Intellectual Property Rights

Essential patents

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (https://ipr.etsi.org/).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

Foreword

This Technical Specification (TS) has been produced by the ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under http://webapp.etsi.org/key/queryform.asp.

Modal verbs terminology

In the present document "**shall**", "**shall not**", "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the ETSI Drafting Rules (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

Foreword 75
Introduction 75
1 Scope 76
2 References 77
3 Definitions and abbreviations 80
3.1 Definitions 80
3.2 Abbreviations 80
4 Overview 80
4.1 Test Methodology 80
4.1.1 Testing of optional functions and procedures 80
4.1.2 Test interfaces and facilities 80
4.2 Implicit Testing 80
5 Reference Conditions 80
5.1 Generic setup procedures 80
6 Idle mode operations 81
6.1 In a pure 3G environment 87
6.1.1 PLMN selection 87
6.1.1.1 PLMN selection of RPLMN, HPLMN, UPLMN and OPLMN; Manual mode 87
6.1.1.2 PLMN selection of "Other PLMN / access technology combinations"; Manual mode 89
6.1.1.3 PLMN selection; independence of RF level and preferred PLMN; Manual mode 92
6.1.1.4 PLMN selection of RPLMN, HPLMN, UPLMN and OPLMN; Automatic mode 95
6.1.1.5 PLMN selection of "Other PLMN / access technology combinations"; Automatic mode 97
6.1.1.6 Void 99
6.1.1.7 Cell reselection of ePLMN in manual mode 99
6.1.1.8 PLMN selection in shared network environment, Automatic mode 100
6.1.1.9 PLMN selection in shared network environment, Manual Mode 103
6.1.1.10 Presentation of additional information during PLMN selection; Manual mode 107
6.1.1.11 Void 109
6.1.1.12 Displaying EHPLMNs in manual mode 109
6.1.1.13 PLMN selection of RPLMN or (E)HPLMN; Automatic mode 112
6.1.1.14 Network selection mode at switch-on 116
6.1.1.15 Exception in manual network selection mode when HPLMN is available at power-on 119
6.1.2 Cell selection and reselection 123
6.1.2.1 Cell reselection 123
6.1.2.1a Cell reselection for inter-band operation 126
6.1.2.1b Cell reselection for inter-band operation(LCR TDD band a-f) 126
6.1.2.2 Cell reselection using Qhyst, Qoffset and Treselection 127
6.1.2.3 HCS Cell reselection 131
6.1.2.4 HCS Cell reselection using reselection timing parameters for the H criterion 133
6.1.2.5 HCS Cell reselection using reselection timing parameters for the R criterion 136
6.1.2.6 Emergency calls 139
6.1.2.7 Void 141
6.1.2.8 Cell reselection: Equivalent PLMN 141
6.1.2.9 Void 145
6.1.2.9a Cell reselection using cell status and cell reservations – Type “A” USIM 145
6.1.2.9b Cell reselection using cell status and cell reservations – Type “B” USIM 147
6.1.2.10 HCS inter-frequency cell reselection 149
6.1.2.10a HCS inter-frequency cell reselection for inter-band operation 151
6.1.2.11 Cell reselection in shared network environment 151

6.1.2.12 Cell reselection based on absolute priority in SIB19 155
6.1.3 MBSFN Cluster selection and reselection 162
6.1.3.1 MBSFN only service recognition 162
6.1.3.2 Suitable PLMN selection; MBSFN Frequency List present (unicast carrier) 166
6.1.3.3 Suitable PLMN search; MBSFN Frequency List not present (unicast carrier) 172
6.1.3.4 Cell reservations and access restrictions; Normal access class only 178
6.1.3.5 Cell reservations and access restrictions; Operator access class 184
6.1.3.6 Cell reservations and access restrictions; Home country services access class 191
6.1.3.7 Inter frequency neighbour reselection / Service activation 193
6.1.3.8 Inter frequency neighbour reselection / Activation of higher priority service 197
6.2 Multi-mode environment (2G/3G case) 201
6.2.1 PLMN and RAT selection 201
6.2.1.1 Selection of the correct PLMN and associated RAT 201
6.2.1.2 Selection of RAT for HPLMN; Manual mode 203
6.2.1.3 Selection of RAT for UPLMN; Manual mode 209
6.2.1.4 Selection of RAT for OPLMN; Manual mode 211
6.2.1.5 Selection of "Other PLMN / access technology combinations"; Manual mode 213
6.2.1.6 Selection of RAT for HPLMN; Automatic mode 216
6.2.1.7 Selection of RAT for UPLMN; Automatic mode 218
6.2.1.8 Selection of RAT for OPLMN; Automatic mode 220
6.2.1.8a Selection of RAT for OPLMN; Different ITU regions 222
6.2.1.9 Selection of "Other PLMN / access technology combinations"; Automatic mode 232
6.2.1.10 Void 234
6.2.1.11 Selection of PLMN and RAT in shared network environment, Manual Mode 234
6.2.2 Cell selection and reselection 238
6.2.2.1 Cell reselection if cell becomes barred or S<0; UTRAN to GSM 238
6.2.2.1a Cell reselection if cell becomes barred or S<0; UTRAN(1.28Mcps TDD) to GSM 240
6.2.2.2 Cell reselection if cell becomes barred or C1<0; GSM to UTRAN 243
6.2.2.2a Cell reselection if cell becomes barred or C1<0; GSM to UTRAN (1.28 Mcps TDD) 246
6.2.2.3 Cell reselection timings; GSM to UTRAN 249
6.2.2.3a Cell reselection timings; GSM to UTRAN (1.28 Mcps TDD) 253
6.2.2.4 Cell reselection in multi-mode shared network environment 257
6.2.2.5 Cell reselection using SIB18; UTRAN to GSM 261
6.2.2.5a Cell reselection using SIB18; UTRAN(1.28Mcps TDD) to GSM 265
6.2.2.6 Cell reselection based on Absolute Priorities(both High priority and Low priority reselection) in SIB19; UTRAN to GSM 268
6.3 HNB Environment 274
6.3.1 CSG Selection 274
6.3.1.1 Manual CSG ID Selection 274
6.3.1.2 UE in automatic network selection mode to select a suitable CSG cell 276
6.3.1.3 Manual CSG ID Selection across PLMNs 277
6.3.1.4 Suitable Cell checking for reselection to the CSG Cell 280
6.3.2 Reselection from a non-CSG cell to an allowed CSG cell 285
6.3.2.1 Intra-frequency cell reselection from a non-CSG cell to an allowed CSG cell 285
6.3.2.2 Inter-frequency cell reselection from a non-CSG cell to an allowed CSG cell 287
6.3.2.3 Inter-RAT Cell Reselection / from GSM_Idle / GPRS Packet_Idle to a UTRA idle CSG cell 290
6.3.3 Reselection from CSG Cell to CSG Cell 292
6.3.3.1 Intra frequency CSG Cell Reselection 292
6.3.3.2 Void 295
6.3.4 Cell Reselection with Hybrid Cells 295
6.3.4.1 Inter-frequency Cell Reselection with Hybrid Cells 295
6.3.4.2 Cell Reselection with Hybrid Cells for non-member UEs 297
6.4 WLAN Environment 298
6.4.1 WLAN Offload / Cell Selection / UTRA RRC_Idle to/from WLAN (Qrxlevmeas, BeaconRSSI) 298
6.4.2 WLAN Offload / Cell Selection / UTRA RRC_Idle to/from WLAN (Qrxlevmeas, BackhaulRateDlWLAN, WLAN identifier no match/match) 300
6.4.3 WLAN Offload / Cell Selection / UTRA RRC_Idle to/from WLAN (Qrxlevmeas, BackhaulRateUlWLAN) 303
6.4.4 WLAN Offload / Cell Selection / UTRA RRC_Idle to/from WLAN (Qqualmeas, ChannelUtilizationWLAN) 306
6.4.5 Void 308

7 Layer 2 309
7.1 MAC 309
7.1.1 Mapping between logical channels and transport channels 309
7.1.1.1 CCCH mapped to RACH/FACH / Invalid TCTF 309
7.1.1.2 DTCH or DCCH mapped to RACH/FACH / Invalid TCTF 315
7.1.1.3 DTCH or DCCH mapped to RACH/FACH / Invalid C/T Field 319
7.1.1.4 DTCH or DCCH mapped to RACH/FACH / Invalid UE ID Type Field 321
7.1.1.5 DTCH or DCCH mapped to RACH/FACH / Incorrect UE ID 323
7.1.1.6 DTCH or DCCH mapped to DSCH or USCH 325
7.1.1.7 DTCH or DCCH mapped to CPCH 328
7.1.1.8 DTCH or DCCH mapped to DCH / Invalid C/T Field 331
7.1.1.9 MTCH mapped to FACH / Invalid TCTF (TDD MBSFN) 334
7.1.1.9a MTCH mapped to FACH / Invalid TCTF (3.84 Mcps TDD IMB) 344
7.1.1.10 MTCH mapped to FACH / Invalid MBMS-Id (TDD MBSFN) 350
7.1.1.10a MTCH mapped to FACH / Invalid MBMS-Id (3.84 Mcps TDD IMB) 359
7.1.2 RACH/FACH procedures 364
7.1.2.1 Selection and control of Power Level 364
7.1.2.1.1 Void 364
7.1.2.1.2 Selection and control of Power Level (3,84 Mcps TDD option) 364
7.1.2.1.3 Void 364
7.1.2.2 Correct application of Dynamic Persistence 364
7.1.2.2.1 Void 364
7.1.2.2.2 Correct application of Dynamic Persistence (3.84 Mcps TDD option) 364
7.1.2.2.3 Void 364
7.1.2.3 Correct Selection of RACH parameters 364
7.1.2.3.1 Correct Selection of RACH parameters (FDD) 364
7.1.2.3.2 Correct Selection of RACH parameters (3.84 Mcps TDD option) 369
7.1.2.3.3 Correct Selection of RACH parameters (1.28 Mcps TDD option) 369
7.1.2.4 Correct Detection and Response to FPACH (1.28 Mcps TDD option) 370
7.1.2.4a Access Service class selection for RACH transmission 373
7.1.2.5 Void 381
7.1.3 Priority handling between data flows of one UE 381
7.1.3.1 Priority handling between data flows of one UE 381
7.1.3.2 TFC Selection 383
7.1.4 Control of CPCH transmissions. 391
7.1.4.1 Control of CPCH transmissions for FDD 391
7.1.5 HS-DSCH MAC-hs 397
7.1.5.1 MAC-hs reordering and stall avoidance 397
7.1.5.2 MAC-hs priority queue handling 401
7.1.5.3 MAC-hs PDU header handling 402
7.1.5.4 MAC-hs retransmissions 405
7.1.5.5 MAC-hs reset 408
7.1.5.6 MAC-hs transport block size selection 410
7.1.5.6a MAC-hs transport block size selection (1.28 Mcps TDD) 419
7.1.5.7 MAC-hs transport block size selection (3.84 Mcps TDD) 425
7.1.5.8 MAC-hs transport block size selection (7.68 Mcps TDD) 431
7.1.5.9 MAC-hs data transmission with enhanced TS0 (1.28 Mcps TDD) 437
7.1.5a HS-DSCH MAC-ehs 439
7.1.5a.1 MAC-ehs multiplexing / multiple logical channels on same queue 439
7.1.5a.2 MAC-ehs multiplexing / multiple logical channels on multiple queues 440
7.1.5a.3 MAC-ehs segmentation / UE handling of partial and full PDUs 442
7.1.5a.4 MAC-ehs reordering and stall avoidance 446
7.1.5a.5 MAC-ehs transport block size selection 452
7.1.5a.5.1 Generic test procedure for the MAC-ehs transport block size selection test cases 452
7.1.5a.5.2 MAC-ehs transport block size selection / QPSK and 16QAM 458
7.1.5a.5.3 MAC-ehs transport block size selection / 64QAM 466
7.1.5a.5.4 MAC-ehs transport block size selection (1.28Mcps TDD) 466
7.1.5a.6 UE Identification on HS-PDSCH in CELL_FACH 472
7.1.5a.7 HARQ retransmissions without ACK/NACK signalling in CELL_FACH 474
7.1.5a.8 HARQ retransmissions without ACK/NACK signalling in CELL_FACH when Dedicated H-RNTI is not allocated (1.28 Mcps TDD) 476

7.1.5a.9 HARQ retransmissions with ACK/NACK signalling in CELL_FACH when Dedicated H-RNTI is allocated (1.28 Mcps TDD) 478
7.1.5a.10 MAC-ehs data transmission with enhanced TS0 (1.28 Mcps TDD) 480
7.1.5b HS-SCCH Less Operation 482
7.1.5b.1 HARQ procedure for HS-SCCH less operation 482
7.1.5c HS-DSCH SPS Operation 486
7.1.5c.1 HARQ procedure for HS-DSCH SPS operation 486
7.1.6 E-DCH MAC-es/e 490
7.1.6.1 MAC-es/e multiplexing 490
7.1.6.1.1 MAC-es/e multiplexing without RRC restrictions 490
7.1.6.1.2 MAC-es/e multiplexing with RRC restrictions 492
7.1.6.1.3 Correct settings of MAC-es/e header fields 494
7.1.6.2 MAC-es/e – Scheduling 496
7.1.6.2.1 Correct settings of MAC-es/e scheduling information 496
7.1.6.2.2 Happy bit setting 501
7.1.6.2.3 MAC-es/e non-scheduled transmissions 503
7.1.6.2.4 MAC-es/e correct handling of scheduled transmissions when absolute grant varies 506
7.1.6.2.5 MAC-es/e de-activation and re-activation of HARQ processes 509
7.1.6.2.6 MAC-es/e correct handling of relative grants 512
7.1.6.2.7 MAC-es/e correct handling of absolute grants on Primary and Secondary E-RNTI 518
7.1.6.2.8 MAC-es/e combined non-scheduled and scheduled transmissions 521
7.1.6.2.9 MAC-es/e Correct handling of HARQ profile power offsets 525
7.1.6.2.9a MAC-es/e Correct handling of HARQ profile (1.28Mcps TDD) 529
7.1.6.2.10 MAC-es/e Correct handling of minimum set of E-TFCI 533
7.1.6.2.10a Smallest E-TFC (1.28Mcps TDD) 537
7.1.6.2.11 MAC-es/e correct handling of absolute and relative grants in discontinuous downlink reception operation 540
7.1.6.2.12 MAC-es/e correct handling scheduling information transmission (for different UpPCH shifting setting, for 1.28Mcps TDD only) 548
7.1.6.3 MAC-es/e- E-TFC selection 553
7.1.6.3.1 MAC-es/e E-TFC priority 553
7.1.6.3.2 MAC-es/e transport block size selection/ UL QPSK 555
7.1.6.3.2a MAC-es/e transport block size selection/UL 16QAM 565
7.1.6.3.3 Impact on E-TFCI selection on MAC at UE for UL DRX at Node B/ MAC Inactivity Threshold>1 573
7.1.6.3.4 Impact on E-TFCI selection on MAC at UE for UL DRX at Node B/ MAC Inactivity Threshold =1 575
7.1.6.3.5 MAC-es/e transport block size selection(1.28Mcps TDD) 577
7.1.6.4 MAC-es/e - E-DCH retransmissions 581
7.1.6.4.1 MAC-es/e process handling 581
7.1.6.4.2 MAC-es/e maximum number of retransmissions 584
7.1.6.4.3 MAC-es/e Correct handling of MAC-es/e reset 587
7.1.6a E-DCH MAC-es/e for 3.84 and 7.68Mcps TDD 589
7.1.6a.1 MAC-es/e multiplexing 589
7.1.6a.1.1 MAC-es/e multiplexing without RRC restrictions 589
7.1.6a.1.2 MAC-es/e multiplexing with RRC restrictions 591
7.1.6a.1.3 Correct settings of MAC-es/e header fields 593
7.1.6a.2 MAC-es/e – Scheduling 595
7.1.6a.2.1 Correct settings of MAC-es/e scheduling information 595
7.1.6a.2.2 Correct settings of MAC-es/e scheduling information when scheduling delay timer expires 599
7.1.6a.2.3 MAC-es/e correct handling of scheduled transmissions 601
7.1.6a.2.4 MAC-es/e combined non-scheduled and scheduled transmissions 603
7.1.6a.2.5 MAC-es/e Correct handling of HARQ profile power offsets 605
7.1.6a.3 MAC-es/e- E-TFC selection 609
7.1.6a.3.1 MAC-es/e E-TFC priority 609
7.1.6a.3.2 MAC-es/e transport block size selection/ UL QPSK 611
7.1.6a.4 MAC-es/e - E-DCH retransmissions 623
7.1.6a.4.1 MAC-es/e process handling 623
7.1.6a.4.2 MAC-es/e maximum number of retransmissions 626
7.1.7 E-DCH MAC-i/is 628
7.1.7.1 MAC-i/is multiplexing (multiple PDUs from different LC in one TTI) 628
7.1.7.2 MAC-i/is segmentation / Correct Usage of Segmentation Status Field 630

7.1.7.3 Correct settings of MAC-i/is header fields....634
7.1.7.4 MAC-is/i transport block size selection/ UL QPSK....638
7.1.7.5 MAC-is/i transport block size selection/ UL 16QAM....647
7.1.7.6 MAC-is/i transport block size selection (1.28Mcps TDD)....654
7.1.8 E-DCH MAC-is/i for RACH procedure....656
7.1.8.1 Release of common E-DCH resource when maximum resource allocation for E-DCH expires or uplink transmission ends for CCCH transmission....656
7.1.8.2 Activation of HS-DPCCH based on the received SIB5/SIB5bis information....661
7.1.8.3 DTCH/DCCH transmission - implicit common E-DCH resource release without receiving E-AGCH....665
7.1.8.4 DTCH/DCCH transmission – explicit common E-DCH resource release by E-AGCH....667
7.1.8.5 RACH procedure with both normal AIs and extended AIs (using E-AICH)....670
7.1.8.6 DTCH/DCCH transmission - Implicit release with E-DCH transmission continuation backoff - Timer Based....675
7.1.8.6a DTCH/DCCH transmission - Implicit release with E-DCH transmission continuation backoff value set to “0”....679
7.1.8.7 Physical Channel Failure for EUL in CELL-FACH during initial access preamble....683
7.1.8.8 Radio Link Failure for Enhanced UL in CELL-FACH with DTCH/DCCH active....686
7.1.8.9 CCCH transmission E-DCH access, the UL transmission within the Scheduling Windows....688
7.1.8.10 DTCH/DCCH transmission with E-RUCCH access for dedicated control signalling or dedicated user data when dedicated E-RNTI is allocated....691
7.1.9 E-DCH MAC-is/i for Dual-Cell HSUPA....693
7.1.9.1 MAC-i/is multiplexing for Dual-Cell HSUPA....693
7.1.9.2 Happy bit setting and SI handling for Dual-Cell HSUPA....696
7.1.9.3 Void....702
7.1.9.4 Void....702
7.1.9.5 Deactivation and activation of secondary uplink frequency using HS-SCCH orders....702
7.1.10 Fallback to R99 PRACH in CELL_FACH....706
7.1.10.1 Fallback to R99 PRACH in CELL_FACH / Network indicates fallback to R99 PRACH on CCCH....706
7.1.10.2 Fallback to R99 PRACH in CELL_FACH / Network indicates fallback to R99 PRACH on DCCH....713
7.1.11 HS-DSCH MAC-ehs with Multiflow....717
7.1.11.1 Maximum number of re-ordering SDUs with inter-Node B operation on two cells on one frequency....717
7.1.11.2 Maximum number of re-ordering SDUs with inter-Node B operation on three cells on two frequencies....719
7.2 RLC testing....720
7.2.0 General....720
7.2.0.1 Radio bearer setup....720
7.2.1 Transparent mode....721
7.2.1.1 Segmentation and reassembly....721
7.2.2 Unacknowledged mode....721
7.2.2.1 General information for UM tests....721
7.2.2.2 Segmentation and reassembly / Selection of 7 or 15 bit "Length Indicators"....721
7.2.2.3 Segmentation and reassembly / 7-bit "Length Indicators" / Padding....723
7.2.2.4 Segmentation and Reassembly / 7-bit "Length Indicators" / LI = 0....724
7.2.2.5 Reassembly / 7-bit "Length Indicators" / Invalid LI value....726
7.2.2.6 Reassembly / 7-bit "Length Indicators" / LI value > PDU size....727
7.2.2.7 Reassembly / 7-bit "Length Indicators" / First data octet LI....728
7.2.2.8 Segmentation and reassembly / 15-bit "Length Indicators" / Padding....730
7.2.2.9 Segmentation and Reassembly / 15-bit "Length Indicators" / LI = 0....731
7.2.2.10 Segmentation and reassembly / 15-bit "Length Indicators" / One octet short LI....732
7.2.2.11 Reassembly / 15-bit "Length Indicators" / Invalid LI value....733
7.2.2.12 Reassembly / 15-bit "Length Indicators" / LI value > PDU size....734
7.2.2.13 Reassembly / 15-bit "Length Indicators" / First data octet LI....736
7.2.2.14 Flexible handling of RLC PDU sizes for UM RLC in downlink....737
7.2.2.15 Flexible handling of RLC PDU sizes for UM RLC in uplink....739
7.2.2a Unacknowledged mode (TDD MBSFN) (non-IMB)....742
7.2.2a.1 P-T-M Radio bearer setup....742
7.2.2a.2 Reassembly / 7-bit "Length Indicators" / Invalid LI value (TDD MBSFN)....743
7.2.2a.3 Reassembly / 7-bit "Length Indicators" / LI value > PDU size (TDD MBSFN)....745

7.2.2a.4 Reassembly / 7-bit "Length Indicators" / First data octet LI (TDD MBSFN) 746
7.2.2a.5 Reassembly / 15-bit "Length Indicators" / Invalid LI value (TDD MBSFN) 748
7.2.2a.6 Reassembly / 15-bit "Length Indicators" / LI value > PDU size (TDD MBSFN) 749
7.2.2a.7 Reassembly / 15-bit "Length Indicators" / First data octet LI (TDD MBSFN) 751
7.2.2b Unacknowledged mode (MBSFN IMB) 752
7.2.2b.1 P-T-M Radio bearer setup 752
7.2.2b.2 Reassembly / 7-bit "Length Indicators" / Invalid LI value (MBSFN IMB) 753
7.2.2b.3 Reassembly / 7-bit "Length Indicators" / LI value > PDU size (MBSFN IMB) 755
7.2.2b.4 Reassembly / 7-bit "Length Indicators" / First data octet LI (MBSFN IMB) 757
7.2.2b.5 Reassembly / 15-bit "Length Indicators" / Invalid LI value (MBSFN IMB) 759
7.2.2b.6 Reassembly / 15-bit "Length Indicators" / LI value > PDU size (MBSFN IMB) 760
7.2.2b.7 Reassembly / 15-bit "Length Indicators" / First data octet LI (MBSFN IMB) 762
7.2.3 Acknowledged mode 763
7.2.3.1 General information for AM tests 763
7.2.3.2 Segmentation and reassembly / Selection of 7 or 15 bit Length Indicators 764
7.2.3.3 Segmentation and Reassembly / 7-bit "Length Indicators" / Padding or Piggy-backed Status 766
7.2.3.4 Segmentation and Reassembly / 7-bit "Length Indicators" / LI = 0 768
7.2.3.5 Reassembly / 7-bit "Length Indicators" / Reserved LI value 770
7.2.3.6 Reassembly / 7-bit "Length Indicators" / LI value > PDU size 771
7.2.3.7 Segmentation and Reassembly / 15-bit "Length Indicators" / Padding or Piggy-backed Status 772
7.2.3.8 Segmentation and Reassembly / 15-bit "Length Indicators" / LI = 0 774
7.2.3.9 Segmentation and reassembly / 15-bit "Length Indicators" / One octet short LI 775
7.2.3.10 Reassembly / 15-bit "Length Indicators" / Reserved LI value 777
7.2.3.11 Reassembly / 15-bit "Length Indicators" / LI value > PDU size 778
7.2.3.12 Correct use of Sequence Numbering 779
7.2.3.13 Control of Transmit Window 781
7.2.3.14 Control of Receive Window 785
7.2.3.15 Polling for status / Last PDU in transmission queue 787
7.2.3.16 Polling for status / Last PDU in retransmission queue 788
7.2.3.17 Polling for status / Poll every Poll_PDU PDUs 790
7.2.3.18 Polling for status / Poll every Poll_SDU SDUs 792
7.2.3.19 Polling for status / Timer triggered polling (Timer_Poll_Periodic) 794
7.2.3.20 Polling for status / Polling on Poll_Window% of transmission window 796
7.2.3.21 Polling for status / Operation of Timer_Poll timer / Timer expiry 798
7.2.3.22 Polling for status / Operation of Timer_Poll timer / Stopping Timer_Poll timer 800
7.2.3.23 Polling for status / Operation of Timer_Poll timer / Restart of the Timer_Poll timer 802
7.2.3.24 Polling for status / Operation of timer Timer_Poll_Prohibit 804
7.2.3.25 Receiver Status Triggers / Detection of missing PDUs 807
7.2.3.26 Receiver Status Triggers / Operation of timer Timer_Status_Periodic 808
7.2.3.27 Receiver Status Triggers / Operation of timer Timer_Status_Prohibit 809
7.2.3.28 Status reporting / Abnormal conditions / Reception of LIST SUFI with Length set to zero 811
7.2.3.29 Timer based discard, with explicit signalling / Expiry of Timer_Discard 813
7.2.3.29a Timer based discard, with explicit signalling / Expiry of Timer_Discard when Timer_STATUS_prohibit is active 815
7.2.3.30 Timer based discard, with explicit signalling / Obsolete MRW_ACK 815
7.2.3.31 Timer based discard, with explicit signalling / Failure of MRW procedure 817
7.2.3.32 SDU discard after MaxDAT-1 number of transmissions 819
7.2.3.33 Operation of the RLC Reset procedure / UE Originated 821
7.2.3.34 Operation of the RLC Reset procedure / UE Terminated 825
7.2.3.35 Reconfiguration of RLC parameters by upper layers 826
7.2.3.36 Flexible handling of RLC PDU sizes for AM RLC 829
7.2.3.37 RLC PDU Size Adaptation in Uplink 832
7.2.3.38 Flexible handling of RLC PDU sizes for AM RLC in uplink 833
7.2.4 MBMS 836
7.2.4.1 Void 836
7.2.4.2 MTCH duplicate avoidance and reordering / MBMS Broadcast Service 836
7.2.4.2a MTCH duplicate avoidance and reordering / MBSFN (FDD) 839
7.2.4.2b-l Void 843
7.2.4.2m MTCH duplicate avoidance and reordering / MBMS Multicast Service 843
7.2.4.3 MCCH Out Of Sequence Delivery handling / MBMS Broadcast Service 844
7.2.4.3a MCCH Out Of Sequence Delivery handling / MBSFN (FDD) 847
7.2.4.3b-l Void 850

7.2.4.3m MCCH Out Of Sequence Delivery handling / MBMS Multicast Service 850
7.2.4.3n-r Void 851
7.2.4.3s MCCH Out Of Sequence Delivery handling / MBMS Broadcast Service (TDD MBSFN) (non-IMB) 851
7.2.4.3t MCCH Out Of Sequence Delivery handling / MBMS Broadcast Service (IMB) 862
7.2.5 Multiflow 867
7.2.5.1 RLC Timer_Reordering with Inter-Node B Multiflow operation 867
7.2.5.2 Expiry of RLC Timer_Reordering with Inter-Node B Multiflow operation 869
7.2.5.3 Void 871
7.2.5.4 Erroneous Sequence Number Processing with Inter Node B Mutiflow operation 871
7.2.5.5 Void 874
7.3 PDCP 874
7.3.1 General 874
7.3.1.1 General assumptions 874
7.3.1.2 Common Test sequences and Default message contents for PDCP 874
7.3.1.2.1 Common Test sequences for PDCP 875
7.3.1.2.2 Default PDCP Message Contents 878
7.3.2 IP Header Compression and PID assignment 880
7.3.2.1 UE in RLC AM 880
7.3.2.1.1 Transmission of uncompressed Header 880
7.3.2.1.2 Transmission of compressed Header 888
7.3.2.2 UE in RLC UM 896
7.3.2.2.1 Transmission of uncompressed Header 896
7.3.2.2.2 Transmission of compressed Header 903
7.3.2.2.3 Extension of used compression methods 910
7.3.2.2.4 Compression type used for different entities 916
7.3.2.2.5 Reception of not defined PID values 922
7.3.3 PDCP sequence numbering when lossless SRNS Relocation 926
7.3.3.1 Data transmission if lossless SRNS Relocation is supported 926
7.3.3.2 Synchronisation of PDCP sequence numbers 931
7.3.3.3 PDCP Sequence Numbering and Data Forwarding ..... - Reception of reserved PDU type 937
7.3.3.4 PDCP Sequence Number synchronization – Reception of invalid next expected receive Sequence Number 937
7.3.3.5 UTRAN MOBILITY INFORMATION: Lossless SRNS relocation in CELL_FACH (without pending of ciphering) 937
7.3.3.6 Cell Update: Lossless SRNS relocation in CELL_FACH (without pending of ciphering) 945
7.3.3.7 URA Update: Lossless SRNS relocation in CELL_FACH (without pending of ciphering) 954
7.3.3.8 Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Success (Lossless SRNS relocation) (without pending of ciphering) 961
7.3.3.9 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Lossless SRNS relocation) (without pending of ciphering) 973
7.3.3.10 Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Success (Lossless SRNS relocation) (without pending of ciphering) 986
7.3.3.11 Transport Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Lossless SRNS relocation) (without pending of ciphering) 994
7.3.4 PDCP configuration testing 1002
7.3.4.1 PDCP configuration behaviour while RRC Radio bearer setup procedure 1002
7.3.4.2 PDCP configuration behaviour while RRC Radio bearer release procedure 1002
7.3.4.3 PDCP configuration behaviour while RRC Cell Update procedure 1002
7.3.4.4 PDCP configuration behaviour for an invalid RRC configuration 1002
7.3.5 PDCP RoHC testing 1002
7.3.5.1 General 1002
7.3.5.1.1 Preamble for extended RoHC conformance testing 1002
7.3.5.2 Compression / Decompression of a UDP/RTP/IPv6 header flow 1003
7.3.5.2.1 UDP/RTP/IPv6 Unacknowledged - unidirectional Mode (U-Mode) 1003
7.3.5.2.2 UDP/RTP/IPv6 Unacknowledged - Normal U-mode Transmission (without ack) 1003
7.3.5.2.3 UDP/RTP/IPv6 Unacknowledged - Bi-directional Optimistic Mode (O-Mode) 1003
7.3.5.2.4 UDP/RTP/IPv6 Unacknowledged - Bi-directional Reliable Mode (R-Mode) 1003
7.3.5.2.5 UDP/RTP/IPv6 Unacknowledged - Transition Mode 1003
7.3.5.2.6 UDP/RTP/IPv6 Unacknowledged - Flow Parameters 1003
7.3.5.2.7 UDP/RTP/IPv6 Acknowledged - unidirectional Mode (U-Mode) 1003

7.3.5.2.8 UDP/RTP/IPv6 Acknowledged - Normal U-mode Transmission (without ack) using the UE as compressor 1004
7.3.5.2.9 UDP/RTP/IPv6 Acknowledged - Bi-directional Optimistic Mode (O-Mode) 1004
7.3.5.2.10 UDP/RTP/IPv6 Acknowledged - Bi-directional Reliable Mode (R-Mode) 1004
7.3.5.2.11 UDP/RTP/IPv6 Acknowledged - Transition Mode 1004
7.3.5.2.12 UDP/RTP/IPv6 Acknowledged - Flow Parameters 1004
7.3.5.3 ROHC Profile 2,3 and 4. Compression / Decompression of a UDP/IPv6 or ESP/IPv6 or IPv6 header flow 1004
7.3.5.3.1 UDP/IPv6 or ESP/IPv6 or IPv6 Unacknowledged - unidirectional Mode (U-Mode) 1004
7.3.5.3.2 UDP/IPv6 or ESP/IPv6 or IPv6 Unacknowledged - Normal U-mode Transmission (without ack) 1004
7.3.6 PDCP RoHC performance testing 1007
7.3.6.1 General 1007
7.3.6.1.1 Generic ROHC performance test procedure 1007
7.3.6.2 Base test of ROHC RTP O-mode compressor 1008
7.3.6.3 Base test of ROHC RTP R-mode compressor 1012
7.3.6.4 Re-establishment of TS function after DTX in O-mode 1017
7.3.6.5 Re-establishment of TS function after DTX in R-mode 1020
7.3.6.6 Compressor response to single lost packets in O-mode 1024
7.3.6.7 Compressor response to single lost packets in R-mode 1025
7.3.6.8 TS function during DTX with varying delta in O-mode 1025
7.3.6.9 TS function during DTX with varying delta in R-mode 1028
7.3.6.10 SRNS relocation for ROHC RTP O-mode compressor 1032
7.3.7 PDCP AMR Data PDU testing 1038
7.3.7.1 PDCP AMR Data PDU testing 1038
7.3.7.2 PDCP Unrecoverable Error Detection 1042
7.4 BMC 1051
7.4.1 BMC RAB + SRBs for CCCH + SRB for DCCH + SRB for BCCH 1051
7.4.1.1 Transport channel parameters of BMC RAB and SRBs for CCCH, SRB for DCCH, and SRB for BCCH 1051
7.4.1.2 TFCS 1051
7.4.1.3 Physical channel parameters 1052
7.4.2 General BMC message reception 1052
7.4.2.1 UE in RRC Idle mode 1052
7.4.2.2 UE in RRC Connected mode, state CELL_PCH 1054
7.4.2.3 UE in RRC Connected mode, state URA_PCH 1056
7.4.2.4 UE in RRC Idle mode (ANSI-41 CB data) 1059
7.4.2.5 UE in RRC Connected mode, state CELL_PCH (ANSI-41 CB data) 1061
7.4.2.6 UE in RRC Connected mode, state URA_PCH (ANSI-41 CB data) 1063
7.4.3 BMC message reception procedure 1066
7.4.3.1 Reception of certain CBS message types 1066

8 Radio Resource Control RRC 1071
8.1 RRC Connection Management Procedure 1071
8.1.1 Paging 1071
8.1.1.1 Paging for Connection in idle mode 1071
8.1.1.2 Paging for Connection in connected mode (CELL_PCH) 1075
8.1.1.3 Paging for Connection in connected mode (URA_PCH) 1078
8.1.1.4 Paging for notification of BCCH modification in idle mode 1080
8.1.1.5 Paging for notification of BCCH modification in connected mode (CELL_PCH) 1084
8.1.1.5a Paging on HS-DSCH for notification of BCCH modification in CELL_PCH 1088
8.1.1.5b Paging on HS-DSCH for notification of BCCH modification in CELL_PCH (1.28Mcps TDD) 1091
8.1.1.6 Paging for notification of BCCH modification in connected mode (URA_PCH) 1095
8.1.1.6a Paging for notification of synchronised BCCH modification in idle mode using BCCH modification time 1099
8.1.1.7 Paging for Connection in connected mode (CELL_DCH) 1104
8.1.1.8 Paging for Connection in connected mode (CELL_FACH) 1107
8.1.1.9 Paging for Connection in idle mode (multiple paging records) 1109
8.1.1.10 Paging for Connection in connected mode (URA_PCH, multiple paging records) 1115
8.1.1.11 Paging for Connection in idle mode (Shared Network Environment) 1121
8.1.1.12 Paging for Connection in connected mode (CELL_PCH) without HS-SCCH 1126

8.1.1.12a Paging for Connection in connected mode (CELL_PCH) without legacy PCH configured (1.28Mcps TDD) 1130
8.1.1.13 ETWS primary and secondary notification without security reception via S-CCPCH in idle mode, URA_PCH and CELL_PCH state / CELL_FACH state 1136
8.1.1.14 Void 1146
8.1.1.15 Void 1146
8.1.1.16 Void 1146
8.1.1.17 Void 1146
8.1.1.18 Void 1146
8.1.1.19 ETWS primary and secondary notification / Cell reselection 1146
8.1.1.20 Paging / EAB active 1153
8.1.2 RRC Connection Establishment 1155
8.1.2.1 RRC Connection Establishment in CELL_DCH state: Success 1155
8.1.2.1a RRC Connection Establishment in CELL_DCH state: Success (TDD Only) 1159
8.1.2.2 RRC Connection Establishment: Success after T300 timeout 1163
8.1.2.3 RRC Connection Establishment: Failure (V300 is greater than N300) 1181
8.1.2.4 RRC Connection Establishment: Reject ("wait time" is not equal to 0) 1183
8.1.2.5 RRC Connection Establishment: Reject ("wait time" is not equal to 0 and V300 is greater than N300) 1187
8.1.2.6 RRC Connection Establishment: Reject ("wait time" is set to 0) 1190
8.1.2.7 RRC Connection Establishment in CELL_FACH state: Success 1192
8.1.2.8 Void 1196
8.1.2.9 RRC Connection Establishment: Success after Physical channel failure and Failure after Invalid configuration 1196
8.1.2.10 RRC connection establishment in CELL_DCH on another frequency 1200
8.1.2.10a RRC connection establishment in CELL_DCH on another frequency in a different frequency band 1203
8.1.2.10b RRC connection establishment in CELL_DCH on another frequency in a different frequency band (TDD a-f band) 1204
8.1.2.11 RRC Connection Establishment in FACH state (Frequency modification): Success 1205
8.1.2.12 RRC Connection Establishment: Reject with interRATInfo is set to GSM 1209
8.1.2.13 RRC Connection Establishment: Reject with InterRATInfo is set to GSM and selection to the designated system fails 1210
8.1.2.14 RRC Connection Establishment using the default configuration for 3.4 kbps signalling bearers 1212
8.1.2.15 RRC Connection Establishment using the default configuration for 13.6 kbps signalling bearers 1215
8.1.2.16 RRC Connection Establishment / Domain Specific Access Control: Success 1217
8.1.2.17 RRC Connection Establishment for transition from Idle Mode to CELL_DCH: Success (start of E-DCH transmission) 1222
8.1.2.18 RRC Connection Establishment using the default configuration for HS-DSCH / E-DCH signalling bearers 1232
8.1.2.19 RRC Connection Establishment for transition from Idle Mode to CELL_DCH: Success (start of discontinuous uplink transmission and downlink reception) 1234
8.1.2.20 RRC Connection Establishment for transition from Idle Mode to CELL_FACH: Success (Start of HS-DSCH Reception) 1238
8.1.2.21 RRC Connection Establishment: Reject with Frequency Info set to the same frequency band – Successful case 1243
8.1.2.21a RRC Connection Establishment: Reject with Frequency Info set to a different frequency band – Successful case 1248
8.1.2.22 RRC Connection Establishment: Reject with Frequency Info set to the same frequency band – Unsuccessful case 1249
8.1.2.22a RRC Connection Establishment: Reject with Frequency Info set to a different frequency band – Unsuccessful case 1254
8.1.2.23 Void 1255
8.1.2.23a Void 1255
8.1.2.24 Void 1255
8.1.2.24a Void 1255
8.1.2.25 RRC Connection Establishment for transition from Idle Mode to CELL_FACH: Success (Start of E-DCH and HS-DSCH Reception) 1255
8.1.2.26 RRC Connection Establishment / Paging Permission with Access Control: Success 1261
8.1.2.27 Void 1268
8.1.3 RRC Connection Release 1268
8.1.3.1 RRC Connection Release in CELL_DCH state: Success 1268

8.1.3.2 RRC Connection Release using on DCCH in CELL_FACH state: Success 1270
8.1.3.3 RRC Connection Release using on CCCH in CELL_FACH state: Success 1272
8.1.3.4 RRC Connection Release in CELL_FACH state: Failure 1274
8.1.3.5 RRC Connection Release in CELL_FACH state: Invalid message 1275
8.1.3.6 RRC Connection Release in CELL_DCH state (Frequency modification): Success 1277
8.1.3.7 RRC Connection Release in CELL_FACH state (Frequency modification): Success 1282
8.1.3.8 Void 1285
8.1.3.9 RRC Connection Release in CELL_DCH state (Network Authentication Failure): Success 1285
8.1.4 Void 1290
8.1.5 UE capability 1290
8.1.5.1 UE Capability in CELL_DCH state: Success 1290
8.1.5.2 UE Capability in CELL_DCH state: Success after T304 timeout 1295
8.1.5.3 UE Capability in CELL_DCH state: Failure (After N304 re-transmissions) 1297
8.1.5.4 UE Capability in CELL_FACH state: Success 1302
8.1.5.5 UE Capability in CELL_FACH state: Success after T304 timeout 1306
8.1.5.6 UE Capability Information/ Reporting Of InterRAT Specific UE RadioAccessCapability 1308
8.1.5.7 UE Capability Information / Audit of UE Capabilities 1309
8.1.6 Direct Transfer 1329
8.1.6.1 Direct Transfer in CELL DCH state (invalid message reception and no signalling connection exists) 1329
8.1.6.2 Direct Transfer in CELL FACH state (invalid message reception and no signalling connection exists) 1331
8.1.6.3 Measurement Report on INITIAL DIRECT TRANSFER message and UPLINK DIRECT TRANSFER message 1334
8.1.6.4 UPLINK Direct Transfer (RLC re-establishment) 1340
8.1.6.5 Initial Direct Transfer: Inclusion of establishment cause 1344
8.1.7 Security mode command 1345
8.1.7.1 Security mode command in CELL_DCH state (CS Domain) 1345
8.1.7.1b Security mode command in CELL_DCH state (PS Domain) 1350
8.1.7.1c Security mode control in CELL_DCH state (CN Domain switch and new keys at RRC message sequence number wrap around) 1356
8.1.7.1d Security mode control in CELL_DCH state interrupted by a cell update 1362
8.1.7.2 Security mode command in CELL_FACH state 1367
8.1.7.3 Security mode command in CELL_DCH state (UEA2/UIA2, CS Domain) 1371
8.1.7.3b Security mode command in CELL_DCH state (UEA2/UIA2, PS Domain) 1372
8.1.7.3c Security mode control in CELL_DCH state (UEA2/UIA2, CN Domain switch and new keys at RRC message sequence number wrap around) 1373
8.1.7.3d Security mode control in CELL_DCH state interrupted by a cell update (UEA2/UIA2) 1374
8.1.7.4 Security mode command in CELL_FACH state (UEA2/UIA2) 1375
8.1.8 Counter check 1376
8.1.8.1 Counter check in CELL_DCH state, with symmetric RAB 1376
8.1.8.2 Counter check in CELL_FACH state 1380
8.1.8.3 Counter check in CELL_DCH state, with asymmetric RAB 1384
8.1.9 Signalling Connection Release Indication 1394
8.1.9a Signalling Connection Release Indication (RLC re-establishment): CS signalling connection release 1396
8.1.9b Signalling Connection Release Indication (RLC re-establishment): PS signalling connection release 1399
8.1.9c Signalling Connection Release Indication in Cell_DCH state when the upper layers of the UE indicate that there is no more PS data for a prolonged period 1402
8.1.9d No Signalling connection release indication in CELL_DCH state when the upper layers of the UE indicate that there is no more PS data for a prolonged period, CS connection exists 1405
8.1.9e Signalling Connection Release Indication in CELL_PCH state when the upper layers of the UE indicate that there is no more PS data for a prolonged period/V316 in use 1408
8.1.9f Signalling Connection Release Indication in Cell_FACH state when the upper layers of the UE indicate that there is no more PS data for a prolonged period 1411
8.1.10 Broadcast of system information 1415
8.1.10.1 Dynamic change of segmentation, concatenation & scheduling and handling of unsupported information blocks 1415
8.1.10.2 BCCH Mapping on HS-DSCH for Transmitting System Information Change Indication 1439
8.1.10.2a BCCH Mapping on HS-DSCH for Transmitting System Information Change Indication with autonomous reading of Master Information Block Value Tag 1444
8.1.10.3 BCCH Mapping on HS-DSCH for Transmitting System Information Change Indication (1.28Mcps TDD) 1448

8.1.11 Signalling Connection Release (Invalid configuration) 1453
8.1.12 Integrity Protection 1456
8.2 Radio Bearer control procedure 1460
8.2.1 Radio Bearer Establishment 1460
8.2.1.1 Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Success 1460
8.2.1.1a Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Success (TDD Only) 1461
8.2.1.2 Void 1463
8.2.1.3 Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Failure (Unsupported configuration) 1463
8.2.1.4 Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Failure (Physical channel Failure and successful reversion to old configuration) 1466
8.2.1.4a Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Success (start of MIMO operation for 1.28Mcps TDD only) 1469
8.2.1.4b Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Success (start of SPS operation) 1471
8.2.1.4c Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Success (start of Control Channel DRX operation) 1473
8.2.1.5 Void 1475
8.2.1.6 Void 1475
8.2.1.7 Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Failure (Invalid message reception and Invalid configuration) 1475
8.2.1.8 Radio Bearer Establishment for transition from CELL_DCH to CELL_FACH: Success 1480
8.2.1.9 Radio Bearer Establishment for transition from CELL_DCH to CELL_FACH: Success (Cell re-selection) 1482
8.2.1.10 Radio Bearer Establishment for transition from CELL_FACH to CELL_DCH: Success 1484
8.2.1.10a Radio Bearer Establishment for transition from CELL_FACH to CELL_DCH: Success (TDD Only) 1485
8.2.1.11 Radio Bearer Establishment for transition from CELL_FACH to CELL_DCH: Failure (Unsupported configuration) 1487
8.2.1.12 Radio Bearer Establishment for transition from CELL_FACH to CELL_DCH: Failure (Physical channel Failure and successful reversion to old configuration) 1490
8.2.1.13 Radio Bearer Establishment for transition from CELL_FACH to CELL_DCH: Failure (Physical channel Failure and cell reselection) 1494
8.2.1.14 Radio Bearer Establishment for transition from CELL_FACH to CELL_DCH: Failure (Incompatible simultaneous reconfiguration) 1498
8.2.1.15 Void 1501
8.2.1.16 Radio Bearer Establishment for transition from CELL_FACH to CELL_FACH: Success 1501
8.2.1.17 Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: success (Subsequently received) 1503
8.2.1.18 Radio Bearer Establishment for transition from CELL_FACH to CELL_DCH: Success (Subsequently received) 1505
8.2.1.19 Void 1508
8.2.1.20 Void 1508
8.2.1.21 Void 1508
8.2.1.22 Radio Bearer Establishment for transition from CELL_DCH to CELL_FACH (Frequency modification): Success 1508
8.2.1.23 Radio Bearer Establishment for transition from CELL_FACH to CELL_DCH (Frequency modification): Success 1511
8.2.1.24 Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH (Frequency modification): Success 1513
8.2.1.24a Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH (Inter band handover): Success 1516
8.2.1.24b Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH (Inter band handover): Success(TDD a-f band) 1517
8.2.1.25 Radio Bearer Establishment for transition from CELL_FACH to CELL_FACH (Frequency modification): Success 1517
8.2.1.26 Void 1520
8.2.1.27 Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Success (two radio links, start of HS-DSCH reception) 1520
8.2.1.27a Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Success (start of HS-DSCH reception) 1527

8.2.1.27b Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Success (start of HS-DSCH reception) (TDD only) 1530
8.2.1.27c Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Success (inter-band frequency hard handover, start of HS-DSCH reception, LCR TDD band a-f) 1534
8.2.1.27d Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Success (start of HS-DSCH reception) (In a different frequency band) 1538
8.2.1.28 Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Success (RB mapping for both DL DCH and HS-DSCH in cell without HS-DSCH support) 1539
8.2.1.29 Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Success (Timing re-initialized hard handover to another frequency, uplink TFCS restriction and start of HS-DSCH reception) 1544
8.2.1.30 Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Success (Timing re-initialised hard handover to another frequency, start of HS-DSCH reception) 1550
8.2.1.31 Radio Bearer Establishment for transition from CELL_FACH to CELL_DCH: Success (start of HS-DSCH reception) 1556
8.2.1.32 Radio Bearer Establishment for transition from CELL_FACH to CELL_DCH: Success (start of HS-DSCH reception with frequency modification) 1561
8.2.1.33 Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Success (Unsynchronised RL Reconfiguration) 1568
8.2.1.34 Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Success (Unsynchronised RL Reconfiguration with frequency modification) 1570
8.2.1.34a Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Success (Unsynchronised RL Reconfiguration with inter band handover) 1573
8.2.1.34b Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Success (Unsynchronised RL Reconfiguration with inter band handover)(TDD a-f band) 1573
8.2.1.35 Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Success (start of E-DCH transmission) 1574
8.2.1.35a Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Success (start of E-DCH transmission, in the multi-frequency network environment, for 1.28 Mcps TDD only) 1583
8.2.1.36 Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Success (hard handover to another frequency, start of E-DCH transmission) 1593
8.2.1.36a Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH using F-DPCH: Success (hard handover to another frequency, start of E-DCH transmission, F-DPCH configured) 1603
8.2.1.36b Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Success (hard handover to another frequency in the multi-frequency network environment, start of E-DCH transmission, for 1.28Mcps TDD only) 1604
8.2.1.37 Void 1615
8.2.1.38 Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Success (start of discontinuous uplink transmission) 1615
8.2.1.39 Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Success (start of HS-SCCH less operation) 1619
8.2.1.40 Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Success (hard handover to another frequency, start of discontinuous uplink transmission) 1622
8.2.1.41 Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Success (UL DPCCH slot format #4) 1625
8.2.1.42 Radio Bearer Establishment for transition from CELL_FACH (Enhanced UL/DL) to CELL_DCH : Success (with ongoing HS-DSCH reception and E-DCH transmission) 1627
8.2.1.43 Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Success (start of E-DCH transmission with enhanced TS0) (1.28 Mcps TDD) 1628
8.2.1.44 Radio Bearer Establishment for transition between CELL_DCH & CELL_DCH with SRBs mapped on DCH: Successful Activation of 3C-HSDPA and 4C-HSDPA for different bands 1630
8.2.1.44.1 Radio Bearer Establishment for transition between CELL_DCH & CELL_DCH with SRB on DCH: Successful Activation of 3C-HSDPA for single band 1630
8.2.1.44.2 Radio Bearer Establishment for transition between CELL_DCH & CELL_DCH with SRB mapped on DCH : Successful Activation of 3C-HSDPA for dual bands (1-2) 1634
8.2.1.44.3 Radio Bearer Establishment for transition between CELL_DCH & CELL_DCH with SRBs mapped on DCH: Successful Activation of 3C-HSDPA for Dual bands (2-1) 1635
8.2.1.44.4 Radio Bearer Establishment for transition between CELL_DCH & CELL_DCH with SRBs mapped on DCH: Successful Activation of 4C-HSDPA for Dual Bands (3-1) 1636
8.2.1.44.5 Radio Bearer Establishment for transition between CELL_DCH & CELL_DCH with SRBs mapped on DCH: Successful Activation of 4C-HSDPA for Dual Bands (2-2) 1637

8.2.1.45 Radio Bearer Establishment for transition between CELL_DCH and CELL_DCH with SRBs mapped on DCH: Successful Activation of Multiflow HSDPA for Single and Dual bands/Intra Node B 1638
8.2.1.45.1 Radio Bearer Establishment for transition between CELL_DCH and CELL_DCH with SRBs mapped on DCH: Successful Activation of 2cell/single frequency Multiflow HSDPA , Intra-NodeB 1638
8.2.1.45.2 Radio Bearer Establishment for transition between CELL_DCH and CELL_DCH with SRBs mapped on DCH: Successful Activation of 3 cell/two frequencies Multiflow HSDPA for Single band, Intra-NodeB 1645
8.2.1.45.3 Radio Bearer Establishment for transition between CELL_DCH and CELL_DCH with SRBs mapped on DCH: Successful Activation of 3 cells/two frequencies Multiflow HSDPA for Dual Bands, intra-NodeB 1647
8.2.1.46 Radio Bearer Establishment for transition between CELL_DCH and CELL_DCH with SRBs mapped on DCH: Successful Activation of Multiflow HSDPA for different bands/Inter Node B, 16QAM/64QAM, 16QAM, assisting serving cell as time reference cell 1648
8.2.1.46.1 Radio Bearer Establishment for transition between CELL_DCH and CELL_DCH with SRBs mapped on DCH: Successful Activation of 2cell/single frequency Multiflow HSDPA for single band, inter-NodeB, 16QAM/64QAM, 16QAM, assisting serving cell as time reference cell 1648
8.2.1.46.2 Radio Bearer Establishment for transition between CELL_DCH and CELL_DCH with SRBs mapped on DCH: Successful Activation of 3 cell/two frequencies Multiflow HSDPA for single band, inter-NodeB, 16QAM/64QAM, 16QAM, assisting serving cell as time reference cell 1652
8.2.1.46.3 Radio Bearer Establishment for transition between CELL_DCH and CELL_DCH with SRBs mapped on DCH: Successful Activation of 3 cells/two frequencies Multiflow HSDPA for dual bands, inter-NodeB, 16QAM/64QAM, 16QAM, assisting serving cell as time reference cell 1654
8.2.1.47 Radio Bearer Establishment for transition between CELL_DCH and CELL_DCH with SRBs mapped on DCH: Successful Activation of DCH Enhancements in Basic Mode 1655
8.2.1.48 Radio Bearer Establishment for transition between CELL_DCH and CELL_DCH with SRBs mapped on DCH: Successful Activation of DCH Enhancements in Full Mode 1661
8.2.2 Radio Bearer Reconfiguration 1666
8.2.2.1 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Success 1666
8.2.2.1a Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Success (TDD Only) 1676
8.2.2.2 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Failure (Unsupported configuration) 1686
8.2.2.3 Void 1689
8.2.2.4 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Failure (Physical channel failure and cell reselection) 1689
8.2.2.5 Void 1694
8.2.2.6 Void 1694
8.2.2.7 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Success (Continue and stop) 1694
8.2.2.8 Radio Bearer Reconfiguration from CELL_DCH to CELL_FACH: Success 1697
8.2.2.9 Radio Bearer Reconfiguration from CELL_DCH to CELL_FACH: Success (Cell re-selection) 1701
8.2.2.10 Radio Bearer Reconfiguration: from CELL_FACH to CELL_DCH including modification of previously signalled CELL_DCH configuration: Success 1706
8.2.2.11 Radio Bearer Reconfiguration from CELL_FACH to CELL_DCH: Failure (Unsupported configuration) 1710
8.2.2.11a Radio Bearer Reconfiguration from CELL_FACH to CELL_DCH: Failure (Unsupported configuration) (1.28 Mcps TDD Only) 1712
8.2.2.12 Void 1714
8.2.2.13 Void 1714
8.2.2.14 Void 1714
8.2.2.15 Void 1714
8.2.2.16 Void 1714
8.2.2.17 Radio Bearer Reconfiguration from CELL_FACH to CELL_FACH: Success 1714
8.2.2.18 Radio Bearer Reconfiguration from CELL_FACH to CELL_FACH: Success (Cell re-selection) 1718
8.2.2.19 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Success (Subsequently received) 1723
8.2.2.20 Void 1736
8.2.2.21 Void 1736
8.2.2.22 Void 1736

8.2.2.23 Radio Bearer Reconfiguration from CELL_FACH to CELL_PCH: Success 1736
8.2.2.24 Void 1740
8.2.2.25 Void 1740
8.2.2.26 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Success (Incompatible Simultaneous Reconfiguration) 1740
8.2.2.27 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH (Frequency modification): Success 1744
8.2.2.28 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_FACH (Transport channel type switching with frequency modification): Success 1746
8.2.2.29 Void 1749
8.2.2.30 Void 1749
8.2.2.31 Radio Bearer Reconfiguration for transition from CELL_FACH to CELL_DCH (Frequency modification): Success 1749
8.2.2.32 Radio Bearer Reconfiguration for transition from CELL_FACH to CELL_FACH (Frequency modification): Success 1752
8.2.2.33 Void 1755
8.2.2.34 Radio Bearer Reconfiguration for transition from CELL_FACH to URA_PCH (Frequency modification): Success 1755
8.2.2.35 Radio Bearer Reconfiguration from CELL_DCH to CELL_FACH: Successful channel switching with multiple PS RABs established 1758
8.2.2.36 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Start and stop of HS-DSCH reception) 1770
8.2.2.36a Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Start and stop of HS-DSCH reception) (TDD only) 1782
8.2.2.36b Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success ((inter-band frequency hard handover, Start and stop of HS-DSCH reception, LCR TDD band a-f)) 1787
8.2.2.36c Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Start and stop of HS-DSCH reception)(In a different frequency band) 1795
8.2.2.37 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_FACH and from CELL_FACH to CELL_DCH: Success (start and stop of HS-DSCH reception) 1796
8.2.2.38 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Success (with active HS-DSCH reception) 1809
8.2.2.39 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Timing re-initialised hard handover to another frequency, start and stop of HS-DSCH reception) 1813
8.2.2.40 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_FACH and from CELL_FACH to CELL_DCH: Success (frequency modification, start and stop of HS-DSCH reception) 1822
8.2.2.41 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Start and stop of HS-DSCH reception, during an active CS bearer) 1838
8.2.2.42 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Timing re-initialised hard handover to another frequency, start and stop of HS-DSCH reception, during an active CS bearer) 1845
8.2.2.43 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Seamless SRNS relocation, without pending of ciphering, frequency modification) 1856
8.2.2.43a Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Seamless SRNS relocation, UEA2/UIA2, without pending of ciphering, frequency modification) 1880
8.2.2.43b Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Seamless SRNS relocation, change of ciphering and integrity protection algorithms, frequency modification) 1881
8.2.2.44 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Success (With active E-DCH transmission) 1899
8.2.2.44a Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Success (With active E-DCH transmission, F-DPCH configured) 1903
8.2.2.45 Radio Bearer Reconfiguration for transition from CELL_FACH to CELL_DCH and CELL_DCH to CELL_FACH: Success (start and stop of E-DCH transmission) 1904
8.2.2.45a Radio Bearer Reconfiguration for transition from CELL_FACH to CELL_DCH and CELL_DCH to CELL_FACH: Success (start and stop of E-DCH transmission, in the multi-frequency network environment, for 1.28Mcps TDD only) 1925
8.2.2.46 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (hard handover to another frequency, start and stop of E-DCH transmission) 1942

8.2.2.46a Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH Success (inter-band frequency hard handover, start and stop of E-DCH transmission, LCR TDD band a-f) 1963
8.2.2.47 Radio Bearer Reconfiguration for transition from CELL_FACH to CELL_DCH and CELL_DCH to CELL_FACH: Success (frequency modification, start and stop of E-DCH transmission) 1973
8.2.2.47a Radio Bearer Reconfiguration for transition from CELL_FACH to CELL_DCH and CELL_DCH to CELL_FACH: Success (frequency modification, start and stop of E-DCH transmission, F-DPCH Configured) 2006
8.2.2.47b Radio Bearer Reconfiguration for transition from CELL_FACH to CELL_DCH and CELL_DCH to CELL_FACH: Success (frequency modification in the multi-frequency network environment, start and stop of E-DCH transmission, for 1.28Mcps TDD only) 2014
8.2.2.48 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Start and stop of E-DCH transmission) 2033
8.2.2.49 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_PCH: Success (stop of E-DCH transmission) 2052
8.2.2.50 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Success (from speech to speech plus PS data with modification of downlink spreading factor) 2063
8.2.2.51 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Success (With active discontinuous uplink transmission) 2069
8.2.2.52 Radio Bearer Reconfiguration for transition from CELL_FACH to CELL_DCH and CELL_DCH to CELL_FACH: Success (start and stop of discontinuous uplink transmission) 2072
8.2.2.53 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (hard handover to another frequency, start and stop of discontinuous uplink transmission) 2083
8.2.2.54 Radio Bearer Reconfiguration for transition from CELL_FACH to CELL_DCH and CELL_DCH to CELL_FACH: Success (frequency modification, start and stop of discontinuous uplink transmission) 2094
8.2.2.55 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Start and stop of discontinuous uplink transmission) 2106
8.2.2.56 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_PCH: Success (stop of discontinuous uplink transmission) 2116
8.2.2.57 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Success (Reconfiguration between fixed and flexible AM RLC, Serving HS-DSCH cell change between MAC-hs and MAC-ehs) 2123
8.2.2.57a Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Success (Reconfiguration between fixed and flexible AM RLC, Serving HS-DSCH cell change between MAC-hs and MAC-ehs) with SRBs mapped on E-DCH/DCH 2150
8.2.2.58 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Reconfigurations between CS voice over DCH and CS voice over HSPA) 2166
8.2.2.59 Radio Bearer Reconfiguration from Cell FACH (Cell supporting HS-DSCH in Cell FACH) to CELL_FACH(Cell not supporting HS-DSCH in Cell FACH): Success (Cell re-selection) 2172
8.2.2.59a Radio Bearer Reconfiguration from Cell FACH (Cell supporting E-DCH and HS-DSCH in Cell FACH) to CELL_FACH(Cell not supporting E-DCH and HS-DSCH in Cell FACH): Success (Cell re-selection)(1.28Mcps TDD only) 2179
8.2.2.60 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_FACH and CELL_FACH to CELL_DCH: Success (with HS-DSCH reception in Enhanced FACH DL) 2186
8.2.2.60a Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_FACH and CELL_FACH to CELL_DCH: Success (with ongoing E-DCH transmission and HS-DSCH reception) (1.28Mcps TDD only) 2195
8.2.2.61 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Success (Reconfiguration between fixed and flexible AM RLC, Serving E-DCH cell change between MAC-e/es and MAC-i/is) 2207
8.2.2.62 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (activation and deactivation of MIMO) 2223
8.2.2.63 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Success (activation and de-activation of 64QAM) 2226
8.2.2.63a Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH with SRBs on E-DCH/DCH : Success (activation and de-activation of 64QAM) 2229
8.2.2.64 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (simultaneous activation and deactivation of 64QAM and MIMO) 2232
8.2.2.65 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_FACH (Enhanced UL/DL) Success 2237

8.2.2.66 Radio Bearer Reconfiguration for transition from CELL_FACH to CELL_DCH and CELL_DCH to CELL_FACH: Success (start and stop of SPS operation) 2244
8.2.2.67 Radio Bearer Reconfiguration for transition from CELL_FACH to CELL_DCH and CELL_DCH to CELL_FACH: Success (start and stop of Control Channel DRX operation) 2252
8.2.2.68 Radio Bearer Reconfiguration for transition between CELL_FACH & CELL_DCH: Success (simultaneous activation and deactivation of Dual-Cell and MIMO) 2260
8.2.2.68a Radio Bearer Reconfiguration for transition between CELL_FACH & CELL_DCH: Success (simultaneous activation and deactivation of Dual-Cell for different bands and MIMO) 2271
8.2.2.69 Radio Bearer Reconfiguration for transition between CELL_FACH & CELL_DCH: Success (simultaneous activation and deactivation of Dual-Cell, MIMO and 64QAM) 2271
8.2.2.69a Radio Bearer Reconfiguration for transition between CELL_FACH & CELL_DCH: Success (simultaneous activation and deactivation of Dual-Cell for different bands, MIMO and 64QAM) . 2282
8.2.2.70 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH with PCI Restrictions and S-CPICH Power Offset IEs: Success (64QAM +MIMO) 2282
8.2.2.71 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH with PCI Restrictions and S-CPICH Power Offset IEs: Success (16QAM +MIMO) 2291
8.2.2.72 Radio Bearer Reconfiguration for S-CPICH based MIMO with DPCH in STTD: (16QAM +MIMO) 2300
8.2.2.73 FFS 2307
8.2.2.74 Radio Bearer Reconfiguration for transition between CELL_FACH & CELL_DCH: Success Activation and Deactivation of Dual-Cell for different band. 2307
8.2.2.75 Radio Bearer Reconfiguration for transition between CELL_FACH & CELL_DCH: Success Activation and Deactivation of Dual-Cell for different bands and 64QAM 2318
8.2.2.76 Radio Bearer Reconfiguration for transition between CELL_FACH and CELL_DCH: Success (start and stop Dual-Cell HSUPA (QPSK) and Dual-Cell HSDPA (16QAM) operation) 2329
8.2.2.77 Radio Bearer Reconfiguration for transition between CELL_FACH and CELL_DCH: Success (Dual-Cell HSUPA (QPSK) and Dual-Cell HSDPA (64QAM)) 2341
8.2.2.78 Radio Bearer Reconfiguration for transition between CELL_FACH and CELL_DCH: Success (start and stop Dual-Cell HSUPA (16QAM) and Dual-Cell HSDPA (16QAM) operation) 2355
8.2.2.79 Radio Bearer Reconfiguration for transition between CELL_FACH & CELL_DCH: Success (simultaneous activation and deactivation of 3C-HSDPA or 4C-HSDPA, MIMO and 64QAM) 2367
8.2.2.79.1 Radio Bearer Reconfiguration for transition between CELL_FACH & CELL_DCH: Successful Activation and Deactivation of 3C-HSDPA Single Band, 64 QAM and MIMO 2367
8.2.2.79.2 Radio Bearer Reconfiguration for transition between CELL_FACH & CELL_DCH: Successful Activation and Deactivation of 3C-HSDPA Dual Bands, 64 QAM and MIMO (1-2) 2384
8.2.2.79.3 Radio Bearer Reconfiguration for transition between CELL_FACH & CELL_DCH: Successful Activation and Deactivation of 3C-HSDPA Dual Bands, 64 QAM and MIMO (2-1) 2385
8.2.2.79.4 Radio Bearer Reconfiguration for transition between CELL_FACH & CELL_DCH: Successful Activation and Deactivation of 4C-HSDPA Dual Bands, 64 QAM and MIMO (3-1) 2386
8.2.2.79.5 Radio Bearer Reconfiguration for transition between CELL_FACH & CELL_DCH: Successful Activation and Deactivation of 4C-HSDPA Dual Bands, 64 QAM and MIMO (2-2) 2389
8.2.2.80 Radio Bearer Reconfiguration for transition between CELL_FACH & CELL_DCH: Successful Activation and Deactivation of 3C-HSDPA and 4C-HSDPA for different bands and 64 QAM 2390
8.2.2.80.1 Radio Bearer Reconfiguration for transition between CELL_FACH & CELL_DCH: Successful Activation and Deactivation of 3C-HSDPA and for Single Band and 64 QAM 2390
8.2.2.80.2 Radio Bearer Reconfiguration for transition between CELL_FACH & CELL_DCH: Successful Activation and Deactivation of 3C-HSDPA Dual Band and 64 QAM (1-2) 2400
8.2.2.80.3 Radio Bearer Reconfiguration for transition between CELL_FACH & CELL_DCH: Successful Activation and Deactivation of 3C-HSDPA Dual Band and 64 QAM (2-1) 2400
8.2.2.80.4 Radio Bearer Reconfiguration for transition between CELL_FACH & CELL_DCH: Successful Activation and Deactivation of 4C-HSDPA for Dual Bands and 64 QAM (3-1) 2401
8.2.2.80.5 Radio Bearer Reconfiguration for transition between CELL_FACH & CELL_DCH: Successful Activation and Deactivation of 4C-HSDPA for Dual Bands and 64 QAM (2-2) 2405
8.2.2.81 Radio Bearer Reconfiguration: 3C or 4C Activation by Serving Cell Change from non 3C-HSDPA or 4C-HSDPA capable cell to a 3C-HSDPA or 4C-HSDPA capable cell 2406
8.2.2.81.1 Radio Bearer Reconfiguration: 3C Activation by Serving Cell Change from non 3C-HSDPA capable cell to a 3C-HSDPA capable cell/Single Band 2406

8.2.2.81.2 Radio Bearer Reconfiguration: 3C Activation by Serving Cell Change from non 3C-HSDPA capable cell to 3C-HSDPA capable cell/Dual Band (1-2) 2415
8.2.2.81.3 Radio Bearer Reconfiguration: 3C Activation by Serving Cell Change from non 3C-HSDPA capable cell to 3C-HSDPA capable cell/Dual Band (2-1) 2416
8.2.2.81.4 Radio Bearer Reconfiguration: 4C Activation by Serving Cell Change from non 4C-HSDPA capable cell to a 4C-HSDPA capable cell/Dual Band (3-1) 2417
8.2.2.81.5 Radio Bearer Reconfiguration: 4C Activation by Serving Cell Change from non 4C-HSDPA capable cell to a 4C-HSDPA capable cell/Dual Band (2-2) 2421
8.2.2.82 Radio Bearer Reconfiguration: 3C or 4C Deactivation by Serving Cell Change from 3C-HSDPA or 4C-HSDPA capable cell to a non 3C-HSDPA or 4C-HSDPA capable cell 2422
8.2.2.82.1 Radio Bearer Reconfiguration: 3C Deactivation by Serving Cell Change from 3C-HSDPA capable cell to a non 3C-HSDPA capable cell/Single Band 2422
8.2.2.82.2 Radio Bearer Reconfiguration: 3C Deactivation by Serving Cell Change from 3C-HSDPA capable cell to a non 3C-HSDPA capable cell/Dual Band (1-2) 2430
8.2.2.82.3 Radio Bearer Reconfiguration: 3C Deactivation by Serving Cell Change from 3C-HSDPA capable cell to a non 3C-HSDPA capable cell/Dual Band (2-1) 2431
8.2.2.82.4 Radio Bearer Reconfiguration: 4C Deactivation by Serving Cell Change from 4C-HSDPA capable cell to a non 4C-HSDPA capable cell/Dual Band (3-1) 2432
8.2.2.82.5 Radio Bearer Reconfiguration: 4C Deactivation by Serving Cell Change from 4C-HSDPA capable cell to a non 4C-HSDPA capable cell/Dual Band (2-2) 2436
8.2.2.83 Radio Bearer Reconfiguration for transition between CELL_DCH & CELL_DCH with SRBs on DCH: Successful Activation and Deactivation of 3C-HSDPA and 4C-HSDPA for different bands and 64 QAM 2437
8.2.2.83.1 Radio Bearer Reconfiguration for transition between CELL_DCH & CELL_DCH with SRBs on DCH: Successful Activation and Deactivation of 3C-HSDPA / Single band and 64 QAM 2437
8.2.2.83.2 Radio Bearer Reconfiguration for transition between CELL_DCH & CELL_DCH with SRBs on DCH: Successful Activation and Deactivation of 3C-HSDPA / Dual band and 64 QAM (1-2) 2447
8.2.2.83.3 Radio Bearer Reconfiguration for transition between CELL_DCH & CELL_DCH with SRB on DCH: Successful Activation and Deactivation of 3C-HSDPA / Dual band and 64 QAM (2-1) 2447
8.2.2.83.4 Radio Bearer Reconfiguration for transition between CELL_DCH & CELL_DCH with SRBs on DCH: Successful Activation and Deactivation of 4C-HSDPA / Dual band and 64 QAM (3-1) 2448
8.2.2.83.5 Radio Bearer Reconfiguration for transition between CELL_DCH & CELL_DCH with SRBs on DCH: Successful Activation and Deactivation of 4C-HSDPA / Dual band and 64 QAM (2-2) 2451
8.2.2.84 Radio Bearer Reconfiguration for transition from CELL_DCH to CELL_DCH and from CELL_DCH to CELL_FACH: Success (Seamless SRNS relocation, without pending of ciphering, frequency modification, Default radio configuration for Cell_FACH) 2451
8.2.2.85 Radio Bearer Reconfiguration for transition between CELL_FACH and CELL_DCH: Successful Activation and Deactivation of Multiflow HSDPA, 16 QAM 2458
8.2.2.85.1 Radio Bearer Reconfiguration for transition between CELL_FACH & CELL_DCH: Successful Activation and Deactivation of 2cell/Single frequency on Single Band, intra-NodeB, 16 QAM 2459
8.2.2.85.2 Radio Bearer Reconfiguration for transition between CELL_FACH and CELL_DCH: Successful Activation and Deactivation of 3cell/two frequency on Dual Bands, inter-NodeB, 16 QAM 2474
8.2.2.86 Radio Bearer Reconfiguration for transition between CELL_DCH & CELL_DCH with SRBs mapped on DCH: Successful Activation and Deactivation of Multiflow HSDPA 2481
8.2.2.86.1 Radio Bearer Reconfiguration for transition between CELL_DCH & CELL_DCH with SRBs mapped on DCH: Successful Activation and Deactivation of two cell/Single frequency Multiflow HSDPA / Single Band 2481
8.2.2.86.2 Radio Bearer Reconfiguration for transition between CELL_DCH & CELL_DCH with SRBs mapped on DCH: Successful Activation and Deactivation of three cell/Two frequency Multiflow HSDPA / Single Band 2486
8.2.2.86.3 Radio Bearer Reconfiguration for transition between CELL_DCH & CELL_DCH with SRBs mapped on DCH: Successful Activation and Deactivation of three cell/Two frequency Multiflow HSDPA / Dual Band 2488
8.2.2.87 Radio Bearer Reconfiguration: two cell/single frequency or 3 cell/two frequencies Activation by Assisting Serving Cell Change from Multiflow HSDPA capable cell to Multiflow HSDPA capable cell 2490

8.2.2.87.1 Radio Bearer Reconfiguration: two cell/single frequency Activation by Assisting Serving Cell Change from Multiflow HSDPA capable cell to Multiflow HSDPA capable cell/Single Band 2490
8.2.2.87.2 Radio Bearer Reconfiguration: 3 cell/two frequencies Activation by Assisting Serving Cell Change from Multiflow capable cell to Multiflow capable cell/Single Band 2498
8.2.2.87.3 Radio Bearer Reconfiguration: 3 cell/two frequencies Activation by Assisting Serving Cell Change from Multiflow capable cell to Multiflow capable cell/Dual Band 2500
8.2.2.88 Radio Bearer Reconfiguration for transition between CELL_PCH and CELL_DCH with SRBs mapped on DCH: Successful Activation of Multiflow HSDPA 2502
8.2.2.88.1 Radio Bearer Reconfiguration for transition between CELL_PCH and CELL_DCH with SRBs mapped on DCH: Successful Activation of two cell/Single frequency Multiflow HSDPA/Single Band 2502
8.2.2.88.2 Radio Bearer Reconfiguration for transition between CELL_PCH and CELL_DCH with SRBs mapped on DCH: Successful Activation of three cell/Two frequency Multiflow HSDPA/Single Band 2510
8.2.2.88.3 Radio Bearer Reconfiguration for transition between CELL_PCH and CELL_DCH with SRBs mapped on DCH: Successful Activation of three cell/Two frequency Multiflow HSDPA/Dual Band 2512
8.2.2.89 Void 2514
8.2.2.90 Void 2514
8.2.2.91 Radio Bearer Reconfiguration for transition to CELL_DCH with SRBs mapped on DCH: Successful Activation and Deactivation of DCH Enhancement in Basic Mode 2514
8.2.2.92 Radio Bearer Reconfiguration for transition to CELL_DCH with SRBs mapped on DCH: Successful Activation and Deactivation of DCH Enhancement in Full Mode 2519
8.2.3 Radio Bearer Release 2524
8.2.3.1 Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Success 2524
8.2.3.1a Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Success (TDD Only) 2525
8.2.3.2 Void 2528
8.2.3.3 Void 2528
8.2.3.4 Void 2528
8.2.3.5 Void 2528
8.2.3.6 Void 2528
8.2.3.7 Radio Bearer Release for transition from CELL_DCH to CELL_FACH: Success 2528
8.2.3.8 Radio Bearer Release for transition from CELL_DCH to CELL_FACH: Success (Cell re-selection) 2530
8.2.3.9 Radio Bearer Release for transition from CELL_FACH to CELL_DCH: Success 2533
8.2.3.10 Void 2534
8.2.3.11 Radio Bearer Release for transition from CELL_FACH to CELL_DCH: Failure (Physical channel failure and successful reversion to old configuration) 2534
8.2.3.12 Void 2538
8.2.3.13 Void 2538
8.2.3.14 Void 2538
8.2.3.15 Radio Bearer Release for transition from CELL_FACH to CELL_FACH: Success 2538
8.2.3.16 Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Success (Subsequently received) 2541
8.2.3.17 Radio Bearer Release for transition from CELL_FACH to CELL_DCH: Success (Subsequently received) 2543
8.2.3.18 Radio Bearer Release from CELL_DCH to CELL_PCH: Success 2546
8.2.3.19 Radio Bearer Release from CELL_DCH to URA_PCH: Success 2548
8.2.3.20 Radio Bearer Release for transition from CELL_DCH to CELL_FACH (Frequency modification): Success 2550
8.2.3.21 Radio Bearer Release from CELL_DCH to CELL_PCH (Frequency modification): Success 2554
8.2.3.22 Radio Bearer Release for transition from CELL_FACH to CELL_PCH: Success 2558
8.2.3.23 Radio Bearer Release for transition from CELL_FACH to URA_PCH: Success 2560
8.2.3.24 Radio Bearer Release for transition from CELL_DCH to CELL_DCH (Frequency modification): Success 2562
8.2.3.25 Radio Bearer Release for transition from CELL_DCH to URA_PCH (Frequency modification): Success 2564
8.2.3.26 Radio Bearer Release for transition from CELL_FACH to CELL_PCH (Frequency modification): Success 2567
8.2.3.27 Radio Bearer Release for transition from CELL_FACH to URA_PCH (Frequency modification): Success 2569

8.2.3.28 Radio Bearer Release for transition from CELL_FACH to CELL_FACH (Frequency modification): Success 2572
8.2.3.29 Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Associated with signalling connection release during simultaneous PS and CS call 2574
8.2.3.30 Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Success (stop of HS-DSCH reception) 2577
8.2.3.30a Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Success (stop of HS-DSCH reception) (In a different frequency band) 2579
8.2.3.31 Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Success (With active HS-DSCH reception) 2580
8.2.3.31a Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Success (With active HS-DSCH reception) (TDD only) 2583
8.2.3.32 Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Success (Timing re-initialised hard handover to another frequency, with active HS-DSCH reception) 2586
8.2.3.33 Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Success (stop of HS-DSCH reception with frequency modification) 2590
8.2.3.34 Radio Bearer Release for transition from CELL_DCH to CELL_FACH: Success (stop of HS-DSCH reception with frequency modification) 2594
8.2.3.35 Radio Bearer Release for transition from CELL_DCH to CELL_PCH: Success (stop of HS-DSCH reception) 2596
8.2.3.36 Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Success (frequency modification, stop of E-DCH transmission) 2599
8.2.3.36a Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Success (frequency modification, stop of E-DCH transmission, in the multi-frequency network environment, for 1.28Mcps TDD only) 2609
8.2.3.37 Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Success (frequency modification, stop of discontinuous uplink transmission) 2616
8.2.4 Transport channel reconfiguration 2620
8.2.4.1 Transport channel reconfiguration (Timing re-initialised hard handover with transmission rate modification) from CELL_DCH to CELL_DCH: Success 2620
8.2.4.1a Transport channel reconfiguration (Transmission Rate Modification) from CELL_DCH to CELL_DCH of the same cell: Success 2624
8.2.4.2 Void 2627
8.2.4.3 Transport channel reconfiguration from CELL_DCH to CELL_DCH: Failure (Physical channel failure and reversion to old configuration) 2627
8.2.4.4 Transport channel reconfiguration from CELL_DCH to CELL_DCH: Failure (Physical channel failure and cell reselection) 2632
8.2.4.4a Transport channel reconfiguration from CELL_DCH to CELL_DCH: Failure (Physical channel failure and cell reselection) (1.28 Mcps TDD Only) 2636
8.2.4.5 Void 2641
8.2.4.6 Void 2641
8.2.4.7 Void 2641
8.2.4.8 Void 2641
8.2.4.9 Void 2641
8.2.4.10 Transport channel reconfiguration from CELL_FACH to CELL_DCH: Success 2641
8.2.4.10a Transport channel reconfiguration from CELL_FACH to CELL_DCH: Success(1.28 Mcps TDD Only) 2643
8.2.4.11 Void 2645
8.2.4.12 Void 2645
8.2.4.13 Void 2645
8.2.4.14 Void 2645
8.2.4.15 Void 2645
8.2.4.16 Void 2645
8.2.4.17 Void 2645
8.2.4.18 Transport Channel Reconfiguration from CELL_DCH to CELL_DCH: Success (Subsequently received) 2645
8.2.4.19 Transport Channel Reconfiguration from CELL_FACH to CELL_DCH: Success (Subsequently received) 2648
8.2.4.20 Void 2651
8.2.4.21 Void 2651
8.2.4.22 Void 2651
8.2.4.23 Void 2651

8.2.4.24 Transport channel reconfiguration from CELL_DCH to CELL_DCH: Success with uplink transmission rate modification 2651
8.2.4.25 Transport channel reconfiguration from CELL_FACH to CELL_DCH (Frequency modification): Success 2654
8.2.4.26 Void 2656
8.2.4.27 Void 2656
8.2.4.28 Void 2656
8.2.4.29 Transport Channel Reconfiguration for transition from CELL_DCH to CELL_DCH (Frequency modification): Success 2656
8.2.4.30 Void 2659
8.2.4.31 Void 2659
8.2.4.32 Void 2659
8.2.4.33 Void 2659
8.2.4.34 Void 2659
8.2.4.35 Void 2659
8.2.4.36 Transport Channel Reconfiguration from CELL_DCH to CELL_DCH: Success (with active HS-DSCH reception, not changing the value of TTI during UL rate modification) 2659
8.2.4.36a Transport Channel Reconfiguration from CELL_DCH to CELL_DCH: Success (with active HS-DSCH reception, not changing the value of TTI during UL rate modification) (TDD) 2666
8.2.4.36b Transport Channel Reconfiguration from CELL_DCH to CELL_DCH: Success (with active HS-DSCH reception, not changing the value of TTI during UL rate modification) (In a different frequency band) 2671
8.2.4.36c Transport Channel Reconfiguration from CELL_DCH to CELL_DCH: Success (inter-band frequency hard handover,,with active HS-DSCH reception, not changing the value of TTI during UL rate modification, LCR TDD band a-f) 2672
8.2.5 Transport format combination control 2674
8.2.5.1 Void 2674
8.2.5.2 Void 2674
8.2.5.3 Void 2674
8.2.5.4 Transport format combination control in CELL_DCH: Failure (Invalid configuration) 2674
8.2.6 Physical channel reconfiguration 2677
8.2.6.1 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (code modification): Success 2677
8.2.6.1a Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (code modification): Success (1.28 Mcps TDD Only) 2679
8.2.6.2 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (code modification): Failure (Unsupported configuration) 2682
8.2.6.3 Void 2685
8.2.6.4 Void 2685
8.2.6.5 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (code modification): Failure (Incompatible simultaneous reconfiguration) 2685
8.2.6.6 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (code modification): Failure (Invalid message reception and Invalid configuration) 2688
8.2.6.7 Physical channel reconfiguration for transition from CELL_DCH to CELL_FACH: Success 2692
8.2.6.8 Physical channel reconfiguration for transition from CELL_DCH to CELL_FACH: Success (Cell re-selection) 2693
8.2.6.9 Physical channel reconfiguration for transition from CELL_FACH to CELL_DCH: Success 2696
8.2.6.9a Physical channel reconfiguration for transition from CELL_FACH to CELL_DCH: Success(1.28 Mcps TDD Only) 2699
8.2.6.10 Void 2701
8.2.6.11 Physical channel reconfiguration for transition from CELL_FACH to CELL_DCH: Failure (Physical channel failure and successful reversion to old configuration) 2701
8.2.6.12 Physical channel reconfiguration for transition from CELL_FACH to CELL_DCH: Failure (Physical channel failure and cell update) 2704
8.2.6.13 Void 2708
8.2.6.14 Physical channel reconfiguration for transition from CELL_FACH to CELL_DCH: Failure (Invalid message reception and Invalid configuration) 2708
8.2.6.15 Void 2713
8.2.6.16 Void 2713
8.2.6.17 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (code modification): Success (Subsequently received) 2713

8.2.6.18 Physical channel reconfiguration for transition from CELL_FACH to CELL_DCH: Success (Subsequently received) 2715
8.2.6.19 Physical Channel Reconfiguration from CELL_DCH to CELL_PCH: Success 2718
8.2.6.20 Physical Channel Reconfiguration from CELL_DCH to URA_PCH: Success 2720
8.2.6.21 Physical Channel Reconfiguration from CELL_FACH to URA_PCH: Success 2723
8.2.6.22 Void 2724
8.2.6.23 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Hard handover to another frequency with timing maintain): Success 2724
8.2.6.24 Void 2726
8.2.6.25 Physical channel reconfiguration for transition from CELL_DCH to CELL_FACH (Frequency modification): Success 2726
8.2.6.26 Physical Channel Reconfiguration from CELL_DCH to CELL_PCH (Frequency modification): Success 2730
8.2.6.27 Physical channel reconfiguration from CELL_FACH to CELL_PCH: Success 2734
8.2.6.28 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Downlink channelisation code modification): Success 2736
8.2.6.29 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Compressed mode initiation): Success 2737
8.2.6.30 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Modify active set cell): Success 2743
8.2.6.31 Physical channel reconfiguration transition from CELL_FACH to URA_PCH: Success 2745
8.2.6.32 Physical channel reconfiguration for transition from CELL_DCH to URA_PCH (Frequency band modification): Success 2747
8.2.6.33 Physical channel reconfiguration for transition from CELL_FACH to CELL_DCH (Frequency band modification): Success 2749
8.2.6.34 Physical channel reconfiguration from CELL_FACH to CELL_PCH (Frequency band modification): Success 2752
8.2.6.35 Physical channel reconfiguration for transition from CELL_FACH to URA_PCH (Frequency band modification): Success 2755
8.2.6.36 Physical channel reconfiguration for transition from CELL_FACH to CELL_FACH (Frequency band modification): Success 2757
8.2.6.37 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Hard handover to another frequency with timing re-initialised) 2760
8.2.6.37a Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Hard handover to another frequency with timing re-initialised) (1.28 Mcps TDD) 2782
8.2.6.37b Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Hard handover to another frequency band cell with timing re-initialised) 2792
8.2.6.37c Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Hard handover to another frequency with timing re-initialised) (1.28 Mcps TDD) (TDD a-f band) 2793
8.2.6.37d Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Hard handover to another frequency with uplink pre-synchronisation) (1.28 Mcps TDD) 2794
8.2.6.37e Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Hard handover to another frequency band cell with uplink pre-synchronisation) (1.28 Mcps TDD) 2795
8.2.6.38 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Hard handover to another frequency with timing re-initialised): Failure (Physical channel failure and reversion to old channel) 2796
8.2.6.39 Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Seamless SRNS relocation) (without pending of ciphering) 2810
8.2.6.39a Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (serving HS-DSCH cell change without MAC-hs reset) 2817
8.2.6.39b Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (serving HS-DSCH cell change with MAC-hs reset) 2836
8.2.6.39c Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (serving HS-DSCH cell change without MAC-hs reset) (TDD) 2855
8.2.6.39d Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (serving HS-DSCH cell change with MAC-hs reset) (1.28 Mcps TDD) 2863
8.2.6.40 Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Two radio links, change of HS-PDSCH configuration) 2869
8.2.6.40a Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (change of HS-PDSCH configuration) 2875
8.2.6.41 Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Timing re-initialised hard handover to another frequency, signalling only) 2879

8.2.6.42 Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Timing re-initialized hard handover to another frequency, Serving HS-DSCH cell change) 2882
8.2.6.42a Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Timing re-initialized hard handover to another frequency, Serving HS-DSCH cell change) (Cells belong to different frequency bands for LCR TDD) 2894
8.2.6.43 Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Seamless SRNS relocation with pending of ciphering) 2895
8.2.6.44 Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Failure (Radio link failure in new configuration) 2903
8.2.6.45 Physical Channel Reconfiguration for transition from CELL_DCH to URA_PCH: Failure (Radio link failure in old configuration) 2910
8.2.6.46 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Hard handover to another frequency with timing re-initialised. Serving HS-DSCH cell change): Failure (Physical channel failure and reversion to old channel) 2912
8.2.6.47 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Compressed mode initiation, with active HS-DSCH reception): Success 2920
8.2.6.48 Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Timing re-initialized hard handover to another frequency, serving HS-DSCH cell change, compressed mode) 2926
8.2.6.48a Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Timing re-initialized hard handover to another frequency, serving HS-DSCH cell change, with measurement report) for 3.84 Mcps TDD 2934
8.2.6.49 Physical Channel Reconfiguration from CELL_DCH to URA_PCH: Success (stop of HS-DSCH reception) 2940
8.2.6.50 Physical Channel Reconfiguration for transition from CELL_DCH to URA_PCH: Success (frequency modification, stop of E-DCH transmission) 2943
8.2.6.51 Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (serving E-DCH cell change) 2947
8.2.6.52 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Timing re-initialized hard handover to another frequency, Serving E-DCH cell change, compressed mode) 2972
8.2.6.53 Void 2987
8.2.6.54 Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Failure (Timing re-initialized hard handover, Serving E-DCH cell change, physical channel failure and reversion to old channel) 2987
8.2.6.54a Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Failure (Timing re-initialized hard handover, Serving E-DCH and HS-DSCH cell change with MIMO activated, physical channel failure and reversion to old channel) 2993
8.2.6.54b Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Failure (Timing re-initialized hard handover, Serving E-DCH and HS-DSCH cell change with MIMO and 64QAM activated, physical channel failure and reversion to old channel) 2997
8.2.6.54c Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Failure (Timing re-initialized hard handover, Serving E-DCH cell change, physical channel failure and reversion to old channel, in the multi-frequency network environment, for 1.28Mcps TDD only) 3002
8.2.6.55 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Start of discontinuous uplink transmission and downlink reception) 3005
8.2.6.56 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Start of HS-SCCH less operation) 3009
8.2.6.57 Physical Channel Reconfiguration for transition from CELL_DCH to URA_PCH: Success (frequency modification, stop of discontinuous uplink transmission) 3011
8.2.6.58 Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Success (serving E-DCH cell change with discontinuous uplink transmission) 3015
8.2.6.59 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Timing re-initialized hard handover to another frequency, Serving E-DCH cell change with discontinuous uplink transmission) 3030
8.2.6.60 Physical Channel Reconfiguration for transition from CELL_DCH to CELL_DCH: Failure (Timing re-initialised hard handover, Serving E-DCH cell change with discontinuous uplink transmission, physical channel failure and reversion to old channel) 3040
8.2.6.61 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH: Success (CQI reporting reduction) 3044
8.2.6.62 Physical Channel Reconfiguration from CELL_DCH to CELL_DCH: Success (activation and de-activation of 64QAM) 3048

8.2.6.62a Physical Channel Reconfiguration from CELL_DCH to CELL_DCH: Success (activation and de-activation of 64QAM) with SRBs mapped in E-DCH/DCH....3051
8.2.6.63 Physical Channel Reconfiguration from CELL_DCH to CELL_DCH: Success (Timing re-initialised hard handover to another frequency, Serving HS-DSCH cell change with MIMO enabled)....3054
8.2.6.64 Physical channel reconfigurations for transition from CELL_DCH to CELL_DCH (activation and de-activation of UL 16QAM): Success....3059
8.2.6.65 Physical Channel Reconfiguration from CELL_DCH to CELL_DCH: Success (Timing re-initialised hard handover to another frequency, Serving HS-DSCH cell change with 64QAM and MIMO enabled)....3063
8.2.6.66 Physical Channel Reconfiguration from CELL_PCH to CELL_FACH: Success (autonomous transitions without cell update procedure)....3070
8.2.6.67 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Start of SPS operation without initial SPS resource) (1.28 Mcps TDD)....3075
8.2.6.68 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Start of SPS operation with initial SPS resource) (1.28 Mcps TDD)....3080
8.2.6.69 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH: Success (Start of Control Channel DRX operation) (1.28 Mcps TDD)....3084
8.2.7 Physical Shared Channel Allocation [TDD only]....3086
8.2.8 PUSCH capacity request [TDD only]....3086
8.2.9 Void....3087
8.2.10.1 WLAN Offload / Offload Success / UTRA RRC_Connected to/from WLAN (RSRPmeas, BackhaulRateUlWLAN)....3087
8.2.10.2 WLAN Offload / Offload Success / UTRA RRC_Connected to/from WLAN ($RSRP_{meas}$, ChannelUtilizationWLAN)....3089
8.2.10.3 WLAN Offload / Offload Success / UTRA RRC_Connected to/from WLAN ($RSRQ_{meas}$, BeaconRSSI) WLAN identifier no match/match....3092
8.2.10.4 WLAN Offload / Offload Success / UTRA RRC_Connected to/from WLAN ($RSRQ_{meas}$, BackhaulRateDlWLAN)....3096
8.2.10.5 WLAN Offload / T330 expiry....3098
8.2.10.6 Void....3101
8.2.10.7 WLAN Offload / Offload Success / UTRA RRC_Connected to/from WLAN (ANDSF and RAN rules co-existence)....3101
8.3 RRC connection mobility procedure....3107
8.3.1 Cell Update....3107
8.3.1.1 Cell Update: cell reselection in CELL_FACH....3107
8.3.1.1a Cell Update: cell reselection in CELL_FACH (Cells belong to different frequency bands)....3119
8.3.1.1b Cell Update: cell reselection in CELL_FACH(TDD)....3121
8.3.1.1c Cell Update: cell reselection in CELL_FACH (Cells belong to different frequency bands for LCR TDD)....3134
8.3.1.1d Inter-frequency absolute priority based reselection in CELL_FACH (Lower Priority)....3136
8.3.1.1e Inter-frequency absolute priority based reselection in CELL_FACH (Higher Priority)....3142
8.3.1.1f Inter-frequency reselection to a no priority layer when NW and UE supports absolute priority in CELL_FACH....3149
8.3.1.2 Cell Update: cell reselection in CELL_PCH....3152
8.3.1.3 Cell Update: periodical cell update in CELL_FACH....3155
8.3.1.3a Cell Update: periodical cell update in CELL_FACH (1.28 Mcps TDD Only)....3162
8.3.1.4 Cell Update: periodical cell update in CELL_PCH....3170
8.3.1.5 Cell Update: UL data transmission in URA_PCH....3175
8.3.1.6 Cell Update: UL data transmission in CELL_PCH....3178
8.3.1.7 Void....3181
8.3.1.8 Void....3181
8.3.1.9 Cell Update: re-entering of service area after T305 expiry and being out of service area....3181
8.3.1.10 Cell Update: expiry of T307 after T305 expiry and being out of service area....3185
8.3.1.11 Cell Update: Success after T302 time-out....3187
8.3.1.12 Cell Update: Failure (After Maximum Re-transmissions)....3189
8.3.1.13 Cell Update: Reception of Invalid CELL UPDATE CONFIRM Message....3191
8.3.1.14 Cell Update: Incompatible simultaneous reconfiguration....3194
8.3.1.15 Cell Update: Unrecoverable error in Acknowledged Mode RLC SRB....3196
8.3.1.16 Void....3202
8.3.1.17 Cell Update: Failure (UTRAN initiate an RRC connection release procedure on CCCH)....3202
8.3.1.18 Cell Update: Radio Link Failure (T314>0, T315=0), CS RAB established....3204

8.3.1.19 Void....3210
8.3.1.20 Cell Update: Reception of CELL UPDATE CONFIRM Message that causes invalid configuration....3210
8.3.1.21 Cell Update: Cell reselection to cell of another PLMN belonging to the equivalent PLMN list....3212
8.3.1.22 Cell update: Restricted cell reselection to a cell belonging to forbidden LA list (Cell_FACH)....3215
8.3.1.23 Cell Update: HCS cell reselection in CELL_FACH....3219
8.3.1.24 Cell Update: HCS cell reselection in CELL_PCH....3236
8.3.1.25 CELL UPDATE: Radio Link Failure (T314=0, T315=0)....3254
8.3.1.26 Cell Update: Radio Link Failure (T314>0, T315=0), PS RAB established....3256
8.3.1.27 Cell Update: Radio Link Failure (T314=0, T315>0), CS RAB....3261
8.3.1.28 Cell Update: Radio Link Failure (T314=0, T315>0), PS RAB....3263
8.3.1.29 Cell Update: Radio Link Failure (T314>0, T315>0), CS RAB....3267
8.3.1.30 Cell Update: Radio Link Failure (T314>0, T315>0), PS RAB....3271
8.3.1.31 Cell Update: re-entering of service area from URA_PCH after T316 expiry but before T317 expiry....3277
8.3.1.32 Cell Update: Transition from URA_PCH to CELL_DCH, start of HS-DSCH reception....3282
8.3.1.32a Cell Update: Transition from URA_PCH to CELL_DCH, start of HS-DSCH reception (Carriers belong to different frequency band for LCR TDD)....3286
8.3.1.33 Cell Update: Transition from CELL_PCH to CELL_DCH, start of HS-DSCH reception, frequency modification....3287
8.3.1.33a Cell Update: Transition from CELL_PCH to CELL_DCH, start of HS-DSCH reception, frequency modification(TDD)....3297
8.3.1.34 Cell Update: Transition from CELL_DCH to CELL_FACH, stop of HS-DSCH reception....3303
8.3.1.35 Cell Update: Transition from CELL_DCH to CELL_DCH, with active HS-DSCH reception....3312
8.3.1.36 Cell Update: Transition from CELL_DCH to CELL_FACH (stop of HS-DSCH reception with frequency modification)....3316
8.3.1.37 Cell Update: Transition from CELL_DCH to CELL_DCH (with active HS-DSCH reception and frequency modification)....3324
8.3.1.38 Cell Update: state specific handling of Treselection and Qhyst for cell reselection in CELL_FACH....3329
8.3.1.39 Cell Update: state specific handling of Treselection and Qhyst for cell reselection in CELL_PCH.3332
8.3.1.40 Cell update: Transition from CELL_PCH to CELL_DCH, inclusion of establishment cause....3336
8.3.1.41 Cell Update: Transition from URA_PCH to CELL_DCH: Success (start of E-DCH transmission) 3339
8.3.1.41a Cell Update: Transition from URA_PCH to CELL_DCH: Success (start of E-DCH transmission, in the multi-frequency network environment, for 1.28Mcps TDD only)....3347
8.3.1.42 Cell Update: Transition from CELL_PCH to CELL_DCH: Success (frequency modification, start of E-DCH transmission)....3355
8.3.1.42a Cell Update: Transition from CELL_PCH to CELL_DCH: Success (frequency modification, start of E-DCH transmission, F-DPCH Configured)....3393
8.3.1.42b Cell Update: Transition from CELL_PCH to CELL_DCH: Success (frequency modification, start of E-DCH transmission in the multi-frequency network environment, for 1.28Mcps TDD only)....3402
8.3.1.43 Cell Update: Radio Link Failure, with active E-DCH transmission....3418
8.3.1.44 Cell Update: Transition from CELL_PCH to CELL_DCH: Success (frequency modification, start of discontinuous uplink transmission)....3429
8.3.1.45 Cell Update: Radio Link Failure, with active discontinuous uplink transmission....3444
8.3.1.46 Cell Update: Transition from URA_PCH to CELL_DCH: Success (start of discontinuous uplink transmission)....3452
8.3.1.47 Cell Update: cell reselection in CELL_FACH (Reselection between cell not supporting HS-PDSCH in CELL_FACH and cell supporting HS-PDSCH is CELL_FACH)....3461
8.3.1.48 Cell Update: Radio Link Failure, UM RLC Re-establishment....3471
8.3.1.49 Cell Update: Intra Frequency cell reselection in Enhanced CELL_FACH with DRX configured ...3482
8.3.1.49a Cell Update: Inter Frequency cell reselection in Enhanced CELL_FACH with DRX configured ...3487
8.3.1.49b Cell Update: Intra Frequency cell reselection in Enhanced CELL_FACH with DRX configured / second DRX cycle with 2-level DRX....3492
8.3.1.49c Cell Update: Inter Frequency cell reselection in Enhanced CELL_FACH with DRX configured / second DRX cycle with 2-level DRX....3499
8.3.1.50 Cell Update: Cell reselection in CELL_FACH when common E-DCH resource is released....3506
8.3.1.51 Cell Update: Cell reselection in CELL_FACH (Reselection between cell not supporting HS-PDSCH and E-DCH in CELL_FACH and cell supporting HS-PDSCH and E-DCH in CELL_FACH)....3509
8.3.1.52 Cell Update: Inter Frequency cell reselection in CELL_FACH based on absolute priority....3520

8.3.1.53 Cell Update: Absolute priority based cell reselection failure to inter-frequency cell for which no priority or no threshold is assigned 3526
8.3.1.54 Cell Update: Absolute priority based cell reselection when more than one cell meets the criterion.3534
8.3.2 URA Update 3541
8.3.2.1 URA Update: Change of URA....3541
8.3.2.1a URA Update: Change of URA (Cells belong to different frequency bands) 3548
8.3.2.1b URA Update: Change of URA (Cells belong to different frequency bands for LCR TDD)....3549
8.3.2.2 URA Update: Periodical URA update and Reception of Invalid message....3550
8.3.2.3 Void....3553
8.3.2.4 URA Update: loss of service after expiry of timers T307 and T305....3553
8.3.2.5 URA Update: Success after Confirmation error of URA-ID list....3556
8.3.2.6 URA Update: Failure (V302 is greater than N302: Confirmation error of URA-ID list) 3559
8.3.2.7 URA Update: Success after T302 timeout 3562
8.3.2.8 Void....3564
8.3.2.9 URA Update: Failure (UTRAN initiate an RRC connection release procedure on CCCH) 3564
8.3.2.10 URA Update: Reception of URA UPDATE CONFIRM message that causes invalid configuration 3566
8.3.2.11 URA Update: Cell reselection to cell of another PLMN belonging to the equivalent PLMN list....3568
8.3.2.12 Restricted cell reselection to a cell belonging to forbidden LA list (URA_PCH)....3571
8.3.2.13 URA Update: Change of URA due to HCS Cell Reselection 3573
8.3.3 UTRAN Mobility Information....3586
8.3.3.1 UTRAN Mobility Information: Success 3586
8.3.3.2 UTRAN Mobility Information: Failure (Invalid message reception)....3589
8.3.3.3 UTRAN MOBILITY INFORMATION: Seamless SRNS relocation in CELL_DCH (without pending of ciphering) 3592
8.3.3.4 UTRAN Mobility Information: Shared Network....3598
8.3.4 Active set update in soft handover (FDD) 3601
8.3.4.1 Active set update in soft handover: Radio Link addition 3601
8.3.4.2 Active set update in soft handover: Radio Link removal 3607
8.3.4.3 Active set update in soft handover: Combined radio link addition and removal 3614
8.3.4.4 Active set update in soft handover: Invalid Configuration....3624
8.3.4.5 Active set update in soft handover: Reception of an ACTIVE SET UPDATE message in wrong state 3627
8.3.4.6 Void....3630
8.3.4.7 Active set update in soft handover: Invalid Message Reception....3630
8.3.4.8 Active set update in soft handover: Radio Link addition in multiple radio link environment 3634
8.3.4.9 Active set update in soft handover: Radio Link removal (stop of HS-PDSCH reception)....3650
8.3.4.10 Active set update in soft handover: Radio Link addition and serving HS-DSCH / E-DCH cell change 3656
8.3.4.11 Active set update in soft handover: Radio Link addition/removal and serving HS-DSCH / E-DCH cell change, with discontinuous uplink transmission....3661
8.3.4.12 Active set update in soft handover: Radio Link addition/removal (stop and start of UL 16QAM) ..3673
8.3.4.13 Active set update in soft handover: Radio Link addition/removal and serving HS-DSCH / E-DCH cell change, with activation/deactivation of 64QAM 3687
8.3.4.13a Active set update in soft handover: Radio Link addition/removal and serving HS-DSCH/E-DCH cell change, with activation/deactivation of 64QAM with SRBs mapped to E-DCH/DCH....3694
8.3.4.14 Active Set Update in Soft Handover: Radio Link addition/removal and serving HS-DSCH / E-DCH cell change with activation/deactivation of MIMO 3701
8.3.4.14a Active Set Update in Soft Handover: Radio Link addition/removal and serving HS-DSCH / E-DCH cell change with activation/deactivation of MIMO with SRBs mapped on E-DCH/DCH 3719
8.3.4.15 Active set update: Dual Cell (DC) Activation by Serving Cell Change from non DC-HSDPA capable cell to DC-HSDPA capable cell....3734
8.3.4.15a Active set update: Dual Cell (DC) Activation by Serving Cell Change from non DC-HSDPA capable cell to DC-HSDPA capable cell with SRB mapped on E-DCH/DCH 3740
8.3.4.16 Active set update: Dual Cell (DC) Activation by Serving Cell Change from DC-HSDPA capable cell to non DC-HSDPA capable cell....3747
8.3.4.16a Active set update: Dual Cell (DC) Activation by Serving Cell Change from DC-HSDPA capable cell to non DC-HSDPA capable cell with SRB mapped on E-DCH/DCH 3753
8.3.4.17 Active Set Update in Soft Handover: Radio Link addition/removal and serving HS-DSCH / E-DCH cell change with simultaneous activation/deactivation of 64QAM and MIMO....3759
8.3.4.18 Test procedure for enhanced serving HS-DSCH cell change: serving HS-DSCH / E-DCH cell change, with discontinuous uplink transmission and downlink reception 3777

8.3.4.19 Active set update: Dual Cell (DC) and MIMO Activation by Serving Cell Change from non-DC-HSDPA capable cell to DC-HSDPA capable cell 3787
8.3.4.19a Void 3795
8.3.4.19b Active set update: DB-DC-HSDPA and MIMO Activation by Serving Cell Change from non-DC-HSDPA capable cell to DB-DC-HSDPA capable cell 3795
8.3.4.20 Active set update in soft handover: Radio Link addition/removal on the secondary E-DCH active set 3795
8.3.4.21 Active Set Update: MIMO Activation by serving cell changes with and without PCI Restrictions and S-CPICH Power Offsets (16QAM + MIMO) 3808
8.3.4.22 Active set update: Dual Cell (DC) Activation by Serving Cell Change from non DC-HSDPA capable cell to DC-HSDPA capable cell with discontinuous uplink transmission and downlink reception 3817
8.3.4.23 Active set update in soft handover: Radio Link addition/deletion in multiple radio link environment with 3C-HSDPA or 4C-HSDPA remaining active 3826
8.3.4.23.1 Active set update in soft handover: Radio Link addition/deletion in multiple radio link environment with 3C-HSDPA remaining active / Single band 3826
8.3.4.23.2 Active set update in soft handover: Radio Link addition/deletion in multiple radio link environment with 3C-HSDPA remaining active / Single band / MIMO 3832
8.3.4.23.3 Active set update in soft handover: Radio Link addition/deletion in multiple radio link environment with 3C-HSDPA remaining active / Dual band 3841
8.3.4.24 Active set update with Multiflow reconfiguration with SRBs mapped on DCH: Successful reconfiguration of Multiflow HSDPA for single and dual bands / Inter-Node B 3842
8.3.5 Hard Handover 3851
8.3.6 Inter-system hard handover from GSM to UTRAN 3851
8.3.7 Inter-system hard handover from UTRAN to GSM 3851
8.3.7.1 Inter system handover from UTRAN/To GSM/Speech/Success with UEA1/UIA1 and A5/1 ciphering 3856
8.3.7.1a Inter system handover from UTRAN/To GSM/Speech/Success with UEA1/UIA1 and A5/3 ciphering 3860
8.3.7.1b Inter system handover from UTRAN/To GSM/Speech/Success with UEA2/UIA2 and A5/3 ciphering 3860
8.3.7.1c Inter system handover from UTRAN/To GSM/Speech/Success with UEA1/UIA1 and A5/4 ciphering 3861
8.3.7.1d Inter system handover from UTRAN/To GSM/Speech/Success with UEA2/UIA2 and A5/4 ciphering 3862
8.3.7.2 Inter system handover from UTRAN/To GSM/Data/Same data rate/Success 3862
8.3.7.2a Inter system handover from UTRAN/To GSM/Data/Same data rate/Extended Rates/Success 3866
8.3.7.3 Inter system handover from UTRAN/To GSM/Data/Data rate down grading/Success 3870
8.3.7.3a Inter system handover from UTRAN/To GSM/Data/Data rate down grading/Extended Rates/Success 3873
8.3.7.4 Inter system handover from UTRAN/To GSM/Speech/Establishment/Success 3876
8.3.7.5 Inter system handover from UTRAN/To GSM/Speech/Failure 3878
8.3.7.6 Inter system handover from UTRAN/To GSM/Speech/Failure (L2 Establishment) 3884
8.3.7.7 Inter system handover from UTRAN/To GSM/Speech/Failure (L1 Synchronization) 3887
8.3.7.8 Inter system handover from UTRAN/To GSM/Speech/Failure (Invalid Inter-RAT message) 3889
8.3.7.9 Inter system handover from UTRAN/To GSM/Speech/Failure (Unsupported configuration) 3891
8.3.7.10 Inter system handover from UTRAN/To GSM/Speech/Failure (Reception by UE in CELL_FACH) 3893
8.3.7.11 Inter system handover from UTRAN/To GSM/Speech/Failure (Invalid message reception) 3894
8.3.7.12 Inter system handover from UTRAN/To GSM/Speech/Failure (Physical channel Failure and Reversion Failure) 3896
8.3.7.13 Inter system handover from UTRAN/To GSM/ success / call under establishment 3903
8.3.7.14 Inter system handover from UTRAN/To GSM/Speech/Success (stop of HS-DSCH reception) 3906
8.3.7.15 Inter system handover from UTRAN/To GSM/Speech/Failure(stop of HS-DSCH reception) 3914
8.3.7.16 Inter system handover from UTRAN/To GSM/Simultaneous CS and PS domain services/Success/TBF Establishment Success 3916
8.3.7.17 Inter system handover from UTRAN/To GSM/DTM Support/Simultaneous CS and PS domain services/Success 3920
8.3.8 Inter system cell reselection to UTRAN 3923
8.3.9 Inter system cell reselection from UTRAN 3924
8.3.9.1 Cell reselection if cell becomes barred or S<0; UTRAN to GPRS (CELL_FACH) 3929

8.3.9.1a Cell reselection if cell becomes barred or S<0; UTRAN to GPRS (CELL_FACH), 1.28Mcps TDD 3932
8.3.9.2 Cell reselection if cell becomes barred or S<0; UTRAN to GPRS (URA_PCH) 3935
8.3.9.2a Cell reselection if cell becomes barred or S<0; UTRAN to GPRS (URA_PCH), 1.28Mcps TDD ..3937
8.3.9.3 Cell reselection if cell rank changes; UTRAN to GPRS (UE in CELL_FACH fails to complete an inter-RAT cell reselection) 3939
8.3.9.4 Cell reselection if S<0; UTRAN to GPRS (UE in CELL_PCH fails to complete an inter-RAT cell reselection) 3941
8.3.9.4a Cell reselection if S<0; UTRAN to GPRS (UE in CELL_PCH fails to complete an inter-RAT cell reselection), 1.28Mcps TDD 3943
8.3.9.5 Successful Cell Reselection with RAU – Q_{offset} value modification; UTRAN to GPRS (CELL_FACH) 3944
8.3.9.5a Successful Cell Reselection with RAU – Q_{offset} value modification; UTRAN to GPRS (CELL_FACH), 1.28Mcps TDD 3947
8.3.10 Void 3949
8.3.11 Inter-RAT cell change order from UTRAN 3949
8.3.11.1 Inter-RAT cell change order from UTRAN/To GPRS/CELL_DCH/Success with UEA1/UIA1, GEA2 ciphering 3949
8.3.11.1a Inter-RAT cell change order from UTRAN/To GPRS/CELL_DCH/Success with UEA2/UIA2, GEA2 ciphering 3952
8.3.11.1b Inter-RAT cell change order from UTRAN/To GPRS/CELL_DCH/Success with UEA2/UIA2 and GEA3 ciphering 3953
8.3.11.1c Inter-RAT cell change order from UTRAN/To GPRS/CELL_DCH/Success with UEA2/UIA2 and GEA4 ciphering 3953
8.3.11.2 Inter-RAT cell change order from UTRAN/To GPRS/CELL_FACH/Success 3954
8.3.11.3 Inter-RAT cell change order from UTRAN/To GPRS/CELL_DCH/Failure (T309 expiry) 3956
8.3.11.4 Inter-RAT cell change order from UTRAN/To GPRS/CELL_DCH/Failure (Physical channel Failure and Reversion Failure) 3959
8.3.11.5 Inter-RAT cell change order from UTRAN/To GPRS/CELL_FACH/Failure (T309 expiry) 3967
8.3.11.6 Inter-RAT cell change order from UTRAN/To GPRS/CELL_FACH/Failure (Physical channel Failure and Reversion Failure) 3969
8.3.11.7 Inter-RAT cell change order from UTRAN/To GPRS/ Failure (Unsupported configuration) 3973
8.3.11.8 Inter-RAT cell change order from UTRAN/To GPRS/ Failure (Invalid Inter-RAT message) 3974
8.3.11.9 Inter-RAT Cell Change Order from UTRAN to GPRS/CELL_DCH/Success (stop of HS-DSCH reception) 3976
8.3.11.10 Inter-RAT Cell Change Order from UTRAN to GPRS/CELL_DCH/Failure (Physical channel Failure) 3980
8.3.11.11 Inter-RAT cell change order from UTRAN/To GPRS/CELL_FACH/No RAB established/Success 3983
8.3.11.12 Inter-RAT cell change order from UTRAN/To GPRS/CELL_DCH/Network Assisted Cell Change/Success 3985
8.3.11.13 Inter-RAT cell change order from UTRAN/To GPRS/CELL_DCH/Network Assisted Cell Change with Invalid SI/Success 3987
8.3.11.14 Inter-RAT Cell Change Order from UTRAN to GPRS/CELL_DCH/Success (stop of E-DCH transmission) 3989
8.3.11.15 Inter-RAT Cell Change Order from UTRAN to GPRS/CELL_DCH/Success (stop of discontinuous uplink transmission) 3992
8.3.11.16 Inter-RAT Cell Change Order from UTRAN to GPRS/ MIMO (Success: with PCI Restrictions and S-CPICH Power Offset) 3995
8.3.11.17 Inter-RAT Cell Change Order from UTRAN to GPRS/MIMO for S-CPICH based MIMO with DPCH in STTD (Failure;physical channel failure) 4004
8.3.11.18 Inter-RAT Cell Change Order from UTRAN to GPRS/ MIMO (Failure; with PCI Restrictions and S-CPICH Power Offset) 4010
8.3.12 Handover to CSG/Hybrid Cell 4017
8.3.12.1 Inter-frequency inbound handover to UMTS CSG cell without reporting proximity indication 4017
8.3.12.2 Inter-frequency inbound handover to UMTS CSG cell 4027
8.3.12.3 Inter-frequency Measurements of UMTS CSG cell by non-member UE 4035
8.3.12.4 Intra-frequency inbound handover to UMTS CSG cell without specifying PSCs for SI Acquisition 4043
8.3.12.5 Intra-frequency inbound handover to UMTS CSG cell without reporting proximity indication 4049
8.3.12.6 Intra-frequency inbound handover to UMTS CSG cell 4055
8.3.12.7 Intra-frequency Measurements for UMTS CSG Cell for Non-member UE 4062

8.3.12.8 Intra-frequency Inbound Handover to UMTS Hybrid Cell 4067
8.3.12.9 Intra-frequency Inbound Handover to UMTS Hybrid Cell for Non-member UE 4069
8.3.12.10 Intra-frequency inbound handover to UMTS non-CSG cell 4075
8.3.12.11 Inter-frequency Measurement of UMTS non-CSG cell 4080
8.3.12.12 Membership checking for handover to the CSG Cell 4088
8.3.12.13 Void 4095
8.3.12.14 Inter-frequency CSG proximity indication 4095
8.4 Measurement procedure 4099
8.4.1 Measurement Control and Report 4099
8.4.1.1 Measurement Control and Report: Intra-frequency measurement for transition from idle mode to CELL_DCH state (FDD) 4099
8.4.1.1a Measurement Control and Report: Intra-frequency measurement for transition from idle mode to CELL_DCH state (TDD) 4113
8.4.1.2 Measurement Control and Report: Inter-frequency measurement for transition from idle mode to CELL_DCH state (FDD) 4124
8.4.1.2a Measurement Control and Report: Inter-frequency measurement for transition from idle mode to CELL_DCH state (TDD) 4137
8.4.1.2b Measurement Control and Report: Inter-band measurement for transition from idle mode to CELL_DCH state (FDD) 4145
8.4.1.2c Measurement Control and Report: Inter-frequency measurement for transition from idle mode to CELL_DCH state (Cells belong to different frequency bands for LCR TDD) 4146
8.4.1.3 Measurement Control and Report: Intra-frequency measurement for transition from idle mode to CELL_FACH state (FDD) 4147
8.4.1.3a Measurement Control and Report: Intra-frequency measurement for transition from idle mode to CELL_FACH state (TDD) 4153
8.4.1.4 Measurement Control and Report: Inter-frequency measurement for transition from idle mode to CELL_FACH state (FDD) 4159
8.4.1.4a Measurement Control and Report: Inter-frequency measurement for transition from idle mode to CELL_FACH state (TDD) 4162
8.4.1.5 Measurement Control and Report: Intra-frequency measurement for transition from CELL_DCH to CELL_FACH state (FDD) 4165
8.4.1.5a Measurement Control and Report: Intra-frequency measurement for transition from CELL_DCH to CELL_FACH state (TDD) 4175
8.4.1.6 Measurement Control and Report: Inter-frequency measurement for transition from CELL_DCH to CELL_FACH state (FDD) 4185
8.4.1.6a Measurement Control and Report: Inter-frequency measurement for transition from CELL_DCH to CELL_FACH state (TDD) 4192
8.4.1.7 Measurement Control and Report: Intra-frequency measurement for transition from CELL_FACH to CELL_DCH state (FDD) 4198
8.4.1.7a Measurement Control and Report: Intra-frequency measurement for transition from CELL_FACH to CELL_DCH state (TDD) 4218
8.4.1.8 Measurement Control and Report: Inter-frequency measurement for transition from CELL_FACH to CELL_DCH state (FDD) 4241
8.4.1.8a Measurement Control and Report: Inter-frequency measurement for transition from CELL_FACH to CELL_DCH state (TDD) 4254
8.4.1.9 Measurement Control and Report: Unsupported measurement in the UE 4261
8.4.1.10 Measurement Control and Report: Failure (Invalid Message Reception) 4265
8.4.1.11 Void 4267
8.4.1.12 Void 4267
8.4.1.13 Void 4267
8.4.1.14 Measurement Control and Report: Cell forbidden to affect reporting range (FDD) 4267
8.4.1.15 Measurement Control and Report: Configuration Incomplete 4280
8.4.1.16 Measurement Control and Report: Traffic volume measurement for transition from idle mode to CELL_FACH state 4291
8.4.1.17 Measurement Control and Report: Traffic volume measurement for transition from idle mode to CELL_DCH state 4298
8.4.1.18 Measurement Control and Report: Traffic volume measurement for transition from CELL_FACH state to CELL_DCH state 4304
8.4.1.18a Measurement Control and Report: Traffic volume measurement for transition from Enhanced CELL_FACH state (common E-DCH in UL and HS-DSCH DL) to CELL_DCH state 4313
8.4.1.19 Measurement Control and Report: Traffic volume measurement for transition from CELL_DCH to CELL_FACH state 4326

8.4.1.20 Void....4335

8.5.1.12m MBMS PTP Session Start at MCCH Notification in URA_PCH / MBMS Multicast Service....4684
8.5.1.13 MBMS PTP Session Start at MCCH Notification in CELL_FACH / MBMS Selected Service....4685
8.5.1.13m MBMS PTP Session Start at MCCH Notification in CELL_FACH / MBMS Multicast Service....4689
8.5.1.14 MBMS PTM Session Start at MCCH Acquisition / MBSFN mode....4690
8.5.1.15 MBMS PTM Session Start at MCCH Notification / MBSFN mode....4694
8.5.2 MBMS Session Reconfiguration....4699
8.5.2.1 MBMS PTP Session Reconfiguration – Change of Activated Service / MBMS Selected Service....4699
8.5.2.1m MBMS PTM Session Reconfiguration - Change of Activated Service / MBSFN mode (FDD)....4704
8.5.2.2 MBMS PTM Session Reconfiguration – Transfer Mode Change to PTP / MBMS Selected Service....4710
8.5.2.2m MBMS PTM Session Reconfiguration - Transfer Mode Change to PTP / MBMS Multicast Service....4714
8.5.2.3 MBMS PTP Session Reconfiguration - Transfer mode change to PTM / MBMS Selected Service 4716
8.5.2.3m MBMS PTP Session Reconfiguration - Transfer mode change to PTM / MBMS Multicast Service....4721
8.5.2.4 MBMS PTM Session Reconfiguration – MTCH data rate change / MBMS Broadcast Service....4723
8.5.2.4m MBMS PTM Session Reconfiguration – MTCH data rate change / MBMS Multicast Service....4726
8.5.2.5 MBMS PTM Session Reconfiguration - MTCH Data Rate Change / MBSFN mode....4727
8.5.3 MBMS Frequency Layer Convergence and Dispersion....4732
8.5.3.1 MBMS Session Start (Frequency Layer Convergence)/Session Stop (Frequency Layer Dispersion) in Idle mode / MBMS Selected Service....4732
8.5.3.1m MBMS Session Start (Frequency Layer Convergence)/Session Stop (Frequency Layer Dispersion) in Idle mode / MBMS Multicast Service....4738
8.5.3.2 MBMS Session Start (Frequency Layer Convergence)/Session Stop (Frequency Layer Dispersion) in CELL_PCH / MBMS Broadcast Service....4739
8.5.3.2m MBMS Session Start (Frequency Layer Convergence)/Session Stop (Frequency Layer Dispersion) in CELL_PCH / MBMS Multicast Service....4745
8.5.3.3 MBMS Session Start (Frequency Layer Convergence)/Session Stop (Frequency Layer Dispersion) in CELL_FACH / MBMS Broadcast Service....4746
8.5.3.3m MBMS Session Start (Frequency Layer Convergence)/Session Stop (Frequency Layer Dispersion) in CELL_FACH / MBMS Multicast Service....4753
8.5.3.4 MBMS Session Stop with Frequency Layer Dispersion - no previous frequency layer available (Idle Mode) / MBMS Broadcast Service....4754
8.5.3.4m MBMS Session Stop with Frequency Layer Dispersion - no previous frequency layer available (Idle Mode) / MBMS Multicast Service....4757
8.5.3.5 MBMS Session Stop with Frequency Layer Dispersion - no previous frequency layer available (URA_PCH) / MBMS Broadcast Service....4758
8.5.3.5m MBMS Session Stop with Frequency Layer Dispersion - no previous frequency layer available (URA_PCH) / MBMS Multicast Service....4762
8.5.3.6 MBMS Session Stop with Frequency Layer Dispersion - no previous frequency layer available (CELL_FACH) / MBMS Broadcast Service....4762
8.5.3.6m MBMS Session Stop with Frequency Layer Dispersion - no previous frequency layer available (CELL_FACH) / MBMS Multicast Service....4766
8.5.4 MBMS Modification Request....4767

8.5.4.1 Transmission of the MBMS Selected Services Information when entering RRC connected mode and CELL_DCH state / MBMS Selected Service 4767
8.5.4.2 Modification of the MBMS Selected Services list whilst in URA_PCH & Cell_FACH / MBMS Selected Service 4769
8.5.4.3 Testing of the MBMS Selected Services indication from the network whilst in CELL_DCH / MBMS Selected Service 4774
8.5.5 MBMS Counting 4777
8.5.5.1 MBMS Counting in Idle Mode / MBMS Selected Service 4777
8.5.5.1m MBMS Counting in Idle Mode / MBMS Multicast Service 4780
8.5.5.2 MBMS Counting in CELL_FACH / MBMS Selected Service 4782
8.5.5.2m MBMS Counting in CELL_FACH / MBMS Multicast Service 4786
8.5.5.3 MBMS No Counting in CELL_DCH / MBMS Selected Service 4787
8.5.5.3m MBMS No Counting in CELL_DCH / MBMS Multicast Service 4790
8.5.5.4 MBMS Counting in CELL_PCH / MBMS Selected Service 4791
8.5.5.4m MBMS Counting in CELL_PCH / MBMS Multicast Service 4795
8.5.5.5 Void 4797
8.5.5.6 Void 4797
8.5.5.7 RRC Connection establishment for MBMS Counting :Success after T318 Timeout/ MBMS Selected Service 4797
8.5.5.7m RRC Connection establishment for MBMS Counting :Success after T318 Timeout / MBMS Multicast Service 4802
8.5.5.8 RRC Connection establishment for MBMS Counting :Success after MAC Layer Failure Indication/ MBMS Selected Service 4803
8.5.5.8m RRC Connection establishment for MBMS Counting :Success after MAC Layer Failure Indication / MBMS Multicast Service 4808
8.5.6 MBMS Controlling Cell Change 4809
8.5.6.1 MBMS Controlling Cell Change - Idle mode - Frequency Layer Convergence – HCS Not Used / MBMS Selected Service 4809
8.5.6.1m MBMS Controlling Cell Change - Idle mode - Frequency Layer Convergence – HCS Not Used / MBMS Multicast Service 4814
8.5.6.2 MBMS Controlling Cell Change in CELL_FACH during ongoing session / MBMS Broadcast Service 4815
8.5.6.2m MBMS Controlling Cell Change in CELL_FACH during ongoing session / MBMS Multicast Service 4820
8.5.6.3 MBMS Controlling Cell Change in CELL_PCH during ongoing session / MBMS Broadcast Service 4821
8.5.6.3m MBMS Controlling Cell Change in CELL_PCH during ongoing session / MBMS Multicast Service 4828
8.5.6.4 MBMS Controlling Cell Change - Idle mode - Frequency Layer Convergence – With HCS / MBMS Selected Service 4828
8.5.6.4m MBMS Controlling Cell Change - Idle mode - Frequency Layer Convergence – With HCS / MBMS Multicast Service 4835
8.5.6.5 MBMS Controlling Cell Change in CELL_DCH during ongoing session / MBMS Broadcast Service 4836
8.5.6.5m MBMS Controlling Cell Change in CELL_DCH during ongoing session / MBMS Multicast Service 4841
8.5.7 MBSFN Specific Procedures (FDD/TDD) 4842
8.5.7.1 Cell Update: cell reselection in CELL_PCH (unicast carrier) during ongoing MBMS session in MBSFN mode 4842
8.5.7.2 Re-acquire MCCH - modified MBSFN inter frequency neighbour list / All MBSFN services notified 4846
8.5.7.3 Re-acquire MCCH - modified MBSFN inter frequency neighbour list / MBSFN services not notified 4857
8.5.7.4 MBSFN TDM Information / TDM services de-multiplexing 4868
8.5.7.5 MBSFN Session Reconfiguration / Change of MBSFN Cluster frequency on notification via MCCH (FDD) 4873
8.6 Minimization of Drive Test Specific Procedures 4878
8.6.1 Immediate MDT 4878
8.6.2 Logged MDT 4878
8.6.2.1 Logged MDT / Intra-frequency measurement, logging and reporting / Idle mode 4878
8.6.2.1a Logged MDT / Intra-frequency measurement, logging and reporting / Idle mode/PLMN list 4885
8.6.2.2 Logged MDT / Intra-frequency measurement, logging and reporting / CELL_PCH 4890

8.6.2.2a Logged MDT / Intra-frequency measurement, logging and reporting / CELL_PCH/PLMN list.....4897
8.6.2.3 Logged MDT / Inter-frequency measurement, logging and reporting / URA_PCH 4903
8.6.2.3a Logged MDT / Intra-frequency measurement, logging and reporting / URA_PCH / PLMN list 4910
8.6.2.4 Logged MDT / Intra-frequency measurement, logging and reporting / Idle mode / Limiting area scope 4915
8.6.2.4a Logged MDT / Intra-frequency measurement, logging and reporting / Idle mode / Limiting area scope / Cell ID list with PLMN identity.....4926
8.6.2.5 Logged MDT / Release of logged MDT measurement configuration / Expire of duration timer 4931
8.6.2.6 Logged MDT / Release of logged MDT measurement configuration / Reception of new logged measurement configuration, Detach or UE power off.....4942
8.6.2.7 Logged MDT / Maintaining logged measurement configuration / UE state transitions and mobility 4948
8.6.2.8 Logged MDT / Reporting / Location information.....4957
8.6.2.9 Logged MDT / Logging and reporting / PLMN list / PLMN change 4960
8.6.3 Inter-RAT Logged MDT 4965
8.6.3.1 Logged MDT / E-UTRAN Inter-RAT measurement, logging and reporting / Idle mode.....4965
8.6.3.2 Logged MDT / GERAN Inter-RAT measurement, logging and reporting / Idle mode 4972
8.6.3.3 Logged MDT / Maintaining logged measurement configuration / UTRAN to E-UTRAN Inter-RAT mobility 4979
8.6.3.4 Logged MDT / Maintaining logged measurement configuration / UTRAN to GERAN Inter-RAT mobility 4989
8.6.4 Connection Establishment Failure 4996
8.6.4.1 Connection Establishment Failure logging / Logging and reporting / T300 expiry.....4996
8.6.4.2 Connection Establishment Failure logging / Logging and reporting / Physical channel failure 5001
8.6.4.3 Connection Establishment Failure logging / Logging and reporting / Invalid RRC CONNECTION SETUP message 5007
8.6.4.4 Connection Establishment Failure logging / Logging and reporting / RRC CONNECTION REJECT message 5012
8.6.4.5 Connection Establishment Failure logging / Logging and reporting / Invalid RRC CONNECTION REJECT message 5018
8.6.4.6 Connection Establishment Failure logging / Logging and reporting / PLMN change 5022
8.6.4.7 Connection Establishment Failure logging / Logging and reporting / location information.....5029
8.6.4.8 Connection Establishment Failure logging / Logging and reporting / Intra-frequency measurements.....5033
8.6.4.9 Connection Establishment Failure logging / Logging and reporting / Inter-frequency measurements.....5039
8.6.5 Inter-RAT Connection Establishment Failure 5044
8.6.5.1 Connection Establishment Failure logging / Reporting at E-UTRAN inter-RAT handover.....5044
8.6.5.2 Connection Establishment Failure logging / Logging and reporting / E-UTRA Inter-RAT measurements.....5056
8.6.5.3 Connection Establishment Failure logging / Logging and reporting / GERAN Inter-RAT measurements.....5062
8.7 Automatic Neighbour Relation (ANR) for UTRAN 5068
8.7.1 Intra-UTRAN.....5068
8.7.1.1 Intra-UTRA / Intra-frequency ANR measurement, logging and reporting in IDLE Mode / RSCP Absolute Threshold 5068
8.7.1.1a Void.....5074
8.7.1.2 Intra-UTRA / Intra-frequency ANR measurement, logging and reporting in Cell_PCH / Ec/N0 Absolute Threshold (FDD) 5074
8.7.1.2a Intra-UTRA / Intra-frequency ANR measurement, logging and reporting in CELL_PCH (TDD)...5078
8.7.1.3 Intra-UTRA / Inter-frequency ANR measurement, logging and reporting in URA_PCH / RSCP Relative Threshold 5082
8.7.1.3a Void.....5087
8.7.1.4 Intra-UTRA / Inter-frequency and Intra-frequency ANR measurement, logging and reporting in IDLE Mode / Ec/N0 Relative Threshold / T327 Expiry / Max Number of ANR Logged Items (FDD).....5087
8.7.1.4a Intra-UTRA / Inter-frequency and Intra-frequency ANR measurement, logging and reporting in IDLE Mode / T327 Expiry / Max Number of ANR Logged Items (TDD) 5095
8.7.1.5 Intra-UTRA / Re-configuration of ANR measurements 5101
8.7.1.5a Void.....5107
8.7.2 Inter-RAT 5107
8.7.2.1 Inter-RAT/ ANR measurement, logging and reporting / GERAN cell 5107

8.7.2.1a Void....5113

9 Elementary procedures of mobility management....5114
9.1 TMSI reallocation....5114
9.2 Authentication....5117
9.2.1 Authentication accepted....5117
9.2.2 Authentication rejected by the network....5118
9.2.3 Authentication rejected by the UE (MAC code failure)....5121

9.4.5.4.2 Location updating / periodic search for HPLMN or higher priority PLMN / UE in manual mode....5214
9.4.5.4.3 Location updating / periodic search for HPLMN or higher priority PLMN / UE waits at least two minutes and at most T minutes....5215
9.4.5.4.4 Location updating/periodic search of the higher priority PLMN, VPLMN in a foreign country – higher priority/UE is in automatic mode. 5217
9.4.5.4.5 Location updating/periodic search of the higher priority PLMN, VPLMN in a foreign country – lower priority/UE is in automatic mode. 5218
9.4.5.4.6 Location updating/periodic search of the higher priority PLMN, VPLMN in a foreign country – List of EPLMN contain HPLMN /UE is in automatic mode.....5220
9.4.5.4.7 Location updating / periodic search for HPLMN or higher priority PLMN / UE waits UE waits Minimum Periodic search timer....5222
9.4.5.5 Location updating / periodic per-device timer....5225
9.4.6 Location updating / interworking of attach and periodic....5226
9.4.7 Location Updating / accept with replacement or deletion of Equivalent PLMN list....5229
9.4.8 Location Updating after UE power off....5231
9.4.9 Location Updating / Accept, Interaction between Equivalent PLMNs and Forbidden PLMNs. 5233
9.4.10 NITZ / MM/ Time zone, Time and DST Handling....5235
9.4.11 Location Updating / EAB active....5241
9.5 MM connection....5243
9.5.1 Introduction....5243
9.5.2 MM connection / establishment in security mode....5243

9.5.3 Void 5244
9.5.4 MM connection / establishment rejected 5244
9.5.5 MM connection / establishment rejected cause 4 5245
9.5.6 MM connection / expiry T3230 5247
9.5.7 MM connection / abortion by the network 5248
9.5.7.1 MM connection / abortion by the network / cause #6 5248
9.5.7.2 MM connection / abortion by the network / cause not equal to #6 5251
9.5.8 MM connection / follow-on request pending 5253
9.5.8.1 MM connection / follow-on request pending / test 1 5253
9.5.8.2 MM connection / follow-on request pending / test 2 5254
9.5.8.3 MM connection / follow-on request pending / test 3 5255
9.5.9 MM connection / abnormal cases / CS domain barred because of domain specific access control 5257

10 Circuit Switched Call Control (CC) 5259
10.1 Circuit switched Call Control (CC) state machine verification 5259
10.1.1 General on CC state machine verification 5259
10.1.2 Establishment of an outgoing call 5260
10.1.2.1 Outgoing call / U0 null state 5262
10.1.2.1.1 Outgoing call / U0 null state / MM connection requested 5262
10.1.2.2 Outgoing call / U0.1 MM connection pending 5263
10.1.2.2.1 Outgoing call / U0.1 MM connection pending / CM service rejected 5263
10.1.2.2.2 Outgoing call / U0.1 MM connection pending / CM service accepted 5264
10.1.2.2.3 Outgoing call / U0.1 MM connection pending / lower layer failure 5265
10.1.2.3 Outgoing call / U1 call initiated 5267
10.1.2.3.1 Outgoing call / U1 call initiated / receiving CALL PROCEEDING 5267
10.1.2.3.2 Outgoing call / U1 call initiated / rejecting with RELEASE COMPLETE 5268
10.1.2.3.3 Outgoing call / U1 call initiated / T303 expiry 5269
10.1.2.3.4 Outgoing call / U1 call initiated / lower layer failure 5270
10.1.2.3.5 Outgoing call / U1 call initiated / receiving ALERTING 5271
10.1.2.3.6 Outgoing call / U1 call initiated / entering state U10 5272
10.1.2.3.7 Outgoing call / U1 call initiated / unknown message received 5273
10.1.2.4 Outgoing call / U3 Mobile originating call proceeding 5274
10.1.2.4.1 Outgoing call / U3 Mobile originating call proceeding / ALERTING received 5274
10.1.2.4.2 Outgoing call / U3 Mobile originating call proceeding / CONNECT received 5275
10.1.2.4.3 Outgoing call / U3 Mobile originating call proceeding / PROGRESS received without in band information 5276
10.1.2.4.4 Outgoing call / U3 Mobile originating call proceeding / PROGRESS with in band information 5278
10.1.2.4.5 Outgoing call / U3 Mobile originating call proceeding / DISCONNECT with in band tones 5279
10.1.2.4.6 Outgoing call / U3 Mobile originating call proceeding / DISCONNECT without in band tones 5281
10.1.2.4.7 Outgoing call / U3 Mobile originating call proceeding / RELEASE received 5282
10.1.2.4.8 Outgoing call / U3 Mobile originating call proceeding / termination requested by the user 5284
10.1.2.4.9 Outgoing call / U3 Mobile originating call proceeding / traffic channel allocation 5285
10.1.2.4.10 Outgoing call / U3 Mobile originating call proceeding / timer T310 time-out 5286
10.1.2.4.11 Outgoing call / U3 Mobile originating call proceeding / lower layer failure 5287
10.1.2.4.12 Outgoing call / U3 Mobile originating call proceeding / unknown message received 5289
10.1.2.4.13 Outgoing call / U3 Mobile originating call proceeding / Internal alerting indication 5290
10.1.2.5 Outgoing call / U4 call delivered 5291
10.1.2.5.1 Outgoing call / U4 call delivered / CONNECT received 5291
10.1.2.5.2 Outgoing call / U4 call delivered / termination requested by the user 5292
10.1.2.5.3 Outgoing call / U4 call delivered / DISCONNECT with in band tones 5293
10.1.2.5.4 Outgoing call / U4 call delivered / DISCONNECT without in band tones 5295
10.1.2.5.5 Outgoing call / U4 call delivered / RELEASE received 5296
10.1.2.5.6 Outgoing call / U4 call delivered / lower layer failure 5297
10.1.2.5.7 Outgoing call / U4 call delivered / traffic channel allocation 5298
10.1.2.5.8 Outgoing call / U4 call delivered / unknown message received 5299
10.1.2.6 U10 active 5300
10.1.2.6.1 U10 active / termination requested by the user 5300
10.1.2.6.2 U10 active / RELEASE received 5301
10.1.2.6.3 U10 active / DISCONNECT with in band tones 5302
10.1.2.6.4 U10 active / DISCONNECT without in band tones 5304

10.1.2.6.5 U10 active / RELEASE COMPLETE received 5305
10.1.2.6.6 U10 active / SETUP received 5306
10.1.2.7 U11 disconnect request 5308
10.1.2.7.1 U11 disconnect request / clear collision 5308
10.1.2.7.2 U11 disconnect request / RELEASE received 5309
10.1.2.7.3 U11 disconnect request / timer T305 time-out 5310
10.1.2.7.4 U11 disconnect request / lower layer failure 5311
10.1.2.7.5 U11 disconnect request / unknown message received 5312
10.1.2.8 U12 disconnect indication 5313
10.1.2.8.1 U12 disconnect indication / call releasing requested by the user 5313
10.1.2.8.2 U12 disconnect indication / RELEASE received 5314
10.1.2.8.3 U12 disconnect indication / lower layer failure 5315
10.1.2.8.4 U12 disconnect indication / unknown message received 5317
10.1.2.9 Outgoing call / U19 release request 5318
10.1.2.9.1 Outgoing call / U19 release request / timer T308 time-out 5318
10.1.2.9.2 Outgoing call / U19 release request / 2nd timer T308 time-out 5319
10.1.2.9.3 Outgoing call / U19 release request / RELEASE received 5320
10.1.2.9.4 Outgoing call / U19 release request / RELEASE COMPLETE received 5321
10.1.2.9.5 Outgoing call / U19 release request / lower layer failure 5322
10.1.3 Establishment of an incoming call / Initial conditions 5323
10.1.3.1 Incoming call / U0 null state 5325
10.1.3.1.1 Incoming call / U0 null state / SETUP received with a non supported bearer capability 5325
10.1.3.2 Incoming call / U6 call present 5326
10.1.3.2.1 Incoming call / U6 call present / automatic call rejection 5326
10.1.3.3 Incoming call / U9 mobile terminating call confirmed 5328
10.1.3.3.1 Incoming call / U9 mobile terminating call confirmed / alerting or immediate connecting 5328
10.1.3.3.2 Incoming call / U9 mobile terminating call confirmed / DTCH assignment 5329
10.1.3.3.3 Void 5330
10.1.3.3.4 Incoming call / U9 mobile terminating call confirmed / DISCONNECT received 5330
10.1.3.3.5 Incoming call / U9 mobile terminating call confirmed / RELEASE received 5332
10.1.3.3.6 Incoming call / U9 mobile terminating call confirmed / lower layer failure 5333
10.1.3.3.7 Incoming call / U9 mobile terminating call confirmed / unknown message received 5334
10.1.3.4 Incoming call / U7 call received 5335
10.1.3.4.1 Incoming call / U7 call received / call accepted 5335
10.1.3.4.2 Incoming call / U7 call received / termination requested by the user 5336
10.1.3.4.3 Incoming call / U7 call received / DISCONNECT received 5337
10.1.3.4.4 Incoming call / U7 call received / RELEASE received 5339
10.1.3.4.5 Incoming call / U7 call received / lower layer failure 5340
10.1.3.4.6 Incoming call / U7 call received / unknown message received 5341
10.1.3.4.7 Incoming call / U7 call received / DTCH assignment 5342
10.1.3.4.8 Incoming call / U7 call received / RELEASE COMPLETE received 5343
10.1.3.5 Incoming call / U8 connect request 5345
10.1.3.5.1 Incoming call / U8 connect request / CONNECT acknowledged 5345
10.1.3.5.2 Incoming call / U8 connect request / timer T313 time-out 5346
10.1.3.5.3 Incoming call / U8 connect request / termination requested by the user 5347
10.1.3.5.4 Incoming call / U8 connect request / DISCONNECT received with in-band information 5348
10.1.3.5.5 Incoming call / U8 connect request / DISCONNECT received without in-band information 5350
10.1.3.5.6 Incoming call / U8 connect request / RELEASE received 5351
10.1.3.5.7 Incoming call / U8 connect request / lower layer failure 5352
10.1.3.5.8 Incoming call / U8 connect request / DTCH assignment 5353
10.1.3.5.9 Incoming call / U8 connect request / unknown message received 5354
10.1.4 In call functions 5355
10.1.4.1 In-call functions / DTMF information transfer 5355
10.1.4.1.1 In-call functions / DTMF information transfer / basic procedures 5355
10.1.4.2 In-call functions / user notification 5357
10.1.4.2.1 In-call functions / User notification / UE terminated 5357
10.1.4.3 In-call functions / channel changes 5358
10.1.4.3.1 In-call functions / channel changes / a successful channel change in active state/ Hard handover 5358
10.1.4.3.2 In-call functions / channel changes / an unsuccessful channel change in active mode/Hard handover 5359
10.1.4.4 In-call functions / UE terminated in-call modification 5360

10.1.4.4.1 In-call functions / UE terminated in-call modification / modify when new mode is not supported 5360
10.1.4.5 In-call functions / UE originated in-call modification 5360
10.1.4.5.1 In-call functions / UE originated in-call modification / a successful case of modifying 5360
10.1.4.5.2 In-call functions / UE originated in-call modification / modify rejected 5360
10.1.4.5.3 In-call functions / UE originated in-call modification / an abnormal case of acceptance 5361
10.1.4.5.4 In-call functions / UE originated in-call modification / an abnormal case of rejection 5361
10.1.4.5.5 In-call functions / UE originated in-call modification / time-out of timer T323 5361
10.1.4.5.6 In-call functions / UE originated in-call modification / a successful channel change in state mobile originating modify 5361
10.1.4.5.7 In-call functions / UE originated in-call modification / an unsuccessful channel change in state mobile originating modify 5361
10.1.4.5.8 In-call functions / UE originated in-call modification / unknown message received 5361
10.1.4.5.9 In-call functions / UE originated in-call modification / a release complete received 5361
10.2 Call Re-establishment 5361
10.2.1 Void 5361
10.3 User to user signalling 5361

11 Session Management Procedures 5363
11.1 PDP context activation 5363
11.1.1 Initiated by the UE 5363
11.1.1.1 Attach initiated by context activation/QoS Offered by Network is the QoS Requested 5363
11.1.1.1a Attach initiated by context activation/QoS Offered by Network is the QoS Requested/Correct handling of QoS extensions for rates above 8640 kbps 5366
11.1.1.2 QoS offered by the network is a lower QoS 5370
11.1.1.2.1 Void 5370
11.1.1.2.2 Void 5370
11.1.1.3 Dual priority / T3396 override 5370
11.1.1.4 Dual priority / T3346 override 5372
11.1.2 PDP context activation requested by the network, successful and unsuccessful 5374
11.1.3 Abnormal Cases 5378
11.1.3.1 T3380 Expiry 5378
11.1.3.2 Collision of UE initiated and network requested PDP context activation 5379
11.1.3.3 Network initiated PDP context activation request for an already activated PDP context (on the UE side) 5382
11.1.3.4 Network reject with Back-off Timer 5383
11.1.4 Secondary PDP context activation procedures 5386
11.1.4.1 Successful Secondary PDP Context Activation Procedure Initiated by the UE 5386
11.1.4.1.1 QoS Offered by Network is the QoS Requested 5386
11.1.4.1.2 QoS Offered by Network is a lower QoS 5389
11.1.4.2 Unsuccessful Secondary PDP Context Activation Procedure Initiated by the UE 5390
11.1.4.3 Abnormal cases 5392
11.1.4.3.1 T3380 Expiry 5392
11.1.5 Secondary PDP context activation procedures initiated by network 5394
11.1.5.1 Successful Secondary PDP Context Activation Procedure Initiated by the Network 5394
11.1.5.2 Successful Secondary PDP Context Activation, Deactivation and Re-activation Initiated by the Network 5398
11.2 PDP context modification procedure 5408
11.2.1 Network initiated PDP context modification 5408
11.2.1a Network initiated PDP context modification / Adding and deleting filters to TFT of a secondary PDP context 5409
11.2.1b Network initiated PDP context modification / Adding filters to TFT of the Primary PDP context 5418
11.2.2 UE initiated PDP context modification 5428
11.2.2.1 UE initiated PDP Context Modification accepted by network 5428
11.2.2.2 UE initiated PDP Context Modification not accepted by the network 5429
11.2.2.3 UE initiated PDP Context Modification / Dual priority / low priority override 5432
11.2.3 Abnormal cases 5434
11.2.3.1 T3381 Expiry 5434
11.2.3.2 Collision of UE and network initiated PDP context modification procedures 5435
11.3 PDP context deactivation procedures 5437
11.3.1 PDP context deactivation initiated by the UE 5437
11.3.2 PDP context deactivation initiated by the network 5440

11.3.2a PDP context deactivation initiated by the network / secondary PDP context active / deactivation of primary PDP context 5442
11.3.3 Abnormal cases 5445
11.3.3.1 T3390 Expiry 5445
11.3.3.2 Collision of UE and network initiated PDP context deactivation requests 5447
11.4 Unknown or Unforeseen Transaction Identifier/Non-semantical Mandatory Information Element Errors 5449
11.4.1 Error cases 5449
11.5 MBMS Context Activation 5452
11.5.1m MBMS Context Activation requested by the network, Successful and Unsuccessful procedure / MBMS Multicast Service 5452
11.5.2m Abnormal Cases 5456
11.5.2.1m T3380 Expiry / MBMS Multicast Service 5456
11.5.2.2m Network initiated MBMS context activation request for an already activated context (on the UE side) / MBMS Multicast Service 5457
11.6 MBMS Context deactivation 5459
11.6.1m MBMS Context deactivation requested by the network, Successful / MBMS Multicast Service 5459
11.6.2 Void 5463
11.6.3 Void 5463
11.7m Network Feature Support IE for MBMS / MBMS Multicast Service 5463
11.8 MBMS Service Request 5467
11.8.1m MBMS Service request procedure not accepted by the network / MBMS Multicast Service 5467
11.8.2 MBMS Service Request procedure collision with Routing Area Update/ MBMS Selected Service 5469
11.8.2m MBMS Service Request procedure collision with Routing Area Update / MBMS Multicast Service 5471
11.9 UE routing of uplink packets 5472
11.9.1 UE routing of uplink packets 5472

12 Elementary procedure for Packet Switched Mobility Management 5494
12.1 Applicability, default conditions and default messages 5494
12.2 PS attach procedure 5495
12.2.1 Normal PS attach 5495
12.2.1.1 PS attach / accepted 5495
12.2.1.1a PS attach / accepted / Attach with IMSI 5499
12.2.1.1b PS attach / accepted / PSM 5503
12.2.1.1c PS attach / accepted / DCN 5505
12.2.1.2 PS attach / rejected / IMSI invalid / illegal UE 5509
12.2.1.3 PS attach / rejected / IMSI invalid / PS services not allowed 5512
12.2.1.4 PS attach / rejected / PLMN not allowed 5515
12.2.1.5a PS attach / rejected / roaming not allowed in this location area 5520
12.2.1.5b PS attach / rejected / No Suitable Cells In Location Area 5532
12.2.1.5c PS attach / rejected / Location area not allowed 5534
12.2.1.5d PS attach / rejected / PS services not allowed in this PLMN 5537
12.2.1.5e PS attach / rejected / Not authorized for this CSG 5541
12.2.1.6 PS attach / abnormal cases / access barred due to access class control 5544
12.2.1.7 PS attach / abnormal cases / change of routing area 5548
12.2.1.8 PS attach / abnormal cases / power off 5550
12.2.1.9 PS attach / abnormal cases / PS detach procedure collision 5551
12.2.1.10 PS attach / abnormal cases / Failure due to non-integrity protection 5553
12.2.1.11 PS attach / accepted / follow-on request pending indicator set 5556
12.2.1.12 PS attach / abnormal cases / access barred due to domain specific access restriction for PS domain 5559
12.2.1.13 NITZ / GMM/ Time zone, Time and DST Handling 5561
12.2.1.14 NITZ / GMM/ NITZ Parameters Storage and Deletion 5565
12.2.1.15 NITZ / GMM/ / MM and GMM Signalling 5568
12.2.1.16 PS attach / EAB active 5573
12.2.2 Combined PS attach 5575
12.2.2.1 Combined PS attach / PS and non-PS attach accepted 5575
12.2.2.2 Combined PS attach / PS only attach accepted 5580
12.2.2.3 Combined PS attach / PS attach while IMSI attach 5587
12.2.2.3a Combined PS attach / NMO-I enabled in UE 5589
12.2.2.3b 5591
12.2.2.3c Combined PS attach / congestion / GPRS services only 5591
12.2.2.4 Combined PS attach / rejected / IMSI invalid / illegal ME 5593

12.2.2.5 Combined PS attach / rejected / PS services and non-PS services not allowed 5596
12.2.2.6 Combined PS attach / rejected / PS services not allowed....5599
12.2.2.7a Combined PS attach / rejected / location area not allowed 5602
12.2.2.7b Combined PS attach / rejected / No Suitable Cells In Location Area 5607
12.2.2.7c Combined PS attach / rejected / Roaming not allowed in this location area 5610
12.2.2.7d Combined PS attach / rejected / PS services not allowed in this PLMN....5612
12.2.2.7e Combined PS attach / rejected / Not authorized for this CSG....5615
12.2.2.8 Combined PS attach / abnormal cases / attempt counter check / miscellaneous reject causes....5618
12.2.2.9 Combined PS attach / abnormal cases / PS detach procedure collision 5623
12.2.2.10 Combined PS attach / abnormal cases / access barred due to paging permission with access control 5625
12.3 PS detach procedure 5627
12.3.1 UE initiated PS detach procedure 5627
12.3.1.1 PS detach / power off / accepted 5627
12.3.1.2 PS detach / accepted....5630
12.3.1.3 PS detach / abnormal cases / attempt counter check / procedure timeout 5632
12.3.1.4 PS detach / abnormal cases / GMM common procedure collision....5635
12.3.1.5 PS detach / power off / accepted / PS/IMSI detach....5638
12.3.1.6 PS detach / accepted / PS/IMSI detach 5639
12.3.1.7 PS detach / accepted / IMSI detach....5642
12.3.1.8 PS detach / abnormal cases / change of cell into new routing area 5644
12.3.1.9 PS detach / abnormal cases / PS detach procedure collision....5647
12.3.1.10 UE initiated detach/abnormal case/ Not authorized for this CSG 5649
12.3.2 Network initiated PS detach procedure....5652
12.3.2.1 PS detach / re-attach not required / accepted 5652
12.3.2.2 PS detach / rejected / IMSI invalid / PS services not allowed....5654
12.3.2.3 PS detach / IMSI detach / accepted....5656
12.3.2.4 PS detach / re-attach requested / accepted....5659
12.3.2.5 PS detach / rejected / location area not allowed....5661
12.3.2.6 PS detach / rejected / No Suitable Cells In Location Area....5666
12.3.2.7 PS detach / rejected / Roaming not allowed in this location area....5669
12.3.2.8 PS detach / rejected / PS services not allowed in this PLMN 5673
12.4 Routing area updating procedure....5679
12.4.1 Normal routing area updating 5679
12.4.1.1a Routing area updating / accepted 5679
12.4.1.1b Routing area updating / accepted / Signalling connection re-establishment 5683
12.4.1.1c Void....5686
12.4.1.1d Routing area updating / accepted / SMS via GPRS supported....5686
12.4.1.1dm Handling of MBMS context status information in ROUTING AREA UPDATE procedure/ MBMS Multicast Service....5688
12.4.1.1e Routing area updating / accepted / low priority override 5692
12.4.1.1f Routing area updating / accepted / PSM 5696
12.4.1.1g Routing area updating / accepted / DCN....5700
12.4.1.2 Routing area updating / rejected / IMSI invalid / illegal ME 5704
12.4.1.3 Routing area updating / rejected / UE identity cannot be derived by the network 5707
12.4.1.4a Routing area updating / rejected / location area not allowed....5710
12.4.1.4b Routing area updating / rejected / No Suitable Cells In Location Area 5715
12.4.1.4c Routing area updating / rejected / PS services not allowed in this PLMN....5718
12.4.1.4d Routing area updating / rejected / Roaming not allowed in this location area 5724
12.4.1.4e Routing area updating / rejected / Not authorized for this CSG....5732
12.4.1.4f Routing area updating / rejected / Congestion 5735
12.4.1.5 Routing area updating / abnormal cases / attempt counter check / miscellaneous reject causes....5738
12.4.1.6 Routing area updating / abnormal cases / change of cell into new routing area....5742
12.4.1.7 Void....5744
12.4.1.8 Routing area updating / abnormal cases / P-TMSI reallocation procedure collision 5744
12.4.1.9 Routing area updating / EAB active....5747
12.4.2 Combined routing area updating....5749
12.4.2.1 Combined routing area updating / combined RA/LA accepted 5749
12.4.2.2 Combined routing area updating / UE in CS operation at change of RA....5753
12.4.2.3 Combined routing area updating / RA only accepted 5755
12.4.2.3a Void....5763
12.4.2.3b Combined routing area updating / SMS only....5763

12.4.2.3c Combined routing area updating / congestion / GPRS services only 5765
12.4.2.4 Combined routing area updating / rejected / PLMN not allowed 5768
12.4.2.5a Combined routing area updating / rejected / roaming not allowed in this location area 5772
12.4.2.5b Combined routing area updating / rejected / No Suitable Cells In Location Area 5780
12.4.2.5c Combined routing area updating / rejected / Location area not allowed 5784
12.4.2.5d Combined routing area updating / rejected / PS services not allowed in this PLMN 5787
12.4.2.5e Combined routing area updating / rejected / Not authorized for this CSG 5790
12.4.2.6 Combined routing area updating / abnormal cases / access barred due to access class control 5793
12.4.2.7 Combined routing area updating / abnormal cases / attempt counter check / procedure timeout 5798
12.4.2.8 Combined routing area updating / abnormal cases / change of cell into new routing area 5802
12.4.2.9 Void 5805
12.4.2.10 Combined routing area updating / abnormal cases / PS detach procedure collision 5805
12.4.2.11 Combined routing area updating / abnormal cases / access barred due to domain specific access restriction for CS domain 5808
12.4.2.12 Combined routing area updating / abnormal cases / access barred due to domain specific access restriction for PS domain 5811
12.4.3 Periodic routing area updating 5814
12.4.3.1 Periodic routing area updating / accepted 5814
12.4.3.2 Periodic routing area updating / accepted / T3312 default value 5815
12.4.3.2a Periodic routing area updating / accepted / per-device timer 5817
12.4.3.2b Periodic routing area updating / accepted / PSM / T3312 Extended Value 5820
12.4.3.3 Periodic routing area updating / no cell available / network mode I 5823
12.4.3.4 Periodic routing area updating / no cell available 5826
12.5 P-TMSI reallocation 5827
12.6 PS authentication 5830
12.6.1 Test of authentication 5830
12.6.1.1 Authentication accepted 5830
12.6.1.2 Authentication rejected by the network 5833
12.6.1.3 Authentication rejected by the UE 5836
12.6.1.3.1 GMM cause 'MAC failure' 5836
12.6.1.3.2 GMM cause 'Synch failure' 5839
12.6.1.3.3 Authentication rejected by the UE / fraudulent network 5842
12.6.2 Void 5845
12.7 Identification procedure 5845
12.7.1 General Identification 5845
12.8 GMM READY timer handling 5848
12.9 Service Request procedure (UMTS Only) 5851
12.9.1 Service Request Initiated by UE Procedure 5851
12.9.2 Service Request Initiated by Network Procedure 5853
12.9.3 Service Request / rejected / Illegal MS 5855
12.9.4 Service Request / rejected / PS services not allowed 5859
12.9.5 Service Request / rejected / MS identity cannot be derived by the network 5863
12.9.6 Service Request / rejected / PLMN not allowed 5866
12.9.7a Service Request / rejected / No PDP context activated 5869
12.9.7b Service Request / rejected / No Suitable Cells In Location Area 5872
12.9.7c Service Request / rejected / Roaming not allowed in this location area 5875
12.9.7d Service Request / rejected / Not authorized for this CSG 5878
12.9.8 Service Request / Abnormal cases / Access barred due to access class control 5881
12.9.9 Service Request / Abnormal cases / Routing area update procedure is triggered 5883
12.9.10 Service Request / Abnormal cases / Power off 5887
12.9.11 Service Request / Abnormal cases / Service request procedure collision 5889
12.9.12 Service Request / RAB re-establishment / UE initiated / Single PDP context 5891
12.9.13 Service Request / RAB re-establishment / UE initiated / multiple PDP contexts 5894
12.9.14 Service Request / RAB re-establishment / Network initiated / single PDP context 5896
12.9.15 Service Request / abnormal cases / access barred due to domain specific access restriction for PS domain 5897
12.9.16 MBMS SERVICE REQUEST / counting / MBMS Selected Service 5900
12.9.16m MBMS SERVICE REQUEST / counting / MBMS Multicast Service 5901
12.9.17 MBMS SERVICE REQUEST / point to point RBs / MBMS Selected Service 5902
12.9.17m MBMS SERVICE REQUEST / point to point RBs / MBMS Multicast Service 5904
12.9.18m Handling of MBMS context status information in SERVICE REQUEST and SERVICE ACCEPT messages / MBMS Multicast Service 5905

13 General Tests 5907
13.1 Emergency call / general 5907
13.2 Emergency call 5907
13.2.1 Emergency call / with USIM 5908
13.2.1.1 Emergency call / with USIM / accept case 5908
13.2.2 Emergency call / without USIM 5910
13.2.2.1 Emergency call / without USIM / accept case 5910
13.2.2.2 Emergency call / without USIM / reject case 5912
13.3 eCall Emergency Call Procedures 5914
13.3.1 eCall / with USIM 5914
13.3.1.1 Void 5914
13.3.1.2 Test eCall using eCall capable UE with eCall only subscription 5914
13.3.1.3 Manually initiated eCall using eCall capable UE with “eCall only” subscription on USIM 5917
13.3.1.4 Reconfiguration eCall using eCall capable UE with an ‘eCall only’ subscription on USIM 5919
13.3.1.5 Manually initiated eCall using eCall capable UE with eCall and non eCall subscriptions on USIM 5922
13.3.1.6 eCall Inactivity State after T3242 expires 5924
13.3.1.7 Automatically initiated eCall 5927
13.3.1.8 Void 5930
13.3.1.9 Void 5930
13.3.1.10 eCall Inactivity State after T3243 expires 5930
13.4 Emergency calls over IMS 5933
13.4.1 Emergency bearer services over IMS / NORMAL-SERVICE / Success 5933
13.4.2 Emergency bearer services over IMS / LIMITTED-SERVICE / Success 5935
13.4.3 Emergency bearer services over IMS / NO-IMSI / Success 5937
13.4.4 Emergency bearer services over IMS / NORMAL-SERVICE / Authentication not accepted by the UE and Timer 3318 expires 5939
13.4.5 Authentication not accepted by the UE / Synch failure / Authentication not accepted by the UE and Timer 3320 expires 5941
13.4.6 Handling of Local Emergency Numbers List provided during Attach procedure 5943
13.4.7 UE has PDN connection only for emergency bearer services / Normal routing area update / Accepted / Handling of the equivalent PLMNs list when PLMN is member of the "forbidden PLMN" list 5947
13.4.8 Handling of Local Emergency Numbers List provided during normal Routing area update procedure 5950
13.4.9 Attach for emergency bearer services / Rejected / No suitable cells in location area / Emergency call using the CS domain 5954
13.4.10 Emergency bearer services / CSG cell / LIMITED-SERVICE / Attach / Security mode control procedure without prior authentication / PDN connect / Service request / PDN disconnect / Detach upon UE switched off / Temporary storage of GMM information 5956

14 Interoperability Radio Bearer Tests 5960
14.1 General information for interoperability radio bearer tests 5960
14.1.1 Generic radio bearer test procedure for single RB configurations 5960
14.1.1a Generic radio bearer test procedure for standalone AMR RB configurations using SRB#5 for TFC control 5962
14.1.2 Generic test procedure for testing multi-RB combinations and simultaneous signalling 5964
14.1.2a Generic test procedure for testing multi-RB combinations and simultaneous signalling in case of DSCH 5968
14.1.3 General information interoperability radio bearer tests for HS-DSCH 5975
14.1.3.1 HS-DSCH radio bearer test parameters 5975
14.1.3.2 Selecting TFRC test points 5976
14.1.3.2.1 Principle for non-enhanced Layer 2 5976
14.1.3.2.1a Principle for enhanced Layer 2 5978
14.1.3.3 TFRC test points for MAC-d PDU size=336 5978
14.1.3.4 TFRC test points for MAC-d PDU size=656 5987
14.1.3.4b TB test points for enhanced Layer 2 5992
14.1.3.4b.1 TFRC test points for MAC-ehs and QPSK with fixed MAC-d PDU size=336 5992
14.1.3.4b.2 TFRC test points for MAC-ehs and fixed MAC-d PDU size=656 or flexible MAC-d PDU size; or for radio bearer combinations with mix of fixed and flexible MAC-d PDU sizes 5997
14.1.3.5 Generic test procedure for HS-DSCH radio bearer combinations with non-enhanced Layer 2 6018
14.1.3.5a Generic test procedure for HS-DSCH radio bearer combinations with enhanced Layer 2 6021

14.1.3.5b Generic test procedure for HS-DSCH radio bearer combinations with enhanced Layer 2 for Three-Cell case 6027
14.1.3.6 Generic test procedure for HS-DSCH radio bearer combinations with AMR RB configurations using SRB#5 for TFC control 6032
14.1.4 General information interoperability radio bearer tests for E-DCH and HS-DSCH combinations 6036
14.1.4.1 Generic test procedure for HS-DSCH and E-DCH radio bearer combinations....6036
14.1.4.1a Generic test procedure for HS-DSCH and E-DCH radio bearer combinations with downlink enhanced Layer 2 6039
14.1.4.1b Generic test procedure for HS-DSCH and E-DCH radio bearer combinations with downlink and uplink enhanced Layer 2 6040
14.1.4.1c Generic test procedure for Dual-Cell HS-DSCH and Dual-Cell E-DCH radio bearer combinations 6040
14.1.4.2 Generic test procedure for HS-DSCH and E-DCH radio bearer combinations with AMR RB configurations using SRB#5 for TFC control 6042
14.1.4.3 Generic test procedure for HS-DSCH and E-DCH radio bearer combinations for enhanced uplink in CELL_FACH....6046
14.1.5 Generic test procedure for radio bearers on MTCH....6049
14.1.5m Generic test procedure for radio bearers on MTCH in MBSFN Mode....6051
14.1.6 Generic test procedure for MBMS PTP radio bearers for HS-DSCH combinations 6053
14.2 Combinations on DPCH....6056

15 Supplementary Services 6596
15.1 CLIP 6596
15.1.1 CLIP / Normal operation 6596
15.2 CLIR 6598
15.2.1 CLIR / Normal operation - requesting presentation of CLI 6598
15.2.2 CLIR / Normal operation - requesting restriction of CLI presentation 6599
15.3 CNAP 6601
15.3.1 CNAP/Normal Operation – Name indication contained in Setup message 6601
15.3.2 CNAP/Normal Operation – Name indication contained in Facility message 6603
15.3.3 CNAP/Interrogation accepted 6605
15.3.4 CNAP/Interrogation rejected 6606
15.4 Call forwarding 6609

15.4.1 Call forwarding supplementary services, Registration accepted 6609
15.4.2 Call forwarding supplementary services, Registration rejected 6614
15.4.3 Call forwarding supplementary services, Erasure accepted 6618
15.4.4 Call forwarding supplementary services, Erasure rejected 6621
15.4.5 Call forwarding supplementary services, Activation 6624
15.4.6 Call forwarding supplementary services, Deactivation 6627
15.4.7 Call forwarding supplementary services, Interrogation accepted 6630
15.4.8 Call forwarding supplementary services, Interrogation rejected 6633
15.5 Call waiting 6637
15.5.1 Call completion supplementary services, Waiting call indication and confirmation 6637
15.5.2 Call completion supplementary services, Waiting call accepted; existing call released 6639
15.5.3 Call completion supplementary services, Waiting call accepted; existing call on hold, no additional calls 6640
15.5.4 Call completion supplementary services, Existing call released by user A; waiting call accepted 6643
15.5.5 Call completion supplementary services, Waiting call released by subscriber B 6644
15.5.6 Call completion supplementary services, Waiting call released by calling user C 6646
15.5.7 Call completion supplementary services, Activation 6647
15.5.8 Call completion supplementary services, Deactivation 6650
15.6 Call Hold supplementary services 6654
15.6.1 Call completion supplementary services, Hold invocation 6654
15.6.2 Call completion supplementary services, Retrieve procedure 6657
15.6.3 Call completion supplementary services, Alternate from one call to the other 6660
15.7 Multi-party supplementary services 6664
15.7.1 Multi-party supplementary services, Beginning the MultiParty service, successful case 6664
15.7.2 Multi-party supplementary services, Beginning the MultiParty service, unsuccessful case 6666
15.7.3 Multi-party supplementary services, Beginning the MultiParty service, expiry of timer T(BuildMPTY) 6670
15.7.4 Multi-party, Managing an active MultiParty call, Put the MultiParty call on hold, successful case 6673
15.7.5 Multi-party, Managing an active MultiParty call, Put the MultiParty call on hold, unsuccessful case 6675
15.7.6 Multi-party, Managing an active MultiParty call, Put the MultiParty call on hold, expiry of timer T(HoldMPTY) 6678
15.7.7 Multi-party, Managing an active MultiParty call, Create a private communication with one of the remote parties, successful case 6681
15.7.8 Multi-party, Managing an active MultiParty call, Create a private communication with one of the remote parties, unsuccessful case 6683
15.7.9 Multi-party, Managing an active MultiParty call, Create a private communication with one of the remote parties, expiry of timer T(SplitMPTY) 6685
15.7.10 Multi-party supplementary services, Terminate the entire MultiParty call 6687
15.7.11 Multi-party supplementary services, Explicitly disconnect a remote party 6688
15.7.12 Multi-party supplementary services, Release from the MultiParty call 6689
15.7.13 Multi-party supplementary services, Retrieve the held MultiParty call, successful case 6691
15.7.14 Multi-party supplementary services, Retrieve the held MultiParty call, unsuccessful case 6693
15.7.15 Multi-party supplementary services, Retrieve the held MultiParty call, expiry of timer T(RetrieveMPTY) 6696
15.7.16 Multi-party supplementary services, Initiate a new call 6699
15.7.17 Multi-party supplementary services, Process a call waiting request 6700
15.7.18 Multi-party supplementary services, Terminate the held MultiParty call 6702
15.7.19 Multi-party, Managing a single call and a MultiParty call, Disconnect the single call, single call active 6703
15.7.20 Multi-party, Managing a single call and a MultiParty call, Disconnect the single call, single call held 6706
15.7.21 Clear all parties of held MultiParty call 6707
15.7.22 Clear all parties of active MultiParty call 6708
15.7.23 Multi-party supplementary services, Disconnect all calls 6710
15.7.24 Multi-party supplementary services, Add the single call to the MPTY, successful case 6712
15.7.25 Multi-party supplementary services, Add the single call to the MPTY, maximum number of participants exceeded 6714
15.7.26 Multi-party supplementary services, Alternate between the MPTY call and the single call 6716
15.7.27 Multi-party supplementary services, Adding extra remote parties 6719
15.8 Call restriction 6722
15.8.1 Registration accepted 6722
15.8.2 Rejection after invoke of the operation “register password” with subscription violation 6725
15.8.3 Rejection after password check with negative result 6727

15.8.4 Activation accepted....6730
15.8.5 Rejection after invoke of ActivateSS operation....6733
15.8.6 Deactivation accepted....6736
15.8.7 Rejection after invoke of DeactivateSS operation....6739
15.8.8 Rejection after use of password procedure....6742
15.8.9 Normal operation....6745
15.9 USSD....6746
15.9.1 ProcessUnstructuredSS-request/accepted....6746
15.9.2 ProcessUnstructuredSS-request/cross phase compatibility and error handling....6753
15.9.3 UnstructuredSS-Notify/accepted....6759
15.9.4 UnstructuredSS-Notify/rejected on user busy....6762
15.9.5 UnstructuredSS-Request/accepted....6765
15.9.6 MMI input for USSD....6768
15.10 Explicit Call Transfer (ECT)....6770
15.10.1 Explicit Call Transfer invocation, successful case, both calls active, clearing using DISCONNECT....6770
15.10.2 Explicit Call Transfer invocation, successful case, both calls active, clearing using RELEASE....6773
15.10.3 Explicit Call Transfer invocation, successful case, both calls active, clearing using RELEASE COMPLETE....6775
15.10.4 Explicit Call Transfer invocation, successful case, second call alerting....6777
15.10.5 Explicit Call Transfer invocation, expiry of T(ECT)....6779

16 Short message service (SMS)....6782
16.1 Short message service point to point on CS mode....6782
16.1.1 SMS mobile terminated....6782
16.1.2 SMS mobile originated....6788
16.1.3 Test of memory full condition and memory available notification:....6791
16.1.4 Test of the status report capabilities and of SMS-COMMAND:....6795
16.1.5 Test of message class 0 to 3....6797
16.1.5.1 Short message class 0....6797
16.1.5.2 Test of class 1 short messages....6799
16.1.5.3 Test of class 2 short messages....6801
16.1.5.4 Test of class 3 short messages....6804
16.1.6 Test of short message type 0 (R99 and REL-4 UE)....6804
16.1.6a Test of short message type 0 (≥ REL-5 UE)....6805
16.1.7 Test of the replace mechanism for SM type 1-7....6808
16.1.8 Test of the reply path scheme....6810
16.1.9 Multiple SMS mobile originated....6813
16.1.9.1 UE in idle mode....6813
16.1.9.2 UE in active mode....6816
16.1.10 Test of capabilities of simultaneously receiving a short message whilst sending a mobile originated short message....6819
16.2 Short message service point to point on PS mode....6820
16.2.1 SMS mobile terminated....6820
16.2.2 SMS mobile originated....6827
16.2.3 Test of memory full condition and memory available notification:....6830
16.2.4 Test of the status report capabilities and of SMS-COMMAND:....6834
16.2.5 Test of message class 0 to 3....6837
16.2.5.1 Short message class 0....6837
16.2.5.2 Test of class 1 short messages....6839
16.2.5.3 Test of class 2 short messages....6840
16.2.5.4 Test of class 3 short messages....6843
16.2.6 Test of short message type 0 (R99 and REL-4 UE)....6843
16.2.6a Test of short message type 0 (≥ REL-5 UE)....6845
16.2.7 Test of the replace mechanism for SM type 1-7....6847
16.2.8 Test of the reply path scheme....6850
16.2.9 Multiple SMS mobile originated....6852
16.2.9.1 UE in idle mode....6852
16.2.9.2 UE in active mode....6852
16.2.10 Test of capabilities of simultaneously receiving a short message whilst sending a mobile originated short message....6852
16.3 Short message service cell broadcast....6854
16.3a Short message service cell broadcast Discontinuous Reception (DRX)....6856

16.4 Default message contents: 6861
16.4.1 Default message contents for SM-CP protocol 6861
16.4.2 Default message contents for SM-RP protocol 6862
16.4.3 Default message contents for SM-TP protocol 6863

17 Specific features 6864
17.1 Test of autocalling restrictions 6864
17.1.1 General 6864
17.1.2 Constraining the access to a single number (TS 22.001 category 3) 6864
17.1.3 Constraining the access to a single number (TS 22.001 categories 1 and 2) 6866
17.1.4 Behaviour of the UE when its list of blacklisted numbers is full 6867
17.2 Location Services 6868
17.2.1 Void 6868
17.2.2 Assisted GPS Network Induced Tests 6868
17.2.2.1 LCS Network Induced location request/ UE-Based GPS/ Emergency Call / with USIM 6868
17.2.2.2 LCS Network Induced location request/ UE-Based GPS/ Emergency Call / without USIM 6868
17.2.2.3 LCS Network induced location request/ UE-Assisted GPS/ Emergency call/ With USIM 6868
17.2.2.4 LCS Network induced location request/ UE-Assisted GPS/ Emergency call/ Without USIM 6868
17.2.3 Assisted GPS Mobile Originated Tests 6869
17.2.3.1 Void 6869
17.2.3.2 LCS Mobile originated location request/ UE-Based GPS/ Position estimate request/ Success 6869
17.2.3.3 LCS Mobile originated location request/ UE-Based or UE-Assisted GPS/ Assistance data request/ Success 6869
17.2.3.4 LCS Mobile originated location request/ UE-Assisted GPS/ Position Estimate/ Success 6869
17.2.3.5 Void 6869
17.2.3.6 LCS Mobile originated location request/ UE-Based GPS/ Transfer to third party/ Success 6869
17.2.3.7 LCS Mobile originated location request/ UE-Assisted GPS/ Transfer to third party/ Success 6869
17.2.3.8 LCS Mobile originated location request/ UE-Based or UE-Assisted GPS/ Assistance data request/ Failure 6869
17.2.3.9 LCS Mobile originated location request/ UE-Based GPS/ Position estimate request/ Failure 6869
17.2.4 Assisted GPS Mobile Terminated Tests 6869
17.2.4.1 LCS Mobile terminated location request/ UE-Based GPS 6869
17.2.4.2 LCS Mobile-terminated location request/UE-Based GPS/ Request for additional assistance data/ Success 6869
17.2.4.3 LCS Mobile-terminated location request/UE-Based GPS/ Failure – Not Enough Satellites 6869
17.2.4.4 LCS Mobile terminated location request/ UE-Assisted GPS/ Success 6869
17.2.4.5 LCS Mobile terminated location request/ UE-Assisted GPS/ Request for additional assistance data/ Success 6870
17.2.4.6 LCS Mobile terminated location request/ UE-Based GPS/ Privacy Verification/ Location Allowed if No Response 6870
17.2.4.7 LCS Mobile terminated location request/ UE-Based GPS/ Privacy Verification/ Location Not Allowed if No Response 6870
17.2.4.8 LCS Mobile terminated location request/ UE-Assisted GPS/ Privacy Verification/ Location Allowed if No Response 6870
17.2.4.9 LCS Mobile terminated location request/ UE-Assisted GPS/ Privacy Verification/ Location Not Allowed if No Response 6870
17.2.4.10 LCS Mobile terminated location request/ UE-Based or UE-Assisted GPS/ Configuration Incomplete 6870
17.2.5 Void 6870
17.2.6 Void 6870
17.2.7 Void 6870
17.3 Mobility between 3GPP WLAN Interworking and 3GPP Systems 6870
17.3.1 Discovery of the Home Agent via DNS 6870
17.3.2 Discovery of the Home Agent address and Home Network Prefix during PDP context activation procedure 6872
17.3.3 Void 6875
17.3.4 Security association establishment 6875
17.3.5 Registration of a new IPv6 CoA (Binding Update/Acknowledgment procedure in IPv6 network) 6886
17.3.6 Registration of a new IPv4 CoA (Binding Update/Acknowledgment procedure in IPv4 network) 6890
17.3.7 Re-registration of IPv6 CoA 6893
17.3.8 Re-registration of Ipv4 CoA 6895
17.3.9 Return to home link 6896

17.3.10 Security association establishment 6898
17.3.11 Termination of protection of DSMIPv6 tunnel traffic by Home Agent 6903
17.3.12 Dual-Stack Mobile IPv6 detach in IPv6 network 6906
17.3.13 Dual-Stack Mobile IPv6 detach in IPv4 network 6908

18 Multi-Layer Functional Tests 6911
18.1 Radio Bearer Tests for 1.28 Mcps TDD option 6911
18.1.1 General information for radio bearer tests (1.28 Mcps TDD) 6911
18.1.1.1 Generic radio bearer test procedure for Single RB configuration 6911
18.1.1.2 Generic test procedure for testing multi-RB configuration and simultaneous signalling 6911
18.1.1.3 Generic test procedure radio bearers on MTCH 6911
18.1.1.4 General information interoperability radio bearer tests for E-DCH and HS-DSCH combinations 6911
18.1.1.5 Generic test procedure for radio bearers on MBSFN MTCH 6911
18.1.1.6 Generic test procedure for HS-DSCH radio bearer combinations with non-enhanced Layer 2 6911
18.1.1.6a General information interoperability radio bearer tests for HS-DSCH 6912
18.1.1.6a.1 HS-DSCH radio bearer test parameters 6912
18.1.1.6a.2 Selecting TFRC test points 6913
18.1.1.6a.2.1 Principle for non-enhanced Layer 2 6913
18.1.1.6a.2.1a Principle for enhanced Layer 2 6914
18.1.1.6a.3 TFRC test points for MAC-d PDU size=336 6914
18.1.1.6a.4 TFRC test points for MAC-d PDU size=656 6919
18.1.1.6a.5 TFRC test points for MAC-ehs with fixed MAC-d PDU size=336 6922
18.1.1.6a.6 TFRC test points for MAC-ehs with fixed MAC-d PDU size=656 6935
18.1.1.7 Generic test procedure for HS-DSCH radio bearer combinations with enhanced Layer 2 6943
18.1.1.8 Generic test procedure for HS-DSCH and E-DCH radio bearer combinations with downlink and uplink enhanced Layer 2 6943
18.1.1.9 Generic test procedure for HS-DSCH and E-DCH radio bearer combinations for enhanced uplink in CELL_FACH 6943
18.1.2 Combinations on DPCH 6943
18.1.2.1 Stand-alone UL:1.7 DL:1.7 kbps SRBs for DCCH 6943
18.1.2.2 Stand-alone UL:3.4 DL:3.4 kbps SRBs for DCCH 6943
18.1.2.3 Stand-alone UL:13.6 DL:13.6 kbps SRBs for DCCH 6943
18.1.2.4 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH 6944
18.1.2.4a Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH(TDD) 6945
18.1.2.5 Conversational / speech / UL:10.2 DL:10.2 kbps / CS RAB + UL:3.4 DL: 3.4 kbps SRBs for DCCH 6947
18.1.2.6 Conversational / speech / UL:7.95 DL:7.95 kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH 6949
18.1.2.7 Conversational / speech / UL:7.4 DL:7.4 kbps / CS RAB+ UL:3.4 DL:3.4 kbps SRBs for DCCH 6950
18.1.2.8 Conversational / speech / UL:6.7 DL:6.7 kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH 6952
18.1.2.9 Conversational / speech / UL:5.9 DL:5.9 kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH 6953

Annex A (normative): Default RRC Message Contents 8279

Annex B (informative): Void 8280

Annex C (normative): Generic Test Procedures to Check UE's State 8281
C.1 Verify that UE is in Idle Mode State 8281
C.2 Verify that UE is in CELL_FACH State 8283
C.3 Verify that UE is in CELL_DCH State 8284
C.4 Verify that UE is in CELL_PCH State 8285
C.5 Verify that UE is in URA_PCH State 8287
C.6 Procedures for RAN Assisted WLAN interworking 8288
C.6.1 Offload from UTRAN to WLAN 8288
C.6.2 Offload from WLAN to UTRAN 8289
C.6.3 Check no Offload to UTRAN, UE in Idle state 8289
C.6.4 Check no Offload to UTRAN, UE in Connected (Cell_DCH) state 8289

Annex D (normative): Generic procedure to use before and following inter-RAT handover/cell change order signalling test cases 8291
D.1 Preamble for UTRAN to GERAN test cases 8291
D.2 Postamble to be used following for inter-RAT handover / cell change order test cases 8291

D.2.1 UTRAN to GERAN handover in CS 8291
D.2.2 UTRAN to GERAN handover in CS+PS 8291
D.2.3 UTRAN to GERAN cell change in PS (in PMM-CONNECTED) 8292

Annex E (informative): Change history 8293

History 8399

Foreword

This Technical Specification (TS) has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

x the first digit:

1 presented to TSG for information;

2 presented to TSG for approval;

3 or greater indicates TSG approved document under change control.

y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.

z the third digit is incremented when editorial only changes have been incorporated in the document.

Introduction

The present document is part 1 of a multi-part conformance test specification for UE.

3GPP TS 34.123-1: "User Equipment (UE) conformance specification; Part 1: Protocol conformance specification". (the present document)

3GPP TS 34.123-2 [11]: "User Equipment (UE) conformance specification; Part 2: Implementation Conformance Statement (ICS) proforma specification".
Containing as well the TCs applicability.

3GPP TS 34.123-3 [12]: "Abstract Test Suite (ATS)".
Containing TTCN-2 (Tree and Tabular Combined Notation version 2) and TTCN-3 (Testing and Test Control Notation version 3) design frame work, test model, Implementation eXtra Information for Testing (IXIT) proforma, and Test Suites (the detailed test specifications in TTCN2 and TTCN-3). Note that there may be tests described in the present document which do not have a matching test case implementation in TTCN.

1 Scope

The present document specifies the protocol conformance testing for the 3rd Generation User Equipment (UE).

This is the first part of a multi-part test specification. The following information can be found in this part:

- the overall test structure;
- the test configurations;
- the conformance requirement and reference to the core specifications;
- the test purposes; and
- the description of the tests' procedures, the specific test requirements and the messages exchanged.

The following information relevant to the tests described in the present document can be found in accompanying specifications:

- the default setting of the test parameters [9];
- the applicability of each test case and the Implementation Conformance Statement (ICS) pro-forma [11].

Note: The present document does not contain any tests on the USIM, or the interface between the UE and the USIM. These tests are documented elsewhere.

The present document is valid for UE implemented according to 3GPP releases starting from Release 1999 up to the Release indicated on the cover page of the present document.

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document in the same Release as the present document unless the context in which the reference is made suggests a different Release is relevant (information on the applicable release in a particular context can be found in e.g. test case title, description or applicability, message description or content).

3 Definitions and abbreviations

3.1 Definitions

For the purposes of the present document, the terms and definitions given in TR 21.905 apply, unless specified below:

Example: text used to clarify abstract rules by applying them literally

Floor: Floor(x) is the largest integer smaller than or equal to x.

Ceil: Ceil (x) is the smallest integer larger than or equal to x.

3.2 Abbreviations

For the purposes of the present document, the abbreviations specified in TR 21.905 apply, with any additional abbreviations specified below:

SS	System Simulator
TTCN-2	Tree and Tabular Combined Notation version 2
TTCN-3	Testing and Test Control Notation version 3

4 Overview

4.1 Test Methodology

4.1.1 Testing of optional functions and procedures

Any function or procedure which is optional, as indicated in the present document may be subject to a conformance test if it is implemented in the UE.

A declaration by the apparatus supplier (ICS) is used to determine whether an optional function/procedure has been implemented.

4.1.2 Test interfaces and facilities

Detailed descriptions of the UE test interfaces and special facilities for testing are provided in [10].

4.2 Implicit Testing

For some 3GPP signalling and protocol features conformance is not verified explicitly in the present document. This does not imply that correct functioning of these features is not essential, but that these are implicitly tested to a sufficient degree in other tests.

5 Reference Conditions

The reference environments used by all signalling and protocol tests are specified in TS 34.108. Where a test requires an environment that is different, this will be specified in the test itself.

5.1 Generic setup procedures

A set of basic generic procedures for radio resource signalling, and generic setup procedures for layer 3 NAS signalling are described in TS 34.108 clause 7. These procedures are used in numerous test cases throughout the present document.

6 Idle mode operations

In the following paragraphs some explanatory text is given concerning the nature of the tests in this clause and the general behaviour of the SS is described.

Since the conformance requirements of most of the tests in this clause cannot be tested explicitly, testing is done implicitly by testing the UE behaviour from its responses to the SS.

In some cases, a test is performed in multiple stages in order that the requirements can be tested within the above constraints.

For any UE all the carriers are in its supported band(s) of operation.

Unless otherwise stated in the method of test, in all of the tests of this clause:

- the default values of the system information data fields given in TS 34.108 are used;
- the UE is equipped with a USIM containing default values. The USIM is in the idle updated state in the default location area with a TMSI assigned at the beginning of each test;
- default cell numbering as defined in TS 34.108 clause 6.1 have been used in the cell selection and re-selection test cases;
- the cells shall be configured such that Squal>0 (FDD only) and Srxlev>0 while applying Qqualmin (FDD only) and Qrxlevmin in table 6.1. In addition, for an FDD cell, the measured primary CPICH RSCP value shall be greater than or equal to -95 dBm (definition of High Quality cell, see TS 25.304, clause 5.1.2.2). In addition, for a TDD cell, the measured P-CCPCH RSCP shall be greater than or equal to –84 dBm (definition of High Quality cell, see TS 25.304, clause 5.1.2.2).

Three different methods A, B and C are applied in the tests:

Method A:

- the SS is continuously paging the UE on all cells at the start of the test and does not respond to RACH requests from the UE (which causes a cell reselection). Where a test specifies that the UE is not paged on a particular cell, only idle paging is transmitted. This method is similar to the one used in TS 51.010-1, clause 20.

Method B:

- the SS is continuously paging the UE on all cells at the start of the test and responds to RACH requests from the UE with an IMMEDIATE ASSIGNMENT REJECT (GERAN cell) or RRC CONNECTION REJECT (UTRAN cell) message which causes the UE to return to Idle mode. Where a test specifies that the UE is not paged in a particular cell, only idle paging is transmitted.

Method C:

- no continuously paging as in method A or B. Normal response to RACH requests so Location Updating and Calls can be done.

In case a test specifies that UE shall read System Information on BCCH while camped on a UTRAN cell, SS shall notify UE on the BCCH modification by sending a PAGING TYPE 1 message to UE. This message shall contain IE BCCH Modification Info with the following settings:

Information Element	Value/remark
BCCH modification info	
MIB Value Tag	Set to the same value as the value tag of the MIB after the BCCH modification
BCCH Modification time	Not present

Table 6.1: Default values of the system information fields

Parameter	Setting
IMSI attach/detach	Method A, B: Not allowed Method C: Allowed
Intra-frequency cell re-selection indicator	Set to allowed if IE Cell Barred is set to barred; otherwise this IE Not Present
Cell_selection_and_reselection_quality_measure	CPICH RSCP (FDD)
Qqualmin (FDD only)	-24 dB
Qrxlevmin (FDD)	-115 dBm
Qrxlevmin (TDD)	-103 dBm
DRX cycle length	1,28 s

For a UE camping in a FDD cell, CPICH_Ec/Io and SCH_Ec/Io shall fulfil requirements in TS 25.133, clause 8.1.2.2.1: The UE is able to identify a new detectable cell belonging to the monitored set within $T_{identify\ intra}$ when CPICH Ec/Io $\geq$ -20 dB and SCH_Ec/Io $\geq$ -20 dB.

For a UE camping in a TDD cell, the UE shall be able to identify a new detectable cell belonging to the monitored set within $T_{identify\ intra}$ when fulfil requirements in TS 25.123, clause 8.1.2.2 for TDD 3.84 Mcps option and 8.1A.2.2 for TDD 1.28 Mcps option.

It is a UE option whether to indicate access technologies to the user (TS 23.122, clause 4.4.3.1.2). Therefore, for combined UTRAN/GSM tests, it is indicated in parentheses which access technology shall be indicated to the user if the UE has this capability.

If a parameter is indicated with a *, it means that the parameter is calculated internally in the UE and is only shown for clarification of the test procedure.

The PLMN numbers indicated in table 6.2 are used in test cases to associate a cell with an MCC and MNC for that cell. If no PLMN is explicitly specified, the default value is PLMN 1.

Table 6.2: Location Area Information (LAI) in System Information type 3 messages broadcast on the BCCH (GSM) or System Information Block Type 1 broadcast on the BCH (UMTS)

PLMN	MCC1	MCC2	MCC3	MNC1	MNC2	MNC3	LAC
1	0	0	1	0	1	Not present	x
2	0	0	2	1	1	Not present	x
3	0	0	3	2	1	Not present	x
4	0	0	4	3	1	Not present	x
5	0	0	5	4	1	Not present	x
6	0	0	6	5	1	Not present	x
7	0	0	7	6	1	Not present	x
8	0	0	8	7	1	Not present	x
9	0	0	9	0	2	Not present	x
10	0	1	0	1	2	Not present	x
11	0	1	1	2	2	Not present	x
12	0	1	2	3	2	Not present	x
NOTE: 'x' denotes any value.							

NOTE: '3rd digit of MNC value is equal to '1' for test case 6.2.1.2a.1 if PLMN's are used for ITU region 2.

References: TS 23.122, annex A and TS 23.003, clause 2.

The FDD frequency bands used in different ITU regions are indicated in table 6.2A. These frequency bands may be selected in dependency of the ITU regions in the initial conditions of each test case.

Table 6.2A: FDD frequency bands used in different ITU regions

Operating FDD Band	FDD Frequency used in ITU region (Note)
I	1/3
II	2

VIII	1
IX	3
X	2
XI	3
XII	2
XIII	2
XIV	2
XIX	3
XX	1
XXI	3
XXII	1

NOTE: The FDD frequency bands used in ITU region 3 for the selection of RAT for PLMNs between frequency bands of different ITU regions are FFS.

The GSM frequency bands used in different ITU regions are indicated in table 6.2B. These frequency bands may be selected according to the requirement mentioned in the initial conditions of each test case.

Table 6.2B: GSM frequency bands used in different ITU regions

Operating GSM Band	GSM Frequency used in ITU region (Note)
GSM 850	2
GSM 900	1
DCS 1 800	1
PCS 1 900	2

NOTE: The GSM frequency bands used in ITU region 3 for the selection of RAT for PLMNs between frequency bands of different ITU regions are FFS.

The test channel numbers indicated in tables 6.3, 6.3B, 6.4, 6.4a, 6.5, 6.6 and 6.7 are used in test cases to associate a cell with a frequency for that cell. The frequencies for GSM and DCS cells in table 6.5, 6.6 and 6.7 are identical to those used in TS 51.010-1, clause 26.3.1. The RF signal levels are given in table 6.5, 6.6 and 6.7 for GSM cells, in table 6.3 and 6.3B for UTRAN FDD cells, in table 6.4 for UTRAN TDD cells 3.84 Mcps option and in table 6.4a for UTRAN TDD cells 1.28 Mcps option. If no channel is explicitly specified, the default value is Test Channel 1.

NOTE: The following list contains the test case(s) which simultaneously configure(s) 4 or more than 4 channels and make(s) use of these tables: test 9.4.5.4.1.

Table 6.3: UTRA (FDD) test frequencies

Test Channel:	1	2	3	4	Unit
RF signal level	-60	-65	-70	-75	CPICH_Ec dBm / 3.84 MHz
Band I	9613	9663	9713	9763	Uplink UARFCN
Band II	9263	9313	9363	9413	Uplink UARFCN
Band III	938	988	1038	1088	Uplink UARFCN
Band IV	1313	1363	1413	1463	Uplink UARFCN
Band V (*)	4133	4158	4183	4208	Uplink UARFCN
Band VI (*)	812	837	Void	Void	Uplink UARFCN
Band VII	2013	2063	2113	2163	Uplink UARFCN
Band VIII (**)	2713	2763	2813	2862	Uplink UARFCN
Band IX	8762	8812	8862	8912	Uplink UARFCN
Band X	2888	2938	2988	3038	Uplink UARFCN
Band XI (*)	3487	3512	3537	3562	Uplink UARFCN
Band XII (*)	3613	3638	3663	Void	Uplink UARFCN
Band XIII (*)	3842	3867	Void	Void	Uplink UARFCN
Band XIV (*)	3942	3967	Void	Void	Uplink UARFCN
Band XIX (*)	387	412	437	Void	Uplink UARFCN
Band XX (*)	4288	4338	4388	Void	Uplink UARFCN
Band XXI (*)	462	487	512	Void	Uplink UARFCN
Band XXII	4438	4488	4538	4588	Uplink UARFCN
Band XXV	4488	4538	4588	4638	Uplink UARFCN
Band XXVI (*)	4083	4108	4133	4158	Uplink UARFCN

NOTE: Bands marked with (*) use a 5 MHz spacing between test channels because the total available bandwidth is limited. Other bands use a 10 MHz spacing between test channels. For Band VIII (**) test channel 4 is only 9.8 MHz separated from test channel 3. Test cases which use more than the currently defined test channels in Table 6.3 cannot be executed and are not applicable for Band VI, XII, XIII, XIV, XIX and XXI.

Table 6.3A: Void

NOTE: The following list in table 6.3B is used for test cases in section 6.2.1.8a which verify the selection of RAT for OPLMN between frequency bands of different ITU regions. Test Channel combinations defined for single FDD frequency band (e.g. Band I) are used if the UE supports only one FDD frequency band within one ITU region (e.g. UE supports only FDD I for ITU region 1 and FDD II for ITU region 2).

Table 6.3B: UTRA (FDD) test frequencies and levels for test cases which verify the selection of RAT for PLMN between frequency bands of different ITU regions

Multiband 450/1800	885	261	267	BCCH ARFCN
Multiband 480/1800	885	308	314	BCCH ARFCN
Multiband 900/1800	885	7	39	BCCH ARFCN

NOTE: The test channels using GSM/DCS test frequencies defined in Table 6.5 are also used in interRAT measurement test cases of section 8.4.

For GSM 710 and T-GSM 810 Bands, ARFCNs are defined using Dynamic Mapping. The information about dynamic mapping is provided by System Information type 15 and the required parameters are defined in 3GPP 51.010-1[13], Table 20.1d.

The following list in table 6.6 is used for test cases which verify the selection of RAT for PLMN between frequency bands of different ITU regions when FDD frequency band of ITU region 2 is configured. Test Channel combinations of one, two or three GSM frequency bands are used if the UE supports only one, two or three GSM frequency bands.

Table 6.6: GSM/DCS test frequencies and levels for test cases which verify the selection of RAT for PLMN between frequency bands of different ITU regions when FDD frequency band of ITU region 2 is configured

Test Channel:	1	2	3	Unit

6.1 In a pure 3G environment

6.1.1 PLMN selection

6.1.1.1 PLMN selection of RPLMN, HPLMN, UPLMN and OPLMN; Manual mode

6.1.1.1.1 Definition

Test to verify that the UE can present the available PLMNs in priority order to the user when asked to do so in manual mode and that the displayed PLMNs can be selected / reselected by the user. If available, the RPLMN shall be selected at switch-on, otherwise the displayed list shall include in priority order HPLMN, User-PLMN and Operator-PLMN. The last priority in the list is "Other PLMN/access technology combinations" which is not included in this test.

Only UTRAN cells and a UE equipped with a USIM with Radio Access Technology fields set to UTRAN are considered.

6.1.1.1.2 Conformance requirement

1. At switch on, or following recovery from lack of coverage, the MS selects the registered PLMN or equivalent PLMN (if it is available) using all access technologies that the MS is capable of and if necessary (in the case of recovery from lack of coverage, see TS 23.122, clause 4.5.2) attempts to perform a Location Registration.

   If successful registration is achieved, the MS indicates the selected PLMN.

   If there is no registered PLMN, or if registration is not possible due to the PLMN being unavailable or registration failure, the MS follows either Automatic or Manual Network Selection Mode Procedure depending on its operating mode.

2. Manual Network Selection Mode Procedure:

   The MS indicates whether there are any PLMNs, which are available using all supported access technologies. This includes PLMNs in the "forbidden PLMNs" list and PLMNs which only offer services not supported by the MS.

   If displayed, PLMNs meeting the criteria above are presented in the following order:

   2.1 HPLMN;

   2.2 PLMNs contained in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

   2.3 PLMNs contained in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

2.4 Other PLMN/access technology combinations with received high quality signal in random order;

2.5 Other PLMN/access technology combinations in order of decreasing signal quality.

The user may select his desired PLMN and the MS then initiates registration on this PLMN using the access technology chosen by the user for that PLMN or using the highest priority available access technology for that PLMN, if the associated access technologies have a priority order. (This may take place at any time during the presentation of PLMNs). For such a registration, the MS shall ignore the contents of the "forbidden LAs for roaming", "forbidden LAs for regional provision of service", "forbidden PLMNs for GPRS service" and "forbidden PLMNs" lists.

If the user does not select a PLMN, the selected PLMN shall be the one that was selected before the PLMN selection procedure started. If no such PLMN was selected or that PLMN is no longer available, then the MS shall attempt to camp on any acceptable cell and enter the limited service state.

3. If a "PLMN not allowed" message is received by an MS in response to an LR request from a VPLMN, that VPLMN is added to a list of "forbidden PLMNs" in the SIM and thereafter that VPLMN will not be accessed by the MS when in automatic mode. A PLMN is removed from the "forbidden PLMNs" list if, after a subsequent manual selection of that PLMN, there is a successful LR. This list is retained when the MS is switched off or the SIM is removed. The HPLMN shall not be stored on the list of "forbidden PLMNs".

2. TS 23.122, clause 4.4.3.1.2;
3. TS 23.122, clause 3.1.

NOTE: TS 31.102 defines the USIM fields.

6.1.1.1.3 Test purpose

1. To verify that if available, the RPLMN is selected at switch-on.
2. To verify that in Manual Network Selection Mode Procedure, the UE presents the HPLMN, UPLMN and OPLMN in a prioritized order.

6.1.1.1.4 Method of test

Initial conditions

The UE is in manual PLMN selection mode.

Cell levels are from table 6.3. (FDD).

All Radio Access Technology USIM fields and cells are UTRAN.

Cell	CPICH_ Ec [dBm/3.84 MHz] (FDD)	P-CCPCH_ RSCP [dBm] (TDD)	Test Channel	PLMN
Cell 1	-60	-54	1	PLMN 1
Cell 2	-65	-59	2	PLMN 2
Cell 4	-75	-69	3	PLMN 4
Cell 5	-80	-74	4	PLMN 5

The UE is equipped with a USIM containing default values except for those listed below.

USIM field	Priority	PLMN
EF_{LOCI}		PLMN 1
$EF_{PLMNwAcT}$	1st	PLMN 4
$EF_{OPLMNwAcT}$	1st	PLMN 5

The HPLMN (MCC+MNC) of the IMSI for the USIM is set to PLMN2.

Test procedure

Method C is applied.

a) The SS activates 4 cells and monitors the cells for random access requests from the UE.

b) The UE is switched on.

c) The SS waits for random access requests from the UE.

d) Cell 1 is switched off.

e) PLMN 4 shall be selected when the PLMN list is presented.

f) The SS waits for random access requests from the UE.

g) Cell 4 is switched off.

h) Void

i) PLMN 5 shall be selected (the list is already available).

j) The SS waits for random access requests from the UE.

k) Cell 5 is switched off.

l) PLMN 2 shall be selected when the PLMN list is presented.

m) The SS waits for random access requests from the UE.

n) Cell 2 is switched off.

6.1.1.1.5 Test Requirements

1) In step c), the response from the UE shall be on Cell 1. The displayed PLMN shall be PLMN 1.

2) In step e), the list shall be presented. The priority shall be as follows: PLMN 2, PLMN 4 and PLMN 5.

3) In step f), the response from the UE shall be on Cell 4. The displayed PLMN shall be PLMN 4.

4) In step j), the response from the UE shall be on Cell 5. The displayed PLMN shall be PLMN 5.

5) In step l), the list shall be presented. The priority shall be as follows: PLMN 2.

6) In step m), the response from the UE shall be on Cell 2. The displayed PLMN shall be PLMN 2.

6.1.1.2 PLMN selection of "Other PLMN / access technology combinations"; Manual mode

6.1.1.2.1 Definition

Test to verify that the UE can present the available high quality signal PLMNs in random order to the user when asked to do so in manual mode and that the displayed PLMNs can be selected / reselected by the user. Forbidden PLMNs shall also be displayed in the list.

Only UTRAN cells and a UE equipped with a USIM with Radio Access Technology fields set to UTRAN are considered.

6.1.1.2.2 Conformance requirement

1. At switch on, or following recovery from lack of coverage, the MS selects the registered PLMN or equivalent PLMN (if it is available) using all access technologies that the MS is capable of and if necessary (in the case of recovery from lack of coverage, see TS 23.122, clause 4.5.2) attempts to perform a Location Registration.

   If successful registration is achieved, the MS indicates the selected PLMN.

If there is no registered PLMN, or if registration is not possible due to the PLMN being unavailable or registration failure, the MS follows either Automatic or Manual Network Selection Mode Procedure depending on its operating mode.

2. Manual Network Selection Mode Procedure:

   The MS indicates whether there are any PLMNs, which are available using all supported access technologies. This includes PLMNs in the "forbidden PLMNs" list and PLMNs which only offer services not supported by the MS.

   If displayed, PLMNs meeting the criteria above are presented in the following order:

   2.1 HPLMN;

   2.2 PLMNs contained in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

   2.3 PLMNs contained in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

   2.4 Other PLMN/access technology combinations with received high quality signal in random order;

   2.5 Other PLMN/access technology combinations in order of decreasing signal quality.

   In 2.5, the MS shall order the PLMN/access technology combinations in order of decreasing signal quality within each access technology. The order between PLMN/access technology combinations with different access technologies is an MS implementation issue.

   The user may select his desired PLMN and the MS then initiates registration on this PLMN using the access technology chosen by the user for that PLMN or using the highest priority available access technology for that PLMN, if the associated access technologies have a priority order. (This may take place at any time during the presentation of PLMNs). For such a registration, the MS shall ignore the contents of the "forbidden LAs for roaming", "forbidden LAs for regional provision of service", "forbidden PLMNs for GPRS service" and "forbidden PLMNs" lists.

   If the user does not select a PLMN, the selected PLMN shall be the one that was selected before the PLMN selection procedure started. If no such PLMN was selected or that PLMN is no longer available, then the MS shall attempt to camp on any acceptable cell and enter the limited service state.

3. If a "PLMN not allowed" message is received by an MS in response to an LR request from a VPLMN, that VPLMN is added to a list of "forbidden PLMNs" in the SIM and thereafter that VPLMN will not be accessed by the MS when in automatic mode. A PLMN is removed from the "forbidden PLMNs" list if, after a subsequent manual selection of that PLMN, there is a successful LR. This list is retained when the MS is switched off or the SIM is removed. The HPLMN shall not be stored on the list of "forbidden PLMNs".

4. The UE shall scan all RF channels in the UTRA band according to its capabilities to find available PLMNs. On each carrier, the UE shall search for the strongest cell according to the cell search procedures (for FDD, see TS 25.214, and TDD, see TS 25.224) and read its system information, in order to find out which PLMN the cell belongs to. If the UE can read the PLMN identity, the found PLMN shall be reported to the NAS as a high quality PLMN (but without the RSCP value), provided that the following high quality criterion is fulfilled:

   - For an FDD cell, the measured primary CPICH RSCP value shall be greater than or equal to -95 dBm.

   - For a TDD cell, the measured P-CCPCH RSCP shall be greater than or equal to –84 dBm.

   Found PLMNs that do not satisfy the high quality criterion, but for which the UE has been able to read the PLMN identities are reported to the NAS together with the CPICH RSCP value for UTRA FDD cells and P-CCPCH RSCP for UTRA TDD cells.

2. TS 23.122, clause 4.4.3.1.2.
3. TS 23.122, clause 3.1.

4. TS 25.304, clause 5.1.2.2.

NOTE: TS 31.102 defines the USIM fields.

6.1.1.2.3 Test purpose

1. To verify that in Manual Network Selection Mode Procedure, the UE presents "Other PLMN/access technology combinations" in a random order according to conformance requirement 2.4. UE requirement on measurement accuracy for PLMN selection is not specified in core specifications. Therefore, the ordering of PLMNs according to conformance requirement 2.5 is not tested.

2. To verify that forbidden PLMNs are also displayed in the list.

6.1.1.2.4 Method of test

Initial conditions

The UE is in manual PLMN selection mode.

All Radio Access Technology USIM fields and cells are UTRAN.

Cell	CPICH_Ec [dBm/3.84 MHz] (FDD)	P-CCPCH_ RSCP [dBm] (TDD)	High Quality signal	Test Channel	PLMN
Cell 1	-85	-74	Yes	1	PLMN 6
Cell 2	-80	-69	Yes	2	PLMN 7
Cell 3	-80	-69	Yes	3	PLMN 8
Cell 4	-80	-69	Yes	4	PLMN 10

The UE is equipped with a USIM containing default values except for those listed below.

USIM field	Priority	PLMN
EF_{LOCI}		PLMN 6
EF_{FPLMN}	PLMN 10	

Test procedure

Method C is applied.

a) The SS activates cells 1-4 and monitors the cells for random access requests from the UE.

b) The UE is switched on.

c) PLMN 6 shall be selected when the PLMN list is presented.

d) The SS waits for random access requests from the UE.

e) Cell 1 is switched off.

f) PLMN 7 shall be selected when the PLMN list is presented.

g) The SS waits for random access requests from the UE.

h) Cell 2 is switched off.

i) PLMN 8 shall be selected when the PLMN list is presented.

j) The SS waits for random access requests from the UE.

k) Cell 3 is switched off.

l) PLMN 10 shall be selected when the PLMN list is presented. The SS shall accept the Registration Request from the UE.

m) Cell 4 is switched off.

6.1.1.2.5 Test Requirements

1) In step c), the list shall be presented. The priority shall be as follows: PLMN 6 followed by PLMN 7, PLMN 8 and PLMN 10 in random order.

2) In step d), the response from the UE shall be on Cell 1. The displayed PLMN shall be PLMN 6.

3) In step f), the list shall be presented. The priority shall be as follows: PLMN 7, PLMN 8 and PLMN 10 in random order.

4) In step g), the response from the UE shall be on Cell 2. The displayed PLMN shall be PLMN 7.

5) In step i), the list shall be presented. The priority shall be as follows: PLMN 8 and PLMN 10 in random order.

6) In step j), the response from the UE shall be on Cell 3. The displayed PLMN shall be PLMN 8.

7) In step l), the list shall be presented containing only PLMN 10. The UE shall perform successful registration on Cell 4.

8) After step m), the UE shall inform that no network is available.

6.1.1.3 PLMN selection; independence of RF level and preferred PLMN; Manual mode

6.1.1.3.1 Definition

Test to verify that in Manual Network Selection Mode, the UE is able to obtain normal service on a PLMN which is neither the better nor a preferred PLMN and that it tries to obtain service on a VPLMN if and only if the user selects it manually.

6.1.1.3.2 Conformance requirement

1. At switch on, or following recovery from lack of coverage, the MS selects the registered PLMN or equivalent PLMN (if it is available) using all access technologies that the MS is capable of and if necessary (in the case of recovery from lack of coverage, see TS 23.122, clause 4.5.2) attempts to perform a Location Registration.

   If successful registration is achieved, the MS indicates the selected PLMN.

   If there is no registered PLMN, or if registration is not possible due to the PLMN being unavailable or registration failure, the MS follows either Automatic or Manual Network Selection Mode Procedure depending on its operating mode.

2. Manual Network Selection Mode Procedure:

   The MS indicates whether there are any PLMNs, which are available using all supported access technologies. This includes PLMNs in the "forbidden PLMNs" list and PLMNs which only offer services not supported by the MS.

If displayed, PLMNs meeting the criteria above are presented in the following order:

2.1 HPLMN;

2.2 PLMNs contained in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

2.3 PLMNs contained in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

2.4 Other PLMN/access technology combinations with received high quality signal in random order;

2.5 Other PLMN/access technology combinations in order of decreasing signal quality.

The user may select his desired PLMN and the MS then initiates registration on this PLMN using the access technology chosen by the user for that PLMN or using the highest priority available access technology for that PLMN, if the associated access technologies have a priority order. (This may take place at any time during the presentation of PLMNs). For such a registration, the MS shall ignore the contents of the "forbidden LAs for

roaming", "forbidden LAs for regional provision of service", "forbidden PLMNs for GPRS service" and "forbidden PLMNs" lists.

If the user does not select a PLMN, the selected PLMN shall be the one that was selected before the PLMN selection procedure started. If no such PLMN was selected or that PLMN is no longer available, then the MS shall attempt to camp on any acceptable cell and enter the limited service state.

2. TS 23.122, clause 4.4.3.1.2

NOTE: TS 31.102 defines the USIM fields.

6.1.1.3.3 Test purpose

1. To verify that the selected PLMN at switch-on is the HPLMN.
2. To verify that in Manual Network Selection Mode Procedure the UE tries to obtain service on a VPLMN if and only if the user selects it manually.
3. To verify that the UE is able to obtain normal service on a PLMN which is neither the better nor a preferred PLMN.

6.1.1.3.4 Method of test

Initial conditions

The UE is in manual PLMN selection mode.

"IMSI attach" flag in the BCCH is set to allowed.

For FDD only:

Step a-d:

Parameter	Unit	Cell 1	Cell 2	Cell 3
Test Channel		1	2	3
CPICH_Ec	dBm/3.84 MHz	-60	-70	OFF
PLMN		1	2	3

Step e-f:

CPICH_Ec	dBm/3.84 MHz	-60 -> OFF	-70	OFF

Step g-h:

CPICH_Ec	dBm/3.84 MHz	OFF	-70	OFF -> -60

Step i-l:

CPICH_Ec	dBm/3.84 MHz	OFF	-70 -> OFF	-60

For TDD only:

Step a-d:

Parameter	Unit	Cell 1	Cell 2	Cell 3
Test Channel		1	2	3
P-CCPCH RSCP	dBm	-69	-74	OFF
PLMN		1	2	3

Step e-f:

P-CCPCH RSCP		-69 -> OFF	-74	OFF

Step g-h:

P-CCPCH RSCP		OFF	-74	OFF -> -69

Step k-l:

P-CCPCH RSCP		OFF	-74 -> OFF	-69

The UE is equipped with a USIM containing default values except for those listed below.

USIM field	Priority	PLMN
EF_{LOCI}		
$EF_{PLMNwAcT}$	1st	PLMN 3

The HPLMN (MCC+MNC) of the IMSI for the USIM is set to PLMN1.

Test procedure

Method C is applied.

a) The SS activates cells 1 and 2.

b) The UE is switched on.

c) PLMN 1 is selected manually.

d) The SS waits for random access requests from the UE. A complete Location Update is done.

e) Cell 1 is switched off.

f) The SS waits to see if there is any random access request from the UE.

g) Cell 3 is switched on.

h) The SS waits to see if there is any random access request from the UE.

i) PLMN 2 is selected manually.

j) The SS waits for random access requests from the UE. A complete Location Update is done.

k) Cell 2 is switched off.

l) The SS waits to see if there is any random access request from the UE.

6.1.1.3.5 Test Requirements

1) In step d), there shall be a response on Cell 1. The selected PLMN shall be PLMN 1.

2) In step f), there shall be no response from the UE within 2 min.

3) In step h), there shall be no response from the UE within 2 min.

4) In step j), there shall be a response on Cell 2. The selected PLMN shall be PLMN 2.

5) In step l), there shall be no response from the UE within 2 min.

6.1.1.4 PLMN selection of RPLMN, HPLMN, UPLMN and OPLMN; Automatic mode

6.1.1.4.1 Definition

Test to verify that in Automatic Network Selection Mode, the UE selects PLMNs in a prioritized order. If available, the RPLMN shall be selected at switch-on, otherwise the list shall include in priority order HPLMN, User-PLMN and Operator-PLMN. The last priority in the list is "Other PLMN/access technology combinations" which is not included in this test.

Only UTRAN cells and a UE equipped with a USIM with Radio Access Technology fields set to UTRAN are considered.

6.1.1.4.2 Conformance requirement

1. At switch on, or following recovery from lack of coverage, the MS selects the registered PLMN or equivalent PLMN (if it is available) using all access technologies that the MS is capable of and if necessary (in the case of recovery from lack of coverage, see TS 23.122, clause 4.5.2) attempts to perform a Location Registration.

   If successful registration is achieved, the MS indicates the selected PLMN.

   If there is no registered PLMN, or if registration is not possible due to the PLMN being unavailable or registration failure, the MS follows either Automatic or Manual Network Selection Mode Procedure depending on its operating mode.

2. Automatic Network Selection Mode Procedure:

   The MS selects and attempts registration on other PLMNs, if available and allowable in the following order:

   2.1 HPLMN (if not previously selected);

   2.2 Each PLMN in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

   2.3 Each PLMN in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

   2.4 Other PLMN/access technology combinations with received high quality signal in random order;

   2.5 Other PLMN/access technology combinations in order of decreasing signal quality.

   If successful registration is achieved, the MS indicates the selected PLMN.

   If registration cannot be achieved because no PLMNs are available and allowable, the MS indicates "no service" to the user, waits until a new PLMN is available and allowable and then repeats the procedure.

   If there were one or more PLMNs which were available and allowable, but an LR failure made registration on those PLMNs unsuccessful or an entry in the "forbidden LAs for regional provision of service" list prevented a registration attempt, the MS selects the first such PLMN again and enters a limited service state.

3. If a "PLMN not allowed" message is received by an MS in response to an LR request from a VPLMN, that VPLMN is added to a list of "forbidden PLMNs" in the SIM and thereafter that VPLMN will not be accessed by the MS when in automatic mode. A PLMN is removed from the "forbidden PLMNs" list if, after a subsequent manual selection of that PLMN, there is a successful LR. This list is retained when the MS is switched off or the SIM is removed. The HPLMN shall not be stored on the list of "forbidden PLMNs".

References

2. TS 23.122, clause 4.4.3.1.1.

3. TS 23.122, clause 3.1.

NOTE: TS 31.102 defines the USIM fields.

6.1.1.4.3 Test purpose

1. To verify that if available, the RPLMN is selected at switch-on.
2. To verify that in Automatic Network Selection Mode Procedure, the UE selects the RPLMN, HPLMN, UPLMN and OPLMN in a prioritized order.

6.1.1.4.4 Method of test

Initial conditions

The UE is in automatic PLMN selection mode.

"IMSI attach" flag in the BCCH is set to allowed.

Cell levels are from table 6.3 (FDD).

All Radio Access Technology USIM fields and cells are UTRAN.

In the System Information broadcast in each cell, the neighbouring cell list does not contain any cell belonging to the other PLMN's.

Cell	CPICH_ Ec [dBm/3.84 MHz] (FDD)	P-CCPCH_ RSCP [dBm] (TDD)	Test Channel	PLMN
Cell 1	-60	-54	1	PLMN 2
Cell 2	-65	-59	2	PLMN 1
Cell 4	-75	-69	3	PLMN 4
Cell 5	-80	-74	4	PLMN 5

The UE is equipped with a USIM containing default values except for those listed below.

USIM field	Priority	PLMN
$EF_{PLMNwAcT}$	1st	PLMN 4
$EF_{OPLMNwAcT}$	1st	PLMN 5

The HPLMN (MCC+MNC) of the IMSI for the USIM is set to PLMN1.

UE is previously registered on PLMN2, before switched off.

Test procedure

Method C is applied.

a) The SS activates 4 cells and monitors the cells for random access requests from the UE.

b) The UE is switched on.

c) The SS waits for random access requests from the UE.

d) Cell 1 is switched off.

e) The SS waits for random access requests from the UE.

f) Cell 2 is switched off.

g) The SS waits for random access requests from the UE.

i) Cell 4 is switched off.

j) The SS waits for random access requests from the UE.

k) Cell 5 is switched off.

6.1.1.4.5 Test Requirements

1) In step c), the response from the UE shall be on Cell 1. The displayed PLMN shall be PLMN 2.

2) In step e), the response from the UE shall be on Cell 2. The displayed PLMN shall be PLMN 1.

3) In step g), the response from the UE shall be on Cell 4. The displayed PLMN shall be PLMN 4.

4) In step j), the response from the UE shall be on Cell 5. The displayed PLMN shall be PLMN 5.

6.1.1.5 PLMN selection of "Other PLMN / access technology combinations"; Automatic mode

6.1.1.5.1 Definition

Test to verify that in Automatic Network Selection Mode, the UE selects high quality signal PLMNs in a random order.

Only UTRAN cells and a UE equipped with a USIM with Radio Access Technology fields set to UTRAN are considered.

6.1.1.5.2 Conformance requirement

1. At switch on, or following recovery from lack of coverage, the MS selects the registered PLMN or equivalent PLMN (if it is available) using all access technologies that the MS is capable of and if necessary (in the case of recovery from lack of coverage, see TS 23.122, clause 4.5.2) attempts to perform a Location Registration.

   If successful registration is achieved, the MS indicates the selected PLMN.

   If there is no registered PLMN, or if registration is not possible due to the PLMN being unavailable or registration failure, the MS follows either Automatic or Manual Network Selection Mode Procedure depending on its operating mode.

2. Automatic Network Selection Mode Procedure:

   The MS selects and attempts registration on other PLMNs, if available and allowable in the following order:

   2.1 HPLMN (if not previously selected);

   2.2 Each PLMN in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

   2.3 Each PLMN in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

   2.4 Other PLMN/access technology combinations with received high quality signal in random order;

   2.5 Other PLMN/access technology combinations in order of decreasing signal quality.

   In 2.5, the MS shall order the PLMN/access technology combinations in order of decreasing signal quality within each access technology. The order between PLMN/access technology combinations with different access technologies is an MS implementation issue.

   If successful registration is achieved, the MS indicates the selected PLMN.

   If registration cannot be achieved because no PLMNs are available and allowable, the MS indicates "no service" to the user, waits until a new PLMN is available and allowable and then repeats the procedure.

   If there were one or more PLMNs which were available and allowable, but an LR failure made registration on those PLMNs unsuccessful or an entry in the "forbidden LAs for regional provision of service" list prevented a registration attempt, the MS selects the first such PLMN again and enters a limited service state.

3. If a "PLMN not allowed" message is received by an MS in response to an LR request from a VPLMN, that VPLMN is added to a list of "forbidden PLMNs" in the SIM and thereafter that VPLMN will not be accessed by the MS when in automatic mode. A PLMN is removed from the "forbidden PLMNs" list if, after a subsequent

manual selection of that PLMN, there is a successful LR. This list is retained when the MS is switched off or the SIM is removed. The HPLMN shall not be stored on the list of "forbidden PLMNs".

4. The UE shall scan all RF channels in the UTRA band according to its capabilities to find available PLMNs. On each carrier, the UE shall search for the strongest cell according to the cell search procedures (for FDD, see TS 25.214, and TDD, see TS 25.224) and read its system information, in order to find out which PLMN the cell belongs to. If the UE can read the PLMN identity, the found PLMN shall be reported to the NAS as a high quality PLMN (but without the RSCP value), provided that the following high quality criterion is fulfilled:

   - For an FDD cell, the measured primary CPICH RSCP value shall be greater than or equal to -95 dBm.
   - For a TDD cell, the measured P-CCPCH RSCP shall be greater than or equal to –84 dBm.

   Found PLMNs that do not satisfy the high quality criterion, but for which the UE has been able to read the PLMN identities are reported to the NAS together with the CPICH RSCP value for UTRA FDD cells and P-CCPCH RSCP for UTRA TDD cells.

4. TS 25.304, clause 5.1.2.2.

NOTE: TS 31.102 defines the USIM fields.

6.1.1.5.3 Test purpose

1. To verify that in Automatic Network Selection Mode Procedure, the UE selects "Other PLMN/access technology combinations" in a random order according to conformance requirement 2.4. UE requirement on measurement accuracy for PLMN selection is not specified in core specifications. Therefore, the ordering of PLMNs according to conformance requirement 2.5 is not tested.

6.1.1.5.4 Method of test

Initial conditions

The UE is in automatic PLMN selection mode.

All Radio Access Technology USIM fields and cells are UTRAN.

Cell	CPICH_Ec [dBm/3.84 MHz] (FDD)	P-CCPCH_ RSCP [dBm] (TDD)	High Quality signal	Test Channel	PLMN
Cell 1	-85	-74	Yes	1	PLMN 6
Cell 2	-80	-69	Yes	2	PLMN 7
Cell 3	-80	-69	Yes	3	PLMN 8

UE is previously registered on PLMN6, before switched off.

Test procedure

Method C is applied.

a) The SS activates cells 1-3 and monitors the cells for random access requests from the UE.

b) The UE is switched on.

c) The SS waits for random access requests from the UE.

d) Cell 1 is switched off.

e) The SS waits for random access requests from the UE.

f) The cell associated to the currently shown PLMN shall be switched off.

g) The SS waits for random access requests from the UE.

6.1.1.5.5 Test Requirements

1) In step c), the response from the UE shall be on Cell 1. The displayed PLMN shall be PLMN 6.

2) In step e), the response from the UE shall be on either Cell 2 or 3. The displayed PLMN shall be the one associated with the cell on which the response was received.

3) In step g), the response from the UE shall be on either Cell 2 or 3 (excluding the cell in step 2). The displayed PLMN shall be the one associated with the cell on which the response was received.

6.1.1.6 Void

6.1.1.7 Cell reselection of ePLMN in manual mode

6.1.1.7.1 Definition

Test to verify that the UE shall be able to reselect to a cell of another PLMN declared as equivalent PLMN to the registered PLMN in the manual mode.

6.1.1.7.2 Conformance requirement

B) Manual network selection mode

Once the UE has registered on a PLMN selected by the user, the UE shall not automatically register on a different PLMN unless:

i) The new PLMN is declared as an equivalent PLMN by the registered PLMN;

or,

ii) The user selects automatic mode.

References:

TS 22.011 clause 3.2.2.2B

6.1.1.7.3 Test purpose

To verify that in Manual Network Selection Mode Procedure, the UE can perform cell reselection to an equivalent PLMN.

6.1.1.7.4 Method of test

Initial conditions

The UE is in manual PLMN selection mode and has successfully selected a PLMN in manual PLMN selection mode.

Cell_selection_and_reselection_quality_measure is CPICH_RSCP (FDD).

All Radio Access Technology USIM fields and cells are UTRAN.

Each cell shall include the other cells as neighbouring cells in System Information Block Type 11.

Cell	CPICH_Ec [dBm/3.84 MHz] (FDD)	P-CCPCH_ RSCP [dBm] (TDD)	Test Channel	PLMN
Cell 1	-78	-69	1	PLMN 1
Cell 4	-62	-54	2	PLMN 2
Cell7	-68	-64	3	PLMN 3

Values of the system information fields applicable for this test case to fulfil the criteria of Cell Reselection

Parameter	Setting
IMSI attach/detach	Method A, B: Not allowed Method C: Allowed
Cell_selection_and_reselection_quality_measure	CPICH RSCP (FDD)
Qqualmin (FDD only)	-16 dB
Qrxlevmin (FDD)	-115 dBm
Qrxlevmin (TDD)	-103 dBm
DRX cycle length	1,28 s

PLMN1 is the HPLMN.

UE is previously registered on PLMN1, before switched off.

Test procedure

a) The SS activates cells 1.

b) The UE is switched on.

c) The SS waits for random access requests from the UE.

d) A Location Update Accept message shall be sent on reception of a Location Update message from the UE. The Location Update Accept message shall include PLMN3 in the equivalent PLMN list. For a UE that supports both CS and PS domain or PS domain only, the Location Updating procedure could be replaced by the appropriate GMM registration procedure. In these cases, the GMM Attach Accept message shall include PLMN3 in the equivalent PLMN list.

e) Cell 4 and 7 are activated.

6.1.1.7.5 Test Requirements

1) In step c), the response from the UE shall be on Cell 1. The displayed PLMN shall be PLMN 1.

2) In step e), the UE shall perform a cell reselection and Location Update or Routing Area Update to PLMN 3, which is equivalent to PLMN1.

6.1.1.8 PLMN selection in shared network environment, Automatic mode

6.1.1.8.1 Definition

Test to verify that when operating in automatic PLMN selection mode in shared network environment, the UE selects PLMNs in a prioritized order according to TS 23.122. Forbidden PLMNs shall not be selected. RPLMN shall be selected at switch-on, otherwise the list shall include in priority order HPLMN, User-PLMN and Operator-PLMN. The last priority in the list is "Other PLMN/access technology combinations" which is not included in this test.

Only UTRAN cells and a UE equipped with a USIM with Radio Access Technology fields set to UTRAN are considered.

6.1.1.8.2 Conformance requirement

1. At switch on, or following recovery from lack of coverage, the MS selects the registered PLMN or equivalent PLMN (if it is available) using all access technologies that the MS is capable of and if necessary (in the case of recovery from lack of coverage, see TS 23.122, clause 4.5.2) attempts to perform a Location Registration.

   If successful registration is achieved, the MS indicates the selected PLMN.

   If there is no registered PLMN, or if registration is not possible due to the PLMN being unavailable or registration failure, the MS follows either Automatic or Manual Network Selection Mode Procedure depending on its operating mode.

2. Automatic Network Selection Mode Procedure:

   The MS selects and attempts registration on other PLMNs, if available and allowable in the following order:

2.1 HPLMN (if not previously selected);

2.2 Each PLMN in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

2.3 Each PLMN in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

2.4 Other PLMN/access technology combinations with received high quality signal in random order;

2.5 Other PLMN/access technology combinations in order of decreasing signal quality.

If successful registration is achieved, the MS indicates the selected PLMN.

If registration cannot be achieved because no PLMNs are available and allowable, the MS indicates "no service" to the user, waits until a new PLMN is available and allowable and then repeats the procedure.

If there were one or more PLMNs which were available and allowable, but an LR failure made registration on those PLMNs unsuccessful or an entry in the "forbidden LAs for regional provision of service" list prevented a registration attempt, the MS selects the first such PLMN again and enters a limited service state.

3. If a "PLMN not allowed" message is received by an MS in response to an LR request from a VPLMN, that VPLMN is added to a list of "forbidden PLMNs" in the SIM and thereafter that VPLMN will not be accessed by the MS when in automatic mode. A PLMN is removed from the "forbidden PLMNs" list if, after a subsequent manual selection of that PLMN, there is a successful LR. This list is retained when the MS is switched off or the SIM is removed. The HPLMN shall not be stored on the list of "forbidden PLMNs".

References

1. TS 23.122, clause 4.4.3.1.
2. TS 23.122, clause 4.4.3.1.1.
3. TS 23.122, clause 3.1.

NOTE: TS 31.102 defines the USIM fields.

6.1.1.8.3 Test purpose

1. To verify that if available, the RPLMN is selected at switch-on.
2. To verify that in Automatic Network Selection Mode, the UE selects the RPLMN, HPLMN, UPLMN and OPLMN in a prioritized order.
3. To verify that forbidden PLMNs are not selected.

For all paragraphs above, it is verified that the UE behaves in accordance with the core specification TS 23.122 when operating in shared network environment. Independence of RF level is also implicitly tested.

6.1.1.8.4 Method of test

Initial conditions

System Simulator:

Cell levels are from table 6.3 (Band I).

Cell	CPICH_ Ec [dBm/3.84 MHz] (FDD)	Test Channel
Cell 1	-65	1
Cell 3	-70	2
Cell 5	-80	3
Cell 6	-85	4

The reference system configuration from TS 34.108 clause 6.1 is used in all cells, with modifications in the Master Information Block according to the table below.

- MIB value tag	Set to (Current MIB value tag + 1)
- Supported PLMN types	
- PLMN type	GSM-MAP
- PLMN identity	
- MCC digit	See table below
- MNC digit	See table below
- Multiple PLMN List	
- MIB PLMN Identity	See table below
- Multiple PLMNs (1)	
- MCC	See table below
- MNC	See table below
- Multiple PLMNs (2)	
- MCC	See table below
- MNC	See table below

The MIB PLMN Identity, PLMN codes and LAC broadcasted on the BCCH in each cell shall be configured as defined in the table below.

Cell	MIB PLMN Identity	PLMN Identity		Multiple PLMNs (1)		Multiple PLMNs (2)		LAC
		MCC digits	MNC digits	MCC digits	MNC digits	MCC digits	MNC digits	
1	FALSE	PLMN 5	PLMN 5	PLMN 10	PLMN 10	PLMN 6	PLMN 6	X
3	TRUE	PLMN 5	PLMN 5	-	PLMN 9	-	PLMN 7	X
5	FALSE	PLMN 5	PLMN 5	-	PLMN 1	-	PLMN 7	X
6	FALSE	PLMN 5	PLMN 5	-	PLMN 1	-	PLMN 2	X
NOTE: the "–" (dash) denotes "not present", and "X" denotes "any value"								

The definition of each PLMN code is found in table below.

PLMN	MCC digit			MNC digit		
	1	2	3	1	2	3
1	0	0	1	0	1	-
2	0	0	1	0	2	-
3	0	0	1	0	3	-
4	0	0	1	0	4	-
5	0	0	1	0	5	-
6	0	0	1	0	6	-
7	0	0	1	0	7	-
8	0	0	1	0	8	-
9	0	0	1	0	9	-
10	0	0	2	1	0	-

NOTE: "–" (dash) denotes "not present"

UE:

The UE is in automatic PLMN selection mode, and equipped with a USIM containing default values except for those listed below. All Radio Access Technology USIM fields are UTRAN.

USIM field	Priority	PLMN
$EF_{PLMNwAcT}$	1st	PLMN 7
$EF_{OPLMNwAcT}$	1st	PLMN 5
	2nd	PLMN 6
EF_{FPLMN}	PLMN 7	

The HPLMN (MCC+MNC) of the IMSI for the USIM is set to PLMN1.

UE is previously registered on PLMN2, before switched off.

Test procedure:

Method C is applied.

a) The SS activates all cells and monitors the cells for random access requests from the UE

b) The UE is switched on.

c) The SS waits for random access requests from the UE.

d) Cell 6 is switched off.

e) The SS waits for random access requests from the UE.

f) Cell 5 is switched off.

g) The SS waits for random access requests from the UE.

h) Cell 3 is switched off.

i) The SS waits for random access requests from the UE.

j) Cell 1 is switched off.

6.1.1.8.5 Test Requirements

1) In step c), the response from the UE shall be on Cell 6. The displayed PLMN shall be PLMN 2.

2) In step e), the response from the UE shall be on Cell 5. The displayed PLMN shall be PLMN 1.

3) In step g), the response from the UE shall be on Cell 3. The displayed PLMN shall be PLMN 5.

4) In step i), the response from the UE shall be on Cell 1. The displayed PLMN shall be PLMN 6.

5) After step j), the UE shall inform that no service or no network is available.

6.1.1.9 PLMN selection in shared network environment, Manual Mode

6.1.1.9.1 Definition

Test to verify that the UE can present the available PLMNs in priority order to the user when asked to do so in manual mode and that the displayed PLMNs can be selected / reselected by the user. The test is performed in shared network environment. All PLMNs shall be displayed in the list, including forbidden PLMNs and PLMNs in the “Multiple PLMN list”. If available, the RPLMN shall be selected at switch-on, otherwise the displayed list shall include in priority order HPLMN, User-PLMN, Operator-PLMN and "Other PLMN/access technology combinations. Only UTRAN cells and a UE equipped with a USIM with Radio Access Technology fields set to UTRAN are considered.

6.1.1.9.2 Conformance requirement

1. At switch on or recovery from lack of coverage

   At switch on, or following recovery from lack of coverage, the MS selects the registered PLMN or equivalent PLMN (if it is available) using all access technologies that the MS is capable of and if necessary (in the case of recovery from lack of coverage, see clause 4.5.2) attempts to perform a Location Registration.

   EXCEPTION: In A/Gb mode an MS with voice capability, shall not search for CPBCCH carriers. In A/Gb mode an MS not supporting packet services shall not search for CPBCCH carriers.

   If successful registration is achieved, the MS indicates the selected PLMN.

   If there is no registered PLMN, or if registration is not possible due to the PLMN being unavailable or registration failure, the MS follows one of the following two procedures depending on its operating mode.

   EXCEPTION: If registration is not possible on recovery from lack of coverage due to the registered PLMN being unavailable, a MS attached to GPRS services may, optionally, continue looking for the registered PLMN for an implementation dependent time.

NOTE: A MS attached to GPRS services should use the above exception only if one or more PDP contexts are currently active.

2. Manual Network Selection Mode Procedure:

   The MS indicates whether there are any PLMNs, which are available using all supported access technologies. This includes PLMNs in the "forbidden PLMNs" list and PLMNs which only offer services not supported by the MS. An MS which supports GSM COMPACT shall also indicate GSM COMPACT PLMNs (which use PBCCH).

   If displayed, PLMNs meeting the criteria above are presented in the following order:

   i)- HPLMN;

   ii)- PLMN/access technology combinations contained in the " User Controlled PLMN Selector with Access Technology " data file in the SIM (in priority order);

   iii)- PLMN/access technology combinations contained in the "Operator Controlled PLMN Selector with Access Technology" data file in the SIM (in priority order);

   iv)- other PLMN/access technology combinations with received high quality signal in random order;

   v)- other PLMN/access technology combinations in order of decreasing signal quality.

   In ii and iii, an MS using a SIM without access technology information storage (i.e. the "User Controlled PLMN Selector with Access Technology" and the "Operator Controlled PLMN Selector with Access Technology" data files are not present) shall instead present the PLMNs contained in the "PLMN Selector" data file in the SIM (in priority order).

   In v, requirement h) in clause 4.4.3.1.1 applies.

   In GSM COMPACT, the non support of voice services shall be indicated to the user.

   The user may select his desired PLMN and the MS then initiates registration on this PLMN using the access technology chosen by the user for that PLMN or using the highest priority available access technology for that PLMN, if the associated access technologies have a priority order. (This may take place at any time during the presentation of PLMNs). For such a registration, the MS shall ignore the contents of the "forbidden LAs for roaming", "forbidden LAs for regional provision of service", "forbidden PLMNs for GPRS service" and "forbidden PLMNs" lists.

   Once the UE has registered on a PLMN selected by the user, the UE shall not automatically register on a different PLMN unless:

   i) the new PLMN is declared as an equivalent PLMN by the registered PLMN; or

   ii) the user selects automatic mode.

   NOTE 1: It is an MS implementation option whether to indicate access technologies to the user. If the MS does display access technologies, then the access technology used should be the access technology chosen by the user for that PLMN. If the MS does not display access technologies, then the access technology chosen for a particular PLMN should be the highest priority available access technology for that PLMN, if the associated access technologies have a priority order.

   If the user does not select a PLMN, the selected PLMN shall be the one that was selected before the PLMN selection procedure started. If no such PLMN was selected or that PLMN is no longer available, then the MS shall attempt to camp on any acceptable cell and enter the limited service state.

   NOTE 2: High quality signal is defined in the appropriate AS specification.

3. If a "PLMN not allowed" message is received by an MS in response to an LR request from a VPLMN, that VPLMN is added to a list of "forbidden PLMNs" in the SIM and thereafter that VPLMN will not be accessed by the MS when in automatic mode. A PLMN is removed from the "forbidden PLMNs" list if, after a subsequent manual selection of that PLMN, there is a successful LR. This list is retained when the MS is switched off or the SIM is removed. The HPLMN shall not be stored on the list of "forbidden PLMNs".

2. TS 23.122, clause 4.4.3.1.2
3. TS 23.122, clause 3.1.

NOTE: TS 31.102 defines the USIM fields.

6.1.1.9.3 Test purpose

1. To verify that all PLMNs broadcasted in the IEs “Multiple PLMN list” are displayed to the user in Manual Selection Mode, even if present in the “forbidden PLMNs” list on the USIM.
2. To verify that the PLMN in the IE “PLMN Identity” is displayed/not displayed according to the value of the IE “MIB PLMN Identity”.
3. To verify that it is possible to select any PLMN on the displayed list, and that the UE subsequently attempts to register on the selected PLMN.
4. To verify that the UE in general behaves according to TS 23.122 in Shared Network environment (Manual Mode).

6.1.1.9.4 Method of test

Initial conditions

Cell levels are from table 6.3. (FDD).

Cell	CPICH_ Ec [dBm/3.84 MHz] (FDD)	Test Channel
Cell 1	-85	1
Cell 2	-80	2
Cell 3	-75	3
Cell 4	-70	4

The reference system configuration from TS 34.108 clause 6.1 is used in all cells, with the following modifications:

Master Information Block

- MIB value tag	Set to (Current MIB value tag + 1)
- Supported PLMN types	
- PLMN type	GSM-MAP
- PLMN identity	
- MCC digit	See table below
- MNC digit	See table below
- Multiple PLMN List	
- MIB PLMN Identity	See table below
- Multiple PLMNs (1)	
- MCC	See table below
- MNC	See table below
- Multiple PLMNs (2)	
- MCC	See table below
- MNC	See table below

The MIB PLMN Identity and PLMN codes broadcasted on the BCCH in each cell shall be configured as defined in the table below.

Cell	MIB PLMN Identity	PLMN Identity		Multiple PLMNs (1)		Multiple PLMNs (2)	
		MCC digits	MNC digits	MCC digits	MNC digits	MCC digits	MNC digits
1	FALSE	PLMN 3	PLMN 3	-	PLMN 2	-	PLMN 4
2	FALSE	PLMN 4	PLMN 4	-	PLMN 3	-	PLMN 1
3	FALSE	PLMN 5	PLMN 5	-	PLMN 3	-	PLMN 4
4	TRUE	PLMN 4	PLMN 4	PLMN 5	PLMN 5	PLMN 6	PLMN 6

The definition of each PLMN code is found in table below.

PLMN	MCC digit			MNC digit		
	1	2	3	1	2	3
1	0	0	1	0	1	-
2	0	0	1	0	2	-
3	0	0	1	0	3	-
4	0	0	1	0	4	-
5	0	0	1	0	5	-
6	0	0	2	0	6	-

NOTE: "–" (dash) denotes "not present"

The UE is in manual PLMN selection mode and equipped with a USIM containing default values except for those listed below. The UE has successfully selected a PLMN in manual PLMN selection mode. All Radio Access Technology USIM fields are set to UTRAN. The HPLMN (MCC+MNC) of the IMSI for the USIM is set to PLMN1.

USIM field	Priority	PLMN
$EF_{PLMNwAcT}$	1st	PLMN 3
$EF_{OPLMNwAcT}$	1st	PLMN 4
	2nd	PLMN 5
EF_{FPLMN}	PLMN 5	

UE is previously registered on PLMN2, before switched off.

Test procedure

Method C is applied.

a) The SS activates cells 1-4 and monitors the cells for random access requests from the UE.

b) The UE is switched on.

c) The SS waits for random access requests from the UE.

d) Cell 1 is switched off.

e) PLMN 1 (HPLMN) shall be selected when the PLMN list is presented.

f) The SS waits for random access requests from the UE.

g) Cell 2 is switched off.

h) PLMN 3 shall be selected when the PLMN list is presented.

i) The SS waits for random access requests from the UE.

j) Cell 3 is switched off.

k) PLMN 5 shall be selected when the PLMN list is presented.

l) The SS waits for random access requests from the UE.

m) Cell 4 is switched off.

6.1.1.9.5 Test Requirements

1) In step c), the response from the UE shall be on Cell 1. The displayed PLMN shall be PLMN 2.

2) In step e), the list shall be presented. The priority shall be as follows: PLMN 1, PLMN 3, PLMN 4, PLMN 5, PLMN 6.

3) In step f), the response from the UE shall be on Cell 2. The displayed PLMN shall be PLMN 1.

4) In step h), the list shall be presented. The priority shall be as follows: PLMN 3, PLMN 4, PLMN 5, PLMN 6.

6) In step i), the response from the UE shall be on Cell 3. The displayed PLMN shall be PLMN 3.

7) In step k), the list shall be presented. The priority shall be as follows: PLMN 4, PLMN 5, PLMN 6.

8) In step l), the response from the UE shall be on Cell 4. The displayed PLMN shall be PLMN 5.

9) After step m), the UE shall inform that no network belonging to PLMN 1 to 6 is available.

6.1.1.10 Presentation of additional information during PLMN selection; Manual mode

6.1.1.10.1 Definition

Test to verify that in Manual Network Selection Mode, the UE displays additional information about the available PLMNs.

6.1.1.10.2 Conformance requirement

The HPLMN may provide on the SIM additional information on the available PLMNs. If this information is provided then the MS shall indicate it to the user. This information, provided as free text may include:

- preferred partner,
- roaming agreement status,
- supported services

Furthermore, the MS may indicate whether the available PLMNs are present on the EHPLMN list, the Forbidden list, the User Controlled PLMN List or the Operator Controlled PLMN List. The MS may also indicate that the PLMN is not present on any of these lists.

References

1. TS 23.122, clause 4.4.3.1.2.

NOTE: TS 31.102 defines the USIM fields.

6.1.1.10.3 Test purpose

To verify that in manual network selection mode if additional information is available on the SIM/USIM about the available PLMNs that information is displayed to the user.

6.1.1.10.4 Method of test

Initial conditions

The UE is in automatic PLMN selection mode.

"IMSI attach" flag in the BCCH is set to allowed.

Cell levels are from table 6.3 for FDD and from table 6.4 for TDD.

All Radio Access Technology USIM fields and cells are UTRAN.

In the System Information broadcast in each cell, the neighbouring cell list does not contain any cell belonging to the other PLMN’s.

Cell	CPICH_ Ec [dBm/3.84 MHz] (FDD)	P-CCPCH_ RSCP [dBm] (TDD)	Test Channel	PLMN
Cell 1	-60	-54	1	PLMN 1
Cell 2	-65	-59	2	PLMN 2
Cell 4	-75	-69	3	PLMN 4
Cell 5	-80	-74	4	PLMN 5

UE is previously registered on PLMN1 before switched off.

The UE is equipped with a USIM containing default values except for those listed below.

USIM field	Priority	PLMN
$EF_{PLMNwAcT}$	1st	PLMN 2
$EF_{OPLMNwAcT}$	1st	PLMN 5
EF_{FPLMN}	1st	PLMN 4

Contents of EF_{OPL}:

Location Area Identity	PLMN Network Name Record Identifier
MCC and MNC of PLMN1+all LAC*	1
MCC and MNC of PLMN2+all LAC*	2
MCC and MNC of PLMN4+all LAC*	3
MCC and MNC of PLMN5+all LAC*	4
*A value of '0000' stored in bytes 4 to 5 and a value of 'FFFE' stored in bytes 6 to 7 shall be used to indicate the entire range of LACs for the given PLMN.	

Contents of EF_{PNN}:

Record order	Full name for network	Short name for network	PLMN Additional Information
1st	Test network PLMN1	PLMN1	PLMN1 offers voice call, SMS and PS data services.
2nd	Test network PLMN2	PLMN2	PLMN2 offers voice call services.
3rd	Test network PLMN4	PLMN4	[field is empty]
4th	Test network PLMN5	PLMN5	PLMN5 offers PS data services.

The EF_{EHPLMN} list is empty.

The HPLMN (MCC+MNC) of the IMSI for the USIM is set to PLMN1.

Related ICS/IXIT statements

Indicating whether a PLMN is present on a PLMN list stored on the USIM Yes/No

Test procedure

Method C is applied.

a) The SS activates all 4 cells and monitors the cells for random access requests from the UE.

b) The UE is switched on.

c) The SS waits for random access requests from the UE.

d) The UE is switched to manual network selection mode and it is made to display the available PLMNs

e) The user selects PLMN2

f) The SS waits for random access requests from the UE.

6.1.1.10.5 Test Requirements

1) In step c), the response from the UE shall be on Cell 1. The displayed PLMN shall be PLMN 1.

2) In step d) the UE shall indicate:
- For PLMN1 the UE shall indicate that “PLMN1 offers voice call, SMS and PS data services.”.
- For PLMN2 the UE shall indicate that “PLMN2 offers voice call services.”.
If the UE supports “Indicating whether a PLMN is present on a PLMN list stored on the USIM” the UE shall indicate that PLMN2 is present on the User Controlled PLMN List.
- If the UE supports “Indicating whether a PLMN is present on a PLMN list stored on the USIM” the UE shall indicate that PLMN4 is present on the Forbidden list.
-For PLMN5 the UE shall indicating that “PLMN5 offers PS data services.”.
If the UE supports “Indicating whether a PLMN is present on a PLMN list stored on the USIM” the UE shall indicate that PLMN5 is present on the Operator Controlled PLMN List.

3) In step f), the response from the UE shall be on Cell 2. The displayed PLMN shall be PLMN 2.

6.1.1.11 Void

6.1.1.12 Displaying EHPLMNs in manual mode

6.1.1.12.1 Definition

Test to verify that in Manual Network Selection Mode, the UE is able to display HPLMN and EHPLMNs in the correct order according to the parameters provided by the USIM.

6.1.1.12.2 Conformance requirement

1. The MS indicates whether there are any PLMNs, which are available using all supported access technologies. This includes PLMNs in the "forbidden PLMNs" list and PLMNs which only offer services not supported by the MS. An MS which supports GSM COMPACT shall also indicate GSM COMPACT PLMNs (which use PBCCH).

If displayed, PLMNs meeting the criteria above are presented in the following order:

i)- either the HPLMN (if the EHPLMN list is not present or is empty) or, if one or more of the EHPLMNs are available then based on an optional data field on the SIM either only the highest priority available EHPLMN is to be presented to the user or all available EHPLMNs are presented to the user in priority order. If the data field is not present on the SIM, then only the highest priority available EHPLMN is presented;

…

2. If there is no registered PLMN, or if registration is not possible due to the PLMN being unavailable or registration failure, the MS follows one of the following two procedures depending on its PLMN selection operating mode. At switch on, if the MS provides the optional feature of user preferred PLMN selection operating mode at switch on then this operating mode shall be used.

EXCEPTION: At switch on, if the MS is in manual mode and neither registered PLMN nor PLMN that is equivalent to it is available but EHPLMN is available, then instead of performing the manual network selection mode procedure of clause 4.4.3.1.2 the MS may select and attempt registration on the highest priority EHPLMN. If the EHPLMN list is not available or is empty and the HPLMN is available, then the MS may select and attempt registration on the HPLMN. The MS shall remain in manual mode.

NOTE 1: If successful registration is achieved, then the current serving PLMN becomes the registered PLMN and the MS does not store the previous registered PLMN for later use.

References

1. TS 23.122, clause 4.4.3.1.2

2. TS 23.122, clause 4.4.3.1

NOTE: TS 31.102 defines the USIM fields.

6.1.1.12.3 Test purpose

1. To confirm that if the EF_{EHPLMN} (Equivalent HPLMN) data field on the USIM is present but there are no EHPLMNs available, only the HPLMN is displayed.

2. To confirm that if EHPLMNs are available and the EF_{EHPLMN} (Equivalent HPLMN) data field on the USIM is present then depending on the USIM settings of $EF_{EHPLMNPI}$ (Equivalent HPLMN Presentation Indication) either all available EHPLMNs are displayed in priority order or only the highest priority EHPLMN is displayed.

3. To confirm that if EHPLMNs are available but the $EF_{EHPLMNPI}$ (Equivalent HPLMN Presentation Indication) data field on the USIM is not present, only the highest priority EHPLMN is displayed.

6.1.1.12.4 Method of test

Initial conditions

The UE is in manual PLMN selection mode.

Cell levels are from table 6.3 for FDD and from table 6.4 for TDD.

All Radio Access Technology USIM fields and cells are UTRAN.

In the System Information broadcast in each cell, the neighbouring cell list does not contain any cell belonging to the other PLMN's.

Steps a) – d)

Cell	CPICH_ Ec [dBm/3.84 MHz] (FDD)	P-CCPCH_ RSCP [dBm] (TDD)	Test Channel	PLMN
Cell 1	off	off	1	PLMN 3
Cell 2	off	off	2	PLMN 2
Cell 3	-70	-64	3	PLMN 1
Cell 4	off	off	4	PLMN 4

Steps e) – t)

Cell	CPICH_ Ec [dBm/3.84 MHz] (FDD)	P-CCPCH_ RSCP [dBm] (TDD)	Test Channel	PLMN
Cell 1	-60	-54	1	PLMN 3
Cell 2	-65	-59	2	PLMN 2
Cell 3	-70	-64	3	PLMN 1
Cell 4	-75	-69	4	PLMN 4

The UE is equipped with a USIM A containing default values except for those listed below (steps a – h).

USIM field	Priority	PLMN
EF_{EHPLMN}	1st	PLMN 4
	2nd	PLMN 2
	3rd	PLMN 1
EF_{UST}	Service n°71 Equivalent HPLMN and Service n°73 Equivalent HPLMN Presentation Indication available	
$EF_{EHPLMNPI}$	'02' - Display all the available EHPLMNs	

The UE is equipped with a USIM B containing default values except for those listed below (steps i – l).

USIM field	Priority	PLMN
EF_{EHPLMN}	1st	PLMN 2
	2nd	PLMN 3
	3rd	PLMN 1
EF_{UST}	Service n°71 Equivalent HPLMN and Service n°73 Equivalent HPLMN Presentation Indication available	
$EF_{EHPLMNPI}$	'01' - Display the highest-priority available EHPLMN only	

The UE is equipped with a USIM C containing default values except for those listed below (steps m – o).

USIM field	Priority	PLMN
EF_{EHPLMN}	1st	PLMN 3
	2nd	PLMN 4
	3rd	PLMN 1
EF_{UST}	Service n°71 Equivalent HPLMN available	
$EF_{EHPLMNPI}$	Not present	

The HPLMN (MCC+MNC) of the IMSI for USIM is set to PLMN 1 (steps a – p).

UE is previously registered on PLMN5, before switched off.

Related ICS/IXIT statement(s)

UE supporting Exception to manual network selection mode at switch-on yes/no

Test procedure

Method C is applied.

a) The SS activates Cell 3 and monitors the cell for random access requests from the UE.

b) The UE is switched on, equipped with USIM A.

c) The SS waits to see if there are any random access requests from the UE. The UE is made to display the available PLMNs. If not yet selected, the UE is made to select the available PLMN.

d) The SS waits for random access requests from the UE, if not done in step c).

e) The SS activates all 4 cells and monitors the cells for random access requests from the UE.

f) The UE is made to display the available PLMNs. The UE is made to select the highest priority EHPLMN.

g) The SS waits for random access requests from the UE.

h) The UE is switched off.

i) The UE is equipped with USIM B, switched on and made to register to PLMN5, switched off, then switched on again.

j) The SS waits to see if there are any random access requests from the UE. The UE is made to display the available PLMNs. If not yet selected, the UE is made to select the displayed EHPLMN.

k) The SS waits for random access requests from the UE, if not done in step j).

l) The UE is switched off.

m) The UE is equipped with USIM C, switched on and made to register to PLMN5, switched off, and switched on again.

n) The SS waits to see if there are any random access requests from the UE. The UE is made to display the available PLMNs. If not yet selected, the UE is made to select the displayed EHPLMN.

o) The SS waits for random access requests from the UE, if not done in step n).

p) The UE is switched off.

6.1.1.12.5 Test Requirements

1) In step c), the UE shall indicate that only PLMN 1 is available.

2) If UE supports "Exception to manual network selection mode at switch-on" the response from UE shall come in step c) otherwise the response from UE shall come in step d). In both cases, the response from the UE shall be on Cell 3. The displayed PLMN shall be PLMN 1.

3) In step f), the UE shall indicate that PLMN 4, PLMN 2, PLMN 1 and PLMN 3 (non-EHPLMN) are available in this priority order.

4) In step g), the response from the UE shall be on Cell 4. The displayed PLMN shall be PLMN 4.

5) In step j), the UE shall indicate that PLMN 2 and PLMN 4 (non-EHPLMN) are available in this priority order.

6) If UE supports "Exception to manual network selection mode at switch-on" the response from UE shall come in step j) otherwise the response from UE shall come in step k). In both cases, the response from the UE shall be on Cell 2. The displayed PLMN shall be PLMN 2.

7) In step n), the UE shall indicate that PLMN 3 and PLMN 2 (non-EHPLMN) are available in this priority order.

8) If UE supports "Exception to manual network selection mode at switch-on" the response from UE shall come in step n) otherwise the response from UE shall come in step o). In both cases, the response from the UE shall be on Cell 1. The displayed PLMN shall be PLMN 3.

6.1.1.13 PLMN selection of RPLMN or (E)HPLMN; Automatic mode

6.1.1.13.1 Definition

Test to verify that in Automatic Network Selection Mode, the UE selects PLMNs in the correct order according to the setting of $EF_{LRPLMNSI}$. If $EF_{LRPLMNSI}$ is available and the field is set to "01", and a non-empty EHPLMN list is present, at switch-on, the UE shall select the EHPLMN or the last RPLMN. If $EF_{LRPLMNSI}$ is set to "00" the last RPLMN shall be selected at switch-on if available.

6.1.1.13.2 Conformance requirement

1. Equivalent HPLMN list: To allow provision for multiple HPLMN codes, PLMN codes that are present within this list shall replace the HPLMN code derived from the IMSI for PLMN selection purposes. This list is stored on the USIM and is known as the EHPLMN list. The EHPLMN list may also contain the HPLMN code derived from the IMSI. If the HPLMN code derived from the IMSI is not present in the EHPLMN list then it shall be treated as a Visited PLMN for PLMN selection purposes.

2. At switch on, or following recovery from lack of coverage, the MS selects the registered PLMN or equivalent PLMN (if it is available) using all access technologies that the MS is capable of and if necessary (in the case of recovery from lack of coverage, see subclause 4.5.2) attempts to perform a Location Registration.

   EXCEPTION: As an alternative option to this, if the MS is in automatic network selection mode and it finds coverage of an EHPLMN, the MS may register to the highest priority EHPLMN available and not return to the registered PLMN or equivalent PLMN. If the EHPLMN list is not present or is empty, and the HPLMN is available, the MS may register on the HPLMN and not return to the registered PLMN or equivalent PLMN. The operator shall be able to control by SIM configuration whether an MS that supports this option is permitted to perform this alternative behaviour.

   EXCEPTION: In A/Gb mode an MS with voice capability, shall not search for CPBCCH carriers. In A/Gb mode an MS not supporting packet services shall not search for CPBCCH carriers.

   If successful registration is achieved, the MS indicates the selected PLMN.

If there is no registered PLMN, or if registration is not possible due to the PLMN being unavailable or registration failure, the MS follows one of the following two procedures depending on its PLMN selection operating mode. At switch on, if the MS provides the optional feature of user preferred PLMN selection operating mode at switch on then this operating mode shall be used.

3. Automatic Network Selection Mode Procedure:

   The MS selects and attempts registration on other PLMN/access technology combinations, if available and allowable in the following order:

   i) either the HPLMN (if the EHPLMN list is not present or is empty) or the highest priority EHPLMN that is available (if the EHPLMN list is present) ;

   ii) Each PLMN/access technology combination in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

   iii) Each PLMN/access technology combination in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

   iv) Other PLMN/access technology combinations with received high quality signal in random order;

   v) Other PLMN/access technology combinations in order of decreasing signal quality.

...

If successful registration is achieved, the MS indicates the selected PLMN.

2. TS 23.122, clause 4.4.3.1.
3. TS 23.122, clause 4.4.3.1.1.

NOTE: TS 31.102 defines the USIM fields.

6.1.1.13.3 Test purpose

1. To verify that the RPLMN or the EHPLMN is selected at switch-on if $EF_{LRPLMNSI}$ = “01”.
2. To verify that the RPLMN is selected at switch-on if $EF_{LRPLMNSI}$ = “00”.
3. The UE indicates the correct PLMN to the User when an EHPLMN is selected.

6.1.1.13.4 Method of test

Initial conditions

The UE is in automatic PLMN selection mode.

"IMSI attach" flag in the BCCH is set to allowed.

All Radio Access Technology USIM fields and cells are UTRAN.

In the System Information broadcast in each cell, the neighbouring cell list does not contain any cell belonging to the other PLMN’s.

The definition of each PLMN code is found in table below.

PLMN	MCC digit			MNC digit		
	1	2	3	1	2	3
1	0	0	1	0	1	-
2	0	0	2	0	2	-
3	0	0	2	0	3	-
4	0	0	1	0	4	-
5	0	0	1	0	5	-

NOTE: "–" (dash) denotes "not present".

Cells 1, 2, 3 use respectively test channels 1, 2, 3 on primary band. If the UE supports multiple frequency bands, Cell 4 uses test channel 1 on secondary band (in the same region if supported) otherwise Cell 4 uses test channel 4 on primary band. Primary and secondary bands are selected according to PIXIT parameters.

Steps a) – d) and i)-k)

Cell	CPICH_ Ec [dBm/3.84 MHz] (FDD)	P-CCPCH_ RSCP [dBm] (TDD)	Test Channel	PLMN
Cell 1	-65	-59	1	PLMN 4
Cell 2	off	off	2	PLMN 2
Cell 3	-75	-74	3	PLMN 3
Cell 4	-80	-69	4 (primary band) or 1 (secondary band)	PLMN 2

Steps e) – h)

Cell	CPICH_ Ec [dBm/3.84 MHz] (FDD)	P-CCPCH_ RSCP [dBm] (TDD)	Test Channel	PLMN
Cell 1	off	off	1	PLMN 4
Cell 2	-60	-54	2	PLMN 2
Cell 3	off	off	3	PLMN 3
Cell 4	off	off	4 (primary band) or 1 (secondary band)	PLMN 2

The UE is equipped with a USIM containing default values except for those listed below.

USIM A

USIM field	LRPLMNSI
$EF_{LRPLMNSI}$	01

USIM B

USIM field	LRPLMNSI
$EF_{LRPLMNSI}$	00

Test procedure

Method C is applied.

a) The SS activates cells 1, 3 and 4 and monitors the cells for random access requests from the UE.

b) The UE is switched on with a USIM setting according to USIM-A inserted.

c) The SS waits for random access requests from the UE.

d) The UE is switched off and a USIM with settings according to USIM B is inserted.

e) The SS deactivates cells 1, 3 and 4 and activates cell 2. The SS monitors cell 2 for random access requests from the UE.

f) The UE is switched on.

g) The SS waits for random access requests from the UE.

h) The UE is switched off.

i) The SS deactivates cell 2 and activates cells 1, 3 and 4 and monitors the cells for random access requests from the UE.

j) The UE is switched on.

k) The SS waits for random access requests from the UE.

6.1.1.13.5 Test Requirements

1) In step c), the response from the UE shall be either:

   - on Cell 1 and the displayed PLMN shall be Test Home PLMN or THPLMN or

   - on Cell 4 and the UE shall indicate PLMN 2.

2) In step g), the response from the UE shall be on Cell 2 and the UE shall indicate PLMN 2.

3) In step k), the response from the UE shall be on Cell 4 and the UE shall indicate PLMN 2.

6.1.1.14 Network selection mode at switch-on

6.1.1.14.1 Definition

Test to verify that the UE uses the optional feature of user preferred PLMN selection operating mode at switch on.

6.1.1.14.2 Conformance requirement

1. If there is no registered PLMN, or if registration is not possible due to the PLMN being unavailable or registration failure, the MS follows one of the following two procedures depending on its PLMN selection operating mode. At switch on, if the MS provides the optional feature of user preferred PLMN selection operating mode at switch on then this operating mode shall be used.

2. The UE shall support both manual and automatic network selection mechanisms (modes). The UE shall select the last mode used, as the default mode, at every switch-on.

   As an optional feature of the ME, the user shall be able to set a preference in the ME for the mode that shall be used at switch on. If set then the ME shall select this preference rather than the default mode.

   NOTE: By defaulting to the last mode used, e.g. manual network selection, the undesired automatic selection of an adjacent PLMN instead of the desired HPLMN in border areas, can be avoided at switch-on.

   The user shall be given the opportunity to change mode at any time.

   Except as defined below, the MMI shall be at the discretion of the UE manufacturer.

   The UE shall contain display functions by which Available PLMNs and the Selected PLMN can be indicated.

   In order not to confuse the user, the same definitions of PLMN names shall be applied consistently both in registered mode and in the list presented to the user when in manual mode.

   In shared networks a radio access network can be part of more than one PLMN. This shall be transparent to the user, i.e. the UE shall be able to indicate those PLMNs to the user, and the UE shall support network selection among those PLMNs, as in non-shared networks.

3. Manual Network Selection Mode Procedure:

   The MS indicates whether there are any PLMNs, which are available using all supported access technologies. This includes PLMNs in the "forbidden PLMNs" list and PLMNs which only offer services not supported by the MS. An MS which supports GSM COMPACT shall also indicate GSM COMPACT PLMNs (which use PBCCH).

   If displayed, PLMNs meeting the criteria above are presented in the following order:

   i)- either the HPLMN (if the EHPLMN list is not present or is empty) or, if one or more of the EHPLMNs are available then based on an optional data field on the SIM either only the highest priority available EHPLMN is to be presented to the user or all available EHPLMNs are presented to the user in priority order. If the data field is not present on the SIM, then only the highest priority available EHPLMN is presented;

   ii)- PLMN/access technology combinations contained in the " User Controlled PLMN Selector with Access Technology " data file in the SIM (in priority order);

   iii)- PLMN/access technology combinations contained in the "Operator Controlled PLMN Selector with Access Technology" data file in the SIM (in priority order);

iv)- other PLMN/access technology combinations with received high quality signal in random order;

v)- other PLMN/access technology combinations in order of decreasing signal quality.

…

The user may select his desired PLMN and the MS then initiates registration on this PLMN using the access technology chosen by the user for that PLMN or using the highest priority available access technology for that PLMN, if the associated access technologies have a priority order. (This may take place at any time during the presentation of PLMNs). For such a registration, the MS shall ignore the contents of the "forbidden LAs for roaming", "forbidden TAs for roaming", "forbidden LAs for regional provision of service", "forbidden TAs for regional provision of service", "forbidden PLMNs for GPRS service" and "forbidden PLMNs" lists.

…

If the user does not select a PLMN, the selected PLMN shall be the one that was selected before the PLMN selection procedure started. If no such PLMN was selected or that PLMN is no longer available, then the MS shall attempt to camp on any acceptable cell and enter the limited service state.

4. Automatic Network Selection Mode Procedure:

The MS selects and attempts registration on other PLMNs, if available and allowable in the following order:

i) either the HPLMN (if the EHPLMN list is not present or is empty) or the highest priority EHPLMN that is available (if the EHPLMN list is present) ;

ii) each PLMN/access technology combination in the "User Controlled PLMN Selector with Access Technology" data file in the SIM (in priority order);

iii) each PLMN/access technology combination in the "Operator Controlled PLMN Selector with Access Technology" data file in the SIM (in priority order);

iv) other PLMN/access technology combinations with received high quality signal in random order;

v) other PLMN/access technology combinations in order of decreasing signal quality.

….

If successful registration is achieved, the MS indicates the selected PLMN.

If registration cannot be achieved because no PLMNs are available and allowable, the MS indicates "no service" to the user, waits until a new PLMN is available and allowable and then repeats the procedure.

If there were one or more PLMNs which were available and allowable, but an LR failure made registration on those PLMNs unsuccessful or an entry in the "forbidden LAs for regional provision of service" list prevented a registration attempt, the MS selects the first such PLMN again and enters a limited service state.

3. TS 23.122, clause 4.4.3.1.2
4. TS 23.122, clause 4.4.3.1.1

NOTE: TS 31.102 defines the USIM fields.

6.1.1.14.3 Test purpose

1. To verify that the user is allowed to configure what network selection mode should be used at switch-on.
2. To verify that this information is not stored on the USIM.

6.1.1.14.4 Method of test

Initial conditions

"IMSI attach" flag in the BCCH is set to allowed.

Cell levels are from table 6.3 for FDD and from table 6.4 for TDD.

All Radio Access Technology USIM fields and cells are UTRAN.

In the System Information broadcast in each cell, the neighbouring cell list does not contain any cell belonging to the other PLMN's.

The UE is in manual PLMN selection mode.

UE is previously registered on PLMN2, before switched off.

The user sets the optional feature "PLMN selection operation mode at switch on" to automatic network selection.

All Radio Access Technology USIM fields and cells are UTRAN.

Steps a) – e)

Cell	CPICH_ Ec [dBm/3.84 MHz] (FDD)	P-CCPCH_ RSCP [dBm] (TDD)	Test Channel	PLMN
Cell 4	-75	-69	1	PLMN 4
Cell 5	-80	-74	2	PLMN 5

Steps f) – h)

Cell	CPICH_ Ec [dBm/3.84 MHz] (FDD)	P-CCPCH_ RSCP [dBm] (TDD)	Test Channel	PLMN
Cell 4	OFF	OFF	1	PLMN 4
Cell 5	-80	-74	2	PLMN 5

The UE is equipped with a USIM containing default values except for those listed below.

USIM field	Priority	PLMN
$EF_{PLMNwAcT}$	1st	PLMN 4
$EF_{OPLMNwAcT}$	1st	PLMN 5

The HPLMN (MCC+MNC) of the IMSI for the USIM is set to PLMN1.

Related ICS/IXIT statement(s)

- UEs supporting NW selection mode at switch-on yes/no

Test procedure

Method C is applied.

a) The SS activates both the cells Cell 4 and Cell 5, and monitors the cells for random access requests from the UE.

b) The UE is switched on.

c) The SS waits for random access requests from the UE.

d) The UE is set to automatic NW selection mode, the optional feature "PLMN selection operation mode at switch on" is set to manual NW selection.

e) The UE is switched off

f) The SS deactivates cell 4 and monitors the cells for random access request from the UE.

g) The UE is switched on

h) The SS waits for random access requests from the UE.

6.1.1.14.5 Test Requirements

1) In step c), the response from the UE shall be on Cell 4. The displayed PLMN shall be PLMN4.

2) In step h), The UE does not send a response on any cell.

6.1.1.15 Exception in manual network selection mode when HPLMN is available at power-on

6.1.1.15.1 Definition

Test to verify that UE in Manual Network Selection Mode at switch on, when neither the RPLMN nor any equivalent PLMN to the RPLMN is available then the UE may optional select the highest priority PLMN in the EHPLMN list or select the HPLMN if EHPLMN list is not available or empty.

6.1.1.15.2 Conformance requirement

1. Equivalent HPLMN list: To allow provision for multiple HPLMN codes, PLMN codes that are present within this list shall replace the HPLMN code derived from the IMSI for PLMN selection purposes. This list is stored on the USIM and is known as the EHPLMN list. The EHPLMN list may also contain the HPLMN code derived from the IMSI. If the HPLMN code derived from the IMSI is not present in the EHPLMN list then it shall be treated as a Visited PLMN for PLMN selection purposes.

2. At switch on, or following recovery from lack of coverage, the MS selects the registered PLMN or equivalent PLMN (if it is available) using all access technologies that the MS is capable of and if necessary (in the case of recovery from lack of coverage, see clause 4.5.2) attempts to perform a Location Registration.

   …

   If successful registration is achieved, the MS indicates the selected PLMN.

   If there is no registered PLMN, or if registration is not possible due to the PLMN being unavailable or registration failure, the MS follows one of the following two procedures depending on its PLMN selection operating mode. At switch on, if the MS provides the optional feature of user preferred PLMN selection operating mode at switch on then this operating mode shall be used.

   EXCEPTION: At switch on, if the MS is in manual mode and neither registered PLMN nor PLMN that is equivalent to it is available but EHPLMN is available, then instead of performing the manual network selection mode procedure of clause 4.4.3.1.2 the MS may select and attempt registration on the highest priority EHPLMN. If the EHPLMN list is not available or is empty and the HPLMN is available, then the MS may select and attempt registration on the HPLMN. The MS shall remain in manual mode.

NOTE 1: If successful registration is achieved, then the current serving PLMN becomes the registered PLMN and the MS does not store the previous registered PLMN for later use.

3. Manual Network Selection Mode Procedure:

   The MS indicates whether there are any PLMNs, which are available using all supported access technologies. This includes PLMNs in the "forbidden PLMNs" list and PLMNs which only offer services not supported by the MS. An MS which supports GSM COMPACT shall also indicate GSM COMPACT PLMNs (which use PBCCH).

   If displayed, PLMNs meeting the criteria above are presented in the following order:

   i)- either the HPLMN (if the EHPLMN list is not present or is empty) or, if one or more of the EHPLMNs are available then based on an optional data field on the SIM either only the highest priority available EHPLMN is to be presented to the user or all available EHPLMNs are presented to the user in priority order. If the data field is not present on the SIM, then only the highest priority available EHPLMN is presented;

ii)- PLMN/access technology combinations contained in the " User Controlled PLMN Selector with Access Technology " data file in the SIM (in priority order);

iii)- PLMN/access technology combinations contained in the "Operator Controlled PLMN Selector with Access Technology" data file in the SIM (in priority order);

iv)- other PLMN/access technology combinations with received high quality signal in random order;

v)- other PLMN/access technology combinations in order of decreasing signal quality.

In ii and iii, an MS using a SIM without access technology information storage (i.e. the "User Controlled PLMN Selector with Access Technology" and the "Operator Controlled PLMN Selector with Access Technology" data files are not present) shall instead present the PLMNs contained in the "PLMN Selector" data file in the SIM (in priority order).

In v, requirement h) in clause 4.4.3.1.1 applies.

In GSM COMPACT, the non support of voice services shall be indicated to the user.

The HPLMN may provide on the SIM additional information on the available PLMNs. If this information is provided then the MS shall indicate it to the user. This information, provided as free text may include:

- preferred partner,
- roaming agreement status,
- supported services

Furthermore, the MS may indicate whether the available PLMNs are present on the EHPLMN list, the Forbidden list, the User Controlled PLMN List or the Operator Controlled PLMN List. The MS may also indicate that the PLMN is not present on any of these lists.

The user may select his desired PLMN and the MS then initiates registration on this PLMN using the access technology chosen by the user for that PLMN or using the highest priority available access technology for that PLMN, if the associated access technologies have a priority order. (This may take place at any time during the presentation of PLMNs). For such a registration, the MS shall ignore the contents of the "forbidden LAs for roaming", "forbidden LAs for regional provision of service", "forbidden PLMNs for GPRS service" and "forbidden PLMNs" lists.

Once the UE has registered on a PLMN selected by the user, the UE shall not automatically register on a different PLMN unless:

i) the new PLMN is declared as an equivalent PLMN by the registered PLMN; or

ii) the user selects automatic mode.

NOTE 1: It is an MS implementation option whether to indicate access technologies to the user. If the MS does display access technologies, then the access technology used should be the access technology chosen by the user for that PLMN. If the MS does not display access technologies, then the access technology chosen for a particular PLMN should be the highest priority available access technology for that PLMN, if the associated access technologies have a priority order.

If the user does not select a PLMN, the selected PLMN shall be the one that was selected before the PLMN selection procedure started. If no such PLMN was selected or that PLMN is no longer available, then the MS shall attempt to camp on any acceptable cell and enter the limited service state.

NOTE 2: High quality signal is defined in the appropriate AS specification.

2. TS 23.122, clause 4.4.3.1.
3. TS 23.122, clause 4.4.3.1.2.

NOTE: TS 31.102 defines the USIM fields.

6.1.1.15.3 Test purpose

1. To verify that a UE supporting the exception to manual network selection mode when EHPLMN is available at power-on selects the highest priority available EHPLMN at switch on when the RPLMN or a PLMN equivalent to it is not available at switch-on.
2. To verify that a UE supporting the exception to manual network selection procedure mode when HPLMN is available at power-on selects the HPLMN when neither the RPLMN (or a PLMN equivalent to it) nor EHPLMNs are available (or EHPLMN list is empty).

6.1.1.15.4 Method of test

Initial conditions

The UE is in manual PLMN selection mode.

UE is previously registered on PLMN2 with USIM A, before switched off.

"IMSI attach" flag in the BCCH is set to allowed.

Cell levels are from table 6.3 for FDD and from table 6.4 for TDD.

All Radio Access Technology USIM fields and cells are UTRAN.

In the System Information broadcast in each cell, the neighbouring cell list does not contain any cell belonging to the other PLMN's.

Steps a) – d) and steps i) – l)

Cell	CPICH_ Ec [dBm/3.84 MHz] (FDD)	P-CCPCH_ RSCP [dBm] (TDD)	Test Channel	PLMN
Cell 1	-60	-54	1	PLMN 2
Cell 2	OFF	OFF	2	PLMN 1
Cell 4	OFF	OFF	3	PLMN 4
Cell 5	OFF	OFF	4	PLMN 5

Steps e) – h) and steps m) – o)

Cell	CPICH_ Ec [dBm/3.84 MHz] (FDD)	P-CCPCH_ RSCP [dBm] (TDD)	Test Channel	PLMN
Cell 1	OFF	OFF	1	PLMN 2
Cell 2	-65	-59	2	PLMN 1
Cell 4	-75	-69	3	PLMN 4
Cell 5	-80	-74	4	PLMN 5

The UE is equipped with a USIM containing default values except for those listed below.

USIM A

USIM field	Priority	PLMN
EF_{EHPLMN}	1st	PLMN 5
EF_{EHPLMN}	2nd	PLMN 4
EF_{UST}	Service n°71 Equivalent HPLMN available	

USIM B

- EF_{EHPLMN} not present

USIM A and USIM B

- The HPLMN (MCC+MNC) of the IMSI set to PLMN1.

UE is switched off.

Related ICS/IXIT statement(s)

- UEs supporting NW selection mode at switch-on yes/no

Test procedure

Method C is applied.

a) The SS activates Cell 1 and monitors the cell for random access requests from the UE.

b) The UE is switched on with a USIM setting according to USIM-A inserted.

c) The SS waits for random access requests from the UE. See note 1.

d) The UE is switched off.

e) The SS deactivate Cell 1 and activates Cell 2, Cell 4 and Cell 5 and monitors the cells for random access requests from the UE.

f) The UE is switched on.

g) The SS waits for random access requests from the UE. See Note 2.

h) The UE is switched off and a USIM with settings according to USIM B is inserted.

i) The SS activates Cell 1 and deactivates Cell 2, Cell 4 and Cell 5 and monitors the cells for random access requests from the UE.

j) The UE is switched on.

k) The UE is made to register to PLMN 2. See note 1.

l) The UE is switched off.

m) The SS deactivate Cell 1 and activates Cell 2, Cell 4 and Cell 5 and monitors the cells for random access requests from the UE.

n) The UE is switched on.

o) The SS waits for random access requests from the UE. See note 3.

NOTE 1. UE is expected to register on Cell 1 and set the previously registered PLMN on the USIM to PLMN2.

NOTE 2. As previously registered PLMN2 is not available and list of EHPLMN exists then UE is expected to send random access requests on the cell belonging to the highest priority PLMN (PLMN5) on the EHPLMN list.

NOTE 3. As previously registered PLMN2 is not available and EHPLMN list does not exist then UE is expected to send random access requests on the cell belonging to the HPLMN (PLMN1).

6.1.1.15.5 Test Requirements

1) In step c), the response from the UE shall be on Cell 1. The displayed PLMN shall be PLMN2.

2) In step g), the response from the UE shall be on Cell 5. The displayed PLMN shall be PLMN5 (highest priority PLMN in EHPLMN list).

3) In step k), the response from the UE shall be on Cell 1. The displayed PLMN shall be PLMN2.

4) In step o), the response from the UE shall be on Cell 2. The displayed PLMN shall be PLMN1 (HPLMN).

6.1.2 Cell selection and reselection

6.1.2.1 Cell reselection

6.1.2.1.1 Definition

Test to verify that the UE performs the cell reselection correctly for intra/inter-frequency cells if the serving cell becomes barred or S<0.

6.1.2.1.2 Conformance requirement

1. When camped on a cell, the UE shall regularly search for a better cell according to the cell reselection criteria. If a better cell is found, that cell is selected. The change of cell may imply a change of RAT.

2. A "suitable cell" is a cell on which the UE may camp on to obtain normal service. Such a cell shall fulfil all the following requirements.

   2.1 The cell is part of the selected PLMN or of a PLMN considered as equivalent by the UE according to the information provided by the NAS.

   2.2 The cell is not barred.

   2.3 The cell is not part of the list of "forbidden LAs for roaming".

   2.4 The cell selection criteria are fulfilled.

3. When camped normally, the UE shall execute the cell reselection evaluation process on the following occasions/triggers:

   3.1 UE internal triggers, so as to meet performance as specified in TS 25.133 for FDD mode and in TS 25.123 for TDD mode.

   3.2 When information on the BCCH used for the cell reselection evaluation procedure has been modified.

4. Cell Reselection Criteria:

   4.1 The UE shall perform ranking of all cells that fulfil the S criterion.

   4.2 The cells shall be ranked according to the R criteria, deriving Qmeas,n and Qmeas,s and calculating the R values using CPICH RSCP, P-CCPCH RSCP and the averaged received signal level as specified in TS 25.133 and TS 25.123 for FDD, TDD and GSM cells, respectively.

   The offset $Qoffset1_{s,n}$ is used for $Qoffset_{s,n}$ to calculate R_n, the hysteresis $Qhyst1_s$ is used for $Qhyst_s$ to calculate R_s.

   If the usage of HCS is indicated in system information, $TEMP_OFFSET1_n$ is used for $TEMP_OFFSET_n$ to calculate TO_n. If it is indicated in system information that HCS is not used, $TEMP_OFFSET_n$ is not applied when calculating R_n. The best ranked cell is the cell with the highest R value.

   If a TDD cell is ranked as the best cell, the UE shall perform cell re-selection to that TDD cell.

   If an FDD cell is ranked as the best cell and the quality measure for cell selection and re-selection is set to CPICH RSCP, the UE shall perform cell re-selection to that FDD cell.

   4.3 In all cases, the UE shall reselect the new cell, only if the following conditions are met:

- the new cell is better ranked than the serving cell during a time interval Treselection.
- more than 1 second has elapsed since the UE camped on the current serving cell.

5. When cell status "barred" is indicated, the UE shall select another cell according to the following rule:

5.1 If the "Intra-frequency cell re-selection indicator" IE in Cell Access Restriction IE is set to value "allowed", the UE may select another cell on the same frequency if selection/re-selection criteria are fulfilled.

- If the UE is camping on another cell, the UE shall exclude the barred cell from the neighbouring cell list until the expiry of a time interval T_{barred}. The time interval T_{barred} is sent via system information in a barred cell together with Cell status information in the Cell Access Restriction IE.
- If the UE does not select another cell, and the barred cell remains to be the "best" one, the UE shall after expiry of the time interval T_{barred} again check whether the status of the barred cell has changed.

5.2 If the "Intra-frequency cell re-selection indicator" IE is set to "not allowed" the UE shall not re-select a cell on the same frequency as the barred cell. For emergency call, the Intra-frequency cell re-selection indicator IE" shall be ignored, i.e. even if it is set to "not allowed" the UE may select another intra-frequency cell.

6.1.2.1.3 Test purpose

1. To verify that the UE performs cell reselection on the following occasions:

   1.1 Serving cell becomes barred;

   1.2 S<0 for serving cell.

2. To verify conformance requirement 5.

NOTE: Reselection triggered by the cell becoming a part of a forbidden registration area is tested in clause 9.4.2.3 and clause 9.4.2.4.

6.1.2.1.4 Method of test

Initial conditions

Treselection, Qhyst, Qoffset, TEMP_OFFSET and PENALTY_TIME are not used, so the cell-ranking criterion R equals CPICH_RSCP for FDD cells, and P-CCPCH RSCP for TDD cells.

Step a-c (FDD):

Parameter	Unit	Cell 1	Cell 2	Cell 4
Test Channel		1	1	2
LAC		0001	0002	0003
CPICH_Ec	dBm/3.84 MHz	-60	-67	-80
Qrxlevmin	dBm	-115	-115	-115
Qqualmin	dB	-16	-16	-16
Srxlev*	dBm	55	48	35
CellBarred		Not barred	Not barred	Not barred

Step a-c (TDD):

Parameter	Unit	Cell 1	Cell 2	Cell 4
P-CCPCH RSCP	dBm	-69	-74	-79
Qrxlevmin	dBm	-103	-103	-103
Srxlev*	dB	34	29	24

Step d-f:

CellBarred		Not barred -> Barred	Not barred	Not barred
Intra-frequency cell re-selection indicator		Not allowed		
Tbarred		10s		

Step g-h:

Intra-frequency cell re-selection indicator		Not Allowed -> Allowed		

Step i-k:

Parameter	Unit	Cell 1	Cell 2	Cell 4
CellBarred		Barred -> Not barred	Not barred	Not barred

Step l-m (FDD):

Qrxlevmin	dBm	-115 -> -51	-115	-115
Qqualmin	dB	-16	-16	-16
Srxlev*	dBm	55 -> -9	48	35

Step l-m (TDD):

Qrxlevmin		-103 -> -59	-103	-103
Srxlev*		34 -> -10	29	24

Test procedure

Method C is applied.

a) The SS activates Cell 1, 2 and 4 and monitors them for random access requests from the UE.

b) The UE is switched on.

c) The SS waits to see if there are any random access requests from the UE.

d) The SS sets Cell 1 to be barred. The SS notifies UE of the BCCH modification.

e) The SS waits to see if there are any random access requests from the UE.

f) The SS sets "Intra-frequency cell re-selection indicator" to "Allowed". The SS notifies UE of the BCCH modification.

g) The SS waits to see if there are any random access requests from the UE.

h) The UE is switched off.

i) The SS sets Cell 1 to be not barred.

j) The UE is switched on.

k) The SS waits to see if there are any random access requests from the UE.

l) For FDD cell, Qrxlevmin is increased to -51 dBm, so S will become negative.
For TDD cell, Qrxlevmin is increased to -59 dBm, so S will become negative.
The SS notifies UE of the BCCH modification

m) The SS waits for random access requests from the UE.

6.1.2.1.5 Test requirements

1) In step c), after the UE has responded on Cell 1, it shall not respond on any other cell within 1 min.

2) In step e), the UE shall respond on Cell 4.

3) In step g), the UE shall respond on Cell 2.

4) In step k), after the UE has responded on Cell 1, it shall not respond on any other cell within 1 min.

5) In step m), the UE shall respond on Cell 2.

6.1.2.1a Cell reselection for inter-band operation

6.1.2.1a.1 Definition

This test case is identical to test case 6.1.2.1 except that the cell to be reselected is on a different frequency band.

6.1.2.1a.2 Conformance requirement

Same conformance requirement as in clause 6.1.2.1.2.

6.1.2.1a.3 Test purpose

Same test purpose as in clause 6.1.2.1.3 except that the cell to be reselected is on a different frequency band.

6.1.2.1a.4 Method of test

Initial conditions

Same initial conditions as in clause 6.1.2.1.4 except that cells 1and 2 use test channel 1 as specified in Table 6.3 for the primary band and that cell 4 uses test channel 2 as specified in Table 6.3 for the secondary band. Primary and secondary bands are selected according to PIXIT parameters.

Related ICS/IXIT statement(s)

- UE supports multiple bands simultaneously yes/no

Test procedure

Same test procedure as in clause 6.1.2.1.4.

NOTE: If the UE supports more than 2 frequency bands, the test may be executed for various band combinations.

6.1.2.1a.5 Test requirements

Same test requirement as in clause 6.1.2.1.5.

6.1.2.1b Cell reselection for inter-band operation(LCR TDD band a-f)

6.1.2.1b.1 Definition

This test case is identical to test case 6.1.2.1 except that the cell to be reselected is on a different frequency band.

6.1.2.1b.2 Conformance requirement

Same conformance requirement as in clause 6.1.2.1.2.

6.1.2.1b.3 Test purpose

Same test purpose as in clause 6.1.2.1.3 except that the cell to be reselected is on a different frequency band.

6.1.2.1b.4 Method of test

Initial conditions

Same initial conditions as in clause 6.1.2.1.4 except that cells 1and 2 use test channel 1 as specified in Table 6.1.2.1b.4-1 below for the band a and that cell 4 uses test channel 2 as specified in Table 6.1.2.1b.4-1 for the secondary band. Primary and secondary bands are selected according to PIXIT parameters

6.1.2.1b.4-1 UTRA TDD test frequencies (1.28 Mcps option)

	Band a		Band f	
Test Channel	**P-CCPCH_ RSCP [dBm]**	**UARFCN**	**P-CCPCH_ RSCP [dBm]**	**UARFCN**
1	-54	9 505	-54	9404
2	-59	9 550	-59	9500
3	-64	9 595	-64	9596
4	-69	10 055	-69	
5	-74	10 088	-74	
6	-79	10 120	-79	

.

Related ICS/IXIT statement(s)

- UE supports multiple bands simultaneously yes/no

Test procedure

Same test procedure as in clause 6.1.2.1.4.

NOTE: If the UE supports more than 2 frequency bands, the test may be executed for various band combinations.

6.1.2.1b.5 Test requirements

Same test requirement as in clause 6.1.2.1.5.

6.1.2.2 Cell reselection using Qhyst, Qoffset and Treselection

6.1.2.2.1 Definition

Test to verify that the UE performs the cell reselection correctly if system information parameters Qoffset, Qhyst and Treselection are applied for non-hierarchical cell structures. TEMP_OFFSET and PENALTY_TIME are only applicable when HCS is applied and are tested in clauses 6.1.2.4 and 6.1.2.5.

6.1.2.2.2 Conformance requirement

1. When camped normally, the UE shall execute the cell reselection evaluation process on the following occasions/triggers:

   1.1 UE internal triggers, so as to meet performance as specified in TS 25.133 for FDD mode and in TS 25.123 for TDD mode.

   1.2 When information on the BCCH used for the cell reselection evaluation procedure has been modified.

2. Cell Reselection Criteria:

   2.1 The UE shall perform ranking of all cells that fulfil the S criterion.

   2.2 The cells shall be ranked according to the R criteria, deriving Qmeas,n and Qmeas,s and calculating the R values using CPICH RSCP, P-CCPCH RSCP and the averaged received signal level as specified in TS 25.133 and TS 25.123 for FDD, TDD and GSM cells, respectively.

The offset $Qoffset1_{s,n}$ is used for $Qoffset_{s,n}$ to calculate R_n, the hysteresis $Qhyst1_s$ is used for $Qhyst_s$ to calculate R_s.

If the usage of HCS is indicated in system information, $TEMP_OFFSET1_n$ is used for $TEMP_OFFSET_n$ to calculate TO_n. If it is indicated in system information that HCS is not used, $TEMP_OFFSET_n$ is not applied when calculating R_n. The best ranked cell is the cell with the highest R value.

If a TDD cell is ranked as the best cell, the UE shall perform cell re-selection to that TDD cell.

If an FDD cell is ranked as the best cell and the quality measure for cell selection and re-selection is set to CPICH RSCP, the UE shall perform cell re-selection to that FDD cell.

2.3 In all cases, the UE shall reselect the new cell, only if the following conditions are met:

- the new cell is better ranked than the serving cell during a time interval Treselection.
- more than 1 second has elapsed since the UE camped on the current serving cell.

References

1. TS 25.304, clause 5.2.5.1.
2. TS 25.304, clause 5.2.6.1.4.

6.1.2.2.3 Test purpose

1. To verify that the UE calculates R from Qhyst and Qoffset and that the modification of these parameters on the BCCH triggers the cell reselection evaluation process. TEMP_OFFSET and PENALTY_TIME are not applied.
2. To verify that the UE reselects the new cell, if the cell reselection criteria are fulfilled during a time interval Treselection.

6.1.2.2.4 Method of test

Initial conditions

For FDD only:

Step a-c:

Parameter	Unit	Cell 1	Cell 2
Test channel		1	1
LAC		0001	0002
CPICH_Ec	dBm/3.84 MHz	-60	-66
$Qhyst1_s$	dB	20	0
R_s*	dB	-40	-66
R_n*	dB	-66	-60

Step d-e:

CPICH_Ec	dBm/3.84 MHz	-60 -> -66	-66 -> -60
R_s*	dB	-40 -> -46	-66 -> -60
R_n*	dB	-66 -> -60	-60 -> -66

Step f-g:

$Qhyst1_s$	dB	20 -> 0	0
R_s*	dB	-46 -> -66	-60
R_n*	dB	-60	-66

Step h-j:

CPICH_Ec	dBm/3.84 MHz	-66 -> -60	-60 -> -66
$Qoffset1_{s,n}$	dBm	0 -> 20	0
R_s*	dBm	-66 -> -60	-60 -> -66
R_n*	dBm	-60 -> -86	-66 -> -60

Step k-l:

CPICH_Ec	dBm/3.84 MHz	-60 -> -66	-66 -> -60
R_s*	dB	-60 -> -66	-66 -> -60
R_n*	dB	-86 -> -80	-60 -> -66

Step m-n:

$Qoffset1_{s,n}$	dB	20 -> 0	0
R_s*	dB	-66	-60
R_n*	dB	-80 -> -60	-66

Step o-p:

$Treselection_s$	s	30	0

For TDD only:

Step a-c:

Parameter	Unit	Cell 1	Cell 2
P-CCPCH RSCP	dBm	-69	-79
$Qhyst1_s$	dB	10	0
R_s*	dB	-59	-79
R_n*	dB	-79	-69

Step d-e:

P-CCPCH RSCP	dBm	-69 -> -79	-79 -> -69
$Qhyst1_s$	dB	10 ->15	0
R_s*	dB	-59 -> -64	-79 ->-69
R_n*	dB	-79 -> -69	-69 ->-79

Step f-g:

$Qhyst1_s$	dB	15 -> 0	0
R_s*	dB	-64 -> -79	-69
R_n*	dB	-69	-79

Step h-j:

P-CCPCH RSCP	dBm	-79 -> -69	-69 ->-79
$Qoffset1_{s,n}$	dB	0 -> 10	0
R_s*	dB	- 79 ->-69	-69 ->-79
R_n*	dB	- 69 -> -79	-79 ->-69

Step k-l:

P-CCPCH RSCP	dBm	-69 -> -79	-79 -> -69
R_s*	dB	-69 -> -79	-79 -> -69
R_n*	dB	-79 -> -89	-69 -> -79

Step m-n:

$Qoffset1_{s,n}$	dB	10 -> 0	0
R_s*	dB	-79	-69
R_n*	dB	-89 -> -79	-79

Step o-p:

$Treselection_s$	s	0 -> 30	0

Test procedure

Method C is applied.

a) The SS activates Cell 1 and 2 and monitors them for random access requests from the UE.

b) The UE is switched on.

c) The SS waits to see if there are any random access requests from the UE.

d) The SS changes the level of Cell 1 and 2 and waits for 10 s (TS 25.133, A.4.2.1.2 for FDD mode and TS 25.123, A.4.2.1.2 for TDD mode).

e) The SS waits to see if there are any random access requests from the UE.

f) The SS resets Qhyst for Cell 1 and notifies UE of the BCCH modification.

g) The SS waits for random access requests from the UE.

h) The UE is switched off. The SS changes the level of Cell 1 and Cell 2. The SS changes Qoffset in Cell 1.

i) The UE is switched on.

j) The SS waits to see if there are any random access requests from the UE.

k) The SS changes the level of Cell 1 and 2 and waits for 10 s (TS 25.133, clause A.4.2.1.2 for FDD mode and TS 25.123, clause A.4.2.1.2 for TDD mode).

l) The SS waits to see if there are any random access requests from the UE.

m) The SS resets Qoffset for Cell 1, and notifies UE of the BCCH modification.

n) The SS waits for random access requests from the UE.

o) Step h-n) is repeated except that Treselection is 30 s

6.1.2.2.5 Test Requirements

1) In step c), after the UE has responded on Cell 1, it shall not respond on any other cell within 1 min.

2) In step e), there shall not be any random access requests on any cell.

3) In step g), the UE shall respond on Cell 2.

4) In step j), the UE shall select a cell to camp on. In case the UE has selected Cell 2, it shall make a reselection to Cell 1 within 10s (TS 25.133, clause A.4.2.1.2 for FDD mode and TS 25.123, clause A.4.2.1.2 for TDD mode).

5) In step l), there shall not be any random access requests on any cell.

6) In step n), the UE shall respond on Cell 2.

7) In step o), the UE shall respond as in previous steps except that when reselecting to Cell 2, there shall be no response from the UE on Cell 2 within 28 s of notifying UE on the BCCH modification, but the UE shall respond on Cell 2 within 35 s.

NOTE: Minimum time set by Treselection – 2 s tolerance. Maximum time set by Treselection + 1 280 msec. for DRX cycle + 1280 ms for system information block type scheduling + 2 s tolerance.

6.1.2.3 HCS Cell reselection

6.1.2.3.1 Definition

Test to verify that the UE performs the cell reselection correctly for hierarchical cell structures. This shall be done according to the HCS priority, the received signal quality value Q and the quality level threshold criterion H.

6.1.2.3.2 Conformance requirement

1. When camped normally, the UE shall execute the cell reselection evaluation process on the following occasions/triggers:

   1.1 UE internal triggers, so as to meet performance as specified in TS 25.133 for FDD mode and in TS 25.123 for TDD mode.

   1.2 When information on the BCCH used for the cell reselection evaluation procedure has been modified.

2. Cell Reselection Criteria for hierarchical cells:

   2.1 The quality level threshold criterion H for hierarchical cell structures is used to determine whether prioritised ranking according to hierarchical cell re-selection rules shall apply, and is calculated from the Q, Qhcs, TEMP_OFFSET and PENALTY_TIME parameters.

   2.2 The UE shall perform ranking of all cells that fulfil the S criterion among all cells that have the highest HCS_PRIO among those cells that fulfil the criterion H >= 0.

   2.3 The cells shall be ranked according to the R criteria. The best ranked cell is the cell with the highest R value. If an FDD cell is ranked as the best cell, the UE shall perform cell re-selection to that FDD cell. If a TDD cell is ranked as the best cell, the UE shall perform cell re-selection to that TDD cell.

   2.4 In all cases, the UE shall reselect the new cell, only if the cell reselection criteria are fulfilled during a time interval Treselection.

   2.5 The cell-ranking criterion R is derived from Q, Qhyst, Qoffset, TEMP_OFFSET, PENALTY_TIME.

References

1. TS 25.304, clause 5.2.2.

2. TS 25.304, clause 5.2.6.1.4.

6.1.2.3.3 Test purpose

1. Verify that the UE ignores cells with H<0 for reselection and that H is calculated from Qhcs. The modification of this parameter on the BCCH shall trigger the cell reselection evaluation process.

2. Verify that the UE ranks cells based on both HCS priority and R. Qhyst, Qoffset, TEMP_OFFSET, PENALTY_TIME and Treselection are not applied so R equals CPICH_RSCP for FDD cells, and P-CCPCH RSCP for TDD cells.

6.1.2.3.4 Method of test

Initial conditions

SS shall indicate in System Information that HCS is in use.

Each cell shall include the other cells as neighbouring cells in System Information Block Type 11.

For FDD only:

Step a-c:

Parameter	Unit	Cell 1	Cell 2	Cell 3
Test channel		1	2	2
LAC		0001	0002	0003
CPICH_Ec	dBm/3.84 MHz	-70	-65	-70
HCS priority		6	7	7
$Qhcs_s$	dBm	-80	-50	-50
$Qhcs_{n=1}$	dBm	n/a	-80	-80
$Qhcs_{n=2}$	dBm	-50	n/a	-50
$Qhcs_{n=3}$	dBm	-50	-50	n/a
H_s*	dB	10	-15	-20
$H_{n=1}$*	dB	n/a	10	10
$H_{n=2}$*	dB	-15	n/a	-15
$H_{n=3}$*	dB	-20	-20	n/a

Step d-e:

$Qhcs_s$	dBm	-80	-50	-50 -> -80
$Qhcs_{n=3}$	dBm	-50 -> -80	-50 -> -80	n/a
H_s*	dB	10	-15	-20 -> 10
$H_{n=3}$*	dB	-20 -> 10	-20 -> 10	n/a

Step f-g:

$Qhcs_s$	dBm	-80	-50 -> -80	-80
$Qhcs_{n=2}$	dBm	-50 -> -80	n/a	-50 -> -80
H_s*	dB	10	-15 -> 15	10
$H_{n=2}$*	dB	-15 -> 15	n/a	-15 -> 15

For TDD only:

Step a-c:

Parameter	Unit	Cell 1	Cell 2	Cell 3
P-CCPCH RSCP	dBm	-69	-74	-79
HCS priority		6	7	7
Qhcss	dBm	-89	-59	-59
Qhcsn=1	dBm	n/a	-89	-89
Qhcsn=2	dBm	-59	n/a	-59
Qhcsn=3	dBm	-59	-59	n/a
Hs*	dB	20	-15	-20
Hn=1*	dB	n/a	20	20
Hn=2*	dB	-15	n/a	-15
Hn=3*	dB	-20	-20	n/a

Step d-e:

$Qhcs_s$	dBm	-89	-59	-59 -> -89
$Qhcs_{n=3}$	dBm	-59 -> -89	-59 -> -89	n/a
H_s*	dB	20	-15	-20 -> 10
$H_{n=3}$*	dB	-20 -> 10	-20 -> 10	n/a

Step f-g:

Qhcss	dBm	-89	-59 -> -89	-89
Qhcsn=2	dBm	-59 -> -89	n/a	-59 -> -89
Hs*	dB	20	-15 -> 15	10
Hn=2*	dB	-15 -> 15	n/a	-15 -> 15

Test procedure

Method C is applied.

a) The SS activates the cells 1-3 and monitors them for random access requests from the UE.

b) The UE is switched on.

c) The SS waits for random access requests from the UE.

d) The SS changes Qhcs for Cell 3, and notifies UE of the BCCH modification.

e) The SS waits for random access requests from the UE.

f) The SS changes Qhcs for Cell 2, and notifies UE of the BCCH modification.

g) The SS waits for random access requests from the UE.

6.1.2.3.5 Test requirements

1) In step c), after the UE has responded on Cell 1, it shall not respond on any other cell within 1 min.

2) In step e), the UE shall respond on Cell 3.

3) In step g), the UE shall respond on Cell 2.

6.1.2.4 HCS Cell reselection using reselection timing parameters for the H criterion

6.1.2.4.1 Definition

Test to verify that the UE performs the cell reselection correctly for hierarchical cell structures using TEMP_OFFSET and PENALTY_TIME applied to the H criterion.

6.1.2.4.2 Conformance requirement

1. When camped normally, the UE shall execute the cell reselection evaluation process on the following occasions/triggers:

   1.1 UE internal triggers, so as to meet performance as specified in TS 25.133 for FDD mode and in TS 25.123 for TDD mode.

   1.2 When information on the BCCH used for the cell reselection evaluation procedure has been modified.

2. Cell Reselection Criteria for hierarchical cells:

   2.1 The quality level threshold criterion H for hierarchical cell structures is used to determine whether prioritised ranking according to hierarchical cell re-selection rules shall apply, and is calculated from the Q, Qhcs, TEMP_OFFSET and PENALTY_TIME parameters.

   2.2 The UE shall perform ranking of all cells that fulfil the S criterion among all cells that have the highest HCS_PRIO among those cells that fulfil the criterion H >= 0.

   2.3 The cells shall be ranked according to the R criteria. The best ranked cell is the cell with the highest R value. If an FDD cell is ranked as the best cell, the UE shall perform cell re-selection to that FDD cell. If a TDD cell is ranked as the best cell, the UE shall perform cell re-selection to that TDD cell.

   2.4 In all cases, the UE shall reselect the new cell, only if the cell reselection criteria are fulfilled during a time interval Treselection.

2.5 The cell-ranking criterion R is derived from Q, Qhyst, Qoffset, TEMP_OFFSET and PENALTY_TIME.

3. $TEMP_OFFSET_n$ applies an offset to the H criteria for the duration of $PENALTY_TIME_n$ after the timer T_n has started for that cell. T_n shall be started from zero when $Q_{meas,n} > Qhcs_n$. TEMP_OFFSET is only applied to the H criteria if the cells have different HCS priorities.

References

1. TS 25.304, clause 5.2.2.

2,3. TS 25.304, clause 5.2.6.1.4.

6.1.2.4.3 Test purpose

1. Verify that TEMP_OFFSET is applied to the H criterion for a period of PENALTY_TIME and that the timer is started when $Q_{meas,n} > Qhcs_n$ if serving and neighbour cell have different HCS priorities.

6.1.2.4.4 Method of test

Initial conditions

Cell_selection_and_reselection_quality_measure is CPICH_RSCP (FDD).

Each cell includes the other cells in the inter-frequency neighbour cell list in System Information Block Type 11.

For FDD only:

Step a-c:

Parameter	Unit	Cell 1	Cell 2	Cell 3
Test channel		1	2	3
LAC		0001	0002	0003
CPICH_Ec	dBm/3.84 MHz	-60	-70	-70
HCS priority		2	4	7
$Qhcs_s$	dBm	-80	-50	-50
$Qhcs_{n=1}$	dBm	n/a	-80	-80
$Qhcs_{n=2}$	dBm	-50	n/a	-50
$Qhcs_{n=3}$	dBm	-50	-50	n/a
$TEMP_OFFSET1_{n=1}$	dB	n/a	0	0
$TEMP_OFFSET1_{n=2}$	dB	inf	n/a	0
$TEMP_OFFSET1_{n=3}$	dB	inf	inf	n/a
H_s*	dB	20	-20	-20
$H_{n=1}$*	dB	n/a	20	20
$H_{n=2}$*	dBm	-20	n/a	-20
$H_{n=3}$*	dBm	-20	-20	n/a
$PENALTY_TIME_{n=1}$	sec	n/a	0	0
$PENALTY_TIME_{n=2}$	sec	40	n/a	0
$PENALTY_TIME_{n=3}$	sec	60	60	n/a

Step d-e:

$Qhcs_s$	dBm	-80	-50 -> -85	-50
$Qhcs_{n=2}$	dBm	-50 -> -85	n/a	-50 -> -85
$Qhcs_{n=3}$	dBm	-50	-50	n/a
H_s*	dB	20	-20 -> 15	-20
$H_{n=2}$*	dB	-inf -> 15 (after 40 sec)	n/a	-20 -> 15
$H_{n=3}$*	dB	-20	-20	n/a

Step f-g:

$Qhcs_s$	dBm	-80	-85	-50 -> -80
$Qhcs_{n=1}$	dBm	n/a	-80	-80
$Qhcs_{n=2}$	dBm	-85	n/a	-85
$Qhcs_{n=3}$	dBm	-50->80	50->-80	n/a
H_s*	dB	20	15	-20 -> 10
$H_{n=1}$*	dB	n/a	20	20
$H_{n=2}$*	dB	15	n/a	15
$H_{n=3}$*	dB	-inf -> 10 (after 60 sec)	-inf -> 10 (after 60 sec)	n/a

For TDD only:

Step a-c:

Parameter	**Unit**	**Cell 1**	**Cell 2**	**Cell 3**
P-CCPCH RSCP	dBm	-69	-74	-74
HCS priority		2	4	7
$Qhcs_s$	dBm	-89	-54	-54
$Qhcs_{n=1}$	dBm	n/a	-89	-89
$Qhcs_{n=2}$	dBm	-54	n/a	-54
$Qhcs_{n=3}$	dBm	-54	-54	n/a
$TEMP_OFFSET1_{n=1}$	dB	n/a	0	0
$TEMP_OFFSET1_{n=2}$	dB	inf	n/a	0
$TEMP_OFFSET1_{n=3}$	dB	inf	inf	n/a
H_s*	dB	20	-20	-20
$H_{n=1}$*	dB	n/a	20	20
$H_{n=2}$*	dB	-20	n/a	-20
$H_{n=3}$*	dB	-20	-20	n/a
$PENALTY_TIME_{n=1}$	sec	n/a	0	0
$PENALTY_TIME_{n=2}$	sec	40	n/a	0
$PENALTY_TIME_{n=3}$	sec	60	60	n/a

Step d-e:

$Qhcs_s$	dBm	-89	-54 -> -94	-54
$Qhcs_{n=2}$	dBm	-54 -> -94	n/a	-54 -> -94
$Qhcs_{n=3}$	dBm	-54	-54	n/a
H_s*	dB	20	-20 -> 20	-20
$H_{n=2}$*	dB	-inf -> 20 (after 40 sec)	n/a	-20 -> 20
$H_{n=3}$*	dB	-inf	-inf	n/a

Step g-f:

$Qhcs_s$	dBm	-89	-94	-54 ->-84
$Qhcs_{n=1}$	dBm	na	-89	-89
$Qhcs_{n=2}$	dBm	-94	n/a	-94
$Qhcs_{n=3}$	dBm	-54->84	-54->-84	n/a
H_s*	dB	20	20	-20 ->10
$H_{n=1}$*	dB	n/a	20	20
$H_{n=2}$*	dB	20	n/a	20
$H_{n=3}$*	dB	-inf ->10 (after 60 sec)	-inf ->10 (after 60 sec)	n/a

Test procedure

Method C is applied.

a) The SS activates the cells 1-3 and monitors them for random access requests from the UE.

b) The UE is switched on.

c) The SS waits for random access requests from the UE.

d) The SS changes Qhcs for Cell 2, and notifies UE of the BCCH modification.

e) The SS waits for random access requests from the UE.

f) The SS changes Qhcs for Cell 3, and notifies UE of the BCCH modification.

g) The SS waits for random access requests from the UE.

6.1.2.4.5 Test requirements

1) In step c), after the UE has responded on Cell 1, it shall not respond on any other cell within 1 min.

2) In step e), there shall be no response from the UE on Cell 2 within 38 s after changing the parameters in step d), but the UE shall respond on Cell 2 within 49 s (see NOTE1).

3) In step g),There shall be no response from the UE on Cell 3 within 58 s after changing the parameters in step f), but the UE shall respond on Cell 3 within 69 s (see NOTE2).

NOTE1: Minimum time set by PENALTY_TIME (cell 2) - 2 s tolerance. Maximum time set by PENALTY_TIME (cell 2) + 1 280 msec. for DRX cycle + 2 s tolerance + 5 s tolerance (for UE to read System Information).

NOTE2: Minimum time set by PENALTY_TIME (cell 3) - 2 s tolerance. Maximum time set by PENALTY_TIME (cell 3) + 1 280 msec. for DRX cycle + 2 s tolerance + 5 s tolerance (for UE to read System Information).

6.1.2.5 HCS Cell reselection using reselection timing parameters for the R criterion

6.1.2.5.1 Definition

Test to verify that the UE performs the cell reselection correctly for hierarchical cell structures using TEMP_OFFSET and PENALTY_TIME applied to the R criterion.

6.1.2.5.2 Conformance requirement

1. When camped normally, the UE shall execute the cell reselection evaluation process on the following occasions/triggers:

   1.1 UE internal triggers, so as to meet performance as specified in TS 25.133 for FDD mode and in TS 25.123 for TDD mode.

   1.2 When information on the BCCH used for the cell reselection evaluation procedure has been modified.

2. Cell Reselection Criteria for hierarchical cells:

   2.1 The quality level threshold criterion H for hierarchical cell structures is used to determine whether prioritised ranking according to hierarchical cell re-selection rules shall apply, and is calculated from the Q, Qhcs, TEMP_OFFSET and PENALTY_TIME parameters.

   2.2 The UE shall perform ranking of all cells that fulfil the S criterion among all cells, not considering HCS priority levels, if no cell fulfil the criterion H>=0.

   2.3 The cells shall be ranked according to the R criteria. The best ranked cell is the cell with the highest R value. If a FDD cell is ranked as the best cell, the UE shall perform cell re-selection to that FDD cell. If a TDD cell is ranked as the best cell, the UE shall perform cell re-selection to that TDD cell.

   2.4 In all cases, the UE shall reselect the new cell, only if the cell reselection criteria are fulfilled during a time interval Treselection.

   2.5 The cell-ranking criterion R is derived from Q, Qhyst, Qoffset, TEMP_OFFSET, PENALTY_TIME.

3. $TEMP_OFFSET_n$ applies an offset to the R criteria for the duration of $PENALTY_TIME_n$ after the timer T_n has started for that cell. T_n shall be started from zero when $Q_{meas,n} > Q_{meas,s} + Qoffset2_{s,n}$. TEMP_OFFSET is only applied to the R criteria if the cells have identical priorities.

References

1. TS 25.304, clause 5.2.2.

2,3. TS 25.304, clause 5.2.6.1.4.

6.1.2.5.3 Test purpose

1. Verify that TEMP_OFFSET is applied to the R criterion for a period of PENALTY_TIME if serving and neighbour cell have identical HCS priorities and that the timer is started when $Q_{meas,n} > Q_{meas,s} + Qoffset1_{s,n}$.

6.1.2.5.4 Method of test

Initial conditions

Cell_selection_and_reselection_quality_measure is CPICH_RSCP (FDD).

For FDD only:

Step a-c:

Parameter	Unit	Cell 1	Cell 2	Cell 3
LAC		0001	0002	0003
CPICH_Ec	dBm/3.84 MHz	-60	-70	-75
HCS priority		1	1	1
$Qhcs_s$	dBm	-80	-80	-80
$TEMP_OFFSET1_{n=1}$	dB	n/a	0	0
$TEMP_OFFSET1_{n=2}$	dBm	inf	n/a	0
$TEMP_OFFSET1_{n=3}$	dBm	inf	inf	n/a
$PENALTY_TIME_{n=1}$	sec	n/a	0	0
$PENALTY_TIME_{n=2}$	sec	40	n/a	0
$PENALTY_TIME_{n=3}$	sec	60	60	n/a
H_s*	dBm	20	10	5
$H_{n=1}$*	dB	n/a	20	20

$H_{n=1}$*	dB	n/a	20	20
$H_{n=2}$*	dB	10	n/a	10
$H_{n=3}$*	dB	5	5	n/a
R_s*	dBm	-69	-79	-84
$R_{n=1}$*	dBm	n/a	-69	-69
$R_{n=2}$*	dBm	-79	n/a	-79
$R_{n=3}$*	dBm	-84	-84	n/a

Step d-e:

P-CCPCH RSCP	dBm	-69 -> -79	-79 -> -74	-84
R_s*	dBm	-69 -> -79	-79 -> -74	-84
$R_{n=1}$*	dBm	n/a	-69 -> -79	-69 -> -79
$R_{n=2}$*	dBm	-inf -> -74 (after 40 sec)	n/a	-79 -> -74
$R_{n=3}$*	dBm	-84	-84	n/a

Step f-g:

P-CCPCH RSCP	dBm	-79	-74	-84 -> -69
R_s*	dBm	-79	-74	-84 -> -69
$R_{n=1}$*	dBm	n/a	-79	-79
$R_{n=2}$*	dBm	-74	n/a	-74
$R_{n=3}$*	dBm	-inf -> -69 (after 60 sec)	-inf -> -69 (after 60 sec)	n/a

Test procedure

Method C is applied.

a) The SS activates the cells 1-3 and monitors them for random access requests from the UE.

b) The UE is switched on.

c) The SS waits for random access requests from the UE.

d) The SS changes the power level of Cell 1-2.

e) The SS waits for random access requests from the UE.

f) The SS changes the power level of Cell 3.

g) The SS waits for random access requests from the UE.

6.1.2.5.5 Test requirements

1) In step c), after the UE has responded on Cell 1, it shall not respond on any other cell within 1 min.

2) In step e), there shall be no response from the UE on Cell 2 within 38 s after changing the parameters in step d), but the UE shall respond on Cell 2 within 50 s (see NOTE1).

3) In step g), there shall be no response from the UE on Cell 3 within 58 s after changing the parameters in step f), but the UE shall respond on Cell 2 within 70 s (see NOTE2).

NOTE1: Minimum time set by PENALTY_TIME (cell 2) – 2 s tolerance. Maximum time set by PENALTY_TIME (cell 2) + 6.4 s ($T_{evaluateFDD}$ from TS 25.133, table 4.1 for FDD mode and $T_{evaluateTDD}$ from TS 25.123, table 4.1 for TDD mode) + 1 280 msec + 2 s tolerance.

NOTE2: Minimum time set by PENALTY_TIME (cell 3) – 2 s tolerance. Maximum time set by PENALTY_TIME (cell 3) + 6.4 s ($T_{evaluateFDD}$ from TS 25.133, table 4.1 for FDD mode and $T_{evaluateTDD}$ from TS 25.123, table 4.1 for TDD mode) + 1 280 msec + 2 s tolerance.

6.1.2.6 Emergency calls

6.1.2.6.1 Definition

Test to verify that the UE shall be able to initiate emergency calls when no suitable cells of the selected PLMN are available, but at least one acceptable cell is available.

6.1.2.6.2 Conformance requirement

1. Acceptable cell:

   An "acceptable cell" is a cell on which the UE may camp to obtain limited service (originate emergency calls). Such a cell shall fulfil the following requirements, which is the minimum set of requirements to initiate an emergency call in a UTRAN network:

   1.1 The cell is not barred;

   1.2 The cell selection criteria are fulfilled.

2. A "suitable cell" is a cell on which the UE may camp on to obtain normal service. Such a cell shall fulfil all the following requirements.

   2.1 The cell is part of the selected PLMN or, of a PLMN considered as equivalent by the UE according to the information provided by the NAS.

   2.2 The cell is not barred.

   2.3 The cell is not part of the list of "forbidden LAs for roaming".

   2.4 The cell selection criteria are fulfilled.

3. If the UE is unable to find any suitable cell of selected PLMN the UE shall enter the *Any cell selection* state.

4. Any Cell Selection State: In this state, the UE shall attempt to find an acceptable cell of any PLMN to camp on, trying all RATs that are supported by the UE and searching first for a high quality cell. The UE, which is not camped on any cell, shall stay in this state until an acceptable cell is found.

5. Camped on Any Cell State: In this state the UE obtains limited service. The UE shall regularly attempt to find a suitable cell of the selected PLMN, trying RATs that are supported by the UE. If a suitable cell is found, this causes an exit to the Camped normally State.

6. In the Camped on Any Cell State, the UE shall perform the cell reselection evaluation process on the following occasions/triggers:

6.1 UE internal triggers, so as to meet performance as specified in TS 25.133 for FDD mode and TS 25.123 for TDD mode.

6.2 When information on the BCCH used for the cell reselection evaluation procedure has been modified.

References

1. TS 25.304, clause 4.3.
2. TS 25.304, clause 4.3.
3. TS 25.304, clause 5.2.2.1.
4. TS 25.304, clause 5.2.8.
5. TS 25.304, clause 5.2.2.5.
6. TS 25.304, clause 5.2.9.1.

6.1.2.6.3 Test purpose

1. To verify that the UE shall be able to initiate emergency calls when no suitable cells of the selected PLMN are available, but at least one acceptable cell is available.
2. To verify that the UE selects a cell with S>0 and CellBarred = Not Barred (i.e. an "acceptable cell") when no suitable cells of the selected PLMN are available.
3. To verify that the UE ranks the acceptable cells according to the cell-ranking criterion R which in this test case equals Q as Qhyst, Qoffset, TEMP_OFFSET and PENALTY_TIME parameters are not used. Treselection is not used either.

6.1.2.6.4 Method of test

Initial conditions

In step a-d, Cell 1 and 4 are neither suitable nor acceptable cells. Cell 7 is an acceptable cell but not suitable.

In step e-f, both Cell 1 and 7 are acceptable cells.

Prior to performing the actual test procedure PLMN3 is set as forbidden PLMN, so that the USIM will contain the following information:

USIM field	PLMN
EF_{FPLMN}	PLMN 3

The HPLMN (MCC+MNC) of the IMSI for the USIM is set to PLMN1.

All cells in this test case belong to PLMN 3.

Each cell shall include the other cells in the neighbour cell list in System Information Block Type 11.

Step a-d:

For FDD only:

Parameter	Unit	Cell 1	Cell 4	Cell 7
Test Channel		1	2	3
CPICH_Ec	dBm/3.84 MHz	-65	-60	-70
Qrxlevmin	dBm	-81	-51	-81
Qqualmin	dB	-16	-16	-16
Srxlev*	dB	16	-9	11
CellBarred		Barred	Not barred	Not barred
Tbarred		10s		

For TDD only:

Parameter	Unit	Cell 1	Cell 3	Cell 7
Test Channel		1	2	3
P-CCPCH RSCP	dBm	-69	-64	-74
CellBarred		Barred	Not barred	Not barred
Tbarred		10s		

Step e-f:

CellBarred		Barred -> Not barred	0	0

Test procedure

Method C is applied.

a) The SS activates the cells and monitors them for random access requests from the UE.

b) The UE is switched on.

c) 50 s after switch on, an emergency call is initiated on the UE.

d) The SS waits for random access request from the UE.

e) The SS changes the CellBarred of Cell 1 to 'Not barred'.

f) After 30 s an emergency call is initiated on the UE.

g) The SS waits for random access request from the UE.

6.1.2.6.5 Test requirements

1) In step d), the first access from the UE shall be on Cell 7.

2) In step g), the first access from the UE shall be on Cell 1.

6.1.2.7 Void

6.1.2.8 Cell reselection: Equivalent PLMN

6.1.2.8.1 Definition

Test to verify that the UE performs the cell reselection correctly to a cell belonging to a PLMN Equivalent to the registered PLMN, if the serving cell of registered PLMN becomes barred or S<0.

6.1.2.8.2 Conformance requirement

1. When camped on a cell, the UE shall regularly search for a better cell according to the cell reselection criteria. If a better cell is found, that cell is selected. The change of cell may imply a change of RAT.

2. A "suitable cell" is a cell on which the UE may camp on to obtain normal service. Such a cell shall fulfil all the following requirements.

   2.1 The cell is part of the selected PLMN or of a PLMN considered as equivalent by the UE according to the information provided by the NAS

   2.2 The cell is not barred

   2.3 The cell is not part of the list of "forbidden LAs for roaming"

   2.4 The cell selection criteria are fulfilled

3. When camped normally, the UE shall execute the cell reselection evaluation process on the following occasions/triggers:

3.1 UE internal triggers, so as to meet performance as specified in TS 25.133 for FDD mode and in TS 25.123 for TDD mode.

3.2 When information on the BCCH used for the cell reselection evaluation procedure has been modified

4. Cell Reselection Criteria:

4.1 The UE shall perform ranking of all cells that fulfil the S criterion

4.2 The cells shall be ranked according to the R criteria, deriving Qmeas,n and Qmeas,s and calculating the R values using CPICH RSCP, P-CCPCH RSCP and the averaged received signal level as specified in TS 25.133 and TS 25.123 for FDD, TDD and GSM cells, respectively.

The offset $Qoffset1_{s,n}$ is used for $Qoffset_{s,n}$ to calculate R_n, the hysteresis $Qhyst1_s$ is used for $Qhyst_s$ to calculate R_s.

If the usage of HCS is indicated in system information, $TEMP_OFFSET1_n$ is used for $TEMP_OFFSET_n$ to calculate TO_n. If it is indicated in system information that HCS is not used, $TEMP_OFFSET_n$ is not applied when calculating R_n. The best ranked cell is the cell with the highest R value.

If a TDD cell is ranked as the best cell, the UE shall perform cell re-selection to that TDD cell.

If an FDD cell is ranked as the best cell and the quality measure for cell selection and re-selection is set to CPICH RSCP, the UE shall perform cell re-selection to that FDD cell.

4.3 In all cases, the UE shall reselect the new cell, only if the following conditions are met:

- the new cell is better ranked than the serving cell during a time interval Treselection.
- more than 1 second has elapsed since the UE camped on the current serving cell.

5. When cell status "barred" is indicated, the UE shall select another cell according to the following rule:

5.1 If the "Intra-frequency cell re-selection indicator" IE in Cell Access Restriction IE is set to value "allowed", the UE may select another cell on the same frequency if selection/re-selection criteria are fulfilled.

- If the UE is camping on another cell, the UE shall exclude the barred cell from the neighbouring cell list until the expiry of a time interval T_{barred}. The time interval T_{barred} is sent via system information in a barred cell together with Cell status information in the Cell Access Restriction IE.
- If the UE does not select another cell, and the barred cell remains to be the "best" one, the UE shall after expiry of the time interval T_{barred} again check whether the status of the barred cell has changed.

5.2 If the "Intra-frequency cell re-selection indicator" IE is set to "not allowed" the UE shall not re-select a cell on the same frequency as the barred cell. For emergency call, the Intra-frequency cell re-selection indicator IE" shall be ignored, i.e. even if it is set to "not allowed" the UE may select another intra-frequency cell.

6.1.2.8.3 Test purpose

1. To confirm that the UE treats the cell of the equivalent PLMN as a cell of the current PLMN.
2. To verify that the UE performs cell reselection on the following occasions:

2.1 Serving cell becomes barred.

2.2 S<0 for serving cell.

3. To verify conformance requirement 5.

NOTE: Reselection triggered by the cell becoming a part of a forbidden registration area is tested in clause 9.4.2.3 "Location updating / rejected / location area not allowed" and 9.4.2.4 "Location updating / rejected / roaming not allowed in this LA".

6.1.2.8.4 Method of test

Initial conditions

Treselection, Qhyst, Qoffset, TEMP_OFFSET and PENALTY_TIME are not used, so the cell-ranking criterion R equals CPICH_RSCP for FDD cells, and P-CCPCH RSCP for TDD cells.

The UE is Idle Updated on PLMN1 in cell 1.

Cell 1 indicates in System Information Block Type 11 that Cell 2 and Cell 4 are neighbouring cells.

Cell 2 indicates in System Information Block Type 11 that Cell 1 and Cell 4 are neighbouring cells.

Cell 4 indicates in System Information Block Type 11 that Cell 1 and Cell 2 are neighbouring cells.

Step a-c (FDD):

Parameter	Unit	Cell 1	Cell 2	Cell 4
Test Channel		1	1	2
PLMN		PLMN 1	PLMN 2	PLMN 3
CPICH_Ec	dBm/ 3.84 MHz	-60	-67	-80
Qrxlevmin	dBm	-115	-115	-115
Qqualmin	dB	-16	-16	-16
Srxlev*	dB	55	48	35
CellBarred		Not barred	Not barred	Not barred

Step a-c (TDD):

Parameter	Unit	Cell 1	Cell 2	Cell 4
Test Channel		1	1	2
PLMN		PLMN 1	PLMN 2	PLMN 3
P-CCPCH RSCP	dBm	-69	-74	-79
Qrxlevmin	dBm	-103	-103	-103
Srxlev*	dB	34	29	24

Step d-f:

CellBarred		Not barred->Barred		
Intra-frequency cell re-selection indicator		Not Allowed		
Tbarred	s	10		

Step g-h:

Intra-frequency cell re-selection indicator		Not Allowed -> Allowed		

Step i-k:

Parameter	Unit	Cell 1	Cell 2	Cell 4
CellBarred		Barred -> Not barred	Not barred	Not barred

Step l-m (FDD):

Qrxlevmin	dBm	-115 -> -51	-115	-115
Qqualmin	dB	-16	-16	-16
Srxlev*	dBm	55 -> -9	48	35

Step l-m (TDD):

Qrxlevmin	dBm	-103 -> -59	-103	-103
Srxlev*	dBm	34 -> -10	29	24

Test procedure

Method C is applied.

a) The UE is switched off. The SS activates Cell 2 and 4.

b) The UE is switched on.

c) The SS waits for random access requests from the UE. A complete Location Update is done. SS specifies PLMN 2 and 3 are Equivalent to PLMN 1 in Location Update Accept Message. For UE that supports both CS and PS domain or PS domain only, the Location Updating procedure could be replaced by the appropriate GMM registration procedure. In these cases, the GMM Attach Accept message shall include PLMN2 and PLMN3 in the equivalent PLMN list.

d) The SS sets Cell 1 to be barred. The SS notifies UE of the BCCH modification.

e) The SS waits for random access requests from the UE. A complete Location Update is done. SS specifies PLMN 1 and 2 are Equivalent to PLMN 3 in Location Update Accept Message. For UE that supports both CS and PS domain or PS domain only, the Location Updating procedure could be replaced by the appropriate GMM Routing Area Updating procedure. In these cases, the Routing Area Update Accept message shall include PLMN1 and PLMN2 in the equivalent PLMN list.

f) The SS sets "Intra-frequency cell re-selection indicator" to "Allowed".

g) The SS waits for random access requests from the UE. A complete Location Update is done. SS specifies PLMN 1 and 3 are Equivalent to PLMN 2 in Location Update Accept Message. For UE that supports both CS and PS domain or PS domain only, the Location Updating procedure could be replaced by a Routing Area Updating procedure. In these cases, the Routing Area Update Accept message shall include PLMN1 and PLMN3 in the equivalent PLMN list.

h) Void

i) The SS sets Cell 1 to be not barred.

j) Void

k) The SS waits for random access requests from the UE. A complete Location Update is done. SS specifies PLMN 2 and 3 are Equivalent to PLMN 1 in Location Update Accept Message. For UE that supports both CS and PS domain or PS domain only, the Location Updating procedure could be replaced by a Routing Area Updating procedure. In these cases, the Routing Area Update Accept message shall include PLMN2 and PLMN3 in the equivalent PLMN list.

l) For FDD cell, Qrxlevmin is increased to -51 dBm, so S will become negative.
For TDD cell, Qrxlevmin is increased to -59 dBm, so S will become negative.
The SS notifies UE of the BCCH modification

m) The SS waits for random access requests from the UE.

6.1.2.8.5 Test requirements

1) In step c), after the UE has responded on Cell 1, it shall not respond on any other cell within 1 min.

2) In step e), the UE shall respond on Cell 4.

3) In step g), the UE shall respond on Cell 2.

4) In step k), the UE shall respond on Cell 1. After the UE has responded on Cell 1, it shall not respond on any other cell within 1 min.

5) In step m), the UE shall respond on Cell 2.

6.1.2.9 Void

6.1.2.9a Cell reselection using cell status and cell reservations – Type “A” USIM

6.1.2.9a.1 Definition

Test to verify that the UE correctly interprets cell status and cell reservations when performing cell reselection.

6.1.2.9a.2 Conformance requirement

1. When cell status is indicated as "not barred", "not reserved" for operator use and "not reserved" for future extension (Cell Reservation Extension),

   - the UE may select/re-select this cell during the cell selection and cell re-selection procedures in Idle mode and in Connected mode.

2. When cell status is indicated as "not barred", "not reserved" for operator use and "reserved" for future extension (Cell Reservation Extension),

   - UEs shall behave as if cell status "barred" is indicated using the value "not allowed" in the IE "Intra-frequency cell re-selection indicator" and the maximum value for T_{barred}, see [8] (see also below).

3. When cell status is indicated as "not barred" and "reserved" for operator use,

   - UEs assigned to Access Class 11 or 15 may select/re-select this cell if in the home PLMN.

   - UEs assigned to an Access Class in the range 0 to 9 and 12 to 14 shall behave as if cell status "barred" is indicated using the value "not allowed" in the IE "Intra-frequency cell re-selection indicator" and the maximum value for T_{barred}, see [8] (see also below).

4. When cell status "barred" is indicated,

   - The UE is not permitted to select/re-select this cell, not even for emergency calls.

   - The UE shall ignore the "Cell Reserved for future extension (Cell Reservation Extension) use" IE.

   - The UE shall select another cell according to the following rule:

     - If the "Intra-frequency cell re-selection indicator" IE in Cell Access Restriction IE is set to value "allowed", the UE may select another cell on the same frequency if selection/re-selection criteria are fulfilled.

       - If the UE is camping on another cell, the UE shall exclude the barred cell from the neighbouring cell list until the expiry of a time interval T_{barred}. The time interval T_{barred} is sent via system information in a barred cell together with Cell status information in the Cell Access Restriction IE.

       - If the UE does not select another cell, and the barred cell remains to be the "best" one, the UE shall after expiry of the time interval T_{barred} again check whether the status of the barred cell has changed.

     - If the "Intra-frequency cell re-selection indicator" IE is set to "not allowed" the UE shall not re-select a cell on the same frequency as the barred cell. For emergency call, the Intra-frequency cell re-selection indicator IE" shall be ignored, i.e. even if it is set to "not allowed" the UE may select another intra-frequency cell.

- If the barred cell remains to be the "best" one, the UE shall after expiry of the time interval T_{barred} again check whether the status of the barred cell has changed.

The reselection to another cell may also include a change of RAT.

Reference(s)

3GPP TS 25.304, clause 5.3.1.1

6.1.2.9a.3 Test purpose

1. To verify that when cell status is indicated as "not barred" and "reserved" for operator use,

   - UEs assigned to an Access Class in the range 0 to 9 shall behave as if cell status "barred" is indicated using the value "not allowed" in the IE "Intra-frequency cell re-selection indicator" and the maximum value for T_{barred}.

6.1.2.9a.4 Method of test

Initial conditions

Use of USIM with "Type A" EF_{ACC} as defined in TS 34.108.

Step a-c (FDD):

Parameter	Unit	Cell 1	Cell 2	Cell 4
Test Channel		1	1	2
LAC		0001	0002	0003
CPICH_Ec	dBm/3.84 MHz	-58	-68	-78
Qqualmin	dB	-16	-24	-16
Qrxlevmin	dBm	-83	-83	-83
Srxlev*	dB	25	15	5
Cell Reserved for operator use		not reserved	not reserved	not reserved
Cell Reservation Extension		not reserved	not reserved	not reserved

Step a-c (TDD):

Parameter	Unit	Cell 1	Cell 2	Cell 4
Test Channel		1	1	2
LAC		0001	0002	0003
P-CCPCH RSCP	dBm	-68	-73	-78
Qrxlevmin	dBm	-83	-83	-83
Srxlev*	dB	15	10	5

Step d-e:

Cell Reserved for operator use		not reserved -> reserved	not reserved	not reserved
Cell Reservation Extension		not reserved	not reserved	not reserved

Step f-g:

Cell Reserved for operator use		reserved -> not reserved	not reserved	not reserved
Cell Reservation Extension		not reserved	not reserved	not reserved

Related ICS/IXIT Statement(s)

None

Test procedure

Method C applied.

a) The SS activates Cell 1, 2 and 4, and monitors them for random access requests from the UE.

b) The UE is switched on.

c) The SS waits to see if there are any random access requests from the UE.

d) The SS sets Cell 1 to "reserved" for operator use. The SS notifies UE of the BCCH modification.

e) The SS waits to see if there are any random access requests from the UE.

f) The SS sets Cell 1 to "not reserved" for operator use.

g) The SS waits to see if there are any random access requests from the UE.

6.1.2.9a.5 Test requirements

1) In step c), the UE shall respond on Cell 1.

2) In step e), the UE shall respond on Cell 4.

3) In step g), the UE shall respond on Cell 1 after 1280 seconds (maximum value for Tbarred) from SS notified UE of the BCCH modification in Cell 1 in step d).

6.1.2.9b Cell reselection using cell status and cell reservations – Type “B” USIM

6.1.2.9b.1 Definition

This test case is identical to test case 6.1.2.9a except that the USIM used for this test case is of type “B”.

6.1.2.9b.2 Conformance requirement

Same conformance requirement as in clause 6.1.2.9a.2

6.1.2.9b.3 Test purpose

1. To verify that when cell status is indicated as "not barred", "not reserved" for operator use and "reserved" for future extension (Cell Reservation Extension),

   - UEs behave as if cell status "barred" is indicated using the value "not allowed" in the IE "Intra-frequency cell re-selection indicator" and the maximum value for T_{barred}.

2. To verify that when cell status is indicated as "not barred" and "reserved" for operator use,

   - UEs assigned to Access Class 11-15 may select/re-select this cell if in the home PLMN.

6.1.2.9b.4 Method of test

Initial conditions

Test procedure: Use of USIM with "Type B" EF_{ACC} as defined in TS 34.108.

Step a-c (FDD):

Parameter	Unit	Cell 1	Cell 2	Cell 4
LAC		0001	0002	0003
Test Channel		1	1	2
CPICH_Ec	dBm/3.84 MHz	-58	-68	-78
Qqualmin	dB	-16	-24	-16
Qrxlevmin	dBm	-83	-83	-83
Srxlev*	dB	25	15	5
Cell Reserved for operator use		not reserved	not reserved	not reserved
Cell Reservation Extension		not reserved	not reserved	not reserved

Step a-c (TDD):

Parameter	Unit	Cell 1	Cell 2	Cell 4
LAC		0001	0002	0003
Test Channel		1	1	2
P-CCPCH RSCP	dBm	-68	-73	-78
Qrxlevmin	dBm	-83	-83	-83
Srxlev*	dB	15	10	5

Step d-e:

Cell Reserved for operator use		not reserved	not reserved	not reserved
Cell Reservation Extension		not reserved -> reserved	not reserved	not reserved

Step f-g:

Cell Reserved for operator use		not reserved -> reserved	not reserved	not reserved
Cell Reservation Extension		reserved	not reserved	not reserved

Related ICS/IXIT Statement(s)

None

Test procedure

Method C applied.

a) The SS activates Cell 1, 2 and 4, and monitors them for random access requests from the UE.

b) The UE is switched on.

c) The SS waits to see if there are any random access requests from the UE.

d) The SS sets Cell 1 to "reserved" for future extension. The SS notifies UE of the BCCH modification.

e The SS waits to see if there are any r random access requests from the UE.

f The SS sets Cell 1 to "reserved" for operator use.

g) The SS waits to see if there are any random access requests from the UE.

6.1.2.9b.5 Test requirements

1) In step c), the UE shall respond on Cell 1.

2) In step e), the UE shall respond on Cell 4.

3) In step g), the UE shall respond on Cell 1 after 1280 seconds (maximum value for Tbarred) from SS notified UE of the BCCH modification in Cell 1 in step d).

6.1.2.10 HCS inter-frequency cell reselection

6.1.2.10.1 Definition

Test to verify that the UE performs inter-frequency cell reselection correctly for hierarchical cell structures in FDD. This shall be done according to the received signal quality value Q and the quality level thresholds Sintrasearch, Sintersearch and SsearchHCS.

6.1.2.10.2 Conformance requirement

1. When camped normally, the UE shall execute the cell reselection evaluation process on the following occasions/triggers:

   1.1 UE internal triggers, so as to meet performance as specified in TS 25.133 for FDD mode.

   1.2 When information on the BCCH used for the cell reselection evaluation procedure has been modified.

2. Cell Reselection Criteria for hierarchical cells:

   2.1 The quality level thresholds for measurement rules for cell reselection can be used to control inter-frequency cell reselections. Intra-frequency cell reselections shall still be performed if Sintrasearch is not sent.

   2.2 The quality level threshold criterion H for hierarchical cell structures is used to determine whether prioritised ranking according to hierarchical cell re-selection rules shall apply, and is calculated from the Q, Qhcs, TEMP_OFFSET and PENALTY_TIME parameters.

   2.3 The UE shall perform ranking of all cells that fulfil the S criterion among all cells that have the highest HCS_PRIO among those cells that fulfil the criterion H >= 0.

   2.4 The cells shall be ranked according to the R criteria. The best ranked cell is the cell with the highest R value. If an FDD cell is ranked as the best cell, the UE shall perform cell re-selection to that FDD cell. If a TDD cell is ranked as the best cell, the UE shall perform cell re-selection to that TDD cell.

   2.5 In all cases, the UE shall reselect the new cell, only if the cell reselection criteria are fulfilled during a time interval Treselection.

   2.6 The cell-ranking criterion R is derived from Q, Qhyst, Qoffset, TEMP_OFFSET, PENALTY_TIME.

References

1. TS 25.304, clause 5.2.2.
2. TS 25.304, clause 5.2.6.1.2.
3. TS 25.304, clause 5.2.6.1.4.

6.1.2.10.3 Test purpose

1. Verify that in FDD the UE ignores inter-frequency cells for reselection when the inter-frequency cells have equal or lower HCS priority than the serving cell, and Sintraseach is not sent, and Sintersearch < Squal and SsearchHCS < Srxlev.
2. Verify that in FDD the UE reselect to an inter-frequency cells when Sintraseach is not sent, and Sintersearch < Squal but SsearchHCS > Srxlev. The modification of this parameter on the BCCH shall trigger the cell reselection evaluation process. Qhyst, Qoffset, TEMP_OFFSET, PENALTY_TIME and Treselection are not applied so R equals CPICH_RSCP for FDD cells.

6.1.2.10.4 Method of test

Initial conditions

SS shall indicate in System Information that HCS is in use.

Each cell shall include the other cells as neighbouring cells in System Information Block Type 11.

For FDD only:

Step a- d:

Parameter	Unit	Cell 1	Cell 2	Cell 3
Test Channel		1	1	2
LAC		0001	0002	0003
HCS priority		6	6	6
CPICH_Ec	dBm/3.84 MHz	-70	-65	-60
CPICH_Ec/No	dB	-11	-6	-5
Qrxlevmin	dBm	-109	-105	-99
Qqualmin	dB	-24	-24	-24
Srxlev*	dB	39	40	39
Squal*	dB	13	18	19
Sintrasearch	dB	8	8	8
Sintersearch	dB	8	8	8
SsearchHCS	dB	31	31	31
$Qhcs_s$	dBm	-80	-80	-80
$Qhcs_{n=1}$	dBm	n/a	-80	-80
$Qhcs_{n=2}$	dBm	-80	n/a	-80
$Qhcs_{n=4}$	dBm	-80	-80	n/a
H_s*	dB	10	15	20
$H_{n=1}$*	dB	n/a	10	10
$H_{n=2}$*	dB	15	n/a	15
$H_{n=4}$*	dB	20	20	n/a

Step e-f:

Sintrasearch	dB	8 -> n/a	8 -> n/a	8 -> n/a

Step g-h:

Srxlev*	dB	39	40->20	39
Qrxlevmin	dBm	-109	-105 -> -85	-99

Test procedure

Method C is applied.

a) The SS activates cell 1.

b) The UE is switched on.

c) The SS waits for random access requests from the UE.

d) The SS activates cells 2 and 3 and monitors them for random access requests from the UE.

e) The SS stops the transmission of Sintrasearch in all cells, and notifies UE of the BCCH modification.

f) The SS waits for random access requests from the UE.

g) The SS changes Qrxlevmin for Cell 2, and notifies UE of the BCCH modification.

h) The SS waits for random access requests from the UE.

6.1.2.10.5 Test requirements

1) In step c, the UE shall respond on cell 1.

2) In step d, the UE shall not respond on cell 2 or 3.

3) In step f), the UE shall respond on Cell 2.

4) In step h), the UE shall respond on Cell 3.

6.1.2.10a HCS inter-frequency cell reselection for inter-band operation

6.1.2.10a.1 Definition

This test case is identical to test case 6.1.2.10 except that the inter-frequency cell to be reselected is on a different frequency band.

6.1.2.10a.2 Conformance requirement

Same conformance requirement as in clause 6.1.2.10.2.

6.1.2.10a.3 Test purpose

Same test purpose as in clause 6.1.2.10.3 except that the inter-frequency cell to be reselected is on a different frequency band.

6.1.2.10a.4 Method of test

Initial conditions

Same initial conditions as in clause 6.1.2.10.4 except that cells 1and 2 use test channel 1 as specified in Table 6.3 for the primary band and that cell 3 uses test channel 2 as specified in Table 6.3 for the secondary band. Primary and secondary bands are selected according to PIXIT parameters.

Related ICS/IXIT statement(s)

- UE supports multiple bands simultaneously yes/no

Test procedure

Same test procedure as in clause 6.1.2.10.4.

NOTE: If the UE supports more than 2 frequency bands, the test may be executed for various band combinations.

6.1.2.10a.5 Test requirements

Same test requirement as in clause 6.1.2.10.5.

6.1.2.11 Cell reselection in shared network environment

6.1.2.11.1 Definition

Test to verify that the UE performs cell reselection according to core specification 25.304 in a shared network environment (FDD). Correct handling of equivalent PLMNs is also verified.

6.1.2.11.2 Conformance requirement

1. suitable cell:

   A "suitable cell" is a cell on which the UE may camp on to obtain normal service. Such a cell shall fulfil all the following requirements.

   - The cell shall be part of either:
     - the selected PLMN, or:
     - the registered PLMN, or:
     - a PLMN of the Equivalent PLMN list

     according to the latest information provided by the NAS.
   - The cell is not barred, see subclause 5.3.1.1;
   - The cell is part of at least one LA that is not part of the list of "forbidden LAs for roaming" [9], which belongs to a PLMN that fulfils the first bullet above;
   - The cell selection criteria are fulfilled, see subclause 5.2.3.1.2.

If the IE “Multiple PLMN List” [4] is broadcast in the cell, the cell is considered to be part of all LAs with LAIs constructed from the PLMN identities in the “Multiple PLMN List” and the LAC broadcast in the cell.

2. When camped on a cell, the UE shall regularly search for a better cell according to the cell reselection criteria. If a better cell is found, that cell is selected. The change of cell may imply a change of RAT.

3. When camped normally, the UE shall perform the following tasks:

   - select and monitor the indicated PICH and PCH of the cell as specified in clause 8 according to information sent in system information;

   - monitor relevant System Information. This is specified in [4];

   - perform necessary measurements for the cell reselection evaluation procedure;

   - execute the cell reselection evaluation process on the following occasions/triggers:

     1) UE internal triggers, so as to meet performance as specified in [10] and [11];

     2) When information on the BCCH used for the cell reselection evaluation procedure has been modified

4. Cell Reselection Criteria:

   4.1 If HCS is not used in the serving cell the UE shall perform ranking of all cells that fulfil the criterion S, among:

   - all measured cells (see subclause 5.2.6.1.1).

   4.2 The cells shall be ranked according to the R criteria, deriving Qmeas,n and Qmeas,s and calculating the R values using CPICH RSCP, P-CCPCH RSCP and the averaged received signal level as specified in TS 25.133 and TS 25.123 for FDD, TDD and GSM cells, respectively.

   The offset $Qoffset1_{s,n}$ is used for $Qoffset_{s,n}$ to calculate R_n, the hysteresis $Qhyst1_s$ is used for $Qhyst_s$ to calculate R_s.

   …

   If the usage of HCS is indicated in system information, $TEMP_OFFSET1_n$ is used for $TEMP_OFFSET_n$ to calculate TO_n. If it is indicated in system information that HCS is not used, $TEMP_OFFSET_n$ is not applied when calculating R_n. The best ranked cell is the cell with the highest R value.

   …

   If an FDD cell is ranked as the best cell and the quality measure for cell selection and re-selection is set to CPICH RSCP, the UE shall perform cell re-selection to that FDD cell.

   4.3 In all cases, the UE shall reselect the new cell, only if the following conditions are met:

   - the new cell is better ranked than the serving cell during a time interval Treselection.

   …

   - more than 1 second has elapsed since the UE camped on the current serving cell.

5. Location Registration

   In the UE, the AS shall report registration area information to the NAS.

   If the UE reads more than one PLMN identity in the current cell, the UE shall report the found PLMN identities that make the cell suitable in the registration area information to NAS.

6. Location updating accepted by the network

   The network may also send a list of "equivalent PLMNs" in the LOCATION UPDATING ACCEPT message. Each entry of the list contains a PLMN code (MCC+MNC). The mobile station shall store the list, as provided by the network, except that any PLMN code that is already in the "forbidden PLMN list" shall be removed from the "equivalent PLMNs" list before it is stored by the mobile station. In addition the mobile station shall add to

the stored list the PLMN code of the registered PLMN that sent the list. All PLMNs in the stored list shall be regarded as equivalent to each other for PLMN selection, cell selection/re-selection and handover. The stored list in the mobile station shall be replaced on each occurrence of the LOCATION UPDATING ACCEPT message. If no list is contained in the message, then the stored list in the mobile station shall be deleted. The list shall be stored in the mobile station while switched off so that it can be used for PLMN selection after switch on.

6.1.2.11.3 Test purpose

1. To verify that the UE is able to reselect to a higher ranked cell in shared network environment.
2. To verify that the UE treats a cell of an Equivalent PLMN as a cell of the Registered PLMN for cell reselection in shared network environment.
3. To verify that the UE respects the IE “MIB PLMN Identity” in Camped Normally state.
4. To verify correct behaviour if the stored Equivalent PLMN list is deleted on reception of Location Area Update Accept or Routing Area Update Accept message not containing an Equivalent PLMN list.

6.1.2.11.4 Method of test

Initial conditions

The UE is equipped with a USIM containing default values. The HPLMN (MCC+MNC) of the IMSI for the USIM is set to PLMN1.

Cell reselection parameters are set to default values, so the cell-ranking criterion R equals CPICH_RSCP.

Each cell indicates in System Information Block Type 11 that all other cells are neighbouring cells.

Cell 2, Cell 4 and Cell 7 are switched off.

The reference system configuration from TS 34.108 clause 6.1 is used in all cells, with the following modifications:

Master Information Block

- MIB value tag	Set to (Current MIB value tag + 1)
- Supported PLMN types	
- PLMN type	GSM-MAP
- PLMN identity	
- MCC digit	See table below
- MNC digit	See table below
- Multiple PLMN List	
- MIB PLMN Identity	See table below
- Multiple PLMNs (1)	
- MCC	See table below
- MNC	See table below
- Multiple PLMNs (2)	
- MCC	See table below
- MNC	See table below

The MIB PLMN Identity and PLMN codes broadcasted on the BCCH in each cell shall be configured as defined in the table below.

Cell	MIB PLMN Identity	PLMN Identity		Multiple PLMNs (1)		Multiple PLMNs (2)	
		MCC digits	MNC digits	MCC digits	MNC digits	MCC digits	MNC digits
1	TRUE	PLMN 1	PLMN 1	-	PLMN 2	-	PLMN 3
2	FALSE	PLMN 3	PLMN 3	-	PLMN 2	-	PLMN 1
4	FALSE	PLMN 4	PLMN 4	-	PLMN 5	-	PLMN 6
7	FALSE	PLMN 6	PLMN 6	-	PLMN 5	-	PLMN 4

The definition of each PLMN code is found in table below.

PLMN	MCC digit			MNC digit		
	1	2	3	1	2	3
1	0	0	1	0	1	-
2	0	0	1	0	2	-
3	0	0	1	0	3	-
4	0	0	1	0	4	-
5	0	0	1	0	5	-
6	0	0	1	0	6	-

NOTE: "–" (dash) denotes "not present"

System Information Block type 1

The GSM-MAP NAS system information (LAC) broadcasted on the BCCH in each cell shall be configured as defined below.

- CN common GSM-MAP NAS system information	
- GSM-MAP NAS system information	See table below

System Information Block type 3 and 4

Parameter	Cell 1	Cell 2	Cell 4	Cell 7
q_QualMin	-24	-16	-16	-24

Cell	LAC
1	1
2	2
4	4
7	7

Step a-e

Parameter	Unit	Cell 1	Cell 2	Cell 4	Cell 7
Test Channel		1	1	2	3
CPICH_Ec	dBm/ 3.84 MHz	-84	-78	-72	-66

Step f-g

Parameter	Unit	Cell 1	Cell 2	Cell 4	Cell 7
CPICH_Ec	dBm/ 3.84 MHz	-84 -> -60	-78 -> -60	-72	-66

Test procedure

Method C is applied.

a) The UE is switched on.

b) The SS waits for random access requests from the UE. A complete Location Update is done. For UE that supports both CS and PS domain or PS domain only, the Location Updating procedure could be replaced by the appropriate GMM registration procedure.

c) Cell 2, Cell 4 and Cell 7 are switched on.

d) The SS waits for random access requests from the UE. A complete Location Update is done. SS specifies PLMN 6 as Equivalent to PLMN1 in Location Update Accept Message. For UE that supports both CS and PS domains or PS domain only, the Location Updating procedure could be replaced by the appropriate GMM Routing Area Updating procedure. In these cases, the Routing Area Update Accept message shall include PLMN6 in the equivalent PLMN list.

e) The SS waits for random access requests from the UE. A complete Location Update is done. For UE that supports both CS and PS domains or PS domain only, the Location Updating procedure could be replaced by the appropriate GMM registration procedure.

f) The SS changes the levels of Cell 1 and Cell 2.

g) The SS waits for random access requests from the UE.

6.1.2.11.5 Test requirements

1) In step b), the UE shall respond on Cell 1.

2) In step d), the UE shall respond on Cell 2.

3) In step e), the UE shall respond on Cell 4.

4) In step g), the UE shall not respond on Cell 1, Cell 2 or Cell 5 within 1 min.

6.1.2.12 Cell reselection based on absolute priority in SIB19

6.1.2.12.1 Definition

Test to verify that the UE performs cell reselection based on absolute RAT priority defined in SIB 19.

6.1.2.12.2 Conformance requirement

5.2.6.1.2a Measurement rules for inter-frequency and inter-RAT cell reselection when

absolute priorities are used

…

If the UE has received absolute priority information for inter-frequency layers, the UE shall follow these rules:

- The UE shall perform measurements of inter-frequency layers with a priority higher than the priority of the

current serving layer.

NOTE: The rate of these measurements may vary depending on whether Srxlev and Squal of the serving cell are

above or below Sprioritysearch1 and Sprioritysearch2. This is specified in [10].

…

- For inter-frequency layers with a priority equal or lower than the priority of the current serving layer:

- If Srxlev**ServingCell** > Sprioritysearch1 and Squal**ServingCell** > Sprioritysearch2 the UE may choose not to perform measurements of inter-frequency layers of equal or lower priority.

- If Srxlev**ServingCell** <= Sprioritysearch1 or Squal**ServingCell** <= Sprioritysearch2 the UE shall perform measurements of

inter-frequency layers of equal or lower priority.

- The UE shall not perform measurements of inter-frequency layers for which the UE has no absolute priority.

…

5.2.6.1.4a Absolute priority based criteria for inter-frequency and inter-RAT cell reselection

Absolute priorities of different absolute priority layers may be provided to the UE. The following cell reselection criteria are used for inter-frequency cells if absolute priority information for inter-frequency is available to the UE, and inter-RAT cells if absolute priority information for inter-RAT is available to the UE.

If System Information Block 18 with UTRAN information is provided then the UE shall apply the inter-frequency priority rules below only to UTRAN cells of the selected PLMN or equivalent PLMNs. If System Information Block 18 is not provided, or is provided but contains no information for UTRAN, then the rules below apply for the entire UTRAN RAT.

…

If priority information is provided for any inter-frequency layers, cells belonging to inter-frequency layers for which no priority or no threshold is assigned shall not be considered for reselection.

…

If none of the inter-frequency layers in UTRAN are provided with both priority and threshold parameters, the cell reselection criteria in subclause 5.2.6.1.4 shall apply for inter-frequency layers in UTRAN.

…

If both criteria in subclause 5.2.6.1.4 and criteria in subclause 5.2.6.1.4a are simultaneously fulfilled, the order in which the reselection criteria are evaluated is left to UE implementation.

…

The UE may apply either priorities broadcast in system information or priorities received through dedicated signalling. The rules regarding which set of priorities shall apply are defined in [4]. UE specific priorities are only valid in the RPLMN, and shall be cleared when the validity time of the UE specific priorities expires, or when leaving the RPLMN. UE specific priorities are not applied in camped on any cell state.

…

The following definitions apply for the layers for which Threshx,high2 or Threshx,low2 are not provided:

- Criterion 1: the SrxlevnonServingCell,x of a cell on an evaluated higher absolute priority layer is greater than

Threshx,high during a time interval Treselection;

- Criterion 2: SrxlevServingCell < Threshserving,low or SqualServingCell < 0 and the SrxlevnonServingCell,x of a inter-frequency cell on an evaluated equal absolute priority layer is greater than Threshx,low during a time interval Treselection;

- Criterion 3: SrxlevServingCell < Threshserving,low or SqualServingCell < 0 and the SrxlevnonServingCell,x of a cell on an evaluated lower absolute priority layer is greater than Threshx,low during a time interval Treselection;

The following definitions apply for the layers for which both Threshx,high2 and Threshx,low2 are provided:

- Criterion 4: the SqualnonServingCell,x of a cell on an evaluated higher absolute priority layer is greater than

Threshx,high2 during a time interval Treselection;

- Criterion 5: SqualServingCell < Threshserving,low2 and the SqualnonServingCell,x of a cell on an evaluated lower absolute priority layer is greater than Threshx,low2 during a time interval Treselection;

Cell reselection to a cell on a higher absolute priority layer than the camped frequency shall be performed if criterion 1 or 4 is fulfilled.

Cell reselection to an inter-frequency cell on an equal absolute priority layer to the camped frequency shall be performed if criterion 2 is fulfilled.

Cell reselection to a cell on a lower absolute priority layer than the camped frequency shall be performed if criterion 3 or 5 is fulfilled.

If more than one cell meets the above criteria, the UE shall reselect the cell with the highest SrxlevnonServingCell,x among

the cells meeting the criteria on the highest absolute priority layer.

The UE shall not perform cell reselection to cells for which the cell selection criterion S is not fulfilled.

The UE shall not perform cell reselection until more than 1 second has elapsed since the UE camped on the current serving cell.

The UE should not perform cell reselection while the UE has an allocated common E-DCH resource.

For UE in RRC connected mode states CELL_PCH or URA_PCH the interval Treselections,PCH applies, if provided in SIB4 (see [4]), while for UE in RRC connected mode state CELL_FACH the interval Treselections,FACH applies, if provided in SIB4 (see [4]).

In all the above criteria the values of Treselections, Treselections,PCH or Treselections,FACH apply for Treselection and are scaled according to the UE mobility state and target RAT, as specified in 5.2.6.1.1a.

8.6.7.3a UTRA priority info list

If the IE "UTRA priority info list" is received in System Information Block Type 19, the UE shall:

1> if the value of the IE "Priority status" in the variable PRIORITY_INFO_LIST equals "dedicated_priority":

2> store the value of the IEs "$S_{prioritysearch1}$", "$S_{prioritysearch2}$", "$Thresh_{serving,low}$" and "$Thresh_{serving,low2}$" in the IE "UTRA Serving Cell" in the variable PRIORITY_INFO_LIST;

2> if any of the values in any of the occurrences of the IE "Frequency List" in any occurrence of the IE "Priority Info List" within the variable PRIORITY_INFO_LIST is the frequency of the serving cell:

3> store the value of the IE "priority" in the IE "UTRA Serving Cell" in the variable PRIORITY_INFO_LIST.

2> otherwise:

3> clear the value of the IE "priority" in the IE "UTRA Serving Cell" in the variable PRIORITY_INFO_LIST.

2> for each occurrence of the IE "UTRAN FDD Frequencies":

3> if the value of the IE "UARFCN" exists in the list of UTRA FDD priorities in the PRIORITY_INFO_LIST then, in the occurrence of IE "Frequency List" within the variable PRIORITY_INFO_LIST with that value of the IE "UARFCN":

4> store the value of the IEs "$Thresh_{x, high}$", "$Thresh_{x, low}$", "QqualminFDD" and "QrxlevminFDD".

2> for each occurrence of the IE "UTRAN TDD Frequencies":

3> if the value of the IE "UARFCN" exists in the list of UTRA TDD priorities in the PRIORITY_INFO_LIST then, in the occurrence of IE "Frequency List" within the variable PRIORITY_INFO_LIST with that value of the IE "UARFCN":

4> store the value of the IEs "$Thresh_{x, high}$", "$Thresh_{x, low}$" and "QrxlevminTDD".

1> otherwise:

2> update the PRIORITY_INFO_LIST IE "Priority status" to cause "sys_info_priority".

2> store information in the IE "UTRA Serving Cell" in the IE "UTRA Serving Cell" within the variable PRIORITY_INFO_LIST;

2> for each occurrence of the IE "UTRAN FDD Frequencies":

3> if an entry already exists in the IE "Priority Info List" in the variable PRIORITY_INFO_LIST with the same priority value as indicated in the IE "priority" and has the CHOICE "Radio Access Technology" set to "UTRA FDD":

4> create a new entry in the IE "Frequency List" in that occurrence of IE "Priority Info List", and store the value of "UARFCN" in the IE "UARFCN" in this occurrence of the IE "Frequency List" within the variable PRIORITY_INFO_LIST, and in that new entry:

5> store the IEs "$Thresh_{x, high}$", "$Thresh_{x, low}$", "QqualminFDD" and "QrxlevminFDD".

3> otherwise:

4> create a new entry in the IE "Priority Info List" and store the value of "priority" in the IE "priority" in this occurrence of the IE "Priority Info List" within the variable PRIORITY_INFO_LIST, and in that new entry:

5> set the CHOICE "Radio Access Technology" to "UTRA FDD" and store the value of "UARFCN" in the IE "UARFCN" in the first occurrence of the IE "Frequency List";

5> store the IEs "$Thresh_{x, high}$", "$Thresh_{x, low}$", "QqualminFDD" and "QrxlevminFDD" in that occurrence of the IE "Frequency List".

2> for each occurrence of the IE "UTRAN TDD Frequencies":

3> if an entry already exists in the IE "Priority Info List" in the variable PRIORITY_INFO_LIST with the same priority value as indicated in the IE "priority" and has the CHOICE "Radio Access Technology" set to "UTRA TDD":

4> create a new entry in the IE "Frequency List" in that occurrence of IE "Priority Info List", and store the value of "UARFCN" in the IE "UARFCN" in this occurrence of the IE "Frequency List" within the variable PRIORITY_INFO_LIST, and in that new entry:

5> store the IEs "$Thresh_{x, high}$", "$Thresh_{x, low}$" and "QrxlevminTDD".

3> otherwise:

4> create a new entry in the IE "Priority Info List" and store the value of "priority" in the IE "priority" in this occurrence of the IE "Priority Info List" within the variable PRIORITY_INFO_LIST, and in that new entry:

5> set the CHOICE "Radio Access Technology" to "UTRA TDD" and store the value of "UARFCN" in the IE "UARFCN" in the first occurrence of the IE "Frequency List";

5> store the IEs "$Thresh_{x, high}$", "$Thresh_{x, low}$" and "QrxlevminTDD" in that occurrence of the IE "Frequency List".

6.1.2.12.3 Test purpose

1. To verify that UE performs Higher Priority Cell Reselection based on absolute priority.
2. To verify that UE performs LowerPriority Cell Reselection based on absolute priority.
3. To verify that UE performs Equal Priority Cell Reselection based on absolute priority.

6.1.2.12.4 Method of test

Initial conditions

System Simulator:

- 2 cells Cell 1 and Cell 4
- Cell 1 as the active cell with SS downlink transmission power settings according to “T0” in table 6.1.2.x below.
- SIB19 to be transmitted by both cells.

User Equipment:

- UE is in idle mode, registered on Cell 1 with power settings “T0”.
- Idle state (state 3 or state 7) as specified in clause 7.4 of TS 34.108 with a CN UE identity, depending on the CN domain(s) supported by the UE.

Related ICS/IXIT statement(s)

- UE supports FDD.

Table 6.1.2.12

Parameter	Unit	Cell 1			Cell 4		
		T0	T1	T2	T0	T1	T2
UTRA RF Channel Number		Mid Range Test Frequency			High Range Test Frequency		
CPICH Ec (FDD)	dBm/3.84MHz	-60	-60	-76	-90	-65	-74
Srxlev*	dB	21	21	5	-9	16	7
qRxLevMinFDD	dB	-81			-81		
Note-Srxlev is calculated in UE. During T1, UE should meet higher priority cell reselection criteria. During T2, UE should meet lower priority cell reselection criteria, followed by equal priority cell reselection criteria.							

Test procedure

Method C is applied.

a) SS transmits the MIB with the “MIB Value Tag” IE different from the original setting and SIB TYPE 19 with cell 4 as higher priority cell and cell 1 as lower priority cell (See specific message contents).

b) SS notifies the UE by sending a PAGING TYPE1 with BCCH modification and waits for 5s to ensure UE has read the SIB information.

c) SS configures downlink transmission power settings according to columns "T1" in the table 6.1.2.x.

d) UE meets the higher priority cell reselection and reselects to higher priority cell 4.

e) SS waits for random access request from UE. A Location Area Update procedure is done for UE. For UE that supports both CS and PS domain or PS domain only, the Location Updating procedure could be replaced by the appropriate GMM registration procedure.

f) SS transmits SIB TYPE 19 default content for cell 1 and then SS configures downlink transmission power settings according to columns "T2" in table 6.1.2.x.SS transmits the MIB with the “MIB Value Tag” IE different

from the original setting and SIB TYPE 19 for cell 4 as indicated in specific message contents SS notifies the UE by sending a PAGING TYPE1 with BCCH modification and waits for 5s to ensure UE has read the SIB information UE meets the lower priority cell reselection criteria and reselects to lower priority cell 1.

g) SS waits for random access request from UE. A Location Area Update procedure is done for UE. For UE that supports both CS and PS domain or PS domain only, the Location Updating procedure could be replaced by the appropriate GMM registration procedure.

h) SS transmits the MIB with the "MIB Value Tag" IE different from the original setting and the SIB TYPE 19 where both Cell 1 and Cell 4 are defined as equal priority cells.

i) SS notifies the UE by sending PAGING TYPE1 with BCCH modification and waits for 5s to ensure UE has read all the SIB information.

j) UE meets the equal priority cell reselection criteria with same power level as “T2” and reselects to equal priority cell 4.

k) SS waits for random access request from UE. A Location Area Update procedure is done for UE. For UE that supports both CS and PS domain or PS domain only, the Location Updating procedure could be replaced by the appropriate GMM registration procedure.

6.1.2.12.5 Test requirements

1) At step d), UE reselects to a higher priority Cell 4.

2) At step i), UE reselects to lower priority Cell 4.

3) At step m), UE reselects to equal priority Cell 4.

6.1.3 MBSFN Cluster selection and reselection

6.1.3.1 MBSFN only service recognition

6.1.3.1.1 Definition

Test to verify that a UE supporting both transmit and receive functions correctly distinguishes an MBSFN only mode cluster from a unicast carrier cell and performs the procedures for either MBSFN cluster selection or UTRAN unicast carrier cell selection as appropriate. The unicast carrier cell may have some (but not all) timeslots assigned to MBSFN.

6.1.3.1.2 Conformance requirement

The MS shall perform registration on the PLMN if the MS is capable of services which require registration. In both automatic and manual modes, the concept of registration on a PLMN is used. An MS successfully registers on a PLMN if:

a) The MS has found a suitable cell of the PLMN to camp on; and

b) An LR request from the MS has been accepted in the registration area of the cell on which the MS is camped (see table 1).

…

The registration on the selected PLMN and the location registration are only necessary if the MS is capable of services which require registration. Otherwise, the PLMN selection procedures are performed without registration.

…

At switch on, or following recovery from lack of coverage, the MS selects the registered PLMN or equivalent PLMN (if it is available) using all access technologies that the MS is capable of and if necessary (in the case of recovery from lack of coverage, see clause 4.5.2) attempts to perform a Location Registration.

…

suitable cell:

A "suitable cell" is a cell on which the UE may camp on to obtain normal service. Such a cell shall fulfil all the following requirements.

- The cell shall be part of either:
  - the selected PLMN, or:
  - the registered PLMN, or:
  - a PLMN of the Equivalent PLMN list

according to the latest information provided by the NAS.

- The cell is not barred, see subclause 5.3.1.1;
- The cell is part of at least one LA that is not part of the list of "forbidden LAs for roaming" [9], which belongs to a PLMN that fulfils the first bullet above;
- The cell selection criteria are fulfilled, see subclause 5.2.3.1.2.

If the IE “Multiple PLMN List” [4] is broadcast in the cell, the cell is considered to be part of all LAs with LAIs constructed from the PLMN identities in the “Multiple PLMN List” and the LAC broadcast in the cell.

…

suitable MBSFN cluster:

A cell is part of an MBSFN cluster if it is indicated in system information [4]. An MBSFN cluster provides exclusively MBMS services. A suitable MBSFN cluster shall fulfil all the following requirements:

- For FDD, 3.84 Mcps TDD IMB and 3.84/7.68 Mcps TDD the MBSFN cluster shall be part of either:
  - the registered PLMN, or:
  - a PLMN of the Equivalent PLMN list

The MBSFN cluster shall be indicated as:

- providing MBSFN only service

…

The UE shall search for MBSFN clusters if the frequencies on which MBSFN clusters are available are not indicated in the cell that the UE is camping on for normal service if the mobile is configured to receive services via MBSFN mode. Details of the process are not specified.

For 1.28 Mcps TDD, the UE that needs receive MBMS services delivered in an MBSFN cluster may at the first step select a non MBSFN cell (i.e. a unicast cell), that the MBSFN cluster is associated with. The UE can get synchronized to the MBSFN cluster with the help of the information indicated in system information broadcast by the associated unicast cell, and receive the system information and MCCH messages in the MBSFN Special Timeslot. The details of the association between MBSFN clusters and non MBSFN cells operating in a unicast carrier are not specified. In case there are more than one MBSFN clusters indicated in system information broadcast by a unicast cell, the process of which MBSFN cluster should be selected for searching is not specified.

…

When camped on a MBSFN cluster, the UE shall perform the following tasks:

- receive the MCCH as specified in clause 8.4 and in [4];

…

If the IE "MBSFN only service" is set to TRUE the UE shall:

1> consider this cell to operate in MBSFN mode;

1> for TDD consider that all slots operate in MBSFN mode;

1> for FDD, 3.84 Mcps TDD IMB and 3.84/7.68 Mcps TDD if the UE capabilities allow the reception of MBSFN in addition to the normal UE operation the UE may receive MBMS services from this cell in accordance with requirements for selection of a cell providing only MBSFN as specified in [4]. For 1.28 Mcps TDD, if the UE capabilities allow the reception of MBSFN in addition to the normal UE operation the UE may get synchronized to the MBSFN cluster as specified in [4].

…

A cell provides MBMS service in MBSFN mode if it is indicated so in system information, see subclause 8.1.1.6.3. A UE that supports MBSFN operation may receive MBMS services via a cell operating in MBSFN mode. For FDD, 3.84

Mcps TDD IMB and 3.84/7.68 Mcps TDD in order to receive an MBMS service via a MBSFN cluster the UE shall select the MBSFN cluster as specified in [4] in addition to selecting a cell for normal camping as specified in [4]. For 1.28 Mcps TDD in order to receive an MBMS service via an MBSFN cluster the UE shall at the first step camp on a unicast cell and get the frequency and "cell parameter ID" from the system information, and then get synchronized to the MBSFN cluster operating with that frequency and "cell parameter ID". For 3.84/7.68 Mcps TDD a cell shall be considered to be operating in MBSFN mode when individual scrambling codes are assigned to all timeslots (via the IE "TDD MBSFN Information").

…

For FDD and 3.84/7.68 Mcps TDD if the IE "MBSFN frequency list" is not included in system information block 11 and if services are listed in the variable MBMS_ACTIVATED_SERVICES a UE supporting reception of MBMS service in MBSFN mode shall search for cells providing MBMS service in MBSFN mode.

For 1.28 Mcps TDD the IE "Cell parameter ID" in the IE "MBSFN frequency list" included in system information block 11 indicates the cell which is providing MBMS service in MBSFN only mode on the corresponding frequency; if the IE "Cell parameter ID" is not included in the IE "MBSFN frequency list", a UE may consider that the corresponding frequency is the secondary frequency providing MBMS service in non-MBSFN only mode of current multi-frequency cell.

…

If the variable MBMS_ACTIVATED_services is not empty, the UE shall apply the MCCH acquisition procedure upon selecting (e.g. upon power on) or re- selecting a cell supporting MBMS or an MBSFN cluster, upon change of MBMS controlling cell (e.g. due to an active set update or hard handover), upon entering UTRA from another RAT, upon release of a MBMS PTP RB for the purpose of changing transfer mode, upon return from loss of coverage and upon receiving an indication from upper layers that the set of activated services has changed.

6.1.3.1.3 Test purpose

1. To verify that the UE initiates PLMN registration following selection of a cell that does not indicate MBSFN only mode.
2. To verify that the UE performs PLMN selection procedures without registration in an MBSFN only mode cluster.

6.1.3.1.4 Method of test

Initial condition

System Simulator:

MBSFN carrier: 1 cell, Cell 31 (PLMN1). In addition to broadcasting System Information, MCCH messages are transmitted by the SS using MBMS configuration C2 and Default1 MCCH scheduling (One ongoing session) according to subclause 11.1 or 11.2 of TS 34.108.

Unicast carrier: 1 cell, Cell 1 (PLMN1) with default configuration. The unicast carrier cell shall support FDD or TDD as appropriate to UE.

User Equipment:

The UE is switched off.

The UE is equipped with a Test-USIM containing default values. The HPLMN (MCC+MNC) of the IMSI for the USIM is set to PLMN1.

Related ICS/IXIT statements

- MBMS Broadcast services in MBSFN mode available on UE Yes/No.
- Support of transmit and receive functions available on UE Yes/No.
- Support of MBSFN receive only function available on UE Yes/No.

Test procedure

a) The UE is switched on.

b) The UE registers as specified in clause 7.2.2 of TS 34.108 on the unicast carrier Cell 1. For 3.84 Mcps TDD IMB, the UE registers on the FDD unicast carrier cell 1. On the unicast carrier Cell 1, a Location Update Accept message shall be sent on reception of a Location Updating Request message from the UE. The Location Updating Accept message shall include PLMN2 in the equivalent PLMN list. For a UE that supports both CS and PS domains or PS domain only, the Location Updating procedure could be replaced by the appropriate GMM registration procedure. In these cases, the GMM Attach Accept message shall include PLMN2 in the equivalent PLMN list.

c) The SS sends ACTIVATE RB TEST MODE on the unicast carrier and the UE responds with ACTIVATE RB TEST MODE COMPLETE. The SS then sends CLOSE UE TEST LOOP to activate RLC SDU counting on the MCCH of Cell 31.

d) The SS activates Cell 31.

e) One MBMS service from the list of services available on the Dedicated National Carrier (see TS 34.108 clause 11.2) is activated on the UE.

f) The SS transmits the SYSTEM INFORMATION BLOCK TYPE 5 message indicating the configuration of the S-CCPCH carrying MCCH within the IE " Secondary CCPCH system information MBMS". In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C2 (one PTM session ongoing) and Default1 MCCH scheduling according to clause 11.1 or 11.2 of TS 34.108. The service is carried on a 129.6kbps RB for MTCH with 80 ms TTI as specified in clause 6.10.3.4.4.6(FDD) or a 124.4 kbps RB for MTCH with 80 ms TTI as specified in clause 6.11.7.2.2.1 (3.84 Mcps TDD IMB) or a 124 kbps RB for MBSFN MTCH with 80ms TTI as specified in clause 6.10.3.4.4.9 (3.84 Mcps TDD) or clause 6.11.5.4.4.9 (1.28 Mcps TDD) or clause 6.11.6.4.4.9 (7.68 Mcps TDD).

g) The UE camps on Cell 31 on the MBSFN carrier. The UE shall perform the MCCH acquisition procedure. The UE shall start receiving the p-t-m radio bearer for the ongoing activated MBMS service indicated in the MBMS UNMODIFIED SERVICES INFORMATION message according to the configuration defined in the MBMS CURRENT CELL P-T-M INFORMATION (one ongoing session corresponding to the service activated at the UE). The UE closes the test loop and starts counting successfully received RLC PDUs on the MTCH. The UE will send CLOSE UE TEST LOOP COMPLETE.

Expected sequence

Step	Direction		Carrier	Message	Comments
	UE	SS			
1	UE		U		The UE is switched on and camps on unicast carrier Cell 1.
2	→		U	LOCATION UPDATING REQUEST	For UE that supports both CS and PS domain or PS domain only, the Location Updating procedure could be replaced by the appropriate GMM registration procedure
3	←		U	LOCATION UPDATING ACCEPT	
4	→		U	TMSI REALLOCATION COMPLETE	
5	←		U	ACTIVATE RB TEST MODE	
6	→		U	ACTIVATE RB TEST MODE COMPLETE	
7	←		U	CLOSE UE TEST LOOP	Loop back mode 3 is activated. Short Transmission Identity for the selected national service on Cell 31.
8	SS		M		Cell 31 is activated

Step	Direction		Carrier	Message	Comments
	UE	SS			
9	UE		M		MBMS National Service 1 is activated.
10	←		M	SYSTEM INFORMATION BLOCK TYPE 5	
11	←		M	MBMS MCCH Message Configuration C2	No modified services. One ongoing session. (Service activated at the UE). 129.6(FDD), 124.4 kbps (IMB) or 124(TDD) kbps PS RAB
12	UE		M		The UE shall continue acquiring the above MBMS messages until it has received a consistent set of MCCH information in the same modification period.
13	→		U	CLOSE UE TEST LOOP COMPLETE	The UE shall establish the indicated p-t-m radio bearer and close the test loop.
14	←		U	OPEN UE TEST LOOP	
15	→		U	OPEN UE TEST LOOP COMPLETE	
16	←		U	DEACTIVATE RB TEST MODE	
17	→		U	DEACTIVATE RB TEST MODE COMPLETE	

Specific message contents

With the following exceptions, all messages have the same content as defined in TS 34.108 clause 9.1.1 or 9.1.3 for the MBSFN carrier and in TS 34.108 clause 9.1.1 or clause 9.1.2 for the unicast carrier:

There are no exceptions for this test case.

6.1.3.1.5 Test requirements

1) The UE sends a LOCATION UPDATING REQUEST message on the unicast carrier at step 2.

2) The UE sends a CLOSE UE TEST LOOP COMPLETE message on the unicast carrier at step 13.

6.1.3.2 Suitable PLMN selection; MBSFN Frequency List present (unicast carrier)

6.1.3.2.1 Definition

Test to verify that the UE performs selection of a suitable MBSFN cluster which is part of the registered PLMN or which is in the stored list of Equivalent PLMN, when the MBSFN Frequency List is present in the SIB11of the unicast carrier on which the UE has registered.

6.1.3.2.2 Conformance requirement

suitable MBSFN cluster:

A cell is part of an MBSFN cluster if it is indicated in system information [4]. An MBSFN cluster provides exclusively MBMS services. A suitable MBSFN cluster shall fulfil all the following requirements:

- For FDD 3.84 Mcps TDD IMB and 3.84/7.68 Mcps TDD the MBSFN cluster shall be part of either:
  - the registered PLMN, or:
  - a PLMN of the Equivalent PLMN list

The MBSFN cluster shall be indicated as:

- providing MBSFN only service

For FDD and 3.84/7.68 Mcps TDD MBSFN cluster selection/reselection process for MBSFN clusters operating on the same frequency shall be based on reception quality. Details of the process are not specified.

…

When camped on a MBSFN cluster, the UE shall perform the following tasks:

- receive the MCCH as specified in clause 8.4 and in [4];

…

A cell provides MBMS service in MBSFN mode if it is indicated so in system information, see subclause 8.1.1.6.3. A UE that supports MBSFN operation may receive MBMS services via a cell operating in MBSFN mode. For FDD, 3.84 Mcps TDD IMB and 3.84/7.68 Mcps TDD in order to receive an MBMS service via a MBSFN cluster the UE shall select the MBSFN cluster as specified in [4] in addition to selecting a cell for normal camping as specified in [4]. For 1.28 Mcps TDD in order to receive an MBMS service via an MBSFN cluster the UE shall at the first step camp on a unicast cell and get the frequency and "cell parameter ID" from the system information, and then get synchronized to the MBSFN cluster operating with that frequency and "cell parameter ID". For 3.84/7.68 Mcps TDD a cell shall be considered to be operating in MBSFN mode when individual scrambling codes are assigned to all timeslots (via the IE "TDD MBSFN Information").

…

MBSFN frequency list

For FDD and 3.84/7.68 Mcps TDD this IE may be included in system information block 11 in a cell which is not providing MBMS service in MBSFN mode in order to provide information about frequencies providing MBMS service in MBSFN mode. For 1.28 Mcps TDD this IE shall be included in system information block 11 in a cell which is not providing MBMS service in MBSFN only mode but is associated with one or more cells in MBSFN only mode, in order to provide information about frequencies providing MBMS service in MBSFN only mode, and this IE also provides information about the secondary frequencies providing MBMS service in non-MBSFN only mode of current multi-frequency cell.

…

If the variable MBMS_ACTIVATED_services is not empty, the UE shall apply the MCCH acquisition procedure upon selecting (e.g. upon power on) or re- selecting a cell supporting MBMS or an MBSFN cluster, upon change of MBMS controlling cell (e.g. due to an active set update or hard handover), upon entering UTRA from another RAT, upon release of a MBMS PTP RB for the purpose of changing transfer mode, upon return from loss of coverage and upon receiving an indication from upper layers that the set of activated services has changed.

TS 25.304, 4.3, 6.3.1.2

TS 25.331, 8.5.43, 8.6.9.9ac, 8.7.2.2

6.1.3.2.3 Test purpose

1. To verify that when SIB11 of the unicast carrier that a UE is camped on contains IE MBSFN Frequency List, a UE supporting reception of MBMS service in MBSFN mode will select a suitable MBSFN cluster if services are listed in the variable MBMS_ACTIVATED_SERVICE.
2. To verify that the UE when selecting a suitable MBSFN cluster will select an available MBSFN cluster of the registered PLMN (unicast carrier).
3. To verify that the UE when selecting a suitable MBSFN cluster will select an available MBSFN cluster of a PLMN in the stored list of Equivalent PLMN.
4. To verify that the UE having selected a suitable MBSFN cluster will start to acquire the MCCH.

6.1.3.2.4 Method of test

Initial condition

System Simulator:

MBSFN carrier(s): 6 cells. Cell 31 (PLMN1), Cell 32 (PLMN2), Cell 33 (PLMN1), Cell 34 (PLMN2), Cell 35 (PLMN3) and Cell 37 (PLMN3) are all switched off.

Unicast carrier: 1 cell, Cell 1 (PLMN1) default configuration.

NOTE: The IE MBSFN frequency list is included in SIB11 of Cell 1.

User Equipment:

The UE is switched off.

The UE is equipped with a Test-USIM containing default values. The HPLMN (MCC+MNC) of the IMSI for the USIM is set to PLMN1.

Related ICS/IXIT statements

- MBMS Broadcast services in MBSFN mode available on UE Yes/No.
- Support of transmit and receive functions available on UE Yes/No.
- Support of MBSFN receive only function available on UE Yes/No.

Test procedure

The SS shall apply the downlink power settings as shown below:

Step 1-7:

Parameter	Unit	Cell 1	Cell 31	Cell 32	Cell 33	Cell 34	Cell 35	Cell 37
P-CCPCH RSCP (TDD)	dBm	-60	OFF	OFF	OFF	OFF	OFF	OFF
CPICH Ec (FDD)	dBm/3.84MHz	-60	OFF	OFF	OFF	OFF	OFF	OFF
P-CPICH Ec (IMB)	dBm/3.84MHz		OFF	OFF	OFF	OFF	OFF	OFF
T-CPICH (IMB)	dBm/3.84MHz		OFF	OFF	OFF	OFF	OFF	OFF

Step 8-19:

Parameter	Unit	Cell 1	Cell 31	Cell 32	Cell 33	Cell 34	Cell 35	Cell 37
P-CCPCH RSCP (TDD)	dBm	-60	OFF	-69	OFF	-69	-59	-59
CPICH Ec (FDD)	dBm/3.84MHz	-60	OFF	-69	OFF	-69	-59	-59
P-CPICH Ec (IMB)	dBm/3.84MHz		OFF	-69	OFF	-69	-59	-59
T-CPICH (IMB)	dBm/3.84MHz		OFF	-59.5	OFF	-59.5	-49.5	-49.5

Step 20-34:

Parameter	Unit	Cell 1	Cell 31	Cell 32	Cell 33	Cell 34	Cell 35	Cell 37
P-CCPCH RSCP (TDD)	dBm	-60	-69	OFF	-69	OFF	-59	-59
CPICH Ec (FDD)	dBm/3.84MHz	-60	-69	OFF	-69	OFF	-59	-59
P-CPICH Ec (IMB)	dBm/3.84MHz		-69	OFF	-69	OFF	-59	-59
T-CPICH (IMB)	dBm/3.84MHz		-59.5	OFF	-59.5	OFF	-49.5	-49.5

a) The UE is switched on.

b) The UE registers as specified in clause 7.2.2 of TS 34.108 on the unicast carrier Cell 1. For 3.84 Mcps TDD IMB, the UE registers on the FDD unicast carrier cell 1. On the unicast carrier Cell 1, a Location Update Accept message shall be sent on reception of a Location Updating Request message from the UE. The Location Updating Accept message shall include PLMN2 in the equivalent PLMN list. For a UE that supports both CS and PS domains or PS domain only, the Location Updating procedure could be replaced by the appropriate GMM registration procedure. In these cases, the GMM Attach Accept message shall include PLMN2 in the equivalent PLMN list.

c) The SS sends ACTIVATE RB TEST MODE on the unicast carrier and the UE responds with ACTIVATE RB TEST MODE COMPLETE. The SS then sends CLOSE UE TEST LOOP to activate RLC SDU counting on the MTCH (Transmission identity corresponding to the activated National Service 1).

d) The SS activates Cell 32, Cell 34, Cell 35 and Cell 37. The SS transmits the SYSTEM INFORMATION BLOCK TYPE 5 message indicating the configuration of the S-CCPCH carrying MCCH within the IE " Secondary CCPCH system information MBMS". In addition to broadcasting System Information, MCCH messages are transmitted by the SS on all these cells using MBMS configuration C2 (one PTM session ongoing) and Default1 MCCH scheduling according to clause 11.1 or 11.2 of TS 34.108. The service is carried on a

129.6kbps RB for MTCH with 80 ms TTI as specified in clause 6.10.3.4.4.6(FDD) or a 124 kbps RB for MBSFN MTCH with 80ms TTI as specified in clause 6.10.3.4.4.9 (3.84 Mcps TDD) or 124.4 kbps RB for MBSFN MTCH with 80ms TTI as specified in clause 6.11.7.2.2.1 (3.84 Mcps TDD IMB) or clause 6.11.5.4.4.9 (1.28 Mcps TDD) or clause 6.11.6.4.4.9 (7.68 Mcps TDD).

e) After the UE is switched on in step 1 the UE starts searching for an MBSFN cell. Cell search on the MBSFN carrier is independent and not time synchronised with the message sequence on the unicast carrier. One MBMS service (National Service 1) from the list of services available is activated at this stage to ensure MBSFN cell search continues.

f) The UE camps on Cell 32 or Cell 34, recognising PLMN2 as an Equivalent PLMN to the registered PLMN on the unicast carrier. The SS transmits the SYSTEM INFORMATION BLOCK TYPE 5 message indicating the configuration of the S-CCPCH carrying MCCH within the IE " Secondary CCPCH system information MBMS". In addition to broadcasting System Information, MCCH messages are transmitted by the SS using MBMS configuration C2 (one PTM session ongoing) and Default1 MCCH scheduling according to clause 11.1 or 11.2 of TS 34.108. The service is carried on a 129.6kbps RB for MTCH with 80 ms TTI as specified in clause 6.10.3.4.4.6(FDD) or a 124 kbps RB for MBSFN MTCH with 80ms TTI as specified in clause 6.10.3.4.4.9 (3.84 Mcps TDD) or 124.4 kbps RB for MBSFN MTCH with 80ms TTI as specified in clause 6.11.7.2.2.1 (3.84 Mcps TDD IMB) or clause 6.11.5.4.4.9 (1.28 Mcps TDD) or clause 6.11.6.4.4.9 (7.68 Mcps TDD).

g) The UE shall perform the MCCH acquisition procedure. The UE shall detect the available MBMS services by acquiring the MBMS MODIFIED SERVICES INFORMATION, the MBMS UNMODIFIED SERVICES INFORMATION, the MBMS GENERAL INFORMATION, the MBMS COMMON P-T-M RB INFORMATION and the MBMS CURRENT CELL P-T-M INFORMATION.

h) The UE shall continue acquiring the above MBMS messages until it has received a consistent set of MCCH information in the same modification period. The UE shall start receiving the p-t-m radio bearer for the ongoing activated MBMS service indicated in the MBMS UNMODIFIED SERVICES INFORMATION message according to the configuration defined in the MBMS CURRENT CELL P-T-M INFORMATION (one ongoing session corresponding to the service activated at the UE). The UE closes the test loop and starts counting successfully received RLC PDUs on the MTCH. The UE will send CLOSE UE TEST LOOP COMPLETE.

i) The SS broadcasts 10 RLC SDUs on the MTCH configured on the MBMS p-t-m radio bearer for the activated service on Cell 32. The SS then broadcasts 10 RLC SDUs on the MTCH configured on the MBMS p-t-m radio bearer for the activated service on Cell 34.

j) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST and waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is > 0.

k) The SS sends OPEN UE TEST LOOP. The UE responds with OPEN UE TEST LOOP COMPLETE.

l) The SS switches off Cell 32 and Cell 34. The SS activates Cell 31 and Cell 33.

m) The SS sends CLOSE UE TEST LOOP to activate RLC SDU counting on the MTCH (Transmission identity corresponding to the activated National Service 1).

n) The UE camps on Cell 31 or Cell 33. The UE shall perform the MCCH acquisition procedure. The UE shall start receiving the p-t-m radio bearer for the ongoing activated MBMS service indicated in the MBMS UNMODIFIED SERVICES INFORMATION message according to the configuration defined in the MBMS CURRENT CELL P-T-M INFORMATION (one ongoing session corresponding to the service activated at the UE). The UE closes the test loop and starts counting successfully received RLC PDUs on the MTCH. The UE will send CLOSE UE TEST LOOP COMPLETE.

o) The SS broadcasts 10 RLC SDUs on the MTCH configured on the MBMS p-t-m radio bearer for the activated service on Cell 31. The SS then broadcasts 10 RLC SDUs on the MTCH configured on the MBMS p-t-m radio bearer for the activated service on Cell 33.

p) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST and waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is > 0.

Expected sequence

Step	Direction		Carrier	Message	Comments
	UE	SS			
1	←		U	SYSTEM INFORMATION BLOCK TYPE 11	The UE is switched on and it camps on unicast carrier Cell 1. The IE MBSFN frequency list is present in SIB 11 on the BCCH.

6.1.3.2.5 Test requirements

1) After step 17, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number > 0.

2) After step 30, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number > 0.

6.1.3.3 Suitable PLMN search; MBSFN Frequency List not present (unicast carrier)

6.1.3.3.1 Definition

Test to verify that the UE performs a search and then selection of a suitable MBSFN cluster which is part of the registered PLMN or which is in the stored list of Equivalent PLMN, when the MBSFN Frequency List is not present in the SIB11of the unicast carrier on which the UE has registered.

6.1.3.3.2 Conformance requirement

suitable MBSFN cluster:

A cell is part of an MBSFN cluster if it is indicated in system information [4]. An MBSFN cluster provides exclusively MBMS services. A suitable MBSFN cluster shall fulfil all the following requirements:

- For FDD, 3.84 Mcps TDD IMB and 3.84/7.68 Mcps TDD the MBSFN cluster shall be part of either:

- the registered PLMN, or:
- a PLMN of the Equivalent PLMN list

The MBSFN cluster shall be indicated as:

- providing MBSFN only service

For FDD and 3.84/7.68 Mcps TDD MBSFN cluster selection/reselection process for MBSFN clusters operating on the same frequency shall be based on reception quality. Details of the process are not specified.

…

The UE shall search for MBSFN clusters if the frequencies on which MBSFN clusters are available are not indicated in the cell that the UE is camping on for normal service if the mobile is configured to receive services via MBSFN mode. Details of the process are not specified.

…

When camped on a MBSFN cluster, the UE shall perform the following tasks:

- receive the MCCH as specified in clause 8.4 and in [4];

…

A cell provides MBMS service in MBSFN mode if it is indicated so in system information, see subclause 8.1.1.6.3. A UE that supports MBSFN operation may receive MBMS services via a cell operating in MBSFN mode. For FDD, 3.84 Mcps TDD IMB and 3.84/7.68 Mcps TDD in order to receive an MBMS service via a MBSFN cluster the UE shall select the MBSFN cluster as specified in [4] in addition to selecting a cell for normal camping as specified in [4]. For 1.28 Mcps TDD in order to receive an MBMS service via an MBSFN cluster the UE shall at the first step camp on a unicast cell and get the frequency and "cell parameter ID" from the system information, and then get synchronized to the MBSFN cluster operating with that frequency and "cell parameter ID". For 3.84/7.68 Mcps TDD a cell shall be considered to be operating in MBSFN mode when individual scrambling codes are assigned to all timeslots (via the IE "TDD MBSFN Information").

…

For FDD and 3.84/7.68 Mcps TDD if the IE "MBSFN frequency list" is not included in system information block 11 and if services are listed in the variable MBMS_ACTIVATED_SERVICES a UE supporting reception of MBMS service in MBSFN mode shall search for cells providing MBMS service in MBSFN mode.

For 1.28 Mcps TDD the IE "Cell parameter ID" in the IE "MBSFN frequency list" included in system information block 11 indicates the cell which is providing MBMS service in MBSFN only mode on the corresponding frequency; if the IE "Cell parameter ID" is not included in the IE "MBSFN frequency list", a UE may consider that the corresponding frequency is the secondary frequency providing MBMS service in non-MBSFN only mode of current multi-frequency cell.

…

If the variable MBMS_ACTIVATED_services is not empty, the UE shall apply the MCCH acquisition procedure upon selecting (e.g. upon power on) or re- selecting a cell supporting MBMS or an MBSFN cluster, upon change of MBMS controlling cell (e.g. due to an active set update or hard handover), upon entering UTRA from another RAT, upon release of a MBMS PTP RB for the purpose of changing transfer mode, upon return from loss of coverage and upon receiving an indication from upper layers that the set of activated services has changed.

…

The Mobile Equipment shall store a list of "equivalent PLMNs". This list is replaced or deleted at the end of each location update procedure, routing area update procedure and GPRS attach procedure. The stored list consists of a list of equivalent PLMNs as downloaded by the network plus the PLMN code of the registeredPLMN that downloaded the list. The stored list shall not be deleted when the MS is switched off. The stored list shall be deleted if the SIM/USIM is removed. The maximum number of possible entries in the stored list is 16.

6.1.3.3.3 Test purpose

1. To verify that when SIB11 of the unicast carrier that a UE is camped on does not contain IE MBSFN Frequency List, a UE supporting reception of MBMS service in MBSFN mode will search for a suitable MBSFN cluster if services are listed in the variable MBMS_ACTIVATED_SERVICES.
2. To verify that the UE when selecting a MBSFN cluster will select a suitable MBSFN cluster of the registered PLMN (unicast carrier).
3. To verify that the UE when selecting a MBSFN cluster will select a suitable MBSFN cluster of a PLMN in the stored list of Equivalent PLMN.
4. To verify that the UE having selected a suitable MBSFN cluster will start to acquire the MCCH.

6.1.3.3.4 Method of test

Initial condition

System Simulator:

MBSFN carrier(s): 3 cells. Cell 31 (PLMN1), Cell 32 (PLMN2) and Cell 37 (PLMN3) are all switched off.

Unicast carrier: 1 cell, Cell 1 (PLMN1) default configuration.

NOTE: The IE MBSFN frequency list is not included in SIB11 of Cell 1.

User Equipment:

The UE is switched off.

The UE is equipped with a Test-USIM containing default values. The HPLMN (MCC+MNC) of the IMSI for the USIM is set to PLMN1.

Related ICS/IXIT statements

- MBMS Broadcast services in MBSFN mode available on UE Yes/No.
- Support of transmit and receive functions available on UE Yes/No.
- Support of MBSFN receive only function available on UE Yes/No.

Test procedure

The SS shall apply the downlink power settings as shown below:

Step 1-7:

Parameter	Unit	Cell 1	Cell 31	Cell 32	Cell 37
P-CCPCH RSCP (TDD)	dBm	-60	OFF	OFF	OFF
CPICH Ec (FDD)	dBm/3.84MHz	-60	OFF	OFF	OFF
P-CPICH (IMB)	dBm/3.84MHz		OFF	OFF	OFF
T-CPICH (IMB)	dBm/3.84MHz		OFF	OFF	OFF

Step 8-19:

Parameter	Unit	Cell 1	Cell 31	Cell 32	Cell 37
P-CCPCH RSCP (TDD)	dBm	-60	OFF	-69	-59
CPICH Ec (FDD)	dBm/3.84MHz	-60	OFF	-69	-59
P-CPICH (IMB)	dBm/3.84MHz		OFF	-69	-59
T-CPICH (IMB)	dBm/3.84MHz		OFF	-59.5	-49.5

Step 20-34:

Parameter	Unit	Cell 1	Cell 31	Cell 32	Cell 37
P-CCPCH RSCP (TDD)	dBm	-60	-69	OFF	-59
CPICH Ec (FDD)	dBm/3.84MHz	-60	-69	OFF	-59
P-CPICH (IMB)	dBm/3.84MHz		-69	OFF	-59
T-CPICH (IMB)	dBm/3.84MHz		-59.5	OFF	-49.5

a) The UE is switched on.

b) The UE registers as specified in clause 7.2.2 of TS 34.108 on the unicast carrier Cell 1. For 3.84 Mcps TDD IMB, the UE registers on the FDD unicast carrier cell 1. On the unicast carrier Cell 1, a Location Update Accept message shall be sent on reception of a Location Updating Request message from the UE. The Location Updating Accept message shall include PLMN2 in the equivalent PLMN list. For a UE that supports both CS and PS domains or PS domain only, the Location Updating procedure could be replaced by the appropriate GMM registration procedure. In these cases, the GMM Attach Accept message shall include PLMN2 in the equivalent PLMN list.

c) The SS sends ACTIVATE RB TEST MODE on the unicast carrier and the UE responds with ACTIVATE RB TEST MODE COMPLETE. The SS then sends CLOSE UE TEST LOOP to activate RLC SDU counting on the MTCH (Transmission identity corresponding to the activated National Service 1).

d) The SS activates Cell 32 and Cell 37. The SS transmits the SYSTEM INFORMATION BLOCK TYPE 5 message indicating the configuration of the S-CCPCH carrying MCCH within the IE " Secondary CCPCH system information MBMS". In addition to broadcasting System Information, MCCH messages are transmitted by the SS on all these cells using MBMS configuration C2 (one PTM session ongoing) and Default1 MCCH scheduling according to clause 11.1 or 11.2 of TS 34.108. The service is carried on a 129.6kbps RB for MTCH with 80 ms TTI as specified in clause 6.10.3.4.4.6(FDD) or a 124 kbps RB for MBSFN MTCH with 80ms TTI as specified in clause 6.10.3.4.4.9 (3.84 Mcps TDD) or 124.4 kbps RB for MBSFN MTCH with 80ms TTI as specified in clause 6.11.7.2.2.1 (3.84 Mcps TDD IMB) or clause 6.11.5.4.4.9 (1.28 Mcps TDD) or clause 6.11.6.4.4.9 (7.68 Mcps TDD).

e) After the UE is switched on in step 1 the UE starts searching for an MBSFN cell. Cell search on the MBSFN carrier is independent and not time synchronised with the message sequence on the unicast carrier. One MBMS service (National Service 1) from the list of services available is activated at this stage to ensure MBSFN cell search continues.

f) The UE camps on Cell 32, recognising PLMN2 as an Equivalent PLMN to the registered PLMN on the unicast carrier. The SS transmits the SYSTEM INFORMATION BLOCK TYPE 5 message indicating the configuration of the S-CCPCH carrying MCCH within the IE " Secondary CCPCH system information MBMS". In addition to broadcasting System Information, MCCH messages are transmitted by the SS using MBMS configuration C2 (one PTM session ongoing) and Default1 MCCH scheduling according to clause 11.1 or 11.2 of TS 34.108. The service is carried on a 129.6kbps RB for MTCH with 80 ms TTI as specified in clause 6.10.3.4.4.6(FDD) or a 124 kbps RB for MBSFN MTCH with 80ms TTI as specified in clause 6.10.3.4.4.9 (3.84 Mcps TDD) or 124.4 kbps RB for MBSFN MTCH with 80ms TTI as specified in clause 6.11.7.2.2.1 (3.84 Mcps TDD IMB) or clause 6.11.5.4.4.9 (1.28 Mcps TDD) or clause 6.11.6.4.4.9 (7.68 Mcps TDD).

g) The UE shall perform the MCCH acquisition procedure. The UE shall detect the available MBMS services by acquiring the MBMS MODIFIED SERVICES INFORMATION, the MBMS UNMODIFIED SERVICES INFORMATION, the MBMS GENERAL INFORMATION, the MBMS COMMON P-T-M RB INFORMATION and the MBMS CURRENT CELL P-T-M INFORMATION.

h) The UE shall continue acquiring the above MBMS messages until it has received a consistent set of MCCH information in the same modification period. The UE shall start receiving the p-t-m radio bearer for the ongoing activated MBMS service indicated in the MBMS UNMODIFIED SERVICES INFORMATION message according to the configuration defined in the MBMS CURRENT CELL P-T-M INFORMATION (one ongoing session corresponding to the service activated at the UE). The UE closes the test loop and starts counting successfully received RLC PDUs on the MTCH. The UE will send CLOSE UE TEST LOOP COMPLETE.

i) The SS broadcasts 10 RLC SDUs on the MTCH configured on the MBMS p-t-m radio bearer for the activated service on Cell 32.

j) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST and waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is > 0.

k) The SS sends OPEN UE TEST LOOP. The UE responds with OPEN UE TEST LOOP COMPLETE.

l) The SS switches off Cell 32. The SS activates Cell 31.

m) The SS sends CLOSE UE TEST LOOP to activate RLC SDU counting on the MTCH (Transmission identity corresponding to the activated National Service 1).

n) The UE camps on Cell 31. The UE shall perform the MCCH acquisition procedure. The UE shall start receiving the p-t-m radio bearer for the ongoing activated MBMS service indicated in the MBMS UNMODIFIED SERVICES INFORMATION message according to the configuration defined in the MBMS CURRENT CELL P-T-M INFORMATION (one ongoing session corresponding to the service activated at the UE). The UE closes the test loop and starts counting successfully received RLC PDUs on the MTCH. The UE will send CLOSE UE TEST LOOP COMPLETE.

o) The SS broadcasts 10 RLC SDUs on the MTCH configured on the MBMS p-t-m radio bearer for the activated service on Cell 31.

p) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST and waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is > 0.

Expected sequence

Step	Direction		Carrier	Message	Comments
	UE	SS			
1	←		U	SYSTEM INFORMATION BLOCK TYPE 11	The UE is switched on and it camps on unicast carrier Cell 1. The IE MBSFN frequency list is not present in SIB 11 on the BCCH.
2	→		U	LOCATION UPDATING REQUEST	For UE that supports both CS and PS domain or PS domain only, the Location Updating procedure could be replaced by the appropriate GMM registration procedure
3	←		U	LOCATION UPDATING ACCEPT	IE Equivalent PLMNs contains PLMN2. PLMN2 is maintained in Equivalent PLMN list of UE.
4	→		U	TMSI REALLOCATION COMPLETE

6.1.3.3.5 Test requirements

1) After step 16, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number > 0.

2) After step 28, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number > 0.

6.1.3.4 Cell reservations and access restrictions; Normal access class only

6.1.3.4.1 Definition

Test to verify that a UE, not assigned to any of the special access classes (Access Classes 11 to 15), performs selection of a suitable MBSFN cluster in accordance with the cell reservations and access restrictions signalled over the air interface.

6.1.3.4.2 Conformance requirement

For an MBSFN cluster (see [4]) when cell status is indicated "not reserved" for operator use and "not reserved" for future extension (Cell Reservation Extension),

- All UEs shall treat this MBSFN cluster as candidate during the MBSFN cluster selection and MBSFN cluster re-selection procedures.

For an MBSFN cluster (see [4]) when cell status is indicated as "not reserved" for operator use and "reserved" for future extension (Cell Reservation Extension),

- UEs shall not consider this MBSFN cluster as candidate during the MBSFN cluster selection and MBSFN cluster re-selection procedures. The UE may choose to not recheck the status of this MBSFN cluster during the time indicated by T_{barred}.

For an MBSFN cluster (see [4]) when cell status is indicated as "reserved" for operator use,

- UEs assigned to Access Class 11 or 15 shall treat this MBSFN cluster as candidate during the MBSFN cluster selection and MBSFN cluster re-selection procedures.

- UEs assigned to an Access Class in the range 0 to 9 and 12 to 14 shall not consider this MBSFN cluster as candidate during the MBSFN cluster selection and MBSFN cluster re-selection procedures The UE may choose to not recheck the status of this MBSFN cluster during the time indicated by T_{barred}.

…

The UE shall search for MBSFN clusters if the frequencies on which MBSFN clusters are available are not indicated in the cell that the UE is camping on for normal service if the mobile is configured to receive services via MBSFN mode. Details of the process are not specified.

…

When camped on a MBSFN cluster, the UE shall perform the following tasks:

- receive the MCCH as specified in clause 8.4 and in [4];

…

A cell provides MBMS service in MBSFN mode if it is indicated so in system information, see subclause 8.1.1.6.3. A UE that supports MBSFN operation may receive MBMS services via a cell operating in MBSFN mode. For FDD, 3.84 Mcps TDD IMB and 3.84/7.68 Mcps TDD in order to receive an MBMS service via a MBSFN cluster the UE shall select the MBSFN cluster as specified in [4] in addition to selecting a cell for normal camping as specified in [4]. For 1.28 Mcps TDD in order to receive an MBMS service via an MBSFN cluster the UE shall at the first step camp on a unicast cell and get the frequency and "cell parameter ID" from the system information, and then get synchronized to the MBSFN cluster operating with that frequency and "cell parameter ID". For 3.84/7.68 Mcps TDD a cell shall be considered to be operating in MBSFN mode when individual scrambling codes are assigned to all timeslots (via the IE "TDD MBSFN Information").

…

If the variable MBMS_ACTIVATED_services is not empty, the UE shall apply the MCCH acquisition procedure upon selecting (e.g. upon power on) or re- selecting a cell supporting MBMS or an MBSFN cluster, upon change of MBMS controlling cell (e.g. due to an active set update or hard handover), upon entering UTRA from another RAT, upon release of a MBMS PTP RB for the purpose of changing transfer mode, upon return from loss of coverage and upon receiving an indication from upper layers that the set of activated services has changed.

6.1.3.4.3 Test purpose

1. To verify that a UE not assigned to any of the special access classes (Access Classes 11 to 15), supporting reception of MBMS service in MBSFN mode, will search for a suitable MBSFN cluster if services are listed in the variable MBMS_ACTIVATED_SERVICES.

2. To verify that a UE not assigned to any of the special access classes (Access Classes 11 to 15), when selecting a suitable MBSFN cluster will not select an MBSFN cluster when the cell status is indicated as "not reserved" for operator use and is indicated as "reserved" for future extension.

3. To verify that a UE not assigned to any of the special access classes (Access Classes 11 to 15), when selecting a suitable MBSFN cluster will not select an MBSFN cluster when the cell status is indicated as "reserved" for operator use.

4. To verify that a UE not assigned to any of the special access classes (Access Classes 11 to 15), when selecting a suitable MBSFN cluster will select an MBSFN cluster when the cell status is indicated as "not reserved" for operator use and "not reserved" for future extension.

5. To verify that the UE having selected a suitable MBSFN cluster will start to acquire the MCCH.

6.1.3.4.4 Method of test

Initial condition

System Simulator:

MBSFN carrier: 3 cells, Cell 31 (PLMN1), Cell 32 (PLMN1) and Cell 37 (PLMN1) which are all switched off.

Unicast carrier: 1 cell, Cell 1 (PLMN1) default configuration.

User Equipment:

The UE is switched off.

The UE is equipped with a Test-USIM containing default values. The HPLMN (MCC+MNC) of the IMSI for the USIM is set to PLMN1.

Related ICS/IXIT statements

- MBMS Broadcast services in MBSFN mode available on UE Yes/No.

  Support of transmit and receive functions available on UE Yes/No.

- Support of MBSFN receive only function available on UE Yes/No.

Test procedure

The SS shall apply the downlink power settings as shown below:

Step 1-7:

Parameter	Unit	Cell 1	Cell 31	Cell 32	Cell 37
P-CCPCH RSCP (TDD)	dBm	-60	OFF	OFF	OFF
CPICH Ec (FDD)	dBm/3.84MHz	-60	OFF	OFF	OFF
P-CPICH (IMB)	dBm/3.84MHz		OFF	OFF	OFF
T-CPICH (IMB)	dBm/3.84MHz		OFF	OFF	OFF

Step 8-16:

Parameter	Unit	Cell 1	Cell 31	Cell 32	Cell 37
P-CCPCH RSCP (TDD)	dBm	-60	OFF	-59	-59
CPICH Ec (FDD)	dBm/3.84MHz	-60	OFF	-59	-59
P-CPICH (IMB)	dBm/3.84MHz		OFF	-59	-59
T-CPICH (IMB)	dBm/3.84MHz		OFF	-49.5	-49.5

Step 17-29:

Parameter	Unit	Cell 1	Cell 31	Cell 32	Cell 37
P-CCPCH RSCP (TDD)	dBm	-60	-69	-59	-59
CPICH Ec (FDD)	dBm/3.84MHz	-60	-69	-59	-59
P-CPICH (IMB)	dBm/3.84MHz		-69	-59	-59
T-CPICH (IMB)	dBm/3.84MHz		-59.5	-49.5	-49.5

a) The UE is switched on.

b) The UE registers as specified in clause 7.2.2 of TS 34.108 on the unicast carrier Cell 1. For 3.84 Mcps TDD IMB, the UE registers on the FDD unicast carrier cell 1. On the unicast carrier Cell 1, a Location Update Accept message shall be sent on reception of a Location Updating Request message from the UE. For a UE that supports both CS and PS domains or PS domain only, the Location Updating procedure could be replaced by the appropriate GMM registration procedure.

c) The SS sends ACTIVATE RB TEST MODE on the unicast carrier and the UE responds with ACTIVATE RB TEST MODE COMPLETE. The SS then sends CLOSE UE TEST LOOP to activate RLC SDU counting on the MTCH (Transmission identity corresponding to the activated National Service 1).

d) The SS activates Cell 32 and Cell 37. Cell 32 indicates 'reserved' for future extension in the Cell Access Restriction IE of SIB3. Cell 37 indicates 'reserved' for operator use in the Cell Access Restriction IE of SIB3. The SS transmits the SYSTEM INFORMATION BLOCK TYPE 5 message indicating the configuration of the S-CCPCH carrying MCCH within the IE " Secondary CCPCH system information MBMS". In addition to broadcasting System Information, MCCH messages are transmitted by the SS on these cells using MBMS configuration C2 (one PTM session ongoing) and Default1 MCCH scheduling according to clause 11.1 or 11.2 of TS 34.108. The service is carried on a 129.6kbps RB for MTCH with 80 ms TTI as specified in clause 6.10.3.4.4.6(FDD) or 124.4 kbps RB for MBSFN MTCH with 80ms TTI as specified in clause 6.11.7.2.2.1 (3.84 Mcps TDD IMB) or a 124 kbps RB for MBSFN MTCH with 80ms TTI as specified in clause 6.10.3.4.4.9 (3.84 Mcps TDD) or clause 6.11.5.4.4.9 (1.28 Mcps TDD) or clause 6.11.6.4.4.9 (7.68 Mcps TDD).

e) After the UE is switched on in step 1 the UE starts searching for an MBSFN cell. Cell search on the MBSFN carrier is independent and not time synchronised with the message sequence on the unicast carrier. One MBMS service (National Service 1) from the list of services available is activated at this stage to ensure MBSFN cell search continues. The UE performs cluster selection but is unable to find a suitable MBSFN cluster.

f) SS delays for a period of time greater than or equal to 10 times the T_{barred} setting used in the Cell Access Restriction IE on Cells 32 and 37 (say 120 seconds). Note: If the UE sends CLOSE UE TEST LOOP COMPLETE at this stage then a test failure is recorded.

g) The SS sends OPEN UE TEST LOOP. The UE responds with OPEN UE TEST LOOP COMPLETE.

h) MBMS National Service 1 is de-activated at the UE.

i) The SS sends CLOSE UE TEST LOOP to activate RLC SDU counting on the MTCH (Transmission identity corresponding to National Service 2).

j) The SS activates Cell 31.

k) MBMS service (National Service 2) from the list of services available is activated to ensure MBSFN cell search continues.

l) The UE camps on Cell 31. The UE shall perform the MCCH acquisition procedure. The UE shall start receiving the p-t-m radio bearer for the ongoing activated MBMS service indicated in the MBMS UNMODIFIED SERVICES INFORMATION message according to the configuration defined in the MBMS CURRENT CELL P-T-M INFORMATION (one ongoing session corresponding to the service activated at the UE). The UE closes the test loop and starts counting successfully received RLC PDUs on the MTCH. The UE will send CLOSE UE TEST LOOP COMPLETE.

m) The SS broadcasts 10 RLC SDUs on the MTCH configured on the MBMS p-t-m radio bearer for National Service 2 on Cell 31.

n) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST and waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter

returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is > 0.

6.1.3.4.5 Test requirements

1) At step 13, CLOSE UE TEST LOOP COMPLETE shall not be received from the UE.

2) After step 25, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number > 0.

6.1.3.5 Cell reservations and access restrictions; Operator access class

6.1.3.5.1 Definition

Test to verify that a UE, assigned to one of the Access Classes 11 or 15, performs selection of a suitable MBSFN cluster in accordance with the cell reservations and access restrictions signalled over the air interface.

6.1.3.5.2 Conformance requirement

For an MBSFN cluster (see [4]) when cell status is indicated "not reserved" for operator use and "not reserved" for future extension (Cell Reservation Extension),

- All UEs shall treat this MBSFN cluster as candidate during the MBSFN cluster selection and MBSFN cluster re-selection procedures.

For an MBSFN cluster (see [4]) when cell status is indicated as "not reserved" for operator use and "reserved" for future extension (Cell Reservation Extension),

- UEs shall not consider this MBSFN cluster as candidate during the MBSFN cluster selection and MBSFN cluster re-selection procedures. The UE may choose to not recheck the status of this MBSFN cluster during the time indicated by T_{barred}.

For an MBSFN cluster (see [4]) when cell status is indicated as "reserved" for operator use,

- UEs assigned to Access Class 11 or 15 shall treat this MBSFN cluster as candidate during the MBSFN cluster selection and MBSFN cluster re-selection procedures.

- UEs assigned to an Access Class in the range 0 to 9 and 12 to 14 shall not consider this MBSFN cluster as candidate during the MBSFN cluster selection and MBSFN cluster re-selection procedures The UE may choose to not recheck the status of this MBSFN cluster during the time indicated by T_{barred}.

…

The UE shall search for MBSFN clusters if the frequencies on which MBSFN clusters are available are not indicated in the cell that the UE is camping on for normal service if the mobile is configured to receive services via MBSFN mode. Details of the process are not specified.

…

When camped on a MBSFN cluster, the UE shall perform the following tasks:

- receive the MCCH as specified in clause 8.4 and in [4];

…

A cell provides MBMS service in MBSFN mode if it is indicated so in system information, see subclause 8.1.1.6.3. A UE that supports MBSFN operation may receive MBMS services via a cell operating in MBSFN mode. For FDD, 3.84 Mcps TDD IMB and 3.84/7.68 Mcps TDD in order to receive an MBMS service via a MBSFN cluster the UE shall select the MBSFN cluster as specified in [4] in addition to selecting a cell for normal camping as specified in [4]. For 1.28 Mcps TDD in order to receive an MBMS service via an MBSFN cluster the UE shall at the first step camp on a unicast cell and get the frequency and "cell parameter ID" from the system information, and then get synchronized to the MBSFN cluster operating with that frequency and "cell parameter ID". For 3.84/7.68 Mcps TDD a cell shall be considered to be operating in MBSFN mode when individual scrambling codes are assigned to all timeslots (via the IE "TDD MBSFN Information").

…

If the variable MBMS_ACTIVATED_services is not empty, the UE shall apply the MCCH acquisition procedure upon selecting (e.g. upon power on) or re- selecting a cell supporting MBMS or an MBSFN cluster, upon change of MBMS controlling cell (e.g. due to an active set update or hard handover), upon entering UTRA from another RAT, upon release of a MBMS PTP RB for the purpose of changing transfer mode, upon return from loss of coverage and upon receiving an indication from upper layers that the set of activated services has changed.

References

TS 25.331, 8.5.43, 8.7.2.2

6.1.3.5.3 Test purpose

1. To verify that a UE assigned to one of the Access Classes 11 or 15 (in addition to one of the Access Classes 0 to 9), supporting reception of MBMS service in MBSFN mode, will search for a suitable MBSFN cluster if services are listed in the variable MBMS_ACTIVATED_SERVICES.

2. To verify that a UE assigned to one of the Access Classes 11 or 15 (in addition to one of the Access Classes 0 to 9), when selecting a suitable MBSFN cluster will not select an MBSFN cluster when the cell status is indicated as "not reserved" for operator use and is indicated as "reserved" for future extension.

3. To verify that a UE assigned to one of the Access Classes 11 or 15 (in addition to one of the Access Classes 0 to 9), when selecting a suitable MBSFN cluster will select an MBSFN cluster when the cell status is indicated as "reserved" for operator use and is indicated as "not reserved" for future extension.

4. To verify that a UE assigned to one of the Access Classes 11 or 15 (in addition to one of the Access Classes 0 to 9), when selecting a suitable MBSFN cluster will select an MBSFN cluster when the cell status is indicated as "not reserved" for operator use and "not reserved" for future extension.

5. To verify that the UE having selected a suitable MBSFN cluster will start to acquire the MCCH.

6.1.3.5.4 Method of test

Initial condition

System Simulator:

MBSFN carrier: 3 cells, Cell 31 (PLMN1), Cell 32 (PLMN1) and Cell 37 (PLMN1) all are switched off.

Unicast carrier: 1 cell, Cell 1 (PLMN1) default configuration.

User Equipment:

The UE is switched off.

The UE is equipped with a Test-USIM containing default values with the exception that the field EF_{ACC} (Access Control Class) of the Test-USIM shall be set as per "Type C" in clause 8.3.2.15.

The HPLMN (MCC+MNC) of the IMSI for the USIM is set to PLMN1.

Related ICS/IXIT statements

- MBMS Broadcast services in MBSFN mode available on UE Yes/No.
- Support of transmit and receive functions available on UE Yes/No.
- Support of MBSFN receive only function available on UE Yes/No.

Test procedure

The SS shall apply the downlink power settings as shown below:

Step 1-7:

Parameter	Unit	Cell 1	Cell 31	Cell 32	Cell 37
P-CCPCH RSCP (TDD)	dBm	-60	OFF	OFF	OFF
CPICH Ec (FDD)	dBm/3.84MHz	-60	OFF	OFF	OFF
P-CPICH (IMB)	dBm/3.84MHz		OFF	OFF	OFF
T-CPICH (IMB)	dBm/3.84MHz		OFF	OFF	OFF

Step 8-16:

Parameter	Unit	Cell 1	Cell 31	Cell 32	Cell 37
P-CCPCH RSCP (TDD)	dBm	-60	OFF	-59	OFF
CPICH Ec (FDD)	dBm/3.84MHz	-60	OFF	-59	OFF
P-CPICH (IMB)	dBm/3.84MHz		OFF	- 59	OFF
T-CPICH (IMB)	dBm/3.84MHz		OFF	-49.5	OFF

Step 17-30:

Parameter	Unit	Cell 1	Cell 31	Cell 32	Cell 37
P-CCPCH RSCP (TDD)	dBm	-60	OFF	-59	-69
CPICH Ec (FDD)	dBm/3.84MHz	-60	OFF	-59	-69
P-CPICH (IMB)	dBm/3.84MHz		OFF	-59	-69
T-CPICH (IMB)	dBm/3.84MHz		OFF	-49.5	-59.5

Step 31-43:

Parameter	Unit	Cell 1	Cell 31	Cell 32	Cell 37
P-CCPCH RSCP (TDD)	dBm	-60	-69	-59	OFF
CPICH Ec (FDD)	dBm/3.84MHz	-60	-69	-59	OFF
P-CPICH (IMB)	dBm/3.84MHz		-69	-59	OFF
T-CPICH (IMB)	dBm/3.84MHz		-59.5	-49.5	OFF

a) The UE is switched on.

b) The UE registers as specified in clause 7.2.2 of TS 34.108 on the unicast carrier Cell 1. For 3.84 Mcps TDD IMB, the UE registers on the FDD unicast carrier cell 1. On the unicast carrier Cell 1, a Location Update Accept message shall be sent on reception of a Location Updating Request message from the UE. For a UE that supports both CS and PS domains or PS domain only, the Location Updating procedure could be replaced by the appropriate GMM registration procedure.

c) The SS sends ACTIVATE RB TEST MODE on the unicast carrier and the UE responds with ACTIVATE RB TEST MODE COMPLETE. The SS then sends CLOSE UE TEST LOOP to activate RLC SDU counting on the MTCH (Transmission identity corresponding to the activated National Service 1).

d) The SS activates Cell 32. Cell 32 indicates 'reserved' for future extension in the Cell Access Restriction IE of SIB3. The SS transmits the SYSTEM INFORMATION BLOCK TYPE 5 message indicating the configuration of the S-CCPCH carrying MCCH within the IE " Secondary CCPCH system information MBMS". In addition to broadcasting System Information, MCCH messages are transmitted by the SS on these cells using MBMS configuration C2 (one PTM session ongoing) and Default1 MCCH scheduling according to clause 11.1 or 11.2 of TS 34.108. The service is carried on a 129.6kbps RB for MTCH with 80 ms TTI as specified in clause 6.10.3.4.4.6(FDD) or a 124 kbps RB for MBSFN MTCH with 80ms TTI as specified in clause 6.10.3.4.4.9 (3.84 Mcps TDD)or 124.4 kbps RB for MBSFN MTCH with 80ms TTI as specified in clause 6.11.7.2.2.1 (3.84 Mcps TDD IMB) or clause 6.11.5.4.4.9 (1.28 Mcps TDD) or clause 6.11.6.4.4.9 (7.68 Mcps TDD).

e) After the UE is switched on in step 1 the UE starts searching for an MBSFN cell. Cell search on the MBSFN carrier is independent and not time synchronised with the message sequence on the unicast carrier. One MBMS service (National Service 1) from the list of services available is activated at this stage to ensure MBSFN cell search continues. The UE performs cluster selection but is unable to find a suitable MBSFN cluster.

f) SS delays for a period of time greater than or equal to 10 times the T_{barred} setting used in the Cell Access Restriction IE on Cells 32 (say 120 seconds). Note: If the UE sends CLOSE UE TEST LOOP COMPLETE at this stage then a test failure is recorded.

g) The SS sends OPEN UE TEST LOOP. The UE responds with OPEN UE TEST LOOP COMPLETE.

h) MBMS National Service 1 is de-activated at the UE.

i) The SS sends CLOSE UE TEST LOOP to activate RLC SDU counting on the MTCH (Transmission identity corresponding to National Service 2).

j) The SS activates Cell 37 as well as Cell 32. Cell 37 indicates 'reserved' for operator use in the Cell Access Restriction IE of SIB3. The SS transmits the SYSTEM INFORMATION BLOCK TYPE 5 message indicating the configuration of the S-CCPCH carrying MCCH within the IE " Secondary CCPCH system information MBMS". In addition to broadcasting System Information, MCCH messages are transmitted by the SS on these cells using MBMS configuration C2 (one PTM session ongoing) and Default1 MCCH scheduling according to clause 11.1 or 11.2 of TS 34.108. The service is carried on a 129.6kbps RB for MTCH with 80 ms TTI as specified in clause 6.10.3.4.4.6(FDD) or a 124 kbps RB for MBSFN MTCH with 80ms TTI as specified in clause 6.10.3.4.4.9 (3.84 Mcps TDD) or 124.4 kbps RB for MBSFN MTCH with 80ms TTI as specified in

clause 6.11.7.2.2.1 (3.84 Mcps TDD IMB) or clause 6.11.5.4.4.9 (1.28 Mcps TDD) or clause 6.11.6.4.4.9 (7.68 Mcps TDD).

k) MBMS service (National Service 2) from the list of services available is activated to ensure MBSFN cell search continues.

l) The UE camps on Cell 37. The UE shall perform the MCCH acquisition procedure. The UE shall start receiving the p-t-m radio bearer for the ongoing activated MBMS service indicated in the MBMS UNMODIFIED SERVICES INFORMATION message according to the configuration defined in the MBMS CURRENT CELL P-T-M INFORMATION (one ongoing session corresponding to the service activated at the UE). The UE closes the test loop and starts counting successfully received RLC PDUs on the MTCH. The UE will send CLOSE UE TEST LOOP COMPLETE.

m) The SS broadcasts 10 RLC SDUs on the MTCH configured on the MBMS p-t-m radio bearer for National Service 2 on Cell 37.

n) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST and waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is > 0.

o) The SS sends OPEN UE TEST LOOP. The UE responds with OPEN UE TEST LOOP COMPLETE.

p) MBMS National Service 2 is de-activated at the UE.

q) The SS sends CLOSE UE TEST LOOP to activate RLC SDU counting on the MTCH (Transmission identity corresponding to National Service 3).

r) The SS switches off Cell 37. The SS activates Cell 31 as well as Cell 32. The SS transmits the SYSTEM INFORMATION BLOCK TYPE 5 message indicating the configuration of the S-CCPCH carrying MCCH within the IE " Secondary CCPCH system information MBMS". In addition to broadcasting System Information, MCCH messages are transmitted by the SS on these cells using MBMS configuration C2 (one PTM session ongoing) and Default1 MCCH scheduling according to clause 11.1 or 11.2 of TS 34.108. The service is carried on a 129.6kbps RB for MTCH with 80 ms TTI as specified in clause 6.10.3.4.4.6(FDD) or a 124 kbps RB for MBSFN MTCH with 80ms TTI as specified in clause 6.10.3.4.4.9 (3.84 Mcps TDD) or 124.4 kbps RB for MBSFN MTCH with 80ms TTI as specified in clause 6.11.7.2.2.1 (3.84 Mcps TDD IMB) or clause 6.11.5.4.4.9 (1.28 Mcps TDD) or clause 6.11.6.4.4.9 (7.68 Mcps TDD).

s) MBMS service (National Service 3) from the list of services available is activated to ensure MBSFN cell search continues.

t) The UE camps on Cell 31. The UE shall perform the MCCH acquisition procedure. The UE shall start receiving the p-t-m radio bearer for the ongoing activated MBMS service indicated in the MBMS UNMODIFIED SERVICES INFORMATION message according to the configuration defined in the MBMS CURRENT CELL P-T-M INFORMATION (one ongoing session corresponding to the service activated at the UE). The UE closes the test loop and starts counting successfully received RLC PDUs on the MTCH. The UE will send CLOSE UE TEST LOOP COMPLETE.

u) The SS broadcasts 10 RLC SDUs on the MTCH configured on the MBMS p-t-m radio bearer for National Service 2 on Cell 31.

v) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST and waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is > 0.

Expected sequence

Step	Direction		Carrier	Message	Comments
	UE	SS			
1	←		U	SYSTEM INFORMATION BLOCK TYPE 11	The UE is switched on and it camps on unicast carrier Cell 1.

Step	Direction		Carrier	Message	Comments
	UE	SS			
2	→		U	LOCATION UPDATING REQUEST	For UE that supports both CS and PS domain or PS domain only, the Location Updating procedure could be replaced by the appropriate GMM registration procedure
3	←		U	LOCATION UPDATING ACCEPT	
4	→		U	TMSI REALLOCATION COMPLETE	
5	←		U	ACTIVATE RB TEST MODE	
6	→		U	ACTIVATE RB TEST MODE COMPLETE	
7	←		U	CLOSE UE TEST LOOP	Loop back mode 3 is activated. Short Transmission Identity for National Service 1
8	SS		M		Cells 32 is switched ON
9	←		M	SYSTEM INFORMATION BLOCK TYPE 3	On Cell 32 the SIB3 contains the IE Cell Reservation Extension set to 'reserved'.
10	←		M	MBMS MCCH Message Configuration C2	Cell 32: No modified services. Three ongoing services (National Services 1, 2 and 3). 129.6(FDD) or 124(TDD) kbps PS RAB, 124.4 kbps (IMB)
11	UE		M		MBMS National Service 1 is activated. UE performs cell search but is unable to find a suitable MBSFN cluster.
12	SS		M		SS delays for >= 10*T_{barred} (e.g. 120s). Note: If CLOSE UE TEST LOOP COMPLETE is received a test failure is recorded.
13	←		U	OPEN UE TEST LOOP	
14	→		U	OPEN UE TEST LOOP COMPLETE	
15	UE		M		MBMS National Service 1 is de-activated.
16	←		U	CLOSE UE TEST LOOP	Loop back mode 3 is activated. Short Transmission Identity for National Service 2 is included.
17	SS		M		Cell 37 is switched ON.
18	SS		M		MBMS National Service 2 is activated.
19	UE		M		UE performs cell search and selects Cell 37.
20	←		M	SYSTEM INFORMATION BLOCK TYPE 3	On Cell 37 the SIB3 contains the IE Cell Reserved for operator use set to 'reserved'.
21	←		M	MBMS MCCH Message Configuration C2	Cell 32 and Cell 37: No modified services. Three ongoing services (National Services 1, 2 and 3). 129.6(FDD) or 124(TDD) kbps PS RAB, 124.4 kbps (IMB)
22	UE		M		The UE shall continue acquiring the above MBMS messages until it has received a consistent set of MCCH information in the same modification period.
23	→		U	CLOSE UE TEST LOOP COMPLETE	The UE shall establish the indicated p-t-m radio bearer and close the test loop.
24	SS		M		The SS transmits 10 RLC SDUs on the MTCH of Cell 37 for National Service 2.
25	←		U	UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST	
26	→		U	UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE	The SS checks that the number of reported RLC SDUs received on the MTCH is greater than zero.
27	←		U	OPEN UE TEST LOOP	
28	→		U	OPEN UE TEST LOOP COMPLETE	
29	UE		M		MBMS National Service 2 is de-activated.
30	←		U	CLOSE UE TEST LOOP	Loop back mode 3 is activated. Short Transmission Identity for National Service 3 is included.
31	SS		M		Cell 37 is switched OFF. Cell 31 is switched ON.

Step	Direction		Carrier	Message	Comments
	UE	SS			
32	SS		M		MBMS National Service 3 is activated.
33	UE		M		UE performs cell search and selects Cell 31.
34	←		M	MBMS MCCH Message Configuration C2	Cell 31 and Cell 32: No modified services. Three ongoing services (National Services 1, 2 and 3). 129.6(FDD) or 124(TDD) kbps PS RAB, 124.4 kbps (IMB)
35	UE		M		The UE shall continue acquiring the above MBMS messages until it has received a consistent set of MCCH information in the same modification period.
36	→		U	CLOSE UE TEST LOOP COMPLETE	The UE shall establish the indicated p-t-m radio bearer and close the test loop.
37	SS		M		The SS transmits 10 RLC SDUs on the MTCH of Cell 31 for National Service 3.
38	←		U	UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST	
39	→		U	UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE	The SS checks that the number of reported RLC SDUs received on the MTCH is greater than zero.

6.1.3.5.5 Test requirements

1) At step 12, CLOSE UE TEST LOOP COMPLETE shall not be received from the UE.

2) After step 26, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number > 0.

3) After step 39, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number > 0.

6.1.3.6 Cell reservations and access restrictions; Home country services access class

6.1.3.6.1 Definition

Test to verify that a UE, assigned to one of the Access Classes 12, 13 or 14, performs selection of a suitable MBSFN cluster in accordance with the cell reservations and access restrictions signalled over the air interface.

6.1.3.6.2 Conformance requirement

For an MBSFN cluster (see [4]) when cell status is indicated "not reserved" for operator use and "not reserved" for future extension (Cell Reservation Extension),

- All UEs shall treat this MBSFN cluster as candidate during the MBSFN cluster selection and MBSFN cluster re-selection procedures.

For an MBSFN cluster (see [4]) when cell status is indicated as "not reserved" for operator use and "reserved" for future extension (Cell Reservation Extension),

- UEs shall not consider this MBSFN cluster as candidate during the MBSFN cluster selection and MBSFN cluster re-selection procedures. The UE may choose to not recheck the status of this MBSFN cluster during the time indicated by T_{barred}.

For an MBSFN cluster (see [4]) when cell status is indicated as "reserved" for operator use,

- UEs assigned to Access Class 11 or 15 shall treat this MBSFN cluster as candidate during the MBSFN cluster selection and MBSFN cluster re-selection procedures.

- UEs assigned to an Access Class in the range 0 to 9 and 12 to 14 shall not consider this MBSFN cluster as candidate during the MBSFN cluster selection and MBSFN cluster re-selection procedures The UE may choose to not recheck the status of this MBSFN cluster during the time indicated by T_{barred}.

…

The UE shall search for MBSFN clusters if the frequencies on which MBSFN clusters are available are not indicated in the cell that the UE is camping on for normal service if the mobile is configured to receive services via MBSFN mode. Details of the process are not specified.

…

When camped on a MBSFN cluster, the UE shall perform the following tasks:

- receive the MCCH as specified in clause 8.4 and in [4];

…

A cell provides MBMS service in MBSFN mode if it is indicated so in system information, see subclause 8.1.1.6.3. A UE that supports MBSFN operation may receive MBMS services via a cell operating in MBSFN mode. For FDD, 3.84 Mcps TDD IMB and 3.84/7.68 Mcps TDD in order to receive an MBMS service via a MBSFN cluster the UE shall select the MBSFN cluster as specified in [4] in addition to selecting a cell for normal camping as specified in [4]. For 1.28 Mcps TDD in order to receive an MBMS service via an MBSFN cluster the UE shall at the first step camp on a unicast cell and get the frequency and "cell parameter ID" from the system information, and then get synchronized to the MBSFN cluster operating with that frequency and "cell parameter ID". For 3.84/7.68 Mcps TDD a cell shall be considered to be operating in MBSFN mode when individual scrambling codes are assigned to all timeslots (via the IE "TDD MBSFN Information").

…

If the variable MBMS_ACTIVATED_services is not empty, the UE shall apply the MCCH acquisition procedure upon selecting (e.g. upon power on) or re- selecting a cell supporting MBMS or an MBSFN cluster, upon change of MBMS controlling cell (e.g. due to an active set update or hard handover), upon entering UTRA from another RAT, upon release of a MBMS PTP RB for the purpose of changing transfer mode, upon return from loss of coverage and upon receiving an indication from upper layers that the set of activated services has changed.

TS 25.331, 8.5.43, 8.7.2.2

6.1.3.6.3 Test purpose

1. To verify that a UE, assigned to just one of the Access Classes 12, 13 or 14 (in addition to one of the Access Classes 0 to 9), supporting reception of MBMS service in MBSFN mode, will search for a suitable MBSFN cluster if services are listed in the variable MBMS_ACTIVATED_SERVICES.

2. To verify that a UE, assigned to just one of the Access Classes 12, 13 or 14 (in addition to one of the Access Classes 0 to 9), when selecting a suitable MBSFN cluster will not select an MBSFN cluster when the cell status is indicated as "not reserved" for operator use and is indicated as "reserved" for future extension.

3. To verify that a UE, assigned to just one of the Access Classes 12, 13 or 14 (in addition to one of the Access Classes 0 to 9), when selecting a suitable MBSFN cluster will not select an MBSFN cluster when the cell status is indicated as "reserved" for operator use.

4. To verify that a UE, assigned to just one of the Access Classes 12, 13 or 14 (in addition to one of the Access Classes 0 to 9), when selecting a suitable MBSFN cluster will select an MBSFN cluster when the cell status is indicated as "not reserved" for operator use and "not reserved" for future extension.

5. To verify that the UE having selected a suitable MBSFN cluster will start to acquire the MCCH.

6.1.3.6.4 Method of test

Refer to the "Method of test" in clause 6.1.3.4.4 with the following exception:

The UE is equipped with a Test-USIM containing default values with the exception that the field EF_{ACC} (Access Control Class) of the Test-USIM shall be set as per "Type D" in clause 8.3.2.15.

6.1.3.6.5 Test requirements

Refer to the "Test requirements" in clause 6.1.3.4.5.

6.1.3.7 Inter frequency neighbour reselection / Service activation

6.1.3.7.1 Definition

This test is applicable for UEs that support MBMS broadcast services in MBSFN mode and which support either both TDD transmit and receive functions or TDD MBSFN receive only function or 3.84 Mcps TDD IMB function.

6.1.3.7.2 Conformance requirement

Upon detection of one MBSFN cluster all other frequencies on which MBMS service is provided in MBSFN mode for one of the PLMN assigned to the MBSFN cluster are indicate as specified in [4].

The UE chooses the frequency for the MBSFN cluster to be received based on the information on the services that are provided on the MBSFN clusters of those frequencies.

…

If the variable MBMS_ACTIVATED_SERVICES is not empty, the UE shall apply the MCCH acquisition procedure upon selecting (e.g. upon power on) or re- selecting a cell supporting MBMS or an MBSFN cluster, upon change of MBMS controlling cell (e.g. due to an active set update or hard handover), upon entering UTRA from another RAT, upon release of a MBMS PTP RB for the purpose of changing transfer mode, upon return from loss of coverage and upon receiving an indication from upper layers that the set of activated services has changed.

…

The UE shall detect the available MBMS services by acquiring the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3.

...

For cells operating in MBSFN mode as indicated in subclause 8.1.1.6.3 the UE shall immediately acquire the MBMS GENERAL INFORMATION messages i.e. it shall not delay reception of these messages until it has completed the acquisition of the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages. Likewise for cells operating in MBSFN mode as indicated in subclause 8.1.1.6.3, the UE should immediately acquire the MBMS CURRENT CELL P-T-M RB INFORMATION.

The UE shall continue acquiring the above messages until it has received a consistent set of MCCH information e.g. both the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION message should be acquired in the same modification period.

…

If the UE selects to another cell, the UE shall re-establish the RLC entity used for MCCH reception.

…

If the IE "MBMS required UE action" is included and concerns an MBMS activated service the UE shall:

…

1> if the IE "MBMS required UE action" is set to 'Acquire PTM RB info'; or

1> if the IE "MBMS required UE action" is set to 'Acquire counting info– PTM RBs unmodified' and the UE is not receiving a p-t-m RB for the concerned service:

2> continue acquiring the MBMS COMMON P-T-M RB INFORMATION, MBMS CURRENT CELL P-T-M RB INFORMATION and the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION messages without delaying reading of MCCH until the next modification period and without stopping at the end of the modification period, in accordance with subclause 8.7.1.3

2> act upon the MBMS COMMON P-T-M RB INFORMATION, MBMS CURRENT CELL P-T-M RB INFORMATION and the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION message, if received, in accordance with subclause 8.7.5;

…

Upon completing the reception of the MBMS COMMON P-T-M RB INFORMATION and the MBMS CURRENT CELL P-T-M RB INFORMATION messages for an activated MBMS service, the UE shall:

1> if the UE is already receiving an MTCH and does not have the capability to receive the new service in addition:

2> the UE behaviour is undefined.

NOTE: In this case, the UE may request upper layers to prioritise the services and only receive the service(s) prioritised by upper layers.

1> act upon all received information elements as specified in subclause 8.6, unless specified otherwise in the following;

1> if the UE previously received the service by means of a p-t-m radio bearer from a cell belonging to another MBMS cell group:

2> re-establish RLC;

2> re-initialise PDCP.

1> start immediately to use the indicated configuration unless specified otherwise;

1> start or continue receiving the indicated p-t-m radio bearers depending on its UE capabilities.

The UE shall continue acquiring the above messages until it has received a consistent set of MCCH information i.e. the MBMS MODIFIED SERVICES INFORMATION message, MBMS UNMODIFIED SERVICES INFORMATION message, MBMS COMMON P-T-M RB INFORMATION and the MBMS CURRENT CELL P-T-M RB INFORMATION message should be acquired in the same modification period.

Reference

3GPP TS 25.304 clauses 6.3.1.3.

3GPP TS 25.331 clauses 8.7.2.2, 8.7.2.3, 8.7.1.3, 8.6.9.6, 8.7.5.3.

6.1.3.7.3 Test purpose

1. To verify that on indication from upper layers that there has been a change to the activated service(s) the UE will perform a cluster reselection to an inter frequency neighbour cluster providing the required MBMS service .

2. To verify that the UE starts the reception of the activated MBMS service after reselection to the inter frequency neighbour MBSFN cluster.

6.1.3.7.4 Method of test

Initial condition

System Simulator:

- MBSFN carrier: 2 cells, Cell 31 (PLMN1) and Cell 33 (PLMN1). Cell 31 is powered off. In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 33 using MBMS configuration C1 and Default1 MCCH scheduling (No ongoing session) according to subclause 11.2 of TS 34.108.

- Unicast carrier : 1 cell, Cell 1 with default parameters.

User Equipment:

- On the unicast carrier cell the UE is in registered Idle Mode on PS (state 3) if the UE only supports PS domain or registered Idle Mode on CS/PS (state 7) if the UE supports both CS and PS domains, as specified in clause 7.2.2 of TS 34.108.

- The UE is in MBSFN Idle mode with no activated service as specified in clause 7.6.3 of TS 34.108.

Related ICS/IXIT statements

- MBMS Broadcast services in MBSFN mode application available on UE Yes/No.

- Support of TDD transmit and receive functions available on UE Yes/No.

- Support of TDD MBSFN receive only function available on UE Yes/No.

Test procedure

Table 8.5.1.14

Parameter	Unit	Cell 1		Cell 31		Cell 33	
		T0	T1	T0	T1	T0	T1
UTRA RF Channel Number		Ch. 1		Ch. 2		Ch. 3	
CPICH Ec (FDD)	dBm / 3.84MHz	-60	-60	-	-	-	-
P-CCPCH RSCP (TDD)	dBM	-60	-60	OFF	-60	-60	-60
P-CPICH (IMB)	dBm / 3.84MHz			OFF	-60	-60	-60
T-CPICH (IMB)	dBm / 3.84MHz			OFF	-50.5	-50.5	-50.5

Table 8.5.1.1 illustrates the downlink power to be applied for the 3 cells at various time instants of the test execution.

a) The UE is camping on Cell 1 and Cell 33. The SS sends ACTIVATE RB TEST MODE on the unicast carrier and the UE responds with ACTIVATE RB TEST MODE COMPLETE. The SS then sends CLOSE UE TEST LOOP to activate RLC SDU counting on MTCH (Transmission identity indicating the MBMS National Service 1 (see TS 34.108 clause 11.2.4). The UE responds with CLOSE UE TEST LOOP COMPLETE.

b) The SS powers on Cell 31 at T1.

c) National Service 1 ongoing on MBSFN Cell 31 (see TS 34.108 clause 11.2.4) is selected at the UE. The UE determines from the MBMS UNMODIFIED SERVICES INFORMATION and MBMS GENERAL INFORMATION messages on the MCCH of Cell 33 that the selected National Service is available on inter frequency neighbour cell 31.

d) The UE reselects to MBSFN carrier on URFCN Ch. 3 and camps on Cell 31. The SS transmits the SYSTEM INFORMATION BLOCK TYPE 5 message indicating the configuration of the S-CCPCH carrying MCCH within the IE " Secondary CCPCH system information MBMS". In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C2 (one PTM session ongoing) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108. The service is carried on a 124 kbps RB for MBSFN MTCH with 80ms TTI as specified in clause 6.10.3.4.4.9 (3.84 Mcps TDD) or 124.4 kbps

RB for MBSFN MTCH with 80ms TTI as specified in clause 6.11.7.2.2.1 (3.84 Mcps TDD IMB) or clause 6.11.5.4.4.9 (1.28 Mcps TDD).or clause 6.11.6.4.4.9 (7.68 Mcps TDD).

e) The UE shall perform the MCCH acquisition procedure. The UE shall start receiving the p-t-m radio bearer for the ongoing activated MBMS service indicated in the MBMS UNMODIFIED SERVICES INFORMATION message according to the configuration defined in the MBMS CURRENT CELL P-T-M INFORMATION (one ongoing session corresponding to the service activated at the UE). The UE closes the test loop and starts counting successfully received RLC PDUs on the MTCH. The UE will send CLOSE UE TEST LOOP COMPLETE.

f) The SS broadcasts 10 RLC SDUs on the MTCH configured on the MBMS p-t-m radio bearer for National Service 1 on Cell 31.

g) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST and waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is > 0.

Expected sequence

Step	Direction		Carrier	Message	Comment
	UE	SS			
	←		M	MBMS MCCH Message Configuration C1	Cell 33: No ongoing sessions
1	←		U	ACTIVATE RB TEST MODE	
2	→		U	ACTIVATE RB TEST MODE COMPLETE	
3	←		U	CLOSE UE TEST LOOP	Loop back mode 3 is activated with Short Transmission Identity for National Service 1 on Cell 31.
5	SS				The SS powers on Cell 31 (T1).
6	UE		M		National Service 1, available on Cell 31, is selected at the UE.
6	UE		M		The UE reselects to Cell 31 and starts to acquire the MCCH.
7	←		M	SYSTEM INFORMATION BLOCK TYPE 5	
	←		M	MBMS MCCH Message Configuration C2	Cell 31: No modified services. One ongoing session. (National Service 1). 124 kbps PS RAB, 124.4 kbps (IMB)
15	UE		M		The UE shall continue acquiring the above MBMS messages until it has received a consistent set of MCCH information in the same modification period.
4	→		U	CLOSE UE TEST LOOP COMPLETE	The UE shall establish the indicated p-t-m radio bearer and close the test loop.
16	SS		M		The SS transmits 10 RLC SDUs on the MTCH of Cell 31 for National Service 1.
17	←		U	UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST	
18	→		U	UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE	The SS checks that the number of reported RLC SDUs received on the MTCH is greater than zero.
19	←		U	OPEN UE TEST LOOP	
20	→		U	OPEN UE TEST LOOP COMPLETE	
21	←		U	DEACTIVATE RB TEST MODE	
22	→		U	DEACTIVATE RB TEST MODE COMPLETE	

Specific message contents

All messages have the same content as defined in 34.108 clause 9.1 with the following exceptions:

There are no exceptions for this test case.

6.1.3.7.5 Test requirements

1) After step 18, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number > 0.

6.1.3.8 Inter frequency neighbour reselection / Activation of higher priority service

6.1.3.8.1 Definition

This test is applicable for UEs that support MBMS broadcast services in MBSFN mode and which support either both TDD transmit and receive functions or TDD MBSFN receive only function or 3.84 Mcps TDD IMB function.

6.1.3.8.2 Conformance requirement

If the cell is operating in MBSFN mode according to subclause 8.1.1.6.3 the UE shall:

1> if for two or more services included in variable MBMS_ACTIVATED_SERVICES the IE "MBSFN cluster frequency" is available:

2> request from upper layers the priorities of the different MBMS services included in variable MBMS_ACTIVATED_SERVICES for which the IE "MBSFN cluster frequency" is available;

2> if the IE "MBSFN cluster frequency" is available for the service with the highest priority included in variable MBMS_ACTIVATED_SERVICES:

3> tune to the frequency indicated in the IE "MBSFN cluster frequency" of that service.

…

The UE may:

1> monitor the MBMS notification Indicator Channel (MICH);

1> if a notification on the MICH for one or more of the MBMS services included in the variable MBMS_ACTIVATED_SERVICES is detected:

2> acquire the MBMS MODIFIED SERVICES INFORMATION message with delaying the reading of MCCH until the next modification period and with stopping at the end of the modification period, in accordance with subclause 8.7.1.3;

2> handle the MBMS MODIFIED SERVICES INFORMATION message as specified in subclause 8.7.3.4.

The UE shall:

1> if in idle mode, URA_PCH, CELL_PCH or CELL_FACH state:

2> if not monitoring MICH during the current or the previous modification period:

3> acquire the MBMS MODIFIED SERVICES INFORMATION message from MCCH at the start of every modification period, in accordance with subclause 8.7.1.3;

3> handle the MBMS MODIFIED SERVICES INFORMATION message as specified in subclause 8.7.3.4.

…

Upon receiving the MBMS MODIFIED SERVICES INFORMATION message, the UE shall act as follows for each of the services included in this messages provided that the service is included in variable MBMS_ACTIVATED_SERVICES and upper layers indicate that the session has not yet been received correctly (referred to as 'applicable services'):

…

1> act upon all received information elements as specified in subclause 8.6, unless specified otherwise in the following

…

1> perform the MBMS frequency selection procedure as specified in subclause 8.5.27;

Reference

3GPP TS 25.331 clauses 8.6.9.9ab, 8.7.3.3.1, 8.7.3.4.

6.1.3.8.3 Test purpose

1. To verify that the UE correctly handles the notification procedure after receiving the MBMS MODIFIED SERVICES INFORMATION message via MCCH indicating a change in available services.

2. To verify that the UE acts upon service priority indications from upper layers that require a change in MBSFN cluster frequency.

3. To verify that the UE acquires the MBMS information on MCCH after selecting the new MBSFN cluster.

4. To verify that the UE, after acquiring the MBMS information on MCCH, starts the p-t-m reception of the higher priority MBMS service.

6.1.3.8.4 Method of test

Initial condition

System Simulator:

- MBSFN carrier: 2 cells, Cell 31 (PLMN1) and Cell 33 (PLMN1). Cell 31 is powered off. In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 33 using MBMS configuration C1 and Default1 MCCH scheduling (No ongoing session) according to subclause 11.2 of TS 34.108.

- Unicast carrier : 1 cell, Cell 1 with default parameters.

User Equipment:

- On the unicast carrier cell the UE is in registered Idle Mode on PS (state 3) if the UE only supports PS domain or registered Idle Mode on CS/PS (state 7) if the UE supports both CS and PS domains, as specified in clause 7.2.2 of TS 34.108.

    - The UE is in MBSFN Idle mode with one activated service as specified in clause 7.6.4 of TS 34.108. The UE has selected (i.e. it is included in MBMS_ACTIVATED_SERVICES variable) a local service that will start on MBSFN Cell 33 (see TS 34.108 clause 11.2.4) during the test. The UE has configured this MBMS service to have a low priority.

Related ICS/IXIT statements

- MBMS Broadcast services in MBSFN mode application available on UE Yes/No.

- Support of TDD transmit and receive functions available on UE Yes/No.

- Support of TDD MBSFN receive only function available on UE Yes/No.

Test procedure

Table 8.5.1.14

Parameter	Unit	Cell 1		Cell 31		Cell 33	
		T0	T1	T0	T1	T0	T1
UTRA RF Channel Number		Ch. 1		Ch. 2		Ch. 3	
CPICH Ec (FDD)	dBm / 3.84MHz	-60	-60	-	-	-	-
P-CCPCH RSCP (TDD)	dBM	-60	-60	OFF	-60	-60	-60
P-CPICH (IMB)	dBm / 3.84MHz			OFF	-60	-60	-60
T-CPICH (IMB)	dBm / 3.84MHz			OFF	-50.5	-50.5	-50.5

Table 8.5.1.1 illustrates the downlink power to be applied for the 3 cells at various time instants of the test execution.

a) The UE is camping on Cell 1 and Cell 33. The SS sends ACTIVATE RB TEST MODE on the unicast carrier and the UE responds with ACTIVATE RB TEST MODE COMPLETE.

b) The SS sends CLOSE UE TEST LOOP to activate RLC SDU counting on the MTCH of Cell 33 (Transmission identity of the activated local service)

c) The SS notifies on MCCH about the start of an MBMS session, corresponding to the national service activated by the UE. For one modification period. MCCH messages are transmitted by the SS on Cell 33 using MBMS configuration C4 (one PTM session starting) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108.

d) MCCH messages are then transmitted by the SS on Cell 33 using MBMS configuration C2 (one PTM session ongoing) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108. The service is carried on a 124 kbps RB for MBSFN MTCH with 80ms TTI as specified in clause 6.10.3.4.4.9 (3.84 Mcps TDD) or 124.4 kbps RB for MBSFN MTCH with 80ms TTI as specified in clause 6.11.7.2.2.1 (3.84 Mcps TDD IMB) or clause 6.11.5.4.4.9 (1.28 Mcps TDD) or clause 6.11.6.4.4.9 (7.68 Mcps TDD).

e) The UE shall start receiving the p-t-m radio bearer for the ongoing activated MBMS service indicated in the MBMS UNMODIFIED SERVICES INFORMATION message according to the configuration defined in the MBMS CURRENT CELL P-T-M INFORMATION (one ongoing session corresponding to the service activated at the UE). The UE closes the test loop and starts counting successfully received RLC PDUs on the MTCH. The UE will send CLOSE UE TEST LOOP COMPLETE.

f) The SS broadcasts 10 RLC SDUs on the MTCH configured on the MBMS p-t-m radio bearer for the selected local service on Cell 33.

g) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST and waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is > 0.

h) The SS sends OPEN UE TEST LOOP. The UE responds with OPEN UE TEST LOOP COMPLETE.

i) The SS sends CLOSE UE TEST LOOP to activate RLC SDU counting on the MTCH (Transmission identity corresponding to National Service 1).

j) The SS powers on Cell 31 (T1). In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C2 (one PTM session ongoing) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108. National Service 1 is carried on a 124 kbps RB for MBSFN MTCH with 80ms TTI as specified in clause 6.10.3.4.4.9 (3.84 Mcps TDD) or 124.4 kbps RB for MBSFN MTCH with 80ms TTI as specified in clause 6.11.7.2.2.1 (3.84 Mcps TDD IMB) or clause 6.11.5.4.4.9 (1.28 Mcps TDD) or clause 6.11.6.4.4.9 (7.68 Mcps TDD).

k) National Service 1 is activated at the UE and is configured to have a high priority.

l) The UE determines from the MBMS UNMODIFIED SERVICES INFORMATION and MBMS GENERAL INFORMATION message that the activated local service is available on inter frequency neighbour cell 31. The UE requests from upper layers the priorities of the activated national service on Cell 31 and the activated local service on Cell 33. The UE decides that reselection to Cell 31 is required in order to receive the higher priority national service. The UE reselects to MBSFN carrier on URFCN Ch. 2 and camps on Cell 31.

m) On Cell 31 the SS transmits the SYSTEM INFORMATION BLOCK TYPE 5 message indicating the configuration of the S-CCPCH carrying MCCH within the IE " Secondary CCPCH system information MBMS". In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C2 (one PTM session ongoing) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108. The service is carried on a 124 kbps RB for MBSFN MTCH with 80ms TTI as specified in clause 6.10.3.4.4.9 (3.84 Mcps TDD) or 124.4 kbps RB for MBSFN MTCH with 80ms TTI as specified in clause 6.11.7.2.2.1 (3.84 Mcps TDD IMB) or clause 6.11.5.4.4.9 (1.28 Mcps TDD) or clause 6.11.6.4.4.9 (7.68 Mcps TDD).

n) The UE shall perform the MCCH acquisition procedure. The UE shall start receiving the p-t-m radio bearer for the ongoing activated MBMS service indicated in the MBMS UNMODIFIED SERVICES INFORMATION message according to the configuration defined in the MBMS CURRENT CELL P-T-M INFORMATION (one ongoing session corresponding to the service activated at the UE). The UE closes the test loop and starts counting successfully received RLC PDUs on the MTCH. The UE will send CLOSE UE TEST LOOP COMPLETE.

o) The SS broadcasts 10 RLC SDUs on the MTCH configured on the MBMS p-t-m radio bearer for National Service 1 on Cell 31.

p) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST and waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is > 0.

Expected sequence

Step	Direction		Carrier	Message	Comment
	UE	SS			
1	←		U	ACTIVATE RB TEST MODE	
2	→		U	ACTIVATE RB TEST MODE COMPLETE	
3	←		U	CLOSE UE TEST LOOP	Loop back mode 3 is activated. Short Transmission Identity for the selected local service
4	←		M	MBMS MCCH Message Configuration C4	Includes the national service activated at UE in the modified services list for one modification period.
5	←		M	MBMS MCCH Message Configuration C2	No modified services. One ongoing national service corresponding to that activated at the UE. 124 kbps PS RAB, 124.4 kbps (IMB)
6	→		U	CLOSE UE TEST LOOP COMPLETE	The UE shall establish the indicated p-t-m radio bearer and close the test loop.
7	**SS**		M		The SS transmits 10 RLC SDUs on the MTCH of Cell 33.

Specific message contents

All messages have the same content as defined in 34.108 clause 9.1 with the following exceptions:

There are no exceptions for this test case.

6.1.3.8.5 Test requirements

1) After step 9, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number > 0.

2) After step 20, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number > 0.

6.2 Multi-mode environment (2G/3G case)

For Inter-RAT idle mode test cases cells belonging to different RAT shall use different LAC and RAC.

6.2.1 PLMN and RAT selection

6.2.1.1 Selection of the correct PLMN and associated RAT

6.2.1.1.1 Definition

Test to verify that the UE selects the correct combination of PLMN and associated access technology according to the fields on the USIM.

6.2.1.1.2 Conformance requirement

1. At switch on, or following recovery from lack of coverage, the MS selects the registered PLMN or equivalent PLMN (if it is available) using all access technologies that the MS is capable of and if necessary (in the case of recovery from lack of coverage, see TS 23.122, clause 4.5.2) attempts to perform a Location Registration.

   If successful registration is achieved, the MS indicates the selected PLMN.

   If there is no registered PLMN, or if registration is not possible due to the PLMN being unavailable or registration failure, the MS follows either Automatic or Manual Network Selection Mode Procedure depending on its operating mode.

2. The "HPLMN Selector with Access Technology", "User Controlled PLMN Selector with Access Technology" and "Operator Controlled PLMN Selector with Access Technology" data fields in the SIM include associated access technologies for each PLMN entry. The PLMN/access technology combinations are listed in priority order. If an entry includes more than one access technology, then no priority is defined for the preferred access technology and the priority is an implementation issue.

3. To allow provision for multiple HPLMN codes, the HPLMN access technologies are stored on the SIM together with PLMN codes. This version of the specification does not support multiple HLPMN codes and the "HPLMN Selector with Access Technology" data field is only used by the MS to get the HPLMN access technologies. The HPLMN code is the PLMN code included in the IMSI.

4. Automatic Network Selection Mode Procedure:

   The MS selects and attempts registration on other PLMNs, if available and allowable in the following order:

   i) HPLMN (if not previously selected);

   ii) Each PLMN in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

   iii) Each PLMN in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

   iv) Other PLMN/access technology combinations with received high quality signal in random order;

   v) Other PLMN/access technology combinations in order of decreasing signal quality.

5. In i [HPLMN (if not previously selected)], the MS shall search for all access technologies it is capable of. No priority is defined for the preferred access technology and the priority is an implementation issue, but "HPLMN Selector with Access Technology" data field on the SIM may be used to optimise the procedure.

NOTE: TS 31.102 defines the USIM fields.

6.2.1.1.3 Test purpose

1. To verify that the UE selects the correct combination of HPLMN/access technology combination according to the fields on the USIM. If the UE is not using HPLMN Selector with Access Technology data field on the USIM there is no priority order for the RAT.

6.2.1.1.4 Method of test

Related ICS/IXIT statements

- Access technology priority supported in HPLMNwACT field – yes/no.

Initial conditions

The UE is in automatic PLMN selection mode.

Cell levels are from tables 6.3, 6.4 and 6.5.

Cell	CPICH_Ec [dBm/3.84 MHz] (FDD)	P-CCPCH_RSCP [dBm] (TDD)	Test Channel	PLMN	Radio Access Technology
Cell 2	-70	-59	1	PLMN 1	UTRAN
Cell 3	-75	-64	2	PLMN 2	UTRAN

Cell	RF signal level [dBm]	Test Channel	PLMN	Radio Access Technology
Cell 1	-48	1	PLMN 1	GSM
Cell 4	-50	2	PLMN 2	GSM

The UE is equipped with a USIM containing default values except for those listed below.

USIM A

USIM field	Priority	PLMN	Access Technology Identifier
$EF_{HPLMNwAcT}$	1st	PLMN1	GSM
	2nd	PLMN1	UTRAN

The HPLMN (MCC+MNC) of the IMSI for USIM A is set to PLMN1.

USIM B

USIM field	Priority	PLMN	Access Technology Identifier
$EF_{HPLMNwAcT}$	1st	PLMN2	UTRAN
	2nd	PLMN2	GSM

The HPLMN (MCC+MNC) of the IMSI for USIM B is set to PLMN2.

Test procedure

Method C is applied.

a) The SS activates cells 1-4 and monitors the cells for random access requests from the UE. The UE shall have a USIM with settings according to USIM A.

b) The UE is switched on.

c) The SS waits for random access requests from the UE.

d) The UE is switched off and a USIM with settings according to USIM B is inserted.

e) The UE is switched on.

f) The SS waits for random access requests from the UE.

6.2.1.1.5 Test Requirements

1) In step c), the response from the UE shall be on Cell 1. The displayed PLMN shall be PLMN1 (GSM). If the UE is not using HPLMN Selector with Access Technology data field on the USIM or if the UE is Rel-6 or higher, the response from the UE shall be either on Cell 1 or Cell 2. The displayed PLMN shall be either PLMN1 (GSM) or PLMN1 (UTRAN).

2) In step f), the response from the UE shall be on Cell 3. The displayed PLMN shall be PLMN2 (UTRAN). If the UE is not using HPLMN Selector with Access Technology data field on the USIM or if the UE is Rel-6 or higher, the response from the UE shall be either on Cell 3 or Cell 4. The displayed PLMN shall be either PLMN2 (GSM) or PLMN2 (UTRAN).

6.2.1.2 Selection of RAT for HPLMN; Manual mode

6.2.1.2.1 Definition

Test to verify that the UE selects the HPLMN RAT according to the HPLMN RAT priority list on the USIM. If no RAT on the list is available, the UE shall try to obtain registration on the same PLMN using other UE-supported RATs.

6.2.1.2.2 Conformance requirement

1. To allow provision for multiple HPLMN codes, the HPLMN access technologies are stored on the SIM together with PLMN codes. This version of the specification does not support multiple HLPMN codes and the "HPLMN Selector with Access Technology" data field is only used by the MS to get the HPLMN access technologies. The HPLMN code is the PLMN code included in the IMSI.

2. For HPLMN, the MS shall search for all access technologies it is capable of. The MS shall start its search using the access technologies stored in the "HPLMN Selector with Access Technology" data field on the SIM in priority order (i.e. the PLMN/access technology combinations are listed in priority order, if an entry includes more than one access technology then no priority is defined for the preferred access technology and the priority is an implementation issue).

3. Manual Network Selection Mode Procedure:

   The MS indicates whether there are any PLMNs, which are available using all supported access technologies. This includes PLMNs in the "forbidden PLMNs" list and PLMNs which only offer services not supported by the MS.

   If displayed, PLMNs meeting the criteria above are presented in the following order:

   3.1 HPLMN;

   3.2 PLMNs contained in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

   3.3 PLMNs contained in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

3.4 Other PLMN/access technology combinations with received high quality signal in random order;

3.5 Other PLMN/access technology combinations in order of decreasing signal quality.

The user may select his desired PLMN and the MS then initiates registration on this PLMN using the access technology chosen by the user for that PLMN or using the highest priority available access technology for that PLMN, if the associated access technologies have a priority order. (This may take place at any time during the presentation of PLMNs). For such a registration, the MS shall ignore the contents of the "forbidden LAs for roaming", "forbidden LAs for regional provision of service", "forbidden PLMNs for GPRS service" and "forbidden PLMNs" lists.

If the user does not select a PLMN, the selected PLMN shall be the one that was selected before the PLMN selection procedure started. If no such PLMN was selected or that PLMN is no longer available, then the MS shall attempt to camp on any acceptable cell and enter the limited service state.

NOTE: It is an MS implementation option whether to indicate access technologies to the user. If the MS does display access technologies, then the access technology used should be the access technology chosen by the user for that PLMN. If the MS does not display access technologies, then the access technology chosen for a particular PLMN should be the highest priority available access technology for that PLMN, if the associated access technologies have a priority order.

2. TS 23.122, clause 4.4.3.1.1 (f).
3. TS 23.122, clause 4.4.3.1.2.

NOTE: TS 31.102 defines the USIM fields.

6.2.1.2.3 Test purpose

1. To verify that:

1.1 the UE searches for a HPLMN RAT according to the HPLMN Selector with Access Technology data field on the USIM in priority order.

1.2 If no RAT on the priority list is available, the UE tries to obtain registration on the same PLMN using other UE-supported RATs.

6.2.1.2.4 Method of test

Initial conditions

The UE is in manual PLMN selection mode.

Cell levels are from tables 6.3, 6.4 and 6.5.

Cell	CPICH_Ec [dBm/3.84 MHz] (FDD)	P-CCPCH_RSCP [dBm] (TDD)	Test Channel	PLMN	Radio Access Technology
Cell 1	-72	-59	1	PLMN 2	UTRAN
Cell 3	-75	-64	2	PLMN 3	UTRAN

Cell	RF signal level [dBm]	Test Channel	PLMN	Radio Access Technology
Cell 2	-48	1	PLMN 2	GSM
Cell 4	-50	2	PLMN 3	GSM

The UE is equipped with a USIM containing default values except for those listed below.

USIM A

USIM field	Priority	PLMN	Access Technology Identifier
EF_{LOCI}		PLMN 1	
$EF_{HPLMNwAcT}$	1st	PLMN2	UTRAN
	2nd	PLMN2	GSM

The HPLMN (MCC+MNC) of the IMSI for USIM A is set to PLMN2.

USIM B

USIM field	Priority	PLMN	Access Technology Identifier
EF_{LOCI}		PLMN 1	
$EF_{HPLMNwAcT}$	1st	PLMN2	UTRAN
	2nd	PLMN2	

The HPLMN (MCC+MNC) of the IMSI for USIM B is set to PLMN2.

Test procedure

Method C is applied.

a) The SS activates cells 1-4 and monitors the cells for random access requests from the UE. The UE shall have a USIM with settings according to USIM A.

b) The UE is switched on.

c) PLMN2 (UTRAN) shall be selected when the PLMN list is presented.

d) The SS waits for random access requests from the UE.

e) Cell 1 is switched off.

f) PLMN2 (GSM) shall be selected when the PLMN list is presented.

g) The SS waits for random access requests from the UE.

h) The UE is switched off and a USIM with settings according to USIM B is inserted. All cells except Cell 1 are active.

i) The UE is switched on.

j) PLMN2 (GSM) shall be selected when the PLMN list is presented.

k) The SS waits for random access requests from the UE.

6.2.1.2.5 Test Requirements

1) In step c), the list shall be presented. It shall contain as highest priority PLMN2 (UTRAN as number 1 on the list and GSM as number 2).

2) In step d), the response from the UE shall be on Cell 1 (1st priority RAT for $EF_{HPLMNwAcT}$). The displayed PLMN shall be PLMN2 (UTRAN).

3) In step f), the list shall be presented. It shall contain as highest priority PLMN2 (GSM).

4) In step g), the response from the UE shall be on Cell 2 (2nd priority RAT for $EF_{HPLMNwAcT}$). The displayed PLMN shall be PLMN2 (GSM).

5) In step j), the list shall be presented. It shall contain as highest priority PLMN2 (GSM).

6) In step k), the response from the UE shall be on Cell 2. The displayed PLMN shall be PLMN2 (GSM). (PLMN2 is not available on UTRAN so registration on the same PLMN is attempted using other UE-supported RATs).

6.2.1.2a Selection of RAT for HPLMN; Different ITU regions; Manual mode

6.2.1.2a.1 Definition and applicability

Test to verify that a Multi-Band Multi-RAT device using manual network mode supports the Multi-Band Multi-RAT PLMN selection between frequency bands of different ITU regions.

Test is applicable for UEs supporting FDD and GSM, at least one FDD frequency band in ITU region 2 and at least one GSM frequency band in ITU region 1.

6.2.1.2a.2 Conformance requirement

1. At switch on, or following recovery from lack of coverage, the MS selects the registered PLMN or equivalent PLMN (if it is available) using all access technologies that the MS is capable of and if necessary (in the case of recovery from lack of coverage, see clause 4.5.2) attempts to perform a Location Registration.

   …

   If successful registration is achieved, the MS indicates the selected PLMN.

2. The MS indicates whether there are any PLMNs, which are available using all supported access technologies. This includes PLMNs in the "forbidden PLMNs" list and PLMNs which only offer services not supported by the MS. An MS which supports GSM COMPACT shall also indicate GSM COMPACT PLMNs (which use PBCCH).

   If displayed, PLMNs meeting the criteria above are presented in the following order:

   i)- either the HPLMN (if the EHPLMN list is not present or is empty) or, if one or more of the EHPLMNs are available then based on an optional data field on the SIM either only the highest priority available EHPLMN is to be presented to the user or all available EHPLMNs are presented to the user in priority order. If the data field is not present on the SIM, then only the highest priority available EHPLMN is presented;

   ii)- PLMN/access technology combinations contained in the " User Controlled PLMN Selector with Access Technology " data file in the SIM (in priority order);

   iii)- PLMN/access technology combinations contained in the "Operator Controlled PLMN Selector with Access Technology" data file in the SIM (in priority order);

   iv)- other PLMN/access technology combinations with received high quality signal in random order;

   v)- other PLMN/access technology combinations in order of decreasing signal quality.

References

1. TS 23.122, clause 4.4.3.1.

NOTE: TS 31.102 defines the USIM fields.

6.2.1.2a.3 Test purpose

1. To verify that in Manual Network Selection Mode Procedure:

   1.1 the UE indicates PLMN/access technology combinations with received high quality signal in random order if none of PLMNs contained in EF_{IMSI}, $EF_{HPLMNwAcT}$, $EF_{PLMNwAcT}$ or $EF_{OPLMNwAcT}$ are available

   1.2 the UE registers in the PLMN selected by the user

6.2.1.2a.4 Method of test

NOTE: The test may be executed with frequency bands of various ITU region combinations.

Initial conditions

The UE is in automatic PLMN selection mode.

In the System Information broadcast in each cell, the neighbouring cell list does not contain any cell belonging to the other PLMN's.

UTRA (FDD) test frequencies for the selection of RAT for HPLMN between frequency bands of different ITU regions.

Test Channel:	1	2	3	Comment
Band II	9263	9313	9263	Uplink UARFCN
Band IV	1313	1363	1313	Uplink UARFCN
Band V (*)	4133	4158	4133	Uplink UARFCN
Band X	FFS	FFS	FFS	Uplink UARFCN
Band XII	FFS	FFS	FFS	Uplink UARFCN
Band XIII	FFS	FFS	FFS	Uplink UARFCN
Band XIV	FFS	FFS	FFS	Uplink UARFCN
Band II / I	9263	9313	9613	Uplink UARFCN
Band II / VIII	9263	9313	2713	Uplink UARFCN
Band IV / I	1313	1363	9613	Uplink UARFCN
Band IV / VIII	1313	1363	2713	Uplink UARFCN
Band V / I	4133	4158	9613	Uplink UARFCN
Band V / VIII	4133	4158	2713	Uplink UARFCN

NOTE: Bands marked with (*) use a 5 MHz spacing between test channels because the total available bandwidth is limited. Other bands use a 10 MHz spacing between test channels. Test Channel combinations defined for single FDD frequency band (e.g. Band II) are used if the UE does not support any FDD frequency band in ITU region 1 (e.g. UE supports FDD II for ITU region 2 and doesn't support FDD I or FDD VIII for ITU region 1). Test Channel combinations of two FDD frequency bands are used if the UE supports at least one FDD frequency band of ITU region 2 and at least one FDD frequency band of ITU region 1.

GSM Cell 2 uses test channel 1 as specified in Table 6.6 as primary GSM band for ITU region 2 or alternatively as primary GSM band for ITU region 1 if the UE does not support any GSM band in ITU region 2. GSM Cell 4 uses test channel 2 as specified in Table 6.6 as secondary GSM band for ITU region 1. Primary GSM band for ITU region 1, secondary GSM band for ITU region 1 and primary GSM band for ITU region 2 are selected according to PIXIT parameters.

Step a-e:

Cell	CPICH_Ec [dBm/3.84 MHz] (FDD)	Test Channel	Frequency band used in ITU region (Note)	PLMN	Radio Access Technology
Cell 1	-70	1	2	PLMN 2	UTRAN

Step f-i:

Cell	CPICH_Ec [dBm/3.84 MHz] (FDD)	Test Channel	Frequency band used in ITU region (Note)	PLMN	Radio Access Technology
Cell 3	-70	2	2	PLMN 3	UTRAN
Cell 5	-76	3	1 else 2	PLMN 4	UTRAN
Note: For Cell 5 FDD frequency band of ITU region 2 may be configured if the UE does not support any FDD frequency band of ITU region 1.					

Cell	RF signal level [dBm]	Test Channel	Frequency band used in ITU region (Note)	PLMN	Radio Access Technology
Cell 2	-48	1	2 else 1	PLMN 5	GSM
Cell 4	-52	2	1	PLMN 6	GSM
Note: For Cell 2 GSM frequency band of ITU region 1 may be configured if the UE does not support any GSM frequency band of ITU region 2.					

The UE is equipped with a USIM containing default values according to TS 34.108 section 8 except for those listed below.

USIM field	Priority	PLMN (Note)	Access Technology Identifier
$EF_{HPLMNwAcT}$	1st	PLMN 1 (ITU region 2)	UTRAN
	2nd	PLMN 1 (ITU region 2)	GSM
NOTE: 3rd digit of MNC value is equal to '1'.			

The $EF_{PLMNwACT}$ list shall be empty according to 3GPP TS 31.102, Annex E. The HPLMN (MCC+MNC) of the IMSI for the USIM is set to PLMN 1 (ITU region 2). 3rd digit of MNC value is equal to '1'.

UE is previously registered on PLMN 2, before switched off .

Related ICS/IXIT statement(s)

None

Test procedure

Method C is applied.

a) The SS activates Cell 1 and monitors the cells for random access requests from the UE.

b) The UE is switched on.

c) The SS waits for random access requests from the UE.

d) Set the network selection mode to manual and then power off the UE.

e) Cell 1 is switched off.

f) The SS activates Cell 2, Cell 3, Cell 4 and Cell 5.

g) The UE is switched on.

h) If the UE supports FDD frequency band used in ITU region 1 then PLMN4 (UTRAN) shall be selected manually when PLMN list is indicated. Otherwise, if the UE does not support FDD frequency band used in ITU region 1, then PLMN6 (GSM) shall be selected when PLMN list is indicated.

i) The SS waits for random access requests from the UE.

6.2.1.2a.5 Test Requirements

1) In step c), the response from the UE shall be on Cell 1 (registered PLMN). The indicated PLMN shall be PLMN 2 (UTRAN).

2) In step g), confirm that the UE after performing manual search, indicates following PLMNs and RATs in any order:

   - PLMN3, FDD UTRAN Frequency band used in ITU region 2
   - PLMN4, FDD UTRAN Frequency band used in ITU region 1 or 2.
   - PLMN5, GSM Frequency band used in ITU region 2 or 1.
   - PLMN6, GSM Frequency band used in ITU region 1

3) In step i)

   - if the UE supports FDD frequency band used in ITU region 1 the response from the UE shall be on Cell 5 and the indicated PLMN shall be PLMN4
   - otherwise, if the UE does not support FDD frequency band used in ITU region 1 the response from the UE shall be on Cell 4 and the indicated PLMN shall be PLMN6.

6.2.1.3 Selection of RAT for UPLMN; Manual mode

6.2.1.3.1 Definition

Test to verify that the UE selects the UPLMN RAT according to the UPLMN RAT priority list on the USIM. If no PLMN/RAT on the UPLMN RAT priority list is available then the UE shall search for PLMNs in the OPLMN list.

6.2.1.3.2 Conformance requirement

1. Manual Network Selection Mode Procedure:

   The MS indicates whether there are any PLMNs, which are available using all supported access technologies. This includes PLMNs in the "forbidden PLMNs" list and PLMNs which only offer services not supported by the MS.

   If displayed, PLMNs meeting the criteria above are presented in the following order:

   1.1 HPLMN;

   1.2 PLMNs contained in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

   1.3 PLMNs contained in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

   1.4 Other PLMN/access technology combinations with received high quality signal in random order;

   1.5 Other PLMN/access technology combinations in order of decreasing signal quality.

   The user may select his desired PLMN and the MS then initiates registration on this PLMN using the access technology chosen by the user for that PLMN or using the highest priority available access technology for that PLMN, if the associated access technologies have a priority order. (This may take place at any time during the presentation of PLMNs). For such a registration, the MS shall ignore the contents of the "forbidden LAs for roaming", "forbidden LAs for regional provision of service", "forbidden PLMNs for GPRS service" and "forbidden PLMNs" lists.

   If the user does not select a PLMN, the selected PLMN shall be the one that was selected before the PLMN selection procedure started. If no such PLMN was selected or that PLMN is no longer available, then the MS shall attempt to camp on any acceptable cell and enter the limited service state.

NOTE: It is an MS implementation option whether to indicate access technologies to the user. If the MS does display access technologies, then the access technology used should be the access technology chosen by the user for that PLMN. If the MS does not display access technologies, then the access technology chosen for a particular PLMN should be the highest priority available access technology for that PLMN, if the associated access technologies have a priority order.

References

1. TS 23.122, clause 4.4.3.1.2.

NOTE: TS 31.102 defines the USIM fields.

6.2.1.3.3 Test purpose

1. To verify that:

   1.1 the UE selects the UPLMN RAT according to the UPLMN RAT priority list on the USIM.

   1.2 If no RAT on the UPLMN RAT priority list is available, the UE searches for PLMNs in the OPLMN list.

6.2.1.3.4 Method of test

Initial conditions

The UE is in manual PLMN selection mode.

Cell levels are from tables 6.3, 6.4 and 6.5.

Cell	CPICH_Ec [dBm/3.84 MHz] (FDD)	P-CCPCH_RSCP [dBm] (TDD)	Test Channel	PLMN	Radio Access Technology
Cell 1	-72	-59	1	PLMN 3	UTRAN
Cell 3	-75	-64	2	PLMN 4	UTRAN
Cell 5	-78	-69	3	PLMN 5	UTRAN

Cell	RF signal level [dBm]	Test Channel	PLMN	Radio Access Technology
Cell 2	-48	1	PLMN 3	GSM
Cell 4	-50	2	PLMN 4	GSM

The UE is equipped with a USIM containing default values except for those listed below.

USIM field	Priority	PLMN	Access Technology Identifier
EF_{LOCI}		PLMN 1	
$EF_{HPLMNwAcT}$	1st	PLMN2	UTRAN
	2nd	PLMN2	GSM
$EF_{PLMNwAcT}$	1st	PLMN 3	UTRAN
	2nd	PLMN 4	GSM
$EF_{OPLMNwAcT}$	1st	PLMN 5	UTRAN
	2nd	PLMN 6	GSM

The HPLMN (MCC+MNC) of the IMSI for the USIM is set to PLMN2.

Test procedure

Method C is applied.

a) The SS activates cells 1-5 and monitors the cells for random access requests from the UE.

b) The UE is switched on.

c) PLMN3 (UTRAN) shall be selected when the PLMN list is presented.

d) The SS waits for random access requests from the UE.

e) Cell 1 and Cell 2 are switched off. See note.

f) PLMN4 (GSM) shall be selected when the PLMN list is presented.

g) The SS waits for random access requests from the UE.

h) Cell 4 and Cell 3 are switched off. See note.

i) PLMN5 (UTRAN) shall be selected when the PLMN list is presented.

j) The SS waits for random access requests from the UE.

NOTE: When the serving cell (Cell 1 in step e and Cell 4 in step h) is switched off then the UE will trigger the recovery from lack of coverage scenario (TS 23.122 clause 4.4.3.1). The UE will search for a cell within the registered PLMN or equivalent PLMN (if it is available) using all access technologies that the UE is capable of. Thus Cell 2 in step e and Cell 3 in step h need to be switched off.

6.2.1.3.5 Test Requirements

1) In step c), the list shall be presented. It shall contain in priority PLMN3 (UTRAN), PLMN4 (GSM), other PLMNs.

2) In step d), the response from the UE shall be on Cell 1 (1st priority RAT for $EF_{PLMNwAcT}$). The displayed PLMN shall be PLMN3 (UTRAN).

3) In step f), the list shall be presented. It shall contain in priority PLMN4 (GSM), PLMN5 (UTRAN), other PLMNs.

4) In step g), the response from the UE shall be on Cell 4 (2nd priority RAT for $EF_{PLMNwACT}$). The displayed PLMN shall be PLMN4 (GSM).

5) In step i), the list shall be presented. It shall contain as highest priority PLMN5 (UTRAN).

6) In step j), the response from the UE shall be on Cell 5 (1st priority RAT for $EF_{OPLMNwAcT}$). The displayed PLMN shall be PLMN5 (UTRAN).

6.2.1.4 Selection of RAT for OPLMN; Manual mode

6.2.1.4.1 Definition

Test to verify that the UE selects the OPLMN RAT according to the OPLMN RAT priority list on the USIM. If no PLMN/RAT on the OPLMN RAT priority list is available then the UE shall search for other PLMN/access technology combinations with received high quality signal in random order.

6.2.1.4.2 Conformance requirement

1. Manual Network Selection Mode Procedure:

   The MS indicates whether there are any PLMNs, which are available using all supported access technologies. This includes PLMNs in the "forbidden PLMNs" list and PLMNs which only offer services not supported by the MS.

   If displayed, PLMNs meeting the criteria above are presented in the following order:

   1.1 HPLMN;

   1.2 PLMNs contained in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

   1.3 PLMNs contained in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

   1.4 Other PLMN/access technology combinations with received high quality signal in random order;

   1.5 Other PLMN/access technology combinations in order of decreasing signal quality.

   The user may select his desired PLMN and the MS then initiates registration on this PLMN using the access technology chosen by the user for that PLMN or using the highest priority available access technology for that PLMN, if the associated access technologies have a priority order. (This may take place at any time during the presentation of PLMNs). For such a registration, the MS shall ignore the contents of the "forbidden LAs for roaming", "forbidden LAs for regional provision of service", "forbidden PLMNs for GPRS service" and "forbidden PLMNs" lists.

   If the user does not select a PLMN, the selected PLMN shall be the one that was selected before the PLMN selection procedure started. If no such PLMN was selected or that PLMN is no longer available, then the MS shall attempt to camp on any acceptable cell and enter the limited service state.

NOTE: It is an MS implementation option whether to indicate access technologies to the user. If the MS does display access technologies, then the access technology used should be the access technology chosen by the user for that PLMN. If the MS does not display access technologies, then the access technology chosen for a particular PLMN should be the highest priority available access technology for that PLMN, if the associated access technologies have a priority order.

References

1. TS 23.122, clause 4.4.3.1.2.

NOTE: TS 31.102 defines the USIM fields.

6.2.1.4.3 Test purpose

1. To verify that:

   1.1 the UE selects the OPLMN RAT according to the OPLMN RAT priority list on the USIM.

   1.2 If no PLMN/RAT on the OPLMN RAT priority list is available, the UE searches for "other PLMN/access technology combinations with received high quality signal in random order".

6.2.1.4.4 Method of test

Initial conditions

The UE is in manual PLMN selection mode.

Cell levels are from tables 6.3, 6.4 and 6.5.

Cell	CPICH_Ec [dBm/3.84 MHz] (FDD)	P-CCPCH_RSCP [dBm] (TDD)	Test Channel	PLMN	Radio Access Technology
Cell 1	-72	-59	1	PLMN 5	UTRAN
Cell 3	-75	-64	2	PLMN 6	UTRAN
Cell 5	-78	-69	3	PLMN 7	UTRAN

Cell	RF signal level [dBm]	Test Channel	PLMN	Radio Access Technology
Cell 2	-48	1	PLMN 5	GSM
Cell 4	-50	2	PLMN 6	GSM

The UE is equipped with a USIM containing default values except for those listed below.

USIM field	Priority	PLMN	Access Technology Identifier
EF_{LOCI}		PLMN 1	
$EF_{HPLMNwAcT}$	1st	PLMN2	UTRAN
	2nd	PLMN2	GSM
$EF_{PLMNwAcT}$	1st	PLMN 3	UTRAN
	2nd	PLMN 4	GSM
$EF_{OPLMNwAcT}$	1st	PLMN 5	UTRAN
	2nd	PLMN 6	GSM

The HPLMN (MCC+MNC) of the IMSI for the USIM is set to PLMN2.

Test procedure

Method C is applied.

a) The SS activates cells 1-5 and monitors the cells for random access requests from the UE.

b) The UE is switched on.

c) PLMN5 (UTRAN) shall be selected when the PLMN list is presented.

d) The SS waits for random access requests from the UE.

e) Cell 1 and Cell2 are switched off. See note.

f) PLMN6 (GSM) shall be selected when the PLMN list is presented.

g) The SS waits for random access requests from the UE.

h) Cell 4 and Cell 3 are switched off. See note.

i) PLMN7 (UTRAN) shall be selected when the PLMN list is presented.

j) The SS waits for random access requests from the UE.

NOTE: When the serving cell (Cell 1 in step e and Cell 4 in step h) is switched off then the UE will trigger the recovery from lack of coverage scenario (TS 23.122 clause 4.4.3.1). The UE will search for a cell within the registered PLMN or equivalent PLMN (if it is available) using all access technologies that the UE is capable of. Thus Cell 2 in step e and Cell 3 in step h need to be switched off.

6.2.1.4.5 Test Requirements

1) In step c), the list shall be presented. It shall contain in priority PLMN5 (UTRAN), PLMN6 (GSM), other PLMNs.

2) In step d), the response from the UE shall be on Cell 1 (1st priority RAT for $EF_{OPLMNwAcT}$). The displayed PLMN shall be PLMN5 (UTRAN).

3) In step f), the list shall be presented. It shall contain as highest priority PLMN6 (GSM) followed by PLMN5 (GSM), PLMN6 (UTRAN) and PLMN7 (UTRAN) in random order.

4) In step g), the response from the UE shall be on Cell 4 (2nd priority RAT for $EF_{OPLMNwAcT}$). The displayed PLMN shall be PLMN6 (GSM).

5) In step i), the list shall be presented. It shall contain PLMN5 (GSM), PLMN6 (UTRAN) and PLMN7 (UTRAN) in random order.

6) In step j), the response from the UE shall be on Cell 5. The displayed PLMN shall be PLMN7 (UTRAN).

6.2.1.5 Selection of "Other PLMN / access technology combinations"; Manual mode

6.2.1.5.1 Definition

Test to verify that if neither RPLMN, HPLMN, UPLMN nor OPLMN is available, the UE tries to obtain registration on "Other PLMN/access technology combinations with received high quality signal in random order". Forbidden PLMNs shall also by displayed in the list.

6.2.1.5.2 Conformance requirement

1. Manual Network Selection Mode Procedure:

   The MS indicates whether there are any PLMNs, which are available using all supported access technologies. This includes PLMNs in the "forbidden PLMNs" list and PLMNs which only offer services not supported by the MS.

   If displayed, PLMNs meeting the criteria above are presented in the following order:

   1.1 HPLMN;

   1.2 PLMNs contained in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

   1.3 PLMNs contained in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

   1.4 Other PLMN/access technology combinations with received high quality signal in random order;

   1.5 Other PLMN/access technology combinations in order of decreasing signal quality.

   In 1.5, the MS shall order the PLMN/access technology combinations in order of decreasing signal quality within each access technology. The order between PLMN/access technology combinations with different access technologies is an MS implementation issue.

   The user may select his desired PLMN and the MS then initiates registration on this PLMN using the access technology chosen by the user for that PLMN or using the highest priority available access technology for that PLMN, if the associated access technologies have a priority order. (This may take place at any time during the presentation of PLMNs). For such a registration, the MS shall ignore the contents of the "forbidden LAs for roaming", "forbidden LAs for regional provision of service", "forbidden PLMNs for GPRS service" and "forbidden PLMNs" lists.

If the user does not select a PLMN, the selected PLMN shall be the one that was selected before the PLMN selection procedure started. If no such PLMN was selected or that PLMN is no longer available, then the MS shall attempt to camp on any acceptable cell and enter the limited service state.

NOTE: It is an MS implementation option whether to indicate access technologies to the user. If the MS does display access technologies, then the access technology used should be the access technology chosen by the user for that PLMN. If the MS does not display access technologies, then the access technology chosen for a particular PLMN should be the highest priority available access technology for that PLMN, if the associated access technologies have a priority order.

2. UTRA case: The UE shall scan all RF channels in the UTRA band according to its capabilities to find available PLMNs. On each carrier, the UE shall search for the strongest cell according to the cell search procedures (for FDD, see TS 25.214, and TDD, see TS 25.224) and read its system information, in order to find out which PLMN the cell belongs to. If the UE can read the PLMN identity, the found PLMN shall be reported to the NAS as a high quality PLMN (but without the RSCP value), provided that the following high quality criterion is fulfilled:

   - For an FDD cell, the measured primary CPICH RSCP value shall be greater than or equal to -95 dBm.
   - For a TDD cell, the measured P-CCPCH RSCP value shall be greater than or equal to –84 dBm.

   Found PLMNs that do not satisfy the high quality criterion, but for which the UE has been able to read the PLMN identities are reported to the NAS together with the CPICH RSCP value for UTRA FDD cells and P-CCPCH RSCP for UTRA TDD cells.

3. GSM case: A PLMN shall be understood to be received with high quality signal if the signal level is above -85 dBm.

References

1. TS 23.122, clause 4.4.3.1.2.
2. TS 25.304, clause 5.1.2.2.
3. TS 03.22, clause 4.4.3.

NOTE: TS 31.102 defines the USIM fields.

6.2.1.5.3 Test purpose

1. To verify that if neither RPLMN, HPLMN, UPLMN nor OPLMN is available, the UE tries to obtain registration on "Other PLMN/access technology combinations with received high quality signal in random order".
2. To verify that forbidden PLMNs are also displayed in the list.

6.2.1.5.4 Method of test

Initial conditions

The UE is in manual PLMN selection mode.

Cell levels are from tables 6.3, 6.4 and 6.5.

Cell	CPICH_Ec [dBm/3.84 MHz] (FDD)	P-CCPCH_RSCP [dBm] (TDD)	High Quality signal	Test Channel	PLMN	Radio Access Technology
Cell 1	-80	-74	Yes	1	PLMN 7	UTRAN
Cell 3	-80	-69	Yes	2	PLMN 9	UTRAN

Cell	RF signal level [dBm]	High Quality signal	Test Channel	PLMN	Radio Access Technology
Cell 2	-65	Yes	1	PLMN 8	GSM
Cell 4	-65	Yes	3	PLMN 11	GSM

The UE is equipped with a USIM containing default values except for those listed below.

USIM field	Priority	PLMN	Access Technology Identifier
EF_{LOCI}		PLMN 7	
EF_{FPLMN}	PLMN 8		
	PLMN 9		

Test procedure

Method C is applied.

a) The SS activates cells 1-4 and monitors the cells for random access requests from the UE.

b) The UE is switched on.

c) PLMN7 shall be selected when the PLMN list is presented.

d) The SS waits for random access requests from the UE.

e) Cell 1 is switched off.

f) PLMN8 shall be selected when the PLMN list is presented. The SS shall accept the Registration Request from the UE.

g) The SS waits for random access requests from the UE.

h) Cell 2 is switched off.

i) PLMN9 shall be selected when the PLMN list is presented. The SS shall accept the Registration Request from the UE.

j) The SS waits for random access requests from the UE.

k) Cell 3 is switched off.

l) PLMN11 shall be selected when the PLMN list is presented.

m) The SS waits for random access requests from the UE.

n) Cell 4 is switched off.

6.2.1.5.5 Test Requirements

In all steps, the PLMN priority list shall be as follows: PLMN7, PLMN8, PLMN9 and PLMN11 in random order.

1) In step c), the list shall be presented and contain PLMN7, 8, 9, 11.

2) In step d), the response from the UE shall be on Cell 1. The displayed PLMN shall be PLMN7.

3) In step f), the list shall be presented and contain PLMN 8, 9, 11.

4) In step g), the response from the UE shall be on Cell 2. The displayed PLMN shall be PLMN8.

5) In step i), the list shall be presented and contain PLMN9, 11.

6) In step j), the response from the UE shall be on Cell 3. The displayed PLMN shall be PLMN9.

7) In step l), the list shall be presented and contain PLMN11. The displayed PLMN shall be PLMN11.

8) After step n), the UE shall inform that no network is available

6.2.1.6 Selection of RAT for HPLMN; Automatic mode

6.2.1.6.1 Definition

Test to verify that the UE selects the HPLMN RAT according to the HPLMN RAT priority list on the USIM. If no RAT on the list is available, the UE shall try to obtain registration on the same PLMN using other UE-supported RATs.

6.2.1.6.2 Conformance requirement

1. To allow provision for multiple HPLMN codes, the HPLMN access technologies are stored on the SIM together with PLMN codes. This version of the specification does not support multiple HLPMN codes and the "HPLMN Selector with Access Technology" data field is only used by the MS to get the HPLMN access technologies. The HPLMN code is the PLMN code included in the IMSI.

2. Automatic Network Selection Mode Procedure:

   The MS selects and attempts registration on other PLMNs, if available and allowable in the following order:

   i) HPLMN (if not previously selected);

   ii) Each PLMN in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

   iii) Each PLMN in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

   iv) Other PLMN/access technology combinations with received high quality signal in random order;

   v) Other PLMN/access technology combinations in order of decreasing signal quality.

   If successful registration is achieved, the MS indicates the selected PLMN.

   If registration cannot be achieved because no PLMNs are available and allowable, the MS indicates "no service" to the user, waits until a new PLMN is available and allowable and then repeats the procedure.

   If there were one or more PLMNs which were available and allowable, but an LR failure made registration on those PLMNs unsuccessful or an entry in the "forbidden LAs for regional provision of service" list prevented a registration attempt, the MS selects the first such PLMN again and enters a limited service state.

Alternative 3a for R99, Rel-4 and Rel-5:

3a. In i [HPLMN (if not previously selected)], the MS shall search for all access technologies it is capable of. The MS shall start its search using the access technologies stored in the "HPLMN Selector with Access Technology" data field on the SIM in priority order as defined in 23.122 clause 4.4.3 (i.e. the PLMN/access technology combinations are listed in priority order, if an entry includes more than one access technology then no priority is defined for the preferred access technology and the priority is an implementation issue).

Alternative 3b for all releases (from R99 onwards):

3b. In i [HPLMN (if not previously selected)], the MS shall search for all access technologies it is capable of. No priority is defined for the preferred access technology and the priority is an implementation issue, but “HPLMN Selector with Access Technology” data field on the SIM may be used to optimise the procedure.

3b. TS 23.122 (Rel-6), clause 4.4.3.1.1 f)

NOTE: TS 31.102 defines the USIM fields.

6.2.1.6.3 Test purpose

1. To verify that:

1.1 the UE searches for a HPLMN RAT according to the HPLMN Selector with Access Technology data field on the USIM in priority order. If the UE is not using HPLMN Selector with Access Technology data field on the USIM, there is no priority order for the RAT.

1.2 If no RAT on the priority list is available, the UE tries to obtain registration on the same PLMN using other UE-supported RATs.

6.2.1.6.4 Method of test

Related ICS/IXIT statements

- Access technology priority supported in HPLMNwACT field – yes/no.

Initial conditions

The UE is in automatic PLMN selection mode.

Cell levels are from tables 6.3, 6.4 and 6.5.

Cell	CPICH_Ec [dBm/3.84 MHz] (FDD)	P-CCPCH_RSCP [dBm] (TDD)	Test Channel	PLMN	Radio Access Technology
Cell 1	-70	-59	1	PLMN 2	UTRAN
Cell 3	-60	-60	2	PLMN 3	UTRAN

Cell	RF signal level [dBm]	Test Channel	PLMN	Radio Access Technology
Cell 2	-48	1	PLMN 2	GSM

The UE is equipped with a USIM containing default values except for those listed below.

USIM A

USIM field	Priority	PLMN	Access Technology Identifier
$EF_{HPLMNwAcT}$	1st	PLMN2	UTRAN
	2nd	PLMN2	GSM
$EF_{PLMNwAcT}$	1ST	PLMN3	UTRAN

The HPLMN (MCC+MNC) of the IMSI for USIM A is set to PLMN2.

USIM B

USIM field	Priority	PLMN	Access Technology Identifier
$EF_{HPLMNwAcT}$	1st	PLMN2	UTRAN
	2nd	PLMN2	
$EF_{PLMNwAcT}$	1ST	PLMN3	UTRAN

The HPLMN (MCC+MNC) of the IMSI for USIM B is set to PLMN2.

Test procedure

Method C is applied.

a) The SS activates cells 1-3 and monitors the cells for random access requests from the UE. The UE shall have a USIM with settings according to USIM A.

b) The UE is switched on.

c) The SS waits for random access requests from the UE.

d) The UE is switched off. All cells except Cell 1 are active. The UE is switched on.

e) The SS waits for random access requests from the UE.

f) The UE is switched off and a USIM with settings according to USIM B is inserted. All cells except Cell 1 are active.

g) The UE is switched on.

h) The SS waits for random access requests from the UE.

6.2.1.6.5 Test Requirements

1) In step c), the response from the UE shall be on Cell 1 (1st priority RAT for $EF_{HPLMNwAcT}$). The displayed PLMN shall be PLMN2 (UTRAN). If the UE is not using HPLMN Selector with Access Technology data field on the USIM or if UE is Rel-6 or higher, the response from the UE shall be either on Cell 1 or Cell 2. The displayed PLMN shall be PLMN2 (either UTRAN or GSM).

2) In step e), the response from the UE shall be on Cell 2. The displayed PLMN shall be PLMN2 (GSM).

3) In step h), the response from the UE shall be on Cell 2. The displayed PLMN shall be PLMN2 (GSM).

6.2.1.7 Selection of RAT for UPLMN; Automatic mode

6.2.1.7.1 Definition

Test to verify that the UE selects the UPLMN RAT according to the UPLMN RAT priority list on the USIM. If no PLMN/RAT on the UPLMN RAT priority list is available then the UE shall search for PLMNs in the OPLMN list.

6.2.1.7.2 Conformance requirement

1. Automatic Network Selection Mode Procedure:

   The MS selects and attempts registration on other PLMNs, if available and allowable in the following order:

   1.1 HPLMN (if not previously selected);

   1.2 Each PLMN in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

   1.3 Each PLMN in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

   1.4 Other PLMN/access technology combinations with received high quality signal in random order;

   1.5 Other PLMN/access technology combinations in order of decreasing signal quality.

   If successful registration is achieved, the MS indicates the selected PLMN.

   If registration cannot be achieved because no PLMNs are available and allowable, the MS indicates "no service" to the user, waits until a new PLMN is available and allowable and then repeats the procedure.

   If there were one or more PLMNs which were available and allowable, but an LR failure made registration on those PLMNs unsuccessful or an entry in the "forbidden LAs for regional provision of service" list prevented a registration attempt, the MS selects the first such PLMN again and enters a limited service state.

References

1. TS 23.122, clause 4.4.3.1.1.

NOTE: TS 31.102 defines the USIM fields.

6.2.1.7.3 Test purpose

1. To verify that:

   1.1 the UE selects the UPLMN RAT according to the UPLMN RAT priority list on the USIM.

   1.2 If no PLMN/RAT on the UPLMN RAT priority list is available, the UE searches for PLMNs in the OPLMN list.

6.2.1.7.4 Method of test

Initial conditions

The UE is in automatic PLMN selection mode.

Cell levels are from tables 6.3, 6.4 and 6.5.

In system information broadcast in each cell, the neighbouring cell list does not contain any other cell belonging to the same PLMN.

Cell	CPICH_Ec [dBm/3.84 MHz] (FDD)	P-CCPCH [dBm] (TDD)	Test Channel	PLMN	Radio Access Technology
Cell 1	-70	-59	1	PLMN 3	UTRAN
Cell 3	-75	-64	2	PLMN 4	UTRAN
Cell 5	-80	-69	3	PLMN 5	UTRAN

Cell	RF signal level [dBm]	Test Channel	PLMN	Radio Access Technology
Cell 2	-48	1	PLMN 3	GSM
Cell 4	-50	2	PLMN 4	GSM

The UE is equipped with a USIM containing default values except for those listed below.

USIM field	Priority	PLMN	Access Technology Identifier
$EF_{HPLMNwAcT}$	1st	PLMN2	UTRAN
	2nd	PLMN2	GSM
$EF_{PLMNwAcT}$	1st	PLMN 3	UTRAN
	2nd	PLMN 4	GSM
$EF_{OPLMNwAcT}$	1st	PLMN 5	UTRAN
	2nd	PLMN 6	GSM

The HPLMN (MCC+MNC) of the IMSI for the USIM is set to PLMN2.

UE is previously registered on PLMN 1, before switched off.

Test procedure

Method C is applied.

a) The SS activates cells 1-5 and monitors the cells for random access requests from the UE.

b) The UE is switched on.

c) The SS waits for random access requests from the UE. As no cell exists for neither registered PLMN (PLMN1) nor home PLMN/RAT (PLMN2, UTRAN or GSM) the UE shall select Cell 1 (1st priority PLMN/RAT in $EF_{PLMNwAcT}$).

d) Cell 1 and Cell 2 are switched off. See note.

e) The SS waits for random access requests from the UE. As no cell exists for neither registered PLMN (PLMN3 registered at step c), home PLMN (PLMN2, UTRAN or GSM) nor any cells for the 1st priority PLMN/RAT in $EF_{PLMNwAcT}$ (PLMN3/UTRAN) then UE shall select Cell 4 (2nd priority PLMN/RAT in $EF_{PLMNwAcT}$).

f) Cell 4 and Cell 3 are switched off. See note.

g) The SS waits for random access requests from the UE. As no cell exists for neither registered PLMN (PLMN4 registered at step e), home PLMN (PLMN2, UTRAN or GSM) nor user controlled PLMN/RAT (PLMN3/UTRAN or PLMN4/GSM) then UE shall select Cell 5 (1st priority RAT for $EF_{OPLMNwAcT}$).

NOTE: When the serving cell (Cell 1 in step d and Cell 4 in step f) is switched off then the UE will trigger the recovery from lack of coverage scenario (TS 23.122 clause 4.4.3.1). The UE will search for a cell within the registered PLMN or equivalent PLMN (if it is available) using all access technologies that the UE is capable of. Thus need Cell 2 in step d and Cell 3 in step f to be switched off.

6.2.1.7.5 Test Requirements

1) In step c), the response from the UE shall be on Cell 1 (1st priority RAT for $EF_{PLMNwAcT}$). The displayed PLMN shall be PLMN3 (UTRAN).

2) In step e), the response from the UE shall be on Cell 4 (2nd priority RAT for $EF_{PLMNwAcT}$). The displayed PLMN shall be PLMN4 (GSM).

3) In step g), the response from the UE shall be on Cell 5 (1st priority RAT for $EF_{OPLMNwAcT}$). The displayed PLMN shall be PLMN5 (UTRAN).

6.2.1.8 Selection of RAT for OPLMN; Automatic mode

6.2.1.8.1 Definition

Test to verify that the UE selects the OPLMN RAT according to the OPLMN RAT priority list on the USIM. If no PLMN/RAT on the OPLMN list is available then the UE shall search for other PLMN/access technology combinations with received high quality signal in random order.

6.2.1.8.2 Conformance requirement

1. Automatic Network Selection Mode Procedure:

   The MS selects and attempts registration on other PLMNs, if available and allowable in the following order:

   1.1 HPLMN (if not previously selected);

   1.2 Each PLMN in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

   1.3 Each PLMN in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

   1.4 Other PLMN/access technology combinations with received high quality signal in random order;

   1.5 Other PLMN/access technology combinations in order of decreasing signal quality.

   If successful registration is achieved, the MS indicates the selected PLMN.

   If registration cannot be achieved because no PLMNs are available and allowable, the MS indicates "no service" to the user, waits until a new PLMN is available and allowable and then repeats the procedure.

   If there were one or more PLMNs which were available and allowable, but an LR failure made registration on those PLMNs unsuccessful or an entry in the "forbidden LAs for regional provision of service" list prevented a registration attempt, the MS selects the first such PLMN again and enters a limited service state.

References

1. TS 23.122, clause 4.4.3.1.1.

NOTE: TS 31.102 defines the USIM fields.

6.2.1.8.3 Test purpose

1. To verify that:

   1.1 the UE selects the OPLMN RAT according to the OPLMN RAT priority list on the USIM.

   1.2 If no PLMN/RAT on the OPLMN RAT priority list is available, the UE searches for "other PLMN/access technology combinations with received high quality signal in random order".

6.2.1.8.4 Method of test

Initial conditions

The UE is in automatic PLMN selection mode.

Cell levels are from tables 6.3, 6.4 and 6.5.

In system information broadcast in each cell, the neighbouring cell list does not contain any other cell belonging to the same PLMN.

Cell	CPICH_Ec [dBm/3.84 MHz] (FDD)	P-CCPCH_RSCP [dBm] (TDD)	Test Channel	PLMN	Radio Access Technology
Cell 1	-70	-59	1	PLMN 5	UTRAN
Cell 3	-75	-64	2	PLMN 6	UTRAN
Cell 5	-80	-69	3	PLMN 7	UTRAN

Cell	RF signal level [dBm]	Test Channel	PLMN	Radio Access Technology
Cell 2	-48	1	PLMN 5	GSM
Cell 4	-50	2	PLMN 6	GSM

The UE is equipped with a USIM containing default values except for those listed below.

USIM field	Priority	PLMN	Access Technology Identifier
$EF_{HPLMNwAcT}$	1st	PLMN2	UTRAN
	2nd	PLMN2	GSM
$EF_{PLMNwAcT}$	1st	PLMN 3	UTRAN
	2nd	PLMN 4	GSM
$EF_{OPLMNwAcT}$	1st	PLMN 5	UTRAN
	2nd	PLMN 6	GSM

The HPLMN (MCC+MNC) of the IMSI for the USIM is set to PLMN2.

UE is previously registered on PLMN 1, before switched off.

Test procedure

Method C is applied.

a) The SS activates cells 1-5 and monitors the cells for random access requests from the UE.

b) The UE is switched on.

c) The SS waits for random access requests from the UE. As no cell exists for neither registered PLMN (PLMN1), home PLMN/RAT (PLMN2, UTRAN or GSM) nor user controlled PLMN/RAT (PLMN3/UTRAN or PLMN4/GSM) then the UE shall select Cell 1 (1st priority RAT for $EF_{OPLMNwAcT}$).

d) Cell 1 and Cell 2 are switched off. See note.

e) The SS waits for random access requests from the UE. As no cell exists for neither registered PLMN (PLMN5 registered in step c), home PLMN/RAT (PLMN2, UTRAN or GSM), user controlled PLMN/RAT

(PLMN3/UTRAN or PLMN4/GSM) nor any cells for the 1st priority PLMN/RAT in $EF_{OPLMNwAcT}$ (PLMN5/UTRAN) then UE shall select Cell 4 (2nd priority PLMN/RAT in $EF_{OPLMNwAcT}$).

f) Cell 4 and Cell 3 are switched off. See note.

g) The SS waits for random access requests from the UE. As no cell exists for neither registered PLMN (PLMN6 registered in step e), home PLMN/RAT (PLMN2, UTRAN or GSM), user controlled PLMN/RAT (PLMN3/UTRAN or PLMN4/GSM) nor operator controlled PLMN/RAT (PLMN5/UTRAN or PLMN6/GSM) then UE shall select another PLMN/access technology combinations with received high quality signal in random order (Cell 5).

NOTE: When the serving cell (Cell 1 in step d and Cell 4 in step f) is switched off then the UE will trigger the recovery from lack of coverage scenario (TS 23.122 clause 4.4.3.1). The UE will search for a cell within the registered PLMN or equivalent PLMN (if it is available) using all access technologies that the UE is capable of. Thus need Cell 2 in step d and Cell 3 in step f to be switched off.

6.2.1.8.5 Test Requirements

1) In step c), the response from the UE shall be on Cell 1 (1st priority RAT for $EF_{OPLMNwAcT}$). The displayed PLMN shall be PLMN5 (UTRAN).

2) In step e), the response from the UE shall be on Cell 4 (2nd priority RAT for $EF_{OPLMNwAcT}$). The displayed PLMN shall be PLMN6 (GSM).

3) In step g), the response from the UE shall be on either Cell 5 (other PLMN/access technology combination) with associated PLMN7 (UTRAN) shown.

6.2.1.8a Selection of RAT for OPLMN; Different ITU regions

In the initial conditions the assignment of ITU region A and ITU region B depends on the selected operation band under test. The FDD frequency bands used in different ITU regions are indicated in table 6.2A. Test channel configurations for the FDD frequency bands are specified in Table 6.3B.

For the case that operation band under test belongs to ITU region 2 (A=2, B=1) following channel configuration is used:

- UTRAN test channel 1 and UTRAN test channel 4 uses primary FDD band for ITU region 2.

- UTRAN test channel 2 and UTRAN test channel 3 uses secondary FDD band for ITU region 2.

- Test channel configurations for the GSM frequency bands are specified in Table 6.6.

  - GSM test channel 1 uses primary GSM band for ITU region 2 or alternatively as secondary GSM band for ITU region 1 if the UE does not support any GSM band in ITU region 2.

  - GSM test channel 2 uses primary GSM band for ITU region 1.

  - GSM test channel 3 uses secondary GSM band for ITU region 1.

For the case that operation band under test belongs to ITU region 1 (A=1, B=2) following channel configuration is used:

- UTRAN test channel 1 and UTRAN test channel 4 uses primary FDD band for ITU region 1.

- UTRAN test channel 2 and UTRAN test channel 3 uses secondary FDD band for ITU region 1.

- Test channel configurations for the GSM frequency bands are specified in Table 6.7.

  - GSM test channel 1 uses primary GSM band for ITU region 1 or alternatively as secondary GSM band for ITU region 2 if the UE does not support any GSM band in ITU region 1.

  - GSM test channel 2 uses primary GSM band for ITU region 2.

  - GSM test channel 3 uses secondary GSM band for ITU region 2.

Primary and secondary FDD and GSM bands for both ITU regions are selected according to PIXIT parameters.

The definition of each PLMN code is found in table below.

PLMN	MCC1	MCC2	MCC3	MNC1	MNC2	MNC3 (Note 1)	LAC (Note 3)
1	0	0	1	0	1	ITU region A	x
2	0	0	1	0	2	ITU region A	x
3	0	0	1	0	3	ITU region A else ITU region B (Note 2)	x
4	0	0	1	0	4	ITU region A	x
5	0	0	1	0	5	ITU region B	x
6	0	0	1	0	6	ITU region B	x
7	0	0	1	0	7	ITU region B	x
8	0	0	1	0	8	ITU region A	x
NOTE 1: 3rd digit of MNC value is equal to '1' if used PLMN is for ITU region 2. NOTE 2: ITU region B may be configured if the UE does not support any GSM frequency band of ITU region A. NOTE 3: 'x' denotes any value.							

6.2.1.8a.1 Selection of RAT for OPLMN; Different ITU regions; Automatic mode

6.2.1.8a.1.1 Definition and applicability

Test to verify that at switch on or following recovery from lack of coverage, the UE selects the registered PLMN. The UE performs Multi-Band Multi-RAT PLMN selection between frequency bands of different ITU regions according to the "Operator Controlled PLMN Selector with Access Technology" priority list on the USIM. If the UE is in a VPLMN it periodically attempts to obtain service on its HPLMN or higher priority PLMN according HPLMN Search Period on the USIM.

Test is applicable for UEs supporting FDD and GSM and at least one frequency band of different ITU region in each RAT.

6.2.1.8a.1.2 Conformance requirement

1. At switch on, or following recovery from lack of coverage, the MS selects the registered PLMN or equivalent PLMN (if it is available) using all access technologies that the MS is capable of and if necessary (in the case of recovery from lack of coverage, see clause 4.5.2) attempts to perform a Location Registration.

   …

   If successful registration is achieved, the MS indicates the selected PLMN.

   If there is no registered PLMN, or if registration is not possible due to the PLMN being unavailable or registration failure, the MS follows one of the following two procedures depending on its operating mode.

2. The MS selects and attempts registration on other PLMN/access technology combinations, if available and allowable, in the following order:

   i) either the HPLMN (if the EHPLMN list is not present or is empty) or the highest priority EHPLMN that is available (if the EHPLMN list is present) ;

   ii) each PLMN/access technology combination in the "User Controlled PLMN Selector with Access Technology" data file in the SIM (in priority order);

   iii) each PLMN/access technology combination in the "Operator Controlled PLMN Selector with Access Technology" data file in the SIM (in priority order);

   …

   If successful registration is achieved, the MS indicates the selected PLMN.

3. If the MS is in a VPLMN, the MS shall periodically attempt to obtain service on its HPLMN (if the EHPLMN list is not present or is empty) or one of its EHPLMNs (if the EHPLMN list is present) or a higher priority PLMN/access technology combinations listed in "user controlled PLMN selector" or "operator controlled PLMN selector" by scanning in accordance with the requirements that are applicable to i), ii) and iii) as defined in the Automatic Network Selection Mode in clause 4.4.3.1.1.

   …

The attempts to access the HPLMN or an EHPLMN or higher priority PLMN shall be as specified below:

a) The periodic attempts shall only be performed in automatic mode when the MS is roaming;

b) After switch on, a period of at least 2 minutes and at most T minutes shall elapse before the first attempt is made;

c) The MS shall make an attempt if the MS is on the VPLMN at time T after the last attempt;

d) Periodic attempts shall only be performed by the MS while in idle mode;

e) If the HPLMN (if the EHPLMN list is not present or is empty) or a EHPLMN (if the list is present) or a higher priority PLMN is not found, the MS shall remain on the VPLMN.

f) In steps i), ii) and iii) of subclause 4.4.3.1.1 the MS shall limit its attempts to access higher priority PLMN/access technology combinations to PLMN/access technology combinations of the same country as the current serving VPLMN, as defined in Annex B.

References

1. TS 23.122, clause 4.4.3.1.

NOTE: TS 31.102 defines the USIM fields.

6.2.1.8a.1.3 Test purpose

1. To verify that in Automatic Network Selection Mode Procedure:

1.1 at switch on the UE selects the registered PLMN using all access technologies that the UE is capable of.

1.2 the UE selects the OPLMN RAT between frequency bands of different ITU regions according to the OPLMN RAT priority list on the USIM.

1.3 the UE attempts to obtain service on its HPLMN or higher priority PLMN according to HPLMN Search Period on the USIM

6.2.1.8a.1.4 Method of test

Initial conditions

The UE is in automatic PLMN selection mode.

In the System Information broadcast in each cell, the neighbouring cell list does not contain any cell belonging to the other PLMN's.

The definition of each PLMN code is found in table above under section 6.2.1.8a

Step a-f:

Cell	CPICH_Ec [dBm/3.84 MHz] (FDD)	Test Channel	Frequency band used in ITU region (Note)	PLMN	Radio Access Technology
Cell 1	-70	1	A	PLMN 2	UTRAN
Cell 3	-76	2	A	PLMN 4	UTRAN
Note: The test may be executed with frequency bands of various ITU region combinations. Different FDD frequency bands shall be defined for the cells if the UE supports two FDD frequency bands of same ITU region (e.g. FDD II for Cell 1 and FDD V for Cell 3 for ITU region 2).					

Cell	RF signal level [dBm]	Test Channel	Frequency band used in ITU region (Note)	PLMN	Radio Access Technology
Cell 2	-48	1	A else B	PLMN 3	GSM
Cell 4	-52	2	B	PLMN 5	GSM
Note: The test may be executed with frequency bands of various ITU region combinations. GSM frequency band of ITU region B may be configured if the UE does not support any GSM frequency band of ITU region A.					

Step g-h:

Cell	CPICH_Ec [dBm/3.84 MHz] (FDD)	Test Channel	Frequency band used in ITU region (Note)	PLMN	Radio Access Technology
Cell 5	-70	3	A	PLMN 8	UTRAN
Cell 7	-76	4	A	PLMN 3	UTRAN
Note: The test may be executed with frequency bands of various ITU region combinations. Different FDD frequency bands shall be defined for the cells if the UE supports two FDD frequency bands of same ITU region (e.g. FDD II for Cell 7 and FDD V for Cell 5 for ITU region 2). Different FDD frequency bands shall be defined for FDD Cell 1 and Cell 5 if the UE supports two FDD frequency bands of same ITU region (e.g. in case of ITU region 2 FDD II for Cell 1 and FDD V for Cell 5 may be configured).					

Cell	RF signal level [dBm]	Test Channel	Frequency band used in ITU region (Note)	PLMN	Radio Access Technology
Cell 6	-48	3	B	PLMN 7	GSM
Cell 4	-52	2	B	PLMN 5	GSM
Note: The test may be executed with frequency bands of various ITU region combinations. Different GSM frequency bands shall be defined for the cells if the UE supports two GSM frequency bands of same ITU region (e.g. in case of ITU region 1 GSM 900 for Cell 6 and GSM 1800 for Cell 4 may be configured).					

The HPLMN Search Period on the USIM shall be set to 6 minutes. The UE is equipped with a USIM containing default values according to TS 34.108 section 8 except for those listed below.

USIM field	Priority	PLMN	Access Technology Identifier
$EF_{HPLMNwAcT}$	1st	PLMN 1	UTRAN
	2nd	PLMN 1	GSM
$EF_{OPLMNwAcT}$	1st	PLMN 8	UTRAN
	2nd	PLMN 8	GSM
	3rd	PLMN 7	GSM
	4th	PLMN 6	UTRAN
	5th	PLMN 6	GSM
	6th	PLMN 5	UTRAN
	7th	PLMN 5	GSM
	8th	PLMN 4	UTRAN
	9th	PLMN 3	UTRAN
	10th	PLMN 3	GSM
	11th	PLMN 2	UTRAN
	12th	PLMN 2	GSM

The $EF_{PLMNwACT}$ list shall be empty according to 3GPP TS 31.102, Annex E.

The HPLMN (MCC+MNC) of the IMSI for the USIM is set to PLMN 1.

UE is previously registered on PLMN 2, before switched off.

Related ICS/IXIT statement(s)

None

Test procedure

Method C is applied.

a) The SS activates Cell 1, Cell 2, Cell 3 and Cell 4 and monitors the cells for random access requests from the UE.

b) The UE is switched on.

c) The SS waits for random access requests from the UE.

d) The SS starts timer of tmin = 2 minutes and tmax = (6 minutes + cell selection time) after the previous registration.

e) The SS waits for random access requests from the UE.

f) Cell 1, Cell 2 and Cell 3 are switched off.

g) The SS activates Cell 5, Cell 6 and Cell 7.

h) The SS waits for random access requests from the UE.

6.2.1.8a.1.5 Test Requirements

1. In step c), the response from the UE shall be on Cell 1 (registered PLMN). The indicated PLMN shall be PLMN 2 (UTRAN).

2. In step e), the response from the UE shall be on Cell 4 (7^{th} priority RAT for $EF_{OPLMNwAcT}$) between tmin = 2 minutes and tmax = (6 minutes + cell selection time) seconds after the previous registration. The indicated PLMN shall be PLMN5 (GSM).

3. In step h), the response from the UE shall be on Cell 5 (1^{st} priority RAT for $EF_{OPLMNwAcT}$) within a maximum of tmax = (6 minutes + cell selection time) after the previous registration. The indicated PLMN shall be PLMN8 (UTRAN).

6.2.1.8a.2 Selection of RAT for OPLMN; Different ITU regions; Limited service; Automatic mode

6.2.1.8a.2.1 Definition and applicability

Test to verify that at switch on or following recovery from lack of coverage, the UE selects the registered PLMN. The UE performs Multi-Band Multi-RAT PLMN selection between frequency bands of different ITU regions according to the "Operator Controlled PLMN Selector with Access Technology" priority list on the USIM. When the network rejects the idle update procedure with reject cause “PLMN not allowed” the UE shall attempt to obtain service on its HPLMN or higher priority PLMN according to the entries on the USIM.

Test is applicable for UEs supporting FDD and GSM and at least one frequency band of different ITU region in each RAT.

6.2.1.8a.2.2 Conformance requirement

1. If a message with cause value "PLMN not allowed" is received by an MS in response to an LR request from a VPLMN, that VPLMN is added to a list of "forbidden PLMNs" in the SIM and thereafter that VPLMN will not be accessed by the MS when in automatic mode.

2. The behaviour of the MS in the roaming not allowed state is dependent on the LR reject cause as shown in table 2 in clause 5. Additionally:

   - in automatic mode, "PLMN not allowed" and "roaming not allowed in this location area" cause the Automatic Network Selection procedure of clause 4.4.3.1.1 to be started;

3. At switch on, or following recovery from lack of coverage, the MS selects the registered PLMN or equivalent PLMN (if it is available) using all access technologies that the MS is capable of and if necessary (in the case of recovery from lack of coverage, see clause 4.5.2) attempts to perform a Location Registration.

…

If successful registration is achieved, the MS indicates the selected PLMN.

If there is no registered PLMN, or if registration is not possible due to the PLMN being unavailable or registration failure, the MS follows one of the following two procedures depending on its operating mode.

4. The MS selects and attempts registration on other PLMN/access technology combinations, if available and allowable, in the following order:

   i) either the HPLMN (if the EHPLMN list is not present or is empty) or the highest priority EHPLMN that is available (if the EHPLMN list is present) ;

   ii) each PLMN/access technology combination in the "User Controlled PLMN Selector with Access Technology" data file in the SIM (in priority order);

   iii) each PLMN/access technology combination in the "Operator Controlled PLMN Selector with Access Technology" data file in the SIM (in priority order);

   …

   If successful registration is achieved, the MS indicates the selected PLMN.

References

1. TS 23.122, clause 3.1, 4.3.3, 4.4.3.1.

NOTE: TS 31.102 defines the USIM fields.

6.2.1.8a.2.3 Test purpose

1. To verify that in Automatic Network Selection Mode Procedure:

   1.1 the UE selects the registered PLMN using all access technologies that the UE is capable of.

   1.2 the UE selects the OPLMN RAT between frequency bands of different ITU regions according to the OPLMN RAT priority list on the USIM.

   1.3 the UE attempts to obtain service on its HPLMN or higher priority PLMN when registration attempt is rejected with "PLMN not allowed" cause.

6.2.1.8a.2.4 Method of test

Initial conditions

The UE is in automatic PLMN selection mode.

In the System Information broadcast in each cell, the neighbouring cell list does not contain any cell belonging to the other PLMN's.

The definition of each PLMN code is found in table above under section 6.2.1.8a

Step a-g:

Cell	CPICH_Ec [dBm/3.84 MHz] (FDD)	Test Channel	Frequency band used in ITU region (Note)	PLMN	Radio Access Technology
Cell 1	-70	1	A	PLMN 2	UTRAN
Cell 3	-76	2	A	PLMN 4	UTRAN
Note: The test may be executed with frequency bands of various ITU region combinations. Different FDD frequency bands shall be defined for the cells if the UE supports two FDD frequency bands of same ITU region (e.g. FDD II for Cell 1 and FDD V for Cell 3 for ITU region 2).					

Cell	RF signal level [dBm]	Test Channel	Frequency band used in ITU region (Note)	PLMN	Radio Access Technology
Cell 2	-48	1	A else B	PLMN 3	GSM
Cell 4	-52	2	B	PLMN 5	GSM
Note: The test may be executed with frequency bands of various ITU region combinations. GSM frequency band of ITU region B may be configured if the UE does not support any GSM frequency band of ITU region A.					

Step h-k:

Cell	CPICH_Ec [dBm/3.84 MHz] (FDD)	Test Channel	Frequency band used in ITU region (Note)	PLMN	Radio Access Technology
Cell 5	-70	3	A	PLMN 8	UTRAN
Cell 7	-76	4	A	PLMN 3	UTRAN
Note: The test may be executed with frequency bands of various ITU region combinations. Different FDD frequency bands shall be defined for the cells if the UE supports two FDD frequency bands of same ITU region (e.g. FDD II for Cell 7 and FDD V for Cell 5 for ITU region 2). Different FDD frequency bands shall be defined for FDD Cell 1 Cell 5 if the UE supports two FDD frequency bands of same ITU region (e.g. in case of ITU region 2 FDD II for Cell 1 and FDD V for Cell 5 may be configured).					

Cell	RF signal level [dBm]	Test Channel	Frequency band used in ITU region (Note)	PLMN	Radio Access Technology
Cell 6	-48	3	B	PLMN 7	GSM
Cell 4	-52	2	B	PLMN 5	GSM
Note: The test may be executed with frequency bands of various ITU region combinations. Different GSM frequency bands shall be defined for the cells if the UE supports two GSM frequency bands of same ITU region (e.g. in case of ITU region 1 GSM 900 for Cell 6 and GSM 1800 for Cell 4 may be configured).					

The UE is equipped with a USIM containing default values according to TS 34.108 section 8 except for those listed below.

USIM field	Priority	PLMN (Note)	Access Technology Identifier
$EF_{HPLMNwAcT}$	1st	PLMN 1 (ITU region A)	UTRAN
	2nd	PLMN 1 (ITU region A)	GSM
$EF_{OPLMNwAcT}$	1st	PLMN 8 (ITU region A)	UTRAN
	2nd	PLMN 8 (ITU region A)	GSM
	3rd	PLMN 7 (ITU region B)	GSM
	4th	PLMN 6 (ITU region B)	UTRAN
	5th	PLMN 6 (ITU region B)	GSM
	6th	PLMN 5 (ITU region B)	UTRAN
	7th	PLMN 5 (ITU region B)	GSM
	8th	PLMN 4 (ITU region A)	UTRAN
	9th	PLMN 3 (ITU region A else B)	UTRAN
	10th	PLMN 3 (ITU region A else B)	GSM
	11th	PLMN 2 (ITU region A)	UTRAN
	12th	PLMN 2 (ITU region A)	GSM
NOTE: 3rd digit of MNC value is equal to '1' if used PLMNs are for ITU region 2. ITU region B may be configured if the UE does not support any GSM frequency band of ITU region A.			

The $EF_{PLMNwACT}$ list shall be empty according to 3GPP TS 31.102, Annex E.

The HPLMN (MCC+MNC) of the IMSI for the USIM is set to PLMN 1 (ITU region A). 3rd digit of MNC value is equal to '1' if used PLMNs are for ITU region 2.

UE is previously registered on PLMN 2, before switched off (ITU region A). 3rd digit of MNC value is equal to '1' if used PLMNs are for ITU region 2.

Related ICS/IXIT statement(s)

None

Test procedure

Method C is applied.

a) The SS activates Cell 1, Cell 2, Cell 3 and Cell 4 and monitors the cells for random access requests from the UE.

b) The UE is switched on.

c) The SS waits for random access requests from the UE.

d) The registration attempt on Cell 1 is rejected by the SS using cause "PLMN not allowed" (#11).

e) The SS waits for the next random access requests from the UE.

f) The UE is switched off.

g) Cell 1, Cell 2 and Cell 3 are switched off.

h) The SS activates Cell 5, Cell 6 and Cell 7.

i) The SS waits for random access requests from the UE.

j) The registration attempt on Cell 4 is rejected by the SS using cause "PLMN not allowed" (#11).

k) The SS waits for the next random access requests from the UE.

6.2.1.8a.2.5 Test Requirements

1. In step c), the response from the UE shall be on Cell 1 (registered PLMN).
2. In step e), the response from the UE shall be on Cell 4 (7th priority RAT for $EF_{OPLMNwAcT}$) after rejection of previous registration attempt. The indicated PLMN shall be PLMN5 (GSM).
3. In step i), the response from the UE shall be on Cell 4 (registered PLMN).
4. In step k), the response from the UE shall be on Cell 5 (1st priority RAT for $EF_{OPLMNwAcT}$) after rejection of previous registration attempt. The indicated PLMN shall be PLMN8 (UTRAN).

6.2.1.8a.3 Selection of RAT for OPLMN; Different ITU regions; No service; Automatic mode

6.2.1.8a.3.1 Definition and applicability

Test to verify that at switch on or following recovery from lack of coverage, the UE selects the registered PLMN. If there is no registered PLMN or if registration is not possible due to the PLMN being unavailable the UE shall attempt to obtain service on its HPLMN or higher priority PLMN according to the entries on the USIM. The UE performs Multi-Band Multi-RAT PLMN selection between frequency bands of different ITU regions according to the "Operator Controlled PLMN Selector with Access Technology" priority list on the USIM.

Test is applicable for UEs supporting FDD and GSM and at least one frequency band of different ITU region in each RAT.

6.2.1.8a.3.2 Conformance requirement

1. At switch on, or following recovery from lack of coverage, the MS selects the registered PLMN or equivalent PLMN (if it is available) using all access technologies that the MS is capable of and if necessary (in the case of recovery from lack of coverage, see clause 4.5.2) attempts to perform a Location Registration.

   …

If successful registration is achieved, the MS indicates the selected PLMN.

If there is no registered PLMN, or if registration is not possible due to the PLMN being unavailable or registration failure, the MS follows one of the following two procedures depending on its operating mode.

2. The MS selects and attempts registration on other PLMN/access technology combinations, if available and allowable, in the following order:

i) either the HPLMN (if the EHPLMN list is not present or is empty) or the highest priority EHPLMN that is available (if the EHPLMN list is present) ;

ii) each PLMN/access technology combination in the "User Controlled PLMN Selector with Access Technology" data file in the SIM (in priority order);

iii) each PLMN/access technology combination in the "Operator Controlled PLMN Selector with Access Technology" data file in the SIM (in priority order);

…

If successful registration is achieved, the MS indicates the selected PLMN.

1. TS 23.122, clause 4.4.3.1.

NOTE: TS 31.102 defines the USIM fields.

6.2.1.8a.3.3 Test purpose

1. To verify that in Automatic Network Selection Mode Procedure:

1.1 the UE selects the registered PLMN using all access technologies that the UE is capable of.

1.2 the UE selects the OPLMN RAT between frequency bands of different ITU regions according to the OPLMN RAT priority list on the USIM.

1.3 the UE attempts to obtain service on its HPLMN or higher priority PLMN when following recovery from lack of coverage (registration not possible due to the PLMN being unavailable).

6.2.1.8a.3.4 Method of test

Initial conditions

The UE is in automatic PLMN selection mode.

In the System Information broadcast in each cell, the neighbouring cell list does not contain any cell belonging to the other PLMN's.

The definition of each PLMN code is found in table above under section 6.2.1.8a

Step a-f:

Cell	CPICH_Ec [dBm/3.84 MHz] (FDD)	Test Channel	Frequency band used in ITU region (Note)	PLMN	Radio Access Technology
Cell 1	-70	1	A	PLMN 2	UTRAN
Cell 3	-76	2	A	PLMN 4	UTRAN
Note: The test may be executed with frequency bands of various ITU region combinations. Different FDD frequency bands shall be defined for the cells if the UE supports two FDD frequency bands of same ITU region (e.g. FDD II for Cell 1 and FDD V for Cell 3 for ITU region 2).					

Cell	RF signal level [dBm]	Test Channel	Frequency band used in ITU region (Note)	PLMN	Radio Access Technology
Cell 2	-48	1	A else B	PLMN 3	GSM
Cell 4	-52	2	B	PLMN 5	GSM
Note: The test may be executed with frequency bands of various ITU region combinations. GSM frequency band of ITU region B may be configured if the UE does not support any GSM frequency band of ITU region A.					

Step g-i:

Cell	CPICH_Ec [dBm/3.84 MHz] (FDD)	Test Channel	Frequency band used in ITU region (Note)	PLMN	Radio Access Technology
Cell 5	-70	3	A	PLMN 8	UTRAN
Cell 7	-76	4	A	PLMN 3	UTRAN
Note: The test may be executed with frequency bands of various ITU region combinations. Different FDD frequency bands shall be defined for the cells if the UE supports two FDD frequency bands of same ITU region (e.g. FDD II for Cell 7 and FDD V for Cell 5 for ITU region 2). Different FDD frequency bands shall be defined for FDD Cell 1 and Cell 5 if the UE supports two FDD frequency bands of same ITU region (e.g. in case of ITU region 2 FDD II for Cell 1 and FDD V for Cell 5 may be configured).					

Cell	RF signal level [dBm]	Test Channel	Frequency band used in ITU region (Note)	PLMN	Radio Access Technology
Cell 6	-48	3	B	PLMN 7	GSM
Cell 4	-52	2	B	PLMN 5	GSM
Note: The test may be executed with frequency bands of various ITU region combinations.					

The UE is equipped with a USIM containing default values according to TS 34.108 section 8 except for those listed below.

USIM field	Priority	PLMN (Note)	Access Technology Identifier
$EF_{HPLMNwAcT}$	1st	PLMN 1 (ITU region A)	UTRAN
	2nd	PLMN 1 (ITU region A)	GSM
$EF_{OPLMNwAcT}$	1st	PLMN 8 (ITU region A)	UTRAN
	2nd	PLMN 8 (ITU region A)	GSM
	3rd	PLMN 7 (ITU region B)	GSM
	4th	PLMN 6 (ITU region B)	UTRAN
	5th	PLMN 6 (ITU region B)	GSM
	6th	PLMN 5 (ITU region B)	UTRAN
	7th	PLMN 5 (ITU region B)	GSM
	8th	PLMN 4 (ITU region A)	UTRAN
	9th	PLMN 3 (ITU region A else B)	UTRAN
	10th	PLMN 3 (ITU region A else B)	GSM
	11th	PLMN 2 (ITU region A)	UTRAN
	12th	PLMN 2 (ITU region A)	GSM
NOTE: 3rd digit of MNC value is equal to '1' if used PLMNs are for ITU region 2. ITU region B may be configured if the UE does not support any GSM frequency band of ITU region A.			

The $EF_{PLMNwACT}$ list shall be empty according to 3GPP TS 31.102, Annex E. The HPLMN (MCC+MNC) of the IMSI for the USIM is set to PLMN 1 (ITU region A). 3rd digit of MNC value is equal to '1' if used PLMNs are for ITU region 2.

UE is previously registered on PLMN 2, before switched off (ITU region A). 3rd digit of MNC value is equal to '1' if used PLMNs are for ITU region 2.

Test procedure

Method C is applied.

a) The SS activates Cell 1, Cell 2, Cell 3 and Cell 4 and monitors the cells for random access requests from the UE.

b) The UE is switched on.

c) The SS waits for random access requests from the UE.

d) Cell 1 is switched off by the SS, after the previous registration.

e) The SS waits for random access requests from the UE.

f) Cell 2 and Cell 3 are switched off by the SS.

g) The SS activates Cell 5, Cell 6 and Cell 7 after the previous test step.

h) Cell 4 is switched off by the SS.

i) The SS waits for random access requests from the UE.

6.2.1.8a.3.5 Test Requirements

1. In step c), the response from the UE shall be on Cell 1 (registered PLMN). The indicated PLMN shall be PLMN 2 (UTRAN).

2. In step e), the response from the UE shall be on Cell 4 (7th priority RAT for $EF_{OPLMNwAcT}$). The indicated PLMN shall be PLMN5 (GSM).

3. In step i), the response from the UE shall be on Cell 5 (1st priority RAT for $EF_{OPLMNwAcT}$). The indicated PLMN shall be PLMN8 (UTRAN).

6.2.1.9 Selection of "Other PLMN / access technology combinations"; Automatic mode

6.2.1.9.1 Definition

Test to verify that if neither RPLMN, HPLMN, UPLMN nor OPLMN is available, the UE tries to obtain registration on "Other PLMN/access technology combinations with received high quality signal in random order".

6.2.1.9.2 Conformance requirement

1. Automatic Network Selection Mode Procedure:

   The MS selects and attempts registration on other PLMNs, if available and allowable in the following order:

   1.1 HPLMN (if not previously selected);

   1.2 Each PLMN in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

   1.3 Each PLMN in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

   1.4 Other PLMN/access technology combinations with received high quality signal in random order;

   1.5 Other PLMN/access technology combinations in order of decreasing signal quality.

In 1.5, the MS shall order the PLMN/access technology combinations in order of decreasing signal quality within each access technology. The order between PLMN/access technology combinations with different access technologies is an MS implementation issue.

If successful registration is achieved, the MS indicates the selected PLMN.

If registration cannot be achieved because no PLMNs are available and allowable, the MS indicates "no service" to the user, waits until a new PLMN is available and allowable and then repeats the procedure.

If there were one or more PLMNs which were available and allowable, but an LR failure made registration on those PLMNs unsuccessful or an entry in the "forbidden LAs for regional provision of service" list prevented a registration attempt, the MS selects the first such PLMN again and enters a limited service state.

2. UTRA case: The UE shall scan all RF channels in the UTRA band according to its capabilities to find available PLMNs. On each carrier, the UE shall search for the strongest cell according to the cell search procedures (for FDD, see TS 25.214, and TDD, see TS 25.224) and read its system information, in order to find out which PLMN the cell belongs to. If the UE can read the PLMN identity, the found PLMN shall be reported to the NAS as a high quality PLMN (but without the RSCP value), provided that the following high quality criterion is fulfilled:

   - For an FDD cell, the measured primary CPICH RSCP value shall be greater than or equal to -95 dBm.
   - For a TDD cell, the measured P-CCPCH RSCP shall be greater than or equal to –84 dBm.

   Found PLMNs that do not satisfy the high quality criterion, but for which the UE has been able to read the PLMN identities are reported to the NAS together with the CPICH RSCP value for UTRA FDD cells and P-CCPCH RSCP for UTRA TDD cells.

3. GSM case: A PLMN shall be understood to be received with high quality signal if the signal level is above -85 dBm.

2. TS 25.304, clause 5.1.2.2.
3. TS 03.22, clause 4.4.3.

NOTE: TS 31.102 defines the USIM fields.

6.2.1.9.3 Test purpose

1. To verify that if neither RPLMN, HPLMN, UPLMN nor OPLMN is available, the UE tries to obtain registration on "Other PLMN/access technology combinations with received high quality signal in random order".

6.2.1.9.4 Method of test

Initial conditions

The UE is in automatic PLMN selection mode.

Cell levels are from tables 6.3, 6.4 and 6.5.

Cell	CPICH_Ec [dBm/3.84 MHz] (FDD)	P-CCPCH_RSCP [dBm] (TDD)	"High Quality signal"	Test Channel	PLMN	Radio Access Technology
Cell 1	-80	-69	Yes	1	PLMN 7	UTRAN
Cell 3	-80	-69	Yes	2	PLMN 9	UTRAN

Cell	RF signal level [dBm]	"High Quality signal"	Test Channel	PLMN	Radio Access Technology
Cell 2	-65	Yes	1	PLMN 8	GSM

UE is previously registered on PLMN7, before switched off.

Test procedure

Method C is applied.

a) The SS activates cells 1-3 and monitors the cells for random access requests from the UE.

b) The UE is switched on.

c) The SS waits for random access requests from the UE.

d) The cell on which a response was received, is switched off.

e) Step c-d) is repeated until the UE informs that no network is available.

6.2.1.9.5 Test Requirements

1) In step c), the displayed PLMN is noted.

2) When the test procedure has finished, the noted PLMNs shall have appeared in the following order: PLMN7 first, then PLMN8 or PLMN9 in random order.

6.2.1.10 Void

6.2.1.11 Selection of PLMN and RAT in shared network environment, Manual Mode

6.2.1.11.1 Definition

Test to verify that the UE can present the available PLMNs in priority order to the user when asked to do so in multi-mode Shared Network environment (Manual Mode). This includes PLMNs broadcasted in UTRAN cells (IE “PLMN Identity”, UTRAN IE “Multiple PLMN list”) and in GSM cells. The test also verifies that displayed PLMNs can be selected by the user and that the UE attempts to access the selected PLMN. After successful registration, the selected PLMN shall be displayed to the user. The order of the displayed PLMNs shall be as specified by TS 23.122.

6.2.1.11.2 Conformance requirement

1a. At switch on or recovery from lack of coverage

At switch on, or following recovery from lack of coverage, the MS selects the registered PLMN or equivalent PLMN (if it is available) using all access technologies that the MS is capable of and if necessary (in the case of recovery from lack of coverage, see clause 4.5.2) attempts to perform a Location Registration.

EXCEPTION: In A/Gb mode an MS with voice capability, shall not search for CPBCCH carriers. In A/Gb mode an MS not supporting packet services shall not search for CPBCCH carriers.

If successful registration is achieved, the MS indicates the selected PLMN.

If there is no registered PLMN, or if registration is not possible due to the PLMN being unavailable or registration failure, the MS follows one of the following two procedures depending on its operating mode.

EXCEPTION: If registration is not possible on recovery from lack of coverage due to the registered PLMN being unavailable, a MS attached to GPRS services may, optionally, continue looking for the registered PLMN for an implementation dependent time.

NOTE: A MS attached to GPRS services should use the above exception only if one or more PDP contexts are currently active.

1b. At switch on, or following recovery from lack of coverage, the MS selects the registered PLMN or equivalent PLMN (if it is available) using all access technologies that the MS is capable of and if necessary (in the case of recovery from lack of coverage, see clause 4.5.2) attempts to perform a Location Registration.

EXCEPTION: In A/Gb mode an MS with voice capability, shall not search for CPBCCH carriers. In A/Gb mode an MS not supporting packet services shall not search for CPBCCH carriers.

If successful registration is achieved, the MS indicates the selected PLMN.

If there is no registered PLMN, or if registration is not possible due to the PLMN being unavailable or registration failure, the MS follows one of the following two procedures depending on its PLMN selection operating mode.

EXCEPTION: At switch on, if the MS is in manual mode and neither registered PLMN nor PLMN that is equivalent to it is available but EHPLMN is available, then instead of performing the manual network selection mode procedure of clause 4.4.3.1.2 the MS may select and attempt registration on the highest priority EHPLMN. If the EHPLMN list is not available or is empty and the HPLMN is available, then the MS may select and attempt registration on the HPLMN. The MS shall remain in manual mode.

NOTE 1: If successful registration is achieved, then the current serving PLMN becomes the registered PLMN and the MS does not store the previous registered PLMN for later use.

EXCEPTION: If registration is not possible on recovery from lack of coverage due to the registered PLMN being unavailable, an MS attached to GPRS services may, optionally, continue looking for the registered PLMN for an implementation dependent time.

NOTE2: An MS attached to GPRS services should use the above exception only if one or more PDP contexts are currently active.

2. Manual Network Selection Mode Procedure:

The MS indicates whether there are any PLMNs, which are available using all supported access technologies. This includes PLMNs in the "forbidden PLMNs" list and PLMNs which only offer services not supported by the MS. An MS which supports GSM COMPACT shall also indicate GSM COMPACT PLMNs (which use PBCCH).

If displayed, PLMNs meeting the criteria above are presented in the following order:

i)- HPLMN;

ii)- PLMN/access technology combinations contained in the " User Controlled PLMN Selector with Access Technology " data file in the SIM (in priority order);

iii)- PLMN/access technology combinations contained in the "Operator Controlled PLMN Selector with Access Technology" data file in the SIM (in priority order);

iv)- other PLMN/access technology combinations with received high quality signal in random order;

v)- other PLMN/access technology combinations in order of decreasing signal quality.

In ii and iii, an MS using a SIM without access technology information storage (i.e. the "User Controlled PLMN Selector with Access Technology" and the "Operator Controlled PLMN Selector with Access Technology" data files are not present) shall instead present the PLMNs contained in the "PLMN Selector" data file in the SIM (in priority order).

In v, requirement h) in clause 4.4.3.1.1 applies.

In GSM COMPACT, the non support of voice services shall be indicated to the user.

The user may select his desired PLMN and the MS then initiates registration on this PLMN using the access technology chosen by the user for that PLMN or using the highest priority available access technology for that PLMN, if the associated access technologies have a priority order. (This may take place at any time during the presentation of PLMNs). For such a registration, the MS shall ignore the contents of the "forbidden LAs for roaming", "forbidden LAs for regional provision of service", "forbidden PLMNs for GPRS service" and "forbidden PLMNs" lists.

Once the UE has registered on a PLMN selected by the user, the UE shall not automatically register on a different PLMN unless:

i) the new PLMN is declared as an equivalent PLMN by the registered PLMN; or

ii) the user selects automatic mode.

NOTE 1: It is an MS implementation option whether to indicate access technologies to the user. If the MS does display access technologies, then the access technology used should be the access technology chosen by the user for that PLMN. If the MS does not display access technologies, then the access technology chosen for a particular PLMN should be the highest priority available access technology for that PLMN, if the associated access technologies have a priority order.

If the user does not select a PLMN, the selected PLMN shall be the one that was selected before the PLMN selection procedure started. If no such PLMN was selected or that PLMN is no longer available, then the MS shall attempt to camp on any acceptable cell and enter the limited service state.

NOTE 2: High quality signal is defined in the appropriate AS specification.

3. If a "PLMN not allowed" message is received by an MS in response to an LR request from a VPLMN, that VPLMN is added to a list of "forbidden PLMNs" in the SIM and thereafter that VPLMN will not be accessed by the MS when in automatic mode. A PLMN is removed from the "forbidden PLMNs" list if, after a subsequent manual selection of that PLMN, there is a successful LR. This list is retained when the MS is switched off or the SIM is removed. The HPLMN shall not be stored on the list of "forbidden PLMNs".

1b. TS 23.122 (Rel-7), clause 4.4.3.1

2. TS 23.122, clause 4.4.3.1.2

NOTE: TS 31.102 defines the USIM fields.

6.2.1.11.3 Test purpose

1. To verify that all PLMNs available are displayed to the user in multi-mode Shared Network environment (Manual Mode). This includes for the UTRAN cells, PLMNs broadcasted in IE “PLMN Identity” and IE “Multiple PLMN list”, as well as the PLMNs broadcasted by GSM cells. The available PLMNs shall be displayed in priority order according to TS 23.122.

2. To verify that it is possible to manually select any PLMN, regardless of RAT, from the displayed list, and that the UE subsequently attempts to register on the selected PLMN/RAT.

3. To verify that the UE in general behaves according to TS 23.122 in multi-mode Shared Network environment (Manual Mode).

6.2.1.11.4 Method of test

Initial conditions

Cell levels are from table 6.5 (GSM) and 6.3 (UTRAN FDD).

Cell	RF signal level [dBm]	Test Channel	PLMN	Radio Access Technology
Cell 9	-48	1	PLMN 9	GSM
Cell 10	-50	2	PLMN 10	GSM

Cell	CPICH_Ec [dBm/3.84 MHz] (FDD)	Test Channel	PLMN	Radio Access Technology
Cell 1	-60	1	See below	UTRAN
Cell 4	-65	2	See below	UTRAN

The reference system configuration from TS 34.108 clause 6.1 is used in the UTRAN cells, with the following modifications:

Master Information Block

- MIB value tag	1Set to (Current MIB value tag + 1)
- Supported PLMN types	

- PLMN type	GSM-MAP
- PLMN identity	
- MCC digit	See table below
- MNC digit	See table below
- Multiple PLMN List	
- MIB PLMN Identity	See table below
- Multiple PLMNs (1)	
- MCC	See table below
- MNC	See table below
- Multiple PLMNs (2)	
- MCC	See table below
- MNC	See table below

The MIB PLMN Identity and PLMN codes broadcasted on the BCCH in each cell shall be configured as defined in the table below.

Cell	MIB PLMN Identity	PLMN Identity		Multiple PLMNs (1)		Multiple PLMNs (2)	
		MCC digits	MNC digits	MCC digits	MNC digits	MCC digits	MNC digits
1	TRUE	PLMN 1	PLMN 1	-	PLMN 2	-	PLMN 3
4	FALSE	PLMN 4	PLMN 4	-	PLMN 5	-	PLMN 10

NOTE: "–" (dash) denotes "not present"

The definition of each PLMN code is found in table below.

PLMN	MCC digit			MNC digit		
	1	**2**	**3**	**1**	**2**	**3**
1	0	0	1	0	1	-
2	0	0	1	0	2	-
3	0	0	1	0	3	-
4	0	0	1	0	4	-
5	0	0	1	0	5	-
6	0	0	1	0	6	-
9	0	0	1	0	9	-
10	0	0	1	1	0	-

NOTE: "–" (dash) denotes "not present"

The UE is in manual PLMN selection mode and equipped with a USIM containing default values except for those listed below. The UE has successfully selected a PLMN in manual PLMN selection mode. The HPLMN (MCC+MNC) of the IMSI for the USIM is set to PLMN1.

USIM field	Priority	PLMN	Access Technology Identifier
$EF_{PLMNwAcT}$	1st	PLMN 10	GSM
	2nd	PLMN 9	GSM
$EF_{OPLMNwAcT}$	1st	PLMN 2	UTRAN

Test procedure

Method C is applied.

a) The SS activates all cells and monitors the cells for random access requests from the UE.

b) The UE is switched on. Instead of performing the manual network selection mode procedure the UE may select and attempt registration on the HPLMN (PLMN 1). The SS shall complete the registration procedure, the UE shall remain in manual mode and the test execution shall continue.

c) PLMN 9 shall be selected when the list is displayed.

d) The SS waits for random access requests from the UE.

e) Cell 9 is switched off.

f) PLMN 2 shall be selected when the list is displayed.

g) The SS waits for random access requests from the UE.

h) Cell 1 is switched off.

i) PLMN 10 shall be selected when the list is displayed.

j) The SS waits for random access requests from the UE.

6.2.1.11.5 Test Requirements

1) In step c), the list shall be presented. The priority shall be as follows PLMN 1, PLMN 10, PLMN 9, PLMN 2, other PLMNs.

2) In step d), the response from the UE shall be on Cell 9. The displayed PLMN shall be PLMN 9. If indication of RAT is supported, the displayed PLMN shall be PLMN 9 (GSM)

3) In step f), the list shall be presented. The priority shall be as follows: PLMN 1, PLMN 10, PLMN 2, other PLMNs.

4) In step g), the response from the UE shall be on Cell 1. The displayed PLMN shall be PLMN 2. If indication of RAT is supported, the displayed PLMN shall be PLMN 2 (UTRAN).

5) In step i), the list shall be presented. The priority shall be as follows: PLMN 10, PLMN 5.

6) In step j), the response from the UE shall be on either Cell 4 or Cell 10. The displayed PLMN shall be PLMN 10.

6.2.2 Cell selection and reselection

6.2.2.1 Cell reselection if cell becomes barred or S<0; UTRAN to GSM

6.2.2.1.1 Definition

Test to verify that if both a GSM and UTRAN network is available, the UE performs cell reselection from UTRAN to GSM if the UTRAN cell becomes barred or S falls below zero.

6.2.2.1.2 Conformance requirement

1. When camped on a cell, the UE shall regularly search for a better cell according to the cell reselection criteria. If a better cell is found, that cell is selected. The change of cell may imply a change of RAT.

2. A "suitable cell" is a cell on which the UE may camp on to obtain normal service. Such a cell shall fulfil all the following requirements.

   2.1 The cell is part of the selected PLMN or, of a PLMN considered as equivalent by the UE according to the information provided by the NAS.

   2.2 The cell is not barred.

   2.3 The cell is not part of the list of "forbidden LAs for roaming".

   2.4 The cell selection criteria are fulfilled.

3. When camped normally, the UE shall execute the cell reselection evaluation process on the following occasions/triggers:

   3.1 UE internal triggers, so as to meet performance as specified in TS 25.133 for FDD and TS 25.123 for TDD.

   3.2 When information on the BCCH used for the cell reselection evaluation procedure has been modified.

4. Cell Reselection Criteria:

4.1 The UE shall perform ranking of all cells that fulfil the S criterion.

4.2 The cells shall be ranked according to the R criteria, deriving Qmeas,n and Qmeas,s and calculating the R values using CPICH RSCP, P-CCPCH RSCP and the averaged received signal level as specified in TS 25.133 and TS 25.123 for FDD, TDD and GSM cells, respectively.

The offset $Qoffset1_{s,n}$ is used for $Qoffset_{s,n}$ to calculate R_n, the hysteresis $Qhyst1_s$ is used for $Qhyst_s$ to calculate R_s.

If the usage of HCS is indicated in system information, $TEMP_OFFSET1_n$ is used for $TEMP_OFFSET_n$ to calculate TO_n. If it is indicated in system information that HCS is not used, $TEMP_OFFSET_n$ is not applied when calculating R_n. The best ranked cell is the cell with the highest R value.

If a TDD or GSM cell is ranked as the best cell, then the UE shall perform cell re-selection to that TDD or GSM cell.

4.3 In all cases, the UE shall reselect the new cell, only if the following conditions are met:

- the new cell is better ranked than the serving cell during a time interval Treselection.
- more than 1 second has elapsed since the UE camped on the current serving cell.

References

1. TS 25.304, clause 5.2.1.
2. TS 25.304, clause 4.3.
3. TS 25.304, clause 5.2.5.1.
4. TS 25.304, clause 5.2.6.1.4.

6.2.2.1.3 Test purpose

1. To verify that the UE performs cell reselection from UTRAN to GSM on the following occasions:

   1.1 Serving cell becomes barred.

   1.2 S<0 for serving cell.

6.2.2.1.4 Method of test

Initial conditions

UE is idle updated on cell 1.

All cells belong to the same PLMN.

The Inter-RAT Cell Info List of Cell 1 (UTRAN) refers to Cell 9 (GSM) and Cell 10 (GSM).

The 3G Neighbour Cell Description of Cell 9 (GSM) and Cell 10 (GSM) refers to Cell 1 (UTRAN)

Step a-c:

Parameter	Unit	Cell 1 (UTRAN)
Test Channel		1
CPICH_Ec (FDD)	dBm / 3.84 MHz	-60
P-CCPCH_RSCP (TDD)	dBm	-60
Qrxlevmin	dBm	-79
Srxlev*	dBm	19
CellBarred		Not barred
S-search RAT	dB	+20

Parameter	Unit	Cell 9 (GSM)	Cell 10 (GSM)
Test Channel		1	2
RF Signal Level	dBm	-80	-87
RXLEV_ACCESS_MIN	dBm	-100	-100
C1*	dBm	20	13
FDD_Qmin	dB	-20	-20
FDD_Qoffset	dBm	0	0

Step d-f:

Parameter	Unit	Cell 1 (UTRAN)
CellBarred		Not barred -> Barred
Tbarred	s	80

Step g:

Parameter	Unit	Cell 1 (UTRAN)
CPICH_Ec (FDD)	dBm/ 3.84 MHz	-90
P-CCPCH_RSCP (TDD)	dBm	-90
Srxlev*	dB	19->-11

Test procedure

Method B is applied.

a) The SS activates cells 9, and 10. The SS monitors cells 9 and 10 for random access requests from the UE.

b) Void

c) Void

d) The SS sets Cell 1 to be barred. The SS notifies UE of the BCCH modification

e) The SS waits for random access request from the UE.

f) The UE is switched off. The SS sets Cell 1 to be not barred

g) Step a-e) is repeated except that in step d), the signal level is reduced, so S will become negative instead of being barred.

6.2.2.1.5 Test Requirements

1) In step a), after the UE has responded on Cell 1, it shall not respond on any other cell within 1 min.

2) In step e), the UE shall respond on Cell 9.

3) In step g), the UE shall respond on Cell 9 after the signal level is reduced.

6.2.2.1a Cell reselection if cell becomes barred or S<0; UTRAN(1.28Mcps TDD) to GSM

6.2.2.1a.1 Definition

Test to verify that if both a GSM and UTRAN network is available, the UE performs cell reselection from UTRAN to GSM if the UTRAN cell becomes barred or S falls below zero.

6.2.2.1a.2 Conformance requirement

1. When camped on a cell, the UE shall regularly search for a better cell according to the cell reselection criteria. If a better cell is found, that cell is selected. The change of cell may imply a change of RAT.

2. A "suitable cell" is a cell on which the UE may camp on to obtain normal service. Such a cell shall fulfil all the following requirements.

   2.1 The cell is part of the selected PLMN or, of a PLMN considered as equivalent by the UE according to the information provided by the NAS.

   2.2 The cell is not barred.

   2.3 The cell is not part of the list of "forbidden LAs for roaming".

   2.4 The cell selection criteria are fulfilled.

3. When camped normally, the UE shall execute the cell reselection evaluation process on the following occasions/triggers:

   3.1 UE internal triggers, so as to meet performance as specified in TS 25.133 for FDD and TS 25.123 for TDD.

   3.2 When information on the BCCH used for the cell reselection evaluation procedure has been modified.

4. Cell Reselection Criteria:

   4.1 The UE shall perform ranking of all cells that fulfil the S criterion.

   4.2 The cells shall be ranked according to the R criteria, deriving Qmeas,n and Qmeas,s and calculating the R values using CPICH RSCP, P-CCPCH RSCP and the averaged received signal level as specified in TS 25.133 and TS 25.123 for FDD, TDD and GSM cells, respectively.

   The offset $Qoffset1_{s,n}$ is used for $Qoffset_{s,n}$ to calculate R_n, the hysteresis $Qhyst1_s$ is used for $Qhyst_s$ to calculate R_s.

   If the usage of HCS is indicated in system information, $TEMP_OFFSET1_n$ is used for $TEMP_OFFSET_n$ to calculate TO_n. If it is indicated in system information that HCS is not used, $TEMP_OFFSET_n$ is not applied when calculating R_n. The best ranked cell is the cell with the highest R value.

   If a TDD or GSM cell is ranked as the best cell, then the UE shall perform cell re-selection to that TDD or GSM cell.

   4.3 In all cases, the UE shall reselect the new cell, only if the following conditions are met:

   - the new cell is better ranked than the serving cell during a time interval Treselection.
   - more than 1 second has elapsed since the UE camped on the current serving cell.

3. TS 25.304, clause 5.2.5.1.
4. TS 25.304, clause 5.2.6.1.4.

6.2.2.1a.3 Test purpose

1. To verify that the UE performs cell reselection from UTRAN to GSM on the following occasions:

   1.1 Serving cell becomes barred.

   1.2 S<0 for serving cell.

6.2.2.1a.4 Method of test

Initial conditions

UE is idle updated on cell 1.

All cells belong to the same PLMN.

The Inter-RAT Cell Info List of Cell 1 (UTRAN) refers to Cell 9 (GSM) and Cell 10 (GSM).

The 3G Neighbour Cell Description of Cell 9 (GSM) and Cell 10 (GSM) refers to Cell 1 (UTRAN)

Step a-c:

Parameter	Unit	Cell 1 (UTRAN)
Test Channel		1
P-CCPCH_RSCP (TDD)	dBm	-65
Qrxlevmin	dBm	-84
Srxlev*	dBm	19
CellBarred		Not barred
S-search RAT	dB	+20

Parameter	Unit	Cell 9 (GSM)	Cell 10 (GSM)
Test Channel		1	2
RF Signal Level	dBm	-80	-87
RXLEV_ACCESS_MIN	dBm	-100	-100
C1*	dBm	20	13
TDD_Qoffset	dBm	-60	-60

Step d-f:

Parameter	Unit	Cell 1 (UTRAN)
CellBarred		Not barred -> Barred
Tbarred	s	80

Step g:

Parameter	Unit	Cell 1 (UTRAN)
P-CCPCH_RSCP (TDD)	dBm	-95
Srxlev*	dB	19->-11

Test procedure

Method B is applied.

a) The SS activates cells 9, and 10. The SS monitors cells 9 and 10 for random access requests from the UE.

b) Void

c) Void

d) The SS sets Cell 1 to be barred. The SS notifies UE of the BCCH modification

e) The SS waits for random access request from the UE.

f) The UE is switched off. The SS sets Cell 1 to be not barred

g) Step a-e) is repeated except that in step d), the signal level is reduced, so S will become negative instead of being barred.

6.2.2.1a.5 Test Requirements

1) In step a), after the UE has responded on Cell 1, it shall not respond on any other cell within 1 min.

2) In step e), the UE shall respond on Cell 9.

3) In step g), the UE shall respond on Cell 9 after the signal level is reduced.

6.2.2.2 Cell reselection if cell becomes barred or C1<0; GSM to UTRAN

6.2.2.2.1 Definition

Test to verify that if both a GSM and UTRAN network is available, the UE performs cell reselection from GSM to UTRAN if the GSM cell becomes barred or the path loss criterion C1 falls below zero for a period of 5 s.

6.2.2.2.2 Conformance requirement

1. At least every 5 s the MS shall calculate the value of C1 and C2 for the serving cell and re-calculate C1 and C2 values for non serving cells (if necessary). The MS shall then check whether:

   1.1 The path loss criterion (C1) for current serving cell falls below zero for a period of 5 s. This indicates that the path loss to the cell has become too high.

2. While camped on a cell of the registered PLMN ("camped normally"), the MS may need to select a different cell ("normal cell reselection" state). The following events trigger a cell reselection:

   2.1 The path loss criterion parameter C1 (see TS 03.22, clause 3.6) indicates that the path loss to the cell has become too high;

   2.2 The cell camped on (current serving cell) has become barred.

References

1. TS 05.08, clause 6.6.2.

2. TS 03.22, clause 4.5.

6.2.2.2.3 Test purpose

1. To verify that the UE performs cell reselection from GSM to UTRAN on the following occasions:

   1.1 Serving cell becomes barred.

   1.2 The path loss criterion C1 for serving cell falls below zero for a period of 5 s.

6.2.2.2.4 Method of test

Initial conditions

UE is idle updated on Cell 9.

Cell 9:

The SS transmitted system information for Cell 1 and Cell 2 shall be according to TS 34.108, clause 6.1.4 with the following exceptions:

The 3G Neighbour Cell Description of Cell 9 (GSM) refers Cell 1 (UTRAN) and Cell 2 (UTRAN).

Cell 1 and Cell 2:

The SS transmitted system information for Cell 1 and Cell 2 shall be according to TS 34.108, clause 6.1.4 with the following exceptions:

The Inter-RAT Cell Info List of Cell 1 (UTRAN) and Cell 2 (UTRAN) refers to Cell 9 (GSM).

Step a-c:

Parameter	Unit	Cell 9 (GSM)
Test Channel		1
RF Signal Level	dBm	-50
RXLEV_ACCESS_MIN	dBm	-70
MS_TXPWR_MAX_CCH	dBm	Max. output power of UE
FDD_Qmin	dB	-20
FDD_Qoffset	dB	0
CELL_BAR_ACCESS		Not barred
C1*	dB	20

Parameter	Unit	Cell 1 (UTRAN)	Cell 2 (UTRAN)
P-CCPCH_RSCP (TDD)	dBm	-65	-72
CPICH_Ec (FDD)	dBm/3.84 MHz	-65	-72
Qrxlevmin	dBm	-101	-101
Srxlev*	dB	36	29

Step d-e:

Parameter	Unit	Cell 9 (GSM)
CELL_BAR_ACCESS		Not barred -> Barred

Step f-g:

Parameter	Unit	Cell 9 (GSM)
RF Signal Level	dBm	-50 -> -80 (4sec) -> -50
C1*	dB	20 -> -10 (4sec) -> 20

Step h:

Parameter	Unit	Cell 9 (GSM)
RF Signal Level	dBm	-50 -> -80
C1*	dB	20 -> -10

Test procedure

Method C is applied.

a) The SS activates cells 1, and 2. The SS monitors cells 1 and 2 for random access requests from the UE.

b) Void.

c) Void

d) The SS sets Cell 9 to be barred. The SS notifies UE of the BCCH modification

e) The SS waits for random access request from the UE.

f) The UE is switched off. The SS sets Cell 9 to be not barred and deactivates cells 1 and 2.

g) The UE is switched on. The SS waits until UE is idle updated on Cell 9.

h) Step a-e) is repeated except that in step d), the SS reduces signal level on Cell 9 to –80 dBm for 4 s and then raises the level back to –50 dBm (C1 becomes –10 dBm during this period).

i) The SS reduces signal level on Cell 9 to –80 dBm.

j) The SS waits for random access request from the UE.

6.2.2.2.5 Test Requirements

1) In step a), there shall not be any random access requests on any cell within 1 min.

2) In step e), the UE shall respond on Cell 1, the RRC Connection Request cause shall be "interRAT_CellReselection".

3) In step h), there shall be no access on Cell 1 within 30 s, after having reduced the signal level on Cell 9.

4) In step j), the UE shall respond on Cell 1, the RRC Connection Request cause shall be "interRAT_CellReselection".

6.2.2.2a Cell reselection if cell becomes barred or C1<0; GSM to UTRAN (1.28 Mcps TDD)

6.2.2.2a.1 Definition

Test to verify that if both a GSM and UTRAN network is available, the UE performs cell reselection from GSM to UTRAN if the GSM cell becomes barred or the path loss criterion C1 falls below zero for a period of 5 s.

6.2.2.2a.2 Conformance requirement

1. At least every 5 s the MS shall calculate the value of C1 and C2 for the serving cell and re-calculate C1 and C2 values for non serving cells (if necessary). The MS shall then check whether:

   1.1 The path loss criterion (C1) for current serving cell falls below zero for a period of 5 s. This indicates that the path loss to the cell has become too high.

2. While camped on a cell of the registered PLMN ("camped normally"), the MS may need to select a different cell ("normal cell reselection" state). The following events trigger a cell reselection:

   2.1 The path loss criterion parameter C1 (see TS 03.22, clause 3.6) indicates that the path loss to the cell has become too high;

   2.2 The cell camped on (current serving cell) has become barred.

References

1. TS 05.08, clause 6.6.2.

2. TS 03.22, clause 4.5.

6.2.2.2a.3 Test purpose

1. To verify that the UE performs cell reselection from GSM to UTRAN on the following occasions:

   1.1 Serving cell becomes barred.

   1.2 The path loss criterion C1 for serving cell falls below zero for a period of 5 s.

6.2.2.2a.4 Method of test

Initial conditions

UE is idle updated on Cell 9.

Cell 9:

The SS transmitted system information for Cell 1 and Cell 2 shall be according to TS 34.108, clause 6.1.4 with the following exceptions:

The 3G Neighbour Cell Description of Cell 9 (GSM) refers Cell 1 (UTRAN) and Cell 2 (UTRAN).

Cell 1 and Cell 2:

The SS transmitted system information for Cell 1 and Cell 2 shall be according to TS 34.108, clause 6.1.4 with the following exceptions:

The Inter-RAT Cell Info List of Cell 1 (UTRAN) and Cell 2 (UTRAN) refers to Cell 9 (GSM).

Step a-c:

Parameter	Unit	Cell 9 (GSM)
Test Channel		1
RF Signal Level	dBm	-50
RXLEV_ACCESS_MIN	dBm	-70
MS_TXPWR_MAX_CCH	dBm	Max. output power of UE
TDD_Qoffset	dBm	-69dbm
CELL_BAR_ACCESS		Not barred
C1*	dB	20

Parameter	Unit	Cell 1 (UTRAN)	Cell 2 (UTRAN)
P-CCPCH_RSCP (TDD)	dBm	-75	-80
Qrxlevmin	dBm	-101	-101
Srxlev*	dB	26	21

Step d-e:

Parameter	Unit	Cell 9 (GSM)
CELL_BAR_ACCESS		Not barred -> Barred

Step f-g:

Parameter	Unit	Cell 9 (GSM)
RF Signal Level	dBm	-50 -> -80 (4sec) -> -50
C1*	dB	20 -> -10 (4sec) -> 20

Step h:

Parameter	Unit	Cell 9 (GSM)
Test Channel		1
RF Signal Level	dBm	-50
RXLEV_ACCESS_MIN	dBm	-70
MS_TXPWR_MAX_CCH	dBm	Max. output power of UE
TDD_Qoffset	dB	-81
CELL_BAR_ACCESS		Not barred
C1*	dB	20

Test procedure

Method C is applied.

a) The SS activates cells 1, and 2. The SS monitors cells 1 and 2 for random access requests from the UE.

b) Void.

c) Void

d) The SS sets Cell 9 to be barred. The SS notifies UE of the BCCH modification

e) The SS waits for random access request from the UE.

f) The UE is switched off. The SS sets Cell 9 to be not barred and deactivates cells 1 and 2.

g) The UE is switched on. The SS waits until UE is idle updated on Cell 9.

h) Step a-e) is repeated except that in step d), the SS reduces signal level on Cell 9 to –80 dBm for 4 s and then raises the level back to –50 dBm (C1 becomes –10 dBm during this period).

i) The SS sets “TDD_Qoffset” to -81dbm. The SS notifies UE of the BCCH modification.

j) The SS waits for random access request from the UE.

6.2.2.2a.5 Test Requirements

1) In step a), there shall not be any random access requests on any cell within 1 min.

2) In step e), the UE shall respond on Cell 1, the RRC Connection Request cause shall be "interRAT_CellReselection".

3) In step h), there shall be no access on Cell 1 within 30 s, after having reduced the signal level on Cell 9.

4) In step j), the UE shall respond on Cell 1, the RRC Connection Request cause shall be "interRAT_CellReselection".

6.2.2.3 Cell reselection timings; GSM to UTRAN

6.2.2.3.1 Definition

Test to verify that the UE meets the cell reselection timing requirements when both a GSM and UTRAN network is available.

6.2.2.3.2 Conformance requirement

1. If the 3G Cell Reselection list (see TS 04.18) includes UTRAN frequencies, the MS shall, at least every 5 s update the value RLA_C for the serving cell and each of the at least 6 strongest non-serving GSM cells.

   1.1 The MS shall then reselect a suitable UTRAN cell if its measured RSCP value exceeds the value of RLA_C for the serving cell and all of the suitable non-serving GSM cells by the value XXX_Qoffset for a period of 5 s and, for FDD, the UTRAN cells measured Ec/No value is equal or greater than the value FDD_Qmin.

   - Ec/No and RSCP are the measured quantities.
   - FDD_Qmin and XXX_Qoffset are broadcast on BCCH of the serving cell. XXX indicates other radio access technology/mode.

   1.2 In case of a cell reselection occurring within the previous 15 s, XXX_Qoffset is increased by 5 dB.

   1.3 Cell reselection to UTRAN shall not occur within 5 s after the MS has reselected a GSM cell from an UTRAN cell if a suitable GSM cell can be found.

   1.4 If more than one UTRAN cell fulfils the above criteria, the UE shall select the cell with the greatest RSCP value.

2. The MS shall be able to identify and select a new best UTRAN cell on a frequency, which is part of the 3G Cell Reselection list, within 30 s after it has been activated under the condition that there is only one UTRAN frequency in the list and under good radio conditions.

   The allowed time is increased by 30 s for each additional UTRAN frequency in the 3G Cell Reselection list. However, multiple UTRAN cells on the same frequency in the neighbour cell list does not increase the allowed time.

NOTE: Definitions of measurements are in TS 25.215 and TS 25.101 for FDD mode, in TS 25.225 and TS 25.102 for TDD mode, clause 3.2 and TS 05.08, clause 6.1.

References

1. TS 05.08, clause 6.6.5.
2. TS 05.08, clause 6.6.4.

6.2.2.3.3 Test purpose

1. To verify that:

   1.1 The UE meets conformance requirement 1.1 and additionally, that no cell reselection is performed if the period is less than 5 s

   1.3 The UE meets conformance requirement 1.3.

6.2.2.3.4 Method of test

UE is idle updated on Cell 1.

Cell 9:

The SS transmitted system information for Cell 1 shall be according to TS 34.108, clause 6.1.4 with the following exceptions:

The 3G Neighbour Cell Description of Cell 9 (GSM) refers to Cell 1 (UTRAN).

0 | 1 < **TDD_MULTIRAT_REPORTING** : bit (2) >	0
0 | 1 < **TDD_REPORTING_OFFSET** : bit (3) >	0

Cell 1:

The SS transmitted system information for Cell 1 shall be according to TS 34.108, clause 6.1.4 with the following exceptions:

The Inter-RAT Cell Info List of Cell 1 (UTRAN) refers to Cell 9 (GSM).

Step a-c:

Parameter	Unit	Cell 9 (GSM)
Test Channel		1
RF Signal Level	dBm	-66
RXLEV_ACCESS_MIN	dBm	-100
MS_TXPWR_MAX_CCH	dBm	Max. output power of UE
FDD_Qmin	dBm	-20
FDD_Qoffset	dB	4

Parameter	Unit	Cell 1 (UTRAN)
Test Channel		1
CPICH_Ec (FDD)	dBm / 3.84 MHz	-74
P-CCPCH_RSCP (TDD)	dBm	-74
Qrxlevmin	dBm	-101
Srxlev*	dB	27
S-search RAT	dB	+20

Step d:

Parameter	Unit	Cell 9 (GSM)
RF Signal Level	dBm	-66 -> -85 (4 s) -> -66

Step f-g:

Parameter	Unit	Cell 9 (GSM)
RF Signal Level	dBm	-66 -> -83 (4 s) -> -66

Step h-i:

Parameter	Unit	Cell 9 (GSM)
RF Signal Level	dBm	-66 -> -83

Test procedure

NOTE: Step a-d): Test purpose 1.3. Step f-i): test purpose 1.1.

A combination of Method B and Method C is applied.

a) The SS activates Cell 9.

b) Void

c) Void.

d) Once the random access request is received on Cell 9, the SS starts paging the UE continuously on Cell 1, and changes the power level of cell 9 to -85 dBm for 4 s (RSCP will then exceed RLA_C value of Cell 9 by 11dB,

which is more than XXX_Qoffset+5dB) and then change back to -66 dBm and see if there is any random access request on cell 1 for 20 s. To avoid that the UE enters dedicated mode (performing the Location Update procedure) during this time, the SS rejects the random access received on Cell 9 with wait indication set to 30 s.

e) When the second random access request is received on Cell 9 (after 30 s), the SS stops paging and performs the Location Update procedure to register the UE on Cell 9.

f) The SS decreases the transmit level of Cell 9 to –83 dBm for a period of 4 s (RSCP will then exceed RLA_C value of Cell 9 by 9dB, which is more than XXX_Qoffset) and then changes the level back to –66 dBm.

g) The SS waits 20 s to see if there is any random access request from the UE on Cell 1.

h) The SS sets the transmit level of Cell 9 to –83 dBm.

i) The SS waits 20 s to see if there is any random access request from the UE on Cell 1. (The UE should revert to Cell 1 due to cell reselection).

j) The SS performs the Location Update procedure (or Routing Area Update procedure for UE that supports PS) to register the UE on Cell 1.

6.2.2.3.5 Test Requirements

1) In step d), there shall be no access on Cell 1.

2) In step g), there shall be no access on Cell 1.

3) In step i), the UE shall send random access on Cell 1.

6.2.2.3a Cell reselection timings; GSM to UTRAN (1.28 Mcps TDD)

6.2.2.3a.1 Definition

Test to verify that the UE meets the cell reselection timing requirements when both a GSM and UTRAN network is available.

6.2.2.3a.2 Conformance requirement

1. If the 3G Cell Reselection list includes UTRAN frequencies, the MS shall, at least every 5 s update the value RLA_C for the serving cell and each of the at least 6 strongest non serving GSM cells.

   1.1 The MS shall then reselect a suitable (see 3GPP TS 25.304) UTRAN cell if:

   - for a TDD cell the measured RSCP value is equal to or greater than TDD_Qoffset for a period of 5 s and
   - for an FDD cell the following criteria are all met for a period of 5 s:

     a) its measured RSCP value exceeds the value of RLA_C for the serving cell and all of the suitable (see 3GPP TS 43.022) non-serving GSM cells by the value FDD_Qoffset,

     b) its measured Ec/No value is equal or greater than the value FDD_Qmin - FDD_Qmin_Offset, and

     c) its measured RSCP value is equal to or greater than FDD_RSCP_threshold.

   1.2 In case of a cell reselection occurring within the previous 15 seconds, FDD_Qoffset or TDD_Qoffset is increased by 5 dB.

   - Ec/No and RSCP are the measured quantities, see subclause 8.1.5.
   - FDD_RSCP_threshold equals FDD_RSCPmin – min((P_MAX – 21 dBm), 3 dB) if FDD_RSCPmin is broadcast on the serving cell, else Qrxlevmin + Pcompensation + 10 dB, if these parameters are available, otherwise the default value of FDD_RSCPmin.
   - Qrxlevmin is the minimum required RX level in the UTRAN FDD cell (dBm), see 3GPP TS 25.304.
   - Pcompensation is max(UE_TXPWR_MAX_RACH – P_MAX, 0) (dB), see 3GPP TS 25.304.

- UE_TXPWR_MAX_RACH is the maximum TX power level an MS may use when accessing the UTRAN FDD cell on RACH (dBm), see 3GPP TS 25.304.

- P_MAX is the maximum RF output power of the MS (dBm) in UTRAN FDD mode, see 3GPP TS 25.304.

- FDD_Qmin, FDD_Qoffset and optionally FDD_RSCPmin and FDD_Qmin_Offset are broadcast on BCCH of the serving cell.

- TDD_Qoffset is broadcast on BCCH of the serving cell.

NOTE 1: The parameters required to determine if the UTRAN cell is suitable are broadcast on BCCH of the UTRAN cell. An MS may start reselection towards the UTRAN cell before decoding the BCCH of the UTRAN cell, leading to a short interruption of service if the UTRAN cell is not suitable.

NOTE 2: If FDD_RSCPmin is broadcast, optimum GSM to UTRAN reselection performance is achieved if UTRAN cells at UTRAN coverage border areas are planned for +24 dBm UE power.

NOTE 3: The parameter TDD_Qoffset is an absolute threshold for reselection towards a target UTRAN TDD cell.

The MS shall store the UTRAN cell RSCP suitability criterion parameters above, whenever decoded from a UTRAN FDD cell of an equivalent PLMN while attempting to camp on the UTRAN FDD cell. The most recently decoded parameters from one UTRAN FDD cell of an equivalent PLMN are valid reselection criteria towards all UTRAN FDD cells. This list of parameters shall be cleared after PLMN selection (see 3GPP TS 23.122).

1.3 Cell reselection to UTRAN shall not occur within 5 seconds after the MS has reselected a GSM cell from an UTRAN cell if a suitable GSM cell can be found.

2. A UTRAN capable MS shall be able to identify and select a new best UTRAN cell on a frequency, which is part of the 3G Cell Reselection list, within 30 seconds after it has been activated under the condition that there is only one UTRAN frequency in the list (and no E-UTRAN frequencies in the E-UTRAN Neighbour Cell list) and that no new GSM cells are activated at the same time and under good radio conditions. As an exception, the time is increased to [70] seconds in case of a UTRAN capable MS performing cell reselection based on priority information (see subclause 6.6.6) if the UTRAN frequency has higher priority than the serving cell. A E-UTRAN capable MS shall be able to identify and select a new best E-UTRAN cell on a frequency, which is part of the E-UTRAN Neighbour Cell list, within 30 seconds after it has been activated if the frequency has lower priority than the serving cell, or within [70] seconds after it has been activated if the frequency has higher priority than the serving cell, under the condition that there is only one E-UTRAN frequency in the list (and no UTRAN frequencies in the 3G Cell Reselection list) and that no new GSM cells are activated at the same time and under good radio conditions. For test purposes the following radio conditions can be used: Serving GSM cell at RXLEV= -70 dBm, with 6 GSM neighbours at RXLEV= -75 dBm. Then either an UTRAN FDD neighbour cell or an UTRAN TDD neighbour cell or an E-UTRAN FDD neighbour cell or an E-UTRAN TDD neighbour cell is switched on.

NOTE: Definitions of measurements are in TS 25.215 and TS 25.101 for FDD mode, in TS 25.225 and TS 25.102 for TDD mode, clause 3.2 and TS 05.08, clause 6.1.

References

1. TS 45.008, clause 6.6.5.

2. TS 45.008, clause 6.6.4.

6.2.2.3a.3 Test purpose

1. To verify that:

1.1 The UE meets conformance requirement 1.1 and additionally, that no cell reselection is performed if the period is less than 5 s

1.3 The UE meets conformance requirement 1.3.

6.2.2.3a.4 Method of test

UE is idle updated on Cell 1.

Cell 9:

The SS transmitted system information for Cell 1 shall be according to TS 34.108, clause 6.1.4 with the following exceptions:

The 3G Neighbour Cell Description of Cell 9 (GSM) refers to Cell 1 (UTRAN).

Cell 1:

The SS transmitted system information for Cell 1 shall be according to TS 34.108, clause 6.1.4 with the following exceptions:

The Inter-RAT Cell Info List of Cell 1 (UTRAN) refers to Cell 9 (GSM).

Step a-c:

Parameter	Unit	Cell 9 (GSM)
Test Channel		1
RF Signal Level	dBm	-70
RXLEV_ACCESS_MIN	dBm	-100
MS_TXPWR_MAX_CCH	dBm	Max. output power of UE
TDD_Qoffset	dBm	-81

Parameter	Unit	Cell 1 (UTRAN)
Test Channel		1
P-CCPCH_RSCP (TDD)	dBm	-74
Qrxlevmin	dBm	-101
Srxlev*	dB	27
S-search RAT	dB	+20

Step d:

Parameter	Unit	Cell 9 (GSM)
RF Signal Level	dBm	-70 -> -85 (4 s) -> -70

Step f-g:

Parameter	Unit	Cell 9 (GSM)
RF Signal Level	dBm	-70 -> -83 (4 s) -> -70

Step h-i:

Parameter	Unit	Cell 9 (GSM)
RF Signal Level	dBm	-70 -> -83

Test procedure

NOTE: Step a-d): Test purpose 1.3. Step f-i): test purpose 1.1.

A combination of Method B and Method C is applied.

a) The SS activates Cell 9.

b) Void

c) Void.

d) Once the random access request is received on Cell 9, the SS starts paging the UE continuously on Cell 1, and changes the power level of cell 9 to -85 dBm for 4 s (GSM RF signal level will then be lower than Qsearch_I and UTRA signal level is higher than TDD_Qoffset) and then change back to -70 dBm and see if there is any random access request on cell 1 for 20 s. To avoid that the UE enters dedicated mode (performing the Location Update procedure) during this time, the SS rejects the random access received on Cell 9 with wait indication set to 30 s.

e) When the second random access request is received on Cell 9 (after 30 s), the SS stops paging and performs the Location Update procedure to register the UE on Cell 9.

f) The SS decreases the transmit level of Cell 9 to –83 dBm for a period of 4 s (GSM RF signal level will then be lower than Qsearch_I and UTRA signal level is higher than TDD_Qoffset) and then changes the level back to –70 dBm.

g) The SS waits 20 s to see if there is any random access request from the UE on Cell 1.

h) The SS sets the transmit level of Cell 9 to –83 dBm.

i) The SS waits 20 s to see if there is any random access request from the UE on Cell 1. (The UE should revert to Cell 1 due to cell reselection).

j) The SS performs the Location Update procedure (or Routing Area Update procedure for UE that supports PS) to register the UE on Cell 1.

6.2.2.3a.5 Test Requirements

1) In step d), there shall be no access on Cell 1.

2) In step g), there shall be no access on Cell 1.

3) In step i), the UE shall send random access on Cell 1.

6.2.2.4 Cell reselection in multi-mode shared network environment

6.2.2.4.1 Definition

Test to verify that the UE performs cell reselection according to core specification 25.304 in multi-mode shared network environment (FDD). It is verified that the UE reselects from a shared UTRAN cell in case of a higher ranked GSM cell or if the serving UTRAN cell becomes unsuitable. It is also verified that the UE is able to return to a shared UTRAN cell in case of loss of GSM coverage.

6.2.2.4.2 Conformance requirement

1. suitable cell:

   A "suitable cell" is a cell on which the UE may camp on to obtain normal service. Such a cell shall fulfil all the following requirements.

   - The cell shall be part of either:
     - the selected PLMN, or:
     - the registered PLMN, or:
     - a PLMN of the Equivalent PLMN list

     according to the latest information provided by the NAS.
   - The cell is not barred, see subclause 5.3.1.1;
   - The cell is part of at least one LA that is not part of the list of "forbidden LAs for roaming" [9], which belongs to a PLMN that fulfils the first bullet above;
   - The cell selection criteria are fulfilled, see subclause 5.2.3.1.2.

     If the IE “Multiple PLMN List” [4] is broadcast in the cell, the cell is considered to be part of all LAs with LAIs constructed from the PLMN identities in the “Multiple PLMN List” and the LAC broadcast in the cell.

2. When camped on a cell, the UE shall regularly search for a better cell according to the cell reselection criteria. If a better cell is found, that cell is selected. The change of cell may imply a change of RAT.

3. When camped normally, the UE shall perform the following tasks:

- select and monitor the indicated PICH and PCH of the cell as specified in clause 8 according to information sent in system information;
- monitor relevant System Information. This is specified in [4];
- perform necessary measurements for the cell reselection evaluation procedure;
- execute the cell reselection evaluation process on the following occasions/triggers:
  1) UE internal triggers, so as to meet performance as specified in [10] and [11];
  2) When information on the BCCH used for the cell reselection evaluation procedure has been modified

4. Cell Reselection Criteria:

4.1 If HCS is not used in the serving cell the UE shall perform ranking of all cells that fulfil the criterion S, among:

- all measured cells (see subclause 5.2.6.1.1).

4.2 The cells shall be ranked according to the R criteria, deriving Qmeas,n and Qmeas,s and calculating the R values using CPICH RSCP, P-CCPCH RSCP and the averaged received signal level as specified in TS 25.133 and TS 25.123 for FDD, TDD and GSM cells, respectively.

The offset $Qoffset1_{s,n}$ is used for $Qoffset_{s,n}$ to calculate R_n, the hysteresis $Qhyst1_s$ is used for $Qhyst_s$ to calculate R_s.

…

If the usage of HCS is indicated in system information, $TEMP_OFFSET1_n$ is used for $TEMP_OFFSET_n$ to calculate TO_n. If it is indicated in system information that HCS is not used, $TEMP_OFFSET_n$ is not applied when calculating R_n. The best ranked cell is the cell with the highest R value.

…

If an FDD cell is ranked as the best cell and the quality measure for cell selection and re-selection is set to CPICH RSCP, the UE shall perform cell re-selection to that FDD cell.

4.3 In all cases, the UE shall reselect the new cell, only if the following conditions are met:

- the new cell is better ranked than the serving cell during a time interval Treselection.

…

- more than 1 second has elapsed since the UE camped on the current serving cell.

5. Location Registration

In the UE, the AS shall report registration area information to the NAS.

If the UE reads more than one PLMN identity in the current cell, the UE shall report the found PLMN identities that make the cell suitable in the registration area information to NAS.

5. TS 25.304, 5.5

6.2.2.4.3 Test purpose

1. To verify that the UE is able to reselect to a higher ranked cell (UTRAN->GSM) in multi-mode shared network environment.

3. To verify that the UE is able to reselect to a GSM cell when the serving shared network UTRAN cell becomes unsuitable (S<0).

4. To verify that the UE is able to return to a shared network UTRAN cell when coverage is lost while camping on a GSM cell.

6.2.2.4.4 Method of test

Initial conditions

The UE is equipped with a USIM containing default values. The HPLMN (MCC+MNC) of the IMSI for the USIM is set to PLMN1.

Cell reselection parameters are set to default values, so the cell-ranking criterion R equals CPICH_RSCP / RF Signal Level.

The Inter-RAT Cell Info List of Cell 1 (UTRAN) refers to Cell 9 (GSM) and Cell 10 (GSM).

The 3G Neighbour Cell Description of Cell 9 (GSM) and Cell 10 (GSM) refers to Cell 1 (UTRAN)

Cell parameters are defined in the table below. Cell 9 and 10 are switched off.

Parameter	Unit	Cell 1 (UTRAN)
Test Channel		1
PLMN		See below MIB PLMN Identity table
LAC		0001
CPICH_Ec (FDD)	dBm / 3.84 MHz	-60
Qrxlevmin	dBm	-99
Srxlev*	dB	39
S-search RAT	dB	Not sent

Parameter	Unit	Cell 9 (GSM)	Cell 10 (GSM)
Test Channel		1	2
PLMN		PLMN 1	PLMN 1
LAC		0009	0010
RF Signal Level	dBm	-75	-80
RXLEV_ACCESS_MIN	dBm	-100	-100
C1*	dB	25	20
FDD_Qmin	dB	-20	-20
FDD_Qoffset	dBm	0	0

The reference system configuration from TS 34.108 clause 6.1 is used in all cells, with the following modifications:

Master Information Block

- MIB value tag	Set to (Current MIB value tag + 1)
- Supported PLMN types	
- PLMN type	GSM-MAP
- PLMN identity	
- MCC digit	See table below
- MNC digit	See table below
- Multiple PLMN List	
- MIB PLMN Identity	See table below
- Multiple PLMNs (1)	
- MCC	See table below
- MNC	See table below

- Multiple PLMNs (2)	
- MCC	See table below
- MNC	See table below

The MIB PLMN Identity and PLMN codes broadcasted on the BCCH in each cell shall be configured as defined in the table below.

Cell	MIB PLMN Identity	PLMN Identity		Multiple PLMNs (1)		Multiple PLMNs (2)	
		MCC digits	MNC digits	MCC digits	MNC digits	MCC digits	MNC digits
1	FALSE	PLMN 3	PLMN 3	-	PLMN 2	-	PLMN 1

The definition of each PLMN code is found in table below.

PLMN	MCC digit			MNC digit		
	1	2	3	1	2	3
1	0	0	1	0	1	-
2	0	0	1	0	2	-
3	0	0	1	0	3	-
4	0	0	2	0	1	-

NOTE: "–" (dash) denotes "not present"

Step e-h

Parameter	Unit	Cell 1 (UTRAN)
CPICH_Ec	dBm / 3.84 MHz	-60 -> -85

Step i-k

Parameter	Unit	Cell 1 (UTRAN)
CPICH_Ec	dBm / 3.84 MHz	-85 -> -60
Qrxlevmin	dBm	-99 -> -65
Srxlev*	dB	6

Step k-m

Parameter	Unit	Cell 9 (GSM)
PLMN		PLMN 1 -> PLMN 4

Step l-m

Parameter	Unit	Cell 1 (UTRAN)
CPICH_Ec	dBm / 3.84 MHz	-60 -> -70

Test procedure

Method C is applied.

a) The UE is switched on.

b) The SS waits for random access requests from the UE. A complete Location Update is done. For UE that supports both CS and PS domain or PS domain only, the Location Updating procedure could be replaced by the appropriate GMM registration procedure.

c) The SS activates Cell 9 and Cell 10.

d) The SS waits for random access requests from the UE.

e) The SS changes the level of Cell 1.

f) The SS waits for random access requests from the UE.

g) Cell 9 and Cell 10 are switched off.

h) The SS waits for random access requests from the UE.

i) The UE is switched off. The SS modifies the level and Qrxlevmin of Cell 1.

j) The UE is switched on. A complete Location Update is done. For UE that supports both CS and PS domain or PS domain only, the Location Updating procedure could be replaced by the appropriate GMM registration procedure.

k) Cell 9 and Cell 10 are activated using new PLMN 4 in Cell 9.

l) The SS changes the level of Cell 1.

m) The SS waits for random access requests from the UE.

6.2.2.4.5 Test requirements

1) In step b), the UE shall respond on Cell 1. The displayed PLMN shall be PLMN 1 (UTRAN).

2) In step d), the UE shall not respond on Cell 9 or Cell 10 for 1 min.

3) In step f), the UE shall respond on Cell 9. The displayed PLMN shall be PLMN 1 (GSM).

4) In step h), the UE shall respond on Cell 1. The displayed PLMN shall be PLMN 1 (UTRAN).

5) In step m), the UE shall respond on Cell 10. The displayed PLMN shall be PLMN 1 (GSM).

NOTE: The RAT requirements (within brackets) apply only if UE supports indication of RAT to the user.

6.2.2.5 Cell reselection using SIB18; UTRAN to GSM

6.2.2.5.1 Definition

Test to verify that the UE performs cell reselection according to core specifications 25.331 and 25.304 in multi-mode environment (FDD) when SIB18 present. It is verified that the UE reselects from a UTRAN cell to the GSM cell allowed by SIB18, even if other GSM cells are better ranked.

6.2.2.5.2 Conformance requirement

1. suitable cell:

   A "suitable cell" is a cell on which the UE may camp on to obtain normal service. Such a cell shall fulfil all the following requirements.

   - The cell shall be part of either:
     - the selected PLMN, or:
     - the registered PLMN, or:
     - a PLMN of the Equivalent PLMN list

     according to the latest information provided by the NAS.
   - The cell is not barred, see subclause 5.3.1.1;

- The cell is part of at least one LA that is not part of the list of "forbidden LAs for roaming" [9], which belongs to a PLMN that fulfils the first bullet above;

- The cell selection criteria are fulfilled, see subclause 5.2.3.1.2.

  If the IE “Multiple PLMN List” [4] is broadcast in the cell, the cell is considered to be part of all LAs with LAIs constructed from the PLMN identities in the “Multiple PLMN List” and the LAC broadcast in the cell.

2. When camped on a cell, the UE shall regularly search for a better cell according to the cell reselection criteria. If a better cell is found, that cell is selected. The change of cell may imply a change of RAT.

3. When camped normally, the UE shall perform the following tasks:

   - select and monitor the indicated PICH and PCH of the cell as specified in clause 8 according to information sent in system information;

   - monitor relevant System Information. This is specified in [4];

   - perform necessary measurements for the cell reselection evaluation procedure;

   - execute the cell reselection evaluation process on the following occasions/triggers:

     1) UE internal triggers, so as to meet performance as specified in [10] and [11];

     2) When information on the BCCH used for the cell reselection evaluation procedure has been modified

4. Cell Reselection Criteria:

   4.1 If HCS is not used in the serving cell the UE shall perform ranking of all cells that fulfil the criterion S, among:

   - all measured cells (see subclause 5.2.6.1.1).

   4.2 The cells shall be ranked according to the R criteria, deriving Qmeas,n and Qmeas,s and calculating the R values using CPICH RSCP, P-CCPCH RSCP and the averaged received signal level as specified in TS 25.133 and TS 25.123 for FDD, TDD and GSM cells, respectively.

   The offset $Qoffset1_{s,n}$ is used for $Qoffset_{s,n}$ to calculate R_n, the hysteresis $Qhyst1_s$ is used for $Qhyst_s$ to calculate R_s.

   …

   If the usage of HCS is indicated in system information, $TEMP_OFFSET1_n$ is used for $TEMP_OFFSET_n$ to calculate TO_n. If it is indicated in system information that HCS is not used, $TEMP_OFFSET_n$ is not applied when calculating R_n. The best ranked cell is the cell with the highest R value.

   …

   If an FDD cell is ranked as the best cell and the quality measure for cell selection and re-selection is set to CPICH RSCP, the UE shall perform cell re-selection to that FDD cell.

   4.3 In all cases, the UE shall reselect the new cell, only if the following conditions are met:

   - the new cell is better ranked than the serving cell during a time interval Treselection.

   …

   - more than 1 second has elapsed since the UE camped on the current serving cell.

5. Location Registration

   In the UE, the AS shall report registration area information to the NAS.

   If the UE reads more than one PLMN identity in the current cell, the UE shall report the found PLMN identities that make the cell suitable in the registration area information to NAS.

6. If the System Information Block type 18 is present, a UE shall obtain knowledge of the PLMN identity of the neighbour cells to be considered for cell reselection, and shall behave as specified in this subclause and in subclause 8.5.14a.

   The UE should store all the relevant IEs included in this system information block.

   A UE in idle mode shall act according to the following rules:

   1> any PLMN list of a given type (IEs "PLMNs of intra-frequency cells list", "PLMNs of inter-frequency cells list", "PLMNs of inter-RAT cell lists") included in the IE "Idle mode PLMN identities" is paired with the list of cells of the same type derived from System Information Block type 11;

   1> the PLMN identity located at a given rank in the PLMN list is that of the cell with the same ranking in the paired list of cells, the cells being considered in the increasing order of their associated identities ("Intra-frequency cell id", "Inter-frequency cell id", "Inter-RAT cell id");

   1> if no identity is indicated for the first PLMN in a list, the UE shall assume that the neighbouring cell broadcasts the same PLMN configuration (i.e. IE "PLMN Identity" and IE "Multiple PLMN List") as the current cell;

   1> if no identity is indicated for another entry in the list, the UE shall assume that the neighbouring cell broadcasts the same PLMN configuration (i.e. IE "PLMN Identity" and IE "Multiple PLMN List") as the previous cell in the list;

   1> if the number of identities in a PLMN list exceeds the number of neighbour cells in the paired list (if any), the extra PLMN identities are considered as unnecessary and ignored;

   1> if the number of identities in a PLMN list (if any) is lower than the number of neighbour cells in the paired list, the missing PLMN identities are replaced by the PLMN configuration for the last cell in the list.

7. Neighbour cells list narrowing for cell reselection

   While a UE is camping on a suitable cell, a UE having performed the PLMN identification of the neighbour cells as specified in subclause 8.1.1.6.18 shall narrow the cell list to be used for cell reselection ([4]) to those neighbour cells for which:

   The PLMN identity is part of the PLMNs that can make a cell suitable as defined in [4].

6.2.2.5.3 Test purpose

To verify that the UE is able to read the information broadcasted in SIB18 and use the information for cell reselection according to core spec 25.331.

6.2.2.5.4 Method of test

Initial conditions

The UE is equipped with a USIM containing default values.

Cell reselection parameters are set to default values, so the cell-ranking criterion R equals CPICH_RSCP / RF Signal Level.

The Inter-RAT Cell Info List of Cell 1 (UTRAN) refers to Cell 9 (GSM) and Cell 10 (GSM).

The 3G Neighbour Cell Description of Cell 9 (GSM) and Cell 10 (GSM) refers to Cell 1 (UTRAN)

Cell parameters are defined in the table below. Cell 9 and 10 are switched off.

Parameter	Unit	Cell 1 (UTRAN)
Test Channel		1
PLMN		PLMN 1
LAC		0001
CPICH_Ec (FDD)	dBm / 3.84 MHz	-60
Qrxlevmin	dBm	-99
Srxlev*	dB	39
S-search RAT	dB	Not sent

Parameter	Unit	Cell 9 (GSM)	Cell 10 (GSM)
Test Channel		1	2
PLMN		PLMN 1	PLMN 1
LAC		0009	0010
RF Signal Level	dBm	-70	-80
RXLEV_ACCESS_MIN	dBm	-100	-100
C1*	dB	30	20
FDD_Qmin	dB	-20	-20
FDD_Qoffset	dBm	0	0

The reference system configuration from TS 34.108 clause 6.1 is used in all cells, with the following modifications:

SYSTEM INFORMATION BLOCK TYPE18

- Idle mode PLMN identities	
- PLMNs of intra-frequency cells list	Not present
- PLMNs of inter-frequency cells list	Not present
- PLMNs of inter-RAT cells list	
- PLMN identity (1)	PLMN2
- PLMN identity (2)	PLMN1
- Connected mode PLMN identities	Not present

Step e-f

Parameter	Unit	Cell 1 (UTRAN)
CPICH_Ec	dBm / 3.84 MHz	-60 -> -85
Srxlev*	dB	39 ->14

Test procedure

Method C is applied.

a) The UE is switched on.

b) The SS waits for random access requests from the UE. A complete Location Update is done. For UE that supports both CS and PS domain or PS domain only, the Location Updating procedure could be replaced by the appropriate GMM registration procedure.

c) The SS activates Cell 9 and Cell 10.

d) The SS checks during 1 minute for random access requests from the UE.

e) The SS changes the level of Cell 1.

f) The SS waits for random access requests from the UE.

6.2.2.5.5 Test requirements

1) In step b), the UE shall respond on Cell 1

2) In step d), the UE shall not respond on Cell 9 or Cell 10.

3) In step f), the UE shall respond on Cell 10.

6.2.2.5a Cell reselection using SIB18; UTRAN(1.28Mcps TDD) to GSM

6.2.2.5a.1 Definition

Test to verify that the UE performs cell reselection according to core specifications 25.331 and 25.304 in multi-mode environment (1.28Mcps TDD) when SIB18 present. It is verified that the UE reselects from a UTRAN cell to the GSM cell allowed by SIB18, even if other GSM cells are better ranked.

6.2.2.5a.2 Conformance requirement

1. suitable cell:

   A "suitable cell" is a cell on which the UE may camp on to obtain normal service. Such a cell shall fulfil all the following requirements.

   - The cell shall be part of either:
     - the selected PLMN, or:
     - the registered PLMN, or:
     - a PLMN of the Equivalent PLMN list

     according to the latest information provided by the NAS.
   - The cell is not barred, see subclause 5.3.1.1;
   - The cell is part of at least one LA that is not part of the list of "forbidden LAs for roaming" [9], which belongs to a PLMN that fulfils the first bullet above;
   - The cell selection criteria are fulfilled, see subclause 5.2.3.1.2.

     If the IE “Multiple PLMN List” [4] is broadcast in the cell, the cell is considered to be part of all LAs with LAIs constructed from the PLMN identities in the “Multiple PLMN List” and the LAC broadcast in the cell.

2. When camped on a cell, the UE shall regularly search for a better cell according to the cell reselection criteria. If a better cell is found, that cell is selected. The change of cell may imply a change of RAT.

3. When camped normally, the UE shall perform the following tasks:

   - select and monitor the indicated PICH and PCH of the cell as specified in clause 8 according to information sent in system information;
   - monitor relevant System Information. This is specified in [4];
   - perform necessary measurements for the cell reselection evaluation procedure;
   - execute the cell reselection evaluation process on the following occasions/triggers:
     1) UE internal triggers, so as to meet performance as specified in [10] and [11];
     2) When information on the BCCH used for the cell reselection evaluation procedure has been modified

4. Cell Reselection Criteria:

4.1 If HCS is not used in the serving cell the UE shall perform ranking of all cells that fulfil the criterion S, among:

- all measured cells (see subclause 5.2.6.1.1).

4.2 The cells shall be ranked according to the R criteria, deriving Qmeas,n and Qmeas,s and calculating the R values using CPICH RSCP, P-CCPCH RSCP and the averaged received signal level as specified in TS 25.133 and TS 25.123 for FDD, TDD and GSM cells, respectively.

The offset $Qoffset1_{s,n}$ is used for $Qoffset_{s,n}$ to calculate R_n, the hysteresis $Qhyst1_s$ is used for $Qhyst_s$ to calculate R_s.

…

If the usage of HCS is indicated in system information, $TEMP_OFFSET1_n$ is used for $TEMP_OFFSET_n$ to calculate TO_n. If it is indicated in system information that HCS is not used, $TEMP_OFFSET_n$ is not applied when calculating R_n. The best ranked cell is the cell with the highest R value.

…

4.3 In all cases, the UE shall reselect the new cell, only if the following conditions are met:

- the new cell is better ranked than the serving cell during a time interval Treselection.

…

- more than 1 second has elapsed since the UE camped on the current serving cell.

5. Location Registration

In the UE, the AS shall report registration area information to the NAS.

If the UE reads more than one PLMN identity in the current cell, the UE shall report the found PLMN identities that make the cell suitable in the registration area information to NAS.

6. If the System Information Block type 18 is present, a UE shall obtain knowledge of the PLMN identity of the neighbour cells to be considered for cell reselection, and shall behave as specified in this subclause and in subclause 8.5.14a.

The UE should store all the relevant IEs included in this system information block.

A UE in idle mode shall act according to the following rules:

1> any PLMN list of a given type (IEs "PLMNs of intra-frequency cells list", "PLMNs of inter-frequency cells list", "PLMNs of inter-RAT cell lists") included in the IE "Idle mode PLMN identities" is paired with the list of cells of the same type derived from System Information Block type 11;

1> the PLMN identity located at a given rank in the PLMN list is that of the cell with the same ranking in the paired list of cells, the cells being considered in the increasing order of their associated identities ("Intra-frequency cell id", "Inter-frequency cell id", "Inter-RAT cell id");

1> if no identity is indicated for the first PLMN in a list, the UE shall assume that the neighbouring cell broadcasts the same PLMN configuration (i.e. IE "PLMN Identity" and IE "Multiple PLMN List") as the current cell;

1> if no identity is indicated for another entry in the list, the UE shall assume that the neighbouring cell broadcasts the same PLMN configuration (i.e. IE "PLMN Identity" and IE "Multiple PLMN List") as the previous cell in the list;

1> if the number of identities in a PLMN list exceeds the number of neighbour cells in the paired list (if any), the extra PLMN identities are considered as unnecessary and ignored;

2> if the number of identities in a PLMN list (if any) is lower than the number of neighbour cells in the paired list, the missing PLMN identities are replaced by the PLMN configuration for the last cell in the list.

7. Neighbour cells list narrowing for cell reselection

   While a UE is camping on a suitable cell, a UE having performed the PLMN identification of the neighbour cells as specified in subclause 8.1.1.6.18 shall narrow the cell list to be used for cell reselection ([4]) to those neighbour cells for which:

   The PLMN identity is part of the PLMNs that can make a cell suitable as defined in [4].

6.2.2.5a.3 Test purpose

To verify that the UE is able to read the information broadcasted in SIB18 and use the information for cell reselection according to core spec 25.331.

6.2.2.5a.4 Method of test

Initial conditions

The UE is equipped with a USIM containing default values.

Cell reselection parameters are set to default values, so the cell-ranking criterion R equals P-CCPCH RSCP / RF Signal Level.

The Inter-RAT Cell Info List of Cell 1 (UTRAN) refers to Cell 9 (GSM) and Cell 10 (GSM).

The 3G Neighbour Cell Description of Cell 9 (GSM) and Cell 10 (GSM) refers to Cell 1 (UTRAN)

Cell parameters are defined in the table below. Cell 9 and 10 are switched off.

Parameter	Unit	Cell 1 (UTRAN)
Test Channel		1
PLMN		PLMN 1
LAC		0001
P-CCPCH RSCP(TDD)	dBm	-65
Qrxlevmin	dBm	-104
Srxlev*	dB	39
S-search RAT	dB	Not sent

Parameter	Unit	Cell 9 (GSM)	Cell 10 (GSM)
Test Channel		1	2
PLMN		PLMN 3	PLMN 1
LAC		0009	0010
RF Signal Level	dBm	-70	-80
RXLEV_ACCESS_MIN	dBm	-100	-100
C1*	dB	30	20
TDD_Qoffset	dBm	-60	-60

The reference system configuration from TS 34.108 clause 6.1 is used in all cells, with the following modifications:

SYSTEM INFORMATION BLOCK TYPE18

- Idle mode PLMN identities	
- PLMNs of intra-frequency cells list	Not present
- PLMNs of inter-frequency cells list	Not present
- PLMNs of inter-RAT cells list	
- PLMN identity (1)	PLMN2
- PLMN identity (2)	PLMN1
- Connected mode PLMN identities	Not present

Step e-f

Parameter	Unit	Cell 1 (UTRAN)
P-CCPCH RSCP(TDD)	dBm	-65 -> -90
Srxlev*	dB	39 ->14

Test procedure

Method C is applied.

a) The UE is switched on.

b) The SS waits for random access requests from the UE. A complete Location Update is done. For UE that supports both CS and PS domain or PS domain only, the Location Updating procedure could be replaced by the appropriate GMM registration procedure.

c) The SS activates Cell 9 and Cell 10.

d) The SS checks during 1 minute for random access requests from the UE.

e) The SS changes the level of Cell 1.

f) The SS waits for random access requests from the UE.

6.2.2.5a.5 Test requirements

1) In step b), the UE shall respond on Cell 1

2) In step d), the UE shall not respond on Cell 9 or Cell 10.

3) In step f), the UE shall respond on Cell 10.

6.2.2.6 Cell reselection based on Absolute Priorities(both High priority and Low priority reselection) in SIB19; UTRAN to GSM

6.2.2.6.1 Definition

To verify that UE reselects from UTRAN to GSM cell when absolute priority of GSM cell is indicated in SIB19 and the cell reselection criteria is fulfilled.

6.2.2.6.2 Conformance requirement

If the cell is not operating in MBSFN mode according to subclause 8.1.1.6.3 the UE should store all relevant IEs included in this system information block. If the cell is not operating in MBSFN mode according to subclause 8.1.1.6.3 the UE shall:

1> if the value of the IE "Priority status" in the variable PRIORITY_INFO_LIST equals "dedicated_priority":

2> clear every stored value of "$Threshx_{, high}$", "$Thresh_{x, low}$", "$Threshx_{, high2}$" and "$Thresh_{x, low2}$" in every occurrence of the IE "Priority Info List" in the variable PRIORITY_INFO_LIST.

1> otherwise:

2> clear the variable PRIORITY_INFO_LIST.

1> clear the variable EUTRA_FREQUENCY_INFO_LIST;

1> act upon the received IE "UTRA priority info list" as described in subclause 8.6.7.3a;

1> if the IE "GSM priority info list" is present:

2> act upon the received IE as described in subclause 8.6.7.3b.

1> if the IE "E-UTRA frequency and priority info list" is present:

2> act upon the received IE as described in subclause 8.6.7.3c.

UTRA priority info list

If the IE "UTRA priority info list" is received in System Information Block Type 19, the UE shall:

1> if the value of the IE "Priority status" in the variable PRIORITY_INFO_LIST equals "dedicated_priority":

2> store the value of the IEs "$S_{prioritysearch1}$", "$S_{prioritysearch2}$", "$Thresh_{serving,low}$" and "$Thresh_{serving,low2}$" in the IE "UTRA Serving Cell" in the variable PRIORITY_INFO_LIST;

2> if any of the values in any of the occurrences of the IE "Frequency List" in any occurrence of the IE "Priority Info List" within the variable PRIORITY_INFO_LIST is the frequency of the serving cell:

3> store the value of the IE "priority" in the IE "UTRA Serving Cell" in the variable PRIORITY_INFO_LIST.

2> otherwise:

3> clear the value of the IE "priority" in the IE "UTRA Serving Cell" in the variable PRIORITY_INFO_LIST.

2> for each occurrence of the IE "UTRAN FDD Frequencies":

3> if the value of the IE "UARFCN" exists in the list of UTRA FDD priorities in the PRIORITY_INFO_LIST then, in the occurrence of IE "Frequency List" within the variable PRIORITY_INFO_LIST with that value of the IE "UARFCN":

4> store the value of the IEs "$Thresh_{x, high}$", "$Thresh_{x, low}$", "QqualminFDD" and "QrxlevminFDD".

2> for each occurrence of the IE "UTRAN TDD Frequencies":

3> if the value of the IE "UARFCN" exists in the list of UTRA TDD priorities in the PRIORITY_INFO_LIST then, in the occurrence of IE "Frequency List" within the variable PRIORITY_INFO_LIST with that value of the IE "UARFCN":

4> store the value of the IEs "$Thresh_{x, high}$", "$Thresh_{x, low}$" and "QrxlevminTDD".

1> otherwise:

2> update the PRIORITY_INFO_LIST IE "Priority status" to cause "sys_info_priority".

2> store information in the IE "UTRA Serving Cell" in the IE "UTRA Serving Cell" within the variable PRIORITY_INFO_LIST;

2> for each occurrence of the IE "UTRAN FDD Frequencies":

3> if an entry already exists in the IE "Priority Info List" in the variable PRIORITY_INFO_LIST with the same priority value as indicated in the IE "priority" and has the CHOICE "Radio Access Technology" set to "UTRA FDD":

4> create a new entry in the IE "Frequency List" in that occurrence of IE "Priority Info List", and store the value of "UARFCN" in the IE "UARFCN" in this occurrence of the IE "Frequency List" within the variable PRIORITY_INFO_LIST, and in that new entry:

5> store the IEs "$Thresh_{x, high}$", "$Thresh_{x, low}$", "QqualminFDD" and "QrxlevminFDD".

3> otherwise:

4> create a new entry in the IE "Priority Info List" and store the value of "priority" in the IE "priority" in this occurrence of the IE "Priority Info List" within the variable PRIORITY_INFO_LIST, and in that new entry:

5> set the CHOICE "Radio Access Technology" to "UTRA FDD" and store the value of "UARFCN" in the IE "UARFCN" in the first occurrence of the IE "Frequency List";

5> store the IEs "$Thresh_{x, high}$", "$Thresh_{x, low}$", "QqualminFDD" and "QrxlevminFDD" in that occurrence of the IE "Frequency List".

2> for each occurrence of the IE "UTRAN TDD Frequencies":

3> if an entry already exists in the IE "Priority Info List" in the variable PRIORITY_INFO_LIST with the same priority value as indicated in the IE "priority" and has the CHOICE "Radio Access Technology" set to "UTRA TDD":

4> create a new entry in the IE "Frequency List" in that occurrence of IE "Priority Info List", and store the value of "UARFCN" in the IE "UARFCN" in this occurrence of the IE "Frequency List" within the variable PRIORITY_INFO_LIST, and in that new entry:

5> store the IEs "$Thresh_{x, high}$", "$Thresh_{x, low}$" and "QrxlevminTDD".

3> otherwise:

4> create a new entry in the IE "Priority Info List" and store the value of "priority" in the IE "priority" in this occurrence of the IE "Priority Info List" within the variable PRIORITY_INFO_LIST, and in that new entry:

5> set the CHOICE "Radio Access Technology" to "UTRA TDD" and store the value of "UARFCN" in the IE "UARFCN" in the first occurrence of the IE "Frequency List";

5> store the IEs "$Thresh_{x, high}$", "$Thresh_{x, low}$" and "QrxlevminTDD" in that occurrence of the IE "Frequency List".

GSM priority info list

If the IE "GSM priority info list" is received in System Information Block Type 19, the UE shall:

1> if the value of the IE "Priority status" in the variable PRIORITY_INFO_LIST equals "dedicated_priority":

2> for each occurrence of the IE "GSM Priority Info":

3> store the IEs "QrxlevminGSM", "$Thresh_{x, high}$" and "$Thresh_{x, low}$" in every entry of PRIORITY_INFO_LIST with CHOICE "Radio Access Technology" set to "GSM", which contains an IE "BCCH ARFCN" matching a BCCH ARFCN indicated in the IE "GSM cell group".

1> otherwise:

2> for each occurrence of the IE "GSM Priority Info":

3> create a new entry in the IE "Priority Info List" in the variable PRIORITY_INFO_LIST, and in this new entry:

4> store the value of IE "priority" from the IE "GSM Priority Info", and set the CHOICE "Radio Access Technology" to "GSM";

4> for each of the BCCH ARFCNs indicated by the IE "GSM cell group":

5> create a new entry in the IE "Frequency List" and store the IEs "Band Indicator", "QrxlevminGSM", "$Thresh_{x, high}$" and "$Thresh_{x, low}$" and store the indicated BCCH ARFCN in the IE "BCCH ARFCN".

If the UE has received absolute priority information for inter-RAT layers, the UE shall follow these rules:

- The UE shall perform measurements of inter-RAT layers with a priority higher than the priority of the current serving cell.

NOTE: The rate of these measurements may vary depending on whether Srxlev and Squal of the serving cell are above or below $S_{prioritysearch1}$ and $S_{prioritysearch2}$. This is specified in [10].

- For inter-RAT layers with a priority lower than the priority of the current serving cell:

  - If $Srxlev_{\mathbf{ServingCell}} > S_{prioritysearch1}$ and $Squal_{\mathbf{ServingCell}} > S_{prioritysearch2}$ the UE may choose not to perform measurements of inter-RAT layers of lower priority.

  - If $Srxlev_{\mathbf{ServingCell}} <= S_{prioritysearch1}$ or $Squal_{\mathbf{ServingCell}} <= S_{prioritysearch2}$ the UE shall perform measurements of inter-RAT layers of lower priority.

Absolute priorities of different absolute priority layers may be provided to the UE. The following cell reselection criteria are used for inter-frequency cells if absolute priority information for inter-frequency is available to the UE, and inter-RAT cells if absolute priority information for inter-RAT is available to the UE.

...

The following definitions apply:

- Criterion 1: the $Srxlev_{nonServingCell,x}$ of a cell on an evaluated higher absolute priority layer is greater than $Thresh_{x,high}$ during a time interval Treselection;

…

- Criterion 3: $Srxlev_{ServingCell} < Thresh_{serving,low}$ or $Squal_{ServingCell} < 0$ and the $Srxlev_{nonServingCell,x}$ of a cell on an evaluated lower absolute priority layer is greater than $Thresh_{x,low}$ during a time interval Treselection;

Cell reselection to a cell on a higher absolute priority layer than the camped frequency shall be performed if criterion 1 is fulfilled.

...

Cell reselection to a cell on a lower absolute priority layer than the camped frequency shall be performed if criterion 3 is fulfilled.

If more than one cell meets the above criteria, the UE shall reselect the cell with the highest $Srxlev_{nonServingCell,x}$ among the cells meeting the criteria on the highest absolute priority layer.

The UE shall not perform cell reselection to cells for which the cell selection criterion S is not fulfilled.

The UE shall not perform cell reselection until more than 1 second has elapsed since the UE camped on the current serving cell.

6.2.2.6.3 Test purpose

1. To verify that the UE performs cell reselection from UTRAN to GSM on the following occasions:

   1.1 Reselection criteria for low priority cell in SIB 19 are fulfilled.

   1.2 Reselection criteria for high priority cell in SIB 19 are fulfilled.

6.2.2.6.4 Method of test

Initial Condition

UE is idle updated on Cell 1.

All cells belong to the same PLMN.

The Inter-RAT Cell Info List of Cell 1 (UTRAN) refers to Cell 9(GSM).

The 3G Neighbour Cell Description of Cell 9(GSM) refers to Cell 1(UTRAN).

UTRAN cell broadcasts SIB19 with default contents as per 34.108. (FFS)

Related ICS/IXIT statement

- UE supports both GSM and UTRAN Radio Access Technologies

Table 6.2.2.6-1

Parameter	Unit	Cell 1 (UTRAN)			
Timing		T0	T1	T2	T3
CPICH Ec (FDD)	dBm / 3.84 MHz	-60	-78	-60	-70
P-CCPCH RSCP (TDD)	dBm	-60	-78	-60	-70
Srxlev*	dB	19	1	19	9

Table 6.2.2.6-2

Parameter	Unit		Cell 92 (GSM)		
Timing		T0	T1	T2	T32
RF Signal Level	dBm	-105	-80	-105	-75
RXLEV_ACCESS_MIN	dBm	-100	-100	-100	-100
C1*	dBm	-5	20	-5	25

Table 6.2.2.6-1 and Table 6.2.2.6-2 illustrate the downlink power to be applied for the two cells at various time instants of the test execution. Columns marked "T0" denote the initial conditions, while columns marked "T1", "T2" and "T3" are to be applied subsequently. The exact instants on which these values shall be applied are described in the texts in this clause.

Test Procedure

Method C is applied.

a) SS transmits the MIB with the “MIB Value Tag” IE different from the original setting and modified SIB 19(Cell1 priority > Cell 9 priority - See specific message contents).

b) SS transmits Paging Type 1 to notify UE of the change in system information on Cell1 and waits for 5s to ensure UE has read the new SIB information.

c) SS reconfigures itself according to settings in Column T1 in tables 6.2.2.x-1 and 6.2.2.x-2. Reselection criteria for low priority cell reselection is fulfilled: $Srxlev_{serving} < Thresh_{serving,low}$ AND $C1 > Thresh_{x,low}$.

d) UE reselects to Cell9(GSM cell configured as low priority in SIB19) and SS checks for random access request on Cell9.

e) SIB19 for Cell1 is configured with default contents as in 34.108. Then, to bring back UE to Cell1(for verifying High priority cell reselection from UTRAN to GSM), SS reconfigures itself according to settings in Column T20 in table 6.2.2.x-1 and 6.2.2.x-2.

f) UE reselects to Cell1. SS checks for random access request on Cell1.

g) SS transmits the MIB with the “MIB Value Tag” IE different from the previous setting and modified SIB19(Cell9 priority > Cell1 priority – See specific message contents).

h) Then, SS transmits Paging Type 1 to notify UE of the change in system information and waits for 5s to ensure UE has read the new SIB information.

i) SS reconfigures itself according to settings in Column T3 in table 6.2.2.x-1 and 6.2.2.x-2. Reselection criterion for high priority cell reselection is fulfilled: C1 > $Thresh_{x,high}$.

j) UE reselects to Cell9(GSM cell configured as high priority in SIB19). SS checks for random access request on Cell9

6.2.2.6.5 Test requirements

At step d), UE reselects to Cell9(GSM) which is configured as low priority cell.

At step j), UE reselects to Cell9(GSM) which is configured as high priority cell.

6.3 HNB Environment

6.3.1 CSG Selection

6.3.1.1 Manual CSG ID Selection

6.3.1.1.1 Definition

6.3.1.1.2 Conformance requirement

1. If the MS supports CSG, it is provisioned with a list of allowed CSG identities and associated PLMN identities from the USIM if the list is available in the USIM or as described in 3GPP TS 24.285 if the list is not available in the USIM. This list has zero or more entries.

- Manual mode: In this mode, the MS indicates to the user the list of available CSGs in the currently selected PLMN. The list of CSGs presented to the user is not restricted by the allowed CSG list stored in the MS. After the user makes a selection, the MS camps on a cell with the selected CSG identity and attempts to register with the associated PLMN.

2. Manual CSG ID selection enables a human user to select a CSG ID. In manual CSG ID selection the UE may scan all frequencies in the supported frequency bands and display a list of found CSG IDs or the corresponding HNB Names if broadcast by the CSG cells, and indications as to whether the found CSG IDs are contained in the UE's Allowed CSG List. When the user selects an entry in the list, the UE selects the CSG cell with the best RF quality among the ones with same CSG ID. The UE may normally camp on the chosen cell if it is an allowed CSG cell.

During manual CSG ID selection a UE is allowed to perform Location Registration procedure on a CSG cell which CSD ID is not in the Allowed CSG List.

Based on the outcome of a Location Registration procedure initiated on a CSG cell the UE's Allowed CSG List is updated.

The UE is allowed to not support manual CSG selection in connected mode.

3. In the UE on request of NAS, the AS shall scan all RF channels in the UTRA and E-UTRA bands according to its capabilities to find available CSG IDs. On each carrier, the UE shall at least search for the strongest cell, read its system information and report available CSG ID(s) belonging to the registered PLMN together with their "HNB name" (if broadcast) to the NAS. The search for available CSG IDs may be stopped on request of the NAS.

If NAS has selected a CSG ID and provided this selection to AS, the UE shall search for an acceptable or suitable cell belonging to the selected CSG ID to perform the location registration.

Reference

1. TS 23.122 clause3.1A

2. TS 25.367 clause6.1.

3. TS 25.304 clause5.6.

6.3.1.1.3 Test purpose

To verify that the UE could select a specific CSG by manual selection procedure and show/update the CSG list.

6.3.1.1.4 Method of test

Initial conditions

1. There exists 4 cells which belong to 3 different CSG IDs respectively- CSG1(cell1), CSG2(cell2), and CSG3(cell4, cell5), and cell4 has better RF quality than cell5. Cell levels are from the table below.

Cell	CPICH_Ec [dBm/3.84 MHz]	CSG ID	Test Channel	PLMN	LAC
Cell 1	-60	CSG 1	1	PLMN1	001
Cell 2	-65	CSG 2	3	PLMN1	002
Cell 4	-75	CSG 3	2	PLMN1	001
Cell 5	-80	CSG 3	2	PLMN1	002

2. On the UE side, CSG1 and CSG2 are in the UE's Allowed CSG List while CSG3 is not in the list.

The UE is equipped with a USIM containing default values except for those listed below.

USIM field	PLMN	CSG ID
EFACSGL	PLMN 1	CSG 1,CSG 2

The UE is previously registered on PLMN1, before switched off.

3. On the SS side, CSG1 and CSG3 are in the Allowed CSG List which belongs to the UE, while CSG2 is not.

4. The UE is power off.

Test Procedure

Method C is applied.

a) The SS activates 4 cells.

b) The UE is switched on.

c) The SS waits to see if there are any random access requests from the UE.

d) Manual CSG ID selection is triggered at the UE, Wait for UE to display the available CSG cells.

e) CSG2 is selected manually.

f) The SS waits to see if there are any random access requests from the UE. The registration attempt on Cell 2 is rejected by the SS using cause “Not authorized for this CSG” (#25).

fa) The SS waits to see if there are any random access requests from the UE.

g) CSG3 is selected manually.

h) The SS waits to see if there are any random access requests from the UE. The registration attempt on cell 4 is accepted by the SS.

6.3.1.1.5 Test Requirements

1) In step c), the response from the UE shall be on Cell 1.

2) In step d), the list is displayed on the UE with 3 CSG IDs and the indications of whether these CSG IDs are in the UE’s Allowed CSG List. It indicates that CSG 1 and CSG 2 are accessible, while CSG 3 is inaccessible.

3) In step f), the response from the UE shall be on Cell 2. The allowed CSG list is updated by deleting CSG 2, and the list indicates now CSG 1 is accessible, while CSG 2 and CSG 3 are not.

3a) In Step fa), the response from the UE shall be on Cell 1.

4) In step h), the response from the UE shall be on Cell 4. The Allowed CSG List on UE is updated which indicates CSG 1 and CSG 3 are accessible while CSG 2 is not.

6.3.1.2 UE in automatic network selection mode to select a suitable CSG cell

6.3.1.2.1 Definition

6.3.1.2.2 Conformance requirements

For an eCall only mobile station, Timers T3242 and T3243 are considered to have expired at power-on. When mobility management is activated after power-on, the service state is 19.7 PLMN SEARCH. The detailed processing in this state is described in detail in 3GPP TS 23.122 , 3GPP TS 43.022, 3GPP TS 45.008 and 3GPP TS 25.304, where procedures for power on and selection of PLMN is described in detail. If the "Location update status" stored on the SIM/USIM is different from "updated", then the mobile shall act as if the "Location update status" stored on the SIM/USIM is "not updated".

If the mobile station is in automatic network selection mode and the selected cell is in a forbidden PLMN, is in a forbidden LA, or is a CSG cell whose CSG ID is not in the allowed CSG ID list stored in the MS, then the mobile station enters the LIMITED SERVICE state.

Reference

TS 24.008 clause 4.2.1.1

6.3.1.2.3 Test purpose

Selection of the Service State after Power On: If the mobile station is in automatic network selection mode and the selected cell is a CSG cell whose CSG ID is not in the allowed CSG ID list stored in the MS, then the mobile station enters the LIMITED SERVICE state.

6.3.1.2.4 Method of test

Initial conditions

1. There exists 2 cells which belong to 2 different CSG IDs respectively- CSG1(cell1), CSG2(cell2). Cell levels are from the table below.

Cell	CPICH_Ec [dBm/3.84 MHz]	CSG ID	Test Channel	PLMN	LAC
Cell 1	-60	CSG 1	1	PLMN1	001
Cell 2	-65	CSG2	1	PLMN1	001

2. There exists a UE whose Allowed CSG List does not contain CSG 1 but contains CSG 2.

The UE is equipped with a USIM containing default values except for those listed below.

USIM field	PLMN	CSG ID
EFACSGL	PLMN 1	CSG 2

The UE is previously registered on PLMN1, before switched off.

3. UE is registered on Cell 2.
4. UE is in “automatic network selection mode” and is switched off.
5. Cell 1 and Cell 2 are both switched off.

Test Procedure

a) The SS activates Cell 1.

b) UE is switched on.

c) The SS waits to see if there are any random access requests from the UE.

d) Cell 1 is switched off.

e) The SS activates Cell 2.

f) The SS waits to see if there are any random access requests from the UE.

6.3.1.2.5 Test Requirements

In step c) the UE shall inform that no service or no network is available.

In step f) the response from the UE shall be on Cell 2.

6.3.1.3 Manual CSG ID Selection across PLMNs

6.3.1.3.1 Definition

Test to verify that the UE performs the manual CSG ID selection whose CSG ID is not within the registered or selected PLMN in CSG or hybrid cells.

6.3.1.3.2 Conformance requirement

1. If the MS supports CSG, it is provisioned with an Allowed CSG list and an Operator CSG list and associated PLMN identities. Both lists can be retrieved either from the USIM if the lists are available in the USIM, or as described in 3GPP TS 24.285 [47] if the lists are not available in the USIM. These lists have zero or more entries.

- Manual mode: In this mode, the MS indicates to the user the list of available CSGs and the associated PLMNs. The list of CSGs presented to the user is not restricted by the Allowed CSG list and the Operator CSG List stored in the MS. After the user makes a selection, the MS camps on a cell with the selected CSG identity and may attempt to register with the associated PLMN.

2. Manual CSG ID selection enables a human user to select a CSG ID. In manual CSG ID selection the UE may scan all frequencies in the supported frequency bands and display a list of found CSG IDs or the corresponding HNB Names if broadcast by the CSG cells or hybrid cells, and indications as to whether the found CSG IDs are contained in the UE's CSG white list. When the user selects an entry in the list, the UE selects any CSG cell or hybrid cell among the ones with same CSG ID. The UE may normally camp on the chosen cell if it is an allowed CSG cell or a hybrid cell.

   During manual CSG ID selection a UE is allowed to perform Location Registration procedure on a CSG cell whose CSD ID is not in the CSG white list.

   Based on the outcome of a Location Registration procedure initiated on a CSG cell, the UE's CSG white list is updated.

3. In the UE on request of NAS, the AS shall scan all RF channels in the UTRA bands according to its capabilities to find available CSG IDs. On each carrier, the UE shall at least search for the strongest cell, read its system information and report available CSG ID(s) together with their "HNB name" (if broadcast) and PLMN(s) to the NAS. The search for available CSG IDs may be stopped on request of the NAS.

   If NAS has selected a CSG ID and provided this selection to AS, the UE shall search for an acceptable or suitable cell belonging to the selected CSG ID to camp on.

4. If the MS has initiated the location updating procedure due to manual CSG selection and receives a LOCATION UPDATING ACCEPT message, and the MS sent the LOCATION UPDATING REQUEST message in a CSG cell, the MS shall check if the CSG ID of the cell is contained in the Allowed CSG list. If not, the MS shall add that CSG ID to the Allowed CSG list.

5. If the user selects a CSG in a PLMN that is different from the RPLMN, then the following applies:

   i) The MS shall store a duplicate of the RPLMN and a duplicate of the current PLMN selection mode;

   ii) The MS shall enter into Manual mode of PLMN selection in state M4 (Trying PLMN) as defined in subclause 4.3.1.2 of TS 23.122;

   iii) The MS shall select the PLMN corresponding to the CSG and attempt to register on the selected CSG cell in the PLMN; and

   iv) If the registration fails or the MS is no longer in the coverage of the CSG, then the MS shall return to the stored duplicate PLMN selection mode and use the stored duplicate value of RPLMN for further action.

Reference

1. TS 23.122 clause 3.1A

2. TS 25.367 clause 6.1.

3. TS 25.304 clause 5.6.

4. TS 24.008 clause 4.4.4.6

5. TS 23.122 clause 4.4.3.1.3.3

6.3.1.3.3 Test purpose

1. To verify that the UE could select a specific CSG by manual selection procedure across PLMNs and update the Allowed CSG list.

2. To verify that the UE could select a specific CSG ID of a hybrid cell by manual selection procedure and does not update the Allowed CSG list.

3. To verify that, after having selected a CSG or hybrid cell not belonging to the initial Registered PLMN, when the UE is no longer within the coverage of the CSG cell, it returns to the stored duplicate PLMN selection mode and selects a cell on the initial Registered PLMN

6.3.1.3.4 Method of test

Initial conditions

1. There exists 3 cells which belong to 3 different CSG IDs respectively- CSG1(cell1), CSG2(cell4), and CSG3(cell8). Cell levels are from the table below.

Cell	CPICH_Ec [dBm/3.84 MHz]	CSG ID	CSG Indicator	Test channel	PLMN	LAC
Cell 1	-70	CSG 1	Enumerated (TRUE)	1	PLMN1	001
Cell 4	-65	CSG 2	Enumerated (TRUE)	2	PLMN2	001
Cell 8	-70	CSG 3	Not present	3	PLMN3	002

Cell 1 and Cell 4 shall also broadcast "CSG PSC Split Information" in its System Information Block type 3 with following parameters:

Parameters	Cell 1	Cell 4
Start PSC	100	250
Number of PSCs	5	5

There exists 1 cell which do not belong to any CSG. Their cell levels are given in the table below.

Cell	CPICH_Ec [dBm/3.84 MHz]	CSG ID	CSG Indicator	Test channel	PLMN	LAC
Cell 5	-65	Not present	Not present	2	PLMN2	003

Cell 4 shall include Cell 5 as a neighbouring cell in its System Information Block Type 11.

Cell 8 shall include Cell 5 as a neighbouring cell in its System Information Block Type 11.

2. On the UE side, CSG1 is in the UE's Allowed CSG List while CSG2 and CSG3 are not in the list. UE's Operator CSG List is empty.

The UE is equipped with a USIM containing default values except for those listed below.

USIM field	PLMN	CSG ID
EF_{ACSGL}	PLMN 1	CSG 1

The UE is previously registered on PLMN1, before switched off.

3. On the SS side, CSG1, CSG2 and CSG3 are in the Allowed CSG List which belongs to the UE.

4. The UE is power off.

Step l:

Cell	CPICH_Ec [dBm/3.84 MHz]	CSG ID	CSG Indicator	Test channel	PLMN	LAC
Cell 1	-70	CSG1	Enumerated (TRUE)	1	PLMN1	001
Cell 4	OFF	CSG2	Enumerated (TRUE)	2	PLMN2	002
Cell 5	-70	Not present	Not present	2	PLMN3	003
Cell 8	OFF	CSG3	Not Present	3	PLMN3	002

Test Procedure

Method C is applied.

a) The SS activates 3 cells 1, 4 and 8.

b) The UE is switched on

c) The SS waits to see if there are any random access requests from the UE.

d) Manual CSG ID selection is triggered at the UE. Wait for UE to display the available CSG cells.

e) CSG2 is selected manually.

f) The SS waits to see if there are any random access requests from the UE. The registration attempt on Cell 4 is accepted by the SS.

g) Cell-8 is switched off.

h) The SS activates Cell-5. Cell-4 is switched off. The SS waits to see if there are any random access requests from the UE.

i) Cell-5 is switched off. The SS activates Cell-8.

j) CSG3 is selected manually via Manual CSG ID selection.

k) The SS waits to see if there are any random access requests from the UE. The registration attempt on cell 8 is accepted by the SS.

l) The SS sets Cell 5 to PLMN3 and the cell power to -70 dBm and activates Cell-5. Cell-8 is switched off. The SS waits to see if there are any random access requests from the UE.

6.3.1.3.5 Test Requirements

1) In step c), the response from the UE shall be on Cell 1. The displayed PLMN shall be PLMN 1.

2) In step d) the list is displayed on the UE with 3 CSG IDs and their associated PLMNs and the indications of whether these CSG IDs are in the UE's CSG whitelist. It indicates that CSG 1 is accessible, while CSG2 and CSG 3 are inaccessible.

3) In step f), the response from the UE shall be on Cell 4. The CSG 2 is added to the Allowed CSG list, and the list indicates now CSG 1 and CSG 2 are accessible, while CSG 3 is not. The displayed PLMN shall be PLMN 2.

4) In step h), the UE shall respond on Cell-1 and not Cell-5.

5) In step k), the response from the UE shall be on Cell 8. The UE indicates that CSG 3 is inaccessible.. The displayed PLMN shall be PLMN 3.

6) In step l), the UE shall respond on Cell-1 and not Cell-5.

6.3.1.4 Suitable Cell checking for reselection to the CSG Cell

6.3.1.4.1 Definition

Test to verify the UE can check whether a Cell is a CSG suitable Cell according to the CSG id and ePLMN identity.

6.3.1.4.2 Conformance requirement

1: Definitions

For the purposes of the present document, the following definitions and the definitions in [12] apply.

Absolute priority layer: A priority level can be defined for a UTRA frequency, a group of GSM frequencies or a E-UTRA frequency.

CSG whitelist: A list provided by NAS containing all the CSG identities and their associated PLMN IDs of the CSGs to which the subscriber belongs.

NOTE: This list is known as Allowed CSG List in Rel-8 Access Stratum specifications.

Acceptable Cell: A Cell that satisfies certain conditions as specified in 4.3. A UE can always attempt emergency calls on an acceptable Cell.

Available PLMN: A PLMN for which the UE has found at least one Cell and read its PLMN identity.

Barred Cell: A Cell a UE is not allowed to camp on.

Camped on a Cell: UE has completed the Cell selection/reselection process and has chosen a Cell. The UE monitors system information and (in most cases) paging information.

Camped on any Cell: UE is in idle mode and has completed the Cell selection/reselection process and has chosen a Cell irrespective of PLMN identity.

Camped on MBSFN cluster: UE has completed the MBSFN Cluster selection/reselection process and has chosen a MBSFN Cluster. The UE monitors system information and receives notifications for MBMS services and possibly receives a MBMS service.

Closed Subscriber Group (CSG): A Closed Subscriber Group identifies subscribers of an operator who are permitted to access one or more Cells of the PLMN but which have restricted access (CSG Cells).

CSG Cell: A Cell broadcasting a CSG Indicator that is set to TRUE and a specific CSG identity. All the UTRAN CSG Cells sharing the same identity and PLMN identity are identifiable as a single group for the purposes of mobility management and charging.

CSG identity: An identifier broadcast by a CSG or hybrid Cell/Cells and used by the UE to facilitate access for authorised members of the associated Closed Subscriber Group.

2. Service type in Idle and Connected Mode

This clause defines the level of service that may be provided by the network to a UE in Idle mode and Connected Mode.

The action of camping on a Cell is necessary to get access to some services. Three levels of services are defined for UE:

- Limited service (emergency calls and ETWS if supported on an acceptable Cell)
- Normal service (for public use on a suitable Cell)
- Operator service (for operators only on a reserved Cell)

Furthermore, the Cells are categorised according to which services they offer:

acceptable Cell:

An "acceptable Cell" is a Cell on which the UE may camp to obtain limited service (originate emergency calls and receive ETWS if supported). Such a Cell shall fulfil the following requirements, which is the minimum set of requirements to initiate an emergency call and to receive ETWS primary notification either with or without security in a UTRAN network:

- The Cell is not barred, see subclause 5.3.1.1;
- The Cell selection criteria are fulfilled, see subclause 5.2.3.1.2;

suitable Cell:

A "suitable Cell" is a Cell on which the UE may camp on to obtain normal service. Such a Cell shall fulfil all the following requirements.

- The Cell shall be part of either:

the selected PLMN, or:

the registered PLMN, or:

a PLMN of the Equivalent PLMN list

- For a CSG Cell, the CSG ID broadcast by the Cell is present in the CSG whitelist associated with the PLMN for which the above condition is satisfied;

According to the latest information provided by the NAS.

- The Cell is not barred, see subclause 5.3.1.1;
- The Cell is part of at least one LA that is not part of the list of "forbidden LAs for roaming" [9], which belongs to a PLMN that fulfils the first bullet above;
- The Cell selection criteria are fulfilled, see subclause 5.2.3.1.2.

If the IE “Multiple PLMN List” [4] is broadcast in the Cell, the Cell is considered to be part of all LAs with LAIs constructed from the PLMN identities in the “Multiple PLMN List” and the LAC broadcast in the Cell.

barred Cell:

A Cell is barred if it is so indicated in the system information [4].

reserved Cell:

A Cell is reserved if it is so indicated in system information [4].

Following exceptions to these definitions are applicable for UEs:

- camped on a Cell that belongs to a LA that is forbidden for regional provision of service, and during emergency calls.
- as an outcome of the manual CSG selection procedure the UE is allowed to access an acceptable Cell which fulfils the Cell selection criteria and is not barred or reserved for operator use for UEs not belonging to AC 11 or 15 and inform NAS that access is possible (for location registration procedure).

NOTE: UE is not required to support manual search and selection of CSG(s) while in RRC CONNECTED state.

A Cell that belongs to a LA that is forbidden for regional provision service ([5], [16]) is suitable but provides only limited service.

If a UE has an ongoing emergency call, all acceptable Cells of that PLMN are treated as suitable for Cell reselection for the duration of the emergency call.

suitable MBSFN cluster:

A Cell is part of an MBSFN cluster if it is indicated in system information [4]. An MBSFN cluster provides exclusively MBMS services. A suitable MBSFN cluster shall fulfil all the following requirements:

- For FDD, 3.84 Mcps TDD IMB and 3.84/7.68 Mcps TDD the MBSFN cluster shall be part of either:

the registered PLMN, or:

a PLMN of the Equivalent PLMN list

The MBSFN cluster shall be indicated as:

- providing MBSFN only service

For FDD, 3.84 Mcps TDD IMB and 3.84/7.68 Mcps TDD MBSFN cluster selection/reselection process for MBSFN clusters operating on the same frequency shall be based on reception quality. Details of the process are not specified.

3. Cell reselection with CSG Cells

Cell reselection from a non-CSG Cell to a CSG Cell

In addition to normal Cell reselection, the UE shall use an autonomous search function to detect at least previously visited allowed CSG Cells on non-serving frequencies, including inter-RAT frequencies, according to the performance requirements specified in [10], when at least one CSG ID with associated PLMN identity is included in the UE’s CSG whitelist. The UE is required to perform autonomous search function in Idle, Cell_PCH and URA_PCH states. The UE shall disable the autonomous search function for CSG Cells if the UE’s CSG whitelist is empty. If "Dedicated CSG frequency(ies) " IE is present, the UE may use the autonomous search function only on these dedicated frequencies and on the other frequencies listed in the system information.

NOTE: The UE autonomous search function, per UE implementation, determines when and/or where to search for allowed CSG Cells.

When the UE has no or an empty CSG whitelist, the UE may ignore Cells with PSC in the stored range "CSG PSC Split Information" [4] reserved for CSG Cells for intra-frequency and inter-frequency measurements and Cell re-selections.

If the UE detects a suitable CSG Cell on the same frequency it shall reselect this Cell if the concerned CSG Cell is the highest ranked Cell, according to 5.2.6.1.4.

If the UE detects a suitable CSG Cell on a different frequency it shall reselect this Cell irrespective of the Cell reselection rules applicable for the Cell the UE is currently camped on, if the detected suitable CSG Cell is the strongest Cell on that frequency. If suitable CSG Cells are detected on different frequencies and these are the strongest Cells on their frequencies, then the UE shall reselect to any one of them.

If the UE detects one or more suitable CSG Cell on another RAT, the UE shall reselect to one of them according to [18].

Cell reselection from a CSG Cell to non-CSG Cell

While camped on a suitable CSG Cell, the UE shall consider the frequency of the serving Cell to be the highest priority frequency (i.e. higher than the eight network configured values or highest HCS priority) and shall not reselect to non-CSG Cell as long as the serving Cell remains the highest ranked Cell on that frequency (This includes the case when the UE has only dedicated priorities for other frequencies but not for the current frequency, i.e. the UE does not consider the current frequency to be the lowest priority frequency according to rules in 5.2.6.1.2a and 5.2.6.1.4a). Cell reselection rules as defined in section 5.2.6.1 are applied for Cell reselection from a CSG Cell to non-CSG Cell.

Cell reselection from a CSG Cell to a CSG Cell

To search for CSG Cells not listed in the system information of the serving CSG Cell, the UE may use the autonomous search function when at least one CSG ID with associated PLMN identity is included in the UE’s CSG whitelist. The UE is required to perform autonomous search function in Idle, Cell_PCH and URA_PCH states. If "Dedicated CSG frequency(ies)" IE is present, the UE may use the autonomous search function only on dedicated frequencies and on other frequencies listed in the system information.

If the UE detects a suitable CSG Cell on the same frequency, it shall reselect to this Cell if the concerned CSG Cell is the highest ranked Cell, according to 5.2.6.1.4.

While camped on a suitable CSG Cell, the UE shall consider the frequency of the serving Cell to be the highest priority frequency (i.e. higher than the eight network configured values or highest HCS priority) as long as the serving Cell is the highest ranked Cell on that frequency (This includes the case when the UE has only dedicated priorities for other frequencies but not for the current frequency, i.e. the UE does not consider the current frequency to be the lowest priority frequency according to rules in 5.2.6.1.2a and 5.2.6.1.4a).

If the UE detects one or more suitable CSG Cell on another RAT, the UE may reselect to one of them according to [18].

For reselection to neighbour CSG Cells listed in the system information of the serving CSG Cell the UE shall apply Cell measurement rules according to 5.2.6. If the UE detects a suitable CSG Cell that is listed in the system information of the serving Cell on other frequencies, and the detected CSG Cell is the strongest Cell on that frequency, then the UE shall consider these frequencies to have a priority equal to the current frequency and shall follow Cell reselection rules according to 5.2.6.1.4 and 5.2.6.1.4a.

Cell Reselection with Hybrid Cells

In addition to normal Cell reselection rules, the UE shall use an autonomous search function to detect at least previously visited hybrid Cells whose CSG ID and associated PLMN identity is in the UE's CSG whitelist according to the performance requirements specified in [10]. The UE shall treat detected hybrid Cells as CSG Cells if the CSG ID and associated PLMN of the hybrid Cell is in the UE’s CSG whitelist and as normal Cells otherwise.

Reference

1. 3GPP TS 25.304 clause 3.1 v9.6
2. 3GPP TS 25.304 clause 4.3 v9.6
3. 3GPP TS 25.304 clause 5.2.6.4. v9.6

6.3.1.4.3 Test purpose

1. To confirm that a CSG Cell is considered as a suitable Cell when the CSG ID with associated PLMN identity of the CSG Cell is included in the UE's CSG whitelist.

6.3.1.4.4 Method of test

Initial conditions

There exist 2 Cells: Cell 1and Cell 2.

Cell 1 shall include Cell 2 as neighbouring Cell in its System Information Block Type 11.

Cell 1 belongs to PLMN 1

Cell 2 is a CSG Cell with the CSG ID of CSG 2. "CSG PSC Split Information" is also included in SIB3 with "Start PSC" set to 144 and "Number of PSCs" set to 10.

The Primary Scrambling Code of Cell 2 is 150.

Cell 2 belongs to PLMN2.

UE's white list is set as below:

Table 6.3.1.4-1

CSG ID	PLMN ID
2	2

Related ICS/IXIT statement(s)

- UE supports FDD and CSG.

Test Procedure

For FDD only:

Step a-d:

Parameter	Unit	Cell 1	Cell 2
Test Channel		1	2
LAC		0001	0002
CPICH_Ec	dBm/3.84 MHz	-60	OFF
$Qhyst1_s$	dB	0	10
$Qoffset1_{s,n}$	dBm	0	10
Sintrasearch	dB	0	not present
Sintersearch	dB	0	not present
CSG Identity			0000002
Start PSC			144
Number of PSCs			10

Step e:

CPICH_Ec	dBm/3.84 MHz	-60->-85	OFF->-55
$Qhyst1_s$	dB	0	10
$Qoffset1_{s,n}$	dBm	0	10

Test procedure

a) The SS activates Cell 1.

b) The UE is switched on.

c) The SS waits for random access requests from the UE. A complete Location Update is done. A Location Update Accept message shall be sent on reception of a Location Update message from the UE. The Location Update Accept message shall include PLMN2 in the equivalent PLMN list. For a UE that supports both CS and PS domain or PS domain only, the Location Updating procedure could be replaced by the appropriate GMM registration procedure. In these cases, the GMM Attach Accept message shall include PLMN2 in the equivalent PLMN list.

d) Void

e) The SS activates Cell 2 and the UE selects Cell 2. A complete Location Updating procedure is done. A Location Update Accept message shall be sent on reception of a Location Update message from the UE. For a UE that supports both CS and PS domain or PS domain only, the Location Updating procedure could be replaced by the appropriate GMM registration procedure.

6.3.1.4.5 Test requirements

1) In step c, the UE shall respond and camp on Cell 1.

2) Void

3) In step e, the UE shall respond and camp on Cell 2.

6.3.2 Reselection from a non-CSG cell to an allowed CSG cell

6.3.2.1 Intra-frequency cell reselection from a non-CSG cell to an allowed CSG cell

6.3.2.1.1 Definition

Test to verify that the UE performs the intra-frequency cell reselection from a non-CSG cell to an allowed CSG cell correctly for non-hierarchical cell structures in FDD.

6.3.2.1.2 Conformance requirement

1. When camped normally, the UE shall execute the cell reselection evaluation process on the following occasions/triggers:

   1.1 UE internal triggers, so as to meet performance as specified in TS 25.133 for FDD mode.

   1.2 When information on the BCCH used for the cell reselection evaluation procedure has been modified.

2. Intra-frequency Cell Reselection Criteria from a non-CSG cell to a CSG cell:

   2.1 In addition to normal cell reselection the UE shall use an autonomous search function for CSG cells when at least one CSG ID is included in the UE's 'Allowed CSG list'.

   2.2 The UE is required to perform autonomous search function in Idle, Cell_PCH and URA_PCH states.

   2.3 For a CSG cell to be suitable, the CSG ID of the CSG cell has to be part of the Allowed CSG list of the UE.

   2.3 If the UE detects a suitable CSG cell on the same frequency it shall reselect to this cell if the concerned CSG cell is the highest ranked cell.

   2.4 The cells shall be ranked according to the R criteria. The best ranked cell is the cell with the highest R value. The cell-ranking criterion R is derived from Q, Qhyst, Qoffset.

   2.5 If a CSG cell is not listed in system information, then Qoffset will have the value 0.

   2.5 In all cases, the UE shall reselect the new cell, only if the cell reselection criteria are fulfilled during a time interval Treselection.

References

2. TS 25.304, clause 5.2.6.4.1.

3. TS 25.304, clause 5.2.6.1.4.

6.3.2.1.3 Test purpose

1. Verify that in FDD, the UE performs intra-frequency measurements for CSG cells even when the normal measurement rules mentioned in Section 5.2.6.1.1 of TS 25.304 do not mandate it.

2. Verify that in FDD, the UE reselects to an allowed CSG cell on the same frequency if the concerned CSG cell is the highest ranked cell, according to 5.2.6.1.4 of TS 25.304.

6.3.2.1.4 Method of test

Initial conditions

Cell 1 shall not include Cell 2 as a neighbouring cell in its System Information Block Type 11.

Cell 2 shall include Cell 1 as a neighbouring cell in its System Information Block Type 11.

Cell 2 shall also include:

- "CSG Indicator" in its Master Information Block
- "CSG Identity" and "CSG PSC Split Information" in its System Information Block type 3.

"Allowed CSG List" of the test UE shall be empty.

EF_{ACSGL} data is not on the USIM.

For FDD only:

Step a-c:

Parameter	Unit	Cell 1	Cell 2
Test Channel		1	
LAC		0001	
CPICH_Ec	dBm/3.84 MHz	-60	OFF
$Qhyst1_s$	dB	0	
$Qoffset1_{s,n}$	dBm	0	
R_s*	dB	-60	
R_n*	dB	-55	
Sintrasearch	dB	0	
Sintersearch	dB	0	
CSG Identity			
Start PSC			
Number of PSCs			

Step d-e:

Parameter	Unit	Cell 1	Cell 2
Test Channel		1	1
LAC		0001	0002
CPICH_Ec	dBm/3.84 MHz	-60	-55
$Qhyst1_s$	dB	0	6
$Qoffset1_{s,n}$	dBm	0	5
R_s*	dB	-60	-49
R_n*	dB	-55	-65
Sintrasearch	dB	0	not present
Sintersearch	dB	0	not present
CSG Identity			0000001
Start PSC			144
Number of PSCs			alltheRest

Step f-g:

CPICH_Ec	dBm/3.84 MHz	-60->-50	-55->-67
$Qhyst1_s$	dB	0	6
$Qoffset1_{s,n}$	dBm	0	5
R_s*	dB	-50	-61
R_n*	dB	-67	-55

Step h-i:

CPICH_Ec	dBm/3.84 MHz	-50->-70	-67-> -60
$Qhyst1_s$	dB	0	6
$Qoffset1_{s,n}$	dBm	0	5
R_s*	dB	-70	-54
R_n*	dB	-60	-75

Test procedure

Method C is applied.

a) The SS activates Cell 1.

b) The UE is switched on.

c) The SS waits for random access requests from the UE.

d) The SS activates Cell 2 and monitors it for random access requests from the UE.

e) The UE is made to perform manual CSG ID selection and select Cell 2. A complete Location Updating procedure is done where SS sends LOCATION UPDATING ACCEPT message.

f) The SS changes the level of Cell 1 and 2.

g) The SS waits for random access requests from the UE

h) The SS changes the level of Cell 1 and 2

i) The SS waits for random access requests from the UE

6.3.2.1.5 Test requirements

1) In step c, the UE shall respond on Cell 1.

2) In step d, the UE shall not respond on Cell 2.

3) In step e, the UE shall respond and camp on Cell 2.

4) In step g, the UE shall respond on Cell 1.

5) In step i, the UE shall respond on Cell 2 within 10 mins.

6.3.2.2 Inter-frequency cell reselection from a non-CSG cell to an allowed CSG cell

6.3.2.2.1 Definition

Test to verify that the UE performs the inter-frequency cell reselection using autonomous search from a non-CSG cell to an allowed CSG cell correctly for non-hierarchical cell structures in FDD.

6.3.2.2.2 Conformance requirement

1. When camped normally, the UE shall execute the cell reselection evaluation process on the following occasions/triggers:

   1.1 UE internal triggers, so as to meet performance as specified in TS 25.133 for FDD mode.

1.2 When information on the BCCH used for the cell reselection evaluation procedure has been modified.

2. Inter-frequency Cell Reselection Criteria from a non-CSG cell to a CSG cell:

2.1. In addition to normal cell reselection the UE shall use an autonomous search function for CSG cells when at least one CSG ID is included in the UE's 'Allowed CSG list'.

2.2 The UE is required to perform autonomous search function in Idle, Cell_PCH and URA_PCH states.

2.3 For a CSG cell to be suitable, the CSG ID of the CSG cell has to be part of the Allowed CSG list of the UE.

2.4 If the UE detects a suitable CSG cell on a different frequency it shall reselect this cell irrespective of the cell reselection rules applicable for the cell the UE is currently camped on, if the detected suitable CSG cell is the strongest cell on that frequency.

2.5 If suitable CSG cells are detected on different frequencies and these are the strongest cells on their frequencies, then the UE shall reselect to any one of them.

2.6 While camped on a suitable CSG cell, the UE shall consider the frequency of the serving cell to be the highest priority frequency (i.e. higher than the eight network configured values or highest HCS priority) and shall not reselect to non-CSG cell as long as the serving cell remains the highest ranked cell on that frequency.

3. The UE shall perform search and reselection to an allowed inter-frequency CSG cell that has met CSG reselection criterion defined in [1] and that is in its whitelist, within 6 minutes.

References

1. TS 25.304, clause 5.2.5.1.
2. TS 25.304, clause 5.2.6.4.1.

6.3.2.2.3 Test purpose

1. Verify that in FDD, the UE performs inter-frequency measurements for CSG cells using autonomous search, even when the normal measurement rules mentioned in Section 5.2.6.1.1 of TS 25.304 do not mandate it.
2. Verify that in FDD, the UE reselects to an allowed CSG cell on a different frequency irrespective of the cell reselection rules applicable for the cell the UE is currently camped on, if the concerned CSG cell is the strongest cell on that frequency.

6.3.2.2.4 Method of test

Initial conditions

Cell 1 shall include Cell 2 and Cell 4 as neighbouring cell in its System Information Block Type 11.

Cell 2 shall include Cell 1 and Cell 4 as neighbouring cell in its System Information Block Type 11.

Cell 4 shall include Cell 1 and Cell 2 as neighbouring cells in its System Information Block Type 11.

Cell 4 shall not include Cell 5 as neighbouring cells in its System Information Block Type 11.

Cell 5 shall include Cell 1, Cell 2 and Cell 4 as neighbouring cells in its System Information Block Type 11.

Cell 5 shall also include:

- "CSG Indicator" in its Master Information Block
- "CSG Identity" and "CSG PSC Split Information" in its System Information Block type 3.

"Allowed CSG List" of the test UE shall be empty.

EF_{ACSGL} data is not on the USIM.

UE is Powered Off.

Cell 1, 2, 4 and 5 are Powered Off.

Cell 1, 2, 4 and 5 have the same RAI.

For FDD only:

Step a-m:

Parameter	Unit	Cell 1	Cell 2	Cell 4	Cell 5
Test Channel		1	1	2	2
LAC		0001	0002	0003	0004
CPICH_Ec	dBm/3.84 MHz	-54	-60	-72	-66
$Qhyst1_s$	dB	0	0	0	0
$Qoffset1_{s,n}$	dBm	0	0	0	0
R_s*	dB	-54	-60	-72	-66

$R_{n=5}$*	dB	-66	-66	-66	n/a
Sintrasearch	dB	0	not present	not present	not present
Sintersearch	dB	0	not present	not present	not present
CSG Identity					0000001
Start PSC					300
Number of PSCs					allt heRest

Test procedure

Method C is applied.

a) The SS activates Cell 1.

b) The UE is switched on.

c) The SS waits for random access requests from the UE.

d) The SS activates Cell 4 and Cell 5 and monitors them for random access requests from the UE.

e) The UE is made to perform manual CSG ID selection and select Cell 5. A complete Location Updating procedure is done where SS sends LOCATION UPDATING ACCEPT message.

f) Cell 1 is switched off. The SS activates Cell 2.

h) Cell 4 and 5 are switched off.

i) The SS waits for random access requests from the UE.

j) The SS activates Cell 1 and 4 and monitors them for random access requests from the UE.

k) Cell 2 is switched off.

l) The SS activates Cell 5.

m) The SS waits for random access requests from the UE.

6.3.2.2.5 Test requirements

1) In step c, the UE shall respond on Cell 1.

2) In step d, the UE shall not respond on Cell 4 or Cell 5.

3) In step e, the UE shall respond and camp on Cell 5.

4) In step i, the UE shall respond on Cell 2.

5) In step j, the UE shall respond on Cell 1.

6) In step m, the UE shall respond on Cell 5 within 6 mins.

6.3.2.3 Inter-RAT Cell Reselection / from GSM_Idle / GPRS Packet_Idle to a UTRA idle CSG cell

6.3.2.3.1 Definition

Test to verify that the UE performs the inter-RAT cell reselection from GSM_Idle/GPRS Packet_Idle to an allowed UTRA CSG cell correctly in FDD.

6.3.2.3.2 Conformance requirement

1. Inter-RAT reselection to an allowed CSG cell is supported when the UE is camped on another RAT. The UE requirements are defined in the specifications of the concerned RAT.

2. If a mobile station is a member of at least one Closed Subscriber Group, i.e. at least one CSG ID is included in the MS's "Allowed CSG list", then, in addition to normal cell reselection, the MS shall use an autonomous search function to detect UTRAN and/or E-UTRAN CSG cells. The autonomous search function shall at least detect previously visited allowed CSG cells.

   If the strongest cell which the MS has detected on a UTRAN or E-UTRAN frequency during a time interval T_reselection is a suitable CSG cell, the MS shall reselect to this cell irrespective of the cell reselection rules applicable for the cell on which the MS is currently camped.

   The following requirements are valid for reselection to allowed CSG cells previously visited by the MS when the radio configuration parameters, including the carrier frequency and PSC/PCI (whichever and if it is applicable) of the CSG cell, non CSG cell and other neighbour cells, are unchanged from the most recent previous visit. The autonomous search and cell re-selection to a previously visited allowed CSG cell shall meet the performance requirements defined as follows:

   - the MS shall perform search and re-selection to a previously visited allowed UTRAN FDD CSG cell, that has met the CSG cell re-selection criterion defined above, within 6 minutes in the radio conditions specified for an UTRAN FDD CSG cell in 3GPP TS 36.133 in terms of parameters for CSG inter-RAT UTRAN FDD reselection; UARFCN and PSC shall be unchanged from the most recent previous visit of the UTRAN FDD CSG cell; Serving GSM cell at RXLEV= -70 dBm, with 6 GSM neighbours at RXLEV= -75 dBm;

   - the MS shall perform search and re-selection to a previously visited allowed E-UTRAN CSG cell, that has met the CSG cell re-selection criterion defined above, within 6 minutes in the radio conditions specified for an E-UTRAN CSG cell in 3GPP TS 25.133 in terms of parameters for CSG inter-RAT E-UTRA reselection; E-UARFCN and PCI shall be unchanged from the most recent previous visit of the E-UTRAN CSG cell; Serving GSM cell at RXLEV= -70 dBm, with 6 GSM neighbours at RXLEV= -75 dBm.

   NOTE 4: The above performance requirements are minimum requirements defined to ensure the testability of autonomous CSG search.

3. If NAS requests AS to search for available CSG IDs, the MS shall perform the search and report the results to NAS as described in 3GPP TS 25.304 for UTRAN and as described in 3GPP TS 36.304 for E-UTRAN.

   If a CSG ID is manually selected by NAS, the MS shall behave as specified in 3GPP TS 25.304 or in 3GPP TS 36.304, depending on the RAT type of the selected CSG cell.

4. If a mobile station is a member of at least one Closed Subscriber Group, i.e. at least one CSG ID is included in the MS's "Allowed CSG list", then, in addition to normal cell reselection, the MS shall use an autonomous search function to detect UTRAN and/or E-UTRAN CSG cells. The autonomous search function shall at least detect previously visited allowed CSG cells.

Reference

1. TS 25.367, clause 7.2.3

2. TS 45.008, clause 6.6.7.1
3. TS 45.008, clause 6.6.7.2
4. TS 45.008, clause 10.1.3.4

6.3.2.3.3 Test purpose

To test the behaviour of the UE idle mode reselection from GSM cell to an allowed UTRA CSG Cell.

6.3.2.3.4 Method of test

Initial condition

Three Cells, Cell 1, Cell 2 and Cell 9:

Cell	Radio Access Technology	CSG Identity	PLMN	LAC
Cell 9	GSM	-	PLMN 1	-
Cell 1	UTRAN	CSG1	PLMN 1	001
Cell 2	UTRAN	-	PLMN 1	002

Cell 1(UTRAN) is not in the 3G Neighbour Cell Description of Cell 9 (GSM).

Cell 1 is not in the cell info list of Cell 2.

Cell 1 shall include:

- "CSG Indicator" with value of "TRUE" in its Master Information Block
- "CSG Identity" and "CSG PSC Split Information" in its System Information Block type 3.

On the UE side, UE's Allowed CSG List is empty.

The UE is equipped with a USIM containing default values.

For FDD only:

Step a-f:

Parameter	Unit	Cell 9
Test Channel		1
RXLEV_ACCESS_MIN	dBm	-81
RF Signal Level	dBm	-48

Parameter	Unit	Cell 1	Cell 2
Test Channel		2	2
$Qhyst1_s$	dB	0	0
$Qoffset1_{s,n}$	dBm	0	0
$S_{search,RAT}$	dB	16	16
CPICH_Ec	dBm/3.84 MHz	-65	-75
Qrxlevmin	dBm	-79	-79
Srxlev*	dB	14	4
CSG Identity		'000 0000 0000 0000 0000 0000 0001'B (CSG 1)	-
Start PSC		144	-
Number of PSCs		alltheRest	-

Step g-h:

Parameter	Unit	Cell 9
RF Signal Level	dBm	-48->-54

Parameter	Unit	Cell 1	Cell 2
CPICH_Ec	dBm/3.84 MHz	-65->-75	-75->-70
Srxlev*	dB	4	9

Step i-j:

Parameter	Unit	Cell 9
RF Signal Level	dBm	-54->-48

Parameter	Unit	Cell 1	Cell 2
CPICH_Ec	dBm/3.84 MHz	-75->-65	-70->-75
Srxlev*	dB	14	4

Test procedure

Method C is applied.

a) The SS activates Cell 9. The UE is switched on.

b) The SS waits for random access requests from the UE.

c) The SS activates Cell 1 and Cell 2.

d) The SS waits for random access requests from the UE.

e) Make UE perform manual CSG ID selection and CSG 1 is selected manually.

f) The SS waits for random access requests from the UE.

g) The SS changes the level of Cell 1, Cell 2 and Cell 9.

h) The SS waits for random access requests from the UE.

i) The SS changes the level of Cell 1, Cell 2 and Cell 9.

j) The SS waits for random access requests from the UE.

6.3.2.3.5 Test requirements

1) In step b, the UE shall respond and camp on Cell 9.

2) In step d, the UE shall not respond and camp on Cell 1 or Cell 2.

3) In step f, the UE shall respond and camp on Cell 1. CSG 1 is added in UE's Allowed CSG list.

4) In step h, the UE shall respond and camp on Cell 9.

5) In step j, the UE shall respond and camp on Cell 1 in 6 mins.

6.3.3 Reselection from CSG Cell to CSG Cell

6.3.3.1 Intra frequency CSG Cell Reselection

6.3.3.1.1 Definition

6.3.3.1.2 Conformance requirement

1. When camped normally, the UE shall execute the cell reselection evaluation process on the following occasions/triggers:

   1.1 UE internal triggers, so as to meet performance as specified in TS 25.133 for FDD mode.

   1.2 When information on the BCCH used for the cell reselection evaluation procedure has been modified.

2. Intra-frequency Cell Reselection Criteria between CSG cells:

2.1 In addition to normal cell reselection the UE shall use an autonomous search function for CSG cells when at least one CSG ID is included in the UE's 'Allowed CSG list'.

2.2 The UE is required to perform autonomous search function in Idle, Cell_PCH and URA_PCH states.

2.3 For a CSG cell to be suitable, the CSG ID of the CSG cell has to be part of the Allowed CSG list of the UE.

2.4 If the UE detects a suitable CSG cell on the same frequency, it shall reselect to this cell if the concerned CSG cell is the highest ranked cell.

2.5 The cells shall be ranked according to the R criteria. The best ranked cell is the cell with the highest R value. The cell-ranking criterion R is derived from Q, Qhyst, Qoffset.

2.6 If a CSG cell is not listed in system information, then Qoffset will have the value 0.

2.7 In all cases, the UE shall reselect the new cell, only if the cell reselection criteria are fulfilled during a time interval Treselection.

References

1. TS 25.304, clause 5.2.5.1.
2. TS 25.304, clause 5.2.6.4.3.
3. TS 25.304, clause 5.2.6.1.4.

6.3.3.1.3 Test purpose

To verify that the UE reselects from a CSG cell to an allowed CSG cell on the same frequency if the detected CSG cell is the highest ranked cell, according to clause 5.2.6.1.4 of TS 25.304.

6.3.3.1.4 Method of test

Initial conditions

Two Cells, Cell 1 and Cell 2. Cell 1 and Cell 2 will be mapped to Cell 1 and Cell 2 respectively as found in TS 34.108 clause 6.1.4.

Cell 1 shall not include Cell 2 as a neighbouring cell in its System Information Block Type 11.

Cell 1 shall also include:

- "CSG Indicator" in its Master Information Block
- "CSG Identity" and "CSG PSC Split Information" in its System Information Block type 3.

Cell 2 shall include Cell 1 as a neighbouring cell in its System Information Block Type 11.

Cell 2 shall also include:

- "CSG Indicator" in its Master Information Block.
- "CSG Identity" and "CSG PSC Split Information" in its System Information Block type 3.

The UE is equipped with a USIM containing default values except for those listed below.

USIM field	PLMN	CSG ID
EF_{ACSGL}	PLMN 1	CSG 1

For FDD only:

Step a-c:

Parameter	Unit	Cell 1	Cell 2
Test Channel		1	
LAC		0001	
CPICH_Ec	dBm/3.84 MHz	-65	OFF
$Qhyst1_s$	dB	6	
$Qoffset1_{s,n}$	dBm	5	
R_s*	dB	-59	
R_n*	dB	-55	
Sintrasearch	dB	not present	
Sintersearch	dB	not present	
CSG Identity		0000001	
Start PSC		80	
Number of PSCs		alltheRest	

Step d-e:

Parameter	Unit	Cell 1	Cell 2
Test Channel		1	1
LAC		0001	0002
CPICH_Ec	dBm/3.84 MHz	-65	-50
$Qhyst1_s$	dB	6	6
$Qoffset1_{s,n}$	dBm	5	5
R_s*	dB	-59	-44
R_n*	dB	-55	-70
Sintrasearch	dB	not present	not present
Sintersearch	dB	not present	not present
CSG Identity		0000001	0000002
Start PSC		80	80
Number of PSCs		alltheRest	alltheRest

Step f-g:

CPICH_Ec	dBm/3.84 MHz	-65->-50	-50->-67
$Qhyst1_s$	dB	6	6
$Qoffset1_{s,n}$	dBm	5	5
R_s*	dB	-44	-61
R_n*	dB	-72	-55

Test procedure

Method C is applied.

a) The SS activates Cell 1.

b) The UE is switched on.

c) The SS waits for random access requests from the UE.

d) The SS activates Cell 2 and monitors it for random access requests from the UE.

e) The UE is made to perform manual CSG ID selection and select Cell 2. A complete Location Updating procedure is done where SS sends LOCATION UPDATING ACCEPT message.

f) The SS changes the level of Cell 1 and 2.

g) The SS waits for random access requests from the UE.

6.3.3.1.5 Test requirements

1) In step c, the UE shall respond on Cell 1.

2) In step d, the UE shall not respond on Cell 2.

3) In step e, the UE shall respond and camp on Cell 2.

4) In step g, the UE shall respond on Cell 1.

6.3.3.2 Void

6.3.4 Cell Reselection with Hybrid Cells

6.3.4.1 Inter-frequency Cell Reselection with Hybrid Cells

6.3.4.1.1 Definition

Test to verify that the UE shall use an autonomous search function to detect hybrid cells whose CSG IDs are in the UE's CSG whitelist and reselect it as a CSG cell correctly in FDD.

6.3.4.1.2 Conformance requirement

1. In case the UE has CSG ID of the hybrid cell in its CSG whitelist, cell reselection procedures will be the same as for a CSG cell as described in Chapter 7.2.

2. In addition to normal cell reselection rules, the UE shall use an autonomous search function to detect at least previously visited hybrid cells whose CSG IDs are in the UE's CSG whitelist according to the performance requirements specified in [10]. The UE shall treat detected hybrid cells as CSG cells if the CSG ID of the hybrid cell is in the UE’s CSG whitelist and as normal cells otherwise.

3. The UE shall perform search and reselection to an allowed inter-frequency CSG cell that has met CSG reselection criterion defined in [1] and that is in its whitelist, within 6 minutes.

Reference

1. TS 25.367, clause 9.2

2. TS 25.304, clause 5.2.6.5

3. TS 25.133, clause 4.2.2.11.1

6.3.4.1.3 Test purpose

To test the behaviour of the UE idle mode inter-frequency cell reselection from non-CSG cell to a hybrid Cell whose CSG ID is in the UE's CSG whitelist.

6.3.4.1.4 Method of test

Initial condition

1. Three Cells, Cell 1, Cell 4, Cell 5 as defined in TS 34.108 clause 6.1.4:

Cell	Radio Access Technology	PLMN	CSG Identity
Cell 1	UTRAN	PLMN 1	-
Cell 4	UTRAN	PLMN 1	-
Cell 5	UTRAN	PLMN 1	CSG 1

For Cell 1, SIB Configuration 6 is to be used for transmitting System Information Block Type 19 as per TS 34.108 clause 6.1.0a.2,

Cell 5 is not in the inter-frequency cell info list of Cell 1 in its System Information Block Type 11.

Cell 5 is not in the intra-frequency cell info list of Cell 4 in its System Information Block Type 11.

Cell 5 should not include “CSG Indicator” in its Master Information Block.

Cell 5 shall include “CSG Identity” in its System Information Block type 3.

Cell 1 has higher frequency priority 4 than Cell 4 with frequency priority 3 in its System Information Block Type 19.

2. On the UE side, CSG1 is in the UE’s Operator CSG List, while the Allowed CSG List is empty.

The UE is equipped with a USIM containing default values except for those listed below.

USIM field	PLMN	CSG ID
EF_{OCSGL}	PLMN 1	CSG 1
EF_{UST}	Service n°86 is disabled	

For FDD only:

Step a-d:

Parameter	Unit	Cell 1	Cell 4	Cell 5
Test Channel		1	2	2
LAC		0001	0002	0002
CPICH_Ec	dBm/3.84 MHz	-55	-70	-60
$Qhyst1_s$	dB	0	0	0
$Qoffset1_{s,n}$	dBm	0	0	0
R_s*	dB	-55	-70	-60
CSG Identity	-	-	-	0000001

Step e-f:

CPICH_Ec	dBm/3.84 MHz	-55	-70	-60->-80
$Qhyst1_s$	dB	0	0	0
$Qoffset1_{s,n}$	dBm	0	0	0
R_s*	dB	-55	-70	-80

Step g-h:

CPICH_Ec	dBm/3.84 MHz	-55	-70	-80->-60
$Qhyst1_s$	dB	0	0	0
$Qoffset1_{s,n}$	dBm	0	0	0
R_s*	dB	-55	-70	-60

Test procedure

Method C is applied.

a) The SS activates Cell 1. The UE is switched on.

b) The SS waits for random access requests from the UE.

c) The SS activates Cell 4 and Cell 5. Make UE perform manual CSG ID selection and CSG 1 is selected manually.

d) The SS waits for random access requests from the UE.

e) The SS changes the level of Cell 5 and Cell 5 is not the strongest cell on frequency f2.

f) The UE is in “automatic network selection mode” and performs the normal cell selection procedure and the SS waits for random access requests from the UE.

g) The SS changes the level of Cell 5 and Cell 5 becomes the strongest cell on frequency f2.

h) The UE performs autonomous search procedure and the SS waits for random access requests from the UE.

6.3.4.1.5 Test requirements

1) In step b, the UE shall respond and camp on Cell 1.

2) In step d, the UE shall respond and camp on Cell 5.

3) In step f, the UE shall respond and camp on Cell 1.

4) In step h, the UE shall respond and camp on Cell 5 in 6 mins.

Specific Message Contents

The contents of the SYSTEM INFORMATION BLOCK TYPE 19 message in this test case is identical to TS 34.108 clause 6.1.0b, with the following exceptions:

6.3.4.2 Cell Reselection with Hybrid Cells for non-member UEs

6.3.4.2.1 Definition

Test to verify that the non-member UE detects the cell is a hybrid cell and reselects it according to normal cell reselection rules correctly.

6.3.4.2.2 Conformance requirement

1. In case the UE has CSG ID of the hybrid cell in its CSG whitelist, cell reselection procedures will be the same as for a CSG cell as described in Chapter 7.2.

For all other UEs, cell reselection procedures will utilise normal cell reselection rules.

2. In addition to normal cell reselection rules, the UE shall use an autonomous search function to detect at least previously visited hybrid cells whose CSG IDs are in the UE's CSG whitelist according to the performance requirements specified in [10]. The UE shall treat detected hybrid cells as CSG cells if the CSG ID of the hybrid cell is in the UE’s CSG whitelist and as normal cells otherwise.

Reference

1. TS 25.367, clause 9.2
2. TS 25.304, clause 5.2.6.5

6.3.4.2.3 Test purpose

To test the behaviour of the UE idle mode cell reselection from non-CSG cell to a hybrid Cell whose CSG ID is not in the UE's CSG whitelist.

6.3.4.2.4 Method of test

Initial condition

Same initial conditions as in clause 6.1.2.1.4 except the following:

1. Cell 2 shall include:

   - "CSG Identity" in its System Information Block type 3 with the value "000 0000 0000 0000 0000 0000 0001".

   Cell 4 shall include:

   - "CSG Identity" in its System Information Block type 3 with the value "000 0000 0000 0000 0000 0000 0002".

2. On the UE side, the Allowed CSG List and the Operator CSG List are empty.

The UE is equipped with a USIM containing default values.

Test procedure

Same test procedure as in clause 6.1.2.1.4.

6.3.4.2.5 Test requirements

Same test requirement as in clause 6.1.2.1.5.

6.4 WLAN Environment

6.4.1 WLAN Offload / Cell Selection / UTRA RRC_Idle to/from WLAN (Qrxlevmeas, BeaconRSSI)

6.4.1.1 Definition

6.4.1.2 Conformance requirement

1. The UE is in UTRA RRC_IDLE state, and UE receives *SystemInformationBlockType23* including RAN-assisted WLAN interworking data and configured with $Thresh_{ServingOffloadWLAN, Low}$ and $Thresh_{BeaconRSSIWLAN, High}$. When the UE measures that Serving cell has condition: Qrxlevmeas < $Thresh_{ServingOffloadWLAN, Low}$ and the target WLAN AP has condition: BeaconRSSI > $Thresh_{BeaconRSSIWLAN, High}$, the UE initiates handover attach to WLAN after $T_{steeringWLAN.}$

2. The UE is associated with WLAN AP and attached to WLAN ePDG and configured with $Thresh_{BeaconRSSIWLAN, Low}$ and $Thresh_{ServingOffloadWLAN, High.}$ When the UE measures that WLAN AP has condition: BeaconRSSI < $Thresh_{BeaconRSSIWLAN, Low}$ and UTRA Serving cell has condition: Qrxlevmeas < $Thresh_{ServingOffloadWLAN, High}$, the UE initiates handover attach to WLAN cell after $T_{steeringWLAN.}$

The rules in this sub-clause are only applicable for WLANs for which identifiers have been signalled to the UE by UTRAN and the UE is capable of access network selection and traffic steering rules. Coexistence with ANDSF based WLAN selection and traffic steering methods on the UE is based on mechanism described in TS 23.402 [23]. The rules refer to the following WLAN quantities:

ChannelUtilizationWLAN	WLAN channel utilization as defined in sub-clause 8.4.2.30 in [24].
BackhaulRateDlWLAN	WLAN DLBandwidth as defined in sub-clause 9.1.2 in [25].
BackhaulRateUlWLAN	WLAN ULBandwidth as defined sub-clause 9.1.2 in [25].
BeaconRSSI	WLAN Beacon RSSI as defined in [26] and [27].

1. TS 25.304, clause 5.10.2

6.4.1.3 Test purpose

1. To verify that a UE initiates handover attach to WLAN after $T_{steeringWLAN}$ when Serving cell has condition: Qrxlevmeas < $Thresh_{ServingOffloadWLAN, Low}$ and the target WLAN AP has condition: BeaconRSSI > $Thresh_{BeaconRSSIWLAN, High}$.

2. To verify that a UE initiates handover attach to UTRA cell after $T_{steeringWLAN}$ WLAN AP has condition: BeaconRSSI < $Thresh_{BeaconRSSIWLAN, Low}$ and UTRA Serving cell has condition: Qrxlevmeas < $Thresh_{ServingOffloadWLAN, High}$.

6.4.1.4 Method of test

Initial conditions

- Cell 1 and Cell 39 are configured. Cell 39 is switched off.
- System information configuration 11 as defined in TS 34.108 [18] clause 6.1.0a.2 is used in Cell 1.
- The UE is in PS+PS-DCCH+DTCH_Idle State 6-19 as specified in clause 7.4 of TS 34.108on Cell 1.

Step a-c:

Parameter	Unit	Cell 1 (UTRAN)
Test Channel		1
CPICH_Ec (FDD)	dBm / 3.84 MHz	-71
P-CCPCH_RSCP (TDD)	dBm	-71

Parameter	Unit	Cell 39 (WLAN)
BeaconRSSI	dBm	68

Step d-e:

Parameter	Unit	Cell 39 (WLAN)
BeaconRSSI	dBm	45

Test Procedure

a) The SS activates Cell 39.

b) Wait for $Tsteering_{WLAN}$.

c) The SS waits to see if the UE offloads to the WLAN AP after $Tsteering_{WLAN}$ as described in Clause C.6.1.

d) Wait for $Tsteering_{WLAN.}$

e) The SS waits to see if the UE offloads to the UTRA Cell after $Tsteering_{WLAN}$ as described in Clause C.6.2.

6.4.1.5 Test Requirements

1) In Step c), UE shall offload the PDN to Cell 39.

2) In Step e), UE shall offload the PDN to Cell 1.

Specific Message Contents

The reference system configuration from TS 34.108 clause 6.1 is used in Cell 1, with the following modification:

SYSTEM INFORMATION BLOCK TYPE 23

Information Element	Condition	Value/remark
- CHOICE WLAN representation		WLAN Offload Information common for all PLMN
- WLAN Offload Information		
- WLAN Offload Configuration		
-Threshold Serving RSCP	RSCP	
-ThreshservingOffloadWLAN, low		-65 dBm
-ThreshservingOffloadWLAN, high		-62 dBm
-Threshold Serving Ec/N0	Ec/No	Not Present
-Threshold Channel Utilization	ChannelUtilization	Not Present
-Threshold Backhaul Bandwidth	BackHaul	
-Threshold Beacon RSSI		
- $Thresh_{BeaconRSSIWLAN, low}$		50 (value in dBm =-78)
- $Thresh_{BeaconRSSIWLAN, high}$		60(value in dBm =-68)
-TsteeringWLAN		7 seconds

6.4.2 WLAN Offload / Cell Selection / UTRA RRC_Idle to/from WLAN (Qrxlevmeas, BackhaulRateDlWLAN, WLAN identifier no match/match)

6.4.2.1 Definition

Test to Verify UE offload from UTRA RRC_Idle to WLAN when Qrxlevmeas < ThreshServingOffloadWLAN, Low and BackhaulRateDlWLAN > $Thresh_{BackhRateDLWLAN, High}$ and

Verify UE offload from WLAN to UTRA RRC_Idle when BackhaulRateDlWLAN < $Thresh_{BackhRateDLWLAN, Low}$ and Qrxlevmeas < ThreshServingOffloadWLAN, High.

Verify that the UE does not offload by Cell Selection from UTRA RRC_IDLE to WLAN when the WLAN Identifier does not match the identifier broadcast in SIB23.

6.4.2.2 Conformance requirement

The rules in this sub-clause are only applicable for WLANs for which identifiers have been signalled to the UE by UTRAN and the UE is capable of access network selection and traffic steering rules. Coexistence with ANDSF based WLAN selection and traffic steering methods on the UE is based on mechanism described in TS 23.402 [23]. The rules refer to the following WLAN quantities:

ChannelUtilizationWLAN	WLAN channel utilization as defined in sub-clause 8.4.2.30 in [24].
BackhaulRateDlWLAN	WLAN DLBandwidth as defined in sub-clause 9.1.2 in [25].
BackhaulRateUlWLAN	WLAN ULBandwidth as defined sub-clause 9.1.2 in [25].
BeaconRSSI	WLAN Beacon RSSI as defined in [26] and [27].

The upper layers in the UE shall be notified (see TS 24.302 [28]) when and for which WLAN(s), that matches all the provided identifiers (in sub-clause 5.10.3) for a specific entry in the list, the following conditions 1 and 2 for steering traffic from UTRAN to WLAN are satisfied for a time interval $Tsteering_{WLAN}$:

1. In the UTRAN serving cell:

   Qrxlevmeas < $Thresh_{ServingOffloadWLAN, Low}$; or

   Qqualmeas < $Thresh_{ServingOffloadWLAN, Low2}$.

2. In the target WLAN:

   ChannelUtilizationWLAN < $Thresh_{ChUtilWLAN, Low}$; and

   BackhaulRateDlWLAN > $Thresh_{BackhRateDLWLAN, High}$; and

BackhaulRateUlWLAN > $Thresh_{BackhRateULWLAN, High}$; and

BeaconRSSI > $Thresh_{BeaconRSSIWLAN, High}$.

The UE shall not consider the metrics for which a threshold has not been provided. The UE shall evaluate the UTRAN conditions on the serving cell in Idle mode, URA_PCH, CELL_PCH, CELL_FACH and CELL_DCH. If not all metrics related to the provided thresholds can be acquired for a WLAN BSS, the UE shall exclude that WLAN BSS from the evaluation of the above rule.

The upper layers in the UE shall be notified (see TS 24.302 [28]) when the following conditions 3 or 4 for steering traffic from WLAN to UTRAN are satisfied for a time interval $Tsteering_{WLAN}$:

1. In the source WLAN:

   ChannelUtilizationWLAN > $Thresh_{ChUtilWLAN, High}$; or

   BackhaulRateDlWLAN < $Thresh_{BackhRateDLWLAN, Low}$; or

   BackhaulRateUlWLAN < $Thresh_{BackhRateULWLAN, Low}$; or

   BeaconRSSI < $Thresh_{BeaconRSSIWLAN, Low}$.

2. In the target UTRANcell:

   Qrxlevmeas > $Thresh_{ServingOffloadWLAN, High}$; and

   Qqualmeas > $Thresh_{ServingOffloadWLAN, High2}$.

The UE shall not consider the metrics for which a threshold has not been provided. The UE shall evaluate the UTRAN conditions on the serving cell in Idle mode, URA_PCH, CELL_PCH, CELL_FACH and CELL_DCH.

Reference

1. TS 25.304, clause 5.10.2

6.4.2.3 Test purpose

To test the behaviour of the UE idle mode offload to/from WLAN

1. UTRA RRC_Idle to WLAN when Qrxlevmeas < ThreshServingOffloadWLAN, Low and BackhaulRateDlWLAN > $Thresh_{BackhRateDLWLAN, High}$
2. WLAN to UTRA RRC_Idle when BackhaulRateDlWLAN < $Thresh_{BackhRateDLWLAN, Low}$ and Qrxlevmeas < ThreshServingOffloadWLAN, High

6.4.2.4 Method of test

Initial condition

- Cell 1 and Cell 39 are configured. Cell 39 is switched off.
- System information configuration 11 as defined in TS 34.108 [18] clause 6.1.0a.2 is used in Cell 1.
- UE is in PS+PS-DCCH+DTCH_Idle State 6-19 as specified in clause 7.4 of TS 34.108on Cell 1.

Step a-c:

Parameter	Unit	Cell 1 (UTRAN)
Test Channel		1
CPICH_Ec (FDD)	dBm / 3.84 MHz	-71
P-CCPCH_RSCP (TDD)	dBm	-71

Parameter	Unit	Cell 39 (WLAN AP)
BackhaulRateDlWLAN	kbps	r16384
BackhaulRateUlWLAN	kbps	r8192

Step c

Parameter	Unit	Cell 1 (UTRAN)
WLAN SSID		Value same as that of cell 39
CPICH_Ec (FDD)	dBm / 3.84 MHz	-60
P-CCPCH_RSCP (TDD)	dBm	-60

Step d-e

Parameter	Unit	Cell 1 (UTRAN)
CPICH_Ec (FDD)	dBm / 3.84 MHz	-71
P-CCPCH_RSCP (TDD)	dBm	-71

Step f-g

Parameter	Unit	Cell 39 (WLAN AP)
2BackhaulRateDlWLAN	kbps	r2048

Test procedure

Method C is applied.

a) The SS activates Cell 39.

b) Wait for $Tsteering_{WLAN}$

c) Update system information to transmit WLAN identifier matching to that of cell 39 and wait for 5 seconds to allow UE to read the system information.

d) Wait for $Tsteering_{WLAN}$

e) SS checks if the test result of generic test procedure in TS 34.123-1 sub clause C.6.1 indicates that the PDN connection is offloaded from UTRAN to WLAN

f) Wait for $Tsteering_{WLAN}$

g) SS checks if the test result of generic test procedure in TS 34.123-1 sub clause C.6.2 indicates that the PDN connection is offloaded from WLAN to UTRAN.

6.4.2.5 Test requirements

1) In Step b), UE shall not offload the PDN to Cell 39 after $Tsteering_{WLAN}$.

2) In Step e), UE shall offload the PDN to Cell 39.

3) In Step g), UE shall offload the PDN to Cell 1

Specific Message Contents

6.4.3 WLAN Offload / Cell Selection / UTRA RRC_Idle to/from WLAN (Qrxlevmeas, BackhaulRateUlWLAN)

6.4.3.1 Definition

Test to Verify UE offload from UTRA RRC_Idle to WLAN when Qrxlevmeas < ThreshServingOffloadWLAN, Low and BackhaulRateUlWLAN > $Thresh_{BackhRateULWLAN, High}$ and

Verify UE offload from WLAN to UTRA RRC_Idle when BackhaulRateUlWLAN < $Thresh_{BackhRateULWLAN, Low}$ and Qrxlevmeas < ThreshServingOffloadWLAN, High.

6.3.4.1.3 Conformance requirement

The rules in this sub-clause are only applicable for WLANs for which identifiers have been signalled to the UE by UTRAN and the UE is capable of access network selection and traffic steering rules. Coexistence with ANDSF based WLAN selection and traffic steering methods on the UE is based on mechanism described in TS 23.402 [23]. The rules refer to the following WLAN quantities:

ChannelUtilizationWLAN	WLAN channel utilization as defined in sub-clause 8.4.2.30 in [24].
BackhaulRateDlWLAN	WLAN DLBandwidth as defined in sub-clause 9.1.2 in [25].
BackhaulRateUlWLAN	WLAN ULBandwidth as defined sub-clause 9.1.2 in [25].
BeaconRSSI	WLAN Beacon RSSI as defined in [26] and [27].

The upper layers in the UE shall be notified (see TS 24.302 [28]) when and for which WLAN(s), that matches all the provided identifiers (in sub-clause 5.10.3) for a specific entry in the list, the following conditions 1 and 2 for steering traffic from UTRAN to WLAN are satisfied for a time interval $Tsteering_{WLAN}$:

1. In the UTRAN serving cell:

   Qrxlevmeas < $Thresh_{ServingOffloadWLAN, Low}$; or

   Qqualmeas < $Thresh_{ServingOffloadWLAN, Low2}$.

2. In the target WLAN:

   ChannelUtilizationWLAN < $Thresh_{ChUtilWLAN, Low}$; and

   BackhaulRateDlWLAN > $Thresh_{BackhRateDLWLAN, High}$; and

   BackhaulRateUlWLAN > $Thresh_{BackhRateULWLAN, High}$; and

   BeaconRSSI > $Thresh_{BeaconRSSIWLAN, High}$.

The UE shall not consider the metrics for which a threshold has not been provided. The UE shall evaluate the UTRAN conditions on the serving cell in Idle mode, URA_PCH, CELL_PCH, CELL_FACH and CELL_DCH. If not all metrics related to the provided thresholds can be acquired for a WLAN BSS, the UE shall exclude that WLAN BSS from the evaluation of the above rule.

The upper layers in the UE shall be notified (see TS 24.302 [28]) when the following conditions 3 or 4 for steering traffic from WLAN to UTRAN are satisfied for a time interval $Tsteering_{WLAN}$:

1. In the source WLAN:

   ChannelUtilizationWLAN > $Thresh_{ChUtilWLAN, High}$; or

   BackhaulRateDlWLAN < $Thresh_{BackhRateDLWLAN, Low}$; or

   BackhaulRateUlWLAN < $Thresh_{BackhRateULWLAN, Low}$; or

   BeaconRSSI < $Thresh_{BeaconRSSIWLAN, Low}$.

2. In the target UTRANcell:

   Qrxlevmeas > $Thresh_{ServingOffloadWLAN, High}$; and

   Qqualmeas > $Thresh_{ServingOffloadWLAN, High2}$.

The UE shall not consider the metrics for which a threshold has not been provided. The UE shall evaluate the UTRAN conditions on the serving cell in Idle mode, URA_PCH, CELL_PCH, CELL_FACH and CELL_DCH.

Reference

1. TS 25.304, clause 5.10.2

6.4.3.3 Test purpose

To test the behaviour of the UE idle mode offload to/from WLAN:

1. UTRA RRC_Idle to WLAN when Qrxlevmeas < ThreshServingOffloadWLAN, Low and BackhaulRateUlWLAN > $Thresh_{BackhRateULWLAN, High}$
2. WLAN to UTRA RRC_Idle when BackhaulRateUlWLAN < $Thresh_{BackhRateULWLAN, Low}$ and Qrxlevmeas < ThreshServingOffloadWLAN, High

6.4.3.4 Method of test

Initial condition

- Cell 1 and Cell 39 are configured. Cell 39 is switched off.
- System information configuration 11 as defined in TS 34.108 [18] clause 6.1.0a.2 is used in Cell 1.
- UE is in PS+PS-DCCH+DTCH_Idle State 6-19 as specified in clause 7.4 of TS 34.108on Cell 1.

Step a-c:

Parameter	Unit	Cell 1 (UTRAN)
Test Channel		1
CPICH_Ec (FDD)	dBm / 3.84 MHz	-71
P-CCPCH_RSCP (TDD)	dBm	-71

Parameter	Unit	Cell 39 (WLAN AP)
BackhaulRateDlWLAN	kbps	r8192
BackhaulRateUlWLAN	kbps	r16384

Step d-e

Parameter	Unit	Cell 39 (WLAN AP)
BackhaulRateUlWLAN	kbps	r2048

Test procedure

Method C is applied.

a) The SS activates Cell 39

b) Wait for $Tsteering_{WLAN}$

c) SS checks if the test result of generic test procedure in TS 34.123-1 sub clause C.6.1 indicates that the PDN connection is offloaded from UTRAN to WLAN

d) Wait for $Tsteering_{WLAN}$

e) SS checks if the test result of generic test procedure in TS 34.123-1 sub clause C.6.2 indicates that the PDN connection is offloaded from WLAN to UTRAN

6.4.3.5 Test requirements

1) In Step c), UE shall offload the PDN to Cell 39.

2) In Step e), UE shall offload the PDN to Cell 1.

Specific Message Contents

The reference system configuration from TS 34.108 clause 6.1 is used in Cell 1, with the following modification:

SYSTEM INFORMATION BLOCK TYPE 23

Information Element	Condition	Value/remark

6.4.4 WLAN Offload / Cell Selection / UTRA RRC_Idle to/from WLAN (Qqualmeas, ChannelUtilizationWLAN)

6.4.4.1 Definition

6.4.4.2 Conformance requirement

1. The UE is in UTRA RRC_IDLE state, and UE receives *SystemInformationBlockType23* including RAN-assisted WLAN interworking data and configured with $Thresh_{ServingOffloadWLAN, Low}$ and $Thresh_{ChUtilWLAN, Low}$. When the UE measures that Serving cell has condition: Qqualmeas < $Thresh_{ServingOffloadWLAN, Low}$ and the target WLAN AP has condition: ChannelUtilizationWLAN < $Thresh_{ChUtilWLAN, High}$, the UE initiates handover attach to WLAN after $T_{steeringWLAN.}$

2. The UE is associated with WLAN AP and attached to WLAN ePDG and configured with $Thresh_{ChUtilWLAN, High}$ and $Thresh_{ServingOffloadWLAN, High.}$ When the UE measures that WLAN AP has condition: ChannelUtilizationWLAN > $Thresh_{ChUtilWLAN, High}$ and UTRA Serving cell has condition: Qqualmeas < $Thresh_{ServingOffloadWLAN, High}$, the UE initiates handover attach to WLAN cell after $T_{steeringWLAN.}$

The rules in this sub-clause are only applicable for WLANs for which identifiers have been signalled to the UE by UTRAN and the UE is capable of access network selection and traffic steering rules. Coexistence with ANDSF based WLAN selection and traffic steering methods on the UE is based on mechanism described in TS 23.402 [23]. The rules refer to the following WLAN quantities:

ChannelUtilizationWLAN	WLAN channel utilization as defined in sub-clause 8.4.2.30 in [24]
BackhaulRateDlWLAN	WLAN DLBandwidth as defined in sub-clause 9.1.2 in [25]
BackhaulRateUlWLAN	WLAN ULBandwidth as defined sub-clause 9.1.2 in [25]
BeaconRSSI	WLAN Beacon RSSI as defined in [26] and [27]

Reference

1. TS 25.304, clause5.10.2

6.4.4.3 Test purpose

1. To verify that a UE initiates handover attach to WLAN after $T_{steeringWLAN}$ when Serving cell has condition: Qqualmeas < $Thresh_{ServingOffloadWLAN, Low}$ and the target WLAN AP has condition: ChannelUtilizationWLAN < $Thresh_{ChUtilWLAN, High}$.

2. To verify that a UE initiates handover attach to UTRA cell after $T_{steeringWLAN}$ WLAN AP has condition: ChannelUtilizationWLAN > $Thresh_{ChUtilWLAN, High}$ and UTRA Serving cell has condition: Qqualmeas < $Thresh_{ServingOffloadWLAN, High}$.

6.4.4.4 Method of test

Initial conditions

- Cell 1 and Cell 39 are configured. Cell 39 is switched off.
- System information configuration 11 as defined in TS 34.108 [18] clause 6.1.0a.2 is used in Cell 1.
- The UE is in PS+PS-DCCH+DTCH_Idle State 6-19 as specified in clause 7.4 of TS 34.108on Cell 1.

Step a-c:

Parameter	Unit	Cell 1
UTRA RF Channel Number		Mid Range Test Frequency
CPICH Ec	dBm/3.84MHz	-75
Ioc (Noise)	dBm/3.84MHz	-60
CPICH_Ec/No	dB	-15.65

Parameter	Unit	Cell 39
UTRA RF Channel Number		Mid Range Test Frequency
ChannelUtilizationWLAN	-	40

Step d-e:

Parameter	Unit	Cell 1
UTRA RF Channel Number		Mid Range Test Frequency
CPICH Ec	dBm/3.84MHz	-60
Ioc (Noise)	dBm/3.84MHz	-60
CPICH_Ec/No	dB	-7.87

Parameter	Unit	Cell 39
UTRA RF Channel Number		Mid Range Test Frequency
ChannelUtilizationWLAN	-	100

Test Procedure

a) The SS activates Cell 39.

b) Wait for $Tsteering_{WLAN.}$

c) The SS waits to see if the UE offloads to the WLAN AP after $Tsteering_{WLAN}$ as described in Clause C.6.1.

d) Wait for $Tsteering_{WLAN.}$

e) The SS waits to see if the UE offloads to the UTRA Cell after $Tsteering_{WLAN}$ as described in Clause C.6.2.

6.4.4.5 Test Requirements

1) In Step c), UE shall offload the PDN to Cell 39.

2) In Step e), UE shall offload the PDN to Cell 1.

-Threshold Channel Utilization, High		80
-TsteeringWLAN		7 seconds

6.4.5 Void

7 Layer 2

7.1 MAC

General

If not otherwise mentioned, the same procedures as used in RRC test specification (TS 34.123-1 clause 8) or in the generic setup procedures (TS 34.108 clause 7) applies to reach initial conditions for MAC testing.

If not explicitly described, the same message contents and settings are applied as described in the RRC test description default settings.

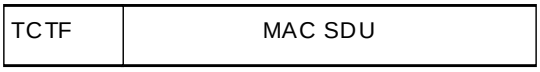
In some MAC test cases, which are explicitly mentioned, the RLC in the system simulator is operated in Transparent Mode (RLC TM) for the tested channel. Accordingly, no RLC header will be added by the RLC entity. Also, there is no header included by the MAC protocol in the system simulator. The UE, however, shall always be configured as specified in TS 34.108 for the respective test case.

Where RLC TM is used, the payload size in the system simulator is set to the value that corresponds to the transport block size expected by the UE for the respective configuration. The bit positions which are interpreted as RLC and MAC headers by the UE are included into the RLC payload by the system simulator.

For test cases where AM RLC is employed in either UE, SS, or both, the default parameter settings as defined in clause 7.2.3.1 are applicable if not mentioned otherwise.

7.1.1 Mapping between logical channels and transport channels

7.1.1.1 CCCH mapped to RACH/FACH / Invalid TCTF



7.1.1.1.1 Definition

This tests that the MAC applies the correct header to the MAC PDU according to the type of logical channel carried on the RACH/FACH transport channel. Incorrect application of MAC headers would result in inoperation of the UE.

7.1.1.1.2 Conformance requirement

CCCH mapped to RACH/FACH:

- TCTF field is included in MAC header.

The following fields are defined for the MAC header:

- Target Channel Type Field
  …

Coding of the Target Channel Type Field on FACH for FDD

TCTF	Designation
00	BCCH
01000000	CCCH
01000001-01111111	Reserved (PDUs with this coding will be discarded by this version of the protocol)
10000000	CTCH
10000001-10111111	Reserved (PDUs with this coding will be discarded by this version of the protocol)
11	DCCH or DTCH over FACH

Coding of the Target Channel Type Field on FACH for TDD

TCTF	Designation
000	BCCH
001	CCCH
010	CTCH
01100	DCCH or DTCH over FACH
01101-01111	Reserved (PDUs with this coding will be discarded by this version of the protocol)
100	SHCCH
101-111	Reserved (PDUs with this coding will be discarded by this version of the protocol)

Reference(s)

TS 25.321 clauses 9.2.1 and 9.2.1.4.

7.1.1.1.3 Test purpose

1. To verify that the UE discards PDUs with reserved or incorrect values in the TCTF field.
2. To verify that the TCTF field is correctly applied when a CCCH is mapped to the RACH/FACH.

7.1.1.1.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

The SCCPCH is configured as specified in TS 34.108 clause 6.10.2.4.3.3 (FDD) , 6.11.5.4.4.3(1.28Mcps TDD) (Interactive/Background 32 kbps RAB + SRB for PCCH + SRB for CCCH + SRB for DCCH + SRB for BCCH) with the following exceptions for the FACH:

FDD:

Higher layer	RAB/signalling RB		SRB#0
	User of Radio Bearer		Test
RLC	Logical channel type		CCCH
	RLC mode		TM
	Payload sizes, bit		168
	Max data rate, bps		33600 (alt. 50400)
	RLC header, bit		0
MAC	MAC header, bit		0 (note)
	MAC multiplexing		Simulated by SS
Layer 1	TrCH type		FACH
	TB sizes, bit		168
	TFS	TF0, bits	0 x 168
		TF1, bits	1 x 168
		TF2, bits	2 x 168
		TF3, bits	N/A (alt. 3 x 168)
	TTI, ms		10
	Coding type		CC 1/2
	CRC, bit		16
	Max number of bits/TTI before rate matching		752 (alt. 1136)
	RM attribute		200-240
NOTE:	The SS MAC layer must be configured not to add a MAC header so that the header can be added by the test case in order to create the necessary invalid values.		

TDD:

Higher layer	RAB/signalling RB		SRB#0
	User of Radio Bearer		Test
RLC	Logical channel type		CCCH
	RLC mode		TM
	Payload sizes, bit		171
	Max data rate, bps		33600 (alt. 50400)
	RLC header, bit		0
MAC	MAC header, bit		0 (note)
	MAC multiplexing		Simulated by SS
Layer 1	TrCH type		FACH
	TB sizes, bit		171
	TFS	TF0, bits	0 x 171
		TF1, bits	1 x 171
		TF2, bits	2 x 171

		TF5, bits	N/A (alt. 5x 171)
		TF6, bits	N/A (alt. 6 x 171)
	TTI, ms		20
	Coding type		CC 1/2
	CRC, bit		16
	Max number of bits/TTI before rate matching		1528 (alt. 2292)
	RM attribute		200-240
NOTE:	The SS MAC layer must be configured not to add a MAC header so that the header can be added by the test case in order to create the necessary invalid values.		

And using the configuration in TS 34.108 clause 6.10.2.4.3.3 (FDD), 6.11.5.4.4.3(1.28Mcps TDD) for the PCH.

The TFCS should be configured as specified in clause 6.10.2.4.3.3.1.4 (FDD), 6.11.5.4.4.3.1.4(1.28Mcps TDD).

User Equipment:

The UE shall operate under normal test conditions, Ciphering Off.

The Test-USIM shall be inserted.

The SS starts broadcasting the System Information as specified in TS 34.108 clause 6.1, using the configuration for the PRACH and SCCPCH (signalled in SYSTEM INFORMATION 5) as follows:

1. The SCCPCH is configured as specified in TS 34.108 clause 6.10.2.4.3.3 (FDD), 6.11.5.4.4.3(1.28Mcps TDD) (Interactive/Background 32 kbps RAB + SRB for PCCH + SRB for CCCH + SRB for DCCH + SRB for BCCH).

2. The PRACH is configured as specified in TS 34.108 clause 6.10.2.4.4.1(FDD), 6.11.5.4.5.2(TDD).

The SS follows the procedure in TS 34.108 clause 7.2.2.1 (CS UE) or 7.2.2.2 (PS UE) so that the UE shall be in idle mode and registered.

Test procedure

a) The SS pages the UE.

b) The SS waits for the first RRC CONNECTION REQUEST message to arrive on the PRACH/CCCH.

c) The SS responds with an RRC CONNECTION SETUP message (specified in TS 34.108 clause 9: Contents of RRC CONNECTION SETUP message: UM (Transition to CELL_FACH)(FDD), or UM (Transition to CELL_FACH) (1.28 Mcps TDD option). In this case the SS will transmit the message in 152 bit for FDD and 160 bits for TDD (note) segments, with a valid UM RLC header and with the MAC header set as follows:

FDD:

Field	Value
TCTF	01000001'B

TDD:

Field	Value
TCTF	101'B

d) The SS waits for retransmission of the RRC CONNECTION REQUEST on the PRACH/CCCH due to expiry of timer T300. If no retransmission is received steps a) and b) are repeated.

e) The SS repeats steps c) and d), with the TCTF field set as follows:

FDD:

Iteration	TCTF Value
2	(void)
3	10000000'B
4	10000001'B
5	(void)

TDD:

Iteration	TCTF Value
2	010'B
3	01111'B
4	(void)'
5	(void)
6	(void)

f) The SS repeats steps c) and d), with the TCTF field set as to 01000000'B(FDD), 001’B(TDD).

Expected sequence

FDD:

Step	Direction		Message	Comments
	UE	SS		
1	←		PAGING TYPE 1

Specific Message Contents

None.

7.1.1.1.5 Test Requirement

On the first iteration, and on each iteration in step e) the UE should not recognise the RRC CONNECTION SETUP message and therefore should either retransmit the RRC CONNECTION REQUEST after each expiry of T300 (the UE

should send up to N300=3 RRC CONNECTION REQUESTs before abandoning the procedure) or not respond (if N300 RRC CONNECTION REQUESTs have already been sent).

On the final iteration the UE should respond with an RRC CONNECTION SETUP COMPLETE message.

7.1.1.2 DTCH or DCCH mapped to RACH/FACH / Invalid TCTF

7.1.1.2.1 Definition

This tests that the MAC applies the correct header to the MAC PDU according to the type of logical channel carried on the RACH/FACH transport channel. Incorrect application of MAC headers would result in inoperation of the UE.

7.1.1.2.2 Conformance requirement

DTCH or DCCH mapped to RACH/FACH:

TCTF field, C/T field, UE-Id type field and UE-Id are included in the MAC header.

The following fields are defined for the MAC header:

- Target Channel Type Field
  …

Coding of the Target Channel Type Field on FACH for FDD

TCTF	Designation
00	BCCH
01000000	CCCH
01000001-01111111	Reserved (PDUs with this coding will be discarded by this version of the protocol)
10000000	CTCH
10000001-10111111	Reserved (PDUs with this coding will be discarded by this version of the protocol)
11	DCCH or DTCH over FACH

Coding of the Target Channel Type Field on FACH for TDD

TCTF	Designation
000	BCCH
001	CCCH
010	CTCH
01100	DCCH or DTCH over FACH
01101-01111	Reserved (PDUs with this coding will be discarded by this version of the protocol)
100	SHCCH
101-111	Reserved (PDUs with this coding will be discarded by this version of the protocol)

Reference(s)

TS 25.321 clauses 9.2.1 and 9.2.1.1 c).

7.1.1.2.3 Test purpose

1. To verify that the UE discards PDUs with reserved or incorrect values in the TCTF field.
2. To verify that the TCTF field, C/T field, UE-Id type and UE-Id field are correctly applied when a DTCH or DCCH is mapped to the RACH/FACH.

7.1.1.2.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

The SCCPCH is configured as specified in TS 34.108 clause 6.10.2.4.3.3(FDD) and 6.11.5.4.4.3(1.28Mcps TDD) (Interactive/Background 32 kbps RAB + SRB for PCCH + SRB for CCCH + SRB for DCCH + SRB for BCCH) with the following exceptions for the FACH:

FDD:

Higher layer	RAB/signalling RB		RB#3 (SRB#3)
	User of Radio Bearer		Test
RLC	Logical channel type		DCCH
	RLC mode		TM
	Payload sizes, bit		168
	Max data rate, bps		33600 (alt. 50400)
	RLC header, bit		0
MAC	MAC header, bit		0 (note)
	MAC multiplexing		Simulated by SS
Layer 1	TrCH type		FACH
	TB sizes, bit		168
	TFS	TF0, bits	0 x 168
		TF1, bits	1 x 168
		TF2, bits	2 x 168
		TF3, bits	N/A (alt. 3 x 168)
	TTI, ms		10
	Coding type		CC ½
	CRC, bit		16
	Max number of bits/TTI before rate matching		752 (alt. 1136)
	RM attribute		200-240
NOTE:	The SS MAC layer must be configured not to add a MAC header so that the header can be added by the test case in order to create the necessary invalid values.		

TDD:

Higher layer	RAB/signalling RB	RB#3 (SRB#3)
	User of Radio Bearer	Test
RLC	Logical channel type	DCCH
	RLC mode	TM
	Payload sizes, bit	171
	Max data rate, bps	33600 (alt. 50400)

	RLC header, bit		0
MAC	MAC header, bit		0 (note)
	MAC multiplexing		Simulated by SS
Layer 1	TrCH type		FACH
	TB sizes, bit		171
	TFS	TF0, bits	0 x 171
		TF1, bits	1 x 171
		TF2, bits	2 x 171
		TF3, bits	3 x 171
		TF4, bits	4x 171
		TF5, bits	N/A (alt. 5x 171)
		TF6, bits	N/A (alt. 6 x 171)
	TTI, ms		20
	Coding type		CC 1/2
	CRC, bit		16
	Max number of bits/TTI before rate matching		1528 (alt. 2292)
	RM attribute		200-240
NOTE:	The SS MAC layer must be configured not to add a MAC header so that the header can be added by the test case in order to create the necessary invalid values.		

and using the configuration in TS 34.108 clause 6.10.2.4.3.3 (FDD), 6.11.5.4.4.3(1.28Mcps TDD) for the PCH.

The TFCS should be configured as specified in clause 6.10.2.4.3.3.1.4 (FDD), 6.11.5.4.4.3.1.4(1.28Mcps TDD).

User Equipment:

The UE shall operate under normal test conditions, Ciphering Off.

The Test-USIM shall be inserted.

The SS starts broadcasting the System Information as specified in TS 34.108 clause 6.1, using the configuration for the PRACH and SCCPCH (signalled in SYSTEM INFORMATION 5) as follows:

1. The SCCPCH is configured as specified in TS 34.108 clause 6.10.2.4.3.3 (FDD), 6.11.5.4.4.3(1.28Mcps TDD) (Interactive/Background 32 kbps RAB + SRB for PCCH + SRB for CCCH + SRB for DCCH + SRB for BCCH).

2. The PRACH is configured as specified in TS 34.108 clause 6.10.2.4.4.1 (FDD), 6.11.5.4.5.2(1.28Mcps TDD).

The SS follows the procedure in TS 34.108 clause 7.4.2.1.1 (Mobile Terminated for CS) so that the UE shall be in state BGP 6-2 (CS-CELL_FACH_INITIAL) or clause 7.4.2.2.1 (Mobile Terminated for PS) so that the UE shall be in state BGP 6-4 PS-CELL_FACH_INITIAL.

Test procedure

a) The SS receives the PAGING RESPONSE or SERVICE REQUEST (depending on domain) message from the UE and checks the TCTF field.

b) The SS transmits MAC PDUs containing RLC AM PDUs containing a DIRECT TRANSFER message containing an AUTHENTICATION REQUEST message.

   1. Dummy octet string for NAS Message, of size sufficient enough to fit in one RLC PDU of 144 bits, including the correct RLC AM header.

   2. The IE CN Domain Identity is Set to PS Domain (if UE initial state is 6-2) or CS Domain (if UE initial state is 6-4) (no signalling connection for this domain exists).

   3. The polling bit in RLC header is set for transmission of RLC STATUS PDU.

The MAC header shall be set as follows:

Field	Value
TCTF	01000001'B(FDD), 101(TDD)
UE ID Type	C-RNTI
UE ID	As set in RRC CONNECTION SETUP message.
C/T	Logical Channel ID for SRB #3 (AM-DCCH NAS High Priority)

Where a TCTF size of 8-bits is used, 6-bits from the RLC payload shall be discarded.

c) The SS checks that UE shall neither transmit RRC Status message on SRB2 nor RLC Status PDU on SRB3.

d) The SS again transmits MAC PDUs as in b) above, but this time uses the correct TCTF of 11'B for FDD, 01100'B for TDD. The sequence numbers in the RLC headers shall be identical with those sent in b).

e) SS Receives RLC Status PDU on SRB #3 acknowledging the receipt of the above RLC PDU.

f) The SS receives a RRC STATUS message on the uplink DCCH using AM RLC on SRB # 2.

g) The SS repeats steps b), c), d) e) and f), with the TCTF field set as follows in step b):

FDD:

Iteration	TCTF Value
2	01111111'B
3	10000000'B
4	10000001'B
5	10111111'B

TDD:

Iteration	TCTF Value
2	110'B
3	010'B
4	01111'B
5	01101'B

Expected sequence

FDD:

Step	Direction		Message	Comments
	UE	SS		
1	→		PAGING RESPONSE/SERVICE REQUEST	Check TCTF
2	←		MAC PDU(TCTF, UE-ID, C/T, RLC AM PDU(SN=x, DIRECT TRANSFER))	Sent with incorrect TCTF = 01000001'B, 01111111'B, 10000000'B, 10000001'B, or 10111111'B
2a			wait for T = 3 s	SS checks that UE shall neither transmit RRC-Status message on SRB 2 nor RLC Status PDU on SRB 3 See note 1 below
3	←		MAC PDU(TCTF, UE-ID, C/T, RLC AM PDU(SN=x, DIRECT TRANSFER))	Sent with correct TCTF = 11'B
4	→		RLC-STATUS-PDU	ACK PDUs with SN = x and TCTF Field is recognised as correct for the DCCH. See note 2 below
5	→		RRC Status message	
NOTE 1: UE will Transmit Signalling Connection Release Indication on expiry of MM Timer T3240 or GMM Timer T3317. NOTE 2: RRC Status message may be received before RLC Status PDU.				

TDD:

Step	Direction		Message	Comments
	UE	SS		
1	→		PAGING RESPONSE	Check TCTF
2	←		MAC PDU(TCTF, UE-ID, C/T, RLC AM PDU(SN=x, DIRECT TRANSFER))	Sent with incorrect TCTF = 101'B, 110'B, 010'B, 01111'B, or 01101'B
2	←		MAC PDU(TCTF, UE-ID, C/T, RLC AM PDU(SN=x, DIRECT TRANSFER))	Sent with incorrect TCTF = 010101'B, 110'B, 010'B, 01111'B, or 01101'B
2a			wait for T = 3 s	SS checks that UE shall neither transmit RRC-Status message on SRB 2 nor RLC Status PDU on SRB 3 See note 1 below
3	←		MAC PDU(TCTF, UE-ID, C/T, RLC AM PDU(SN=x, DIRECT TRANSFER))	Sent with correct TCTF = 01100'B
4	→		RLC-STATUS-PDU	ACK PDUs with SN = x and TCTF Field is recognised as correct for the DCCH. See note 2 below
5	→		RRC Status message	
NOTE 1: UE will Transmit Signalling Connection Release Indication on expiry of MM Timer T3240 or GMM Timer T3317. NOTE 2: RRC Status message may be received before RLC Status PDU.				

Steps 2 – 5 of above expected sequence are repeated for iterations 2 to 5. Note: For iteration k the SN in steps 2 and 4 starts with x + (k –1).

Specific Message Contents

None

7.1.1.2.5 Test Requirement

In step a) the TCTF field should have the value '01'B. Note that this may be implied from receipt of the PAGING RESPONSE/SERVICE REQUEST message correctly by the SS test script.

During the test the SS shall request an RLC status report with every transmitted PDU by setting of the Polling Bit. The UE shall not send any STATUS PDUs indicating missing PDUs.

At the end of each iteration (steps 4 and 5 of expected sequence) the SS shall receive an RRC Status message on SRB # 2, and RLC Status PDU on SRB # 3 with TCTF field set to value '01' B for FDD, '0100' B for TDD.

7.1.1.3 DTCH or DCCH mapped to RACH/FACH / Invalid C/T Field

7.1.1.3.1 Definition

This tests that the MAC applies the correct header to the MAC PDU according to the type of logical channel carried on the RACH/FACH transport channel. Incorrect application of MAC headers would result in inoperation of the UE.

7.1.1.3.2 Conformance requirement

DTCH or DCCH mapped to RACH/FACH:

TCTF field, C/T field, UE-Id type field and UE-Id are included in the MAC header.

The following fields are defined for the MAC header:

- C/T field
  The C/T field provides identification of the logical channel instance when multiple logical channels are carried on the same transport channel…

Structure of the C/T field

C/T field	Designation
0000	Logical channel 1
0001	Logical channel 2
...	...
1110	Logical channel 15
1111	Reserved (PDUs with this coding will be discarded by this version of the protocol)

Reference(s)

TS 25.321 clauses 9.2.1 and 9.2.1.1 c).

7.1.1.3.3 Test purpose

1. To verify that the UE discards PDUs with reserved or incorrect values in C/T field.
2. To verify that the TCTF field, C/T field, UE-Id type and UE-Id field are correctly applied when a DTCH or DCCH is mapped to the RACH/FACH.

7.1.1.3.4 Method of test

Initial conditions

System Simulator:

See clause 7.1.1.2.4.

User Equipment:

See clause 7.1.1.2.4.

Test procedure

a) The SS receives the PAGING RESPONSE or SERVICE REQUEST (depending on domain) message from the UE and checks the C/T field.

b) The SS transmits MAC PDUs containing RLC AM PDUs containing a DIRECT TRANSFER message containing.

1. Dummy octet string for NAS Message, of size sufficient enough to fit in one RLC PDU of 144 bits, including the correct RLC AM header.
2. The IE CN Domain Identity is Set to PS Domain (no signalling connection for this domain exists).
3. The polling bit in RLC header is set for Transmission of RLC STATUS PDU.

The MAC header shall be set as follows:

Field	Value
TCTF	11'B
UE ID Type	C-RNTI
UE ID	As set in RRC CONNECTION SETUP message.
C/T	0111'B

c) The SS checks that UE shall neither transmit RRC Status message on SRB2 nor RLC Status PDU on.

d) The SS again transmits MAC PDUs as in b) above, but this time uses the correct C/T value for AM-DCCH NAS High Priority of 0010'B. The sequence numbers in the RLC headers shall be identical with those sent in b).

e) SS receives RLC Status PDU on SRB #3 acknowledging the receipt of the above RLC PDU.

f) The SS receives a RRC STATUS message on the uplink DCCH using AM RLC on SRB # 2.

g) The SS repeats steps b), c), d), e) and f), with the C/T field set as follows:

Iteration	C/T Value
2	1111'B

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	→		PAGING RESPONSE/SERVICE REQUEST	Check C/T field
2	←		MAC PDU(TCTF, UE-ID, C/T, RLC AM PDU(SN=x, DIRECT TRANSFER))	Sent with incorrect C/T = 0111'B, or 1111'B.
2a			wait for T = 5 s	SS checks that UE shall neither transmit RRC-Status message on SRB 2 nor RLC Status PDU on SRB 3. See note 1 below.
3	←		MAC PDU(TCTF, UE-ID, C/T, RLC AM PDU(SN=x, DIRECT TRANSFER))	Sent with correct C/T = 0010'B
4	→		RLC-STATUS-PDU	ACK PDUs with SN = x C/T Field is recognised as correct for the DCCH. See note 2 below.
5	→		RRC Status message	
NOTE 1: UE will Transmit Signalling Connection Release Indication on expiry of MM Timer T3240 or GMM Timer T3317. NOTE 2: RRC Status message may be received before RLC Status PDU.				

Steps 2 to 5 of the expected sequence are repeated for iteration 2. Note: For iteration k the SN in steps 2 and 4 starts with x + (k –1).

Specific Message Contents

None

7.1.1.3.5 Test Requirement

In step a) the C/T field should be set to the Logical Channel ID for SRB #3 (0010'B). Note that this may be implied from receipt of the PAGING RESPONSE/SERVICE REQUEST message correctly by the SS test script.

During the test the SS shall request RLC status report with every transmitted PDU by setting of the Polling Bit. The UE shall not send any STATUS PDUs indicating missing PDUs.

At the end of each iteration (steps 4 and 5 of expected sequence) the SS shall receive a RLC Status PDU on SRB # 3, with C/T field set to value '0010'B and RRC Status message on SRB # 2.

7.1.1.4 DTCH or DCCH mapped to RACH/FACH / Invalid UE ID Type Field

7.1.1.4.1 Definition

This tests that the MAC applies the correct header to the MAC PDU according to the type of logical channel carried on the RACH/FACH transport channel. Incorrect application of MAC headers would result in inoperation of the UE.

7.1.1.4.2 Conformance requirement

DTCH or DCCH mapped to RACH/FACH:

TCTF field, C/T field, UE-Id type field and UE-Id are included in the MAC header.

The following fields are defined for the MAC header:

- UE-Id Type
  The UE-Id Type field is needed to ensure correct decoding of the UE-Id field in MAC Headers.

Table 9.2.1.7: UE-Id Type field definition

UE-Id Type field 2 bits	UE-Id Type
00	U-RNTI
01	C-RNTI
10	Reserved (PDUs with this coding will be discarded by this version of the protocol)
11	Reserved (PDUs with this coding will be discarded by this version of the protocol)

Reference(s)

TS 25.321 clauses 9.2.1 and 9.2.1.1 c).

7.1.1.4.3 Test purpose

1. To verify that the UE discards PDUs with reserved values in UE-Id type field.

2. To verify that the TCTF field, C/T field, UE-Id type and UE-Id field are correctly applied when a DTCH or DCCH is mapped to the RACH/FACH.

7.1.1.4.4 Method of test

Initial conditions

System Simulator:

See clause 7.1.1.2.4.

User Equipment:

See clause 7.1.1.2.4.

Test procedure

a) The SS receives the PAGING RESPONSE or SERVICE REQUEST (depending on domain) message from the UE and checks the UE-Id Type field.

b) The SS transmits MAC PDUs containing RLC AM PDUs containing a DIRECT TRANSFER message containing.

1. Dummy octet string for NAS Message, of size sufficient enough to fit in one RLC PDU of 144 bits, including the correct RLC AM header.

2. The IE CN Domain Identity is Set to PS Domain (no signalling connection for this domain exists)

3. The polling bit in RLC header is set for transmission of RLC STATUS PDU.

The MAC header shall be set as follows:

Field	Value
TCTF	11'B
UE ID Type	10'B
UE ID	As set in RRC CONNECTION SETUP message.
C/T	Logical Channel ID for SRB #3 (AM-DCCH NAS High Priority): 0010'B

c) The SS checks that UE shall neither transmit RRC Status message on SRB2 nor RLC Status PDU on SRB3.

d) The SS again transmits MAC PDUs as in b) above, but this time uses the correct UE-Id type value for C-RNTI of 01'B. The sequence numbers in the RLC headers shall be identical with those sent in b).

e) SS Receives RLC Status PDU on SRB #3 acknowledging the receipt of the above RLC PDU.

f) The SS receives a RRC STATUS message on the uplink DCCH using AM RLC on SRB # 2

g) The SS repeats steps b), c), d), e) and f), with the UE-Id type field set as follows in step b):

Iteration	UE-Id type Value
2	11'B

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	→		PAGING RESPONSE/SERVICE REQUEST	Check UE-Id Type
2	←		MAC PDU(TCTF, UE-ID, C/T, RLC AM PDU(SN=x, DIRECT TRANSFER))	Sent with incorrect UE-Id Type = 10'B, or 11'B.
2a			wait for T = 5 s	SS checks that UE shall neither transmit RRC-Status message on SRB 2 nor RLC Status PDU on SRB 3. See note 1 below.
3	←		MAC PDU(TCTF, UE-ID, C/T, RLC AM PDU(SN=x, DIRECT TRANSFER))	Sent with correct UE-Id Type = 01'B
4	→		RLC-STATUS-PDU	ACK PDU with SN = x UE-Id is recognised as correct for the UE. See note 2 below.
5	→		RRC Status message	RRC
NOTE 1: UE will Transmit Signalling Connection Release Indication on expiry of MM Timer T3240 or GMM Timer T3317. NOTE 2: RRC Status message may be received before RLC Status PDU.				

Steps 2 to 5 of the expected sequence are repeated for iteration 2. Note: For iteration k the SN in step 2 and 4 starts with x + (k –1).

Specific Message Contents

None

7.1.1.4.5 Test Requirement

In step a) the UE-Id Type field should be set to 01'B. Note that this may be implied from receipt of the PAGING RESPONSE/SERVICE REQUEST message correctly by the SS test script.

During the test the SS request an RLC status report with every transmitted PDU by setting of the Polling Bit. The UE shall not send any STATUS PDUs indicating missing PDUs.

At the end of each iteration (steps 4 and 5 of expected sequence) the SS shall receive a RLC Status PDU on SRB # 3, with UE Id type correctly set to '01'B and RRC Status message on SRB # 2.

7.1.1.5 DTCH or DCCH mapped to RACH/FACH / Incorrect UE ID

7.1.1.5.1 Definition

This tests that the MAC applies the correct header to the MAC PDU according to the type of logical channel carried on the RACH/FACH transport channel. Incorrect application of MAC headers would result in inoperation of the UE.

7.1.1.5.2 Conformance requirement

DTCH or DCCH mapped to RACH/FACH:

TCTF field, C/T field, UE-Id type field and UE-Id are included in the MAC header.

The following fields are defined for the MAC header:

- UE-Id
  The UE-Id field provides an identifier of the UE on common transport channels…

Lengths of UE Id field

UE Id type	Length of UE Id field
U-RNTI	32 bits
C-RNTI	16 bits

Reference(s)

TS 25.321 clauses 9.2.1 and 9.2.1.1 c).

7.1.1.5.3 Test purpose

1. To verify that the UE ignores PDUs with UE-Ids that do not match the Id allocated to it.
2. To verify that the TCTF field, C/T field, UE-Id type and UE-Id field are correctly applied when a DTCH or DCCH is mapped to the RACH/FACH.

7.1.1.5.4 Method of test

Initial conditions

System Simulator:

See clause 7.1.1.2.4.

User Equipment:

See clause 7.1.1.2.4.

Test procedure

a) The SS receives the PAGING RESPONSE or SERVICE REQUEST (depending on domain) message from the UE and checks the UE-Id field.

b) The SS transmits MAC PDUs containing RLC AM PDUs containing a DIRECT TRANSFER message containing.

   1. Dummy Octet String for NAS Message, of size sufficient enough to fit in one RLC PDU of 144 bits, including the correct RLC AM header.
   2. The IE CN Domain Identity is Sset to PS Domain (no signalling connection for this domain exists)
   3. The polling bit in RLC header is set for transmission of RLC STATUS PDU.

   The MAC header shall be set as follows:

Field	Value
TCTF	11'B
UE ID Type	C-RNTI
UE ID	Address allocated in RRC CONNECTION SETUP message + 1.
C/T	Logical Channel ID for SRB #3 (AM-DCCH NAS High Priority): 0010'B

c) The SS checks that UE shall neither transmit RRC Status message on SRB2 nor RLC Status PDU on SRB3.

d) The SS again transmits MAC PDUs as in b) above, but this time uses the correct UE-Id value of the address allocated in the RRC CONNECTION SETUP message. The sequence numbers in the RLC headers shall be identical with those sent in b).

e) SS Receives RLC Status PDU on SRB #3 acknowledging the receipt of the above RLC PDU

f) The SS receives a RRC STATUS message on the uplink DCCH using AM RLC on SRB # 2.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	→		PAGING RESPONSE/SERVICE REQUEST	Check UE-Id
2	←		MAC PDU(TCTF, UE-ID, C/T, RLC AM PDU(SN=x, DIRECT TRANSFER))	Sent with incorrect UE-Id = C-RNTI+1
2a			wait for T = 10 s	SS checks that UE shall neither transmit RRC-Status message on SRB 2 nor RLC Status PDU on SRB 3. See note 1 below.
3	←		MAC PDU(TCTF, UE-ID, C/T, RLC AM PDU(SN=x, DIRECT TRANSFER))	Sent with correct UE-Id = C-RNTI
4	→		RLC-STATUS-PDU	ACK PDUs with SN = x UE-Id is recognised as correct for the UE. See note 2 below.
5	→		RRC Status message	
NOTE 1: UE will Transmit Signalling Connection Release Indication on expiry of MM Timer T3240 or GMM Timer T3317. NOTE 2: RRC Status message may be received before RLC Status PDU.				

Specific Message Contents

None

7.1.1.5.5 Test Requirement

In step a) the UE-Id field should be set to the C-RNTI allocated in the RRC CONNECTION SETUP message. Note that this may be implied from receipt of the PAGING RESPONSE/SERVICE REQUEST message correctly by the SS test script.

During the test the SS shall request an RLC status report with every transmitted PDU by setting of the Polling Bit. The UE shall not send any STATUS PDUs indicating missing PDUs.

At the end of the expected sequence (steps 4 and 5) the SS shall receive RLC Status PDU on SRB # 3 with correct C-RNTI and RRC Status message on SRB # 2.

7.1.1.6 DTCH or DCCH mapped to DSCH or USCH

7.1.1.6.1 Definition and applicability

Applicable for if mode TDD only or FDD only is supported. In FDD applicable only to R99 and Rel-4 UEs.

7.1.1.6.2 Conformance requirement

The TCTF field is included in the MAC header for TDD only. The UE-Id type and UE-Id are included in the MAC header for FDD only. The C/T field is included if multiplexing on MAC is applied.

Reference(s)

TS 25.321 clause 9.2.1.1.

7.1.1.6.3 Test purpose

To verify when DTCH or DCCH is mapped to DSCH or USCH, the TCTF field is applied for TDD only, the UE-Id type and UE-Id are applied for FDD only. If multiplexing on MAC is applied, C/T field is included, otherwise, the C/T field is not included in the MAC header.

7.1.1.6.4 Method of test

Initial conditions

System Simulator:

- 1 cell, default parameters. Ciphering Off.

User Equipment:

- The UE shall operate under normal test conditions, Ciphering Off.
- The Test-USIM shall be inserted.

The UE is in Connected mode and a connection is established as described in the TS 34.123-1, 7.3 PDCP testing, clause "Setup a UE originated PS session using IP Header compression in AM RLC (using Loop back test mode 1).

Related ICS/IXIT Statement(s)

TBD

Foreseen Final State of the UE

Test procedure

a) The SS sends a certain data block to the UE.

b) After having received the data block via configured mapped channels, the UE forwards the data to its Radio Bearer Loop Back entity. The received data shall be returned by the UE via its MAC configuration to the SS.

c) The SS receives the returned data block and checks its MAC header whether the TCTF is applied for TDD only, or the UE-Id type and UE-Id are applied for FDD only, and the C/T field shall not be applied.

d) The SS configures the RLC.

e) The SS starts a Radio Bearer Reconfiguration procedure to be connected in RLC transparent mode and configures the Radio Bearer for multiplexing.

f) The SS sends a certain data block to the UE.

g) After having received the data block via configured mapped channels, the UE forwards the data to its Radio Bearer Loop Back entity. The received data shall be returned by the UE via its MAC configuration to the SS.

h) The SS receives the returned data block and checks its MAC header whether the TCTF is applied for TDD only, or the UE-Id type and UE-Id are applied for FDD only and the C/T field is applied.

i) The SS reconfigures its RLC mode to be in AM.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		DATA BLOCK	The SS sends one data block with MAC header, sets TCTF as "DCCH or DTCH over USCH or DSCH" for TDD only, or sets UE-Id type as "C-RNTI", and UE-Id as C-RNTI of UE for FDD only.
2	→		LOOP BACK DATA BLOCK	SS receives the loop back data block from the Uplink RB and checks the MAC header.
3				SS sends CMAC_MAC_HEADER_REQ with enable_mac_header and CRLC_CONFIG_REQ with RLC mode as "AM mode".
4	←		RADIO BEARER RECONFIGURE	Reconfigures the downlink and uplink radio bearer as multiplexing .
5	→		RADIO BEARER RECONFIGURATION COMPLETE	
6				SS sends CMAC_MAC_HEADER_REQ with disable_mac_header and CRLC_CONFIG_REQ with RLC mode as "Transparent mode".
7	←		DATA BLOCK	The SS sends one data block with MAC header, sets TCTF as "DCCH or DTCH over USCH or DSCH" for TDD only, or sets UE-Id type as "C-RNTI", and UE-Id as C-RNTI of UE for FDD only and C/T field is included.
8	→		LOOP BACK DATA BLOCK	SS receives the loop back data block from the Uplink RB and checks the MAC header.
9				SS sends CMAC_MAC_HEADER_REQ with enable_mac_header and CRLC_CONFIG_REQ with RLC mode as "AM mode".

Specific Message Contents

TS 25.211 clause 5.3.3.11.

7.1.1.7.3 Test purpose

To verify when DTCH or DCCH mapped to CPCH, UE-Id type field and UE-Id are included in the MAC header. if multiplexing on MAC is applied, the C/T field is included in the MAC header, otherwise, C/T field is not included.

7.1.1.7.4 Method of test

Initial conditions

System Simulator:

- 1 cell, default parameters, Ciphering Off.

User Equipment:

- The UE shall operate under normal test conditions, Ciphering Off.
- The Test-USIM shall be inserted.

The UE is in Connected mode and a connection is established as described in the TS 34.123-1, 7.3 PDCP testing, clause "Setup a UE originated PS session using IP Header compression in UM RLC (using Loop back test mode 1).

Related ICS/IXIT Statement(s)

TBD

Foreseen Final State of the UE

Test procedure

a) The SS sends SIBs 7, 8, and 9, sends CSICH information and waits 30 s.

b) The SS reconfigures its RLC mode to be in transparent mode RLC. Afterwards its sends a certain data block to the UE.

c) After having received the data block via configured mapped channels, the UE forwards the data to its Radio Bearer Loop Back entity. The received data shall be returned by the UE via its MAC configuration to the SS.

d) The SS receives the returned data block and checks its MAC header, whether a UE-Id type and a UE-Id are included.

e) The SS reconfigures its RLC mode to be in AM.

f) The SS starts a Radio Bearer Reconfiguration procedure to be connected in RLC transparent mode and configures the Radio Bearer for multiplexing.

g) The SS sends the next data block via its MAC entity with MAC header, including the UE-Id type as "C-RNTI" and UE-Id as C-RNTI of the UE.C/T field.

h) After having received the data block via configured mapped channels, the UE forwards the data to its Radio Bearer Loop Back entity. The received data shall be returned by the UE via its MAC configuration to the SS.

i) The SS receives the returned data block and checks its MAC header, whether UE-Id type, UE-Id field are included and C/T field is applied or not.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		SIBs 7, 8 and 9 and CSICH information	Containing default settings for CPCH.
2	←		DATA BLOCK	The SS sends one data block with MAC header, sets UE-Id type as "C-RNTI", and UE-Id as C-RNTI of UE.
3	→		LOOP BACK DATA BLOCK	SS receives the loop back data block from the Uplink RB and checks the MAC header.
4				SS sends CMAC_MAC_HEADER_REQ with enable_mac_header and CRLC_CONFIG_REQ with RLC mode as "AM mode".
5	←		RADIO BEARER RECONFIGURE	Reconfigures the downlink and uplink radio bearer as multiplexing.
6	→		RADIO BEARER RECONFIGURATION COMPLETE

7.1.1.7.5 Test requirements

The UE-Id type and UE-Id field are included in the MAC header. When multiplexing on MAC is not applied, C/T field is included in the MAC header. Otherwise, C/T field is not included.

7.1.1.8 DTCH or DCCH mapped to DCH / Invalid C/T Field

7.1.1.8.1 Definition

This tests that the MAC applies the correct header to the MAC PDU according to the type of logical channel carried on the DCH transport channel. Incorrect application of MAC headers would result in inoperation of the UE.

7.1.1.8.2 Conformance requirement

DTCH or DCCH mapped to DCH, no multiplexing of dedicated channels on MAC: -no MAC header is required.

DTCH or DCCH mapped to DCH, with multiplexing of dedicated channels on MAC: -C/T field is included in MAC header.

The following fields are defined for the MAC header:

- C/T field
  The C/T field provides identification of the logical channel instance when multiple logical channels are carried on the same transport channel…

Structure of the C/T field

C/T field	Designation
0000	Logical channel 1
0001	Logical channel 2
...	...
1110	Logical channel 15
1111	Reserved (PDUs with this coding will be discarded by this version of the protocol)

Reference(s)

TS 25.321 clauses 9.2.1 and 9.2.1.1 b).

7.1.1.8.3 Test purpose

1. To verify that the UE discards PDUs with reserved or incorrect values in C/T field.
2. To verify that the C/T field is correctly applied when a DTCH or DCCH is mapped to a DCH.

7.1.1.8.4 Method of test

Initial conditions

System Simulator:

- 1 cell, default parameters, Ciphering Off.

  The DCH/DPCH is configured as specified in TS 34.108 clause 6.10.2.4.1.2 (FDD), 6.11.5.4.1.2(1.28Mcps TDD): (Stand-alone UL:3.4 DL:3.4 kbps SRBs for DCCH) with the following exception:

Higher layer	RAB/signalling RB		RB#3 (SRB#3)
	User of Radio Bearer		NAS_DT High prio
RLC	Logical channel type		DCCH
	RLC mode		TM
	Payload sizes, bit		148
	Max data rate, bps		3700
	RLC header, bit		0
MAC	MAC header, bit		0 (note)
	MAC multiplexing		Simulated by SS
Layer 1	TrCH type		DCH
	TB sizes, bit		148
	TFS	TF0, bits	0 x 148
		TF1, bits	1 x 148
	TTI, ms		40
	Coding type		CC 1/3
	CRC, bit		16
	Max number of bits/TTI before rate matching		516
	Uplink: Max number of bits/radio frame before rate matching		129
	RM attribute		155-165
NOTE: The SS MAC layer must be configured not to add a MAC header so that the header can be added by the test case in order to create the necessary invalid values.			

The TFCS should be configured as specified in clause 6.10.2.4.1.2.1.1.2 (FDD), 6.11.5.4.1.2.1.1.2(1.28 Mcps TDD).

User Equipment:

The UE shall operate under normal test conditions, Ciphering Off.

The Test-USIM shall be inserted.

The SS starts broadcasting the System Information as specified in TS 34.108 clause 6.1, using the configuration for the PRACH and SCCPCH (signalled in SYSTEM INFORMATION 5) as follows:

1. The SCCPCH is configured as specified in TS 34.108 clause 6.10.2.4.3.3 (FDD), 6.11.5.4.4.3(1.28Mcps TDD) (Interactive/Background 32 kbps RAB + SRB for PCCH + SRB for CCCH + SRB for DCCH + SRB for BCCH).

2. The PRACH is configured as specified in TS 34.108 clause 6.10.2.4.4.1 (FDD), 6.11.5.4.5.2(1.28Mcps TDD).

The SS follows the procedure in TS 34.108 clause 7.4.2.1 (Mobile Terminated for CS) so that the UE shall be in state BGP 6-1 (CS-CELL_DCH_INITIAL) or clause 7.4.2.2 (Mobile Terminated for PS) so that the UE shall be in state BGP 6-3 (PS-CELL_DCH_INITIAL). During this procedure the RRC CONNECTION SETUP message shall allocate a DCH to carry the signalling radio bearers as follows:

1. The DCH/DPCH is configured as specified in TS 34.108 clause 6.10.2.4.1.2 (FDD), 6.11.5.4.1.2(1.28Mcps TDD): Stand-alone UL:3.4 DL:3.4 kbps SRBs for DCCH).

Test procedure

a) The SS receives the PAGING RESPONSE or SERVICE REQUEST (depending on domain) message from the UE and checks the C/T field.

b) The SS transmits MAC PDUs containing RLC AM PDUs containing a DIRECT TRANSFER message containing

1. Dummy octet string for NAS Message, of size sufficient enough to fit in one RLC PDU of 144 bits, including the correct RLC AM header.

2. The IE CN Domain Identity is Set to PS Domain (no signalling connection for this Domain exists).

3. The polling bit in RLC header is set for transmission of RLC STATUS PDU.

The MAC header shall be set as follows:

Field	Value
C/T	'0111'B

c) The SS checks that UE shall neither transmit RRC Status message on SRB2 nor RLC Status PDU on SRB3.

d) The SS again transmits MAC PDUs as in b) above, but this time uses the correct C/T value for AM-DCCH NAS High Priority of 0010'B. The sequence numbers in the RLC headers shall be identical with those sent in b).

e) SS Receives RLC Status PDU on SRB #3 acknowledging the receipt of the above RLC PDU.

f) The SS receives a RRC STATUS message on the uplink DCCH using AM RLC on SRB # 2.

g) The SS repeats steps b), c), d), e) and f), with the C/T field set as follows in step b):

Iteration	C/T Value
2	1111'B

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	→		PAGING RESPONSE/SERVICE REQUEST	Check C/T field
2	←		MAC PDU(C/T, RLC AM PDU(SN=x, DIRECT TRANSFER))	Sent with incorrect C/T = 0111'B, or 1111'B
2a			wait for T = 5 s	SS checks that UE shall neither transmit RRC-Status message on SRB 2 nor RLC Status PDU on SRB 3. See note 1 below.
3	←		MAC PDU(C/T, RLC AM PDU(SN=x, DIRECT TRANSFER))	Sent with correct C/T = 0010'B
4	→		RLC-STATUS-PDU	ACK PDUs with SN = x C/T Field is recognised as correct for the DCCH. See note 2 below.
5	→		RRC Status message	
NOTE 1: UE will Transmit Signalling Connection Release Indication on expiry of MM Timer T3240 or GMM Timer T3317. NOTE 2: RRC Status message may be received before RLC Status PDU.				

Steps 2 to 5 of the expected sequence are repeated for iteration 2.

NOTE: For iteration 2 the SN in steps 2 and 4 starts with x+1.

Specific Message Contents

None

7.1.1.8.5 Test Requirement

In step a) the C/T field should be set to the Logical Channel ID for SRB #3 (0010'B). Note that this may be implied from receipt of the PAGING RESPONSE or SERVICE REQUEST message correctly by the SS test script.

During the test the SS shall request RLC status reports with every transmitted PDU by setting of the Polling Bit. The UE shall not send any STATUS PDUs indicating missing PDUs.

At the end of each iteration (steps 4 and 5 of expected sequence) the SS shall receive a RLC Status PDU on SRB # 3 with C/T field set to '0010'B and RRC Status message on SRB # 2.

7.1.1.9 MTCH mapped to FACH / Invalid TCTF (TDD MBSFN)

7.1.1.9.1 Definition

This tests that the MAC applies the correct header to the MAC PDU according to the type of logical channel carried on the FACH transport channel. Incorrect application of MAC headers would result in inoperation of the UE.

7.1.1.9.2 Conformance requirement

MTCH mapped to FACH:

The TCTF field and MBMS-Id field are included in the MAC header for MTCH

…

Table 9.2.1.1: Coding of the Target Channel Type Field on FACH for TDD

TCTF	Designation
000	BCCH
001	CCCH
010	CTCH
01100	DCCH or DTCH over FACH
01101	MCCH
01110	MTCH
01111	MSCH
100	SHCCH
101-111	Reserved (PDUs with this coding will be discarded by this version of the protocol)

Reference(s)

TS 25.321 clauses 9.2.1 and 9.2.1.8.

7.1.1.9.3 Test purpose

1. To verify that the UE discards PDUs with reserved or incorrect values in the TCTF field.
2. To verify that the TCTF field is correctly applied when a MTCH is mapped to the FACH.

7.1.1.9.4 Method of test

Initial conditions

System Simulator:

Unicast carrier: 1 cell, Cell 1 with default configuration.

- MBSFN carriers: 1 cell, Cell 31 has default parameters. In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C1 and Default1 MCCH scheduling (No ongoing session) according to subclause 11.2 of TS 34.108.

The configuration of the S-CCPCH which will carry the MTCH is based upon that specified in TS 34.108 clause 6.11.1c (3.84 Mcps TDD), 6.11.1d (7.68 Mcps TDD) and 6.11.5.4.4.13 (1.28 Mcps TDD) 8kbps RB for MBSFN MTCH with the following exceptions for the FACH:

Higher layer	RAB/signalling RB		RAB
	User of Radio Bearer		Test
RLC	Logical channel type		MTCH
	RLC mode		TM
	Payload sizes, bit		345
	Max data rate, bps		8200
	UMD PDU header, bit		0
MAC	MAC header, bit		0 (note)
	MAC multiplexing		Simulated by SS
Layer 1	TrCH type		FACH
	TB sizes, bit		345
	TFS	TF0, bits	0x345
		TF1, bits	1x345
	TTI, ms		40
	Coding type		TC
	CRC, bit		16
	Max number of bits/TTI after channel coding		1095
	Max number of bits/radio frame before rate matching		274
	RM attribute		128
NOTE: The SS MAC layer must be configured not to add a MAC header so that the header can be added by the test case in order to create the necessary invalid values.			

User Equipment:

- On the unicast carrier cell the UE is in registered Idle Mode on PS (state 3) if the UE only supports PS domain or registered Idle Mode on CS/PS (state 7) if the UE supports both CS and PS domains, as specified in clause 7.2.2 of TS 34.108.

- The UE is in MBSFN Idle mode with one activated service as specified in clause 7.6.4 of TS 34.108. The UE has selected (i.e. it is included in MBMS_ACTIVATED_SERVICES variable) a national service for which there will be a session starting on MBSFN Cell 31 (see TS 34.108 clause 11.2.4).

Related ICS/IXIT statements

- MBMS Broadcast services in MBSFN mode available on UE Yes/No.

- Support of TDD transmit and receive functions available on UE Yes/No.

- Support of TDD MBSFN receive only function available on UE Yes/No.

Test procedure

a) The UE is camping on Cell 1 and Cell 31. In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C1 (no session ongoing) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108.

b) The SS sends ACTIVATE RB TEST MODE on the unicast carrier and the UE responds with ACTIVATE RB TEST MODE COMPLETE.

c) The SS sends CLOSE UE TEST LOOP to activate RLC SDU counting on Cell 31 MTCH (Transmission identity indicating the MBMS activated service).

d) The SS notifies on MCCH about the start of an MBMS session for one modification period. MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C4 (one PTM session starting) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108.

e) MCCH messages are then transmitted by the SS on Cell 31 using MBMS configuration C2 (one PTM session ongoing) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108.

f) The SS waits for the UE to start reception of the MBMS data on MTCH according to the specified service activation time. The UE closes the test loop. The UE sends CLOSE UE TEST LOOP COMPLETE.

g) The SS transmits MAC PDUs containing RLC UM PDUs containing an octet string representing dummy traffic data, of size sufficient enough to fit in one RLC PDU of 338 bits, including the correct RLC UM header.

The MAC header shall be set as follows:

Field	Value
TCTF	101'B
MBMS-Id	0000'B

h) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST. The SS waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE corresponds to zero received RLC SDUs. The SS records the value.

i) The SS again transmits MAC PDUs as in b) above, but this time uses the correct TCTF of 01110’B. Where a TCTF size of 5-bits is used, 2-bits from the RLC payload (specified above as 338 bits) shall be discarded. The sequence numbers in the RLC headers shall be identical with those sent in b).

j) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST. The SS waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is > 0. The SS records the value.

k) The SS repeats steps g), h), i) and j), with the TCTF field set as follows in step g):

Iteration	TCTF Value
2	110'B
3	111'B
4	001'B
5	010'B
6	100'B
7	01100'B

NOTE 1: For a UE in UE test loop mode 3 the RLC SDU counter value is only reset upon reception of the CLOSE UE TEST LOOP message configuring UE test loop mode 3. To enable the SS to measure the number of received RLC SDUs for the different sub-tests the SS needs to record the reported values for each sub-test and perform the checking of the reported value relative to the previously reported value.

Expected sequence

Step	Direction		Carrier	Message	Comment
	UE	SS			
1	←		U	ACTIVATE RB TEST MODE	
2	→		U	ACTIVATE RB TEST MODE COMPLETE	
3	←		U	CLOSE UE TEST LOOP	Loop back mode 3 is activated on Cell 31 for the selected national service on MTCH.
4	←		M	MBMS MCCH Message Configuration C4	Includes the national service activated at UE in the modified services list for one modification period.
5	←		M	MBMS MCCH Message Configuration C2	No modified services. One ongoing service corresponding to that activated at the UE.
6	→		U	CLOSE UE TEST LOOP COMPLETE	The UE establishes the MTCH according to the activation time and closes the test loop.
7	SS		M		The SS repeats steps 8 - 15 for each invalid TCTF value.
8				MAC PDU(TCTF, MBMS-Id, RLC UM PDU(SN=x))	Sent with invalid TCTF = 101'B, 110'B, 111'B, 001'B, 010'B, 100'B and 01100'B
9					SS waits for T = 2 s
10	←		U	UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST	
11	→		U	UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE	The SS checks that the number of reported RLC SDUs received on the MTCH is equal to zero. The SS records the value.
12				MAC PDU(TCTF, MBMS-Id, RLC UM PDU(SN=x))	Sent with correct TCTF = 01110'B
13					SS waits for T = 2 s
14	←		U	UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST	
15	→		U	UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE	The SS checks that the number of reported RLC SDUs received on the MTCH is greater than zero. The SS records the value.
16	←		U	OPEN UE TEST LOOP	
17	→		U	OPEN UE TEST LOOP COMPLETE	
18	←		U	DEACTIVATE RB TEST MODE	
19	→		U	DEACTIVATE RB TEST MODE COMPLETE	

Steps 8 – 15 of the above expected sequence are repeated for iterations 2 to 7. Note: For iteration k the SN in steps 8 and 12 starts with x + (k –1).

7.1.1.9.5 Test Requirement

1) At step 11 on each iteration, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number that corresponds to zero received RLC SDUs for Cell 31 MTCH.

2) At step 15 on each iteration, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number that corresponds to > 0 received RLC SDUs for Cell 31 MTCH.

7.1.1.9a MTCH mapped to FACH / Invalid TCTF (3.84 Mcps TDD IMB)

7.1.1.9a.1 Definition

This tests that the MAC applies the correct header to the MAC PDU according to the type of logical channel carried on the FACH transport channel. Incorrect application of MAC headers would result in inoperation of the UE.

7.1.1.9a.2 Conformance requirement

MTCH mapped to FACH:

The TCTF field and MBMS-Id field are included in the MAC header for MTCH

Table 9.2.1.1a: Coding of the Target Channel Type Field on FACH for 3.84 Mcps TDD IMB

TCTF	Designation
00	BCCH
01000000	CCCH
01000001-01001111	Reserved (PDUs with this coding will be discarded by this version of the protocol)
01010000	MCCH
01010001-01011110	Reserved (PDUs with this coding will be discarded by this version of the protocol)
01011111	MSCH
0110	MTCH
0111	Reserved (PDUs with this coding will be discarded by this version of the protocol)
10000000	CTCH
10000001-10111111	Reserved (PDUs with this coding will be discarded by this version of the protocol)
11	DCCH or DTCH over FACH

Reference(s)

TS 25.321 [6] clauses 9.2.1 and 9.2.1.8.

7.1.1.9a.3 Test purpose

1. To verify that the UE discards PDUs with reserved or incorrect values in the TCTF field.
2. To verify that the TCTF field is correctly applied when a MTCH is mapped to the FACH.

7.1.1.9a.4 Method of test

Initial conditions

System Simulator:

Unicast carrier: 1 cell, Cell 1 with default configuration.

- MBSFN carriers: 1 cell, Cell 31 has default parameters. In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C1 and Default1 MCCH scheduling (No ongoing session) according to subclause 11.2 of TS 34.108 [9].

The configuration of the S-CCPCH which will carry the MTCH is based upon that specified in TS 34.108 [9], clause 6.11.1e (3.84 Mcps TDD IMB) 8kbps RB for MBSFN MTCH with the following exceptions for the FACH:

Higher layer	RAB/signalling RB		RAB
	User of Radio Bearer		Test
RLC	Logical channel type		MTCH
	RLC mode		TM
	Payload sizes, bit		344
	Max data rate, bps		8200
	UMD PDU header, bit		0
MAC	MAC header, bit		0 (NOTE)
	MAC multiplexing		Simulated by SS
Layer 1	TrCH type		FACH
	TB sizes, bit		344
	TFS	TF0, bits	0x344
		TF1, bits	1x344
	TTI, ms		40
	Coding type		TC
	CRC, bit		16
	Max number of bits/TTI after channel coding		1092
	Max number of bits/radio frame before rate matching		273
	RM attribute		128
NOTE: The SS MAC layer must be configured not to add a MAC header so that the header can be added by the test case in order to create the necessary invalid values.			

User Equipment:

- On the unicast carrier cell the UE is in registered Idle Mode on PS (state 3) if the UE only supports PS domain or registered Idle Mode on CS/PS (state 7) if the UE supports both CS and PS domains, as specified in clause 7.2.2 of TS 34.108 [9].

- The UE is in MBSFN Idle mode with one activated service as specified in clause 7.6.4 of TS 34.108 [9]. The UE has selected (i.e. it is included in MBMS_ACTIVATED_SERVICES variable) a service for which there will be a session starting on MBSFN Cell 31 (see TS 34.108 [9], clause 11.2.4).

Related ICS/IXIT statements

- MBMS Broadcast services in MBSFN mode available on UE Yes/No.

- Support of TDD or FDD transmit and receive functions available on UE Yes/No.

- Support of 3.84 Mcps TDD IMB receive function available on UE Yes/No.

Test procedure

a) The UE is camping on Cell 1 and Cell 31. In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C1 (no session ongoing) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108 [9].

b) The SS sends ACTIVATE RB TEST MODE on the unicast carrier and the UE responds with ACTIVATE RB TEST MODE COMPLETE.

c) The SS sends CLOSE UE TEST LOOP to activate RLC SDU counting on Cell 31 MTCH (Transmission identity indicating the MBMS activated service).

d) The SS notifies on MCCH about the start of an MBMS session for one modification period. MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C4 (one PTM session starting) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108 [9].

e) MCCH messages are then transmitted by the SS on Cell 31 using MBMS configuration C2 (one PTM session ongoing) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108 [9].

f) The SS waits for the UE to start reception of the MBMS data on MTCH according to the specified service activation time. The UE closes the test loop. The UE sends CLOSE UE TEST LOOP COMPLETE.

g) The SS transmits MAC PDUs containing RLC UM PDUs containing an octet string representing dummy traffic data, of size sufficient enough to fit in one RLC PDU of 332 bits, including the correct RLC UM header.

The MAC header shall be set as follows:

Field	Value
TCTF	01000001'B
MBMS-Id	0000'B

h) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST. The SS waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE corresponds to zero received RLC SDUs. The SS records the value.

i) The SS again transmits MAC PDUs as in g) above, but this time uses the correct TCTF of 0110'B. Where a TCTF size of 4-bits is used, 4-bits to the RLC payload (specified above as 332 bits) shall be added. The sequence numbers in the RLC headers shall be identical with those sent in g).

j) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST. The SS waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is > 0. The SS records the value.

k) The SS repeats steps g), h), i) and j), with the TCTF field set as follows in step g):

Iteration	TCTF Value
2	01000010'B
3	01001111'B
4	01000000'B
5	01010001'B
6	01010010'B
7	01011110'B
8	0111'B
9	10000000'B
10	10000001'B
11	10000010'B
12	10111111'B
13	11'B

NOTE 1: For a UE in UE test loop mode 3 the RLC SDU counter value is only reset upon reception of the CLOSE UE TEST LOOP message configuring UE test loop mode 3. To enable the SS to measure the number of received RLC SDUs for the different sub-tests the SS needs to record the reported values for each sub-test and perform the checking of the reported value relative to the previously reported value.

Expected sequence

Step	Direction		Carrier	Message	Comment
	UE	SS			
1	←		U	ACTIVATE RB TEST MODE	
2	→		U	ACTIVATE RB TEST MODE COMPLETE	
3	←		U	CLOSE UE TEST LOOP	Loop back mode 3 is activated on Cell 31 for the selected national service on MTCH.
4	←		M	MBMS MCCH Message Configuration C4	Includes the national service activated at UE in the modified services list for one modification period.
5	←		M	MBMS MCCH Message Configuration C2	No modified services. One ongoing service corresponding to that activated at the UE.
6	→		U	CLOSE UE TEST LOOP COMPLETE	The UE establishes the MTCH according to the activation time and closes the test loop.
7	SS		M		The SS repeats steps 8 - 15 for each invalid TCTF value.
8				MAC PDU(TCTF, MBMS-Id, RLC UM PDU(SN=x))	Sent with invalid TCTF = 01000001'B, 01000010'B, 01001111'B, 01000000'B, 01010001'B, 01010010'B, 01011110'B, 0111'B, 10000000'B, 10000001'B, 10000010'B, 10111111'B, 11'B
9					SS waits for T = 2 s
10	←		U	UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST	
11	→		U	UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE	The SS checks that the number of reported RLC SDUs received on the MTCH is equal to zero. The SS records the value.
12				MAC PDU(TCTF, MBMS-Id, RLC UM PDU(SN=x))	Sent with correct TCTF = 0110'B
13					SS waits for T = 2 s
14	←		U	UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST	
15	→		U	UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE	The SS checks that the number of reported RLC SDUs received on the MTCH is greater than zero. The SS records the value.
16	←		U	OPEN UE TEST LOOP	
17	→		U	OPEN UE TEST LOOP COMPLETE	
18	←		U	DEACTIVATE RB TEST MODE	
19	→		U	DEACTIVATE RB TEST MODE COMPLETE	

Steps 8 – 15 of the above expected sequence are repeated for iterations 2 to 13. Note: For iteration k the SN in steps 8 and 12 starts with x + (k –1).

7.1.1.9a.5 Test Requirement

1) At step 11 on each iteration, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number that corresponds to zero received RLC SDUs for Cell 31 MTCH.

2) At step 15 on each iteration, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number that corresponds to > 0 received RLC SDUs for Cell 31 MTCH.

7.1.1.10 MTCH mapped to FACH / Invalid MBMS-Id (TDD MBSFN)

7.1.1.10.1 Definition

This tests that the MAC applies the correct header to the MAC PDU according to the type of logical channel carried on the FACH transport channel. Incorrect application of MAC headers would result in inoperation of the UE.

7.1.1.10.2 Conformance requirement

MTCH mapped to FACH:

The TCTF field and MBMS-Id field are included in the MAC header for MTCH

…

Table 9.2.1.8: Structure of the MBMS-Id field

MBMS-Id field	MBMS logical channel identity [7]
0000	1
0001	2
...	...
1110	15
1111	Reserved (PDUs with this coding will be discarded by this version of the protocol)

Reference(s)

TS 25.321 clauses 9.2.1 and 9.2.1.8.

7.1.1.10.3 Test purpose

1. To verify that the UE discards PDUs with reserved or incorrect values in the MBMS-Id field.
2. To verify that the MBMS-Id field is correctly applied when a MTCH is mapped to the FACH.

7.1.1.10.4 Method of test

Initial conditions

System Simulator:

Unicast carrier: 1 cell, Cell 1 with default configuration.

- MBSFN carriers: 1 cell, Cell 31 has default parameters. In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C1 and Default1 MCCH scheduling (No ongoing session) according to subclause 11.2 of TS 34.108.

The configuration of the S-CCPCH which will carry the MTCH is based upon that specified in TS 34.108 clause 6.11.1c (3.84 Mcps TDD) and 6.11.1d (7.68 Mcps TDD) 8kbps RB for MBSFN MTCH with the following exceptions for the FACH:

Higher layer	RAB/signalling RB		RAB
	User of Radio Bearer		Test
RLC	Logical channel type		MTCH
	RLC mode		TM
	Payload sizes, bit		345
	Max data rate, bps		8200
	UMD PDU header, bit		0
MAC	MAC header, bit		0 (note)
	MAC multiplexing		Simulated by SS
Layer 1	TrCH type		FACH
	TB sizes, bit		345
	TFS	TF0, bits	0x345
		TF1, bits	1x345
	TTI, ms		40
	Coding type		TC
	CRC, bit		16
	Max number of bits/TTI after channel coding		1095
	Max number of bits/radio frame before rate matching		274
	RM attribute		128
NOTE: The SS MAC layer must be configured not to add a MAC header so that the header can be added by the test case in order to create the necessary invalid values.			

User Equipment:

- On the unicast carrier cell the UE is in registered Idle Mode on PS (state 3) if the UE only supports PS domain or registered Idle Mode on CS/PS (state 7) if the UE supports both CS and PS domains, as specified in clause 7.2.2 of TS 34.108.
- The UE is in MBSFN Idle mode with one activated service as specified in clause 7.6.4 of TS 34.108. The UE has selected (i.e. it is included in MBMS_ACTIVATED_SERVICES variable) a national service for which there will be a session starting on MBSFN Cell 31 (see TS 34.108 clause 11.2.4).

Related ICS/IXIT statements

- MBMS Broadcast services in MBSFN mode available on UE Yes/No.
- Support of TDD transmit and receive functions available on UE Yes/No.
- Support of TDD MBSFN receive only function available on UE Yes/No.

Test procedure

a) The UE is camping on Cell 1 and Cell 31. In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C1 (no session ongoing) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108.

b) The SS sends ACTIVATE RB TEST MODE on the unicast carrier and the UE responds with ACTIVATE RB TEST MODE COMPLETE.

c) The SS sends CLOSE UE TEST LOOP to activate RLC SDU counting on Cell 31 MTCH (Transmission identity indicating the MBMS activated service).

d) The SS notifies on MCCH about the start of an MBMS session for one modification period. MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C4 (one PTM session starting) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108.

e) MCCH messages are then transmitted by the SS on Cell 31 using MBMS configuration C2 (one PTM session ongoing) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108.

f) The SS waits for the UE to start reception of the MBMS data on MTCH according to the specified service activation time. The UE closes the test loop. The UE sends CLOSE UE TEST LOOP COMPLETE.

g) The SS transmits MAC PDUs containing RLC UM PDUs containing an octet string representing dummy traffic data, of size sufficient enough to fit in one RLC PDU of 336 bits, including the correct RLC UM header.

The MAC header shall be set as follows:

Field	Value
TCTF	01110'B
MBMS-Id	1111'B

h) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST. The SS waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE corresponds to zero received RLC SDUs. The SS records the value.

i) The SS again transmits MAC PDUs as in b) above, but this time uses a valid MBMS-Id of 1110’B. The sequence numbers in the RLC headers shall be identical with those sent in b).

j) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST. The SS waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE corresponds to > 0 received RLC SDUs

Expected sequence

Step	Direction		Carrier	Message	Comment
	UE	SS			
1	←		U	ACTIVATE RB TEST MODE	
2	→		U	ACTIVATE RB TEST MODE COMPLETE	
3	←		U	CLOSE UE TEST LOOP	Loop back mode 3 is activated on Cell 31 for the selected national service on MTCH.
4	←		M	MBMS MCCH Message Configuration C4	Includes the national service activated at UE in the modified services list for one modification period.
5	←		M	MBMS MCCH Message Configuration C2	No modified services. One ongoing service corresponding to that activated at the UE.
6	→		U	CLOSE UE TEST LOOP COMPLETE	The UE establishes the MTCH according to the activation time and closes the test loop.
7				MAC PDU(TCTF, MBMS-Id, RLC UM PDU(SN=x))	Sent with reserved MBMS-Id = 1111'B
8					SS waits for T = 2 s
9	←		U	UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST	
10	→		U	UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE	The SS checks that the number of reported RLC SDUs received on the MTCH is equal to zero. The SS records the value.
11				MAC PDU(TCTF, MBMS-Id, RLC UM PDU(SN=x))	Sent with valid MBMS-Id = 1110'B
12					SS waits for T = 2 s
13	←		U	UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST	
14	→		U	UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE	The SS checks that the number of reported RLC SDUs received on the MTCH is greater than zero.
15	←		U	OPEN UE TEST LOOP	
16	→		U	OPEN UE TEST LOOP COMPLETE	
17	←		U	DEACTIVATE RB TEST MODE	
18	→		U	DEACTIVATE RB TEST MODE COMPLETE	

Specific Message Contents

With the following exceptions, all messages have the same content as defined in TS 34.108 clause 9.1.3 for the MBSFN carriers and in TS 34.108 clause 9.1.1 or 9.1.2 for the unicast carrier:

		TF1, bits	1x344
	TTI, ms		40
	Coding type		TC
	CRC, bit		16
	Max number of bits/TTI after channel coding		1092
	Max number of bits/radio frame before rate matching		273
	RM attribute		128
NOTE: The SS MAC layer must be configured not to add a MAC header so that the header can be added by the test case in order to create the necessary invalid values.			

User Equipment:

- On the unicast carrier cell the UE is in registered Idle Mode on PS (state 3) if the UE only supports PS domain or registered Idle Mode on CS/PS (state 7) if the UE supports both CS and PS domains, as specified in clause 7.2.2 of TS 34.108 [9].

- The UE is in MBSFN Idle mode with one activated service as specified in clause 7.6.4 of TS 34.108 [9]. The UE has selected (i.e. it is included in MBMS_ACTIVATED_SERVICES variable) a national service for which there will be a session starting on MBSFN Cell 31 (see TS 34.108 [9], clause 11.2.4).

Related ICS/IXIT statements

- MBMS Broadcast services in MBSFN mode available on UE Yes/No.

- Support of TDD or FDD transmit and receive functions available on UE Yes/No.

- Support of 3.84 Mcps TDD IMB receive only function available on UE Yes/No.

Test procedure

a) The UE is camping on Cell 1 and Cell 31. In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C1 (no session ongoing) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108 [9].

b) The SS sends ACTIVATE RB TEST MODE on the unicast carrier and the UE responds with ACTIVATE RB TEST MODE COMPLETE.

c) The SS sends CLOSE UE TEST LOOP to activate RLC SDU counting on Cell 31 MTCH (Transmission identity indicating the MBMS activated service).

d) The SS notifies on MCCH about the start of an MBMS session for one modification period. MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C4 (one PTM session starting) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108 [9].

e) MCCH messages are then transmitted by the SS on Cell 31 using MBMS configuration C2 (one PTM session ongoing) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108 [9].

f) The SS waits for the UE to start reception of the MBMS data on MTCH according to the specified service activation time. The UE closes the test loop. The UE sends CLOSE UE TEST LOOP COMPLETE.

g) The SS transmits MAC PDUs containing RLC UM PDUs containing an octet string representing dummy traffic data, of size sufficient enough to fit in one RLC PDU of 336 bits, including the correct RLC UM header.

The MAC header shall be set as follows:

Field	Value
TCTF	0110'B
MBMS-Id	1111'B

h) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST. The SS waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE corresponds to zero received RLC SDUs. The SS records the value.

i) The SS again transmits MAC PDUs as in g) above, but this time uses a valid MBMS-Id of 1110’B. The sequence numbers in the RLC headers shall be identical with those sent in g).

j) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST. The SS waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE corresponds to > 0 received RLC SDUs

Expected sequence

Step	Direction		Carrier	Message	Comment
	UE	SS			
1	←		U	ACTIVATE RB TEST MODE	
2	→		U	ACTIVATE RB TEST MODE COMPLETE	
3	←		U	CLOSE UE TEST LOOP	Loop back mode 3 is activated on Cell 31 for the selected national service on MTCH.
4	←		M	MBMS MCCH Message Configuration C4	Includes the national service activated at UE in the modified services list for one modification period.
5	←		M	MBMS MCCH Message Configuration C2	No modified services. One ongoing service corresponding to that activated at the UE.
6	→		U	CLOSE UE TEST LOOP COMPLETE	The UE establishes the MTCH according to the activation time and closes the test loop.
7				MAC PDU(TCTF, MBMS-Id, RLC UM PDU(SN=x))	Sent with reserved MBMS-Id = 1111'B

7.1.1.10a.5 Test Requirement

1) At step 10 on each iteration, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number that corresponds to zero received RLC SDUs for Cell 31 MTCH.

2) At step 14 on each iteration, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number that corresponds to > 0 received RLC SDUs for Cell 31 MTCH.

7.1.2 RACH/FACH procedures

7.1.2.1 Selection and control of Power Level

7.1.2.1.1 Void

NOTE Test case "Selection and control of Power Level (FDD)" has been removed as the test purpose is implicitly tested by radio resource management test cases in TS 34.121 clause 8.4.2.1 and 8.4.2.2.

7.1.2.1.2 Selection and control of Power Level (3,84 Mcps TDD option)

(FFS)

7.1.2.1.3 Void

NOTE: Test case "Selection and control of Power Level (1.28Mcps TDD option)" has been removed as the test purpose is implicitly tested by radio resource management test cases in TS 34.1227.1.2.2. Correct application of Dynamic Persistence

7.1.2.2 Correct application of Dynamic Persistence

7.1.2.2.1 Void

NOTE Test case "Correct application of Dynamic Persistence (FDD)" has been removed as the test purpose is implicitly tested by radio resource management test cases in TS 34.121.

7.1.2.2.2 Correct application of Dynamic Persistence (3.84 Mcps TDD option)

(FFS)

7.1.2.2.3 Void

7.1.2.3 Correct Selection of RACH parameters

7.1.2.3.1 Correct Selection of RACH parameters (FDD)

7.1.2.3.1.1 Definition

The physical random access procedure described in this subclause is initiated upon request of a PHY-Data-REQ primitive from the MAC sublayer.

The UE selection of "PRACH system information" is described in TS 25.331 clause 8.5.17.

7.1.2.3.1.2 Conformance requirement

A. The physical random-access procedure shall be performed as follows:

1 Derive the available uplink access slots, in the next full access slot set, for the set of available RACH sub-channels within the given ASC with the help of TS 25.214, subclauses 6.1.1 and 6.1.2. Randomly select one access slot among the ones previously determined. If there is no access slot available in the selected set, randomly select one uplink access slot corresponding to the set of available RACH sub-channels within the given ASC from the next access slot set. The random function shall be such that each of the allowed selections is chosen with equal probability.

2 Randomly select a signature from the set of available signatures within the given ASC. The random function shall be such that each of the allowed selections is chosen with equal probability.

3 Set the Preamble Retransmission Counter to Preamble Retrans Max.

…

5 … Transmit a preamble using the selected uplink access slot, signature, and preamble transmission power.

6 If no positive or negative acquisition indicator (AI ≠ +1 nor –1) corresponding to the selected signature is detected in the downlink access slot corresponding to the selected uplink access slot:

6.1 Select the next available access slot in the set of available RACH sub-channels within the given ASC.

6.2 Randomly select a new signature from the set of available signatures within the given ASC. The random function shall be such that each of the allowed selections is chosen with equal probability.

…

6.4 Decrease the Preamble Retransmission Counter by one.

6.5 If the Preamble Retransmission Counter > 0 then repeat from step 5. Otherwise pass L1 status ("No ack on AICH") to the higher layers (MAC) and exit the physical random access procedure.

7 If a negative acquisition indicator corresponding to the selected signature is detected in the downlink access slot corresponding to the selected uplink access slot, pass L1 status ("Nack on AICH received") to the higher layers (MAC) and exit the physical random access procedure.

8 Transmit the random access message three or four uplink access slots after the uplink access slot of the last transmitted preamble depending on the AICH transmission timing parameter. Transmission power of the control part of the random access message should be $P_{p\text{-}m}$ [dB] higher than the power of the last transmitted preamble. Transmission power of the data part of the random access message is set according to subclause 5.1.1.2.

9 Pass L1 status "RACH message transmitted" to the higher layers and exit the physical random access procedure.

Reference(s)

TS 25.214 clause 6.1.

7.1.2.3.1.3 Test purpose

To verify that:

A1 the UE, initially:

- determines the ASC for the given Access Class (AC).
- derives the available uplink access slots, in the next full access slot set, for the set of available RACH sub-channels within the given ASC with the help of TS 25.214, subclauses 6.1.1. and 6.1.2. and randomly select one access slot among the ones previously determined.
- randomly select a new signature from the set of available signatures within the given ASC.

A2 the UE, when not receiving any reply from UTRAN:

- selects the next available access slot in the set of available RACH sub-channels within the given ASC.
- randomly select a new signature from the set of available signatures within the given ASC.
- does not transmit on the PRACH resources specified in the BCH message SIB 5/SIB 5bis after that the physical random access procedure is terminated.

A3 the UE, when detecting a negative acquisition indicator:

- does not transmit on the PRACH resources specified in the BCH message SIB 5/SIB 5bisafter that the physical random access procedure is terminated.

A4 the UE, when detecting a positive acquisition indicator:

- transmits the random access message three or four uplink access slots after the uplink access slot of the last transmitted preamble depending on the AICH transmission timing parameter.
- terminates the random access procedure.

7.1.2.3.1.4 Method of test

Initial conditions

The UE shall be attached to the network and in idle mode.

The UE shall use Access Class AC#0-9, which provides permission to use ASC#0 for the initial access.

Preamble Retrans Max parameter in SIB5/SIB5bis set to 5.

Maximum number of preamble retransmission cycles in SIB 5/SIB 5bis is set to Mmax = 1.

2 ASC settings (ASC#0 and ASC#1) are defined (with default parameters) in SIB5/SIB 5bis, except that the parameter assigned sub channel number is set as follows:

ASC#0 Assigned sub channel number = '0001'B

ASC#1 Assigned sub channel number = '0010'B

The available sub-channel number defined in SIB5/SIB 5bis is set to '1111 1111 1111'B.

NOTE: this value allows RACH transmission on all sub-channels defined by "Assigned sub channel number" above.

Related ICS/IXIT Statement(s)

TBD

Foreseen Final State of the UE

The same as the initial conditions.

Test procedure

a) The SS pages the UE until it performs a RACH access.

b) The SS measures the access slot and preamble signature used.

c) The SS does not acknowledge the RACH access, causing the UE to retry.

d) The SS again measures the access slot and preamble signature used.

e) The SS repeats the procedure from step c) until the maximum number of retries "Preamble Retrans Max" has been attempted, and monitors the RACH channel for 10 seconds to ensure that no further RACH accesses occur.

f) The SS pages the UE until it performs a RACH access.

g) The SS measures the access slot and preamble signature used.

h) The SS responds with a negative acquisition indicator on the AICH.

i) The SS monitors the RACH channel for 10 seconds to ensure that no further RACH accesses occur.

j) The SS pages the UE until it performs a RACH access.

k) The SS measures the access slot used.

l) The SS acknowledges the RACH access normally.

m) The SS measures the first access slot used in the PRACH message part.

n) The SS monitors the RACH channel for 10 seconds to ensure that no further RACH accesses occur.

7.1.2.3.1.5 Test requirements

A1

At step 2

- the SS shall receive a PRACH preamble using an access slot as defined below and using a preamble signature from the set of preamble signatures {P_0 .. P_7}. See TS 25.213, clause 4.3.3.3 for a list of preamble codes.

- the access slot selected for the first access preamble can be any of the shaded table entries given below for ASC#0, depending on SFN.

NOTE: the table entries which are not shaded are not allowed for ASC#0.

SFN modulo 8 of corresponding P-CCPCH frame	Sub-channel number											
	0	1	2	3	4	5	6	7	8	9	10	11
0	0	1	2	3	4	5	6	7				
1	12	13	14						8	9	10	11
2				0	1	2	3	4	5	6	7	
3	9	10	11	12	13	14						8

5			8	9	10	11	12	13	14			
6	3	4	5	6	7					0	1	2
7						8	9	10	11	12	13	14

A2

At steps 3, 4, 5, and 6

- the SS shall receive a PRACH preamble using access slot mod(n + 3, 15), where n is the access slot used in the previous step, and using a preamble signature from the set of preamble signatures {P_0 .. P_7}. See TS 25.213, clause 4.3.3.3 for a list of preamble codes.

At step 7

- the SS shall not receive on the PRACH resources specified in the BCH message SIB 5/SIB 5bis after that the physical random access procedure is terminated.

A3

At step 11

- the SS shall not receive on the PRACH resources specified in the BCH message SIB 5/SIB 5bis after that the physical random access procedure is terminated.

A4

At step 15

- the SS shall receive the random access message three access slots after the uplink access slot of the preamble received in step 13.

At step 11

- the SS shall not receive on the PRACH resources specified in the BCH message SIB 5/SIB 5bis after that the physical random access procedure is terminated.

7.1.2.3.2 Correct Selection of RACH parameters (3.84 Mcps TDD option)

(FFS)

7.1.2.3.3 Correct Selection of RACH parameters (1.28 Mcps TDD option)

7.1.2.3.3.1 Definition and applicability

All TDD 1.28 Mcps UE

7.1.2.3.3.2 Conformance requirement

That the UE selects UpPCH codes and UpPCH sub-channels that are defined for the ASC that the UE should adopt based on its AC (when the RACH message to be transmitted is an 'RRC Connection Request'). Parameters are defined in the SIB 5 messages received by the UE.

Reference(s)

TS25.224 clauses 4.7.1 and 5.6.

TS25.321 clause 11.2.3.

7.1.2.3.3.3 Test Purpose

To verify that the UE selects UpPCH codes and sub-channels that are allocated to the ASC that the UE should adopt based on its AC.

7.1.2.3.3.4 Method of test

Initial conditions

The UE is attached to the network and in idle mode. The Sim card should be configured so that the UE can adopt a known ASC based on its AC. The SS will broadcast SIB 5 messages that allocate to each ASC subsets of the total UpPCH codes and sub-channels.

Related ICS/IXT Statement(s)

TBD

Foreseen Final State of the UE

The same as the initial condition.

Test procedure

The test procedure is similar to that specified for test 7.1.2.1.3. In place of power level the test monitors the UpPCH codes that are used for the UE's UpPCH transmissions and the sub-channels in which they are made.

a) The SS pages the UE to initiate the RACH access procedure;

b) The SS does not respond to UpPCH transmissions received from the UE;

c) The SS identifies the UpPCH codes on which the UE transmits;

d) The SS identifies the system frame numbers of the frames in which the UE's UpPCH transmissions are received;

e) The procedure is continued until the maximum permitted power ramping cycles, and within each power ramping cycle, the maximum number of UpPCH transmissions have been made.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		<–	PAGE	
2		->	UpPCH	Code and sub-channel should be valid.
3		->	UpPCH	Code and sub-channel should be valid.
4			……

6		->	UpPCH	Code and sub-channel should be valid.
7		->	UpPCH	Code and sub-channel should be valid.
8			……	
9		->	UpPCH	Code and sub-channel should be valid.

7.1.2.3.3.5 Test Requirements

The UpPCH transmissions should be made in sub-channels and using codes that are allocated to the ASC that the UE should adopt based on its AC.

7.1.2.4 Correct Detection and Response to FPACH (1.28 Mcps TDD option)

7.1.2.4.1 Definition and applicability

All TDD 1,28 Mcps UE.

7.1.2.4.2 Conformance requirement

That the UE:

1. Receives and acts upon an FPACH message transmitted within WT sub-frames of the UE transmitting a UpPCH code, provided that:

   - The FPACH was transmitted in the FPACH resource associated with the UpPCH code used by the UE; and

   - The FPACH message correctly identifies the UpPCH codes identity and the number of sub-frames between the UpPCH and the FPACH transmissions.

2. Responds to the valid FPACH by transmitting an 'RRC Connection Request' message in the PRACH resources associated with the FPACH. The transmission should:

   - Occupy the PRACH resource associated with the FPACH and the sub-channel in which the FPACH was received for the duration of the TTI;

   - Be made with a timing correction and a transmission power that are based on information received in the FPACH.

3. Does not respond to FPACH messages that are transmitted, within WT sub-frames of the UE UpPCH transmission, in FPACH resources that are not associated with the UpPCH code that the UE used. Nor should it respond to FPACH messages that are received on the correct FPACH resources within WT sub-frames but which contain the incorrect UpPCH code identifier or an incorrect indication of the number of sub-frames elapsed between the UpPCH and FPACH transmissions.

Reference(s)

TS 25.224 clauses 4.7.1, 5.2.3, 5.6.

TS 25.331 clause 8.5.7.

TS 25.321 clause 11.2.3.

7.1.2.4.3 Test Purpose

To verify that:

- The UE does not respond to FPACH transmissions that are either, received on incorrect FPACH resources, or are received on correct resources and within WT sub-frames of the UpPCH transmission, but which do not contain the correct UpPCH identity or elapsed sub-frames.
- The UE does respond to an FPACH transmission that is received, within WT sub-frames of the UpPCH transmission, on the correct FPACH resources for the UpPCH code that was used, provided that the FPACH contains the identity of the UpPCH code and the number of sub-frames elapsed between the UpPCH and the FPACH transmissions.
- The UE response is to transmit an 'RRC Connection Request' message on the PRACH resources that are associated with the FPACH taking account of the timing correction and power adjustment parameters received in the FPACH.

7.1.2.4.4 Method of test

Initial conditions

The UE is attached to the network and in idle mode. The SS BCH SIB 5 message will specify that there are two or more FPACH associated with the UpPCH code set in a single PRACH system information. The UpPCH code set must include one or more odd and one or more even numbered codes.

Related ICS/IXT Statement(s)

TBD

Foreseen Final State of the UE

The same as the initial condition.

Test procedure

The test procedure consists of a number of stages:

a) The SS pages the UE to initiate RACH access.

b) When UpPCH transmissions are received from the UE the SS should transmit FPACH responses within WT sub-frames of each UpPCH transmission but on an incorrect FPACH resource for the UpPCH code used. It is noted that the UE may change the code used for each UpPCH transmission randomly amongst those available to its ASC.

c) The PRACH resources associated with all of the FPACH should be monitored for a transmission from the UE.

d) The SS pages the UE to initiate RACH access.

e) When UpPCH transmissions are received from the UE the SS should transmit FPACH responses within WT sub-frames of each UpPCH transmission on the correct FPACH resource for the UpPCH code used. The FPACH transmission should contain a signature reference number that is different from that of the UpPCH code that was used by the UE.

f) The PRACH resources associated with all of the FPACH should be monitored for a transmission from the UE.

g) The SS pages the UE to initiate RACH access.

h) When UpPCH transmissions are received from the UE the SS should transmit FPACH responses within WT sub-frames of each UpPCH transmission on the correct FPACH resource for the UpPCH code used. The FPACH transmission should contain a relative sub-frame number that is different from that defined by the elapsed number of frames between the UpPCH and the FPACH transmissions.

i) The PRACH resources associated with all of the FPACH should be monitored for a transmission from the UE.

j) The SS pages the UE to initiate RACH access.

k) When UpPCH transmissions are received from the UE the SS should transmit an FPACH response on the correct FPACH resources for the UpPCH code that was used by the UE. The FPACH response should include correct values for the signature reference and relative sub-frame number fields. The FPACH should also include known entries for the Received starting position of the UpPCH ($UpPCH_{POS}$) and the Transmit Power Level Command for RACH ($PRX_{PRACHdes}$) fields.

l) The SS should monitor the PRACH resources associated with the FPACH commencing two or three sub-frames (depending upon the sub-frame in which the FPACH was transmitted and the length of the TTI) following the sub-frame in which the FPACH was transmitted and continuing for the number of sub-frames in the RACH TTI. The power level of the PRACH transmissions and the time of arrival of their mid-ambles should be measured. The SS should continue to monitor the UpPCH slot to ensure that the UE has ceased UpPCH transmissions.

Expected sequence

19		->	RRC Connection Request	$P_{PRACH} = L_{PCCPCH} + PRX_{PRACHdes} +(i-1)*Pwr_{ramp}$, $UpPCH_{ADV} + UpPCH_{POS}$- 8×16Tc

7.1.2.4.5 Test Requirements

The UE should not respond to FPACH transmissions, which are made on the incorrect FPACH resources for the UpPCH code that the UE uses. The UE should continue to transmit UpPCH until the permitted maximum number of power ramping cycles is complete.

The UE should not respond to FPACH transmissions which are made within WT sub-frames of a UpPCH transmission and on the correct FPACH resources for the UpPCH code that it used if the FPACH contains either an incorrect signature reference number or an incorrect relative sub-frame number. The UE should continue to transmit UpPCH until the permitted maximum number of power ramping cycles is complete.

The UE should respond to an FPACH received within WT sub-frames of a UpPCH transmission if the FPACH is received on the correct FPACH resources for the UpPCH code used and if it contains valid information fields. The UE should cease transmitting UpPCH bursts and transmit an RRC Connection Request message using the PRACH resources that are associated with the FPACH and the sub-frame in which the FPACH was received. The transmission should commence two or three sub-frames after that containing the FPACH (dependent upon the sub-frame in which the FPACH was transmitted and the length of the TTI) and is made in all sub-frames within the TTI. Each PRACH burst should be made using the transmission power:

$$P_{PRACH} = L_{PCCPCH} + PRX_{PRACHdes} + (i-1)*Pwr_{ramp}$$

Where i is the number of transmission attempts on UpPCH, i=1…Max SYNC_UL Transmissions. When the power used by the UE for the UpPCH transmission acknowledged by the FPACH was:

$$P_{UpPCH} = L_{PCCPCH} + PRX_{UpPCHdes} +(i-1)*Pwr_{ramp}$$

And $PRACH_{ADV}$,i.e., the offset from the start of the PRACH slot of the UE's transmission measured by SS shall be

$UpPCH_{ADV}$+$UpPCH_{POS}$ - 8×16Tc chips, to an accuracy of 1/8 chip.

Where $UpPCH_{ADV}$ denotes the offset from the start of the UpPCH slot of the UE's transmission measured by SS and $UpPCH_{POS}$ is the timing correction signalled to the UE in the FPACH.

7.1.2.4a Access Service class selection for RACH transmission

7.1.2.4a.1 Definition and applicability

All UE.

7.1.2.4a.2 Conformance requirement

The following ASC selection scheme shall be applied, where NumASC is the highest available ASC number and MinMLP the highest logical channel priority assigned to one logical channel:

- In case all TBs in the TB set have the same MLP, select ASC=min(NumASC, MLP).
- In case TBs in a TB set have different priority, determine the highest priority level MinMLP and select ASC=min(NumASC, MinMLP).

Reference(s)

TS 25.321 clause 11.2.1.

7.1.2.4a.3 Test purpose

To verify that MAC selects ASC correctly.

7.1.2.4a.4 Method of test

Initial conditions

System Simulator:

- SYSTEM INFORMATION BLOCK TYPE 7 (see specific message contents).
- 1 cell, default parameters, Ciphering Off.

User Equipment:

- The UE shall operate under normal test conditions, Ciphering Off.
- The Test-USIM shall be inserted

  The SS starts broadcasting the System Information as specified in TS 34.108 clause 6.1, using the configuration for the PRACH and SCCPCH (signalled in SYSTEM INFORMATION BLOCK types 5 and 6) as follows:

  1. The SCCPCH is configured as specified in TS 34.108 clause 6.10.2.4.3.3 (Interactive/Background 32 kbps RAB + SRB for PCCH + SRB for CCCH + SRB for DCCH + SRB for BCCH).
  2. The PRACH is configured as specified in TS 34.108 clause 6.10.2.4.4.1.

  The SS follows the procedure in TS 34.108 clause 7.4.2.6 (initiated by Mobile Terminated connection) so that the UE shall be in state BGP 6-11 (PS-DCCH+DTCH_FACH) with the following exceptions:

  1. The MAC Logical channel Priority (MLP) of the user RB is set to 8.
  2. The Timer Poll for RB20 will be Omitted in Radio Bearer Setup message to UE.

The user RB is placed into loop-back mode 1 each with the UL SDU size set to 39 bytes.

Related ICS/IXIT Statement(s)

TBD

Foreseen Final State of the UE

Test procedure

a) The SS sends 1 RLC SDU of size 10 bytes on the downlink user RB.

The SS waits to receive uplink data on RACH TrCH via the user RB.

NOTE 1: As all access slots are allowed, correct reception of loop backed PDU by SS, implicitly checks correct selection of ASC.

b) The SS reconfigures the transmitted system information as follows:

Only one ASC setting (ASC#0) is defined, with default parameters, except that the parameter "Assigned sub channel number" is set as follows:

ASC#0 Assigned sub channel number = '0010'B (FDD)

The available sub-channel number defined in system information is set to '1111 1111 1111'B (default parameter setting).

NOTE 2: this value allows RACH transmission on any sub-channel defined by "Assigned sub channel number" above.

ASC#0 sub channel size = Size1 : NULL (1.28Mcps TDD)

NOTE 3: "all available channelisation codes" and "all available subchannels" with "subchannel size=Size 1".The SS then updates System Information Block 6, sends a SYSTEM INFORMATION CHANGE INDICATION message to the UE and waits 10 s for the UE to take the system information change into account.

c) The SS sends 1 RLC SDU of size 10 bytes on the downlink user RB.

d) The SS waits to receive uplink data on RACH TrCH via the user RB, for FDD, then checks that the access slots and preamble signatures used correspond to ASC#0, i.e. the access slot selected for the first access preamble can be any of the shaded table entries given below for ASC#0, depending on SFN. The access slot used for the Message part shall be the access slot used for preamble (for which SS ACK's) + 3.

NOTE 4: the table entries which are not shaded are not allowed for ASC#0 (FDD).

SFN modulo 8 of corresponding P-CCPCH frame	**Sub-channel number**											
	0	1	2	3	4	5	6	7	8	9	10	11
0	0	1	2	3	4	5	6	7				
1	12	13	14						8	9	10	11
2				0	1	2	3	4	5	6	7	
3	9	10	11	12	13	14						8
4	6	7					0	1	2	3	4	5
5			8	9	10	11	12	13	14			
6	3	4	5	6	7					0	1	2
7						8	9	10	11	12	13	14

e) The SS reconfigures the transmitted system information as follows:

Four ASC settings (ASC#0 to ASC#3) are defined (with default parameters), except that the parameter assigned sub channel number is set as follows (FDD):

ASC#0 Assigned sub channel number = '0100'B

ASC#1 Assigned sub channel number = '0001'B

ASC#2 Assigned sub channel number = '0010'B

ASC#3 Assigned sub channel number = '0000'B (i.e. no sub channel is assigned)

The available sub-channel number defined in system information is set to '1111 1111 1111'B (default parameter setting).

NOTE 5: this value allows RACH transmission on all sub-channels defined by "Assigned sub channel number" above.

Four ASC settings (ASC#0 to ASC#3) are defined (with default parameters), except that the parameter assigned sub channel number is set as follows (1.28Mcps TDD):

ASC#0 sub channel size = Size4 : '0100'B

ASC#1 sub channel size = Size4 : '0001'B

ASC#2 sub channel size = Size4 : '0010'B

ASC#3 sub channel size = Size4 : '0000'B (i.e. no sub channel is assigned)

NOTE 6: Each bit indicates availability of a subchannel, where the subchannels are numbered subchannel 0, subchannel 1 etc. The value 1 of a bit indicates that the subchannel is available for the ASC this IE is associated with. The value 0 of a bit indicates that the subchannel is not available for the ASC this IE is associated with. Default value of the IE is that all subchannels within the size are available for the ASC this IE is associated with.

The SS then updates System Information Block 6, sends a SYSTEM INFORMATION CHANGE INDICATION message to the UE and waits 10 s for the UE to take the system information change into account.

f) The SS sends 1 RLC SDU of size 10 bytes on the downlink user RB.

g) The SS waits 10 s to ensure no uplink data is received on RACH TrCH via the user RB.

h) The SS then reconfigures the uplink user RB to have a MAC Logical channel Priority of 1 by sending Radio Bearer Reconfiguration message on the DCCH using UM RLC.

i) The SS sends 1 RLC SDU of size 10 bytes on the downlink user RB.

j) The SS waits to receive uplink data on RACH TrCH via the user RB, for FDD, then checks that the access slots and preamble signatures used correspond to ASC#1, i.e. the access slot selected for the first access preamble can be any of the shaded table entries given below for ASC#1, depending on SFN. The access slot used for the Message part shall be the access slot used for preamble (for which SS ACK's) + 3.SS will receive 2 loop backed PDU's. One the loop backed PDU of step I, and the second one due to RLC layer transmission/retransmission of loop backed PDU of step f. As 'In sequence Delivery' will be enabled, the loop backed PDU of step f shall arrive before loop backed PDU of step i.

NOTE 7: the table entries which are not shaded are not allowed for ASC#1(FDD).

SFN modulo 8 of corresponding P-CCPCH frame	**Sub-channel number**											
	0	1	2	3	4	5	6	7	8	9	10	11
0	0	1	2	3	4	5	6	7				
1	12	13	14						8	9	10	11
2				0	1	2	3	4	5	6	7	
3	9	10	11	12	13	14						8
4	6	7					0	1	2	3	4	5
5			8	9	10	11	12	13	14			
6	3	4	5	6	7					0	1	2
7						8	9	10	11	12	13	14

k) The SS may optionally release the radio bearer.

7.1.2.4a.5 Test requirements

In step 1a, SS implicitly checks ASC parameters by receiving correctly the loop backed PDU.

In step 4, the access slots and preamble signatures used on the PRACH TrCH on which the RLC PDU was received shall correspond to configured legal values for the allowed ASC#0.

In step 6a, no PDUs shall be received on PRACH.

In step 9, the access slots and preamble signatures used on the PRACH TrCH on which the RLC PDU was received shall correspond to configured legal values for the allowed ASC#1.

7.1.2.5 Void

NOTE: Test case "Control of RACH transmissions for FDD mode" has been removed as the test purpose is implicitly tested by radio resource management test case in TS 34.121 clause 8.4.2.3.

7.1.3 Priority handling between data flows of one UE

7.1.3.1 Priority handling between data flows of one UE

7.1.3.1.1 Definition and applicability

7.1.3.1.2 Conformance requirement

When selecting between the Transport Format Combinations in the given Transport FormatCombination Set, priorities of the data flows to be mapped onto the corresponding Transport Channels can be taken into account.

The chosen TFC shall be selected from within the set of valid TFCs and shall satisfy the following criteria in the order in which they are listed below:

1. No other TFC shall allow the transmission of more highest priority data than the chosen TFC.
2. No other TFC shall allow the transmission of more data from the next lower priority logical channels. Apply this criterion recursively for the remaining priority levels.

3. No other TFC shall have a lower bit rate than the chosen TFC.

The above rules for TFC selection in the UE shall apply to DCH, and the same rules shall apply for TF selection on RACH.

Reference(s)

TS 25.301 clause 5.3.1.2.

TS 25.321, clause 11.4.

7.1.3.1.3 Test purpose

To verify that the UE prioritise signalling compared to data on a lower priority logical channel.

7.1.3.1.4 Method of test

Initial conditions

System Simulator:

- 1 cell, default parameters, Ciphering Off.

User Equipment:

- The UE shall operate under normal test conditions, Ciphering Off.
- The Test-USIM shall be inserted.

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for UM 7-bit "Length Indicator" tests described in 3G TS 34.108 clause 6.11.1 is used.

For radio bearer setup the following settings shall be used in both CS and PS mode:

- Re-establishment Timer: useT314
- MAC logical channel priority: 7
- UL Logical Channel Identity:7
- DL Logical Channel Identity:7

Let UM_7_PayloadSize denote the RAB payload size in octets.

Related ICS/IXIT Statement(s)

None

Test procedure

a The SS transmits a TRANSPORT FORMAT COMBINATION CONTROL message using AM_RLC on the DCCH, which indicates that only transport format minimum set is allowed on the uplink for DCH transport channel on the DTCH. I.e. the restricted uplink transport format set shall be (DCCH, UM RLC 7 bit LI RB)=(TF0, TF0), (TF1, TF0) and (TF0, TF1).

b The SS closes the test loop using UE test loop mode 1 with the UL SDU size set to (UM_7_PayloadSize * 25) - 2 bytes. See note 1.

c. The SS transmits a MEASUREMENT CONTROL message requesting periodic reporting with a period of 250ms.

d. The SS sends one RLC SDUs of size floor (UM_7_PayloadSize) - 1 bytes to the UE. The UE is expected to loop this data back in one RLC SDU, segmented into a total of 25 RLC PDUs.

e. The SS waits until data is returned in uplink.

f. The SS checks that the UE transmits alternating measurement reports and data.

NOTE 1: Having UE to return 25 PDUs corresponds to 25*TTI (40 ms) = 1 second of continuous data transmission. SDU size shall be (UM_7_PayloadSize * 25) - 2 to account for presence of Special "Length Indicator" indicating "beginning of an SDU" in the first PDU for a Rel5 and later UE and presence of Special "Length Indicator" indicating end of SDU in the last PDU. As the periodic measurement interval is 250ms this will guarantee that data transmission will be interrupted by transmission of measurement reports in uplink.

Expected sequence

5	<--		CLOSE UE TEST LOOP (DCCH)	TC UE test mode 1 with UL RLC SDU size parameter set to achieve UE to transmit 25 PDUs in uplink.
6	-->		CLOSE UE TEST LOOP COMPLETE (DCCH)	TC
7	-		Void	
8	<--		MEASUREMENT CONTROL (DCCH)	SS sends a MEASUREMENT CONTROL message requesting periodic reporting at 250 ms interval.
9	<--		Downlink RLC PDU	SS sends a SDU fit into one PDU.
10	-->		Uplink RLC PDUs	SS starts receiving RLC PDUs from the UE on the UM RLC RB
11	-->		MEASUREMENT REPORT (DCCH)	SS checks that at least one MEASUREMENT REPORT message is received within 500 ms (=2 x reporting interval)
12	-->		Uplink RLC PDUs	SS checks that UE resumes returning RLC PDUs from the UE on the UM RLC RB

7.1.3.1.5 Test requirements

1. After step 10 the UE shall transmit a MEASUREMENT REPORT message within 500 ms.

2. After step 11 the UE shall resume data transmission.

7.1.3.2 TFC Selection

7.1.3.2.1 Definition and applicability

All UEs

7.1.3.2.2 Conformance requirement

Before selecting a TFC, i.e. at every boundary of the shortest TTI, or prior to each transmission on PRACH the set of valid TFCs shall be established. All TFCs in the set of valid TFCs shall:

1. belong to the TFCS.

1a. not be restricted by higher layer signalling (e.g. TFC Control, see [7]).

2. not be in the Blocked state.

3. be compatible with the RLC configuration.

4. not require RLC to produce padding PDUs (see [6] for definition).

5. not carry more bits than can be transmitted in a TTI (e.g. when compressed mode by higher layer scheduling is used and the presence of compressed frames reduces the number of bits that can be transmitted in a TTI using the Minimum SF configured).

[...]

The chosen TFC shall be selected from within the set of valid TFCs and shall satisfy the following criteria in the order in which they are listed below:

1. No other TFC shall allow the transmission of more highest priority data than the chosen TFC.

2. No other TFC shall allow the transmission of more data from the next lower priority logical channels. Apply this criterion recursively for the remaining priority levels.

3. No other TFC shall have a lower bit rate than the chosen TFC.

In FDD mode the above rules for TFC selection in the UE shall apply to DCH, and the same rules shall apply for TF selection on RACH.

[...]

Reference(s)

TS 25.301 clause 5.3.1.2.

TS 25.321, clause 11.4.

7.1.3.2.3 Test purpose

1. To verify that the UE supports a TFCS that does not allow simultaneous transmission of max data rate on all transport channels.

2. To verify that the UE selects a TFC according to the rule that no other TFC shall allow the transmission of more highest priority data than the chosen TFC.

3. To verify that the UE selects a TFC according to the rule that no other TFC shall allow the transmission of more data from the next lower priority logical channels.

7.1.3.2.4 Method of test

Initial conditions

System Simulator:

- 1 cell, default parameters, Ciphering Off.

User Equipment:

- The UE shall operate under normal test conditions, Ciphering Off.

- The Test-USIM shall be inserted.

RRC Connection Setup procedure is executed with the following exception for SRB 2

Parameter	Value
Polling Info	
- Timer poll prohibit	500

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the following exceptions:

A radio bearer configuration for "Streaming / unknown / UL:16 DL:64 kbps / PS RAB + Interactive or background / UL:16 DL:64 kbps / PS RAB + UL:13.6 DL:13.6 kbps SRBs for DCCH" is configured. This is a modified version of the radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.58 (FDD) clause 6.10.3.4.1.58 (3.85 Mcps

TDD) for "Streaming / unknown / UL:16 DL:64 kbps / PS RAB + Interactive or background / UL: 8 DL: 8 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH" RAB with the following modifications:

NOTE This radio bearer configuration has been selected to provide for a representative test scenario for how UTRAN configures the TFCS such that the data rate can be increased on one transport channel when there is no (or low) activity on the other transport channels, e.g. to provide for improved signalling performance (13.6 kbps) when there is no data transmitted.

Uplink Transport channel parameters for Streaming / unknown / UL:16 kbps / PS RAB

	Codes and time slots	SF16 x 6 codes x 1 time slot
	Max. Number of data bits/radio frame	1640 bits
	TFCI code word	16 bits
	Puncturing limit	0.64

The logical channel priorities are set according to the following:

Radio Bearer	**Logical Channel Priority**
RB1 (DCCH)	3
RB2 (DCCH)	3
RB3 (DCCH)	4
RB4 (DCCH)	5
RB 5 (streaming/unknown)	2
RB 6 (Interactive/ background)	7

Let PayloadSize denote the RAB payload size in octets.

Related ICS/IXIT Statement(s)

None

Test procedure

In the following, the Streaming/ unknown radio bearer is denoted RB 5, the Interactive/ background radio bearer is denoted RB 6, the payload size for RB5 is denoted RB5_PayloadSize and the payload size for RB6 is denoted RB6_PayloadSize.

a) The SS closes the test loop using UE test loop mode 1 with the UL SDU size set to (RB5_PayloadSize * 25) - 1 bytes for RB5 and to (RB6_PayloadSize * 25) - 1 bytes for RB6. See note 1.

b) The SS transmits a MEASUREMENT CONTROL message requesting periodic reporting with a period of 250ms.

c) The SS sends two RLC SDUs of size floor (RB6_PayloadSize) - 1 bytes to the UE on RB 6. The UE is expected to loop this data back in two RLC SDUs, segmented into a total of 50 RLC PDUs.

d) The SS checks that data is returned in uplink

e) The SS waits until a measurement report is received and checks that the UE transmits the measurement report and data on RB6 simultaneously using a TFC that maximises the data rate for the SRB.

f) The SS waits until the UE has looped back all data

g) The SS sends two RLC SDUs of size floor (RB5_PayloadSize) - 1 bytes to the UE on RB 5. The UE is expected to loop this data back in two RLC SDUs, segmented into a total of 50 RLC PDUs.

h) The SS sends two RLC SDUs of size floor (RB6_PayloadSize) - 1 bytes to the UE on RB 6. The UE is expected to loop this data back in two RLC SDUs, segmented into a total of 50 RLC PDUs.

i) The SS checks that data is returned in uplink on RB5 and RB6 simultaneously.

j) The SS waits until a measurement report is received and checks that during the reception of the measurement report, at least once data is also received on RB5 simultaneously, but not on RB6.

NOTE 1. Having UE to return 50 PDUs corresponds to 50*TTI (20 ms) = 1 second of continuous data transmission. As the periodic measurement interval is 250ms this will guarantee that data transmission will be interrupted by transmission of measurement reports in uplink. To keep the uplink SDU size below the limit (1500 octets) of the Max SDU size parameter associated with PDP context establishment then two downlink PDUs is used to generate the 50 uplink PDUs (uplink SDU size= 1000 octets).

16		-->	Uplink RLC PDUs	SS continues receiving RLC PDUs from the UE on RB5 and RB6

7.1.3.2.5 Test requirements

1. After step 8 the UE shall loopback data on RB6 using the transport format that carries the maximum amount of data (2 PDUs per TTI)

2. After step 10 the UE shall transmit a MEASUREMENT REPORT message within 500 ms.

3. After step 10 and during the reception of the MEASUREMENT REPORT message, data shall also be received on RB6

4. After step 13, the UE shall loopback data simultaneously on RB5 and RB6 using a TFC that carries data for both transport channels.

5. After step 15 the UE shall transmit a MEASUREMENT REPORT message within 500 ms

6. After step 15 and during the reception of the MEASUREMENT REPORT, the UE shall at least once simultaneously transmit data on RB5 but not on RB6 [Note 1].

NOTE 1: Due to the complexity of test case implementation, the SS verifies at least once that the UE transmits one Measurement report simultaneously with data on RB5 but not on RB6.

7.1.4 Control of CPCH transmissions.

7.1.4.1 Control of CPCH transmissions for FDD

7.1.4.1.1 Definition and applicability

All UEs which support CPCH.

7.1.4.1.2 Conformance requirement

1. If counter M is not less than N_access_fails, the UE shall execute an access failure error procedure and the CPCH access procedure ends.
2. If the sum of the Frame Count Transmitted counter plus the number of frames in the next TTI is larger than NF_max, the UE shall exit the CPCH transmission procedure.
3. If the CSICH information indicates no PCPCH is available, the UE shall not attempt CPCH access.
4. If the CPCH Persistency levels are all set to 8, the UE shall not attempt CPCH access.
5. If the SS issues an immediate Emergency Stop command in the DL-DPCCH for CPCH, the UE shall abort CPCH access.

7.1.4.1.3 Test purpose

To verify that the MAC entity control CPCH transmission correctly.

7.1.4.1.4 Method of test

Initial conditions

System Simulator:

- 1 cell, default parameters, Ciphering Off.

User Equipment:

- The UE shall operate under normal test conditions, Ciphering Off.
- The Test-USIM shall be inserted.

The UE is in Connected mode and a connection is established as described in the TS 34.123-1, clause 7.3 PDCP testing, clause "Setup a UE originated PS session using IP Header compression in AM RLC (using Loop back test mode 1).

Related ICS/IXIT Statement(s)

TBD

Foreseen Final State of the UE

The same as the initial conditions.

Test procedure

a) The SS ends SIBs 7, 8 and 9, sends CSICH information and waits 30 s.

b) The SS configures its RLC entity for "Transparent Mode".

c) The SS sends certain DATA BLOCKS to UE with UE-Id type and UE-Id field.

d) After having received the data block via configured mapped channels, the UE forwards the data to its Radio Bearer Loop Back entity. The received data shall be returned by the UE via its MAC configuration to the SS.

e) The SS receives returned DATA BLOCKS.

f) The SS configures its RLC entity for "AM mode.

g) The SS starts the RB reconfiguration procedure by sending the RADIO BEARER RECONFIGURATION message.

h) After having received the UE confirmation for the reconfiguration procedure, the SS configures its RLC entity for" Transparent Mode".

i) The SS sends SIB 8 on BCH with parameter : N_access_fails = 0 and waits 30 s.

j) The SS sends certain DATA BLOCKS.

k) The SS shall not receive any LOOP BACK DATA BLOCKS within 30 s.

l) The SS configures its RLC entity for" AM mode".

m) The SS starts the RB reconfiguration procedure by sending the RADIO BEARER RECONFIGURATION message.

n) The SS receives RADIO BEARER RECONFIGURE COMPLETE.

o) After having received the UE confirmation for the reconfiguration procedure, the SS configures its RLC entity for "Transparent Mode".

p) The SS sends SIB 8 on BCH with parameter : NF_max = 0 and waits 30 s.

q) The SS sends certain DATA BLOCKS.

r) The SS shall not receive any returned DATA BLOCKS within 30 s.

s) The SS configures its RLC entity for "AM mode".

t) The SS starts the RB reconfiguration procedure by sending the RADIO BEARER RECONFIGURATION message.

u) The SS receives RADIO BEARER RECONFIGURE COMPLETE.

v) After having received the UE confirmation for the reconfiguration procedure, the SS configures its RLC entity for "Transparent Mode".

w) The SS sends SIB 8 on BCH and waits 30 s.

x) The SS continuously sends CSICH information with PCA1=PCA2= NOT AVAILABLE.

y) The SS sends certain DATA BLOCKS.

z) The SS shall not receive any returned DATA BLOCKS within 30 s.

aa) The SS configures its RLC entity for "AM mode".

bb) The SS starts the RB reconfiguration procedure by sending the RADIO BEARER RECONFIGURATION message.

cc) The SS receives RADIO BEARER RECONFIGURE COMPLETE.

dd) After having received the UE confirmation for the reconfiguration procedure, the SS configures its RLC entity for "Transparent Mode".

ee) The SS sends CSICH information with PCA1=PCA2= AVAILABLE and the SS PHY is configured to send CPCH Emergency Stop message in all DL DPCCHs for CPCH after N_start_message frames.

ff) The SS sends certain DATA BLOCKS.

gg) The SS shall not receive any returned DATA BLOCKS within 30 s.

hh) The SS configures its RLC entity for "AM mode".

ii) The SS starts the RB reconfiguration procedure by sending the RADIO BEARER RECONFIGURATION message.

jj) The SS receives RADIO BEARER RECONFIGURE COMPLETE.

kk) After having received the UE confirmation for the reconfiguration procedure, the SS configures its RLC entity for "Transparent Mode".

ll) The SS sends SIB 9 on BCH with the CPCH persistence levels set to 8, no access allowed.

mm) The SS sends certain DATA BLOCKS.

nn) The SS shall not receive any returned DATA BLOCKS within 30 s.

oo) The SS configures its RLC entity for "AM mode".

pp) The SS starts the RB reconfiguration procedure by sending the RADIO BEARER RECONFIGURATION message.

qq) The SS receives RADIO BEARER RECONFIGURE COMPLETE.

rr) After having received the UE confirmation for the reconfiguration procedure, the SS configures its RLC entity for "Transparent Mode".

ss) The SS sends SIB 9 on BCH with the CPCH persistence levels set to 1, immediate access allowed.

tt) The SS sends certain DATA BLOCKS.

uu) The SS receives returned DATA BLOCKS.

vv) The SS configures its RLC entity for "AM mode".

7.1.4.1.5 Test requirements

The SS can't receives data blocks from UE when N_access_fails or NF_max set as 0.

The SS can't receives data blocks from UE when NF_max set as 0.

The SS can't receives data blocks from UE when CSICH info indicates channels not available.

The SS can't receives data blocks from UE when CPCH Persistency level set to 8.

The SS can't receives data blocks from UE when Emergency Stop message terminates access.

7.1.5 HS-DSCH MAC-hs

7.1.5.1 MAC-hs reordering and stall avoidance

7.1.5.1.1 Definition and applicability

All UEs which support HS-PDSCH.

7.1.5.1.2 Conformance requirement

When a MAC-hs PDU with TSN = SN is received:

- If SN is within the receiver window:
  - if SN < next_expected_TSN, or this MAC-hs PDU has previously been received:
    - the MAC-hs PDU shall be discarded.
    - else:
  - the MAC-hs PDU is placed in the reordering buffer at the place indicated by the TSN.
- If SN is outside the receiver window:
  - the received MAC-hs PDU shall be placed above the highest received TSN in the reordering buffer, at the position indicated by SN;
  - RcvWindow_UpperEdge shall be set to SN thus advancing the receiver window;
  - any MAC-hs PDUs with TSN ≤ RcvWindow_UpperEdge – RECEIVE_WINDOW_SIZE, i.e. outside the receiver window after its position is updated, shall be removed from the reordering buffer and be delivered to the disassembly entity;
  - next_expected_TSN shall be set to RcvWindow_UpperEdge – RECEIVE_WINDOW_SIZE + 1;
- All received MAC-hs PDUs with consecutive TSNs from next_expected_TSN (included) up to the first not received MAC-hs PDU are delivered to the disassembly entity.
- next_expected_TSN shall be advanced to the TSN of this first not received MAC-hs PDU.

[...]

If no timer T1 is active:

- the timer T1 shall be started when a MAC-hs PDU with TSN > next_expected_TSN is correctly received.
- T1_TSN shall be set to the TSN of this MAC-hs PDU.

If a timer T1 is already active:

- no additional timer shall be started, i.e. only one timer T1 may be active at a given time.

The timer T1 shall be stopped if:

- the MAC-hs PDU with TSN = T1_TSN can be delivered to the disassembly entity before the timer expires.

When the timer T1expires and T1_TSN > next_expected_TSN:

- all correctly received MAC-hs PDUs with TSN > next_expected_TSN up to and including T1_TSN-1 shall be delivered to the disassembly entity;

- all correctly received MAC-hs PDUs up to the next not received MAC-hs PDU shall be delivered to the disassembly entity.

- next_expected_TSN shall be set to the TSN of the next not received MAC-hs PDU.

When the timer T1 is stopped or expires, and there still exist some received MAC-hs PDUs that can not be delivered to higher layer:

- timer T1 is started

- set T1_TSN to the highest TSN among those of the MAC-hs PDUs that can not be delivered.

[...]

Reference(s)

TS 25.321 clauses 11.6.2.3.1, 11.6.2.3.2

7.1.5.1.3 Test purpose

1. To confirm that the UE performs MAC-hs reordering and delivers RLC PDUs in order to RLC.

2. To confirm that the UE performs stall avoidance in case of missing MAC-hs PDUs based on a) window based stall avoidance and b) timer based stall avoidance.

7.1.5.1.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

The SS establishes the reference radio bearer configuration “Interactive or background / UL:64 DL: [max bit rate depending on UE category] / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH” as specified in TS 34.108, clause 6.10.2.4.5.1. The following parameters are specific for this test case:

Parameter	Value
MAC-hs receiver window size	32
MAC-hs reordering timer T1	400 ms
Polling Info	
- Timer poll prohibit	Not Present
- Timer_poll	Not Present

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to 39 octets.

Let T be the value of MAC-hs reordering timer T1 parameter.

Test procedure

In this test procedure each MAC-hs PDU contains one RLC PDU carrying one SDU of size 39 octets and one length indicator indicating the end of the SDU.

a) The SS transmits a MAC-hs PDU with Transmission Sequence Number (TSN) = 0 containing an RLC PDU with SN=0.

b) The SS checks that the RLC PDU with SN=0 is looped back

c) The SS transmits a MAC-hs PDU with TSN = 1 containing an RLC PDU with SN=1.

d) The SS checks that the RLC PDU with SN=1 is looped back

e) The SS repeats the transmission of the MAC-hs PDUs in step a) and c) with identical content except that the RLC PDUs have SN 2,3

f) The SS checks that no data is looped back (the data is discarded in the UE)

g) The SS transmits a MAC-hs PDU with TSN = 3 containing an RLC PDU with SN=3

h) The SS waits 400 ms and checks that no data is looped back and no RLC status report is received during that time

i) The SS transmits a MAC-hs PDU with TSN = 2 containing an RLC PDU with SN=2

j) The SS checks that the RLC PDUs with SN = 2,3 are looped back

k) The SS transmits a MAC-hs PDU with TSN = 6 containing an RLC PDU with SN=4

l) The SS transmits a MAC-hs PDU with TSN = 7 containing an RLC PDU with SN=5

m) The SS transmits a MAC-hs PDU with TSN = 38 containing an RLC PDU with SN=6

n) The SS checks that the RLC PDU with SN = 4 and 5 is looped back but the RLC PDU with SN = 6 is not looped back

o) The SS waits 400 ms and checks that the RLC PDU with SN = 6 is looped back after this time

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		MAC-hs PDU with TSN = 0, containing RLC PDU with SN = 0	
2	→		RLC PDU with SN 0	
3	←		MAC-hs PDU with TSN = 1, containing RLC PDU with SN = 1	
4	→		RLC PDU with SN 1	
5	←		MAC-hs PDU with TSN = 0, containing RLC PDU with SN = 2	The duplicated data is discarded in the UE
6	←		MAC-hs PDU with TSN = 1, containing RLC PDU with SN = 3	The duplicated data is discarded in the UE
7	←		MAC-hs PDU with TSN = 3, containing RLC PDU with SN = 3	
8			SS waits T ms and checks that no data is looped back and no RLC status report is received	The waiting time may need to be adjusted to assure that T1 has not expired in the UE
9	←		MAC-hs PDU with TSN = 2, containing RLC PDU with SN = 2	
10	→		RLC PDUs with SN 2,3	
11	←		MAC-hs PDU with TSN = 6, containing RLC PDU with SN = 4	
12	←		MAC-hs PDU with TSN = 7, containing RLC PDU with SN = 5	
13	←		MAC-hs PDU with TSN = 38, containing RLC PDU with SN = 6	SS need to transmit this PDU before timer T1 in UE expires (400 ms after reception of MAC-hs PDU with TSN=6). Note: T_A
14	→		RLC PDUs with SN 4,5	The RLC PDUs with SN = 4,5 is looped back after reception of the MAC_hs PDU in step 13, i.e. before timer T1 expires
15			SS waits T ms and checks that the RLC PDU with SN = 6 is not looped back during this time	
16	→		RLC PDU with SN 6	The RLC PDU with SN = 6 is looped back after expiry of T1. Note: T_B

NOTE 1: The RLC SN in step 5,6 is increased since otherwise the data would be discarded by RLC even if the MAC-hs reordering does not work correctly. Since the data is discarded the same RLC SN can be reused later in the test sequence.
NOTE 2: In step 8 the absence of an RLC status report is used to check that the RLC PDU with SN = 3 is not delivered to RLC. If the RLC PDU was delivered to RLC the gap in the SN would trigger a status report (detection of missing PDUs).
NOTE3: In step13, the timer T1 is restarted in the UE since the PDU with TSN = 38 can not be delivered to higher layers.
NOTE 4: General timer tolerance as defined by 34.108 sub-clause 4.2.3 applies.

Specific Message Contents

None

7.1.5.1.5 Test requirements

1. After step 1, the RLC PDU with SN = 0 shall be looped back
2. After step 3, the RLC PDU with SN = 1 shall be looped back
3. After step 5 and 6 , no data shall be looped back
4. After step 7, no data shall be looped back and no RLC status report shall be received
5. After step 9, the RLC PDUs with SN = 2,3 shall be looped back
6. After step 13, the RLC PDUs with SN = 4,5 shall be looped back

7. In step 16, the RLC PDU with SN = 6 shall be looped back and $T_B - T_A$ shall be equal to T ms .

7.1.5.2 MAC-hs priority queue handling

7.1.5.2.1 Definition and applicability

All UEs which support HS-PDSCH.

7.1.5.2.2 Conformance requirement

Reordering Queue distribution:

The reordering queue distribution function routes the MAC-hs PDUs to the correct reordering buffer based on the Queue ID.

[...]

The HARQ process processes the Queue ID in the received MAC-hs PDUs. The UE shall:

- arrange the received MAC-hs PDUs in queues based on the Queue ID.

[...]

Reference(s)

TS 25.321 clauses 4.2.3.3 and 11.6.2.2

7.1.5.2.3 Test purpose

1. To confirm that the UE handles several priority queues, where different radio bearers are mapped to different queues.

7.1.5.2.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

The SS establishes the reference radio bearer configuration “5 x Interactive or background / UL: 8 kbps DL: [max bit rate depending on UE category] / UM PS RAB” as specified in TS 34.108, clause 6.11.4a.1 with the logical channel, transport channel and queue identities set to:

Logical Channel ID	MAC-d flow (DL)	Queue ID	Comment
7	1	0	RB5
8	1	0	RB6
9	2	1	RB7
10	2	2	RB8
13	3	3	RB9
NOTE 1: LCH 7-8 emulates logical channels with the same priority whereas LCH 9-10 emulates logical channels with different priorities. NOTE 2: The radio bearer numbers refer to the radio bearers as specified in TS 34.108 clause 6.11.4a.1.			

The following parameters are specific for this test case:

- Timer poll prohibit	Not Present
- Timer_poll	Not Present

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to 40 octets for RB5, RB6 and 39 octets for RB7, RB8, RB9.

Test procedure

In this test procedure each MAC-hs PDU contains one RLC PDU carrying one SDU of size 39 or 40 octets (depending on the RB Identity, see Initial conditions) and one length indicator indicating the end of the SDU.

a) The SS transmits a MAC-hs PDU where:

1. The TSN = 0
2. The Queue ID = 0
3. The MAC-hs PDU contains an RLC PDU with SN=0.

b) The SS checks that the RLC PDU with SN=0 is looped back and checks that the logical channel IDs are correct.

c) The SS repeats steps a), b) with the Logical channel ID, Queue ID and TSN field set as follows:

Iteration	Logical Channel ID	Queue ID Value	TSN Value
1	7	0	0
2	8	0	1
3	9	1	0
4	10	2	0
5	13	3	0

Expected sequence

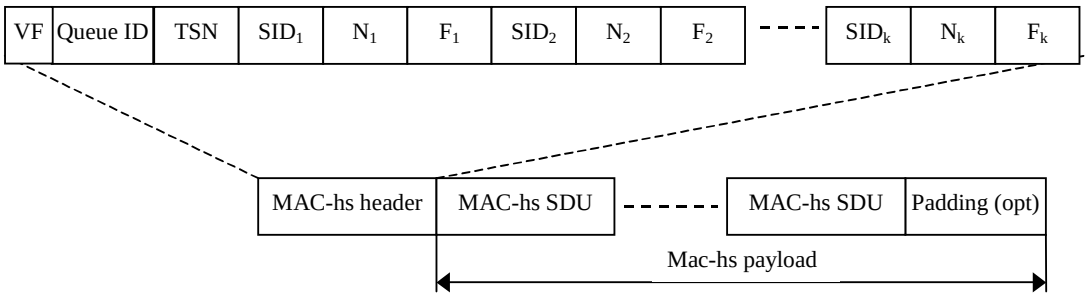
Step	Direction		Message	Comments
	UE	SS		
1	←		MAC-hs PDU containing an RLC PDU with SN = 0. The Logical channel ID, Queue ID and TSN are set according to the table above.	
2	→		RLC PDU with SN = 0	

Steps 1 to 2 of the expected sequence are repeated for iteration 2-5.

7.1.5.2.5 Test requirements

1. In step 2, for each iteration, the RLC PDU with SN=0 shall be looped back with the logical channel ID as specified by the table below:

Iteration	Logical Channel ID
1	7
2	8
3	9
4	10
5	13
NOTE: Logical Channel ID 13 is the Uplink Logical Channel Identity of RB9.	



7.1.5.3 MAC-hs PDU header handling

7.1.5.3.1 Definition and applicability

All UEs which support HS-PDSCH.

7.1.5.3.2 Conformance requirement

MAC PDU (HS-DSCH):

[...]

The following fields are included in the MAC header for HS-DSCH:

- Version Flag (VF):
  The VF field is a one bit flag providing extension capabilities of the MAC-hs PDU format. The VF field shall be set to zero and the value one is reserved in this version of the protocol.

- Queue identifier (Queue ID):
  The Queue ID field provides identification of the reordering queue in the receiver, in order to support independent buffer handling of data belonging to different reordering queues. The length of the Queue ID field is 3 bit.

- Transmission Sequence Number (TSN):
  The TSN field provides an identifier for the transmission sequence number on the HS-DSCH. The TSN field is used for reordering purposes to support in-sequence delivery to higher layers. The length of the TSN field is 6 bit.

- Size index identifier (SID):
  The SID fields identifies the size of a set of consecutive MAC-d PDUs. The MAC-d PDU size for a given SID is configured by higher layers and is independent for each Queue ID. The length of the SID field is 3 bit.

- Number of MAC-D PDUs (N):
  The number of consecutive MAC-d PDUs with equal size is identified with the N field. The length of the N field is 7 bits. In FDD mode, the maximum number of PDUs transmitted in a single TTI shall be assumed to be 70. In 1.28 Mcps TDD mode, the maximum number of PDUs transmitted in a single TTI shall be assumed to be 45. In 3.84 Mcps TDD mode, the maximum number of PDUs transmitted in a single TTI shall be assumed to be 318. If more PDUs than the defined maximum number of PDUs for the corresponding mode are received, the UE behaviour is unspecified.

- Flag (F):
  The F field is a flag indicating if more fields are present in the MAC-hs header or not. If the F field is set to "0" the F field is followed by an additional set of SID, N and F fields. If the F field is set to "1" the F field is followed by a MAC-d PDU. The maximum number of MAC-hs header extensions, i.e. number of fields F set to “0”, in a single TTI shall be assumed to be 7. If more extensions than the maximum defined for the corresponding mode are included in a TTI, the UE behaviour is unspecified.

[...]

a) Use of reserved coding in the MAC header

   If the MAC entity receives a MAC PDU with a header field using a value marked as reserved for this version of the protocol, it shall discard the PDU, unless explicitly mentioned otherwise.

b) Inconsistent MAC header

   If the MAC entity receives a MAC PDU with a header inconsistent with the configuration received from RRC, it shall discard the PDU. E.g.: In case DTCH is mapped to RACH/FACH, the MAC entity shall discard a PDU with a C/T field indicating a logical channel number that is not configured.

[...]

Reference(s)

TS 25.321 clauses 9.1.4, 9.2.2, 10

7.1.5.3.3 Test purpose

1. To confirm that the UE discards PDUs with reserved values of the fields in the MAC header
2. To confirm that the UE discards PDUs with values in the MAC header that are inconsistent with the RRC configuration.
3. To confirm that the UE correctly reads the MAC header and disassembles the MAC-hs PDU into MAC-d PDUs and delivers the MAC-d PDUs to the RLC layer.

7.1.5.3.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

The SS establishes the reference radio bearer configuration “Interactive or background / UL:64 DL: [max bit rate depending on UE category] / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH” as specified in TS 34.108, clause 6.10.2.4.5.1. The following parameters are specific for this test case:

Parameter	Value
UMD_PDU_size1	136 bit
UMD_PDU_size2	328 bit
Queue ID	0
Size Index Identifier (SID)	SID =0: 136 bit SID =1: 328 bit
MAC-hs reordering timer T1	400 ms
MAC-hs receiver window size	32

The RB is configured with 2 RLC PDU sizes UMD_PDU_size1 and UMD_PDU_size2.

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to 39 octets.

Let T be the value of MAC-hs reordering timer T1 parameter.

Test procedure

a) The SS transmits a MAC-hs PDU containing:

8 RLC UMD PDUs where:

RLC PDUs with SN= 0, 2, 4, 6has the PDU size UMD_PDU_size1 and contains one SDU of length 14 octets .

RLC PDUs with SN= 1, 3, 5, 7 has the PDU size UMD_PDU_size2 and contains one SDU of length 38 octets .

The first RLC PDU with SN=0 will have two Length Indicators. The first Length Indicator will be set to 1111100 (starting of the SDU) and the second length Indicator will have the exact size of the first PDU.

The remaining RLC PDUs will also have two length Indicators. The first LI will have the exact size of the PDU and the second LI will be set to 1111111(the rest of the RLC PDU has padding bits and the number padding bits will be zero).The MAC fields in the MAC-hs header shall be set according to 25.321 with the following exception:

Field	Value
Version flag VF	1

b) The SS checks that the UE does not loop back any data (since the MAC-hs PDU in the previous step is discarded)

c) The SS again transmits a MAC-hs PDU as in a) above, but this time sets the fields in the MAC-hs header according to 25.321 with the following exception:

Field	Value
Size index identifier (SID)	SID =2: 136 bit SID =3: 328 bit

The sequence numbers in the RLC headers shall be identical with those sent in a).

d) The SS checks that the UE does not loop back any data (since the MAC-hs PDU in the previous step is discarded)

e) The SS again transmits a MAC-hs PDU as in a) above, but this time sets the fields in the MAC-hs header according to 25.321. The sequence numbers in the RLC headers shall be identical with those sent in a).

f) The SS checks that the UE loops back 8 RLC PDUs and checks the sequence numbers of the RLC PDUs

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		MAC-hs PDU with a reserved value of the version flag	discarded by the UE
2			wait for T ms	SS checks that no RLC PDUs are looped back (note)
3	←		MAC-hs PDU with a value of the size index identifier that is inconsistent with RRC configuration	discarded by the UE
4			wait for T ms	SS checks that no RLC PDUs are looped back (note)
5	←		MAC-hs PDU with correct values of the MAC-hs header	Accepted by the UE and the contained data is looped back.
6	→		RLC PDUs with SN 0,1, ...,7	
NOTE General timer tolerance as defined by 34.108 sub-clause 4.2.3 applies.				

Specific Message Contents

See test procedure

7.1.5.3.5 Test requirements

1. After step 1, no data shall be looped back to the SS
2. After step 3, no data shall be looped back to the SS
3. After step 5, the RLC PDUs with SN =0,1, ...,7 shall be looped back to the SS

7.1.5.4 MAC-hs retransmissions

7.1.5.4.1 Definition and applicability

All UEs which support HS-PDSCH.

7.1.5.4.2 Conformance requirement

[...]

The UE shall:

- if the New Data Indicator has been incremented compared to the value in the previous received transmission in this HARQ process or this is the first received transmission in the HARQ process:

- replace the data currently in the soft buffer for this HARQ process with the received data.
- if the Transport Block Size index value is equal to 111111 (FDD only):
  - generate a positive acknowledgement (ACK) of the data in this HARQ process;
  - discard the received data;
  - assume that the data has been successfully decoded.

- if the New Data Indicator is identical to the value used in the previous received transmission in the HARQ process:
  - if the Transport Block Size index value is equal to 111111 (FDD only):
    - assume that the transport block size is identical to the last valid transport block size signalled for this HARQ process.
  - if the data has not yet been successfully decoded:
    - combine the received data with the data currently in the soft buffer for this HARQ process.
- if the data in the soft buffer has been successfully decoded and no error was detected:
  - deliver the decoded MAC-hs PDU to the reordering entity;
  - generate a positive acknowledgement (ACK) of the data in this HARQ process.
- else:
  - generate a negative acknowledgement (NAK) of the data in this HARQ process;
- schedule the generated positive or negative acknowledgement for transmission and the time of transmission relative to the reception of data in a HARQ process is configured by upper layer.

[...]

Reference(s)

TS 25.321 clauses 11.6.22

7.1.5.4.3 Test purpose

1. To confirm that the UE correctly transmit positive and negative acknowledgements when receiving MAC-hs PDUs

7.1.5.4.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

The SS establishes the reference radio bearer configuration “Interactive or background / UL:64 DL: [max bit rate depending on UE category] / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH” as specified in TS 34.108, clause 6.10.2.4.5.1. The following parameters are specific for this test case:

Parameter	Value
Polling info	
- Timer Poll Prohibit	Not Present
- Timer_poll	Not Present

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to 39 octets.

Test procedure

In this test procedure each MAC-hs PDU contains one RLC PDU carrying one SDU of size 39 octets and one length indicator indicating the end of the SDU.

a) The SS transmits a MAC-hs PDU where:

1. The TSN = 0
2. The HARQ process id = 0
3. The Queue ID = 0
4. The MAC-hs PDU contains an RLC PDU with SN=0.
5. The physical layer CRC is modified such that the CRC check in the UE will fail

b) The SS checks that a negative acknowledgement is received for the correct HARQ process and no RLC PDU loop backed by UE

c) The SS transmits a MAC-hs PDU with the same content as in step a) but where the CRC is correct

d) The SS checks that a positive acknowledgement is received for the correct HARQ process and RLC PDU is loop backed by UE.

e) The SS repeats steps a), b), c) & d) with the HARQ process, TSN and RLC SN set as follows for iteration 2 to 8:

Iteration	HARQ process	TSN	RLC SN
1	0	0	0
2	1	1	1
3	2	2	2
4	3	3	3
5	4	4	4
6	5	5	5
7	6	6	6
8	7	7	7

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		MAC-hs PDU sent in process N	Erroneous CRC
2	→		MAC-hs negative acknowledgement with process id = N	
2a				SS checks for 5 sec that UE does not send loop backed PDU
3	←		MAC-hs PDU sent in process N	
4	→		MAC-hs positive acknowledgement with process id = N	
5	→		RLC Loop Backed PDU	
NOTE: The process id N in step 1-4 is taken from the table in the Test procedure description above.				

Steps 1 to 5 of the expected sequence are repeated for iteration 2-8.

7.1.5.4.5 Test requirements

1. After step 1, a MAC-hs negative acknowledgement shall be received for the correct HARQ process
2. After step 3, a MAC-hs positive acknowledgement shall be received for the correct HARQ process

7.1.5.5 MAC-hs reset

7.1.5.5.1 Definition and applicability

All UEs which support HS-PDSCH.

7.1.5.5.2 Conformance requirement

Rel-5 and Rel-6:

If a reset of the MAC-hs entity is requested by upper layers, the UE shall:

- flush soft buffer for all configured HARQ processes;
- stop all active re-ordering release timer (T1) and set all timer T1 to their initial value;
- start TSN with value 0 for the next transmission on every configured HARQ process;
- initialise the variables RcvWindow_UpperEdge and next_expected_TSN to their initial values;
- disassemble all MAC-hs PDUs in the re-ordering buffer and deliver all MAC-d PDUs to the MAC-d entity;
- flush the re-ordering buffer.

and then:

- indicate to all AM RLC entities mapped on HS-DSCH to generate a status report.

[...]

Rel-7:

If a reset of the MAC-hs entity is requested by upper layers, the UE shall at the activation time indicated by higher layers:

- flush soft buffer for all configured HARQ processes;
- stop all active re-ordering release timer (T1) and set all timer T1 to their initial value;
- start TSN with value 0 for the next transmission on every configured HARQ process;
- initialise the variables RcvWindow_UpperEdge and next_expected_TSN to their initial values;
- disassemble all MAC-hs PDUs in the re-ordering buffer and deliver all MAC-d PDUs to the MAC-d entity;
- flush the re-ordering buffer.

[...]

Reference(s)

TS 25.321 clause 11.6.2.5

7.1.5.5.3 Test purpose

1. To confirm that the UE flushes the reordering buffer and delivers all MAC-d PDUs in the buffer to higher layers upon reset.
2. To confirm that the UE initializes the TSN and next_expected_TSN to their initial values.

7.1.5.5.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off

User Equipment:

The SS establishes the reference radio bearer configuration "Interactive or background / UL:64 DL: [max bit rate depending on UE category] / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH" as specified in TS 34.108, clause 6.10.2.4.5.1. The following parameters are specific for this test case:

Parameter	Value
MAC-hs receiver window size	32
MAC-hs reordering timer T1	400 ms
Polling Info	
- Timer poll prohibit	Not Present
- Timer poll	Disabled

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to 39 octets.

Test procedure

In this test procedure each MAC-hs PDU contains one RLC PDU carrying one SDU of size 39 octets and one length indicator indicating the end of the SDU.

a) The SS transmits a MAC-hs PDU with Transmission Sequence Number (TSN) = 0 containing an RLC PDU with SN=0

b) The SS checks that the RLC PDU with SN=0 is looped back

b) The SS transmits 2 MAC-hs PDUs with TSN = 2,3 containing the RLC PDUs with SN=1,2

c) The SS initiates a MAC-hs reset by transmitting a PHYSICAL CHANNEL RECONFIGURATION message

d) The SS checks that the RLC PDUs with SN=1,2 are looped back

e) The UE may send an RLC status report

d) The SS transmits a MAC-hs PDU with TSN = 0 containing an RLC PDU with SN=3

e) The SS checks that the RLC PDU with SN=3 is looped back

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		MAC-hs PDU with TSN = 0, containing RLC PDU with SN = 0	
2	→		RLC PDU with SN 0	
3	←		MAC-hs PDU with TSN = 2, containing RLC PDU with SN = 1	
4	←		MAC-hs PDU with TSN = 3, containing RLC PDU with SN = 2	
5	←		SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to trigger a MAC-hs reset	
6	→		PHYSICAL CHANNEL RECONFIGURATION COMPLETE	
7	→		RLC PDUs with SN 1,2	The RLC PDUs are delivered directly after the MAC-hs reset i.e. before T1 expires.
8	→		RLC status report	Optional
9	←		MAC-hs PDU with TSN = 0, containing RLC PDU with SN = 3	
10	→		RLC PDU with SN 3	
NOTE: Steps 6-8 may occur in different order.				

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 5)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

Information Element	Value/remark
Downlink information common for all radio links - MAC-hs reset indicator	TRUE

7.1.5.5.5 Test requirements

1. After step 1, the RLC PDU with SN = 0 shall be looped back
2. After step 5, the RLC PDUs with SN = 1,2 shall be looped back
3. After step 9, the RLC PDU with SN=3 shall be looped back

7.1.5.6 MAC-hs transport block size selection

7.1.5.6.1 Definition and applicability

All UEs which support HS-PDSCH and FDD.

7.1.5.6.2 Conformance requirement

For HS-DSCH the transport block size is derived from the value signalled on the HS-SCCH. The mapping between the TFRI value and the transport block size for each mode is specified below:

For all transmissions of a transport block, the transport block size is derived from the TFRI value as specified below, except only in those cases of retransmissions where the Node-B selects a combination for which no mapping exists between the original transport block size and the selected combination of channelisation Code set and modulation type. In such cases, the transport block size index value signalled to the UE shall be set to 111111, i.e., k_i=63.

Let k_i be the TFRI signalled on the HS-SCCH value and let $k_{0,i}$ be the value in the table 7.1.5.6.1 corresponding to the modulation and the number of codes signalled on the HS-SCCH. Let k_t be the sum of the two values: $k_t = k_i + k_{0,i}$. The transport block size $L(k_t)$ can be obtained by accessing the position k_t in the table in Annex A (normative) or by using the formula below (informative):

If $k_t < 40$

$$L(k_t) = 125 + 12 \cdot k_t$$

else

$$L(k_t) = \lfloor L_{\min} p^{k_t} \rfloor$$

$$p = 2085/2048$$

$$L_{\min} = 296$$

End

Table 7.1.5.6.1: Values of $k_{0,i}$ for different numbers of channelization codes and modulation schemes

Combination *i*	Modulation scheme	Number of channelization codes	$k_{0,i}$
0	QPSK	1	1
1		2	40
2		3	63
3		4	79
4		5	92
5		6	102
6		7	111
7		8	118
8		9	125
9		10	131
10		11	136
11		12	141
12		13	145

Reference(s)

3GPP TS 25.321, 9.2.3, 9.2.3.1 and Annex A

7.1.5.6.3 Test purpose

To verify that the UE selects the correct transport block size based on the TFRI value signalled on the HS-SCCH.

7.1.5.6.4 Method of test

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-5 IE “HS-DSCH physical layer category” (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

Definition of test variables:

N_{codes}	Number of HS-DSCH codes (1..15, maximum number dependent on UE category)
M	Type of modulation scheme (QPSK, 16QAM)
k_i	TFRI signalled on the HS-SCCH value
$K_{0,I}$	See table 7.1.5.6.2
k_t	Transport Block Size index (=k_i + $k_{0,I}$), see table 7.1.5.6.3
TB_{size}	Transport Block size
N_{PDUs}	Number of MAC-d PDUs
MAC-hs_header_size	MAC-hs header size for the reference HS-DSCH radio bearer configuration under test.
MAC-d_PDU_size	MAC-d PDU size for the reference HS-DSCH radio bearer configuration under test.

Table 7.1.5.6.2: Values of $k_{0,i}$ for different numbers of channelization codes and modulation schemes

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off

User Equipment:

UE in idle mode

The following parameters are specific for this test case:

Common for all UE categories:

Parameter	Value
MAC-d PDU size	336 bits
MAC-hs receiver window size	16
Number of HARQ processes	1
Number of reordering queues	1

UE Category 1 to 4:

Parameter	Value
RLC Transmission window size	128
RLC Receiving window size	512

UE Category 5 and 6:

Parameter	Value
RLC Transmission window size	256
RLC Receiving window size	512

UE Category 7 and 8:

Parameter	Value
RLC Transmission window size	512
RLC Receiving window size	1536

UE Category 9 and 10:

Parameter	Value
RLC Transmission window size	512
RLC Receiving window size	2047

UE Category 11 and 12:

Parameter	Value
RLC Transmission window size	128
RLC Receiving window size	1024

Test procedure

a) The SS establishes the reference radio bearer configuration “Interactive or background / UL:64 DL: [max bit rate depending on UE category] / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH” as specified in TS 34.108, clause 6.10.2.4.5.1. See note 1.

b) The SS closes the test loop using UE test loop mode 1 setting the UL RLC SDU size parameter to 39 octets (312 bits).

c) The SS sets M= QPSK.

d) The SS sets $N_{\underline{codes}}$ = 1.

e) The SS sets $k_{0,i}$ to the value according to table 7.1.5.6.2 based on the actual value of M and $N_{\underline{codes}}$.

f) The SS sets the test parameter k_i to 0.

g) The SS calculates the index value k_t (=k_i + $k_{0,i}$) and look up the transport block size, TB_{size}, for the actual k_t in table 7.1.5.6.3

If TB_{size} is bigger than the UE capability for “Maximum number of bits of an HS-DSCH transport block received within an HS-DSCH TTI” then SS continues with step n) else step h). See note 2.

h) The SS calculates the coding rate using $Coding_rate = (TB_{size} + N_{CRC}) / (N_{codes} \cdot N_{phy_bits})$.

If *Coding_rate* falls within any of the ranges defined in table 14.1.3.2.1 then SS continues with step m), else proceed with step i). See note 4.

i) The SS calculates the maximum number of MAC-d PDUs that fits into the MAC-hs transport block:

N_{PDUs} = floor((TB_{size} – *MAC-hs_header_size)* / *MAC-d_PDU_size)*

If N_{PDUs} is bigger than 70 then SS continues with step n) else j).

j) The SS creates a MAC-hs PDU of size TB_{size} containing N_{PDUs} MAC-d PDUs + padding. The payload data of the MAC-d PDUs contains 4 RLC SDUs of size N_{PDUs} * MAC-d PDU payload size / 4 minus 8 bits (size of 7 bit length indicator and expansion bit). See note 3.

k) The SS configures the HARQ transmission parameters according to TS 34.108 [9], table 6.1.5.1 based on the actual value of *M*. Then the SS transmits the MAC-hs PDU.

l) The SS checks that the UE returned RLC SDUs has the same content as the first 312 bits of the test data sent by the SS in downlink.

m) The SS increments the test parameter k_i by 1. If k_i is less than 63 then SS repeats steps g) to m).

n) The SS increments the test parameter $N_{\underline{codes}}$ *by 1*. If $N_{\underline{codes}}$ is less or equal to the UE capability for *"Maximum number of HS-DSCH codes received"* then the SS repeats test steps e) to n) else continue with step o). See note 2.

o) If *Modulation* = QPSK and UE capability for *"Supported modulation"* is 16QAM then the SS sets the test parameter *Modulation* to 16QAM and repeats steps d) to o) else continue with step p). See note 2.

p) The SS opens the UE test loop.

q) The SS release the radio bearer.

r) The SS may optionally deactivate the radio bearer test mode.

NOTE 1: The SS configures the physical channel parameters according to the actual UE category under test.

NOTE 2: See table 14.1.3.1.1 in section 14.1.3.1 for FDD HS-DSCH physical layer and RLC and MAC-hs capability parameters and there values for different UE FDD HS-DSCH physical layer categories (UE categories). The capability parameters having impact on the test procedure are: "Maximum number of bits of an HS-DSCH transport block received within an HS-DSCH TTI", *"Maximum number of HS-DSCH codes received" and "Supported modulation"*

NOTE 3: The test data for transport channels on HS-DSCH is divided into 4 RLC SDUs to keep the SDU size not to exceed 1500 octets (limit of SDU size in SM).

NOTE 4: See table 14.1.3.2.1 in section 14.1.3.2 for those values of coding rate that must be avoided because of turbo coder irregularities.

Expected sequence

Step	Direction		Message	Comments
	UE	SS

23	-->		DEACTIVATE RB TEST MODE COMPLETE	TC Optional step
Note 1: In addition to activate integrity protection Step 6 and Step 7 are inserted in order to stop T3317 timer in the UE, which starts after transmitting SERVICE REQUEST message.				

7.1.5.6.5 Test requirements

For each TFRC the UE shall return a UL RLC SDUs with the same content as the first 312 bits of the test data sent by the SS in downlink.

7.1.5.6a MAC-hs transport block size selection (1.28 Mcps TDD)

7.1.5.6a.1 Definition and applicability

All 1.28 Mcps TDD UEs which support HS-PDSCH.

7.1.5.6a.2 Conformance requirement

The mapping of transport block size, in bits, to TFRI value is dependent upon the UE's HS-DSCH capability class.

When MAC-hs is used, the bit aligned table of transport block size defined as following shall be used.

If k is the signalled TFRI value then the corresponding HS-DSCH transport block size L_k is given by:

If k = 1..62

$$L_k = \left\lfloor L_{\min} p^{k-1} \right\rfloor$$

where

$p = \frac{6214}{5973}$ if the HS-DSCH physical layer category is between 1 and 3 inclusively,

$p = \frac{1292}{1228}$ if the HS-DSCH physical layer category is between 4 and 6 inclusively,

$p = \frac{1901}{1795}$ if the HS-DSCH physical layer category is between 7 and 9 inclusively,

$p = \frac{9445}{8877}$ if the HS-DSCH physical layer category is between 10 and 12 inclusively,

$p = \frac{2345}{2196}$ if the HS-DSCH physical layer category is between 13 and 15 inclusively,

and

$L_{\min} = 240$

If k = 63 then,

L_k = 2788 if the HS-DSCH physical layer category is between 1 and 3 inclusively,

5600 if the HS-DSCH physical layer category is between 4 and 6 inclusively,

8416 if the HS-DSCH physical layer category is between 7 and 9 inclusively,

11226 if the HS-DSCH physical layer category is between 10 and 12 inclusively,

14043 if the HS-DSCH physical layer category is between 13 and 15 inclusively.

If k=0, L_k indicates NULL and shall not be used to signal a transport block size in the TFRI.

Transport block sizes calculated by this formula shall equal the values indicated in the following tables: –

Reference(s)

3GPP TS 25.321 Section 9.2.3.3.

7.1.5.6a.3 Test purpose

To verify that the UE selects the correct transport block size based on the TFRI value signalled on the HS-SCCH.

7.1.5.6a.4 Method of test

Definition of test variables:

N_{slots}	Number of HS-DSCH slots (1- 6 dependent on UE category)
N_{codes}	Number of HS-DSCH codes per timeslot, 1 to 16
k	TFRI signalled on the HS-SCCH value (see Table 7.1.5.6a.2)
TB_{size}	Transport Block size (see Table 7.1.5.6a.2)
N_{PDUs}	Number of MAC-d PDUs
MAC-hs_header_size	MAC-hs header size for the reference HS-DSCH radio bearer configuration under test.
MAC-d_PDU_size	MAC-d PDU size for the reference HS-DSCH radio bearer configuration under test.

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off

User Equipment:

UE in idle mode

The following parameters are specific for this test case:

Common for all UE categories:

Parameter	Value
MAC-d PDU size	336 bits
MAC-hs receiver window size	16
Number of HARQ processes	1
Number of reordering queues	1

UE Category 1 to 3:

Parameter	Value
RLC Transmission window size	128
RLC Receiving window size	512

UE Category 4and 6

Parameter	Value
RLC Transmission window size	256
RLC Receiving window size	512

UE Category 7 and 9:

Parameter	Value
RLC Transmission window size	512
RLC Receiving window size	1536

UE Category 10and 12:

Parameter	Value
RLC Transmission window size	512
RLC Receiving window size	1536

UE Category 13and 15:

Parameter	Value
RLC Transmission window size	512
RLC Receiving window size	1536

Test procedure

a) The SS establishes the reference radio bearer configuration "Interactive or background / UL:64 DL: [max bit rate depending on UE category] / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH" as specified in TS 34.108, clause 6.10.3.4.6.1. See note 1.

b) The SS closes the test loop using UE test loop mode 1 setting the UL RLC SDU size parameter to 39 octets (312 bits).

c) The SS sets N_{slots} =*3*.

d) The SS sets $N_{\underline{codes}}$ = 1.

e) The SS calculates TB_{size} and k for N_{slots} and N_{codes} according to table 7.1.5.6a.2

f) If TB_{size} is bigger than the UE capability for "Maximum number of bits of an HS-DSCH transport block received within an HS-DSCH TTI" then SS continues with step l) else step g). See note 2.

g) The SS calculates the maximum number of MAC-d PDUs that fits into the MAC-hs transport block:

N_{PDUs} = floor((TB_{size} – *MAC-hs_header_size)* / *MAC-d_PDU_size)*

If N_{PDUs} is bigger than 45 then SS continues with step m) else i).

h) The SS creates a MAC-hs PDU of size TB_{size} containing N_{PDUs} MAC-d PDUs + padding. The payload data of the MAC-d PDUs contains 4 RLC SDUs of size N_{PDUs} * MAC-d PDU payload size / 4 minus 8 bits (size of 7 bit length indicator and expansion bit). See note 3.

i) The SS transmits the MAC-hs PDU.

j) The SS checks that the UE returned RLC SDUs has the same content as the first 312 bits of the test data sent by the SS in downlink.

k) The SS increments N_{codes} by 1.If N_{codes} is $\leq$16 then SS repeats steps e) to k).

l) The SS sets $N_{\underline{slots}}$ *to the next category supported by the UE and repeats steps d) to l).* If there are no more categories supported by the UE (i.e. all categories have been tested) then the test is completed via steps m) through q). See note 2.

m) The SS opens the UE test loop.

n) The SS release the radio bearer.

o) The SS may optionally deactivate the radio bearer test mode.

NOTE 1: The SS configures the physical channel parameters according to the actual UE category under test.

NOTE 2: See 34.108 6.11for 1.28 Mcps TDD HS-DSCH physical layer, RLC and MAC-hs capability parameters and the values for different UE 3.84 Mcps TDD HS-DSCH physical layer categories (UE categories). The capability parameters having impact on the test procedure are: "Maximum number of bits of an HS-DSCH transport block received within an HS-DSCH TTI" and "Maximum number of HS-DSCH timeslots per TTI"

NOTE 3: The test data for transport channels on HS-DSCH is divided into 4 RLC SDUs to keep the SDU size not to exceed 1500 octets (limit of SDU size in SM).

Expected sequence:

Step	Direction		Message	Comments
	UE	SS		
1	<--		SYSTEM INFORMATION (BCCH)	Broadcast
2	<--		PAGING TYPE 1 (PCCH)	Paging (PS domain, P-TMSI)
3	-->		RRC CONNECTION REQUEST (CCCH)	RRC
4	<--		RRC CONNECTION SETUP (CCCH)	RRC
5	-->		RRC CONNECTION SETUP COMPLETE (DCCH)	RRC
6	-->		SERVICE REQUEST (DCCH)	GMM
7	<--		SECURITY MODE COMMAND	RRC see note 1
8	-->		SECURITY MODE COMPLETE	RRC see note 1
9	<--		ACTIVATE RB TEST MODE (DCCH)	TC
10	-->		ACTIVATE RB TEST MODE COMPLETE (DCCH)	TC
11	<--		RADIO BEARER SETUP (DCCH)	RRC. For the PS radio bearer the 'pdcp info' IE shall be omitted.
12	-->		RADIO BEARER SETUP COMPLETE (DCCH)	RRC
13	<--		CLOSE UE TEST LOOP (DCCH)	TC UE test mode 1 RLC SDU size is set to 39 octets
14	-->		CLOSE UE TEST LOOP COMPLETE (DCCH)	TC
15	SS			The SS calculates test data for the first TFRC
16	<--		DOWNLINK MAC-hs PDU (4 x RLC SDU)	Send test data. The MAC-hs PDU contains 4 RLC SDUs
17	-->		UPLINK RLC SDUs	The SS checks that the content of the received UL RLC SDUs are correct
18	SS			The SS calculates test data for next TFRC and repeat steps 16 to 18 until all TFRCs have been tested.
19	<--		OPEN UE TEST LOOP (DCCH)	TC
20	-->		OPEN UE TEST LOOP COMPLETE (DCCH)	TC
21			RB RELEASE	RRC
22	<--		DEACTIVATE RB TEST MODE	TC Optional step
23	-->		DEACTIVATE RB TEST MODE COMPLETE	TC Optional step
Note 1: In addition to activate integrity protection Step 6 and Step 7 are inserted in order to stop T3317 timer in the UE, which starts after transmitting SERVICE REQUEST message.				

7.1.5.6a.5 Test requirements

For each TFRC the UE shall return a UL RLC SDUs with the same content as the first 312 bits of the test data sent by the SS in downlink.

7.1.5.7 MAC-hs transport block size selection (3.84 Mcps TDD)

7.1.5.7.1 Definition and applicability

All 3.84 Mcps TDD UEs which support HS-PDSCH.

7.1.5.7.2 Conformance requirement

For HS-DSCH the transport block size is derived from the value signalled on the HS-SCCH. The mapping between the TFRI value and the transport block size for each mode is specified below:

Let k be the signalled TFRI value, then the corresponding HS-DSCH transport block size L_k is given by:

If k=1..510

$$L_k = \lfloor L_{\min} p^k \rfloor$$

$$p = \frac{8313}{8192}$$

$$L_{\min} = 57$$

If k = 511

L_k = 102000

If k=0, L_k indicates NULL and shall not be used to signal a transport block size in the TFRI.

Transport block sizes calculated by this formula shall equal the values indicated in Table 7.1.5.7.2

Table 7.1.5.7.2: HSDPA Transport Block Sizes for 3.84 Mcps TDD

Reference(s)

3GPP TS 25.321 Section 9.2.3.2

7.1.5.7.3 Test purpose

To verify that the UE selects the correct transport block size based on the TFRI value signalled on the HS-SCCH.

7.1.5.7.4 Method of test

Definition of test variables:

$N_{\underline{slots}}$ Number of HS-DSCH slots (2, 4, 6 or 12 dependent on UE category)

N_{codes} Number of HS-DSCH codes per timeslot, 1 to 16

k TFRI signalled on the HS-SCCH value (see Table 7.1.5.7.2)

TB_{size} Transport Block size (see Table 7.1.5.7.2)

N_{PDUs} Number of MAC-d PDUs

MAC-hs_header_size MAC-hs header size for the reference HS-DSCH radio bearer configuration under test.

MAC-d_PDU_size MAC-d PDU size for the reference HS-DSCH radio bearer configuration under test.

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off

User Equipment:

UE in idle mode

The following parameters are specific for this test case:

Common for all UE categories:

Parameter	Value
MAC-d PDU size	336 bits
MAC-hs receiver window size	16
Number of HARQ processes	1
Number of reordering queues	1

UE Category 1 to 4:

Parameter	Value
RLC Transmission window size	128
RLC Receiving window size	512

UE Category 5 and 6:

Parameter	Value
RLC Transmission window size	256
RLC Receiving window size	512

UE Category 7 and 8:

Parameter	Value
RLC Transmission window size	512
RLC Receiving window size	1536

UE Category 9:

Parameter	Value
RLC Transmission window size	512
RLC Receiving window size	2047

Test procedure

a) The SS establishes the reference radio bearer configuration “Interactive or background / UL:64 DL: [max bit rate depending on UE category] / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH” as specified in TS 34.108, clause 6.10.3.4.6.1. See note 1.

b) The SS closes the test loop using UE test loop mode 1 setting the UL RLC SDU size parameter to 39 octets (312 bits).

c) The SS sets $N_{slots} = 2$.

d) The SS sets $N_{\underline{codes}} = 1$.

e) The SS calculates TB_{size} and k for N_{slots} and N_{codes} according to table 7.1.5.7.2

f) If TB_{size} is bigger than the UE capability for "Maximum number of bits of an HS-DSCH transport block received within an HS-DSCH TTI" then SS continues with step l) else step g). See note 2.

g) The SS calculates the maximum number of MAC-d PDUs that fits into the MAC-hs transport block:

$$N_{PDUs} = \text{floor}((TB_{size} - MAC\text{-}hs_header_size) / MAC\text{-}d_PDU_size)$$

If N_{PDUs} is bigger than 318 then SS continues with step m) else i).

h) The SS creates a MAC-hs PDU of size TB_{size} containing N_{PDUs} MAC-d PDUs + padding. The payload data of the MAC-d PDUs contains 4 RLC SDUs of size N_{PDUs} * MAC-d PDU payload size / 4 minus 8 bits (size of 7 bit length indicator and expansion bit). See note 3.

i) The SS transmits the MAC-hs PDU.

j) The SS checks that the UE returned RLC SDUs has the same content as the first 312 bits of the test data sent by the SS in downlink.

k) The SS increments N_{codes} by 1.If N_{codes} is $\leq$16 then SS repeats steps e) to k).

l) The SS sets $N_{\underline{slots}}$ *to the next category supported by the UE and repeats steps d) to l).* If there are no more categories supported by the UE (i.e. all categories have been tested) then the test is completed via steps m) through q). See note 2.

m) The SS opens the UE test loop.

n) The SS release the radio bearer.

o) The SS may optionally deactivate the radio bearer test mode.

NOTE 1: The SS configures the physical channel parameters according to the actual UE category under test.

NOTE 2: See table 18.2.1.4.1.1 in section 18.2.1.4.1 for 3.84 Mcps TDD HS-DSCH physical layer, RLC and MAC-hs capability parameters and the values for different UE 3.84 Mcps TDD HS-DSCH physical layer categories (UE categories). The capability parameters having impact on the test procedure are: "Maximum number of bits of an HS-DSCH transport block received within an HS-DSCH TTI" and "Maximum number of HS-DSCH timeslots per TTI"

NOTE 3: The test data for transport channels on HS-DSCH is divided into 4 RLC SDUs to keep the SDU size not to exceed 1500 octets (limit of SDU size in SM).

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	<--		SYSTEM INFORMATION (BCCH)	Broadcast
2	<--		PAGING TYPE 1 (PCCH)	Paging (PS domain, P-TMSI)
3	-->		RRC CONNECTION REQUEST (CCCH)	RRC
4	<--		RRC CONNECTION SETUP (CCCH)	RRC
5	-->		RRC CONNECTION SETUP COMPLETE (DCCH)	RRC
6	-->		SERVICE REQUEST (DCCH)	GMM
7	<--		SECURITY MODE COMMAND	RRC see note 1
8	-->		SECURITY MODE COMPLETE	RRC see note 1
9	<--		ACTIVATE RB TEST MODE (DCCH)	TC
10	-->		ACTIVATE RB TEST MODE COMPLETE (DCCH)	TC
11	<--		RADIO BEARER SETUP (DCCH)	RRC. For the PS radio bearer the 'pdcp info' IE shall be omitted.
12	-->		RADIO BEARER SETUP COMPLETE (DCCH)	RRC
13	<--		CLOSE UE TEST LOOP (DCCH)	TC UE test mode 1 RLC SDU size is set to 39 octets
14	-->		CLOSE UE TEST LOOP COMPLETE (DCCH)	TC
15	SS			The SS calculates test data for the first TFRC
16	<--		DOWNLINK MAC-hs PDU (4 x RLC SDU)	Send test data. The MAC-hs PDU contains 4 RLC SDUs
17	-->		UPLINK RLC SDUs	The SS checks that the content of the received UL RLC SDUs are correct
18	SS			The SS calculates test data for next TFRC and repeat steps 16 to 18 until all TFRCs have been tested.
19	<--		OPEN UE TEST LOOP (DCCH)	TC
20	-->		OPEN UE TEST LOOP COMPLETE (DCCH)	TC
21			RB RELEASE	RRC
22	<--		DEACTIVATE RB TEST MODE	TC Optional step
23	-->		DEACTIVATE RB TEST MODE COMPLETE	TC Optional step
Note 1: In addition to activate integrity protection Step 6 and Step 7 are inserted in order to stop T3317 timer in the UE, which starts after transmitting SERVICE REQUEST message.				

7.1.5.7.5 Test requirements

For each TFRC the UE shall return a UL RLC SDUs with the same content as the first 312 bits of the test data sent by the SS in downlink.

7.1.5.8 MAC-hs transport block size selection (7.68 Mcps TDD)

7.1.5.8.1 Definition and applicability

All 7.68 Mcps TDD UEs which support HS-PDSCH.

7.1.5.8.2 Conformance requirement

For HS-DSCH the transport block size is derived from the value signalled on the HS-SCCH. The mapping between the TFRI value and the transport block size for each mode is specified below:

Let k be the signalled TFRI value, then the corresponding HS-DSCH transport block size L_k is given by:

If k=1..510

$$L_k = \lfloor L_{\min} p^k \rfloor$$

$$p = \frac{33297}{32768}$$

$$L_{\min} = 57$$

If k = 511

L_k = 204000

If k=0, L_k indicates NULL and shall not be used to signal a transport block size in the TFRI.

Transport block sizes calculated by this formula shall equal the values indicated in Table 7.1.5.8.2

Table 7.1.5.8.2: HSDPA Transport Block Sizes for 7.68 Mcps TDD

TB index (k)	TB size [bits]	TB index (k)	TB size [bits]	TB index (k)	TB size [bits]	TB index (k)	TB size [bits]

Reference(s)

3GPP TS 25.321 Section 9.2.3.2a

7.1.5.8.3 Test purpose

To verify that the UE selects the correct transport block size based on the TFRI value signalled on the HS-SCCH.

7.1.5.8.4 Method of test

Definition of test variables:

N_{slots}	Number of HS-DSCH slots (1, 2, 3, 4, 5, 8 or 12 dependent on UE category)
N_{codes}	Number of HS-DSCH codes per timeslot, 1 to 16
k	TFRI signalled on the HS-SCCH value (see Table 7.1.5.8.2)
TB_{size}	Transport Block size (see Table 7.1.5.8.2)
N_{PDUs}	Number of MAC-d PDUs
MAC-hs_header_size	MAC-hs header size for the reference HS-DSCH radio bearer configuration under test.
MAC-d_PDU_size	MAC-d PDU size for the reference HS-DSCH radio bearer configuration under test.

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off

User Equipment:

UE in idle mode

The following parameters are specific for this test case:

Common for all UE categories:

Parameter	Value
MAC-d PDU size	336 bits
MAC-hs receiver window size	16
Number of HARQ processes	1
Number of reordering queues	1

UE Category 1 to 4:

Parameter	Value
RLC Transmission window size	128
RLC Receiving window size	512

UE Category 5 and 6:

Parameter	Value
RLC Transmission window size	256
RLC Receiving window size	512

UE Category 7 to 10:

Parameter	Value
RLC Transmission window size	512
RLC Receiving window size	1536

UE Category 11 to 12:

Parameter	Value
RLC Transmission window size	768
RLC Receiving window size	3072

UE Category 13:

Parameter	Value
RLC Transmission window size	1024
RLC Receiving window size	4095

Test procedure

a) The SS establishes the reference radio bearer configuration "Interactive or background / UL:64 DL: [max bit rate depending on UE category] / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH" as specified in TS 34.108, clause 6.10.3.4.6.1. See note 1.

b) The SS closes the test loop using UE test loop mode 1 setting the UL RLC SDU size parameter to 39 octets (312 bits).

c) The SS sets $N_{slots} = 2$.

d) The SS sets $N_{\underline{codes}} = 1$.

e) The SS calculates TB_{size} and k for N_{slots} and N_{codes} according to table 7.1.5.8.2

f) If TB_{size} is bigger than the UE capability for "Maximum number of bits of an HS-DSCH transport block received within an HS-DSCH TTI" then SS continues with step l) else step g). See note 2.

g) The SS calculates the maximum number of MAC-d PDUs that fits into the MAC-hs transport block:

N_{PDUs} = floor((TB_{size} – *MAC-hs_header_size)* / *MAC-d_PDU_size)*

If N_{PDUs} is bigger than 318 then SS continues with step m) else i).

h) The SS creates a MAC-hs PDU of size TB_{size} containing N_{PDUs} MAC-d PDUs + padding. The payload data of the MAC-d PDUs contains 4 RLC SDUs of size N_{PDUs} * MAC-d PDU payload size / 4 minus 8 bits (size of 7 bit length indicator and expansion bit). See note 3.

i) The SS transmits the MAC-hs PDU.

j) The SS checks that the UE returned RLC SDUs has the same content as the first 312 bits of the test data sent by the SS in downlink.

k) The SS increments N_{codes} by 1.If N_{codes} is $\leq$16 then SS repeats steps e) to k).

l) The SS sets $N_{\underline{slots}}$ *to the next category supported by the UE and repeats steps d) to l)*. If there are no more categories supported by the UE (i.e. all categories have been tested) then the test is completed via steps m) through q). See note 2.

m) The SS opens the UE test loop.

n) The SS release the radio bearer.

o) The SS may optionally deactivate the radio bearer test mode.

NOTE 1: The SS configures the physical channel parameters according to the actual UE category under test.

NOTE 2: See table 18.2.1.4.1.1 in section 18.2.1.4.1 for 3.84 Mcps TDD HS-DSCH physical layer, RLC and MAC-hs capability parameters and the values for different UE 3.84 Mcps TDD HS-DSCH physical layer categories (UE categories). The capability parameters having impact on the test procedure are: "Maximum number of bits of an HS-DSCH transport block received within an HS-DSCH TTI" and "Maximum number of HS-DSCH timeslots per TTI"

NOTE 3: The test data for transport channels on HS-DSCH is divided into 4 RLC SDUs to keep the SDU size not to exceed 1500 octets (limit of SDU size in SM).

7.1.5.8.5 Test requirements

For each TFRC the UE shall return a UL RLC SDUs with the same content as the first 312 bits of the test data sent by the SS in downlink.

7.1.5.9 MAC-hs data transmission with enhanced TS0 (1.28 Mcps TDD)

7.1.5.9.1 Definition and applicability

All UEs which support HS-PDSCH and 1.28Mcps TDD and enhanced TS0.

7.1.5.9.2 Conformance requirement

For 1.28 Mcps, the timeslots to be used for HS-PDSCH resources are signalled by the bits $x_{ts,1}$, $x_{ts,2}$, …, $x_{ts,5}$, where bit $x_{ts,n}$ carries the information for timeslot n+1. Timeslot 1 cannot be used for HS-DSCH resources. If the signalling bit is set (i.e. equal to 1), then the corresponding timeslot shall be used for HS-PDSCH resources. Otherwise, the timeslot shall not be used. All used timeslots shall use the same channelisation code set, as signalled by the channelisation code set information bits.

When indicated by the higher layer that Timeslot 0 can be used for HS-PDSCH, bit $x_{ts,1}$ carries the information for timeslot 0. If $x_{ts,1}$ is set (i.e. equal to 1), Timeslot 0 shall be used for HS-PDSCH resource. Otherwise, Timeslot 0 shall not be used.

7.1.5.9.3 Test purpose

To verify that the UE can receive the data transmitted in TS0 with MAC-hs.

7.1.5.9.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off cell1 configures 3 carrier frequency, one is primary frequency, other are secondary frequencies. The frequency relation show as below:

Parameter	Cell 1
UTRA RF Channel Number1	Ch. 1
UTRA RF Channel Number2	Ch. 2
UTRA RF Channel Number3	Ch.3

User Equipment:

UE in idle mode

Test procedure

a) The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 6.11.5.4.7.6 using condition A11 as specified in clause 9.1 of TS 34.108.

b) The SS closes the test loop using UE test loop mode 1 setting the UL RLC SDU size parameter to 39 octets (312 bits).

c) The SS transmits a MAC-hs PDU in TS0.

d) The SS checks that the UE returned RLC SDUs has the same content as the first 312 bits of the test data sent by the SS in downlink.

Expected sequence

Step	Direction		Message	Comments

Specific Message Contents

RADIO BEARER SETUP (Step 1)

Use the same message as specified for "Packet to CELL_DCH / E-DCH / HS-DSCH using three multiplexing options (3/3) and SRBs mapped on DCH/DCH" in 34.108 with the following exceptions:

Information Element	Value/remark
Downlink HS-PDSCH Information	Not Present
- CHOICE mode	TDD
- CHOICE *TDD option*	1.28 Mcps
- TS0 Indicator	TRUE
Multi-frequency Info	
- Second Frequency Info	UTRA RF Channel Number2

7.1.5.9.5 Test requirements

In step6 the UE shall return a UL RLC SDUs with the same content as the first 312 bits of the test data sent by the SS in downlink.

7.1.5a HS-DSCH MAC-ehs

7.1.5a.1 MAC-ehs multiplexing / multiple logical channels on same queue

7.1.5a.1.1 Definition and applicability

All UEs which support MAC-ehs.

7.1.5a.1.2 Conformance requirement

- LCH-ID demultiplexing:
  The demultiplexing entity routes the MAC-ehs SDUs to correct logical channel based on the received logical channel identifier.

- The following is allowed:
  The MAC-ehs SDUs included in a MAC-ehs PDU can have a different size and a different priority and can be mapped to different priority queues.

[...]

When MAC-ehs is configured, a MAC PDU for HS-DSCH consists of one MAC-ehs header and one or more reordering PDUs. Each reordering PDU consists of one or more reordering SDUs belonging to the same priority queue. Each reordering SDU equals a complete MAC-ehs SDU or a segment of a MAC-ehs SDU. Each MAC-ehs SDU equals a MAC-d PDU or a MAC-c PDU (FDD and 1.28 Mcps TDD only). The LCH-ID and L fields are repeated per reordering SDU. The TSN and SI fields are repeated per reordering PDU. In 1.28 Mcps TDD multi-frequency HS-DSCH cell, TSN can be extended to 9bit as indicated by RRC signalling. When TSN is extended to 9bit, the 3 least significant bits are placed after the last reordering PDU. If several TSNs are included in MAC-ehs header, the extended bits of TSN should be concatenated in the same order as that of the TSN occurrence in the MAC-ehs header. For FDD, the size of the TSN field is configurable by upper layers [7].

The presence of the TSN_i and SI_i fields is based on the value of the $LCH\text{-}ID_i$; if the $LCH\text{-}ID_i$ is mapped to the same reordering queue as $LCH\text{-}ID_{i-1}$, there is no TSN_i or SI_i field. The mapping of the LCH-ID to the reordering queue is provided by upper layers [7]. The TSN_1 and SI_1 fields are always present.

[...]

For each MAC-d or MAC-c PDU that is delivered to the demultiplexing entity, the UE shall:

- route MAC-d or MAC-c PDU to the correct logical channel based on the corresponding LCH ID field.

Reference(s)

TS 25.321 clauses 4.2.3.5, 9.1.4, 11.6.4.7

7.1.5a.1.3 Test purpose

To confirm that the UE handles multiple logical channels, mapped to same Mac-ehs queue.

7.1.5a.1.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

The SS establishes the reference radio bearer configuration 3 x Interactive or background / UL: 8 kbps DL: [max bit rate depending on UE category] / UM PS RAB as specified in TS 34.108, clause 6.11.4f.1 (FDD) / 6.11.5.4.8.1 (1.28 Mcps TDD) with the logical channel, MAC-ehs queue identities set to:

Logical Channel ID	Mac-ehs Queue ID	Comment
7	0	RB5
8	0	RB6
9	0	RB7

DL MAC header type is set as MAC-ehs.

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to 39 octets for RB5, RB6 and RB7 and RLC Mode as UM.

Test procedure

In this test procedure each DL RLC PDU consists of one RLC SDU of size 39 octets , special LI and length indicator indicating the end of the SDU.

a) The SS transmits a MAC-ehs PDU where:

1. The TSN1 = 0, TSN2, TSN3 are not present
2. contains 3 MAC-ehs SDU's one each from each RB.

b) The SS checks that the RLC PDU's are looped back and checks that the logical channel IDs are correct.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		MAC-ehs PDU containing 3 RLC PDU's with TSN = 0. Each RLC corresponds to different RB's configured	MAC-ehs header consists of LCH1[6], L1[42],TSN1[0], SI1[00],F1[0] LCH2[7],L2[42],F2[0], LCH3[8],L3[42],F3[1] all values are in decimal. See NOTE1
2	→		Loop Backed RLC PDU's on RB5, RB6 and RB7	
NOTE1: The SS will send the LCH Id one less than the LCH Id signalled to the UE as per TS 25.321 section 9.2.2				

Specific Message Contents

None

7.1.5a.1.5 Test requirements

In Step 2, SS receives one loop backed RLC PDU on RB5, RB6 and RB7.

7.1.5a.2 MAC-ehs multiplexing / multiple logical channels on multiple queues

7.1.5a.2.1 Definition and applicability

All UEs which support MAC-ehs.

7.1.5a.2.2 Conformance requirement

- LCH-ID demultiplexing:
  The demultiplexing entity routes the MAC-ehs SDUs to correct logical channel based on the received logical channel identifier.

None.

7.1.5a.2.5 Test requirements

In Step 2, SS receives one loop backed RLC PDU on RB5, RB6 and RB7.

7.1.5a.3 MAC-ehs segmentation / UE handling of partial and full PDUs

7.1.5a.3.1 Definition and applicability

All UEs which support MAC-ehs.

7.1.5a.3.2 Conformance requirement

If MAC-ehs is configured by upper layers [7], the parameters for the MAC header are:

…

- Segmentation Indication (SI)

  The SI field indicates if the MAC-ehs SDU has been segmented. Table 9.2.2-1 shows the 2 bit SI field.

Table 9.2.2-1: Structure of the SI field

SI Field	Segmentation indication
00	The first reordering SDU of the reordering PDU is a completeMAC-ehs SDU. The last reordering SDU of the reordering PDU is a complete MAC-ehs SDU.
01	If there are more than one reordering SDUs in the reordering PDU, the last reordering SDU of the reordering PDU is a complete MAC-ehs SDU. The first reordering SDU of the reordering PDU is the last segment of a MAC-ehs SDU.
10	If there are more than one reordering SDUs in the reordering PDU, the first reordering SDU of the reordering PDU is a complete MAC-ehs SDU. The last reordering SDU of the reordering PDU is the first segment of a MAC-ehs SDU.
11	If there are more than one reordering SDUs in the reordering PDU, the first reordering SDU of the reordering PDU is the last segment of a MAC-ehs SDU and the last reordering SDU of reordering PDU is the first segment of a MAC-ehs SDU. If there is only one reordering SDU in the reordering PDU, the reordering SDU is a middle segment of a MAC-ehs SDU.

[…]

The reassembly unit processes the SI field associated with a reordering PDU. The UE shall:

- if SI field is set to “00”:
  - deliver all MAC-d or MAC-c PDUs corresponding to MAC-ehs SDUs in the reordering PDU to demultiplexing entity;
  - discard any previously stored segment of MAC-ehs SDU.
- if SI field is set to “01”:
  - if the received and stored segments of a MAC-ehs SDU are consecutive:
    - combine the first reordering SDU with the stored segment of MAC-ehs SDU;
    - deliver the MAC-d or MAC-c PDU corresponding to the combined MAC-ehs SDU to demultiplexing entity.
  - if the received and stored segments of MAC-ehs SDU are not consecutive
    - discard the first received reordering SDU and the stored segment of MAC-ehs SDU.
  - deliver all MAC-d or MAC-c PDUs corresponding to subsequent MAC-ehs SDUs in the reordering queue to demultiplexing entity;
- if SI field is set to “10”:
  - deliver all MAC-d or MAC-c PDUs corresponding to all but last reordering SDU in the reordering PDU to the demultiplexing entity;
  - discard any previously stored segment of MAC-ehs SDU and store the last reordering SDU of the received reordering PDU
- if SI field is set to “11”:
  - if the received and stored MAC-ehs SDUs are consecutive:
    - if there is only one reordering SDU in the reordering PDU:

- combine the received reordering SDU with the stored segment of MAC-ehs SDU:

- if is more than one reordering SDUs in the reordering PDU:

- combine the first received reordering SDU with the stored segment MAC-ehs SDU;

- deliver the MAC-d or MAC-c PDU corresponding to the combined MAC-ehs SDU to demultiplexing entity.

- deliver all MAC-d or MAC-c PDUs corresponding to all but last reordering SDU in the reordering PDU to demultiplexing entity;

- discard any previously stored segment of MAC-ehs SDU and store the last reordering SDU of the received reordering PDU.

- if the received and stored segments of the MAC-ehs SDU are not consecutive:

- discard the first received reordering SDU and the stored segment of MAC-ehs SDU;

- if is more than one reordering SDUs in the reordering PDU:

- deliver all MAC-d or MAC-c PDUs corresponding to all but first and last reordering SDUs in the reordering PDU to demultiplexing entity and store the last reordering SDU of the received reordering PDU.

Reference(s)

TS 25.321 clauses 9.2.2, 11.6.4.6

7.1.5a.3.3 Test purpose

1. To test UE is able to handle all 4 SI values.

2 To test UE is able to combine MAC-ehs SDU segments from consecutive MAC-ehs PDU's

3. To test UE discards stored MAC-ehs SDU segment, if it cannot be combined.

7.1.5a.3.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

The SS establishes the reference radio bearer configuration 1 x Interactive or background / UL: 8 kbps DL: [max bit rate depending on UE category] / UM PS RAB as specified in TS 34.108, clause 6.11.4f.2 (FDD) / 6.11.5.4.8.2 (1.28 Mcps TDD) with the logical channel, MAC-ehs queue identity set to:

Logical Channel ID	Mac-ehs Queue ID	Comment
7	0	RB5

DL MAC header type is set as MAC-ehs.

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to 39 octets and RLC Mode as UM.

Test procedure

In this test procedure each DL RLC PDU consists of one RLC SDU of size 39 octets , special LI and length indicator indicating the end of the SDU.

a) The SS transmits a MAC-ehs PDU:

The TSN = 0, SI =10, and containing one full MAC-ehs SDU 1 and one segment of MAC-ehs SDU 2.

b) UE loops back the RLC PDU corresponding to full MAC-ehs SDU 1 and stores the segment of MAC-ehs SDU 2.

c) The SS transmits a MAC-ehs PDU :

The TSN=1, SI=01, and containing remaining part of the MAC-ehs SDU 2 and a full MAC-ehs SDU3.

d) UE transmits 2 loop back PDU's corresponding to MAC-ehs SDU's 2 and 3.

e) The SS transmits a MAC-ehs PDU:

The TSN=2, SI=11, and containing a segment of the MAC-ehs SDU 4, a full MAC-ehs SDU5 and a segment of MAC-ehs SDU 6.

f) UE discards, segment of MAC-ehs SDU4, loop backs RLC PDU corresponding to MAC-ehs SDU5 and stores segment of MAC-ehs SDU 6.

g) The SS transmits a MAC-ehs PDU:

The TSN=3, SI=00, and containing one full MAC-ehs SDU 7.

h) UE discards stored segment of MAC-ehs SDU6, and loops back RLC PDU corresponding to MAC-ehs SDU 7.

i) The SS transmits a MAC-ehs PDU:

The TSN=4, SI=10, and containing first segment of MAC-ehs SDU 8.

j) The SS transmits a MAC-ehs PDU:

The TSN=5, SI=11, and containing second segment of MAC-ehs SDU 8.

k) The SS transmits a MAC-ehs PDU:

The TSN=6, SI=01, and containing last segment of MAC-ehs SDU 8.

l) UE transmits loop back PDU corresponding to MAC-ehs SDU 8.

Expected sequence

Step	Direction		Message	Comments

7.1.5a.3.5 Test requirements

a) In step 2, UE loop backs RLC PDU corresponding to MAC-ehs SDU1.

b) In step 4 and 5, UE loop backs RLC PDU's corresponding to MAC-ehs SDU's 2 and 3.

c) In Step 7, UE loops back RLC PDU corresponding to MAC-ehs SDU5

d) In step 8, no RLC PDU's are received by SS.

e) In Step 10, UE loops back RLC PDU corresponding to MAC-ehs SDU7

f) In Step 14, UE loops back RLC PDU corresponding to MAC-ehs SDU8

g) In step 15, no RLC PDU's are received by SS

7.1.5a.4 MAC-ehs reordering and stall avoidance

7.1.5a.4.1 Definition and applicability

All UEs which support MAC-ehs.

7.1.5a.4.2 Conformance requirement

The SI field indicates if the MAC-ehs SDU has been segmented. Table 9.2.2-1 shows the 2 bit SI field.

Table 9.2.2-1: Structure of the SI field

SI Field	Segmentation indication
00	The first reordering SDU of the reordering PDU is a completeMAC-ehs SDU. The last reordering SDU of the reordering PDU is a complete MAC-ehs SDU.
01	If there are more than one reordering SDUs in the reordering PDU, the last reordering SDU of the reordering PDU is a complete MAC-ehs SDU. The first reordering SDU of the reordering PDU is the last segment of a MAC-ehs SDU.
10	If there are more than one reordering SDUs in the reordering PDU, the first reordering SDU of the reordering PDU is a complete MAC-ehs SDU. The last reordering SDU of the reordering PDU is the first segment of a MAC-ehs SDU.
11	If there are more than one reordering SDUs in the reordering PDU, the first reordering SDU of the reordering PDU is the last segment of a MAC-ehs SDU and the last reordering SDU of reordering PDU is the first segment of a MAC-ehs SDU. If there is only one reordering SDU in the reordering PDU, the reordering SDU is a middle segment of a MAC-ehs SDU.

[…]

When a reordering PDU with TSN = SN is received:

- if SN is within the receiver window:
  - if SN < next_expected_TSN, or this reordering PDU has previously been received:
    - the reordering PDU shall be discarded;
  - else:
    - the reordering PDU shall be placed in the reordering buffer at the place indicated by the TSN.
- if SN is outside the receiver window:
  - the received reordering PDU shall be placed above the highest received TSN in the reordering buffer, at the position indicated by SN;
  - RcvWindow_UpperEdge shall be set to SN thus advancing the receiver window;
  - any reordering PDU with TSN ≤ RcvWindow_UpperEdge – RECEIVE_WINDOW_SIZE, i.e. outside the receiver window after its position is updated, shall be removed from the reordering buffer and be delivered to the reassembly entity;
  - if next_expected_TSN is below the updated receiver window:
    - next_expected_TSN shall be set to RcvWindow_UpperEdge – RECEIVE_WINDOW_SIZE + 1;
- if the reordering PDU with TSN = next_expected_TSN is stored in the reordering buffer:
  - all received reordering PDUs with consecutive TSNs from next_expected_TSN (included) up to the first not received reordering PDU shall be delivered to the reassembly entity;
  - next_expected_TSN shall be advanced to the TSN of this first not received reordering PDU.

[...]

If no timer T1 is active:

- the timer T1 shall be started when a reordering PDU with TSN > next_expected_TSN is correctly received.

- T1_TSN shall be set to the TSN of this reordering PDU.

If a timer T1 is already active:

- no additional timer shall be started, i.e. only one timer T1 may be active at a given time.

The timer T1 shall be stopped if:

- the reordering PDU with TSN = T1_TSN can be delivered to the reassembly entity before the timer expires.

When the timer T1expires and T1_TSN > next_expected_TSN:

- all correctly received reordering PDUs with TSN > next_expected_TSN up to and including T1_TSN-1 shall be delivered to the reassembly entity;
- all correctly received reordering PDUs up to the next not received reordering PDU shall be delivered to the reassembly entity.
- next_expected_TSN shall be set to the TSN of the next not received reordering PDU.

When the timer T1 is stopped or expires, and there still exist some received reordering PDUs that can not be delivered to higher layer:

- timer T1 is started
- set T1_TSN to the highest TSN among those of the reordering PDUs that can not be delivered.

[...]

The reassembly unit processes the SI field associated with a reordering PDU. The UE shall:

- if SI field is set to “00”:
  - deliver all MAC-d or MAC-c PDUs corresponding to MAC-ehs SDUs in the reordering PDU to demultiplexing entity;
  - discard any previously stored segment of MAC-ehs SDU.
- if SI field is set to “01”:
  - if the received and stored segments of a MAC-ehs SDU are consecutive:
    - combine the first reordering SDU with the stored segment of MAC-ehs SDU;
    - deliver the MAC-d or MAC-c PDU corresponding to the combined MAC-ehs SDU to demultiplexing entity.
  - if the received and stored segments of MAC-ehs SDU are not consecutive
    - discard the first received reordering SDU and the stored segment of MAC-ehs SDU.
  - deliver all MAC-d or MAC-c PDUs corresponding to subsequent MAC-ehs SDUs in the reordering queue to demultiplexing entity;
- if SI field is set to “10”:
  - deliver all MAC-d or MAC-c PDUs corresponding to all but last reordering SDU in the reordering PDU to the demultiplexing entity;
  - discard any previously stored segment of MAC-ehs SDU and store the last reordering SDU of the received reordering PDU
- if SI field is set to “11”:
  - if the received and stored MAC-ehs SDUs are consecutive:
    - if there is only one reordering SDU in the reordering PDU:

- combine the received reordering SDU with the stored segment of MAC-ehs SDU:

- if is more than one reordering SDUs in the reordering PDU:

- combine the first received reordering SDU with the stored segment MAC-ehs SDU;

- deliver the MAC-d or MAC-c PDU corresponding to the combined MAC-ehs SDU to demultiplexing entity.

- deliver all MAC-d or MAC-c PDUs corresponding to all but last reordering SDU in the reordering PDU to demultiplexing entity;

- discard any previously stored segment of MAC-ehs SDU and store the last reordering SDU of the received reordering PDU.

- if the received and stored segments of the MAC-ehs SDU are not consecutive:

- discard the first received reordering SDU and the stored segment of MAC-ehs SDU;

- if is more than one reordering SDUs in the reordering PDU:

- deliver all MAC-d or MAC-c PDUs corresponding to all but first and last reordering SDUs in the reordering PDU to demultiplexing entity and store the last reordering SDU of the received reordering PDU.

Reference(s)

TS 25.321 clauses 9.2.2, 11.6.4.5.2 and 11.6.4.6

7.1.5a.4.3 Test purpose

1. To confirm that the UE performs MAC-ehs reordering and delivers RLC PDUs in order to RLC.
2. To confirm that the UE performs stall avoidance in case of missing MAC-ehs PDUs based on a) window based stall avoidance and b) timer based stall avoidance.
3. To confirm that the UE correctly discards partial MAC-ehs SDU segments in case of missing MAC-ehs PDUs.

7.1.5a.4.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

The SS establishes the reference radio bearer configuration 1 x Interactive or background / UL: 8 kbps DL: [max bit rate depending on UE category] / UM PS RAB as specified in TS 34.108, clause 6.11.4f.2 (FDD) / 6.11.5.4.8.2 (1.28 Mcps TDD). The following parameters are specific for this test case:

Parameter	Value
MAC-ehs receiver window size	32
MAC-ehs reordering timer T1	400 ms

DL MAC header type is set as MAC-ehs.

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to 39 octets.

Let T be the value of MAC-ehs reordering timer T1 parameter.

Test procedure

In this test procedure each DL RLC PDU consists of one RLC SDU of size 39 octets, special LI and one length indicator indicating the end of the SDU.

a) The SS transmits a MAC-ehs PDU with TSN = 0, SI = 00 and containing a full MAC-ehs SDU carrying RLC PDU with SN = 0

b) The SS checks that the RLC PDU corresponding to DL SN = 0 is looped back

c) The SS transmits a MAC-ehs PDU with TSN = 1, SI = 00 and containing a full MAC-ehs SDU carrying RLC PDU with SN = 1

d) The SS checks that the RLC PDU corresponding to DL SN = 1 is looped back

e) The SS repeats the transmission of the MAC-ehs PDUs in steps a) and c) with identical content except that the RLC PDUs have SN = 2 and 3

f) The SS checks that no data is looped back (the data is discarded in the UE)

g) The SS transmits a MAC-ehs PDU with TSN = 3, SI = 10 and containing a full MAC-ehs SDU carrying RLC PDU with SN = 3 as well as the start segment of a MAC-ehs SDU carrying RLC PDU with SN = 4

h) The SS waits 200 ms and checks that no data is looped back.

NOTE: T1 is 400ms and the middle value of 200ms is considered to assure that T1 has not expired in the UE.

i) The SS transmits a MAC-ehs PDU with TSN = 2, SI = 00 and containing a full MAC-ehs SDU carrying an RLC PDU with SN=2

j) The SS checks that the RLC PDUs corresponding to DL SN = 2 and 3 are looped back

k) The SS transmits a MAC-ehs PDU with TSN = 6, SI = 00 and containing a full MAC-ehs SDU carrying an RLC PDU with SN = 5

l) The SS transmits a MAC-ehs PDU with TSN = 7, SI = 00 and containing a full MAC-ehs SDU carrying an RLC PDU with SN = 6

m) The SS transmits a MAC-ehs PDU with TSN = 38, SI = 01 and containing the end segment of a MAC-ehs SDU carrying an RLC PDU with SN=7, as well as a full MAC-ehs SDU carrying an RLC PDU with SN = 8

n) The SS checks that the RLC PDUs corresponding to DL SN = 5 and 6 are looped back but the RLC PDUs corresponding to DL SN = 4, 7 and 8 are not looped back

o) The SS waits 400 ms and checks that the RLC PDU corresponding to DL SN = 8 is looped back after this time, but that the RLC PDUs with SN = 4 and 7 are not looped back

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		MAC-ehs PDU with TSN = 0 and SI = 00, containing a full MAC-ehs SDU carrying RLC PDU with SN = 0	
2	→		RLC PDU corresponding to DL SN 0	
3	←		MAC-ehs PDU with TSN = 1 and SI = 00, containing a full MAC-ehs SDU carrying RLC PDU with SN = 1	
4	→		RLC PDU corresponding to DL SN 1	
5	←		MAC-ehs PDU with TSN = 0 and SI = 00, containing a full MAC-ehs SDU carrying RLC PDU with SN = 2	The duplicated data is discarded in the UE
6	←		MAC-ehs PDU with TSN = 1 and SI = 00, containing a full MAC-ehs SDU carrying RLC PDU with SN = 3	The duplicated data is discarded in the UE
7	←		MAC-ehs PDU with TSN = 3 and SI = 10, containing a full MAC-ehs SDU carrying RLC PDU with SN = 3 and the start segment of a MAC-ehs SDU carrying RLC PDU with SN = 4	
8			SS waits 200 ms and checks that no data is looped back	Note: T1 is 400ms and the middle value of 200ms is considered to assure that T1 has not expired in the UE
9	←		MAC-ehs PDU with TSN = 2 and SI = 00, containing a full MAC-ehs SDU carrying RLC PDU with SN = 2	
10	→		RLC PDUs corresponding to DL SN 2,3	
11	←		MAC-ehs PDU with TSN = 6 and SI = 00, containing a full MAC-ehs SDU carrying RLC PDU with SN = 5	
12	←		MAC-ehs PDU with TSN = 7 and SI = 00, containing a full MAC-ehs SDU carrying RLC PDU with SN = 6	
13	←		MAC-ehs PDU with TSN = 38 and SI = 01, containing the end segment of a MAC-ehs SDU carrying RLC PDU with SN = 7 and a full MAC-ehs SDU carrying RLC PDU with SN = 8	SS need to transmit this PDU before timer T1 in UE expires (400 ms after reception of MAC-ehs PDU with TSN=6). Note: T_A
14	→		RLC PDUs corresponding to DL SN 5,6	The RLC PDUs corresponding to DL SN = 5,6 are looped back after reception of the MAC-ehs PDU in step 13, i.e. before timer T1 expires. See NOTE 5
15			SS waits T ms and checks that the RLC PDUs corresponding to DL SN = 4, 7 and 8 are not looped back during this time	
16	→		RLC PDU corresponding to DL SN 8	The RLC PDU corresponding to DL SN = 8 is looped back after expiry of T1. Note: T_B. See NOTE 6

NOTE 1: The RLC SN in step 5,6 is increased since otherwise the data would be discarded by RLC even if the MAC-ehs reordering does not work correctly. Since the data is discarded the same RLC SN can be reused later in the test sequence.
NOTE 2: Void
NOTE3: In step 13, the timer T1 is restarted in the UE since the PDU with TSN = 38 cannot be delivered to higher layers.
NOTE 4: General timer tolerance as defined by 34.108 subclause 4.2.3 applies.
NOTE 5: RLC PDUs with UL SN=4 and 5 is looped back
NOTE 6: RLC PDU with UL SN=6 is looped back

Specific Message Contents

None

7.1.5a.4.5 Test requirements

1. After step 1, the RLC PDU corresponding to DL SN = 0 shall be looped back
2. After step 3, the RLC PDU corresponding to DL SN = 1 shall be looped back
3. After steps 5 and 6, no data shall be looped back
4. After step 7, no data shall be looped back and no RLC status report shall be received
5. After step 9, the RLC PDUs corresponding to DL SN = 2 and 3 shall be looped back
6. After step 13, the RLC PDUs corresponding to DL SN = 5 and 6 shall be looped back
7. In step 16, the RLC PDU corresponding to DL SN = 8 shall be looped back and $T_B - T_A$ shall be equal to T ms

7.1.5a.5 MAC-ehs transport block size selection

7.1.5a.5.1 Generic test procedure for the MAC-ehs transport block size selection test cases

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-7 IE "HS-DSCH physical layer category extension". This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is configured.

Definition of test variables:

N_{codes}	Number of HS-DSCH codes (1..15, maximum number dependent on UE category)
M	Type of modulation scheme (QPSK, 16QAM, 64QAM)
k_i	TFRI signalled on the HS-SCCH value
$K_{0,I}$	See table 7.1.5a.5.3
k_t	Transport Block Size index $(=k_i + k_{0,I})$, see table 7.1.5a.5.4
TB_{size}	Transport Block size
MAC-ehs_header_size	MAC-ehs header size for the reference HS-DSCH radio bearer configuration under test.

Table 7.1.5a.5.3: Values of $k_{0,i}$ for different numbers of channelization codes and modulation schemes

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off

User Equipment:

UE in idle mode

The following parameters are specific for this test case:

Common for all UE categories:

Parameter	Value
MAC-ehs receiver window size	16
Number of HARQ processes	1
Number of reordering queues	1

UE Category 1 to 4:

Parameter	Value
RLC Transmission window size	128
RLC Receiving window size	512

UE Category 5 and 6:

Parameter	Value
RLC Transmission window size	256
RLC Receiving window size	512

UE Category 7 and 8:

Parameter	Value
RLC Transmission window size	512
RLC Receiving window size	1536

UE Category 9 and 10:

Parameter	Value
RLC Transmission window size	512
RLC Receiving window size	2047

UE Category 11 and 12:

Parameter	Value
RLC Transmission window size	128
RLC Receiving window size	1024

UE Category 13 to 20:

Parameter	Value
RLC Transmission window size	512
RLC Receiving window size	2047

Test procedure

a) The SS establishes the reference radio bearer configuration “Interactive or background / UL:64 DL: [max bit rate depending on UE category] / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH” using enhanced Layer 2 configuration with Flexible RLC and MAC-ehs (Alt 3) as specified in TS 34.108, clause 6.10.2.4.5.1. See note 1.

b) The SS closes the test loop using UE test loop mode 1 setting the UL RLC SDU size parameter to 39 octets (312 bits).

c) The SS sets M= modulation scheme as specified in the test case.

d) The SS sets $N_{\underline{codes}} = 1$.

e) The SS sets $k_{0,i}$ to the value according to table 7.1.5a.5.3 based on the actual value of M and $N_{\underline{codes}}$.

f) The SS sets the test parameter k_i to 0.

g) The SS calculates the index value k_t (=k_i + $k_{0,1}$) and look up the transport block size, TB_{size}, for the actual k_t in table 7.1.5a.5.4.

If TB_{size} is bigger than the UE capability for "Maximum number of bits of an HS-DSCH transport block received within an HS-DSCH TTI" then SS continues with step n) else step h). See note 2.

h) The SS calculates the coding rate using $Coding_rate = (TB_{size} + N_{CRC}) / (N_{codes} \cdot N_{phy_bits})$.

If *Coding_rate* falls within any of the ranges defined in table 14.1.3.2.1b then SS continues with step m), else proceed with step i). See note 4.

i) If the transport block size TB_{size} is >12040 bits the SS creates 4 DL RLC SDUs of size 8*FLOOR ((TB_{size} – 136 bit)/32) (largest possible RLC SDU size considering octet alignment and MAC-ehs and minimum RLC AM headers). If the transport block size TB_{size} is ≤ 12040 bits the SS creates 1 DL RLC SDUs of size 8*FLOOR((TB_{size} – 40 bit)/8). The SS creates a DL RLC PDU for each DL RLC SDU using the special value of HE field ('10') in the RLC PDU header. See note 3.

j) Void

k) The SS configures the HARQ transmission parameters according to TS 34.108 [9], table 6.1.5.1 based on the actual value of *M*. Then the SS transmits all the DL RLC PDUs generated in step i) concatenated into a MAC-ehs PDU.

l) The SS checks that the UE returned RLC SDUs has the same content as the first 312 bits of the test data sent by the SS in downlink for DL RLC SDU size greater than or equal to 312 bits. If the downlink RLC SDU size is less than 312 bits then the UE shall return 4 RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink.

m) The SS increments the test parameter k_i by 1.

For UE category 13: if M=64QAM and *ki* is larger than 52 then SS continues with step n).

If k_i is less than 63 then SS repeats steps g) to m) else SS continues with step n).

n) The SS increments the test parameter N_{codes} *by 1*. If N_{codes} is less or equal to the UE capability for *"Maximum number of HS-DSCH codes received"* then the SS repeats test steps e) to n) else continue with step o). See note 2.

o) The SS opens the UE test loop.

p) The SS release the radio bearer.

q) The SS may optionally deactivate the radio bearer test mode.

NOTE 1: The SS configures the physical channel parameters according to the actual UE category under test.

NOTE 2: See table 14.1.3.1.1 in section 14.1.3.1 for FDD HS-DSCH physical layer and RLC and MAC-ehs capability parameters and there values for different UE FDD HS-DSCH physical layer categories (UE categories). The capability parameters having impact on the test procedure are: "Maximum number of bits of an HS-DSCH transport block received within an HS-DSCH TTI" *and "Maximum number of HS-DSCH codes received"*.

NOTE 3: The test data for DTCHs mapped on HS-DSCH is divided into 4 RLC SDUs to keep the maximum SDU size below or equal to 1500 octets (1500 octets is the limit of QoS parameter "Max SDU size" in SM). To allow for testing of the smallest TB sizes a single RLC PDU is used when the TB size is equal or below 12040 bits to reduce the L2 header overhead. 12040 bits corresponds to maximum RLC SDU size of 1500 octets (12000 bits) plus MAC-ehs header size of 24 bits and AMD PDU header size (16 bits).

NOTE 4: See table 14.1.3.2.1b in section 14.1.3.2.1b for those values of coding rate that must be avoided because of turbo coder irregularities.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	<--		SYSTEM INFORMATION (BCCH)	Broadcast
2	<--		PAGING TYPE 1 (PCCH)	Paging (PS domain, P-TMSI)
3	-->		RRC CONNECTION REQUEST (CCCH)	RRC
4	<--		RRC CONNECTION SETUP (CCCH)	RRC
5	-->		RRC CONNECTION SETUP COMPLETE (DCCH)	RRC
6	-->		SERVICE REQUEST (DCCH)	GMM
7	<--		SECURITY MODE COMMAND	RRC see note 1
8	-->		SECURITY MODE COMPLETE	RRC see note 1
9	<--		ACTIVATE RB TEST MODE (DCCH)	TC
10	-->		ACTIVATE RB TEST MODE COMPLETE (DCCH)	TC
11	<--		RADIO BEARER SETUP (DCCH)	RRC. For the PS radio bearer the 'pdcp info' IE shall be omitted.
12	-->		RADIO BEARER SETUP COMPLETE (DCCH)	RRC
13	<--		CLOSE UE TEST LOOP (DCCH)	TC UE test mode 1 RLC SDU size is set to 39 octets
14	-->		CLOSE UE TEST LOOP COMPLETE (DCCH)	TC
15	SS			The SS calculates test data for the first TFRC (TFRI,N_{codes} and *M*).
16	<--		DOWNLINK MAC-hs PDU	Send test data. The MAC-hs PDU contains one or 4 RLC SDUs depending on TB size to be tested
17	-->		UPLINK RLC SDUs	The SS checks that the content of the received UL RLC SDUs are correct
18	SS			The SS calculates test data for next TFRC and repeat steps 16 to 18 until all TFRCs have been tested.
19	<--		OPEN UE TEST LOOP (DCCH)	TC
20	-->		OPEN UE TEST LOOP COMPLETE (DCCH)	TC
21			RB RELEASE	RRC
22	<--		DEACTIVATE RB TEST MODE	TC Optional step
23	-->		DEACTIVATE RB TEST MODE COMPLETE	TC Optional step
Note 1: In addition to activate integrity protection Step 6 and Step 7 are inserted in order to stop T3317 timer in the UE, which starts after transmitting SERVICE REQUEST message.				

7.1.5a.5.2 MAC-ehs transport block size selection / QPSK and 16QAM

7.1.5a.5.2.1 Definition and applicability

All UEs which support FDD, HS-PDSCH and MAC-ehs.

7.1.5a.5.2.2 Conformance requirement

For all transmissions of a transport block, the transport block size is derived from the TFRI value as specified below, except only in those cases of retransmissions where the Node-B selects a combination for which no mapping exists between the original transport block size and the selected combination of channelisation Code set and modulation type. In such cases, the transport block size index value signalled to the UE shall be set to 111111, i.e., k_i=63.

Let k_i be the TFRI signalled on the HS-SCCH value and let $k_{0,i}$ be the value in table 7.1.5a.5.1 or table 7.1.5a.5.2.2 (as configured by higher layers) corresponding to the modulation and the number of codes signalled on the HS-SCCH. Let k_t be the sum of the two values: $k_t = k_i + k_{0,i}$. The transport block size $L(k_t)$ can be obtained by accessing the position k_t in one of the tables in Annex A (normative) or by using one of the corresponding formulas below (informative).

The use of table 7.1.5a.5.2.2 requires MAC-ehs.

Formula corresponding to table 7.1.5a.5.2.1:

If $k_t < 40$

$$L(k_t) = 125 + 12 \cdot k_t$$

else

$$L(k_t) = \lfloor L_{\min} p^{k_t} \rfloor$$
$$p = 2085/2048$$
$$L_{\min} = 296$$

end

Table 7.1.5a.5.2.1: Table 0 of values of $k_{0,i}$ for different numbers of channelization codes and modulation schemes (QPSK and 16QAM)

Combination *i*	Modulation scheme	Number of channelization codes	$k_{0,i}$
0	QPSK	1	1
1		2	40
2		3	63
3		4	79
4		5	92
5		6	102
6		7	111
7		8	118
8		9	125
9		10	131
10		11	136
11		12	141
12		13	145
13		14	150
14		15	153
15	16QAM	1	40

18		4	118
19		5	131
20		6	141
21		7	150
22		8	157
23		9	164
24		10	169
25		11	175
26		12	180
27		13	184
28		14	188
29		15	192

NOTE: Some UE categories are only required to support values of K_i up to the value of 52, as described in [23].

Formula corresponding to table 7.1.5a.5.2.2:

If $k_t < 40$

$$L(k_t) = (14 + k_t) * 8$$

else

$$L(k_t) = \lfloor L_{\min} p^{k_t} \rfloor * 8$$

$$p = \left(\frac{5274}{27} \right)^{\frac{1}{296-1}}$$

$$L_{\min} = 27$$

end

Table 7.1.5a.5.2.2: Table 1 of values of $k_{0,i}$ for different numbers of channelization codes and modulation schemes (QPSK, 16QAM and 64QAM)

Combination *i*	Modulation scheme	Number of channelization codes	$k_{0,i}$
0	QPSK	1	1
1		2	58

Reference(s)

3GPP TS 25.321, 9.2.3.1 and Annex A

7.1.5a.5.2.3 Test purpose

To verify that the UE selects the correct transport block size with MAC-ehs configured based on the TFRI value signalled on the HS-SCCH for the QPSK and 16QAM modulations schemes.

7.1.5a.5.2.4 Method of test

The test procedure in clause 7.1.5a.5.1 is executed twice.

Execution counter	Downlink Modulation Scheme (M)
1	QPSK
2	16QAM

7.1.5a.5.2.5 Test requirements

For execution counter 1 and 2; and for each TFRC the UE shall return a UL RLC SDUs with the same content as the first 312 bits of the test data sent by the SS in downlink for DL RLC SDU size greater than or equal to 312 bits. If the

downlink RLC SDU size is less than 312 bits then the UE shall return 4 RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink.

7.1.5a.5.3 MAC-ehs transport block size selection / 64QAM

7.1.5a.5.3.1 Definition and applicability

All UEs which support FDD, HS-PDSCH, MAC-ehs and 64QAM.

7.1.5a.5.3.2 Conformance requirement

See 7.1.5a.2.2

7.1.5a.5.3.3 Test purpose

To verify that the UE selects the correct transport block size with MAC-ehs configured based on the TFRI value signalled on the HS-SCCH for the 64QAM modulations scheme case.

7.1.5a.5.3.4 Method of test

The test procedure in clause 7.1.5a.5.1 is executed with M=64QAM.

7.1.5a.5.3.5 Test requirements

The UE shall for each TFRC return a UL RLC SDUs with the same content as the first 312 bits of the test data sent by the SS in downlink for DL RLC SDU size greater than or equal to 312 bits. If the downlink RLC SDU size is less than 312 bits then the UE shall return 4 RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink.

7.1.5a.5.4 MAC-ehs transport block size selection (1.28Mcps TDD)

NOTE: The reference to UE Categories refers to the UE capability as signalled in the Rel-7 IE "HS-DSCH physical layer category extension". This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is configured.

7.1.5a.5.4.1 Definition and applicability

All UEs which support 1.28Mcps TDD, HS-PDSCH and MAC-ehs.

7.1.5a.5.4.2 Conformance requirement

When MAC-ehs is used, the octet aligned table of transport block size defined as following shall be used.

NOTE: When in CELL_FACH, CELL_PCH or URA_PCH state with HS-DSCH reception, the octet aligned table of transport block size for the HS-DSCH physical layer category 9 shall be used.

If k is the signalled TFRI value then the corresponding HS-DSCH transport block size Lk is given by:

If k = 1..62

$$L_k = \lfloor L_{\min} p^{k-1} \rfloor * 8$$

where

$p = \left(\frac{348}{30}\right)^{\frac{1}{63-1}}$ if the HS-DSCH physical layer category is between 1 and 3 inclusively,

$p = \left(\frac{700}{30}\right)^{\frac{1}{63-1}}$ if the HS-DSCH physical layer category is between 4 and 6 inclusively,

$p = \left(\frac{1052}{30}\right)^{\frac{1}{63-1}}$ if the HS-DSCH physical layer category is between 7 and 9 inclusively,

$p = \left(\frac{1403}{30}\right)^{\frac{1}{63-1}}$ if the HS-DSCH physical layer category is between 10 and 12 inclusively,

$p = \left(\frac{1755}{30}\right)^{\frac{1}{63-1}}$ if the HS-DSCH physical layer category is between 13 and 15 inclusively,

$p = \left(\frac{1579}{30}\right)^{\frac{1}{63-1}}$ if the HS-DSCH physical layer category is between 16 and 18 inclusively,

$p = \left(\frac{2107}{30}\right)^{\frac{1}{63-1}}$ if the HS-DSCH physical layer category is between 19 and 21 inclusively,

$p = \left(\frac{2634}{30}\right)^{\frac{1}{63-1}}$ if the HS-DSCH physical layer category is between 22 and 24 inclusively,

and

$L_{\min} = 30$

If k = 63 then,

L_k = 2784 if the HS-DSCH physical layer category is between 1 and 3 inclusively,

5600 if the HS-DSCH physical layer category is between 4 and 6 inclusively,

8416 if the HS-DSCH physical layer category is between 7 and 9 inclusively,

11224 if the HS-DSCH physical layer category is between 10 and 12 inclusively,

14040 if the HS-DSCH physical layer category is between 13 and 15 inclusively,

12632 if the HS-DSCH physical layer category is between 16 and 18 inclusively,

16856 if the HS-DSCH physical layer category is between 19 and 21 inclusively,

21072 if the HS-DSCH physical layer category is between 22 and 24 inclusively.

If k=0, L_k indicates NULL and shall not be used to signal a transport block size in the TFRI.

Transport block sizes calculated by this formula shall equal the values indicated in the following tables:

Reference(s)

3GPP TS 25.321, 9.2.3.3

7.1.5a.5.4.3 Test purpose

To verify that the UE selects the correct transport block size with MAC-ehs configured based on the TFRI value signalled on the HS-SCCH.

7.1.5a.5.4.4 Method of test

Definition of test variables:

N_{slots}	Number of HS-DSCH slots (1- 6 dependent on UE category)
N_{codes}	Number of HS-DSCH codes per timeslot, 1 to 16
k	TFRI signalled on the HS-SCCH value (see Table 7.1.5a.5.4.x)
TB_{size}	Transport Block size (see Table 7.1.5a.5.4.x)
N_{PDUs}	Number of MAC-d PDUs
MAC-hs_header_size	MAC-hs header size for the reference HS-DSCH radio bearer configuration under test.
MAC-d_PDU_size	MAC-d PDU size for the reference HS-DSCH radio bearer configuration under test.

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off

User Equipment:

UE in idle mode

The following parameters are specific for this test case:

Common for all UE categories:

Parameter	Value
MAC-d PDU size	336 bits
MAC-hs receiver window size	16
Number of HARQ processes	1
Number of reordering queues	1

UE Category 1 to 3:

Parameter	Value
RLC Transmission window size	128
RLC Receiving window size	512

UE Category 4 to 6

Parameter	Value
RLC Transmission window size	256
RLC Receiving window size	512

UE Category 7 to 9:

Parameter	Value
RLC Transmission window size	512
RLC Receiving window size	1536

UE Category 10 to 12:

Parameter	Value
RLC Transmission window size	512
RLC Receiving window size	1536

UE Category 13 to 15:

Parameter	Value
RLC Transmission window size	512
RLC Receiving window size	1536

UE Category 16 to 24:

Parameter	Value
RLC Transmission window size	512
RLC Receiving window size	2047

The test procedure in clause 7.1.5.6a is executed.

7.1.5a.5.4.5 Test requirements

For each TFRC the UE shall return a UL RLC SDUs with the same content as the first 312 bits of the test data sent by the SS in downlink for DL RLC SDU size greater than or equal to 312 bits. If the downlink RLC SDU size is less than 312 bits then the UE shall return 4 RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink.

7.1.5a.6 UE Identification on HS-PDSCH in CELL_FACH

7.1.5a.6.1 Definition and applicability

All UEs which support FDD or 1.28 Mcps TDD and HS-PDSCH in CELL_FACH.

7.1.5a.6.2 Conformance requirement

In FDD and 1.28 Mcps TDD, the MAC PDU header for DTCH and DCCH mapped on HS-DSCH CELL_FACH, CELL_PCH state is as shown in figure 9.2.1.1c-1.

- there is no MAC-d header included for DTCH and DCCH.
- there is no MAC-c header included for DTCH and DCCH when UE dedicated H-RNTI is used.

Whenever the variable HS_DSCH_RECEPTION_CELL_FACH_STATE is set to TRUE, the UE shall:

1> set the variable HS_DSCH_RECEPTION_GENERAL to TRUE;

1> use the IE "HS-DSCH common system information" in System Information Block type 5 or System Information Block type 5bis;

1> for FDD, receive the HS-SCCH(s) according to the IE "HS-SCCH channelisation code" on the serving cell applying the scrambling code as received in the IE "DL Scrambling code" as received in IE "HS-DSCH common system information";

1> for 1.28 Mcps TDD, receive the HS-SCCH(s) according to the stored HS-SCCH configuration, applying the HS-PDSCH midamble code according to the stored HS-PDSCH midamble configuration;

1> perform HS-DSCH reception procedures:

2> if the UE has a stored IE "HARQ info":

3> act on subclause 8.6.5.6b for the stored IE "HARQ info".

2> else:

3> act on subclause 8.6.5.20 for the IE "HARQ System info" as received in IE "HS-DSCH common system information".

2> and use the value of the variable H_RNTI as UE identity in the HS-SCCH reception procedure in the physical layer.

When the variable HS_DSCH_RECEPTION_CELL_FACH_STATE is set to TRUE the UE shall:

1> use the value of the variable H_RNTI as UE identity in the HS-SCCH reception procedure in the physical layer.

3GPP TS 25.321 clause 9.2.1.1c

3GPP TS 25.331 clauses 8.5.36, 8.6.3.1b

7.1.5a.6.3 Test purpose

1. To confirm that the UE can receive data on DCCH (SRB#1) using common H-RNTI in CELL_FACH state.

7.1.5a.6.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: CELL_FACH state as specified in clause 7.4 of TS 34.108, with dedicated H-RNTI assigned. SIB5 uses default message in 34.108 section 6.10b, condition B1, with the exception of the following parameters

Information Element	Value/remark
- HS-DSCH paging system information	Not Present

Related ICS/IXIT statement(s)

- UE supports FDD or 1.28 Mcps TDD
- UE supports HS-PDSCH in CELL_FACH

Test Procedure

The UE is in CELL_FACH state with SRBs mapped to HS-DSCH and RACH. The SS transmits a UE CAPABILITY ENQUIRY message on RB1 over HS-DSCH but with unmatched UE Id on HS-SCCH. The UE does not respond to this. SS transmits a UE CAPABILITY ENQUIRY message on RB2 over HS-DSCH with matched UE Id on HS-SCCH. After receiving the message, the UE shall transmit a UE CAPABILITY INFORMATION message on the uplink DCCH which includes the requested capabilities. The SS transmits a UE CAPABILITY INFORMATION CONFIRM message to the UE to complete the UE capability enquiry procedure.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is brought to CELL_FACH state with dedicated H-RNTI
2	←		UE CAPABILITY ENQUIRY	Sent on HS-DSCH using UM RLC but sent with unmatched H-RNTI on HS-SCCH. Use default message
3				SS waits 10 seconds and checks that UE does not respond
4	←		UE CAPABILITY ENQUIRY	Sent on HS-DSCH using AM RLC but sent with matched H-RNTI on HS-SCCH. Use default message.
5	→		UE CAPABILITY INFORMATION	Use default message.
6	←		UE CAPABILITY INFORMATION CONFIRM	Use default message. SRB is sent on DCCH using AM RLC.

7.1.5a.6.5 Test requirement

At step 3 the UE shall not respond to the UE CAPABILITY ENQUIRY message sent in step 2.

After step 4, the UE shall transmit a UE CAPABILITY INFORMATION message on the uplink DCCH to respond to the downlink UE CAPABILITY ENQUIRY message with correct contents.

7.1.5a.7 HARQ retransmissions without ACK/NACK signalling in CELL_FACH

7.1.5a.7.1 Definition and applicability

All UEs which support FDD and HS-PDSCH in CELL_FACH.

7.1.5a.7.2 Conformance requirement

The HS-SCCH reception procedure is as defined in subclause 6A.1.1.

If a UE detects that one of the monitored HS-SCCHs carries consistent control information intended for this UE, the UE shall perform the following:

- Start receiving the HS-PDSCHs indicated by this consistent control information
- If the CRC of the HS-SCCH is OK, the transport block size information shall be derived from the signalled TFRI value as defined in [9]. If the 'Hybrid-ARQ process information' is not included in the set configured by upper layers, the UE shall discard the information received on this HS-SCCH and on the HS-PDSCHs.

Unless indicated by higher layers, the UE shall not transmit any HARQ-ACK or CQI information and DTX shall be used on all the HS-DPCCH subframes.

3GPP TS 25.214 clauses 6A.1.1A

7.1.5a.7.3 Test Purpose

To confirm that the UE can perform the HARQ Retransmissions without ACK/NACK Signalling.

7.1.5a.7.4 Method of test

Initial Condition

System Simulator: 1 cell, default parameters, Ciphering Off.

The radio bearer is placed into UE test loop mode 1 and configured to return UL RLC SDUs of the same size as received in DL.

UE: CELL_FACH state as specified in clause 7.4 of TS 34.108, with dedicated H-RNTI. SIB5 uses default message in 34.108 section 6.10b, condition B1, with the exception of the following parameters

Information Element	Value/remark
- HS-DSCH paging system information	Not Present

Related ICS/IXIT statement(s)

- UE supports FDD
- UE supports HS-PDSCH in CELL_FACH

Test Procedure

The UE is in CELL_FACH state and has a radio bearer established which is mapped to HS-DSCH and RACH. The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed with default Radio Bearer according to RB setup (condition A24). With the exception of the following parameters which are specific for this test case:

Parameter	Value
PDCP info	Not Present
Polling info	
- Timer Poll Prohibit	Not Present
- Timer_poll	Not Present

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to 39 octets.

In this test procedure each MAC-ehs PDU contains one RLC PDU carrying one SDU of size 39 octets and one length indicator indicating the end of the SDU.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is in CELL_FACH state with dedicated H-RNTI
2			RB Establishment	See generic procedures
3			Close UE Test Loop	
4	←		MAC-ehs PDU sent	Correct CRC
5	→		RLC Loop Backed PDU	SS validates that UE sends loop backed PDU correctly, while UE does not send HARQ ACK or NACK
6	←		MAC-ehs PDU sent	Erroneous CRC
7				SS checks for 5 sec that UE does not send loop backed PDU. UE does not send HARQ ACK or NACK
8			Open UE Test Loop	See generic procedures
9			RB Release	

Specific Message Contents

None.

7.1.5a.7.5 Test requirement

1. At Step 5, the UE shall loop back the RLC PDU.
2. After Step 6, no data shall be looped back.
3. At Step 5 & 7, the UE shall not send HARQ ACK or NACK.

7.1.5a.8 HARQ retransmissions without ACK/NACK signalling in CELL_FACH when Dedicated H-RNTI is not allocated (1.28 Mcps TDD)

7.1.5a.8.1 Definition and applicability

All UEs which support 1.28Mcps TDD and HS-PDSCH in CELL_FACH.

7.1.5a.8.2 Conformance requirement

If the UE is configured without dedicated UE identity, the UE shall not transmit an HS-SICH. If the UE is configured with a dedicated UE identity, but the HS-SCCH is an uplink synchronization establishment order, then its associated HS-SICH shall not be transmitted. Otherwise, the channel quality indication shall be transmitted on HS-SICH, and the HS-DSCH channel quality indication procedure is the same as that in CELL_DCH state of 1.28Mcps TDD, cf. 5.9.2.

- Schedules new transmissions and retransmissions:
  - When transmitting for a UE in CELL_DCH state the scheduler determines based on the status reports from HARQ Processes if either a new transmission or a retransmission should be made. A new transmission can however be initiated on a HARQ process at any time. Based on a delay attribute provided by upper layers, the scheduler may decide to discard any 'out-of-date' MAC-ehs SDU.
  - In FDD when transmitting for a UE in CELL_FACH state the scheduler determines based on RRM and IE "Transmitted Power Level" received on Iub FP the number of retransmission that should be made after new transmission. If HARQ feedback is configured, the scheduler may stop retransmission based on the status reports from HARQ processes. A new transmission can however be initiated on a HARQ process at any time. Based on a delay attribute provided by upper layers, the scheduler may decide to discard any 'out-of-date' MAC-ehs SDU.
  - In 1.28Mcps TDD, when transmitting CCCH or DCCH with common H-RNTI for a UE in CELL_FACH state the scheduler determines based on RRM and IE "Transmitted Power Level" received on Iub FP the

number of retransmission that should be made after new transmission. Based on a delay attribute provided by upper layers, the scheduler may decide to discard any 'out-of-date' MAC-ehs SDU.

6	←		MAC-ehs PDU sent	Correct CRC
7	→		RLC Loop Backed PDU	SS validates that UE sends loop backed PDU correctly, while UE does not send HARQ ACK or NACK
8			Open UE Test Loop	See generic procedures
9			RB Release	

Specific Message Contents

None.

7.1.5a.8.5 Test requirement

1. At step 4, SS sends a MAC-ehs PDU with erroneous CRC.
2. At step 6, SS sends a MAC-ehs PDU with correct CRC.
3. At step 7, SS receives the loop backed PDU.

7.1.5a.9 HARQ retransmissions with ACK/NACK signalling in CELL_FACH when Dedicated H-RNTI is allocated (1.28 Mcps TDD)

7.1.5a.9.1 Definition and applicability

All UEs which support 1.28Mcps TDD and HS-PDSCH in CELL_FACH.

7.1.5a.9.2 Conformance requirement

If the UE is configured without dedicated UE identity, the UE shall not transmit an HS-SICH. If the UE is configured with a dedicated UE identity, but the HS-SCCH is an uplink synchronization establishment order, then its associated HS-SICH shall not be transmitted. Otherwise, the channel quality indication shall be transmitted on HS-SICH, and the HS-DSCH channel quality indication procedure is the same as that in CELL_DCH state of 1.28Mcps TDD, cf. 5.9.2.

- Schedules new transmissions and retransmissions:
  - When transmitting for a UE in CELL_DCH state the scheduler determines based on the status reports from HARQ Processes if either a new transmission or a retransmission should be made. A new transmission can however be initiated on a HARQ process at any time. Based on a delay attribute provided by upper layers, the scheduler may decide to discard any 'out-of-date' MAC-ehs SDU.
  - In FDD when transmitting for a UE in CELL_FACH state the scheduler determines based on RRM and IE "Transmitted Power Level" received on Iub FP the number of retransmission that should be made after new transmission. If HARQ feedback is configured, the scheduler may stop retransmission based on the status reports from HARQ processes. A new transmission can however be initiated on a HARQ process at any time. Based on a delay attribute provided by upper layers, the scheduler may decide to discard any 'out-of-date' MAC-ehs SDU.

- In 1.28Mcps TDD, when transmitting CCCH or DCCH with common H-RNTI for a UE in CELL_FACH state the scheduler determines based on RRM and IE "Transmitted Power Level" received on Iub FP the number of retransmission that should be made after new transmission. Based on a delay attribute provided by upper layers, the scheduler may decide to discard any 'out-of-date' MAC-ehs SDU.

- In 1.28Mcps TDD, When transmitting or retransmitting DCCH/DTCH with dedicated H-RNTI for a UE in CELL_FACH state, if In SYNC state is not indicated by physical layer as in [18], then the synchronization Command via HS-SCCH shall be sent to the UE firstly, the transmitting or retransmitting DCCH/DTCH shall not be initiated or resumed until In-SYNC state is detected as in [18]. The scheduler determines based on the status reports from HARQ Processes if either a new transmission or a retransmission should be made. Based on a delay attribute provided by upper layers, the scheduler may decide to discard any 'out-of-date' MAC-ehs SDU.

None.

7.1.5a.9.5 Test requirement

1. At step 4, SS sends a MAC-ehs PDU with erroneous CRC.
2. At step 6, SS sends a MAC-ehs PDU with correct CRC.
3. At step 7, SS receives the loop backed PDU.

7.1.5a.10 MAC-ehs data transmission with enhanced TS0 (1.28 Mcps TDD)

7.1.5a.10.1 Definition and applicability

All UEs which support HS-PDSCH and 1.28Mcps TDD and MAC-ehs and enhanced TS0.

7.1.5a.10.2 Conformance requirement

For 1.28 Mcps, the timeslots to be used for HS-PDSCH resources are signalled by the bits $x_{ts,1}$, $x_{ts,2}$, …, $x_{ts,5}$, where bit $x_{ts,n}$ carries the information for timeslot n+1. Timeslot 1 cannot be used for HS-DSCH resources. If the signalling bit is set (i.e. equal to 1), then the corresponding timeslot shall be used for HS-PDSCH resources. Otherwise, the timeslot shall not be used. All used timeslots shall use the same channelisation code set, as signalled by the channelisation code set information bits.

When indicated by the higher layer that Timeslot 0 can be used for HS-PDSCH, bit $x_{ts,1}$ carries the information for timeslot 0. If $x_{ts,1}$ is set (i.e. equal to 1), Timeslot 0 shall be used for HS-PDSCH resource. Otherwise, Timeslot 0 shall not be used.

Reference(s)

TS 25.222 clause 4.6.1.2.1

7.1.5a.10.3 Test purpose

To verify that the UE can receive the data transmitted in TS0 with MAC-ehs.

7.1.5a.10.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off cell1 configures 3 carrier frequency, one is primary frequency, other are secondary frequencies. The frequency relation show as below:

Parameter	Cell 1
UTRA RF Channel Number1	Ch. 1
UTRA RF Channel Number2	Ch. 2
UTRA RF Channel Number3	Ch.3

User Equipment:

UE in idle mode

Test procedure

a) The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 6.11.5.4.7.6 using condition A11 as specified in clause 9.1 of TS 34.108.

b) The SS closes the test loop using UE test loop mode 1 setting the UL RLC SDU size parameter to 39 octets (312 bits).

c) The SS transmits a MAC-ehs PDU in TS0.

d) The SS checks that the UE returned RLC SDUs has the same content as the first 312 bits of the test data sent by the SS in downlink.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	<--		RADIO BEARER SETUP (DCCH)	RRC. For the PS radio bearer the 'pdcp info' IE shall be omitted.
2	-->		RADIO BEARER SETUP COMPLETE (DCCH)	RRC

4	-->		CLOSE UE TEST LOOP COMPLETE (DCCH)	TC
5	<--		DOWNLINK MAC-ehs PDU	Send test data inTS0
6	-->		UPLINK RLC SDUs	The SS checks that the content of the received UL RLC SDUs are correct

Specific Message Contents

RADIO BEARER SETUP (Step 1)

Use the same message as specified for "Packet to CELL_DCH / E-DCH / HS-DSCH using three multiplexing options (3/3) and SRBs mapped on DCH/DCH" in 34.108 with the following exceptions:

Information Element	Value/remark
Downlink HS-PDSCH Information	Not Present
- CHOICE mode	TDD
- CHOICE *TDD option*	1.28 Mcps
- TS0 Indicator	TRUE
Multi-frequency Info	
- Second Frequency Info	UTRA RF Channel Number2

7.1.5a.10.5 Test requirements

In step6 the UE shall return a UL RLC SDUs with the same content as the first 312 bits of the test data sent by the SS in downlink.

7.1.5b HS-SCCH Less Operation

7.1.5b.1 HARQ procedure for HS-SCCH less operation

7.1.5b.1.1 Definition and applicability

All UEs which support HS-SCCHless HS-DSCH.

7.1.5b.1.2 Conformance requirement

When the HS-SCCH less mode of operation is enabled, the UE shall be able to store 13 TTIs in a cyclic soft buffer.

For each received MAC-hs PDU provided by the lower layers the UE shall:

- If the associated HS-SCCH corresponds to an HS-SCCH less retransmission as defined in subclause 4.6A.2.1.2 of [16]:
  - if the data in the soft buffer identified by the TTI [5*CFN + subframe number - 6 – PTR]**mod** 13 has not been decoded successfully:
    - combine the received data with the data currently in the soft buffer identified by [5*CFN + subframe number - 6 – PTR]**mod** 13 where PTR is the value of the pointer to the previous transmission as defined in subclause 4.6A.2.1.2.1 of [16].
  - If the data in the soft buffer has been successfully decoded and no error was detected;
    - deliver the decoded MAC-hs PDU to the reordering entity;
    - generate a positive acknowledgement (ACK) of the data corresponding to this TTI.
  - else:
    - place the combined data for the HS-SCCH less TTI in the soft buffer identified by [5*CFN + subframe number]**mod** 13, replacing any data previously stored in that buffer.
  - generate a negative acknowledgement (NACK) of the data corresponding to this TTI.
- Else if the associated HS-SCCH corresponds to a HS-SCCH type 1 as defined in subclause 4.6 of [16];
  - process the received MAC-hs PDU provided by the lower layers as per subclause 11.6.2.2.
- Else;
  - If the data has been successfully decoded and no error was detected;
    - deliver the decoded MAC-hs PDU to the reordering entity;
    - generate a positive acknowledgement (ACK) of the data corresponding to this TTI.
  - else
  - place the data for the HS-SCCH less TTI in the soft buffer identified by [5*CFN + subframe number]**mod** 13, replacing any data previously stored in that buffer.

Reference(s)

TS 25.321 clauses 11.6.2.7

7.1.5b.1.3 Test purpose

To verify that

1. UE is able to operate in HS-SCCH less mode of operation..
2. When multiple transport block sizes are configured, UE is able to decode the Transport block correctly on first Transmission.
3. UE is able to combine data in soft buffer and data received and decode combined data.

4. UE does not transmit NACK for HS-SCCH less mode of operation

7.1.5b.1.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

The SS establishes the reference radio bearer configuration Streaming or interactive or background / UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] / UM PS RAB + UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] SRBs for DCCH on E-DCH and HS-DSCH, as specified in TS 34.108, clause 6.11.4i.1 with the logical channel, MAC-hs queue identity set to:

Logical Channel ID	Mac-hs Queue ID	Comment
7	0	RB5

The following parameters are specific for this test case:

Parameter	Value
DTX_DRX_STATUS	FALSE
HS-SCCH less information	
- HS-PDSCH Code Index	14
- Transport Block Size List	4 elements
- Transport Block Size Index	20 [365, sufficient for one MAC-hs SDU 0f 336 + MAC-hs header of 21]
- HS-PDSCH Second Code Support	FALSE
- Transport Block Size Index	48 [699, sufficient for 2 MAC-hs SDU of 336 + MAC-hs header of 21]
- HS-PDSCH Second Code Support	FALSE
- Transport Block Size Index	70[1036, sufficient for 3 MAC-hs SDU of 336 + MAC-hs header of 21]
- HS-PDSCH Second Code Support	TRUE
- Transport Block Size Index	86 [1380, sufficient for 4 MAC-hs SDU of 336 + MAC-hs header of 21]
- HS-PDSCH Second Code Support	TRUE

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to 39 octets.

Test procedure

In this test procedure each MAC-hs PDU contains one RLC PDU carrying one SDU of size 39 octets and one length indicator indicating the end of the SDU.

a) The SS transmits a MAC-hs PDU where:

1. The TSN = 0
2. The MAC-hs PDU contains a RLC PDU with SN=0.

Using HS-SCCH less mode of operation.

b) The SS checks that a Positive acknowledgement is received and RLC PDUis loop backed by UE

c) The SS transmits a MAC-hs PDU where:

1. The TSN = 1

2. The MAC-hs PDU contains 2 RLC PDU's with SN=1&2.

3. The physical layer CRC is modified such that the CRC check in the UE will fail

The MAC-hs PDU is transmitted in a CFN, Subframe number such that by [5*CFN + subframe number]**mod** 13 = X, using HS-SCCH less mode of operation.

d) The SS checks that no negative acknowledgement is received and no RLC PDU loop backed by UE

e) The SS re-transmits a MAC-hs PDU with the same content as in step c) but where the CRC is correct, using HS-SCCH Type-2, in next available CFN & subframe satisfying [5*CFN + subframe number - 6 – PTR]**mod** 13=X as in step c.

f) The SS checks that a positive acknowledgement is received and RLC PDU's for SN 1,2 are loop backed by UE.

g) The SS transmits a MAC-hs PDU where:

1. The TSN = 2

2. The MAC-hs PDU contains 3 RLC PDU's with SN=3,4&5.

3. The physical layer CRC is modified such that the CRC check in the UE will fail

The MAC-hs PDU is transmitted in a CFN, Subframe number such that by [5*CFN + subframe number]**mod** 13 = X, using HS-SCCH less mode of operation.

h) The SS checks that no negative acknowledgement is received and no RLC PDU loop backed by UE

i) The SS re-transmits a MAC-hs PDU with the same content as in step g) again with an incorrect CRC, using HS-SCCH Type-2, in next available CFN & subframe satisfying [5*CFN + subframe number - 6 – PTR]**mod** 13=X as in step g [second transmission]. Further [5*CFN + subframe number]**mod** 13 = Y.

j) The SS checks that a negative acknowledgement is received and no RLC PDU loop backed by UE.

k) The SS re-transmits a MAC-hs PDU with the same content as in step g) but where the CRC is correct, using HS-SCCH Type-2, in next available CFN & subframe satisfying [5*CFN + subframe number - 6 – PTR]**mod** 13=Y as in step i[final transmission].

l) The SS checks that a positive acknowledgement is received and RLC PDU's for SN 3,4,5 are loop backed by UE.

m) The SS repeats steps g to l, with TSN=3 and MAC-hs PDU consisting of 4 RLC PDU's with SN=6,7,8&9

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		MAC-hs PDU containing one RLC PDU with SN=0	HS-SCCH Less operation
2	->		MAC-hs ACK	
3	->		RLC Loop Backed PDU with SN=0	
4	←		MAC-hs PDU containing 2 RLC PDU's with SN=1&2	Erroneous CRC, [5*CFN + subframe number]**mod** 13 = X
5				SS checks no MAC-hs negative acknowledgement or loop backed data is received
6	←		MAC-hs PDU containing 2 RLC PDU's with SN=1&2	First Transmission, Correct CRC, [5*CFN + subframe number - 6 – PTR]**mod** 13=X [second transmission]
7	→		MAC-hs positive acknowledgement	
8	→		RLC Loop Backed PDU's with SN=1&2	
9	←		MAC-hs PDU containing 3 RLC PDU's with SN=3,4&5	Erroneous CRC, [5*CFN + subframe number]**mod** 13 = X
10				SS checks no MAC-hs negative acknowledgement or loop backed data is received
11	←		MAC-hs PDU containing 3 RLC PDU's with SN=3,4&5	Second Transmission, Erroneous CRC, [5*CFN + subframe number - 6 – PTR]**mod** 13=X [second transmission] Further [5*CFN + subframe number]**mod** 13 = Y
12	→		MAC-hs negative acknowledgement	
13	←		MAC-hs PDU containing 3 RLC PDU's with SN=3,4&5	Third Transmission, Correct CRC, [5*CFN + subframe number - 6 – PTR] **mod** 13 = Y [Final transmission]
14	→		MAC-hs positive acknowledgement	
15	→		RLC Loop Backed PDU's with SN=3,4&5	
16	←		MAC-hs PDU containing 4 RLC PDU's with SN=6,7,8&9	Erroneous CRC, [5*CFN + subframe number] **mod** 13 = XX
17				SS checks no MAC-hs negative acknowledgement or loop backed data is received
18	←		MAC-hs PDU containing 4 RLC PDU's with SN=6,7,8&9	Second Transmission, Erroneous CRC, [5*CFN + subframe number - 6 – PTR]**mod** 13=XX [second transmission] Further [5*CFN + subframe number]**mod** 13 = YY *Note
19	→		MAC-hs negative acknowledgement	
20	←		MAC-hs PDU containing 4 RLC PDU's with SN=6,7,8&9	Third Transmission, Correct CRC, [5*CFN + subframe number - 6 – PTR]**mod** 13=YY [Final transmission] *Note
21	→		MAC-hs positive acknowledgement	
22	→		RLC Loop Backed PDU's with SN=6,7,8&9	
Note: the CRC calculations made in steps 16, 18 &20 [9, 11 & 13] is in such a way that, it will result in CRC error in steps 16 & 18 [9 & 11] and no CRC error in step 20 [13], after combination of new data in step 20 [13] and stored data in UE after step 18[11].				

Specific Message Contents

None

7.1.5b.1.5 Test requirements

1. After steps 11 & 18, a MAC-hs negative acknowledgement shall be received.
2. After steps 1, 6, 13 & 20, a MAC-hs Positive acknowledgement shall be received
3. After steps 4, 9 & 16 no MAC-hs NACK shall be received by SS.
4. After step 1, RLC Loop Backed PDU with SN=1 is received.
5. After step 6, RLC Loop Backed PDU's with SN=2 & 3 is received
6. After step 13, RLC Loop Backed PDU's with SN=4, 5 & 6 are received
7. After step 20, RLC Loop Backed PDU's with SN=7, 8, 9 & 10 are received

7.1.5c HS-DSCH SPS Operation

7.1.5c.1 HARQ procedure for HS-DSCH SPS operation

7.1.5c.1.1 Definition and applicability

All UEs which support 1.28Mcps TDD and SPS operation.

7.1.5c.1.2 Conformance requirement

When the HS-DSCH SPS operation is enabled, the UE shall maintain cyclic virtual IR buffers with number of N where N is configured by higher layer as in [7]. And the value tagged to the virtual IR buffers should be all set to NULL.

For each received MAC-hs PDU provided by the lower layers the UE shall:

- If the associated HS-SCCH corresponds to an HS-SCCH SPS retransmission as defined in subclause 4.6C of [19]:
  - if the data in the virtual IR buffer tagged with the value [2*CFN + subframe number - 4 – PTR] mod 512 has not been decoded successfully:
    - combine the received data with the data currently in the virtual IR buffer tagged with the value [2*CFN + subframe number - 4 - PTR] mod 512, where PTR is the value of the pointer to the previous transmission as defined in subclause 4.6C of [19].
  - If the data in the virtual IR buffer has been successfully decoded and no error was detected:
    - deliver the decoded MAC-hs PDU to the reordering entity;
    - generate a positive acknowledgement (ACK) of the data corresponding to this TTI;
      - tag the virtual IR buffer with the value NULL.
  - else:
    - generate a negative acknowledgement (NACK) of the data corresponding to this TTI;
    - tag the virtual IR buffer with the value [2*CFN + subframe number].
  - else:
    - generate a positive acknowledgement (ACK) of the data corresponding to this TTI;
    - discard the received data.
- Else if the associated HS-SCCH corresponds to a HS-SCCH as defined in subclause 4.6 of [19]:
  - process the received MAC-hs PDU provided by the lower layers as per subclause 11.6.2.2.

- Else if the TTI is allocated to the UE with HS-DSCH SPS resources:
  - if there is virtual IR buffer of which the tagged value is set to NULL:
    - place the received data for the HS-DSCH SPS TTI in any of the virtual IR buffers of which the tagged value is set to NULL.
  - else:
    - place the received data for the HS-DSCH SPS TTI in the virtual IR buffer which contains the oldest MAC-hs PDU, replacing any data previously stored in this buffer.
  - If the received data has been successfully decoded and no error was detected;
    - deliver the decoded MAC-hs PDU to the reordering entity;
    - generate a positive acknowledgement (ACK) of the data corresponding to this TTI;
    - tag the virtual IR buffer with the value NULL.
  - else:
    - generate a negative acknowledgement (NACK) of the data corresponding to this TTI;
    - tag the virtual IR buffer with the value [2*CFN + subframe number].
- For the data stored in each virtual IR buffer of which the tagged value is not set to NULL, if the time waiting for retransmission has been longer than 4+PTRmax TTIs, where PTRmax is the maximum value that can be indicated by PTR:
  - tag the virtual IR buffer with the value NULL.

Reference(s)

TS 25.321 clauses 11.6.2.8

7.1.5c.1.3 Test purpose

To verify that

1. UE is able to operate in SPS operation..
2. UE is able to decode the Transport block correctly on first Transmission.
3. UE is able to combine data in soft buffer and data received and decode combined data.

7.1.5c.1.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

The SS establishes the reference radio bearer configuration Streaming or interactive or background / UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] / PS RAB + UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] SRBs for DCCH on E-DCH and HS-DSCH, as specified in TS 34.108, clause 6.11.5.4.7.4 with the logical channel, MAC-hs/MAC-ehs queue identity set to:

Logical Channel ID	Mac-hs Queue ID	Comment
7	0	RB5

The following parameters are specific for this test case:

Parameter	Value
CONTROL_CHANNEL_DRX_STATUS	FALSE
Transport Block Size List	1 element
- Transport Block Size Index	9 [sufficient for one MAC-hs SDU 0f 336 + MAC-hs header of 21]
HARQ Info for Semi-Persistent Scheduling	
- Number of Processes	8
- Process Memory size	hms6400

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to 39 octets.

Test procedure

In this test procedure each MAC-hs PDU contains one RLC PDU carrying one SDU of size 39 octets and one length indicator indicating the end of the SDU.

a) The SS transmits a MAC-hs PDU where:

1. The TSN = 0
2. The MAC-hs PDU contains a RLC PDU with SN=0.

Using HS-DSCH SPS resource.

b) The SS checks that a Positive acknowledgement is received and RLC PDU is loop backed by UE

c) The SS transmits a MAC-hs PDU where:

1. The TSN = 1
2. The MAC-hs PDU contains 1 RLC PDU with SN=1.
3. The physical layer CRC is modified such that the CRC check in the UE will fail

The MAC-hs PDU is transmitted in a CFN, Subframe number such that by 2*CFN + subframe number =X, using HS-DSCH SPS resource.

d) The SS checks that a negative acknowledgement is received and no RLC PDU loop backed by UE

e) The SS re-transmits a MAC-hs PDU with the same content as in step c) but where the CRC is correct, using HS-SCCH Type-3, in next available CFN & subframe satisfying [2*CFN + subframe number - 4 – PTR] mod 512 = X as in step c.

f) The SS checks that a positive acknowledgement is received and RLC PDU's for SN 1 are loop backed by UE.

g) The SS transmits a MAC-hs PDU where:

1. The TSN = 2
2. The MAC-hs PDU contains 2 RLC PDU's with SN=2.

3. The physical layer CRC is modified such that the CRC check in the UE will fail

The MAC-hs PDU is transmitted in a CFN, Subframe number such that by 2*CFN + subframe number = X, using HS-DSCH SPS operation.

h) The SS checks that a negative acknowledgement is received and no RLC PDU loop backed by UE

i) The SS re-transmits a MAC-hs PDU with the same content as in step g) again with an incorrect CRC, using HS-SCCH Type-3, in next available CFN & subframe satisfying [2*CFN + subframe number - 4 – PTR] mod 512 = X as in step g [second transmission]. Further 2*CFN + subframe number = Y.

j) The SS checks that a negative acknowledgement is received and no RLC PDU loop backed by UE.

k) The SS re-transmits a MAC-hs PDU with the same content as in step g) but where the CRC is correct, using HS-SCCH Type-3, in next available CFN & subframe satisfying [2*CFN + subframe number - 4 – PTR] mod 512 = Y as in step i[final transmission].

l) The SS checks that a positive acknowledgement is received and RLC PDU for SN 3 is loop backed by UE.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		MAC-hs PDU containing one RLC PDU with SN=0	SPS operation
2	->		MAC-hs ACK	
3	->		RLC Loop Backed PDU with SN=0	
4	←		MAC-hs PDU containing one RLC PDU with SN=1	Erroneous CRC, 2*CFN + subframe number = X
5			MAC-hs negative acknowledgement	SS checks a MAC-hs negative acknowledgement
6	←		MAC-hs PDU containing one RLC PDU with SN=1	First Transmission, Correct CRC, [2*CFN + subframe number - 4 – PTR] mod 512 =X [second transmission]
7	→		MAC-hs positive acknowledgement	
8	→		RLC Loop Backed PDU's with SN=1	
9	←		MAC-hs PDU containing one RLC PDU with SN=2	Erroneous CRC, 2*CFN + subframe number = X
10			MAC-hs negative acknowledgement	SS checks a MAC-hs negative acknowledgement
11	←		MAC-hs PDU containing one RLC PDU's with SN=2	Second Transmission, Erroneous CRC, [2*CFN + subframe number - 4 – PTR] mod 512=X [second transmission] Further 2*CFN + subframe number = Y
12	→		MAC-hs negative acknowledgement	
13	←		MAC-hs PDU containing one RLC PDU with SN=2	Third Transmission, Correct CRC, [2*CFN + subframe number - 4 – PTR] mod 512 = Y [Final transmission]
14	→		MAC-hs positive acknowledgement	
15	→		RLC Loop Backed PDU's with SN=2	
Note: the CRC calculations made in steps 9, 11 & 13 is in such a way that, it will result in CRC error in steps 9 & 11 and no CRC error in step 13, after combination of new data in step 13 and stored data in UE after step 11.

7.1.6 E-DCH MAC-es/e

7.1.6.1 MAC-es/e multiplexing

7.1.6.1.1 MAC-es/e multiplexing without RRC restrictions

7.1.6.1.1.1 Definition and applicability

All UEs which support E-DCH.

7.1.6.1.1.2 Conformance requirement

From 25.321 clause 9.1.5:

In the case of E-DCH there are two MAC sublayers, MAC-e and MAC-es. MAC-es sits on top of MAC-e and receives PDUs directly from MAC-d. MAC-es SDUs (i.e. MAC-d PDUs) of the same size, coming from a particular logical channel can be multiplexed together into a single MAC-es payload. To this payload is prepended the MAC-es header (see subclause 9.2.4.1). The number of PDUs, as well as the DDI value identifying the logical channel, the MAC-d flow and the MAC-es SDU size are included as part of the MAC-e header. In case sufficient space is left in the E-DCH transport block or if Scheduling Information needs to be transmitted, an SI will be included at the end of the MAC-e PDU (see subclause 9.2.4.2). Multiple MAC-es PDUs, but only one MAC-e PDU can be transmitted in a TTI.

[…]

From 25.331 clause 8.6.5.18:

1> if the IE "E-DCH MAC-d flow multiplexing list" is included:

2> only multiplex MAC-d PDU’s from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU’s from E-DCH MAC-d flows with which multiplexing in the same MAC-e PDU is allowed in accordance to the IE "E-DCH MAC-d flow multiplexing list".

[…]

Reference(s)

TS 25.321 clause 9.1.5, TS 25.331 clause 8.6.5.18

7.1.6.1.1.3 Test purpose

The purpose of this test case is to verify that the UE multiplexes data from different logical channels in the same TTI when no restriction on the multiplexing is configured by RRC.

7.1.6.1.1.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 6.11.4d(FDD) /6.11.5.4.7.7(1.28Mcps TDD) using condition A15(FDD) /A14(1.28Mcps TDD) as specified in clause 9.1 of TS 34.108. The logical channel, transport channel and queue identities are set to:

Logical Channel ID	MAC-d flow (UL)	Priority	Comment
7 (LCH1)	2	1	RB25
8 (LCH2)	3	2	RB17
Note: The RAB combination also includes SRBs on E-DCH on MAC-d flow 1 which is not used in the testcase			

The following parameters are specific for this test case:

Parameter	Value
Periodicity for Scheduling Info – no grant	500 ms (see 25.331 10.3.6.99) (FDD)
T-WAIT	200 ms (see 25.331 10.3.6.103)(1.28Mcps TDD)
E-DCH MAC-d flow multiplexing list	11111111 (See 25.331 10.3.5.1b) Note 1
Note 1: This configuration means that all MAC-d flows can be multiplexed in the same TTI	

The UE is placed into UE test loop mode 1 with the UL SDU size set to 39 octets for RB25 and RB17.

Test procedure

The UE is configured with two logical channels, LCH1 (with priority 1) and LCH2 (with priority 2). LCH1 is mapped to MAC-d flow 2 and LCH2 is mapped to MAC-d flow 3.

a) The SS has not issued any scheduling grants for E-DCH to the UE

b) The SS transmits one SDU of size 40 bytes (plus 1 byte RLC length indicator) on LCH2

c) The SS transmits one SDU of size 40 bytes (plus 1 byte RLC length indicator) on LCH1

d) The SS waits for an SI to be received that indicates that data is available on both logical channels (can be identified from the content of the SI)

e) The SS issues an absolute grant that allows the UE to send with a high rate (signalling value 10, allowing a rate well above 2 SDUs/TTI)

f) The SS waits until data is received and verifies that data from the two LCHs is received in the same TTI

NOTE: The UE may send an SI after step 1 but this SI would only indicate data on LCH2. This SI will be ignored.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		1 RLC PDU on LCH 2	
2	←		1 RLC PDU on LCH 1	
3	→		Potential SI indicating data on LCH 2	This SI is ignored by the SS
4	→		SI indicating data on LCH 1 and LCH 2	This can be verified from the indicated fraction of data on LCH1
5	←		Absolute grant allowing UE to transmit on E-DCH	This grant must be sufficiently high to allow a rate corresponding to at least 2 RLC PDUs/TTI, signalling value 10
6	→		MAC e/es PDU containing 1 RLC PDU on LCH 1 and one RLC PDU on LCH 2	

Specific Message Contents

None

7.1.6.1.1.5 Test requirements

1. After step 2 the SS shall receive an SI indicating that data is available on LCH 1 and LCH 2 but no RLC PDUs shall be received

2. In step 6, the SS shall receive 1 RLC PDU on LCH 1 and one RLC PDU on LCH 2 in the same TTI

7.1.6.1.2 MAC-es/e multiplexing with RRC restrictions

7.1.6.1.2.1 Definition and applicability

All UEs which support E-DCH.

7.1.6.1.2.2 Conformance requirement

From 25.321 clause 9.1.5:

In the case of E-DCH there are two MAC sublayers, MAC-e and MAC-es. MAC-es sits on top of MAC-e and receives PDUs directly from MAC-d. MAC-es SDUs (i.e. MAC-d PDUs) of the same size, coming from a particular logical channel can be multiplexed together into a single MAC-es payload. 7.1.6.1.2.3 Test purpose

The purpose of this test case is to verify that the UE does not multiplex data from different logical channels in the same TTI when the multiplexing has been restricted by RRC.

7.1.6.1.2.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 6.11.4d(FDD) /6.11.5.4.7.7(1.28Mcps TDD) using condition A15(FDD) /A14(1.28Mcps TDD) as specified in clause 9.1 of TS 34.108.The logical channel, transport channel and queue identities are set to:

Logical Channel ID	MAC-d flow (UL)	Priority	Comment
7 LCH1)	2	1	RB25
8 (LCH2)	3	2	RB17
Note: The RAB combination also includes SRBs on E-DCH on MAC-d flow 1 which is not used in the test case			

The following parameters are specific for this test case:

Parameter	Value
Periodicity for Scheduling Info – no grant	500 ms (see 25.331 10.3.6.99) (FDD)
T-WAIT	200 ms (see 25.331 10.3.6.103)(1.28Mcps TDD)
E-DCH MAC-d flow multiplexing list	00000000 (See 25.331 10.3.5.1b) Note 1
Note 1: This configuration means that no multiplexing is allowed	

The UE is placed into UE test loop mode 1 with the UL SDU size set to 39 octets for RB25 and RB17.

Test procedure

The UE is configured with two logical channels, LCH1 (with priority 1) and LCH2 (with priority 2). LCH1 is mapped to MAC-d flow 2 and LCH2 is mapped to MAC-d flow 3.

a) The SS has not issued any scheduling grants for E-DCH to the UE

b) The SS transmits one SDU of size 40 bytes (plus 1 byte RLC length indicator) on LCH2

c) The SS transmits one SDU of size 40 bytes (plus 1 byte RLC length indicator) on LCH1

d) The SS waits for an SI to be received that indicates that data is available on both logical channels (can be identified from the content of the SI)

e) The SS issues an absolute grant that allows the UE to send with a high rate (signalling value 10, allowing rates well above 2 SDUs/TTI)

f) The SS waits until data is received and verifies that only data from LCH1 is received in the first TTI

g) The SS verifies that data from LCH2 is received (in a separate TTI from the data from LCH1)

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		1 RLC PDU on LCH 2	
2	←		1 RLC PDU on LCH 1	
3	→		Potential SI indicating data on LCH 2	This SI is ignored by the SS
4	→		SI indicating data on LCH 1 and LCH 2	This can be verified from the indicated fraction of data on LCH1
5	←		Absolute grant allowing UE to transmit on E-DCH	This grant must be sufficiently high to allow a rate corresponding to at least 2 RLC PDUs/TTI, signalling value 10
6	→		MAC e/es PDU containing 1 RLC PDU on LCH 1	
7	→		MAC e/es PDU containing 1 RLC PDU on LCH 2	

Specific Message Contents

7.1.6.1.2.5 Test requirements

1. After step 2 the SS shall receive an SI indicating that data is available on LCH 1 and LCH 2 but no RLC PDUs shall be received

2. In step 6, the SS shall receive 1 RLC PDU on LCH 1 but no data from LCH 2

3. In step 7, the SS shall receive 1 RLC PDU on LCH 2 but no data from LCH 1

7.1.6.1.3 Correct settings of MAC-es/e header fields

7.1.6.1.3.1 Definition and applicability

All UEs which support E-DCH.

7.1.6.1.3.2 Conformance requirement

Extract from 25.321:

[…]

- Transmission Sequence Number (TSN):
  The TSN field provides the transmission sequence number for the MAC-es PDU. This information is used for reordering purposes to support in-sequence delivery to higher layers. The length of the TSN field is 6 bits.

[…]

- For FDD: Data description indicator (DDI):
  The DDI field identifies the logical channel, MAC-d flow and size of the MAC-d PDUs concatenated into the associated MAC-es PDU. The mapping between the DDI values and the logical channel ID, MAC-d flow and PDU size is provided by higher layers. The length of the DDI field is 6 bits. When, due to the quantization in the transport block sizes that can be supported or triggering of the Scheduling Information, the size of the data plus header is less than or equal to the TB size of the E-TFC selected by the UE minus 24 bits, the DDI value [111111] shall be appended at the end of the MAC-e header and a Scheduling Information shall be concatenated into this MAC-e PDU, where DDI value [111111] indicates that there is a Scheduling Information concatenated in this MAC-e PDU. Otherwise, if the size of the data plus header is less than or equal to the TB size of the E-TFC selected by the UE minus 18 bits, a Scheduling Information shall be concatenated into this MAC-e PDU. In any other case it is understood that another MAC-es PDU or Scheduling Information does not fit and it is therefore not necessary to reserve room in the transport block for an additional DDI field.

- For TDD: When, due to the quantization in the transport block sizes that can be supported or triggering of the Scheduling Information (due to timer expiry, see subclauses 11.9.1.4a and 11.9.1.5), the size of the data plus header is less than or equal to the TB size of the E-TFC selected by the UE minus 29bits, the DDI value [111111] shall be appended at the end of the MAC-e header and a Scheduling Information shall be concatenated into this MAC-e PDU, where DDI value [111111] indicates that there is a Scheduling Information concatenated in this MAC-e PDU. Otherwise, if the size of the data plus header is less than or equal to the TB size of the E-TFC selected by the UE minus 23 bits, a Scheduling Information shall be concatenated into this MAC-e PDU. In any other case it is understood that another MAC-es PDU or Scheduling Information does not fit and it is therefore not necessary to reserve room in the transport block for an additional DDI field.

- Number of MAC-d PDUs (N):
  The number of consecutive MAC-d PDUs corresponding to the same DDI value. The length of the N field is 6 bits.

Reference(s)

TS 25.321 clauses 9.2.4.1, 9.2.4.2

7.1.6.1.3.3 Test purpose

The purpose of this test case is to verify that the UE sets the MAC-es/e header fields in a correct way.

7.1.6.1.3.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 6.11.4d(FDD) /6.11.5.4.7.7(1.28Mcps TDD) using condition A15(FDD) /A14(1.28Mcps TDD) as specified in clause 9.1 of TS 34.108. The logical channel, transport channel and queue identities are set to:

Logical Channel ID	MAC-d flow (UL)	Priority	Comment
7 (LCH1)	2	1	RB25
8 (LCH2)	3	2	RB17
Note: The RAB combination also includes SRBs on E-DCH on MAC-d flow 1 which is not used in the testcase			

The following parameters are specific for this test case:

Parameter	Value
Periodicity for Scheduling Info – no grant	500 ms (see 25.331 10.3.6.99) (FDD)
T-WAIT	200 ms (see 25.331 10.3.6.103)(1.28Mcps TDD)
E-DCH MAC-d flow multiplexing list	11111111 (See 25.331 10.3.5.1b) Note 1
Note 1: This configuration means that all MAC-d flows can be multiplexed in the same TTI	

The UE is placed into UE test loop mode 1 with the UL SDU size set to 39 octets for RB25 and RB17.

Test procedure

The UE is configured with two logical channels, LCH1 (with priority 1) and LCH2 (with priority 2). LCH1 is mapped to MAC-d flow 2 and LCH2 is mapped to MAC-d flow 3.

a) The SS has not issued any scheduling grant for E-DCH to the UE

b) The SS transmits 4 SDUs of size 40 bytes (plus 1 byte RLC length indicator) on LCH2

c) The SS issues an absolute grant that allows the UE to send with a high rate (signalling value 10, allowing rates well above 5 SDUs/TTI)

d) The SS waits until data is received and checks the values of the header parameters

e) The SS removes the scheduling grant for E-DCH for the UE

f) The SS transmits three SDUs of size 40 bytes (plus 1 byte RLC length indicator) on LCH2

g) The SS transmits two SDU of size 40 bytes (plus 1 byte RLC length indicator) on LCH1

h) The SS issues an absolute grant that allows the UE to send with a high rate (signalling value 10, allowing rates well above 5 SDUs/TTI)

i) The SS waits until data is received and checks the values of the header parameters

j) The SS transmits two SDUs of size 40 bytes (plus 1 byte RLC length indicator) on LCH2

k) The SS waits until data is received and checks the values of the header parameters

Expected sequence

Step	Direction		Message	Comments
	UE	SS		

1	←	4 RLC PDUs on LCH 2	
2	→	SI indicating data on LCH 2	
3	←	Absolute grant allowing UE to transmit on E-DCH	This grant must be sufficiently high to allow a rate corresponding to at least 5 RLC PDUs/TTI, signalling value 10

7.1.6.1.3.5 Test requirements

1. After step 4, the SS shall receive 1 MAC-es PDU shall be received where:
   - The TSN is set to 0, DDI is set to 6 and N is set to 4
2. After step 10, the SS shall receive 2 MAC-es PDUs shall be received where:
   - For MAC-es PDU 1: The TSN is set to 0, DDI is set to 5 and N is set to 2
   - For MAC-es PDU 2: The TSN is set to 1, DDI is set to 6 and N is set to 3
3. After step 12, the SS shall receive 1 MAC-es PDU where:
   - The TSN is set to 2, DDI is set to 6 and N is set to 2

7.1.6.2 MAC-es/e – Scheduling

7.1.6.2.1 Correct settings of MAC-es/e scheduling information

7.1.6.2.1.1 Definition and applicability

All UEs which support E-DCH.

7.1.6.2.1.2 Conformance requirement

Extract From 25.321 clause 9.2.5.3.2:

This information includes the following fields:

The Scheduling Information shall not be transmitted if the Total E-DCH Buffer Status is zero, even if it was triggered by one of the configured triggering mechanisms.

[…]

If data with higher priority than the data already in the transmission buffer arrives, the transmission of a Scheduling Information shall be triggered.

[…]

- Highest priority Logical channel ID (HLID):
  The HLID field identifies unambiguously the highest priority logical channel with available data. If multiple logical channels exist with the highest priority, the one corresponding to the highest buffer occupancy will be reported. The length of the HLID is 4 bits. In case the TEBS is indicating index 0 (0 bits), the HLID shall indicate the value "0000".

- Fields related to amount of available data:

- Total E-DCH Buffer Status (TEBS):
  The TEBS field identifies the total amount of data available across all logical channels for which reporting has been requested by the RRC. The length of this field is 5 bits. The values taken by TEBS are shown in [Ts 25.321] Table 9.2.5.3.2.1.

- Highest priority Logical channel Buffer Status (HLBS):
  The HLBS field indicates the amount of data available from the logical channel identified by HLID, relative to the highest value of the buffer size range reported by TEBS when the reported TEBS index is not 31, and relative to 50000 bits when the reported TEBS index is 31. The length of HLBS is 4 bits. The values taken by HLBS are shown in [TS 25.321] table 9.2.5.3.2.2. In case the TEBS field is indicating index 0 (0 bits), the HLBS field shall indicate index 0.

[…]

Extract From 25.321 clause 9.2.4.2:

- Data description indicator (DDI):
  The DDI field identifies the logical channel, MAC-d flow and size of the MAC-d PDUs concatenated into the associated MAC-es PDU. The mapping between the DDI values and the logical channel ID, MAC-d flow and PDU size is provided by higher layers. The length of the DDI field is 6 bits.

- For FDD: When, due to the quantization in the transport block sizes that can be supported or triggering of the Scheduling Information, the size of the data plus header is less than or equal to the TB size of the E-TFC selected by the UE minus 24 bits, the DDI value [111111] shall be appended at the end of the MAC-e header and a Scheduling Information shall be concatenated into this MAC-e PDU, where DDI value [111111] indicates that there is a Scheduling Information concatenated in this MAC-e PDU. Otherwise, if the size of the data plus header is less than or equal to the TB size of the E-TFC selected by the UE minus 18 bits, a Scheduling Information shall be concatenated into this MAC-e PDU. In any other case it is understood that another MAC-es PDU or Scheduling Information does not fit and it is therefore not necessary to reserve room in the transport block for an additional DDI field.

- For TDD: When, due to the quantization in the transport block sizes that can be supported or triggering of the Scheduling Information (due to timer expiry, see subclauses 11.9.1.4a and 11.9.1.5), the size of the data plus header is less than or equal to the TB size of the E-TFC selected by the UE minus 29bits, the DDI value [111111] shall be appended at the end of the MAC-e header and a Scheduling Information shall be concatenated into this MAC-e PDU, where DDI value [111111] indicates that there is a Scheduling Information concatenated in this MAC-e PDU. Otherwise, if the size of the data plus header is less than or equal to the TB size of the E-TFC selected by the UE minus 23 bits, a Scheduling Information shall be concatenated into this MAC-e PDU. In any other case it is understood that another MAC-es PDU or Scheduling Information does not fit and it is therefore not necessary to reserve room in the transport block for an additional DDI field.

[…]

Extract From 25.321 clause 9.2.6.3:

This control information is used by UEs to indicate to the Node B the amount of resources they require. Scheduling Information is sent via the E-PUCH in the MAC-e header when the UE is granted resource and by the E-RUCCH when no resource has been granted. Scheduling Information consists of three components as defined in subclause 9.2.6.3.3.

- Buffer Information: This consists of:

  - Highest priority Logical Channel (HLID)

  - Total E-DCH Buffer Status (TEBS)

  - Highest priority Logical channel Buffer Status (HLBS)

- UE Power Headroom (UPH): The UPH field indicates the ratio of the maximum UE transmission power and the calculated UE transmit power defined as in [18] that would result for β_e equal to 0. The length of UPH is 5 bits.

- Serving and Neighbour Cell Pathloss (SNPL): This may be used by the Node-B to assist with its estimation of the degree of inter cell interference each UE will generate and hence the absolute grant power value and physical resources to assign . The length of SNPL is 5 bits.

The length of TEBS field is 5 bits, the values taken by TEBS are shown in Table 9.2.5.3.2-1. The length of HLBS is 4 bits, the values taken by HLBS are shown in table 9.2.5.3.2-2.

The Scheduling Information message is represented in figure 9.2.6.3-1.

SNPL (5 bits)	UPH (5 bits)	TEBS (5 bits)	HLBS (4 bits)	HLID (4 bits)

Figure 9.2.6.3.-1: Scheduling Information format

If Scheduling Information is sent via the E-RUCCH then the E-RNTI is also sent via the E-RUCCH, as shown by Figure 9.2.6.3-2:

Scheduling Information (23 bits)	E-RNTI (16 bits)

Figure 9.2.6.3-2: Format of information sent on E-RUCCH

-

[…]

Scheduling information reports will be triggered differently depending on the value of the variable Serving_Grant after the Serving Grant Update function. The triggering of a report shall be indicated to the E-TFC selection function at the first new transmission opportunity (this process may be delayed in case the HARQ processes are occupied with re-transmissions).

Extract From 25.321 clause 11.9.1.5:

[…]

If a UE has no Grant and the TEBS becomes larger than zero, the transmission of Scheduling Information shall be triggered via E-RUCCH.

If the UE has a Grant, the scheduling information needs to be included in the MAC-e PDU according to subclause 9.2.4.2, and it shall be transmitted regardless of TEBS status. Additional timer mechanism is used to avoid long pause duration of scheduling information reporting (period defined by RRC and set the same value as below T_WAIT). When the scheduling information is included in MAC-e PDU and sent, the timer will be reset and restarted immediately; when the timer expires, scheduling information shall be sent in a new MAC-e PDU.

RRC can configure MAC with a delay timer to be used when the UE transits from having a Grant to not having a Grant and the TEBS is still larger than zero. The delay timer T_WAIT shall be started once the Grant expires and shall be stopped and reset when a Grant is received. When T_WAIT expires, the transmission of a Scheduling Information shall be triggered via E-RUCCH (T_WAIT shall be stopped and reset).

7.1.6.2.1.3 Test purpose

The purpose of this test case is to verify that the UE sends the E-DCH scheduling information with correct content and with correct triggers.

7.1.6.2.1.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 6.11.4d(FDD) /6.11.5.4.7.7(1.28Mcps TDD) using condition A15(FDD) /A14(1.28Mcps TDD) as specified in clause 9.1 of TS 34.108. The logical channel, transport channel and queue identities are set to:

Logical Channel ID	MAC-d flow (UL)	Priority	Comment
7 (LCH1)	2	1	RB25
8 (LCH2)	3	2	RB17
Note: The RAB combination also includes SRBs on E-DCH on MAC-d flow 1 which is not used in the testcase			

The following parameters are specific for this test case:

Parameter	Value
Periodicity for Scheduling Info – no grant	500 ms (see 25.331 10.3.6.99) (FDD)
Periodicity for Scheduling Info – grant	100ms (FDD)
T-WAIT	200 ms (see 25.331 10.3.6.103)(1.28Mcps TDD)
T-RUCCH	600 ms (see 25.331 10.3.6.103)(1.28Mcps TDD)
E-DCH MAC-d flow multiplexing list	11111111 (See 25.331 10.3.5.1b) Note 1
E-DCH Transport Block Size Table	0
Note 1: This configuration means that all MAC-d flows can be multiplexed in the same TTI	

The UE is placed into UE test loop mode 1 with the UL SDU size set to 39 octets for RB25 and RB17.

Test procedure

The UE is configured with two logical channels, LCH1 (with priority 1) and LCH2 (with priority 2). LCH1 is mapped to MAC-d flow 2 and LCH2 is mapped to MAC-d flow 3.

a) The SS has not issued any scheduling grant for E-DCH to the UE

b) The SS waits for at least 1000 ms and verifies that no SI is received

c) The SS transmits 1 SDU of size 40 bytes (plus 1 byte RLC length indicator) on LCH2

d) The SS waits until an SI is received at time **T0**

e) The SS waits until the next SI is received at time **T1** and checks the content

f) The SS transmits 1 SDU of size 40 bytes (plus 1 byte RLC length indicator) on LCH 1 at time **T2**

g) The SS waits until the next SI is received at time **T3** and checks the content

h) The SS issues an absolute grant that allows the UE to transmit 1 SDUs/TTI (absolute grant signalling value 4)

i) The SS waits until all data has been received

j) The SS removes the scheduling grant for the UE

k) The SS transmits 24 SDUs of size 40 bytes (plus 1 byte RLC length indicator) on LCH 1

l) The SS issues an absolute grant that allows the UE to transmit 1 SDUs/TTI (absolute grant signalling value 4)

m) The SS waits until the next SI is received with payload at time **T4**

n) The SS waits until the next SI is received with payload at time **T5**

o) The SS waits until all data is received

p) Void

q) The SS issues an absolute grant that allows the UE to transmit 5 SDUs/TTI (absolute grant signalling value 8)

r) The SS transmits 5 SDU of size 40 bytes (plus 1 byte RLC length indicator) on LCH1

s) The SS waits until the 5 SDUs are received and checks that contain both a regular SI and the special DDI (value = 63) NOTE

NOTE: 5 336 bit PDUs and 18 bit Mac-e/es header require a TB size of 1698 bits. The nearest higher TB size is 1749, which easily holds an SI + the special length indicator.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	SS			After the radio bearer has been established the SS waits 1000 ms. No SI shall be received during this time
2	←		1 RLC PDUs on LCH 2	
3	→		SI indicating data on LCH 2	Time **T0**
4	→		SI indicating data on LCH 2	Time **T1**
5	←		1 RLC PDUs on LCH 1	Time **T2**
6	→		SI indicating data on LCH 1 and LCH 2	Time **T3.** Presence of data on LCH 1 and LCH 2 can be verified from the indicated fraction of data on LCH1
7	←		Absolute grant allowing the UE to transmit 1 RLC PDUs per TTI	Signalling value 4
8	→		Data on LCH 1 and LCH 2	
8a	←		Removal of absolute grant	Signalling value 1
9	←		24 RLC PDUs on LCH 1	
9a	←		Absolute grant allowing the UE to transmit 1 RLC PDUs per TTI	Signalling value 4
10	→		Data and SI	Time **T4**
11	→		Data only	
12	→		Data and SI	Time **T5**
13	→		Data only	
14	SS			After all data has been received, SS waits 1000ms. No SI shall be received during this time.
15	←		void	
16	→		void	
17	←		Absolute grant allowing the UE to transmit 5 RLC PDUs per TTI	Signalling value 8
18	←		5 RLC PDUs on LCH 1	
19	→		Data and SI	The received transport block shall in addition to the 5 PDUs contain a regular SI and the special DDI (value = 63). As there is no data left in buffers, TEBS is set as 0, HLID is set as '0000' and HLBS is set as 0.
NOTE 1: General timer tolerance as defined by 34.108 sub-clause 4.2.3 applies. NOTE 2: Step 10 and 11 can occur in any order. SS should accept these PDUs in any order and verify the time difference between T5 and T4 as per the test requirement.				

Specific Message Contents

None

7.1.6.2.1.5 Test requirements

1. In step 1 the SS shall not receive any SI since the UE buffer is empty
2. In step 3 the SS shall receive an SI (content ignored)
3. In step 4 the SS shall receive an SI indicating

- Total E-DCH Buffer Status (TEBS) Index = 6 (32 < TEBS ≤ 42).
- Highest priority Logical channel ID (HLID) = LCH 2.
- Highest Priority Logical Channel Buffer Status (HLBS) Index = 15 (82% < HLBS ≤ 100%).

4. In step 6 the SS shall receive an SI indicating
   - Total E-DCH Buffer Status (TEBS) Index = 9 (73 < TEBS ≤ 97).
   - Highest priority Logical channel ID (HLID) = LCH 1.
   - Highest Priority Logical Channel Buffer Status (HLBS) Index =11(37 < HLBS ≤ 45).
5. T1-T0 shall equal 500 ms
6. T3-T2 shall be less then 120 ms. Note 1.
7. T5-T4 shall equal 100ms
8. In step 14, the SS shall not receive any SI since the UE buffer is empty.
9. In step 19, the received transport block shall in addition to the payload include a regular SI and the special DDI (value = 63). TEBS, HLID and HLBS shall be set as zero.

NOTE 1. 120ms = 2 TTI(for Data to be transmitted from RLC to MAC) + Maximum UE test loop delay (10*TTI according to 34.109=100ms).

7.1.6.2.2 Happy bit setting

7.1.6.2.2.1 Definition and applicability

All UEs which support E-DCH.

7.1.6.2.2.2 Conformance requirement

The happy bit is a single bit field that is passed from MAC to the physical layer for inclusion on the E-DPCCH. This field takes two values, “Not Happy” and “Happy” indicating respectively whether the UE could use more resources or not. The setting of the Happy Bit is defined in subclause [TS 25.321] 11.8.1.5.

[…]

The Happy Bit is included on the E-DPCCH for every E-DCH transmission. E-DCH transmissions shall not be triggered specifically to allow the transmission of the happy bit.

RRC configures MAC with the duration Happy_Bit_Delay_Condition, over which to evaluate the current grant relative to the TEBS after application of the E-TFC selection procedure described in [TS 25.321] subclause 11.8.1.4.

For every E-DCH transmission, the Happy Bit shall be set to "unhappy" if the three following criteria are met:

1) UE is transmitting as much scheduled data as allowed by the current Serving_Grant in E-TFC selection; and
2) UE has enough power available to transmit at higher data rate; and
3) Based on the same power offset as the one selected in E-TFC selection to transmit data in the same TTI as the Happy Bit, TEBS would require more than Happy_Bit_Delay_Condition ms to be transmitted with the current Serving_Grant × the ratio of active processes to the total number of processes.

The first criteria is always true for a deactivated process and the ratio of the third criteria is always 1 for 10ms TTI.

Reference(s)

TS 25.321 clause 9.2.5.3.1, 11.8.1.5

7.1.6.2.2.3 Test purpose

The purpose of this test case is to verify that the UE sets the happy bit correctly.

7.1.6.2.2.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 6.11.4c using condition A12 as specified in clause 9.1 of TS 34.108.

The following parameters are specific for this test case:

Parameter	Value
Periodicity for Scheduling Info	No periodic SI transmission
Happy bit delay condition	20 ms
E-DCH MAC-d flow maximum number of retransmissions	15
HARQ RV Configuration	rv0

The UE is placed into UE test loop mode 1 with the UL SDU size set to 39 octets.

Test procedure

In this test procedure the UE is configured with one logical channel with Id 7 (LCH1).

a) The SS transmits 2 SDUs of size 40 bytes (plus 1 byte RLC length indicator) on LCH1

b) The SS issues an absolute grant corresponding to 2 RLC PDUs of size 41 octets per TTI (signalling value 5)

c) The SS waits until all data is received in uplink and checks the happy bit

d) The SS removes the scheduling grant for the UE

e) The SS transmits 8 SDUs of size 40 bytes (plus 1 byte RLC length indicator) on LCH1

f) The SS issues an absolute grant corresponding to 2 RLC SDUs of size 40 octets per TTI (signalling value 5)

g) SS waits until data is receive in uplink and checks the happy bit

h) The SS waits until all data is received in uplink

i) The SS is configured to always send a NACK on every HARQ process, when data is received in uplink, and to pass the received data to the higher layers.

j) The SS transmits 2 SDUs of size 40 bytes (plus 1 byte RLC length indicator) on LCH1

k) The SS waits until data is received in uplink. The SS stores the HARQ process ID[x] of the HARQ process used for this transmission and checks the happy bit

l) The SS is reconfigured to normal ACK/NACK operation mode on all HARQ processes, except HARQ process ID[x]

m) The SS transmits 10 SDUs of size 40 bytes (plus 1 byte RLC length indicator) on LCH1

n) The SS waits for the data to be received in uplink and checks the happy bit every time data is re-transmitted on HARQ process ID[x]

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		2 RLC PDUs on LCH 1	
2	←		Absolute grant allowing the UE to transmit 2 RLC PDUs per TTI	Signalling value 5
3	→		Data and happy bit	Happy bit should be set to happy
4	←		Removal of absolute grant	Signalling value 1
5	←		8 RLC PDUs on LCH 1	
6	←		Absolute grant allowing the UE to transmit 2 RLC PDUs per TTI	Signalling value 5
7	→		Data and happy bit	Happy bit should be set to unhappy
8	SS			The SS always NACK the received data on all HARQ processes
9	←		2 RLC PDUs on LCH 1	
10	→		Data and happy bit	Happy bit should be set to happy for the data received by the SS on HARQ process ID[x]
11	SS			The SS is set to normal ACK/NACK operation mode on all HARQ processes, except HARQ process ID[x]
12	←		10 RLC PDUs on LCH 1	
12a	←		10 RLC PDUs on LCH1	
13	→		Data and happy bit	Happy bit for the retransmissions of the MAC es PDU received on HARQ process ID[x] should change from happy to unhappy, and become happy again when buffered data has been processed by the other HARQ processes.

Specific Message Contents

None

7.1.6.2.2.5 Test requirements

1. In step 3 the SS shall receive data and the happy bit shall be set to happy in the first TTI containing data
2. In step 7 the SS shall receive data and the happy bit shall be set to unhappy in the first TTI containing data
3. In step 10 the SS shall receive data and the happy bit shall be set to happy in the first TTI containing data
4. In step 13 the SS shall receive data and the happy bit, on the same HARQ process as in step 10, shall change status from happy to unhappy, and later change status from unhappy to happy.

7.1.6.2.3 MAC-es/e non-scheduled transmissions

7.1.6.2.3.1 Definition and applicability

All UEs which support E-DCH.

7.1.6.2.3.2 Conformance requirement

Extract From 25.321 clause 11.8.1.4:

[…]

RRC can allocate non-scheduled transmission grants to individual MAC-d flows in order to reduce the transmission delays. When a 2ms TTI is configured each non-scheduled grant is applicable to the specific set of HARQ processes indicated by RRC. The applicability of scheduled grants can be also restricted to a specific set of HARQ processes when a 2ms TTI is configured. HARQ process restriction and reservation is under the control of the serving cell Node B and indicated to the UE by RRC.

[…]

For all logical channels, if the logical channel belongs to a non-scheduled MAC-d flow, its data shall be considered as available up to the corresponding non-scheduled grant, if the logical channel does not belong to a non-scheduled MAC-d flow, its data shall be considered as available up to the Serving Grant;

[…]

The amount of data from MAC-d flows for which non-scheduled grants were configured shall not exceed the value of the non-scheduled grant;

[…]

Extract From 25.321 clause11.9.1.4:

In TDD, rules for E-TFC selection shall be applied as provided below.

UEs shall apply E-TFC selection when invoked by the HARQ entity (see subclause 11.9.1.1.1).

For each MAC-d flow, RRC configures MAC-e with a HARQ profile and multiplexing list. Additionally, RRC configures MAC with a power offset in case the Scheduling Information needs to be transmitted without any higher-layer data. The HARQ profile includes the power offset and maximum number of HARQ transmissions to use for this MAC-d flow. For 1.28 Mcps TDD, the HARQ profile also includes a retransmission timer attribute. The multiplexing list identifies for each MAC-d flow(s), the other MAC-d flows for which data can be multiplexed in a transmission that uses the power offset included in its HARQ profile.

RRC can control the scheduling of uplink data by giving each logical channel a priority between 1 and 8, where 1 is the highest priority and 8 the lowest. E-TFC selection in the UE shall be done in accordance with the priorities indicated by RRC. Logical channels have absolute priority, i.e. the UE shall maximise the transmission of higher priority data.

RRC can allocate non-scheduled transmission grants to individual MAC-d flows in order to reduce the transmission delays.

The UE shall determine whether to take scheduled or non-scheduled grants into account in the upcoming transmission. If neither are supposed to be taken into account (i.e. the TTI is not available for non-scheduled transmission and no Grant for scheduled transmission has been received) then no grant shall be assumed to exist. If a grant exists then the transmission format and data allocation shall follow the requirements below.

For each configured MAC-d flow, a given E-TFC can be in any of the following states:

- Supported state;
- Blocked state.

The E-TFC states are derived according to the following:

- If the transmission is a retransmission then only the E-TFC with the same block size as the original transmission may be in the supported state.

- For 1.28Mcps TDD, only E-TFCs from the E-TFCS (the table of TB sizes) which are consistent with the UE's E-DCH capability category shall be considered for the transmission;

- Only E-TFCs from the E-TFCS (the table of TB sizes) which can be supported by (exactly) the number of slots assigned by the grant shall be considered for the transmission;

- Only E-TFCs which result (for the granted timeslot and code physical resources) in a code rate lying between the maximum and minimum (inclusive) allowable code rates set by RRC [7] shall be considered for the transmission {note: the definition of the term “coderate” as used here is the same as that provided by [18]}. This shall be evaluated for both QPSK and 16-QAM modulation;

- P_{HARQ}, the HARQ profile power offset is selected (the HARQ profile for the transmission shall be selected among the HARQ profiles of MAC-d flows on which the highest priority logical channels with available data are mapped; Scheduling Information power offset shall be used when Scheduling Information is transmitted without any higher-layer data.)

- Only E-TFCs whose calculated transmission power requirement $P_{E\text{-}PUCH}$ (see [18]) is less than or equal to the available or granted power shall be considered for the transmission (note: this requirement does not apply in the case of a retransmission on non-scheduled resources).

For 3.84Mcps/7.68Mcps TDD, from those E-TFCs in the supported state the UE determines the largest block size that it is permitted to transmit within the given constraints.

For 1.28Mcps TDD, from those E-TFCs in the supported state, UE determines a candidate set with up to 64 E-TFCs, including the largest 63 E-TFCs, in addition to the E-TFC dedicated for SI. If the number of E-TFCs in the supported state is not greater than 63, all the E-TFCs in the supported state shall be included in the candidate set. The E-TFCs in the candidate set shall then be re-indexed in an ascending order and numbered from 0 to (Nmax -1), where Nmax is the number of E-TFC in the candidate set. From the candidate set the UE determines the largest block size that is permitted to transmit within the given constraints.

The UE shall select the modulation type associated with the determined E-TFC (note: if an E-TFC is supported by both QPSK and 16-QAM then 16-QAM modulation shall be used if its power requirement ($P_{E\text{-}PUCH}$) is lower than the power requirement for QPSK, otherwise QPSK modulation shall be used).

Data allocation shall then be performed in accordance with the following:

- For all logical channels, if the logical channel belongs to a non-scheduled MAC-d flow, its data shall be considered as available up to the largest block size determined for the corresponding non-scheduled grant. If the logical channel does not belong to a non-scheduled MAC-d flow, its data shall be considered as available up to the largest block size determined for the Serving Grant;

- The data allocation shall maximise the transmission of higher priority data;

- The UE shall select the E-TFC, SF and modulation which minimises the power used (3.84/7.68 Mcps TDD only);

- The UE shall select the E-TFC and modulation which minimises the power used (1.28 Mcps TDD only);

Once an appropriate E-TFC and data allocation are found according to the rules above, the "Multiplexing and TSN Setting" entity shall generate the corresponding MAC-e PDU.

In 1.28Mcps TDD, when Scheduling Information is triggered by timer per subclause 11.9.1.5, the E-TFC selection and data-allocation process shall assume that Scheduling Information has a priority higher than any other logical channel.

The E-TFC selection function shall provide this MAC-e PDU and transmission HARQ profile to the HARQ entity. The selected E-TFC is also provided (Note: for 1.28Mcps TDD, the signalled transport block size index, i.e. E-TFCI, is the index of the selected E-TFC in the candidate set.). The maximum number of HARQ transmissions and the power offset in this profile shall be set respectively to the maximum of both the Max Number of HARQ Transmissions and of the power offset of the HARQ profiles from all the MAC-d flows from which data is multiplexed into the transmission. For 1.28 Mcps TDD, the retransmission timer shall be set to the maximum of the retransmission timer value of the HARQ profiles that are permitted to be multiplexed into the transmission. Each HARQ process which is associated with a buffer holding a MAC-e PDU for potential retransmission shall maintain the HARQ profile and the number of re-transmissions that have occurred. For 1.28 Mcps TDD, the HARQ process shall also maintain the value of RTX_TIMER.

Further information on E-TFC selection is provided in Annex CA.

Reference(s)

TS 25.321 clause 11.8.1.4, 11.9.1.4

7.1.6.2.3.3 Test purpose

To verify that the UE when RRC is configured for non-scheduled transmissions sends data without scheduling grant. To verify that no SI is sent for non-scheduled transmissions.

7.1.6.2.3.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 6.11.4c(FDD) /6.11.5.4.7.6(1.28Mcps TDD) using condition A12(FDD) /A11(1.28Mcps TDD) as specified in clause 9.1 of TS 34.108. The following parameters are specific for this test case:

Parameter	Value
Periodicity for scheduling info	No periodic scheduling info
E-TFCI table	Table 0 for 10 ms TTI(FDD)
E-TFCI table	5ms TTI E-DCH Transport Block Size Table 0(1.28Mcps TDD)

The UE is placed into UE test loop mode 1 with the UL SDU size set to (10*41)-2 octets.

Test procedure

LCH 1 is mapped to MAC-d flow 2 which is configured for non-scheduled transmission allowing one SDU/TTI to be sent.

a) The SS has not issued any scheduling grant for E-DCH to the UE

b) The SS transmits 1 SDU of size 40 bytes (plus 1 byte RLC length indicator) on LCH 1

c) The SS waits until data is received and checks that only 1 PDU/TTI is transmitted

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		1 RLC PDU on LCH 1	
2	→		MAC-es PDU containing 1 RLC PDU	This step is repeated 10 times until the complete SDU is transmitted

Specific Message Contents

None

7.1.6.2.3.5 Test requirements

1. After step 1, the SS shall not receive any SI.
2. In step 2, the SS shall receive 1 MAC-es PDU containing 1 RLC PDU in each TTI until the complete SDU has been received.

7.1.6.2.4 MAC-es/e correct handling of scheduled transmissions when absolute grant varies

7.1.6.2.4.1 Definition and applicability

All UEs which support E-DCH.

7.1.6.2.4.2 Conformance requirement

Extract from 25.321 clause 9.2.5.2.2:

The absolute grant message is sent on downlink, on the configured E-AGCH, from the serving E-DCH cell and allows the Node B scheduler to directly adjust the granted rate of UEs under its control.

[…]

Absolute Grant Value:
This field indicates the maximum E-DCH traffic to pilot ratio (E-DPDCH/DPCCH) that the UE is allowed to use in the next transmission. The length of the Absolute Grant Value field is 5 bits

[…]

Extract From 25.321 clause 9.2.6.2.1:

The Absolute Grant is sent on downlink on a set of configured E-AGCHs from the serving E-DCH cell and allows the Node B scheduler to directly adjust the granted rate and assigned physical resources for UEs under its control. The physical resource assignment indicates to the UE the maximum amount of uplink resources that it may use for a scheduled transmission.

The E-AGCH is a shared channel that uses an E-RNTI specific CRC in order to address messages to specific UEs (see [19]). For TDD, the RRC shall configure the MAC with a primary E-RNTI only.

A UE is required to monitor a set of E-AGCHs. The RRC signals to the UE details of the set of E-AGCHs that are to be monitored. The UE decodes an Absolute Grant intended for it on the basis of the E-RNTI sent to it by the Node B via the SRNC and by RRC. The following information will be conveyed in an absolute grant message:

Absolute Grant Value – maximum power granted per resource unit (per slot)

The physical resources to be used for transmission

- Channelisation Code
- Timeslots
- Resource Duration (optional)

The absolute grant message itself includes multiple fields that are multiplexed together into between 14 and 28 bits for 3.84/7.68 Mcps TDD and between 23 and 26 bits for 1.28 Mcps TDD (depending on the system configuration) inside the MAC-e of the Node B and then submitted to the physical layer for transmission on the E-AGCH. These fields are:

- Absolute Grant Value:
  For TDD, this field indicates the maximum E-DCH traffic to reference power ratio (E-PUCH/$P_{e\text{-}base}$) per TDD resource unit that the UE is allowed to use on the E-DCH resources associated with the Absolute Grant. A TDD resource unit is defined as one sixteenth of the OVSF code space in one timeslot. The length of the Absolute Grant Value field for TDD is 5 bits.

- Channelisation Code:
  This field describes the code component of the physical resource grant. For 1.28/3.84 Mcps TDD it comprises an enumerated value of length 5 bits indicating which node on the OVSF code tree has been allocated. For 7.68 Mcps TDD it comprises an enumerated value of length 6 bits indicating which node on the OVSF tree has been allocated. The mapping between the allocated OVSF and the enumerated node 0…30 for 1.28/3.84 Mcps and 0…62 for 7.68 Mcps is as given in [19].

- Timeslot Resource Related Information:
  This field describes the timeslot component of the physical resource grant and comprises a bitmap of length n_{TRRI} indicating which of the timeslots configured for E-DCH use by RRC have been allocated with the LSB corresponding to the lowest numbered E-DCH timeslot and the MSB corresponding to the highest numbered timeslot. The length of the TRRI field (n_{TRRI}) is 5 bits for 1.28 Mcps TDD and is configurable by RRC on a per-cell basis between 1 and 12 bits for 3.84/7.68 Mcps TDD.

- Resource Duration Indicator:
  Optionally, RRC may configure, on a per-cell basis the presence of a resource duration indicator field on E-AGCH for TDD. If configured as present in a cell, 3 bits are used to indicate the number of TTI's allocated and the spacing between the allocated TTIs via a single grant according to table 9.2.6.2.1-2. If the field is configured as not present on E-AGCH in the cell, a value of 0 is implicitly assumed by the UE corresponding to 1 TTI.

Table 9.2.6.2.1-2 – Resource Duration Indicator (RDI) interpretation

Resource Duration Indicator (3 bits)	TTIs allocated	TTI spacing
0	1	1
1	2	1
2	2	2
3	2	4
4	4	1
5	4	2
6	4	4
7	8	1

- E-AGCH Cyclic Sequence Number (ECSN):
  The ECSN is a 3-bit field used to assist the UE with outer-loop power control of E-AGCH (cf. HCSN for HS-SCCH).

- E-HICH Indicator(EI) (1.28 Mcps TDD only)
  The E-HICH indicator (EI) consists of 2 bits and is used to indicate which E-HICH will convey the acknowledgement indicator for the scheduled UEs.

- E-UCCH Number Indicator (ENI) (1.28 Mcps TDD only)
  The E-UCCH Number Indicator (ENI) is a 3-bit field used to indicate the detailed number of E-UCCH.

[…]

UEs in CELL_DCH state, configured with an E-DCH transport channel shall maintain a Serving Grant and the list of active HARQ processes based on the absolute and relative grant commands decoded on the configured E-AGCH and E-RGCH(s).

[…]

For all logical channels, if the logical channel belongs to a non-scheduled MAC-d flow, its data shall be considered as available up to the corresponding non-scheduled grant, if the logical channel does not belong to a non-scheduled MAC-d flow, its data shall be considered as available up to the Serving Grant;

7.1.6.2.4.5 Test requirements

1. In step 3, the SS shall receive 1 MAC-es PDU containing 1 RLC PDU. This shall happen 4 TTIs in a row.
2. In step 7, the SS shall receive 1 MAC-es PDU containing 4 RLC PDUs. This shall happen 2 TTIs in a row.

7.1.6.2.5 MAC-es/e de-activation and re-activation of HARQ processes

7.1.6.2.5.1 Definition and applicability

All UEs which support E-DCH and support 2 ms TTI.

7.1.6.2.5.2 Conformance requirement

The Serving Grant Update procedure shall be applied at every TTI boundary and shall take into account the Absolute Grant message, Serving Relative Grant and non-serving Relative Grants that apply to the TTI.

The UE shall:

1> set reference_ETPR to the E-DPDCH to DPCCH power ratio as defined in subclause 3.1.2;

1> if an Absolute Grant was received for this TTI:

2> if the Identity type is “Primary”, and the Absolute Grant value is set to "INACTIVE":

3> if Absolute Grant Scope indicates "Per HARQ process" and a 2ms TTI is configured:

4> de-activate the process given by the value of CURRENT_HARQ_PROCESS.

3> if Absolute Grant Scope indicates "All HARQ processes" and a secondary E-RNTI was configured by higher layers:

4> activate all HARQ processes;

4> set Serving_Grant = Stored_Secondary_Grant;

4> set Primary_Grant_Available to "False".

3> if Absolute Grant Scope indicates "All HARQ processes", a 2ms TTI is configured and a secondary E-RNTI was not configured by higher layers:

4> deactivate all HARQ processes (if a process was inactive it remains inactive, if a process was active it becomes inactive).

2> else if the Absolute Grant Value is different from "INACTIVE":

3> if the Identity Type is "Secondary":

4> set Stored_Secondary_Grant = Absolute Grant Value.

3> if the Identity Type is "Primary" or Primary_Grant_Available is set to "False":

4> set Serving_Grant = Absolute Grant Value.

4> if the Identity Type is "Primary":

5> set Primary_Grant_Available to "True";

5> if Absolute Grant Scope indicates "Per HARQ process":

6> activate the process given by the value of CURRENT_HARQ_PROCESS.

5> if Absolute Grant Scope indicates "All HARQ processes":

6> activate all HARQ processes;

5> if AG_Timer is not active, it shall be started, otherwise it shall be restarted.

7.1.6.2.5.3 Test purpose

The purpose of this test case is to verify the selective de-activation and re-activation of a HARQ process

7.1.6.2.5.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 6.11.4c using condition A12 as specified in clause 9.1 of TS 34.108. The logical channel, transport channel and queue identities are set to:

Logical Channel ID	MAC-d flow (UL)	Priority	Comment
7 (LCH1)	2	1	RB25

The following parameters are specific for this test case:

Parameter	Value
Periodicity for Scheduling Info – no grant	500 ms (see 25.331 10.3.6.99)
E-DCH TTI	2 ms

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to (10*41)-2 octets.

Test procedure

In this test procedure The UE is configured with one logical channels, with an UL SDU size of 39 octets.

a) SS has not issued any scheduling grant for E-DCH to the UE

b) SS transmits 5 SDU's of size 40 bytes (plus 1 byte RLC length indicator) on LCH1

c) SS waits until an SI is received.

d) SS issues an absolute grant that allows the UE to send 1 RLC PDU per TTI (signalling value 4)

e) SS starts receiving loop backed RLC PDU's. SS checks all 8 Harq processes are used.

f) SS transmits an absolute grant, with Absolute Grant Value set to "INACTIVE" and Absolute Grant Scope indicating "Per HARQ process" corresponding to HARQ process 0 & 4.

g) SS transmits 5 SDU's of size 40 bytes (plus 1 byte RLC length indicator) on LCH1

h) SS starts receiving loop backed RLC PDU's. SS checks Harq processes 0 and 4 are not used.

i) SS transmits an absolute grant, with Absolute Grant Value that allows UE to send 1 RLC PDU per TTI (signalling value 4) and Absolute Grant Scope indicating " All HARQ processes ".

j) SS transmits 1 SDU of size 40 bytes (plus 1 byte RLC length indicator) on LCH1

k) SS starts receiving loop backed RLC PDU's. SS checks all 8 Harq processes are used.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		5 RLC PDUs on LCH 1

7.1.6.2.6 MAC-es/e correct handling of relative grants

7.1.6.2.6.1 Definition and applicability

All UEs which support E-DCH.

7.1.6.2.6.2 Conformance requirement

The Serving Grant Update procedure shall be applied at every TTI boundary and shall take into account the Absolute Grant message, Serving Relative Grant and non-serving Relative Grants that apply to the TTI.

The UE shall:

1> set reference_ETPR2 to reference_ETPR as defined in subclause 3.1.2;

1> set reference_ETPR to the E-DPDCH to DPCCH power ratio as defined in subclause 3.1.2;

1> if an Absolute Grant was received for this TTI:

…..

1> else (no Absolute Grant received):

2> if the HARQ process given by the value of CURRENT_HARQ_PROCESS is active; and

2> if Primary_Grant_Available is equal to "True"; and

2> if Serving_Grant <> "Zero_Grant" ; and

2> if AG_Timer has expired; and2> if there was a scheduled transmission (see Note) in the previous TTI of the HARQ process given by the value of CURRENT_HARQ_PROCESS:

3> if the Serving Relative Grant indicates "UP":

4> determine the Serving_Grant in accordance with subclause 9.2.5.2.1.

3> else, if the Serving Relative Grant indicates "DOWN":

4> determine the Serving_Grant in accordance with subclause 9.2.5.2.1.

1> if any Non-Serving Relative Grants indicate "DOWN" for this TTI and Serving_Grant <> "Zero_Grant":

2> Serving_Grant = MIN(Serving_Grant, Serving_Grant determined in accordance with subclause 9.2.5.2.1);

2> Maximum_Serving_Grant = Serving_Grant.

2> if Non_Serving_RG_Timer is not active it shall be started, otherwise it shall be restarted;

1> else if no Non-Serving Relative Grants indicate "DOWN" for this TTI:

2> if Non_Serving_RG_Timer has not expired:

3> Serving_Grant = MIN(Maximum_Serving_Grant, Serving_Grant).NOTE: Scheduling Information sent alone is not considered as a scheduled transmission.

Reference(s)

TS 25.321 clause 11.8.1.3.1

7.1.6.2.6.3 Test purpose

The purpose of this test case is

1. To verify that the UE acts on serving and non-serving relative grants when the UE is using the Primary E-RNTI.
2. To verify that the UE only acts on non-serving relative grants when the UE is using the Secondary E-RNTI
3. To verify that the UE does not use a Serving_Grant value greater than Maximum_Serving_Grant when the Non_Serving_RG_Timer has not expired.

7.1.6.2.6.4Method of test

Initial conditions

System Simulator:

2 cells, default parameters, Ciphering Off.

User Equipment:

The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 6.11.4c using condition A12 as specified in clause 9.1 of TS 34.108. The logical channel, transport channel and queue identities are set to:

Logical Channel ID	MAC-d flow (UL)	Priority	Comment
7 (LCH1)	2	1	RB25

Cell 1 is the serving E-DCH cell.

The following parameters are specific for this test case:

Parameter	Value
Periodicity for Scheduling Info – no grant	500 ms (see 25.331 10.3.6.99)
E-DCH TTI	10 ms
New Secondary E-RNTI	'1010 1111 1010 1111'
3-Index-Step Threshold	20
2-Index-Step Threshold	37

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to (10*41)-2 octets.

Test procedure

In this test procedure the UE is configured with one logical channel.

0) SS waits for the Measurement report from the UE with event set to “1a” and then adds the Radio link on the second cell by sending an Active Set Update message.

a) SS has not issued any scheduling grant for E-DCH to the UE

b) SS transmits 10 SDU’s of size 40 bytes (plus 1 byte RLC length indicator) on LCH1

c) SS waits until an SI is received.

d) SS issues a primary absolute grant that allows the UE to send 1 RLC PDU per TTI (signalling value 4)

e) SS starts receiving loop backed RLC PDU’s.

f) After receiving data once on all HARQ processes in a HARQ-RTT, SS transmits a relative grant in cell 1(serving cell) as ‘UP’.

g) SS continues receiving loop back PDU’s and checks that UE has started using the serving grant corresponding to more than one RLC PDU’s transmitted per TTI.

h) SS transmits 10 SDU’s of size 40 bytes (plus 1 byte RLC length indicator) on LCH1

i) SS starts receiving loop backed RLC PDU’s.

j) After receiving data once on all HARQ processes in a HARQ-RTT, SS transmits a relative grant in cell 2(non serving) as ‘Down’.

k) SS continues receiving loop back PDU’s and checks that the UE has reduced the serving grant corresponding to one RLC PDU transmitted per TTI.

l) SS transmits a primary absolute grant, with Absolute Grant Value set to "INACTIVE" and Absolute Grant Scope indicating "All HARQ process" . The UE starts using the Secondary Grant.

m) SS transmits 10 SDU's of size 40 bytes (plus 1 byte RLC length indicator) on LCH1.

n) SS waits until an SI is received.

o) SS issues a secondary absolute grant corresponding to 1 RLC PDU of size 41 octets per TTI (signalling value 4)

p) After receiving data once on all HARQ processes in a HARQ-RTT, SS transmits a relative grant in cell 1(serving cell) as ‘UP’.

q) SS continues receiving loop back PDU’s and checks that the UE has ignored the previous relative grant.

r) SS issues a secondary absolute grant corresponding to 2 RLC PDU’s of size 41 octets per TTI (signalling value 5)

s) SS transmits 10 SDU’s of size 40 bytes (plus 1 byte RLC length indicator) on LCH1

t) SS starts receiving loop backed RLC PDU’s. SS checks that the UE is using a serving grant corresponding to 2 RLC PDU’s transmitted per TTI.

u) After receiving data on all HARQ processes for two HARQ-RTTs, SS transmits a relative grant in cell 2 (non serving) as ‘Down’. (*Note)

v) SS continues receiving loop back PDU’s and checks that UE has reduced the serving grant corresponding to 1 RLC PDU’s transmitted per TTI.

w) SS issues a secondary absolute grant corresponding to 2 RLC PDU’s of size 41 octets per TTI (signalling value 5)

wa) SS transmits 10 SDU's of size 40 bytes (plus 1 byte RLC length indicator) on LCH1.

wb) SS starts receiving loop backed RLC PDU's. SS checks that the UE is using a serving grant corresponding to 2 RLC PDU's transmitted per TTI.

x) After receiving data on all HARQ processes for two HARQ-RTTs, SS transmits a relative grant in cell 2 (non serving) as 'Down'.

y) In the following TTI, SS transmits a secondary absolute grant that allows the UE to send 2 RLC PDU's of size 41 octets per TTI (signalling value 5).

za) Void

aa) SS continues receiving loop back PDU's and checks that UE has reduced the serving grant corresponding to 1 RLC PDU's transmitted per TTI.

Specific Message Contents

MEASUREMENT REPORT (Step 0a)

Use the same message as specified in 34.108 except for the following:

Information Element	Value/remark
Message Type	
Integrity check info	
- Message authentication code	This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC Message sequence number	This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value.
Measurement identity	1
Measured Results	
- Intra-frequency measured results	Check to see if measurement results for 2 cells are included (the order in which the different cells are reported is not important)
- Cell measured results	
- Cell Identity	Checked that this IE is absent
- Cell synchronisation information	Checked that this IE is present and includes IE COUNT-C-SFN frame difference
- Primary CPICH info	
- Primary scrambling code	Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108
- CPICH Ec/N0	Checked that this IE is absent
- CPICH RSCP	Checked that this IE is present
- Pathloss	Checked that this IE is absent
- Cell measured results	
- Cell Identity	Checked that this IE is absent
- Cell synchronisation information	Checked that this IE is absent
- Primary CPICH info	
- Primary scrambling code	Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1 of TS 34.108
- CPICH Ec/N0	Checked that this IE is absent
- CPICH RSCP	Checked that this IE is present
- Pathloss	Checked that this IE is absent
Measured results on RACH	Checked that this IE is absent
Additional measured results	Checked that this IE is absent
Event results	
- Intra-frequency measurement event results	
- Intra-frequency event identity	1a
- Cell measurement event results	
- Primary CPICH info	
- Primary scrambling code	Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108

ACTIVE SET UPDATE (Step 0b)

The message to be used in this test is defined in TS 34.108, clause 9, with the following exceptions:

Information Element	Value/remark
Activation time	Not Present
Radio link addition information	
- Primary CPICH Info	
- Primary Scrambling Code	Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108
- Downlink DPCH info for each RL	
- CHOICE mode	FDD
- Primary CPICH usage for channel estimation	P-CPICH can be used.
- DPCH frame offset	Calculated value from Cell synchronisation information
- Secondary CPICH info	Not Present
- DL channelisation code	This IE is repeated for all existing downlink DPCHs allocated to the UE
- Secondary scrambling code	1
- Spreading factor	Refer to TS 34.108 clause 6.10.2.4 "Typical radio parameter sets"
- Code Number	For each DPCH, assign the same code number in the current code given in cell 1.
- Scrambling code change	Not Present
- TPC Combination Index	1
- Close loop timing adjustment mode	Not Present
- TFCI Combining Indicator	FALSE
- E-HICH Information	
- Channelisation code	4
- Signature sequence	1
- CHOICE E-RGCH Information	
- E-RGCH Information	
- Signature Sequence	0
- RG combination index	1

7.1.6.2.6.5 Test requirements

1. After step 5 UE will start sending 2 RLC PDU's per TTI.
2. After step 9, UE will reduce number of RLC PDU's per TTI to 1.
3. After step 16, UE will not change its rate of RLC PDU's per TTI.
4. After step 21, UE will reduce number of RLC PDU's per TTI to 1.

4a After Step 23,UE will start sending 2 RLC PDU's per TTI

4b. After step 24, UE will reduce number of RLC PDU's per TTI to 1

5. After step 25, UE will not change its SG_{LUPR} and hence in step 27 will loop back PDU's at the rate of 1 RLC PDU per TTI.

7.1.6.2.7 MAC-es/e correct handling of absolute grants on Primary and Secondary E-RNTI

7.1.6.2.7.1 Definition and applicability

All UEs which support E-DCH.

7.1.6.2.7.2 Conformance requirement

The Serving Grant Update procedure shall be applied at every TTI boundary and shall take into account the Absolute Grant message, Serving Relative Grant and non-serving Relative Grants that apply to the TTI.

The UE shall:

1> set reference_ETPR to the E-DPDCH to DPCCH power ratio as defined in subclause 3.1.2;

1> if an Absolute Grant was received for this TTI:

2> if the Identity type is “Primary”, and the Absolute Grant value is set to "INACTIVE":

3> if Absolute Grant Scope indicates "Per HARQ process" and a 2ms TTI is configured:

4> de-activate the process given by the value of CURRENT_HARQ_PROCESS.

3> if Absolute Grant Scope indicates "All HARQ processes" and a secondary E-RNTI was configured by higher layers:

4> activate all HARQ processes;

4> set Serving_Grant = Stored_Secondary_Grant;

4> set Primary_Grant_Available to "False".

3> if Absolute Grant Scope indicates "All HARQ processes", a 2ms TTI is configured and a secondary E-RNTI was not configured by higher layers:

4> deactivate all HARQ processes (if a process was inactive it remains inactive, if a process was active it becomes inactive).

2> else if the Absolute Grant Value is different from "INACTIVE":

3> if the Identity Type is "Secondary":

4> set Stored_Secondary_Grant = Absolute Grant Value.

3> if the Identity Type is "Primary" or Primary_Grant_Available is set to "False":

4> set Serving_Grant = Absolute Grant Value.

4> if the Identity Type is "Primary":

5> set Primary_Grant_Available to "True";

5> if Absolute Grant Scope indicates "Per HARQ process":

6> activate the process given by the value of CURRENT_HARQ_PROCESS.

5> if Absolute Grant Scope indicates "All HARQ processes":

6> activate all HARQ processes;

5> if AG_Timer is not active, it shall be started, otherwise it shall be restarted.

Reference(s)

TS 25.321 clause 11.8.1.3.1

7.1.6.2.7.3 Test purpose

The purpose of this test case is to verify that the UE acting on absolute grants given on the Primary and Secondary E-RNTI and switching between the 2 cases.

7.1.6.2.7.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 6.11.4c using condition A12 as specified in clause 9.1 of TS 34.108. The logical channel, transport channel and queue identities are set to:

Logical Channel ID	MAC-d flow (UL)	Priority	Comment
7 (LCH1)	2	1	RB25

The following parameters are specific for this test case:

Parameter	Value
Periodicity for Scheduling Info – no grant	500 ms (see 25.331 10.3.6.99)
New Secondary E-RNTI	'1010 1111 1010 1111'

The UE is placed into UE test loop mode 1 with the UL SDU size set to (4*41)-2 octets.

Test procedure

In this test procedure The UE is configured with one logical channel.

a) SS has not issued any scheduling grant for E-DCH to the UE

b) SS transmits 1 SDU of size 40 bytes (plus 1 byte RLC length indicator) on LCH1

c) SS waits until an SI is received.

d) The SS issues primary absolute grant corresponding to 4 RLC PDUs of size 41 octets per TTI (signalling value 7)

e) SS starts receiving loop backed RLC PDU's.

f) SS transmits primary absolute grant, with Absolute Grant Value set to "INACTIVE" and Absolute Grant Scope indicating "All HARQ process" . UE starts using Secondary Grant.

g) SS transmits 1 SDU of size 40 bytes (plus 1 byte RLC length indicator) on LCH1.

h) SS waits until an SI is received.

i) The SS issues secondary absolute grant corresponding to 1 RLC PDU of size 41 octets per TTI (signalling value 4)

j) SS starts receiving loop backed RLC PDU's.

k) SS issues secondary absolute grant of 'ZERO_GRANT'.

l) SS transmits 1 SDU of size 40 bytes (plus 1 byte RLC length indicator) on LCH1.

m) SS waits until an SI is received.

n) The SS issues primary absolute grant corresponding to 4 RLC PDUs of size 41 octets per TTI (signalling value 7), with Absolute Grant Scope set as "All HARQ processes". UE starts using primary grant.

o) SS starts receiving loop backed RLC PDU's.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		1 RLC PDUs on LCH 1	
2	→		SI indicating data on LCH 1

None

7.1.6.2.7.5 Test requirements

1. In step 4, the SS shall receive 1 MAC-es PDU containing 4 RLC PDU's

1a. In step 7 UE shall transmit SI, as an indication that it has stopped using previous absolute grant.

2. After step 8, UE shall start sending loop backed PDU, with one RLC PDU per TTI.

3. In step 12 UE shall transmit SI.

4. After step 13, UE shall loop back all 4 RLC PDU's in one TTI.

7.1.6.2.8 MAC-es/e combined non-scheduled and scheduled transmissions

7.1.6.2.8.1 Definition and applicability

All UEs which support E-DCH.

7.1.6.2.8.2 Conformance requirement

From 25.321 clause 11.8.1.4:

The transmission format and data allocation shall follow the requirements below:

[…]

- For all logical channels, if the logical channel belongs to a non-scheduled MAC-d flow, its data shall be considered as available up to the corresponding non-scheduled grant, if the logical channel does not belong to a non-scheduled MAC-d flow, its data shall be considered as available up to the Serving Grant;

[…]

- The amount of data from MAC-d flows for which non-scheduled grants were configured shall not exceed the value of the non-scheduled grant;

[…]

- When not in a power limited condition the maximum amount of data from MAC-d flows for which no non-scheduled grants were configured shall be quantized to the next smaller supported E-TFC based on the Serving Grant (after adjustment for compressed frames), the power offset from the selected HARQ profile, the non-scheduled grants (if any) and Scheduling Information (if any); In the case a 2ms TTI is configured and the HARQ process is inactive, the UE shall not include any such data in the transmission;

From 25.321 clause 11.9.1.4:

In TDD, rules for E-TFC selection shall be applied as provided below.

UEs shall apply E-TFC selection when invoked by the HARQ entity (see subclause 11.9.1.1.1).

For each MAC-d flow, RRC configures MAC-e with a HARQ profile and multiplexing list. Additionally, RRC configures MAC with a power offset in case the Scheduling Information needs to be transmitted without any higher-layer data. For 1.28 Mcps TDD, RRC also configures MAC with a retransmission timer and the maximum number of HARQ transmissions in case the Scheduling Information needs to be transmitted without any higher-layer data. The HARQ profile includes the power offset and maximum number of HARQ transmissions to use for this MAC-d flow. For 1.28 Mcps TDD, the HARQ profile also includes a retransmission timer attribute. The multiplexing list identifies for each MAC-d flow(s), the other MAC-d flows for which data can be multiplexed in a transmission that uses the power offset included in its HARQ profile.

RRC can control the scheduling of uplink data by giving each logical channel a priority between 1 and 8, where 1 is the highest priority and 8 the lowest. E-TFC selection in the UE shall be done in accordance with the priorities indicated by RRC. Logical channels have absolute priority, i.e. the UE shall maximise the transmission of higher priority data.

RRC can allocate non-scheduled transmission grants to individual MAC-d flows in order to reduce the transmission delays.

The UE shall determine whether to take scheduled or non-scheduled grants into account in the upcoming transmission. If neither are supposed to be taken into account (i.e. the TTI is not available for non-scheduled transmission and no Grant for scheduled transmission has been received) then no grant shall be assumed to exist. If a grant exists then the transmission format and data allocation shall follow the requirements below.

For each configured MAC-d flow, a given E-TFC can be in any of the following states:

- Supported state;
- Blocked state.

The E-TFC states are derived according to the following:

- If the transmission is a retransmission then only the E-TFC with the same block size as the original transmission may be in the supported state.
- For 1.28Mcps TDD, only E-TFCs from the E-TFCS (the table of TB sizes) which are consistent with the UE's E-DCH capability category shall be considered for the transmission;
- Only E-TFCs from the E-TFCS (the table of TB sizes) which can be supported by (exactly) the number of slots assigned by the grant shall be considered for the transmission;
- Only E-TFCs which result (for the granted timeslot and code physical resources) in a coderate lying between the maximum and minimum (inclusive) allowable code rates set by RRC [7] shall be considered for the transmission {note: the definition of the term “coderate” as used here is the same as that provided by [18]}. This shall be evaluated for both QPSK and 16-QAM modulation;
- P_{HARQ}, the HARQ profile power offset is selected (for 3.84/7.68Mcps TDD the HARQ profile for the transmission shall be selected among the HARQ profiles of MAC-d flows on which the highest priority logical channels with available data are mapped, for 1.28Mcps TDD the HARQ power offset shall be set to the maximum of HARQ power offset of all the MAC-d flows mapped to the same type of resource (scheduled or non-scheduled resource); Scheduling Information power offset shall be used when Scheduling Information is transmitted without any higher-layer data.)
- Only E-TFCs whose calculated transmission power requirement $P_{E\text{-}PUCH}$ (see [18]) is less than or equal to both the available and the granted power shall be considered for the transmission (note: this requirement does not

apply in the case of a retransmission on non-scheduled resources). For TDD, the smallest E-TFC is considered always in the supported state. The granted power is defined as the calculated E-PUCH transmission power of [18] with β_e = (Absolute Grant Value + α_e). The available power is the maximum UE transmission power.

From those E-TFCs in the supported state the UE determines the largest block size that it is permitted to transmit within the given constraints.

The UE shall select the modulation type associated with the determined E-TFC (note: if an E-TFC is supported by both QPSK and 16-QAM then 16-QAM modulation shall be used if its power requirement ($P_{E\text{-}PUCH}$) is lower than the power requirement for QPSK, otherwise QPSK modulation shall be used).

Data allocation shall then be performed in accordance with the following:

- For all logical channels, if the logical channel belongs to a non-scheduled MAC-d flow, its data shall be considered as available up to the largest block size determined for the corresponding non-scheduled grant. If the logical channel does not belong to a non-scheduled MAC-d flow, its data shall be considered as available up to the largest block size determined for the Serving Grant;

- The data allocation shall maximise the transmission of higher priority data;

- The UE shall select the E-TFC, SF and modulation which minimises the power used (3.84/7.68 Mcps TDD only);

- The UE shall select the E-TFC and modulation which minimises the power used (1.28 Mcps TDD only);

Once an appropriate E-TFC and data allocation are found according to the rules above, the "Multiplexing and TSN Setting" entity shall generate the corresponding MAC-e PDU.

In 1.28Mcps TDD, when Scheduling Information is triggered by timer per subclause 11.9.1.5, the E-TFC selection and data-allocation process shall assume that Scheduling Information has a priority higher than any other logical channel.

The E-TFC selection function shall provide this MAC-e PDU and transmission HARQ profile to the HARQ entity. For 3.84Mcps TDD and 7.68Mcps TDD the selected E-TFC is also provided (Note: for 1.28Mcps TDD, the signalled transport block size index, i.e. E-TFCI, is the index of the selected E-TFC in the candidate set.). The maximum number of HARQ transmissions and the power offset in this profile shall be set respectively to the maximum of both the Max Number of HARQ Transmissions and of the power offset of the HARQ profiles from all the MAC-d flows from which data is multiplexed into the transmission. For 1.28 Mcps TDD, the maximum number of HARQ transmissions shall be set to the maximum of the Max Number of HARQ Transmissions of the HARQ profiles from all the MAC-d flows from which data is multiplexed into the transmission, the HARQ power offset shall be set to the maximum of HARQ power offset of all the MAC-d flows mapped to the same type of resource (scheduled or non-scheduled resource), and the retransmission timer shall be set to the maximum of the retransmission timer value of the HARQ profiles that are permitted to be multiplexed into the transmission. For 1.28Mcps TDD, when the Scheduling Information needs to be transmitted without any higher-layer data, the specific HARQ profile should be applied. Each HARQ process which is associated with a buffer holding a MAC-e PDU for potential retransmission shall maintain the HARQ profile and the number of re-transmissions that have occurred. For 1.28 Mcps TDD, the HARQ process shall also maintain the value of RTX_TIMER.

Further information on E-TFC selection is provided in Annex CA.

From 25.331 clause 8.6.5.18:

1> if the IE "E-DCH MAC-d flow multiplexing list" is included:

2> only multiplex MAC-d PDU's from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU's from E-DCH MAC-d flows with which multiplexing in the same MAC-e PDU is allowed in accordance to the IE "E-DCH MAC-d flow multiplexing list".

[…]

1> for FDD:

2> if the IE "Non-scheduled transmission grant info" is included:

3> if the TTI configured on the E-DCH equals 2ms, and the IE "2ms non-scheduled transmission grant HARQ process allocation" is configured for this MAC-d flow:

4> MAC-d PDU's for logical channels belonging to this MAC-d flow shall only be included in a MAC-e PDU transmitted by HARQ processes allowed by the IE "2ms non-scheduled transmission grant HARQ process allocation", with a total contribution from this MAC-d flow not exceeding the size as signalled by the IE "Max MAC-e PDU contents size".

3> else:

4> MAC-d PDU's for logical channels belonging to this MAC-d flow shall be included in a MAC-e PDU transmitted by any HARQ process, with a total contribution from this MAC-d flow not exceeding the size as signalled by the IE "Max MAC-e PDU contents size".

1> for TDD:

2> if the IE "Non-scheduled transmission grant info" is included:

3> MAC-d PDU's for logical channels belonging to this MAC-d flow shall only be included in a MAC-e PDU transmitted by HARQ processes designated as non scheduled (Ids 4 – 7) in the TTIs indicated (as determined from the IEs "Activation Time", "Resource Duration" and "Resource Periodicity").

2> if the IE "Scheduled transmission grant info" is included:

3> transmission of MAC-d PDUs for logical channels belonging to this MAC-d flow shall be in accordance with the received scheduled grant on E-AGCH (see [15]).

7.1.6.2.8.3 Test purpose

To verify that the UE is able to handle combined non-scheduled and scheduled transmissions.

7.1.6.2.8.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 6.11.4d (FDD) /6.11.5.4.7.7(1.28Mcps TDD) using condition A15 (FDD) /A14 (1.28Mcps TDD) as specified in clause 9.1 of TS 34.108. The following parameters are specific for this test case with the logical channel, transport channel and queue identities are set to:

Logical Channel ID	MAC-d flow (UL)	Priority	Comment
7 (LCH1)	2	1	RB25
8 (LCH2)	3	2	RB17
Note: The RAB combination also includes SRBs on E-DCH on MAC-d flow 1 which is not used in the test case			

The following parameters are specific for this test case:

Parameter	Value
E-DCH MAC-d flow multiplexing list	11111111 (See 25.331 10.3.5.1b) Note 1
E-TFCI table	Table 0 for 10 ms TTI (FDD)
E-TFCI table	5ms TTI E-DCH Transport Block Size Table 0(1.28Mcps TDD)
Note 1: This configuration means that all MAC-d flows can be multiplexed in the same TTI	

The UE is placed into UE test loop mode 1 with the UL SDU size for LCH 1 set to (25*41)-2 octets and LCH 2 size set to 39 octets.

Test procedure

The UE is configured with a non-scheduled grant on MAC-d flow 2, and the value of the "Max MAC-e PDU contents size" is 500 bits. The UE is not given any grant to transmit on MAC-d flow 3 (LCH 2).

a) The SS has not issued any grant for E-DCH on MAC-d flow 3 (LCH 2)

b) The SS transmits 1 SDU of size 40 bytes (plus 1 byte RLC length indicator) on LCH 2

c) The SS transmits 1 SDU of size 40 bytes (plus 1 byte RLC length indicator) on LCH 1

d) The SS waits until data is received and checks that the first TTI contains only data on LCH 1

e) The SS issues an absolute grant that allows the UE to send with a high rate on LCH 2 (well above 1 SDU/TTI) immediately after the previous step (i.e. not more than one TTI after the first data on LCH 1 has been looped back).

f) The SS receives data from the two logical channels LCH 1 and LCH 2 in one TTI.

g) The SS removes the scheduling grant for E-DCH for the UE

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		1 RLC PDU on LCH 2	SDU size is 40 bytes
2	←		1 RLC PDU on LCH 1	SDU size is 40 bytes
2a	→		SI indicating data on LCH 2	Step 2a and 3 can happen in any order
3	→		MAC es PDU containing 1 RLC PDU on LCH 1	
4	←		Absolute grant allowing the UE to transmit with high data rate on LCH 2	Signalling value 31
5	→		MAC es PDU containing 1 RLC PDU on LCH 1 and 1 RLC PDU on LCH 2	Before and after this step, SS continues to receive 1 RLC PDU on LCH 1 per TTI, until complete SDU consisting of 25 PDU's is received.
6	←		Removal of absolute grant	Signalling value 1

7.1.6.2.8.5 Test requirements

1. In step 3, the SS shall receive 1 MAC-es PDU containing 1 RLC PDU on LCH 1.

2. In step 5, the SS shall receive 1 MAC-es PDU containing 1 RLC PDU on LCH 1 and 1 RLC PDU on LCH 2 within the same TTI.

7.1.6.2.9 MAC-es/e Correct handling of HARQ profile power offsets

7.1.6.2.9.1 Definition and applicability

All UEs which support E-DCH.

7.1.6.2.9.2 Conformance requirement

In FDD mode, the rules for E-TFC selection provided below shall apply to UEs in CELL_DCH state with an E-DCH transport channel configured. These UEs shall apply the E-TFC selection procedure when invoked by the HARQ entity (see subclause 11.8.1.1.1). In the case where a 2ms TTI is configured, E-TFC selection shall not be performed for TTIs that overlap with an uplink compressed mode gap. The E-TFC restriction procedure described in [12] shall always be applied before the E-TFC selection process below. Furthermore, for UEs that are also configured with a DCH transport channel on uplink, the TFC selection procedure shall be applied before either of these.

For each MAC-d flow, RRC configures MAC with a HARQ profile and a multiplexing list. Additionally, RRC configures MAC with a power offset for "Control-only" transmissions. This power offset and a maximum number of

HARQ transmissions of 8 will be used to define a HARQ profile for "Control-only" transmissions which will be used, in case the Scheduling Information needs to be transmitted without any higher-layer data. The HARQ profile includes the power offset and maximum number of HARQ transmissions to use for this MAC-d flow. The multiplexing list identifies for each MAC-d flow(s), the other MAC-d flows from which data can be multiplexed in a transmission that uses the power offset included in its HARQ profile.

RRC can control the scheduling of uplink data by giving each logical channel a priority between 1 and 8, where 1 is the highest priority and 8 the lowest. E-TFC selection in the UE shall be done in accordance with the priorities indicated by RRC. Logical channels have absolute priority, i.e. the UE shall maximise the transmission of higher priority data.

RRC can allocate non-scheduled transmission grants to individual MAC-d flows in order to reduce the transmission delays. When a 2ms TTI is configured each non-scheduled grant is applicable to the specific set of HARQ processes indicated by RRC. The applicability of scheduled grants can be also restricted to a specific set of HARQ processes when a 2ms TTI is configured. HARQ process restriction and reservation is under the control of the serving cell Node B and indicated to the UE by RRC.

For each configured MAC-d flow, a given E-TFC can be in any of the following states:

- Supported state;
- Blocked state.

At each TTI boundary, UEs in CELL_DCH state with an E-DCH transport channel configured shall determine the state of each E-TFC for every MAC-d flow configured based on its required transmit power versus the maximum UE transmit power (see [7] and [12]). If no DCH transport channel is configured or if a DCH transport channel is configured and the selected TFC is "empty" (see [3]), the UE shall consider that E-TFCs included in the minimum set of E-TFCs are always in supported state (see [7]).

At every TTI boundary for which a new transmission is requested by the HARQ entity (see subclause 11.8.1.1.1), the UE shall perform the operations described below. UEs configured both with DCH and E-DCH transport channels shall perform TFC selection before performing E-TFC selection.

The Serving Grant Update function provides the E-TFC selection function with the maximum E-DPDCH to DPCCH power ratio that the UE is allowed to allocate for the upcoming transmission for scheduled data (held in the Serving Grant state variable – see subclause 11.8.1.3).

The HARQ process ID for the upcoming transmission is determined using the following formulae:

- For 2ms TTI: CURRENT_HARQ_PROCESS_ID = [5*CFN + subframe number] **mod** HARQ_RTT
- For 10ms TTI: CURRENT_HARQ_PROCESS_ID = [CFN] **mod** HARQ_RTT

Based on this current HARQ process ID and the RRC configuration, the UE shall determine whether to take the scheduled and non-scheduled grants into account in the upcoming transmission. If they are not supposed to be taken into account, then the corresponding grant shall be assumed to not exist. If the variable Serving_Grant has the value "Zero_Grant" after the Serving Grant Update, then the Serving Grant shall not be taken into account in the upcoming transmission.

When Scheduling Information is triggered per subclause 11.8.1.6, the E-TFC selection and data-allocation process shall assume that a non-scheduled grant is available for its transmission and that Scheduling Information has a priority higher then any other logical channel. Furthermore the HARQ process used for the upcoming transmission shall be assumed to be active and not L3 restricted for the transmission of the Scheduling Information, i.e. transmission of Scheduling Information can take place on this process.

The transmission format and data allocation shall follow the requirements below:

- Only E-TFCs from the configured E-TFCS shall be considered for the transmission;
- For all logical channels, if the logical channel belongs to a non-scheduled MAC-d flow, its data shall be considered as available up to the corresponding non-scheduled grant, if the logical channel does not belong to a non-scheduled MAC-d flow, its data shall be considered as available up to the Serving Grant;
- The power offset for the transmission is the one from the HARQ profile of the MAC-d flow that allows highest-priority data to be transmitted. If more than one MAC-d flow allows data of the same highest priority to be transmitted, it is left to implementation to select which MAC-d flow to prefer);

- In case the variable Serving_Grant has the value "Zero_Grant" after the Serving Grant Update function and there is no data available for MAC-d flows for which non-scheduled grants were configured and the transmission of Scheduling Information has been triggered, the "Control-only" HARQ profile configured by the higher layers shall be used.

- The Nominal Power Offset shall be set to the power offset included in the transmission HARQ profile;

- The data allocation shall maximize the transmission of higher priority data;

- The amount of data from MAC-d flows for which non-scheduled grants were configured shall not exceed the value of the non-scheduled grant;

- If a 10ms TTI is configured and the TTI for the upcoming transmission overlaps with a compressed mode gap, the Serving_Grant provided by the Serving Grant Update function shall be scaled back as follows:

$$SG' = SG * (\frac{N_C}{15})$$

  where SG' represents the modified serving grant considered by the E-TFC selection algorithm and N_C represents the number of non DTX slots in the compressed TTI;

- When not in a power limited condition the maximum amount of data from MAC-d flows for which no non-scheduled grants were configured shall be quantized to the next smaller supported E-TFC based on the Serving Grant (after adjustment for compressed frames), the power offset from the selected HARQ profile, the non-scheduled grants (if any) and Scheduling Information (if any); In the case a 2ms TTI is configured and the HARQ process is inactive, the UE shall not include any such data in the transmission;

- The Scheduling Information is always sent when triggered;

- Only E-TFCs in supported state shall be considered;

- The E-TFC resulting in the smallest amount of padding for the selected MAC-es PDUs and corresponding MAC-e/es headers, shall be selected including the case when the Scheduling Information needs to be transmitted.

Once an appropriate E-TFC and data allocation are found according to the rules above, the "Multiplexing and TSN Setting" entity shall generate the corresponding MAC-e PDU.

The E-TFC selection function shall provide this MAC-e PDU and transmission HARQ profile to the HARQ entity. The maximum number of HARQ transmissions and the power offset in this profile, shall be set respectively to the maximum of the Max Number of HARQ Transmissions of the HARQ profiles from all the MAC-d flows from which data is multiplexed into the transmission and to the Nominal Power Offset. The HARQ entity shall also be informed of whether the transmission includes Scheduling Information and whether this information is sent by itself or with higher-layer data.

Reference(s)

TS 25.321 clause 11.8.1.4

7.1.6.2.9.3 Test purpose

The purpose of this test case is to verify that the UE applies different HARQ profiles from different MAC-d flows to E-DCH transmissions accordingly and in case data from two MAC-d flows is transmitted in the same E-DCH transmission, the UE selects the correct power offset.

7.1.6.2.9.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 6.11.4d using condition A15 as specified in clause 9.1 of TS 34.108. The logical channel, transport channel and queue identities are set to:

Logical Channel ID	MAC-d flow (UL)	Priority	Comment
7 (LCH1)	2	1	RB25
8 (LCH2)	3	2	RB17
Note: The RAB combination also includes SRBs on E-DCH on MAC-d flow 1 which is not used in the testcase			

The following parameters are specific for this test case:

Parameter	Value
E-DCH MAC-d flow multiplexing list for MAC-d flow 2	11111111 (See 25.331 10.3.5.1b) Note 1
E-DCH MAC-d flow multiplexing list for MAC-d flow 3	11111111 (See 25.331 10.3.5.1b) Note 1
Power offset for MAC-d flow 2	3dB (see 25.331 subclause 10.3.5.1b)
Power offset for MAC-d flow 3	0dB (see 25.331 subclause 10.3.5.1b)
Note 1: This configuration means that all MAC-d flows can be multiplexed in the same TTI	

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to 39 octets for RB 25 and RB17.

Test procedure

The UE is configured with two logical channels, LCH1 (with priority 1) and LCH2 (with priority 2). LCH1 is mapped to MAC-d flow 2 and LCH2 is mapped to MAC-d flow 3.

a) SS has not issued any scheduling grant for E-DCH to the UE.

b) SS transmits 2 SDUs of size 40 bytes (plus 1 byte RLC length indicator) on LCH1.

c) SS waits until an SI is received.

d) The SS issues primary absolute grant corresponding to 1 RLC PDU of size 41 octets per TTI when the Mac-d flow power offset is 3dB (signalling value 5), with Absolute Grant Scope set as "All HARQ processes".

e) SS starts receiving loop backed RLC PDU’s.

f) The SS issues primary absolute grant corresponding to “ZERO GRANT”, with Absolute Grant Scope set as "All HARQ processes".

g) SS transmits 4 SDUs of size 40 bytes (plus 1 byte RLC length indicator) on LCH2.

h) SS waits until an SI is received.

i) The SS issues primary absolute grant corresponding to 2 RLC PDUs of size 41 octets per TTI when the Mac-d flow power offset is 0dB (signalling value 5), with Absolute Grant Scope set as "All HARQ processes".

j) SS starts receiving loop backed RLC PDU’s.

k) The SS issues primary absolute grant corresponding to “ZERO GRANT”, with Absolute Grant Scope set as "All HARQ processes".

l) SS transmits 2 SDUs of size 40 bytes (plus 1 byte RLC length indicator) on LCH2.

m) SS waits until an SI is received.

n) SS transmits 2 SDUs of size 40 bytes (plus 1 byte RLC length indicator) on LCH1.

o) SS waits until an SI is received.

p) The SS issues primary absolute grant corresponding to 3 RLC PDUs of size 41 octets per TTI when the Mac-d flow power offset is 3dB (signalling value 9), with Absolute Grant Scope set as "All HARQ processes".

q) SS starts receiving loop backed RLC PDU's.

Expected sequence

7.1.6.2.9.5 Test requirements

1. In step 4, UE shall loop back PDUs for two TTIs, with one RLC PDU per TTI.
2. In step 9, UE shall loop back PDUs for two TTIs, with two RLC PDUs per TTI.
3. In step 16, UE shall loop back PDUs for one TTI, with three RLC PDU per TTI (2 RLC PDU's from LCH1 and 1 RLC PDU from LCH 2).
4. In step 17, UE shall loop back PDU for one TTI, with one RLC PDU per TTI (1 RLC PDU from LCH 2).

7.1.6.2.9a MAC-es/e Correct handling of HARQ profile (1.28Mcps TDD)

7.1.6.2.9a.1 Definition and applicability

All UEs which support E-DCH.

7.1.6.2.9a.2 Conformance requirement

In TDD, rules for E-TFC selection shall be applied as provided below.

UEs shall apply E-TFC selection when invoked by the HARQ entity (see subclause 11.9.1.1.1).

For each MAC-d flow, RRC configures MAC-e with a HARQ profile and multiplexing list. Additionally, RRC configures MAC with a power offset in case the Scheduling Information needs to be transmitted without any higher-layer data. For 1.28 Mcps TDD, RRC also configures MAC with a retransmission timer and the maximum number of HARQ transmissions in case the Scheduling Information needs to be transmitted without any higher-layer data. The HARQ profile includes the power offset and maximum number of HARQ transmissions to use for this MAC-d flow.

For 1.28 Mcps TDD, the HARQ profile also includes a retransmission timer attribute. The multiplexing list identifies for each MAC-d flow(s), the other MAC-d flows for which data can be multiplexed in a transmission that uses the power offset included in its HARQ profile.

RRC can control the scheduling of uplink data by giving each logical channel a priority between 1 and 8, where 1 is the highest priority and 8 the lowest. E-TFC selection in the UE shall be done in accordance with the priorities indicated by RRC. Logical channels have absolute priority, i.e. the UE shall maximise the transmission of higher priority data.

RRC can allocate non-scheduled transmission grants to individual MAC-d flows in order to reduce the transmission delays.

The UE shall determine whether to take scheduled or non-scheduled grants into account in the upcoming transmission. If neither are supposed to be taken into account (i.e. the TTI is not available for non-scheduled transmission and no Grant for scheduled transmission has been received) then no grant shall be assumed to exist. If a grant exists then the transmission format and data allocation shall follow the requirements below.

For each configured MAC-d flow, a given E-TFC can be in any of the following states:

- Supported state;
- Blocked state.

The E-TFC states are derived according to the following:

- If the transmission is a retransmission then only the E-TFC with the same block size as the original transmission may be in the supported state.
- For 1.28Mcps TDD, only E-TFCs from the E-TFCS (the table of TB sizes) which are consistent with the UE's E-DCH capability category shall be considered for the transmission;
- Only E-TFCs from the E-TFCS (the table of TB sizes) which can be supported by (exactly) the number of slots assigned by the grant shall be considered for the transmission;
- Only E-TFCs which result (for the granted timeslot and code physical resources) in a coderate lying between the maximum and minimum (inclusive) allowable code rates set by RRC [7] shall be considered for the transmission {note: the definition of the term “coderate” as used here is the same as that provided by [18]}. This shall be evaluated for both QPSK and 16-QAM modulation;
- P_{HARQ}, the HARQ profile power offset is selected (for 3.84/7.68Mcps TDD the HARQ profile for the transmission shall be selected among the HARQ profiles of MAC-d flows on which the highest priority logical channels with available data are mapped, for 1.28Mcps TDD the HARQ power offset shall be set to the maximum of HARQ power offset of all the MAC-d flows mapped to the same type of resource (scheduled or non-scheduled resource); Scheduling Information power offset shall be used when Scheduling Information is transmitted without any higher-layer data.)
- Only E-TFCs whose calculated transmission power requirement $P_{E\text{-}PUCH}$ (see [18]) is less than or equal to both the available and the granted power shall be considered for the transmission (note: this requirement does not apply in the case of a retransmission on non-scheduled resources). For TDD, the smallest E-TFC is considered always in the supported state. The granted power is defined as the calculated E-PUCH transmission power of [18] with β_e = (Absolute Grant Value + α_e). The available power is the maximum UE transmission power.

From those E-TFCs in the supported state the UE determines the largest block size that it is permitted to transmit within the given constraints.

The UE shall select the modulation type associated with the determined E-TFC (note: if an E-TFC is supported by both QPSK and 16-QAM then 16-QAM modulation shall be used if its power requirement ($P_{E\text{-}PUCH}$) is lower than the power requirement for QPSK, otherwise QPSK modulation shall be used).

Data allocation shall then be performed in accordance with the following:

- For all logical channels, if the logical channel belongs to a non-scheduled MAC-d flow, its data shall be considered as available up to the largest block size determined for the corresponding non-scheduled grant. If the logical channel does not belong to a non-scheduled MAC-d flow, its data shall be considered as available up to the largest block size determined for the Serving Grant;
- The data allocation shall maximise the transmission of higher priority data;

- The UE shall select the E-TFC, SF and modulation which minimises the power used (3.84/7.68 Mcps TDD only);

- The UE shall select the E-TFC and modulation which minimises the power used (1.28 Mcps TDD only);

Once an appropriate E-TFC and data allocation are found according to the rules above, the "Multiplexing and TSN Setting" entity shall generate the corresponding MAC-e PDU.

In 1.28Mcps TDD, when Scheduling Information is triggered by timer per subclause 11.9.1.5, the E-TFC selection and data-allocation process shall assume that Scheduling Information has a priority higher than any other logical channel.

The E-TFC selection function shall provide this MAC-e PDU and transmission HARQ profile to the HARQ entity. For 3.84Mcps TDD and 7.68Mcps TDD the selected E-TFC is also provided

NOTE: For 1.28Mcps TDD, the signalled transport block size index, i.e. E-TFCI, is the index of the selected E-TFC in the candidate set.

The maximum number of HARQ transmissions and the power offset in this profile shall be set respectively to the maximum of both the Max Number of HARQ Transmissions and of the power offset of the HARQ profiles from all the MAC-d flows from which data is multiplexed into the transmission. For 1.28 Mcps TDD, the maximum number of HARQ transmissions shall be set to the maximum of the Max Number of HARQ Transmissions of the HARQ profiles from all the MAC-d flows from which data is multiplexed into the transmission, the HARQ power offset shall be set to the maximum of HARQ power offset of all the MAC-d flows mapped to the same type of resource (scheduled or non-scheduled resource), and the retransmission timer shall be set to the maximum of the retransmission timer value of the HARQ profiles that are permitted to be multiplexed into the transmission. For 1.28Mcps TDD, when the Scheduling Information needs to be transmitted without any higher-layer data, the specific HARQ profile should be applied. Each HARQ process which is associated with a buffer holding a MAC-e PDU for potential retransmission shall maintain the HARQ profile and the number of re-transmissions that have occurred. For 1.28 Mcps TDD, the HARQ process shall also maintain the value of RTX_TIMER.

Further information on E-TFC selection is provided in Annex CA.

Reference(s)

TS 25.321 clause 11.9.1.4

7.1.6.2.9a.3 Test purpose

The purpose of this test case is to verify that the UE applies different HARQ profiles from different MAC-d flows to E-DCH transmissions.

7.1.6.2.9a.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 6.11.5.4.7.7 using condition A14 as specified in clause 9.1 of TS 34.108. The logical channel, transport channel and queue identities are set to:

Logical Channel ID	MAC-d flow (UL)	Priority	Comment
7 (LCH1)	2	1	RB25
8 (LCH2)	3	2	RB17
Note: The RAB combination also includes SRBs on E-DCH on MAC-d flow 1 which is not used in the testcase			

The following parameters are specific for this test case:

Parameter	Value
E-DCH MAC-d flow multiplexing list for MAC-d flow 2	11111111 (See 25.331 10.3.5.1b) Note 1
E-DCH MAC-d flow multiplexing list for MAC-d flow 3	11111111 (See 25.331 10.3.5.1b) Note 1
Power offset for MAC-d flow 2	3dB (see 25.331 subclause 10.3.5.1b)
Power offset for MAC-d flow 3	0dB (see 25.331 subclause 10.3.5.1b)
Note 1: This configuration means that all MAC-d flows can be multiplexed in the same TTI	

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to 39 octets for RB 25 and RB17.

Test procedure

The UE is configured with two logical channels, LCH1 (with priority 1) and LCH2 (with priority 2). LCH1 is mapped to MAC-d flow 2 and LCH2 is mapped to MAC-d flow 3.

a) SS has not issued any scheduling grant for E-DCH to the UE.

b) SS transmits 2 SDUs of size 40 bytes (plus 1 byte RLC length indicator) on LCH1.

c) SS waits until an SI is received.

d) The SS issues primary absolute grant corresponding to 1 RLC PDU of size 41 octets per TTI.

e) SS starts receiving loop backed RLC PDU's.

f) SS transmits 4 SDUs of size 40 bytes (plus 1 byte RLC length indicator) on LCH2.

g) SS waits until an SI is received.

h) The SS issues primary absolute grant corresponding to 2 RLC PDUs of size 41 octets per TTI.

i) SS starts receiving loop backed RLC PDU's.

j) SS transmits 2 SDUs of size 40 bytes (plus 1 byte RLC length indicator) on LCH2.

k) SS waits until an SI is received.

l) SS transmits 2 SDUs of size 40 bytes (plus 1 byte RLC length indicator) on LCH1.

m) SS waits until an SI is received.

n) The SS issues primary absolute grant corresponding to 3 RLC PDUs of size 41 octets per TTI.

o) SS starts receiving loop backed RLC PDU's.

7.1.6.2.9a.5 Test requirements

1. In step 4, UE shall loop back PDUs for two TTIs, with one RLC PDU per TTI.
2. In step 9, UE shall loop back PDUs for two TTIs, with two RLC PDUs per TTI.
3. In step 16, UE shall loop back PDUs for one TTI, with three RLC PDU per TTI (2 RLC PDU's from LCH1 and 1 RLC PDU from LCH 2).
4. In step 17, UE shall loop back PDU for one TTI, with one RLC PDU per TTI (1 RLC PDU from LCH 2).

7.1.6.2.10 MAC-es/e Correct handling of minimum set of E-TFCI

7.1.6.2.10.1 Definition and applicability

All UEs which support E-DCH.

7.1.6.2.10.2 Conformance requirement

In FDD mode, the rules for E-TFC selection provided below shall apply to UEs in CELL_DCH state with an E-DCH transport channel configured. These UEs shall apply the E-TFC selection procedure when invoked by the HARQ entity (see subclause 11.8.1.1.1). In the case where a 2ms TTI is configured, E-TFC selection shall not be performed for TTIs that overlap with an uplink compressed mode gap. The E-TFC restriction procedure described in [12] shall always be applied before the E-TFC selection process below. Furthermore, for UEs that are also configured with a DCH transport channel on uplink, the TFC selection procedure shall be applied before either of these.

For each MAC-d flow, RRC configures MAC with a HARQ profile and a multiplexing list. Additionally, RRC configures MAC with a power offset for "Control-only" transmissions. This power offset and a maximum number of HARQ transmissions of 8 will be used to define a HARQ profile for "Control-only" transmissions which will be used, in case the Scheduling Information needs to be transmitted without any higher-layer data. The HARQ profile includes the power offset and maximum number of HARQ transmissions to use for this MAC-d flow. The multiplexing list identifies for each MAC-d flow(s), the other MAC-d flows from which data can be multiplexed in a transmission that uses the power offset included in its HARQ profile.

RRC can control the scheduling of uplink data by giving each logical channel a priority between 1 and 8, where 1 is the highest priority and 8 the lowest. E-TFC selection in the UE shall be done in accordance with the priorities indicated by RRC. Logical channels have absolute priority, i.e. the UE shall maximise the transmission of higher priority data.

RRC can allocate non-scheduled transmission grants to individual MAC-d flows in order to reduce the transmission delays. When a 2ms TTI is configured each non-scheduled grant is applicable to the specific set of HARQ processes indicated by RRC. The applicability of scheduled grants can be also restricted to a specific set of HARQ processes when a 2ms TTI is configured. HARQ process restriction and reservation is under the control of the serving cell Node B and indicated to the UE by RRC.

For each configured MAC-d flow, a given E-TFC can be in any of the following states:

- Supported state;
- Blocked state.

At each TTI boundary, UEs in CELL_DCH state with an E-DCH transport channel configured shall determine the state of each E-TFC for every MAC-d flow configured based on its required transmit power versus the maximum UE transmit power (see [7] and [12]). If no DCH transport channel is configured or if a DCH transport channel is configured and the selected TFC is "empty" (see [3]), the UE shall consider that E-TFCs included in the minimum set of E-TFCs are always in supported state (see [7]).

At every TTI boundary for which a new transmission is requested by the HARQ entity (see subclause 11.8.1.1.1), the UE shall perform the operations described below. UEs configured both with DCH and E-DCH transport channels shall perform TFC selection before performing E-TFC selection.

The Serving Grant Update function provides the E-TFC selection function with the maximum E-DPDCH to DPCCH power ratio that the UE is allowed to allocate for the upcoming transmission for scheduled data (held in the Serving Grant state variable – see subclause 11.8.1.3).

The HARQ process ID for the upcoming transmission is determined using the following formulae:

- For 2ms TTI: CURRENT_HARQ_PROCESS_ID = [5*CFN + subframe number] **mod** HARQ_RTT
- For 10ms TTI: CURRENT_HARQ_PROCESS_ID = [CFN] **mod** HARQ_RTT

Based on this current HARQ process ID and the RRC configuration, the UE shall determine whether to take the scheduled and non-scheduled grants into account in the upcoming transmission. If they are not supposed to be taken into account, then the corresponding grant shall be assumed to not exist. If the variable Serving_Grant has the value "Zero_Grant" after the Serving Grant Update, then the Serving Grant shall not be taken into account in the upcoming transmission.

When Scheduling Information is triggered per subclause 11.8.1.6, the E-TFC selection and data-allocation process shall assume that a non-scheduled grant is available for its transmission and that Scheduling Information has a priority higher then any other logical channel. Furthermore the HARQ process used for the upcoming transmission shall be assumed to be active and not L3 restricted for the transmission of the Scheduling Information, i.e. transmission of Scheduling Information can take place on this process.

The transmission format and data allocation shall follow the requirements below:

- Only E-TFCs from the configured E-TFCS shall be considered for the transmission;
- For all logical channels, if the logical channel belongs to a non-scheduled MAC-d flow, its data shall be considered as available up to the corresponding non-scheduled grant, if the logical channel does not belong to a non-scheduled MAC-d flow, its data shall be considered as available up to the Serving Grant;
- The power offset for the transmission is the one from the HARQ profile of the MAC-d flow that allows highest-priority data to be transmitted. If more than one MAC-d flow allows data of the same highest priority to be transmitted, it is left to implementation to select which MAC-d flow to prefer);
- In case the variable Serving_Grant has the value "Zero_Grant" after the Serving Grant Update function and there is no data available for MAC-d flows for which non-scheduled grants were configured and the transmission of Scheduling Information has been triggered, the "Control-only" HARQ profile configured by the higher layers shall be used.
- The Nominal Power Offset shall be set to the power offset included in the transmission HARQ profile;

- The data allocation shall maximize the transmission of higher priority data;
- The amount of data from MAC-d flows for which non-scheduled grants were configured shall not exceed the value of the non-scheduled grant;
- If a 10ms TTI is configured and the TTI for the upcoming transmission overlaps with a compressed mode gap, the Serving_Grant provided by the Serving Grant Update function shall be scaled back as follows:

$$SG' = SG * (\frac{N_C}{15})$$

where SG' represents the modified serving grant considered by the E-TFC selection algorithm and N_C represents the number of non DTX slots in the compressed TTI;

- When not in a power limited condition the maximum amount of data from MAC-d flows for which no non-scheduled grants were configured shall be quantized to the next smaller supported E-TFC based on the Serving Grant (after adjustment for compressed frames), the power offset from the selected HARQ profile, the non-scheduled grants (if any) and Scheduling Information (if any); In the case a 2ms TTI is configured and the HARQ process is inactive, the UE shall not include any such data in the transmission;
- The Scheduling Information is always sent when triggered;
- Only E-TFCs in supported state shall be considered;
- The E-TFC resulting in the smallest amount of padding for the selected MAC-es PDUs and corresponding MAC-e/es headers, shall be selected including the case when the Scheduling Information needs to be transmitted.

Once an appropriate E-TFC and data allocation are found according to the rules above, the "Multiplexing and TSN Setting" entity shall generate the corresponding MAC-e PDU.

The E-TFC selection function shall provide this MAC-e PDU and transmission HARQ profile to the HARQ entity. The maximum number of HARQ transmissions and the power offset in this profile, shall be set respectively to the maximum of the Max Number of HARQ Transmissions of the HARQ profiles from all the MAC-d flows from which data is multiplexed into the transmission and to the Nominal Power Offset. The HARQ entity shall also be informed of whether the transmission includes Scheduling Information and whether this information is sent by itself or with higher-layer data.

TS 25.321 clause 11.8.1.4

7.1.6.2.10.3 Test purpose

The purpose of this test case is to verify that the UE considers the minimum set of E-TFCI as always supported.

7.1.6.2.10.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 6.11.4c using condition A12 as specified in clause 9.1 of TS 34.108. The following parameters are specific for this test case:

Logical Channel ID	MAC-d flow (UL)	Priority	Comment
7 (LCH1)	2	1	RB25

The following Radio Bearer Setup parameters are specific for this test case:

Parameter	Value
Maximum allowed UL TX power	23dBm
Uplink DPCH power control info	
Power Control Algorithm	Algorithm 2
- E-DPDCH info	
- E-TFCI table index	0
- E-DCH minimum set E-TFCI	31
- Reference E-TFCIs	2 E-TFCIs
- Reference E-TFCI	11
- Reference E-TFCI PO	8
- Reference E-TFCI	83
- Reference E-TFCI PO	21
Scheduling Information Configuration	
- Periodicity for Scheduling Info – no grant	10ms
ACK/NACK	5
CQI Reporting Cycle	2

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to 39 octets.

Test procedure

In this test procedure The UE is configured with one logical channel, with Id 7 (LCH 1). The Scheduling Information configuration for the E-DCH indicates to the UE that it shall periodically report Scheduling Information, which contains UPH measurement every E-DCH TTI.

a) SS has not issued any scheduling grant for E-DCH to the UE.

b) SS transmits 2 SDUs of size 40 bytes (plus 1 byte RLC length indicator) on LCH1.

c) SS waits until an SI is received.

d) The SS issues primary absolute grant corresponding to 2 RLC PDUs of size 41 octets per TTI (signalling value 8), with Absolute Grant Scope set as "All HARQ process".

e) SS starts receiving loop backed RLC PDU’s.

f) The SS issues primary absolute grant corresponding to “ZERO GRANT”, with Absolute Grant Scope set as "All HARQ processes".

g) SS transmits 2 SDUs of size 40 bytes (plus 1 byte RLC length indicator) on LCH1

h) SS waits until the next periodic SI is received.

i) The SS sends power control bits to give one TPC_cmd +1 to the UE.

j) SS waits 100ms and checks the UPH measurement from the UE for 150ms. If UPH measurement does not indicate UE_POWER_HEADROOM_5 or less within the 150ms then go back to step g) otherwise proceed to next step.

NOTE: When the UPH target range is reached then power control bits to give TPC_cmd =0 should be sent by SS to maintain the target power headroom.

k) The SS issues primary absolute grant corresponding to 2 RLC PDUs of size 41 octets per TTI (signalling value 8), with Absolute Grant Scope set as "All HARQ process".

l) SS starts receiving loop backed RLC PDU’s.

NOTE: Due to the configured “Minimum set of E-TFCI” of 31, the UE should send a single PDU/TTI anyway.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		2 RLC PDUs on LCH 1	
2	→		SI indicating data on LCH 1	
3	←		Primary Absolute grant allowing the UE to transmit 2 RLC PDU per TTI	Signalling value 8
4	→		MAC es PDU containing 2 RLC PDU's from LCH 1	
5	←		Primary Absolute grant set to 'ZERO GRANT' and scope 'All HARQ Processes'	
6	←		2 RLC PDUs on LCH 1	
7	→		SI indicating data on LCH 1	Next periodic SI sent from UE
8	←			The SS sends power control bits to give one TPC_cmd +1 to the UE.
9			Wait 100ms	
10	→		Periodic SIs indicating UPH measurement	SS checks UPH measurement for 150ms. If UE_POWER_HEADROOM_5 or less is received then next step, otherwise step 6
11	←		Primary Absolute grant allowing the UE to transmit 2 RLC PDU per TTI	Signalling value 8
12	→		MAC es PDU containing 1 RLC PDUs from LCH 1	This step is repeated until the all RLC SDUs are transmitted

Specific Message Contents

None

7.1.6.2.10.5 Test requirements

1. In step 4, UE shall start sending loop backed PDU, with two RLC PDUs per TTI.
2. In step 12, UE shall start sending loop backed PDU, with one RLC PDU per TTI.

7.1.6.2.10a Smallest E-TFC (1.28Mcps TDD)

7.1.6.2.10a.1 Definition and applicability

All UEs which support E-DCH.

7.1.6.2.10a.2 Conformance requirement

In TDD, rules for E-TFC selection shall be applied as provided below.

UEs shall apply E-TFC selection when invoked by the HARQ entity (see subclause 11.9.1.1.1).

For each MAC-d flow, RRC configures MAC-e with a HARQ profile and multiplexing list. Additionally, RRC configures MAC with a power offset in case the Scheduling Information needs to be transmitted without any higher-layer data. For 1.28 Mcps TDD, RRC also configures MAC with a retransmission timer and the maximum number of HARQ transmissions in case the Scheduling Information needs to be transmitted without any higher-layer data. The HARQ profile includes the power offset and maximum number of HARQ transmissions to use for this MAC-d flow. For 1.28 Mcps TDD, the HARQ profile also includes a retransmission timer attribute. The multiplexing list identifies for each MAC-d flow(s), the other MAC-d flows for which data can be multiplexed in a transmission that uses the power offset included in its HARQ profile.

RRC can control the scheduling of uplink data by giving each logical channel a priority between 1 and 8, where 1 is the highest priority and 8 the lowest. E-TFC selection in the UE shall be done in accordance with the priorities indicated by RRC. Logical channels have absolute priority, i.e. the UE shall maximise the transmission of higher priority data.

RRC can allocate non-scheduled transmission grants to individual MAC-d flows in order to reduce the transmission delays.

The UE shall determine whether to take scheduled or non-scheduled grants into account in the upcoming transmission. If neither are supposed to be taken into account (i.e. the TTI is not available for non-scheduled transmission and no Grant for scheduled transmission has been received) then no grant shall be assumed to exist. If a grant exists then the transmission format and data allocation shall follow the requirements below.

For each configured MAC-d flow, a given E-TFC can be in any of the following states:

- Supported state;
- Blocked state.

The E-TFC states are derived according to the following:

- If the transmission is a retransmission then only the E-TFC with the same block size as the original transmission may be in the supported state.
- For 1.28Mcps TDD, only E-TFCs from the E-TFCS (the table of TB sizes) which are consistent with the UE's E-DCH capability category shall be considered for the transmission;
- Only E-TFCs from the E-TFCS (the table of TB sizes) which can be supported by (exactly) the number of slots assigned by the grant shall be considered for the transmission;
- Only E-TFCs which result (for the granted timeslot and code physical resources) in a coderate lying between the maximum and minimum (inclusive) allowable code rates set by RRC [7] shall be considered for the transmission {note: the definition of the term “coderate” as used here is the same as that provided by [18]}. This shall be evaluated for both QPSK and 16-QAM modulation;
- P_{HARQ}, the HARQ profile power offset is selected (for 3.84/7.68Mcps TDD the HARQ profile for the transmission shall be selected among the HARQ profiles of MAC-d flows on which the highest priority logical channels with available data are mapped, for 1.28Mcps TDD the HARQ power offset shall be set to the maximum of HARQ power offset of all the MAC-d flows mapped to the same type of resource (scheduled or non-scheduled resource); Scheduling Information power offset shall be used when Scheduling Information is transmitted without any higher-layer data.)
- Only E-TFCs whose calculated transmission power requirement $P_{E\text{-}PUCH}$ (see [18]) is less than or equal to both the available and the granted power shall be considered for the transmission (note: this requirement does not apply in the case of a retransmission on non-scheduled resources). For TDD, the smallest E-TFC is considered always in the supported state. The granted power is defined as the calculated E-PUCH transmission power of [18] with β_e = (Absolute Grant Value + α_e). The available power is the maximum UE transmission power.

From those E-TFCs in the supported state the UE determines the largest block size that it is permitted to transmit within the given constraints.

The UE shall select the modulation type associated with the determined E-TFC (note: if an E-TFC is supported by both QPSK and 16-QAM then 16-QAM modulation shall be used if its power requirement ($P_{E\text{-}PUCH}$) is lower than the power requirement for QPSK, otherwise QPSK modulation shall be used).

Data allocation shall then be performed in accordance with the following:

- For all logical channels, if the logical channel belongs to a non-scheduled MAC-d flow, its data shall be considered as available up to the largest block size determined for the corresponding non-scheduled grant. If the logical channel does not belong to a non-scheduled MAC-d flow, its data shall be considered as available up to the largest block size determined for the Serving Grant;
- The data allocation shall maximise the transmission of higher priority data;
- The UE shall select the E-TFC, SF and modulation which minimises the power used (3.84/7.68 Mcps TDD only);
- The UE shall select the E-TFC and modulation which minimises the power used (1.28 Mcps TDD only);

Once an appropriate E-TFC and data allocation are found according to the rules above, the "Multiplexing and TSN Setting" entity shall generate the corresponding MAC-e PDU.

In 1.28Mcps TDD, when Scheduling Information is triggered by timer per subclause 11.9.1.5, the E-TFC selection and data-allocation process shall assume that Scheduling Information has a priority higher than any other logical channel.

The E-TFC selection function shall provide this MAC-e PDU and transmission HARQ profile to the HARQ entity. For 3.84Mcps TDD and 7.68Mcps TDD the selected E-TFC is also provided.

NOTE: For 1.28Mcps TDD, the signalled transport block size index, i.e. E-TFCI, is the index of the selected E-TFC in the candidate set.

The maximum number of HARQ transmissions and the power offset in this profile shall be set respectively to the maximum of both the Max Number of HARQ Transmissions and of the power offset of the HARQ profiles from all the MAC-d flows from which data is multiplexed into the transmission. For 1.28 Mcps TDD, the maximum number of HARQ transmissions shall be set to the maximum of the Max Number of HARQ Transmissions of the HARQ profiles from all the MAC-d flows from which data is multiplexed into the transmission, the HARQ power offset shall be set to the maximum of HARQ power offset of all the MAC-d flows mapped to the same type of resource (scheduled or non-scheduled resource), and the retransmission timer shall be set to the maximum of the retransmission timer value of the HARQ profiles that are permitted to be multiplexed into the transmission. For 1.28Mcps TDD, when the Scheduling Information needs to be transmitted without any higher-layer data, the specific HARQ profile should be applied. Each HARQ process which is associated with a buffer holding a MAC-e PDU for potential retransmission shall maintain the HARQ profile and the number of re-transmissions that have occurred. For 1.28 Mcps TDD, the HARQ process shall also maintain the value of RTX_TIMER.

Further information on E-TFC selection is provided in Annex CA.

Reference(s)

TS 25.321 clause 11.9.1.4

7.1.6.2.10a.3 Test purpose

The purpose of this test case is to verify that the UE considers the smallest E-TFC as always supported.

7.1.6.2.10a.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 6.11.5.4.7.6 using condition A11 as specified in clause 9.1 of TS 34.108. The following parameters are specific for this test case:

Logical Channel ID	MAC-d flow (UL)	Priority	Comment
7 (LCH1)	2	1	RB25

The following parameters are specific for this test case:

Parameter	Value
Maximum allowed UL TX power	33dBm

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to 39 octets.

Test procedure

In this test procedure The UE is configured with one logical channel, with Id 7 (LCH 1).

a) SS has not issued any scheduling grant for E-DCH to the UE.

b) SS transmits 2 SDUs of size 40 bytes (plus 1 byte RLC length indicator) on LCH1.

c) SS waits until an SI is received.

d) The SS issues primary absolute grant corresponding to 2 RLC PDUs of size 41 octets per TTI.

e) SS starts receiving loop backed RLC PDU's.

f) The SS performs a physical channel reconfiguration setting the “Maximum allowed UL TX power” to a small enough value that not even a single PDU is supported due to insufficient available power.

g) SS transmits 2 SDUs of size 40 bytes (plus 1 byte RLC length indicator) on LCH1

h) SS waits until an SI is received.

i) The SS issues primary absolute grant corresponding to 2 RLC PDUs of size 41 octets per TTI (.

j) SS starts receiving loop backed MAC es PDU only including an SI.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		2 RLC PDUs on LCH 1	
2	→		SI indicating data on LCH 1	
3	←		Primary Absolute grant allowing the UE to transmit 2 RLC PDU per TTI	
4	→		MAC es PDU containing 2 RLC PDU’s from LCH 1	
5	←		SS performs a physical channel reconfiguration	The “Maximum allowed UL TX power” is reduced such that any E-TFC is not supported anymore
6	←		2 RLC PDUs on LCH 1	
7	→		SI indicating data on LCH 1	
8	←		Primary Absolute grant allowing the UE to transmit 2 RLC PDU per TTI	
9	→		MAC es PDU containing an SI only	

Specific Message Contents

None

7.1.6.2.10a.5 Test requirements

1. In step 4, UE shall start sending loop backed PDU, with two RLC PDUs per TTI.
2. In step 9, UE shall start sending loop backed PDU, including an SI only.

7.1.6.2.11 MAC-es/e correct handling of absolute and relative grants in discontinuous downlink reception operation

7.1.6.2.11.1 Definition and applicability

All UEs which support DPCCH Discontinuous Transmission and Discontinuous Downlink Reception operation.

7.1.6.2.11.2 Conformance requirement

From TS 25.321 clause 11.8.1.3.1

The Serving Grant Update procedure shall be applied at every TTI boundary and shall take into account the Absolute Grant message, Serving Relative Grant and non-serving Relative Grants that apply to the TTI.

The UE shall:

1> set reference_ETPR2 to reference_ETPR as defined in subclause 3.1.2;

1> set reference_ETPR to the E-DPDCH to DPCCH power ratio as defined in subclause 3.1.2;

1> if an Absolute Grant was received for this TTI:

2> if the Identity type is "Primary", and the Absolute Grant value is set to "INACTIVE":

3> if Absolute Grant Scope indicates "Per HARQ process" and a 2ms TTI is configured:

4> de-activate the process given by the value of CURRENT_HARQ_PROCESS.

3> if Absolute Grant Scope indicates "All HARQ processes" and a secondary E-RNTI was configured by higher layers:

4> activate all HARQ processes;

4> set Serving_Grant = Stored_Secondary_Grant;

4> set Primary_Grant_Available to "False".

3> if Absolute Grant Scope indicates "All HARQ processes", a 2ms TTI is configured and a secondary E-RNTI was not configured by higher layers:

4> deactivate all HARQ processes (if a process was inactive it remains inactive, if a process was active it becomes inactive).

2> else if the Absolute Grant Value is different from "INACTIVE":

3> if the Identity Type is "Secondary":

4> set Stored_Secondary_Grant = Absolute Grant Value.

3> if the Identity Type is "Primary" or Primary_Grant_Available is set to "False":

4> set Serving_Grant = Absolute Grant Value.

4> if the Identity Type is "Primary":

5> set Primary_Grant_Available to "True";

5> if Absolute Grant Scope indicates "Per HARQ process":

6> activate the process given by the value of CURRENT_HARQ_PROCESS.

5> if Absolute Grant Scope indicates "All HARQ processes":

6> activate all HARQ processes.

5> if AG_Timer is not active, it shall be started, otherwise it shall be restarted.

1> else (no Absolute Grant received):

2> if the HARQ process given by the value of CURRENT_HARQ_PROCESS is active; and

2> if Primary_Grant_Available is equal to "True"; and

2> if Serving_Grant <> "Zero_Grant" ; and

2> if AG_Timer has expired; and

2> if there was a scheduled transmission (see NOTE) in the previous TTI of the HARQ process given by the value of CURRENT_HARQ_PROCESS:

3> if the Serving Relative Grant indicates "UP":

4> determine the Serving_Grant in accordance with subclause 9.2.5.2.1.

3> else, if the Serving Relative Grant indicates "DOWN":

4> determine the Serving_Grant in accordance with subclause 9.2.5.2.1.

3> else:

4> the Serving_Grant is unchanged (i.e. kept from previous TTI).

1> if any Non-Serving Relative Grants indicate "DOWN" for this TTI and Serving_Grant <> "Zero_Grant":

2> Serving_Grant = MIN(Serving_Grant, Maximum_Serving_Grant, Serving_Grant determined in accordance with subclause 9.2.5.2.1);

2> Maximum_Serving_Grant = Serving_Grant.

2> if Non_Serving_RG_Timer is not active it shall be started, otherwise it shall be restarted;

1> else if no Non-Serving Relative Grants indicate "DOWN" for this TTI:

2> if Non_Serving_RG_Timer has not expired:

3> Serving_Grant = MIN(Maximum_Serving_Grant, Serving_Grant).

1> if Non_Serving_RG_Timer expires:

2> set the Maximum_Serving_Grant to the highest possible value (i.e. index 37 in table 9.2.5.2.1.1 or 9.2.5.2.1.2 as configured by higher layers).

NOTE 1: MIN("Zero_Grant", any numerical value) = "Zero_Grant".

NOTE 2: Scheduling Information sent alone is not considered as a scheduled transmission.

From TS 25.321 clause 11.8.1.8

When the DRX feature is enabled by higher layers, and in addition to the conditions defined in subclause 6C.3 of [5] the downlink monitoring of E-AGCH and E-RGCH sets is required in the following conditions:

- At least one MAC-d flow is configured with a scheduled transmission and TEBS > 0 or;
- a scheduled E-DCH transmission has been performed in any of the *Inactivity Threshold for UE Grant Monitoring* previous TTIs or;
- the start of E-AGCH and E-RGCH commands overlap with an E-HICH corresponding to a scheduled E-DCH transmission.

From TS 25.214 clause 6C.3

When DL_DRX_Active is TRUE (see section 6C), the UE shall continue to receive F-DPCH as described in sub-clause 5.1 and the UE need not receive physical downlink channels other than the F-DPCH except for the following cases:

1. …
2. …
3. …
4. …
5. The UE shall monitor the full E-AGCH transmission from the serving E-DCH cell in the following cases:
   - If UE_DRX_Grant_Monitoring is TRUE and the start of the E-AGCH transmission overlaps with an HS-SCCH reception subframe as defined in the HS-SCCH reception pattern,
   - When conditions defined in subclause 11.8.1.8 of [6] are fulfilled.
6. The UE shall monitor the full E-RGCH transmissions from cells in the serving E-DCH radio link set in the following cases:
   - If UE_DRX_Grant_Monitoring is TRUE and the start of the E-RGCH transmission overlaps with an HS-SCCH reception subframe as defined in the HS-SCCH reception pattern,
   - When conditions defined in subclause 11.8.1.8 of [6] are fulfilled.
7. The UE shall monitor the full E-RGCH(s) from all the other cells in the E-DCH active set, except from the cells in the serving E-DCH radio link set as determined in subclause 11.8.1.8 of [6].

TS 25.214 clause 6C.3

7.1.6.2.11.3 Test purpose

The purpose of this test case is to verify that when in discontinuous downlink reception operation, the UE monitors the E-AGCH and E-RGCH at the times specified in the core specifications.

7.1.6.2.11.4 Method of test

Initial conditions

System Simulator:

2 cells, default parameters, Ciphering Off.

User Equipment:

The SS establishes the reference radio bearer configuration Streaming or interactive or background / UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] / UM PS RAB + UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] SRBs for DCCH on E-DCH and HS-DSCH as specified in TS 34.108, clause 6.11.4i.1. The logical channel, transport channel and queue identities are set to:

Logical Channel ID	MAC-d flow (UL)	Priority	Comment
7 (LCH1)	2	1	RB25

Both cells 1 and 2 are in E-DCH active set. Cell 1 is the serving E-DCH cell. Cell 2 belongs to non serving Radio link set.

The following parameters are specific for this test case:

Parameter	Value
Periodicity for Scheduling Info – no grant	500 ms (see 25.331 10.3.6.99)
E-DCH TTI	10 ms
Inactivity Threshold for UE Grant Monitoring	0

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to (10*41)-2 octets.

Test procedure

In this test procedure the UE is configured with one logical channel.

0) SS waits for the Measurement report from the UE with event set to “1a” and then adds the Radio link on the second cell by sending an Active Set Update message.

a) SS has not issued any scheduling grant for E-DCH to the UE, TEBS at the UE is 0 and there is no pending E-HICH corresponding to a previous scheduled E-DCH transmission.

b) SS has waited long enough for both SS and UE to go autonomously into DTX/DRX mode.

c) SS transmits 10 SDUs of size 40 bytes (plus 1 byte RLC length indicator) on LCH1.

d) The SS waits for an SI to be received that indicates that data is available. SS issues a primary absolute grant that allows the UE to send 2 RLC PDUs per TTI (signalling value 5), in a transmission that overlaps with an HS-SCCH reception subframe as defined in the HS-SCCH reception pattern.

e) SS starts receiving looped back PDU’s and checks that UE has started using the serving grant corresponding to 2 RLC PDU’s transmitted per TTI.

f) Void.

g) Within 1 HARQ-RTT of the TTI with the last scheduled E-DCH transmission, and in a transmission that overlaps with an HS-SCCH reception subframe as defined in the HS-SCCH reception pattern, SS sends a relative grant in cell 2 (non-serving) as ‘Down’. (*Note)

h) SS transmits 10 SDU’s of size 40 bytes (plus 1 byte RLC length indicator) on LCH1.

i) SS starts receiving looped back PDU's and checks that UE has started using the serving grant corresponding to 1 RLC PDU transmitted per TTI, i.e. that it has acted on the 'Down' command from cell 2.

j) In a transmission overlapping with the E-HICH for the last received PDU or the previous last PDU, but not overlapping with an HS-SCCH reception subframe as defined in the HS-SCCH reception pattern , SS issues a issues a primary absolute grant that allows the UE to send 2 RLC PDU's per TTI (signalling value 5).

k) SS transmits 10 SDU's of size 40 bytes (plus 1 byte RLC length indicator) on LCH1.

l) SS starts receiving looped back PDU's and checks that UE has started using the serving grant corresponding to 2 RLC PDU's transmitted per TTI.

m) Void.

n) In a transmission overlapping with the E-HICH for the last received PDU or the previous last PDU, but not overlapping with an HS-SCCH reception subframe as defined in the HS-SCCH reception pattern, SS issues a relative grant in cell 2 (non-serving) as 'Down'. (*Note)

o) SS transmits 10 SDU's of size 40 bytes (plus 1 byte RLC length indicator) on LCH1.

p) SS starts receiving looped back PDU's and checks that UE has started using the serving grant corresponding to 1 RLC PDU transmitted per TTI.

q) SS waits until all data has been received.

r) SS removes the scheduling grant from the UE.

s) SS sends a Physical Channel Reconfiguration Message to the UE to change the value of 'Inactivity Threshold for UE Grant Monitoring' from 0 to 8 subframes.

t) UE sends a Physical Channel Reconfiguration Complete Message.

u) SS transmits 10 SDUs of size 40 bytes (plus 1 byte RLC length indicator) on LCH1.

v) The SS waits for an SI to be received that indicates that data is available. SS issues a primary absolute grant that allows the UE to send 1 RLC PDU per TTI (signalling value 4), in a transmission that overlaps with an HS-SCCH reception subframe as defined in the HS-SCCH reception pattern.

w) SS starts receiving looped back PDU's and checks that UE has started using the serving grant corresponding to 1 RLC PDU transmitted per TTI.

x) In up to 8 subframes of the TTI with the last scheduled E-DCH transmission, in a transmission that does not overlap with an HS-SCCH reception subframe as defined in the HS-SCCH reception pattern, SS issues a primary absolute grant that allows the UE to send 2 RLC PDU's per TTI (signalling value 5)

y) SS transmits 10 SDU's of size 40 bytes (plus 1 byte RLC length indicator) on LCH1.

z) SS starts receiving looped back PDU's and checks that UE has started using the serving grant corresponding to 2 RLC PDU's transmitted per TTI.

aa) In up to 8 subframes of the TTI with the last scheduled E-DCH transmission, in a transmission that does not overlap with an HS-SCCH reception subframe as defined in the HS-SCCH reception pattern, SS issues relative grant in cell 2 (non-serving) as 'Down'. (*Note)

ab) SS transmits 10 SDU's of size 40 bytes (plus 1 byte RLC length indicator) on LCH1.

ac) SS starts receiving looped back PDU's and checks that UE has started using the serving grant corresponding to 1 RLC PDU transmitted per TTI, i.e. that it has acted on the first primary grant followed by the 'Down' command from cell 2.

ad) SS waits for at least 8 subframes after the TTI of the last scheduled E-DCH transmission, then removes the scheduling grant from the UE.

ae) SS transmits 10 SDU's of size 40 bytes (plus 1 byte RLC length indicator) on LCH1.

af) SS waits until an SI is received.

ag) SS issues a primary absolute grant that allows the UE to send 2 RLC PDU's per TTI (signalling value 5), in a transmission that does not overlap with an HS-SCCH reception subframe as defined in the HS-SCCH reception pattern.

ah) SS starts receiving looped back PDU's and checks that UE has started using the serving grant corresponding to 2 RLC PDU's transmitted per TTI.

*NOTE: The absolute grants issued in steps c, j and x with signalling value 5 result in SG_{LUPR} corresponding to 19/15. One transmission of a 'Down' command will result in SG_{LUPR} corresponding to 17/15, which is sufficient for 1 RLC PDU transmission only.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
0A	→		Measurement Report	See specific message contents for this message
0B	←		ACTIVE SET UPDATE	The SS instructs the UE to add cell 2 in the active set
0C	→		ACTIVE SET UPDATE COMPLETE	
1	←		10 RLC PDUs on LCH 1	
1a	→		SI indicating data	
2	←		Absolute grant allowing the UE to transmit 2 RLC PDUs per TTI	Signalling value 5 Overlapping with an HS-SCCH reception subframe
3	→		MAC es PDU containing more than one RLC PDU from LCH 1	This step is repeated until all RLC SDU's are received.
4	←		Void	
5	←		Within 1 HARQ-RTT of the last scheduled E-DCH transmission in Step 3, Relative Grant in cell 2 with 'DOWN'	Overlapping with an HS-SCCH reception subframe
6	←		10 RLC PDUs on LCH 1	
7	→		MAC es PDU containing 1 RLC PDU from LCH 1	This step is repeated until all RLC SDU's are received.
8	←		Absolute grant allowing the UE to transmit 2 RLC PDUs per TTI	Signalling value 5 Overlapping with E-HICH transmission for the last PDU or previous last PDU received in Step 7 Not overlapping with an HS-SCCH reception subframe
9	←		10 RLC PDUs on LCH 1	
10	→		MAC es PDU containing more than one RLC PDU from LCH 1	This step is repeated until all RLC SDU's are received.
11	←		Void	
12	←		Relative Grant in cell 2 with 'DOWN'	Overlapping with E-HICH transmission for the last PDU or previous last PDU received in Step 10 Not overlapping with an HS-SCCH reception subframe
13	←		10 RLC PDUs on LCH 1	
14	→		MAC es PDU containing 1 RLC PDU from LCH 1	This step is repeated until all RLC SDU's are received.
15			Removal of scheduling grant for the UE	
16	←		Physical Channel Reconfiguration	'Inactivity Threshold for UE Grant Monitoring' set to 8 frames
17	→		Physical Channel Reconfiguration Complete	
18	←		10 RLC PDUs on LCH 1	
18a	→		SI indicating data	
19	←		Absolute grant allowing the UE to transmit 1 RLC PDU per TTI	Signalling value 4 Overlapping with an HS-SCCH reception subframe
20	→		MAC es PDU containing 1 RLC PDU from LCH 1	This step is repeated until all RLC SDU's are received.
21			In up to 8 subframes of the last scheduled E-DCH transmission in Step 20, absolute grant allowing the UE to transmit 2 RLC PDUs per TTI	Signalling value 5 Not overlapping with an HS-SCCH reception subframe
22	←		10 RLC PDUs on LCH 1	
23	→		MAC es PDU containing more than one RLC PDU from LCH 1	This step is repeated until all RLC SDU's are received
24			Void	
25			In up to 8 subframes of the last scheduled E-DCH transmission in Step 23, Relative Grant in cell 2 with 'DOWN'	Not overlapping with an HS-SCCH reception subframe
26	←		10 RLC PDUs on LCH 1	
27	→		MAC es PDU containing 1 RLC PDU from LCH 1	This step is repeated until all RLC SDU's are received.

28	←	At least 8 subframes after the last scheduled E-DCH transmission in Step 27, removal of scheduling grant for the UE	
29	←	10 RLC PDUs on LCH 1	
30	→	SI indicating data on LCH 1	
31	←	Absolute grant allowing the UE to transmit 2 RLC PDUs per TTI	Signalling value 5 Not overlapping with an HS-SCCH reception subframe
32	→	MAC es PDU containing more than one RLC PDU from LCH 1	This step is repeated until all RLC SDU's are received

Specific Message Contents

MEASUREMENT REPORT (Step 0a)

Use the same message as specified in 34.108 except for the following:

Information Element	Value/remark
Message Type	
Integrity check info	
- Message authentication code	This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I.
- RRC Message sequence number	This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value.
Measurement identity	1
Measured Results	
- Intra-frequency measured results	Check to see if measurement results for 2 cells are included (the order in which the different cells are reported is not important)
- Cell measured results	
- Cell Identity	Checked that this IE is absent
- Cell synchronisation information	Checked that this IE is present and includes IE COUNT-C-SFN frame difference
- Primary CPICH info	
- Primary scrambling code	Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108
- CPICH Ec/N0	Checked that this IE is absent
- CPICH RSCP	Checked that this IE is present
- Pathloss	Checked that this IE is absent
- Cell measured results	
- Cell Identity	Checked that this IE is absent
- Cell synchronisation information	Checked that this IE is absent
- Primary CPICH info	
- Primary scrambling code	Refer to clause titled "Default settings for cell No.1 (FDD)" in clause 6.1 of TS 34.108
- CPICH Ec/N0	Checked that this IE is absent
- CPICH RSCP	Checked that this IE is present
- Pathloss	Checked that this IE is absent
Measured results on RACH	Checked that this IE is absent
Additional measured results	Checked that this IE is absent
Event results	
- Intra-frequency measurement event results	
- Intra-frequency event identity	1a
- Cell measurement event results	
- Primary CPICH info	
- Primary scrambling code	Refer to clause titled "Default settings for cell No.2 (FDD)" in clause 6.1 of TS 34.108

ACTIVE SET UPDATE (Step 0b)

The message to be used in this test is defined in TS 34.108, clause 9, with the following exceptions:

Information Element	Value/remark
Activation time	Not Present
DTX-DRX timing information	
CHOICE *timing*	Continue
DTX-DRX Information	Not Present
Radio link addition information	
- Primary CPICH Info	
- Primary scrambling code	Primary scrambling code of Cell 2
- Downlink F-DPCH info for each RL	
- Primary CPICH usage for channel estimation	Primary CPICH may be used
- F-DPCH frame offset	Calculated value from Cell synchronisation information
- F-DPCH slot format	3 if UE supports enhanced F-DPCH, otherwise Not Present
- Secondary CPICH info	Not Present
- Secondary scrambling code	Not Present
- Code number	12
- TPC combination index	1
- CHOICE E-HICH Information	
- E-HICH Information	
- Channelisation code	4
- Signature sequence	1
- CHOICE E-RGCH Information	
- E-RGCH Information	
- Signature Sequence	0
- RG combination index	2

7.1.6.2.11.5 Test requirements

1. After step 2, UE will start sending 2 RLC PDU's per TTI.
2. After step 6, UE will start sending 1 RLC PDU per TTI.
3. After step 9, UE will start sending 2 RLC PDU's per TTI.
4. After step 13, UE will start sending 1 RLC PDU per TTI.
5. After step 19, UE will start sending 1 RLC PDU per TTI.
6. After step 22, UE will start sending 2 RLC PDU's per TTI.
7. After step 26, UE will start sending 1 RLC PDU per TTI.
8. After Step 31, UE will start sending 2 RLC PDU's per TTI.

7.1.6.2.12 MAC-es/e correct handling scheduling information transmission (for different UpPCH shifting setting, for 1.28Mcps TDD only)

7.1.6.2.12.1 Definition and applicability

All UEs which support 1.28Mcps TDD and HS-PDSCH and E-DCH.

7.1.6.2.12.2 Conformance requirement

[TS 25.224, clause 5.2.2]

Open loop uplink synchronisation control is used for UpPCH.

The UE may estimate the propagation delay Δt_p based upon the path loss using the received P-CCPCH and/or DwPCH power.

The UpPCH is sent to the Node B advanced in time according to the timing of the received DwPCH. The time of the beginning of the UpPCH $T_{TX\text{-}UpPCH}$ is given by:

$T_{TX\text{-}UpPCH} = T_{RX\text{-}DwPCH} - 2\Delta t_p + 12*16\ T_C + n_{UpPCHShift}*16Tc$

$n_{UpPCHShift}$ =0..127, $n_{UpPCHShift}$ is indicated by higher layers

in multiple of 1/8 chips, where

$T_{TX\text{-}UpPCH}$ is the beginning time of UpPCH transmission with the UE's timing,

$T_{RX\text{-}DwPCH}$ is the received beginning time of DwPCH with the UE's timing,

$2\Delta t_p$ is the timing advance of the UpPCH default value is 48Tc.

[TS 25.224, clause 5.6.3]

Requests for the transmission of an E-RUCCH are controlled by higher layers [18].

The available eight SYNC_UL signatures in a cell is divided into two subsets, one for the access of RACH information and the other for the access of E-RUCCH information.

When a Node B detects a SYNC_UL signature and acknowledges it on the related FPACH, it should do some recordings, including the FPACH channel number, the sub-frame on which the acknowledgement is sent and the SYNC_UL signature number. When a PRACH or E-RUCCH comes from a UE, the Node B should derive the related FPACH and the sub-frame on which the acknowledgement was sent for the UE and find the right record. The signature number in the record can help the Node B know the access type.

Random access procedure for enhanced uplink is basically same as random access procedure in subclause 5.6.3, only adding some new definitions.

L_{iE} is the Length of E-RUCCH information transport blocks associated to FPACHi in sub-frames.

N_{RACHi} is the number of PRACHs associated to the ith FPACH.

$N_{E\text{-}RUCCHi}$ is the number of E-RUCCHs associated to the ith FPACH and $N_{E\text{-}RUCCHi}$ equals to $\min\{N_{RACHi}, L_{iE}\}$.

When SF of PRACH code equals to 16, L_{iE} will be 2, otherwise L_{iE} will be 1

When SF of PRACH code equals to 4, SF of E-RUCCH will be 8, otherwise E-RUCCHs has the same SF with PRACH.

When $n_{E\text{-}RUCCHi}$ equals to n_{RACHi}, E-RUCCH will share the same code resource with PRACH. And when SF of PRACH code equals to 4, the code resource assigned to PRACH including two codes (code i and code i+1) of SF 8, E-RUCCH can use the ith code of SF 8.

If $FPACH_i$ sent an acknowledgement for E-RUCCH information, the sub-frames on which an acknowledgement is sent on FPACHi is fulfilling the following relation:

(SFN' mod L_{iE})=$n_{E\text{-}RUCCHi}$; $n_{E\text{-}RUCCHi}$=0,…, $N_{E\text{-}RUCCHi}$-1,

Where, SFN' is the sub-frame number of the acknowledgement on FPACH

Accordingly, the code resource assigned to PRACH may be used by PRACH or E-RUCCH, we should make two prescript avoiding the collision between PRACH and E-RUCCH.

When Node B sent a $FPACH_i$ for $PRACH_{nRACHi}$ in sub frame K, Node B could not send a $FPACH_i$ for $E-RUCCH_{n_{E-RUCCHi}}$ before sub frame K+L_i.

When Node B sent a $FPACH_i$ for $E-RUCCH_{n_{E-RUCCHi}}$ in sub frame K, Node B could not send a FPACHi for $PRACH_{nRACHi}$ before sub frame K+L_{iE}.

The interval between the acknowledgement on FPACH and transmission of E-RUCCH is fixed for a UE. The UE will send at the sub-frame coming 2 sub-frames after the one carrying the signature acknowledgement. In case L_{iE} is bigger than one and the sub-frame number of the acknowledgement is odd the UE will wait one more sub-frame.

The transmission power and the transmission timing are set according to subclause 5.1.1.7 and 5.2.7 respectively.

[TS 25.224, clause 5.2.7]

The Node B shall measure the received SYNC-UL timing deviation $UpPCH_{POS}$. $UpPCH_{POS}$ is sent in the FPACH and is represented as an 13 bit number (0-8191) being the multiple of 1/8 chips which is nearest to received position of the UpPCH.

Time of the beginning of the E-RUCCH $T_{TX\text{-}E\text{-}RUCCH}$ is given by:

$T_{TX\text{-}E\text{-}RUCCH} = T_{RX\text{-}E\text{-}RUCCH} – (UpPCH_{ADV} + UpPCH_{POS} – 8*16\ T_C)$

in multiple of 1/8 chips, where

$T_{TX\text{-}E\text{-}RUCCH}$ is the beginning time of E-RUCCH transmission with the UE's timing,

$T_{RX\text{-}E\text{-}RUCCH}$ is the beginning time of E-RUCCH reception with the UE's timing if the E-RUCCH was a DL channel,

$UpPCH_{ADV}$ is the timing advance of the UpPCH.

[TS 25.321, clause 11.9.1.5]

A "Grant Request" type Scheduling Information can be triggered if any of the following events occur:

- The TEBS becomes larger than zero;
- An E-DCH serving cell change occurs and the TEBS is larger than zero;

An optional Extended Estimation Window (defined by RRC in TTIs) may be used to prevent the UE from triggering unnecessary E-RUCCH transmission in case the UE potentially has an available Grant a short time in the future. The UE may perform a persistent check through the Extended Estimation Window to evaluate whether there is a Grant available for new data transmission when the UE can not take the decision just according to the related HARQ information, e.g., HARQ timing, HARQ retransmission numbers and so on.

If a UE has no Grant (including scheduled grant or non-scheduled grant) available for a new MAC-e or MAC-i PDU transmission in current TTI or in the Extended Estimation Window (if configured by RRC), as the "Grant Request" type Scheduling Information is triggered, the transmission of Scheduling Information shall be triggered via E-RUCCH.

Else if the UE has a Grant (including scheduled grant or non-scheduled grant) available for a new MAC-e or MAC-i PDU transmission in current TTI or in Extended Estimation Window (if configured by RRC), as the "Grant Request" type Scheduling Information is triggered, the scheduling information should be included in a MAC-e or MAC-i PDU via the Grant. If the HARQ process fails to deliver the MAC-e or MAC-i PDU containing the triggered the "Grant Request" type Scheduling Information, another "Grant Request" type Scheduling Information shall be triggered.

When assembling a MAC-e or MAC-i PDU, if the scheduling information needs to be included in the MAC-e or MAC-i PDU according to subclause 9.2.4.2 and it shall be transmitted regardless of TEBS status.

Additional periodic timer T-SI is used to avoid long pause duration of scheduling information reporting (defined by RRC). Once the grant is designated, T-SI shall be started .When the scheduling information is included in MAC-e or MAC-i PDU and sent, the timer shall be restarted immediately. When the timer expires, if there is a grant to send a new MAC-e or MAC-i PDU, it should include scheduling information, otherwise the UE shall wait for a grant to send scheduling information in a new MAC-e or MAC-i PDU.

Additionally if data with higher priority than the data already in the transmission buffer arrives, the Scheduling Information shall be triggered and included in next available MAC-e or MAC-i PDU, i.e. higher priority data arrival event shall not trigger a E-RUCCH procedure.

RRC can configure MAC with a delay timer to be used when the UE transits from having a Grant to not having a Grant and the TEBS is still larger than zero. The delay timer T_WAIT shall be started once the Grant expires and shall be stopped and reset when a Grant is received. When T_WAIT expires, the transmission of a Scheduling Information shall be triggered via E-RUCCH (T_WAIT shall be stopped and reset).

Even if multiple events are triggered by the time a new Scheduling Information reporting can take place, only single scheduling information with newly updated content shall be sent via E-RUCCH or included in a MAC-e or MAC-i PDU.

[TS 25.331, clause 8.6.6.43]

If the IE "Second Frequency info" is included, the UE shall:

1> act as specified in section 8.6.6.1.

If the IE "FPACH Frequency info" is included, the UE shall:

1> store the FPACH frequency indicated in the IE "FPACH Frequency info".

If the IE "UpPCH Position Info" is included:

1> store and use the UpPCH position indicated by the IE "UpPCH Position Info ". The calculation of the uplink access position is described in [33].

If the IE "UpPCH Position Info" is not included:

1> use the UpPTS as the default UpPCH position.

Reference

3GPP TS 25.224 clause 5.2.2, 5.2.7, 5.6.3a, TS25.321 clause 11.9.1.5, TS 25.331 clause 8.6.6.43.

7.1.6.2.12.3 Test purpose

To confirm that UE can transmit SI correctly for different UpPCH shifting setting.

7.1.6.2.12.4 Method of test

Initial conditions

System Simulator:

1 cell, 3 frequency (one is primary frequency, others are secondary frequency).

User Equipment:

The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 6.11.5.4.7.6 using condition A11 as specified in clause 9.1 of TS 34.108 at the secondary frequency. The following parameters are specific for this test case:

Logical Channel ID	MAC-d flow (UL)	Priority	Comment
7 (LCH1)	2	1	RB25

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to 39 octets.

Test procedure

In this test procedure The UE is configured with one logical channel, with Id 7 (LCH 1).

a) SS has not issued any scheduling grant for E-DCH to the UE.

b) SS transmits 2 SDUs of size 40 bytes (plus 1 byte RLC length indicator) on LCH1.

c) Wait 40ms until the timer T-WAIT expires.

d) UE sends SI on E-RUCCH.

e) The SS issues primary absolute grant corresponding to 2 RLC PDUs of size 41 octets per TTI.

f) SS starts receiving loop backed RLC PDU’s.

g) SS sends the PHYSICAL CHANNEL RECONFIGURATION message to UE for changing the UpPCH shifting value from 0(default value) to 63.

h) UE sends PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to SS.

i) SS transmits 2 SDUs of size 40 bytes (plus 1 byte RLC length indicator) on LCH1.

j) Wait 40ms until the timer T-WAIT expires.

k) UE sends SI on E-RUCCH.

l) The SS issues primary absolute grant corresponding to 2 RLC PDUs of size 41 octets per TTI.

m) SS starts receiving loop backed RLC PDU's.

n) SS sends the PHYSICAL CHANNEL RECONFIGURATION message to UE for modifying the UpPCH shifting value from 63(default value) to 127.

o) UE sends PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to SS.

p) SS transmits 2 SDUs of size 40 bytes (plus 1 byte RLC length indicator) on LCH1.

q) UE sends SI on E-RUCCH.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		2 RLC PDUs on LCH 1	
2			Wait 40ms until timer T-WAIT expires	
3	→		SI via E-RUCCH	SS checks SI received on E-RUCCH.
4	←		Absolute grant allowing the UE to transmit 2 RLC PDU per TTI	
5	→		MAC es PDU containing 2 RLC PDU's from LCH 1	
6	←		PHYSICAL CHANNEL RECONFIGURATION	UpPCH shifting value=63
7	→		PHYSICAL CHANNEL RECONFIGURATION COMPLETE	
8	←		2 RLC PDUs on LCH 1	
9			Wait 40ms until timer T-WAIT expires	
10	→		SI via E-RUCCH	SS checks SI received on E-RUCCH.
11	←		Absolute grant allowing the UE to transmit 2 RLC PDU per TTI	
12	→		MAC es PDU containing 2 RLC PDU's from LCH 1	
13	←		PHYSICAL CHANNEL RECONFIGURATION	UpPCH shifting value=127
14	→		PHYSICAL CHANNEL RECONFIGURATION COMPLETE	
15	←		2 RLC PDUs on LCH 1	
16			Wait 40ms until timer T-WAIT expires	
17	→		SI via E-RUCCH	SS checks SI received on E-RUCCH.

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 6) (1.28 Mcps TDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

Information Element	Value/remark	Version
New H-RNTI	'0101 0101 0101 0101'	
Frequency info		
- UARFCN (Nt)	Same as primary frequency of the cell	
Multi-frequency Info		
- Second Frequency Info	Same as secondary frequency of the cell	
- FPACH Frequency Info	Same as secondary frequency of the cell	
- UpPCH Position Info	63	

PHYSICAL CHANNEL RECONFIGURATION (Step 13) (1.28 Mcps TDD)

Use the same message as specified for "Packet to CELL_DCH from CELL_DCH in PS" in 34.108 except for the following:

Information Element	Value/remark	Version
New H-RNTI	'0101 0101 0101 0101'	
Frequency info		
- UARFCN (Nt)	Same as primary frequency of the cell	
Multi-frequency Info		
- Second Frequency Info	Same as secondary frequency of the cell	
- FPACH Frequency Info	Same as secondary frequency of the cell	
- UpPCH Position Info	127	

7.1.6.2.12.5 Test requirements

1. After step 3 the SS shall receive an SI indicating that data is available on LCH 1.
2. After step 10 the SS shall receive an SI indicating that data is available on LCH 1.
3. After step 17 the SS shall receive an SI indicating that data is available on LCH 1.

7.1.6.3 MAC-es/e- E-TFC selection

7.1.6.3.1 MAC-es/e E-TFC priority

7.1.6.3.1.1 Definition and applicability

All UEs which support E-DCH.

7.1.6.3.1.2 Conformance requirement

Extract from TS 25.321 clause 11.8.1.4

[…]

RRC can control the scheduling of uplink data by giving each logical channel a priority between 1 and 8, where 1 is the highest priority and 8 the lowest. E-TFC selection in the UE shall be done in accordance with the priorities indicated by RRC. Logical channels have absolute priority, i.e. the UE shall maximise the transmission of higher priority data.

[…]

Extract from TS 25.321 clause 11.9.1.4

[…]

RRC can control the scheduling of uplink data by giving each logical channel a priority between 1 and 8, where 1 is the highest priority and 8 the lowest. E-TFC selection in the UE shall be done in accordance with the priorities indicated by RRC. Logical channels have absolute priority, i.e. the UE shall maximise the transmission of higher priority data.

Reference(s)

TS 25.321 clause 11.8.1.4, 11.9.1.4

7.1.6.3.1.3 Test purpose

To verify that the UE transmits data in order of priority

7.1.6.3.1.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 6.11.4d(FDD) /6.11.5.4.7.7(1.28Mcps TDD) using condition A15(FDD) /A14(1.28Mcps TDD) as specified in clause 9.1 of TS 34.108. The logical channel, transport channel and queue identities are set to:

Logical Channel ID	MAC-d flow (UL)	Priority	Comment
7 (LCH1)	2	1	RB25
8 (LCH2)	3	2	RB17
NOTE: The RAB combination also include SRBs on E-DCH on MAC-d flow 1 which are not used in the test case			

The following parameters are specific for this test case:

Parameter	Value
Periodicity for Scheduling Info – no grant	500 ms (see 25.331 10.3.6.99) (FDD)
T-WAIT	200 ms (see 25.331 10.3.6.103)(1.28Mcps TDD)
E-DCH MAC-d flow multiplexing list	11111111 (See 25.331 10.3.5.1b) Note 1
Note 1: This configuration means that all MAC-d flows can be multiplexed in the same TTI	

The UE is placed into UE test loop mode 1 with the UL SDU size set to (10*41)-2 octets for RB25 and RB17.

Test procedure

The UE is configured with two logical channels, LCH1 (with priority 1) and LCH2 (with priority 2). LCH1 is mapped to MAC-d flow 2 and LCH2 is mapped to MAC-d flow 3.

a) The SS has not issued any scheduling grant for E-DCH to the UE

b) The SS transmits one SDU of size 40 bytes (plus 1 byte RLC length indicator) on LCH2

c) The SS transmits one SDU of size 40 bytes (plus 1 byte RLC length indicator) on LCH1

d) The SS waits for an SI to be received that indicates that data is available on both logical channels (can be identified from the content of the SI)

e) The SS issues an absolute grant that allows the UE to send 1 RLC PDU per TTI (signalling value 4)

f) The SS verifies that the first TTIs only contains data from LCH1 which have a higher priority

g) The SS verifies that data on LCH2 is only transmitted after all the data on LCH1 has been looped back

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		1 RLC PDU on LCH 2	
2	←		1 RLC PDU on LCH 1	
3	→		Potential SI indicating data on LCH 2	This SI is ignored by the SS
4	→		SI indicating that data is available for LCH 1 and LCH 2	
5	←		Absolute grant allowing the UE to transmit 1 RLC PDU per TTI	Signalling value 4
6	→		MAC es PDU containing 1 RLC PDU from LCH 1	This step is repeated until the whole RLC SDU is transmitted
7	→		MAC es PDU containing 1 RLC PDU from LCH 2	This step is repeated until the whole RLC SDU is transmitted

Specific Message Contents

None

7.1.6.3.1.5 Test requirements

1. In step 6, the SS shall receive 1 MAC-es PDU containing 1 RLC PDU from LCH 1 in each TTI until the whole RLC SDU has been received.
2. In step 6, the SS verifies that no data is received on LCH 2 until all data on LCH 1 has been received
3. In step 7, the SS shall receive 1 MAC-es PDU containing 1 RLC PDU from LCH 2 in each TTI until the whole RLC SDU has been received

7.1.6.3.2 MAC-es/e transport block size selection/ UL QPSK

7.1.6.3.2.1 Definition and applicability

All UEs which support E-DCH.

7.1.6.3.2.2 Conformance requirement

Extract from TS 25.321 clause 11.8.1.4

For Rel-6:

[…]

The transmission format and data allocation shall follow the requirements below:

- Only E-TFCs from the configured E-TFCS shall be considered for the transmission;

  […]

- The UE may avoid using the following E-TFCIs;
  - If the UE is configured with E-TFCI table 0 (see [7]) and 2ms TTI, it may avoid using E-TFCI 120 in the mapping defined in Annex B.1
  - If the UE is configured with E-TFCI table 1 (see [7]) and 2ms TTI, it may avoid using E-TFCI 115 in the mapping defined in Annex B.2

  […]

[…]

For Rel-7 and later releases:

[…]

The transmission format and data allocation shall follow the requirements below:

[…]

- The UE shall not use the following E-TFCIs;
  - If the UE is configured with E-TFCI table 0 (see [7]) and 2ms TTI, it shall not use E-TFCI 120 in the mapping defined in Annex B.1
  - If the UE is configured with E-TFCI table 1 (see [7]) and 2ms TTI, it shall not use E-TFCI 115 in the mapping defined in Annex B.2
  - If the UE is configured with E-TFCI table 2 (see [7]) and 2ms TTI, it shall not use E-TFCI 121 in the mapping defined in Annex B.2a
  - If the UE is configured with E-TFCI table 3 (see [7]) and 2ms TTI, it shall not use E-TFCIs 101 and 102 in the mapping defined in Annex B.2b

[…]

[…]

Extract from TS 25.321 clause 9.2.5.4

[…]

RRC can configure the MAC-e to use one of two Transport block size sets for each TTI duration. The normative description of the mapping between the E-TFC index and the corresponding transport block size is provided in Annex B:

- If the UE is configured with E-TFCI table 0 (see 3GPP TS 25.331) and 2ms TTI, it shall use the mapping defined in 3GPP TS 25.321 Annex B.1
- If the UE is configured with E-TFCI table 1 (see 3GPP TS 25.331) and 2ms TTI, it shall use the mapping defined in 3GPP TS 25.321 Annex B.2
- If the UE is configured with E-TFCI table 0 (see 3GPP TS 25.331) and 10ms TTI, it shall use the mapping defined in 3GPP TS 25.321 Annex B.3
- If the UE is configured with E-TFCI table 1 (see 3GPP TS 25.331) and 10ms TTI, it shall use the mapping defined in 3GPP TS 25.321 Annex B.4

[…]

Reference(s)

TS 25.321 clause 9.2.5.4

7.1.6.3.2.3 Test purpose

To verify that the UE is able to transmit all possible transport block sizes in accordance with configured MAC-d PDU size and within the UE capability.

7.1.6.3.2.4 Method of test

NOTE: The reference to E-DCH Category refers to the UE capability as signalled in the Rel-6 IE “E-DCH physical layer category”. All UEs supporting E-DCH should signal a category between 1 and 6 for this IE even if the UE physical capability category is above 6.

NOTE: The reference to HS-DSCH Categories refers to the UE capability as signalled in the Rel-5 IE “HS-DSCH physical layer category” (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

NOTE: At the SS RLC transmit entity and UE UL RLC entity for data RB ‘Last transmission PDU poll and Last retransmission PDU poll’ should be set to ‘FALSE’ and ‘Poll SDU’ to ‘Not Present’.

User Equipment:

UE in idle mode

The following parameters are specific for this test case:

Common for all UE HS-DSCH categories:

Parameter	Value
MAC-d PDU size	336 bits
MAC-hs receiver window size	16
Number of HARQ processes	1
Number of reordering queues	1

Common for all UE E-DCH categories:

Parameter	Value
Periodicity for Scheduling Info – no grant	500 ms (see 25.331 10.3.6.99)
RLC Poll Timer	1000ms
RLC Reset Timer	1000ms

Specific depending on E-DCH category:

Parameter	E-DCH Category	Value
RLC Transmission window size	1	512
	2 to 3	1024
	4 to 6	1536
E-TFCI table	1 to 6	See table 7.1.6.3.2.5

Specific depending on HS-DSCH category:

Parameter	HS-DSCH Category	Value
RLC Receiving window size	1 to 6	512
	7 and 8	1536
	9 and 10	2047
	11 and 12	1024

Definition of test variables:

N_{PDUs}	Number of MAC-d PDUs

The mapping between the chosen E-TFC index and the corresponding E-DCH transport block size is given in the following tables:

Table 7.1.6.3.2.1: Test points for 2ms TTI E-DCH Transport Block Size Table 0

Sub-test	**E-DCH TTI**	**E-DCH Transport Block Size Table**	**Category 1**	**Category 2**	**Category 3**	**Category 4**	**Category 5**	**Category 6**
1	10ms	10ms TTI Table 0, Table 7.1.6.3.2.3	1..101	1..119	1..119	1..127	1..127	1..127
2	10ms	10ms TTI Table 1, Table 7.1.6.3.2.4	1..54	1..97	1..97	1..120	1..120	1..120
3	2ms	2ms TTI Table 0, Table 7.1.6.3.2.1	N/A	1..88	N/A	1..108	N/A	1..127
4	2ms	2ms TTI Table 1, Table 7.1.6.3.2.2	N/A	1..44	N/A	1..73	N/A	1..125
NOTE 1: Applicable indexes depends on the UE capability of "Maximum number of bits of an E-DCH transport block transmitted within a 10 ms E-DCH TTI" and "Maximum number of bits of an E-DCH transport block transmitted within a 2 ms E-DCH TTI" as specified in TS 25.306 clause 5 and Table 5.1g. E-TFCI index=0 not tested as TB size for this E-TFCI value is 18 bits, which would only fit the MAC-e/es header used by the SS in the test procedure 1.								
NOTE 2: For E-DCH categories beyond 6, E-TFS indices for category 6 are applicable.								

Table 7.1.6.3.2.6: E-TFCI values causing degradation due to turbo coder irregularities

E-DCH Transport Block Size Tables	E-TFCI	Reference
2 ms TTI, Table 0	120	[6], Annex B.1
2 ms TTI, Table 1	115	[6], Annex B.2

Test procedure

a) The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 6.10.2.4.6.2 using condition A13 as specified in clause 9.1 of TS 34.108.. See Note 1.

b) The SS closes the test loop using UE test loop mode 1 and configuring the UL RLC SDU size to be equal to the received DL SDU size (i.e. not setting the UL RLC SDU size parameter).

c) SS sets RLC SDU size = 312 bits which corresponds to maximum AM payload size for 1 MAC-d PDU of size 336 bits.

d) The SS removes the scheduling grant for E-DCH for the UE.

e) If N_{PDUs} is less than 36 the SS transmits one RLC SDU with size ((*NPDUs* – 1) * 320 + 312) else the SS transmits two SDUs with size ((N_{PDUs} – 2) * 320 + 2 * 312) / 2. See note 2.

f) The SS waits for an SI to be received that indicates that there is data available for transmission (can be identified from the content of the SI). See Note 3. The SS checks that TEBS has the correct value.

g) The SS issues an absolute grant that allows the UE to send at maximum bit rate (signalling value 31)

h) The SS waits until data is received and verifies that the looped back SDU data has the correct content and is sent in the same TTI.

i) The SS verifies that the received E-TFC used by the UE is correct. For Rel-7 and later release UE the SS checks that the UE has not used the transport block sizes correspondent to the E-TFCI values as listed in table 7.1.6.3.2.6, but instead used the transport block size correspondent to the next possible larger E-TFCI value.

j) The SS increments the RLC SDU payload size by 320 bits. For the case of 2 SDUs transmitted by the SS, each of the payload sizes are incremented by 320 bits. The SS calculates the new E-TFC transport block size from the relevant Transport Block Size Table. If this transport block size is supported by the UE under test, according to Table 7.1.6.3.2.5, then continue with step d else continue with step k.

k) The SS opens the UE test loop.

l) The SS release the radio bearer.

m) The SS may optionally deactivate the radio bearer test mode.

NOTE 1: The SS configures the physical channel parameters according to the actual UE category under test.

NOTE 2: Calculation of Downlink (DL) RLC SDU size:

DL SDU size = N_{PDUs} * 336 bits RLC PDU – headers associated with MAC and RLC.

RLC PDU = RLC 16 bits Sequence Number + 8 bits for the Optional Length Indicators + RLC pay load size. The Optional Length Indicator is present only in the delivery of the last RLC PDU.

The Optional Length Indicators consists of a 7 bits Length Indicator + 1 bit Extension Field of binary value = "0". The 7 bit length indicator indicates the number of octets between the end of the RLC header up to and including the last octet of the (DL) RLC SDU ending within the PDU.

Therefore, the RLC payload has two different sizes of 320 bits (336 – 16 bits Sequence Number) and 312 bits (336 – 16 bits sequence Number - (7 bits Length Indicator + 1 bit extension field)).

N_{PDUs} = FLOOR ((TBS size – MAC-e header size – MAC-es header size) / MAC-d PDU size) = FLOOR ((TBS size -18) / 336).

For N_{PDUs} = 1

DL RLC SDU payload has size 312 bits

For $1 < N_{PDUs} < 36$

There are (N_{PDUs} – 1) RLC payloads of size 320 bits with the last RLC payload size 312 bits

DL RLC SDU payload size = (N_{PDUs} -1) * 320 + 312

For $N_{PDUs} \geq 36$

The test data for transport channels on HS-DSCH and E-DCH is divided into 2 RLC SDUs so that the SDU size does not exceed 1500 octets (limit of SDU size in SM)

The payload data of the MAC-d PDUs contains 2 RLC SDUs of size

((N_{PDUs} – 2) * 320 + 2 * 312) / 2

$N_{PDU} = N_{PDUs} + 2$

Calculation of E-TFC TB Size:

Select the E-TFC Index/TB Size = Number of MAC-d PDU * 336 bits RLC PDU + 18 bits MAC-es and MAC-e headers (6 bits N + 6 bits TSN + 6 bits DDI) according to the E-DCH Transport Block Size Tables for FDD per 25.321 Annex B, .

As an example TBS value of 716 bits is used by the UE in the 10mS Index 0 subtest to deliver UL RLC SDU size o f 84 bytes = 672bit + 18 bits MAC headers = 690 bits

NOTE 3: Calculation of TEBS value:

Using the E-TFC TB size determined in Note 2 above, select the TEBS index according to 25.321 Table 9.2.5.3.2-1.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	<--		SYSTEM INFORMATION (BCCH)	Broadcast
2	<--		PAGING TYPE 1 (PCCH)	Paging (PS domain, P-TMSI)
3	-->		RRC CONNECTION REQUEST (CCCH)	RRC
4	<--		RRC CONNECTION SETUP (CCCH)	RRC
5	-->		RRC CONNECTION SETUP COMPLETE (DCCH)	RRC
6	-->		SERVICE REQUEST (DCCH)	GMM
7	<--		SECURITY MODE COMMAND	RRC see note 1
8	-->		SECURITY MODE COMPLETE	RRC see note 1
9	<--		ACTIVATE RB TEST MODE (DCCH)	TC
10	-->		ACTIVATE RB TEST MODE COMPLETE (DCCH)	TC
11	<--		RADIO BEARER SETUP (DCCH)	RRC. For the PS radio bearer the 'pdcp info' IE shall be omitted.
12	-->		RADIO BEARER SETUP COMPLETE (DCCH)	RRC
13	<--		CLOSE UE TEST LOOP (DCCH)	TC UE test mode 1 with no "LB Setup RB IE#k" parameter set (UE shall return an UL RLC SDU with the same size as the received RLC SDU in downlink)
14	-->		CLOSE UE TEST LOOP COMPLETE (DCCH)	TC
15	SS			The SS initially creates one RLC SDU with payload size 312bits
16	←		Removal of absolute grant	Signalling value 1
17	<--		DOWNLINK RLC SDU(s)	Send test data. The data contains 1 RLC SDU or 2 SDUs (refer to Note 2) in test procedure above
18	→		SI indicating data for transmission	This can be verified from the indicated Total E-DCH Buffer Status (TEBS)
19	<--		Absolute grant allowing the UE to transmit at maximum bit rate.	Signalling value 31
20	-->		UPLINK RLC SDU(s)	The SS checks E-TFC from the UE and checks that the content of the received UL RLC SDU is correct and sent in the same TTI. For Rel-7 and later release UE the SS checks that the UE has not used the transport block sizes correspondent to the E-TFCI values as listed in table 7.1.6.3.2.6, but instead used the transport block size correspondent to the next possible larger E-TFCI value.
21	SS			The SS increases the SDU size(s) by 320 bits (refer to Note 2) and calculates the E-TFC transport block size required to send this data on E-DCH from the relevant Transport Block Size Table. If E-TFC TB size is supported by the E-DCH category then repeat steps 16 to 19
22	<--		OPEN UE TEST LOOP (DCCH)	TC
23	-->		OPEN UE TEST LOOP COMPLETE (DCCH)	TC
24			RB RELEASE	RRC
25	<--		DEACTIVATE RB TEST MODE	TC Optional step
26	-->		DEACTIVATE RB TEST MODE COMPLETE	TC Optional step
Note 1: In addition to activate integrity protection Step 7 and Step 8 are inserted in order to stop T3317 timer in the UE, which starts after transmitting SERVICE REQUEST message.				

7.1.6.3.2.5 Test requirements

1. In step 20, the SS verifies that the received E-TFC has the correct size .For Rel-7 and later release UE the SS checks that the UE has not used the transport block sizes correspondent to the E-TFCI values as listed in table 7.1.6.3.2.6, but instead used the transport block size correspondent to the next possible larger E-TFCI value.

2. In step 20, the SS shall receive the RLC SDUs in the same TTI and with the same content as sent in downlink.

7.1.6.3.2a MAC-es/e transport block size selection/UL 16QAM

7.1.6.3.2a.1 Definition and applicability

All UEs which support E-DCH and UL 16QAM.

7.1.6.3.2a.2 Conformance requirement

Extract from TS 25.321 clause 9.2.5.4

Extract from TS 25.321 clause 11.8.1.4

For Rel-6:

[…]

The transmission format and data allocation shall follow the requirements below:

- Only E-TFCs from the configured E-TFCS shall be considered for the transmission;

  […]

- The UE may avoid using the following E-TFCIs;

  - If the UE is configured with E-TFCI table 0 (see [7]) and 2ms TTI, it may avoid using E-TFCI 120 in the mapping defined in Annex B.1

  - If the UE is configured with E-TFCI table 1 (see [7]) and 2ms TTI, it may avoid using E-TFCI 115 in the mapping defined in Annex B.2

  […]

[…]

For Rel-7 and later releases:

[…]

The transmission format and data allocation shall follow the requirements below:

  […]

- The UE shall not use the following E-TFCIs;

  - If the UE is configured with E-TFCI table 0 (see [7]) and 2ms TTI, it shall not use E-TFCI 120 in the mapping defined in Annex B.1

  - If the UE is configured with E-TFCI table 1 (see [7]) and 2ms TTI, it shall not use E-TFCI 115 in the mapping defined in Annex B.2

  - If the UE is configured with E-TFCI table 2 (see [7]) and 2ms TTI, it shall not use E-TFCI 121 in the mapping defined in Annex B.2a

  - If the UE is configured with E-TFCI table 3 (see [7]) and 2ms TTI, it shall not use E-TFCIs 101 and 102 in the mapping defined in Annex B.2b

  […]

[…]

RRC can configure the MAC-e to use one of two Transport block size sets for each TTI duration. The normative description of the mapping between the E-TFC index and the corresponding transport block size is provided in Annex B:

- If the UE is configured with E-TFCI table 0 (see 3GPP TS 25.331) and 2ms TTI, it shall use the mapping defined in 3GPP TS 25.321 Annex B.1
- If the UE is configured with E-TFCI table 1 (see 3GPP TS 25.331) and 2ms TTI, it shall use the mapping defined in 3GPP TS 25.321 Annex B.2
- If the UE is configured with E-TFCI table 2 (see 3GPP TS 25.331) and 2ms TTI, it shall use the mapping defined in 3GPP TS 25.321 Annex B.2a
- If the UE is configured with E-TFCI table 3 (see 3GPP TS 25.331) and 2ms TTI, it shall use the mapping defined in 3GPP TS 25.321 Annex B.2b
- If the UE is configured with E-TFCI table 0 (see 3GPP TS 25.331) and 10ms TTI, it shall use the mapping defined in 3GPP TS 25.321 Annex B.3
- If the UE is configured with E-TFCI table 1 (see 3GPP TS 25.331) and 10ms TTI, it shall use the mapping defined in 3GPP TS 25.321 Annex B.4

[…]

Reference(s)

TS 25.321 clause 9.2.5.4

7.1.6.3.2a.3 Test purpose

To verify that the UE is able to transmit all possible transport block sizes in accordance with configured MAC-d PDU size and within the UE capability.

7.1.6.3.2a.4 Method of test

NOTE: The reference to E-DCH Category refers to the UE capability as signalled in the Rel-7 IE “E-DCH physical layer category extension”.

NOTE: The reference to HS-DSCH Categories refers to the UE capability as signalled in the Rel-5 IE “HS-DSCH physical layer category” (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

NOTE: At the SS RLC transmit entity for data RB ‘Last transmission PDU poll and Last retransmission PDU poll’ should be set to ‘FALSE’ and ‘Poll SDU’ to ‘Not Present’.

User Equipment:

UE in idle mode

The following parameters are specific for this test case:

Common for all UE HS-DSCH categories:

Parameter	Value
MAC-d PDU size	656 bits
MAC-hs receiver window size	16
Number of HARQ processes	1
Number of reordering queues	1

Common for all UE E-DCH categories:

Parameter	Value
Periodicity for Scheduling Info – no grant	500 ms (see 25.331 10.3.6.99)
RLC Poll Timer	1000ms
RLC Reset Timer	1000ms

Specific depending on E-DCH category:

Parameter	E-DCH Category	Value
RLC Transmission window size	**7**	**1536**
E-TFCI table	**7**	**See table 7.1.6.3.2a.3**

Specific depending on HS-DSCH category:

Parameter	HS-DSCH Category	Value
RLC Receiving window size	1 to 6	512
	7 and 8	1536
	9 and 10	2047
	11 and 12	1024

Definition of test variables:

N_{PDUs}	Number of MAC-d PDUs

The mapping between the chosen E-TFC index and the corresponding E-DCH transport block size is given in the following tables:

Table 7.1.6.3.2a.1 Test points for 2ms TTI E-DCH Transport Block Size Table 2

E-TFCI	TB Size (bits)	E-TFCI	TB Size (bits)	E-TFCI	TB Size (bits)	E-TFCI	TB Size (bits)	E-TFCI	TB Size (bits)

29	1884	59	6438	89	13848	119	21774		

NOTE: E-TFCI values 101 and 102 shall not be used by a Rel-7 or later release UE and may not be used by a Rel-6 UE. The reason for including the test point for the E-TFCI values 101 and 102 is to verify that a Rel-7 UE uses the next possible larger E-TFCI values instead.

Table 7.1.6.3.2a.3 Applicable E-TFS indexes for sub-tests 1 to 2 and UE E-DCH category 7.

			Applicable E-TFS indexes
Sub-test	**E-DCH TTI**	**E-DCH Transport Block Size Table**	**Category 7**
1	2ms	2ms TTI Table 2, Table 7.1.6.3.2.2a.1	1..127
2	2ms	2ms TTI Table 3, Table 7.1.6.3.2.2a.2	1..124
NOTE 1: Applicable indexes depends on "Maximum number of bits of an E-DCH transport block transmitted within a 2 ms E-DCH TTI" as specified in TS 25.306 clause 5.1. E-TFCI index=0 not tested as TB size for this E-TFCI value is 18 bits, which would only fit the MAC-e/es header used by the SS in the test procedure.			

Table 7.1.6.3.2a.6 lists E-TFCI values that a Rel-7 or later release UE shall not use due to the associated coding rates cause turbo coder irregularities (ref. [6], Annex B).

Table 7.1.6.3.2a.6: E-TFCI values causing degradation due to turbo coder irregularities

E-DCH Transport Block Size Tables	E-TFCI	Reference
2 ms TTI, Table 2	121	[6], Annex B.2a
2 ms TTI, Table 3	101	[6], Annex B.2b
2 ms TTI, Table 3	102	[6], Annex B.2b

Test procedure

a) The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 6.10.2.4.6.2 using condition " Packet to CELL_DCH / E-DCH[UL : 16QAM] / HS-DSCH using one multiplexing option (1/1) and SRBs mapped on E-DCH/DCH condition A19a" as specified in clause 9.1 of TS 34.108. See note 1.

b) The SS closes the test loop using UE test loop mode 1 and configuring the UL RLC SDU size to be equal to the received DL SDU size (i.e. not setting the UL RLC SDU size parameter).

c) SS sets RLC SDU size = 632 bits which corresponds to maximum AM payload size for 1 MAC-d PDU of size 656 bits.

d) The SS removes the scheduling grant for E-DCH for the UE.

e) If N_{PDUs} is less than 18 the SS transmits one RLC SDU with size ((*NPDUs* – 1) * 640 + 632) else the SS transmits two SDUs with size ((N_{PDUs} – 2) * 640 + 2 * 632) / 2. See note 2.

f) The SS waits for an SI to be received that indicates that there is data available for transmission (can be identified from the content of the SI). See Note 3. The SS checks that TEBS has the correct value.

g) The SS issues an absolute grant that allows the UE to send at maximum bit rate (signalling value 31)

h) The SS waits until data is received and verifies that the looped back SDU data has the correct content and is sent in the same TTI.

i) The SS verifies that the received E-TFC used by the UE is correct. For Rel-7 and later release UE the SS checks that the UE has not used the transport block sizes correspondent to the E-TFCI values as listed in table 7.1.6.3.2a.6, but instead used the transport format correspondent to the next possible larger E-TFCI value.

j) The SS increments the RLC SDU payload size by 640 bits. For the case of 2 SDUs transmitted by the SS, each of the payload sizes are incremented by 640 bits. The SS calculates the new E-TFC transport block size from the relevant Transport Block Size Table. If this transport block size is supported by the UE under test, according to Table 7.1.6.3.2.5, then continue with step d else continue with step k.

k) The SS opens the UE test loop.

l) The SS release the radio bearer.

m) The SS may optionally deactivate the radio bearer test mode.

NOTE 1: The SS configures the physical channel parameters according to the actual UE category under test.

NOTE 2: Calculation of Downlink (DL) RLC SDU size:
DL SDU size = N_{PDUs} * 656 bits RLC PDU – headers associated with MAC and RLC.

RLC PDU = RLC 16 bits Sequence Number + 8 bits for the Optional Length Indicators + RLC pay load size. The Optional Length Indicator is present only in the delivery of the last RLC PDU.

The Optional Length Indicators consists of a 7 bits Length Indicator + 1 bit Extension Field of binary value = "0". The 7 bit length indicator indicates the number of octets between the end of the RLC header up to and including the last octet of the (DL) RLC SDU ending within the PDU.

Therefore, the RLC payload has two different sizes of 640 bits (656 – 16 bits Sequence Number) and 632 bits (656 – 16 bits sequence Number - (7 bits Length Indicator + 1 bit extension field)).

N_{PDUs} = FLOOR ((TBS size – MAC-e header size – MAC-es header size) / MAC-d PDU size) = FLOOR ((TBS size -18) / 656).

For N_{PDUs} = 1
DL RLC SDU payload has size 632 bits

For $1 < N_{PDUs} < 18$
There are (N_{PDUs} – 1) RLC payloads of size 640 bits with the last RLC payload size 632 bits
DL RLC SDU payload size = (N_{PDUs} -1) * 640 + 632

For $N_{PDUs} \geq 18$
The test data for transport channels on HS-DSCH and E-DCH is divided into 2 RLC SDUs so that the SDU size does not exceed 1500 octets (limit of SDU size in SM)

The payload data of the MAC-d PDUs contains 2 RLC SDUs of size

((N_{PDUs} – 2) * 640 + 2 * 632) / 2

$N_{PDU} = N_{PDUs} + 2$

Calculation of E-TFC TB Size:
Select the E-TFC Index/TB Size = Number of MAC-d PDU * 656 bits RLC PDU + 18 bits MAC-es and MAC-e headers (6 bits N + 6 bits TSN + 6 bits DDI) according to the E-DCH Transport Block Size Tables for FDD per 25.321 Annex B,

As an example TBS value of 716 bits is used by the UE in the 10mS Index 0 subtest to deliver UL RLC SDU size o f 84 bytes = 672bit + 18 bits MAC headers = 690 bits

NOTE 3: Calculation of TEBS value:
Using the E-TFC TB size determined in Note 2 above, select the TEBS index according to 25.321 Table 9.2.5.3.2-1.

Expected sequence

Note 1	In addition to activate integrity protection Step 7 and Step 8 are inserted in order to stop T3317 timer in the UE, which starts after transmitting SERVICE REQUEST message.			

7.1.6.3.2a.5 Test requirements

1. In step 20, the SS verifies that the received E-TFC has the correct size. For Rel-7 and later release UE the SS checks that the UE has not used the transport block sizes correspondent to the E-TFCI values as listed in table 7.1.6.3.2a.6, but instead used the transport block size correspondent to the next possible larger E-TFCI value,.

2. In step 20, the SS shall receive the RLC SDU(s) in the same TTI and with the same content as sent in downlink.

7.1.6.3.3 Impact on E-TFCI selection on MAC at UE for UL DRX at Node B/ MAC Inactivity Threshold>1

7.1.6.3.3.1 Definition and applicability

All UEs which support UL DTX (E-DCH start time restriction).

7.1.6.3.3.2 Conformance requirement

In FDD mode, the rules for E-TFC selection provided below shall apply to UEs in CELL_DCH state with an E-DCH transport channel configured. These UEs shall apply the E-TFC selection procedure when invoked by the HARQ entity (see subclause 11.8.1.1.1). In the case where a 2ms TTI is configured, E-TFC selection shall not be performed for TTIs that overlap with an uplink compressed mode gap. The E-TFC restriction procedure described in [12] shall always be applied before the E-TFC selection process below. E-TFCs which (according to calculations in [16]) require channelisation codes which are not allowed by the value given by the Maximum channelisation codes for E-DPDCH or are not supported by the UE capability shall be considered as blocked. Furthermore, for UEs that are also configured with a DCH transport channel on uplink, the TFC selection procedure shall be applied before either of these.

…

In FDD, in case the DTX feature is configured by higher layers and no E-DCH transmission is performed in this TTI:

- if *MAC Inactivity Threshold* > 1 and no E-DCH transmission has been performed for *MAC Inactivity Threshold* - 1 previous TTIs or,

- if *MAC Inactivity Threshold* = 1:

  - E-TFC selection shall only be performed for the TTIs where the following conditions are fulfilled:

    - For 2ms TTI: [5*CFN + subframe number - *UE DTX DRX Offset*] **mod** *MAC DTX Cycle* = 0;

    - For 10ms TTI: [5*CFN - *UE DTX DRX Offset*] **mod** *MAC DTX Cycle* = 0.

    In 2ms TTI case, if the TTI that fulfilled [5*CFN + subframe number - UE DTX DRX Offset] mod MAC DTX Cycle = 0 overlapped with an uplink compressed mode transmission gap, the E-TFC selection shall be performed for the first TTI not overlapping with an uplink compressed mode transmission gap.

7.1.6.3.3.3 Test purpose

The purpose of this test case is to verify that

1. To verify that when no E-DCH transmission has been performed for MAC Inactivity Threshold -1 previous TTI, UE start E-DCH transmission in TTI satisfying [5*CFN - *UE DTX DRX Offset*] **mod** *MAC DTX Cycle* = 0.

2. To verify that when E-DCH transmission has been performed within MAC Inactivity Threshold -1 previous TTI, UE start E-DCH transmission immediately[Grant available].

7.1.6.3.3.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

The SS establishes the reference radio bearer configuration Streaming or interactive or background / UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] / UM PS RAB + UL: [max bit rate depending on UE category and TTI] DL: [max bit rate depending on UE category] SRBs for DCCH on E-DCH and HS-DSCH as specified in TS 34.108, clause 6.11.4i.1. The logical channel, transport channel and queue identities are set to:

Logical Channel ID	MAC-d flow (UL)	Priority	Comment
7 (LCH1)	2	1	RB25

DL_DRX is not activated and default UL_DTX parameters are applied.

The following UL_DRX parameters are specific for this test case:

Parameter	Value
E-DCH TTI	10 ms
MAC DTX Cycle	20
MAC Inactivity Threshold	128
UE DTX DRX Offset	10 (multiple of 5)

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to 39 octets.

Test procedure

a) SS waits for 1.5 seconds, so that condition for MAC Inactivity is satisfied.

b) SS transmits 5 SDU's of size 40 bytes (plus 1 byte RLC length indicator) on LCH1

c) SS waits until an SI is received. SS checks that the CFN in which SI is received satisfies condition [5*CFN - UE DTX DRX Offset] mod MAC DTX Cycle = 0.

d) SS issues an absolute grant that allows the UE to send 1 RLC PDU per TTI (signalling value 4)

e) SS starts receiving loop backed RLC PDU's.

f) SS transmits 1 SDU of size 40 bytes (plus 1 byte RLC length indicator) on LCH1Expected sequence

g) SS receives loop backed RLC PDU. SS repeats steps f & g, until CFN in which loop backed PDU is received satisfies condition [5*CFN - *UE DTX DRX Offset*] **mod** *MAC DTX Cycle* ≠ 0.

h) SS waits for 1.5 seconds, so that condition for MAC Inactivity is satisfied.

i) SS transmits 1 SDU of size 40 bytes (plus 1 byte RLC length indicator) on LCH1

j) SS receives loop backed RLC PDU. SS checks that the CFN in which loop backed PDU is received satisfies condition [5*CFN - *UE DTX DRX Offset*] **mod** *MAC DTX Cycle* = 0.

k) SS repeats steps h-j, 10 times and always condition [5*CFN - *UE DTX DRX Offset*] **mod** *MAC DTX Cycle* = 0 is satisfied.

Reference(s)

TS 25.321 clause 9.2.6.4

7.1.6.3.2.3 Test purpose

To verify that the UE transmits all possible transport block sizes within the UE capability.

7.1.6.3.2.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

UE in idle mode

The following parameters are specific for this test case:

Sub-tests and test points for UE HS-DSCH physical layer category 6. Testing of UE supporting UE HS-DSCH physical layer category 13 to 15 shall be performed in accordance to test parameters, sub-tests and test points for UE HS-DSCH physical layer category 10

Common for all UE HS-DSCH categories:

Parameter	Value
MAC-d PDU size	336 bits
MAC-hs receiver window size	16
Number of HARQ processes	1
Number of reordering queues	1

Common for all UE E-DCH categories:

Parameter	Value
T-WAIT	200 ms (see 25.331 10.3.6.103)

Specific depending on E-DCH category:

Parameter	E-DCH Category	Value
RLC Transmission window size	1 to 5	512
	6	1536
E-TFCI table	1 to 6	See table 7.1.6.3.2.5

Specific depending on HS-DSCH category:

Parameter	HS-DSCH Category	Value
RLC Receiving window size	1 to 6	512
	7 and 8	1536
	9 and 10	2047
	11 and 12	1024

The mapping between the chosen E-TFC index and the corresponding E-DCH transport block size is given in the following tables:

Table 7.1.6.3.5.2 Applicable E-TFS indexes for sub-tests 1 to 4 and UE E-DCH categories 1 to 6.

			Applicable E-TFS indexes					
Sub-test	**E-DCH TTI**	**E-DCH Transport Block Size Table**	**Category 1**	**Category 2**	**Category 3**	**Category 4**	**Category 5**	**Category 6**
1	5ms	5ms TTI Table 0, Table 7.1.6.3.5.1	0..101	0..119	0..119	0..127	0..127	0..127
NOTE 1: Applicable indexes depends on the UE capability of "Maximum number of bits of an E-DCH transport block transmitted within a 5 ms E-DCH TTI" and "Maximum number of bits of an E-DCH transport block transmitted within a 5 ms E-DCH TTI" as specified in TS 25.306 clause 5.1.								

Test procedure

a) The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 6.11.5.4.7.2 using condition A11 as specified in clause 9.1 of TS 34.108.. See note 1.

b) The SS closes the test loop using UE test loop mode 1 and configuring the UL RLC SDU size to be equal to the received DL SDU size (i.e. not setting the UL RLC SDU size parameter).

c) SS sets *E-TFC index* = 0.

d) The SS removes the scheduling grant for E-DCH for the UE.

e) The SS transmits two RLC SDUs of size (*TBS_size* – 18)*160 / 336 – 8 bits, where the value for *TBS_size* is derived from the applicable E-TFS index table as specified in Table 7.1.6.3.5.2 for the sub-test.

f) The SS waits for an SI to be received that indicates that the two RLC SDUs are available for transmission (can be identified from the content of the SI)

g) The SS issues an absolute grant that allows the UE to send at maximum bit rate

h) The SS waits until data is received and verifies that the looped back SDU has correct content

i) The SS verifies that the received E-TFC has correct size

j) The SS increments the parameter *E-TFC index* by one. If the *E-TFC index* is supported by the UE under test according to Table 7.1.6.3.5.2 then continue with step d else continue with step k.

k) The SS opens the UE test loop.

l) The SS release the radio bearer.

m) The SS may optionally deactivate the radio bearer test mode.

NOTE 1: The SS configures the physical channel parameters according to the actual UE category under test.

NOTE 2: The test data for transport channels on HS-DSCH and E-DCH is divided into 2 RLC SDUs to keep the SDU size not to exceed 1500 octets (limit of SDU size in SM). Calculation of RLC SDU size:

*RLC SDUs of size = Number of MAC-d PDUs * RLC payload size* / 2 – 8 bits (size of 7 bit length indicator and expansion bit) where the *RLC payload size* is 320 bits and the *Number of MAC-d PDUs* = (*TBS size – MAC-e header size – MAC-es header size*) / *MAD-d PDU size* = (*TBS size* – 18) / 336. This gives that the *RLC SDUs of size* = (TBS size – 18) *160 / 336 – 8 bits.

7.1.6.3.2.5 Test requirements

1. In step 20, the SS verifies that the received E-TFC has the correct size
2. In step 20, the SS shall receive 2 RLC SDUs with the same content as sent in downlink.

7.1.6.4 MAC-es/e - E-DCH retransmissions

7.1.6.4.1 MAC-es/e process handling

7.1.6.4.1.1 Definition and applicability

All UEs which support E-DCH with 2ms TTI. (FDD)/ All UEs which support E-DCH(1.28Mcps TDD).

7.1.6.4.1.2 Conformance requirement

Extract from 25.331:

1> for FDD:

2> if the IE "Non-scheduled transmission grant info" is included:

3> if the TTI configured on the E-DCH equals 2ms, and the IE "2ms non-scheduled transmission grant HARQ process allocation" is configured for this MAC-d flow:

4> MAC-d PDU's for logical channels belonging to this MAC-d flow shall only be included in a MAC-e PDU transmitted by HARQ processes allowed by the IE "2ms non-scheduled transmission HARQ process allocation", with a total contribution from this MAC-d flow not exceeding the size as signalled by the IE "Max MAC-e PDU contents size".

1> for TDD:

2> if the IE "Non-scheduled transmission grant info" is included:

3> MAC-d PDU's for logical channels belonging to this MAC-d flow shall only be included in a MAC-e PDU transmitted by HARQ processes designated as non scheduled (Ids 4 – 7) in the TTIs indicated (as determined from the IEs "Activation Time", "Resource Duration" and "Resource Periodicity").

Extract from 25.331:

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

1> for FDD:

2> configure the UL E-DPCCH in accordance with the stored IE "E-DPCCH" configuration;

2> configure the MAC with the stored IE "E-DPDCH" configuration and/or the information contained in IE "Scheduled Transmission configuration".

1> for TDD:

2> configure the E-RUCCH with the stored E-RUCCH configuration;

2> configure the MAC with the stored E-PUCH configuration.

Extract from 25.321:

RRC can allocate non-scheduled transmission grants to individual MAC-d flows in order to reduce the transmission delays. When a 2ms TTI is configured each non-scheduled grant is applicable to the specific set of HARQ processes indicated by RRC. The applicability of scheduled grants can be also restricted to a specific set of HARQ processes when a 2ms TTI is configured. HARQ process restriction and reservation is under the control of the serving cell Node B and indicated to the UE by RRC

Extract From 25.321 clause 11.9.1.4:

RRC can allocate non-scheduled transmission grants to individual MAC-d flows in order to reduce the transmission delays.

The UE shall determine whether to take scheduled or non-scheduled grants into account in the upcoming transmission. If neither are supposed to be taken into account (i.e. the TTI is not available for non-scheduled transmission and no Grant for scheduled transmission has been received) then no grant shall be assumed to exist. If a grant exists then the transmission format and data allocation shall follow the requirements below.

Reference(s)

TS 25.321 clauses 11.8.1.4, 11.9.1.4,. TS 25.331 clauses 8.6.5.18 and 8.6.6.37

7.1.6.4.1.3 Test purpose

To verify that the UE performs transmissions and retransmissions in the correct MAC-es process.

To verify that the UE uses only the allowed HARQ processes for scheduled and non-scheduled transmissions.

7.1.6.4.1.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 6.11.4d(FDD) /6.11.5.4.7.7(1.28Mcps TDD) using condition A15(FDD) /A14(1.28Mcps TDD) as specified in clause 9.1 of TS 34.108. The following parameters are specific for this test case with the logical channel, transport channel and queue identities set to:

Logical Channel ID	MAC-d flow (UL)	Priority	Comment
7 (LCH1)	2	1	RB25
8 (LCH2)	3	2	RB17
Note: The RAB combination also includes SRBs on E-DCH on MAC-d flow 1 which is not used in the test case			

The following parameters are specific for this test case:

Parameter	Value
TTI for Radio bearer	2 ms(FDD)
TTI for Radio bearer	5 ms(1.28Mcps TDD)
Periodicity for scheduling info	No periodic scheduling info
E-TFCI table	Table 0 for 2 ms TTI
E-TFCI table	5ms TTI E-DCH Transport Block Size Table 0(1.28Mcps TDD)
HARQ RV Configuration	rv0

The UE is placed into UE test loop mode 1 with the UL SDU size set to 39 octets.

Test procedure

In this test procedure the UE is configured with two logical channels, with Id 7 (LCH 1) and 8 (LCH2). LCH 1 is mapped to MAC-d flow 2 and LCH 2 is mapped to MAC-d flow3. The MAC-d flow 2 has been configured with non-scheduled transmissions allowed in HARQ process 1(FDD) / one HARQ process of 4 to 7 (1.28Mcps TDD), with a rate exceeding 1 SDU/TTI and the value of the “Max MAC-e PDU contents size” is 500 bits. MAC-d flow 3 has been configured with a scheduled transmission allowed in HARQ process 2/ one HARQ process of 0 to 3(1.28Mcps TDD)..

a) The SS has not issued any scheduling grant for E-DCH to the UE

b) The SS transmits 1 SDU of size 40 bytes (plus 1 byte RLC length indicator) on LCH 1

c) The SS waits until data is received and checks that the data is received in HARQ process 1(FDD) / one HARQ process of 4 to7 (1.28Mcps TDD)

d) The SS sends a HARQ NACK

e) The SS waits until the retransmission is received and checks that the data is received in HARQ process 1(FDD) / one HARQ process of 4 to7 (1.28Mcps TDD)

f) The SS transmits 8 SDU’s of size 40 bytes (plus 1 byte RLC length indicator) on LCH 2

g) The SS waits until an SI is received.

h) The SS issues primary absolute grant corresponding to 1 RLC PDU of size 41 octets per TTI (signalling value 4), with Absolute Grant Scope set as "All HARQ processes"(FDD)/ The SS issues absolute grant corresponding to 1 RLC PDU of size 41 octets per TTI(1.28Mcps TDD).

i) The SS waits until data is received and checks that the data is received in HARQ process 2/ one HARQ process of 0 to 3(1.28Mcps TDD).

j) The SS transmits 8 SDU's of size 40 bytes (plus 1 byte RLC length indicator) on LCH 1

k) The SS waits until data is received and checks that the data is received in HARQ process 1(FDD) / one HARQ process of 4 to7 (1.28Mcps TDD)

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		1 RLC PDU on LCH 1	
2	→		MAC-es PDU containing 1 RLC PDU	
3	←		HARQ NACK	
4	→		MAC-es PDU containing 1 RLC PDU	
5	←		8 RLC SDU's on LCH 2	
6	→		SI indicating data on LCH 2	
7	←		Primary Absolute grant allowing the UE to transmit 1 RLC PDU per TTI	Signalling value 4
8	→		MAC-es PDU containing 1 RLC PDU	PDU shall be received in HARQ process 2/ one HARQ process of 0 to 3(1.28Mcps TDD). This step is repeated until all 8 RLC SDU's are received on LCH2.
9	←		8 RLC SDU's on LCH 1	
10	→		MAC-es PDU containing 1 RLC PDU	PDU shall be received in HARQ process 1(FDD) / one HARQ process of 4 to7 (1.28Mcps TDD). This step is repeated until all 8 RLC SDU's are received on LCH1.

Specific Message Contents

None

7.1.6.4.1.5 Test requirements

1. In step 2 the SS shall receive a MAC-es PDU in HARQ process 1(FDD) / one HARQ process of 4 to7 (1.28Mcps TDD).

2. In step 4 the SS shall receive a MAC-es PDU in HARQ process 1(FDD) / one HARQ process of 4 to7 (1.28Mcps TDD).

3. In step 8 the SS shall receive all MAC-es PDUs in HARQ process 2/ one HARQ process of 0 to 3(1.28Mcps TDD).

4. In step 10 the SS shall receive all MAC-es PDUs in HARQ process 1(FDD) / one HARQ process of 4 to7 (1.28Mcps TDD).

7.1.6.4.2 MAC-es/e maximum number of retransmissions

7.1.6.4.2.1 Definition and applicability

All UEs which support E-DCH.

7.1.6.4.2.2 Conformance requirement

Extract From 25.321 clause 11.8.1.4:

For each MAC-d flow, RRC configures MAC with a HARQ profile and a multiplexing list. Additionally, RRC configures MAC with a power offset for "Control-only" transmissions. This power offset and a maximum number of

HARQ transmissions of 8 will be used to define a HARQ profile for “Control-only” transmissions which will be used, in case the Scheduling Information needs to be transmitted without any higher-layer data. The HARQ profile includes the power offset and maximum number of HARQ transmissions to use for this MAC-d flow. The multiplexing list identifies for each MAC-d flow(s), the other MAC-d flows from which data can be multiplexed in a transmission that uses the power offset included in its HARQ profile.

[..]

The E-TFC selection function shall provide this MAC-e PDU and transmission HARQ profile to the HARQ entity. The maximum number of HARQ transmissions and the power offset in this profile, shall be set respectively to the maximum of the Max Number of HARQ Transmissions of the HARQ profiles from all the MAC-d flows from which data is multiplexed into the transmission and to the Nominal Power Offset. The HARQ entity shall also be informed of whether the transmission includes Scheduling Information and whether this information is sent by itself or with higher-layer data.

Extract From 25.321 clause 11.9.1.4:

[..]

For each MAC-d flow, RRC configures MAC-e with a HARQ profile and multiplexing list. Additionally, RRC configures MAC with a power offset in case the Scheduling Information needs to be transmitted without any higher-layer data. The HARQ profile includes the power offset and maximum number of HARQ transmissions to use for this MAC-d flow. For 1.28 Mcps TDD, the HARQ profile also includes a retransmission timer attribute. The multiplexing list identifies for each MAC-d flow(s), the other MAC-d flows for which data can be multiplexed in a transmission that uses the power offset included in its HARQ profile.

[..]

The E-TFC selection function shall provide this MAC-e PDU and transmission HARQ profile to the HARQ entity. The selected E-TFC is also provided (Note: for 1.28Mcps TDD, the signalled transport block size index, i.e. E-TFCI, is the index of the selected E-TFC in the candidate set.). The maximum number of HARQ transmissions and the power offset in this profile shall be set respectively to the maximum of both the Max Number of HARQ Transmissions and of the power offset of the HARQ profiles from all the MAC-d flows from which data is multiplexed into the transmission. For 1.28 Mcps TDD, the retransmission timer shall be set to the maximum of the retransmission timer value of the HARQ profiles that are permitted to be multiplexed into the transmission. Each HARQ process which is associated with a buffer holding a MAC-e PDU for potential retransmission shall maintain the HARQ profile and the number of re-transmissions that have occurred. For 1.28 Mcps TDD, the HARQ process shall also maintain the value of RTX_TIMER.

Reference(s)

TS 25.321 clause 11.8.1.4, 11.9.1.4

7.1.6.4.2.3 Test purpose

To verify that the UE, when 2 MAC d flows are multiplexed, follows the maximum number of retransmissions according to the HARQ profiles (different values configured for maximum number of retransmissions for each HARQ profile).

7.1.6.4.2.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 6.11.4d(FDD) /6.11.5.4.7.7(1.28Mcps TDD) using condition A15(FDD) /A14(1.28Mcps TDD) as specified in clause 9.1 of TS 34.108. The logical channel, transport channel, maximum number of retransmissions and queue identities are set to:

Logical Channel ID	MAC-d flow (UL)	Priority	Max. retransmissions	Comment
7 (LCH1)	2	1	2	RB25
8 (LCH2)	3	2	4	RB17
NOTE: The RAB combination also includes SRBs on E-DCH which are not used in the testcase				

The following parameters are specific for this test case:

Parameter	Value
Periodicity for Scheduling Info – no grant	500 ms(FDD)
T-WAIT	200 ms (see 25.331 10.3.6.103)(1.28Mcps TDD)
E-DCH MAC-d flow multiplexing list	11111111 (See 25.331 10.3.5.1b) Note 1
HARQ RV Configuration	rv0
Note 1: This configuration means that all MAC-d flows can be multiplexed in the same TTI	

The UE is placed into UE test loop mode 1 with the UL SDU size set to 39 octets for RB25 and RB17.

Test procedure

The UE is configured with two logical channels, LCH1 (with priority 1) and LCH2 (with priority 2). LCH1 is mapped to MAC-d flow 2 and LCH2 is mapped to MAC-d flow 3. The UE is not given any grant to transmit on E-DCH.

a) The SS has not issued any scheduling grant for E-DCH to the UE

b) The SS transmits one SDU of size 40 bytes (plus 1 byte RLC length indicator) on LCH1

c) The SS waits for an SI to be received that indicates that data is available

d) The SS issues an absolute grant that allows the UE to send with a rate sufficient to accommodate one RLC PDU per TTI (signalling value 4)

e) For each received transmission, the SS sends a negative HARQ acknowledgement and verifies that exactly 2 retransmissions are made by the UE.

f) The SS sets the absolute grant to zero for the UE(FDD only)

g) The SS transmits one SDU of size 40 bytes (plus 1 byte RLC length indicator) on LCH2

h) The SS transmits one SDU of size 40 bytes (plus 1 byte RLC length indicator) on LCH1

i) The SS waits for an SI to be received that indicates that data is available on both LCHs.

j) The SS issues an absolute grant that allows the UE to send with a rate sufficient to accommodate two RLC PDUs per TTI (signalling value 5)

k) For each received transmission, the SS sends a negative HARQ acknowledgement and verifies that exactly 4 retransmissions are made by the UE (maximum from the HARQ profiles for LCH1 and LCH2).

NOTE: The UE may send an SI after step g but this SI would only indicate data on LCH2. This SI will be ignored.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		

1	←	1 RLC PDUs on LCH 1	
2	→	SI showing that data is available for LCH 1	
3	←	Absolute grant allowing the UE to transmit 1 RLC PDU per TTI	Signalling value 4
4	→	MAC es PDU containing 1 RLC PDU from LCH 1	
5	←	HARQ NACK	
6	SS		SS sends a HARQ NACK for each received retransmission. After the second retransmission the SS waits 1 s to verify that no further retransmissions occur.
7	←	Removal of absolute grant	Signalling value 1(FDD only)
8	←	1 RLC PDUs on LCH 2	
9	←	1 RLC PDUs on LCH 1	
10	→	Potential SI indicating data on LCH 2	This SI is ignored by the SS
11	→	SI showing that data is available for LCH 1 and LCH 2	
12	←	Absolute grant allowing the UE to transmit 2 RLC PDUs per TTI	Signalling value 5
13	→	MAC e PDU containing 1 RLC PDU from LCH 1 and 1 RLC PDU from LCH 2 (NOTE1)	
14	←	HARQ NACK	
15	SS		SS sends a HARQ NACK for each received retransmission. After the fourth retransmission the SS waits 1 s to verify that no further retransmissions occur.
NOTE 1: MAC SDU for LCH 1 and 2 can come in any order			

Specific Message Contents

None

7.1.6.4.2.5 Test requirements

1. In step 6, exactly 2 retransmission shall be performed by the UE.
2. In step 15, exactly 4 retransmissions shall be performed by the UE.

7.1.6.4.3 MAC-es/e Correct handling of MAC-es/e reset

7.1.6.4.3.1 Definition and applicability

All UEs which support E-DCH (FDD) / All UEs which support E-DCH(1.28Mcps TDD).

7.1.6.4.3.2 Conformance requirement

For FDD, if a reset of the MAC-es/e entity is requested by upper layers, the UE shall at the activation time indicated by higher layers:

- flush all HARQ processes.
- set CURRENT_TSN to 0 for all the logical channels mapped to E-DCH.

NOTE: In this case, the HARQ entity will not notify the Scheduling Information Reporting function if a flushed MAC-e PDU contained a triggered Scheduling Information (rely on periodic triggering).

For 1.28Mcps TDD, if a reset of MAC-es/e entity is requested by upper layers, the UE shall at the activation time indicated by higher layer:

- flush all HARQ processes;
- set CURRENT_TSN to 0 for all the logical channels mapped to E-DCH;
- stop all active timers (the timers include Retransmission timer, T_SI, T_WAIT, T_RUCCH);

- set CURRENT_RUCCH to 0.

Reference(s)

TS 25.321 clause 11.8.1.7, 11.9.1.6.

7.1.6.4.3.3 Test purpose

The purpose of this test case is to verify that the UE correctly handles a MAC-es/e reset procedure.

7.1.6.4.3.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 6.11.4c (FDD) /6.11.5.4.7.6 (1.28Mcps TDD) using condition A12 (FDD) / A11 (1.28Mcps TDD) as specified in clause 9.1 of TS 34.108 as specified in clause 9.1 of TS 34.108. The following parameters are specific for this test case:

Logical Channel ID	MAC-d flow (UL)	Priority	Comment
7 (LCH1)	2	1	RB25

The following parameters are specific for this test case:

Parameter	Value	
E-DCH MAC-d flow maximum number of retransmissions	15	
E-DCH MAC-d flow retransmission timer	>40	Only for 1.28Mcps TDD
HARQ RV Configuration	rv0	

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to 39 octets.

Test procedure

In this test procedure The UE is configured with one logical channel, with Id 7 (LCH1).

a) SS has not issued any scheduling grant for E-DCH to the UE.

b) SS transmits 1 SDUs of size 40 bytes (plus 1 byte RLC length indicator) on LCH1.

c) SS waits until an SI is received.

d) The SS issues primary absolute grant corresponding to 1 RLC PDU of size 41 octets per TTI (signalling value 4), with Absolute Grant Scope set as "All HARQ process" (FDD) / The SS issues absolute grant corresponding to 1 RLC PDU of size 41 octets per TTI(1.28Mcps TDD).

e) SS starts receiving loop backed RLC PDU’s.

f) The SS sends HARQ ACK.

g) SS transmits 1 SDUs of size 40 bytes (plus 1 byte RLC length indicator) on LCH1.

h) SS starts receiving loop backed RLC PDU’s.

i) The SS continuously sends HARQ NACKs. The UE continuously performs retransmissions of the same PDU.

j) The SS waits 40 ms after completing step h), then sends a Radio Bearer Reconfiguration message with the MAC-es/e reset indicator set to true and activation time set to “now”.

k) SS transmits 1 SDU of size 40 bytes (plus 1 byte RLC length indicator) on LCH1.

l) SS starts receiving loop backed RLC PDU's.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		1 RLC PDUs on LCH 1	
2	→		SI indicating data on LCH 1	
3	←		Primary Absolute grant (FDD) / Absolute grant (1.28Mcps TDD) allowing the UE to transmit 1 RLC PDU per TTI	Signalling value 4

7.1.6.4.3.5 Test requirements

1. In step 9, UE shall abort transmission of the MAC-e PDU
2. In step 11, UE shall start sending loop backed PDU, with one RLC PDU per TTI.
3. In step 11, The TSN field in the MAC-es PDU shall be set to zero.

7.1.6a E-DCH MAC-es/e for 3.84 and 7.68Mcps TDD

7.1.6a.1 MAC-es/e multiplexing

7.1.6a.1.1 MAC-es/e multiplexing without RRC restrictions

7.1.6a.1.1.1 Definition and applicability

All UEs which support E-DCH and 3.84Mcps or 7.68Mcps TDD.

7.1.6a.1.1.2 Conformance requirement

From 25.321 clause 9.1.5:

In the case of E-DCH there are two MAC sublayers, MAC-e and MAC-es. MAC-es sits on top of MAC-e and receives PDUs directly from MAC-d. MAC-es SDUs (i.e. MAC-d PDUs) of the same size, coming from a particular logical channel can be multiplexed together into a single MAC-es payload. To this payload is prepended the MAC-es header (see subclause 9.2.4.1). The number of PDUs, as well as the DDI value identifying the logical channel, the MAC-d flow and the MAC-es SDU size are included as part of the MAC-e header. In case sufficient space is left in the E-DCH transport block or if Scheduling Information needs to be transmitted, an SI will be included at the end of the MAC-e PDU (see subclause 9.2.4.2). Multiple MAC-es PDUs, but only one MAC-e PDU can be transmitted in a TTI.

[…]

From 25.331 clause 8.6.5.18:

1> if the IE "E-DCH MAC-d flow multiplexing list" is included:

2> only multiplex MAC-d PDU's from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU's from E-DCH MAC-d flows with which multiplexing in the same MAC-e PDU is allowed in accordance to the IE "E-DCH MAC-d flow multiplexing list".

[…]

Reference(s)

TS 25.321 clause 9.1.5, TS 25.331 clause 8.6.5.18

7.1.6a.1.1.3 Test purpose

The purpose of this test case is to verify that the UE multiplexes data from different logical channels in the same TTI when no restriction on the multiplexing is configured by RRC.

7.1.6a.1.1.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 6.11.4h using condition A15 as specified in clause 9.1 of TS 34.108. The logical channel, transport channel and queue identities are set to:

Logical Channel ID	MAC-d flow (UL)	Priority	Comment
7 (LCH1)	2	1	RB25
8 (LCH2)	3	2	RB17
Note: The RAB combination also includes SRBs on E-DCH on MAC-d flow 1 which is not used in the testcase			

The following parameters are specific for this test case:

Parameter	Value
T-RUCCH	200ms (see 25.331 10.3.6.103)
E-DCH MAC-d flow multiplexing list	11111111 (See 25.331 10.3.5.1b) Note 1
Note 1: This configuration means that all MAC-d flows can be multiplexed in the same TTI	

The UE is placed into UE test loop mode 1 with the UL SDU size set to 39 octets for RB25 and RB17.

Test procedure

The UE is configured with two logical channels, LCH1 (with priority 1) and LCH2 (with priority 2). LCH1 is mapped to MAC-d flow 2 and LCH2 is mapped to MAC-d flow 3.

a) The SS has not issued any scheduling grants for E-DCH to the UE

b) The SS transmits one SDU of size 40 bytes (plus 1 byte RLC length indicator) on LCH2

c) The SS transmits one SDU of size 40 bytes (plus 1 byte RLC length indicator) on LCH1

d) The SS waits for an SI to be received that indicates that data is available on both logical channels (can be identified from the content of the SI)

e) The SS issues an absolute grant that allows the UE to send with a high rate (signalling value 10, code resource related value 0 (i.e. SF1) and timeslot resource related information set to indicate all timeslots on which PUCH can be allocated for TDD only; thus allowing a rate well above 2 SDUs/TTI)

f) The SS waits until data is received and verifies that data from the two LCHs is received in the same TTI

NOTE: The UE may send an SI after step 1 but this SI would only indicate data on LCH2. This SI will be ignored.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		1 RLC PDU on LCH 2	
2	←		1 RLC PDU on LCH 1	
3	→		Potential SI indicating data on LCH 2	This SI is ignored by the SS
4	→		SI indicating data on LCH 1 and LCH 2	This can be verified from the indicated fraction of data on LCH1
5	←		Absolute grant allowing UE to transmit on E-DCH	This grant must be sufficiently high to allow a rate corresponding to at least 2 RLC PDUs/TTI, signalling value 10
6	→		MAC e/es PDU containing 1 RLC PDU on LCH 1 and one RLC PDU on LCH 2

7.1.6a.1.2.3 Test purpose

The purpose of this test case is to verify that the UE does not multiplex data from different logical channels in the same TTI when the multiplexing has been restricted by RRC.

7.1.6a.1.2.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 6.11.4d using condition A15 as specified in clause 9.1 of TS 34.108.The logical channel, transport channel and queue identities are set to:

Logical Channel ID	MAC-d flow (UL)	Priority	Comment
7 LCH1)	2	1	RB25
8 (LCH2)	3	2	RB17
Note: The RAB combination also includes SRBs on E-DCH on MAC-d flow 1 which is not used in the test case			

The following parameters are specific for this test case:

Parameter	Value
T-RUCCH	200ms (see 25.331 10.3.6.103)
E-DCH MAC-d flow multiplexing list	00000000 (See 25.331 10.3.5.1b) Note 1
Note 1: This configuration means that no multiplexing is allowed	

The UE is placed into UE test loop mode 1 with the UL SDU size set to 39 octets for RB25 and RB17.

Test procedure

The UE is configured with two logical channels, LCH1 (with priority 1) and LCH2 (with priority 2). LCH1 is mapped to MAC-d flow 2 and LCH2 is mapped to MAC-d flow 3.

a) The SS has not issued any scheduling grants for E-DCH to the UE

b) The SS transmits one SDU of size 40 bytes (plus 1 byte RLC length indicator) on LCH2

c) The SS transmits one SDU of size 40 bytes (plus 1 byte RLC length indicator) on LCH1

d) The SS waits for an SI to be received that indicates that data is available on both logical channels (can be identified from the content of the SI)

e) The SS issues an absolute grant that allows the UE to send with a high rate (signalling value 10, code resource related value 0 (i.e. SF1) and timeslot resource related information set to indicate all timeslots on which PUCH can be allocated; thus allowing a rate well above 2 SDUs/TTI)

f) The SS waits until data is received and verifies that only data from LCH1 is received in the first TTI

g) The SS verifies that data from LCH2 is received (in a separate TTI from the data from LCH1)

Expected sequence

7.1.6a.1.2.5 Test requirements

1. After step 2 the SS shall receive an SI indicating that data is available on LCH 1 and LCH 2 but no RLC PDUs shall be received

2. In step 6, the SS shall receive 1 RLC PDU on LCH 1 but no data from LCH 2

3. In step 7, the SS shall receive 1 RLC PDU on LCH 2 but no data from LCH 1

7.1.6a.1.3 Correct settings of MAC-es/e header fields

7.1.6a.1.3.1 Definition and applicability

All UEs which support E-DCH and 3.84Mcps or 7.68Mcps TDD.

7.1.6a.1.3.2 Conformance requirement

Extract from 25.321:

[…]

- Transmission Sequence Number (TSN):
  The TSN field provides the transmission sequence number for the MAC-es PDU. This information is used for reordering purposes to support in-sequence delivery to higher layers. The length of the TSN field is 6 bits.

[…]

- Data description indicator (DDI):
  The DDI field identifies the logical channel, MAC-d flow and size of the MAC-d PDUs concatenated into the associated MAC-es PDU. The mapping between the DDI values and the logical channel ID, MAC-d flow and PDU size is provided by higher layers. The length of the DDI field is 6 bits.

  - For FDD: When, due to the quantization in the transport block sizes that can be supported or triggering of the Scheduling Information, the size of the data plus header is less than or equal to the TB size of the E-TFC selected by the UE minus 24 bits, the DDI value [111111] shall be appended at the end of the MAC-e header and a Scheduling Information shall be concatenated into this MAC-e PDU, where DDI value [111111] indicates that there is a Scheduling Information concatenated in this MAC-e PDU. Otherwise, if the size of the data plus header is less than or equal to the TB size of the E-TFC selected by the UE minus 18 bits, a Scheduling Information shall be concatenated into this MAC-e PDU. In any other case it is understood that another MAC-es PDU or Scheduling Information does not fit and it is therefore not necessary to reserve room in the transport block for an additional DDI field.

  - For TDD: When, due to the quantization in the transport block sizes that can be supported or triggering of the Scheduling Information (due to timer expiry, see subclauses 11.9.1.4a and 11.9.1.5), the size of the data plus header is less than or equal to the TB size of the E-TFC selected by the UE minus 29bits, the DDI value [111111] shall be appended at the end of the MAC-e header and a Scheduling Information shall be concatenated into this MAC-e PDU, where DDI value [111111] indicates that there is a Scheduling Information concatenated in this MAC-e PDU. Otherwise, if the size of the data plus header is less than or equal to the TB size of the E-TFC selected by the UE minus 23 bits, a Scheduling Information shall be

concatenated into this MAC-e PDU. In any other case it is understood that another MAC-es PDU or Scheduling Information does not fit and it is therefore not necessary to reserve room in the transport block for an additional DDI field.

- Number of MAC-d PDUs (N):
  The number of consecutive MAC-d PDUs corresponding to the same DDI value. The length of the N field is 6 bits.

Reference(s)

TS 25.321 clauses 9.2.4.1, 9.2.4.2

7.1.6a.1.3.3 Test purpose

The purpose of this test case is to verify that the UE sets the MAC-es/e header fields in a correct way.

7.1.6a.1.3.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 6.11.4h using condition A15 as specified in clause 9.1 of TS 34.108. The logical channel, transport channel and queue identities are set to:

Logical Channel ID	MAC-d flow (UL)	Priority	Comment
7 (LCH1)	2	1	RB25
8 (LCH2)	3	2	RB17
Note: The RAB combination also includes SRBs on E-DCH on MAC-d flow 1 which is not used in the testcase			

The following parameters are specific for this test case:

Parameter	Value
T-RUCCH	200ms (see 25.331 10.3.6.103)
E-DCH MAC-d flow multiplexing list	11111111 (See 25.331 10.3.5.1b) Note 1
Note 1: This configuration means that all MAC-d flows can be multiplexed in the same TTI	

The UE is placed into UE test loop mode 1 with the UL SDU size set to 39 octets for RB25 and RB17.

Test procedure

The UE is configured with two logical channels, LCH1 (with priority 1) and LCH2 (with priority 2). LCH1 is mapped to MAC-d flow 2 and LCH2 is mapped to MAC-d flow 3.

a) The SS has not issued any scheduling grant for E-DCH to the UE

b) The SS transmits 4 SDUs of size 40 bytes (plus 1 byte RLC length indicator) on LCH2

c) The SS issues an absolute grant that allows the UE to send with a high rate (signalling value 10, code resource related value 0 (i.e. SF1) and timeslot resource related information set to indicate all timeslots on which PUCH can be allocated, allowing rates well above 5 SDUs/TTI)

d) The SS waits until data is received and checks the values of the header parameters

e) The SS removes the scheduling grant for E-DCH for the UE

f) The SS transmits three SDUs of size 40 bytes (plus 1 byte RLC length indicator) on LCH2

g) The SS transmits two SDU of size 40 bytes (plus 1 byte RLC length indicator) on LCH1

h) The SS issues an absolute grant that allows the UE to send with a high rate (signalling value 10, allowing rates well above 5 SDUs/TTI)

i) The SS waits until data is received and checks the values of the header parameters

j) The SS transmits two SDUs of size 40 bytes (plus 1 byte RLC length indicator) on LCH2

k) The SS waits until data is received and checks the values of the header parameters

7.1.6a.1.3.5 Test requirements

1. After step 4, the SS shall receive 1 MAC-es PDU shall be received where:
   - The TSN is set to 0, DDI is set to 6 and N is set to 4
2. After step 10, the SS shall receive 2 MAC-es PDUs shall be received where:
   - For MAC-es PDU 1: The TSN is set to 0, DDI is set to 5 and N is set to 2
   - For MAC-es PDU 2: The TSN is set to 1, DDI is set to 6 and N is set to 3
3. After step 12, the SS shall receive 1 MAC-es PDU where:
   - The TSN is set to 2, DDI is set to 6 and N is set to 2

7.1.6a.2 MAC-es/e – Scheduling

7.1.6a.2.1 Correct settings of MAC-es/e scheduling information

7.1.6a.2.1.1 Definition and applicability

All UEs which support E-DCH and 3.84Mcps or 7.68Mcps TDD.

7.1.6a.2.1.2 Conformance requirement

This control information is used by UEs to indicate to the Node B the amount of resources they require. Scheduling Information is sent via the E-PUCH in the MAC-e header when the UE is granted resource and by the E-RUCCH when no resource has been granted. Scheduling Information consists of three components as defined in subclause 9.2.6.3.3 -

- Buffer Information: This consists of:
  - Highest priority Logical Channel (HLID)
  - Total E-DCH Buffer Status (TEBS)
  - Highest priority Logical channel Buffer Status (HLBS)

- UE Power Headroom (UPH): The UPH field indicates the ratio of the maximum UE transmission power and the calculated UE transmit power defined as in [18] that would result for β_e equal to 0. The length of UPH is 5 bits.

- Serving and Neighbour Cell Pathloss (SNPL): This may be used by the Node-B to assist with its estimation of the degree of intercell interference each UE will generate and hence the absolute grant power value and physical resources to assign . The length of SNPL is 5 bits.

The length of TEBS field is 5 bits, the values taken by TEBS are shown in Table 9.2.5.3.2-1[in TS25.331]. The length of HLBS is 4 bits, the values taken by HLBS are shown in table 9.2.5.3.2-2 [in TS25.331].

[…]

If a UE has no Grant and the TEBS becomes larger than zero, the transmission of Scheduling Information shall be sent via E-RUCCH.

If the UE has a Grant then Scheduling Information may be included in the MAC-e PDU according to subclause 9.2.4.2. If the UE has a Grant and scheduling information delay timer ≥ T-SCHED then the UE shall include Scheduling Information in the next MAC-e PDU sent and the scheduling information delay timer shall be restarted. If the UE does not receive any Grant before the scheduling information delay timer > T-SCHED + T-RUCCH /2 then the UE shall send scheduling information via the E-RUCCH and shall stop and reset the scheduling information delay timer.

Reference(s)

TS 25.321 clause 9.2.6.3, 11.9.1.4a

7.1.6a.2.1.3 Test purpose

The purpose of this test case is to verify that the UE sends the E-DCH scheduling information with correct content and with correct triggers.

7.1.6a.2.1.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 6.11.4h using condition A15 as specified in clause 9.1 of TS 34.108. The logical channel, transport channel and queue identities are set to:

Logical Channel ID	MAC-d flow (UL)	Priority	Comment
7 (LCH1)	2	1	RB25
8 (LCH2)	3	2	RB17
Note: The RAB combination also includes SRBs on E-DCH on MAC-d flow 1 which is not used in the testcase			

The following parameters are specific for this test case:

Parameter	Value
T-RUCCH	200 ms (see 25.331 10.3.6.103) Note 1
T-SCHED	160ms (see 25.331 10.3.6.103)
E-DCH MAC-d flow multiplexing list	11111111 (See 25.331 10.3.5.1b) Note 2
E-DCH Transport Block Size Table	0
Note 1: The persistence value will result in the time between sending scheduling information on the E-RUCCH to obe variable, however only a single ASC is defined and thus the persistence is configured to 1. Note 2: This configuration means that all MAC-d flows can be multiplexed in the same TTI	

The UE is placed into UE test loop mode 1 with the UL SDU size set to 39 octets for RB25 and RB17.

Test procedure

The UE is configured with two logical channels, LCH1 (with priority 1) and LCH2 (with priority 2). LCH1 is mapped to MAC-d flow 2 and LCH2 is mapped to MAC-d flow 3.

a) The SS has not issued any scheduling grant for E-DCH to the UE

b) The SS waits for at least 1000 ms and verifies that no SI is received

c) The SS transmits 1 SDU of size 40 bytes (plus 1 byte RLC length indicator) on LCH2

d) The SS waits until an SI is received at time **T0**

e) The SS waits until the next SI is received at time **T1** and checks the content

f) The SS transmits 1 SDU of size 40 bytes (plus 1 byte RLC length indicator) on LCH 1 at time **T2**

g) The SS waits until the next SI is received at time **T3** and checks the content

h) The SS issues an absolute grant that allows the UE to transmit 1 SDUs/TTI

i) The SS waits until all data has been received

j) The SS removes the scheduling grant for the UE

k) The SS transmits 24 SDUs of size 40 bytes (plus 1 byte RLC length indicator) on LCH 1

l) The SS issues an absolute grant that allows the UE to transmit 1 SDUs/TTI

m) The SS waits until the next SI is received with payload at time **T4**

n) The SS waits until the next SI is received with payload at time **T5**

o) The SS waits until all data is received

p) Void

q) The SS issues an absolute grant that allows the UE to transmit 5 SDUs/TTI

r) The SS transmits 5 SDU of size 40 bytes (plus 1 byte RLC length indicator) on LCH1

s) The SS waits until the 5 SDUs are received and checks that contain both a regular SI and the special DDI (value = 63) NOTE

NOTE: 5 336 bit PDUs and 18 bit Mac-e/es header require a TB size of 1698 bits. The nearest higher TB size is 1730, which is able to additionally hold an SI + the special DDI.

Expected sequence

8	→		Data on LCH 1 and LCH 2	
8a	←		Removal of absolute grant	
9	←		24 RLC PDUs on LCH 1	
9a	←		Absolute grant allowing the UE to transmit 1 RLC PDUs per TTI	
10	→		Data and SI	Time **T4**
11	→		Data only	
12	→		Data and SI	Time **T5**
13	→		Data only	
14		SS		After all data has been received, SS waits 1000ms. No SI shall be received during this time.
15	←		void	
16	→		void	
17	←		Absolute grant allowing the UE to transmit 5 RLC PDUs per TTI	
18	←		5 RLC PDUs on LCH 1	
19	→		Data and SI	The received transport block shall in addition to the 5 PDUs contain a regular SI and the special DDI (value = 63). As there is no data left in buffers, TEBS is set as 0, HLID is set as '0000' and HLBS is set as 0.
NOTE 1: General timer tolerance as defined by 34.108 sub-clause 4.2.3 applies. NOTE 2: Step 10 and 11 can occur in any order. SS should accept these PDUs in any order and verify the time difference between T5 and T4 as per the test requirement.				

Specific Message Contents

None

7.1.6a.2.1.5 Test requirements

1. In step 1 the SS shall not receive any SI since the UE buffer is empty
2. In step 3 the SS shall receive an SI (content ignored)
3. In step 4 the SS shall receive an SI indicating
   - Total E-DCH Buffer Status (TEBS) Index = 6 ($32 < TEBS \leq 42$).
   - Highest priority Logical channel ID (HLID) = LCH 2.
   - Highest Priority Logical Channel Buffer Status (HLBS) Index = 15 ($82\% < HLBS \leq 100\%$).
4. In step 6 the SS shall receive an SI indicating

- Total E-DCH Buffer Status (TEBS) Index = 9 (73 < TEBS ≤ 97).
- Highest priority Logical channel ID (HLID) = LCH 1.
- Highest Priority Logical Channel Buffer Status (HLBS) Index = 12 (45% < HLBS ≤ 55%).

5. T1-T0 shall equal 200 ms
6. T3-T2 shall be less then 120 ms. Note 1.
7. T5-T4 shall equal 160ms
8. In step 14, the SS shall not receive any SI since the UE buffer is empty.
9. In step 19, the received transport block shall in addition to the payload include a regular SI and the special DDI (value = 63). TEBS, HLID and HLBS shall be set as zero.

NOTE 1: 120ms = 2 TTI(for Data to be transmitted from RLC to MAC) + Maximum UE test loop delay (10*TTI according to 34.109=100ms).

7.1.6a.2.2 Correct settings of MAC-es/e scheduling information when scheduling delay timer expires

7.1.6a.2.2.1 Definition and applicability

All UEs which support E-DCH and 3.84Mcps or 7.68Mcps TDD.

7.1.6a.2.2.2 Conformance requirement

If the UE has a Grant then Scheduling Information may be included in the MAC-e PDU according to subclause 9.2.4.2. If the UE has a Grant and scheduling information delay timer ≥ T-SCHED then the UE shall include Scheduling Information in the next MAC-e PDU sent and the scheduling information delay timer shall be restarted. If the UE does not receive any Grant before the scheduling information delay timer > T-SCHED + T-RUCCH /2 then the UE shall send scheduling information via the E-RUCCH and shall stop and reset the scheduling information delay timer.

Reference(s)

TS 25.321 clause 11.9.1.4a

7.1.6a.2.2.3 Test purpose

The purpose of this test case is to verify that the UE sends the E-DCH scheduling information using the correct trigger when a previous grant has been sent to the UE so the scheduling information delay timer is running but no subsequent grant is sent to the UE.

7.1.6a.2.2.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 6.11.4h using condition A15 as specified in clause 9.1 of TS 34.108. The logical channel, transport channel and queue identities are set to:

Logical Channel ID	MAC-d flow (UL)	Priority	Comment
7 (LCH1)	2	1	RB25
8 (LCH2)	3	2	RB17
Note: The RAB combination also includes SRBs on E-DCH on MAC-d flow 1 which is not used in the testcase			

The following parameters are specific for this test case:

Parameter	Value
T-RUCCH	200 ms (see 25.331 10.3.6.103) Note 1
T-SCHED	160ms (see 25.331 10.3.6.103)
E-DCH MAC-d flow multiplexing list	11111111 (See 25.331 10.3.5.1b) Note 2
Note 1: The persistence value will result in the time between sending scheduling information on the E-RUCCH to obe variable, however only a single ASC is defined and thus the persistence is configured to 1. Note 2: This configuration means that all MAC-d flows can be multiplexed in the same TTI	

The UE is placed into UE test loop mode 1 with the UL SDU size set to 39 octets for RB25 and RB17.

Test procedure

The UE is configured with two logical channels, LCH1 (with priority 1) and LCH2 (with priority 2). LCH1 is mapped to MAC-d flow 2 and LCH2 is mapped to MAC-d flow 3.

a) The SS has not issued any scheduling grant for E-DCH to the UE

b) The SS waits for at least 1000 ms and verifies that no SI is received

c) The SS transmits 10 SDUs of size 40 bytes (plus 1 byte RLC length indicator) on LCH2

d) The SS waits until an SI is received at T0.

h) The SS issues an absolute grant that allows the UE to transmit 1 SDUs/TTI once every 40ms.

i) The SS continues to send absolute grants while waiting to receive a SI from the UE sent in a MAC-e PDU at time T1.

j) The SS stops issuing absolute grants to the UE.

k) The SS waits for a SI from the UE at T2.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	SS			After the radio bearer has been established the SS waits 1000 ms. No SI shall be received during this time
2	←		10 RLC PDUs on LCH 2	
3	→		SI indicating data on LCH 2	Time **T0**
4	←		Absolute grant allowing the UE to transmit 1 RLC PDUs per TTI	This grant is made every 40ms until step 6.
5	→		Data on LCH 2 (no SI included)	
6	→		Data on LCH 2 (with SI included)	Time **T1**
7			SS stops sending absolute grants to the UE	
8	→		E-RUCCH which contains SI	Time **T2**

Specific Message Contents

None

7.1.6a.2.2.5 Test requirements

1. In step 1 the SS shall not receive any SI since the UE buffer is empty

2. In step 3 the SS shall receive an SI (content ignored)

3. T1-T0 shall equal 160 ms

4. T2-T1 shall be less then 260 ms.

7.1.6a.2.3 MAC-es/e correct handling of scheduled transmissions

7.1.6a.2.3.1 Definition and applicability

All UEs which support E-DCH.

7.1.6a.2.3.2 Conformance requirement

Extract from 25.321 clause 9.2.6.2.1:

The Absolute Grant is sent on downlink on a set of configured E-AGCHs from the serving E-DCH cell and allows the Node B scheduler to directly adjust the granted rate and assigned physical resources for UEs under its control. The physical resource assignment indicates to the UE the maximum amount of uplink resources that it may use for a scheduled transmission.

[…]

The absolute grant message itself includes multiple fields that are multiplexed together into between 14 and 28 bits for 3.84/7.68 Mcps TDD and between 23 and 26 bits for 1.28 Mcps TDD (depending on the system configuration) inside the MAC-e of the Node B and then submitted to the physical layer for transmission on the E-AGCH. These fields are:

- Absolute Grant Value:
  For TDD, this field indicates the maximum E-DCH traffic to reference power ratio (E-PUCH/$P_{e\text{-}base}$) per TDD resource unit that the UE is allowed to use on the E-DCH resources associated with the Absolute Grant. A TDD resource unit is defined as one sixteenth of the OVSF codespace in one timeslot. The length of the Absolute Grant Value field for TDD is 5 bits.

- Channelisation Code:
  This field describes the code component of the physical resource grant. For 1.28/3.84 Mcps TDD it comprises an enumerated value of length 5 bits indicating which node on the OVSF code tree has been allocated. For 7.68 Mcps TDD it comprises an enumerated value of length 6 bits indicating which node on the OVSF tree has been allocated. The mapping between the allocated OVSF and the enumerated node 0…30 for 1.28/3.84 Mcps and 0…62 for 7.68 Mcps is as given in [19].

- Timeslot Resource Related Information:
  This field describes the timeslot component of the physical resource grant and comprises a bitmap of length n_{TRRI} indicating which of the timeslots configured for E-DCH use by RRC have been allocated with the LSB corresponding to the lowest numbered E-DCH timeslot and the MSB corresponding to the highest numbered timeslot. The length of the TRRI field (n_{TRRI}) is 5 bits for 1.28 Mcps TDD and is configurable by RRC on a per-cell basis between 1 and 12 bits for 3.84/7.68 Mcps TDD.

- Resource Duration Indicator:
  Optionally, RRC may configure, on a per-cell basis the presence of a resource duration indicator field on E-AGCH for TDD. If configured as present in a cell, 3 bits are used to indicate the number of TTI's allocated and the spacing between the allocated TTIs via a single grant according to table 9.2.6.2.1-2. If the field is configured as not present on E-AGCH in the cell, a value of 0 is implicitly assumed by the UE corresponding to 1 TTI.

Table 9.2.6.2.1-2 – Resource Duration Indicator (RDI) interpretation

Resource Duration Indicator (3 bits)	TTIs allocated	TTI spacing
0	1	1
1	2	1
2	2	2
3	2	4
4	4	1
5	4	2
6	4	4
7	8	1

- E-AGCH Cyclic Sequence Number (ECSN):
  The ECSN is a 3-bit field used to assist the UE with outer-loop power control of E-AGCH (cf. HCSN for HS-SCCH).

- E-HICH Indicator(EI) (1.28 Mcps TDD only)
  The E-HICH indicator (EI) consists of 2 bits and is used to indicate which E-HICH will convey the acknowledgement indicator for the scheduled UEs.

- E-UCCH Number Indicator (ENI) (1.28 Mcps TDD only)
  The E-UCCH Number Indicator (ENI) is a 3-bit field used to indicate the detailed number of E-UCCH.

[…]

The UE determines whether each TTI is available for scheduled or non-scheduled transmissions.

The parameters applicable to a transmission are timeslots, code and maximum power. In the case of non-scheduled transmission, these parameters are set by RRC and retransmissions and/or new transmissions may occur in frames at intervals set by RRC. For scheduled transmission, the parameters are received via the E-AGCH.

7.1.6a.2.3.3 Test purpose

To verify that the UE transmits different amount of data when the absolute grant varies.

7.1.6a.2.3.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 6.11.4f using condition A12 as specified in clause 9.1.2 of TS 34.108. The following parameters are specific for this test case:

Parameter	Value
Periodicity for scheduling info	No periodic scheduling info

The UE is placed into UE test loop mode 1 with the UL SDU size set to 39 octets.

Test procedure

Logical Channel with Id 7 (LCH 1) is mapped to MAC-d flow 2 with priority 1.

a) The SS has not issued any scheduling grant for E-DCH to the UE

b) The SS transmits 4 SDUs of size 40 bytes (plus 1 byte RLC length indicator) on LCH 1

c) SS waits until an SI is received

d) The SS issues an absolute grant that allows the UE to transmit 1 SDU/TTI (absolute grant signalling value 10, Timeslot Resource Related Information 0001, channelisation code 1, Resource Duration Indicator 4)

e) The SS waits until data is received and checks that only 1 SDU/TTI is transmitted

f) The SS waits until all 4 SDUs have been received

g) The SS transmits 8 SDUs of size 40 bytes (plus 1 byte RLC length indicator) on LCH 1

h) SS waits until an SI is received

i) The SS issues an absolute grant that allows the UE to transmit 4 SDUs/TTI (absolute grant signalling value 10, Timeslot Resource Related Information 1111, channelisation code 1, Resource Duration Indicator 1)

j) The SS waits until data is received and checks that only 4 SDUs/TTI is transmitted

k) The SS waits until all 8 SDUs have been received

Expected sequence

7.1.6a.2.4 MAC-es/e combined non-scheduled and scheduled transmissions

7.1.6a.2.4.1 Definition and applicability

All UEs which support E-DCH.

7.1.6a.2.4.2 Conformance requirement

From 25.321 clause 11.9.1.4:

The transmission format and data allocation shall follow the requirements below:

[…]

- - RRC can allocate non-scheduled transmission grants to individual MAC-d flows in order to reduce the transmission delays;

[…]

- The UE shall determine whether to take scheduled or non-scheduled grants into account in the upcoming transmission. If neither are supposed to be taken into account (i.e. the TTI is not available for non-scheduled transmission and no Grant for scheduled transmission has been received) then no grant shall be assumed to exist. If a grant exists then the transmission format and data allocation shall follow the requirements below;

[…]

- For all logical channels, if the logical channel belongs to a non-scheduled MAC-d flow, its data shall be considered as available up to the largest block size determined for the corresponding non-scheduled grant. If the logical channel does not belong to a non-scheduled MAC-d flow, its data shall be considered as available up to the largest block size determined for the Serving Grant;

From 25.331 clause 8.6.5.18:

1> if the IE "E-DCH MAC-d flow multiplexing list" is included:

2> only multiplex MAC-d PDU's from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU's from E-DCH MAC-d flows with which multiplexing in the same MAC-e or MAC-i PDU is allowed in accordance to the IE "E-DCH MAC-d flow multiplexing list".

[…]

1> for TDD:

2> if the IE "Non-scheduled transmission grant info" is included:

3> MAC-d PDU's for logical channels belonging to this MAC-d flow shall only be included in a MAC-e or MAC-i PDU transmitted by HARQ processes designated as non scheduled (Ids 4 – 7) in the TTIs indicated (for 3.84 Mcps TDD and 7.68 Mcps TDD, as determined from the IEs "Activation Time", "Resource Duration" and "Resource Periodicity"; for 1.28 Mcps TDD, as determined from the IEs "Activation Time", "Subframe number", "Resource Duration" and "Resource Periodicity", and the calculation of assigned Non-scheduled transmission grant is specified in subclause 8.6.6.16a).

2> if the IE "Scheduled transmission grant info" is included:

3> transmission of MAC-d PDUs for logical channels belonging to this MAC-d flow shall be in accordance with the received scheduled grant on E-AGCH (see [15]).

Reference(s)

TS 25.321 clause 11.9.1.4 , TS 25.331 clause 8.6.5.18

7.1.6a.2.4.3 Test purpose

To verify that the UE is able to handle combined non-scheduled and scheduled transmissions.

7.1.6a.2.4.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 6.11.4h using condition A15 as specified in clause 9.1 of TS 34.108. The following parameters are specific for this test case with the logical channel, transport channel and queue identities are set to:

Logical Channel ID	MAC-d flow (UL)	Priority	Comment
7 (LCH1)	2	1	RB25
8 (LCH2)	3	2	RB17
Note: The RAB combination also includes SRBs on E-DCH on MAC-d flow 1 which is not used in the test case			

The following parameters are specific for this test case:

Parameter	Value
E-DCH MAC-d flow multiplexing list	11111111 (See 25.331 10.3.5.1b) Note 1
Note 1: This configuration means that all MAC-d flows can be multiplexed in the same TTI	

The UE is placed into UE test loop mode 1 with the UL SDU size for LCH 1 set to (25*41)-2 octets and LCH 2 size set to 39 octets.

Test procedure

The UE is configured with a non-scheduled grant on MAC-d flow 2, and the value of the "Max MAC-e PDU contents size" is 500 bits. The UE is not given any grant to transmit on MAC-d flow 3 (LCH 2).

a) The SS has not issued any grant for E-DCH on MAC-d flow 3 (LCH 2)

b) The SS transmits 1 SDU of size 40 bytes (plus 1 byte RLC length indicator) on LCH 2

c) The SS transmits 1 SDU of size 40 bytes (plus 1 byte RLC length indicator) on LCH 1

d) The SS waits until data is received and checks that the first TTI contains only data on LCH 1

e) The SS issues an absolute grant that allows the UE to send with a high rate on LCH 2 (well above 1 SDU/TTI) immediately after the previous step (i.e. not more than one TTI after the first data on LCH 1 has been looped back).

f) The SS receives data from the two logical channels LCH 1 and LCH 2 in one TTI.

g) The SS removes the scheduling grant for E-DCH for the UE

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		1 RLC PDU on LCH 2	SDU size is 40 bytes
2	←		1 RLC PDU on LCH 1	SDU size is 40 bytes

7.1.6a.2.4.5 Test requirements

1. In step 3, the SS shall receive 1 MAC-es PDU containing 1 RLC PDU on LCH 1.

2. In step 5, the SS shall receive 1 MAC-es PDU containing 1 RLC PDU on LCH 1 and 1 RLC PDU on LCH 2 within the same TTI.

7.1.6a.2.5 MAC-es/e Correct handling of HARQ profile power offsets

7.1.6a.2.5.1 Definition and applicability

All UEs which support E-DCH.

7.1.6a.2.5.2 Conformance requirement

In TDD, rules for E-TFC selection shall be applied as provided below.

UEs shall apply E-TFC selection when invoked by the HARQ entity (see subclause 11.9.1.1.1).

For each MAC-d flow, RRC configures MAC-e with a HARQ profile and multiplexing list. Additionally, RRC configures MAC with a power offset in case the Scheduling Information needs to be transmitted without any higher-layer data. The HARQ profile includes the power offset and maximum number of HARQ transmissions to use for this MAC-d flow. For 1.28 Mcps TDD, the HARQ profile also includes a retransmission timer attribute. The multiplexing list identifies for each MAC-d flow(s), the other MAC-d flows for which data can be multiplexed in a transmission that uses the power offset included in its HARQ profile.

RRC can control the scheduling of uplink data by giving each logical channel a priority between 1 and 8, where 1 is the highest priority and 8 the lowest. E-TFC selection in the UE shall be done in accordance with the priorities indicated by RRC. Logical channels have absolute priority, i.e. the UE shall maximise the transmission of higher priority data.

RRC can allocate non-scheduled transmission grants to individual MAC-d flows in order to reduce the transmission delays.

The UE shall determine whether to take scheduled or non-scheduled grants into account in the upcoming transmission. If neither are supposed to be taken into account (i.e. the TTI is not available for non-scheduled transmission and no Grant for scheduled transmission has been received) then no grant shall be assumed to exist. If a grant exists then the transmission format and data allocation shall follow the requirements below.

For each configured MAC-d flow, a given E-TFC can be in any of the following states:

- Supported state;

- Blocked state.

The E-TFC states are derived according to the following:

- If the transmission is a retransmission then only the E-TFC with the same block size as the original transmission may be in the supported state.

- For 1.28Mcps TDD, only E-TFCs from the E-TFCS (the table of TB sizes) which are consistent with the UE's E-DCH capability category shall be considered for the transmission;

- Only E-TFCs from the E-TFCS (the table of TB sizes) which can be supported by (exactly) the number of slots assigned by the grant shall be considered for the transmission;

- Only E-TFCs which result (for the granted timeslot and code physical resources) in a code rate lying between the maximum and minimum (inclusive) allowable code rates set by RRC [7] shall be considered for the transmission {note: the definition of the term “code rate” as used here is the same as that provided by [18]}. This shall be evaluated for both QPSK and 16-QAM modulation;

- P_{HARQ}, the HARQ profile power offset is selected (the HARQ profile for the transmission shall be selected among the HARQ profiles of MAC-d flows on which the highest priority logical channels with available data are mapped; Scheduling Information power offset shall be used when Scheduling Information is transmitted without any higher-layer data.)

- Only E-TFCs whose calculated transmission power requirement $P_{E\text{-}PUCH}$ (see [18]) is less than or equal to the available or granted power shall be considered for the transmission (note: this requirement does not apply in the case of a retransmission on non-scheduled resources).

For 3.84Mcps/7.68Mcps TDD, from those E-TFCs in the supported state the UE determines the largest block size that it is permitted to transmit within the given constraints.

For 1.28Mcps TDD, from those E-TFCs in the supported state, UE determines a candidate set with up to 64 E-TFCs, including the largest 63 E-TFCs, in addition to the E-TFC dedicated for SI. If the number of E-TFCs in the supported state is not greater than 63, all the E-TFCs in the supported state shall be included in the candidate set. The E-TFCs in the candidate set shall then be re-indexed in an ascending order and numbered from 0 to (Nmax -1), where Nmax is the number of E-TFC in the candidate set. From the candidate set the UE determines the largest block size that is permitted to transmit within the given constraints.

The UE shall select the modulation type associated with the determined E-TFC (note: if an E-TFC is supported by both QPSK and 16-QAM then 16-QAM modulation shall be used if its power requirement ($P_{E\text{-}PUCH}$) is lower than the power requirement for QPSK, otherwise QPSK modulation shall be used).

Data allocation shall then be performed in accordance with the following:

- For all logical channels, if the logical channel belongs to a non-scheduled MAC-d flow, its data shall be considered as available up to the largest block size determined for the corresponding non-scheduled grant. If the logical channel does not belong to a non-scheduled MAC-d flow, its data shall be considered as available up to the largest block size determined for the Serving Grant;

- The data allocation shall maximise the transmission of higher priority data;

- The UE shall select the E-TFC, SF and modulation which minimises the power used (3.84/7.68 Mcps TDD only);

- The UE shall select the E-TFC and modulation which minimises the power used (1.28 Mcps TDD only);

Once an appropriate E-TFC and data allocation are found according to the rules above, the "Multiplexing and TSN Setting" entity shall generate the corresponding MAC-e PDU.

In 1.28Mcps TDD, when Scheduling Information is triggered by timer per subclause 11.9.1.5, the E-TFC selection and data-allocation process shall assume that Scheduling Information has a priority higher than any other logical channel.

The E-TFC selection function shall provide this MAC-e PDU and transmission HARQ profile to the HARQ entity. The selected E-TFC is also provided (Note: for 1.28Mcps TDD, the signalled transport block size index, i.e. E-TFCI, is the index of the selected E-TFC in the candidate set.). The maximum number of HARQ transmissions and the power offset in this profile shall be set respectively to the maximum of both the Max Number of HARQ Transmissions and of the power offset of the HARQ profiles from all the MAC-d flows from which data is multiplexed into the transmission. For 1.28 Mcps TDD, the retransmission timer shall be set to the maximum of the retransmission timer value of the HARQ profiles that are permitted to be multiplexed into the transmission. Each HARQ process which is associated with a buffer holding a MAC-e PDU for potential retransmission shall maintain the HARQ profile and the number of re-transmissions that have occurred. For 1.28 Mcps TDD, the HARQ process shall also maintain the value of RTX_TIMER.

Reference(s)

TS 25.321 clause 11.9.1.4

7.1.6a.2.5.3 Test purpose

The purpose of this test case is to verify that the UE applies different HARQ profiles from different MAC-d flows to E-DCH transmissions accordingly and in case data from two MAC-d flows is transmitted in the same E-DCH transmission, the UE selects the correct power offset.

7.1.6a.2.5.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 6.11.4h using condition A15 as specified in clause 9.1 of TS 34.108. The logical channel, transport channel and queue identities are set to:

Logical Channel ID	MAC-d flow (UL)	Priority	Comment
7 (LCH1)	2	1	RB25
8 (LCH2)	3	2	RB17
Note: The RAB combination also includes SRBs on E-DCH on MAC-d flow 1 which is not used in the testcase			

The following parameters are specific for this test case:

Parameter	Value
E-DCH MAC-d flow multiplexing list for MAC-d flow 2	11111111 (See 25.331 10.3.5.1b) Note 1
E-DCH MAC-d flow multiplexing list for MAC-d flow 3	11111111 (See 25.331 10.3.5.1b) Note 1
E-DCH MAC-d flow power offset for flow 2	3dB (see 25.331 subclause 10.3.5.1b)
E-DCH MAC-d flow power offset for flow 3	0dB (see 25.331 subclause 10.3.5.1b)
Note 1: This configuration means that all MAC-d flows can be multiplexed in the same TTI	

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to 39 octets for RB 25 and RB17.

Test procedure

The UE is configured with two logical channels, LCH1 (with priority 1) and LCH2 (with priority 2). LCH1 is mapped to MAC-d flow 2 and LCH2 is mapped to MAC-d flow 3.

a) SS has not issued any scheduling grant for E-DCH to the UE.

b) SS transmits 2 SDUs of size 40 bytes (plus 1 byte RLC length indicator) on LCH1.

c) SS waits until an SI is received.

d) The SS issues absolute grant corresponding to 1 RLC PDU of size 41 octets per TTI when the Mac-d flow power offset is 3dB (signalling value 5), with Absolute Grant Scope set as "All HARQ processes".

e) SS starts receiving loop backed RLC PDU’s.

f) The SS stops issuing absolute grants to the UE.

g) SS transmits 4 SDUs of size 40 bytes (plus 1 byte RLC length indicator) on LCH2.

h) SS waits until an SI is received.

i) The SS issues primary absolute grant corresponding to 2 RLC PDUs of size 41 octets per TTI when the Mac-d flow power offset is 0dB (signalling value 5), with Absolute Grant Scope set as "All HARQ processes".

j) SS starts receiving loop backed RLC PDU’s.

k) The SS issues primary absolute grant corresponding to “ZERO GRANT”, with Absolute Grant Scope set as "All HARQ processes".

l) SS transmits 2 SDUs of size 40 bytes (plus 1 byte RLC length indicator) on LCH2.

m) SS waits until an SI is received.

n) SS transmits 2 SDUs of size 40 bytes (plus 1 byte RLC length indicator) on LCH1.

o) SS waits until an SI is received.

p) The SS issues primary absolute grant corresponding to 3 RLC PDUs of size 41 octets per TTI when the Mac-d flow power offset is 3dB (signalling value 9), with Absolute Grant Scope set as "All HARQ processes".

q) SS starts receiving loop backed RLC PDU’s.

Expected sequence

7.1.6a.2.5.5 Test requirements

1. In step 4, UE shall loop back PDUs for two TTIs, with one RLC PDU per TTI.
2. In step 8, UE shall loop back PDUs for two TTIs, with two RLC PDUs per TTI.
3. In step 15, UE shall loop back PDUs for one TTI, with three RLC PDU per TTI (2 RLC PDU's from LCH1 and 1 RLC PDU from LCH 2).
4. In step 16, UE shall loop back PDU for one TTI, with one RLC PDU per TTI (1 RLC PDU from LCH 2).

7.1.6a.3 MAC-es/e- E-TFC selection

7.1.6a.3.1 MAC-es/e E-TFC priority

7.1.6a.3.1.1 Definition and applicability

All UEs which support E-DCH.

7.1.6a.3.1.2 Conformance requirement

Extract from TS 25.321 clause 11.9.1.4

[…]

RRC can control the scheduling of uplink data by giving each logical channel a priority between 1 and 8, where 1 is the highest priority and 8 the lowest. E-TFC selection in the UE shall be done in accordance with the priorities indicated by RRC. Logical channels have absolute priority, i.e. the UE shall maximise the transmission of higher priority data.

Reference(s)

TS 25.321 clause 11.9.1.4

7.1.6a.3.1.3 Test purpose

To verify that the UE transmits data in order of priority

7.1.6a.3.1.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 6.11.4h using condition A15 as specified in clause 9.1 of TS 34.108. The logical channel, transport channel and queue identities are set to:

Logical Channel ID	MAC-d flow (UL)	Priority	Comment
7 (LCH1)	2	1	RB25
8 (LCH2)	3	2	RB17
NOTE: The RAB combination also include SRBs on E-DCH on MAC-d flow 1 which are not used in the test case			

The following parameters are specific for this test case:

Parameter	Value
T-RUCCH	200ms (see 25.331 10.3.6.103)
E-DCH MAC-d flow multiplexing list	11111111 (See 25.331 10.3.5.1b) Note 1
Note 1: This configuration means that all MAC-d flows can be multiplexed in the same TTI	

The UE is placed into UE test loop mode 1 with the UL SDU size set to (10*41)-2 octets for RB25 and RB17.

Test procedure

The UE is configured with two logical channels, LCH1 (with priority 1) and LCH2 (with priority 2). LCH1 is mapped to MAC-d flow 2 and LCH2 is mapped to MAC-d flow 3.

a) The SS has not issued any scheduling grant for E-DCH to the UE

b) The SS transmits one SDU of size 40 bytes (plus 1 byte RLC length indicator) on LCH2

c) The SS transmits one SDU of size 40 bytes (plus 1 byte RLC length indicator) on LCH1

d) The SS waits for an SI to be received that indicates that data is available on both logical channels (can be identified from the content of the SI)

e) The SS issues an absolute grant that allows the UE to send 1 RLC PDU per TTI (signalling value 4)

f) The SS verifies that the first TTIs only contains data from LCH1 which have a higher priority

g) The SS verifies that data on LCH2 is only transmitted after all the data on LCH1 has been looped back

Expected sequence

Step	Direction		Message	Comments
	UE	SS		

1	←	1 RLC PDU on LCH 2	
2	←	1 RLC PDU on LCH 1	
3	→	Potential SI indicating data on LCH 2	This SI is ignored by the SS
4	→	SI indicating that data is available for LCH 1 and LCH 2	
5	←	Absolute grant allowing the UE to transmit 1 RLC PDU per TTI	Signalling value 4
6	→	MAC es PDU containing 1 RLC PDU from LCH 1	This step is repeated until the whole RLC SDU is transmitted
7	→	MAC es PDU containing 1 RLC PDU from LCH 2	This step is repeated until the whole RLC SDU is transmitted

7.1.6a.3.1.5 Test requirements

1. In step 6, the SS shall receive 1 MAC-es PDU containing 1 RLC PDU from LCH 1 in each TTI until the whole RLC SDU has been received.

2. In step 6, the SS verifies that no data is received on LCH 2 until all data on LCH 1 has been received

3. In step 7, the SS shall receive 1 MAC-es PDU containing 1 RLC PDU from LCH 2 in each TTI until the whole RLC SDU has been received

7.1.6a.3.2 MAC-es/e transport block size selection/ UL QPSK

7.1.6a.3.2.1 Definition and applicability

All UEs which support E-DCH.

7.1.6a.3.2.2 Conformance requirement

Extract from TS 25.321 clause 9.2.6.4

[…]

For 3.84 Mcps TDD, the normative description of the mapping between the E-TFC index and the corresponding transport block size is provided in Annex BA.

For 7.68 Mcps TDD, the normative description of the mapping between the E-TFC index and the corresponding transport block size is provided in Annex BB.

[…]

For 3.84 Mcps TDD, the mapping of transport block size L to signalled index k_i = {0,1,…127} (see Annex BA.1) is given by the formula:

$$L = \lfloor 60 \times \rho^{k_n + k_i} \rfloor$$

In the above formula $\rho = 128^{\frac{1}{127}}$, k_i is the TBS index (0…127) and k_n is an integer selected based upon the number of timeslots allocated (n). Values for k_n are tabulated in Table 9.2.6.4.1.

7.1.6a.3.2.3 Test purpose

To verify that the UE transmits all possible transport block sizes within the UE capability.

7.1.6a.3.2.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

UE in idle mode

The following parameters are specific for this test case:

Common for all UE HS-DSCH categories:

Parameter	Value
MAC-d PDU size	336 bits
MAC-hs receiver window size	16
Number of HARQ processes	1
Number of reordering queues	1

Common for all UE E-DCH categories:

Parameter	Value
T-RUCCH	200 ms (see 25.331 10.3.6.103)

Specific depending on E-DCH category for 3.84Mcps:

Parameter	E-DCH Category	Value
RLC Transmission window size	1 to 4	512
	5	1536
E-TFCI table	1 to 5	See table 7.1.6a.3.1

Specific depending on E-DCH category for 7.68Mcps:

Parameter	E-DCH Category	Value
RLC Transmission window size	1 to 4	512
	5 to 7	1536
E-TFCI table	1 to7	See table 7.1.6a.3.3

Specific depending on HS-DSCH category for 3.84Mcps:

Parameter	HS-DSCH Category	Value
RLC Receiving window size	1 to 6	512
	7 and 8	1536
	9	2047

Specific depending on HS-DSCH category for 7.68Mcps:

Parameter	HS-DSCH Category	Value
RLC Receiving window size	1 to 6	512
	7 to 10	1536
	11 to 13	2047

The mapping between the chosen E-TFC index and the corresponding E-DCH transport block size is given in the following table:

Table 7.1.6a.3.1 10ms TTI E-DCH Transport Block Size Table 0 for 3.84Mcps

Table 7.1.6a.3.4 Applicable E-TFS indexes for sub-tests 1 to 3 and UE E-DCH categories 1 to 7 for 3.84Mcps.

			Applicable E-TFS indexes						
Sub-test	N_{slots}	E-DCH Transport Block Size Table	Category 1	Category 2	Category 3	Category 4	Category 5	Category 6	Category 7
1	**12**	**Table 7.1.6a.3.3**	**0..66**	**0..82**	**0..91**	**0..100**	**0..107**	**0..115**	**0..127**
2	**6**	**Table 7.1.6a.3.3**	**0..81**	**0..97**	**0.106**	**0..115**	**0..127**	**0..127**	**0..127**
3	**1**	**Table 7.1.6a.3.3**	**0..122**	**0..127**	**0..127**	**0..127**	**0..127**	**0..127**	**0..127**
NOTE 1: Applicable indexes depends on the UE capability of "Maximum number of bits of an E-DCH transport block transmitted within a 10 ms E-DCH TTI" as specified in TS 25.306 clause 5.1.									

Test procedure

a) The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 6.10.3.4.7.1 for 3.84Mcps and clause 6.11.6.4.7.1 for 7.68Mcps using condition A12 as specified in clause 9.1 of TS 34.108.. See note 1.

b) The SS closes the test loop using UE test loop mode 1 and configuring the UL RLC SDU size to be equal to the received DL SDU size (i.e. not setting the UL RLC SDU size parameter).

c) SS sets RLC SDU size = 312 bits which corresponds to maximum AM payload size for 1 MAC-d PDU of size 336 bits.

d) The SS removes the scheduling grant for E-DCH for the UE.

e) If N_{PDUs} is less than 36 the SS transmits one RLC SDU with size ((*NPDUs* – 1) * 320 + 312) else the SS transmits two SDUs with size ((N_{PDUs} – 2) * 320 + 2 * 312) / 2. See note 2.

f) The SS waits for an SI to be received that indicates that there is data available for transmission (can be identified from the content of the SI). See Note 3. The SS checks that TEBS and HLBS have the correct values.

g) The SS issues an absolute grant that allows the UE to which specifies the maximum absolute grant value (signalled value 31) together with a physical resource allocation of the whole code space (signalled value 0) and TS allocation limited to the number of timeslots defined in Table 7.1.6a.3.2 for 3.84Mcps and in Table 7.1.6a.3.4 for 7.68Mcps for the sub-test. The resource duration takes the default value of 1 TTI.

h) The SS waits until data is received and verifies that the looped back SDU data has the correct content and is sent in the same TTI.

i) The SS verifies that the received E-TFC used by the UE is correct. For Rel-7 and later release UE the SS checks that the UE has not used the transport block sizes correspondent to the E-TFCI values as listed in table 7.1.6.3.2.6, but instead used the transport block size correspondent to the next possible larger E-TFCI value.

j) The SS increments the RLC SDU payload size by 320 bits. For the case of 2 SDUs transmitted by the SS, each of the payload sizes are incremented by 320 bits. The SS calculates the new E-TFC transport block size from the relevant Transport Block Size Table. If this transport block size is supported by the UE under test, according to Table 7.1.6.3.2.5, then continue with step d else continue with step k.

k) The SS opens the UE test loop.

l) The SS release the radio bearer.

m) The SS may optionally deactivate the radio bearer test mode.

NOTE 1: The SS configures the physical channel parameters according to the actual UE category under test.

NOTE 2: Calculation of Downlink (DL) RLC SDU size:

DL SDU size = N_{PDUs} * 336 bits RLC PDU – headers associated with MAC and RLC.

RLC PDU = RLC 16 bits Sequence Number + 8 bits for the Optional Length Indicators + RLC pay load size. The Optional Length Indicator is present only in the delivery of the last RLC PDU.

The Optional Length Indicators consists of a 7 bits Length Indicator + 1 bit Extension Field of binary value = “0”. The 7 bit length indicator indicates the number of octets between the end of the RLC header up to and including the last octet of the (DL) RLC SDU ending within the PDU.

Therefore, the RLC payload has two different sizes of 320 bits (336 – 16 bits Sequence Number) and 312 bits (336 – 16 bits sequence Number - (7 bits Length Indicator + 1 bit extension field)).

N_{PDUs} = FLOOR ((TBS size – MAC-e header size – MAC-es header size) / MAC-d PDU size) = FLOOR ((TBS size -18) / 336).

For N_{PDUs} = 1

DL RLC SDU payload has size 312 bits

For $1 < N_{PDUs} < 36$

There are (N_{PDUs} – 1) RLC payloads of size 320 bits with the last RLC payload size 312 bits

DL RLC SDU payload size = (N_{PDUs} -1) * 320 + 312

For $N_{PDUs} \geq 36$

The test data for transport channels on HS-DSCH and E-DCH is divided into 2 RLC SDUs so that the SDU size does not exceed 1500 octets (limit of SDU size in SM)

The payload data of the MAC-d PDUs contains 2 RLC SDUs of size

((N_{PDUs} – 2) * 320 + 2 * 312) / 2

$N_{PDU} = N_{PDUs} + 2$

Calculation of E-TFC TB Size:

Select the E-TFC Index/TB Size = Number of MAC-d PDU * 336 bits RLC PDU + 336 bits UL AM ACK (status) PDU + 18 bits MAC-es and MAC-e headers (6 bits N + 6 bits TSN + 6 bits DDI) according to the E-DCH Transport Block Size Tables for FDD per 25.321 Annex B, .

As an example TBS value of 716 bits is used by the UE in the 10mS Index 0 subtest to deliver UL RLC SDU size o f 84 bytes = 672bit + 18 bits MAC headers = 690 bits

NOTE 3: Calculation of TEBS value:

Using the E-TFC TB size determined in Note 2 above, select the TEBS index according to 25.321 Table 9.2.5.3.2-1.

Expected sequence

Step	Direction		Message	Comments

Note 1	In addition to activate integrity protection Step 6 and Step 7 are inserted in order to stop T3317 timer in the UE, which starts after transmitting SERVICE REQUEST message.			

7.1.6a.3.2.5 Test requirements

1. In step 20, the SS verifies that the received E-TFC has the correct size
2. In step 20, the SS shall receive 2 RLC SDUs with the same content as sent in downlink.

7.1.6a.4 MAC-es/e - E-DCH retransmissions

7.1.6a.4.1 MAC-es/e process handling

7.1.6a.4.1.1 Definition and applicability

All UEs which support E-DCH.

7.1.6a.4.1.2 Conformance requirement

Extract from 25.331:

1> for TDD:

2> if the IE "Non-scheduled transmission grant info" is included:

3> MAC-d PDU's for logical channels belonging to this MAC-d flow shall only be included in a MAC-e or MAC-i PDU transmitted by HARQ processes designated as non scheduled (Ids 4 – 7) in the TTIs indicated (for 3.84 Mcps TDD and 7.68 Mcps TDD, as determined from the IEs "Activation Time", "Resource Duration" and "Resource Periodicity"; for 1.28 Mcps TDD, as determined from the IEs "Activation Time", "Subframe number", "Resource Duration" and "Resource Periodicity", and the calculation of assigned Non-scheduled transmission grant is specified in subclause 8.6.6.16a).

[…]

When the variable E_DCH_TRANSMISSION is set to TRUE the UE shall:

[…]

1> for TDD:

2> configure the E-RUCCH with the stored E-RUCCH configuration;

2> configure the MAC with the stored E-PUCH configuration.

Extract From 25.321 clause 11.9.1.4:

RRC can allocate non-scheduled transmission grants to individual MAC-d flows in order to reduce the transmission delays.

The UE shall determine whether to take scheduled or non-scheduled grants into account in the upcoming transmission. If neither are supposed to be taken into account (i.e. the TTI is not available for non-scheduled transmission and no Grant for scheduled transmission has been received) then no grant shall be assumed to exist. If a grant exists then the transmission format and data allocation shall follow the requirements below.

7.1.6a.4.1.3 Test purpose

To verify that the UE performs transmissions and retransmissions in the correct MAC-es process.

To verify that the UE uses only the allowed HARQ processes for scheduled and non-scheduled transmissions.

7.1.6a.4.1.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 6.11.4h using condition A15 as specified in clause 9.1 of TS 34.108. The logical channel, transport channel and queue identities are set to:

Logical Channel ID	MAC-d flow (UL)	Priority	Comment
7 (LCH1)	2	1	RB25
8 (LCH2)	3	2	RB17
Note: The RAB combination also includes SRBs on E-DCH on MAC-d flow 1 which is not used in the test case			

The following parameters are specific for this test case:

Parameter	Value
Periodicity for scheduling info	No periodic scheduling info
HARQ RV Configuration	rv0

The UE is placed into UE test loop mode 1 with the UL SDU size set to 39 octets.

Test procedure

In this test procedure the UE is configured with two logical channels, with Id 7 (LCH 1) and 8 (LCH2). LCH 1 is mapped to MAC-d flow 2 and LCH 2 is mapped to MAC-d flow3. The MAC-d flow 2 has been configured with non-scheduled transmissions allowed in HARQ process 4, with a rate exceeding 1 SDU/TTI and the value of the "Max MAC-e PDU contents size" is 500 bits. MAC-d flow 3 has been configured with a scheduled transmission allowed in HARQ process 2.

a) The SS has not issued any scheduling grant for E-DCH to the UE

b) The SS transmits 1 SDU of size 40 bytes (plus 1 byte RLC length indicator) on LCH 1

c) The SS waits until data is received and checks that the data is received in HARQ process 4

d) The SS sends a HARQ NACK

e) The SS waits until the retransmission is received and checks that the data is received in HARQ process 4

f) The SS transmits 8 SDU's of size 40 bytes (plus 1 byte RLC length indicator) on LCH 2

g) The SS waits until an SI is received.

h) The SS issues absolute grant corresponding to 1 RLC PDU of size 41 octets per TTI.

i) The SS waits until data is received and checks that the data is received in HARQ process 2

j) The SS transmits 8 SDU's of size 40 bytes (plus 1 byte RLC length indicator) on LCH 1

k) The SS waits until data is received and checks that the data is received in HARQ process 4

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		1 RLC PDU on LCH 1	
2	→		MAC-es PDU containing 1 RLC PDU	
3	←		HARQ NACK	
4	→		MAC-es PDU containing 1 RLC PDU	
5	←		8 RLC SDU's on LCH 2	
6	→		SI indicating data on LCH 2	
7	←		Primary Absolute grant allowing the UE to transmit 1 RLC PDU per TTI	Signalling value 4
8	→		MAC-es PDU containing 1 RLC PDU	PDU shall be received in HARQ process 2. This step is repeated until all 8 RLC SDU's are received on LCH2.
9	←		8 RLC SDU's on LCH 1	
10	→		MAC-es PDU containing 1 RLC PDU	PDU shall be received in HARQ process 4. This step is repeated until all 8 RLC SDU's are received on LCH1.

7.1.6a.4.1.5 Test requirements

1. In step 2 the SS shall receive a MAC-es PDU in HARQ process 4
2. In step 4 the SS shall receive a MAC-es PDU in HARQ process 4
3. In step 8 the SS shall receive all MAC-es PDUs in HARQ process 2
4. In step 10 the SS shall receive all MAC-es PDUs in HARQ process 4

7.1.6a.4.2 MAC-es/e maximum number of retransmissions

7.1.6a.4.2.1 Definition and applicability

All UEs which support E-DCH.

7.1.6a.4.2.2 Conformance requirement

Extract From 25.321 clause 11.9.1.4:

[..]

For each MAC-d flow, RRC configures MAC-e with a HARQ profile and multiplexing list. Additionally, RRC configures MAC with a power offset in case the Scheduling Information needs to be transmitted without any higher-layer data. The HARQ profile includes the power offset and maximum number of HARQ transmissions to use for this MAC-d flow. For 1.28 Mcps TDD, the HARQ profile also includes a retransmission timer attribute. The multiplexing list identifies for each MAC-d flow(s), the other MAC-d flows for which data can be multiplexed in a transmission that uses the power offset included in its HARQ profile.

[..]

The E-TFC selection function shall provide this MAC-e PDU and transmission HARQ profile to the HARQ entity. The selected E-TFC is also provided (Note: for 1.28Mcps TDD, the signalled transport block size index, i.e. E-TFCI, is the index of the selected E-TFC in the candidate set.). The maximum number of HARQ transmissions and the power offset in this profile shall be set respectively to the maximum of both the Max Number of HARQ Transmissions and of the power offset of the HARQ profiles from all the MAC-d flows from which data is multiplexed into the transmission. For 1.28 Mcps TDD, the retransmission timer shall be set to the maximum of the retransmission timer value of the HARQ profiles that are permitted to be multiplexed into the transmission. Each HARQ process which is associated with a buffer holding a MAC-e PDU for potential retransmission shall maintain the HARQ profile and the number of re-transmissions that have occurred. For 1.28 Mcps TDD, the HARQ process shall also maintain the value of RTX_TIMER.

Reference(s)

TS 25.321 clause 11.9.1.4

7.1.6a.4.2.3 Test purpose

To verify that the UE, when 2 MAC d flows are multiplexed, follows the maximum number of retransmissions according to the HARQ profiles (different values configured for maximum number of retransmissions for each HARQ profile).

7.1.6a.4.2.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 6.11.4h using condition A15 as specified in clause 9.1 of TS 34.108. The logical channel, transport channel and queue identities are set to:

Logical Channel ID	MAC-d flow (UL)	Priority	Max. retransmissions	Comment
7 (LCH1)	2	1	2	RB25
8 (LCH2)	3	2	4	RB17
NOTE: The RAB combination also includes SRBs on E-DCH which are not used in the testcase				

The following parameters are specific for this test case:

Parameter	Value
T-RUCCH	200 ms (see 25.331 10.3.6.103
E-DCH MAC-d flow multiplexing list	11111111 (See 25.331 10.3.5.1b) Note 1
HARQ RV Configuration	rv0
Note 1: This configuration means that all MAC-d flows can be multiplexed in the same TTI	

The UE is placed into UE test loop mode 1 with the UL SDU size set to 39 octets for RB25 and RB17.

Test procedure

The UE is configured with two logical channels, LCH1 (with priority 1) and LCH2 (with priority 2). LCH1 is mapped to MAC-d flow 2 and LCH2 is mapped to MAC-d flow 3. The UE is not given any grant to transmit on E-DCH.

a) The SS has not issued any scheduling grant for E-DCH to the UE

b) The SS transmits one SDU of size 40 bytes (plus 1 byte RLC length indicator) on LCH1

c) The SS waits for an SI to be received that indicates that data is available

d) The SS issues an absolute grant that allows the UE to send with a rate sufficient to accommodate one RLC PDU per TTI

e) For each received transmission, the SS sends a negative HARQ acknowledgement and verifies that exactly 2 retransmissions are made by the UE.

f) The SS stops issuing absolute grants

g) The SS transmits one SDU of size 40 bytes (plus 1 byte RLC length indicator) on LCH2

h) The SS transmits one SDU of size 40 bytes (plus 1 byte RLC length indicator) on LCH1

i) The SS waits for an SI to be received that indicates that data is available on both LCHs.

j) The SS issues an absolute grant that allows the UE to send with a rate sufficient to accommodate two RLC PDUs per TTI (signalling value 5)

k) For each received transmission, the SS sends a negative HARQ acknowledgement and verifies that exactly 4 retransmissions are made by the UE (maximum from the HARQ profiles for LCH1 and LCH2).

NOTE: The UE may send an SI after step g but this SI would only indicate data on LCH2. This SI will be ignored.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		

1	←	1 RLC PDUs on LCH 1	
2	→	SI showing that data is available for LCH 1	
3	←	Absolute grant allowing the UE to transmit 1 RLC PDU per TTI	Signalling value 4
4	→	MAC es PDU containing 1 RLC PDU from LCH 1	
5	←	HARQ NACK	
6	SS		SS sends a HARQ NACK for each received retransmission. After the second retransmission the SS waits 1 s to verify that no further retransmissions occur.
7	←	1 RLC PDUs on LCH 2	
8	←	1 RLC PDUs on LCH 1	
9	→	Potential SI indicating data on LCH 2	This SI is ignored by the SS
10	→	SI showing that data is available for LCH 1 and LCH 2	
11	←	Absolute grant allowing the UE to transmit 2 RLC PDUs per TTI	Signalling value 5
12	→	MAC es PDU containing 1 RLC PDU from LCH 1 and 1 RLC PDU from LCH 2	
13	←	HARQ NACK	
14	SS		SS sends a HARQ NACK for each received retransmission. After the fourth retransmission the SS waits 1 s to verify that no further retransmissions occur.

Specific Message Contents

None

7.1.6a.4.2.5 Test requirements

1. In step 6, exactly 2 retransmissions shall be performed by the UE.
2. In step 15, exactly 4 retransmissions shall be performed by the UE.

7.1.7 E-DCH MAC-i/is

7.1.7.1 MAC-i/is multiplexing (multiple PDUs from different LC in one TTI)

7.1.7.1.1 Definition and applicability

Applicable for all UEs supporting MAC-i/is.

7.1.7.1.2 Conformance Requirement

From 25.321 clause 9.1.5:

When MAC-i/is is configured, there are two MAC sublayers, MAC-i and MAC-is. MAC-is sits on top of MAC-i and receives PDUs directly from MAC-d. When MAC-i/is is configured, a MAC PDU for E-DCH consists of one MAC-i header and one or more MAC-is PDUs. Each MAC-is PDU consists of one or more MAC-is SDUs belonging to the same logical channel. Each MAC-is SDU equals a complete or a segment of a MAC-d PDU. The MAC-is SDUs can have different sizes. The LCH-ID and L fields are repeated per MAC-is SDU. The TSN and SS fields are repeated per MAC-is PDU. Multiple MAC-is PDUs from multiple logical channels, but only one MAC-i PDU can be transmitted in a TTI. In case sufficient space is left in the E-DCH transport block or if Scheduling Information needs to be transmitted, an SI will be included at the end of the MAC-i PDU (see subclause 9.2.4.2).

[…]

From 25.331 clause 8.6.5.18:

1> if the IE "E-DCH MAC-d flow multiplexing list" is included:

✍ 2> only multiplex MAC-d PDU's from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU's from E-DCH MAC-d flows with which multiplexing in the same MAC-e or MAC-i PDU is allowed in accordance to the IE "E-DCH MAC-d flow multiplexing list".

TS 25.321 clause 9.1.5, TS 25.331 clause 8.6.5.18

7.1.7.1.3 Test purpose

1. To verify that the UE multiplexes data from multiple PDUs from different logical channels in the same TTI

7.1.7.1.4 Method of test

Initial conditions

System Simulator:

1 cells, default parameters, Ciphering Off

User Equipment:

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed with all the parameters as specified in the procedure, with the exception that the default Radio Bearer is replaced with the Radio Bearers according to clause 6.11.4k.4 (FDD) / 6.11.5.4.9.4(1.28Mcps TDD) (Flexible RLC + MAC-i/is + MAC-ehs) using condition A26 (FDD) / A22(1.28Mcps TDD). The MAC-d flows are configured for scheduled transmissions. The following parameters are specific for this test case with the logical channel, transport channel and queue identities set to:

Logical Channel ID	MAC-d flow (UL)	Priority	Comment
7 (LCH1)	2	6	RB26
8 (LCH2)	3	7	RB27
9 (LCH3)	4	8	RB21
Note: The RAB combination also includes SRBs on E-DCH on MAC-d flow 1 which is not used in the test case			

The following parameters are specific for this test case

Parameter	Value
Periodicity for Scheduling Info – no grant	500 ms (see 25.331 10.3.6.99) (FDD)
E-DCH MAC-d flow multiplexing list	Flow 2 = 00101000 Flow 3 = 00010000 Flow 4 = 00101000 See 25.331 10.3.5.1b

The UE is placed into UE test loop mode 1 with the UL SDU size for LCH 1 and LCH2 set to 40 octets.

Test procedure

The UE is configured with three logical channels, LCH1 (with priority 6), LCH2 (with priority 7) and LCH3 (with priority 8). LCH1 is mapped to MAC-d flow 2, LCH2 is mapped to MAC-d flow 3 and LCH3 is mapped to MAC-d flow 4.

a) The SS has not issued any scheduling grants for E-DCH to the UE

b) The SS transmits one SDU of size 40 bytes (plus 1 byte RLC length indicator) on LCH3

c) The SS transmits one SDU of size 40 bytes (plus 1 byte RLC length indicator) on LCH2

d) The SS transmits one SDU of size 40 bytes (plus 1 byte RLC length indicator) on LCH1

e) The SS waits for an SI to be received that indicates that data is available on all three logical channels (can be identified from the content of the SI)

e) The SS issues an absolute grant that allows the UE to send with a high rate (signalling value 10 (FDD only), allowing a rate well above 3 SDUs/TTI)

f) The SS waits until data is received and verifies that data from LCH1 and LCH3 are received in the same TTI and data from LCH2 is received in the next TTI

NOTE: The UE may send an SI after step 1 or step 2 but these SI's would only indicate data on LCH3, LCH2 or LCH2 and LCH3. These will be ignored.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		1 RLC PDU on LCH 3	
2	←		1 RLC PDU on LCH 2	
3	←		1 RLC PDU on LCH 1	
4	→		Potential SI indicating data on LCH3, LCH2 or LCH2 and LCH3	These SI are ignored by the SS
5	→		SI indicating data on LCH 1 LCH 2 and LCH3	This can be verified from the indicated fraction of data on LCH1, LCH2 and LCH3
6	←		Absolute grant allowing UE to transmit on E-DCH	This grant must be sufficiently high to allow a rate corresponding to at least 3 RLC PDUs/TTI, signalling value 10 for FDD
7	→		MAC-i PDU containing 1 RLC PDU on LCH 1 and 1 RLC PDU on LCH 3	Data on LCH1 and LCH2 should be received in the same TTI
8	→		MAC-i PDU containing 1 RLC PDU on LCH 2	Data on LCH2 in the next TTI

Specific Message Contents

None.

7.1.7.1.5 Test requirements

1. After step 3 the SS shall receive an SI indicating that data is available on LCH 1, LCH 2 and LCH3 but no RLC PDUs shall be received

2. In step 7, the SS shall receive 1 RLC PDU on LCH 1 and 1 RLC PDU on LCH 3 in the same TTI

3. In step 8, the SS shall receive 1 RLC PDU on LCH2 in the next TTI

7.1.7.2 MAC-i/is segmentation / Correct Usage of Segmentation Status Field

7.1.7.2.1 Definition and applicability

Applicable for all UEs supporting MAC-i/is.

7.1.7.2.2 Conformance requirement

The transmitting UM RLC entity segments the RLC SDU into UMD PDUs of appropriate size, if the RLC SDU is larger than the length of available space in the UMD PDU. The size of the UMD PDUs after segmentation and/or concatenation shall be smaller than or equal to the largest UL UMD PDU size. If MAC-i/is has been configured and the RLC PDU size is set to "flexible size", the size of the UMD PDUs after segmentation and/or concatenation shall be larger than or equal to the Minimum UL RLC PDU size. If data to be transmitted is not enough to create a UMD PDU of the minimum size, it is allowed to create a UMD PDU including all data to be transmitted, even if the resulting size is smaller than the Minimum UL RLC PDU size. The UMD PDU may contain segmented and/or concatenated RLC SDUs. UMD PDU may also contain padding to ensure that it is of a valid length. Length Indicators are used to define boundaries between RLC SDUs within UMD PDUs unless the "Extension bit" already indicates that a UMD PDU contains exactly one complete SDU. Length Indicators are also used to define whether Padding is included in the UMD PDU.

…

- in uplink, the last segment of an RLC SDU shall be concatenated with the first segment of the next RLC SDU in order to fill the data field at least up to the Minimum UL RLC PDU size. It is allowed to concatenate up to the largest UL AMD PDU size for Acknowledged mode data and largest UMD PDU size for Unacknowledged mode data. The "Length Indicator" field is used to point the borders between RLC SDUs (see subclause 9.2.2.8). If data to be transmitted is not enough to create a UMD PDU of the minimum size, it is allowed to create a UMD PDU including all data to be transmitted, even if the resulting size is smaller than the Minimum UL RLC PDU size.

- in uplink, if MAC-i/is has been configured:

  - if the UE pre-generates RLC PDUs for transmission in a later TTI:

    - provided that the UE has sufficient amount of data available for transmission, the size of the data field of the RLC PDU shall be chosen so that each RLC PDU to be multiplexed to the MAC-i/is PDU matches the maximum amount of data allowed to be transmitted by the applicable current grant (scheduled or non-scheduled) for the current TTI.

    - RLC PDUs may only be pre-generated if the amount of data in outstanding pre-generated RLC PDUs for this logical channel is less than or equal to four times the maximum amount of data allowed to be transmitted by the applicable current grant (scheduled or non-scheduled) for the current TTI.

  - if the UE generates RLC PDUs for transmission in the current TTI:

    - the size of the data field of the RLC PDU shall be chosen so that the RLC PDU size matches the data requested for this logical channel by the current E-TFC selection.

…

There are two different MAC PDU formats for E-DCH. Depending on configuration by upper layers the format is either MAC-e/es or MAC-i/is. The MAC PDU format is determined by upper layer signalling [7].

…

- Segmentation Status (SS):
  The Segmentation Status (SS) field provides indication of the segmentation status of the MAC SDU or segment of MAC SDU belonging to the logical channel identified by the LCH-ID field. The length of the SS field is 2 bits.

Table 9.2.4.3-1: Structure of the SS field

SI Field	Segmentation indication
00	The first MAC-is SDU of the MAC-is PDU is a complete MAC-d PDU. The last MAC-is SDU of the MAC-is PDU is a complete MAC-d PDU.
01	If there are more than one MAC-is SDUs in the MAC-is PDU, the last MAC-is SDU of the MAC-is PDU is a complete MAC-d PDU. The first MAC-is SDU of the MAC-is PDU is the last segment of a MAC-d PDU.
10	If there are more than one MAC-is SDUs in the MAC-is PDU, the first MAC-is SDU of the MAC-is PDU is a complete MAC-d PDU. The last MAC-is SDU of the MAC-is PDU is the first segment of a MAC-d PDU.
11	If there are more than one MAC-is SDUs in the MAC-is PDU, the first MAC-is SDU of the MAC-is PDU is the last segment of a MAC-d PDU and the last MAC-is SDU of MAC-is PDU is the first segment of a MAC-d PDU. If there is only one MAC-is SDU in the MAC-is PDU, the MAC-is SDU is a middle segment of a MAC-d PDU.

[…]

There is one segmentation entity per logical channel in the UE.

When the MAC-d PDU size, the untransmitted part of the MAC-d PDU, the MAC-c PDU size (FDD only) or the untransmitted part of the MAC-c PDU (FDD only) exceeds available space in the transport block according to the E-TFC selection, the segmentation entity shall:

- segment the MAC-d PDU, the untransmitted part of the MAC-d PDU, the MAC-c PDU or the untransmitted part of the MAC-c PDU to fit the available space in the transport block according to the E-TFC selection and store the untransmitted part of the MAC-d PDU or MAC-c PDU;
- set the segmentation status (SS) field of the transmission to indicate the segmentation status as described in subclause 9.2.4.3.

Reference(s)

TS 25.322 clause 4.2.1.2.1, 9.2.2.9

TS 25.321 clauses 9.1.5, 9.2.4.3, 11.8.1.2a

7.1.7.2.3 Test purpose

To test UE is able to segment data at MAC layer and use all 4 SS values in MAC-is header.

7.1.7.2.4 Method of test

Initial conditions

Downlink length indicators of size 15 shall be used

Uplink length indicator of size 15 shall be used

Test procedure

The following parameters are specific for this test case:

Parameter	Value
Minimum UL RLC PDU	1600 bits
Largest UL RLC PDU size	1600 bits
Max_RLC_PDU_size	200 octets
Periodicity for scheduling info	No periodic scheduling info
E-TFCI table	Table 0 for 10 ms TTI (FDD), 5ms TTI E-DCH Transport Block Size Table 0(1.28Mcps TDD)

In this test procedure the UE is configured with one logical channel with Id 7 (LCH1).

a) The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed with all the parameters as specified in the procedure, with the exception that the default Radio Bearer is replaced with the RB according to clause 6.11.4k.2 (FDD) /6.11.5.4.9.2 (1.28Mcps TDD) (UM Flexible RLC + MAC-i/is + MAC-ehs) using condition A27 (FDD) /A23 (1.28Mcps TDD) with RB mapping to HS-DSCH and E-DCH. The MAC-d flow of the RB is configured for scheduled transmissions.

b) The radio bearer is placed into UE test loop mode 1 and configured to return UL RLC SDUs of the same size as received in DL.

c) The SS transmits two RLC SDUs (SDU1, SDU2) of size 40 and 60 octets respectively. The SDUs are concatenated into a single RLC PDU. Length indicators are used to indicate the end of each SDU.

d) The SS waits for an SI to be received that indicates that data is available (can be identified from the content of the SI).

e) The SS issues a scheduled grant that allows the UE to transmit SDU1 and the first segment of the SDU2.

f) UE loops back SDU1 and a segment of SDU2 in first TTI and the remainder of SDU2 in the next TTI.

TSN = 0, SS = 10, for MAC-is header in first TTI, TSN = 1, SS = 01 for MAC-is header in the next TTI.

g) The SS removes the scheduling grant for the UE.

h) The SS transmits three RLC SDUs (SDU3, SDU4, SDU5) of size 20, 30, 10 octets, respectively. The SDUs are concatenated into a single RLC PDU. Length indicators are used to indicate the end of each SDU.

i) The SS waits for an SI to be received that indicates that data is available.

j) The SS issues a scheduled grant that allows the UE to transmit the 3 SDUs.

k) UE loops back SDU3, SDU4, SDU5 in the same TTI.

TSN = 2, SS = 00, for MAC-is header.

l) The SS removes the scheduling grant for the UE.

m) SS transmits one RLC (SDU6) of size 198 octets with no Length Indicator and Alternative E-bit interpretation (bit value 0) in the UM header.

n) The SS waits for an SI to be received that indicates that data is available.

o) The SS issues an absolute grant (grant value 5) which restricts the UE to transmit less than 300 bits per TTI. The current grant is less than the minimum UL RLC PDU size.

p) UE loops back the contents of SDU6 in consecutive MAC-i PDUs.

SS = 10, and MAC-is PDU4 containing first segment of SDU6.

SS = 11, and MAC-is PDUs containing the middle segments of SDU6.

SS = 01, and MAC-is PDU containing the last segment of SDU6.

All MAC-is PDUs should have sequential sequence numbers starting from TSN = 3 for MAC-is PDU4

Expected sequence

4	→		SI indicating data	
5	←		Absolute grant allowing the UE to transmit SDU1 and a segment of SDU2	Grant value 4 for FDD
6	→		MAC-is PDU1, TSN = 0	TSN = 0, SS = 10 MAC-is PDU consisting of SDU1 and the first segment of SDU2
7	→		MAC-is PDU2, TSN = 1	TSN = 1, SS = 01 MAC-is PDU consisting of last segment of SDU2
8	←		Removal of absolute grant	Signalling value 1 (FDD only)
9	←		DOWNLINK RLC SDUs (SDU3, SDU4, SDU5)	SDU3 size = 20, SDU4 size = 30, SDU5 size = 10
10	→		SI indicating data	
11	←		Absolute grant of sufficient value to allow the UE to transmit SDU3, SDU4 and SDU5	Grant value 10 for FDD
12	→		MAC-is PDU3, TSN = 2	TSN=2, SS=00, MAC-is PDU consisting of SDU3, SDU4, SDU5.
	←		Removal of absolute grant	Signalling value 1 (FDD only)
13	←		DOWNLINK RLC SDU6	DL RLC SDU size = 198 Octets
14	→		SI indicating data	
15	←		Absolute grant allowing the UE to transmit segments of SDU6.	Grant value 5 for FDD The current grant is less than the minimum UL PDU size
16	→		UPLINK MACis PDUs	TSN = 3, SS = 10 for MAC-is PDU 4 contains first segment of SDU6. The last MAC-is PDU contains the final segment of SDU6, SS = 01. The other MAC-is PDUs contain the middle segments of SDU6, SS = 11.
17			Open UE test loop	
18			RB release	

7.1.7.2.5 Test requirements

a) In step 6, UE loop backs RLC SDU1 and first segment of RLC SDU2 in MAC-i PDU.

b) In step 7, UE loop backs the final segment of RLC SDU2 in MAC-i PDU.

c) In step 12, UE loops back RLC SDU3, SDU4, SDU5 in a single MAC-i PDU.

d) In step 16, UE loops back RLC SDU6 in several TTIs. In the first MAC-i PDU has SS = 10, containing the first segment of SDU6, the succeeding MAC-i PDUs contain the middle segments of SDU6, SS = 11 and the final MAC-i PDU contains the final segment of SDU6, SS = 01.

7.1.7.3 Correct settings of MAC-i/is header fields

7.1.7.3.1 Definition and applicability

Applicable for all UEs supporting MAC-i/is

7.1.7.3.2 Conformance requirement

Extract from 25.321:

[…]

When MAC-i/is is configured, there are two MAC sublayers, MAC-i and MAC-is. MAC-is sits on top of MAC-i and receives PDUs directly from MAC-d and MAC-c (FDD and 1.28 Mcps TDD only). When MAC-i/is is configured, a MAC PDU for E-DCH consists of one MAC-i header and one or more MAC-is PDUs. Each MAC-is PDU consists of one or more MAC-is SDUs belonging to the same logical channel. Each MAC-is SDU equals a complete or a segment of a MAC-d PDU or a MAC-c PDU (FDD and 1.28 Mcps TDD only). The MAC-is SDUs can have different sizes. The LCH-ID and L fields are repeated per MAC-is SDU. The TSN and SS fields are repeated per MAC-is PDU. Multiple MAC-is PDUs from multiple logical channels, but only one MAC-i PDU can be transmitted in a TTI. In case sufficient space is left in the E-DCH transport block or if Scheduling Information needs to be transmitted, an SI will be included at the end of the MAC-i PDU (see Figure 9.1.5.4a).

[…]

- Transmission Sequence Number (TSN):
  The TSN field provides the transmission sequence number for the MAC-is PDU. This information is used for reordering purposes to support in-sequence delivery to higher layers. The length of the TSN field is 6 bits.

- Segmentation Status (SS):
  The Segmentation Status (SS) field provides indication of the segmentation status of the MAC SDU or segment of MAC SDU belonging to the logical channel identified by the LCH-ID field. The length of the SS field is 2 bits.

[…]

- Length (L):
  The L field provides the length of the MAC-is SDU in octets. The size can vary for each SDU in the MAC-is PDU, and is set for each SDU individually. The length of the Length field is 11 bits.

- Logical channel identifier (LCH-ID):
  The LCH-ID field provides identification of the logical channel at the receiver and the re-ordering buffer destination of a MAC-is SDU. In FDD, one LCH-ID value is reserved to indicate that the UE's E-RNTI is included in the MAC-i header. The length of the LCH-ID is 4 bits.

Table 9.2.4.4-1: Structure of the LCH-ID field (FDD only)

LCH-ID Field	Designation
0000	Logical channel 1
0001	Logical channel 2
…	…
1101	Logical channel 14
1110	Identification of CCCH (SRB0)
1111	Identification of E-RNTI being included.

Table 9.2.4.4-2: Structure of the LCH-ID field (1.28 Mcps TDD only)

LCH-ID Field	Designation
0000	Logical channel 1
0001	Logical channel 2
…	…
1101	Logical channel 14
1110	Identification of CCCH (SRB0)
1111	Reserved

- Flag (F):
  The F field is a flag indicating if more fields are present in the MAC-i header or not. If the F field is set to "0" the F field is followed by an additional set of LCH-ID, L and F fields. If the F field is set to "1" the F field is followed by a MAC-is PDU. Each header extension corresponds to one MAC-is SDU.

Reference(s)

TS 25.321 clauses 9.1.5, 9.2.4.3, 9.2.4.4

7.1.7.3.3 Test purpose

The purpose of this test case is to verify that the UE sets the MAC-i/is header fields in the correct way for multiple logical channels on multiple flows mapped onto a single MAC-i PDU.

7.1.7.3.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 6.11.4k.4 (FDD) / 6.11.5.4.9.4(1.28Mcps TDD) using condition A26 (FDD) /A22 (1.28Mcps TDD) in UM as specified in clause 9.1 of TS 34.108. The logical channel, transport channel and queue identities are set to:

Logical Channel ID	MAC-d flow (UL)	Priority	Comment
7 (LCH1)	2	6	RB26
8 (LCH2)	3	7	RB27
9 (LCH3)	4	8	RB21
Note: The RAB combination also includes SRBs on E-DCH on MAC-d flow 1 which is not used in the testcase			

The following parameters are specific for this test case:

Parameter	Value
Periodicity for Scheduling Info – no grant	500 ms (see 25.331 10.3.6.99) (FDD)
E-DCH MAC-d flow multiplexing list	11111111 (See 25.331 10.3.5.1b) Note 1
Largest UL RLC PDU size	20 bytes (Note 2)
Note 1: This configuration means that all MAC-d flows can be multiplexed in the same TTI Note 2: The actual value is (IE value * 8) + 16	

The UE is placed into UE test loop mode 1 and the loopback is configured to return UL RLC SDUs of the same size as received the received DL RLC SDU for each radio bearer.

Test procedure

The UE is configured with three logical channels, LCH1 (with priority 6), LCH2 (with priority 7) and LCH3 (with priority 8). LCH1 is mapped to MAC-d flow 2, LCH2 is mapped to MAC-d flow 3 and LCH3 is mapped to MAC-d flow 4.

a) The SS has not issued any scheduling grant for E-DCH to the UE

b) The SS transmits 4 SDUs of sizes 20, 60, 30, 40 bytes on LCH2 in the same TTI

c) The SS waits for an SI indicating data on LCH2

d) The SS issues an absolute grant that allows the UE to send with a high rate (signalling value 10, allowing rates well above 4 SDUs/TTI)

e) The SS waits until data is received and checks the values of the header parameters

f) The SS removes the scheduling grant for E-DCH for the UE

g) The SS transmits three SDUs of size 40, 30, 40 bytes respectively on LCH3 in the same TTI

h) The SS transmits two SDU of size 20, 15 bytes respectively on LCH2 in the same TTI

i) The SS transmits one SDU of size 50 bytes on LCH1

j) The SS waits for SI indicating data on the 3 logical channels

k) The SS issues an absolute grant that allows the UE to send with a high rate (signalling value 10, allowing rates well above 6 SDUs/TTI)

l) The SS waits until data is received and checks the values of the header parameters

m) The SS removes the scheduling grant for E-DCH for the UE

n) The SS transmits two SDUs of size 40 bytes, on LCH2 in the same TTI

o) The SS waits for SI indicating data on LCH2

p) The SS issues an absolute grant that allows the UE to send with a high rate (signalling value 10, allowing rates well above 2 SDUs/TTI)

q) The SS waits until data is received and checks the values of the header parameters

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		4 RLC SDUs on LCH 2 with sizes 20, 60, 30, 40 bytes respectively in the same TTI	
2	→		SI indicating data on LCH 2	
3	←		Absolute grant allowing UE to transmit on E-DCH	This grant must be sufficiently high to allow a rate corresponding to at least 4 RLC PDUs/TTI, signalling value 10 for FDD
4	→		1 MAC-is PDU containing 8 RLC PDUs on LCH 2	SS checks header fields
5	←		Removal of scheduling grant for UE	Grant value 1 (FDD only)
6	←		3 RLC SDUs on LCH 3, size 40, 30, 40 bytes respectively	Data sent in the same TTI
7	←		2 RLC SDUs on LCH 2, size 20 and 15 bytes respectively	Data sent in the same TTI
8	←		1 RLC SDUs on LCH 1, size 50 byes	
9	→		Potential SI indicating data on LCH 3, LCH2, LCH1 or any combination	SS waits for SI indicating data on all logical channels
10	←		Absolute grant allowing UE to transmit on E-DCH	This grant must be sufficiently high to allow a rate corresponding to at least 6 RLC PDUs/TTI, signalling value 10
11	→		3 MAC-is PDUs containing 3 RLC PDUs on LCH 1, 2 RLC PDUs on LCH 2 and 6 RLC PDUs on LCH3 respectively	SS checks header fields
12	←		Removal of scheduling grant for UE	Grant value 1 (FDD only)
13	←		2 RLC SDUs on LCH 2, size 40 bytes each	Data sent in the same TTI
14	→		SI indicating data on LCH 2	
15	←		Absolute grant allowing UE to transmit on E-DCH	This grant must be sufficiently high to allow a rate corresponding to at least 2 RLC PDUs/TTI, signalling value 10 for FDD
16	→		1 MAC-is PDU containing 4 RLC PDUs on LCH 2	SS checks header fields

Specific Message Contents

None

7.1.7.3.5 Test requirements

1. After step 4, the SS shall receive 1 MAC-is PDU shall be received where:

   - For MAC-is header content,, TSN = 0, SS = 00

   - The content of MAC-i headers received shall be set to :

LCH-ID = 0111’B, L = 22’D or 21’D, F = 0 header for MAC-is SDU1

LCH-ID = 0111'B, L = 22’D, F = 0 header for MAC-is SDU2

LCH-ID = 0111'B, L = 22’D, F = 0 header for MAC-is SDU3

LCH-ID = 0111'B, L = 22’D, F = 0 header for MAC-is SDU4

LCH-ID = 0111'B, L = 22’D, F = 0 header for MAC-is SDU5

LCH-ID = 0111'B, L = 22’D, F = 0 header for MAC-is SDU6

LCH-ID = 0111'B, L = 22’D, F = 0 header for MAC-is SDU7

LCH-ID = 0111'B, L = 12’D, F = 1 header for MAC-is SDU8

2. After step 11, the SS shall receive 3 MAC-is PDUs where:

- For MAC-is PDU1:

TSN = 0, SS = 00, for The Content of MAC-I Header received shall be set to

LCH-ID = 0110’B, L = 22’D, F = 0

LCH-ID = 0110’B, L = 22’D, F = 0

LCH-ID = 0110’B, L = 12’D, F = 0

- FOR MAC-is PDU2

TSN = 1, SS = 00, the content of MAC-i headers received shall be set to :

LCH-ID = 0111’B, L = 22’D or 21’D, F = 0

LCH-ID = 0111’B, L = 17’D or 16’D, F = 0

- FOR MAC-is PDU3

TSN = 0, SS = 00, the content of MAC-i headers received shall be set to :

LCH-ID = 1000’B, L = 22’D, F = 0

LCH-ID = 1000’B, L = 22’D, F = 0

LCH-ID = 1000’B, L = 22’D, F = 0

LCH-ID = 1000’B, L = 22’D, F = 0

LCH-ID = 1000’B, L = 22’D, F = 0

LCH-ID = 1000’B, L = 12’D, F = 1

3. After step 16, the SS shall receive 1 MAC-is PDU where:

- The TSN is set to 2, SS = 00, the content of MAC-i headers received shall be set to :

LCH-ID = 0111’B , L = 22’D, F = 0

LCH-ID = 0111’B , L = 22’D, F = 0

LCH-ID = 0111’B , L = 22’D, F = 0

LCH-ID = 0111’B , L = 22’D, F = 1

7.1.7.4 MAC-is/i transport block size selection/ UL QPSK

7.1.7.4.1 Definition and applicability

Applicable for all UEs supporting MAC-i/is.

7.1.7.4.2 Conformance requirement

Extract from TS 25.321 clause 11.8.1.4

The transmission format and data allocation shall follow the requirements below:

- Only E-TFCs from the configured E-TFCS shall be considered for the transmission;

[…]

- The UE shall not use the following E-TFCIs;
  - If the UE is configured with E-TFCI table 0 (see [7]) and 2ms TTI, it shall not use E-TFCI 120 in the mapping defined in Annex B.1
  - If the UE is configured with E-TFCI table 1 (see [7]) and 2ms TTI, it shall not use E-TFCI 115 in the mapping defined in Annex B.2
  - If the UE is configured with E-TFCI table 2 (see [7]) and 2ms TTI, it shall not use E-TFCI 121 in the mapping defined in Annex B.2a
  - If the UE is configured with E-TFCI table 3 (see [7]) and 2ms TTI, it shall not use E-TFCIs 101 and 102 in the mapping defined in Annex B.2b

[…]

[…]

Extract from TS 25.321 clause 9.2.5.4

[…]

RRC can configure the MAC-e or MAC-i to use one of two Transport block size sets for the 10ms TTI duration and one of four Transport block size sets for the 2ms TTI duration. The normative description of the mapping between the E-TFCI and the corresponding transport block size is provided in Annex B:

- If the UE is configured with E-TFCI table 0 (see [7]) and 2ms TTI, it shall use the mapping defined in Annex B.1
- If the UE is configured with E-TFCI table 1 (see [7]) and 2ms TTI, it shall use the mapping defined in Annex B.2
- If the UE is configured with E-TFCI table 2 (see [7]) and 2ms TTI, it shall use the mapping defined in Annex B.2a
- If the UE is configured with E-TFCI table 3 (see [7]) and 2ms TTI, it shall use the mapping defined in Annex B.2b
- If the UE is configured with E-TFCI table 0 (see [7]) and 10ms TTI, it shall use the mapping defined in Annex B.3
- If the UE is configured with E-TFCI table 1 (see [7]) and 10ms TTI, it shall use the mapping defined in Annex B.4

[…]

Reference(s)

TS 25.321 clause 11.8.1.4, 9.2.5.4

7.1.7.4.3 Test purpose

To verify that the UE is able to transmit all possible transport block sizes when MAC-i/is is configured and within the UE capability.

7.1.7.4.4 Method of test

NOTE: The reference to E-DCH Category refers to the UE capability as signalled in the Rel-6 IE "E-DCH physical layer category". All UEs supporting E-DCH should signal a category between 1 and 6 for this IE even if the UE physical capability category is above 6.

NOTE: The reference to HS-DSCH Categories refers to the UE capability as signalled in the Rel-5 IE "HS-DSCH physical layer category" (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

UE in idle mode

The following parameters are specific for this test case:

Common for all UE HS-DSCH categories:

Parameter	Value
MAC-d PDU size	336 bits
MAC-ehs receiver window size	16
Number of HARQ processes	1
Number of reordering queues	1

Common for all UE E-DCH categories:

Parameter	Value
Periodicity for Scheduling Info – no grant	500 ms (see 25.331 10.3.6.99)

Specific depending on E-DCH category:

Parameter	E-DCH Category	Value
RLC Transmission window size	1 to 5	512
	6	1536
E-TFCI table	1 to 6	See table 7.1.6.3.2.5

Specific depending on HS-DSCH category:

Parameter	HS-DSCH Category	Value
RLC Receiving window size	1 to 6	512
	7 and 8	1536
	9 and 10	2047
	11 and 12	1024

Definition of test variables:

$I_{E\text{-}TFCI}$	Index value used by SS to lock up the TB size used for the different test points

The mapping between the chosen E-TFC index and the corresponding E-DCH transport block size is given in the following tables:

Table 7.1.7.4.1: Test points for 2ms TTI E-DCH Transport Block Size Table 0

$I_{E\text{-}TFCI}$	TB Size (bits)	$I_{E\text{-}TFCI}$	TB Size (bits)	$I_{E\text{-}TFCI}$	TB Size (bits)	$I_{E\text{-}TFCI}$	TB Size (bits)	$I_{E\text{-}TFCI}$	TB Size (bits)

Table 7.1.7.4.5: Applicable E-TFS indexes for sub-tests 1 to 4 and UE E-DCH categories 1 to 6.

			Applicable E-TFS indexes					
Sub-test	**E-DCH TTI**	**E-DCH Transport Block Size Table**	**Category 1**	**Category 2**	**Category 3**	**Category 4**	**Category 5**	**Category 6**
1	10ms	10ms TTI Table 0, Table 7.1.7.4.3	1..101	1..119	1..119	1..127	1..127	1..127
2	10ms	10ms TTI Table 1, Table 7.1.7.4.4	1..54	1..99	1..99	1..120	1..120	1..120
3	2ms	2ms TTI Table 0, Table 7.1.7.4.1	N/A	1..88	N/A	1..108	N/A	1..127
4	2ms	2ms TTI Table 1, Table 7.1.7.4.2	N/A	1..44	N/A	1..73	N/A	1..125
NOTE 1: Applicable indexes depends on the UE capability of “Maximum number of bits of an E-DCH transport block transmitted within a 10 ms E-DCH TTI” and “Maximum number of bits of an E-DCH transport block transmitted within a 2 ms E-DCH TTI” as specified in TS 25.306 clause 5 and Table 5.1g. E-TFCI index=0 not tested as TB size for this E-TFCI value is 18 bits, which would only fit the MAC-i/is header used by the SS in the test procedure 1. NOTE 2: For E-DCH categories beyond 6, E-TFS indices for category 6 are applicable.								

Table 7.1.7.4.6: E-TFCI values causing degradation due to turbo coder irregularities

E-DCH Transport Block Size Tables	E-TFCI	Reference
2 ms TTI, Table 0	120	[6], Annex B.1
2 ms TTI, Table 1	115	[6], Annex B.2

Test procedure

The following test specs shall be executed for each applicable sub-test in Table 7.1.7.4.5:

a) The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 6.11.4k.2 (UM, Flexible RLC + MAC-i/is + MAC-ehs) using conditions A27 as specified in clause 9.1 of TS 34.108. See Note 1.

b) The SS closes the test loop using UE test loop mode 1 and configuring the UL RLC SDU size to be equal to the received DL SDU size (i.e. not setting the UL RLC SDU size parameter).

c) The SS sets $I_{E\text{-}TFCI}$ =1.

d) The SS look up the TB Size based on the $I_{E\text{-}TFCI}$ value in the table used for the sub-test according to Table 7.1.7.4.5.

e) The SS removes the scheduling grant for E-DCH for the UE.

f) If the transport block size TB_{size} is >12040 bits then SS creates 2 DL RLC SDUs of size 8*FLOOR ((TB_{size} – 104 bit)/16) (largest possible RLC SDU size considering octet alignment and MAC-i/is and RLC UM headers). If the transport block size TB_{size} is ≤ 12040 bits the SS creates 1 DL RLC SDUs of size 8*FLOOR((TB_{size} – 32 bit)/8). The SS creates a DL RLC PDU for each DL RLC SDU using Alternative E-bit interpretation ('0') in the RLC PDU header and transmits in downlink. See note 2.

g) The SS waits for an SI to be received that indicates that there is data available for transmission (can be identified from the content of the SI). The SS checks that TEBS have the correct values. See Note 3.

h) The SS issues an absolute grant that allows the UE to send at maximum bit rate (signalling value 31)

i) The SS waits until data is received and verifies that the looped back SDU data has the correct content and is sent in the same TTI.

j) The SS verifies that the received E-TFC used by the UE is correct. The SS checks that the UE has not used the transport block sizes correspondent to the E-TFCI values as listed in table 7.1.7.4.6, but instead used the transport block size correspondent to the next possible larger E-TFCI value.

k) The SS increments the $I_{E\text{-}TFCI}$ by 1. If the $I_{E\text{-}TFCI}$ value is less than maximum value for the actual sub-test and UE category according to Table 7.1.7.4.5 then continue with step d else continue with step l.

l) The SS opens the UE test loop.

m) The SS release the radio bearer.

n) The SS may optionally deactivate the radio bearer test mode.

NOTE 1: The SS configures the physical channel parameters according to the actual UE category under test.

NOTE 2: The test data for DTCHs mapped on HS-DSCH is divided into 2 RLC SDUs to keep the maximum SDU size below or equal to 1500 octets (1500 octets is the limit of QoS parameter "Max SDU size" in SM). To allow for testing of the smallest TB sizes a single RLC PDU is used when the TB size is equal or below 12032 bits to reduce the L2 header overhead. 12032 bits corresponds to maximum RLC SDU size of 1500 octets (12000 bits) plus MAC-i/is header size of 24 bits and UMD PDU header size (8 bits).

The SS is using one RLC PDU per RLC SDU. The RLC SDU size is calculated as:
RLC SDU size = 8*FLOOR((TBsize - MAC-i/is header size)/N - UMD PDU header size)/8
= 8*FLOOR((TBsize – 24 - (N-1)*16)/N – UMD PDU header size)/8 bits.

For N=1 UMD PDU header size =8, this gives RLC SDU size = 8*FLOOR(TB size – 32)/8 bits.
For N=2 UMD PDU header size = 64(taking into account possible use of length indicators), this gives RLC SDU size = 8*FLOOR(TB size – 104)/16 bits

NOTE 3: The SS calculates the TEBS value using the E-TFC TB size determined by the E-TFCI value tested according to 25.321 Table 9.2.5.3.2-1.

Expected sequence

The expected sequence is repeated for each applicable sub-test in Table 7.1.7.4.5:

Step	Direction		Message	Comments
	UE	SS		
1	<--		SYSTEM INFORMATION (BCCH)	Broadcast
2	<--		PAGING TYPE 1 (PCCH)	Paging (PS domain, P-TMSI)
3	-->		RRC CONNECTION REQUEST (CCCH)	RRC
4	<--		RRC CONNECTION SETUP (CCCH)	RRC
5	-->		RRC CONNECTION SETUP COMPLETE (DCCH)	RRC
6	-->		SERVICE REQUEST (DCCH)	GMM
7	<--		SECURITY MODE COMMAND	RRC see note 1
8	-->		SECURITY MODE COMPLETE	RRC see note 1
9	<--		ACTIVATE RB TEST MODE (DCCH)	TC
10	-->		ACTIVATE RB TEST MODE COMPLETE (DCCH)	TC
11	<--		RADIO BEARER SETUP (DCCH)	RRC. For the PS radio bearer the 'pdcp info' IE shall be omitted.
12	-->		RADIO BEARER SETUP COMPLETE (DCCH)	RRC
13	<--		CLOSE UE TEST LOOP (DCCH)	TC UE test mode 1 with no "LB Setup RB IE#k" parameter set (UE shall return an UL RLC SDU with the same size as the received RLC SDU in downlink)
14	-->		CLOSE UE TEST LOOP COMPLETE (DCCH)	TC
15	SS			The SS sets $I_{E\text{-}TFCI}$ = 1 and look up the transport block size from the relevant Transport Block Size Table for the sub-test.
16	←		Removal of absolute grant	Signalling value 1
17	<--		DOWNLINK RLC SDU(s)	The SS creates and transmit one or 2 RLC SDUs. The number of RLC SDUs and their size depends on TB size under test.
18	→		SI indicating data for transmission	This can be verified from the indicated Total E-DCH Buffer Status (TEBS)
19	<--		Absolute grant allowing the UE to transmit at maximum bit rate.	Signalling value 31
20	-->		UPLINK RLC SDU(s)	The SS checks E-TFC from the UE and checks that the content of the received UL RLC SDU(s) are correct and sent in the same TTI. The SS checks that the UE has not used the transport block sizes correspondent to the E-TFCI values as listed in table 7.1.7.4.6, but instead used the transport block size correspondent to the next possible larger E-TFCI value.
21	SS			The SS increments $I_{E\text{-}TFCI}$ by 1 and look up transport block size from the relevant Transport Block Size Table for the sub-test. If E-TFC TB size is supported by the E-DCH category then repeat steps 16 to 21 else continue with step 22.
22	<--		OPEN UE TEST LOOP (DCCH)	TC
23	-->		OPEN UE TEST LOOP COMPLETE (DCCH)	TC
24			RB RELEASE	RRC
25	<--		DEACTIVATE RB TEST MODE	TC Optional step
26	-->		DEACTIVATE RB TEST MODE COMPLETE	TC Optional step
Note 1: In addition to activate integrity protection Step 7 and Step 8 are inserted in order to stop T3317 timer in the UE, which starts after transmitting SERVICE REQUEST message.				

7.1.7.4.5 Test requirements

1. In step 20, the SS verifies that the received E-TFC has the correct size. The SS checks that the UE has not used the transport block sizes correspondent to the E-TFCI values as listed in table 7.1.7.4.6, but instead used the transport block size correspondent to the next possible larger E-TFCI value.

2. In step 20, the SS shall receive the RLC SDUs in the same TTI and with the same content as sent in downlink.

7.1.7.5 MAC-is/i transport block size selection/ UL 16QAM

7.1.7.5.1 Definition and applicability

Applicable for all UEs supporting MAC-i/is and UL 16QAM.

7.1.7.5.1 Conformance requirement

Extract from TS 25.321 clause 11.8.1.4

The transmission format and data allocation shall follow the requirements below:

- Only E-TFCs from the configured E-TFCS shall be considered for the transmission;

[…]

- The UE shall not use the following E-TFCIs;
  - If the UE is configured with E-TFCI table 0 (see [7]) and 2ms TTI, it shall not use E-TFCI 120 in the mapping defined in Annex B.1
  - If the UE is configured with E-TFCI table 1 (see [7]) and 2ms TTI, it shall not use E-TFCI 115 in the mapping defined in Annex B.2
  - If the UE is configured with E-TFCI table 2 (see [7]) and 2ms TTI, it shall not use E-TFCI 121 in the mapping defined in Annex B.2a
  - If the UE is configured with E-TFCI table 3 (see [7]) and 2ms TTI, it shall not use E-TFCIs 101 and 102 in the mapping defined in Annex B.2b

[…]

[…]

Extract from TS 25.321 clause 9.2.5.4

[…]

RRC can configure the MAC-e or MAC-i to use one of two Transport block size sets for the 10ms TTI duration and one of four Transport block size sets for the 2ms TTI duration. The normative description of the mapping between the E-TFCI and the corresponding transport block size is provided in Annex B:

- If the UE is configured with E-TFCI table 0 (see [7]) and 2ms TTI, it shall use the mapping defined in Annex B.1
- If the UE is configured with E-TFCI table 1 (see [7]) and 2ms TTI, it shall use the mapping defined in Annex B.2
- If the UE is configured with E-TFCI table 2 (see [7]) and 2ms TTI, it shall use the mapping defined in Annex B.2a
- If the UE is configured with E-TFCI table 3 (see [7]) and 2ms TTI, it shall use the mapping defined in Annex B.2b
- If the UE is configured with E-TFCI table 0 (see [7]) and 10ms TTI, it shall use the mapping defined in Annex B.3
- If the UE is configured with E-TFCI table 1 (see [7]) and 10ms TTI, it shall use the mapping defined in Annex B.4

[…]

Reference(s)

TS 25.321 clause 11.8.1.4, 9.2.5.4

7.1.7.5.3 Test purpose

To verify that the UE is able to transmit all possible transport block sizes when 16QAM uplink and MAC-i/is is configured.

7.1.7.5.4 Method of test

NOTE: The reference to E-DCH Category refers to the UE capability as signalled in the Rel-7 IE "E-DCH physical layer category extension".

NOTE: The reference to HS-DSCH Categories refers to the UE capability as signalled in the Rel-5 IE "HS-DSCH physical layer category" (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

UE in idle mode

The following parameters are specific for this test case:

Common for all UE HS-DSCH categories:

Parameter	Value
MAC-d PDU size	336 bits
MAC-ehs receiver window size	16
Number of HARQ processes	1
Number of reordering queues	1

Common for all UE E-DCH categories:

Parameter	Value
Periodicity for Scheduling Info – no grant	500 ms (see 25.331 10.3.6.99)
RLC Poll Timer	1000ms
RLC Reset Timer	1000ms

Specific depending on E-DCH category:

Parameter	E-DCH Category	Value
RLC Transmission window size	**7**	**1536**
E-TFCI table	**7**	**See table 7.1.5.1.3**

Specific depending on HS-DSCH category:

Parameter	HS-DSCH Category	Value
RLC Receiving window size	1 to 6	512
	7 and 8	1536
	9 and 10	2047
	11 and 12	1024

Definition of test variables:

$I_{E\text{-}TFCI}$	Index value used by SS to lock up the TB size used for the different test points

The mapping between the chosen E-TFC index and the corresponding E-DCH transport block size is given in the following tables:

Table 7.1.7.5.1: Test points for 2ms TTI E-DCH Transport Block Size Table 2

$I_{E\text{-}TFCI}$	TB Size (bits)	$I_{E\text{-}TFCI}$	TB Size (bits)	$I_{E\text{-}TFCI}$	TB Size (bits)	$I_{E\text{-}TFCI}$	TB Size (bits)	$I_{E\text{-}TFCI}$	TB Size (bits)

Note: E-TFCI indices 101 and 102 shall not be used by the UE (see TS 25.321 clause 11.8.1.4). The reason to include this test point is to verify that UE comply to this requirement and is not using E-TFCI index values 101 and 102.

Table 7.1.7.5.3: Applicable E-TFS indexes for sub-tests 1 to 2 and UE E-DCH category 7.

Sub-test	E-DCH TTI	E-DCH Transport Block Size Table	Applicable E-TFS indexes
1	2ms	2ms TTI Table 2, Table 7.1.7.4.2a	1..127
2	2ms	2ms TTI Table 3, Table 7.1.7.4.2b	1..124

Table 7.1.7.5.4: E-TFCI values causing degradation due to turbo coder irregularities

E-DCH Transport Block Size Tables	E-TFCI	Reference
2 ms TTI, Table 2	121	[6], Annex B.2a
2 ms TTI, Table 3	101	[6], Annex B.2b
2 ms TTI, Table 3	102	[6], Annex B.2b

Test procedure

The following test specs shall be executed for each applicable sub-test in Table 7.1.7.5.5:

a) The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 6.11.4k.2 (UM, Flexible RLC + MAC-i/is + MAC-ehs) using conditions A27a (16QAM) as specified in clause 9.1 of TS 34.108. See Note 1.

b) The SS closes the test loop using UE test loop mode 1 and configuring the UL RLC SDU size to be equal to the received DL SDU size (i.e. not setting the UL RLC SDU size parameter).

c) The SS sets $I_{E\text{-}TFCI}$ =1.

d) The SS look up the TB Size based on the $I_{E\text{-}TFCI}$ value in the table used for the sub-test according to Table 7.1.7.5.5.

e) The SS removes the scheduling grant for E-DCH for the UE.

f) If the transport block size TB_{size} is >12040 bits then SS creates 2 DL RLC SDUs of size 8*FLOOR ((TB_{size} – 56 bit)/16) (largest possible RLC SDU size considering octet alignment and MAC-i/is and minimum RLC UM headers). If the transport block size TB_{size} is $\leq$ 12040 bits the SS creates 1 DL RLC SDUs of size 8*FLOOR((TB_{size} – 32 bit)/8). The SS creates a DL RLC PDU for each DL RLC SDU using the special value of HE field ('10') in the RLC PDU header and transmits in downlink. See note 2.

g) The SS waits for an SI to be received that indicates that there is data available for transmission (can be identified from the content of the SI). The SS checks that TEBS have the correct values. See Note 3.

h) The SS issues an absolute grant that allows the UE to send at maximum bit rate (signalling value 31)

i) The SS waits until data is received and verifies that the looped back SDU data has the correct content and is sent in the same TTI.

j) The SS verifies that the received E-TFC used by the UE is correct. The SS checks that the UE has not used the transport block sizes correspondent to the E-TFCI values as listed in table 7.1.7.5.6, but instead used the transport block size correspondent to the next possible larger E-TFCI value.

k) The SS increments the $I_{E\text{-}TFCI}$ by 1. If the $I_{E\text{-}TFCI}$ value is less than maximum value for the actual sub-test and UE category according to Table 7.1.7.5.5 then continue with step d else continue with step l.

l) The SS opens the UE test loop.

m) The SS release the radio bearer.

n) The SS may optionally deactivate the radio bearer test mode.

NOTE 1: The SS configures the physical channel parameters according to the actual UE category under test.

NOTE 2: The test data for DTCHs mapped on HS-DSCH is divided into 2 RLC SDUs to keep the maximum SDU size below or equal to 1500 octets (1500 octets is the limit of QoS parameter "Max SDU size" in SM). To allow for testing of the smallest TB sizes a single RLC PDU is used when the TB size is equal or below 12032 bits to reduce the L2 header overhead. 12032 bits corresponds to maximum RLC SDU size of 1500 octets (12000 bits) plus MAC-i/is header size of 24 bits and UMD PDU header size (8 bits).

The SS is using one RLC PDU per RLC SDU. The RLC SDU size is calculated as:
RLC SDU size = 8*FLOOR((TBsize - MAC-i/is header size)/N - UMD PDU header size)/8
= 8*FLOOR((TBsize – 24 - (N-1)*16)/N – 8)/8 bits.

For N=1 this gives RLC SDU size = 8*FLOOR(TB size – 32)/8 bits.
For N=2 this gives RLC SDU size = 8*FLOOR(TB size – 56)/16 bits

NOTE 3: The SS calculates the TEBS value using the E-TFC TB size determined by the E-TFCI value tested according to 25.321 Table 9.2.5.3.2-1.

Expected sequence

The expected sequence is repeated for each applicable sub-test in Table 7.1.7.5.5:

Step	Direction		Message	Comments
	UE	SS		
1	<--		SYSTEM INFORMATION (BCCH)	Broadcast
2	<--		PAGING TYPE 1 (PCCH)	Paging (PS domain, P-TMSI)
3	-->		RRC CONNECTION REQUEST (CCCH)	RRC
4	<--		RRC CONNECTION SETUP (CCCH)	RRC
5	-->		RRC CONNECTION SETUP COMPLETE (DCCH)	RRC
6	-->		SERVICE REQUEST (DCCH)	GMM
7	<--		SECURITY MODE COMMAND	RRC see note 1
8	-->		SECURITY MODE COMPLETE	RRC see note 1
9	<--		ACTIVATE RB TEST MODE (DCCH)	TC
10	-->		ACTIVATE RB TEST MODE COMPLETE (DCCH)	TC
11	<--		RADIO BEARER SETUP (DCCH)	RRC. For the PS radio bearer the 'pdcp info' IE shall be omitted.
12	-->		RADIO BEARER SETUP COMPLETE (DCCH)	RRC
13	<--		CLOSE UE TEST LOOP (DCCH)	TC UE test mode 1 with no "LB Setup RB IE#k" parameter set (UE shall return an UL RLC SDU with the same size as the received RLC SDU in downlink)
14	-->		CLOSE UE TEST LOOP COMPLETE (DCCH)	TC
15	SS			The SS sets $I_{E\text{-}TFCI}$ = 1 and look up the transport block size from the relevant Transport Block Size Table for the sub-test.
16	←		Removal of absolute grant	Signalling value 1
17	<--		DOWNLINK RLC SDU(s)	The SS creates and transmit one or 2 RLC SDUs. The number of RLC SDUs and their size depends on TB size under test.
18	→		SI indicating data for transmission	This can be verified from the indicated Total E-DCH Buffer Status (TEBS)
19	<--		Absolute grant allowing the UE to transmit at maximum bit rate.	Signalling value 31
20	-->		UPLINK RLC SDU(s)	The SS checks E-TFC from the UE and checks that the content of the received UL RLC SDU(s) are correct and sent in the same TTI. The SS checks that the UE has not used the transport block sizes correspondent to the E-TFCI values as listed in table 7.1.7.5.6, but instead used the transport block size correspondent to the next possible larger E-TFCI value.
21	SS			The SS increments $I_{E\text{-}TFCI}$ by 1 and look up transport block size from the relevant Transport Block Size Table for the sub-test. If E-TFC TB size is supported by the E-DCH category then repeat steps 16 to 21 else continue with step 22.
22	<--		OPEN UE TEST LOOP (DCCH)	TC
23	-->		OPEN UE TEST LOOP COMPLETE (DCCH)	TC
24			RB RELEASE	RRC
25	<--		DEACTIVATE RB TEST MODE	TC Optional step
26	-->		DEACTIVATE RB TEST MODE COMPLETE	TC Optional step
Note 1: In addition to activate integrity protection Step 7 and Step 8 are inserted in order to stop T3317 timer in the UE, which starts after transmitting SERVICE REQUEST message.				

7.1.7.5.5 Test requirements

1. In step 20, the SS verifies that the received E-TFC has the correct size. The SS checks that the UE has not used the transport block sizes correspondent to the E-TFCI values as listed in table 7.1.7.5.4, but instead used the transport block size correspondent to the next possible larger E-TFCI value.

2. In step 20, the SS shall receive the RLC SDUs in the same TTI and with the same content as sent in downlink.

7.1.7.6 MAC-is/i transport block size selection (1.28Mcps TDD)

7.1.7.6.1 Definition and applicability

Applicable for all UEs supporting 1.28Mcps TDD and MAC-i/is.

7.1.7.6.2 Conformance requirement

Extract from TS 25.321 clause 11.9.1.4

In TDD, rules for E-TFC selection shall be applied as provided below.

UEs shall apply E-TFC selection when invoked by the HARQ entity (see subclause 11.9.1.1.1).

For CELL-DCH state in TDD, for each MAC-d flow, RRC configures MAC-e with a HARQ profile and multiplexing list. Additionally, RRC configures MAC with a power offset in case the Scheduling Information needs to be transmitted without any higher- layer data. For 1.28 Mcps TDD, RRC also configures MAC with a retransmission timer and the maximum number of HARQ transmissions in case the Scheduling Information needs to be transmitted without any higher-layer data. The HARQ profile includes the power offset and maximum number of HARQ transmissions to use for this MAC-d flow. For 1.28 Mcps TDD, the HARQ profile also includes a retransmission timer attribute. The multiplexing list identifies for each MAC-d flow(s), the other MAC-d flows for which data can be multiplexed in a transmission that uses the power offset included in its HARQ profile.

For 1.28 Mcps TDD in CELL_FACH state and idle mode, for common MAC flows, RRC configures MAC with a HARQ profile and multiplexing list. The HARQ profile includes the power offset/maximum number of HARQ transmissions to use for this common MAC flows and a retransmission timer attribute.

RRC can control the scheduling of uplink data by giving each logical channel a priority between 1 and 8, where 1 is the highest priority and 8 the lowest. E-TFC selection in the UE shall be done in accordance with the priorities indicated by RRC. Logical channels have absolute priority, i.e. the UE shall maximise the transmission of higher priority data.

For 1.28 Mcps TDD in CELL_FACH state and idle mode, CCCH shall not be multiplexed with any other logical channel, and the CCCH data shall have higher priority than that of any other logical channel.

RRC can allocate non-scheduled transmission grants to individual MAC-d flows in order to reduce the transmission delays.

The UE shall determine whether to take scheduled or non-scheduled grants into account in the upcoming transmission. If neither are supposed to be taken into account (i.e. the TTI is not available for non-scheduled transmission and no Grant for scheduled transmission has been received) then no grant shall be assumed to exist. If a grant exists then the transmission format and data allocation shall follow the requirements below.

For each configured MAC-d flow or common flow (1.28 Mcps TDD only), a given E-TFC can be in any of the following states:

- Supported state;
- Blocked state.

The E-TFC states are derived according to the following:

- If the transmission is a retransmission then only the E-TFC with the same block size as the original transmission may be in the supported state.
- For 1.28Mcps TDD, only E-TFCs from the E-TFCS (the table of TB sizes) which are consistent with the UE's E-DCH capability category shall be considered for the transmission;
- Only E-TFCs from the E-TFCS (the table of TB sizes) which can be supported by (exactly) the number of slots assigned by the grant shall be considered for the transmission;
- Only E-TFCs which result (for the granted timeslot and code physical resources) in a code rate lying between the maximum and minimum (inclusive) allowable code rates set by RRC [7] shall be considered for the transmission {note: the definition of the term “code rate” as used here is the same as that provided by [18]}. This shall be evaluated for both QPSK and 16-QAM modulation;

- P_{HARQ}, the HARQ profile power offset is selected (for 3.84/7.68Mcps TDD the HARQ profile for the transmission shall be selected among the HARQ profiles of MAC-d flows on which the highest priority logical channels with available data are mapped, for 1.28Mcps TDD the HARQ power offset shall be set to the maximum of HARQ power offset of all the MAC-d flows or common flows mapped to the same type of resource (scheduled or non-scheduled resource); Scheduling Information power offset shall be used when Scheduling Information is transmitted without any higher-layer data.)

- Only E-TFCs whose calculated transmission power requirement $P_{E\text{-}PUCH}$ (see [18]) is less than or equal to both the available and the granted power shall be considered for the transmission (note: this requirement does not apply in the case of a retransmission on non-scheduled resources). For TDD, the smallest E-TFC is considered always in the supported state. The granted power is defined as the calculated E-PUCH transmission power of [18] with β_e = (Absolute Grant Value + α_e). The available power is the maximum UE transmission power.

- For 1.28Mcps TDD, if the E-PUCH coexists with other physical channel within one timeslot, the sum of calculated transmission power requirement $P_{E\text{-}PUCH}$ and the transmission power requirement for the other physical channel shall be less than or equal to the available power.

- If only scheduling information is included in MAC-e PDU, the transmission power shall be equal to the granted power (the available maximum E-PUCH power shall be considered too). And the UE shall select QPSK modulation. (1.28 Mcps TDD only);

From those E-TFCs in the supported state the UE determines the largest block size that it is permitted to transmit within the given constraints.

The UE shall select the modulation type associated with the determined E-TFC (note: if an E-TFC is supported by both QPSK and 16-QAM then 16-QAM modulation shall be used if its power requirement ($P_{E\text{-}PUCH}$) is lower than the power requirement for QPSK, otherwise QPSK modulation shall be used).

Data allocation shall then be performed in accordance with the following:

- For all logical channels, if the logical channel belongs to a non-scheduled MAC-d flow, its data shall be considered as available up to the largest block size determined for the corresponding non-scheduled grant. If the logical channel does not belong to a non-scheduled MAC-d flow, its data shall be considered as available up to the largest block size determined for the Serving Grant;

- The data allocation shall maximise the transmission of higher priority data;

- The UE shall select the E-TFC, SF and modulation which minimises the power used (3.84/7.68 Mcps TDD only);

- The UE shall select the E-TFC and modulation. QPSK shall be used in the case of E-PUCH allocated with other physical channel in the same timeslot of one TTI for one UE, otherwise modulation shall be selected, which minimises the power used (1.28 Mcps TDD only);

While respecting all the above listed requirements, for each logical channel using RLC-UM or RLC-AM when new data to be transmitted, at every TTI, the UE may select the RLC PDU size so as to maximise the amount of data of this logical channel that can be transmitted.

Once an appropriate E-TFC and data allocation are found according to the rules above, the "Multiplexing and TSN Setting" entity shall generate the corresponding MAC-e or MAC-i PDU.

In 1.28Mcps TDD, when Scheduling Information is triggered by timer per subclause 11.9.1.5, the E-TFC selection and data-allocation process shall assume that Scheduling Information has a priority higher than any other logical channel.

The E-TFC selection function shall provide this MAC-e or MAC-i PDU and transmission HARQ profile to the HARQ entity. The selected E-TFC is also provided. For 3.84Mcps TDD and 7.68Mcps TDD the maximum number of HARQ transmissions and the power offset in this profile shall be set respectively to the maximum of both the Max Number of HARQ Transmissions and of the power offset of the HARQ profiles from all the MAC-d flows from which data is multiplexed into the transmission. For 1.28 Mcps TDD, the maximum number of HARQ transmissions shall be set to the maximum of the Max Number of HARQ Transmissions of the HARQ profiles from all the MAC-d flows from which data is multiplexed into the transmission, the HARQ power offset shall be set to the maximum of HARQ power offset of all the MAC-d flows mapped to the same type of resource (scheduled or non-scheduled resource), and the retransmission timer shall be set to the maximum of the retransmission timer value of the HARQ profiles that are permitted to be multiplexed into the transmission. For 1.28Mcps TDD, when the Scheduling Information needs to be transmitted without any higher-layer data, the specific HARQ profile should be applied. Each HARQ process which is

associated with a buffer holding a MAC-e or MAC-i PDU for potential retransmission shall maintain the HARQ profile and the number of re-transmissions that have occurred. For 1.28 Mcps TDD, the HARQ process shall also maintain the value of RTX_TIMER.

Further information on E-TFC selection is provided in Annex CA.

[…]

For 1.28 Mcps TDD, the mapping of transport block size *L* to TB index *k* (k = {0,1,…63};) (see Annex BC.1) is given by the formula:

Table 9.2.6.4.3: formula used to calculate the Transport Block Size

Category 1-2			Category 3-6			
1 Timeslot	**2 Timeslots**	**3 Timeslots**	**1 Timeslot**	**2 Timeslots**	**3 Timeslots**	**4&5 Timeslots**
$L_0 = 23, L_1 = 116, L_{\min} = 162, L_k = \lfloor L_{\min} p^{k-2} \rfloor, k \in [2,62]$						
$L_{63} = 1346,$ $p = \frac{7768}{7503}$	$L_{63} = 2754,$ $p = \frac{2578}{2461}$	$L_{63} = 4162,$ $p = \frac{8934}{8471}$	$L_{63} = 2720,$ $p = \frac{9781}{9339}$	$L_{63} = 5532,$ $p = \frac{2934}{2769}$	$L_{63} = 8348,$ $p = \frac{3052}{2861}$	$L_{63} = 11160,$ $p = \frac{9652}{9005}$

NOTE: When in CELL FACH state with E-DCH transmission, the formula used to calculate the Transport Block Size according to the E-DCH physical layer category 3 shall be used.

7.1.8 E-DCH MAC-is/i for RACH procedure

7.1.8.1 Release of common E-DCH resource when maximum resource allocation for E-DCH expires or uplink transmission ends for CCCH transmission

7.1.8.1.1 Definition and Applicability

All UEs which support E-DCH in CELL_FACH

7.1.8.1.2 Conformance Requirement

Extract from 25.321 11.2.2A:

The allocated common E-DCH resource shall be used by MAC to carry either only CCCH transmission or only DTCH/DCCH transmission, but not both.

The E-DCH enhanced physical random access transmission procedure is completed with release of the allocated common E-DCH resource, if one of the following conditions is fulfilled:

- If the UE according to subclause 8.5.4A in [7] failed to establish the physical channels, or if the criteria for radio link failure are met as specified in subclause 8.5.6 in [7], then the timer T_2 is started. After the expiry of T_2 a back off timer T_{BO1} is started. Back off timer T_{BO1} is set to an integer number N_{BO1} of 10 ms time intervals, randomly drawn within an interval $0 \leq N_{BO1min} \leq N_{BO1} \leq N_{BO1max}$ (with uniform distribution). N_{BO1min} and N_{BO1max} may be set equal when a fixed delay is desired, and even to zero when no delay other than the one due to persistency is desired. The procedure ends if timer TBO1 expires or the UE performs cell reselection while timer TBO1 is running, whatever occurs first. In case of a cell reselection, the timer TBO1 is stopped.

- In case of CCCH transmission, if the maximum E-DCH resource allocation for CCCH has been reached, then this triggers a CMAC-STATUS which informs the RRC about end of the Enhanced Uplink for CELL_FACH state and Idle mode.

- In case of CCCH transmission, if the transmission E-DCH Buffer status is 0 bytes, then the MAC-STATUS-Ind primitive indicates to RLC for each logical channel that no PDU shall be transferred to MAC. If the transmission E-DCH Buffer status is 0 bytes and no MAC-i PDUs are left for (re-)transmission in MAC, then this triggers a CMAC-STATUS which informs the RRC about the end of the Enhanced Uplink for CELL_FACH state and Idle mode.

- In case of DTCH/DCCH transmission, if no E-AGCH with UE's E-RNTI has been received (through an E-RNTI-specific CRC attachment) within the maximum period for collision resolution phase, then this triggers a CMAC-STATUS which informs the RRC about the end of the Enhanced Uplink for CELL_FACH state and Idle mode. Then the timer T_2 is started. After the expiry of T_2 a back off timer T_{BO1} is started. Back off timer T_{BO1} is set to an integer number N_{BO1} of 10 ms time intervals, randomly drawn within an interval $0 \leq N_{BO1min} \leq N_{BO1} \leq N_{BO1max}$ (with uniform distribution). N_{BO1min} and N_{BO1max} may be set equal when a fixed delay is desired, and even to zero when no delay other than the one due to persistency is desired. The procedure ends when T_{BO1} expires.

- Explicit common E-DCH resource release:
  In case of DTCH/DCCH transmission, if an E-AGCH with UE's E-RNTI has been received (through an E-RNTI-specific CRC attachment) with absolute grant value set to 'INACTIVE', then this triggers a CMAC-STATUS which informs the RRC about end of the Enhanced Uplink for CELL_FACH state and Idle mode.

- Implicit release with E-DCH transmission continuation back off
  Implicit resource release is enabled only if "E-DCH transmission continuation back off" is not set to "infinity".
  If implicit resource release is enabled, then in case of DTCH/DCCH transmission, the timer Tb is set to "E-DCH transmission continuation back off" value, when TEBS is 0 byte and the last generated MAC-i PDU with higher layer data is provided with the PHY-data-REQ primitive to the physical layer for transmission.
  If TEBS <> 0 byte is detected while timer Tb is running, then the timer is stopped and uplink data transmission on the common E-DCH resource continues.
  If a MAC-ehs PDU is received while timer Tb is running, then the timer is re-started.
  At expiry of timer Tb the MAC-STATUS-Ind primitive indicates to RLC for each logical channel that no PDUs shall be transferred to MAC. TEBS = 0 byte is reported to the Node B MAC as SI in a MAC-i PDU. If the "E-DCH transmission continuation back off" value is set to "0", then the SI should be transmitted with the MAC-i PDU carrying the last DCCH/DTCH data, given the serving grant is sufficient to carry the SI in the same MAC-i PDU together with the remaining DCCH/DTCH data. Otherwise, the empty buffer status report is transmitted separately with the next MAC-i PDU.
  If after the expiry of timer Tb no MAC-i PDU is left in a HARQ process for (re-)transmission, then this triggers a CMAC-STATUS which informs the RRC about end of the Enhanced Uplink for CELL_FACH state and Idle mode.

Extract from 25.321 clause 11.8.1.4:

For each MAC-d flow, RRC configures MAC with a HARQ profile and a multiplexing list. Additionally, RRC configures MAC with a power offset for "Control-only" transmissions. This power offset and a maximum number of HARQ transmissions of 8 will be used to define a HARQ profile for "Control-only" transmissions which will be used,

in case the Scheduling Information needs to be transmitted without any higher-layer data. The HARQ profile includes the power offset and maximum number of HARQ transmissions to use for this MAC-d flow. The multiplexing list identifies for each MAC-d flow(s), the other MAC-d flows from which data can be multiplexed in a transmission that uses the power offset included in its HARQ profile.

[..]

The E-TFC selection function shall provide this MAC-e PDU and transmission HARQ profile to the HARQ entity. The maximum number of HARQ transmissions and the power offset in this profile, shall be set respectively to the maximum of the Max Number of HARQ Transmissions of the HARQ profiles from all the MAC-d flows from which data is multiplexed into the transmission and to the Nominal Power Offset. The HARQ entity shall also be informed of whether the transmission includes Scheduling Information and whether this information is sent by itself or with higher-layer data.

[...]

if expiry of timer T300 occurs:

the UE shall:

1> check the value of V300; and

2> if V300 is equal to or smaller than N300:

…

3> set the IEs in the RRC CONNECTION REQUEST message according to TS 25.331 subclause 8.1.3.3;

…

3> submit a new RRC CONNECTION REQUEST message to lower layers for transmission on the uplink CCCH;

3> increment counter V300;

3> restart timer T300 when the MAC layer indicates success or failure to transmit the message.

…

2> if V300 is greater than N300:

3> enter idle mode.

3> consider the procedure to be unsuccessful;

3> Other actions the UE shall perform when entering idle mode from connected mode are specified in TS 25.331 subclause 8.5.2;

3> the procedure ends.

References(s)

TS 25.321 clause 11.2.2A , 11.8.1.4,

3GPP TS 25.331 clause 8.1.3.

7.1.8.1.3 Test purpose

1. To verify that UE releases common E-DCH resource when max resource allocation timer of E-DCH expires for CCCH transmission.

2. To verify that UE releases common E-DCH resource when uplink transmission ends for CCCH transmission.

7.1.8.1.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

UE: Idle state (state 3 or state 7) as specified in clause 7.4 of TS 34.108 with a CN UE identity, depending on the CN domain(s) supported by the UE.

Test procedure

a) SS transmits the PAGING TYPE 1 with cause BCCH modification.

b) SS transmits the changed system information SIB 1 and SIB5 / SIB5 bis. UE updates the stored SIBs. The new SIB 5 / SIB5-bis contains the common E-DCH related information.

c) SS transmits the PAGING TYPE 1 with cause terminating conversational call.

d) SS receives RRC CONNECTION REQ on common E-DCH resource.

e) SS transmits a negative HARQ acknowledgement.

f) SS transmits a HARQ NACK for each received retransmission.

g) The E-DCH resource allocation timer shall expire in UE side which would lead to release of the common E-DCH resource before the specified number of retransmissions.

h) SS receives the RRC CONNECTION REQ sent by UE after the expiry of T300

i) SS transmits a HARQ ACK for the received transmission.

j) UE does not have to send any data (MAC buffer empty) which leads to release of the common E-DCH resource. As RRC CONNECTION SETUP is not sent by SS, the UE acquires a common E-DCH resource to transmit RRC CONNECTION REQUEST after expiry of T300.

NOTE 1: There should not be any transmission from UE for the period of T300 after the expiry of E-DCH resource allocation timer.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		

1	←	Paging Type 1	BCCH change ind
2	←	SIB1 and SIB 5/ SIB5 bis	SS transmits E-DCH common information to UE
3			SS waits 5s (to ensure that the UE has time to read the new system information)
4	←	Paging Type 1	SS starts to transmit this message on the PCCH at the correct paging occasion with cause “Terminating conversational call”
5	→	RRC CONNECTION REQ	UE starts the timer max-CCH-ResourceAllocation. SS starts (max CCCH ResourceAllocation timer) + 10%
6	←	HARQ NACK	
7	SS		SS sends a HARQ NACK for each received retransmission. Max – CCH Resource Allocation Timer in UE shall expire. SS checks that the number of UL HARQ re-transmissions shall be less than the mac-d-FlowMaxRetrans (as specified in the test case). This is due to max-CCCH-ResourceAllocation timer < (No of mac-d-FlowMaxRetrans * E-DCH TTI). SS check that the last retransmitted RRC CONNECTION REQUEST is sent before expiry of the timer (max CCCH ResourceAllocation timer) + 10% started in step 5.
8	→	RRC CONNECTION REQ	UE re-transmits after the expiry of T300. UE re-transmits after the expiry of T300. SS checks that UE perform Prach Preamble and Acquisition Indication reception procedure prior to acquiring common E-DCH resource and sending RRC CONNECTION REQ
9	←	HARQ ACK	
10	SS		SS does not respond with RRC CONNECTION SETUP
11	→	RRC CONNECTION REQ	UE re-transmits after the expiry of T300. SS checks that UE perform Prach Preamble and Acquisition Indication reception procedure prior to acquiring common E-DCH resource and sending RRC CONNECTION REQ

7.1.8.1.5 Test requirements

1. At step 7 , SS checks that the number of UL HARQ retransmissions for RRC CONNECTION REQUEST is less than mac-d flow max number of retransmissions, specified in SIB5 due to expiry of CCCH resource allocation timer.

2. At step 11 , SS shall check the use of PRACH Preamble and Acquisition Indication procedure to acquire common E-DCH resource to send RRC CONNECTION REQUEST.

7.1.8.2 Activation of HS-DPCCH based on the received SIB5/SIB5bis information

7.1.8.2.1 Definition and Applicability

All UEs which support E-DCH in CELL_FACH

7.1.8.2.2 Conformance requirement

25.331 section 8.5.45

If variable READY_FOR_COMMON_EDCH is set to TRUE, then after selection of a common E-DCH resource configuration, the RRC in the UE shall configure MAC and the physical layer for E-DCH and HSDPA transmission, and the UE shall:

1> configure Uplink DPCH in accordance with the uplink DPCCH slot format 1 [26], the IE "Uplink DPCH code info" and IE "Uplink DPCH power control info";

1> if IE "ACK/NACK support on HS-DPCCH" is set to TRUE:

2> configure the HS-DPCCH in accordance with HS-DPCCH slot format [26], the HS-DPCCH code [28] and IE "Uplink DPCH power control info".

1> configure the common E-DCH MAC-d flows as described in subclause 8.6.5.24;

1> configure the UL E-DPCCH in accordance with the IE "E-DPCCH" configuration;

1> apply the TTI as signalled in the IE "E-DCH Transmission Time Interval" on the E-DPDCH;

1> use a redundancy version for each HARQ transmission as configured by the IE "HARQ RV Configuration";

1> use the same scrambling code for F-DPCH, E-RGCH, E-HICH and E-AGCH reception as configured for the Primary CPICH;

1> use a channelization code for F-DPCH reception as configured by IE "F-DPCH Code number";

1> configure F-DPCH in accordance with the F-DPCH slot format #0 [26];

1> apply the DPC_Mode=0 for F-DPCH according to [29];

1> configure the MAC with the stored IE "E-DPDCH" configuration and/or the information contained in IE "Scheduled Transmission configuration";

1> configure the E-HICH in accordance with the IE "E-HICH info" configuration;

1> configure the E-AGCH in accordance with the IE "E-AGCH info" configuration;

1> configure the E-RGCH in accordance with the IE "E-RGCH info" configuration if an E-RGCH configuration has been provided with the system information;

1> configure the radio link as the serving E-DCH radio link;

1> determine the value for the COMMON_E_DCH_TRANSMISSION variable and take the corresponding actions as described in subclause 8.5.46.

25.331 section 8.5.46

The variable COMMON_E_DCH_TRANSMISSION shall be set to TRUE only when all the following conditions are met:

1> the UE is in CELL_FACH state or Idle mode;

1> one radio link is configured as the serving E-DCH radio link, and for this radio link the UTRAN has configured the IE "E-HICH info" and the IE "E-AGCH info", and for 1.28Mcps TDD the IE "E-RUCCH Info" and "E-PUCH Info";

1> all logical channels are mapped to E-DCH, and for each of which there is:

- 2> one E-DCH MAC-d flow is configured, i.e. the IEs "E-DCH MAC-d flow power offset", "E-DCH MAC-d flow maximum number of retransmissions", and for 1.28 Mcps TDD, the IEs "E-DCH MAC-d flow retransmission timer".

…..

For FDD, whenever the variable COMMON_E_DCH_TRANSMISSION is set to TRUE, the UE shall:

…..

1> if transmitting DCCH or DTCH data:

- 2> if IE "ACK/NACK support on HS-DPCCH" is set to TRUE:
  - 3> after collision resolution provide ACK/NACK feedback in accordance with [29] in the physical layer on the serving HS-DSCH radio link, using the information in the IE "Uplink DPCH power control info";

- 3> after collision resolution use the information for the channel quality indication (CQI) procedure in the physical layer on the serving HS-DSCH radio link if the IE "Measurement Feedback Info" has been provided with the common E-DCH resource.

25.321 clauses 11.6.22

[...]

The UE shall:

- if the New Data Indicator has been incremented compared to the value in the previous received transmission in this HARQ process or this is the first received transmission in the HARQ process:
  - replace the data currently in the soft buffer for this HARQ process with the received data.
  - if the Transport Block Size index value is equal to 111111 (FDD only):
    - generate a positive acknowledgement (ACK) of the data in this HARQ process;
    - discard the received data;
    - assume that the data has been successfully decoded.
- if the New Data Indicator is identical to the value used in the previous received transmission in the HARQ process:
  - if the Transport Block Size index value is equal to 111111 (FDD only):
    - assume that the transport block size is identical to the last valid transport block size signalled for this HARQ process.
  - if the data has not yet been successfully decoded:
    - combine the received data with the data currently in the soft buffer for this HARQ process.
- if the data in the soft buffer has been successfully decoded and no error was detected:
  - deliver the decoded MAC-hs PDU to the reordering entity;
  - generate a positive acknowledgement (ACK) of the data in this HARQ process.
- else:
  - generate a negative acknowledgement (NAK) of the data in this HARQ process;
- schedule the generated positive or negative acknowledgement for transmission and the time of transmission relative to the reception of data in a HARQ process is configured by upper layer.

TS 25.321 clauses 11.6.22

7.1.8.2.3 Test purpose

The purpose of the test case is to verify that UE configures the HS-DPCCH based on the common E-DCH information received in SIB5/SIB5bis .

7.1.8.2.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

UE: Idle state (state 3 or state 7) as specified in clause 7.4 of TS 34.108 with a CN UE identity, depending on the CN domain(s) supported by the UE.

UE shall receive SIB5/SIB5bis with condition B3 “Only for cells which configure common E-DCH and HS-DSCH reception in CELL_FACH”.

Test Procedure

a) SS sends the PAGING TYPE 1 with cause “Terminating conversational call”

b) SS waits for RRC CONNECTION REQ message to arrive on E-DCH/CCCH.

c) SS transmits RRC CONNECTION SETUP

d) SS receives RRC CONNECTION SETUP COMPLETE message from UE

e) SS sends E- AGCH with UE specific E-RNTI to end collision resolution phase.

f) SS transmits UE CAPABILITY ENQUIRY message with CRC error

g) SS checks HARQ NACK on HS DPCCH for the message received at step g

h) SS transmits UE CAPABILITY ENQUIRY message without CRC error

i) SS checks HARQ ACK on HS DPCCH for the message received at step i

j) SS receives UE CAPABILITY INFORMATION

k) SS transmits UE CAPABILITY INFORMATION CONFIRM

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		Paging Type 1	SS starts to transmit this message continuously on the PCCH at the correct paging occasion with cause “Terminating conversational call”
2	→		RRC CONNECTION REQ	
3	←		RRC CONNECTION SETUP	
4	→		RRC CONNECTION SETUP COMPLETE	
5	←		Absolute Grant	SS sends E-AGCH with serving grant 4 and with UE specific E-RNTI to end the collision resolution phase.
6	←		UE CAPABILITY ENQUIRY	The SS sends this message over HS-DSCH with CRC error.
7			MAC-ehs negative acknowledgement.	UE sends a HARQ NACK for each received data on HS-DSCH on HS_DPCCH
8	←		UE CAPABILITY ENQUIRY	Message sent on HS-DSCH with correct CRC.
9			MAC-ehs positive acknowledgement.	UE sends a HARQ ACK for each received data on HS-DSCH on HS_DPCCH
10	→		UE CAPABILITY INFORMATION	
11	←		UE CAPABILITY INFORMATION CONFIRM	

Specific Message Contents

PAGING TYPE 1 (Step 1)

Information Element	Value/remark
Message Type	
Paging record list	Only 1 entry
Paging record	
- CHOICE Used paging identity	CN identity
- Paging Cause	Terminating Call with one of the supported services
- CN Domain Identity	PS Domain or CS Domain
- CHOICE UE Identity	Local (P)TMSI
- Routing parameter	Same as registered P-TMSI
BCCH modification info	Not Present

RRC CONNECTION REQUEST (Step 2)

Information Element	Value/remark
Message Type	
Initial UE Identity	Same as the IMSI stored in the TEST USIM card, or the registered P-TMSI
Establishment Cause	Checked to see if set to one of the supported originating call types
Protocol Error Indicator	Checked to see if set to "FALSE"
Measured Results on RACH	Checked to see if it is absent

7.1.8.2.5 Test Requirement

1. At step 6 and step 8 , SS checks the Nack/Ack on HS-DPCCH channel

7.1.8.3 DTCH/DCCH transmission - implicit common E-DCH resource release without receiving E-AGCH

7.1.8.3.1 Definition and applicability

Applicable for all UEs supporting Enhanced UL in Cell_FACH.

7.1.8.3.2 Conformance Requirement

[..]

- In case of DTCH/DCCH transmission, if no E-AGCH with UE's E-RNTI has been received (through an E-RNTI-specific CRC attachment) within the maximum period for collision resolution phase, then this triggers a CMAC-STATUS which informs the RRC about the end of the Enhanced Uplink for CELL_FACH state and Idle mode.

[..]

- If the UE is sending DTCH or DCCH data, the UE shall release the common E-DCH resource under following conditions:

  - the maximum period for collision resolution is reached and no E-AGCH with the UE's E-RNTI (through an E-RNTI specific CRC attachment) has been reached;

[..]

Reference(s)

TS 25.321 clause 11.2.2A, 11.8.1.9

7.1.8.3.3 Test purpose

1. To verify that the UE releases E-DCH resources when no valid E-AGCH is received and allocates E-DCH resources when a valid E-AGCH is received.

7.1.8.3.4 Method of test

Initial conditions

UE is in Enhanced CELL_FACH state with DTCH/DCCH on common E-DCH / HS-DSCH.

The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 9.1 using condition "AM Packet to Enhanced CELL_FACH from Enhanced CELL_FACH in PS with SRBs mapped on common E-DCH/HS-DSCH".

The radio bearer is placed in UE loop-back mode 1 with the UL SDU size set to 40 bytes.

System Simulator

1 cell, default parameters, Ciphering Off

Test procedure

a) Void

b) The SS sends 15 RLC SDU of size 40 bytes on the downlink.

c) The SS allocates common E-DCH resource.

d) The SS does not transmit a grant on the E-AGCH thereby causing the UE to implicitly release the allocated E-DCH resources after expiry of collision resolution phase.

e) The SS checks that UE initiates a PRACH preamble and Acquisition Indication for a new common E-DCH channel which is used to loop back the data. SS checks the loop back data.

Expected sequence

Step	Direction		Message	Comments
	UE	**SS**		
1			Void	
1a			Void	
2	←		RLC SDU	SS sends 15 RLC SDU of size 40 bytes on the downlink
3			UE acquires common E-DCH resource	Preamble transmission to use common E-DCH resource and SS acknowledges the RACH transmission
4				SS does not send E-AGCH
5			Wait for T = 15TTI	SS monitors data transmissions while waiting for the collision resolution phase to end.
6			UE acquires common E-DCH resource	UE initiates a PRACH preamble and Acquisition Indication for a new common E-DCH channel which is used to loop back the data
7	←		Absolute Grant	SS sends E-AGCH with serving grant 4
8	→		RLC SDU	SS receives and checks loop back data on common E-DCH

Specific Message Contents

Use the default parameter values for the system information block with the same type specified in clause 6.1.0b of TS 34.108, with the following exceptions

7.1.8.3.5 Test requirements

1. At step 6, the UE initiate a PRACH preamble and Acquisition Indication.

2. At step 8, the SS shall receive at least one loopback RLC PDU.

7.1.8.4 DTCH/DCCH transmission – explicit common E-DCH resource release by E-AGCH

7.1.8.4.1 Definition and applicability

Applicable for all UEs supporting Enhanced UL in Cell_FACH.

7.1.8.4.2 Conformance Requirement

[..]

- Explicit common E-DCH resource release:
  In case of DTCH/DCCH transmission, if an E-AGCH with UE's E-RNTI has been received (through an E-

RNTI-specific CRC attachment) with absolute grant value set to 'INACTIVE', then this triggers a CMAC-STATUS which informs the RRC about end of the Enhanced Uplink for CELL_FACH state and Idle mode.

[..]

- If the UE is sending DTCH or DCCH data, the UE shall release the common E-DCH resource under following conditions:

  - an E-AGCH is received with a common E-DCH resource release command (INACTIVE) (explicit common E-DCH resource release);

[..]

Reference(s)

TS 25.321 clause 11.2.2A, 11.8.1.9

7.1.8.4.3 Test purpose

1. To verify that the UE releases E-DCH resources when a valid E-AGCH is received with a common E-DCH resource release command (INACTIVE).

7.1.8.4.4 Method of test

Initial conditions

UE is in Enhanced CELL_FACH state with DTCH/DCCH on common E-DCH / HS-DSCH.

The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 9.1 using condition “AM Packet to Enhanced CELL_FACH from Enhanced CELL_FACH in PS with SRBs mapped on common E-DCH/HS-DSCH”.

The radio bearer is placed in UE loop-back mode 1 with the UL SDU size set to 10 bytes.

System Simulator

1 cell, default parameters, Ciphering Off

Test procedure

a) UE has common E-DCH resource and allocated E-RNTI to allow data transmission on DTCH. SS sends absolute grant with value of 4 which is sufficient for the UE to transmit data.

b) The SS sends 1 RLC SDU of size 10 bytes on the downlink.

c) The SS receives looped back data on the common E-DCH channel.

d) SS sends Explicit Release on E-AGCH to release the common E-DCH resource.

e) The SS sends 1 RLC SDU of size 10 bytes on the downlink.

f) The SS checks that original common E-DCH channel has been explicitly released by checking that UE initiates a PRACH preamble and Acquisition Indication for a new common E-DCH channel which is used to loop back the data. SS checks the loop back data.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		

1	←		UE has common E-DCH with E-RNTI allocated. The user plane RAB uses DTCH transmission.
1a	←	Absolute Grant	Serving Grant value 4
2	←	RLC SDU	SS sends 1 RLC SDU of size 10 bytes on the downlink
3	→	RLC SDU	SS receives and checks loop back data on common E-DCH
4	←	Absolute grant set to INACTIVE	The SS explicitly instructs the UE to release the E-DCH resources
5	←	RLC SDU	SS sends 1 RLC SDU of size 10 bytes on the downlink
6	<->	UE acquires common E-DCH resource	SS first checks that UE perform Prach Preamble prior to acquiring common E-DCH resource. UE shall then loop back the data using DTCH transmission on common E-DCH
7	→	RLC SDU	SS receives and checks loop back data on common E-DCH

7.1.8.4.5 Test requirements

At step 3, the SS shall receive the loopback PDU.

At step 7, the SS shall receive the loopback PDU on E-DCH resource used other than step 3.

7.1.8.5 RACH procedure with both normal AIs and extended AIs (using E-AICH).

7.1.8.5.1 Definition and Applicability

All UEs which support E-DCH in CELL_FACH

7.1.8.5.2 Conformance Requirement

Extract from 25.211 5.3.3.7.

The use of acquisition indicators is described in [5]. The meaning of acquisition indicators depends on whether a UE sends an access preamble signature corresponding to a PRACH message or corresponding to an E-DCH transmission. Furthermore, if a UE sends an access preamble signature corresponding to an E-DCH transmission, the meaning of the acquisition indicator depends on whether EAI is configured or not. The following rules apply for one PRACH preamble scrambling code. If multiple PRACH preamble scrambling codes are defined in a cell, then for each of them the following rules are used independently.

- If the UE sends an access preamble signature corresponding to a PRACH message, then;
  - if an Acquisition Indicator is set to +1, it represents a positive acknowledgement,

- if an Acquisition Indicator is set to -1, it represents a negative acknowledgement.

- If the UE sends an access preamble signature corresponding to an E-DCH transmission, then;
  - if the corresponding Acquisition Indicator is set to +1, it represents a positive acknowledgement and the associated default E-DCH resource configuration is allocated to the UE,
  - if the corresponding Acquisition Indicator is set to -1 and EAI is not configured, then it represents a negative acknowledgement,
  - if the corresponding Acquisition Indicator is set to -1 and EAI is configured, then the UE detects which one of the Extended Acquisition Indicator signatures is present.

Extract from 25.331 clause 8.1.3.9 (for RRC CONNECTION REJECT)

2> if V300 is greater than N300:

3> enter idle mode;

3> perform the actions specified in TS 25.331 subclause 8.5.2 when entering idle mode from connected mode;

3> consider the RRC establishment procedure to be unsuccessful;

3> the procedure ends.

7.1.8.5.3 Test purpose

The purpose of the test case is to verify that UE successfully completes raching procedure when E-AICH is not configured and when E-AICH is configured.

7.1.8.5.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

UE: Idle state (state 3 or state 7) as specified in clause 7.4 of TS 34.108 with a CN UE identity, depending on the CN domain(s) supported by the UE.

Test procedure

a) SS transmits the PAGING TYPE 1 with cause BCCH modification.

b) SS transmits the changed system information SIB1 and SIB5 / SIB5bis. UE updates the stored SIBs. The new SIB 5 / SIB5-bis contains the common E-DCH related information (E-AIs not supported).

c) SS transmits the PAGING TYPE 1 with cause Terminating Interactive Call.

d) The SS measures the preamble signature used

e) The SS responds with a negative acquisition indicator on the AICH.

f) The SS monitors the RACH channel for 10 seconds to ensure that no further RACH accesses occur.

g) The SS transmits the PAGING TYPE 1 with cause Terminating Interactive Call.

h) The SS measures the preamble signature used .

i) The SS responds with a positive acquisition indicator on the AICH.

j) UE transmits RRC CONNECTION REQ using the common E-DCH resources allocated.

k) The SS responds with RRC CONNECTION REJECT to avoid any HARQ retransmission and to bring the UE to Idle mode.

l) SS transmits the PAGING TYPE 1 with cause BCCH modification.

m) SS transmits the changed system information SIB5 / SIB5bis. UE updates the stored SIBs. The new SIB 5 / SIB5-bis contain the common E-DCH related information (E-AIs supported).

n) SS transmits the PAGING TYPE 1 with cause Terminating Interactive Call.

o) The SS measures the preamble signature used.

p) The SS responds with a negative acquisition indicator on the AICH.

q) The SS responds with acquisition indicator on the E-AICH with index to use common E-DCH resource.

r) UE transmits RRC CONNECTION REQ using the common E-DCH resources allocated.

s) The SS responds with RRC CONNECTION REJECT to avoid any HARQ retransmission and to bring the UE to Idle mode.

Expected sequence

Step	Direction		Message	Comments
	UE	SS

7.1.8.5.5 Test requirements

1. At step 7, SS checks UE does not try for RACH access after transmitting AICH = NEG ACQUISITION IND.

2. At step 11, SS shall receive RRC CONNECTION REQ sent by UE after transmitting AICH = POS ACQUISITION IND (with Index to default common E-DCH resource) at step 10.

3. At step 20 , SS shall receive RRC CONNECTION REQ after transmitting AICH = NEG ACQUISITION IND at step 18 and E-AICH = Index to common E-DCH resource at step 19.

7.1.8.6 DTCH/DCCH transmission - Implicit release with E-DCH transmission continuation backoff - Timer Based

7.1.8.6.1 Definition and applicability

Applicable for all UEs supporting Enhanced UL in Cell_FACH.

7.1.8.6.2 Conformance Requirement

[..]

- Implicit release with E-DCH transmission continuation backoff
  Implicit resource release is enabled only if "E-DCH transmission continuation back off" is not set to "infinity".
  If implicit resource release is enabled, then in case of DTCH/DCCH transmission, the timer Tb is set to "E-DCH transmission continuation back off" value, when TEBS is 0 byte and the last generated MAC-i PDU with higher layer data is provided with the PHY-data-REQ primitive to the physical layer for transmission.
  If TEBS <> 0 byte is detected while timer Tb is running, then the timer is stopped and uplink data transmission on the common E-DCH resource continues.
  If a MAC-ehs PDU is received while timer Tb is running, then the timer is re-started.
  If the "E-DCH transmission continuation back off" value is set to "0" or if timer Tb expires the MAC-STATUS-Ind primitive indicates to RLC for each logical channel that no PDUs shall be transferred to MAC. TEBS = 0 byte is reported to the Node B MAC as SI in a MAC-i PDU. If the "E-DCH transmission continuation back off" value is set to "0", then the SI shall be transmitted with the MAC-i PDU carrying the last DCCH/DTCH data, given the serving grant is sufficient to carry the SI in the same MAC-i PDU together with the remaining DCCH/DTCH data. Otherwise, the empty buffer status report is transmitted separately with the next MAC-i PDU.

CMAC-STATUS-Ind which informs the RRC about the Enhanced Uplink in CELL_FACH state and Idle mode process termination is triggered when the empty buffer status has been reported and no MAC-i PDU is left in any HARQ process for (re-)transmission.

[..]

When "E-DCH transmission continuation back off" is set to "infinity", the Scheduling Information with empty buffer status report shall be transmitted with the MAC-i PDU carrying the last DCCH/DTCH data, given the serving grant is sufficient to carry the SI in the same MAC-i PDU together with the remaining DCCH/DTCH data. Otherwise, the Scheduling Information with empty buffer status report is transmitted separately with the next MAC-i PDU.

[..]

If the UE is sending DTCH or DCCH data, the UE shall release the common E-DCH resource under following conditions:

[..]

- "E-DCH transmission continuation back off" is not set to "infinity", the empty buffer status (TEBS = 0 byte) has been reported and no MAC-i PDU is left in a HARQ process for (re-)transmission.

[..]

Reference(s)

TS 25.321 clause 11.2.2A, 11.8.1.6, 11.8.1.9

7.1.8.6.3 Test purpose

1. To verify that the UE releases E-DCH resources implicitly only if “E-DCH transmission continuation backoff is not set to “infinity”.
2. To verify that, when “E-DCH transmission continuation backoff is set to “infinity” and all data have been sent, the UE send the Scheduling Information with empty buffer status report in the same MAC-i PDU carrying the last DCCH/DTCH data.

7.1.8.6.4 Method of test

Initial conditions

System Simulator

1 cell, default parameters, Ciphering Off

User Equipment:

SS shall broadcast SIB5/SIB5bis with Common E-DCH/HS-DSCH information with specific message content given below.

The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 9.1 using condition “AM Packet to Enhanced CELL_FACH from Enhanced CELL_FACH in PS with SRBs mapped on common E-DCH/HS-DSCH”.

UE is in Enhanced CELL_FACH state with DTCH/DCCH on common E-DCH / HS-DSCH.

The radio bearer is placed in UE loop-back mode 1 with the UL SDU size set to 10 bytes.

Test procedure

a) UE has common E-DCH resource and allocated E-RNTI to allow data transmission on DTCH. SS sends absolute grant with value of 4 which is sufficient for the UE to transmit data.

b) The SS sends 1 RLC SDU of size 10 bytes on the downlink.

c) The SS receives looped back data on the common E-DCH channel.

NOTE: Data should be looped back before E-DCH-transmission continuation back off period expires.

d) The SS waits sufficient time for the "E-DCH transmission continuation back off" period to expire after loop back data transfer.

e) The SS sends 1 RLC SDU of size 10 bytes on the downlink.

f) The SS checks that original common E-DCH channel has been implicitly released by checking that UE initiates a PRACH preamble and Acquisition Indication for a new common E-DCH channel which is used to loop back the data. SS checks the loop back data.

g) SS checks that all the data is looped back on common E-DCH channel.

h) SS sends Explicit Release on E-AGCH to release the common E-DCH resource.

i) The SS commences required actions for acquisition indication and assignment of a common E-DCH resource for RACH preamble phase.

j) The SS issues an absolute grant on E-AGCH with the UE's E-RNTI and a signalling value of 4 during the collision resolution phase to allow the UE to transmit data. SS ensure that E-AGCH is received by UE within Maximum period for collision resolution time interval.

k) UE performs PRACH preamble and Acquisition Indication for a common E-DCH resource allocation.

l) After 120TTI, the SS checks that common E-DCH has not been released by checking that there is still transmission on UL DPCCH assigned to that resource.

m) After 120TTI, the SS checks that common E-DCH has not been released by checking that data can be looped back on the existing common E-DCH without PRACH preamble and AICH procedure for acquiring a common E-DCH resource. The SS also checks that the UE includes the SI with TEBS=0 in the same MAC-i PDU together with the DCCH/DTCH data.

Expected sequence

Reference(s)

TS 25.321 clause 11.2.2A, 11.8.1.9

7.1.8.6a.3 Test purpose

1. To verify that, when “E-DCH transmission continuation back off" value is set to "0" and UE has resources to transmit all remaining data and a SI, the UE transmit a SI with TEBS=0 in a MAC-i PDU together with the remaining DCCH/DTCH data.

2. To verify that, when “E-DCH transmission continuation back off" value is set to "0" and UE has not resources to transmit all remaining data and a SI, the UE transmit a SI with TEBS=0 separately with the next MAC-i PDU.

7.1.8.6a.4 Method of test

Initial conditions

System Simulator

1 cell, default parameters, Ciphering Off

SS shall broadcast SIB5/SIB5bis with Common E-DCH/HS-DSCH information with specific message content given below.

User Equipment:

UE is in Enhanced CELL_FACH state with DTCH/DCCH on common E-DCH / HS-DSCH.

The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 9.1 using condition “AM Packet to Enhanced CELL_FACH from Enhanced CELL_FACH in PS with SRBs mapped on common E-DCH/HS-DSCH”.

The radio bearer is placed in UE loop-back mode 1 configured to return UL RLC SDUs of the same size as the received DL RLC SDUs.

Test procedure

a) UE has common E-DCH resource and allocated E-RNTI to allow data transmission on DTCH. SS sends absolute grant with value of 30.

b) The SS sends 1 RLC SDU of size 12 bytes on the downlink.

c) The UE has enough resources to transmit all data and SI with TEBS=0. The SS receives looped back data and a SI with TEBS=0 in the same MAC-i PDU on the common E-DCH channel.

d1) After UE has received the HARQ ACK then is the UE performing an implicit release.

NOTE 1: UE is performing an implicit release as “E-DCH transmission continuation back off" value is set to "0" in broadcasted SIB5 and all data have been transmitted.

d2) The SS sends 1 RLC SDU of size 12 bytes on the downlink.

e) The SS checks that original common E-DCH channel has been implicitly released by checking that UE initiates a PRACH preamble and Acquisition Indication for a new common E-DCH channel which is used to loop back the data. SS sends absolute grant with value of 10 allowing UE to return data only.

NOTE 2: An absolute grant of 10 corresponds to AG Index 5, E-TFCI = 1. TBS = 120 bits. With 24 bits for MAC-i/is header of 24 bits this allows 96 bits for data (12 bytes).

f) The SS receives looped back data only in a MAC-i PDU on the common E-DCH channel.

g) The SS receives a MAC-i PDU with SI with TEBS=0 on the common E-DCH channel.

h) After UE has received the HARQ ACK then is the UE performing an implicit release.

NOTE 3: UE is performing an implicit release as “E-DCH transmission continuation back off" value is set to "0" in broadcasted SIB5 and all data have been transmitted.

i) The SS sends 1 RLC SDU of size 12 bytes on the downlink.

j) The SS checks that original common E-DCH channel has been implicitly released by checking that UE initiates a PRACH preamble and Acquisition Indication for a new common E-DCH channel which is used to loop back the data. SS sends absolute grant with value of 30 allowing UE to return data and SI on the same MAC-i PDU.

k) The UE has enough resources to transmit all data and SI with TEBS=0. The SS receives looped back data and a SI with TEBS=0 in the same MAC-i PDU on the common E-DCH channel.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←			UE has common E-DCH with E-RNTI allocated. The user plane RAB uses DTCH transmission.
2	←		Absolute Grant	Serving Grant 30. (Note 1)
3	←		RLC SDU	SS sends 1 RLC SDU of size 12 bytes on the downlink
4	→		RLC SDU	SS checks that UE transmits the loop back data and a SI with TEBS=0 in the same MAC-i PDU on the common E-DCH
5	←		HARQ ACK	SS acknowledge the received RLC SDU and wait 100 ms for UE to release the resources
6	←		RLC SDU	SS sends 1 RLC SDU of size 12 bytes
7	<->		UE acquires common E-DCH resource	SS checks that UE perform PRACH Preamble prior to acquiring common E-DCH resource.
8	←		Absolute Grant	Serving Grant 10. (Note 2)

9	→	RLC SDU	SS receives and checks loop back data on the common E-DCH. The SS checks that no SI is received.
10	→	SI	SS checks that the UE transmit a MAC-I PDU with TEBS=0.
11	←	HARQ ACK	SS acknowledge the received SI and wait 100 ms for UE to release the resources
12	←	RLC SDU	SS sends 1 RLC SDU of size 12 bytes
13	<->	UE acquires common E-DCH resource	SS checks that UE perform PRACH Preamble prior to acquiring common E-DCH resource.
14	←	Absolute Grant	Serving Grant 30. (Note 1)
15	→	RLC SDU	SS receives and checks loop back data and a SI with TEBS=0 in the same MAC-i PDU on the common E-DCH.
Note 1: Grant value of 30 guarantees that UE have common resources to be able to transmit remaining data and the scheduling information in the same TTI. Note 2: Grant value of 10 guarantees that UE have common resources to be able to transmit remaining data only causing the scheduling information to be sent in next TTI.			

Specific Message Contents

Use the same message type found in clause 6.1.1 of TS 34.108, with SIB5 configured for common E-DCH / HS-DSCH, with the following exceptions.

System Information Block type 5/System Information Block type 5bis

7.1.8.6a.5 Test requirements

- At step 4 the UE shall include data and a SI with TEBS=0 in the same MAC-i PDU.
- At step 7, UE shall perform PRACH preamble and receive Acquisition Indication before looping back data on allocated common E-DCH resource.
- At step 10, UE shall send a MAC-I PDU including a SI with TEBS=0
- At step 13, UE shall perform PRACH preamble and receive Acquisition Indication before looping back data on allocated common E-DCH resource.

7.1.8.7 Physical Channel Failure for EUL in CELL-FACH during initial access preamble

7.1.8.7.1 Definition and Applicability

All UEs which support E-DCH in CELL_FACH

7.1.8.7.2 Conformance Requirement

- If the UE according to subclause 8.5.4A in [7] failed to establish the physical channels, or if the criteria for radio link failure are met as specified in subclause 8.5.6 in [7], then the timer T_2 is started. After the expiry of T_2 a

backoff timer T_{BO1} is started. Backoff timer T_{BO1} is set to an integer number N_{BO1} of 10 ms time intervals, randomly drawn within an interval $0 \leq N_{BO1min} \leq N_{BO1} \leq N_{BO1max}$ (with uniform distribution). N_{BO1min} and N_{BO1max} may be set equal when a fixed delay is desired, and even to zero when no delay other than the one due to persistency is desired. The procedure ends if timer TBO1 expires or the UE performs cell reselection while timer TBO1 is running, whatever occurs first. In case of a cell reselection, the timer TBO1 is stopped.

[…]

When the physical channel establishment for Enhanced Uplink in CELL_FACH state and Idle mode is initiated by the UE, the UE shall considered the physical channel being immediately established.

If the physical layer considers the post-verification of procedure AA failed [29, section 4.3.2.3A], the UE shall consider this as a "physical channel failure".

NOTE: The criteria defined in this subclause only apply in case the UE performs synchronisation procedure AA (FDD only).

[…]

d) The UE shall start transmission on uplink at the time defined for the Enhanced Uplink in CELL_FACH state and IDLE mode in [1] and shall use a post-verification period for confirming the establishment of the downlink physical channel as follows: During the first 40 ms period of the first phase of the downlink synchronisation procedure the UE shall control its transmitter according to a downlink F-DPCH quality criterion as follows:

- When the UE estimates the F-DPCH quality over the first 40 ms period of the first phase of the downlink synchronisation status evaluation to be worse than a threshold Q_{in}, the UE shall shut its transmitter off and consider post-verification failed. Q_{in} is defined implicitly by the relevant tests in [7].

If the post-verification has failed, the UE shall not transmit on uplink and await higher layer orders.

[…]

TS 25.321 11.2.2A , Figure 11.2.2A-2

TS 25.331 8.5.4A

TS 25.214 4.3.2.3A

7.1.8.7.3 Test purpose

To verify that UE detects physical channel failure in the RACH preamble procedure for enhanced uplink in CELL_FACH and ends that access attempt.

7.1.8.7.4 Method of test

Initial conditions

Test case shall be attempted on E-DCH TTI 10msec, irrespective of the device E-DCH category.

System Simulator:

1 cell, default parameters, Ciphering Off.

SS shall broadcast SIB5/SIB5bis with condition B3 “Only for cells which configure common E-DCH and HS-DSCH reception in CELL_FACH”.

User Equipment:

UE: Idle state (state 3 or state 7) as specified in clause 7.4 of TS 34.108 with a CN UE identity, depending on the CN domain(s) supported by the UE.

Test procedure

a) SS does not send F-DPCH.

b) SS transmits the PAGING TYPE 1 with cause terminating conversational call.

c) UE sends an access preamble.

d) SS responds with positive E-AI but does not send F-DPCH.

e) UE detects Physical channel failure

f) UE should end the RACH attempt

g) UE waits for T2 expiry (10ms) + Tbo1 expiry (<= UE shall not attempt another RACH transmission while in waiting for the timer to expire.)

h) UE takes 40 ms to detect the Physical Channel failure at step (d) after SS has stopped F-DPCH transmission. During this period the UE is not allowed to transmit on uplink, since the additional e-dch transmission back off is set to 5, which means ((1+5)*10msec tti = 60 msec). Therefore the SS shall not receive the uplink RLC SDU. As in the MAC layer, the check for physical channel failure is done after the data is passed to the physical layer, MAC considers the RRC Connection Request sent although it is actually lost at the physical layer.

i) UE then sends another access preamble. The preamble should be triggered by MAC upon receiving RRC connection request from RRC after T300 expiry.

j) SS responds with E-AI and sends F-DPCH as per normal RACH attempt.

k) The UE sends an RRC connection request

l) SS sends RRC Connection Reject to terminate the procedure

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
				SS does not transmit F-DPCH.
1	←		Paging Type 1	SS starts to transmit this message on the PCCH at the correct paging occasion with cause “Terminating Interactive Call”
2	→		Access Preamble	
3	←		AICH = POS ACQUISITION IND	
4				SS waits for for the expiry of T300 (minus tolerances) and checks that UE shall not send any RLC PDUs or perform a new Access Preamble. UE takes 40 ms to detect the physcial channel failure, but due to the value of “Additional E-DCH transmission back off”, no E-DPDCH transmissiong is allowed for 60 ms, therefore the UE will not transmit any RLC PDU or perform a new Access Preamble until the expiry of T300
4a	→		Void	
4b				SS establishes the required physical channels including F-DPCH as per normal enhanced RACH preamble procedure
5	→		Access Preamble	UE initiates new PRACH preamble attempt after the expiry of T300
6	←		AICH = POS ACQUISITION IND	
7	<->			UE acquires common E-DCH resource
8	→		RRC CONNECTION REQ	Establishment ***cause***=”Terminating Interactive call”
9	←		RRC CONNECTION REJECT	IE "wait time" set to 0 to bring the UE to idle mode.

Specific Message Contents

RRC CONNECTION REJECT (Step 9)

Use the same message type found in clause 9 of TS 34.108, with the following exception.

Information Element	Value/remark
Initial UE Identity	Same as the type and value defined in RRC CONNECTION REQUEST message (step 8)
Reject Cause	Congestion
Wait time	0 second

7.1.8.7.5 Test requirements

1. At step 5, SS checks that UE sends another preamble.
2. At step 8 , UE should send an RRC Connection Request.

7.1.8.8 Radio Link Failure for Enhanced UL in CELL-FACH with DTCH/DCCH active

7.1.8.8.1 Definition and Applicability

All UEs which support E-DCH in CELL_FACH

7.1.8.8.2 Conformance Requirement

For FDD, in CELL_FACH state and Idle mode, in conjunction with the Enhanced Uplink in CELL_FACH state, after receiving an indication from layer 1 that physical layer transmission stopped caused by an DL out-of-synchronisation, the UE shall:

1> consider it as a "Radio link failure".

[…]

The E-DCH enhanced physical random access transmission procedure is completed with release of the allocated common E-DCH resource, if one of the following conditions is fulfilled:

- If the UE according to subclause 8.5.4A in [7] failed to establish the physical channels, or if the criteria for radio link failure are met as specified in subclause 8.5.6 in [7], then the timer T_2 is started. After the expiry of T_2 a backoff timer T_{BO1} is started. Backoff timer T_{BO1} is set to an integer number N_{BO1} of 10 ms time intervals, randomly drawn within an interval $0 \leq N_{BO1min} \leq N_{BO1} \leq N_{BO1max}$ (with uniform distribution). N_{BO1min} and N_{BO1max} may be set equal when a fixed delay is desired, and even to zero when no delay other than the one due to persistency is desired. The procedure ends if timer TBO1 expires or the UE performs cell reselection while timer TBO1 is running, whatever occurs first. In case of a cell reselection, the timer TBO1 is stopped.

[…]

TS 25.331 8.5.6

TS 25.321 11.2.2A

7.1.8.8.3 Test purpose

To verify that UE releases common E-DCH resource in the event of radio link failure when DTCH/DCCH is active in Enhanced CELL_FACH state.

7.1.8.8.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

System Information Block type 5 (FDD)

Use the default parameter values for the system information block 5 with the same type specified in clause

6.1.0b of TS 34.108 for common E-DCH and HS-DSCH reception in CELL_FACH, with the following exceptions:

Information Element	Value/Remark
- Common EDCH System Info	
- E-DCH transmission continuation back off	Infinity

User Equipment:

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed with all the parameters as specified in the procedure, with the exception that the default Radio Bearer is replaced with the RB according to clause 6.10.2.4.6.3 using condition A29 with RB mapping to HS-DSCH and E-DCH. The MAC-d flow of the user plane RB is configured for scheduled transmissions. The logical channel, transport channel and common MAC-d flow identities are set to:

Logical Channel ID	MAC-d flow (UL)	Priority	Comment
7 (LCH1)	2	8	RB25
Note: The RAB combination also includes SRBs on E-DCH on MAC-d flow 1 which is not used in the testcase			

The UE is placed into UE test loop mode 1 with the UL SDU size set to 39 octets for RB25

Test procedure

1. SS transmits 1 SDU of size 40 bytes
2. SS waits until data is received and checks that all the data is received. SS checks that there is no RACH preamble prior to data loopback because UE has common E-DCH resource
3. SS stops F-DPCH transmission for 5 seconds. This should be sufficient time for UE to detect Radio Link Failure
4. SS transmits 1 SDU of size 40 bytes
5. UE shall acquire common E-DCH resource as SS resumes F-DPCH following positive AI. SS waits until data is received and checks that all the data is received. SS checks that there is RACH preamble prior to data loopback
6. SS opens the test loop and releases the radio bearer

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1			RB ESTABLISHMENT	See generic procedures, UE has acquired common E-DCH resource and uses this for UL transmission.
2			Close UE test loop	
2a			Absolute Grant	Serving Grant 4
3	←		DOWNLINK RLC SDU	SDU size = 40 Octets
4	→		UPLINK RLC SDU	The SS checks length and content of the received RLC SDUs. SS checks that there is no RACH preamble prior to data loopback on common E-DCH resource.
5				SS stops F-DPCH transmission
6				Wait 5 seconds. This time is sufficient for UE to detect Radio Link failure and release common E-DCH resource
7	←		DOWNLINK RLC SDU	SDU size = 40 Octets
8	<->		UE acquires common E-DCH resource	SS checks for preamble PRACH and sets up the necessary channels, including the resumption of F-DPCH transmission, and takes the steps necessary for UE to acquire common E-DCH resource
8a			Absolute Grant	Serving Grant 4
9	→		UPLINK RLC SDU	The SS checks length and content of the received RLC SDUs.
10			OPEN UE TEST LOOP PROCEDURE	
11			RB RELEASE	

7.1.8.8.5 Test requirements

- at step 4, the UE shall return 1 SDU with the same content as the transmitted SDU on common E-DCH resource without RACH preamble.
- at step 8, UE shall send RACH preamble.
- t step 9 the UE shall return 1 SDU with the same content as the transmitted SDU on common E-DCH resource.

7.1.8.9 CCCH transmission E-DCH access, the UL transmission within the Scheduling Windows

7.1.8.9.1 Definition and Applicability

1.28Mcps TDD UEs which support E-DCH in CELL_FACH

7.1.8.9.2 Conformance Requirement

Extract from 25.331 8.5.46:

For 1.28 Mcps TDD, whenever the variable COMMON_E_DCH_TRANSMISSION is set to TRUE, the UE shall:

1> if CCCH message is submitted for transmission on the uplink and if the variable E_RNTI is not set:

2> select a common E-RNTI according to subclause 8.5.50;

2> perform E-RUCCH transmission procedure, using the selected common E-RNTI as UE identity;

2> use the selected common E-RNTI as UE identity in the E-AGCH reception procedure in the physical layer in the common E-RNTI scheduling window according to subclause 8.5.50.

1> else:

2> perform E-RUCCH transmission procedure according to the stored PRACH configuration (see [60]), using the value stored in the variable E_RNTI as UE identity;

2> use the value stored in the variable E_RNTI as UE identity in the E-AGCH reception procedure in the physical layer.

1> perform E-HICH reception procedures for the serving E-DCH radio link;

1> perform E-PUCH transmission procedures according to the stored E-PUCH configuration;

1> perform the inclusion of MAC-d PDUs and MAC-c PDUs in a MAC-i PDU for logical channels belonging to the MAC-d flows in accordance with the received scheduling grant on E-AGCH (see [15]).

NOTE: For 1.28 Mcps TDD, when performing E-DCH transmission in CELL_FACH state and Idle mode, the UE shall use the tables of transport block size for the E-DCH physical layer category 3 as specified in [15].

…

When the IE "Common E-RNTI Information" is included in System Information Block type 5, and if the UE is in CELL_FACH state or Idle mode, and if the variable E_RNTI is not set, UE shall use a common E-RNTI for CCCH transmission (i.e. the common E-RNTI identifies the initial access, including RRC connection request and cell update after cell re-selection):

1> configure the MAC layer with the information in the IE(s) "Common E-RNTI information";

1> when a CCCH message is to be sent, and if the variable E_RNTI is not set, the MAC layer operates as follows:

2> select an E-RUCCH;

2> select the instance of the IE(s) "Common E-RNTI information" which is related to the selected E-RUCCH;

2> select a common E-RNTI which is related to the selected E-RUCCH according to the following procedure:

3> compile a list of candidate common E-RNTI group from the selected instance of the IE(s) "Common E-RNTI information" in the order of appearance in System Information Block type 5, and select a common E-RNTI group from the list of candidate Common E-RNTI groups based on the E-RUCCH transmission occasion:

"Index of selected Common E-RNTI group" = SFNE-RUCCH mod K, for TTI of E-RUCCH = 10ms;

or "Index of selected Common E-RNTI group" = SFN'E-RUCCH mod K, for TTI of E-RUCCH = 5ms;

Where K is the number of E-RNTI groups related to the E-RUCCH; $SFN_{E\text{-}RUCCH}$ or $SFN'_{E\text{-}RUCCH}$ is the frame or sub-frame on which the E-RUCCH shall be sent [33].

3> select a common E-RNTI randomly amongst the candidate the candidate E-RNTIs in the selected group.

2> use the value of the selected common E-RNTI as UE identity in current E-RUCCH transmission, and in the E-AGCH reception within the common E-RNTI scheduling window which is of K frames or K sub-frames length.

References(s)

3GPP TS 25.331 clause 8.5.46, 8.5.50.

7.1.8.9.3 Test purpose

The purpose of the test case is to verify support of CCCH transmission E-DCH with common E-RNTI.

7.1.8.9.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

UE: Idle state (state 2 or state 3 or state 7) as specified in clause 7.4 of TS 34.108 with a CN UE identity, depending on the CN domain(s) supported by the UE.

Test procedure

k) SS transmits the PAGING TYPE 1 with cause BCCH modification.

l) SS transmits the changed system information SIB5 / SIB5 bis. UE updates the stored SIBs. The new SIB 5 / SIB5-bis contains the common E-DCH related information.

m) SS transmits the PAGING TYPE 1 with cause terminating conversational call.

n) SS receives E-RUCCH

o) SS transmits a AGCH.

p) SS receives the RRC CONNECTION REQ sent by UE

q) SS transmits a RRC CONNECTION REJECT.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		Paging Type 1	BCCH change ind
2	←		SIB1 and SIB 5/ SIB5 bis	SS transmits E-DCH common information to UE
3				SS waits 5s (to ensure that the UE has time to read the new system information)
4	←		Paging Type 1	SS starts to transmit this message continuously on the PCCH at the correct paging occasion with cause “Terminating conversational call”
5	→		E-RUCCH	SS checks UE use correct common E-RNTI.
6	←		AGCH	
7	→		RRC CONNECTION REQ	
8	←		RRC CONNECTION REJECT

7.1.8.10.3 Test purpose

The purpose of the test case is to verify support of DTCH/DCCH transmission with E-RUCCH access for dedicated control signalling or dedicated user data when dedicated E-RNTI is allocated

7.1.8.10.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

UE: PS-DCCH+DTCH_FACH (state 6-11) as specified in clause 7.4 of TS 34.108 with a dedicated E-RNTI is allocated.

Test procedure

a) The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 6.11.5.4.7.2 using condition A11 as specified in clause 9.1 of TS 34.108.. See note 1.

b) The SS closes the test loop using UE test loop mode 1 and configuring the UL RLC SDU size to be equal to the received DL SDU size (i.e. not setting the UL RLC SDU size parameter).

c) The SS transmits one RLC SDU of size 320 bits,

d) The SS waits for an E-RUCCHwith SI to be received that indicates that the one RLC SDU is available for transmission (can be identified from the content of the SI)

e) The SS issues an absolute grant that allows the UE to send

f) The SS waits until data is received and verifies that the looped back SDU has correct content

g) The SS opens the UE test loop.

h) The SS release the radio bearer.

i) The SS may optionally deactivate the radio bearer test mode.

Expected sequence

7.1.8.10.5 Test requirements

1. At step 19 , SS checks UE send correct RLC SDU.

7.1.9 E-DCH MAC-is/i for Dual-Cell HSUPA

7.1.9.1 MAC-i/is multiplexing for Dual-Cell HSUPA

7.1.9.1.1 Definition and applicability

Applicable for all UEs supporting MAC-i/is, DC-HSDPA and DC-HSUPA

7.1.9.1.2 Conformance Requirement

From 25.321 clause 9.1.5:

When MAC-i/is is configured, there are two MAC sublayers, MAC-i and MAC-is. MAC-is sits on top of MAC-i and receives PDUs directly from MAC-d. When MAC-i/is is configured, a MAC PDU for E-DCH consists of one MAC-i header and one or more MAC-is PDUs. Each MAC-is PDU consists of one or more MAC-is SDUs belonging to the same logical channel. Each MAC-is SDU equals a complete or a segment of a MAC-d PDU. The MAC-is SDUs can have different sizes. The LCH-ID and L fields are repeated per MAC-is SDU. The TSN and SS fields are repeated per

MAC-is PDU. Multiple MAC-is PDUs from multiple logical channels, but only one MAC-i PDU can be transmitted in a TTI. In case sufficient space is left in the E-DCH transport block or if Scheduling Information needs to be transmitted, an SI will be included at the end of the MAC-i PDU (see subclause 9.2.4.2).

[…]

From 25.321 clause 4.2.3.6:

- Multiplexing and TSN setting:

The multiplexing and TSN setting entity is responsible for concatenating multiple MAC-d PDUs into MAC-is PDUs, and to multiplex one or multiple MAC-is PDUs into a single MAC-i PDU, or, when more than one uplink frequency is activated, one or two MAC-i PDUs, to be transmitted in the next TTI, as instructed by the E-TFC selection function. It is also responsible for managing and setting the TSN per logical channel for each MAC-is PDU.

[…]

From 25.321 clause 11.8.1.2.1:

When one uplink frequency is configured, after each MAC-es PDU or MAC-is PDU is multiplexed:

- increment CURRENT_TSN by 1;
- if CURRENT_TSN > 63:
  - set CURRENT_TSN = 0.

When more than one uplink frequency is configured, after each MAC-is PDU is multiplexed:

- increment CURRENT_TSN by 1;
- if CURRENT_TSN > 16383:
  - set CURRENT_TSN = 0.

[…]

From 25.331 clause 8.6.5.18:

1> if the IE "E-DCH MAC-d flow multiplexing list" is included:

2> only multiplex MAC-d PDU’s from the E-DCH MAC-d flow indicated in the IE "E-DCH MAC-d flow identity" with MAC-d PDU’s from E-DCH MAC-d flows with which multiplexing in the same MAC-e or MAC-i PDU is allowed in accordance to the IE "E-DCH MAC-d flow multiplexing list".

Reference(s)

TS 25.321 clause 9.1.5, 4.2.3.6, 11.8.1.2.1, TS 25.331 clause 8.6.5.18

7.1.9.1.3 Test purpose

1. To verify that the UE, when Dual-Cell E-DCH is configured, multiplex multiple MAC-is PDUs into two MAC-i PDUs.
2. To verify that the UE, when Dual-Cell E-DCH is configured, use the extended TSN range (0 to 16383).

7.1.9.1.4 Method of test

Initial conditions

System Simulator:

2 cells –Cell 1/2 DC HSDPA and DC HSUPA cell(s) with Cell 1 (Serving HS.DSCH cell/Primary uplink frequency) and Cell 2 (Secondary serving HS.DSCH cell /Secondary uplink frequency) and Ciphering Off.

User Equipment:

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed with all the parameters as specified in the procedure, with the exception that the default Radio Bearer is replaced with the

Radio Bearers according to clause 6.11.4k.4 (Flexible RLC + MAC-i/is + MAC-ehs), but with downlink SRBs mapped to HS-DSCH instead of DCH for 2 PS RABs using condition A25c to configure Dual-Cell E-DCH operation.

The MAC-d flows are configured for scheduled transmissions. The following parameters are specific for this test case with the logical channel, transport channel and queue identities set to:

Logical Channel ID	MAC-d flow (UL)	Priority	Comment
7 (LCH1)	2	6	RB26
8 (LCH2)	3	7	RB27
Note: The RAB combination also includes SRBs on E-DCH on MAC-d flow 1 which is not used in the test case			

The following parameters are specific for this test case.

Parameter	Value
Periodicity for Scheduling Info – no grant	500 ms (see 25.331 10.3.6.99) (FDD)
E-DCH MAC-d flow multiplexing list	Flow 2 = 00100000 Flow 3 = 00010000 See 25.331 10.3.5.1b
Reference E-TFCIs	11 and 125

Secondary uplink frequency is activated using HS-SCCH Order as specified in the TS 25.212, clause 4.6C.2.2.2.

The UE is placed into UE test loop mode 1 with the UL SDU size for LCH 1 and LCH2 set to 40 octets.

Test procedure

a) The SS has not issued any scheduling grant for E-DCH to the UE

b) The SS transmits one RLC SDU of size 40 bytes on LCH1

c) The SS transmits one RLC SDU of size 40 bytes on LCH2

d) The SS waits for UE to send a SI indicating that all data received in steps b and c is available for transmission.

e) The SS issues an absolute grant on both the uplink frequency that allows the UE to loopback the received data (signalling value 8)

f) The SS checks that the UE returns one RLC SDU for LCH1 and one RLC SDU for LCH2 in 2 MAC-i PDUs in the same TTI. The SS checks the TSN value for each LCH. For the first iteration the TSN value shall be '0'. For each successive iteration the UE shall increment the TSN value by 1 modulo 16383.

g) The SS removes the scheduling grant for E-DCH for the UE.

h) The SS repeats step b to step g 65 times.

NOTE: The UE may send an SI after step 1 or step 2 indicating that only part of the data is available for transmission. These SIs will be ignored by the SS.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		

1	←	1 RLC SDU on LCH 1	
2	←	1 RLC SDU on LCH 2	
3	→	SI	SS waits until UE sends a SI indicating that all data sent in steps 1 and 2 are available for transmission in uplink. This can be verified from the indicated fraction of data on LCH1 and LCH2. The SS ignores any SI indicating that only part of the data sent in step 1 and 2 is available for transmission in uplink.
4	←	Absolute grant	Absolute grant allowing UE to transmit all data on both E-DCH (signalling value 8)
5	→	2 MAC-i PDUs	Two MAC-i PDUs shall be received in the same TTI containing one RLC PDU on LCH 1 and one RLC PDU on LCH 2. SS check the TSN value for MAC-I PDU.
6	←	SS removes the scheduling grant	
7	SS		Repeat steps 1 to 65 times

Specific Message Contents

None

7.1.9.1.5 Test requirements

1. At step 5 the SS shall receive 2 MAC-i PDU in the same TTI containing one RLC PDU on LCH1 and one RLC PDU on LCH2.

2. At step 5 the TSN value for both MAC-I PDUs shall be:

   - Frist iteration: ‘0’;

   - Iteration 2 to 65: ‘1’ to ‘64’

7.1.9.2 Happy bit setting and SI handling for Dual-Cell HSUPA

7.1.9.2.1 Definition and applicability

All UEs which support Dual-Cell HSDPA and Dual-Cell E-DCH.

7.1.9.2.2 Conformance requirement

The happy bit is a single bit field that is passed from MAC to the physical layer for inclusion on the E-DPCCH. This field takes two values, "Not Happy" and "Happy" indicating respectively whether the UE could use more resources or not. The setting of the Happy Bit is defined in subclause [TS 25.321] 11.8.1.5.

A happy bit is reported on each of the Activated Uplink Frequencies.

[…]

The Happy Bit is included on the E-DPCCH for every E-DCH transmission on each Activated Uplink Frequency. E-DCH transmissions shall not be triggered specifically to allow the transmission of the happy bit.

RRC configures MAC with the duration Happy_Bit_Delay_Condition, over which to evaluate the current grant relative to the TEBS after application of the E-TFC selection procedure described in subclause 11.8.1.4.

For every E-DCH transmission and for each Activated Uplink Frequency, the Happy Bit on a frequency shall be set to "unhappy" if the three following criteria are met on that frequency:

1) UE is transmitting as much scheduled data as allowed by the current Serving_Grant in E-TFC selection on that frequency; and

2) UE has enough power available to transmit at higher data rate on that frequency; and

3) Based on the same power offset as the one selected in E-TFC selection to transmit data in the same TTI as the Happy Bit, TEBS would require more than Happy_Bit_Delay_Condition ms to be transmitted with the current Serving_Grant × the ratio of active processes to the total number of processes.

   If there is more than one Activated Uplink Frequency, based on the same power offset as the one selected in E-TFC selection on each Activated Uplink Frequency to transmit data in the same TTI as the Happy Bit, TEBS would require more than Happy_Bit_Delay_Condition ms to be transmitted with the current (Serving_Grant × the ratio of active processes to the total number of processes on the Primary Uplink Frequency) plus (Serving_Grant × the ratio of active processes to the total number of processes on the Secondary Uplink Frequency).

The first criteria is always true for a deactivated process and the ratio of the third criteria is always 1 for 10ms TTI.

Otherwise, the Happy Bit shall be set to "happy". When the UE has more than one Activated Uplink Frequency, the power used to assess whether the UE has enough power to transmit at a higher data rate on one Activated Uplink Frequency is based on the maximum remaining power allowed for E-DCH transmission on that Activated Uplink Frequency as determined by E-TFC selection described in subclause 11.8.1.4 and in [12].

In order to assess if it has enough power available to transmit at higher data rate on an Activated Uplink Frequency, the UE shall:

1) If MAC-i/is is configured, identify the E-TFC that has a transport block size at least 32 bits larger than the transport block size of the E-TFC selected for transmission in the same TTI as the Happy Bit. Otherwise, identify the E-TFC that has a transport block size at least *x* bits larger than the transport block size of the E-TFC selected for transmission in the same TTI as the Happy Bit, where *x* is the smallest RLC PDU size configured among all the logical channels that do not belong to non-scheduled MAC-d flows and which have data in the buffer; and

2) Based on the same power offset as the one selected in E-TFC selection to transmit data in the same TTI as the Happy Bit, check that the identified E-TFC is supported i.e. not blocked.

[…]

The Scheduling Information is located at the end of the MAC-e or MAC-i PDU and is used to provide the serving Node B with a better view of the amount of system resources needed by the UE and the amount of resources it can actually make use of. The transmission of this information will be initiated due to the quantization of the transport block sizes that can be supported or based on the triggers defined in subclause 11.8.1.6. When a Scheduling Information is transmitted, its contents shall always be updated in new transmissions with the buffer status after application of the E-TFC selection procedure described in subclause 11.8.1.4. The logical channels for which a non-scheduled grant is configured shall never be taken into account when putting together this information. In addition, the RRC may restrict applicability for logical channels for which no non-scheduled grant was configured.

A Scheduling Information is reported independently on each of the Activated Uplink Frequencies.

This information includes the following fields:

- Highest priority Logical channel ID (HLID):
  The HLID field identifies unambiguously the highest priority logical channel with available data. If multiple logical channels exist with the highest priority, the one corresponding to the highest buffer occupancy will be reported. The length of the HLID is 4 bits. In case the TEBS is indicating index 0 (0 byte), the HLID shall indicate the value "0000".

- Fields related to amount of available data:

- Total E-DCH Buffer Status (TEBS):
  The TEBS field identifies the total amount of data available across all logical channels for which reporting has been requested by the RRC and indicates the amount of data in number of bytes that is available for transmission and retransmission in RLC layer. If MAC-i/is is configured, it also includes the amount of data that is available for transmission in the MAC-i/is segmentation entity. When MAC is connected to an AM RLC entity, control PDUs to be transmitted and RLC PDUs outside the RLC Tx window shall also be included in the TEBS. RLC PDUs that have been transmitted but not negatively acknowledged by the peer entity shall not be included in the TEBS.

The length of this field is 5 bits. The values taken by TEBS are shown in Table 9.2.5.3.2.1.

Table 9.2.5.3.2-1: TEBS Values

Index	TEBS Value (bytes)
0	TEBS = 0
1	0 < TEBS ≤ 10
2	10 < TEBS ≤ 14
3	14 < TEBS ≤ 18
4	18 < TEBS ≤ 24
5	24 < TEBS ≤ 32
6	32 < TEBS ≤ 42
7	42 < TEBS ≤ 55
8	55 < TEBS ≤ 73
9	73 < TEBS ≤ 97
10	97 < TEBS ≤ 129
11	129 < TEBS ≤ 171
12	171 < TEBS ≤ 228
13	228 < TEBS ≤ 302
14	302 < TEBS ≤ 401
15	401 < TEBS ≤ 533
16	533 < TEBS ≤ 708
17	708 < TEBS ≤ 940
18	940 < TEBS ≤ 1248
19	1248 < TEBS ≤ 1658
20	1658 < TEBS ≤ 2202
21	2202 < TEBS ≤ 2925
22	2925 < TEBS ≤ 3884
23	3884 < TEBS ≤ 5160
24	5160 < TEBS ≤ 6853
25	6853 < TEBS ≤ 9103
26	9103 < TEBS ≤ 12092
27	12092 < TEBS ≤ 16062
28	16062 < TEBS ≤ 21335
29	21335 < TEBS ≤ 28339
30	28339 < TEBS ≤ 37642
31	37642 < TEBS

- Highest priority Logical channel Buffer Status (HLBS):
  The HLBS field indicates the amount of data available from the logical channel identified by HLID, relative to the highest value of the buffer size range reported by TEBS when the reported TEBS index is not 31, and relative to 50000 bytes when the reported TEBS index is 31. The length of HLBS is 4 bits. The values taken by HLBS are shown in table 9.2.5.3.2.2. In case the TEBS field is indicating index 0 (0 byte), the HLBS field shall indicate index 0.

Table 9.2.5.3.2-2: HLBS Values

Index	HLBS values (%)

0	0 < HLBS ≤ 4
1	4 < HLBS ≤ 6
2	6 < HLBS ≤ 8
3	8 < HLBS ≤ 10
4	10 < HLBS ≤ 12

13	55 < HLBS ≤ 68
14	68 < HLBS ≤ 82
15	82 < HLBS

- UE Power Headroom (UPH):
  The UPH field of a frequency indicates the ratio of the maximum UE transmission power and the corresponding DPCCH code power of that frequency defined in [17]. The length of UPH is 5 bits.

The Scheduling Information message is represented in figure 9.2.5.3.2-1 where for each field, the LSB is the rightmost bit in the figure and the MSB is the leftmost bit.

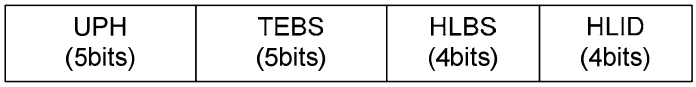

Figure 9.2.5.3.2-1: Scheduling Information format

7.1.9.2.3 Test purpose

1 To verify that UE makes the correct settings of happy bit for the primary and secondary frequency.

2. To verify that UE makes the correct settings of scheduling information for the primary and secondary frequency.

7.1.9.2.4 Method of test

Initial conditions

System Simulator:

2 cell – Cell 1/2 DC HSDPA and DC HSUPA cell(s) with Cell 1 (Serving HS-DSCH cell/Primary uplink frequency) and 2 (Secondary serving HS-DSCH/Secondary uplink frequency), Ciphering Off.

User Equipment:

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed with all the parameters as specified in the procedure, with the exception that the default Radio Bearer is replaced with the Radio Bearers according to clause 6.11.4k.4 (Flexible RLC + MAC-i/is + MAC-ehs), but with downlink SRBs mapped to HS-DSCH instead of DCH for 1 PS RAB using condition A25c to configure Dual-Cell E-DCH operation.

The MAC-d flows are configured for scheduled transmissions. The following parameters are specific for this test case with the logical channel, transport channel and queue identities set to:

Logical Channel ID	MAC-d flow (UL)	Priority	Comment
7	2	6	RB26
Note: The RAB combination also includes SRBs on E-DCH on MAC-d flow 1 which is not used in the test case			

The following parameters are specific for this test case

Parameter	Value
Happy bit delay condition	10 ms (see 25.331 10.3.6.98)
Periodicity for Scheduling Info – no grant	500 ms (see 25.331 10.3.6.99) (FDD)
Reference E-TFCIs	11 and 125

Secondary uplink frequency is activated using HS-SCCH Order as specified in the TS 25.212, clause 4.6C.2.2.2.

The UE is placed into UE test loop mode 1 with the UL RLC SDU size set to 39 octets.

Test procedure

In this test procedure the UE is configured with one logical channel with Id 7.

a) The SS has not issued any scheduling grant for E-DCH to the UE.

b) The SS transmits 5 RLC SDUs of size 39 bytes to the UE

c) The SS waits for the UE to send a SI on each Activated Uplink Frequency indicating that all data received in step b is available for transmission

d) The SS issues an absolute grant on each Activated Uplink Frequencies allowing the UE to transmit 3 RLC SDUs of size 39 bytes per TTI (signalling value 7 for FDD). This enables the UE to loopback all the received data.

e) The SS waits until all data is received in uplink and checks the happy bit on both E-DPCCH

f) The SS removes the scheduling grant for the UE (Signalling value 1 for FDD).

g) The SS transmits 200 RLC SDUs of size 39 bytes to the UE.

h) The SS waits for the UE to send a SI indicating that all data received in step g is available for transmission

i) The SS issues an absolute grant on both Activated Uplink Frequencies allowing the UE to transmit 1 RLC SDU of size 39 bytes per TTI on both uplink frequency (signalling value 3 for FDD).

j) The SS waits until data is received in uplink and checks the happy bit on both E-DPCCH

k) The SS issues an absolute grant allowing UE to transmit the remaining RLC SDUs (signalling value 31 for FDD)

l) The SS waits until all data has been received in uplink and checks the happy bit on both E-DPCCH

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		5 RLC SDUs	
2	→		SI	Scheduling Information on each Activated Uplink Frequency indicating that data received in step 1 is available for transmission
3	←		Absolute grants	Absolute grant on each Activated Uplink Frequency allowing the UE to transmit at least 3 RLC SDUs of size 39 bytes per TTI. Signalling value 7. Note : Grant on each Activated uplink frequency is sent on a specific activation time (i.e ACT_CFN_Step3 = (8 + Current CFN) MOD 256)
4	→		Data, happy bit	Happy bit on both E-DPCCH shall be set to happy in the first TTI containing data.
5	←		Removal of absolute grant	Signalling value 1 on each Activated Uplink Frequency
6	←		200 RLC SDUs	
7	→		SI	Scheduling Information on each Activated Uplink Frequency indicating that data received in step 6 is available for transmission
8	←		Absolute grants	Absolute grant on each Activated Uplink Frequency allowing the UE to transmit 1 RLC SDU of size 39 bytes per TTI. Signalling value 3. Grant on each Activated uplink frequency is sent on a specific activation time (i.e ACT_CFN_Step8 = (8 + Current CFN) MOD 256)
9	→		Data, happy bit	Happy bit on both E-DPCCH shall be set to unhappy in the first TTI containing data.
10	←		Absolute grants	Absolute grant on each Activated Uplink Frequency allowing the UE to transmit remaining RLC SDUs. Signalling value 31. Grant on each Activated uplink frequency is sent on a specific activation time (i.e ACT_CFN_Step10 = (8 + ACT_CFN_Step8) Note : Step 10 is pre configured before step 9 to ensure activation times are co-ordinated.
11	→		Data, happy bit	Happy bit on both E-DPCCH shall be set to happy in the first TTI containing data.

Specific Message Contents

None

7.1.9.2.5 Test requirements

1. In step 2 the SS shall receive a Scheduling Information on both Activated Uplink Frequencies indicating a total E-DCH Buffer Status (TEBS) Index > 0

2. In step 4 the SS shall for each Activated Uplink Frequency receive data and happy bit information. For each E-DPCCH the happy bit shall be set to happy in the first TTI containing data.
3. In step 9 the SS shall receive data and the happy bit from both E-DPCCH shall be set to unhappy in the first TTI containing data.
4. In step 11 the SS shall receive data and the happy bit from both E-DPCCH shall be set to happy in the first TTI containing data.

7.1.9.3 Void

7.1.9.4 Void

7.1.9.5 Deactivation and activation of secondary uplink frequency using HS-SCCH orders

7.1.9.5.1 Definition and applicability

This test apply for Release 9 and later releases for the FDD UE that supports HSDPA and Dual Cell E-DCH.

7.1.9.5.2 Conformance requirement

If the UE receives:

- a HS-SCCH order for secondary uplink frequency activation/deactivation

it shall:

1> if the variable SECONDARY_CELL_E_DCH_TRANSMISSION is set to TRUE and the HS-SCCH order is to activate the secondary uplink frequency:

2> consider the secondary uplink frequency as activated;

2> initiate the physical dedicated channel establishment procedure on the downlink frequency associated with the secondary uplink frequency according to the stored configuration;

2> configure the serving grant on the secondary uplink frequency in accordance with the IE "Serving Grant Value" configuration.

1> if the HS-SCCH order is to deactivate the secondary uplink frequency:

2> consider the secondary uplink frequency as not activated.

1> determine the value for the SECONDARY_CELL_E_DCH_TRANSMISSION and take the corresponding actions as described in subclause 8.5.58.

…

Whenever the variable SECONDARY_CELL_E_DCH_TRANSMISSION is set to TRUE, and the secondary uplink frequency is an activated uplink frequency, the UE shall:

1> perform E_AGCH reception procedures on the secondary serving E-DCH cell according to the stored E_AGCH configuration as stated in:

2> subclause 8.6.3.14 for the IE "Primary E-RNTI" and the IE "Secondary E-RNTI" for secondary serving E-DCH cell.

1> perform E-HICH reception procedures for all radio links in the secondary E-DCH active set;

1> perform E-RGCH reception procedures for all radio links in the secondary E-DCH active set for which an E-RGCH configuration has been provided;

1> perform uplink DPCCH transmission on the secondary uplink frequency according to the stored uplink DPCH info configuration as stated in:

2> subclause 8.6.6.6 for the IE "Uplink DPCH info";

2> subclause 8.6.6.49 for the IE "Uplink Secondary Cell Info FDD".

1> perform E-DPCCH transmission procedures on the secondary uplink frequency according to the stored E-DPCCH configuration as stated in:

2> subclause 8.6.6.37 for the IE "E-DPCCH Info";

2> subclause 8.6.6.49 for the IE "Uplink Secondary Cell Info FDD".

1> perform E-DPDCH transmission procedures on the secondary uplink frequency according to the stored E-DPDCH configuration as stated in:

2> subclause 8.6.5.16 for the IE "E-DCH Transmission Time Interval";

2> subclause 8.6.5.17 for the IE "HARQ info for E-DCH";

2> subclause 8.6.6.37 for the IE "E-DPDCH Info";

2> subclause 8.6.6.49 for the IE "Uplink Secondary Cell Info FDD".

1> inclusion of MAC-d PDU's in a MAC-i PDU for logical channels on the secondary uplink frequency shall:

2> be performed in accordance with the received scheduling grant on E-AGCH/E-RGCH (see [15]) on the downlink frequency associated with the secondary uplink frequency; and

2> obey the scheduling restrictions as specified for scheduled transmissions (see subclause 8.6.6.37).

Whenever the variable SECONDARY_CELL_E_DCH_TRANSMISSION is set to FALSE, or the secondary uplink frequency is not an activated uplink frequency, the UE shall:

1> not perform F-DPCH, E-AGCH, E-HICH and E-RGCH reception procedures on the downlink frequency associated with the secondary uplink frequency;

1> not perform DPCCH, E-DPCCH and E-DPDCH transmission procedures on the secondary uplink frequency

…

If the UE is configured with multiple uplink frequencies, HS-SCCH ordered deactivation or activation of the secondary serving HS-DSCH cell(s) is applied by the UE 18 slots after the end of the HS-SCCH subframe delivering the order, and any transient behaviour related to this change should take place before this point in time. If:

- the activation statuses of all secondary serving HS-DSCH cells in a frequency band (as defined in [7]) remain unaffected by the HS-SCCH ordered deactivation or activation and the serving HS-DSCH cell is not configured in this band or

- the activation statuses of all secondary serving HS-DSCH cells and the secondary uplink frequency in a frequency band remain unaffected by the HS-SCCH ordered deactivation or activation and the serving HS-DSCH cell is configured in this band

...

Figure 34 shows the timing offset between the uplink DPCH, the HS-PDSCH and the HS-DPCCH at the UE. An HS-DPCCH sub-frame starts $m \times 256$ chips after the start of an uplink DPCH frame that corresponds to the DL DPCH or F-DPCH frame from the HS-DSCH serving cell containing the beginning of the related HS-PDSCH subframe with m calculated as

$m = (T_{TX_diff} / 256) + 101$

where T_{TX_diff} is the difference in chips (T_{TX_diff} =0, 256, ..., 38144), between

- the transmit timing of the start of the related HS-PDSCH subframe (see sub-clauses 7.8 and 7.1)

and

- the transmit timing of the start of the downlink DPCH or F-DPCH frame from the HS-DSCH serving cell that contains the beginning of the HS-PDSCH subframe (see sub-clause 7.1).

At any one time, *m* therefore takes one of a set of five possible values according to the transmission timing of HS-DSCH sub-frame timings relative to the DPCH or F-DPCH frame boundary. The UE and Node B shall only update the set of values of *m* in connection to UTRAN reconfiguration of downlink timing.

More information about uplink timing adjustments can be found in [5].

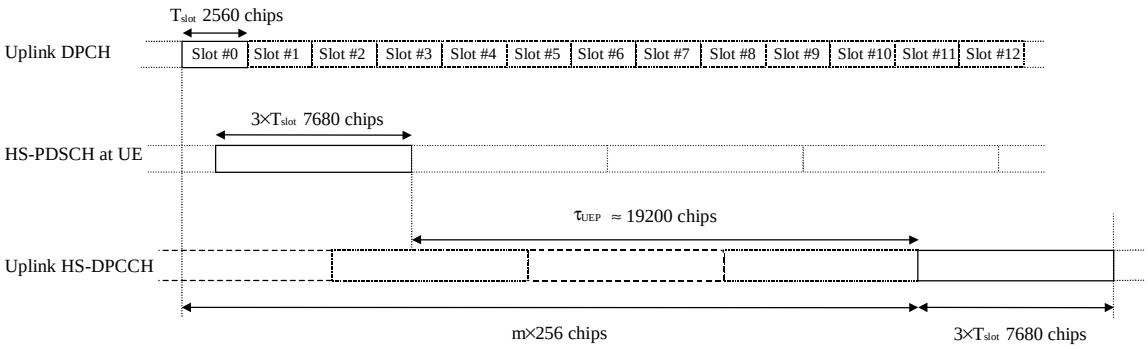

Figure 34: Timing structure at the UE for HS-DPCCH control signalling

...

Figure 35 shows the relative timing between the HS-SCCH and the associated HS-PDSCH for one HS-DSCH sub-frame. The HS-PDSCH starts $\tau_{HS\text{-}PDSCH} = 2\times T_{slot} = 5120$ chips after the start of the HS-SCCH.

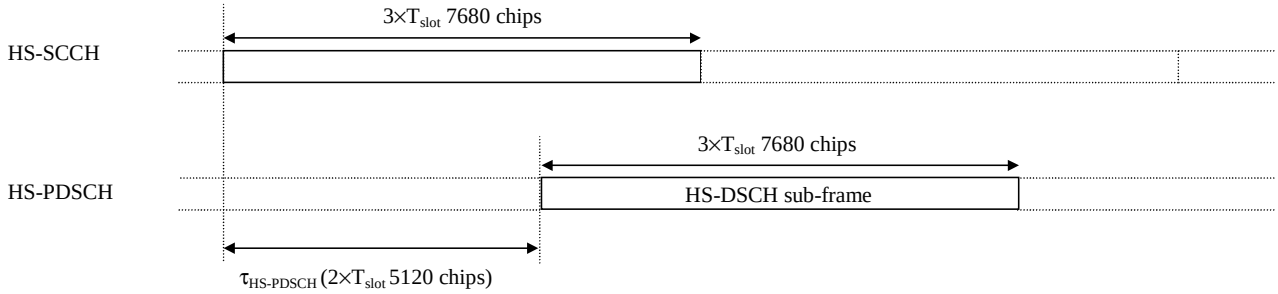

Figure 35: Timing relation between the HS-SCCH and the associated HS-PDSCH

Reference

3GPP TS 25.331 clause 8.5.58, 8.5.59. TS 25.214 clause 6A.1. TS 25.211 clause 7.7, 7.8.

7.1.9.5.3 Test purpose

1. To verify that UE deactivates the secondary uplink frequency when deactivation command is received on the HS-SCCH.

2. To verify that UE activates the secondary uplink frequency when activation command is received on the HS-SCCH.

7.1.9.5.4 Method of test

Initial Condition

System Simulator:

2 cells –Cell 1/2 DC HSDPA and DC HSUPA cell(s) with Cell 1 (Serving HS-DSCH cell/Primary uplink frequency) and Cell 2 (Secondary serving HS-DSCH cell /Secondary uplink frequency) and Ciphering Off.

UE:

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed with all the parameters as specified in the procedure, with the exception that the default Radio Bearer is replaced with the Radio Bearers according to clause 6.11.4k.4 (Flexible RLC + MAC-i/is + MAC-ehs), but with downlink SRBs mapped to HS-DSCH instead of DCH for 1 PS RAB using condition A25c to configure Dual-Cell E-DCH operation.

The UE is in secondary uplink frequency deactivation state after the establishment of the secondary uplink carrier.

UE is configured with DC-HSDPA in downlink and Flexible RLC, MAC-i/is in uplink.

The MAC-d flows are configured for scheduled transmissions. The following parameters are specific for this test case with the logical channel, transport channel and queue identities set to:

Logical Channel ID	MAC-d flow (UL)	Priority	Comment
7 (LCH1)	2	6	RB26
Note: The RAB combination also includes SRBs on E-DCH on MAC-d flow 1 which is not used in the test case			

The following parameters are specific for this test case.

Parameter	Value
Periodicity for Scheduling Info – no grant	500 ms (see 25.331 10.3.6.99) (FDD)
Reference E-TFCIs	11 and 125

Secondary uplink frequency is activated using HS-SCCH Order as specified in the TS 25.212, clause 4.6C.2.2.2.

The UE is placed into UE test loop mode 1 with the UL SDU size for LCH 1 set to 40 octets.

Test Procedure

The UE is configured with one logical channel. The logical channel is mapped to MAC-d flow 2.

a) The SS transmits an activation HS-SCCH order to the UE to activate secondary uplink carrier.

b) The UE shall respond with ACK on HS-DPCCH. SS check the ACK on HS-DPCCH.

c) The UE is in secondary uplink frequency activation state. SS should sent zero absolute grant to primary uplink carrier to restrict the data transfer on primary uplink carrier

d) The SS transmits one RLC SDU of size 40 bytes on LCH1

e) The SS waits for an SI to be received that indicates that data is available on LCH1

f) SS should send absolute grant on secondary uplink carrier allowing UE to transmit on secondary E-DCH(Signalling value 4)

g) The SS waits until data is received on the secondary uplink carrier to check that the UE has activated the secondary uplink frequency.

h) The SS transmits deactivation HS-SCCH order to the UE.

i) The UE shall respond with ACK on HS-DPCCH. SS check the ACK on HS-DPCCH.

j) The SS transmits one RLC SDU of size 40 bytes on LCH1

k) The SS waits for an SI to be received that indicates that data is available on LCH1

l) The data will not be received by the SS, if the UE has de-activated the secondary uplink frequency and there is one zero grant on primary carrier.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1	←		HS-SCCH order(Activation Command)	The UE is in secondary uplink frequency deactivation state after the establishment of the secondary uplink frequency. The HS-SCCH order is used to activate the secondary uplink frequency.
2	→		ACK	
3	←		Zero absolute grant on primary carrier	Disable the uplink data transmitting on primary uplink carrier
4	←		1 RLC SDU on LCH 1	
5	→		SI indicating data on LCH 1	
6	←		Absolute grant on secondary uplink carrier allowing UE to transmit on secondary E-DCH	signalling value 4
7	→		MAC-i PDUs containing 1 RLC PDU on LCH 1	MAC-I PDU should be received on the secondary uplink carrier
8	←		HS-SCCH order(De-Activation Command)	
9	→		ACK	
10	←		1 RLC SDU on LCH 1	
11	→		SI indicating data on LCH 1	SI should be received on the primary uplink carrier
12				SS check that no uplink data will be received during 10 TTIs

Specific Message Contents

HS-SCCH order

The following information is transmitted by means of the HS-SCCH order physical channel. The content of HS-SCCH order in this test case is specified in the TS 25.212, clause 4.6C.2.2.2.

- Order type (3 bits): *001*
- Order (3 bits): *011(Activation) / 001(Deactvation)*
- UE identity (16 bits): H-RNTI

7.1.9.5.4 Test requirement

At step 2 the UE shall transmit a HS-DPCCH ACK to respond the Activation Command.

At step 7 the UE shall transmit data to SS on the secondary uplink carrier.

At step 9 the UE shall transmit a HS-DPCCH ACK to respond the De-Activation Command.

After step 11 the UE should not send any data on the primary or secondary uplink carrier during the check time e.g. 10 TTIs.

7.1.10 Fallback to R99 PRACH in CELL_FACH

7.1.10.1 Fallback to R99 PRACH in CELL_FACH / Network indicates fallback to R99 PRACH on CCCH

7.1.10.1.1 Definition and applicability

This test apply for Release 11 and later releases for a FDD UE that supports Fallback to R99 PRACH in CELL_FACH.

7.1.10.1.2 Conformance requirement

[TS 25.319, clause 23.2]

The sub-feature of fallback to R99 PRACH allows the network to indicate to the UE to use a RACH resource instead of a common E-DCH resource for an uplink transmission, when a UE attempts to access on common E-DCH in CELL_FACH state and IDLE mode.

If configured by the network, the UE may be indicated to fallback to R99 PRACH using a 'NACK' on E-AI. The network may configure fallback to R99 PRACH for the logical channels CCCH and DCCH independently. If the network indicates fallback and the UE has data to transmit on the logical channels for which fallback has been configured, the UE attempts to accesses again using the RACH random access procedure to obtain a R99 RACH resource for the uplink transmission. If the network indicates fallback and the UE has data to transmit only on the logical channels for which fallback is not configured, the UE does not fallback to R99 PRACH and instead interprets it as if a NACK is received.

[TS 25.321, clause 11.2.2]

MAC receives the following RACH transmission control parameters from RRC with the CMAC-CONFIG-Req primitive:

- a set of Access Service Class (ASC) parameters, which includes for each ASC, i=0,…,NumASC an identification of a PRACH partition and a persistence value P_i (transmission probability);
- maximum number of preamble ramping cycles M_{max};
- range of backoff interval for timer $T_{BO1,}$ given in terms of numbers of transmission 10 ms time intervals N_{BO1max} and N_{BO1min}, applicable when negative acknowledgement on AICH is received.
- Fallback R99 PRACH parameters.

…

When the preamble has been acknowledged on AICH, L1 access information with parameter value "ready for data transmission" is indicated to MAC with PHY-ACCESS-CNF primitive. Also, if CCCH or DCCH fallback is configured, Fallback transmission initiation is reported to higher layers with a CMAC-STATUS-Ind primitive. Then data transmission is requested with PHY-DATA-REQ primitive, and the PRACH transmission procedure shall be completed with transmission of the PRACH message part according to L1 specifications. Successful completion (TX status) of the MAC transmission control procedure shall be indicated to higher layer.

…

If CCCH or DCCH fallback is configured, both transmission failure of the MAC transmission control procedure (due to e.g. Maximum number of preamble ramping cycles reached for RACH in FDD) and transmission success upon finishing transmission of the PRACH message part according to L1 specifications trigger a CMAC-STATUS-Ind which informs the RRC about the Fallback transmission termination.

[ST 25.321, clause 11.2.2A]

The transmissions in Enhanced Uplink in CELL_FACH state and Idle mode are controlled by the UE MAC sublayer as outlined in figures 11.2.2A-1, 11.2.2A-2 and 11.2.2A-3.

NOTE: The figures shall illustrate the operation of the transmission control procedure as specified below. It shall not impose restrictions on implementation. MAC controls the timing of each initial preamble ramping cycle as well as successive preamble ramping cycles in case that no or a negative acknowledgement is received carried with an AI on AICH, if the use of E-AIs is not configured, and in case that none is received carried with an AI or a negative acknowledgement is received carried with an E-AI, if the use of E-AIs is configured.

MAC receives the following random access transmission control parameters from RRC with the CMAC-CONFIG-Req primitive:

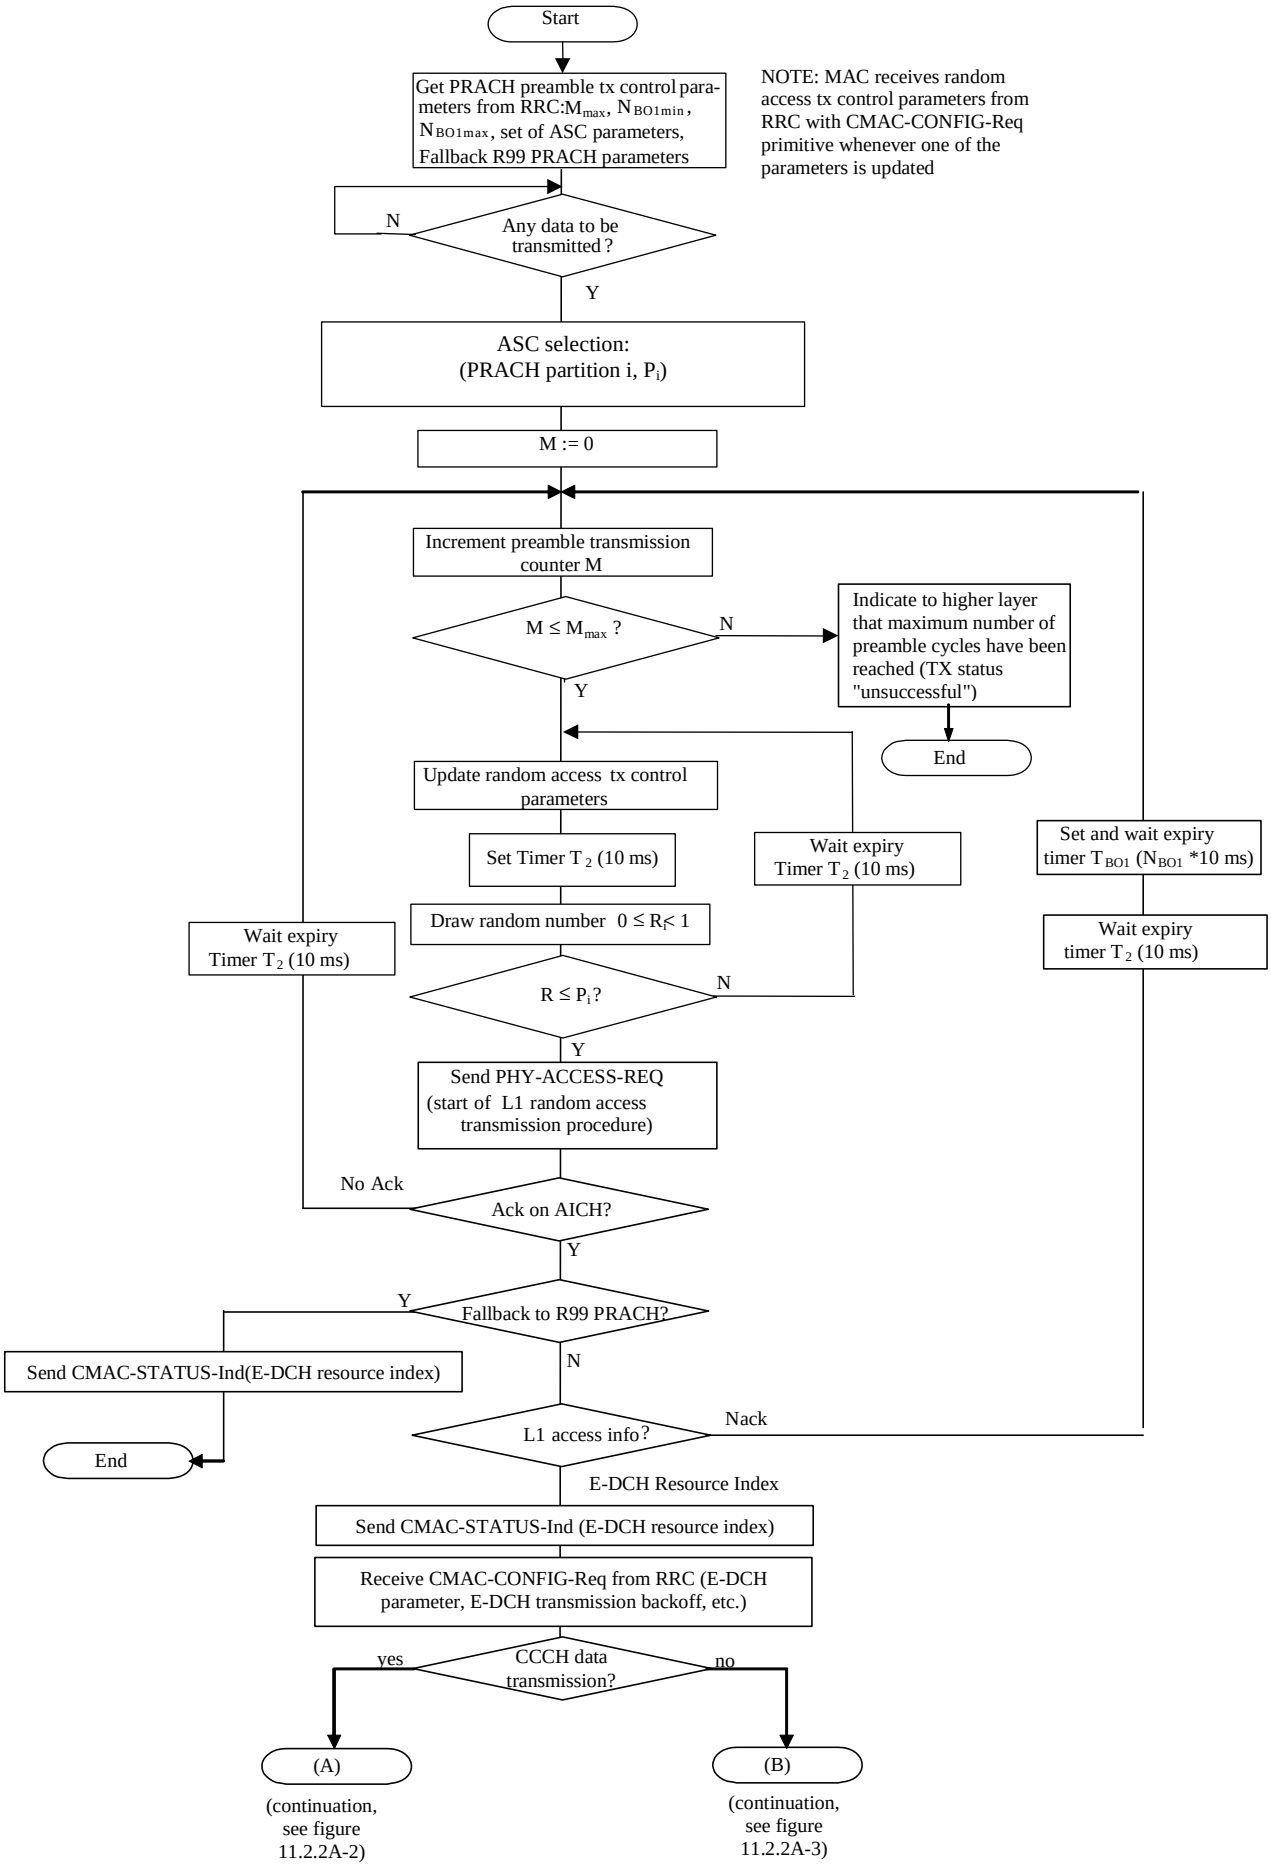
- a set of Access Service Class (ASC) parameters, which includes for each ASC, i=0,…,NumASC an identification of a PRACH partition and a persistence value P_i (transmission probability);
- maximum number of preamble ramping cycles M_{max};
- range of backoff interval for timer $T_{BO1,}$ given in terms of numbers of transmission 10 ms time intervals N_{BO1max} and N_{BO1min}, applicable when negative acknowledgement is received carried with an E-AI, or carried with an AI, when the use of E-AIs is not configured;

- Fallback R99 PRACH parameters.

…

If not triggered due to reception of HS-SCCH order for NodeB triggered HS-DPCCH transmission, the procedure ends if a negative acknowledgement has been received with an E-AI on AICH if the use of E-AI is configured, and the UE has CCCH data to transmit on the uplink when CCCH fallback is configured or the UE has DCCH data to transmit on the uplink when DCCH fallback is configured. MAC provides an "E-DCH resource index" equal to -1 with the CMAC-STATUS-Ind primitive to the RRC.

…



Start
Get PRACH preamble tx control parameters from RRC:M_{max}, N_{BO1min}, N_{BO1max}, set of ASC parameters, Fallback R99 PRACH parameters

Reference

3GPP TS 25.319 clause 23.2 and TS 25.321 clauses 11.2.2, 11.2.2A.

7.1.10.1.3 Test purpose

With UE in CELL_FACH with HS-DSCH and E-DCH configured and the network in SIB22 indicates fallback to R99 PRACH on CCCH, but not on DCCH:

1. To verify that UE, when UE has CCCH data to transmit in uplink and NodeB rejects a common E-DCH resource request, use the RACH random access procedure to obtain a R99 RACH resource to transmit the CCCH data in uplink.

2. To verify that UE, when UE has DCCH data to transmit in uplink, does not use the RACH random access procedure to obtain a R99 RACH resource, but instead request common E-DCH resources to transmit the DCCH data in uplink.

3. To verify that UE, when UE has DTCH data to transmit in uplink, does not use the RACH random access procedure to obtain a R99 RACH resource, but instead request common E-DCH resources to transmit the DTCH data in uplink.

7.1.10.1.4 Method of test

Initial Condition

System Simulator:

1 cell, default parameters, Ciphering Off, SIB configuration 10 according to TS 34.108 clause 6.10a2 using the specific message content for SIB1, SIB3, SIB4, SIB5 and SIB22 as specified below.

UE:

UE is in Enhanced CELL_FACH state with DTCH/DCCH on common E-DCH / HS-DSCH.

The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 9.1 using condition “AM Packet to Enhanced CELL_FACH from Enhanced CELL_FACH in PS with SRBs mapped on common E-DCH/HS-DSCH”.

The radio bearer is placed in UE loop-back mode 1 with the UL SDU size set to 10 bytes.

Test Procedure

Table 7.1.10.1

Parameter	Unit	Cell 1	
		T0	T1
UTRA RF Channel Number		Mid Range Test Frequency	
CPICH Ec (FDD)	dBm/3.84MHz	-60	-80

Table 7.1.10.1 illustrates the downlink power to be applied at various time instants of the test execution. Columns marked "T0" denote the initial conditions.

a) The UE is in Enhanced CELL_FACH state with DTCH/DCCH on common E-DCH/HS-DSCH. The SS configures its downlink transmission power settings according to columns "T1" in table 7.1.10.1 so that S<0. The UE shall detect that it is out of service area.

b) Following the expiry of periodic cell updating timer T305 according to the system information, and within the time interval equivalent to T307 timer value, SS configures its downlink transmission power settings according to columns "T0" in table 7.1.10.1 so that S>0.

c) The UE shall find that it is back in service area and initiate a CELL UPDATE procedure using E-DCH channel. The SS responds by a 'NACK' on E-AI. The UE initiates a PRACH preamble for R99 RACH.

d) The SS grants access to the R99 PRACH with a positive acquisition indication on AICH. The SS checks that UE transmits the CELL UPDATE message on CCCH in uplink.

NOTE: As CCCH Fallback IE is set to TRUE in the broadcasted SIB22 the UE shall fallback to R99 RACH resources to transmit the CELL UPDATE message on CCCH

e) The SS respond with a CELL UPDATE CONFIRM message to complete the CELL UPDATE procedure.

f) The SS transmits a UE CAPABILITY ENQUIRY message which includes the IE "Capability update requirement".

g) The SS checks that UE initiates a PRACH preamble and Acquisition Indication reception procedure for a new common E-DCH channel. The SS grants access with a positive acquisition on E-AI. The SS checks that UE transmits a UE CAPABILITY INFORMATION message on DCCH in uplink. The SS waits until the UE CAPABILITY INFORMATION message on DCCH has been received.

h) The SS transmits a UE CAPABILITY INFORMATION CONFIRM message to the UE to complete the UE capability enquiry procedure.

i) The SS explicitly instructs the UE to release the E-DCH resources

j) The SS sends a RLC SDU of size 10 bytes on the downlink.

k) The SS checks that UE initiates a PRACH preamble and Acquisition Indication for a new common E-DCH channel which is used to loop back the data. The SS checks the loop back data.

Expected sequence

Step	Direction		Message	Comments
	UE	**SS**		
1				SS configures its downlink transmission power settings according to columns "T1" in table 7.1.10.1 so that its S value falls below 0.
2				The UE shall detect an "out of service" condition and it shall search for other cells to camp on. Upon expiry of timer T305, UE starts T307 timer..
3				SS configures its downlink transmission power settings according to columns "T0" in table 7.1.10.1.
3A	→		Access Preamble	UE performs RACH random access procedure to obtain common E-DCH resources
3B	←		'NACK'	The SS responds with a 'NACK' on E-AI.
4	→		Access Preamble	SS checks that UE performs RACH random access procedure to obtain a R99 RACH resource
5	←		AICH = POS ACQUISITION IND	SS acknowledges the RACH access
6	→		CELL UPDATE	SS checks that UE transmits the CELL UPDATE message on CCCH using the R99 RACH resource

Specific Message Contents

SYSTEM INFORMATION BLOCK TYPE 1

Use the default parameter values for the system information block 1 with the same type specified in clause 6.1.1 of TS 34.108 with the following exception:

Information Element	Value/remark
T305	5 minutes
T307	50 seconds

SYSTEM INFORMATION BLOCK TYPE 3 and 4 (Preamble)

Use the default parameter values for the system information block 2 and 4 with the same type specified in clause 6.1.1 of TS 34.108 with the following exception:

Information Element	Value/remark
Qrxlevmin	-35 (-69 dBm)

SYSTEM INFORMATION BLOCK TYPE 5 (FDD) (Preamble)

Use the default parameter values for the system information block 5 with the same type specified in clause 6.1.1 of TS 34.108 for common E-DCH and HS-DSCH reception in CELL_FACH, with the following exceptions:

Information Element	Value/remark
- SIB22 Indicator	TRUE

SYSTEM INFORMATION BLOCK TYPE 22 (Preamble)

Use the default parameter values for the system information block 22 with the same type specified in clause 6.1.1 of TS 34.108 with the following exception:

Information Element	Value/remark
- Fallback R99 PRACH info	
- CCCH Fallback	TRUE
- DCCH Fallback	FALSE

7.1.10.1.4 Test requirement

At step 4 the UE shall perform a RACH random access procedure to obtain a R99 RACH resource.

At step 6 the UE shall transmit a CELL UPDATE message on CCCH using the R99 RACH resource.

At step 9 the UE shall perform a PRACH Preamble and Acquisition Indication reception procedure prior to acquiring common E-DCH resource and sending the UE CAPABILITY INFORMATION message on DCCH.

At step 13 the UE shall initiate a PRACH preamble and Acquisition Indication reception procedure for a new common E-DCH channel.

At step 15 the UE shall return a RLC SDU with same content as sent by the SS in downlink in step 12.

7.1.10.2 Fallback to R99 PRACH in CELL_FACH / Network indicates fallback to R99 PRACH on DCCH

7.1.10.2.1 Definition and applicability

This test apply for Release 11 and later releases for a FDD UE that supports Fallback to R99 PRACH in CELL_FACH.

7.1.10.2.2 Conformance requirement

Same as in 7.1.10.1.2.

7.1.10.2.3 Test purpose

With UE in CELL_FACH with HS-DSCH and E-DCH configured and the network in SIB22 indicates fallback to R99 PRACH on DCCH, but not on CCCH:

1. To verify that UE, when UE has DCCH data to transmit in uplink and when a common E-DCH is rejected by the NodeB uses the RACH random access procedure to obtain a R99 RACH resource to transmit the DCCH data in uplink.

2. To verify that UE, when UE has CCCH data to transmit in uplink, does not use the RACH random access procedure to obtain a R99 RACH resource, but instead request common E-DCH resources to transmit the CCCH data in uplink.

3. To verify that UE, when UE has DTCH data to transmit in uplink, does not use the RACH random access procedure to obtain a R99 RACH resource, but instead request common E-DCH resources to transmit the DTCH data in uplink.

7.1.10.2.4 Method of test

Initial Condition

System Simulator:

1 cell, default parameters, Ciphering Off, SIB configuration 10 according to TS 34.108 clause 6.10a2 using the specific message content for SIB1, SIB3, SIB4, SIB5 and SIB22 as specified below.

UE:

UE is in Enhanced CELL_FACH state with DTCH/DCCH on common E-DCH / HS-DSCH.

The SS establishes the reference radio bearer configuration specified in TS 34.108 clause 9.1 using condition “AM Packet to Enhanced CELL_FACH from Enhanced CELL_FACH in PS with SRBs mapped on common E-DCH/HS-DSCH”.

The radio bearer is placed in UE loop-back mode 1 with the UL SDU size set to 10 bytes.

Test Procedure

Table 7.1.10.2

Parameter	Unit	Cell 1	
		T0	T1
UTRA RF Channel Number		Mid Range Test Frequency	
CPICH Ec (FDD)	dBm/3.84MHz	-60	-80

Table 7.1.10.2 illustrates the downlink power to be applied at various time instants of the test execution. Columns marked "T0" denote the initial conditions.

a) The UE is in Enhanced CELL_FACH state with DTCH/DCCH on common E-DCH/HS-DSCH. The SS configures its downlink transmission power settings according to columns "T1" in table 7.1.10.2 so that S<0. The UE shall detect that it is out of service area.

b) Following the expiry of periodic cell updating timer T305 according to the system information, and within the time interval equivalent to T307 timer value, SS configures its downlink transmission power settings according to columns "T0" in table 7.1.10.2 so that S>0.

c) The UE shall find that it is back in service area and initiate a CELL UPDATE procedure.

d) The SS checks that UE initiates a PRACH preamble and Acquisition Indication for a new common E-DCH channel which is used to transmit the CELL UPDATE message on CCCH in uplink. The SS waits until the CELL UPDATE message on CCCH has been received.

f) The SS respond with a CELL UPDATE CONFIRM message to complete the CELL UPDATE procedure.

g) The SS explicitly instructs the UE to release the E-DCH resources.

h) The SS transmits a UE CAPABILITY ENQUIRY message which includes the IE "Capability update requirement". UE initiates a PRACH preamble and Acquisition Indication for a new E-DCH channel to transmit UE CAPABILITY INFORMATION message. The SS responds by a 'NACK' on E-AI. The UE initiates a PRACH preamble and Acquisition Indication for R99 RACH

NOTE: As DCCH Fallback IE is set to TRUE in the broadcasted SIB22 the UE shall fallback to R99 RACH resources to transmit the UE CAPABILITY INFORMATION message on DCCH

i) The SS checks that UE perform a RACH random access procedure to obtain a R99 RACH resource and transmit the UE CAPABILITY INFORMATION message on DCCH in uplink.

j) The SS transmits a UE CAPABILITY INFORMATION CONFIRM message to the UE to complete the UE capability enquiry procedure.

k) The SS sends a RLC SDU of size 10 bytes on the downlink.

l) The SS checks that UE initiates a PRACH preamble and Acquisition Indication for a new common E-DCH channel which is used to loop back the data. The SS checks the loop back data.

Qrxlevmin	-35 (-69 dBm)

SYSTEM INFORMATION BLOCK TYPE 5 (Preamble)

Use the default parameter values for the system information block 5 with the same type specified in clause 6.1.1 of TS 34.108 for common E-DCH and HS-DSCH reception in CELL_FACH, with the following exception:

Information Element	Value/remark
- SIB22 indicator	TRUE

SYSTEM INFORMATION BLOCK TYPE 22 (Preamble)

Use the default parameter values for the system information block 22 with the same type specified in clause 6.1.1 of TS 34.108 with the following exception:

Information Element	Value/remark
- Fallback R99 PRACH info	
- CCCH Fallback	FALSE
- DCCH Fallback	TRUE

7.1.10.2.4 Test requirement

At step 4 the UE shall perform a PRACH Preamble and Acquisition Indication reception procedure prior to acquiring common E-DCH resource and sending the CELL UPDATE message on CCCH.

At step 8 the UE shall perform a RACH random access procedure to obtain a R99 RACH resource.

At step 10 the UE shall transmit a UE CAPABILITY INFORMATION message on DCCH using the R99 RACH resource.

At step 13 the UE shall initiate a PRACH preamble and Acquisition Indication for a new common E-DCH channel.

At step 15 the UE shall return a RLC SDU with same content as sent by the SS in downlink in step 12.

7.1.11 HS-DSCH MAC-ehs with Multiflow

7.1.11.1 Maximum number of re-ordering SDUs with inter-Node B operation on two cells on one frequency

7.1.11.1.1 Definition and applicability

A UEs that support Multiflow operation on two cells on one frequency.

7.1.11.1.2 Conformance requirement

The UE behaviour is unspecified, if any of the following conditions are met when Multiflow is not configured or when intra-Node B Multiflow is configured:

- if reordering SDUs in one TTI belong to more than 3 priority queues,
- if the TSN field extension for MAC-ehs entity is not configured and MAC-ehs PDU(s) received during one TTI contain more than 26 reordering SDUs, or,

- if the TSN field extension for MAC-ehs entity is configured and
  - up to 3 secondary serving HS-DSCH cells are configured and MAC-ehs PDU(s) received during one TTI contain more than 44 reordering SDUs; or
  - more than 3 secondary serving HS-DSCH cells are configured and MAC-ehs PDU(s) received during one TTI contain more than 64 reordering SDUs.

The UE behaviour is unspecified, if any of the following conditions are met for each of the MAC-ehs entities when inter-Node B Multiflow is configured:

- if reordering SDUs in one TTI belong to more than 2 priority queues,
- if MIMO is not configured for this MAC-ehs entity and
  - if one HS-DSCH cell is configured for this MAC-ehs entity and MAC-ehs PDU(s) received during one TTI contain more than 16 reordering SDUs, or,
  - if more than one HS-DSCH cell is configured for this MAC-ehs entity and MAC-ehs PDU(s) received during one TTI contain more than 26 reordering SDUs, or,
- if MIMO is configured for this MAC-ehs entity and
  - MAC-ehs PDU(s) received during one TTI contain more than 26 reordering SDUs.

Reference(s)

TS 25.321 clauses 9.1.4

7.1.11.1.3 Test purpose

To confirm that the UE can handle the maximum number of re-ordering SDUs per each MAC-ehs entity.

7.1.11.1.4 Method of test

Initial conditions

System Simulator: 2 cells

Node B 1: Cell 1 (f1, serving HS-DSCH cell)

Node B 2: Cell 2 (f1, assisting serving HS-DSCH cell)

Tcell of Cell 1 is set to 0 chips, Tcell of Cell 2 is set to 1280 chips (0.5 slots). Ciphering off.

User equipment:

CELL_DCH (state 6-18 PS-DCCH+DTCH E-DCH/HS-DSCH) under condition A44 as specified in clause 7.4 of TS 34.108 [9]. The procedure P9b in TS 34.108 [9], clause 7.4.2.4a is executed to add Cell 2 in the active set.

The radio bearer is placed into UE test loop mode 1.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE category supports Multiflow HSDPA operation on two cells on one frequency (UE Category 21-24)

Test procedure

The UE is in CELL_DCH state with configured Multiflow operation, SRBs are mapped to DCH/DCH.

The SS constructs and sends DL RLC PDUs such that there are 16 re-ordering MAC-ehs SDUs transmitted in the same TTI for MAC-ehs entities associated with Cell 1 and Cell 2. The SS checks that all the RLC PDUs are looped back.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		MAC-ehs PDU containing 16 re-ordering SDUs sent over Cell 1. MAC-ehs PDU containing 16 re-ordering SDUs sent over Cell 2.	MAC-ehs PDUs for Cell 1 and Cell 2 are sent at the same moment of time.
2	→		Loop backed all RLC PDU's	

Specific Message Contents

None

7.1.11.1.5 Test requirements

In Step 2, SS receives loop backed all RLC PDUs.

7.1.11.2 Maximum number of re-ordering SDUs with inter-Node B operation on three cells on two frequencies

7.1.11.2.1 Definition and applicability

All UEs that support Multiflow operation on three cells on two frequencies.

7.1.11.2.2 Conformance requirement

The UE behaviour is unspecified, if any of the following conditions are met when Multiflow is not configured or when intra-Node B Multiflow is configured:

- if reordering SDUs in one TTI belong to more than 3 priority queues,
- if the TSN field extension for MAC-ehs entity is not configured and MAC-ehs PDU(s) received during one TTI contain more than 26 reordering SDUs, or,
- if the TSN field extension for MAC-ehs entity is configured and
  - up to 3 secondary serving HS-DSCH cells are configured and MAC-ehs PDU(s) received during one TTI contain more than 44 reordering SDUs; or
  - more than 3 secondary serving HS-DSCH cells are configured and MAC-ehs PDU(s) received during one TTI contain more than 64 reordering SDUs.

The UE behaviour is unspecified, if any of the following conditions are met for each of the MAC-ehs entities when inter-Node B Multiflow is configured:

- if reordering SDUs in one TTI belong to more than 2 priority queues,
- if MIMO is not configured for this MAC-ehs entity and
  - if one HS-DSCH cell is configured for this MAC-ehs entity and MAC-ehs PDU(s) received during one TTI contain more than 16 reordering SDUs, or,
  - if more than one HS-DSCH cell is configured for this MAC-ehs entity and MAC-ehs PDU(s) received during one TTI contain more than 26 reordering SDUs, or,
- if MIMO is configured for this MAC-ehs entity and
  - MAC-ehs PDU(s) received during one TTI contain more than 26 reordering SDUs.

Reference(s)

TS 25.321 clauses 9.1.4

7.1.1.2.3 Test purpose

To confirm that the UE can handle the maximum number of re-ordering SDUs per each MAC-ehs entity.

7.1.11.2.4 Method of test

Initial conditions

System Simulator: 3 cells

Node B 1: Cell 1 (f1, serving HS-DSCH cell)

Node B 2: Cell 2 (f1, assisting serving HS-DSCH cell)

Node B 1: Cell 3 (f2, secondary serving HS-DSCH cell)

Tcell of Cell 1 and Cell 3 is set to 0 chips, Tcell of Cell 2 is set to 1280 chips (0.5 slots). Ciphering off.

User equipment:

CELL_DCH (state 6-18 PS-DCCH+DTCH E-DCH/HS-DSCH) under condition A45 as specified in clause 7.4 of TS 34.108 [9]. The procedure P9b in TS 34.108 [9], clause 7.4.2.4a is executed to add Cell 2 in the active set.

The radio bearer is placed into UE test loop mode 1.

Related ICS/IXIT statement(s)

- UE supports FDD
- UE category supports Multiflow HSDPA operation on three cells on two frequencies (UE Category 29)

Test procedure

The UE is in CELL_DCH state with configured Multiflow operation, SRBs are mapped to DCH/DCH.

The SS constructs and sends DL RLC PDUs such that there are 26 re-ordering MAC-ehs SDUs transmitted in the same TTI for MAC-ehs entities associated with Cell 1/3, and 16 re-ordering MAC-ehs SDUs transmitted in the same TTI for MAC-ehs entities associated Cell 2. The SS checks that all the RLC PDUs are looped back.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		MAC-ehs PDU containing 26 re-ordering SDUs sent over Cell 1/3. MAC-ehs PDU containing 16 re-ordering SDUs sent over Cell 2.	MAC-ehs PDUs for Cell 1/3 and Cell 2 are sent at the same moment of time.
2	→		Loop backed all RLC PDU's	

Specific Message Contents

None

7.1.11.2.5 Test requirements

In Step 2, SS receives loop backed all RLC PDUs.

7.2 RLC testing

7.2.0 General

7.2.0.1 Radio bearer setup

For radio bearer setup the following settings shall be used in both CS and PS mode:

- Re-establishment Timer: useT314
- MAC logical channel priority: 7
- UL Logical Channel Identity:7

- DL Logical Channel Identity:7

7.2.1 Transparent mode

7.2.1.1 Segmentation and reassembly

Transparent mode segmentation and reassembly are not tested in this release of the specification.

7.2.2 Unacknowledged mode

7.2.2.1 General information for UM tests

Two generic Radio Access Bearers are provided for UM tests.

The UM test RAB is set up using the Generic Procedure described in clause 7.1.3 of 3GPP TS 34.108, and with the default RAB replaced as follows:

- For UM 7-bit "Length Indicator" tests: the RB configuration described in 3GPP TS 34.108 clause 6.11.1 is used. For these tests, let UM_7_PayloadSize denote the RAB payload size in octets.
- For UM 15-bit "Length Indicator" tests: the RB configuration described in 3GPP TS 34.108 clause 6.11.2 is used. For these tests, let UM_15_PayloadSize denote the RAB payload size in octets.

The UM test RABs are used in all tests with the following exception:

- Tests that explicitly specify a different Radio Bearer configuration.

All other settings are the same.

The special "Length Indicator" indicating that an SDU begins in the first octet of a PDU, described in clause 9.2.2.8 in 3GPP TS 25.322 is not used in uplink or downlink except when explicitly stated in the corresponding test case.

7.2.2.2 Segmentation and reassembly / Selection of 7 or 15 bit "Length Indicators"

7.2.2.2.1 Definition

The RLC segments and concatenates SDUs into UMD PDUs according to the PDU size requested by MAC. "Length Indicators" are added to allow correct reconstruction of SDUs. The selection of the size of the "Length Indicator" fields used must follow the specified rules. Incorrect operation of segmentation, concatenation, or coding of "Length Indicators" will result in failure of the UE to communicate.

7.2.2.2.2 Conformance requirement

Except for the predefined values reserved for special purposes and listed in TS 25.322 section 9.2.2.8 the "Length Indicator" shall:

- be set to the number of octets between the end of the RLC header and up to and including the last octet of an RLC SDU segment;
- be included in the PDUs that they refer to.

The size of the Length Indicator may be either 7 bits or 15 bits.

[...]

For UM:

- if the "largest UMD PDU size" is ≤ l25 octets:
  - 7-bit "Length Indicators" shall be used.
- else:
  - 15-bit "Length Indicators" shall be used.

- between modifications of the "largest UMD PDU size", the size of the "Length Indicator" is the same for all UMD PDUs.

Reference(s)

TS 25.322 clauses 9.2.2.8 and 9.2.2.9.

7.2.2.2.3 Test purpose

To test that if the size of the largest PDU is ≤ l25 octets, 7 bit indicators are used, otherwise, 15 bit indicators are used.

7.2.2.2.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for UM 7-bit "Length Indicator" tests in clause 7.2.2.1.

These settings apply to both the uplink and downlink DTCH.

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to 10 bytes.

Test procedure

a) The SS transmits an RLC SDU of size 10 bytes.

b) The SS checks the "Length Indicator" values and SDU size and contents in the RLC PDU returned on the uplink (assuming a 7-bit "Length Indicator" size). SS shall take into account presence of Special “Length Indicator” indicating “beginning of an SDU” that will be included by a Rel5 and later UE.

c) The SS releases the RB, and performs the Radio Bearer establishment procedure (clause 7.1.3 of TS 34.108) with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for UM 15-bit "Length Indicator" tests in clause 7.2.2.1.

All other settings the same.

d) The SS transmits an RLC SDU of size 10 bytes.

e) The SS checks the "Length Indicator" values and SDU size and contents in the RLC PDU returned on the uplink (assuming a 15-bit "Length Indicator" size). SS shall take into account presence of Special “Length Indicator” indicating “beginning of an SDU” that will be included by a Rel5 and later UE.

f) The SS may optionally release the radio bearer.

Expected sequence

3	→		UPLINK RLC PDU	10 byte SDU + padding
4	←		RB RELEASE	
5			RB ESTABLISHMENT	See generic procedures for UM 15 bit LIs (largest UMD PDU size > 125 bytes)
6	←		DOWNLINK RLC PDU	10 byte SDU + padding
7	→		UPLINK RLC PDU	10 byte SDU + padding
8			RB RELEASE	Optional step
NOTE 1: The Expected Sequence shown is informative. The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity. Information such as SDU, PDU or Sequence numbers given in the comments column shall be considered informative only, for test case development purposes.				

7.2.2.2.5 Test requirements

1. The UE shall send 7 bit "Length Indicators" with values that correctly indicate the end of the SDU received in step 3.

2. The UE shall send 15 bit "Length Indicators" with values that correctly indicate the end of the SDU received in step 7.

7.2.2.3 Segmentation and reassembly / 7-bit "Length Indicators" / Padding

7.2.2.3.1 Definition

The RLC segments and concatenates SDUs into UMD PDUs according to the PDU size requested by MAC. "Length Indicators" are added to allow correct reconstruction of SDUs. Incorrect operation of segmentation, concatenation, or coding of "Length Indicators" will result in failure of the UE to communicate.

7.2.2.3.2 Conformance requirement

A "Length Indicator" is used to indicate the last octet of each RLC SDU ending within the PDU.

Except for the predefined values reserved for special purposes and listed in the tables below, the "Length Indicator" shall:

- be set to the number of octets between the end of the RLC header and up to and including the last octet of an RLC SDU segment;

- be included in the PDUs that they refer to.

[...]

For UM and AM RLC:

- if a 7 bit "Length Indicator" is used in a RLC PDU and one or more padding octets are present in the RLC PDU after the end of the last RLC SDU:

  - indicate the presence of padding by including a "Length Indicator" with value "1111111" as the last "Length Indicator" in the PDU.

NOTE: After the "Length Indicator" indicating the presence of padding has been included in the RLC PDU, the length of the padding may be zero.

Reference(s)

TS 25.322 clauses 9.2.2.8 and 11.2.2.1.

7.2.2.3.3 Test purpose

1. To test that the UE correctly segments a large SDU, includes a "Length Indicator" indicating padding in the RLC PDU carrying the last SDU segment, and adds padding at the end.

2. To test that the UE correctly deals with a 7-bit padding "Length Indicator" when present in a received PDU.

7.2.2.3.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for UM 7-bit "Length Indicator" tests in clause 7.2.2.1.

These settings apply to both the uplink and downlink DTCH.

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to UM_7_PayloadSize + 1 bytes.

Test procedure

a) The SS transmits an RLC SDU of size UM_7_PayloadSize + 1 bytes. The second of the 2 PDUs sent shall contain a "Length Indicator" indicating the end of the SDU and the "Length Indicator" indicating that padding is present.

b) The SS checks the "Length Indicator" values in the RLC PDUs returned on the uplink, and checks the length and content of the received RLC SDU (assuming a 7-bit "Length Indicator" size). SS shall take into account presence of Special “Length Indicator” indicating “beginning of an SDU” that will be included by a Rel5 and later UE in the first PDU.

c) The SS may optionally release the radio bearer.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1			RB ESTABLISHMENT	See generic procedures
2		←	DOWNLINK RLC PDU	SDU 1
3		←	DOWNLINK RLC PDU	SDU 1 & Padding
4		→	UPLINK RLC PDU	No LI. See Note 2
5		→	UPLINK RLC PDU	Check LIs and re-assembled SDU
6			RB RELEASE	Optional step
NOTE 1: The Expected Sequence shown is informative. The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity. Information such as SDU, PDU or Sequence numbers given in the comments column shall be considered informative only, for test case development purposes.				
NOTE 2: SS shall take into account presence of Special “Length Indicator” indicating “beginning of an SDU” that will be included by a Rel5 and later UE.				

7.2.2.3.5 Test requirements

1. The UE shall return two RLC PDUs. The first RLC PDU shall not include "Length Indicators". except for presence of Special “Length Indicator” indicating “beginning of an SDU” that will be included by a Rel5 and later UE. The second RLC PDU shall have a "Length Indicator" indicating the PDU contains an SDU boundary after octet 1 of the data field, and the second “Length Indicator” shall indicate that the remainder of the PDU contains padding.

2. The length and data content of the received SDU shall be the same as the transmitted SDU.

7.2.2.4 Segmentation and Reassembly / 7-bit "Length Indicators" / LI = 0

7.2.2.4.1 Definition

The RLC segments and concatenates SDUs into UMD PDUs according to the PDU size requested by MAC. A pre-defined "Length Indicator" value is used to indicate when a SDU ends coincident with the end of the previous PDU. Incorrect operation of segmentation, concatenation, or coding of "Length Indicators" will result in failure of the UE to communicate.

7.2.2.4.2 Conformance requirement

A "Length Indicator" is used to indicate the last octet of each RLC SDU ending within the PDU.

Except for the predefined values reserved for special purposes and listed in TS 25.322 subclause 9.2.2.8, the "Length Indicator" shall:

- be set to the number of octets between the end of the RLC header and up to and including the last octet of an RLC SDU segment;

- be included in the PDUs that they refer to.

[...]

In the case where the end of the last segment of an RLC SDU exactly ends at the end of a PDU and there is no "Length Indicator" that indicates the end of the RLC SDU:

- if 7-bit "Length Indicator" is used:

  - a "Length Indicator" with value "000 0000" shall be placed as the first "Length Indicator" in the following PDU;

[...]

For UM and AM RLC:

- if a 7 bit "Length Indicator" is used in a RLC PDU and one or more padding octets are present in the RLC PDU after the end of the last RLC SDU:

- indicate the presence of padding by including a "Length Indicator" with value "1111111" as the last "Length Indicator" in the PDU.

Reference(s)

TS 25.322 clause 9.2.2.8 and 11.2.2.1.

7.2.2.4.3 Test purpose

1. To test that where a SDU exactly fills a PDU, a "Length Indicator" of all 0's is placed by the transmitter as the first "Length Indicator" in the next PDU.

2. To test that where a SDU exactly fills a PDU, the receiver accepts a "Length Indicator" of all 0's, placed as the first "Length Indicator" in the next PDU.

7.2.2.4.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for UM 7-bit "Length Indicator" tests in clause 7.2.2.1.

These settings apply to both the uplink and downlink DTCH.

The radio bearer is placed into loop-back mode 1 with the UL SDU size set to UM_7_PayloadSize bytes. For a Rel-5 and later UE , the UL SDU size shall be set to (UM_7_PayloadSize -1) bytes.

Test procedure

a) The SS transmits an RLC SDU of size 2 * UM_7_PayloadSize bytes.

b) The SS checks the "Length Indicator" values in the RLC PDUs returned on the uplink, and checks the length and content of the received RLC SDU (assuming a 7-bit "Length Indicator" size).

c) The SS may optionally release the radio bearer.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1			RB ESTABLISHMENT	See generic procedures
2	←		DOWNLINK RLC PDU	SDU 1
3	←		DOWNLINK RLC PDU	SDU 1
4	←		DOWNLINK RLC PDU	LI=0 and padding
5	→		UPLINK RLC PDU	No LIs. See Note 2
6	→		UPLINK RLC PDU	Check Lis and re-assembled SDU
7			RB RELEASE	Optional step
NOTE 1: The Expected Sequence shown is informative. The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity. Information such as SDU, PDU or Sequence numbers given in the comments column shall be considered informative only, for test case development purposes.				
NOTE 2: SS shall take into account presence of Special “Length Indicator” indicating “beginning of an SDU” that will be included by a Rel5 and later UE.				

7.2.2.4.5 Test requirements

The UE shall return two RLC PDUs. The first RLC PDU shall not include "Length Indicators" except for presence of Special “Length Indicator” indicating “beginning of an SDU” that will be included by a Rel-5 and later UE.. The second RLC PDU shall have a "Length Indicator" indicating that the SDU exactly filled the previous UMD PDU, and a "Length Indicator" indicating that the remainder of the PDU contains padding.

For Rel99 UE, the length of the received SDU shall be UM_7_PayloadSize bytes, and the data content shall be the same as the first UM_7_PayloadSize bytes of the transmitted SDU.

For Rel-5 and later UEs , the length of the received SDU shall be (UM_7_PayloadSize-1) bytes, and the data content shall be the same as the first (UM_7_PayloadSize-1) bytes of the transmitted SDU.

7.2.2.5 Reassembly / 7-bit "Length Indicators" / Invalid LI value

7.2.2.5.1 Definition

The RLC segments and concatenates SDUs into UMD PDU according to the PDU size requested by MAC. "Length Indicators" are added to allow correct reconstruction of SDUs. The behaviour of the RLC on reception of an invalid "Length Indicator" value has been specified. Incorrect operation of segmentation, concatenation, or coding of "Length Indicators" will result in failure of the UE to communicate.

7.2.2.5.2 Conformance requirement

Upon delivery by the lower layer of an UMD PDU that contains a "Length Indicator" value specified to be reserved for UMD PDUs in this version of the protocol, the Receiver shall:

- ignore that UMD PDU.

[...]

Length: 7 bits

Bit	Description
1111101	Reserved (PDUs with this coding will be discarded by this version of the protocol).
1111110	AMD PDU: The rest of the RLC PDU includes a piggybacked STATUS PDU. UMD PDU: Reserved (PDUs with this coding will be discarded by this version of the protocol).

Reference(s)

TS 25.322 clause 9.2.2.8 and 11.2.4.1.

7.2.2.5.3 Test purpose

To test that PDUs with invalid "Length indicator" '111 1110' are discarded by the receiving RLC.

7.2.2.5.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for UM 7-bit "Length Indicator" tests in clause 7.2.2.1.

These settings apply to both the uplink and downlink DTCH.

The radio bearer is placed into loop-back mode 1with the UL SDU size set to UM_7_PayloadSize + 1 bytes.

Test procedure

a) The SS transmits two RLC SDUs of size UM_7_PayloadSize + 1 bytes. In the third PDU for transmission, the SS sets the value of the second (padding) LI to 1111110.

b) The SS checks the "Length Indicator" sizes and values of any RLC PDUs returned on the uplink, and checks for the presence of any received RLC SDUs. SS shall take into account presence of Special “Length Indicator” indicating “beginning of an SDU” that will be included by a Rel-5 and later UE in the first PDU

c) The SS may optionally release the radio bearer.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1			RB ESTABLISHMENT	See generic procedures
2	←		DOWNLINK RLC PDU	SDU 1
3	←		DOWNLINK RLC PDU	SDU 1 & SDU 2
4	←		DOWNLINK RLC PDU	SDU 2 and invalid LI (=11111110)
5	→		UPLINK RLC PDU	SDU 1
6	→		UPLINK RLC PDU	SDU 1: Check Lis and re-assembled SDU
7			RB RELEASE	Optional step
NOTE 1: The Expected Sequence shown is informative. The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity. Information such as SDU, PDU or Sequence numbers given in the comments column shall be considered informative only, for test case development purposes.				

7.2.2.5.5 Test requirements

The UE shall return two RLC PDUs. The first RLC PDU shall not include any "Length Indicators" except for presence of Special “Length Indicator” indicating “beginning of an SDU” that will be included by a Rel-5 and later UE. The second RLC PDU shall have a "Length Indicator" indicating the end of the SDU, and a padding "Length Indicator".

The length and data content of the received SDU shall be the same as the first transmitted SDU. The second SDU shall not be returned.

7.2.2.6 Reassembly / 7-bit "Length Indicators" / LI value > PDU size

7.2.2.6.1 Definition

The RLC segments and concatenates SDUs into UMD PDUs according to the PDU size requested by MAC. "Length Indicators" are added to allow correct reconstruction of SDUs. The behaviour of the RLC on reception of an invalid "Length Indicator" value has been specified. Incorrect operation of segmentation, concatenation, or coding of "Length Indicators" will result in failure of the UE to communicate.

7.2.2.6.2 Conformance requirement

If the "Length Indicator" of an UMD PDU has a value that is larger than the PDU size – RLC header size and is not one of the predefined values listed in the table of TS 25.322 subclause 9.2.2.8, the Receiver shall:

- ignore the UMD PDU.

[...]

Upon delivery of a set of UMD PDUs from the lower layer, the Receiver shall:

- update VR(US) according to each received UMD PDU (see TS 25.322 subclause 9.4);
- if the updating step of VR(US) is not equal to one (i.e. one or more UMD PDUs are missing):
  - discard the SDUs that have segments in the missing UMD PDUs.

Reference(s)

TS 25.322 clauses 11.2.4.2 and 11.2.3.

7.2.2.6.3 Test purpose

To test that PDUs with "Length Indicators" that point beyond the end of the PDU are ignored by the receiving RLC entity.

7.2.2.6.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for UM 7-bit "Length Indicator" tests in clause 7.2.2.1.

These settings apply to both the uplink and downlink DTCH.

The radio bearer is placed into loop-back mode 1 with the UL SDU size set to UM_7_PayloadSize + 1 bytes.

Test procedure

a) The SS transmits three RLC SDUs of size UM 7 PayloadSize + 1 bytes. All the SDUs are concatenated or segmented over successive RLC PDUs. In the third PDU for transmission, the SS sets value of the "Length Indicator" to be UM_7_PayloadSize (decimal).

b) The SS checks the "Length Indicator" values in the RLC PDUs returned on the uplink, and checks the length and content of the received RLC SDUs (assuming a 7-bit "Length Indicator" size). . SS shall take into account presence of Special “Length Indicator” indicating “beginning of an SDU” that will be included by a Rel-5 and later UE in the first PDU

c) The SS may optionally release the radio bearer.

Expected sequence

Step	Direction		Message	Comments
	UE	SS

3		←	DOWNLINK RLC PDU	SDU 1 & SDU 2
4		←	DOWNLINK RLC PDU	SDU 2 & SDU 3, with bad LI
5		←	DOWNLINK RLC PDU	SDU 3 and padding
6		→	UPLINK RLC PDU	SDU 1
7		→	UPLINK RLC PDU	SDU 1 and padding: Check LIs and re-assembled SDU
8			RB RELEASE	Optional step
NOTE 1: The Expected Sequence shown is informative. The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity. Information such as SDU, PDU or Sequence numbers given in the comments column shall be considered informative only, for test case development purposes.				

7.2.2.6.5 Test requirements

The UE shall return two RLC PDUs. The first RLC PDU shall not include "Length Indicators" except for presence of Special “Length Indicator” indicating “beginning of an SDU” that will be included by a Rel-5 and later UE. The second RLC PDU shall have a LI indicating the end of an SDU and an "Length Indicator" indicating that the remainder of the PDU contains padding.

The length and data content of the received SDU should be the same as the first transmitted SDU. No further SDUs or PDUs should be received.

7.2.2.7 Reassembly / 7-bit "Length Indicators" / First data octet LI

7.2.2.7.1 Definition

The RLC segments and concatenates SDUs into UMD PDUs according to the PDU size requested by MAC. "Length indicators" are added to allow correct reconstruction of SDUs. A special "Length Indicator" is defined to indicate that the start of an SDU is coincident with the start of the PDU. The special "Length Indicator" is needed to avoid discarding of an SDU when the first received PDU has a sequence number different from zero. Incorrect operation of segmentation, concatenation, or coding of "Length Indicators" will result in failure of the UE to communicate.

7.2.2.7.2 Conformance requirement

1. "Length Indicator" = 1111100, UMD PDU: The first data octet in this RLC PDU is the first octet of a RLC SDU.

2. Upon delivery of a set of UMD PDUs from the lower layer, the Receiver shall:

   ...

   - if the special "Length Indicator" "1111 100" or "1111 1111 1111 100" is the first "Length Indicator" of a UMD PDU received on the downlink:

     - consider the first data octet in this UMD PDU as the first octet of an RLC SDU.

Reference(s)

1. TS 25.322 clause 9.2.2.8.

2. TS 25.322 clause 11.2.3.

7.2.2.7.3 Test purpose

To test that a UE in unacknowledged mode correctly handles a received RLC PDU with a 7-bit "Length Indicator" having its value equal to the special "Length Indicator" value 1111100 when the sequence number of the first received PDU is different from zero.

7.2.2.7.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for UM 7-bit "Length Indicator" tests in clause 7.2.2.1.

These settings apply to both the uplink and downlink DTCH.

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to 12 bytes.

Test procedure

a) The SS transmits a RLC SDU of size 12 bytes in a PDU which has the 'First Data Octet LI' as the first "Length Indicator" in the PDU.

b) The SS waits until the SDU has been received back from the UE, and then transmits another SDU of 12 bytes in a PDU which has the 'First Data Octet LI' as the first "Length Indicator" in the PDU.

c) The SS waits until this SDU has been received back from the UE.

c) The SS may optionally release the radio bearer.

NOTE: The SS sends PDUs in downlink starting at sequence number 10.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1			RB ESTABLISHMENT	See generic procedures
2		←	DOWNLINK RLC PDU, SN 10	SDU 1 with LI = 1111100
3			…	Wait for loopback
4		→	UPLINK RLC PDU	SDU 1. See Note 2
5		←	DOWNLINK RLC PDU, SN 11	SDU 2 with LI = 1111100
6		→	UPLINK RLC PDU	SDU 2. See Note 2
7			RB RELEASE	Optional step
NOTE 1: The Expected Sequence shown is informative. The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity. Information such as SDU, PDU or Sequence numbers given in the comments column shall be considered informative only, for test case development purposes.				
NOTE 2: SS shall take into account presence of Special “Length Indicator” indicating “beginning of an SDU” that will be included by a Rel5 and later UE.				

7.2.2.7.5 Test requirements

1. The UE shall return two RLC PDUs.
2. The length and data content of each received SDU shall be the same as the transmitted SDU.

7.2.2.8 Segmentation and reassembly / 15-bit "Length Indicators" / Padding

7.2.2.8.1 Definition

The RLC segments and concatenates SDUs into UMD PDU according to the PDU size requested by MAC. "Length Indicators" are added to allow correct reconstruction of SDUs. Incorrect operation of segmentation, concatenation, or coding of "Length Indicators" will result in failure of the UE to communicate.

7.2.2.8.2 Conformance requirement

A PDU that has unused space, to be referred to as padding, shall use a "Length Indicator" to indicate that this space is used as padding unless the padding size is one octet for PDUs with 15-bit "Length Indicators". A padding "Length Indicator" must be placed after any "Length Indicators" for a PU.

One "Length Indicator" field shall be included for each end of a SDU that the PDU includes. The "Length Indicator" shall be set equal to the number of octets between the end of the header fields and the end of the segment. If padding is needed, another "Length Indicator" field set to only 1's shall be added unless the padding size is one octet for PDUs with 15-bit "Length Indicators".

Reference(s)

TS 25.322 clauses 9.2.2.8 and 11.2.2.1.

7.2.2.8.3 Test purpose

1. To test that the UE correctly segments a large SDU and padding is added at the end.
2. To test that the UE correctly deals with a 15-bit padding "Length Indicator" when present in a received PDU.

7.2.2.8.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for UM 15-bit "Length Indicator" tests in clause 7.2.2.1.

These settings apply to both the uplink and downlink DTCH.

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to UM_15_PayloadSize + 1 bytes.

Test procedure

a) The SS transmits an RLC SDU of size UM_15_PayloadSize + 1 bytes. The second of the 2 PDUs sent shall contain a "Length Indicator" indicating the end of the SDU and the "Length Indicator" indicating that padding is present.

b) The SS checks the "Length Indicator" values in the RLC PDU returned on the uplink, and checks the length and content of the received RLC SDU (assuming a 15-bit "Length Indicator" size).

c) The SS may optionally release the radio bearer.

Expected sequence

7.2.2.8.5 Test requirements

1. The UE shall return two RLC PDUs. The first shall not include "Length Indicators". The second shall have a "Length Indicator" indicating the PDU contains a SDU boundary after octet 1 of the data field, and the second shall indicate that the remainder of the PDU contains padding.

2. The length and data content of the received SDU shall be the same as the transmitted SDU.

7.2.2.9 Segmentation and Reassembly / 15-bit "Length Indicators" / LI = 0

7.2.2.9.1 Definition

The RLC segments and concatenates SDUs into UMD PDUs according to the PDU size requested by MAC. A pre-defined "Length Indicator" value is used to indicate when an SDUs ends coincident with the end of the previous PU. Incorrect operation of segmentation, concatenation, or coding of "Length Indicators" will result in failure of the UE to communicate.

7.2.2.9.2 Conformance requirement

If the PDU is exactly filled with the last segment of a SDU and there is no room for an "Length Indicator" field, a "Length Indicator" field set to all 0's shall be included as the first "Length Indicator" in the following PDU.

Reference(s)

TS 25.322 clause 11.2.2.1.

7.2.2.9.3 Test purpose

1. To test that where a SDU exactly fills a PDU, a "Length Indicator" of all 0's is placed by the transmitter as the first "Length Indicator" in the next PDU.

2. To test that where an SDU exactly fills a PDU, and an "Length Indicator" of all 0's is the first "Length Indicator" in the next PDU, the receiver correctly reassembles the PDU.

7.2.2.9.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for UM 15-bit "Length Indicator" tests in clause 7.2.2.1.

These settings apply to both the uplink and downlink DTCH.

The radio bearer is placed into loop-back mode 1 with the UL SDU size set to UM_15_PayloadSize bytes.

Test procedure

a) The SS transmits an RLC SDU of size 2 * UM_15_PayloadSize bytes.

b) The SS checks the "Length Indicator" values in the RLC PDUs returned on the uplink, and checks the length and content of the received RLC SDU (assuming a 15-bit "Length Indicator" size).

c) The SS may optionally release the radio bearer.

NOTE 1: The Expected Sequence shown is informative. The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity. Information such as SDU, PDU or Sequence numbers given in the comments column shall be considered informative only, for test case development purposes.				

7.2.2.9.5 Test requirements

The UE shall return two RLC PDUs. The first shall not include "Length Indicators". The second shall have an "Length Indicators" indicating that the SDU exactly filled the previous UMD PDU, and a "Length Indicators" indicating that the remainder of the PDU contains padding.

The length of the received SDU shall be UM_15_PayloadSize bytes, and the data content shall be the same as the first UM_15_PayloadSize bytes of the transmitted SDU.

7.2.2.10 Segmentation and reassembly / 15-bit "Length Indicators" / One octet short LI

7.2.2.10.1 Definition

The RLC segments and concatenates SDUs into UMD PDUs according to the PDU size requested by MAC. A pre-defined "Length Indicator" value is used to indicate when an SDUs ends one octet short of the end of the previous PDU. Incorrect operation of segmentation, concatenation, or coding of "Length Indicators" will result in failure of the UE to communicate.

7.2.2.10.2 Conformance requirement

In the case where the last segment of an RLC SDU is one octet short of exactly filling the last RLC PDU, and 15-bit "Length Indicators" are used, the next "Length Indicator" shall be placed as the first "Length Indicator" in the next PDU and have value "Length Indicator"=111 1111 1111 1011.

In the case where a PDU contains a 15-bit "Length Indicator" indicating that an SDU ends with one octet left in the PDU, the last octet of this PDU shall be ignored and shall not be filled with the first octet of the next SDU data.

Reference(s)

TS 25.322 clause 9.2.2.8.

7.2.2.10.3 Test purpose

1. To test that where the UE transmits an SDU, which is one byte short of filling a PDU, an "Length Indicator" indicating one byte short is placed as the first "Length Indicator" in the next PDU.

2. To test that where the UE correctly handles a received PDU containing an "Length Indicator" indicating that an SDU ended one byte short of the end of the previous PDU.

7.2.2.10.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for UM 15-bit "Length Indicator" tests in clause 7.2.2.1.

These settings apply to both the uplink and downlink DTCH.

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to UM_15_PayloadSize - 1bytes.

Test procedure

a) The SS transmits an RLC SDU of size (2 * UM_15_PayloadSize) - 1 bytes.

b) The SS checks the "Length Indicator" sizes and values in the RLC PDUs returned on the uplink, and checks the length and content of the received RLC SDU (assuming a 15-bit "Length Indicator" size).

c) The SS may optionally release the radio bearer.

Expected sequence

4	←		DOWNLINK RLC PDU	LI=111 1111 1111 1011 and padding
5	→		UPLINK RLC PDU	No LIs
6	→		UPLINK RLC PDU	Check LIs and re-assembled SDU
7			RB RELEASE	Optional step
NOTE 1: The Expected Sequence shown is informative. The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity. Information such as SDU, PDU or Sequence numbers given in the comments column shall be considered informative only, for test case development purposes.				

7.2.2.10.5 Test requirements

1. The UE shall return two RLC PDUs. The first shall have no "Length Indicators". The second shall have 2 "Length Indicators". The first "Length Indicator" shall be a "Length Indicator" indicating that the SDU was one byte short of filling the previous PDU, and the second shall be a "Length Indicator" indicating that the remainder of the PDU contains padding.

2. The length of the received SDU shall be UM_15_PayloadSize - 1bytes, and the data content shall be the same as the first UM_15_PayloadSize - 1 bytes of the transmitted SDU.

7.2.2.11 Reassembly / 15-bit "Length Indicators" / Invalid LI value

7.2.2.11.1 Definition

The RLC segments and concatenates SDUs into UMD PDUs according to the PDU size requested by MAC. "Length Indicators" are added to allow correct reconstruction of SDUs. The behaviour of the RLC on reception of an invalid "Length Indicator" value has been specified. Incorrect operation of segmentation, concatenation, or coding of "Length Indicator" will result in failure of the UE to communicate.

7.2.2.11.2 Conformance requirement

Upon delivery by the lower layer of an UMD PDU that contains a "Length Indicator" value specified to be reserved for UMD PDUs in this version of the protocol, the Receiver shall:

- ignore that UMD PDU.;

Length: 15bits

Bit	Description
111111111111110	AMD PDU: The rest of the RLC PDU includes a piggybacked STATUS PDU. UMD PDU: Reserved (PDUs with this coding will be discarded by this version of the protocol).

Reference(s)

TS 25.322 clause 11.2.4.1, 9.2.2.8.

7.2.2.11.3 Test purpose

To test that PDUs with invalid "Length Indicators" are discarded by the receiving RLC.

7.2.2.11.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for UM 15-bit "Length Indicator" tests in clause 7.2.2.1.

These settings apply to both the uplink and downlink DTCH.

The radio bearer is placed into loop-back mode 1 with the UL SDU size set to UM_15_PayloadSize + 1 bytes.

Test procedure

a) The SS transmits two RLC SDUs of size UM_15_PayloadSize + 1 bytes. In the third PDU for transmission, the SS sets the value of the second (padding) LI to 111111111111110.

b) The SS checks the "Length Indicator" sizes and values of any RLC PDUs returned on the uplink, and checks for the presence of any received RLC SDUs.

c) The SS may optionally release the radio bearer.

Expected sequence

Step	Direction		Message	Comments
	UE	**SS**

2	←		DOWNLINK RLC PDU	SDU 1
3	←		DOWNLINK RLC PDU	SDU 1 & SDU 2
4	←		DOWNLINK RLC PDU	SDU 2 and invalid LI (=111111111111110)
5	→		UPLINK RLC PDU	SDU 1
6	→		UPLINK RLC PDU	SDU 1: Check Lis and re-assembled SDU
7			RB RELEASE	Optional step
NOTE 1: The Expected Sequence shown is informative. The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity. Information such as SDU, PDU or Sequence numbers given in the comments column shall be considered informative only, for test case development purposes.				

7.2.2.11.5 Test requirements

The UE shall return two RLC PDUs. The first shall not include any "Length Indicators". The second shall have a "Length Indicator" indicating the end of the SDU, and a padding "Length Indicator".

The length and data content of the received SDU shall be the same as the first transmitted SDU. The second SDU shall not be returned.

7.2.2.12 Reassembly / 15-bit "Length Indicators" / LI value > PDU size

7.2.2.12.1 Definition

The RLC segments and concatenates SDUs into UMD PDUs according to the PDU size requested by MAC. "Length Indicators" are added to allow correct reconstruction of SDUs. The behaviour of the RLC on reception of an invalid

"Length Indicator" value has been specified. Incorrect operation of segmentation, concatenation, or coding of "Length Indicators" will result in failure of the UE to communicate.

7.2.2.12.2 Conformance requirement

If the "Length Indicator" of a PDU has a value that is larger than the PDU size – the number of octets containing "Length Indicators" in the PDU – 1 and is not one of the predefined values listed in the table of 3GPP TS 25.322 clause 9.2.2.8, the PDU shall be discarded and treated as a missing PDU.

If a PDU with sequence number < VR(US) is missing then all SDUs that have segments in this PDU shall be discarded.

Reference(s)

TS 25.322 clauses 11.2.4.2 and 11.2.3.

7.2.2.12.3 Test purpose

To test that PDUs with "Length Indicators" that point beyond the end of the PDU are ignored by the receiving RLC entity.

7.2.2.12.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for UM 15-bit "Length Indicator" tests in clause 7.2.2.1.

These settings apply to both the uplink and downlink DTCH.

The radio bearer is placed into loop-back mode 1 with the UL SDU size set to UM_15_PayloadSize + 1bytes.

Test procedure

a) The SS transmits three RLC SDUs of size UM_15_PayloadSize + 1 bytes. All the SDUs are concatenated or segmented over successive RLC PDUs. In the third PDU for transmission, the SS sets value of the "Length Indicator" to be UM_15_PayloadSize + 1 (decimal).

b) The SS checks the "Length Indicator" values in the RLC PDUs returned on the uplink, and checks the length and content of the received RLC SDUs (assuming a 15-bit "Length Indicator" size).

c) The SS may optionally release the radio bearer.

Expected sequence

7.2.2.12.5 Test requirements

The UE shall return two RLC PDUs. The first shall not include any "Length Indicators". The second shall have a "Length Indicator" indicating the end of an SDU and a "Length Indicator" indicating that the remainder of the PDU contains padding.

The length and data content of the received SDU shall be the same as the first transmitted SDU. No further SDUs or PDUs shall be received.

7.2.2.13 Reassembly / 15-bit "Length Indicators" / First data octet LI

7.2.2.13.1 Definition

The RLC segments and concatenates SDUs into UMD PDUs according to the PDU size requested by MAC. "Length Indicators" are added to allow correct reconstruction of SDUs. A special LI is defined to indicate that the start of on SDU is coincident with the start of the PDU. The special LI is needed to avoid discarding of an SDU when the first received PDU has a sequence number different from zero. Incorrect operation of segmentation, concatenation, or coding of "Length Indicators" will result in failure of the UE to communicate.

7.2.2.13.2 Conformance requirement

"Length Indicators" = 111111111111100, UMD PDU: The first data octet in this RLC PDU is the first octet of a RLC SDU.

Reference(s)

TS 25.322 clause 9.2.2.8.

7.2.2.13.3 Test purpose

To test that a UE in unacknowledged mode correctly handles a received RLC PDU with a 15-bit "Length Indicator" having its value equal to the special LI value 111111111111100 when the sequence number of the first received PDU is different from zero.

7.2.2.13.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for UM 15-bit "Length Indicator" tests in clause 7.2.2.1.

These settings apply to both the uplink and downlink DTCH.

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to 150 bytes.

Test procedure

a) The SS transmits a RLC SDU of size 150 bytes in a PDU which has the 'First Data Octet LI' as the first "Length Indicator" in the PDU.

b) The SS waits until the SDU has been received back from the UE, and then transmits another SDU of 150 bytes in a PDU which has the 'First Data Octet LI' as the first "Length Indicator" in the PDU.

c) The SS waits until this SDU has been received back from the UE.

c) The SS may optionally release the radio bearer.

Expected sequence

Step	Direction		Message	Comments

7.2.2.13.5 Test requirements

1. The UE shall return two RLC PDUs.
2. The length and data content of each received SDU shall be the same as the transmitted SDU.

7.2.2.14 Flexible handling of RLC PDU sizes for UM RLC in downlink

7.2.2.14.1 Definition

When UM RLC is mapped to MAC-ehs (downlink only) the RLC PDU size can have arbitrary size (integer number of octets). The network can choose to segment the SDUs into smaller RLC PDUs or select the RLC PDU size to exactly fit the SDU size.

7.2.2.14.2 Conformance requirement

Unless the "Extension bit" indicates that a UMD PDU contains a complete SDU which is not segmented, concatenated or padded, or the HE field indicates that an AMD PDU contains the last octet of the RLC SDU, a "Length Indicator" is used to indicate the last octet of each RLC SDU ending within the PDU

[…]

The interpretation of this [E bit] bit depends on RLC mode and higher layer configuration:

- In the UMD PDU, the "Extension bit" in the first octet has either the normal E-bit interpretation or the alternative E-bit interpretation depending on higher layer configuration. The "Extension bit" in all the other octets always has the normal E-bit interpretation.
- In the AMD PDU, the "Extension bit" always has the normal E-bit interpretation.

Normal E-bit interpretation:

Bit	Description
0	The next field is data, piggybacked STATUS PDU or padding
1	The next field is Length Indicator and E bit

Alternative E-bit interpretation:

Bit	Description
0	The next field is a complete SDU, which is not segmented, concatenated or padded.
1	The next field is Length Indicator and E bit

[…]

If one or more SDUs have been scheduled for transmission according to subclause 11.2.2, the Sender shall:

- inform the lower layer of the number and size of SDUs scheduled for transmission;
- segment, and if possible concatenate the SDUs according to the PDU sizes indicated by the lower layer (see subclause 9.2.2.9);

[…]

- reassemble the received UMD PDUs into RLC SDUs;
- submit the RLC SDUs to upper layers through the UM-SAP.

Reference(s)

TS 25.322 clauses 9.2.2.8, 11.2.2 and 11.2.3.

7.2.2.14.3 Test purpose

1. To test that a large SDU is correctly received for varying RLC PDU sizes up to the maximum RLC PDU size
2. To test that a segmented SDU is reassembled correctly and delivered to higher layers

7.2.2.14.4 Method of test

Initial conditions

The following parameters are specific for this test case:

Parameter	Value
DL UM RLC LI size	15
Alternative E-bit interpretation	TRUE

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Bearer is replaced with the RB according to 34.108 clause 6.11.4j.1..

The radio bearer is placed into UE test loop mode 1 and configured to return UL RLC SDUs of the same size as received in DL.

Test procedure

a) The SS transmits one RLC SDU of size 20 octets. An RLC PDU is created by adding a one octet UMD header (the SDU is not segmented or concatenated). In the RLC PDU the E field is set to “0”.

b) The SS checks the length and content of the received RLC SDUs

c) The SS transmits one RLC SDU of size 80 octets. An RLC PDU is created by adding a one octet UMD header (the SDU is not segmented or concatenated). In the RLC PDU the E field is set to “0”.

d) The SS checks the length and content of the received RLC SDUs

e) The SS transmits one RLC SDU of size 1500 octets. An RLC PDU is created by adding a one octet UMD header (the SDU is not segmented or concatenated). In the RLC PDU the E field is set to “0”.

f) The SS checks the length and content of the received RLC SDUs

g) The SS transmits one RLC SDU of size 240 octets. The SDU is segmented into successive RLC PDUs of size 2-3, 43, 83 and 103 octets including a one octet UMD header and a length indicator in each RLC PDU.

h) The SS checks the length and content of the received RLC SDUs

i) The SS opens the UE test loop and release the radio bearer.

NOTE 1: The Expected Sequence shown is informative. Information such as SDU, PDU or Sequence numbers given in the comments column shall be considered informative only, for test case development purposes.				

7.2.2.14.5 Test requirements

For each execution of the test procedure:

1. In steps 4, the UE shall return one RLC SDU with the same size and content as the transmitted SDU
2. In steps 6, the UE shall return one RLC SDU with the same size and content as the transmitted SDU
3. In steps 8, the UE shall return one RLC SDU with the same size and content as the transmitted SDU
4. In steps 10, the UE shall return one RLC SDU with the same size and content as the transmitted SDU

7.2.2.15 Flexible handling of RLC PDU sizes for UM RLC in uplink

7.2.2.15.1 Definition

When UM RLC is mapped to MAC-i/is (uplink only) the RLC PDU size can have arbitrary size (integer number of octets) as long as the size is between the configured minimum and maximum size. For each transmission the RLC entity constructs an RLC PDU with a size that matches the size indicated by the MAC layer.

7.2.2.15.2 Conformance requirement

The transmitting UM RLC entity segments the RLC SDU into UMD PDUs of appropriate size, if the RLC SDU is larger than the length of available space in the UMD PDU. The size of the UMD PDUs after segmentation and/or concatenation shall be smaller than or equal to the largest UL UMD PDU size. If MAC-i/is has been configured, the size of the UMD PDUs after segmentation and/or concatenation shall be larger than or equal to the Minimum UL RLC PDU size.

[..]

- in uplink, if MAC-i/is has been configured:
  - if the UE pre-generates RLC PDUs for transmission in a later TTI:
    - provided that the UE has sufficient amount of data available for transmission, the size of the data field of the RLC PDU shall be chosen so that each RLC PDU to be multiplexed to the MAC-i/is PDU matches the maximum amount of data allowed to be transmitted by the applicable current grant (scheduled or non-scheduled) for the current TTI.
    - RLC PDUs may only be pre-generated if the amount of data in outstanding pre-generated RLC PDUs for this logical channel is less than or equal to four times the maximum amount of data allowed to be transmitted by the applicable current grant (scheduled or non-scheduled) for the current TTI.

- else:
  - the size of the data field of the RLC PDU shall be chosen so that the RLC PDU size matches the data requested for this logical channel by the current E-TFC selection.

[…]

For UM uplink:

- if the "largest UL UMD PDU size" is ≤ 125 octets:
  - 7-bit "Length Indicators" shall be used.
- else:
  - 15-bit "Length Indicators" shall be used.

[…]

If one or more SDUs have been scheduled for transmission according to subclause 11.2.2, the Sender shall:

- inform the lower layer of the number and size of SDUs scheduled for transmission;
- segment, and if possible concatenate the SDUs according to the PDU sizes indicated by the lower layer (see subclause 9.2.2.9);

Reference(s)

TS 25.322 clauses 4.2.1.2.1, 9.2.2.8 and 11.2.2.2.

7.2.2.15.3 Test purpose

1. To test that SDUs are correctly concatenated/segmented into RLC PDUs not smaller than “Minimum UL PDU size” (unless there is no other data in the buffer) and not larger than “largest UL UMD PDU size”
2. To test that the size of the RLC PDU is adapted to the size of the issued grant
3. To test that the size of the Length Indicator field is correctly selected based on the maximum PDU size

7.2.2.15.4 Method of test

Initial conditions

The following parameters are specific for this test case:

Parameter	Value
Minimum UL PDU size	320 bit (Note 1)
Largest UL UMD PDU size	640 bit (Note 1)
Alternative E-bit interpretation	TRUE
Note 1: The actual value is (IE value * 8) + 16	

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exceptions that the default Radio Bearer is replaced with the RB according to 34.108 clause 6.11.4k.1 (Flexible RLC + MAC-i/is) and that the MAC-d flow#1 of the RB in 34.108 clause 6.11.4k.1 is configured for scheduled transmissions.

The UE is placed into UE test loop mode 1 with the UL SDU size set to 80 octets.

Test procedure

a) The SS has not issued any grant to the UE for E-DCH

b) The SS transmits 4 RLC SDUs of size 80 octets. RLC PDUs are created by adding a one octet UMD header (the SDUs are not segmented or concatenated). In each RLC PDU the E field is set to “0”.

c) The SS waits for an SI

d) The SS issues an absolute grant correspondent to a Maximum allowed RLC PDU size below the configured "Minimum UL PDU size" (signalling value 3). See note 1.

e) The SS checks the content of the received RLC SDUs and size of the received RLC PDUs;

f) The SS removes the scheduling grant for the UE

g) The SS transmits 4 RLC SDUs of size 80 octets. RLC PDUs are created by adding a one octet UMD header (the SDUs are not segmented or concatenated). In each RLC PDU the E field is set to "0".

h) The SS issues an absolute grant correspondent to a Maximum allowed RLC PDU size above the configured "Largest UL UMD PDU size" (signalling value 5). See note 2.

i) The SS checks the content of the received RLC SDUs and size of the received RLC PDUs

j) The SS opens the UE test loop and release the radio bearer.

NOTE 1: Signalled absolute grant of 3 enable the UE to transmit a maximum RLC PDU size of 235 bits (10ms TTI, Reference E-TFCI=11 Signalled power offset=4), which is less than the configured "Minimum UL PDU size" of 320 bits.

NOTE 2: Signalled absolute grant of 5 together with mentioned reference E-TFCI for 2/10 ms TTI, SS allocates enough resources for the UE to transmit RLC PDU which is not larger than the configured with E_TFCI-50(2ms TTI) and E_TFCI-45(10ms TTI) "Largest UL PDU size" of 656bits.

NOTE 1: The Expected Sequence shown is informative. Information such as SDU, PDU or Sequence numbers given in the comments column shall be considered informative only, for test case development purposes.				

7.2.2.15.5 Test requirements

For each execution of the test procedure:

1. In step 6, the UE shall return 4 RLC SDUs with the same content as the transmitted SDUs. The RLC PDU size of the first three RLC PDUs shall be equal to "minimum UL PDU size". The size of the LI field in the RLC header shall be 7 bit.

2. In step 11, the UE shall return 4 RLC SDUs with the same content as the transmitted SDUs. The RLC PDU size of the first RLC PDU shall be equal to "Largest UL UMD PDU size", the subsequent RLC PDUs shall be between minimum UL PDU size and Largest UL UMD PDU size, and the last PDU shall be less than the Largest UL UMD PDU size. The size of the LI field in the RLC header shall be 7 bit.

7.2.2a Unacknowledged mode (TDD MBSFN) (non-IMB)

7.2.2a.1 P-T-M Radio bearer setup

Two generic P-T-M Radio Access Bearers are provided for the MBSFN UM tests.

The UM test RAB is set up using the Generic Procedure described below, and with the default RAB replaced as follows:

- For UM 7-bit "Length Indicator" tests: the RB configuration described in 3GPP TS 34.108 clause 6.11.1c (3.84 Mcps TDD) or 6.11.1d (7.68 Mcps TDD) or 6.11.5.4.4.13 (1.28 Mcps TDD) is used. For these tests, let UM_7_PayloadSize denote the RAB payload size in octets.

- For UM 15-bit "Length Indicator" tests: the RB configuration described in 3GPP TS 34.108 clause 6.11.2a (3.84 Mcps TDD) or 6.11.2b (7.68 Mcps TDD) or 6.11.5.4.4.14 (1.28 Mcps TDD) is used. For these tests, let UM_15_PayloadSize denote the RAB payload size in octets.

These UM test RABs are used in all tests with the following exception:

- Tests that explicitly specify a different Radio Bearer configuration.

All other settings are the same.

The special "Length Indicator" indicating that an SDU begins in the first octet of a PDU, described in clause 9.2.2.8 in 3GPP TS 25.322 is not used except when explicitly stated in the corresponding test case.

Initial conditions

System Simulator:

Unicast carrier: 1 cell, Cell 1 with default configuration.

- MBSFN carriers: 1 cell, Cell 31 has default parameters. In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C1 and Default1 MCCH scheduling (No ongoing session) according to subclause 11.2 of TS 34.108.

  The configuration of the S-CCPCH which will carry the MTCH is based upon the default test RAB configuration defined above.

User Equipment:

- On the unicast carrier cell the UE is in registered Idle Mode on PS (state 3) if the UE only supports PS domain or registered Idle Mode on CS/PS (state 7) if the UE supports both CS and PS domains, as specified in clause 7.2.2 of TS 34.108.

- The UE is in MBSFN Idle mode with one activated service as specified in clause 7.6.4 of TS 34.108. The UE has selected (i.e. it is included in MBMS_ACTIVATED_SERVICES variable) a national service for which there will be a session starting on MBSFN Cell 31 (see TS 34.108 clause 11.2.4).

Procedure

a) The UE is camping on Cell 1 and Cell 31. In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C1 (no session ongoing) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108.

b) The SS sends ACTIVATE RB TEST MODE on the unicast carrier and the UE responds with ACTIVATE RB TEST MODE COMPLETE.

c) The SS sends CLOSE UE TEST LOOP to activate RLC SDU counting on Cell 31 MTCH (Transmission identity indicating the MBSFN MBMS activated service).

d) The SS notifies on MCCH about the start of an MBMS session for one modification period. MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C4 (one PTM session starting) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108.

e) MCCH messages are then transmitted by the SS on Cell 31 using MBMS configuration C2 (one PTM session ongoing) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108.

f) The SS waits for the UE to start reception of the MBMS data on MTCH according to the specified service activation time. The UE closes the test loop. The UE sends CLOSE UE TEST LOOP COMPLETE.

Expected sequence

Step	Direction		Carrier	Message	Comment
	UE	SS			
1	←		U	ACTIVATE RB TEST MODE	
2	→		U	ACTIVATE RB TEST MODE COMPLETE	
3	←		U	CLOSE UE TEST LOOP	Loop back mode 3 is activated on Cell 31 for the selected national service on MTCH.
4	←		M	MBMS MCCH Message Configuration C4	Includes the national service activated at UE in the modified services list for one modification period.
5	←		M	MBMS MCCH Message Configuration C2	No modified services. One ongoing service corresponding to that activated at the UE.
6	→		U	CLOSE UE TEST LOOP COMPLETE	The UE establishes the MTCH according to the activation time and closes the test loop.

7.2.2a.2 Reassembly / 7-bit "Length Indicators" / Invalid LI value (TDD MBSFN)

7.2.2a.2.1 Definition

The RLC segments and concatenates SDUs into UMD PDU according to the PDU size requested by MAC. "Length Indicators" are added to allow correct reconstruction of SDUs. The behaviour of the RLC on reception of an invalid "Length Indicator" value has been specified. Incorrect operation of segmentation, concatenation, or coding of "Length Indicators" will result in failure of the UE to communicate.

7.2.2a.2.2 Conformance requirement

Upon delivery by the lower layer of an UMD PDU that contains a "Length Indicator" value specified to be reserved for UMD PDUs in this version of the protocol, the Receiver shall:

- ignore that UMD PDU.

[...]

Length: 7 bits

Bit	Description
1111101	Reserved (PDUs with this coding will be discarded by this version of the protocol).
1111110	AMD PDU: The rest of the RLC PDU includes a piggybacked STATUS PDU. UMD PDU: Reserved (PDUs with this coding will be discarded by this version of the protocol).

Reference(s)

TS 25.322 clause 9.2.2.8 and 11.2.4.1.

7.2.2a.2.3 Test purpose

To test that PDUs with reserved "Length indicator" values of '111 1110' and '111 1101' are discarded by the receiving RLC.

7.2.2a.2.4 Method of test

Initial conditions

The generic procedure for P-T-M Radio Bearer setup (clause 7.2.2a.1) is executed with all the parameters as specified in the procedure for the RAB defined for UM 7-bit "Length Indicator" tests.

Test procedure

a) The SS transmits two RLC SDUs of size UM_7_PayloadSize + 1 bytes. In the third PDU for transmission, the SS sets the value of the second (padding) LI to 1111110.

b) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST. The SS waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is = 1. The SS records the value.

c) The SS transmits two RLC SDUs of size UM_7_PayloadSize + 1 bytes. In the third PDU for transmission, the SS sets the value of the second (padding) LI to 1111101.

d) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST. The SS waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is consistent with a number of received RLC SDUs equal to 1.

Expected sequence

Step	Direction		Carrier	Message	Comment
	UE	SS			
1				P-T-M RADIO BEARER SETUP	See clause 7.2.2a.1
2	←		M	DOWNLINK RLC PDU	SDU 1
3	←		M	DOWNLINK RLC PDU	SDU 1 & SDU 2
4	←		M	DOWNLINK RLC PDU	SDU 2 and invalid LI (=11111110)
5	←		U	UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST	
6	→		U	UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE	The SS checks that the number of reported RLC SDUs received on the MTCH is equal to one. SS records value.
7	←		M	DOWNLINK RLC PDU	SDU 1
8	←		M	DOWNLINK RLC PDU	SDU 1 & SDU 2
9	←		M	DOWNLINK RLC PDU	SDU 2 and invalid LI (=11111101)
10	←		U	UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST	
11	→		U	UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE	The SS checks that the number of reported RLC SDUs received on the MTCH is equal to one.
12	←		U	OPEN UE TEST LOOP	
13	→		U	OPEN UE TEST LOOP COMPLETE	
14	←		U	DEACTIVATE RB TEST MODE	
15	→		U	DEACTIVATE RB TEST MODE COMPLETE	

Specific Message Contents

With the following exceptions, all messages have the same content as defined in TS 34.108 clause 9.1.3 for the MBSFN carriers and in TS 34.108 clause 9.1.1 or 9.1.2 for the unicast carrier:

None.

7.2.2a.2.5 Test requirements

1) At step 6, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number that corresponds to one received RLC SDU for Cell 31 MTCH.

2) At step 11, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number that corresponds to one received RLC SDU for Cell 31 MTCH.

7.2.2a.3 Reassembly / 7-bit "Length Indicators" / LI value > PDU size (TDD MBSFN)

7.2.2a.3.1 Definition

The RLC segments and concatenates SDUs into UMD PDUs according to the PDU size requested by MAC. "Length Indicators" are added to allow correct reconstruction of SDUs. The behaviour of the RLC on reception of an invalid "Length Indicator" value has been specified. Incorrect operation of segmentation, concatenation, or coding of "Length Indicators" will result in failure of the UE to communicate.

7.2.2a.3.2 Conformance requirement

If the "Length Indicator" of an UMD PDU has a value that is larger than the PDU size – RLC header size and is not one of the predefined values listed in the table of TS 25.322 subclause 9.2.2.8, the Receiver shall:

- ignore the UMD PDU.

[...]

Upon delivery of a set of UMD PDUs from the lower layer, the Receiver shall:

- update VR(US) according to each received UMD PDU (see TS 25.322 subclause 9.4);
- if the updating step of VR(US) is not equal to one (i.e. one or more UMD PDUs are missing):
  - discard the SDUs that have segments in the missing UMD PDUs.

Reference(s)

TS 25.322 clauses 11.2.4.2 and 11.2.3.

7.2.2a.3.3 Test purpose

To test that PDUs with "Length Indicators" that point beyond the end of the PDU are ignored by the receiving RLC entity.

7.2.2a.3.4 Method of test

Initial conditions

The generic procedure for P-T-M Radio Bearer setup (clause 7.2.2a.1) is executed with all the parameters as specified in the procedure for the RAB defined for UM 7-bit "Length Indicator" tests.

Test procedure

a) The SS transmits three RLC SDUs of size UM 7 PayloadSize + 1 bytes. All the SDUs are concatenated or segmented over successive RLC PDUs. In the third PDU for transmission, the SS sets value of the "Length Indicator" to be UM_7_PayloadSize (decimal).

b) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST. The SS waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 4 RLC SDU COUNTER RESPONSE is = 1. The SS records the value.

c) The SS transmits three RLC SDUs of size UM 7 PayloadSize + 1 bytes. All the SDUs are concatenated or segmented over successive RLC PDUs. In the third PDU for transmission, the SS sets value of the "Length Indicator" to be UM_7_PayloadSize (decimal).

d) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST. The SS waits for the UE to respond with UE TEST LOOP MODE 4 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is consistent with a number of received RLC SDUs equal to 1.

16	←		U	DEACTIVATE RB TEST MODE	
17	→		U	DEACTIVATE RB TEST MODE COMPLETE	

Specific Message Contents

With the following exceptions, all messages have the same content as defined in TS 34.108 clause 9.1.3 for the MBSFN carriers and in TS 34.108 clause 9.1.1 or 9.1.2 for the unicast carrier:

None.

7.2.2a.3.5 Test requirements

1) At step 7, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number that corresponds to one received RLC SDU for Cell 31 MTCH.

2) At step 13, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number that corresponds to one received RLC SDU for Cell 31 MTCH.

7.2.2a.4 Reassembly / 7-bit "Length Indicators" / First data octet LI (TDD MBSFN)

7.2.2a.4.1 Definition

The RLC segments and concatenates SDUs into UMD PDUs according to the PDU size requested by MAC. "Length indicators" are added to allow correct reconstruction of SDUs. A special "Length Indicator" is defined to indicate that the start of an SDU is coincident with the start of the PDU. The special "Length Indicator" is needed to avoid discarding of an SDU when the first received PDU has a sequence number different from zero. Incorrect operation of segmentation, concatenation, or coding of "Length Indicators" will result in failure of the UE to communicate.

7.2.2a.4.2 Conformance requirement

1. "Length Indicator" = 1111100, UMD PDU: The first data octet in this RLC PDU is the first octet of a RLC SDU.

2. Upon delivery of a set of UMD PDUs from the lower layer, the Receiver shall:

   ...

   - if the special "Length Indicator" "1111 100" or "1111 1111 1111 100" is the first "Length Indicator" of a UMD PDU received on the downlink:

     - consider the first data octet in this UMD PDU as the first octet of an RLC SDU.

Reference(s)

1. TS 25.322 clause 9.2.2.8.
2. TS 25.322 clause 11.2.3.

7.2.2a.4.3 Test purpose

To test that a UE in unacknowledged mode correctly handles a received RLC PDU with a 7-bit "Length Indicator" having its value equal to the special "Length Indicator" value 1111100 when the sequence number of the first received PDU is different from zero.

7.2.2a.4.4 Method of test

Initial conditions

The generic procedure for P-T-M Radio Bearer setup (clause 7.2.2a.1) is executed with all the parameters as specified in the procedure for the RAB defined for UM 7-bit "Length Indicator" tests.

Test procedure

a) The SS transmits a RLC SDU of size 12 bytes in a PDU which has the 'First Data Octet LI' as the first "Length Indicator" in the PDU.

b) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST. The SS waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is = 1. The SS records the value.

c) The SS transmits another SDU of 12 bytes in a PDU which has the 'First Data Octet LI' as the first "Length Indicator" in the PDU.

d) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST. The SS waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is consistent with a number of received RLC SDUs equal to 1.

NOTE: The SS sends PDUs in downlink starting at sequence number 10.

Expected sequence

7.2.2a.6 Reassembly / 15-bit "Length Indicators" / LI value > PDU size (TDD MBSFN)

7.2.2a.6.1 Definition

The RLC segments and concatenates SDUs into UMD PDUs according to the PDU size requested by MAC. "Length Indicators" are added to allow correct reconstruction of SDUs. The behaviour of the RLC on reception of an invalid "Length Indicator" value has been specified. Incorrect operation of segmentation, concatenation, or coding of "Length Indicators" will result in failure of the UE to communicate.

7.2.2a.6.2 Conformance requirement

If the "Length Indicator" of a PDU has a value that is larger than the PDU size – the number of octets containing "Length Indicators" in the PDU – 1 and is not one of the predefined values listed in the table of 3GPP TS 25.322 clause 9.2.2.8, the PDU shall be discarded and treated as a missing PDU.

If a PDU with sequence number < VR(US) is missing then all SDUs that have segments in this PDU shall be discarded.

Reference(s)

TS 25.322 clauses 11.2.4.2 and 11.2.3.

7.2.2a.6.3 Test purpose

To test that PDUs with "Length Indicators" that point beyond the end of the PDU are ignored by the receiving RLC entity.

7.2.2a.6.4 Method of test

Initial conditions

The generic procedure for P-T-M Radio Bearer setup (clause 7.2.2a.1) is executed with all the parameters as specified in the procedure for the RAB defined for UM 15-bit "Length Indicator" tests.

Test procedure

a) The SS transmits three RLC SDUs of size UM 15 PayloadSize + 1 bytes. All the SDUs are concatenated or segmented over successive RLC PDUs. In the third PDU for transmission, the SS sets value of the "Length Indicator" to be UM_15_PayloadSize (decimal).

b) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST. The SS waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is = 1. The SS records the value.

c) The SS transmits three RLC SDUs of size UM 15 PayloadSize + 1 bytes. All the SDUs are concatenated or segmented over successive RLC PDUs. In the third PDU for transmission, the SS sets value of the "Length Indicator" to be UM_15_PayloadSize (decimal).

d) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST. The SS waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is consistent with a number of received RLC SDUs equal to 1.

1) At step 7, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number that corresponds to one received RLC SDU for Cell 31 MTCH.

2) At step 13, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number that corresponds to one received RLC SDU for Cell 31 MTCH.

7.2.2a.7 Reassembly / 15-bit "Length Indicators" / First data octet LI (TDD MBSFN)

7.2.2a.7.1 Definition

The RLC segments and concatenates SDUs into UMD PDUs according to the PDU size requested by MAC. "Length Indicators" are added to allow correct reconstruction of SDUs. A special LI is defined to indicate that the start of on SDU is coincident with the start of the PDU. The special LI is needed to avoid discarding of an SDU when the first received PDU has a sequence number different from zero. Incorrect operation of segmentation, concatenation, or coding of "Length Indicators" will result in failure of the UE to communicate.

7.2.2a.7.2 Conformance requirement

"Length Indicators" = 111111111111100, UMD PDU: The first data octet in this RLC PDU is the first octet of a RLC SDU.

Reference(s)

TS 25.322 clause 9.2.2.8.

7.2.2a.7.3 Test purpose

To test that a UE in unacknowledged mode correctly handles a received RLC PDU with a 15-bit "Length Indicator" having its value equal to the special LI value 111111111111100 when the sequence number of the first received PDU is different from zero.

7.2.2a.7.4 Method of test

Initial conditions

The generic procedure for P-T-M Radio Bearer setup (clause 7.2.2a.1) is executed with all the parameters as specified in the procedure for the RAB defined for UM 15-bit "Length Indicator" tests.

Test procedure

a) The SS transmits a RLC SDU of size 150 bytes in a PDU which has the 'First Data Octet LI' as the first "Length Indicator" in the PDU.

b) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST. The SS waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is = 1. The SS records the value.

c) The SS transmits another SDU of 150 bytes in a PDU which has the 'First Data Octet LI' as the first "Length Indicator" in the PDU.

d) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST. The SS waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is consistent with a number of received RLC SDUs equal to 1.

NOTE: The SS sends PDUs in downlink starting at sequence number 10.

Expected sequence

Step	Direction		Carrier	Message	Comment
	UE	SS			
1				P-T-M RADIO BEARER SETUP	See clause 7.2.2a.1
2	←		M	DOWNLINK RLC PDU, SN 10	SDU 1 with LI = 111111111111100
3	←		U	UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST	
4	→		U	UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE	The SS checks that the number of reported RLC SDUs received on the MTCH is equal to one. SS records value.
5	←		M	DOWNLINK RLC PDU, SN 11	SDU 2 with LI = 111111111111100
6	←		M	UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST	
7	→		U	UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE	The SS checks that the number of reported RLC SDUs received on the MTCH is equal to one.
8	←		U	OPEN UE TEST LOOP	
9	→		U	OPEN UE TEST LOOP COMPLETE	
10	←		U	DEACTIVATE RB TEST MODE	
11	→		U	DEACTIVATE RB TEST MODE COMPLETE	

Specific Message Contents

With the following exceptions, all messages have the same content as defined in TS 34.108 clause 9.1.3 for the MBSFN carriers and in TS 34.108 clause 9.1.1 or 9.1.2 for the unicast carrier:

None.

7.2.2a.7.5 Test requirements

1) At step 4, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number that corresponds to one received RLC SDU for Cell 31 MTCH.

2) At step 7, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number that corresponds to one received RLC SDU for Cell 31 MTCH.

7.2.2b Unacknowledged mode (MBSFN IMB)

7.2.2b.1 P-T-M Radio bearer setup

Two generic P-T-M Radio Access Bearers are provided for the MBSFN UM tests.

The UM test RAB is set up using the Generic Procedure described below, and with the default RAB replaced as follows:

- For UM 7-bit "Length Indicator" tests: the RB configuration described in 3GPP TS 34.108 clause 6.11.1e (3.84 Mcps TDD IMB) is used. For these tests, let UM_7_PayloadSize denote the RAB payload size in octets.

- For UM 15-bit "Length Indicator" tests: the RB configuration described in 3GPP TS 34.108 clause 6.11.2c (3.84 Mcps TDD IMB) is used. For these tests, let UM_15_PayloadSize denote the RAB payload size in octets.

These UM test RABs are used in all tests with the following exception:

- Tests that explicitly specify a different Radio Bearer configuration.

All other settings are the same.

The special "Length Indicator" indicating that an SDU begins in the first octet of a PDU, described in clause 9.2.2.8 in 3GPP TS 25.322 is not used except when explicitly stated in the corresponding test case.

Initial conditions

System Simulator:

Unicast carrier: 1 cell, Cell 1 with default configuration.

- MBSFN carriers: 1 cell, Cell 31 has default parameters. In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C1 and Default1 MCCH scheduling (No ongoing session) according to subclause 11.2 of TS 34.108.

  The configuration of the S-CCPCH which will carry the MTCH is based upon the default test RAB configuration defined above.

User Equipment:

- On the unicast carrier cell the UE is in registered Idle Mode on PS (state 3) if the UE only supports PS domain or registered Idle Mode on CS/PS (state 7) if the UE supports both CS and PS domains, as specified in clause 7.2.2 of TS 34.108.
- The UE is in MBSFN Idle mode with one activated service as specified in clause 7.6.4 of TS 34.108. The UE has selected (i.e. it is included in MBMS_ACTIVATED_SERVICES variable) a national service for which there will be a session starting on MBSFN Cell 31 (see TS 34.108 clause 11.2.4).

Procedure

a) The UE is camping on Cell 1 and Cell 31. In addition to broadcasting System Information, MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C1 (no session ongoing) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108.

b) The SS sends ACTIVATE RB TEST MODE on the unicast carrier and the UE responds with ACTIVATE RB TEST MODE COMPLETE.

c) The SS sends CLOSE UE TEST LOOP to activate RLC SDU counting on Cell 31 MTCH (Transmission identity indicating the MBSFN MBMS activated service).

d) The SS notifies on MCCH about the start of an MBMS session for one modification period. MCCH messages are transmitted by the SS on Cell 31 using MBMS configuration C4 (one PTM session starting) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108.

e) MCCH messages are then transmitted by the SS on Cell 31 using MBMS configuration C2 (one PTM session ongoing) and Default1 MCCH scheduling according to clause 11.2 of TS 34.108.

f) The SS waits for the UE to start reception of the MBMS data on MTCH according to the specified service activation time. The UE closes the test loop. The UE sends CLOSE UE TEST LOOP COMPLETE.

Expected sequence

Step	Direction		Carrier	Message	Comment
	UE	SS			
1	←		U	ACTIVATE RB TEST MODE	
2	→		U	ACTIVATE RB TEST MODE COMPLETE	
3	←		U	CLOSE UE TEST LOOP	Loop back mode 3 is activated on Cell 31 for the selected national service on MTCH.
4	←		M	MBMS MCCH Message Configuration C4	Includes the national service activated at UE in the modified services list for one modification period.
5	←		M	MBMS MCCH Message Configuration C2	No modified services. One ongoing service corresponding to that activated at the UE.
6	→		U	CLOSE UE TEST LOOP COMPLETE	The UE establishes the MTCH according to the activation time and closes the test loop.

7.2.2b.2 Reassembly / 7-bit "Length Indicators" / Invalid LI value (MBSFN IMB)

7.2.2b.2.1 Definition

The RLC segments and concatenates SDUs into UMD PDU according to the PDU size requested by MAC. "Length Indicators" are added to allow correct reconstruction of SDUs. The behaviour of the RLC on reception of an invalid

"Length Indicator" value has been specified. Incorrect operation of segmentation, concatenation, or coding of "Length Indicators" will result in failure of the UE to communicate.

7.2.2b.2.2 Conformance requirement

Upon delivery by the lower layer of an UMD PDU that contains a "Length Indicator" value specified to be reserved for UMD PDUs in this version of the protocol, the Receiver shall:

- ignore that UMD PDU.

[...]

Length: 7 bits

Bit	Description
1111101	Reserved (PDUs with this coding will be discarded by this version of the protocol).
1111110	AMD PDU: The rest of the RLC PDU includes a piggybacked STATUS PDU. UMD PDU: Reserved (PDUs with this coding will be discarded by this version of the protocol).

Reference(s)

TS 25.322 clause 9.2.2.8 and 11.2.4.1.

7.2.2b.2.3 Test purpose

To test that PDUs with reserved "Length indicator" values of '111 1110' and '111 1101' are discarded by the receiving RLC.

7.2.2b.2.4 Method of test

Initial conditions

The generic procedure for P-T-M Radio Bearer setup (clause 7.2.2b.1) is executed with all the parameters as specified in the procedure for the RAB defined for UM 7-bit "Length Indicator" tests.

Test procedure

a) The SS transmits two RLC SDUs of size UM_7_PayloadSize + 1 bytes. In the third PDU for transmission, the SS sets the value of the second (padding) LI to 1111110.

b) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST. The SS waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is = 1. The SS records the value.

c) The SS transmits two RLC SDUs of size UM_7_PayloadSize + 1 bytes. In the third PDU for transmission, the SS sets the value of the second (padding) LI to 1111101.

d) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST. The SS waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is consistent with a number of received RLC SDUs equal to 1.

Expected sequence

Step	Direction		Carrier	Message	Comment
	UE	SS			
1				P-T-M RADIO BEARER SETUP	See clause 7.2.2b.1
2	←		MU	DOWNLINK RLC PDU	SDU 1
3	←		MU	DOWNLINK RLC PDU	SDU 1 & SDU 2
4	←		MU	DOWNLINK RLC PDU	SDU 2 and invalid LI (=11111110)
5	←		U	UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST	
6	→		U	UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE	The SS checks that the number of reported RLC SDUs received on the MTCH is equal to one. SS records value.

13	→		U	OPEN UE TEST LOOP COMPLETE	
14	←		U	DEACTIVATE RB TEST MODE	
15	→		U	DEACTIVATE RB TEST MODE COMPLETE	

Specific Message Contents

With the following exceptions, all messages have the same content as defined in TS 34.108 clause 9.1.3 for the MBSFN carriers and in TS 34.108 clause 9.1.1 or 9.1.2 for the unicast carrier:

None.

7.2.2b.2.5 Test requirements

1) At step 6, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number that corresponds to one received RLC SDU for Cell 31 MTCH.

2) At step 11, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number that corresponds to one received RLC SDU for Cell 31 MTCH.

7.2.2b.3 Reassembly / 7-bit "Length Indicators" / LI value > PDU size (MBSFN IMB)

7.2.2b.3.1 Definition

The RLC segments and concatenates SDUs into UMD PDUs according to the PDU size requested by MAC. "Length Indicators" are added to allow correct reconstruction of SDUs. The behaviour of the RLC on reception of an invalid "Length Indicator" value has been specified. Incorrect operation of segmentation, concatenation, or coding of "Length Indicators" will result in failure of the UE to communicate.

7.2.2b.3.2 Conformance requirement

If the "Length Indicator" of an UMD PDU has a value that is larger than the PDU size – RLC header size and is not one of the predefined values listed in the table of TS 25.322 subclause 9.2.2.8, the Receiver shall:

- ignore the UMD PDU.

[...]

Upon delivery of a set of UMD PDUs from the lower layer, the Receiver shall:

- update VR(US) according to each received UMD PDU (see TS 25.322 subclause 9.4);
- if the updating step of VR(US) is not equal to one (i.e. one or more UMD PDUs are missing):
  - discard the SDUs that have segments in the missing UMD PDUs.

Reference(s)

TS 25.322 clauses 11.2.4.2 and 11.2.3.

7.2.2b.3.3 Test purpose

To test that PDUs with "Length Indicators" that point beyond the end of the PDU are ignored by the receiving RLC entity.

7.2.2b.3.4 Method of test

Initial conditions

The generic procedure for P-T-M Radio Bearer setup (clause 7.2.2b.1) is executed with all the parameters as specified in the procedure for the RAB defined for UM 7-bit "Length Indicator" tests.

Test procedure

a) The SS transmits three RLC SDUs of size UM 7 PayloadSize + 1 bytes. All the SDUs are concatenated or segmented over successive RLC PDUs. In the third PDU for transmission, the SS sets value of the "Length Indicator" to be UM_7_PayloadSize (decimal).

b) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST. The SS waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 4 RLC SDU COUNTER RESPONSE is = 1. The SS records the value.

c) The SS transmits three RLC SDUs of size UM 7 PayloadSize + 1 bytes. All the SDUs are concatenated or segmented over successive RLC PDUs. In the third PDU for transmission, the SS sets value of the "Length Indicator" to be UM_7_PayloadSize (decimal).

d) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST. The SS waits for the UE to respond with UE TEST LOOP MODE 4 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is consistent with a number of received RLC SDUs equal to 1.

Expected sequence

16	←		U	DEACTIVATE RB TEST MODE	
17	→		U	DEACTIVATE RB TEST MODE COMPLETE	

Specific Message Contents

With the following exceptions, all messages have the same content as defined in TS 34.108 clause 9.1.3 for the MBSFN carriers and in TS 34.108 clause 9.1.1 or 9.1.2 for the unicast carrier:

None.

7.2.2b.3.5 Test requirements

1) At step 7, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number that corresponds to one received RLC SDU for Cell 31 MTCH.

2) At step 13, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number that corresponds to one received RLC SDU for Cell 31 MTCH.

7.2.2b.4 Reassembly / 7-bit "Length Indicators" / First data octet LI (MBSFN IMB)

7.2.2b.4.1 Definition

The RLC segments and concatenates SDUs into UMD PDUs according to the PDU size requested by MAC. "Length indicators" are added to allow correct reconstruction of SDUs. A special "Length Indicator" is defined to indicate that the start of an SDU is coincident with the start of the PDU. The special "Length Indicator" is needed to avoid discarding of an SDU when the first received PDU has a sequence number different from zero. Incorrect operation of segmentation, concatenation, or coding of "Length Indicators" will result in failure of the UE to communicate.

7.2.2b.4.2 Conformance requirement

1. "Length Indicator" = 1111100, UMD PDU: The first data octet in this RLC PDU is the first octet of a RLC SDU.

2. Upon delivery of a set of UMD PDUs from the lower layer, the Receiver shall:

   ...

   - if the special "Length Indicator" "1111 100" or "1111 1111 1111 100" is the first "Length Indicator" of a UMD PDU received on the downlink:

     - consider the first data octet in this UMD PDU as the first octet of an RLC SDU.

Reference(s)

1. TS 25.322 clause 9.2.2.8.
2. TS 25.322 clause 11.2.3.

7.2.2b.4.3 Test purpose

To test that a UE in unacknowledged mode correctly handles a received RLC PDU with a 7-bit "Length Indicator" having its value equal to the special "Length Indicator" value 1111100 when the sequence number of the first received PDU is different from zero.

7.2.2b.4.4 Method of test

Initial conditions

The generic procedure for P-T-M Radio Bearer setup (clause 7.2.2b.1) is executed with all the parameters as specified in the procedure for the RAB defined for UM 7-bit "Length Indicator" tests.

Test procedure

a) The SS transmits a RLC SDU of size 12 bytes in a PDU which has the 'First Data Octet LI' as the first "Length Indicator" in the PDU.

b) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST. The SS waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is = 1. The SS records the value.

c) The SS transmits another SDU of 12 bytes in a PDU which has the 'First Data Octet LI' as the first "Length Indicator" in the PDU.

d) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST. The SS waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is consistent with a number of received RLC SDUs equal to 1.

NOTE: The SS sends PDUs in downlink starting at sequence number 10.

Expected sequence

None.

7.2.2b.4.5 Test requirements

1) At step 4, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number that corresponds to one received RLC SDU for Cell 31 MTCH.

2) At step 7, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number that corresponds to one received RLC SDU for Cell 31 MTCH.

7.2.2b.5 Reassembly / 15-bit "Length Indicators" / Invalid LI value (MBSFN IMB)

7.2.2b.5.1 Definition

The RLC segments and concatenates SDUs into UMD PDUs according to the PDU size requested by MAC. "Length Indicators" are added to allow correct reconstruction of SDUs. The behaviour of the RLC on reception of an invalid "Length Indicator" value has been specified. Incorrect operation of segmentation, concatenation, or coding of "Length Indicator" will result in failure of the UE to communicate.

7.2.2b.5.2 Conformance requirement

Upon delivery by the lower layer of an UMD PDU that contains a "Length Indicator" value specified to be reserved for UMD PDUs in this version of the protocol, the Receiver shall:

- ignore that UMD PDU.;

Length: 15bits

Bit	Description
111111111111110	AMD PDU: The rest of the RLC PDU includes a piggybacked STATUS PDU. UMD PDU: Reserved (PDUs with this coding will be discarded by this version of the protocol).

Reference(s)

TS 25.322 clause 11.2.4.1, 9.2.2.8.

7.2.2b.5.3 Test purpose

To test that PDUs with invalid "Length Indicators" are discarded by the receiving RLC.

7.2.2b.5.4 Method of test

Initial conditions

The generic procedure for P-T-M Radio Bearer setup (clause 7.2.2b.1) is executed with all the parameters as specified in the procedure for the RAB defined for UM 15-bit "Length Indicator" tests.

Test procedure

a) The SS transmits two RLC SDUs of size UM_15_PayloadSize + 1 bytes. In the third PDU for transmission, the SS sets the value of the second (padding) LI to 111111111111110.

b) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST. The SS waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is = 1. The SS records the value.

c) The SS transmits two RLC SDUs of size UM_15_PayloadSize + 1 bytes. In the third PDU for transmission, the SS sets the value of the second (padding) LI to 111111111111110.

d) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST. The SS waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is consistent with a number of received RLC SDUs equal to 1.

None.

7.2.2b.5.5 Test requirements

1) At step 6, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number that corresponds to one received RLC SDU for Cell 31 MTCH.

2) At step 11, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number that corresponds to one received RLC SDU for Cell 31 MTCH.

7.2.2b.6 Reassembly / 15-bit "Length Indicators" / LI value > PDU size (MBSFN IMB)

7.2.2b.6.1 Definition

The RLC segments and concatenates SDUs into UMD PDUs according to the PDU size requested by MAC. "Length Indicators" are added to allow correct reconstruction of SDUs. The behaviour of the RLC on reception of an invalid "Length Indicator" value has been specified. Incorrect operation of segmentation, concatenation, or coding of "Length Indicators" will result in failure of the UE to communicate.

7.2.2b.6.2 Conformance requirement

If the "Length Indicator" of a PDU has a value that is larger than the PDU size – the number of octets containing "Length Indicators" in the PDU – 1 and is not one of the predefined values listed in the table of 3GPP TS 25.322 clause 9.2.2.8, the PDU shall be discarded and treated as a missing PDU.

If a PDU with sequence number < VR(US) is missing then all SDUs that have segments in this PDU shall be discarded.

Reference(s)

TS 25.322 clauses 11.2.4.2 and 11.2.3.

7.2.2b.6.3 Test purpose

To test that PDUs with "Length Indicators" that point beyond the end of the PDU are ignored by the receiving RLC entity.

7.2.2b.6.4 Method of test

Initial conditions

The generic procedure for P-T-M Radio Bearer setup (clause 7.2.2b.1) is executed with all the parameters as specified in the procedure for the RAB defined for UM 15-bit "Length Indicator" tests.

Test procedure

a) The SS transmits three RLC SDUs of size UM 15 PayloadSize + 1 bytes. All the SDUs are concatenated or segmented over successive RLC PDUs. In the third PDU for transmission, the SS sets value of the "Length Indicator" to be UM_15_PayloadSize (decimal).

b) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST. The SS waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is = 1. The SS records the value.

c) The SS transmits three RLC SDUs of size UM 15 PayloadSize + 1 bytes. All the SDUs are concatenated or segmented over successive RLC PDUs. In the third PDU for transmission, the SS sets value of the "Length Indicator" to be UM_15_PayloadSize (decimal).

d) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST. The SS waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is consistent with a number of received RLC SDUs equal to 1.

Expected sequence

16	←		U	DEACTIVATE RB TEST MODE	
17	→		U	DEACTIVATE RB TEST MODE COMPLETE	

Specific Message Contents

With the following exceptions, all messages have the same content as defined in TS 34.108 clause 9.1.3 for the MBSFN carriers and in TS 34.108 clause 9.1.1 or 9.1.2 for the unicast carrier:

None.

7.2.2b.6.5 Test requirements

1) At step 7, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number that corresponds to one received RLC SDU for Cell 31 MTCH.

2) At step 13, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number that corresponds to one received RLC SDU for Cell 31 MTCH.

7.2.2b.7 Reassembly / 15-bit "Length Indicators" / First data octet LI (MBSFN IMB)

7.2.2b.7.1 Definition

The RLC segments and concatenates SDUs into UMD PDUs according to the PDU size requested by MAC. "Length Indicators" are added to allow correct reconstruction of SDUs. A special LI is defined to indicate that the start of on SDU is coincident with the start of the PDU. The special LI is needed to avoid discarding of an SDU when the first received PDU has a sequence number different from zero. Incorrect operation of segmentation, concatenation, or coding of "Length Indicators" will result in failure of the UE to communicate.

7.2.2b.7.2 Conformance requirement

"Length Indicators" = 111111111111100, UMD PDU: The first data octet in this RLC PDU is the first octet of a RLC SDU.

Reference(s)

TS 25.322 clause 9.2.2.8.

7.2.2b.7.3 Test purpose

To test that a UE in unacknowledged mode correctly handles a received RLC PDU with a 15-bit "Length Indicator" having its value equal to the special LI value 111111111111100 when the sequence number of the first received PDU is different from zero.

7.2.2b.7.4 Method of test

Initial conditions

The generic procedure for P-T-M Radio Bearer setup (clause 7.2.2b.1) is executed with all the parameters as specified in the procedure for the RAB defined for UM 15-bit "Length Indicator" tests.

Test procedure

a) The SS transmits a RLC SDU of size 150 bytes in a PDU which has the 'First Data Octet LI' as the first "Length Indicator" in the PDU.

b) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST. The SS waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is = 1. The SS records the value.

c) The SS transmits another SDU of 150 bytes in a PDU which has the 'First Data Octet LI' as the first "Length Indicator" in the PDU.

d) The SS sends UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST. The SS waits for the UE to respond with UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE. The SS shall check that the counter returned by the UE for the MTCH of the activated service in the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE is consistent with a number of received RLC SDUs equal to 1.

NOTE: The SS sends PDUs in downlink starting at sequence number 10.

Expected sequence

Step	Direction		Carrier	Message	Comment
	UE	SS			
1				P-T-M RADIO BEARER SETUP	See clause 7.2.2a.1
2	←		MU	DOWNLINK RLC PDU, SN 10	SDU 1 with LI = 111111111111100
3	←		U	UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST	
4	→		U	UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE	The SS checks that the number of reported RLC SDUs received on the MTCH is equal to one. SS records value.
5	←		MU	DOWNLINK RLC PDU, SN 11	SDU 2 with LI = 111111111111100
6	←		MU	UE TEST LOOP MODE 3 RLC SDU COUNTER REQUEST	
7	→		U	UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE	The SS checks that the number of reported RLC SDUs received on the MTCH is equal to one.
8	←		U	OPEN UE TEST LOOP	
9	→		U	OPEN UE TEST LOOP COMPLETE	
10	←		U	DEACTIVATE RB TEST MODE	
11	→		U	DEACTIVATE RB TEST MODE COMPLETE	

Specific Message Contents

With the following exceptions, all messages have the same content as defined in TS 34.108 clause 9.1.3 for the MBSFN carriers and in TS 34.108 clause 9.1.1 or 9.1.2 for the unicast carrier:

None.

7.2.2b.7.5 Test requirements

1) At step 4, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number that corresponds to one received RLC SDU for Cell 31 MTCH.

2) At step 7, the UE TEST LOOP MODE 3 RLC SDU COUNTER RESPONSE message shall report a number that corresponds to one received RLC SDU for Cell 31 MTCH.

7.2.3 Acknowledged mode

7.2.3.1 General information for AM tests

Two generic Radio Access Bearers are provided for AM tests.

The AM test RAB is set up using the Generic Procedure described in clause 7.1.3 of TS 34.108, and with the default RAB replaced as follows:

- For AM 7-bit "Length Indicator" tests: the RB configuration described in 3G TS 34.108 clause 6.11.3 is used. For these tests, let AM_7_PayloadSize denote the RAB payload size in octets.

- For AM 15-bit "Length Indicator" tests: the RB configuration described in 3G TS 34.108 clause 6.11.4 is used. For these tests, let AM_15_PayloadSize denote the RAB payload size in octets.

Unless specified in individual test cases, the default RLC settings are given in table 7.2/1.

Table 7.2/1: RLC Parameters for AM testing

Uplink RLC	
Transmission RLC discard	
Max DAT retransmissions	
Max_DAT	4
Transmission window size	128
Timer_RST	500
Max_RST	4
Polling info	
Timer_poll_prohibit	disabled
Timer_poll	disabled
Poll_PU	disabled
Poll_SDU	disabled
Last transmission PDU poll	TRUE
Last retransmission PDU poll	TRUE
Poll_Window	disabled
Timer_poll_periodic	disabled
Downlink RLC	
In-sequence delivery	TRUE
Receiving window size	128
Timer_Status_Prohibit	disabled
Timer_EPC	disabled
Missing PDU Indicator	TRUE
Timer_STATUS_periodic	disabled

The AM test RABs are used in all tests with the following exception:

- Tests that explicitly specify a different Radio Bearer configuration.

All other settings are the same.

7.2.3.2 Segmentation and reassembly / Selection of 7 or 15 bit Length Indicators

7.2.3.2.1 Definition

The RLC segments and concatenates SDUs into PDUs according to the PDU size configured by RRC. "Length Indicators" are added to allow correct reconstruction of SDUs. The selection of the size of the "Length Indicator" fields used must follow the specified rules. Incorrect operation of segmentation, concatenation, or coding of "Length Indicators" will result in failure of the UE to communicate.

7.2.3.2.2 Conformance requirement

Except for the predefined values reserved for special purposes and listed in TS 25.322 section 9.2.2.8 the "Length Indicator" shall:

- be set to the number of octets between the end of the RLC header and up to and including the last octet of an RLC SDU segment;

- be included in the PDUs that they refer to.

[...]

The size of the Length Indicator may be either 7 bits or 15 bits.

[...]

For AM:

- if the "AMD PDU size" is ≤ l26 octets:

  - 7-bit "Length Indicators" shall be used.

- else:

- 15-bit "Length Indicators" shall be used.

- the size of the "Length Indicator" is always the same for all AMD PDUs, for one RLC entity.

Reference(s)

TS 25.322 clauses 9.2.2.8 and 9.2.2.9.

7.2.3.2.3 Test purpose

To test that if the configured AMD PDU size is ≤ l26 octets, 7 bit "Length Indicators" are used in transmitted AMD PDUs, otherwise, 15 bit "Length Indicators" are used.

7.2.3.2.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit "Length Indicator" tests in clause 7.2.3.1.

These settings apply to both the uplink and downlink DTCH.

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to 10 bytes.

Test procedure

a) The SS transmits an RLC SDU of size 10 bytes. The PDU carrying this SDU is transmitted with a poll for status.

b) The SS checks the "Length Indicator" values and SDU size and contents in the RLC PDU returned on the uplink (assuming a 7-bit "Length Indicator" size).

c) The SS releases the RB.

The SS performs the Radio Bearer establishment procedure (clause 7.1.3 of TS 34.108) with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 15-bit "Length Indicator" tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

Uplink RLC Transmission window size	16
Downlink RLC Receiving window size	16

All other settings are the same.

d) The SS transmits an RLC SDU of size 10 bytes. The PDU carrying this SDU is transmitted with a poll for status.

e) The SS checks the "Length Indicator" values and SDU size and contents in the RLC PDU returned on the uplink (assuming a 15-bit "Length Indicator" size).

f) The SS may optionally release the radio bearer.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1			RB ESTABLISHMENT	See generic procedures for AM 7 bit LIs
2	←		DOWNLINK RLC PDU	10 byte SDU + padding + poll
3	→		UPLINK RLC PDU	10 byte SDU + piggy-backed status + poll

5	←		RB RELEASE	
6			RB ESTABLISHMENT	See generic procedures for AM 15 bit LIs (AMD PDU size > 126 bytes)
7	←		DOWNLINK RLC PDU	10 byte SDU + padding + poll
8	→		UPLINK RLC PDU	10 byte SDU + piggy-backed status + poll
8a	→		*STATUS PDU*	*If piggy-backed status is not used in 7*
9	←		STATUS PDU	
10			RB RELEASE	Optional step
NOTE 1: The Expected Sequence shown is informative. The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity. Information such as SDU, PDU or Sequence numbers given in the comments column shall be considered informative only, for test case development purposes.				

7.2.3.2.5 Test requirements

The UE shall send 7 bit "Length Indicators" with values that correctly indicate the end of SDU in step b).

The UE shall send 15 bit "Length Indicators" with values that correctly indicate the end of SDU in step e).

7.2.3.3 Segmentation and Reassembly / 7-bit "Length Indicators" / Padding or Piggy-backed Status

7.2.3.3.1 Definition

The RLC segments and concatenates SDUs into AMD PDUs according to the PDU size configured by RRC. "Length Indicators" are added to allow correct reconstruction of SDUs. Incorrect operation of segmentation, concatenation, or coding of length indicators will result in failure of the UE to communicate.

7.2.3.3.2 Conformance requirement

A "Length Indicator" is used to indicate the last octet of each RLC SDU ending within the PDU.

Except for the predefined values reserved for special purposes and listed in the tables below, the "Length Indicator" shall:

- be set to the number of octets between the end of the RLC header and up to and including the last octet of an RLC SDU segment;
- be included in the PDUs that they refer to.

Predefined values of the "Length Indicator" are used to indicate padding. The values that are reserved for special purposes are listed in the tables below depending on the size of the "Length Indicator". Only predefined "Length Indicator" values can refer to the padding space. These values shall only be placed after all other "Length Indicators" for a PDU.

STATUS PDUs can be piggybacked on the AMD PDU by using part or all of the padding space. A predefined "Length Indicator" shall be used to indicate the presence of a piggybacked STATUS PDU. This "Length Indicator" replaces the padding "Length Indicator". The piggybacked STATUS PDU shall be appended immediately following the PDU data. When only part of the padding space is used, the end of the piggybacked STATUS PDU is indicated by one of the SUFI fields NO_MORE or ACK. Thus no additional "Length Indicator" is required to show that there is still padding in the AMD PDU.

[…]

Sender shall:

- when RLC SDUs are received from upper layers:

- segment the RLC SDUs into AMD PDUs where the fixed PDU size is configured by upper layer;
- set a "Length Indicator" field for each SDU that ends in the AMD PDU according to subclause 9.2.2.8;

[…]

The Receiver may:

- if STATUS PDU(s) to be sent fit into padding octets in AMD PDU(s) to be sent:
  - piggyback a STATUS PDU on the AMD PDU to be sent.

Submission of a piggybacked STATUS PDU in an AMD PDU to the lower layer follows the same rules as an ordinary STATUS PDU.

Reference(s)

TS 25.322 clauses 9.2.2.8, 11.3.2 and 11.5.2.1.

7.2.3.3.3 Test purpose

1. To test that a large SDU is correctly segmented and padding added at the end.
2. To test that a large SDU is received correctly, whether or not it has piggy-backed status at the end.

7.2.3.3.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit "Length Indicator" tests in clause 7.2.3.1.

These settings apply to both the uplink and downlink DTCH.

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to AM_7_PayloadSize + 1 bytes.

Test procedure

a) The SS transmits an RLC SDU (SDU1) of size AM_7_PayloadSize + 1bytes, and polls the receiver for status.

b) The SS checks the "Length Indicator" values in the RLC PDUs returned on the uplink, and checks the length and content of the received RLC SDU (assuming a 7-bit "Length Indicator" size).

c) The SS transmits another RLC SDU (SDU2) of size AM_7_PayloadSize + 1 bytes, and includes piggy-backed status in the second of the 2 PDUs sent. The SS also polls the receiver for status.

d) The SS checks the "Length Indicator" values in the RLC PDUs returned on the uplink, and checks the length and content of the received RLC SDU (assuming a 7-bit "Length Indicator" size).

e) The SS may optionally release the radio bearer.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1			RB ESTABLISHMENT	See generic procedures
2	←		DOWNLINK RLC PDU	SDU 1

9a	→		*STATUS PDU*	*If piggy-backed status is not used in 9*
10	←		STATUS PDU	
11			RB RELEASE	Optional step
NOTE 1: The Expected Sequence shown is informative. The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity. Information such as SDU, PDU or Sequence numbers given in the comments column shall be considered informative only, for test case development purposes.				

7.2.3.3.5 Test requirements

1. In steps 4 and 5, the UE shall return two RLC PDUs. The first shall have no "Length Indicators". The second shall have a "Length Indicator" indicating the PDU contains an SDU boundary after octet 1 of the data field, and the second shall indicate either that the remainder of the PDU contains padding, or that it contains a piggy-backed status PDU.

2. In steps 8 and 9, the UE shall return two RLC PDUs. The first shall have no "Length Indicators". The second shall have a "Length Indicator" indicating the PDU contains an SDU boundary after octet 1 of the data field, and the second shall indicate either that the remainder of the PDU contains padding, or that it contains a piggy-backed status PDU.

3. The length and data content of all received SDUs shall be the same as the transmitted SDUs.

7.2.3.4 Segmentation and Reassembly / 7-bit "Length Indicators" / LI = 0

7.2.3.4.1 Definition

The RLC segments and concatenates SDUs into AMD PDUs according to the PDU size configured by RRC. A pre-defined "Length Indicator" value is used to indicate when an SDUs ends coincident with the end of the previous PDU. Incorrect operation of segmentation, concatenation, or coding of "Length Indicators" will result in failure of the UE to communicate.

7.2.3.4.2 Conformance requirement

Except for the predefined values reserved for special purposes and listed in TS 25.322 section 9.2.2.8 the "Length Indicator" shall:

- be set to the number of octets between the end of the RLC header and up to and including the last octet of an RLC SDU segment;

- be included in the PDUs that they refer to.

[...]

In the case where the end of the last segment of an RLC SDU exactly ends at the end of a PDU and there is no "Length Indicator" that indicates the end of the RLC SDU:

- if 7-bit "Length Indicator" is used:

  - a "Length Indicator" with value "000 0000" shall be placed as the first "Length Indicator" in the following PDU;

[...]

For UM and AM RLC:

- if a 7 bit "Length Indicator" is used in a RLC PDU and one or more padding octets are present in the RLC PDU after the end of the last RLC SDU:

- indicate the presence of padding by including a "Length Indicator" with value "1111111" as the last "Length Indicator" in the PDU.

[...]

STATUS PDUs can be piggybacked on the AMD PDU by using part or all of the padding space. A predefined "Length Indicator" shall be used to indicate the presence of a piggybacked STATUS PDU. This "Length Indicator" replaces the padding "Length Indicator". The piggybacked STATUS PDU shall be appended immediately following the PDU data. When only part of the padding space is used, the end of the piggybacked STATUS PDU is indicated by one of the SUFI fields NO_MORE or ACK. Thus no additional "Length Indicator" is required to show that there is still padding in the AMD PDU.

Reference(s)

TS 25.322 clause 9.2.2.8 and 11.3.2.1.

7.2.3.4.3 Test purpose

1. To test that where an SDU exactly fills a PDU, an "Length Indicator" of all 0's is placed by the transmitter as the first "Length Indicator" in the next PDU.

2. To test that where an SDU exactly fills a PDU, and an "Length Indicator" of all 0's is the first "Length Indicator" in the next PDU, the receiver correctly reassembles the SDU.

7.2.3.4.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit "Length Indicator" tests in clause 7.2.3.1.

These settings apply to both the uplink and downlink DTCH.

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to AM_7_PayloadSize bytes.

Test procedure

a) The SS transmits an RLC SDU of size 2 * AM_7_PayloadSize bytes. The SS polls the receiver for status in the last RLC PDU sent.

b) The SS checks the "Length Indicator" sizes and values in the RLC PDUs returned on the uplink, and checks the length and content of the received RLC SDU (assuming a 7-bit "Length Indicator" size).

c) The SS may optionally release the radio bearer.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1			RB ESTABLISHMENT	See generic procedures
2	←		DOWNLINK RLC PDU	SDU 1
3	←		DOWNLINK RLC PDU	SDU 1
4	←		DOWNLINK RLC PDU	LI=0, poll and padding
5	→		UPLINK RLC PDU	No Lis
6	→		UPLINK RLC PDU	(Poll) Check Lis and re-assembled SDU
6a	→		*STATUS PDU*	*If piggy-backed status is not used in 6*
7	←		STATUS PDU	
8			RB RELEASE	Optional step
NOTE 1: The Expected Sequence shown is informative. The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity. Information such as SDU, PDU or Sequence numbers given in the comments column shall be considered informative only, for test case development purposes.				

7.2.3.4.5 Test requirements

The UE shall return two RLC PDUs. The first shall not include any "Length Indicators". The second shall have a "Length Indicator" indicating that the SDU exactly filled the previous PDU, and a "Length Indicator" indicating either that the remainder of the PDU contains padding, or that it contains a piggy-backed STATUS PDU.

The length of the received SDU shall be AM_7_PayloadSize bytes, and the data content shall be the same as the first AM_7_PayloadSize bytes of the transmitted SDU.

7.2.3.5 Reassembly / 7-bit "Length Indicators" / Reserved LI value

7.2.3.5.1 Definition

The RLC segments and concatenates SDUs into AMD PDUs according to the PDU size configured by RRC. "Length Indicators" are added to allow correct reconstruction of SDUs. The behaviour of the RLC on reception of a reserved "Length Indicator" value is specified in the conformance requirement below. Incorrect operation of segmentation, concatenation, or coding of "Length Indicators" will result in failure of the UE to communicate.

7.2.3.5.2 Conformance requirement

Upon delivery by the lower layer of an AMD PDU that contains a "Length Indicator" value specified to be reserved for AMD PDUs in this version of the protocol, the Receiver shall:

- ignore that AMD PDU.

[...]

Length: 7 bits

Bit	Description
1111100	UMD PDU: The first data octet in this RLC PDU is the first octet of an RLC SDU. AMD PDU: Reserved (PDUs with this coding will be discarded by this version of the protocol).
1111101	Reserved (PDUs with this coding will be discarded by this version of the protocol).

Reference(s)

TS 25.322 clause 9.2.2.8 and 11.3.4.6.

7.2.3.5.3 Test purpose

To test that PDUs with reserved "Length Indicators" are discarded by the receiving RLC.

7.2.3.5.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit "Length Indicators" tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

Downlink RLC Missing PDU Indicator	 FALSE

These settings apply to both the uplink and downlink DTCH.

Test procedure

a) The SS transmits three concatenated RLC SDUs of size AM_7_PayloadSize + 1 bytes. In the second PDU, the SS sets the value of the first "Length Indicator" to correctly indicate the end of SDU1 and adds a second erroneous "Length Indicator" with value 1111100. In the third PDU for transmission, the SS sets the value of the "Length Indicator" to 1111101.

b) The SS waits to receive a status report from the UE.

c) The SS may optionally release the radio bearer.

Expected sequence

NOTE 1: The Expected Sequence shown is informative. The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity. Information such as SDU, PDU or Sequence numbers given in the comments column shall be considered informative only, for test case development purposes.				

7.2.3.5.5 Test requirements

1. The UE shall return a STATUS PDU indicating that PDUs with sequence numbers 1 and 2 were not received.

7.2.3.6 Reassembly / 7-bit "Length Indicators" / LI value > PDU size

7.2.3.6.1 Definition

The RLC segments and concatenates SDUs into AMD PDUs according to the PDU size configured by RRC. "Length Indicators" are added to allow correct reconstruction of SDUs. The behaviour of the RLC on reception of an invalid "Length Indicator" value where the value is too large is specified in the conformance requirement below. Incorrect operation of segmentation, concatenation, or coding of "Length Indicator" will result in failure of the UE to communicate.

7.2.3.6.2 Conformance requirement

If the "Length Indicator" of an AMD PDU has a value that is larger than the PDU size – RLC header size and is not one of the predefined values listed in the table of subclause 9.2.2.8, the Sender shall:

- ignore that AMD PDU.

Reference(s)

TS 25.322 clause 11.3.4.5.

7.2.3.6.3 Test purpose

To test that PDUs with "Length Indicators" that point beyond the end of the PDU are discarded by the receiving RLC.

7.2.3.6.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit "Length Indicator" tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

Downlink RLC Missing PDU Indicator	 FALSE

These settings apply to both the uplink and downlink DTCH.

Test procedure

a) The SS transmits three RLC SDUs of size AM_7_PayloadSize + 1bytes. All the SDUs are concatenated or segmented over successive RLC PDUs. In the third PDU for transmission, the SS sets value of the "Length Indicator" to be AM_7_PayloadSize (decimal).

b) The SS checks the "Length Indicator" values in the RLC PDUs returned on the uplink, and checks the content of the received STATUS PDU (assuming a 7-bit "Length Indicator" size).

c) The SS may optionally release the radio bearer.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1			RB ESTABLISHMENT	See generic procedures
2	←		DOWNLINK RLC PDU #0	SDU 1
3	←		DOWNLINK RLC PDU #1	SDU 1 & SDU 2
4	←		DOWNLINK RLC PDU #2	SDU 2 & SDU 3, with bad LI
5	←		DOWNLINK RLC PDU #3	SDU 3, poll and padding
6	→		STATUS PDU	Nack PDU #2
7			RB RELEASE	Optional step
NOTE 1: The Expected Sequence shown is informative. The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity. Information such as SDU, PDU or Sequence numbers given in the comments column shall be considered informative only, for test case development purposes.				

7.2.3.6.5 Test requirements

The UE shall return a STATUS PDU indicating that the PDU with sequence number 2 was not received.

7.2.3.7 Segmentation and Reassembly / 15-bit "Length Indicators" / Padding or Piggy-backed Status

7.2.3.7.1 Definition

The RLC segments and concatenates SDUs into AMD PDUs according to the PDU size configured by RRC. "Length Indicators" are added to allow correct reconstruction of SDUs. Incorrect operation of segmentation, concatenation, or coding of "Length Indicators" will result in failure of the UE to communicate.

7.2.3.7.2 Conformance requirement

The "Length Indicator" is used to indicate, each time, the end of an SDU occurs in the PU. The "Length Indicator" points out the number of octets between the end of the last "Length Indicator" field and up to and including the octet at the end of an SDU segment

A PDU that has unused space, to be referred to as padding, shall use a "Length Indicator" to indicate that this space is used as padding unless the padding size is one octet for PDUs with 15-bit LIs. A padding "Length Indicator" must be placed after any "Length Indicators" for a PDU.

Upon reception of a SDU, RLC shall segment the SDU to fit into the fixed size of a PDU. The segments are inserted in the data field of a PDU. A "Length Indicator" shall be added to each PDU that includes a border of an SDU, i.e. if a PDU does not contain a "Length Indicator", the SDU continues in the next PDU. The length indicator indicates where the border occurs in the PDU. The data after the indicated border can be either a new SDU, padding or piggybacked information. If padding or piggybacking is added another "Length Indicator" shall be added unless the padding size is one octet for PDUs with 15-bit "Length Indicators", see clauses 9.2.2.8 and 9.2.2.9.

Reference(s)

TS 25.322 clauses 9.2.2.8 and 11.3.2.1.2.

7.2.3.7.3 Test purpose

1. To test that a large SDU is correctly segmented and padding added at the end.
2. To test that a large SDU is received correctly, whether or not it has piggy-backed status at the end.

7.2.3.7.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 15-bit "Length Indicator" tests in clause 7.2.3.1.

These settings apply to both the uplink and downlink DTCH.

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to AM_15_PayloadSize + 1bytes.

Test procedure

a) The SS transmits an RLC SDU (SDU1) of size AM_15_PayloadSize + 1 bytes, and polls the receiver for status.

b) The SS checks the "Length Indicator" values in the RLC PDU returned on the uplink, and checks the length and content of the received RLC SDU (assuming a 15-bit "Length Indicator" size).

c) The SS transmits another RLC SDU (SDU2) of size AM_15_PayloadSize + 1 bytes, and includes piggy-backed status in the second of the 2 PDUs sent. The SS also polls the receiver for status.

d) The SS checks the "Length Indicator" sizes and values in the RLC PDUs returned on the uplink, and checks the length and content of the received RLC SDU (assuming a 15-bit "Length Indicator" size).

e) The SS may optionally release the radio bearer.

Expected sequence

7.2.3.7.5 Test requirements

1. In steps 4 and 5, the UE shall return two RLC PDUs. The first shall not include any "Length Indicators". The second shall have a "Length Indicator" indicating the PDU contains an SDU boundary after octet 1 of the data field, and the second shall indicate either that the remainder of the PDU contains padding, or that it contains a piggy-backed status PDU.

2. In steps 8 and 9, the UE shall return two RLC PDUs. The first shall not include any "Length Indicators". The second shall have a "Length Indicator" indicating the PDU contains an SDU boundary after octet 1 of the data field, and the second shall indicate either that the remainder of the PDU contains padding, or that it contains a piggy-backed status PDU.

3. The length and data content of all received SDUs shall be the same as the transmitted SDUs.

7.2.3.8 Segmentation and Reassembly / 15-bit "Length Indicators" / LI = 0

7.2.3.8.1 Definition

The RLC segments and concatenates SDUs into AMD PDUs according to the PDU size configured by RRC. A pre-defined "Length Indicator" value is used to indicate when an SDUs ends coincident with the end of the previous PU. Incorrect operation of segmentation, concatenation, or coding of "Length Indicators" will result in failure of the UE to communicate.

7.2.3.8.2 Conformance requirement

If the PDU is exactly filled with the last segment of a SDU and there is no room for a "Length Indicator" field, a "Length Indicator" field set to only 0's shall be included as the first "Length Indicator" in the following PDU.

Reference(s)

TS 25.322 clause 11.3.2.1.

7.2.3.8.3 Test purpose

1. To test that where an SDU exactly fills a PDU, a "Length Indicator" of all 0's is placed by the transmitter as the first "Length Indicator" in the next PDU.

2. To test that where an SDU exactly fills a PDU, and a "Length Indicator" of all 0's is the first "Length Indicator" in the next PDU, the receiver correctly reassembles the SDU.

7.2.3.8.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 15-bit "Length Indicator" tests in clause 7.2.3.1.

These settings apply to both the uplink and downlink DTCH.

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to AM_15_PayloadSize bytes.

Test procedure

a) The SS transmits an RLC SDU of size 2 * AM_15_PayloadSize bytes. The SS polls the receiver for status in the last RLC PDU sent.

b) The SS checks the "Length Indicator" values in the RLC PDUs returned on the uplink, and checks the length and content of the received RLC SDU (assuming a 15-bit "Length Indicator" size).

c) The SS may optionally release the radio bearer.

Expected sequence

NOTE 1: The Expected Sequence shown is informative. The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity. Information such as SDU, PDU or Sequence numbers given in the comments column shall be considered informative only, for test case development purposes.				

7.2.3.8.5 Test requirements

The UE shall return two RLC PDUs. The first shall have no "Length Indicators". The second shall have a "Length Indicator" indicating that the SDU exactly filled the previous PDU, and a "Length Indicator" indicating either that the remainder of the PDU contains padding, or that it contains a piggy-backed STATUS PDU.

The length of the received SDU shall be AM_15_PayloadSize bytes, and the data content shall be the same as the first AM_15_PayloadSize bytes of the transmitted SDU.

7.2.3.9 Segmentation and reassembly / 15-bit "Length Indicators" / One octet short LI

7.2.3.9.1 Definition

The RLC segments and concatenates SDUs into AMD PDUs according to the PDU size configured by RRC. A pre-defined "Length Indicator" value is used to indicate when an SDUs ends one octet short of the end of the previous PU. Incorrect operation of segmentation, concatenation, or coding of "Length Indicators" will result in failure of the UE to communicate.

7.2.3.9.2 Conformance requirement

In the case where the last segment of an RLC SDU is one octet short of exactly filling the last RLC PU, and 15-bit "Length Indicators" are used, the next "Length Indicator" shall be placed as the first "Length Indicator" in the next PDU and have value "Length Indicator"=111 1111 1111 1011.

In the case where a PDU contains a 15-bit "Length Indicator" indicating that an SDU ends with one octet left in the PDU, the last octet of this PDU shall be ignored and shall not be filled with the first octet of the next SDU data.

Reference(s)

TS 25.322 clause 9.2.2.8.

7.2.3.9.3 Test purpose

1. To test that where the UE transmits an SDU, which is one byte short of filling a PDU, a "Length Indicator" indicating one byte short is placed as the first "Length Indicator" in the next PDU.

2. To test that where the UE correctly handles a received PDU containing a "Length Indicator" indicating that an SDU ended one byte short of the end of the previous PDU.

7.2.3.9.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 15-bit "Length Indicator" tests in clause 7.2.3.1.

These settings apply to both the uplink and downlink DTCH.

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to AM_15_PayloadSize – 1bytes.

Test procedure

a) The SS transmits an RLC SDU of size (2 * AM_15_PayloadSize) - 1 bytes. The SS polls the receiver for status in the last RLC PDU sent.

b) The SS checks the "Length Indicator" values of the RLC PDUs returned on the uplink, and checks the length and content of the received RLC SDU (assuming a 15-bit "Length Indicator" size).

c) The SS may optionally release the radio bearer.

Expected sequence

7.2.3.9.5 Test requirements

1. The UE shall return two RLC PDUs. The first shall have no "Length Indicators". The second shall have 2 "Length Indicators". The first "Length Indicator" shall be an "Length Indicator" indicating that the SDU was one byte short of filling the previous PDU, and the second shall be a "Length Indicator" indicating that the remainder of the PDU contains padding.

2. The length of the received SDU shall be AM_15_PayloadSize - 1 bytes, and the data content shall be the same as the first AM_15_PayloadSize - 1 bytes of the transmitted SDU.

7.2.3.10 Reassembly / 15-bit "Length Indicators" / Reserved LI value

7.2.3.10.1 Definition

The RLC segments and concatenates SDUs into AMD PDU according to the PDU size configured by RRC. "Length Indicators" are added to allow correct reconstruction of SDUs. The behaviour of the RLC on reception of a reserved LI value has been specified. Incorrect operation of segmentation, concatenation, or coding of "Length Indicators" will result in failure of the UE to communicate.

7.2.3.10.2 Conformance requirement

Upon reception of an AMD PDU that contains "Length Indicator" value "111111111111100" or "111111111111101": PDUs with this coding will be discarded by this version of the protocol.

Reference(s)

TS 25.322 clause 9.2.2.8.

7.2.3.10.3 Test purpose

To test that PDUs with reserved "Length Indicators" are discarded by the receiving RLC.

7.2.3.10.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 15-bit "Length Indicator" tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

Downlink RLC Missing PDU Indicator	 FALSE

These settings apply to both the uplink and downlink DTCH.

Test procedure

a) The SS transmits three RLC SDUs of size AM_15_PayloadSize + 1 bytes. In the second PDU, the SS sets the value of the "Length Indicator" to 111111111111100. In the third PDU for transmission, the SS sets the value of the second (padding) "Length Indicator" to 111111111111101.

b) The SS waits to receive a status report from the UE.

c) The SS may optionally release the radio bearer.

Expected sequence

7.2.3.10.5 Test requirements

1. The UE shall return a STATUS PDU indicating that PDUs with sequence numbers 1 and 2 were incorrectly received.

2. No uplink SDUs shall be received.

7.2.3.11 Reassembly / 15-bit "Length Indicators" / LI value > PDU size

7.2.3.11.1 Definition

The RLC segments and concatenates SDUs into PDUs according to the PDU size configured by RRC. "Length Indicators" are added to allow correct reconstruction of SDUs. The behaviour of the RLC on reception of an invalid LI value has been specified. Incorrect operation of segmentation, concatenation, or coding of "Length Indicators" will result in failure of the UE to communicate.

7.2.3.11.2 Conformance requirement

If the "Length Indicator" of a PDU has a value that is larger than the PDU size – the number of octets containing "Length Indicators" in the PDU – 1 and is not one of the predefined values listed in the table of 3GPP TS 25.322 clause 9.2.2.8, the PDU shall be discarded and treated as a missing PDU.

Reference(s)

TS 25.322 clause 11.3.4.5.

7.2.3.11.3 Test purpose

To test that PDUs with "Length Indicators" that point beyond the end of the PDU are discarded by the receiving RLC.

7.2.3.11.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 15-bit "Length Indicator" tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

Downlink RLC Missing PDU Indicator	FALSE

These settings apply to both the uplink and downlink DTCH.

Test procedure

a) The SS transmits three RLC SDUs of size AM_15_PayloadSize + 1 bytes. All the SDUs are concatenated or segmented over successive RLC PDUs. In the third PDU for transmission, the SS sets value of the "Length Indicators" to be AM_15_PayloadSize + 1 (decimal).

b) The SS checks the "Length Indicator" values of the RLC PDUs returned on the uplink, and checks the content of the received STATUS PDUs (assuming a 15-bit "Length Indicator" size).

c) The SS may optionally release the radio bearer.

6	→		STATUS PDU	Nack PDU #2
7			RB RELEASE	Optional step

7.2.3.11.5 Test requirements

The UE shall indicate that the PDU with sequence number 2 was not received.

7.2.3.12 Correct use of Sequence Numbering

7.2.3.12.1 Definition

Peer RLC entities use sequence numbering to detect missing PDUs, and for flow control purposes. Incorrect operation of sequence numbering will result in failure of the UE to communicate.

7.2.3.12.2 Conformance requirement

This sub-clause describes the state variables used in AM and UM in order to specify the peer-to-peer protocol. All state variables are non-negative integers. UMD and AMD PDUs are numbered by modulo integer sequence numbers (SN) cycling through the field: 0 to $2^{12} – 1$ for AM … . All arithmetic operations contained in the present document on VT(S), VT(A), VT(MS), VR(R), VR(H) and VR(MR) are affected by the AM modulus. … . When performing arithmetic comparisons of state variables or Sequence number values a modulus base shall be used. This modulus base is subtracted (within the appropriate field) from all the values involved and then an absolute comparison is performed. At the Sender, VT(A) … shall be assumed to be the modulus base in AM … . At the Receiver, VR(R) … shall be assumed to be the modulus base in AM … .

The RLC shall maintain the following state variables in the Sender.

a) VT(S) - Send state variable.

   This state variable contains the "Sequence Number" of the next AMD PDU to be transmitted for the first time (i.e. excluding retransmitted PDUs). It shall be updated after the aforementioned AMD PDU is transmitted or after transmission of a MRW SUFI which includes SN_MRW_{LENGTH} >VT(S) (see subclause 11.6). The initial value of this variable is 0.

[...]

If the AMD PDU is transmitted for the first time, the Sender shall:

- set the "Sequence Number" field equal to VT(S);

Reference(s)

TS 25.322, clauses 9.4 and 11.3.2.1.

7.2.3.12.3 Test purpose

1. To verify that the UE transmits the first PDU with the Sequence Number field equal to 0.
2. To verify that the UE increments the Sequence Number field according to the number of PDUs transmitted.
3. To verify that the UE wraps the Sequence Number after transmitting the 2^{12}-1th PDU.
4. To verify that the UE receiver accepts PDUs with SNs that wrap around every 2^{12}-1th PDU.

7.2.3.12.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit "Length Indicator" tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

Uplink RLC	
Polling info	
Poll_PDU	64
Transmission window size	128
Downlink RLC	
Receiving window size	128

These settings apply to both the uplink and downlink DTCH.

The Radio Bearer is placed in UE test loop mode 1 with the UL SDU size set to (2 * AM_7_PayloadSize) - 1 bytes.

Test procedure

a) The SS sends 2049 RLC SDUs to the UE, each of (2 * AM_7_PayloadSize) - 1 bytes. The SS polls for status on each 64th RLC PDU and the last PDU transmitted

b) When the SS received an uplink PDU with the P bit set to 1, the SS transmits a STATUS PDU acknowledging all the RLC PDUs received so far.

c) The SS checks the sequence numbers of the RLC PDUs it receives in the uplink

d) The SS checks the content of the SDUs it receives from the UE.

e) The SS may optionally release the radio bearer.

NOTE: The Expected Sequence shown is informative. The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity. Information such as SDU, PDU or Sequence numbers given in the comments column shall be considered informative only, for test case development purposes.				

7.2.3.12.5 Test requirements

1. The first PDU received shall have the SN field set to 0. The second PDU shall have the SN field set to 1, and the 4 097th PDU shall have the SN field set to 0.

2. The size and data content of the received SDUs shall match those of the transmitted SDUs.

7.2.3.13 Control of Transmit Window

7.2.3.13.1 Definition

This test is to check that the UE is able to correctly control its RLC transmission window. Correct operation of RLC windowing is critical for acknowledged mode operation.

7.2.3.13.2 Conformance requirement

VT(MS) - Maximum Send state variable.

This state variable contains the "Sequence Number" of the first AMD PDU that can be rejected by the peer Receiver, VT(MS) = VT(A) + VT(WS). This value represents the upper edge of the transmission window. The transmitter shall not transmit AMD PDUs with "Sequence Number" ≥ VT(MS) unless VT(S) ≥ VT(MS). In that case, the AMD PDU with "Sequence Number" = VT(S) - 1 can also be transmitted. VT(MS) shall be updated when VT(A) or VT(WS) is updated.

The initial value of this variable is Configured_Tx_Window_size.

... The receiver is always allowed to change the Tx window size of the peer entity during a connection, but the minimum and the maximum allowed value is given by RRC configuration. The Rx window of the receiver is not changed.

Reference(s)

TS 25.322, clauses 9.2.2.11.3 and 9.4.

7.2.3.13.3 Test purpose

To verify that the UE does not transmit PDUs with sequence numbers outside of the transmit window, except the PDU with SN=VT(S)-1, even when the transmit window size is changed by the receiver.

7.2.3.13.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit "Length Indicator" tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

Uplink RLC Transmission window size	First run 16	Second run 128

These settings apply to both the uplink and downlink DTCH.

The Radio Bearer is placed in UE test loop mode 1 with the UL SDU size set to AM_7_PayloadSize - 1 bytes.

Related IXIT statement

UE support for either RLC SDU Buffering OR RLC SDU Discard.

Test procedure

Let W be the size of the transmit window.

The length of all transmitted SDUs is set to AM_7_PayloadSize - 1 bytes.

a) The SS transmits W+1 RLC SDUs to the UE.

b) The SS checks the RLC SDUs received on the uplink, but does not reply to poll requests from the UE, or transmit STATUS PDUs for any other reason.

c) After confirming that the UE has stopped transmitting new RLC SDUs for at least (2*W*TTI) ms, the SS transmits a STATUS PDU acknowledging all the RLC PDUs received so far. The SS transmits W+1 additional RLC SDUs to the UE.

d) The SS again checks the RLC SDUs received on the uplink, but does not reply to poll requests from the UE, or transmit further STATUS PDUs for any other reason.

e) After confirming that the UE has again stopped transmitting new RLC SDUs for at least (2*W*TTI) ms, the SS transmits a STATUS PDU acknowledging all the RLC PDUs received so far, and containing a WINDOW command to reduce the UE transmit window size (W) to half its initial size. The SS transmits W/2+1 additional RLC SDUs to the UE (where W is the original window size).

f) The SS checks the RLC SDUs received on the uplink, but does not reply to poll requests from the UE, or transmit STATUS PDUs for any other reason.

g) After confirming that the UE has stopped transmitting new RLC SDUs for at least (2*W*TTI) ms, the SS transmits a STATUS PDU acknowledging all the RLC PDUs received so far. The SS transmits W/2+1 additional RLC SDUs to the UE (where W is the original window size).

h) The SS checks the RLC SDUs received on the uplink.

i) The SS may optionally release the radio bearer.

NOTE: Window arithmetic is carried out modulo 4096.

The test procedure is run with the window transmit window size set to 16, and the repeated with the transmit window size set to 128.

30			RB RELEASE	Optional step

NOTE 1: The Expected Sequence shown is informative. The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity. Information such as SDU, PDU or Sequence numbers given in the comments column shall be considered informative only, for test case development purposes.

NOTE 2: The polls in step 11, 17, 23 and 29 are transmitted as the last PDU in buffer trigger is set to TRUE and the transmitted PDU is the last PDU in the transmitter window, see TS 25.322 clause 9.7.1.

NOTE 3: TS 25.322 does not specify the UE behaviour when transmission buffer is full. Thus, depending on UE implementation, the uplink AM entity may or may not discard AM RLC PDUs received from upper layer (e.g. from UE test loop function) when transmission buffer is full. The SS need to take this into consideration when comparing SS sent SDUs in downlink with the UE returned SDUs in uplink.

7.2.3.13.5 Test requirements

From steps 8 to 11, the SDU contents reassembled from the uplink shall match those of the first W transmitted SDUs.

At step 12 there shall be no further transmission on the uplink DTCH whilst the SS is waiting, except for any repeats of SDUs from 1 to W.

After step 13, the UE shall resume transmission of the next W SDUs. The contents of these SDUs shall match those of SDUs W+1 to 2*W (SDU buffered, see note 3), or W+2 to 2*W+1 (SDU W+1 discarded, see note 3), sent on the downlink.

At step 18 there shall be no further transmission on the uplink DTCH whilst the SS is waiting, except for any repeats of SDUs from W+1 to 2*W or W+2 to 2*W+1.

After step 19, the UE shall resume transmission of the next W/2 SDUs. The contents of these SDUs shall match those of SDUs 2*W+1 to 2*W+W/2 (SDU buffered, see note 3), or 2*W+3 to 2*W+W/2+2 (SDU 2W+2 discarded, see note 3), sent on the downlink.

At step 24 there shall be no further transmission on the uplink DTCH whilst the SS is waiting, except for any repeats of SDUs from 2*W+1 to 2*W+W/2 or 2*W+3 to 2*W+W/2+2.

After step 25, the UE shall resume transmission of the next W/2 SDUs. The contents of these SDUs shall match those of SDUs 2*W+W/2+1 to 3*W (SDU buffered, see note 3), or 2*W+W/2+4 to 3*W+3 (SDU 2W+W/2+3 discarded, see note 3), sent on the downlink.

7.2.3.14 Control of Receive Window

7.2.3.14.1 Definition

This test is to check that the UE is able to correctly control its RLC receive window. Correct operation of RLC windowing is critical for acknowledged mode operation.

This test applies to all UE.

7.2.3.14.2 Conformance requirement

Upon reception of an AMD PDU with "Sequence Number" outside the interval VR(R)≤SN<VR(MR), the Receiver shall:

- discard the AMD PDU;
- if the "polling bit" in the discarded AMD PDU is set to "1":
  - initiate the STATUS PDU transfer procedure.

Reference(s)

TS 25.322, clause 11.3.4.2.

7.2.3.14.3 Test purpose

To verify that the UE discards PDUs with sequence numbers outside the upper boundary of the receive window.

7.2.3.14.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit "Length Indicator" tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

Uplink RLC Transmission window size	First run 8	Second run 128
Downlink RLC Missing PDU Indicator Receiving window size	 FALSE 8	 FALSE 128

These settings apply to both the uplink and downlink DTCH.

The Radio Bearer is placed in UE test loop mode 1 with the UL SDU size set to AM_7_PayloadSize - 1 bytes.

Test procedure

Let W be the size of the receive window.

The length of all transmitted SDUs is set to AM_7_PayloadSize - 1 bytes.

a) The SS transmits W RLC SDUs to the UE, polling only on the last RLC PDU.

b) The SS checks the RLC SDUs received on the uplink, responding to poll requests with acknowledgements. Then after receiving the STATUS PDU from the UE it transmits a further RLC SDU with the poll bit set. The SS sets the sequence number for the associated RLC PDU above the top of the receive window, for example, 2*W.

c) The SS receives a STATUS PDU from the UE.

d) The SS transmits a further RLC SDU with the sequence number set to the value of the next sequence number within the receive window.

e) The SS checks the RLC SDUs received on the uplink.

f) The SS may optionally release the radio bearer.

This test case is run once for the default receive window size (8) and again with the receive window size set to 128.

Expected sequence

14			RB RELEASE	Optional step
NOTE 1: The Expected Sequence shown is informative. The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity. Information such as SDU, PDU or Sequence numbers given in the comments column shall be considered informative only, for test case development purposes.				

7.2.3.14.5 Test requirements

1. The SS shall receive back SDUs 1 to W, and SDU W + 2 only. No other SDUs shall be looped back.

2. The SS shall receive a STATUS PDU in step 11a. SN=2W shall not be indicated as received in the STATUS PDU. Negative acknowledgements shall not be indicated for SN=W to 2W-1 either.

7.2.3.15 Polling for status / Last PDU in transmission queue

7.2.3.15.1 Definition

This case tests that the UE will poll for a status request on the last PDU in its transmission queue when that mode is enabled. Incorrect operation of polling will cause degradation of service, or at worst service failure.

7.2.3.15.2 Conformance requirement

Last PDU in buffer.

When an AMD PDU to be transmitted for the first time is submitted to lower layer, the Sender shall:

- if the AMD PDU is the last AMD PDU scheduled for transmission according to subclause 11.3.2 (i.e. no data received from upper layer remains to be segmented into AMD PDUs); or
- if the AMD PDU is the last AMD PDU that is allowed to transmit according to subclause 11.3.2.2:
  - trigger a poll for this AMD PDU

....

- AMD PDUs are only allowed to transmit:
  - if the AMD PDU has a "Sequence Number" < VT(MS); or
  - if the AMD PDU has a "Sequence Number" equal to VT(S)-1; and
  - if the AMD PDU is not restricted to be transmitted by the local suspend function, see 3GPP TS 25.322 subclause 9.7.5.

...

The Sender shall:

- if a poll has been triggered by one or several poll triggers (see 3GPP TS 25.322 subclause 9.7.1):
  - if polling is not prohibited, see subclause 9.5:
    - set the "Polling bit" in the AMD PDU header to "1";
- otherwise:
  - set the "Polling bit" in the AMD PDU header to "0".

Reference

TS 25.322 clause 11.3.2.1.1, 9.7.1 and 11.3.2.

7.2.3.15.3 Test purpose

1. To verify that a poll is performed when only one PDU is available for transmission, and the poll prohibit timer function is not used.
2. To verify that a poll is performed when only one PDU is available for transmission, and the poll prohibit timer function is used, but inactive.

7.2.3.15.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit "Length Indicator" tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

Uplink RLC	First run	Second run
Polling info		
Timer_poll_prohibit	disabled	200
Last transmission PDU poll	TRUE	TRUE
Last retransmission PDU poll	FALSE	FALSE

These settings apply to both the uplink and downlink DTCH.

The Radio Bearer is placed in UE test loop mode 1 with the UL SDU size set to (2 * AM_7_PayloadSize) - 1 bytes.

Test procedure

a) The SS transmits an RLC SDU of length (4 * AM_7_PayloadSize) - 1bytes to the UE.

b) The SS checks the uplink RLC PDUs for a poll for status flag.

c) The SS may optionally release the radio bearer.

The test is repeated using the RLC parameters given in the Second run column of the configuration table for the initial conditions.

Expected sequence

8	→		UPLINK RLC PDU	SDU 1 + Poll
9	←		STATUS PDU	
10			RB RELEASE	Optional step
NOTE 1: The Expected Sequence shown is informative. The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity. Information such as SDU, PDU or Sequence numbers given in the comments column shall be considered informative only, for test case development purposes.				

7.2.3.15.5 Test requirements

The Poll bit shall be set in the AMD PDU header of the PDU returned in step 8. The poll bit shall not be set in the AMD PDU header of other PDUs.

7.2.3.16 Polling for status / Last PDU in retransmission queue

7.2.3.16.1 Definition

This case tests that the UE will poll for a status request on the last PDU in its retransmission queue when that mode is enabled. Incorrect operation of polling will cause degradation of service, or at worst service failure.

7.2.3.16.2 Conformance requirement

Last PDU in Retransmission buffer.

When a retransmitted AMD PDU is submitted to lower layer, the Sender shall:

- if the AMD PDU is the last AMD PDU scheduled for retransmission according to subclause 11.3.2; or
- if the AMD PDU is the last of the AMD PDUs scheduled for retransmission that are allowed to transmit according to subclause 11.3.2.2:
  - trigger a poll for this AMD PDU

....

- AMD PDUs are only allowed to transmit:
  - if the AMD PDU has a "Sequence Number" < VT(MS); or
  - if the AMD PDU has a "Sequence Number" equal to VT(S)-1; and
  - if the AMD PDU is not restricted to be transmitted by the local suspend function, see 3GPP TS 25.322 subclause 9.7.5.

...

The Sender shall:

- if a poll has been triggered by one or several poll triggers (see 3GPP TS 25.322 subclause 9.7.1):
  - if polling is not prohibited, see subclause 9.5:
    - set the "Polling bit" in the AMD PDU header to "1";
- otherwise:

- set the "Polling bit" in the AMD PDU header to "0".

Reference

25.322 clause 11.3.2.1.1, 9.7.1 and 11.3.2.

7.2.3.16.3 Test purpose

1. To verify that a poll is performed when only one PDU is available for retransmission, and the poll prohibit timer function is not used.
2. To verify that a poll is performed when only one PDU is available for retransmission, and the poll prohibit timer function is used, but inactive.

7.2.3.16.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit "Length Indicator" tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

Uplink RLC	First run	Second run
Polling info		
Timer_poll_prohibit	disabled	200
Last transmission PDU poll	FALSE	FALSE
Last retransmission PDU poll	TRUE	TRUE

These settings apply to both the uplink and downlink DTCH.

The Radio Bearer is placed in UE test loop mode 1 with the UL SDU size set to (2 * AM_7_PayloadSize) - 1 bytes.

Test procedure

a) The SS transmits an RLC SDU of length (4 * AM_7_PayloadSize) - 1 bytes to the UE.

b) The SS checks the uplink RLC PDUs for a poll for status flag.

c) The SS transmits a STATUS PDU negatively acknowledging the first uplink RLC PDU as missing.

d) The SS waits for the RLC PDU to be retransmitted and then checks the uplink RLC PDU for a poll for status flag.

e) The SS may optionally release the radio bearer.

The test is repeated using the RLC parameters given in the Second run column of the configuration table for the initial conditions.

Expected sequence

Step	Direction		Message	Comments

7.2.3.16.5 Test requirements

The Poll bit shall be set in the AMD PDU header of the PDU returned in step 11. The poll bit shall not be set in the AMD PDU header of other PDUs.

7.2.3.17 Polling for status / Poll every Poll_PDU PDUs

7.2.3.17.1 Definition

This case tests that the UE will poll for a status request every Poll_PDU PDUs when that mode is enabled. Incorrect operation of polling will cause degradation of service, or at worst service failure.

7.2.3.17.2 Conformance requirement

VT(PDU).

This state variable is used when the "poll every Poll_PDU PDU" polling trigger is configured. It shall be incremented by 1 for each AMD PDU that is transmitted including both new and retransmitted AMD PDUs. When it becomes equal to the value Poll_PDU, a new poll shall be transmitted and the state variable shall be set to zero.

The initial value of this variable is 0.

Poll_PDU.

This protocol parameter indicates how often the transmitter shall poll the Receiver in the case where "polling every Poll_PDU PDU" is configured by upper layers. It represents the upper limit for the state variable VT(PDU). When VT(PDU) equals the value Poll_PDU a poll shall be transmitted to the peer entity.

Every Poll_PDU PDU.

The Sender triggers the Polling function for every Poll_PDU PDU. Both retransmitted and new AMD PDUs shall be counted.

The Sender shall:

- if a poll has been triggered by one or several poll triggers (see subclause 9.7.1):

- if polling is not prohibited, see subclause 9.5:
  - set the "Polling bit" in the AMD PDU header to "1";
- otherwise:
  - set the "Polling bit" in the AMD PDU header to "0".

Reference

TS 25.322 clauses 9.4, 9.6, 11.3.2.1.1 and 9.7.1.

7.2.3.17.3 Test purpose

1. To verify that a poll is performed when VT(PDU) reaches Poll_PDU.
2. To verify VT(PDU) is incremented for both new and retransmitted PDUs.

7.2.3.17.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit "Length Indicator" tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

Uplink RLC	
Polling info	
Poll_PDU	4
Last transmission PDU poll	FALSE
Last retransmission PDU poll	FALSE

These settings apply to both the uplink and downlink DTCH.

The Radio Bearer is placed in UE test loop mode 1 with the UL SDU size set to AM_7_PayloadSize - 1 bytes.

Test procedure

Let the value of Poll_PDU be P:

a) The SS sends 3 * P - 2 RLC SDUs of size AM_7_PayloadSize - 1 bytes to the UE in PDUs with sequence numbers that are contiguous, starting from zero.

b) The SS checks the sequence numbers and polling bits of the RLC PDUs returned on the uplink.

c) The SS sends a STATUS PDU negatively acknowledging two RLC PDUs with a sequence numbers of already received PDUs. The other PDUs are acknowledged as received correctly.

d) The SS checks the sequence numbers and polling bits of the RLC SDUs returned on the uplink.

e) The SS terminates the connection.

Expected sequence

17			RB RELEASE	Optional step

NOTE 1: The Expected Sequence shown is informative. The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity. Information such as SDU, PDU or Sequence numbers given in the comments column shall be considered informative only, for test case development purposes.

NOTE 2: Due to retransmissions it is not possible to determine the exact PDU that a poll is received on. i.e. A poll may be received on a retransmitted PDU or a PDU transmitted for the first time.

7.2.3.17.5 Test requirements

The SS shall receive a poll for status every Poll_PDU RLC PDUs sent on the uplink.

7.2.3.18 Polling for status / Poll every Poll_SDU SDUs

7.2.3.18.1 Definition

This case tests that the UE will poll for a status request every Poll_SDU SDUs when that mode is enabled. Incorrect operation of polling will cause degradation of service, or at worst service failure.

7.2.3.18.2 Conformance requirement

VT(SDU).

This state variable is used when the "poll every Poll_SDU SDU" polling trigger is configured. It shall be incremented by 1 for a given SDU when the AMD PDUs carrying the first segment of this SDU is scheduled to be transmitted for the first time. When it becomes equal to the value Poll_SDU a new poll shall be transmitted and the state variable shall be set to zero. The "Polling bit" shall be set to "1" in the first transmission of the AMD PDU that contains the “Length Indicator” indicating the end of the SDU.

The initial value of this variable is 0.

Poll_SDU.

This protocol parameter indicates how often the transmitter shall poll the Receiver in the case where "polling every Poll_SDU SDU" is configured by upper layers. It represents the upper limit for state variable VT(SDU). When VT(SDU) equals the value Poll_SDU a poll shall be transmitted to the peer entity.

Every Poll_SDU SDU.

The Sender triggers the Polling function for every Poll_SDU SDU. The poll shall be triggered for the first transmission of the AMD PDU that contains the “Length Indicator” indicating the end of the SDU.

The Sender shall:

- if a poll has been triggered by one or several poll triggers (see TS 25.322 subclause 9.7.1):
  - if polling is not prohibited, see TS 25.322 subclause 9.5:
    - set the "Polling bit" in the AMD PDU header to "1";
- otherwise:
  - set the "Polling bit" in the AMD PDU header to "0".

Reference

TS 25.322 clauses 9. 4, 9.6, 9.7.1 and 11.3.2.1.1.

7.2.3.18.3 Test purpose

1. To verify that a poll is performed when VT(SDU) reaches Poll_ SDU.
2. To verify that the poll is sent in the last PDU of the SDU.

7.2.3.18.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit "Length Indicator" tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

Uplink RLC	
Polling info	
Last transmission PDU poll	FALSE
Poll_SDU	1

These settings apply to both the uplink and downlink DTCH.

The Radio Bearer is placed in UE test loop mode 1 with the UL SDU size set to (2 * AM_7_PayloadSize) - 1 bytes.

Let the value of Poll_SDU be P.

a) The SS sends 2 * P RLC SDUs of size AM_7_PayloadSize - 1 bytes to the UE in PDUs with sequence numbers that are contiguous, starting from zero.

b) The SS checks the sequence numbers and polling bits of the RLC SDUs returned on the uplink.

c) The SS terminates the connection.

The test is repeated with Poll_SDU set to 16.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		DOWNLINK RLC PDU	SDU 1
2	←		DOWNLINK RLC PDU	SDU 2
3	←		…	SS continues to transmit RLC SDUs
4	←		DOWNLINK RLC PDU	SDU 2P
5	→		UPLINK RLC PDU	SDU 1 Expanded to (2 *
6	→		UPLINK RLC PDU	AM_7_PayloadSize) - 1 bytes by test function
7	→		…	SS continues to receive RLC SDUs
8	→		UPLINK RLC PDU	SDU P, Poll
9	←		STATUS PDU	
10	→		UPLINK RLC PDU	SDU P+1 Expanded to (2 *
11	→		UPLINK RLC PDU	AM_7_PayloadSize) - 1 bytes by test function
12	→		…	SS continues to receive RLC SDUs
13	→		UPLINK RLC PDU	SDU 2P, Poll
14			RB RELEASE	Optional step
NOTE 1: The Expected Sequence shown is informative. The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity. Information such as SDU, PDU or Sequence numbers given in the comments column shall be considered informative only, for test case development purposes.				

7.2.3.18.5 Test requirements

The UE shall return uplink PDUs that contain polls for status in sequence numbers 2 * P – 1 and 4 * P – 1. No other PDUs shall poll for status.

7.2.3.19 Polling for status / Timer triggered polling (Timer_Poll_Periodic)

7.2.3.19.1 Definition

This case tests that the UE will poll for a status request every Timer_Poll_Periodic ms when that mode is enabled. Incorrect operation of polling will cause degradation of service, or at worst service failure.

7.2.3.19.2 Conformance requirement

This timer shall only be used when "timer based polling" is configured by upper layers. The value of the timer is signalled by upper layers. The timer shall be started when the RLC entity is created. When the timer expires, the RLC entity shall:

- restart the timer;
- if AMD PDUs are available for transmission or retransmission (not yet acknowledged):
  - trigger a poll.

[...]

The Sender shall:

- if a poll has been triggered by one or several poll triggers (see TS 25.322 subclause 9.7.1):
  - if polling is not prohibited, see TS 25.322 subclause 9.5:
    - set the "Polling bit" in the AMD PDU header to "1";
- otherwise:

- set the "Polling bit" in the AMD PDU header to "0".

Reference

TS 25.322 clauses 9.5, 9.7.1 and 11.3.2.1.1.

7.2.3.19.3 Test purpose

1. To verify that the UE polls the SS in the next PDU to be transmitted or retransmitted each time the Timer_Poll_Periodic timer expires.

2. To verify that if there is no PDU to be transmitted or retransmitted, the timer is restarted, but no poll is sent.

7.2.3.19.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit "Length Indicator" tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

Uplink RLC	First run	Second run
Polling info		
Last retransmission PDU poll	FALSE	FALSE
Last transmission PDU poll	FALSE	FALSE
Timer_poll_periodic	500	2000

These settings apply to both the uplink and downlink DTCH.

The Radio Bearer is placed in UE test loop mode 1 with the UL SDU size set to (AM_7_PayloadSize * ceil(T/(5*TTI))) - 1 bytes.

Test procedure

Let T be the value of Timer_Poll_Periodic:

a) The SS waits for at least 2*T ms before starting any transmissions, and monitors the uplink.

b) The SS sends five RLC SDUs of size floor (AM_7_PayloadSize/5) - 1 bytes to the UE. The SDUs are concatenated five SDUs to one PDU. The UE is expected to loop this data back in five RLC SDUs, segmented into a total of at least ceil(T/TTI) RLC PDUs.

c) The SS checks that at least one RLC PDU is received on the uplink with the P bit set and records the arrival time of the last RLC PDU received with the P bit set (T_1) . The SS does not send any STATUS PDUs in response to these poll requests.

d) The SS continues to receive RLC PDUs until all of the data has been received.

e) The SS waits for the UE to retransmit an RLC PDU in order to transmit a poll (this may be the PDU with SN VT(S) - 1, or a PDU that has not been acknowledged). The SS checks that the P bit is set, and records the arrival time (T_2).

f) The SS responds with a STATUS PDU acknowledging all received PDUs.

g) The SS waits for 2*T ms to ensure that no further polls are received from the UE.

h) Void

i) The SS may optionally release the radio bearer.

The Test is repeated using the parameters specified for the second run.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		DOWNLINK RLC PDU	SDU 1, SDU2, SDU 3, SDU 4, SDU 5, SN=0
2	→		UPLINK RLC PDU	PDU 1, SN=0
3	→		UPLINK RLC PDU	PDU 2, SN=1
4	→		-	SS continues to receive RLC PDUs
5	→		UPLINK RLC PDU	Poll: Note T_1
6	→		-	SS continues to receive RLC PDUs
7	→		UPLINK RLC PDU	SN = ceil(T/TTI) - 1
8	→		UPLINK RLC PDU	Retransmission of VT(S)-1 or unacknowledged PDU in order to transmit a poll. Poll: Note T_2.
9	←		STATUS PDU	Normal
10	-		-	SS monitors uplink for 2*T ms
11			RB RELEASE	Optional step
NOTE 1: The Expected Sequence shown is informative. The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity. Information such as SDU, PDU or Sequence numbers given in the comments column shall be considered informative only, for test case development purposes.				

7.2.3.19.5 Test requirements

1. No PDUs shall be received from the UE for 2*T ms before step 1.
2. Time $T_2 - T_1$ shall be T.
3. No PDUs shall be received from the UE for 2*T ms after step 9.

7.2.3.20 Polling for status / Polling on Poll_Window% of transmission window

7.2.3.20.1 Definition

This case tests that the UE will poll for a status request when it has reached Poll_Window% of the transmission window, when that mode is enabled. Incorrect operation of polling will cause degradation of service, or at worst service failure.

This test applies to all UE.

7.2.3.20.2 Conformance requirement

1. A poll is triggered for each AMD PDU when $J \geq$ Poll_Window, where J is the window transmission percentage defined by

$$J = \frac{(4096+VT(S)+1-VT(A)) \textbf{ mod } 4096}{VT(WS)} * 100 ,$$

   where the constant 4096 is the modulus for AM described in 3GPP TS 25.322 subclause 9.4 and VT(S) is the value of the variable before the AMD PDU is submitted to lower layer.

2. The Polling function is used by the Sender to request the peer RLC entity for a status report. The "Polling bit" in the AMD PDU indicates the poll request. There are several triggers for initiating the Polling function. Which of the triggers shall be used is configured by upper layers for each RLC entity. The following triggers can be configured:

   …….

   6) Window based.

      The Sender triggers the Polling function when the condition described in subclause 9.6 d) ("Poll_Window") is fulfilled.

3. The Sender shall:

- if a poll has been triggered by one or several poll triggers (see subclause 9.7.1):
  - if polling is not prohibited, see subclause 9.5:
    - set the "Polling bit" in the AMD PDU header to "1".

Reference

25.322 clauses 9.6, 9.7.1 and 11.3.2.1.1.

7.2.3.20.3 Test purpose

To verify that the UE polls the SS when the window based polling condition J >= Poll_Window is fulfilled.

7.2.3.20.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit "Length Indicator" tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

Uplink RLC	
Polling info	
Last transmission PDU poll	FALSE
Poll_Window	50
Transmission window size	8
Downlink RLC	
Receiving window size	8

These settings apply to both the uplink and downlink DTCH.

The Radio Bearer is placed in UE test loop mode 1with the UL SDU size set to AM_7_PayloadSize - 1 bytes.

Test procedure

Let W be the size of the transmission window.

a) The SS transmits (W/2) + 2 RLC SDUs of size AM_7_PayloadSize - 1 bytes.

b) The SS checks the sequence number of the first three uplink PDUs received with the P bit set.

c) The SS sends another RLC SDU of size AM_7_PayloadSize - 1 bytes.

d) The SS checks the sequence number of the next uplink PDU received with the P bit set.

e) The SS waits until no more new PDUs are received.

f) The SS sends a STATUS PDU acknowledging the received RLC PDUs with SN = 0 through W/2, followed by two further RLC SDUs.

g) The SS checks the sequence number of the next uplink PDU received with the P bit set.

h) The SS may optionally release the radio bearer.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		DOWNLINK RLC PDU	SDU 1
2	←		…	SS continues to transmit RLC SDUs
3	←		DOWNLINK RLC PDU	SDU W/2+2
4	→		UPLINK RLC PDU	SDU 1, SN=0
5	→		UPLINK RLC PDU	SDU 2, SN=1
6	→		…	SS continues to receive RLC PDUs
7	→		UPLINK RLC PDU	SN = W/2-1, Poll
7a	→		UPLINK RLC PDU	SN = W/2, Poll
7b	→		UPLINK RLC PDU	SN = W/2 +1, Poll
8	←		DOWNLINK RLC PDU	SDU W/2 + 3
9	→		UPLINK RLC PDU	SN = W/2 + 2, Poll
9a				SS waits 10 TTI periods to ensure no more new PDUs are received
10	←		STATUS PDU	ACK SN 0 to W/2 (UE sets VT(A) to W/2+1)
11	←		DOWNLINK RLC PDU	SDU W/2 + 4
12	←		DOWNLINK RLC PDU	SDU W/2 + 5
13	→		UPLINK RLC PDU	SN = W/2+3
14	→		UPLINK RLC PDU	SN = W/2+4, Poll
15			RB RELEASE	Optional step
NOTE: The Expected Sequence shown is informative. The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity. Information such as SDU, PDU or Sequence numbers given in the comments column shall be considered informative only, for test case development purposes.				

7.2.3.20.5 Test requirements

The SS shall receive RLC PDUs with the P bit set in PDUs with sequence numbers of 3, 4, 5, 6 and 8. No other PDUs shall have their P bits set.

7.2.3.21 Polling for status / Operation of Timer_Poll timer / Timer expiry

7.2.3.21.1 Definition

This case tests that the UE will retransmit a poll for status if it does not receive a STATUS PDU within Timer_Poll ms after a poll for status is transmitted. Incorrect operation of polling will cause degradation of service, or possible service failure.

7.2.3.21.2 Conformance requirement

Timer_Poll.

This timer shall only be used when so configured by upper layers. The value of the timer is signalled by upper layers. In the UE this timer shall be started when the successful or unsuccessful transmission of an AMD PDU containing a poll is indicated by lower layer. In UTRAN it should be started when an AMD PDU containing a poll is submitted to lower layer. If x is the value of the state variable VT(S) after the poll was submitted to lower layer, the timer shall be stopped upon receiving:

- positive acknowledgements for all the AMD PDUs with "Sequence Number" up to and including x - 1; or
- a negative acknowledgement for the AMD PDU with "Sequence Number" = x - 1.

If the timer expires and no STATUS PDU fulfilling the criteria above has been received:

- the Receiver shall be polled once more;
- the timer shall be restarted; and
- the new value of VT(S) shall be saved.

If a new poll is sent when the timer is active, the timer shall be restarted at the time specified above, and the value of VT(S) shall be saved.

[...]

The Sender shall:

- if a poll has been triggered by one or several poll triggers (see subclause 9.7.1):
  - if polling is not prohibited, see subclause 9.5:
    - set the "Polling bit" in the AMD PDU header to "1";
- otherwise:
  - set the "Polling bit" in the AMD PDU header to "0".

Reference

TS 25.322 clauses 11.3.2.1.1 and 11.3.4.1.

7.2.3.21.3 Test purpose

To verify that if the timer expires and no STATUS PDU containing an acknowledgement or negative acknowledgement of the AMD PDUs up to that which triggered the timer has been received, the receiver is polled once more.

7.2.3.21.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit "Length Indicator" tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

Uplink RLC	First run	Second run
Transmission window size	256	256
Polling info		
Last transmission PDU poll	FALSE	FALSE
Timer_poll	600	1000
Timer_Poll_Periodic	2000	2000

These settings apply to both the uplink and downlink DTCH.

The Radio Bearer is placed in UE test loop mode 1with the UL SDU size set to AM_7_PayloadSize - 1 bytes.

Test procedure

Let T be the value of the Timer_Poll_Periodic timer.

a) The SS transmits at least 2 * T / TTI SDUs of size AM_7_PayloadSize - 1 bytes.

b) The SS receives PDUs from the UE, and notes the time on receiving the first PDU with the P bit set, but does not respond. This time will be recorded as T_1.

c) The SS continues to receive PDUs from the UE and notes the time on receipt of the next PDU with the P bit set. This time will be recorded as T_2.

d) The SS continues to receive PDUs from the UE until all transmitted PDUs have been received. The SS responds to any PDU received with the P bit set by transmitting a STATUS PDU containing an acknowledgement of the AMD PDUs received.

e) The SS acknowledges the last Poll PDU from the UE.

f) The SS may optionally release the radio bearer.

The test case is run once for each set of initial RLC parameters.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		DOWNLINK RLC PDU	SDU 1
2	←		…	SS continues to transmit RLC SDUs
3	←		DOWNLINK RLC PDU	SDU ceil(2T/TTI)
4	→		UPLINK RLC PDU	SDU 1
5	→		UPLINK RLC PDU	SDU 2
6	→		…	SS continues to receive RLC PDUs
7	→		UPLINK RLC PDU	SN = n , Poll: Note T_1 (First PDU with P bit set)
8	→		UPLINK RLC PDU	SN = n+1
9	→		…	SS continues to receive RLC PDUs
9a		SS		No STATUS PDUs are sent by the SS between steps 7 and 10.
10	→		UPLINK RLC PDU	Poll: Note T_2 (Next PDU with P bit set)
11	→		…	SS continues to receive PDUs, acknowledging with STATUS PDUs when polled until all PDUs have been received and acknowledged
12			RB RELEASE	Optional step
NOTE 1: The Expected Sequence shown is informative. The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity. Information such as SDU, PDU or Sequence numbers given in the comments column shall be considered informative only, for test case development purposes.				
NOTE 2: The SN value “n” identifies the current RLC sequence number of the first UL PDU with the Poll Bit set. This value is for informative purposes only				

7.2.3.21.5 Test requirements

For the first run, the measured time $T_2 - T_1$ shall be 600 ms.

For the second run, the measured time $T_2 - T_1$ shall be 1000 ms.

7.2.3.22 Polling for status / Operation of Timer_Poll timer / Stopping Timer_Poll timer

7.2.3.22.1 Definition

This case tests that the UE will stop the Timer_Poll timer if it receives a STATUS PDU within Timer_Poll ms after a poll for status is transmitted. Incorrect operation of polling will cause degradation of service, or possible service failure.

7.2.3.22.2 Conformance requirement

Timer_Poll.

This timer shall only be used when so configured by upper layers. The value of the timer is signalled by upper layers. In the UE this timer shall be started when the successful or unsuccessful transmission of an AMD PDU containing a poll is indicated by lower layer. In UTRAN it should be started when an AMD PDU containing a poll is submitted to lower layer. If x is the value of the state variable VT(S) after the poll was submitted to lower layer, the timer shall be stopped upon receiving:

- positive acknowledgements for all the AMD PDUs with "Sequence Number" up to and including x - 1; or
- a negative acknowledgement for the AMD PDU with "Sequence Number" = x - 1.

If the timer expires and no STATUS PDU fulfilling the criteria above has been received:

- the Receiver shall be polled once more;
- the timer shall be restarted; and
- the new value of VT(S) shall be saved.

If a new poll is sent when the timer is active, the timer shall be restarted at the time specified above, and the value of VT(S) shall be saved.

[...]

The Sender shall:

- if a poll has been triggered by one or several poll triggers (see subclause 9.7.1):
  - if polling is not prohibited, see subclause 9.5:
    - set the "Polling bit" in the AMD PDU header to "1";
- otherwise:
  - set the "Polling bit" in the AMD PDU header to "0".

Reference

TS 25.322 clause 9.5.

7.2.3.22.3 Test purpose

To verify that the Timer_Poll timer is stopped when receiving a STATUS PDU that acknowledges all AMD PDUs with SN up to and including VT(S)-1 at the time the poll was transmitted.

7.2.3.22.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit "Length Indicator" tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

Uplink RLC	First run	Second run
Tx_Window_Size	256	256
Polling info		
Last transmission PDU poll	FALSE	FALSE
Timer_poll	500	1000
Timer_Poll_Periodic	2000	2000

These settings apply to both the uplink and downlink DTCH.

The Radio Bearer is placed in UE test loop mode 1 with the UL SDU size set to AM_7_PayloadSize - 1 bytes.

Test procedure

Let T be the value of the Timer_Poll_Periodic timer.

a) The SS transmits at least 2 * T / TTI SDUs of size AM_7_PayloadSize - 1 bytes.

b) The SS receives PDUs from the UE, and notes the time on receiving the first PDU with the P bit set. This time will be recorded as T_1.

c) The SS sends a STATUS PDU acknowledging all the PDUs up to and including the PDU carrying the poll request.

d) The SS continues to receive PDUs from the UE and notes the time on receipt of the next PDU with the P bit set. This time will be recorded as T_2.

e) The SS continues to receive PDUs from the UE until all transmitted PDUs have been received. The SS responds to any PDU received with the P bit set by transmitting a STATUS PDU containing an acknowledgement of the AMD PDUs received.

f) The SS acknowledges the last Poll PDU from the UE.

g) The SS may optionally release the radio bearer.

The test case is run once for each set of initial RLC parameters.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		DOWNLINK RLC PDU	SDU 1
2	←		…	SS continues to transmit RLC SDUs
3	←		DOWNLINK RLC PDU	SDU ceil(2T/TTI)
4	→		UPLINK RLC PDU	SDU 1
5	→		UPLINK RLC PDU	SDU 2
6	→		…	SS continues to receive RLC PDUs
7	→		UPLINK RLC PDU	SN = n , Poll: Note T_1 (First PDU with the P bit set).
8	←		STATUS PDU	ACK SN= 0 to SN =n
9	→		UPLINK RLC PDU	SN = n +1
10	→		…	SS continues to receive RLC PDUs
11	→		UPLINK RLC PDU	Poll: Note T_2 (Next PDU with the P bit set)
12	→		…	SS continues to receive PDUs, acknowledging with Status PDUs when polled until all PDUs have been received and acknowledged
13			RB RELEASE	Optional step
NOTE 1: The Expected Sequence shown is informative. The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity. Information such as SDU, PDU or Sequence numbers given in the comments column shall be considered informative only, for test case development purposes.				
NOTE 2: The SN value “n” identifies the current RLC sequence number of the first UL PDU with the Poll Bit set. This value is for informative purposes only				

7.2.3.22.5 Test requirements

For both execution runs, the measured time $T_2 - T_1$ shall be 2000 ms.

7.2.3.23 Polling for status / Operation of Timer_Poll timer / Restart of the Timer_Poll timer

7.2.3.23.1 Definition

This case tests that the UE will restart the Timer_Poll timer if another poll request is transmitted whilst the timer is running. Incorrect operation of polling will cause degradation of service, or possible service failure.

This test applies to all UE.

7.2.3.23.2 Conformance requirement

Timer_Poll.

This timer shall only be used when so configured by upper layers. The value of the timer is signalled by upper layers. In the UE this timer shall be started when the successful or unsuccessful transmission of an AMD PDU containing a poll is indicated by lower layer. In UTRAN it should be started when an AMD PDU containing a

poll is submitted to lower layer. If x is the value of the state variable VT(S) after the poll was submitted to lower layer, the timer shall be stopped upon receiving:

- positive acknowledgements for all the AMD PDUs with "Sequence Number" up to and including x - 1; or
- a negative acknowledgement for the AMD PDU with "Sequence Number" = x - 1.

If the timer expires and no STATUS PDU fulfilling the criteria above has been received:

- the Receiver shall be polled once more;
- the timer shall be restarted; and
- the new value of VT(S) shall be saved.

If a new poll is sent when the timer is active, the timer shall be restarted at the time specified above, and the value of VT(S) shall be saved.

[...]

The Sender shall:

- if a poll has been triggered by one or several poll triggers (see subclause 9.7.1):
  - if polling is not prohibited, see subclause 9.5:
    - set the "Polling bit" in the AMD PDU header to "1";
- otherwise:
  - set the "Polling bit" in the AMD PDU header to "0".

Reference

TS 25.322 clause 9.5.

7.2.3.23.3 Test purpose

To verify that if a new poll is sent when the timer is running it is restarted.

7.2.3.23.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit "Length Indicator" tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

Uplink RLC	
Polling info	
Last retransmission PDU poll	FALSE
Last transmission PDU poll	FALSE
Timer_poll	600
Poll_Window	60
Poll_PDU	16
Transmit window size	32

These settings apply to both the uplink and downlink DTCH.

The Radio Bearer is placed in UE test loop mode 1 with the UL SDU size set to AM_7_PayloadSize - 1 bytes.

Test procedure

Let T be the value of the Timer_Poll timer.

a) The SS starts transmission of ceil(Tx_Window_Size * 60%) numbers of SDUs of size AM_7_PayloadSize - 1bytes.

b) Whilst transmitting, the SS receives PDUs from the UE, until it receives the second PDU with the P bit set. This time is recorded as T_1. (Note: poll due to Poll_Window).

c) Void.

d) Void.

e) The SS waits until a PDU is received with the poll bit set and notes the time when it was received. This time is recorded as T_2.

f) The SS may optionally release the radio bearer.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		DOWNLINK RLC PDU	SDU 1
2	←		…	SS continues to transmit RLC SDUs
3	←		DOWNLINK RLC PDU	SDU ceil(Tx_Window_Size * 60%)
4	→		UPLINK RLC PDU	SDU 1
5	→		UPLINK RLC PDU	SDU 2

7	→		UPLINK RLC PDU	SN = poll_PDU - 1, 1st Poll, Timer_Poll started
8	→		Void	
9			Void	
10	→		UPLINK RLC PDU	SS continues to receive RLC PDUs
11	→		UPLINK RLC PDU	SN= ceil(Tx_Window_Size * 60%)-1, 2nd Poll, Timer_Poll restarted. Note T1
12			Void	
13			Void	
14			Void	
15	→		UPLINK RLC PDU	SS waits for reception of PDU with poll bit set, 3rd Poll, Timer_Poll expired. Note T_2
16			RB RELEASE	Optional step
NOTE: The Expected Sequence shown is informative. The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity. Information such as SDU, PDU or Sequence numbers given in the comments column shall be considered informative only, for test case development purposes.				

7.2.3.23.5 Test requirements

The measured time $T_2 - T_1$ shall be 600 ms.

7.2.3.24 Polling for status / Operation of timer Timer_Poll_Prohibit

7.2.3.24.1 Definition

This case tests that the UE will not send a poll request within Timer_Poll_Prohibit ms of a previous poll request when this mode of operation is enabled. Incorrect operation of polling will cause degradation of service, or possible service failure.

7.2.3.24.2 Conformance requirement

The timers defined in this subclause are normative. The timers shall be considered active from the time they are started until the time they either expire or are stopped.

b) Timer_Poll_Prohibit.

This timer shall only be used when so configured by upper layers. It is used to prohibit transmission of polls within a certain period. The value of the timer is signalled by upper layers.

In the UE this timer shall be started when the successful or unsuccessful transmission of an AMD PDU containing a poll is indicated by lower layer. In UTRAN it should be started when an AMD PDU containing a poll is submitted to lower layer.

From the time a poll is triggered until the timer expires, polling is prohibited. If another poll is triggered while polling is prohibited, its transmission shall be delayed until the timer expires (see subclause 9.7.1). Only one poll shall be transmitted when Timer_Poll_Prohibit expires even if several polls were triggered in the meantime. This timer shall not be affected by the reception of STATUS PDUs.

When Timer_Poll_Prohibit is not configured by upper layers, polling is never prohibited.

The Sender shall:

- if a poll has been triggered by one or several poll triggers (see subclause 9.7.1):
  - if polling is not prohibited, see subclause 9.5:
    - set the "Polling bit" in the AMD PDU header to "1";
- otherwise:
  - set the "Polling bit" in the AMD PDU header to "0".

Reference

TS 25.322 clauses 9.5, 9.7.1 and 11.3.2.1.1.

7.2.3.24.3 Test purpose

1. To verify that no poll is transmitted if one or several polls are triggered when the Timer_Poll_Prohibit timer is active and has not expired.
2. To verify that the UE polls only once after Timer_Poll_Prohibit expires even though triggered several times during the prohibit time.

7.2.3.24.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit "Length Indicator" tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

Uplink RLC	
Transmission RLC discard	
MaxDAT	15
Polling info	
Timer_poll_prohibit	500
Last transmission PDU poll	FALSE
Poll_PDU	2
Poll_Window	50
Transmission window size	32
Downlink RLC	
Receiving window size	128

These settings apply to both the uplink and downlink DTCH.

The Radio Bearer is placed in UE test loop mode 1 with the UL SDU size set to AM_7_PayloadSize - 1 bytes.

Test procedure

Let T be the value of the Timer_Poll_Prohibit timer.

a) The SS starts transmission of at least (2*Poll_PDU) + ceil(T / TTI) SDUs of size AM_7_PayloadSize - 1 bytes.

b) Whilst transmitting, the SS receives PDUs from the UE, and notes the time on receiving the first PDU with the P bit set. This time will be recorded as T_1.

c) The SS does not respond to the poll request.

d) The SS continues to receive PDUs from the UE and notes the time on receipt of the next PDU with the P bit set. This time will be recorded as T_2.

e) The SS waits for at least Timer_Poll_Prohibit to acknowledge any last Poll PDU from the UE.

f) The SS may optionally release the radio bearer.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		DOWNLINK RLC PDU	SDU 1
2	←		…	SS continues to transmit RLC SDUs
3	←		DOWNLINK RLC PDU	SDU (2*Poll_PDU)+ ceil(T/TTI)
4	→		UPLINK RLC PDU	SDU 1
5	→		UPLINK RLC PDU	SDU 2
6	→		…	SS continues to receive RLC PDUs
7	→		UPLINK RLC PDU	SN = Poll_PDU - 1, Poll: Note T_1
8	→		…	SS continues to receive RLC PDUs
9			Void	
10	→		UPLINK RLC PDU	SN = (Transmission Window Size / 2) – 1, No Poll
11	→		…	SS continues to receive RLC PDUs
12	→		UPLINK RLC PDU	SN = Poll_PDU + ceil(T/TTI) - 1, Poll: Note T_2
12a	→		…	SS continues to receive RLC PDUs acknowledging with STATUS PDUs when polled until all PDUs have been received and acknowledged
13			RB RELEASE	Optional step
NOTE: The Expected Sequence shown is informative. The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity. Information such as SDU, PDU or Sequence numbers given in the comments column shall be considered informative only, for test case development purposes.				

7.2.3.24.5 Test requirements

1. The measured time $T_2 – T_1$ shall be Timer_poll_prohibit ms.

2. After step 12 no further poll shall be received from the UE for the next Timer_poll_prohibit ms.

7.2.3.25 Receiver Status Triggers / Detection of missing PDUs

7.2.3.25.1 Definition

This case tests that the UE transmits a status report whenever it detects that a PDU is missing, if this mode of operation is enabled. Incorrect operation of status reporting will cause degradation of service, or possible service failure.

7.2.3.25.2 Conformance requirement

Detection of missing PDU(s).

If the Receiver detects one or several missing AMD PDUs it shall trigger the transmission of a status report to the Sender.

Reference

TS 25.322 clause 9.7.2.

7.2.3.25.3 Test purpose

To verify that a status report is transmitted if there are one or more missing PDUs.

7.2.3.25.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit "Length Indicator" tests in clause 7.2.3.1.

These settings apply to both the uplink and downlink DTCH.

Test procedure

a) The SS transmits 7 SDUs, each of size AM_7_PayloadSize - 1 bytes, in PDUs with consecutive sequence numbers starting from 0, followed by 5 SDUs in PDUs with consecutive sequence numbers starting from 8, followed by an SDU in a PDU with a sequence number of 15.

b) While transmitting, the SS monitors the uplink for STATUS PDUs.

c) The SS may optionally release the radio bearer

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		DOWNLINK RLC PDU	SN = 0
2	←		…	SS continues to transmit RLC SDUs
3	←		DOWNLINK RLC PDU	SN = 6
4	←		DOWNLINK RLC PDU	SN = 8
5	→		STATUS PDU	SN = 7 missing
6	←		DOWNLINK RLC PDU	
7	←		…	SS continues to transmit RLC SDUs
8	←		DOWNLINK RLC PDU	SN = 12
9	←		DOWNLINK RLC PDU	SN = 15
10	→		STATUS PDU	SN = 7, 13, 14 missing
11			RB RELEASE	Optional step
NOTE: The Expected Sequence shown is informative. The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity. Information such as SDU, PDU or Sequence numbers given in the comments column shall be considered informative only, for test case development purposes.				

7.2.3.25.5 Test requirements

A STATUS PDU shall be received from the UE after step 4, indicating that the PDU with sequence number 7 was missing.

A STATUS PDU shall be received from the UE after step 9, indicating that the PDUs with sequence numbers 7, 13 and 14 were missing.

7.2.3.26 Receiver Status Triggers / Operation of timer Timer_Status_Periodic

7.2.3.26.1 Definition

This case tests that the UE transmits a status report every Timer_Status_Periodic ms when this mode of operation is enabled. Incorrect operation of status reporting will cause degradation of service, or possible service failure.

7.2.3.26.2 Conformance requirement

This timer shall only be used when timer based status reporting is configured by upper layers.

This timer shall be started when the RLC entity is created. When the timer expires the transmission of a status report shall be triggered and the timer shall be restarted.

Reference

TS 25.322 clauses 9.5, 9.7.2 and 11.5.2.

7.2.3.26.3 Test purpose

To verify that a status report is transmitted each time the Timer_Status_Periodic timer expires.

7.2.3.26.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit "Length Indicator" tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

Downlink RLC Timer_STATUS_periodic	 400

These settings apply to both the uplink and downlink DTCH.

Test procedure

Let T be the value of the Timer_STATUS_periodic timer.

a) The SS starts transmission of at least ceil(2 * T / TTI) SDUs of size AM_7_PayloadSize - 1 bytes.

b) The SS waits to receive a STATUS PDU and notes the time. This time will be recorded as T_1.

c) The SS waits to receive a second STATUS PDU and notes the time. This time will be recorded as T_2.

d) The SS waits for at least Timer_Status_Periodic to receive any last STATUS PDU from the UE.

e) The SS may optionally release the radio bearer.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		DOWNLINK RLC PDU	SDU 1
2	←		…	SS continues to transmit RLC SDUs
3	←		DOWNLINK RLC PDU	SDU m
4	→		STATUS PDU	Note T_1
5	←		DOWNLINK RLC PDU	
6	←		…	SS continues to transmit RLC SDUs
7	←		DOWNLINK RLC PDU	SDU m + ceil(T/TTI)
8	→		STATUS PDU	Note T_2
9			Void	
10	→		STATUS PDU	SS may receive STATUS PDUs
11			RB RELEASE	Optional step
NOTE 1: The Expected Sequence shown is informative. The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity. Information such as SDU, PDU or Sequence numbers given in the comments column shall be considered informative only, for test case development purposes.				

7.2.3.26.5 Test requirements

The measured time $T_2 - T_1$ shall be 400 ms.

7.2.3.27 Receiver Status Triggers / Operation of timer Timer_Status_Prohibit

7.2.3.27.1 Definition

This case tests that the UE does not transmit a status report more often than every Timer_Status_Prohibit ms when this mode of operation is enabled. Incorrect operation of status reporting will cause degradation of service, or possible service failure.

7.2.3.27.2 Conformance requirement

In the UE, this timer shall be started when the successful or unsuccessful transmission of the last STATUS PDU of an acknowledgement status report is indicated by lower layer

[...]

When a status report is triggered the Receiver shall:

- if transmission of status reports is not prohibited by any of the functions "STATUS prohibit" or "EPC mechanism":
  - assemble and transmit the status report to the Sender, as specified in subclauses TS 25.322 11.5.2.2 and 11.5.2.3.
- otherwise (if the status report is prohibited by at least one of the functions "STATUS prohibit" or "EPC mechanism"):

  [...]

  - if ACK, LIST, BITMAP, or RLIST SUFIs are required in the status report:
- delay sending these SUFIs until the prohibit function terminates.

[...]

Upon expiry of the timer Timer_Status_Prohibit [...], the Receiver shall:

- if at least one status report was triggered during the time the transmission of a status reports was prohibited that could not be transmitted due to prohibition; and
- if transmission of a status reports is no longer prohibited by any of the functions "STATUS prohibit" or "EPC mechanism":
  - transmit one status report to the Sender, using the procedure described in subclause TS 25.322 11.5.2.3.

Reference

TS 25.322 clause 9.7.2.

7.2.3.27.3 Test purpose

1. To verify that a status report is not transmitted while the Timer_Status_Prohibit timer is active.
2. To verify that only one status report is sent on the expiry of the Timer_Status_Prohibit timer if several triggers occur while it is active.

7.2.3.27.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit "Length Indicator" tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

Downlink RLC	
Timer_Status_Prohibit	500
Timer_STATUS_periodic	200

These settings apply to both the uplink and downlink DTCH.

Test procedure

Let T_{pro} be the value of the Timer_Status_Prohibit timer, and T_{per} be the value of the Timer_Status_Periodic timer.

a) The SS starts transmission of at least ceil(2 * T_{pro} / TTI) + ceil(T_{per}/TTI) SDUs of size AM_7_PayloadSize - 1 bytes.

b) Whilst transmitting, the SS monitors the uplink for a STATUS PDU and notes the time. This time will be recorded as T_1.

c) The SS sets the P bit in one of the next floor(T_{pro}/TTI) PDUs transmitted on the downlink.

d) The SS waits to receive a second STATUS PDU and notes the time. This time will be recorded as T_2.

e) The SS waits for at least Timer_Status_Prohibit to receive any last STATUS PDU from the UE.

f) The SS may optionally release the radio bearer.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		DOWNLINK RLC PDU	SDU 1
2	←		…	SS continues to transmit RLC SDUs
3	←		DOWNLINK RLC PDU	SDU m
4	→		STATUS PDU	Note T_1
5	←		DOWNLINK RLC PDU	Poll
6	←		…	SS continues to transmit RLC PDUs
7	←		DOWNLINK RLC PDU	SDU m + ceil(T_{pro} / TTI)
8	→		STATUS PDU	Note T_2
9			Void	
10	→		STATUS PDU	SS may receive STATUS PDUs
11			RB RELEASE	Optional Step
NOTE 1: The Expected Sequence shown is informative. The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity. Information such as SDU, PDU or Sequence numbers given in the comments column shall be considered informative only, for test case development purposes.				

7.2.3.27.5 Test requirements

1. The measured time $T_2 - T_1$ shall be 500 ms.
2. Only one STATUS PDU shall be received in step 8 after (T1 + Tpro) and before (T1 + 2*Tpro).

7.2.3.28 Status reporting / Abnormal conditions / Reception of LIST SUFI with Length set to zero

7.2.3.28.1 Definition

Peer RLCs use STATUS PDUs to manage flow control and retransmission. On a STATUS report PDU with an invalid LIST SUFI the RLC must behave as specified. Incorrect behaviour may result in degradation of QoS, or failure of the UE to communicate.

7.2.3.28.2 Conformance requirement

The List super-field

The List Super-Field consists of a type identifier field (LIST), a list length field (LENGTH) and a list of LENGTH number of pairs as shown in figure 9.11 below:

Type = **LIST**
LENGTH
SN_1
L_1
SN_2
L_2
…
SN_{LENGTH}
L_{LENGTH}

Figure 9.11: The List fields in a STATUS PDU

LENGTH

Length: 4 bits

The number of (SN_i, L_i)-pairs in the super-field of type LIST. The value "0000" is invalid and the list is discarded.

Reference

TS 25.322 clause 9.2.2.11.4.

7.2.3.28.3 Test purpose

To verify that if a STATUS PDU is received with a LIST SUFI and the LENGTH field is set to "0000" that the list is discarded.

7.2.3.28.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit "Length Indicator" tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

Uplink RLC Polling info Poll_PDU	 4

These settings apply to both the uplink and downlink DTCH.

The Radio Bearer is placed in UE test loop mode 1 with the UL SDU size set to (3 * Poll_PDU * AM_7_PayloadSize) – 1 bytes.

Test procedure

a) The SS sends an SDU of size (AM_7_PayloadSize) – 1.

b) The SS monitors the received (looped back) PDUs for a poll request.

c) The SS responds to the poll request by transmitting a STATUS PDU with a LIST SUFI. The list contains an indication that two PDUs were not received, but has the length field set to "0000".

d) The SS continues to monitor the received PDUs to verify that none are retransmitted.

e) The SS may optionally release the radio bearer.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		DOWNLINK RLC PDU	SDU 1 (start)
2	←		…	SS continues to transmit RLC PDUs
3	←		DOWNLINK RLC PDU	SDU 1 (end)
4	→		UPLINK RLC PDU	SDU 1 (start)
5	→		UPLINK RLC PDU	
6	→		…	SS continues to receive RLC PDUs
7	→		UPLINK RLC PDU	SN = Poll_PDU - 1, Poll
8	←		STATUS PDU	LIST(LENGTH = "0000", SN = 1, SN = 2)
9	→		…	SS continues to receive RLC PDUs
10	→		UPLINK RLC PDU	Poll
11	←		STATUS PDU	Normal reply
12	→		…	SS continues to receive RLC PDUs
13	→		UPLINK RLC PDU	SDU 1 (end)
14			RB RELEASE	Optional step
NOTE 1: The Expected Sequence shown is informative. The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity. Information such as SDU, PDU or Sequence numbers given in the comments column shall be considered informative only, for test case development purposes.				

7.2.3.28.5 Test requirements

No RLC PDUs shall be retransmitted by the UE.

7.2.3.29 Timer based discard, with explicit signalling / Expiry of Timer_Discard

7.2.3.29.1 Definition

This case tests that when the transmission of an SDU exceeds a time limit, the SDU is discarded by the sender, and the discard is signalled to the receiver. SDU discard is used to keep network delays within limits, and incorrect operation will effect the quality of service.

7.2.3.29.2 Conformance requirement

If the transmission time exceeds a predefined value for a SDU in acknowledged mode RLC, this SDU is discarded in the transmitter and a Move Receiving Window (MRW) command is sent to the receiver so that AMD PDUs carrying that SDU are discarded in the receiver and the receiver window is updated accordingly.

This procedure is initiated by the sender when the following conditions are fulfilled … Timer based SDU discard with explicit signalling is used, and Timer_Discard expires for an SDU.

This status report is sent even if the 'STATUS prohibit' is used and the timer 'Timer_Status_Prohibit' is active.

The STATUS PDUs have higher priority than data PDUs.

Reference

TS 25.322 clauses 9.7.3.1, 11.3.4.3.1 and 11.6.

7.2.3.29.3 Test purpose

1. To verify that if the transmission time for an SDU exceeds Timer_Discard, the SDU is discarded in the transmitter and the MRW procedure is invoked.

2. ...

7.2.3.29.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit "Length Indicator" tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

Uplink RLC	
Transmission RLC discard	
Timer based with explicit signalling	
Timer_MRW	500
Timer_Discard	1000
MAX_MRW	4

These settings apply to both the uplink and downlink DTCH.

The Radio Bearer is placed in UE test loop mode 1 with the UL SDU size set to AM_7_PayloadSize – 1 bytes.

Test procedure

a) The SS sends at least 2 RLC SDUs of size AM_7_PayloadSize – 1bytes.

b) The SS notes the time that the first RLC PDU is received on the uplink. This time will be recorded as T_1.

c) The SS checks the RLC PDUs received on the uplink and responds to all poll requests with a STATUS PDU, negatively acknowledging the RLC PDU with sequence number 0, and positively acknowledging all other RLC PDUs received.

d) The SS monitors received STATUS PDUs for the presence of a MRW SUFI, noting the time it was received. This time will be recorded as T_2.

e) The SS responds to the MRW command with a correct MRW_ACK.

f) Void.

g) The SS may optionally release the radio bearer.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		DOWNLINK RLC PDU	SDU 1
2	←		DOWNLINK RLC PDU	SDU 2
3	→		UPLINK RLC PDU	SDU 1: Note T_1

5	→		UPLINK RLC PDU	SDU 2 + Poll
6	←		STATUS PDU	NAK SN=0
7	→		…	SS continues to receive RLC PDU with SN=0 + Poll
8	←		…	STATUS PDU, SS continues to NAK PDU with SN=0
9	→		STATUS PDU	MRW Command: Note T_2
10	←		STATUS PDU	MRW_ACK
11			RB RELEASE	Optional step
NOTE 1: The Expected Sequence shown is informative. The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity. Information such as SDU, PDU or Sequence numbers given in the comments column shall be considered informative only, for test case development purposes.				

7.2.3.29.5 Test requirements

1. The measured time $T_2 - T_1$ shall be 1000 ms.
2. The STATUS PDU received in step 9 shall contain a MRW SUFI indicating that the first three PDUs shall be discarded, and that the data indicated in the fourth PDU by the first LI shall also be discarded.

7.2.3.29a Timer based discard, with explicit signalling / Expiry of Timer_Discard when Timer_STATUS_prohibit is active

7.2.3.29a.1 Definition

This case tests that when the transmission of an SDU exceeds a time limit, the SDU is discarded by the sender, and the discard is signalled to the receiver while the Timer_STATUS_Prohibit is active. SDU discard is used to keep network delays within limits, and incorrect operation will effect the quality of service.

This test applies to all UE.

7.2.3.29a.2 Conformance requirement

If the transmission time exceeds a predefined value for a SDU in acknowledged mode RLC, this SDU is discarded in the transmitter and a Move Receiving Window (MRW) command is sent to the receiver so that AMD PDUs carrying that SDU are discarded in the receiver and the receiver window is updated accordingly.

Upon expiry of Timer_Discard the sender shall initiate the SDU discard with explicit signalling procedure.

This status report is sent even if the 'STATUS prohibit' is used and the timer 'Timer_Status_Prohibit' is active.

The STATUS PDUs have higher priority than data PDUs.

Reference

TS 25.322 clauses 9.7.3.1, 11.3.4.3.1 and 11.6.

7.2.3.29a.3 Test purpose

1. …
2. To verify that the MRW procedure status report is sent even if the 'STATUS prohibit' is used and the timer 'Timer_Status_Prohibit' is active.

7.2.3.29a.4 Method of test

TBD

7.2.3.29a.5 Test requirements

TBD

7.2.3.30 Timer based discard, with explicit signalling / Obsolete MRW_ACK

7.2.3.30.1 Definition

This case tests the ability of the receiving AM RLC entity to handle obsolete information that can be received during a failure of the SDU discard procedure. SDU discard is used to keep network delays within limits, and incorrect operation will effect the quality of service.

7.2.3.30.2 Conformance requirement

If Timer_MRW expires before the discard procedure is terminated, the MRW SUFI shall be retransmitted, VT(MRW) is incremented by one and Timer_MRW restarted. MRW SUFI shall be exactly the same as previously transmitted even though some new SDUs would have been discarded during the running of the Timer_MRW.

The received MRW_ACK shall be discarded in the following cases.

1. …

2. If the SN_ACK field in the received MRW_ACK < SN_MRW_{LENGTH} in the transmitted MRW SUFI.

3. If the SN_ACK field in the received MRW_ACK is equal to the SN_MRW_{LENGTH} in the transmitted MRW SUFI and the N field in the received MRW_ACK is not equal to the N_{LENGTH} field in the transmitted MRW SUFI

4. If the SN_ACK field in the received MRW_ACK > SN_MRW_{LENGTH} in the transmitted MRW SUFI and the N field in the received MRW_ACK is not equal to zero.

Reference

TS 25.322 clauses 11.6.5 and 11.6.6.3.

7.2.3.30.3 Test purpose

1. To verify that the MRW SUFI is retransmitted if Timer_MRW expires before a valid MRW_ACK is received.

2. To verify that the MRW_ACK is discarded if the SN_ACK field < SN_MRW_{LENGTH}.

3. To verify that the MRW_ACK is discarded if the N field is not equal to N_{LENGTH} transmitted in the MRW SUFI.

4. To verify that the MRW_ACK is discarded if the N field is not zero and the SN_ACK field > SN_MRW_{LENGTH} in the transmitted MRW SUFI.

7.2.3.30.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit "Length Indicator" tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

Uplink RLC	
Transmission RLC discard	
MaxDAT Retransmissions	
MaxDAT	40
Timer_MRW	500
MAX_MRW	4

These settings apply to both the uplink and downlink DTCH.

The Radio Bearer is placed in UE test loop mode 1 with the UL SDU size set to AM_7_PayloadSize – 1bytes.

Test procedure

a) The SS sends at least 2 RLC SDUs of size AM_7_PayloadSize – 1bytes.

b) The SS checks the RLC PDUs received on the uplink and responds to all poll requests with a STATUS PDU, negatively acknowledging the RLC PDU with sequence number 0, and positively acknowledging all other RLC PDUs received.

c) The SS monitors received STATUS PDUs for the presence of a MRW SUFI, noting the time it was received. This time will be recorded as T_1.

d) The SS responds to the MRW command with an MRW_ACK with the SN_ACK field set to SN_MRW_{LENGTH} – 1.

e) The SS monitors received STATUS PDUs for another MRW SUFI, noting the time it was received. This time will be recorded as T_2.

f) The SS responds to the MRW command with an MRW_ACK with the SN_ACK field set to SN_MRW_{LENGTH}, and the N field set to (N_{LENGTH} + 1) modulo 4.

g) The SS monitors received STATUS PDUs for another MRW SUFI, noting the time it was received. This time will be recorded as T_3.

h) The SS responds to the MRW command with an MRW_ACK with the SN_ACK field set to SN_MRW_{LENGTH} + 1, and the N field set to 1.

i) The SS monitors received STATUS PDUs for another MRW SUFI.

j) The SS responds to the MRW command with a correct MRW_ACK.

k) The SS may optionally release the radio bearer.

Expected sequence

Step	Direction		Message	Comments

NOTE 1: The Expected Sequence shown is informative. The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity. Information such as SDU, PDU or Sequence numbers given in the comments column shall be considered informative only, for test case development purposes.				

7.2.3.30.5 Test requirements

1. The measured time $T_2 - T_1$ shall be 500 ms.
2. The measured time $T_3 - T_2$ shall be 500 ms.
3. The STATUS PDUs received in steps 8, 10, 12 and 14 shall contain an identical MRW SUFI.

7.2.3.31 Timer based discard, with explicit signalling / Failure of MRW procedure

7.2.3.31.1 Definition

This case tests that if a failure occurs during the signalling of an SDU discard to the receiver, the retransmission protocol operates correctly. SDU discard is used to keep network delays within limits, and incorrect operation will effect the quality of service.

7.2.3.31.2 Conformance requirement

If VT(MRW) = MaxMRW, the Sender shall:

- terminate the SDU discard with explicit signalling procedure;
- stop the timer Timer_MRW if it was started;
- initiate the RLC RESET procedure (see clause 11.4).

If Timer_MRW expires before the discard procedure is terminated, the Sender shall:

- increment VT(MRW) by one;
- if VT(MRW)<MaxMRW:
  - set the MRW SUFI as previously transmitted (even if additional SDUs were discarded in the mean-time);
  - include the MRW SUFI in a new status report (if other SUFIs are included, their contents shall be updated);
  - transmit the status report by either including it in a STATUS PDU or piggybacked in an AMD PDU;
  - restart Timer_MRW for this discard procedure;
- else (if VT(MRW) = MaxMRW):
  - perform the actions specified in subclause 11.6.4a.

Reference

TS 25.322 clause 11.6.4a, 11.6.5.

7.2.3.31.3 Test purpose

1. To verify that when the number of retransmissions of a MRW command reaches MaxMRW, an error indication is passed to RRC and RESET procedure is initiated.

7.2.3.31.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit "Length Indicator" tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

Uplink RLC	
Transmission RLC discard	
Timer based with explicit signalling	
Timer_MRW	500
Timer_Discard	500
Max_MRW	4
Polling info	
Poll_PDU	2

These settings apply to both the uplink and downlink DTCH.

The Radio Bearer is placed in UE test loop mode 1with the UL SDU size set to (2 * AM_7_PayloadSize) – 1bytes.

Test procedure

a) The SS sends 4 RLC SDUs of size (2 * AM_7_PayloadSize) – 1bytes.

b) The SS checks the RLC PDUs received on the uplink and responds to all poll requests as follows: While the VR(H) is 4 or less, with a STATUS PDU, negatively acknowledging the RLC PDU with sequence number 0, and positively acknowledging all other RLC PDUs received. While the VR(H) is greater than 4, a STATUS PDU negatively acknowledging RLC PDUs with sequence numbers 0 and 4, and positively acknowledging all others.

c) The SS monitors received STATUS PDUs for the presence of an MRW SUFI, noting the time it was received. This time will be recorded as T_1.

d) The SS makes no response, but monitors for the next STATUS PDU containing an MRW SUFI, noting the time it was received. This time will be recorded as T_2.

e) The SS sends a STATUS PDU with an MRW_ACK indicating the discard of SDU 1 moving VR(R) to 4.

f) The SS monitors for further STATUS PDUs containing an MRW SUFI, or for a RESET PDU. The SS records the number of STATUS PDUs it received with MRW SUFI before it received the RESET PDU.

g) The SS checks any RLC SDUs reassembled from the uplink.

h) The SS may optionally release the radio bearer.

Expected sequence

NOTE 1: The Expected Sequence shown is informative. The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity. Information such as SDU, PDU or Sequence numbers given in the comments column shall be considered informative only, for test case development purposes.				

7.2.3.31.5 Test requirements

The measured time $T_2 - T_1$ shall be 500 ms.

After step 17, the SS shall detect 3 repeats of the MRW command sent in step 17 before a RESET PDU is sent.

7.2.3.32 SDU discard after MaxDAT-1 number of transmissions

7.2.3.32.1 Definition

This case tests that if a PDU is unsuccessfully transmitted MaxDAT-1 times, the SDU it carries, and therefore all other associated PDUs, are discarded by the transmitter and receiver. This mode of SDU discard is used to minimize data loss, and incorrect operation will effect the quality of service.

7.2.3.32.2 Conformance requirement

1. There shall be one VT(DAT) for each PDU and each shall be incremented every time the corresponding AMD PDU is scheduled to be transmitted. The initial value of this variable is 0.

2. If the number of times an AMD PDU is scheduled for transmission reaches MaxDAT, the Sender shall:

   - discard all SDUs segments of which are contained in the AMD PDU; and

- utilise explicit signalling to inform the Receiver according to clause 11.6.

3. If VT(DAT) = MaxDAT, the Sender shall:

   - if "No_discard after MaxDAT number of transmissions" is configured:

     ….

   - if "SDU discard after MaxDAT number of transmissions" is configured:

     - initiate the "SDU discard with explicit signalling" procedure for the corresponding SDU, see subclause 11.6.

4. Upon initiation of the SDU discard with explicit signalling procedure, the Sender shall:

   …..

   - if "SDU discard after MaxDAT number of transmissions" is configured:

     - discard all SDUs that have segments in AMD PDUs with "Sequence Number" SN inside the interval VT(A) ≤ SN ≤ X, where X is the value of the "Sequence Number" of the AMD PDU with VT(DAT) ≥ MaxDAT.

   - discard all AMD PDUs including segments of the discarded SDUs, unless they also carry a segment of a SDU whose timer has not expired;

   - if more than 15 discarded SDUs are to be informed to the Receiver (see subclause 11.6.2.2):

     ….

   - otherwise (less than or equal to 15 discarded SDUs are to be informed to the Receiver):

     - assemble an MRW SUFI with the discard information of the SDUs.

   - schedule and submit to lower layer a STATUS PDU/piggybacked STATUS PDU containing the MRW SUFI;

   ….

Reference

TS 25.322 clauses 9.4, 9.7.3.3, 11.3.3a and 11.6.

7.2.3.32.3 Test purpose

1. To verify that if VT(DAT) = MaxDAT for any PDU the sender initiates the SDU discard with explicit signalling procedure.

7.2.3.32.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit "Length Indicator" tests in clause 7.2.3.1.

These settings apply to both the uplink and downlink DTCH.

The Radio Bearer is placed in UE test loop mode 1 with the UL SDU size set to (2 * AM_7_PayloadSize) – 1 bytes.

Test procedure

a) The SS sends 2 RLC SDUs of size (2 * AM_7_PayloadSize) – 1 bytes.

b) The SS checks the RLC PDUs received on the uplink and responds to all poll requests with a STATUS PDU negatively acknowledging the RLC PDU with sequence number 0, and positively acknowledging all other RLC PDUs received.

c) The SS monitors received STATUS PDUs for the presence of an MRW SUFI.

d) The SS responds with a STATUS PDU containing a valid MRW_ACK SUFI.

e) The SS checks any RLC SDUs reassembled from the uplink.

f) The SS may optionally release the radio bearer.

Expected sequence

NOTE 1: The Expected Sequence shown is informative. The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity. Information such as SDU, PDU or Sequence numbers given in the comments column shall be considered informative only, for test case development purposes.				

7.2.3.32.5 Test requirements

The uplink RLC PDU with sequence number 0 shall be retransmitted twice, then the SS shall detect a STATUS PDU with an MRW command.

7.2.3.33 Operation of the RLC Reset procedure / UE Originated

7.2.3.33.1 Definition

This case tests that when the maximum number of retransmissions is exceeded, the UE initiates and performs the RLC Reset procedure. Incorrect operation of this procedure may cause loss of service.

7.2.3.33.2 Conformance requirement

The Sender shall:

- if one of the following triggers is detected:

1) "No_Discard after MaxDAT number of transmissions" is configured and VT(DAT) equals the value MaxDAT (see TS 25.322 subclause 9.7.3.4);

…

- stop transmitting any AMD PDU or STATUS PDU;
- increment VT(RST) by 1;
- if VT(RST) = MaxRST:
  - the Sender may submit to the lower layer a RESET PDU;

- perform the actions specified in TS 25.322 subclause 11.4.4a.

- else (if VT(RST) < MaxRST):

  - submit a RESET PDU to the lower layer;

  - start the timer Timer_RST.

NOTE: If the TFC selection exchange has been initiated by sending the RLC Entity Info parameter to MAC, the RLC entity may delay the RLC reset procedure until the end of the next TTI.

When a reset procedure has been initiated it can only be ended upon reception of a RESET ACK PDU with the same RSN value as in the corresponding RESET PDU, or upon request of re-establishment or release from upper layer, a reset procedure is not interrupted by the reception of a RESET PDU from the peer entity.

[...]

The Sender shall:

- set the HFNI field to the currently highest used HFN (DL HFN when the RESET PDU is sent by UTRAN or UL HFN when the RESET PDU is sent by the UE);

- set the RSN field to the sequence number of the RESET PDU. The sequence number of the first RESET PDU after the AM entity is established or re-established shall be "0". This sequence number is incremented every time a new RESET PDU is transmitted, but not when a RESET PDU is retransmitted.

[...]

Upon reception of a RESET ACK PDU, the Sender shall:

- if the Sender has already transmitted a RESET PDU which has not been yet acknowledged by a RESET ACK PDU:

  - if the received RSN value is the same as the one in the corresponding RESET PDU:

    - set the HFN value (DL HFN when the RESET ACK PDU is received in UE or UL HFN when the RESET ACK PDU is received in UTRAN) to the HFNI field of the received RESET ACK PDU;

    - reset the state variables described in subclause 9.4 to their initial values;

    - stop all the timers described in subclause 9.5;

    - reset configurable parameters to their configured values;

    - discard all RLC PDUs in the receiving side of the AM RLC entity;

    - discard all RLC SDUs that were transmitted before the reset in the transmitting side of the AM RLC entity;

    - increase with one the UL HFN and DL HFN, and the updated HFN values shall be used for the first transmitted and received AMD PDUs after the reset procedure;

  - otherwise (if the received RSN value is not the same as the one in the corresponding RESET PDU):

    - discard the RESET ACK PDU;

- otherwise (if the Sender has not transmitted a RESET PDU which has not been yet acknowledged by a RESET ACK PDU):

  - discard the RESET ACK PDU.

NOTE: If the TFC selection exchange has been initiated by sending the RLC Entity Info parameter to MAC, the RLC entity may delay the RLC SDUs discard in the transmitting side until the end of the next TTI.

[...]

If Timer_RST expires before the reset procedure is terminated, the Sender shall:

- increment VT(RST) by one;
- if VT(RST)<MaxRST:
  - set the RESET PDU as previously transmitted (even if additional SDUs were discarded in the mean-time);
  - transmit RESET PDU;
  - restart Timer_RST.

Reference

TS 25.322 clause 11.4.2, 11.4.2.1, 11.4.4, 11.4.5.1.

7.2.3.33.3 Test purpose

1. To verify that the Reset procedure is initiated when the maximum number of retransmissions has been exceeded (Reset trigger condition 1) in subclause 11.4.2 of 3GPP TS 25.322 (R1999).
2. To verify that the sender resets state variables to their initial value and resets configurable parameters to their configured value.
3. To verify that RSN is updated correctly.
4. To verify operation of Timer_RST.

7.2.3.33.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit "Length Indicator" tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

Uplink RLC Transmission RLC discard No discard Max_DAT	 4

These settings apply to both the uplink and downlink DTCH.

The Radio Bearer is placed in UE test loop mode 1 with the UL SDU size set to (2 * AM_7_PayloadSize) – 1 bytes.

Test procedure

a) The SS sends 2 RLC SDUs of size (2 * AM_7_PayloadSize) – 1 bytes.

b) The SS checks the RLC PDUs received on the uplink and responds to all poll requests with a STATUS PDU negatively acknowledging the RLC PDU with sequence number 0, and positively acknowledging all other RLC PDUs received.

c) The SS notes the time that the RESET PDU is received. This time will be recorded as T_1. The SS notes the value of the RSN bit.

d) The SS makes no response, and notes the time that the next RESET PDU is received. This time will be recorded as T_2. The SS notes the value of the RSN bit.

e) The SS sends a RESET ACK PDU with the RSN bit set to the same value as received in the RESET PDU received in step d).

f) The SS sends an RLC SDU of size (2 * AM_7_PayloadSize) – 1bytes. The data contents of this RLC SDU shall be different from the contents of the RLC SDUs sent in procedure step a) above.

g) The SS checks the RLC PDUs received on the uplink and responds to all poll requests with a STATUS PDU negatively acknowledging the RLC PDU with sequence number 0, and positively acknowledging all other RLC PDUs received.

h) The SS notes the value of the RSN bit of the RESET PDU received.

i) The SS sends a RESET ACK PDU with the RSN bit set to the value received in the RESET PDU in step c (the incorrect value).

j) The SS waits to receive another RESET PDU and checks the RSN bit.

k) The SS sends a RESET ACK PDU with the correct RSN bit.

l) The SS checks any RLC SDU received on the uplink.

m) The SS may optionally release the radio bearer.

NOTE: The Expected Sequence shown is informative. The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity. Information such as SDU, PDU or Sequence numbers given in the comments column shall be considered informative only, for test case development purposes.				

7.2.3.33.5 Test requirements

1. The measured time $T_2 - T_1$ shall be 500 ms.

2. In steps 20 to 21 the SS shall receive an RLC SDU with contents that match the third RLC SDU sent to the UE. The first RLC PDU containing that SDU shall have sequence number 0.

3. The RSN bit of the first and second RESET PDUs received shall be set to 0. The RSN bit of the third and fourth RESET PDU shall be set to 1.

7.2.3.34 Operation of the RLC Reset procedure / UE Terminated

7.2.3.34.1 Definition

This case tests that the UE responds correctly to the RLC Reset procedure initiated by the network. Incorrect operation of this procedure may cause loss of service.

7.2.3.34.2 Conformance requirement

Upon reception of a RESET PDU the Receiver shall:

- if the RSN value in the RESET PDU is the same as the RSN value in the last received RESET PDU:
  - either only submit a RESET ACK PDU to the lower layer with the contents set exactly as in the last transmitted RESET ACK PDU (i.e., in this case the RLC entity is not reset); or
  - perform the actions specified below as if the RSN value was different from the RSN value in the last received RESET PDU.
- otherwise, if the RESET PDU is the first RESET PDU received since the entity was (re-)established or the RSN value is different from the RSN value in the last received RESET PDU:
  - submit a RESET ACK PDU to the lower layer with the content set as specified in subclause 11.4.3.1;
  - reset the state variables described in subclause 9.4 except VT(RST) to their initial values;
  - stop all the timers described in subclause 9.5 except Timer_RST;
  - reset configurable parameters to their configured values;
  - discard all RLC PDUs in the receiving side of the AM RLC entity;
  - discard all RLC SDUs that were transmitted before the reset in the transmitting side of the AM RLC entity;
  - set the HFN (DL HFN when the RESET PDU is received in UE or UL HFN when the RESET PDU is received in UTRAN) equal to the HFNI field in the received RESET PDU;
  - increase with one the UL HFN and DL HFN, and the updated HFN values shall be used for the first transmitted and received AMD PDUs after the reset procedure.

NOTE: If the TFC selection exchange has been initiated by sending the RLC Entity Info parameter to MAC, the RLC entity may delay the RLC SDUs discard in the transmitting side of the AM RLC entity until the end of the next TTI.

Reference

TS 25.322 clause 11.4.3.

7.2.3.34.3 Test purpose

1. To verify that upon reception of a RESET PDU the receiver responds with a RESET ACK PDU.

2. To verify that the receiver resets its state variables to their initial value and resets configurable parameters to their configured value.

7.2.3.34.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit "Length Indicator" tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

Uplink RLC Transmission RLC discard No discard MaxDAT	 4

These settings apply to both the uplink and downlink DTCH.

Test procedure

a) The SS sends 2 RLC SDUs of size (2 * AM_7_PayloadSize) – 1 bytes, and polls on the last PDU sent.

b) The SS checks the STATUS PDUs received on the uplink until both SDUs have been acknowledged.

c) The SS transmits a RESET PDU.

d) The SS monitors the uplink for a RESET ACK PDU.

e) The SS sends an RLC SDU of size (2 * AM_7_PayloadSize) – 1 bytes, and polls on the last PDU sent.

f) The SS checks for STATUS PDUs received on the uplink until the SDU has been acknowledged.

g) The SS may optionally release the radio bearer.

Expected sequence

Step	Direction		Message	Comments

7.2.3.34.5 Test requirements

1. The SS shall receive a RESET ACK PDU in step 7.

2. The SS shall receive a STATUS PDU in step 10 acknowledging for the third RLC SDU transmitted with PDUs starting at SN=0.

7.2.3.35 Reconfiguration of RLC parameters by upper layers

7.2.3.35.1 Definition

This case verifies the UE behaviour after a reconfiguration of RLC parameters on an established RLC AM entity.

7.2.3.35.2 Conformance requirement

Upon reception of the IE "RLC Info", the UE shall:
