of Cell 24 in the preferred frequency list |

MBMS GENERAL INFORMATION(Step 3)

| Information Element | Value/remark |
|---|---|
| MBMS preferred frequency information | Only 1 entry |
| MBMS preferred frequency list | |
| - MBMS preferred frequency | Value N corresponds with the $n^{th}$ frequency included in the IE New inter-frequency cells that is specified within SIB 11, corresponding to cell 24 frequency (f2). |
| - CHOICE Layer convergence information | No HCS |
| - Qoffmbms | Infinity |

MBMS MODIFIED SERVICES INFORMATION (Step 5)

| Information Element | Value/remark |
|---|---|
| Modified service list | Only 1 entry |
| -MBMS Transmission identity | MBMS Transmission identity indicating MBMS activated service |
| -MBMS required UE action | Acquire counting info |
| - MBMS preferred frequency | - |
| - PFL index | Set to the index of the frequency of Cell 24 in the preferred frequency list |

MBMS GENERAL INFORMATION (Steps 6 and 16)

| Information Element | Value/remark |
|---|---|
| MBMS preferred frequency information | Only 1 entry |
| MBMS preferred frequency list | |
| - MBMS preferred frequency | Not present (indicates PFL is current cell frequency) |
| - CHOICE Layer convergence information | No HCS |
| - Qoffmbms | Infinity |

MBMS ACCESS INFORMATION (Step 7)

| Information Element | Value/remark |
|---|---|
| Service list | Only 1 entry |
| - MBMS short transmission ID | Index to the MBMS transmission identity in the previous MBMS MODIFIED SERVICES INFORMATION |
| - Access probability factor - Idle | 0 (corresponding to the actual probability factor value 1) |
| - Connected mode counting scope | |
| - URA_PCH | FALSE |
| - CELL_PCH | FALSE |
| - CELL_FACH | FALSE |

MBMS MODIFICATION REQUEST (steps 10a)

| Information Element | Value/remark |
|---|---|
| MBMS preferred frequency request | Check that the IE is not present |
| MBMS RB list requested to be released | Check that the IE is not present |
| MBMS Selected Service Info | |
| - CHOICE Status | Some |
| - MBMS Selected Services Full | |
| - MBMS Selected Service ID | Only 1 entry |
| - MBMS Service ID | MBMS service ID of the activated MBMS service |
| - CHOICE PLMN identity | Check to see that one of the below choice element is present |
| - SameAs-MIB | (no data) |
| - explicitPLMN_Id | Check to see if it is set to the same value as "PLMN ID" in the Master Information block transmitted for the current serving cell. |

MBMS MODIFIED SERVICES INFORMATION (Step 15)

| Information Element | Value/remark |
|---|---|
| Modified service list | 1 |
| -MBMS Transmission identity | MBMS Transmission identity indicating MBMS activated service |
| -MBMS required UE action | Acquire PTM RB info |
| - MBMS preferred frequency | - |
| - PFL index | Set to the index of the frequency of Cell 24 in the preferred frequency list |

MBMS MODIFIED SERVICES INFORMATION (Step 19)

| Information Element | Value/remark |
|---|---|
| Modified service list | 1 |
| -MBMS Transmission identity | MBMS Transmission identity indicating MBMS activated service |
| -MBMS required UE action | 'Release PTM RB' |

#### 8.5.3.1.1.5 Test requirements

At step 8, the UE shall send an RRC CONNECTION REQUEST message on Cell 24 with Establishment cause set to “MBMS reception”.

At step 21, the test result of C.1 shall indicate that the UE is in idle mode on Cell 21.

### 8.5.3.1m MBMS Session Start (Frequency Layer Convergence)/Session Stop (Frequency Layer Dispersion) in Idle mode / MBMS Multicast Service

#### 8.5.3.1m.1 Definition

This test is applicable for all UEs that support MBMS multicast services.

#### 8.5.3.1m.2 Conformance requirement

Same conformance requirement as in clause 8.5.3.1.2

#### 8.5.3.1m.3 Test purpose

Same test purpose as in clause 8.5.3.1.3.

#### 8.5.3.1m.4 Method of test

Initial condition

System Simulator:

2 MBMS cells, Cell 21, Cell 24.

User Equipment:

The UE is in Idle Mode as specified in clause 7.6 of TS 34.108.

The UE has joined the multicast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Multicast service application available on UE Yes/No.

Test procedure

Same test procedure as in clause 8.5.3.1.4, except that at step 11 UE transmits Service Request, with IE "Service type" set to "MBMS Multicast service Reception".

Specific message contents

Same specific messages contents as in clause 8.5.3.1.4

#### 8.5.3.1m.5 Test requirements

Same test requirement as in clause 8.5.3.1.5.

### 8.5.3.2 MBMS Session Start (Frequency Layer Convergence)/Session Stop (Frequency Layer Dispersion) in CELL_PCH / MBMS Broadcast Service

#### 8.5.3.2.1 Definition

This test is applicable for all UEs supporting MBMS broadcast services.

#### 8.5.3.2.2 Conformance requirement

The UE shall perform the MBMS frequency layer selection procedure upon receiving the IE "MBMS Preferred frequency information", when specified explicitly e.g. as in subclause 8.6.9.2, or when the preferred MBMS service changes.

The UE shall:

1> if there exist two or more preferred frequencies for services included in variable MBMS_ACTIVATED_SERVICES:

2> request from upper layers the priorities of the different MBMS services included in variable MBMS_ACTIVATED_SERVICES for which a preferred frequency has been received.

1> if the UE is in idle mode:

2> if a preferred frequency layer applies for a service included in variable MBMS_ACTIVATED_SERVICES:

3> select the preferred frequency indicated for the MBMS service(s) prioritised most by upper layers for which a preferred frequency exists as the preferred frequency.

1> if the UE is in CELL_FACH, CELL_PCH or URA_PCH state; and

1> if there exists one or more preferred frequencies for services included in variable MBMS_ACTIVATED_SERVICES and the variable MBMS_PL_SERVICE_RESTRICTION_INFO_DEDICATED is set to FALSE:

2>if the IE "RAB information" in the variable ESTABLISHED_RABS is not empty:

3> if the current frequency is the frequency corresponding with the preferred frequency indicated for the MBMS service(s) prioritised most by upper layers for which a preferred frequency exists:

4> select the current frequency as the preferred frequency.

3> else:

4> if there exists one or more preferred frequencies for services included in variable MBMS_ACTIVATED_SERVICES for which the IE "MBMS PL Service Restriction Information" has not been received in the MBMS GENERAL INFORMATION message:

5> select the preferred frequency indicated for the MBMS service(s) prioritised most by upper layers for which a preferred frequency exists for which the IE "MBMS PL Service Restriction Information" has not been received in the MBMS GENERAL INFORMATION message as the preferred frequency.

2> else:

3> select the preferred frequency indicated for the MBMS service(s) prioritised most by upper layers for which a preferred frequency exists as the preferred frequency.

…

1> if a preferred frequency has been selected:

2> if the UE is not in CELL_DCH state:

3> apply the cell-reselection procedure as described in [4], using the received "MBMS Preferred frequency information" applicable to the selected frequency:

4> if HCS is not used, and the IE "Qoffmbms" is not present for the MBMS preferred frequency:

5> consider the cells on the MBMS preferred frequency having a Qoffmbms equal to "infinity".

4> if HCS is used, and the IE "HCS_OFFmbms" is not present for the MBMS preferred frequency:

5> consider the cells on the MBMS preferred frequency having the highest HCS priority level.

3> if the UE re-selects to a cell on the indicated preferred frequency:

4> if the UE is in CELL_FACH, CELL_PCH or URA_PCH:

5> act according to subclause 8.3.1.2.

4> store the frequency information of the frequency on which the UE was operating prior to cell-reselection to the preferred frequency in the variable MBMS_PREV_FREQUENCY_INFORMATION.

4> apply the MCCH acquisition procedure, as specified in subclause 8.7.2.

1> else:

2> if the UE is not in CELL_DCH state:

3> stop applying any "MBMS Preferred frequency information".

…

If the IE "MBMS required UE action" is included and concerns an MBMS activated service the UE shall:

1> if the "MBMS required UE action" is set to 'None':

2> take no action with respect to this IE.

1> if the IE "MBMS required UE action" is set to 'Acquire counting info' or set to 'Acquire counting info– PTM RBs unmodified':

2> perform the MBMS counting procedure as specified in subclause 8.7.4;

NOTE: If upper layers indicate that an MBMS transmission has already been received correctly, the UE will continue as if the information about the concerned MBMS transmission was not included in the message. This implies that the UE does not respond to counting for a transmission already received correctly.

1> if the IE "MBMS required UE action" is set to 'Acquire PTM RB info'; or

1> if the IE "MBMS required UE action" is set to 'Acquire counting info– PTM RBs unmodified' and the UE is not receiving a p-t-m RB for the concerned service:

2> continue acquiring the MBMS COMMON P-T-M RB INFORMATION, MBMS CURRENT CELL P-T-M RB INFORMATION and the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3

2> act upon the MBMS COMMON P-T-M RB INFORMATION, MBMS CURRENT CELL P-T-M RB INFORMATION and the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION message, if received, in accordance with subclause 8.7.5;

…

1> if the IE "MBMS required UE action" is set to 'Release PTM RB':

2> stop receiving the concerned MBMS service;

2> if the UE is in a state other than CELL_DCH (for FDD) or if the UE is in Idle mode, URA_PCH or CELL_PCH state (for TDD); and

2> if the UE does not decide to receive an MBMS service; and

2> if the variable MBMS_PREV_FREQUENCY_INFO is not empty:

3> if any frequency in SIB11 or SIB12 has the same frequency stored in the variable MBMS_PREV_FREQUENCY_INFO:

4> select a suitable UTRA cell in that frequency.

4> if no suitable UTRA cell in that frequency is found:

5> select a suitable UTRA cell in another frequency.

3> if no frequency in SIB11 or SIB12 has the same frequency stored in the variable MBMS_PREV_FREQUENCY_INFO.

4> select a frequency randomly among the inter-frequencies indicated in SIB11 or SIB12.

5> select a suitable UTRA cell in the selected frequency.

5> if no suitable UTRA cell in the selected frequency is found:

6> select a suitable UTRA cell in another frequency.

3> clear the variable MBMS_PREV_FREQUENCY_INFO.

2> clear all service specific information applicable for the concerned service.

NOTE: The UE is only required to acquire the relevant SIB11 or SIB12, according to what is specified in subclauses 8.1.1.6.11 and 8.1.1.6.12.

…

If the UE is receiving an MBMS service that is not included in variable MBMS_ACTIVATED_SERVICES and that is using a p-t-m radio bearer, the UE shall:

1> stop receiving the concerned MBMS service and clear all service specific information applicable for the concerned service.

Upon completing the reception of the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages, the UE shall

1> act as follows for each of the services included in these messages provided that the service is included in variable MBMS_ACTIVATED_SERVICES and upper layers indicate that the session has not yet been received correctly (referred to as 'applicable services');

1> act upon all received information elements as specified in subclause 8.6, unless specified otherwise in the following;

1> if one or more preferred frequency applies for the applicable services:

2> delay acting upon the "MBMS Preferred frequency information" until receiving the relevant MCCH information i.e. the MBMS GENERAL INFORMATION message;

2> act upon the "MBMS Preferred frequency information" as specified in subclause 8.6.9.4 for the service(s) that upper layers indicate to have highest priority.

1> perform MBMS frequency selection procedure as specified in subclause 8.5.27;

1> if the UE receives an MBMS service using a p-t-m radio bearer and the received messages do not contain an IE "MBMS required UE action" set to "Acquire PTM RB info" or set to "Acquire counting info– PTM RBs unmodified" for that service then the UE shall:

2> stop receiving the concerned MBMS service and clear all service specific information applicable for the concerned service.

Reference

3GPP TS 25.331 clauses 8.5.27, 8.6.9.6, 8.7.2.4.

### 8.5.3.2.3 Test purpose

To verify that in CELL_PCH, the UE at session start re-selects to the preferred Frequency Layer for the MBMS services it has activated.

To verify that at session stop the UE re-select to the frequency where it has previously camped.

### 8.5.3.2.4 Method of test

Initial condition

System Simulator:

System Simulator: 2 MBMS cells, Cell21 and Cell24

User Equipment:

The UE is in CELL_PCH state as specified in clause 7.6 of TS 34.108.

The UE is interested in the broadcast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Broadcast service application available on UE Yes/No.

Test procedure

The UE receives, at notification via MCCH, an MBMS MODIFIED SERVICES INFORMATION message including a preferred frequency in the IE ”MBMS preferred frequency”.

The UE shall consider this frequency as the preferred frequency layer for cell re-selection and re-select to Cell 24 at session start for the MBMS service it has activated. The UE shall store the frequency information of the frequency on which the UE was operating prior to cell-reselection to the preferred frequency in the variable MBMS_PREV_FREQUENCY_INFORMATION.

The UE shall perform the MCCH acquisition procedure on the new cell.

The UE shall transmit a CELL UPDATE message on the uplink CCCH of Cell 24 and set IE "Cell update cause" to "cell reselection".

After the SS receives this message, it transmits a CELL UPDATE CONFIRM message to the UE on the downlink CCCH. The UE shall move to the CELL_PCH state as indicated by the IE "RRC State Indicator".

The UE receives a MBMS MODIFIED SERVICES INFORMATION message “MBMS required UE action” IE set to Acquire PTM RB info”. The UE shall apply the MBMS p-t-m radio bearer configuration procedure to acquire the radio bearer configuration for the MBMS services the UE has activated.

The UE start receiving the indicated p-t-m radio bearer.

The UE receives a MBMS MODIFIED SERVICES INFORMATION message with IE "MBMS required UE action" set to 'Release PTM RB'. The UE shall stop receiving the concerned MBMS service. The variable MBMS_PREV_FREQUENCY_INFO is not empty, and any frequency in SIB11 or SIB12 has the same frequency stored in the variable MBMS_PREV_FREQUENCY_INFO , therefore the UE shall select cell 21 (suitable UTRA cell in that frequency).

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | The UE is in CELL_PCH on cell 21. |
| 2 | ← | | MBMS MODIFIED SERVICES INFORMATION | “MBMS required UE action” IE is set to “none” and the “MBMS preferred frequency” IE indicates the reference to f2. |
| 3 | ← | | MBMS GENERAL INFORMATION | MBMS preferred frequency information is set to f2. |
| 4 | UE | | | The UE re-selects to cell 24. |
| 5 | → | | CELL UPDATE | The CELL UPDATE message shall contain the value "Cell Update Cause" set to "cell reselection" |
| 6 | ← | | CELL UPDATE CONFIRM | IE "RRC State Indicator is set to CELL_PCH. |
| 7 | ← | | MBMS MODIFIED SERVICES INFORMATION | “MBMS required UE action” IE is set to "Acquire PTM RB info". |
| 8 | ← | | MBMS GENERAL INFORMATION | MBMS preferred frequency information set without index into SIB11 neighbour list. |
| 9 | | | VOID | |
| 10 | ← | | MBMS MODIFIED SERVICES INFORMATION | "MBMS required UE action" IE is set to "Release PTM RB" |
| 11 | ← | | MBMS GENERAL INFORMATION | MBMS preferred frequency information set without index into SIB11 neighbour list. |
| 12 | ← | | SYSTEM INFORMATION BLOCK TYPE 12<br>SYSTEM INFORMATION BLOCK TYPE 11 | The cell 24 contains cell 21 in SIB11 and SIB12. |
| 13 | UE | | | The UE stops receiving the concerned MBMS services and re-selects to cell 21. |
| 14 | → | | CELL UPDATE | The CELL UPDATE message shall contain the value "Cell Update Cause" set to "cell reselection" |
| 15 | ← | | CELL UPDATE CONFIRM | IE "RRC State Indicator is set to CELL_PCH. |
| 16 | ←→ | | CALL C.4 | If the test result of C.4 indicates that UE is in CELL_PCH state, the test passes, otherwise it fails. |

Specific message contents

All messages have the same content as defined in 34.108 clause 9.1.1 with the following exceptions:

MBMS MODIFIED SERVICES INFORMATION (Step 2)

| Information Element | Value/remark |
|---|---|
| Modified service list<br>- MBMS Transmission identity<br><br>- MBMS required UE action<br>- MBMS preferred frequency<br>- PFL index | At least the entry including the activated service<br>MBMS Transmission identity indicating MBMS activated service<br>None<br><br>Index for f2 (the frequency that UEs shall consider as the preferred frequency layer for cell re-selection during a session for an MBMS service the UE has activated) |

MBMS GENERAL INFORMATION (Step 3)

| Information Element | Value/remark |
|---|---|
| MBMS preferred frequency information | |
| - MBMS preferred frequency list | Only 1 Entry |
| - CHOICE Layer convergence information | f2 (the frequency that UEs shall consider as the preferred frequency layer for cell re-selection during a session for an MBMS service the UE has activated) |

CELL UPDATE (Step 5 and 14)

Use the message sub-type in default message content defined in 3GPP TS 34.108 [9] clause 9, with the following exceptions.

| Information Element | Value/remark |
|---|---|
| Cell update cause | cell reselection |

CELL UPDATE CONFIRM (Step 6 and 15)

| Information Element | Value/remark |
|---|---|
| RRC State Indicator | CELL_PCH |
| UTRAN DRX cycle length coefficient | 7 |

MBMS MODIFIED SERVICES INFORMATION (Step 7)

| Information Element | Value/remark |
|---|---|
| Modified service list<br>- MBMS Transmission identity<br><br>- MBMS required UE action<br>- MBMS preferred frequency<br>- PFL index | At least the entry including the activated service<br>MBMS Transmission identity indicating MBMS activated service<br>Acquire PTM RB'<br>-<br>Set to the index of the frequency of Cell 24 in the preferred frequency list |

MBMS GENERAL INFORMATION (Steps 8 and 11)

| Information Element | Value/remark |
|---|---|
| MBMS preferred frequency information<br>MBMS preferred frequency list<br>- MBMS preferred frequency<br>- CHOICE Layer convergence information<br>- Qoffmbms | Only 1 entry<br><br>Not present (indicates PFL is current cell frequency)<br>No HCS<br>Infinity |

MBMS MODIFIED SERVICES INFORMATION (Step 10)

| Information Element | Value/remark |
|---|---|
| Modified service list | At least the entry including the activated service |
| - MBMS Transmission identity | MBMS Transmission identity indicating MBMS activated service |
| - MBMS required UE action | 'Release PTM RB' |

#### 8.5.3.2.5 Test requirements

At step 5, the UE shall perform the cell update procedure using the cause value “MBMS reception” set to “cell reselection” on cell 24.

At step 14, the UE shall perform the cell update procedure using the cause value “MBMS reception” set to “cell reselection” on cell 21.

At step 16, the procedure C.4 shall verify that the UE is in CELL_PCH state.

### 8.5.3.2m MBMS Session Start (Frequency Layer Convergence)/Session Stop (Frequency Layer Dispersion) in CELL_PCH / MBMS Multicast Service

#### 8.5.3.2m.1 Definition

This test is applicable for all UEs that support MBMS multicast services.

#### 8.5.3.2m.2 Conformance requirement

Same conformance requirement as in clause 8.5.3.2.2

#### 8.5.3.2m.3 Test purpose

Same test purpose as in clause 8.5.3.2.3.

#### 8.5.3.2m.4 Method of test

##### Initial condition

System Simulator:

2 MBMS cells, Cell 21, Cell 24.

User Equipment:

The UE is in CELL_PCH state as specified in clause 7.6 of TS 34.108.

The UE has joined the multicast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

##### Related ICS/IXIT statements

- MBMS Multicast service application available on UE Yes/No.

##### Test procedure

Same test procedure as in clause 8.5.3.2.4.

##### Specific message contents

Same specific messages contents as in clause 8.5.3.2.4

#### 8.5.3.2m.5 Test requirements

Same test requirement as in clause 8.5.3.2.5.

### 8.5.3.3 MBMS Session Start (Frequency Layer Convergence)/Session Stop (Frequency Layer Dispersion) in CELL_FACH / MBMS Broadcast Service

#### 8.5.3.3.1 Definition

This test is applicable for all UEs supporting MBMS broadcast services.

#### 8.5.3.3.2 Conformance requirement

The UE shall perform the MBMS frequency layer selection procedure upon receiving the IE "MBMS Preferred frequency information", when specified explicitly e.g. as in subclause 8.6.9.2, or when the preferred MBMS service changes.

The UE shall:

1> if there exist two or more preferred frequencies for services included in variable MBMS_ACTIVATED_SERVICES:

2> request from upper layers the priorities of the different MBMS services included in variable MBMS_ACTIVATED_SERVICES for which a preferred frequency has been received.

1> if the UE is in idle mode:

2> if a preferred frequency layer applies for a service included in variable MBMS_ACTIVATED_SERVICES:

3> select the preferred frequency indicated for the MBMS service(s) prioritised most by upper layers for which a preferred frequency exists as the preferred frequency.

1> if the UE is in CELL_FACH, CELL_PCH or URA_PCH state; and

1> if there exists one or more preferred frequencies for services included in variable MBMS_ACTIVATED_SERVICES and the variable MBMS_PL_SERVICE_RESTRICTION_INFO_DEDICATED is set to FALSE:

2>if the IE "RAB information" in the variable ESTABLISHED_RABS is not empty:

3> if the current frequency is the frequency corresponding with the preferred frequency indicated for the MBMS service(s) prioritised most by upper layers for which a preferred frequency exists:

4> select the current frequency as the preferred frequency.

3> else:

4> if there exists one or more preferred frequencies for services included in variable MBMS_ACTIVATED_SERVICES for which the IE "MBMS PL Service Restriction Information" has not been received in the MBMS GENERAL INFORMATION message:

5> select the preferred frequency indicated for the MBMS service(s) prioritised most by upper layers for which a preferred frequency exists for which the IE "MBMS PL Service Restriction Information" has not been received in the MBMS GENERAL INFORMATION message as the preferred frequency.

2> else:

3> select the preferred frequency indicated for the MBMS service(s) prioritised most by upper layers for which a preferred frequency exists as the preferred frequency.

…

1> if a preferred frequency has been selected:

2> if the UE is not in CELL_DCH state:

3> apply the cell-reselection procedure as described in [4], using the received "MBMS Preferred frequency information" applicable to the selected frequency:

4> if HCS is not used, and the IE "Qoffmbms" is not present for the MBMS preferred frequency:

5> consider the cells on the MBMS preferred frequency having a Qoffmbms equal to "infinity".

4> if HCS is used, and the IE "HCS_OFFmbms" is not present for the MBMS preferred frequency:

5> consider the cells on the MBMS preferred frequency having the highest HCS priority level.

3> if the UE re-selects to a cell on the indicated preferred frequency:

4> if the UE is in CELL_FACH, CELL_PCH or URA_PCH:

5> act according to subclause 8.3.1.2.

4> store the frequency information of the frequency on which the UE was operating prior to cell-reselection to the preferred frequency in the variable MBMS_PREV_FREQUENCY_INFORMATION.

4> apply the MCCH acquisition procedure, as specified in subclause 8.7.2.

1> else:

2> if the UE is not in CELL_DCH state:

3> stop applying any "MBMS Preferred frequency information".

…

If the IE "MBMS required UE action" is included and concerns an MBMS activated service the UE shall:

1> if the "MBMS required UE action" is set to 'None':

2> take no action with respect to this IE.

1> if the IE "MBMS required UE action" is set to 'Acquire counting info' or set to 'Acquire counting info– PTM RBs unmodified':

2> perform the MBMS counting procedure as specified in subclause 8.7.4;

NOTE: If upper layers indicate that an MBMS transmission has already been received correctly, the UE will continue as if the information about the concerned MBMS transmission was not included in the message. This implies that the UE does not respond to counting for a transmission already received correctly.

1> if the IE "MBMS required UE action" is set to 'Acquire PTM RB info'; or

1> if the IE "MBMS required UE action" is set to 'Acquire counting info– PTM RBs unmodified' and the UE is not receiving a p-t-m RB for the concerned service:

2> continue acquiring the MBMS COMMON P-T-M RB INFORMATION, MBMS CURRENT CELL P-T-M RB INFORMATION and the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3

2> act upon the MBMS COMMON P-T-M RB INFORMATION, MBMS CURRENT CELL P-T-M RB INFORMATION and the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION message, if received, in accordance with subclause 8.7.5;

…

1> if the IE "MBMS required UE action" is set to 'Release PTM RB':

2> stop receiving the concerned MBMS service;

2> if the UE is in a state other than CELL_DCH (for FDD) or if the UE is in Idle mode, URA_PCH or CELL_PCH state (for TDD); and

2> if the UE does not decide to receive an MBMS service; and

2> if the variable MBMS_PREV_FREQUENCY_INFO is not empty:

3> if any frequency in SIB11 or SIB12 has the same frequency stored in the variable MBMS_PREV_FREQUENCY_INFO:

4> select a suitable UTRA cell in that frequency.

4> if no suitable UTRA cell in that frequency is found:

5> select a suitable UTRA cell in another frequency.

3> if no frequency in SIB11 or SIB12 has the same frequency stored in the variable MBMS_PREV_FREQUENCY_INFO.

4> select a frequency randomly among the inter-frequencies indicated in SIB11 or SIB12.

5> select a suitable UTRA cell in the selected frequency.

5> if no suitable UTRA cell in the selected frequency is found:

6> select a suitable UTRA cell in another frequency.

3> clear the variable MBMS_PREV_FREQUENCY_INFO.

2> clear all service specific information applicable for the concerned service.

NOTE: The UE is only required to acquire the relevant SIB11 or SIB12, according to what is specified in subclauses 8.1.1.6.11 and 8.1.1.6.12.

…

If the UE is receiving an MBMS service that is not included in variable MBMS_ACTIVATED_SERVICES and that is using a p-t-m radio bearer, the UE shall:

1> stop receiving the concerned MBMS service and clear all service specific information applicable for the concerned service.

Upon completing the reception of the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages, the UE shall

1> act as follows for each of the services included in these messages provided that the service is included in variable MBMS_ACTIVATED_SERVICES and upper layers indicate that the session has not yet been received correctly (referred to as 'applicable services');

1> act upon all received information elements as specified in subclause 8.6, unless specified otherwise in the following;

1> if one or more preferred frequency applies for the applicable services:

2> delay acting upon the "MBMS Preferred frequency information" until receiving the relevant MCCH information i.e. the MBMS GENERAL INFORMATION message;

2> act upon the "MBMS Preferred frequency information" as specified in subclause 8.6.9.4 for the service(s) that upper layers indicate to have highest priority.

1> perform MBMS frequency selection procedure as specified in subclause 8.5.27;

1> if the UE receives an MBMS service using a p-t-m radio bearer and the received messages do not contain an IE "MBMS required UE action" set to "Acquire PTM RB info" or set to "Acquire counting info– PTM RBs unmodified" for that service then the UE shall:

2> stop receiving the concerned MBMS service and clear all service specific information applicable for the concerned service.

Reference

3GPP TS 25.331 clauses 8.5.27, 8.6.9.6, 8.7.2.4.

#### 8.5.3.3.3 Test purpose

To verify that in CELL_FACH, the UE at session start re-selects to the preferred Frequency Layer for the MBMS services it has activated.

To verify that at session stop the UE re-select to the one of the frequencies indicated in the System Information.

#### 8.5.3.3.4 Method of test

Initial condition

System Simulator:

3 MBMS cells, Cell 21, Cell 24 and Cell 27

**Table 8.5.3.3-1**

| Parameter | Unit | Cell 21 | Cell 24 | Cell 27 |
|---|---|---|---|---|
| UTRA RF Channel Number | | f1 | f2 | f3 |
| Test Frequency ID | | Mid Range | High Range | Low Range |
| CPICH Ec (FDD) | dBm/3.84 MHz | -60 | -66 | -66 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -66 | -66 |

User Equipment:

The UE is in CELL_FACH state as specified in clause 7.6 of TS 34.108.

The UE is interested in the broadcast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Broadcast service application available on UE Yes/No.

Test procedure

SS broadcasts SYSTEM INFORMATION BLOCK TYPE 11 with FACH Measurement Occasion details on Cell 21. The UE receives, at notification via MCCH, an MBMS MODIFIED SERVICES INFORMATION message including a preferred frequency in the IE "MBMS preferred frequency".

The UE shall consider this frequency as the preferred frequency layer for cell re-selection and re-select to Cell 24 at session start for the MBMS service it has activated. The UE shall store the frequency information of the frequency on which the UE was operating prior to cell-reselection to the preferred frequency in the variable MBMS_PREV_FREQUENCY_INFORMATION.

The UE shall perform the MCCH acquisition procedure on the new cell.

The UE shall transmit a CELL UPDATE message on the uplink CCCH of Cell 24 and set IE "Cell update cause" to "cell reselection".

After the SS receives this message, it transmits a CELL UPDATE CONFIRM message to the UE on the downlink CCCH. The UE shall stay in CELL_FACH state as indicated by the IE "RRC State Indicator".

The UE receives a MBMS MODIFIED SERVICES INFORMATION message “MBMS required UE action” IE set to Acquire PTM RB info”. The UE shall apply the MBMS p-t-m radio bearer configuration procedure to acquire the radio bearer configuration for the MBMS services the UE has activated.

The UE starts receiving the indicated p-t-m radio bearer and in order to check this, loop back mode 3 is used.

The UE receives a MBMS MODIFIED SERVICES INFORMATION message with IE "MBMS required UE action" set to 'Release PTM RB'. The UE shall stop receiving the concerned MBMS service. The variable MBMS_PREV_FREQUENCY_INFO is not empty. The frequencies in SIB11 or SIB12 are different from the frequency stored in the variable MBMS_PREV_FREQUENCY_INFO therefore the UE shall select Cell 27 (suitable UTRA cell in the indicated frequency) even if Cell 21 is present.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | The UE is in CELL_FACH on Cell 21. |
| 1a | ← | | SYSTEM INFORMATION BLOCK TYPE 11 | SS transmits modified SIB 11, with contents given in specific message contents. |
| 2 | ← | | MBMS MODIFIED SERVICES INFORMATION | “MBMS required UE action” IE is set to “none” and the “MBMS preferred frequency” IE indicates the f2. |
| 3 | ← | | MBMS GENERAL INFORMATION | MBMS preferred frequency information is set to f2. |
| 4 | UE | | | The UE re-selects to Cell 24. |
| 5 | → | | CELL UPDATE | The CELL UPDATE message shall contain the value "Cell Update Cause" set to "cell reselection" |
| 6 | ← | | CELL UPDATE CONFIRM | IE "RRC State Indicator is set to CELL_FACH. |
| 6a | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 7 | ← | | ACTIVATE RB TEST MODE | The SS activates the RB TEST MODE |
| 8 | → | | ACTIVATE RB TEST MODE COMPLETE | |
| 9 | ← | | MBMS MODIFIED SERVICES INFORMATION | “MBMS required UE action” IE is set to "Acquire PTM RB info". |
| 10 | ← | | MBMS GENERAL INFORMATION | MBMS preferred frequency information set without index into SIB11 neighbour list. |
| 11 | ← | | CLOSE UE TEST LOOP | The SS closes the Loop back mode 3 on MTCH. |
| 12 | → | | CLOSE UE TEST LOOP COMPLETE | |
| 13 | SS | | | The SS starts to broadcast MBMS data on MTCH on the concerned MBMS radio bearer. The SS transmits 10 RLC SDUs on the MTCH.. |
| 14 | ← | | UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST | |
| 15 | → | | UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE | The SS checks that the UE has received MBMS data. |
| 16 | ← | | OPEN UE TEST LOOP | |
| 17 | → | | OPEN UE TEST LOOP COMPLETE | |
| 18 | ← | | SYSTEM INFORMATION BLOCK TYPE 11 | Sent on cell 24, with Cell 27, but not the frequency of cell 21 in the neighbour list. |
| 19 | ← | | SYSTEM INFORMATION BLOCK TYPE 4 | Sent on cell 27. $Qhyst1_S$ is set to 12dB in SIB4, to prevent reselection from this cell. |
| 20 | ← | | MBMS MODIFIED SERVICES INFORMATION | “MBMS required UE action” IE is set to "Release PTM RB”. The UE stops receiving the concerned MBMS services and re-selects to Cell 27 |
| 21 | ← | | MBMS GENERAL INFORMATION | MBMS preferred frequency information set without index into SIB11 neighbour list. |
| 22 | → | | CELL UPDATE | The CELL UPDATE message shall contain the value "Cell Update Cause" set to "cell reselection" |
| 23 | ← | | CELL UPDATE CONFIRM | "RRC State Indicator is set to CELL_FACH. |
| 23a | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 24 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific message contents

SYSTEM INFORMATION BLOCK TYPE 11 (Step 1a)(FDD)

Use the message sub-type in default message content defined in 3GPP TS 34.108 clause 6.1.4 for Cell 21, with the following exceptions.

| Information Element | Value/remark |
|---|---|
| FACH measurement occasion info | |
| - FACH Measurement occasion cycle length coefficient | 3 |
| - Inter-frequency FDD measurement indicator | TRUE |
| - Inter-frequency TDD measurement indicator | FALSE |
| - Inter-RAT measurement indicators | Not Present |

All messages have the same content as defined in 34.108 clause 9.1.1 with the following exceptions:

MBMS MODIFIED SERVICES INFORMATION (Step 2)

| Information Element | Value/remark |
|---|---|
| Modified service list | At least the entry including the activated service |
| - MBMS Transmission identity | MBMS Transmission identity indicating MBMS activated service |
| - MBMS required UE action | None |
| - MBMS preferred frequency | |
| - PFL index | Index for f2 (the frequency that UEs shall consider as the preferred frequency layer for cell re-selection during a session for an MBMS service the UE has activated) |

MBMS GENERAL INFORMATION (Step 3)

| Information Element | Value/remark |
|---|---|
| MBMS preferred frequency information | |
| - MBMS preferred frequency list | Only 1 Entry |
| - CHOICE Layer convergence information | f2 (the frequency that UEs shall consider as the preferred frequency layer for cell re-selection during a session for an MBMS service the UE has activated) |

CELL UPDATE (Step 5 and 22)

| Information Element | Value/remark |
|---|---|
| Cell update cause | cell reselection |

CELL UPDATE CONFIRM (Step 6 and 23)

Use the same message sub-type found in TS 34.108, clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | '1010 1010 1010 1010' |

MBMS MODIFIED SERVICES INFORMATION (Step 9)

| Information Element | Value/remark |
|---|---|
| Modified service list | At least the entry including the activated service |
| - MBMS Transmission identity | MBMS Transmission identity indicating MBMS activated service |
| - MBMS required UE action | 'Acquire PTM RB' |
| - MBMS preferred frequency | - |
| - PFL index | Set to the index of the frequency of Cell 24 in the preferred frequency list |

MBMS GENERAL INFORMATION (Steps 10 and 21)

| Information Element | Value/remark |
|---|---|
| MBMS preferred frequency information | Only 1 entry |
| MBMS preferred frequency list | |
| - MBMS preferred frequency | Not present (indicates PFL is current cell frequency) |
| - CHOICE Layer convergence information | No HCS |
| - Qoffmbms | Infinity |

SYSTEM INFORMATION BLOCK TYPE 11 (Step 18)(FDD)

Use the message sub-type in default message content defined in 3GPP TS 34.108 [9] clause 6.1.4 for Cell 24, with the following exceptions.

| Information Element | Value/remark |
|---|---|
| **- Inter-frequency measurement system information** | |
| ….. | |
| - Inter frequency cell id | 27 |
| - Frequency info | Same content as specified for Inter-frequency cell id=7 in SIB11 for Cell 7 in clause 6.1.4.2 |
| - Cell info | Same content as specified for Intra-frequency cell id=7 in SIB11 for Cell 1 in clause 6.1.0b with the exception that value for Primary scrambling code shall be according to clause titled "Default settings for cell No.27 (TDD)" in clause 6.1.4.3 |
| - Inter frequency cell id | 28 |
| - Frequency info | Not present |
| - Cell info | Same content as specified for Intra-frequency cell id=8 in SIB11 for Cell 1 in clause 6.1.0b with the exception that value for Primary scrambling code shall be according to clause titled "Default settings for cell No.28 (TDD)" in clause 6.1.4.3 |
| - Inter frequency cell id | 7 |
| - Frequency info | Not Present |
| - Cell info | Same content as specified for Inter-frequency cell id=7 in SIB11 for Cell 1 in clause 6.1.0b |
| - Inter frequency cell id | 8 |
| - Frequency info | Not present |
| - Cell info | Same content as specified for Inter-frequency cell id=8 in SIB11 for Cell 1 in clause 6.1.0b |

SYSTEM INFORMATION BLOCK TYPE 11 (Step 18)(1.28Mcps TDD)

Use the message sub-type in default message content defined in 3GPP TS 34.108 [9] clause 6.1.4 for Cell 24, with the following exceptions.

| Information Element | Value/remark |
|---|---|
| **- Inter-frequency measurement system information** | |
| ….. | |
| - New inter-frequency cells | |
| - Inter-frequency cell id | 1 |
| - Frequency info | |
| - UARFCN | Low Range |

SYSTEM INFORMATION BLOCK TYPE 4 (Step 19)

Use the message sub-type in default message content defined in 3GPP TS 34.108 [9] clause 6.1.4 for Cell 27, with the following exceptions.

| Information Element | Value/remark |
|---|---|
| Cell selection and re-selection info | |
| - $Qhyst1_S$ | 6 (12dB) |

MBMS MODIFIED SERVICES INFORMATION (Step 20)

| Information Element | Value/remark |
|---|---|
| Modified service list<br>- MBMS Transmission identity<br><br>- MBMS required UE action | At least the entry including the activated service<br>MBMS Transmission identity indicating MBMS activated service<br>'Release PTM RB' |

#### 8.5.3.3.5 Test requirements

At step 5, the UE shall perform the cell update procedure on cell 24 using the cause value “cell reselection” set to “cell reselection”.

At step 15, the UE shall transmit a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message and the number of reported RLC SDUs shall be greater than zero.

At step 22, the UE shall perform the cell update procedure on cell 27 using the cause value “cell reselection”.

At step 24 the procedure C.2 shall verify that the UE is in CELL_FACH state.

### 8.5.3.3m MBMS Session Start (Frequency Layer Convergence)/Session Stop (Frequency Layer Dispersion) in CELL_FACH / MBMS Multicast Service

#### 8.5.3.3m.1 Definition

This test is applicable for all UEs that support MBMS multicast services.

#### 8.5.3.3m.2 Conformance requirement

Same conformance requirement as in clause 8.5.3.3.2

#### 8.5.3.3m.3 Test purpose

Same test purpose as in clause 8.5.3.3.3.

#### 8.5.3.3m.4 Method of test

##### Initial condition

System Simulator:

3 MBMS cells, Cell 21, Cell 24 and Cell 27.

User Equipment:

The UE is in CELL_FACH state as specified in clause 7.6 of TS 34.108.

The UE has joined the multicast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

##### Related ICS/IXIT statements

- MBMS Multicast service application available on UE Yes/No.

##### Test procedure

Same test procedure as in clause 8.5.3.3.4.

##### Specific message contents

Same specific messages contents as in clause 8.5.3.3.4

#### 8.5.3.3m.5 Test requirements

Same test requirement as in clause 8.5.3.3.5.

## 8.5.3.4 MBMS Session Stop with Frequency Layer Dispersion - no previous frequency layer available (Idle Mode) / MBMS Broadcast Service

### 8.5.3.4.1 Definition

This test is applicable for all UEs supporting MBMS broadcast services.

### 8.5.3.4.2 Conformance requirement

1> if the IE "MBMS required UE action" is set to 'Release PTM RB':

2> stop receiving the concerned MBMS service;

2> if the UE is in a state other than CELL_DCH (for FDD) or if the UE is in Idle mode, URA_PCH or CELL_PCH state (for TDD); and

2> if the UE does not decide to receive an MBMS service; and

2> if the variable MBMS_PREV_FREQUENCY_INFO is not empty:

3> if any frequency in SIB11 or SIB12 has the same frequency stored in the variable MBMS_PREV_FREQUENCY_INFO:

4> select a suitable UTRA cell in that frequency.

4> if no suitable UTRA cell in that frequency is found:

5> select a suitable UTRA cell in another frequency.

3> if no frequency in SIB11 or SIB12 has the same frequency stored in the variable MBMS_PREV_FREQUENCY_INFO.

4> select a frequency randomly among the inter-frequencies indicated in SIB11 or SIB12.

5> select a suitable UTRA cell in the selected frequency

5> if no suitable UTRA cell in the selected frequency is found:

6> select a suitable UTRA cell in another frequency.

3> clear the variable MBMS_PREV_FREQUENCY_INFO.

2> clear all service specific information applicable for the concerned service.

NOTE: The UE is only required to acquire the relevant SIB11 or SIB12, according to what is specified in subclauses 8.1.1.6.11 and 8.1.1.6.12.

#### Reference

3GPP TS 25.331 clause 8.6.9.6.

### 8.5.3.4.3 Test purpose

To verify that in idle mode state, the UE performs frequency layer dispersion procedure at session stop, when no suitable cell in the previously stored frequency is found.

### 8.5.3.4.4 Method of test

#### Initial condition

System Simulator: 3 MBMS cells (Cell 21, Cell 24 and Cell 27), with the downlink transmission power shown in column marked "T0" in table 8.5.3.5-1.

User Equipment:

The UE is interested in the broadcast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

The UE is in Idle Mode as specified in clause 7.6 of TS 34.108.

Related ICS/IXIT statements

- MBMS Broadcast service application available on UE Yes/No

Test procedure

Table 8.5.3.4-1 illustrates the downlink power to be applied for the 3 cells at various time instants of the test execution. Columns marked "T0" denote the initial conditions, while columns marked "T1 are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.5.3.4-1**

| Parameter | Unit | Cell 21 | | Cell 24 | | Cell 27 | |
|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | | Low Range Test Frequency | |
| LAC | | 0001 | | 0002 | | 0003 | |
| CPICH Ec (FDD) | dBm/3.84 MHz | -60 | OFF | -70 | -70 | -70 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | OFF | -70 | -70 | -70 | -60 |

Method C is applied (as described and used in clause 6 of TS 34.123-1).

The SS activates Cell 21, Cell 24 and Cell 27 and monitors them for access requests from the UE. The UE is in idle mode on Cell 21.The UE receives, at notification via MCCH, an MBMS MODIFIED SERVICES INFORMATION message including a preferred frequency in the IE" MBMS preferred frequency".

The UE shall consider this frequency as the preferred frequency layer for cell re-selection. The SS waits for random access requests from the UE. The UE moves to Cell 24 at session start for the concerned MBMS service. The UE shall store the frequency information of the frequency on which the UE was operating prior to cell-reselection to the preferred frequency in the variable MBMS_PREV_FREQUENCY_INFORMATION.

The UE shall perform the MCCH acquisition procedure on the new cell.

The UE receives an MBMS MODIFIED SERVICES INFORMATION message with the "MBMS required UE action" IE set to "Acquire PTM RB info". The UE shall apply the MBMS p-t-m radio bearer configuration procedure to acquire the radio bearer configuration for the MBMS service provided by the SS.

The UE starts receiving the indicated p-t-m radio bearer.

SS reconfigures itself according to the settings stated in column "T1" of table 8.5.3.4-1. The SS waits to see if there are any random access requests from the UE. The UE receives a MBMS MODIFIED SERVICES INFORMATION message with IE "MBMS required UE action" is set to 'Release PTM RB'. The UE shall stop receiving the concerned MBMS service. The variable MBMS_PREV_FREQUENCY_INFO is not empty, and no frequency in SIB11 or SIB12 has the same frequency stored in the variable MBMS_PREV_FREQUENCY_INFO. The SS waits for random access requests from the UE. The UE shall select Cell 27 (suitable UTRA).

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE is in Idle mode on Cell 21. |
| 2 | | ← | MBMS MODIFIED SERVICES INFORMATION | Service_id = service activated "MBMS required UE action is set to "none (FLC)". |
| 3 | | ← | MBMS GENERAL INFORMATION | MBMS preferred frequency information is set to f4. |
| 4 | | | | The SS waits for random access requests from the UE. The UE shall respond on Cell 24, a GMM registration procedure is performed. |
| 5 | | | | The following MBMS messages sent on the MCCH will be received in the next Modification Period. |

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 6 | ← | | MBMS MODIFIED SERVICES INFORMATION | |
| 7 | ← | | MBMS UNMODIFIED SERVICES INFORMATION | "MBMS required UE action" IE is set to "Acquire PTM RB info". |
| 8 | ← | | MBMS GENERAL INFORMATION | MBMS preferred frequency information set without index into SIB11 neighbour list. |
| 9 | | | | UE starts receiving the indicated p-t-m radio bearer |
| 10 | | SS | | The SS reconfigures itself according to the settings stated in column "T1" of table 8.5.3.4-1. |
| 11 | ← | | MBMS MODIFIED SERVICES INFORMATION | "MBMS required UE action" IE is set to "Release PTM RB". |
| 12 | ← | | MBMS GENERAL INFORMATION | MBMS preferred frequency information set without index into SIB11 neighbour list. |
| 13 | | | | The UE stops receiving the concerned MBMS services.<br>The SS waits for random access requests from the UE. The UE shall respond on Cell 27, a GMM registration procedure is performed. |
| 14 | ←→ | | CALL C.1 | If the test result of C.1 indicates that UE is in Idle Mode state, the test passes, otherwise it fails. |

Specific message contents

All messages have the same content as defined in 34.108 clause 9.1.1 with the following exceptions:

MBMS MODIFIED SERVICES INFORMATION (Step 2)

| Information Element | Value/remark |
|---|---|
| Modified service list | Only 1 entry |
| - MBMS Transmission identity | MBMS Transmission identity indicating MBMS activated service |
| - MBMS required UE action | None (FLC) |
| - MBMS preferred frequency | |
| - PFL index | index of the frequency of Cell 24 in the preferred frequency list |

MBMS GENERAL INFORMATION (Step 3)

| Information Element | Value/remark |
|---|---|
| MBMS preferred frequency information | |
| MBMS preferred frequency list<br>- MBMS preferred frequency | Value N corresponds with the $n^{th}$ frequency included in the IE New inter-frequency cells that is specified within SIB 11, corresponding to cell 24 frequency. |

MBMS UNMODIFIED SERVICES INFORMATION (Step 7)

| Information Element | Value/remark |
|---|---|
| Modified service list | Only 1 entry |
| - MBMS Transmission identity | MBMS Transmission identity indicating MBMS activated service |
| - MBMS required UE action | Acquire PTM RB info |
| - MBMS preferred frequency | - |
| - PFL index | index of the frequency of Cell 24 in the preferred frequency list |

MBMS GENERAL INFORMATION (Steps 8 and 12)

| Information Element | Value/remark |
|---|---|
| MBMS preferred frequency information | Only 1 entry |
| MBMS preferred frequency list | |
| - MBMS preferred frequency | Not present (indicates PFL is current cell frequency) |
| - CHOICE Layer convergence information | No HCS |
| - Qoffmbms | infinity |

MBMS MODIFIED SERVICES INFORMATION (Step 11)

| Information Element | Value/remark |
|---|---|
| Modified service list | Only 1 entry |
| - MBMS Transmission identity | MBMS Transmission identity indicating MBMS activated service |
| - MBMS required UE action | 'Release PTM RB' |

#### 8.5.3.4.5 Test requirements

At step 4, the UE shall respond on Cell 24.

At step 13, the UE shall respond on Cell 27.

At step 14 the procedure C.1 shall verify that the UE is in Idle Mode.

### 8.5.3.4m MBMS Session Stop with Frequency Layer Dispersion - no previous frequency layer available (Idle Mode) / MBMS Multicast Service

#### 8.5.3.4m.1 Definition

This test is applicable for all UEs that support MBMS multicast services.

#### 8.5.3.4m.2 Conformance requirement

Same conformance requirement as in clause 8.5.3.4.2

#### 8.5.3.4m.3 Test purpose

Same test purpose as in clause 8.5.3.4.3.

#### 8.5.3.4m.4 Method of test

Initial condition

System Simulator:

3 MBMS cells, Cell 21, Cell 24 and Cell 27.

User Equipment:

The UE is in Idle Mode as specified in clause 7.6 of TS 34.108.

The UE has joined the multicast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Multicast service application available on UE Yes/No.

Test procedure

Same test procedure as in clause 8.5.3.4.4.

Specific message contents

Same specific messages contents as in clause 8.5.3.4.4

#### 8.5.3.4m.5 Test requirements

Same test requirement as in clause 8.5.3.4.5.

### 8.5.3.5 MBMS Session Stop with Frequency Layer Dispersion - no previous frequency layer available (URA_PCH) / MBMS Broadcast Service

#### 8.5.3.5.1 Definition

This test is applicable for all UEs supporting MBMS broadcast services.

#### 8.5.3.5.2 Conformance requirement

1> if the IE "MBMS required UE action" is set to 'Release PTM RB':

2> stop receiving the concerned MBMS service;

2> if the UE is in a state other than CELL_DCH (for FDD) or if the UE is in Idle mode, URA_PCH or CELL_PCH state (for TDD); and

2> if the UE does not decide to receive an MBMS service; and

2> if the variable MBMS_PREV_FREQUENCY_INFO is not empty:

3> if any frequency in SIB11 or SIB12 has the same frequency stored in the variable MBMS_PREV_FREQUENCY_INFO:

4> select a suitable UTRA cell in that frequency.

4> if no suitable UTRA cell in that frequency is found:

5> select a suitable UTRA cell in another frequency.

3> if no frequency in SIB11 or SIB12 has the same frequency stored in the variable MBMS_PREV_FREQUENCY_INFO.

4> select a frequency randomly among the inter-frequencies indicated in SIB11 or SIB12.

5> select a suitable UTRA cell in the selected frequency

5> if no suitable UTRA cell in the selected frequency is found:

6> select a suitable UTRA cell in another frequency.

3> clear the variable MBMS_PREV_FREQUENCY_INFO.

2> clear all service specific information applicable for the concerned service.

NOTE: The UE is only required to acquire the relevant SIB11 or SIB12, according to what is specified in subclauses 8.1.1.6.11 and 8.1.1.6.12.

Reference

3GPP TS 25.331, clause 8.6.9.6

#### 8.5.3.5.3 Test purpose

To verify UE performs frequency layer dispersion procedure at session stop in URA_PCH state, when no suitable cell in the previously stored frequency is found.

#### 8.5.3.5.4 Method of test

Initial condition

System Simulator:

3 MBMS cells, Cell 21, Cell 24 and Cell 27

User Equipment:

The UE is in URA_PCH state as specified in clause 7.6 of TS 34.108.

The UE is interested in the broadcast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

### Related ICS/IXIT statements

- MBMS Broadcast service application available on UE Yes/No

### Test procedure

Table 8.5.3.5-1 illustrates the downlink power to be applied for the 3 cells at various time instants of the test execution. Columns marked "T0" denote the initial conditions, while columns marked "T1 are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.5.3.5-1**

| Parameter | Unit | Cell 21 | | Cell 24 | | Cell 27 | |
|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | | Low Range Test Frequency | |
| URA ID | | URA-ID 1 | | URA-ID 2 | | URA-ID 3 | |
| CPICH Ec (FDD) | dBm/3.84 MHz | -60 | OFF | -70 | -70 | -70 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | OFF | -70 | -70 | -70 | -60 |

The UE is in URA_PCH state on cell 21. SS indicates on MICH and modifies the MCCH to indicate the start of the service which the UE has activated. The UE moves to cell 24 with a cell update and begins reception of the MBMS service using the 64.8kbps radio bearer configuration as specified in TS 34.108 clause 6.10.2.4.3.5. The SS reconfigures itself according to the settings stated in column "T1" of table 8.5.3.5-1. The SS terminates the MBMS service with an indication that the UE should perform frequency layer dispersion. The UE moves to cell 27 with a cell update.

Expected Sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | ← | MBMS MODIFIED SERVICES INFORMATION (Cell 21) | SS indicates availability of the MBMS broadcast or multicast service on cell 24. (Preferred frequency for this service is set to the index of the frequency of Cell 24 in the preferred frequency list)<br><br>SS: MCCH message combination C4 for 1 modification period, then combination C2. |
| 2 | | ← | MBMS GENERAL INFORMATION (Cell 21) | MBMS Qoffset for the preferred frequency for this service set to infinity) |
| 3 | | → | URA UPDATE | UE reselects to cell 24. URA Update cause = “change of URA” |
| 4 | | ← | URA UPDATE CONFIRM | RRC State indicator = URA_PCH |
| 5 | | ← | MBMS UNMODIFIED SERVICES INFORMATION (Cell 24) | UE begins reception of the MBMS service using the 64.8kbps radio bearer configuration as specified in TS 34.108 clause 6.10.2.4.3.5.<br><br>SS: MCCH message combination C2. |
| 6 | | ← | MBMS GENERAL INFORMATION | MBMS preferred frequency information set without index into SIB11 neighbour list. |
| 7 | | | | SS reconfigures itself according to the settings stated in column "T1" of table 8.5.3.5-1. |
| 8 | | ← | MBMS MODIFIED SERVICES INFORMATION (Cell 24) | The SS terminates the MBMS service with an indication to perform frequency layer dispersion.<br><br>SS: MCCH message combination C4 for 1 modification period. |
| 9 | | ← | MBMS GENERAL INFORMATION | MBMS preferred frequency information set without index into SIB11 neighbour list. |
| 10 | | → | URA UPDATE | UE reselects to cell 27. URA Update cause = “change of URA” |
| 11 | | ← | URA UPDATE CONFIRM | RRC State indicator = URA_PCH |
| 12 | | ←→ | CALL C.5 | If the test result of C.5 indicates that UE is in URA_PCH state, the test passes, otherwise it fails |

Specific message contents

All messages have the same content as defined in 34.108 clause 9.1.1 with the following exceptions:

SYSTEM INFORMATION BLOCK TYPE 2

Cell 21:

| Information Element | Value/remark |

### 8.5.3.6 MBMS Session Stop with Frequency Layer Dispersion - no previous frequency layer available (CELL_FACH) / MBMS Broadcast Service

#### 8.5.3.6.1 Definition

This test is applicable for all UEs supporting MBMS broadcast services.

#### 8.5.3.6.2 Conformance requirement

1> if the IE "MBMS required UE action" is set to 'Release PTM RB':

2> stop receiving the concerned MBMS service;

2> if the UE is in a state other than CELL_DCH (for FDD) or if the UE is in Idle mode, URA_PCH or CELL_PCH state (for TDD); and

2> if the UE does not decide to receive an MBMS service; and

2> if the variable MBMS_PREV_FREQUENCY_INFO is not empty:

3> if any frequency in SIB11 or SIB12 has the same frequency stored in the variable MBMS_PREV_FREQUENCY_INFO:

4> select a suitable UTRA cell in that frequency.

4> if no suitable UTRA cell in that frequency is found:

5> select a suitable UTRA cell in another frequency.

3> if no frequency in SIB11 or SIB12 has the same frequency stored in the variable MBMS_PREV_FREQUENCY_INFO.

4> select a frequency randomly among the inter-frequencies indicated in SIB11 or SIB12.

5> select a suitable UTRA cell in the selected frequency

5> if no suitable UTRA cell in the selected frequency is found:

6> select a suitable UTRA cell in another frequency.

3> clear the variable MBMS_PREV_FREQUENCY_INFO.

2> clear all service specific information applicable for the concerned service.

NOTE: The UE is only required to acquire the relevant SIB11 or SIB12, according to what is specified in subclauses 8.1.1.6.11 and 8.1.1.6.12.

Reference

3GPP TS 25.331, clause 8.6.9.6.

### 8.5.3.6.3 Test purpose

To verify UE performs frequency layer dispersion procedure at session stop in CELL_FACH state, when no suitable cell in the previously stored frequency is found.

### 8.5.3.6.4 Method of test

Initial condition

System Simulator:

3 MBMS cells, Cell 21, Cell 24 and Cell 27.

User Equipment:

The UE is in CELL_FACH state as specified in clause 7.6 of TS 34.108.

The UE is interested in the broadcast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Broadcast service application available on UE Yes/No

Test procedure

Table 8.5.3.6-1 illustrates the downlink power to be applied for the 3 cells at various time instants of the test execution. Columns marked "T0" denote the initial conditions, while columns marked "T1 are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.5.3.6-1**

| Parameter | Unit | Cell 21 | | Cell 24 | | Cell 27 | |
|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | | Low Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84 MHz | -60 | OFF | -70 | -70 | -70 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | OFF | -70 | -70 | -70 | -60 |

The UE is in CELL_FACH state on cell 21. The SS broadcasts SYSTEM INFORMATION BLOCK TYPE 11 with FACH Measurement Occasion details on Cell 21. SS indicates on MICH and modifies the MCCH to indicate the start of the service which the UE has activated. The UE moves to cell 24 with a cell update and begins reception of the MBMS service using the 64.8kbps radio bearer configuration as specified in TS 34.108 clause 6.10.2.4.3.5. The SS reconfigures itself according to the settings stated in column "T1" of table 8.5.3.6-1. The SS terminates the MBMS service with an indication that the UE should perform frequency layer dispersion. The UE moves to cell 27 with a cell update.

Expected Sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | ← | | SYSTEM INFORMATION BLOCK TYPE 11 | SS transmits modified SIB 11, with contents given in specific message contents. |
| 1 | ← | | MBMS MODIFIED SERVICES INFORMATION (Cell 21) | SS indicates availability of the MBMS broadcast or multicast service on Cell 24. (Preferred frequency for this service is set to the index of the frequency of Cell 24 in the preferred frequency list)<br><br>SS: MCCH message combination C4 for 1 modification period, then combination C2. |
| 2 | ← | | MBMS GENERAL INFORMATION (Cell 21) | MBMS Qoffset for the preferred frequency for this service set to infinity |
| 3 | → | | CELL UPDATE | UE reselects to Cell 24. Cell Update cause = “Cell reselection” |
| 4 | ← | | CELL UPDATE CONFIRM | RRC State indicator = CELL_FACH |
| 4a | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 5 | ← | | MBMS UNMODIFIED SERVICES INFORMATION (Cell 24) | UE begins reception of the MBMS service using the 64.8kbps radio bearer configuration as specified in TS 34.108 clause 6.10.2.4.3.5.<br><br>SS: MCCH message combination C2. |
| 6 | ← | | MBMS GENERAL INFORMATION | MBMS preferred frequency information set without index into SIB11 neighbour list. |
| 7 | | | | SS reconfigures itself according to the settings stated in column "T1" of table 8.5.3.6-1. |
| 8 | ← | | MBMS MODIFIED SERVICES INFORMATION (Cell 24) | The SS terminates the MBMS service.<br><br>SS: MCCH message combination C4 for 1 modification period. |
| 9 | ← | | MBMS GENERAL INFORMATION | MBMS preferred frequency information set without index into SIB11 neighbour list. |
| 10 | → | | CELL UPDATE | UE reselects to Cell 27. Cell Update cause = “Cell reselection” |
| 11 | ← | | CELL UPDATE CONFIRM | RRC State indicator = CELL_FACH |
| 11a | → | | UTRAN MOBILITY INFORMATION CONFIRM | |

| | | | |
|---|---|---|---|
| 12 | ←→ | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific message contents

All messages have the same content as defined in 34.108 clause 9.1.1 with the following exceptions:

SYSTEM INFORMATION BLOCK TYPE 11 (Step 0)(FDD)

Use the message sub-type in default message content defined in 3GPP TS 34.108 clause 6.1.4 for Cell 21, with the following exceptions.

| Information Element | Value/remark |
|---|---|
| FACH measurement occasion info | |
| - FACH Measurement occasion cycle length coefficient | 3 |
| - Inter-frequency FDD measurement indicator | TRUE |
| - Inter-frequency TDD measurement indicator | FALSE |
| - Inter-RAT measurement indicators | Not Present |

MBMS MODIFIED SERVICES INFORMATION (Step 1)

| Information Element | Value/remark |
|---|---|
| MBMS Transmission identity | MBMS Transmission identity indicating MBMS activated service |
| MBMS required UE action | None |
| MBMS preferred frequency | |
| - PFL index | Set to the index of the frequency of Cell 24 in the preferred frequency list |

MBMS GENERAL INFORMATION (Step 2)

| Information Element | Value/remark |
|---|---|
| MBMS preferred frequency list | |
| MBMS preferred frequency | Value N corresponds with the $n^{th}$ frequency included in the IE New inter-frequency cells that is specified within SIB 11, corresponding to Cell 24 frequency. |
| Layer convergence information | No HCS |
| MBMS Qoffset | Infinity |

MBMS UNMODIFIED SERVICES INFORMATION (Step 5)

| Information Element | Value/remark |
|---|---|
| MBMS Transmission identity | MBMS Transmission identity indicating MBMS activated service |
| MBMS required UE action | Acquire PTM RB info |
| MBMS preferred frequency | |
| - PFL index | Set to the index of the frequency of Cell 24 in the preferred frequency list |

MBMS GENERAL INFORMATION (Steps 6 and 9)

| Information Element | Value/remark |
|---|---|
| MBMS preferred frequency information | Only 1 entry |
| MBMS preferred frequency list | |
| - MBMS preferred frequency | Not present (indicates PFL is current cell frequency) |
| - CHOICE Layer convergence information | No HCS |
| - Qoffmbms | infinity |

MBMS MODIFIED SERVICES INFORMATION (Step 8)

| Information Element | Value/remark |
|---|---|
| MBMS Transmission identity | MBMS Transmission identity indicating MBMS activated service |
| MBMS required UE action | Release PTM RB |

CELL UPDATE (Step 3 and 10)

| Information Element | Value/remark |
|---|---|
| Cell Update Cause | 'Cell Reselection' |

CELL UPDATE CONFIRM (Step 4 and 11)

Use the same message sub-type found in TS 34.108, clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | '1010 1010 1010 1010' |

#### 8.5.3.6.5 Test requirements

At step 3, the UE performs cell update on cell 24.

At step 10, the UE performs cell update on cell 27.

### 8.5.3.6m MBMS Session Stop with Frequency Layer Dispersion - no previous frequency layer available (CELL_FACH) / MBMS Multicast Service

#### 8.5.3.6m.1 Definition

This test is applicable for all UEs that support MBMS multicast services.

#### 8.5.3.6m.2 Conformance requirement

Same conformance requirement as in clause 8.5.3.6.2

#### 8.5.3.6m.3 Test purpose

Same test purpose as in clause 8.5.3.6.3.

#### 8.5.3.6m.4 Method of test

Initial condition

System Simulator:

3 MBMS cells, Cell 21, Cell 24 and Cell 27

User Equipment:

The UE is in CLL_FACH state as specified in clause 7.6 of TS 34.108.

The UE has joined the multicast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Multicast service application available on UE Yes/No.

Test procedure

Same test procedure as in clause 8.5.3.6.4.

Specific message contents

Same specific messages contents as in clause 8.5.3.6.4

8.5.3.6m.5 Test requirements

Same test requirement as in clause 8.5.3.6.5.

## 8.5.4 MBMS Modification Request

### 8.5.4.1 Transmission of the MBMS Selected Services Information when entering RRC connected mode and CELL_DCH state / MBMS Selected Service

#### 8.5.4.1.1 Definition

This test is applicable for all UEs that support MBMS broadcast services.

#### 8.5.4.1.2 Conformance requirement

A UE entering CELL_DCH shall initiate the MBMS modification request procedure in the following cases:

1> if the UE has any MBMS Selected Service; and

1> if the IE "MCCH configuration information" was received in System Information Block Type 5 or System Information Block Type 5bis prior to entering CELL_DCH.

A UE completing an RRC Connection Setup procedure shall initiate the MBMS modification request procedure in the following cases:

1> if the UE has any MBMS Selected Service; and

1> if the IE "MCCH configuration information" was received in System Information Block Type 5 or System Information Block Type 5bis prior to completing the RRC Connection Setup procedure.

…

The UE shall set the contents of the MBMS MODIFICATION REQUEST message as follows:

1> if there is a change in selection of one or more of the MBMS Selected Services:

2> if the UE has not selected any MBMS Selected Service:

3> include the MBMS Selected Service Info and set the Status to 'None'.

2> otherwise:

3> include the MBMS Selected Service Info and set the Status to 'Some'.

3> for each MBMS Selected Service:

4> include the MBMS Selected Service ID.

Reference

3GPP TS 25.331 clauses 8.7.6.2, 8.7.6.2a.

#### 8.5.4.1.3 Test purpose

1. To verify that when the list of MBMS Selected Services is not empty, the UE sends the MBMS Selected Services Information to the network when entering RRC connected mode.
2. To verify that when the list of MBMS Selected Services is not empty, the UE sends the MBMS Selected Services Information to the network when entering CELL_DCH state.

8.5.4.1.4 Method of test

Initial condition

System Simulator:

1 MBMS cell.

User Equipment:

The UE is interested in the selected service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

The UE is in Idle Mode as specified in clause 7.6 of TS 34.108.

Related ICS/IXIT statements

- MBMS Broadcast service application available on UE Yes / No

Test procedure

The UE is in idle mode and has selected MBMS Service 1. The UE performs an outgoing call to setup a PS service. After the RRC connection establishment, the UE transmits an MBMS MODIFICATION REQUEST message containing the selected service to the SS.

Then the SS transmits a PHYSICAL CHANEL RECONFIGURATION message to move the UE to CELL_DCH state. After entering CELL_DCH state, the UE transmits an MBMS MODIFICATION REQUEST message containing the selected service to the SS.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | → | | RRC CONNECTION REQUEST | |
| 2 | ← | | RRC CONNECTION SETUP | |
| 3 | → | | RRC CONNECTION SETUP COMPLETE | |
| 4 | → | | MBMS MODIFICATION REQUEST | This message may be received at any point after step 3 but before step 10. |
| 5 | | | VOID | |
| 6 | ← | | SECURITY MODE COMMAND | |
| 7 | → | | SECURITY MODE COMPLETE | |
| 8 | ← | | RADIO BEARER SETUP | |
| 9 | → | | RADIO BEARER SETUP COMPLETE | |
| 10 | ← | | PHYSICAL CHANNEL RECONFIGURATION | |
| 11 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE enters CELL_DCH state |
| 12 | → | | MBMS MODIFICATION REQUEST | |

Specific message contents

RRC CONNECTION SETUP (Step 2)

Use the message sub-type titled “Transition to CELL_FACH” in TS 34.108 clause 9.

MBMS MODIFICATION REQUEST (steps 4 and 12)

| Information Element | Value/remark |
|---|---|
| MBMS preferred frequency request | Check that the IE is not present |
| MBMS RB list requested to be released | Check that the IE is not present |
| MBMS Selected Service Info<br>- CHOICE Status<br>- MBMS Selected Services Full<br>- MBMS Selected Service ID<br>- MBMS Service ID<br>- CHOICE PLMN identity<br>- SameAs-MIB<br>- explicitPLMN_Id | <br>Some<br><br><br>MBMS service ID of the activated MBMS service<br>Check to see that one of the below choice element is present<br>(no data)<br>Check to see if it is set to the same value as "PLMN ID” in the Master Information block transmitted for the current serving cell. |

RADIO BEARER SETUP (Step 8)

Use the message sub-type titled "Packet to CELL_FACH from CELL_FACH in PS" in 34.108 clause 9.PHYSICAL CHANNEL RECONFIGURATION (Step 10)

Use the message sub-type titled "Packet to CELL_DCH from CELL_FACH in PS" in 34.108 clause 9.

#### 8.5.4.1.5 Test requirements

After step 3, the UE shall transmit an MBMS MODIFICATION REQUEST message.

After step 11, the UE shall transmit an MBMS MODIFICATION REQUEST message.

### 8.5.4.2 Modification of the MBMS Selected Services list whilst in URA_PCH & Cell_FACH / MBMS Selected Service

#### 8.5.4.2.1 Definition

This test is applicable for Rel-6 UEs supporting MBMS broadcast services.

#### 8.5.4.2.2 Conformance requirement

A UE in CELL_FACH, CELL_PCH or URA_PCH state shall initiate the MBMS modification request procedure in the following cases:

1> upon a change of the MBMS Selected Services; and

1> if the IE "Indicate changes in MBMS Selected Services" that is included in the MBMS GENERAL INFORMATION message is set to TRUE.

If the UE is required to initiate the MBMS modification request procedure as specified in the conditions above, the UE shall:

1> transmit an MBMS MODIFICATION REQUEST message with the contents as specified in subclause 8.7.6.2a.

The UE shall set the contents of the MBMS MODIFICATION REQUEST message as follows:

1> if the preferred frequency applicable for the MBMS service prioritised by upper layers is different from the currently used frequency:

2> include the IE "MBMS preferred frequency request" and set it to the prioritised MBMS service identity.

1> if upper layers request to discontinue reception of an MBMS service provided via a p-t-p radio bearer:

2> include the p-t-p radio bearers used for the corresponding MBMS services within the IE "MBMS RB list requested to be released".

1> if the UE enters CELL_DCH; or

1> if the UE completes the RRC connection establishment procedure; or

1> if there is a change in selection of one or more of the MBMS Selected Services:

2> if the UE has not selected any MBMS Selected Service:

3> include the MBMS Selected Service Info and set the Status to 'None'.

2> otherwise:

3> include the MBMS Selected Service Info and set the Status to 'Some'.

3> for each MBMS Selected Service:

4> include the MBMS Selected Service ID.

Reference

3GPP TS 25.331, clauses 8.7.6.2, 8.7.6.2a.

#### 8.5.4.2.3 Test purpose

To verify that when a UE is in URA_PCH the introduction of a MBMS Service ID onto the MCCH does not trigger the UE to send a update to the network.

To verify that when the list of MBMS Selected Services is modified in the UE in URA_PCH or CELL_FACH, when the network indicates it should do so (in the MBMS General Information message), the UE informs the network that the MBMS selected Services have changed.

To verify that when the list of MBMS Selected Services is modified in the UE in CELL_FACH, when the network indicates it should not update the network (in the MBMS General Information message), ensure that the UE does not inform the network that the MBMS selected Services have changed.

#### 8.5.4.2.4 Method of test

Initial condition

System Simulator:

1 MBMS cell.

User Equipment:

The UE is in URA_PCH state as specified in clause 7.6 of TS 34.108.

The UE is interested in the selected service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Broadcast service application available on UE Yes / No

Test procedure

a) The MCCH on Cell 21 is modified to indicate the availability of service 1, and the Notification Indicator on MICH corresponding to service 1 is set. The IE “MBMS re- acquire MCCH” that is included in MBMS MODIFIED SERVICES INFORMATION is set to TRUE. The IE "Indicate changes in MBMS Selected Services" that is included in the MBMS GENERAL INFORMATION message is set to TRUE. The SS starts service 1 using the 64.8kbps radio bearer configuration as specified in TS 34.108 clause 6.10.2.4.3.5.

b) The SS verifies for 1 complete modification period that the UE does not perform a Cell Update or send MBMS MODIFICATION REQUEST.

c) Service 1 is removed from the UE selected services.

d) The UE performs a Cell Update, indicating “Uplink data transmission”. The Cell Update Confirm message moves the UE to CELL_FACH state.

e) The UE transmits MBMS MODIFICATION REQUEST indicating the list of selected services (Status = “None”).

f) Service 1 is added to the UE selected services.

g) The UE transmits MBMS MODIFICATION REQUEST indicating the list of selected services (service 1).

h) The MCCH on Cell 21 is modified, and the Notification Indicator on MICH corresponding to service 1 is set. The IE “MBMS re- acquire MCCH” that is included in MBMS MODIFIED SERVICES INFORMATION is set to TRUE. The IE "Indicate changes in MBMS Selected Services" that is included in the MBMS GENERAL INFORMATION message is set to FALSE.

i) After 1 complete modification period, service 1 is removed from the UE selected services.

j) The SS verifies for 1 complete modification period that the UE does not perform a Cell Update and/or send MBMS MODIFICATION REQUEST.

k) Service 1 is added to the UE selected services.

l) The SS verifies for 1 complete modification period that the UE does not perform a Cell Update and/or send MBMS MODIFICATION REQUEST.

Expected Sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE state in Cell 21 is: URA_PCH<br><br>UE: Service 1 only is selected. |
| 2 | ← | | MBMS MODIFIED SERVICES INFORMATION | SS indicates the availability of the MBMS broadcast service 1.<br><br>'MBMS re- acquire MCCH' = TRUE<br><br>SS: MCCH message combination C4 for 1 modification period, then combination C2. |
| 3 | ← | | MBMS GENERAL INFORMATION | 'Indicate changes in MBMS Selected Services' = TRUE |
| 4 | | | | SS verifies for 1 complete modification period that the UE does not send MBMS MODIFICATION REQUEST. |
| 5 | | | | Service 1 is removed from the UE selected services. |
| 6 | → | | CELL UPDATE | |
| 7 | ← | | CELL UPDATE CONFIRM | The UE shall move to CELL_FACH state |
| 7a | → | | UTRAN MOBILITY INFORMATION CONFIRM | |
| 8 | → | | MBMS MODIFICATION REQUEST | MBMS Selected Service Info: Status = 'None'. |
| 9 | | | | Service 1 is added to the UE selected services. |
| 10 | → | | MBMS MODIFICATION REQUEST | MBMS Selected Service Info: Status = 'Some'. MBMS Selected Service ID = 5 |
| 11 | ← | | MBMS MODIFIED SERVICES INFORMATION | SS indicates a change in MBMS broadcast service 1.<br><br>SS: MCCH message combination C4 for 1 modification period, then combination C2. |
| 12 | ← | | MBMS GENERAL INFORMATION | 'Indicate changes in MBMS Selected Services' = FALSE |
| 13 | | | | After 1 complete modification period, the UE removes service 1 from the selected services. |
| 14 | | | | SS verifies that the UE does not send MBMS MODIFICATION REQUEST or Cell Update. |
| 15 | | | | After 1 complete modification period, the UE adds service 1 to the selected services. |
| 16 | | | | SS verifies that the UE does not send MBMS MODIFICATION REQUEST or Cell Update. |

Specific message contents

MBMS MODIFIED SERVICES INFORMATION (Step 2)

The same message found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Modified service list<br>- MBMS Transmission identity<br>- MBMS Service ID<br>- MBMS Session ID<br>- MBMS required UE action<br>- Continue MCCH reading | <br><br>'000005'<br>1<br>Acquire PTM RB Info<br>FALSE |
| MBMS re- acquire MCCH | TRUE |

MBMS GENERAL INFORMATION (Step 3)

The same message found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Indicate changes in MBMS Selected Services | TRUE |

CELL UPDATE (Step 6)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| Cell Update Cause | Check to see if set to ‘uplink data transmission’ |

CELL UPDATE CONFIRM (Step 7)

| Information Element | Value/remark |
|---|---|
| New C-RNTI | '1010 1010 1010 1010' |

MBMS MODIFICATION REQUEST (STEP 8)

| Information Element | Value/remark |
|---|---|
| MBMS Selected Service Info<br>- CHOICE Status | <br>None |

MBMS MODIFICATION REQUEST (STEP 10)

| Information Element | Value/remark |
|---|---|
| MBMS Selected Service Info<br>- CHOICE Status<br>- MBMS Selected Services<br>- MBMS Selected Service ID<br>- CHOICE PLMN identity<br><br>- SameAs-MIB<br>- explicitPLMN_Id | <br>Some<br><br>‘000005’<br>Check to see that one of the below choice element is present<br>(no data)<br>Check to see if it is set to the same value as "PLMN ID” in the Master Information block transmitted for the current serving cell. |

MBMS MODIFIED SERVICES INFORMATION (Step 11)

The same message found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Modified service list<br>- MBMS Transmission identity<br>- MBMS Service ID<br>- MBMS Session ID<br>- MBMS required UE action<br>- Continue MCCH reading | <br><br>‘000005’<br>1<br>None<br>FALSE |
| MBMS re- acquire MCCH | TRUE |

MBMS GENERAL INFORMATION (Step 12)

The same message found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Indicate changes in MBMS Selected Services | FALSE |

#### 8.5.4.2.5 Test requirements

In steps b, j, and l the UE shall not send MBMS MODIFICATION REQUEST.

In step e the UE shall transmit MBMS GENERAL INFORMATION indicating the list of selected services (Status = “None”).

In step g the UE shall transmit MBMS GENERAL INFORMATION indicating the list of selected services (Status = “Some”, MBMS Selected Service ID = '000005').

### 8.5.4.3 Testing of the MBMS Selected Services indication from the network whilst in CELL_DCH / MBMS Selected Service

#### 8.5.4.3.1 Definition

This test is applicable for Rel-6 UEs supporting MBMS broadcast services and MBMS p-t-m reception in CELL_DCH state.

#### 8.5.4.3.2 Conformance requirement

A UE in CELL_DCH shall initiate the MBMS modification request procedure in the following cases:

1> the preferred frequency applicable for the MBMS service prioritised by upper layers is different from the currently used frequency;

1> upper layers request to discontinue reception of an MBMS service provided via a p-t-p radio bearer e.g. because this inhibits reception of a higher priority service;

1> upon a change in selection of the MBMS Selected Services.

NOTE: The above case may occur upon receiving a dedicated notification or in other cases e.g. a change of transfer mode from p-t-p to p-t-m for the UE's highest priority MBMS service.

...

If the UE is required to initiate the MBMS modification request procedure as specified in the conditions above, the UE shall:

1> transmit an MBMS MODIFICATION REQUEST message with the contents as specified in subclause 8.7.6.2a.

The UE shall set the contents of the MBMS MODIFICATION REQUEST message as follows:

1> if the preferred frequency applicable for the MBMS service prioritised by upper layers is different from the currently used frequency:

2> include the IE "MBMS preferred frequency request" and set it to the prioritised MBMS service identity.

1> if upper layers request to discontinue reception of an MBMS service provided via a p-t-p radio bearer:

2> include the p-t-p radio bearers used for the corresponding MBMS services within the IE "MBMS RB list requested to be released".

1> if the UE enters CELL_DCH; or

1> if the UE completes the RRC connection establishment procedure; or

1> if there is a change in selection of one or more of the MBMS Selected Services:

2> if the UE has not selected any MBMS Selected Service:

3> include the MBMS Selected Service Info and set the Status to 'None'.

2> otherwise:

3> include the MBMS Selected Service Info and set the Status to 'Some'.

3> for each MBMS Selected Service:

4> include the MBMS Selected Service ID.

Reference

3GPP TS 25.331, clauses 8.7.6.2, 8.7.6.2a.

8.5.4.3.3 Test purpose

To verify that the UE updates the MBMS Selected Service Information at the introduction of a MBMS Service ID on the MCCH, when the UE is in CELL_DCH state.

8.5.4.3.4 Method of test

Initial condition

System Simulator:

- 1 MBMS cell.

User Equipment:

- The UE is in CELL_DCH state as specified in clause 7.6 of TS 34.108.
- The UE is interested in the selected service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Broadcast service application available on UE Yes/No
- UE supports MBMS MCCH reception in CELL_DCH state Yes/No

Test procedure

a) The MCCH on Cell 21 is modified to indicate the availability of service 1, and the Notification Indicator on MICH corresponding to service 1 is set. The IE “MBMS re- acquire MCCH” that is included in MBMS MODIFIED SERVICES INFORMATION is set to TRUE. The SS starts service 1 using the 64.8kbps radio bearer configuration as specified in TS 34.108 clause 6.10.2.4.3.5.

b) The SS verifies for 1 complete modification period that the UE does not send MBMS MODIFICATION REQUEST.

c) Service 1 is removed from the UE selected services.

d) The UE transmits MBMS MODIFICATION REQUEST indicating the list of selected services (Status = “None”).

e) Service 1 is added to the UE selected services.

f) The UE transmits MBMS MODIFICATION REQUEST indicating the list of selected services (service 1).

Expected Sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | | | The UE state in Cell 21 is:<br>CELL_DCH<br><br>UE: Service 1 only is selected. |
| 2 | ← | | MBMS MODIFIED SERVICES INFORMATION | SS indicates the availability of the MBMS broadcast service 1.<br><br>'MBMS re- acquire MCCH' = TRUE<br><br>SS: MCCH message combination C4 for 1 modification period, then combination C2. |
| 3 | | | | SS verifies for 1 complete modification period that the UE does not send MBMS MODIFICATION REQUEST. |
| 4 | | | | Service 1 is removed from the UE selected services. |
| 5 | → | | MBMS MODIFICATION REQUEST | MBMS Selected Service Info: Status = 'None'. |
| 6 | | | | Service 1 is added to the UE selected services. |
| 7 | → | | MBMS MODIFICATION REQUEST | MBMS Selected Service Info: Status = 'Some'.<br>MBMS Selected Service ID = 5 |

Specific message contents

MBMS MODIFIED SERVICES INFORMATION (Step 2)

The same message found in TS 34.108 clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| Modified service list<br>- MBMS Transmission identity<br>- MBMS Service ID<br>- MBMS Session ID<br>- MBMS required UE action<br>- Continue MCCH reading<br>MBMS re- acquire MCCH | <br><br>'000005'<br>1<br>Acquire PTM RB Info<br>FALSE<br>TRUE |

MBMS MODIFICATION REQUEST (STEP 5)

| Information Element | Value/remark |
|---|---|
| MBMS Selected Service Info<br>- CHOICE Status | <br>None |

MBMS MODIFICATION REQUEST (STEP 7)

| Information Element | Value/remark |
|---|---|
| MBMS Selected Service Info<br>- CHOICE Status<br>- MBMS Selected Services Full<br>- MBMS Selected Service ID<br>- MBMS Service ID<br>- CHOICE PLMN identity<br><br>- SameAs-MIB<br>- explicitPLMN_Id | <br>Some<br><br><br>'000005'<br>Check to see that one of the below choice element is present<br>(no data)<br>Check to see if it is set to the same value as "PLMN ID" in the Master Information block transmitted for the current serving cell. |

#### 8.5.4.3.5 Test requirements

In step 3 the UE shall not send MBMS MODIFICATION REQUEST.

In step 5 the UE shall transmit MBMS MODIFICATION REQUEST indicating the list of selected services (Status = “None”).

In step 7 the UE shall transmit MBMS MODIFICATION REQUEST indicating the list of selected services (Status = “Some”, MBMS Service ID = ‘000005’).

## 8.5.5 MBMS Counting

### 8.5.5.1 MBMS Counting in Idle Mode / MBMS Selected Service

#### 8.5.5.1.1 Definition

This test case is applicable for all UEs supporting MBMS broadcast services.

#### 8.5.5.1.2 Conformance requirement

The MBMS counting procedure is used by the UE to inform UTRAN about its interest to receive an MBMS transmission.

…

The UE initiates the MBMS counting procedure for an MBMS transmission upon receiving an MBMS MODIFIED SERVICES message including IE "MBMS required UE action" with the value set to 'Acquire counting info' or set to "Acquire counting info– PTM RBs unmodified".

…

Upon receiving the MBMS ACCESS INFORMATION message including one or more MBMS service(s) it has joined, and/ or including one or more MBMS Selected Services the UE shall for each joined and / or selected service:

1> if the UE is in idle mode:

2> draw a random number, "rand", uniformly distributed in the range: $0 \leq rand < 1$

2> if 'rand' is lower than the value indicated by the IE 'Access probability factor-Idle' for the concerned service:

3> indicate to upper layers that establishment of an RRC connection is required to receive the concerned MBMS service, with the establishment cause set to 'MBMS reception';

3> if the above condition applies for more than one service, initiate a single indication to upper layers;

3> if the RRC connection establishment succeeds, the procedure ends.

…

The UE shall, in the transmitted RRC CONNECTION REQUEST message:

…

1> otherwise if the UE performs connection establishment for MBMS counting as specified in subclause 8.7.4; and

1> if one or more of the MBMS services for which the UE initiates the counting response concerns an MBMS Selected Service:

2> for each MBMS Selected Service that is indicated on MCCH and for which the UE initiates the counting response:

3> order the MBMS Selected Services such that those selected with a higher priority are listed in the IE "MBMS Selected Services Short" before those selected with a lower priority;

3> include the IE "MBMS Selected Service ID" within the IE "MBMS Selected Services Short" and set it to a value in accordance with subclause 8.6.9.8.

1> if the UE included one or more "MBMS Selected Service ID" IEs:

2> include the IE "MBMS Modification Period identity" and set it to a value in accordance with subclause 8.5.29.

Reference

3GPP TS 25.331 clauses 8.7.4, 8.7.4.1, 8.7.4.2, 8.7.4.3, 8.1.3.3.

8.5.5.1.3 Test purpose

To confirm that the UE starts the MBMS counting procedure in idle mode upon receiving an MBMS MODIFIED SERVICES message including IE "MBMS required UE action" and an ACCESS INFORMATION message including IE "Access probability factor – Idle" set to 0 (corresponding to the actual probability factor value 1).

To verify that the UE correctly includes the IE "MBMS Selected Service ID" within the IE "MBMS Selected Services Short" and IE "MBMS Modification Period identity" in the counting response initiated for a MBMS Selected Service.

8.5.5.1.4 Method of test

Initial Condition

System Simulator: 1 MBMS cell (cell 21) using MCCH Longest Default scheduling, and combination C1 as defined in TS 34.108 clause 11.

User Equipment:

The UE is in Idle Mode as specified in clause 7.6 of TS 34.108.

The UE is interested in the selected service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Broadcast service application available on UE Yes/No.

Test Procedure

The SS transmits an MBMS MODIFIED SERVICE INFORMATION message which includes in the “Modified service list” for the MBMS activated service “MBMS required UE action” set to “Acquire counting info”.

The SS transmits an MBMS ACCESS INFORMATION message, which includes the MBMS Short transmission ID associated to the MBMS activated service and “Access probability factor – Idle” set to 0.

NOTE: The “Access probability factor” sent in the MBMS ACCESS INFORMATION message set to 0 corresponds to an actual Probability Factor = 1, according to the formula in TS 25.331 clause 10.2.16e.

The UE transmits an RRC CONNECTION REQUEST message to the SS, with “Establishment cause” set to “MBMS reception”.

The SS transmits an RRC CONNECTION SETUP message to the UE which moves the UE to CELL_DCH state.

When the UE receives this message, the UE establishes an RRC connection and transmits an RRC CONNECTION SETUP COMPLETE message.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| | | | | The UE is in idle mode. |
| 1 | | ← | MBMS MODIFIED SERVICES INFORMATION | The SS transmits the message, which includes “MBMS required UE action” set to “Acquire counting info” |
| 2 | | ← | MBMS ACCESS INFORMATION | The SS transmits the message, which includes “MBMS short transmission ID” IE referring to the service the UE has activated and “Access probability factor – Idle” IE set to 0 (corresponding to actual Access Probability = 1). |
| 3 | | → | RRC CONNECTION REQUEST | The UE transmits the message with Establishment cause set to “MBMS reception” and with the “MBMS Selected Services Short” IE referring to the concerned MBMS Selected service and the corresponding Modification period identity. |
| 4 | | ← | RRC CONNECTION SETUP | SS assigns DPCH resources to allow UE to establish an RRC connection.<br>RRC state indicator set to CELL_DCH. |
| 5 | | → | RRC CONNECTION SETUP COMPLETE | |
| 5a | | → | MBMS MODIFICATION REQUEST | The UE completing the RRC Connection Setup procedure shall initiate the MBMS MODIFICATION REQUEST procedure. This message may be received at any point after step 5 and before step 7. |
| 6 | UE | | | UE transmits SERVICE REQUEST, with IE "Service type" set to "MBMS Broadcast service Reception”. |
| 7 | | ←→ | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

All messages have the same content as defined in 34.108 clause 9.1.1 with the following exceptions:

MBMS MODIFIED SERVICES INFORMATION (Step 1)

| Information Element | Value/remark |
|---|---|
| Modified service list<br>- MBMS Transmission identity<br><br>- MBMS required UE action | Only 1 entry<br>MBMS Transmission identity indicating MBMS activated service<br>Acquire counting info |

MBMS ACCESS INFORMATION (Step 2)

| Information Element | Value/remark |
|---|---|
| Service list | Only 1 entry |
| - MBMS short transmission ID | Index to the MBMS transmission identity in the previous MBMS MODIFIED SERVICES INFORMATION |
| - Access probability factor – Idle | 0 (corresponding to the actual probability factor value 1) |
| - Connected mode counting scope | |
| - URA_PCH | FALSE |
| - CELL_PCH | FALSE |
| - CELL_FACH | FALSE |

RRC CONNECTION REQUEST (Step 3)

| Information Element | Value/remark |
|---|---|
| Message type | |
| Initial UE identity | Same as the registered TMSI or P-TMSI. |
| Establishment Cause | MBMS reception |
| Protocol Error Indicator | Check to see if it is set to FALSE |
| Measured results on RACH | Not checked. |
| MBMS Selected Services | |
| - MBMS Selected Services | Only 1 entry |
| - MBMS Selected Service ID | MBMS short transmission identity referring to the service the UE has selected |
| - Modification period identity | Indicates the modification period the MBMS short transmission identities refer to |

MBMS MODIFICATION REQUEST (steps 5a)

| Information Element | Value/remark |
|---|---|
| MBMS preferred frequency request | Check that the IE is not present |
| MBMS RB list requested to be released | Check that the IE is not present |
| MBMS Selected Service Info | |
| - CHOICE Status | Some |
| - MBMS Selected Services Full | |
| - MBMS Selected Service ID | Only 1 entry |
| - MBMS Service ID | MBMS service ID of the activated MBMS service |
| - CHOICE PLMN identity | Check to see that one of the below choice element is present |
| - SameAs-MIB | (no data) |
| - explicitPLMN_Id | Check to see if it is set to the same value as "PLMN ID" in the Master Information block transmitted for the current serving cell. |

#### 8.5.5.1.5 Test requirement

At step 3, the UE shall transmit an RRC CONNECTION REQUEST message with “Establishment Cause” set to “MBMS reception” on the uplink CCCH and including in case of MBMS Selected services the IE “MBMS Selected Service ID” of the concerned MBMS selected service within the IE “MBMS Selected Services Short” and the IE “MBMS Modification Period identity”.

At step 5, the UE shall transmit an RRC CONNECTION SETUP COMPLETE message on a dedicated channel.

### 8.5.5.1m MBMS Counting in Idle Mode / MBMS Multicast Service

#### 8.5.5.1m.1 Definition

This test is applicable for all UEs that support MBMS multicast services.

#### 8.5.5.1m.2 Conformance requirement

Same conformance requirement as in clause 8.5.5.1.2 except there is no reference to 3GPP TS 25.331 clause 8.1.3.3.

Reference

3GPP TS 25.331 clauses 8.7.4, 8.7.4.1, 8.7.4.2, 8.7.4.3.

8.5.5.1m.3 Test purpose

To confirm that the UE starts the MBMS counting procedure in idle mode upon receiving an MBMS MODIFIED SERVICES message including IE "MBMS required UE action" and an ACCESS INFORMATION message including IE "Access probability factor – Idle" set to 0 (corresponding to the actual probability factor value 1).

8.5.5.1m.4 Method of test

Initial condition

System Simulator:

2 MBMS cells, Cell 21 and Cell 22

User Equipment:

The UE is in Idle Mode as specified in clause 7.6 of TS 34.108.

The UE has joined the multicast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Multicast service application available on UE Yes/No.

Test procedure

Same test procedure as in clause 8.5.5.1.4.

Expected sequence

Same expected sequence as in clause 8.5.5.1.4 except for RRC CONNECTION REQUEST message content (step 3) and MODIFICATION REQUEST procedure not required.

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| | | | | The UE is in idle mode. |
| 1 | ← | | MBMS MODIFIED SERVICES INFORMATION | The SS transmits the message, which includes “MBMS required UE action” set to “Acquire counting info” |
| 2 | ← | | MBMS ACCESS INFORMATION | The SS transmits the message, which includes “MBMS short transmission ID” IE referring to the service the UE has joined and “Access probability factor – Idle” IE set to 0 (corresponding to actual Access Probability = 1). |
| 3 | → | | RRC CONNECTION REQUEST | The UE transmits the message with Establishment cause set to “MBMS reception” |
| 4 | ← | | RRC CONNECTION SETUP | SS assigns DPCH resources to allow UE to establish an RRC connection.<br>RRC state indicator set to CELL_DCH. |
| 5 | → | | RRC CONNECTION SETUP COMPLETE | |
| 6 | UE | | | UE transmits SERVICE REQUEST, with IE "Service type" set to "MBMS Multicast service Reception”. |
| 7 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific message contents

Same specific messages contents as in clause 8.5.5.1.4 except for RRC CONNECTION REQUEST message content (step 3).

RRC CONNECTION REQUEST (Step 3)

| Information Element | Value/remark |
|---|---|
| Message type | |
| Initial UE identity | Same as the registered TMSI or P-TMSI. |
| Establishment Cause | MBMS reception |
| Protocol Error Indicator | Check to see if it is set to FALSE |
| Measured results on RACH | Not checked. |
| MBMS Selected Services | Not present |

#### 8.5.5.1m.5 Test requirements

At step 3, the UE shall transmit an RRC CONNECTION REQUEST message with “Establishment Cause” set to “MBMS reception” on the uplink CCCH.

At step 5, the UE shall transmit an RRC CONNECTION SETUP COMPLETE message on a dedicated channel.

### 8.5.5.2 MBMS Counting in CELL_FACH / MBMS Selected Service

#### 8.5.5.2.1 Definition

This test case is applicable for UEs that support MBMS broadcast services.

#### 8.5.5.2.2 Conformance requirement

If the IE "MBMS required UE action" is included and concerns an MBMS activated service the UE shall:

…

1> if the IE "MBMS required UE action" is set to 'Acquire counting info' or set to 'Acquire counting info– PTM RBs unmodified':

2> perform the MBMS counting procedure as specified in subclause 8.7.4;

NOTE: If upper layers indicate that an MBMS transmission has already been received correctly, the UE will continue as if the information about the concerned MBMS transmission was not included in the message. This implies that the UE does not respond to counting for a transmission already received correctly.

…

The MBMS counting procedure is used by the UE to inform UTRAN about its interest to receive an MBMS transmission. The procedure applies to UEs supporting MBMS that are in idle mode or in connected mode. In connected mode the procedure applies to the URA_PCH, Cell_PCH and/ or Cell_FACH states dependent upon the value of the IE "Connected mode counting scope".

…

The UE initiates the MBMS counting procedure for an MBMS transmission upon receiving an MBMS MODIFIED SERVICES message including IE "MBMS required UE action" with the value set to 'Acquire counting info' or set to "Acquire counting info– PTM RBs unmodified".

…

Upon receiving the MBMS ACCESS INFORMATION message including one or more MBMS service(s) it has joined, and/ or including one or more MBMS Selected Services the UE shall for each joined and / or selected service:

…

1> if the UE is in URA_PCH state, Cell_PCH or Cell_FACH state and the IE "Connected mode counting scope" indicates that counting is applicable for this UE state:

2> draw a random number, "rand", uniformly distributed in the range: $0 \leq rand < 1$.

2> if 'rand' is lower than the value indicated by the IE 'Access probability factor-connected' for the concerned service:

3> if a cell update has not been successfully transmitted for this service in the current modification period:

4> initiate the cell update procedure with 'Cell update cause' set to "MBMS reception", in accordance with subclause 8.3.1;

4> if the above condition applies for more than one service, initiate a single cell update;

4> if the cell update procedure succeeds,

5> the procedure ends.

2> otherwise:

3> if the message triggering the MBMS counting procedure included the IE "Continue MCCH reading" with a value set to TRUE:

4> continue acquiring further MBMS ACCESS INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3.

3> otherwise:

4> continue acquiring further MBMS ACCESS INFORMATION messages without delaying reading of MCCH until the next modification period and with stopping at the end of the modification period, in accordance with subclause 8.7.1.3.

1> otherwise:

2> the procedure ends;

Upon receiving the MBMS ACCESS INFORMATION message not including an MBMS service(s) the UE has joined:

1> the procedure ends;

…

The UE shall set the IEs in the CELL UPDATE message as follows:

…

1> otherwise, if the UE performs cell update for MBMS counting as specified in subclause 8.7.4; and

1> if one or more of the MBMS services for which the UE initiates the counting response concerns an MBMS Selected Service:

2> for each MBMS Selected Service that is indicated on MCCH and for which the UE initiates the counting response:

3> order the MBMS Selected Services such that those selected with a higher priority are listed in the IE "MBMS Selected Services Short" before those selected with a lower priority;

3> include the IE "MBMS Selected Service ID" within the IE "MBMS Selected Services Short" and set it to a value in accordance with subclause 8.6.9.8.

1> if the UE included one or more "MBMS Selected Service ID" IEs:

2> include the IE "MBMS Modification Period identity" and set it to a value in accordance with subclause 8.5.29.

Reference

3GPP TS 25.331 clauses 8.6.9.6, 8.7.4, 8.7.4.1, 8.7.4.2, 8.7.4.3, 8.3.1.3.

#### 8.5.5.2.3 Test purpose

To verify that the UE correctly handles the counting procedure in cell_FACH state, upon receiving an MBMS MODIFIED SERVICES message including IE "MBMS required UE action" and an ACCESS INFORMATION message including IE "Access probability factor – Connected" set to 0.

To verify that the UE correctly includes the IE "MBMS Selected Service ID" within the IE "MBMS Selected Services Short" and IE "MBMS Modification Period identity" in the counting response initiated for a MBMS Selected Service.

#### 8.5.5.2.4 Method of test

##### Initial condition

System Simulator: one MBMS cell (cell 21) using MCCH Shortest Default scheduling, and combination C1 as defined in TS 34.108 clause 11.

User Equipment:

The UE is in CELL_FACH state as specified in clause 7.6 of TS 34.108.

The UE is interested in the selected service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

##### Related ICS/IXIT statements

- MBMS Broadcast service application available on UE Yes/No.

##### Test procedure

1) The SS sends a MBMS MODIFIED SERVICES INFORMATION message which includes the IE “MBMS required UE action” set to ‘Acquire counting info’ for the MBMS Service identity in the MBMS Transmission identity matching the one in the MBMS_ACTIVATED_SERVICES variable.

2) The SS sends in the same Modification Period the MBMS ACCESS INFORMATION message which includes:

   - the “MBMS short transmission ID” IE referring to the service the UE has activated
   - the “Connected mode counting scope” IE set to TRUE applicable to the UE connected state and
   - the value for “Access probability factor – connected” IE set to 0 (corresponding to the actual probability factor value 1)

3) The UE shall perform the MBMS counting procedure. The UE shall draw a random number ‘rand’. If ‘rand’ is lower than the value indicated by the IE “Access probability factor – connected”, it shall send a CELL UPDATE message to the SS on the uplink CCCH of cell 21 and set IE "Cell update cause" to "MBMS reception". The IE "MBMS Selected Service ID" within the IE "MBMS Selected Services Short" and the IE "MBMS Modification Period identity" shall be included in the counting response initiated for a MBMS Selected Service. After the SS receives this message, it transmits a CELL UPDATE CONFIRM message to the UE on the downlink CCCH.

4) The SS sends the MBMS ACCESS INFORMATION message again in the same Modification Period. The UE shall not perform the MBMS counting procedure during the same Modification Period.

##### Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | ← | MBMS MODIFIED SERVICES INFORMATION | “MBMS required UE action” IE is set to "Acquire counting info" |
| 2 | | ← | MBMS ACCESS INFORMATION | “MBMS short transmission ID” IE referring to the service the UE has activated, “Connected mode counting scope” IE set to "TRUE", “Access probability factor – connected” IE set to 0. |

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 3 | → | | CELL UPDATE | The CELL UPDATE message shall contain the value "Cell Update Cause" set to "MBMS reception" and in case of MBMS Selected service the "MBMS Selected Services Short" IE referring to the concerned MBMS Selected service and the corresponding Modification period identity. |
| 4 | ← | | CELL UPDATE CONFIRM | |
| 5 | ← | | MBMS ACCESS INFORMATION | The SS sends again in the same MP a MBMS access Information message. |
| 6 | | | | The SS check that the UE shall not perform again the counting procedure by sending another cell update message. |
| 7 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific message contents

All messages have the same content as defined in 34.108 clause 9.1.1 with the following exceptions:

MBMS MODIFIED SERVICES INFORMATION (Step 1)

| Information Element | Value/remark |
|---|---|
| Modified services list | Only 1 entry |
| -MBMS Transmission identity | MBMS Transmission identity indicating MBMS activated service |
| -MBMS required UE action | Acquire counting info |

MBMS Access Information (Steps 2 and 5)

| Information Element | Value/remark |
|---|---|
| Service list | Only 1 entry |
| -MBMS short transmission ID | Index to the MBMS transmission identity in the previous MBMS MODIFIED SERVICES INFORMATION |
| -Access probability factor – connected | 0 (corresponding to the actual probability factor value 1) |
| -Connected mode counting scope | |
| - URA_PCH | FALSE |
| - CELL_PCH | FALSE |
| - CELL_FACH | TRUE |

CELL UPDATE (Step 3)

| Information Element | Value/remark |
|---|---|
| Cell update cause | MBMS reception |
| MBMS Selected Services | present in case of MBMS Selected service |
| - MBMS Selected Services | Only 1 entry |
| - MBMS Selected Service ID | MBMS short transmission identity referring to the service the UE has selected |
| - Modification period identity | Indicates the modification period the MBMS short transmission identities refer to |

### 8.5.5.2.5 Test requirements

At step 3, check that the UE performs the MBMS counting procedure by performing the cell update procedure using the cause value "MBMS reception" and using in case of MBMS Selected services the IE "MBMS Selected Service ID" of the concerned MBMS selected service within the IE "MBMS Selected Services Short" and the IE "MBMS Modification Period identity".

At step 6, check that the UE does not perform the MBMS counting again during the same Modification Period.

## 8.5.5.2m MBMS Counting in CELL_FACH / MBMS Multicast Service

### 8.5.5.2m.1 Definition

This test is applicable for all UEs that support MBMS multicast services.

### 8.5.5.2m.2 Conformance requirement

Same conformance requirement as in clause 8.5.5.2.2 except there is no reference to 3GPP TS 25.331 clause 8.3.1.3.

### 8.5.5.2m.3 Test purpose

To verify that the UE correctly handles the counting procedure in cell_FACH state, upon receiving an MBMS MODIFIED SERVICES message including IE "MBMS required UE action" and an ACCESS INFORMATION message including IE "Access probability factor – Connected" set to 0.

### 8.5.5.2m.4 Method of test

#### Initial condition

System Simulator:

2 MBMS cells, Cell 21 and Cell 22

User Equipment:

The UE is in CELL_FACH state as specified in clause 7.6 of TS 34.108.

The UE has joined the multicast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

#### Related ICS/IXIT statements

- MBMS Multicast service application available on UE Yes/No.

#### Test procedure

Same test procedure as in clause 8.5.5.2.4 except for the points 2 and 3:

2) The SS sends in the same Modification Period the MBMS ACCESS INFORMATION message which includes:
   - the “MBMS short transmission ID” IE referring to the service the UE has joined
   - the “Connected mode counting scope” IE set to TRUE applicable to the UE connected state and
   - the value for “Access probability factor – connected” IE set to 0 (corresponding to the actual probability factor value 1)
3) The UE shall perform the MBMS counting procedure. The UE shall draw a random number ‘rand’. If ‘rand’ is lower than the value indicated by the IE “Access probability factor – connected”, it shall send a CELL UPDATE message to the SS on the uplink CCCH of cell 21 and set IE "Cell update cause" to "MBMS reception". After the SS receives this message, it transmits a CELL UPDATE CONFIRM message to the UE on the downlink CCCH.

#### Expected sequence

Same expected sequence as in clause 8.5.5.2.4 except for CELL UPDATE message content (step 3).

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | MBMS MODIFIED SERVICES INFORMATION | “MBMS required UE action” IE is set to "Acquire counting info" |
| 2 | ← | | MBMS ACCESS INFORMATION | “MBMS short transmission ID” IE referring to the service the UE has joined, “Connected mode counting scope” IE set to "TRUE", “Access probability factor – connected” IE set to 0. |
| 3 | → | | CELL UPDATE | The CELL UPDATE message shall contain the value "Cell Update Cause" set to "MBMS reception". |
| 4 | ← | | CELL UPDATE CONFIRM | |
| 5 | ← | | MBMS ACCESS INFORMATION | The SS sends again in the same MP a MBMS access Information message. |
| 6 | | | | The SS check that the UE shall not perform again the counting procedure by sending another cell update message. |
| 7 | ←→ | | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific message contents

Same specific messages contents as in clause 8.5.5.2.4 except for CELL UPDATE message content (step 3).

CELL UPDATE (Step 3)

Use the message sub-type in default message content defined in 3GPP TS 34.108 [9] clause 9, with the following exceptions.

| Information Element | Value/remark |
|---|---|
| Cell update cause | MBMS reception |

#### 8.5.5.2m.5 Test requirements

At step 3, check that the UE performs the MBMS counting procedure by performing the cell update procedure using the cause value “MBMS reception”.

At step 6, check that the UE does not perform the MBMS counting again during the same Modification Period.

### 8.5.5.3 MBMS No Counting in CELL_DCH / MBMS Selected Service

#### 8.5.5.3.1 Definition

This test is applicable for all UEs that support MBMS broadcast services and capable of reading MCCH in CELL_DCH state.

#### 8.5.5.3.2 Conformance requirement

If the IE "MBMS required UE action" is included and concerns an MBMS activated service the UE shall:

1> if the "MBMS required UE action" is set to 'None':

2> take no action with respect to this IE.

1> if the IE "MBMS required UE action" is set to 'Acquire counting info' or set to 'Acquire counting info– PTM RBs unmodified':

2> perform the MBMS counting procedure as specified in subclause 8.7.4;

NOTE: If upper layers indicate that an MBMS transmission has already been received correctly, the UE will continue as if the information about the concerned MBMS transmission was not included in the message. This implies that the UE does not respond to counting for a transmission already received correctly.

…

The MBMS counting procedure is used by the UE to inform UTRAN about its interest to receive an MBMS transmission. The procedure applies to UEs supporting MBMS that are in idle mode or in connected mode. In connected mode the procedure applies to the URA_PCH, Cell_PCH and/ or Cell_FACH states dependent upon the value of the IE "Connected mode counting scope".

The UE initiates the MBMS counting procedure for an MBMS transmission upon receiving an MBMS MODIFIED SERVICES message including IE "MBMS required UE action" with the value set to 'Acquire counting info' or set to "Acquire counting info– PTM RBs unmodified".

The UE shall acquire the MBMS ACCESS INFORMATION message without delaying reading of MCCH until the next modification period in accordance with subclause 8.7.1.3. If the procedure the UE would apply to respond to counting (Idle mode: RRC connection establishment, connected mode: Cell update) is ongoing, the UE may defer acquiring the MBMS ACCESS INFORMATION message until this procedure has completed.

The UE behaviour upon receiving an MBMS ACCESS INFORMATION message that is contained in more than one TTI is not specified.

Upon receiving the MBMS ACCESS INFORMATION message including one or more MBMS service(s) it has joined, and/or including one or more MBMS Selected Services the UE shall for each joined and/or selected service:

1> if the UE is in idle mode:

…

1> if the UE is in URA_PCH state, Cell_PCH or Cell_FACH state and the IE "Connected mode counting scope" indicates that counting is applicable for this UE state:

…

1> otherwise:

2> the procedure ends;

Reference

3GPP TS 25.331 clauses 8.6.9.6, 8.7.4.1, 8.7.4.2, 8.7.4.3.

### 8.5.5.3.3 Test purpose

To verify that the UE in CELL_DCH state (with the probability factor set to 1) does not perform the MBMS counting procedure.

### 8.5.5.3.4 Method of test

Initial condition

System Simulator: one MBMS cell (cell 21) using MCCH Default2 scheduling, and combination C1 as defined in TS 34.108 clause 11.

User Equipment:

The UE is in CELL_DCH state as specified in clause 7.6 of TS 34.108. The UE has been registered in both CS and PS domains.

The UE is interested in the selected service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Broadcast service application available on UE Yes/No.

- UE supports MCCH reception in CELL_DCH state Yes/No.

Test procedure

The UE is in CELL_DCH state. The SS transmits an MBMS MODIFIED SERVICES INFORMATION message which includes the IE “MBMS required UE action” set to "Acquire counting info" for the MBMS Service identity in the MBMS Transmission identity matching the one in the MBMS_ACTIVATED_SERVICES variable.

The UE receives an MBMS ACCESS INFORMATION message including the concerned MBMS Selected service.

The UE shall not perform the MBMS counting procedure.

The SS continues to send MBMS ACCESS INFORMATION messages including the MBMS Selected service in the same Modification Period. The UE shall not perform the MBMS counting procedure.

The UE receives an MBMS ACCESS INFORMATION message including the MBMS Selected service in the next Modification Period. The UE shall not perform the MBMS counting procedure.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| | | | | The UE is in CELL_DCH state. |
| 1 | ← | | MBMS MODIFIED SERVICES INFORMATION | “MBMS required UE action” IE is set to "Acquire counting info" |
| 2 | ← | | MBMS ACCESS INFORMATION | “MBMS short transmission ID” IE referring to the service the UE has activated, “Connected mode counting scope” IE set to "TRUE", “Access probability factor – connected” IE “ set to 0 (corresponding to the actual probability factor value 1). |
| 3 | | | | The SS checks that the UE does not perform the counting procedure. |
| 4 | ← | | MBMS ACCESS INFORMATION | The SS continues to send MBMS access Information messages in the same MP. |
| 5 | | | | The SS checks that the UE does not perform the counting procedure. |
| 6 | ← | | MBMS ACCESS INFORMATION | The SS sends a MBMS access Information message in the next MP. |
| 7 | | | | The SS checks that the UE does not perform the counting procedure. |
| 8 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific message contents

MBMS MODIFIED SERVICES INFORMATION (Step 1)

| Information Element | Value/remark |
|---|---|
| Modified service list<br>- MBMS Transmission identity<br><br>- MBMS required UE action<br>- Continue MCCH reading | Only 1 entry<br>MBMS Transmission identity indicating MBMS activated service<br>Acquire counting info<br>TRUE |

MBMS ACCESS INFORMATION (Step 2, Step 4 and Step 6)

| Information Element | Value/remark |
|---|---|
| Service list | Only 1 entry |
| - MBMS short transmission ID | Index to the MBMS transmission identity in the previous MBMS MODIFIED SERVICES INFORMATION |
| - Access probability factor - Idle | 0 (corresponding to the actual probability factor value 1) |

| - URA_PCH | TRUE |
| - CELL_PCH | TRUE |
| - CELL_FACH | TRUE |

#### 8.5.5.3.5 Test requirements

After step 2, the UE shall not perform the MBMS counting procedure.

After step 4, the UE shall not perform the MBMS counting procedure.

After step 6, the UE shall not perform the MBMS counting procedure.

### 8.5.5.3m MBMS No Counting in CELL_DCH / MBMS Multicast Service

#### 8.5.5.3m.1 Definition

This test is applicable for all UEs that support MBMS multicast services and capable of reading MCCH in CELL_DCH state.

#### 8.5.5.3m.2 Conformance requirement

Same conformance requirement as in clause 8.5.5.3.2.

#### 8.5.5.3m.3 Test purpose

Same test purpose as in clause 8.5.5.3.3.

#### 8.5.5.3m.4 Method of test

Initial condition

System Simulator:

2 MBMS cells, Cell 21 and Cell 22

User Equipment:

The UE is in CELL_DCH state as specified in clause 7.6 of TS 34.108.

The UE has joined the multicast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Multicast service application available on UE Yes/No.
- UE supports MCCH reception in CELL_DCH state Yes/No.

Test procedure

The UE is in CELL_DCH state. The SS transmits an MBMS MODIFIED SERVICES INFORMATION message which includes the IE “MBMS required UE action” set to "Acquire counting info" for the MBMS Service identity in the MBMS Transmission identity matching the one in the MBMS_ACTIVATED_SERVICES variable.

The UE receives an MBMS ACCESS INFORMATION message including the MBMS service the UE has joined.

The UE shall not perform the MBMS counting procedure.

The SS continues to send MBMS ACCESS INFORMATION messages including the MBMS service the UE has joined in the same Modification Period. The UE shall not perform the MBMS counting procedure.

The UE receives an MBMS ACCESS INFORMATION message including the MBMS service the UE has joined in the next Modification Period. The UE shall not perform the MBMS counting procedure.

Expected sequence

Same expected sequence as in clause 8.5.5.3.4 except for MBMS ACCESS INFORMATION message contents (steps 2, 4 and 6).

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| | | | | The UE is in CELL_DCH state. |
| 1 | ← | | MBMS MODIFIED SERVICES INFORMATION | "MBMS required UE action" IE is set to "Acquire counting info" |
| 2 | ← | | MBMS ACCESS INFORMATION | "MBMS short transmission ID" IE referring to the service the UE has joined. |
| 3 | | | | The SS checks that the UE does not perform the counting procedure. |
| 4 | ← | | MBMS ACCESS INFORMATION | The SS continues to send MBMS access Information messages in the same MP. |
| 5 | | | | The SS checks that the UE does not perform the counting procedure. |
| 6 | ← | | MBMS ACCESS INFORMATION | The SS sends a MBMS access Information message in the next MP. |
| 7 | | | | The SS checks that the UE does not perform the counting procedure. |
| 8 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific message contents

8.5.5.3m.5 Test requirements

Same test requirement as in clause 8.5.5.3.5.

## 8.5.5.4 MBMS Counting in CELL_PCH / MBMS Selected Service

### 8.5.5.4.1 Definition

This test case is applicable for UEs that support MBMS broadcast services.

### 8.5.5.4.2 Conformance requirement

The MBMS counting procedure is used by the UE to inform UTRAN about its interest to receive an MBMS transmission. The procedure applies to UEs supporting MBMS that are in idle mode or in connected mode. In connected mode the procedure applies to the URA_PCH, Cell_PCH and/ or Cell_FACH states dependent upon the value of the IE "Connected mode counting scope".

…

The UE initiates the MBMS counting procedure for an MBMS transmission upon receiving an MBMS MODIFIED SERVICES message including IE "MBMS required UE action" with the value set to 'Acquire counting info' or set to "Acquire counting info– PTM RBs unmodified".

…

Upon receiving the MBMS ACCESS INFORMATION message including one or more MBMS service(s) it has joined, and/ or including one or more MBMS Selected Services the UE shall for each joined and / or selected service:

…

1> if the UE is in URA_PCH state, Cell_PCH or Cell_FACH state and the IE "Connected mode counting scope" indicates that counting is applicable for this UE state:

2> draw a random number, "rand", uniformly distributed in the range: $0 \leq rand < 1$.

2> if 'rand' is lower than the value indicated by the IE 'Access probability factor-connected' for the concerned service:

3> if a cell update has not been successfully transmitted for this service in the current modification period:

4> initiate the cell update procedure with 'Cell update cause' set to "MBMS reception", in accordance with subclause 8.3.1;

4> if the above condition applies for more than one service, initiate a single cell update;

4> if the cell update procedure succeeds,

5> the procedure ends.

2> otherwise:

3> if the message triggering the MBMS counting procedure included the IE "Continue MCCH reading" with a value set to TRUE:

4> continue acquiring further MBMS ACCESS INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3.

3> otherwise:

4> continue acquiring further MBMS ACCESS INFORMATION messages without delaying reading of MCCH until the next modification period and with stopping at the end of the modification period, in accordance with subclause 8.7.1.3.

1> otherwise:

2> the procedure ends;

Upon receiving the MBMS ACCESS INFORMATION message not including an MBMS service(s) the UE has joined:

1> the procedure ends;

…

The UE shall set the IEs in the CELL UPDATE message as follows:

…

1> otherwise, if the UE performs cell update for MBMS counting as specified in subclause 8.7.4; and

1> if one or more of the MBMS services for which the UE initiates the counting response concerns an MBMS Selected Service:

2> for each MBMS Selected Service that is indicated on MCCH and for which the UE initiates the counting response:

3> order the MBMS Selected Services such that those selected with a higher priority are listed in the IE "MBMS Selected Services Short" before those selected with a lower priority;

3> include the IE "MBMS Selected Service ID" within the IE "MBMS Selected Services Short" and set it to a value in accordance with subclause 8.6.9.8.

1> if the UE included one or more "MBMS Selected Service ID" IEs:

2> include the IE "MBMS Modification Period identity" and set it to a value in accordance with subclause 8.5.29.

Reference

3GPP TS 25.331 clauses 8.7.4, 8.7.4.1, 8.7.4.2, 8.7.4.3, 8.3.1.3.

### 8.5.5.4.3 Test purpose

To verify that the UE correctly handles the counting procedure in cell_PCH state, upon receiving an MBMS MODIFIED SERVICES message including IE "MBMS required UE action" and an ACCESS INFORMATION message including IE "Access probability factor – Connected" set to 0 for the selected services.

To verify that the UE correctly includes the IE "MBMS Selected Service ID" within the IE "MBMS Selected Services Short" and IE "MBMS Modification Period identity" in the counting response initiated for a MBMS Selected Service.

### 8.5.5.4.4 Method of test

Initial condition

System Simulator: one MBMS cell (cell 21)

User Equipment:

The UE is in CELL_PCH state as specified in clause 7.6 of TS 34.108.

The UE is interested in the selected service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Broadcast service application available on UE Yes/No.

Test procedure

1) The SS sends a MBMS MODIFIED SERVICES INFORMATION message which includes the IE “MBMS required UE action” set to ‘Acquire counting info’ for the MBMS Service identity in the MBMS Transmission identity matching the one in the MBMS_ACTIVATED_SERVICES variable.

2) The SS sends in the same Modification Period the MBMS ACCESS INFORMATION message which includes:

   - the “MBMS short transmission ID” IE referring to the service the UE has activated
   - the “Connected mode counting scope” IE set to TRUE applicable to the UE connected state and
   - the value for “Access probability factor – connected” IE set to 0 (corresponding to the actual probability factor value 1)

3) The UE shall perform the MBMS counting procedure. The UE shall draw a random number ‘rand’. If ‘rand’ is lower than the value indicated by the IE “Access probability factor – connected”, it shall send a CELL UPDATE message to the SS on the uplink CCCH of cell 21 and set IE "Cell update cause" to "MBMS reception". The IE "MBMS Selected Service ID" within the IE "MBMS Selected Services Short" and the IE "MBMS Modification Period identity" shall be included in the counting response initiated for the MBMS Selected Service. After the SS receives this message, it transmits a CELL UPDATE CONFIRM message to the UE on the downlink CCCH. The UE shall move to the Cell_PCH state as indicated by the IE "RRC State Indicator".

4) The SS sends the MBMS ACCESS INFORMATION message again in the same Modification Period. The UE shall not perform the MBMS counting procedure during the same Modification Period.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| | | | | The UE is in cell_PCH |
| 1 | ← | | MBMS MODIFIED SERVICES INFORMATION | “MBMS required UE action” IE is set to "Acquire counting info" |

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 2 | ← | | MBMS ACCESS INFORMATION | "MBMS short transmission ID" IE referring to the service the UE has activated and "Connected mode counting scope" IE set to "TRUE", "Access probability factor – connected" IE set to 0. |
| 3 | → | | CELL UPDATE | The UE shall perform the MBMS counting procedure which triggers the cell updating procedure which moves the UE into CELL_FACH state. The CELL UPDATE message shall contain the value "Cell Update Cause" set to "MBMS reception" and the "MBMS Selected Services Short" IE referring to the concerned MBMS Selected service and the corresponding Modification period identity. |
| 4 | ← | | CELL UPDATE CONFIRM | IE "RRC State Indicator" is set to CELL_PCH. |
| 5 | ← | | MBMS ACCESS INFORMATION | The SS sends again in the same MP a MBMS access Information message. |
| 6 | | | | The SS check that the UE shall not perform again the counting procedure by sending another cell update message. |
| 7 | ←→ | | CALL C.4 | If the test result of C.4 indicates that UE is in CELL_PCH state, the test passes, otherwise it fails. |

Specific message contents

MBMS MODIFIED SERVICES INFORMATION (Step 1)

| Information Element | Value/remark |
|---|---|
| Modified services list | Only 1 entry |
| -MBMS Transmission identity | MBMS Transmission identity indicating MBMS activated service |
| -MBMS required UE action | Acquire counting info |

MBMS ACCESS INFORMATION (Steps 2 and 5)

| Information Element | Value/remark |
|---|---|
| Service list | Only 1 entry |
| -MBMS short transmission ID | Index to the MBMS transmission identity in the previous MBMS MODIFIED SERVICES INFORMATION |
| -Access probability factor – connected | 0 (corresponding to the actual probability factor value 1) |
| -Connected mode counting scope | |
| - URA_PCH | TRUE |
| - CELL_PCH | TRUE |
| - CELL_FACH | TRUE |

CELL UPDATE (Step 3)

Use the message sub-type in default message content defined in 3GPP TS 34.108 [9] clause 9, with the following exceptions.

| Information Element | Value/remark |
|---|---|
| Cell update cause | MBMS reception |
| MBMS Selected Services | |
| - MBMS Selected Services | Only 1 entry |
| - MBMS Selected Service ID | MBMS short transmission identity referring to the service the UE has selected |
| - Modification period identity | Indicates the modification period the MBMS short transmission identities refer to |

CELL UPDATE CONFIRM (Step 4)

Use the message sub-type in default message content defined in 3GPP TS 34.108 [9] clause 9, with the following exceptions.

| Information Element | Value/remark |
|---|---|
| RRC State Indicator | Cell_PCH |
| UTRAN DRX cycle length coefficient | 7 |

#### 8.5.5.4.5 Test requirements

At step 3, check that the UE performs the MBMS counting procedure by performing the cell update procedure using the cause value “MBMS reception” and using in case of MBMS Selected services the IE “MBMS Selected Service ID” of the concerned MBMS selected service within the IE “MBMS Selected Services Short” and the IE “MBMS Modification Period identity”.

At step 6, check that the UE does not perform the MBMS counting again during the same Modification Period.

### 8.5.5.4m MBMS Counting in CELL_PCH / MBMS Multicast Service

#### 8.5.5.4m.1 Definition

This test is applicable for all UEs that support MBMS multicast services.

#### 8.5.5.4m.2 Conformance requirement

Same conformance requirement as in clause 8.5.5.4.2 except there is no reference to 3GPP TS 25.331 clause 8.3.1.3.

#### 8.5.5.4m.3 Test purpose

To verify that the UE correctly handles the counting procedure in cell_PCH state, upon receiving an MBMS MODIFIED SERVICES message including IE "MBMS required UE action" and an ACCESS INFORMATION message including IE "Access probability factor – Connected" set to 0.

#### 8.5.5.4m.4 Method of test

##### Initial condition

System Simulator:

2 MBMS cells, Cell 21 and Cell 22

User Equipment:

The UE is in CELL_PCH state as specified in clause 7.6 of TS 34.108.

The UE has joined the multicast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

##### Related ICS/IXIT statements

- MBMS Multicast service application available on UE Yes/No.

##### Test procedure

Same test procedure as in clause 8.5.5.2.4 except for the points 2 and 3:

2) The SS sends in the same Modification Period the MBMS ACCESS INFORMATION message which includes:

   - the “MBMS short transmission ID” IE referring to the service the UE has joined
   - the “Connected mode counting scope” IE set to TRUE applicable to the UE connected state and
   - the value for “Access probability factor – connected” IE set to 0 (corresponding to the actual probability factor value 1)

3) The UE shall perform the MBMS counting procedure. The UE shall draw a random number ‘rand’. If ‘rand’ is lower than the value indicated by the IE “Access probability factor – connected”, it shall send a CELL UPDATE message to the SS on the uplink CCCH of cell 21 and set IE "Cell update cause" to "MBMS reception". After the SS receives this message, it transmits a CELL UPDATE CONFIRM message to the UE on the downlink CCCH. The UE shall move to the Cell_PCH state as indicated by the IE "RRC State Indicator".

### Expected sequence

Same expected sequence as in clause 8.5.5.4.4 except for MBMS ACCESS INFORMATION message content (step 2) and CELL UPDATE message content (step 3).

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| | | | | The UE is in cell_PCH |
| 1 | ← | | MBMS MODIFIED SERVICES INFORMATION | “MBMS required UE action” IE is set to "Acquire counting info" |
| 2 | ← | | MBMS ACCESS INFORMATION | “MBMS short transmission ID” IE referring to the service the UE has joined and “Connected mode counting scope” IE set to "TRUE", “Access probability factor – connected” IE set to 0. |
| 3 | → | | CELL UPDATE | The UE shall perform the MBMS counting procedure which triggers the cell updating procedure which moves the UE into CELL_FACH state. The CELL UPDATE message shall contain the value "Cell Update Cause" set to "MBMS reception". |
| 4 | ← | | CELL UPDATE CONFIRM | IE "RRC State Indicator” is set to CELL_PCH. |
| 5 | ← | | MBMS ACCESS INFORMATION | The SS sends again in the same MP a MBMS access Information message. |
| 6 | | | | The SS check that the UE shall not perform again the counting procedure by sending another cell update message. |
| 7 | ←→ | | CALL C.4 | If the test result of C.4 indicates that UE is in CELL_PCH state, the test passes, otherwise it fails. |

### Specific message contents

Same specific messages contents as in clause 8.5.5.4.4.

### CELL UPDATE (Step 3)

Use the message sub-type in default message content defined in 3GPP TS 34.108 [9] clause 9, with the following exceptions.

| Information Element | Value/remark |
|---|---|
| Cell update cause | MBMS reception |

### CELL UPDATE CONFIRM (Step 4)

Use the same specific message content as in clause 8.5.5.4.4 for CELL UPDATE CONFIRM message at Step 4.

#### 8.5.5.4m.5 Test requirements

At step 3, check that the UE performs the MBMS counting procedure by performing the cell update procedure using the cause value “MBMS reception”.

At step 6, check that the UE does not perform the MBMS counting again during the same Modification Period.

### 8.5.5.5 Void

### 8.5.5.6 Void

### 8.5.5.7 RRC Connection establishment for MBMS Counting :Success after T318 Timeout/ MBMS Selected Service

#### 8.5.5.7.1 Definition

This test case is applicable for UEs that support MBMS broadcast services.

#### 8.5.5.7.2 Conformance requirement

The MBMS counting procedure is used by the UE to inform UTRAN about its interest to receive an MBMS transmission. The procedure applies to UEs supporting MBMS that are in idle mode or in connected mode for cells not operating in MBSFN mode as indicated in subclause 8.1.1.6.3.

…

The UE initiates the MBMS counting procedure for an MBMS transmission upon receiving an MBMS MODIFIED SERVICES message including IE "MBMS required UE action" with the value set to 'Acquire counting info' or set to "Acquire counting info– PTM RBs unmodified".

…

Upon receiving the MBMS ACCESS INFORMATION message for cells not operating in MBSFN mode as indicated in subclause 8.1.1.6.3 including one or more MBMS service(s) it has joined and/or including one or more MBMS Selected Services, the UE shall for each joined and/or selected service:

1> if the UE is in idle mode:

2> draw a random number, "rand", uniformly distributed in the range: $0 \leq rand < 1$

2> if 'rand' is lower than the value indicated by the IE 'Access probability factor-Idle' for the concerned service:

3> indicate to upper layers that establishment of an RRC connection is required to receive the concerned MBMS service, with the establishment cause set to 'MBMS reception';

3> if the above condition applies for more than one service, initiate a single indication to upper layers;

3> if the RRC connection establishment succeeds, the procedure ends.

…

1> submit the RRC CONNECTION REQUEST message for transmission on the uplink CCCH;

1> set counter V300 to 1; and

1> if the variable ESTABLISHMENT_CAUSE is set to "MBMS reception":

2> when the MAC layer indicates success or failure to transmit the message:

3> if the MAC layer indicates failure:

4> enter idle mode;

4> consider the procedure to be unsuccessful;

4> perform other actions when entering idle mode from connected mode as specified in subclause 8.5.2;

4> the procedure ends.

3> else:

4> start timer T318;

4> apply value 0 for counter N300 regardless of the value included in IE "UE Timers and Constants in idle mode".

…

The UE shall, in the transmitted RRC CONNECTION REQUEST message:

…

1> otherwise if the UE performs connection establishment for MBMS counting as specified in subclause 8.7.4; and

1> if one or more of the MBMS services for which the UE initiates the counting response concerns an MBMS Selected Service:

2> for each MBMS Selected Service that is indicated on MCCH and for which the UE initiates the counting response:

3> include the IE "MBMS Selected Service ID" within the IE "MBMS Selected Services Short" and set it to a value in accordance with subclause 8.6.9.8.

1> if the UE included one or more "MBMS Selected Service ID" IEs:

2> include the IE "MBMS Modification Period identity" and set it to a value in accordance with subclause 8.5.29.

…

If the counting response procedure (RRC connection establishment or Cell update) fails, the UE shall:

1> if the failure occurs in the same modification period as the one in which the UE initiated the counting response procedure; or

1> if the message triggering the MBMS counting procedure included the IE "Continue MCCH reading" with a value set to TRUE that is applicable in the modification period in which the UE detects the failure:

2> continue acquiring further MBMS ACCESS INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3.

1> otherwise:

2> the procedure ends.

Reference

3GPP TS 25.331 clauses 8.7.4, 8.7.4.1, 8.7.4.2, 8.7.4.3, 8.1.3.2, 8.1.3.3, 8.7.4.5.

### 8.5.5.7.3 Test purpose

To confirm that the UE starts T318 timer once UE MAC layer indicates successful transmission of RRC Connection Request message for MBMS counting.

To verify that the UE continues to acquire MBMS ACCESS INFORMATION messages after Expiry of T318, and hence re-start RRC Connection Request procedure for counting.

### 8.5.5.7.4 Method of test

Initial Condition

System Simulator: 1 MBMS cell (cell 21).

User Equipment:

The UE is in Idle Mode as specified in clause 7.6 of TS 34.108.

The UE is interested in the selected service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Longest MCCH scheduling configuration defined in 34.108 clause 11.1.1.3 is used.

### Related ICS/IXIT statements

- MBMS Broadcast service application available on UE Yes/No.

### Test Procedure

The SS transmits an MBMS MODIFIED SERVICE INFORMATION message which includes in the “Modified service list” for the MBMS activated service “MBMS required UE action” set to “Acquire counting info”.

The SS transmits an MBMS ACCESS INFORMATION message, which includes the MBMS Short transmission ID associated to the MBMS activated service and “Access probability factor – Idle” set to 0.

NOTE: The “Access probability factor” sent in the MBMS ACCESS INFORMATION message set to 0 corresponds to an actual Probability Factor = 1, according to the formula in TS 25.331 clause 10.2.16e.

The UE transmits an RRC CONNECTION REQUEST message to the SS, with “Establishment cause” set to “MBMS reception”. After MAC indication on successful transmission, starts T318 timer.

SS does not respond to the RRC CONNECTION REQUEST message.

After expiry of T318, UE Re-acquires MBMS ACCESS INFORMATION, and re-starts the counting procedure. The UE transmits an RRC CONNECTION REQUEST message to the SS, with “Establishment cause” set to “MBMS reception”.

The SS transmits an RRC CONNECTION SETUP message to the UE which moves the UE to CELL_DCH state.

When the UE receives this message, the UE establishes an RRC connection and transmits an RRC CONNECTION SETUP COMPLETE message.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| | | | | The UE is in idle mode. |
| 1 | ← | | MBMS MODIFIED SERVICES INFORMATION | The SS transmits the message, which includes “MBMS required UE action” set to “Acquire counting info” |
| 2 | ← | | MBMS ACCESS INFORMATION | The SS transmits the message, which includes “MBMS short transmission ID” IE referring to the service the UE has activated and “Access probability factor – Idle” IE set to 0 (corresponding to actual Access Probability = 1). |
| 3 | ← | | MBMS GENERAL INFORMATION | |
| 4 | → | | RRC CONNECTION REQUEST | The UE transmits the message with Establishment cause set to “MBMS reception” |
| 5 | | | | SS does not respond to RRC Connection Request message in step 4. |
| 6 | → | | RRC CONNECTION REQUEST | The UE re-sends the message with Establishment cause set to “MBMS reception” with the “MBMS Selected Services Short” IE referring to the concerned MBMS Selected service and the corresponding Modification period identity. |
| 7 | ← | | RRC CONNECTION SETUP | SS assigns DPCH resources to allow UE to establish an RRC connection.<br>RRC state indicator set to CELL_DCH. |
| 8 | → | | RRC CONNECTION SETUP COMPLETE | |
| 8a | → | | MBMS MODIFICATION REQUEST | The UE completing the RRC connection Setup procedure shall initiate the MBMS MODIFICATION REQUEST procedure. This message may be received at any point after step 8 and before step 10. |
| 9 | UE | | | UE transmits SERVICE REQUEST, with IE "Service type" set to "MBMS Broadcast service Reception”. |
| 10 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 1 (FDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in idle mode | |
| -T300 | 8000 milliseconds |

MBMS MODIFIED SERVICES INFORMATION (Step 1)

| Information Element | Value/remark |
|---|---|
| Modified service list | Only 1 entry |
| - MBMS Transmission identity | MBMS Transmission identity indicating MBMS activated service |
| - MBMS required UE action | Acquire counting info |
| - Continue MCCH reading | TRUE |

MBMS ACCESS INFORMATION (Step 2)

| Information Element | Value/remark |
|---|---|
| Service list | Only 1 entry |
| - MBMS short transmission ID | Index to the MBMS transmission identity in the previous MBMS MODIFIED SERVICES INFORMATION |
| - Access probability factor – Idle | 0 (corresponding to the actual probability factor value 1) |

MBMS GENERAL INFORMATION (Step 3)

Use the default message type found in TS 34.108, 9.1.1 except for

| | |
|---|---|
| MBMS timers and counters | |
| - T318 | 1500 ms |

RRC CONNECTION REQUEST (Step 4 and 6)

| Information Element | Value/remark |
|---|---|
| Message type | |
| Initial UE identity | Same as the registered TMSI or P-TMSI. |
| Establishment Cause | MBMS reception |
| Protocol Error Indicator | Check to see if it is set to FALSE |
| Measured results on RACH | Not checked. |
| MBMS Selected Services | |
| - MBMS Selected Services | Only 1 entry |
| - MBMS Selected Service ID | MBMS short transmission identity referring to the service the UE has selected |
| - Modification period identity | Indicates the modification period the MBMS short transmission identities refer to |

RRC CONNECTION SETUP (Step 7)

Use the default message type found in TS 34.108, 9.1.1.

RRC CONNECTION SETUP COMPLETE (Step 8)

Use the default message type found in TS 34.108, 9.1.1.

MBMS MODIFICATION REQUEST (steps 8a)

| Information Element | Value/remark |
|---|---|
| MBMS preferred frequency request | Check that the IE is not present |
| MBMS RB list requested to be released | Check that the IE is not present |
| MBMS Selected Service Info | |
| - CHOICE Status | Some |
| - MBMS Selected Services Full | |
| - MBMS Selected Service ID | Only 1 entry |
| - MBMS Service ID | MBMS service ID of the activated MBMS service |
| - CHOICE PLMN identity | Check to see that one of the below choice element is present |
| - SameAs-MIB | (no data) |
| - explicitPLMN_Id | Check to see if it is set to the same value as "PLMN ID" in the Master Information block transmitted for the current serving cell. |

#### 8.5.5.7.5 Test requirement

At step 4 and 6, the UE shall transmit an RRC CONNECTION REQUEST message with “Establishment Cause” set to “MBMS reception” on the uplink CCCH and including the IE “MBMS Selected Service ID” of the concerned MBMS selected service within the IE “MBMS Selected Services Short” and the IE “MBMS Modification Period identity”.

The time difference between step 4 and 6 should be at least 1500 milliseconds (T318 expiry), and less than 6 seconds (T318 [1500ms] +2*AP [1280ms] +Transmission time on PRACH)

At step 8, the UE shall transmit an RRC CONNECTION SETUP COMPLETE message on a dedicated channel.

### 8.5.5.7m RRC Connection establishment for MBMS Counting :Success after T318 Timeout / MBMS Multicast Service

#### 8.5.5.7m.1 Definition

This test is applicable for all UEs that support MBMS multicast services.

#### 8.5.5.7m.2 Conformance requirement

Same conformance requirement as in clause 8.5.5.7.2.

#### 8.5.5.7m.3 Test purpose

Same test purpose as in clause 8.5.5.7.3.

#### 8.5.5.7m.4 Method of test

##### Initial Condition

System Simulator: 1 MBMS cell (cell 21).

User Equipment:

The UE is in Idle Mode as specified in clause 7.6 of TS 34.108.

The UE has joined the multicast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

##### Related ICS/IXIT statements

- MBMS Multicast service application available on UE Yes/No.

##### Test procedure

Same test procedure as in clause 8.5.5.7.4, except expected sequence step 8a is not applicable and at step 9 UE transmits Service Request, with IE "Service type" set to "MBMS Multicast service Reception”.

##### Specific message contents

Same specific messages contents as in clause 8.5.5.7.4 except for RRC CONNECTION REQUEST message content (step 4 and 6). Step 8a contents are not applicable.

RRC CONNECTION REQUEST (Step 4 and 6)

| Information Element | Value/remark |
|---|---|
| Message type | |
| Initial UE identity | Same as the registered P-TMSI. |
| Establishment Cause | MBMS reception |
| Protocol Error Indicator | Check to see if it is set to FALSE |
| Measured results on RACH | Not checked. |
| MBMS Selected Services | Not present |

#### 8.5.5.7m.5 Test requirements

Same Test Requirements as in clause 8.5.5.7.5, except UE shall not include in the IE “MBMS Selected Service ID” of the concerned MBMS selected service within the IE “MBMS Selected Services Short” and the IE “MBMS Modification Period identity” in step 4 and 6.

### 8.5.5.8 RRC Connection establishment for MBMS Counting :Success after MAC Layer Failure Indication/ MBMS Selected Service

#### 8.5.5.8.1 Definition

This test case is applicable for UEs that support MBMS broadcast services.

#### 8.5.5.8.2 Conformance requirement

The MBMS counting procedure is used by the UE to inform UTRAN about its interest to receive an MBMS transmission. The procedure applies to UEs supporting MBMS that are in idle mode or in connected mode for cells not operating in MBSFN mode as indicated in subclause 8.1.1.6.3.

…

The UE initiates the MBMS counting procedure for an MBMS transmission upon receiving an MBMS MODIFIED SERVICES message including IE "MBMS required UE action" with the value set to 'Acquire counting info' or set to "Acquire counting info– PTM RBs unmodified".

…

Upon receiving the MBMS ACCESS INFORMATION message for cells not operating in MBSFN mode as indicated in subclause 8.1.1.6.3 including one or more MBMS service(s) it has joined and/or including one or more MBMS Selected Services, the UE shall for each joined and/or selected service:

1> if the UE is in idle mode:

2> draw a random number, "rand", uniformly distributed in the range: $0 \leq rand < 1$

2> if 'rand' is lower than the value indicated by the IE 'Access probability factor-Idle' for the concerned service:

3> indicate to upper layers that establishment of an RRC connection is required to receive the concerned MBMS service, with the establishment cause set to 'MBMS reception';

3> if the above condition applies for more than one service, initiate a single indication to upper layers;

3> if the RRC connection establishment succeeds, the procedure ends.

…

1> submit the RRC CONNECTION REQUEST message for transmission on the uplink CCCH;

1> set counter V300 to 1; and

1> if the variable ESTABLISHMENT_CAUSE is set to "MBMS reception":

2> when the MAC layer indicates success or failure to transmit the message:

3> if the MAC layer indicates failure:

4> enter idle mode;

4> consider the procedure to be unsuccessful;

4> perform other actions when entering idle mode from connected mode as specified in subclause 8.5.2;

4> the procedure ends.

3> else:

4> start timer T318;

4> apply value 0 for counter N300 regardless of the value included in IE "UE Timers and Constants in idle mode".

…

The UE shall, in the transmitted RRC CONNECTION REQUEST message:

…

1> otherwise if the UE performs connection establishment for MBMS counting as specified in subclause 8.7.4; and

1> if one or more of the MBMS services for which the UE initiates the counting response concerns an MBMS Selected Service:

2> for each MBMS Selected Service that is indicated on MCCH and for which the UE initiates the counting response:

3> include the IE "MBMS Selected Service ID" within the IE "MBMS Selected Services Short" and set it to a value in accordance with subclause 8.6.9.8.

1> if the UE included one or more "MBMS Selected Service ID" IEs:

3> include the IE "MBMS Modification Period identity" and set it to a value in accordance with subclause 8.5.29.

…

If the counting response procedure (RRC connection establishment or Cell update) fails, the UE shall:

1> if the failure occurs in the same modification period as the one in which the UE initiated the counting response procedure; or

1> if the message triggering the MBMS counting procedure included the IE "Continue MCCH reading" with a value set to TRUE that is applicable in the modification period in which the UE detects the failure:

2> continue acquiring further MBMS ACCESS INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3.

1> otherwise:

2> the procedure ends.

Reference

3GPP TS 25.331 clauses 8.7.4, 8.7.4.1, 8.7.4.2, 8.7.4.3, 8.1.3.2, 8.1.3.3, 8.7.4.5.

#### 8.5.5.8.3 Test purpose

To confirm that the UE does not start T318 timer once UE MAC layer indicates un-successful transmission of RRC Connection Request message for MBMS counting.

To verify that the UE continues to acquire MBMS ACCESS INFORMATION messages after MAC layer failure indication for first RRC Connection Request transmission, and hence re-start RRC Connection Request procedure for counting.

#### 8.5.5.8.4 Method of test

Initial Condition

System Simulator: 1 MBMS cell (cell 21).

User Equipment:

The UE is in Idle Mode as specified in clause 7.6 of TS 34.108.

The UE is interested in the selected service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Longest MCCH scheduling configuration defined in 34.108 clause 11.1.1.3 is used.

### Related ICS/IXIT statements

- MBMS Broadcast service application available on UE Yes/No.

### Test Procedure

The SS transmits an MBMS MODIFIED SERVICE INFORMATION message which includes in the “Modified service list” for the MBMS activated service “MBMS required UE action” set to “Acquire counting info”.

The SS transmits an MBMS ACCESS INFORMATION message, which includes the MBMS Short transmission ID associated to the MBMS activated service and “Access probability factor – Idle” set to 0.

NOTE: The “Access probability factor” sent in the MBMS ACCESS INFORMATION message set to 0 corresponds to an actual Probability Factor = 1, according to the formula in TS 25.331 clause 10.2.16e.

The UE submits RRC CONNECTION REQUEST message for transmission, with “Establishment cause” set to “MBMS reception”.

SS does not acknowledge the RACH access on AICH.

After Failure indication by UE MAC Layer, UE Re-acquires MBMS ACCESS INFORMATION, and re-starts the counting procedure. The UE transmits RRC CONNECTION REQUEST message to the SS, with “Establishment cause” set to “MBMS reception”.

The SS transmits an RRC CONNECTION SETUP message to the UE which moves the UE to CELL_DCH state.

When the UE receives this message, the UE establishes an RRC connection and transmits an RRC CONNECTION SETUP COMPLETE message.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| | | | | The UE is in idle mode. |
| 1 | ← | | MBMS MODIFIED SERVICES INFORMATION | The SS transmits the message, which includes “MBMS required UE action” set to “Acquire counting info” |
| 2 | ← | | MBMS ACCESS INFORMATION | The SS transmits the message, which includes “MBMS short transmission ID” IE referring to the service the UE activated and “Access probability factor – Idle” IE set to 0 (corresponding to actual Access Probability = 1). |
| 3 | ← | | MBMS GENERAL INFORMATION | |
| 4 | → | | ACCESS PREAMBLE(RRC CONNECTION REQUEST) | |
| 5 | | | | SS does not respond to ACCESS PREAMBLE on AICH channel. |
| 6 | | | | After Failure indication by MAC Layer, UE starts acquiring MBMS ACCESS INFORMATION |
| 7 | → | | RRC CONNECTION REQUEST | The UE re-sends the message with Establishment cause set to “MBMS reception”. (SS ACKS on AICH for ACCESS PREAMBLE) |
| 8 | ← | | RRC CONNECTION SETUP | SS assigns DPCH resources to allow UE to establish an RRC connection.<br>RRC state indicator set to CELL_DCH. |
| 9 | → | | RRC CONNECTION SETUP COMPLETE | |
| 9a | → | | MBMS MODIFICATION REQUEST | The UE completing the RRC connection Setup procedure shall initiate the MBMS MODIFICATION REQUEST procedure. This message may be received at any point after step 9 and before step 11. |
| 10 | UE | | | UE transmits SERVICE REQUEST, with IE "Service type" set to "MBMS Broadcast service Reception”. |
| 11 | ←→ | | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

System Information Block type 1 (FDD)

Use the default system information block with the same type specified in clause 6.1 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| - UE Timers and constants in idle mode | |
| -T300 | 8000 milliseconds |

MBMS MODIFIED SERVICES INFORMATION (Step 1)

| Information Element | Value/remark |
|---|---|
| Modified service list | Only 1 entry |
| - MBMS Transmission identity | MBMS Transmission identity indicating MBMS activated service |
| - MBMS required UE action | Acquire counting info |
| - Continue MCCH reading | TRUE |

MBMS ACCESS INFORMATION (Step 2)

| Information Element | Value/remark |
|---|---|
| Service list | Only 1 entry |
| - MBMS short transmission ID | Index to the MBMS transmission identity in the previous MBMS MODIFIED SERVICES INFORMATION |
| - Access probability factor – Idle | 0 (corresponding to the actual probability factor value 1) |

MBMS GENERAL INFORMATION (Step 3)

Use the default message type found in TS 34.108, 9.1.1 except for

| | |
|---|---|
| MBMS timers and counters | |
| - T318 | 16000 ms |

RRC CONNECTION REQUEST (Step 7)

| Information Element | Value/remark |
|---|---|
| Message type | |
| Initial UE identity | Same as the registered TMSI or P-TMSI. |
| Establishment Cause | MBMS reception |
| Protocol Error Indicator | Check to see if it is set to FALSE |
| Measured results on RACH | Not checked. |
| MBMS Selected Services | |
| - MBMS Selected Services | Only 1 entry |
| - MBMS Selected Service ID | MBMS short transmission identity referring to the service the UE has selected |
| - Modification period identity | Indicates the modification period the MBMS short transmission identities refer to |

RRC CONNECTION SETUP (Step 8)

Use the default message type found in TS 34.108, 9.1.1.

RRC CONNECTION SETUP COMPLETE (Step 9)

Use the default message type found in TS 34.108, 9.1.1.

MBMS MODIFICATION REQUEST (steps 9a)

| Information Element | Value/remark |
|---|---|
| MBMS preferred frequency request | Check that the IE is not present |
| MBMS RB list requested to be released | Check that the IE is not present |
| MBMS Selected Service Info | |
| - CHOICE Status | Some |
| - MBMS Selected Services Full | |
| - MBMS Selected Service ID | Only 1 entry |
| - MBMS Service ID | MBMS service ID of the activated MBMS service |
| - CHOICE PLMN identity | Check to see that one of the below choice element is present |
| - SameAs-MIB | (no data) |
| - explicitPLMN_Id | Check to see if it is set to the same value as "PLMN ID" in the Master Information block transmitted for the current serving cell. |

#### 8.5.5.8.5 Test requirement

At step 7, the UE shall transmit an RRC CONNECTION REQUEST message with “Establishment Cause” set to “MBMS reception” on the uplink CCCH and including the IE “MBMS Selected Service ID” of the concerned MBMS selected service within the IE “MBMS Selected Services Short” and the IE “MBMS Modification Period identity”.

The time difference between step 4(last Access Preamble Reception) and 7 should be at least 1280 milliseconds (one AP), and less than 4 seconds (2*AP[1280ms]+Transmission time on PRACH).

At step 9, the UE shall transmit an RRC CONNECTION SETUP COMPLETE message on a dedicated channel.

### 8.5.5.8m RRC Connection establishment for MBMS Counting :Success after MAC Layer Failure Indication / MBMS Multicast Service

#### 8.5.5.8m.1 Definition

This test is applicable for all UEs that support MBMS multicast services.

#### 8.5.5.8m.2 Conformance requirement

Same conformance requirement as in clause 8.5.5.8.2.

#### 8.5.5.8m.3 Test purpose

Same test purpose as in clause 8.5.5.8.3.

#### 8.5.5.8m.4 Method of test

##### Initial Condition

System Simulator: 1 MBMS cell (cell 21).

User Equipment:

The UE is in Idle Mode as specified in clause 7.6 of TS 34.108.

The UE has joined the multicast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

##### Related ICS/IXIT statements

- MBMS Multicast service application available on UE Yes/No.

##### Test procedure

Same test procedure as in clause 8.5.5.8.4, except expected sequence step 9a is not applicable and at step 10 UE transmits Service Request, with IE "Service type" set to "MBMS Multicast service Reception”.

##### Specific message contents

Same specific messages contents as in clause 8.5.5.8.4 except for RRC CONNECTION REQUEST message content (step 7). Step 9a contents are not applicable.

RRC CONNECTION REQUEST (Step 7)

| Information Element | Value/remark |
|---|---|
| Message type | |
| Initial UE identity | Same as the registered P-TMSI. |
| Establishment Cause | MBMS reception |
| Protocol Error Indicator | Check to see if it is set to FALSE |
| Measured results on RACH | Not checked. |
| MBMS Selected Services | Not present |

#### 8.5.5.8m.5 Test requirements

Same Test Requirements as in clause 8.5.5.8.5, except UE shall not include in the IE “MBMS Selected Service ID” of the concerned MBMS selected service within the IE “MBMS Selected Services Short” and the IE “MBMS Modification Period identity” in step 7.

## 8.5.6 MBMS Controlling Cell Change

### 8.5.6.1 MBMS Controlling Cell Change - Idle mode - Frequency Layer Convergence – HCS Not Used / MBMS Selected Service

#### 8.5.6.1.1 Definition

Test to verify that the UE performs the cell reselection correctly if system information parameters Qoffset, Qhyst, Qoffmbms and Treselection are applied for non-hierarchical cell structures. This test case is applicable for all UEs that support MBMS broadcast services.

#### 8.5.6.1.2 Conformance requirement

When camped normally, the UE shall perform the following tasks:

- select and monitor the indicated PICH and PCH of the cell as specified in clause 8 according to information sent in system information;
- monitor relevant System Information. This is specified in [8];
- perform necessary measurements for the cell reselection evaluation procedure;
- execute the cell reselection evaluation process on the following occasions/triggers:
  1) UE internal triggers, so as to meet performance as specified in [22] and [23];
  2) When information on the BCCH used for the cell reselection evaluation procedure has been modified

If the UE supports MBMS and MBMS is active in the cell and the UE is permitted to receive MBMS services in the cell, the UE shall perform MBMS tasks as specified in subclause 6.3 of TS 25.304.

…

The cell-ranking criterion R is defined by:

$$R_s = Q_{meas,s} + Qhyst_s + Qoffmbms$$

$$R_n = Q_{meas,n} - Qoffset_{s,n} + Qoffmbms - TO_n * (1 - L_n)$$

where:

the signalled value Qoffmbms is only applied to those cells (serving or neighbouring) belonging to the MBMS PL

…

The cells shall be ranked according to the R criteria specified above, deriving $Q_{meas,n}$ and $Q_{meas,s}$ and calculating the R values using CPICH RSCP, P-CCPCH RSCP and the averaged received signal level as specified in [22] and [23] for FDD, TDD and GSM cells, respectively.

The offset $Qoffset1_{s,n}$ is used for $Qoffset_{s,n}$ to calculate $R_n$, the hysteresis $Qhyst1_s$ is used for $Qhyst_s$ to calculate $R_s$. For UE in RRC connected mode states CELL_PCH or URA_PCH the hysteresis $Qhyst_s$ takes the value $Qhyst1_{s,PCH}$ to calculate $R_s$, if provided in SIB4 [see 8]. For UE in RRC connected mode state CELL_FACH the hysteresis $Qhyst_s$ takes the value $Qhyst1_{s,FACH}$ to calculate $R_s$, if provided in SIB4 [see 8].

…

If an FDD cell is ranked as the best cell and the quality measure for cell selection and re-selection is set to CPICH RSCP, the UE shall perform cell re-selection to that FDD cell. If this cell is found to be not suitable, the UE shall behave according to subclause 5.2.6.1.3 of TS 25.304.

…

In all cases, the UE shall reselect the new cell, only if the following conditions are met:

- the new cell is better ranked than the serving cell during a time interval Treselection. For UE in RRC connected mode states CELL_PCH or URA_PCH the interval $Treselection_{s,PCH}$ applies, if provided in SIB4 [see 8], while for UE in RRC connected mode state CELL_FACH the interval $Treselection_{s,FACH}$ applies, if provided in SIB4 [see 8]. For hierarchical cell structures when high mobility state has not been detected, if according to the HCS rules the serving cell is not ranked then all the ranked cells are considered to be better ranked than the serving cell.

Reference

3GPP TS 25.304 clauses 5.2.5.1, 5.2.6.1.4.

### 8.5.6.1.3 Test purpose

1. To verify that a UE in idle mode calculates R from Qhyst, and Qoffset and Qoffmbms, which triggers the cell reselection evaluation process.
2. To verify that a UE in idle mode performs a Serving Cell Reselection to the Preferred Layer at Session Start.
3. To verify that a UE in idle mode performs an intra-frequency Cell Reselection on the Preferred Layer during an ongoing Session

### 8.5.6.1.4 Method of test

Initial Condition

System Simulator: 3 MBMS cells (Cell 21, Cell 24, Cell 26) with the downlink transmission power shown in column marked "T0" in table 8.5.6.1-1.

The UE is in Idle Mode as specified in clause 7.6 of TS 34.108 and camped on Cell 21.

The UE is interested in the broadcast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Specific message contents for System information blocks 3 and 11 are used in Cell 21.

Related ICS/IXIT statement(s)

- MBMS Broadcast service application available on UE Yes/No

Test procedure

Table 8.5.6.1-1 illustrates the downlink power to be applied for the 3 cells at various time instants of the test execution. Columns marked “T0” denote the initial conditions, while columns marked “T1” are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.5.6.1-1**

| Parameter | Unit | Cell 21 | | Cell 24 | | Cell 26 | |
|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84 MHz | -60 | -60 | -66 | -75 | -75 | -66 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -60 | -66 | -75 | -75 | -66 |

The UE is in idle mode in Cell 21.

The SS notifies on MICH and MCCH in Cell 1 about the start of an MBMS session including a preferred frequency in the IE “MBMS preferred frequency”. The UE reselects to Cell 24 (Frequency Layer Convergence).

The SS transmits an MBMS MODIFIED SERVICE INFORMATION message which includes in the “Modified service list” for the MBMS activated service “MBMS required UE action” set to “Acquire counting info” and MBMS ACCESS INFORMATION message, which includes the MBMS Short Transmission ID associated to the MBMS activated service and “Access probability factor – Idle” set to 0 (corresponds to an actual Probability Factor = 1).

The UE shall transmit an RRC CONNECTION REQUEST message, with “Establishment cause” set to “MBMS reception”. The SS transmits a RRC CONNECTION SETUP. The UE establishes an RRC connection and transmits an RRC CONNECTION SETUP COMPLETE message.

The UE receives an MBMS MODIFIED SERVICES INFORMATION message “MBMS required UE action” IE set to “Acquire PTM RB info”. The UE receives an MBMS NEIGHBOURING CELL P-T-M RB INFORMATION including MBMS neighbouring cell information for Cell 26. The UE shall apply the MBMS p-t-m radio bearer configuration procedure to acquire the radio bearer configuration for the MBMS service provided by the SS.

The UE starts receiving the indicated p-t-m radio bearer.

The SS applies the power settings of “T1” in table 8.5.6.1-1. Then the UE shall reselect to Cell 26 applying the Qoffmbms.

The UE receives an MBMS UNMODIFIED SERVICES INFORMATION message “MBMS required UE action” IE set to “Acquire PTM RB info”. The UE receives an MBMS NEIGHBOURING CELL P-T-M RB INFORMATION including MBMS neighbouring cell information for Cell 24. The UE shall apply the MBMS p-t-m radio bearer configuration and continues receiving the indicated p-t-m radio bearer.

SS calls for generic procedure C.1 to check that UE is in idle mode.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | The UE is in idle mode on Cell 21. |
| 2 | ← | | SYSTEM INFORMATION | See specific message contents for SIB3 |
| 3 | ← | | MBMS MODIFIED SERVICES INFORMATION | "MBMS required UE action" IE is set to "none" and the "MBMS preferred frequency" IE indicates the reference to Ch. 2. |
| 4 | ← | | MBMS GENERAL INFORMATION | MBMS preferred frequency information is set to Ch. 2. Qoffmbms is set to 12 dB. |
| 5 | UE | | | UE reselects to Cell 24 |
| 5a | SS | | | The following MCCH messages are sent on Cell 24. |
| 6 | ← | | MBMS MODIFIED SERVICES INFORMATION | Transmitted "MBMS required UE action" IE is set to "Acquire counting info" |
| 7 | ← | | MBMS ACCESS INFORMATION | "MBMS short transmission ID" IE set to 1, "Access probability factor – Idle" set to 0 (corresponding to the actual probability factor value 1). |
| 8 | ← | | MBMS GENERAL INFORMATION | MBMS preferred frequency information set without index into SIB11 neighbour list. |
| 9 | → | | RRC CONNECTION REQUEST | The UE transmits the message with Establishment cause set to "MBMS reception" and in case of MBMS Selected service with the "MBMS Selected Services Short" IE referring to the concerned MBMS Selected service and the corresponding Modification period identity. |
| 10 | ← | | RRC CONNECTION SETUP | |
| 11 | → | | RRC CONNECTION SETUP COMPLETE | |
| 11a | → | | MBMS MODIFICATION REQUEST | The UE completing the RRC connection Setup procedure shall initiate the MBMS MODIFICATION REQUEST procedure in case of MBMS selected Service. This message may be received at any point after step 11 and before step 13. |
| 12 | UE | | | UE transmits SERVICE REQUEST, with IE "Service type" set to "MBMS Broadcast service Reception". |
| 13 | ← | | RRC CONNECTION RELEASE | |
| 14 | → | | RRC CONNECTION RELEASE COMPLETE | The UE shall enter idle state. |
| 15 | ← | | MBMS MODIFIED SERVICES INFORMATION | MBMS session start. The SS also sets the Notification Indicator on MICH. The SS waits for the UE to establish the MTCH. |
| 16 | ← | | MBMS GENERAL INFORMATION | MBMS preferred frequency information set without index into SIB11 neighbour list. |
| 17 | ← | | MBMS NEIGHBOURING CELL P-T-M RB INFORMATION | This message has info for neighbouring cell 26 |
| 18 | SS | | | The SS applies the power settings of "T1" in Table 8.5.6.1-1 |

| | | | |
|---|---|---|---|
| 19 | UE | | UE performs reselection applying Qoffmbms and reselects the Cell 26 |
| 20 | ← | MBMS UNMODIFIED SERVICES INFORMATION | There is no change in MBMS services already ongoing in previous cell |
| 21 | ← | MBMS GENERAL INFORMATION | MBMS preferred frequency information set without index into SIB11 neighbour list. |
| 22 | ← | MBMS NEIGHBOURING CELL P-T-M RB INFORMATION | This message has info for neighbouring cell 24 |
| 23 | ←→ | CALL C.1 | If the test result of C.1 indicates that UE is in idle mode, the test passes, otherwise it fails. |

| MBMS p-t-m activation time | SS shall choose a value which is sufficient far ahead for the UE to establish the MTCH |

MBMS UNMODIFIED SERVICES INFORMATION (Step 20)

| Information Element | Value/remark |
|---|---|
| Message type | |
| Unmodified service list | |
| - MBMS Transmission identity | MBMS Transmission identity indicating MBMS activated service |
| - MBMS required UE action | Acquire PTM RB info |

#### 8.5.6.1.5 Test requirement

After step 6, the UE upon receiving an MBMS MODIFIED SERVICES INFORMATION message with IE "MBMS required UE action" set to 'Acquire counting info', shall perform the counting procedure.

At step 8, the UE shall send an RRC CONNECTION REQUEST message with "Establishment cause" set to 'MBMS reception'.

After step 15, the UE shall reselect to Cell 26 applying the Qoffmbms and the SS shall check that the UE is camped on Cell 26 in idle mode.

### 8.5.6.1m MBMS Controlling Cell Change - Idle mode - Frequency Layer Convergence – HCS Not Used / MBMS Multicast Service

#### 8.5.6.1m.1 Definition

This test is applicable for all UEs that support MBMS multicast services.

#### 8.5.6.1m.2 Conformance requirement

Same conformance requirement as in clause 8.5.6.1.2

#### 8.5.6.1m.3 Test purpose

Same test purpose as in clause 8.5.6.1.3.

#### 8.5.6.1m.4 Method of test

Initial condition

System Simulator:

3 MBMS cells , Cell 21, Cell 24, Cell 26.

User Equipment:

The UE is in Idle Mode as specified in clause 7.6 of TS 34.108.

The UE has joined the multicast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Multicast service application available on UE Yes/No.

Test procedure

Same test procedure as in clause 8.5.6.1.4, except that at step 12 UE transmits Service Request, with IE "Service type" set to "MBMS Multicast service Reception".

Specific message contents

Same specific messages contents as in clause 8.5.6.1.4

#### 8.5.6.1m.5 Test requirements

Same test requirement as in clause 8.5.6.1.5.

### 8.5.6.2 MBMS Controlling Cell Change in CELL_FACH during ongoing session / MBMS Broadcast Service

#### 8.5.6.2.1 Definition and applicability

This test case is applicable for all UEs that support MBMS broadcast services.

#### 8.5.6.2.2 Conformance requirement

The UE shall detect the available MBMS services by acquiring the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3 of TS 25.331.

The UE shall immediately acquire the MBMS ACCESS INFORMATION and the MBMS GENERAL INFORMATION messages i.e. it shall not delay reception of these messages until it has completed the acquisition of the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages. Likewise, the UE should immediately acquire the MBMS CURRENT CELL P-T-M RB INFORMATION and MBMS NEIGHBOURING CELL P-T-M RB INFORMATION messages.

The UE shall continue acquiring the above messages until it has received a consistent set of MCCH information e.g. both the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION message should be acquired in the same modification period.

…

The UE may:

1> if in idle mode, URA_PCH, CELL_PCH or CELL_FACH state; and

1> if not receiving an MBMS service provided via a p-t-m radio bearer:

2> monitor the MBMS notification Indicator Channel (MICH).

2> if a notification on the MICH for one or more of the MBMS services included in the variable MBMS_ACTIVATED_SERVICES is detected:

3> acquire the MBMS MODIFIED SERVICES INFORMATION message with delaying the reading of MCCH until the next modification period and with stopping at the end of the modification period, in accordance with subclause 8.7.1.3 of TS 25.331;

3> handle the MBMS MODIFIED SERVICES INFORMATION message as specified in subclause 8.7.3.4 of TS 25.331.

The UE shall:

1> if in idle mode, URA_PCH, CELL_PCH or CELL_FACH state:

2> if receiving an MBMS service that is provided via a p-t-m radio bearer; or

2> if not receiving an MBMS service that is provided via a p-t-m radio bearer and not monitoring MICH:

3> acquire the MBMS MODIFIED SERVICES INFORMATION message from MCCH at the start of every modification period, in accordance with subclause 8.7.1.3 of TS 25.331;

3> handle the MBMS MODIFIED SERVICES INFORMATION message as specified in subclause 8.7.3.4 of TS 25.331.

…

1> if the IE "MBMS required UE action" is set to 'Acquire PTM RB info'; or

1> if the IE "MBMS required UE action" is set to 'Acquire counting info– PTM RBs unmodified' and the UE is not receiving a p-t-m RB for the concerned service:

2> continue acquiring the MBMS COMMON P-T-M RB INFORMATION, MBMS CURRENT CELL P-T-M RB INFORMATION and the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3

2> act upon the MBMS COMMON P-T-M RB INFORMATION, MBMS CURRENT CELL P-T-M RB INFORMATION and the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION message, if received, in accordance with subclause 8.7.5;

Reference

3GPP TS 25.331 clause 8.7.2.3, 8.7.3.3.1, 8.6.9.6.

### 8.5.6.2.3 Test purpose

1. To verify that a UE in CELL_FACH state performs an inter-frequency MBMS Controlling Cell Change during an ongoing Session.
2. To verify that a UE in CELL_FACH state performs an intra-frequency MBMS Controlling Cell Change during an ongoing Session.
3. To verify that the UE is able to read MCCH in combination with FACH measurements.
4. To verify that a UE in CELL_FACH is able to apply MBMS NEIGHBOURING CELLS P-T-M RB INFORMATION and receive data on this p-t-m radio bearer.

### 8.5.6.2.4 Method of test

Initial Condition

System Simulator:

3 MBMS cells, Cell 21, Cell 24 and Cell 26.

User Equipment:

The UE is in CELL_FACH state as specified in clause 7.6 of TS 34.108.

The UE is interested in the broadcast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Specific message contents for System information blocks 3 and 11 are used in Cell 21.

Related ICS/IXIT statement(s)

- MBMS Broadcast service application available on UE Yes/No

Test Procedure

Table 8.5.6.2-1 illustrates the downlink power to be applied for the 3 cells in this test case. Initially, the SS applies the power settings of column “T0”.

**Table 8.5.6.2-1**

| Parameter | Unit | Cell 21 | | | Cell 24 | | | Cell 26 | | |
|---|---|---|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T0 | T1 | T2 | T0 | T1 | T2 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | | High Range Test Frequency | | | High Range Test Frequency | | |
| CPICH Ec ( FDD ) | dBm/3.84 MHz | -60 | -80 | -80 | -70 | -60 | -70 | -70 | -70 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -80 | -80 | -70 | -60 | -70 | -70 | -70 | -60 |

The UE is in CELL_FACH state in Cell 21. The SS notifies on MICH and MCCH about the start of an MBMS session and waits for the UE to activate MTCH reception. The MBMS radio bearer on MTCH is put into loopback mode 3.

The SS sends 10 RLC SDUs of MBMS data on MTCH in Cell 21 on the concerned MBMS radio bearer. The SS retrieves the number of RLC SDUs on MTCH counted by the UE by sending the UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST message. The SS checks that the UE has received at least one RLC SDUs.

The SS applies the power settings of “T1” in table 8.5.6.2-1. Then the UE shall reselect to Cell 24 and send a CELL UPDATE message on the CCCH. SS then replies with CELL UPDATE CONFIRM message on the downlink DCCH.

The SS provides information about the ongoing MBMS service in cell 24 by sending MBMS UNMODIFIED SERVICES INFORMATION. The SS informs the UE about Cell 26 as neighbouring cell by sending MBMS NEIGHBOURING CELL P-T-M RB INFORMATION in Cell 24. The MBMS radio bearer on MTCH is put into loopback mode 3, and SDU counter is reset to 0.The SS transmits 10 RLC SDUs of MBMS data in Cell 24. The SS retrieves the number of RLC SDUs on MTCH counted by the UE by sending the UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST message. The SS checks that the reported number is greater than zero.

The SS transmits 10 RLC SDUs of MBMS data in neighbouring Cell 26. The SS retrieves the number of RLC SDUs on MTCH counted by the UE by sending the UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST message. The SS checks that the reported number is greater than the number reported previously at step 16 of expected sequence.

The SS applies the power settings of “T2” in table 8.5.6.2-1. Then the UE shall reselect to Cell 26 and send a CELL UPDATE message on the CCCH. SS then replies with CELL UPDATE CONFIRM message on the downlink DCCH.

The SS provides information about the ongoing MBMS service in cell 26 by MBMS UNMODIFIED SERVICES INFORMATION. The SS informs the UE about Cell 24 as neighbouring cell by sending MBMS NEIGHBOURING CELL P-T-M RB INFORMATION in Cell 26.

The SS transmits 10 RLC SDUs of MBMS data in Cell 26. The SS retrieves the number of RLC SDUs on MTCH counted by the UE by sending the UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST message. The SS checks that the reported number is greater than the number reported by the UE previously at step 19 of expected sequence.

The SS transmits 10 RLC SDUs of MBMS data in neighbouring Cell 24. The SS retrieves the number of RLC SDUs on MTCH counted by the UE by sending the UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST message. The SS checks that the reported number is greater than the number reported by the UE at step 27 of expected sequence. The loopback mode 3 in the UE is deactivated.

SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

NOTE: If the UE fails the test because of selecting the wrong cell, the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0 | ← | | SYSTEM INFORMATION | See specific message contents for SIB3 and SIB11 |
| 1 | ← | | ACTIVATE RB TEST MODE | |
| 2 | → | | ACTIVATE RB TEST MODE COMPLETE | |
| 3 | ← | | MBMS MODIFIED SERVICES INFORMATION | MBMS session start. The SS also sets the Notification Indicator on MICH. The SS waits for the UE to establish the MTCH. |
| 4 | ← | | CLOSE UE TEST LOOP | |
| 5 | → | | CLOSE UE TEST LOOP COMPLETE | Loop back mode 3 on MTCH is activated. |
| 6 | SS | | | The SS broadcasts 10 RLC SDUs of MBMS data in Cell 21. |
| 7 | ← | | UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST | |
| 8 | → | | UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE | The SS checks that the UE has received MBMS data in Cell 21. The SS checks that the number of reported RLC PDUs is greater than zero and records that value. |

| RLC SDU Counter Value | Check that the number is greater than previous sub-test |

#### 8.5.6.2.5 Test requirement

After step 7 , the UE shall transmit a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message with the number of reported RLC SDUs shall be greater than zero.

After step 9, the UE shall transmit a CELL UPDATE message in Cell 24.

After step 15, the UE shall transmit a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message with the number of reported RLC SDUs shall be greater than zero.

After step 18, the UE shall transmit a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message with the number of reported RLC SDUs shall be greater than the number reported in step 16.

After step 26, the UE shall transmit a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message with the number of reported RLC SDUs shall be greater than the number reported in step 19.

After step 29, the UE shall transmit a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message with the number of reported RLC SDUs shall be greater than the number reported in step 27.

### 8.5.6.2m MBMS Controlling Cell Change in CELL_FACH during ongoing session / MBMS Multicast Service

#### 8.5.6.2m.1 Definition

This test is applicable for all UEs that support MBMS multicast services.

#### 8.5.6.2m.2 Conformance requirement

Same conformance requirement as in clause 8.5.6.2.2

#### 8.5.6.2m.3 Test purpose

Same test purpose as in clause 8.5.6.2.3.

#### 8.5.6.2m.4 Method of test

Initial condition

System Simulator:

2 MBMS cells, Cell 21 and Cell 24

User Equipment:

The UE is in CELL_FACH state as specified in clause 7.6 of TS 34.108.

The UE has joined the multicast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Multicast service application available on UE Yes/No.

Test procedure

Same test procedure as in clause 8.5.6.2.4.

Specific message contents

Same specific messages contents as in clause 8.5.6.2.4

#### 8.5.6.2m.5 Test requirements

Same test requirement as in clause 8.5.6.2.5.

### 8.5.6.3 MBMS Controlling Cell Change in CELL_PCH during ongoing session / MBMS Broadcast Service

#### 8.5.6.3.1 Definition and applicability

This test case is applicable for all UEs that support MBMS broadcast services.

#### 8.5.6.3.2 Conformance requirement

The UE shall detect the available MBMS services by acquiring the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3 of TS 25.331.

The UE shall immediately acquire the MBMS ACCESS INFORMATION and the MBMS GENERAL INFORMATION messages i.e. it shall not delay reception of these messages until it has completed the acquisition of the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages. Likewise, the UE should immediately acquire the MBMS CURRENT CELL P-T-M RB INFORMATION and MBMS NEIGHBOURING CELL P-T-M RB INFORMATION messages.

The UE shall continue acquiring the above messages until it has received a consistent set of MCCH information e.g. both the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION message should be acquired in the same modification period.

…

The UE may:

1> if in idle mode, URA_PCH, CELL_PCH or CELL_FACH state; and

1> if not receiving an MBMS service provided via a p-t-m radio bearer:

2> monitor the MBMS notification Indicator Channel (MICH).

2> if a notification on the MICH for one or more of the MBMS services included in the variable MBMS_ACTIVATED_SERVICES is detected:

3> acquire the MBMS MODIFIED SERVICES INFORMATION message with delaying the reading of MCCH until the next modification period and with stopping at the end of the modification period, in accordance with subclause 8.7.1.3 of TS 25.331;

3> handle the MBMS MODIFIED SERVICES INFORMATION message as specified in subclause 8.7.3.4 of TS 25.331.

The UE shall:

1> if in idle mode, URA_PCH, CELL_PCH or CELL_FACH state:

2> if receiving an MBMS service that is provided via a p-t-m radio bearer; or

2> if not receiving an MBMS service that is provided via a p-t-m radio bearer and not monitoring MICH:

3> acquire the MBMS MODIFIED SERVICES INFORMATION message from MCCH at the start of every modification period, in accordance with subclause 8.7.1.3 of TS 25.331;

3> handle the MBMS MODIFIED SERVICES INFORMATION message as specified in subclause 8.7.3.4 of TS 25.331.

…

1> if the IE "MBMS required UE action" is set to 'Acquire PTM RB info'; or

1> if the IE "MBMS required UE action" is set to 'Acquire counting info– PTM RBs unmodified' and the UE is not receiving a p-t-m RB for the concerned service:

2> continue acquiring the MBMS COMMON P-T-M RB INFORMATION, MBMS CURRENT CELL P-T-M RB INFORMATION and the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3

2> act upon the MBMS COMMON P-T-M RB INFORMATION, MBMS CURRENT CELL P-T-M RB INFORMATION and the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION message, if received, in accordance with subclause 8.7.5;

Reference

3GPP TS 25.331 clauses 8.7.2.3, 8.7.3.3.1, 8.6.9.6.

#### 8.5.6.3.3 Test purpose

1. To verify that a UE in CELL_PCH state performs an inter-frequency MBMS Controlling Cell Change during an ongoing Session.
2. To verify that a UE in CELL_PCH state performs an intra-frequency MBMS Controlling Cell Change during an ongoing Session.
3. To verify that a UE in CELL_PCH is able to apply MBMS NEIGHBOURING CELLS P-T-M RB INFORMATION and receive data on this p-t-m radio bearer.

#### 8.5.6.3.4 Method of test

Initial Condition

System Simulator:

3 MBMS cells, Cell 21, Cell 24 and Cell 26.

User Equipment:

The UE is in CELL_FACH state as specified in clause 7.6 of TS 34.108.

The UE is interested in the broadcast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statement(s)

- MBMS Broadcast service application available on UE Yes/No

Test Procedure

Table 8.5.6.3-1 illustrates the downlink power to be applied for the 2 cells in this test case. Initially, the SS applies the power settings of column "T0".

**Table 8.5.6.3-1**

| Parameter | Unit | Cell 21 | | | Cell 24 | | | Cell 26 | | |
|---|---|---|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T0 | T1 | T2 | T0 | T1 | T2 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | | High Range Test Frequency | | | High Range Test Frequency | | |
| CPICH Ec ( FDD ) | dBm/3.84 MHz | -60 | -80 | -80 | -70 | -60 | -70 | -70 | -70 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -80 | -80 | -70 | -60 | -70 | -70 | -70 | -60 |

The UE is in CELL_FACH state in Cell 21. The SS notifies on MICH and MCCH about the start of an MBMS session and waits for the UE to activate MTCH reception.

The SS orders the UE to move to CELL_PCH state by transmitting a PHYSICAL CHANNEL RECONFIGURATION message with the RRC state indicator set to "CELL_PCH".

The SS applies the power settings of "T1" in table 8.5.6.3-1. At this point the UE shall reselect to Cell 24 and send a CELL UPDATE message on the CCCH. SS then replies with CELL UPDATE CONFIRM message on the downlink DCCH and orders the UE to stay in CELL_FACH state. The UE replies with a UTRAN MOBILITY INFORMATION CONFIRM message, and waits for the UE to activate MTCH reception. The MBMS radio bearer on MTCH is put into loopback mode 3.

The SS orders the UE to move to CELL_PCH state by transmitting a PHYSICAL CHANNEL RECONFIGURATION message with the RRC state indicator set to "CELL_PCH". The UE responds with PHYSICAL CHANNEL RECONIGURATION COMPLETE.

The SS provides information about the ongoing MBMS service in cell 24 by sending MBMS UNMODIFIED SERVICES INFORMATION. The SS informs the UE about Cell 26 as neighbouring cell by sending MBMS NEIGHBOURING CELL P-T-M RB INFORMATION in Cell 24. The SS sends 10 RLC SDUs of MBMS data in neighbouring cell 26.

The SS transmits a PAGING TYPE 1 message to the UE on the PCH and the UE moves to CELL_FACH state, sending a CELL UPDATE message. The SS replies with a CELL UPDATE CONFIRM message and UE confirms the received C-RNTI to be used in CELL FACH state by transmitting a UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH.

Then the SS retrieves the number of RLC SDUs on MTCH counted by the UE by sending the UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST message. The SS checks that the reported number is greater than the number reported previously at step 14 of expected sequence.

The SS orders the UE to move to CELL_PCH state by transmitting a PHYSICAL CHANNEL RECONFIGURATION message with the RRC state indicator set to "CELL_PCH". When the PHYSICAL CHANNEL RECONFIGURATION COMPLETE message has been received, the SS sends 10 RLC SDUs of MBMS data in serving Cell 24.

The SS applies the power settings of "T2" in table 8.5.6.3-1. At this point the UE shall reselect to Cell 26 and send a CELL UPDATE message on the CCCH. SS then replies with CELL UPDATE CONFIRM message on the downlink DCCH and orders the UE to stay in CELL_FACH state. The UE replies with a UTRAN MOBILITY INFORMATION CONFIRM message.

The SS provides information about the ongoing MBMS service in cell 26 by sending MBMS UNMODIFIED SERVICES INFORMATION. The SS informs the UE about Cell 24 as neighbouring cell by sending MBMS NEIGHBOURING CELL P-T-M RB INFORMATION in Cell 26.

The SS retrieves the number of RLC SDUs on MTCH counted by the UE by sending the UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST message. The SS checks that the UE has received greater number of RLC SDU than reported in previous step 25 of expected sequence.

The SS orders the UE to move to CELL_PCH state by transmitting a PHYSICAL CHANNEL RECONFIGURATION message with the RRC state indicator set to “CELL_PCH” and the UE responds with PHYSICAL CHANNEL RECONIGURATION COMPLETE.

The SS sends 10 RLC SDUs of MBMS data in neighbouring Cell 24.The SS transmits a PAGING TYPE 1 message to the UE on the PCH and the UE moves to CELL_FACH state, sending a CELL UPDATE message. The SS replies with a CELL UPDATE CONFIRM message and UE confirms the received C-RNTI to be used in CELL FACH state by transmitting a UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH.

The SS retrieves the number of RLC SDUs on MTCH counted by the UE by sending the UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST message. The SS checks that the reported number is greater than the number previously reported by the UE at step 34 of expected sequence.

The loopback mode 3 in the UE is deactivated.

SS calls for generic procedure C.2 to check that UE is in CELL_FACH state.

NOTE: If the UE fails the test because of selecting the wrong cell, the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | ACTIVATE RB TEST MODE | |
| 2 | → | | ACTIVATE RB TEST MODE COMPLETE | |
| 3 | ← | | MBMS MODIFIED SERVICES INFORMATION | MBMS session start. The SS also sets the Notification Indicator on MICH. The SS waits for the UE to establish the MTCH. |
| 4 | | | Void | |
| 5 | | | Void | |
| 6 | ← | | PHYSICAL CHANNEL RECONFIGURATION | |
| 7 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE now transits to CELL_PCH state |
| 8 | | | Void | |
| 9 | | SS | | The SS applies the power settings of “T1” in table 8.5.6.3-1. |
| 10 | → | | CELL UPDATE | This message is transmitted in Cell 24. |
| 11 | ← | | CELL UPDATE CONFIRM | |
| 12 | → | | UTRAN MOBILITY INFORMATION CONFIRM | The UE stays in CELL_FACH state in Cell 24. The SS waits for the UE to establish the MTCH |
| 13 | ← | | CLOSE UE TEST LOOP | |
| 14 | → | | CLOSE UE TEST LOOP COMPLETE | Loop back mode 3 on MTCH is activated. |
| 15 | ← | | PHYSICAL CHANNEL RECONFIGURATION | |
| 16 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE now transits to CELL_PCH state |
| 17 | ← | | MBMS UNMODIFIED SERVICES INFORMATION | |
| 18 | ← | | MBMS NEIGHBOURING CELL P-T-M RB INFORMATION | This message has info for neighbouring cell 26 |
| 19 | | | | The SS transmits 10 RLC SDUs of MBMS data from neighbouring Cell 26. |
| 20 | ← | | PAGING TYPE 1 | |
| 21 | → | | CELL UPDATE | Paging response |
| 22 | ← | | CELL UPDATE CONFIRM | |
| 23 | → | | UTRAN MOBILITY CONFIRM | |
| 24 | ← | | UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST | |
| 25 | → | | UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE | The SS checks that the number of reported RLC PDUs is greater than 0. |
| 26 | ← | | PHYSICAL CHANNEL RECONFIGURATION | |
| 27 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE now transits to CELL_PCH state |
| 28 | | SS | | The SS transmits 10 RLC SDUs of MBMS data from Cell 24. |
| 29 | | SS | | The SS applies the power settings of “T2” in table 8.5.6.3-1 |
| 30 | → | | CELL UPDATE | This message is transmitted in Cell 26. |
| 31 | ← | | CELL UPDATE CONFIRM | |
| 32 | → | | UTRAN MOBILITY INFORMATION CONFIRM | The UE stays in CELL_FACH state in Cell 26 |

| | | | |
|---|---|---|---|
| 33 | ← | MBMS UNMODIFIED SERVICES INFORMATION | |
| 34 | ← | MBMS NEIGHBOURING CELL P-T-M RB INFORMATION | This message has info for neighbouring cell 24 |
| 35 | ← | UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST | |
| 36 | → | UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE | The SS checks that the number of reported RLC PDUs is greater than the previously reported number of RLC PDUs at step 25. |
| 37 | ← | PHYSICAL CHANNEL RECONFIGURATION | |
| 38 | → | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE now transits to CELL_PCH state |
| 39 | | | The SS transmits 10 RLC SDUs of MBMS data from neighbouring Cell 24. |
| 40 | ← | PAGING TYPE 1 | |
| 41 | → | CELL UPDATE | Paging response |
| 42 | ← | CELL UPDATE CONFIRM | |
| 43 | → | UTRAN MOBILITY INFORMATION CONFIRM | |
| 44 | ← | UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST | |
| 45 | → | UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE | The SS checks that the number of reported RLC PDUs is greater than the previously reported number of RLC PDUs at step 34. |
| 46 | ← | OPEN UE TEST LOOP | |
| 47 | → | OPEN UE TEST LOOP COMPLETE | |
| 48 | ←→ | CALL C.2 | If the test result of C.2 indicates that UE is in CELL_FACH state, the test passes, otherwise it fails. |

Specific Message Contents

MBMS UNMODIFIED SERVICES INFORMATION (Step 17 and 33)

| Information Element | Value/remark |
|---|---|
| Message type | |
| Unmodified service list | |
| - MBMS Transmission identity | MBMS Transmission identity indicating MBMS activated service |
| - MBMS required UE action | Acquire PTM RB info |

PHYSICAL CHANNEL RECONFIGURATION (Steps 6, 15, 26 and 37)

Use the same message sub-type titled "Packet to CELL_FACH from CELL_FACH in PS" in TS 34.108 clause 9 with following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State Indicator | CELL_PCH |
| UTRAN DRX cycle length coefficient | 7 |

PAGING TYPE 1 (Step 20 and 40)

Use the following message:

| Information Element | Value/remark |
|---|---|
| Message Type | |
| Paging record list | Only 1 entry |
| Paging record | |
| - CHOICE Used paging identity | UTRAN identity |
| - U-RNTI | |
| - SRNC Identity | Set to the previously assigned SRNC identity |
| - S-RNTI | Set to previously assigned S-RNTI |
| - CN originated page to connected mode UE | Not Present |
| BCCH modification info | Not Present |

CELL UPDATE (Steps 10 and 30)

| Information Element | Value/remark |
|---|---|
| Cell update cause | Check that the value is set to “Cell reselection” |

CELL UPDATE CONFIRM (Steps 11, 22, 31 and 42)

Use the same message sub-type found in TS 34.108, clause 9, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| New C-RNTI | '1010 1010 1010 1010' |

UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE (Step 14)

| Information Element | Value/remark |
|---|---|
| RLC SDU Counter Value | Check that the number is greater than zero |

CELL UPDATE (Steps 21 and 41)

| Information Element | Value/remark |
|---|---|
| Cell update cause | Check that the value is set to “Paging response” |

UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE (Step 25, 36 and 45)

| Information Element | Value/remark |
|---|---|
| RLC SDU Counter Value | Check that the number is greater than the value reported at the previous sub-test. |

### 8.5.6.3.5 Test requirement

After step 9, the UE shall transmit a CELL UPDATE message in Cell 24.

After step 24, the UE shall transmit a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message with the number of reported RLC SDUs shall be greater than zero.

After step 35, the UE shall transmit a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message with the number of reported RLC SDUs shall be greater than the number reported in step 25.

After step 44, the UE shall transmit a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message with the number of reported RLC SDUs shall be greater than the number reported in step 36.

### 8.5.6.3m MBMS Controlling Cell Change in CELL_PCH during ongoing session / MBMS Multicast Service

#### 8.5.6.3m.1 Definition

This test is applicable for all UEs that support MBMS multicast services.

#### 8.5.6.3m.2 Conformance requirement

Same conformance requirement as in clause 8.5.6.3.2

#### 8.5.6.3m.3 Test purpose

Same test purpose as in clause 8.5.6.3.3.

#### 8.5.6.3m.4 Method of test

Initial condition

System Simulator:

2 MBMS cells, Cell 21 and Cell 24

User Equipment:

The UE is in CELL_PCH state as specified in clause 7.6 of TS 34.108.

The UE has joined the multicast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Multicast service application available on UE Yes/No.

Test procedure

Same test procedure as in clause 8.5.6.3.4.

Specific message contents

Same specific messages contents as in clause 8.5.6.3.4

#### 8.5.6.3m.5 Test requirements

Same test requirement as in clause 8.5.6.3.5.

### 8.5.6.4 MBMS Controlling Cell Change - Idle mode - Frequency Layer Convergence – With HCS / MBMS Selected Service

#### 8.5.6.4.1 Definition

Test to verify that the UE performs the cell reselection correctly for hierarchical cell structures. This shall be done according to the HCS priority, the received signal quality value Q and the quality level threshold criterion H. This test case is applicable for all UEs that support MBMS broadcast services.

#### 8.5.6.4.2 Conformance requirement

When camped normally, the UE shall perform the following tasks:

- select and monitor the indicated PICH and PCH of the cell as specified in clause 8 according to information sent in system information;
- monitor relevant System Information. This is specified in [8];
- perform necessary measurements for the cell reselection evaluation procedure;
- execute the cell reselection evaluation process on the following occasions/triggers:

1) UE internal triggers, so as to meet performance as specified in [22] and [23];

2) When information on the BCCH used for the cell reselection evaluation procedure has been modified

If the UE supports MBMS and MBMS is active in the cell and the UE is permitted to receive MBMS services in the cell, the UE shall perform MBMS tasks as specified in subclause 6.3 of TS 25.304.

…

In the cell reselection process, an MBMS PL shall only be applicable while the UE is receiving an MBMS session from one or more of the ongoing activated MBMS services for which this PL is indicated.

…

The measurement rules below apply in Idle, URA_PCH, CELL_PCH states. In CELL_FACH state the UE is required to perform measurements on all intra-frequency, inter-frequency and inter-RAT cells listed in system information according to requirements specified in [10]. In Idle, URA_PCH, CELL_PCH and CELL_FACH states the UE shall only consider those cells the UE is mandated to measure according to the measurement rules below as measured cells in the cell reselection criteria (subclause 5.2.6.1.4).

If the system information broadcast in the serving cell indicates that HCS is used, then for intra-frequency and inter-frequency measurements, the UE shall:

use HCS $priority_1$ as the HCS priority broadcast in the system information and apply the following rule:

IF an MBMS PL is used THEN

- If the UE is in HCS low mobility state, for serving cell and neighbour cells belonging to the MBMS PL set the HCS priority = HCS $priority_1$ + $HCS_OFF_{mbms}$.
- If the UE is in HCS high mobility state, for serving cell and neighbour cells belonging to the MBMS PL set the HCS priority = HCS $priority_1$.
- for serving cell and neighbour cells not belonging to the MBMS PL, set the HCS priority = HCS $priority_1$.

IF an MBMS PL is not used THEN

For serving cell and all neighbour cells set HCS priority = HCS $priority_1$

…

The quality level threshold criterion H for hierarchical cell structures is used to determine whether prioritised ranking according to hierarchical cell re-selection rules shall apply, and is defined by:

$$H_s = Q_{meas,s} - Qhcs_s$$

$$H_n = Q_{meas,n} - Qhcs_n - TO_n * L_n$$

…

The cell-ranking criterion R is defined by:

$$R_s = Q_{meas,s} + Qhyst_s + Qoffmbms$$

$$R_n = Q_{meas,n} - Qoffset_{s,n} + Qoffmbms - TO_n * (1 - L_n)$$

where:

the signalled value Qoffmbms is only applied to those cells (serving or neighbouring) belonging to the MBMS PL

where:

$TO_n = TEMP_OFFSET_n * W(PENALTY_TIME_n - T_n)$

$L_n = 0$ if $HCS_PRIO_n = HCS_PRIO_s$
$L_n = 1$ if $HCS_PRIO_n <> HCS_PRIO_s$

$W(x) = 0$ for $x < 0$
$W(x) = 1$ for $x >= 0$

$TEMP_OFFSET_n$ applies an offset to the H and R criteria for the duration of $PENALTY_TIME_n$ after a timer $T_n$ has started for that neighbouring cell.

$TEMP_OFFSET_n$ and $PENALTY_TIME_n$ are only applicable if the usage of HCS is indicated in system information.

…

If HCS is used in the serving cell the UE shall perform ranking of all cells that fulfil the criterion S among

1. when in low-mobility (see subclause 5.2.6.1.2),

   - all measured cells, that have the highest HCS_PRIO among those cells that fulfil the criterion H >= 0.
   - all measured cells, not considering HCS priority levels, if no cell fulfil the criterion H >= 0.

…

If the usage of HCS is indicated in system information, $TEMP_OFFSET1_n$ is used for $TEMP_OFFSET_n$ to calculate $TO_n$. If it is indicated in system information that HCS is not used, $TEMP_OFFSET_n$ is not applied when calculating $R_n$. The best ranked cell is the cell with the highest R value.

…

If a TDD or GSM cell is ranked as the best cell, then the UE shall perform cell re-selection to that TDD or GSM cell

…

If an FDD cell is ranked as the best cell and the quality measure for cell selection and re-selection is set to CPICH RSCP, the UE shall perform cell re-selection to that FDD cell. If this cell is found to be not suitable, the UE shall behave according to subclause 5.2.6.1.3.

…

The cells shall be ranked according to the R criteria specified above, deriving $Q_{meas,n}$ and $Q_{meas,s}$ and calculating the R values using CPICH RSCP, P-CCPCH RSCP and the averaged received signal level as specified in [22] and [23] for FDD, TDD and GSM cells, respectively.

The offset $Qoffset1_{s,n}$ is used for $Qoffset_{s,n}$ to calculate $R_n$, the hysteresis $Qhyst1_s$ is used for $Qhyst_s$ to calculate $R_s$. For UE in RRC connected mode states CELL_PCH or URA_PCH the hysteresis $Qhyst_s$ takes the value $Qhyst1_{s,PCH}$ to calculate $R_s$, if provided in SIB4 [see 8]. For UE in RRC connected mode state CELL_FACH the hysteresis $Qhyst_s$ takes the value $Qhyst1_{s,FACH}$ to calculate $R_s$, if provided in SIB4 [see 8].

…

If an FDD cell is ranked as the best cell and the quality measure for cell selection and re-selection is set to CPICH RSCP, the UE shall perform cell re-selection to that FDD cell. If this cell is found to be not suitable, the UE shall behave according to subclause 5.2.6.1.3 of TS 25.304.

…

In all cases, the UE shall reselect the new cell, only if the following conditions are met:

- the new cell is better ranked than the serving cell during a time interval Treselection. For UE in RRC connected mode states CELL_PCH or URA_PCH the interval $Treselection_{s,PCH}$ applies, if provided in SIB4 [see 8], while for UE in RRC connected mode state CELL_FACH the interval $Treselection_{s,FACH}$ applies, if provided in SIB4 [see 8]. For hierarchical cell structures when high mobility state has not been detected, if according to the HCS rules the serving cell is not ranked then all the ranked cells are considered to be better ranked than the serving cell.

...

The UE shall perform the MBMS frequency layer selection procedure upon receiving the IE "MBMS Preferred frequency information", when specified explicitly e.g. as in subclause 8.6.9.2, or when the priority for an MBMS service as indicated by upper layers changes.

The UE shall:

1> if there exist two or more preferred frequencies for services included in variable MBMS_ACTIVATED_SERVICES:

2> request from upper layers the priorities of the different MBMS services included in variable MBMS_ACTIVATED_SERVICES for which a preferred frequency has been received.

1> if the UE is in idle mode:

2> if a preferred frequency layer applies for a service included in variable MBMS_ACTIVATED_SERVICES:

3> select the preferred frequency indicated for the MBMS service(s) prioritised most by upper layers for which a preferred frequency exists as the preferred frequency.

Reference

3GPP TS 25.304 clauses 5.2.5.1, 5.2.6.1.0, 5.2.6.1.2, 5.2.6.1.4.

3GPP TS 25.331 clause 8.5.27.

#### 8.5.6.4.3 Test purpose

1. To verify that a UE in idle mode ranks cells based on both HCS priority and R. Qhyst, Qoffset and PENALTY TIME are not applied so R equals CPICH_RSCP.
2. To verify that a UE in idle mode performs a Serving Cell Reselection to the Preferred Layer at Session Start.
3. To verify that a UE in idle mode performs an intra-frequency Cell Reselection on the Preferred Layer during an ongoing Session

#### 8.5.6.4.4 Method of test

##### Initial Condition

System Simulator: 3 MBMS cells (Cell 21, Cell 24, Cell 26) with the downlink transmission power shown in column marked "T0" in table 8.5.6.4-1.

SS shall indicate in System Information that HCS is in use. Qhcs = 0 so all cells fulfil the criterion H >=0.

Each cell shall include the other cells as neighbouring cells in System Information Block Type 11.

UE:

The UE is in Idle Mode as specified in clause 7.6 of TS 34.108.

The UE is interested in the broadcast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Specific message contents for System information blocks 3 and 11 are used in Cell 21.

##### Related ICS/IXIT statement(s)

- MBMS Broadcast service application available on UE Yes/No

Test procedure

Table 8.5.6.4-1 illustrates the downlink power to be applied for the 3 cells at various time instants of the test execution. Columns marked "T0" denote the initial conditions, while columns marked "T1 are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.5.6.4-1**

| Parameter | Unit | Cell 21 | | Cell 24 | | Cell 26 | |
|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84 MHz | -60 | -60 | -60 | -75 | -75 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -60 | -60 | -75 | -75 | -60 |
| HCS_PRIO | | 5 | | 3 | | 3 | |

Method C is applied (as described and used in clause 6 of TS 34.123-1).

The SS activates Cell 21, Cell 24 and Cell 26 and monitors them for access request from the UE. The UE is in idle mode state on Cell 21.The UE receives at notification via MCCH, an MBMS MODIFIED SERVICES INFORMATION message including a preferred frequency in the IE “MBMS preferred frequency”. The HCS_OFFmbms is added to the normal HCS priority level of cells on this MBMS preferred frequency. Cell 24 and Cell 26 have the highest priority.

The UE shall consider this frequency as the preferred frequency layer for cell re-selection. The SS waits for random access requests from the UE. The UE moves to Cell 24 at session start for the concerned MBMS service. The UE shall store the frequency information of the frequency on which the UE was operating prior to cell-reselection to the preferred frequency in the variable MBMS_PREV_FREQUENCY_INFORMATION.

The HCS_OFFmbms is added to the normal HCS priority level of cells on this MBMS preferred frequency. Cell 24 and Cell 26 have the highest priority.

The SS transmits an MBMS MODIFIED SERVICE INFORMATION message which includes in the “Modified service list” for the MBMS activated service “MBMS required UE action” set to “Acquire counting info” and MBMS ACCESS INFORMATION message, which includes the MBMS Short Transmission ID associated to the MBMS activated service and “Access probability factor – Idle” set to 0 (corresponds to an actual Probability Factor = 1).

The UE shall transmit an RRC CONNECTION REQUEST message, with “Establishment cause” set to “MBMS reception”. The SS transmits a RRC CONNECTION SETUP. The UE establishes an RRC connection and transmits an RRC CONNECTION SETUP COMPLETE message.

The UE receives an MBMS MODIFIED SERVICES INFORMATION message “MBMS required UE action” IE set to “Acquire PTM RB info”. The UE receives an MBMS NEIGHBOURING CELL P-T-M RB INFORMATION including MBMS neighbouring cell information for Cell 26. The UE shall apply the MBMS p-t-m radio bearer configuration procedure to acquire the radio bearer configuration for the MBMS service provided by the SS.

The UE starts receiving the indicated p-t-m radio bearer.

The SS applies the power settings of “T1” in table 8.5.6.4-1. The SS waits for random access requests from the UE. The UE shall reselect to Cell 26.

The UE receives an MBMS UNMODIFIED SERVICES INFORMATION message “MBMS required UE action” IE set to “Acquire PTM RB info”. The UE receives an MBMS NEIGHBOURING CELL P-T-M RB INFORMATION including MBMS neighbouring cell information for Cell 24. The UE shall apply the MBMS p-t-m radio bearer configuration and continues receiving the indicated p-t-m radio bearer.

SS calls for generic procedure C.1 to check that UE is in idle mode.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | UE | | | The UE is in idle mode on Cell 21. |
| 2 | ← | | SYSTEM INFORMATION | SS indicates that HCS is used. |
| 3 | ← | | MBMS MODIFIED SERVICES INFORMATION | "MBMS required UE action" IE is set to "none" and the "MBMS preferred frequency" IE indicates the reference to Ch. 2. |
| 4 | ← | | MBMS GENERAL INFORMATION | MBMS preferred frequency information is set to Ch. 2. |
| 5 | | | | The SS waits for random access requests from the UE. The UE shall responds on Cell 24. |
| 6 | ← | | MBMS MODIFIED SERVICES INFORMATION | "MBMS required UE action" IE is set to "Acquire counting info" |
| 7 | ← | | MBMS GENERAL INFORMATION | MBMS preferred frequency information set without index into SIB11 neighbour list. |
| 8 | ← | | MBMS ACCESS INFORMATION | "MBMS short transmission ID" IE set to 1, "Access probability factor – Idle" set to 0 (corresponding to the actual probability factor value 1). |
| 9 | → | | RRC CONNECTION REQUEST | Establishment cause set to MBMS reception. |
| 10 | ← | | RRC CONNECTION SETUP | |
| 11 | → | | RRC CONNECTION SETUP COMPLETE | |
| 11a | → | | MBMS MODIFICATION REQUEST | The UE completing the RRC connection Setup procedure shall initiate the MBMS MODIFICATION REQUEST procedure in case of MBMS selected Service. This message may be received at any point after step 11 and before step 13. |
| 12 | UE | | | UE transmits SERVICE REQUEST, with IE "Service type" set to "MBMS Broadcast service Reception". |
| 13 | ← | | RRC CONNECTION RELEASE | |
| 14 | → | | RRC CONNECTION RELEASE COMPLETE | The UE shall enter idle state. |
| 15 | ← | | MBMS MODIFIED SERVICES INFORMATION | MBMS session start. The SS also sets the Notification Indicator on MICH. The SS waits for the UE to establish the MTCH. |
| 16 | ← | | MBMS GENERAL INFORMATION | MBMS preferred frequency information set without index into SIB11 neighbour list. |
| 17 | ← | | MBMS NEIGHBOURING CELL P-T-M RB INFORMATION | This message has info for neighbouring cell 26 |
| 18 | SS | | | The SS applies the power settings of "T1" in Table 8.5.6.4-1 |
| 19 | UE | | | The SS waits for random access requests from the UE. The UE shall responds on Cell 26. |
| 20 | ← | | MBMS UNMODIFIED SERVICES INFORMATION | There is no change in MBMS services already ongoing in previous cell |
| 21 | ← | | MBMS GENERAL INFORMATION | MBMS preferred frequency information set without index into SIB11 neighbour list. |

| | | | |
|---|---|---|---|
| 22 | ← | MBMS NEIGHBOURING CELL P-T-M RB INFORMATION | This message has info for neighbouring cell 24 |
| 23 | ←→ | CALL C.1 | If the test result of C.1 indicates that UE is in idle mode, the test passes, otherwise it fails. |

Specific Message Contents

SYSTEM INFORMATION BLOCK TYPE 3 (Step 2)

| Information Element | Value/remark |
|---|---|
| Sintersearch | Not Present |

MBMS MODIFIED SERVICES INFORMATION (Step 3)

| Information Element | Value/remark |
|---|---|
| Modified service list | Only 1 Entry |
| - MBMS Transmission identity | MBMS Transmission identity indicating MBMS activated service |
| - MBMS required UE action | None |
| - MBMS preferred frequency | |
| - PFL index | Index for Ch 2 (the frequency that UEs shall consider as the preferred frequency layer for cell re-selection during a session for an MBMS service the UE has activated) |
| - Continue MCCH reading | FALSE |

MBMS GENERAL INFORMATION (Step 4)

| Information Element | Value/remark |
|---|---|
| MBMS preferred frequency information | |
| - MBMS preferred frequency list | Only 1 Entry |
| - MBMS preferred frequency | Ch 2 (the frequency that UEs shall consider as the preferred frequency layer for cell re-selection during a session for an MBMS service the UE has activated) |
| - CHOICE Layer convergence information | |
| - HCS | |
| - HCS_OFFmbms | 4 (Offset added to the normal HCS priority level of cells on this MBMS preferred frequency) |
| - MBMS PL Service Restriction Information | TRUE |

MBMS MODIFIED SERVICES INFORMATION (Step 6)

| Information Element | Value/remark |
|---|---|
| Modified service list | Only 1 entry |
| - MBMS Transmission identity | MBMS Transmission identity indicating MBMS activated service |
| - MBMS required UE action | Acquire counting info |
| - Continue MCCH reading | FALSE |

MBMS MODIFIED SERVICES INFORMATION (Step 15)

| Information Element | Value/remark |
|---|---|
| Message type | |
| Modified service list | |
| - MBMS Transmission identity | MBMS Transmission identity indicating MBMS activated service |
| - MBMS required UE action | Acquire PTM RB info |
| MBMS p-t-m activation time | Set to the first TTI of the next modification period |

MBMS UNMODIFIED SERVICES INFORMATION (Step 20)

| Information Element | Value/remark |
|---|---|
| Message type | |
| Unmodified service list | |
| - MBMS Transmission identity | MBMS Transmission identity indicating MBMS activated service |
| - MBMS required UE action | Acquire PTM RB info |

8.5.6.4.5 Test requirement

At step 5, the UE shall respond on Cell 24.

At step 15, the UE shall respond on Cell 26.

## 8.5.6.4m MBMS Controlling Cell Change - Idle mode - Frequency Layer Convergence – With HCS / MBMS Multicast Service

8.5.6.4m.1 Definition

This test is applicable for all UEs that support MBMS multicast services.

8.5.6.4m.2 Conformance requirement

Same conformance requirement as in clause 8.5.6.4.2

8.5.6.4m.3 Test purpose

Same test purpose as in clause 8.5.6.4.3.

8.5.6.4m.4 Method of test

Initial condition

System Simulator:

3 MBMS cells, Cell 21, Cell 24, Cell 26.

User Equipment:

The UE is in Idle Mode as specified in clause 7.6 of TS 34.108.

The UE has joined the multicast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Multicast service application available on UE Yes/No.

Test procedure

Same test procedure as in clause 8.5.6.4.4, except that at step 12 UE transmits Service Request, with IE "Service type" set to "MBMS Multicast service Reception".

Specific message contents

Same specific messages contents as in clause 8.5.6.4.4

8.5.6.4m.5 Test requirements

Same test requirement as in clause 8.5.6.4.5.

## 8.5.6.5 MBMS Controlling Cell Change in CELL_DCH during ongoing session / MBMS Broadcast Service

### 8.5.6.5.1 Definition and applicability

This test case is applicable for all UEs that support MBMS broadcast services and support MBMS p-t-m reception in CELL_DCH state.

### 8.5.6.5.2 Conformance requirement

The UE shall detect the available MBMS services by acquiring the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3 of TS 25.331.

The UE shall immediately acquire the MBMS ACCESS INFORMATION and the MBMS GENERAL INFORMATION messages i.e. it shall not delay reception of these messages until it has completed the acquisition of the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages. Likewise, the UE should immediately acquire the MBMS CURRENT CELL P-T-M RB INFORMATION and MBMS NEIGHBOURING CELL P-T-M RB INFORMATION messages.

The UE shall continue acquiring the above messages until it has received a consistent set of MCCH information e.g. both the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION message should be acquired in the same modification period.

#### Reference

3GPP TS 25.331 clause 8.7.2.3.

### 8.5.6.5.3 Test purpose

1. To verify that a UE in CELL_DCH state performs an inter-frequency MBMS Controlling Cell Change during an ongoing Session.
2. To verify that a UE in CELL_DCH state performs an intra-frequency MBMS Controlling Cell Change during an ongoing Session.
3. To verify that a UE in CELL_DCH is able to apply MBMS NEIGHBOURING CELLS P-T-M RB INFORMATION and receive data on this p-t-m radio bearer.

### 8.5.6.5.4 Method of test

#### Initial Condition

System Simulator:

3 MBMS cells, Cell 21, Cell 24 and Cell 26.

User Equipment:

The UE is in CELL_DCH state as specified in clause 7.6 of TS 34.108.

The UE is interested in the broadcast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

#### Related ICS/IXIT statement(s)

- MBMS Broadcast service application available on UE Yes/No
- UE supports MBMS p-t-m reception in CELL_DCH state Yes/No

#### Test Procedure

Table 8.5.6.5-1 illustrates the downlink power to be applied for the 3 cells in this test case. Initially, the SS applies the power settings of column “T0”.

**Table 8.5.6.5-1**

| Parameter | Unit | Cell 21 | | | Cell 24 | | | Cell 26 | | |
|---|---|---|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T0 | T1 | T2 | T0 | T1 | T2 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | | High Range Test Frequency | | | High Range Test Frequency | | |
| CPICH Ec ( FDD ) | dBm/3.84 MHz | -60 | -80 | -80 | -70 | -60 | -70 | -70 | -70 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -80 | -80 | -70 | -60 | -70 | -70 | -70 | -60 |

The UE is in the CELL_DCH state in Cell 21. The SS notifies on MICH and MCCH about the start of an MBMS session and waits for the UE to activate MTCH reception. The MBMS radio bearer on MTCH is put into loopback mode 3.

The SS sends 10 RLC SDUs of MBMS data on MTCH in Cell 21 on the concerned MBMS radio bearer. The retrieves the number of RLC SDUs on MTCH counted by the UE by sending the UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST message. The SS checks that the UE has received at least one RLC SDU.

The SS applies the power settings of “T1” in table 8.5.6.5-1 and orders an inter-frequency hard handover to Cell 24 by transmitting a PHYSICAL CHANNEL RECONFIGURATION message. The UE establishes the dedicated physical channel in Cell 24 and replies with a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message, and waits for the UE to activate MTCH reception.

The SS provides information about the ongoing MBMS services in cell 24 by sending MBMS UNMODIFIED SERVICES INFORMATION. The SS informs the UE about Cell 26 as neighbouring cell by sending MBMS NEIGHBOURING CELL P-T-M RB INFORMATION in Cell 24.

The SS sends 10 RLC SDUs of MBMS data in cell 24. The SS retrieves the number of RLC SDUs on MTCH counted by the UE by sending the UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST message. The SS checks that the reported number is greater than zero.

The SS then sends 10 RLC SDUs of MBMS data in neighbouring cell 26 and SS retrieves the number of RLC SDUs on MTCH counted by the UE by sending the UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST message. UE should be able to receive the MBMS data from neighbouring Cell 26 when camped in Cell 24. The SS checks that the reported number is greater than the number reported by the UE at step 16 of expected sequence. The SS applies the power settings of “T2” in table 8.5.6.5-1 and then orders handover to Cell 26 by transmitting a PHYSICAL CHANNEL RECONFIGURATION message. The UE establishes the dedicated physical channel in Cell 26 and replies with a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message.

The SS provides information about the ongoing MBMS service in cell 26 by sending MBMS UNMODIFIED SERVICES INFORMATION. The SS informs the UE about Cell 24 as neighbouring cell by sending MBMS NEIGHBOURING CELL P-T-M RB INFORMATION in Cell 24.

The SS sends 10 RLC SDUs of MBMS data in cell 26. The SS retrieves the number of RLC SDUs on MTCH counted by the UE by sending the UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST message. The SS checks that the reported number is greater than the number reported by the UE at step 19.

The SS then sends 10 RLC SDUs of MBMS data in neighbouring cell 24 and SS retrieves the number of RLC SDUs on MTCH counted by the UE by sending the UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST message. The SS checks that the reported number is greater than the previous number reported by the UE at step 27.

The loopback mode 3 in the UE is deactivated.

SS calls for generic procedure C.3 to check that UE is in CELL_DCH state.

NOTE: If the UE fails the test because of selecting the wrong cell, the operator may re-run the test.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | ACTIVATE RB TEST MODE | |
| 2 | → | | ACTIVATE RB TEST MODE COMPLETE | |
| 3 | ← | | MBMS MODIFIED SERVICES INFORMATION | MBMS session start. The SS also sets the Notification Indicator on MICH. The SS waits for the UE to establish the MTCH. |
| 4 | ← | | CLOSE UE TEST LOOP | |
| 5 | → | | CLOSE UE TEST LOOP COMPLETE | Loop back mode 3 on MTCH is activated. |
| 6 | | SS | | The SS broadcasts 10 RLC SDUs of MBMS data in Cell 21. |
| 7 | ← | | UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST | |
| 8 | → | | UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE | The SS checks that the UE has received MBMS data in Cell 21. The SS checks that the number of reported RLC PDUs is greater than zero and record the value. |
| 9 | | SS | | The SS applies the power settings of “T1” in table 8.5.6.5-1. |
| 10 | | | PHYSICAL CHANNEL RECONFIGURATION | Inter-frequency hard handover to Cell 24. |
| 11 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The SS waits for the UE to establish the MTCH according to the messages in steps 12-13 |
| 12 | ← | | MBMS UNMODIFIED SERVICES INFORMATION | There is no change in MBMS services already ongoing in previous cell |
| 13 | ← | | MBMS NEIGHBOURING CELL P-T-M RB INFORMATION | This message has info for neighbouring cell 26 |
| 13a | ← | | CLOSE UE TEST LOOP | |
| 13b | → | | CLOSE UE TEST LOOP COMPLETE | Loop back mode 3 on MTCH is activated. |
| 14 | | SS | | The SS transmits 10 RLC SDUs of MBMS data in Cell 24. |
| 15 | ← | | UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST | |
| 16 | → | | UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE | The SS checks that the UE has received MBMS data also in Cell 24. The SS checks that the number of reported RLC PDUs is greater than 0. |
| 17 | | SS | | SS transmits 10 RLC SDUs of MBMS data in Cell 26. |
| 18 | ← | | UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST | |
| 19 | → | | UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE | The SS checks that the UE has received MBMS data sent in neighbouring cell 26. The SS checks that the number of reported RLC PDUs is greater than the value at step 16. |
| 20 | | SS | | The SS applies the power settings of “T2” in table 8.5.6.5-1 |
| 21 | | | PHYSICAL CHANNEL RECONFIGURATION | UE moves to Cell 26. |
| 22 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |

| | | | |
|---|---|---|---|
| 23 | ← | MBMS UNMODIFIED SERVICES INFORMATION | There is no change in MBMS services already ongoing in previous cell |
| 24 | ← | MBMS NEIGHBOURING CELL P-T-M RB INFORMATION | This message has info for neighbouring cell 24 |
| 25 | SS | | SS transmits 10 RLC SDUs of MBMS data in Cell 26. |
| 26 | ← | UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST | |
| 27 | → | UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE | The SS checks that the UE has received MBMS data also in Cell 26. The SS checks that the number of reported RLC PDUs is greater than the value at step 19. |
| 28 | SS | | SS transmits 10 RLC SDUs of MBMS data in Cell 24. |
| 29 | ← | UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST | |
| 30 | → | UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE | The SS checks that the UE has received MBMS data sent in neighbouring cell 24. The SS checks that the number of reported RLC PDUs is greater than the value at step 27. |
| 31 | ← | OPEN UE TEST LOOP | |
| 32 | → | OPEN UE TEST LOOP COMPLETE | |
| 33 | ←→ | CALL C.3 | If the test result of C.3 indicates that UE is in CELL_DCH state, the test passes, otherwise it fails. |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 10) (FDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Frequency info | |
| - UARFCN uplink(Nu) | Not present<br>Absence of this IE is equivalent to applying the default duplex distance defined for the operating frequency according to 3GPP TS 25.101 [21] |
| - UARFCN downlink(Nd) | Same downlink UARFCN as used for Cell 24 |
| Downlink information common for all radio links | |
| - Downlink DPCH info common for all RL | |
| - Timing indication | Initialise |
| - Default DPCH Offset Value | Arbitrary set to value 0..306688 by step of 512 |

| - MAC-d HFN initial value | Not Present |
| - CHOICE mode | TDD |
| - CHOICE mode | TDD |
| - CHOICE TDD option | 1.28 Mcps TDD |
| - TSTD indicator | FALSE |
| - Default DPCH Offset Value | Arbitrary set to value 0..306688 by step of 512 |
| - CHOICE mode | TDD |
| - Default DPCH Offset Value | 0 Integer(0..7) |
| - MAC-hs reset indicator | FALSE |
| Downlink information per radio link list | 1 radio link |
| Downlink information for each radio link | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | Set to the Cell parameters ID for cell 4 |
| - Downlink DPCH info for each RL | |
| - CHOICE mode | TDD |
| - TFCS ID | Reference to TS34.108 clause 6.11 Parameter Set |
| - Time info | Reference to TS34.108 clause 6.11 Parameter Set |
| - Common timeslot info | Reference to TS34.108 clause 6.11 Parameter Set |
| - Downlink DPCH timeslots and codes | as used for cell 4 |

PHYSICAL CHANNEL RECONFIGURATION (Step 10) (3.84Mcps TDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Frequency info | |
| - UARFCN (Nt) | Same UARFCN as used for cell 4 |
| CHOICE channel requirement | Not present |
| Downlink information common for all radio links | |
| - Downlink DPCH info common for all RL | |
| - Timing indication | Initialise |
| - CFN-targetSFN frame offset | 0 |
| - Downlink DPCH power control information | Not Present |
| - Downlink rate matching restriction information | Not Present |
| - Spreading factor | Reference to TS34.108 clause 6.10 Parameter Set |
| - Fixed or flexible position | Reference to TS34.108 clause 6.10 Parameter Set |
| - TFCI existence | Reference to TS34.108 clause 6.10 Parameter Set |
| - CHOICE SF | Reference to TS34.108 clause 6.10 Parameter Set |
| - DPCH compressed mode info | Not present |
| - TX Diversity mode | Not Present |
| - SSDT information | Not Present |
| - Default DPCH Offset Value | Arbitrary set to value 0..306688 by step of 512 |
| - MAC-hs reset indicator | FALSE |
| Downlink information per radio link list | 1 radio link |
| Downlink information for each radio link | |
| - CHOICE mode | TDD |
| - Primary CCPCH info | Set to the Cell parameters ID for cell 4 |
| - Downlink DPCH info for each RL | |
| - CHOICE mode | TDD |
| - TFCS ID | Reference to TS34.108 clause 6.10 Parameter Set |
| - Time info | Reference to TS34.108 clause 6.10 Parameter Set |
| - Common timeslot info | Reference to TS34.108 clause 6.10 Parameter Set |
| - Downlink DPCH timeslots and codes | as used for cell 4 |

UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE (Step 8)

| Information Element | Value/remark |
|---|---|
| RLC SDU Counter Value | Check that the number is greater than zero |

UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE (Step 16,19,27,30 )

| Information Element | Value/remark |
|---|---|
| RLC SDU Counter Value | Check that the number is greater than the value reported at the previous sub-test. |

PHYSICAL CHANNEL RECONFIGURATION (Step 21) (FDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

| Information Element | Value/remark |
|---|---|
| Frequency info | |
| - UARFCN uplink(Nu) | Not present<br>Absence of this IE is equivalent to applying the default duplex distance defined for the operating frequency according to 3GPP TS 25.101 [21] |
| - UARFCN downlink(Nd) | Same downlink UARFCN as used for Cell 26 |
| Downlink information common for all radio links | |
| - Downlink DPCH info common for all RL | |
| - Timing indication | Initialise |
| - Default DPCH Offset Value | Arbitrary set to value 0..306688 by step of 512 |
| Downlink information per radio link list | 1 radio link |
| Downlink information for each radio link | |
| - CHOICE mode | FDD |
| - Primary CPICH info | |
| - Primary scrambling code | Set to the scrambling code for Cell 26 |

#### 8.5.6.5.5 Test requirement

After step 7, the UE shall transmit a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message with the number of reported RLC SDUs shall be greater than zero.

After step 10, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message in Cell 24.

After step 15, the UE shall transmit a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message with the number of reported RLC SDUs shall be greater than zero

After step 18, the UE shall transmit a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message with the number of reported RLC SDUs shall be greater than the number reported in step 16.

After step 26, the UE shall transmit a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message with the number of reported RLC SDUs shall be greater than the number reported in step 19.

After step 29, the UE shall transmit a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message with the number of reported RLC SDUs shall be greater than the number reported in step 27.

### 8.5.6.5m MBMS Controlling Cell Change in CELL_DCH during ongoing session / MBMS Multicast Service

#### 8.5.6.5m.1 Definition

This test is applicable for all UEs that support MBMS multicast services and support MBMS p-t-m reception in CELL_DCH state.

#### 8.5.6.5m.2 Conformance requirement

Same conformance requirement as in clause 8.5.6.5.2

#### 8.5.6.5m.3 Test purpose

Same test purpose as in clause 8.5.6.5.3.

#### 8.5.6.5m.4 Method of test

Initial condition

System Simulator:

2 MBMS cells, Cell 21 and Cell 24.

User Equipment:

The UE is in Idle Mode as specified in clause 7.6 of TS 34.108.

The UE has joined the multicast service to be provided by the SS (included in MBMS_ACTIVATED_SERVICES variable).

Related ICS/IXIT statements

- MBMS Multicast service application available on UE Yes/No.
- UE supports MBMS p-t-m reception in CELL_DCH state Yes/No

Test procedure

Same test procedure as in clause 8.5.6.5.4.

Specific message contents

Same specific messages contents as in clause 8.5.6.5.4

#### 8.5.6.5m.5 Test requirements

Same test requirement as in clause 8.5.6.5.5.

## 8.5.7 MBSFN Specific Procedures (FDD/TDD)

### 8.5.7.1 Cell Update: cell reselection in CELL_PCH (unicast carrier) during ongoing MBMS session in MBSFN mode

#### 8.5.7.1.1 Definition

This test is applicable for UEs that support MBMS broadcast services in MBSFN mode and which support either both transmit and receive functions or MBSFN receive only function.

#### 8.5.7.1.2 Conformance requirement

The UE reception of MBMS services provided in MBSFN mode shall not affect the UE behaviour on the unicast carrier. Especially the UE mobility on the unicast carrier is not affected by the reception of MBMS services provided on a cell operating in MBSFN mode and can imply that the reception of the MBMS service on the cell operating in MBSFN mode is impossible due to the limited support of combination of frequency bands for MBMS SFN reception and unicast reception.

…

A UE that is capable of receiving MBMS services on cells operating in MBSFN mode as specified in subclause 8.1.1.6.3 is operating in idle mode and acts on RRC messages and system information received from this cell operating in MBSFN mode independently from messages received from cells not operating in MBSFN mode. This implies that procedures executed based on messages and system information received from a cell operating in MBSFN mode shall not interact with messages and system information received from a cell not operating in MBSFN mode unless explicitly specified otherwise.

NOTE 1: This implies that the UE is operating an independent stack for the reception of MBMS services on cells operating in MBSFN mode as specified in subclause 8.1.1.6.3.

NOTE 2: For 1.28 Mcps TDD, if the cell is operating in MBSFN mode, system information and MCCH messages are transmitted on the MBSFN Special Timeslot [30].

…

A cell provides MBMS service in MBSFN mode if it is indicated so in system information, see subclause 8.1.1.6.3. A UE that supports MBSFN operation may receive MBMS services via a cell operating in MBSFN mode. For FDD, 3.84 Mcps TDDIMB and 3.84/7.68 Mcps TDD in order to receive an MBMS service via a MBSFN cluster the UE shall select the MBSFN cluster as specified in [4] in addition to selecting a cell for normal camping as specified in [4]. For 1.28 Mcps TDD in order to receive an MBMS service via an MBSFN cluster the UE shall at the first step camp on a unicast cell and get the frequency and "cell parameter ID" from the system information, and then get synchronized to the MBSFN cluster operating with that frequency and "cell parameter ID". For 3.84/7.68 Mcps TDD a cell shall be considered to be operating in MBSFN mode when individual scrambling codes are assigned to all timeslots (via the IE "TDD MBSFN Information").

…

Reference

3GPP TS 25.346 clauses 7.1A.

3GPP TS 25.331 clauses 7.2.1, 8.5.43.

### 8.5.7.1.3 Test purpose

To verify that the UE will perform a Cell Update on the unicast carrier while receiving an ongoing MBMS service via a p-t-m radio bearer on the MBSFN cluster.

### 8.5.7.1.4 Method of test

Initial condition

System Simulator:

- MBSFN carrier: 1 cell, Cell 31 (PLMN1). In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C1 and Default1 MCCH scheduling (No ongoing session) according to subclause 11.2 of TS 34.108.
- Unicast carrier : 2 cells, Cell 1 and Cell 2 with default parameters.

User Equipment:

- On the unicast carrier the UE is in CELL_PCH (state 6-12) in Cell 1 as specified in clause 7.4 of TS 34.108.
- The UE is in MBSFN Idle mode with one activated service as specified in clause 7.6.4 of TS 34.108. The UE has selected (i.e. it is included in MBMS_ACTIVATED_SERVICES variable) a national service for which a session will start on MBSFN Cell 31 (see TS 34.108 clause 11.2.4) during the test.

Related ICS/IXIT statements

- MBMS Broadcast services in MBSFN mode application available on UE Yes/No.
- Support of transmit and receive functions available on UE Yes/No.
- Support of MBSFN receive only function available on UE Yes/No.

Test procedure

The SS shall apply the downlink power settings as shown below:

Step 1-13:

| Parameter | Unit | Cell 1 | Cell 2 | Cell 31 |
|---|---|---|---|---|
| UTRA RF Channel Number | | Ch. 1 | Ch. 1 | Ch. 2 |
| P-CCPCH RSCP | dBm | -60 | -69 | -60 |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -69 | -60 |
| P-CPICH (IMB) | dBm/3.84MHz | | | -60 |
| T-CPICH (IMB) | dBm/3.84MHz | | | -50.5 |

Step 14-25:

| Parameter | Unit | Cell 1 | Cell 2 | Cell 31 |
|---|---|---|---|---|
| UTRA RF Channel Number | | Ch. 1 | Ch. 1 | Ch. 2 |
| P-CCPCH RSCP | dBm | -69 | -60 | -60 |
| CPICH Ec (FDD) | dBm/3.84MHz | -69 | -60 | -60 |
| P-CPICH (IMB) | dBm/3.84MHz | | | -60 |
| T-CPICH (IMB) | dBm/3.84MHz | | | -50.5 |

a) The UE is camping on Cell 1 and Cell 31. For 3.84 Mcps TDD IMB, the UE is camping on the FDD unicast carrier cell 1 and IMB cell 31. In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C1 (no session ongoing) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108.

b) The SS sends ACTIVATE RB TEST MODE on the unicast carrier and the UE responds with ACTIVATE RB TEST MODE COMPLETE.

c) The SS sends CLOSE UE TEST LOOP to activate RLC SDU counting on Cell 31 MTCH (Transmission identity indicating the MBMS activated service).

d) The SS notifies on MCCH about the start of an MBMS session for one modification period. MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C4 (one PTM session starting) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108.

e) MCCH messages are then transmitted by the SS on Cell 31 using MBMS configuration C2 (one PTM session ongoing) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108.

f) The UE establishes the p-t-m radio bearer for the activated service according to the specified service activation time (i.e. the first SFN of the modification period following the notification (step d). The UE closes the test loop and starts counting successfully received RLC PDUs on the MTCH. The UE will send CLOSE UE TEST LOOP COMPLETE.

g) The SS broadcasts 10 RLC SDUs on the MTCH configured on the MBMS p-t-m radio bearer for the activated service. The service is carried on a 129.6kbps RB for MTCH with 80 ms TTI as specified in clause 6.10.3.4.4.6(FDD) or a 124 kbps RB for MBSFN MTCH with 80ms TTI as specified in clause 6.10.3.4.4.9 (3.84 Mcps TDD) or clause 6.11.5.4.4.9 (1.28 Mcps TDD) or clause 6.11.6.4.4.9 (7.68 Mcps TDD) or a 124.4 kbps RB for MTCH with 80 ms TTI as specified in clause 6.11.7.2.2.1 (3.84 Mcps TDD IMB).

h) The SS shall then send UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST. The UE shall respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is > 0. The SS shall store the counter value.

i) The SS adjusts the power settings for Cell 1 and Cell 2. When the UE detects the presence of cell 2, it moves to CELL_FACH state and transmits a CELL UPDATE message on the uplink CCCH. The value "cell reselection" shall be set in IE "Cell update cause" in CELL UPDATE message.

j) Upon reception of the CELL_UPDATE message, the SS replies with a CELL UPDATE CONFIRM message with the IE "RRC State Indicator" set to "CELL_PCH". After receiving this message, the UE returns to CELL_PCH state without transmitting any uplink message.

k) The SS calls for generic procedure C.4 to check that the UE is in CELL_PCH state.

l) The SS broadcasts 10 RLC SDUs on the MTCH configured on the MBSFN MBMS p-t-m radio bearer for the activated service.

m) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST and waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE corresponds to > 0 received RLC SDUs.

NOTE: If the UE fails the test because of a failure to reselect to the right unicarrier cell (Cell 2), then the operator may re-run the test.

Expected sequence

| Step | Direction | | Carrier | Message | Comment |
|---|---|---|---|---|---|
| | UE | SS | | | |
| 1 | ← | | U | ACTIVATE RB TEST MODE | |
| 2 | → | | U | ACTIVATE RB TEST MODE COMPLETE | |
| 3 | ← | | U | CLOSE UE TEST LOOP | Loop back mode 3 is activated on Cell 31 for the selected local service on MTCH. |
| 4 | ← | | M | MBMS MCCH Message Configuration C4 | Includes the national service activated at UE in the modified services list for one modification period. |
| 5 | ← | | M | MBMS MCCH Message Configuration C2 | No modified services. One ongoing service corresponding to that activated at the UE 129.6(FDD) or 124(TDD) kbps PS RAB, 124.4 kbps (IMB) |
| 6 | → | | U | CLOSE UE TEST LOOP COMPLETE | The UE shall establish the indicated p-t-m radio bearer and close the test loop. |
| 7 | | SS | M | | After delaying for a period equal to the MCCH modification period, the SS transmits 10 RLC SDUs on the MTCH. |
| 8 | ← | | U | UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST | |
| 9 | → | | U | UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE | The SS checks that the number of reported RLC SDUs received on the MTCH is greater than zero. SS stores value. |
| 10 | | | U | | The SS transmits 10 RLC SDUs on the MTCH starting at the indicated activation time. |
| 11 | → | | U | CELL UPDATE | The UE moves to CELL_FACH state and transmits this message with the IE "Cell update cause" set to "cell reselection" |
| 12 | ← | | U | CELL UPDATE CONFIRM | IE "RRC State Indicator" is set to "CELL_PCH". |
| 13 | UE | | U | | The UE is in CELL_PCH state. |
| 14 | ← → | | U | CALL C.4 | If the test result of C.4 indicates that UE is in CELL_PCH state, the test passes, otherwise it fails. |
| 15 | | SS | M | | The SS transmits 10 RLC SDUs on the MTCH. |
| 16 | ← | | U | UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST | |
| 17 | → | | U | UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE | The SS checks that the number of reported RLC SDUs received on the MTCH is greater than zero. |
| 18 | ← | | U | OPEN UE TEST LOOP | |
| 19 | → | | U | OPEN UE TEST LOOP COMPLETE | |
| 20 | ← | | U | DEACTIVATE RB TEST MODE | |
| 21 | → | | U | DEACTIVATE RB TEST MODE COMPLETE | |

Specific message contents

With the following exceptions, all messages have the same content as defined in TS 34.108 clause 9.1.3 for the MBSFN carriers and in TS 34.108 clause 9.1.1 or 9.1.2 for the unicast carrier:

CELL UPDATE (Step 11)

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - SRNC Identity | Check to see if set to '0000 0000 0001' |
| - S-RNTI | Check to see if set to '0000 0000 0000 0000 0001' |
| Cell Update Cause | Check to see if set to 'Cell Re-selection' |

CELL UPDATE CONFIRM (Step 162)

| Information Element | Value/remark |
|---|---|
| RRC State Indicator | CELL_PCH |
| UTRAN DRX cycle length coefficient | 3 |

#### 8.5.7.1.5 Test requirements

1) After step 9, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number > 0 for Cell 31 MTCH.

3) After step 11, the UE shall reselect to Cell 2 and transmit a CELL UPDATE message, containing the IE "Cell update cause" set to "cell reselection".

4) After step 13, the UE shall enter CELL_PCH state.

5) After step 17, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number > 0 for Cell 31 MTCH.

### 8.5.7.2 Re-acquire MCCH - modified MBSFN inter frequency neighbour list / All MBSFN services notified

#### 8.5.7.2.1 Definition

This test is applicable for UEs that support MBMS broadcast services in MBSFN mode and which support either both transmit and receive functions or MBSFN receive only function.

#### 8.5.7.2.2 Conformance requirement

Upon receiving the MBMS GENERAL INFORMATION message, the UE should store all relevant IEs included in this message. The UE shall also:

1> act upon all received information elements as specified in subclause 8.6, unless specified otherwise in the following.

…

For FDD 3.84 Mcps TDD IMB and 3.84/7.68 Mcps TDD if the IE "MBSFN inter frequency neighbour list" is included and the UE does not receive a service from this MBSFN cluster, the UE shall:

1> consider that MBMS services transmitted in MBSFN mode are available on these frequencies;

…

1> if at least one frequency is listed for which "MBSFN services not notified" is indicated in the IE "MBSFN inter frequency neighbour list":

2> if the IE "All MBSFN services notified" is included for one frequency as defined in [21] for FDD and [22] for TDD on which the UE supports reception in MBSFN mode:

3> attempt to receive notifications on one of the frequencies for which the IE "All MBSFN services notified" is included according to subclause 8.7.3.

…

Upon receiving the MBMS MODIFIED SERVICES INFORMATION message, the UE shall act as follows for each of the services included in this messages provided that the service is included in variable MBMS_ACTIVATED_SERVICES and upper layers indicate that the session has not yet been received correctly (referred to as 'applicable services'):

…

1> act upon all received information elements as specified in subclause 8.6, unless specified otherwise in the following

…

If the UE receives the IE " MBMS re- acquire MCCH", the UE shall:

1> perform the MCCH acquisition procedure as specified in subclause 8.7.2.

Reference

3GPP TS 25.331 clauses 8.7.2.5, 8.6.9.9ad, 8.7.3.4, 8.6.9.6a.

8.5.7.2.3 Test purpose

1. To verify that the UE correctly re-acquires the MCCH information when the UE receives the IE MBMS re-acquire MCCH in a received MBMS MODIFIED SERVICES INFORMATION message.
2. To verify that the UE acts upon the modified IE MBSFN inter frequency neighbour list received in the re-acquired MBMS GENERAL INFORMATION message when a service not received on the current MBSFN cluster is present in the variable MBMS_ACTIVATED_SERVICES.
3. To verify that the UE attempts to receive notifications, for the service not received on the current MBSFN cluster, on one of the frequencies for which the IE "All MBSFN services notified" is included.

8.5.7.2.4 Method of test

Initial condition

System Simulator:

- MBSFN carrier: 3 cells, Cell 31, Cell 36 and Cell 38 (all PLMN1). Cell 36 and Cell 38 are powered off. In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C1 and Default1 MCCH scheduling (No ongoing session) according to subclause 11.2 of TS 34.108.

  Unicast carrier: 1 cell, Cell 1 (PLMN1) default configuration.

User Equipment:

- On the unicast carrier cell the UE is in registered Idle Mode on PS (state 3) if the UE only supports PS domain or registered Idle Mode on CS/PS (state 7) if the UE supports both CS and PS domains, as specified in clause 7.2.2 of TS 34.108.
- The UE is in MBSFN Idle mode with no activated service as specified in clause 7.6.3 of TS 34.108.

Related ICS/IXIT statements

- MBMS Broadcast services in MBSFN mode application available on UE Yes/No.
- Support of transmit and receive functions available on UE Yes/No.
- Support of MBSFN receive only function available on UE Yes/No.

Test procedure

The SS shall apply the downlink power settings as shown below:

Step 1-7:

| Parameter | Unit | Cell 1 | Cell 31 | Cell 33 | Cell 36 |
|---|---|---|---|---|---|
| UTRA RF Channel Number | | Ch. 1 | Ch. 2 | Ch. 3 | Ch. 4 |
| P-CCPCH RSCP | dBm | -60 | -60 | OFF | OFF |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -60 | OFF | OFF |
| P-CPICH (IMB) | dBm/3.84MHz | | -60 | OFF | OFF |
| T-CPICH (IMB) | dBm/3.84MHz | | -50.5 | OFF | OFF |

Step 8-33:

| Parameter | Unit | Cell 1 | Cell 31 | Cell 33 | Cell 36 |
|---|---|---|---|---|---|
| UTRA RF Channel Number | | Ch. 1 | Ch. 2 | Ch. 3 | Ch. 4 |
| P-CCPCH RSCP | dBm | -60 | -60 | -60 | -70 |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -60 | -60 | -70 |
| P-CPICH (IMB) | dBm/3.84MHz | | -60 | -60 | -70 |
| T-CPICH (IMB) | dBm/3.84MHz | | -50.5 | -50.5 | -60.5 |

a) The UE is camping on Cell 1 and Cell 31. For 3.84 Mcps TDD IMB, the UE is camping on the FDD unicast carrier cell 1 and IMB cell 31. In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C1 (no session ongoing) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108. Note: The IE "MBSFN inter frequency neighbour list" is not present in MBMS GENERAL INFORMATION.

b) The SS sends ACTIVATE RB TEST MODE on the unicast carrier and the UE responds with ACTIVATE RB TEST MODE COMPLETE.

c) The SS sends CLOSE UE TEST LOOP to activate RLC SDU counting on MTCH. The Short Transmission identity is set to value "0" corresponding to National Service 5 (see TS 34.108 clause 11.2.4) on either Cell 33 or Cell 36.

d) For Cell 31 in the IE "MBSFN inter frequency neighbour list" of the MBMS GENERAL INFORMATION message the SS adds (i) the frequency for Cell 36 with the IE "MBSFN services notification" set to "MBSFN services not notified" and with the option "All MBSFN services notified" included, and (ii) the frequency for Cell 33 with the IE "MBSFN services notification" set to "MBSFN services not notified" without the option "All MBSFN services notified". The SS sends MBMS MODIFIED SERVICES INFORMATION with IE "MBMS re- acquire MCCH" set to "True".

e) The UE shall re-perform the MCCH acquisition procedure on Cell 31.

f) The SS powers on Cell 33 and Cell 36. MCCH messages are transmitted by the SS on Cell 36 using MBMS configuration C2 (one PTM session ongoing - National Service 5) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108. MCCH messages are transmitted by the SS on Cell 33 using MBMS configuration C2 (one PTM session ongoing - National Service 5) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108.

g) National Service 5 is activated at the UE.

h) The UE shall retune to the frequency for Cell 36, perform MBSFN cluster reselection and shall perform the MCCH acquisition procedure on Cell 36.

i) The UE immediately establishes the p-t-m radio bearer for National Service 5. The UE closes the test loop and starts counting successfully received RLC PDUs on the MTCH. The UE will send CLOSE UE TEST LOOP COMPLETE.

j) On Cell 33 the SS broadcasts 10 RLC SDUs on the MTCH configured on the MBMS p-t-m radio bearer for National Service 5. The service is carried on a 129.6kbps RB for MTCH with 80 ms TTI as specified in clause 6.10.3.4.4.6(FDD) or a 124.4 kbps RB for MTCH with 80 ms TTI as specified in clause 6.11.7.2.2.1 (3.84 Mcps TDD IMB) or a 124 kbps RB for MBSFN MTCH with 80ms TTI as specified in clause 6.10.3.4.4.9 (3.84 Mcps TDD) or clause 6.11.5.4.4.9 (1.28 Mcps TDD) or clause 6.11.6.4.4.9 (7.68 Mcps TDD).

k) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST and waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is = 0.

l) On Cell 36 the SS broadcasts 10 RLC SDUs on the MTCH configured on the MBMS p-t-m radio bearer for National Service 5. The service is carried on a 129.6kbps RB for MTCH with 80 ms TTI as specified in clause 6.10.3.4.4.6(FDD), or a 124.4 kbps RB for MTCH with 80 ms TTI as specified in clause 6.11.7.2.2.1 (3.84 Mcps TDD IMB) or a 124 kbps RB for MBSFN MTCH with 80ms TTI as specified in clause 6.10.3.4.4.9 (3.84 Mcps TDD) or clause 6.11.5.4.4.9 (1.28 Mcps TDD) or clause 6.11.6.4.4.9 (7.68 Mcps TDD).

m) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST and waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is > 0.

Expected sequence

| Step | Direction | | Carrier | Message | Comment |
|---|---|---|---|---|---|
| | UE | SS | | | |
| 1 | ← | | M | MBMS MCCH Message Configuration C1 | No sessions ongoing. IE "MBSFN inter frequency neighbour list" not present in MBMS GENERAL INFORMATION |
| 2 | ← | | U | ACTIVATE RB TEST MODE | |
| 3 | → | | U | ACTIVATE RB TEST MODE COMPLETE | |
| 4 | ← | | U | CLOSE UE TEST LOOP | Loop back mode 3 is activated with Short Transmission Identity = "0". |
| 5 | ← | | M | MBMS MCCH Message Configuration C1 | Cell 31: IE "MBMS re-acquire MCCH" set to "True" in MBMS MODIFIED SERVICES INFO. Frequencies for Cell 33 and Cell 36 have been added to IE "MBSFN inter frequency neighbour list". |
| 6 | UE | | M | | UE re-acquires MCCH on Cell 31. |
| 7 | SS | | | | The SS powers on Cell 33 and Cell 36. |
| 8 | ← | | M | MBMS MCCH Message Configuration C2 | Cell 33: One PTM session ongoing (National Service 5). 129.6(FDD) or 124(TDD)kbps PS RAB, 124.4 kbps (IMB) |
| 9 | ← | | M | MBMS MCCH Message Configuration C2 | Cell 36: One PTM session ongoing (National Service 5). 129.6(FDD) or 124(TDD)kbps PS RAB, 124.4 kbps (IMB) |
| 10 | UE | | M | | National Service 5 is activated at the UE. |
| 11 | UE | | M | | UE retunes to frequency for Cell 36 and acquires the MCCH. |
| 12 | → | | U | CLOSE UE TEST LOOP COMPLETE | The UE shall establish the indicated p-t-m radio bearer for National Service 5 and close the test loop. |
| 13 | SS | | M | | The SS transmits 10 RLC SDUs on the MTCH for Cell 33. |
| 14 | ← | | U | UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST | |
| 15 | → | | U | UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE | The SS checks that the number of reported RLC SDUs received on the MTCH is equal to zero. |
| 16 | SS | | M | | The SS transmits 10 RLC SDUs on the MTCH for Cell 36. |
| 17 | ← | | U | UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST | |
| 18 | → | | U | UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE | The SS checks that the number of reported RLC SDUs received on the MTCH is greater than zero. |
| 19 | ← | | U | OPEN UE TEST LOOP | |
| 20 | → | | U | OPEN UE TEST LOOP COMPLETE | |
| 21 | ← | | U | DEACTIVATE RB TEST MODE | |
| 22 | → | | U | DEACTIVATE RB TEST MODE COMPLETE | |

Specific message contents

With the following exceptions, all messages have the same content as defined in TS 34.108 clause 9.1.3 for the MBSFN carriers and in TS 34.108 clause 9.1.1 or 9.1.2 for the unicast carrier:

MBMS MODIFIED SERVICES INFORMATION (Step 1, Step 8, and Step 9)

| Information Element | Value/remark | Version |
|---|---|---|
| Modified service list | Not Present | Rel-6 |
| MBMS re- acquire MCCH | Not Present | Rel-6 |
| MBMS dynamic persistence level | Not Present | Rel-6 |
| End of modified MCCH information | Not Present | Rel-6 |
| MBMS number of neighbour cells | 0 | Rel-6 |
| MBMS all unmodified p-t-m services | Not Present | Rel-6 |
| MBMS p-t-m activation time | Not Present | Rel-6 |
| MIB Value tag | Not Present | Rel-7 |

MBMS UNMODIFIED SERVICES INFORMATION (Dedicated National carrier) (Step 1 and Step 5)

| Information Element | Value/remark | Version |
|---|---|---|
| Message type | | Rel-6 |
| Unmodified service list | Not Present | Rel-6 |

MBMS GENERAL INFORMATION (Step 1)

| Information Element | Value/remark | Version |
|---|---|---|
| … | | |
| MBSFN inter frequency neighbour list | Not Present | Rel-7 |

MBMS MODIFIED SERVICES INFORMATION (Step 5)

| Information Element | Value/remark | Version |
|---|---|---|
| Modified service list | Not Present | Rel-6 |
| MBMS re- acquire MCCH | True | Rel-6 |
| MBMS dynamic persistence level | Not Present | Rel-6 |
| End of modified MCCH information | Not Present | Rel-6 |
| MBMS number of neighbour cells | 0 | Rel-6 |
| MBMS all unmodified p-t-m services | Not Present | Rel-6 |
| MBMS p-t-m activation time | Not Present | Rel-6 |
| MIB Value tag | Not Present | Rel-7 |

MBMS GENERAL INFORMATION (Step 5)(FDD)

| Information Element | Value/remark | Version |
|---|---|---|
| … | | |
| MBSFN inter frequency neighbour list | | Rel-7 |
| - MBSFN frequency | | |
| - CHOICE *mode* | FDD | |

| - MBMS Transmission identity | | |
| - MBMS Service ID | (National Service 6) | |
| - MBMS Service ID | Refer to clause 11.2.4 "MBSFN service availability" | |
| - CHOICE PLMN identity | SameAs-MIB | |
| - no data | | |
| - MBMS Session ID | Not Present | |
| - MBMS required UE action | None | |
| - MBMS preferred frequency | Not Present | |
| - MBSFN cluster frequency | 2 | Rel-7 |

MBMS GENERAL INFORMATION (Step 9)

| Information Element | Value/remark | Version |
|---|---|---|
| … | | |
| MBSFN inter frequency neighbour list | | Rel-7 |
| - MBSFN frequency | | |
| - CHOICE *mode* | TDD | |
| - UARFCN (Nt) | Refer to clause 5.1 "Test frequencies" for frequency "f1" | |
| - CHOICE *MBSFN services notification* | MBSFN services notified | |
| - no data | | |
| - MBSFN frequency | | |
| - CHOICE *mode* | TDD | |
| - UARFCN (Nt) | Refer to clause 5.1 "Test frequencies" for frequency "f2" | |
| - CHOICE *MBSFN services notification* | MBSFN services notified | |
| - no data | | |

MBMS GENERAL INFORMATION (Step 9)(IMB)

| Information Element | Value/remark | Version |
|---|---|---|
| … | | |
| MBSFN inter frequency neighbour list | | Rel-7 |
| - MBSFN frequency | | |
| - CHOICE *mode* | TDD | |
| - UARFCN (Nt) | Refer to clause 5.1 "Test frequencies" for frequency "f2" | |
| - IMB indication | TRUE | Rel-8 |
| - CHOICE *MBSFN services notification* | MBSFN services not notified | |
| - no data | | |
| - MBSFN frequency | | |
| - CHOICE *mode* | TDD | |
| - UARFCN (Nt) | Refer to clause 5.1 "Test frequencies" for frequency "f3" | |
| - IMB indication | TRUE | Rel-8 |
| - CHOICE *MBSFN services notification* | MBSFN services not notified | |
| - no data | | |

#### 8.5.7.2.5 Test requirements

1) After step 15, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report that zero RLC SDUs have been received.

2) After step 18, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report that > 0 RLC SDUs have been received.

### 8.5.7.3 Re-acquire MCCH - modified MBSFN inter frequency neighbour list / MBSFN services not notified

#### 8.5.7.3.1 Definition

This test is applicable for UEs that support MBMS broadcast services in MBSFN mode and which support either both transmit and receive functions or MBSFN receive only function.

#### 8.5.7.3.2 Conformance requirement

Upon receiving the MBMS GENERAL INFORMATION message, the UE should store all relevant IEs included in this message. The UE shall also:

1> act upon all received information elements as specified in subclause 8.6, unless specified otherwise in the following.

…

For FDD, 3.84 Mcps TDD IMB and 3.84/7.68 Mcps TDD if the IE "MBSFN inter frequency neighbour list" is included and the UE does not receive a service from this MBSFN cluster, the UE shall:

1> consider that MBMS services transmitted in MBSFN mode are available on these frequencies;

…

1> if at least one frequency is listed for which "MBSFN services not notified" is indicated in the IE "MBSFN inter frequency neighbour list":

2> if the IE "All MBSFN services notified" is included for one frequency as defined in [21] for FDD and [22] for TDD on which the UE supports reception in MBSFN mode:

…

2> else:

3> attempt to receive notifications on all frequencies for which the IE “MBSFN services not notified” is indicated as specified in subclause 8.7.3 on that band.

…

Upon receiving the MBMS MODIFIED SERVICES INFORMATION message, the UE shall act as follows for each of the services included in this messages provided that the service is included in variable MBMS_ACTIVATED_SERVICES and upper layers indicate that the session has not yet been received correctly (referred to as 'applicable services'):

…

1> act upon all received information elements as specified in subclause 8.6, unless specified otherwise in the following

…

If the UE receives the IE " MBMS re- acquire MCCH", the UE shall:

1> perform the MCCH acquisition procedure as specified in subclause 8.7.2.

Reference

3GPP TS 25.331 clauses 8.7.2.3, 8.7.2.5, 8.6.9.9ad, 8.7.3.4, 8.6.9.6a.

### 8.5.7.3.3 Test purpose

1. To verify that the UE correctly re-acquires the MCCH information when the UE receives the IE MBMS re-acquire MCCH in a received MBMS MODIFIED SERVICES INFORMATION message.
2. To verify that the UE acts upon the modified IE MBSFN inter frequency neighbour list received in the re-acquired MBMS GENERAL INFORMATION message when a service not received on the current MBSFN cluster is present in the variable MBMS_ACTIVATED_SERVICES.
3. To verify that in the absence of the IE "All MBSFN services notified" the UE attempts to receive notifications on all frequencies for which the IE “MBSFN services not notified” is indicated on that band.

### 8.5.7.3.4 Method of test

Initial condition

System Simulator:

- MBSFN carrier: 3 cells, Cell 31, Cell 36 and Cell 38 (all PLMN1). Cell 36 and Cell 38 are powered off. In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C1 and Default1 MCCH scheduling (No ongoing session) according to subclause 11.2 of TS 34.108.

  Unicast carrier: 1 cell, Cell 1 (PLMN1) default configuration.

User Equipment:

- On the unicast carrier cell the UE is in registered Idle Mode on PS (state 3) if the UE only supports PS domain or registered Idle Mode on CS/PS (state 7) if the UE supports both CS and PS domains, as specified in clause 7.2.2 of TS 34.108.

- The UE is in MBSFN Idle mode with no activated service as specified in clause 7.6.3 of TS 34.108.

Related ICS/IXIT statements

- MBMS Broadcast services in MBSFN mode application available on UE Yes/No.

- Support of transmit and receive functions available on UE Yes/No.

- Support of MBSFN receive only function available on UE Yes/No.

Test procedure

The test shall be performed as two independent sub-tests with the UE and SS being returned to Initial Conditions between the sub-tests. The test method shall be the same for the two sub-tests with the exception that:

- In sub-test 1, Local Service 1 in Service Area 1 (Cell 33) shall be activated in the UE;

- In sub-test 2, Local Service 1 in Service Area 4 (Cell 36) shall be activated in the UE.

The SS shall apply the downlink power settings as shown below:

Step 1-7:

| Parameter | Unit | Cell 1 | Cell 31 | Cell 33 | Cell 36 |
|---|---|---|---|---|---|
| UTRA RF Channel Number | | Ch. 1 | Ch. 2 | Ch. 3 | Ch. 4 |
| P-CCPCH RSCP | dBm | -60 | -60 | OFF | OFF |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -60 | - | - |
| P-CPICH (IMB) | dBm/3.84MHz | | -60 | OFF | OFF |
| T-CPICH (IMB) | dBm/3.84MHz | | -50.5 | OFF | OFF |

Step 8-33:

| Parameter | Unit | Cell 1 | Cell 31 | Cell 33 | Cell 36 |
|---|---|---|---|---|---|
| UTRA RF Channel Number | | Ch. 1 | Ch. 2 | Ch. 3 | Ch. 4 |
| P-CCPCH RSCP | dBm | -60 | -60 | -60 | -60 |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -60 | -60 | -60 |
| P-CPICH (IMB) | dBm/3.84MHz | | -60 | -60 | -60 |
| T-CPICH (IMB) | dBm/3.84MHz | | -50.5 | -50.5 | -50.5 |

a) The UE is camping on Cell 1 and Cell 31. For 3.84 Mcps TDD IMB, the UE is camping on the FDD unicast carrier cell 1 and IMB cell 31. In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C1 (no session ongoing) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108. Note: The IE "MBSFN inter frequency neighbour list" is not present in MBMS GENERAL INFORMATION.

b) The SS sends ACTIVATE RB TEST MODE on the unicast carrier and the UE responds with ACTIVATE RB TEST MODE COMPLETE.

c) The SS sends CLOSE UE TEST LOOP to activate RLC SDU counting on MTCH. The Short Transmission identity is set to value "2" corresponding to Local Service 1 (see TS 34.108 clause 11.2.4) on either Cell 33 or Cell 36.

d) For Cell 31 in the IE "MBSFN inter frequency neighbour list" of the MBMS GENERAL INFORMATION message the SS adds (i) the frequency for Cell 36 with the IE "MBSFN services notification" set to "MBSFN services not notified" and without the option "All MBSFN services notified", and (ii) the frequency for Cell 33 with the IE "MBSFN services notification" set to "MBSFN services not notified" without the option "All MBSFN services notified". The SS sends MBMS MODIFIED SERVICES INFORMATION with IE "MBMS re- acquire MCCH" set to "True".

e) The UE shall re-perform the MCCH acquisition procedure on Cell 31.

f) The SS powers on Cell 33 and Cell 36. MCCH messages are transmitted by the SS on Cell 36 using MBMS configuration C2 (one PTM session ongoing - Local Service 1) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108. MCCH messages are transmitted by the SS on Cell 33 using MBMS configuration C2 (one PTM session ongoing - Local Service 1) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108.

g) Local Service 1 for the Service Area determined by the sub-test number (see above) is activated at the UE.

h) The UE shall re-tune to the frequency for Cell 33 or Cell 36, perform MBSFN cluster reselection and shall perform the MCCH acquisition procedure. If the UE determines that the selected MBMS service is available on this cell then the UE proceeds to the next step. Otherwise, the UE re-tunes to the other frequency, performs MBSFN cluster reselection and again performs the MCCH acquisition procedure to find the selected MBMS service.

i) The UE immediately establishes the p-t-m radio bearer for Local Service 1. The UE closes the test loop and starts counting successfully received RLC PDUs on the MTCH. The UE will send CLOSE UE TEST LOOP COMPLETE.

j) On Cell 33 the SS broadcasts 10 RLC SDUs on the MTCH configured on the MBMS p-t-m radio bearer for Local Service 1. The service is carried on a 129.6kbps RB for MTCH with 80 ms TTI as specified in clause 6.10.3.4.4.6(FDD), or a 124.4 kbps RB for MTCH with 80 ms TTI as specified in clause 6.11.7.2.2.1 (3.84 Mcps TDD IMB) or a 124 kbps RB for MBSFN MTCH with 80ms TTI as specified in clause 6.10.3.4.4.9 (3.84 Mcps TDD) or clause 6.11.5.4.4.9 (1.28 Mcps TDD) or clause 6.11.6.4.4.9 (7.68 Mcps TDD).

k) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST and waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check the counter returned by the UE for the MTCH in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS stores the value.

l) On Cell 36 the SS broadcasts 10 RLC SDUs on the MTCH configured on the MBMS p-t-m radio bearer for Local Service 1. The service is carried on a 129.6kbps RB for MTCH with 80 ms TTI as specified in clause 6.10.3.4.4.6(FDD), or a 124.4 kbps RB for MTCH with 80 ms TTI as specified in clause 6.11.7.2.2.1 (3.84 Mcps TDD IMB) or a 124 kbps RB for MBSFN MTCH with 80ms TTI as specified in clause 6.10.3.4.4.9 (3.84 Mcps TDD) or clause 6.11.5.4.4.9 (1.28 Mcps TDD) or clause 6.11.6.4.4.9 (7.68 Mcps TDD).

m) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST and waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check the counter returned by the UE for the MTCH in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE, using the stored initial count from step k).

Expected sequence

| Step | Direction | | Carrier | Message | Comment |
|---|---|---|---|---|---|
| | UE | SS | | | |
| 1 | ← | | M | MBMS MCCH Message Configuration C1 | No sessions ongoing. IE "MBSFN inter frequency neighbour list" not present in MBMS GENERAL INFORMATION |
| 2 | ← | | U | ACTIVATE RB TEST MODE | |
| 3 | → | | U | ACTIVATE RB TEST MODE COMPLETE | |
| 4 | ← | | U | CLOSE UE TEST LOOP | Loop back mode 3 is activated with Short Transmission Identity = "2". |
| 5 | ← | | M | MBMS MCCH Message Configuration C1 | Cell 31: IE "MBMS re-acquire MCCH" set to "True" in MBMS MODIFIED SERVICES INFO. Frequencies for Cell 33 and Cell 36 have been added to IE "MBSFN inter frequency neighbour list". |
| 6 | UE | | M | | UE re-acquires MCCH on Cell 31. |
| 7 | SS | | | | The SS powers on Cell 33 and Cell 36. |
| 8 | ← | | M | MBMS MCCH Message Configuration C2 | Cell 33: One PTM session ongoing (Local Service 1). 129.6(FDD) or 124(TDD)kbps PS RAB. |
| 9 | ← | | M | MBMS MCCH Message Configuration C2 | Cell 36: One PTM session ongoing (Local Service 1). 129.6(FDD) or 124(TDD)kbps PS RAB. |
| 10 | UE | | M | | Local Service 1 is activated at the UE, for the Service Area determined by the sub-test execution number (see above). |
| 11 | SS | | | | The SS shall set a timer value of 300 seconds to wait for CLOSE UE TEST LOOP COMPLETE from the UE. If a timeout occurs the test shall be deemed failed and execution continues from step 20. |
| 12 | UE | | M | | UE retunes to frequency for Cell 33 and/or Cell 36 and acquires the MCCH. |
| 13 | → | | U | CLOSE UE TEST LOOP COMPLETE | The UE shall establish the indicated p-t-m radio bearer for Local Service 1 and close the test loop. |
| 14 | SS | | M | | The SS transmits 10 RLC SDUs on the MTCH for Cell 33. |
| 15 | ← | | U | UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST | |
| 16 | → | | U | UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE | The SS checks the number of reported RLC SDUs received on the MTCH. SS stores the value. |
| 17 | SS | | M | | The SS transmits 10 RLC SDUs on the MTCH for Cell 36. |
| 18 | ← | | U | UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST | |
| 19 | → | | U | UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE | The SS checks the number of reported RLC SDUs received on the MTCH. |
| 20 | ← | | U | OPEN UE TEST LOOP | |
| 21 | → | | U | OPEN UE TEST LOOP COMPLETE | |
| 22 | ← | | U | DEACTIVATE RB TEST MODE | |
| 23 | → | | U | DEACTIVATE RB TEST MODE COMPLETE | |

Specific message contents

With the following exceptions, all messages have the same content as defined in TS 34.108 clause 9.1.3 for the MBSFN carriers and in TS 34.108 clause 9.1.1 or 9.1.2 for the unicast carrier:

MBMS MODIFIED SERVICES INFORMATION (Step 1, Step 8, and Step 9)

| - MBSFN frequency | | |
| - CHOICE *mode* | TDD | |
| - UARFCN (Nt) | Refer to clause 5.1 "Test frequencies" for frequency "f3" | |
| - IMB indication | TRUE | |
| - CHOICE *MBSFN services notification* | MBSFN services not notified | |
| - no data | | |

#### 8.5.7.3.5 Test requirements

For sub-test 1:

1) After step 15, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a count > 0 for the number of RLC SDUs received.

2) After step 18, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a count corresponding to zero RLC SDUs.

For sub-test 2:

1) After step 15, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a count = 0 for the number of RLC SDUs received.

2) After step 18, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a count > 0 for the number of RLC SDUs received.

### 8.5.7.4 MBSFN TDM Information / TDM services de-multiplexing

#### 8.5.7.4.1 Definition

This test is applicable for UEs that support MBMS broadcast services in MBSFN mode and which support either both transmit and receive functions or MBSFN receive only function.

#### 8.5.7.4.2 Conformance requirement

For cells operating in MBSFN mode as indicated in subclause 8.1.1.6.3 upon receiving the MBMS CURRENT CELL P-T-M RB INFORMATION message, the UE shall act as specified in subclauses 8.7.5.3.

…

The UE applies the MBMS p-t-m radio bearer configuration procedure whenever it detects that one of the activated services is provided by means of a p-t-m radio bearer. This may occur as part of the MCCH acquisition or the MBMS Notification procedure.

…

Upon completing the reception of the MBMS COMMON P-T-M RB INFORMATION and the MBMS CURRENT CELL P-T-M RB INFORMATION messages for an activated MBMS service, the UE shall:

1> if the UE is already receiving an MTCH and does not have the capability to receive the new service in addition:

2> the UE behaviour is undefined.

NOTE: In this case, the UE may request upper layers to prioritise the services and only receive the service(s) prioritised by upper layers.

1> act upon all received information elements as specified in subclause 8.6, unless specified otherwise in the following;

1> if the UE previously received the service by means of a p-t-m radio bearer from a cell belonging to another MBMS cell group:

2> re-establish RLC;

2> re-initialise PDCP.

1> start immediately to use the indicated configuration unless specified otherwise;

1> start or continue receiving the indicated p-t-m radio bearers depending on its UE capabilities.

The UE shall continue acquiring the above messages until it has received a consistent set of MCCH information i.e. the MBMS MODIFIED SERVICES INFORMATION message, MBMS UNMODIFIED SERVICES INFORMATION

message, MBMS COMMON P-T-M RB INFORMATION and the MBMS CURRENT CELL P-T-M RB INFORMATION message should be acquired in the same modification period.

…

If the IE "MBSFN TDM Information List" is included, the UE shall:

1> assume that the MBMS service identified in IE "MBMS short transmission ID" can be received only in frame(s) with the CFN fulfilling the following equation:

(CFN div N) mod TDM_Rep = TDM_Offset + i, i = 0 to TDM_Length - 1

where

- N is the TTI (in number of 10ms frames) of the FACH
- TDM_Rep is the repetition period
- TDM_Offset is the offset
- TDM_Length is the number of TTIs the MBMS Service is transmitted, starting from TDM _Offset
- CFN is set according to subclause 8.5.15.3 (Initialisation for Cell_FACH).

Reference

3GPP TS 25.331 clauses 8.7.2.5, 8.7.5.2, 8.7.5.3, 8.6.9.9ae

### 8.5.7.4.3 Test purpose

1. To verify that the UE correctly acquires the MCCH, when two services included in the variable MBMS_ACTIVATED_SERVICES are broadcast in a time division multiplexed fashion in the current MBSFN cluster.
2. To verify that the UE correctly acts upon the IE MBSFN TDM Information List received in the MBMS CURRENT CELL P-T-M RB INFORMATION messages for the two services in the variable MBMS_ACTIVATED_SERVICES and correctly de-multiplexes the two sessions.

### 8.5.7.4.4 Method of test

Initial condition

System Simulator:

- MBSFN carrier: 1 cell, Cell 31 (PLMN1). In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C1 and Default1 MCCH scheduling (one ongoing session) according to subclause 11.2 of TS 34.108.
- Unicast carrier : 1 cell, Cell 1 with default parameters.

User Equipment:

- On the unicast carrier cell the UE is in registered Idle Mode on PS (state 3) if the UE only supports PS domain or registered Idle Mode on CS/PS (state 7) if the UE supports both CS and PS domains, as specified in clause 7.2.2 of TS 34.108.
- The UE is in MBSFN Idle mode with one activated service as specified in clause 7.6.4 of TS 34.108. The UE has selected (i.e. it is included in MBMS_ACTIVATED_SERVICES variable) a national service for which a session will start on MBSFN Cell 31 (see TS 34.108 clause 11.2.4) during the test.

Related ICS/IXIT statements

- MBMS Broadcast services in MBSFN mode application available on UE Yes/No.
- Support of transmit and receive functions available on UE Yes/No.
- Support of MBSFN receive only function available on UE Yes/No.

Test procedure

a) The UE is camping on Cell 1 and Cell 31. For 3.84 Mcps TDD IMB, the UE is camping on the FDD unicast carrier cell 1 and IMB cell 31. In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C1 (no session ongoing) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108.

b) The SS sends ACTIVATE RB TEST MODE on the unicast carrier and the UE responds with ACTIVATE RB TEST MODE COMPLETE. The SS then sends CLOSE UE TEST LOOP to activate RLC SDU counting on Cell 31 MTCH (Transmission identity indicating the MBMS activated service).

c) The SS notifies on MCCH, for one modification period, about the start of the MBMS sessions. MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C4 (two PTM sessions starting) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108.

d) From the first SFN of the next modification period the SS transmits MCCH messages on Cell 31 using MBMS configuration C2 (two PTM sessions ongoing) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108

e) The UE establishes the p-t-m radio bearer for the activated service according to the specified service activation time (i.e. the first SFN of the modification period following the notification (step c). The UE closes the test loop and starts counting successfully received RLC PDUs on the MTCH. The UE will send CLOSE UE TEST LOOP COMPLETE.

f) The SS then broadcasts 10 RLC SDUs on the MTCH configured for the MBMS service not activated by the UE. The service is carried on a 129.6kbps RB for MTCH with 80 ms TTI as specified in clause 6.10.3.4.4.6(FDD) or a 124.4 kbps RB for MTCH with 80 ms TTI as specified in clause 6.11.7.2.2.1 (3.84 Mcps TDD IMB) or the RB for MBSFN MTCH with 80ms TTI as specified in clause 6.10.3.4.4.9 (3.84 Mcps TDD) or clause 6.11.5.4.4.9 (1.28 Mcps TDD) or clause 6.11.6.4.4.9 (7.68 Mcps TDD) of TS 34.108. The nominal data rate of the RB as given in TS 34.108 will be scaled down by the factor (TDM_Length/TDM_Rep) as described in TS 25.331 clause 8.6.9.9ae.

g) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST and waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is = 0.

h) The SS then broadcasts 10 RLC SDUs on the MTCH configured for the MBMS service activated by the UE. The service is carried on a 129.6kbps RB for MTCH with 80 ms TTI as specified in clause 6.10.3.4.4.6(FDD) or a 124.4 kbps RB for MTCH with 80 ms TTI as specified in clause 6.11.7.2.2.1 (3.84 Mcps TDD IMB)or the RB for MBSFN MTCH with 80ms TTI as specified in clause 6.10.3.4.4.9 (3.84 Mcps TDD) or clause 6.11.5.4.4.9 (1.28 Mcps TDD) or clause 6.11.6.4.4.9 (7.68 Mcps TDD) of TS 34.108. The nominal data rate of the RB as given in TS 34.108 will be scaled down by the factor (TDM_Length/TDM_Rep) as described in TS 25.331 clause 8.6.9.9ae.

i) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST and waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is > 0.

j) The SS sends OPEN UE TEST LOOP. The UE responds with OPEN UE TEST LOOP COMPLETE.

k) MCCH messages are then transmitted by the SS on Cell 31 using MBMS configuration C1 (no sessions ongoing) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108.

l) The SS then delays for 5*modification period and then sends CLOSE UE TEST LOOP to re-start RLC SDU counting on Cell 31 MTCH (Transmission identity indicating the MBMS activated service).

m) The SS notifies on MCCH, for one modification period, about the start of the MBMS sessions. MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C4 (two PTM sessions starting) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108. A different TDM configuration from that notified in step c) is used.

n) From the first SFN of the next modification period the SS transmits MCCH messages on Cell 31 using MBMS configuration C2 (two PTM sessions ongoing) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108

o) The UE establishes the p-t-m radio bearer for the activated service according to the specified service activation time (i.e. the first SFN of the modification period following the notification (step c). The UE closes the test loop and starts counting successfully received RLC PDUs on the MTCH. The UE will send CLOSE UE TEST LOOP COMPLETE.

p) The SS then broadcasts 10 RLC SDUs on the MTCH configured for the MBMS service not activated by the UE. The service is carried on a 129.6kbps RB for MTCH with 80 ms TTI as specified in clause 6.10.3.4.4.6(FDD) or a 124.4 kbps RB for MTCH with 80 ms TTI as specified in clause 6.11.7.2.2.1 (3.84 Mcps TDD IMB) or the RB for MBSFN MTCH with 80ms TTI as specified in clause 6.10.3.4.4.9 (3.84 Mcps TDD) or clause 6.11.5.4.4.9 (1.28 Mcps TDD) or clause 6.11.6.4.4.9 (7.68 Mcps TDD) of TS 34.108. The nominal data rate of the RB as given in TS 34.108 will be scaled down by the factor (TDM_Length/TDM_Rep) as described in TS 25.331 clause 8.6.9.9ae.

q) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST and waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is = 0.

r) The SS then broadcasts 10 RLC SDUs on the MTCH configured for the MBMS service activated by the UE. The service is carried on a 129.6kbps RB for MTCH with 80 ms TTI as specified in clause 6.10.3.4.4.6(FDD) or a 124.4 kbps RB for MTCH with 80 ms TTI as specified in clause 6.11.7.2.2.1 (3.84 Mcps TDD IMB) or the RB for MBSFN MTCH with 80ms TTI as specified in clause 6.10.3.4.4.9 (3.84 Mcps TDD) or clause 6.11.5.4.4.9 (1.28 Mcps TDD) or clause 6.11.6.4.4.9 (7.68 Mcps TDD) of TS 34.108. The nominal data rate of the RB as given in TS 34.108 will be scaled down by the factor (TDM_Length/TDM_Rep) as described in TS 25.331 clause 8.6.9.9ae.

s) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST and waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is > 0.

Expected sequence

| Step | Direction | | Carrier | Message | Comment |
|---|---|---|---|---|---|
| | UE | SS | | | |
| 1 | ← | | U | ACTIVATE RB TEST MODE | |
| 2 | → | | U | ACTIVATE RB TEST MODE COMPLETE | |
| 3 | ← | | U | CLOSE UE TEST LOOP | Loop back mode 3 is activated for the selected national service on MTCH. |
| 4 | ← | | M | MBMS MCCH Message Configuration C4 | For one modification period. Two sessions starting, one of which is the activated service. |
| 5 | ← | | M | MBMS MCCH Message Configuration C2 | No modified services. Two sessions ongoing. |
| 6 | → | | U | CLOSE UE TEST LOOP COMPLETE | The UE shall establish the indicated p-t-m radio bearer and close the test loop. |
| 7 | | SS | M | | Then SS transmits 10 RLC SDUs on the MTCH, for the service not activated by the UE. |
| 8 | ← | | U | UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST | |
| 9 | → | | U | UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE | The SS checks that the number of reported RLC SDUs received on the MTCH equals zero. |
| 10 | | SS | M | | Then the SS transmits 10 RLC SDUs on the MTCH for the service activated by the UE. |
| 11 | ← | | U | UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST | |
| 12 | → | | U | UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE | The SS checks that the number of reported RLC SDUs received on the MTCH is greater than zero. |
| 13 | ← | | U | OPEN UE TEST LOOP | |
| 14 | → | | U | OPEN UE TEST LOOP COMPLETE | |
| 15 | ← | | M | MBMS MCCH Message Configuration C1 | No sessions ongoing |
| 16 | | SS | M | | SS delays for a period 5*modification period. |
| 17 | ← | | U | CLOSE UE TEST LOOP | Loop back mode 3 is activated for the selected national service on MTCH. |
| 18 | ← | | M | MBMS MCCH Message Configuration C4 | For one modification period. Two sessions starting, one of which is the activated service. |
| 19 | ← | | M | MBMS MCCH Message Configuration C2 | No modified services. Two sessions ongoing |
| 20 | → | | U | CLOSE UE TEST LOOP COMPLETE | The UE shall establish the indicated p-t-m radio bearer and close the test loop. |
| 21 | | SS | M | | Then SS transmits 10 RLC SDUs on the MTCH, for the service not activated by the UE. |
| 22 | ← | | U | UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST | |
| 23 | → | | U | UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE | The SS checks that the number of reported RLC SDUs received on the MTCH equals zero. |
| 24 | | SS | M | | Then the SS transmits 10 RLC SDUs on the MTCH for the service activated by the UE. |
| 25 | ← | | U | UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST | |
| 26 | → | | U | UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE | The SS checks that the number of reported RLC SDUs received on the MTCH is greater than zero. |
| 27 | ← | | U | OPEN UE TEST LOOP | |
| 28 | → | | U | OPEN UE TEST LOOP COMPLETE | |
| 29 | ← | | U | DEACTIVATE RB TEST MODE | |
| 30 | → | | U | DEACTIVATE RB TEST MODE COMPLETE | |

Specific message contents

With the following exceptions, all messages have the same content as defined in TS 34.108 clause 9.1.3 for the MBSFN carriers and in TS 34.108 clause 9.1.1 or 9.1.2 for the unicast carrier:

MBMS CURRENT CELL P-T-M RB INFORMATION (Step 4 and Step 5)

| Information Element | Value/remark | Version |
|---|---|---|
| … | | |
| MBSFN TDM Info List | | Rel-7 |
| - MBMS short transmission ID | Index to the activated service | |
| - TDM_Rep | 8 | |
| - TDM_Offset | 4 | |
| - TDM_Length | 4 | |
| - MBMS short transmission ID | Index to the not activated service | |
| - TDM_Rep | 8 | |
| - TDM_Offset | 0 | |
| - TDM_Length | 2 | |

MBMS CURRENT CELL P-T-M RB INFORMATION (Step 18 and Step 19)

| Information Element | Value/remark | Version |
|---|---|---|
| … | | |
| MBSFN TDM Info List | | Rel-7 |
| - MBMS short transmission ID | Index to the activated service | |
| - TDM_Rep | 4 | |
| - TDM_Offset | 0 | |
| - TDM_Length | 1 | |
| - MBMS short transmission ID | Index to the not activated service | |
| - TDM_Rep | 4 | |
| - TDM_Offset | 1 | |
| - TDM_Length | 3 | |

#### 8.5.7.4.5 Test requirements

1) After step 9, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report an SDU count = 0.

2) After step 12, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report an SDU count > 0.

3) After step 23, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report an SDU count = 0.

4) After step 26, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report an SDU count > 0.

### 8.5.7.5 MBSFN Session Reconfiguration / Change of MBSFN Cluster frequency on notification via MCCH (FDD)

#### 8.5.7.5.1 Definition

This test is applicable for UEs that support MBMS broadcast services in MBSFN mode and which support either both transmit and receive functions or MBSFN receive only function.

#### 8.5.7.5.2 Conformance requirement

The UE applies the MCCH acquisition procedure to determine the MBMS services available in the cell and to initiate reception of the services that the UE has activated. The procedure applies to all UEs supporting MBMS, irrespective of their state (idle, URA_PCH, CELL_PCH, CELL_FACH and CELL_DCH).

…

The UE shall detect the available MBMS services by acquiring the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3.

...

For cells operating in MBSFN mode as indicated in subclause 8.1.1.6.3 the UE shall immediately acquire the MBMS GENERAL INFORMATION messages i.e. It shall not delay reception of these messages until it has completed the acquisition of the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages. Likewise for cells operating in MBSFN mode as indicated in subclause 8.1.1.6.3, the UE should immediately acquire the MBMS CURRENT CELL P-T-M RB INFORMATION.

The UE shall continue acquiring the above messages until it has received a consistent set of MCCH information e.g. Both the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION message should be acquired in the same modification period.

…

When requested to acquire MBMS control information other than the MBMS ACCESS INFORMATION message, the UE shall:

1> if requested to start reading MCCH at the next modification period:

2> start reading MCCH at the beginning of the next modification period.

1> otherwise

2> start reading MCCH at the beginning of the next repetition period.

1> if requested to stop reading MCCH at the end of the modification period:

2> continue reading MCCH until the required MBMS control information is received or until the UE detects a TTI in which no MCCH information is transmitted, whichever is first;

2> continue reading MCCH in this manner at every subsequent repetition period, until the information is received correctly or until the end of the modification period.

1> otherwise:

2> continue reading MCCH until the required MBMS control information is received or until the UE detects a TTI in which no MCCH information is transmitted, whichever is first;

2> continue reading MCCH in this manner at every subsequent repetition period, until the information is received correctly.

NOTE 1: The UE may combine information received at different repetition periods within a modification period.

…

The MBMS notification procedure is used by the UE to respond to a notification provided by UTRAN, indicating a change applicable for one or more MBMS services the UE has activated. The procedure applies to all UEs supporting MBMS, irrespective of their state (idle and connected mode: URA_PCH, CELL_PCH, CELL_FACH and CELL_DCH). The actual notification mechanism to be used depends on the UE state.

…

The UE may:

1> monitor the MBMS notification Indicator Channel (MICH);

1> if a notification on the MICH for one or more of the MBMS services included in the variable MBMS_ACTIVATED_SERVICES is detected:

2> acquire the MBMS MODIFIED SERVICES INFORMATION message with delaying the reading of MCCH until the next modification period and with stopping at the end of the modification period, in accordance with subclause 8.7.1.3;

2> handle the MBMS MODIFIED SERVICES INFORMATION message as specified in subclause 8.7.3.4.

The UE shall:

1> if in idle mode, URA_PCH, CELL_PCH or CELL_FACH state:

2> if not monitoring MICH during the current or the previous modification period:

3> acquire the MBMS MODIFIED SERVICES INFORMATION message from MCCH at the start of every modification period, in accordance with subclause 8.7.1.3;

3> handle the MBMS MODIFIED SERVICES INFORMATION message as specified in subclause 8.7.3.4.

…

If the IE "MBMS required UE action" is included and concerns an MBMS activated service the UE shall:

…

1> if the IE "MBMS required UE action" is set to 'Acquire PTM RB info'; or

1> if the IE "MBMS required UE action" is set to 'Acquire counting info– PTM RBs unmodified' and the UE is not receiving a p-t-m RB for the concerned service:

2> continue acquiring the MBMS COMMON P-T-M RB INFORMATION, MBMS CURRENT CELL P-T-M RB INFORMATION and the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3

2> act upon the MBMS COMMON P-T-M RB INFORMATION, MBMS CURRENT CELL P-T-M RB INFORMATION and the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION message, if received, in accordance with subclause 8.7.5;

…

Upon completing the reception of the MBMS COMMON P-T-M RB INFORMATION and the MBMS CURRENT CELL P-T-M RB INFORMATION messages for an activated MBMS service, the UE shall:

1> if the UE is already receiving an MTCH and does not have the capability to receive the new service in addition:

2> the UE behaviour is undefined.

NOTE: In this case, the UE may request upper layers to prioritise the services and only receive the service(s) prioritised by upper layers.

1> act upon all received information elements as specified in subclause 8.6, unless specified otherwise in the following;

1> if the UE previously received the service by means of a p-t-m radio bearer from a cell belonging to another MBMS cell group:

2> re-establish RLC;

2> re-initialise PDCP.

1> start immediately to use the indicated configuration unless specified otherwise;

1> start or continue receiving the indicated p-t-m radio bearers depending on its UE capabilities.

The UE shall continue acquiring the above messages until it has received a consistent set of MCCH information i.e. the MBMS MODIFIED SERVICES INFORMATION message, MBMS UNMODIFIED SERVICES INFORMATION message, MBMS COMMON P-T-M RB INFORMATION and the MBMS CURRENT CELL P-T-M RB INFORMATION message should be acquired in the same modification period.

…

The UE shall:

1> if the IE "Secondary CCPCH system information MBMS" is included:

2> apply the Secondary CCPCH and FACH indicated by the IE "FACH carrying MCCH" for receiving MCCH.

1> otherwise, if the IE "Secondary CCPCH system information" includes the IE "MCCH configuration information":

2> apply the Secondary CCPCH and FACH indicated by the IE “MCCH configuration information” for receiving MCCH.

1> for TDD, if the IE "TDD MBSFN Information" is included:

2> apply the scrambling codes (as referenced by the "Cell parameters ID") to each timeslot indicated by "TDD MBSFN Information".

Reference

3GPP TS 25.331 clauses 8.7.2.1, 8.7.2.3, 8.7.1.3, 8.7.3.1, 8.7.3.3.1, 8.6.9.6, 8.7.5.3, 8.1.1.6.5

### 8.5.7.5.3 Test purpose

To verify that the UE correctly handles the notification procedure after receiving the MBMS MODIFIED SERVICES INFORMATION message via MCCH indicating a change in available services.

To verify that the UE acts upon service priority indications from upper layers that require a change in MBSFN cluster frequency.

To verify that the UE acquires the MBMS information on MCCH after selecting the new MBSFN cluster.

To verify that the UE, after acquiring the MBMS information on MCCH, starts the p-t-m reception of the higher priority MBMS service according to the information on MCCH..

### 8.5.7.5.4 Method of test

Initial condition

System Simulator:

- MBSFN carrier: 2 cells, Cell 31 and Cell 33, the tow cells are in deferent MBSFN cluster.

User Equipment:

- The UE is in MBSFN Idle mode with one activated service as specified in clause 7.6.4 of TS 34.108. The UE has selected (i.e. it is included in MBMS_ACTIVATED_SERVICES variable) a national service for which a session will start on MBSFN Cell 31 during the test.

Related ICS/IXIT statements

- MBMS Broadcast services in MBSFN mode application available on UE Yes/No.
- Support of transmit and receive functions available on UE Yes/No.
- Support of MBSFN receive only function available on UE Yes/No.

Test procedure

a) The UE camps on Cell 31 in idle state and establish to start receiving MBMS Service_1.

b) Another MBMS Service_2 is set up in Cell 33 and the SS sends a notification to the UE about the active services in Cell 31 by MCCH.

c) The UE gets the IE“MBSFN cluster frequency” which is updated and selects MBMS Service_2,then ,the UE shall stop receiving Service_1 and perform Cell Reselection from Cell 31 to Cell 33.

d) After selecting the new MBSFN cluster, the UE acquires the MBMS information on MCCH; the UE starts the p-t-m reception of the MBMS Service_2.

Expected sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| | | | | The UE camps on Cell 31 and starts reception of the MBMS Service_1 |
| 1 | ← | | MBMS MODIFIED SERVICES INFORMATION | The MBMS Service_2 has been activated by upper layer in the other MBSFN cluster. The SS notifies the UE the MBMS Service_2 is available on the MCCH. |
| 2 | ← | | MBMS GENERAL INFORMATION | The UE gets the MBSFN inter frequency neighbour list including Cell 33. |
| 3 | | | | The UE selects the MBMS Service_2 |
| 4 | | | | The UE performs Cell Reselection to select new MBSFN cluster. |
| 5 | ← | | MBMS MODIFIED SERVICES INFORMATION | In Cell 33, the UE acquires the MBMS information on MCCH. |
| 6 | ← | | MBMS COMMON P-T-M RB INFORMATION | |
| 7 | ← | | MBMS UNMODIFIED SERVICES INFORMATION | The UE starts reception of the MBMS Service_2 on MTCH. |
| 8 | ← | | CLOSE UE TEST LOOP | |
| 9 | → | | CLOSE UE TEST LOOP COMPLETE | Loop back mode 3 on MTCH is activated. |
| 10 | SS | | | The SS broadcasts 10 RLC SDUs of MBMS data on MTCH on the concerned MBMS radio bearer. |
| 11 | ← | | UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST | |
| 12 | → | | UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE | The SS checks that the number of reported RLC PDUs is greater than zero and records the value. |

Specific Message Contents.

MBMS MODIFIED SERVICES INFORMATION (Step 1)

| Information Element | Value/remark |
|---|---|
| Modified service list | |
| - MBMS Transmission identity | MBMS Transmission identity indicating MBMS activated service |
| - MBMS required UE action | Acquire PTM RB info |
| - MBSFN cluster frequency | 2 |

MBMS GENERAL INFORMATION (Step 2)

| Information Element | Value/remark | Version |
|---|---|---|
| … | | |
| MBSFN inter frequency neighbour list | | Rel-7 |
| - MBSFN frequency | | |
| - CHOICE *mode* | FDD | |
| - UARFCN downlink (Nd) | Refer to clause 5.1 "Test frequencies" for frequency "f2" | |
| - CHOICE *MBSFN services notification* | MBSFN services not notified | |
| - no data | | |

MBMS MODIFIED SERVICES INFORMATION (Step 5)

| Information Element | Value/remark |
|---|---|
| Modified service list | |
| - MBMS Transmission identity | MBMS Transmission identity indicating MBMS activated service |
| - MBMS required UE action | Acquire PTM RB info |
| - MBSFN cluster frequency | The Current MBSFN Cluster |

UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE (Step 7)

| Information Element | Value/remark |
|---|---|
| RLC SDU Counter Value | Check that the number is greater than zero. |

#### 8.5.7.5.5 Test requirements

At step 4 the UE shall select new MBSFN Cluster and perform Cell Reselection from Cell 31 to Cell 33.

At step 12 the UE shall send a UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE with a RLC SDU counter value greater zero.

# 8.6 Minimization of Drive Test Specific Procedures

## 8.6.1 Immediate MDT

NOTE: Immediate MDT logging and reporting is provided by the UE through normal measurement procedures (subclause 8.4).

## 8.6.2 Logged MDT

### 8.6.2.1 Logged MDT / Intra-frequency measurement, logging and reporting / Idle mode

#### 8.6.2.1.1 Definition

#### 8.6.2.1.2 Conformance requirement

[TS 25.304, clause 5.7 (TP1, TP2)]

The UE may be configured to perform logging of measurement results in idle mode, CELL_PCH and URA_PCH state with LOGGING MEASUREMENT CONFIGURATION message specified in TS 25.331 [4]. This configuration is valid while the logging duration timer is running.

If the configuration of logged measurements is valid, the UE shall perform logging of measurement results if all of the following conditions are met:

- the UE is in *camped normally* state in idle mode, CELL_PCH or URA_PCH state;
- RPLMN of the UE is the same as the RPLMN at the point of time of LOGGING MEASUREMENT CONFIGURATION message reception
- the UE is camped on a cell belonging to Area Configuration (see TS 25.331 [4]), if configured;
- the UE is camped on the RAT where the logged measurement configuration was received.

Otherwise, the logging of measurement results shall be suspended.

NOTE: Even if logging of measurement results is suspended, the logging duration timer and time stamp will continue, and the logged measurement configuration and corresponding log are kept.

[TS 25.331, clause 8.1.3.6 (TP3)]

The UE shall compare the value of the IE "Initial UE identity" in the received RRC CONNECTION SETUP message with the value of the variable INITIAL_UE_IDENTITY.

If the values are different, the UE shall:

1> ignore the rest of the message.

If the values are identical, the UE shall:

...

1> submit an RRC CONNECTION SETUP COMPLETE message to the lower layers on the uplink DCCH after successful state transition per subclause 8.6.3.3, with the contents set as specified below:

...

2> if an IE "Logged ANR Report Info" in variable LOG_ ANR_REPORT_VARIABLE is present and the registered PLMN is the same as one of the PLMNs in the IE "PLMN Identity" or IE "Equivalent PLMN Identity List" stored in variable LOG_ANR_REPORT_VARIABLE:

3> include IE "ANR Logging Results Available".

...

When the RRC CONNECTION SETUP COMPLETE message has been submitted to lower layers for transmission the UE shall:

...

[TS 25.331, clause 8.5.63.3 (TP1)]

Upon receiving the LOGGING MEASUREMENT CONFIGURATION message the UE shall:

1> if IE "Logged Measurements Configuration Info" is present:

2> if stored, discard the existing logged measurement configuration as well as the logged measurement information as specified in 8.5.66;

2> store the received IEs "Logging Duration", "Logging Interval", "Area Configuration" if included in IE "Logged Measurements Configuration Info" in variable LOGGED_MEAS_CONFIG and IEs "Absolute Time Info", "Trace reference", "Trace recording session" and "TCE Id" in variable LOGGED_MEAS_REPORT_VARIABLE;

2> store the current Registered PLMN in the IE "PLMN Identity" in variable LOGGED_MEAS_REPORT_VARIABLE;

2> start timer T326 with the timer value set to the IE "Logging Duration".

NOTE: The UE should not stop timer T326 unless explicitly stated when it moves to another RAT.

1> if IE "Logged ANR configuration Info" is present:

2> if variable LOG_ANR_CONFIG was already stored, discard the existing logged measurement configuration for ANR purpose as well as the associated logged measurement information as specified in 8.5.68;

2> store the received IEs in the IE "Logged ANR configuration Info" in variable LOG_ANR_CONFIG;

2> store the current Registered PLMN in the IE "PLMN Identity" in variable LOG_ANR_REPORT_VARIABLE;

2> store the list of Equivalent PLMNs in the IE "Equivalent PLMN Identity List" in variable LOG_ANR_REPORT_VARIABLE;

2> start timer T327 with the timer value set to the IE "Logging Duration" included in IE "Logged ANR configuration Info".

[TS 25.331, clause 8.5.64.3 (TP2)]

UE Shall:

1> if IE "Logged Measurements Report Request" is present:

2> if Registered PLMN is the same as the IE "PLMN Identity" stored in variable LOGGED_MEAS_REPORT_VARIABLE:

3> if an IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" in variable LOGGED_MEAS_REPORT_VARIABLE is present:

4> set IE "Logged Meas Report" in the UE INFORMATION RESPONSE as follows:

5> include the IE "Absolute Time Info" and set it to the value of the IE "Absolute Time Info" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "Trace reference" and set it to the value of IE "Trace reference" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "Trace recording session" and set it to the value of IE "Trace recording session" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "TCE Id" and set it to the value of IE "TCE Id" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IEs "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" and set it to include, in the same order as logged, one or more entries from LOGGED_MEAS_REPORT_VARIABLE;

5> clear the logged measurement results included in the list of IEs "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" from LOGGED_MEAS_REPORT_VARIABLE;

5> if the variable LOGGED_MEAS_REPORT_VARIABLE is not empty:

6> include IE "Logged Meas Available";

2> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

…

[TS 25.331, clause 8.5.65 (TP1, TP2)]

When in idle mode, CELL_PCH or URA_PCH state and Logged Measurements has been configured, the UE shall:

1> Store the available measurements according to the logged measurements configuration in LOGGED_MEAS_CONFIG variable as specified in subclause 8.5.65.2.

[TS 25.331, clause 8.5.65.2 (TP1, TP2, TP4)]

While T326 is running, the UE shall:

1> perform this logging in accordance with the following:

2> perform the logging while camping normally on an UTRA cell and the RPLMN of the UE is the same as the PLMN Identity stored in LOGGED_MEAS_REPORT_VARIABLE and, if the IE "Area Configuration" is present in variable LOGGED_MEAS_CONFIG, that is part of the concerned area;

2> perform the logging at regular intervals, as defined by the IE "Logging Interval" in variable LOGGED_MEAS_CONFIG;

2> when adding a logged measurement entry in variable LOGGED_MEAS_REPORT_VARIABLE, include the fields in accordance with the following:

3> set the IE "Relative Time Stamp" to indicate time relative to the moment at which the logged measurement configuration was received;

3> if GNSS location information became available during the last logging interval:

4> if the UE has been able to calculate a 3-dimensional position:

5> set IE "Ellipsoid point with altitude" to include the location coordinates;

4>else:

5> set IE "Ellipsoid point" to include the location coordinates:

3> set the IE "Cell ID" to indicate cell identity of the cell the UE is camping on obtained from system information;

3> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell that the UE is camping on for UTRA FDD;

3> set the "P-CCPCH RSCP" to include measured quantities for the cell that the UE is camping on for UTRA 1.28 Mcps TDD;

3> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", in order of decreasing ranking quantity as used for cell re-selection in each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

3> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes, only once, the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

2> when the memory reserved for the logging of measurements becomes full, stop timer T326 and performs the same actions as performed upon expiry of T326, as specified in 8.5.63.4.

Reference

3GPP TS 25.304 clause 5.7 and TS 25.331 clauses 8.1.3.6, 8.5.63.3, 8.5.64.3, 8.5.65, 8.5.65.2.

### 8.6.2.1.3 Test Purpose

1. Verify logging of configured Logged MDT measurements in Idle mode.
2. Verify logging and reporting of Logged MDT Intra-frequency measurements.
3. Verify indication of availability of Logged MDT measurements at RRC connection establishment.
4. Verify presence of correct time stamp in Logged MDT measurement reports.

### 8.6.2.1.4 Method of test

Initial Condition

System Simulator: 2 cells, Cell 1 and Cell 2 are active. Cell 1 and Cell 2 belongs to same PLMN, but have different Location Area Codes.

UE: PS-DCCH+DTCH_DCH (state 6-10) in Cell 1 as specified in clause 7.4 of TS 34.108.

Test Procedure

Table 8.6.2.1-1 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Column marked "T0" denotes the initial conditions, while column marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.6.2.1-1**

| Parameter | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -69 | -69 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -69 | -69 | -60 |

The UE is in CELL_DCH state of cell 1. SS transmits a LOGGING MEASUREMENT CONFIGURATION message to the UE to configure logged measurements.

The SS transmits a RRC CONNECTION RELEASE message to release the RRC connection.

The UE transmits a RRC CONNECTION RELEASE COMPLETE message and enters idle mode.

The SS waits 5s to allow UE to activate logging.

SS configures its downlink transmission power settings according to columns "T1" in Table 8.6.2.1-1.

The UE re-selects to Cell2 and performs Routing area update procedure. After completion of this procedure the UE is brought to idle mode and SS sends a paging message to the UE. The UE transmits a RRC CONNECTION REQUEST message and SS respond by transmitting a RRC CONNECTION SETUP. The UE transmits a RRC CONNECTION SETUP COMPLETE message with IE “Logged Meas Available” present.

SS transmits a UE INFORMATION REQUEST message with IE "Logged Measurements Report Request" present.

UE shall transmits a UE INFORMATION REPONSE message, and include IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD".

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | <-- | | LOGGING MEASUREMENT CONFIGURATION | |
| 2 | <-- | | RRC CONNECTION RELEASE | SS transmits a RRC CONNECTION RELEASE message to release the RRC connection. |
| 3 | --> | | RRC CONNECTION RELEASE COMPLETE | UE confirms the connection release and returns to Idle mode. |
| 4 | | | | Wait 5s to allow UE to activate logging. |
| 5 | - | | - | SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.6.2.1-1. The UE shall find that the cell 2 is better and attempt to perform a cell reselection. |
| 6 | - | | - | The UE re-selects to Cell2 and performs Routing area update procedure. After completion of this procedure the UE is brought to idle mode. |
| 7 | <-- | | Paging | SS transmits a Paging message on Cell 2. |

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 8 | --> | | RRC CONNECTION REQUEST | The UE transmits an RRC CONNECTION REQUEST message. |
| 9 | <-- | | RRC CONNECTION SETUP | SS transmit an RRC CONNECTION SETUP message. |
| 10 | --> | | RRC CONNECTION SETUP COMPLETE | The UE shall transmit an RRC CONNECTION SETUP COMPLETE message with IE “Logged Meas Available” present. |
| 10A | --> | | RRC: INITIAL DIRECT TRANSFER<br>NAS: SERVICE REQUEST | The UE transmits SERVICE REQUEST message. |
| 10B | | | | Steps 6 to 9 defined in TS34.108 clause 7.2.4.2 occurs to complete the service request procedure. |
| 11 | <-- | | UE INFORMATION REQUEST | SS transmits a UE INFORMATION REQUEST message with IE" Logged Measurements Report Request" set to “true”. |
| 12 | --> | | UE INFORMATION RESPONSE | UE shall transmit a UE INFORMATION RESPONSE message. |

Specific Message Contents

All messages have the same content as defined in 34.108 clause 9 with the following exceptions:

LOGGING MEASUREMENT CONFIGURATION (Step 1)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged ANR configuration Info | |
| - Absolute Time Info | Set to value corresponding to the absolute time when the message is sent |
| - Logging Duration | 10 min |
| - Logging Interval | 2.56 |
| - Trace reference | |
| - PLMN Identity | Same as MIB |
| - Trace ID | ‘0EF’H |
| -Trace recording session | ‘1A’H |
| - TCE Id | ‘5’H |
| - CHOICE Area Configuration | Not present |

RRC CONNECTION SETUP COMPLETE (step 9)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message. |
| Logged Meas Available | True |

UE INFORMATION REQUEST (Step 11)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Measurements Report Request | TRUE |
| Logged ANR Report Request | Not Present |

UE INFORMATION RESPONSE (FDD) (Step 12)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Meas Report | |
| - Absolute Time Info | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace reference | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace recording session | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - CHOICE mode | FDD |
| - List of measurements FDD | At least 1 entry where at least one entry complies to entry with index ‘x’ below. |
| - Logged Measurement Info-FDD[x] | |
| - Relative Time Stamp[x] | Checked to be present with a value bigger than 0. |
| - Logged Measurements Serving Cell[x] | |
| - Cell ID[x] | Cell 1 |
| - Primary CCPCH RSCP[x] | (0..91) |
| - CPICH Ec/N0 | (0..49) |
| - Logged Measurements Intra Frequency list[x] | Only 1 intra Frequency cell |
| - Primary CPICH info | Set to the scrambling code for cell 2 |
| - CPICH RSCP | (0..91) |
| - CPICH Ec/N0 | (0..49) |
| - Logged Meas Available | Not checked |

UE INFORMATION RESPONSE (TDD) (Step 12)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Meas Report | |
| - Absolute Time Info | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace reference | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace recording session | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT |

| Information Element | Value/remark |
|---|---|
| | CONFIGURATION in step 1 |
| - CHOICE mode | TDD |
| - List of measurements TDD | At least 1 entry where at least one entry complies to entry with index 'x' below. |
| - Logged Measurement Info-TDD[x] | |
| - Relative Time Stamp[x] | Checked to be present with a value bigger than 0. |
| - Logged Measurements Serving Cell[x] | |
| - Cell ID | Cell 1 |
| - Primary CCPCH RSCP | (0..91) |
| - Logged Measurements Intra Frequency list[x] | Only 1 intra Frequency cell |
| - Cell parameters Id | Cell parameter Id of Cell 2 |
| - Primary CCPCH RSCP | (0..91) |
| - Logged Meas Available | Not checked |

#### 8.6.2.1.5 Test requirement

At step 10 the UE shall transmit a RRC CONNECTION SETUP COMPLETE message on uplink DCCH including the IE "Logged Meas Available" (TP3).

At step 12 the UE shall transmit a UE INFORMATION RESPONSE message includes IE "Logged Meas Report" with logged Measurements of Cell 2 in the "Logged Measurements Intra Frequency Neighbouring Cells list" with the IE Absolute Time Info set equal to the value configured when the logged measurement configuration was received and the Relative Time Stamp indicating a value bigger than 0 indicating the elapsed time since the logged measurement configuration was received (TP1, TP2, TP4).

### 8.6.2.1a Logged MDT / Intra-frequency measurement, logging and reporting / Idle mode/PLMN list

#### 8.6.2.1a.1 Definition

#### 8.6.2.1a.2 Conformance requirement

[TS 25.304, clause 5.7 (TP1, TP2)]

The UE may be configured to perform logging of measurement results in idle mode, CELL_PCH and URA_PCH state with LOGGING MEASUREMENT CONFIGURATION message specified in TS 25.331 [4]. This configuration is valid while the logging duration timer is running.

If the configuration of logged measurements is valid, the UE shall perform logging of measurement results if all of the following conditions are met:

- the UE is in *camped normally* state in idle mode, CELL_PCH or URA_PCH state;
- the RPLMN of the UE is present in the MDT PLMN identity list, if received in the LOGGING MEASUREMENT CONFIGURATION message, or the RPLMN of the UE is the same as the RPLMN at the point of time of LOGGING MEASUREMENT CONFIGURATION message reception
- the UE is camped on a cell belonging to Area Configuration (see TS 25.331 [4]), if configured;
- the UE is camped on the RAT where the logged measurement configuration was received.

Otherwise, the logging of measurement results shall be suspended.

NOTE: Even if logging of measurement results is suspended, the logging duration timer and time stamp will continue, and the logged measurement configuration and corresponding log are kept.

[TS 25.331, clause 8.1.3.6 (TP1)]

The UE shall compare the value of the IE "Initial UE identity" in the received RRC CONNECTION SETUP message with the value of the variable INITIAL_UE_IDENTITY.

If the values are different, the UE shall:

1> ignore the rest of the message.

If the values are identical, the UE shall:

...

1> submit an RRC CONNECTION SETUP COMPLETE message to the lower layers on the uplink DCCH after successful state transition per subclause 8.6.3.3, with the contents set as specified below:

...

2> if an IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" in variable LOGGED_MEAS_REPORT_VARIABLE is present and registered PLMN is present in the IE "PLMN Identity List" stored in variable LOGGED_MEAS_REPORT_VARIABLE:

3> include IE "Logged Meas Available".

...

When the RRC CONNECTION SETUP COMPLETE message has been submitted to lower layers for transmission the UE shall:

...

[TS 25.331, clause 8.5.64.3 (TP2)]

UE Shall:

1> if IE "Logged Measurements Report Request" is present:

2> if Registered PLMN is present in the IE "PLMN Identity List" stored in variable LOGGED_MEAS_REPORT_VARIABLE:

3> if an IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" in variable LOGGED_MEAS_REPORT_VARIABLE is present:

5> set IE "Logged Meas Report" in the UE INFORMATION RESPONSE as follows:

5> include the IE "Absolute Time Info" and set it to the value of the IE "Absolute Time Info" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "Trace reference" and set it to the value of IE "Trace reference" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "Trace recording session" and set it to the value of the IE "Trace recording session" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "TCE Id" and set it to the value of IE "TCE Id" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IEs "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" and set it to include, in the same order as logged, one or more entries from LOGGED_MEAS_REPORT_VARIABLE;

5> clear the logged measurement results included in the list of IEs "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" from LOGGED_MEAS_REPORT_VARIABLE;

5> if the variable LOGGED_MEAS_REPORT_VARIABLE is not empty:

6> include IE "Logged Meas Available";

2> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

…

## Reference

3GPP TS 25.304 clause 5.7 and TS 25.331 clauses 8.1.3.6, 8.5.64.3,

### 8.6.2.1a.3 Test Purpose

1. Verify indication of availability of Logged MDT measurements at RRC connection establishment in the cell that belongs to the PLMN included in LOGGING MEASUREMENT CONFIGURATION message.

2. Verify that Logged Meas Report (logged in idle mode) is reported in UE INFORMATION RESPONSE message.

### 8.6.2.1a.4 Method of test

#### Initial Condition

System Simulator: 2 cells, Cell 1 and Cell 2 are active.

UE: PS-DCCH+DTCH_DCH (state 6-10) in Cell 1 as specified in clause 7.4 of TS 34.108, the Attach Accept message in P2 procedure includes PLMN2 in the equivalent PLMN list.

#### Test Procedure

Table 8.6.2.1a-1 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Column marked "T0" denotes the initial conditions, while column marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.6.2.1a-1**

| Parameter | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -69 | -69 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -69 | -69 | -60 |
| PLMN | | PLMN 1 | | PLMN 2 | |

The UE is in CELL_DCH state of cell 1. SS transmits a LOGGING MEASUREMENT CONFIGURATION message to the UE to configure logged measurements.

The SS transmits a RRC CONNECTION RELEASE message to release the RRC connection.

The UE transmits a RRC CONNECTION RELEASE COMPLETE message and enters idle mode

The SS waits 5s to allow UE to activate logging.

SS configures its downlink transmission power settings according to columns "T1" in Table 8.6.2.1a-1

The UE transmits a RRC CONNECTION REQUEST message and SS respond by transmitting a RRC CONNECTION SETUP. The UE transmits a RRC CONNECTION SETUP COMPLETE message with IE “Logged Meas Available” present.

Complete ROUTING AREA UPDATE procedure.

SS transmits a UE INFORMATION REQUEST message with IE "Logged Measurements Report Request" present.

UE shall transmits a UE INFORMATION REPONSE message, and include IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD".

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | <-- | | LOGGING MEASUREMENT CONFIGURATION | |
| 2 | <-- | | RRC CONNECTION RELEASE | SS transmits a RRC CONNECTION RELEASE message to release the RRC connection. |
| 3 | --> | | RRC CONNECTION RELEASE COMPLETE | UE confirms the connection release and returns to Idle mode. |
| 4 | - | | - | Wait 5s to allow UE to activate logging. |
| 5 | - | | - | SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.6.2.1a-1. The UE shall find that the cell 2 is better and attempt to perform a cell reselection. |
| 6 | --> | | RRC CONNECTION REQUEST | The UE transmits an RRC CONNECTION REQUEST message. |
| 7 | <-- | | RRC CONNECTION SETUP | SS transmit an RRC CONNECTION SETUP message. |
| 8 | --> | | RRC CONNECTION SETUP COMPLETE | The UE shall transmit an RRC CONNECTION SETUP COMPLETE message with IE “Logged Meas Available” present. |
| 9 | --> | | RRC: INITIAL DIRECT TRANSFER<br>NAS: ROUTING AREA UPDATE REQUEST | The UE transmits a ROUTING AREA UPDATE REQUEST message. |
| 10 | <-- | | RRC: DOWNLINK DIRECT TRANSFER<br>NAS: ROUTING AREA UPDATE ACCEPT | The SS transmits a ROUTING AREA UPDATE ACCEPT message. |
| 11 | --> | | RRC: UPLINK DIRECT TRANSFER<br>NAS: ROUTING AREA UPDATE COMPLETE | The UE transmits a ROUTING AREA UPDATE COMPLETE message. |
| 12 | <-- | | UE INFORMATION REQUEST | SS transmits a UE INFORMATION REQUEST message with IE" Logged Measurements Report Request" set to “true”. |
| 13 | --> | | UE INFORMATION RESPONSE | UE shall transmit a UE INFORMATION RESPONSE message. |

Specific Message Contents

All messages have the same content as defined in 34.108 clause 9 with the following exceptions:

LOGGING MEASUREMENT CONFIGURATION (Step 1)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |

| | |
|---|---|
| Logged Measurements Configuration Info | |
| - Absolute Time Info | Set to value corresponding to the absolute time when the message is sent |
| - Logging Duration | 10 min |
| - Logging Interval | 2.56 |
| - Trace reference | |
| - PLMN Identity | Same as MIB |
| - Trace ID | '0EF'H |
| -Trace recording session | '1A'H |
| - TCE Id | '5'H |
| - CHOICE Area Configuration | Not present |
| - PLMN Identity List | |
| - PLMN Identity | PLMN2 |

RRC CONNECTION SETUP COMPLETE (step 8)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message. |
| Logged Meas Available | True |

UE INFORMATION REQUEST (Step 12)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Measurements Report Request | TRUE |
| Logged ANR Report Request | Not Present |

UE INFORMATION RESPONSE (FDD) (Step 13)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Meas Report | |
| - Absolute Time Info | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace reference | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace recording session | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - CHOICE mode | FDD |
| - List of measurements FDD | At least 1 entry where at least one entry complies to entry with index 'x' below. |
| - Logged Measurement Info-FDD[x] | |
| - Relative Time Stamp[x] | Checked to be present with a value bigger than 0. |
| - Logged Measurements Serving Cell[x] | |
| - PLMN Identity | PLMN 1 |
| - Cell ID[x] | Cell 1 |
| - Primary CCPCH RSCP[x] | (0..91) |
| - CPICH Ec/N0 | (0..49) |

| Information Element | Value/remark |
|---|---|
| - Logged Measurements Intra Frequency list[x] | Only 1 intra Frequency cell |
| - Primary CPICH info | Set to the scrambling code for cell 2 |
| - CPICH RSCP | (0..91) |
| - CPICH Ec/N0 | (0..49) |
| - Logged Meas Available | Not checked |

UE INFORMATION RESPONSE (TDD) (Step 13)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Meas Report | |
| - Absolute Time Info | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace reference | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace recording session | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - CHOICE mode | TDD |
| - List of measurements TDD | At least 1 entry where at least one entry complies to entry with index 'x' below. |
| - Logged Measurement Info-TDD[x] | |
| - Relative Time Stamp[x] | Checked to be present with a value bigger than 0. |
| - Logged Measurements Serving Cell[x] | |
| - PLMN Identity | PLMN 1 |
| - Cell ID | Cell 1 |
| - Primary CCPCH RSCP | (0..91) |
| - Logged Measurements Intra Frequency list[x] | Only 1 intra Frequency cell |
| - Cell parameters Id | Cell parameter Id of Cell 2 |
| - Primary CCPCH RSCP | (0..91) |
| - Logged Meas Available | Not checked |

#### 8.6.2.1a.5 Test requirement

At step 8 the UE shall transmit a RRC CONNECTION SETUP COMPLETE message on uplink DCCH including the IE "Logged Meas Available" (TP1).

At step 13 the UE shall transmit a UE INFORMATION RESPONSE message includes IE "Logged Meas Report" with logged Measurements of Cell 2 in the "Logged Measurements Intra Frequency Neighbouring Cells list" (TP2).

### 8.6.2.2 Logged MDT / Intra-frequency measurement, logging and reporting / CELL_PCH

#### 8.6.2.2.1 Definition

#### 8.6.2.2.2 Conformance requirement

[TS 25.304, clause 5.7 (TP1)]

The UE may be configured to perform logging of measurement results in idle mode, CELL_PCH and URA_PCH state with LOGGING MEASUREMENT CONFIGURATION message specified in TS 25.331 [4]. This configuration is valid while the logging duration timer is running.

If the configuration of logged measurements is valid, the UE shall perform logging of measurement results if all of the following conditions are met:

- the UE is in *camped normally* state in idle mode, CELL_PCH or URA_PCH state;
- RPLMN of the UE is the same as the RPLMN at the point of time of LOGGING MEASUREMENT CONFIGURATION message reception
- the UE is camped on a cell belonging to Area Configuration (see TS 25.331 [4]), if configured;
- the UE is camped on the RAT where the logged measurement configuration was received.

Otherwise, the logging of measurement results shall be suspended.

NOTE: Even if logging of measurement results is suspended, the logging duration timer and time stamp will continue, and the logged measurement configuration and corresponding log are kept.

[TS 25.331, clause 8.3.1.3 (TP3)]

In case of cell update procedure the UE shall transmit a CELL UPDATE message.

…

The UE shall set the IEs in the CELL UPDATE message as follows:

…

1> if an IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" in variable LOGGED_MEAS_REPORT_VARIABLE is present and registered PLMN is the same as the IE "PLMN Identity" stored in variable LOGGED_MEAS_REPORT_VARIABLE:

2> include IE "Logged Meas Available".

…

[TS 25.331, clause 8.5.63.3 (TP1)]

Upon receiving the LOGGING MEASUREMENT CONFIGURATION message the UE shall:

1> if IE "Logged Measurements Configuration Info" is present:

2> if stored, discard the existing logged measurement configuration as well as the logged measurement information as specified in 8.5.66;

2> store the received IEs "Logging Duration", "Logging Interval", "Area Configuration" if included in IE "Logged Measurements Configuration Info" in variable LOGGED_MEAS_CONFIG and IEs "Absolute Time Info", "Trace reference", "Trace recording session" and "TCE Id" in variable LOGGED_MEAS_REPORT_VARIABLE;

2> store the current Registered PLMN in the IE "PLMN Identity" in variable LOGGED_MEAS_REPORT_VARIABLE;

2> start timer T326 with the timer value set to the IE "Logging Duration".

NOTE: The UE shall not stop timer T326 unless explicitly stated when it moves to another RAT.

…

[TS 25.331, clause 8.5.64.3 (TP2)]

UE Shall:

1> if IE "Logged Measurements Report Request" is present:

2> if Registered PLMN is the same as the IE "PLMN Identity" stored in variable LOGGED_MEAS_REPORT_VARIABLE:

3> if an IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" in variable LOGGED_MEAS_REPORT_VARIABLE is present:

6> set IE "Logged Meas Report" in the UE INFORMATION RESPONSE as follows:

5> include the IE "Absolute Time Info" and set it to the value of the IE "Absolute Time Info" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "Trace reference" and set it to the value of IE "Trace reference" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "Trace recording session" and set it to the value of IE "Trace recording session" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "TCE Id" and set it to the value of IE "TCE Id" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IEs "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" and set it to include, in the same order as logged, one or more entries from LOGGED_MEAS_REPORT_VARIABLE;

5> clear the logged measurement results included in the list of IEs "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" from LOGGED_MEAS_REPORT_VARIABLE;

5> if the variable LOGGED_MEAS_REPORT_VARIABLE is not empty:

6> include IE "Logged Meas Available";

2> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

…

[TS 25.331, clause 8.5.65 (TP1, TP2)]

When in idle mode, CELL_PCH or URA_PCH state and Logged Measurements has been configured, the UE shall:

1> Store the available measurements according to the logged measurements configuration in LOGGED_MEAS_CONFIG variable as specified in subclause 8.5.65.2.

[TS 25.331, clause 8.5.65.2 (TP1, TP2)]

While T326 is running, the UE shall:

1> perform this logging in accordance with the following:

2> perform the logging while camping normally on an UTRA cell and the RPLMN of the UE is the same as the PLMN Identity stored in LOGGED_MEAS_REPORT_VARIABLE and, if the IE "Area Configuration" is present in variable LOGGED_MEAS_CONFIG, that is part of the concerned area;

2> perform the logging at regular intervals, as defined by the IE "Logging Interval" in variable LOGGED_MEAS_CONFIG;

2> when adding a logged measurement entry in variable LOGGED_MEAS_REPORT_VARIABLE, include the fields in accordance with the following:

3> set the IE "Relative Time Stamp" to indicate time relative to the moment at which the logged measurement configuration was received;

3> if GNSS location information became available during the last logging interval:

4> if the UE has been able to calculate a 3-dimensional position:

5> set IE "Ellipsoid point with altitude" to include the location coordinates;

4>else:

5> set IE "Ellipsoid point" to include the location coordinates:

3> set the IE "Cell ID" to indicate cell identity of the cell the UE is camping on obtained from system information;

3> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell that the UE is camping on for UTRA FDD;

3> set the "P-CCPCH RSCP" to include measured quantities for the cell that the UE is camping on for UTRA 1.28 Mcps TDD;

3> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", in order of decreasing ranking quantity as used for cell re-selection in each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

3> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes, only once, the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

2> when the memory reserved for the logging of measurements becomes full, stop timer T326 and performs the same actions as performed upon expiry of T326, as specified in 8.5.63.4.

Reference

3GPP TS 25.304 clause 5.7 and TS 25.331 clauses 8.3.1.3, 8.5.63, 8.5.65, 8.5.65.2.

### 8.6.2.2.3 Test Purpose

1. Verify logging of configured Logged MDT measurements in CELL_PCH state.
2. Verify logging and reporting of Logged MDT Intra-frequency measurements.
3. Verify indication of availability of Logged MDT measurements in CELL UPDATE message.

### 8.6.2.2.4 Method of test

Initial Condition

System Simulator: 2 cells, Cell 1 and Cell 2 are active.

SYSTEM INFORMATION BLOCK TYPE 4 (see specific message contents).

UE: PS-DCCH+DTCH_DCH (state 6-10) in Cell 1 as specified in clause 7.4 of TS 34.108.

Test Procedure

Table 8.6.2.2-1 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Column marked "T0" denotes the initial conditions, while column marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.6.2.2-1**

| Parameter | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -69 | -69 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -69 | -69 | -60 |

The UE is in CELL_DCH state of cell 1. SS transmits a LOGGING MEASUREMENT CONFIGURATION message to the UE to configure logged measurements.

SS transmits a PHYSICAL CHANNEL RECONFIGURATION message, which invokes the UE to transit from CELL_DCH to CELL_PCH.

The UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and enters CELL_PCH state.

Wait 5s to allow UE to activate logging.

SS configures its downlink transmission power settings according to columns "T1" in Table 8.6.2.2-1

When the UE detects the presence of cell 2, it moves to CELL_FACH state and transmits a CELL UPDATE message on the uplink CCCH. The IE "Logged Meas Available" shall be present in the message.

Upon reception of CELL_UPDATE message, SS replies with a CELL UPDATE CONFIRM message with the IE "RRC State Indicator" set to "CELL_DCH".

SS transmits a UE INFORMATION REQUEST message, and the IE "Logged Measurements Report Request" is present.

UE shall transmits a UE INFORMATION REPONSE message, and include IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD".

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | LOGGING MEASUREMENT CONFIGURATION | |
| 1a | | | | SS waits for 200msec to ensure UE acts upon Step 1 before proceeding to next step. |
| 2 | ← | | PHYSICAL CHANNEL RECONFIGURATION | The IE "RRC state indicator" is set to "CELL_PCH". |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE sends this message before it completes state transition. |
| 4 | | | | Wait 5s to allow UE to activate logging. |
| 5 | | | | SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.6.2.2-1. The UE shall find that the cell 2 is better and attempt to perform a cell reselection. |
| 6 | → | | CELL UPDATE | The UE moves to CELL_FACH state and transmits this message with the IE "Logged Meas Available" set as true |
| 7 | ← | | CELL UPDATE CONFIRM | IE "RRC State Indicator" is set to "CELL_DCH". |
| 7a | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 8 | ← | | UE INFORMATION REQUEST | SS transmits a UE INFORMATION REQUEST message with IE" Logged Measurements Report Request" set to “true”. |
| 9 | → | | UE INFORMATION RESPONSE | UE shall transmit a UE INFORMATION RESPONSE message. |

Specific Message Contents

SYSTEM INFORMATION BLOCK TYPE 4

Use the same message type found in clause 6.1.0b of TS 34.108, with the following exceptions for Cell 1:

| | |
|---|---|
| - Qqualmin | -16 |

All messages have the same content as defined in 34.108 clause 9 with the following exceptions:

LOGGING MEASUREMENT CONFIGURATION (Step 1)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged ANR configuration Info | |
| - Absolute Time Info | Set to value corresponding to the absolute time when the message is sent |
| - Logging Duration | 10 min |
| - Logging Interval | 2.57 |
| - Trace reference | |
| - PLMN Identity | Same as MIB |
| - Trace ID | '0EF'H |
| -Trace recording session | '1A'H |
| - TCE Id | '5'H |
| - CHOICE Area Configuration | Not present |

PHYSICAL CHANNEL RECONFIGURATION (Steps 2)

Use the same message sub-type titled "Packet to CELL_PCH from CELL_DCH in PS" in TS 34.108 clause 9 with following exceptions.

| Information Element | Value/remark |
|---|---|
| Downlink information for each radio link<br>-Primary CPICH info<br>-Primary scrambling code | <br><br>100 |

CELL UPDATE (Step 6)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI<br>- SRNC Identity<br>- S-RNTI<br>Cell Update Cause<br>Logged Meas Available | <br>Check to see if set to '0000 0000 0001'<br>Check to see if set to '0000 0000 0000 0000 0001'<br>Check to see if set to 'Cell Re-selection'<br>TRUE |

CELL UPDATE CONFIRM (Step 7)

Use the same message sub-type found in TS 34.108, clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State indicator | CELL_DCH |
| CHOICE channel requirement | |
| Uplink DPCH info | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A4. |
| Downlink information common for all radio links | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A4. |
| Downlink information per radio link list | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A4. |

UE INFORMATION REQUEST (Step 8)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Measurements Report Request | TRUE |
| Logged ANR Report Request | Not Present |

UE INFORMATION RESPONSE (FDD) (Step 9)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Meas Report | |
| - Absolute Time Info | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace reference | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace recording session | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - CHOICE mode | FDD |
| - List of measurements FDD | At least 1 entry where at least one entry complies to entry with index ‘x’ below. |
| - Logged Measurement Info-FDD[x] | |
| - Relative Time Stamp[x] | Not checked |
| - Logged Measurements Serving Cell[x] | |
| - Cell ID[x] | Cell 1 |
| - Primary CCPCH RSCP[x] | (0..91) |
| - CPICH Ec/N0 | (0..49) |
| - Logged Measurements Intra Frequency list[x] | Only 1 intra Frequency cell |
| - Primary CPICH info | Set to the scrambling code for cell 2 |
| - CPICH RSCP | (0..91) |
| - CPICH Ec/N0 | (0..49) |
| - Logged Meas Available | Not checked |

UE INFORMATION RESPONSE (TDD) (Step 9)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Meas Report | |
| - Absolute Time Info | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace reference | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace recording session | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT |

| Information Element | Value/remark |
|---|---|
| | CONFIGURATION in step 1 |
| - CHOICE mode | TDD |
| - List of measurements TDD | At least 1 entry where at least one entry complies to entry with index 'x' below. |
| - Logged Measurement Info-TDD[x] | |
| - Relative Time Stamp[x] | Not checked |
| - Logged Measurements Serving Cell[x] | |
| - Cell ID | Cell 1 |
| - Primary CCPCH RSCP | (0..91) |
| - Logged Measurements Intra Frequency list[x] | Only 1 intra Frequency cell |
| - Cell parameters Id | Cell parameter Id of Cell 2 |
| - Primary CCPCH RSCP | (0..91) |
| - Logged Meas Available | Not checked |

#### 8.6.2.2.5 Test requirement

At step 6 the UE shall transmit a CELL UPDATE message on uplink DCCH including the IE "Logged Meas Available" (TP3).

At step 9 the UE shall transmit a UE INFORMATION RESPONSE message includes IE "Logged Meas Report" with logged Measurements of Cell 2 in the "Logged Measurements Intra Frequency Neighbouring Cells list" (TP1, TP2).

### 8.6.2.2a Logged MDT / Intra-frequency measurement, logging and reporting / CELL_PCH/PLMN list

#### 8.6.2.2a.1 Definition

#### 8.6.2.2a.2 Conformance requirement

[TS 25.304, clause 5.7 (TP1, TP2)]

The UE may be configured to perform logging of measurement results in idle mode, CELL_PCH and URA_PCH state with LOGGING MEASUREMENT CONFIGURATION message specified in TS 25.331 [4]. This configuration is valid while the logging duration timer is running.

If the configuration of logged measurements is valid, the UE shall perform logging of measurement results if all of the following conditions are met:

- the UE is in *camped normally* state in idle mode, CELL_PCH or URA_PCH state;
- the RPLMN of the UE is present in the MDT PLMN identity list, if received in the LOGGING MEASUREMENT CONFIGURATION message, or the RPLMN of the UE is the same as the RPLMN at the point of time of LOGGING MEASUREMENT CONFIGURATION message reception
- the UE is camped on a cell belonging to Area Configuration (see TS 25.331 [4]), if configured;
- the UE is camped on the RAT where the logged measurement configuration was received.

Otherwise, the logging of measurement results shall be suspended.

NOTE: Even if logging of measurement results is suspended, the logging duration timer and time stamp will continue, and the logged measurement configuration and corresponding log are kept.

[TS 25.331, clause 8.3.1.3 (TP1)]

In case of cell update procedure the UE shall transmit a CELL UPDATE message.

…

The UE shall set the IEs in the CELL UPDATE message as follows:

…

1> if an IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" in variable LOGGED_MEAS_REPORT_VARIABLE is present and registered PLMN is the same as the IE "PLMN Identity" stored in variable LOGGED_MEAS_REPORT_VARIABLE:

2> include IE "Logged Meas Available".

…

[TS 25.331, clause 8.5.64.3 (TP2)]

UE Shall:

1> if IE "Logged Measurements Report Request" is present:

2> if Registered PLMN is present in the IE "PLMN Identity List" stored in variable LOGGED_MEAS_REPORT_VARIABLE:

3> if an IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" in variable LOGGED_MEAS_REPORT_VARIABLE is present:

7> set IE "Logged Meas Report" in the UE INFORMATION RESPONSE as follows:

5> include the IE "Absolute Time Info" and set it to the value of the IE "Absolute Time Info" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "Trace reference" and set it to the value of IE "Trace reference" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "Trace recording session" and set it to the value of the IE "Trace recording session" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "TCE Id" and set it to the value of IE "TCE Id" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IEs "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" and set it to include, in the same order as logged, one or more entries from LOGGED_MEAS_REPORT_VARIABLE;

5> clear the logged measurement results included in the list of IEs "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" from LOGGED_MEAS_REPORT_VARIABLE;

5> if the variable LOGGED_MEAS_REPORT_VARIABLE is not empty:

6> include IE "Logged Meas Available";

2> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

…

### Reference

3GPP TS 25.304 clause 5.7 and TS 25.331 clauses 8.3.1.3, 8.5.64.3,

### 8.6.2.2a.3 Test Purpose

1. Verify indication of availability of Logged MDT measurements obtained in CELL_PCH state at cell update procedure in the cell that belongs to the PLMN included in LOGGING MEASUREMENT CONFIGURATION message.

2. Verify that Logged Meas Report (logged in CELL_PCH state) is reported in UE INFORMATION RESPONSE message.

### 8.6.2.2a.4 Method of test

### Initial Condition

System Simulator: 2 cells, Cell 1 and Cell 2 are active.

UE: PS-DCCH+DTCH_DCH (state 6-10) in Cell 1 as specified in clause 7.4 of TS 34.108, the Attach Accept message in P2 procedure includes PLMN2 in the equivalent PLMN list.

Test Procedure

Table 8.6.2.2a-1 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Column marked "T0" denotes the initial conditions, while column marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.6.2.2a-1**

| Parameter | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -69 | -69 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -69 | -69 | -60 |
| PLMN | | PLMN 1 | | PLMN 2 | |

The UE is in CELL_DCH state of cell 1. SS transmits a LOGGING MEASUREMENT CONFIGURATION message to the UE to configure logged measurements.

SS transmits a PHYSICAL CHANNEL RECONFIGURATION message, which invokes the UE to transit from CELL_DCH to CELL_PCH.

The UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and enters CELL_PCH state.

Wait 5s to allow UE to activate logging.

SS configures its downlink transmission power settings according to columns "T1" in Table 8.6.2.2a-1

When the UE detects the presence of cell 2, it moves to CELL_FACH state and transmits a CELL UPDATE message on the uplink CCCH. The IE "Logged Meas Available" shall be present in the message.

Upon reception of CELL_UPDATE message, SS replies with a CELL UPDATE CONFIRM message with the IE "RRC State Indicator" set to "CELL_DCH".

Completes ROUTING AREA UPDATE procedure.

SS transmits a UE INFORMATION REQUEST message, and the IE "Logged Measurements Report Request" is present.

UE shall transmits a UE INFORMATION REPONSE message, and include IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD".

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | LOGGING MEASUREMENT CONFIGURATION | |
| 2 | ← | | PHYSICAL CHANNEL RECONFIGURATION | The IE "RRC state indicator" is set to "CELL_PCH". |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE sends this message before it completes state transition. |
| 4 | - | | - | Wait 5s to allow UE to activate logging. |
| 5 | - | | - | SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.6.2.2a-1. The UE shall find that the cell 2 is better and attempt to perform a cell reselection. |

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 6 | → | | CELL UPDATE | The UE moves to CELL_FACH state and transmits this message with the IE "Logged Meas Available" set as true |
| 7 | ← | | CELL UPDATE CONFIRM | IE "RRC State Indicator" is set to "CELL_DCH". |
| 7a | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 8 | --> | | RRC: INITIAL DIRECT TRANSFER<br>NAS: ROUTING AREA UPDATE REQUEST | The UE transmits a ROUTING AREA UPDATE REQUEST message. |
| 9 | <-- | | RRC: DOWNLINK DIRECT TRANSFER<br>NAS: ROUTING AREA UPDATE ACCEPT | The SS transmits a ROUTING AREA UPDATE ACCEPT message. |
| 10 | --> | | RRC: UPLINK DIRECT TRANSFER<br>NAS: ROUTING AREA UPDATE COMPLETE | The UE transmits a ROUTING AREA UPDATE COMPLETE message. |
| 11 | ← | | UE INFORMATION REQUEST | SS transmits a UE INFORMATION REQUEST message with IE" Logged Measurements Report Request" set to “true”. |
| 12 | → | | UE INFORMATION RESPONSE | UE shall transmit a UE INFORMATION RESPONSE message. |

Specific Message Contents

All messages have the same content as defined in 34.108 clause 9 with the following exceptions:

LOGGING MEASUREMENT CONFIGURATION (Step 1)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged ANR configuration Info | |
| - Absolute Time Info | Set to value corresponding to the absolute time when the message is sent |
| - Logging Duration | 10 min |
| - Logging Interval | 2.57 |
| - Trace reference | |
| - PLMN Identity | Same as MIB |
| - Trace ID | ‘0EF’H |
| -Trace recording session | ‘1A’H |
| - TCE Id | ‘5’H |
| - CHOICE Area Configuration | Not present |
| - PLMN Identity List | |
| - PLMN Identity | PLMN2 |

PHYSICAL CHANNEL RECONFIGURATION (Steps 2)

Use the same message sub-type titled "Packet to CELL_PCH from CELL_DCH in PS" in TS 34.108 clause 9 with following exceptions:

| Information Element | Value/remark |
|---|---|
| Downlink information for each radio link<br>-Primary CPICH info<br>-Primary scrambling code | <br><br>100 |

CELL UPDATE (Step 6)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI<br>- SRNC Identity<br>- S-RNTI<br>Cell Update Cause<br>Logged Meas Available | <br>Check to see if set to '0000 0000 0001'<br>Check to see if set to '0000 0000 0000 0000 0001'<br>Check to see if set to 'Cell Re-selection'<br>TRUE |

CELL UPDATE CONFIRM (Step 7)

Use the same message sub-type found in TS 34.108, clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State indicator | CELL_DCH |
| CHOICE channel requirement | |
| Uplink DPCH info | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A4. |
| Downlink information common for all radio links | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A4. |
| Downlink information per radio link list | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A4. |

UE INFORMATION REQUEST (Step 11)

| Information Element | Value/remark |
|---|---|
| Message Type<br>RRC transaction identifier<br>Integrity check info<br>- message authentication code<br><br><br>- RRC message sequence number<br>Logged Measurements Report Request<br>Logged ANR Report Request | <br>Arbitrarily selects an integer between 0 and 3<br><br>SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.<br>SS provides the value of this IE, from its internal counter.<br>TRUE<br>Not Present |

UE INFORMATION RESPONSE (FDD) (Step 12)

| Information Element | Value/remark |
|---|---|
| Message Type<br>RRC transaction identifier<br>Integrity check info<br>- message authentication code<br><br><br>- RRC message sequence number<br>Logged Meas Report<br>- Absolute Time Info<br><br>- Trace reference<br><br>- Trace recording session | <br>Arbitrarily selects an integer between 0 and 3<br><br>SS calculates the value of MAC-I for this message and writes to this IE. | Information Element | Value/remark |
|---|---|
| | CONFIGURATION in step 1 |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - CHOICE mode | FDD |
| - List of measurements FDD | At least 1 entry where at least one entry complies to entry with index 'x' below. |
| - Logged Measurement Info-FDD[x] | |
| - Relative Time Stamp[x] | Not checked |
| - Logged Measurements Serving Cell[x] | |
| - PLMN Identity | PLMN 1 |
| - Cell ID[x] | Cell 1 |
| - Primary CCPCH RSCP[x] | (0..91) |
| - CPICH Ec/N0 | (0..49) |
| - Logged Measurements Intra Frequency list[x] | Only 1 intra Frequency cell |
| - Primary CPICH info | Set to the scrambling code for cell 2 |
| - CPICH RSCP | (0..91) |
| - CPICH Ec/N0 | (0..49) |
| - Logged Meas Available | Not checked |

UE INFORMATION RESPONSE (TDD) (Step 12)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Meas Report | |
| - Absolute Time Info | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace reference | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace recording session | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - CHOICE mode | TDD |
| - List of measurements TDD | At least 1 entry where at least one entry complies to entry with index 'x' below. |
| - Logged Measurement Info-TDD[x] | |
| - Relative Time Stamp[x] | Not checked |
| - Logged Measurements Serving Cell[x] | |
| - PLMN Identity | PLMN 1 |
| - Cell ID | Cell 1 |
| - Primary CCPCH RSCP | (0..91) |
| - Logged Measurements Intra Frequency list[x] | Only 1 intra Frequency cell |
| - Cell parameters Id | Cell parameter Id of Cell 2 |
| - Primary CCPCH RSCP | (0..91) |
| - Logged Meas Available | Not checked |

### 8.6.2.2a.5 Test requirement

At step 6 the UE shall transmit a CELL UPDATE message on uplink DCCH including the IE "Logged Meas Available" (TP1).

At step 12 the UE shall transmit a UE INFORMATION RESPONSE message includes IE "Logged Meas Report" with logged Measurements of Cell 2 in the "Logged Measurements Intra Frequency Neighbouring Cells list" (TP2).

### 8.6.2.3 Logged MDT / Inter-frequency measurement, logging and reporting / URA_PCH

#### 8.6.2.3.1 Definition

#### 8.6.2.3.2 Conformance requirement

[TS 25.304, clause 5.7 (TP1)]

The UE may be configured to perform logging of measurement results in idle mode, CELL_PCH and URA_PCH state with LOGGING MEASUREMENT CONFIGURATION message specified in TS 25.331 [4]. This configuration is valid while the logging duration timer is running.

If the configuration of logged measurements is valid, the UE shall perform logging of measurement results if all of the following conditions are met:

- the UE is in *camped normally* state in idle mode, CELL_PCH or URA_PCH state;
- RPLMN of the UE is the same as the RPLMN at the point of time of LOGGING MEASUREMENT CONFIGURATION message reception
- the UE is camped on a cell belonging to Area Configuration (see TS 25.331 [4]), if configured;
- the UE is camped on the RAT where the logged measurement configuration was received.

Otherwise, the logging of measurement results shall be suspended.

NOTE: Even if logging of measurement results is suspended, the logging duration timer and time stamp will continue, and the logged measurement configuration and corresponding log are kept.

[TS 25.331, clause 8.3.1.3 (TP3)]

…

In case of URA update procedure the UE shall transmit a URA UPDATE message.

…

The UE shall set the IEs in the URA UPDATE message as follows:

…

1> if an IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" in variable LOGGED_MEAS_REPORT_VARIABLE is present and registered PLMN is the same as the IE "PLMN Identity" stored in variable LOGGED_MEAS_REPORT_VARIABLE:

2> include IE "Logged Meas Available".

…

[TS 25.331, clause 8.5.63.3 (TP1)]

Upon receiving the LOGGING MEASUREMENT CONFIGURATION message the UE shall:

1> if IE "Logged Measurements Configuration Info" is present:

2> if stored, discard the existing logged measurement configuration as well as the logged measurement information as specified in 8.5.66;

2> store the received IEs "Logging Duration", "Logging Interval", "Area Configuration" if included in IE "Logged Measurements Configuration Info" in variable LOGGED_MEAS_CONFIG and IEs "Absolute Time Info", "Trace reference", "Trace recording session" and "TCE Id" in variable LOGGED_MEAS_REPORT_VARIABLE;

2> store the current Registered PLMN in the IE "PLMN Identity" in variable LOGGED_MEAS_REPORT_VARIABLE;

2> start timer T326 with the timer value set to the IE "Logging Duration".

NOTE: The UE shall not stop timer T326 unless explicitly stated when it moves to another RAT.

…

[TS 25.331, clause 8.5.64.3 (TP2)]

UE Shall:

1> if IE "Logged Measurements Report Request" is present:

2> if Registered PLMN is the same as the IE "PLMN Identity" stored in variable LOGGED_MEAS_REPORT_VARIABLE:

3> if an IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" in variable LOGGED_MEAS_REPORT_VARIABLE is present:

8> set IE "Logged Meas Report" in the UE INFORMATION RESPONSE as follows:

5> include the IE "Absolute Time Info" and set it to the value of the IE "Absolute Time Info" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "Trace reference" and set it to the value of IE "Trace reference" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "Trace recording session" and set it to the value of IE "Trace recording session" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "TCE Id" and set it to the value of IE "TCE Id" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IEs "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" and set it to include, in the same order as logged, one or more entries from LOGGED_MEAS_REPORT_VARIABLE;

5> clear the logged measurement results included in the list of IEs "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" from LOGGED_MEAS_REPORT_VARIABLE;

5> if the variable LOGGED_MEAS_REPORT_VARIABLE is not empty:

6> include IE "Logged Meas Available";

2> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

…

[TS 25.331, clause 8.5.65 (TP1, TP2)]

When in idle mode, CELL_PCH or URA_PCH state and Logged Measurements has been configured, the UE shall:

1> Store the available measurements according to the logged measurements configuration in LOGGED_MEAS_CONFIG variable as specified in subclause 8.5.65.2.

[TS 25.331, clause 8.5.65.2 (TP1, TP2)]

While T326 is running, the UE shall:

1> perform this logging in accordance with the following:

2> perform the logging while camping normally on an UTRA cell and the RPLMN of the UE is the same as the PLMN Identity stored in LOGGED_MEAS_REPORT_VARIABLE and, if the IE "Area Configuration" is present in variable LOGGED_MEAS_CONFIG, that is part of the concerned area;

2> perform the logging at regular intervals, as defined by the IE "Logging Interval" in variable LOGGED_MEAS_CONFIG;

2> when adding a logged measurement entry in variable LOGGED_MEAS_REPORT_VARIABLE, include the fields in accordance with the following:

3> set the IE "Relative Time Stamp" to indicate time relative to the moment at which the logged measurement configuration was received;

3> if GNSS location information became available during the last logging interval:

4> if the UE has been able to calculate a 3-dimensional position:

5> set IE "Ellipsoid point with altitude" to include the location coordinates;

4>else:

5> set IE "Ellipsoid point" to include the location coordinates:

3> set the IE "Cell ID" to indicate cell identity of the cell the UE is camping on obtained from system information;

3> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell that the UE is camping on for UTRA FDD;

3> set the "P-CCPCH RSCP" to include measured quantities for the cell that the UE is camping on for UTRA 1.28 Mcps TDD;

3> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", in order of decreasing ranking quantity as used for cell re-selection in each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

3> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes, only once, the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

2> when the memory reserved for the logging of measurements becomes full, stop timer T326 and performs the same actions as performed upon expiry of T326, as specified in 8.5.63.4.

#### 8.6.2.3.3 Test Purpose

1. Verify logging of configured Logged MDT measurements in URA_PCH state
2. Verify logging and reporting of Logged MDT Inter-frequency measurements
3. Verify indication of availability of Logged MDT measurements in URA UPDATE message

#### 8.6.2.3.4 Method of test

##### Initial Condition

System Simulator: 2 cells, Cell 1 and Cell 4 are active.

SYSTEM INFORMATION BLOCK TYPE 4 (see specific message contents).

UE: PS-DCCH+DTCH_DCH (state 6-10) in Cell 1 as specified in clause 7.4 of TS 34.108.

##### Test Procedure

Table 8.6.2.3-1 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Column marked "T0" denotes the initial conditions, while column marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.6.2.3-1**

| Parameter | Unit | Cell 1 | | Cell 4 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -69 | -69 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -69 | -69 | -60 |
| URA ID | | URA-ID 1 | | URA-ID 2 | |

The UE is in CELL_DCH state of cell 1. SS transmits a LOGGING MEASUREMENT CONFIGURATION message to the UE to configure logged measurements.

SS transmits a PHYSICAL CHANNEL RECONFIGURATION message, which invokes the UE to transit from CELL_DCH to URA_PCH.

The UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and enters URA_PCH state.

Wait 5s to allow UE to activate logging.

SS configures its downlink transmission power settings according to columns "T1" in Table 8.6.2.3-1.

When the UE detects the presence of cell 4, it moves to CELL_FACH state and transmits a URA UPDATE message on the uplink CCCH. The IE "Logged Meas Available" shall be present in the message.

Upon reception of URA_UPDATE message, SS replies with a URA UPDATE CONFIRM message with the IE "RRC State Indicator" set to "URA_PCH".

SS Pages the UE using Paging type 1 message, receives Cell-Update message from UE and SS can transmits Cell-Update message with the IE ‘RRC State Indicator” set to CELL-DCH.

SS transmits a UE INFORMATION REQUEST message, and the IE "Logged Measurements Report Request" is present.

UE shall transmits a UE INFORMATION REPONSE message, and include IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD".

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | LOGGING MEASUREMENT CONFIGURATION | The UE is in idle mode and camped onto cell 1. |
| 2 | ← | | PHYSICAL CHANNEL RECONFIGURATION | The IE "RRC state indicator" is set to "URA_PCH". |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE sends this message before it completes state transition. |
| 4 | | | | Wait 5s to allow UE to activate logging. |
| 5 | | | | SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.6.2.3-1. The UE shall find that the Cell 4 is better and attempt to perform a cell reselection. |

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 6 | → | | URA UPDATE | The UE transmits this message with the IE "Logged Meas Available" set as true |
| 7 | ← | | URA UPDATE CONFIRM | IE "RRC State Indicator" is set to "URA_PCH". |
| 7a | | | | SS waits for 5 seconds before proceeding to next step. |
| 7b | ← | | PAGING TYPE 1 | SS transmits Paging Type 1 message to UE. |
| 7c | → | | CELL UPDATE | The UE transmits Cell-Update message. |
| 7d | ← | | CELL UPDATE CONFIRM | IE “RRC State Indicator” is set to Cell-DCH. |
| 7e | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 8 | ← | | UE INFORMATION REQUEST | SS transmits a UE INFORMATION REQUEST message with IE "Logged Measurements Report Request" set to “true”. |
| 9 | → | | UE INFORMATION RESPONSE | UE shall transmit a UE INFORMATION RESPONSE message includes IE “Logged Meas Report". |

Specific Message Contents

LOGGING MEASUREMENT CONFIGURATION (Step 1)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged ANR configuration Info | |
| - Absolute Time Info | Set to value corresponding to the absolute time when the message is sent |
| - Logging Duration | 10 min |
| - Logging Interval | 2.56 |
| - Trace reference | |
| - PLMN Identity | Same as MIB |
| - Trace ID | ‘0EF’H |
| -Trace recording session | ‘1A’H |
| - TCE Id | ‘5’H |
| - CHOICE Area Configuration | Not present |

PHYSICAL CHANNEL RECONFIGURATION (Steps 2)

Use the same message sub-type titled "Packet to URA_PCH from CELL_DCH in PS" in TS 34.108 clause 9.

URA UPDATE (Step 6)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - SRNC Identity | Check to see if set to '0000 0000 0001' |
| - S-RNTI | Check to see if set to '0000 0000 0000 0000 0001' |
| URA Update Cause | Check to see if set to 'change of URA' |
| Logged Meas Available | TRUE |

PAGING TYPE 1 (Step 7b)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| Paging record list | Only 1 entry |
| Paging record | |
| - CHOICE Used paging identity | UTRAN identity |
| - U-RNTI | |
| - SRNC Identity | Set to the previously assigned SRNC identity |
| - S-RNTI | Set to previously assigned S-RNTI |
| - CN originated page to connected mode UE | Not Present |
| BCCH modification info | Not Present |

CELL UPDATE (Step 7c)

Check to see if the same message type found in TS 34.108, clause 9 is received, with the following exceptions:

| Information Element | Value/remark |
|---|---|
| U-RNTI | Checked to see if it is set to the same values as in step 7b |
| - SRNC identity | |
| - S-RNTI | |
| Cell update cause | Paging response |

CELL UPDATE CONFIRM (Step 7d)

Use the same message sub-type found in TS 34.108, clause 9 with the following exceptions:

| Information Element | Value/remark |
|---|---|
| RRC State indicator | CELL_DCH |
| CHOICE channel requirement | |
| Uplink DPCH info | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A4. |
| Downlink information common for all radio links | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A4. |
| Downlink information per radio link list | Same as the set defined in RADIO BEARER SETUP message found in TS 34.108 clause 9 under condition A4. |

UE INFORMATION REQUEST (Step 8)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Measurements Report Request | TRUE |
| Logged ANR Report Request | Not Present |

UE INFORMATION RESPONSE (FDD) (Step 9)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Meas Report | |
| - Absolute Time Info | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace reference | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace recording session | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - CHOICE mode | FDD |
| - List of measurements FDD | At least 1 entry where at least one entry complies to entry with index 'x' below. |
| - Logged Measurement Info-FDD[x] | |
| - Relative Time Stamp[x] | Not checked |
| - Logged Measurements Serving Cell[x] | |
| - Cell ID[x] | Cell 1 |
| - Primary CCPCH RSCP[x] | (0..91) |
| - CPICH Ec/N0 | (0..49) |
| - Logged Measurements Inter Frequency | Only 1 inter Frequency |
| Neighbouring Cells list[x] | |
| - Frequency Info | f2 |
| - Logged Measurements Inter-frequency | Only 1 cell |
| Neighbouring Cells list | |
| - Primary CPICH info | Set to the scrambling code for cell 4 |
| - CPICH RSCP | (0..91) |
| - CPICH Ec/N0 | (0..49) |
| - Logged Meas Available | Not checked |

UE INFORMATION RESPONSE (TDD) (Step 9)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Meas Report | |
| - Absolute Time Info | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace reference | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace recording session | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - CHOICE mode | TDD |
| - List of measurements TDD | At least 1 entry where at least one entry complies to entry with index 'x' below. |
| - Logged Measurement Info-TDD[x] | |
| - Relative Time Stamp[x] | Not checked |
| - Logged Measurements Serving Cell[x] | |
| - Cell ID | Cell 1 |
| - Primary CCPCH RSCP | (0..91) |

| Information Element | Value/remark |
|---|---|
| - Logged Measurements Inter Frequency Neighbouring Cells list[x] | Only 1 inter Frequency |
| - Frequency Info | Frequency of Cell 4 |
| - Logged Measurements Inter-frequency Neighbouring Cells list | Only 1 cell |
| - Cell parameters Id | Cell parameter Id of Cell 4 |
| - Primary CCPCH RSCP | (0..91) |
| - Logged Meas Available | Not checked |

#### 8.6.2.3.5 Test requirement

At step 6 the UE shall transmit a URA UPDATE message on uplink DCCH including the IE “Logged Meas Available” (TP3).

At step 9 the UE shall transmit a UE INFORMATION RESPONSE message includes IE “Logged Meas Report" with logged Measurements of Cell 4 in the “Logged Measurements Inter Frequency Neighbouring Cells list” (TP1, TP2).

### 8.6.2.3a Logged MDT / Intra-frequency measurement, logging and reporting / URA_PCH / PLMN list

#### 8.6.2.3a.1 Definition

#### 8.6.2.3a.2 Conformance requirement

[TS 25.304, clause 5.7 (TP1, TP2)]

The UE may be configured to perform logging of measurement results in idle mode, CELL_PCH and URA_PCH state with LOGGING MEASUREMENT CONFIGURATION message specified in TS 25.331 [4]. This configuration is valid while the logging duration timer is running.

If the configuration of logged measurements is valid, the UE shall perform logging of measurement results if all of the following conditions are met:

- the UE is in *camped normally* state in idle mode, CELL_PCH or URA_PCH state;
- the RPLMN of the UE is present in the MDT PLMN identity list, if received in the LOGGING MEASUREMENT CONFIGURATION message, or the RPLMN of the UE is the same as the RPLMN at the point of time of LOGGING MEASUREMENT CONFIGURATION message reception
- the UE is camped on a cell belonging to Area Configuration (see TS 25.331 [4]), if configured;
- the UE is camped on the RAT where the logged measurement configuration was received.

Otherwise, the logging of measurement results shall be suspended.

NOTE: Even if logging of measurement results is suspended, the logging duration timer and time stamp will continue, and the logged measurement configuration and corresponding log are kept.

[TS 25.331, clause 8.3.1.3 (TP1)]

…

In case of URA update procedure the UE shall transmit a URA UPDATE message.

…

The UE shall set the IEs in the URA UPDATE message as follows:

…

1> if an IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" in variable LOGGED_MEAS_REPORT_VARIABLE is present and registered PLMN is the same as the IE "PLMN Identity" stored in variable LOGGED_MEAS_REPORT_VARIABLE:

2> include IE "Logged Meas Available".

…

[TS 25.331, clause 8.5.64.3 (TP2)]

UE Shall:

1> if IE "Logged Measurements Report Request" is present:

2> if Registered PLMN is present in the IE "PLMN Identity List" stored in variable LOGGED_MEAS_REPORT_VARIABLE:

3> if an IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" in variable LOGGED_MEAS_REPORT_VARIABLE is present:

9> set IE "Logged Meas Report" in the UE INFORMATION RESPONSE as follows:

5> include the IE "Absolute Time Info" and set it to the value of the IE "Absolute Time Info" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "Trace reference" and set it to the value of IE "Trace reference" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "Trace recording session" and set it to the value of the IE "Trace recording session" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "TCE Id" and set it to the value of IE "TCE Id" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IEs "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" and set it to include, in the same order as logged, one or more entries from LOGGED_MEAS_REPORT_VARIABLE;

5> clear the logged measurement results included in the list of IEs "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" from LOGGED_MEAS_REPORT_VARIABLE;

5> if the variable LOGGED_MEAS_REPORT_VARIABLE is not empty:

6> include IE "Logged Meas Available";

2> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

…

Reference

3GPP TS 25.304 clause 5.7 and TS 25.331 clauses 8.3.1.3, 8.5.64.3,

### 8.6.2.3a.3 Test Purpose

1. Verify indication of availability of Logged MDT measurements obtained in URA_PCH state at URA update procedure in the cell that belongs to the PLMN included in LOGGING MEASUREMENT CONFIGURATION message.

2. Verify that Logged Meas Report (logged in URA_PCH state) is reported in UE INFORMATION RESPONSE message.

### 8.6.2.3a.4 Method of test

Initial Condition

System Simulator: 2 cells, Cell 1 and Cell 2 are active.

UE: PS-DCCH+DTCH_DCH (state 6-10) in Cell 1 as specified in clause 7.4 of TS 34.108, the Attach Accept message in P2 procedure includes PLMN2 in the equivalent PLMN list.

Test Procedure

Table 8.6.2.3a-1 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Column marked "T0" denotes the initial conditions, while column marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.6.2.3a-1**

| Parameter | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -69 | -69 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -69 | -69 | -60 |
| URA ID | | URA-ID 1 | | URA-ID 2 | |
| PLMN | | PLMN 1 | | PLMN 2 | |

T he UE is in CELL_DCH state of cell 1. SS transmits a LOGGING MEASUREMENT CONFIGURATION message to the UE to configure logged measurements.

SS transmits a PHYSICAL CHANNEL RECONFIGURATION message, which invokes the UE to transit from CELL_DCH to URA_PCH.

The UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and enters URA_PCH state.

Wait 5s to allow UE to activate logging.

SS configures its downlink transmission power settings according to columns "T1" in Table 8.6.2.3a-1.

When the UE detects the presence of cell 2, it moves to CELL_FACH state and transmits a URA UPDATE message on the uplink CCCH. The IE "Logged Meas Available" shall be present in the message.

Upon reception of URA_UPDATE message, SS replies with a URA UPDATE CONFIRM message with the IE "RRC State Indicator" set to "CELL_DCH".

Completes ROUTING AREA UPDATE procedure.

SS transmits a UE INFORMATION REQUEST message, and the IE "Logged Measurements Report Request" is present.

UE shall transmits a UE INFORMATION REPONSE message, and include IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD".

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | LOGGING MEASUREMENT CONFIGURATION | |
| 1a | | | | SS waits for 200msec to ensure UE acts upon Step 1 before proceeding to next step. |
| 2 | ← | | PHYSICAL CHANNEL RECONFIGURATION | The IE "RRC state indicator" is set to "URA_PCH". |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE sends this message before it completes state transition. |
| 4 | - | | - | Wait 5s to allow UE to activate logging. |

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 5 | - | | - | SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.6.2.3a-1. The UE shall find that the Cell 2 is better and attempt to perform a cell reselection. |
| 6 | → | | URA UPDATE | The UE transmits this message with the IE "Logged Meas Available" set as true |
| 7 | ← | | URA UPDATE CONFIRM | IE "RRC State Indicator" is set to "CELL_DCH". |
| 8 | --> | | RRC: INITIAL DIRECT TRANSFER<br>NAS: ROUTING AREA UPDATE REQUEST | The UE transmits a ROUTING AREA UPDATE REQUEST message. |
| 9 | <-- | | RRC: DOWNLINK DIRECT TRANSFER<br>NAS: ROUTING AREA UPDATE ACCEPT | The SS transmits a ROUTING AREA UPDATE ACCEPT message. |
| 10 | --> | | RRC: UPLINK DIRECT TRANSFER<br>NAS: ROUTING AREA UPDATE COMPLETE | The UE transmits a ROUTING AREA UPDATE COMPLETE message. |
| 11 | ← | | UE INFORMATION REQUEST | SS transmits a UE INFORMATION REQUEST message with IE "Logged Measurements Report Request" set to “true”. |
| 12 | → | | UE INFORMATION RESPONSE | UE shall transmit a UE INFORMATION RESPONSE message includes IE “Logged Meas Report". |

Specific Message Contents

SYSTEM INFORMATION BLOCK TYPE 4

Use the same message type found in clause 6.1.0b of TS 34.108, with the following exceptions for Cell 1:

| | |
|---|---|
| - Qqualmin | -16 |

LOGGING MEASUREMENT CONFIGURATION (Step 1)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged ANR configuration Info | |
| - Absolute Time Info | Set to value corresponding to the absolute time when the message is sent |
| - Logging Duration | 10 min |
| - Logging Interval | 2.57 |
| - Trace reference | |
| - PLMN Identity | Same as MIB |
| - Trace ID | ‘0EF’H |
| -Trace recording session | ‘1A’H |
| - TCE Id | ‘5’H |
| - CHOICE Area Configuration | Not present |
| - PLMN Identity List | |
| - PLMN Identity | PLMN2 |

PHYSICAL CHANNEL RECONFIGURATION (Steps 2)

Use the same message sub-type titled "Packet to URA_PCH from CELL_DCH in PS" in TS 34.108 clause 9.

URA UPDATE (Step 6)

The same message found in TS 34.108 clause 9 shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element | Value/remark |
|---|---|
| U-RNTI | |
| - SRNC Identity | Check to see if set to '0000 0000 0001' |
| - S-RNTI | Check to see if set to '0000 0000 0000 0000 0001' |
| URA Update Cause | Check to see if set to 'change of URA' |
| Logged Meas Available | TRUE |

UE INFORMATION REQUEST (Step 11)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Measurements Report Request | TRUE |
| Logged ANR Report Request | Not Present |

UE INFORMATION RESPONSE (FDD) (Step 12)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Meas Report | |
| - Absolute Time Info | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace reference | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace recording session | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - CHOICE mode | FDD |
| - List of measurements FDD | At least 1 entry where at least one entry complies to entry with index ‘x’ below. |
| - Logged Measurement Info-FDD[x] | |
| - Relative Time Stamp[x] | Not checked |
| - Logged Measurements Serving Cell[x] | |
| - PLMN Identity | PLMN 1 |
| - Cell ID[x] | Cell 1 |
| - Primary CCPCH RSCP[x] | (0..91) |
| - CPICH Ec/N0 | (0..49) |
| - Logged Measurements Intra Frequency list[x] | Only 1 intra Frequency cell |
| - Primary CPICH info | Set to the scrambling code for cell 2 |
| - CPICH RSCP | (0..91) |
| - CPICH Ec/N0 | (0..49) |
| - Logged Meas Available | Not checked |

UE INFORMATION RESPONSE (TDD) (Step 12)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Meas Report | |
| - Absolute Time Info | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace reference | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace recording session | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - CHOICE mode | TDD |
| - List of measurements TDD | At least 1 entry where at least one entry complies to entry with index 'x' below. |
| - Logged Measurement Info-TDD[x] | |
| - Relative Time Stamp[x] | Not checked |
| - Logged Measurements Serving Cell[x] | |
| - PLMN Identity | PLMN 1 |
| - Cell ID | Cell 1 |
| - Primary CCPCH RSCP | (0..91) |
| - Logged Measurements Intra Frequency list[x] | Only 1 intra Frequency cell |
| - Cell parameters Id | Cell parameter Id of Cell 2 |
| - Primary CCPCH RSCP | (0..91) |
| - Logged Meas Available | Not checked |

#### 8.6.2.3a.5 Test requirement

At step 6 the UE shall transmit a URA UPDATE message on uplink DCCH including the IE "Logged Meas Available" (TP1).

At step 12 the UE shall transmit a UE INFORMATION RESPONSE message includes IE "Logged Meas Report" with logged Measurements of Cell 2 in the "Logged Measurements Intra Frequency Neighbouring Cells list" (TP2).

### 8.6.2.4 Logged MDT / Intra-frequency measurement, logging and reporting / Idle mode / Limiting area scope

#### 8.6.2.4.1 Definition

This test is applicable for all UEs that support Logged MDT services.

#### 8.6.2.4.2 Conformance requirement

[TS 25.304, clause 5.7 (TP1, TP2, TP3)]

The UE may be configured to perform logging of measurement results in idle mode, CELL_PCH and URA_PCH state with LOGGING MEASUREMENT CONFIGURATION message specified in TS 25.331 [4]. This configuration is valid while the logging duration timer is running.

If the configuration of logged measurements is valid, the UE shall perform logging of measurement results if all of the following conditions are met:

- the UE is in camped normally state in idle mode, CELL_PCH or URA_PCH state;

- RPLMN of the UE is the same as the RPLMN at the point of time of LOGGING MEASUREMENT CONFIGURATION message reception

- the UE is camped on a cell belonging to Area Configuration (see TS 25.331 [4]), if configured;

- the UE is camped on the RAT where the logged measurement configuration was received.

Otherwise, the logging of measurement results shall be suspended.

NOTE: Even if logging of measurement results is suspended, the logging duration timer and time stamp will continue, and the logged measurement configuration and corresponding log are kept.

[TS 25.331, clause 8.5.65.2 (TP1, TP2, TP3)]

While T326 is running, the UE shall:

1> perform this logging in accordance with the following:

2> perform the logging while camping normally on an UTRA cell and the RPLMN of the UE is the same as the PLMN Identity stored in LOGGED_MEAS_REPORT_VARIABLE and, if the IE "Area Configuration" is present in variable LOGGED_MEAS_CONFIG, that is part of the concerned area;

2> perform the logging at regular intervals, as defined by the IE "Logging Interval" in variable LOGGED_MEAS_CONFIG;

2> when adding a logged measurement entry in variable LOGGED_MEAS_REPORT_VARIABLE, include the fields in accordance with the following:

3> set the IE "Relative Time Stamp" to indicate time relative to the moment at which the logged measurement configuration was received;

3> if GNSS location information became available during the last logging interval:

4> if the UE has been able to calculate a 3-dimensional position:

5> set IE "Ellipsoid point with altitude" to include the location coordinates;

4>else:

5> set IE "Ellipsoid point" to include the location coordinates:

3> set the IE "Cell ID" to indicate cell identity of the cell the UE is camping on obtained from system information;

3> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell that the UE is camping on for UTRA FDD;

3> set the "P-CCPCH RSCP" to include measured quantities for the cell that the UE is camping on for UTRA 1.28 Mcps TDD;

3> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", in order of decreasing ranking quantity as used for cell re-selection in each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

3> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes, only once, the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

2> when the memory reserved for the logging of measurements becomes full, stop timer T326 and performs the same actions as performed upon expiry of T326, as specified in 8.5.63.4.

Reference

TS 25.304 clause 5.7 and TS 25.331 clause 8.5.65.2

.8.6.2.4.3 Test Purpose

1. Verify limiting area scope logging of configured Logged MDT measurements when area scope based on cell list is configured

2. Verify limiting area scope logging of configured Logging MDT measurements when area scope based on list of Location Areas is configured

3. Verify limiting area scope logging of configured Logging MDT measurements when area scope based on list of Routing Areas is configured.

8.6.2.4.4 Method of test

Initial conditions

System Simulator:

3 cells, cell 1, cell 2 and cell 3.

User Equipment:

UE: PS-DCCH+DTCH_DCH (state 6-10) in Cell 1 as specified in clause 7.4 of TS 34.108.

Test procedure

Table 8.6.2.4.4-1 illustrates the downlink power to be applied for the 3 cells. Column marked "T0" denotes the initial conditions, while columns marked "T1", "T2", “T3”,"T4", “T5” and “T6” are to be applied subsequently. The exact instants on which these values shall be applied are described in the text in this clause.

| Parameter | Unit | Cell 1 | | | | | | | Cell 2 | | | | | | | Cell 3 | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T3 | T4 | T5 | T6 | T0 | T1 | T2 | T3 | T4 | T5 | T6 | T0 | T1 | T2 | T3 | T4 | T5 | T6 |
| JTRA RF Channel Number | | Mid Range Test Frequency | | | | | | | Mid Range Test Frequency | | | | | | | Mid Range Test Frequency | | | | | | |
| LAC | | 1 | | | | | | | 2 | | | | | | | 1 | | | | | | |
| RAC | | 1 | | | | | | | 2 | | | | | | | 2 | | | | | | |
| CPICH Ec FDD) | dBm/3.84 MHz | -60 | OFF | OFF | -60 | OFF | OFF | -60 | OFF | -60 | OFF | OFF | -60 | OFF | OFF | OFF | OFF | -60 | OFF | OFF | -60 | OFF |
| P-CCPCH RSCP(TDD) | dBm | -60 | OFF | OFF | -60 | OFF | OFF | -60 | OFF | -60 | OFF | OFF | -60 | OFF | OFF | OFF | OFF | -60 | OFF | OFF | -60 | OFF |

a) SS transmits a LOGGING MEASUREMENT CONFIGURATION message with a cell list on Cell 1 and only Cell 3 in the configured cell list. SS changes Cell 1, Cell 2 and Cell 3 level, and the UE moves to idle mode on Cell 2.Verify Logging MDT measurements on Cell 2.

b) SS changes Cell 1, Cell 2 and Cell 3 level, and the UE moves to idle mode on Cell 3. Verify Logging MDT measurements on Cell 3.

c) Re-configure logged measurement with limiting area scope using Location Areas list, only Cell 2 belongs to Location Areas in the list. SS changes Cell 1, Cell 2 and Cell 3 level, and the UE moves to idle mode on Cell 1. Verify Logging MDT measurements on Cell 1.

d) SS changes Cell 1, Cell 2 and Cell 3 level, and the UE moves to idle mode on Cell 2. Verify Logging MDT measurements on Cell 2.

e) Re-configure logged measurement with limiting area scope using Routing Areas list and only Cell 1 belongs to Routing Areas in configured Routing Areas list. SS changes Cell 1, Cell 2 and Cell 3 level, and the UE moves to idle mode on Cell 3. Verify Logging MDT measurements on Cell 3.

f) SS changes Cell 1, Cell 2 and Cell 3 level, and the UE moves to idle mode on Cell 1. Verify Logging MDT measurements on Cell 1.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|

| | UE | SS | | |
|---|---|---|---|---|
| 1 | <-- | | LOGGING MEASUREMENT CONFIGURATION | SS transmits a LOGGING MEASUREMENT CONFIGURATION message with a cell list on Cell 1. Only Cell 3 in configured cell list. |
| 2 | <-- | | RRC CONNECTION RELEASE | SS transmits a RRC CONNECTION RELEASE message to release the RRC connection. |
| 3 | --> | | RRC CONNECTION RELEASE COMPLETE | UE confirms the connection release and returns to Idle mode. |
| 4 | - | | | SS changes Cell 1, Cell 2 and Cell 3 level according to the T1 in Table 8.6.2.4.4-1. Call generic procedure in 36.508 subclause 6.4.2.8-1, UE reselects to cell 2. The UE performs a RAU procedure and the RRC Connection is released. |
| 5 | - | | - | Wait 10 seconds for UE logging interval timer to expire at least once |
| 6 | <-- | | Paging | SS transmits a Paging message. |
| 7 | --> | | RRC CONNECTION REQUEST | The UE transmits an RRC CONNECTION REQUEST message. |
| 8 | <-- | | RRC CONNECTION SETUP | SS transmit an RRC CONNECTION SETUP message. |
| 9 | --> | | RRC CONNECTION SETUP COMPLETE | The UE shall transmit an RRC CONNECTION SETUP COMPLETE message with IE “Logged Meas Available” not present. |
| 10 | --> | | RRC: INITIAL DIRECT TRANSFER<br>NAS: SERVICE REQUEST | The UE transmits SERVICE REQUEST message. |
| 11 | <-- | | RRC CONNECTION RELEASE | SS transmits a RRC CONNECTION RELEASE message to release the RRC connection. |
| 12 | --> | | RRC CONNECTION RELEASE COMPLETE | The UE confirms the connection release and returns to Idle mode. |
| 13 | - | | - | SS changes Cell 1, Cell 2 and Cell 3 level according to the T2 in Table 8.6.2.4.4-1. Call generic procedure in 36.508 subclause 6.4.2.8-1, UE reselects to cell 3. The UE performs a RAU procedure and the RRC Connection is released. |
| 14 | | | | Wait 10 seconds for UE logging interval timer to expire at least once |
| 15 | <-- | | Paging | SS transmits a Paging message. |
| 16 | --> | | RRC CONNECTION REQUEST | The UE transmits an RRC CONNECTION REQUEST message. |
| 17 | <-- | | RRC CONNECTION SETUP | SS transmit an RRC CONNECTION SETUP message. |
| 18 | --> | | RRC CONNECTION SETUP COMPLETE | The UE shall transmit an RRC CONNECTION SETUP COMPLETE message including IE “Logged Meas Available”. |
| 19 | --> | | RRC: INITIAL DIRECT TRANSFER<br>NAS: SERVICE REQUEST | The UE transmits SERVICE REQUEST message. |
| 20 | <-- | | UE INFORMATION REQUEST | SS send an UE INFORMATION REQUEST message to get logMeasReport. |
| 21 | --> | | UE INFORMATION RESPONSE | The UE shall send an UE INFORMATION RESPONSE message with Logged Meas Report of Cell 3. |
| 22 | <-- | | LOGGING MEASUREMENT CONFIGURATION | SS transmits a LOGGING MEASUREMENT CONFIGURATION message with a using Location Areas list on Cell 3, only Cell 2 belongs to Location Areas in the list. |
| 23 | <-- | | RRC CONNECTION RELEASE | SS transmits a RRC CONNECTION RELEASE message to release RRC connection and moves to idle mode on Cell 3. |
| 24 | --> | | RRC CONNECTION RELEASE COMPLETE | UE confirms the connection release and returns to Idle mode |
| 25 | - | | - | SS changes Cell 1, Cell 2 and Cell 3 level according to the T3 in Table 8.6.2.4.4-1. Call generic procedure in 36.508 subclause 6.4.2.8-1, UE reselects to cell 1. The UE performs a RAU procedure and the RRC Connection is released. |
| 26 | | | | Wait 10 seconds for UE logging interval timer to expire at least once |
| 27 | <-- | | Paging | SS transmits a Paging message. |
| 28 | --> | | RRC CONNECTION REQUEST | The UE transmits an RRC CONNECTION REQUEST message. |
| 29 | <-- | | RRC CONNECTION SETUP | SS transmit an RRC CONNECTION SETUP message. |

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 30 | --> | | RRC CONNECTION SETUP COMPLETE | The UE shall transmit an RRC CONNECTION SETUP COMPLETE message with IE “Logged Meas Available” not present. |
| 31 | --> | | RRC: INITIAL DIRECT TRANSFER<br>NAS: SERVICE REQUEST | The UE transmits SERVICE REQUEST message. |
| 32 | <-- | | RRC CONNECTION RELEASE | SS transmits a RRC CONNECTION RELEASE message to release the RRC connection. |
| 33 | --> | | RRC CONNECTION RELEASE COMPLETE | The UE confirms the connection release and returns to Idle mode. |
| 34 | - | | - | SS changes power level of Cell 1, Cell 2, and Cell 3 according to the T4 in Table 8.6.2.4.4-1. Call generic procedure in 36.508 subclause 6.4.2.8-1, UE reselects to cell 2. The UE performs a RAU procedure and the RRC Connection is released. |
| 35 | | | | Wait 10 seconds for UE logging interval timer to expire at least once. |
| 36 | <-- | | Paging | SS transmits a Paging message on Cell 2. |
| 37 | --> | | RRC CONNECTION REQUEST | The UE transmits an RRC CONNECTION REQUEST message on Cell 2. |
| 38 | <-- | | RRC CONNECTION SETUP | SS transmit an RRC CONNECTION SETUP message on Cell 2. |
| 39 | --> | | RRC CONNECTION SETUP COMPLETE | The UE shall transmit an RRC CONNECTION SETUP COMPLETE message including IE “Logged Meas Available”. |
| 40 | --> | | RRC: INITIAL DIRECT TRANSFER<br>NAS: SERVICE REQUEST | The UE transmits SERVICE REQUEST message. |
| 41 | <-- | | UE INFORMATION REQUEST | SS send a UE INFORMATION REQUEST message to get logMeasReport. |
| 42 | --> | | UE INFORMATION RESPONSE | The UE shall send an UE INFORMATION RESPONSE message with Logged Meas Report of Cell 2. |
| 43 | <-- | | LOGGING MEASUREMENT CONFIGURATION | SS transmits a LOGGING MEASUREMENT CONFIGURATION message with a Routing Areas List on Cell 2. Only Cell 1 belongs to Routing Areas in configured Routing Areas list. |
| 44 | <-- | | RRC CONNECTION RELEASE | SS transmits a RRC CONNECTION RELEASE message to release RRC connection and moves to idle mode on Cell 2. |
| 45 | --> | | RRC CONNECTION RELEASE COMPLETE | UE confirms the connection release and returns to Idle mode. |
| 46 | - | | - | SS changes Cell 1, Cell 2 and Cell 3 level according to the T5 in Table 8.6.2.4.4-1. Call generic procedure in 36.508 subclause 6.4.2.8-1, UE reselects to cell 3. The UE performs a RAU procedure and the RRC Connection is released. |
| 47 | | | - | Wait 10 seconds for UE logging interval timer to expire at least once |
| 48 | <-- | | Paging | SS transmits a Paging message. |
| 49 | --> | | RRC CONNECTION REQUEST | The UE transmits an RRC CONNECTION REQUEST message. |
| 50 | <-- | | RRC CONNECTION SETUP | SS transmit an RRC CONNECTION SETUP message. |
| 51 | --> | | RRC CONNECTION SETUP COMPLETE | The UE shall transmit an RRC CONNECTION SETUP COMPLETE message and IE “Logged Meas Available” is not present. |
| 52 | --> | | RRC: INITIAL DIRECT TRANSFER<br>NAS: SERVICE REQUEST | The UE transmits SERVICE REQUEST message. |
| 53 | <-- | | RRC CONNECTION RELEASE | SS transmits an RRC CONNECTION RELEASE message to release the RRC connection. |
| 54 | --> | | RRC CONNECTION RELEASE COMPLETE | UE confirms the connection release and returns to Idle mode. |
| 55 | - | | - | SS changes Cell 1, Cell 2 and Cell 3 level according to the T6 in Table 8.6.2.4.4-1. Call generic procedure in 36.508 subclause 6.4.2.8-1, UE reselects to cell 1. The UE performs a RAU procedure and the RRC Connection is released. |
| 56 | - | | - | Wait 10 seconds for UE logging interval timer to expire at least once |
| 57 | <-- | | Paging | SS transmits a Paging message on Cell 1. |
| 58 | --> | | RRC CONNECTION REQUEST | The UE transmits an RRC CONNECTION REQUEST message on Cell1. |

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 59 | <-- | | RRC CONNECTION SETUP | SS transmit an RRC CONNECTION SETUP message on Cell 1. |
| 60 | --> | | RRC CONNECTION SETUP COMPLETE | The UE shall transmit an RRC CONNECTION SETUP COMPLETE message including IE Logged Meas Available. |
| 61 | --> | | RRC: INITIAL DIRECT TRANSFER<br>NAS: SERVICE REQUEST | The UE transmits SERVICE REQUEST message. |
| 62 | <-- | | UE INFORMATION REQUEST | SS send a UE INFORMATION REQUEST message to get logMeasReport. |
| 63 | --> | | UE INFORMATION RESPONSE | The UE shall send an UE INFORMATION RESPONSE message with Logged Meas Report of Cell 1? |
| 64 | <-- | | RRC CONNECTION RELEASE | SS transmits an RRC CONNECTION RELEASE message to release the RRC connection. |
| 65 | --> | | RRC CONNECTION RELEASE COMPLETE | UE confirms the connection release and returns to Idle mode. |

Specific message contents

All messages have the same content as defined in 34.108 clause 9 with the following exceptions:

LOGGING MEASUREMENT CONFIGURATION (Step 1)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Measurements Configuration Info | |
| - Absolute Time Info | Set to value corresponding to the absolute time when the message is sent |
| - Logging Duration | 10 min |
| - Logging Interval | 2.59 |
| - Trace reference | |
| - PLMN Identity | Same as MIB |
| - Trace ID | '0EF'H |
| -Trace recording session | '1A'H |
| - TCE Id | '5'H |
| - CHOICE Area Configuration | |
| - Cell IDList | |
| - Cell ID | Cell 3 |

RRC CONNECTION SETUP COMPLETE (step 9)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message. |
| Logged Meas Available | Not present |

RRC CONNECTION SETUP COMPLETE (step 18)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message. |
| Logged Meas Available | True |

UE INFORMATION RESPONSE (FDD) (Step 21)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Meas Report | |
| - Absolute Time Info | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace reference | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - PLMN Identity | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace ID | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace recording session | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - CHOICE mode | FDD |
| - List of measurements FDD | At least 1 entry where at least one entry complies to entry with index ‘x’ below. |
| - Logged Measurement Info-FDD[x] | |
| - Relative Time Stamp[x] | Not checked |
| - Logged Measurements Serving Cell[x] | |
| - Cell ID[x] | Cell 3 |
| - Primary CCPCH RSCP[x] | (0..91) |
| - CPICH Ec/N0 | (0..49) |
| - Logged Meas Available | Not checked |

UE INFORMATION RESPONSE (TDD) (Step 21)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Meas Report | |
| - Absolute Time Info | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace reference | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace recording session | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - PLMN Identity | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace ID | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - CHOICE mode | TDD |
| - List of measurements TDD | At least 1 entry where at least one entry complies to entry with index ‘x’ below. |
| - Logged Measurement Info-TDD[x] | |
| - Relative Time Stamp[x] | Not checked |
| - Logged Measurements Serving Cell[x] | |
| - Cell ID | Cell 3 |
| - Primary CCPCH RSCP | (0..91) |
| - Logged Meas Available | Not checked |

LOGGING MEASUREMENT CONFIGURATION (Step 22)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged ANR configuration Info | |
| - Absolute Time Info | Set to value corresponding to the absolute time when the message is sent |
| - Logging Duration | 10 min |
| - Logging Interval | |
| - Trace reference | |
| - PLMN Identity | Same as MIB |
| - Trace ID | '0EF'H |
| -Trace recording session | '1A'H |
| - TCE Id | '5'H |
| - CHOICE Area Configuration | |
| - Location Area Code List | |
| - LAI | |
| - PLMN identity | Same as MIB |
| - LAC | 2 |

RRC CONNECTION SETUP COMPLETE (step 30)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message. |
| Logged Meas Available | Not present |

RRC CONNECTION SETUP COMPLETE (step 39)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message. |
| Logged Meas Available | True |

UE INFORMATION RESPONSE (FDD) (Step 42)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Meas Report | |
| - Absolute Time Info | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace reference | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - PLMN Identity | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace ID | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace recording session | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT |

| Information Element | Value/remark |
|---|---|
| | CONFIGURATION in step 1 |
| - CHOICE mode | FDD |
| - List of measurements FDD | At least 1 entry where at least one entry complies to entry with index 'x' below. |
| - Logged Measurement Info-FDD[x] | |
| - Relative Time Stamp[x] | Not checked |
| - Logged Measurements Serving Cell[x] | |
| - Cell ID[x] | Cell 2 |
| - Primary CCPCH RSCP[x] | (0..91) |
| - CPICH Ec/N0 | (0..49) |
| - Logged Meas Available | Not checked |

UE INFORMATION RESPONSE (TDD) (Step 42)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Meas Report | |
| - Absolute Time Info | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace reference | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - PLMN Identity | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace ID | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace recording session | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - CHOICE mode | TDD |
| - List of measurements TDD | At least 1 entry where at least one entry complies to entry with index 'x' below. |
| - Logged Measurement Info-TDD[x] | |
| - Relative Time Stamp[x] | Not checked |
| - Logged Measurements Serving Cell[x] | |
| - Cell ID | Cell 2 |
| - Primary CCPCH RSCP | (0..91) |
| - Logged Meas Available | Not checked |

LOGGING MEASUREMENT CONFIGURATION (Step 43)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Measurements Configuration Info | |
| - Absolute Time Info | Set to value corresponding to the absolute time when the message is sent |
| - Logging Duration | 10 min |
| - Logging Interval | 2.56 |
| - Trace reference | |
| - PLMN Identity | Same as MIB |
| - Trace ID | '0EF'H |
| -Trace recording session | '1A'H |
| - TCE Id | '5'H |
| - CHOICE Area Configuration | |
| - Routing Code Area List | |
| - RAI | |
| - LAI | PLMN identity set to Same as MIB, and LAC=1 |
| - RAC | 1 |

RRC CONNECTION SETUP COMPLETE (step 51)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message. |
| Logged Meas Available | Not present |

RRC CONNECTION SETUP COMPLETE (step 60)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message. |
| Logged Meas Available | True |

UE INFORMATION RESPONSE (FDD) (Step 63)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Meas Report | |
| - Absolute Time Info | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 29 |
| - Trace reference | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 29 |
| - PLMN Identity | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 29 |
| - Trace ID | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 29 |
| - Trace recording session | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 29 |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT |

| Information Element | Value/remark |
|---|---|
| | CONFIGURATION in step 29 |
| - CHOICE mode | FDD |
| - List of measurements FDD | At least 1 entry where at least one entry complies to entry with index 'x' below. |
| - Logged Measurement Info-FDD[x] | |
| - Relative Time Stamp[x] | Not checked |
| - Logged Measurements Serving Cell[x] | |
| - Cell ID[x] | Cell 1 |
| - Primary CCPCH RSCP[x] | (0..91) |
| - CPICH Ec/N0 | (0..49) |
| - Logged Meas Available | Not checked |

UE INFORMATION RESPONSE (TDD) (Step 63)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Meas Report | |
| - Absolute Time Info | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 29 |
| - Trace reference | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 29 |
| - PLMN Identity | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 29 |
| - Trace ID | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 29 |
| - Trace recording session | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 29 |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 29 |
| - CHOICE mode | TDD |
| - List of measurements TDD | At least 1 entry where at least one entry complies to entry with index 'x' below. |
| - Logged Measurement Info-TDD[x] | |
| - Relative Time Stamp[x] | Not checked |
| - Logged Measurements Serving Cell[x] | |
| - Cell ID | Cell 1 |
| - Primary CCPCH RSCP | (0..91) |
| - Logged Meas Available | Not checked |

### 8.6.2.4.5 Test requirements

At step 9, the UE shall transmit an RRC CONNECTION SETUP COMPLETE message with IE "Logged Meas Available" not present (TP1).

At step 18, the UE shall transmit an RRC CONNECTION SETUP COMPLETE message including IE "Logged Meas Available" (TP1).

At step 21, the UE shall send an UE INFORMATION RESPONSE message with Logged Meas Report of Cell 3(TP1).

At step 30, the UE shall transmit an RRC CONNECTION SETUP COMPLETE message with IE "Logged Meas Available" not present (TP2).

At step 39, the UE shall transmit an RRC CONNECTION SETUP COMPLETE message including IE "Logged Meas Available" (TP2).

At step 42, the UE shall send an UE INFORMATION RESPONSE message with Logged Meas Report of Cell 2 (TP2).

At step 51, the UE shall transmit an RRC CONNECTION SETUP COMPLETE message with IE "Logged Meas Available" not present (TP3).

At step 60 the UE shall transmit an RRC CONNECTION SETUP COMPLETE message including IE “Logged Meas Available” (TP3).

At step 63 the UE shall send an UE INFORMATION RESPONSE message with Logged Meas Report of Cell 1(TP3).

## 8.6.2.4a Logged MDT / Intra-frequency measurement, logging and reporting / Idle mode / Limiting area scope / Cell ID list with PLMN identity

### 8.6.2.4a.1 Definition

This test is applicable for all UEs that support Logged MDT services.

### 8.6.2.4a.2 Conformance requirement

[TS 25.304, clause 5.7 (TP1, TP2)]

The UE may be configured to perform logging of measurement results in idle mode, CELL_PCH and URA_PCH state with LOGGING MEASUREMENT CONFIGURATION message specified in TS 25.331 [4]. This configuration is valid while the logging duration timer is running.

If the configuration of logged measurements is valid, the UE shall perform logging of measurement results if all of the following conditions are met:

- the UE is in *camped normally* state in idle mode, CELL_PCH or URA_PCH state;
- the RPLMN of the UE is present in the MDT PLMN identity list, if received in the LOGGING MEASUREMENT CONFIGURATION message, or the RPLMN of the UE is the same as the RPLMN at the point of time of LOGGING MEASUREMENT CONFIGURATION message reception
- the UE is camped on a cell belonging to Area Configuration (see TS 25.331 [4]), if configured;
- the UE is camped on the RAT where the logged measurement configuration was received.

Otherwise, the logging of measurement results shall be suspended.

NOTE: Even if logging of measurement results is suspended, the logging duration timer and time stamp will continue, and the logged measurement configuration and corresponding log are kept.

[TS 25.331, clause 8.5.65.2 (TP1, TP2)]

While T326 is running, the UE shall:

1> perform this logging in accordance with the following:

2> perform the logging while camping normally on an UTRA cell and the RPLMN of the UE is present in the "PLMN Identity List" stored in LOGGED_MEAS_REPORT_VARIABLE and, if the IE "Area Configuration" is present in variable LOGGED_MEAS_CONFIG, that is part of the concerned area;

2> perform the logging at regular intervals, as defined by the IE "Logging Interval” in variable LOGGED_MEAS_CONFIG;

2> when adding a logged measurement entry in variable LOGGED_MEAS_REPORT_VARIABLE, include the fields in accordance with the following:

3> set the IE "Relative Time Stamp" to indicate time relative to the moment at which the logged measurement configuration was received;

3> if GNSS location information became available during the last logging interval:

4> if the UE has been able to calculate a 3-dimensional position:

5> set IE "Ellipsoid point with altitude" or the IE "Ellipsoid point with altitude and uncertainty ellipsoid" to include the location coordinates;

4>else:

5> set IE "Ellipsoid point" or the IE "Ellipsoid point with uncertainty circle" or the IE "Ellipsoid point with uncertainty ellipse" to include the location coordinates:

4> a value of the IE "Confidence", different from "0" should be calculated, as the probability that the UE is located within the uncertainty region of the one of the IEs "Ellipsoid point with uncertainty ellipse" or "Ellipsoid point with altitude and uncertainty ellipsoid".

3> set the IE "PLMN Identity" of the Logged Measurements Serving Cell to indicate the PLMN Identity of the cell the UE is camping on obtained from system information;

3> set the IE "Cell ID" to indicate cell identity of the cell the UE is camping on obtained from system information;

3> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell that the UE is camping on for UTRA FDD;

3> set the "P-CCPCH RSCP" to include measured quantities for the cell that the UE is camping on for UTRA 1.28 Mcps TDD;

3> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", "Logged Measurements E-UTRA frequency extension list", in order of decreasing ranking quantity as used for cell re-selection in each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

3> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes, only once, the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

2> when the memory reserved for the logging of measurements becomes full, stop timer T326 and performs the same actions as performed upon expiry of T326, as specified in 8.5.63.4.

Reference

TS 25.304 clause 5.7 and TS 25.331 clause 8.5.65.2

### .8.6.2.4a.3 Test Purpose

1. Verify UE is logging when area scope based on Cell ID list with PLMN identity is configured and UE is camping on a cell in the Cell ID list with PLMN identity.

2. Verify UE is not logging of configured Logging MDT measurements when area scope based on Cell ID list with PLMN identity is configured and UE is camping on a cell not included in the Cell ID list with PLMN identity

### 8.6.2.4a.4 Method of test

Initial conditions

System Simulator:

3 cells, cell 1, cell 2 and cell 3.

User Equipment:

UE: PS-DCCH+DTCH_DCH (state 6-10) in Cell 1 as specified in clause 7.4 of TS 34.108, the Attach Accept message in P2 procedure includes PLMN2 in the equivalent PLMN list.

Test procedure

Table 8.6.2.4a.4-1 illustrates the downlink power to be applied for the 3 cells. Column marked "T0" denotes the initial conditions, while columns marked "T1", "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the text in this clause.

| Parameter | Unit | Cell 1 | | | Cell 2 | | | Cell 3 | | |
|---|---|---|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T0 | T1 | T2 | T0 | T1 | T2 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | | Mid Range Test Frequency | | | Mid Range Test Frequency | | |
| CPICH Ec (FDD) | dBm/3.84 MHz | -60 | OFF | OFF | OFF | -60 | OFF | OFF | OFF | -60 |
| P-CCPCH RSCP(TDD) | dBm | -60 | OFF | OFF | OFF | -60 | OFF | OFF | OFF | -60 |
| PLMN | | PLMN 1 | | | PLMN 2 | | | PLMN 2 | | |

a) SS transmits a LOGGING MEASUREMENT CONFIGURATION message with a cell list on Cell 1 and only Cell 3 in the configured cell list. SS changes Cell 1, Cell 2 and Cell 3 power levels, and the UE moves to idle mode on Cell 2.Verify Logging MDT measurements on Cell 2.

b) SS changes Cell 1, Cell 2 and Cell 3 power levels, and the UE moves to idle mode on Cell 3. Verify Logging MDT measurements on Cell 3.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | <-- | | LOGGING MEASUREMENT CONFIGURATION | SS transmits a LOGGING MEASUREMENT CONFIGURATION message with a cell list on Cell 1. Only Cell 3 is in a configured cell list. |
| 2 | <-- | | RRC CONNECTION RELEASE | SS transmits a RRC CONNECTION RELEASE message to release the RRC connection. |
| 3 | --> | | RRC CONNECTION RELEASE COMPLETE | UE confirms the connection release and returns to Idle mode. |
| 4 | - | | - | SS changes Cell 1, Cell 2 and Cell 3 level according to the T1 in Table 8.6.2.4a.4-1. UE performs cell reselection and the UE moves to idle mode on Cell 2. |
| 5 | - | | | Wait 10 seconds for UE logging interval timer to expire at least once. |
| 6 | <-- | | Paging | SS transmits a Paging message. |
| 7 | --> | | RRC CONNECTION REQUEST | The UE transmits an RRC CONNECTION REQUEST message. |
| 8 | <-- | | RRC CONNECTION SETUP | SS transmit an RRC CONNECTION SETUP message. |
| 9 | --> | | RRC CONNECTION SETUP COMPLETE | The UE shall transmit an RRC CONNECTION SETUP COMPLETE message with IE “Logged Meas Available” not present. |
| 10 | --> | | RRC: INITIAL DIRECT TRANSFER<br>NAS: SERVICE REQUEST | The UE transmits SERVICE REQUEST message. |
| 11 | <-- | | RRC CONNECTION RELEASE | SS transmits a RRC CONNECTION RELEASE message to release the RRC connection. |
| 12 | --> | | RRC CONNECTION RELEASE COMPLETE | The UE confirms the connection release and returns to Idle mode. |
| 13 | | | | SS changes Cell 1, Cell 2 and Cell 3 level according to the T2 in Table 8.6.2.4a.4-1. UE performs cell reselection and the UE moves to idle mode on Cell 3. |
| 14 | | | | Wait 10 seconds for UE logging interval timer to expire at least once |
| 15 | <-- | | Paging | SS transmits a Paging message. |
| 16 | --> | | RRC CONNECTION REQUEST | The UE transmits an RRC CONNECTION REQUEST message. |
| 17 | <-- | | RRC CONNECTION SETUP | SS transmit an RRC CONNECTION SETUP message. |
| 18 | --> | | RRC CONNECTION SETUP COMPLETE | The UE shall transmit an RRC CONNECTION SETUP COMPLETE message including IE “Logged Meas Available”. |
| 19 | --> | | RRC: INITIAL DIRECT TRANSFER<br>NAS: SERVICE REQUEST | The UE transmits SERVICE REQUEST message. |
| 20 | <-- | | UE INFORMATION REQUEST | SS send an UE INFORMATION REQUEST message to get logMeasReport. |
| 21 | --> | | UE INFORMATION RESPONSE | The UE shall send an UE INFORMATION RESPONSE message with Logged Meas Report of Cell 3. |

Specific message contents

All messages have the same content as defined in 34.108 clause 9 with the following exceptions:

LOGGING MEASUREMENT CONFIGURATION (Step 1)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |

| | |
|---|---|
| Logged Measurements Configuration Info | |
| - Absolute Time Info | Set to value corresponding to the absolute time when the message is sent |
| - Logging Duration | 10 min |
| - Logging Interval | 2.56 |
| - Trace reference | |
| - PLMN Identity | Same as MIB |
| - Trace ID | '0EF'H |
| -Trace recording session | '1A'H |
| - TCE Id | '5'H |
| - CHOICE Area Configuration | |
| - Cell IDList | |
| - Cell ID | Cell 3 |
| - PLMN Identity | PLMN2 |
| - PLMN Identity List | |
| - PLMN Identity | PLMN2 |

RRC CONNECTION SETUP COMPLETE (step 9)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message. |
| Logged Meas Available | Not present |

RRC CONNECTION SETUP COMPLETE (step 18)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message. |
| Logged Meas Available | True |

UE INFORMATION RESPONSE (FDD) (Step 21)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Meas Report | |
| - Absolute Time Info | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace reference | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - PLMN Identity | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace ID | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace recording session | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - CHOICE mode | FDD |
| - List of measurements FDD | At least 1 entry where at least one entry complies to entry with index 'x' below. |
| - Logged Measurement Info-FDD[x] | |
| - Relative Time Stamp[x] | Not checked |
| - Logged Measurements Serving Cell[x] | |
| - PLMN Identity | PLMN2 |
| - Cell ID[x] | Cell 3 |

| Information Element | Value/remark |
|---|---|
| - Primary CCPCH RSCP[x] | (0..91) |
| - CPICH Ec/N0 | (0..49) |
| - Logged Meas Available | Not checked |

UE INFORMATION RESPONSE (TDD) (Step 21)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Meas Report | |
| - Absolute Time Info | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace reference | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace recording session | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - PLMN Identity | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace ID | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - CHOICE mode | TDD |
| - List of measurements TDD | At least 1 entry where at least one entry complies to entry with index 'x' below. |
| - Logged Measurement Info-TDD[x] | |
| - Relative Time Stamp[x] | Not checked |
| - Logged Measurements Serving Cell[x] | |
| - PLMN Identity | PLMN2 |
| - Cell ID | Cell 3 |
| - Primary CCPCH RSCP | (0..91) |
| - Logged Meas Available | Not checked |

#### 8.6.2.4a.5 Test requirements

At step 9, the UE shall transmit an RRC CONNECTION SETUP COMPLETE message with IE "Logged Meas Available" not present (TP2).

At step 18, the UE shall transmit an RRC CONNECTION SETUP COMPLETE message including IE "Logged Meas Available" (TP1).

At step 21, the UE shall send an UE INFORMATION RESPONSE message with Logged Meas Report of Cell 3(TP1).

### 8.6.2.5 Logged MDT / Release of logged MDT measurement configuration / Expire of duration timer

#### 8.6.2.5.1 Definition

#### 8.6.2.5.2 Conformance requirement

[TS 25.331, clause 8.5.63.3 (TP1, TP2)]

Upon receiving the LOGGING MEASUREMENT CONFIGURATION message the UE shall:

1> if IE "Logged Measurements Configuration Info" is present:

2> if stored, discard the existing logged measurement configuration as well as the logged measurement information as specified in 8.5.66;

2> store the received IEs "Logging Duration", "Logging Interval", "Area Configuration" if included in IE "Logged Measurements Configuration Info" in variable LOGGED_MEAS_CONFIG and IEs "Absolute Time Info", "Trace reference", "Trace recording session" and "TCE Id" in variable LOGGED_MEAS_REPORT_VARIABLE;

2> store the current Registered PLMN in the IE "PLMN Identity" in variable LOGGED_MEAS_REPORT_VARIABLE;

2> start timer T326 with the timer value set to the IE "Logging Duration".

NOTE: The UE shall not stop timer T326 unless explicitly stated when it moves to another RAT.

1> if IE "Logged ANR configuration Info" is present:

2> if variable LOG_ANR_CONFIG was already stored, discard the existing logged measurement configuration for ANR purpose as well as the associated logged measurement information as specified in 8.5.68;

2> store the received IEs in the IE "Logged ANR configuration Info" in variable LOG_ANR_CONFIG;

2> store the current Registered PLMN in the IE "PLMN Identity" in variable LOG_ANR_REPORT_VARIABLE;

2> store the list of Equivalent PLMNs in the IE "Equivalent PLMN Identity List" in variable LOG_ANR_REPORT_VARIABLE;

2> start timer T327 with the timer value set to the IE "Logging Duration" included in IE "Logged ANR configuration Info".

When in idle mode, CELL_PCH or URA_PCH state and Logged Measurements has been configured, the UE shall:

1> Store the available measurements according to the logged measurements configuration in LOGGED_MEAS_CONFIG variable as specified in subclause 8.5.65.2.

[TS 25.331, clause 8.5.63.4 (TP1)]

When timer T326 expires, the UE shall:

1> release variable LOGGED_MEAS_CONFIG.

The UE is allowed to release stored logged measurements, i.e. to release LOGGED_MEAS_REPORT_VARIABLE 48 hours after T326 expiry.

[TS 25.331, clause 8.5.64.3 (TP2)]

UE Shall:

1> if IE "Logged Measurements Report Request" is present:

2> if Registered PLMN is the same as the IE "PLMN Identity" stored in variable LOGGED_MEAS_REPORT_VARIABLE:

3> if an IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" in variable LOGGED_MEAS_REPORT_VARIABLE is present:

10> set IE "Logged Meas Report" in the UE INFORMATION RESPONSE as follows:

5> include the IE "Absolute Time Info" and set it to the value of the IE "Absolute Time Info" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "Trace reference" and set it to the value of IE "Trace reference" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "Trace recording session" and set it to the value of IE "Trace recording session" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "TCE Id" and set it to the value of IE "TCE Id" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IEs "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" and set it to include, in the same order as logged, one or more entries from LOGGED_MEAS_REPORT_VARIABLE;

5> clear the logged measurement results included in the list of IEs "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" from LOGGED_MEAS_REPORT_VARIABLE;

5> if the variable LOGGED_MEAS_REPORT_VARIABLE is not empty:

6> include IE "Logged Meas Available";

2> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

1> if IE "Logged ANR Report Request" is present:

2> if Registered PLMN is the same as one of the PLMNs in the IE "PLMN Identity" or IE "Equivalent PLMN Identity List" stored in variable LOG_ANR_REPORT_VARIABLE:

3> if IE "Logged ANR Report Info" in variable LOG_ANR_REPORT_VARIABLE is present:

4> set IEs "Logged ANR Report Info" in the UE INFORMATION RESPONSE as follows:

5> include the IEs "Logged ANR Report Info List" and set it to include entries from LOG_ANR_REPORT_VARIABLE;

5> clear the logged measurement results included in the list of IEs "Logged ANR Report Info List" from the LOG_ANR_REPORT_VARIABLE;

5> clear the variable LOG_ANR_CONFIG and stop timer T327.

2> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

[TS 25.331, clause 8.5.65.2 (TP1, TP2)]

While T326 is running, the UE shall:

1> perform this logging in accordance with the following:

2> perform the logging while camping normally on an UTRA cell and the RPLMN of the UE is the same as the PLMN Identity stored in LOGGED_MEAS_REPORT_VARIABLE and, if the IE "Area Configuration" is present in variable LOGGED_MEAS_CONFIG, that is part of the concerned area;

2> perform the logging at regular intervals, as defined by the IE "Logging Interval" in variable LOGGED_MEAS_CONFIG;

2> when adding a logged measurement entry in variable LOGGED_MEAS_REPORT_VARIABLE, include the fields in accordance with the following:

3> set the IE "Relative Time Stamp" to indicate time relative to the moment at which the logged measurement configuration was received;

3> if GNSS location information became available during the last logging interval:

4> if the UE has been able to calculate a 3-dimensional position:

5> set IE "Ellipsoid point with altitude" to include the location coordinates;

4>else:

5> set IE "Ellipsoid point" to include the location coordinates:

3> set the IE "Cell ID" to indicate cell identity of the cell the UE is camping on obtained from system information;

3> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell that the UE is camping on for UTRA FDD;

3> set the "P-CCPCH RSCP" to include measured quantities for the cell that the UE is camping on for UTRA 1.28 Mcps TDD;

3> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", in order of decreasing ranking quantity as used for cell re-selection in each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

3> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes, only once, the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

2> when the memory reserved for the logging of measurements becomes full, stop timer T326 and performs the same actions as performed upon expiry of T326, as specified in 8.5.63.4.

Reference

3GPP TS 25.331 clauses 8.5.63.3, 8.5.63.4, 8.5.64.3 and 8.5.65.2

### 8.6.2.5.3 Test Purpose

1. Verify release of Logged MDT measurement configuration up on stop or expire of logging duration timer.
2. Verify that UE, when being requested to report logged MDT measurements before the duration timer has expired, deletes the reported logged MDT measurements.

### 8.6.2.5.4 Method of test

Initial Condition

System Simulator: Cell 1 is active.

UE: PS-DCCH+DTCH_DCH (state 6-10) in Cell 1 as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is in CELL_DCH state of cell 1. SS transmits a LOGGING MEASUREMENT CONFIGURATION message to the UE to configure logged measurements.

SS transmits an RRC CONNECTION RELEASE message to the UE to disconnect the connection.

The UE transmits an RRC CONNECTION RELEASE COMPLETE message using unacknowledged mode

Wait 5s to allow UE to activate logging.

SS request Logged Meas Report until all the Logged Meas Report has been transmitted.

SS transmits a UE INFORMATION REQUEST message, and the IE "Logged Measurements Report Request" is present.

The UE shall transmit a UE INFORMATION REPONSE message, without IE “Logged Meas Report ".

SS transmits an RRC CONNECTION RELEASE message to the UE to disconnect the connection.

The UE transmits an RRC CONNECTION RELEASE COMPLETE message using unacknowledged mode

Wait 10 minutes for UE performing the logging at regular time intervals as to ensure timer T326 has expired.

The UE transmits an RRC CONNECTION REQUEST message to SS.

SS transmits an RRC CONNECTION SETUP message to the UE.

The UE transmits an RRC CONNECTION SETUP COMPLETE message to SS, and enters CELL_DCH state.

SS request Logged Meas Report until all the Logged Meas Report has been transmitted.

SS transmits an RRC CONNECTION RELEASE message to the UE to disconnect the connection.

The UE transmits an RRC CONNECTION RELEASE COMPLETE message using unacknowledged mode.

Wait 10 s.

The UE transmits an RRC CONNECTION REQUEST message to SS.

SS transmits an RRC CONNECTION SETUP message to the UE.

The UE transmits an RRC CONNECTION SETUP COMPLETE message to SS, and without IE "Logged Meas Available"

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | LOGGING MEASUREMENT CONFIGURATION | Include IE “Logged Measurements Configuration Info”, with “Logging Interval” set as 2.56s and “Logging Duration” set as 10min. |
| 2 | ← | | RRC CONNECTION RELEASE | |
| 3 | → | | RRC CONNECTION RELEASE COMPLETE | |
| 4 | | | | Wait 5s to allow UE to active logging. |
| 5 | → | | RRC CONNECTION REQUEST | By outgoing call operation. |
| 6 | ← | | RRC CONNECTION SETUP | |
| 7 | → | | RRC CONNECTION SETUP COMPLETE | |
| 7A | → | | RRC: INITIAL DIRECT TRANSFER<br>NAS: SERVICE REQUEST | The UE transmits SERVICE REQUEST message. |
| - | - | | - | EXCEPTION: In parallel to the events described in steps 8 to 11 below, steps 6 to 13 defined in TS34.108 clause 7.2.4.2 occurs to complete service request procedure. |
| 8 | ← | | UE INFORMATION REQUEST | SS transmits a UE INFORMATION REQUEST message with IE "Logged Measurements Report Request" set to “true”. |
| 9 | → | | UE INFORMATION RESPONSE | |
| | | | | EXCEPTION: In case the IE “Logged Meas Available” present in IE “Logged Meas Report” in message UE INFORMATION RESPONSE in step 9, steps 9a1 and 9a2 will be executed. |
| 9a1 | ← | | UE INFORMATION REQUEST | SS transmits a UE INFORMATION REQUEST message with IE "Logged Measurements Report Request" set to “true”. |
| 9a2 | → | | UE INFORMATION RESPONSE | |
| | | | | EXCEPTION: In case the IE “Logged Meas Available” present in IE “Logged Meas Report” in message UE INFORMATION RESPONSE in step 9a2, steps 9a1 and 9a2 will be executed again. |
| 10 | ← | | UE INFORMATION REQUEST | SS transmits a UE INFORMATION REQUEST message with IE "Logged Measurements Report Request" set to “true”. |

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 11 | → | | UE INFORMATION RESPONSE | The UE shall send a UE INFORMATION RESPONSE message, without IE “Logged Meas Report”. |
| 12 | ← | | RRC CONNECTION RELEASE | |
| 13 | → | | RRC CONNECTION RELEASE COMPLETE | The UE sends this message before it completes state transition. |
| 14 | | | | Wait 10 min for UE performing the logging at regular time intervals as to ensure timer T326 has expired. |
| 15 | → | | RRC CONNECTION REQUEST | By outgoing call operation. |
| 16 | ← | | RRC CONNECTION SETUP | |
| 17 | → | | RRC CONNECTION SETUP COMPLETE | |
| 17A | → | | RRC: INITIAL DIRECT TRANSFER<br>NAS: SERVICE REQUEST | The UE transmits SERVICE REQUEST message. |
| - | - | | - | EXCEPTION: In parallel to the events described in steps 18 to 19a2 below, steps 6 to 13 defined in TS34.108 clause 7.2.4.2 occurs to complete service request procedure. |
| 18 | ← | | UE INFORMATION REQUEST | SS transmits a UE INFORMATION REQUEST message with IE "Logged Measurements Report Request" set to “true”. |
| 19 | → | | UE INFORMATION RESPONSE | The UE sends a UE INFORMATION RESPONSE message; include IE “Logged Meas Report” of Cell 1. |
| | | | | EXCEPTION: In case the IE “Logged Meas Available” present in IE “Logged Meas Report” in message UE INFORMATION RESPONSE in step 19, steps 19a1 and 19a2 will be executed. |
| 19a1 | ← | | UE INFORMATION REQUEST | SS transmits a UE INFORMATION REQUEST message with IE "Logged Measurements Report Request" set to “true”. |
| 19a2 | → | | UE INFORMATION RESPONSE | |
| | | | | EXCEPTION: In case the IE “Logged Meas Available” present in IE “Logged Meas Report” in message UE INFORMATION RESPONSE in step 19a2, steps 19a1 and 19a2 will be executed again. |
| 20 | ← | | RRC CONNECTION RELEASE | |
| 21 | → | | RRC CONNECTION RELEASE COMPLETE | |
| | | | Void | Wait 10s. |
| 22 | → | | RRC CONNECTION REQUEST | By outgoing call operation. |
| 23 | ← | | RRC CONNECTION SETUP | |
| 24 | → | | RRC CONNECTION SETUP COMPLETE | The UE shall transmit a RRC CONNECTION SETUP COMPLETE message, without IE “Logged Meas Available”. |

Specific Message Contents

All messages have the same content as defined in 34.108 clause 9 with the following exceptions:

LOGGING MEASUREMENT CONFIGURATION (Step 1)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Measurements Configuration Info | |
| - Absolute Time Info | Set to value corresponding to the absolute time when the message is sent |
| - Logging Duration | 10 min |
| - Logging Interval | 2.56 |
| - Trace reference | |
| - PLMN Identity | Same as MIB |
| - Trace ID | '0EF'H |
| -Trace recording session | '1A'H |
| - TCE Id | '5'H |
| - CHOICE Area Configuration | Not present |

UE INFORMATION REQUEST (Step 8 and 10)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Measurements Report Request | TRUE |
| Logged ANR Report Request | Not Present |

UE INFORMATION RESPONSE (FDD) (Step 9)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Meas Report | |
| - Absolute Time Info | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace reference | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - PLMN Identity | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace ID | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace recording session | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - CHOICE mode | FDD |
| - List of measurements FDD | At least 1 entry where at least one entry complies to entry with index 'x' below. |
| - Logged Measurement Info-FDD[x] | |
| - Relative Time Stamp[x] | Not checked |

| Information Element | Value/remark |
|---|---|
| - Logged Measurements Serving Cell[x] | |
| - Cell ID | Cell 1 |
| - Primary CCPCH RSCP | (0..91) |
| - CPICH Ec/N0 | (0..49) |
| - Logged Meas Available | Not present or TRUE |

UE INFORMATION RESPONSE (TDD) (Step 9)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Meas Report | |
| - Absolute Time Info | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace reference | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - PLMN Identity | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace ID | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace recording session | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - CHOICE mode | TDD |
| - List of measurements TDD | At least 1 entry where at least one entry complies to entry with index ‘x’ below. |
| - Logged Measurement Info-TDD[x] | |
| - Relative Time Stamp[x] | Not checked |
| - Logged Measurements Serving Cell[x] | |
| - Cell ID | Cell 1 |
| - Primary CCPCH RSCP | (0..91) |
| - Logged Meas Available | Not present or TRUE |

UE INFORMATION RESPONSE (FDD) (Step 9a2)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Meas Report | |
| - Absolute Time Info | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace reference | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - PLMN Identity | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace ID | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace recording session | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - CHOICE mode | FDD |
| - List of measurements FDD | At least 1 entry where at least one entry complies to entry with index ‘x’ below. |

| Information Element | Value/remark |
|---|---|
| - Logged Measurement Info-FDD[x] | |
| - Relative Time Stamp[x] | Not checked |
| - Logged Measurements Serving Cell[x] | |
| - Cell ID | Cell 1 |
| - Primary CCPCH RSCP | (0..91) |
| - CPICH Ec/N0 | (0..49) |
| - Logged Meas Available | Not present or TRUE |

UE INFORMATION RESPONSE (TDD) (Step 9a2)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Meas Report | |
| - Absolute Time Info | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace reference | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - PLMN Identity | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace ID | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace recording session | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - CHOICE mode | TDD |
| - List of measurements TDD | At least 1 entry where at least one entry complies to entry with index ‘x’ below. |
| - Logged Measurement Info-TDD[x] | |
| - Relative Time Stamp[x] | Not checked |
| - Logged Measurements Serving Cell[x] | |
| - Cell ID | Cell 1 |
| - Primary CCPCH RSCP | (0..91) |
| - Logged Meas Available | Not present or TRUE |

UE INFORMATION RESPONSE (Step 11)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Meas Report | Not present |

UE INFORMATION RESPONSE (FDD) (Step 19)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |

| Information Element | Value/remark |
|---|---|
| Logged Meas Report | |
| - Absolute Time Info | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace reference | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - PLMN Identity | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace ID | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace recording session | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - CHOICE mode | FDD |
| - List of measurements FDD | At least 1 entry where at least one entry complies to entry with index 'x' below. |
| - Logged Measurement Info-FDD[x] | |
| - Relative Time Stamp[x] | Not checked |
| - Logged Measurements Serving Cell[x] | |
| - Cell ID | Cell 1 |
| - Primary CCPCH RSCP | (0..91) |
| - CPICH Ec/N0 | (0..49) |
| - Logged Meas Available | Not present or TRUE |

UE INFORMATION RESPONSE (TDD) (Step 19)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Meas Report | |
| - Absolute Time Info | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace reference | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - PLMN Identity | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace ID | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace recording session | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - CHOICE mode | TDD |
| - List of measurements TDD | At least 1 entry where at least one entry complies to entry with index 'x' below. |
| - Logged Measurement Info-TDD[x] | |
| - Relative Time Stamp[x] | Not checked |
| - Logged Measurements Serving Cell[x] | |
| - Cell ID | Cell 1 |
| - Primary CCPCH RSCP | (0..91) |
| - Logged Meas Available | Not present or TRUE |

UE INFORMATION RESPONSE (FDD) (Step 19a2)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of |

| Information Element | Value/remark |
|---|---|
| | the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Meas Report | |
| - Absolute Time Info | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace reference | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - PLMN Identity | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace ID | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace recording session | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - CHOICE mode | FDD |
| - List of measurements FDD | At least 1 entry where at least one entry complies to entry with index 'x' below. |
| - Logged Measurement Info-FDD[x] | |
| - Relative Time Stamp[x] | Not checked |
| - Logged Measurements Serving Cell[x] | |
| - Cell ID | Cell 1 |
| - Primary CCPCH RSCP | (0..91) |
| - CPICH Ec/N0 | (0..49) |
| - Logged Meas Available | Not present or TRUE |

UE INFORMATION RESPONSE (TDD) (Step 19a2)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Meas Report | |
| - Absolute Time Info | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace reference | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - PLMN Identity | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace ID | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace recording session | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - CHOICE mode | TDD |
| - List of measurements TDD | At least 1 entry where at least one entry complies to entry with index 'x' below. |
| - Logged Measurement Info-TDD[x] | |
| - Relative Time Stamp[x] | Not checked |
| - Logged Measurements Serving Cell[x] | |
| - Cell ID | Cell 1 |
| - Primary CCPCH RSCP | (0..91) |
| - Logged Meas Available | Not present or TRUE |

RRC CONNECTION SETUP COMPLETE (step 24)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | The value of this IE is checked to see that it matches the value of the same IE |

| | |
|---|---|
| Logged Meas Available | transmitted in the downlink RRC CONNECTION SETUP message.<br>Not present |

#### 8.6.2.5.5 Test requirement

At step 11, the UE shall send an UE INFORMATION RESPONSE message, without IE “Logged Meas Report” (TP2).

At step 24, the UE shall transmit a RRC CONNECTION SETUP COMPLETE message, without IE “Logged Meas Available” (TP1).

### 8.6.2.6 Logged MDT / Release of logged MDT measurement configuration / Reception of new logged measurement configuration, Detach or UE power off

#### 8.6.2.6.1 Definition

#### 8.6.2.6.2 Conformance requirement

[TS 25.331, clause 8.5.63.3 (TP1, TP2)]

Upon receiving the LOGGING MEASUREMENT CONFIGURATION message the UE shall:

1> if IE "Logged Measurements Configuration Info" is present:

2> if stored, discard the existing logged measurement configuration as well as the logged measurement information as specified in 8.5.66;

2> store the received IEs "Logging Duration", "Logging Interval", "Area Configuration" if included in IE "Logged Measurements Configuration Info" in variable LOGGED_MEAS_CONFIG and IEs "Absolute Time Info", "Trace reference", "Trace recording session" and "TCE Id" in variable LOGGED_MEAS_REPORT_VARIABLE;

2> store the current Registered PLMN in the IE "PLMN Identity" in variable LOGGED_MEAS_REPORT_VARIABLE;

2> start timer T326 with the timer value set to the IE "Logging Duration".

NOTE: The UE shall not stop timer T326 unless explicitly stated when it moves to another RAT.

1> if IE "Logged ANR configuration Info" is present:

2> if variable LOG_ANR_CONFIG was already stored, discard the existing logged measurement configuration for ANR purpose as well as the associated logged measurement information as specified in 8.5.68;

2> store the received IEs in the IE "Logged ANR configuration Info" in variable LOG_ANR_CONFIG;

2> store the current Registered PLMN in the IE "PLMN Identity" in variable LOG_ANR_REPORT_VARIABLE;

2> store the list of Equivalent PLMNs in the IE "Equivalent PLMN Identity List" in variable LOG_ANR_REPORT_VARIABLE;

2> start timer T327 with the timer value set to the IE "Logging Duration" included in IE "Logged ANR configuration Info".

When in idle mode, CELL_PCH or URA_PCH state and Logged Measurements has been configured, the UE shall:

1> Store the available measurements according to the logged measurements configuration in LOGGED_MEAS_CONFIG variable as specified in subclause 8.5.65.2.

[TS 25.331, clause 8.5.66.2 (TP1, TP2)]

The UE initiates the procedure upon receiving a logged measurement configuration in UTRAN or in another RAT. The UE also shall initiate the procedure upon switch off or detach.

The UE shall:

1> if stored, discard the existing logged measurement configuration as well as the logged measurement information, i.e. release the UE variables LOGGED MEAS CONFIG and LOGGED_MEAS_REPORT_VARIABLE and stop timer T326.

Reference

TS 25.331 clauses 8.5.63.3, 8.5.66.2

8.6.2.6.3 Test Purpose

1. Verify release of logged measurement configuration and logs up on reception of new logged measurement configuration
2. Verify release of logged measurement configuration and logs upon UE switch off or detach

8.6.2.6.4 Method of test

Initial Condition

System Simulator: Cell 1 is active.

UE: PS-DCCH+DTCH_DCH (state 6-10) in Cell 1 as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statement(s)

Switch off button Yes/No.

Test Procedure

The UE is in CELL_DCH state of cell 1. SS transmits a LOGGING MEASUREMENT CONFIGURATION message to the UE to configure logged measurements.

SS transmits an RRC CONNECTION RELEASE message to the UE to disconnect the connection.

The UE transmits an RRC CONNECTION RELEASE COMPLETE message using unacknowledged mode

Wait 10s to allow UE to activate logging.

The UE transmits an RRC CONNECTION REQUEST message to SS.

SS transmits an RRC CONNECTION SETUP message to the UE.

The UE transmits an RRC CONNECTION SETUP COMPLETE message to SS, and enters CELL_DCH state.

SS transmits a LOGGING MEASUREMENT CONFIGURATION message to the UE to configure logged measurements.

SS transmits a UE INFORMATION REQUEST message, and the IE "Logged Measurements Report Request" is present.

The UE shall transmit a UE INFORMATION REPONSE message, without IE “Logged Meas Report ".

SS transmits an RRC CONNECTION RELEASE message to the UE to disconnect the connection.

The UE transmits an RRC CONNECTION RELEASE COMPLETE message using unacknowledged mode

Wait 10s to allow UE to activate logging.

The UE transmits an RRC CONNECTION REQUEST message to SS.

SS transmits an RRC CONNECTION SETUP message to the UE.

The UE transmits an RRC CONNECTION SETUP COMPLETE message to SS, and enters CELL_DCH state.

SS transmits a UE INFORMATION REQUEST message, and the IE "Logged Measurements Report Request" is present.

The UE shall transmit a UE INFORMATION REPONSE message, without IE “Logged Meas Report” based on the message LOGGING MEASUREMENT CONFIGURATION in step 1.

SS transmits an RRC CONNECTION RELEASE message to the UE to disconnect the connection.

The UE transmits an RRC CONNECTION RELEASE COMPLETE message using unacknowledged mode.

Wait 10s to allow UE to activate logging.

The UE is switched off, or detaches from the network.

The UE is switched on, or attaches to the network.

The UE registered on the network.

Wait 10s

The UE transmits an RRC CONNECTION REQUEST message to SS.

SS transmits an RRC CONNECTION SETUP message to the UE.

The UE transmits an RRC CONNECTION SETUP COMPLETE message to SS, and without IE "Logged Meas Available"

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | LOGGING MEASUREMENT CONFIGURATION | Include IE “Logged Measurements Configuration Info”, with “Logging Interval” set as 2.56s and “Logging Duration” set as 10min. |
| 2 | ← | | RRC CONNECTION RELEASE | |
| 3 | → | | RRC CONNECTION RELEASE COMPLETE | |
| 4 | | | | Wait 10s to allow UE to activate logging. |
| 5 | → | | RRC CONNECTION REQUEST | By outgoing call operation. |
| 6 | ← | | RRC CONNECTION SETUP | |
| 7 | → | | RRC CONNECTION SETUP COMPLETE | |
| 7A | → | | RRC: INITIAL DIRECT TRANSFER<br>NAS: SERVICE REQUEST | The UE transmits SERVICE REQUEST message. |
| - | - | | - | EXCEPTION: In parallel to the events described in steps 8 to 11 below, steps 6 to 13 defined in TS34.108 clause 7.2.4.2 occurs to complete service request procedure. |
| 8 | ← | | LOGGING MEASUREMENT CONFIGURATION | Include IE “Logged Measurements Configuration Info”, with “Logging Interval” set as 2.56s and “Logging Duration” set as 10min. |
| 9 | ← | | UE INFORMATION REQUEST | SS transmits a UE INFORMATION REQUEST message with IE "Logged Measurements Report Request" set to “true”. |
| 10 | → | | UE INFORMATION RESPONSE | The UE shall send a UE INFORMATION RESPONSE message, without IE “Logged Meas Report”. |
| 11 | ← | | RRC CONNECTION RELEASE | |

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 12 | → | | RRC CONNECTION RELEASE COMPLETE | The UE sends this message before it completes state transition. |
| 13 | | | | Wait 10s to allow UE to activate logging. |
| 14 | → | | RRC CONNECTION REQUEST | By outgoing call operation. |
| 15 | ← | | RRC CONNECTION SETUP | |
| 16 | → | | RRC CONNECTION SETUP COMPLETE | |
| 16A | --> | | RRC: INITIAL DIRECT TRANSFER<br>NAS: SERVICE REQUEST | The UE transmits SERVICE REQUEST message. |
| - | - | | - | EXCEPTION: In parallel to the events described in steps 17 to 18 below, steps 6 to 13 defined in TS34.108 clause 7.2.4.2 occurs to complete service request procedure. |
| 17 | ← | | UE INFORMATION REQUEST | SS transmits a UE INFORMATION REQUEST message with IE "Logged Measurements Report Request" set to “true”. |
| 18 | → | | UE INFORMATION RESPONSE | The UE shall send a UE INFORMATION RESPONSE message, with IE “Logged Meas Report” present. And the IE “Logged Meas Report” does not include logged measurement reports based on the message LOGGING MEASUREMENT CONFIGURATION in step 1. |
| 19 | ← | | RRC CONNECTION RELEASE | |
| 20 | → | | RRC CONNECTION RELEASE COMPLETE | |
| 21 | | | | Wait 10s to allow UE to activate logging. |
| 22 | | | | The UE is powered down or switched off and initiates a detach. |
| 23 | | | | The UE is powered up or switched on and initiates an attach. |
| 24-36 | | | | Steps 1 to 13 of the generic test procedure in TS 34.108 subclause 7.2.2.2.3 are performed to complete the registration on the network. |
| 37 | | | | Wait 10s to allow UE to activate logging. |
| 38 | → | | RRC CONNECTION REQUEST | By outgoing call operation. |
| 39 | ← | | RRC CONNECTION SETUP | |
| 40 | → | | RRC CONNECTION SETUP COMPLETE | The UE shall transmit a RRC CONNECTION SETUP COMPLETE message, without IE “Logged Meas Available”. |

Specific Message Contents

All messages have the same content as defined in 34.108 clause 9 with the following exceptions:

LOGGING MEASUREMENT CONFIGURATION (Step 1 and 8)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Measurements Configuration Info | |
| - Absolute Time Info | Set to value corresponding to the absolute time when the message is sent |
| - Logging Duration | 10 min |
| - Logging Interval | 2.56 |
| - Trace reference | |
| - PLMN Identity | Same as MIB |
| - Trace ID | '0EF'H |
| -Trace recording session | '1A'H |
| - TCE Id | '5'H |
| - CHOICE Area Configuration | Not present |

RRC CONNECTION SETUP COMPLETE (step 7)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message. |
| Logged Meas Available | TRUE |

UE INFORMATION REQUEST (Steps 9 and 17)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Measurements Report Request | TRUE |
| Logged ANR Report Request | Not Present |

UE INFORMATION RESPONSE (Step 10)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Meas Report | Not present |

UE INFORMATION RESPONSE (FDD) (Step 18)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. |

| Information Element | Value/remark |
|---|---|
| | The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Meas Report | |
| - Absolute Time Info | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 8 |
| - Trace reference | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 8 |
| - PLMN Identity | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 8 |
| - Trace ID | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 8 |
| - Trace recording session | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 8 |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 8 |
| - CHOICE mode | FDD |
| - List of measurements FDD | At least 1 entry where at least one entry complies to entry with index 'x' below. |
| - Logged Measurement Info-FDD[x] | |
| - Relative Time Stamp[x] | Not checked |
| - Logged Measurements Serving Cell[x] | |
| - Cell ID[x] | Cell 1 |
| - Primary CCPCH RSCP[x] | (0..91) |
| - CPICH Ec/N0 | (0..49) |

UE INFORMATION RESPONSE (TDD) (Step 18)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Meas Report | |
| - Absolute Time Info | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 8 |
| - Trace reference | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 8 |
| - PLMN Identity | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 8 |
| - Trace ID | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 8 |
| - Trace recording session | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 8 |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 8 |
| - CHOICE mode | TDD |
| - List of measurements TDD | At least 1 entry where at least one entry complies to entry with index 'x' below. |
| - Logged Measurement Info-TDD[x] | |
| - Relative Time Stamp[x] | Not checked |
| - Logged Measurements Serving Cell[x] | |
| - Cell ID | Cell 1 |
| - Primary CCPCH RSCP | (0..91) |

RRC CONNECTION SETUP COMPLETE (step 40)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message. |
| Logged Meas Available | Not present |

#### 8.6.2.6.5 Test requirement

At step 10, the UE shall send a UE INFORMATION RESPONSE message, without IE “Logged Meas Report” (TP1).

At step18, the UE shall send a UE INFORMATION RESPONSE message, with IE “Logged Meas Report”. And the IE “Logged Meas Report” does not include logged measurement reports based on the message LOGGING MEASUREMENT CONFIGURATION in step 1. (TP1).

At step 40, the UE shall transmit a RRC CONNECTION SETUP COMPLETE message, without IE “Logged Meas Available” (TP2).

### 8.6.2.7 Logged MDT / Maintaining logged measurement configuration / UE state transitions and mobility

#### 8.6.2.7.1 Definition

#### 8.6.2.7.2 Conformance requirement

[TS 25.304, clause 5.7 (TP1, TP2, TP3, TP4)]

The UE may be configured to perform logging of measurement results in idle mode, CELL_PCH and URA_PCH state with LOGGING MEASUREMENT CONFIGURATION message specified in TS 25.331 [4]. This configuration is valid while the logging duration timer is running.

If the configuration of logged measurements is valid, the UE shall perform logging of measurement results if all of the following conditions are met:

- the UE is in *camped normally* state in idle mode, CELL_PCH or URA_PCH state;
- RPLMN of the UE is the same as the RPLMN at the point of time of LOGGING MEASUREMENT CONFIGURATION message reception
- the UE is camped on a cell belonging to Area Configuration (see TS 25.331 [4]), if configured;
- the UE is camped on the RAT where the logged measurement configuration was received.

Otherwise, the logging of measurement results shall be suspended.

NOTE: Even if logging of measurement results is suspended, the logging duration timer and time stamp will continue, and the logged measurement configuration and corresponding log are kept.

[TS 25.331, clause 8.5.65.2 (TP2, TP3, TP4)]

While T326 is running, the UE shall:

1> perform this logging in accordance with the following:

2> perform the logging while camping normally on an UTRA cell and the RPLMN of the UE is the same as the PLMN Identity stored in LOGGED_MEAS_REPORT_VARIABLE and, if the IE "Area Configuration" is present in variable LOGGED_MEAS_CONFIG, that is part of the concerned area;

2> perform the logging at regular intervals, as defined by the IE "Logging Interval" in variable LOGGED_MEAS_CONFIG;

2> when adding a logged measurement entry in variable LOGGED_MEAS_REPORT_VARIABLE, include the fields in accordance with the following:

3> set the IE "Relative Time Stamp" to indicate time relative to the moment at which the logged measurement configuration was received;

3> if GNSS location information became available during the last logging interval:

4> if the UE has been able to calculate a 3-dimensional position:

5> set IE "Ellipsoid point with altitude" to include the location coordinates;

4>else:

5> set IE "Ellipsoid point" to include the location coordinates:

3> set the IE "Cell ID" to indicate cell identity of the cell the UE is camping on obtained from system information;

3> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell that the UE is camping on for UTRA FDD;

3> set the "P-CCPCH RSCP" to include measured quantities for the cell that the UE is camping on for UTRA 1.28 Mcps TDD;

3> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", in order of decreasing ranking quantity as used for cell re-selection in each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

3> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes, only once, the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

2> when the memory reserved for the logging of measurements becomes full, stop timer T326 and performs the same actions as performed upon expiry of T326, as specified in 8.5.63.4.

[TS 25.331, clause 13.4.48 (TP2, TP3, TP4)]

This variable contains parameters related to Logged Measurements. This variable shall not be deleted upon transition to idle mode and when the UE moves to another RAT.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Logged Measurements Configuration Info | MP | | Logged Measurements Configuration Info 10.3.7.132 | | REL-10 |

[TS 25.331, clause 13.4.49 (TP2, TP3, TP4)]

This variable includes the logged measurements information. This variable shall not be deleted upon transition to Idle mode and when the UE moves to another RAT. The UE shall store the logged measurements during 48 hours after expiry of the timer T326.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Trace reference | MP | | Trace Reference 10.3.7.133 | Parameter trace reference: See TS 32.422 [81] | REL-10 |

Reference

TS 25.304 clause 5.7 and TS 25.331 clauses 8.5.65.2, 13.4.48, 13.4.49

### 8.6.2.7.3 Test Purpose

1. Verify that UE is not indicating availability of Logged MDT measurements when UE has moved to a non MDT PLMN cell
2. Verify that logged measurement configurations and logs are maintained despite periods of interruptions due to UE transitions to CELL_FACH or CELL_DCH
3. Verify that logged measurement configurations and logs are maintained despite periods of interruptions due to UE change to a non MDT PLMN cell
4. Verify that logging is stopped (but duration timer is kept running) when UE changes from "camp normally" state to "any cell selection" or "camp on any cell" states and resumes logging when returning to "camp normally" state

### 8.6.2.7.4 Method of test

Initial Condition

System Simulator: 2 cells, Cell 1 and Cell 2.

UE: PS-DCCH+DTCH_DCH (state 6-10) in Cell 1 as specified in clause 7.4 of TS 34.108.

Test Procedure

Table 8.6.2.7 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Column marked "T0" denotes the initial condition. Subsequent configurations marked “T1”, “T2”, “T3”and “T4” are applied at the points indicated described in the texts in this clause.

**Table 8.6.2.7**

| | Parameter | Unit | Cell 1 | Cell 2 | Cell 3 |
|---|---|---|---|---|---|
| | UTRA RF Channel Number | | Mid Range Test Frequency | Mid Range Test Frequency | Mid Range Test Frequency |
| | PLMN | | PLMN 1 | PLMN 2 | PLMN 1 |

| | | | | | |
|---|---|---|---|---|---|
| **T0** | CPICH Ec (FDD) | dBm/3.84MHz | -60 | Off | Off |
| | P-CCPCH RSCP (TDD) | dBm | -60 | Off | Off |
| **T1** | CPICH Ec (FDD) | dBm/3.84MHz | -69 | -60 | Off |
| | P-CCPCH RSCP (TDD) | dBm | -69 | -60 | Off |
| **T2** | CPICH Ec (FDD) | dBm/3.84MHz | Off | -69 | -60 |
| | P-CCPCH RSCP (TDD) | dBm | Off | -69 | -60 |
| **T3** | CPICH Ec (FDD) | dBm/3.84MHz | Off | Off | Off |
| | P-CCPCH RSCP (TDD) | dBm | Off | Off | Off |
| **T4** | CPICH Ec (FDD) | dBm/3.84MHz | Off | Off | -60 |
| | P-CCPCH RSCP (TDD) | dBm | Off | Off | -60 |

The UE is in CELL_DCH state of cell 1. SS transmits a LOGGING MEASUREMENT CONFIGURATION message to the UE to configure logged measurements.

SS transmits a PHYSICAL CHANNEL RECONFIGURATION message, which invokes the UE to transit from CELL_DCH to CELL_PCH.

The UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and enters CELL_PCH state.

Wait 10s to allow UE to activate logging.

SS configures its downlink transmission power settings according to columns "T1" in table 8.6.2.7.

When the UE detects the presence of cell 2, it moves to CELL_FACH state and transmits a CELL UPDATE message without IE "Logged Meas Available".

Upon reception of CELL_UPDATE message, SS replies with a CELL UPDATE CONFIRM message, the IE "RRC State Indicator" set to "CELL_PCH".

Wait 10s to allow UE to activate logging.

SS configures its downlink transmission power settings according to columns "T2" in table 8.6.2.7.

When the UE detects the presence of cell 3, it moves to CELL_FACH state and transmits a CELL UPDATE message with IE "Logged Meas Available".

Upon reception of CELL_UPDATE message, SS replies with a CELL UPDATE CONFIRM message.

SS transmits an RRC CONNECTION RELEASE message to the UE to disconnect the connection.

The UE transmits an RRC CONNECTION RELEASE COMPLETE message using unacknowledged mode.

Wait 10s to allow UE to activate logging.

The UE transmits an RRC CONNECTION REQUEST message to SS.

SS transmits an RRC CONNECTION SETUP message to the UE.

The UE transmits an RRC CONNECTION SETUP COMPLETE message to SS, and enters CELL_DCH state.

SS transmits a UE INFORMATION REQUEST message, and the IE "Logged Measurements Report Request" is present.

The UE shall transmit a UE INFORMATION REPONSE message, with IE "Logged Meas Report" including logged report of Cell 1 and Cell 3.

SS transmits an RRC CONNECTION RELEASE message to the UE to disconnect the connection.

The UE transmits an RRC CONNECTION RELEASE COMPLETE message using unacknowledged mode

Wait 10s to allow UE to activate logging.

SS configures its downlink transmission power settings according to columns "T3" in table 8.6.2.7.

Wait 30s.

SS configures its downlink transmission power settings according to columns "T4" in table 8.6.2.7.

Wait 10s to allow UE to activate logging.

The UE transmits an RRC CONNECTION REQUEST message to SS.

SS transmits an RRC CONNECTION SETUP message to the UE.

The UE transmits an RRC CONNECTION SETUP COMPLETE message to SS, and enters CELL_DCH state.

SS transmits a UE INFORMATION REQUEST message, and the IE "Logged Measurements Report Request" is present.

The UE shall transmit a UE INFORMATION REPONSE message, with IE “Logged Meas Report” of Cell 2.

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | LOGGING MEASUREMENT CONFIGURATION | Include IE “Logged Measurements Configuration Info”, with “Logging Interval” set as 2.56s and “Logging Duration” set as 10min. |
| 2 | ← | | PHYSICAL CHANNEL RECONFIGURATION | The IE "RRC state indicator" is set to "CELL_PCH". |
| 3 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE sends this message before it completes state transition. |
| 4 | | | | Wait 10s to allow UE to activate logging. |
| 5 | | | | SS configures its downlink transmission power settings according to columns "T1" in table 8.6.2.7. |
| 6 | → | | CELL UPDATE | The UE moves to CELL_FACH state and transmits this message without the IE "Logged Meas Available" on Cell 2. |
| 7 | ← | | CELL UPDATE CONFIRM | IE "RRC State Indicator" is set to "CELL_PCH". |
| 8 | | | | Wait 10s to allow UE to activate logging. |
| 9 | | | | SS configures its downlink transmission power settings according to columns "T2" in table 8.6.2.7. |
| 10 | → | | CELL UPDATE | The UE moves to CELL_FACH state and transmits this message with the IE "Logged Meas Available" on Cell 3. |

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 11 | ← | | CELL UPDATE CONFIRM | IE "RRC State Indicator" is set to "CELL_DCH". |
| 12 | ← | | RRC CONNECTION RELEASE | |
| 13 | → | | RRC CONNECTION RELEASE COMPLETE | The UE sends this message before it completes state transition. |
| 14 | | | | Wait 10s to allow UE to activate logging. |
| 15 | → | | RRC CONNECTION REQUEST | By outgoing call operation. |
| 16 | ← | | RRC CONNECTION SETUP | |
| 17 | → | | RRC CONNECTION SETUP COMPLETE | |
| 17A | --> | | RRC: INITIAL DIRECT TRANSFER<br>NAS: SERVICE REQUEST | The UE transmits SERVICE REQUEST message. |
| - | - | | - | EXCEPTION: In parallel to the events described in steps 18 to 19 below, steps 6 to 13 defined in TS34.108 clause 7.2.4.2 occurs to complete service request procedure. |
| 18 | ← | | UE INFORMATION REQUEST | SS transmits a UE INFORMATION REQUEST message with IE "Logged Measurements Report Request" set to “true”. |
| 19 | → | | UE INFORMATION RESPONSE | The UE shall send a UE INFORMATION RESPONSE message, with IE “Logged Meas Report” including logged report of Cell1 and Cell 3. |
| 19A | ← | | RRC CONNECTION RELEASE | |
| 19B | → | | RRC CONNECTION RELEASE COMPLETE | |
| 20 | | | | Wait 10s to allow UE to activate logging. |
| 21 | | | | SS configures its downlink transmission power settings according to columns "T3" in table 8.6.2.7. |
| 22 | | | | Wait 30s to allow UE to activate logging. |
| 23 | | | | SS configures its downlink transmission power settings according to columns "T4" in table 8.6.2.7. |
| 24 | | | | Wait 10s to allow UE to activate logging. |
| 25 | → | | RRC CONNECTION REQUEST | By outgoing call operation. |
| 26 | ← | | RRC CONNECTION SETUP | |
| 27 | → | | RRC CONNECTION SETUP COMPLETE | |
| 27A | --> | | RRC: INITIAL DIRECT TRANSFER<br>NAS: SERVICE REQUEST | The UE transmits SERVICE REQUEST message. |
| 28 | ← | | UE INFORMATION REQUEST | SS transmits a UE INFORMATION REQUEST message with IE "Logged Measurements Report Request" set to “true”. |
| 29 | → | | UE INFORMATION RESPONSE | The UE shall send a UE INFORMATION RESPONSE message, with IE “Logged Meas Report” including logged report of Cell 3. |

Specific Message Contents

All messages have the same content as defined in 34.108 clause 9 with the following exceptions:

LOGGING MEASUREMENT CONFIGURATION (Step 1)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Measurements Configuration Info | |
| - Absolute Time Info | Set to value corresponding to the absolute time when the message is sent |
| - Logging Duration | 10 min |
| - Logging Interval | 2.58 |
| - Trace reference | |
| - PLMN Identity | Same as MIB |
| - Trace ID | '0EF'H |
| -Trace recording session | '1A'H |
| - TCE Id | '5'H |
| - CHOICE Area Configuration | Not present |

CELL UPDATE (Step 6)

Use the message sub-type in default message content defined in 3GPP TS 34.108 [9] clause 9, with the following exceptions.

| Information Element | Value/remark |
|---|---|
| Cell Update Cause | 'Cell Re-selection' |
| Logged Meas Available | Not present |

CELL UPDATE (Step 10)

Use the message sub-type in default message content defined in 3GPP TS 34.108 [9] clause 9, with the following exceptions.

| Information Element | Value/remark |
|---|---|
| Cell Update Cause | 'Cell Re-selection' |
| Logged Meas Available | TRUE |

UE INFORMATION REQUEST (Steps 18 and 28)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Measurements Report Request | TRUE |
| Logged ANR Report Request | Not Present |

UE INFORMATION RESPONSE (FDD) (Step 19)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |

| Information Element | Value/remark |
|---|---|
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Meas Report | |
| - Absolute Time Info | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace reference | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - PLMN Identity | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace ID | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace recording session | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - CHOICE mode | FDD |
| - List of measurements FDD | At least one entry complies to entry with index 'x' below for cell 1 and at least one entry complies to entry with index 'y' below for cell 3. |
| - Logged Measurement Info-FDD[x] | |
| - Relative Time Stamp[x] | Not checked |
| - Logged Measurements Serving Cell[x] | |
| - Cell ID | Cell 1 |
| - Primary CCPCH RSCP | (0..91) |
| - CPICH Ec/N0 | (0..49) |
| - Logged Measurement Info-FDD[y] | |
| - Relative Time Stamp[y] | Not checked |
| - Logged Measurements Serving Cell[y] | |
| - Cell ID | Cell 3 |
| - Primary CCPCH RSCP | (0..91) |
| - CPICH Ec/N0 | (0..49) |
| - Logged Meas Available | Not checked |

UE INFORMATION RESPONSE (TDD) (Step 19)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Meas Report | |
| - Absolute Time Info | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace reference | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - PLMN Identity | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace ID | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace recording session | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - CHOICE mode | TDD |
| - List of measurements TDD | At least one entry complies to entry with index 'x' below for cell 1 and at least one entry complies to entry with index 'y' below for cell 3. |
| - Logged Measurement Info-TDD[x] | |
| - Relative Time Stamp[x] | Not checked |
| - Logged Measurements Serving Cell[x] | |
| - Cell ID | Cell 1 |
| - Primary CCPCH RSCP | (0..91) |
| - Logged Measurement Info-TDD[y] | |
| - Relative Time Stamp[y] | Not checked |
| - Logged Measurements Serving Cell[y] | |
| - Cell ID | Cell 3 |

| Information Element | Value/remark |
|---|---|
| - Primary CCPCH RSCP | (0..91) |
| - Logged Meas Available | Not checked |

UE INFORMATION RESPONSE (FDD) (Step 29)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Meas Report | |
| - Absolute Time Info | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace reference | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - PLMN Identity | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace ID | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace recording session | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - CHOICE mode | FDD |
| - List of measurements FDD | At least one entry complies to entry with index 'x' below for cell 3 and the number of entries shall no more than 20/2.56. |
| - Logged Measurement Info-FDD[x] | |
| - Relative Time Stamp[x] | Not checked |
| - Logged Measurements Serving Cell[x] | |
| - Cell ID | Cell 3 |
| - Primary CCPCH RSCP | (0..91) |
| - CPICH Ec/N0 | (0..49) |
| - Logged Meas Available | Not checked |

UE INFORMATION RESPONSE (TDD) (Step 29)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Meas Report | |
| - Absolute Time Info | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace reference | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - PLMN Identity | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace ID | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace recording session | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - CHOICE mode | TDD |
| - List of measurements TDD | At least one entry complies to entry with index 'x' below for cell 3 and the number of entries shall no more than 20/2.56. |
| - Logged Measurement Info-TDD[x] | |
| - Relative Time Stamp[x] | Not checked |

| Information Element | Value/remark |
|---|---|
| - Logged Measurements Serving Cell[x] | |
| - Cell ID | Cell 3 |
| - Primary CCPCH RSCP | (0..91) |
| - Logged Meas Available | Not checked |

#### 8.6.2.7.5 Test requirement

At step 6, the UE shall transmit a CELL UPDATE message without the IE "Logged Meas Available" on Cell 2 (TP1).

At step 10, the UE shall transmit a CELL UPDATE message with the IE "Logged Meas Available" set as TRUE on Cell 3 (TP3).

At step 19, the UE shall transmit a UE INFORMATION RESPONSE message, with IE “Logged Meas Report” including logged report of Cell1 and Cell 3 (TP2).

At step 29, the UE shall transmit a UE INFORMATION RESPONSE message, with IE “Logged Meas Report” including logged report of Cell 3. And the number of entries in the List of measurements FDD or TDD shall be no more than the expected logged measurement result entries within 20 seconds of logging periods (TP4).

### 8.6.2.8 Logged MDT / Reporting / Location information

#### 8.6.2.8.1 Definition

#### 8.6.2.8.2 Conformance requirement

[TS 25.331, clause 8.5.65.2]

While T326 is running, the UE shall:

1> perform this logging in accordance with the following:

2> perform the logging while camping normally on an UTRA cell and the RPLMN of the UE is the same as the PLMN Identity stored in LOGGED_MEAS_REPORT_VARIABLE and, if the IE "Area Configuration" is present in variable LOGGED_MEAS_CONFIG, that is part of the concerned area;

2> perform the logging at regular intervals, as defined by the IE "Logging Interval" in variable LOGGED_MEAS_CONFIG;

2> when adding a logged measurement entry in variable LOGGED_MEAS_REPORT_VARIABLE, include the fields in accordance with the following:

3> set the IE "Relative Time Stamp" to indicate time relative to the moment at which the logged measurement configuration was received;

3> if GNSS location information became available during the last logging interval:

4> if the UE has been able to calculate a 3-dimensional position:

5> set IE "Ellipsoid point with altitude" to include the location coordinates;

4>else:

5> set IE "Ellipsoid point" to include the location coordinates:

3> set the IE "Cell ID" to indicate cell identity of the cell the UE is camping on obtained from system information;

3> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell that the UE is camping on for UTRA FDD;

3> set the "P-CCPCH RSCP" to include measured quantities for the cell that the UE is camping on for UTRA 1.28 Mcps TDD;

3> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", in order of decreasing ranking quantity

as used for cell re-selection in each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

3> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes, only once, the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

2> when the memory reserved for the logging of measurements becomes full, stop timer T326 and performs the same actions as performed upon expiry of T326, as specified in 8.5.63.4.

Reference

3GPP TS 25.331 clause 8.5.65.2.

### 8.6.2.8.3 Test Purpose

1. Verify presence of location information in Logged MDT measurement reports.

### 8.6.2.8.4 Method of test

Initial Condition

System Simulator: 2 cells, Cell 1 and Cell 2 are active.

UE: PS-DCCH+DTCH_DCH (state 6-10) in Cell 1 as specified in clause 7.4 of TS 34.108.

The UE's positioning engine (e.g. standalone GNSS receiver) should be provided with any necessary stimulus to allow it to provide the position. This shall be done by use of the test function Update UE Location Information defined in TS 34.109 [10], if supported by the UE according to pc_UpdateUE_LocationInformation. Otherwise, or in addition any other suitable method may also be used.

Test Procedure

Same as the test procedure in subclause 8.2.6.1.4

Specific Message Contents

All messages have the same content as the specific messages in clause 8.2.6.1.4 with the following exceptions:

UE INFORMATION RESPONSE (FDD) (Step 12)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Meas Report | |
| - Absolute Time Info | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace reference | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace recording session | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - CHOICE mode | FDD |
| - List of measurements FDD | At least 1 entry where at least one entry complies to entry with index ‘x’ below. |
| - Logged Measurement Info-FDD[x] | |
| - Relative Time Stamp[x] | Checked to be present with a value bigger than 0. |
| - Logged Measurements Serving Cell[x] | |
| - Cell ID[x] | Cell 1 |
| - Primary CCPCH RSCP[x] | (0..91) |

| Information Element | Value/remark |
|---|---|
| - CPICH Ec/N0 | (0..49) |
| - Logged Measurements Intra Frequency list[x] | Only 1 intra Frequency cell |
| - Primary CPICH info | Set to the scrambling code for cell 2 |
| - CPICH RSCP | (0..91) |
| - CPICH Ec/N0 | (0..49) |
| - CHOICE *GNSS UE Position* | Ellipsoid or Ellipsoid with altitude |
| - Ellipsoid point | If CHOICE *GNSS UE Position* is 'Ellipsoid' then check to be present |
| - Ellipsoid point with altitude | If CHOICE *GNSS UE Position* is 'Ellipsoid with altitude' then check to be present |
| - Logged Meas Available | Not checked |

UE INFORMATION RESPONSE (TDD) (Step 12)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Meas Report | |
| - Absolute Time Info | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace reference | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace recording session | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - CHOICE mode | TDD |
| - List of measurements TDD | At least 1 entry where at least one entry complies to entry with index 'x' below. |
| - Logged Measurement Info-TDD[x] | |
| - Relative Time Stamp[x] | Checked to be present with a value bigger than 0. |
| - Logged Measurements Serving Cell[x] | |
| - Cell ID | Cell 1 |
| - Primary CCPCH RSCP | (0..91) |
| - Logged Measurements Intra Frequency list[x] | Only 1 intra Frequency cell |
| - Cell parameters Id | Cell parameter Id of Cell 2 |
| - Primary CCPCH RSCP | (0..91) |
| - CHOICE *GNSS UE Position* | Ellipsoid or Ellipsoid with altitude |
| - Ellipsoid point | If CHOICE *GNSS UE Position* is 'Ellipsoid' then check to be present |
| - Ellipsoid point with altitude | If CHOICE *GNSS UE Position* is 'Ellipsoid with altitude' then check to be present |
| - Logged Meas Available | Not checked |

#### 8.6.2.8.5 Test requirement

Test step numbers as per expected sequence table in subclause 8.6.2.1.4.

At step 12 the UE shall transmit a UE INFORMATION RESPONSE message includes IE "Logged Meas Report" with logged Measurements of Cell 2 in the "Logged Measurements Intra Frequency Neighbouring Cells list" with the IE Ellipsoid point or IE Ellipsoid point with altitude present (TP1).

## 8.6.2.9 Logged MDT / Logging and reporting / PLMN list / PLMN change

### 8.6.2.9.1 Definition

This test is applicable for all UEs that support Enhancement of Logged MDT services.

### 8.6.2.9.2 Conformance requirement

[TS 25.304, clause 5.7 (TP1, TP2)]

The UE may be configured to perform logging of measurement results in idle mode, CELL_PCH and URA_PCH state with LOGGING MEASUREMENT CONFIGURATION message specified in TS 25.331 [4]. This configuration is valid while the logging duration timer is running.

If the configuration of logged measurements is valid, the UE shall perform logging of measurement results if all of the following conditions are met:

- the UE is in *camped normally* state in idle mode, CELL_PCH or URA_PCH state;
- the RPLMN of the UE is present in the MDT PLMN identity list, if received in the LOGGING MEASUREMENT CONFIGURATION message, or the RPLMN of the UE is the same as the RPLMN at the point of time of LOGGING MEASUREMENT CONFIGURATION message reception
- the UE is camped on a cell belonging to Area Configuration (see TS 25.331 [4]), if configured;
- the UE is camped on the RAT where the logged measurement configuration was received.

Otherwise, the logging of measurement results shall be suspended.

NOTE: Even if logging of measurement results is suspended, the logging duration timer and time stamp will continue, and the logged measurement configuration and corresponding log are kept.

[TS 25.331, clause 8.1.3.6 (TP1, TP2)]

The UE shall compare the value of the IE "Initial UE identity" in the received RRC CONNECTION SETUP message with the value of the variable INITIAL_UE_IDENTITY.

If the values are different, the UE shall:

1> ignore the rest of the message.

If the values are identical, the UE shall:

...

1> submit an RRC CONNECTION SETUP COMPLETE message to the lower layers on the uplink DCCH after successful state transition per subclause 8.6.3.3, with the contents set as specified below:

...

2> if an IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" in variable LOGGED_MEAS_REPORT_VARIABLE is present and registered PLMN is present in the IE "PLMN Identity List" stored in variable LOGGED_MEAS_REPORT_VARIABLE:

3> include IE "Logged Meas Available".

...

When the RRC CONNECTION SETUP COMPLETE message has been submitted to lower layers for transmission the UE shall:

...

[TS 25.331, clause 8.5.65.2 (TP1, TP2)]

While T326 is running, the UE shall:

1> perform this logging in accordance with the following:

2> perform the logging while camping normally on an UTRA cell and the RPLMN of the UE is present in the "PLMN Identity List" stored in LOGGED_MEAS_REPORT_VARIABLE and, if the IE "Area Configuration" is present in variable LOGGED_MEAS_CONFIG, that is part of the concerned area;

2> perform the logging at regular intervals, as defined by the IE "Logging Interval" in variable LOGGED_MEAS_CONFIG;

2> when adding a logged measurement entry in variable LOGGED_MEAS_REPORT_VARIABLE, include the fields in accordance with the following:

3> set the IE "Relative Time Stamp" to indicate time relative to the moment at which the logged measurement configuration was received;

3> if GNSS location information became available during the last logging interval:

4> if the UE has been able to calculate a 3-dimensional position:

5> set IE "Ellipsoid point with altitude" or the IE "Ellipsoid point with altitude and uncertainty ellipsoid" to include the location coordinates;

4>else:

5> set IE "Ellipsoid point" or the IE "Ellipsoid point with uncertainty circle" or the IE "Ellipsoid point with uncertainty ellipse" to include the location coordinates:

4> a value of the IE "Confidence", different from "0" should be calculated, as the probability that the UE is located within the uncertainty region of the one of the IEs "Ellipsoid point with uncertainty ellipse" or "Ellipsoid point with altitude and uncertainty ellipsoid".

3> set the IE "PLMN Identity" of the Logged Measurements Serving Cell to indicate the PLMN Identity of the cell the UE is camping on obtained from system information;

3> set the IE "Cell ID" to indicate cell identity of the cell the UE is camping on obtained from system information;

3> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell that the UE is camping on for UTRA FDD;

3> set the "P-CCPCH RSCP" to include measured quantities for the cell that the UE is camping on for UTRA 1.28 Mcps TDD;

3> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", "Logged Measurements E-UTRA frequency extension list", in order of decreasing ranking quantity as used for cell re-selection in each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

3> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes, only once, the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

2> when the memory reserved for the logging of measurements becomes full, stop timer T326 and performs the same actions as performed upon expiry of T326, as specified in 8.5.63.4.

Reference

TS 25.304 clause 5.7 and TS 25.331 clause 8.3.1.6, 8.5.65.2

.8.6.2.9.3 Test Purpose

1. Verify that IE "Logged Meas Available" is not indicated in the cell that does not belong to the PLMN included in LOGGING MEASUREMENT CONFIGURATION message.

2. Verify that IE "Logged Meas Available" is indicated in the cell that belongs to the PLMN included in LOGGING MEASUREMENT CONFIGURATION message.

8.6.2.9.4 Method of test

Initial conditions

System Simulator:

3 cells, cell 1, cell 2 and cell 3.

User Equipment:

UE: PS-DCCH+DTCH_DCH (state 6-10) in Cell 1 as specified in clause 7.4 of TS 34.108.

Test procedure

Table 8.6.2.9 illustrates the downlink power to be applied for the 3 cells. Column marked "T0" denotes the initial conditions, while columns marked "T1", "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the text in this clause.

Table 8.6.2.9

| Parameter | Unit | Cell 1 | | | Cell 2 | | | Cell 3 | | |
|---|---|---|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T0 | T1 | T2 | T0 | T1 | T2 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | | Mid Range Test Frequency | | | Mid Range Test Frequency | | |
| CPICH Ec (FDD) | dBm/3.84 MHz | -60 | OFF | OFF | OFF | -60 | OFF | OFF | OFF | -60 |
| P-CCPCH RSCP(TDD) | dBm | -60 | OFF | OFF | OFF | -60 | OFF | OFF | OFF | -60 |
| PLMN | | PLMN 1 | | | PLMN 2 | | | PLMN 3 | | |

a) SS transmits a LOGGING MEASUREMENT CONFIGURATION message with a cell list on Cell 1 and only Cell 3 in the configured cell list. SS changes Cell 1, Cell 2 and Cell 3 power levels, and the UE moves to idle mode on Cell 2.Verify Logging MDT measurements on Cell 2.

b) SS changes Cell 1, Cell 2 and Cell 3 power levels, and the UE moves to idle mode on Cell 3. Verify Logging MDT measurements on Cell 3.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| **1** | <-- | | LOGGING MEASUREMENT CONFIGURATION | SS transmits a LOGGING MEASUREMENT CONFIGURATION message with a cell list on Cell 1. Only Cell 3 in configured cell list. |
| **2** | <-- | | RRC CONNECTION RELEASE | SS transmits a RRC CONNECTION RELEASE message to release the RRC connection. |
| **3** | --> | | RRC CONNECTION RELEASE COMPLETE | UE confirms the connection release and returns to Idle mode. |
| **4** | - | | - | Wait 10 seconds for UE logging interval timer to expire at least once |
| **5** | - | | - | SS changes Cell 1, Cell 2 and Cell 3 level according to the T1 in Table 8.6.2.9. |
| **6** | - | | - | UE select PLMN 2 and Cell2. Call PS Registration procdeure in TS34.108 clause 7.2.2.2.3 on cell 2, and enter idle mode. |
| **7** | - | | - | Wait 10 seconds for UE logging interval timer to expire at least once |
| **8** | <-- | | Paging | SS transmits a Paging message. |
| **9** | --> | | RRC CONNECTION REQUEST | The UE transmits an RRC CONNECTION REQUEST message. |
| **10** | <-- | | RRC CONNECTION SETUP | SS transmit an RRC CONNECTION SETUP message. |
| **11** | --> | | RRC CONNECTION SETUP COMPLETE | The UE shall transmit an RRC CONNECTION SETUP COMPLETE message with IE “Logged Meas Available” not present. |
| **12** | <-- | | RRC CONNECTION RELEASE | SS transmits a RRC CONNECTION RELEASE message to release the RRC connection. |
| **13** | --> | | RRC CONNECTION RELEASE COMPLETE | The UE confirms the connection release and returns to Idle mode. |
| **14** | - | | - | SS changes Cell 1, Cell 2 and Cell 3 level according to the T2 in Table 8.6.2.9. |
| **15** | - | | - | UE select PLMN 3 and Cell3. Call PS Registration procdeure in TS34.108 clause 7.2.2.2.3 on cell 3, and enter idle mode. |
| **16** | | | | Wait 10 seconds for UE logging interval timer to expire at least once |
| **17** | <-- | | Paging | SS transmits a Paging message. |
| **18** | --> | | RRC CONNECTION REQUEST | The UE transmits an RRC CONNECTION REQUEST message. |
| **19** | <-- | | RRC CONNECTION SETUP | SS transmit an RRC CONNECTION SETUP message. |
| **20** | --> | | RRC CONNECTION SETUP COMPLETE | The UE shall transmit an RRC CONNECTION SETUP COMPLETE message including IE “Logged Meas Available”. |
| 21 | --> | | RRC: INITIAL DIRECT TRANSFER<br>NAS: SERVICE REQUEST | The UE transmits SERVICE REQUEST message. |
| **22** | <-- | | UE INFORMATION REQUEST | SS send an UE INFORMATION REQUEST message to get logMeasReport. |
| **23** | --> | | UE INFORMATION RESPONSE | The UE shall send an UE INFORMATION RESPONSE message with Logged Meas Report of Cell 3. |

Specific message contents

All messages have the same content as defined in 34.108 clause 9 with the following exceptions:

LOGGING MEASUREMENT CONFIGURATION (Step 1)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |

| | |
|---|---|
| Logged Measurements Configuration Info | |
| - Absolute Time Info | Set to value corresponding to the absolute time when the message is sent |
| - Logging Duration | 10 min |
| - Logging Interval | 2.56 |
| - Trace reference | |
| - PLMN Identity | Same as MIB |
| - Trace ID | '0EF'H |
| -Trace recording session | '1A'H |
| - TCE Id | '5'H |
| - CHOICE Area Configuration | Not present |
| - PLMN Identity List | |
| - PLMN Identity | PLMN3 |

RRC CONNECTION SETUP COMPLETE (step 11)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message. |
| Logged Meas Available | Not present |

RRC CONNECTION SETUP COMPLETE (step 20)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message. |
| Logged Meas Available | True |

UE INFORMATION RESPONSE (FDD) (Step 23)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Meas Report | |
| - Absolute Time Info | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace reference | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - PLMN Identity | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace ID | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace recording session | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - CHOICE mode | FDD |
| - List of measurements FDD | At least 2 entry where at least one entry complies to entry with index 'x' and at least one entry with index 'y' below. |
| - Logged Measurement Info-FDD[x] | |
| - Relative Time Stamp[x] | Not checked |
| - Logged Measurements Serving Cell[x] | |
| - PLMN Identity | PLMN1 |
| - Cell ID | Cell 1 |
| - Primary CCPCH RSCP | (0..91) |
| - CPICH Ec/N0 | (0..49) |
| - Logged Measurement Info-FDD[y] | |

| Information Element | Value/remark |
|---|---|
| - Relative Time Stamp[y] | Not checked |
| - Logged Measurements Serving Cell[y] | |
| - PLMN Identity[y] | PLMN3 |
| - Cell ID | Cell 3 |
| - Primary CCPCH RSCP | (0..91) |
| - CPICH Ec/N0 | (0..49) |
| - Logged Meas Available | Not checked |

UE INFORMATION RESPONSE (TDD) (Step 23)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Meas Report | |
| - Absolute Time Info | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace reference | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace recording session | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - PLMN Identity | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace ID | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - CHOICE mode | TDD |
| - List of measurements TDD | At least 2 entry where at least one entry complies to entry with index 'x' and at least one entry with index 'y' below. |
| - Logged Measurement Info-TDD[x] | |
| - Relative Time Stamp[x] | Not checked |
| - Logged Measurements Serving Cell[x] | |
| - PLMN Identity | PLMN1 |
| - Cell ID | Cell 1 |
| - Primary CCPCH RSCP | (0..91) |
| - Logged Measurement Info-TDD[y] | |
| - Relative Time Stamp[y] | Not checked |
| - Logged Measurements Serving Cell[y] | |
| - PLMN Identity | PLMN3 |
| - Cell ID | Cell 3 |
| - Primary CCPCH RSCP | (0..91) |
| - Logged Meas Available | Not checked |

#### 8.6.2.9.5 Test requirements

At step 11, the UE shall transmit an RRC CONNECTION SETUP COMPLETE message with IE "Logged Meas Available" not present (TP1).

At step 20, the UE shall transmit an RRC CONNECTION SETUP COMPLETE message including IE "Logged Meas Available" (TP2).

At step 23, the UE shall send an UE INFORMATION RESPONSE message with Logged Meas Report of Cell 1 and Cell 3(TP2).

## 8.6.3 Inter-RAT Logged MDT

### 8.6.3.1 Logged MDT / E-UTRAN Inter-RAT measurement, logging and reporting / Idle mode

8.6.3.1.1 Definition

8.6.3.1.2 Conformance requirement

[TS 25.304, clause 5.7 (TP1)]

The UE may be configured to perform logging of measurement results in idle mode, CELL_PCH and URA_PCH state with LOGGING MEASUREMENT CONFIGURATION message specified in TS 25.331 [4]. This configuration is valid while the logging duration timer is running.

If the configuration of logged measurements is valid, the UE shall perform logging of measurement results if all of the following conditions are met:

- the UE is in *camped normally* state in idle mode, CELL_PCH or URA_PCH state;
- RPLMN of the UE is the same as the RPLMN at the point of time of LOGGING MEASUREMENT CONFIGURATION message reception
- the UE is camped on a cell belonging to Area Configuration (see TS 25.331 [4]), if configured;
- the UE is camped on the RAT where the logged measurement configuration was received.

Otherwise, the logging of measurement results shall be suspended.

NOTE: Even if logging of measurement results is suspended, the logging duration timer and time stamp will continue, and the logged measurement configuration and corresponding log are kept.

[TS 25.331, clause 8.5.64.3 (TP1)]

UE Shall:

1> if IE "Logged Measurements Report Request" is present:

2> if Registered PLMN is the same as the IE "PLMN Identity" stored in variable LOGGED_MEAS_REPORT_VARIABLE:

3> if an IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" in variable LOGGED_MEAS_REPORT_VARIABLE is present:

11> set IE "Logged Meas Report" in the UE INFORMATION RESPONSE as follows:

5> include the IE "Absolute Time Info" and set it to the value of the IE "Absolute Time Info" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "Trace reference" and set it to the value of IE "Trace reference" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "Trace recording session" and set it to the value of IE "Trace recording session" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "TCE Id" and set it to the value of IE "TCE Id" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IEs "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" and set it to include, in the same order as logged, one or more entries from LOGGED_MEAS_REPORT_VARIABLE;

5> clear the logged measurement results included in the list of IEs "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" from LOGGED_MEAS_REPORT_VARIABLE;

5> if the variable LOGGED_MEAS_REPORT_VARIABLE is not empty:

6> include IE "Logged Meas Available";

2> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

1> if IE "Logged ANR Report Request" is present:

2> if Registered PLMN is the same as the IE "PLMN Identity" stored in variable LOG_ANR_REPORT_VARIABLE:

3> if IE "Logged ANR Report Info" in variable LOG_ANR_REPORT_VARIABLE is present:

4> set IEs "Logged ANR Report Info" in the UE INFORMATION RESPONSE as follows:

5> include the IEs "Logged ANR Report Info List" and set it to include entries from LOG_ANR_REPORT_VARIABLE;

5> clear the logged measurement results included in the list of IEs "Logged ANR Report Info List" from the LOG_ANR_REPORT_VARIABLE;

5> clear the variable LOG_ANR_CONFIG and stop timer T327.

2> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

[TS 25.331, clause 8.5.65 (TP1)]

When in idle mode, CELL_PCH or URA_PCH state and Logged Measurements has been configured, the UE shall:

1> Store the available measurements according to the logged measurements configuration in LOGGED_MEAS_CONFIG variable as specified in subclause 8.5.65.2.

[TS 25.331, clause 8.5.65.2 (TP1)]

While T326 is running, the UE shall:

1> perform this logging in accordance with the following:

2> perform the logging while camping normally on an UTRA cell and the RPLMN of the UE is the same as the PLMN Identity stored in LOGGED_MEAS_REPORT_VARIABLE and, if the IE "Area Configuration" is present in variable LOGGED_MEAS_CONFIG, that is part of the concerned area;

2> perform the logging at regular intervals, as defined by the IE "Logging Interval" in variable LOGGED_MEAS_CONFIG;

2> when adding a logged measurement entry in variable LOGGED_MEAS_REPORT_VARIABLE, include the fields in accordance with the following:

3> set the IE "Relative Time Stamp" to indicate time relative to the moment at which the logged measurement configuration was received;

3> if GNSS location information became available during the last logging interval:

4> if the UE has been able to calculate a 3-dimensional position:

5> set IE "Ellipsoid point with altitude" to include the location coordinates;

4>else:

5> set IE "Ellipsoid point" to include the location coordinates:

3> set the IE "Cell ID" to indicate cell identity of the cell the UE is camping on obtained from system information;

3> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell that the UE is camping on for UTRA FDD;

3> set the "P-CCPCH RSCP" to include measured quantities for the cell that the UE is camping on for UTRA 1.28 Mcps TDD;

3> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", in order of decreasing ranking quantity as used for cell re-selection in each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

3> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes, only once, the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

2> when the memory reserved for the logging of measurements becomes full, stop timer T326 and performs the same actions as performed upon expiry of T326, as specified in 8.5.63.4.

TS 25.304 clause 5.7, TS 25.331 clauses 8.5.64., 8.5.65 and 8.5.65.2.

8.6.3.1.3 Test Purpose

1. Verify logging and reporting of Logged MDT E-UTRAN Inter-RAT measurements

8.6.3.1.4 Method of test

System Simulator: 1 UTRAN FDD cell (or TDD cell) and 1 E-UTRAN cell. Cell 1 is a UTRAN cell, and Cell 2 is an E-UTRAN Cell. Cell 2 configuration refers to “Cell 1” in TS36.508 clause 6.3. SIB configuration 6 is applied in accordance with TS 34.108 clause 6.1.0a.2.

UE: PS-DCCH+DTCH_DCH (state 6-10) in Cell 1as specified in clause 7.4 of TS 34.108.

Related ICS/IXIT statements

- Compressed mode required yes/no
- UE supports E-UTRAN.

Test Procedure

Table 8.6.3.1illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Column marked "T0" denotes the initial condition, while column marked "T1" and "T2" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.6.3.1: Time instances of cell power level and parameter changes**

| | Parameter | Unit | Cell 1(UTRA) | Cell 2(E-UTRA) |
|---|---|---|---|---|
| T0 | Cell-specific RS EPRE | dBm/15kHz | - | -90 |
| | CPICH Ec (UTRA FDD) | dBm/3.84 MHz | -65 | - |
| | PCCPCH Ec(UTRA LCR TDD) | dBm/1.28 MHz | -65 | - |
| T1 | Cell-specific RS EPRE | dBm/15kHz | - | -70 |
| | CPICH Ec (UTRA FDD) | dBm/3.84 MHz | -100 | - |
| | PCCPCH Ec(UTRA LCR TDD) | dBm/1.28 MHz | -100 | - |
| T2 | Cell-specific RS EPRE | dBm/15kHz | - | -90 |
| | CPICH Ec (UTRA FDD) | dBm/3.84 MHz | -65 | - |
| | PCCPCH Ec(UTRA LCR TDD) | dBm/1.28 MHz | -65 | - |

The UE is in CELL_DCH state of cell 1. SS transmits a LOGGING MEASUREMENT CONFIGURATION message to the UE to configure logged measurements.

SS transmits an RRC CONNECTION RELEASE message to the UE to disconnect the connection.

The UE transmits an RRC CONNECTION RELEASE COMPLETE message using unacknowledged mode

Wait 10s to allow UE to activate logging.

SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.6.3.1. The UE shall find that the cell 2 is better and attempt to perform a cell reselection.

UE reselects to cell 2 and moves to RRC_IDLE.

SS applies the downlink transmission power settings, according to the values in columns "T2" of table 8.6.3.1. The UE shall find that the cell 1 is better and attempt to perform a cell reselection.

The UE transmits an RRC CONNECTION REQUEST message to SS.

SS transmits an RRC CONNECTION SETUP message to the UE.

The UE transmits an RRC CONNECTION SETUP COMPLETE message to SS, and enters CELL_DCH state.

The UE performs RAU procedure on Cell 1.

SS transmits a UE INFORMATION REQUEST message, and the IE "Logged Measurements Report Request" is present.

The UE shall transmit a UE INFORMATION REPONSE message, with IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD". And Logged Measurements of Cell 2 is in the Logged Measurements inter RAT Neighbouring Cells list".

SS transmits an RRC CONNECTION RELEASE message to the UE to disconnect the connection.

The UE transmits an RRC CONNECTION RELEASE COMPLETE message using unacknowledged mode

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | LOGGING MEASUREMENT CONFIGURATION | Include IE "Logged Measurements Configuration Info", with "Logging Interval" set as 2.56s and "Logging Duration" set as 10min. |
| 2 | ← | | RRC CONNECTION RELEASE | |
| 3 | → | | RRC CONNECTION RELEASE COMPLETE | The UE sends this message before it completes state transition. |
| 4 | - | | - | Wait 10s to allow UE to activate logging. |
| 5 | - | | - | SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.6.3.1. The UE shall find that the cell 2 is better and attempt to perform a cell reselection. |
| 6 | - | | - | Call generic procedure in 36.508 subclause 6.4.2.7A-1, UE reselects to cell 2. The UE performs a TAU procedure and the RRC Connection is released. |
| 7 | - | | - | SS applies the downlink transmission power settings, according to the values in columns "T2" of table 8.6.3.1. The UE shall find that the cell 1 is better and attempt to perform a cell reselection. |
| | | | | |
| | | | | |
| 10 | → | | RRC CONNECTION REQUEST | |
| 11 | ← | | RRC CONNECTION SETUP | |
| 12 | → | | RRC CONNECTION SETUP COMPLETE | |
| 13 | - | | - | Call steps 4 to 8 in generic procedure in 36.508 subclause 6.4.2.8-1, the UE performs a RAU procedure on Cell 1. |

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 14 | ← | | UE INFORMATION REQUEST | SS transmits a UE INFORMATION REQUEST message with IE "Logged Measurements Report Request" set to “true”. |
| 15 | → | | UE INFORMATION RESPONSE | The UE shall send a UE INFORMATION RESPONSE message. And Logged Measurements of Cell 2 is in the Logged Measurements E-UTRA frequency list. |
| 16 | ← | | RRC CONNECTION RELEASE | |
| 17 | → | | RRC CONNECTION RELEASE COMPLETE | The UE sends this message before it completes state transition. |

Specific Message Contents

Conditions for specific message contents

| Condition | Explanation |
|---|---|
| Band > 64 | If E-UTRA band > 64 is selected |

LOGGING MEASUREMENT CONFIGURATION (Step 1)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged ANR configuration Info | |
| - Absolute Time Info | Set to value corresponding to the absolute time when the message is sent |
| - Logging Duration | 10 min |
| - Logging Interval | 2.59 |
| - Trace reference | |
| - PLMN Identity | Same as MIB |
| - Trace ID | ‘0EF’H |
| -Trace recording session | ‘1A’H |
| - TCE Id | ‘5’H |
| - CHOICE Area Configuration | Not present |

UE INFORMATION REQUEST (Step 14)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Measurements Report Request | TRUE |
| Logged ANR Report Request | Not Present |

UE INFORMATION RESPONSE (FDD) (Step 15)

| Information Element | Value/remark | Conditions |
|---|---|---|
| Message Type | | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 | |
| Integrity check info | | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. | |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. | |
| Logged Meas Report | | |
| - Absolute Time Info | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 | |
| - Trace reference | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 | |
| - PLMN Identity | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 | |
| - Trace ID | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 | |
| - Trace recording session | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 | |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 | |
| - CHOICE mode | FDD | |
| - List of measurements FDD | At least 1 entry where at least one entry complies to entry with index 'x' below. | |
| - Logged Measurement Info-FDD[x] | | |
| - Relative Time Stamp[x] | Not checked | |
| - Logged Measurements Serving Cell[x] | | |
| - Cell ID[x] | Cell 1 | |
| - Primary CCPCH RSCP[x] | (0..91) | |
| - CPICH Ec/N0 | (0..49) | |
| - Logged Measurements Inter-RAT Neighbour cells list [x] | | |
| - Logged Measurements E-UTRA frequency list | 1 entry | |
| - E-UTRA Carrier Frequency | Same as cell 2 | |
| - E-UTRA Carrier Frequency | 65535 | Band > 64 |
| - Logged Measurements E-UTRA Frequency Neighbours List | 1 entry | |
| - Physical Cell Identity | Same as cell 2 | |
| - RSRP | (0..97) | |
| - RSRQ | (0..34) | |
| - Logged Measurements E-UTRA frequency extension list | 1 entry | Band > 64 |
| - EARFCN extension | Same as cell 2 | |
| - Logged Meas Available | Not checked | |

UE INFORMATION RESPONSE (TDD) (Step 15)

| Information Element | Value/remark | Conditions |
|---|---|---|
| Message Type | | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 | |
| Integrity check info | | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant | |

| Information Element | Value/remark | Conditions |
|---|---|---|
| | bit of the MAC-I. | |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. | |
| Logged Meas Report | | |
| - Absolute Time Info | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 | |
| - Trace reference | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 | |
| - PLMN Identity | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 | |
| - Trace ID | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 | |
| - Trace recording session | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 | |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 | |
| - CHOICE mode | TDD | |
| - List of measurements TDD | At least 1 entry where at least one entry complies to entry with index 'x' below. | |
| - Logged Measurement Info-TDD[x] | | |
| - Relative Time Stamp[x] | Not checked | |
| - Logged Measurements Serving Cell[x] | | |
| - Cell ID | Cell 1 | |
| - Primary CCPCH RSCP | (0..91) | |
| - Logged Measurements Inter-RAT Neighbour cells list | | |
| - Logged Measurements E-UTRA frequency list | 1 entry | |
| - E-UTRA Carrier Frequency | Same as cell 2 | |
| - E-UTRA Carrier Frequency | 65535 | Band > 64 |
| - Logged Measurements E-UTRA Frequency Neighbours List | 1 entry | |
| - Physical Cell Identity | Same as cell 2 | |
| - RSRP | (0..97) | |
| - RSRQ | (0..34) | |
| - Logged Measurements E-UTRA frequency extension list | 1 entry | Band > 64 |
| - EARFCN extension | Same as cell 2 | |
| - Logged Meas Available | Not checked | |

#### 8.6.3.1.5 Test requirement

At step 15, the UE shall transmit a UE INFORMATION RESPONSE message, with IE "Logged Measurements Inter-RAT Neighbour cells list" include Logged Measurements of Cell 2 (TP1).

### 8.6.3.2 Logged MDT / GERAN Inter-RAT measurement, logging and reporting / Idle mode

#### 8.6.3.2.1 Definition

#### 8.6.3.2.2 Conformance requirement

[TS 25.304, clause 5.7 (TP1)]

The UE may be configured to perform logging of measurement results in idle mode, CELL_PCH and URA_PCH state with LOGGING MEASUREMENT CONFIGURATION message specified in TS 25.331 [4]. This configuration is valid while the logging duration timer is running.

If the configuration of logged measurements is valid, the UE shall perform logging of measurement results if all of the following conditions are met:

- the UE is in *camped normally* state in idle mode, CELL_PCH or URA_PCH state;
- RPLMN of the UE is the same as the RPLMN at the point of time of LOGGING MEASUREMENT CONFIGURATION message reception
- the UE is camped on a cell belonging to Area Configuration (see TS 25.331 [4]), if configured;
- the UE is camped on the RAT where the logged measurement configuration was received.

Otherwise, the logging of measurement results shall be suspended.

NOTE: Even if logging of measurement results is suspended, the logging duration timer and time stamp will continue, and the logged measurement configuration and corresponding log are kept.

[TS 25.331, clause 8.5.65.2 (TP1)]

While T326 is running, the UE shall:

1> perform this logging in accordance with the following:

2> perform the logging while camping normally on an UTRA cell and the RPLMN of the UE is the same as the PLMN Identity stored in LOGGED_MEAS_REPORT_VARIABLE and, if the IE "Area Configuration" is present in variable LOGGED_MEAS_CONFIG, that is part of the concerned area;

2> perform the logging at regular intervals, as defined by the IE "Logging Interval" in variable LOGGED_MEAS_CONFIG;

2> when adding a logged measurement entry in variable LOGGED_MEAS_REPORT_VARIABLE, include the fields in accordance with the following:

3> set the IE "Relative Time Stamp" to indicate time relative to the moment at which the logged measurement configuration was received;

3> if GNSS location information became available during the last logging interval:

4> if the UE has been able to calculate a 3-dimensional position:

5> set IE "Ellipsoid point with altitude" to include the location coordinates;

4> else:

5> set IE "Ellipsoid point" to include the location coordinates:

3> set the IE "Cell ID" to indicate cell identity of the cell the UE is camping on obtained from system information;

3> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell that the UE is camping on for UTRA FDD;

3> set the "P-CCPCH RSCP" to include measured quantities for the cell that the UE is camping on for UTRA 1.28 Mcps TDD;

3> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", in order of decreasing ranking quantity as used for cell re-selection in each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

3> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes, only once, the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

2> when the memory reserved for the logging of measurements becomes full, stop timer T326 and performs the same actions as performed upon expiry of T326, as specified in 8.5.63.4.

[TS 25.331, clause 8.5.64.3 (TP1)]

UE Shall:

1> if IE "Logged Measurements Report Request" is present:

2> if Registered PLMN is the same as the IE "PLMN Identity" stored in variable LOGGED_MEAS_REPORT_VARIABLE:

3> if an IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" in variable LOGGED_MEAS_REPORT_VARIABLE is present:

12> set IE "Logged Meas Report" in the UE INFORMATION RESPONSE as follows:

5> include the IE "Absolute Time Info" and set it to the value of the IE "Absolute Time Info" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "Trace reference" and set it to the value of IE "Trace reference" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "Trace recording session" and set it to the value of IE "Trace recording session" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "TCE Id" and set it to the value of IE "TCE Id" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IEs "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" and set it to include, in the same order as logged, one or more entries from LOGGED_MEAS_REPORT_VARIABLE;

5> clear the logged measurement results included in the list of IEs "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" from LOGGED_MEAS_REPORT_VARIABLE;

5> if the variable LOGGED_MEAS_REPORT_VARIABLE is not empty:

6> include IE "Logged Meas Available";

2> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

1> if IE "Logged ANR Report Request" is present:

2> if Registered PLMN is the same as the IE "PLMN Identity" stored in variable LOG_ANR_REPORT_VARIABLE:

3> if IE "Logged ANR Report Info" in variable LOG_ANR_REPORT_VARIABLE is present:

4> set IEs "Logged ANR Report Info" in the UE INFORMATION RESPONSE as follows:

5> include the IEs "Logged ANR Report Info List" and set it to include entries from LOG_ANR_REPORT_VARIABLE;

5> clear the logged measurement results included in the list of IEs "Logged ANR Report Info List" from the LOG_ANR_REPORT_VARIABLE;

5> clear the variable LOG_ANR_CONFIG and stop timer T327.

2> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

[TS 37.320, clause 5.1.1.3.1 (TP1)]

A UE configured to perform Logged MDT measurements indicates the availability of Logged MDT measurements, by means of an indicator, in RRCConnectionSetupComplete message during connection establishment. Furthermore, the indicator (possibly updated) shall be provided within E-UTRAN handover and re-establishment, and UTRAN procedures involving the change of SRNC (SRNC relocation), CELL UPDATE, URA UPDATE messages as well as MEASUREMENT REPORT message in case of state transition to CELL_FACH without CELL UPDATE. The UE includes the indication in one of these messages at every transition to RRC Connected mode even though the logging period has not ended, upon connection to RAT which configured the UE to perform Logged MDT measurements and RPLMN which is equal to a PLMN in the MDT PLMN list.

The indicator shall be also provided in UEInformationResponse message during MDT report retrieval in case the UE has not transferred the total log in one RRC message in order to indicate the remaining data availability.

The UE will not indicate the availability of MDT measurements in another RAT or in a PLMN that is not in the MDT PLMN list.

The network may decide to retrieve the logged measurements based on this indication. In case Logged MDT measurements are retrieved before the completion of the pre-defined logging duration, the reported measurement results are deleted, but MDT measurement logging will continue according to ongoing logged measurement configuration.

In case the network does not retrieve Logged MDT measurements, UE should store non-retrieved measurements for 48 hours from the moment the duration timer for logging expired. There is no requirement to store non-retrieved data beyond 48 hours. In addition, all logged measurement configuration and the log shall be removed by the UE at switch off or detach.

Reference

TS 25.304 clause 5.7, TS 25.331 clauses 8.5.65.2, 8.5.64.3 and TS37.320 clause 5.1.1.3.1.

### 8.6.3.2.3 Test Purpose

1. Verify logging and reporting of Logged MDT GERAN Inter-RAT measurements

### 8.6.3.2.4 Method of test

Initial Condition

System Simulator: 2 cells – cell 1 and cell 9 are active. Cell 1 is UTRA FDD or TDD cells. Cell 9 is GSM cell. The PLMN of Cell 1 and Cell 9 are the same.

UE: PS-DCCH+DTCH_DCH (state 6-10) in cell 1 as specified in clause 7.4 of TS 34.108.

Test Procedure

Table 8.6.3.2-1and Table 8.6.3.2-2 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" is to be applied subsequently.

**Table 8.6.3.2-1: Time instances of cell power level and parameter changes**

| Parameter | Unit | Cell 1 (UTRA) | | |
|---|---|---|---|---|
| | | T0 | T1 | T2 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | |
| CPICH Ec | dBm/3.84MHz | -60 | -80 | -60 |
| PCCPCH_RSCP (TDD) | dBm | -60 | -80 | -60 |

**Table 8.6.3.2-2**

| Parameter | Unit | Cell 9 (GSM) | | |
|---|---|---|---|---|
| | | T0 | T1 | T2 |
| Test Channel | | 1 | | |
| RF Signal Level | dBm | -90 | -48 | -90 |
| RXLEV_ACCESS_MIN | dBm | -100 | -100 | -100 |
| FDD_Qmin | dB | -20 | -20 | -20 |
| FDD_Qoffset | dBm | 0 | 0 | 0 |

The UE is in CELL_DCH state of cell 1. SS transmits a LOGGING MEASUREMENT CONFIGURATION message to the UE to configure logged measurements.

SS transmits an RRC CONNECTION RELEASE message to the UE to disconnect the connection.

The UE transmits an RRC CONNECTION RELEASE COMPLETE message using unacknowledged mode

Wait 10s to allow UE to activate logging.

SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.6.3.2-1 and table 8.6.3.2-2. The UE shall find that the cell 9 is better and attempt to perform a cell reselection.

UE reselects to GERAN cell 9 and complete routing area update procedure on cell 9.

SS applies the downlink transmission power settings, according to the values in columns "T2" of table 8.6.3.2-1 and table 8.6.3.2-2. The UE shall find that the cell 1 is better and attempt to perform a cell reselection.

The UE transmits an RRC CONNECTION REQUEST message to SS.

SS transmits an RRC CONNECTION SETUP message to the UE.

The UE transmits an RRC CONNECTION SETUP COMPLETE message to SS, and enters CELL_DCH state.

SS completes routing area update procedure on cell 1.

SS transmits a UE INFORMATION REQUEST message, and the IE "Logged Measurements Report Request" is present.

The UE shall transmit a UE INFORMATION REPONSE message, with IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD". And Logged Measurements of Cell 9 is in the Logged Measurements inter RAT Neighbouring Cells list".

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | LOGGING MEASUREMENT CONFIGURATION | Include IE "Logged Measurements Configuration Info", with "Logging Interval" set as 2.56s and "Logging Duration" set as 10min. |
| 2 | ← | | RRC CONNECTION RELEASE | |
| 3 | → | | RRC CONNECTION RELEASE COMPLETE | The UE sends this message before it completes state transition. |
| 4 | | | | Wait 10s to allow UE to activate logging. |
| 5 | - | | - | SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.6.3.2-1 and table 8.6.3.2-2. The UE shall find that the cell 9 is better and attempt to perform a cell reselection. |
| 6 | → | | CHANNEL REQUEST | The SS receives this burst on the RACH of cell 9(GSM cell). (triggered by UE routing area update procedure) |
| 7 | ← | | IMMEDIATE ASSIGNMENT | Sent on AGCH. |
| 8 | SS | | | The SS completes the routing area update procedure requested by the UE. |
| 9 | - | | - | SS applies the downlink transmission power settings, according to the values in columns "T2" of table 8.6.3.2-1 and table 8.6.3.2-2. The UE shall find that the cell 1 is better and attempt to perform a cell reselection. |
| 10 | → | | RRC CONNECTION REQUEST | |
| 11 | ← | | RRC CONNECTION SETUP | |

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 12 | → | | RRC CONNECTION SETUP COMPLETE | |
| 13 | - | | - | The SS completes the Routing Area Update procedure requested by the UE. |
| 14 | ← | | UE INFORMATION REQUEST | SS transmits a UE INFORMATION REQUEST message with IE "Logged Measurements Report Request" set to “true”. |
| 15 | → | | UE INFORMATION RESPONSE | The UE shall send a UE INFORMATION RESPONSE message. And Logged Measurements of Cell 9 is in the Logged Measurements GSM frequency list. |

Specific Message Contents

LOGGING MEASUREMENT CONFIGURATION (Step 1)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged ANR configuration Info | |
| - Absolute Time Info | Set to value corresponding to the absolute time when the message is sent |
| - Logging Duration | 10 min |
| - Logging Interval | 2.60 |
| - Trace reference | |
| - PLMN Identity | Same as MIB |
| - Trace ID | ‘0EF’H |
| -Trace recording session | ‘1A’H |
| - TCE Id | ‘5’H |
| - CHOICE Area Configuration | Not present |

UE INFORMATION REQUEST (Step 14)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Measurements Report Request | TRUE |
| Logged ANR Report Request | Not Present |

UE INFORMATION RESPONSE (FDD) (Step 14)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |

| - Band indicator | Same as cell 9 |
| - BCCH ARFCN | Same as cell 9 |
| - GSM carrier RSSI | (0...63) |
| - Logged Meas Available | Not checked |

UE INFORMATION RESPONSE (TDD) (Step 15)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Meas Report | |
| - Absolute Time Info | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace reference | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - PLMN Identity | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace ID | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace recording session | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - CHOICE mode | TDD |
| - List of measurements TDD | At least 1 entry where at least one entry complies to entry with index 'x' below. |
| - Logged Measurement Info-TDD[x] | |
| - Relative Time Stamp[x] | Not checked |
| - Logged Measurements Serving Cell[x] | |
| - Cell ID | Cell 1 |
| - Primary CCPCH RSCP | (0..91) |
| - Logged Measurements Inter-RAT Neighbour cells list | |
| - Logged Measurements GSM Neighbouring | 1 entry |

| Information Element | Value/remark |
|---|---|
| Cells list | |
| - BSIC | Same as cell 9 |
| - Band indicator | Same as cell 9 |
| - BCCH ARFCN | Same as cell 9 |
| - GSM carrier RSSI | (0...63) |
| - Logged Meas Available | Not checked |

#### 8.6.3.2.5 Test requirement

At step 15, the UE shall transmit a UE INFORMATION RESPONSE message, with IE “Logged Measurements Inter-RAT Neighbour cells list” include Logged Measurements of Cell 9 (TP1).

### 8.6.3.3 Logged MDT / Maintaining logged measurement configuration / UTRAN to E-UTRAN Inter-RAT mobility

#### 8.6.3.3.1 Definition

#### 8.6.3.3.2 Conformance requirement

[TS 25.304, clause 5.7 (TP1, TP2)]

The UE may be configured to perform logging of measurement results in idle mode, CELL_PCH and URA_PCH state with LOGGING MEASUREMENT CONFIGURATION message specified in TS 25.331 [4]. This configuration is valid while the logging duration timer is running.

If the configuration of logged measurements is valid, the UE shall perform logging of measurement results if all of the following conditions are met:

- the UE is in *camped normally* state in idle mode, CELL_PCH or URA_PCH state;
- RPLMN of the UE is the same as the RPLMN at the point of time of LOGGING MEASUREMENT CONFIGURATION message reception
- the UE is camped on a cell belonging to Area Configuration (see TS 25.331 [4]), if configured;
- the UE is camped on the RAT where the logged measurement configuration was received.

Otherwise, the logging of measurement results shall be suspended.

NOTE: Even if logging of measurement results is suspended, the logging duration timer and time stamp will continue, and the logged measurement configuration and corresponding log are kept.

[TS 25.331, clause 8.3.6.3 (TP1, TP2)]

The UE shall be able to receive a HANDOVER TO UTRAN COMMAND message and perform an inter-RAT handover, even if no prior UE measurements have been performed on the target UTRAN cell and/or frequency.

The UE shall act upon all received information elements as specified in subclause 8.6, unless specified otherwise in the following.

The UE may:

1> maintain a list of the set of cells to which the UE has Radio Links if the IE "Cell ID" is present.

The UE shall:

…

1> if an IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" in variable LOGGED_MEAS_REPORT_VARIABLE is present and registered PLMN is the same as the IE "PLMN Identity" stored in variable LOGGED_MEAS_REPORT_VARIABLE:

2> include IE "Logged Meas Available".

…

1> and the procedure ends.

[TS 25.331, clause 8.5.63.3 (TP1, TP2)]

Upon receiving the LOGGING MEASUREMENT CONFIGURATION message the UE shall:

1> if IE "Logged Measurements Configuration Info" is present:

2> if stored, discard the existing logged measurement configuration as well as the logged measurement information as specified in 8.5.66;

2> store the received IEs "Logging Duration", "Logging Interval", "Area Configuration" if included in IE "Logged Measurements Configuration Info" in variable LOGGED_MEAS_CONFIG and IEs "Absolute Time Info", "Trace reference", "Trace recording session" and "TCE Id" in variable LOGGED_MEAS_REPORT_VARIABLE;

2> store the current Registered PLMN in the IE "PLMN Identity" in variable LOGGED_MEAS_REPORT_VARIABLE;

2> start timer T326 with the timer value set to the IE "Logging Duration".

NOTE: The UE should not stop timer T326 unless explicitly stated when it moves to another RAT.

1> if IE "Logged ANR configuration Info" is present:

2> if variable LOG_ANR_CONFIG was already stored, discard the existing logged measurement configuration for ANR purpose as well as the associated logged measurement information as specified in 8.5.68;

2> store the received IEs in the IE "Logged ANR configuration Info" in variable LOG_ANR_CONFIG;

2> store the current Registered PLMN in the IE "PLMN Identity" in variable LOG_ANR_REPORT_VARIABLE;

2> store the list of Equivalent PLMNs in the IE "Equivalent PLMN Identity List" in variable LOG_ANR_REPORT_VARIABLE;

2> start timer T327 with the timer value set to the IE "Logging Duration" included in IE "Logged ANR configuration Info".

#### Reference

TS 25.304 clause 5.7, TS 25.331 clauses 8.5.6.3 and 8.5.63.3.

### 8.6.3.3.3 Test Purpose

1. Verify indication of availability of Logged MDT measurements in HANDOVER TO UTRAN COMMAND message.
2. Verify that logged measurement configurations and logs are maintained despite periods of interruptions due to UE transitions to E-UTRAN.

### 8.6.3.3.4 Method of test

System Simulator: 1 UTRAN FDD cell (or TDD cell) and 1 E-UTRAN cell. Cell 1 is a UTRAN cell, and Cell 2 is an E-UTRAN Cell. Cell 2 configuration refers to “Cell 1” in TS36.508 clause 6.3.

UE: PS-DCCH+DTCH_DCH (state 6-10) in Cell 1as specified in clause 7.4 of TS 34.108.

#### Related ICS/IXIT statements

- Compressed mode required yes/no
- UE supports E-UTRAN.

#### Test Procedure

Table 8.6.3.3 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Column marked "T0" denotes the initial condition. Subsequent configurations marked “T1”, “T2” are applied at the points indicated described in the texts in this clause.

| | | | | | |
|---|---|---|---|---|---|
| T2 | Cell-specific RS EPRE | dBm/15kHz | - | -90 | |
| | CPICH Ec (UTRA FDD) | dBm/3.84 MHz | -65 | - | |
| | PCCPCH Ec(UTRA LCR TDD) | dBm/1.28 MHz | -65 | - | |

**Table 8.6.3.3: Time instances of cell power level and parameter changes**

| | Parameter | Unit | Cell 1(UTRA) | Cell 2(E-UTRA) | Remark |
|---|---|---|---|---|---|
| T0 | Cell-specific RS EPRE | dBm/15kHz | - | -90 | |
| | CPICH Ec (UTRA FDD) | dBm/3.84 MHz | -65 | - | |
| | PCCPCH Ec(UTRA LCR TDD) | dBm/1.28 MHz | -65 | - | |
| T1 | Cell-specific RS EPRE | dBm/15kHz | - | -70 | The power level values are such that entering conditions for event 3a are satisfied. |
| | CPICH Ec (UTRA FDD) | dBm/3.84 MHz | -100 | - | |
| | PCCPCH Ec (UTRA LCR TDD) | dBm/1.28 MHz | -100 | - | |
| T2 | Cell-specific RS EPRE | dBm/15kHz | - | -90 | |
| | CPICH Ec (UTRA FDD) | dBm/3.84 MHz | -65 | - | |
| | PCCPCH Ec(UTRA LCR TDD) | dBm/1.28 MHz | -65 | - | |

The UE is in CELL_DCH state of cell 1. SS transmits a LOGGING MEASUREMENT CONFIGURATION message to the UE to configure logged measurements.

SS transmits an RRC CONNECTION RELEASE message to the UE to disconnect the connection.

The UE transmits an RRC CONNECTION RELEASE COMPLETE message using unacknowledged mode.

Wait 10s to allow UE to activate logging.

The UE transmits an RRC CONNECTION REQUEST message to SS.

SS transmits an RRC CONNECTION SETUP message to the UE.

The UE transmits an RRC CONNECTION SETUP COMPLETE message to SS, and enters CELL_DCH state.

The UE transmits SERVICE REQUEST message.

SS sends PHYSICAL CHANNEL RECONFIGURATION message to the UE to configure the compressed mode pattern sequence parameters. When the PHYSICAL CHANNEL RECONFIGURATION COMPLETE is received from the UE, the SS sends a MEASUREMENT CONTROL message.

SS adjusts cell power level according to columns "T1" in tables 8.6.3.3, and UE send MEASUREMENT REPORT to SS.

The UE receive “HANDOVER FROM UTRAN COMMAND” message from cell1, and handover to E-UTRAN cell 2,

SS adjust cell power level according to columns "T2" in tables 8.6.3.3, and UE sends *MeasurementReport* message to SS.

SS transmits a *MobilityFromEUTRACommand* message to UE.

The UE handover to UTRAN cell from E-UTRAN cell, and send HANDOVER TO UTRAN COMPLETE message and complete handover to Cell 1.

SS transmits a UE INFORMATION REQUEST message, and the IE "Logged Measurements Report Request" is present.

The UE shall transmit a UE INFORMATION REPONSE message, with IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD".

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | LOGGING MEASUREMENT CONFIGURATION | Include IE “Logged Measurements Configuration Info”, with “Logging Interval” set as 2.56s and “Logging Duration” set as 10min. |
| 2 | ← | | RRC CONNECTION RELEASE | |
| 3 | → | | RRC CONNECTION RELEASE COMPLETE | The UE sends this message before it completes state transition. |
| 4 | | | | Wait 10s to allow UE to activate logging. |
| 5 | → | | RRC CONNECTION REQUEST | By outgoing call operation. |
| 6 | ← | | RRC CONNECTION SETUP | |
| 7 | → | | RRC CONNECTION SETUP COMPLETE | |
| 7a | --> | | RRC: INITIAL DIRECT TRANSFER<br>NAS: SERVICE REQUEST | The UE transmits SERVICE REQUEST message. |
| - | - | | - | For FDD, Steps 8 to 9 describe behaviour that depends on the UE capability; the "lower case letter" identifies a step sequence that takes place if a capability is supported.<br><br>For TDD, go to Step 10. |
| 8 | ← | | PHYSICAL CHANNEL RECONFIGURATION | Compressed mode pattern sequence parameters are loaded to UE. |
| 9 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 10 | ← | | MEASUREMENT CONTROL | SS configures event 3a in the UE. If the UE requires compressed mode (refer ICS/IXIT), compressed mode is started. |
| 11 | | | | SS re-adjusts the downlink transmission power settings according to columns "T1" in tables 8.6.3.3. |
| 12 | → | | MEASUREMENT REPORT | After about 2s, the UE sends a MEASUREMENT REPORT to SS triggered by event 3a. |
| 13 | ← | | HANDOVER FROM UTRAN COMMAND | The SS transmits a HANDOVER FROM UTRAN COMMAND message to UE. |
| 14 | → | | *RRCConnectionReconfigurationComplete* | The UE shall send a *RRCConnectionReconfigurationComplete* message to cell 2. |
| 15 | ← | | *RRCConnectionReconfiguration* | The SS transmits an *RRCConnectionReconfiguration* message to setup inter RAT measurement on Cell 2. |

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 16 | → | | *RRCConnectionReconfigurationComplete* | The UE transmits an *RRCConnectionReconfiguratio nComplete* message to confirm the setup of inter RAT measurement on Cell 2. |
| 17 | | | | SS re-adjusts the downlink transmission power settings according to columns "T2" in tables 8.6.3.3. |
| 18 | → | | *MeasurementReport* | The UE transmits a *MeasurementReport message to cell 2.* |
| 19 | ← | | *MobilityFromEUTRACommand* | The SS transmits a *MobilityFromEUTRACommand* message on Cell 2. |
| 20 | → | | HANDOVER TO UTRAN COMPLETE | The UE transmit a HANDOVER TO UTRAN COMPLETE message on cell 1. |
| 21 | ← | | SECURITY MODE COMMAND | The SS transmits a SECURITY MODE COMMAND message on Cell 1 in order to activate integrity protection. |
| 22 | → | | SECURITY MODE COMPLETE | The UE transmits a SECURITY MODE COMPLETE message on Cell 1. |
| 23 | ← | | UE INFORMATION REQUEST | SS transmits a UE INFORMATION REQUEST message with IE "Logged Measurements Report Request" set to “true”. |
| 24 | → | | UE INFORMATION RESPONSE | The UE shall send a UE INFORMATION RESPONSE message, with IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" |

Specific Message Contents

Conditions for specific message contents

| Condition | Explanation |
|---|---|
| Band > 64 | If E-UTRA band > 64 is selected |

LOGGING MEASUREMENT CONFIGURATION (Step 1)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |

| | |
|---|---|
| Logged ANR configuration Info | |
| - Absolute Time Info | Set to value corresponding to the absolute time when the message is sent |
| - Logging Duration | 10 min |
| - Logging Interval | 2.61 |
| - Trace reference | |
| - PLMN Identity | Same as MIB |
| - Trace ID | '0EF'H |
| -Trace recording session | '1A'H |
| - TCE Id | '5'H |
| - CHOICE Area Configuration | Not present |

PHYSICAL CHANNEL RECONFIGURATION (FDD) (Step 8)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an unused integer between 0 to 3 |
| Integrity check info | |
| - Message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |

| - RSRQ | (0..34) | |
| - Logged Measurements E-UTRA frequency extension list | 1 entry | |
| - EARFCN extension | Same as cell 2 | Band > 64 |
| - Logged Meas Available | Not checked | |

UE INFORMATION RESPONSE (TDD) (Step 24)

| Information Element | Value/remark | Conditions |
|---|---|---|
| Message Type | | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 | |
| Integrity check info | | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. | |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. | |
| Logged Meas Report | | |
| - Absolute Time Info | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 | |
| - Trace reference | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 | |

| Information Element | Value/remark | Conditions |
|---|---|---|
| - PLMN Identity | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 | |
| - Trace ID | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 | |
| - Trace recording session | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 | |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 | |
| - CHOICE mode | TDD | |
| - List of measurements TDD | At least 1 entry where at least one entry complies to entry with index 'x' below. | |
| - Logged Measurement Info-TDD[x] | | |
| - Relative Time Stamp[x] | Not checked | |
| - Logged Measurements Serving Cell[x] | | |
| - Cell ID | Cell 1 | |
| - Primary CCPCH RSCP | (0..91) | |
| - Logged Measurements Inter-RAT Neighbour cells list | | |
| - Logged Measurements E-UTRA frequency list | 1 entry | |
| - E-UTRA Carrier Frequency | Same as cell 2 | |
| - E-UTRA Carrier Frequency | 65535 | Band > 64 |
| - Logged Measurements E-UTRA Frequency Neighbours List | 1 entry | |
| - Physical Cell Identity | Same as cell 2 | |
| - RSRP | (0..97) | |
| - RSRQ | (0..34) | |
| - Logged Measurements E-UTRA frequency extension list | 1 entry | |
| - EARFCN extension | Same as cell 2 | Band > 64 |
| - Logged Meas Available | Not checked | |

#### 8.6.3.3.5 Test requirement

At step 20, the UE shall transmit a HANDOVER TO UTRAN COMPLETE message, with the IE "Logged Meas Available" on Cell 1 (TP1).

At step 24, the UE shall transmit a UE INFORMATION RESPONSE message includes IE "Logged Meas Report" with logged Measurements of Cell 1 and Cell 2 (TP2).

### 8.6.3.4 Logged MDT / Maintaining logged measurement configuration / UTRAN to GERAN Inter-RAT mobility

#### 8.6.3.4.1 Definition

#### 8.6.3.4.2 Conformance requirement

[TS 25.304, clause 5.7 (TP1)]

The UE may be configured to perform logging of measurement results in idle mode, CELL_PCH and URA_PCH state with LOGGING MEASUREMENT CONFIGURATION message specified in TS 25.331 [4]. This configuration is valid while the logging duration timer is running.

If the configuration of logged measurements is valid, the UE shall perform logging of measurement results if all of the following conditions are met:

- the UE is in *camped normally* state in idle mode, CELL_PCH or URA_PCH state;
- RPLMN of the UE is the same as the RPLMN at the point of time of LOGGING MEASUREMENT CONFIGURATION message reception.
- the UE is camped on a cell belonging to Area Configuration (see TS 25.331 [4]), if configured;

- the UE is camped on the RAT where the logged measurement configuration was received.

Otherwise, the logging of measurement results shall be suspended.

NOTE: Even if logging of measurement results is suspended, the logging duration timer and time stamp will continue, and the logged measurement configuration and corresponding log are kept.

[TS 25.331, clause 8.5.65.2 (TP1)]

While T326 is running, the UE shall:

1> perform this logging in accordance with the following:

2> perform the logging while camping normally on an UTRA cell and the RPLMN of the UE is the same as the PLMN Identity stored in LOGGED_MEAS_REPORT_VARIABLE and, if the IE "Area Configuration" is present in variable LOGGED_MEAS_CONFIG, that is part of the concerned area;

2> perform the logging at regular intervals, as defined by the IE "Logging Interval" in variable LOGGED_MEAS_CONFIG;

2> when adding a logged measurement entry in variable LOGGED_MEAS_REPORT_VARIABLE, include the fields in accordance with the following:

3> set the IE "Relative Time Stamp" to indicate time relative to the moment at which the logged measurement configuration was received;

3> if GNSS location information became available during the last logging interval:

4> if the UE has been able to calculate a 3-dimensional position:

5> set IE "Ellipsoid point with altitude" to include the location coordinates;

4> else:

5> set IE "Ellipsoid point" to include the location coordinates:

3> set the IE "Cell ID" to indicate cell identity of the cell the UE is camping on obtained from system information;

3> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell that the UE is camping on for UTRA FDD;

3> set the "P-CCPCH RSCP" to include measured quantities for the cell that the UE is camping on for UTRA 1.28 Mcps TDD;

3> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", in order of decreasing ranking quantity as used for cell re-selection in each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

3> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes, only once, the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

2> when the memory reserved for the logging of measurements becomes full, stop timer T326 and performs the same actions as performed upon expiry of T326, as specified in 8.5.63.4.

[TS 25.331, clause 8.5.64.3 (TP1)]

UE Shall:

1> if IE "Logged Measurements Report Request" is present:

2> if Registered PLMN is the same as the IE "PLMN Identity" stored in variable LOGGED_MEAS_REPORT_VARIABLE:

3> if an IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" in variable LOGGED_MEAS_REPORT_VARIABLE is present:

13> set IE "Logged Meas Report" in the UE INFORMATION RESPONSE as follows:

5> include the IE "Absolute Time Info" and set it to the value of the IE "Absolute Time Info" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "Trace reference" and set it to the value of IE "Trace reference" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "Trace recording session" and set it to the value of IE "Trace recording session" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IE "TCE Id" and set it to the value of IE "TCE Id" in the variable LOGGED_MEAS_REPORT_VARIABLE;

5> include the IEs "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" and set it to include, in the same order as logged, one or more entries from LOGGED_MEAS_REPORT_VARIABLE;

5> clear the logged measurement results included in the list of IEs "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" from LOGGED_MEAS_REPORT_VARIABLE;

5> if the variable LOGGED_MEAS_REPORT_VARIABLE is not empty:

6> include IE "Logged Meas Available";

2> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

1> if IE "Logged ANR Report Request" is present:

2> if Registered PLMN is the same as the IE "PLMN Identity" stored in variable LOG_ANR_REPORT_VARIABLE:

3> if IE "Logged ANR Report Info" in variable LOG_ANR_REPORT_VARIABLE is present:

4> set IEs "Logged ANR Report Info" in the UE INFORMATION RESPONSE as follows:

5> include the IEs "Logged ANR Report Info List" and set it to include entries from LOG_ANR_REPORT_VARIABLE;

5> clear the logged measurement results included in the list of IEs "Logged ANR Report Info List" from the LOG_ANR_REPORT_VARIABLE;

5> clear the variable LOG_ANR_CONFIG and stop timer T327.

2> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

[TS 37.320, clause 5.1.1.3.1 (TP2)]

A UE configured to perform Logged MDT measurements indicates the availability of Logged MDT measurements, by means of an indicator, in RRCConnectionSetupComplete message during connection establishment. Furthermore, the indicator (possibly updated) shall be provided within E-UTRAN handover and re-establishment, and UTRAN procedures involving the change of SRNC (SRNC relocation), CELL UPDATE, URA UPDATE messages as well as MEASUREMENT REPORT message in case of state transition to CELL_FACH without CELL UPDATE. The UE includes the indication in one of these messages at every transition to RRC Connected mode even though the logging period has not ended, upon connection to RAT which configured the UE to perform Logged MDT measurements and RPLMN which is equal to a PLMN in the MDT PLMN list.

The indicator shall be also provided in UEInformationResponse message during MDT report retrieval in case the UE has not transferred the total log in one RRC message in order to indicate the remaining data availability.

The UE will not indicate the availability of MDT measurements in another RAT or in a PLMN that is not in the MDT PLMN list.

The network may decide to retrieve the logged measurements based on this indication. In case Logged MDT measurements are retrieved before the completion of the pre-defined logging duration, the reported measurement results are deleted, but MDT measurement logging will continue according to ongoing logged measurement configuration.

In case the network does not retrieve Logged MDT measurements, UE should store non-retrieved measurements for 48 hours from the moment the duration timer for logging expired. There is no requirement to store non-retrieved data beyond 48 hours. In addition, all logged measurement configuration and the log shall be removed by the UE at switch off or detach.

Reference

TS 25.304 clause 5.7, TS 25.331 clauses 8.5.65.2, 8.5.64.3 and TS37.320 clause 5.1.1.3.1.

### 8.6.3.4.3 Test Purpose

1. Verify indication of availability of Logged MDT measurements in HANDOVER TO UTRAN COMMAND message.
2. Verify that logged measurement configurations and logs are maintained despite periods of interruptions due to UE transitions to other RAT.

### 8.6.3.4.4 Method of test

Initial Condition

System Simulator: 2 cells – cell 1 and cell 9 are active. Cell 1 is UTRA FDD or TDD cells. Cell 9 is GSM cell. The PLMN of Cell 1 and Cell 9 are the same.

UE: CELL_DCH (state 6-9) in cell 1 as specified in clause 7.4 of TS 34.108.

Test Procedure

**Table 8.6.3.4-1**

| Parameter | Unit | Cell 1 (UTRA) | | |
|---|---|---|---|---|
| | | T0 | T1 | T2 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | |
| CPICH Ec(FDD) | dBm/3.84MHz | -60 | -80 | -60 |
| PCCPCH_RSCP (TDD) | dBm | -60 | -80 | -60 |

**Table 8.6.3.4-2**

| Parameter | Unit | Cell 9 (GSM) | | |
|---|---|---|---|---|
| | | T0 | T1 | T2 |
| Test Channel | | 1 | | |
| RF Signal Level | dBm | -90 | -48 | -90 |
| RXLEV_ACCESS_MIN | dBm | -100 | | |
| FDD_Qmin | dB | -20 | | |
| FDD_Qoffset | dBm | 0 | | |

Table 8.6.3.4-1 and table 8.6.3.4-2 illustrate the downlink power to be applied for the 2 cells at various time instants of the test execution. Columns marked "T0" denote the initial conditions, while column marked “T1” and “T2” is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

The UE is in CELL_DCH state of cell 1.

SS transmits a LOGGING MEASUREMENT CONFIGURATION message to the UE to configure logged measurements.

SS disconnects the CS call.

SS transmits an RRC CONNECTION RELEASE message to the UE to disconnect the connection.

The UE transmits an RRC CONNECTION RELEASE COMPLETE message using unacknowledged mode.

Wait 10s to allow UE to activate logging.

The SS configures its downlink transmission power settings according to columns "T1" in tables' 8.6.3.4-1 and 8.6.3.4-2. The UE performs cell re-selection to Cell 9 and performs location update.

UE triggers an MO call and enters U10 call active state.

The SS configures its downlink transmission power settings according to columns "T2" in tables' 8.6.3.4-1 and 8.6.3.4-2.

The SS sends a MEASUREMENT INFORMATION to trigger the MS to perform measurements on the UTRAN cell.

The UE sends a MEASUREMENT REPORT to SS.

The SS sends INTERSYSTEM TO UTRAN HANDOVER COMMAND indicating the dedicated channel of the target cell to the MS through the GSM serving cell.

The UE handover to UTRAN cell from GERAN cell, and send HANDOVER TO UTRAN COMMAND message.

SS transmits a UE INFORMATION REQUEST message, and the IE "Logged Measurements Report Request" is present.

The UE shall transmit a UE INFORMATION REPONSE message, with IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD".

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | ← | | LOGGING MEASUREMENT CONFIGURATION | Include IE "Logged Measurements Configuration Info", with "Logging Interval" set as 2.56s and "Logging Duration" set as 10min. |
| 2 | <- | | DISCONNECT | SS disconnects the CS call |
| 3 | -> | | RELEASE | |
| 4 | <- | | RELEASE COMPLETE | |
| 5 | ← | | RRC CONNECTION RELEASE | |
| 6 | → | | RRC CONNECTION RELEASE COMPLETE | The UE sends this message before it completes state transition. |
| 7 | | | | Wait 10s to allow UE to activate logging. |
| 8 | | | | The SS configures its downlink transmission power settings according to columns "T1" in tables' 8.6.3.4-1 and 8.6.3.4-2. The UE performs cell re-selection to Cell 9. |
| 9 | → | | CHANNEL REQUEST | The SS receives this burst on the RACH of cell 9(GSM cell). (triggered by UE location update procedure or RAU procedure) |
| 10 | ← | | IMMEDIATE ASSIGNMENT | Sent on AGCH. |
| 11 | SS | | | The SS completes the Location Update procedure or RAU procedure requested by the UE. |
| 12-28 | - | | - | The generic test procedure in TS 51.010-1 sub clause 10.2.3 are performed NOTE: Mobile originating CS call is established. |

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 29 | - | | - | The SS configures its downlink transmission power settings according to columns "T2" in tables' 8.6.3.4-1 and 8.6.3.4-2. |
| 30 | ← | | MEASUREMENT INFORMATION | |
| 31 | → | | MEASUREMENT REPORT | Including Measurement Results on the UTRAN cell in Step 4 |
| 32 | ← | | INTERSYSTEM TO UTRAN HANDOVER COMMAND | Send on cell 9 (GSM cell) |
| 33 | → | | HANDOVER TO UTRAN COMPLETE | The UE transmit a HANDOVER TO UTRAN COMPLETE message on cell 1. |
| 34 | ← | | SECURITY MODE COMMAND | The SS transmits a SECURITY MODE COMMAND message on Cell 1 in order to activate integrity protection. |
| 35 | → | | SECURITY MODE COMPLETE | The UE transmits a SECURITY MODE COMPLETE message on Cell 1. |
| 36 | ← | | UE INFORMATION REQUEST | SS transmits a UE INFORMATION REQUEST message with IE "Logged Measurements Report Request" set to "true". |
| 37 | → | | UE INFORMATION RESPONSE | The UE shall send a UE INFORMATION RESPONSE message, with IE "Logged Measurement Info-FDD" or "Logged Measurement Info-TDD" |

Specific Message Contents

LOGGING MEASUREMENT CONFIGURATION (Step 1)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged ANR configuration Info | |
| - Absolute Time Info | Set to value corresponding to the absolute time when the message is sent |
| - Logging Duration | 10 min |
| - Logging Interval | 2.62 |
| - Trace reference | |
| - PLMN Identity | Same as MIB |
| - Trace ID | '0EF'H |
| -Trace recording session | '1A'H |
| - TCE Id | '5'H |
| - CHOICE Area Configuration | Not present |

HANDOVER TO UTRAN COMPLETE (Step 33)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| **UE Information elements** | |
| START list | Not checked |
| - CN domain identity | Not checked |
| - START | Not checked |

| | |
|---|---|
| **RB Information elements** | |
| - COUNT-C activation time | Not checked |
| **Other Information elements** | |
| - Logged Meas Available | TRUE |

FFS

UE INFORMATION RESPONSE (FDD) (Step 37)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Meas Report | |
| - Absolute Time Info | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace reference | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - PLMN Identity | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace ID | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace recording session | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - CHOICE mode | FDD |
| - List of measurements FDD | At least 1 entry where at least one entry complies to entry with index ‘x’ below. |
| - Logged Measurement Info-FDD[x] | |
| - Relative Time Stamp[x] | Not checked |
| - Logged Measurements Serving Cell[x] | |
| - Cell ID[x] | Cell 1 |
| - Primary CCPCH RSCP[x] | (0..91) |
| - CPICH Ec/N0 | (0..49) |
| - Logged Measurements Inter-RAT Neighbour cells list | |
| - Logged Measurements GSM Neighbouring Cells list | |
| - BSIC | Same as cell 9 |
| - Band indicator | Same as cell 9 |
| - BCCH ARFCN | Same as cell 9 |
| - GSM carrier RSSI | (0...63) |
| - Logged Meas Available | Not checked |

UE INFORMATION RESPONSE (TDD) (Step 37)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Meas Report | |
| - Absolute Time Info | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace reference | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |

| Information Element | Value/remark |
|---|---|
| - PLMN Identity | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace ID | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - Trace recording session | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - TCE Id | Same value as sent by SS in LOGGING MEASUREMENT CONFIGURATION in step 1 |
| - CHOICE mode | TDD |
| - List of measurements TDD | At least 1 entry where at least one entry complies to entry with index 'x' below. |
| - Logged Measurement Info-TDD[x] | |
| - Relative Time Stamp[x] | Not checked |
| - Logged Measurements Serving Cell[x] | |
| - Cell ID | Cell 1 |
| - Primary CCPCH RSCP | (0..91) |
| - Logged Measurements Inter-RAT Neighbour cells list | |
| - Logged Measurements GSM Neighbouring Cells list | 1 entry |
| - BSIC | Same as cell 9 |
| - Band indicator | Same as cell 9 |
| - BCCH ARFCN | Same as cell 9 |
| - GSM carrier RSSI | (0...63) |
| - Logged Meas Available | Not checked |

#### 8.6.3.4.5 Test requirement

At step 33, the UE shall transmit a HANDOVER TO UTRAN COMPLETE message, with the IE "Logged Meas Available" on Cell 1 (TP1).

At step 37, the UE shall transmit a UE INFORMATION RESPONSE message includes IE "Logged Meas Report" with logged Measurements of Cell 1 and Cell 9 (TP2).

## 8.6.4 Connection Establishment Failure

### 8.6.4.1 Connection Establishment Failure logging / Logging and reporting / T300 expiry

#### 8.6.4.1.1 Definition

This test is applicable for all UEs that support Connection Establishment Failure logging services.

#### 8.6.4.1.2 Conformance requirement

[TS 25.331, clause 8.1.3.5 (TP1)]

1> if the UE has not yet received an RRC CONNECTION SETUP message with the value of the IE "Initial UE identity" equal to the value of the variable INITIAL_UE_IDENTITY; and

1> if cell re-selection or expiry of timer T300 or timer T318 occurs:

the UE shall:

1> if the UE performs cell reselection:

2> clear the variable SYSTEM_INFORMATION_CONTAINER.

1> check the value of V300; and

…

2> if V300 is greater than N300:

3> if the UE supports logging of failed RRC Connection Establishment, perform the actions specified in subclause 8.1.3.11;

3> enter idle mode.

3> consider the procedure to be unsuccessful;

3> Other actions the UE shall perform when entering idle mode from connected mode are specified in subclause 8.5.2;

3> the procedure ends.

[TS 25.331, clause 8.1.3.6 ( TP2)]

The UE shall compare the value of the IE "Initial UE identity" in the received RRC CONNECTION SETUP message with the value of the variable INITIAL_UE_IDENTITY.

If the values are different, the UE shall:

1> ignore the rest of the message.

If the values are identical, the UE shall:

...

1> submit an RRC CONNECTION SETUP COMPLETE message to the lower layers on the uplink DCCH after successful state transition per subclause 8.6.3.3, with the contents set as specified below:

...

2> if an IE "Logged Connection Establishment Failure Info-FDD" or "Logged Connection Establishment Failure Info-TDD" in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE is present and the current Registered PLMN is the same as the PLMN in IE "PLMN Identity" stored in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE:

3> include IE "Connection Establishment Failure Info Available".

...

When the RRC CONNECTION SETUP COMPLETE message has been submitted to lower layers for transmission the UE shall:

...

[TS 25.331, clause 8.1.3.11 (TP1)]

If the RRC connection establishment fails and the UE supports logging of failed RRC Connection Establishment, the UE shall perform logging of information for later retrieval. The UE shall store connection establishment failure information in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE by setting its fields as follows:

1> clear the information included in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE, if any;

1> set the IE "PLMN Identity" to the same value as the selected PLMN [4];

1> set the IE "Number Of RRC Msg Transmitted" to indicate the number of times the RRC CONNECTION REQUEST message was transmitted by the UE during the failed RRC Connection Establishment procedure.

1> for TDD:

2> set the IE "FPACH Received" to TRUE if FPACH was received during the failed RRC Connection Establishment procedure.

2> if common E-DCH was used, include the IE "E-RUCCH Failure" and set it to TRUE if failure indication of the E-RUCCH transmission was received during the failed RRC Connection Establishment procedure.

1> if detailed location information is available:

2> if the UE has been able to calculate a 3-dimensional position:

3> set the IE "Ellipsoid point with altitude" or the IE "Ellipsoid point with altitude and uncertainty ellipsoid" to include the location coordinates;

2> else:

3> set the IE "Ellipsoid point" or the IE "Ellipsoid point with uncertainty circle" or the IE “Ellipsoid point with uncertainty ellipse" to include the location coordinates:

2> if horizontal velocity information is available:

3> set the IE "Horizontal velocity" to include the horizontal velocity;

2> a value of the IE "Confidence", different from "0" should be calculated, as the probability that the UE is located within the uncertainty region of the one of the IEs "Ellipsoid point with uncertainty ellipse" or "Ellipsoid point with altitude and uncertainty ellipsoid".

1> set the IE "PLMN Identity" of the Logged Measurements Failed Cell to indicate the IE "PLMN Identity" obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "Cell ID" to indicate cell identity obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell where the connection establishment failure was detected for UTRA FDD;

1> set the "P-CCPCH RSCP" to include measured quantities for the cell where the connection establishment failure was detected for UTRA 1.28 Mcps TDD;

1> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", "Logged Measurements E-UTRA frequency extension list", in order of decreasing ranking quantity as used for cell re-selection in each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

1> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

[TS 25.331, clause 8.5.64.3 (TP3)]

UE Shall:

…

1> if IE "Connection Establishment Failure Request" is present:

2> if Registered PLMN is the same as the PLMN in the IE "PLMN Identity" stored in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE:

3> set IE "Connection Establishment Failure Report" in the UE INFORMATION RESPONSE as follows:

4> include the IE "Logged Connection Establishment Failure Info-FDD" or "Logged Connection Establishment Failure Info-TDD" and set it to include the entry from the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE;

4> set the IE "Time Since Failure" to indicate the elapsed time starting from the Logging of the Connection establishment failure information that is stored in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE.

3> clear the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE;

1> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

Reference

TS 25.304 clause 5.7 and TS 25.331 clause 8.3.1.5, 8.3.1.6, 8.1.3.11 and 8.5.64.3

.8.6.4.1.3 Test Purpose

1. Verify that Connection Establishment Failure information is logged when T300 is expired and V300 is greater than N300.

2. Verify that IE "Logged Connection Establishment Failure Info Available" is indicated at RRC connection establishment.

3. Verify that Connection Establishment Failure information is reported in connection establishment failure information in UE INFORMATION RESPONSE message.

8.6.4.1.4 Method of test

Initial conditions

System Simulator:

Cell 1

User Equipment:

UE: Registered Idle Mode on PS (state 3) in Cell 1 as specified in clause 7.4 of TS 34.108.

Test procedure

The UE sends RRC CONNECTION REQUEST message to SS, and SS does not response any message to UE.

The UE resubmits RRC CONNECTION REQUEST message 3 times and does not get any response make V300>N300.

The SS sends Paging message to UE to set up RRC CONNECTION.

The UE transmits an RRC CONNECTION REQUEST message.

When the UE receives RRC CONNECTION SETUP message, the UE should transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available".

The UE transmits SERVICE REQUEST message.

The SS sends an UE INFORMATION REQUEST message to get Connection Establishment Failure Report.

The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1.

The SS sends RRC CONNECTION RELEASE message to UE, and makes UE enter idle mode.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | <-- | | Paging | SS transmits a Paging message. |
| 2 | --> | | RRC CONNECTION REQUEST | The UE transmits an RRC CONNECTION REQUEST message. |
| 3 | - | | - | SS does not send any message to UE. Waits 2 seconds make T300 expire. |
| 4 | - | | - | Repeat steps 2 and 3 2 times, make V300=N300. |
| 5 | - | | RRC CONNECTION REQUEST | The UE transmits an RRC CONNECTION REQUEST message. |
| 6 | - | | - | SS does not send any message to UE in 5 seconds and allow UE to enter idle mode and perform Connection Establishment Failure logging |
| 7 | <-- | | Paging | SS transmits a Paging message. |
| 8 | --> | | RRC CONNECTION REQUEST | The UE transmits an RRC CONNECTION REQUEST message. |
| 9 | <-- | | RRC CONNECTION SETUP | SS transmit an RRC CONNECTION SETUP message. |

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 10 | --> | | RRC CONNECTION SETUP COMPLETE | The UE shall transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available". |
| 10a | --> | | RRC: INITIAL DIRECT TRANSFER<br>NAS: SERVICE REQUEST | The UE transmits SERVICE REQUEST message. |
| 11 | <-- | | UE INFORMATION REQUEST | SS sends an UE INFORMATION REQUEST message to get Connection Establishment Failure Report. |
| 12 | --> | | UE INFORMATION RESPONSE | The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1. |
| 13 | <-- | | RRC CONNECTION RELEASE | SS transmits a RRC CONNECTION RELEASE message to release RRC connection and moves to idle mode. |
| 14 | --> | | RRC CONNECTION RELEASE COMPLETE | UE confirms the connection release and returns to Idle mode |

Specific message contents

All messages have the same content as defined in 34.108 clause 9 with the following exceptions:

SYSTEM INFORMATION TYPE 1 (Initial conditions and all steps)

| | |
|---|---|
| - UE Timers and constants in idle mode | |
| -T300 | 2000 milliseconds |
| -N300 | 3 |
| -T312 | 10 seconds |
| - N312 | 1 |

RRC CONNECTION SETUP COMPLETE (step 10)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message. |
| Connection Establishment Failure Info Available | TRUE |

UE INFORMATION REQUEST (Step 11)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Measurements Report Request | Not Present |
| Logged ANR Report Request | Not Present |
| Connection Establishment Failure Request | TRUE |

UE INFORMATION RESPONSE (FDD) (Step 12)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Connection Establishment Failure Report | |

| Information Element | Value/remark |
|---|---|
| - Time Since Failure | [0..172800] Indicates the elapsed time in seconds between Logging and reporting of Connection establishment failure info. |
| - CHOICE mode | FDD |
| - Logged Connection Establishment Failure Info-FDD | |
| - Number Of RRC Msg Transmitted | 4 |
| - Logged Measurements Failed Cell | |
| - Cell ID | Cell 1 |
| - CPICH RSCP | (0..91) |
| - CPICH Ec/N0 | (0..49) |

UE INFORMATION RESPONSE (TDD) (Step 12)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Connection Establishment Failure Report | |
| - Time Since Failure | [0..172800] Indicates the elapsed time in seconds between Logging and reporting of Connection establishment failure info. |
| - CHOICE mode | FDD |
| - Logged Connection Establishment Failure Info-FDD | |
| - Number Of RRC Msg Transmitted | 4 |
| - FPACH Received | Not checked |
| - E-RUCCH Failure | Not checked |
| - Logged Measurements Failed Cell | |
| - Cell ID | Cell 1 |
| - Primary CCPCH RSCP | (0..91) |

#### 8.6.4.1.5 Test requirements

At step 10, the UE should transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available".(TP1,TP2).

At step 12, The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1. (TP1, TP3).

### 8.6.4.2 Connection Establishment Failure logging / Logging and reporting / Physical channel failure

#### 8.6.4.2.1 Definition

This test is applicable for all UEs that support Connection Establishment Failure logging services.

#### 8.6.4.2.2 Conformance requirement

[TS 25.331, clause 8.1.3.6 (TP2)]

The UE shall compare the value of the IE "Initial UE identity" in the received RRC CONNECTION SETUP message with the value of the variable INITIAL_UE_IDENTITY.

If the values are different, the UE shall:

1> ignore the rest of the message.

If the values are identical, the UE shall:

...

1> submit an RRC CONNECTION SETUP COMPLETE message to the lower layers on the uplink DCCH after successful state transition per subclause 8.6.3.3, with the contents set as specified below:

...

2> if an IE "Logged Connection Establishment Failure Info-FDD" or "Logged Connection Establishment Failure Info-TDD" in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE is present and the current Registered PLMN is the same as the PLMN in IE "PLMN Identity" stored in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE:

3> include IE "Connection Establishment Failure Info Available".

...

When the RRC CONNECTION SETUP COMPLETE message has been submitted to lower layers for transmission the UE shall:

...

[TS 25.331, clause 8.1.3.7 (TP1)]

1> If the UE failed to establish, per subclause 8.5.4, the physical channel(s) indicated in the RRC CONNECTION SETUP message; or

1> if the UE performs cell re-selection; or

1> if the UE will be in the CELL_FACH state at the conclusion of this procedure; and

1> if the received RRC CONNECTION SETUP message included the IE "Frequency info" and the UE could not find a suitable UTRA cell on that frequency but it could find a suitable UTRA cell on another frequency; or

1> if the received RRC CONNECTION SETUP message included the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD), and the UE selected another cell than indicated by this IE; or

1> if the contents of the variable C_RNTI is empty;

1> after having received an RRC CONNECTION SETUP message with the value of the IE "Initial UE identity" equal to the value of the variable INITIAL_UE_IDENTITY; and

1> before the RRC CONNECTION SETUP COMPLETE message is delivered to lower layers for transmission:

the UE shall:

1> clear the entry for the RRC CONNECTION SETUP message in the table "Accepted transactions" in the variable TRANSACTIONS;

1> clear the variable SYSTEM_INFORMATION_CONTAINER;

1> check the value of V300, and:

2> if V300 is equal to or smaller than N300:

3> set CFN in relation to SFN of current cell according to subclause 8.5.15;

3> set the IEs in the RRC CONNECTION REQUEST message according to subclause 8.1.3.3;

3> perform the mapping of the Access Class to an Access Service Class as specified in subclause 8.5.13, and apply the given Access Service Class when accessing the RACH or the common E-DCH (for the Enhanced Uplink in CELL_FACH and Idle mode);

3> submit a new RRC CONNECTION REQUEST message to the lower layers for transmission on the uplink CCCH;

3> increment counter V300; and

3> restart timer T300 when the MAC layer indicates success or failure in transmitting the message.

2> if V300 is greater than N300:

3> if the UE supports logging of failed RRC Connection Establishment, perform the actions specified in subclause 8.1.3.11;

3> enter idle mode;

3> perform the actions specified in subclause 8.5.2 when entering idle mode from connected mode;

3> consider the RRC establishment procedure to be unsuccessful;

3> the procedure ends.

[TS 25.331, clause 8.1.3.11 (TP1)]

If the RRC connection establishment fails and the UE supports logging of failed RRC Connection Establishment, the UE shall perform logging of information for later retrieval. The UE shall store connection establishment failure information in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE by setting its fields as follows:

1> clear the information included in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE, if any;

1> set the IE "PLMN Identity" to the same value as the selected PLMN [4];

1> set the IE "Number Of RRC Msg Transmitted" to indicate the number of times the RRC CONNECTION REQUEST message was transmitted by the UE during the failed RRC Connection Establishment procedure.

1> for TDD:

2> set the IE "FPACH Received" to TRUE if FPACH was received during the failed RRC Connection Establishment procedure.

2> if common E-DCH was used, include the IE "E-RUCCH Failure" and set it to TRUE if failure indication of the E-RUCCH transmission was received during the failed RRC Connection Establishment procedure.

1> if detailed location information is available:

2> if the UE has been able to calculate a 3-dimensional position:

3> set the IE "Ellipsoid point with altitude" or the IE "Ellipsoid point with altitude and uncertainty ellipsoid" to include the location coordinates;

2> else:

3> set the IE "Ellipsoid point" or the IE "Ellipsoid point with uncertainty circle" or the IE "Ellipsoid point with uncertainty ellipse" to include the location coordinates:

2> if horizontal velocity information is available:

3> set the IE "Horizontal velocity" to include the horizontal velocity;

2> a value of the IE "Confidence", different from "0" should be calculated, as the probability that the UE is located within the uncertainty region of the one of the IEs "Ellipsoid point with uncertainty ellipse" or "Ellipsoid point with altitude and uncertainty ellipsoid".

1> set the IE "PLMN Identity" of the Logged Measurements Failed Cell to indicate the IE "PLMN Identity" obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "Cell ID" to indicate cell identity obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell where the connection establishment failure was detected for UTRA FDD;

1> set the "P-CCPCH RSCP" to include measured quantities for the cell where the connection establishment failure was detected for UTRA 1.28 Mcps TDD;

1> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", "Logged Measurements E-UTRA frequency extension list", in order of decreasing ranking quantity as used for cell re-selection in each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

1> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

[TS 25.331, clause 8.5.64.3 (TP1)]

UE Shall:

…

1> if IE "Connection Establishment Failure Request" is present:

2> if Registered PLMN is the same as the PLMN in the IE "PLMN Identity" stored in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE:

3> set IE "Connection Establishment Failure Report" in the UE INFORMATION RESPONSE as follows:

4> include the IE "Logged Connection Establishment Failure Info-FDD" or "Logged Connection Establishment Failure Info-TDD" and set it to include the entry from the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE;

4> set the IE "Time Since Failure" to indicate the elapsed time starting from the Logging of the Connection establishment failure information that is stored in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE.

3> clear the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE;

1> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

### Reference

TS 25.304 clause 5.7 and TS 25.331 clause 8.3.1.6, 8.3.1.7, 8.1.3.11 and 8.5.64.3

### 8.6.4.2.3 Test Purpose

1. Verify that Connection Establishment Failure information is logged when Physical channel failure is occurred and V300 is greater than N300.

2. Verify that IE "Logged Connection Establishment Failure Info Available" is indicated at RRC connection establishment.

### 8.6.4.2.4 Method of test

### Initial conditions

System Simulator:

Cell 1

User Equipment:

UE: Registered Idle Mode on PS (state 3) in Cell 1 as specified in clause 7.4 of TS 34.108.

### Test procedure

SS transmits a Paging message.

The UE sends RRC CONNECTION REQUEST message to SS, and SS send a RRC CONNECTION SETUP message to UE without physical channel configuration.

Repeat last procedure 3 times make V300>N300.

The SS sends Paging message to UE to set up RRC CONNECTION.

The UE transmits an RRC CONNECTION REQUEST message.

When the UE receives RRC CONNECTION SETUP message, the UE should transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available".

The UE transmits SERVICE REQUEST message.

The SS sends an UE INFORMATION REQUEST message to get Connection Establishment Failure Report.

The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1.

The SS sends RRC CONNECTION RELEASE message to UE, and makes UE enter idle mode.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | <-- | Paging | SS transmits a Paging message. |
| 2 | --> | | RRC CONNECTION REQUEST | The UE transmits an RRC CONNECTION REQUEST message. |
| 3 | | <-- | RRC CONNECTION SETUP | SS does not configure the physical channel in RRC CONNECTION SETUP message. |
| 4 | - | | - | Repeat steps 2 and 3 3 times, make V300>N300. |
| 5 | - | | - | Waiting 5 seconds allows UE to enter idle mode and perform Connection Establishment Failure logging |
| 6 | | <-- | Paging | SS transmits a Paging message. |
| 7 | --> | | RRC CONNECTION REQUEST | The UE transmits an RRC CONNECTION REQUEST message. |
| 8 | | <-- | RRC CONNECTION SETUP | SS transmit an RRC CONNECTION SETUP message. |
| 9 | --> | | RRC CONNECTION SETUP COMPLETE | The UE shall transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available". |
| 9a | --> | | RRC: INITIAL DIRECT TRANSFER<br>NAS: SERVICE REQUEST | The UE transmits SERVICE REQUEST message. |
| 10 | | <-- | UE INFORMATION REQUEST | SS sends an UE INFORMATION REQUEST message to get Connection Establishment Failure Report. |
| 11 | --> | | UE INFORMATION RESPONSE | The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1. |
| 12 | | <-- | RRC CONNECTION RELEASE | SS transmits a RRC CONNECTION RELEASE message to release RRC connection and moves to idle mode. |
| 13 | --> | | RRC CONNECTION RELEASE COMPLETE | UE confirms the connection release and returns to Idle mode |

Specific message contents

All messages have the same content as defined in 34.108 clause 9 with the following exceptions:

SYSTEM INFORMATION TYPE 1 (Initial conditions and all steps)

| | |
|---|---|
| - UE Timers and constants in idle mode | |
| -T300 | 2000 milliseconds |
| -N300 | 3 |
| -T312 | 10 seconds |
| - N312 | 1 |

RRC CONNECTION SETUP (Step 3)

| Information Element | Value/remark |
|---|---|
| RRC State Indicator | CELL_DCH |
| Uplink DPCH info | Not present |

RRC CONNECTION SETUP COMPLETE (step 9)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message. |
| Connection Establishment Failure Info Available | TRUE |

UE INFORMATION REQUEST (Step 10)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Measurements Report Request | Not Present |
| Logged ANR Report Request | Not Present |
| Connection Establishment Failure Request | TRUE |

UE INFORMATION RESPONSE (FDD) (Step 11)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Connection Establishment Failure Report | |
| - Time Since Failure | [0..172800] Indicates the elapsed time in seconds between Logging and reporting of Connection establishment failure info. |
| - CHOICE mode | FDD |
| - Logged Connection Establishment Failure Info-FDD | |
| - Number Of RRC Msg Transmitted | 4 |
| - Logged Measurements Failed Cell | |
| - Cell ID | Cell 1 |
| - CPICH RSCP | (0..91) |
| - CPICH Ec/N0 | (0..49) |

UE INFORMATION RESPONSE (TDD) (Step 11)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Connection Establishment Failure Report | |
| - Time Since Failure | [0..172800] Indicates the elapsed time in seconds between Logging and reporting of Connection establishment failure info. |

| Information Element | Value/remark |
|---|---|
| - CHOICE mode | FDD |
| - Logged Connection Establishment Failure Info-FDD | |
| - Number Of RRC Msg Transmitted | 4 |
| - FPACH Received | Not checked |
| - E-RUCCH Failure | Not checked |
| - Logged Measurements Failed Cell | |
| - Cell ID | Cell 1 |
| - Primary CCPCH RSCP | (0..91) |

#### 8.6.4.2.5 Test requirements

At step 9, the UE should transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available" (TP2).

At step 11, The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1 (TP1).

### 8.6.4.3 Connection Establishment Failure logging / Logging and reporting / Invalid RRC CONNECTION SETUP message

#### 8.6.4.3.1 Definition

This test is applicable for all UEs that support Connection Establishment Failure logging services.

#### 8.6.4.3.2 Conformance requirement

[TS 25.331, clause 8.1.3.6 (TP2)]

The UE shall compare the value of the IE "Initial UE identity" in the received RRC CONNECTION SETUP message with the value of the variable INITIAL_UE_IDENTITY.

If the values are different, the UE shall:

1> ignore the rest of the message.

If the values are identical, the UE shall:

...

1> submit an RRC CONNECTION SETUP COMPLETE message to the lower layers on the uplink DCCH after successful state transition per subclause 8.6.3.3, with the contents set as specified below:

...

2> if an IE "Logged Connection Establishment Failure Info-FDD" or "Logged Connection Establishment Failure Info-TDD" in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE is present and the current Registered PLMN is the same as the PLMN in IE "PLMN Identity" stored in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE:

3> include IE "Connection Establishment Failure Info Available".

...

When the RRC CONNECTION SETUP COMPLETE message has been submitted to lower layers for transmission the UE shall:

...

[TS 25.331, clause 8.1.3.8 (TP1)]

If the UTRAN instructs the UE to use a configuration, which it does not support e.g., the message includes a pre-defined configuration that the UE has not stored and/or if the received message causes the variable UNSUPPORTED_CONFIGURATION or the variable INVALID_CONFIGURATION to be set to TRUE the UE shall perform procedure specific error handling as specified in this subclause.

If the UE receives an RRC CONNECTION SETUP message which contains an IE "Initial UE identity" with a value which is identical to the value of the variable INITIAL_UE_IDENTITY, but the RRC CONNECTION SETUP message contains a protocol error causing the variable PROTOCOL_ERROR_REJECT to be set to TRUE according to clause 9, the UE shall perform procedure specific error handling as follows. The UE shall:

1> stop timer T300 or T318, whichever one is running; and

1> clear the entry for the RRC CONNECTION SETUP message in the table "Rejected transactions" in the variable TRANSACTIONS and proceed as below.

If the UE receives an RRC CONNECTION SETUP message which contains an IE "Initial UE identity" with a value which is identical to the value of the variable INITIAL_UE_IDENTITY:

1> if the RRC CONNECTION SETUP message contained a configuration the UE does not support; and/or

1> if the variable UNSUPPORTED_CONFIGURATION becomes set to TRUE due to the received RRC CONNECTION SETUP message; and/or

1> if the variable INVALID_CONFIGURATION becomes set to TRUE due to the received RRC CONNECTION SETUP message:

the UE shall:

1> stop timer T300 or T318, whichever one is running; and

1> clear the entry for the RRC CONNECTION SETUP message in the table "Accepted transactions" in the variable TRANSACTIONS and proceed as below.

If V300 is equal to or smaller than N300, the UE shall:

1> set the variable PROTOCOL_ERROR_INDICATOR to TRUE;

1> set the IEs in the RRC CONNECTION REQUEST message according to subclause 8.1.3.3;

1> perform the mapping of the Access Class to an Access Service Class as specified in subclause 8.5.13; and

1> apply the given Access Service Class when accessing the RACH or the common E-DCH (for the Enhanced Uplink in CELL_FACH and Idle mode);

1> submit a new RRC CONNECTION REQUEST message to the lower layers for transmission on the uplink CCCH;

1> increment counter V300; and

1> restart timer T300 when the MAC layer indicates success or failure in transmitting the message.

If V300 is greater than N300, the UE shall:

1> if the UE supports logging of failed RRC Connection Establishment, perform the actions specified in subclause 8.1.3.11;

1> enter idle mode;

1> perform the actions specified in subclause 8.5.2 when entering idle mode from connected mode;

1> consider the RRC establishment procedure to be unsuccessful;

1> the procedure ends.

[TS 25.331, clause 8.1.3.11 (TP1)]

If the RRC connection establishment fails and the UE supports logging of failed RRC Connection Establishment, the UE shall perform logging of information for later retrieval. The UE shall store connection establishment failure information in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE by setting its fields as follows:

1> clear the information included in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE, if any;

1> set the IE "PLMN Identity" to the same value as the selected PLMN [4];

1> set the IE "Number Of RRC Msg Transmitted" to indicate the number of times the RRC CONNECTION REQUEST message was transmitted by the UE during the failed RRC Connection Establishment procedure.

1> for TDD:

2> set the IE "FPACH Received" to TRUE if FPACH was received during the failed RRC Connection Establishment procedure.

2> if common E-DCH was used, include the IE "E-RUCCH Failure" and set it to TRUE if failure indication of the E-RUCCH transmission was received during the failed RRC Connection Establishment procedure.

…

1> set the IE "PLMN Identity" of the Logged Measurements Failed Cell to indicate the IE "PLMN Identity" obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "Cell ID" to indicate cell identity obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell where the connection establishment failure was detected for UTRA FDD;

1> set the "P-CCPCH RSCP" to include measured quantities for the cell where the connection establishment failure was detected for UTRA 1.28 Mcps TDD;

1> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", "Logged Measurements E-UTRA frequency extension list", in order of decreasing ranking quantity as used for cell re-selection in each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

1> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

[TS 25.331, clause 8.5.64.3 (TP1)]

UE Shall:

…

1> if IE "Connection Establishment Failure Request" is present:

2> if Registered PLMN is the same as the PLMN in the IE "PLMN Identity" stored in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE:

3> set IE "Connection Establishment Failure Report" in the UE INFORMATION RESPONSE as follows:

4> include the IE "Logged Connection Establishment Failure Info-FDD" or "Logged Connection Establishment Failure Info-TDD" and set it to include the entry from the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE;

4> set the IE "Time Since Failure" to indicate the elapsed time starting from the Logging of the Connection establishment failure information that is stored in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE.

3> clear the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE;

1> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

Reference

TS 25.304 clause 5.7 and TS 25.331 clause 8.3.1.6, 8.3.1.8, 8.1.3.11 and 8.5.64.3

.8.6.4.3.3 Test Purpose

1. Verify that Connection Establishment Failure information is logged when Invalid RRC CONNECTION SETUP message is received and V300 is greater than N300.

2. Verify that IE "Logged Connection Establishment Failure Info Available" is indicated at RRC connection establishment.

8.6.4.3.4 Method of test

Initial conditions

System Simulator:

Cell 1

User Equipment:

UE: Registered Idle Mode on PS (state 3) in Cell 1 as specified in clause 7.4 of TS 34.108.

Test procedure

SS transmits a Paging message.

The UE sends RRC CONNECTION REQUEST message to SS, and SS send a RRC CONNECTION SETUP message to UE with a unsupported frequency.

Repeats last procedure 3 times make V300>N300.

The SS sends Paging message to UE to set up RRC CONNECTION.

The UE transmits an RRC CONNECTION REQUEST message.

When the UE receives RRC CONNECTION SETUP message, the UE should transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available".

The UE transmits SERVICE REQUEST message.

The SS sends an UE INFORMATION REQUEST message to get Connection Establishment Failure Report.

The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1.

The SS sends RRC CONNECTION RELEASE message to UE, and makes UE enter idle mode.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | | <-- | Paging | SS transmits a Paging message. |
| 2 | --> | | RRC CONNECTION REQUEST | The UE transmits an RRC CONNECTION REQUEST message. |
| 3 | | <-- | RRC CONNECTION SETUP | SS sends a RRC CONNECTION SETUP message with UE unsupported frequency configuration. |
| 4 | - | | - | Repeat steps 2 and 3 3 times, make V300>N300. |
| 5 | - | | - | Waiting 5 seconds allows UE to enter idle mode and perform Connection Establishment Failure logging |
| 6 | | <-- | Paging | SS transmits a Paging message. |
| 7 | --> | | RRC CONNECTION REQUEST | The UE transmits an RRC CONNECTION REQUEST message. |
| 8 | | <-- | RRC CONNECTION SETUP | SS transmit an RRC CONNECTION SETUP message. |
| 9 | --> | | RRC CONNECTION SETUP COMPLETE | The UE shall transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available". |

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 9a | --> | | RRC: INITIAL DIRECT TRANSFER<br>NAS: SERVICE REQUEST | The UE transmits SERVICE REQUEST message. |
| 10 | <-- | | UE INFORMATION REQUEST | SS sends an UE INFORMATION REQUEST message to get Connection Establishment Failure Report. |
| 11 | --> | | UE INFORMATION RESPONSE | The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1. |
| 12 | <-- | | RRC CONNECTION RELEASE | SS transmits a RRC CONNECTION RELEASE message to release RRC connection and moves to idle mode. |
| 13 | --> | | RRC CONNECTION RELEASE COMPLETE | UE confirms the connection release and returns to Idle mode |

Specific message contents

All messages have the same content as defined in 34.108 clause 9 with the following exceptions:

SYSTEM INFORMATION TYPE 1 (Initial conditions and all steps)

| | |
|---|---|
| - UE Timers and constants in idle mode | |
| -T300 | 2000 milliseconds |
| -N300 | 3 |
| -T312 | 10 seconds |
| - N312 | 1 |

RRC CONNECTION SETUP (Step 3) (FDD)

| Information Element | Value/remark |
|---|---|
| Frequency info | |
| - UARFCN uplink(Nu) | 0 |
| - UARFCN downlink(Nd) | 950 |

RRC CONNECTION SETUP (Step 3) (TDD)

| Information Element | Value/remark |
|---|---|
| Frequency info | |
| - UARFCN (Nt) | 0 |

RRC CONNECTION SETUP COMPLETE (step 9)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message. |
| Connection Establishment Failure Info Available | TRUE |

UE INFORMATION REQUEST (Step 10)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Measurements Report Request | Not Present |
| Logged ANR Report Request | Not Present |
| Connection Establishment Failure Request | TRUE |

UE INFORMATION RESPONSE (FDD) (Step 11)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Connection Establishment Failure Report | |
| - Time Since Failure | [0..172800] Indicates the elapsed time in seconds between Logging and reporting of Connection establishment failure info. |
| - CHOICE mode | FDD |
| - Logged Connection Establishment Failure Info-FDD | |
| - Number Of RRC Msg Transmitted | 4 |
| - Logged Measurements Failed Cell | |
| - Cell ID | Cell 1 |
| - CPICH RSCP | (0..91) |
| - CPICH Ec/N0 | (0..49) |

UE INFORMATION RESPONSE (TDD) (Step 11)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Connection Establishment Failure Report | |
| - Time Since Failure | [0..172800] Indicates the elapsed time in seconds between Logging and reporting of Connection establishment failure info. |
| - CHOICE mode | FDD |
| - Logged Connection Establishment Failure Info-FDD | |
| - Number Of RRC Msg Transmitted | 4 |
| - FPACH Received | Not checked |
| - E-RUCCH Failure | Not checked |
| - Logged Measurements Failed Cell | |
| - Cell ID | Cell 1 |
| - Primary CCPCH RSCP | (0..91) |

#### 8.6.4.3.5 Test requirements

At step 9, the UE should transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available".( TP2).

At step 11, The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1. (TP1).

### 8.6.4.4 Connection Establishment Failure logging / Logging and reporting / RRC CONNECTION REJECT message

#### 8.6.4.4.1 Definition

This test is applicable for all UEs that support Connection Establishment Failure logging services.

#### 8.6.4.4.2 Conformance requirement

[TS 25.331, clause 8.1.3.6 (TP1, TP2)]

The UE shall compare the value of the IE "Initial UE identity" in the received RRC CONNECTION SETUP message with the value of the variable INITIAL_UE_IDENTITY.

If the values are different, the UE shall:

1> ignore the rest of the message.

If the values are identical, the UE shall:

...

1> submit an RRC CONNECTION SETUP COMPLETE message to the lower layers on the uplink DCCH after successful state transition per subclause 8.6.3.3, with the contents set as specified below:

...

2> if an IE "Logged Connection Establishment Failure Info-FDD" or "Logged Connection Establishment Failure Info-TDD" in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE is present and the current Registered PLMN is the same as the PLMN in IE "PLMN Identity" stored in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE:

3> include IE "Connection Establishment Failure Info Available".

...

When the RRC CONNECTION SETUP COMPLETE message has been submitted to lower layers for transmission the UE shall:

...

[TS 25.331, clause 8.1.3.9 (TP1)]

When the UE receives an RRC CONNECTION REJECT message on the downlink CCCH, it shall compare the value of the IE "Initial UE identity" in the received RRC CONNECTION REJECT message with the value of the variable INITIAL_UE_IDENTITY:

If the values are different, the UE shall ignore the rest of the message;

If the values are identical, the UE shall:

…

1> stop timer T300 or T318, whichever one is running; and

1> clear the entry for the RRC CONNECTION REJECT message in the table "Accepted transactions" in the variable TRANSACTIONS;

1> if the UE has disabled cell reselection to a UTRA carrier due to an earlier RRC CONNECTION REJECT message, the UE shall resume cell reselection to that UTRA carrier;

1> if the Rejection Cause is 'unspecified' and the IE "Counting Completion" is present, the UE shall terminate an ongoing MBMS counting procedure according to subclause 8.7.4.4;

1> if the IE "wait time" <> '0'; and

1> if the IE "frequency info" is present and:

2> if V300 is equal to or smaller than N300:

…

2> if V300 is greater than N300:

3> if the UE supports logging of failed RRC Connection Establishment, perform the actions specified in subclause 8.1.3.11;

3> enter idle mode;

3> perform the actions specified in subclause 8.5.2 when entering idle mode from connected mode;

3> consider the RRC establishment procedure to be unsuccessful;

3> the procedure ends.

…

[TS 25.331, clause 8.1.3.11 (TP1)]

If the RRC connection establishment fails and the UE supports logging of failed RRC Connection Establishment, the UE shall perform logging of information for later retrieval. The UE shall store connection establishment failure information in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE by setting its fields as follows:

1> clear the information included in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE, if any;

1> set the IE "PLMN Identity" to the same value as the selected PLMN [4];

1> set the IE "Number Of RRC Msg Transmitted" to indicate the number of times the RRC CONNECTION REQUEST message was transmitted by the UE during the failed RRC Connection Establishment procedure.

1> for TDD:

2> set the IE "FPACH Received" to TRUE if FPACH was received during the failed RRC Connection Establishment procedure.

2> if common E-DCH was used, include the IE "E-RUCCH Failure" and set it to TRUE if failure indication of the E-RUCCH transmission was received during the failed RRC Connection Establishment procedure.

1> if detailed location information is available:

2> if the UE has been able to calculate a 3-dimensional position:

3> set the IE "Ellipsoid point with altitude" or the IE "Ellipsoid point with altitude and uncertainty ellipsoid" to include the location coordinates;

2> else:

3> set the IE "Ellipsoid point" or the IE "Ellipsoid point with uncertainty circle" or the IE "Ellipsoid point with uncertainty ellipse" to include the location coordinates:

2> if horizontal velocity information is available:

3> set the IE "Horizontal velocity" to include the horizontal velocity;

2> a value of the IE "Confidence", different from "0" should be calculated, as the probability that the UE is located within the uncertainty region of the one of the IEs "Ellipsoid point with uncertainty ellipse" or "Ellipsoid point with altitude and uncertainty ellipsoid".

1> set the IE "PLMN Identity" of the Logged Measurements Failed Cell to indicate the IE "PLMN Identity" obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "Cell ID" to indicate cell identity obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell where the connection establishment failure was detected for UTRA FDD;

1> set the "P-CCPCH RSCP" to include measured quantities for the cell where the connection establishment failure was detected for UTRA 1.28 Mcps TDD;

1> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", "Logged Measurements E-UTRA frequency extension list", in order of decreasing ranking quantity as used for cell re-selection in each frequency for at most

the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

1> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

[TS 25.331, clause 8.5.64.3 (TP2)]

UE Shall:

…

1> if IE "Connection Establishment Failure Request" is present:

2> if Registered PLMN is the same as the PLMN in the IE "PLMN Identity" stored in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE:

3> set IE "Connection Establishment Failure Report" in the UE INFORMATION RESPONSE as follows:

4> include the IE "Logged Connection Establishment Failure Info-FDD" or "Logged Connection Establishment Failure Info-TDD" and set it to include the entry from the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE;

4> set the IE "Time Since Failure" to indicate the elapsed time starting from the Logging of the Connection establishment failure information that is stored in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE.

3> clear the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE;

1> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

#### Reference

TS 25.304 clause 5.7 and TS 25.331 clause 8.3.1.6, 8.1.3.9, 8.1.3.11 and 8.5.64.3

### 8.6.4.4.3 Test Purpose

1. Verify that Connection Establishment Failure information is logged when RRC CONNECTION REJECT message is received and V300 is greater than N300.

2. Verify that IE "Logged Connection Establishment Failure Info Available" is indicated at RRC connection establishment.

### 8.6.4.4.4 Method of test

#### Initial conditions

System Simulator:

Cell 1

User Equipment:

UE: Registered Idle Mode on PS (state 3) in Cell 1 as specified in clause 7.4 of TS 34.108.

#### Test procedure

SS transmits a Paging message.

The UE sends RRC CONNECTION REQUEST message to SS, and SS send a RRC CONNECTION REJECT message to UE.

Repeats last procedure 3 times make V300>N300, and waiting 1 seconds before every repeating.

The SS sends Paging message to UE to set up RRC CONNECTION.

The UE transmits an RRC CONNECTION REQUEST message.

When the UE receives RRC CONNECTION SETUP message, the UE should transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available".

The UE transmits SERVICE REQUEST message.

The SS sends an UE INFORMATION REQUEST message to get Connection Establishment Failure Report.

The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1.

The SS sends RRC CONNECTION RELEASE message to UE, and makes UE enter idle mode.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | <-- | | Paging | SS transmits a Paging message. |
| 2 | --> | | RRC CONNECTION REQUEST | The UE transmits an RRC CONNECTION REQUEST message. |
| 3 | <-- | | RRC CONNECTION REJECT | SS send a RRC CONNECTION REJECT message. |
| 4 | - | | - | Performs the following procedure 3 times make V300>N300: “Waiting 1 second and run step 2 and step 3”. |
| 5 | - | | - | Waiting 5 seconds allows UE to enter idle mode and perform Connection Establishment Failure logging |
| 6 | <-- | | Paging | SS transmits a Paging message. |
| 7 | --> | | RRC CONNECTION REQUEST | The UE transmits an RRC CONNECTION REQUEST message. |
| 8 | <-- | | RRC CONNECTION SETUP | SS transmit an RRC CONNECTION SETUP message. |
| 9 | --> | | RRC CONNECTION SETUP COMPLETE | The UE shall transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available". |
| 10 | --> | | RRC: INITIAL DIRECT TRANSFER<br>NAS: SERVICE REQUEST | The UE transmits SERVICE REQUEST message. |
| 11 | <-- | | UE INFORMATION REQUEST | SS sends an UE INFORMATION REQUEST message to get Connection Establishment Failure Report. |
| 12 | --> | | UE INFORMATION RESPONSE | The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1. |
| 13 | <-- | | RRC CONNECTION RELEASE | SS transmits a RRC CONNECTION RELEASE message to release RRC connection and moves to idle mode. |
| 14 | --> | | RRC CONNECTION RELEASE COMPLETE | UE confirms the connection release and returns to Idle mode |

Specific message contents

All messages have the same content as defined in 34.108 clause 9 with the following exceptions:

SYSTEM INFORMATION TYPE 1 (Initial conditions and all steps)

| | |
|---|---|
| - UE Timers and constants in idle mode | |
| -T300 | 2000 milliseconds |
| -N300 | 3 |
| -T312 | 10 seconds |
| - N312 | 1 |

RRC CONNECTION REJECT (step 3)

| Information Element | Value/remark |
|---|---|
| Wait Time | 1 |

RRC CONNECTION SETUP COMPLETE (step 9)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message. |
| Connection Establishment Failure Info Available | TRUE |

UE INFORMATION REQUEST (Step 11)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Measurements Report Request | Not Present |
| Logged ANR Report Request | Not Present |
| Connection Establishment Failure Request | TRUE |

UE INFORMATION RESPONSE (FDD) (Step 12)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Connection Establishment Failure Report | |
| - Time Since Failure | [0..172800] Indicates the elapsed time in seconds between Logging and reporting of Connection establishment failure info. |
| - CHOICE mode | FDD |
| - Logged Connection Establishment Failure Info-FDD | |
| - Number Of RRC Msg Transmitted | 4 |
| - Logged Measurements Failed Cell | |
| - Cell ID | Cell 1 |
| - CPICH RSCP | (0..91) |
| - CPICH Ec/N0 | (0..49) |

UE INFORMATION RESPONSE (TDD) (Step 12)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Connection Establishment Failure Report | |
| - Time Since Failure | [0..172800] Indicates the elapsed time in seconds between Logging and reporting of Connection establishment failure info. |
| - CHOICE mode | TDD |
| - Logged Connection Establishment Failure Info-TDD | |
| - Number Of RRC Msg Transmitted | 4 |
| - FPACH Received | Not checked |
| - E-RUCCH Failure | Not checked |
| - Logged Measurements Failed Cell | |

| Information Element | Value/remark |
|---|---|
| - Cell ID | Cell 1 |
| - Primary CCPCH RSCP | (0..91) |

#### 8.6.4.4.5 Test requirements

At step 9, the UE should transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available" (TP2).

At step 12, The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1 (TP1).

### 8.6.4.5 Connection Establishment Failure logging / Logging and reporting / Invalid RRC CONNECTION REJECT message

#### 8.6.4.5.1 Definition

This test is applicable for all UEs that support Connection Establishment Failure logging services.

#### 8.6.4.5.2 Conformance requirement

[TS 25.331, clause 8.1.3.10(TP1)]

If the UE receives an RRC CONNECTION REJECT message which contains an IE "Initial UE identity" with a value which is identical to the value of the IE "Initial UE identity" in the most recent RRC CONNECTION REQUEST message sent by the UE; but the RRC CONNECTION REJECT message contains a protocol error causing the variable PROTOCOL_ERROR_REJECT to be set to TRUE according to clause 9, the UE shall perform procedure specific error handling as follows:

The UE shall:

1> stop timer T300 or T318, whichever one is running; and

1> clear the entry for the RRC CONNECTION REJECT message in the table "Rejected transactions" in the variable TRANSACTIONS;

1> if V300 is equal to or smaller than N300:

…

1> if V300 is greater than N300:

2> if the UE supports logging of failed RRC Connection Establishment, perform the actions specified in subclause 8.1.3.11;

2> enter idle mode;

2> perform the actions specified in subclause 8.5.2 when entering idle mode from connected mode;

2> consider the procedure to be successful;

2> the procedure ends.

[TS 25.331, clause 8.1.3.11 (TP1)]

If the RRC connection establishment fails and the UE supports logging of failed RRC Connection Establishment, the UE shall perform logging of information for later retrieval. The UE shall store connection establishment failure information in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE by setting its fields as follows:

1> clear the information included in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE, if any;

1> set the IE "PLMN Identity" to the same value as the selected PLMN [4];

1> set the IE "Number Of RRC Msg Transmitted" to indicate the number of times the RRC CONNECTION REQUEST message was transmitted by the UE during the failed RRC Connection Establishment procedure.

1> for TDD:

2> set the IE "FPACH Received" to TRUE if FPACH was received during the failed RRC Connection Establishment procedure.

2> if common E-DCH was used, include the IE "E-RUCCH Failure" and set it to TRUE if failure indication of the E-RUCCH transmission was received during the failed RRC Connection Establishment procedure.

1> if detailed location information is available:

2> if the UE has been able to calculate a 3-dimensional position:

3> set the IE "Ellipsoid point with altitude" or the IE "Ellipsoid point with altitude and uncertainty ellipsoid" to include the location coordinates;

2> else:

3> set the IE "Ellipsoid point" or the IE "Ellipsoid point with uncertainty circle" or the IE "Ellipsoid point with uncertainty ellipse" to include the location coordinates:

2> if horizontal velocity information is available:

3> set the IE "Horizontal velocity" to include the horizontal velocity;

2> a value of the IE "Confidence", different from "0" should be calculated, as the probability that the UE is located within the uncertainty region of the one of the IEs "Ellipsoid point with uncertainty ellipse" or "Ellipsoid point with altitude and uncertainty ellipsoid".

1> set the IE "PLMN Identity" of the Logged Measurements Failed Cell to indicate the IE "PLMN Identity" obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "Cell ID" to indicate cell identity obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell where the connection establishment failure was detected for UTRA FDD;

1> set the "P-CCPCH RSCP" to include measured quantities for the cell where the connection establishment failure was detected for UTRA 1.28 Mcps TDD;

1> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", "Logged Measurements E-UTRA frequency extension list", in order of decreasing ranking quantity as used for cell re-selection in each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

1> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

[TS 25.331, clause 8.5.64.3 (TP2)]

UE Shall:

…

1> if IE "Connection Establishment Failure Request" is present:

2> if Registered PLMN is the same as the PLMN in the IE "PLMN Identity" stored in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE:

3> set IE "Connection Establishment Failure Report" in the UE INFORMATION RESPONSE as follows:

4> include the IE "Logged Connection Establishment Failure Info-FDD" or "Logged Connection Establishment Failure Info-TDD" and set it to include the entry from the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE;

4> set the IE "Time Since Failure" to indicate the elapsed time starting from the Logging of the Connection establishment failure information that is stored in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE.

3> clear the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE;

1> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

Reference

TS 25.304 clause 5.7 and TS 25.331 clause 8.3.1.5, 8.3.1.8, 8.1.3.11 and 8.5.64.3

### 8.6.4.5.3 Test Purpose

1. Verify that Connection Establishment Failure information is logged when Invalid RRC CONNECTION REJECT message is received and V300 is greater than N300.

2. Verify that IE "Logged Connection Establishment Failure Info Available" is indicated at RRC connection establishment.

### 8.6.4.5.4 Method of test

Initial conditions

System Simulator:

Cell 1

User Equipment:

UE: Registered Idle Mode on (state 3) in Cell 1 as specified in clause 7.4 of TS 34.108.

Test procedure

SS transmits a Paging message.

The UE sends RRC CONNECTION REQUEST message to SS, and SS send a RRC CONNECTION REJECT message with protocol error to UE.

Repeats last procedure 3 times make V300>N300.

The SS sends Paging message to UE.

The UE transmits an RRC CONNECTION REQUEST message.

When the UE receives RRC CONNECTION SETUP message, the UE should transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available".

The UE transmits SERVICE REQUEST message.The SS sends an UE INFORMATION REQUEST message to get Connection Establishment Failure Report.

The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1.

The SS sends RRC CONNECTION RELEASE message to UE, and makes UE enter idle mode.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | <-- | | Paging | SS transmits a Paging message. |
| 2 | --> | | RRC CONNECTION REQUEST | The UE transmits an RRC CONNECTION REQUEST message. |
| 3 | <-- | | RRC CONNECTION REJECT | SS send a RRC CONNECTION REJECT message with protocol error. |
| 4 | - | | - | Repeats step 2 and step 3 3 times make V300>N300. |

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 5 | - | | - | Waiting 5 seconds allows UE to enter idle mode and perform Connection Establishment Failure logging |
| 6 | <-- | | Paging | SS transmits a Paging message. |
| 7 | --> | | RRC CONNECTION REQUEST | The UE transmits an RRC CONNECTION REQUEST message. |
| 8 | <-- | | RRC CONNECTION SETUP | SS transmit an RRC CONNECTION SETUP message. |
| 9 | --> | | RRC CONNECTION SETUP COMPLETE | The UE shall transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available". |
| 10 | --> | | RRC: INITIAL DIRECT TRANSFER<br>NAS: SERVICE REQUEST | The UE transmits SERVICE REQUEST message. |
| 11 | <-- | | UE INFORMATION REQUEST | SS sends an UE INFORMATION REQUEST message to get Connection Establishment Failure Report. |
| 12 | --> | | UE INFORMATION RESPONSE | The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1. |
| 13 | <-- | | RRC CONNECTION RELEASE | SS transmits a RRC CONNECTION RELEASE message to release RRC connection and moves to idle mode. |
| 14 | --> | | RRC CONNECTION RELEASE COMPLETE | UE confirms the connection release and returns to Idle mode |

Specific message contents

All messages have the same content as defined in 34.108 clause 9 with the following exceptions:

SYSTEM INFORMATION TYPE 1 (Initial conditions and all steps)

| | |
|---|---|
| - UE Timers and constants in idle mode | |
| -T300 | 2000 milliseconds |
| -N300 | 3 |
| -T312 | 10 seconds |
| - N312 | 1 |

RRC CONNECTION REJECT (step 3)

| Information Element | Value/remark |
|---|---|
| Wait Time | 20 |

RRC CONNECTION SETUP COMPLETE (step 9)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message. |
| Connection Establishment Failure Info Available | TRUE |

UE INFORMATION REQUEST (Step 11)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Measurements Report Request | Not Present |
| Logged ANR Report Request | Not Present |
| Connection Establishment Failure Request | TRUE |

UE INFORMATION RESPONSE (FDD) (Step 12)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Connection Establishment Failure Report | |
| - Time Since Failure | [0..172800] Indicates the elapsed time in seconds between Logging and reporting of Connection establishment failure info. |
| - CHOICE mode | FDD |
| - Logged Connection Establishment Failure Info-FDD | |
| - Number Of RRC Msg Transmitted | 4 |
| - Logged Measurements Failed Cell | |
| - Cell ID | Cell 1 |
| - CPICH RSCP | (0..91) |
| - CPICH Ec/N0 | (0..49) |

UE INFORMATION RESPONSE (TDD) (Step 12)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Connection Establishment Failure Report | |
| - Time Since Failure | [0..172800] Indicates the elapsed time in seconds between Logging and reporting of Connection establishment failure info. |
| - CHOICE mode | TDD |
| - Logged Connection Establishment Failure Info-TDD | |
| - Number Of RRC Msg Transmitted | 4 |
| - FPACH Received | Not checked |
| - E-RUCCH Failure | Not checked |
| - Logged Measurements Failed Cell | |
| - Cell ID | Cell 1 |
| - Primary CCPCH RSCP | (0..91) |

#### 8.6.4.5.5 Test requirements

At step 9, the UE should transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available".( TP2).

At step 12, The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1. (TP1).

### 8.6.4.6 Connection Establishment Failure logging / Logging and reporting / PLMN change

#### 8.6.4.6.1 Definition

This test is applicable for all UEs that support Connection Establishment Failure logging services.

#### 8.6.4.6.2 Conformance requirement

[TS 25.331, clause 8.1.3.5 (TP1, TP2)]

1> if the UE has not yet received an RRC CONNECTION SETUP message with the value of the IE "Initial UE identity" equal to the value of the variable INITIAL_UE_IDENTITY; and

1> if cell re-selection or expiry of timer T300 or timer T318 occurs:

the UE shall:

1> if the UE performs cell reselection:

2> clear the variable SYSTEM_INFORMATION_CONTAINER.

1> check the value of V300; and

2> if V300 is equal to or smaller than N300:

3> if cell re-selection occurred:

4> set CFN in relation to SFN of current cell according to subclause 8.5.15.

4> for FDD and 1.28 Mcps TDD, if the UE supports HS-DSCH reception in CELL_FACH state and if IE: "HS-DSCH common system information" is included in System Information Block type 5 or System Information Block type 5bis:

5> if variable HS_DSCH_RECEPTION_OF_CCCH_ENABLED is set to TRUE:

6> reset the MAC-ehs entity [15].

5> else:

6> set the variable HS_DSCH_RECEPTION_OF_CCCH_ENABLED to TRUE;

6> start receiving the HS-DSCH according to the procedure in subclause 8.5.37.

3> set the IEs in the RRC CONNECTION REQUEST message according to subclause 8.1.3.3;

3> perform the mapping of the Access Class to an Access Service Class as specified in subclause 8.5.13; and

3> apply the given Access Service Class when accessing the RACH or the common E-DCH (for the Enhanced Uplink in CELL_FACH state and Idle mode);

3> submit a new RRC CONNECTION REQUEST message to lower layers for transmission on the uplink CCCH;

3> increment counter V300;

3> restart timer T300 when the MAC layer indicates success or failure to transmit the message.

2> if V300 is greater than N300:

3> if the UE supports logging of failed RRC Connection Establishment, perform the actions specified in subclause 8.1.3.11;

3> enter idle mode.

3> consider the procedure to be unsuccessful;

3> Other actions the UE shall perform when entering idle mode from connected mode are specified in subclause 8.5.2;

3> the procedure ends.

[TS 25.331, clause 8.1.3.6 (TP1)]

The UE shall compare the value of the IE "Initial UE identity" in the received RRC CONNECTION SETUP message with the value of the variable INITIAL_UE_IDENTITY.

If the values are different, the UE shall:

1> ignore the rest of the message.

If the values are identical, the UE shall:

...

1> submit an RRC CONNECTION SETUP COMPLETE message to the lower layers on the uplink DCCH after successful state transition per subclause 8.6.3.3, with the contents set as specified below:

...

2> if an IE "Logged Connection Establishment Failure Info-FDD" or "Logged Connection Establishment Failure Info-TDD" in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE is present and the current Registered PLMN is the same as the PLMN in IE "PLMN Identity" stored in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE:

3> include IE "Connection Establishment Failure Info Available".

...

When the RRC CONNECTION SETUP COMPLETE message has been submitted to lower layers for transmission the UE shall:

...

[TS 25.331, clause 8.1.3.11 (TP1)]

If the RRC connection establishment fails and the UE supports logging of failed RRC Connection Establishment, the UE shall perform logging of information for later retrieval. The UE shall store connection establishment failure information in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE by setting its fields as follows:

1> clear the information included in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE, if any;

1> set the IE "PLMN Identity" to the same value as the selected PLMN [4];

1> set the IE "Number Of RRC Msg Transmitted" to indicate the number of times the RRC CONNECTION REQUEST message was transmitted by the UE during the failed RRC Connection Establishment procedure.

1> for TDD:

2> set the IE "FPACH Received" to TRUE if FPACH was received during the failed RRC Connection Establishment procedure.

2> if common E-DCH was used, include the IE "E-RUCCH Failure" and set it to TRUE if failure indication of the E-RUCCH transmission was received during the failed RRC Connection Establishment procedure.

…

1> set the IE "PLMN Identity" of the Logged Measurements Failed Cell to indicate the IE "PLMN Identity" obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "Cell ID" to indicate cell identity obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell where the connection establishment failure was detected for UTRA FDD;

1> set the "P-CCPCH RSCP" to include measured quantities for the cell where the connection establishment failure was detected for UTRA 1.28 Mcps TDD;

1> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", "Logged Measurements E-UTRA frequency extension list", in order of decreasing ranking quantity as used for cell re-selection in each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

…

[TS 25.331, clause 8.5.64.3 (TP2)]

UE Shall:

…

1> if IE "Connection Establishment Failure Request" is present:

2> if Registered PLMN is the same as the PLMN in the IE "PLMN Identity" stored in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE:

3> set IE "Connection Establishment Failure Report" in the UE INFORMATION RESPONSE as follows:

4> include the IE "Logged Connection Establishment Failure Info-FDD" or "Logged Connection Establishment Failure Info-TDD" and set it to include the entry from the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE;

4> set the IE "Time Since Failure" to indicate the elapsed time starting from the Logging of the Connection establishment failure information that is stored in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE.

3> clear the the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE;

1> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

### 8.6.4.6.3 Test Purpose

1. Verify that IE "Logged Connection Establishment Failure Info Available" is not indicated in the cell that does not belong to the PLMN where RRC connection establishment failure was occurred.

2. Verify that IE "Logged Connection Establishment Failure Info Available" is indicated in the cell that belongs to the PLMN where RRC connection establishment failure was occurred.

### 8.6.4.6.4 Method of test

Initial conditions

System Simulator:

3 cells, cell 1, cell 2 and cell 3.

User Equipment:

UE: Registered Idle Mode on PS (state 3) in Cell 1 as specified in clause 7.4 of TS 34.108.

Test procedure

Table 8.6.4.6 illustrates the downlink power to be applied for the 3 cells. Column marked "T0" denotes the initial conditions, while columns marked "T1", "T2" are to be applied subsequently. The exact instants on which these values shall be applied are described in the text in this clause.

**Table 8.6.4.6**

| Parameter | Unit | Cell 1 | | | Cell 2 | | | Cell 3 | | |
|---|---|---|---|---|---|---|---|---|---|---|
| | | T0 | T1 | T2 | T0 | T1 | T2 | T0 | T1 | T2 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | | Mid Range Test Frequency | | | Mid Range Test Frequency | | |
| CPICH Ec (FDD) | dBm/3.84 MHz | -60 | OFF | OFF | OFF | -60 | OFF | OFF | OFF | -60 |
| P-CCPCH RSCP(TDD) | dBm | -60 | OFF | OFF | OFF | -60 | OFF | OFF | OFF | -60 |
| PLMN | | PLMN 1 | | | PLMN 2 | | | PLMN 1 | | |

Test procedure

SS transmits a Paging message.

The UE sends RRC CONNECTION REQUEST message to SS, and SS does not response any message to UE.

The UE resubmits RRC CONNECTION REQUEST message 3 times and does not get any response make V300>N300.

SS changes Cell 1, Cell 2 and Cell 3 level according to the T1 in Table 8.6.4.6, and UE select to PLMN 2 and Cell2.

The UE transmits an RRC CONNECTION REQUEST message.

When the UE receives RRC CONNECTION SETUP message, the UE should transmit an RRC CONNECTION SETUP COMPLETE message without IE "Connection Establishment Failure Info Available".

UE registered on cell2, and enter idle mode.

SS changes Cell 1, Cell 2 and Cell 3 level according to the T2 in Table 8.6.4.6, and UE select to PLMN 1 and Cell3.

The UE transmits an RRC CONNECTION REQUEST message.

When the UE receives RRC CONNECTION SETUP message, the UE should transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available".

UE registered on cell3.

The SS sends an UE INFORMATION REQUEST message to get Connection Establishment Failure Report.

The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1.

The SS sends RRC CONNECTION RELEASE message to UE, and makes UE enter idle mode.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | <-- | | Paging | SS transmits a Paging message. |
| 2 | --> | | RRC CONNECTION REQUEST | The UE transmits an RRC CONNECTION REQUEST message. |
| 3 | - | | - | SS does not send any message to UE. Waits 2 seconds make T300 expire. |
| 4 | - | | - | Repeat steps 2 and 3 2 times, make V300=N300. |
| 5 | - | | RRC CONNECTION REQUEST | The UE transmits an RRC CONNECTION REQUEST message. |
| 6 | - | | - | SS does not send any message to UE in 5 seconds and allow UE to enter idle mode and perform Connection Establishment Failure logging |

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 7 | - | | - | SS changes Cell 1, Cell 2 and Cell 3 level according to the T1 in Table 8.6.4.6. |
| 8 | - | | - | UE select PLMN 2 and Cell2. |
| 9 | --> | | RRC CONNECTION REQUEST | The UE transmits an RRC CONNECTION REQUEST message. |
| 10 | <-- | | RRC CONNECTION SETUP | SS transmit an RRC CONNECTION SETUP message. |
| 11 | --> | | RRC CONNECTION SETUP COMPLETE | The UE shall transmit an RRC CONNECTION SETUP COMPLETE message, and IE "Connection Establishment Failure Info Available" not present. |
| 12 | - | | - | Call steps 5 to13 in TS34.108 clause 7.2.2.2.3 on cell 2, and enter idle mode. |
| 13 | - | | - | SS changes Cell 1, Cell 2 and Cell 3 level according to the T2 in Table 8.6.4.6. |
| 14 | - | | - | UE select PLMN 1 and Cell3. |
| 15 | --> | | RRC CONNECTION REQUEST | The UE transmits an RRC CONNECTION REQUEST message. |
| 16 | <-- | | RRC CONNECTION SETUP | SS transmit an RRC CONNECTION SETUP message. |
| 17 | --> | | RRC CONNECTION SETUP COMPLETE | The UE shall transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available". |
| 18 | - | | - | Call steps 5 to11 in TS34.108 clause 7.2.2.2.3 on cell 3. |
| 19 | <-- | | UE INFORMATION REQUEST | SS sends an UE INFORMATION REQUEST message to get Connection Establishment Failure Report. |
| 20 | --> | | UE INFORMATION RESPONSE | The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1. |
| 21 | <-- | | RRC CONNECTION RELEASE | SS transmits a RRC CONNECTION RELEASE message to release RRC connection and moves to idle mode. |
| 22 | --> | | RRC CONNECTION RELEASE COMPLETE | UE confirms the connection release and returns to Idle mode |

Specific message contents

All messages have the same content as defined in 34.108 clause 9 with the following exceptions:

SYSTEM INFORMATION TYPE 1 (Initial conditions and all steps)

| | |
|---|---|
| - UE Timers and constants in idle mode | |
| -T300 | 2000 milliseconds |
| -N300 | 3 |
| -T312 | 10 seconds |
| - N312 | 1 |

RRC CONNECTION SETUP COMPLETE (step 11)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message. |
| Connection Establishment Failure Info Available | Not present |

RRC CONNECTION SETUP COMPLETE (step 17)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message. |
| Connection Establishment Failure Info Available | TRUE |

UE INFORMATION REQUEST (Step 19)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Measurements Report Request | Not Present |
| Logged ANR Report Request | Not Present |
| Connection Establishment Failure Request | TRUE |

UE INFORMATION RESPONSE (FDD) (Step 20)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Connection Establishment Failure Report | |
| - Time Since Failure | [0...172800] Indicates the elapsed time in seconds between Logging and reporting of Connection establishment failure info. |
| - CHOICE mode | FDD |
| - Logged Connection Establishment Failure Info-FDD | |
| - Number Of RRC Msg Transmitted | 4 |
| - Logged Measurements Failed Cell | |
| - Cell ID | Cell 1 |
| - CPICH RSCP | (0..91) |
| - CPICH Ec/N0 | (0..49) |

UE INFORMATION RESPONSE (TDD) (Step 20)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Connection Establishment Failure Report | |
| - Time Since Failure | [0..172800] Indicates the elapsed time in seconds between Logging and reporting of Connection establishment failure info. |
| - CHOICE mode | TDD |
| - Logged Connection Establishment Failure Info-TDD | |
| - Number Of RRC Msg Transmitted | 4 |
| - FPACH Received | Not checked |
| - E-RUCCH Failure | Not checked |
| - Logged Measurements Failed Cell | |
| - Cell ID | Cell 1 |
| - Primary CCPCH RSCP | (0..91) |

### 8.6.4.6.5 Test requirements

At step 17, the UE should transmit an RRC CONNECTION SETUP COMPLETE message, and IE "Connection Establishment Failure Info Available" not presents. (TP1)

At step 19, the UE should transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available". (TP2).

At step 20, The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Reports of cell 1. (TP2)

### 8.6.4.7 Connection Establishment Failure logging / Logging and reporting / location information

#### 8.6.4.7.1 Definition

This test is applicable for all UEs that support Connection Establishment Failure logging services.

#### 8.6.4.7.2 Conformance requirement

[TS 25.331, clause 8.1.3.11(TP1)]

If the RRC connection establishment fails and the UE supports logging of failed RRC Connection Establishment, the UE shall perform logging of information for later retrieval. The UE shall store connection establishment failure information in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE by setting its fields as follows:

1> clear the information included in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE, if any;

1> set the IE "PLMN Identity" to the same value as the selected PLMN [4];

1> set the IE "Number Of RRC Msg Transmitted" to indicate the number of times the RRC CONNECTION REQUEST message was transmitted by the UE during the failed RRC Connection Establishment procedure.

1> for TDD:

2> set the IE "FPACH Received" to TRUE if FPACH was received during the failed RRC Connection Establishment procedure.

2> if common E-DCH was used, include the IE "E-RUCCH Failure" and set it to TRUE if failure indication of the E-RUCCH transmission was received during the failed RRC Connection Establishment procedure.

1> if detailed location information is available:

2> if the UE has been able to calculate a 3-dimensional position:

3> set the IE "Ellipsoid point with altitude" or the IE "Ellipsoid point with altitude and uncertainty ellipsoid" to include the location coordinates;

2> else:

3> set the IE "Ellipsoid point" or the IE "Ellipsoid point with uncertainty circle" or the IE "Ellipsoid point with uncertainty ellipse" to include the location coordinates:

2> if horizontal velocity information is available:

3> set the IE "Horizontal velocity" to include the horizontal velocity;

2> a value of the IE "Confidence", different from "0" should be calculated, as the probability that the UE is located within the uncertainty region of the one of the IEs "Ellipsoid point with uncertainty ellipse" or "Ellipsoid point with altitude and uncertainty ellipsoid".

1> set the IE "PLMN Identity" of the Logged Measurements Failed Cell to indicate the IE "PLMN Identity" obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "Cell ID" to indicate cell identity obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell where the connection establishment failure was detected for UTRA FDD;

1> set the "P-CCPCH RSCP" to include measured quantities for the cell where the connection establishment failure was detected for UTRA 1.28 Mcps TDD;

1> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", "Logged Measurements E-UTRA frequency extension list", in order of decreasing ranking quantity as used for cell re-selection in each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

1> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

Reference

3GPP TS 25.331 clause 8.1.3.11.

8.6.4.7.3 Test Purpose

1. Verify presence of location information in RLF measurement, triggered by RRC connection establishment failure, is reported in connection establishment failure information in UE INFORMATION RESPONSE message.

8.6.4.7.4 Method of test

Initial Condition

System Simulator:

Cell 1

User Equipment:

UE: Registered Idle mode on PS (state 3) in Cell 1 as specified in clause 7.4 of TS 34.108.

The UE's positioning engine (e.g. standalone GNSS receiver) should be provided with any necessary stimulus to allow it to provide the position. This shall be done by use of the test function Update UE Location Information defined in TS 34.109 [10], if supported by the UE according to pc_UpdateUE_LocationInformation. Otherwise, or in addition any other suitable method may also be used.

Test Procedure

The UE sends RRC CONNECTION REQUEST message to SS, and SS does not response any message to UE.

The UE resubmits RRC CONNECTION REQUEST message 3 times and does not get any response make V300>N300.

The SS sends Paging message to UE to set up RRC CONNECTION.

The UE transmits an RRC CONNECTION REQUEST message.

When the UE receives RRC CONNECTION SETUP message, the UE should transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available".

The UE transmits SERVICE REQUEST message.

The SS sends an UE INFORMATION REQUEST message to get Connection Establishment Failure Report.

The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1.

The SS sends RRC CONNECTION RELEASE message to UE, and makes UE enter idle mode.

Expected Sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | <-- | | Paging | SS transmits a Paging message. |
| 2 | --> | | RRC CONNECTION REQUEST | The UE transmits an RRC CONNECTION REQUEST message. |
| 3 | - | | - | SS does not send any message to UE. Waits 2 seconds make T300 expire. |
| 4 | - | | - | Repeat steps 2 and 3 2 times, make V300=N300. |
| 5 | - | | RRC CONNECTION REQUEST | The UE transmits an RRC CONNECTION REQUEST message. |
| 6 | - | | - | SS does not send any message to UE in 5 seconds and allow UE to enter idle mode and perform Connection Establishment Failure logging |
| 7 | <-- | | Paging | SS transmits a Paging message. |
| 8 | --> | | RRC CONNECTION REQUEST | The UE transmits an RRC CONNECTION REQUEST message. |
| 9 | <-- | | RRC CONNECTION SETUP | SS transmit an RRC CONNECTION SETUP message. |
| 10 | --> | | RRC CONNECTION SETUP COMPLETE | The UE shall transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available". |
| 11 | --> | | RRC: INITIAL DIRECT TRANSFER<br>NAS: SERVICE REQUEST | The UE transmits SERVICE REQUEST message. |
| 12 | <-- | | UE INFORMATION REQUEST | SS sends an UE INFORMATION REQUEST message to get Connection Establishment Failure Report. |
| 13 | --> | | UE INFORMATION RESPONSE | The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1. |
| 14 | <-- | | RRC CONNECTION RELEASE | SS transmits a RRC CONNECTION RELEASE message to release RRC connection and moves to idle mode. |
| 15 | --> | | RRC CONNECTION RELEASE COMPLETE | UE confirms the connection release and returns to Idle mode |

Specific Message Contents

All messages have the same content as defined in 34.108 clause 9 with the following exceptions:

SYSTEM INFORMATION TYPE 1 (Initial conditions and all steps)

| | |
|---|---|
| - UE Timers and constants in idle mode | |
| -T300 | 2000 milliseconds |
| -N300 | 3 |
| -T312 | 10 seconds |
| -N312 | 1 |

RRC CONNECTION SETUP COMPLETE (step 11)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message. |
| Connection Establishment Failure Info Available | TRUE |

UE INFORMATION REQUEST (Step 12)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |

| Information Element | Value/remark |
|---|---|
| Logged Measurements Report Request | Not Present |
| Logged ANR Report Request | Not Present |
| Connection Establishment Failure Request | TRUE |

UE INFORMATION RESPONSE (FDD) (Step 13)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Connection Establishment Failure Report | |
| - Time Since Failure | [0..172800] Indicates the elapsed time in seconds between Logging and reporting of Connection establishment failure info. |
| - CHOICE mode | FDD |
| - Logged Connection Establishment Failure Info-FDD | |
| - Access Information | |
| - Number Of RRC Msg Transmitted | 4 |
| - Logged Measurements Failed Cell | |
| - Cell ID | Cell 1 |
| - CPICH RSCP | (0..91) |
| - CPICH Ec/N0 | (0..49) |
| - Location Information | |
| - CHIOCE *Location* | Ellipsoid or Ellipsoid with altitude or Ellipsoid with uncertainty circle or Ellipsoid with uncertainty ellipse or Ellipsoid with altitude and uncertainty ellipsoid. |
| - Ellipsoid point | If CHOICE *Location* is 'Ellipsoid' then check to be present |
| - Ellipsoid point with altitude | If CHOICE *Location* is ' Ellipsoid with altitude' then check to be present |
| - Ellipsoid point with uncertainty circle | If CHOICE *Location* is ' Ellipsoid with uncertainty circle' then check to be present |
| - Ellipsoid point with uncertainty ellipse | If CHOICE *Location* is ' Ellipsoid with uncertainty ellipse' then check to be present |
| - Ellipsoid point with altitude and uncertainty ellipsoid | If CHOICE *Location* is ' Ellipsoid with altitude and uncertainty ellipsoid' then check to be present |
| - Horizontal velocity | |
| - Bearing | (0...359) |
| - Horizontal Speed | (0...$2^{11}$-1) |

UE INFORMATION RESPONSE (TDD) (Step 13)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Connection Establishment Failure Report | |
| - Time Since Failure | [0..172800] Indicates the elapsed time in seconds between Logging and reporting of Connection establishment failure info. |
| - CHOICE mode | TDD |
| - Logged Connection Establishment Failure Info-TDD | |
| - Access Information | |
| - Number Of RRC Msg Transmitted | 4 |
| - FPACH Received | Not checked |
| - E-RUCCH Failure | Not checked |
| - Logged Measurements Failed Cell | Logged Measurements Failed Cell |
| - Cell ID | Cell 1 |
| - Primary CCPCH RSCP | (0..91) |
| - Location Information | |

| Information Element | Value/remark |
|---|---|
| - CHIOCE *Location* | Ellipsoid or Ellipsoid with altitude or Ellipsoid with uncertainty circle or Ellipsoid with uncertainty ellipse or Ellipsoid with altitude and uncertainty ellipsoid. |
| - Ellipsoid point | If CHOICE *Location* is 'Ellipsoid' then check to be present |
| - Ellipsoid point with altitude | If CHOICE *Location* is ' Ellipsoid with altitude' then check to be present |
| - Ellipsoid point with uncertainty circle | If CHOICE *Location* is ' Ellipsoid with uncertainty circle' then check to be present |
| - Ellipsoid point with uncertainty ellipse | If CHOICE *Location* is ' Ellipsoid with uncertainty ellipse' then check to be present |
| - Ellipsoid point with altitude and uncertainty ellipsoid | If CHOICE *Location* is ' Ellipsoid with altitude and uncertainty ellipsoid' then check to be present |
| - Horizontal velocity | |
| - Bearing- Horizontal Speed | (0...359)<br>(0...$2^{11}$-1) |

#### 8.6.4.7.5 Test requirement

At step 12, The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report including location information on cell 1. (TP1).

### 8.6.4.8 Connection Establishment Failure logging / Logging and reporting / Intra-frequency measurements

#### 8.6.4.8.1 Definition

This test is applicable for all UEs that support Connection Establishment Failure logging services.

#### 8.6.4.8.2 Conformance requirement

[TS 25.331, clause 8.1.3.6 (TP1)]

The UE shall compare the value of the IE "Initial UE identity" in the received RRC CONNECTION SETUP message with the value of the variable INITIAL_UE_IDENTITY.

If the values are different, the UE shall:

1> ignore the rest of the message.

If the values are identical, the UE shall:

...

1> submit an RRC CONNECTION SETUP COMPLETE message to the lower layers on the uplink DCCH after successful state transition per subclause 8.6.3.3, with the contents set as specified below:

...

2> if an IE "Logged Connection Establishment Failure Info-FDD" or "Logged Connection Establishment Failure Info-TDD" in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE is present and the current Registered PLMN is the same as the PLMN in IE "PLMN Identity" stored in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE:

3> include IE "Connection Establishment Failure Info Available".

...

When the RRC CONNECTION SETUP COMPLETE message has been submitted to lower layers for transmission the UE shall:

...

[TS 25.331, clause 8.1.3.10(TP1)]

If the UE receives an RRC CONNECTION REJECT message which contains an IE "Initial UE identity" with a value which is identical to the value of the IE "Initial UE identity" in the most recent RRC CONNECTION REQUEST

message sent by the UE; but the RRC CONNECTION REJECT message contains a protocol error causing the variable PROTOCOL_ERROR_REJECT to be set to TRUE according to clause 9, the UE shall perform procedure specific error handling as follows:

The UE shall:

1> stop timer T300 or T318, whichever one is running; and

1> clear the entry for the RRC CONNECTION REJECT message in the table "Rejected transactions" in the variable TRANSACTIONS;

1> if V300 is equal to or smaller than N300:

2> set the variable PROTOCOL_ERROR_INDICATOR to TRUE;

2> set the IEs in the RRC CONNECTION REQUEST message according to subclause 8.1.3.3;

2> perform the mapping of the Access Class to an Access Service Class as specified in subclause 8.5.13, and apply the given Access Service Class when accessing the RACH or the common E-DCH (for the Enhanced Uplink in CELL_FACH and Idle mode);

2> submit a new RRC CONNECTION REQUEST message to the lower layers for transmission on the uplink CCCH;

2> increment counter V300;

2> restart timer T300 when the MAC layer indicates success or failure to transmit the message.

1> if V300 is greater than N300:

2> if the UE supports logging of failed RRC Connection Establishment, perform the actions specified in subclause 8.1.3.11;

2> enter idle mode;

2> perform the actions specified in subclause 8.5.2 when entering idle mode from connected mode;

2> consider the procedure to be successful;

2> the procedure ends.

[TS 25.331, clause 8.1.3.11 (TP1)]

If the RRC connection establishment fails and the UE supports logging of failed RRC Connection Establishment, the UE shall perform logging of information for later retrieval. The UE shall store connection establishment failure information in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE by setting its fields as follows:

1> clear the information included in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE, if any;

1> set the IE "PLMN Identity" to the same value as the selected PLMN [4];

1> set the IE "Number Of RRC Msg Transmitted" to indicate the number of times the RRC CONNECTION REQUEST message was transmitted by the UE during the failed RRC Connection Establishment procedure.

1> for TDD:

2> set the IE "FPACH Received" to TRUE if FPACH was received during the failed RRC Connection Establishment procedure.

2> if common E-DCH was used, include the IE "E-RUCCH Failure" and set it to TRUE if failure indication of the E-RUCCH transmission was received during the failed RRC Connection Establishment procedure.

…

1> set the IE "PLMN Identity" of the Logged Measurements Failed Cell to indicate the IE "PLMN Identity" obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "Cell ID" to indicate cell identity obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell where the connection establishment failure was detected for UTRA FDD;

1> set the "P-CCPCH RSCP" to include measured quantities for the cell where the connection establishment failure was detected for UTRA 1.28 Mcps TDD;

1> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", "Logged Measurements E-UTRA frequency extension list", in order of decreasing ranking quantity as used for cell re-selection in each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

1> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

[TS 25.331, clause 8.5.64.3 (TP1)]

UE Shall:

…

1> if IE "Connection Establishment Failure Request" is present:

2> if Registered PLMN is the same as the PLMN in the IE "PLMN Identity" stored in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE:

3> set IE "Connection Establishment Failure Report" in the UE INFORMATION RESPONSE as follows:

4> include the IE "Logged Connection Establishment Failure Info-FDD" or "Logged Connection Establishment Failure Info-TDD" and set it to include the entry from the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE;

4> set the IE "Time Since Failure" to indicate the elapsed time starting from the Logging of the Connection establishment failure information that is stored in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE.

3> clear the the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE;

1> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

### Reference

TS 25.304 clause 5.7 and TS 25.331 clause 8.3.1.6, 8.3.1.10, 8.1.3.11 and 8.5.64.3

### .8.6.4.8.3 Test Purpose

1. Verify that intra-frequency neighbour cell information (IE "Logged Measurements Intra Frequency Neighbouring Cells list") is reported in connection establishment failure information in UE INFORMATION RESPONSE message.

### 8.6.4.8.4 Method of test

#### Initial conditions

System Simulator:

2 cells, Cell 1 and Cell 2

User Equipment:

UE: Registered Idle mode (state 3) in Cell 1 as specified in clause 7.4 of TS 34.108.

Test Procedure

Table 8.6.4.8 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Column marked "T0" denotes the initial conditions, while column marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.6.4.8**

| Parameter | Unit | Cell 1 | | Cell 2 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | Mid Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -69 | -69 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -69 | -69 | -60 |

SS configures its downlink transmission power settings according to columns "T1" in Table 8.6.4.8. The UE shall find that the cell 2 is better and attempt to perform a cell reselection.

SS transmits a Paging message to UE.

The UE sends RRC CONNECTION REQUEST message to SS, and SS does not send any message to UE on Cell 2. Waits 2 seconds make T300 expire.

Repeats last procedure 3 times make V300>N300.

UE performs Connection Establishment Failure logging and enter idle mod.

The SS sends Paging message to UE.

The UE transmits an RRC CONNECTION REQUEST message.

When the UE receives RRC CONNECTION SETUP message, the UE should transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available".

The UE transmits SERVICE REQUEST message.

The SS sends an UE INFORMATION REQUEST message to get Connection Establishment Failure Report.

The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 2, include the "Logged Measurements Intra Frequency Neighbouring Cells list" with Cell 1 information in the Report.

The SS sends RRC CONNECTION RELEASE message to UE, and makes UE enter idle mode.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | - | | - | SS configures its downlink transmission power settings according to columns "T1" in Table 8.6.4.8. The UE shall find that the cell 2 is better and attempt to perform a cell reselection. The following messages are sent on Cell 2. |
| 2 | <-- | | Paging | SS transmits a Paging message. |
| 3 | --> | | RRC CONNECTION REQUEST | The UE transmits an RRC CONNECTION REQUEST message on Cell 2. |
| 4 | - | | - | SS does not send any message to UE. Waits 2 seconds make T300 expire. |
| 5 | - | | - | Repeats “step 3 and step 4” 3 times make V300>N300. |
| 6 | - | | - | UE performs Connection Establishment Failure logging and enter idle mod. |
| 7 | <-- | | Paging | SS transmits a Paging message. |
| 8 | --> | | RRC CONNECTION REQUEST | The UE transmits an RRC CONNECTION REQUEST message. |
| 9 | <-- | | RRC CONNECTION SETUP | SS transmit an RRC CONNECTION SETUP message. |
| 10 | --> | | RRC CONNECTION SETUP COMPLETE | The UE shall transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available". |

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 11 | --> | | RRC: INITIAL DIRECT TRANSFER<br>NAS: SERVICE REQUEST | The UE transmits SERVICE REQUEST message. |
| 12 | <-- | | UE INFORMATION REQUEST | SS sends an UE INFORMATION REQUEST message to get Connection Establishment Failure Report. |
| 13 | --> | | UE INFORMATION RESPONSE | The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1. |
| 14 | <-- | | RRC CONNECTION RELEASE | SS transmits a RRC CONNECTION RELEASE message to release RRC connection and moves to idle mode. |
| 15 | --> | | RRC CONNECTION RELEASE COMPLETE | UE confirms the connection release and returns to Idle mode |

Specific message contents

All messages have the same content as defined in 34.108 clause 9 with the following exceptions:

SYSTEM INFORMATION TYPE 1 (Initial conditions and all steps for Cell 2)

| | |
|---|---|
| - UE Timers and constants in idle mode | |
| -T300 | 2000 milliseconds |
| -N300 | 3 |
| -T312 | 10 seconds |
| - N312 | 1 |

SYSTEM INFORMATION BLOCK TYPE 11 (Initial conditions and all steps for Cell 1)

Use same message sub-clause 6.1 of TS 34.108, with the exception of that cell 2 is listed as intra-frequency neighbour cell.

SYSTEM INFORMATION BLOCK TYPE 11 (Initial conditions and all steps for Cell 2)

Use same message sub-clause 6.1 of TS 34.108, with the exception of that cell 1 is listed as intra-frequency neighbour cell.

RRC CONNECTION SETUP COMPLETE (step 10)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message. |
| Connection Establishment Failure Info Available | TRUE |

UE INFORMATION REQUEST (Step 12)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Measurements Report Request | Not Present |
| Logged ANR Report Request | Not Present |
| Connection Establishment Failure Request | TRUE |

UE INFORMATION RESPONSE (FDD) (Step 13)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Connection Establishment Failure Report | |
| - Time Since Failure | [0..172800] Indicates the elapsed time in seconds between Logging and reporting of Connection establishment failure info. |
| - CHOICE mode | FDD |
| - Logged Connection Establishment Failure Info-FDD | |
| - Number Of RRC Msg Transmitted | 4 |
| - Logged Measurements Failed Cell | |
| - Cell ID | Cell 2 |
| - CPICH RSCP | (0..91) |
| - CPICH Ec/N0 | (0..49) |
| - Logged Measurements Intra Frequency Neighbouring Cells list | |
| - Primary CPICH info | Set to the scrambling code for cell 1 |
| - CPICH RSCP | (0..91) |
| - CPICH Ec/N0 | (0..49) |

UE INFORMATION RESPONSE (TDD) (Step 13)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Connection Establishment Failure Report | |
| - Time Since Failure | [0...172800] Indicates the elapsed time in seconds between Logging and reporting of Connection establishment failure info. |
| - CHOICE mode | TDD |
| - Logged Connection Establishment Failure Info-TDD | |
| - Number Of RRC Msg Transmitted | 4 |
| - FPACH Received | Not checked |
| - E-RUCCH Failure | Not checked |
| - Logged Measurements Failed Cell | |
| - Cell ID | Cell 2 |
| - Primary CCPCH RSCP | (0..91) |
| - Logged Measurements Intra Frequency Cells list | |
| - Cell parameters Id | Cell parameter Id of Cell 1 |
| - Primary CCPCH RSCP | (0..91) |

### 8.6.4.8.5 Test requirements

At step 13, The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 2 and include the "Logged Measurements Intra Frequency Neighbouring Cells list" with Cell 1 information in the Report. (TP1).

## 8.6.4.9 Connection Establishment Failure logging / Logging and reporting / Inter-frequency measurements

### 8.6.4.9.1 Definition

This test is applicable for all UEs that support Connection Establishment Failure logging services.

### 8.6.4.9.2 Conformance requirement

[TS 25.331, clause 8.1.3.6 (TP1)]

The UE shall compare the value of the IE "Initial UE identity" in the received RRC CONNECTION SETUP message with the value of the variable INITIAL_UE_IDENTITY.

If the values are different, the UE shall:

1> ignore the rest of the message.

If the values are identical, the UE shall:

...

1> submit an RRC CONNECTION SETUP COMPLETE message to the lower layers on the uplink DCCH after successful state transition per subclause 8.6.3.3, with the contents set as specified below:

...

2> if an IE "Logged Connection Establishment Failure Info-FDD" or "Logged Connection Establishment Failure Info-TDD" in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE is present and the current Registered PLMN is the same as the PLMN in IE "PLMN Identity" stored in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE:

3> include IE "Connection Establishment Failure Info Available".

...

When the RRC CONNECTION SETUP COMPLETE message has been submitted to lower layers for transmission the UE shall:

...

[TS 25.331, clause 8.1.3.10 (TP1)]

If the UE receives an RRC CONNECTION REJECT message which contains an IE "Initial UE identity" with a value which is identical to the value of the IE "Initial UE identity" in the most recent RRC CONNECTION REQUEST message sent by the UE; but the RRC CONNECTION REJECT message contains a protocol error causing the variable PROTOCOL_ERROR_REJECT to be set to TRUE according to clause 9, the UE shall perform procedure specific error handling as follows:

The UE shall:

1> stop timer T300 or T318, whichever one is running; and

1> clear the entry for the RRC CONNECTION REJECT message in the table "Rejected transactions" in the variable TRANSACTIONS;

1> if V300 is equal to or smaller than N300:

2> set the variable PROTOCOL_ERROR_INDICATOR to TRUE;

2> set the IEs in the RRC CONNECTION REQUEST message according to subclause 8.1.3.3;

2> perform the mapping of the Access Class to an Access Service Class as specified in subclause 8.5.13, and apply the given Access Service Class when accessing the RACH or the common E-DCH (for the Enhanced Uplink in CELL_FACH and Idle mode);

2> submit a new RRC CONNECTION REQUEST message to the lower layers for transmission on the uplink CCCH;

2> increment counter V300;

2> restart timer T300 when the MAC layer indicates success or failure to transmit the message.

1> if V300 is greater than N300:

2> if the UE supports logging of failed RRC Connection Establishment, perform the actions specified in subclause 8.1.3.11;

2> enter idle mode;

2> perform the actions specified in subclause 8.5.2 when entering idle mode from connected mode;

2> consider the procedure to be successful;

2> the procedure ends.

[TS 25.331, clause 8.1.3.11 (TP1)]

If the RRC connection establishment fails and the UE supports logging of failed RRC Connection Establishment, the UE shall perform logging of information for later retrieval. The UE shall store connection establishment failure information in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE by setting its fields as follows:

1> clear the information included in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE, if any;

1> set the IE "PLMN Identity" to the same value as the selected PLMN [4];

1> set the IE "Number Of RRC Msg Transmitted" to indicate the number of times the RRC CONNECTION REQUEST message was transmitted by the UE during the failed RRC Connection Establishment procedure.

1> for TDD:

2> set the IE "FPACH Received" to TRUE if FPACH was received during the failed RRC Connection Establishment procedure.

2> if common E-DCH was used, include the IE "E-RUCCH Failure" and set it to TRUE if failure indication of the E-RUCCH transmission was received during the failed RRC Connection Establishment procedure.

…

1> set the IE "PLMN Identity" of the Logged Measurements Failed Cell to indicate the IE "PLMN Identity" obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "Cell ID" to indicate cell identity obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell where the connection establishment failure was detected for UTRA FDD;

1> set the "P-CCPCH RSCP" to include measured quantities for the cell where the connection establishment failure was detected for UTRA 1.28 Mcps TDD;

1> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", "Logged Measurements E-UTRA frequency extension list", in order of decreasing ranking quantity as used for cell re-selection in each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

1> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

[TS 25.331, clause 8.5.64.3 (TP1)]

UE Shall:

…

1> if IE "Connection Establishment Failure Request" is present:

2> if Registered PLMN is the same as the PLMN in the IE "PLMN Identity" stored in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE:

3> set IE "Connection Establishment Failure Report" in the UE INFORMATION RESPONSE as follows:

4> include the IE "Logged Connection Establishment Failure Info-FDD" or "Logged Connection Establishment Failure Info-TDD" and set it to include the entry from the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE;

4> set the IE "Time Since Failure" to indicate the elapsed time starting from the Logging of the Connection establishment failure information that is stored in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE.

3> clear the the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE;

1> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

Reference

TS 25.304 clause 5.7 and TS 25.331 clause 8.3.1.6, 8.3.1.10, 8.1.3.11 and 8.5.64.3

### 8.6.4.9.3 Test Purpose

1. Verify that inter-frequency neighbour cell information (IE "Logged Measurements Inter Frequency list") is reported in connection establishment failure information in UE INFORMATION RESPONSE message.

### 8.6.4.9.4 Method of test

Initial conditions

System Simulator:

2 cells, Cell 1 and Cell 4

User Equipment:

UE: Registered Idle mode (state 3) in Cell 1 as specified in clause 7.4 of TS 34.108.

Table 8.6.4.8 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Column marked "T0" denotes the initial conditions, while column marked "T1" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.6.4.8**

| Parameter | Unit | Cell 1 | | Cell 4 | |
|---|---|---|---|---|---|
| | | T0 | T1 | T0 | T1 |
| UTRA RF Channel Number | | Mid Range Test Frequency | | High Range Test Frequency | |
| CPICH Ec (FDD) | dBm/3.84MHz | -60 | -69 | -69 | -60 |
| P-CCPCH RSCP (TDD) | dBm | -60 | -69 | -69 | -60 |

SS configures its downlink transmission power settings according to columns "T1" in Table 8.6.4.8. The UE shall find that the cell 4 is better and attempt to perform a cell reselection.

SS transmits a Paging message.

The UE sends RRC CONNECTION REQUEST message to SS, and SS does not send any message to UE on Cell 4. Waits 2 seconds make T300 expire.

Repeats last procedure 3 times make V300>N300.

The SS sends Paging message to UE.

The UE transmits an RRC CONNECTION REQUEST message.

When the UE receives RRC CONNECTION SETUP message, the UE should transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available".

The UE transmits SERVICE REQUEST message.

The SS sends an UE INFORMATION REQUEST message to get Connection Establishment Failure Report.

The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 4; include the "Logged Measurements Inter Frequency Neighbouring Cells list" with Cell 1 information.

The SS sends RRC CONNECTION RELEASE message to UE, and makes UE enter idle mode.

Expected sequence

| Step | Direction | | Message | Comments |
|---|---|---|---|---|
| | UE | SS | | |
| 1 | - | | - | SS configures its downlink transmission power settings according to columns "T1" in Table 8.6.4.8. The UE shall find that the cell 2 is better and attempt to perform a cell reselection. The following messages are sent on Cell 4. |
| 2 | <-- | | Paging | SS transmits a Paging message. |
| 3 | --> | | RRC CONNECTION REQUEST | The UE transmits an RRC CONNECTION REQUEST message on Cell 4. |
| 4 | - | | - | SS does not send any message to UE. Waits 2 seconds make T300 expire. |
| 5 | - | | - | Repeats “step 3 and step 4” 3 times make V300>N300. |
| 6 | - | | - | UE performs Connection Establishment Failure logging and enter idle mod. UE selects to Cell 4. |
| 7 | <-- | | Paging | SS transmits a Paging message. |
| 8 | --> | | RRC CONNECTION REQUEST | The UE transmits an RRC CONNECTION REQUEST message. |
| 9 | <-- | | RRC CONNECTION SETUP | SS transmit an RRC CONNECTION SETUP message. |
| 10 | --> | | RRC CONNECTION SETUP COMPLETE | The UE shall transmit an RRC CONNECTION SETUP COMPLETE message including IE "Connection Establishment Failure Info Available". |
| 11 | --> | | RRC: INITIAL DIRECT TRANSFER<br>NAS: SERVICE REQUEST | The UE transmits SERVICE REQUEST message. |
| 12 | <-- | | UE INFORMATION REQUEST | SS sends an UE INFORMATION REQUEST message to get Connection Establishment Failure Report. |
| 13 | --> | | UE INFORMATION RESPONSE | The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1. |
| 14 | <-- | | RRC CONNECTION RELEASE | SS transmits a RRC CONNECTION RELEASE message to release RRC connection and moves to idle mode. |
| 15 | --> | | RRC CONNECTION RELEASE COMPLETE | UE confirms the connection release and returns to Idle mode |

Specific message contents

All messages have the same content as defined in 34.108 clause 9 with the following exceptions:

SYSTEM INFORMATION TYPE 1 (Initial conditions and all steps for Cell 4)

| | |
|---|---|
| - UE Timers and constants in idle mode | |
| -T300 | 2000 milliseconds |
| -N300 | 3 |
| -T312 | 10 seconds |
| - N312 | 1 |

SYSTEM INFORMATION BLOCK TYPE 11 (Initial conditions and all steps for Cell1)

Use same message sub-clause 6.1 of TS 34.108, with the exception of that cell 4 is listed as inter-frequency neighbour cell.

SYSTEM INFORMATION BLOCK TYPE 11 (Initial conditions and all steps for Cell4)

Use same message sub-clause 6.1 of TS 34.108, with the exception of that cell 1 is listed as inter-frequency neighbour cell.

RRC CONNECTION SETUP COMPLETE (step 10)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION SETUP message. |
| Connection Establishment Failure Info Available | TRUE |

UE INFORMATION REQUEST (Step 12)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Measurements Report Request | Not Present |
| Logged ANR Report Request | Not Present |
| Connection Establishment Failure Request | TRUE |

UE INFORMATION RESPONSE (FDD) (Step 13)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Connection Establishment Failure Report | |
| - Time Since Failure | [0..172800] Indicates the elapsed time in seconds between Logging and reporting of Connection establishment failure info. |
| - CHOICE mode | FDD |
| - Logged Connection Establishment Failure Info-FDD | |
| - Number Of RRC Msg Transmitted | 4 |
| - Logged Measurements Failed Cell | |
| - Cell ID | Cell 4 |
| - CPICH RSCP | (0..91) |
| - CPICH Ec/N0 | (0..49) |
| - Logged Measurements Inter Frequency Neighbouring Cells list | |
| - Frequency Info | Frequency of Cell 1 |
| - Logged Measurements Inter-frequency Neighbouring Cells list | Only 1 cell |
| - Primary CPICH info | Set to the scrambling code for cell 1 |
| - CPICH RSCP | (0..91) |
| - CPICH Ec/N0 | (0..49) |

UE INFORMATION RESPONSE (TDD) (Step 13)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Connection Establishment Failure Report | |
| - Time Since Failure | [0...172800] Indicates the elapsed time in seconds between Logging and reporting of Connection establishment failure info. |
| - CHOICE mode | TDD |
| - Logged Connection Establishment Failure Info-TDD | |
| - Number Of RRC Msg Transmitted | 4 |
| - FPACH Received | Not checked |
| - E-RUCCH Failure | Not checked |
| - Logged Measurements Failed Cell | |
| - Cell ID | Cell 4 |
| - Primary CCPCH RSCP | (0..91) |
| - Logged Measurements Inter Frequency Cells list | |
| - Frequency Info | Frequency of Cell 1 |
| - Logged Measurements Inter-frequency Neighbouring Cells list | Only 1 cell |
| - Cell parameters Id | Cell parameter Id of Cell 1 |
| - Primary CCPCH RSCP | (0..91) |

#### 8.6.4.9.5 Test requirements

At step 13, The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 4 and include the "Logged Measurements Inter Frequency Neighbouring Cells list" with Cell 1 information in the Report. (TP1).

## 8.6.5 Inter-RAT Connection Establishment Failure

### 8.6.5.1 Connection Establishment Failure logging / Reporting at E-UTRAN inter-RAT handover

#### 8.6.5.1.1 Definition

This test is applicable for all UEs that support Connection Establishment Failure logging services.

#### 8.6.5.1.2 Conformance requirement

[TS 25.331, clause 8.1.3.6 (TP1)]

The UE shall compare the value of the IE "Initial UE identity" in the received RRC CONNECTION SETUP message with the value of the variable INITIAL_UE_IDENTITY.

If the values are different, the UE shall:

1> ignore the rest of the message.

If the values are identical, the UE shall:

...

1> submit an RRC CONNECTION SETUP COMPLETE message to the lower layers on the uplink DCCH after successful state transition per subclause 8.6.5.1, with the contents set as specified below:

...

2> if an IE "Logged Connection Establishment Failure Info-FDD" or "Logged Connection Establishment Failure Info-TDD" in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE is present and the current Registered PLMN is the same as the PLMN in IE "PLMN Identity" stored in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE:

3> include IE "Connection Establishment Failure Info Available".

...

When the RRC CONNECTION SETUP COMPLETE message has been submitted to lower layers for transmission the UE shall:

...

[TS 25.331, clause 8.1.3.10(TP1)]

If the UE receives an RRC CONNECTION REJECT message which contains an IE "Initial UE identity" with a value which is identical to the value of the IE "Initial UE identity" in the most recent RRC CONNECTION REQUEST message sent by the UE; but the RRC CONNECTION REJECT message contains a protocol error causing the variable PROTOCOL_ERROR_REJECT to be set to TRUE according to clause 9, the UE shall perform procedure specific error handling as follows:

The UE shall:

1> stop timer T300 or T318, whichever one is running; and

1> clear the entry for the RRC CONNECTION REJECT message in the table "Rejected transactions" in the variable TRANSACTIONS;

1> if V300 is equal to or smaller than N300:

2> set the variable PROTOCOL_ERROR_INDICATOR to TRUE;

2> set the IEs in the RRC CONNECTION REQUEST message according to subclause 8.1.3.3;

2> perform the mapping of the Access Class to an Access Service Class as specified in subclause 8.5.13, and apply the given Access Service Class when accessing the RACH or the common E-DCH (for the Enhanced Uplink in CELL_FACH and Idle mode);

2> submit a new RRC CONNECTION REQUEST message to the lower layers for transmission on the uplink CCCH;

2> increment counter V300;

2> restart timer T300 when the MAC layer indicates success or failure to transmit the message.

1> if V300 is greater than N300:

2> if the UE supports logging of failed RRC Connection Establishment, perform the actions specified in subclause 8.1.3.11;

2> enter idle mode;

2> perform the actions specified in subclause 8.5.2 when entering idle mode from connected mode;

2> consider the procedure to be successful;

2> the procedure ends.

[TS 25.331, clause 8.1.3.11 (TP1)]

If the RRC connection establishment fails and the UE supports logging of failed RRC Connection Establishment, the UE shall perform logging of information for later retrieval. The UE shall store connection establishment failure information in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE by setting its fields as follows:

1> clear the information included in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE, if any;

1> set the IE "PLMN Identity" to the same value as the selected PLMN [4];

1> set the IE "Number Of RRC Msg Transmitted" to indicate the number of times the RRC CONNECTION REQUEST message was transmitted by the UE during the failed RRC Connection Establishment procedure.

1> for TDD:

2> set the IE "FPACH Received" to TRUE if FPACH was received during the failed RRC Connection Establishment procedure.

2> if common E-DCH was used, include the IE "E-RUCCH Failure" and set it to TRUE if failure indication of the E-RUCCH transmission was received during the failed RRC Connection Establishment procedure.

…

1> set the IE "PLMN Identity" of the Logged Measurements Failed Cell to indicate the IE "PLMN Identity" obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "Cell ID" to indicate cell identity obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell where the connection establishment failure was detected for UTRA FDD;

1> set the "P-CCPCH RSCP" to include measured quantities for the cell where the connection establishment failure was detected for UTRA 1.28 Mcps TDD;

1> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", "Logged Measurements E-UTRA frequency extension list", in order of decreasing ranking quantity as used for cell re-selection in each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

1> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

[TS 25.331, clause 8.5.64.3 (TP1,)]

UE Shall:

…

1> if IE "Connection Establishment Failure Request" is present:

2> if Registered PLMN is the same as the PLMN in the IE "PLMN Identity" stored in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE:

3> set IE "Connection Establishment Failure Report" in the UE INFORMATION RESPONSE as follows:

4> include the IE "Logged Connection Establishment Failure Info-FDD" or "Logged Connection Establishment Failure Info-TDD" and set it to include the entry from the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE;

4> set the IE "Time Since Failure" to indicate the elapsed time starting from the Logging of the Connection establishment failure information that is stored in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE.

3> clear the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE;

1> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

Reference

TS 25.304 clauses 5.7 and TS 25.331 clause 8.3.1.6, 8.3.1.10, 8.1.3.11 and 8.5.64.3

8.6.5.1.3 Test Purpose

1. Verify that IE "Logged Connection Establishment Failure Info Available" is indicated at inter-RAT handover to UTRA.

8.6.5.1.4 Method of test

Initial conditions

System Simulator:

2 cells, 1 UTRAN FDD cell (or TDD cell) and 1 E-UTRAN cell. Cell 1 is a UTRAN cell, and Cell 2 is an E-UTRAN Cell. Cell 2 configuration refers to “Cell 1” in TS36.508 clause 6.3. SIB configuration 6 is applied in accordance with TS 34.108 clause 6.1.0a.2

User Equipment:

UE: state Registered, Idle mode (state 2) in Cell 2 as specified in clause 4.5 of TS 34.108.

Test Procedure

Table 8.6.5.1 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Column marked "T0" denotes the initial condition. Subsequent configurations marked “T1”, “T2” and “T3” are applied at the points indicated described in the texts in this clause.

**Table 8.6.5.1: Time instances of cell power level and parameter changes**

| | Parameter | Unit | Cell 1(UTRA) | Cell 2(E-UTRA) | Remark |
|---|---|---|---|---|---|
| T0 | Cell-specific RS EPRE | dBm/15kHz | - | -70 | |
| | CPICH Ec (UTRA FDD) | dBm/3.84 MHz | -100 | - | |
| | PCCPCH Ec(UTRA LCR TDD) | dBm/1.28 MHz | -100 | - | |
| T1 | Cell-specific RS EPRE | dBm/15kHz | - | -90 | |
| | CPICH Ec (UTRA FDD) | dBm/3.84 MHz | -65 | - | |
| | PCCPCH Ec(UTRA LCR TDD) | dBm/1.28 MHz | -65 | - | |
| T2 | Cell-specific RS EPRE | dBm/15kHz | - | -70 | The power level values are such that entering conditions for event 3a are satisfied. |
| | CPICH Ec (UTRA FDD) | dBm/3.84 MHz | -100 | - | |
| | PCCPCH Ec (UTRA LCR TDD) | dBm/1.28 MHz | -100 | - | |
| T3 | Cell-specific RS EPRE | dBm/15kHz | - | -90 | |
| | CPICH Ec (UTRA FDD) | dBm/3.84 MHz | -65 | - | |
| | PCCPCH Ec(UTRA LCR TDD) | dBm/1.28 MHz | -65 | - | |

The SS changes Cell 1 and Cell 2 level according to the row "T1" in table 8.6.5.1.

The UE reselect to Cell 1 and Generic test procedure in TS 36.508 subclause 6.4.2.8 is performed on Cell 1.

The SS sends Paging message to UE.

The UE sends RRC CONNECTION REQUEST message to SS, and SS does not send any message to UE. Waits 2 seconds make T300 expire..

Repeats last procedure 3 times make V300>N300.

Waiting 5 seconds allows UE to enter idle mode and perform Connection Establishment Failure logging

The SS sends Paging message to UE.

The UE transmits an RRC CONNECTION REQUEST message.

When the UE receives RRC CONNECTION SETUP message, the UE transmits an RRC CONNECTION SETUP COMPLETE message.

The UE transmits SERVICE REQUEST message.

SS sends PHYSICAL CHANNEL RECONFIGURATION message to the UE to configure the compressed mode pattern sequence parameters. When the PHYSICAL CHANNEL RECONFIGURATION COMPLETE is received from the UE, the SS sends a MEASUREMENT CONTROL message.

SS adjusts cell power level according to columns "T1" in tables 8.6.5.1, and UE send MEASUREMENT REPORT to SS.

The UE receive “HANDOVER FROM UTRAN COMMAND” message from Cell 1, and handover to E-UTRAN Cell 2,

SS adjust cell power level according to columns "T2" in tables 8.6.5.1, and UE sends *MeasurementReport* message to SS.

SS transmits a *MobilityFromEUTRACommand* message to UE.

The UE handover to UTRAN cell from E-UTRAN cell, and send HANDOVER TO UTRAN COMPLETE message and complete handover to Cell 1.

SS transmits a UE INFORMATION REQUEST message to get Connection Establishment Failure Report

The UE shall transmit a UE INFORMATION REPONSE message, with Connection Establishment Failure Report on Cell 1

Expected Sequence

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 0A | - | | - | The SS changes Cell 1 and Cell 2 level according to the row "T1" in table8.6.5.1. |
| 0B | - | | - | The UE reselect to Cell 1 and Generic test procedure in TS 36.508 subclause 6.4.2.8 is performed on Cell 1.<br>NOTE: The UE performs an RAU procedure and the RRC connection is released. |
| 1 | <-- | | Paging | SS transmits a Paging message. |
| 2 | --> | | RRC CONNECTION REQUEST | The UE transmits an RRC CONNECTION REQUEST message. |
| 3 | - | | - | SS does not send any message to UE. Waits 2 seconds make T300 expire. |
| 4 | - | | - | Repeats “step 2 and step 3” 3 times make V300>N300. |
| 5 | - | | - | Waiting 5 seconds allows UE to enter idle mode and perform Connection Establishment Failure logging |
| 6 | <-- | | Paging | SS transmits a Paging message. |
| 7 | → | | RRC CONNECTION REQUEST | |

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| 8 | ← | | RRC CONNECTION SETUP | |
| 9 | → | | RRC CONNECTION SETUP COMPLETE | |
| 10 | --> | | RRC: INITIAL DIRECT TRANSFER<br>NAS: SERVICE REQUEST | The UE transmits SERVICE REQUEST message. |
| 10A | SS | | | The SS starts ciphering and integrity protection |
| 10B | SS | | | The SS establishes the radio access bearer for the active PDP context, using the same QoS that was used at activation |
| 11 | ← | | PHYSICAL CHANNEL RECONFIGURATION | Compressed mode pattern sequence parameters are loaded to UE. |
| 12 | → | | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | |
| 13 | ← | | MEASUREMENT CONTROL | SS configures event 3a in the UE. If the UE requires compressed mode (refer ICS/IXIT), compressed mode is started. |
| 14 | | | | SS re-adjusts the downlink transmission power settings according to columns "T1" in tables 8.6.5.1. |
| 15 | → | | MEASUREMENT REPORT | After about 2s, the UE sends a MEASUREMENT REPORT to SS triggered by event 3a. |
| 16 | ← | | HANDOVER FROM UTRAN COMMAND | The SS transmits a HANDOVER FROM UTRAN COMMAND message to UE. |
| 17 | → | | *RRCConnectionReconfigurationComplete* | The UE shall send a *RRCConnectionReconfigurationComplete* message to Cell 2. |
| 17A | - | | - | Generic test procedure in TS 36.508 subclause 6.4.2.10 is performed on Cell 2.<br>NOTE: The UE performs tracking area updating procedure without ISR and security reconfiguration after successful completion of handover from UTRA. |
| 18 | ← | | *RRCConnectionReconfiguration* | The SS transmits an *RRCConnectionReconfiguration* message to setup inter RAT measurement on Cell 2. |
| 19 | → | | *RRCConnectionReconfigurationComplete* | The UE transmits an *RRCConnectionReconfigurationComplete* message to confirm the setup of inter RAT measurement on Cell 2. |
| 20 | | | | S*S* re-adjusts the downlink transmission power settings according to columns "T2" in tables 8.6.5.1. |
| 21 | → | | *MeasurementReport* | The UE transmits a *MeasurementReport message* to Cell 2. |
| 22 | ← | | *MobilityFromEUTRACommand* | The SS transmits a *MobilityFromEUTRACommand* message on Cell 2. |
| 23 | → | | HANDOVER TO UTRAN COMPLETE | The UE transmit a HANDOVER TO UTRAN COMPLETE message on Cell 1. |

| Step | Direction | | Message | Comment |
|---|---|---|---|---|
| | UE | SS | | |
| - | - | | - | EXCEPTION: Step 23Aa1 depend on UE implementation |
| 23Aa1 | → | | ROUTING AREA UPDATE REQUEST | The UE sends a ROUTING AREA UPDATE REQUEST message within [2] seconds. |
| 24 | ← | | SECURITY MODE COMMAND | The SS transmits a SECURITY MODE COMMAND message on Cell 1 in order to activate integrity protection. |
| 25 | → | | SECURITY MODE COMPLETE | The UE transmits a SECURITY MODE COMPLETE message on Cell 1. |
| - | - | | - | EXCEPTION: Steps 25Aa1 to 25Aa2 depend on UE implementation; the second "lower case letter" identifies a step sequence that takes place if the UE sent a ROUTING AREA UPDATE REQUEST message at 23Aa1. |
| 25Aa1 | ← | | ROUTING AREA UPDATE ACCEPT | The SS transmits a ROUTING AREA UPDATE ACCEPT message. |
| 25Aa2 | → | | ROUTING AREA UPDATE COMPLETE | The UE transmits a ROUTING AREA UPDATE COMPLETE message. |
| 26 | ← | | UE INFORMATION REQUEST | SS sends an UE INFORMATION REQUEST message to get Connection Establishment Failure Report. |
| 27 | → | | UE INFORMATION RESPONSE | The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on Cell 1. |
| - | - | | - | EXCEPTION: Steps 28a1 to 28a3 depend on UE implementation; the second "lower case letter" identifies a step sequence that takes place if the UE did not send a ROUTING AREA UPDATE REQUEST message at step 23Aa1. |
| 28a1 | → | | ROUTING AREA UPDATE REQUEST | The UE sends a ROUTING AREA UPDATE REQUEST message. |
| 28a2 | ← | | ROUTING AREA UPDATE ACCEPT | The SS transmits a ROUTING AREA UPDATE ACCEPT message. |
| 28a3 | → | | ROUTING AREA UPDATE COMPLETE | The UE transmits a ROUTING AREA UPDATE COMPLETE message. |

Specific Message Contents

Conditions for specific message contents

| Condition | Explanation |
|---|---|
| Band > 64 | If E-UTRA band > 64 is selected |

SYSTEM INFORMATION TYPE 1 (Initial conditions and all steps)

| | |
|---|---|
| - UE Timers and constants in idle mode | |
| -T300 | 2000 milliseconds |
| -N300 | 3 |
| -T312 | 10 seconds |
| - N312 | 1 |

SYSTEM INFORMATION BLOCK TYPE 19 (Initial conditions and all steps)

Use same message sub-clause 6.1 of TS 34.108, with the exception of that frequency of Cell 2 is listed in the IE "E-UTRA frequency and priority info list".

PHYSICAL CHANNEL RECONFIGURATION (FDD) (Step 11)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an unused integer between 0 to 3 |
| Integrity check info | |
| - Message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Integrity protection mode info | Not Present |
| Ciphering mode info | Not Present |
| Activation time | Not Present |
| Delay restriction flag | Not Present |
| New U-RNTI | Not Present |
| New C-RNTI | Not Present |
| New H-RNTI | Not Present |
| New Primary E-RNTI | Not Present |
| New Secondary E-RNTI | Not Present |
| RRC State indicator | CELL_DCH |
| UE Mobility State Indicator | Not Present |
| UTRAN DRX cycle length coefficient | Not Present |
| CN information info | Not Present |
| URA identity | Not Present |
| RNC support for change of UE capability | Not Present |
| Reconfiguration in response to requested change of UE capability | Not Present |
| Downlink counter synchronization info | Not Present |
| Frequency info | Not Present |
| DTX-DRX timing information | Not Present |
| DTX-DRX Information | Not Present |
| HS-SCCH less Information | Not Present |
| MIMO parameters | Not Present |
| HARQ Info | Not Present |
| Maximum allowed UL TX power | Not Present |
| CHOICE channel requirement | Not Present |
| E-DCH Info | Not Present |
| Downlink HS-PDSCH Information | Not Present |
| Downlink information common for all radio links | |
| - Downlink DPCH info common for all RL | Not Present |
| - DPCH compressed mode info | |
| - TGPSI | 1 |
| - TGPS Status Flag | Deactivate |
| - TGCFN | Not Present |

| | |
|---|---|
| - Transmission gap pattern sequence configuration parameters | |
| - TGMP | E-UTRA measurement |
| - TGPRC | Infinity |
| - TGSN | 8 |
| - TGL1 | 10 |
| - TGL2 | Not Present |
| - TGD | undefined |
| - TGPL1 | 12 |
| - TGPL2 | Not Present |
| - RPP | Mode 0 |
| - ITP | Mode 0 |
| - CHOICE UL/DL Mode | UL and DL, UL only or DL only (depending on the UE capability) |
| - Downlink compressed mode method | HLS(or not sent, depending on the UE capability) |
| - Uplink compressed mode method | HLS(or not sent, depending on the UE capability) |
| - Downlink frame type | B |
| - DeltaSIR1 | 20 (2.0) |
| - DeltaSIRAfter1 | 10 (1.0) |
| - DeltaSIR2 | Not Present |
| - DeltaSIRAfter2 | Not Present |
| - N identify abort | Not Present |
| - T Reconfirm abort | Not Present |
| - TX Diversity mode | Not Present |
| - SSDT information | Not Present |
| - Default DPCH Offset Value | Not Present |
| Downlink information for each radio link | Not Present |
| MBMS PL Service Restriction Information | Not Present |

MEASUREMENT CONTROL (FDD) (Step 13)

| Information Element | Value/remark | Conditions |
|---|---|---|
| Message Type | | |
| RRC transaction identifier | Arbitrarily selects an unused integer between 0 to 3 | |
| Integrity check info | | |
| - Message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. | |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. | |
| Measurement Identity | 3 | |
| Measurement Command | Setup | |
| Measurement Reporting Mode | | |
| - Measurement Report Transfer Mode | Acknowledged mode RLC | |
| - Periodical Reporting/Event Trigger Reporting Mode | Event trigger | |
| Additional measurement list | Not present | |
| CHOICE Measurement type | Inter-RAT measurement | |
| - CHOICE Inter-RAT measurement objects | E-UTRA frequency list | |
| - CHOICE E-UTRA frequency removal | Remove no frequencies | |
| - New frequencies | | |
| - E-UTRA carrier frequency | Downlink EARFCN of E-UTRA Cell | |
| - E-UTRA carrier frequency | 65535 | Band > 64 |
| - EARFCN extension | Downlink EARFCN of E-UTRA Cell | Band > 64 |
| - Measurement bandwidth | Same downlink system bandwidth as used for E-UTRA Cell | |
| - Blacklisted cells list | Not present | |
| - Inter-RAT measurement quantity | | |
| - Measurement quantity for UTRAN quality estimate | | |
| - Filter coefficient | 0 | |
| - CHOICE mode | FDD | |
| - Measurement quantity | CPICH Ec/N0 | |
| - CHOICE system | E-UTRA | |
| - Measurement quantity | RSRP | |

| | | |
|---|---|---|
| - Filter coefficient | 0 | |
| - Inter-RAT reporting quantity | | |
| - UTRAN estimated quality | FALSE | |
| - CHOICE system | E-UTRA | |
| - Reporting quantity | both | |
| - Reporting cell status | Not present | |
| - CHOICE report criteria | Inter-RAT measurement reporting criteria | |
| - Parameters required for each event | 1 entry | |
| - Inter-RAT event identity | Set according to specific test. | |
| - Threshold own system | -66 dB | |
| - W | 0 | |
| - Threshold other system | -55 (-80 dBm) | |
| - Hysteresis | 0 | |
| - Time to trigger | 10 ms | |
| - Reporting cell status | | |
| - CHOICE reported cell | Report cells within active set or within virtual active set or of the other RAT | |
| - Maximum number of reported cells | 2 | |
| - Idle Interval Information | Not present | |
| DPCH Compressed mode status info | | |
| - TGPS reconfiguration CFN | (Current CFN + (250 – TTI/10msec)) mod 256 | |
| - Transmission gap pattern sequence | 1 entry | |
| - TGPSI | 1 | |
| - TGPS Status Flag | activate | |
| - TGCFN | (Current CFN + (252 – TTI/10msec)) mod 256 | |

MEASUREMENT CONTROL (TDD) (Step 13)

| Information Element | Value/remark | Conditions |
|---|---|---|
| Message Type | | |
| RRC transaction identifier | Arbitrarily selects an unused integer between 0 to 3 | |
| Integrity check info | | |
| - Message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. | |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. | |
| Measurement Identity | 3 | |
| Measurement Command | Setup | |
| Measurement Reporting Mode | | |
| - Measurement Report Transfer Mode | Acknowledged mode RLC | |
| - Periodical Reporting/Event Trigger Reporting Mode | Event trigger | |
| Additional measurement list | Not present | |
| CHOICE Measurement type | Inter-RAT measurement | |
| - CHOICE Inter-RAT measurement objects | E-UTRA frequency list | |
| - CHOICE E-UTRA frequency removal | Remove no frequencies | |
| - New frequencies | | |
| - E-UTRA carrier frequency | Downlink EARFCN of E-UTRA Cell | |
| - E-UTRA carrier frequency | 65535 | Band > 64 |
| - EARFCN extension | Downlink EARFCN of E-UTRA Cell | Band > 64 |
| - Measurement bandwidth | Same downlink system bandwidth as used for E-UTRA Cell | |
| - Blacklisted cells list | Not present | |
| - Inter-RAT measurement quantity | | |
| - Measurement quantity for UTRAN quality estimate | | |
| - Filter coefficient | 0 | |
| - CHOICE mode | TDD | |
| - Measurement quantity | Primary CCPCH RSCP | |
| - CHOICE system | E-UTRA | |
| - Measurement quantity | RSRP | |
| - Filter coefficient | 0 | |
| - Inter-RAT reporting quantity | | |
| - UTRAN estimated quality | FALSE | |

| | | |
|---|---|---|
| - CHOICE system | E-UTRA | |
| - Reporting quantity | both | |
| - Reporting cell status | Not present | |
| - CHOICE report criteria | Inter-RAT measurement reporting criteria | |
| - Parameters required for each event | 1 entry | |
| - Inter-RAT event identity | Set according to specific test. | |
| - Threshold own system | -66 dB | |
| - W | 0 | |
| - Threshold other system | -55 (-80 dBm) | |
| - Hysteresis | 0 | |
| - Time to trigger | 10 ms | |
| - Reporting cell status | | |
| - CHOICE reported cell | Report cells within active set or within virtual active set or of the other RAT | |
| - Maximum number of reported cells | 2 | |
| - Idle Interval Information | Not present | |
| DPCH Compressed mode status info | Not present | |

MEASUREMENT REPORT (Step 15)

| Information Element | Value/remark | Conditions |
|---|---|---|
| Integrity check info | | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. | |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. | |
| Activation time | (256+CFN-(CFN MOD 8 + 8)) MOD 256 | |
| Measurement identity | 3 | |
| Measured Results | Not present | |
| Measured results on RACH | Not present | |
| Additional measured results | Not present | |
| Event results | Not present | |
| Inter-RAT cell info indication | Not present | |
| E-UTRA Measured Results | | |
| - E-UTRA measured results list | 1 entry | |
| - E-UTRA Carrier Frequency | | |
| - Measured E-UTRA cells | 1 entry | |
| - Physical Cell Identity | PhysicalCellIdentity of Cell 2 | |
| - RSRP | Set according to specific test. | |
| - RSRQ | Set according to specific test. | |
| E-UTRA Event Results | | |
| - Inter-RAT event identity | Set according to specific test. | |
| - E-UTRA events results list | 1 entry | |
| - E-UTRA Carrier Frequency | Downlink EARFCN of Cell 2 | |
| - E-UTRA Carrier Frequency | 65535 | Band > 64 |
| - Reported cells | 1 entry | |
| - Physical Cell Identity | PhysicalCellIdentity of Cell 2 | |
| - E-UTRA events results extension list | 1 entry | Band > 64 |
| - EARFCN extension | Downlink EARFCN of Cell 2 | |

HANDOVER TO UTRAN COMPLETE (Step 23)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| UE Information elements | |
| - START list | Not checked |
| - CN domain identity | Not checked |
| - START | Not checked |
| RB Information elements | |
| - COUNT-C activation time | Not checked |
| Other Information elements | |
| - Connection Establishment Failure Info Available | TRUE |

UE INFORMATION REQUEST (Step 26)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Logged Measurements Report Request | Not Present |
| Logged ANR Report Request | Not Present |
| Connection Establishment Failure Request | TRUE |

UE INFORMATION RESPONSE (FDD) (Step 27)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Connection Establishment Failure Report | |
| - Time Since Failure | [0..172800] Indicates the elapsed time in seconds between Logging and reporting of Connection establishment failure info. |
| - CHOICE mode | FDD |
| - Logged Connection Establishment Failure Info-FDD | |
| - Number Of RRC Msg Transmitted | 4 |
| - Logged Measurements Failed Cell | |
| - Cell ID | Cell 1 |
| - CPICH RSCP | (0..91) |
| - CPICH Ec/N0 | (0..49) |
| - CPICH Ec/N0 | (0..49) |

UE INFORMATION RESPONSE (TDD) (Step 27)

| Information Element | Value/remark |
|---|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Connection Establishment Failure Report | |
| - Time Since Failure | [0...172800] Indicates the elapsed time in seconds between Logging and reporting of Connection establishment failure info. |
| - CHOICE mode | TDD |
| - Logged Connection Establishment Failure | |

| Information Element | Value/remark |
|---|---|
| Info-TDD | |
| - Number Of RRC Msg Transmitted | 4 |
| - FPACH Received | Not checked |
| - E-RUCCH Failure | Not checked |
| - Logged Measurements Failed Cell | |
| - Cell ID | Cell 1 |
| - Primary CCPCH RSCP | (0..91) |

#### 8.6.5.1.5 Test requirements

At step 23, The UE shall send HANDOVER TO UTRAN COMPLETE message to SS, and include IE “Connection Establishment Failure Info Available” as True (TP1).

At step 27, The UE shall send an UE INFORMATION RESPONSE message with Connection Establishment Failure Report on cell 1. (TP1).

### 8.6.5.2 Connection Establishment Failure logging / Logging and reporting / E-UTRA Inter-RAT measurements

#### 8.6.5.2.1 Definition

This test is applicable for all UEs that support Connection Establishment Failure logging services.

#### 8.6.5.2.2 Conformance requirement

[TS 25.331, clause 8.1.3.6 (TP1)]

The UE shall compare the value of the IE "Initial UE identity" in the received RRC CONNECTION SETUP message with the value of the variable INITIAL_UE_IDENTITY.

If the values are different, the UE shall:

1> ignore the rest of the message.

If the values are identical, the UE shall:

...

1> submit an RRC CONNECTION SETUP COMPLETE message to the lower layers on the uplink DCCH after successful state transition per subclause 8.6.3.3, with the contents set as specified below:

...

2> if an IE "Logged Connection Establishment Failure Info-FDD" or "Logged Connection Establishment Failure Info-TDD" in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE is present and the current Registered PLMN is the same as the PLMN in IE "PLMN Identity" stored in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE:

3> include IE "Connection Establishment Failure Info Available".

...

When the RRC CONNECTION SETUP COMPLETE message has been submitted to lower layers for transmission the UE shall:

...

[TS 25.331, clause 8.1.3.10(TP1)]

If the UE receives an RRC CONNECTION REJECT message which contains an IE "Initial UE identity" with a value which is identical to the value of the IE "Initial UE identity" in the most recent RRC CONNECTION REQUEST message sent by the UE; but the RRC CONNECTION REJECT message contains a protocol error causing the variable PROTOCOL_ERROR_REJECT to be set to TRUE according to clause 9, the UE shall perform procedure specific error handling as follows:

The UE shall:

1> stop timer T300 or T318, whichever one is running; and

1> clear the entry for the RRC CONNECTION REJECT message in the table "Rejected transactions" in the variable TRANSACTIONS;

1> if V300 is equal to or smaller than N300:

2> set the variable PROTOCOL_ERROR_INDICATOR to TRUE;

2> set the IEs in the RRC CONNECTION REQUEST message according to subclause 8.1.3.3;

2> perform the mapping of the Access Class to an Access Service Class as specified in subclause 8.5.13, and apply the given Access Service Class when accessing the RACH or the common E-DCH (for the Enhanced Uplink in CELL_FACH and Idle mode);

2> submit a new RRC CONNECTION REQUEST message to the lower layers for transmission on the uplink CCCH;

2> increment counter V300;

2> restart timer T300 when the MAC layer indicates success or failure to transmit the message.

1> if V300 is greater than N300:

2> if the UE supports logging of failed RRC Connection Establishment, perform the actions specified in subclause 8.1.3.11;

2> enter idle mode;

2> perform the actions specified in subclause 8.5.2 when entering idle mode from connected mode;

2> consider the procedure to be successful;

2> the procedure ends.

[TS 25.331, clause 8.1.3.11 (TP1)]

If the RRC connection establishment fails and the UE supports logging of failed RRC Connection Establishment, the UE shall perform logging of information for later retrieval. The UE shall store connection establishment failure information in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE by setting its fields as follows:

1> clear the information included in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE, if any;

1> set the IE "PLMN Identity" to the same value as the selected PLMN [4];

1> set the IE "Number Of RRC Msg Transmitted" to indicate the number of times the RRC CONNECTION REQUEST message was transmitted by the UE during the failed RRC Connection Establishment procedure.

1> for TDD:

2> set the IE "FPACH Received" to TRUE if FPACH was received during the failed RRC Connection Establishment procedure.

2> if common E-DCH was used, include the IE "E-RUCCH Failure" and set it to TRUE if failure indication of the E-RUCCH transmission was received during the failed RRC Connection Establishment procedure.

…

1> set the IE "PLMN Identity" of the Logged Measurements Failed Cell to indicate the IE "PLMN Identity" obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "Cell ID" to indicate cell identity obtained from system information of the cell where the connection establishment failure was detected;

1> set the IE "CPICH Ec/N0" and "CPICH RSCP" to include measured quantities of the cell where the connection establishment failure was detected for UTRA FDD;

1> set the "P-CCPCH RSCP" to include measured quantities for the cell where the connection establishment failure was detected for UTRA 1.28 Mcps TDD;

1> set the IE "Logged Measurements Intra Frequency Neighbouring Cells list", "Logged Measurements Inter Frequency list", "Logged Measurements E-UTRA frequency list", "Logged Measurements E-UTRA frequency extension list", in order of decreasing ranking quantity as used for cell re-selection in each frequency for at most the following number of neighbouring cells; 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency per RAT;

1> set the IE "Logged Measurements GSM Neighbouring Cells list" in order of decreasing RXLEV.

NOTE: The UE includes the latest available results of the measurement performed for cell reselection, which are performed in accordance with the regular performance requirements as specified in [19].

[TS 25.331, clause 8.5.64.3 (TP1)]

UE Shall:

…

1> if IE "Connection Establishment Failure Request" is present:

2> if Registered PLMN is the same as the PLMN in the IE "PLMN Identity" stored in variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE:

3> set IE "Connection Establishment Failure Report" in the UE INFORMATION RESPONSE as follows:

4> include the IE "Logged Connection Establishment Failure Info-FDD" or "Logged Connection Establishment Failure Info-TDD" and set it to include the entry from the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE;

4> set the IE "Time Since Failure" to indicate the elapsed time starting from the Logging of the Connection establishment failure information that is stored in the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE.

3> clear the variable LOGGED_CONNECTION_ESTABLISHMENT_FAILURE;

1> transmit a UE INFORMATION RESPONSE message on the uplink DCCH using AM RLC.

### Reference

TS 25.304 clause 5.7 and TS 25.331 clause 8.3.1.6, 8.3.1.10, 8.1.3.11 and 8.5.64.3

### .8.6.5.2.3 Test Purpose

1. Verify that E-UTRA neighbour cell information (IE "Logged Measurements E-UTRA frequency list") is reported in connection establishment failure information in UE INFORMATION RESPONSE message.

### 8.6.5.2.4 Method of test

### Initial conditions

System Simulator:

2 cells, Cell 1 and Cell 2(E-UTRA)

User Equipment:

UE: Registered Idle mode (state 3) in Cell 1 as specified in clause 7.4 of TS 34.108.

Test procedure

Table 8.6.5.2 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Column marked "T0" denotes the initial condition, while column marked "T1" and "T2" is to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

**Table 8.6.5.2: Time instances of cell power level and parameter changes**

| | Parameter | Unit | Cell 1(UTRA) | Cell 2(E-UTRA) |
|---|---|---|---|---|
| T0 | Cell-specific RS EPRE | dBm/15kHz | - | -90 |
| | CPICH Ec (UTRA FDD) | dBm/3.84 MHz | -65 | - |
| | PCCPCH Ec(UTRA LCR TDD) | dBm/1.28 MHz | -65 | - |
| T1 | Cell-specific RS EPRE | dBm/15kHz | - | -70 |
