## Important notice

The present document can be downloaded from:
https://www.etsi.org/standards-search
The present document may be made available in electronic versions and/or in print. The content of any electronic and/or print versions of the present document shall not be modified without the prior written authorization of ETSI. In case of any existing or perceived difference in contents between such versions and/or in print, the prevailing version of an ETSI deliverable is the one made publicly available in PDF format at www.etsi.org/deliver.

Users of the present document should be aware that the document may be subject to revision or change of status. Information on the current status of this and other ETSI documents is available at https://portal.etsi.org/TB/ETSIDeliverableStatus.aspx
If you find errors in the present document, please send your comment to one of the following services:
https://portal.etsi.org/People/CommiteeSupportStaff.aspx
If you find a security vulnerability in the present document, please report it through our Coordinated Vulnerability Disclosure Program:
https://www.etsi.org/standards/coordinated-vulnerability-disclosure

## Notice of disclaimer \& limitation of liability

The information provided in the present deliverable is directed solely to professionals who have the appropriate degree of experience to understand and interpret its content in accordance with generally accepted engineering or other professional standard and applicable regulations.
No recommendation as to products and services or vendors is made or should be implied.
No representation or warranty is made that this deliverable is technically accurate or sufficient or conforms to any law and/or governmental rule and/or regulation and further, no representation or warranty is made of merchantability or fitness for any particular purpose or against infringement of intellectual property rights.
In no event shall ETSI be held liable for loss of profits or any other incidental or consequential damages.
Any software contained in this deliverable is provided "AS IS" with no warranties, express or implied, including but not limited to, the warranties of merchantability, fitness for a particular purpose and non-infringement of intellectual property rights and ETSI shall not be held liable in any event for any damages whatsoever (including, without limitation, damages for loss of profits, business interruption, loss of information, or any other pecuniary loss) arising out of or related to the use of or inability to use the software.

## Copyright Notification

No part may be reproduced or utilized in any form or by any means, electronic or mechanical, including photocopying and microfilm except as authorized by written permission of ETSI.
The content of the PDF version shall not be modified without the written authorization of ETSI.
The copyright and the foregoing restriction extend to reproduction in all media.

## Intellectual Property Rights

## Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The declarations pertaining to these essential IPRs, if any, are publicly available for ETSI members and non-members, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (https://ipr.etsi.org/).

Pursuant to the ETSI Directives including the ETSI IPR Policy, no investigation regarding the essentiality of IPRs, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

## Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

DECT $^{\text {TM }}$, PLUGTESTS ${ }^{\text {TM }}$, UMTS ${ }^{\text {TM }}$ and the ETSI logo are trademarks of ETSI registered for the benefit of its Members. 3GPP ${ }^{\text {TM }}$ and LTE ${ }^{\text {TM }}$ are trademarks of ETSI registered for the benefit of its Members and of the 3GPP Organizational Partners. oneM2M ${ }^{\text {TM }}$ logo is a trademark of ETSI registered for the benefit of its Members and of the oneM2M Partners. GSM ${ }^{\circledR}$ and the GSM logo are trademarks registered and owned by the GSM Association.

## Legal Notice

This Technical Specification (TS) has been produced by the ETSI 3rd Generation Partnership Project (3GPP).
The present document may refer to technical specifications or reports using their 3GPP identities. These shall be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between 3GPP and ETSI identities can be found under https://webapp.etsi.org/key/queryform.asp.

## Modal verbs terminology

In the present document "shall", "shall not", "should", "should not", "may", "need not", "will", "will not", "can" and "cannot" are to be interpreted as described in clause 3.2 of the ETSI Drafting Rules (Verbal forms for the expression of provisions).
"must" and "must not" are NOT allowed in ETSI deliverables except when used in direct citation.

8.4.1.2.4 Minimum Requirement 2 Tx Antenna Port (demodulation subframe overlaps with aggressor cell ABS and CRS assistance information are configured) ..... 747
8.4.1.2.5 Enhanced Downlink Control Channel Performance Requirement Type A - 2 Tx Antenna Port under Asynchronous Network ..... 750
8.4.1.2.6 Enhanced Downlink Control Channel Performance Requirement Type A-2 Tx Antenna Port with Non-Colliding CRS Dominant Interferer ..... 751
8.4.1.2.7 Enhanced Downlink Control Channel Performance Requirement Type B-2 Tx Antenna Port with Colliding CRS Dominant Interferer. ..... 752
8.4.1.2.8 Enhanced Downlink Control Channel Performance Requirement Type B-2 Tx Antenna Port with Non-Colliding CRS Dominant Interferer ..... 753
8.4.1.2.9 Enhanced Downlink Control Channel Performance Requirement Type A - 4 Tx Antenna Port with Non-Colliding CRS Dominant Interferer ..... 754
8.4.2 TDD ..... 755
8.4.2.1 Single-antenna port performance ..... 756
8.4.2.2 Transmit diversity performance ..... 756
8.4.2.2.1 Minimum Requirement 2 Tx Antenna Port ..... 756
8.4.2.2.2 Minimum Requirement 4 Tx Antenna Port ..... 756
8.4.2.2.3 Minimum Requirement 2 Tx Antenna Port (demodulation subframe overlaps with aggressor cell ABS) ..... 757
8.4.2.2.4 Minimum Requirement 2 Tx Antenna Port (demodulation subframe overlaps with aggressor cell ABS and CRS assistance information are configured) ..... 759
8.4.2.2.5 Enhanced Downlink Control Channel Performance Requirement Type A - 2 Tx Antenna Port with Colliding CRS Dominant Interferer. ..... 762
8.4.2.2.6 Enhanced Downlink Control Channel Performance Requirement Type A-2 Tx Antenna Port with Non-Colliding CRS Dominant Interferer ..... 763
8.4.2.2.7 Enhanced Downlink Control Channel Performance Requirement Type B - 2 Tx Antenna Port with Colliding CRS Dominant Interferer. ..... 764
8.4.2.2.8 Enhanced Downlink Control Channel Performance Requirement Type B-2 Tx Antenna Port with Non-Colliding CRS Dominant Interferer ..... 765
8.4.2.2.9 Enhanced Downlink Control Channel Performance Requirement Type A - 4 Tx Antenna Port with Non-Colliding CRS Dominant Interferer ..... 766
8.4.3 LAA. ..... 767
8.4.3.1 Transmit diversity performance ..... 767
8.4.3.1.1 FDD Pcell (FDD single carrier) ..... 767
8.4.3.1.2 TDD Pcell (TDD single carrier) ..... 768
8.5 Demodulation of PHICH ..... 769
8.5.1 FDD ..... 769
8.5.1.1 Single-antenna port performance ..... 770
8.5.1.2 Transmit diversity performance ..... 770
8.5.1.2.1 Minimum Requirement 2 Tx Antenna Port ..... 770
8.5.1.2.2 Minimum Requirement 4 Tx Antenna Port ..... 770
8.5.1.2.3 Minimum Requirement 2 Tx Antenna Port (demodulation subframe overlaps with aggressor cell ABS) ..... 771
8.5.1.2.4 Minimum Requirement 2 Tx Antenna Port (demodulation subframe overlaps with aggressor cell ABS and CRS assistance information are configured) ..... 772
8.5.1.2.5 Enhanced Downlink Control Channel Performance Requirement Type A - 2 Tx Antenna Ports under Asynchronous Network ..... 774
8.5.1.2.6 Enhanced Downlink Control Channel Performance Requirement Type A-2 Tx Antenna Ports with Non-Colliding CRS Dominant Interferer ..... 774
8.5.1.2.7 Ports with Colliding CRS Dominant Interferer ..... 775
8.5.1.2.8 Enhanced Downlink Control Channel Performance Requirement Type B - 2 Tx Antenna Ports with Non-Colliding CRS Dominant Interferer ..... 776
8.5.2 TDD ..... 777
8.5.2.1 Single-antenna port performance ..... 778
8.5.2.2 Transmit diversity performance ..... 778
8.5.2.2.1 Minimum Requirement 2 Tx Antenna Port ..... 778
8.5.2.2.2 Minimum Requirement 4 Tx Antenna Port ..... 778
8.5.2.2.3 Minimum Requirement 2 Tx Antenna Port (demodulation subframe overlaps with aggressor cell ABS) ..... 779
8.5.2.2.4 Minimum Requirement 2 Tx Antenna Port (demodulation subframe overlaps with aggressor cell ABS and CRS assistance information are configured) ..... 780
8.5.2.2.5 Enhanced Downlink Control Channel Performance Requirement Type A-2 Tx Antenna Ports with Colliding CRS Dominant Interferer ..... 781
8.5.2.2.6 Enhanced Downlink Control Channel Performance Requirement Type A-2 Tx Antenna Ports with Non-Colliding CRS Dominant Interferer ..... 782
8.5.2.2.7 Enhanced Downlink Control Channel Performance Requirement Type B - 2 Tx Antenna Ports with Colliding CRS Dominant Interferer ..... 783
8.5.2.2.8 Enhanced Downlink Control Channel Performance Requirement Type B - 2 Tx Antenna Ports with Non-Colliding CRS Dominant Interferer ..... 784
8.6 Demodulation of PBCH ..... 785
8.6.1 FDD ..... 785
8.6.1.1 Single-antenna port performance ..... 785
8.6.1.2 Transmit diversity performance ..... 786
8.6.1.2.1 Minimum Requirement 2 Tx Antenna Port ..... 786
8.6.1.2.2 Minimum Requirement 4 Tx Antenna Port ..... 786
8.6.1.2.3 Minimum Requirement 2 Tx Antenna Port under Time Domain Measurement Resource Restriction with CRS Assistance Information ..... 786
8.6.2 TDD ..... 787
8.6.2.1 Single-antenna port performance ..... 787
8.6.2.2 Transmit diversity performance ..... 788
8.6.2.2.1 Minimum Requirement 2 Tx Antenna Port ..... 788
8.6.2.2.2 Minimum Requirement 4 Tx Antenna Port ..... 788
8.6.2.2.3 Minimum Requirement 2 Tx Antenna Port under Time Domain Measurement Resource
Restriction with CRS Assistance Information ..... 788
8.7 Sustained downlink data rate provided by lower layers ..... 789
8.7.1 $\quad$ FDD (single carrier and CA) ..... 789
8.7.2 TDD (single carrier and CA) ..... 798
8.7.3 FDD (EPDCCH scheduling) ..... 801
8.7.4 TDD (EPDCCH scheduling) ..... 803
8.7.5 TDD FDD CA ..... 805
8.7.5.1 Minimum Requirement FDD PCell ..... 805
8.7.5.2 Minimum Requirement TDD PCell ..... 811
8.7.6 FDD (DC) ..... 816
8.7.7 TDD (DC) ..... 820
8.7.8 TDD FDD (DC) ..... 823
8.7.9 FDD (4 Rx) ..... 825
8.7.10 TDD (4 Rx) ..... 826

8.9.4 PDCCH/PCFICH ..... 874
8.9.4.1 FDD and half-duplex FDD ..... 874
8.9.4.1.1 Enhanced Downlink Control Channel Performance Requirement Type A-2 Tx Antenna Port with Non-Colliding CRS Dominant Interferer ..... 874
8.9.4.1.2 Enhanced Downlink Control Channel Performance Requirement Type A-4 Tx Antenna Port with Non-Colliding CRS Dominant Interferer ..... 875
8.9.4.2 TDD ..... 876
8.9.4.2.1 Enhanced Downlink Control Channel Performance Requirement Type A-2 Tx Antenna Port with Non-Colliding CRS Dominant Interferer ..... 876
8.9.4.2.2 Enhanced Downlink Control Channel Performance Requirement Type A - 4 Tx Antenna Port with Non-Colliding CRS Dominant Interferer ..... 877
8.10 Demodulation (4 receiver antenna ports) ..... 878
8.10.1 PDSCH ..... 878
8.10.1.1 FDD (Fixed Reference Channel) ..... 878
8.10.1.1.1 Transmit diversity performance with 2Tx Antenna Ports (Cell-Specific Reference Symbols). ..... 879
8.10.1.1.1A Transmit diversity performance wit Enhanced Performance Requirement Type A-2 Tx Antenna Ports with TM3 interference model. ..... 880
8.10.1.1.2 Open-loop spatial multiplexing performance with 2Tx Antenna Ports (Cell-Specific Reference Symbols) ..... 881
8.10.1.1.3 Closed-loop spatial multiplexing Enhanced Performance Requirements Type A - Single- Layer Spatial Multiplexing 2 Tx Antenna Port with TM4 interference model (Cell-Specific Reference Symbols) ..... 881
8.10.1.1.4 Closed-loop spatial multiplexing performance, Dual-Layer Spatial Multiplexing 4 Tx Antenna Port (Cell-Specific Reference Symbols) ..... 882
8.10.1.1.4A Enhanced Performance Requirement Type C - Dual-Layer Spatial Multiplexing with 2Tx Antenna Ports ..... 883
8.10.1.1.5 Enhanced Performance Requirement Type A - Single-layer Spatial Multiplexing with TM9 interference model (User-Specific Reference Symbols) ..... 884
8.10.1.1.5A Single-layer Spatial Multiplexing (User-Specific Reference Symbols) ..... 885
8.10.1.1.5B Single-layer Spatial Multiplexing (With Enhanced DMRS table configured) ..... 886
8.10.1.1.6 Dual-Layer Spatial Multiplexing (User-Specific Reference Symbols) ..... 887
8.10.1.1.6A Enhanced Performance Requirement Type C - Dual-Layer Spatial Multiplexing ..... 888
8.10.1.1.6B Dual-Layer Spatial Multiplexing with altCQI-Table-1024QAM configured (User-Specific Reference Symbols) ..... 889
8.10.1.1.7 Open-loop spatial multiplexing, 3 Layer Multiplexing with 4 Tx Antenna Ports (Cell-Specific Reference Symbols) ..... 890
8.10.1.1.7A Enhanced Performance Requirement Type C - Open-loop spatial multiplexing, 3 Layer Multiplexing with 4 Tx Antenna Ports (Cell-Specific Reference Symbols) ..... 891
8.10.1.1.8 Closed-loop spatial multiplexing performance, 4 Layers spatial multiplexing 4 Tx antennas (Cell-Specific Reference Symbols) ..... 891
8.10.1.1.9 4 Layer Spatial Multiplexing (User-Specific Reference Symbols) ..... 892
8.10.1.1.9A Enhanced Performance Requirement Type C-4 Layer Spatial Multiplexing (User-Specific Reference Symbols) ..... 893
8.10.1.1.10 Closed loop spatial multiplexing performance - Single-Layer Spatial Multiplexing 2 Tx Antenna Port with CRS assistance information (Cell-Specific Reference Symbols) ..... 894
8.10.1.1.1 Closed loop spatial multiplexing performance - Single-Layer Spatial Multiplexing 4 Tx Antenna Port with CRS assistance information (Cell-Specific Reference Symbols) ..... 895
8.10.1.1.12 Closed loop spatial multiplexing performance - Single-Layer Spatial Multiplexing with CRS assistance information (User-Specific Reference Symbols) ..... 896
8.10.1.1.13 Performance requirements for DCI format 2D and non Quasi Co-located Antenna Ports ..... 897
8.10.1.1.14 HST-SFN performance ..... 900
8.10.1.2 TDD (Fixed Reference Channel) ..... 9018.10.1.2.1
Transmit diversity performance with 2Tx Antenna Ports (Cell-Specific Reference Symbols) ..... 902
8.10.1.2.1A Transmit diversity performance with Enhanced Performance Requirement Type A-2 Tx Antenna Ports with TM3 interference model. ..... 902
8.10.1.2.2 Open-loop spatial multiplexing performance with 2Tx Antenna Ports (Cell-Specific Reference Symbols) ..... 903
8.10.1.2.3 Closed-loop spatial multiplexing Enhanced Performance Requirements Type A - Single- Layer Spatial Multiplexing 2 Tx Antenna Port with TM4 interference model (Cell-Specific Reference Symbols) ..... 904
8.10.1.2.4 Closed-loop spatial multiplexing performance, Dual-Layer Spatial Multiplexing 4 Tx Antenna Ports (Cell-Specific Reference Symbols) ..... 905
8.10.1.2.4A Enhanced Performance Requirement Type C - Dual-Layer Spatial Multiplexing with 2Tx Antenna Ports ..... 906
8.10.1.2.5 Enhanced Performance Requirement Type A - Single-layer Spatial Multiplexing with TM9 interference model (User-Specific Reference Symbols) ..... 906
8.10.1.2.5A Single-layer Spatial Multiplexing (with multiple CSI-RS configurations) ..... 908
8.10.1.2.5B Single-layer Spatial Multiplexing (With Enhanced DMRS table configured) ..... 909
8.10.1.2.6 Dual-Layer Spatial Multiplexing (User-Specific Reference Symbols) ..... 910
8.10.1.2.6A Enhanced Performance Requirement Type C - Dual-Layer Spatial Multiplexing ..... 911
8.10.1.2.6B Dual-Layer Spatial Multiplexing with altCQI-Table-1024QAM configured (User-Specific Reference Symbols) ..... 912
8.10.1.2.7 Open-loop spatial multiplexing, 3 Layer Multiplexing with 4 Tx Antenna Ports (Cell-Specific Reference Symbols) ..... 913
8.10.1.2.7A Enhanced Performance Requirement Type C - Open-loop spatial multiplexing, 3 Layer Multiplexing with 4 Tx Antenna Ports (Cell-Specific Reference Symbols). ..... 914
8.10.1.2.8 Closed-loop spatial multiplexing performance, 4 Layers spatial multiplexing 4 Tx antennas ..... 914
4 Layer Spatial Multiplexing (User-Specific Reference Symbols) ..... 915
8.10.1.2.9A Enhanced Performance Requirement Type C-4 Layer Spatial Multiplexing (User-Specific Reference Symbols) ..... 916
8.10.1.2.10 Closed loop spatial multiplexing performance - Single-Layer Spatial Multiplexing 2 Tx Antenna Port with CRS assistance information (Cell-Specific Reference Symbols) ..... 917
8.10.1.2.11 Closed loop spatial multiplexing performance - Single-Layer Spatial Multiplexing 4 Tx Antenna Port with CRS assistance information (Cell-Specific Reference Symbols) ..... 918
8.10.1.2.12 Closed loop spatial multiplexing performance - Single-Layer Spatial Multiplexing with CRS assistance information (User-Specific Reference Symbols) ..... 919
8.10.1.2.13 Performance requirements for DCI format 2D and non Quasi Co-located Antenna Ports ..... 920
8.10.1.2.14 HST-SFN performance ..... 924
8.10.2 PDCCH/PCFICH ..... 924
8.10.2.1 FDD ..... 924
8.10.2.1.1 Single-antenna port performance ..... 925
8.10.2.1.2 Transmit diversity performance with 2 Tx Antenna Ports ..... 925
8.10.2.1.3 Transmit diversity performance with 4 Tx Antenna Ports ..... 925
8.10.2.1.4 Enhanced Downlink Control Channel Performance Requirement Type A - 4 Tx Antenna Port with Non-Colliding CRS Dominant Interferer ..... 926
8.10.2.2 TDD ..... 927
8.10.2.2.1 Single-antenna port performance. ..... 927
8.10.2.2.2 Transmit diversity performance with 2 Tx Antenna Ports ..... 927
8.10.2.2.3 Transmit diversity performance with 4 Tx Antenna Ports ..... 928
8.10.2.2.4 Enhanced Downlink Control Channel Performance Requirement Type A - 4 Tx Antenna Port with Non-Colliding CRS Dominant Interferer ..... 928
8.10.3 PHICH ..... 929
8.10.3.1 FDD. ..... 929
8.10.3.1.1 Single Tx Antenna Port performance ..... 929
8.10.3.1.2 Transmit diversity performance with 2 Tx Antenna Ports ..... 930
8.10.3.1.3 Transmit diversity performance with 4 Tx Antenna Ports ..... 930
8.10.3.2 TDD ..... 930
8.10.3.2.1 Single Tx Antenna Port performance ..... 931
8.10.3.2. Transmit diversity performance with 2 Tx Antenna Ports ..... 931
8.10.3.2.3 Transmit diversity performance with 4 Tx Antenna Ports ..... 931

8.12 Demodulation of Narrowband IoT ..... 968
8.12.1 NPDSCH ..... 968
8.12.1.1.1 Minimum Requirements for In-band ..... 969
8.12.1.1.2 Minimum Requirements for Standalone/Guard-band ..... 969
8.12.1.1.3 Minimum Requirements for Standalone for UE Category NB2 ..... 970
8.12.1.1.4 Minimum Requirements for Standalone for UE with multiple TBs interleaved transmission ..... 971
8.12.1.2 TDD ..... 971
8.12.1.2.1 Minimum Requirements for In-band ..... 972
8.12.1.2.2 Minimum Requirements for Standalone/Guard-band ..... 973
8.12.1.2.3 Minimum Requirements for Standalone for UE Category NB2 ..... 974
8.12.2 NPDCCH ..... 974
8.12.2.1 Half-duplex FDD ..... 974
8.12.2.1.1 Single-antenna performance ..... 975
8.12.2.1.2 Transmit diversity performance ..... 976
8.12.2.2 ..... TDD ..... 976
8.12.2.2.1 Single-antenna performance ..... 977
8.12.2.2.2 Transmit diversity performance ..... 977
8.12.3 Demodulation of NPBCH ..... 978
8.12.3.1 HD-FDD ..... 978
8.12.3.1.1 Single-antenna port performance with single NPBCH TTI ..... 978
8.12.3.1.2 Transmit diversity performance ..... 978
8.12.3.2 TDD ..... 979
8.12.3.2.1 Single-antenna port performance with single NPBCH TTI ..... 979
8.12.3.2.2 Transmit diversity performance ..... 979
8.13 Demodulation of PDSCH CA and DC(4 receiver antenna ports). ..... 979
8.13.1 FDD (CA and DC) ..... 979
8.13.1.1 Closed-loop spatial multiplexing performance ..... 980
8.13.1.1.1 Minimum Requirement Multi-Layer Spatial Multiplexing 4 Tx Antenna Port ..... 980
8.13.1.1.2 Minimum Requirement Multi-Layer Spatial Multiplexing 4 Tx Antenna Port for dual connectivity ..... 983
8.13.1.1.3 Minimum Requirement Multi-Layer Spatial Multiplexing 4 Tx Antenna Port with 256QAM ..... 985
8.13.1.1.4 Minimum Requirement Four-Layer Spatial Multiplexing 4 Tx Antenna Port ..... 986
8.13.1.2 Dual-Layer Spatial Multiplexing (User-Specific Reference Symbols) ..... 987
8.13.1.2.1 Minimum Requirement Dual-Layer Spatial Multiplexing 2 Tx Antenna Port ..... 987
8.13.1.3 Enhanced Performance Requirements Type A Closed-loop spatial multiplexing ..... 990
8.13.1.3.1 Minimum Requirement Single-Layer Spatial Multiplexing 2 Tx Antenna Port with TM4 interference model (Cell-Specific Reference Symbols) ..... 990
8.13.1.4 Enhanced Performance Requirement Type A - Single-layer Spatial Multiplexing (User-Specific Reference Symbols) ..... 992
8.13.1.4.1 Minimum Requirement Enhanced Performance Requirement Type A - Single-layer Spatial Multiplexing with TM9 interference model (User-Specific Reference Symbols) ..... 992
8.13.2 TDD (CA and DC) ..... 994
8.13.2. Closed-loop spatial multiplexing performance ..... 994
8.13.2.1.1 Minimum Requirement Multi-Layer Spatial Multiplexing 4 Tx Antenna Port ..... 994
8.13.2.1.2 Minimum Requirement Multi-Layer Spatial Multiplexing 4 Tx Antenna Port for dualconnectivity996
8.13.2.1.3 Minimum Requirement Multi-Layer Spatial Multiplexing 4 Tx Antenna Port with 256QAM ..... 998
8.13.2.1.4 Minimum Requirement Four-Layer Spatial Multiplexing 4 Tx Antenna Port ..... 999
8.13.2.2 Dual-Layer Spatial Multiplexing (User-Specific Reference Symbols) ..... 1000
8.13.2.2.1 Minimum Requirement Dual-Layer Spatial Multiplexing 2 Tx Antenna Port ..... 1000
8.13.2.4 Enhanced Performance Requirement Type A - Single-layer Spatial Multiplexing (User-Specific Reference Symbols) ..... 1004
8.13.2.4.1 Minimum Requirement Enhanced Performance Requirement Type A - Single-layer Spatial Multiplexing with TM9 interference model (User-Specific Reference Symbols) ..... 1004
8.13.3 TDD-FDD (CA and DC) ..... 1006
8.13.3.1 Closed-loop spatial multiplexing performance 4Tx Antenna Port ..... 1006
8.13.3.1.1 Minimum Requirement for FDD PCell ..... 1006
8.13.3.1.2 Minimum Requirement for TDD PCell ..... 1009
8.13.3.2 Dual-Layer Spatial Multiplexing (User-Specific Reference Symbols) ..... 1013
8.13.3.2.1 Minimum Requirement Dual-Layer Spatial Multiplexing 2 Tx Antenna Port for FDD PCell ..... 1013
8.13.3.2.2 Minimum Requirement Dual-Layer Spatial Multiplexing 2 Tx Antenna Port for TDD PCell. ..... 1016
8.13.3.3 Enhanced Performance Requirements Type A Closed-loop spatial multiplexing ..... 1019
8.13.3.3.1 Minimum Requirement Single-Layer Spatial Multiplexing 2 Tx Antenna Port with TM4 interference model (Cell-Specific Reference Symbols) for FDD PCell ..... 1019
8.13.3.3.2 Minimum Requirement Single-Layer Spatial Multiplexing 2 Tx Antenna Port with TM4 interference model (Cell-Specific Reference Symbols) for TDD PCell ..... 1021
8.13.3.4 Enhanced Performance Requirement Type A - Single-layer Spatial Multiplexing (User-Specific Reference Symbols) ..... 1023
8.13.3.4.1 Minimum Requirement Enhanced Performance Requirement Type A - Single-layer Spatial Multiplexing with TM9 interference model (User-Specific Reference Symbols) for FDD PCell ..... 1023
8.13.3.4.2 Minimum Requirement Enhanced Performance Requirement Type A - Single-layer Spatial Multiplexing with TM9 interference model (User-Specific Reference Symbols) for TDD PCell ..... 1025
8.13.3.5 Closed-loop spatial multiplexing performance 4Tx Antenna Port for DC ..... 1028
8.13.3.5.1 Minimum Requirement for FDD PCell ..... 1028
8.13.3.5.2 Minimum Requirement for TDD PCell ..... 1030
8.13.3.6 Closed-loop spatial multiplexing performance 4Tx Antenna Port with 256QAM ..... 1031
8.13.3.6.1 Minimum Requirement for FDD PCell ..... 1031
8.13.3.6.2 Minimum Requirement for TDD PCell ..... 1033
8.13.3.7 Closed-loop spatial multiplexing performance 4Tx Antenna Port with Four layers ..... 1034
8.13.3.7.1 Minimum Requirement for FDD PCell ..... 1034
8.13.3.7.2 Minimum Requirement for TDD PCell ..... 1036
8.14 Demodulation (UE supporting Short TTI) ..... 1037
8.14.1 Slot-PDSCH and Subslot-PDSCH ..... 1037
8.14.1.1 FDD (Fixed Reference Channel) ..... 1037
8.14.1.1.1 Open-loop spatial multiplexing performance ..... 1038
8.14.1.1.2 Closed-loop spatial multiplexing performance (User-Specific Reference Signals) ..... 1039
8.14.1.2 TDD (Fixed Reference Channel) ..... 1040
8.14.1.2.1 Open-loop spatial multiplexing performance ..... 1040
8.14.1.2.2 Closed-loop spatial multiplexing performance (User-Specific Reference Signals) ..... 1041
8.14.2 SPDCCH ..... 1042
8.14.2.1 FDD ..... 1042
8.14.2.1.1 Mimimum requirement ..... 1043
8.14.2.2 TDD ..... 1043
8.14.2.2.1 Mimimum requirement ..... 1044
8.15 Demodulation (8 receiver antenna ports) ..... 1044
8.15.1 PDSCH ..... 1044
8.15.1.1 Void. ..... 1044
8.15.1.2 TDD (Fixed Reference Channel) ..... 1044
8.15.1.2.1 Transmit diversity performance with 2Tx Antenna Ports (Cell-Specific Reference Symbols) ..... 1045
8.15.1.2.2 Open-loop spatial multiplexing performance with 2Tx Antenna Ports (Cell-Specific Reference Symbols) ..... 1046
8.15.1.2.3 8 Layer Spatial Multiplexing (User-Specific Reference Symbols) ..... 1046
8.15.2 CA ..... 1047
8.15.2.1 Void. ..... 1047
8.15.2.2 TDD ..... 1047
8.15.2.2.1 Eight Layer Spatial Multiplexing (User-Specific Reference Symbols) ..... 1048
9 Reporting of Channel State Information ..... 1049
9.1 General ..... 1049
9.1.1 Applicability of requirements ..... 1049
9.1.1.1 Applicability of requirements for different channel bandwidths ..... 1049
9.1.1.2 Applicability and test rules for different CA configurations and bandwidth combination sets ..... 1049
9.1.1.2A Applicability and test rules for different TDD-FDD CA configurations and bandwidth combination sets ..... 1050
9.1.1.3 Test coverage for different number of componenet carriers ..... 1051
9.1.1.4 Applicability of performance requirements for 4Rx capable UEs ..... 1051
9.1.1.4.1 Applicability rule and antenna connection for single carrier tests with 2 Rx ..... 1051
9.1.1.4.2 Applicability rule and antenna connection for CA tests with 2Rx ..... 1053
9.1.1.4.3 Applicability rule and antenna connection for single carrier tests with 4Rx ..... 1053
9.1.1.5 Applicability of requirements for UEs supporting coverage enhancement ..... 1053
9.2 CQI reporting definition under AWGN conditions ..... 1054
9.2.1 Minimum requirement PUCCH 1-0 (Cell-Specific Reference Symbols) ..... 10549.2.1.19.2.1.FDD.1054
9.2.1.2 TDD ..... 1055
9.2.1.3 FDD (CSI measurements in case two CSI subframe sets are configured) ..... 1056
9.2.1.4 TDD (CSI measurements in case two CSI subframe sets are configured) ..... 1057
9.2.1.5 FDD (CSI measurements in case two CSI subframe sets are configured and with CRS assistance information) ..... 1059
9.2.1.6 TDD (CSI measurements in case two CSI subframe sets are configured and with CRS assistance information) ..... 1061
9.2.1.7 FDD (Modulation and TBS index Table 2 and 4-bit CQI Table 2 are used) ..... 1062
9.2.1.8 TDD (Modulation and TBS index Table 2 and 4-bit CQI Table 2 are used) ..... 1063
9.2.1.9 FDD (Modulation and TBS index Table 3 and 4-bit CQI Table 4 are used) ..... 1064

12.8 Sustained downlink data rate with active Sidelink ..... 1293
13 Void ..... 1295
14 Performance requirement (V2X Sidelink Communication) ..... 1295
14.1 General ..... 1295
14.1.1 Applicability of requirements ..... 1295
14.2 Demodulation of PSSCH. ..... 1296
14.3 Demodulation of PSCCH ..... 1296
14.4 Power imbalance performance with two links ..... 1297
14.5 Demodulation of PSBCH ..... 1298
14.6 Demodulation of PSSCH with eNB based synchronization ..... 1298
14.7 Soft buffer test ..... 1299
$14.8 \quad$ PSCCH decoding capability test ..... 1300
14.9 Sustained downlink data rate with active sidelink ..... 1301
14.10 Soft buffer test (CA) ..... 1302
$14.11 \quad$ PSCCH/PSSCH decoding capability test (CA) ..... 1303
Annex A (normative): Measurement channels ..... 1305
A. 1 General ..... 1305
A. 2 UL reference measurement channels ..... 1305
A.2.1 General ..... 1305
A.2.1.1 Applicability and common parameters ..... 1305
A.2.1.2 Determination of payload size ..... 1305
A.2.1.3 Overview of UL reference measurement channels ..... 1306
A.2.2 Reference measurement channels for FDD ..... 1320
A.2.2.1 Full RB allocation. ..... 1320
A.2.2.1.1 QPSK ..... 1320
A.2.2.1.2 16-QAM ..... 1322
A.2.2.1.3 64-QAM ..... 1323
A.2.2.1.4 256 QAM ..... 1324
A.2.2.2 Partial RB allocation ..... 1324
A.2.2.2.1 QPSK ..... 1324
A.2.2.2.2 16-QAM ..... 1326
A.2.2.2.3 64-QAM ..... 1328
A.2.2.2.4 256 QAM ..... 1329
A.2.2.3 Void ..... 1330
A.2.2.4 subPRB allocation ..... 1330
A.2.3 Reference measurement channels for TDD ..... 1330
A.2.3.1 Full RB allocation. ..... 1330
A.2.3.1.1 QPSK ..... 1330
A.2.3.1.2 16-QAM ..... 1332
A.2.3.1.3 64-QAM ..... 1334
A.2.3.1.4 256 QAM ..... 1335
A.2.3.2 Partial RB allocation ..... 1335
A.2.3.2.1 QPSK ..... 1336
A.2.3.2.2 16-QAM ..... 1338
A.2.3.2.3 64-QAM ..... 1342
A.2.3.2.4 256 QAM ..... 1343
A.2.3.3 Void ..... 1343
A.2.3.4 subPRB allocation ..... 1344
A.2.4 Reference measurement channels for UE category NB1 ..... 1344
A.2.5 Reference measurement channels for LAA ..... 1345
A.2.5.1 Full RB allocation. ..... 1345
A.2.5.1.1 QPSK ..... 1345
A.2.5.1.2 16QAM ..... 1345
A.2.5.1.3 64QAM ..... 1346
A.2.5.2 Partial RB allocation ..... 1346
A.2.5.2.1 QPSK ..... 1346
A.2.5.2.2 16QAM ..... 1347
A.2.5.2.3 64QAM ..... 1347
A. 3 DL reference measurement channels ..... 1348
A.3.1 General ..... 1348
A.3.1.1 Overview of DL reference measurement channels ..... 1348
A.3.2 Reference measurement channel for receiver characteristics ..... 1367
A.3.3 Reference measurement channels for PDSCH performance requirements (FDD) ..... 1386
A.3.3.1 Single-antenna transmission (Common Reference Symbols) ..... 1386
A.3.3.2 Multi-antenna transmission (Common Reference Symbols) ..... 1390
A.3.3.2.1 Two antenna ports ..... 1390
A.3.3.2.2 Four antenna ports ..... 1397
A.3.3.3 Reference Measurement Channel for UE-Specific Reference Symbols ..... 1401
A.3.3.3.0 Two antenna ports (no CSI-RS) ..... 1401
A.3.3.3.1 Two antenna port (CSI-RS) ..... 1402
A.3.3.3.2 Four antenna ports (CSI-RS) ..... 1405
A.3.3.3.2A Eight antenna ports (CSI-RS). ..... 1410
A.3.3.3.3 Twelve antenna port (CSI-RS) ..... 1411
A.3.3.3.4 Sixteen antenna port (CSI-RS) ..... 1412
A.3.3.3.5 Twenty-four antenna port (CSI-RS) ..... 1413
A.3.3.3.6 Thirty-two antenna port (CSI-RS). ..... 1414
A.3.4 Reference measurement channels for PDSCH performance requirements (TDD) ..... 1415
A.3.4.1 Single-antenna transmission (Common Reference Symbols) ..... 1415
A.3.4.2 Multi-antenna transmission (Common Reference Signals) ..... 1421
A.3.4.2.1 Two antenna ports ..... 1421
A.3.4.2.2 Four antenna ports ..... 1430
A.3.4.3 Reference Measurement Channels for UE-Specific Reference Symbols ..... 1434
A.3.4.3.1 Single antenna port (Cell Specific) ..... 1434
A.3.4.3.2 Two antenna ports (Cell Specific) ..... 1435
A.3.4.3.3 Two antenna ports (CSI-RS) ..... 1437
A.3.4.3.4 Four antenna ports (CSI-RS) ..... 1442
A.3.4.3.5 Eight antenna ports (CSI-RS) ..... 1448
A.3.4.3.6 Twelve antenna ports (CSI-RS) ..... 1452
A.3.4.3.7 Sixteen antenna ports (CSI-RS) ..... 1453
A.3.4.3.8 Twenty-four antenna ports (CSI-RS) ..... 1454
A.3.4.3.9 Thirty-two antenna ports (CSI-RS) ..... 1455
A.3.5 Reference measurement channels for PDCCH/PCFICH performance requirements ..... 1456
A.3.5.1 FDD ..... 1456
A.3.5.2 TDD ..... 1456
A.3.5.3 LAA ..... 1457
A.3.6 Reference measurement channels for PHICH performance requirements ..... 1457
A.3.7 Reference measurement channels for PBCH performance requirements ..... 1458
A.3.8 Reference measurement channels for MBMS performance requirements ..... 1458
A.3.8.1 FDD ..... 1458
A.3.8.2 TDD ..... 1462
A.3.9 Reference measurement channels for sustained downlink data rate provided by lower layers ..... 1464
A.3.9.1 FDD ..... 1464
A.3.9.2 TDD ..... 1467
A.3.9.3 FDD (EPDCCH scheduling) ..... 1473
A.3.9.4 TDD (EPDCCH scheduling) ..... 1474
A.3.9.5 LAA ..... 1475
A.3.10 Reference Measurement Channels for EPDCCH performance requirements ..... 1477
A.3.10.1 FDD ..... 1477
A.3.10.2 TDD ..... 1477
A.3.11 Reference Measurement Channels for MPDCCH performance requirements ..... 1477
A.3.11.1 FDD and half-duplex FDD ..... 1477
A.3.11.2 TDD. ..... 1478
A.3.12 Reference measurement channels for NPDSCH performance requirements. ..... 1478
A.3.12.1 In-band ..... 1478
A.3.12.1.2 Two-antenna transmission ..... 1478
A.3.12.2 Standalone/Guard-band ..... 1479
A.3.12.2.1 Single-antenna transmission ..... 1479
A.3.13 Reference measurement channels for NPDCCH performance requirements ..... 1482
A.3.13.1 Half-duplex FDD ..... 1482
A.3.13.2 TDD ..... 1482
A.3.14 Reference measurement channels for NPBCH performance requirements for Cat NB1 UEs. ..... 1483
A.3.15 Reference Measurement Channels for LAA SCell with frame structure Type-3 ..... 1483
A.3.15.1 Multi-antenna transmission (Common Reference Symbols) ..... 1483
A.3.15.1.1 Four antenna ports ..... 1483
A.3.15.2 Reference Measurement Channel for UE-Specific Reference Symbols ..... 1484
A.3.15.2.1 Two antenna ports (CSI-RS) ..... 1484
A.3.16 Reference measurement channels for Slot-PDSCH and Subslot-PDSCH performance requirements ..... 1485
A.3.16.1 FDD ..... 1485
A.3.16.2 TDD ..... 1488
A.3.17 Reference measurement channels for SPDCCH performance requirements ..... 1489
A.3.17.1 FDD ..... 1489
A.3.17.2 TDD ..... 1489
A. 4 CSI reference measurement channels ..... 1489
A. 5 OFDMA Channel Noise Generator (OCNG) ..... 1501
A.5.1 OCNG Patterns for FDD ..... 1501
A.5.1.1 OCNG FDD pattern 1: One sided dynamic OCNG FDD pattern ..... 1501
A.5.1.2 OCNG FDD pattern 2: Two sided dynamic OCNG FDD pattern ..... 1502
A.5.1.3 OCNG FDD pattern 3: 49 RB OCNG allocation with MBSFN in 10 MHz ..... 1502
A.5.1.3A OCNG FDD pattern 3A: 49 RB OCNG allocation with MBSFN enhancement in 10 MHz ..... 1503
A.5.1.4 OCNG FDD pattern 4: One sided dynamic OCNG FDD pattern for MBMS transmission ..... 1503
A.5.1.4A OCNG FDD pattern 4A: One sided dynamic OCNG FDD pattern for enhanced MBMS transmission. ..... 1504
A.5.1.5 OCNG FDD pattern 5: One sided dynamic 16QAM modulated OCNG FDD pattern ..... 1504
A.5.1.6 OCNG FDD pattern 6: dynamic OCNG FDD pattern when user data is in 2 non-contiguous blocks. ..... 1505
A.5.1.8 OCNG FDD pattern 8: Dynamic OCNG FDD pattern for TM10 transmission ..... 1506
A.5.2 OCNG Patterns for TDD ..... 1507
A.5.2.1 OCNG TDD pattern 1: One sided dynamic OCNG TDD pattern ..... 1507
A.5.2.2 OCNG TDD pattern 2: Two sided dynamic OCNG TDD pattern ..... 1508
A.5.2.3 OCNG TDD pattern 3: 49 RB OCNG allocation with MBSFN in 10 MHz ..... 1508
A.5.2.4 OCNG TDD pattern 4: One sided dynamic OCNG TDD pattern for MBMS transmission ..... 1509
A.5.2.5 OCNG TDD pattern 5: One sided dynamic 16QAM modulated OCNG TDD pattern. ..... 1509
A.5.2.6 OCNG TDD pattern 6: dynamic OCNG TDD pattern when user data is in 2 non-contiguous blocks ..... 1510
A.5.2.8 OCNG TDD pattern 8: Dynamic OCNG TDD pattern for TM10 transmission ..... 1511
A.5.3 OCNG Patterns for Narrowband IoT ..... 1512
A.5.3.1 Narrowband IoT OCNG pattern 1 ..... 1512
A.5.4 OCNG Patterns for frame structure type 3 ..... 1512
A.5.4.1 OCNG FS3 pattern 1: One sided dynamic OCNG frame structure type 3 pattern ..... 1513
A.5.4.2 OCNG FS3 pattern 2: Two sided dynamic OCNG frame structure 3 pattern ..... 1513
A. 6 Sidelink reference measurement channels ..... 1514
A.6.1 General ..... 1514
A.6.1.1 Overview of ProSe reference measurement channels ..... 1514
A.6.2 Reference measurement channel for receiver characteristics ..... 1515
A.6.3 Reference measurement channels for PSDCH performance requirements ..... 1517
A.6.4 Reference measurement channels for PSCCH performance requirements ..... 1517
A.6.5 Reference measurement channels for PSSCH performance requirements ..... 1518
A.6.6 Reference measurement channels for PSBCH performance requirements ..... 1518
A. 7 Sidelink reference resource pool configurations ..... 1519
A.7.1 Reference resource pool configurations for ProSe Direct Discovery demodulation tests ..... 1519
A.7.1.1 FDD ..... 1519
A.7.1.2 TDD ..... 1521
A.7.2 Reference resource pool configurations for ProSe Direct Communication demodulation tests ..... 1522
A.7.2.1 FDD ..... 1522
A. 8 V2X reference measurement channels ..... 1526
A.8.1 General ..... 1526
A.8.1.1 Overview of V2X reference measurement channels ..... 1527
A.8.2 Reference measurement channel for receiver characteristics ..... 1527
A.8.3 Reference measurement channel for transmitter characteristics ..... 1529
A.8.4 Reference measurement for PSCCH performance requirements. ..... 1531
A.8.5 Reference measurement for PSSCH performance requirements ..... 1531
A.8.6 Reference measurement for PSBCH performance requirements. ..... 1532
A. 9 V2X reference resource pool configurations ..... 1532
Annex B (normative): Propagation conditions ..... 1535
B. 1 Static propagation condition ..... 1535
B.1.1 UE Receiver with 2Rx ..... 1535
B.1.2 UE Receiver with 4Rx ..... 1535
B.1.3 UE Receiver with 8Rx. ..... 1536
B. 2 Multi-path fading propagation conditions ..... 1537
B.2.1 Delay profiles ..... 1537
B.2.2 Combinations of channel model parameters ..... 1538
B.2.3 MIMO Channel Correlation Matrices ..... 1539
B.2.3.1 Definition of MIMO Correlation Matrices ..... 1539
B.2.3.2 MIMO Correlation Matrices at High, Medium and Low Level. ..... 1544
B.2.3A MIMO Channel Correlation Matrices using cross polarized antennas ..... 1547
B.2.3A. 1 Definition of MIMO Correlation Matrices using cross polarized antennas ..... 1547
B.2.3A. 2 Spatial Correlation Matrices using cross polarized antennas at eNB and UE sides. ..... 1548
B.2.3A.2.1 Spatial Correlation Matrices at eNB side ..... 1548
B.2.3A.2.2 Spatial Correlation Matrices at UE side ..... 1548
B.2.3A. 4 Beam steering approach ..... 1551
B.2.3B MIMO Channel Correlation Matrices using two-dimension cross polarized antennas at eNB and cross polarized antennas at UE ..... 1551
B.2.3B. 1 Definition of MIMO Correlation Matrices using two-dimension cross polarized antennas at eNB and cross polarized antennas at UE ..... 1552
B.2.3B. 2 Spatial Correlation Matrices using two-dimension cross polarized antennas at eNB and cross polarized antennas at UE ..... 1553
B.2.3B.2.1 Spatial Correlation Matrices at eNB side ..... 1553
B.2.3B.2.2 Spatial Correlation Matrices at UE side ... ..... 1553
B.2.3B. 3 MIMO Correlation Matrices using two-dimension cross polarized antennas at eNB and cross polarized antennas at UE ..... 1553
B.2.3B. 4 Beam steering approach ..... 1555
B.2.3B.4A Beam steering approach with dual cluster beams ..... 1556
B.2.4 Propagation conditions for CQI tests ..... 1557
B.2.4.1 Propagation conditions for CQI tests with multiple CSI processes ..... 1557
B.2.5 Void ..... 1558
B.2.6 MBSFN Propagation Channel Profile ..... 1558
B.2.6.1 Subcarrier spacing 15 kHz or 7.5 kHz ..... 1558
B.2.6.2 Subcarrier spacing 1.25 kHz ..... 1558
B.2.6.3 Subcarrier spacing 0.37 kHz ..... 1559
B.2.6.4 Subcarrier spacing 2.5 kHz . ..... 1559
B. 3 High speed train scenario ..... 1560
B.3A HST-SFN scenario ..... 1561
B.3B HST-SFN scenario for $500 \mathrm{~km} / \mathrm{h}$ speed ..... 1564
B.3C HST scenario for $500 \mathrm{~km} / \mathrm{h}$ speed ..... 1564
B. 4 Beamforming Model ..... 1565
B.4.1 Single-layer random beamforming (Antenna port 5, 7, or 8) ..... 1565
B.4.1A Single-layer random beamforming (Antenna port 7, 8, 11 or 13 with enhanced DMRS table configured) ..... 1565
B.4.2 Dual-layer random beamforming (antenna ports 7 and 8) ..... 1566
B.4.3 Generic beamforming model (antenna ports 7-14) ..... 1566
B.4.4 Random beamforming for EPDCCH distributed transmission (Antenna port 107 and 109) ..... 1567
B.4.5 Random beamforming for EPDCCH localized transmission (Antenna port 107, 108, 109 or 110) ..... 1567
B.4.6 Beamforming model for CRI test ..... 1568
B. 5 Interference models for enhanced performance requirements Type-A ..... 1569
B.5.1 Dominant interferer proportion ..... 1569
B.5.2 Transmission mode 3 interference model ..... 1569
B.5.3 Transmission mode 4 interference model ..... 1570
B.5. 4 Transmission mode 9 interference model ..... 1570
B. 6 Interference models for enhanced performance requirements Type-B ..... 1571
B.6.1 Transmission mode 2 interference model ..... 1571
B.6.2 Transmission mode 3 interference model ..... 1571
B.6.3 Transmission mode 4 interference model ..... 1571
B.6.4 Transmission mode 9 interference model ..... 1572
B.6.5 CRS interference model ..... 1572
B.6.6 Random interference model ..... 1572
B. 7 Interference models for enhanced downlink control channel performance requirements Type A and B ..... 1573
B.7.1 PDCCH, PCFICH and PHICH interference model ..... 1573
B. 8 Burst transmission models for Frame structure type 3 ..... 1574
B.8.1 Burst transmission model for one LAA SCell ..... 1574
B.8.2 Burst transmission model for multiple LAA SCell(s) ..... 1575
Annex C (normative): Downlink Physical Channels. ..... 1576
C. 1 General ..... 1576
C. 2 Set-up ..... 1576
C. 3 Connection ..... 1576
C.3.1 Measurement of Receiver Characteristics ..... 1576
C.3.2 Measurement of Performance requirements. ..... 1577
C.3.3 Aggressor cell power allocation for Measurement of Performance Requirements when ABS is Configured ..... 1578
C.3.4 Power Allocation for Measurement of Performance Requirements when Quasi Co-location Type B: same Cell ID ..... 1579
C.3.5 Simplified CA testing method ..... 1579
C.3.6 Measurement of Receiver Characteristics for Narrowband IoT ..... 1580
Annex D (normative): Characteristics of the interfering signal ..... 1581
D. 1 General ..... 1581
D. 2 Interference signals ..... 1581
Annex E (normative): Environmental conditions ..... 1582
E. 1 General ..... 1582
E. 2 Environmental ..... 1582
E.2.1 Temperature ..... 1582
E.2.2 Voltage ..... 1582
E.2.3 Vibration. ..... 1583
Annex F (normative): Transmit modulation ..... 1584
F. 1 Measurement Point. ..... 1584
F. 2 Basic Error Vector Magnitude measurement ..... 1584
F. 3 Basic in-band emissions measurement. ..... 1585
F. 4 Modified signal under test ..... 1585
F. 5 Window length ..... 1587
F.5.1 Timing offset. ..... 1587
F.5.2 Window length ..... 1587
F.5.3 Window length for normal CP ..... 1587
F.5.4 Window length for Extended CP ..... 1588
F.5.5 Window length for PRACH ..... 1588
F.5.F Window length for category NB1 ..... 1589
F. 6 Averaged EVM ..... 1589
F.6.F Averaged EVM for category NB1 ..... 1590
F. 7 Spectrum Flatness ..... 1590
Annex G (informative): Reference sensitivity level in lower SNR. ..... 1591
G. 1 General ..... 1591
G. 2 Typical receiver sensitivity performance (QPSK) ..... 1591
G. 3 Reference measurement channel for REFSENSE in lower SNR ..... 1594
Annex H (normative): Modified MPR behavior ..... 1596
H. 1 Indication of modified MPR behavior ..... 1596
Annex I (normative): Supported Post Antenna Gain ..... 1597
I. 1 Declared Supported Post Antenna Gain for UE ..... 1597
Annex J (informative): Change history ..... 1598
History ..... 1643

## Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).
The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z
where:
$x$ the first digit:
1 presented to TSG for information;
2 presented to TSG for approval;
3 or greater indicates TSG approved document under change control.
y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
z the third digit is incremented when editorial only changes have been incorporated in the document.
In the present document, modal verbs have the following meanings:

| shall | indicates a mandatory requirement to do something |
| :--- | :--- |
| shall not | indicates an interdiction (prohibition) to do something |

The constructions "shall" and "shall not" are confined to the context of normative provisions, and do not appear in Technical Reports.

The constructions "must" and "must not" are not used as substitutes for "shall" and "shall not". Their use is avoided insofar as possible, and they are not used in a normative context except in a direct citation from an external, referenced, non-3GPP document, or so as to maintain continuity of style when extending or modifying the provisions of such a referenced document.

| should | indicates a recommendation to do something |
| :--- | :--- |
| should not | indicates a recommendation not to do something |
| may | indicates permission to do something |
| need not | indicates permission not to do something |

The construction "may not" is ambiguous and is not used in normative elements. The unambiguous constructions "might not" or "shall not" are used instead, depending upon the meaning intended.

| can | indicates that something is possible |
| :--- | :--- |
| cannot | indicates that something is impossible |

The constructions "can" and "cannot" are not substitutes for "may" and "need not".
will indicates that something is certain or expected to happen as a result of action taken by an agency the behaviour of which is outside the scope of the present document
will not indicates that something is certain or expected not to happen as a result of action taken by an agency the behaviour of which is outside the scope of the present document
might indicates a likelihood that something will happen as a result of action taken by some agency the behaviour of which is outside the scope of the present document
might not indicates a likelihood that something will not happen as a result of action taken by some agency the behaviour of which is outside the scope of the present document

In addition:
$\begin{array}{ll}\text { is } & \text { (or any other verb in the indicative mood) indicates a statement of fact } \\ \text { is not } & \text { (or any other negative verb in the indicative mood) indicates a statement of fact }\end{array}$
The constructions "is" and "is not" do not indicate requirements.

## 1 Scope

The present document establishes the minimum RF characteristics and minimum performance requirements for EUTRA User Equipment (UE).

## 2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document in the same Release as the present document.

## 3 Definitions, symbols and abbreviations

### 3.1 Definitions

For the purposes of the present document, the terms and definitions given in TR 21.905 [1] and the following apply in the case of a single component carrier. A term defined in the present document takes precedence over the definition of the same term, if any, in TR 21.905 [1].

Aggregated Channel Bandwidth: The RF bandwidth in which a UE transmits and receives multiple contiguously aggregated carriers.

Aggregated Transmission Bandwidth Configuration: The number of resource block allocated within the aggregated channel bandwidth.

Carrier aggregation: Aggregation of two or more component carriers in order to support wider transmission bandwidths.

Carrier aggregation band: A set of one or more operating bands across which multiple carriers are aggregated with a specific set of technical requirements.

Carrier aggregation bandwidth class: A class defined by the aggregated transmission bandwidth configuration and maximum number of component carriers supported by a UE.

Carrier aggregation configuration: A combination of CA operating band(s) and CA bandwidth class(es) supported by a UE.

Channel edge: The lowest and highest frequency of the carrier, separated by the channel bandwidth.
Channel bandwidth: The RF bandwidth supporting a single E-UTRA RF carrier with the transmission bandwidth configured in the uplink or downlink of a cell. The channel bandwidth is measured in MHz and is used as a reference for transmitter and receiver RF requirements.

Composite spectrum emission mask: Emission mask requirement for intraband non-contiguous carrier aggregation which is a combination of individual sub-block spectrum emissions masks.

Composite spurious emission requirement: Spurious emission requirement for intraband non-contiguous carrier aggregation which is a combination of individual sub-block spurious emission requirements.

Contiguous carriers: A set of two or more carriers configured in a spectrum block where there are no RF requirements based on co-existence for un-coordinated operation within the spectrum block.

Contiguous resource allocation: A resource allocation of consecutive resource blocks within one carrier or across contiguously aggregated carriers. The gap between contiguously aggregated carriers due to the nominal channel spacing is allowed.

Contiguous spectrum: Spectrum consisting of a contiguous block of spectrum with no sub-block gaps.
Enhanced downlink control channel performance requirements type A: This defines performance requirements for downlink control channel assuming as baseline receiver reference symbol based linear minimum mean square error interference rejection combining plus CRS interference cancellation.

Enhanced downlink control channel performance requirements type B: This defines performance requirements for downlink control channel assuming as baseline receiver reference symbol based enhanced linear minimum mean square error interference rejection combining plus CRS interference cancellation.

Enhanced performance requirements type A: This defines performance requirements assuming as baseline receiver reference symbol based linear minimum mean square error interference rejection combining.

Enhanced performance requirements type B: This defines performance requirements assuming as baseline receiver using network assisted interference cancelation and suppression.

Enhanced performance requirements type C: This defines performance requirements assuming as baseline receiver inter-stream interference cancellation.

Inter-band carrier aggregation: Carrier aggregation of component carriers in different operating bands.
NOTE: Carriers aggregated in each band can be contiguous or non-contiguous.
Intra-band contiguous carrier aggregation: Contiguous carriers aggregated in the same operating band.
Intra-band non-contiguous carrier aggregation: Non-contiguous carriers aggregated in the same operating band.
Lower sub-block edge: The frequency at the lower edge of one sub-block. It is used as a frequency reference point for both transmitter and receiver requirements.

Category NB1/NB2 stand-alone operation: category NB1/NB2 is operating standalone when it utilizes its own spectrum, for example the spectrum used by GERAN systems as a replacement of one or more GSM carriers, as well as scattered spectrum for potential IoT deployment.

Category NB1/NB2 guard band operation: category NB1/NB2 is operating in guard band when it utilizes the unused resource block(s) within a E-UTRA carrier's guard-band.

Category NB1/NB2 in-band operation: category NB1/NB2 is operating in-band when it utilizes the resource block(s) within a normal E-UTRA carrier or within a normal NR carrier plus 15 kHz at each edge (and not within NR minimum guard band).

Non-contiguous spectrum: Spectrum consisting of two or more sub-blocks separated by sub-block gap(s).
ProSe-enabled UE: A UE that supports ProSe requirements and associated procedures.
NOTE: As defined in TS 23.303 [10].
ProSe Direct Communication: A communication between two or more UEs in proximity that are ProSe-enabled.
NOTE: As defined in TS 23.303 [10].
ProSe Direct Discovery: A procedure employed by a ProSe-enabled UE to discover other ProSe-enabled UEs in its vicinity.

NOTE: As defined in TS 23.303 [10].
sTTI : A transmission time interval (TTI) of either one slot or one subslot as defined in TS 36.211 [4] on either uplink or downlink.

Sub-block: This is one contiguous allocated block of spectrum for transmission and reception by the same UE. There may be multiple instances of sub-blocks within an RF bandwidth.

Sub-block bandwidth: The bandwidth of one sub-block.
Sub-block gap: A frequency gap between two consecutive sub-blocks within an RF bandwidth, where the RF requirements in the gap are based on co-existence for un-coordinated operation.

Synchronized operation: Operation of TDD in two different systems, where no simultaneous uplink and downlink occur.

Unsynchronized operation: Operation of TDD in two different systems, where the conditions for synchronized operation are not met.

Upper sub-block edge: The frequency at the upper edge of one sub-block. It is used as a frequency reference point for both transmitter and receiver requirements.

V2X Communication: V2X (Vehicle to Everything) service is operating in ITS spectrum and/or LTE licensed operating bands.

### 3.2 Symbols

For the purposes of the present document, the following symbols apply:

| $\mathrm{BW}_{\text {Channel }}$ | Channel bandwidth |
| :--- | :--- |
| $\mathrm{BW}_{\text {Channel,block }}$ | Sub-block bandwidth, expressed in MHz. $\mathrm{BW}_{\text {Channel,block }}=\mathrm{F}_{\text {edge,block,high }}-\mathrm{F}_{\text {edge,block,low. }}$ |
| $\mathrm{BW}_{\text {Channel_CA }}$ | Aggregated channel bandwidth, expressed in MHz. |
| $\mathrm{BW}_{\mathrm{GB}}$ | Virtual guard band to facilitate transmitter (receiver) filtering above / below edge CCs. |
| $E_{R S}$ | Transmitted energy per RE for reference symbols during the useful part of the symbol, i.e. |
|  | excluding the cyclic prefix, (average power normalized to the subcarrier spacing) at the eNode B <br>  <br>  <br> transmit antenna connector |

| $\hat{E}_{s}$ | The averaged received energy per RE of the wanted signal during the useful part of the symbol, i.e. excluding the cyclic prefix, at the UE antenna connector; average power is computed within a set of REs used for the transmission of physical channels (including user specific RSs when present), divided by the number of REs within the set, and normalized to the subcarrier spacing |
| :---: | :---: |
| F | Frequency |
| $\mathrm{F}_{\text {agg_alloc_low }}$ | Aggregated Transmission Bandwidth Configuration. The lowest frequency of the simultaneously transmitted resource blocks. |
| $\mathrm{F}_{\text {agg_alloc_high }}$ | Aggregated Transmission Bandwidth Configuration. The highest frequency of the simultaneously transmitted resource blocks. |
| $\mathrm{F}_{\text {Interferer }}$ (offset) | Frequency offset of the interferer (between the center frequency of the interferer and the carrier frequency of the carrier measured) |
| $\mathrm{F}_{\text {Interferer }}$ | Frequency of the interferer |
| $\mathrm{F}_{\text {Ioffset }}$ | Frequency offset of the interferer (between the center frequency of the interferer and the closest edge of the carrier measured) |
| $\mathrm{F}_{\mathrm{C}}$ | Frequency of the carrier centre frequency |
| $\mathrm{F}_{\mathrm{C}_{\text {_agg }}}$ | Aggregated Transmission Bandwidth Configuration. Center frequency of the aggregated carriers. |
| $\mathrm{F}_{\mathrm{C}, \text { block, high }}$ | Center frequency of the highest transmitted/received carrier in a sub-block. |
| $\mathrm{F}_{\mathrm{C}, \text { block, low }}$ | Center frequency of the lowest transmitted/received carrier in a sub-block. |
| $\mathrm{F}_{\mathrm{C}_{\text {_low }}}$ | The centre frequency of the lowest carrier, expressed in MHz. |
| $\mathrm{F}_{\mathrm{C} \text { _high }}$ | The centre frequency of the highest carrier, expressed in MHz. |
| F ${ }_{\text {DL_low }}$ | The lowest frequency of the downlink operating band |
| $\mathrm{F}_{\text {DL_high }}$ | The highest frequency of the downlink operating band |
| $\mathrm{F}_{\text {UL_low }}$ | The lowest frequency of the uplink operating band |
| $\mathrm{F}_{\text {UL_high }}$ | The highest frequency of the uplink operating band |
| $\mathrm{F}_{\text {edge,block,low }}$ | The lower sub-block edge, where $\mathrm{F}_{\text {edge,block,low }}=\mathrm{F}_{\mathrm{C}, \text { block,low }}-\mathrm{F}_{\text {offset }}$. |
| $\mathrm{F}_{\text {edge,block,high }}$ | The upper sub-block edge, where $\mathrm{F}_{\text {edge,block,high }}=\mathrm{F}_{\mathrm{C}, \text { block,high }}+\mathrm{F}_{\text {offset. }}$ |
| Fedge_low | The lower edge of aggregated channel bandwidth, expressed in MHz. |
| $\mathrm{F}_{\text {edge_high }}$ | The higher edge of aggregated channel bandwidth, expressed in MHz. |
| $\mathrm{F}_{\text {offset }}$ | Frequency offset from $\mathrm{F}_{\mathrm{C}_{\text {Lhigh }}}$ to the higher edge or $\mathrm{F}_{\mathrm{C}_{-} \text {low }}$ to the lower edge. |
| $\mathrm{F}_{\text {offset,block,low }}$ | Separation between lower edge of a sub-block and the center of the lowest component carrier within the sub-block |
| $\mathrm{F}_{\text {offsee,block,high }}$ | Separation between higher edge of a sub-block and the center of the highest component carrier within the sub-block |
| $\mathrm{F}_{\text {offset_NS_23 }}$ | Frequency offset in MHz needed if NS_23 is used |
| $\mathrm{F}_{\text {оов }}$ | The boundary between the E-UTRA out of band emission and spurious emission domains. |
| $I_{o}$ | The power spectral density of the total input signal (power averaged over the useful part of the |
|  | symbols within the transmission bandwidth configuration, divided by the total number of RE for this configuration and normalised to the subcarrier spacing) at the UE antenna connector, including the own-cell downlink signal |
| $I_{\text {or }}$ | The total transmitted power spectral density of the own-cell downlink signal (power averaged over |
|  | the useful part of the symbols within the transmission bandwidth configuration, divided by the total number of RE for this configuration and normalised to the subcarrier spacing) at the eNode B transmit antenna connector |
| $\hat{I}_{o r}$ | The total received power spectral density of the own-cell downlink signal (power averaged over |
|  | the useful part of the symbols within the transmission bandwidth configuration, divided by the total number of RE for this configuration and normalised to the subcarrier spacing) at the UE antenna connector |
| $I_{o t}$ | The received power spectral density of the total noise and interference for a certain RE (average power obtained within the RE and normalized to the subcarrier spacing) as measured at the UE antenna connector |
| $\mathrm{L}_{\text {CRB }}$ | Transmission bandwidth which represents the length of a contiguous resource block allocation expressed in units of resources blocks |
| $\mathrm{L}_{\text {Ctone }}$ | Transmission bandwidth which represents the length of a contiguous sub-carrier allocation expressed in units of tones |
| $\mathrm{N}_{\mathrm{cp}}$ | Cyclic prefix length |
| $\mathrm{N}_{\mathrm{DL}}$ | Downlink EARFCN |
| $N_{o c}$ | The power spectral density of a white noise source (average power per RE normalised to the subcarrier spacing), simulating interference from cells that are not defined in a test procedure, as measured at the UE antenna connector |

| $N_{o c 1}$ | The power spectral density of a white noise source (average power per RE normalized to the subcarrier spacing), simulating interference in non-CRS symbols in ABS subframe from cells that are not defined in a test procedure, as measured at the UE antenna connector. |
| :---: | :---: |
| $N_{o c 2}$ | The power spectral density of a white noise source (average power per RE normalized to the subcarrier spacing), simulating interference in CRS symbols in ABS subframe from all cells that are not defined in a test procedure, as measured at the UE antenna connector. |
| $N_{o c 3}$ | The power spectral density of a white noise source (average power per RE normalised to the subcarrier spacing), simulating interference in non-ABS subframe from cells that are not defined in a test procedure, as measured at the UE antenna connector |
| $N_{o c}$ | The power spectral density (average power per RE normalised to the subcarrier spacing) of the summation of the received power spectral densities of the strongest interfering cells explicitly defined in a test procedure plus $N_{o c}$, as measured at the UE antenna connector. The respective power spectral density of each interfering cell relative to $N_{o c}{ }^{\prime}$ is defined by its associated DIP value, or the respective power spectral density of each interfering cell relative to $N_{o c}$ is defined by its associated Es/Noc value. |
| Noffs-DL | Offset used for calculating downlink EARFCN |
| Noffs-UL | Offset used for calculating uplink EARFCN |
| $N_{o t x}$ | The power spectral density of a white noise source (average power per RE normalised to the subcarrier spacing) simulating eNode B transmitter impairments as measured at the eNode B transmit antenna connector |
| $\mathrm{N}_{\mathrm{RB}}$ | Transmission bandwidth configuration, expressed in units of resource blocks |
| $\mathrm{N}_{\text {RB_agg }}$ | The number of the aggregated RBs within the fully allocated Aggregated Channel bandwidth. |
| $\mathrm{N}_{\text {RB_alloc }}$ | Total number of simultaneously transmitted resource blocks in Channel bandwidth or Aggregated Channel Bandwidth. |
| $\mathrm{N}_{\text {RB, }}$ | The transmission bandwidth configuration of component carrier $c$, expressed in units of resource blocks |
| $\mathrm{N}_{\text {RB, largest }} \mathrm{BW}$ | The largest transmission bandwidth configuration of the component carriers in the bandwidth combination, expressed in units of resource blocks |
| $\mathrm{N}_{\mathrm{RX}}$ | Number of receiver antennas |
| $\mathrm{N}_{\text {tone }}$ | Transmission bandwidth configuration for category NB1 and NB2, expressed in units of tones. |
| $\mathrm{N}_{\text {tone }}$ 3.75kHz | Transmission bandwidth configuration for category NB1 and NB2 with 3.75 kHz sub-carrier spacing, expressed in units of tones. |
| $\mathrm{N}_{\text {tone }} 15 \mathrm{kHz}$ | Transmission bandwidth configuration for category NB1 and NB2 with 15 kHz sub-carrier spacing, expressed in units of tones. |
| $\mathrm{N}_{\mathrm{UL}}$ | Uplink EARFCN. |
| Rav | Minimum average throughput per RB. |
| $\mathrm{P}_{\text {CMAX }}$ | The configured maximum UE output power. |
| $\mathrm{P}_{\text {CMAX }}$ c | The configured maximum UE output power for serving cell $c$. |
| Pemax | Maximum allowed UE output power signalled by higher layers. Same as IE P-Max, defined in [7]. |
| Pemax, $c$ | Maximum allowed UE output power signalled by higher layers for serving cell $c$. Same as IE $P$-Max, defined in [7]. |
| $\mathrm{P}_{\text {Interferer }}$ | Modulated mean power of the interferer |
| $\mathrm{P}_{\text {Powerclass }}$ | $\mathrm{P}_{\text {PowerClass }}$ is the nominal UE power (i.e., no tolerance). |
| $\mathrm{P}_{\text {PowerClass_Default }}$ | $\mathrm{P}_{\text {PowerClass_Default }}$ is the default nominal UE power (i.e., no tolerance) for the band. |
| $\mathrm{P}_{\text {UMAX }}$ | The measured configured maximum UE output power. |
| Puw | Power of an unwanted DL signal |
| Pw | Power of a wanted DL signal |
| $\mathrm{RB}_{\text {start }}$ | Indicates the lowest RB index of transmitted resource blocks. |
| $\mathrm{RB}_{\text {end }}$ | Indicates the highest RB index of transmitted resource blocks. |
| $\mathrm{T}_{\text {no_hopping }}$ | Transmission period within a TTI duration when consecutive symbols are transmitted without applying any frequency hopping |
| $\Delta \mathrm{f}_{\text {OOB }}$ | $\Delta$ Frequency of Out Of Band emission. |
| $\Delta \mathrm{P}_{\text {PowerClass }}$ | Adjustment to maximum output power for a given power class. |
| $\Delta \mathrm{R}_{\mathrm{IB}, \mathrm{c}}$ | Allowed reference sensitivity relaxation due to support for inter-band CA operation, for serving cell $c$. |
| $\Delta \mathrm{R}_{\mathrm{IB}, 4 \mathrm{R}}$ | Reference sensitivity adjustment due to support for 4 antenna ports. |
| $\Delta \mathrm{R}_{\mathrm{IB}, 8 \mathrm{R}}$ | Reference sensitivity adjustment due to support for 8 antenna ports. |

| $\Delta \mathrm{T}_{\text {IB,c }}$ | Allowed maximum configured output power relaxation due to support for inter-band CA <br> operation, for serving cell $c$. |
| :--- | :--- |
| $\Delta \mathrm{T}_{\mathrm{C}}$ | Allowed operating band edge transmission power relaxation. |
| $\Delta \mathrm{T}_{\mathrm{C}, c}$ | Allowed operating band edge transmission power relaxation for serving cell $c$. |
| $\Delta \mathrm{T}_{\text {Prose }}$ | Allowed operating band transmission power relaxation due to support of E-UTRA ProSe on an <br> operating band. |
| $\rho_{A}$ | According to Clause 5.2 in TS $36.213[6]$ |
| $\rho_{B}$ | According to Clause 5.2 in TS 36.213 [6] |
| $\sigma$ | Test specific auxiliary variable used for the purpose of downlink power allocation, defined in |
|  | Annex C.3.2. |
| $\mathrm{W}_{\text {gap }}$ | Sub-block gap size |
| $\mathrm{W}_{\text {gap_L }}$ | Sub-block gap size between lowest two CCs in frequency domain on CA_X-X-X |
| $\mathrm{W}_{\text {gap_H }}$ | Sub-block gap size between highest two CCs in frequency domain on CA_X-X-X |

### 3.3 Abbreviations

For the purposes of the present document, the abbreviations given in TR 21.905 [1] and the following apply. An abbreviation defined in the present document takes precedence over the definition of the same abbreviation, if any, in TR 21.905 [1].

| ABS | Almost Blank Subframe |
| :--- | :--- |
| ACLR | Adjacent Channel Leakage Ratio |
| ACS | Adjacent Channel Selectivity |
| A-MPR | Additional Maximum Power Reduction |
| AWGN | Additive White Gaussian Noise |
| BS | Base Station |
| CA | Carrier Aggregation |
| CA_X | Intra-band contiguous CA of component carriers in one sub-block within Band X where X is the <br> applicable E-UTRA operating band |
| CA_X-X | Intra-band non-contiguous CA of component carriers in two sub-blocks within Band X where X is <br> the applicable E-UTRA operating band |
| CA_X-X-X | Intra-band non-contiguous CA of component carriers in three sub-blocks within Band X where X <br> is the applicable E-UTRA operating band |
| CA_X-X-X-X | Intra-band non-contiguous CA of component carriers in four sub-blocks within Band X where X is |
| the applicable E-UTRA operating band |  |
| CA_X-Y | Inter-band CA of component carrier(s) in one sub-block within Band X and component carrier(s) <br> in one sub-block within Band Y where X and Y are the applicable E-UTRA operating band <br> CA_X-X-Y |
| CA of component carriers in two sub-blocks within Band X and component carrier(s) in one sub- <br> Clock within Band Y where X and Y are the applicable E-UTRA operating bands |  |
| CC | Component Carriers <br> CG |
| CPErrier Group |  |

| HD-FDD | Half- Duplex FDD |
| :---: | :---: |
| ITS | Intelligent Transportation Systems |
| MCS | Modulation and Coding Scheme |
| MCG | Master Cell Group |
| MOP | Maximum Output Power |
| MPR | Maximum Power Reduction |
| MSD | Maximum Sensitivity Degradation |
| OCNG | OFDMA Channel Noise Generator |
| OFDMA | Orthogonal Frequency Division Multiple Access |
| OOB | Out-of-band |
| PA | Power Amplifier |
| PCC | Primary Component Carrier |
| P-MPR | Power Management Maximum Power Reduction |
| ProSe | Proximity-based Services |
| PSBCH | Physical Sidelink Broadcast CHannel |
| PSCCH | Physical Sidelink Control CHannel |
| PSDCH | Physical Sidelink Discovery CHannel |
| PSS | Primary Synchronization Signal |
| PSS_RA | PSS-to-RS EPRE ratio for the channel PSS |
| SSSS | Secondary Sidelink Synchronization Signal |
| PSSCH | Physical Sidelink Shared CHannel |
| PSSS | Primary Sidelink Synchronization Signal |
| RE | Resource Element |
| REFSENS | Reference Sensitivity power level |
| r.m.s | Root Mean Square |
| SCC | Secondary Component Carrier |
| SCG | Secondary Cell Group |
| SINR | Signal-to-Interference-and-Noise Ratio |
| SNR | Signal-to-Noise Ratio |
| SSS | Secondary Synchronization Signal |
| SSS_RA | SSS-to-RS EPRE ratio for the channel SSSSSSS Secondary Sidelink Synchronization Signal |
| TDD | Time Division Duplex |
| UE | User Equipment |
| UL | Uplink |
| UL-MIMO | Up Link Multiple Antenna transmission |
| UMTS | Universal Mobile Telecommunications System |
| UTRA | UMTS Terrestrial Radio Access |
| UTRAN | UMTS Terrestrial Radio Access Network |
| V2X | Vehicle to Everything |
| xCH_RA | $\mathrm{xCH}-\mathrm{to}-\mathrm{RS}$ EPRE ratio for the channel xCH in all transmitted OFDM symbols not containing cellspecific RS |
| xCH_RB | xCH-to-RS EPRE ratio for the channel xCH in all transmitted OFDM symbols containing cellspecific RS |

## 4 General

### 4.1 Relationship between minimum requirements and test requirements

The Minimum Requirements given in this specification make no allowance for measurement uncertainty. The test specification TS 36.521-1 Annex F defines Test Tolerances. These Test Tolerances are individually calculated for each test. The Test Tolerances are used to relax the Minimum Requirements in this specification to create Test Requirements.

The measurement results returned by the Test System are compared - without any modification - against the Test Requirements as defined by the shared risk principle.

The Shared Risk principle is defined in ITU-R M. 1545 [3].

### 4.2 Applicability of minimum requirements

a) In this specification the Minimum Requirements are specified as general requirements and additional requirements. Where the Requirement is specified as a general requirement, the requirement is mandated to be met in all scenarios
b) For specific scenarios for which an additional requirement is specified, in addition to meeting the general requirement, the UE is mandated to meet the additional requirements.
c) The reference sensitivity power levels defined in subclause 7.3 are valid for the specified reference measurement channels.
d) NOTE: Receiver sensitivity degradation may occur when:

1) The UE simultaneously transmits and receives with bandwidth allocations less than the transmission bandwidth configuration (see Figure 5.6-1), and
2) Any part of the downlink transmission bandwidth is within an uplink transmission bandwidth from the downlink center subcarrier.
e) The spurious emissions power requirements are for the long term average of the power. For the purpose of reducing measurement uncertainty it is acceptable to average the measured power over a period of time sufficient to reduce the uncertainty due to the statistical nature of the signal.
f) The requirements in this specification for TDD operating bands apply for downlink and uplink operations using Frame Structure Type 2 [4] except for Band 46 operating with Frame Structure Type 3.
g) The requirements related to subslot TTI and/or slot TTI shall apply only if UE supports multiple TTI patterns. And these requirements only apply to subslot and/or slot TTI configurations

### 4.3 Void

### 4.3A Applicability of minimum requirements (CA, UL-MIMO, ProSe, Dual Connectivity, UE category 0, UE category M1, UE category M2, UE category 1bis, UE category NB1 and NB2, V2X Communication, MBMS UE)

The requirements in clauses 5, 6 and 7 which are specific to CA, UL-MIMO, ProSe, Dual Connectivity, UE category 0 , UE category M1, UE category M2, UE category 1bis, UE category NB1 and NB2 and V2X Communication are specified as suffix A, B, C, D, E, F and G where;
a) Suffix A additional requirements need to support CA
b) Suffix B additional requirements need to support UL-MIMO
c) Suffix C additional requirements need to support Dual Connectivity
d) Suffix D additional requirements need to support ProSe
e) Suffix E additional requirements need to support UE category 0, category M1, category M2, and category 1bis
f) Suffix F additional requirements need to support UE category NB1 and NB2
g) Suffix G additional requirements need to support V2X Communication

A terminal which supports the above features needs to meet both the general requirements and the additional requirement applicable to the additional subclause (suffix A, B, C, D, E, F and G) in clauses 5, 6 and 7. Where there is a difference in requirement between the general requirements and the additional subclause requirements (suffix $\mathrm{A}, \mathrm{B}, \mathrm{C}$, $\mathrm{D}, \mathrm{E}, \mathrm{F}$ and G) in clauses 5, 6 and 7, the tighter requirements are applicable unless stated otherwise in the additional subclause.

A terminal which supports more than one feature (CA, UL-MIMO, ProSe, Dual Connectivity, UE category 0, UE category M1, UE category M2, UE category 1bis, UE category NB1 and NB2 and V2X Communication) in clauses 5, 6 and 7 shall meet all of the separate corresponding requirements.

For a terminal supporting CA, compliance with minimum requirements for non-contiguous intra-band carrier aggregation in any given operating band does not imply compliance with minimum requirements for contiguous intraband carrier aggregation in the same operating band.

For a terminal supporting CA, compliance with minimum requirements for contiguous intra-band carrier aggregation in any given operating band does not imply compliance with minimum requirements for non- contiguous intra-band carrier aggregation in the same operating band.

A terminal which supports a DL CA configuration shall support all the lower order fallback DL CA combinations and it shall support at least one bandwidth combination set for each of the constituent lower order DL combinations containing all the bandwidths specified within each specific combination set of the upper order DL combination.

A terminal which supports CA, for each supported CA configuration, shall support Pcell transmissions in each of the aggregated Component Carriers unless indicated otherwise in clause 5.6A.1.

Terminal supporting Dual Connectivity configuration shall meet the minimum requirements for corresponding CA configuration (suffix A), unless otherwise specified.

For a terminal that supports ProSe Direct Communication and/or ProSe Direct Discovery, the minimum requirements are applicable when

- the UE is associated with a serving cell on the ProSe carrier, or
- the UE is not associated with a serving cell on the ProSe carrier and is provisioned with the preconfigured radio parameters for ProSe Direct Communications and/or ProSe Direct Discovery that are associated with known Geographical Area, or
- the UE is associated with a serving cell on a carrier different than the ProSe carrier, and the radio parameters for ProSe Direct Discovery on the ProSe carrier are provided by the serving cell, or
- the UE is associated with a serving cell on a carrier different than the ProSe carrier, and has a non-serving cell selected on the ProSe carrier that supports ProSe Direct Discovery and/or ProSe Direct Communication.

When the ProSe UE is not associated with a serving cell on the ProSe carrier, and the UE does not have knowledge of its geographical area, or is provisioned with preconfigured radio parameters that are not associated with any Geographical Area, ProSe transmissions are not allowed, and the requirements in Section 6.3.3D apply.

A terminal that supports simultaneous E-UTRA ProSe sidelink transmissions and E-UTRA uplink transmissions for the inter-band E-UTRA ProSe/E-UTRA bands specified in Table 5.5D-2, shall meet the minimum requirements for the corresponding inter-band UL CA configuration (suffix A), unless otherwise specified. For transmitter characteristics specified in clause 6 , the terminal is required to meet the conformance tests for the corresponding inter-band UL CA configuration and is not required to be retested with simultaneous E-UTRA ProSe sidelink and E-UTRA uplink transmissions.

A terminal that supports E-UTRA V2X intra-band multi-carrier operation including carrier aggregation for the band specified in Table $5.5 \mathrm{G}-3$, shall meet the corresponding transmitter characteristics requirements (in subclauses with suffix $G$ in Section 6) only when there are multiple active transmissions on all of the configured carrier components. When there is only one active transmission on one of the configured carrier components, the corresponding requirements for V2X single carrier operation apply for the corresponding active carrier component.

A terminal which supports MBMS (including $15 \mathrm{kHz}, 7.5 \mathrm{kHz}, 1.25 \mathrm{kHz}, 2.5 \mathrm{kHz}$ and 0.37 kHz subcarrier spacing), shall meet the minimum requirements in clauses 5 and 7. A terminal which supports MBMS is not required to support all kinds of subcarrier spacing.

A terminal that supports multiple TTI patterns in different carriers, different TTI patterns can only be used when the carriers are aggregated in inter-band manner. For intra-band carrier aggregation, only same TTI patterns and same TAG are allowed in aggregated carriers.

### 4.4 RF requirements in later releases

The standardisation of new frequency bands and carrier aggregation configurations (downlink and uplink aggregation) may be independent of a release. However, in order to implement a UE that conforms to a particular release but supports a band of operation or a carrier aggregation configuration that is specified in a later release, it is necessary to specify some extra requirements. TS 36.307 [8] specifies requirements on UEs supporting a frequency band or a carrier aggregation configuration that is independent of release.

NOTE: For UEs conforming to the 3GPP release of the present document, some RF requirements of later releases may be mandatory independent of whether the UE supports the bands specif or carrier aggregation configurations ied in later releases or not. The set of RF requirements of later releases that is also mandatory for UEs conforming to the 3GPP release of the present document is determined by regional regulation.

## 5 Operating bands and channel arrangement

### 5.1 General

The channel arrangements presented in this clause are based on the operating bands and channel bandwidths defined in the present release of specifications.

NOTE: Other operating bands and channel bandwidths may be considered in future releases.

### 5.2 Void

### 5.3 Void

5.4 Void

### 5.5 Operating bands

E-UTRA is designed to operate in the operating bands defined in Table 5.5-1.
Table 5.5-1 E-UTRA operating bands

| E-UTRA Operating Band | Uplink (UL) operating band BS receive UE transmit |  |  | Downlink (DL) operating band BS transmit UE receive |  |  | Duplex Mode |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Ful_Iow | - | Ful_high | FDL_low | - | FDL_high |  |
| 1 | 1920 MHz | - | 1980 MHz | 2110 MHz | - | 2170 MHz | FDD |
| 2 | 1850 MHz | - | 1910 MHz | 1930 MHz | - | 1990 MHz | FDD |
| 3 | 1710 MHz | - | 1785 MHz | 1805 MHz | - | 1880 MHz | FDD |

NOTE 1: Band 6, 23 is not applicable
NOTE 2: Restricted to E-UTRA operation when carrier aggregation is configured. The downlink operating band is paired with the uplink operating band (external) of the carrier aggregation configuration that is supporting the configured Pcell.
NOTE 3: A UE that complies with the E-UTRA Band 65 minimum requirements in this specification shall also comply with the E-UTRA Band 1 minimum requirements.

NOTE 4: The range $2180-2200 \mathrm{MHz}$ of the DL operating band is restricted to E-UTRA operation when carrier aggregation is configured.
NOTE 5: A UE that supports E-UTRA Band 66 shall receive in the entire DL operating band
NOTE 6: A UE that supports E-UTRA Band 66 and CA operation in any CA band shall also comply with the minimum requirements specified for the DL CA configurations CA_66B, CA_66C and CA_66A-66A.
NOTE 7: A UE that complies with the E-UTRA Band 66 minimum requirements in this specification shall also comply with the E-UTRA Band 4 minimum requirements.
NOTE 8: This band is an unlicensed band restricted to licensed-assisted operation using Frame Structure Type 3
NOTE 9: In this version of the specification, restricted to E-UTRA DL operation when carrier aggregation is configured.
NOTE 10: The range $2010-2020 \mathrm{MHz}$ of the DL operating band is restricted to E-UTRA operation when carrier aggregation is configured and TX-RX separation is 300 MHz The range $2005-2020 \mathrm{MHz}$ of the DL operating band is restricted to E-UTRA operation when carrier aggregation is configured and TX-RX separation is 295 MHz .
NOTE 11: This band is unlicensed band used for V2X communication. There is no expected network deployment in this band so Frame Structure Type 1 is used.
NOTE 12: A UE that complies with the E-UTRA Band 74 minimum requirements in this specification shall also comply with the E-UTRA Band 11 and Band 21 minimum requirements.
NOTE 13: UE that complies with the E-UTRA Band 50 minimum requirements in this specification shall also comply with the E-UTRA Band 51 minimum requirements.
NOTE 14: A UE that complies with the E-UTRA Band 75 minimum requirements in this specification shall also comply with the E-UTRA Band 76 minimum requirements.
NOTE 15: Uplink transmission is not allowed at this band for UE with external vehiclemounted antennas.
NOTE 16: This band is restricted to licensed-assisted operation using Frame Structure Type 3
NOTE 17: DL operation in this band is restricted to $1526-1536 \mathrm{MHz}$ and UL operation is restricted to $1627.5-1637.5 \mathrm{MHz}$ and $1646.5-1656.5 \mathrm{MHz}$.

### 5.5A Operating bands for CA

E-UTRA carrier aggregation is designed to operate in the operating bands defined in Tables $5.5 \mathrm{~A}-1,5.5 \mathrm{~A}-2,5.5 \mathrm{~A}-2 \mathrm{a}$, $5.5 \mathrm{~A}-2 \mathrm{~b}, 5.5 \mathrm{~A}-2 \mathrm{c}$ and $5.5 \mathrm{~A}-3$.

Table 5.5A-1: Intra-band contiguous CA operating bands

| 20 | 20 | 832 MHz | - | 862 MHz | 832 MHz | - 862 MHz | HD | Yes | Yes |
| 26 | 26 | 814 MHz | - | 849 MHz | 814 MHz | - 849 MHz | HD | Yes | Yes |
| 28 | 28 | 703 MHz | - | 748 MHz | 703 MHz | - 748 MHz | HD | Yes | Yes |
| 31 | 31 | 452.5 MHz | - | 457.5 MHz | 452.5 MHz | - 457.5 MHz | HD | Yes | Yes |
| 41 | 41 | 2496 MHz | - | 2690 MHz | 2496 MHz | - 2690 MHz | HD | Yes |  |
| 68 | 68 | 698 MHz | - | 728 MHz | 698 MHz | - 728 MHz | HD | Yes | Yes |
| 72 | 72 | 451 MHz | - | 456 MHz | 451 MHz | - 456 MHz | HD | Yes | Yes |

E-UTRA ProSe is designed to operate concurrent with E-UTRA uplink/downlink on the operating bands combinations listed in Table 5.5D-2.

Table 5.5D-2 Inter-band E-UTRA ProSe / E-UTRA operating bands

| E-UTRA ProSe Band Note 1 | E-UTRA band / E-UTRA CA band Note |
| :---: | :---: |
|  | 4 |
| 28 | CA_2-4Note 3 |
|  | 1 |

|  |  | CA_1-28Note 3 |
| :--- | :--- | :--- |
| NOTE 1: | As specified in Table 5.5D-1 |  |
| NOTE 2: | As specified in Table 5.5-1 and Table 5.5A-2 |  |
| NOTE 3: | Applies when E-UTRA uplink is assigned to one E-UTRA |  |
|  | band and ProSe operation is restricted to the uplink |  |
| frequencies paired with either PCC or SCC. |  |  |

### 5.5E Operating bands for UE category 0, UE category M1 and M2 and UE category 1bis

UE category 0 is designed to operate in the E-UTRA operating bands 2, 3, 4, 5, 8, 13, 20, 25, 26 and 28 in both half duplex FDD mode and full-duplex FDD mode and in bands 39, 40 and 41 in TDD mode. The E-UTRA bands are defined in Table 5.5-1.

UE category M1 and M2 is designed to operate in the E-UTRA operating bands $1,2,3,4,5,7,8,11,12,13,14,18,19$, $20,21,25,26,27,28,31,66,71,72,73,74,85,87$ and 88 in both half duplex FDD mode and full-duplex FDD mode, and in bands 39, 40, 41, 42 and 43 in TDD mode. The E-UTRA bands are defined in Table 5.5-1.

UE category 1 bis is designed to operate in the E-UTRA operating bands $1,2,3,4,5,7,8,12,13,18,20,26,28,31,66$ and 72 in full duplex FDD mode and in bands $34,39,40$ and 41 in TDD mode. The E-UTRA bands are defined in Table 5.5-1

### 5.5F Operating bands for category NB1 and NB2

Category NB1 and NB2 are designed to operate in the E-UTRA operating bands $1,2,3,4,5,7,8,11,12,13,14,17,18$, $19,20,21,25,26,28,31,41,42,43,65,66,70,71,72,73,74,85,87$ and 88 which are defined in Table 5.5-1. Category NB1 and NB2 are designed to operate in the NR operating bands n1, n2, n3, n5, n7, n8, n12, n14, n18, n20, n25, n26, n28, n41, n65, n66, n70, n71, n74, n90.

Category NB1 and NB2 systems operate in HD-FDD duplex mode or in TDD mode.
In case UE receives network signaling value NS_04 on any of the operating bands listed in Table 5.5F-1 then the lower and upper limit of those bands are shown in Table $5.5 \mathrm{~F}-1$ to account for the USA emission requirements.

Table 5.5F-1 E-UTRA operating bands for NB-IoT in the USA

### 5.5G Operating bands for V2X Communication

E-UTRA V2X Communication is designed to operate in the the operating bands defined in Table 5.5G-1.

Table 5.5G-1 V2X operating band

| E-UTRA Operating Band | ```E-UTRA V2X Operating Band``` | V2X UE transmit |  |  | V2X UE receive |  | Duplex Mode | Interface |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Ful_low | - | Fut_high | Fil_low | FdL_high |  |  |
| 47 | 47 | $\begin{aligned} & 5855 \\ & \mathrm{MHz} \end{aligned}$ |  | $\begin{aligned} & 5925 \\ & \mathrm{MHz} \end{aligned}$ | $\begin{aligned} & 5855 \\ & \mathrm{MHz} \end{aligned}$ | $\begin{aligned} & 5925 \\ & \mathrm{MHz} \end{aligned}$ | HD | PC5 |

E-UTRA V2X communication is designed to operate concurrent with E-UTRA uplink/downlink on the operating bands combinations listed in Table 5.5G-2.

Table 5.5G-2 Inter-band con-current V2X operating bands

| V2X concurrent band configuration | E-UTRA <br> or V2X <br> Operating Band | Interface | Uplink (UL) operating band BS receive UE transmit |  |  | Downlink (DL) operating band BS transmit UE receive |  |  | Duplex Mode |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | FuL_Iow | - | Ful_high | FDL_Iow |  | Fol_high |  |

|  | 47 | PC5 | 5855 MHz | - | 5925 MHz | 5855 MHz |  | 5925 MHz | HD |

E-UTRA V2X communication is also designed to operate for intra-band multi-carrier operation in the operating bands defined in Table 5.5G-3.

Table 5.5G-3: V2X intra-band multi-carrier operation

| V2X multi-carrier <br> Band configuration | V2X operating Band | Interface |
| :---: | :---: | :---: |
| V2X_47 | 47 | PC5 |

### 5.6 Channel bandwidth

Requirements in present document are specified for the channel bandwidths listed in Table 5.6-1.
Table 5.6-1: Transmission bandwidth configuration $\mathrm{N}_{\mathrm{RB}}$ in E-UTRA channel bandwidths

| Channel bandwidth <br> BW Channel $[\mathbf{M H z}]$ | $\mathbf{1 . 4}$ | $\mathbf{3}$ | $\mathbf{5}$ | $\mathbf{1 0}$ | $\mathbf{1 5}$ | $\mathbf{2 0}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Transmission bandwidth <br> configuration NRB | 6 | 15 | 25 | 50 | 75 | 100 |

Figure 5.6-1 shows the relation between the Channel bandwidth ( $\mathrm{BW}_{\text {Channel }}$ ) and the Transmission bandwidth configuration $\left(\mathrm{N}_{\mathrm{RB}}\right)$. The channel edges are defined as the lowest and highest frequencies of the carrier separated by the channel bandwidth, i.e. at $\mathrm{F}_{\mathrm{C}}+/-\mathrm{BW}_{\text {Channel }} / 2$.

Figure 5.6-1: Definition of channel bandwidth and transmission bandwidth configuration for one E-UTRA carrier

### 5.6.1 Channel bandwidths per operating band

a) The requirements in this specification apply to the combination of channel bandwidths and operating bands shown in Table 5.6.1-1. The transmission bandwidth configuration in Table 5.6.1-1 shall be supported for each of the specified channel bandwidths. The same (symmetrical) channel bandwidth is specified for both the TX and RX path.

Table 5.6.1-1: E-UTRA channel bandwidth

| E-UTRA band / Channel bandwidth |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

NOTE 1: ${ }^{1}$ refers to the bandwidth for which a relaxation of the specified UE receiver sensitivity requirement (subclause 7.3) is allowed.
NOTE 2: ${ }^{2}$ For the 20 MHz bandwidth, the minimum requirements are specified for E-UTRA UL carrier frequencies confined to either $713-723 \mathrm{MHz}$ or 728738 MHz
NOTE 3: ${ }^{3}$ refers to the bandwidth for which the uplink transmission bandwidth can be restricted by the network for some channel assignments in FDD/TDD co-existence scenarios in order to meet unwanted emissions requirements (Clause 6.6.3.2).
NOTE 4: ${ }^{4}$ For the 20 MHz bandwidth, the minimum requirements are restricted to E-UTRA operation when carrier aggregation is configured.
NOTE 5: ${ }^{5}$ For the 15 MHz bandwidth, the minimum requirements are specified for E-UTRA UL carrier frequencies confined to either 705.5 MHz or $710.5-$ 720.5 MHz

> | NOTE 6: | ${ }^{6}$ For the 20 MHz bandwidth, the minimum requirements are specified for E- |
| :--- | :--- |
|  | UTRA UL carrier frequencies confined to either $673-678 \mathrm{MHz}$ or $683-$ |
|  | 688MHz. |

b) The use of different (asymmetrical) channel bandwidth for the TX and RX is not precluded and is intended to form part of a later release.

### 5.6A Channel bandwidth for CA

For intra-band contiguous carrier aggregation Aggregated Channel Bandwidth, Aggregated Transmission Bandwidth Configuration and Guard Bands are defined as follows, see Figure 5.6A-1.

Figure 5.6A-1. Definition of Aggregated channel bandwidth and aggregated channel bandwidth edges

The aggregated channel bandwidth, $\mathrm{BW}_{\text {Channel_CA }}$, is defined as

$$
\mathrm{BW}_{\text {Channel_CA }}=\mathrm{F}_{\text {edge,high }}-\mathrm{F}_{\text {edge,low }}[\mathrm{MHz}] .
$$

The lower bandwidth edge $\mathrm{F}_{\text {edge,low }}$ and the upper bandwidth edge $\mathrm{F}_{\text {edge, high }}$ of the aggregated channel bandwidth are used as frequency reference points for transmitter and receiver requirements and are defined by

$$
\begin{gathered}
\mathrm{F}_{\text {edge,low }}=\mathrm{F}_{\mathrm{C}, \text { low }}-\mathrm{F}_{\text {offset,low }} \\
\mathrm{F}_{\text {edge,high }}=\mathrm{F}_{\mathrm{C}, \text { high }}+\mathrm{F}_{\text {offset,high }}
\end{gathered}
$$

The lower and upper frequency offsets depend on the transmission bandwidth configurations of the lowest and highest assigned edge component carrier and are defined as

$$
\begin{aligned}
& \mathrm{F}_{\text {offset,low }}=\left(0.18 \mathrm{~N}_{\mathrm{RB}, \text { low }}+\Delta \mathrm{f}_{1}\right) / 2+\mathrm{BW}_{\mathrm{GB}}[\mathrm{MHz}] \\
& \mathrm{F}_{\text {offset,high }}=\left(0.18 \mathrm{~N}_{\mathrm{RB}, \text { high }}+\Delta \mathrm{f}_{1}\right) / 2+\mathrm{BW}_{\mathrm{GB}}[\mathrm{MHz}]
\end{aligned}
$$

where $\Delta f_{1}=\Delta f$ for the downlink with $\Delta f$ the subcarrier spacing and $\Delta f_{1}=0$ for the uplink, while $N_{R B, l o w}$ and $N_{R B, \text { high }}$ are the transmission bandwidth configurations according to Table 5.6-1 for the lowest and highest assigned component carrier, respectively. $\mathrm{BW}_{\mathrm{GB}}$ denotes the Nominal Guard Band and is defined in Table $5.6 \mathrm{~A}-1$, and the factor 0.18 is the PRB bandwidth in MHz.

NOTE: The values of $\mathrm{BW}_{\text {Channel_CA }}$ for UE and BS are the same if the lowest and the highest component carriers are identical.

Aggregated Transmission Bandwidth Configuration is the number of the aggregated RBs within the fully allocated Aggregated Channel bandwidth and is defined per CA Bandwidth Class (Table 5.6A-1).

For intra-band non-contiguous carrier aggregation Sub-block Bandwidth and Sub-block edges are defined as follows, see Figure 5.6A-2.

Figure 5.6A-2. Non-contiguous intraband CA terms and definitions
The lower sub-block edge of the Sub-block Bandwidth ( $\mathrm{BW}_{\text {Channel,block }}$ ) is defined as

$$
\mathrm{F}_{\text {edge,block, low }}=\mathrm{F}_{\mathrm{C}, \text { block,low }}-\mathrm{F}_{\text {offset,block, low. }}
$$

The upper sub-block edge of the Sub-block Bandwidth is defined as

$$
\mathrm{F}_{\text {edge,block,high }}=\mathrm{F}_{\mathrm{C}, \text { block,high }}+\mathrm{F}_{\text {offset,block,high }} .
$$

The Sub-block Bandwidth, BW $_{\text {Channel,block }}$, is defined as follows:

$$
\text { BWChannel,block }=\mathrm{F}_{\text {edge,block,high }}-\mathrm{F}_{\text {edge,block,low }[\mathrm{MHz}]}
$$

The lower and upper frequency offsets $\mathrm{F}_{\text {offset,block,low }}$ and $\mathrm{F}_{\text {offset,block,high }}$ depend on the transmission bandwidth configurations of the lowest and highest assigned edge component carriers within a sub-block and are defined as

$$
\begin{aligned}
& \mathrm{F}_{\text {offset,block,low }}=\left(0.18 \mathrm{~N}_{\mathrm{RB}, \text { low }}+\Delta \mathrm{f}_{1}\right) / 2+\mathrm{BW}_{\mathrm{GB}}[\mathrm{MHz}] \\
& \mathrm{F}_{\text {offset,block,high }}=\left(0.18 \mathrm{~N}_{\mathrm{RB}, \text { high }}+\Delta \mathrm{f}_{1}\right) / 2+\mathrm{BW}_{\mathrm{GB}}[\mathrm{MHz}]
\end{aligned}
$$

where $\Delta f_{l}=\Delta f$ for the downlink with $\Delta f$ the subcarrier spacing and $\Delta f_{l}=0$ for the uplink, while $N_{R B, \text { low }}$ and $N_{R B, \text { high }}$ are the transmission bandwidth configurations according to Table 5.6-1 for the lowest and highest assigned component carrier within a sub-block, respectively. $\mathrm{BW}_{\mathrm{GB}}$ denotes the Nominal Guard Band and is defined in Table 5.6A-1, and the factor 0.18 is the PRB bandwidth in MHz .

The sub-block gap size between two consecutive sub-blocks $\mathrm{W}_{\text {gap }}$ is defined as

$$
\mathrm{W}_{\text {gap }}=\mathrm{F}_{\text {edge,block } \mathrm{n}+1, \text { low }}-\mathrm{F}_{\text {edge,block } \mathrm{n}, \text { high }[\mathrm{MHz}]}
$$

Table 5.6A-1: CA bandwidth classes and corresponding nominal guard bands

| CA Bandwidth Class | Aggregated Transmission Bandwidth Configuration | Number of contiguous CC | Nominal Guard Band BWGB |
| :---: | :---: | :---: | :---: |
| A | $N_{\text {RB,agg }} \leq 100$ | 1 | $\mathrm{a}_{1} \mathrm{BW}$ Channel(1) - $0.5 \Delta \mathrm{f}_{1}$ (NOTE 2) |
| B | $25<N_{\text {RB,agg }} \leq 100$ | 2 | $\begin{gathered} 0.05 \max \left(\mathrm{BW}_{\text {Channel(1) }}, \mathrm{BW}_{\text {Channel(2) }}\right) \\ -0.5 \Delta \mathrm{f}_{1} \end{gathered}$ |
| C | $100<N_{\text {RB,agg }} \leq 200$ | 2 | $\begin{gathered} \hline 0.05 \max (\mathrm{BW} \text { Channel( } 11, \mathrm{BW} \text { Channel(2)) } \\ 0.5 \Delta \mathrm{f}_{1} \\ \hline \end{gathered}$ |

| D | $200<N_{\text {RB,agg }} \leq 300$ | 3 | $\begin{gathered} \hline 0.05 \max ^{(\mathrm{BW}} \text { Channel(1), } \mathrm{BW}_{\text {Channel(2), }} \\ \mathrm{BW} \text { Channel(3)) }-0.5 \Delta \mathrm{f}_{1} \\ \hline \end{gathered}$ |
| :---: | :---: | :---: | :---: |
| E | $300<N_{\text {RB,agg }} \leq 400$ | 4 | 0.05 max(BW Channel(1), BW Channel(2), $\mathrm{BW}_{\text {Channel(3) }}, \mathrm{BW}_{\text {Channel(4) }}$ ) $0.5 \Delta \mathrm{f}_{1}$ |
| F | $400<N_{\text {RB,agg }} \leq 500$ | 5 | 0.05 max $(\mathrm{BW}$ Channel(1), BW Channel(2), $\mathrm{BW}_{\text {Channel(3) }}$, BW Channel(4), $\mathrm{BW}_{\text {Channel(5) }}$ ) - 0.5 $5 f_{1}$ |
| I | $700<N_{\text {RB,agg }} \leq 800$ | 8 | NOTE 3 |
| NOTE 1: $\quad B_{\text {Channel( }),}, j=1,2,3,4$ is the channel bandwidth of an E-UTRA component carrier according to Table 5.6-1 and $\Delta f_{1}=\Delta f$ for the downlink with $\Delta f$ the subcarrier spacing while $\Delta f_{1}=0$ for the uplink. <br> NOTE 2: $\mathrm{a}_{1}=0.16 / 1.4$ for $B W_{\text {Channel }(1)}=1.4 \mathrm{MHz}$ whereas $\mathrm{a}_{1}=0.05$ for all other channel bandwidths. <br> NOTE 3: Applicable for later releases. |  |  |  |

The channel spacing between centre frequencies of contiguously aggregated component carriers is defined in subclause 5.7.1A.

### 5.6A.1 Channel bandwidths per operating band for CA

The requirements for carrier aggregation in this specification are defined for carrier aggregation configurations with associated bandwidth combination sets. For inter-band carrier aggregation, a carrier aggregation configuration is a combination of operating bands, each supporting a carrier aggregation bandwidth class. For intra-band contiguous carrier aggregation, a carrier aggregation configuration is a single operating band supporting a carrier aggregation bandwidth class.

For each carrier aggregation configuration, requirements are specified for all bandwidth combinations contained in a bandwidth combination set, which is indicated per supported band combination in the UE radio access capability. A UE can indicate support of several bandwidth combination sets per band combination.

Requirements for intra-band contiguous carrier aggregation are defined for the carrier aggregation configurations and bandwidth combination sets specified in Table 5.6A.1-1. Requirements for inter-band carrier aggregation are defined for the carrier aggregation configurations and bandwidth combination sets specified in Table 5.6A.1-2, Table 5.6A.1-2a, Table 5.6A.1-2b and Table 5.6A.1-2c. Requirements for intra-band non-contiguous carrier aggregation are defined for the carrier aggregation configurations and bandwidth combination sets specified in Table 5.6A.1-3.

The DL component carrier combinations for a given CA configuration shall be symmetrical in relation to channel centre unless stated otherwise in Table 5.6A.1-1, Table 5.6A.1-2, Table 5.6A.1-2a, Table 5.6A.1-2b and Table 5.6A.1-2c.

Table 5.6A.1-1: E-UTRA CA configurations and bandwidth combination sets defined for intra-band contiguous CA

| E-UTRA CA configuration | Uplink CA configurations (NOTE 3) | E-UTRA CA configuration / Bandwidth combination set |  |  |  |  |  |  |

NOTE 1: The CA configuration refers to an operating band and a CA bandwidth class specified in Table 5.6A-1 (the indexing letter). Absence of a CA bandwidth class for an operating band implies support of all classes.
NOTE 2: For the supported CC bandwidth combinations, the CC downlink and uplink bandwidths are equal.
NOTE 3: Uplink CA configurations are the configurations supported by the present release of specifications.
NOTE 4: Restricted to E-UTRA operation when inter-band carrier aggregation is configured. The downlink operating band is paired with the uplink operating band (external) of the carrier aggregation configuration that is supporting the configured Pcell.
NOTE 5: 8 Rx Requirements are applicable for this band configuration if UE supports 8 Rx

Table 5.6A.1-2: E-UTRA CA configurations and bandwidth combination sets defined for inter-band CA (two bands)

| E-UTRA CA configuration / Bandwidth combination set |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

NOTE 1: The CA Configuration refers to a combination of an operating band and a CA bandwidth class specified in Table 5.6A-1 (the indexing letter). Absence of a CA bandwidth class for an operating band implies support of all classes.
NOTE 2: For each band combination, all combinations of indicated bandwidths belong to the set.
NOTE 3: For the supported CC bandwidth combinations, the CC downlink and uplink bandwidths are equal.
NOTE 4: A terminal which supports a DL CA configuration shall support all the lower order fallback DL CA combinations and it shall support at least one bandwidth combination set for each of the constituent lower order DL combinations containing all the bandwidths specified within each specific combination set of the upper order DL combination.
NOTE 5: Uplink CA configurations are the configurations supported by the present release of specifications.
NOTE 6: If the UE supports any uplink CA configuration for corresponding downlink CA configuration it shall support this uplink CA configuration.
NOTE 7: Power imbalance between downlink carriers on Band 20 and Band 28 is assumed to be within [ 6 dB ].
NOTE 8: UL carrier is only supported on Band 1, Band 3 or Band 5 not Band 41 because the fall back mode 2DL/1UL CA_1A-41A has the limitation that UL carrier is only supported on Band 1.
NOTE 9: UL carrier shall be supported in Band 1, 3, 8 or 28 only. Power imbalance between downlink carriers on Band 7 and Band 38 is assumed to be within [6dB].

NOTE 1: The CA Configuration refers to a combination of an operating band and a CA bandwidth class specified in Table 5.6A-1 (the indexing letter). Absence of a CA bandwidth class for an operating band implies support of all classes.
NOTE 2: For each band combination, all combinations of indicated bandwidths belong to the set.
NOTE 3: For the supported CC bandwidth combinations, the CC downlink and uplink bandwidths are equal.
NOTE 4: A terminal which supports a DL CA configuration shall support all the lower order fallback DL CA combinations and it shall support at least one bandwidth combination set for each of the constituent lower order DL combinations containing all the bandwidths specified within each specific combination set of the upper order DL combination.
NOTE 5: Uplink CA configurations are the configurations supported by the present release of specifications.
NOTE 6: If the UE supports uplink CA for corresponding downlink CA it shall support this uplink CA configuration.
NOTE 7: Power imbalance between downlink carriers on Band 20 and Band 28 is assumed to be within [6dB].

Table 5.6A.1-3: E-UTRA CA configurations and bandwidth combination sets defined for non-contiguous intra-band CA (with two sub-blocks)

NOTE 1: Uplink CA configurations are the configurations supported by the present release of specifications.
NOTE 2: Restricted to E-UTRA operation when inter-band carrier aggregation is configured. The downlink operating band is paired with the uplink operating band (external) of the carrier aggregation configuration that is supporting the configured Pcell.

Table 5.6A.1-4: E-UTRA CA configurations and bandwidth combination sets defined for non-contiguous intra-band CA (with three sub-blocks)

### 5.6B Channel bandwidth for UL-MIMO

The requirements specified in subclause 5.6 are applicable to UE supporting UL-MIMO.

### 5.6B.1 Void

### 5.6C Channel bandwidth for Dual Connectivity

For E-UTRA DC bands specified in 5.5C, the corresponding E-UTRA CA configurations in 5.6A.1, i.e., dual uplink inter-band carrier aggregation with uplink assigned to two E-UTRA bands, are applicable to Dual Connectivity.

NOTE 1: Requirements for the dual connectivity configurations are defined in the section corresponding E-UTRA uplink CA configurations, unless otherwise specified.

NOTE 2: For TDD inter-band dual connectivity configurations, requirements are applicable only for synchronous operation.
5.6C.1 Void

Table 5.6C.1-1: Void

Table 5.6C.1-2: Void

### 5.6D Channel bandwidth for ProSe

### 5.6D.1 Channel bandwidths per operating band for ProSe

The ProSe combination of channel bandwidths and operating bands is shown in Table 5.6D.1-1 and Table 5.6D.1-2. The transmission bandwidth configuration in Table 5.6D.1-1 and Table 5.6D.1-2 shall be supported for each of the specified channel bandwidths. The same (symmetrical) channel bandwidth is specified for both the TX and RX path.

Table 5.6D.1-1 ProSe Direct Discovery channel bandwidth

| E-UTRA ProSe band/ProSe channel bandwidth |  |  |  |  |  |  |

### 5.6F Channel bandwidth for category NB1 and NB2

Channel bandwidth for Category NB1 and NB2 is 200 kHz .
For category NB1 and NB2, requirements in present document are specified for the channel bandwidth listed in Table 5.6F-1.

Table 5.6F-1: Transmission bandwidth configuration $N_{\text {RB }}, N_{\text {tone }} 15 \mathrm{kHz}$ and $\boldsymbol{N}_{\text {tone }} 3.75 \mathrm{kHz}$ in NB1 and NB2 channel bandwidth

| Channel bandwidth <br> $\mathbf{B} W_{\text {Channel }}[\mathbf{k H z}]$ | $\mathbf{2 0 0}$ |
| :---: | :---: |
| Transmission bandwidth <br> configuration NRB | 1 |
| Transmission bandwidth <br> configuration $N_{\text {tone }} 15 \mathrm{kHz}$ | 12 |
| Transmission bandwidth <br> configuration $N_{\text {tone }} 3.75 \mathrm{kHz}$ | 48 |

Figure $5.6 \mathrm{~F}-1$ shows the relation between the Category NB1/NB2 channel bandwidth ( $\mathrm{BW}_{\text {Channel }}$ ) and the Category NB1 /NB2 transmission bandwidth configuration ( $\mathrm{N}_{\text {tone }}$ ). The channel edges are defined as the lowest and highest frequencies of the carrier separated by the channel bandwidth, i.e. at $\mathrm{F}_{\mathrm{C}}+/-\mathrm{BW}_{\text {Channel }} / 2$.

Figure 5.6F-1 Definition of Channel Bandwidth and Transmission Bandwidth configuration

### 5.6G Channel bandwidth for V2X Communication

### 5.6G.1 Channel bandwidths per operating band for V2X Communication

E-UTRA V2X Communication channel bandwidths and operating band is shown in Table 5.6G.1-1. The same (symmetrical) channel bandwidth is specified for both the TX and RX path.

Table 5.6G.1-1: V2X Communciation channel bandwidth

| E-UTRA V2X band / V2X channel bandwidth |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| E-UTRA <br> V2X <br> Operating <br> Band | $\mathbf{1 . 4 ~ M H z}$ | $\mathbf{3 M H z}$ | $\mathbf{5 M H z}$ | $\mathbf{1 0} \mathbf{~ M H z}$ | $\mathbf{1 5} \mathbf{~ M H z}$ | $\mathbf{2 0} \mathbf{~ M H z}$ |
| 47 |  |  |  | Yes |  |  |

For V2X inter-band con-current operation, the V2X Communication channel bandwidths for each operating band is specified in Table 5.6G.1-2.

Table 5.6G.1-2: Inter-band con-current V2X configurations and bandwidth combination sets

V2X Bandwidth Class is specified in Table 5.6G.1-3 for V2X intra-band contiguous multi-carrier operation.
Table 5.6G.1-3: V2X bandwidth classes and corresponding nominal guard bands

| V2X Bandwidth <br> Class | Aggregated <br> Transmission <br> Bandwidth <br> Configuration | Number of <br> contiguous <br> CC | Nominal Guard Band BW |
| :---: | :---: | :---: | :---: |

```
NOTE 1: BWChannel(), j= 1, 2, 3, 4 is the channel bandwidth of an E-UTRA component carrier
    according to Table 5.6-1 and \Deltaff = \Deltaf for the downlink with \Deltaf the subcarrier spacing while
    \Deltaf
NOTE 2: Void
NOTE 3: Applicable for later releases.
```

For V2X intra-band multi-carrier operation, the V2X communication channel bandwidths for each operating band is specified in Table 5.6G.1-4.

Table 5.6G.1-4: V2X intra-band multi-carrier configurations

### 5.7 Channel arrangement

### 5.7.1 Channel spacing

The spacing between carriers will depend on the deployment scenario, the size of the frequency block available and the channel bandwidths. The nominal channel spacing between two adjacent E-UTRA carriers is defined as following:

$$
\text { Nominal Channel spacing }=\left(\mathrm{BW}_{\text {Channel(1) }}+\mathrm{BW}_{\text {Channel(2) })}\right) / 2
$$

where $\mathrm{BW}_{\text {Channel(1) }}$ and $\mathrm{BW}_{\text {Channel(2) }}$ are the channel bandwidths of the two respective E-UTRA carriers. The channel spacing can be adjusted to optimize performance in a particular deployment scenario.

### 5.7.1A Channel spacing for CA

For intra-band contiguous carrier aggregation with two or more component carriers, the nominal channel spacing between two adjacent E-UTRA component carriers is defined as the following unless stated otherwise:

$$
\text { Nominal channel spacing }=\left\lfloor\frac{B W_{\text {Channel (1) }}+B W_{\text {Channel(2) }}-0.1\left|B W_{\text {Channel }(1)}-B W_{\text {Channel(2) }}\right|}{0.6}\right\rfloor 0.3[\mathrm{MHz}]
$$

where $\mathrm{BW}_{\text {Channel(1) }}$ and $\mathrm{BW}_{\text {Channel(2) }}$ are the channel bandwidths of the two respective E-UTRA component carriers according to Table 5.6-1 with values in MHz. The channel spacing for intra-band contiguous carrier aggregation can be adjusted to any multiple of 300 kHz less than the nominal channel spacing to optimize performance in a particular deployment scenario.

For intra-band contiguous carrier aggregation with two or more component carriers in Band 46, the requirements apply for both 19.8 MHz and 20.1 MHz nominal carrier spacing between two 20 MHz component carriers, and for 15.0 MHz nominal carrier spacing between 10 MHz and 20 MHz component carriers.

For intra-band non-contiguous carrier aggregation the channel spacing between two or more E-UTRA component carriers in different sub-blocks shall be larger than the nominal channel spacing defined in this subclause.

### 5.7.1F Channel spacing for category NB1 and NB2

Nominal channel spacing for UE category NB1 and NB2 in stand-alone mode is 200 kHz . For in-band and guard-band cases the nominal channel spacing between two adjacent category NB1 or NB2 carriers is 180 kHz .

### 5.7.2 Channel raster

The channel raster is 100 kHz for all bands, which means that the carrier centre frequency must be an integer multiple of 100 kHz .

### 5.7.2A Channel raster for CA

For carrier aggregation the channel raster is 100 kHz for all bands, which means that the carrier centre frequency must be an integer multiple of 100 kHz .

### 5.7.2F Channel raster for category NB1 and NB2

Channel raster for category NB1 and NB2 in-band, guard-band and standalone operation is 100 kHz .

### 5.7.3 Carrier frequency and EARFCN

The carrier frequency in the uplink and downlink is designated by the E-UTRA Absolute Radio Frequency Channel Number (EARFCN) in the range $0-262143$. The relation between EARFCN and the carrier frequency in MHz for the downlink is given by the following equation, where $\mathrm{F}_{\text {DL_low }}$ and $\mathrm{N}_{\text {Offs-DL }}$ are given in Table 5.7.3-1 and $\mathrm{N}_{\mathrm{DL}}$ is the downlink EARFCN.

$$
\mathrm{F}_{\mathrm{DL}}=\mathrm{F}_{\mathrm{DL} \_ \text {low }}+0.1\left(\mathrm{~N}_{\mathrm{DL}}-\mathrm{N}_{\text {offs }-\mathrm{DL}}\right)
$$

The relation between EARFCN and the carrier frequency in MHz for the uplink is given by the following equation where $\mathrm{F}_{\text {UL_low }}$ and $\mathrm{N}_{\text {Offs-UL }}$ are given in Table 5.7.3-1 and $\mathrm{N}_{\mathrm{UL}}$ is the uplink EARFCN.

$$
\mathrm{F}_{\mathrm{UL}}=\mathrm{F}_{\mathrm{UL} \_ \text {low }}+0.1\left(\mathrm{~N}_{\mathrm{UL}}-\mathrm{N}_{\text {Offs-UL }}\right)
$$

Table 5.7.3-1: E-UTRA channel numbers

| E-UTRA <br> Operating <br> Band | Downlink |  |  | FDL_low (MHz) | Noffs-DL | Range of NDL |

NOTE 1: The channel numbers that designate carrier frequencies so close to the operating band edges that the carrier extends beyond the operating band edge shall not be used. This implies that the first $7,15,25$, 50,75 and 100 channel numbers at the lower operating band edge and the last 6, 14, 24, 49, 74 and 99 channel numbers at the upper operating band edge shall not be used for channel bandwidths of 1.4, 3, $5,10,15$ and 20 MHz respectively.
NOTE 2: Restricted to E-UTRA operation when carrier aggregation is configured.
NOTE 3: For ProSe and V2X the corresponding UL channel number are also specified for the DL for the associated ProSe/V2X operating bands i.e. ProSe_Ful = Ful and ProSe_Fdl = Ful; V2X_Ful = Fdl and V2X_Fdl = Ful.
NOTE 4: Requirements for uplink operations are not specified in this version of the specification.
NOTE 5: The range $2180-2200 \mathrm{MHz}$ of the DL operating band is restricted to E-UTRA operation when carrier aggregation is configured.
NOTE 6: The range $2010-2020 \mathrm{MHz}$ of the DL operating band is restricted to E-UTRA operation when carrier aggregation is configured and TX-RX separation is 300 MHz The range $2005-2020 \mathrm{MHz}$ of the DL operating band is restricted to E-UTRA operation when carrier aggregation is configured and TX-RX separation is 295 MHz .

### 5.7.3F Carrier frequency and EARFCN for category NB1 and NB2

The carrier frequency of category NB1/NB2 in the downlink is designated by the E-UTRA Absolute Radio Frequency Channel Number (EARFCN) in the range $0-262143$ and the Offset of category NB1/NB2 Channel Number to EARFCN in the range $\{-10,-9,-8,-7,-6,-5,-4,-3,-2,-1,-0.5,0,1,2,3,4,5,6,7,8,9\}$ for FDD and in the range $\{-10,-9,-8.5,-8,-$ $7,-6,-5,-4.5,-4,-3,-2,-1,-0.5,0,1,2,3,3.5,4,5,6,7,7.5,8,9\}$ for TDD. The relation between EARFCN, Offset of category NB1/NB2 Channel Number to EARFCN and the carrier frequency in MHz for the downlink is given by the following equation, where $\mathrm{F}_{\mathrm{DL}}$ is the downlink carrier frequency of category $\mathrm{NB} 1 / \mathrm{NB} 2, \mathrm{~F}_{\mathrm{DL} \text { _low }}$ and $\mathrm{N}_{\text {Offs-DL }}$ are given in table 5.7.3-1, $\mathrm{N}_{\mathrm{DL}}$ is the downlink EARFCN, $\mathrm{M}_{\mathrm{DL}}$ is the Offset of category NB1/NB2 Channel Number to downlink EARFCN.

$$
\mathrm{F}_{\mathrm{DL}}=\mathrm{F}_{\mathrm{DL} \_ \text {low }}+0.1\left(\mathrm{~N}_{\mathrm{DL}}-\mathrm{N}_{\mathrm{Offs}-\mathrm{DL}}\right)+0.0025 *\left(2 \mathrm{M}_{\mathrm{DL}}+1\right)
$$

The carrier frequency of category NB1/NB2 in the uplink is designated by the E-UTRA Absolute Radio Frequency Channel Number (EARFCN) in the range $0-262143$, and the Offset of category NB1/NB2 Channel Number to EARFCN in the range $\{-10,-9,-8,-7,-6,-5,-4,-3,-2,-1,0,1,2,3,4,5,6,7,8,9\}$ for FDD and in the range $\{-11,-10,-9.5,-9,-8.5$, $-8,-7.5,-7,-6.5,-6,-5.5,-5,-4.5,-4,-3.5,-3,-2.5,-2,-1.5,-1,-0.5,0,0.5,1,1.5,2,2.5,3,3.5,4,4.5,5,5.5,6,6.5,7,7.5,8,8.5,9,9.5,10$, $11\}$ for TDD. The relation between EARFCN, Offset of category NB1/NB2 Channel Number to EARFCN and the carrier frequency in MHz for the uplink is given by the following equation, where $\mathrm{F}_{\mathrm{UL}}$ is the uplink carrier frequency of category NB1/NB2, F UL_low and Noffs-UL are given in table 5.7.3-1, $\mathrm{N}_{\mathrm{UL}}$ is the uplink EARFCN, $\mathrm{M}_{\mathrm{UL}}$ is the Offset of category NB1/NB2 Channel Number to uplink EARFCN.

$$
\mathrm{F}_{\mathrm{UL}}=\mathrm{F}_{\mathrm{UL} \_ \text {low }}+0.1\left(\mathrm{~N}_{\mathrm{UL}}-\mathrm{N}_{\mathrm{Offs}-\mathrm{UL}}\right)+0.0025 *\left(2 \mathrm{M}_{\mathrm{UL}}\right)
$$

NOTE 1: For category NB1/NB2, N ${ }_{\text {DL }}$ or $\mathrm{N}_{\mathrm{UL}}$ is different than the value of EARFCN that corresponds to E-UTRA downlink or uplink carrier frequency for in-band and guard band operation.

NOTE 2: For FDD $M_{D L}=-0.5$ is not applicable for in-band and guard band operation. For TDD $M_{D L}\{-0.5,+3.5,-$ $4.5,+7.5,-8.5\}$ is not applicable for in-band and guard band operation.

NOTE 3: For the carrier including NPSS/NSSS for in-band and guard band operation, MDL is selected from \{-2,$1,0,1\}$.

NOTE 4: For the carrier including NPSS/NSSS for stand-alone operation, MDL $=-0.5$.

### 5.7.4 TX-RX frequency separation

a) The default E-UTRA TX channel (carrier centre frequency) to RX channel (carrier centre frequency) separation is specified in Table 5.7.4-1 for the TX and RX channel bandwidths defined in Table 5.6.1-1

Table 5.7.4-1: Default UE TX-RX frequency separation

| E-UTRA Operating Band | TX - RX <br> carrier centre frequency <br> separation |
| :---: | :---: |
| 1 | 190 MHz |
| 2 | 80 MHz. |

| 73 | 48 MHz |
| 74 | 30 MHz |
| 85 | 10 MHz |
| 87 | 10 MHz |
| 88 |  |
| NOTE 1: Default TX-RX carrier centre frequency separation. |  |

b) The use of other TX channel to RX channel carrier centre frequency separation is not precluded and is intended to form part of a later release.

### 5.7.4A TX-RX frequency separation for CA

For intra-band contiguous carrier aggregation, the same TX-RX frequency separation as specified in Table 5.7.4-1 is applied to PCC and SCC, respectively.

### 5.7.4E TX-RX frequency separation for category M1 and M2

For the category M1 and M2 TX-RX frequency separation is flexible within the assigned channel bandwidth of EUTRA carrier with the TX-RX frequency separation of the E-UTRA carriers as specified in Table 5.7.4-1.

### 5.7.4F TX-RX frequency separation for category NB1 and NB2

For in-band and guard-band operation mode, the category NB1 and NB2 TX-RX frequency separation is flexible within the assigned channel bandwidth of E-UTRA carrier with the TX-RX frequency separation of the E-UTRA carriers as specified in Table 5.7.4-1. For stand-alone operation mode the default TX-RX frequency separation is the same as Table 5.7.4-1.

## 6 Transmitter characteristics

### 6.1 General

Unless otherwise stated, the transmitter characteristics are specified at the antenna connector of the UE with a single or multiple transmit antenna(s). For UE with integral antenna only, a reference antenna with a gain of 0 dBi is assumed.

Unless otherwise stated, NB1 and NB2 requirements specified for an E-UTRA band shall also apply for the re-farmed NR band (e.g. if NB1/NB2 requirements are specified for E-UTRA band 1, they shall also apply for NR band n1).

### 6.2 Transmit power

### 6.2.1 Void

### 6.2.2 UE maximum output power

The following UE Power Classes define the maximum output power for any transmission bandwidth within the channel bandwidth for non CA configuration unless otherwise stated. The period of measurement shall be at least as defined in Table 6.2.2-0.

Table 6.2.2-0: Measurement period for UE maximum output power

| TTI pattern | Minimum measurement <br> period |
| :---: | :---: |
| Subframe | 1 ms |
| Slot | 70 S |
| Subslot | $2 O S, 3 O S$ |

Table 6.2.2-1: UE Power Class

| $\begin{aligned} & \text { EUTRA } \\ & \text { band } \end{aligned}$ | Class 1 (dBm) | $\begin{aligned} & \text { Tolerance } \\ & \text { (dB) } \\ & \hline \end{aligned}$ | Class 2 (dBm) | $\begin{aligned} & \text { Tolerance } \\ & \text { (dB) } \end{aligned}$ | Class 3 (dBm) | $\begin{aligned} & \text { Tolerance } \\ & \text { (dB) } \end{aligned}$ | Class 4 (dBm) | $\begin{gathered} \text { Tolerance } \\ \text { (dB) } \\ \hline \end{gathered}$ |

| ... |  |  |  |  |  |  |  |  |
| 33 |  |  |  |  | 23 | $\pm 2$ |  |  |
| 34 |  |  |  |  | 23 | $\pm 2$ |  |  |
| 35 |  |  |  |  | 23 | $\pm 2$ |  |  |
| 36 |  |  |  |  | 23 | $\pm 2$ |  |  |
| 37 |  |  |  |  | 23 | $\pm 2$ |  |  |
| 38 |  |  | 26 | $\pm 2$ | 23 | $\pm 2$ |  |  |
| 39 |  |  |  |  | 23 | $\pm 2$ |  |  |
| 40 |  |  | 26 | $\pm 2$ | 23 | $\pm 2$ |  |  |
| 41 |  |  | 26 | $\pm 2^{2}$ | 23 | $\pm 2^{2}$ |  |  |
| 42 |  |  | 26 | +2/-3 | 23 | +2/-3 |  |  |

The default power class $\mathrm{P}_{\text {PowerClass_Default }}$ for an operating band is Power Class 3 unless otherwise stated.
For a power class 2 capable UE operating on Band 41, when an IE $P$-max as defined in TS 36.331 [7] of 23 dBm or lower is indicated in the cell or if the uplink/downlink configuration is 0 or 6 , the requirements for power class 2 are not applicable, and the corresponding requirements for a power class 3 UE shall apply.

For each supported frequency band other than Band 14 and Band 41, the UE shall:

- if the UE supports a different power class than the default UE power class for the band and the supported power class enables the higher maximum output power than that of the default power class:
- if the band is a TDD band whose frame configuration is 0 or 6 ; or
- if the IE P-Max as defined in TS 36.331 [7] is not provided; or
- if the IE $P$-Max as defined in TS 36.331 [7] is provided and set to the maximum output power of the default power class or lower;
- meet all requirements for the default power class of the operating band in which the UE is operating and set its configured transmitted power as specified in sub-clause 6.2.5;
- else (i.e the IE P-Max as defined in TS 36.331 [7] is provided and set to the higher value than the maximum output power of the default power class):
- meet all requirements for the supported power class and set its configured transmitted power class as specified in sub-clause 6.2.5;

### 6.2.2A UE maximum output power for CA

The following UE Power Classes define the maximum output power for any transmission bandwidth within the aggregated channel bandwidth.

The maximum output power is measured as the sum of the maximum output power at each UE antenna connector. The period of measurement shall be at least as defined in Table 6.2.2A-0a.

Table 6.2.2A-0a: Measurement period for UE maximum output power for CA

| TTI pattern | Minimum measurement <br> period |
| :---: | :---: |
| Subframe | 1 ms |
| Slot | $7 O S$ |
| Subslot | $2 O S, 3 O S$ |

For inter-band carrier aggregation with one uplink component carrier assigned to one E-UTRA band the requirements in subclause 6.2.2 apply. For inter-band carrier aggregation with two uplink contiguous component carrier assigned to one E-UTRA band the requirements specified in Table 6.2.2A-1 apply for that band. For inter-band carrier aggregation with one uplink component carrier assigned to one E-UTRA band in Band $38,40,41$ or 42 , the requirements for power class 2 are not applicable and the corresponding requirements for a power class 3 UE shall apply. For inter-band carrier aggregation with one uplink component carrier assigned to one E-UTRA band in Band 3, 20, 28, or 31, the requirements for power class 1 are not applicable and the corresponding requirements for a power class 3 UE shall apply.

For inter-band carrier aggregation with uplink assigned to two E-UTRA bands, UE maximum output power shall be measured over all component carriers from different bands. If each band has separate antenna connectors, maximum output power is measured as the sum of maximum output power at each UE antenna connector. The maximum output power is specified in Table 6.2.2A-0.

For E-UTRA CA bands including an uplink LAA Scell in Band 46, the UE shall meet the following additional requirements for transmission within the frequency ranges $5150-5350 \mathrm{MHz}$ and $5470-5725 \mathrm{MHz}$ :

- a maximum mean power density of 10 dBm in any 1 MHz band when the network signaling value NS_28 or NS_29 is indicated in the LAA Scell;
- a maximum mean power density of 11 dBm in any 1 MHz band when the network signaling value NS_30 is indicated in the LAA Scell;
the following additional requirements for transmission within the frequency range $5230-5250 \mathrm{MHz}$ :
- a maximum mean power density of 4 dBm in any 1 MHz band when the network signaling value NS_31 is indicated in the LAA Scell;
the following additional requirements for transmission within the frequency ranges $5150-5230 \mathrm{MHz}, 5250-5350 \mathrm{MHz}$, $5470-5725 \mathrm{MHz}$ and $5725-5850 \mathrm{MHz}$ :
- a maximum mean power density of 10 dBm in any 1 MHz band when the network signaling value NS_31 is indicated in the LAA Scell;
where the said network signaling values are specified in clause 6.2.4.
Table 6.2.2A-0: UE Power Class for uplink interband CA (two bands)

| E-UTRA CA <br> Configuration | Class 1 <br> $(\mathbf{d B m})$ | Tolerance <br> $(\mathbf{d B})$ | Class 2 <br> $(\mathbf{d B m})$ | Tolerance <br> $(\mathbf{d B})$ | Class 3 <br> $(\mathbf{d B m})$ | Tolerance <br> $(\mathbf{d B})$ | Class 4 <br> $(\mathbf{d B m})$ | Tolerance <br> $(\mathbf{d B})$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| CA_1A-3A |  |  |  |  | 23 | $+2 /-3^{2}$ |  |  |
| CA_1A-5A |  |  |  |  | 23 | $+2 /-3$ |  |  |
| CA_1A-7A |  |  |  |  | 23 | $+2 /-3^{2}$ |  |  |
| CA_1A-8A |  |  |  |  | 23 | $+2 /-3^{2}$ |  |  |
| CA_1A-11A |  |  |  |  | 23 | $+2 /-3^{5}$ |  |  |
| CA_1A-18A |  |  |  |  | 23 | $+2 / 3^{5}$ |  |  |
| CA_1A-19A |  |  |  |  | 23 | $+2 /-3$ |  |  |
| CA_1A-20A |  |  |  |  | 23 | $+2 /-3$ |  |  |

For uplink intra-band contiguous carrier aggregation the maximum output power is specified in Table 6.2.2A-1. For downlink intra-band contiguous carrier aggregation with a single uplink component carrier configured in the E-UTRA band, the maximum output power is specified in Table 6.2.2-1.

For a power class 2 capable UE operating with intra-band uplink contiguous CA bandwidth class C on Band 41, when an IE P-max as defined in TS 36.331 [7] of 23 dBm or lower is indicated in the cell or if the uplink/downlink configuration is 0 or 6 , the requirements for power class 2 are not applicable, and the corresponding requirements for a power class 3 UE shall apply.

Table 6.2.2A-1: CA UE Power Class for intraband contiguous CA

| E-UTRA CA Configuration | Class 1 <br> (dBm) | Tolerance (dB) | Class 2 (dBm) | Tolerance $(\mathrm{dB})$ | Class 3 (dBm) | Tolerance (dB) | Class 4 (dBm) | Tolerance (dB) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| CA_1C |  |  |  |  | 23 | +2/-2 |  |  |
| CA 3C |  |  |  |  | 23 | +2/-2 ${ }^{2}$ |  |  |
| CA_5B |  |  |  |  | 23 | +2/-2 ${ }^{2}$ |  |  |
| CA_7C |  |  |  |  | 23 | +2/-2 ${ }^{2}$ |  |  |
| CA 8B |  |  |  |  | 23 | +2/-2 ${ }^{2}$ |  |  |
| CA_38C |  |  |  |  | 23 | +2/-2 |  |  |
| CA 39 C |  |  |  |  | 23 | +2/-2 |  |  |
| CA_40C |  |  |  |  | 23 | +2/-2 |  |  |
| CA 40D |  |  |  |  | 23 | +2/-2 |  |  |
| CA_41C |  |  | 26 | +2/-2 ${ }^{2}$ | 23 | +2/-2 ${ }^{2}$ |  |  |
| CA_41D |  |  |  |  | 23 | $+2 /-2^{2}$ |  |  |
| CA 42C |  |  |  |  | 23 | +2/-3 |  |  |
| CA_48B |  |  |  |  | 23 | +2/-3 |  |  |
| CA_48C |  |  |  |  | 23 | +2/-3 |  |  |
| CA_66B |  |  |  |  | 23 | +2/-2 |  |  |
| CA_66C |  |  |  |  | 23 | +2/-2 |  |  |
| NOTE 2: If all transmitted resource blocks (Figure 5.6A-1) over all component carriers are confined within FuL_low and Ful_low + 4 MHz or/and Ful_high -4 MHz and Ful_nigh, the maximum output power requirement is relaxed by reducing the lower tolerance limit by 1.5 dB |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
| NOTE 4: For intra-band transmitted pow |  | aximum UE tiguous car over all com | wer spec raggrega onent ca | fied without on the maxi rs (per UE) | king into um power | count the to quirement | nce <br> uld apply | the total |

For intra-band non-contiguous carrier aggregation with one uplink carrier on the PCC, the requirements in subclause 6.2.2 apply. For intra-band non-contiguous carrier aggregation with two uplink carriers the maximum output power is specified in Table 6.2.2A-2.

Table 6.2.2A-2: UE Power Class for intraband non-contiguous CA

| E-UTRA CA <br> Configuration | Class 1 <br> $(\mathrm{dBm})$ | Tolerance <br> $(\mathrm{dB})$ | Class 2 <br> $(\mathrm{dBm})$ | Tolerance <br> $(\mathrm{dB})$ | Class 3 <br> $(\mathrm{dBm})$ | Tolerance <br> $(\mathrm{dB})$ | Class 4 <br> $(\mathrm{dBm})$ | Tolerance <br> $(\mathrm{dB})$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| CA_4A-4A |  |  |  |  | 23 | $+2 /-2$ |  |  |

NOTE 1: For transmission bandwidths (Figure 5.6-1) confined within Ful_low and Ful_low + 4 MHz or Ful_nigh - 4 MHz and Ful_nigh, the maximum output power requirement is relaxed by reducing the lower tolerance limit by 1.5 dB
NOTE 2: PpowerClass is the maximum UE power specified without taking into account the tolerance
NOTE 3: For intra-band non-contiguous carrier aggregation the maximum power requirement should apply to the total transmitted power over all component carriers (per UE).

### 6.2.2B UE maximum output power for UL-MIMO

For UE with two transmit antenna connectors in closed-loop spatial multiplexing scheme, the maximum output power for any transmission bandwidth within the channel bandwidth is specified in Table 6.2.2B-1. The requirements shall be met with the UL-MIMO configurations specified in Table 6.2.2B-2. For UE supporting UL-MIMO, the maximum output power is measured as the sum of the maximum output power at each UE antenna connector. The period of measurement shall be at least as defined in Table 6.2.2B-0.

Table 6.2.2B-O: Measurement period for UE maximum output power for UL-MIMO

| TTI pattern | Minimum measurement <br> period |
| :---: | :---: |
| Subframe | 1 ms |

| 28 |  |  |  |  | 23 | +2/[-3] |  |  |
| 30 |  |  |  |  | 23 | +2/-3 |  |  |
| 31 | 31 | +2/-3 |  |  | 23 | +2/-3 |  |  |
| $\ldots$ |  |  |  |  |  |  |  |  |
| 33 |  |  |  |  | 23 | +2/-3 |  |  |

The default power class for an operating band is Power Class 3 unless otherwise stated.
For a power class 2 capable UE operating on Band 41, when an IE $P$-max as defined in TS 36.331 [7] of 23 dBm or lower is indicated in the cell or if the uplink/downlink configuration is 0 or 6 , the requirements for power class 2 are not applicable and the corresponding requirements for a power class 3 UE shall apply.

For each supported frequency band other than Band 41, the UE shall:

- if the UE supports a different power class than the UE default power class for the band and the supported power class enables the higher maximum output power than that of the default power class:
- if the band is a TDD band whose frame configuration is 0 or 6 ; or
- $\quad$ if the IE $P$-Max as defined in TS 36.331 [7] is not provided; or
- if the IE $P$-Max as defined in TS 36.331 [7] is provided and set to the maximum output power of the default power class or lower;
- meet all requirements for the default power class of the operating band in which the UE is operating and set its configured transmitted power as specified in sub-clause 6.2.5;
- else (i.e the IE P-Max as defined in TS 36.331 [7] is provided and set to the higher value than the maximum output power of the default power class):
- meet all requirements for the supported power class and set its configured transmitted power as specified in sub-clause 6.2.5;

Table 6.2.2B-2: UL-MIMO configuration in closed-loop spatial multiplexing scheme

| Transmission mode | DCI format | Codebook Index |
| :---: | :---: | :---: |
| Mode 2 | DCI format 4 | Codebook index 0 |

If UE is configured for transmission on single-antenna port, the requirements in subclause 6.2.2 apply.

### 6.2.2C Void

<reserved for future use>

### 6.2.2D UE maximum output power for ProSe

When UE is configured for simultaneous E-UTRA ProSe sidelink and E-UTRA uplink transmissions for inter-band EUTRA ProSe / E-UTRA bands specified in Table 5.5D-2, the UE maximum output power shall be as specified in Table 6.2.2A-0 in subclause 6.2 .2 A for the corresponding inter-band aggregation with uplink assigned to two bands.

If UE is configured to oprerate on single E-UTRA ProSe sidelink band or E-UTRA uplink band specidied in Table 5.5D-1, the requirements in subclause 6.2 .2 apply.

### 6.2.2E UE maximum output power for Category M1 and M2 UE

The following UE Power Classes define the maximum output power for any transmission bandwidth within the channel bandwidth for non CA configuration and UL-MIMO unless otherwise stated. The period of measurement shall be at least one sub frame ( 1 ms ).

Table 6.2.2E-1: UE Power Class

| EUTRA band | Class 2 (dBm) | Tolerance (dB) | Class 3 <br> (dBm) | Tolerance (dB) | Class 5 (dBm) | Tolerance (dB) | Class 6 (dBm) | Tolerance (dB) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 |  |  | 23 | $\pm 2$ | 20 | $\pm 2$ | 14 | $\pm 2.5$ |
| 2 |  |  | 23 | $\pm 2^{2}$ | 20 | $\pm 2^{2}$ | 14 | $\pm 2.5$ |
| 3 |  |  | 23 | $\pm 2^{2}$ | 20 | $\pm 2^{2}$ | 14 | $\pm 2.5$ |
| 4 |  |  | 23 | $\pm 2$ | 20 | $\pm 2$ | 14 | $\pm 2.5$ |
| 5 |  |  | 23 | $\pm 2$ | 20 | $\pm 2$ | 14 | $\pm 2.5$ |
| 7 |  |  | 23 | $\pm 2^{2}$ | 20 | $\pm 2^{2}$ | 14 | $\pm 2.5$ |
| 8 |  |  | 23 | $\pm 2^{2}$ | 20 | $\pm 2^{2}$ | 14 | $\pm 2.5$ |
| 11 |  |  | 23 | $\pm 2$ | 20 | $\pm 2$ | 14 | $\pm 2.5$ |
| 12 |  |  | 23 | $\pm{ }^{2}$ | 20 | $\pm 2^{2}$ | 14 | $\pm 2.5$ |
| 13 |  |  | 23 | $\pm 2$ | 20 | $\pm 2$ | 14 | $\pm 2.5$ |
| 14 |  |  | 23 | $\pm 2$ | 20 | $\pm 2$ | 14 | $\pm 2.5$ |
| 18 |  |  | 23 | $\pm 2^{5}$ | 20 | $\pm{ }^{5}$ | 14 | $\pm 2.5$ |
| 19 |  |  | 23 | $\pm 2$ | 20 | $\pm 2$ | 14 | $\pm 2.5$ |
| 20 |  |  | 23 | $\pm 2^{2}$ | 20 | $\pm 2^{2}$ | 14 | $\pm 2.5$ |
| 21 |  |  | 23 | $\pm 2$ | 20 | $\pm 2$ | 14 | $\pm 2.5$ |
| 25 |  |  | 23 | $\pm 2^{2}$ | 20 | $\pm 2$ | 14 | $\pm 2.5$ |
| 26 |  |  | 23 | $\pm 2^{2}$ | 20 | $\pm{ }^{2}$ | 14 | $\pm 2.5$ |
| 27 |  |  | 23 | $\pm 2$ | 20 | $\pm 2$ | 14 | $\pm 2.5$ |
| 28 |  |  | 23 | +2/-2.5 | 20 | +2/-2.5 | 14 | $\pm 2.5$ |
| 31 | $26^{7}$ | $\pm 2$ | 23 | $\pm 2$ | 20 | $\pm 2$ | 14 | $\pm 2.5$ |
| ... |  |  |  |  |  |  |  |  |
| 39 |  |  | 23 | $\pm 2$ | 20 | $\pm 2$ | 14 | $\pm 2.5$ |

| 41 |  |  | 23 | $\pm 2^{2}$ | 20 | $\pm{ }^{2}$ | 14 | $\pm 2.5$ |
| 42 |  |  | 23 | +2/-3 | 20 | +2/-3 | 14 | $\pm 2.5$ |
| 43 |  |  | 23 | +2/-3 | 20 | +2/-3 | 14 | $\pm 2.5$ |
|  |  |  |  |  |  |  |  |  |
| 71 |  |  | 23 | $\pm 2$ | 20 | $\pm 2$ | 14 | $\pm 2.5$ |
| 72 | $26^{7}$ | $\pm 2$ | 23 | $\pm 2$ | 20 | $\pm 2$ | 14 | $\pm 2.5$ |
| 73 |  |  | 23 | $\pm 2$ | 20 | $\pm 2$ | 14 | $\pm 2.5$ |
| 74 |  |  | 23 | $\pm 2$ | 20 | $\pm 2$ | 14 | $\pm 2.5$ |

| 85 |  |  | 23 | $\pm 2^{2}$ | 20 | $\pm 2^{2}$ | 14 | $\pm 2.5$ |
| :---: | :--- | :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| 87 |  |  | 23 | $\pm 2$ | 20 | $\pm 2$ | 14 | $\pm 2.5$ |
| 88 |  |  | 23 | $\pm 2$ | 20 | $\pm 2$ | 14 | $\pm 2.5$ |

NOTE 1: Void
NOTE 2: ${ }^{2}$ refers to the transmission bandwidths (Figure 5.6-1) confined within Ful_low and Ful_low +4 MHz or Ful_high - 4 MHz and Ful_high, the maximum output power requirement is relaxed by reducing the lower tolerance limit by 1.5 dB
NOTE 3: For the UE which supports both Band 11 and Band 21 operating frequencies, the tolerance is FFS.
NOTE 4: PpowerClass is the maximum UE power specified without taking into account the tolerance
NOTE 5: For a UE that supports both Band 18 and Band 26, the maximum output power requirement is relaxed by reducing the lower tolerance limit by 1.5 dB for transmission bandwidths confined within 815 MHz and 818 MHz .
NOTE 6: Void
NOTE 7: Applicable for category M1 and M2 HD-FDD UE

### 6.2.2F UE maximum output power for category NB1 and NB2

Category NB1 and NB2 UE Power Classes are specified in Table $6.2 .2 \mathrm{~F}-1$ and define the maximum output power for any transmission bandwidth within the category NB1 and NB2 channel bandwidth. For 3.75 kHz sub-carrier spacing the maximum output power is defined as mean power of measurement which period is atleast one slot ( 2 ms ) excluding the 2304 Ts gap when UE is not transmitting. For 15 kHz sub-carrier spacing the maximum output power is defined as mean power of measurement which period is atleast one sub-frame ( 1 ms ).

Table 6.2.2F-1: UE Power Class

| EUTRA band | $\begin{gathered} \text { Class } 3 \\ (\mathrm{dBm}) \\ \hline \end{gathered}$ | Tolerance (dB) | $\begin{gathered} \text { Class } 5 \\ (\mathrm{dBm}) \\ \hline \end{gathered}$ | Tolerance (dB) | $\begin{gathered} \hline \text { Class } 6 \\ (\mathrm{dBm}) \\ \hline \end{gathered}$ | $\begin{gathered} \text { Tolerance } \\ \text { (dB) } \end{gathered}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 23 | $\pm 2$ | 20 | $\pm 2$ | 14 | $\pm 2.5$ |
| 2 | 23 | $\pm 2$ | 20 | $\pm 2$ | 14 | $\pm 2.5$ |
| 3 | 23 | $\pm 2$ | 20 | $\pm 2$ | 14 | $\pm 2.5$ |
| 4 | 23 | $\pm 2$ | 20 | $\pm 2$ | 14 | $\pm 2.5$ |
| 5 | 23 | $\pm 2$ | 20 | $\pm 2$ | 14 | $\pm 2.5$ |

| 72 | 23 | $\pm 2$ | 20 | $\pm 2$ | 14 | $\pm 2.5$ |
| 73 | 23 | $\pm 2$ | 20 | $\pm 2$ | 14 | $\pm 2.5$ |
| 74 | 23 | $\pm 2$ | 20 | $\pm 2$ | 14 | $\pm 2.5$ |
| 85 | 23 | $\pm 2$ | 20 | $\pm 2$ | 14 | $\pm 2.5$ |
| 87 | 23 | $\pm 2$ | 20 | $\pm 2$ | 14 | $\pm 2.5$ |
| 88 | 23 | $\pm 2$ | 20 | $\pm 2$ | 14 | $\pm 2.5$ |

### 6.2.2G UE maximum output power for V2X Communication

When UE is configured for E-UTRA V2X sidelink transmissions non-concurrent with E-UTRA uplink transmissions for E-UTRA V2X operating bands specified in Table 5.5G-1, the allowed V2X UE maximum output power for shall be as applied in Table 6.2.2-1 in subclause 6.2.2.

For V2X UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions for inter-band E-UTRA V2X / E-UTRA bands specified in Table 5.5G-2, the UE maximum output power shall be as specified in Table $6.2 .2 \mathrm{G}-1$ in subclause 6.2 .2 G for the corresponding inter-band con-current operation with uplink assigned to two bands.

Table 6.2.2G-1: Inter-band con-current V2X UE Power Class (two bands)

| V2X concurrent band Configuration | Class 1 (dBm) | Tolerance (dB) | Class 2 (dBm) | Tolerance (dB) | Class 3 (dBm) | Tolerance (dB) | Class 4 (dBm) | Tolerance (dB) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| V2X_3A-47A |  |  |  |  | 23 | +2/-3 ${ }^{4}$ |  |  |
| V2X_5A-47A |  |  |  |  | 23 | +2/-3 ${ }^{4}$ |  |  |
| V2X 7 7-47A |  |  |  |  | 23 | $+2 /-3^{4}$ |  |  |
| V2X_8A-47A |  |  |  |  | 23 | +2/-3 ${ }^{4}$ |  |  |
| V2X 20A-47A |  |  |  |  | 23 | $+2 /-3^{4}$ |  |  |
| V2X_28A-47A |  |  |  |  | 23 | $+2 /-3^{4}$ |  |  |
| V2X_34A-47A |  |  |  |  | 23 | +2/-3 ${ }^{4}$ |  |  |
| V2X_39A-47A |  |  |  |  | 23 | $+2 /-3^{4}$ |  |  |
| V2X_41A-47A |  |  |  |  | 23 | +2/-3 ${ }^{4}$ |  |  |
| V2X 71A-47A |  |  |  |  | 23 | $+2 /-3^{4}$ |  |  |
| NOTE 1: The con-current band combinations is used for V2X Service. <br> NOTE 2: PPowerClass is the maximum UE power specified without taking into account the tolerance <br> NOTE 3: For inter-band con-current aggregation the maximum power requirement apply to the total transmitted power over all component carriers (per UE). <br> NOTE 4: ${ }^{4}$ refers to the transmission bandwidths (Figure 5.6-1) confined within Ful_low and Ful_low +4 MHz or Ful_high -4 MHz and Ful_high, the maximum output power requirement is relaxed by reducing the lower tolerance limit by 1.5 dB |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |

For intra-band contiguous multi-carrier operation, the maximum output power is defined in Table 6.2.2G-2.
Table 6.2.2G-2: V2X UE Power Class for intra-band contiguous multi-carrier operation

| V2X intra- <br> band multi- <br> carrier <br> configuratio <br> $\mathbf{n}$ | Class <br> $\mathbf{1}$ <br> $(\mathrm{dBm})$ | Toleranc <br> $\mathbf{e}(\mathrm{dB})$ | Class <br> $\mathbf{2}$ <br> $(\mathrm{dBm})$ | Toleranc <br> $\mathbf{e}(\mathrm{dB})$ | Class <br> $\mathbf{3}$ <br> $(\mathrm{dBm})$ | Toleranc <br> $\mathbf{e}(\mathrm{dB})$ | Class <br> $\mathbf{4}$ <br> $(\mathrm{dBm})$ | Toleranc <br> $\mathbf{e}(\mathrm{dB})$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| V2X_47B |  |  |  |  | 23 | $\pm 2$ |  |  |
| V2X_47C |  |  |  |  | 23 | $\pm 2$ |  |  |

NOTE 1: PpowerClass is the maximum UE power specified without taking into account the tolerance
NOTE 2: For intra-band multi-carrier operation, the maximum power requirement should apply to the total transmitted power over all component carriers (per UE).

When a UE is configured for E-UTRA V2X sidelink transmissions in Band 47, the UE shall meet the following additional requirements for transmission within the frequency ranges $5855-5925 \mathrm{MHz}$ :

- The maximum mean power spectral density shall be restricted to $23 \mathrm{dBm} / \mathrm{MHz}$ EIRP when the network signaling value NS_33 or NS_34 is indicated.
where the network signaling values are specified in clause 6.2 .4 G .
NOTE: The PSD limit in EIRP shall be converted to conducted requirement depend on the supported post antenna connector gain $\mathrm{G}_{\text {post connector }}$ declared by the UE following the principle described in annex I.

For V2X UE supporting Transmit Diversity, if the UE transmits on two connectors at the same time, the maximum output power for any transmission bandwidth within the channel bandwidth is specified in Table $6.2 .2 \mathrm{G}-3$. The
maximum output power is measured as the sum of the maximum output power at each UE antenna connector. The period of measurement shall be at least one sub frame (1ms).

Table 6.2.2G-3: V2X UE Power Class for Transmit Diversity scheme

| E-UTRA <br> band | Class 1 <br> $(\mathrm{dBm})$ | Tolerance <br> $(\mathrm{dB})$ | Class 2 <br> $(\mathrm{dBm})$ | Tolerance <br> $(\mathrm{dB})$ | Class 3 <br> $(\mathrm{dBm})$ | Tolerance <br> $(\mathrm{dB})$ | Class 4 <br> $(\mathrm{dBm})$ | Tolerance <br> $(\mathrm{dB})$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 47 |  |  | 26 | $+2 /-3$ | 23 | $+2 /-3$ |  |  |

If the UE transmits on one antenna connector at a time, the requirements in Table 6.2.2-1 shall apply to the active antenna connector.

### 6.2.3 UE maximum output power for modulation / channel bandwidth

For UE Power Class 1, 2 and 3, the allowed Maximum Power Reduction (MPR) for the maximum output power in Table 6.2.2-1 due to higher order modulation and transmit bandwidth configuration (resource blocks) is specified in Table 6.2.3-1.

Table 6.2.3-1: Maximum Power Reduction (MPR) for Power Class 1, 2 and 3

| Modulation | Channel bandwidth / Transmission bandwidth (NB) |  |  |  |  |  | MPR (dB) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\mathbf{1 . 4}$ <br> $\mathbf{M H z}$ | $\mathbf{3 . 0}$ <br> $\mathbf{M H z}$ | $\mathbf{5}$ | $\mathbf{M H z}$ | $\mathbf{1 0}$ | $\mathbf{M H z}$ |  |
|  | $>5$ | $>4$ | $>8$ | $>12$ | $>16$ | $>18$ | $\leq 1$ |
| QPSK | $\leq 5$ | $\leq 4$ | $\leq 8$ | $\leq 12$ | $\leq 16$ | $\leq 18$ | $\leq 1$ |
| 16 QAM | $>5$ | $>4$ | $>8$ | $>12$ | $>16$ | $>18$ | $\leq 2$ |
| 16 QAM | $\leq 5$ | $\leq 4$ | $\leq 8$ | $\leq 12$ | $\leq 16$ | $\leq 18$ | $\leq 2$ |
| 64 QAM | $>5$ | $>4$ | $>8$ | $>12$ | $>16$ | $>18$ | $\leq 3$ |
| 64 QAM | $>4$ | $\mathbf{M H z}$ |  |  |  |  |  |
| 256 QAM | $\geq 1$ |  |  |  |  |  | $\leq 5$ |

For PRACH, PUCCH and SRS transmissions, the allowed MPR is according to that specified for PUSCH QPSK modulation for the corresponding transmission bandwidth.

For each TTI pattern, the MPR shall be evaluated per $\mathrm{T}_{\text {eval }}$ period as specified in table 6.2.3-2 and given by the maximum value taken over the transmission(s) within that period; the maximum MPR over $\mathrm{T}_{\text {REF }}$ is then applied for $\mathrm{T}_{\text {REF }}$.

Table 6.2.3-2: MPR evaluation period

| TTI pattern | T$_{\text {REF }}$ | T $_{\text {eval }}$ |
| :---: | :---: | :---: |
| Subframe | 1 subframe | 1 slot |
| Slot | 7 OS | $\operatorname{Min}\left(T_{\text {no_hopping, }}\right.$ 7OS $)$ |
| Sublot | 2 OS, 3OS | $\operatorname{Min}\left(T_{\text {no_hopping, }}\right.$ 2OS/3OS $)$ |

For UE Power Class 1 and 3 transmissions with non-contiguous resource allocation in single component carrier, the allowed Maximum Power Reduction (MPR) for the maximum output power in table 6.2.2-1, is specified as follows

$$
\mathrm{MPR}=\operatorname{CEIL}\left\{\mathrm{M}_{\mathrm{A}}, 0.5\right\}
$$

Where $\mathrm{M}_{\mathrm{A}}$ is defined as follows for QPSK, 16 QAM and 64 QAM

$$
\begin{aligned}
\mathrm{M}_{\mathrm{A}}= & 8.00-10.12 \mathrm{~A} & & ; 0.00<\mathrm{A} \leq 0.33 \\
& 5.67-3.07 \mathrm{~A} & & ; 0.33<\mathrm{A} \leq 0.77 \\
& 3.31 & & ; 0.77<\mathrm{A} \leq 1.00
\end{aligned}
$$

Where $\mathrm{M}_{\mathrm{A}}$ is defined as follows for 256 QAM

$$
\begin{array}{cl}
\mathrm{MA}=8.00-10.12 \mathrm{~A} & ; 0.00<\mathrm{A} \leq 0.25 \\
5.50 & ; 0.25<\mathrm{A}<1.00
\end{array}
$$

Where

$$
\mathrm{A}=\mathrm{N}_{\mathrm{RB} \text { _alloc }} / \mathrm{N}_{\mathrm{RB}} .
$$

$\operatorname{CEIL}\left\{\mathrm{M}_{\mathrm{A}}, 0.5\right\}$ means rounding upwards to closest 0.5 dB , i.e. MPR $\in[3.0,3.54 .04 .55 .05 .56 .06 .57 .07 .5$ 8.0]

The allowed MPR for transmission on an Scell in Band 46 or Band 49 within a component carrier of a nominal channel bandwidth of 10 MHz or 20 MHz is in accordance with $6.2 .3-1$ for $R I V=' 11111 '(10 \mathrm{MHz})$ and $L=10(20 \mathrm{MHz})$ with $L$ defined in Clause 8.1.4 of [6]. For all other possible values of the RIV defined in Clause 8.1.4 of [6] the allowed MPR is 2.5 dB for QPSK modulation, 3 dB for 16QAM modulation and 4 dB for 64QAM modulation (256QAM is FFS).

For a power class 2 capable UE operating on Band 41, when an IE $P$-max as defined in [7] of 23 dBm or lower is indicated in the cell or if the uplink/downlink configuration is 0 or 6 , the requirements for power class 2 are not applicable, and the corresponding requirements for a power class 3 UE shall apply.

For each supported frequency band other than Band 14 and Band 41, the UE shall:

- if the UE supports a different power class than the default UE power class for the band and the supported power class enables the higher maximum output power than that of the default power class:
- if the band is a TDD band whose frame configuration is 0 or 6 ; or
- if the IE P-Max as defined in TS 36.331 [7] is not provided; or
- if the IE $P$-Max as defined in TS 36.331 [7] is provided and set to the maximum output power of the default power class or lower;
- meet all requirements for the default power class of the operating band in which the UE is operating and set its configured transmitted power as specified in sub-clause 6.2.5;
- else (i.e the IE P-Max as defined in TS 36.331 [7] is provided and set to the higher value than the maximum output power of the default power class):
- meet all requirements for the supported power class and set its configured transmitted power class as specified in sub-clause 6.2.5.

For UE Power Class 2 transmissions with non-contiguous resource allocation in single component carrier, the allowed Maximum Power Reduction (MPR) for the maximum output power is not specified in this version of the specification.

For the UE maximum output power modified by MPR, the power limits specified in subclause 6.2 .5 apply.

### 6.2.3A UE Maximum Output power for modulation / channel bandwidth for CA

For inter-band carrier aggregation with one uplink component carrier assigned to one E-UTRA band, the requirements in subclause 6.2.3 apply. For inter-band carrier aggregation with two uplink contiguous component carrier assigned to one E-UTRA band specified in this clause for intra-band contiguous carrier aggregation apply for that band.

For inter-band carrier aggregation with one component carrier per operating band and the uplink active in two E-UTRA bands, the requirements in subclause 6.2.3 apply for each uplink component carrier.

For intra-band contiguous carrier aggregation the allowed Maximum Power Reduction (MPR) for the maximum output power in Table 6.2 .2 A -1due to higher order modulation and contiguously aggregated transmit bandwidth configuration (resource blocks) is specified in Table 6.2.3A-1 for UE power class 3 CA bandwidth classes B and C, in Table 6.2.3A1a for UE power class 2 CA bandwidth class C, and Table 6.2.3A-2 for UE power class 3 CA bandwidth class D. In case the modulation format is different on different component carriers then the MPR is determined by the rules applied to higher order of those modulations.

Table 6.2.3A-1: Maximum Power Reduction (MPR) for Power Class 3

| Modulation | CA bandwidth Class B and C / Smallest <br> Component Carrier Transmission <br> Bandwidth Configuration | MPR <br> (dB) |
| :---: | :---: | :---: |

$\left.\begin{array}{|c|c|c|c|c|c|}\hline & \text { 25 RB } & \text { 50 RB } & \text { 75 RB } & \text { 100 RB } & \\ \hline \text { QPSK } & \begin{array}{c}>8 \text { and } \leq \\ 25\end{array} & \begin{array}{c}>12 \text { and } \\ \leq 50\end{array} & \begin{array}{c}>16 \text { and } \\ \leq 75\end{array} & \begin{array}{c}>18 \text { and } \\ \leq 100\end{array} & \leq 1 \\ \hline \text { QPSK } & >25 & >50 & >75 & >100 & \leq 2 \\ \hline \text { 16 QAM } & \leq 8 & \leq 12 & \leq 16 & \leq 18 & \leq 1 \\ \hline \text { 16 QAM } & >8 \text { and } \leq \\ 25\end{array}\right)$

| 256 QAM | $\geq 1$ |  |  |  |  | $\leq 5.5$ |

For PUCCH and SRS transmissions, the allowed MPR is according to that specified for PUSCH QPSK modulation for the corresponding transmission bandwidth.

For UE power class 3 intra-band contiguous carrier aggregation bandwidth class C with non-contiguous resource allocation, the allowed Maximum Power Reduction (MPR) for the maximum output power in Table 6.2.2A-1 is specified as follows

$$
\mathrm{MPR}=\mathrm{CEIL}\left\{\min \left(\mathrm{M}_{\mathrm{A}}, \mathrm{M}_{\mathrm{IM} 5}\right), 0.5\right\}
$$

Where $\mathrm{M}_{\mathrm{A}}$ is defined as follows for QPSK, 16 QAM and 64 QAM

$$
\begin{array}{ll}
\mathrm{M}_{\mathrm{A}}= & 8.2 \\
9.2-40 \mathrm{~A} & ; 0 \leq \mathrm{A}<0.025 \\
8-16 \mathrm{~A} & ; 0.05 \leq \mathrm{A}<0.05 \\
4.83-3.33 \mathrm{~A}<0.25 \\
& ; 0.25 \leq \mathrm{A} \leq 0.4, \\
& 3.83-0.83 \mathrm{~A}
\end{array}
$$

Where $\mathrm{M}_{\mathrm{A}}$ is defined as follows for 256 QAM

$$
\begin{array}{ll}
\text { MA }= & 8.2 \\
9.2-40 \mathrm{~A} & ; 0 \leq \mathrm{A}<0.025 \\
8-16 \mathrm{~A} & ; 0.025 \leq \mathrm{A}<0.05 \\
& ; 0.05 \leq \mathrm{A}<0.16 \\
5.5 & ; 0.16 \leq \mathrm{A}<1
\end{array}
$$

and $\mathrm{M}_{\text {IM } 5}$ is defined as follows

$$
\begin{array}{rlrl}
\mathrm{M}_{\mathrm{IM} 5}= & 4.5 & & ; \Delta_{\mathrm{IM} 5}<1.5 * \mathrm{BW}_{\text {Channel_CA }} \\
& 6.0 & ; 1.5 * \mathrm{BW}_{\text {Channel_CA }} \leq \Delta_{\mathrm{IM} 5}<\mathrm{BW}_{\text {Channel_CA }} / 2+\mathrm{F}_{\mathrm{OOB}} \\
& \mathrm{M}_{\mathrm{A}} & ; \Delta_{\mathrm{IM} 5} \geq \mathrm{BW}_{\text {Channel_CA }} / 2+\mathrm{F}_{\mathrm{OOB}}
\end{array}
$$

For UE power class 2 intra-band contiguous carrier aggregation bandwidth class C with non-contiguous resource allocation, the allowed Maximum Power Reduction (MPR) for the maximum output power in Table 6.2.2A-1 is specified as follows

$$
\mathrm{MPR}=\operatorname{CEIL}\left\{\min \left(\mathrm{M}_{\mathrm{A}}, \mathrm{M}_{\mathrm{IM} 5}\right), 0.5\right\}
$$

Where $\mathrm{M}_{\mathrm{A}}$ is defined as follows for QPSK, 16 QAM and 64 QAM

$$
\begin{array}{rll}
\mathrm{M}_{\mathrm{A}}= & 8.2 & ; 0 \leq \mathrm{A}<0.04 \\
& 9.2-40 \mathrm{~A} & ; 0.04 \leq \mathrm{A}<0.075 \\
& 8-16 \mathrm{~A} & ; 0.075 \leq \mathrm{A}<0.25 \\
& 4.83-3.33 \mathrm{~A} & ; 0.25 \leq \mathrm{A} \leq 0.4, \\
& 3.83-0.83 \mathrm{~A} & ; 0.4 \leq \mathrm{A} \leq 1,
\end{array}
$$

Where $\mathrm{M}_{\mathrm{A}}$ is defined FFS for 256 QAM and $\mathrm{M}_{\mathrm{IM} 5}$ is defined as follows

$$
\begin{aligned}
\mathrm{M}_{\mathrm{IM} 5}=5.0 & \\
& ; \Delta_{\mathrm{IM} 5}<1.5 * \mathrm{BW}_{\text {Channel_CA }} \\
& 6.0 \\
& ; 1.5 * \mathrm{BW}_{\text {Channel_CA }} \leq \Delta_{\mathrm{IM} 5}<\mathrm{BW}_{\text {Channel_CA }} / 2+\mathrm{F}_{\mathrm{OOB}} \\
& \\
& ; \Delta_{\mathrm{IM} 5} \geq \mathrm{BW}_{\text {Channel_CA }} / 2+\mathrm{F}_{\mathrm{OOB}}
\end{aligned}
$$

For UE power class 3 intra-band contiguous carrier aggregation bandwidth class B with non-contiguous resource allocation, the allowed Maximum Power Reduction (MPR) for the maximum output power in Table 6.2.2A-1 is specified as follows

$$
\mathrm{MPR}=\operatorname{CEIL}\left\{\mathrm{M}_{\mathrm{A}}, 0.5\right\}
$$

Where $\mathrm{M}_{\mathrm{A}}$ is defined as follows for QPSK, 16 QAM and 64 QAM

$$
\begin{array}{rll}
\mathrm{M}_{\mathrm{A}}=10.5-17.5 \mathrm{~A} & ; 0 \leq \mathrm{A}<0.2 \\
& 8.5-7.5 \mathrm{~A} & ; 0.2 \leq \mathrm{A}<0.6 \\
5.5-2.5 \mathrm{~A} & ; 0.6 \leq \mathrm{A} \leq 1
\end{array}
$$

Where $\mathrm{M}_{\mathrm{A}}$ is defined as follows for 256 QAM

$$
\begin{array}{ll}
\mathrm{M}_{\mathrm{A}}=10.5-17.5 \mathrm{~A} & ; 0 \leq \mathrm{A}<0.2 \\
& 8.5-7.5 \mathrm{~A}
\end{array}
$$

Where

$$
\begin{aligned}
& \mathrm{A}=\mathrm{N}_{\mathrm{RB} \_ \text {alloc }} / \mathrm{N}_{\text {RB_agg. }} \\
& \Delta_{\mathrm{IM} 5}=\max \left(\left|\mathrm{F}_{\mathrm{C} \_ \text {agg }}-\left(3 * \mathrm{~F}_{\text {agg_alloc_low }}-2 * \mathrm{~F}_{\text {agg_alloc_high }}\right)\right|,\left|\mathrm{F}_{\mathrm{C} \_ \text {agg }}-\left(3 * \mathrm{~F}_{\text {agg_alloc_high }}-2 * \mathrm{~F}_{\text {agg_alloc_low }}\right)\right|\right) \\
& \mathrm{F}_{\mathrm{C} \_ \text {agg }}=\left(\mathrm{F}_{\text {edge_high }}+\mathrm{F}_{\text {edge_low }}\right) / 2
\end{aligned}
$$

For UE power class 3 intra-band contiguous carrier aggregation bandwidth class D with non-contiguous resource allocation, the allowed Maximum Power Reduction (MPR) for the maximum output power in Table 6.2.3A-2 is specified as follows

$$
\operatorname{MPR}=\operatorname{CEIL}\left\{\min \left(\mathrm{M}_{\mathrm{A}}, \mathrm{M}_{\mathrm{IM} 5}\right), 0.5\right\}
$$

Where $\mathrm{M}_{\mathrm{A}}$ is defined as follows for QPSK, 16 QAM and 64 QAM

$$
\begin{aligned}
& M_{A}=8.2 \\
& ; 0 \leq \mathrm{A}<0.025 \\
& 9.2-40 \mathrm{~A} \quad ; 0.025 \leq \mathrm{A}<0.05 \\
& 8-16 \mathrm{~A} \quad ; 0.05 \leq \mathrm{A}<0.25
\end{aligned}
$$

$$
4.0 \quad ; 0.25 \leq \mathrm{A}<1
$$

Where $\mathrm{M}_{\mathrm{A}}$ is defined as follows for 256 QAM

| $\mathrm{M}_{\mathrm{A}}=$ | 8.2 | $; 0 \leq \mathrm{A}<0.025$ |
| :--- | :--- | :--- |
|  | $9.2-40 \mathrm{~A}$ | $; 0.025 \leq \mathrm{A}<0.05$ |
| $8-16 \mathrm{~A}$ | $; 0.05 \leq \mathrm{A}<0.16$ |  |
|  | 5.5 | $; 0.16 \leq \mathrm{A}<1$ |

and $\mathrm{M}_{\mathrm{IM} 5}$ is defined as follows

$$
\begin{aligned}
\mathrm{M}_{\mathrm{IM} 5}=4.5 & & ; \Delta_{\mathrm{IM} 5}<1.5 * \mathrm{BW}_{\text {Channel_CA }} \\
& 6.0 & ; 1.5 * \mathrm{BW}_{\text {Channel_CA }} \leq \Delta_{\mathrm{IM} 5}<\quad \mathrm{BW}_{\text {Channel_CA }} / 2+\mathrm{F}_{\mathrm{OOB}} \\
& \mathrm{M}_{\mathrm{A}} & ; \Delta_{\mathrm{IM} 5} \geq \mathrm{BW}_{\text {Channel_CA }} / 2+\mathrm{F}_{\mathrm{OOB}}
\end{aligned}
$$

$\operatorname{CEIL}\left\{\mathrm{M}_{\mathrm{A}}, 0.5\right\}$ means rounding upwards to closest 0.5 dB , i.e. MPR $\in[3.0,3.5,4.0,4.5,5.0,5.5,6.0,6.5,7.0,7.5$, 8.0, 8.5].

For intra-band non-contiguous carrier aggregation with one uplink carrier, the requirements in subclause 6.2.3 apply.
For intra-band non-contiguous carrier aggregation with two uplink carriers MPR is specified for E-UTRA CA configurations with a maximum possible $\mathrm{W}_{\mathrm{GAP}} \leq 35 \mathrm{MHz}$; the allowed MPR is

$$
\operatorname{MPR}=\operatorname{CEIL}\left\{\mathrm{M}_{\mathrm{N}}, 0.5\right\}
$$

where $\mathrm{M}_{\mathrm{N}}$ is defined as follows

$$
\begin{array}{llr}
\mathrm{M}_{\mathrm{N}}= & -0.125 \mathrm{~N}+18.25 & ; 2 \leq \mathrm{N} \leq 50 \\
& -0.0333 \mathrm{~N}+13.67 & ; 50<\mathrm{N} \leq 200
\end{array}
$$

where $\mathrm{N}=\mathrm{N}_{\text {RB_alloc }}$ is the number of allocated resource blocks. Clause 6.2 .3 does not apply in addition. E-UTRA CA configurations with a maximum possible $\mathrm{W}_{\text {gap }}>35 \mathrm{MHz}$ and their corresponding MPR are intended to form part of a later release.

For intra-band carrier aggregation, the MPR is evaluated per $T_{\text {eval }}$ period specified in table 6.2.3A-3 and given by the maximum value taken over the transmission(s) on all component carriers within that period; the maximum MPR over $\mathrm{T}_{\text {REF }}$ is then applied for $\mathrm{T}_{\text {REF }}$.

Table 6.2.3A-3: MPR evaluation period for CA

| TTI pattern | $\mathbf{T}_{\text {REF }}$ | $\mathbf{T}_{\text {eval }}$ |
| :---: | :---: | :---: |
| Subframe | 1 subframe | 1 slot |
| Slot | 7 OS | $\operatorname{Min}\left(T_{\text {no_hopping, }}\right.$ 7OS $)$ |
| Sublot | 2 OS, 3OS | Min(Tno_hopping, <br> 2OS/3OS $)$ |

For combinations of intra-band and inter-band carrier aggregation with three uplink component carriers (up to two contiguously aggregated carriers per band), the requirements specified in subclause 6.2.3 apply for the E-UTRA band supporting one component carrier, and for the E-UTRA band supporting two contiguous component carriers the requirements specified in subclause 6.2 .3 A apply.

For the UE maximum output power modified by MPR, the power limits specified in subclause 6.2 .5 A apply.

### 6.2.3B UE maximum output power for modulation / channel bandwidth for UL-MIMO

For UE with two transmit antenna connectors in closed-loop spatial multiplexing scheme, the allowed Maximum Power Reduction (MPR) for the maximum output power in Table 6.2.2B-1 is specified in Table 6.2.3-1. The requirements
shall be met with UL-MIMO configurations defined in Table 6.2.2B-2. For UE supporting UL-MIMO, the maximum output power is measured as the sum of the maximum output power at each UE antenna connector.

For the UE maximum output power modified by MPR, the power limits specified in subclause 6.2.5B apply.
If UE is configured for transmission on single-antenna port, the requirements in subclause 6.2.3 apply.

### 6.2.3D UE maximum output power for modulation / channel bandwidth for ProSe

When UE is configured for E-UTRA ProSe sidelink transmissions non-concurrent with E-UTRA uplink transmissions for E-UTRA ProSe operating bands specified in Table 5.5D-1, this subclause specifies the allowed Maximum Power Reduction (MPR) power for ProSe physical channels and signals due to higher order modulation and transmit bandwidth configuration (resource blocks).

The allowed MPR for the maximum output power for ProSe physical channels PSDCH, PSCCH, PSSCH, and PSBCH shall be as specified in subclause 6.2.3 for PUSCH for the corresponding modulation and transmission bandwidth.

The allowed MPR for the maximum output power for ProSe physical signal PSSS shall be as be as specified in subclause 6.2.3 for PUSCH QPSK modulation for the corresponding transmission bandwidth.

The allowed MPR for the maximum output power for ProSe physical signal SSSS is specified in Table 6.2.3D-1.
For a power class 2 capable UE operating on Band 41, the corresponding requirements for a power class 3 UE apply when an IE $P$-max as defined in [7] of 23 dBm or lower is indicated in the cell or if the uplink/downlink configuration is 0 or 6 .

For each supported frequency band other than Band 14 and Band 41, the UE shall:

- if the UE supports a different power class than the default UE power class for the band and the supported power class enables the higher maximum output power than that of the default power class:
- if the band is a TDD band whose frame configuration is 0 or 6 ; or
- if the IE P-Max as defined in TS 36.331 [7] is not provided; or
- if the IE P-Max as defined in TS 36.331 [7] is provided and set to the maximum output power of the default power class or lower;
- meet all requirements for the default power class of the operating band in which the UE is operating and set its configured transmitted power as specified in sub-clause 6.2.5;
- else (i.e the IE $P$-Max as defined in TS 36.331 [7] is provided and set to the higher value than the maximum output power of the default power class):
- meet all requirements for the supported power class and set its configured transmitted power class as specified in sub-clause 6.2.5.

Table 6.2.3D-1: Maximum Power Reduction (MPR) for SSSS for Power Class 1, 2 and 3

| Channel bandwidth | MPR for SSSS (dB) |
| :---: | :---: |
| 1.4 MHz |  |
| 3.0 MHz | $\leq 4$ |
| 5.0 MHz | $\leq 4$ |
| 10 MHz | $\leq 4$ |
| 15 MHz | $\leq 4$ |
| 20 MHz |  |

When UE is configured for simultaneous E-UTRA ProSe sidelink and E-UTRA uplink transmissions for inter-band EUTRA ProSe / E-UTRA bands specified in Table 5.5D-2, the requirements in subclause 6.2.3D apply for ProSe transmission and the requirements in subclause 6.2.3 apply for uplink transmission.

### 6.2.3E UE maximum output power for modulation / channel bandwidth for category M1 and M2

For category M1 UE Power Class 3, 5 and 6, the allowed Maximum Power Reduction (MPR) for the maximum output power specified in Table 6.2.2E-1 due to higher order modulation and transmit bandwidth configuration (resource blocks) is specified in Tables 6.2.3E-1, 6.2.3E-2 and 6.2.3E-5 respectively.

For category M2 UE Power Class 3, 5 and 6, the allowed Maximum Power Reduction (MPR) for the maximum output power specified in Table 6.2.2E-1 due to higher order modulation and transmit bandwidth configuration (resource blocks) is specified in Table $6.2 .3 \mathrm{E}-3$, Table $6.2 .3 \mathrm{E}-4$ and Table $6.2 .3 \mathrm{E}-6$ respectively.

For subPRB allocation of category M1 UE of Power Class 3, there is no MPR applies. For subPRB allocation of category M2 UE of Power Class 3, the allowed MPR due to higher order modulation and transmit bandwidth configuration (subcarrier) is specified in in Table 6.2.3E-7.

Table 6.2.3E-1: Maximum Power Reduction (MPR) for category M1 UE for Power Class 2 and 3

| Modulation | Channel bandwidth / Transmission bandwidth (N $\mathbf{N B}^{*}$ |  |  |  |  |  |  |

Table 6.2.3E-7: Maximum Power Reduction (MPR) for category M2 UE for Power Class 3 for subPRB allocation

| Channel bandwidth | 5 MHz |  | 10 MHz |  |  |  | 15MHz |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Modulation | BPSK | QPSK | BPSK |  | QPSK |  | BPSK |  | QPSK |  |
| WB index for 2 subcarrier transmission | 0 | - | 0 | 1 |  |  | 0 | 2 |  |  |
| MPR | $\leq 0.5$ | - | $\leq 0.5$ | $\leq 0.5$ |  |  | $\leq 0.5$ | $\leq 0.5$ |  |  |
| WB index for 3 subcarrier transmission | - | 0 |  |  | 0 | 1 |  |  | 0 | 2 |
| MPR | - | $\leq 2$ |  |  | $\leq 2$ | $\leq 2$ |  |  | $\leq 2$ | $\leq 2$ |
| WB index for 6 subcarrier transmission | - | 0 |  |  | 0 | 1 |  |  | 0 | 2 |
| MPR | - | $\leq 1$ |  |  | $\leq 1$ | $\leq 1$ |  |  | $\leq 1$ | $\leq 1$ |
| NOTE: $\quad$ WB is specified in TS 36.211 [4] |  |  |  |  |  |  |  |  |  |  |

For PRACH, PUCCH and SRS transmissions, the allowed MPR is according to that specified for PUSCH QPSK modulation for the corresponding transmission bandwidth.

For each subframe, the MPR is evaluated per slot and given by the maximum value taken over the transmission(s) within the slot; the maximum MPR over the two slots is then applied for the entire subframe.

For the UE maximum output power modified by MPR, the power limits specified in subclause 6.2.5 apply.
No other MPR requirement than those specified in tables $6.2 .3 \mathrm{E}-1$ and Table $6.2 .3 \mathrm{E}-2$ and Table $6.2 .3 \mathrm{E}-5$ applies to category M1 and those specified in tables $6.2 .3 \mathrm{E}-3$ and Table $6.2 .3 \mathrm{E}-4$ and Table $6.2 .3 \mathrm{E}-6$ applies to category M2 UE.

### 6.2.3F UE maximum output power for modulation / channel bandwidth for category NB1 and NB2

For UE category NB1 and NB2 power class 3 and 5 the allowed Maximum Power Reduction (MPR) for the maximum output power given in Table $6.2 .2 \mathrm{~F}-1$ is specified in Table 6.2.3F-1.

Table 6.2.3F-1: Maximum Power Reduction (MPR) for UE category NB1 and NB2 Power Class 3 and 5

| Modulation | QPSK |  |  |
| :---: | :---: | :---: | :---: |
| Tone positions for 3 Tones allocation | $0-2$ | $3-5$ and 6-8 | $9-11$ |
| MPR | $\leq 0.5 \mathrm{~dB}$ | 0 dB | $\leq 0.5 \mathrm{~dB}$ |
| Tone positions for 6 Tones allocation | $0-5$ and 6-11 |  |  |
| MPR | $\leq 1 \mathrm{~dB}$ |  | $\leq 1 \mathrm{~dB}$ |

| Tone positions for 12 Tones allocation | $0-11$ |
| :---: | :---: |
| MPR | $\leq 2 \mathrm{~dB}$ |

For UE category NB1 and NB2 power class 6 the allowed Maximum Power Reduction (MPR) for the maximum output power given in Table 6.2.2F-1 is specified in Table 6.2.3F-2.

Table 6.2.3F-2: Maximum Power Reduction (MPR) for UE category NB1 and NB2 Power Class 6

| Modulation | QPSK |
| :---: | :---: |
| MPR for 3 Tones allocation | $\leq 0.5 \mathrm{~dB}$ |
| MPR for 6 Tones allocation | $\leq 1 \mathrm{~dB}$ |
| MPR for 12 Tones allocation | $\leq 1.5 \mathrm{~dB}$ |

For the UE maximum output power modified by MPR, the power limits specified in sub-clause 6.2 .5 F apply.

### 6.2.3G UE maximum output power for modulation / channel bandwidth for V2X Communication

When UE is configured for E-UTRA V2X sidelink transmissions non-concurrent with E-UTRA uplink transmissions for E-UTRA V2X operating bands specified in Table 5.5G-1, this subclause specifies the allowed Maximum Power Reduction (MPR) power for V2X physical channels and signals due to PSCCH and PSSCH simultaneous transmission.

### 6.2.3G. 1 MPR for Power class 3 V2X UE

For contiguous allocation of PSCCH and PSSCH simultaneous transmission, the allowed MPR for the maximum output power for V2X physical channels PSCCH and PSSCH shall be as specified in Table 6.2.3G.1-1 for power class 3.

Table 6.2.3G.1-1: Maximum Power Reduction (MPR) for power class 3 V2X Communication (Contiguous PSCCH and PSSCH transmission)

| Modulation | Channel bandwidth / Transmission bandwidth (NB) |  |  |  |  |  | MPR (dB) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\mathbf{1 . 4}$ | $\mathbf{3 . 0}$ | $\mathbf{5}$ | $\mathbf{1 0}$ | $\mathbf{1 5}$ | $\mathbf{2 0}$ |  |
|  | $\mathbf{M H z}$ | $\mathbf{M H z}$ | $\mathbf{M H z}$ | $\mathbf{M H z}$ | $\mathbf{M H z}$ | $\mathbf{M H z}$ |  |
| QPSK |  |  |  |  |  |  | $\leq 1.5$ |
| 16 QAM |  |  |  |  |  |  | $\leq 2$ |
| 64QAM |  |  |  |  |  |  | $\leq 3$ |

For non-contiguous allocation of PSCCH and PSSCH simultaneous transmission, the allowed MPR for the maximum output power for V2X physical channels PSCCH and PSSCH shall be as specified as follows

$$
\mathrm{MPR}=\operatorname{CEIL}\left\{\mathrm{M}_{\mathrm{A}}, 0.5\right\}
$$

Where $\mathrm{M}_{\mathrm{A}}$ is defined as follows

$$
\begin{aligned}
\mathrm{M}_{\mathrm{A}}= & 4.5 \quad ; 0.00<\mathrm{A} \leq 0.2 \\
& 5.5-5.833 \mathrm{~A} \\
& 2.0
\end{aligned} \quad ; 0.2<\mathrm{A} \leq 0.6
$$

Where

$$
\mathrm{A}=\mathrm{N}_{\mathrm{RB} \_ \text {alloc }} / \mathrm{N}_{\mathrm{RB}} .
$$

$\operatorname{CEIL}\left\{\mathrm{M}_{\mathrm{A}}, 0.5\right\}$ means rounding upwards to closest 0.5 dB .
The allowed MPR for the maximum output power for V2X physical channels PSBCH and PSSS shall be as specified in subclause 6.2 .3 for the corresponding modulation and transmission bandwidth.

The allowed MPR for the maximum output power for V2X physical signal SSSS is specified in Table 6.2.3D-1.

When UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions for inter-band EUTRA V2X / E-UTRA bands specified in Table 5.5G-2, the allowed MPR requirements in subclause 6.2 .3 G apply for V2X PSSCH and PSCCH transmission. The allowed MPR requirements in subclause 6.2.3D apply for other V2X sidelink transmission (PSBCH/PSSS/SSSS). The MPR requirements in subclause 6.2.3 apply for uplink transmission.

For intra-band contiguous multi-carrier operation bandwidth class B the allowed Maximum Power Reduction (MPR) for the maximum output power in Table 6.2.2G.1-2 due to higher order modulation is specified as follows.

Table 6.2.3G.1-2: Void

$$
\operatorname{MPR}=\operatorname{CEIL}\left\{\mathrm{M}_{\mathrm{A}}, 0.5\right\}
$$

Where $\mathrm{M}_{\mathrm{A}}$ is defined as follows for QPSK, 16 QAM and 64 QAM

$$
\begin{array}{lll}
\mathrm{M}_{\mathrm{A}}= & 6.5 & ; 0 \leq \mathrm{A}<0.1 \\
& 8-15 \mathrm{~A} & ; 0.1 \leq \mathrm{A}<0.2 \\
& 5.75-3.75 \mathrm{~A} & ; 0.2 \leq \mathrm{A}<0.6
\end{array}
$$

$3.5 \quad ; 0.6 \leq \mathrm{A} \leq 1$ For intra-band contiguous multi-carrier operation bandwidth class C the allowed Maximum Power Reduction (MPR) for the maximum output power can be specified as follows. In case the modulation format is different on different component carriers then the MPR is determined by the rules applied to higher order of those modulations.

$$
\mathrm{MPR}=\operatorname{CEIL}\left\{\mathrm{M}_{\mathrm{A}}, 0.5\right\}
$$

Where $\mathrm{M}_{\mathrm{A}}$ is defined as follows for QPSK, 16 QAM and 64 QAM

$$
\begin{array}{rll}
{\left[\mathrm{M}_{\mathrm{A}}=\right.} & 6.5 & ; 0 \leq \mathrm{A}<0.1 \\
& 8.5-20 \mathrm{~A} & ; 0.1 \leq \mathrm{A}<0.2 \\
5.25-2.5 \mathrm{~A} & ; 0.2 \leq \mathrm{A}<0.6 \\
3.5 & ; 0.6 \leq \mathrm{A} \leq 1]
\end{array}
$$

### 6.2.3G.2 MPR for Power class 2 V2X UE

For contiguous allocation of PSCCH and PSSCH simultaneous transmission, the allowed MPR for the maximum output power for V2X physical channels PSCCH and PSSCH shall be as specified in Table 6.2.3G.2-1 for power class 2.

Table 6.2.3G.2-1: Maximum Power Reduction (MPR) for power class 2 V2X Communication (Contiguous PSCCH and PSSCH transmission)

| Modulation | Channel bandwidth Transmission bandwidth (NB) |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\mathbf{1 . 4}$ | $\mathbf{3 . 0}$ | $\mathbf{5}$ | $\mathbf{1 0}$ | $\mathbf{1 5}$ | $\mathbf{2 0}$ |  |
|  | $\mathbf{M H z}$ | $\mathbf{M H z}$ | $\mathbf{M H z}$ | $\mathbf{M H z}$ | $\mathbf{M H z}$ | $\mathbf{M H z}$ |  |
| QPSK |  |  |  |  |  |  | $\leq 2$ |
| 16 QAM |  |  |  |  |  |  | $\leq 2.5$ |
| 64QAM |  |  |  |  |  |  | $\leq 3$ |

For non-contiguous allocation of PSCCH and PSSCH simultaneous transmission, the allowed MPR for the maximum output power for V2X physical channels PSCCH and PSSCH shall be as specified as follows:

$$
\mathrm{MPR}=\operatorname{CEIL}\left\{\mathrm{M}_{\mathrm{A}}, 0.5\right\}
$$

Where $\mathrm{M}_{\mathrm{A}}$ is defined as follows
For 10 MHz channel bandwidth

$$
\begin{aligned}
\mathrm{M}_{\mathrm{A}}=4.5 & ; 0.0<\mathrm{A} \leq 0.2 \\
8.5-20.0 \mathrm{~A} & ; 0.2<\mathrm{A} \leq 0.3
\end{aligned}
$$

For 20 MHz channel bandwidth

$$
\begin{array}{cc}
\mathrm{M}_{\mathrm{A}}=9.0 & ; 0.0<\mathrm{A} \leq 0.1 \\
12.0-30.0 \mathrm{~A} & ; 0.1<\mathrm{A} \leq 0.3 \\
3.0 & ; 0.3<\mathrm{A} \leq 1.00
\end{array}
$$

Where

$$
\mathrm{A}=\mathrm{N}_{\mathrm{RB} \_ \text {alloc }} / \mathrm{N}_{\mathrm{RB}} .
$$

$\operatorname{CEIL}\left\{\mathrm{M}_{\mathrm{A}}, 0.5\right\}$ means rounding upwards to closest 0.5 dB .

### 6.2.4 UE maximum output power with additional requirements

Additional ACLR and spectrum emission requirements can be signalled by the network to indicate that the UE shall also meet additional requirements in a specific deployment scenario. To meet these additional requirements, Additional Maximum Power Reduction (A-MPR) is allowed for the output power as specified in Table 6.2.2-1. Unless stated otherwise, an A-MPR of 0 dB shall be used.

For UE Power Class 1, 2 and 3 the specific requirements and identified subclauses are specified in Table 6.2.4-1 along with the allowed A-MPR values that may be used to meet these requirements. The allowed A-MPR values specified below in Table 6.2.4.-1 to 6.2.4-15 are in addition to the allowed MPR requirements specified in subclause 6.2.3.

Table 6.2.4-1: Additional Maximum Power Reduction (A-MPR)

| Network Signalling value | Requirements (subclause) | E-UTRA Band | Channel bandwidth (MHz) | Resources Blocks ( $N_{\text {RB }}$ ) | A-MPR (dB) |

| NS_56 | 6.6.3.3.35 | 24 | 5, 10 | Tab |  |

NOTE 1: Applicable when the lower edge of the assigned E-UTRA UL channel bandwidth frequency is larger than or equal to the upper edge of PHS band ( 1915.7 MHz ) $+4 \mathrm{MHz}+$ the channel BW assigned, where channel BW is as defined in subclause 5.6. A-MPR for operations below this frequency is not covered in this version of specifications except for the channel assignments in NOTE2 as the emissions requirement in 6.6.3.3.1 may not be met. For 10 MHz channel bandwidth whose carrier frequency is larger than or equal to 1945 MHz or 15 MHz channel bandwidth whose carrier frequency is larger than or equal to 1947.5 MHz , no A-MPR applies.
NOTE 2: Applicable when carrier frequency is 1932.5 MHz for 15 MHz channel bandwidth or 1930 MHz for 20 MHz channel bandwidth case.
NOTE 3: Applicable when the E-UTRA carrier is within 1920-1980 MHz.
NOTE 4: Applicable when the upper edge of the channel bandwidth frequency is greater than 1980MHz.
NOTE 5: Applicable only for an LAA Scell configured in Band 46.
NOTE 6: Applicable when the E-UTRA carrier is within 1447.9 - 1462.9 MHz
NOTE 7: Applicable for power class 2 UE in E-UTRA carrier with channel bandwidth is confined within 2570 MHz and 2615 MHz
NOTE 8: Not applicable for power class 2 UE in Band 42

Table 6.2.4-2: A-MPR for "NS_07"

| Parameters | Region A |  | Region B |  | Region C |
| :--- | :---: | :---: | :---: | :---: | :---: |
| RB $_{\text {start }}$ | $0-12$ |  | $13-18$ | $19-42$ | $43-49$ |
| $L_{\text {CRB }}[R B s]$ | $6-8$ | 1 to 5 and <br> $9-50$ | $\geq 8$ | $\geq 18$ | $\leq 2$ |
| A-MPR [dB] | $\leq 8$ | $\leq 12$ | $\leq 12$ | $\leq 6$ | $\leq 3$ |

NOTE 1; RB start indicates the lowest RB index of transmitted resource blocks
NOTE 2; LCRB is the length of a contiguous resource block allocation
NOTE 3: For intra-subframe frequency hopping between two regions, notes 1 and 2 apply on a per slot basis. For intra-slot or intra-subslot frequency hopping between two regions, notes 1 and 2 apply on a per $T_{\text {no_hopping }}$ basis.
NOTE 4; For intra-subframe frequency hopping between two regions, the larger A-MPR value of the two regions may be applied for both slots in the subframe. For intra-slot frequency hopping between two regions, the larger A-MPR value of the two regions may be applied for the slot. For intra-subslot frequency hopping between two regions, the larger A-MPR value of the two regions may be applied for the subslot.

Table 6.2.4-3: A-MPR for "NS_10"

| Channel bandwidth [MHz] | Parameters | Region A |
| :---: | :---: | :---: |
| 15 | $\mathrm{RB}_{\text {start }}$ | 0-10 |
|  | Lcrb [RBs] | 1-20 |
|  | A-MPR [dB] | $\leq 2$ |
| 20 | $\mathrm{RB}_{\text {start }}$ | 0-15 |
|  | LCRB [RBs] | 1-20 |
|  | A-MPR [dB] | $\leq 5$ |
| NOTE 1: RB start indicates the lowest RB index of transmitted resource blocks <br> NOTE 2: LcRB is the length of a contiguous resource block allocation <br> NOTE 3: For intra-subframe frequency hopping which intersects Region A, notes 1 and 2 apply on a per slot basis. For intra-slot or intra-subslot frequency hopping which intersects Region A, notes 1 and 2 apply on a Tno_hopping basis. |  |  |

|  | Lcrb [RBs] | > 36 | 33-36 | $\leq 32$ | $\leq 32$ |
|  | $\begin{aligned} & \text { RBstart + LCRB } \\ & \text { [RBs] } \end{aligned}$ | N/A | N/A | N/A | $\geq 44$ |
|  | A-MPR [dB] | $\leq 4$ | $\leq 3$ | $\leq 3$ | $\leq 3$ |
| 15 | RBstart | 0-24 | 0-38 | $\leq 14$ | $\geq 23$ |
|  | Lcrb [RBs] | > 50 | 37-50 | $\leq 36$ | $\leq 36$ |
|  | $\begin{aligned} & \text { RBstart + LCRB } \\ & \text { [RBs] } \end{aligned}$ | N/A | N/A | N/A | $\geq 59$ |
|  | A-MPR [dB] | $\leq 5$ | $\leq 4$ | $\leq 3$ | $\leq 3$ |
| 20 | $\mathrm{RB}_{\text {start }}$ | 0-35 | 0-51 | $\leq 21$ | $\geq 31$ |
|  | LCRB [RBs] | > 64 | 49-64 | $\leq 48$ | $\leq 48$ |
|  | $\begin{aligned} & \text { RBstart + LCRB } \\ & \text { [RBs] } \end{aligned}$ | N/A | N/A | N/A | $\geq 79$ |
|  | A-MPR [dB] | $\leq 5$ | $\leq 4$ | $\leq 3$ | $\leq 3$ |

NOTE 1; RB start indicates the lowest RB index of transmitted resource blocks
NOTE 2; LCRB is the length of a contiguous resource block allocation
NOTE 3: For intra-subframe frequency hopping between two regions, notes 1 and 2 apply on a per slot basis. For intra-slot or intra-subslot frequency hopping between two regions, notes 1 and 2 apply on a per $\mathrm{T}_{\text {no_hopping }}$ basis.
NOTE 4; For intra-subframe frequency hopping between two regions, the larger A-MPR value of the two regions may be applied for both slots in the subframe. For intra-slot frequency hopping between two regions, the larger A-MPR value may be applied for the slot. For intra-subslot frequency hopping between two regions, the larger A-MPR value may be applied for the subslot.

Table 6.2.4-18: A-MPR for "NS_05"

| Channel | Parameters |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| 1651.5 |  |  |  |  | A-MPR | ded |  |  |  |

For PRACH, PUCCH and SRS transmissions, the allowed A-MPR is according to that specified for PUSCH QPSK modulation for the corresponding transmission bandwidth.

For each TTI pattern, the A-MPR shall be evaluated per $T_{\text {eval }}$ period as specified in table 6.2.4-35 and given by the maximum value taken over the transmission(s) within that period; the maximum A-MPR over the $\mathrm{T}_{\mathrm{REF}}$ is then applied for $\mathrm{T}_{\text {REF }}$.

Table 6.2.4-35: A-MPR evaluation period

| TTI pattern | Tref | $\mathrm{T}_{\text {eval }}$ |
| :---: | :---: | :---: |
| Subframe | 1 subframe | 1 slot |
| Slot | 7 OS | $\operatorname{Min}\left(T_{\text {no_hopping, }}, 70 S\right)$ |
| Sublot | 2 OS, 30S | $\operatorname{Min}\left(T_{\text {no_hopping, }}\right.$ 2OS/3OS) |

For the UE maximum output power modified by A-MPR, the power limits specified in subclause 6.2.5 apply.

### 6.2.4A UE maximum output power with additional requirements for CA

Additional ACLR, spectrum emission and spurious emission requirements for carrier aggregation can be signalled by the network to indicate that the UE shall also meet additional requirements in a specific deployment scenario. To meet these additional requirements, Additional Maximum Power Reduction (A-MPR) is allowed for the CA Power Class as specified in Table 6.2.2A-1.

If for intra-band carrier aggregation the UE is configured for transmissions on a single serving cell, then subclauses 6.2.3 and 6.24 apply with the Network Signaling value indicated by the field additionalSpectrumEmission.

For intra-band contiguous aggregation with the UE configured for transmissions on two serving cells, the maximum output power reduction specified in Table $6.2 .4 \mathrm{~A}-1$ is allowed for all serving cells of the applicable uplink CA configurations according to the CA network signalling value indicated by the field additionalSpectrumEmissionSCell$r 10$. Then clause 6.2 .3 A does not apply, i.e. the carrier aggregation MPR $=0 \mathrm{~dB}$, unless the value indicated is CA_NS_09 or CA_NS_31. For uplink 64 QAM and 256 QAM, the applied maximum output power reduction is obtained by taking the maximum value of MPR requirements specified in Table 6.2.3A-1 and A-MPR requirements specified in Table 6.2.4A-1.

Table 6.2.4A-1: Additional Maximum Power Reduction (A-MPR) for intra-band contiguous CA

| CA Network Signalling <br> value | Requirements <br> (subclause) | Uplink CA Configuration | A-MPR [dB] <br> (subclause) |
| :---: | :---: | :---: | :---: |
| CA_NS_01 | $6.6 .3 .3 A .1$ | CA_1C | 6.2 .4 A .1 |
| CA_NS_02 | $6.6 .3 .3 A .2$ | CA_1C | 6.2 .4 A .2 |
| CA_NS_03 | $6.6 .3 .3 A .3$ | CA_1C | 6.2 .4 A .3 |
| CA_NS_04 | $6.6 .2 .2 A .1,6.6 .3 .3 A .8$ | CA_41C, CA_41D | 6.2 .4 A .4 |
| CA_NS_05 | $6.6 .3 .3 A .4$ | CA_38C | 6.2 .4 A .5 |
| CA_NS_06 | $6.6 .3 .3 A .5$ | CA_7C | 6.2 .4 A .6 |
| CA_NS_07 | $6.6 .3 .3 A .6$ | CA_39C | 6.2 .4 A .7 |
| CA_NS_08 | $6.6 .3 .3 A .7$ | CA_42C | 6.2 .4 A .8 |
| CA_NS_09 | $6.6 .2 .2 A .2$ | CA_66B | N/A |
| CA_NS_10 | $6.6 .2 .2 A .3$ | CA_66C | N/A |
|  | $6.6 .2 .2 A .4$ | CA_48B, CA_48C | $6.2 .4 A .10$ |

| $\ldots$ |  |  |  |
| :---: | :---: | :---: | :---: |
| CA_NS_31 | NOTE 1 | Table 5.6A.1-1 (NOTE 1) | N/A |
| CA_NS_32 | Reserved |  |  |
| NOTE 1: Applicable for uplink CA configurations listed in Table 5.6A.1-1 for which none of the additional |  |  |  |
| requirements in subclauses 6.6.2.2A or 6.6.3.3A apply. |  |  |  |
| NOTE 2:The index of the sequence CA_NS corresponds to the value of additionalSpectrumEmissionSCell-r10. |  |  |  |

If for intra-band non-contigous carrier aggregation the UE is configured for transmissions on a single serving cell, then subclauses 6.2 .3 and 6.24 apply with the Network Signaling value indicated by the field additionalSpectrumEmission.

For intra-band non-contiguous carrier aggregation with the UE configured for transmissions on two serving cells, the maximum output power reduction specified in Table 6.2.4A-2 is allowed for all serving cells of the applicable uplink CA configurations according to the CA network signalling value indicated by the field
additionalSpectrumEmissionSCell-r10. MPR as specified in subclause 6.2 .3 A is not allowed in addition, unless A-MPR is $\mathrm{N} / \mathrm{A}$.

Table 6.2.4A-2: Additional Maximum Power Reduction (A-MPR) for intra-band non-contiguous CA

| CA Network Signalling value | Additional requirements for sub-blocks in order of increasing uplink carrier frequency |  | Uplink CA Configuration | A-MPR for sub-blocks in order of increasing uplink carrier frequency |
| :---: | :---: | :---: | :---: | :---: |
|  | Requirements (subclause) | Requirements (subclause) |  | A-MPR [dB] (subclause) |
| CA_NC_NS_01 | $\begin{aligned} & \hline 6.6 .2 .2 .1 \\ & \text { (NS_03) } \end{aligned}$ | $\begin{aligned} & \hline 6.6 .2 .2 .1 \\ & \text { (NS_03) } \\ & \hline \end{aligned}$ | CA_4A-4A | N/A |
| $\ldots$ |  |  |  |  |
| CA_NC_NS_31 | NOTE 1 | NOTE 1 | Table 5.6A.1-3 (NOTE 1) | N/A |
| CA_NC_NS_32 | Reserved |  |  |  |
| NOTE 1: Applicable for uplink CA configurations listed in Table 5.6A.1-3 for which the additional requirements in subclause 6.6.2.1.1 (indicated by NS_01) applies in each sub-block. <br> NOTE 2: The index of the sequence CA_NC_NS corresponds to the value of additionalSpectrumEmissionSCell-r10. |  |  |  |  |

If for inter-band carrier aggregation the UE is configured for transmissions on a single serving cell, then subclauses 6.2.3 and 6.24 apply with the Network Signaling value indicated by the field additionalSpectrumEmission.

For inter-band carrier aggregation with the UE configured for transmissions on two serving cells the maximum output power reduction specified in Table 6.2.4-1 is allowed for each serving cell of the applicable uplink CA configuration according to the Network Signaling value indicated by the field additionalSprectrumEmission for the PCC and the CA network signalling value indicated by the field additionalSpectrumEmissionSCell-r10 for the SCC. The value of additionalSpectrumEmissionSCell-r10 is equal to that of additionalSprectrumEmission configured on the SCC. MPR as specified in subclause 6.2 .3 A is allowed in addition.

For PUCCH and SRS transmissions, the allowed A-MPR is according to that specified for PUSCH QPSK modulation for the corresponding transmission bandwidth.

For intra-band carrier aggregation, the A-MPR shall be evaluated per $T_{\text {eval }}$ period as specified in table $6.2 .4 \mathrm{~A}-3$ and given by the maximum value taken over the transmission(s) on all component carriers within that period; the maximum A-MPR over $\mathrm{T}_{\text {REF }}$ is then applied for the entire $\mathrm{T}_{\text {REF }}$.

Table 6.2.4A-3: A-MPR evaluation $\mathrm{T}_{\text {eval }}$ period

| TTI pattern | Treef | Teval $_{\text {eval }}$ |
| :---: | :---: | :---: |
| Subframe | 1 subframe | 1 slot |
| Slot | 7 OS | $\operatorname{Min}\left(T_{\text {no_hopping, }}\right.$ 7OS $)$ |
| Sublot | 2 OS, 3OS | $\operatorname{Min}\left(T_{\text {no_hopping, }}\right.$ 2OS/3OS $)$ |

For combinations of intra-band and inter-band carrier aggregation with the UE configured for transmission on three serving cells (up to two contiguously aggregated carriers per band), the maximum output power reduction is specified as follows. For the band supporting one serving cell the maximum output power reduction specified in Table 6.2.4-1 is allowed according to the Network Signaling value indicated by the field additionalSprectrumEmission for the PCC and
the CA network signalling value indicated by the field additionalSpectrumEmissionSCell-r10 for the SCC. The value of additionalSpectrumEmissionSCell-r10 is equal to that of additionalSprectrumEmission configured on the SCC. MPR as specified in subclause 6.2 .3 A is allowed in addition. For the band supporting intra-band contiguous aggregation with the UE configured for transmissions on two serving cells, the maximum output power reduction specified in Table 6.2.4A-1 is allowed for all serving cells of the applicable uplink CA configurations according to the CA network signalling value indicated by the field additionalSpectrumEmissionSCell-r10. Then clause 6.2.3A does not apply, i.e. the carrier aggregation MPR $=0 \mathrm{~dB}$, unless the value indicated is CA_NS_31. For uplink 64 QAM and 256 QAM, the applied maximum output power reduction is obtained by taking the maximum value of MPR requirements specified in Table 6.2.3A-1 and A-MPR requirements specified in Table 6.2.4A-1.

For the UE maximum output power modified by A-MPR specified in table $6.2 .4 \mathrm{~A}-1$, the power limits specified in subclause 6.2.5A apply.

### 6.2.4A.1 A-MPR for CA_NS_01 for CA_1C

If the UE is configured to CA_1C and it receives IE CA_NS_01 the allowed maximum output power reduction applied to transmissions on the PCC and the SCC for contiguously aggregated signals is specified in table 6.2.4A.1-1.

Table 6.2.4A.1-1: Contiguous allocation A-MPR for CA_NS_01

| CA_1C: CA_NS_01 | $\mathrm{RB}_{\text {start }}$ | Lcrb [RBs] | $\begin{gathered} \mathrm{RB}_{\text {start }}+\mathrm{L}_{\text {CRB }} \\ {[\mathrm{RBs}]} \end{gathered}$ | A-MPR for QPSK, 16 QAM, 64 QAM and 256 QAM [dB] |
| :---: | :---: | :---: | :---: | :---: |
| 100 RB / 100 RB | $\begin{aligned} & 0-23 \text { and } \\ & 176-199 \end{aligned}$ | $>0$ | N/A | $\leq 12.0$ |
|  | 24-105 | > 64 | N/A | $\leq 6.0$ |
|  | 106-175 | N/A | > 175 | $\leq 5.0$ |
| 75 RB / 75 RB | $\begin{gathered} 0-6 \text { and } 143 \\ -149 \end{gathered}$ | $0<L_{\text {CRB }} \leq 10$ | N/A | $\leq 11.0$ |

If the UE is configured to CA_1C and it receives IE CA_NS_01 the allowed maximum output power reduction applied to transmissions on the PCell and the SCell with non-contiguous resource allocation is defined as follows

$$
\mathrm{A}-\mathrm{MPR}=\operatorname{CEIL}\left\{\mathrm{M}_{\mathrm{A}}, 0.5\right\}
$$

Where $\mathrm{M}_{\mathrm{A}}$ is defined as follows

$$
\begin{array}{rll}
\mathrm{M}_{\mathrm{A}}= & -22.5 \mathrm{~A}+17 & ; 0 \leq \mathrm{A}<0.20 \\
& -11.0 \mathrm{~A}+14.7 & ; 0.20 \leq \mathrm{A}<0.70 \\
& -1.7 \mathrm{~A}+8.2 & ; 0.70 \leq \mathrm{A} \leq 1
\end{array}
$$

Where $\mathrm{A}=\mathrm{N}_{\text {RB_alloc }} / \mathrm{N}_{\text {RB_agg }}$.

### 6.2.4A.2 A-MPR for CA_NS_02 for CA_1C

If the UE is configured to CA_1C and it receives IE CA_NS_02 the allowed maximum output power reduction applied to transmission on the PCC and the SCC for contiguously aggregated signals is specified in Table 6.2.4A.2-1.

Table 6.2.4A.2-1: Contiguous allocation A-MPR for CA_NS_02

| CA_1C: CA_NS_02 | RB ${ }_{\text {end }}$ | LcRB [RBs] | A-MPR for QPSK, 16 <br> QAM, 64 QAM and <br> 256 QAM [dB] |
| :---: | :---: | :---: | :---: |
|  | $0-20$ | $>0$ | $\leq 4 \mathrm{~dB}$ |
|  | $21-46$ | $>0$ | $\leq 3 \mathrm{~dB}$ |
|  | $47-99$ | $>\mathrm{RB}_{\text {end }}-20$ | $\leq 3 \mathrm{~dB}$ |
|  | $100-184$ | $>75$ | $\leq 6 \mathrm{~dB}$ |
|  | $185-199$ | $>0$ | $\leq 10 \mathrm{~dB}$ |
| $75 \mathrm{RB} / 75 \mathrm{RB}$ | $0-48$ | $>0$ | $\leq 2 \mathrm{~dB}$ |
|  | $49-80$ | $>\mathrm{RB}_{\text {end }}-20$ | $\leq 3 \mathrm{~dB}$ |
|  | $81-129$ | $>60$ | $\leq 5 \mathrm{~dB}$ |
|  | $130-149$ | $>84$ | $\leq 6 \mathrm{~dB}$ |
|  | $130-149$ | $1-84$ | $\leq 2 \mathrm{~dB}$ |

If the UE is configured to CA_1C and it receives IE CA_NS_02 the allowed maximum output power reduction applied to transmissions on the PCell and the SCell with non-contiguous resource allocation is defined as follows:

$$
\mathrm{A}-\mathrm{MPR}=\operatorname{CEIL}\left\{\mathrm{M}_{\mathrm{A}}, 0.5\right\}
$$

Where $\mathrm{M}_{\mathrm{A}}$ is defined as follows

$$
\begin{array}{rll}
\mathrm{M}_{\mathrm{A}}= & -22.5 \mathrm{~A}+17 & ; 0 \leq \mathrm{A}<0.20 \\
& -11.0 \mathrm{~A}+14.7 & ; 0.20 \leq \mathrm{A}<0.70 \\
& -1.7 \mathrm{~A}+8.2 & ; 0.70 \leq \mathrm{A} \leq 1
\end{array}
$$

Where $\mathrm{A}=\mathrm{N}_{\text {RB_alloc }} / \mathrm{N}_{\text {RB_agg. }}$

### 6.2.4A.3 A-MPR for CA_NS_03 for CA_1C

If the UE is configured to CA_1C and it receives IE CA_NS_03 the allowed maximum output power reduction applied to transmission on the PCC and the SCC for contiguously aggregated signals is specified in Table 6.2.4A.3-1.

Table 6.2.4A.3-1: Contiguous allocation A-MPR for CA_NS_03

| CA_1C: CA_NS_03 | RBend | Lcrb [RBs] | A-MPR for QPSK, 16 QAM, 64 QAM and 256 QAM [dB] |
| :---: | :---: | :---: | :---: |
| 100 RB / 100 RB | 0-26 | $>0$ | $\leq 10 \mathrm{~dB}$ |
|  | 27-63 | $\geq \mathrm{RB}_{\text {end }}-27$ | $\leq 6 \mathrm{~dB}$ |
|  | 27-63 | $<\mathrm{RB}_{\text {end }}-27$ | $\leq 1 \mathrm{~dB}$ |
|  | 64-100 | $>\mathrm{RB}_{\text {end }}-20$ | $\leq 4 \mathrm{~dB}$ |
|  | 101-171 | > 68 | $\leq 7 \mathrm{~dB}$ |
|  | 172-199 | $>0$ | $\leq 10 \mathrm{~dB}$ |
| 75 RB / 75 RB | 0-20 | $>0$ | $\leq 10 \mathrm{~dB}$ |
|  | 21-45 | > 0 | $\leq 4 \mathrm{~dB}$ |
|  | 46-75 | $>\mathrm{RB}_{\text {end }}-13$ | $\leq 2 \mathrm{~dB}$ |
|  | 76-95 | $>45$ | $\leq 5 \mathrm{~dB}$ |
|  | 96-149 | > 43 | $\leq 8 \mathrm{~dB}$ |
|  | 120-149 | 1-43 | $\leq 6 \mathrm{~dB}$ |

If the UE is configured to CA_1C and it receives IE CA_NS_03 the allowed maximum output power reduction applied to transmissions on the PCell and the SCell with non-contiguous resource allocation is defined as follows:

$$
\mathrm{A}-\mathrm{MPR}=\operatorname{CEIL}\left\{\mathrm{M}_{\mathrm{A}}, 0.5\right\}
$$

Where $\mathrm{M}_{\mathrm{A}}$ is defined as follows

$$
\begin{aligned}
\mathrm{M}_{\mathrm{A}}=-23.33 \mathrm{~A}+17.5 & ; 0 \leq \mathrm{A}<0.15 \\
-7.65 \mathrm{~A}+15.15 & ; 0.15 \leq \mathrm{A} \leq 1
\end{aligned}
$$

Where $A=N_{\text {RB_alloc }} / N_{\text {RB_agg. }}$

### 6.2.4A. 4 A-MPR for CA_NS_04

If the UE is configured to CA_41C or any uplink inter-band CA configuration containing CA_41C and it receives IE CA_NS_04 the allowed maximum output power reduction applied to transmission on two component carriers for contiguously aggregated signals is specified in Table $6 \cdot 2.4 \mathrm{~A} .4-1$ and Table $6 \cdot 2.4 \mathrm{~A} .4-1 \mathrm{~A}$ for UE power class 3 and in Table 6.2.4A.4-2 for UE power class 2.

Table 6.2.4A.4-1: Contiguous Allocation A-MPR for CA_NS_04 (power class 3), Bandwidth Class C

| CA Bandwidth Class C | RBStart | $\begin{gathered} \text { LCRB } \\ {[\mathrm{RBs}]} \end{gathered}$ | $\begin{gathered} \mathrm{RB}_{\text {start }+\mathrm{L}_{\mathrm{CRB}}} \\ {[\mathrm{RBs}]} \end{gathered}$ | A-MPR for QPSK [dB] | A-MPR for 16 QAM, 64 QAM and 256 QAM [dB] |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 25 RB / 100 RB | 0-34 and 90-124 | >0 | N/A | $\leq 3 \mathrm{~dB}$ | $\leq 3.5 \mathrm{~dB}$ |
|  | 35-89 | N/A | >90 | $\leq 1 \mathrm{~dB}$ | $\leq 2.5 \mathrm{~dB}$ |
| 50RB / 100 RB | 0-44 and 105-149 | >0 | N/A | $\leq 4 \mathrm{~dB}$ | $\leq 4 \mathrm{~dB}$ |
|  | 45-104 | N/A | >105 | $\leq 3 \mathrm{~dB}$ | $\leq 4 \mathrm{~dB}$ |
| 75 RB / 75 RB | 0-44 and 105-149 | >0 | N/A | $\leq 4 \mathrm{~dB}$ | $\leq 4 \mathrm{~dB}$ |
|  | 45-104 | N/A | >105 | $\leq 4 \mathrm{~dB}$ | $\leq 4 \mathrm{~dB}$ |

\end{aligned}
$$

Where $\mathrm{A}=\mathrm{N}_{\text {RB_alloc }} / \mathrm{N}_{\text {RB_agg. }}$

### 6.2.4A. 5 A-MPR for CA_NS_05 for CA_38C

If the UE is configured to CA_38C and it receives IE CA_NS_05 the allowed maximum output power reduction applied to transmission on the PCC and the SCC for contiguously aggregated signals is specified in Table 6.2.4A.5-1.

Table 6.2.4A.5-1: Contigous Allocation A-MPR for CA_NS_05

| CA_38C | RB ${ }_{\text {end }}$ | LcRB [RBs] | A-MPR for QPSK, 16 <br> QAM, 64 QAM and <br> 256 QAM [dB] |
| :---: | :---: | :---: | :---: |
| 100RB/100RB | $0-12$ | $>0$ | $\leq 5 \mathrm{~dB}$ |
|  | $13-79$ | $>\mathrm{RB}_{\text {end }}-13$ | $\leq 2 \mathrm{~dB}$ |
|  | $80-180$ | $>60$ | $\leq 6 \mathrm{~dB}$ |
|  | $181-199$ | $>0$ | $\leq 11 \mathrm{~dB}$ |

| 75RB/75RB | 0-70 | $>\max \left(0, \mathrm{RB}_{\text {end }}-10\right)$ | $\leq 2 \mathrm{~dB}$ |
| :---: | :---: | :---: | :---: |
|  | 71-108 | > 60 | $\leq 5 \mathrm{~dB}$ |
|  | 109-139 | >0 | $\leq 5 \mathrm{~dB}$ |
|  | 140-149 | $\leq 70$ | $\leq 2 \mathrm{~dB}$ |
|  | 140-149 | >70 | $\leq 6 \mathrm{~dB}$ |
| NOTE 1: RBend indicates the highest RB index of transmitted resource blocks |  |  |  |
| NOTE 2: LCRB is the length of a contiguous resource block allocation |  |  |  |
| NOTE 3: For intra-subframe frequency hopping which intersects regions, notes 1 and 2 apply on a per slot basis. For intra-slot or intra-subslot frequency hopping which intersects regions, notes 1 and 2 apply on a per $\mathrm{T}_{\text {no }}$ hopping basis. |  |  |  |
| NOTE 4: For intra-subframe frequency hopping which intersects regions, the larger AMPR value may be applied for both slots in the subframe. For intra-slot frequency hopping which intersects regions, the larger A-MPR value may be applied for the slot. For intra-subslot frequency hopping which intersects regions, the larger A-MPR value may be applied for the subslot. |  |  |  |

If the UE is configured to CA_38C and it receives IE CA_NS_05 the allowed maximum output power reduction applied to transmissions on the PCell and the SCell with non-contiguous resource allocation is defined as follows

$$
\mathrm{A}-\mathrm{MPR}=\operatorname{CEIL}\left\{\mathrm{M}_{\mathrm{A}}, 0.5\right\}
$$

Where MA is defined as follows

$$
\begin{array}{cl}
\mathrm{M}_{\mathrm{A}}=-14.17 \mathrm{~A}+16.50 & ; 0 \leq \mathrm{A}<0.60 \\
-2.50 \mathrm{~A}+9.50 & ; 0.60 \leq \mathrm{A} \leq 1
\end{array}
$$

Where $A=N_{\text {RB_alloc }} / N_{\text {RB_agg. }}$

### 6.2.4A. 6 A-MPR for CA_NS_06

If the UE is configured to CA_7C and it receives IE CA_NS_06 the allowed maximum output power reduction applied to transmission on the PCC and the SCC for contiguously aggregated signals is specified in Table 6.2.4A.6-1.

Table 6.2.4A.6-1: Contiguous Allocation A-MPR for CA_NS_06

| CA Bandwidth Class C | $\mathrm{RB}_{\text {end }}$ | Lcrb [RBs] | A-MPR for QPSK, 16 QAM, 64 QAM and 256 QAM [dB] |
| :---: | :---: | :---: | :---: |
| 100RB/100RB | 0-22 | >0 | $\leq 4 \mathrm{~dB}$ |
|  | 23-99 | $>\max \left(0, \mathrm{RB}_{\text {end }}-25\right)$ | $\leq 2 \mathrm{~dB}$ |
|  | 100-142 | $>75$ | $\leq 3 \mathrm{~dB}$ |
|  | 143-177 | >70 | $\leq 5 \mathrm{~dB}$ |
|  | 178-199 | $>0$ | $\leq 10 \mathrm{~dB}$ |
| 75RB/75RB | 0-7 | $>0$ | $\leq 5 \mathrm{~dB}$ |
|  | 8-74 | $>\max \left(0, \mathrm{RB}_{\text {end }}-10\right)$ | $\leq 2 \mathrm{~dB}$ |
|  | 75-109 | >64 | $\leq 2 \mathrm{~dB}$ |
|  | 110-144 | >35 | $\leq 6 \mathrm{~dB}$ |
|  | 145-149 | >0 | $\leq 10 \mathrm{~dB}$ |
| 50RB/100RB and 100RB/50RB | 0-10 | $>0$ | $\leq 5 \mathrm{~dB}$ |
|  | 11-75 | > max(0, RB_End - 25) | $\leq 2 \mathrm{~dB}$ |
|  | 76-103 | > 50 | $\leq 3 \mathrm{~dB}$ |
|  | 104-144 | $>25$ | $\leq 6 \mathrm{~dB}$ |
|  | 145-149 | $>0$ | $\leq 10 \mathrm{~dB}$ |
| 75RB/100RB | 0-15 | $>0$ | $\leq 5 \mathrm{~dB}$ |

| $\substack{\text { and } \\ \text { 100RB/75RB }}$ | $16-75$ | $>\max (0$, RB_End -15$)$ | $\leq 2 \mathrm{~dB}$ |
| :---: | :---: | :---: | :---: |
|  | $76-120$ | $>50$ | $\leq 3 \mathrm{~dB}$ |
|  | $121-160$ | $>50$ | $\leq 6 \mathrm{~dB}$ |
|  | $161-174$ | $>0$ | $\leq 10 \mathrm{~dB}$ |

If the UE is configured to CA_7C and it receives IE CA_NS_06 the allowed maximum output power reduction applied to transmissions on the PCell and the SCell with non-contiguous resource allocation is defined as follows:

$$
\mathrm{A}-\mathrm{MPR}=\operatorname{CEIL}\left\{\mathrm{M}_{\mathrm{A}}, 0.5\right\}
$$

Where $\mathrm{M}_{\mathrm{A}}$ is defined as follows

$$
\begin{aligned}
\mathrm{M}_{\mathrm{A}}=-13.33 \mathrm{~A}+17.5 & ; 0 \leq \mathrm{A}<0.15 \\
-6.47 \mathrm{~A}+16.47 & ; 0.15 \leq \mathrm{A} \leq 1
\end{aligned}
$$

Where $\mathrm{A}=\mathrm{N}_{\text {RB_alloc }} / \mathrm{N}_{\text {RB_agg. }}$.

### 6.2.4A. 7 A-MPR for CA_NS_07

If the UE is configured to CA_39C or any uplink inter-band CA configuration containing CA_39C and it receives IE CA_NS_07 the allowed maximum output power reduction applied to transmission on two component carriers for contiguously aggregated signals is specified in Table 6.2.4A.7-1.

Table 6.2.4A.7-1: Contiguous Allocation A-MPR for CA_NS_07

| CA_39C: CA_NS_07 | RBStart | Lcrb [RBs] | A-MPR for QPSK, 16 QAM, 64 QAM and 256 QAM [dB] |
| :---: | :---: | :---: | :---: |
| $\begin{gathered} 75 \mathrm{RB} / 100 \mathrm{RB} \\ \text { and } \\ 100 \mathrm{RB} / 75 \mathrm{RB} \end{gathered}$ | 0-13 | $>0$ | $\leq 11$ |
|  | 14-50 | $\leq 60$ | $\leq 3$ |
|  | 14-100 | $>60$ | $\leq 7$ |
|  | 101-155 | > max(155-RBstart , 0) | $\leq 2$ |
|  | 156-174 | $>0$ | $\leq 5$ |
| $\begin{gathered} 50 \mathrm{RB} / 100 \mathrm{RB} \\ \text { and } \\ 100 \mathrm{RB} / 50 \mathrm{RB} \end{gathered}$ | 0-5 | $>0$ | $\leq 11$ |
|  | 6-42 | $\leq 25$ | $\leq 3$ |
|  |  | $>25$ | $\leq 6$ |
|  | 43-80 | $>50$ | $\leq 5$ |
|  | 81-138 | $>20$ | $\leq 2$ |
|  | 139-149 | $>0$ | $\leq 5$ |
| $\begin{gathered} 25 \mathrm{RB} / 100 \mathrm{RB} \\ \text { and } \\ 100 \mathrm{RB} / 25 \mathrm{RB} \end{gathered}$ | 0-32 | $\geq 84$ | $\leq 6$ |
|  |  | $<84$ | $\leq 4$ |
|  | 33-60 | $>50$ | $\leq 3$ |
|  | 61-124 | $>20$ | $\leq 3$ |

If the UE is configured to CA_39C or any uplink inter-band CA configuration containing CA_39C and it receives IE CA_NS_07 the allowed maximum output power reduction applied to transmissions on two serving cells assigned to Band 39 with non-contiguous resource allocation is defined as follows

$$
\mathrm{A}-\mathrm{MPR}=\operatorname{CEIL}\left\{\mathrm{M}_{\mathrm{A}}, 0.5\right\}
$$

Where $\mathrm{M}_{\mathrm{A}}$ is defined as follows

$$
\begin{aligned}
\mathrm{M}_{\mathrm{A}}=-16.25 \mathrm{~A}+21 & ; 0 \leq \mathrm{A}<0.80 \\
-2.50 \mathrm{~A}+10.00 & ; 0.80 \leq \mathrm{A} \leq 1
\end{aligned}
$$

Where $\mathrm{A}=\mathrm{N}_{\text {RB_alloc }} / \mathrm{N}_{\text {RB_agg }}$

### 6.2.4A. 8 A-MPR for CA_NS_08

If the UE is configured to CA_42C and it receives IE CA_NS_08 the allowed maximum output power reduction applied to transmission on the PCC and the SCC for contiguously aggregated signals is specified in Table 6.2.4A.8-1.

Table 6.2.4A.8-1: Contiguous Allocation A-MPR for CA_NS_08

| $\begin{aligned} & \text { CA_42C: } \\ & \text { CA_NS_08 } \end{aligned}$ | RBstart | Condition | RBend | Lcrb [RBs] | A-MPR for QPSK, 16 QAM, 64 QAM and 256 QAM [dB] |
| :---: | :---: | :---: | :---: | :---: | :---: |

& 8 \\
& ; 0.9 \leq \mathrm{A} \leq 1
\end{aligned}
$$

Where $\mathrm{A}=\mathrm{N}_{\text {RB_alloc }} / \mathrm{N}_{\text {RB_agg. }}$

### 6.2.4A. 9 Void

### 6.2.4A. 10 A-MPR for CA_NS_10

If the UE is configured to CA_48C and it receives IE CA_NS_10 the allowed maximum output power reduction applied to transmission on the PCC and the SCC for contiguously aggregated signals is specified in Table 6.2.4A.10-2 or Table 6.2.4A.10-3. Which table is determined by the position of the carrier centre frequency in Table 6.2.4A.10-1.

Table 6.2.4A.10-1: A-MPR regions for CA_48C

| Channel Bandwidth, MHz | Carrier Centre Frequency, Fc, MHz | A-MPR |
| :---: | :---: | :---: |
| $20+5 / 5+20$ | $\begin{gathered} \mathrm{FLL}_{\mathrm{L}}+\mathrm{BW} \mathrm{CA} / 2 \leq \mathrm{FC}_{\mathrm{C}}< \\ \mathrm{F}_{\mathrm{L}}+3^{*} \mathrm{BW} \mathrm{CA}^{2} / 2-10 \mathrm{MHz} \\ \mathrm{~F}_{\mathrm{H}}-3^{*} \mathrm{BW} \mathrm{C}_{\mathrm{CA}} / 2+10 \mathrm{MHz} \leq \mathrm{F}_{\mathrm{C}} \leq \\ \mathrm{F}_{\mathrm{H}}-\mathrm{BW}_{\mathrm{CA}} / 2 \end{gathered}$ | Table 6.2.4A.10-2 |

$9.17-1.67 \mathrm{~A} ; \quad 0.40<\mathrm{A}<=1.00$

### 6.2.4B UE maximum output power with additional requirements for ULMIMO

For UE with two transmit antenna connectors in closed-loop spatial multiplexing scheme, the A-MPR values specified in subclause 6.2 .4 shall apply to the maximum output power specified in Table 6.2.2B-1. The requirements shall be met with the UL-MIMO configurations specified in Table 6.2.2B-2. For UE supporting UL-MIMO, the maximum output power is measured as the sum of the maximum output power at each UE antenna connector. Unless stated otherwise, an A-MPR of 0 dB shall be used.

For the UE maximum output power modified by A-MPR, the power limits specified in subclause 6.2 .5 B apply.
If UE is configured for transmission on single-antenna port, the requirements in subclause 6.2.4 apply.

### 6.2.4D UE maximum output power with additional requirements for ProSe

When UE is configured for E-UTRA ProSe sidelink transmissions non-concurrent with E-UTRA uplink transmissions for E-UTRA ProSe operating bands specified in Table 5.5D-1, the allowed A-MPR for the maximum output power for ProSe physical channels PSDCH, PSCCH, PSSCH, and PSBCH shall be as specified in subclause 6.2.4 for PUSCH for the corresponding modulation and transmission bandwidth.

The allowed A-MPR for the maximum output power for ProSe physical signal PSSS and SSSS shall be as be as specified in subclause 6.2 .4 for PUSCH QPSK modulation for the corresponding transmission bandwidth.

When UE is configured for simultaneous E-UTRA ProSe sidelink and E-UTRA uplink transmissions for inter-band EUTRA ProSe / E-UTRA bands specified in Table 5.5D-2, the requirements in subclause 6.2.4D apply for ProSe transmission and the requirements in subclause 6.2.4 apply for uplink transmission.

### 6.2.4E UE maximum output power with additional requirements for category M1 and M2 UE

Additional ACLR and spectrum emission requirements can be signalled by the network to indicate that the UE shall also meet additional requirements in a specific deployment scenario. To meet these additional requirements, Additional Maximum Power Reduction (A-MPR) is allowed for the output power as specified in Table 6.2.2E-1 and Table 6.2.4E2. Unless stated otherwise, an A-MPR of 0 dB shall be used.

For UE Power Class 3 and 5 the specific requirements and identified subclauses are specified in Table $6.2 .4 \mathrm{E}-1$ and Table 6.2.4E-2 along with the allowed A-MPR values that may be used to meet these requirements. The allowed AMPR values specified below in Table 6.2.4E-1 and Table 6.2.4E-2 and from 6.2.4-2 to 6.2.4-15 are in addition to the allowed MPR requirements specified in subclause 6.2.3E.

No other A-MPR requirement than those specified in table $6.2 .4 \mathrm{E}-1$, table $6.2 .4 \mathrm{E}-2$, table $6.2 .4 \mathrm{E}-6$ and table $6.2 .4 \mathrm{E}-7$ applies to category M1 and M2 UE.

### 6.2.4F UE maximum output power with additional requirements for category NB1 and NB2 UE

Additional ACLR and spectrum emission requirements can be signalled by the network to indicate that the UE shall also meet additional requirements in a specific deployment scenario. To meet these additional requirements, Additional Maximum Power Reduction (A-MPR) is allowed for the output power are specified. For the agreed E-UTRA bands for category NB1 and NB2 UE an A-MPR of 0 dB shall be allowed unless specified otherwise.

For UE Power Class 3 and 5 the specific requirements and identified subclauses are specified in Table $6.2 .4 \mathrm{~F}-1$ along with the allowed A-MPR values that may be used to meet these requirements. The allowed A-MPR values specified below in Table $6.2 .4 \mathrm{~F}-1$ are in addition to the allowed MPR requirements specified in subclause $6.2 .3 \mathrm{~F}-1$.

Table 6.2.4F-1: Additional Maximum Power Reduction (A-MPR) for category NB1 and NB2 UE

| Network <br> Signalling <br> value | Requirements <br> (subclause) | E-UTRA Band | A-MPR (dB) |

### 6.2.4G UE maximum output power with additional requirements for V2X Communication

For QPSK the MPR requirements specified in subclause 6.2 .3 G does not apply, i.e. MPR $=0 \mathrm{~dB}$. For 16 QAM and 64 QAM, the applied maximum output power reduction is obtained by taking the maximum value of MPR requirements specified in subclause 6.2 .3 G and A-MPR requirements specified in subclause 6.2.4G.

When UE is configured for E-UTRA V2X sidelink transmissions non-concurrent with E-UTRA uplink transmissions for E-UTRA V2X operating bands specified in Table 5.5G-1, the maximum output power reduction specified as

$$
\mathrm{A}-\mathrm{MPR}=\operatorname{CEIL}\left\{\mathrm{M}_{\mathrm{A}}, 0.5\right\}
$$

Where $\mathrm{M}_{\mathrm{A}}$ is defined as follows

$$
\mathrm{M}_{\mathrm{A}}=\mathrm{A}-\mathrm{MPR}_{\text {Base }}+\mathrm{G}_{\text {post connector }} * \mathrm{~A}-\mathrm{MPR}_{\text {Step }}
$$

$\operatorname{CEIL}\left\{\mathrm{M}_{\mathrm{A}}, 0.5\right\}$ means rounding upwards to closest 0.5 dB .
A-MPR Base and A-MPR Step are specified in Tables $6.2 .4 \mathrm{G}-1,6.2 .4 \mathrm{G}-2,6.2 .4 \mathrm{G}-3$ is allowed when network signalling value is provided. The supported post antenna connector gain $\mathrm{G}_{\text {post connector }}$ is declared by the UE following the principle described in annex I.

NOTE: the A-MPR step $^{\text {is the increase in A-MPR allowance to allow UE to meet tighter conducted A-SE and A-SEM }}$ requirements with higher value of declared $G_{\text {post connector. }}$ A-MPR Base is the default A-MPR value when no $G_{\text {post connector }}$ is declared. A-MPR Base and A-MPR step $^{\text {vary depending on channel frequency and RB allocation. For channel }}$
frequencies and RB allocations that are close to the frequency range $5815-5855 \mathrm{MHz}$, those value are much higher due to stringent emission requirement in this range.

Table 6.2.4G-1: Additional Maximum Power Reduction (A-MPR) for power class 3 V2X UE

|  |  | $>18$ and $\leq 42$ |  | 2.5 | 1 |
|  |  | >42 |  | 3 | 1 |

The allowed A-MPR for the maximum output power for V2X physical signal PSBCH and PSSS/SSSS shall be as be as specified in subclause 6.2.4 for the corresponding modulation and transmission bandwidth.

When UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions for inter-band EUTRA V2X / E-UTRA bands specified in Table 5.5G-2, the requirements in subclause 6.2.4G apply for V2X PSSCH and PSCCH transmission. The allowed A-MPR requirements in subclause 6.2 .4 D apply for other V2X sidelink transmission (PSBCH/PSSS/SSSS). The A-MPR requirements in subclause 6.2.4 apply for uplink transmission.

When UE is configured for E-UTRA V2X sidelink transmissions non-concurrent with E-UTRA uplink transmissions for E-UTRA V2X operating bands specified in Table $5.5 \mathrm{G}-1$, the allowed A-MPR for the maximum output power for V2X physical channels PSCCH and PSSCH shall be as specified in Table 6.2.4G-3 and 6.2.4G-4 for V2X UE power class 2.

### 6.2.5 Configured transmitted power

The UE is allowed to set its configured maximum output power $\mathrm{P}_{\mathrm{CMAX}, c}$ for serving cell $c$. The configured maximum output power $\mathrm{P}_{\mathrm{CMAX}, c}$ is set within the following bounds:
$\mathrm{P}_{\text {CMAX_L }, c} \leq \mathrm{P}_{\text {CMAX }, c} \leq \mathrm{P}_{\text {CMAX_H }, c}$ with
$\mathrm{P}_{\mathrm{CMAX} \_\mathrm{L}, c}=\operatorname{MIN}\left\{\mathrm{P}_{\mathrm{EMAX}, c}-\Delta \mathrm{T}_{\mathrm{C}, c}, \quad\left(\mathrm{P}_{\text {PowerClass }}-\Delta \mathrm{P}_{\text {PowerClass }}\right)-\mathrm{MAX}\left(\mathrm{MPR}_{c}+\mathrm{A}-\mathrm{MPR}_{c}+\Delta \mathrm{T}_{\mathrm{IB}, \mathrm{c}}+\Delta \mathrm{T}_{\mathrm{C}, c}+\Delta \mathrm{T}_{\text {ProSe }}, \mathrm{P}-\right.\right.$ $\left.\left.\operatorname{MPR}_{c}\right)\right\}$

$$
\mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}, c}=\mathrm{MIN}\left\{\mathrm{P}_{\mathrm{EMAX}, c}, \quad \mathrm{P}_{\text {PowerClass }}-\Delta \mathrm{P}_{\text {PowerClass }}\right\}
$$

where

- $\quad \mathrm{P}_{\mathrm{EmAX}, c}$ is the value given by IE $P$-Max for serving cell $c$, defined in [7];
- $\quad P_{\text {PowerClass }}$ is the maximum UE power specified in Table 6.2.2-1 without taking into account the tolerance specified in the Table 6.2.2-1;
- $\Delta \mathrm{P}_{\text {PowerClass }}=3 \mathrm{~dB}$ for a power class 2 capable UE operating in Band 41 , when $P$-max of 23 dBm or lower is indicated or if the uplink/downlink configuration is 0 or 6 in the cell; otherwise, $\Delta \mathrm{P}_{\text {PowerClass }}=0 \mathrm{~dB}$
- $\Delta \mathrm{P}_{\text {PowerClass }}=\mathrm{P}_{\text {PowerClass }}-\mathrm{P}_{\text {PowerClass_Defautt }} \mathrm{dB}$ for UE operating in Band 14 , when $P$-max of 23 dBm or lower is indicated in the cell; otherwise, $\Delta \mathrm{P}_{\text {PowerClass }}=0 \mathrm{~dB}$.
- $\mathrm{MPR}_{c}$ and A-MPR ${ }_{c}$ for serving cell $c$ are specified in subclause 6.2.3 and subclause 6.2.4, respectively;
- $\Delta \mathrm{T}_{\mathrm{IB}, \mathrm{c}}$ is the additional tolerance for serving cell $c$ as specified in Table 6.2.5-2; $\Delta \mathrm{T}_{\mathrm{IB}, \mathrm{c}}=0 \mathrm{~dB}$ otherwise;
- $\Delta \mathrm{T}_{\mathrm{C}, c}=1.5 \mathrm{~dB}$ when NOTE 2 in Table 6.2.2-1 applies;
- $\Delta \mathrm{T}_{\mathrm{C}, \mathrm{c}}=0 \mathrm{~dB}$ when NOTE 2 in Table 6.2.2-1 does not apply;
- $\Delta \mathrm{T}_{\text {ProSe }}=0.1 \mathrm{~dB}$ when the UE supports ProSe Direct Discovery and/or ProSe Direct Communication on the corresponding E-UTRA ProSe band; $\Delta \mathrm{T}_{\text {ProSe }}=0 \mathrm{~dB}$ otherwise.
- For a power class higher than default UE power class capable UE except for operating in Band 14 and Band $41, \Delta \mathrm{P}_{\text {PowerClass }}=\mathrm{P}_{\text {PowerClass }}-\mathrm{P}_{\text {PowerClass_Default }} \mathrm{dB}$, when the band is a TDD band whose frame configuration is 0 or 6; or P-max is not indicated in the cell; or P-Max is provided and set to the maximum output power of the default power class or lower, otherwise, $\Delta \mathrm{P}_{\text {PowerClass }}=0 \mathrm{~dB}$.
$\mathrm{P}-\mathrm{MPR}_{c}$ is the allowed maximum output power reduction for
a) ensuring compliance with applicable electromagnetic energy absorption requirements and addressing unwanted emissions / self desense requirements in case of simultaneous transmissions on multiple RAT(s) for scenarios not in scope of 3GPP RAN specifications;
b) ensuring compliance with applicable electromagnetic energy absorption requirements in case of proximity detection is used to address such requirements that require a lower maximum output power.

The UE shall apply P-MPR ${ }_{c}$ for serving cell $c$ only for the above cases. For UE conducted conformance testing P-MPR shall be 0 dB

NOTE 1: $\mathrm{P}-\mathrm{MPR}_{c}$ was introduced in the $\mathrm{P}_{\mathrm{CMAX}, c}$ equation such that the UE can report to the eNB the available maximum output transmit power. This information can be used by the eNB for scheduling decisions.

NOTE 2: P-MPR ${ }_{c}$ may impact the maximum uplink performance for the selected UL transmission path.
$\mathrm{T}_{\text {REF }}$ and $\mathrm{T}_{\text {eval }}$ are specified in Table 6.2.5-0 for different TTI patterns. For each $\mathrm{T}_{\text {REF }}$, the $\mathrm{P}_{\text {CMAX_L }}$ for serving cell $c$ is evaluated per $\mathrm{T}_{\text {eval }}$ and given by the minimum value taken over the transmission(s) within the $\mathrm{T}_{\text {eval }}$; the minimum $\mathrm{P}_{\text {CMAX }}$ $\mathrm{L}, \mathrm{c}$ over the one or more $\mathrm{T}_{\text {eval }}$ is then applied for the entire $\mathrm{T}_{\text {REF. }}$. $\mathrm{P}_{\text {PowerClass }}$ shall not be exceeded by the UE during any period of time.

Table 6.2.5-0: Pcmax evaluation window for different TTI patterns

| TTI pattern | T $_{\text {REF }}$ | $\mathbf{T}_{\text {eval }}$ | Teval with frequency hopping |
| :---: | :---: | :---: | :---: |
| Subframe | 1 subframe | 1 slot | 1 slot |
| Subslot | $20 S$ | $20 S$ | $\operatorname{Min}\left(T_{\text {no_hopping, }}\right.$ 2OS $)$ |
| Slot | 7 OS | 7 OS | $\operatorname{Min}\left(T_{\text {no_hopping, }}\right.$ 7OS $)$ |

The measured configured maximum output power $\mathrm{P}_{\mathrm{UMAX}, \mathrm{c}}$ shall be within the following bounds:

$$
\mathrm{P}_{\mathrm{CMAX} L \mathrm{~L}, c}-\operatorname{MAX}\left\{\mathrm{T}_{\mathrm{L}, c}, \mathrm{~T}\left(\mathrm{P}_{\mathrm{CMAX} L \mathrm{~L}, c}\right)\right\} \leq \mathrm{P}_{\mathrm{UMAX}, c} \leq \mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}, c}+\mathrm{T}_{\left(\mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}, c}\right)} .
$$

where the tolerance $\mathrm{T}\left(\mathrm{P}_{\mathrm{CMAX}, c}\right)$ for applicable values of $\mathrm{P}_{\mathrm{CMAX}, c}$ is specified in Table 6.2.5-1, and Table 6.2.5-1A. The tolerance $\mathrm{T}_{\mathrm{L}, c}$ is the absolute value of the lower tolerance for the applicable operating band as specified in Table 6.2.2-1.

Table 6.2.5-1: $\mathrm{P}_{\text {cmax }}$ tolerance

| PcMAX,$c$ <br> $(\mathbf{d B m})$ | Tolerance T(PcMAX, $\boldsymbol{c})$ <br> $(\mathbf{d B})$ |

NOTE 1: The above additional tolerances are only applicable for the E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations
NOTE 2: The above additional tolerances also apply in non-aggregated operation for the supported E-UTRA operating bands that belong to the supported interband carrier aggregation configurations
NOTE 3: In case the UE supports more than one of the above 2DL inter-band carrier aggregation configurations and a E-UTRA operating band belongs to more than one 2DL inter-band carrier aggregation configurations then:

- When the E-UTRA operating band frequency range is $\leq 1 \mathrm{GHz}$, the applicable additional tolerance shall be the average of the 2DL tolerances above, truncated to one decimal place for that operating band among the supported 2DL CA configurations. In case there is a harmonic relation between low band UL and high band DL, then the maximum tolerance among the different supported 2DL carrier aggregation configurations involving such band shall be applied
- When the E-UTRA operating band frequency range is $>1 \mathrm{GHz}$, the applicable additional 2DL tolerance shall be the maximum tolerance above that applies for that operating band among the supported 2DL CA configurations
NOTE 4: Only applicable for UE supporting inter-band carrier aggregation with uplink in one E-UTRA band and without simultaneous Rx/Tx.
NOTE 5: Unless otherwise specified, in case the UE supports more than one of the above 3DL inter-band carrier aggregation configurations and a E-UTRA operating band belongs to more than one 3DL inter-band carrier aggregation configurations then:
- When the E-UTRA operating band frequency range is $\leq 1 \mathrm{GHz}$ and the tolerances are the same, the value applies to the band. If the tolerances are different, the applicable additional 3DL tolerance is FFS. In case there is a harmonic relation between low band UL and high band DL, then the maximum tolerance among the different supported 3DL carrier aggregation configurations involving such band shall be applied
- When the E-UTRA operating band frequency range is $>1 \mathrm{GHz}$, the applicable additional 3DL tolerance shall be the maximum tolerance above that applies for that operating band among the supported 3DL CA configurations.
NOTE 6: The above additional tolerances applicable for the E-UTRA operating bands that belong to the supported highest order inter-band carrier aggregation configuration, also applies to the same E-UTRA operating bands that belong to a supported lower order CA configuration.
NOTE 7: Applicable for UE supporting inter-band carrier aggregation without simultaneous Rx/Tx.

NOTE 8: Only applicable for UE supporting inter-band carrier aggregation with the uplink active in the FDD band.
NOTE 9: For Band 28, the requirements only apply for the restricted frequency range specified for this CA configuration (Table 5.5A-2).
NOTE 10: The requirement is applied for UE transmitting on the frequency range of $2545-2690 \mathrm{MHz}$.
NOTE 11: The requirement is applied for UE transmitting on the frequency range of $2496-2545 \mathrm{MHz}$.
NOTE 12: For UE supporting E-UTRA band 65 and CA configurations including Band 1, the Band $65 \Delta T_{i B, c}$ is the $\max$ (Band $65 \Delta T_{i B, c}$, Band $1 \Delta T_{i B, c}$ )
NOTE 13: For UE supporting E-UTRA band 42,43 or 48 and CA configurations including Band 42,43 or 48 , the applicable $\Delta T_{I B, c}$ in Band 42,43 , or 48 is the $\max$ (Band $42 \Delta \mathrm{~T}_{\mathrm{ib}, \mathrm{c}}$, Band $43 \Delta \mathrm{~T}_{\mathrm{ib}, \mathrm{c},}$, Band $48 \Delta \mathrm{~T}_{\mathrm{Ib}, \mathrm{c}}$ ).
NOTE 14: Only applicable for UE supporting inter-band carrier aggregation with the uplink active in Band 8.

NOTE: The above additional tolerances do not apply to supported UTRA operating bands with frequency range below 1 GHz that correspond to the E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations when such bands are belonging only to band combination(s) where one band is $<1 \mathrm{GHz}$ and another band is $>1.7 \mathrm{GHz}$ and there is no harmonic relationship between the low band UL and high band DL. Otherwise the above additional tolerances also apply to supported UTRA operating bands that correspond to the E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations.

NOTE: To meet the $\Delta \mathrm{T}_{\mathrm{IB}, \mathrm{c}}$ requirements for CA_3A-7A with state-of-the-art technology, an increase in power consumption of the UE may be required. It is also expected that as the state-of-the-art technology evolves in the future, this possible power consumption increase can be reduced or eliminated.

Table 6.2.5-3: $\Delta \mathrm{T}_{\mathrm{IB}, \mathrm{c}}$ (three bands)

| E-UTRA operating band combination | E-UTRA Band | $\left.\Delta \mathrm{TIB}, \mathrm{c}^{\text {[ }} \mathrm{dB}\right]$ |

| NOTE 1: The above additional tolerances are only applicable for the E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations |  |  |

NOTE 2: The above additional tolerances also apply in non-aggregated operation for the supported E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations
NOTE 3: Unless otherwise specified, in case the UE supports more than one of the above 3DL inter-band carrier aggregation configurations and a E-UTRA operating band belongs to more than one 3DL inter-band carrier aggregation configurations then:

- When the E-UTRA operating band frequency range is $\leq 1 \mathrm{GHz}$ and the tolerances are the same, the value applies to the band. If the tolerances are different, the applicable additional 3DL tolerance is FFS. In case there is a harmonic relation between low band UL and high band DL, then the maximum tolerance among the different supported 3DL carrier aggregation configurations involving such band shall be applied
- When the E-UTRA operating band frequency range is $>1 \mathrm{GHz}$, the applicable additional 3DL tolerance shall be the maximum tolerance above that applies for that operating band among the supported 3DL CA configurations
NOTE 4: The above additional tolerances applicable for the E-UTRA operating bands that belong to the supported highest order interband carrier aggregation configuration, also applies to the same EUTRA operating bands that belong to a supported lower order CA configuration.
NOTE 5: The requirement is specified for the frequency range of 25452690MHz.
NOTE 6: The requirement is specified for the frequency range of 24962545MHz.
NOTE 7: For UE supporting E-UTRA band 65 and CA configurations including Band 1, the Band $65 \Delta \mathrm{~T}_{\mathrm{IB}, \mathrm{c}}$ is the $\max$ (Band $65 \Delta \mathrm{~T}_{\mathrm{IB}, \mathrm{c}}$, Band $1 \Delta \mathrm{~T}_{\mathrm{IB}, \mathrm{c}}$
NOTE 8: Only applicable for UE supporting inter-band carrier aggregation with the uplink active in Band 1 or Band 42.
NOTE 9: Only applicable for UE supporting inter-band carrier aggregation with uplink in one E-UTRA band and without simultaneous $\mathrm{Rx} / \mathrm{Tx}$ on Band 41 and Band 42.
NOTE 10: Applicable for UE supporting inter-band carrier aggregation without simultaneous $\mathrm{Rx} / \mathrm{Tx}$ among TDD bands.
NOTE 11: Only applicable for UE supporting inter-band carrier aggregation with the uplink active in Band 1 or Band 8
NOTE 12: Only applicable for UE supporting inter-band carrier aggregation with the uplink active in Band 3 or Band 8.
NOTE 13: Applicable for UE supporting inter-band carrier aggregation without simultaneous $\mathrm{Rx} / \mathrm{Tx}$ among TDD bands.
NOTE 14: Applicable for UE supporting inter-band carrier aggregation without simultaneous $\mathrm{Rx} / \mathrm{Tx}$ among TDD bands.
NOTE 15: Only applicable for UE supporting inter-band carrier aggregation with the uplink active in Band 8 or Band 41.
NOTE 16: For UE supporting E-UTRA band 42, 43 or 48 and CA configurations including Band 42,43 or 48 , the applicable $\Delta T_{18, c}$ in Band 42, 43, or 48 is the max (Band $42 \Delta T_{i B, c}$, Band $43 \Delta T_{i B, c}$, Band $\left.48 \Delta T_{1 B, c}\right)$.
NOTE 17: Only applicable for UE supporting inter-band carrier aggregation with the uplink active in Band 8 or Band 11.
NOTE 18: The values in the table reflect what can be achieved with the present state of the art technology. They shall be reconsidered when the state of the art technology progresses.
NOTE 19: Only applicable for UE supporting inter-band carrier aggregation with uplink in one E-UTRAN band and without simultaneous $\mathrm{Rx} / \mathrm{Tx}$ on band 39 and band 41
NOTE 20: Only applicable for UE supporting inter-band carrier aggregation with uplink in one E-UTRA band and without simultaneous Rx/Tx among TDD bands

Table 6.2.5-4: $\Delta T_{\mathrm{IB}, \mathrm{c}}$ (four bands)

| E-UTRA operating band combination | E-UTRA Band | $\Delta \mathrm{TIB}, \mathrm{c}^{\text {[dB] }}$ |

NOTE 1: The above additional tolerances are only applicable for the E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations.
NOTE 2: The above additional tolerances also apply in non-aggregated operation for the supported E-UTRA operating bands that belong to the supported interband carrier aggregation configurations.
NOTE 3: Tolerances for a UE supporting multiple 4DL inter-band CA configurations are FFS.
NOTE 4: The above additional tolerances applicable for the E-UTRA operating bands that belong to the supported highest order inter-band carrier aggregation configuration, also applies to the same E-UTRA operating bands that belong to a supported lower order CA configuration.
NOTE 5: For UE supporting E-UTRA band 65 and CA configurations including Band 1, the Band $65 \Delta \mathrm{~T}_{\mathrm{IB}, \mathrm{c}}$ is the $\max$ (Band $65 \Delta \mathrm{~T}_{\mathrm{IB}, \mathrm{c}}$, Band $1 \Delta \mathrm{~T}_{\mathrm{IB}, \mathrm{c}}$ ).
NOTE 6: For UE supporting E-UTRA band 42,43 or 48 and CA configurations including Band 42,43 or 48 , the applicable $\Delta T_{i B, c}$ in Band 42,43 , or 48 is the $\max$ (Band $42 \Delta T_{i B, c}$, Band $43 \Delta T_{i B, c}$, Band $\left.48 \Delta T_{I B, c}\right)$.
NOTE 7: The requirement is applied for UE transmitting on the frequency range of $2545-2690 \mathrm{MHz}$.
NOTE 8: The requirement is applied for UE transmitting on the frequency range of $2496-2545 \mathrm{MHz}$.
NOTE 9: The values in the table reflect what can be achieved with the present state of the art technology. They shall be reconsidered when the state of the art technology progresses.
NOTE 10: Only applicable for UE supporting inter-band carrier aggregation with the uplink active in Band 1, Band 3 or Band 8.
NOTE 11: Only applicable for UE supporting inter-band carrier aggregation with the uplink active in Band 1, Band 8 or Band 11.
NOTE 12: Only applicable for UE supporting inter-band carrier aggregation with the uplink active in Band 3, Band 8 or Band 11.
NOTE 13: Applicable for UE supporting inter-band carrier aggregation without simultaneous $R x / T x$ among TDD bands.

Table 6.2.5-5: $\Delta \mathrm{T}_{\mathrm{IB}, \mathrm{c}}$ (five bands)

|  | 42 | 0.8 |
|  | 43 | 0.8 |
| NOTE 1: The above additional tolerances are only applicable for the E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations. |  |  |
| NOTE 2: The above additional tolerances also apply in non-aggregated operation for the supported E-UTRA operating bands that belong to the supported interband carrier aggregation configurations. |  |  |
| NOTE 3: Tolerances for a UE supporting multiple 5DL inter-band CA configurations are FFS. |  |  |
| NOTE 4: The above additional tolerances applicable for the E-UTRA operating bands that belong to the supported highest order inter-band carrier aggregation configuration, also applies to the same E-UTRA operating bands that belong to a supported lower order CA configuration. |  |  |

NOTE: The above additional tolerances do not apply to supported UTRA operating bands with frequency range below 1 GHz that correspond to the E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations when such bands are belonging only to band combination(s) where one band is $<1 \mathrm{GHz}$ and other bands are $>1.7 \mathrm{GHz}$ and there is no harmonic relationship between the low band UL and high band DL. Otherwise the above additional tolerances also apply to supported UTRA operating bands that correspond to the E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations.

### 6.2.5A Configured transmitted power for CA

For uplink carrier aggregation the UE is allowed to set its configured maximum output power $\mathrm{P}_{\mathrm{CMAX}, c}$ for serving cell $c$ and its total configured maximum output power $\mathrm{P}_{\text {CMAX }}$.

The configured maximum output power $\mathrm{P}_{\mathrm{CMAX}, c}$ on serving cell $c$ shall be set as specified in subclause 6.2.5 .
For uplink inter-band carrier aggregation, $\mathrm{MPR}_{c}$ and $\mathrm{A}-\mathrm{MPR}_{c}$ apply per serving cell $c$ and are specified in subclause 6.2.3 and subclause 6.2.4 , respectively. $\mathrm{P}^{2} \mathrm{MPR}_{c}$ accounts for power management for serving cell $c$. $\mathrm{P}_{\mathrm{CMAX}, c}$ is calculated under the assumption that the transmit power is increased independently on all component carriers.

For uplink intra-band contiguous and non-contiguous carrier aggregation, $\mathrm{MPR}_{c}=\mathrm{MPR}$ and $\mathrm{A}-\mathrm{MPR}_{c}=\mathrm{A}-\mathrm{MPR}$ with MPR and A-MPR specified in subclause 6.2 .3 A and subclause 6.2.4A respectively. There is one power management term for the UE, denoted P-MPR, and P-MPR ${ }_{c}=\mathrm{P}-\mathrm{MPR} . \mathrm{P}_{\mathrm{CMAX}, c}$ is calculated under the assumption that the transmit power is increased by the same amount in dB on all component carriers.

The total configured maximum output power $\mathrm{P}_{\mathrm{CMAX}}$ shall be set within the following bounds:

$$
\mathrm{P}_{\text {CMAX_L }} \leq \mathrm{P}_{\text {CMAX }} \leq \mathrm{P}_{\text {CMAX_H }}
$$

For uplink inter-band carrier aggregation with one serving cell c per operating band when same TTI pattern is used in all aggregated serving cells,

```
\(\left.P_{\text {PowerClass }}\right\}\)
```

$$
\mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}}=\operatorname{MIN}\left\{10 \log _{10} \sum \mathrm{p}_{\mathrm{EMAX}, \mathrm{c}}, \mathrm{P}_{\text {PowerClass }}\right\}
$$

where

- $\quad \mathrm{p}_{\text {EmAX,c }}$ is the linear value of $\mathrm{P}_{\text {Emax, }}$ w which is given by IE $P$-Max for serving cell $c$ in [7];
- $\quad P_{\text {PowerClass }}$ is the maximum UE power specified in Table 6.2.2A-1 without taking into account the tolerance specified in the Table 6.2.2A-1; ppowerClass is the linear value of $\mathrm{P}_{\text {PowerClass }}$;
- $\operatorname{mpr}_{c}$ and a-mpr ${ }_{c}$ are the linear values of $\mathrm{MPR}_{c}$ and A-MPR ${ }_{c}$ as specified in subclause 6.2.3 and subclause 6.2.4, respectively;
- $\mathrm{pmpr}_{\mathrm{c}}$ is the linear value of $\mathrm{P}-\mathrm{MPR}_{c}$;
- $\Delta \mathrm{t}_{\mathrm{C}, \mathrm{c}}$ is the linear value of $\Delta \mathrm{T}_{\mathrm{C}, \mathrm{c} .} \Delta \mathrm{t}_{\mathrm{C}, \mathrm{c}}=1.41$ when NOTE 2 in Table 6.2.2-1 applies for a serving cell $c$, otherwise $\Delta \mathrm{t}_{\mathrm{C}, \mathrm{c}}=1$;
- $\Delta t_{\mathrm{IB}, \mathrm{c}}$ is the linear value of the inter-band relaxation term $\Delta \mathrm{T}_{\mathrm{IB}, \mathrm{c}}$ of the serving cell $c$ as specified in Table 6.2.5-2; otherwise $\Delta \mathrm{t}_{\mathrm{IB}, \mathrm{c}}=1$;
- $\Delta t_{\text {ProSe }}$ is the linear value of $\Delta \mathrm{T}_{\text {ProSe }}$ and applies as specified in subclause 6.2.5.

For uplink intra-band contiguous and non-contiguous carrier aggregation when same TTI pattern is used in all aggregated serving cells,
$\mathrm{P}_{\mathrm{CMAX} L}=\operatorname{MIN}\left\{10 \log _{10} \sum \mathrm{p}_{\mathrm{EmAX}, \mathrm{c}}-\Delta \mathrm{T}_{\mathrm{C}},\left(\mathrm{P}_{\text {PowerClass }}-\Delta \mathrm{P}_{\text {PowerClass }}\right)-\mathrm{MAX}\left(\mathrm{MPR}+\mathrm{A}-\mathrm{MPR}+\Delta \mathrm{T}_{\mathrm{IB}, \mathrm{c}}+\Delta \mathrm{T}_{\mathrm{C}}+\Delta \mathrm{T}_{\text {ProSe }}\right.\right.$, P-MPR) \}

$$
\mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}}=\operatorname{MIN}\left\{10 \log _{10} \sum \mathrm{p}_{\text {EMAX }, \mathrm{c}}, \mathrm{P}_{\text {PowerClass }}\right\}
$$

where

- pemax, cis the linear value of $\mathrm{P}_{\mathrm{EmAX}, c}$ which is given by IE P-Max for serving cell $c$ in [7];
- $\quad P_{\text {PowerClass }}$ is the maximum UE power specified in Table 6.2.2A-1 without taking into account the tolerance specified in the Table 6.2.2A-1;
$\Delta \mathrm{P}_{\text {PowerClass }}=3 \mathrm{~dB}$ for a power class 2 capable UE operating in Band 41 , when $P$-max of 23 dBm or lower is indicated or if the uplink/downlink configuration is 0 or 6 in the cell; otherwise, $\Delta \mathrm{P}_{\text {PowerClass }}=0 \mathrm{~dB}$
- MPR and A-MPR are specified in subclause 6.2.3A and subclause 6.2.4A respectively;
- $\Delta \mathrm{T}_{\text {IB, }, \mathrm{c}}$ is the additional tolerance for serving cell $c$ as specified in Table 6.2.5-2;
- P-MPR is the power management term for the UE;
- $\Delta \mathrm{T}_{\mathrm{C}}$ is the highest value $\Delta \mathrm{T}_{\mathrm{C}, \mathrm{c}}$ among all serving cells $c$ in the $\mathrm{T}_{\mathrm{REF}}$ over all $\mathrm{T}_{\text {eval }}$ durations. $\Delta \mathrm{T}_{\mathrm{C}, \mathrm{c}}=1.5 \mathrm{~dB}$ when NOTE 2 in Table 6.2.2A-1 applies to the serving cell $c$, otherwise $\Delta \mathrm{T}_{\mathrm{C}, \mathrm{c}}=0 \mathrm{~dB}$;
- $\Delta \mathrm{T}_{\text {ProSe }}$ applies as specified in subclause 6.2.5.

For uplink inter-band carrier aggregation with one serving cell c per operating band when at least one different TTI patterns is used in aggregated cells, the UE is allowed to set its configured maximum output power $\mathrm{P}_{\mathrm{CMAX}, \mathrm{c}(\mathrm{i}), \mathrm{i}}$ for serving cell $\mathrm{c}(\mathrm{i})$ of TTI length $\mathrm{i}, \mathrm{i}=1,2,3$ and its total configured maximum output power $\mathrm{P}_{\text {Cmax }}$.

The configured maximum output power $\mathrm{P}_{\mathrm{CMAX}, \mathrm{c}(\mathrm{i}) \mathrm{i}}(\mathrm{p})$ in TTI p of serving cell $\mathrm{c}(\mathrm{i})$ on TTI length i shall be set within the following bounds:

$$
P_{\text {CMAX_L,c(i),i }}(\mathrm{p}) \leq \mathrm{P}_{\text {CMAX,c(i), }}(\mathrm{p}) \leq \mathrm{P}_{\text {CMAX_H,C(i), }}(\mathrm{p})
$$

where $\mathrm{P}_{\text {CMAX_L,c(i),i }}(\mathrm{p})$ and $\mathrm{P}_{\text {CMAX_H,c(i),i }}(\mathrm{p})$ are the limits for a serving cell $\mathrm{c}(\mathrm{i})$ of TTI length i as specified in subclause 6.2.5.

The total UE configured maximum output power $\mathrm{P}_{\mathrm{CMAX}}(\mathrm{p}, \mathrm{q}, \mathrm{k})$ in a TTI p of TTI length 1 , a TTI q of TTI length 2 and a TTI k of TTI length 3 that overlap in time shall be set within the following bounds unless stated otherwise:

$$
\mathrm{P}_{\text {CMAX_L }}(\mathrm{p}, \mathrm{q}, \mathrm{k}) \leq \mathrm{P}_{\mathrm{CMAX}}(\mathrm{p}, \mathrm{q}, \mathrm{k}) \leq \mathrm{P}_{\text {CMAX_H }}(\mathrm{p}, \mathrm{q}, \mathrm{k})
$$

When $\mathrm{p}, \mathrm{q}, \mathrm{k}$ are of different lengths and belong to different cells:

$$
\begin{aligned}
& \mathrm{P}_{\text {CMAX_L }}(\mathrm{p}, \mathrm{q}, \mathrm{k})=\operatorname{MIN}\left\{10 \log _{10}\left[\mathrm{p}_{\mathrm{CMAX} \_\mathrm{L}, \mathrm{c}(1), 1}(\mathrm{p})+\mathrm{p}_{\mathrm{CMAX} \_\mathrm{L}, \mathrm{c}(2), 2}(\mathrm{q})++\mathrm{p}_{\mathrm{CMAX} \_\mathrm{L}, \mathrm{c}(3), 3}(\mathrm{k})\right], \mathrm{P}_{\text {PowerClass }}\right\} \\
& \mathrm{P}_{\text {CMAX_H }}(\mathrm{p}, \mathrm{q}, \mathrm{k})=\operatorname{MIN}\left\{10 \log _{10}\left[\mathrm{p}_{\mathrm{CMAX} \_\mathrm{H}, \mathrm{c}(1), 1}(\mathrm{p})+\mathrm{p}_{\mathrm{CMAX} \_\mathrm{H}, \mathrm{c}(2), 2}(\mathrm{q})+\mathrm{p}_{\mathrm{CMAX} \_\mathrm{H}, \mathrm{c}(3), 3}(\mathrm{k})\right], \mathrm{P}_{\text {PowerClass }}\right\}
\end{aligned}
$$

where $\mathrm{p}_{\text {CMAX_L,c(i),i }}$ and $\mathrm{p}_{\text {CMAX_H,c(i), }}$ are the respective limits $\mathrm{P}_{\text {CMAX_L,c(i),i }}$ and $\mathrm{P}_{\text {CMAX_H,c(i),i }}$ expressed in linear scale.
For combinations of intra-band and inter-band carrier aggregation with UE configured for transmission on three serving cells (up to two contiguously aggregated carriers per operating band),

For the case when p and q belong to the same band and k belongs to a different band but $\mathrm{p}, \mathrm{q}$ and k are of the same TTI pattern.

$$
\begin{gathered}
\mathrm{P}_{\text {CMAX_L }}=\operatorname{MIN}\left\{10 \log _{10} \sum\left(\mathrm{p}_{\text {CMAX_L, Bi }}\right), \mathrm{P}_{\text {PowerClass }}\right\} \\
\mathrm{P}_{\text {CMAX_H }}=\operatorname{MIN}\left\{10 \log _{10} \sum \mathrm{p}_{\text {EMAX,C }}, \mathrm{P}_{\text {PowerClass }}\right\}
\end{gathered}
$$

For the case when p and q belong to the same band and are of the same TTI pattern while k belong to a different band and is of different TTI pattern then:

$$
\begin{aligned}
& \mathrm{P}_{\text {CMAX_L }}(\mathrm{p}, \mathrm{q}, \mathrm{k})=\operatorname{MIN}\left\{10 \log _{10}\left[\mathrm{p}_{\text {CMAX_L,Bi }}(\mathrm{p})+\mathrm{p}_{\text {CMAX_L }, \mathrm{c}(3), 3}(\mathrm{k})\right], \mathrm{P}_{\text {PowerClass }}\right\} \\
& \mathrm{P}_{\text {CMAX_H }}(\mathrm{p}, \mathrm{q}, \mathrm{k})=\operatorname{MIN}\left\{10 \log _{10}\left[\mathrm{p}_{\text {CMAX_H,Bi }}(\mathrm{p})+\mathrm{p}_{\text {CMAX_H,C(3),3 }}(\mathrm{k})\right], \mathrm{P}_{\text {PowerClass }}\right\}
\end{aligned}
$$

where

- $\quad \mathrm{p}_{\text {EMAX,c }}$ is the linear value of $\mathrm{P}_{\mathrm{EMAX}, c}$ which is given by IE $P$-Max for serving cell $c$ in [7];
- $P_{\text {PowerClass }}$ is the maximum UE power specified in Table 6.2.2A-0 without taking into account the tolerance specified in the Table 6.2.2A-0; peowerClass is the linear value of $\mathrm{P}_{\text {PowerClass }}$;
- p$_{\text {CMAX_L, bi }}$ is the linear values of $\mathrm{P}_{\text {CMAX_L }}$ as specified in corresponding operating band. $\mathrm{P}_{\text {CMAX_L,c }}$ specified for single carrier in subclause 6.2.5 applies for operating band supporting one serving cell. $\mathrm{P}_{\text {CMAX_L }}$ specified for uplink intra-band contiguous carrier aggregation in subclause 6.2.5A applies for operating band supporting two contiguous serving cells.
- intra-band carriers use the same TTI patterns.
$\mathrm{T}_{\text {REF }}$ and $\mathrm{T}_{\text {eval }}$ are specified in Table $6.2 .5 \mathrm{~A}-0$ when same and different TTI patterns are used in aggregated carriers. For each $\mathrm{T}_{\text {REF }}$, the $\mathrm{P}_{\text {CMAX_L }}$ is evaluated per $\mathrm{T}_{\text {eval }}$ and given by the minimum value taken over the transmission(s) within the $\mathrm{T}_{\text {eval }}$ the minimum $\mathrm{P}_{\text {CMAX_L }}$ over the one or more $\mathrm{T}_{\text {eval }}$ is then applied for the entire $\mathrm{T}_{\text {REF }}$. $\mathrm{P}_{\text {PowerClass }}$ shall not be exceeded by the UE during any period of time.

Table 6.2.5A-0: Pcmax evaluation window for different TTI patterns

| TTI duration | T $_{\text {REF }}$ | Teval |
| :---: | :---: | :---: |
| Different TTI duration in different <br> aggregated carrier | $\mathrm{T}_{\text {REF }}$ of longer TTI | $\mathrm{T}_{\text {eval }}$ of shortest TTI |

If the UE is configured with multiple TAGs and transmissions of the UE on TTI $i$ for any serving cell in one TAG overlap some portion of the first symbol of the transmission on TTI $i+1$ for a different serving cell in another TAG, the UE minimum of $\mathrm{P}_{\text {CMAX_L }}$ for TTIs $i$ and $i+1$ applies for any overlapping portion of TTIs $i$ and $i+1$. P $_{\text {PowerClass }}$ shall not be exceeded by the UE during any period of time.

In case PC2 and uplink intra-band contiguous CA capable UE receives $p_{\text {Emax,c }}$ in Scell then that applies both to Scell and Pcell once the Scell is activated.

The measured maximum output power $\mathrm{P}_{\text {UMAX }}$ over all serving cells with same TTI pattern shall be within the following range:

$$
\begin{gathered}
\mathrm{P}_{\mathrm{CMAX} \_\mathrm{L}}-\operatorname{MAX}\left\{\mathrm{T}_{\mathrm{L}}, \mathrm{~T}_{\mathrm{LOW}}\left(\mathrm{P}_{\mathrm{CMAX} \_\mathrm{L}}\right)\right\} \leq \mathrm{P}_{\mathrm{UMAX}} \leq \mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}}+\mathrm{T}_{\mathrm{HIGH}}\left(\mathrm{P}_{\mathrm{CMAX}} \mathrm{H}\right) \\
\mathrm{P}_{\mathrm{UMAX}}=10 \log _{10} \sum \mathrm{p}_{\mathrm{UMAX}, \mathrm{c}}
\end{gathered}
$$

where $\mathrm{p}_{\mathrm{UMAX}, \mathrm{c}}$ denotes the measured maximum output power for serving cell $c$ expressed in linear scale. The tolerances $\mathrm{T}_{\text {LOw }}\left(\mathrm{P}_{\mathrm{CMAX}}\right)$ and $\mathrm{T}_{\text {HIGH }}\left(\mathrm{P}_{\text {CMAX }}\right)$ for applicable values of $\mathrm{P}_{\text {CMAX }}$ are specified in Table $6.2 .5 \mathrm{~A}-1$ and Table $6.2 .5 \mathrm{~A}-2$ for inter-band carrier aggregation and intra-band carrier aggregation, respectively. The tolerance $\mathrm{T}_{\mathrm{L}}$ is the absolute value of the lower tolerance for applicable E-UTRA CA configuration as specified in Table 6.2.2A-0, Table 6.2.2A-1 and Table 6.2.2A-2 for inter-band carrier aggregation, intra-band contiguous carrier aggregation and intra-band non-contiguous carrier aggregation, respectively.

The measured maximum output power $\mathrm{P}_{\mathrm{UMAX}}$ over all serving cells, when atleast one TTI has a different TTI pattern, shall be within the following range:

$$
\begin{gathered}
\mathrm{P}_{\text {CMAX_L }}-\operatorname{MAX}\left\{\mathrm{T}_{\mathrm{L}}, \mathrm{~T}_{\text {LOW }}\left(\mathrm{P}_{\text {CMAX_L }}^{\prime}\right)\right\} \leq \mathrm{P}_{\text {UMAX }}^{\prime} \leq \mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}}^{\prime}+\mathrm{T}_{\text {HIGH }}\left(\mathrm{P}^{\prime} \mathrm{CMAX}_{\perp}\right) \\
\mathrm{P}_{\text {UMAX }}^{\prime}=10 \log _{10} \sum \mathrm{p}_{\text {UMAX, }}^{\prime}
\end{gathered}
$$

where ${ }^{\prime}$ ' ${ }^{\prime}{ }^{\prime}$ $\mathrm{T}_{\text {REF. }}$. The tolerances $\mathrm{T}_{\text {LOW }}\left(\mathrm{P}^{\prime}{ }_{\text {CMAX }}\right)$ and $\mathrm{T}_{\text {HIGH }}\left(\mathrm{P}^{\prime}{ }_{\text {CMAX }}\right)$ for applicable values of $\mathrm{P}^{\prime}{ }_{\text {CMAX }}$ are specified in Table $6.2 .5 \mathrm{~A}-1$ and Table $6.2 .5 \mathrm{~A}-2$ for inter-band carrier aggregation and intra-band carrier aggregation, respectively. The tolerance $\mathrm{T}_{\mathrm{L}}$ is the absolute value of the lower tolerance for applicable E-UTRA CA configuration as specified in Table 6.2.2A-0, Table $6.2 .2 \mathrm{~A}-1$ and Table $6.2 .2 \mathrm{~A}-2$ for inter-band carrier aggregation, intra-band contiguous carrier aggregation and intra-band non-contiguous carrier aggregation, respectively.
where:

$$
\begin{aligned}
\mathrm{P}_{\text {CMAX_L }}^{\prime} & =\operatorname{MIN}\left\{\operatorname{MIN}\left\{10 \log _{10} \sum\left(\mathrm{p}_{\text {CMAX_L, Bi }}\right), \mathrm{P}_{\text {PowerClass }}\right\} \text { over all overlapping TTIs in } \mathrm{T}_{\text {REF }}\right\} \\
\mathrm{P}_{\text {CMAX_H }} & =\operatorname{MAX}\left\{\operatorname{MIN}\left\{10 \log _{10} \sum \mathrm{p}_{\mathrm{EMAX}, \mathrm{c}}, \mathrm{P}_{\text {PowerClass }}\right\} \text { over all overlapping TTIs in } \mathrm{T}_{\text {REF }}\right\}
\end{aligned}
$$

Table 6.2.5A-1: Pcmax $^{\text {tolerance for uplink inter-band } C A ~(t w o ~ b a n d s) ~}$

### 6.2.5B Configured transmitted power for UL-MIMO

For UE supporting UL-MIMO, the transmitted power is configured per each UE.
The definitions of configured maximum output power $\mathrm{P}_{\mathrm{CMAX}, c}$, the lower bound $\mathrm{P}_{\text {CMAX_L }, c}$, and the higher bound $\mathrm{P}_{\text {CMAX_H }, c}$ specified in subclause 6.2 .5 shall apply to UE supporting UL-MIMO, where

- $\mathrm{P}_{\text {PowerClass, }}, \Delta \mathrm{P}_{\text {PowerClass }}$ and $\Delta \mathrm{T}_{\mathrm{C}, \mathrm{c}}$ are specified in subclause 6.2.2B;
- $\quad \mathrm{MPR}_{, c}$ is specified in subclause 6.2.3B;
- A-MPR ${ }_{c}$ is specified in subclause 6.2.4B.

The measured configured maximum output power $\mathrm{P}_{\mathrm{UMAX}, c}$ for serving cell $c$ shall be within the following bounds:

$$
\mathrm{P}_{\mathrm{CMAX} \_\mathrm{L}, c}-\operatorname{MAX}\left\{\mathrm{T}_{\mathrm{L}}, \mathrm{~T}_{\mathrm{LOW}}\left(\mathrm{P}_{\mathrm{CMAX} \_\mathrm{L}, c}\right)\right\} \leq \mathrm{P}_{\mathrm{UMAX}, c} \leq \mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}, c}+\mathrm{T}_{\mathrm{HIGH}}\left(\mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}, c}\right)
$$

where $\mathrm{T}_{\text {LOw }}\left(\mathrm{P}_{\text {CMAX_L }, c}\right)$ and $\mathrm{T}_{\text {HIGH }}\left(\mathrm{P}_{\text {CMAX_H }, c}\right)$ are defined as the tolerance and applies to $\mathrm{P}_{\text {CMAX_L }, c}$ and $\mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}, c}$ separately, while $\mathrm{T}_{\mathrm{L}}$ is the absolute value of the lower tolerance in Table $6.2 .2 \mathrm{~B}-1$ for the applicable operating band.

For UE with two transmit antenna connectors in closed-loop spatial amultiplexing scheme, the tolerance is specified in Table 6.2.5B-1. The requirements shall be met with UL-MIMO configurations specified in Table 6.2.2B-2.

Table 6.2.5B-1: $\mathrm{P}_{\text {смах }, \text { c }}$ tolerance in closed-loop spatial multiplexing scheme

| Рсмах,с (dBm) | Tolerance <br>  | $\begin{gathered} \text { Tolerance } \\ \mathrm{T}_{\text {HIGH }}\left(\mathrm{P}_{\text {cMAX_H }, \mathrm{c})}(\mathrm{dB})\right. \end{gathered}$ |
| :---: | :---: | :---: |
| $\mathrm{P}_{\text {cmax }, \mathrm{c}}=23$ | 3.0 | 2.0 |
| $22 \leq \mathrm{PCMAX}, ~_{\text {c }}<23$ | 5.0 | 2.0 |
| $21 \leq \mathrm{PCMAX}, \mathrm{c}^{2}$ 22 | 5.0 | 3.0 |
| $20 \leq \mathrm{Pcmax}$, c $<21$ | 6.0 | 4.0 |
| $16 \leq \mathrm{Pcmax}$, c $^{2} 20$ | 5.0 |  |
| $11 \leq \mathrm{PCMAX}, \mathrm{c}^{\text {< }}$ < 16 | 6.0 |  |
| $-40 \leq \mathrm{P}_{\text {CMAX }, \text { c }}<11$ | 7.0 |  |

If UE is configured for transmission on single-antenna port, the requirements in subclause 6.2 .5 apply.

### 6.2.5C Configured transmitted power for Dual Connectivity

For inter-band dual connectivity with one uplink serving cell per CG, the UE is allowed to set its configured maximum output power $\mathrm{P}_{\mathrm{CMAX}, c(i), i}$ for serving cell $c(i)$ of $\mathrm{CG} i, i=1,2$, and its total configured maximum output power $\mathrm{P}_{\mathrm{CMAX}}$.

The configured maximum output power $\mathrm{P}_{\mathrm{CMAX}, c(i), i}(p)$ in subframe $p$ of serving cell $c(i)$ on $\mathrm{CG} i$ shall be set within the following bounds:

$$
\mathrm{P}_{\text {CMAX_L }, c(i), i}(p) \leq \mathrm{P}_{\text {CMAX }, c(i), i}(p) \leq \mathrm{P}_{\text {CMAX_H }, c(i), i}(p)
$$

where $\mathrm{P}_{\mathrm{CMAX} \_\mathrm{L}, c(i), i}(p)$ and $\mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}, c(i), i}(p)$ are the limits for a serving cell $c(i)$ of CG $i$ as specified in subclause 6.2.5.
The total UE configured maximum output power $\mathrm{P}_{\mathrm{CMAX}}(p, q)$ in a subframe $p$ of CG 1 and a subframe $q$ of CG 2 that overlap in time shall be set within the following bounds for synchronous and asynchronous operation unless stated otherwise:

$$
\mathrm{P}_{\mathrm{CMAX} \_\mathrm{L}}(p, q) \leq \mathrm{P}_{\mathrm{CMAX}}(p, q) \leq \mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}}(p, q)
$$

with

$$
\begin{aligned}
& \operatorname{PCMAX} \_\mathrm{L}(p, q)=\operatorname{MIN}\left\{10 \log _{10}\left[\operatorname{paxax\_ L}, c(1), I(p)+\operatorname{pemax} \_\mathrm{L}, c(2), 2(q)\right], \mathrm{P}_{\text {PowerClass }}\right\} \\
& \operatorname{P}_{\text {CMAX_H }}(p, q)=\operatorname{MIN}\left\{10 \log _{10}\left[\operatorname{p}_{\text {CMAX_H }, c(1), l}(p)+\operatorname{p}_{\text {CMAX_H }}, c(2), 2(q)\right], \mathrm{P}_{\text {PowerClass }}\right\}
\end{aligned}
$$

where $\mathrm{p}_{\text {CMAX_L, } c(i), i}$ is $\mathrm{p}_{\text {CMAX_H }, c(i), i}$ are the respective limits $\mathrm{P}_{\text {CMAX_L }, c(i), i}(p)$ and $\mathrm{P}_{\text {CMAX_H }, c(i), i}(p)$ expressed in linear scale.

If the UE is configured in Dual Connectivity and synchronous transmissions of the UE on subframe $p$ for a serving cell in one CG overlaps some portion of the first symbol of the transmission on subframe $q+1$ for a different serving cell in the other CG, the UE minimum of $\mathrm{P}_{\text {CMAX_L }}$ between subframes pairs $(p, q)$ and $(p+1, q+1)$ respectively applies for any overlapping portion of subframes $(p, q)$ and $(p+1, q+1)$. $\mathrm{P}_{\text {PowerClass }}$ shall not be exceeded by the UE during any period of time.

The measured total maximum output power $\mathrm{P}_{\text {UMAX }}$ over both CGs is

$$
\mathrm{P}_{\mathrm{UMAX}}=10 \log _{10}\left[\mathrm{p}_{\mathrm{UMAX}, c(1), l}+\mathrm{p}_{\mathrm{UMAX}, c(2), 2}\right],
$$

where $\mathrm{p}_{\mathrm{UMAX}, c(i), i}$ denotes the measured output power of serving cell $c(i)$ of CG $i$ expressed in linear scale.
If the UE is configured in Dual Connectivity and synchronous transmissions

$$
\operatorname{P}_{\text {CMAX } \_L}(p, q)-\mathrm{T}_{\text {LOW }}\left(\operatorname{P}_{\text {CMAX_L }}(p, q)\right) \leq \operatorname{P}_{\mathrm{UMAX}} \leq \operatorname{P}_{\text {CMAX_H }}(p, q)+\mathrm{T}_{\text {HIGH }}\left(\mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}}(p, q)\right)
$$

where $\mathrm{P}_{\mathrm{CMAX} \_\mathrm{L}}(p, q)$ and $\mathrm{P}_{\text {CMAX_H }}(p, q)$ are the limits for the pair $(p, q)$ and with the tolerances $\mathrm{T}_{\text {LOw }}\left(\mathrm{P}_{\text {CMAX }}\right)$ and $\mathrm{T}_{\text {HIGH }}\left(\mathrm{P}_{\mathrm{CMAX}}\right)$ for applicable values of $\mathrm{P}_{\text {CMAX }}$ specified in Table $6.2 .5 \mathrm{C}-1$. $\mathrm{P}_{\text {CMAX_L }}$ may be modified for any overlapping portion of subframes $(p, q)$ and $(p+1, q+1)$.

If the UE is configured in Dual Connectivity and asynchronous transmissions, the subframes of the leading CG are taken as reference subframes for the measurement of the total configured output power $\mathrm{P}_{\mathrm{UMAX}}$. If subframe $p$ of CG 1 and subframe $q$ of CG 2 overlap in time in their respective slot 0 and

1. if $p$ leads in time over $q$, then $p$ is the reference subframe and the $(p, q)$ and $(p, q-1)$ pairs are considered for determining the $\mathrm{P}_{\text {CMAX }}$ tolerance
2. if $q$ leads in time over $p$, then $q$ is the reference subframe and the $(p-1, q)$ and $(p, q)$ pairs are considered for determining the $\mathrm{P}_{\mathrm{CMAX}}$ tolerance;
for the reference subframe $p$ duration (when subframe $p$ in CG 1 leads):

$$
\begin{aligned}
& \mathrm{P}_{\text {CMAX_L }}=\operatorname{MIN}\left\{\mathrm{P}_{\mathrm{CMAX} \_\mathrm{L}}(p, q), \mathrm{P}_{\mathrm{CMAX} \_\mathrm{L}}(p, q-l)\right\} \\
& \mathrm{P}_{\text {CMAX_H }}^{\prime}=\operatorname{MAX}\left\{\mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}}(p, q), \mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}}(p, q-l)\right\}
\end{aligned}
$$

while for the reference subframe $q$ duration (when subframe $q$ in CG 2 leads):

$$
\begin{aligned}
& \mathrm{P}_{\text {'cmax_L }}=\operatorname{MIN}\left\{\operatorname{P}_{\mathrm{CMAX} \_\mathrm{L}}(p-1, q), \mathrm{P}_{\mathrm{CMAX} \_\mathrm{L}}(p, q)\right\} \\
& \mathrm{P}_{\text {CMAX_H }}^{\prime}=\operatorname{MAX}\left\{\mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}}(p-1, q), \mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}}(p, q)\right\}
\end{aligned}
$$

where $\mathrm{P}_{\text {CMAX_L }}$ and $\mathrm{P}_{\text {СмAX_н }}$ are the applicable limits for each overlapping subframe pairs $(p, q),(p, q-l)$ and $(p-1, q)$. The measured total configured maximum output power $\mathrm{P}_{\mathrm{UMAX}}$ shall be within the following bounds:

$$
\mathrm{P}_{\text {CMAX_L }}^{\prime}-\mathrm{T}_{\text {LOW }}\left(\mathrm{P}^{\prime} \mathrm{CMAX}_{\mathrm{LL}}\right) \leq \mathrm{P}_{\text {UMAX }} \leq \mathrm{P}_{\text {CMAX_H }}^{\prime}+\mathrm{T}_{\text {HIGH }}\left(\mathrm{P}_{\text {CMAX_H }}^{\prime}\right)
$$

with the tolerances $\mathrm{T}_{\text {LOw }}\left(\mathrm{P}_{\mathrm{CMAX}}\right)$ and $\mathrm{T}_{\mathrm{HIGH}}\left(\mathrm{P}_{\mathrm{CMAX}}\right)$ for applicable values of $\mathrm{P}_{\mathrm{CMAX}}$ specified in Table $6.2 .5 \mathrm{C}-1$.
Table 6.2.5C-1: Pcmax tolerance for inter-band Dual Connectivity

| Pcmax(dBm) | Tolerance <br> Tlow(Pcmax_L )(dB) | $\begin{gathered} \text { Tolerance } \\ \text { Thigh }^{(\text {PcmAX_H })(\mathrm{dB})} \end{gathered}$ |
| :---: | :---: | :---: |
| Рсмах $=23$ | 3.0 | 2.0 |
| $22 \leq \mathrm{P}_{\text {смах }}<23$ | 5.0 | 2.0 |
| $21 \leq \mathrm{P}_{\text {cmax }}<22$ | 5.0 | 3.0 |
| $20 \leq \mathrm{P}_{\text {cmax },}<21$ | 6.0 | 4.0 |
| $16 \leq \mathrm{Pcmax}<20$ | 5.0 |  |
| $11 \leq \mathrm{P}_{\text {cmax }}$ < 16 | 6.0 |  |
| $-40 \leq$ PCMAX $^{\text {< }} 11$ | 7.0 |  |

### 6.2.5D Configured transmitted power for ProSe

When UE is configured for E-UTRA ProSe sidelink transmissions non-concurrent with E-UTRA uplink transmissions for E-UTRA ProSe operating bands specified in Table 5.5D-1, the configured maximum output power $\mathrm{P}_{\mathrm{CMAX}, c}$ and power boundary requirement specified in subclause 6.2 .5 shall apply to UE supporting ProSe, where

- $\quad \mathrm{MPR}_{c}$ is specified in subclause 6.2 .3 D ;
- $\mathrm{A}^{-\mathrm{MPR}_{c}}$ is specified in subclause 6.2.4D;
- $\Delta \mathrm{T}_{\text {ProSe }}=0.1 \mathrm{~dB}$.

For $P_{\mathrm{CMAX}, P S S C H}$ and $P_{\text {CMAXPSCCH }}, \mathrm{P}_{\text {EMAX }, c}$ is the value given by IE $P$-Max for serving cell c, defined by [7], when present. $\mathrm{P}_{\mathrm{EMAX}, \mathrm{c}}$ is the value given by IE maxTxPower, defined by [7], when the UE is not associated with a serving cell on the ProSe carrier .

For $P_{\text {CMAXPSDCH }}, \mathrm{P}_{\mathrm{EMAX}, c}$ is the value given by the IE discMaxTxPower in [7].
For $P_{\text {CMAXPSBCH }}, \mathrm{P}_{\mathrm{EMAX}, c}$ is the value given by the IE maxTxPower in [7] when the ProSe UE is not associated with a serving cell on the ProSe carrier. When the UE is associated with a serving cell, then $\mathrm{P}_{\mathrm{EMAX}, c}$ is the value given by the IE $P$-Max when PSBCH/SLSS transmissions is triggered for ProSe Direct communication as specified in [7], and is the value given by the IE discMaxTxPower in [7] otherwise.

For $P_{\text {CMAX,SSSS }}$, the value is as calculated for $P_{\text {CMAXPSBCH }}$ and applying the MPR for SSSS as specified in Section 6.2 .3 D .

When a UE is configured for simultaneous E-UTRA ProSe sidelink and E-UTRA uplink transmissions for inter-band EUTRA ProSe / E-UTRA bands specified in Table 5.5D-2, the UE is allowed to set its configured maximum output power $\mathrm{P}_{\text {CMAX }, c, \text { E-UTRA }}$ and $\mathrm{P}_{\text {CMAX }, c, \text { Prose }}$ for the configured E-UTRA uplink carrier and the configured E-UTRA ProSe carrier, respectively, and its total configured maximum output power $\mathrm{P}_{\mathrm{CMAX}, \mathrm{c}}$.

The configured maximum output power $\mathrm{P}_{\mathrm{CMAX}}{ }_{c, E-U T R A}(p)$ in subframe $p$ for the configured E-UTRA uplink carrier shall be set within the bounds:

$$
\mathrm{P}_{\mathrm{CMAX} \_\mathrm{L}, c, E-U T R A}(p) \leq \mathrm{P}_{\mathrm{CMAX}, c, E-U T R A}(p) \leq \mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}, c, E-U T R A}(p)
$$

where $\mathrm{P}_{\text {CMAX_LL, }, E-U T R A}$ and $\mathrm{P}_{\text {CMAX_H }, c, E-\text { UTRA }}$ are the limits for a serving cell c as specified in subclause 6.2.5.
The configured maximum output power $\mathrm{P}_{\mathrm{CMAX}}$ cProSe $(q)$ in subframe $q$ for the configured E-UTRA ProSe carrier shall be set within the bounds:

$$
\mathrm{P}_{\mathrm{CMAX}, c, \text { ProSe }}(q) \leq \mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}, c, \text { ProSe }}(q)
$$

where $\mathrm{P}_{\text {CMAX_H, }, \text { Prose }}$ is the limit as specified in subclause 6.2.5D.
The total UE configured maximum output power $\mathrm{P}_{\mathrm{CMAX}}(p, q)$ in a subframe $p$ of an E-UTRA uplink carrier and a subframe $q$ of an E-UTRA ProSe sidelink that overlap in time shall be set within the following bounds for synchronous and asynchronous operation unless stated otherwise:

$$
\operatorname{P}_{\mathrm{CMAX} \_\mathrm{L}}(p, q) \leq \mathrm{P}_{\mathrm{CMAX}}(p, q) \leq \mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}}(p, q)
$$

with

$$
\begin{gathered}
\mathrm{P}_{\mathrm{CMAX} \_\mathrm{L}}(p, q)=\mathrm{P}_{\mathrm{CMAX} \_\mathrm{L}, c, \text { E-UTRA }}(p) \\
\mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}}(p, q)=\operatorname{MIN}\left\{10 \log _{10}\left[\mathrm{p}_{\mathrm{CMAX} \_\mathrm{H}, c, E-\text { UTRA }}(p)+\mathrm{p}_{\mathrm{CMAX} \_\mathrm{H}, c, \text { ProSe }}(q)\right], \mathrm{P}_{\text {PowerClass }}\right\}
\end{gathered}
$$

 scale.

The measured total maximum output power $\mathrm{P}_{\mathrm{UMAX}}$ over both the E-UTRA uplink and E-UTRA ProSe carriers is

$$
\mathrm{P}_{\mathrm{UMAX}}=10 \log _{10}\left[\mathrm{p}_{\mathrm{UMAX}, c, E-U T R A}+\mathrm{p}_{\mathrm{UMAX}, c, \text { ProSe }}\right],
$$

where $\mathrm{p}_{\text {UMAX }, c, E-\text { UTRA }}$ denotes the measured output power of serving cell $c$ for the configured E-UTRA uplink carrier, and $p_{U M A X}, c$, Prose denotes the measured output power for the configured E-UTRA ProSe carrier expressed in linear scale.

When a UE is configured for synchronous ProSe and uplink transmissions,

$$
\mathrm{P}_{\mathrm{CMAX} \_\mathrm{L}}(p, q)-\mathrm{T}_{\mathrm{LOW}}\left(\mathrm{P}_{\mathrm{CMAX} \_\mathrm{L}}(p, q)\right) \leq \mathrm{P}_{\mathrm{UMAX}} \leq \mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}}(p, q)+\mathrm{T}_{\mathrm{HIGH}}\left(\mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}}(p, q)\right)
$$

where $\mathrm{P}_{\text {CMAX_L }}(p, q)$ and $\mathrm{P}_{\text {CMAX_H }}(p, q)$ are the limits for the pair $(p, q)$ and with the tolerances $\mathrm{T}_{\text {LOw }}\left(\mathrm{P}_{\mathrm{CMAX}}\right)$ and $\mathrm{T}_{\mathrm{HIGH}}\left(\mathrm{P}_{\mathrm{CMAX}}\right)$ for applicable values of $\mathrm{P}_{\text {CMAX }}$ specified in Table $6.2 .5 \mathrm{C}-1$. $\mathrm{P}_{\text {CMAX_L }}$ may be modified for any overlapping portion of subframes $(p, q)$ and $(p+1, q+1)$.

When a UE is configured for asynchronous ProSe and uplink transmissions, the carrier configured for uplink transmission is taken as the reference. If subframe $p$ for the E-UTRA uplink carrier and subframe $q$ for the E-UTRA ProSe carrier overlap in time and

1. if uplink carrier leads in time over $q$, then $p$ is the reference subframe and, the $(p, q)$ and $(p, q-1)$ pairs are considered for determining the $\mathrm{P}_{\text {CMAX }}$ tolerance
2. if ProSe carrier leads in time over $p$, then $p$ is the reference subframe and, the $(p, q)$ and $(p, q+1)$ pairs are considered for determining the $\mathrm{P}_{\text {CMAX }}$ tolerance

For the reference subframe $p$ duration when uplink carrier leads:

$$
\begin{gathered}
\mathrm{P}_{\mathrm{CMAX} \_\mathrm{L}}^{\prime}=\mathrm{P}_{\mathrm{CMAX} \_L, c E-U T R A}(p) \\
\mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}}^{\prime}=\operatorname{MAX}\left\{\mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}}(p, q-1), \mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}}(p, q)\right\}
\end{gathered}
$$

For the reference subframe $p$ duration when ProSe carrier leads:

$$
\begin{gathered}
\mathrm{P}_{\mathrm{CMAX} \_\mathrm{L}}^{\prime}=\mathrm{P}_{\mathrm{CMAX} \_ \text {L }, \text { E-UTRA }}(p) \\
\mathrm{P}_{\text {CMAX_H }}^{\prime}= \\
\mathrm{MAX}_{\left\{\mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}} \quad(p, q), \mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}}(p, q+1)\right\}}
\end{gathered}
$$

where $\mathrm{P}_{\text {CMAX_L,cE-UTRA }}(p)$ and $\mathrm{P}_{\text {CMAX_H }}$ are the applicable limits for each overlapping subframe pairs $(p, q),(p, q+l),(p$, $q-1)$. The measured total configured maximum output power $\mathrm{P}_{\mathrm{UMAX}}$ shall be within the following bounds:

$$
\mathrm{P}_{\mathrm{CMAX} \_L}^{\prime}-\mathrm{T}_{\text {LOW }}\left(\mathrm{P}_{\mathrm{CMAX} \_}^{\prime}\right) \leq \mathrm{P}_{\text {UMAX }} \leq \mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}}^{\prime}+\mathrm{T}_{\text {HIGH }}\left(\mathrm{P}_{\mathrm{CMAX}-\mathrm{H}}^{\prime}\right)
$$

with the tolerances $\mathrm{T}_{\text {LOw }}\left(\mathrm{P}_{\mathrm{CMAX}}\right)$ and $\mathrm{T}_{\text {HIGH }}\left(\mathrm{P}_{\mathrm{CMAX}}\right)$ for applicable values of $\mathrm{P}_{\mathrm{CMAX}}$ specified in Table 6.2.5C-1.

### 6.2.5F Configured transmitted Power for category NB1 and NB2

For each slot $i$ the category NB1 and NB2 UE is allowed to set its configured maximum output power $\mathrm{P}_{\mathrm{CMAX}, c}$. The configured maximum output power $\mathrm{P}_{\mathrm{CMAX}, c}$ is set within the following bounds:

$$
\mathrm{P}_{\mathrm{CMAX} \_\mathrm{L}, c} \leq \mathrm{P}_{\mathrm{CMAX}, c} \leq \mathrm{P}_{\text {CMAX_H }, c}
$$

Where

- $\mathrm{P}_{\text {CMAX_H }, c}=\operatorname{MIN}\left\{\mathrm{P}_{\mathrm{EMAX}, c}, \quad \mathrm{P}_{\text {PowerClass }}\right\}$
- $\mathrm{P}_{\mathrm{EmaX}, c}$ is the value given to IE $P$-Max, defined in [7]
- $P_{\text {PowerClass }}$ is the maximum category NB1 and NB2 UE power specified in Table 6.2.2F-1 without taking into account the associated tolerance
- $\mathrm{MPR}_{c}$ is specified in subclause 6.2.3F
- $\mathrm{A}-\mathrm{MPR}_{c}=0 \mathrm{~dB}$ unless otherwise stated.

The measurement period for $\mathrm{P}_{\mathrm{UMAX}, c}$ is at least one sub-frame ( 1 ms ) for 15 KHz channel spacing, and at least a 2 ms slot (excluding the 2304Ts gap when UE is not transmitting) respectively for the 3.75 KHz channel spacing. The measured maximum output power $\mathrm{P}_{\mathrm{UMAX}, c}$ shall be within the following bounds:

$$
\mathrm{P}_{\mathrm{CMAX} \_\mathrm{L}, c}-\mathrm{T}\left(\mathrm{P}_{\mathrm{CMAX} \_\mathrm{L}, c}\right) \leq \mathrm{P}_{\mathrm{UMAX}, c} \leq \mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}, c}+\mathrm{T}\left(\mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}, c}\right)
$$

Where $\mathrm{T}\left(\mathrm{P}_{\text {CMAX }}\right)$ is defined by the tolerance table below and applies to $\mathrm{P}_{\text {CMAX_L }, c}$ and $\mathrm{P}_{\text {CMAX_H }, c}$ separately.
Table 6.2.5F-1: $\mathrm{P}_{\text {смAx }}$ tolerance for power class 3

| Pcmax ( dBm ) | Tolerance T(Pсмах) (dB) |
| :---: | :---: |
| $21 \leq \mathrm{P}_{\text {cmax }} \leq 23$ | 2.0 |
| $20 \leq \mathrm{P}_{\text {CMAX }}<21$ | 2.5 |
| $19 \leq \mathrm{P}_{\text {cmax }}<20$ | 3.5 |

| $5 \leq \mathrm{P}_{\mathrm{CMAX}, c}<8$ | 6.0 |
| $-40 \leq \mathrm{P}_{\mathrm{CMAX}, c}<5$ | 7.0 |

### 6.2.5G Configured transmitted power for V2X Communication

When UE is configured for E-UTRA V2X sidelink transmissions non-concurrent with E-UTRA uplink transmissions for E-UTRA V2X operating bands specified in Table $5.5 \mathrm{G}-1$, the V2X UE is allowed to set its configured maximum output power $\mathrm{P}_{\mathrm{CMAX}, c}$ for component carrier $c$. The configured maximum output power $\mathrm{P}_{\mathrm{CMAX}, c}$ is set within the following bounds:

```
                        \(\mathrm{P}_{\text {CMAX_L }, c} \leq \mathrm{P}_{\mathrm{CMAX}, c} \leq \mathrm{P}_{\text {CMAX_H }, c}\) with
\(\mathrm{P}_{\mathrm{CMAX} \_\mathrm{L}, c}=\operatorname{MIN}\left\{\mathrm{P}_{\mathrm{EMAX}, c}-\Delta \mathrm{T}_{\mathrm{C}, c}, \quad \mathrm{P}_{\text {PowerClass }}-\mathrm{MAX}\left(\mathrm{MPR}_{c}+\mathrm{A}-\mathrm{MPR}_{c}+\Delta \mathrm{T}_{\mathrm{IB}, \mathrm{c}}+\Delta \mathrm{T}_{\mathrm{C}, c}+\Delta \mathrm{T}_{\mathrm{ProSe}}, \mathrm{P}-\mathrm{MPR}_{c}\right), \mathrm{P}_{\text {Regulatory }, \mathrm{c}}\right.\)
\}
    \(\mathrm{P}_{\text {CMAX_H }, c}=\operatorname{MIN}\left\{\mathrm{P}_{\text {EMAX }, c}, \quad \mathrm{P}_{\text {PowerClass }}, \mathrm{P}_{\text {Regulatory }, \mathrm{c}}\right\}\)
```

where

- For the total transmitted power $\mathrm{P}_{\mathrm{CMAX}, \mathrm{c}}$ of PSSCH and PSCCH, $\mathrm{P}_{\mathrm{EMAX}, \mathrm{c}}$ is the value given by IE maxTxPower, defined by [7], when the UE is not associated with a serving cell on the V2X carrier.
- For $P_{\text {CMAXPSSBCH }}, \mathrm{P}_{\mathrm{EMAX}, c}$ is the value given by the IE maxTxPower in [7] when the UE is not associated with a serving cell on the V2X carrier.
- For $P_{\text {CMAXSSSS }}$, the value is as calculated for $P_{\text {CMAXPSBCH }}$ and applying the MPR for SSSS as specified in Section 6.2.3D.
- $\quad P_{\text {PowerClass }}$ is the maximum UE power specified in Table 6.2.2-1 without taking into account the tolerance specified in the Table 6.2.2-1;
- $\quad \mathrm{MPR}_{c}$ and A-MPR ${ }_{c}$ for serving cell $c$ are specified in subclause 6.2 .3 G and subclause 6.2 .4 G , respectively;
- $\Delta \mathrm{T}_{\mathrm{IB}, \mathrm{c}}, \Delta \mathrm{T}_{\mathrm{C}, c}, \Delta \mathrm{~T}_{\text {ProSe }}$ and P-MPR ${ }_{c}$ are specified in subclause 6.2.5
- $\quad \mathrm{P}_{\text {Regulatory }, \mathrm{c}}=10-\mathrm{G}_{\text {post connector }} \mathrm{dBm}$ when the V2X UE is within the protected zone [13] of CEN DSRC tolling system and operating in Band 47; $\mathrm{P}_{\text {Regulatory }, \mathrm{c}}=33-\mathrm{G}_{\text {post connector }} \mathrm{dBm}$ otherwise.

The maximum output power $\mathrm{P}_{\text {CMAX,PSSCH }}$ and $\mathrm{P}_{\text {CMAX,PSCCH }}$ are derived from $\mathrm{P}_{\text {CMAX,c }}$ based on the PSD offset following subclause 14.1.1.5 in [6]. For all cases, the PSD difference between PSCCH and PSSCH shall be the same as the PSD offset value.

For the measured configured maximum output power $\mathrm{P}_{\mathrm{UMAX}, c}$ for E-UTRA V2X sidelink transmissions non-concurrent with E-UTRA uplink transmissions, the same requirement as in subclause 6.2 .5 shall be applied.

When a UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions for inter-band EUTRA V2X / E-UTRA bands specified in Table 5.5G-2, the UE is allowed to set its configured maximum output power $\mathrm{P}_{\mathrm{CMAX}, c, E-U T R A}$ and $\mathrm{P}_{\mathrm{CMAX}, c, V 2 X}$ for the configured E-UTRA uplink carrier and the configured E-UTRA V2X carrier, respectively, and its total configured maximum output power $\mathrm{P}_{\mathrm{CMAX}, \mathrm{c}}$. The $\Delta \mathrm{T}_{\mathrm{IB}, \mathrm{c}}$ of $\mathrm{P}_{\mathrm{CMAX}, c, E-U T R A}$ is specified in Table 6.2.5G-1.

The configured maximum output power $\mathrm{P}_{\mathrm{CMAX}}$ c,E-UTRA $(p)$ in subframe $p$ for the configured E-UTRA uplink carrier shall be set within the bounds:

$$
\operatorname{P}_{\text {CMAX_L }, c, E-U T R A}(p) \leq \operatorname{P}_{\text {CMAX }, c, E-U T R A}(p) \leq \operatorname{P}_{\text {CMAX_H }, c, E-U T R A}(p)
$$

where $\mathrm{P}_{\text {CMAX_L }, c, E-U T R A}$ and $\mathrm{P}_{\text {CMAX_H }, c, E-\text { UTRA }}$ are the limits for a serving cell c as specified in subclause 6.2.5.
The configured maximum output power $\operatorname{P}_{\text {CMAX }} c, V 2 X(q)$ in subframe $q$ for the configured E-UTRA V2X carrier shall be set within the bounds:

$$
\mathrm{P}_{\mathrm{CMAX}, c, V 2 X}(q) \leq \mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}, c, V 2 X}(q)
$$

where $\mathrm{P}_{\text {CMAX_H }, \text {, }, V 2 X}$ is the limit as specified in subclause 6.2 .5 G .
The total UE configured maximum output power $\mathrm{P}_{\mathrm{CMAX}}(p, q)$ in a subframe $p$ of an E-UTRA uplink carrier and a subframe $q$ of an E-UTRA V2X sidelink that overlap in time shall be set within the following bounds for synchronous and asynchronous operation unless stated otherwise:

$$
\mathrm{P}_{\mathrm{CMAX} \_\mathrm{L}}(p, q) \leq \mathrm{P}_{\mathrm{CMAX}}(p, q) \leq \mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}}(p, q)
$$

with

$$
\begin{gathered}
\mathrm{P}_{\mathrm{CMAX} \_\mathrm{L}}(p, q)=\mathrm{P}_{\mathrm{CMAX} \_\mathrm{L}, c, E-U T R A}(p) \\
\mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}}(p, q)=10 \log _{10}\left[\mathrm{p}_{\mathrm{CMAX} \_\mathrm{H}, c, E-U T R A}(p)+\mathrm{p}_{\mathrm{CMAX} \_\mathrm{H}, c, V 2 X}(q)\right]
\end{gathered}
$$

where $\mathrm{p}_{\text {CMAX_H }, c, V 2 X}$ and $\mathrm{p}_{\text {CMAX_H }, c, E-U T R A}$ are the limits $\mathrm{P}_{\text {CMAX_H }, c, V 2 X}(q)$ and $\mathrm{P}_{\text {CMAX_H }, c, E-U T R A}(p)$ expressed in linear scale.
The measured total maximum output power $\mathrm{P}_{\mathrm{UMAX}}$ over both the E-UTRA uplink and E-UTRA V2X carriers is

$$
\mathrm{P}_{\mathrm{UMAX}}=10 \log _{10}\left[\mathrm{p}_{\mathrm{UMAX}, c, E-U T R A}+\mathrm{p}_{\mathrm{UMAX}, c, V 2 X}\right],
$$

where $\mathrm{p}_{\mathrm{UMAX}, c, E-U T R A}$ denotes the measured output power of serving cell $c$ for the configured E-UTRA uplink carrier, and pumax,c,V2X denotes the measured output power for the configured E-UTRA V2X carrier expressed in linear scale.

When a UE is configured for synchronous V2X sidelink and uplink transmissions,

$$
\operatorname{P}_{\mathrm{CMAX} \_\mathrm{L}}(p, q)-\mathrm{T}_{\mathrm{LOW}}\left(\mathrm{P}_{\mathrm{CMAX} \_\mathrm{L}}(p, q)\right) \leq \mathrm{P}_{\mathrm{UMAX}} \leq \mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}}(p, q)+\mathrm{T}_{\mathrm{HIGH}}\left(\mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}}(p, q)\right)
$$

where $\mathrm{P}_{\mathrm{CMAX} \_\mathrm{L}}(p, q)$ and $\mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}}(p, q)$ are the limits for the pair $(p, q)$ and with the tolerances $\mathrm{T}_{\text {LOw }}\left(\mathrm{P}_{\mathrm{CMAX}}\right)$ and $\mathrm{T}_{\mathrm{HIGH}}\left(\mathrm{P}_{\mathrm{CMAX}}\right)$ for applicable values of $\mathrm{P}_{\text {CMAX }}$ specified in Table $6.2 .5 \mathrm{G}-2$. $\mathrm{P}_{\text {CMAX_L }}$ may be modified for any overlapping portion of subframes $(p, q)$ and $(p+1, q+1)$.

When a UE is configured for asynchronous V2X and uplink transmissions, the subframe $p$ for the E-UTRA uplink carrier and subframe $q$ for the E-UTRA V2X carrier overlap in time and

1. if uplink carrier leads in time over q and V2X UE sidelink transmission has SCI whose "Priority" field is set to a value less than the high layer parameter thresSL-TxPrioritization, then p is the reference subframe and the ( $\mathrm{p}, \mathrm{q}$ ) and ( $\mathrm{p}, \mathrm{q}-1$ ) pairs are considered for determining the PCMAX tolerance
2. if uplink carrier leads in time over q and V2X UE sidelink transmission has SCI whose "Priority" field is set to a value larger than the high layer parameter thresSL-TxPrioritization, then $q$ is the reference subframe and the $(\mathrm{p}, \mathrm{q})$ and ( $\mathrm{p}+1, \mathrm{q}$ ) pairs are considered for determining the PCMAX tolerance
3. if V2X carrier leads in time over p and V2X UE sidelink transmission has SCI whose "Priority" field is set to a value less than the high layer parameter thresSL-TxPrioritization, then $p$ is the reference subframe and the ( $\mathrm{p}, \mathrm{q}$ ) and ( $\mathrm{p}, \mathrm{q}+1$ ) pairs are considered for determining the PCMAX tolerance
4. if V2X carrier leads in time over p and V2X UE sidelink transmission has SCI whose "Priority" field is set to a value larger than the high layer parameter thresSL-TxPrioritization,, then q is the reference subframe and the ( p $1, q)$ and ( $\mathrm{p}, \mathrm{q}$ ) pairs are considered for determining the PCMAX tolerance

For the reference subframe $p$ duration when uplink carrier leads:

$$
\begin{gathered}
\mathrm{P}_{\mathrm{CMAX} \_\mathrm{L}}^{\prime}=\mathrm{P}_{\text {CMAX_L, cE-UTRA }}(p) \\
\mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}}^{\prime}=\operatorname{MAX}\left\{\mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}} \quad(p, q-1), \mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}}(p, q)\right\}
\end{gathered}
$$

For the reference subframe $p$ duration when V2X carrier leads:

$$
\begin{gathered}
\mathrm{P}_{\mathrm{CMAX} \_\mathrm{L}}^{\prime}=\mathrm{P}_{\text {CMAX_L } c, E-U T R A}(p) \\
\mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}}^{\prime}= \\
\operatorname{MAX}\left\{\mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}} \quad(p, q), \mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}}(p, q+1)\right\}
\end{gathered}
$$

For the reference subframe $q$ duration when uplink carrier leads:

$$
\begin{gathered}
\mathrm{P}_{\text {CMAX_L }}^{\prime}=\mathrm{P}_{\text {CMAX_L }, c, \text { E-UTRA }}(q) \\
\mathrm{P}_{\text {CMAX_H }}^{\prime}= \\
\mathrm{MAX}_{\left\{\mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}}(p, q), \mathrm{P}_{\text {CMAX_H }}(p+1, q)\right\}}
\end{gathered}
$$

For the reference subframe $q$ duration when V2X carrier leads:

$$
\begin{gathered}
\mathrm{P}_{\text {CMAX_L }}^{\prime}=\mathrm{P}_{\text {CMAX_L }, c, E-U T R A}(p) \\
\mathrm{P}_{\text {CMAX_H }}^{\prime}= \\
\operatorname{MAX}\left\{\mathrm{P}_{\mathrm{CMAX} \_\mathrm{H}} \quad(p-1, q), \mathrm{P}_{\text {CMAX_H }}(p, q)\right\}
\end{gathered}
$$

where $\mathrm{P}_{\text {CMAX_L,cE-UTRA }}(p)$ and $\mathrm{P}_{\text {CMAX_H }}$ are the applicable limits for each overlapping subframe pairs above 4 case with $(p, q),(p, q-1)$ or $(p, q),(p, q+1)$ or $(p, q),(p+1, q)$ or $(p, q),(p-1, q)$. The measured total configured maximum output power $\mathrm{P}_{\mathrm{umax}}$ shall be within the following bounds:

$$
\mathrm{P}_{\text {CMAX_L }}^{\prime}-\mathrm{T}_{\text {LOW }}\left(\mathrm{P}_{\text {CMAX_L }}^{\prime}\right) \leq \mathrm{P}_{\text {UMAX }} \leq \mathrm{P}_{\text {CMAX_H }}^{\prime}+\mathrm{T}_{\text {HIGH }}\left(\mathrm{P}_{\text {CMAX_H }}^{\prime}\right)
$$

with the tolerances $\mathrm{T}_{\text {LOw }}\left(\mathrm{P}_{\text {CMAX }}\right)$ and $\mathrm{T}_{\text {HIGH }}\left(\mathrm{P}_{\text {CMAX }}\right)$ for applicable values of $\mathrm{P}_{\mathrm{CMAX}}$ specified in Table 6.2.5G-2.
For intra-band contiguous multi-carrier operation, $\mathrm{MPR}_{c}=\mathrm{MPR}$ and A-MPR $=\mathrm{A}-\mathrm{MPR}$ with MPR and A-MPR specified in subclause 6.2 .3 G and subclause 6.2 .4 G respectively. There is one power management term for the UE, denoted P-MPR, and P-MPR ${ }_{c}=\mathrm{P}-\mathrm{MPR} . \mathrm{P}_{\mathrm{CMAX}, c}$ is calculated under the assumption that the transmit power is increased by the same amount in dB on all component carriers.

The total configured maximum output power $\mathrm{P}_{\mathrm{CMAX}}$ shall be set within the following bounds:

```
    \(\mathrm{P}_{\text {CMAX_L }} \leq \mathrm{P}_{\text {CMAX }} \leq \mathrm{P}_{\text {CMAX_H }}\)
\(\mathrm{P}_{\text {CMAX_L }}=\operatorname{MIN}\left\{10 \log _{10} \sum \mathrm{p}_{\text {EMAX }, \mathrm{c}}-\Delta \mathrm{T}_{\mathrm{C}}, \mathrm{P}_{\text {PowerClass }}-\operatorname{MAX}\left(\mathrm{MPR}+\mathrm{A}-\mathrm{MPR}+\Delta \mathrm{T}_{\mathrm{IB}, \mathrm{c}}+\Delta \mathrm{T}_{\mathrm{C}}+\Delta \mathrm{T}_{\text {ProSe }}, \mathrm{P}-\mathrm{MPR}\right)\right.\),
\(\left.P_{\text {Regulatory }}\right\}\)
```

$$
\mathrm{P}_{\text {CMAX_H }}=\operatorname{MIN}\left\{10 \log _{10} \sum \mathrm{p}_{\text {EMAX,c }}, \mathrm{P}_{\text {PowerClass }}, \mathrm{P}_{\text {Regulatory }}\right\}
$$

where

- $\quad p_{\text {EmAX,c }}$ is the linear value of $\mathrm{P}_{\text {EMAX }, c}$ which is given by IE maxTxPower in [7];
- $\quad P_{\text {PowerClass }}$ is the maximum UE power specified in Table 6.2.2G-1 without taking into account the tolerance specified in the Table 6.2.2G-1;
- MPR and A-MPR are specified in subclause 6.2 .3 G and subclause 6.2 .4 G respectively;
- $\Delta \mathrm{T}_{\mathrm{IB}, \mathrm{c}}$ is the additional tolerance for serving cell $c$ as specified in Table 6.2.5-2;
- P-MPR is the power management term for the UE;
- $\Delta \mathrm{T}_{\mathrm{C}}$ is the highest value $\Delta \mathrm{T}_{\mathrm{C}, \mathrm{c}}$ among all serving cells $c$ in the subframe over both timeslots. $\Delta \mathrm{T}_{\mathrm{C}, \mathrm{c}}=1.5 \mathrm{~dB}$ when NOTE 2 in Table 6.2.2-1 applies, otherwise $\Delta \mathrm{T}_{\mathrm{C}, \mathrm{c}}=0 \mathrm{~dB}$;
- $\Delta \mathrm{T}_{\text {ProSe }}$ applies as specified in subclause 6.2.5.
- $P_{\text {Regulatory }}=10-G_{\text {post connector }} \mathrm{dBm}$ when V2X UE is within the protected zone [13] of CEN DSRC tolling system and operating in Band $47 ; \mathrm{P}_{\text {Regulatory }}=33-\mathrm{G}_{\text {post connector }} \mathrm{dBm}$ otherwise.

NOTE: The supported post antenna connector gain $\mathrm{G}_{\text {post connector }}$ declared by the UE following the principle described in annex I.

Table 6.2.5G-1: $\Delta \mathrm{T}_{\mathrm{IB}, \mathrm{c}}$ for inter-band con-current V2X operation (two bands)

| V2X con- <br> current band <br> Combination | E-UTRA or V2X <br> Operating Band | $\boldsymbol{\Delta T} \mathbf{T I B}, \mathrm{c}^{\text {[dB] }}$ |
| :---: | :---: | :---: |
| V2X_3-47 | 3 | 0.0 |
| V2X_5-47 | 5 | 0.2 |
| V2X_7-47 | 7 | 0.0 |
| V2X_8-47 | 8 | 0.0 |
| V2X_20-47 | 20 | 0.2 |
| V2X_28A-47A | 28 | 0.2 |
| V2X_34-47 | 34 | 0.0 |
| V2X_39-47 | 39 | 0.0 |
| V2X_41-47 | 41 | 0.0 |
| V2X_71A-47A | 71 | 0.0 |

For V2X UE supporting Transmit Diversity, the transmitted power is configured per each UE.
If the UE transmits on two antenna connectors at the same time, the tolerance is specified in Table 6.2.5G-2 and 6.2.5G3 for PC2 and PC3 V2X UE respectively.

Table 6.2.5G-2: $\mathrm{P}_{\mathrm{cmax}, \mathrm{c}}$ tolerance in Transmit Diversity scheme for PC2 V2X UE

| Pcmax,c (dBm) | $\begin{gathered} \text { Tolerance } \\ \text { TLow(PcmAx_L,c) (dB) } \end{gathered}$ | $\begin{gathered} \text { Tolerance } \\ \mathbf{T}_{\text {HIGH }}\left(\mathbf{P c m A x \_ h ~}, \mathrm{c}\right)^{(\mathrm{dB})} \end{gathered}$ |
| :---: | :---: | :---: |
| $\mathrm{P}_{\text {cmax }, c}=26$ | 3.0 | 2.0 |
| $23 \leq \mathrm{P}$ смАХ, с $<26$ | 4.0 | 2.0 |
| $22 \leq \mathrm{P}_{\text {смАХ }, \text { с }}<23$ | 5.0 | 2.0 |
| $21 \leq \mathrm{P}_{\text {смАХ }, \text { c }}<22$ | 5.0 | 3.0 |

| $11 \leq \mathrm{P}_{\text {CMAX }, \text { c }}<16$ | 6.0 |  |
| $-40 \leq \mathrm{Pcmax}, c<11$ | 7.0 |  |

If the UE transmits on one antenna connector at a time, the requirements in Table 6.2.5-1 apply to the active antenna connector.

### 6.3 Output power dynamics

### 6.3.1 (Void)

### 6.3.2 Minimum output power

The minimum controlled output power of the UE is defined as the broadband transmit power of the UE, i.e. the power in the channel bandwidth for all transmit bandwidth configurations (resource blocks), when the power is set to a minimum value.

### 6.3.2.1 Minimum requirement

The minimum output power is defined as the mean power in one sub-frame (1ms). The minimum output power shall not exceed the values specified in Table 6.3.2.1-1.

Table 6.3.2.1-1: Minimum output power

|  | Channel bandwidth / Minimum output power / Measurement bandwidth |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\begin{gathered} 1.4 \\ \mathrm{MHz} \end{gathered}$ | $\begin{gathered} \hline 3.0 \\ \mathrm{MHz} \end{gathered}$ | $\begin{gathered} 5 \\ \hline \mathbf{~ M H z} \end{gathered}$ | $\begin{gathered} \hline 10 \\ \mathrm{MHz} \end{gathered}$ | $\begin{gathered} \hline 15 \\ \mathrm{MHz} \end{gathered}$ | $\begin{gathered} \hline 20 \\ \mathrm{MHz} \end{gathered}$ |
| Minimum output power | -40 dBm |  |  |  |  |  |
| Measurement bandwidth | 1.08 MHz | 2.7 MHz | 4.5 MHz | 9.0 MHz | 13.5 MHz | 18 MHz |

### 6.3.2A UE Minimum output power for CA

For inter-band carrier aggregation with uplink assigned to two E-UTRA bands and intra-band contiguous and noncontiguous carrier aggregation, the minimum controlled output power of the UE is defined as the transmit power of the UE per component carrier, i.e., the power in the channel bandwidth of each component carrier for all transmit bandwidth configurations (resource blocks), when the power on both component carriers are set to a minimum value.

### 6.3.2A.1 Minimum requirement for CA

For inter-band carrier aggregation with uplink assigned to two E-UTRA bands, the minimum output power is defined per carrier and the requirement is specified in subclause 6.3.2.1. If two contiguous component carriers are assigned to one E-UTRA band, the requirements in subclause 6.3.2A.1 apply for those component carriers.

For intra-band contiguous and non-contiguous carrier aggregation the minimum output power is defined as the mean power in one sub-frame ( 1 ms ). The minimum output power shall not exceed the values specified in Table 6.3.2A.1-1.

Table 6.3.2A.1-1: Minimum output power for intra-band contiguous and non-contiguous CA UE

|  | CC Channel bandwidth / Minimum output power / Measurement |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  |  |
|  | $\mathbf{1 . 4}$ <br> $\mathbf{M H z}$ | $\mathbf{3 . 0}$ <br> $\mathbf{M H z}$ | $\mathbf{5}$ <br> $\mathbf{M H z}$ | $\mathbf{1 0}$ <br> $\mathbf{M H z}$ | $\mathbf{1 5}$ <br> $\mathbf{M H z}$ | $\mathbf{2 0}$ <br> $\mathbf{M H z}$ |  |
| Minimum output <br> power | $-40 \mathrm{dBm}$ |  |  |  |  |  |  |
| Measurement <br> bandwidth |  |  | 4.5 MHz | 9.0 MHz | 13.5 MHz | 18 MHz |  |

### 6.3.2B UE Minimum output power for UL-MIMO

For UE supporting UL-MIMO, the minimum controlled output power is defined as the broadband transmit power of the UE, i.e. the sum of the power in the channel bandwidth for all transmit bandwidth configurations (resource blocks) at each transmit antenna connector, when the UE power is set to a minimum value.

### 6.3.2B. 1 Minimum requirement

For UE with two transmit antenna connectors in closed-loop spatial multiplexing scheme, the minimum output power is defined as the sum of the mean power at each transmit connector in one sub-frame ( 1 ms ). The minimum output power shall not exceed the values specified in Table 6.3.2B.1-1.

Table 6.3.2B.1-1: Minimum output power

|  | Channel bandwidth / Minimum output power / Measurement |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\mathbf{1 . 4}$ <br> bandwidth | $\mathbf{3 . 0}$ <br> $\mathbf{M H z}$ | $\mathbf{5}$ <br> $\mathbf{M H z}$ | $\mathbf{1 0}$ <br> $\mathbf{M H z}$ | $\mathbf{1 5}$ <br> $\mathbf{M H z}$ | $\mathbf{2 0}$ <br> $\mathbf{M H z}$ |  |
| Minimum output <br> power | $-40 \mathrm{dBm}$ |  |  |  |  |  |  |
| Measurement <br> bandwidth | 1.08 MHz | 2.7 MHz | 4.5 MHz | 9.0 MHz | 13.5 MHz | 18 MHz |  |

If UE is configured for transmission on single-antenna port, the requirements in subclause 6.3 .2 apply.

### 6.3.2C Void

<reserved for future use>

### 6.3.2D UE Minimum output power for ProSe

When UE is configured for E-UTRA ProSe sidelink transmissions non-concurrent with E-UTRA uplink transmissions for E-UTRA ProSe operating bands specified in Table 5.5D-1, the requirements in subclause 6.3.2 apply for ProSe transmission.

When UE is configured for simultaneous E-UTRA ProSe sidelink and E-UTRA uplink transmissions for inter-band EUTRA ProSe / E-UTRA bands specified in Table 5.5D-2, the requirements in subclause 6.3.2A apply as specified for the corresponding inter-band aggregation with uplink assigned to two bands.

### 6.3.2F UE Minimum output power for category NB1 and NB2

For category NB1 and NB2 UE the single-tone and multi-tone transmission minimum output power requirement for the channel bandwidth is -40 dBm . For 3.75 kHz sub-carrier spacing the minimum output power is defined as mean power in one slot ( 2 ms ) excluding the 2304 Ts gap when UE is not transmitting. For 15 kHz sub-carrier spacing the minimum output power is defined as mean power in one sub-frame ( 1 ms ).

### 6.3.2G UE Minimum output power for V2X Communication

When UE is configured for E-UTRA V2X sidelink transmissions non-concurrent with E-UTRA uplink transmissions for E-UTRA V2X operating bands specified in Table 5.5G-1, the minimum output power shall not exceed the values specified in Table 6.3.2G-1.

Table 6.3.2G-1: Minimum output power

|  | Channel bandwidth / Minimum output power / Measurement bandwidth |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\begin{gathered} \hline 1.4 \\ \mathrm{MHz} \end{gathered}$ | $\begin{gathered} \hline 3.0 \\ \mathrm{MHz} \end{gathered}$ | $\begin{gathered} 5 \\ \mathbf{M H z} \end{gathered}$ | $\begin{gathered} 10 \\ \mathrm{MHz} \end{gathered}$ | $\begin{gathered} \hline 15 \\ \mathrm{MHz} \end{gathered}$ | $\begin{gathered} \hline 20 \\ \mathrm{MHz} \end{gathered}$ |
| Minimum output power | -30 dBm |  |  |  |  |  |
| Measurement bandwidth |  |  |  | 9.0 MHz |  | 18 MHz |

When UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions for inter-band EUTRA V2X / E-UTRA bands specified in Table 5.5G-2, the requirements specified in subclause 6.3.2 shall apply for the uplink and the requirements specified in subclause 6.3 .2 G shall apply for the sidelink.

For intra-band contiguous E-UTRA V2X multiple carrier transmissions, the requirements specified in subclause 6.3.2G shall apply for each sidelink carrier.

For V2X UE supporting Transmit Diversity, if the UE transmits on two antenna connectors at the same time, the minimum output power is defined as the sum of the mean power at each transmit connector in one sub-frame ( 1 ms ). The minimum output power shall not exceed the values specified for single carrier.

If the UE transmits on aone antenna connector at a time, the requirements specified for single carrier shall apply to the active antenna connector.

### 6.3.3 Transmit OFF power

Transmit OFF power is defined as the mean power when the transmitter is OFF. The transmitter is considered to be OFF when the UE is not allowed to transmit or during periods when the UE is not transmitting a sub-frame. During DTX and measurements gaps, the UE is not considered to be OFF.

### 6.3.3.1. Minimum requirement

The transmit OFF power is defined as the mean power in a duration of at least one sub-frame (1ms) excluding any transient periods. The transmit OFF power shall not exceed the values specified in Table 6.3.3.1-1.

Table 6.3.3.1-1: Transmit OFF power

|  | Channel bandwidth / Transmit OFF power / Measurement |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  |  |
|  | $\mathbf{1 . 4}$ <br> $\mathbf{M H z}$ | $\mathbf{3 . 0}$ <br> $\mathbf{M H z}$ | $\mathbf{5}$ <br> $\mathbf{M H z}$ | $\mathbf{1 0}$ <br> $\mathbf{M H z}$ | $\mathbf{1 5}$ <br> $\mathbf{M H z}$ | $\mathbf{2 0}$ <br> $\mathbf{M H z}$ |  |
| Transmit OFF <br> power | $-50 \mathrm{dBm}$ |  |  |  |  |  |  |
| Measurement <br> bandwidth | 1.08 MHz | 2.7 MHz | 4.5 MHz | 9.0 MHz | 13.5 MHz | 18 MHz |  |

### 6.3.3A UE Transmit OFF power for CA

For inter-band carrier aggregation with uplink assigned to two E-UTRA bands and intra-band contiguous and noncontiguous carrier aggregation, transmit OFF power is defined as the mean power per component carrier when the transmitter is OFF on all component carriers. The transmitter is considered to be OFF when the UE is not allowed to transmit or during periods when the UE is not transmitting a sub-frame. During measurements gaps, the UE is not considered to be OFF.

### 6.3.3A.1 Minimum requirement for CA

For inter-band carrier aggregation with uplink assigned to two E-UTRA bands, transmit OFF power requirement is defined per carrier and the requirement is specified in subclause 6.3.3.1. If two contiguous component carriers are assigned to one E-UTRA band, the requirements in subclause 6.3.3A.1 apply for those component carriers.

For intra-band contiguous and non-contiguous carrier aggregation the transmit OFF power is defined as the mean power in a duration of at least one sub-frame ( 1 ms ) excluding any transient periods. The transmit OFF power shall not exceed the values specified in Table 6.3.3A.1-1.

Table 6.3.3A.1-1: Transmit OFF power for intra-band contiguous and non-contiguos CA UE

|  | CC Channel bandwidth / Transmit OFF power / Measurement |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| Measurement bandwidth |  |  | 4.5 MHz | 9.0 MHz | 13.5 MHz | 18 MHz |

### 6.3.3B UE Transmit OFF power for UL-MIMO

For UE supporting UL-MIMO, the transmit OFF power is defined as the mean power at each transmit antenna connector when the transmitter is OFF at all transmit antenna connectors. The transmitter is considered to be OFF when the UE is not allowed to transmit or during periods when the UE is not transmitting a sub-frame. During DTX and measurements gaps, the UE is not considered to be OFF.

### 6.3.3B. 1 Minimum requirement

The transmit OFF power is defined as the mean power at each transmit antenna connector in a duration of at least one sub-frame ( 1 ms ) excluding any transient periods. The transmit OFF power at each transmit antenna connector shall not exceed the values specified in Table 6.3.3B.1-1.

Table 6.3.3B.1-1: Transmit OFF power per antenna port

|  | Channel bandwidth / Transmit OFF power/ Measurement |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  |  |
|  | $\mathbf{1 . 4}$ <br> $\mathbf{M H z}$ | $\mathbf{3 . 0}$ <br> $\mathbf{M H z}$ | $\mathbf{5}$ <br> $\mathbf{M H z}$ | $\mathbf{1 0}$ <br> $\mathbf{M H z}$ | $\mathbf{1 5}$ <br> $\mathbf{M H z}$ | $\mathbf{2 0}$ <br> $\mathbf{M H z}$ |  |
| Transmit OFF <br> power | $-50 \mathrm{dBm}$ |  |  |  |  |  |  |
| Measurement <br> bandwidth | 1.08 MHz | 2.7 MHz | 4.5 MHz | 9.0 MHz | 13.5 MHz | 18 MHz |  |

### 6.3.3D Transmit OFF power for ProSe

When UE is configured for E-UTRA ProSe sidelink transmissions non-concurrent with E-UTRA uplink transmissions for E-UTRA ProSe operating bands specified in Table 5.5D-1, the Prose UE shall meet the Transmit OFF power at all times when the UE is not associated with a serving cell on the ProSe carrier and does not have knowledge of its geographical area or is provisioned with pre-configured radio parameters that are not associated with any known Geographical Area.

The requirements specified in subclause 6.3.3 shall apply to UE supporting ProSe when

- the UE is associated with a serving cell on the ProSe carrier, or
- the UE is not associated with a serving cell on the ProSe carrier and is provisioned with the preconfigured radio parameters for ProSe Direct Communications and/or ProSe Direct Discovery that are associated with known Geographical Area, or
- the UE is associated with a serving cell on a carrier different than the ProSe carrier, and the radio parameters for ProSe Direct Discovery on the ProSe carrier are provided by the serving cell, or
- the UE is associated with a serving cell on a carrier different than the ProSe carrier, and has a non-serving cell selected on the ProSe carrier that supports ProSe Direct Discovery and/or ProSe Direct Communication.

When UE is configured for simultaneous E-UTRA ProSe sidelink and E-UTRA uplink transmissions for inter-band E-UTRA ProSe / E-UTRA bands specified in Table 5.5D-2, transmit OFF power is defined as the mean power per component carrier when the transmitter is OFF on all component carriers. During measurement gaps and transmission/reception gaps for ProSe, the UE is not considered to be OFF. Transmit OFF power requirement as specified in subclause 6.3.3 apply per carrier.

### 6.3.3F Transmit OFF power for category NB1 and NB2

For category NB1 and NB2 UE the transmit OFF power requirement for the channel bandwidth is -50 dBm . For 3.75 kHz sub-carrier spacing the transmit OFF power is defined as mean power in one slot ( 2 ms ) excluding the 2304 Ts gap when UE is not transmitting. For 15 kHz sub-carrier spacing the transmit OFF power is defined as mean power in one sub-frame ( 1 ms ).

### 6.3.3G Transmit OFF power for V2X Communication

When UE is configured for E-UTRA V2X sidelink transmissions non-concurrent with E-UTRA uplink transmissions for E-UTRA V2X operating bands specified in Table 5.5G-1, the V2X UE shall meet the Transmit OFF power in subclause 6.3.3D.

When UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions for inter-band EUTRA V2X / E-UTRA bands specified in Table 5.5G-2, the requirements in subclause 6.3.3A apply for as specified for the corresponding inter-band con-current operation with uplink assigned to two bands.

For intra-band contiguous E-UTRA V2X multiple carrier transmissions, the requirements in subclause 6.3.3A apply as specified for the corresponding intra band contiguous carrier aggregation.

The transmit OFF power is defined as the mean power at each transmit antenna connector.
The transmit OFF power at each transmit antenna connector shall not exceed the values specified for single carrier.

### 6.3.4 ON/OFF time mask

### 6.3.4.1 General ON/OFF time mask

The General ON/OFF time mask defines the observation period between Transmit OFF and ON power and between Transmit ON and OFF power. ON/OFF scenarios include; the beginning or end of DTX, measurement gap, contiguous, and non contiguous transmission

The OFF power measurement period is defined in a duration of at least one subframe, or one slot or one subslot for sTTI, excluding any transient periods. The ON power is defined as the mean power over one subframe, or one slot or one subslot for sTTI, excluding any transient period.

There are no additional requirements on UE transmit power beyond that which is required in subclause 6.2.2 and subclause 6.6.2.3

The transient period length shall be no longer than the specified value in Table 6.3.4.1-1.
Table 6.3.4.1-1: Transient period length depending on transmission length

| TTI pattern | Channel BW (MHz) | TTI Duration | Transient period length <br> $(\boldsymbol{\mu s})$ |
| :---: | :---: | :---: | :---: |
| Subframe TTI |  | 1 ms | 20 |
| Slot TTI | 1.4 | 1 slot | 20 |
|  | $>1.4$ | 1 slot | 10 |
|  | 1.4 | 20 s or 3 os | 20 |

Figure 6.3.4.1-1: General ON/OFF time mask for subframe TTI and for Frame Structure Type 1 and Frame Structure Type 2

For Frame Structure Type 3 the general ON/OFF mask is specified in 6.3.4.1-1A with the PUSCH starting position modified by $t_{D}=N_{\text {start }}^{\mathrm{FS3}} T_{s}$ relative to the start of the sub-frame as indicated in the associated DCI, where $N_{\text {start }}^{\mathrm{FS3}}$ and the basic time unit $T_{s}$ are specified in [4]. At the end of the sub-frame $t_{e n d}=0$ and $t_{\text {end }}=T_{\text {symb }}$ with $T_{\text {symb }}$ denoting the duration of the last SC-FDMA symbol when the bit indicating the PUSCH ending symbol in the associated DCI has value ' 0 ' and ' 1 ' as specified in [5], respectively; the OFF power requirement applies $5 \mu$ s after the end of the last symbol transmitted.

Figure 6.3.4.1-1 A: General ON/OFF time mask for subframe TTI and for Frame Structure Type 3

Figure 6.3.4.1-1B: General ON/OFF time mask for sTTI and for Frame Structure Type 1 and Frame Structure Type 2

### 6.3.4.2 PRACH and SRS time mask

### 6.3.4.2.1 PRACH time mask

The PRACH ON power is specified as the mean power over the PRACH measurement period excluding any transient periods as shown in Figure 6.3.4.2-1. The measurement period for different PRACH preamble format is specified in Table 6.3.4.2-1.

There are no additional requirements on UE transmit power beyond that which is required in subclause 6.2.2 and subclause 6.6.2.3

Table 6.3.4.2-1: PRACH ON power measurement period

| PRACH preamble format | Measurement period (ms) |
| :---: | :---: |
| 0 | 0.9031 |
| 1 | 1.4844 |
| 2 | 1.8031 |
| 3 | 2.2844 |
| 4 | 0.1479 |

Figure 6.3.4.2-1: PRACH ON/OFF time mask

### 6.3.4.2.2 SRS time mask

In the case a single SRS transmission, the ON power is defined as the mean power over the symbol duration excluding any transient period; Figure 6.3.4.2.2-1 and Figure 6.3.4.2.2-1A.

In the case a dual SRS transmission, the ON power is defined as the mean power for each symbol duration excluding any transient period. Figure 6.3.4.2.2-2

There are no additional requirements on UE transmit power beyond that which is required in subclause 6.2.2 and subclause 6.6.2.3

Figure 6.3.4.2.2-1: Single SRS time mask for Frame Structure Type 1 and Frame Structure Type 2

For Frame Structure Type 3 and single SRS transmission, the SRS time mask is specified in 6.3.4.2-2A; the OFF power requirement applies [5] $\mu \mathrm{s}$ after the end of the SRS symbol.

Figure 6.3.4.2.2-1A: Single SRS time mask for Frame Structure Type 3

Figure 6.3.4.2.2-2: Dual SRS time mask for the case of UpPTS transmissions
For SRS transmission mapped to two or more OFDM symbols the ON power is defined as the mean power for each symbol duration excluding any transient period. For consecutive SRS transmissions without power change, Figure 6.3.4.2.2-3 applies.

Figure 6.3.4.2.2-3: Consecutive SRS time mask for the case when no power change is required
When power change between consecutive SRS transmissions is required, then Figure 6.3.4.2.2-4 and Figure 6.3.4.2.2-5 apply.

Figure 6.3.4.2.2-4: Consecutive SRS time mask for the case when power change is required

Figure 6.3.4.2.2-5: Time mask for SRS antenna switching
The above transient period applies to all the transmit CCs in CA with the CC sounding SRS. UE RF requirements do not apply during this transient period.

### 6.3.4.3 Slot / Sub frame boundary time mask for subframe TTI

The sub frame boundary time mask defines the observation period between the previous/subsequent sub-frame and the (reference) sub-frame. A transient period at a slot boundary within a sub-frame is only allowed in the case of Intra-sub frame frequency hopping. For the cases when the subframe contains SRS the time masks in subclause 6.3.4.4 apply.

There are no additional requirements on UE transmit power beyond that which is required in subclause 6.2.2 and subclause 6.6.2.3

Figure 6.3.4.3-1: Transmission power template for Frame Structure Type 1 and Frame Structure Type 2

For Frame Structure Type 3 the sub-frame boundary time mask is specified in Figüre 6.3.4.3-1A when the bit indicating the PUSCH ending symbol in the associated DCI has value ' 1 ' and the PUSCH starting position is modified by $t_{D}$ in the following subframe (clause 6.3.4.1); $T_{\text {symb }}$ denotes the duration of the ending SC-FDMA symbol. the OFF power requirement applies $5 \mu \mathrm{~s}$ after the end of the last symbol transmitted.

Figure 6.3.4.3-1A: Transmission power template when the bit in the associated DCI indcating the PUSCH ending symbol has value ' 1 ' for Frame Structure Type 3

For Frame Structure Type 3 the first slot boundary time mask is specified in Figure 6.3.4.3-1B when the PUSCH mode is 3 indicated in DCI [4]. The PUSCH starting position modified by $t_{D}=N_{\text {start }}^{\mathrm{FS} 3} T_{s}$ relative to the start of the sub-frame as indicated in the associated DCI, where $N_{\text {start }}^{\mathrm{FS3}}$ and the basic time unit $T_{s}$ are specified in TS 36.211 [4]. At the end of the first slot $t_{\text {end }}=3 \cdot T_{\text {symb }}$ or $t_{\text {end }}=0$ with $T_{\text {symb }}$ denoting the duration of one SC-FDMA symbol when the bit indicating the PUSCH ending symbol in the associated DCI is either fourth or seventh symbol as specified in TS 36.212 [5], respectively; the OFF power requirement applies $5 \mu$ s after the end of the last symbol transmitted.

Figure 6.3.4.3-1B: Transmission power template for the first slot in one subframe for Frame Structure Type 3

For Frame Structure Type 3 the second slot boundary time mask is specified in Figure 6.3.4.3-1C when the PUSCH mode is 2 indicated in DCI [4]. The PUSCH starting position modified by $t_{D}=N_{\mathrm{start}}^{\mathrm{FS} 3} T_{s}$ relative to the start of the second slot as indicated in the associated DCI, where $N_{\text {start }}^{\mathrm{FS} 3}$ and the basic time unit $T_{s}$ are specified in TS 36.211 [4]. At the end of the second slot $t_{\text {end }}=T_{\text {symb }}$ or $t_{\text {end }}=0$ with $T_{\text {symb }}$ denoting the duration of one SC-FDMA symbol when the bit indicating the PUSCH ending symbol in the associated DCI is either thirteenth or fourteenth symbol as specified in TS 36.212 [5], respectively; the OFF power requirement applies $5 \mu \mathrm{~s}$ after the end of the last symbol transmitted.

For Frame Structure Type 3 the second slot boundary time mask specified in Figure 6.3.4.3-1C can also be applied when the PUSCH mode is 1 indicated in DCI [4] and transmition starts at the eighth symbol. The PUSCH starting position $t_{D}=0$ relative to the start of the second slot. At the end of the second slot $t_{\text {end }}=T_{\text {symb }}$ or $t_{\text {end }}=0$ with $T_{\text {symb }}$ denoting the duration of one SC-FDMA symbol when the bit indicating the PUSCH ending symbol in the associated DCI is either thirteenth or fourteenth symbol as specified in TS 36.212 [5], respectively; the OFF power requirement applies $5 \mu \mathrm{~s}$ after the end of the last symbol transmitted.

Figure 6.3.4.3-1C: Transmission power template for the second slot in one subframe for Frame Structure Type 3

### 6.3.4.4 PUCCH / PUSCH / SRS time mask for subframe TTI

The PUCCH/PUSCH/SRS time mask defines the observation period between sounding reference symbol (SRS) and an adjacent PUSCH/PUCCH symbol and subsequent sub-frame. The time masks apply for all types of frame structures and their allowed PUCCH/PUSCH/SRS transmissions unless otherwise stated.

There are no additional requirements on UE transmit power beyond that which is required in subclause 6.2.2 and subclause 6.6.2.3

Figure 6.3.4.4-1: PUCCH/PUSCH/SRS time mask when there is a transmission before SRS but not after for Frame Structure Type 1 and Frame Structure Type 2

For Frame Structure Type 3 the PUSCH/SRS time mask when there is a transmission before SRS but not after is specified in Figure 6.3.4.4-1A; the OFF power requirement applies $5 \mu \mathrm{~s}$ after the end of the last symbol transmitted.

Figure 6.3.4.4-1A: PUSCH/SRS time mask when there is a transmission before SRS but not after for Frame Structure Type 3

Figure 6.3.4.4-2: PUCCH/PUSCH/SRS time mask when there is transmission before and after SRS

Figure 6.3.4.4-3: PUCCH/PUSCH/SRS time mask when there is a transmission after SRS but not before

Figure 6.3.4.4-4: SRS time mask when there is FDD SRS blanking for Frame Structure Type 1 and Frame Structure Type 2

For Frame Structure Type 3 the PUSCH/SRS time mask with transmission after the SRS symbol and the PUSCH starting position modified by $t_{D}$ in the following subframe (clause 6.3.4.1) is specified in Figure 6.3.4.4-4A when there is SRS blanking.

Figure 6.3.4.4-4A: SRS time mask when there is SRS blanking for Frame Structure Type 3

### 6.3.4.5 Symbol / Subslot boundary time mask for subslot TTI

The subslot boundary time mask defines the observation period between the previous/subsequent subslot and the (reference) subslot. A transient period at a symbol boundary within a subslot is only allowed in the case of Intra-subslot frequency hopping. For the cases when the subslot contains SRS the time masks in subclause 6.3.4.6 apply.

There are no additional requirements on UE transmit power beyond that which is required in subclause 6.2.2 and subclause 6.6.2.3

Following time masks requirements shall be applied:

- the transient period shall be equally shared between two consecutive Reference symbols or Data symbols (figure 6.3.4.5-1 and figure 6.3.4.5-4).
- Otherwise, the transient period shall be placed in the Reference symbol (figure 6.3.4.5-2 and figure 6.3.4.5-3).

Figure 6.3.4.5-1: Transmission power template for subslot TTI - transient period shared

Figure 6.3.4.5-2: Transmission power template for subslot TTI - transient period not shared

Figure 6.3.4.5-3: Transmission power template for subslot TTI - transient period not shared

Figure 6.3.4.5-4: Transmission power template for subslot TTI - transient period shared

### 6.3.4.6 Subslot PUCCH / subslot PUSCH / SRS time mask for subslot TTI

The subslot PUCCH/subslot PUSCH/SRS time mask defines the observation period between sounding reference symbol (SRS) in the last symbol in subslot N and an adjacent subslot PUSCH/subslot PUCCH symbol in subslot $\mathrm{N}+1$.

There are no additional requirements on UE transmit power beyond that which is required in subclause 6.2.2 and subclause 6.6.2.3

Following time masks requirement shall be applied when SRS is either transmitted or blanked:

- the transient period shall be placed in Reference symbol when the transient is in between Reference symbol and SRS (figure 6.3.4.6-1, figure 6.3.4.6-2, figure 6.3.4.6-5 and figure 6.3.4.6-7).
- the transient period shall be equally shared when the transien is in between Data symbol and SRS (figure 6.3.4.6-3 and figure 6.3.4.6-4).

Figure 6.3.4.6-1: subslot PUSCH/SRS time mask when there is a Reference symbol before SRS (or SRS blanking) and data symbol after

| Subslot N |  |  | Subslot $\mathrm{N}+1$ |  |
| :---: | :---: | :---: | :---: | :---: |
| Data | Reference | SR S or SRS blan king | Reference | Data |
|  |  <br> Transient period | period Tran |  |  |

Figure 6.3.4.6-2:subslot PUSCH/SRS time mask when there is a Reference symbol before SRS (or SRS blanking) and Reference symbol after

Figure 6.3.4.6-3: subslot PUSCH/SRS time mask when there is a data symbol before SRS (or SRS blanking) and data symbol after

Figure 6.3.4.6-4: subslot PUSCH/SRS time mask when there is a data symbol before SRS (or SRS blanking) and Reference symbol after

Figure 6.3.4.6-5: subslot PUSCH/SRS time mask when there is a no symbol before SRS

Figure 6.3.4.6-6: subslot PUSCH/SRS time mask when there is a no symbol after SRS

Figure 6.3.4.6-7: subslot PUSCH/SRS time mask when there is a no symbol before and after SRS

### 6.3.4.7 Symbol / Slot boundary time mask for slot TTI

The slot boundary time mask defines the observation period between the previous/subsequent slot and the (reference) slot. A transient period at a symbol boundary within a slot is only allowed in the case of Intra slot frequency hopping. For the cases when the slot contains SRS the time masks in subclause 6.3.4.8 shall apply.

There are no additional requirements on UE transmit power beyond that which is required in subclause 6.2.2 and subclause 6.6.2.3

For slot boundary, the time maks specified in subclause 6.3.4.4 shall apply with a transient time of $10 \mu \mathrm{~s}$ intead of $20 \mu \mathrm{~s}$.
For frequency hopping within the slot, the time masks specified in subclause 6.3.4.5 shall apply.

### 6.3.4.8 Slot PUCCH / slot PUSCH / SRS time mask for slot TTI

The slot PUCCH/slot PUSCH/SRS time mask defines the observation period between sounding reference symbol (SRS) and an adjacent slot PUSCH/slot PUCCH symbol and subsequent slot.

There are no additional requirements on UE transmit power beyond that which is required in subclause 6.2.2 and subclause 6.6.2.3

The time masks specified in subclause 6.3.4.4 shall apply.

### 6.3.4.9 Consecutive subslot and slot TTI or consecutive subslot and subframe TTI time mask

The consecutive subslot and slot boundary time mask or consecutive subslot and subframe boundary time mask defines the observation period between the subslot and the slot or subframe.

There are no additional requirements on UE transmit power beyond that which is required in subclause 6.2 .2 and subclause 6.6.2.3.

In this case, the transient period shall be placed in the subframe TTI or the slot TTI (figure 6.3.4.9-1)

Figure 6.3.4.9-1: subslot TTI and subframe TTI boundary

### 6.3.4.10 Consecutive subframe and subslot TTI or consecutive slot and subslot TTI time mask

The consecutive subframe and subslot boundary time mask or consecutive slot and subslot boundary time mask defines the observation period between the slot or subframe and the subslot.

There are no additional requirements on UE transmit power beyond that which is required in subclause 6.2.2 and subclause 6.6.2.3

| Subframe K or slot P |  | Subslot N |  |
| :---: | :---: | :---: | :---: |
|  | SRS | Reference |  |
|  |  |  |  |

Figure 6.3.4.10-1: Subframe TTI and subslot TTI boundary with SRS in last subframe TTI symbol and Reference Symbol in first subslot TTI symbol

Figure 6.3.4.10-2: Subframe TTI and subslot TTI boundary with SRS in last subframe TTI symbol and data Symbol in first subslot TTI symbol

When the last symbol of the Subframe or slot is not SRS then the transient period is placed in the Subframe or Slot.

Figure 6.3.4.10-3: subframe TTI and subslot TTI boundary

### 6.3.4.11 Consecutive TTI and slot TTI or consecutive slot TTI and TTI time mask

The consecutive subframe and slot boundary time mask or consecutive slot and subframe boundary time mask defines the observation period between the subframe and the slot or the slot and the subframe.

There are no additional requirements on UE transmit power beyond that which is required in subclause 6.2.2 and subclause 6.6.2.3

The time masks at subframe boundary specified in subclause 6.3.4.3 or at slot boundary specified in subclause 6.3.4.7 shall apply.

### 6.3.4A ON/OFF time mask for CA

For inter-band carrier aggregation with uplink assigned to two E-UTRA bands and intra-band contiguous and noncontiguous carrier aggregation, the general output power ON/OFF time mask specified in subclause 6.3.4.1 is applicable for each component carrier during the ON power period and the transient periods. The OFF period as specified in subclause 6.3.4.1 shall only be applicable for each component carrier when all the component carriers are OFF.

### 6.3.4B ON/OFF time mask for UL-MIMO

For UE supporting UL-MIMO, the ON/OFF time mask requirements in subclause 6.3.4 apply at each transmit antenna connector.

For UE with two transmit antenna connectors in closed-loop spatial multiplexing scheme, the general ON/OFF time mask requirements specified in subclause 6.3.4.1 apply to each transmit antenna connector. The requirements shall be met with the UL-MIMO configurations specified in Table 6.2.2B-2.

If UE is configured for transmission on single-antenna port, the requirements in subclause 6.3.4 apply.

### 6.3.4D ON/OFF time mask for ProSe

For ProSe Direct Discovery and ProSe Direct Communications, additional requirements on ON/OFF time masks for ProSe physical channels and signals are specified in this clause.

When UE is configured for simultaneous E-UTRA ProSe sidelink and E-UTRA uplink transmissions for inter-band EUTRA ProSe / E-UTRA bands specified in Table 5.5D-2, the requirements in subclause 6.3.4D apply for ProSe transmission and the requirements in subclause 6.3.4 apply for uplink transmission.

### 6.3.4D.1 General time mask for ProSe

The General ON/OFF time mask defines the observation period between the Transmit OFF and ON power and between Transmit ON and OFF power for PSDCH, PSCCH, and PSSCH transmissions in a subframe wherein the last symbol is punctured to create a guard period.

There are no additional requirements on UE transmit power beyond that which is required in subclause 6.2.2 and subclause 6.6.2.3.

Figure 6.3.4D.1-1: PSDCH/PSCCH/PSSCH time mask

### 6.3.4D.2 PSSS/SSSS time mask

The PSSS time mask / SSSS time mask defines the observation period between the Transmit OFF and ON power and between Transmit ON and OFF power for PSSS/SSSS transmissions in a subframe when not multiplexed with PSBCH in that subframe.

There are no additional requirements on UE transmit power beyond that which is required in subclause 6.2.2 and subclause 6.6.2.3.

Figure 6.3.4D.2-1: PSSS time mask for normal CP transmission (when not time-multiplexed with PSBCH)

Figure 6.3.4D.2-2: PSSS time mask for extended CP transmission (when not time-multiplexed with PSBCH)

Figure 6.3.4D.2-3: SSSS time mask (when not time-multiplexed with PSBCH)

### 6.3.4D. 3 PSSS / SSSS / PSBCH time mask

The PSSS/SSSS/PSBCH time mask defines the observation period between SSSS and adjacent PSSS/PSBCH symbols in a subframe, with last symbol punctured to create a guard period.

There are no additional requirements on UE transmit power beyond that which is required in subclause 6.2.2 and subclause 6.6.2.3.

Figure 6.3.4D.3-1: PSSS/SSSS/PBCH time mask for normal CP transmission

Figure 6.3.4D.3-2: PSSS/SSSS/PBCH time mask for extended CP transmission

### 6.3.4D. 4 PSSCH / SRS time mask

The PSSCH/SRS time mask defines the observation period between sounding reference symbol (SRS) and an adjacent PSSCH symbol and subsequent sub-frame.

There are no additional requirements on UE transmit power beyond that which is required in subclause 6.2.2 and subclause 6.6.2.3.

The PSSCH/SRS time mask shall follow the PUSCH/PUCCH/SRS time mask as specified in subclause 6.3.4.4.

### 6.3.4F ON/OFF time mask for category NB1 and NB2

### 6.3.4F. 1 General ON/OFF time mask

E-UTRA general ON/OFF time mask in subclause 6.3.4.1 applies for category NB1 and NB2 UE with an exception that for 3.75 kHz sub-carrier spacing the transmit OFF power is defined as mean power in one slot ( 2 ms ) and for 15 kHz sub-
carrier spacing the transmit OFF power is defined as mean power in one sub-frame ( 1 ms ), excluding any transient periods. The ON power is defined as the mean power over one RU excluding any transient periods.

### 6.3.4F. 2 NPRACH time mask

The NPRACH ON power is specified as the mean power over the NPRACH measurement period excluding any transient periods as shown in Figure 6.3.4F.2-1. The measurement period for different NPRACH preamble format is specified in Table 6.3.4F.2-1.

There are no additional requirements on UE transmit power beyond that which is required in subclause 6.2 .2 F and subclause 6.6.2.3F.

Table 6.3.4F.2-1: NPRACH ON power measurement period

| NPRACH preamble format | Measurement period (ms) |
| :---: | :---: |
| 0 | 5.6 |
| 1 | 6.4 |

Figure 6.3.4F.2-1: NPRACH ON/OFF time mask

### 6.3.4G ON/OFF time mask for V2X Communication

For V2X Communications, additional requirements on ON/OFF time masks for V2X physical channels and signals are specified in this clause.

The General ON/OFF time mask in subclause 6.3.4D.1 and PSSS/SSSS time mask in subcluse 6.3.4D. 2 are applied for E-UTRA V2X sidelink UE.

When UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions for inter-band EUTRA V2X / E-UTRA bands specified in Table 5.5G-2, the requirements in subclause 6.3.4G apply for the V2X sidelink transmission and the requirements in subclause 6.3.4 apply for the E-UTRA uplink transmission.

For intra-band contiguous multi-carrier operation the general ON/OFF time mask is applicable for each component carrier during the ON power period and the transient periods. The OFF period shall only be applicable for each component carrier when all the component carriers are OFF.

For V2X UE supporting Transmit Diversity, the ON/OFF time mask requirements apply at each transmit antenna connector.

If the UE transmits on two antenna connectorsat the same time, the general ON/OFF time mask requirements apply to each transmit antenna connector.

If the UE transmits on one antenna connector at a time, the general ON/OFF time mask requirements apply to the active antenna connector.

### 6.3.4G. $1 \quad$ PSSS / SSSS / PSBCH time mask

The PSSS/SSSSS/PSBCH time mask for V2X UE defines the observation period between SSSS and adjacent PSSS/PSBCH symbols in a subframe, with last symbol punctured to create a guard period.

Figure 6.3.4G.1-1: PSSS/SSSS/PSBCH time mask for normal CP transmission for V2X Service

Figure 6.3.4G.1-2: PSSS/SSSS/PSBCH time mask for extended CP transmission for V2X Service

### 6.3.5 Power Control

### 6.3.5.1 Absolute power tolerance

Absolute power tolerance is the ability of the UE transmitter to set its initial output power to a specific value for the first sub-frame at the start of a contiguous transmission or non-contiguous transmission with a transmission gap larger than 20 ms . This tolerance includes the channel estimation error (the absolute RSRP accuracy requirement specified in subclause 9.1 of TS 36.133). In the case of a PRACH transmission, the absolute tolerance is specified for the first preamble. The absolute power tolerance includes the channel estimation error (the absolute RSRP accuracy requirement specified in subclause 9.1 of TS 36.133).

### 6.3.5.1.1 Minimum requirements

The minimum requirement for absolute power tolerance is given in Table 6.3.5.1.1-1 over the power range bounded by the Maximum output power as defined in subclause 6.2.2 and the Minimum output power as defined in subclause 6.3.2.

For operating bands under NOTE 2 in Table 6.2.2-1, the absolute power tolerance as specified in Table 6.3.5.1.1-1 is relaxed by reducing the lower limit by 1.5 dB when the transmission bandwidth is confined within $\mathrm{F}_{\text {UL_low }}$ and $\mathrm{F}_{\mathrm{UL} \_l o w}+$ 4 MHz or $\mathrm{F}_{\mathrm{UL} \text { _high }}-4 \mathrm{MHz}$ and $\mathrm{F}_{\mathrm{UL} \text { _high }}$.

Table 6.3.5.1.1-1: Absolute power tolerance

| Conditions | Tolerance |
| :--- | :---: |
| Normal | $\pm 9.0 \mathrm{~dB}$ |
| Extreme | $\pm 12.0 \mathrm{~dB}$ |

### 6.3.5.2 Relative Power tolerance

The relative power tolerance is the ability of the UE transmitter to set its output power in a target sub-frame relatively to the power of the most recently transmitted reference sub-frame if the transmission gap between these sub-frames is $\leq 20$ ms .

For PRACH transmission, the relative tolerance is the ability of the UE transmitter to set its output power relatively to the power of the most recently transmitted preamble. The measurement period for the PRACH preamble is specified in Table 6.3.4.2-1.

### 6.3.5.2.1 Minimum requirements

The requirements specified in Table 6.3.5.2.1-1 apply when the power of the target and reference sub-frames are within the power range bounded by the Minimum output power as defined in subclause 6.3.2 and the measured PUMAX as defined in subclause 6.2 .5 (i.e, the actual power as would be measured assuming no measurement error). This power shall be within the power limits specified in subclause 6.2.5.

To account for RF Power amplifier mode changes 2 exceptions are allowed for each of two test patterns. The test patterns are a monotonically increasing power sweep and a monotonically decreasing power sweep over a range bounded by the requirements of minimum power and maximum power specified in subclauses 6.3.2 and 6.2.2. For these exceptions the power tolerance limit is a maximum of $\pm 6.0 \mathrm{~dB}$ in Table 6.3.5.2.1-1

Table 6.3.5.2.1-1 Relative power tolerance for transmission (normal conditions)

| Power step $\Delta \mathbf{P}$ <br> (Up or down) <br> [dB] | All combinations <br> of PUSCH and <br> PUCCH <br> transitions [dB] | All combinations of <br> PUSCH/PUCCH and <br> SRS transitions <br> between sub- <br> frames [dB] | PRACH [dB] |
| :---: | :---: | :---: | :---: |

The power step $(\Delta \mathrm{P})$ is defined as the difference in the calculated setting of the UE Transmit power between the target and reference sub-frames with the power setting according to subclause 5.1 of [TS 36.213]. The error is the difference
between $\Delta \mathrm{P}$ and the power change measured at the UE antenna port with the power of the cell-specific reference signals kept constant. The error shall be less than the relative power tolerance specified in Table 6.3.5.2.1-1.

For sub-frames not containing an SRS symbol, the power change is defined as the relative power difference between the mean power of the original reference sub-frame and the mean power of the target subframe not including transient durations. The mean power of successive sub-frames shall be calculated according to Figure 6.3.4.3-1 and Figure 6.3.4.1-1 if there is a transmission gap between the reference and target sub-frames.

If at least one of the sub-frames contains an SRS symbol, the power change is defined as the relative power difference between the mean power of the last transmission within the reference sub-frame and the mean power of the first transmission within the target sub-frame not including transient durations. A transmission is defined as PUSCH, PUCCH or an SRS symbol. The mean power of the reference and target sub-frames shall be calculated according to Figures 6.3.4.1-1, 6.3.4.2-1, 6.3.4.4-1, 6.3.4.4-2 and 6.3.4.4-3 for these cases.

### 6.3.5.3 Aggregate power control tolerance

Aggregate power control tolerance is the ability of a UE to maintain its power in non-contiguous transmission within 21 ms in response to 0 dB TPC commands with respect to the first UE transmission, when the power control parameters specified in TS 36.213 are constant. For HD-FDD UEs that support coverage enhancement (CE), the requirements on aggregate power control tolerance in 6.3.5E. 3 apply.

### 6.3.5.3.1 Minimum requirement

The UE shall meet the requirements specified in Table 6.3.5.3.1-1 for aggregate power control over the power range bounded by the minimum output power as defined in subclause 6.3.2 and the maximum output power as defined in subclause 6.2.2.

Table 6.3.5.3.1-1: Aggregate power control tolerance

| TPC command | UL channel | Aggregate power tolerance within 21 ms |
| :---: | :---: | :---: |
| 0 dB | PUCCH | $\pm 2.5 \mathrm{~dB}$ |
| 0 dB | PUSCH | $\pm 3.5 \mathrm{~dB}$ |
| NOTE: | The UE transmission gap is 4 ms. TPC command is transmitted via PDCCH <br> 4 <br> 4 |  |

### 6.3.5A Power control for CA

The requirements apply for one single PUCCH, PUSCH or SRS transmission of contiguous PRB allocation per component carrier with power setting in accordance with Clause 5.1 of [6].

### 6.3.5A. 1 Absolute power tolerance

The absolute power tolerance is the ability of the UE transmitter to set its initial output power to a specific value for the first sub-frame at the start of a contiguous transmission or non-contiguous transmission with a transmission gap on each active component carriers larger than 20 ms . For component carriers with Frame Structure Type 3 the absolute power toerlance requirements apply when the said transmission gaps are larger than 40 ms . The requirement can be tested by time aligning any transmission gaps on the component carriers.

When SRS carrier based switching is used, then the above mentioned absolute power tolerance is the ability of the UE transmitter to set its initial output power to a specific value for the first sub-frame at the start of a contiguous transmission or non-contiguous transmission with a transmission gap on component carriers (to which SRS switching occurs) larger than 40 ms .

### 6.3.5A.1.1 Minimum requirements

For inter-band carrier aggregation with uplink assigned to two E-UTRA bands, the absolute power control tolerance is specified on each component carrier exceed the minimum output power as defined in subclause 6.3 .2 A and the total power is limited by maximum output power as defined in subclause 6.2 .2 A . The requirements defined in Table
6.3.5.1.1-1 shall apply on each component carrier with all component carriers active. The requirements can be tested by time aligning any transmission gaps on all the component carriers.

For intra-band contiguous carrier aggregation bandwidth class B, C and D and intra-band non-contiguous carrier aggregation the absolute power control tolerance per component carrier is given in Table 6.3.5.1.1-1.

### 6.3.5A. 2 Relative power tolerance

### 6.3.5A.2.1 Minimum requirements

For inter-band carrier aggregation with uplink assigned to two E-UTRA bands, the relative power tolerance is specified when the power of the target and reference sub-frames on each component carrier exceed the minimum output power as defined in subclause 6.3.2A and the total power is limited by $\mathrm{P}_{\text {UMAX }}$ as defined in subclause 6.2 .5 A . The requirements shall apply on each component carrier with all component carriers active. The UE transmitter shall have the capability of changing the output power independently on all component carriers in the uplink and:
a) the requirements for all combinations of PUSCH and PUCCH transitions per component carrier is given in Table 6.3.5.2.1-1.
b) for SRS the requirements for combinations of PUSCH/PUCCH and SRS transitions between subframes given in Table 6.3.5.2.1-1 apply per component carrier when the target and reference subframes are configured for either simultaneous SRS or simultaneous PUSCH.
c) for RACH the requirements apply for the primary cell and are given in Table 6.3.5.2.1-1.

For component carriers with Frame Structure Type 3 the requirements for the target sub-frame relative to the power of the most recently transmitted reference sub-frame shall be met with a transmission gap $\leq 40 \mathrm{~ms}$.

For intra-band contiguous carrier aggregation bandwidth class B, C and D and intra-band non-contiguous carrier aggregation, the requirements apply when the power of the target and reference sub-frames on each component carrier exceed -20 dBm and the total power is limited by $\mathrm{P}_{\mathrm{UMAX}}$ as defined in subclause 6.2 .5 A . For the purpose of these requirements, the power in each component carrier is specified over only the transmitted resource blocks.

The UE shall meet the following requirements for transmission on both assigned component carriers when the average transmit power per PRB is aligned across both assigned carriers in the reference sub-frame:
a) for all possible combinations of PUSCH and PUCCH transitions per component carrier, the corresponding requirements given in Table 6.3.5.2.1-1;
b) for SRS transitions on each component carrier, the requirements for combinations of PUSCH/PUCCH and SRS transitions given in Table 6.3.5.2.1-1 with simultaneous SRS of constant SRS bandwidth allocated in the target and reference subrames;
c) for RACH on the primary component carrier, the requirements given in Table 6.3.5.2.1-1 for PRACH.

For a) and b) above, the power step $\Delta \mathrm{P}$ between the reference and target subframes shall be set by a TPC command and/or an uplink scheduling grant transmitted by means of an appropriate DCI Format.

For a), b) and c) above, two exceptions are allowed for each component carrier for a power per carrier ranging from - 20 dBm to $\mathrm{P}_{\mathrm{UMAX}, \mathrm{c}}$ as defined in subclause 6.2.5. For these exceptions the power tolerance limit is $\pm 6.0 \mathrm{~dB}$ in Table 6.3.5.2.1-1.

### 6.3.5A. 3 Aggregate power control tolerance

Aggregate power control tolerance is the ability of a UE to maintain its power in non-contiguous transmission within 21 ms in response to 0 dB TPC commands with respect to the first UE transmission, when the power control parameters specified in [6] are constant on all active component carriers.

### 6.3.5A.3.1 Minimum requirements

For inter-band carrier aggregation with uplink assigned to two E-UTRA bands, the aggregate power tolerance is specified on each component carrier exceed the minimum output power as defined in subclause 6.3.2A and the total power is limited by maximum output power as defined in subclause 6.2 .2 A . The requirements defined in Table
6.3.5.3.1-1 shall apply on each component carrier with all component carriers active. The requirements can be tested by time aligning any transmission gaps on both the component carriers.

For intra-band contiguous carrier aggregation bandwidth class B, C and D and intra-band non-contiguous carrier aggregation, the aggregate power tolerance per component carrier is given in Table 6.3.5.3.1-1 with either simultaneous PUSCH or simultaneous PUCCH-PUSCH (if supported by the UE) configured. The average power per PRB shall be aligned across both assigned carriers before the start of the test. The requirement can be tested with the transmission gaps time aligned between component carriers.

### 6.3.5B Power control for UL-MIMO

For UE supporting UL-MIMO, the power control tolerance applies to the sum of output power at each transmit antenna connector.

The power control requirements specified in subclause 6.3.5 apply to UE with two transmit antenna connectors in closed-loop spatial multiplexing scheme. The requirements shall be met with UL-MIMO configurations specified in Table 6.2.2B-2, wherein

- The Maximum output power requirements for UL-MIMO are specified in subclause 6.2.2B
- The Minimum output power requirements for UL-MIMO are specified in subclause 6.3.2B
- The requirements for configured transmitted power for UL-MIMO are specified in subclause 6.2.5B.

If UE is configured for transmission on single-antenna port, the requirements in subclause 6.3 .5 apply.

### 6.3.5D Power Control for ProSe

When UE is configured for simultaneous E-UTRA ProSe sidelink and E-UTRA uplink transmissions for inter-band EUTRA ProSe / E-UTRA bands specified in Table 5.5D-2, the requirements in subclause 6.3.5D apply for ProSe transmission and the requirements in subclause 6.3.5 apply for uplink transmission.

### 6.3.5D.1 Absolute power tolerance

For ProSe transmissions, the absolute power tolerance requirements specified in subclause 6.3.5.1 shall apply for each ProSe transmission.

### 6.3.5E Power control for category M1 and M2

### 6.3.5E. 1 Absolute power tolerance

The absolute power tolerance requirements specified in subclause 6.3.5.1 apply, wherein

- The Maximum output power requirements are specified in subclause 6.2 .2 E
- The Minimum output power requirements are specified in subclause 6.3.2
- The requirements for configured transmitted power are specified in subclause 6.2.5.

### 6.3.5E. 2 Relative Power tolerance

The relative power tolerance requirements specified in subclause 6.3.5.2 apply, wherein

- The Maximum output power requirements are specified in subclause 6.2 .2 E
- The Minimum output power requirements are specified in subclause 6.3.2
- The requirements for configured transmitted power are specified in subclause 6.2.5.

### 6.3.5E. 3 Aggregate power control tolerance

Aggregate power control tolerance is the ability of a UE to maintain its power in non-contiguous transmission in response to 0 dB TPC commands with respect to the first UE transmission, when the power control parameters specified in TS 36.213 are constant.

For category M1 and M2 TDD and FD-FDD UEs, the aggregate power control tolerance requirements specified in Table 6.3.5E.3.1-0 apply. For category M1 and M2 HD-FDD UEs and for continuous uplink transmissions of duration $\leq 64 \mathrm{~ms}$, the aggregate power control tolerance requirements specified in Table 6.3.5E.3.1-0 apply.

For category M1 and M2 HD-FDD UEs and for continuous uplink transmissions of duration $>64 \mathrm{~ms}$, the aggregate power control tolerance requirements specified in Table 6.3.5E.3.1-1 apply.

### 6.3.5E.3.1 Minimum requirement

The category M1 and M2 TDD and FD-FDD UEs shall meet the requirements specified in Table 6.3.5E.3.1-0 for aggregate power control over the power range bounded by the minimum output power as defined in subclause 6.3.2, the maximum output power as defined in subclause 6.2 .2 E , and the requirements for configured transmitted power are specified in subclause 6.2.5.

The category M1 and M2 HD-FDD UEs and for continuous uplink transmissions of duration $\leq 64 \mathrm{~ms}$, shall meet the requirements specified in Table 6.3.5E.3.1-0 for aggregate power control over the power range bounded by the minimum output power as defined in subclause 6.3.2, the maximum output power as defined in subclause 6.2 .2 E , and the requirements for configured transmitted power are specified in subclause 6.2.5.

Table 6.3.5E.3.1-0: Aggregate power control tolerance

| TPC command | UL channel | Aggregate power tolerance within 21 ms ${ }^{2}$ |
| :---: | :---: | :---: |
| 0 dB | PUCCH | $\pm 2.5 \mathrm{~dB}$ |
| 0 dB | PUSCH | $\pm 3.5 \mathrm{~dB}$ |
| NOTE 1: | The UE transmission gap is 4 ms for full-duplex FDD and TDD. |  |
|  | For UE of half-duplex FDD with the channel bandwidth $5 \mathrm{MHz} / 10 \mathrm{MHz} / 15$ |  |
| $\mathrm{MHzz} / 20 \mathrm{MHz}$, the transmission gap is 1 ms after subframe \#4 and 7 ms |  |  |
| after subframe \#6. |  |  |
|  | For UE of half-duplex FDD with the CBW $1.4 / 3 \mathrm{MHz}$, the transmission gap |  |
| is 9 ms . |  |  |
| TPC command is transmitted via MPDCCH 4 subframes preceding each |  |  |
| PUCCH/PUSCH transmission. |  |  |
| NOTE 2: | For UE of half-duplex FDD with the CBW $1.4 / 3 \mathrm{MHz}$, the test interval is 41 <br>  <br> ms. |  |

The category M1 and M2 HD-FDD UE and for continuous uplink transmissions of duration $>64 \mathrm{~ms}$ shall meet the requirements specified in Table 6.3.5E.3.1-1 for aggregate power control over the power range bounded by the minimum output power as defined in subclause 6.3.2 and the maximum output power as defined in subclause 6.2.2E.

Table 6.3.5E.3.1-1: Aggregate power control tolerance

| TPC command | UL channel | Aggregate power tolerance within 129 ms |
| :---: | :---: | :---: |
| 0 dB | PUCCH | $\pm 2.5 \mathrm{~dB}$ |
| 0 dB | PUSCH | $\pm 3.5 \mathrm{~dB}$ |
| NOTE: | The UE transmission gap is 5 ms . TPC command is transmitted via <br> MPDCCH 4 subframes preceding each PUCCH/ PUSCH transmission. |  |

### 6.3.5F Power Control for category NB1 and NB2

Power control requirements in this clause apply for category NB1 and NB2 UE.

### 6.3.5F. 1 Absolute power tolerance

The minimum requirement for absolute power tolerance is given in Table 6.3.5F.1-1 over the power range bounded by the Maximum output power as defined in subclause 6.2 .2 F and the Minimum output power as defined in subclause 6.3.2F.

Table 6.3.5F.1-1: Absolute power tolerance - I

| Conditions | Tolerance |
| :--- | :---: |
| Normal | $\pm 9.0 \mathrm{~dB}$ |
| Extreme | $\pm 12.0 \mathrm{~dB}$ |

In case of $-15 \mathrm{~dB} \leq \hat{\mathrm{Es}} /$ Iot $<-6 \mathrm{~dB}$, the absolute power tolerance given in Table 6.3.5F.1-2 applies if the UE transmit power is not mandated to be $P_{\mathrm{CMAX}, \mathrm{c}}$ according to the UE uplink power control procedure or random access procedure in Section 16 of [6] (e.g. the lowest configured repetition level is used for NPRACH transmission or the number of repetitions of the allocated NPUSCH RUs is no more than 2).

Table 6.3.5F.1-2: Absolute power tolerance - II

| Conditions | Tolerance |
| :--- | :--- |
| Normal | $\pm 13.3 \mathrm{~dB}$ |
| Extreme | $\pm 16.3 \mathrm{~dB}$ |

### 6.3.5F. 2 Relative power tolerance

Category NB1 and NB2 UE relative power control requirement is defined for NPRACH power step values of $0,2,4$ and 6 dB . For NPRACH transmission, the relative tolerance is the ability of the UE transmitter to set its output power relatively to the power of the most recently transmitted preamble. The measurement period for the NPRACH preamble is specified in Table 6.3.4F.2-1.

The requirements specified in Table 6.3.5F.2-1 apply when the power of the target and reference sub-frames are within the power range bounded by the Minimum output power as defined in subclause 6.3 .2 F and the maximum output power as defined in subclause 6.2 .2 F .

Table 6.3.5F.2-1: Relative power tolerance for category NB1 and NB2 NPRACH transmission (normal conditions)

| Power step $\Delta \mathbf{P}$ <br> [dB] | NPRACH [dB] |
| :---: | :---: |
| $\Delta \mathrm{P}=0$ | $\pm 1.5$ |
| $\Delta \mathrm{P}=2$ | $\pm 2.0$ |
| $\Delta \mathrm{P}=4$ | $\pm 3.5$ |
| $\mathrm{P}=6$ $\pm 4.0$ <br> NOTE:For extreme conditions an additional $\pm 2.0 \mathrm{~dB}$ <br> relaxation is allowed.  <br>   l |  |

The power step $(\Delta \mathrm{P})$ is defined as the difference in the calculated setting of the UE transmit power between the target and reference sub-frames. The error is the difference between $\Delta \mathrm{P}$ and the power change measured at the UE antenna port with the power of the cell-specific reference signals kept constant. The error shall be less than the relative power tolerance specified in Table 6.3.5F.2-1.

### 6.3.5F.3 Aggregate power control tolerance for category NB1 and NB2

Category NB1 and NB2 aggregate power control tolerance is the ability of a UE to maintain its output power in noncontiguous transmission with respect to the first UE transmission, when the uplink power control parameters as defined in TS 36.213 are constant and $\alpha$ is set to 0 .

### 6.3.5F.3.1 Minimum requirement

The UE shall meet the requirements specified in Table 6.3.5F.3.1-1 for aggregate power control over the power range bounded by the minimum output power as defined in subclause 6.3 .2 F and the maximum output power as defined in subclause 6.2.2F.

Table 6.3.5F.3.1-1: Aggregate power control tolerance for HD-FDD

| UL channel | Aggregate power tolerance |  |
| :---: | :---: | :---: |
|  | $\mathbf{1 5} \mathbf{~ k H z / 1 2}$ tones <br> within $\mathbf{5 3} \mathbf{~ m s ~}$ | $\mathbf{1 5} \mathbf{~ k H z} / \mathbf{1}$ tone <br> within $\mathbf{1 0 4} \mathbf{~ m s ~}$ |
| $\pm 3.5 \mathrm{~dB}$ |  |  |
| NOTE: | For five consecutive UE transmissions the transmission <br> gaps are 12 ms for 12 tone and 16 ms for single tone <br> transmissions. Uplink scheduling grant is transmitted via <br> NPDCCH eight subframes before NPUSCH <br> transmission. |  |

Table 6.3.5F.3.1-2: Aggregate power control tolerance for TDD

| UL channel | Aggregate power tolerance |  |
| :---: | :---: | :---: |
|  | 15 kHz / 12 tones within 81 ms | 15 kHz / 1 tone within 177 ms |
| NPUSCH | $\pm 3.5 \mathrm{~dB}$ |  |
| NOTE:For fiv  <br>  gaps <br>  transn <br>  NPDC <br>  transm | For five consecutive UE transmissions the transmission gaps are 19 ms for 12 tone and 23 ms for single tone transmissions. Uplink scheduling grant is transmitted via NPDCCH eight subframes before NPUSCH transmission. |  |

### 6.3.5G Power Control for V2X Communication

When UE is configured for E-UTRA V2X sidelink transmissions non-concurrent with E-UTRA uplink transmissions for E-UTRA V2X operating bands specified in Table Table 5.5G-1, the requirements in subclause 6.3.5G.1 apply for EUTRA V2X sidelink transmission.

When UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions for inter-band EUTRA V2X / E-UTRA bands specified in Table 5.5G-2, the requirements in subclause 6.3.5G.1 apply for V2X sidelink transmission and the requirements in subclause 6.3.5 apply for the E-UTRA uplink transmission.

For V2X UE supporting Transmit Diversity, if the UE transmits on two antenna connectors at the same time, the power control tolerance for single carrier shall apply to the sum of output power at each transmit antenna connector.

If the UE transmitson one -antenna connector at a time, the requirements for single carrier shall apply to the active antenna connector.

### 6.3.5G.1 Absolute power tolerance

Absolute power tolerance is the ability of the UE to set its output power to a specific value for each subframe.
For V2X sidelink communication transmissions in the operating bands specified in Table 5.5G-1, the minimum requirement for absolute power tolerance is given in Table 6.3.5G.1-1 over the power range bounded by the Maximum output power as defined in subclause 6.2 .2 G and the Minimum output power as defined in subclause 6.3.2G.

For operating bands under NOTE 2 in Table 6.2.2-1, the absolute power tolerance as specified in Table 6.3.5G.1-1 is relaxed by reducing the lower limit by 1.5 dB when the transmission bandwidth is confined within $\mathrm{F}_{\mathrm{UL} \text { _low }}$ and $\mathrm{F}_{\text {UL_low }}+$ 4 MHz or $\mathrm{F}_{\mathrm{UL} \_ \text {high }}-4 \mathrm{MHz}$ and $\mathrm{F}_{\mathrm{UL} \_ \text {high }}$.

Table 6.3.5G.1-1: Absolute power tolerance

| Conditions | Tolerance |
| :--- | :---: |
| Normal | $\pm 9.0 \mathrm{~dB}$ |
| Extreme | $\pm 12.0 \mathrm{~dB}$ |

For intra-band contiguous multi-carrier operation the absolute power control tolerance specified in Table 6.3.5G.1-1 shall apply for each component carrier.

### 6.4 Void

### 6.5 Transmit signal quality

### 6.5.1 Frequency error

The UE modulated carrier frequency shall be accurate to within $\pm 0.1$ PPM observed over a period of one time slot ( 0.5 ms ) compared to the carrier frequency received from the E-UTRA Node B

### 6.5.1A Frequency error for CA

For inter-band carrier aggregation with uplink assigned to two E-UTRA bands, the frequency error requirements defined in subclause 6.5 . 1 shall apply on each component carrier with all component carriers active.

For intra-band contiguous carrier aggregation the UE modulated carrier frequencies per band shall be accurate to within $\pm 0.1 \mathrm{PPM}$ observed over a period of one timeslot compared to the carrier frequency of primary component carrier received from the E-UTRA in the corresponding band.

For intra-band non-contiguous carrier aggregation the requirements in Section 6.5.1 applies per component carrier.

### 6.5.1B Frequency error for UL-MIMO

For UE(s) supporting UL-MIMO, the UE modulated carrier frequency at each transmit antenna connector shall be accurate to within $\pm 0.1 \mathrm{PPM}$ observed over a period of one time slot $(0.5 \mathrm{~ms})$ compared to the carrier frequency received from the E-UTRA Node B.

### 6.5.1D Frequency error for ProSe

The UE modulated carrier frequency for ProSe sidelink transmissions shall be accurate to within $\pm 0.1$ PPM observed over a period of one time slot ( 0.5 ms ) compared to the carrier frequency received from the synchronization source. The synchronization source can be E-UTRA Node B or a ProSe UE transmitting sidelink synchronization signals.

When UE is configured for simultaneous E-UTRA ProSe sidelink and E-UTRA uplink transmissions for inter-band EUTRA ProSe / E-UTRA bands specified in Table 5.5D-2, the requirements in subclause 6.5.1D apply for ProSe transmission and the requirements in subclause 6.5.1 apply for uplink transmission.

### 6.5.1E Frequency error for UE category M1 and M2

For category M1 and M2 TDD UEs and FD-FDD UEs, the frequency error requirements in Clause 6.5.1 apply.
For category M1 and M2 HD-FDD UEs and for continuous uplink transmissions of duration $\leq 64 \mathrm{~ms}$, the frequency error requirements in Clause 6.5.1 apply.

For category M1 and M2 HD-FDD UEs and for continuous uplink transmissions of duration > 64 ms , the UE modulated carrier frequency shall be accurate to within the limits in Table $6.5 .1 \mathrm{E}-1$ observed over a period of one time slot $(0.5 \mathrm{~ms})$ compared to the carrier frequency received from the E-UTRA Node B.

Table 6.5.1E-1: Frequency error requirement for HD-FDD UE category M1 and M2

| Carrier <br> frequency [GHz] | Frequency error <br> [ppm] |
| :---: | :---: |
| $\leq 1$ | $\pm 0.2$ |
| $>1$ | $\pm 0.1$ |

### 6.5.1F Frequency error for UE category NB1 and NB2

For UE category NB1 and NB2, the UE modulated carrier frequency shall be accurate to within the following limits
Table 6.5.1F-1: Frequency error requirement for UE category NB1 and NB2

| Carrier <br> frequency [GHz] | Frequency error <br> [ppm] |
| :---: | :---: |
| $\leq 1$ | $\pm 0.2$ |
| $>1$ | $\pm 0.1$ |

Observed over a period of one time slot ( 0.5 ms for 15 kHz sub-carrier spacing and 2 ms excluding the 2304Ts gap for 3.75 kHz sub-carrier spacing) and averaged over $72 / L_{\text {Cone }}$ slots (where $L_{\text {Ctone }}=\{1,3,6,12\}$ is the number of subcarriers used for the transmission), compared to the carrier frequency received from the E-UTRA Node B.

### 6.5.1G Frequency error for V2X Communication

The UE modulated carrier frequency for V2X sidelink transmissions shall be accurate to within $\pm 0.1$ PPM observed over a period of one time slot ( 0.5 ms ) compared to the absolute frequency in case of using GNSS synchronization source. The same requirements applied over a period of one time slot ( 0.5 ms ) compared to the relative frequency in case of using the E-UTRA Node B or V2X UE sidelink synchronization signals.

When UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions for inter-band EUTRA V2X / E-UTRA bands specified in Table 5.5G-2, the requirements in subclause 6.5.1G apply for V2X sidelink transmission and the requirements in subclause 6.5.1 apply for the E-UTRA uplink transmission.

For V2X UE supporting Transmit Diversity, if the UE transmits on two antenna connectors at the same time, the UE modulated carrier frequency at each transmit antenna connector shall be accurate to within $\pm 0.1$ PPM observed over a period of one time slot $(0.5 \mathrm{~ms})$ in case of using GNSS synchronization source. The same requirements applied over a period of one time slot ( 0.5 ms ) compared to the relative frequency in case of using the E-UTRA Node B or V2X UE sidelink synchronization signals.

If the UE transmits on one antenna connector at a time, the requirements for single carrier shall apply to the active antenna connector.

### 6.5.2 Transmit modulation quality

Transmit modulation quality defines the modulation quality for expected in-channel RF transmissions from the UE. The transmit modulation quality is specified in terms of:

- Error Vector Magnitude (EVM) for the allocated resource blocks (RBs)
- EVM equalizer spectrum flatness derived from the equalizer coefficients generated by the EVM measurement process
- Carrier leakage
- In-band emissions for the non-allocated RB

All the parameters defined in subclause 6.5.2 are defined using the measurement methodology specified in Annex F.

### 6.5.2.1 Error Vector Magnitude

The Error Vector Magnitude is a measure of the difference between the reference waveform and the measured waveform. This difference is called the error vector. Before calculating the EVM the measured waveform is corrected by the sample timing offset and RF frequency offset. Then the carrier leakage shall be removed from the measured waveform before calculating the EVM.

The measured waveform is further modified by selecting the absolute phase and absolute amplitude of the Tx chain. The EVM result is defined after the front-end IDFT as the square root of the ratio of the mean error vector power to the mean reference power expressed as a $\%$.

The basic EVM measurement interval in the time domain is one preamble sequence for the PRACH, and as specified in Table 6.5.2.1-1 for the PUCCH and PUSCH in the time domain. When the PUSCH or PUCCH transmission slot or subslot is shortened due to multiplexing with SRS, the EVM measurement interval is reduced by one symbol, accordingly. Likewise, when the PUSCH starting position is modified or when second last symbol is the ending symbol of the PUSCH subframe for Frame Structure Type 3, the EVM measurement interval is reduced accordingly. The PUSCH or PUCCH EVM measurement interval is also reduced when the mean power, modulation or allocation between slots or subslots is expected to change. In the case of PUSCH transmission, the measurement interval is reduced by a time interval equal to the sum of $5 \mu \mathrm{~s}$ and the applicable exclusion period defined in subclause 6.3.4, adjacent to the boundary where the power change is expected to occur. The PUSCH exclusion period is applied to the signal obtained after the front-end IDFT. In the case of PUCCH transmission with power change, the PUCCH EVM measurement interval is reduced by one symbol adjacent to the boundary where the power change is expected to occur.

Table 6.5.2.1-1: Measurement interval for EVM

| TTI pattern | Measurement interval |
| :---: | :---: |
| Subframe | 70 S |
| Slot | 70 S |
| Subslot | $20 S, 30 \mathrm{~S}$ |

### 6.5.2.1.1 Minimum requirement

The RMS average of the basic EVM measurements for 10 subframes excluding any transient period for the average EVM case, and 60 subframes excluding any transient period for the reference signal EVM case, for the different modulations schemes shall not exceed the values specified in Table 6.5.2.1.1-1 for the parameters defined in Table 6.5.2.1.1-2. For EVM evaluation purposes, [all PRACH preamble formats $0-4$ and] all PUCCH formats $1,1 \mathrm{a}, 1 \mathrm{~b}, 2$, 2a and 2 b are considered to have the same EVM requirement as QPSK modulated.

Table 6.5.2.1.1-1: Minimum requirements for Error Vector Magnitude

| Parameter | Unit | Average EVM Level | Reference Signal EVM <br> Level |
| :--- | :---: | :---: | :---: |
| QPSK or BPSK | $\%$ | 17.5 | 17.5 |
| 16 QAM | $\%$ | 12.5 | 12.5 |
| 64 QAM | $\%$ | 8 | 8 |
| 256 QAM | $\%$ | 3.5 | 3.5 |

Table 6.5.2.1.1-2: Parameters for Error Vector Magnitude

| Parameter | Unit | Level |
| :--- | :---: | :---: |
| UE Output Power | dBm | $\geq-40$ |
| UE Output Power for 256 QAM | dBm | $\geq-30$ |
| Operating conditions |  | Normal conditions |

### 6.5.2.2 Carrier leakage

Carrier leakage is an additive sinusoid waveform that has the same frequency as a modulated waveform carrier frequency. The measurement interval is one slot in the time domain.

### 6.5.2.2.1 Minimum requirements

The relative carrier leakage power is a power ratio of the additive sinusoid waveform and the modulated waveform. The relative carrier leakage power shall not exceed the values specified in Table 6.5.2.2.1-1.

Table 6.5.2.2.1-1: Minimum requirements for relative carrier leakage power

| Parameters | Relative limit <br> $(\mathrm{dBc})$ | Applicable frequencies |
| :---: | :---: | :---: |
| Output power $>10 \mathrm{dBm}$ | -28 | Carrier center frequency < 1 GHz |
|  | -25 | Carrier center frequency $\geq 1 \mathrm{GHz}$ |
| $0 \mathrm{dBm} \leq$ Output power $\leq 10 \mathrm{dBm}$ | -25 |  |
| $-30 \mathrm{dBm} \leq$ Output power $\leq 0 \mathrm{dBm}$ | -20 |  |
| $-40 \mathrm{dBm} \leq$Output power $<-30 \mathrm{dBm}$ <br> (NOTE 1) | -10 |  |
| NOTE 1:The requirement in this power range is not applicable for V2X sidelink transmission for <br> E-UTRA V2X operating bands specified in Table 5.5G-1. |  |  |

### 6.5.2.3 In-band emissions

The in-band emission is defined as the average across 12 sub-carrier and as a function of the RB offset from the edge of the allocated UL transmission bandwidth. The in-band emission is measured as the ratio of the UE output power in a non-allocated RB to the UE output power in an allocated RB.

The basic in-band emissions measurement interval is defined over one slot in the time domain. When the PUSCH or PUCCH transmission slot is shortened due to multiplexing with SRS, the in-band emissions measurement interval is reduced by one SC-FDMA symbol, accordingly. Likewise, when the PUSCH starting position is modified or when the second last symbol is the ending symbol of the PUSCH sub-frame for Frame Structure Type 3, the in-band emissions measurement interval is reduced accordingly.

### 6.5.2.3.1 Minimum requirements

The relative in-band emission shall not exceed the values specified in Table 6.5.2.3.1-1.
Table 6.5.2.3.1-1: Minimum requirements for in-band emissions

| Parameter description | Unit |  | Limit (NOTE 1) | Applicable Frequencies |
| :---: | :---: | :---: | :---: | :---: |
| General | dB | For Frame Structure Type 1 and Frame Structure Type 2: $\begin{aligned} & \max \left\{-25-10 \cdot \log _{10}\left(N_{R B} / L_{C R B}\right),\right. \\ & 20 \cdot \log _{10} E V M-3-5 \cdot\left(\left\|\Delta_{R B}\right\|-1\right) / L_{C R B}, \\ & \left.-57 \mathrm{dBm} / 180 \mathrm{kHz}-P_{R B}\right\} \end{aligned}$ <br> For Frame Structure Type $3,10 \mathrm{MHz}$ and 20 MHz channel bandwidths: $\max \left\{\begin{array}{c} -10-6\left(\left\|\Delta_{R B}\right\|-1\right), \\ -57 \mathrm{dBm} / 180 \\ \mathrm{kHz}-P_{R B} \end{array}\right\}$ |  | Any non-allocated (NOTE 2) |
| IQ Image | dB | -28 | Image frequencies when carrier center frequency <br> $<1 \mathrm{GHz}$ and Output power $>10 \mathrm{dBm}$ | Image frequencies (NOTES 2, 3) |
|  |  | -25 | Image frequencies when carrier center frequency $<1 \mathrm{GHz}$ and Output power $\leq 10 \mathrm{dBm}$ |  |
|  |  | -25 | Image frequencies when carrier center frequency $\geq 1 \mathrm{GHz}$ |  |
| Carrier leakage | dBc | -28 | Output power > 10 dBm and carrier center frequency $<1 \mathrm{GHz}$ | Carrier frequency <br> (NOTES 4, 5) |
|  |  | -25 | Output power > 10 dBm and carrier center frequency $\geq 1 \mathrm{GHz}$ |  |
|  |  | -25 | $0 \mathrm{dBm} \leq$ Output power $\leq 10 \mathrm{dBm}$ |  |
|  |  | -20 | $-30 \mathrm{dBm} \leq$ Output power $\leq 0 \mathrm{dBm}$ |  |
|  |  | -10 | $-40 \mathrm{dBm} \leq$ Output power $<-30 \mathrm{dBm}{ }^{\text {(NOTE 12) }}$ |  |
| NOTE 1: An in-band emissions combined limit is evaluated in each non-allocated RB. For each such RB, the minimum requirement is calculated as the higher of $P_{R B}-30 \mathrm{~dB}$ and the power sum of all limit values (General, IQ Image or Carrier leakage) that apply. $P_{R B}$ is defined in NOTE 10. |  |  |  |  |

NOTE 2: The measurement bandwidth is 1 RB and the limit is expressed as a ratio of measured power in one nonallocated RB to the measured average power per allocated RB, where the averaging is done across all allocated RBs. For Frame Structure Type 3 and 20 MHz channel bandwidth, the requirement applies for QPSK, 16QAM and 64QAM modulation with $\left|\Delta_{R B}\right| \leq 5$ for any non-allocated RB and $R I V=1$ in the uplink scheduling grant with RIV specified in [6]. For Frame Structure Type 3 and 10 MHz channel bandwidth in Band 49, the requirement applies for QPSK, 16QAM and 64QAM modulation with $\left|\Delta_{R B}\right| \leq 3$ for any nonallocated RB and $R I V=$ ' 01000 in the uplink scheduling grant.
NOTE 3: The applicable frequencies for this limit are those that are enclosed in the reflection of the allocated bandwidth, based on symmetry with respect to the centre carrier frequency, but excluding any allocated RBs. For Frame Structure Type 3 with 20 MHz channel bandwidth, the applicable frequency is $n_{P R B}=98$ for QPSK, 16QAM and 64QAM modulation. For Frame Structure Type 3 and 10 MHz channel bandwidth in Band 49, the applicable frequency is $n_{P R B}=48$ for QPSK, 16QAM and 64QAM modulation.
NOTE 4: The measurement bandwidth is 1 RB and the limit is expressed as a ratio of measured power in one nonallocated RB to the measured total power in all allocated RBs. For Frame Structure Type 3 and 20 MHz channel bandwidth, the requirement applies for QPSK, 16QAM and 64QAM modulation with $R I V=5$ in the uplink scheduling grant. For Frame Structure Type 3 and 10 MHz channel bandwidth in Band 49, the requirement applies for QPSK, 16QAM and 64QAM modulation with $R I V=' 00100$ in the uplink scheduling grant.
NOTE 5: The applicable frequencies for this limit are those that are enclosed in the RBs containing the DC frequency if $N_{R B}$ is odd, or in the two RBs immediately adjacent to the DC frequency if $N_{R B}$ is even, but excluding any allocated RB.
NOTE 6: $\quad L_{C R B}$ is the Transmission Bandwidth (see Figure 5.6-1).
NOTE 7: $\quad N_{R B}$ is the Transmission Bandwidth Configuration (see Figure 5.6-1).
NOTE 8: $E V M$ is the limit specified in Table 6.5.2.1.1-1 for the modulation format used in the allocated RBs.
NOTE 9: $\Delta_{R B}$ is the starting frequency offset between the allocated RB and the measured non-allocated RB (e.g.
$\Delta_{R B}=1$ or $\Delta_{R B}=-1$ for the first adjacent RB outside of the allocated bandwidth.
NOTE 10: $P_{R B}$ is the transmitted power per 180 kHz in allocated RBs, measured in dBm.
[NOTE 11: For V2V-V2X waveforms, the requirements are applied when PSSCH and PSCCH are adjacent in frequency. The limit values (General, IQ Image or Carrier leakage) of each channel is calculated separately
 combined limit is evaluated in each non-allocated RB. For each such RB, the minimum requirement is calculated as the higher of $P_{\text {RB, }}$ PSSCH -30 dB and the $P_{\text {Sumibe.SSCH, }}$ where $P_{\text {Sumibe.SSCH }}$ is the linear sum of $P_{\text {general, }}$ PSSCH, PIQ, PSSCH, PLO, PSSCH, P ${ }_{\text {general, }}$ PSCCH, PIQ, PSCCH, PLO, PSCCH.]
NOTE 12: The requirement in this power range is not applicable for V2X sidelink transmission for E-UTRA V2X operating bands specified in Table 5.5G-1.

NOTE: For Frame Structure 3 and operations in Band 46, in-band emissions requirements are not specified for the 10 MHz channel bandwidth.

### 6.5.2.4 EVM equalizer spectrum flatness

The zero-forcing equalizer correction applied in the EVM measurement process (as described in Annex F) must meet a spectral flatness requirement for the EVM measurement to be valid. The EVM equalizer spectrum flatness is defined in terms of the maximum peak-to-peak ripple of the equalizer coefficients ( dB ) across the allocated uplink block. The basic measurement interval is the same as for EVM.

### 6.5.2.4.1 Minimum requirements

The peak-to-peak variation of the EVM equalizer coefficients contained within the frequency range of the uplink allocation shall not exceed the maximum ripple specified in Table 6.5.2.4.1-1 for normal conditions. For uplink allocations contained within both Range 1 and Range 2, the coefficients evaluated within each of these frequency ranges shall meet the corresponding ripple requirement and the following additional requirement: the relative difference between the maximum coefficient in Range 1 and the minimum coefficient in Range 2 must not be larger than 5 dB , and the relative difference between the maximum coefficient in Range 2 and the minimum coefficient in Range 1 must not be larger than 7 dB (see Figure 6.5.2.4.1-1).

The EVM equalizer spectral flatness shall not exceed the values specified in Table 6.5.2.4.1-2 for extreme conditions. For uplink allocations contained within both Range 1 and Range 2, the coefficients evaluated within each of these frequency ranges shall meet the corresponding ripple requirement and the following additional requirement: the relative difference between the maximum coefficient in Range 1 and the minimum coefficient in Range 2 must not be larger than 6 dB , and the relative difference between the maximum coefficient in Range 2 and the minimum coefficient in Range 1 must not be larger than 10 dB (see Figure 6.5.2.4.1-1).

Table 6.5.2.4.1-1: Minimum requirements for EVM equalizer spectrum flatness (normal conditions)

| Frequency range | Maximum ripple [dB] |
| :---: | :---: |
| Ful_Meas - Ful_Low $\geq 3 \mathrm{MHz}$ and Ful_High - Ful_Meas $\geq 3 \mathrm{MHz}$ (Range 1) | 4 (p-p) |
| $\text { Ful_Meas - Ful_Low < } 3 \mathrm{MHz} \text { or FuL_High - Ful_Meas < } 3 \mathrm{MHz}$ (Range 2) | 8 (p-p) |
| NOTE 1: Ful_Meas refers to the sub-carrier frequency for whic evaluated <br> NOTE 2: Ful_Low and Ful_High refer to each E-UTRA frequen 5.5-1 | equalizer coefficient is nd specified in Table |

Table 6.5.2.4.1-2: Minimum requirements for EVM equalizer spectrum flatness (extreme conditions)

| Frequency range | Maximum Ripple [dB] |
| :---: | :---: |
| Ful_Meas - Ful_Low $\geq 5 \mathrm{MHz}$ and Ful_High - Ful_Meas $\geq 5 \mathrm{MHz}$ (Range 1) | 4 (p-p) |
| $\text { Ful_Meas - Ful_Low < } 5 \mathrm{MHz} \text { or Ful_High - Ful_Meas }<5 \mathrm{MHz}$ (Range 2) | 12 (p-p) |
| NOTE 1: Ful_Meas refers to the sub-carrier frequency for whic evaluated <br> NOTE 2: Ful_Low and Ful_High refer to each E-UTRA frequen 5.5-1 | e equalizer coefficient is and specified in Table |

Figure 6.5.2.4.1-1: The limits for EVM equalizer spectral flatness with the maximum allowed variation of the coefficients indicated (the ETC minimum requirement within brackets).

### 6.5.2A Transmit modulation quality for CA

For inter-band carrier aggregation with uplink assigned to two E-UTRA bands, the requirements shall apply on each component carrier as defined in clause 6.5 .2 with all component carriers active. If two contiguous component carriers are assigned to one E-UTRA band, the requirements in subclauses $6.5 .2 \mathrm{~A} .1,6.5 .2 \mathrm{~A} .2$, and 6.5 .2 A .3 apply for those component carriers.

The requirements in this clause apply with PCC and SCC in the UL configured and activated: PCC with PRB allocation and SCC without PRB allocation and without CSI reporting and SRS configured.

### 6.5.2A. $1 \quad$ Error Vector Magnitude

For the intra-band contiguous and non-contiguous carrier aggregation, the Error Vector Magnitude requirement should be defined for each component carrier. Requirements only apply with PRB allocation in one of the component carriers. Similar transmitter impairment removal procedures are applied for CA waveform before EVM calculation as is specified for non-CA waveform in sub-section 6.5.2.1.

When a single component carrier is configured Table 6.5.2.1.1-1 apply.
The EVM requirements are according to Table 6.5.2A.1-1 if CA is configured in uplink with the parameters defined in Table 6.5.2.1.1-2.

Table 6.5.2A.1-1: Minimum requirements for Error Vector Magnitude

| Parameter | Unit | Average EVM Level per <br> CC | Reference Signal EVM <br> Level |
| :--- | :---: | :---: | :---: |
| QPSK or BPSK | $\%$ | 17.5 | 17.5 |
| 16 QAM | $\%$ | 12.5 | 12.5 |
| 64 QAM | $\%$ | 8 | 8 |
| 256 QAM | $\%$ | 3.5 | 3.5 |

### 6.5.2A. 2 Carrier leakage for CA

Carrier leakage is an additive sinusoid waveform that is confined within the aggrecated transmission bandwidth configuration. The carrier leakage requirement is defined for each component carrier and is measured on the component carrier with PRBs allocated. The measurement interval is one slot in the time domain.

### 6.5.2A.2.1 Minimum requirements

The relative carrier leakage power is a power ratio of the additive sinusoid waveform and the modulated waveform. The relative carrier leakage power shall not exceed the values specified in Table 6.5.2A.2.1-1.

Table 6.5.2A.2.1-1: Minimum requirements for Relative Carrier Leakage Power

| Parameters | Relative Limit (dBc) |
| :---: | :---: |
| Output power $>0 \mathrm{dBm}$ | -25 |
| $-30 \mathrm{dBm} \leq$ Output power $\leq 0 \mathrm{dBm}$ | -20 |
| $-40 \mathrm{dBm} \leq$ Output power $<-30 \mathrm{dBm}$ | -10 |

### 6.5.2A. 3 In-band emissions

### 6.5.2A.3.1 Minimum requirement for $C A$

For intra-band contiguous carrier aggregation bandwidth class $B, C$ and $D$, the requirements in Table 6.5.2A.3.1-1 and 6.5.2A.3.1-2 apply within the aggregated transmission bandwidth configuration with both component carrier (s) active and one single contiguous PRB allocation of bandwidth $L_{C R B}$ at the edge of the aggregated transmission bandwidth configuration.

The inband emission is defined as the interference falling into the non allocated resource blocks for all component carriers. The measurement method for the inband emissions in the component carrier with PRB allocation is specified in annex F. For a non allocated component carrier a spectral measurement is specified.

For intra-band non-contiguous carrier aggregation the requirements for in-band emissions should be defined for each component carrier. Requirements only apply with PRB allocation in one of the component carriers according to Table 6.5.2.3.1.

Table 6.5.2A.3.1-1: Minimum requirements for in-band emissions (allocated component carrier)

| Parameter | Unit |  | Limit | Applicable Frequencies |
| :---: | :---: | :---: | :---: | :---: |
| General | dB | $\begin{aligned} & \max \\ & 20.1 \\ & -57 \end{aligned}$ | $\begin{aligned} & 5-10 \cdot \log _{10}\left(N_{R B} / L_{C R B}\right), \\ & E V M-3-5 \cdot\left(\left\|\Delta_{R B}\right\|-1\right) / L_{C R B}, \\ & \left.180 \mathrm{kHz}-P_{R B}\right\} \end{aligned}$ | Any non-allocated (NOTE 2) |
| IQ Image | dB |  | -25 | Exception for IQ image (NOTE 3) |
| Carrier leakage | dBc | -25 | Output power > 0 dBm | Exception for Carrier frequency <br> (NOTE 4) |
|  |  | -20 | -30 dBm $\leq$ Output power $\leq 0 \mathrm{dBm}$ |  |

NOTE 1: An in-band emissions combined limit is evaluated in each non-allocated RB. For each such RB, the minimum requirement is calculated as the higher of $P_{R B}-30 \mathrm{~dB}$ and the power sum of all limit values (General, IQ Image or Carrier leakage) that apply. $P_{R B}$ is defined in NOTE 9. The limit is evaluated in each non-allocated RB.
NOTE 2: The measurement bandwidth is 1 RB and the limit is expressed as a ratio of measured power in one nonallocated RB to the measured average power per allocated RB, where the averaging is done across all allocated RBs
NOTE 3: Exceptions to the general limit are allowed for up to $L_{C R B s}+1$ RBs within a contiguous width of $L_{C R B s}+1$ non-allocated RBs. The measurement bandwidth is 1 RB.
NOTE 4: Exceptions to the general limit are allowed for up to two contiguous non-allocated RBs. The measurement bandwidth is 1 RB and the limit is expressed as a ratio of measured power in the non-allocated RB to the measured total power in all allocated RBs.
NOTE 5: $\quad L_{C R B}$ is the Transmission Bandwidth (see Figure 5.6-1) not exceeding $\left\lfloor N_{R B} / 2-1\right\rfloor$
NOTE 6: $\quad N_{R B}$ is the Transmission Bandwidth Configuration (see Figure 5.6-1) of the component carrier with RBs allocated.
NOTE 7: $E V M$ is the limit specified in Table 6.5.2.1.1-1 for the modulation format used in the allocated RBs.
NOTE 8: $\Delta_{R B}$ is the starting frequency offset between the allocated RB and the measured non-allocated RB (e.g. $\Delta_{R B}=1$ or $\Delta_{R B}=-1$ for the first adjacent RB outside of the allocated bandwidth).
NOTE 9: $\quad P_{R B}$ is the transmitted power per 180 kHz in allocated RBs, measured in dBm .
NOTE 10: For V2X intra-band contiguous multi-carrier operation the in-band emission requirement (General, IQ Image or Carrier leakage) of each channel is calculated separately as Pgeneral, PSSCH, C(i), PIQ, PSSCH, (i), PLO, PSSCH, (i), Pgeneral, PSCCH, $(i), P_{I Q}, ~ P S C C H, C(i)$, PLO, $P S C C H, c(i)$ for each carrier respectively. In-band emissions combined limit for the aggregated bandwidth is evaluated in each non-allocated RB. For each such RB, the minimum requirement is calculated as the $P_{\text {sumIBE.CA, }}$ where $P_{\text {sumIBE.CA }}$ is the linear sum of $P_{\text {general, }, \text { PSSCH, }}$ ( $(i)$, $P_{I Q}$, PSSCH, $C(i), P_{L O}, P S S C H, C(i)$, Pgeneral, $P S C C H, C(i), P_{I Q}, P S C C H, C(i), P_{L O}, P S C C H, C(i)$ for all carriers.

Table 6.5.2A.3.1-2: Minimum requirements for in-band emissions (not allocated component carrier)

| Parameter | Unit | Meas BW NOTE 1 | Limit | remark | Applicable Frequencies |
| :---: | :---: | :---: | :---: | :---: | :---: |
| General | dB | BW of 1 RB <br> (180KHz rectangular) | $\begin{aligned} & \max \left\{-25-10 \cdot \log _{10}\left(N_{R B} / L_{C R B}\right),\right. \\ & 20 \cdot \log _{10} E V M-3-5 \cdot\left(\left\|\Delta_{R B}\right\|-1\right) / L_{C R B}, \\ & \left.-57 \mathrm{dBm} / 180 \mathrm{kHz}-P_{R B}\right\} \end{aligned}$ | The reference value is the average power per allocated RB in the allocated component carrier | Any RB in the non allocated component carrier. <br> The frequency raster of the RBs is derived when this component carrier is allocated with RBs |
| IQ Image | dB | BW of 1 RB (180KHz rectangular) | $\begin{gathered} -25 \\ \text { NOTE } 2 \end{gathered}$ | The reference value is the average power per allocated RB in the allocated | The frequencies of the $L_{C R B}$ contiguous non-allocated RBs are unknown. |

|  |  |  |  |  | component carrier | The frequency raster of the RBs is derived when this component carrier is allocated with RBs |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Carrier leakage | dBc | $\begin{aligned} & \text { BW of } 1 \mathrm{RB} \\ & \text { (180KHz } \\ & \text { rectangular) } \end{aligned}$ | NOTE 3 |  | The reference value is the total power of the allocated RBs in the allocated component carrier | The frequencies of the up to 2 non-allocated RBs are unknown. <br> The frequency raster of the RBs is derived when this component carrier is allocated with RBs |
|  |  |  | -25 | Output power > 0 dBm |  |  |
|  |  |  | -20 | $-30 \mathrm{dBm} \leq \begin{gathered}\text { Output power } \leq 0 \\ \mathrm{dBm}\end{gathered}$ |  |  |
|  |  |  | -10 | $\begin{gathered} -40 \mathrm{dBm} \leq \text { Output power }<-30 \\ \mathrm{dBm} \end{gathered}$ |  |  |
| NOTE1: Resolution BWs smaller than the measurement BW may be integrated to achieve the measurement bandwidth. |  |  |  |  |  |  |
| NOTE 2: Exceptions to the general limit is are allowed for up to $L_{C R B}+1$ RBs within a contiguous width of $L_{C R B}+1$ non-allocated RBs. |  |  |  |  |  |  |
| NOTE 3: Two Exceptions to the general limit are allowed for up to two contiguous non-allocated RBs NOTE 4: NOTES 1, 5, 6, 7, 8, 9 from Table 6.5.2A.3.1-1 apply for Table 6.5.2A.3.1-2 as well. |  |  |  |  |  |  |
| NOTE 5: <br> NOTE 6: | $\Delta_{R B}$ for measured non-allocated RB in the non allocated component carrier may take non-integer values when the carrier spacing between the CCs is not a multiple of RB. |  |  |  |  |  |
|  | For V2X intra-band contiguous multi-carrier operation the in-band emission requirement (General, IQ Image or Carrier leakage) of each channel is calculated separately as Pgeneral, PSSCH,C(i), PIQ, PSSCH,C(i), PLO, PSSCH,C(i), Pgeneral, PSCCH,C(i), PIQ, PSCCH,C(i), PLO, PSCCH,C(i) for each carrier respectively. In-band emissions combined limit for the aggregated bandwidth is evaluated in each non-allocated RB. For each such RB, the minimum requirement is calculated as the $P_{\text {sumIBE.CA }}$, where $P_{\text {sumiBE.CA }}$ is the linear <br>  carriers. |  |  |  |  |  |

### 6.5.2B Transmit modulation quality for UL-MIMO

For UE supporting UL-MIMO, the transmit modulation quality requirements are specified at each transmit antenna connector.

If UE is configured for transmission on single-antenna port, the requirements in subclause 6.5.2 apply.
The transmit modulation quality is specified in terms of:

- Error Vector Magnitude (EVM) for the allocated resource blocks (RBs)
- EVM equalizer spectrum flatness derived from the equalizer coefficients generated by the EVM measurement process
- Carrier leakage (caused by IQ offset)
- In-band emissions for the non-allocated RB

### 6.5.2B.1 Error Vector Magnitude

For UE with two transmit antenna connectors in closed-loop spatial multiplexing scheme, the Error Vector Magnitude requirements specified in Table 6.5.2.1.1-1 which is defined in subclause 6.5.2.1 apply at each transmit antenna connector. The requirements shall be met with the UL-MIMO configurations specified in Table 6.2.2B-2

### 6.5.2B.2 Carrier leakage

For UE with two transmit antenna connectors in closed-loop spatial multiplexing scheme, the Relative Carrier Leakage Power requirements specified in Table 6.5.2.2.1-1 which is defined in subclause 6.5.2.2 apply at each transmit antenna connector. The requirements shall be met with the UL-MIMO configurations specified in Table 6.2.2B-2.

### 6.5.2B. 3 In-band emissions

For UE with two transmit antenna connectors in closed-loop spatial multiplexing scheme, the In-band Emission requirements specified in Table 6.5.2.3.1-1 which is defined in subclause 6.5.2.3 apply at each transmit antenna connector. The requirements shall be met with the uplink MIMO configurations specified in Table 6.2.2B-2.

### 6.5.2B. 4 EVM equalizer spectrum flatness for UL-MIMO

For UE with two transmit antenna connectors in closed-loop spatial multiplexing scheme, the EVM Equalizer Spectrum Flatness requirements specified in Table 6.5.2.4.1-1 and Table 6.5.2.4.1-2 which are defined in subclause 6.5.2.4 apply at each transmit antenna connector. The requirements shall be met with the UL-MIMO configurations specified in Table 6.2.2B-2.

### 6.5.2D Transmit modulation quality for ProSe

The requirements in this clause apply to ProSe sidelink transmissions.
When UE is configured for simultaneous E-UTRA ProSe sidelink and E-UTRA uplink transmissions for inter-band EUTRA ProSe / E-UTRA bands specified in Table 5.5D-2, the requirements in subclause 6.5.2D apply for ProSe transmission and the requirements in subclause 6.5.2 apply for uplink transmission.

### 6.5.2D.1 Error Vector Magnitude

For ProSe sidelink physical channels PSDCH, PSCCH, PSSCH, and PSBCH, the Error Vector Magnitude requirements shall be as specified for PUSCH in subclause 6.5.2.1 for the corresponding modulation and transmission bandwidth. When ProSe transmissions are shortened due to transmission gap of 1 symbol at the end of the subframe, the EVM measurement interval is reduced by one symbol, accordingly.

For PSBCH the duration over which EVM is averaged shall be 24 subframes.
This requirement is not applicable for ProSe physical signals PSSS and SSSS.

### 6.5.2D.2 Carrier leakage

The requirements of subcaluse 6.5.2.2 shall apply for ProSe transmissions.

### 6.5.2D.3 In-band emissions

For ProSe sidelink physical channels PSDCH, PSCCH, PSSCH, and PSBCH, the In-band emissions requirements shall be as specified for PUSCH in subclause 6.5.2.3 for the corresponding modulation and transmission bandwidth. When ProSe transmissions are shortened due to transmission gap of 1 symbol at the end of the subframe, the In-band emissions measurement interval is reduced by one symbol, accordingly.

### 6.5.2D.4 EVM equalizer spectrum flatness for ProSe

The requirements of subcaluse 6.5.2.4 shall apply for ProSe transmissions.

### 6.5.2E Transmit modulation quality for category M 1 and M 2

### 6.5.2E. 1 Error Vector Magnitude

The Error Vector Magnitude is defined in section 6.5.2.1.

### 6.5.2E. 2 Carrier leakage

Carrier leakage is an additive sinusoid waveform that has the same frequency as a modulated waveform carrier frequency. For UE of UL Categories M1 and M2, the sinusoid waveform may lie at the center of the narrowband assigned for transmission. The measurement interval is one slot in the time domain.

### 6.5.2E.2.1 Minimum requirements

The relative carrier leakage power is a power ratio of the additive sinusoid waveform and the modulated waveform. The relative carrier leakage power at the center of the channel bandwidth or the center of the narrowband assigned for transmission shall not exceed the values specified in Table 6.5.2.2.1-1.

### 6.5.2E. 3 In-band emissions

The in-band emission is defined in clause 6.5.2.3 and measurement condition specified in Annex F.

### 6.5.2E.3.1 Minimum requirements

The relative in-band emission when the center carrier frequency is either at the center of channel bandwidth or at the center of the narrowband assigned for transmission shall not exceed the values specified in Table 6.5.2E.3.1-1

Table 6.5.2E.3.1-1: Minimum requirements for in-band emissions

| Parameter description | Unit |  | Limit (NOTE 1) | Applicable Frequencies |
| :---: | :---: | :---: | :---: | :---: |
| General | dB | $-18-[5] \cdot\left(\left\|\Delta_{\text {SubG }}\right\|-1\right) / L_{\text {SCG }}$ |  | Any non-allocated Subcarrier Group within the subPRB allocation <br> (NOTE 11,12,13) |
|  |  | $\begin{aligned} & \max \left\{-25-10 \cdot \log _{10}\left(N_{R B} / L_{C R B}\right),\right. \\ & 20 \cdot \log _{10} E V M-3-5 \cdot\left(\left\|\Delta_{R B}\right\|-1\right) / L_{C R B}, \\ & \left.-57 \mathrm{dBm} / 180 \mathrm{kHz}-P_{R B}\right\} \end{aligned}$ |  | Any non-allocated (NOTE 2) |
| IQ Image | dB | -28 | Image frequencies when carrier center frequency <br> $<1 \mathrm{GHz}$ and Output power $>10 \mathrm{dBm}$ | Image frequencies (NOTES 2, 3) |
|  |  | -25 | Image frequencies when carrier center frequency <br> $<1 \mathrm{GHz}$ and Output power $\leq 10 \mathrm{dBm}$ |  |
|  |  | -25 | Image frequencies when carrier center frequency $\geq 1 \mathrm{GHz}$ |  |
| Carrier leakage | dBc | -28 | Output power > 10 dBm and carrier center frequency $<1 \mathrm{GHz}$ | Carrier frequency <br> (NOTES 4, 5) |
|  |  | -25 | Output power > 10 dBm and carrier center frequency $\geq 1 \mathrm{GHz}$ |  |
|  |  | -25 | $0 \mathrm{dBm} \leq$ Output power $\leq 10 \mathrm{dBm}$ |  |
|  |  | -20 | $-30 \mathrm{dBm} \leq$ Output power $\leq 0 \mathrm{dBm}$ |  |
|  |  | -10 | $-40 \mathrm{dBm} \leq$ Output power $<-30 \mathrm{dBm}$ |  |
| NOTE 1: An in-band emissions combined limit is evaluated in each non-allocated RB. For each such RB, the minimum requirement is calculated as the higher of $P_{R B}-30 \mathrm{~dB}$ and the power sum of all limit values (General, IQ Image or Carrier leakage) that apply. $P_{R B}$ is defined in NOTE 10. |  |  |  |  |
| NOTE 2: | The measurement bandwidth is 1 RB and the limit is expressed as a ratio of measured power in one nonallocated RB to the measured average power per allocated RB, where the averaging is done across all allocated RBs. |  |  |  |
| NOTE 3: Th | The applicable frequencies for this limit are those that are enclosed in the reflection of the allocated bandwidth, based on symmetry with respect to the centre carrier frequency, but excluding any allocated |  |  |  |

RBs. For UE of UL Categories M1 and M2, the applicable frequencies shall alternatively include those found by reflection on the center of the assigned narrowband, but excluding any allocated RBs.
NOTE 4: The measurement bandwidth is 1 RB and the limit is expressed as a ratio of measured power in one nonallocated RB to the measured total power in all allocated RBs.
NOTE 5: The applicable frequencies for this limit are those that are enclosed in the RBs containing the DC frequency if $N_{R B}$ is odd, or in the two RBs immediately adjacent to the DC frequency if $N_{R B}$ is even, but excluding any allocated RB. For UE of UL Categories M1 and M2, the applicable frequencies shall alternatively be the centre frequency of the supported 6RBs.
NOTE 6: $\quad L_{C R B}$ is the Transmission Bandwidth (see Figure 5.6-1).
NOTE 7: $\quad N_{R B}$ is the Transmission Bandwidth Configuration (see Figure 5.6-1).
NOTE 8: $E V M$ is the limit specified in Table 6.5.2.1.1-1 for the modulation format used in the allocated RBs.
NOTE 9: $\Delta_{R B}$ is the starting frequency offset between the allocated RB and the measured non-allocated RB (e.g. $\Delta_{R B}=1$ or $\Delta_{R B}=-1$ for the first adjacent RB outside of the allocated bandwidth.
NOTE 10: $P_{R B}$ is the transmitted power per 180 kHz in allocated RBs, measured in dBm .
NOTE 11: The measurement bandwidth is 1 subcarrier group ( [ 3 ] subcarrier per subcarrier group) and the limit is expressed as a ratio of measured power in one non-allocated subcarrier group to the measured total power in all allocated subcarrier.
NOTE 12: $\Delta_{\text {SubG }}$ is the starting frequency offset between the allocated subcarrier group and the measured nonallocated subcarrier group (e.g. $\Delta_{S u b G}=1$ or $\Delta_{S u b G}=-1$ for the first adjacent subcarrier group outside the allocated subcarrier group.)
NOTE 13: $L_{S C G}$ is the Transmission bandwidth (number of subcarrier group).

### 6.5.2F Transmit modulation quality for Category NB1 and NB2

### 6.5.2F. 1 Error Vector Magnitude

The RMS average of the basic EVM measurements for $240 / L_{\text {Ctone }}$ slots excluding any transient period for the average EVM case, where $L_{\text {Ctone }}=\{1,3,6,12\}$ is the number of subcarriers for the category NB1 and NB2 transmission, for the different modulations schemes shall not exceed the values specified in Table 6.5.2.1.1-1 for the parameters defined in Table 6.5.2.1.1-2. For EVM evaluation purposes, both NPRACH formats are considered to have the same EVM requirement as QPSK modulated.

### 6.5.2F.2 Carrier leakage

Carrier leakage is an additive sinusoid waveform that has the same frequency as a modulated waveform carrier frequency. The measurement interval is one slot in the time domain. The relative carrier leakage power is a power ratio of the additive sinusoid waveform and the modulated waveform. The relative carrier leakage power of category NB1 or NB2 UE shall not exceed the values specified in Table 6.5.2F.2-1.

## Table 6.5.2F.2-1: Minimum requirements for relative carrier leakage power

| Parameters | Relative limit (dBc) |
| :---: | :---: |
| $0 \mathrm{dBm} \leq$ Output power | -25 |
| $-30 \mathrm{dBm} \leq$ Output power $\leq 0 \mathrm{dBm}$ | -20 |
| $-40 \mathrm{dBm} \leq$ Output power $<-30 \mathrm{dBm}$ | -10 |

### 6.5.2F. 3 In-band emissions

The in-band emission is defined as a function of the tone offset from the edge of the allocated UL transmission tone(s) within the transmission bandwidth configuration. The in-band emission is measured as the ratio of the UE output power in a non-allocated tone to the UE output power in an allocated tone. The basic in-band emissions measurement interval is defined over one slot in the time domain.

The category NB1 and NB2 UE relative in-band emission shall not exceed the values specified in Table 6.5.2F.3-1.

Table 6.5.2F.3-1: Minimum requirements for in-band emissions

| Parameter description | Unit |  | Limit (NOTE 1) | Applicable Frequencies |
| :---: | :---: | :---: | :---: | :---: |
| General | dB | $\begin{aligned} & \max \left\{-15-10 \cdot \log _{10}\left(N_{\text {tone }} / L_{\text {Ctone }}\right),\right. \\ & -18-5 \cdot\left(\left\|\Delta_{\text {tone }}\right\|-1\right) / L_{\text {Ctone }}, \\ & \left.-57 \mathrm{dBm} /(3.75 \mathrm{kHz} \text { or } 15 \mathrm{kHz})-P_{\text {tone }}\right\} \end{aligned}$ |  | Any non-allocated (NOTE 2) |
| IQ Image | dB | -25 |  | Image frequencies (NOTES 2, 3) |
| Carrier leakage | dBc | -25 | $0 \mathrm{dBm} \leq$ Output power | Carrier frequency (NOTES 4, 5) |
|  |  | -20 | $-30 \mathrm{dBm} \leq$ Output power $\leq 0 \mathrm{dBm}$ |  |
|  |  | -10 | $-40 \mathrm{dBm} \leq$ Output power <-30 dBm |  |

NOTE 1: An in-band emissions combined limit is evaluated in each non-allocated tone. For each such tone, the minimum requirement is calculated as the higher of $P_{\text {tone }}-30 \mathrm{~dB}$ and the power sum of all limit values (General, IQ Image or Carrier leakage) that apply. Ptone is defined in NOTE 9.
NOTE 2: The measurement bandwidth is 1 tone and the limit is expressed as a ratio of measured power in one nonallocated tone to the measured average power per allocated tone, where the averaging is done across all allocated tones.
NOTE 3: The applicable frequencies for this limit are those that are enclosed in the reflection of the allocated bandwidth, based on symmetry with respect to the centre carrier frequency, but excluding any allocated tones.
NOTE 4: The measurement bandwidth is 1 tone and the limit is expressed as a ratio of measured power in one nonallocated tone to the measured total power in all allocated tones.
NOTE 5: The applicable frequencies for this limit are those that are enclosed in the tones containing the DC frequency if $N_{\text {tone }}$ is odd, or in the two tones immediately adjacent to the DC frequency if $N_{\text {tone }}$ is even, but excluding any allocated tone.
NOTE 6: $L_{\text {Ctone }}$ is the Transmission Bandwidth (tones).
NOTE 7: $N_{\text {tone }}$ is the Transmission Bandwidth Configuration (tones).
NOTE 8: $\Delta_{\text {tone }}$ is the starting frequency offset between the allocated tone and the measured non-allocated tone. (e.g. $\Delta_{\text {tone }}=1$ or $\Delta_{\text {tone }}=-1$ for the first adjacent tone outside of the allocated bandwidth.

NOTE 9: $\quad P_{\text {tone }}$ is the transmitted power per 3.75 kHz or 15 kHz in allocated tones, measured in dBm .

### 6.5.2G Transmit modulation quality for V2X Communication

The requirements in this clause apply to V2X sidelink transmissions.
When UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions for inter-band EUTRA V2X / E-UTRA bands specified in Table 5.5G-2, the requirements in subclause 6.5 .2 G apply for V2X sidelink transmission and the requirements in subclause 6.5.2 apply for the E-UTRA uplink transmission.

For V2X UE supporting Transmit Diversity, if the UE transmits on two antenna-connectors at the same time, the transmit modulation quality requirements for single carrier shall apply to each transmit antenna connector.

If V2X UE transmits on one-antenna connector at a time, the requirements specified for single carrier apply to the active antenna connector.

### 6.5.2G. 1 Error Vector Magnitude

For V2X physical channels PSCCH, PSSCH and PSBCH, the Error Vector Magnitude requirements shall be as specified for PUSCH in subclause 6.5.2.1 for the corresponding modulation and transmission bandwidth.

For V2X sidelink physical channels PSCCH, PSSCH and PSBCH, the Error Vector Magnitude requirements shall be as specified separately for PSSCH and PSCCH for the corresponding modulation and transmission bandwidth. The measurement period for EVM of PSSCH and PSCCH is 15 subframes. The measurement period for reference signal EVM is 30 subframes. When V2X transmissions are shortened due to transmission gap of 1 symbol at the end of the subframe, the EVM measurement interval is reduced by one symbol, accordingly.

For PSBCH the duration over which EVM is averaged shall be 24 subframes.
For intra-band contiguous multi-carrier operation the EVM requirement shall apply for each component carrier.

### 6.5.2G. 2 Carrier leakage

The requirements of subcaluse 6.5 .2 . 2 shall apply for V2X transmissions.
For intra-band contiguous multi-carrier operation the carrier leakage requirement of subcaluse 6.5 .2 A .2 shall apply.

### 6.5.2G.3 In-band emissions

For V2X sidelink physical channels PSCCH, PSSCH and PSBCH, the In-band emissions requirements shall be as specified for PUSCH in subclause 6.5.2.3 for the corresponding modulation and transmission bandwidth. When V2X transmissions are shortened due to transmission gap of 1 symbol at the end of the subframe, the In-band emissions measurement interval is reduced by one symbol, accordingly.

For intra-band contiguous multi-carrier operation the in-band emission requirement of subcaluse 6.5 .2 A .3 shall apply.

### 6.5.2G.4 EVM equalizer spectrum flatness

The requirements of subcaluse 6.5 .2 .4 shall apply for V2X transmissions.
For intra-band contiguous multi-carrier operation the EVM equalizer spectrum flatness requirement of subcaluse 6.5.2.4 shall apply for each component carrier.

### 6.6 Output RF spectrum emissions

The output UE transmitter spectrum consists of the three components; the emission within the occupied bandwidth (channel bandwidth), the Out Of Band (OOB) emissions and the far out spurious emission domain.

Figure 6.6-1: Transmitter RF spectrum

### 6.6.1 Occupied bandwidth

Occupied bandwidth is defined as the bandwidth containing $99 \%$ of the total integrated mean power of the transmitted spectrum on the assigned channel. The occupied bandwidth for all transmission bandwidth configurations (Resources Blocks) shall be less than the channel bandwidth specified in Table 6.6.1-1

Table 6.6.1-1: Occupied channel bandwidth

|  | Occupied channel bandwidth Channel bandwidth |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1.4 | 3.0 | 5 | 10 | 15 | 20 |

|  | MHz | MHz | MHz | MHz | MHz | MHz |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Channel bandwidth <br> (MHz) | 1.4 | 3 | 5 | 10 | 15 | 20 |

### 6.6.1.1 Additional minimum requirement for E-UTRA (network signalled value "NS_29")

For E-UTRA CA bands including one uplink LAA Scell in Band 46 with "NS_29" indicated, the occupied bandwidth for all transmission bandwidth configurations (Resources Blocks) shall be less than or equal to 19 MHz and 19.7 MHz for E-UTRA carriers of 20 MHz bandwidth assigned within $5150-5350 \mathrm{MHz}$ and $5470-5725 \mathrm{MHz}$, respectively.

### 6.6.1A Occupied bandwidth for CA

For inter-band carrier aggregation with one component carrier per operating band and the uplink active in two E-UTRA bands the occupied bandwidth is defined per component carrier. Occupied bandwidth is the bandwidth containing $99 \%$ of the total integrated mean power of the transmitted spectrum on assigned channel bandwidth on the component carrier. The occupied bandwidth shall be less than the channel bandwidth specified in Table 6.6.1-1.

For intra-band contiguous carrier aggregation the occupied bandwidth is a measure of the bandwidth containing $99 \%$ of the total integrated power of the transmitted spectrum. The OBW shall be less than the aggregated channel bandwidth defined in subclause 5.6A.

For intra-band non-contiguous carrier aggregation sub-block occupied bandwidth is defined as the bandwidth containing $99 \%$ of the total integrated mean power of the transmitted spectrum on the sub-block. In case the sub-block consist of one component carrier the occupied bandwidth of the sub-block shall be less than the channel bandwidth specified in Table 6.6.1-1.

For combinations of intra-band and inter-band carrier aggregation with three uplink component carriers (up to two contiguously aggregated carriers per band), the occupied bandwidth is the bandwidth containing $99 \%$ of the total integrated mean power of the transmitted spectrum on each E-UTRA band. The OBW shall be less than the channel bandwidth as specified in Table 6.6.1-1 for the E-UTRA band supporting one component carrier. The OBW shall be less than the aggregated channel bandwidth as specified in subclause 5.6A for the E-UTRA band supporting two contiguous component carriers.

### 6.6.1B Occupied bandwidth for UL-MIMO

For UE supporting UL-MIMO, the requirements for occupied bandwidth is specified at each transmit antenna connector. The occupied bandwidth is defined as the bandwidth containing $99 \%$ of the total integrated mean power of the transmitted spectrum on the assigned channel at each transmit antenna connector.

For UE with two transmit antenna connectors in closed-loop spatial multiplexing scheme, the occupied bandwidth at each transmitter antenna shall be less than the channel bandwidth specified in Table 6.6.1B-1. The requirements shall be met with the UL-MIMO configurations specified in Table 6.2.2B-2.

Table 6.6.1B-1: Occupied channel bandwidth

|  | Occupied channel bandwidth Channel bandwidth |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\mathbf{1 . 4}$ <br> $\mathbf{M H z}$ | $\mathbf{3 . 0}$ <br> $\mathbf{M H z}$ | $\mathbf{5}$ <br> $\mathbf{M H z}$ | $\mathbf{M H z}$ | $\mathbf{M H z}$ | $\mathbf{2 0}$ <br> $\mathbf{M H z}$ |
|  | 1.4 | 3 | 5 | 10 | 15 | 20 |

If UE is configured for transmission on single-antenna port, the requirements in subclause 6.6.1 apply.

### 6.6.1F Occupied bandwidth for category NB1 and NB2

The occupied bandwidth is defined as the bandwidth containing $99 \%$ of the total integrated mean power of the transmitted spectrum on the assigned channel at the transmit antenna connector. Occupied bandwidth shall be less than the channel bandwidth of category NB1 and NB2 specified in Section 5.6F.

### 6.6.1G Occupied bandwidth for V2X Communication

When UE is configured for E-UTRA V2X sidelink transmissions non-concurrent with E-UTRA uplink transmissions for E-UTRA V2X operating bands specified in Table Table 5.5G-1, the requirements in subclause 6.6.1 apply for EUTRA V2X sidelink transmission.

When UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions for inter-band EUTRA V2X / E-UTRA bands specified in Table 5.5G-2, the requirements in subclause 6.6.1 apply for V2X sidelink transmission and the E-UTRA uplink transmission.

For intra-band contiguous multi-carrier operation, the occupied bandwidth is a measure of the bandwidth containing 99 \% of the total integrated power of the transmitted spectrum. The OBW shall be less than the aggregated channel bandwidth defined in subclause 5.6A.

For V2X UE supporting Transmit Diversity, if the UE transmits on two antenna connectors at the same time, the requirements for occupied bandwidth is specified at each transmit antenna connector and the occupied bandwidth at each transmitter antenna shall be less than the channel bandwidth specified for single carrier.

If V2X UE transmits on one antenna connector at a time, the requirements specified for single carrier shall apply to the active antenna connector.

### 6.6.2 Out of band emission

The Out of band emissions are unwanted emissions immediately outside the assigned channel bandwidth resulting from the modulation process and non-linearity in the transmitter but excluding spurious emissions. This out of band emission limit is specified in terms of a spectrum emission mask and an Adjacent Channel Leakage power Ratio.

### 6.6.2.1 Spectrum emission mask

The spectrum emission mask of the UE applies to frequencies ( $\Delta \mathrm{f}_{\mathrm{Oов}}$ ) starting from the $\pm$ edge of the assigned E-UTRA channel bandwidth. For frequencies offset greater than $\Delta f_{\text {оов }}$ as specified in Table 6.6.2.1.1-1 the spurious requirements in subclause 6.6.3 are applicable.

### 6.6.2.1.1 Minimum requirement

The power of any UE emission shall not exceed the levels specified in Table 6.6.2.1.1-1 for the specified channel bandwidth.

Table 6.6.2.1.1-1: General E-UTRA spectrum emission mask

| Spectrum emission limit (dBm)/ Channel bandwidth |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathbf{\Delta f o o b}$ <br> $\mathbf{( M H z )}$ | $\mathbf{1 . 4}$ <br> $\mathbf{M H z}$ | $\mathbf{3 . 0}$ <br> $\mathbf{M H z}$ | $\mathbf{5}$ <br> $\mathbf{M H z}$ | $\mathbf{1 0}$ <br> $\mathbf{M H z}$ | $\mathbf{1 5}$ <br> $\mathbf{M H z}$ | $\mathbf{2 0}$ <br> $\mathbf{M H z}$ | Measurement <br> bandwidth |
| $\pm 0-1$ | -10 | -13 | -15 | -18 | -20 | -21 | 30 kHz |
| $\pm 1-2.5$ | -10 | -10 | -10 | -10 | -10 | -10 | 1 MHz |
| $\pm 2.5-2.8$ | -25 | -10 | -10 | -10 | -10 | -10 | 1 MHz |
| $\pm 2.8-5$ |  | -10 | -10 | -10 | -10 | -10 | 1 MHz |
| $\pm 5-6$ |  | -25 | -13 | -13 | -13 | -13 | 1 MHz |
| $\pm 6-10$ |  |  | -25 | -13 | -13 | -13 | 1 MHz |
| $\pm 10-15$ |  |  |  | -25 | -13 | -13 | 1 MHz |
| $\pm 15-20$ |  |  |  |  | -25 | -13 | 1 MHz |
| $\pm 20-25$ |  |  |  |  |  | -25 | 1 MHz |

NOTE: As a general rule, the resolution bandwidth of the measuring equipment should be equal to the measurement bandwidth. However, to improve measurement accuracy, sensitivity and efficiency, the resolution bandwidth may be smaller than the measurement bandwidth. When the resolution bandwidth is smaller than the measurement bandwidth, the result should be integrated over the measurement bandwidth in order to obtain the equivalent noise bandwidth of the measurement bandwidth.

### 6.6.2.1A Spectrum emission mask for CA

For inter-band carrier aggregation with one component carrier per operating band and the uplink active in two E-UTRA bands, the spectrum emission mask of the UE is defined per component carrier while both component carriers are active and the requirements are specified in subclauses 6.6.2.1 and 6.6.2.2. If for some frequency spectrum emission masks of component carriers overlap then spectrum emission mask allowing higher power spectral density applies for that frequency. If for some frequency a component carrier spectrum emission mask overlaps with the channel bandwidth of another component carrier, then the emission mask does not apply for that frequency.

For intra-band contiguous carrier aggregation the spectrum emission mask of the UE applies to frequencies ( $\Delta \mathrm{f}_{\mathrm{OOB}}$ ) starting from the $\pm$ edge of the aggregated channel bandwidth (Table 5.6A-1) For intra-band contiguous carrier aggregation the bandwidth class $B, C$ and $D$, the power of any UE emission shall not exceed the levels specified in Table 6.6.2.1A-0, Table 6.6.2.1A-1 and Table 6.6.2.1A-2 for the specified channel bandwidth.

Table 6.6.2.1A-0: General E-UTRA CA spectrum emission mask for Bandwidth Class B

| $\mathbf{\Delta f o o b}$ <br> $(\mathbf{M H z})$ | $\mathbf{2 5 R B + 2 5 R B}$ <br> $(\mathbf{9 . 8 M H z})$ | $\mathbf{2 5 R B}+50 R B$ <br> $(\mathbf{1 4 . 9 5 ~ M H z )}$ | $\mathbf{2 5 R B + 7 5 R B}$ <br> $(\mathbf{1 9 . 8 M H z})$ | 50RB+50RB <br> $(\mathbf{1 9 . 9} \mathbf{~ M H z )}$ | Measurement <br> bandwidth |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\pm 0-1$ | -18 | -20 | -21 | -21 | 30 kHz |
| $\pm 1-5$ | -10 | -10 | -10 | -10 | 1 MHz |
| $\pm 5-9.8$ | -13 | -13 | -13 | -13 | 1 MHz |
| $\pm 9.8-14.8$ | -25 | -13 | -13 | -13 | 1 MHz |
| $\pm 14.8-14.95$ |  | -13 | -13 | -13 | 1 MHz |
| $\pm 14.95-19.80$ |  | -25 | -13 | -13 | 1 MHz |
| $\pm 19.80-19.90$ |  | -25 | -25 | -13 | 1 MHz |
| $\pm 19.90-19.95$ |  | -25 | -25 | -25 | 1 MHz |
| $\pm 19.95-24.80$ |  |  | -25 | -25 | 1 MHz |
| $\pm 24.80-24.90$ |  |  |  | -25 | 1 MHz |

Table 6.6.2.1A-1: General E-UTRA CA spectrum emission mask for Bandwidth Class C

| Spectrum emission limit [dBm]/BWChannel_CA |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\Delta \mathrm{foob}$ $(\mathrm{MHz})$ | $\begin{gathered} \hline \text { 25RB+100RB } \\ \text { (24.95MHz) } \end{gathered}$ | $\begin{aligned} & \text { 50RB+75RB } \\ & (24.75 \mathrm{MHz}) \end{aligned}$ | $\begin{gathered} \text { 50RB+100RB } \\ \text { (29.9 MHz) } \\ \hline \end{gathered}$ | $\begin{gathered} \text { 75RB+75RB } \\ (30 \mathrm{MHz}) \\ \hline \end{gathered}$ | $\begin{gathered} \text { 75RB+100RB } \\ (34.85 \mathrm{MHz}) \end{gathered}$ | $\begin{gathered} \text { 100RB+100RB } \\ (39.8 \mathrm{MHz}) \end{gathered}$ | Measurement bandwidth |

| $\pm 54.65-54.7$ |  | -25 | -25 | -25 | -13 | 1 MHz |
| $\pm 54.7-54.85$ |  |  | -25 | -25 | -13 | 1 MHz |
| $\pm 54.85-59.6$ |  |  |  | -25 | -13 | 1 MHz |
| $\pm 59.6-59.65$ |  |  |  | -25 | -25 | 1 MHz |
| $\pm 59.65-64.6$ |  |  |  |  | -25 | 1 MHz |

For intra-band non-contiguous carrier aggregation transmission the spectrum emission mask requirement is defined as a composite spectrum emissions mask. Composite spectrum emission mask applies to frequencies up to $\pm \Delta \mathrm{f}_{\text {oOB }}$ starting from the edges of the sub-blocks. Composite spectrum emission mask is defined as follows
a) Composite spectrum emission mask is a combination of individual sub-block spectrum emissions masks
b) In case the sub-block consist of one component carrier the sub-lock general spectrum emission mask is defined in subclause 6.6.2.1.1
c) If for some frequency sub-block spectrum emission masks overlap then spectrum emission mask allowing higher power spectral density applies for that frequency
d) If for some frequency a sub-block spectrum emission mask overlaps with the sub-block bandwidth of another sub-block, then the emission mask does not apply for that frequency.

For combinations of intra-band and inter-band carrier aggregation with three uplink component carriers (up to two contiguously aggregated carriers per band), the spectrum emission mask of the UE is defined per E-UTRA band while all component carriers are active. For the E-UTRA band supporting one component carrier the requirements in subclauses 6.6.2.1 and 6.6.2.2 apply. For the E-UTRA band supporting two contiguous component carriers the requirements specified in subclause 6.6.2.1A apply. If for some frequency spectrum emission masks of single component carrier and two contiguous component carriers overlap then spectrum emission mask allowing higher power spectral density applies for that frequency. If for some frequency spectrum emission masks of single component carrier or two contiguous component carriers overlap then the emission mask does not apply for that frequency.

### 6.6.2.2 Additional spectrum emission mask

This requirement is specified in terms of an "additional spectrum emission" requirement.

### 6.6.2.2.1 Minimum requirement (network signalled value "NS_03", "NS_11", "NS_20", and "NS_21")

Additional spectrum emission requirements are signalled by the network to indicate that the UE shall meet an additional requirement for a specific deployment scenario as part of the cell handover/broadcast message.

When "NS_03", "NS_11", "NS_20" or "NS_21" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.2.2.1-1.

Table 6.6.2.2.1-1: Additional requirements

|  | Spectrum emission limit (dBm)/ Channel bandwidth |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathbf{\Delta f o o b}$ <br> $\mathbf{( M H z})$ | $\mathbf{1 . 4}$ <br> $\mathbf{M H z}$ | $\mathbf{3 . 0}$ <br> $\mathbf{M H z}$ | $\mathbf{5}$ <br> $\mathbf{M H z}$ | $\mathbf{1 0}$ <br> $\mathbf{M H z}$ | $\mathbf{1 5}$ <br> $\mathbf{M H z}$ | $\mathbf{2 0}$ <br> $\mathbf{M H z}$ | Measurement <br> bandwidth |
| $\pm 0-1$ | -10 | -13 | -15 | -18 | -20 | -21 | 30 kHz |
| $\pm 1-2.5$ | -13 | -13 | -13 | -13 | -13 | -13 | 1 MHz |
| $\pm 2.5-2.8$ | -25 | -13 | -13 | -13 | -13 | -13 | 1 MHz |
| $\pm 2.8-5$ |  | -13 | -13 | -13 | -13 | -13 | 1 MHz |
| $\pm 5-6$ |  | -25 | -13 | -13 | -13 | -13 | 1 MHz |
| $\pm 6-10$ |  |  | -25 | -13 | -13 | -13 | 1 MHz |
| $\pm 10-15$ |  |  |  | -25 | -13 | -13 | 1 MHz |
| $\pm 15-20$ |  |  |  |  | -25 | -13 | 1 MHz |
| $\pm 20-25$ |  |  |  |  |  | -25 | 1 MHz |

NOTE: As a general rule, the resolution bandwidth of the measuring equipment should be equal to the measurement bandwidth. However, to improve measurement accuracy, sensitivity and efficiency, the resolution bandwidth may be smaller than the measurement bandwidth. When the resolution bandwidth is smaller than the measurement bandwidth, the result should be integrated over the measurement bandwidth in order to obtain the equivalent noise bandwidth of the measurement bandwidth.

### 6.6.2.2.2 Minimum requirement (network signalled value "NS_04")

Additional spectrum emission requirements are signalled by the network to indicate that the UE shall meet an additional requirement for a specific deployment scenario as part of the cell handover/broadcast message.

When "NS_04" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.2.2.2-1.

Table 6.6.2.2.2-1: Additional requirements

|  | Spectrum emission limit (dBm)/ Channel bandwidth |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathbf{\Delta f o o b}$ <br> $\mathbf{( M H z )}$ | $\mathbf{5}$ <br> $\mathbf{M H z}$ | $\mathbf{1 0}$ <br> $\mathbf{M H z}$ | $\mathbf{1 5}$ <br> $\mathbf{M H z}$ | $\mathbf{2 0}$ <br> $\mathbf{M H z}$ | Measurement <br> bandwidth |
| $\pm 0-1$ | -15 | -18 | -20 | -21 | 30 kHz |
| $\pm 1-2.5$ | -10 | -10 | -10 | -10 | 1 MHz |
| $\pm 2.5-2.8$ | -10 | -10 | -10 | -10 | 1 MHz |
| $\pm 2.8-5$ | -10 | -10 | -10 | -10 | 1 MHz |
| $\pm 5-6$ | -13 | -13 | -13 | -13 | 1 MHz |
| $\pm 6-9$ | -25 | -13 | -13 | -13 | 1 MHz |
| $\pm 9-10$ | -25 | -25 | -13 | -13 | 1 MHz |
| $\pm 10-13.5$ |  | -25 | -13 | -13 | 1 MHz |
| $\pm 13.5-15$ |  | -25 | -25 | -13 | 1 MHz |
| $\pm 15-18$ |  |  | -25 | -13 | 1 MHz |
| $\pm 18-20$ |  |  | -25 | -25 | 1 MHz |
| $\pm 20-25$ |  |  |  | -25 | 1 MHz |

NOTE: As a general rule, the resolution bandwidth of the measuring equipment should be equal to the measurement bandwidth. However, to improve measurement accuracy, sensitivity and efficiency, the resolution bandwidth may be smaller than the measurement bandwidth. When the resolution bandwidth is smaller than the measurement bandwidth, the result should be integrated over the measurement bandwidth in order to obtain the equivalent noise bandwidth of the measurement bandwidth.

### 6.6.2.2.3 Minimum requirement (network signalled value "NS_06" or "NS_07")

Additional spectrum emission requirements are signalled by the network to indicate that the UE shall meet an additional requirement for a specific deployment scenario as part of the cell handover/broadcast message.

When "NS_06" or "NS_07" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.2.2.3-1.

Table 6.6.2.2.3-1: Additional requirements

|  | Spectrum emission limit (dBm)/ Channel bandwidth |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathbf{\Delta f o o b}$ <br> $\mathbf{( M H z )}$ | $\mathbf{1 . 4}$ <br> $\mathbf{M H z}$ | $\mathbf{3 . 0}$ <br> $\mathbf{M H z}$ | $\mathbf{5}$ <br> $\mathbf{M H z}$ | $\mathbf{1 0}$ <br> $\mathbf{M H z}$ | Measurement <br> bandwidth |
| $\pm 0-0.1$ | -13 | -13 | -15 | -18 | 30 kHz |
| $\pm 0.1-1$ | -13 | -13 | -13 | -13 | 100 kHz |
| $\pm 1-2.5$ | -13 | -13 | -13 | -13 | 1 MHz |
| $\pm 2.5-2.8$ | -25 | -13 | -13 | -13 | 1 MHz |
| $\pm 2.8-5$ |  | -13 | -13 | -13 | 1 MHz |
| $\pm 5-6$ |  | -25 | -13 | -13 | 1 MHz |
| $\pm 6-10$ |  |  | -25 | -13 | 1 MHz |
| $\pm 10-15$ |  |  |  | -25 | 1 MHz |

NOTE: As a general rule, the resolution bandwidth of the measuring equipment should be equal to the measurement bandwidth. However, to improve measurement accuracy, sensitivity and efficiency, the resolution bandwidth may be smaller than the measurement bandwidth. When the resolution bandwidth is smaller than the measurement bandwidth, the result should be integrated over the measurement bandwidth in order to obtain the equivalent noise bandwidth of the measurement bandwidth.

### 6.6.2.2.4 Minimum requirement (network signalled value "NS_33" or "NS_34")

The additional spectrum mask in Table 6.6.2.2.4-1 applies for E-UTRA V2X UE within 5855 MHz to 5950 MHz according to ETSI EN 302 571. Additional spectrum emission requirements are signalled by the network to indicate that the UE shall meet an additional requirement for a specific deployment scenario as part of the cell handover/broadcast message.

When "NS_33" or "NS_34" is indicated in the cell, the power of any V2X UE emission shall not exceed the levels specified in Table 6.6.2.2.4-1.

Table 6.6.2.2.4-1: Additional requirements for 10 MHz channel bandwidth

| Spectrum emission limit (dBm EIRP)/ Channel bandwidth |  |  |
| :---: | :---: | :---: |
| $\mathbf{\Delta f o o b}$ <br> $\mathbf{( M H z )}$ | $\mathbf{1 0 ~ M H z}$ | Measurement <br> bandwidth |
| $\pm 0-0.5$ | $[-13-12(\|\Delta \mathrm{fOOB}\| / \mathrm{MHz})]$ | 100 kHz |
| $\pm 0.5-5$ | $\left[-19-\frac{16}{9}(\|\Delta \mathrm{fOOB}\| / \mathrm{MHz}-0.5)\right]$ | 100 kHz |
| $\pm 5-10$ | $[-27-2(\|\Delta \mathrm{fOOB}\| / M H z-5.0)]$ | 100 kHz |

NOTE 1: As a general rule, the resolution bandwidth of the measuring equipment should be equal to the measurement bandwidth. However, to improve measurement accuracy, sensitivity and efficiency, the resolution bandwidth may be smaller than the measurement bandwidth. When the resolution bandwidth is smaller than the measurement bandwidth, the result should be integrated over the measurement bandwidth in order to obtain the equivalent noise bandwidth of the measurement bandwidth.

NOTE 2: Additional SEM for V2X overrides any other requirements in frequency range $5855-5950 \mathrm{MHz}$.
NOTE 3: The EIRP requirement is converted to conducted requirement depend on the supported post antenna connector gain $\mathrm{G}_{\text {post connector }}$ declared by the UE following the principle described in annex I.

### 6.6.2.2.5 Minimum requirement (network signalled value "NS_27" and "NS_43")

Additional spectrum emission requirements are signalled by the network to indicate that the UE shall meet an additional requirement for a specific deployment scenario as part of the cell handover/broadcast message.

When "NS_27" or "NS_43" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.2.2.5-1.

Table 6.6.2.2.5-1: Additional requirements

|  | Spectrum emission limit (dBm)/ Channel bandwidth |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathbf{\Delta f o o b}$ <br> $\mathbf{( M H z )}$ | $\mathbf{5}$ | $\mathbf{1 0}$ | $\mathbf{1 5}$ | $\mathbf{2 0}$ | Measurement |
| (MHz | $\mathbf{M H z}$ | $\mathbf{M H z}$ | $\mathbf{M H z}$ | bandwidth |  |
| $\pm 0-1$ | -13 | -13 | -13 | -13 | Note 1 |
| $\pm 1-10$ | -13 | -13 | -13 | -13 | 1 MHz |
| $\pm 10-15$ |  | -25 | -25 | -25 | 1 MHz |
| $\pm 15-20$ |  |  | -25 | -25 | 1 MHz |
| $\pm 20-25$ |  |  |  | -25 | 1 MHz |
| Note 1: The measurement bandwidth is $1 \%$ of the applicable E- |  |  |  |  |  |
| UTRA channel bandwidth. |  |  |  |  |  |

### 6.6.2.2.6 Minimum requirement (network signalled value "NS_28")

When "NS_28" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.2.2.6-1 for E-UTRA channels assigned within the frequency ranges $5150-5350$ and $5470-5725 \mathrm{MHz}$.

Table 6.6.2.2.6-1: Additional requirements

| Frequency offset of measurement filter -3dB point, $\Delta f$ | Frequency offset of measurement filter centre frequency, f_offset | Minimum requirement [dBm] | Measurement bandwidth |
| :---: | :---: | :---: | :---: |
| $0 \mathrm{MHz} \leq \Delta \mathrm{f}<0.5 \mathrm{MHz}$ | $0.5 \mathrm{MHz} \leq$ f_offset < 1 MHz | 10-20(f_offset/MHz) dB | 1 MHz |
| $0.5 \mathrm{MHz} \leq \Delta \mathrm{f}<9.5 \mathrm{MHz}$ | $1 \mathrm{MHz} \leq$ f_offset $<10 \mathrm{MHz}$ | $-10-8 / 9\left(f \_\right.$offset/ $\left./ \mathrm{MHz}-1\right) \mathrm{dB}$ | 1 MHz |
| $9.5 \mathrm{MHz} \leq \Delta \mathrm{f}<19.5 \mathrm{MHz}$ | $10 \mathrm{MHz} \leq \mathrm{f}$ _offset $<20 \mathrm{MHz}$ | -28-1.2(f_offset/MHz - 10) dB | 1 MHz |
| $19.5 \mathrm{MHz} \leq \Delta \mathrm{f}$ | $20 \mathrm{MHz} \leq \mathrm{f}$ _offset | -30 | 1 MHz |
| NOTE 1: The measurement filter -3dB point is that closest to the channel edge. <br> NOTE 2: The requirement applies when the offset of the measurement filter centre frequency is such that both -3 dB points of the measurement filter are confined within any of the two frequency ranges $5150-5250 \mathrm{MHz}$ and $5470-5725 \mathrm{MHz}$. |  |  |  |

NOTE: As a general rule, the resolution bandwidth of the measuring equipment should be equal to the measurement bandwidth. However, to improve measurement accuracy, sensitivity and efficiency, the resolution bandwidth may be smaller than the measurement bandwidth. When the resolution bandwidth is smaller than the measurement bandwidth, the result should be integrated over the measurement bandwidth in order to obtain the equivalent noise bandwidth of the measurement bandwidth.

### 6.6.2.2.7 Minimum requirement (network signalled value "NS_35")

Additional spectrum emission requirements are signalled by the network to indicate that the UE shall meet an additional requirement for a specific deployment scenario as part of the cell handover/broadcast message.

When "NS_35" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.2.2.7-1.

Table 6.6.2.2.7-1: Additional requirements

| $\mathbf{\Delta f o o s}$ <br> $\mathbf{( M H z )}$ | $\mathbf{5}$ <br> $\mathbf{M H z}$ | $\mathbf{1 0}$ <br> $\mathbf{M H z}$ | $\mathbf{1 5}$ <br> $\mathbf{M H z}$ | $\mathbf{2 0}$ <br> $\mathbf{M H z}$ | Measurement <br> bandwidth <br> (unless <br> otherwise <br> stated) |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\pm 0-0.1$ | -15 | -18 | -20 | -21 | 30 kHz |
| $\pm 0.1-6$ | -13 | -13 | -13 | -13 | 100 kHz |
| $\pm 6-10$ | $-25^{1}$ | -13 | -13 | -13 | 100 kHz |
| $\pm 10-15$ |  | $-25^{1}$ | -13 | -13 | 100 kHz |
| $\pm 15-20$ |  |  | $-25^{1}$ | -13 | 100 kHz |
| $\pm 20-25$ |  |  | -25 | 1 MHz |  |
| Note 1: The measurement bandwidth shall be 1 MHz |  |  |  |  |  |

NOTE: As a general rule, the resolution bandwidth of the measuring equipment should be equal to the measurement bandwidth. However, to improve measurement accuracy, sensitivity and efficiency, the resolution bandwidth may be smaller than the measurement bandwidth. When the resolution bandwidth is smaller than the measurement bandwidth, the result should be integrated over the measurement bandwidth in order to obtain the equivalent noise bandwidth of the measurement bandwidth.

### 6.6.2.2A Additional Spectrum Emission Mask for CA

This requirement is specified in terms of an "additional spectrum emission" requirement.

### 6.6.2.2A.1 Minimum requirement (network signalled value "CA_NS_04")

Additional spectrum emission requirements are signalled by the network to indicate that the UE shall meet an additional requirement for a specific deployment scenario as part of the cell handover/broadcast message.

When "CA_NS_04" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.2.2A.1-1.

Table 6.6.2.2A.1-1: Additional requirements

| Spectrum emission limit [dBm]/BW Channel_cA $^{\text {che }}$ |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\Delta$ fooв <br> (MHz) | $\begin{gathered} \text { 50+75RB } \\ \text { (24.75 MHz) } \\ \hline \end{gathered}$ | $\begin{gathered} \text { 25+100RB } \\ (24.95 \mathrm{MHz}) \end{gathered}$ | $\begin{aligned} & 50+100 \mathrm{RB} \\ & \text { (29.9 MHz) } \\ & \hline \end{aligned}$ | $\begin{aligned} & \text { 75+75RB } \\ & \text { ( } 30 \mathrm{MHz} \text { ) } \\ & \hline \end{aligned}$ | $\begin{gathered} \text { 75+100RB } \\ \text { ( } 34.85 \mathrm{MHz} \text { ) } \end{gathered}$ | $\begin{aligned} & \hline \text { 100+100RB } \\ & (39.8 \mathrm{MHz}) \\ & \hline \end{aligned}$ | Measurement bandwidth |
| $\pm$ 0-1 | -22 | -22 | -22.5 | -23 | -23.5 | -24 | 30 kHz |
| $\pm 1-5$ | -10 | -10 | -10 | -10 | -10 | -10 | 1 MHz |
| $\pm 5-22.95$ | -13 | -13 | -13 | -13 | -13 | -13 | 1 MHz |
| $\pm 22.95-23.25$ | -13 | -25 | -13 | -13 | -13 | -13 | 1 MHz |
| $\pm 23.25-27.9$ | -25 | -25 | -13 | -13 | -13 | -13 | 1 MHz |
| $\pm 27.9-28.5$ | -25 | -25 | -25 | -13 | -13 | -13 | 1 MHz |
| $\pm 28.5-29.75$ | -25 | -25 | -25 | -25 | -13 | -13 | 1 MHz |
| $\pm$ 29.75-29.95 |  | -25 | -25 | -25 | -13 | -13 | 1 MHz |
| $\pm$ 29.95-32.85 |  |  | -25 | -25 | -13 | -13 | 1 MHz |
| $\pm$ 32.85-34.9 |  |  | -25 | -25 | -25 | -13 | 1 MHz |
| $\pm 34.9-35$ |  |  |  | -25 | -25 | -13 | 1 MHz |
| $\pm 35-37.8$ |  |  |  |  | -25 | -13 | 1 MHz |
| $\pm 37.8-39.85$ |  |  |  |  | -25 | -25 | 1 MHz |
| $\pm 39.85-44.8$ |  |  |  |  |  | -25 | 1 MHz |

NOTE: As a general rule, the resolution bandwidth of the measuring equipment should be equal to the measurement bandwidth. However, to improve measurement accuracy, sensitivity and efficiency, the resolution bandwidth may be smaller than the measurement bandwidth. When the resolution bandwidth is smaller than the measurement bandwidth, the result should be integrated over the measurement bandwidth in order to obtain the equivalent noise bandwidth of the measurement bandwidth.

### 6.6.2.2A.2 Minimum requirement CA_66B (network signalled value "CA_NS_09")

Additional spectrum emission requirements are signalled by the network to indicate that the UE shall meet an additional requirement for a specific deployment scenario as part of the cell handover/broadcast message.

When "CA_NS_09" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.2.2A.2-1.

Table 6.6.2.2A.2-1: Additional requirements

| $\Delta f$ foob <br> $\mathbf{( M H z )}$ | 25RB+25RB <br> $(9.8 \mathrm{MHz})$ | 25RB+50RB <br> $(14.95 \mathrm{MHz})$ | 25RB+75RB <br> $(19.8 \mathrm{MHz})$ | 50RB+50RB <br> $(19.9 \mathrm{MHz})$ | Measurement <br> bandwidth |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\pm 0-1$ | -18 | -20 | -21 | -21 | 30 kHz |
| $\pm 1-5$ | -13 | -13 | -13 | -13 | 1 MHz |
| $\pm 5-9.8$ | -13 | -13 | -13 | -13 | 1 MHz |
| $\pm 9.8-14.8$ | -25 | -13 | -13 | -13 | 1 MHz |
| $\pm 14.8-14.95$ |  | -13 | -13 | -13 | 1 MHz |
| $\pm 14.95-19.80$ |  | -25 | -13 | -13 | 1 MHz |
| $\pm 19.80-19.90$ |  | -25 | -25 | -13 | 1 MHz |
| $\pm 19.90-19.95$ |  | -25 | -25 | -25 | 1 MHz |
| $\pm 19.95-24.80$ |  |  | -25 | -25 | 1 MHz |
| $\pm 24.80-24.90$ |  |  |  | -25 | 1 MHz |

NOTE: As a general rule, the resolution bandwidth of the measuring equipment should be equal to the measurement bandwidth. However, to improve measurement accuracy, sensitivity and efficiency, the resolution bandwidth may be smaller than the measurement bandwidth. When the resolution bandwidth is smaller than the measurement bandwidth, the result should be integrated over the measurement bandwidth in order to obtain the equivalent noise bandwidth of the measurement bandwidth.

### 6.6.2.2A. 3 Minimum requirement CA_66C (network signalled value "CA_NS_09")

Additional spectrum emission requirements are signalled by the network to indicate that the UE shall meet an additional requirement for a specific deployment scenario as part of the cell handover/broadcast message.

When "CA_NS_09" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.2.2A.3-1.

Table 6.6.2.2A.3-1: Additional requirements

| Spectrum emission limit [dBm]/BWChannel_CA |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \Delta \text { foob } \\ & \text { (MHz) } \end{aligned}$ | $\begin{gathered} \text { 25RB+100RB } \\ (24.95 \mathrm{MHz}) \end{gathered}$ | $\begin{aligned} & \text { 50RB+75RB } \\ & \text { (24.75 MHz) } \end{aligned}$ | $\begin{gathered} \text { 50RB+100RB } \\ (29.9 \mathrm{MHz}) \end{gathered}$ | $\begin{gathered} \text { 75RB+75RB } \\ (30 \mathrm{MHz}) \end{gathered}$ | $\begin{gathered} \text { 75RB+100RB } \\ (34.85 \mathrm{MHz}) \end{gathered}$ | $\begin{gathered} \text { 100RB+100RB } \\ (39.8 \mathrm{MHz}) \\ \hline \end{gathered}$ | Measurement bandwidth |
| $\pm 0-1$ | -22 | -22 | -22.5 | -22.5 | -23.5 | -24 | 30 kHz |
| $\pm 1-5$ | -13 | -13 | -13 | -13 | -13 | -13 | 1 MHz |
| $\pm$ 5-24.75 | -13 | -13 | -13 | -13 | -13 | -13 | 1 MHz |
| $\pm 24.75-24.95$ | -13 | -25 | -13 | -13 | -13 | -13 | 1 MHz |
| $\pm 24.95-29.75$ | -25 | -25 | -13 | -13 | -13 | -13 | 1 MHz |
| $\pm$ 29.75-29.9 | -25 |  | -13 | -13 | -13 | -13 | 1 MHz |
| $\pm$ 29.9-29.95 | -25 |  | -25 | -13 | -13 | -13 | 1 MHz |
| $\pm 29.95-30$ |  |  | -25 | -13 | -13 | -13 | 1 MHz |
| $\pm 30-34.85$ |  |  | -25 | -25 | -13 | -13 | 1 MHz |
| $\pm$ 34.85-34.9 |  |  | -25 | -25 | -25 | -13 | 1 MHz |
| $\pm 34.9$-35 |  |  |  | -25 | -25 | -13 | 1 MHz |
| $\pm 35-39.8$ |  |  |  |  | -25 | -13 | 1 MHz |
| $\pm 39.8-39.85$ |  |  |  |  | -25 | -25 | 1 MHz |
| $\pm 39.85-44.8$ |  |  |  |  |  | -25 | 1 MHz |

NOTE: As a general rule, the resolution bandwidth of the measuring equipment should be equal to the measurement bandwidth. However, to improve measurement accuracy, sensitivity and efficiency, the resolution bandwidth may be smaller than the measurement bandwidth. When the resolution bandwidth is smaller than the measurement bandwidth, the result should be integrated over the measurement bandwidth in order to obtain the equivalent noise bandwidth of the measurement bandwidth.

### 6.6.2.2A.4 Minimum requirement CA_48B and CA_48C (network signalled value "CA_NS_10")

Additional spectrum emission requirements are signalled by the network to indicate that the UE shall meet an additional requirement for a specific deployment scenario as part of the cell handover/broadcast message.

When "CA_NS_10" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.2.2A.4-1.

Table 6.6.2.2A.4-1: Additional requirements for "CA_NS_10"

|  | Spectrum emission limit (dBm) / measurement bandwidth for each channel bandwidth |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\Delta$ foob MHz | $\begin{gathered} \text { 25+100RB } \\ \text { (24.95MHz) } \end{gathered}$ | $\begin{gathered} \hline \text { 50+50RB } \\ (19.9 \\ \mathrm{MHz}) \\ \hline \end{gathered}$ | $\begin{gathered} \hline 50+100 \mathrm{RB} \\ (29.9 \\ \mathrm{MHz}) \\ \hline \end{gathered}$ | $\begin{gathered} \hline \text { 75+100RB } \\ (34.85 \\ \mathrm{MHz}) \\ \hline \end{gathered}$ | $\begin{aligned} & \text { 100+100RB } \\ & (39.8 \mathrm{MHz}) \end{aligned}$ | Measurement bandwidth |
| $\pm 0-1$ | -13 |  |  |  |  | 1 \% channel bandwidth |
| $\pm 1-\mathrm{X}$ | -13 |  |  |  |  | 1 MHz |
| $\begin{gathered} <-X \text { or }>X \text { when } \\ 3540 \mathrm{MHz}<\Delta \text { foos }<3710 \mathrm{MHz} \end{gathered}$ | -25 |  |  |  |  |  |
| NOTE: $\quad \mathrm{X}$ is aggregated channel bandwidth as defined in clause 5.6A |  |  |  |  |  |  |

NOTE: As a general rule, the resolution bandwidth of the measuring equipment should be equal to the measurement bandwidth. However, to improve measurement accuracy, sensitivity and efficiency, the resolution bandwidth may be smaller than the measurement bandwidth. When the resolution bandwidth is smaller than the measurement bandwidth, the result should be integrated over the measurement bandwidth in order to obtain the equivalent noise bandwidth of the measurement bandwidth.

### 6.6.2.3 Adjacent Channel Leakage Ratio

Adjacent Channel Leakage power Ratio (ACLR) is the ratio of the filtered mean power centred on the assigned channel frequency to the filtered mean power centred on an adjacent channel frequency. ACLR requirements for one E-UTRA carrier are specified for two scenarios for an adjacent E-UTRA and /or UTRA channel as shown in Figure 6.6.2.3-1.

Figure 6.6.2.3-1: Adjacent Channel Leakage requirements for one E-UTRA carrier

### 6.6.2.3.1 Minimum requirement E-UTRA

E-UTRA Adjacent Channel Leakage power Ratio (E-UTRA $A_{\text {ACLR }}$ ) is the ratio of the filtered mean power centred on the assigned channel frequency to the filtered mean power centred on an adjacent channel frequency at nominal channel spacing. The assigned E-UTRA channel power and adjacent E-UTRA channel power are measured with rectangular filters with measurement bandwidths specified in Table 6.6.2.3.1-1, Table 6.6.2.3.1-2, and Table 6.6.2.3.1-3. If the measured adjacent channel power is greater than -50 dBm then the E-UTRA $A_{\text {ACLR }}$ shall be higher than the value specified in Table 6.6.2.3.1-1, Table 6.6.2.3.1-2, and Table 6.6.2.3.1-3.

For a power class 2 capable UE operating on Band 41, when an IE $P$-max as defined in [7] of 23 dBm or lower is indicated in the cell or if the uplink/downlink configuration is 0 or 6 , the requirements for power class 2 are not applicable, and the corresponding requirements for a power class 3 UE shall apply.

For each supported frequency band other than Band 14 and Band 41, the UE shall:

- if the UE supports a different power class than the default UE power class for the band and the supported power class enables the higher maximum output power than that of the default power class:
- if the band is a TDD band whose frame configuration is 0 or 6 ; or
- if the IE P-Max as defined in TS 36.331 [7] is not provided; or
- if the IE $P$-Max as defined in TS 36.331 [7] is provided and set to the maximum output power of the default power class or lower;
- meet all requirements for the default power class of the operating band in which the UE is operating and set its configured transmitted power as specified in sub-clause 6.2.5;
- else (i.e the IE $P$-Max as defined in TS 36.331 [7] is provided and set to the higher value than the maximum output power of the default power class):
- meet all requirements for the supported power class and set its configured transmitted power class as specified in sub-clause 6.2.5.

Table 6.6.2.3.1-1: General requirements for E-UTRA $A_{A C L R}$

6.6.2.3.1a Additional minimum requirement for E-UTRA (network signalled value "NS_29")

When "NS_29" is indicated in the cell, the UE emission shall meet the additional requirements specified in Table $6.6 .2 .3 .1 \mathrm{a}-1$ for E-UTRA channels assigned within the frequency ranges $5150-5350 \mathrm{MHz}$ and $5470-5725 \mathrm{MHz}$. The assigned E-UTRA channel power and alternative adjacent E-UTRA channel power are measured with rectangular filters with measurement bandwidths specified in Table 6.6.2.3.1a-1. If the measured alternative adjacent channel power is greater than -50 dBm then the E-UTRA ${ }_{\text {ACLR2 }}$ shall be higher than the value specified in Table 6.6.2.3.1a-1.

### 6.6.2.3.1A Void

### 6.6.2.3.1Aa <br> Void

### 6.6.2.3.2 Minimum requirements UTRA

UTRA Adjacent Channel Leakage power Ratio (UTRA ${ }_{\text {ACLR }}$ ) is the ratio of the filtered mean power centred on the assigned E-UTRA channel frequency to the filtered mean power centred on an adjacent(s) UTRA channel frequency.

UTRA Adjacent Channel Leakage power Ratio is specified for both the first UTRA adjacent channel (UTRA ACLR1 ) and the $2^{\text {nd }}$ UTRA adjacent channel ( UTRA ${ }_{\text {ACLR2 }}$ ). The UTRA channel power is measured with a RRC bandwidth filter with roll-off factor $\alpha=0.22$. The assigned E-UTRA channel power is measured with a rectangular filter with measurement bandwidth specified in Table 6.6.2.3.2-1. If the measured UTRA channel power is greater than -50 dBm then the UTRA $_{\text {ACLR }}$ shall be higher than the value specified in Table 6.6.2.3.2-1.

UTRA $_{\text {ACLR }}$ is not applicable to the power class 3 UE operating in Band 7, 12, 13, 17, 20, 24, 27, 30, 33, 35, 36, 37, 38, $40,43,44,45,47,48,50,51,52,68,70,71,85$ and Scell operation in Band 46, 49.

UTRA $_{\text {ACLR }}$ is not applicable to the power class 2 UE operating in Band 38, 40, 41, 42 or 47 and Scell operation in Band 46.

UTRA $_{\text {ACLR }}$ is not applicable to the power class 1 UE operating in Band 3, 20, 28, 31 or 72.

### 6.6.2.3.2A Minimum requirement UTRA for CA

For inter-band carrier aggregation with one component carrier per operating band and the uplink active in two E-UTRA bands, the UTRA Adjacent Channel Leakage power Ratio (UTRA ${ }_{A C L R}$ ) is the ratio of the filtered mean power centred on the assigned channel bandwidth on the component carrier to the filtered mean power centred on an adjacent channel
frequency. The UTRA Adjacent Channel Leakage power Ratio is defined per carrier and the requirement is specified in subclause 6.6.2.3.2.

For intra-band contiguous carrier aggregation the UTRA Adjacent Channel Leakage power Ratio (UTRA ${ }_{\text {ACLR }}$ ) is the ratio of the filtered mean power centred on the aggregated channel bandwidth to the filtered mean power centred on an adjacent(s) UTRA channel frequency.

For intra-band non-contiguous carrier aggregation when all sub-blocks consist of one component carrier the UTRA Adjacent Channel Leakage power Ratio (UTRA $A_{A C L R}$ ) is the ratio of the sum of the filtered mean powers centered on the assigned sub-block frequencies to the filtered mean power centred on an adjacent(s) UTRA channel frequency. UTRA $_{\text {ACLR } 1 / 2}$ requirements are applicaple for all sub-blocks and are specified in Table 6.6.2.3.2A-2. UTRA ${ }_{A C L R 1}$ is required to be met in the sub-block gap when the gap bandwidth Wgap is $5 \mathrm{MHz} \leq \mathrm{Wgap}<15 \mathrm{MHz}$. Both UTRA $\mathrm{UCLR}^{\text {and }}$ and UTRA $_{\text {ACLR2 }}$ are required to be met in the sub-block gap when the gap bandwidth Wgap is $15 \mathrm{MHz} \leq$ Wgap.

For combinations of intra-band and inter-band carrier aggregation with three uplink component carriers (up to two contiguously aggregated carriers per band), the UTRA Adjacent Channel Leakage power Ratio (UTRA $A_{\text {ACLR }}$ ) is defined as follows. For the E-UTRA band supporting one component carrier, the UTRA Adjacent Channel Leakage power Ratio (UTRA $A_{A C L R}$ ) is the ratio of the filtered mean power centred on the assigned channel bandwidth of the component carrier to the filtered mean power centred on an adjacent(s) UTRA channel frequency and the requirements specified in subclause 6.6.2.3.2 apply. For the E-UTRA band supporting two contiguous component carriers the UTRA Adjacent Channel Leakage power Ratio (UTRA $A_{A C L R}$ ) is the ratio of the filtered mean power centred on the aggregated channel bandwidth to the filtered mean power centred on an adjacent(s) UTRA channel frequency and the requirements specified in subclause 6.6.2.3.2A apply.

UTRA Adjacent Channel Leakage power Ratio is specified for both the first UTRA adjacent channel (UTRA ACLRI ) and the $2^{\text {nd }}$ UTRA adjacent channel ( UTRA ${ }_{\text {ACLR2 }}$ ). The UTRA channel power is measured with a RRC bandwidth filter with roll-off factor $\alpha=0.22$. The assigned aggregated channel bandwidth power is measured with a rectangular filter with measurement bandwidth specified in Table 6.6.2.3.2A-1 for intraband contiguous carrier aggregation or 6.6.2.3.2A-2 for intraband non-contiguous carrier aggregation. If the measured UTRA channel power is greater than -50 dBm then the UTRA ${ }_{\text {ACLR }}$ shall be higher than the value specified in Table 6.6.2.3.2A-1 for intraband contiguous carrier aggregation or $6 \cdot 6 \cdot 2.3 .2 \mathrm{~A}-2$ for intraband non-contiguous carrier aggregation.

For carrier aggregation with one or two uplink component carriers, the UTRA ${ }_{\text {ACLR }}$ requirements for the PC3 UE are not applicable to the uplink component carrier(s) assigned to one of the E-UTRA band in Band 7, 12, 13, 17, 20, 24, 27, 30, $33,35,36,37,38,40,43,44,45,46,47,48,49,50,51,52,68,70,71$ or 85.

### 6.6.2.3.3A Minimum requirements for CA E-UTRA

For intra-band contiguous carrier aggregation the carrier aggregation E-UTRA Adjacent Channel Leakage power Ratio (CA E-UTRA $A_{A C L R}$ ) is the ratio of the filtered mean power centred on the aggregated channel bandwidth to the filtered mean power centred on an adjacent aggregated channel bandwidth at nominal channel spacing. The assigned aggregated channel bandwidth power and adjacent aggregated channel bandwidth power are measured with rectangular filters with measurement bandwidths specified in Table 6.6.2.3.3A-1. If the measured adjacent channel power is greater than 50 dBm then the E-UTRA Acle $^{2}$ shall be higher than the value specified in Table 6.6.2.3.3A-1 and Table 6.6.2.3.3A-1a.

Table 6.6.2.3.3A-1: General requirements for CA E-UTRA $A_{A C L R}$

| :---: | :---: |
| bandwidth |  |

For inter-band carrier aggregation with one component carrier per operating band and the uplink active in two E-UTRA bands, E-UTRA Adjacent Channel Leakage power Ratio (E-UTRA $A$ ALLR $)$ is the ratio of the filtered mean power centred on the assigned channel bandwidth on a component carrier to the filtered mean power centred on an adjacent channel frequency. The E-UTRA Adjacent Channel Leakage power Ratio is defined per carrier and the requirement is specified in subclause 6.6.2.3.1.

For intra-band non-contiguous carrier aggregation when all sub-blocks consist of one component carrier the E-UTRA Adjacent Channel Leakage power Ratio (E-UTRA ${ }_{\text {ACLR }}$ ) is the ratio of the sum of the filtered mean powers centred on the assigned sub-block frequencies to the filtered mean power centred on an adjacent channel frequency at nominal channel spacing. In case the sub-block gap bandwidth Wgap is smaller than of the sub-block bandwidth then for that sub-block no E-UTRA ACLR requirement is set for the gap. In case the sub-block gab bandwidth Wgap is smaller than either of the sub-block bandwidths then no E- UTRA ACLR $^{\text {requirement is set for the gap.The assigned E-UTRA sub- }}$ block power and adjacent E-UTRA channel power are measured with rectangular filters with measurement bandwidths specified in Table 6.6.2.3.3A-2. If the measured adjacent channel power is greater than -50 dBm then the E-UTRA Aclr shall be higher than the value specified in Table 6.6.2.3.3A-2.

Table 6.6.2.3.3A-2: General requirements for non-contiguous intraband CA E-UTRA $A_{A C L R}$

|  | CC and adjacent channel bandwidth / E-UTRAACLR / Measurement bandwidth |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1.4 MHz | 3 MHz | 5 MHz | 10 MHz | 15 MHz | 20 MHz |
| E-UTRAacle1 | 30 dB | 30 dB | 30 dB | 30 dB | 30 dB | 30 dB |
| CC and adjacent channel measurement bandwidth [MHz] | 1.08 | 2.7 | 4.5 | 9 | 13.5 | 18 |
| Adjacent channel centre frequency offset [MHz] | $\begin{gathered} \hline+1.4 \\ / \\ -1.4 \end{gathered}$ | $\begin{gathered} +3 \\ 1 \\ -3 \\ \hline \end{gathered}$ | $\begin{aligned} & \hline+5 \\ & / \\ & -5 \\ & \hline \end{aligned}$ | $\begin{gathered} +10 \\ / \\ -10 \end{gathered}$ | $\begin{gathered} +15 \\ / \\ -15 \end{gathered}$ | $\begin{gathered} +20 \\ \hline \\ -20 \end{gathered}$ |

For combinations of intra-band and inter-band carrier aggregation with three uplink component carriers (up to two contiguously aggregated carriers per band), the E-UTRA Adjacent Channel Leakage power Ratio (E-UTRA $A_{\text {ACLR }}$ ) is defined as follows. For the E-UTRA band supporting one component carrier, the E-UTRA Adjacent Channel Leakage power Ratio (UTRA $A_{A C L R}$ ) is the ratio of the filtered mean power centred on the assigned channel bandwidth of the component carrier to the filtered mean power centred on an adjacent channel frequency and the requirements in subclause 6.6.2.3.1 apply. For the E-UTRA band supporting two contiguous component carriers the E-UTRA Adjacent Channel Leakage power Ratio (E-UTRA $A_{A C L R}$ ) is the ratio of the filtered mean power centred on the aggregated channel bandwidth to the filtered mean power centred on an adjacent(s) aggregated channel bandwidth at nominal channel

### 6.6.2.4 Void

6.6.2.4.1 Void

### 6.6.2A Void

<reserved for future use>

### 6.6.2B Out of band emission for UL-MIMO

For UE supporting UL-MIMO, the requirements for Out of band emissions resulting from the modulation process and non-linearity in the transmitters are specified at each transmit antenna connector.

For UEs with two transmit antenna connectors in closed-loop spatial multiplexing scheme, the requirements in subclause 6.6.2 apply to each transmit antenna connector. The requirements shall be met with the UL-MIMO configurations specified in Table 6.2.2B-2.

If UE is configured for transmission on single-antenna port, the requirements in subclause 6.6.3 apply.

### 6.6.2C Void

[^1]
### 6.6.2D Out of band emission for ProSe

When UE is configured for E-UTRA ProSe sidelink transmissions non-concurrent with E-UTRA uplink transmissions for E-UTRA ProSe operating bands specified in Table 5.5D-1, the requirements in subclause 6.6 .2 apply.

When UE is configured for simultaneous E-UTRA ProSe sidelink and E-UTRA uplink transmissions for inter-band EUTRA ProSe / E-UTRA bands specified in Table 5.5D-2, the requirements in subclause 6.6.2 apply per E-UTRA ProSe sidelink and E-UTRA uplink transmission as specified for the corresponding inter-band aggregation with uplink assigned to two bands.

### 6.6.2F Out of band emission for category NB1 and NB2

### 6.6.2F.1 Spectrum emission mask

The spectrum emission mask of the category NB1 and NB2 UE applies to frequencies ( $\Delta \mathrm{f}_{\mathrm{OOB}}$ ) starting from the $\pm$ edge of the assigned category NB1 or NB2 channel bandwidth. For frequencies greater than ( $\left.\Delta \mathrm{f}_{\text {оов }}\right)$ as specified in Table 6.6.2F.1-1 the spurious requirements in subclause 6.6 .3 are applicable.

The power of any category NB1 or NB2 UE emission shall not exceed the levels specified in Table 6.6.2F.1-1. The spectrum emission limit between each $\Delta f_{\text {Oов }}$ is linearly interpolated.

Table 6.6.2F.1-1: category NB1 and NB2 UE spectrum emission mask

| $\boldsymbol{\Delta f o o в ~ ( k H z ) ~}$ | Emission <br> limit (dBm) | Measurement <br> bandwidth |
| :---: | :---: | :---: |
| $\pm 0$ | 26 | 30 kHz |
| $\pm 100$ | -5 | 30 kHz |
| $\pm 150$ | -8 | 30 kHz |
| $\pm 300$ | -29 | 30 kHz |
| $\pm 500-1700$ | -35 | 30 kHz |

In addition to the spectrum emission mask requirement in Table 6.6.2F.1-1 a category NB1 or NB2 UE shall also meet the applicable E-UTRA spectrum emission mask requirement in sub-clause 6.6.2. E-UTRA spectrum emission requirement applies for frequencies that are Foffset away from edge of NB1 or NB2 channel edge as defined in Table 6.6.2F.1-2.

Table 6.6.2F.1-2: Foffset for category NB1 and NB2 UE spectrum emission mask

| Channel BW <br> $(\mathbf{M H z})$ | Foffset <br> $[\mathbf{k H z}]$ |
| :---: | :---: |
| 1.4 | 165 |
| 3 | 190 |
| 5 | 200 |
| 10 | 225 |
| 15 | 240 |
| 20 | 245 |

Note: $\quad$ Foffset in Table 6.6.2F.1-2 is used to guarantee co-existence for guard-band operation.

### 6.6.2F.2 Additional Spectrum Emission Mask for Category NB1 and NB2

This requirement is specified in terms of an "additional spectrum emission" requirement.

### 6.6.2F.2.1 Minimum requirement (network signalled value "NS_02")

Additional spectrum emission requirements are signalled by the network to indicate that the UE shall meet an additional requirement for a specific deployment scenario as part of the cell broadcast message.

When "NS_02" is indicated in the cell, the NB-IoT channel is deployed in the lower guard-band of a 10 MHz E-UTRA channel and the separation between the two channel centres is equal to 4.695 MHz . The power of any UE emission shall
not exceed the levels specified in Table 6.6.2.1.1-1 for the specified E-UTRA channel bandwidth and the levels specified in Table 6.6.2F.1-1 for the NB-IoT channel.

Note: UEs that meet the above emission requirement would automatically meet the E-UTRA additional spectrum emission masks as defined in 6.6.2.2 for the applicable operating bands.

### 6.6.2F.2.2 Minimum requirement (network signalled value "NS_03")

Additional spectrum emission requirements are signalled by the network to indicate that the UE shall meet an additional requirement for a specific deployment scenario as part of the cell broadcast message.

When "NS_03" is indicated in the cell, the NB-IoT channel is deployed in the upper guard-band of a 10MHz E-UTRA channel and the separation between the two channel centres is equal to 4.695 MHz . The power of any UE emission shall not exceed the levels specified in Table 6.6.2.1.1-1 for the specified E-UTRA channel bandwidth and the levels specified in Table 6.6.2F.1-1 for the NB-IoT channel.

Note: UEs that meet the above emission requirement would automatically meet the E-UTRA additional spectrum emission masks as defined in 6.6.2.2 for the applicable operating bands.

### 6.6.2F. 3 Adjacent Channel Leakage Ratio for category NB1 and NB2

Adjacent Channel Leakage power Ratio is the ratio of the filtered mean power centred on the assigned channel frequency to the filtered mean power centred on an adjacent channel frequency. The assigned category NB1 or NB2 channel power and adjacent channel power are measured with filters and measurement bandwidths specified in Table 6.6.2F.3-1. If the measured adjacent channel power is greater than -50 dBm then the category NB1 or NB2 UE ACLR shall be higher than the value specified in Table 6.6.2F.3-1. GSM ACLR requirement is intended for protection of GSM system. UTRA ACLR requirement is intended for protection of UTRA and E-UTRA systems.

Table 6.6.2F.3-1: category NB1 and NB2 UE ACLR requirements

|  | GSM $_{\text {ACLR }}$ | UTRA $_{\text {ACLR }}$ |
| :---: | :---: | :---: |
| ACLR | 20 dB | 37 dB |
| Adjacent channel <br> center frequency offset <br> from category NB1 or <br> NB2 Channel edge | $\pm 200 \mathrm{kHz}$ | $\pm 2.5 \mathrm{MHz}$ |
| Adjacent channel <br> measurement bandwidth | 180 kHz | 3.84 MHz |
| Measurement filter | Rectangular | RRC-filter <br> $\mathrm{a}=0.22$ |
| Category NB1 and NB2 <br> channel measurement <br> bandwidth | 180 kHz | 180 kHz |
| Category NB1 and NB2 <br> channel Measurement <br> filter | Rectangular | Rectangular |

### 6.6.2G Out of band emission for V2X Communication

When UE is configured for E-UTRA V2X sidelink transmissions non-concurrent with E-UTRA uplink transmissions for E-UTRA V2X operating bands specified in Table 5.5G-1, the requirements in subclause 6.6 .2 apply except for the ACLR requirements for power class 2 V2X UE.

When UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions for inter-band EUTRA V2X / E-UTRA bands specified in Table 5.5G-2, the requirements in subclause 6.6.2 apply per V2X sidelink
transmission and E-UTRA uplink transmission as specified for the corresponding inter-band con-current operation with uplink assigned to two bands.

For intra-band contiguous multi-carrier operation, the general CA spectrum emission mask for CA Bandwidth Class B specified in subclause 6.6.2.1A shall apply for V2X Bandwdith Class B, the general CA spectrum emission mask for CA Bandwidth Class C specified in subclause 6.6.2.1A shall apply for V2X Bandwdith Class C and C ${ }_{1}$.

For intra-band contiguous multi-carrier operation, the E-UTRA ACLR requirment for CA Bandwidth Class B specified in subclause 6.6.2.3.3A shall apply for V2X Bandwdith Class B, the general CA spectrum emission mask for CA Bandwidth Class C specified in subclause 6.6.2.3.3A shall apply for V2X Bandwdith Class C and $\mathrm{C}_{1}$.

For power class 2 V2X UE, the assigned channel power and adjacent channel power are measured with rectangular filters with measurement bandwidths specified in Table 6.6.2G-1. If the measured adjacent channel power is greater than -50 dBm then ACLR shall be higher than the value specified in Table 6.6.2G-1.

Table 6.6.2G-1: ACLR requirements for power class 2 V2X Communication

|  | Channel bandwidth / ACLR/Measurement bandwidth |  |
| :---: | :---: | :---: |
|  | $\mathbf{1 0 ~ M H z}$ | $\mathbf{2 0} \mathbf{~ M H z}$ |
| ACLR | 31 dB | 31 dB |
| E-UTRA channel Measurement bandwidth | 9.0 MHz | 18 MHz |
| Adjacent channel centre frequency offset | +10 | +20 |
| $[\mathrm{MHz}]$ | $/$ | $/$ |
|  | -10 | -20 |

For V2X UE supporting Transmit Diversity, if the UE transmits on two antenna connectors at the same time, the requirements specified for single carrier apply to each transmit antenna connector.

If V2X UE transmits on one antenna connector at a time, the requirements specified for single carrier shall apply to the active antenna connector.

### 6.6.3 Spurious emissions

Spurious emissions are emissions which are caused by unwanted transmitter effects such as harmonics emission, parasitic emissions, intermodulation products and frequency conversion products, but exclude out of band emissions unless otherwise stated. The spurious emission limits are specified in terms of general requirements inline with SM. 329 [2] and E-UTRA operating band requirement to address UE co-existence.

To improve measurement accuracy, sensitivity and efficiency, the resolution bandwidth may be smaller than the measurement bandwidth. When the resolution bandwidth is smaller than the measurement bandwidth, the result should be integrated over the measurement bandwidth in order to obtain the equivalent noise bandwidth of the measurement bandwidth.

### 6.6.3.1 Minimum requirements

Unless otherwise stated, the spurious emission limits apply for the frequency ranges that are more than $\mathrm{F}_{\text {OOB }}(\mathrm{MHz})$ in Table 6.6.3.1-1 from the edge of the channel bandwidth. The spurious emission limits in Table 6.6.3.1-2 apply for all transmitter band configurations $\left(\mathrm{N}_{\mathrm{RB}}\right)$ and channel bandwidths.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

Table 6.6.3.1-1: Boundary between E-UTRA out of band and spurious emission domain

| Channel <br> bandwidth | $\mathbf{1 . 4}$ <br> $\mathbf{M H z}$ | $\mathbf{3 . 0}$ <br> $\mathbf{M H z}$ | $\mathbf{5}$ <br> $\mathbf{M H z}$ | $\mathbf{1 0}$ <br> $\mathbf{M H z}$ | $\mathbf{1 5}$ <br> $\mathbf{M H z}$ | $\mathbf{2 0}$ <br> $\mathbf{M H z}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| OOB <br> boundary <br> FoOB (MHz) | 2.8 | 6 | 10 | 15 | 20 | 25 |

Table 6.6.3.1-2: Spurious emissions limits

| Frequency Range | Maximum <br> Level | Measurement <br> bandwidth | NOTE |
| :---: | :---: | :---: | :---: |
| $9 \mathrm{kHz} \leq \mathrm{f}<150 \mathrm{kHz}$ | -36 dBm | 1 kHz |  |
| $150 \mathrm{kHz} \leq \mathrm{f}<30 \mathrm{MHz}$ | -36 dBm | 10 kHz |  |
| $30 \mathrm{MHz} \leq \mathrm{f}<1000 \mathrm{MHz}$ | -36 dBm | 100 kHz |  |
| $1 \mathrm{GHz} \leq \mathrm{f}<12.75 \mathrm{GHz}$ | -30 dBm | 1 MHz |  |
| $12.75 \mathrm{GHz} \leq \mathrm{f}<5^{\text {th }}$ <br> harmonic of the upper <br> frequency edge of the <br> UL operating band in <br> GHz | -30 dBm | 1 MHz | 1 |
| $12.75 \mathrm{GHz}<\mathrm{f}<26 \mathrm{GHz}$ | -30 dBm |  |  |
| NOTE 1: Applies for Band 22, Band 42, Band 43 and Band 48. <br> NOTE 2: Applies for Band 46 and Band 47. |  |  |  |

### 6.6.3.1 $A$ Minimum requirements for $C A$

This clause specifies the spurious emission requirements for carrier aggregation.
NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

For inter-band carrier aggregation with one component carrier per operating band and the uplink active in two E-UTRA bands, the spurious emission requirement Table 6.6.3.1-2 apply for the frequency ranges that are more than $\mathrm{F}_{\text {оов }}$ as defined in Table 6.6.3.1-1 away from edges of the assigned channel bandwidth on a component carrier. If for some frequency a spurious emission requirement of individual component carrier overlaps with the spectrum emission mask or channel bandwidth of another component carrier then it does not apply.

NOTE: For inter-band carrier aggregation with uplink assigned to two E-UTRA bands the requirements in Table 6.6.3.1-2 could be verified by measuring spurious emissions at the specific frequencies where second and third order intermodulation products generated by the two transmitted carriers can occur; in that case, the requirements for remaining applicable frequencies in Table 6.6.3.1-2 would be considered to be verified by the measurements verifying the one uplink inter-band CA spurious emission requirement.

For intra-band contiguous carrier aggregation the spurious emission limits apply for the frequency ranges that are more than FOOB (MHz) in Table 6.6.3.1A-1 from the edge of the aggregated channel bandwidth (Table 5.6A-1). For frequencies $\triangle$ fOOB greater than FOOB as specified in Table 6.6.3.1A-1 the spurious emission requirements in Table 6.6.3.1-2 are applicable.

Table 6.6.3.1A-1: Boundary between E-UTRA out of band and spurious emission domain for intraband contiguous carrier aggregation

| CA Bandwidth Class | OOB boundary Foob <br> (MHz) |
| :---: | :---: |
| A | Table 6.6.3.1-1 |
| B | BW Channel_CA +5 |
| C | BW Channel_CA +5 |

For intra-band non-contiguous carrier aggregation transmission the spurious emission requirement is defined as a composite spurious emission requirement. Composite spurious emission requirement applies to frequency ranges that are more than $\mathrm{F}_{\text {OOB }}$ away from the edges of the sub-blocks. Composite spurious emission requirement is defined as follows
a) Composite spurious emission requirement is a combination of individual sub-block spurious emission requirements
b) In case the sub-block consist of one component carrier the sub-lock spurious emission requirement and $\mathrm{F}_{\text {оов }}$ are defined in subclause 6.6.3.1
c) If for some frequency an individual sub-block spurious emission requirement overlaps with the general spectrum emission mask or the sub-block bandwidth of another sub-block then it does not apply

For combinations of intra-band and inter-band carrier aggregation with three uplink component carriers (up to two contiguously aggregated carriers per band), the spurious emission requirememnt is defined as follows. For the E-UTRA band supporting one component carrier the requirements in Table 6.6.3.1-2 apply for frequency ranges that are more than FOOB $(\mathrm{MHz})$ from the edges of assigned channel bandwidth as defined in Table 6.6.3.1-1. For the E-UTRA band supporting two contiguous component carriers the requirements in Table 6.6.3.1-2 apply for frequency ranges that are more than FOOB (MHz) from the edges of assigned aggregated channel bandwidth as defined in Table 6.6.3.1A-1. If for some frequency a spurious emission requirement of a single component carrier or two contiguous component carriers overlap with the spurious emission requirement or channel bandwidth of another component carrier or two contiguously aggregated carriers then it does not apply.

### 6.6.3.2 Spurious emission band UE co-existence

This clause specifies the requirements for the specified E-UTRA band, for coexistence with protected bands.
NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

Table 6.6.3.2-1: Requirements

| E-UTRA <br> Band | Spurious emission |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Protected band | Frequency range (MHz) |  |  | Maximum Level | MBW (MHz) | NOTE |
| 1 | E-UTRA Band 1, 3, 5, 7, 8, 11, 18, 19, $20,21,22,26,27,28,31,32,38,40,41$, <br> $42,43,44,45,50,51,52,65,67,68,69$, <br> 72, 73, 74, 75, 76, 87, 88 <br> NR Band n78, n79 | $\mathrm{F}_{\text {DL_low }}$ | - | $F_{\text {DL__high }}$ | -50 | 1 |  |

|  | Frequency range | 470 | - | 694 | -42 | 8 |  |

NOTE 1: FDL_low and FDL_high refer to each E-UTRA frequency band specified in Table 5.5-1
NOTE 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1-2 are permitted for each assigned E-UTRA carrier used in the measurement due to $2^{\text {nd }}, 3^{\text {rd }}$, $4^{\text {th }}$ [or $\left.5^{\text {th }}\right]$ harmonic spurious emissions. Due to spreading of the harmonic emission the exception is also allowed for the first 1 MHz frequency range immediately outside the harmonic emission on both sides of the harmonic emission. This results in an overall exception interval centred at the harmonic emission of ( $2 \mathrm{MHz}+\mathrm{N} \times \mathrm{L}_{\text {CRB }} \times 180 \mathrm{kHz}$ ), where N is $2,3,4,[5]$ for the $2^{\text {nd }}, 3^{\text {rd }}, 4^{\text {th }}$ [or $\left.5^{\text {th }}\right]$ harmonic respectively. The exception is allowed if the measurement bandwidth (MBW) totally or partially overlaps the overall exception interval.
NOTE 3: N/A
NOTE 4: N/A
NOTE 5: For non synchronised TDD operation to meet these requirements some restriction will be needed for either the operating band or protected band
NOTE 6: N/A
NOTE 7: Applicable when co-existence with PHS system operating in 1884.5-1919.6MHz.
NOTE 8: Applicable when co-existence with PHS system operating in 1884.5-1915.7MHz.
NOTE 9: N/A
NOTE 10: N/A
NOTE 11: Whether the applicable frequency range should be $793-805 \mathrm{MHz}$ instead of $799-805 \mathrm{MHz}$ is TBD
NOTE 12: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB

NOTE 13: N/A
NOTE 14: N/A
NOTE 15: These requirements also apply for the frequency ranges that are less than Foob (MHz) in Table 6.6.3.1-1 and Table 6.6.3.1A-1 from the edge of the channel bandwidth.

NOTE 16: N/A
NOTE 17: N/A

## NOTE 18: N/A

NOTE 19: Applicable when the assigned E-UTRA carrier is confined within 718 MHz and 748 MHz and when the channel bandwidth used is 5 or 10 MHz .
NOTE 20: N/A
NOTE 21: This requirement is applicable for any channel bandwidths within the range $2500-2570 \mathrm{MHz}$ with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range $2560.5-2562.5 \mathrm{MHz}$ and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range $2552-2560 \mathrm{MHz}$ the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.
NOTE 22: This requirement is applicable for power class 3 UE for any channel bandwidths within the range $2570-2615 \mathrm{MHz}$ with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range $2605.5-2607.5 \mathrm{MHz}$ and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range $2597-2605 \mathrm{MHz}$ the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB. For power class 2 UE for any channel bandwidths within the range $2570-2615 \mathrm{MHz}$, NS_44 shall apply.
For power class 2 or 3 UE for carriers with channel bandwidth overlapping the frequency range 2615-2620 MHz the requirement applies with the maximum output power configured to +19 dBm in the IE P-Max.
NOTE 23: This requirement is applicable only for the following cases:

- for carriers of 5 MHz channel bandwidth when carrier centre frequency $\left(F_{c}\right)$ is within the range $902.5 \mathrm{MHz} \leq \mathrm{F}_{\mathrm{c}}<907.5 \mathrm{MHz}$ with an uplink transmission bandwidth less than or equal to 20 RB - for carriers of 5 MHz channel bandwidth when carrier centre frequency $\left(F_{c}\right)$ is within the range $907.5 \mathrm{MHz} \leq \mathrm{F}_{\mathrm{c}} \leq 912.5 \mathrm{MHz}$ without any restriction on uplink transmission bandwidth. - for carriers of 10 MHz channel bandwidth when carrier centre frequency $\left(F_{c}\right)$ is $F_{c}=910 \mathrm{MHz}$ with an uplink transmission bandwidth less than or equal to 32 RB with RBstart $>3$.
NOTE 24: As exceptions, measurements with a level up to the applicable requirement of $-38 \mathrm{dBm} / \mathrm{MHz}$ is permitted for each assigned E-UTRA carrier used in the measurement due to $2^{\text {nd }}$ harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the $2^{\text {nd }}$ harmonic totally or partially overlaps the measurement bandwidth (MBW).
NOTE 25: As exceptions, measurements with a level up to the applicable requirement of $-36 \mathrm{dBm} / \mathrm{MHz}$ is permitted for each assigned E-UTRA carrier used in the measurement due to $3^{\text {rd }}$ harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the $3^{\text {rd }}$ harmonic totally or partially overlaps the measurement bandwidth (MBW).
NOTE 26: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.
NOTE 27: This requirement is applicable for any channel bandwidths within the range 1920-1980 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1927.5-1929.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range $1930-1938 \mathrm{MHz}$ the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.
NOTE 28: N/A
NOTE 29: N/A
NOTE 30: This requirement applies when the E-UTRA carrier is confined within $2545-2575 \mathrm{MHz}$ or $2595-$ 2645 MHz and the channel bandwidth is 10 or 20 MHz
NOTE 31: N/A
NOTE 32: Void
NOTE 33: This requirement is only applicable for carriers with bandwidth confined within $1885-1920 \mathrm{MHz}$ (requirement for carriers with at least 1RB confined within $1880-1885 \mathrm{MHz}$ is not specified). This requirement applies for an uplink transmission bandwidth less than or equal to 54 RB for carriers of 15 MHz bandwidth when carrier center frequency is within the range $1892.5-1894.5 \mathrm{MHz}$ and for carriers of 20 MHz bandwidth when carrier center frequency is within the range $1895-1903 \mathrm{MHz}$.
NOTE 34: This requirement is applicable for 5 and 10 MHz E-UTRA channel bandwidth allocated within 718728 MHz . For carriers of 10 MHz bandwidth, this requirement applies for an uplink transmission bandwidth less than or equal to 30 RB with RBstart > 1 and RBstart<48.
NOTE 35: This requirement is applicable in the case of a 10 MHz E-UTRA carrier confined within 703 MHz and 733 MHz , otherwise the requirement of -25 dBm with a measurement bandwidth of 8 MHz applies.
NOTE 36: This requirement is applicable for E-UTRA channel bandwidth allocated within $1920-1980 \mathrm{MHz}$.
NOTE 37: Applicable when the upper edge of the channel bandwidth frequency is greater than 1980 MHz .
NOTE 38: Applicable when NS_33 or NS_34 is configured by the pre-configured radio parameters.
NOTE 39: Applicable only when the assigned E-UTRA carrier is confined within 824 MHz and 849 MHz for UE category M1, M2 and UE category NB1 and NB2.
NOTE 40: In the frequency range $x-5950 \mathrm{MHz}$, SE requirement of $-30 \mathrm{dBm} / \mathrm{MHz}$ should be applied; where $\mathrm{x}=$ $\max (5925, \mathrm{fc}+15)$, where fc is the channel centre frequency.
NOTE 41: Applicable for all bandwidths, and when the lower edge of the assigned E-UTRA UL channel bandwidth frequency is greater than or equal to $1427 \mathrm{MHz}+$ the channel BW assigned for 1.4, 3, 5

NOTE: The restriction on the maximum uplink transmission to 54 RB in Notes 21, 22, and 27 of Table 6.6.3.2-1 and the restriction on the single-tone uplink transmission to sub-carrier index $>2$ in Note 44 of Table 6.6.3.2-1 are intended for conformance testing and may be applied to network operation to facilitate coexistence when the aggressor and victim bands are deployed in the same geographical area. The applicable spurious emission requirement of $-15.5 \mathrm{dBm} / 5 \mathrm{MHz}$ is a least restrictive technical condition for FDD/TDD coexistence and may have to be revised in the future.

When "NS_33" or "NS 34 " is configured from pre-configured radio parameters or the cell and the indication from upper layers has indicated that the UE is within the protection zone of CEN DSRC devices or HDR DSRC devices, the power of any V2X UE emission shall fulfil either one of the two set of conditions.

|  | Maximum Transmission Power <br> (dBm EIRP) | Emission Limit in Frequency Range $\mathbf{5 7 9 5 - 5 8 1 5}(\mathbf{d B m} / \mathbf{M H z}$ <br> EIRP) |
| :---: | :---: | :---: |
| Condition 1 | 10 | -65 |
| Condition 2 | 10 | -45 |

### 6.6.3.2A Spurious emission band UE co-existence for CA

This clause specifies the requirements for inter-band carrier aggregation configurations with the uplink assigned to two E-UTRA bands for coexistence with protected bands. When both constituent bands have common coexistence band protection requirements as specified in clause 6.6.3.2, the requirements are also applied to the carrier aggregation configuration

As exceptions, the additional requirements in Table 6.6.3.2A-0 apply on each component carrier with all component carriers are active.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

NOTE: For inter-band carrier aggregation with uplink assigned to two E-UTRA bands the requirements in Table 6.6.3.2A-0 could be verified by measuring spurious emissions at the specific frequencies where second and third order intermodulation products generated by the two transmitted carriers can occur; in that case, the requirements for remaining applicable frequencies in Table 6.6.3.2A-0 would be considered to be verified by the measurements verifying the one uplink inter-band CA UE to UE co-existence requirements.

Table 6.6.3.2A-0: Requirements for uplink inter-band carrier aggregation (two bands)

| E-UTRA CA <br> Configuration | Protected band | Frequency range <br> $(\mathrm{MHz})$ | Maximum <br> Level <br> $(\mathrm{dBm})$ | MBW <br> $(\mathrm{MHz})$ | NOTE |

NOTE 1: Void
NOTE 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1-2 are permitted for each assigned E-UTRA carrier used in the measurement due to $2^{\text {nd }}, 3^{\text {rd }}$, $4^{\text {th }}$ [or $\left.5^{\text {th }}\right]$ harmonic spurious emissions. In case the exceptions are allowed due to spreading of the harmonic emission the exception is also allowed for the first 1 MHz frequency range immediately outside the harmonic emission on both sides of the harmonic emission. This results in an overall exception interval centred at the harmonic emission of ( $2 \mathrm{MHz}+\mathrm{N} \times \operatorname{LcRB} \times 180 \mathrm{kHz}$ ), where N is 2,3 or 4 for the $2^{\text {nd }}, 3^{\text {rd }}$ or $4^{\text {th }}$ harmonic respectively. The exception is allowed if the measurement bandwidth (MBW) totally or partially overlaps the overall exception interval.
NOTE 3: These requirements also apply for the frequency ranges that are less than Fоов ( MHz ) in Table 6.6.3.1-1 and Table 6.6.3.1A-1 from the edge of the aggregated channel bandwidth.

NOTE 4: Applicable when co-existence with PHS system operating in $1884.5-1915.7 \mathrm{MHz}$.
NOTE 5: Applicable when the assigned E-UTRA carrier is confined within 718 MHz and 748 MHz and when the channel bandwidth used is 5 or 10 MHz .
NOTE 6: Void
NOTE 7: Void
NOTE 8: Void
NOTE 9: Void
NOTE10: Void
NOTE 11: This requirement is applicable only for the following cases:

- for carriers of 5 MHz channel bandwidth when carrier centre frequency $\left(F_{c}\right)$ is within the range $902.5 \mathrm{MHz} \leq \mathrm{F}_{\mathrm{c}}<907.5 \mathrm{MHz}$ with an uplink transmission bandwidth less than or equal to 20 RB - for carriers of 5 MHz channel bandwidth when carrier centre frequency $\left(F_{c}\right)$ is within the range $907.5 \mathrm{MHz} \leq \mathrm{F}_{\mathrm{c}} \leq 912.5 \mathrm{MHz}$ without any restriction on uplink transmission bandwidth.
- for carriers of 10 MHz channel bandwidth when carrier centre frequency $\left(F_{c}\right)$ is $F_{c}=910 \mathrm{MHz}$ with an uplink transmission bandwidth less than or equal to 32 RB with $\mathrm{RB}_{\text {start }}>3$.
NOTE 12: Void
NOTE13: Void
NOTE 14: Void
NOTE 15: Void
NOTE 16: Void
NOTE 17: This requirement is applicable only when Band 3 transmission frequency is less than or equal to 1765 MHz .
NOTE 18: This requirement applies when the E-UTRA carrier is confined within $2545-2575 \mathrm{MHz}$ or $2595-$ 2645 MHz and the channel bandwidth is 10 or 20 MHz
NOTE 19: Void
NOTE 20: This requirement is only applicable for carriers with bandwidth confined within $1885-1920 \mathrm{MHz}$ (requirement for carriers with at least 1RB confined within $1880-1885 \mathrm{MHz}$ is not specified). This requirement applies for an uplink transmission bandwidth less than or equal to 54 RB for carriers of 15 MHz bandwidth when carrier center frequency is within the range $1892.5-1894.5 \mathrm{MHz}$ and for carriers of 20 MHz bandwidth when carrier center frequency is within the range $1895-1903 \mathrm{MHz}$.
NOTE 21: Void

NOTE 22: This requirement is applicable in the case of a 10 MHz E-UTRA carrier confined within 703 MHz and 733 MHz , otherwise the requirement of -25 dBm with a measurement bandwidth of 8 MHz applies.
NOTE 23: This requirement is applicable for 5 and 10 MHz E-UTRA channel bandwidth allocated within 718728 MHz . For carriers of 10 MHz bandwidth, this requirement applies for an uplink transmission bandwidth less than or equal to 30 RB with RBstart > 1 and RBstart<48.NOTE 24: Void
NOTE 25: Void

Table 6.6.3.2A-1: Requirements for intraband carrier aggregation

| E- <br> UTRA <br> CA <br> Config uration | Spurious emission |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Protected band | Frequency range (MHz) |  |  | Maximum Level | $\begin{gathered} \text { MBW } \\ (\mathrm{MHz}) \end{gathered}$ | NOTE |

| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| CA_66 | $\begin{aligned} & \text { E-UTRA Band } 2,4,5,7,12,13,14,17, \\ & 24,25,26,27,28,29,30,38,41,43,50 \text {, } \\ & 51,66,70,71,74,85 \end{aligned}$ | $F_{\text {DL_low }}$ | - | $\mathrm{F}_{\text {DL_high }}$ | -50 | 1 |  |
|  | E-UTRA Band 42, 48 NR Band n77 | F ${ }_{\text {DL_low }}$ | - | $\mathrm{F}_{\text {DL_high }}$ | -50 | 1 | 2 |

NOTE 1: FDL_low and FDL_high refer to each E-UTRA frequency band specified in Table 5.5-1
NOTE 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1-2 are permitted for each assigned E-UTRA carrier used in the measurement due to $2^{\text {nd }}$, $3^{\text {rd }}, 4^{\text {th }}$ [or $5^{\text {th }}$ ] harmonic spurious emissions. Due to spreading of the harmonic emission the exception is also allowed for the first 1 MHz frequency range immediately outside the harmonic emission on both sides of the harmonic emission. This results in an overall exception interval centred at the harmonic emission of ( $2 \mathrm{MHz}+\mathrm{N} \times \operatorname{LcRB} \times 180 \mathrm{kHz}$ ), where N is $2,3,4$, [5] for the $2^{\text {nd }}, 3^{\text {rd }}, 4^{\text {th }}$ [or $\left.5^{\text {th }}\right]$ harmonic respectively. The exception is allowed if the measurement bandwidth (MBW) totally or partially overlaps the overall exception interval
NOTE 3: To meet these requirements some restriction will be needed for either the operating band or protected band
NOTE 4: N/A
NOTE 5: N/A
NOTE 6: N/A
NOTE 7: N/A
NOTE 8: N/A
NOTE 9: N/A
NOTE 10: The requirement also applies for the frequency ranges that are less than Foob ( MHz ) in Table 6.6.3.1-1 and Table 6.6.3.1A-1 from the edge of the aggregated channel bandwidth.

NOTE 11: N/A
NOTE 12: N/A
NOTE 13: N/A
NOTE 14: N/A
NOTE 15: Applicable when co-existence with PHS system operating in $1884.5-1915.7 \mathrm{MHz}$.

Table 6.6.3.2A-2: Requirements for intraband non-contiguous CA

| E-UTRA CA Configur ation | Spurious emission |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Protected band | Frequency range (MHz) |  |  | Maximum Level (dBm) | $\begin{aligned} & \hline \text { MBW } \\ & (\mathrm{MHz}) \end{aligned}$ | NOTE |
| CA_4-4 | $\begin{aligned} & \text { E-UTRA Band } 2,4,5,10,12,13, \\ & 14,17,24,25,26,27,28,29,30, \\ & 41,43,50,51,53,66,70,71,74, \\ & 85 \end{aligned}$ | FDL_low | - | FDL_high | -50 | 1 |  |
|  | E-UTRA Band 42, 22 NR Band n 7 | FDL_low | - | FDL_high | -50 | 1 | 2 |

NOTE 1: FDL_low and FDL_nigh refer to each E-UTRA frequency band specified in Table 5.5-1
NOTE 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2nd or 3rd harmonic spurious emissions. Due to spreading of the harmonic emission the exception is also allowed for the first 1 MHz frequency range immediately outside the harmonic emission on both sides of the harmonic emission. This results in an overall exception interval centred at the harmonic emission of ( $2 \mathrm{MHz}+\mathrm{N} \times$ LCRB $\times 180 \mathrm{kHz}$ ), where N is 2 or 3 for the 2 nd or 3rd harmonic respectively. The exception is allowed if the measurement bandwidth (MBW) totally or partially overlaps the overall exception interval.

### 6.6.3.3 Additional spurious emissions

These requirements are specified in terms of an additional spectrum emission requirement. Additional spurious emission requirements are signalled by the network to indicate that the UE shall meet an additional requirement for a specific deployment scenario as part of the cell handover/broadcast message.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

### 6.6.3.3.1 Minimum requirement (network signalled value "NS_05")

When "NS_05" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.1-1. This requirement also applies for the frequency ranges that are less than $\mathrm{FOOB}(\mathrm{MHz})$ in Table 6.6.3.1-1 from the edge of the channel bandwidth.

Table 6.6.3.3.1-1: Additional requirements (PHS)

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) |  |  |  | Measurement bandwidth | NOTE |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\begin{gathered} 5 \\ \mathrm{MHz} \end{gathered}$ | $\begin{gathered} \hline 10 \\ \mathrm{MHz} \end{gathered}$ | $\begin{gathered} \hline 15 \\ \mathrm{MHz} \end{gathered}$ | $\begin{gathered} 20 \\ \mathrm{MHz} \end{gathered}$ |  |  |
| $1884.5 \leq f \leq 1915.7$ | -41 | -41 | -41 | -41 | 300 KHz | 1 |

Table 6.6.3.3.1-2: Void

### 6.6.3.3.2 Minimum requirement (network signalled value "NS_07")

When "NS_07" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.2-1. This requirement also applies for the frequency ranges that are less than FOOB ( MHz ) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

Table 6.6.3.3.2-1: Additional requirements

| Frequency band <br> $(\mathbf{M H z})$ | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |  |  |
| :---: | :---: | :---: | :---: | :---: |
| $\mathbf{1 0 ~ \mathbf { M H z }}$ | -57 | 6.25 kHz |  |  |
| $769 \leq \mathrm{f} \leq 775$ | NOTE:The emissions measurement shall be sufficiently power averaged to ensure standard standard <br> deviation $<0.5 \mathrm{~dB}$. |  |  |  |

### 6.6.3.3.3 Minimum requirement (network signalled value "NS_08")

When "NS 08 " is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.3-1. This requirement also applies for the frequency ranges that are less than $\mathrm{F}_{\text {оов }}(\mathrm{MHz})$ in Table 6.6.3.1-1 from the edge of the channel bandwidth.

Table 6.6.3.3.3-1: Additional requirement

| Frequency <br> band <br> (MHz) | Channel bandwidth / Spectrum emission limit (dBm) |  |  | Measurement bandwidth |
| :---: | :---: | :---: | :---: | :---: |
|  | $\mathbf{5 M H z}$ | $\mathbf{1 0 M H z}$ | $\mathbf{1 5 M H z}$ |  |
| $860 \leq \mathrm{f} \leq 890$ | -40 | -40 | -40 | 1 MHz |

### 6.6.3.3.4 Minimum requirement (network signalled value "NS_09")

When "NS 09" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.4-1. This requirement also applies for the frequency ranges that are less than $\mathrm{F}_{\text {оов }}(\mathrm{MHz})$ in Table 6.6.3.1-1 from the edge of the channel bandwidth.

Table 6.6.3.3.4-1: Additional requirement

| Frequency band <br> (MHz) | Channel bandwidth / Spectrum emission |  |  | Measurement <br> limit (dBm) <br> bandwidth |
| :---: | :---: | :---: | :---: | :---: |
|  | $\mathbf{5 M H z}$ | $\mathbf{1 0 M H z}$ | $\mathbf{1 5 M H z}$ |  |
| $1475.9 \leq \mathrm{f} \leq 1510.9$ | -35 | -35 | -35 | 1 MHz |

NOTE 1: Void.
NOTE 2: To improve measurement accuracy, A-MPR values for NS_09 specified in Table 6.2.4-1 in subclause 6.2.4 are derived based on 100 kHz RBW.

### 6.6.3.3.5 Minimum requirement (network signalled value "NS_12")

When "NS 12 " is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.5-1. This requirement also applies for the frequency ranges that are less than $\mathrm{F}_{\text {оов }}(\mathrm{MHz})$ in Table 6.6.3.1-1 from the edge of the channel bandwidth.

Table 6.6.3.3.5-1: Additional requirements

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
| :---: | :---: | :---: |
|  | 1.4 MHz, 3 MHz , 5 MHz , $10 \mathrm{MHz}, 15 \mathrm{MHz}$ |  |
| $806 \leq \mathrm{f} \leq 813.5$ | -42 | 6.25 kHz |
| NOTE 1: The requirement applies for E-UTRA carriers with lower channel edge at or above 814.2 MHz. <br> NOTE 2: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation $<0.5 \mathrm{~dB}$. |  |  |

### 6.6.3.3.6 Minimum requirement (network signalled value "NS_13")

When "NS 13" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.6-1. This requirement also applies for the frequency ranges that are less than $\mathrm{F}_{\text {оов }}(\mathrm{MHz})$ in Table 6.6.3.1-1 from the edge of the channel bandwidth.

Table 6.6.3.3.6-1: Additional requirements

| Frequency band <br> (MHz) | Channel bandwidth / <br> Spectrum emission limit <br> $(\mathbf{d B m})$ | Measurement <br> bandwidth |
| :---: | :---: | :---: |
|  | $\mathbf{1 . 4 , \mathbf { 3 } , \mathbf { ~ M H z }}$ | -42 |
| NOTE 1:The requirement applies for E-UTRA carriers with lower channel edge at or <br> above 819 MHz. |  |  |
| NOTE 2:The emissions measurement shall be sufficiently power averaged to ensure a <br> standard deviation $<0.5 \mathrm{~dB}$. |  |  |

### 6.6.3.3.7 Minimum requirement (network signalled value "NS_14")

When "NS 14 " is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.7-1. This requirement also applies for the frequency ranges that are less than $\mathrm{F}_{\mathrm{OOB}}(\mathrm{MHz})$ in Table 6.6.3.1-1 from the edge of the channel bandwidth.

Table 6.6.3.3.7-1: Additional requirements

| Frequency band <br> $(\mathbf{M H z})$ | Channel bandwidth / <br> Spectrum emission limit <br> $(\mathbf{d B m})$ | Measurement <br> bandwidth |
| :---: | :---: | :---: |
|  | $\mathbf{1 0 \mathbf { M H z } , \mathbf { 1 5 } \mathbf { ~ M H z }}$ |  |
| $806 \leq \mathrm{f} \leq 816$ | -42 | 6.25 kHz |

```
NOTE 1: The requirement applies for E-UTRA carriers with lower channel edge at or above 824 MHz .
NOTE 2: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation \(<0.5 \mathrm{~dB}\).
```

### 6.6.3.3.8 Minimum requirement (network signalled value "NS_15")

When "NS 15 " is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.8-1. This requirement also applies for the frequency ranges that are less than $\mathrm{F}_{\text {оов }}(\mathrm{MHz})$ in Table 6.6.3.1-1 from the edge of the channel bandwidth.

Table 6.6.3.3.8-1: Additional requirements

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
| :---: | :---: | :---: |
|  | 1.4 MHz, 3 MHz, 5 MHz , 10 MHz , 15 MHz |  |
| $851 \leq f \leq 859$ | -53 | 6.25 kHz |
| 1: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation $<0.5 \mathrm{~dB}$. |  |  |

### 6.6.3.3.9 Minimum requirement (network signalled value "NS_16")

When "NS_16" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.9-1. This requirement also applies for the frequency ranges that are less than $\mathrm{F}_{\text {оов }}(\mathrm{MHz})$ in Table 6.6.3.1-1 from the edge of the channel bandwidth.

Table 6.6.3.3.9-1: Additional requirements

| Frequency <br> band <br> (MHz) | Channel bandwidth / Spectrum <br> emission limit (dBm) | Measurement <br> bandwidth | NOTE |
| :---: | :---: | :---: | :---: |
| $\mathbf{1 . 4 , \mathbf { 3 , 5 , 1 0 ~ \mathbf { M H z } }}$ |  |  |  |
| $790 \leq \mathrm{f} \leq 803$ | -32 | 1 MHz |  |

### 6.6.3.3.10 Minimum requirement (network signalled value "NS_17")

When "NS_17" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.10-1. This requirement also applies for the frequency ranges that are less than $\mathrm{F}_{\text {OOB }}(\mathrm{MHz})$ in Table 6.6.3.3.1-1 from the edge of the channel bandwidth.

Table 6.6.3.3.10-1: Additional requirements

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) $5,10 \mathrm{MHz}$ | Measurement bandwidth | NOTE |
| :---: | :---: | :---: | :---: |
| $470 \leq \mathrm{f}$ < 710 | -26.2 | 6 MHz | 1 |
| NOTE 1: Applicable when the assigned E-UTRA carrier is confined within 718 MHz and 748 MHz and when the channel bandwidth used is 5 or 10 MHz . |  |  |  |

### 6.6.3.3.11 Minimum requirement (network signalled value "NS_18")

When "NS_18" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.11-1. This requirement also applies for the frequency ranges that are less than $\mathrm{F}_{\text {oob }}(\mathrm{MHz})$ in Table 6.6.3.1-1 from the edge of the channel bandwidth.

Table 6.6.3.3.11-1: Additional requirements

| Frequency <br> band <br> (MHz) | Channel bandwidth / Spectrum <br> emission limit (dBm) | Measurement <br> bandwidth | NOTE |
| :---: | :---: | :---: | :---: |
| $\mathbf{5 , 1 0 , 1 5 , 2 0 ~ \mathbf { M H z }}$ |  |  |  |
| $692-698$ | -26.2 | 6 MHz |  |

### 6.6.3.3.12 Minimum requirement (network signalled value "NS_19")

When "NS_19" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.12-1. This requirement also applies for the frequency ranges that are less than $\mathrm{F}_{\text {оов }}(\mathrm{MHz}$ ) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

Table 6.6.3.3.12-1: Additional requirements

| Frequency <br> band <br> (MHz) | Channel bandwidth / Spectrum <br> emission limit (dBm) | Measurement <br> bandwidth | NOTE |
| :---: | :---: | :---: | :---: |
| $\mathbf{3 , 5 , 1 0 , 1 5 , \mathbf { 2 0 } \mathbf { ~ M H z }}$ |  |  |  |
| $662 \leq \mathrm{f} \leq 694$ | -25 | 8 MHz |  |

### 6.6.3.3.13 Minimum requirement (network signalled value "NS_11")

When "NS_11" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.13-1. These requirements also apply for the frequency ranges that are less than $\mathrm{F}_{\mathrm{OOB}}(\mathrm{MHz})$ in Table 6.6.3.1-1 and Table $6 \cdot 6 \cdot 3.1 \mathrm{~A}-1$ from the edge of the channel bandwidth.

Table 6.6.3.3.13-1: Additional requirements

| Frequency <br> band <br> (MHz) | Channel bandwidth / Spectrum <br> emission limit (dBm) | Measurement <br> bandwidth |
| :---: | :---: | :---: |
|  | $\mathbf{1 . 4 , \mathbf { 3 , 5 } , \mathbf { 1 0 , 1 5 , \mathbf { 2 0 } \mathbf { ~ M H z } }}$ |  |
| E-UTRA Band 2 | -50 | 1 MHz |
| $1998 \leq \mathrm{f} \leq 1999$ | -21 | 1 MHz |
| $1997 \leq \mathrm{f}<1998$ | -27 | 1 MHz |
| $1996 \leq \mathrm{f}<1997$ | -32 | 1 MHz |
| $1995 \leq \mathrm{f}<1996$ | -37 | 1 MHz |
| $1990 \leq \mathrm{f}<1995$ | -40 | 1 MHz |

### 6.6.3.3.14 Minimum requirement (network signalled value "NS_20")

When "NS_20" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.14-1. These requirements also apply for the frequency ranges that are less than $\mathrm{F}_{\text {оов }}(\mathrm{MHz})$ in Table 6.6.3.1-1 and Table 6.6.3.1A-1 from the edge of the channel bandwidth.

Table 6.6.3.3.14-1: Additional requirements

| Frequency <br> band <br> (MHz) | Channel bandwidth / Spectrum <br> emission limit (dBm) | Measurement <br> bandwidth |
| :---: | :---: | :---: |
|  | $\mathbf{5 , 1 0 , 1 5 , \mathbf { 2 0 } \mathbf { ~ M H z }}$ |  |
| $1990 \leq \mathrm{f}<1999$ | -40 | 1 MHz |
| $1999 \leq \mathrm{f} \leq 2000$ | -40 | NOTE 1 |
| NOTE 1: The measurement bandwidth is $1 \%$ of the applicable E-UTRA <br> channel bandwidth. |  |  |

### 6.6.3.3.15 Minimum requirement (network signalled value "NS_21")

When "NS_21" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.15-1. These requirements also apply for the frequency ranges that are less than $\mathrm{F}_{\text {оов }}(\mathrm{MHz})$ in Table 6.6.3.1-1 and Table $6 \cdot 6.3 .1 \mathrm{~A}-1$ from the edge of the channel bandwidth.

Table 6.6.3.3.15-1: Additional requirements

| Frequency <br> band <br> (MHz) | Channel bandwidth / Spectrum <br> emission limit (dBm) | Measurement <br> bandwidth |
| :---: | :---: | :---: |
|  | $\mathbf{5 , 1 0 \mathbf { M H z }}$ |  |
| $2200 \leq \mathrm{f}<2288$ | -40 | 1 MHz |
| $2288 \leq \mathrm{f}<2292$ | -37 | 1 MHz |
| $2292 \leq \mathrm{f}<2296$ | -31 | 1 MHz |
| $2296 \leq \mathrm{f}<2300$ | -25 | 1 MHz |
| $2320 \leq \mathrm{f}<2324$ | -25 | 1 MHz |
| $2324 \leq \mathrm{f}<2328$ | -31 | 1 MHz |
| $2328 \leq \mathrm{f}<2332$ | -37 | 1 MHz |
| $2332 \leq \mathrm{f} \leq 2395$ | -40 | 1 MHz |

### 6.6.3.3.16 Minimum requirement (network signalled value "NS_22")

When "NS 22" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.16-1. This requirement also applies for the frequency ranges that are less than $\mathrm{F}_{\text {оов }}(\mathrm{MHz})$ in Table 6.6.3.11 from the edge of the channel bandwidth.

Table 6.6.3.3.16-1: Additional requirement

| Frequency band <br> (MHz) | Channel bandwidth / Spectrum <br> emission limit (dBm) | MBW |
| :---: | :---: | :---: |
|  | $\mathbf{5 , 1 0 , 1 5 , \mathbf { 2 0 } \mathbf { ~ M H z }}$ |  |
| $3400 \leq \mathrm{f} \leq 3800$ | -23 (NOTE 1, NOTE 3) | 5 MHz |
|  | -40 (NOTE 2) | 1 MHz |
|  |  |  |

NOTE 1: This requirement applies within an offset between 5 MHz and 25 MHz from the lower and from the upper edge of the channel bandwidth,
whenever these frequencies overlap with the specified frequency band.
NOTE 2: This requirement applies from 3400 MHz to 25 MHz below the lower
E-UTRA channel edge and from 25 MHz above the upper E-UTRA
channel edge to 3800 MHz .
NOTE 3: This emission limit might imply risk of harmful interference to UE(s) operating in the protected operating band

### 6.6.3.3.17 Minimum requirement (network signalled value "NS_23")

When "NS 23" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.17-1. This requirement also applies for the frequency ranges that are less than $\mathrm{F}_{\text {оов }}(\mathrm{MHz})$ in Table 6.6.3.11 from the edge of the channel bandwidth.

Table 6.6.3.3.17-1: Additional requirement

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) $5,10,15,20 \mathrm{MHz}$ | MBW |
| :---: | :---: | :---: |
| $3400 \leq f \leq 3800$ | -23 (NOTE 1, NOTE 4) | 5 MHz |
|  | -40 (NOTE 2) | 1 MHz |
| NOTE 1: This requirement applies within an offset between $5 \mathrm{MHz}+$ Foffset_Ns_23 and $25 \mathrm{MHz}+$ Foffset NS $_{23}$ from the lower and from the upper edges of the |  |  |

```
channel bandwidth, whenever these frequencies overlap with the specified frequency band.
NOTE 2: This requirement applies from 3400 MHz to \(25 \mathrm{MHz}+\) Foffset_Ns_23 below the lower E-UTRA channel edge and from \(25 \mathrm{MHz}+\mathrm{F}_{\text {offset_Ns_23 }}\) above the upper E-UTRA channel edge to 3800 MHz .
NOTE 3: \(F_{\text {offset_Ns_2 }}\) is:
0 MHz for 5 MHz channel BW, 5 MHz for 10 MHz channel BW, 9 MHz for 15 MHz channel BW and 12 MHz for 20 MHz channel BW.
```

NOTE 4: This emission limit might imply risk of harmful interference to UE(s) operating in the protected operating band

Table 6.6.3.3.18-1: Void

### 6.6.3.3.19 Minimum requirement (network signalled value "NS_04")

When "NS 04" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.19-1. This requirement also applies for the frequency ranges that are less than $\mathrm{F}_{\text {оов }}(\mathrm{MHz})$ in Table 6.6.3.11 from the edge of the channel bandwidth.

Table 6.6.3.3.19-1: Additional requirements

| Frequency band | Channel bandwidth / Spectrum <br> emission limit (dBm) | Measurement <br> bandwidth |
| :---: | :---: | :---: |
| $\mathbf{5 , 1 0 , 1 5 , 2 0 ~ \mathbf { M H z }}$ |  |  |
| $2490.5 \mathrm{MHz} \leq \mathrm{f}<$ <br> 2495 MHz | -13 | 1 MHz |
| $9 \mathrm{kHz}<\mathrm{f}<2490.5$ <br> MHz | -25 | 1 MHz |

### 6.6.3.3.20 Minimum requirement (network signalled value "NS_24")

When "NS_24" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.20-1. This requirement also applies for the frequency ranges that are less than $\mathrm{F}_{\text {оов }}(\mathrm{MHz})$ in Table 6.6.3.1-1 from the edge of the channel bandwidth.

Table 6.6.3.3.20-1: Additional requirements

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit $(\mathrm{dBm})$ | Measurement bandwidth |
| :---: | :---: | :---: |
| Band 34 | -50 | MHz |
| NOTE 1: This requirement applies at a frequency offset equal or larger than 5 MHz from the upper edge of the channel bandwidth, whenever these frequencies overlap with the specified frequency band. |  |  |

### 6.6.3.3.21 Minimum requirement (network signalled value "NS_25")

When "NS_25" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.21-1. This requirement also applies for the frequency ranges that are less than $\mathrm{F}_{\mathrm{OOB}}(\mathrm{MHz})$ in Table 6.6.3.1-1 from the edge of the channel bandwidth.

Table 6.6.3.3.21-1: Additional requirements

| Frequency band <br> $(\mathrm{MHz})$ | Channel bandwidth $/$ <br> Spectrum emission limit <br> $(\mathrm{dBm})$ | Measurement <br> bandwidth |
| :---: | :---: | :---: |
| Band 34 | $5 \mathrm{MHz}, 10 \mathrm{MHz}, 15 \mathrm{MHz}, 20 \mathrm{MHz}$ |  |
|  | -40 | MHz |

NOTE 1: This requirement applies at a frequency offset equal or larger than 5 MHz from the upper edge of the channel bandwidth, whenever these frequencies overlap with the specified frequency band.

### 6.6.3.3.22 Minimum requirement (network signalled value "NS_26")

When "NS_26" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.22-1. This requirement also applies for the frequency ranges that are less than $\mathrm{F}_{\mathrm{OOB}}(\mathrm{MHz})$ in Table 6.6.3.1-1 from the edge of the channel bandwidth.

Table 6.6.3.3.22-1: Additional requirements

| Frequency band <br> $(\mathrm{MHz})$ | Channel bandwidth $/$ <br> Spectrum emission limit <br> $(\mathrm{dBm})$ | Measurement <br> bandwidth |
| :---: | :---: | :---: |
|  | $\mathbf{5 \mathrm { MHz } , 1 0 \mathrm { MHz } , \mathbf { 1 5 ~ M H z }}$ |  |
| $686 \leq \mathrm{f} \leq 694$ | -25 | 8 MHz |

### 6.6.3.3.23 Minimum requirement (network signalled value "NS_27" and "NS_43")

When "NS_27" or "NS_43" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.23-1. This requirement also applies for the frequency ranges that are less than $\mathrm{F}_{\text {оов }}(\mathrm{MHz})$ in Table 6.6.3.1-1 from the edge of the channel bandwidth.

Table 6.6.3.3.23-1: Additional requirements
$\begin{array}{|c|c|c|}\hline \text { Frequency band } & \begin{array}{c}\text { Channel bandwidth / Spectrum } \\ \text { emission limit (dBm) }\end{array} & \begin{array}{c}\text { Measurement } \\ \text { bandwidth }\end{array} \\$\cline { 2 - 2 } \& $\left.5,10,15, \mathbf{2 0} \mathbf{~ M H z}\end{array}\right]$

### 6.6.3.3.24 Minimum requirement (network signalled value "NS_28")

When "NS_28" is indicated in the cell, the power of any UE emission for E-UTRA channels assigned within 5150-5350 MHz and $5470-5725 \mathrm{MHz}$ shall not exceed the levels specified in Table 6.6.3.3.24-1. This requirement also applies for the frequency ranges that are less than $\mathrm{F}_{\mathrm{OOB}}(\mathrm{MHz})$ in Table 6.6.3.1-1 from the edge of the channel bandwidth.

Table 6.6.3.3.24-1: Additional requirements

| Frequency band <br> $(\mathbf{M H z})$ | Channel bandwidth / <br> Spectrum emission limit <br> $(\mathbf{d B m})$ | Measurement <br> bandwidth |
| :---: | :---: | :---: |
| $\mathbf{2 0 ~ M H z}$ |  |  |
| $47 \leq \mathrm{f} \leq 74$ | -54 | 100 kHz |
| $87.5 \leq \mathrm{f} \leq 118$ | -54 | 100 kHz |
| $174 \leq \mathrm{f} \leq 230$ | -54 | 100 kHz |
| $470 \leq \mathrm{f} \leq 862$ | -54 | 100 kHz |
| $1000 \leq \mathrm{f} \leq 5150$ | -30 | 1 MHz |
| $5350 \leq \mathrm{f} \leq 5470$ | -30 | 1 MHz |
| $5725 \leq \mathrm{f} \leq 26000$ | -30 | 1 MHz |

### 6.6.3.3.25 Minimum requirement (network signalled value "NS_29")

When "NS_29" is indicated in the cell, the power of any UE emission for E-UTRA channels assigned within 5150-5350 and $5470-5725 \mathrm{MHz}$ shall not exceed the levels specified in Table 6.6.3.3.25-1. This requirement also applies for the frequency ranges that are less than $\mathrm{F}_{\text {оов }}(\mathrm{MHz})$ in Table 6.6.3.1-1 from the edge of the channel bandwidth.

Table 6.6.3.3.25-1: Additional requirements

| Centre Frequency Fc [MHz] | Protected range [MHz] | Frequency difference $\Delta \mathrm{f}$ between centre frequency - <br> 5240 (for Fc=5180, 5200, 5220, 5240) <br> 5260 (for Fc=5260, 5280, 5300, 5320) <br> (MHz) |  | Measurement bandwidth |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & 5180,5200, \\ & 5220,5240 \end{aligned}$ | $5135 \leq f \leq 5142$ | - | -26 | 1 MHz |
|  | $5142<f \leq 5150$ | - | -18 |  |
|  | $5250 \leq f<5251$ | $\geq 10$ and $<11$ | 10(10- 4 f ) |  |
|  | $5251 \leq \mathrm{f}$ < 5260 | $\geq 11$ and $<20$ | $-10-8 / 9(\Delta f-11)$ |  |
|  | $5260 \leq f<5266.7$ | $\geq 20$ and $<26.7$ | $-18-1.2(\Delta f-20)$ |  |
|  | $5266.7 \leq f \leq 5365$ | - | -26 |  |
| $\begin{aligned} & 5260,5280, \\ & 5300,5320 \end{aligned}$ | $5135 \leq f \leq 5233.3$ | - | -26 |  |
|  | $5233.3<\mathrm{f} \leq 5240$ | $\geq 20$ and < 26.7 | $-18-1.2(\Delta f-20)$ |  |
|  | $5240<\mathrm{f} \leq 5249$ | $\geq 11$ and $<20$ | $-10-8 / 9(\Delta f-11)$ |  |
|  | $5249<\mathrm{f} \leq 5250$ | $\geq 10$ and $<11$ | 10(10- $\mathrm{ff}^{\text {f }}$ |  |
|  | $5350 \leq f \leq 5365$ | - | -26 |  |
| $\begin{gathered} \hline 5500,5520, \\ 5540,5560, \\ 5580,5600, \\ 5620,5640, \\ 5660,5680, \\ 5700 \\ \hline \end{gathered}$ | $5455 \leq f \leq 5460$ | - | -26 |  |
|  | $5460<\mathrm{f} \leq 5470$ | - | -19 |  |
|  | $5725 \leq f<5740$ | - | -19 |  |
|  | $5740 \leq f \leq 5745$ | - | -26 |  |

### 6.6.3.3.26 Minimum requirement (network signalled value "NS_30")

When "NS_30" is indicated in the cell, the power of any UE emission for E-UTRA channels assigned within 5150-5350 $\mathrm{MHz}, 5470-5725 \mathrm{MHz}$ and $5725-5850 \mathrm{MHz}$ shall not exceed the levels specified in Table 6.6.3.3.26-1, Table 6.6.3.3.26-2 and Table 6.6.3.3.26-3, respectively. These requirements also apply for the frequency ranges that are less than $\mathrm{F}_{\text {оов }}(\mathrm{MHz})$ in Table 6.6.3.1-1 from the edge of the channel bandwidth.

Table 6.6.3.3.26-1: Additional requirements for E-UTRA channels assigned within $5150-5350 \mathrm{MHz}$

| Frequency band <br> $(\mathbf{M H z})$ | Channel bandwidth / <br> Spectrum emission limit <br> $(\mathrm{dBm})$ | Measurement <br> bandwidth |
| :---: | :---: | :---: |
|  | $\mathbf{2 0 ~ M H z}$ |  |
| $4500 \leq f \leq 5150$ | -41 | 1 MHz |
| $5350 \leq f \leq 5460$ | -41 |  |

Table 6.6.3.3.26-2: Additional requirements for E-UTRA channels assigned within $5470-5725 \mathrm{MHz}$

| Frequency band <br> $(\mathbf{M H z})$ | Channel bandwidth / <br> Spectrum emission limit <br> $(\mathbf{d B m})$ | Measurement <br> bandwidth |
| :---: | :---: | :---: |
|  | $\mathbf{2 0 \mathbf { M H z }}$ |  |
| $4500 \leq \mathrm{f} \leq 5150$ | -41 | 1 MHz |
| $5350 \leq \mathrm{f} \leq 5460$ | -41 |  |
| $5460<\mathrm{f} \leq 5470$ | -27 |  |
| $5725 \leq \mathrm{f}$ | -27 |  |

Table 6.6.3.3.26-3: Additional requirements for E-UTRA channels assigned within $5725-5850 \mathrm{MHz}$

| Frequency offset of measurement filter -3dB point, $\Delta f$ | Frequency offset of measurement filter centre frequency, f_offset | Minimum requirement [dBm] | Measurement bandwidth |
| :---: | :---: | :---: | :---: |
| $0 \mathrm{MHz} \leq \Delta \mathrm{f}<5 \mathrm{MHz}$ | $0.5 \mathrm{MHz} \leq$ f_offset $<5.5 \mathrm{MHz}$ | 27-2.28(f_offset/MHz - 0.5) | 1 MHz |
| $5 \mathrm{MHz} \leq \Delta \mathrm{f}<25 \mathrm{MHz}$ | $5.5 \mathrm{MHz} \leq$ f_offset $<25.5 \mathrm{MHz}$ | $15.6-0.28$ (f_offset/MHz - 0.5) | 1 MHz |
| $25 \mathrm{MHz} \leq \Delta \mathrm{f}<75 \mathrm{MHz}$ | $25.5 \mathrm{MHz} \leq$ f_offset $<75.5 \mathrm{MHz}$ | 10-0.74(f_offset/MHz - 0.5) | 1 MHz |
| $75 \mathrm{MHz} \leq \Delta \mathrm{f}$ | $75.5 \mathrm{MHz} \leq$ f_offset | -27 | 1 MHz |
| NOTE 1: The frequency offset f_offset is below and above the range $5725-5850 \mathrm{MHz}$; the measurement filter -3dB point is that closest to the range $57 \overline{2} 5-5850 \mathrm{MHz}$ <br> NOTE 2: The requirement applies when the offset of the measurement filter centre frequency is such that both -3 dB points of the measurement filter are confined within the frequency range $5725-5850 \mathrm{MHz}$. |  |  |  |

### 6.6.3.3.27 Minimum requirement (network signalled value "NS_31")

When "NS_31" is indicated in the cell, the power of any UE emission for E-UTRA channels assigned within 5150-5250 $\mathrm{MHz}, 5250-5350 \mathrm{MHz}, 5470-5725 \mathrm{MHz}$ and $5725-5850 \mathrm{MHz}$ shall not exceed the levels specified in Table 6.6.3.3.271, Table 6.6.3.3.27-2, Table 6.6.3.3.27-3 and Table 6.6.3.3.27-4, respectively. These requirements also apply for the frequency ranges that are less than $\mathrm{F}_{\text {оов }}(\mathrm{MHz})$ in Table 6.6.3.1-1 from the edge of the channel bandwidth.

Table 6.6.3.3.27-1: Additional requirements for E-UTRA channels assigned within $5150-5250 \mathrm{MHz}$

| Frequency band <br> $(\mathbf{M H z})$ | Channel bandwidth / <br> Spectrum emission limit <br> $(\mathbf{d B m})$ | Measurement <br> bandwidth |
| :---: | :---: | :---: |
| $\mathbf{2 0 ~ M H z}$ |  |  |
| $\mathrm{f} \leq 5150$ | -27 | 1 MHz |
| $\mathrm{f} \geq 5250$ | -27 |  |

Table 6.6.3.3.27-2: Additional requirements for E-UTRA channels assigned within $5250-5350 \mathrm{MHz}$

| Frequency band <br> (MHz) | Channel bandwidth / <br> Spectrum emission limit <br> (dBm) | Measurement <br> bandwidth |
| :---: | :---: | :---: |
| $\mathbf{2 0 ~ M H z}$ |  |  |
| $\mathrm{f} \leq 5250$ | -27 | 1 MHz |
| $\mathrm{f} \geq 5350$ | -27 |  |

Table 6.6.3.3.27-3: Additional requirements for E-UTRA channels assigned within 5470-5725 MHz

| Frequency band <br> $(\mathbf{M H z})$ | Channel bandwidth / <br> Spectrum emission limit <br> $(\mathbf{d B m})$ | Measurement <br> bandwidth |
| :---: | :---: | :---: |
| $\mathbf{2 0 ~ M H z}$ |  |  |
| $\mathrm{f} \leq 5470$ | -27 | 1 MHz |
| $\mathrm{f} \geq 5725$ | -27 |  |

Table 6.6.3.3.27-4: Additional requirements for E-UTRA channels assigned within $5725-5850 \mathrm{MHz}$

| Frequency band <br> (MHz) | Channel bandwidth / <br> Spectrum emission limit <br> $(\mathbf{d B m})$ | Measurement <br> bandwidth |
| :---: | :---: | :---: |
| $\mathbf{2 0 ~ M H z}$ |  |  |
| $\mathrm{f} \leq 5725$ | -27 | 1 MHz |
| $\mathrm{f} \geq 5850$ | -27 |  |

### 6.6.3.3.28 Minimum requirement (network signalled value "NS_36")

When "NS_36" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.28-1. This requirement also applies for the frequency ranges that are less than $\mathrm{F}_{\text {oob }}(\mathrm{MHz})$ in Table 6.6.3.1-1 from the edge of the channel bandwidth.

Table 6.6.3.3.28-1: Additional requirements

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
| :---: | :---: | :---: |
|  | 5 MHz , 10 MHz and 15 MHz |  |
| $470 \leq f \leq 694$ | -42 | 8MHz |
| NOTE: For a 5 MHz E-UTRA carrier confined within 698 MHz and 703 MHz , this requirement shall be met in normal conditions only. The requirement is relaxed to -30 dBm in extreme conditions. |  |  |

### 6.6.3.3.29 Minimum requirement (network signalled value "NS_38")

When "NS_38" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.29-1. This requirement also applies for the frequency ranges that are less than $\mathrm{F}_{\text {OOB }}(\mathrm{MHz})$ in Table 6.6.3.1-1 from the edge of the channel bandwidth.

Table 6.6.3.3.29-1: Additional requirements

| Frequency band (MHz) | Channel bandwidth / <br> Spectrum emission limit <br> $(\mathrm{dBm})$ <br> $1.4 \mathrm{MHz}, 3 \mathrm{MHz}, 5 \mathrm{MHz}, 10 \mathrm{MHz}, 15 \mathrm{MHz}$, <br> 20 MHz | Measurement bandwidth |
| :---: | :---: | :---: |
| $1400 \leq f \leq 1427$ | -32 | 27MHz |
| NOTE 1: This requirement shall be verified with UE transmission power configured as high as possible but no higher than 15 dBm . |  |  |

### 6.6.3.3.30 Minimum requirement (network signalled value "NS_39")

When "NS_39" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.30-1. This requirement also applies for the frequency ranges that are less than $\mathrm{F}_{\mathrm{OOB}}(\mathrm{MHz})$ in Table 6.6.3.1-1 from the edge of the channel bandwidth.

Table 6.6.3.3.30-1: Additional requirements

| Frequency band <br> $(\mathrm{MHz})$ | Channel bandwidth $/$ <br> Spectrum emission limit <br> $(\mathrm{dBm})$ | Measurement <br> bandwidth |
| :---: | :---: | :---: |
|  |  <br> $1.4 \mathrm{MHz}, 3 \mathrm{MHz}, 5 \mathrm{MHz}, 10 \mathrm{MHz}, 15 \mathrm{MHz}$, <br> 20 MHz |  |
| $1475 \leq \mathrm{f} \leq 1488$ | -28 | 1 MHz |

### 6.6.3.3.31 Minimum requirement (network signalled value "NS_40" and "NS_41")

When "NS_40" or "NS_41" is indicated in the cell, the power of any UE emission for E-UTRA channels assigned within $1427-1432 \mathrm{MHz}$ (B51) and $1432-1452 \mathrm{MHz}$ (B50) shall not exceed the levels specified in Table 6.6.3.3.31-1. These requirements also apply for the frequency ranges that are less than $\mathrm{F}_{\mathrm{OOB}}(\mathrm{MHz})$ in Table 6.6.3.1-1 from the edge of the channel bandwidth.

Table 6.6.3.3.31-1: Additional requirements for E-UTRA channels assigned within $1427-1452 \mathrm{MHz}$

| Frequency band <br> $(\mathrm{MHz})$ | Channel bandwidth / <br> Spectrum emission limit <br> $(\mathrm{dBm})$ | Measurement <br> bandwidth |
| :---: | :---: | :---: |

|  | $\mathbf{3 , 5 , 1 0 , 1 5}$, <br> $\mathbf{2 0} \mathbf{~ M H z}$ |  |
| :---: | :---: | :---: |
| 1400 $\leq \mathrm{f} \leq 1427$ | -32 | 27 MHz |
| NOTE 1:This requirement shall be verified with UE transmission power configured as <br> high as possible but no higher than 15 dBm. |  |  |

### 6.6.3.3.32 Minimum requirement (network signalled value "NS_42")

When "NS_42" is indicated in the cell, the power of any UE emission for E-UTRA channels assigned within 1492-1517 MHz (B50) shall not exceed the levels specified in Table 6.6.3.3.32-1. These requirements also apply for the frequency ranges that are less than $\mathrm{F}_{\text {оов }}(\mathrm{MHz})$ in Table 6.6.3.1-1 from the edge of the channel bandwidth.

Table 6.6.3.3.32-1: Additional requirements for E-UTRA channels assigned within 1492-1517 MHz

| Frequency band <br> (MHz) | Channel bandwidth / <br> Spectrum emission limit <br> $(\mathrm{dBm})$ | Measurement <br> bandwidth |
| :---: | :---: | :---: |
|  | $\mathbf{3 , 5 , 1 0 , 1 5 ,}$ <br> $\mathbf{2 0 ~ M H z}$ |  |
| $1518 \leq \mathrm{f} \leq 1559$ | -30 | 1 MHz |

### 6.6.3.3.33 Minimum requirement (network signalled value "NS_44")

When "NS_44" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.33-1. This requirement also applies for the frequency ranges that are less than $\mathrm{F}_{\text {OOB }}(\mathrm{MHz})$ in Table 6.6.3.1-1 from the edge of the channel bandwidth.

Table 6.6.3.3.33-1: Additional requirements

| Frequency <br> band <br> (MHz) | Channel bandwidth / Spectrum <br> emission limit (dBm) | Measurement <br> bandwidth | NOTE |
| :---: | :---: | :---: | :---: |
|  | 5, 10, 15, 20 |  | 1 |
| $2620-2645$ | -15.5 | 1 MHz | 1 |
| $2645-2690$ | -40 | MHz |  |
| Note 1:The E-UTRA carrier with channel bandwidth is confined within 2570 <br> and 2615 MHz |  |  |  |

### 6.6.3.3.34 Minimum requirement (network signalled value "NS_45")

When "NS_45" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Tables 6.6.3.3.35-1 and 6.6.3.3.35-2. This requirement also applies for the frequency ranges that are less than $\mathrm{F}_{\mathrm{OOB}}(\mathrm{MHz})$ in Table 6.6.3.1-1 from the edge of the channel bandwidth.

Table 6.6.3.3.34-1: Additional requirements for $1.4,3$ and 5 MHz channel bandwidths

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth | NOTE |
| :---: | :---: | :---: | :---: |
|  | 1.4, 3, 5 |  |  |
| $0.009<\mathrm{f}$ < 2477.5 | -25 | 1 MHz |  |
| $2477.5<\mathrm{f} \leq 2478.5$ | -13 | 1 MHz |  |
| $2478.5<\mathrm{f} \leq 2483.5$ | -10 | 1 MHz |  |
| $2495 \leq f$ < 2496 | -13 | 1\% of Channel Bandwidth |  |
| $2496<\mathrm{f} \leq 2501$ | -13 | 1 MHz |  |
| $2501 \leq f \leq 5^{\text {th }}$ harmonic of the upper frequency edge of the UL operating band | -25 | 1 MHz |  |

Table 6.6.3.3.34-2: Additional requirements for 10 MHz channel bandwidth

| Frequency band <br> (MHz) | Channel bandwidth / Spectrum <br> emission limit (dBm) | Measurement <br> bandwidth | NOTE |
| :---: | :---: | :---: | :---: |
|  | $\mathbf{1 0}$ |  |  |
| $0.009<\mathrm{f} \leq 2473.5$ | -25 | 1 MHz |  |
| $2473.5<\mathrm{f} \leq 2478.5$ | -13 | 1 MHz |  |
| $2478.5<\mathrm{f} \leq 2483.5$ | -10 | $1 \%$ of Channel <br> Bandwidth |  |
| $2495 \leq \mathrm{f}<2496$ | -13 | 1 MHz |  |
| $2496<\mathrm{f} \leq 2505$ | -13 | 1 MHz |  |
| $2505 \leq \mathrm{f} \leq 5^{\text {th }}$ harmonic of the upper frequency |  |  |  |
| edge of the UL operating band |  |  |  |

### 6.6.3.3.35 Minimum requirement (network signalled value "NS_56")

When "NS_56" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.35-1. This requirement also applies for the frequency ranges that are less than $\mathrm{F}_{\text {OOB }}(\mathrm{MHz})$ in Table 6.6.3.1-1 from the edge of the channel bandwidth.

Table 6.6.3.3.35-1: Additional requirements

| Frequency band (MHz) | Channel bandwidth / <br> Spectrum emission <br> limit $^{1}(\mathrm{dBm})$ <br> $5 \mathrm{MHz}, 10 \mathrm{MHz}$ | Measurement bandwidth | NOTE |
| :---: | :---: | :---: | :---: |
| $1541 \leq \mathrm{f} \leq 1559$ | -102 | 2 kHz | Averaged over any 2 millisecond active transmission interval |
| 1559 $\leq$ f $\leq 1608$ | -85 | 700 Hz |  |
| $1608 \leq \mathrm{f} \leq 1610$ | $-85+5 / 2(f-1608)$ | 700 Hz |  |
| $1610 \leq \mathrm{f} \leq 1625$ | -80+66/15 (f-1610) | 700 Hz |  |
| $1541 \leq \mathrm{f} \leq 1608$ | -75 | 1 MHz | Averaged over any 2 millisecond active transmission interval |
| $1608 \leq \mathrm{f} \leq 1610$ | $-75+5 / 2(f-1608)$ | 1 MHz |  |
| $1610 \leq \mathrm{f} \leq 1627.5$ | -70+57/17.5 (f-1610) | 1 MHz |  |
| 1627.5 | -37 | 4 kHz |  |
| $1638.5 \leq f \leq 1645.5$ | -28 | 4 kHz |  |
| $1657.5 \leq f \leq 1660.5$ | -28 | 4 kHz |  |
| NOTE 1: The EIRP requirement in regulation is converted to conducted requirement using a 0 dBi antenna. |  |  |  |

### 6.6.3.3A Additional spurious emissions for CA

These requirements are specified in terms of an additional spectrum emission requirement. Additional spurious emission requirements are signalled by the network to indicate that the UE shall meet an additional requirement for a specific deployment scenario as part of the cell reconfiguration message.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

### 6.6.3.3A.1 Minimum requirement for CA_1C (network signalled value "CA_NS_01")

When "CA_NS_01" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3A.1-1. This requirement also applies for the frequency ranges that are less than $\mathrm{FOOB}(\mathrm{MHz})$ in Table 6.6.3.1A1 from the edge of the aggregated channel bandwidth.

Table 6.6.3.3A.1-1: Additional requirements (PHS)

| Protected band | Frequency range (MHz) |  |  | Maximum Level (dBm) | MBW (MHz) | NOTE |
| :--- | ---: | :--- | :--- | :---: | :---: | :---: |
| E-UTRA band 34 | FDL_Iow | - | FDL_high | -50 | 1 |  |
| Frequency range | 1884.5 | - | 1915.7 | -41 | 0.3 | 1 |

NOTE 1: Applicable when the aggregated channel bandwidth is confined within frequency range $1940-1980 \mathrm{MHz}$
6.6.3.3A. 2 Minimum requirement for CA_1C (network signalled value "CA_NS_02")

When "CA_NS_02" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3A.2-1. This requirement also applies for the frequency ranges that are less than FOOB (MHz) in Table 6.6.3.1A1 from the edge of the aggregated channel bandwidth.

Table 6.6.3.3A.2-1: Additional requirements

| Protected band | Frequency range (MHz) |  |  | Maximum Level (dBm) | MBW (MHz) | NOTE |
| :--- | ---: | :---: | :--- | :---: | :---: | :---: |
| E-UTRA band 34 | FDL_low | - | FDL_nigh | -50 | 1 |  |
| Frequency range | 1900 | - | 1915 | -15.5 | 5 | 1,2 |
| Frequency range | 1915 | - | 1920 | +1.6 | 5 | 1,2 |

NOTE 1: The requirement also applies for the frequency ranges that are less than FOOB (MHz) in Table 6.6.3.1-1 and Table 6.6.3.1A-1 from the edge of the channel bandwidth.
NOTE 2: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.

### 6.6.3.3A.3 Minimum requirement for CA_1C (network signalled value "CA_NS_03")

When "CA_NS_03" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3A.3-1. This requirement also applies for the frequency ranges that are less than FOOB (MHz) in Table 6.6.3.1A1 from the edge of the aggregated channel bandwidth.

Table 6.6.3.3A.3-1: Additional requirements

| Protected band | Frequency range (MHz) |  |  | Maximum Level (dBm) | MBW (MHz) | NOTE |
| :--- | ---: | :--- | :--- | :---: | :---: | :---: |
| E-UTRA band 34 | FDL_low | - | FD_high | -50 | 1 |  |
| Frequency range | 1880 | - | 1895 | -40 | 1 |  |
| Frequency range | 1895 | - | 1915 | -15.5 | 5 | 1,2 |
| Frequency range | 1915 | - | 1920 | +1.6 | 5 | 1,2 |

NOTE 1: The requirement also applies for the frequency ranges that are less than FOOB (MHz) in Table 6.6.3.1-1 and Table 6.6.3.1A-1 from the edge of the channel bandwidth.
NOTE 2: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.

### 6.6.3.3A.4 Minimum requirement for CA_38C (network signalled value "CA_NS_05")

When "CA_NS_05" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3A.4-1. This requirement also applies for the frequency ranges that are less than $\mathrm{F}_{\text {оов }}(\mathrm{MHz})$ in Table 6.6.3.1A-1 from the edge of the aggregated channel bandwidth. This requirement is applicable for carriers with aggregated channel bandwidths confined in 2570-2615 MHz.

Table 6.6.3.3A.4-1: Additional requirements

| Protected band | Frequency range (MHz) |  |  | Maximum Level (dBm) | MBW (MHz) | NOTE |
| :--- | :---: | :---: | :--- | :---: | :---: | :---: |
| Frequency range | 2620 | - | 2645 | -15.5 | 5 | $1,2,3$ |
| Frequency range | 2645 | - | 2690 | -40 | 1 | 1,3 |

NOTE 1: The requirement also applies for the frequency ranges that are less than FOOB (MHz) in Table 6.6.3.1-1 and Table 6.6.3.1A-1 from the edge of the channel bandwidth.

NOTE 2: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.
NOTE 3: This requirement is applicable for carriers with aggregated channel bandwidths confined in 2570-2615 MHz .

### 6.6.3.3A.5 Minimum requirement for CA_7C (network signalled value "CA_NS_06")

When "CA_NS_06" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3A.5-1. This requirement also applies for the frequency ranges that are less than $\mathrm{F}_{\text {оов }}(\mathrm{MHz})$ in Table 6.6.3.1A-1 from the edge of the aggregated channel bandwidth.

Table 6.6.3.3A.5-1: Additional requirements

| Protected band | Frequency range (MHz) |  |  | Maximum Level (dBm) | MBW (MHz) | NOTE |
| :--- | :---: | :---: | :--- | :---: | :---: | :---: |
| Frequency range | 2570 | - | 2575 | +1.6 | 5 | 1,2 |
| Frequency range | 2575 | - | 2595 | -15.5 | 5 | 1,2 |
| Frequency range | 2595 | - | 2620 | -40 | 1 |  |

NOTE 1: The requirement also applies for the frequency ranges that are less than FOOB (MHz) in Table 6.6.3.1-1 and Table 6.6.3.1A-1 from the edge of the channel bandwidth.
NOTE 2: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.

### 6.6.3.3A.6 Minimum requirement for CA_39C and CA_39C-41A (network signalled value "CA_NS_07")

When "CA_NS_07" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3A.6-1. This requirement also applies for the frequency ranges that are less than $\mathrm{F}_{\text {оов }}(\mathrm{MHz})$ in Table 6.6.3.1A-1 from the edge of the aggregated channel bandwidth.

Table 6.6.3.3A.6-1: Additional requirements

| Protected band | Frequency range (MHz) |  |  | Maximum Level (dBm) | MBW (MHz) | NOTE |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Frequency range | 1805 | - | 1855 | -40 | 1 | 1 |
| Frequency range | 1855 | - | 1880 | -15.5 | 5 | $1,2,3$ |

NOTE 1: This requirement is applicable for carriers with aggregated channel bandwidths confined in 1885-1920 MHz .
NOTE 2: The requirement also applies for the frequency ranges that are less than FOOB $(\mathrm{MHz})$ in Table 6.6.3.1-1 and Table 6.6.3.1A-1 from the edge of the channel bandwidth.
NOTE 3: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.
6.6.3.3A. 7 Minimum requirement for CA_42C (network signalled value "CA_NS_08")

When "CA_NS_08" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3A.7-1. This requirement also applies for the frequency ranges that are less than $\mathrm{F}_{\text {OOB }}(\mathrm{MHz})$ in Table 6.6.3.1A-1 from the edge of the aggregated channel bandwidth.

Table 6.6.3.3A.7-1: Additional requirements

| Frequency band <br> (MHz) | Aggregated bandwidth / <br> Spectrum emission limit <br> (dBm) | MBW |
| :---: | :---: | :---: |
|  | $\mathbf{2 5 , 3 0 , 3 5 , \mathbf { 4 0 } \mathbf { ~ M H z ~ ( N o t e ~ }}$ |  |
| $\mathbf{1 )}$ |  |  |

NOTE 3: This requirement applies from 3400 MHz to 25 MHz below the lower E-UTRA channel edge and from 25 MHz above the upper E-UTRA channel edge to 3800 MHz.
NOTE 4: This emission limit might imply risk of harmful interference to UE(s) operating in the protected operating band.

### 6.6.3.3A.8 Minimum requirement for CA_41C and CA_41D (network signalled value "CA_NS_04")

When "CA_NS_04" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3A.8-1. This requirement also applies for the frequency ranges that are less than $\mathrm{F}_{\text {оов }}(\mathrm{MHz})$ in Table 6.6.3.1 $\mathrm{A}-1$ from the edge of the aggregated channel bandwidth.

Table 6.6.3.3A.8-1: Additional requirements

| Frequency band | Spectrum emission limit (dBm) | Measurement bandwidth |
| :---: | :---: | :---: |
| $\begin{gathered} 2490.5 \mathrm{MHz} \leq \mathrm{f}< \\ 2495 \mathrm{MHz} \end{gathered}$ | -13 | 1 MHz |
| $\begin{gathered} 9 \mathrm{kHz}<\mathrm{f}<2490.5 \\ \mathrm{MHz} \end{gathered}$ | -25 | 1 MHz |

### 6.6.3.3A. 9 Void

6.6.3.3A.10 Minimum requirement for CA_48B and CA_48C (network signalled value "CA_NS_10")

When "CA_NS_10" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3A.10-1. This requirement also applies for the frequency ranges that are less than $\mathrm{F}_{\text {OOB }}(\mathrm{MHz})$ in Table 6.6.3.1 $\mathrm{A}-1$ from the edge of the aggregated channel bandwidth.

Table 6.6.3.3A.10-1: Additional requirements

| Frequency range (MHz) | Aggregated bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
| :---: | :---: | :---: |
|  | 5, 10, 15, 20, 40 MHz |  |
| $9 \mathrm{kHz}-3530 \mathrm{MHz}$ | -40 | 1 MHz |
| $3530 \mathrm{MHz}-3540 \mathrm{MHz}$ | -25 |  |
| $3710 \mathrm{MHz}-3720 \mathrm{MHz}$ | -25 |  |
| $3720 \mathrm{MHz}-12.75 \mathrm{GHz}$ | -40 |  |

### 6.6.3A Void

<reserved for future use>

### 6.6.3B Spurious emission for UL-MIMO

For UE supporting UL-MIMO, the requirements for Spurious emissions which are caused by unwanted transmitter effects such as harmonics emission, parasitic emissions, intermodulation products and frequency conversion products are specified at each transmit antenna connector.

For UEs with two transmit antenna connectors in closed-loop spatial multiplexing scheme, the requirements in subclause 6.6.3 apply to each transmit antenna connector. The requirements shall be met with the UL-MIMO configurations specified in Table 6.2.2B-1.

If UE is configured for transmission on single-antenna port, the general requirements in subclause 6.6.3 apply.

### 6.6.3C Void

<reserved for future use>

### 6.6.3D Spurious emission for ProSe

When UE is configured for E-UTRA ProSe sidelink transmissions non-concurrent with E-UTRA uplink transmissions for E-UTRA ProSe operating bands specified in Table 5.5D-1, the requirements in subclause 6.6 .3 apply.

When UE is configured for simultaneous E-UTRA ProSe sidelink and E-UTRA uplink transmissions for inter-band EUTRA ProSe / E-UTRA bands specified in Table 5.5D-2, the UE co-existence requirements in Table 6.6.3.2A-0 in subclause 6.6.3.2A apply as specified for the corresponding inter-band aggregation with uplink assigned to two bands.

### 6.6.3F Spurious emission for category NB1 and NB2

When UE is configured for category NB1 or NB2 uplink transmissions the requirements in subclause 6.6 .3 apply with an exception that boundary between category NB1 or NB2 out of band and spurious emission domain shall be $\mathrm{F}_{\mathrm{OOB}}=$ 1.7 MHz.

### 6.6.3G Spurious emission for V2X Communication

When UE is configured for E-UTRA V2X sidelink transmissions non-concurrent with E-UTRA uplink transmissions for E-UTRA V2X operating bands specified in Table 5.5G-1, the requirements in subclause 6.6.3 apply.

When UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions for inter-band EUTRA V2X / E-UTRA bands specified in Table 5.5G-2, the UE-coexistence requirements in Table 6.6.3G-0 in subclause 6.6 .3 G apply as as specified for the corresponding inter-band con-current operation with uplink assigned to two bands.

Table 6.6.3G-0: Requirements for inter-band con-current V2X operation

| V2X concurrent band Configuration | Spurious emission |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

|  | Frequency range | 5925 | - | 5950 | -30 | 1 | 7, 8 |
|  | Frequency range | 5815 | - | 5855 | -30 | 1 | 7 |

NOTE 1: FDL_low and FDL_high refer to each E-UTRA frequency band specified in Table 5.5-1
NOTE 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1-2 are permitted for each assigned E-UTRA carrier used in the measurement due to $2^{\text {nd }}, 3^{\text {rd }}$, $4^{\text {th }}$ [or $\left.5^{\text {th }}\right]$ harmonic spurious emissions. In case the exceptions are allowed due to spreading of the harmonic emission the exception is also allowed for the first 1 MHz frequency range immediately outside the harmonic emission on both sides of the harmonic emission. This results in an overall exception interval centred at the harmonic emission of ( $2 \mathrm{MHz}+\mathrm{N} \times \mathrm{L}_{\mathrm{crB}} \times 180 \mathrm{kHz}$ ), where $N$ is 2,3 or 4 for the $2^{\text {nd }}, 3^{\text {rd }}$ or $4^{\text {th }}$ harmonic respectively. The exception is allowed if the measurement bandwidth (MBW) totally or partially overlaps the overall exception interval.
NOTE 3: These requirements also apply for the frequency ranges that are less than Foов (MHz) in Table 6.6.3.1-1 and Table 6.6.3.1A-1 from the edge of the aggregated channel bandwidth.

NOTE 4: For these adjacent bands, the emission limit could imply risk of harmful interference to $\mathrm{UE}(\mathrm{s})$ operating in the protected operating band.

For intra-band contiguous multi-carrier operation, the boundary between E-UTRA out of band and spurious emission domain for intra-band contiguous carrier aggregation specified in Table $6.6 .3 .1 \mathrm{~A}-1$ shall apply.

For intra-band contiguous multi-carrier operation, the spurious emission requirements in Table 6.6.3G-1 shall apply for coexistence with protected bands.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

Table 6.6.3G-1: Requirements for intraband multi-carrier V2X operation

| V2X <br> multicarrier Config uration | Spurious emission |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Protected band | Frequency range (MHz) |  |  | Maximum Level (dBm) | $\begin{aligned} & \hline \text { MBW } \\ & (\mathrm{MHz}) \end{aligned}$ | NOTE |
| $\begin{gathered} \text { V2X_47 } \\ B \end{gathered}$ | E-UTRA Band 1, 3, 5, 7, 8, 22, 26, 28, $34,39,40,41,42,44,45,50,51,52,65$ NR band $\mathrm{n} 77, \mathrm{n} 78, \mathrm{n} 79$ | $F_{\text {DL_Iow }}$ | - | $\mathrm{F}_{\text {DL_high }}$ | -50 | 1 |  |

For V2X UEs supportingTransmit Diversity, the requirements specified for single carrier shall apply to each transmit antenna connector.

If V2X UE is configured for transmission on single-antenna connector, the general requirements specified for single carrier shall apply to the active antenna connector.

### 6.6A Void

6.6B Void

### 6.7 Transmit intermodulation

The transmit intermodulation performance is a measure of the capability of the transmitter to inhibit the generation of signals in its non linear elements caused by presence of the wanted signal and an interfering signal reaching the transmitter via the antenna.

### 6.7.1 Minimum requirement

User Equipment(s) transmitting in close vicinity of each other can produce intermodulation products, which can fall into the UE, or eNode B receive band as an unwanted interfering signal. The UE intermodulation attenuation is defined by the ratio of the mean power of the wanted signal to the mean power of the intermodulation product when an interfering CW signal is added at a level below the wanted signal at each of the transmitter antenna port with the other antenna port(s) if any is terminated. Both the wanted signal power and the intermodulation product power are measured through E-UTRA rectangular filter with measurement bandwidth shown in Table 6.7.1-1.

The requirement of transmitting intermodulation is prescribed in Table 6.7.1-1.
Table 6.7.1-1: Transmit Intermodulation

| BW Channel (UL) | 5 MHz |  | 10 MHz |  | 15 MHz |  | 20 MHz |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Interference Signal <br> Frequency Offset | 5 MHz | 10 MHz | 10 MHz | 20 MHz | 15 MHz | 30 MHz | 20 MHz | 40 MHz |
| Interference CW Signal <br> Level | $-40 \mathrm{dBc}$ |  |  |  |  |  |  |  |
| Intermodulation Product | -29 dBc | -35 dBc | -29 dBc | -35 dBc | -29 dBc | -35 dBc | -29 dBc | -35 dBc |
| Measurement bandwidth | 4.5 MHz | 4.5 MHz | 9.0 MHz | 9.0 MHz | 13.5 MHz | 13.5 MHz | 18 MHz | 18 MHz |

### 6.7.1A Minimum requirement for CA

User Equipment(s) transmitting in close vicinity of each other can produce intermodulation products, which can fall into the UE, or eNode B receive band as an unwanted interfering signal. The UE intermodulation attenuation is defined by the ratio of the mean power of the wanted signal to the mean power of the intermodulation product on both component carriers when an interfering CW signal is added at a level below the wanted signal at each of the transmitter antenna port with the other antenna port(s) if any is terminated. Both the wanted signal power and the intermodulation product power are measured through rectangular filter with measurement bandwidth shown in Table 6.7.1A-1.

For inter-band carrier aggregation with one component carrier per operating band and the uplink active in two E-UTRA bands, the requirement is specified in Table 6.7.1-1 which shall apply on each component carrier with both component carriers active.

For intra-band contiguous carrier aggregation the requirement of transmitting intermodulation is specified in Table 6.7.1A-1.

Table 6.7.1A-1: Transmit Intermodulation

| CA bandwidth class(UL) | B and C |  |
| :--- | :--- | :--- |
| Interference Signal <br> Frequency Offset | BW Channel_CA | 2*BW Channel_CA $^{\|c\|}$ |
| Interference CW Signal <br> Level | $-40 \mathrm{dBc}$ |  |

| Intermodulation Product | -29 dBc | -35 dBc |
| :--- | :--- | :---: |
| Measurement bandwidth | BWChannel_CA- 2* BWGG |  |

For combinations of intra-band and inter-band carrier aggregation with three uplink component carriers (up to two contiguously aggregated carriers per band) transmit intermodulations is defined as follows. For the E-UTRA band supporting one component carrier the requirement specified in Table 6.7.1-1 apply. For the E-UTRA band supporting two contiguous component carriers the requirements specified in Table $6.7 .1 \mathrm{~A}-1$ apply.

### 6.7.1B Minimum requirement for UL-MIMO

For UE supporting UL-MIMO, the transmit intermodulation requirements are specified at each transmit antenna connector and the wanted signal is defined as the sum of output power at each transmit antenna connector.

For UEs with two transmit antenna connectors in closed-loop spatial multiplexing scheme, the requirements in subclause 6.7.1 apply to each transmit antenna connector. The requirements shall be met with the UL-MIMO configurations specified in Table 6.2.2B-2.

If UE is configured for transmission on single-antenna port, the requirements in subclause 6.7.1 apply.

### 6.7.1F Minimum requirement for category NB1 and NB2

The UE category NB1 and NB2 transmitter intermodulation attenuation is defined by the ratio of the mean power of the wanted signal to the mean power of the intermodulation product as defined in Table 6.7.1F-1 when an interfering CW signal is added at a level below the wanted signal at the transmitter antenna port. Both the wanted signal power and the intermodulation product power are measured through rectangular filter with measurement bandwidth shown in Table 6.7.1F-1.

Table 6.7.1F-1: UE category NB1 and NB2 transmitter IM requirement

| Parameters for transmitter intermodulation |  |  |
| :---: | :---: | :---: |
| BW Channel (UL) | 15 kHz (1 tone at sub-carrier 5 or 6) |  |
| Interference Signal Frequency Offset | 180 kHz | 360 kHz |
| Interference CW Signal Level | $-40 \mathrm{dBc}$ |  |
| Intermodulation Product | -20 dBc | -39 dBc |
| Measurement bandwidth | 30 kHz | 30 kHz |

### 6.7.1G Minimum requirement for V2X Communication

When UE is configured for E-UTRA V2X sidelink transmissions non-concurrent with E-UTRA uplink transmissions for E-UTRA V2X operating bands specified in Table Table 5.5G-1, the requirements in subclause 6.7.1 apply for EUTRA V2X sidelink transmission.

When UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions for inter-band EUTRA V2X / E-UTRA bands specified in Table 5.5G-2, the requirements in subclause 6.7.1 apply for V2X sidelink transmission and the E-UTRA uplink transmission.

For intra-band contiguous multi-carrier operation, the transmit intermodulation requirement for CA Bandwidth Class B specified in subclause 6.7.1A shall apply for V2X Bandwdith Class B, the general CA spectrum emission mask for CA Bandwidth Class C specified in subclause 6.7.1A shall apply for V2X Bandwdith Class C and $\mathrm{C}_{1}$.

For V2X UE supporting Transmit Diversity, if the UE transmits on two antenna connectors at the same time, the requirements specified for single carrier shall apply to each transmit antenna connector. If the UE transmits on one antenna connector, the requirements specified for single carrier shall apply to the active antenna connector.

### 6.8 Void

6.8A Void

### 6.8B Time alignment error for UL-MIMO

For UE(s) with multiple transmit antenna connectors supporting UL-MIMO, this requirement applies to frame timing differences between transmissions on multiple transmit antenna connectors in the closed-loop spatial multiplexing scheme.

The time alignment error (TAE) is defined as the average frame timing difference between any two transmissions on different transmit antenna connectors.

### 6.8B.1 Minimum Requirements

For UE(s) with multiple transmit antenna connectors, the Time Alignment Error (TAE) shall not exceed 130 ns.

### 6.8C Void

6.8D Void
6.8E Void
6.8F Void

### 6.8G Time alignment error

For V2X UE(s) with two transmit antenna connectors in Transmit Diversity scheme, this requirement applies to frame timing differences between transmissions on two transmit antenna connectors.The Time Alignment Error (TAE) shall not exceed [260] ns.

## 7 Receiver characteristics

### 7.1 General

Unless otherwise stated the receiver characteristics are specified at the antenna connector(s) of the UE. For UE(s) with an integral antenna only, a reference antenna(s) with a gain of 0 dBi is assumed for each antenna port(s). UE with an integral antenna(s) may be taken into account by converting these power levels into field strength requirements, assuming a 0 dBi gain antenna. . For UEs with more than one receiver antenna connector, identical interfering signals shall be applied to each receiver antenna port if more than one of these is used (diversity).

The levels of the test signal applied to each of the antenna connectors shall be as defined in the respective sections below.

With the exception of subclause 7.3 , the requirements shall be verified with the network signalling value NS_01 configured (Table 6.2.4-1).

All the parameters in clause 7 are defined using the UL reference measurement channels specified in Annexes A.2.2 and A.2.3, the DL reference measurement channels specified in Annex A.3.2 and using the set-up specified in Annex C.3.1.

For the additional requirements for intra-band non-contiguous carrier aggregation of two or more sub-blocks, an in-gap test refers to the case when the interfering signal is located at a negative offset with respect to the assigned lowest channel frequency of the highest sub-block and located at a positive offset with respect to the assigned highest channel frequency of the lowest sub-block.

For the additional requirements for intra-band non-contiguous carrier aggregation of two or more sub-blocks, an out-ofgap test refers to the case when the interfering signal(s) is (are) located at a positive offset with respect to the assigned channel frequency of the highest carrier frequency, or located at a negative offset with respect to the assigned channel frequency of the lowest carrier frequency.

For the additional requirements for intra-band non-contiguous carrier aggregation of two or more sub-blocks with channel bandwidth larger than or equal to 5 MHz , the existing adjacent channel selectivity requirements, in-band blocking requirements (for each case), and narrow band blocking requirements apply for in-gap tests only if the corresponding interferer frequency offsets with respect to the two measured carriers satisfy the following condition in relation to the sub-block gap size $\mathrm{W}_{\text {gap }}$ for at least one of these carriers $j=1,2$, so that the interferer frequency position does not change the nature of the core requirement tested:

$$
\text { Wgap } \left.\geq 2 \cdot \mid \text { FInterferer }^{(\text {offset })_{j} \mid} \mid-\operatorname{BWChannel}_{(j)}\right)
$$

where $\mathrm{F}_{\text {Interferer (offset }) j}$ for a sub-block with a single component carrier is the interferer frequency offset with respect to carrier $j$ as specified in subclause 7.5.1, subclause 7.6.1 and subclause 7.6 .3 for the respective requirement and $\mathrm{BW}_{\text {Channel }(j)}$ the channel bandwidth of carrier $j$. $\mathrm{F}_{\text {Interferer (offset), }}$ for a sub-block with two or more contiguous component carriers is the interference frequency offset with respect to the carrier adjacent to the gap is specified in subclause 7.5.1A, 7.6.1A and 7.6.3A. The interferer frequency offsets for adjacent channel selectivity, each in-band blocking case and narrow- band blocking shall be tested separately with a single in-gap interferer at a time.

For a ProSe UE that supports both ProSe Direct Discovery and ProSe Direct Communication, the receiver characteristics specified in clause 7 for ProSe Direct Communication shall apply.

For ProSe Direct Discovery and ProSe Direct Communication on E-UTRA ProSe operating bands that correspond to TDD E-UTRA operating bands as specified in subclause 5.5D, the only additional requirement for ProSe specified in subcaluse 7.4.1D is applicable.

### 7.2 Diversity characteristics

The requirements in Section 7 assume that the receiver is equipped with two Rx port as a baseline. These requirements apply to all UE categories unless stated otherwise. Additional requirements apply for UE(s) equipped with four Rx ports. These additional requirements also apply for supported band combinations for which the UE can operate using up to four Rx ports while configured with carrier aggregation. With the exception of subclause 7.9 all requirements shall be verified by using both (all) antenna ports simultaneously.

NOTE: for an operating band in which the UE can operate using up to four Rx ports, it suffices to verify for conformance the additional requirements applicable for four Rx ports [except for REFSENS].

NOTE: Implementation of 4 antenna ports for all operating bands supported by the UE is not mandated.
For a category 0, a category [M 1], category 1bis, category NB1 and NB2 UE the requirements in Section 7 assume that the receiver is equipped with single Rx port.

### 7.3 Reference sensitivity power level

The reference sensitivity power level REFSENS is the minimum mean power applied to each one of the UE antenna ports for all UE categories except category 0 , category M1, category M2, and category 1 bis, or to the single antenna port for UE category 0 , UE category M1, category M2, and UE category 1bis, at which the throughput shall meet or exceed the requirements for the specified reference measurement channel.

The throughput for the REFSENS test is measured based on the Transmission Mode 1 unless specified otherwise.

### 7.3.1 Minimum requirements (QPSK)

The throughput shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP. 1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3.1-1 and Table 7.3.1-2

Table 7.3.1-1: Reference sensitivity QPSK Prefsens

| Channel bandwidth |  |  |  |  |  |  |  |

| level is FFS. |  |  |  |  |  |  |  |

For UE(s) equipped with 4 antenna ports, the minimum requirement for reference sensitivity in Table 7.3.1-1 shall be modified by the amount given in $\Delta \mathrm{R}_{\mathrm{IB}, 4 \mathrm{R}}$ in Table 7.3.1-1a for the applicable E-UTRA bands.

Table 7.3.1-1a: $\Delta R_{I B, 4 R}$

| E-UTRA Band | $\Delta \mathbf{R}_{\text {IB, } 4 \mathrm{R}}[\mathrm{dB}]$ |
| :---: | :---: |
| $1,2,3,4,7,20,21,25,30,34,39,40,41,66$ | -2.7 |
| $42,43,52$ | -2.2 |

For UE(s) equipped with 8 antenna ports, the minimum requirement for reference sensitivity in Table 7.3.1-1 shall be modified by the amount given in $\Delta \mathrm{R}_{\mathrm{IB}, 8 \mathrm{R}}$ in Table 7.3.1-1 aa for the applicable E-UTRA bands.

Table 7.3.1-1aa: $\Delta R_{I B, 8 R}$

| E-UTRA Band | $\Delta$ RIB,8R [dB] |
| :---: | :---: |
| $41,42,43$ | -4 |

For UE(s) supporting power class 1 in any of the E-UTRA bands given in table 7.3.1-1b, the following exceptions due to the high power leakage or blocking issue shall apply. The throughput shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP. 1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3.1-1b and Table 7.3.1-2.

Table 7.3.1-1b: Reference sensitivity for power class 1 QPSK PREFSENS (Exception due to high power issue)

## Channel bandwidth

| $\begin{aligned} & \text { E-UTRA } \\ & \text { Band } \end{aligned}$ | $\begin{gathered} \text { 1.4 MHz } \\ \text { (dBm) } \end{gathered}$ | $\begin{aligned} & \hline 3 \mathrm{MHz} \\ & (\mathrm{dBm}) \end{aligned}$ | $\begin{aligned} & 5 \mathrm{MHz} \\ & \text { (dBm) } \end{aligned}$ | $\begin{gathered} 10 \mathrm{MHz} \\ (\mathrm{dBm}) \end{gathered}$ | $\begin{gathered} 15 \mathrm{MHz} \\ (\mathrm{dBm}) \end{gathered}$ | $\begin{gathered} 20 \mathrm{MHz} \\ (\mathrm{dBm}) \end{gathered}$ | Duplex <br> Mode |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 20 |  |  | -92.8 | -90.9 | -89.5 | -88.5 | FDD |
| NOTE 1: The transmitter shall be set to Pumax as defined in subclause 6.2.5 <br> NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP. 1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 <br> NOTE 3: The signal power is specified per port. |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |

The reference receive sensitivity (REFSENS) requirement specified in Table 7.3.1-1 (two antenna ports) and Table 7.3.1-1a (four antenna ports) shall be met for an uplink transmission bandwidth less than or equal to that specified in Table 7.3.1-2.

NOTE: Table 7.3.1-2 is intended for conformance tests and does not necessarily reflect the operational conditions of the network, where the number of uplink and downlink allocated resource blocks will be practically constrained by other factors. Typical receiver sensitivity performance with HARQ retransmission enabled and using a residual BLER metric relevant for e.g. Speech Services is given in the Annex G (informative).For the UE which supports inter-band carrier aggregation configuration with the uplink in one or two E-UTRA bands, the minimum requirement for reference sensitivity in Table 7.3.1-1 and Table 7.3.1-1 a shall be increased by the amount given in $\Delta \mathrm{R}_{\mathrm{IB}, \mathrm{c}}$ in Table 7.3.1-1 A , Table 7.3.1-1B and Table 7.3.1-1C for the applicable E-UTRA bands where unless otherwise stated, the same $\Delta \mathrm{R}_{\mathrm{IB}, \mathrm{c}}$ is applicable to E-UTRA band(s) part for CA configurations which have the same E-UTRA operating band combination.

Table 7.3.1-1A: $\Delta R_{\text {IB, }}$ (two bands)

NOTE 1: The above additional tolerances are only applicable for the E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations
NOTE 2: The above additional tolerances also apply in intra-band and non-aggregated operation for the supported E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations
NOTE 3: In case the UE supports more than one of the above 2DL inter-band carrier aggregation configurations and a E-UTRA operating band belongs to more than one 2DL inter-band carrier aggregation configurations then:

- When the E-UTRA operating band frequency range is $\leq 1 \mathrm{GHz}$, the applicable additional tolerance shall be the average of the 2DL tolerances in Table 7.3.1-1A, truncated to one decimal place that would apply for that operating band among the supported 2DL CA configurations. In case there is a harmonic relation between low band UL and high band DL, then the maximum tolerance among the different supported 2DL carrier aggregation configurations involving such band shall be applied
- When the E-UTRA operating band frequency range is $>1 \mathrm{GHz}$, the applicable additional tolerance shall be the maximum 2DL tolerance in Table 7.3.1-1A that would apply for that operating band among the supported 2DL CA configurations
NOTE 4: Only applicable for UE supporting inter-band carrier aggregation with uplink in one E-UTRA band and without simultaneous Rx/Tx.
NOTE 5: Unless otherwise specified, in case the UE supports more than one of the above 3DL inter-band carrier aggregation configurations and a E-UTRA operating band belongs to more than one 3DL inter-band carrier aggregation configurations then:
- When the E-UTRA operating band frequency range is $\leq 1 \mathrm{GHz}$ and the tolerances are the same, the value applies to the band. If the tolerances are different, the applicable additional 3DL tolerance is FFS. In case there is a harmonic relation between low band UL and high band DL, then the maximum tolerance among the different supported 3DL carrier aggregation configurations involving such band shall be applied
- When the E-UTRA operating band frequency range is $>1 \mathrm{GHz}$, the applicable additional 3DL tolerance shall be the maximum tolerance above that applies for that operating band among the supported 3DL CA configurations.
NOTE 6: The above additional tolerances applicable for the E-UTRA operating bands that belong to the supported highest order inter-band carrier aggregation configuration, also applies to the same E-UTRA operating bands that belong to a supported lower order CA configuration.
NOTE 7: Applicable for UE supporting inter-band carrier aggregation without simultaneous $\mathrm{Rx} / \mathrm{Tx}$.
NOTE 8: Only applicable for UE supporting inter-band carrier aggregation with the uplink active in the FDD band.
NOTE 9: For Band 28, the requirements only apply for the restricted frequency range specified for this CA configuration (Table 5.5A-2).
NOTE 10: The requirement is applied for UE transmitting on the frequency range of 25452690MHz.
NOTE 11: The requirement is applied for UE transmitting on the frequency range of 24962545 MHz .
NOTE 12: For UE supporting E-UTRA band 42,43 or 48 and CA configurations including Band 42,43 or 48 , the applicable $\Delta R_{I B, c}$ in Band 42,43 , or 48 is the max(Band $42 \Delta R_{I B, c}$, Band $43 \Delta R_{I B, c}$, Band $48 \Delta R_{I B, c}$.
NOTE 13: Only applicable for UE supporting inter-band carrier aggregation with the uplink active in Band 8.

NOTE: To meet the $\Delta \mathrm{R}_{\text {IB, }, ~}$ requirements for CA_20A-28A state-of-the-art filter combiner technology is needed.

Table 7.3.1-1B: $\Delta R_{\text {IB,c }}$ (three bands)

| E-UTRA operating band combination | E-UTRA Band | $\left.\Delta \mathrm{RIB}, \mathrm{c}^{\text {[ }} \mathrm{dB}\right]$ |

NOTE 1: The above additional tolerances are only applicable for the E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations.
NOTE 2: The above additional tolerances also apply in intra-band and nonaggregated operation for the supported E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations.
NOTE 3: Unless otherwise specified, in case the UE supports more than one of the above 3DL inter-band carrier aggregation configurations and a E-UTRA operating band belongs to more than one 3DL inter-band carrier aggregation configurations then:

When the E-UTRA operating band frequency range is $\leq 1 \mathrm{GHz}$ and the tolerances are the same, the value applies to the band. If the tolerances are different, the applicable additional 3DL tolerance is FFS. In case there is a harmonic relation between low band UL and high band DL , then the maximum tolerance among the different supported 3DL carrier aggregation configurations involving such band shall be applied

- When the E-UTRA operating band frequency range is $>1 \mathrm{GHz}$, the applicable additional 3DL tolerance shall be the maximum tolerance above that applies for that operating band among the supported 3DL CA configurations.

NOTE 4: The above additional tolerances applicable for the E-UTRA operating bands that belong to the supported highest order inter-band carrier aggregation configuration, also applies to the same E-UTRA operating bands that belong to a supported lower order CA configuration.
NOTE 5: The requirement is specified for the frequency range of $2545-2690 \mathrm{MHz}$.
NOTE 6: The requirement is specified for the frequency range of $2496-2545 \mathrm{MHz}$.
NOTE 7: Only applicable for UE supporting inter-band carrier aggregation with the uplink active in Band 1 or Band 42.
NOTE 8: Only applicable for UE supporting inter-band carrier aggregation with uplink in one E-UTRA band and without simultaneous Rx/Tx on Band 41 and Band 42.
NOTE 9: Applicable for UE supporting inter-band carrier aggregation without simultaneous $\mathrm{Rx} / \mathrm{Tx}$ among TDD bands.
NOTE 10: Only applicable for UE supporting inter-band carrier aggregation with the uplink active in Band 1 or Band 8.
NOTE 11: Only applicable for UE supporting inter-band carrier aggregation with the uplink active in Band 3 or Band 8.
NOTE 12: Applicable for UE supporting inter-band carrier aggregation without simultaneous $\mathrm{Rx} / \mathrm{Tx}$ among TDD bands.
NOTE 13: Applicable for UE supporting inter-band carrier aggregation without simultaneous $\mathrm{Rx} / \mathrm{Tx}$ among TDD bands.
NOTE 14: Only applicable for UE supporting inter-band carrier aggregation with the uplink active in Band 8 or Band 41.
NOTE 15: For UE supporting E-UTRA band 42,43 or 48 and CA configurations including Band 42,43 or 48 , the applicable $\Delta$ Rib,c in Band 42,43 , or 48 is the max(Band $42 \Delta R_{i b, c}$, Band $43 \Delta R_{i b, c}$, Band $48 \Delta R_{i b, c}$.
NOTE 16: Only applicable for UE supporting inter-band carrier aggregation with the uplink active in Band 8 or Band 11.
NOTE17: Only applicable for UE supporting inter-band carrier aggregation with uplink in one E-UTRAN band and without simultaneous Rx/Tx on Band 39 and Band 41.
NOTE 18: Only applicable for UE supporting inter-band carrier aggregation with uplink in one E-UTRA band and without simultaneous Rx/Tx among TDD bands.

Table 7.3.1-1C: $\Delta R_{\text {IB,c }}$ (four bands)

NOTE 1: The above additional tolerances are only applicable for the E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations.
NOTE 2: The above additional tolerances also apply in intra-band and nonaggregated operation for the supported E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations.
NOTE 3: Tolerances for a UE supporting multiple 4DL inter-band CA configurations are FFS.
NOTE 4: The above additional tolerances applicable for the E-UTRA operating bands that belong to the supported highest order inter-band carrier aggregation configuration, also applies to the same E-UTRA operating bands that belong to a supported lower order CA configuration.
NOTE 5: For UE supporting E-UTRA band 42,43 or 48 and CA configurations including Band 42,43 or 48 , the applicable $\Delta R_{I B, c}$ in Band 42,43 , or 48 is the max (Band $42 \Delta R_{i b, c}$, Band $43 \Delta R_{i b, c}$, Band $48 \Delta R_{i b, c}$.
NOTE 6: The requirement is applied for UE transmitting on the frequency range of $2545-2690 \mathrm{MHz}$.
NOTE 7: The requirement is applied for UE transmitting on the frequency range of $2496-2545 \mathrm{MHz}$.
NOTE 8: Only applicable for UE supporting inter-band carrier aggregation with the uplink active in Band 1, Band 3 or Band 8.
NOTE 9: Only applicable for UE supporting inter-band carrier aggregation with the uplink active in Band 1, Band 8 or Band 11.
NOTE 10: Only applicable for UE supporting inter-band carrier aggregation with the uplink active in Band 3, Band 8 or Band 11.
NOTE 11: Applicable for UE supporting inter-band carrier aggregation without simultaneous $\mathrm{Rx} / \mathrm{Tx}$ among TDD bands.

|  | 32 | 0 |
|  | 42 | 0.5 |

NOTE 1: The above additional tolerances are only applicable for the E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations.
NOTE 2: The above additional tolerances also apply in intra-band and nonaggregated operation for the supported E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations.
NOTE 3: Tolerances for a UE supporting multiple 5DL inter-band CA configurations are FFS.
NOTE 4: The above additional tolerances applicable for the E-UTRA operating bands that belong to the supported highest order inter-band carrier aggregation configuration, also applies to the same E-UTRA operating bands that belong to a supported lower order CA configuration.

NOTE: The above additional tolerances do not apply to supported UTRA operating bands with frequency range below 1 GHz that correspond to the E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations when such bands are belonging only to band combination(s) where one band is $<1 \mathrm{GHz}$ and other bands are $>1.7 \mathrm{GHz}$ and there is no harmonic relationship between the low band UL and high band DL. Otherwise the above additional tolerances also apply to supported UTRA operating bands that correspond to the E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations.

### 7.3.1A Minimum requirements (QPSK) for CA

For inter-band carrier aggregation with one component carrier per operating band and the uplink assigned to one EUTRA band the throughput shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP. 1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3.1-1, Table 7.3.1-1a and Table 7.3.1-2. The reference sensitivity is defined to be met with all downlink component carriers active and one of the uplink carriers active. The uplink resource blocks shall be located as close as possible to the primary downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.6-1). The primary downlink operating band is the downlink band of the active uplink operating band. The UE shall meet the requirements specified in subclause 7.3 .1 with the following exceptions.

For the bands supporting 4 antenna ports which are in Table 7.3.1-1a, the minimum requirements for reference sensitivity in the reference sensitivity exception tables shall be modified by the amount given in $\Delta \mathrm{R}_{\mathrm{IB}, 4 \mathrm{R}}$ in Table 7.3.11a for the applicable E-UTRA bands unless otherwise specified.

For the bands supporting 8 antenna ports which are in Table 7.3.1-1aa, the minimum requirements for reference sensitivity in the reference sensitivity exception tables shall be modified by the amount given in $\Delta \mathrm{R}_{\mathrm{IB}, 8 \mathrm{R}}$ in Table 7.3.11aa for the applicable E-UTRA bands unless otherwise specified.

For the UE that supports any of the E-UTRA CA configurations given in Table 7.3.1A-0a, exceptions to the requirements for a band(s) specified in subclause 7.3.1 are allowed when the band(s) is impacted by harmonic interference from the uplink transmission in a lower-frequency band of the same CA configuration. For these exceptions, the UE shall meet the requirements specified in Table 7.3.1A-0a and Table 7.3.1A-0b.

NOTE 1: The transmitter shall be set to Pumax as defined in subclause 6.2.5A.
NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP. 1 FDD/TDD/FS3 as described in Annex A.5.1.1/A.5.2.1/A.5.4.1.
NOTE 3: The signal power is specified per port
NOTE 4: No requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the low band for which the $2^{\text {nd }}$ transmitter harmonic is within the downlink transmission bandwidth of the high band. The reference sensitivity for all active downlink component carriers is only verified when this is not the case (the requirements specified in clause 7.3.1 apply unless otherwise specified).
NOTE 5: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of a low band for which the $3^{\text {rd }}$ transmitter harmonic is within the downlink transmission bandwidth of a high band.
NOTE 6: The requirements should be verified for UL EARFCN of a low band (superscript LB) such that $f_{U L}^{L B}=\left\lfloor f_{D L}^{H B} / 0.3\right\rfloor 0.1$ in MHz and $F_{U L_{-l} \text { low }}^{L B}+B W_{\text {Channel }}^{L B} / 2 \leq f_{U L}^{L B} \leq F_{U L}^{L B}$ high $-B W_{\text {Channel }}^{L B} / 2$ with $f_{D L}^{H B}$ the carrier frequency of a high band in MHz and $B W_{\text {Channel }}^{L B}$ the channel bandwidth configured in the low band.
NOTE 7: Void.
NOTE 8: No requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the low band for which the $3^{\text {rd }}$ transmitter harmonic is within the downlink transmission bandwidth of the high band. The reference sensitivity is only verified when this is not the case (the requirements specified in clause 7.3.1 apply).
NOTE 9: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the aggressor (lower) band for which the $2^{\text {nd }}$ transmitter harmonic is within the downlink transmission bandwidth of a victim (higher) band and a range $\Delta F H D$ above and below the edge of this downlink transmission bandwidth. The value $\Delta \mathrm{F}_{\mathrm{HD}}$ depends on the E-UTRA configuration: $\Delta \mathrm{F}_{\mathrm{HD}}=10 \mathrm{MHz}$ for CA 3A-42A, CA_3A-3A-42A, CA_3A-42A-42A, CA_1A-3A-20A-32A-42A, CA_3A-42A-43A, CA_3A-32A-42A-43A, CA_1A-3A-42A, CA_2A-13A-48A-66A, CA_2A-48A, CA_2A-48C, CA_2A-48D, CA_48A66A, CA_3A-7A-42 $A$, CA_3A-19A- $-42 A, C A \_3 A-20 A-42 A, ~ C A \_3 A-28 A-\overline{42 A, ~ C A \_1 A-3 A-7 A-42 A, ~ C A \_5 A-~}$ 48A-66A, CA_5A-48A-66A-66A, CA_13A-48A-66A, CA_13A-48A-66A-66A, CA_13A-48A-66B, CA_13A-48A-66C, CA_13A-48A-48A-66A, CA_13A-48C-66A, CA_13A-48D-66A, CA_13A-48A-48C-66A, CA_28A32A, CA_48A-66A-66A, CA_48A-66B-, CA_48A-66C, CA_-48A-48A-66A, CA_48C-66A, CA_48A-48A-66A66A, CA_48A-48A-66B, CA_48A-48A-66C, CA_48C-66B, CA_48C-66C, CA_48E-66A, CA_1A-3A-18A42A, CA_1A-3A-19A-42A, CA_1A-3A-32A-42A, CA_1A-3A-41A-42A, CA_3A-7A-20A-42A, CA_3A-20A-32A-42A, CA_3A-28A-41A-42A, CA_3A-18A-42A, CA_3A-18A-42C, CA_3A-8A-42A and CA_3A-8A-42C. $\Delta \mathrm{F}$ нд $=0 \mathrm{MHz}$ for CA_11A-28A, CA_1A-11A-28A and CA $\_3 \mathrm{~A}-11 \mathrm{~A}-28 \mathrm{~A}$.
NOTE 10: The requirements should be verified for UL EARFCN of the aggressor (lower) band (superscript LB) such that $f_{U L}^{L B}=\left\lfloor f_{D L}^{H B} / 0.2\right\rfloor 0.1$ in MHz and $F_{U L_{-} \text {low }}^{L B}+B W_{\text {Channel }}^{L B} / 2 \leq f_{U L}^{L B} \leq F_{U L_{-} \text {high }}^{L B}-B W_{\text {Channel }}^{L B} / 2$ with $f_{D L}^{H B}$ carrier frequency in the victim (higher) band in MHz and $B W_{\text {Channel }}^{L B}$ the channel bandwidth configured in the lower band.
NOTE 11: The requirements are only applicable to channel bandwidths with a carrier frequency at $\pm\left(20+B W_{\text {Channel }}^{H B} / 2\right) \mathrm{MHz}$ offset from $2 f_{U L}^{L B}$ in the victim (higher band) with $F_{U L_{-} \text {low }}^{L B}+B W_{\text {Channel }}^{L B} / 2 \leq f_{U L}^{L B} \leq F_{U L_{-} \text {high }}^{L B}-B W_{\text {Channel }}^{L B} / 2$, where $B W_{\text {Channel }}^{L B}$ and $B W_{\text {Channel }}^{H B}$ are the channel bandwidths configured in the aggressor (lower) and victim (higher) bands in MHz , respectively.
NOTE 12: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of a low band for which the $4^{\text {th }}$ transmitter harmonic is within the downlink transmission bandwidth of a high band.
NOTE 13: The requirements should be verified for UL EARFCN of a low band (superscript LB) such that $f_{U L}^{L B}=\left\lfloor f_{D L}^{H B} / 0.4\right\rfloor 0.1 \mathrm{in} \mathrm{MHz}$ and $F_{U L_{-l} \text { low }}^{L B}+B W_{C h a n n e l}^{L B} / 2 \leq f_{U L}^{L B} \leq F_{U L_{-} \text {high }}^{L B}-B W_{C h a n n e l}^{L B} / 2$ with $f_{D L}^{H B}$ the carrier frequency of a high band in MHz and $B W_{\text {Channel }}^{L B}$ the channel bandwidth configured in the low band.
NOTE 14: For the UE that supports CA_1A-18A-28A or CA_1A-19A-28A, no requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the low band for which the $3^{\text {rd }}$ transmitter harmonic is within the downlink transmission bandwidth of the high band. The reference sensitivity should only be verified when this is not the case (the requirements specified in clause 7.3.1 apply).
NOTE 15: These requirements apply when there is at least one individual RE within the downlink transmission bandwidth of the victim (lower) band for which the $3^{\text {rd }}$ harmonic is within the uplink transmission bandwidth or the uplink adjacent channel's transmission bandwidth of an aggressor (higher) band.

NOTE 16: The requirements should be verified for UL EARFCN of the aggressor (higher) band (superscript HB) such
that $f_{D L}^{L B}=\left\lfloor f_{U L}^{H B} / 0.3\right\rfloor 0.1$ in MHz and $F_{U L_{-} \text {low }}^{L B}+B W_{\text {Channel }}^{L B} / 2 \leq f_{U L}^{L B} \leq F_{U L_{-} h i g h}^{L B}-B W_{\text {Channel }}^{L B} / 2$ with $f_{D L}^{L B}$ the carrier frequency in the victim (lower) band and $B W_{\text {Channel }}^{H B}$ the channel bandwidth configured in the higher band.
NOTE 17: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of a low band for which the $5^{\text {th }}$ transmitter harmonic is within the downlink transmission bandwidth of a high band.
NOTE 18: The requirements should be verified for UL EARFCN of a low band (superscript LB) such that
$f_{U L}^{L B}=\left\lfloor f_{D L}^{H B} / 0.5\right\rfloor 0.1 \mathrm{in} \mathrm{MHz}$ and $F_{U L_{-} l o w}^{L B}+B W_{C h a n n e l}^{L B} / 2 \leq f_{U L}^{L B} \leq F_{U L_{-} \text {high }}^{L B}-B W_{C h a n n e l}^{L B} / 2$ with $f_{D L}^{H B}$ the carrier frequency of a high band in MHz and $B W_{\text {Channel }}^{L B}$ the channel bandwidth configured in the low band.
NOTE 19: No requirements apply for the case that there is at least one individual RE within the uplink transmission bandwidth of the relative higher band and when the frequency range of relative higher band's uplink channel bandwidth or uplink $1^{\text {st }}$ adjacent channel bandwidth is fully or partially overlapped with the 3 times of the frequency range of the relative lower band's downlink channel bandwidth. The reference sensitivity is only verified when this is not the case (the requirements specified in clause 7.3.1 apply).
NOTE 20: Void
NOTE 21: No requirements apply when there is at least one individual RE on band 28 uplink outside frequencies 728 -738 MHz . The reference sensitivity is only verified when all configured RE's are confined within frequencies $728-738 \mathrm{MHz}$ (the requirements specified in clause 7.3 .1 of [6] apply).
NOTE 22: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the aggressor (lower) band for which the $2^{\text {nd }}$ transmitter harmonic is within the downlink transmission bandwidth of a victim (higher) band and a range $\Delta F_{H D}$ above and below the edge of this downlink transmission bandwidth. The value $\Delta \mathrm{F}_{H D}$ depends on the E-UTRA configuration: $\Delta \mathrm{F}_{\mathrm{HD}}=10 \mathrm{MHz}$ for CA_1A-3A-21A-42A.
NOTE 23: The requirements should be verified for UL EARFCN of the aggressor (lower) band (superscript LB) such that $f_{U L}^{L B}=\left\lfloor f_{D L}^{H B} / 0.2\right\rfloor 0.1$ in MHz and $F_{U L_{-} \text {low }}^{L B}+B W_{\text {Channel }}^{L B} / 2<f_{U L}^{L B}<F_{U L_{-} \text {high }}^{L B}-B W_{\text {Channel }}^{L B} / 2$ with $f_{D L}^{H B}$ carrier frequency in the victim (higher) band in MHz and $B W_{\text {Channel }}^{L B}$ the channel bandwidth configured in the lower band.
NOTE 24: The requirements are only applicable to channel bandwidths with a carrier frequency at $\pm\left(20+B W_{\text {Channel }}^{H B} / 2\right) \mathrm{MHz}$ offset from $2 f_{U L}^{L B}$ in the victim (higher band) with $F_{U L_{-l} \text { low }}^{L B}+B W_{\text {Channel }}^{L B} / 2<f_{U L}^{L B}<F_{U L_{-} \text {high }}^{L B}-B W_{\text {Channel }}^{L B} / 2$, where $B W_{\text {Channel }}^{L B}$ and $B W_{\text {Channel }}^{H B}$ are the channel bandwidths configured in the aggressor (lower) and victim (higher) bands in MHz , respectively.
NOTE 25: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the aggressor (lower) band for which the $2^{\text {nd }}$ transmitter harmonic is within the downlink transmission bandwidth of a victim (higher) band and a range $\Delta F_{H D}$ above and below the edge of this downlink transmission bandwidth. The value $\Delta \mathrm{F}_{\mathrm{HD}}$ depends on the E-UTRA configuration: $\Delta \mathrm{F}_{\mathrm{HD}}=10 \mathrm{MHz}$ for CA_3A-19A-21A-42A.
NOTE 26: The requirements should be verified for UL EARFCN of the aggressor (lower) band (superscript LB) such that $f_{U L}^{L B}=\left\lfloor f_{D L}^{H B} / 0.2\right\rfloor 0.1$ in MHz and $F_{U L_{-} \text {low }}^{L B}+B W_{C h a n n e l}^{L B} / 2<f_{U L}^{L B}<F_{U L_{-} \text {high }}^{L B}-B W_{C h a n n e l}^{L B} / 2$ with $f_{D L}^{H B}$ carrier frequency in the victim (higher) band in MHz and $B W_{\text {Channel }}^{L B}$ the channel bandwidth configured in the lower band.
NOTE 27: The requirements are only applicable to channel bandwidths with a carrier frequency at $\pm\left(20+B W_{\text {Channel }}^{H B} / 2\right) \mathrm{MHz}$ offset from $2 f_{U L}^{L B}$ in the victim (higher band) with $F_{U L \_l o w}^{L B}+B W_{\text {Channel }}^{L B} / 2<f_{U L}^{L B}<F_{U L_{-} \text {high }}^{L B}-B W_{\text {Channel }}^{L B} / 2$, where $B W_{\text {Channel }}^{L B}$ and $B W_{\text {Channel }}^{H B}$ are the channel bandwidths configured in the aggressor (lower) and victim (higher) bands in MHz , respectively.
NOTE 28: No requirements apply when there is at least one individual RE within the uplink transmission bandwidth of either Band 5 or Band 8 for which the $3^{\text {rd }}$ transmitter harmonic is within the downlink transmission bandwidth of Band 41 . The reference sensitivity for all active downlink component carriers is only verified when this is not the case (the requirements specified in clause 7.3.1 apply).
NOTE 29: The B41 requirements are modified by -0.1 dB when carrier frequency of the assigned E-UTRA channel bandwidth is within $2545-2690 \mathrm{MHz}$.
NOTE 30: Void
NOTE 31: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the aggressor (lower) band for which the $2^{\text {nd }}$ transmitter harmonic is within the downlink transmission bandwidth of a victim (higher) band and a range $\Delta F_{H D}$ above and below the edge of this downlink transmission bandwidth. The value $\Delta \mathrm{F}_{\mathrm{HD}}$ depends on the E-UTRA configuration: $\Delta \mathrm{F}_{\mathrm{HD}}=10 \mathrm{MHz}$ for CA_2A-48A-48A and CA_2A-48A-48C
NOTE 32: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the aggressor (lower) band for which the $2^{\text {nd }}$ transmitter harmonic is within the downlink transmission bandwidth of a victim (higher) band and a range $\Delta \mathrm{F}_{\mathrm{HD}}$ above and below the edge of this
downlink transmission bandwidth. The value $\Delta \mathrm{FHD}$ depends on the E-UTRA configuration: $\Delta \mathrm{FHD}=10 \mathrm{MHz}$ for CA_2A-48A-66A, CA 2A-48A-66A-66A and CA_2A-48C-66A
NOTE 33: Applicable for the operations with 2 or 4 antenna ports supported in the band with carrier aggregation configured.
NOTE 34: Void
NOTE 35: These exceptions for the intra-band class C carriers should be verified one carrier at a time, according to note 6 frequency arrangements. No exceptions apply for the carrier which is not under REFSENS exception test.
NOTE 36: These requirements apply when the lower edge frequency of the 5 MHz uplink channel in Band 71 is located at or below 668 MHz and the downlink channel in Band 2 is located with its upper edge at 1990 MHz.
NOTE 37: These requirements apply when the lower edge frequency of the $10 \mathrm{MHz}, 15 \mathrm{MHz}$, or 20 MHz uplink channel in Band 71 is located at or below 668 MHz and the downlink channel in Band 2 is located with its upper edge at 1990 MHz .
Note 38: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the aggressor (lower) band for which the 3nd transmitter harmonic is within the downlink transmission bandwidth of a victim (higher) band and a range $\Delta \mathrm{F}_{\mathrm{HD}}$ above and below the edge of this downlink transmission bandwidth. The value $\Delta \mathrm{FHD}$ depends on the E-UTRA configuration: $\Delta \mathrm{FHD}=15 \mathrm{MHz}$ for CA_26A-41A, CA 25A-26A-41A.

Table 7.3.1A-0b: Uplink configuration for the low band (exceptions due to harmonic issue)

NOTE 1: refers to the UL resource blocks, which shall be centred within the transmission bandwidth configuration for the channel bandwidth.
NOTE 2: the UL configuration applies regardless of the channel bandwidth of the low band unless the UL resource blocks exceed that specified in Table 7.3.1-2 for the uplink bandwidth in which case the allocation according to Table 7.3.1-2 applies.
NOTE 3: ${ }^{3}$ refers to the UL resource blocks shall be located between $2373-2400 \mathrm{MHz}$.
NOTE 4: These configurations apply when there is at least one individual RE within the uplink transmission bandwidth of a low band for which the 3rd transmitter harmonic is within the downlink transmission bandwidth of a high band.
NOTE 5: These configurations apply when there is at least one individual RE within the uplink transmission bandwidth of a low band for which the 2nd transmitter harmonic is within the downlink transmission bandwidth of a high band.

For the UE that supports any of the E-UTRA CA configurations given in Table 7.3.1A-0bA, exceptions to the requirements for a band(s) specified in subclause 7.3.1 are allowed when the band(s) is impacted by the uplink being active within a specified frequency range as noted in Table 7.3.1A-0bA. For these exceptions, the UE shall meet the requirements specified in Table 7.3.1A-0bA and Table 7.3.1A-0bB.

NOTE 1: The transmitter shall be set to Pumax as defined in subclause 6.2.5A.
NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP. 1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1
NOTE 3: The signal power is specified per port
NOTE 4: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is $<60 \mathrm{MHz}$. For each channel bandwidth in Band 3, the requirement applies regardless of channel bandwidth in Band 1.
NOTE 5: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is $\geq 60 \mathrm{MHz}$. For each channel bandwidth in Band 3, the requirement applies regardless of channel bandwidth in Band 1.
NOTE 6: These requirements apply when the uplink is active in Band 18 and the downlink channels in Band 28 are confined within the restricted frequency range specified for this CA configuration (Table 5.5A-2). For each channel bandwidth in Band 28, the requirement applies regardless of channel bandwidth in Band 18.
NOTE 7: These requirements apply when the uplink is active in Band 19 and the downlink channels in Band 28 are allocated at the middle of the restricted frequency range specified for this CA configuration (Table 5.5A-2). For each channel bandwidth in Band 28, the requirement applies regardless of channel bandwidth in Band 19.
NOTE 8: Void
NOTE 9: Applicable for the operations with 2 or 4 antenna ports supported in the band with carrier aggregation configured.

NOTE 1: refers to the UL resource blocks shall be located as close as possible to the downlink channel in Band 3 but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.6-1) in the uplink channel in Band 1.
NOTE 2: UL allocation when the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is $<60 \mathrm{MHz}$
NOTE 3: UL allocation when the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is $\geq 60 \mathrm{MHz}$.
NOTE 4: refers to the UL resource blocks shall be located as close as possible to the downlink channel in Band 28 but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.6-1).

For the UE that supports any of the E-UTRA CA configurations given in Table 7.3.1A-0bC, exceptions to the requirements for a band(s) specified in subclause 7.3.1 are allowed when the band(s) is impacted by the uplink being active within a specified frequency range as noted in Table $7.3 .1 \mathrm{~A}-0 \mathrm{bC}$. For these exceptions, the UE shall meet the requirements specified in Table 7.3.1A-0bC and Table 7.3.1A-0bD.

Table 7.3.1A-0bC: Reference sensitivity for carrier aggregation QPSK $P_{\text {REFSENS }, ~ c A ~(e x c e p t i o n s ~ f o r ~}^{\text {f }}$ three bands due to close proximity of UL to DL channel)

| CA_1A-19A-28A |  | 28 |  |  | -94 | -92 |  |  |

NOTE 1: The transmitter shall be set to Pumax as defined in subclause 6.2.5A.
NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP. 1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1
NOTE 3: The signal power is specified per port
NOTE 4: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz . For each channel bandwidth in the Bands other than Band 1, the requirement applies regardless of channel bandwidth in Band 1.
NOTE 5: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is $\geq 60$ MHz . For each channel bandwidth in the Bands other than Band 1, the requirement applies regardless of channel bandwidth in Band 1.
NOTE 6: These requirements apply when the uplink is active in Band 18 and the downlink channels in Band 28 are confined within the restricted frequency range specified for this CA configuration (Table 5.5A-2). For each channel bandwidth in Band 28, the requirement applies regardless of channel bandwidth in Band 18.
NOTE 7: Void
NOTE 8: These requirements apply when the uplink is active in Band 19 and the downlink channels in Band 28 are allocated at the middle of the restricted frequency range specified for this CA configuration (Table 5.5A-2). For each channel bandwidth in Band 28, the requirement applies regardless of channel bandwidth in Band 19.
NOTE 9: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz . For each channel bandwidth in Band 3 and Band 7, the requirement applies regardless of channel bandwidth in Band 1.
NOTE 10: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is $\geq 60$ MHz . For each channel bandwidth in Band 3 and Band 7, the requirement applies regardless of channel bandwidth in Band 1.
NOTE 11: Void
NOTE 12: Applicable for the operations with 2 or 4 antenna ports supported in the band with carrier aggregation configured.

NOTE 1: refers to the UL resource blocks shall be located as close as possible to the downlink channel in Band 3 but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.6-1) in the uplink channel in Band 1.
NOTE 2: UL allocation when the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is $<60 \mathrm{MHz}$
NOTE 3: UL allocation when the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is $\geq 60 \mathrm{MHz}$.
NOTE 4: refers to the UL resource blocks shall be located as close as possible to the downlink channel in Band 28 but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.61).

For the UE that supports any of the E-UTRA CA configurations given in Table 7.3.1A-0bD1, exceptions to the requirements for a band(s) specified in subclause 7.3.1 are allowed when the band(s) is impacted by the uplink being active within a specified frequency range as noted in Table 7.3.1A-0bD1. For these exceptions, the UE shall meet the requirements specified in Table 7.3.1A-0bD1 and Table 7.3.1A-0bD2.

Table 7.3.1A-0bD1: Reference sensitivity for carrier aggregation QPSK PREFSENs, cA (exceptions for four bands due to close proximity of UL to DL channel)

NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP. 1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1
NOTE 3: The signal power is specified per port
NOTE 4: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz . For each channel bandwidth in the bands other than Band 1, the requirement applies regardless of channel bandwidth in Band 1.
NOTE 5: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is $\geq 60$ MHz . For each channel bandwidth in the bands other than Band 1, the requirement applies regardless of channel bandwidth in Band 1.
NOTE 6: Void
NOTE 7: The Band 41 requirements are modified by -0.5 dB when carrier frequency of the assigned E-UTRA channel bandwidth is within $2545-2690 \mathrm{MHz}$.
NOTE 8: The Band 41 requirements also apply to the supported CA_1A-41A.
NOTE 9: Applicable for the operations with 2 or 4 antenna ports supported in the band with carrier aggregation configured.

Table 7.3.1A-0bD2: Uplink configuration for the low band (exceptions for four bands due to close proximity of UL to DL channel)

For the UE that supports any of the E-UTRA CA configurations given in Table 7.3.1A-0bD1, exceptions are allowed when the uplink is active within a specified frequency range as noted in Table 7.3.1A-0bD1. For these exceptions, the UE shall meet the requirements specified in Table 7.3.1A-0bD1 and Table 7.3.1A-0bD2.

NOTE 1: The transmitter shall be set to Pumax as defined in subclause 6.2.5A.
NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP. 1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1
NOTE 3: The signal power is specified per port
NOTE 4: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz . For each channel bandwidth in the bands other than Band 1, the requirement applies regardless of channel bandwidth in Band 1.
NOTE 5: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is $\geq 60$ MHz . For each channel bandwidth in the bands other than Band 1, the requirement applies regardless of channel bandwidth in Band 1.
NOTE 6: Void
NOTE 7: Applicable for the operations with 2 or 4 antenna ports supported in the band with carrier aggregation configured.

Table 7.3.1A-0bD4: Uplink configuration for the low band (exceptions for five bands due to close proximity of UL to DL channel)

For the UE that supports any of the E-UTRA CA configurations given in Table 7.3.1A-0bE, exceptions to the requirements for a band(s) specified in subclause 7.3.1 are allowed when the band(s) is impacted by uplink being active in the applicable active UL bands of the same CA configuration in Table 7.3.1A-0bE. For these exceptions, the UE shall meet the reference sensitivities specified in Table 7.3.1A-0bE and Table 7.3.1A-0bF.

NOTE 1: The transmitter shall be set to Pumax as defined in subclause 6.2.5A
NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP. 1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1
NOTE 3: The signal power is specified per port
NOTE 4: These requirements apply regardless of the channel bandwidth and the location of UL band.
NOTE 5: The B41 requirements are modified by -0.5 dB when carrier frequency of the assigned E-UTRA channel bandwidth is within $2545-2690 \mathrm{MHz}$.
NOTE 6: The antenna isolation for MSD calculation is assumed as 10 dB . For conducted mode REFSENS test such antenna isolation is not observed as the antennas are disconnected. Additionally antenna isolation assumption is under discussion depending on the frequency range
NOTE 7: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the aggressor (lower) band for which the 2nd transmitter harmonic is within the downlink transmission bandwidth of a victim (higher) band and a range $\Delta F_{H D}$ above and below the edge of this downlink transmission bandwidth. The value $\Delta \mathrm{FHD}$ depends on the E-UTRA configuration: $\Delta \mathrm{FHD}=10 \mathrm{MHz}$ for CA 3A-42A, CA 3A-42C, CA 3A-42D, CA 3A-3A-42C, CA 3A-42A-42C, CA_1A-3A-42A, CA 1A-3A42C, CA_1A-3A-42D, CA_3A-19A-42A, CA_3A-19A-42C, CA_1A-3A-19A-42A, CA 3A-41A-42A, CA_3A-41A-42C, CA_3A-41C-42A, and CA_3A-41C-42C.
NOTE 8: The requirements should be verified for UL EARFCN of the aggressor (lower) band (superscript LB) such that $\left.f_{U L}^{L B}=f_{D L}^{H B} / 0.2\right\rfloor .1$ in MHz and $F_{U L_{-} \text {low }}^{L B}+B W_{\text {Channel }}^{L B} / 2 \leq f_{U L}^{L B} \leq F_{U L_{-} \text {high }}^{L B}-B W_{\text {Channel }}^{L B} / 2$ with $f_{D L}^{H B}$ carrier frequency in the victim (higher) band in MHz and $B W_{\text {Channel }}^{L B}$ the channel bandwidth configured in the lower band.
NOTE 9: The requirements are only applicable to channel bandwidths with a carrier frequency at $\pm\left(20+B W_{\text {Channel }}^{H B} / 2\right) \mathrm{MHz}$ offset from $2 f_{U L}^{L B}$ in the victim (higher band) with $F_{U L_{-l} \text { low }}^{L B}+B W_{\text {Channel }}^{L B} / 2 \leq f_{U L}^{L B} \leq F_{U L_{-} \text {high }}^{L B}-B W_{\text {Channel }}^{L B} / 2$, where $B W_{\text {Channel }}^{L B}$ and $B W_{\text {Channel }}^{H B}$ are the channel bandwidths configured in the aggressor (lower) and victim (higher) bands in MHz , respectively.
NOTE 10: Only applicable for UE supporting inter-band carrier aggregation with uplink in one E-UTRA band and without simultaneous $\mathrm{Rx} / \mathrm{Tx}$.
NOTE 11: Void

NOTE 12: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is $<60 \mathrm{MHz}$. For each channel bandwidth in Band 3 and Band 41, the requirement applies regardless of channel bandwidth in Band 1.
NOTE 13: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is $\geq 60 \mathrm{MHz}$. For each channel bandwidth in Band 3 and Band 41, the requirement applies regardless of channel bandwidth in Band 1.
NOTE 14: The B41 requirements also apply to the supported CA_1A-41A.
NOTE 15: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is $<60 \mathrm{MHz}$. For each channel bandwidth other than Band 1, the requirement applies regardless of channel bandwidth in Band 1
NOTE 16: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is $\geq 60 \mathrm{MHz}$. For each channel bandwidth other than Band 1, the requirement applies regardless of channel bandwidth in Band 1.
NOTE 17: The B41 requirements are modified by -0.1 dB when carrier frequency of the assigned E-UTRA channel bandwidth is within $2545-2690 \mathrm{MHz}$.
NOTE 18: No requirements apply when there is at least one individual RE within the downlink transmission bandwidth of band5 for which the 3rd receiver harmonic is within the uplink transmission bandwidth of band41. The reference sensitivity is only verified when this is not the case (the requirements specified in clause 7.3.1 apply).
NOTE 19: Applicable for the operations with 2 or 4 antenna ports supported in the band with carrier aggregation configured.

Table 7.3.1A-0bF: Uplink configuration for reference sensitivity (exceptions due to cross band isolation issues of TDD and FDD bands)

NOTE 1: ${ }^{1}$ refers to the UL resource blocks shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.6-1).
NOTE 2: the UL configuration applies regardless of the channel bandwidth of the low band unless the UL resource blocks exceed that specified in Table 7.3.1-2 for the uplink bandwidth in which case the allocation according to Table 7.3.1-2 applies.
NOTE 3: UL allocation when the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is $<60 \mathrm{MHz}$.
NOTE 4: UL allocation when the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is $\geq 60 \mathrm{MHz}$.
NOTE 5: ${ }^{5}$ refers to Band 20; in the case of 15 MHz channel bandwidth, the UL resource blocks shall be located at $\mathrm{RB}_{\text {start }} 11$ and in the case of 20 MHz channel bandwidth, the UL resource blocks shall be located at $\mathrm{RB}_{\text {start }} 16$

For band combinations including operating bands without uplink band (as noted in Table 5.5-1), the requirements are specified in Table 7.3.1A-0d and for any uplink band with uplink configuration specified in Table 7.3.1-2.

NOTE 1: The transmitter shall be set to Pumax as defined in subclause 6.2.5A.
NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP. 1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1
NOTE 3: The signal power is specified per port.
NOTE 4: Void
NOTE 5: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.
NOTE 6: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz . For each channel bandwidth in Band 3, the requirement applies regardless of channel bandwidth in Band 1.
NOTE 7: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is $\geq 60$ MHz . For each channel bandwidth in Band 3, the requirement applies regardless of channel bandwidth in Band 1.

Table 7.3.1A-0e: Void

For band combinations including operating band 46 (Table 5.5-1), the requirements are specified in Table 7.3.1A-0eA for the uplink in any band other than band 46 with the uplink configuration specified in Table 7.3.1-2 and Table 7.3.1A0 eC .

For band combinations including operating band 49 (Table 5.5-1), the requirements are specified in Table 7.3.1A-0eA for the uplink in any band other than Band 49 with uplink configurations specified in Table 7.3.1-2 and measurement exclusion region in Table 7.3.1A-0eD.

NOTE 1: The transmitter shall be set to Pumax as defined in subclause 6.2.5A.
NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP. 1 FDD/TDD/FS3 as described in Annex A.5.1.1/A.5.2.1/A.5.4.1.
NOTE 3: The signal power is specified per port.
NOTE 4: Void
NOTE 5: The requirement for B46 does not apply when there is at least one individual RE within the B46 downlink transmission bandwidth which falls into the reference sensitivity exclusion region as specified in Table $7.3 .1 \mathrm{~A}-0 \mathrm{eC}$.
NOTE 6: Void
NOTE 7: ${ }^{7}$ indicates that the requirement is modified by -0.5 dB when the carrier frequency of the assigned E-UTRA channel bandwidth is within $865-894 \mathrm{MHz}$.
NOTE 8: When Band 46 have self interference problems by dual uplink $C A$, then the requirements not apply in exclusion zone which is frequency range within (harmonics frequency region $+\Delta \mathrm{F}_{\mathrm{HD}}$ ) and IMD frequency region as follow.
NOTE 9: The requirement for B49 does not apply when there is at least one individual RE within the B49 downlink transmission bandwidth which falls into the reference sensitivity exclusion region as specified in Table 7.3.1A-0eD.
NOTE 10: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the aggressor (lower) band for which the 2nd transmitter harmonic is within the downlink transmission bandwidth of a victim (higher) band which excludes band 46 and a range $\triangle \mathrm{FHD}$ above and below the edge of this downlink transmission bandwidth. The value $\Delta$ FHD depends on the E-UTRA configuration: $\Delta F H D=10 \mathrm{MHz}$ for CA_2-46-48, CA_46-48-66, and CA_2-46-48-66. For harmonic issue not related with band 46, the uplink configuration of CA_2-48, CA_48-66 and CA_2-48-66 in Table 7.3.1A-0b can be used.
NOTE 11: The requirements should be verified for UL EARFCN of the aggressor (lower) band (superscript LB) such that $f_{U L}^{L B}=\left\lfloor f_{D L}^{H B} / 0.2\right\rfloor 0.1$ in MHz and
$F_{U L-l o w}^{L B}+B W_{\text {Channel }}^{L B} / 2 \leq f_{U L}^{L B} \leq F_{U L \text { _high }}^{L B}-B W_{\text {Channel }}^{L B} / 2$ with $f_{D L}^{H B}$ carrier frequency in the victim (higher) band in MHz and $B W_{\text {Channel }}^{L B}$ the channel bandwidth configured in the lower band.
NOTE 12: The requirements are only applicable to channel bandwidths with a carrier frequency at $\pm\left(20+B W_{\text {Channel }}^{H B} / 2\right) \mathrm{MHz}$ offset from $2 f_{U L}^{L B}$ in the victim (higher band) with
$F_{U L \_l o w}^{L B}+B W_{\text {Channel }}^{L B} / 2 \leq f_{U L}^{L B} \leq F_{\text {UL_high }}^{L B}-B W_{\text {Channel }}^{L B} / 2$, where $B W_{\text {Channel }}^{L B}$ and $B W_{\text {Channel }}^{H B}$ are the channel bandwidths configured in the aggressor (lower) and victim (higher) bands in MHz , respectively. IMD frequency range

Table 7.3.1A-0eB: Void

Table 7.3.1A-0eC specifies the Band 46 reference measurement exclusion region for different licensed component carriers and channel bandwidth. The exclusion region is defined according to the licensed component carrier channel bandwidth. The UL configurations to be adopted for the test are specified in Table 7.3.1-2. The exclusion region in Table 7.3.1A-0eC is specified for the case of 10 MHz and 20 MHz channel bandwidth in Band 46 .

Table 7.3.1A-0eC: Band 46 Reference sensitivity measurement exclusion region in MHz.

NOTE 1: Even though UL harmonic does not fall directly into Band 46 the exclusion region still applies.
NOTE 2: The center of the exclusion region is obtained by multiplying the UL channel center frequency by the harmonic order.

Table 7.3.1A-0eD specifies the Band 49 reference measurement exclusion region for different licensed component carriers and channel bandwidth. The exclusion region is defined according to the licensed component carrier channel bandwidth. The UL configurations to be adopted for the test are specified in Table 7.3.1-2.

Table 7.3.1A-0eD: Band 49 reference sensitivity measurement exclusion region in MHz.

| Licensed Component Carriers / E-UTRA Band / Harmonic order / Channel BW in UL |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Licensed <br> Component <br> Carriers | Harmonic <br> order | 5 MHz | $\mathbf{1 0 M H z}$ | $\mathbf{1 5 M H z}$ | $\mathbf{2 0 M H z}$ |
| $2^{1}$ | 2 | $+/-12.5$ | $+/-25$ | $+/-37.5$ | $+/-50$ |

NOTE 1: Even though UL harmonic does not fall directly into Band 49 the exclusion region still applies.
NOTE 2: The center of the exclusion region is obtained by multiplying the UL channel center frequency by the harmonic order.

In all cases for single uplink inter-band CA, unless given by Table 7.3.1-3 for the band with the active uplink carrier, the applicable reference sensitivity requirements shall be verified with the network signalling value NS_01 (Table 6.2.41) configured.

For inter-band carrier aggregation with one component carrier per operating band (up to four downlinks) and the uplink assigned to two E-UTRA bands the throughput shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP. 1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3.1-1, Table 7.3.1-1a and Table 7.3.1-2. The reference sensitivity is defined to be met with all downlink component carriers active and both of the uplink carriers active.

For E-UTRA CA configurations with uplink and downlink assigned to two E-UTRA bands given in Table 7.3.1A-0f, the reference sensitivity is defined only for the specific uplink and downlink test points which are specified in Table 7.3.1A-Of. For E-UTRA CA configurations with uplink assigned to two E-UTRA bands and downlink assigned to three E-UTRA bands given in Table 7.3.1A-0g, the reference sensitivity is defined only for the specific uplink and downlink test points which are specified in Table 7.3.1A-0g. For these test points the reference sensitivity requirement specified in Table 7.3.1-1 and Table 7.3.1-1a are relaxed by the amount of the corresponding parameter MSD given in Table 7.3.1A-0f and Table $7 \cdot 3 \cdot 1 \mathrm{~A}-0 \mathrm{~g}$.

The allowed exceptions defined in Table 7.3.1A-0a and Table 7.3.1A-0b for inter-band carrier aggregation with a single active uplink are also applicable for dual uplink operation.

NOTE 1: Both of the transmitters shall be set $\min (+20 \mathrm{dBm}$, Pcmax_L, $)$ as defined in subclause 6.2 .5 A
NOTE 2: RBstart $=0$
NOTE 3: No requirements apply when there is at least one individual RE within the intermodulation generated by the dual uplink is within the downlink transmission bandwidth of the FDD band. The reference sensitivity should only be verified when this is not the case (the requirements specified in clause 7.3.1 apply).
NOTE 4: This band is subject to IMD5 also which MSD is not specified.
NOTE 5: Void
NOTE 6: For operations with 4 antenna ports, the MSD in the applicable bands shall be modified by the absolute value of $\Delta R_{\text {IB,4R }}$ in Table 7.3.1-1a when MSD $>0$.

NOTE 1: This band is subject to IMD3 also which MSD is not specified.
NOTE 1: Both of the transmitters shall be set $\min (+20 \mathrm{dBm}$, Pсмах_L,c) as defined in subclause 6.2.5A
NOTE 2: $\quad$ RB ${ }_{\text {StART }}=0$
NOTE 3: Void
NOTE 4: This MSD requirement apply with both IMD2 and IMD3 products should be generated.
NOTE 5: For operations with 4 antenna ports, the MSD in the applicable bands shall be modified by the absolute value of $\Delta R_{\text {ib,4R }}$ in Table 7.3.1-1a when MSD > 0 .
NOTE 6: Due to the spectrum holdings of the operator, the deployed frequency ranges do not result MSD to interested downlink channel. Therefore, no requirements apply for this CA configuration.

For intra-band contiguous carrier aggregation the throughput of each component carrier shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP. 1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3.1-1, Table 7.3.1-1a, Table 7.3.1-1A, Table 7.3.1-1B, Table 7.3.1-1C, Table 7.3.1A-0h and Table 7.3.1A-1. For operating bands with an unpaired DL part (as noted in Table 5.5-1), the power levels in Table 7.3.1-1 and Table 7.3.1-1a also apply for an SCC assigned in the unpaired part. The requirement is verified using an uplink CA configuration with the largest number of carriers supported by the UE. Table 7.3.1A-0h, Table 7.3.1A-1 and Table 7.3.1A-2 specifies the maximum number of allocated uplink resource blocks for which the intra-band contiguous carrier aggregation reference sensitivity requirement shall be met. The PCC and SCC allocations as defined in Table 7.3.1A0h, Table 7.3.1A-1 and Table 7.3.1A-2 form a contiguous allocation where TX-RX frequency separations of the component carriers are as defined in Table 5.7.4-1. In case downlink CA configuration has additional SCC(s) compared to uplink CA configuration those are configured furthers away from uplink band. For UE(s) supporting one uplink carrier, the uplink configuration of the PCC shall be in accordance with Table 7.3.1-2 and the downlink PCC carrier center frequency shall be configured closer to uplink operating band than any of the downlink SCC center frequency. Unless given by Table 7.3.1-3, the reference sensitivity requirements shall be verified with the network signalling value NS_01 (Table 6.2.4-1) configured.

Table 7.3.1A-Oh: Intra-band contiguous CA uplink configuration for reference sensitivity for Bandwidth Class B

| Uplink CA <br> configuration | 25RB+25RB |  | 50RB+25RB |  | 50RB+50RB |  | 75RB+25RB |  | Duplex Mode |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| CA_66B | 25 | 25 | 50 | 25 | 50 | 50 | 75 | 25 | FDD |

NOTE 1: The carrier centre frequency of SCC in the UL operating band is configured closer to the DL operating band.
NOTE 2: The transmitted power over both PCC and SCC shall be set to Pumax as defined in subclause 6.2.5A.

NOTE 3: The UL resource blocks in both PCC and SCC shall be confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.6-1).
NOTE 4: The UL resource blocks in PCC shall be located as close as possible to the downlink operating band, while the UL resource blocks in SCC shall be located as far as possible from the downlink operating band.
NOTE 5: In case a CA configuration consists of CC channel bandwidths which are unequal in bandwidth the PCC channel bandwidth shall be the larger one for reference sensitivity test.

Table 7.3.1 A-1: Intra-band contiguous CA uplink configuration for reference sensitivity for Bandwidth Class C

NOTE 1: The carrier centre frequency of SCC in the UL operating band is configured closer to the DL operating band.
NOTE 2: The transmitted power over both PCC and SCC shall be set to PUMAX as defined in subclause 6.2.5A.
NOTE 3: The UL resource blocks in both PCC and SCC shall be confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.6-1).
NOTE 4: The UL resource blocks in PCC shall be located as close as possible to the downlink operating band, while the UL resource blocks in SCC shall be located as far as possible from the downlink operating band.
NOTE 5: In case a CA configuration consists of CC channel bandwidths which are unequal in bandwidth the PCC channel bandwidth shall be the larger one for reference sensitivity test.
NOTE 6: All uplink CCs are fully allocated

For intra-band non-contiguous carrier aggregation with one uplink carrier and two or more downlink sub-blocks, the throughput of each downlink component carrier shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP. 1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) and parameters specified in Table 7.3.1-1, Table 7.3.1-1a, Table 7.3.1-1A, Table 7.3.1-1B, Table 7.3.1-1C and Table 7.3.1A-3 with the reference sensitivity power level increased by $\Delta \mathrm{R}_{\text {IBNC }}$ given in Table 7.3.1A-3 for the $\operatorname{SCC}(\mathrm{s})$. For aggregation of more than two downlink FDD carriers with one uplink carrier the reference sensitivity is defined only for the specific uplink and downlink test points which are specified in Table 7.3.1A-3. The requirements apply with all downlink carriers active. Unless given by Table 7.3.13 , the reference sensitivity requirements shall be verified with the network signalling value NS_01 (Table 6.2.4-1) configured.

Table 7.3.1A-3: Intra-band non-contiguous CA with one uplink configuration for reference sensitivity

For intra-band non-contiguous carrier aggregation with two uplink and downlink carriers the reference sensitivity is defined to be met with both downlink and uplink carriers activated. The downlink PCC and SCC minimum requirements for reference sensitivity power level as specified in Table 7.3.1-1, Table 7.3.1-1a, Table 7.3.1-1A, Table
7.3.1-1B and Table 7.3.1-1C are increased by amount of $\Delta \mathrm{R}_{2 \mathrm{UL} \text { PCCC }}$ and $\Delta \mathrm{R}_{2 \mathrm{UL} \text { _SCC }}$ which are defined in Table 7.3.1A-4 when uplink PCC and SCC allocations are according to the Table 7.3.1A-4.

Table 7.3.1A-4: Intra-band non-contiguous CA with two uplinks configuration for reference sensitivity

| CA <br> configuration | Aggregated <br> channel <br> bandwidth <br> (PCC+SCC) | $\mathbf{W}_{\text {gap }} /[\mathrm{MHz}]$ | UL PCC <br> allocation | UL SCC <br> allocation | $\Delta R_{2 U L}$ PCC <br> (dB) | $\Delta R_{2 \text { 2L_scc }}(\mathrm{dB})$ | Duplex <br> mode |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| CA_4A-4A | NOTE 2 | NOTE 3 | NOTE 4 | NOTE 5 | 0.0 | 0.0 | FDD |

NOTE 1: The transmitter shall be set to Pumax as defined in subclause 6.2.5A.
NOTE 2: All combinations of channel bandwidths defined in Table 5.6A.1-3.
NOTE 3: All applicable sub-block gap sizes.
NOTE 4: The PCC allocation is same as Transmission bandwidth configuration Nвв as defined in Table 5.6-1.
NOTE 5: The SCC allocation is same as Transmission bandwidth configuration NRB as defined in Table 5.6-1.

For combinations of intra-band and inter-band carrier aggregation, the requirement is defined with an uplink configuration in accordance with Table 7.3.1A-3 when the uplink is active in the band supporting two or more noncontigous component carriers, Table 7.3.1A-1 when the uplink (up to two contiguously aggregated uplink carriers) is active in a band supporting two contiguous component carriers and in accordance with Table 7.3.1-2 when an uplink is active in a band supporting one carrier per band. The downlink PCC shall be configured closer to the uplink operating band than the downlink $\operatorname{SCC}(\mathrm{s})$ when the uplink is active in band(s) supporting contiguous aggregation. The carrier center frequency of PCC in the UL operating band is configured closer to the DL operating band when the uplink is active in band(s) supporting non-contiguous aggregation. For these uplink configurations, the UE shall meet the reference sensitivity requirements for intra-band non-contiguous carrier aggregation of two or more downlink subblocks, the requirements for intra-band contiguous carrier aggregation for the contiguously aggregated downlink carriers and for any remaining component carrier(s) the requirements specified in subclause 7.3.1. For the two or more component carriers within the same band, $\Delta \mathrm{R}_{\mathrm{IBNC}}=0 \mathrm{~dB}$ for all sub-block gaps (Table 7.3.1A-3) when the uplink is active in another band. All downlink carriers shall be active throughout the tests and the requirements for the downlinks shall be met with all uplink carriers active in each band capable of UL operation. For component carriers configured in Band 46, the said requirements for intra-band carrier aggregation of downlink carriers are replaced by the requirements in Table 7.3.1A-0eA for the uplink in any band other than band 46 with the uplink configuration specified in Table 7.3.1-2. Unless given by Table 7.3.1-3, the reference sensitivity requirements shall be verified with the network signalling value NS_01 (Table 6.2.4-1) configured.

For the UE that supports any of combinations of intra-band and inter-band carrier aggregation given in Table 7.3.1A-5, exceptions to the requirements for a band(s) specified in subclause 7.3.1 are allowed when the band(s) is impacted by harmonic interference from the uplink being active in a lower-frequency band of the same CA configuration. For these exceptions, the UE shall meet the requirements specified in Table 7.3.1A-5 and Table 7.3.1A-6.

Table 7.3.1A-5: Reference sensitivity for carrier aggregation QPSK Prefsens, ca (exceptions due to harmonic issues in the combinations of intra-band and inter-band CA)

NOTE 1: The transmitter shall be set to Pumax as defined in subclause 6.2.5A.
NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP. 1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1
NOTE 3: The signal power is specified per port
NOTE 4: No requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the low band for which the 2nd transmitter harmonic is within the downlink transmission bandwidth of the high band. The reference sensitivity for all active downlink component carriers is only verified when this is not the case (the requirements specified in clause 7.3.1 apply unless otherwise specified).

NOTE 5: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of a low band for which the 3rd transmitter harmonic is within the downlink transmission bandwidth of a high band.
NOTE 6: The requirements should be verified for UL EARFCN of a low band (superscript LB) such that $f_{U L}^{L B}=\left\lfloor f_{D L}^{H B} / 0.3\right\rfloor 0.1$ in MHz and $F_{U L-l o w}^{L B}+B W_{C h a n n e l}^{L B} / 2 \leq f_{U L}^{L B} \leq F_{U L_{-} \text {high }}^{L B}-B W_{C h a n n e l}^{L B} / 2$ with $f_{D L}^{H B}$ the carrier frequency of a high band in MHz and $B W_{\text {Channel }}^{L B}$ the channel bandwidth configured in the low band.
NOTE 7: No requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the low band for which the 3rd transmitter harmonic is within the downlink transmission bandwidth of the high band. The reference sensitivity is only verified when this is not the case (the requirements specified in clause 7.3.1 apply).
NOTE 8: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the aggressor (lower) band for which the 2nd transmitter harmonic is within the downlink transmission bandwidth of a victim (higher) band and a range $\Delta \mathrm{F}_{\mathrm{HD}}$ above and below the edge of this downlink transmission bandwidth. The value $\Delta F_{H D}$ depends on the E-UTRA configuration: $\Delta \mathrm{FHD}=10 \mathrm{MHz}$ for CA_3A-42C, CA_3A-42D, CA_3A-3A-42C, CA_3A-42A-42C, CA_3A-42C-42C, CA_1A-3A-18A-42C, CA_1A-3A-19A-42C, CA_1A-3A-21A-42C, CA_1A-3A41 A- $42 \mathrm{C}, \mathrm{CA} \_1 \mathrm{~A}-3 \mathrm{~A}-41 \mathrm{C}-42 \mathrm{~A}, \mathrm{CA} \_1 \mathrm{~A}-3 \mathrm{~A}-41 \mathrm{C}-42 \mathrm{C}, \mathrm{CA} 1 \mathrm{~A}-3 \mathrm{~A}-42 \mathrm{C}, \mathrm{CA} 3 \mathrm{~A}-28 \mathrm{~A}-42 \overline{\mathrm{C}}, \mathrm{CA}-3 \mathrm{~A}-$ 28A-42D, CA_3A-19A-42C, CA_3A-19A-42D, CA_3A-21A-42D, CA_3A-28A-40C, CA_3A-28A40D, CA $3 \mathrm{~A}-28 \mathrm{~A}-41 \mathrm{~A}-42 \mathrm{C}, \mathrm{CA} \_3 \mathrm{~A}-28 \mathrm{~A}-41 \mathrm{C}-42 \mathrm{~A}, \mathrm{CA} \_3 \mathrm{~A}-28 \mathrm{~A}-41 \mathrm{C}-42 \mathrm{C}, \mathrm{CA} 3 \mathrm{~A}-28 \mathrm{~A}-42 \mathrm{~A}-42 \mathrm{~A}$, CA_3A-28A-42A-42C, CA_3A-28A-42C-42C, CA_3A-41A-42A-42A, CA_3A-41A-42A-42C,

NOTE 9: The requirements should be verified for UL EARFCN of the aggressor (lower) band (superscript LB ) such that $f_{U L}^{L B}=\left\lfloor f_{D L}^{H B} / 0.2\right\rfloor$. 1 in MHz and $F_{U L-l o w}^{L B}+B W_{\text {Channel }}^{L B} / 2 \leq f_{U L}^{L B} \leq F_{U L \text { high }}^{L B}-B W_{\text {Channel }}^{L B} / 2$ with $f_{D L}^{H B}$ carrier frequency in the victim (higher) band in MHz and $B W_{C h a n n e l}^{L B}$ the channel bandwidth configured in the lower band.
NOTE 10: The requirements are only applicable to channel bandwidths with a carrier frequency at $\pm\left(20+B W_{\text {Channel }}^{H B} / 2\right) \mathrm{MHz}$ offset from $2 f_{U L}^{L B}$ in the victim (higher band) with
$F_{U L_{-} \text {low }}^{L B}+B W_{\text {Channel }}^{L B} / 2 \leq f_{U L}^{L B} \leq F_{U L_{-} \text {high }}^{L B}-B W_{\text {Channel }}^{L B} / 2$, where $B W_{\text {Channel }}^{L B}$ and $B W_{\text {Channel }}^{H B}$ are the channel bandwidths configured in the aggressor (lower) and victim (higher) bands in MHz , respectively.
NOTE 11: Void
NOTE 12: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of a low band for which the $5^{\text {th }}$ transmitter harmonic is within the downlink transmission bandwidth of a high band.
NOTE 13: The requirements should be verified for UL EARFCN of a low band (superscript LB) such that $f_{U L}^{L B}=\left\lfloor f_{D L}^{H B} / 0.5\right\rfloor 0.1 \mathrm{in} \mathrm{MHz}$ and $F_{U L_{-l} \text { low }}^{L B}+B W_{\text {Channel }}^{L B} / 2 \leq f_{U L}^{L B} \leq F_{U B-\text { high }}^{L B}-B W_{\text {Channel }}^{L B} / 2$ with $f_{D L}^{H B}$ the carrier frequency of a high band in MHz and $B W_{\text {Channel }}^{L B}$ the channel bandwidth configured in the low band.
NOTE 14: No requirements apply when there is at least one individual RE on band 28 uplink outside frequencies $728-738 \mathrm{MHz}$. The reference sensitivity is only verified when all configured RE's are confined within frequencies $728-738 \mathrm{MHz}$ (the requirements specified in clause 7.3.1 of [6] apply).
NOTE 15: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of a low band for which the $4^{\text {th }}$ transmitter harmonic is within the downlink transmission bandwidth of a high band.
NOTE 16: The requirements should be verified for UL EARFCN of a low band (superscript LB) such that $f_{U L}^{L B}=\left\lfloor f_{D L}^{H B} / 0.4\right\rfloor 0.1 \mathrm{in} \mathrm{MHz}$ and $F_{U L_{-} \text {low }}^{L B}+B W_{\text {Channel }}^{L B} / 2 \leq f_{U L}^{L B} \leq F_{U L_{-} \text {high }}^{L B}-B W_{\text {Channel }}^{L B} / 2$ with $f_{D L}^{H B}$ the carrier frequency of a high band in MHz and $B W_{\text {Channel }}^{L B}$ the channel bandwidth configured in the low band.
NOTE 17: These requirements apply when there is at least one individual RE within the downlink transmission bandwidth of the victim (lower) band for which the $3^{\text {rd }}$ harmonic is within the uplink transmission bandwidth or the uplink adjacent channel's transmission bandwidth of an aggressor (higher) band.
NOTE 18: The requirements should be verified for UL EARFCN of the aggressor (higher) band (superscript $\mathrm{HB})$ such that $f_{D L}^{L B}=\left\lfloor f_{U L}^{H B} / 0.3\right\rfloor 0.1$ in MHz and $F_{U B-l o w}^{L B}+B W_{\text {Channel }}^{L B} / 2 \leq f_{U L}^{L B} \leq F_{U L_{-} \text {high }}^{L B}-B W_{\text {Channel }}^{L B} / 2$ with $f_{D L}^{L B}$ the carrier frequency in the victim (lower) band and $B W_{\text {Channel }}^{H B}$ the channel bandwidth configured in the higher band.
NOTE 19: The requirement for B46 does not apply when there is at least one individual RE within the B46 downlink transmission bandwidth which falls into the reference sensitivity exclusion region as specified in Table 6.2.4-3.
NOTE 20: The $B 41$ requirements are modified by -0.1 dB when carrier frequency of the assigned E-UTRA channel bandwidth is within $2545-2690 \mathrm{MHz}$.
NOTE 21: Applicable for the operations with 2 or 4 antenna ports supported in the band with carrier aggregation configured.
NOTE 22: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the aggressor (lower) band for which the 2nd transmitter harmonic is within the downlink transmission bandwidth of a victim (higher) band and a range $\Delta \mathrm{F}_{\mathrm{HD}}$ above and below the edge of this downlink transmission bandwidth. The value $\Delta F_{H D}$ depends on the E-UTRA configuration: $\Delta \mathrm{F}_{H D}=10 \mathrm{MHz}$ for $\mathrm{CA} 2 \mathrm{~A}-48 \mathrm{~A}-48 \mathrm{C}$

Table 7.3.1A-6: Uplink configuration for the low band (exceptions due to harmonic issues in the combinations of intra-band and inter-band CA)

## E-UTRA Band / Channel bandwidth of the high band / NRB / Duplex mode

| E-UTRA Band / Channel bandwidth of the high band / N RB / Duplex mode |  |  |  |  |  |  |  |  |

NOTE 1: refers to the UL resource blocks, which shall be centred within the transmission bandwidth configuration for the channel bandwidth.
NOTE 2: the UL configuration applies regardless of the channel bandwidth of the low band unless the UL resource blocks exceed that specified in Table 7.3.1-2 for the uplink bandwidth in which case the allocation according to Table 7.3.1-2 applies.
NOTE 3: refers to the UL resource blocks shall be located between $2373-2400 \mathrm{MHz}$.

### 7.3.1B Minimum requirements (QPSK) for UL-MIMO

For UE with two transmitter antenna connectors in closed-loop spatial multiplexing scheme, the minimum requirements in Clause 7.3.1 shall be met with the UL-MIMO configurations specified in Table 6.2.2B-2. For UL-MIMO, the parameter $\mathrm{P}_{\mathrm{UMAX}}$ is the total transmitter power over the two transmits power over the two transmit antenna connectors.

### 7.3.1D Minimum requirements (QPSK) for ProSe

When UE is configured for E-UTRA ProSe reception non-concurrent with E-UTRA uplink transmissions for E-UTRA ProSe operating bands specified in Table 5.5D-1, the throughput shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annexes A.6.2 with parameters specified in Table 7.3.1D-1 and Table 7.3.1D-2.

Table 7.3.1D-1: Reference sensitivity for ProSe Direct Discovery QPSK Prefsens

| Channel bandwidth |  |  |  |  |  |  |  |

| 68 |  |  | -101.7 | -98.9 |  |  | HD |
| 72 |  |  | -96.7 |  |  |  | HD |

```
NOTE 1: Reference measurement channel is A.6.2
NOTE 2: The signal power is specified per port
NOTE 3: For the UE which supports both Band 3 and Band 9 the reference sensitivity
    level is FFS.
NOTE 4: For the UE which supports both Band }11\mathrm{ and Band }21\mathrm{ the reference sensitivity
    level is FFS.
NOTE 5: 5 indicates that the requirement is modified by -0.5 dB when the carrier
    frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz.
NOTE 6: For a UE that support both Band 18 and Band 26, the reference sensitivity level
    for Band 26 applies for the applicable channel bandwidths.
```

NOTE: Table 7.3.1D-1/ Table 7.3.1D-2 is intended for conformance tests and does not necessarily reflect the operational conditions of the network, where the number of allocated resource blocks will be practically constrained by other factors.

For the UE which supports ProSe in an operating band as specified in Section 5.5D, and the UE also supports a EUTRA downlink inter-band carrier aggregation configuration in Table 7.3.1-1A or Table 7.3.1-1B, the minimum requirement for reference sensitivity in Table 7.3.1D-1 and Table 7.3.1D-2 shall be increased by the amount given in $\Delta \mathrm{R}_{\mathrm{IB}, \mathrm{c}}$ in Table 7.3.1-1A and Table 7.3.1-1B for the corresponding E-UTRA ProSe band.

When UE is configured for E-UTRA ProSe reception on PCC for the inter-band E-UTRA ProSe / E-UTRA bands specified in Table 5.5D-2, there are no further requirements for reference sensitivity beyond those specified above when only PCC is configured in Table 7.3.1D-1 and Table 7.3.1D-2.

When UE is configured for E-UTRA ProSe reception on SCC or a non-serving carrier concurrent with E-UTRA uplink for inter-band E-UTRA ProSe / E-UTRA bands specified in Table 5.5D-2, E-UTRA ProSe throughput shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annexes A. 6.2 with parameters specified in Table 7.3.1D-1 and Table 7.3.1D-2. The reference sensitivity is defined to be met with E-UTRA uplink assigned to one band (that differs from the ProSe operating band) and all E-UTRA downlink carriers active. The EUTRA uplink resource blocks shall be located as close as possible to E-UTRA ProSe operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.6-1). The uplink configuration for the E-UTRA operating band is specified in Table 7.3.1D-3.

NOTE: The E-UTRA uplink channel bandwidth and transmission bandwidth specified in this Table 7.3.1D-3 are intended for conformance tests and does not restrict the operating conditions of the network.

Table 7.3.1D-3: Uplink configuration for E-UTRA band / E-UTRA CA band

| Inter-band E-UTRA ProSe/E-UTRA <br> configuration |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| E-UTRA ProSe <br> band | E-UTRA band / E- <br> UTRA CA band | E-UTRA <br> UL band | Channel <br> Bandwidth <br> (MHz) | N $_{\text {RB }}$ | Duplex <br> Mode |
| 2 | 4 | 4 | 5 | 25 | FDD |
| 2 | CA_2-4 | 4 | 5 | 25 | FDD |
| 28 | 1 | 1 | 5 | 25 | FDD |
| 28 | CA_1-28 | 1 | 5 | 25 | FDD |
| NOTE 1: For E-UTRA ProSe reception on SCC, the channel bandwith of the E-UTRA downlink |  |  |  |  |  |
| SCC is set same as the ProSe channel bandwidth for which reference sensitivity is |  |  |  |  |  |
| being measured. |  |  |  |  |  |

### 7.3.1E Minimum requirements (QPSK) for UE category 0, M1, M2 and 1bis

The throughput shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP. 1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3.1E-1A/Table 7.3.1E-1B and Table 7.3.1E-2 for category 0 , Table 7.3.1E-3/Table 7.3.1E-4 for category M1, and Table 7.3.1E-6/Table 7.3.1E-7 for category 1bis, and Table 7.3.1E-8/Table 7.3.1E-9 for category M2.

Table 7.3.1E-1A: Reference sensitivity for FDD and TDD UE category 0 QPSK Prefsens

## Channel bandwidth

| E-UTRA <br> Band | $\mathbf{1 . 4} \mathbf{~ M H z}$ <br> $\mathbf{( d B m})$ | $\mathbf{3} \mathbf{~ M H z}$ <br> $\mathbf{( d B m})$ | $\mathbf{5} \mathbf{~ M H z}$ <br> $(\mathbf{d B m})$ | $\mathbf{1 0} \mathbf{~ M H z}$ <br> $\mathbf{( d B m})$ | $\mathbf{1 5} \mathbf{~ M H z}$ <br> $(\mathbf{d B m})$ | $\mathbf{2 0} \mathbf{~ M H z}$ <br> $\mathbf{( d B m})$ | Duplex <br> Mode |

| 26 | -100.2 | -97.2 | $-95^{3}$ | $-92^{3}$ | $-90.2^{3}$ |  | FDD |
| 28 |  | -97.7 | -96 | -93 | -91.2 | -88.5 | FDD |
| 39 |  |  | -97.5 | -94.5 | -92.7 | -91.5 | TDD |
| 40 |  |  | -97.5 | -94.5 | -92.7 | -91.5 | TDD |
| 41 |  |  | -95.5 | -92.5 | -90.7 | -89.5 | TDD |

NOTE 1: The transmitter shall be set to Pumax as defined in subclause 6.2.5
NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP. 1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1
NOTE 3: The requirement is modified by -0.5 dB when the carrier frequency of the assigned E-UTRA channel bandwidth is within $865-894 \mathrm{MHz}$

Table 7.3.1E-1B: Reference sensitivity for HD-FDD UE category 0 QPSK PREFSENs

| Channel bandwidth |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| E-UTRA <br> Band | $\mathbf{1 . 4 ~ M H z}$ <br> $\mathbf{( d B m})$ | $\mathbf{3} \mathbf{~ M H z}$ <br> $\mathbf{( d B m})$ | $\mathbf{5} \mathbf{~ M H z}$ <br> $\mathbf{( d B m})$ | $\mathbf{1 0} \mathbf{M H z}$ <br> $\mathbf{( d B m})$ | $\mathbf{1 5 ~ M H z}$ <br> $\mathbf{( d B m})$ | $\mathbf{2 0} \mathbf{M H z}$ <br> $\mathbf{( d B m})$ | Duplex <br> $\mathbf{M o d e}$ |
| 2 | -101 | -98 | -96.3 | -93.3 | -91.5 | -90.3 | HD-FDD |
| 3 | -100 | -97 | -95.3 | -92.3 | -90.5 | -89.3 | HD-FDD |
| 4 | -103 | -100 | -98.3 | -95.3 | -93.5 | -92.3 | HD-FDD |
| 5 | -101.5 | -98.5 | -96.3 | -93.3 |  |  | HD-FDD |
| 8 | -100.5 | -97.5 | -95.3 | -92.3 |  |  | HD-FDD |
| 13 |  |  | -95.3 | -92.3 |  |  | HD-FDD |
| 20 |  |  | -95.3 | -92.3 | -89.5 | -88.3 | HD-FDD |
| 25 | -99.5 | -96.5 | -94.8 | -91.8 | -90 | -88.8 | HD-FDD |
| 26 | -101 | -98 | -95.8 | -92.8 |  |  | HD-FDD |
| 28 |  | -98.5 | -96.8 | -93.8 | -92 | -89.3 | HD-FDD |

NOTE 1: The transmitter shall be set to Pumax as defined in subclause 6.2.5
NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP. 1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1

The reference receive sensitivity (REFSENS) requirement specified in Table 7.3.1E-1A/Table 7.3.1E-1B shall be met for an uplink transmission bandwidth less than or equal to that specified in Table 7.3.1E-2.

Unless given by Table 7.3.1-3, the minimum requirements specified in Table 7.3.1E-1A/Table 7.3.1E-1B shall be verified with the network signalling value NS_01 (Table 6.2.4E-1) configured.

NOTE: Table 7.3.1E-2 is intended for conformance tests and does not necessarily reflect the operational conditions of the network, where the number of uplink and downlink allocated resource blocks will be practically constrained by other factors. Typical receiver sensitivity performance with HARQ retransmission enabled and using a residual BLER metric relevant for e.g. Speech Services is given in the Annex G (informative).

Table 7.3.1E-2: FDD and TDD UE category 0 Uplink configuration for reference sensitivity

### 7.3.1F Minimum requirements for UE category NB1 and NB2

### 7.3.1F.1 Reference sensitivity for UE category NB1 and NB2

The category NB1 and NB2 UE throughput shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channel as specified in Annex A.3.2 with received signal level as specified in Table 7.3.1F.1-1. Requirement in Table 7.3.1F.1-1 applies for any uplink configuration.

Table 7.3.1F.1-1: Reference sensitivity for UE category NB1 and NB2

| Operating band | REFSENS <br> [dBm] |
| :---: | :---: |
| According to subclause 5.5F | -108.2 |

### 7.3.1F. 2 Void

### 7.3.1G Minimum requirements (QPSK) for V2X

When UE is configured for E-UTRA V2X reception non-concurrent with E-UTRA uplink transmissions for E-UTRA V2X operating bands specified in Table 5.5G-1, the throughput shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annexes A.8.2 with parameters specified in Table 7.3.1G-1.

Table 7.3.1G-1: Reference sensitivity of E-UTRA V2X Bands (PC5)

| Channel bandwidth |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { E-UTRA } \\ & \text { V2X Band } \end{aligned}$ | $\begin{gathered} 1.4 \mathrm{MHz} \\ (\mathrm{dBm}) \\ \hline \end{gathered}$ | $\begin{aligned} & \hline 3 \mathrm{MHz} \\ & (\mathrm{dBm}) \end{aligned}$ | $\begin{aligned} & 5 \mathrm{MHz} \\ & (\mathrm{dBm}) \end{aligned}$ | $\begin{gathered} 10 \mathrm{MHz} \\ (\mathrm{dBm}) \end{gathered}$ | $\begin{gathered} \hline 15 \mathrm{MHz} \\ (\mathrm{dBm}) \end{gathered}$ | $\begin{gathered} 20 \mathrm{MHz} \\ (\mathrm{dBm}) \end{gathered}$ | Duplex Mode |
| 47 |  |  |  | -90.4 |  | -87.5 | HD |
| NOTE 1: Reference measurement channel is defined in A.8.2. NOTE 2: The signal power is specified per port. |  |  |  |  |  |  |  |

Table 7.3.1.G-1a: Sidelink TX configuration for reference sensitivity of E-UTRA V2X Bands (PC5)

| E-UTRA Band / Channel bandwidth / NRB / Duplex mode |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| E-UTRA <br> V2X Band | $\mathbf{1 . 4} \mathbf{~ M H z}$ | $\mathbf{3} \mathbf{~ M H z}$ | $\mathbf{5} \mathbf{~ M H z}$ | $\mathbf{1 0} \mathbf{~ M H z}$ | $\mathbf{1 5} \mathbf{~ M H z}$ | $\mathbf{2 0} \mathbf{~ M H z}$ | Duplex <br> Mode |
| 47 |  |  |  | 50 |  | 98 | HD |

When UE is configured for E-UTRA V2X reception on V2X carrier con-current with E-UTRA uplink and downlink for inter-band E-UTRA V2X / E-UTRA bands specified in Table 5.5G-2 with one or multiple contiguous carriers in V2X sidelink, E-UTRA V2X sidelink throughput for each component carrier shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annexes A.8.2 with parameters specified in Table 7.3.1G-2. Also the E-UTRAdownlink throughput shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annexes A.3.3.2.

For the UE which supports V2X in an operating band as specified in Table 5.5G-2, and the UE also supports a E-UTRA downlink inter-band con-current configuration in Table $7.3 .1 \mathrm{G}-2 \mathrm{~A}$, the minimum requirement for reference sensitivity in Table $7.3 .1 \mathrm{G}-1$ and Table $7.3 .1 \mathrm{G}-2$ shall be increased by the amount given in $\Delta \mathrm{R}_{\mathrm{IB}, \mathrm{c}}$ in Table $7.3 .1 \mathrm{G}-2 \mathrm{~A}$ for the corresponding E-UTRA V2X band.

The reference sensitivity is defined to be met with E-UTRA uplink assigned to one band (that differs from the V2X operating band) and all E-UTRA downlink carriers active. The E-UTRA uplink resource blocks shall be located as close as possible to E-UTRA V2X operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.6-1). The uplink configuration for the E-UTRA operating band is specified in Table 7.3.1G-3 and 7.3.1G-4. The REFSENS of Uu downlink and PC5 sidelink will be tested at the same time.

Table 7.3.1G-3: Uplink configuration for REFSENS of E-UTRA V2X Bands

For intra-band contiguous multi-carrier operation, the reference sensitivity requirement specified in Table 7.3.1G-1 shall apply for each component carrier with all carriers active. The requirement is applied for multi-carrier intra-band con-current receptions when 2 carrier transmissions are activated at the same time.

### 7.3.2 Void

### 7.4 Maximum input level

This is defined as the maximum mean power received at the UE antenna port, at which the specified relative throughput shall meet or exceed the minimum requirements for the specified reference measurement channel.

### 7.4.1 Minimum requirements

The throughput shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP. 1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.4.1-1. For operating bands with an unpaired DL part (as noted in Table 5.5-1), the requirements only apply for carriers assigned in the paired part.

Table 7.4.1-1: Maximum input level

| Rx Parameter | Units | Channel bandwidth |  |  |  |  |  |

### 7.4.1A Minimum requirements for CA

For inter-band carrier aggregation with one component carrier per operating band and the uplink assigned to one EUTRA band the maximum input level is defined with the uplink active on the band(s) other than the band whose downlink is being tested. For E-UTRA CA configurations including an operating band without uplink band or an operating band with an unpaired DL part, the requirements for all downlinks shall be met with the single uplink carrier active in each band capable of UL operation. The UE shall meet the requirements specified in subclause 7.4.1 for each component carrier while all downlink carriers are active.

For intra-band contiguous carrier aggregation maximum input level is defined as the powers received at the UE antenna port over the Transmission bandwidth configuration of each CC, at which the specified relative throughput shall meet or exceed the minimum requirements for the specified reference measurement channel over each component carrier.

The downlink SCC(s) shall be configured at nominal channel spacing to the PCC. For FDD the PCC shall be configured closest to the uplink band. All downlink carriers shall be active throughout the test. The uplink output power shall be set as specified in Table 7.4.1A-1 with the uplink configuration set according to Table 7.3.1A-1 for the applicable carrier aggregation configuration. For $\mathrm{UE}(\mathrm{s})$ supporting one uplink carrier, the uplink configuration of the PCC shall be in accordance with Table 7.3.1-2.

The throughput shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels over each component carrier as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP. 1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.4.1A-1. For operating bands with an unpaired DL part (as noted in Table 5.5-1), the requirements also apply for an SCC assigned in the unpaired part with parameters specified in Table 7.4.1A-1.

For intra-band non-contiguous carrier aggregation with one uplink carrier and two or more downlink sub-blocks, each larger than or equal to 5 MHz , the maximum input level requirements are defined with the uplink configuration in accordance with Table 7.3.1A-3. For this uplink configuration, the UE shall meet the requirements for each sub-block as specified in Table 7.4.1-1 and Table 7.4.1A-1 for one component carrier and two component carriers per sub-block, respectively. The throughput of each downlink component carrier shall be $\geq 95 \%$ of the maximum throughput of the specified reference measurement channel as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP. 1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1). The requirements apply with all downlink carriers active.

Table 7.4.1A-1: Maximum input level for intra-band contiguous CA

| Rx Parameter | Units | CA Bandwidth Class |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | A | B | C | D | E | F |
| Power in largest Transmission Bandwidth Configuration CC | dBm |  | -28 ${ }^{2}$ | -25 ${ }^{2}$ | -25 ${ }^{2}$ | -26 ${ }^{2}$ | $-27^{2}$ |
|  |  |  | $-30^{3}$ | -27 ${ }^{3}$ | -27 ${ }^{3}$ | $[-28]^{3}$ | [-29] ${ }^{3}$ |
|  |  |  | $-30^{4}$ | $-27^{4}$ | -274 | $[-28]^{4}$ | [-29] ${ }^{4}$ |
| Power in each other CC | dBm |  | $\begin{gathered} -28+ \\ \text { 10log(NRB,C } \\ / \text { NRBB,largest }^{\text {BW) }} \text { 2 } \\ \hline \end{gathered}$ | $\begin{gathered} -25+ \\ \text { 10log(NRB,C } \\ /_{\text {NRB, largest }} \\ \left.B_{W}\right)^{2} \\ \hline \end{gathered}$ | $\begin{gathered} -25+ \\ \text { 10log(NRB,C } \\ \text { /NRBB, largest }^{\text {BW) }} \text { 2 } \\ \hline \end{gathered}$ | $\begin{gathered} -26+ \\ \text { 10log(NRB,C } \\ /_{\text {NRB, largest }} \\ \text { BW) }{ }^{2} \\ \hline \end{gathered}$ | $\begin{gathered} -27+ \\ \text { 10log(NRB, } \\ / \text { NRB, largest }^{\text {BW) }} \text { 2 } \\ \hline \end{gathered}$ |
|  |  |  | $\begin{gathered} -30+ \\ 10 \log \left(\mathrm{~N}_{\mathrm{RB}, \mathrm{C}}\right. \\ / \mathrm{N}_{\mathrm{RB}, \text { largest }} \\ \mathrm{BW})^{3} \\ \hline \end{gathered}$ | $\begin{gathered} -27+ \\ 10 \log \left(\text { N RB, }^{\prime}\right. \\ / N_{\text {RB, largest }} \\ \mathrm{BW})^{3} \\ \hline \end{gathered}$ | $\begin{gathered} -27+ \\ 10 \log \left(\text { N }_{\mathrm{RB}, \mathrm{c}}\right. \\ / \mathrm{N}_{\mathrm{RB}, \text { largest }} \\ \mathrm{BW})^{3} \\ \hline \end{gathered}$ | $\begin{gathered} {[-28]+} \\ 10 \log \left(\text { NRB,C }^{c}\right. \\ / N_{\text {RB, largest }} \\ \mathrm{BW})^{3} \\ \hline \end{gathered}$ | $\begin{gathered} {[-29]+} \\ 10 \log \left(\text { N }_{\text {RB, } \mathrm{c}}\right. \\ / \mathrm{N}_{\mathrm{RB}, \text { largest }} \\ \mathrm{BW})^{3} \\ \hline \end{gathered}$ |
|  |  |  | $\begin{gathered} -30+ \\ 10 \log \left(\text { NRB, }^{\text {c }}\right. \\ / \mathrm{N}_{\text {RB, largest }} \\ \mathrm{BW})^{4}{ }^{4} \\ \hline \end{gathered}$ | $\begin{gathered} -27+ \\ 10 \log \left(\text { NRBB, }^{c}\right. \\ /_{\text {RBB,largest }} \\ \text { BW) }{ }^{4} \\ \hline \end{gathered}$ | $\begin{gathered} -27+ \\ \text { 10log(NBB, } \\ / \text { N }_{\text {RB, largest }} \\ \left.B_{W}\right)^{4} \\ \hline \end{gathered}$ | $\begin{gathered} {[-28]+} \\ \text { 10log(NRB,C } \\ /_{\text {RBB, largest }} \\ B W)^{4} \\ \hline \end{gathered}$ | $\begin{gathered} {[-29]+} \\ \text { 10log(NRB,C } \\ / N_{R B, \text { largest }} \\ B W)^{4} \\ \hline \end{gathered}$ |

NOTE 1: The transmitter shall be set to 4dB below Pcmax_l,c or Pcmax_l as defined in subclause 6.2.5A.
NOTE 2: Reference measurement channel is Annex A.3.2: 64QAM, $\mathrm{R}=3 / 4$ variant with one sided dynamic OCNG Pattern OP. 1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.
NOTE 3: Reference measurement channel is Annex A.3.2: 256QAM, $R=4 / 5$ variant with one sided dynamic OCNG Pattern OP. 1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.
NOTE 4: Reference measurement channel is Annex A.3.2: 1024QAM, $R=4 / 5$ variant with one sided dynamic OCNG Pattern OP. 1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.

For combinations of intra-band and inter-band carrier aggregation and one uplink assigned to one E-UTRA band, the requirement is defined with the uplink active in a band other than that supporting the downlink(s) under test. The uplink configuration shall be in accordance with Table 7.3.1A-3 when the uplink is active in the band supporting two or more non-contiguous component carriers, Table $7.3 .1 \mathrm{~A}-1$ when the uplink is active in a band supporting two contiguous component carriers and in accordance with Table 7.3.1-2 when the uplink is active in a band supporting one carrier per band. The downlink PCC shall be configured closer to the uplink operating band than the downlink SCC(s) when the uplink is active in band(s) supporting contiguous aggregation. For these uplink configurations, the UE shall meet the maximum input-level requirements for intra-band non-contiguous carrier aggregation of two or more downlink subblocks, the requirements for intra-band contiguous carrier aggregation for the contiguously aggregated downlink carriers and for any remaining component carrier(s) the the requirements specified in subclause 7.4.1. All downlink carriers shall be active throughout the tests and the requirements for the downlinks shall be met with the single uplink carrier active in each band capable of UL operation.

### 7.4.1B Minimum requirements for UL-MIMO

For UE with two transmitter antenna connectors in closed-loop spatial multiplexing, the minimum requirements in Clause 7.4.1 shall be met with the UL-MIMO configurations specified in Table 6.2.2B-2. For UL-MIMO, the parameter Pcmax_l is defined as the total transmitter power over the two transmit antenna connectors.

### 7.4.1D Minimum requirements for ProSe

The throughput shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annexes A.6.2.

Table 7.4.1D-1: Maximum input level for ProSe

| Rx Parameter | Units |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | $\mathbf{1 . 4}$ | $\mathbf{3}$ | $\mathbf{5}$ | $\mathbf{1 0}$ | $\mathbf{1 5}$ | $\mathbf{2 0}$ |
|  |  | $\mathbf{M H z}$ | $\mathbf{M H z}$ | $\mathbf{M H z}$ | $\mathbf{M H z}$ | $\mathbf{M H z}$ | $\mathbf{M H z}$ |
| Power in Transmission <br> Bandwidth Configuration |  |  |  |  |  |  |  |
| NOTE 1: Reference measurement channel is Annex A.6.2 |  |  |  |  |  |  |  |

### 7.4.1F Minimum requirements for category NB1 and NB2

Category NB1 and NB2 UE maximum input level requirement is -25 dBm . For this input level the throughput shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channel as specified in Annex A.3.2.

### 7.4.1G Minimum requirements for V2X

The throughput shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annexes A.8.2 with parameters specified in Table 7.4.1G-1.

Table 7.4.1G-1: Maximum input level

| Rx Parameter | Units | Channel bandwidth |  |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | $\mathbf{1 . 4}$ <br> $\mathbf{M H z}$ | $\mathbf{3}$ <br> $\mathbf{M H z}$ | $\mathbf{5}$ <br> $\mathbf{M H z}$ | $\mathbf{1 0}$ <br> $\mathbf{M H z}$ | $\mathbf{1 5}$ <br> $\mathbf{M H z}$ | $\mathbf{2 0}$ <br> $\mathbf{M H z}$ |
| Power in Transmission <br> Bandwidth Configuration | dBm |  |  |  | $-22^{2}$ |  | $-22^{2}$ |
|  |  |  |  |  | $-23^{3}$ |  | $-23^{3}$ |

When UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA downlink reception for inter-band EUTRA V2X / E-UTRA bands specified in Table 5.5G-2, the requirements in subclause 7.4.1G apply for the E-UTRA V2X sidelink reception and the requirements in subclause 7.4.1 apply for the E-UTRA downlink reception while all downlink carriers are active.

For intra-band contiguous multi-carrier operation, maximum input level is defined as the powers received at the UE antenna port over the Transmission bandwidth configuration of each CC, at which the specified relative throughput shall meet or exceed the minimum requirements for the specified reference measurement channel over each component carrier.

Table 7.4.1G-2: Maximum input level for intra-band contiguous multi-carrier for V2X UE

| Rx Parameter | Units | V2X Bandwidth Class |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | A | B | C/ $\mathbf{C}_{1}$ | D | E | F |
| Power in largest Transmission Bandwidth Configuration CC | dBm |  | $-22^{2}$ | $-22^{2}$ |  |  |  |
|  |  |  | $-233$ | $-23{ }^{3}$ |  |  |  |
| Power in each other CC | dBm |  | $-22+$ $10 \log \left(\mathrm{~N}_{\mathrm{RB}, \mathrm{c}}\right.$ $/ \mathrm{N}_{\mathrm{RB}, \text { largest }}$ $\mathrm{BW})^{2}$ | $\begin{gathered} -22^{2}+ \\ 10 \log \left(\text { N }_{\text {RB, } \mathrm{C}}\right. \\ / \mathrm{N}_{\mathrm{RB}, \text { largest }} \\ \mathrm{BW})^{2}{ }^{2} \\ \hline \end{gathered}$ |  |  |  |
|  |  |  | $-23+$ $10 \log \left(\right.$ NRB, $^{2}$ $/_{\text {RB,largest }}$ $\mathrm{BW})^{3}$ | $\begin{gathered} -23+ \\ 10 \log \left(\text { NRB, }^{\prime}\right. \\ / N_{\text {RB, largest }} \\ \mathrm{BW})^{3} \\ \hline \end{gathered}$ |  |  |  |
| NOTE 1: Void <br> NOTE 2: The requirement is applied for multi-carrier intra-band con-current receptions when 2 carrier transmissions are activated at the same time. <br> NOTE 3: This requirement is applicable for 64QAM. |  |  |  |  |  |  |  |

### 7.4A Void

### 7.4A. 1 Void

### 7.5 Adjacent Channel Selectivity (ACS)

Adjacent Channel Selectivity (ACS) is a measure of a receiver's ability to receive a E-UTRA signal at its assigned channel frequency in the presence of an adjacent channel signal at a given frequency offset from the centre frequency of the assigned channel. ACS is the ratio of the receive filter attenuation on the assigned channel frequency to the receive filter attenuation on the adjacent channel(s).

### 7.5.1 Minimum requirements

The UE shall fulfil the minimum requirement specified in Table 7.5.1-1 for all values of an adjacent channel interferer up to -25 dBm . However it is not possible to directly measure the ACS, instead the lower and upper range of test parameters are chosen in Table 7.5.1-2 and Table 7.5.1-3 where the throughput shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP. 1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1). For operating bands with an unpaired DL part (as noted in Table 5.5-1), the requirements only apply for carriers assigned in the paired part.

Table 7.5.1-1: Adjacent channel selectivity

| Finterferer (offset) | MHz | $\begin{gathered} 1.4+0.0025 \\ / \\ -1.4-0.0025 \end{gathered}$ | $\begin{gathered} 3+0.0075 \\ l \\ -3-0.0075 \end{gathered}$ | $\begin{gathered} 5+0.0025 \\ / \\ -5-0.0025 \end{gathered}$ | $\begin{gathered} 7.5+0.0075 \\ / \\ -7.5-0.0075 \end{gathered}$ | $\begin{gathered} 10+0.0125 \\ / \\ -10-0.0125 \end{gathered}$ | $\begin{gathered} \hline 12.5+0.0025 \\ / \\ -12.5- \\ 0.0025 \\ \hline \end{gathered}$ |

NOTE 1: The transmitter shall be set to 24dB below Pcmax_L at the minimum uplink configuration specified in Table 7.3.1-2 with Рсмах_L as defined in subclause 6.2.5.

NOTE 2: The interferer consists of the Reference measurement channel specified in Annex 3.2 with one sided dynamic OCNG Pattern OP. 1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.

### 7.5.1A Minimum requirements for CA

For inter-band carrier aggregation with one component carrier per operating band and the uplink assigned to one EUTRA band, the adjacent channel requirements are defined with the uplink active on the band(s) other than the band whose downlink is being tested. The UE shall meet the requirements specified in subclause 7.5.1 for each component carrier while all downlink carriers are active. For E-UTRA CA configurations including an operating band without uplink operation or an operating band with an unpaired DL part (as noted in Table 5.5-1), the requirements for all downlinks shall be met with the single uplink carrier active in each band capable of UL operation. For a component carrier configured in Band 46 or Band 49, the requirements specified in subclause 7.5.1 are replaced by the requirements in Table 7.5.1A-0a with test parameters in Table 7.5.1A-0b and Table 7.5.1A-0c.

Table 7.5.1A-0a: Adjacent channel selectivity

| E-UTRA band | Rx Parameter | Units | Channel bandwidth |  |  |  |  |  |

| 49 | Power in Transmission Bandwidth Configuration |  |  |  |  | -56.5 |  | -56.5 |
|  | PInterferer |  | -25 |  |  |  |  |  |
|  | BW Interferer |  |  |  |  | 10 |  | 20 |
|  | Finterferer (offset) |  |  |  |  | $\begin{gathered} 10+0.01 \\ 25 \\ / \\ -10- \\ 0.0125 \\ \hline \end{gathered}$ |  | $\begin{gathered} 20+0.0025 \\ ! \\ -20-0.0025 \end{gathered}$ |

NOTE 1: In a band capable of unplink operation, the transmitter shall be set to 24 dB below Pcmax_L at the minimum uplink configuration specified in Table 7.3.1-2 with Pcmax_L as defined in subclause 6.2.5.
NOTE 2: The interferer consists of the Reference measurement channel specified in Annex A. 3.2 with one sided dynamic OCNG Pattern OP. 1 FDD/TDD/FS3 as described in Annex A.5.1.1/A.5.2.1/A.5.4.1 and set-up according to Annex C.3.1.

For E-UTRA CA configurations listed in Table 7.3.1A-0a under conditions for which reference sensitivity for the operating band being tested is N/A, the adjacent channel requirements of subclause 7.5.1A do not apply.

For intra-band contiguous carrier aggregation the downlink $\operatorname{SCC}(s)$ shall be configured at nominal channel spacing to the PCC. For FDD, the PCC shall be configured closest to the uplink band. All downlink carriers shall be active throughout the test. The uplink output power shall be set as specified in Table 7.5.1A-2 and Table 7.5.1A-3 with the uplink configuration set according to Table 7.3.1A-1 for the applicable carrier aggregation configuration. For UE(s) supporting one uplink carrier, the uplink configuration of the PCC shall be in accordance with Table 7.3.1-2. The UE shall fulfil the minimum requirement specified in Table $7.5 .1 \mathrm{~A}-1$ for an adjacent channel interferer on either side of the aggregated downlink signal at a specified frequency offset and for an interferer power up to -25 dBm . The throughput of each carrier shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP. 1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Tables 7.5.1A-2 and 7.5.1A-3. For operating bands with an unpaired DL part (as noted in Table 5.5-1), the requirements also apply for an SCC assigned in the unpaired part with parameters specified in Tables 7.5.1A-2 and 7.5.1A-3.

For intra-band non-contiguous carrier aggregation with one uplink carrier and two or more downlink sub-blocks, each larger than or equal to 5 MHz , the adjacent channel selectivity requirements are defined with the uplink configuration in accordance with Table 7.3.1A-3. For this uplink configuration, the UE shall meet the requirements for each sub-block as specified in subclauses 7.5 .1 and 7.5 .1 A for one component carrier and two component carriers per sub-block, respectively. The UE shall fulfil the minimum requirements all values of a single adjacent channel interferer in-gap and out-of-gap up to a -25 dBm interferer power while all downlink carriers are active. For the lower range of test parameters (Case 1), the interferer power $\mathrm{P}_{\text {interferer }}$ shall be set to the maximum of the levels given by the carriers of the respective sub-blocks as specified in Table 7.5.1-2 and Table 7.5.1A-2 for one component carrier and two component carriers per sub-block, respectively. The wanted signal power levels for the carriers of each sub-block shall then be adjusted relative to $\mathrm{P}_{\text {interferer }}$ in accordance with the ACS requirement for each sub-block (Table 7.5.1-1 and Table 7.5.1A-1). For the upper range of test parameters (Case 2) for which the interferer power $\mathrm{P}_{\text {interferer }}$ is -25 dBm (Table 7.5.1-3 and Table 7.5.1A-3) the wanted signal power levels for the carriers of each sub-block shall be adjusted relative to $\mathrm{P}_{\text {interferer }}$ like for Case 1 .

NOTE 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP. 1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1
NOTE 3: The Finterfere (offset) is the frequency separation of the center frequency of the carrier closest to the interferer and the center frequency of the adjacent channel interferer and shall be further adjusted to $\left\lfloor\mathrm{F}_{\text {inerferer }} / 0.015+0.5\right\rfloor 0.015+0.0075 \mathrm{MHz}$ to be offset from the sub-carrier raster.

| PInterferer | dBm | -25 |  |  |  |  |
| BW Interferer | MHz | 5 | 5 | 5 | 5 | 5 |
| Finterferer (offset) | MHz | $\begin{gathered} \hline 2.5+\mathrm{F}_{\text {offset }} \\ \mathrm{l} \\ -2.5-\mathrm{F}_{\text {offset }} \end{gathered}$ | $\begin{gathered} \hline 2.5+\text { Foffset }^{\text {/ }} \\ -2.5-\text { Foffiset } \end{gathered}$ | $\begin{gathered} 2.5+\text { Foffset } \\ \text { / } \\ -2.5-F_{\text {offset }} \end{gathered}$ | $\begin{gathered} 2.5+\text { Foffset } / \\ -2.5-F_{\text {offset }} \end{gathered}$ | $\begin{gathered} \hline 2.5+\text { Foffiset }^{\text {/ }} \\ -2.5-\text { Foffiset } \end{gathered}$ |

NOTE 1: The transmitter shall be set to 24 dB below Pcmax L, or $\operatorname{Pcmax\_ }$ as defined in subclause 6.2.5A.
NOTE 2: The interferer consists of the Reference measurement channel specified in Annex 3.2 with one sided dynamic OCNG Pattern OP. 1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1
NOTE 3: The Finterferer (offset) is the frequency separation of the center frequency of the carrier closest to the interferer and the center frequency of the adjacent channel interferer and shall be further adjusted to $\left\lfloor\mathrm{F}_{\text {interferer }} / 0.015+0.5\right\rfloor 0.015+0.0075 \mathrm{MHz}$ to be offset from the sub-carrier raster.

For combinations of intra-band and inter-band carrier aggregation and one uplink carrier assigned to one E-UTRA band, the requirement is defined with the uplink active in each band other than that supporting the downlink(s) under test. The uplink configuration shall be in accordance with Table 7.3.1A-3 when the uplink is active in the band supporting two or more non-contiguous component carriers, Table 7.3.1A-1 when the uplink is active in a band supporting two contiguous component carriers and in accordance with Table 7.3.1-2 when the uplink is active in a band supporting one carrier per band. The downlink PCC shall be configured closer to the uplink operating band than the downlink SCC(s) when the uplink is active in band(s) supporting contiguous aggregation. For these uplink configurations, the UE shall meet the adjacent channel selectivity requirements for intra-band non-contiguous carrier aggregation with $\Delta \mathrm{R}_{\text {IBNC }}=0 \mathrm{~dB}$ for all sub-block gaps (Table 7.3.1A-3) for the two or more non-contiguous downlink sub-blocks, the requirements for intraband contiguous carrier aggregation for the contiguously aggregated downlink carriers and for any remaining
component carrier(s) the requirements specified in subclause 7.5.1. For contiguously aggregated component carriers configured in Band 46, the said requirements for intra-band contiguous carrier aggregation of downlink carriers are replaced by requirements in Table 7.5.1A-4 with test parameters in Table 7.5.1A-5 and Table 7.5.1A-6. For noncontiguously aggregated component carriers configured in Band 46, the said requirements are applied to each sub-block for in-gap and out-of-gap interferers. For the sub-block with a single component carrier, the requirement is replaced by Table 7.5.1A-0a with test parameters in Table 7.5.1A-0b and Table 7.5.1A-0c. For the sub-block with two or more contiguous component carriers, the requirement is replaced by Table 7.5.1A-4 with test parameters in Table 7.5.1A-5 and Table 7.5.1A-6. All downlink carriers shall be active throughout the tests and the requirements for downlinks shall be met with the single uplink carrier active in each band capable of UL operation.

### 7.5.1B Minimum requirements for UL-MIMO

For UE(s) with two transmitter antenna connectors in closed-loop spatial multiplexing scheme, the minimum requirements in Clause 7.5.1 shall be met with the UL-MIMO configurations specified in Table 6.2.2B-2. For ULMIMO, the parameter Pcmax_l is defined as the total transmitter power over the two transmit antenna connectors.

### 7.5.1D Minimum requirements for ProSe

The UE shall fulfil the minimum requirement specified in Table 7.5.1D-1 for all values of an adjacent channel interferer up to -25 dBm . However it is not possible to directly measure the ACS, instead the lower and upper range of test parameters are chosen in Table 7.5.1D-2 and Table 7.5.1D-3 where the throughput shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annex A.6.2.

Table 7.5.1D-1: Adjacent channel selectivity for ProSe

|  |  | 1.4 MHz | 3 MHz | 5 MHz | 10 MHz | 15 MHz | 20 MHz |
| Power in Transmission Bandwidth Configuration | dBm |  |  | -56.5 | -56.5 | -53.5 | -50.5 |
| Pinterferer | dBm | -25 |  |  |  |  |  |
| BW Interferer | MHz |  |  | 5 | 5 | 5 | 5 |
| Finterferer (offset) | MHz |  |  | $\begin{gathered} 5+0.0025 \\ 1 \\ -5-0.0025 \end{gathered}$ | $\begin{gathered} 7.5+0.0075 \\ / \\ -7.5-0.0075 \end{gathered}$ | $\begin{gathered} 10+0.0125 \\ / \\ -10-0.0125 \end{gathered}$ | $\begin{gathered} 12.5+0.0025 \\ / \\ -12.5- \\ 0.0025 \end{gathered}$ |

NOTE 1: The interferer is QPSK modulated PUSCH containing data and reference symbols. Normal cyclic prefix is used. The data content shall be uncorrelated to the wanted signal and modulated according to clause 5 of TS36.211.

### 7.5.1F Minimum requirements for category NB1 and NB2

Category NB1 and NB2 UE shall fulfil the minimum requirement specified in Table $7.5 .1 \mathrm{~F}-1$ for all values of an adjacent channel interferer up to -25 dBm . However it is not possible to directly measure the ACS, instead the lower
and upper range of test parameters are chosen in Table $7.5 .1 \mathrm{~F}-1$ where the throughput shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channel as specified in Annex A.3.2.

Table 7.5.1F: Adjacent channel selectivity parameters for category NB1 and NB2

| ACS1 test Parameters |  |  |
| :---: | :---: | :---: |
| Interferer | GSM (GMSK) | E-UTRA |
| Category NB1 or NB2 signal power ( $\mathrm{P}_{\text {wanted }}$ ) / dBm | REFSENS + 14 dB |  |
| Interferer signal power (Pinterferer) / dBm | REFSENS + 42 dB | REFSENS + 47 dB |
| Interferer bandwidth | 200 kHz | 5 MHz |
| Interferer offset from category NB1 or NB2 channel edge | $\pm 200 \mathrm{kHz}$ | $\pm 2.5 \mathrm{MHz}$ |
| ACS2 test Parameters |  |  |
| Interferer | GSM (GMSK) | E-UTRA |
| Category NB1 or NB2 signal power ( $\mathrm{P}_{\text {wanted }}$ ) / dBm | $-53 \mathrm{dBm}$ | -58 dBm |
| Interferer signal power (Pinterferer) / dBm | $-25 \mathrm{dBm}$ |  |
| Interferer bandwidth | 200 kHz | 5 MHz |
| Interferer offset from category NB1 or NB2 channel edge | $\pm 200 \mathrm{kHz}$ | $\pm 2.5 \mathrm{MHz}$ |

### 7.5.1G Minimum requirements for V2X

The V2X UE shall fulfil the minimum requirement specified in Table 7.5.1G-1 for all values of an adjacent channel interferer up to -22 dBm . However it is not possible to directly measure the ACS, instead the lower and upper range of test parameters are chosen in Table 7.5.1G-2 and Table 7.5.1G-3 where the throughput shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annex A.8.2.

Table 7.5.1G-1: Adjacent channel selectivity for V2X

|  |  | Channel bandwidth |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Rx Parameter | Units | $\mathbf{1 . 4}$ <br>  | $\mathbf{3}$ <br> $\mathbf{M H z}$ | $\mathbf{5}$ | $\mathbf{1 0}$ | $\mathbf{1 5}$ | $\mathbf{2 0}$ |
| $\mathbf{M H z}$ | $\mathbf{M H z}$ | $\mathbf{M H z}$ | $\mathbf{M H z}$ |  |  |  |  |
| ACS | dB |  |  |  | 33.0 |  | $\mathbf{2 7}$ |

Table 7.5.1G-2: Test parameters for Adjacent channel selectivity for V2X, Case 1

| Rx Parameter | Units | Channel bandwidth |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 1.4 MHz | 3 MHz | 5 MHz | 10 MHz | 15 MHz | 20 MHz |
| Power in Transmission Bandwidth Configuration | dBm | Prefsens_v2x +14 dB |  |  |  |  |  |
| PInterferer | dBm |  |  |  | $\begin{gathered} \text { Prefsens_v2x } \\ +45.5 \mathrm{~dB} \end{gathered}$ |  | $\begin{gathered} \text { Prefsens_V2x }+39.5 \mathrm{~dB} \end{gathered}$ |
| BW Interferer | MHz |  |  |  | 10 |  | 10 |
| Finterferer (offset) | MHz |  |  |  | $\begin{gathered} \hline 10+0.0125 \\ / \\ -10-0.0125 \end{gathered}$ |  | $\begin{gathered} 15+0.0075 \\ / \\ -15-0.0075 \end{gathered}$ |

NOTE 1: The interferer is QPSK modulated PUSCH containing data and reference symbols. Normal cyclic prefix is used. The data content shall be uncorrelated to the wanted signal and modulated according to clause 5 of TS36.211.

Table 7.5.1G-3: Test parameters for Adjacent channel selectivity for V2X, Case 2

| Rx Parameter | Units | Channel bandwidth |  |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | $\mathbf{1 . 4} \mathbf{M H z}$ | $\mathbf{3} \mathbf{M H z}$ | $\mathbf{5 H z}$ | $\mathbf{1 0} \mathbf{~ M H z}$ | $\mathbf{1 5} \mathbf{M H z}$ | $\mathbf{2 0} \mathbf{~ M H z}$ |
| Power in <br> Transmission |  |  |  |  | -53.5 |  | -47.5 |

| Bandwidth <br> Configuration |  |  |  |  |  |  |  |
| :--- | :---: | :--- | :--- | :--- | :--- | :--- | :---: |
| Plinterferer | dBm |  |  |  |  |  |  |

| Finterferer (offset) | MHz |  |  |  | 10 |  | $15+0.0075$ |
|  |  |  |  |  | $10+0.0125$ |  | 1 |
|  |  |  |  | $-10-0.0125$ |  | $-15-0.0075$ |  |

NOTE 1: The interferer is QPSK modulated PUSCH containing data and reference symbols. Normal cyclic prefix is used. The data content shall be uncorrelated to the wanted signal and modulated according to clause 5 of TS36.211.

When UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA downlink reception for inter-band EUTRA V2X / E-UTRA bands specified in Table 5.5G-2, the requirements in subclause 7.5.1G apply for the E-UTRA V2X sidelink reception and the requirements in subclause 7.5.1 apply for the E-UTRA downlink reception while all downlink carriers are active.

For intra-band contiguous multi-carrier operation, the V2X UE shall fulfil the minimum requirement specified in Table 7.5.1G-4 to Table 7.5.1G-6 where the throughput shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annex A.8.2.

Table 7.5.1G-4: Adjacent channel selectivity for intra-band contiguous multi-carrier for V2X UE

|  |  | V2X Bandwidth Class |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Rx Parameter | Units | B | C/ C 1 | D | E | F |  |
| ACS | dB | 30 | 24 |  |  |  |  |

Table 7.5.1G-5: Test parameters for Adjacent channel selectivity, Case 1

| Rx Parameter | Units | V2X Bandwidth Class |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | B | C/ $\mathrm{C}_{1}$ | D | E | F |
| Pw in Transmission Bandwidth Configuration, per CC |  | $\begin{gathered} \text { REFSENS } \\ +14 \mathrm{~dB} \end{gathered}$ | $\begin{gathered} \text { REFSENS } \\ +14 \mathrm{~dB} \end{gathered}$ |  |  |  |
| Pinterferer | dBm | Aggregated power + 28.5 dB | Aggregated power + 22.5 dB |  |  |  |
| BW Interferer | MHz | 10 | 10 |  |  |  |
| Finterferer (offset) | MHz | $\begin{gathered} 5+\text { Foffset }^{\prime} \\ -5-F_{\text {offset }} \end{gathered}$ | $\begin{gathered} 5+\text { Foffiset } \\ / \\ -5-F_{\text {offset }} \\ \hline \end{gathered}$ |  |  |  |

NOTE 1: The Finterfere (offset) is the frequency separation of the center frequency of the carrier closest to the interferer and the center frequency of the adjacent channel interferer and shall be further adjusted to $\left\lfloor\mathrm{F}_{\text {interferer }} / 0.015+0.5\right\rfloor 0.015+0.0075 \mathrm{MHz}$ to be offset from the sub-carrier raster.
NOTE 2: The requirement is applied for multi-carrier intra-band con-current receptions when 2 carrier transmissions are activated at the same time.

Table 7.5.1G-6: Test parameters for Adjacent channel selectivity, Case 2

| Rx Parameter | Units | V2X Bandwidth Class |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | B | C/ $\mathbf{C}_{1}$ | D | E | F |
| Pw in Transmission Bandwidth Configuration, per CC | dBm | $\begin{gathered} -50.5 \\ +10 \log _{10}(\mathrm{~N} \\ \text { RB,d/ } \\ \text { agg } \text { ) } \\ \hline \end{gathered}$ | $\begin{gathered} -47.5 \\ +10 \log _{10}\left(\mathrm{~N}_{\mathrm{RB}}\right. \\ \left., \mathrm{c} / \mathrm{N}_{\text {RB agg }}\right) \end{gathered}$ |  |  |  |
| Pinterferer | dBm |  |  | -22 |  |  |
| BW Interferer | MHz | 10 | 10 |  |  |  |
| Finterferer (offset) | MHz | $\begin{gathered} 5+F_{\text {offset }} \\ \quad / \\ -5-F_{\text {offset }} \end{gathered}$ | $\begin{gathered} 5+\text { Foffset } \\ \quad / \\ -5-F_{\text {offset }} \\ \hline \end{gathered}$ |  |  |  |

NOTE 1: The Finterferer (offset) is the frequency separation of the center frequency of the carrier closest to the interferer and the center frequency of the adjacent channel interferer and shall be further adjusted to $\left\lfloor\mathrm{F}_{\text {interferer }} / 0.015+0.5\right\rfloor 0.015+0.0075 \mathrm{MHz}$ to be offset from the sub-carrier raster.
NOTE 2: The requirement is applied for multi-carrier intra-band con-current receptions when 2 carrier transmissions are activated at the same time.

### 7.6 Blocking characteristics

The blocking characteristic is a measure of the receiver's ability to receive a wanted signal at its assigned channel frequency in the presence of an unwanted interferer on frequencies other than those of the spurious response or the adjacent channels, without this unwanted input signal causing a degradation of the performance of the receiver beyond a specified limit. The blocking performance shall apply at all frequencies except those at which a spurious response occur.

### 7.6.1 In-band blocking

In-band blocking is defined for an unwanted interfering signal falling into the UE receive band or into the first 15 MHz below or above the UE receive band at which the relative throughput shall meet or exceed the minimum requirement for the specified measurement channels.

For CA configurations including Band 46, in-band blocking in Band 46 is defined for a 20 MHz unwanted interfering signal falling into the UE receive band or into the first 60 MHz below or above the UE receive band (Table 7.6.1.1A-0a and Table 7.6.1.1A-0b).

For CA configurations including Band 49, in-band blocking in Band 49 is defined for an unwanted interfering signal falling into the UE receive band or into the first 60 MHz below or above the UE receive band (Table 7.6.1.1A-0a and Table 7.6.1.1A-0b).

### 7.6.1.1 Minimum requirements

The throughput shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP. 1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Tables 7.6.1.1-1 and 7.6.1.1-2. For operating bands with an unpaired DL part (as noted in Table 5.5-1), the requirements only apply for carriers assigned in the paired part.

Table 7.6.1.1-1: In band blocking parameters

| Rx parameter | Units | Channel bandwidth |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 1.4 MHz | 3 MHz | 5 MHz | 10 MHz | 15 MHz | 20 MHz |
| Power in |  | REFSENS + channel bandwidth specific value below |  |  |  |  |  |
| Transmission Bandwidth Configuration | dBm | 6 | 6 | 6 | 6 | 7 | 9 |
| BW Interferer | MHz | 1.4 | 3 | 5 | 5 | 5 | 5 |
| Flofiset, case 1 | MHz | $2.1+0.0125$ | 4.5+0.0075 | $7.5+0.0125$ | 7.5+0.0025 | 7.5+0.0075 | 7.5+0.0125 |
| $\mathrm{F}_{\text {loffset, case } 2}$ | MHz | 3.5+0.0075 | 7.5+0.0075 | 12.5+0.0075 | $\begin{gathered} 12.5+0.012 \\ 5 \end{gathered}$ | $\begin{gathered} 12.5+0.002 \\ 5 \end{gathered}$ | $\begin{gathered} 12.5+0.007 \\ 5 \end{gathered}$ |

NOTE 1: The transmitter shall be set to 4 dB below Pcmax_L at the minimum uplink configuration specified in Table 7.3.1-2 with Pcmax_L as defined in subclause 6.2.5.
NOTE 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP. 1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1.
NOTE 3: The REFSENS power level is specified in Table 7.3.1-1 and Table 7.3.1-1a for two and four antenna ports, respectively.
NOTE 4: For DL category M1 and M2 UE, the reference sensitivity for category M1 in table 7.3.1E-3 and category M2 in Table 7.3.1E-8 should be used as REFSENS for the power in Transmission Bandwidth Configuration.
NOTE5: For DL category M1 and M2 UE, the parameters for the applicable channel bandwidth apply.

Table 7.6.1.1-2: In-band blocking

| E-UTRA band | Parameter | Unit | Case 1 | Case 2 | Case 3 | Case 4 | Case 5 | Case 6 |

| 71 | Finterferer | MHz | (NOTE 2) | $\begin{gathered} \hline \text { FDL_low - } 12 \text { to } \\ \text { FDL _high }+15^{2} \end{gathered}$ |  |  |  | FDL-ow - 12 |
| NOTE 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band <br> NOTE 2: For each carrier frequency the requirement is valid for two frequencies: <br> a. the carrier frequency -BW/2- Floffiset, case 1 and <br> b. the carrier frequency $+\mathrm{BW} / 2+\mathrm{F}_{\text {loffset, case } 1}$ <br> NOTE 3: Finterferer range values for unwanted modulated interfering signal are interferer center frequencies |  |  |  |  |  |  |  |  |

For the UE which supports inter band CA configuration in Table 7.3.1-1A, $\mathrm{P}_{\text {Interferer }}$ power defined in Table 7.6.1.1-2 is increased by the amount given by $\Delta \mathrm{R}_{\mathrm{IB}, \mathrm{c}}$ in Table 7.3.1-1A.

### 7.6.1.1A Minimum requirements for CA

For inter-band carrier aggregation with one component carrier per operating band and the uplink assigned to one EUTRA band the in-band blocking requirements are defined with the uplink active on the band(s) other than the band whose downlink is being tested. For adjacent downlink bands separated by less than 30 MHz the frequency separation between the center frequencies of adjacent component carriers belonging to different bands shall be $\geq \mathrm{BW}_{1} / 2+\mathrm{BW}_{2} / 2+$ $2 \mathrm{~F}_{\text {Ioffset, case } j}$ for Case $j$ interferers, $j=1,2$, where $\mathrm{BW}_{k} / 2$ are the channel bandwidths of carrier $k, k=1,2$. The UE shall meet the requirements specified in subclause 7.6.1.1 for each component carrier while all downlink carriers are active. For the UE which supports inter band CA configuration in Table 7.3.1-1A, $\mathrm{P}_{\text {Interferer }}$ power defined in Table 7.6.1.1-2 is increased by the amount given by $\Delta \mathrm{R}_{\mathrm{IB}, \mathrm{c}}$ in Table 7.3.1-1A. For E-UTRA CA configurations including an operating band without uplink operation or an operating band with an unpaired DL part (as noted in Table 5.5-1), the requirements for all downlinks shall be met with the single uplink carrier active in each band capable of UL operation. The requirements for the component carrier configured in the operating band without uplink operation are specified in Table 7.6.1.1A-0, Table 7.6.1.1A-0a and Table 7.6.1.1A-0b. The requirements for a component carrier configured in Band 49 are specified in Table 7.6.1.1A-0a and Table 7.6.1.1A-0b.

Table 7.6.1.1A-0: In-band blocking for additional operating bands for carrier aggregation

For E-UTRA CA configurations listed in Table 7.3.1A-0a under conditions for which reference sensitivity for the operating band being tested is N/A, the in-band blocking requirements of subclause 7.6.1.1A do not apply.

For intra-band contiguous carrier aggregation the downlink $\operatorname{SCC}(\mathrm{s})$ shall be configured at nominal channel spacing to the PCC. For FDD, the PCC shall be configured closest to the uplink band. All downlink carriers shall be active throughout the test. The uplink output power shall be set as specified in Table 7.6.1.1A-1 with the uplink configuration set according to Table 7.3.1A-1 for the applicable carrier aggregation configuration. For UE(s) supporting one uplink carrier, the uplink configuration of the PCC shall be in accordance with Table 7.3.1-2. The UE shall fulfil the minimum requirement in presence of an interfering signal specified in Tables 7.6.1.1A-1 and Tables 7.6.1.1A-2 being on either side of the aggregated signal. The throughput of each carrier shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG

Pattern OP. 1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Tables 7.6.1.1A-1 and 7.6.1.1A-2. For operating bands with an unpaired DL part (as noted in Table 5.5-1), the requirements also apply for an SCC assigned in the unpaired part with parameters specified in Tables 7.6.2.1A-1 and 7.6.2.1A-2.

For intra-band non-contiguous carrier aggregation with one uplink carrier and two or more downlink sub-blocks, each larger than or equal to 5 MHz , the in-band blocking requirements are defined with the uplink configuration in accordance with Table 7.3.1A-3. For this uplink configuration, the UE shall meet the requirements for each sub-block as specified in subclause 7.6.1.1 and in this subclause for one component carrier and two component carriers per subblock, respectively. The requirements apply for in-gap and out-of-gap interferers while all downlink carriers are active.

Table 7.6.1.1A-1: In band blocking parameters

| Rx Parameter | Units | CA Bandwidth Class |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| $\mathrm{F}_{\text {lofiset, case } 2}$ | MHz | 12.5 | 12.5 | 12.5 | 12.5 | 12.5 |

NOTE 1: The transmitter shall be set to 4dB below Pcmax_L, or Pcmax_L as defined in subclause 6.2.5A
NOTE 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP. 1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 and set-up according to Annex C.3.1

Table 7.6.1.1 A-2: In-band blocking

| CA configuration | Parameter | Unit | Case 1 | Case 2 |
| :---: | :---: | :---: | :---: | :---: |
|  | PInterferer | dBm | -56 | -44 |
|  | Finterferer (offset) | MHz | $\begin{gathered} =- \text { Foffset } \text { F }_{\text {loffset, case } 1} \\ \& \\ =+ \text { Foffset }+ \text { F }_{\text {loffset, case } 1} \end{gathered}$ | $\begin{gathered} \hline \leq \text { F }_{\text {offset }}-\text { F }_{\text {loffiset,case } 2} \\ \& \\ \geq+ \text { Foffset }+\mathrm{F}_{\text {loffset, case 2 }} \\ \hline \end{gathered}$ |
| CA 1C, CA 2C, CA 3B, CA_3C, CA_5B, CA_7B, CA-7C, CA_8B, CA-12B, CA $23 \mathrm{~B}, \mathrm{CA} 27 \mathrm{~B}, \mathrm{CA}$ 28C, CA_38C, CA 39C, CA_40C, CA 40D, CA 40E, CA 40F, CA_41C, CA_41D, CA_41E, CA_41F, CA_42C, CA_42D, CA_42E, CA_42F, CA_43C, CA_48B, CA_48C, CA_48D, CA_48E, CA_48F, CA_66B, CA 66C, CA 66D, CA 70 C | Finterferer <br> (Range) | MHz | (NOTE 2) | FDL_low-15 to <br> FDL_nigh +15 |
| NOTE 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band <br> NOTE 2: For each carrier frequency the requirement is valid for two frequencies: <br> a. the carrier frequency-Foffset - Fioffset, case 1 and <br> b. the carrier frequency + Foffset + Floffset, case 1 <br> NOTE 3: Foffset is the frequency offset from the center frequency of the CC being tested to the edge of aggregated channel bandwidth. <br> NOTE 4: The Finterferer (offset) is the frequency separation of the center frequency of the carrier closest to the interferer and the center frequency of the interferer and shall be further adjusted to $\left\lfloor\mathrm{F}_{\text {interferer }} / 0.015+0.5\right\rfloor 0.015+0.0075 \mathrm{MHz}$ to be offset from the sub-carrier raster. |  |  |  |  |

For combinations of intra-band and inter-band carrier aggregation and one uplink carrier assigned to one E-UTRA band, the requirement is defined with the uplink active in the band other than that supporting the downlink(s) under test. The uplink configuration shall be in accordance with Table 7.3.1A-3 when the uplink is active in the band supporting two or more non-contiguous component carriers, Table 7.3.1A-1 when the uplink is active in a band supporting two contiguous component carriers and in accordance with Table 7.3.1-2 when the uplink is active in a band supporting one carrier per band. The downlink PCC shall be configured closer to the uplink operating band than the downlink SCC(s) when the uplink is active in band(s) supporting contiguous aggregation. For these uplink configurations, the UE shall meet the inband blocking requirements for intra-band non-contiguous carrier aggregation with $\Delta R_{\text {IBNC }}=0 \mathrm{~dB}$ for all sub-block
gaps (Table 7.3.1A-3) for the two or more non-contiguous downlink sub-blocks, the requirements for intra-band contiguous carrier aggregation for the contiguously aggregated downlink carriers and for any remaining component carrier(s) the requirements specified in subclause 7.6.1. For contiguously aggregated component carriers configured in Band 46, the said requirements for intra-band contiguous carrier aggregation of downlink carriers are replaced by requirements in Table 7.6.1.1A-3 and 7.6.1.1A-4. For non-contiguously aggregated component carriers configured in Band 46, the said requirements are applied to each sub-block for in-gap and out-of-gap interferers. For the sub-block with a single component carrier, the requirement is replaced by Table 7.6.1.1A-0a and 7.6.1.1A-0b. For the sub-block with two or more contiguous component carriers, the requirement is replaced by Table 7.6.1.1A-3 and 7.6.1.1A-4. All downlink carriers shall be active throughout the tests and the requirements for the downlinks shall be met with the single uplink carrier active in each band capable of uplink operation.

Table 7.6.1.1A-3: In band blocking parameters

| E-UTRA Band | Rx Parameter | Units | CA Bandwidth Class |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | B | C | D | E | F |
| 46 | Pw in Transmission | dBm | REFSENS + CA Bandwidth Class specific value below |  |  |  |  |
|  | Bandwidth Configuration, per CC |  |  | 12 | 13.8 | 15 |  |
|  | BW Interferer | MHz |  | 20 | 20 | 20 |  |
|  | Floffset, case 1 | MHz |  | 30 | 30 | 30 |  |
|  | Floffset, case 2 | MHz |  | 50 | 50 | 50 |  |
| NOTE 1: In a band capable of uplink operation, the transmitter shall be set to 4dB below Pcmax_L,c or Pcmax_L as defined in subclause 6.2.5A <br> NOTE 2: The interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP. 1 FDD/TDD/FS3 as described in Annex A.5.1.1/A.5.2.1/A.5.4.1 and set-up according to Annex C.3.1 |  |  |  |  |  |  |  |

Table 7.6.1.1A-4: In-band blocking

| E-UTRA Band | Parameter | Unit | Case 1 | Case 2 |
| :---: | :---: | :---: | :---: | :---: |
|  | Pinterferer | dBm | -50 | -44 |
|  | Finterferer (offset) | MHz | $\begin{gathered} =- \text { Fofffset } \text { F Foffset, case } 1^{\&} \\ =+ \text { Foffset }+ \text { F }_{\text {loffset,case } 1} \end{gathered}$ | $\begin{gathered} \hline \leq-F_{\text {offset }} F_{\text {loffset,case 2 }} \\ \& \\ \geq+F_{\text {offset }}+F_{\text {loffifet,case 2 }} \end{gathered}$ |
| 46 | Finterferer (Range) | MHz | (Note 2) | $\begin{aligned} & \text { FDL_low }-60 \\ & \text { to } \\ & \text { FDL_high }+60 \\ & \hline \end{aligned}$ |

NOTE 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band
NOTE 2: For each carrier frequency the requirement is valid for two frequencies:
a. the carrier frequency - ooffset - Foffset, case 1 and
b. the carrier frequency + Foffset + Floffset, case 1

NOTE 3: Foffset is the frequency offset from the center frequency of the CC being tested to the edge of aggregated channel bandwidth.
NOTE 4: The Finterferer (offset) is the frequency separation of the center frequency of the carrier closest to the interferer and the center frequency of the interferer and shall be further adjusted to $\left\lfloor\mathrm{F}_{\text {interferer }} / 0.015+0.5\right\rfloor 0.015+0.0075 \mathrm{MHz}$ to be offset from the sub-carrier raster.

### 7.6.1.1D Minimum requirements for ProSe

The throughput shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annex A.6.2.

Table 7.6.1.1D-1: In band blocking parameters for ProSe Direct Discovery

| Rx parameter | Units | Channel bandwidth |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 1.4 MHz | 3 MHz | 5 MHz | 10 MHz | 15 MHz | 20 MHz |
| Power in | dBm | Prefsens_Prose + channel bandwidth specific value below + Poffset |  |  |  |  |  |
| Transmission Bandwidth Configuration |  |  |  | 6 | 6 | 7 | 9 |
| BW Interferer | MHz |  |  | 5 | 5 | 5 | 5 |
| $\mathrm{F}_{\text {loffiset, case } 1}$ | MHz |  |  | 7.5+0.0125 | $7.5+0.0025$ | 7.5+0.0075 | 7.5+0.0125 |

| Floffset, case 2 | MHz |  |  | $12.5+0.0075$ | $12.5+0.012$ | $12.5+0.002$ | $12.5+0.007$ |
| :--- | :---: | :--- | :--- | :---: | :---: | :---: | :---: |
|  |  |  |  | 5 | 5 | 5 |  |
| $P_{\text {offset }}$ | dB |  |  | 10.9 | 13.9 | 15.7 | 16.9 |

NOTE 1: The interferer is QPSK modulated PUSCH containing data and reference symbols. Normal cyclic prefix is used. The data content shall be uncorrelated to the wanted signal and modulated according to clause 5 of TS36.211

Table 7.6.1.1D-2: In band blocking parameters for ProSe Direct Communication

| Rx parameter | Units | Channel bandwidth |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 1.4 MHz | 3 MHz | 5 MHz | 10 MHz | 15 MHz | 20 MHz |
| Power in | Prefsens_Prose + channel bandwidth specific value below |  |  |  |  |  |  |
| Transmission Bandwidth Configuration | dBm |  |  | 6 | 6 | 7 | 9 |
| BWInterferer | MHz |  |  | 5 | 5 | 5 | 5 |
| F ${ }_{\text {Iofiset, case } 1}$ | MHz |  |  | 7.5+0.0125 | 7.5+0.0025 | 7.5+0.0075 | 7.5+0.0125 |
| $\mathrm{F}_{\text {lofifset, case } 2}$ | MHz |  |  | $12.5+0.0075$ | $\begin{gathered} 12.5+0.012 \\ 5 \\ \hline \end{gathered}$ | $\begin{gathered} 12.5+0.002 \\ 5 \\ \hline \end{gathered}$ | $\begin{gathered} 12.5+0.007 \\ 5 \\ \hline \end{gathered}$ |

NOTE 1: The interferer is QPSK modulated PUSCH containing data and reference symbols. Normal cyclic prefix is used. The data content shall be uncorrelated to the wanted signal and modulated according to clause 5 of TS36.211

Table 7.6.1.1D-3: In-band blocking for ProSe

| E-UTRA <br> ProSe <br> band | Parameter | Unit | Case 1 | Case 2 |
| :---: | :---: | :---: | :---: | :---: |
|  | Plinterferer $^{\mathrm{dBm}}$ | -56 |  |  |

NOTE 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band
NOTE 2: For each carrier frequency the requirement is valid for two frequencies:
a. the carrier frequency -BW/2 - F Foffset, case 1 and
b. the carrier frequency $+\mathrm{BW} / 2+$ Floffset, case 1

NOTE 3: Finterferer range values for unwanted modulated interfering signal are interferer center frequencies

For the UE which supports inter band CA configuration in Table 7.3.1-1A, $\mathrm{P}_{\text {Interferer }}$ power defined in Table 7.6.1.1D-3 is increased by the amount given by $\Delta \mathrm{R}_{\mathrm{IB}, \mathrm{c}}$ in Table 7.3.1-1 A .

### 7.6.1.1F Minimum requirements for category NB1 and NB2

Category NB1 and NB2 UE throughput shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channel as specified in Annex A.3.2 with parameters specified in Table 7.6.1.1F-1.

Table 7.6.1.1F-1: In-band blocking parameters for category NB1 and NB2

\left.| IBB1 test Parameters |  |
| :---: | :---: |
| Category NB1 or NB2 signal power |  |
| (Pwanted )/dBm |  |$\right)$ REFSENS +6 dB

| :---: | :---: |
| Category NB1 or NB2 signal power <br> $\left(\mathrm{P}_{\text {wanted }}\right) / \mathrm{dBm}$ | REFSENS +6 dB |
| Interferer | E-UTRA |
| Interferer signal power <br> $($ Pinterferer $) / \mathrm{dBm}$ | -44 dBm |
| Interferer bandwidth | 5 MHz |
| Interferer offset range from category NB1 or NB2 channel edge | From +12.5 MHz to FDL_high +15 MHz <br> and <br> From -12.5 MHz to $\mathrm{FDL}_{\text {DL_low }}-15 \mathrm{MHz}$ |

### 7.6.1.1G Minimum requirements for V2X

The V2X UE throughput shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annex A.8.2 with paramteters defined in Table 7.6.1.1G-1 and Table 7.6.1.1G-2.

Table 7.6.1.1G-1: In band blocking parameters

| Rx parameter | Units | Channel bandwidth |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 1.4 MHz | 3 MHz | 5 MHz | 10 MHz | 15 MHz | 20 MHz |
| Power in | Prefsens _v2x + channel bandwidth specific value below |  |  |  |  |  |  |
| Transmission Bandwidth Configuration | dBm |  |  |  | 6 |  | 9 |
| BW Interferer | MHz |  |  |  | 10 |  | 10 |
| Flofiset, case 1 | MHz |  |  |  | 15+0.0025 |  | 15+0.005 |
| Flofiset, case 2 | MHz |  |  |  | 25+0.0075 |  | 25+0.0025 |

NOTE 1: The interferer is QPSK modulated PUSCH containing data and reference symbols. Normal cyclic prefix is used. The data content shall be uncorrelated to the wanted signal and modulated according to clause 5 of TS36.211

Table 7.6.1.1G-2: In-band blocking

| $\begin{aligned} & \hline \text { E-UTRA } \\ & \text { V2X } \\ & \text { band } \end{aligned}$ | Parameter | Unit | Case 1 | Case 2 |
| :---: | :---: | :---: | :---: | :---: |
|  | Pinterferer | dBm | -44 | -44 |
|  | Finterferer (offset) | MHz | $\begin{aligned} =-B W / 2- & \text { Foffiset,case } 1 \\ & \& \\ =+B W / 2 & + \text { Fiofifset,case } 1 \end{aligned}$ | $\begin{gathered} \text { క-BW/2 }- \text { Floffset,case 2 } \\ \& \\ \geq+B W / 2+\text { Floffseet,case 2 } \end{gathered}$ |
| 47 | Finterferer | MHz | (NOTE 2) | $\begin{aligned} & \text { FDL_low }-30 \\ & \text { to } \\ & \text { FDL_high }+30 \end{aligned}$ |
| NOTE 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 15 MHz below or above the UE receive band |  |  |  |  |
| NOTE 2: For | For each carrier frequency the requirement is valid for two frequencies: <br> a. the carrier frequency -BW/2- F loffset, case 1 and <br> b. the carrier frequency $+\mathrm{BW} / 2+$ F loffset, case 1 |  |  |  |
| NOTE 3: | Finterferer range values for unwanted modulated interfering signal are interferer center frequencies |  |  |  |

When UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA downlink reception for inter-band EUTRA V2X / E-UTRA bands specified in Table 5.5G-2, the requirements in subclause 7.6.1.1G apply for the E-UTRA V2X sidelink reception and the requirements in subclause 7.6.1.1 apply for the E-UTRA downlink reception while all downlink carriers are active.

For intra-band contiguous multi-carrier operation, the V2X UE throughput shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annex A.8.2 with paramteters defined in Table 7.6.1.1G-3 and Table 7.6.1.1G-4.

Table 7.6.1.1G-3: In band blocking parameters for intra-band contiguous multi-carrier for V2X UE

| Rx Parameter | Units | V2X Bandwidth Class |
| :--- | :--- | :--- |

|  |  | B | C/ $\mathrm{C}_{1}$ | D | E | F |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Pw in Transmission | REFSENS + V2X Bandwidth Class specific value below |  |  |  |  |  |
| Bandwidth Configuration, per CC | dBm | 9 | 12 |  |  |  |
| BW Interferer | MHz | 10 | 10 |  |  |  |
| F ${ }_{\text {loffiset, case } 1}$ | MHz | 15 | 15 |  |  |  |
| Floffset, case 2 | MHz | 25 | 25 |  |  |  |

Table 7.6.1.1G-4: In-band blocking for intra-band contiguous multi-carrier for V2X UE

| V2X multi-carrier <br> configuration | Parameter | Unit | Case 1 | Case 2 |
| :---: | :---: | :---: | :---: | :---: |
|  | Plinterferer | dBm | -44 |  |

NOTE 1: For certain bands, the unwanted modulated interfering signal may not fall inside the UE receive band, but within the first 30 MHz below or above the UE receive band
NOTE 2: For each carrier frequency the requirement is valid for two frequencies:
a. the carrier frequency -Foffset - Floffset, case 1 and
b. the carrier frequency + Foffset + Floffset, case 1

NOTE 3: Foffset is the frequency offset from the center frequency of the CC being tested to the edge of aggregated channel bandwidth.
NOTE 4: The Finterferer (offset) is the frequency separation of the center frequency of the carrier closest to the interferer and the center frequency of the interferer and shall be further adjusted to $\left\lfloor\mathrm{F}_{\text {interferer }} / 0.015+0.5\right\rfloor 0.015+0.0075 \mathrm{MHz}$ to be offset from the sub-carrier raster.
NOTE 5: The requirement is applied for multi-carrier intra-band con-current receptions when 2 carrier transmissions are activated at the same time.

### 7.6.2 Out-of-band blocking

Out-of-band band blocking is defined for an unwanted CW interfering signal falling more than 15 MHz below or above the UE receive band. For the first 15 MHz below or above the UE receive band the appropriate in-band blocking or adjacent channel selectivity in subclause 7.5.1 and subclause 7.6.1 shall be applied.

For CA configurations including Band 46 or Band 49, out-of-band band blocking is defined for an unwanted CW interfering signal falling more than 60 MHz below or above the UE receive band (see Table 7.6.2.1A-0a). For the first 60 MHz below or above the UE receive band the appropriate in-band blocking or adjacent channel selectivity in subclause 7.5 .1 A and subclause 7.6 .1 A shall be applied.

### 7.6.2.1 Minimum requirements

The throughput shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP. 1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Tables 7.6.2.1-1 and 7.6.2.1-2. For operating bands with an unpaired DL part (as noted in Table 5.5-1), the requirements only apply for carriers assigned in the paired part.

For Table 7.6.2.1-2 in frequency range 1,2 and 3 , up to $\max \left(24,6 \cdot\left\lceil N_{R B} / 6\right\rceil\right)$ exceptions are allowed for spurious response frequencies in each assigned frequency channel when measured using a 1 MHz step size, where $N_{R B}$ is the number of resource blocks in the downlink transmission bandwidth configuration (see Figure 5.6-1). For these exceptions the requirements of subclause 7.7 Spurious response are applicable.

For Table 7.6.2.1-2 in frequency range 4 , up to $\max \left(8,\left\lceil\left(N_{R B}+2 \cdot L_{C R B S}\right) / 8\right\rceil\right)$ exceptions are allowed for spurious response frequencies in each assigned frequency channel when measured using a 1 MHz step size, where $N_{R B}$ is the number of resource blocks in the downlink transmission bandwidth configurations (see Figure 5.6-1) and $L_{C R B s}$ is the
number of resource blocks allocated in the uplink. For these exceptions the requirements of clause 7.7 spurious response are applicable.

Table 7.6.2.1-1: Out-of-band blocking parameters

| Rx Parameter | Units | Channel bandwidth |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

|  | FIntererer | MHz | - | - | - | (NOTE 5) |

NOTE 1: For the UE which supports both Band 11 and Band 21 the out of blocking is FFS.
NOTE 2: The power level of the interferer (Pinterferer) for Range 3 shall be modified to -20 dBm for $\mathrm{F}_{\text {Interferer }}>2800$ MHz and $\mathrm{F}_{\text {Interferer }}<4400 \mathrm{MHz}$. The power level of the interferer (PInterferer) for Range 3 shall be modified to -20 dBm for FInterferer $>2800 \mathrm{MHz}$ and FInterferer $<4800 \mathrm{MHz}$ when UE supports both EUTRA band B42 and NR bands n77, n78.
NOTE 3: For the UE that supports both Band 4 and Band 66, the out-of-blocking frequency range for Band 4 is defined relative to FDL_Iow and FDL_high of Band 66.
NOTE 4: For a UE supporting CA_20A-28A, CA_1A-3A-7A-20A-28A, CA_1A-3A-20A-28A, CA_1A-3A-3A-20A28A, CA_1A-7A-20A-28A, CA_1A-20A-28A, CA_3A-7A-20A-28A, CA_3A-20A-28A or CA_7A-20A-28A the requirements for Band 20 and Band 28 apply with FdL_low given by the lower limit of the restricted operating frequency range in Band 28 and FdL_high by Band 20 (Table 5.5A-2).
NOTE 5: Range 4 requirement does not apply to category M1 and M2.
NOTE 6: The power level of the interferer (Pinterferer) for Range 3 shall be modified to -20 dBm for $\mathrm{F}_{\text {Interferer }}>2700$ MHz and Finterferer $<4000 \mathrm{MHz}$.
NOTE 7: For band 51 the FDL_high of band 50 is applied as FDL_high for band 51.
NOTE 8: For UEs supporting both bands 38 and 41, the FDL_high and FdL_low of band 41 is applied as FdL_nigh and FDL_low for band 38 .
NOTE 9: The power level of the interferer (P ${ }_{\text {Interferer }}$ ) for Range 3 shall be modified to $[-20 \mathrm{dBm}]$ for Finterferer $>$ [2580 MHz ] and $\mathrm{F}_{\text {Interferer }}<[2775 \mathrm{MHz}$ ].

### 7.6.2.1A Minimum requirements for CA

For inter-band carrier aggregation with one component carrier per operating band and the uplink assigned to one EUTRA band, the out-of-band blocking requirements are defined with the uplink active on the band(s) other than the band whose downlink is being tested. The throughput in the downlink measured shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP. 1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Tables 7.6.2.1-1 and 7.6.2.1A-0. For E-UTRA CA configurations including an operating band without uplink operation (as noted in Table 5.5-1), the requirements for all downlinks shall be met with the uplink active in the band(s) capable of UL operation. For the E-UTRA CA configurations with band 46 or Band 49 , the parameters specified in Table 7.6.2.1A-0 are replaced by those specified in Table 7.6.2.1A-0a. The UE shall meet these requirements for each component carrier while all downlink carriers are active.

For inter-band carrier aggregation with one component carrier per operating band and the uplink active in two E-UTRA bands, the out-of-band blocking requirements specified above shall be met with the transmitter power for the uplink set to 7 dB below Pcmax_l,c for each serving cell $c$.

For E-UTRA CA configurations including an operating band without uplink band or an operating band with an unpaired DL part (as noted in Table 5.5-1), the requirements for all downlinks shall be met with the single uplink carrier active in each band capable of UL operation. For E-UTRA CA configurations listed in Table 7.3.1A-0a under conditions for which reference sensitivity for the operating band being tested is N/A, the out-of-band blocking requirements of subclause $7.6 \cdot 2.1 \mathrm{~A}$ do not apply.

Table 7.6.2.1 A-0: out-of-band blocking for inter-band carrier aggregation

| Parameter | Unit | Range 1 | Range 2 | Range 3 |
| :---: | :---: | :---: | :---: | :---: |
| $\mathrm{P}_{\mathrm{w}}$ | dBm | Table 7.6.2.1-1 for all component carriers |  |  |
| Pinterferer | dBm | $-44+\Delta \mathrm{R}_{\text {IB, }}$ | $-30+\Delta \mathrm{R}_{\text {IB, }}$ | $-15+\Delta \mathrm{RiB}, \mathrm{c}$ |
| Finterferer (CW) | MHz | $\begin{gathered} -60<f-\text { FDL_Low() }<-15 \\ \text { or } \\ 15<f-\text { FDL_High() }<60 \end{gathered}$ | $\begin{gathered} -85<f-\text { FDL_Low( })^{\text {or }} \leq-60 \\ 60 \leq f-\text { FDL_High() }^{2}<85 \end{gathered}$ |  |

NOTE 1: $\mathrm{F}_{\left.\mathrm{DL} \_ \text {_Low() }\right) \text { and }}^{\left.\mathrm{DDL} \_ \text {High() }\right)}$ denote the respective lower and upper frequency limits of the operating band containing carrier $j, j=1, \ldots, \mathrm{X}$, with carriers numbered in increasing order of carrier frequency and $X$ the number of component carriers in the band combination.
NOTE 2: For $F_{D L \_L o w(j+1)}-F_{D L \_}$High() $<145 \mathrm{MHz}$ and $F_{\text {Interferer }}$ in $F_{D L \_H i g h()}<f<F_{D L \_L o w(j+1)}$ with $j<X$, Finterferer can be in both Range 1 and Range 2. Then the lower of the $\mathrm{P}_{\text {Interferer }}$ applies.
NOTE 3: For FDL_Low() - $15 \mathrm{MHz} \leq \mathrm{f} \leq$ FDL_High() $^{\text {( }} 15 \mathrm{MHz}$ the appropriate adjacent channel selectivity and in-band blocking requirments in the respective subclauses 7.5 .1 A and 7.6 .1 .1 A shall be applied for carrier $j$.
NOTE 4: $\Delta \mathrm{R}_{\mathrm{IB}, \mathrm{c}}$ according to Table 7.3.1-1A applies when serving cell $c$ is measured.
NOTE 5: For inter-band CA combinations containing Bands 42, 43,or 48, the interferer with respect to Band 42, Band 43, or Band 48 shall have power level (Pinterferer) for Range 3 modified to $-20+$ $\Delta \mathrm{R}_{\mathrm{IB}, \mathrm{C}} \mathrm{dBm}$ for Finterferer $>2800 \mathrm{MHz}$ and Finterferer $<4400 \mathrm{MHz}$.
NOTE 6: For inter-band CA combinations containing Bands 7 and 38 simultaneously, for Finterferer Bands 7 and 38 are considered as one single band as follows: FDL_Low $=2570 \mathrm{MHz}$ and FDL_High $=2690 \mathrm{MHz}$. For Range 2, the following applies for FDL_Low: $-95<f-$ FDL_Low $\leq-60$ or $60 \leq \mathrm{f}-\mathrm{F}_{\text {DL_High }}<85$. For Range 3 the following applies $1 \leq \mathrm{f} \leq$ F FL_Low $^{\prime}-95$ or FDL_High $+85 \leq$ $\mathrm{f} \leq 12750$. For UEs supporting both bands 38 and 41, FDL_Low $=2496 \mathrm{MHz}$.
NOTE 7: For CA_20A-28A, CA_1A-3A-7A-20A-28A, CA_1A-3A-20A-28A, CA_1A-3A-3A-20A-28A, CA_1A-7A-20A-28A, C̄A_1A-20A-28A, CA_3A-7A-20A-28A, CA_3A-20A-28A and CA_7A-20A-28A the $\mathrm{F}_{\mathrm{DL}}$ low(1) is given by the lower limit of the restricted operating frequency range in Band 28 and FDL_high(2) $^{2}$ by Band 20 (Table 5.5A-2).
NOTE 8: For inter-band CA combinations including DL in band 76, the FdL_high of band 75 is applied as FDL_high for band 76.
NOTE 9: For CA band combinations including DL in band 32, FdL_high of band 75 is applied as Fdl_high for band 32, and FdL_low of band 76 is applied as FDL_ow for band 32.

Table 7.6.2.1A-0a: out-of-band blocking for inter-band carrier aggregation with band 46 or Band 49 and with one active uplink

|  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| $P_{\text {wanted }}$ | dBr | Table 7.6.2.1-1 for component carriers in bands with $j \leq \mathrm{K}$ and Table <br> 7.6.1.1A-Oa for component carriers in bands with $j>K$ |  |  |
| Pinterferer | dB | $-44+\Delta \mathrm{R}_{\mathrm{IB}, \mathrm{C}}$ | $-30+\Delta \mathrm{R}_{\mathrm{IB}, \mathrm{c}}$ | $-15+\Delta \mathrm{R}_{\mathrm{IB}, \mathrm{C}}$ <br> (NOTE 5) |
| $\begin{aligned} & \hline \text { Finterfel } \\ & \text { (CW) } \end{aligned}$ |  | ```with j\leqK or 15<f-FDL_High() < 60 with j\leqK``` | $\begin{gathered} 60 \\ \text { or } \\ 60 \leq f-\text { FDL_High }()< \\ 85^{6} \end{gathered}$ | $\begin{gathered} 1 \leq f \leq \text { FDL_Low }()-85^{6} \\ \text { or } \\ \text { FDL_High() }+85^{6} \leq f \\ \leq 12750 \end{gathered}$ |
| NOTE 1: $F_{D L \_L o w() ~}$ and $\mathrm{F}_{\left.\mathrm{DL} \_ \text {_High( }\right), ~}, j=1, \ldots, \mathrm{~K}, \ldots \mathrm{~N}$, denote the respective lower and upper frequency limits of the (non-overlapping) operating bands of the CA configuration numbered in increasing order of frequency, with $N$ the number of bands in the band combination and <br>  Band 49. |  |  |  |  |
| NOTE 2: F | For FDL_Low() $^{\text {( }} 15 \mathrm{MHz} \leq \mathrm{f} \leq \mathrm{F}_{\mathrm{DL} \_ \text {High() }}+15 \mathrm{MHz}$ the appropriate adjacent channel electivity and in-band blocking requirements in the respective subclauses 7.5.1 A and 2.6.1.1A shall be applied for carrier $j \leq \mathrm{K}$. |  |  |  |
| NOTE 3: $\begin{aligned} & \text { F } \\ & \\ & \text { s } \\ & 7\end{aligned}$ | For FdL_Low() $-60 \mathrm{MHz} \leq \mathrm{f} \leq \mathrm{Fdl}_{\mathrm{d}} \mathrm{H} \operatorname{ligh}()+60 \mathrm{MHz}$ the appropriate adjacent channel selectivity and in-band blocking requirements in the respective subclauses 7.5 .1 A and 7.6.1.1A shall be applied for carrier $K<j \leq N$. |  |  |  |
| NOTE 4: <br> NOTE 5: | The power level ( $\mathrm{P}_{\text {Interferer }}$ ) for Range 3 is modified to -20 dBm for Finterferer $>4400 \mathrm{MHz}$ except for band combinations with Band 42 or Band 43 for which PInterferer for Range 3 is modified to -20 dBm for $\mathrm{F}_{\text {Interferer }}>2800 \mathrm{MHz}$. |  |  |  |
| NOTE 6: T | The -85 MHz and 85 MHz offset from FDL_Low() and FDL_High() is modified to -200 MHz and 200 MHz for carrier $j$ in Band 46. |  |  |  |

For Table 7.6.2.1A-0 and Table 7.6.2.1A-0b in frequency ranges 1,2 and 3, up to $\max \left(24,6 \cdot\left\lceil N_{R B} \cdot / 6\right\rceil\right)$ exceptions per downlink are allowed for spurious response frequencies for one active uplink when measured using a step size of 1 MHz .

For Table $7 \cdot 6 \cdot 2.1 \mathrm{~A}-0$ in frequency ranges 1,2 and 3 , up to $2 \cdot \max \left(24,6 \cdot\left\lceil N_{R B} \cdot / 6\right\rceil\right)$ exceptions per downlink are allowed for spurious response frequencies for two active uplinks when measured using a step size of 1 MHz . For these exceptions the requirements in clause 7.7 .1 A apply.

For intra-band contiguous carrier aggreagations the downlink $\operatorname{SCC}(\mathrm{s})$ shall be configured at nominal channel spacing to the PCC. For FDD, the PCC shall be configured closest to the uplink band. All downlink carriers shall be active throughout the test. The uplink output power shall be set as specified in Table 7.6.2.1A-1 with the uplink configuration set according to Table 7.3.1A-1 for the applicable carrier aggregation configuration. For UE(s) supporting one uplink carrier, the uplink configuration of the PCC shall be in accordance with Table 7.3.1-2.

The UE shall fulfil the minimum requirement in presence of an interfering signal specified in Tables 7.6.2.1A-1 and Tables 7.6.2.1A-2 being on either side of the aggregated signal. The throughput of each carrier shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP. 1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Tables 7.6.2.1A-1 and 7.6.2.1A-2. For operating bands with an unpaired DL part (as noted in Table 5.5-1), the requirements also apply for an SCC assigned in the unpaired part with parameters specified in Tables 7.6.2.1A-1 and 7.6.2.1A-2.

For Table 7.6.2.1A-2 in frequency range 1, 2 and 3, up to $\max \left(24,6 \cdot\left\lceil N_{R B} \cdot / 6\right\rceil\right)$ exceptions are allowed for spurious response frequencies in each assigned frequency channel when measured using a 1 MHz step size. For these exceptions the requirements of subclause 7.7 Spurious response are applicable.

Table 7.6.2.1A-1: Out-of-band blocking parameters

| Rx Parameter | CA Bandwidth Class |  |  |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | B | C | D | E | F |

| Pw in Transmission Bandwidth Configuration, per <br> CC | dBm | REFSENS + CA Bandwidth Class specific value |  |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | 9 | 9 | 9 | 9 | 9 |

NOTE 1: The transmitter shall be set to 4dB below Pcmax_L, or Pcmax_l as defined in subclause 6.2.5A.
NOTE 2: Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP. 1 FDD/TDD as described in Annex A.5.1.1/A.5.2.

Table 7.6.2.1A-2: Out of band blocking

| CA configuration | Parameter | Units | Frequency |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | $\begin{gathered} \text { Range } \\ \hline \end{gathered}$ | $\begin{gathered} \text { Range } \\ 2 \end{gathered}$ | $\begin{gathered} \text { Range } \\ 3 \end{gathered}$ |
|  | PInterferer | dBm | -44 | -30 | -15 |
| CA 1C, CA 2C, CA 3B, CA 3C, CA 5B, CA 7B, CA 7C, CA ${ }^{-} 8 \mathrm{~B}, \mathrm{CA}^{-} 12 \mathrm{~B}, \mathrm{CA} 23 \mathrm{~B}, \mathrm{CA} 27 \mathrm{~B}, \overline{\mathrm{CA}} 28 \mathrm{C}, \mathrm{CA} 38 \overline{\mathrm{C}}$, CA 39C, CA 40C, CA 40D, CA 40E, CA 40F, CA 41 C , | Finterferer | MHz | $\begin{aligned} & \text { FDL_1ow - } \\ & 15 \text { to } \\ & \text { FDL_low - } \\ & 60 \end{aligned}$ | $\begin{aligned} & \text { FDL_low - } \\ & 60 \text { to } \\ & \text { FdL_low - } \\ & 85 \end{aligned}$ | FDL low 85 to 1 MHz |
| CA_41D, CA_41E, CA_41F, CA_42C ${ }^{1}$, CA_42D ${ }^{1}$, CA $-42 E^{1}$, CA_42F ${ }^{1}$, CA_43C ${ }^{1}$, CA $\_48 \mathrm{~B}^{1}, \overline{\mathrm{C}} \mathrm{A} \_48 \mathrm{C}^{1}, \overline{\mathrm{C}} \mathrm{A} \_48 \mathrm{D}^{1}, \overline{\mathrm{C}} \mathrm{A} \_48 \mathrm{E}^{1}$, CA_48F ${ }^{1}$, CA_66B, CA_66C, CA_66D, CA_70C |  |  | $\begin{aligned} & \text { FDL_high } \\ & +15 \text { to } \\ & \text { FDL_high } \\ & +60 \\ & \hline \end{aligned}$ | $\begin{aligned} & \text { FDL_high } \\ & +60 \text { to } \\ & \text { FDL_high } \\ & +85 \\ & \hline \end{aligned}$ | $\begin{aligned} & \text { FDL_high } \\ & +85 \text { to } \\ & +12750 \\ & \mathrm{MHz} \\ & \hline \end{aligned}$ |

NOTE 1: The power level of the interferer (Pinterferer) for this CA configuration for Range 3 shall be modified to -20 dBm for Finterferer $>2800 \mathrm{MHz}$ and Finterferer $^{<} 4400 \mathrm{MHz}$. The power level of the interferer (Pinterferer) for Range 3 shall be modified to -20 dBm for $\mathrm{Finterferer}>2800 \mathrm{MHz}$ and $\mathrm{F}_{\text {Interererer }}<4800 \mathrm{MHz}$ when UE supports both E-UTRA band B42 and NR bands n77, n78.

For intra-band non-contiguous carrier aggregation with one uplink carrier and two or more downlink sub-blocks, the out-of-band blocking requirements are defined with the uplink configuration in accordance with table 7.3.1A-3. For this uplink configuration, the UE shall meet the requirements for each sub-block as specified in subclauses 7.6.2.1 and 7.6.2.1A for one component carrier and two or more component carriers per sub-block, respectively. The requirements apply with all downlink carriers active.

For Table 7.6.2.1-2 in frequency range 1,2 and 3 , up to $\max \left(24,6 \cdot\left\lceil N_{R B} \cdot / 6\right\rceil\right)$ exceptions per assigned E-UTRA channel per sub-block of the E-UTRA CA configuration are allowed for spurious response frequencies for one active uplink when measured using a 1 MHz step size. For these exceptions the requirements of subclause 7.7 spurious response are applicable.

For Table 7.6.2.1-2 in frequency range 4 , up to $\max \left(8,\left\lceil\left(N_{R B}+2 \cdot L_{C R B S}\right) / 8\right\rceil\right)$ exceptions per assigned E-UTRA channel per sub-block of the E-UTRA CA configuration are allowed for spurious response frequencies for one active uplink when measured using a 1 MHz step size. For these exceptions the requirements of clause 7.7 spurious response are applicable.

For intra-band non-contiguous carrier aggregation with two uplink carriers and two or more downlink carriers, the out-of-band blocking requirements are defined with the uplink configuration of the PCC and SCC being in accordance with Table 7.3.1A-4 and powers of both carriers set to $\mathrm{P}_{\text {CMAX_L, }}-7 \mathrm{dBm}$. The UE shall meet the requirements specified in subclause 7.6.2.1 for each component carrier while both downlink carriers are active.

For Table 7.6.2.1-2 in frequency range 1,2 and 3 , up to $2 \cdot \max \left(24,6 \cdot\left\lceil N_{R B} \cdot / 6\right\rceil\right)$ exceptions per assigned E-UTRA channel per sub-block of the E-UTRA CA configuration are allowed for spurious response frequencies for two active uplinks in the same operating band when measured using a 1 MHz step size. For these exceptions the requirements of subclause 7.7 spurious response are applicable.

For Table 7.6.2.1-2 in frequency range 4, up to $2 \cdot{ }_{\max }\left(8,\left\lceil\left(N_{R B}+2 \cdot L_{C R B s}\right) / 8\right\rceil\right.$ ) exceptions per assigned E-UTRA channel per sub-block of the E-UTRA CA configuration are allowed for spurious response frequencies for two active uplinks in the same operating band when measured using a 1 MHz step size. For these exceptions the requirements of clause 7.7 spurious response are applicable.

For combinations of intra-band and inter-band carrier aggregation and the uplink assigned to one E-UTRA band, the requirement is defined with the uplink active in a band other than that supporting the downlink(s) under test. The uplink configuration shall be in accordance with Table 7.3.1A-3 when the uplink is active in the band supporting two or more non-contiguous component carriers, Table $7.3 .1 \mathrm{~A}-1$ when the uplink is active in a band supporting two contiguous component carriers and in accordance with Table 7.3.1-2 when the uplink is active in a band supporting one carrier per
band. The downlink PCC shall be configured closer to the uplink operating band than the downlink SCC(s) when the uplink is active in band(s) supporting contiguous aggregation. For the two or more non-contiguous component carriers within the same band, $\mathrm{P}_{\text {wanted }}$ in Table 7.6.2.1A-0 is set using $\Delta \mathrm{R}_{\mathrm{IBNC}}=0 \mathrm{~dB}$ for all sub-block gaps (Table 7.3.1A-3) while a band supporting contiguously aggregated carriers the out-of-band blocking parameters in Table 7.6.2.1-1 are replaced by those specified in Table 7.6.2.1A-1. For each downlink the UE shall meet the out-of-band blocking requirements applicable for inter-band carrier aggregation with one component carrier per operating band with the following exception. For each component carrier of the E-UTRA CA Configurations with band 46 or band 49, the requirements specified in Table 7.6.2.1A-0 are replaced by those in Table 7.6.2.1A-0a. All downlink carriers shall be active throughout the tests and the requirements for the downlinks shall be met with the single uplink carrier active in each band capable of UL operation.

### 7.6.2.1D Minimum requirements for ProSe

The throughput shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annex A. 6.2 with parameters specified in Tables 7.6.2.1D-1, 7.6.2.1D-2 and 7.6.2.1D-3.

For Table 7.6.2.1D-3 in frequency range 1,2 and 3 , up to $\max \left(24,6 \cdot\left\lceil N_{R B} / 6\right\rceil\right)$ exceptions are allowed for spurious response frequencies in each assigned frequency channel when measured using a 1 MHz step size, where $N_{R B}$ is the number of resource blocks in the downlink transmission bandwidth configuration (see Figure 5.6-1). For these exceptions the requirements of subclause 7.7 Spurious response are applicable.

Table 7.6.2.1D-1: Out-of-band blocking parameters for ProSe Direct Discovery

| Rx Parameter | Units | Channel bandwidth |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | $\begin{gathered} 1.4 \\ \mathrm{MHz} \end{gathered}$ | 3 MHz | 5 MHz | $\begin{gathered} 10 \\ \mathrm{MHz} \end{gathered}$ | $\begin{gathered} 15 \\ \mathrm{MHz} \end{gathered}$ | $\begin{gathered} 20 \\ \mathrm{MHz} \end{gathered}$ |
| Power in Transmission | dBm | Prefsens_Prose + channel bandwidth specific value below <br> $+P_{\text {offset }}$ |  |  |  |  |  |
| Bandwidth Configuration |  |  |  | 6 | 6 | 7 | 9 |
| $\mathrm{P}_{\text {offset }}$ | dB |  |  | 10.9 | 13.9 | 15.7 | 16.9 |
| NOTE 2: Reference measurement channel is specified in Annex A.6.2. |  |  |  |  |  |  |  |

Table 7.6.2.1D-2: Out-of-band blocking parameters for ProSe Direct Communication

| Rx Parameter | Units | Channel bandwidth |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | $\begin{gathered} 1.4 \\ \mathrm{MHz} \end{gathered}$ | 3 MHz | 5 MHz | $\begin{gathered} 10 \\ \mathrm{MHz} \end{gathered}$ | $\begin{gathered} 15 \\ \mathrm{MHz} \\ \hline \end{gathered}$ | $\begin{gathered} \hline 20 \\ \mathrm{MHz} \end{gathered}$ |
| Power | dBm | Prefsens Prose + channel bandwidth specific value below |  |  |  |  |  |
| Transmission <br> Bandwidth Configuration |  |  |  | 6 | 6 | 7 | 9 |

Table 7.6.2.1D-3: Out of band blocking for ProSe

| E-UTRA ProSe band | Parameter | Units | Frequency |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Range 1 | Range 2 | Range 3 |
|  | Pinterferer | dBm | -44 | -30 | -15 |
| $\begin{array}{\|l} 2,3,4,7,14, \\ 20,26,28,31,72 \end{array}$ | Finterferer (CW) | MHz | $\begin{gathered} \text { FDL_low }-15 \text { to } \\ \text { FDL_Iow }-60 \\ \hline \end{gathered}$ | $\begin{gathered} \text { FDL_Iow }-60 \text { to } \\ \text { FDL_low }-85 \\ \hline \end{gathered}$ | $\begin{gathered} \hline \text { FDL_low }-85 \text { to } \\ 1 \mathrm{MHz} \\ \hline \end{gathered}$ |
|  |  |  | $\begin{gathered} \text { FDL_high +15 to } \\ \text { FDL__high }+60 \\ \hline \end{gathered}$ | $\begin{gathered} \hline \text { FDL_high }+60 \text { to } \\ \text { FDL_high }+85 \end{gathered}$ | $\begin{aligned} & \hline \text { FDL_high }+85 \text { to } \\ & +12750 \mathrm{MHz} \\ & \hline \end{aligned}$ |

NOTE 1: For the UE which supports both Band 11 and Band 21 the out of blocking is FFS.

### 7.6.2.1F Minimum requirements for category NB1 and NB2

The category NB1 and NB2 UE throughput shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annexes A.3.2 with parameters specified in Table 7.6.2.1F-1.

For Table $7.6 .2 .1 \mathrm{~F}-1$ in frequency range 1,2 and 3 , up to 24 exceptions are allowed for spurious response frequencies in each assigned frequency channel when measured using a 1 MHz step size. For these exceptions the requirements of subclause 7.7.1F spurious response are applicable.

Table 7.6.2.1F-1: Out-of-band blocking parameters for category NB1 and NB2 UE

| Parameter | Units | Frequency |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Range 1 | Range 2 | Range 3 |
| Pwanted | dBm | REFSENS + 6 dB |  |  |
| Pinterferer (CW) | dBm | -44 | -30 | -15 |
| Finterferer range | MHz | FDL_ow - 15 to $\mathrm{FDL}_{\text {dılow - } 60}$ | FDL_Iow - 60 to FDL_Iow-85 | FdL_low - 85 to 1 MHz |
|  | MHz | FDL_high +15 to FDL_high +60 | FDL_high + 60 to FDL_high +85 | FDL_high + 85 to 12750 MHz |

NOTE 1: For operating bands which downlink band frequency range is between $617 \mathrm{MHz}<\mathrm{f}<1 \mathrm{GHz}$ the power level of the interferer (Pinterferer) for Range 3 shall be modified to: -18 dBm for the frequency range which is bounded by FDL_low - 150 MHz of the lowest band that UE supports in frequency range $617 \mathrm{MHz}<\mathrm{f}<1$ GHz and FDL_high +150 MHz of the highest band that UE supports in frequency range $617 \mathrm{MHz}<\mathrm{f}<1$ GHz.
NOTE 2: For operating bands which downlink band frequency range is between $1475.9 \mathrm{MHz}<\mathrm{f}<2690 \mathrm{MHz}$ the power level of the interferer (Pinterferer) for Range 3 shall be modified to: -20 dBm for the frequency range which is bounded by FDL_low- 200 MHz of the lowest band that UE supports in frequency range 1475.9 MHz $<\mathrm{f}<2690 \mathrm{MHz}$ and $\mathrm{F}_{\mathrm{DL}}$ high +200 MHz of the highest band that UE supports supports in frequency range 1475.9 MHz < f < 2690 MHz .

NOTE 3: For operating bands which downlink band frequency range is between $460 \mathrm{MHz}<\mathrm{f}<467.5 \mathrm{MHz}$ the power level of the interferer (Pinterferer) for Range 3 shall be modified to: -18 dBm for the frequency range which is bounded by FDL_low - 150 MHz of the lowest band that UE supports in frequency range $460 \mathrm{MHz}<\mathrm{f}<467.5$ 0 MHz and $\mathrm{F}_{\mathrm{DL}}$ _high +150 MHz of the highest band that UE supports supports in frequency range 460 MHz $<\mathrm{f}<467.5$.
NOTE 4: The power level of the interferer (Pinterferer) for Range 3 shall be modified to -20 dBm for Finterferer $>$ 2800 MHz and $F_{\text {Interferer }}<4400 \mathrm{MHz}$.

### 7.6.2.1G Minimum requirements for V2X

The throughput shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annex A.8.2 with parameters specified in Tables 7.6.2.1G-1, 7.6.2.1G-2.

For Table 7.6.2.1G-2 in frequency range 1,2 and 3 , up to $\max \left(24,6 \cdot\left\lceil N_{R B} / 6\right\rceil\right)$ exceptions are allowed for spurious response frequencies in each assigned frequency channel when measured using a 1 MHz step size, where $N_{R B}$ is the number of resource blocks in the downlink transmission bandwidth configuration (see Figure 5.6-1). For these exceptions the requirements of subclause 7.7 spurious response are applicable.

Table 7.6.2.1G-1: Out-of-band blocking parameters

| Rx Parameter | Units | Channel bandwidth |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | $\begin{gathered} 1.4 \\ \mathrm{MHz} \end{gathered}$ | 3 MHz | 5 MHz | $\begin{gathered} 10 \\ \mathrm{MHz} \end{gathered}$ | $\begin{gathered} \hline 15 \\ \mathrm{MHz} \end{gathered}$ | $\begin{gathered} \hline 20 \\ \mathrm{MHz} \end{gathered}$ |
| Power in | dBm | Prefsens_v2x + channel bandwidth specific value below |  |  |  |  |  |
| Transmission Bandwidth Configuration |  |  |  |  | 6 |  | 9 |

Table 7.6.2.1G-2: Out of band blocking

| $\begin{gathered} \text { E-UTRA V2X } \\ \text { band } \end{gathered}$ | Parameter | Units | Frequency |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Range 1 | Range 2 | Range 3 |
|  | Pinterferer | dBm | -44 | -30 | -15 |
| 47 | Finterferer (CW) | MHz | $\begin{gathered} \text { FDL_Iow - } 30 \text { to } \\ \text { FDL_Iow }-60 \end{gathered}$ | $\begin{gathered} \text { FDL_Iow - } 60 \text { to } \\ \text { FDL_Iow }-85 \end{gathered}$ | $\begin{gathered} \text { FdL_Iow }-85 \text { to } \\ 1 \mathrm{MHz} \end{gathered}$ |
|  |  |  | $\mathrm{F}_{\mathrm{DL}}$ _high +30 to | $\mathrm{F}_{\mathrm{DL} \text { _ _igh }+60 \text { to }}$ | FDL high +85 to |

|  |  |  | FDL high +60 | FDL_ high +85 | +12750 MHz |
| :--- | :--- | :--- | :---: | :---: | :---: |
| NOTE: | The power level of the interferer (PInterferer) for Range 3 shall be modified to -20 dBm for <br> FInterferer $>4400 \mathrm{MHz}$. |  |  |  |  |

When UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA downlink reception for inter-band EUTRA V2X / E-UTRA bands specified in Table 5.5G-2, the requirements in subclause 7.6.2.1G apply for the E-UTRA V2X sidelink reception and the requirements in subclause 7.6.2.1 apply for the E-UTRA downlink reception while all downlink carriers are active.

For intra-band contiguous multi-carrier operation, the V2X UE throughput shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annex A.8.2 with parameters specified in Tables 7.6.2.1G-3 and 7.6.2.1G-4.

For Table 7.6.2.1G-4 in frequency range 1, 2 and 3, up to $\max \left(24,6 \cdot\left\lceil N_{R B} \cdot / 6\right\rceil\right)$ exceptions are allowed for spurious response frequencies in each assigned frequency channel when measured using a 1 MHz step size. For these exceptions the requirements of subclause 7.7 spurious response are applicable.

Table 7.6.2.1G-3: Out-of-band blocking parameters for intra-band contiguous multi-carrier for V2X UE

| Rx Parameter | Units | V2X Bandwidth Class |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | B | C/ $\mathrm{C}_{1}$ | D | E | F |
| Pw in Transmission Bandwidth Configuration, per CC | dBm | REFSENS + V2X Bandwidth Class specific value |  |  |  |  |
|  |  | 9 | 9 |  |  |  |

Table 7.6.2.1G-4: Out of band blocking for intra-band contiguous multi-carrier for V2X UE

| V2X multi-carrier configuration | Parameter | Units | Frequency |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Range 1 | Range 2 | Range 3 |
|  | Pinterferer | dBm | -44 | -30 | -15 |
| V2X_47B, V2X_47C, V2X_47C ${ }_{1}$ | Finterferer (CW) | MHz | FDL low -30 to FDL low-60 | FDL low -60 to FDL low-85 | FDL_ow -85 to 1 MHz |
|  |  |  | FDL_high +30 to <br> $\mathrm{F}_{\mathrm{DL}}$ _high +60 | $\text { FDL_high }+60 \text { to }$ $\text { FDL_ high }+85$ | $\begin{aligned} & \text { FDL_high }+85 \text { to } \\ & +12750 \mathrm{MHz} \\ & \hline \end{aligned}$ |

NOTE 1: The power level of the interferer (Pinterferer) for Range 3 shall be modified to -20 dBm for Finterferer $>4400$ MHz .
NOTE 2: The requirement is applied for multi-carrier intra-band con-current receptions when 2 carrier transmissions are activated at the same time.

### 7.6.3 Narrow band blocking

This requirement is measure of a receiver's ability to receive a E-UTRA signal at its assigned channel frequency in the presence of an unwanted narrow band CW interferer at a frequency, which is less than the nominal channel spacing.

### 7.6.3.1 Minimum requirements

The relative throughput shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP. 1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.6.3.1-1. For operating bands with an unpaired DL part (as noted in Table 5.5-1), the requirements only apply for carriers assigned in the paired part.

Table 7.6.3.1-1: Narrow-band blocking

| Parameter | Unit | Channel Bandwidth |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 1.4 MHz | 3 MHz | 5 MHz | 10 MHz | 15 MHz | 20 MHz |
| Pw | dBm | Prefsens + channel-bandwidth specific value below |  |  |  |  |  |
|  |  | 22 | 18 | 16 | 13 | 14 | 16 |
| Puw (CW) | dBm | -55 | -55 | -55 | -55 | -55 | -55 |
| Fuw (offset for $\Delta f=15 \mathrm{kHz})$ | MHz | 0.9075 | 1.7025 | 2.7075 | 5.2125 | 7.7025 | 10.2075 |

For the UE which supports inter-band CA configuration in Table 7.3.1-1A, P Puw power defined in Table 7.6.3.1-1 is increased by the amount given by $\Delta \mathrm{R}_{\mathrm{IB}, \mathrm{c}}$ in Table 7.3.1-1A.

### 7.6.3.1 $\mathrm{A} \quad$ Minimum requirements for CA

For inter-band carrier aggregation with one component carrier per operating band and the uplink assigned to one EUTRA band the narrow-band blocking requirements are defined with the uplink active on the band(s) other than the band whose downlink is being tested. The UE shall meet the requirements specified in subclause 7.6.3.1 for each component carrier while all downlink carriers are active. For E-UTRA CA configurations including an operating band without uplink band or an operating band with an unpaired DL part (as noted in Table 5.5-1), the requirements for all downlinks shall be met with the single uplink carrier active in each band capable of UL operation. For E-UTRA CA configurations listed in Table 7.3.1A-0a under conditions for which reference sensitivity for the operating band being tested is N/A, the narrow-band blocking requirements of subclause 7.6.3.1A do not apply. For E-UTRA CA configurations with a component carrier assigned in Band 46, narrow-band blocking requirements do not apply in the presence of a narrow-band interferer in Band 46.

For intra-band contiguous carrier aggregation the downlink $\operatorname{SCC}(s)$ shall be configured at nominal channel spacing to the PCC. For FDD, the PCC shall be configured closest to the uplink band. All downlink carriers shall be active throughout the test. The uplink output power shall be set as specified in Table 7.6.3.1A-1 with the uplink configuration set according to Table 7.3.1A-1 for the applicable carrier aggregation configuration. For UE(s) supporting one uplink, the uplink configuration of the PCC shall be in accordance with Table 7.3.1-2. The UE shall fulfil the minimum requirement in presence of an interfering signal specified in Table 7.6.3.1A-1 being on either side of the aggregated signal. The throughput of each carrier shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP. 1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.6.3.1A-1. For operating bands with an unpaired DL part (as noted in Table 5.5-1), the requirements also apply for an SCC assigned in the unpaired part with parameters specified in Table 7.6.3.1A-1.

For intra-band non-contiguous carrier aggregation with one uplink carrier and two or more downlink sub-blocks, the narrow band blocking requirements are defined with the uplink configuration in accordance with Table 7.3.1A-3. For this uplink configuration, the UE shall meet the requirements for each sub-block as specified in subclauses 7.6.3.1 and 7.6.3.1A for one component carrier and two component carriers per sub-block, respectively. The requirements apply for in-gap and out-of-gap interferers while all downlink carriers are active.

Table 7.6.3.1A-1: Narrow-band blocking

| Parameter | Unit | CA Bandwidth Class |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | B | C | D | E | F |
| $\mathrm{P}_{\mathrm{w}}$ in Transmission Bandwidth | dBm | REFSENS + CA Bandwidth Class specific value below |  |  |  |  |
| Configuration, per CC | dBm | 16 | $16^{4}$ | 16 | 16 | 16 |
| Puw (CW) | dBm | -55 | -55 | -55 | -55 | -55 |
| Fuw (offset for $\Delta f=15 \mathrm{kHz})$ | MHz | $\begin{aligned} & - \text { F offset } / 0.2 \\ & + \text { Foffiset }+0.2 \end{aligned}$ | $\begin{aligned} & - \text { Foffset }-0.2 \\ & +F_{\text {offset }}+0.2 \end{aligned}$ | $\begin{aligned} & \hline-\mathrm{F}_{\text {offset }}- \\ & 0.2 \\ & 1 \\ & +\mathrm{F}_{\text {offset }}+ \\ & 0.2 \end{aligned}$ | $\begin{gathered} -\mathrm{F}_{\text {offset }}- \\ 0.2 \\ 1 \\ +\mathrm{F}_{\text {offseet }}+ \\ 0.2 \end{gathered}$ | $\begin{gathered} -\mathrm{F}_{\text {offset }}- \\ 0.2 \\ 1 \\ +\mathrm{F}_{\text {offset }}+ \\ 0.2 \end{gathered}$ |

| Fuw (offset for <br> $\Delta f=7.5 \mathrm{kHz})$ | MHz |  |  |
| :--- | :--- | :--- | :--- | :--- |
| NOTE 1: | The transmitter shall be set to 4dB below PcMAX_L,c or PcMAX_L as defined in subclause 6.2.5A. |  |  |
| NOTE 2: | Reference measurement channel is specified in Annex A.3. 2 with one sided dynamic OCNG Pattern OP. 1 |  |  |
| FDD/TDD as described in Annex A.5.1.1/A.5.2.1. |  |  |  |

For combinations of intra-band and inter-band carrier aggregation and one uplink carrier assigned to one E-UTRA band, the requirement is defined with the uplink active in a band other than that supporting the downlink(s) under test. The uplink configuration shall be in accordance with Table 7.3.1A-3 when the uplink is active in the band supporting two or more non-contiguous component carriers, Table 7.3.1A-1 when the uplink is active in a band supporting two contiguous component carriers and in accordance with Table 7.3.1-2 when the uplink is active in a band supporting one carrier per band. The downlink PCC shall be configured closer to the uplink operating band than the downlink SCC(s) when the uplink is active in band(s) supporting contiguous aggregation. For these uplink configurations, the UE shall meet the narrow-band blocking requirements for intra-band non-contiguous carrier aggregation with $\Delta \mathrm{R}_{\text {IBNC }}=0 \mathrm{~dB}$ for all subblock gaps (Table 7.3.1A-3) for the two or more non-contiguous downlink sub-blocks, the requirements for intra-band contiguous carrier aggregation for the contiguously aggregated downlink carriers and for any remaining component carrier(s) the requirements specified in subclause 7.6.3. For E-UTRA CA configurations with component carriers assigned in Band 46, narrow-band blocking requirements do not apply in the presence of a narrow-band interferer in Band 46. All downlink carriers shall be active throughout the tests and the requirements for the downlinks shall be met with the single uplink carrier active in each band capable of UL operation.

### 7.6.3.1D Minimum requirements for ProSe

The relative throughput shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annex A. 6.2 with parameters specified in Table 7.6.3.1D-1 and Table 7.6.3.1D-2.

Table 7.6.3.1D-1: Narrow-band blocking for ProSe Direct Discovery

| Parameter | Unit | Channel Bandwidth |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 1.4 MHz | 3 MHz | 5 MHz | 10 MHz | 15 MHz | 20 MHz |
| $\mathrm{P}_{w}$ | dBm | Prefsens_Prose + channel-bandwidth specific value below + Poffiset |  |  |  |  |  |
| Pw | dBm |  |  | 16 | 13 | 14 | 16 |
| Puw (CW) | dBm |  |  | -55 | -55 | -55 | -55 |
| Poffset | dB |  |  | 10.9 | 13.9 | 15.7 | 16.9 |
| Fuw (offset for $\Delta f=15 \mathrm{kHz}$ ) | MHz |  |  | 2.7075 | 5.2125 | 7.7025 | 10.2075 |
| Fuw (offset for $\Delta f=7.5 \mathrm{kHz})$ | MHz |  |  |  |  |  |  |

Table 7.6.3.1D-2: Narrow-band blocking for ProSe Direct Communication

| Parameter | Unit | Channel Bandwidth |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 1.4 MHz | 3 MHz | 5 MHz | 10 MHz | 15 MHz | 20 MHz |
| Pw | dBm | Prefsens_ProSe + channel-bandwidth specific value below |  |  |  |  |  |
| Pw | dBm |  |  | 16 | 13 | 14 | 16 |
| Puw (CW) | dBm |  |  | -55 | -55 | -55 | -55 |
| Fuw (offset for $\Delta f=15 \mathrm{kHz}$ ) | MHz |  |  | 2.7075 | 5.2125 | 7.7025 | 10.2075 |
| Fuw (offset for $\Delta f=7.5 \mathrm{kHz})$ | MHz |  |  |  |  |  |  |

For the UE which supports inter-band CA configuration in Table 7.3.1-1A, P ${ }_{\text {Uw }}$ power defined in Table 7.6.3.1D-1 and Table 7.6.3.1D-2 is increased by the amount given by $\Delta \mathrm{R}_{\mathrm{IB}, \mathrm{c}}$ in Table 7.3.1-1 A .

### 7.6A Void

<Reserved for future use>

### 7.6B Blocking characteristics for UL-MIMO

For UE with two transmitter antenna connectors in closed-loop spatial multiplexing scheme, the minimum requirements in subclause 7.6 shall be met with the UL-MIMO configurations specified in Table 6.2.2B-2. For UL-MIMO, the parameter Pcmax_L is defined as the total transmitter power over the two transmit antenna connectors.

### 7.7 Spurious response

Spurious response is a measure of the receiver's ability to receive a wanted signal on its assigned channel frequency without exceeding a given degradation due to the presence of an unwanted CW interfering signal at any other frequency at which a response is obtained i.e. for which the out of band blocking limit as specified in subclause 7.6 .2 is not met.

### 7.7.1 Minimum requirements

The throughput shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP. 1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Tables 7.7.1-1 and 7.7.1-2. For operating bands with an unpaired DL part (as noted in Table 5.5-1), the requirements only apply for carriers assigned in the paired part.

Table 7.7.1-1: Spurious response parameters

| Rx parameter | Units | Channel bandwidth |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 1.4 MHz | 3 MHz | 5 MHz | 10 MHz | 15 MHz | 20 MHz |
| Power in Transmission Bandwidth Configuration | dBm | REFSENS + channel bandwidth specific value below |  |  |  |  |  |
|  |  | 6 | 6 | 6 | 6 | 7 | 9 |
| NOTE 1: The transmitter shall be set to 4 dB below PcmAx_L at the minimum uplink configuration specified in Table 7.3.1-2. <br> N OTE 2: Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP. 1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1. <br> NOTE 3: The REFSENS power level is specified in Table 7.3.1-1 and Table 7.3.1-1a for two and four antenna ports, respectively. |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |

Table 7.7.1-2: Spurious response

| Parameter | Unit | Level |
| :--- | :---: | :---: |
| Pinterferer <br> (CW) | dBm | -44 |
| Finterferer | MHz | Spurious response frequencies |

For the UE which supports inter-band CA configuration in Table 7.3.1-1 A, $\mathrm{P}_{\text {interferer }}$ power defined in Table 7.7.1-2 is increased by the amount given by $\Delta \mathrm{R}_{\mathrm{IB}, \mathrm{c}}$ in Table 7.3.1-1A.

### 7.7.1A Minimum requirements for CA

For inter-band carrier aggregation with one component carrier per operating band and the uplink assigned to one EUTRA band the spurious response requirements are defined with the uplink active on the band(s) other than the band whose downlink is being tested. The throughput measured in each downlink with $\mathrm{F}_{\text {interferer }}$ in Table 7.6.2.1A-0 and Table 7.6.2.1A-0a at spurious response frequencies shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP. 1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Tables 7.7.1-1 and 7.7.1-2. The UE shall meet these requirements for each component carrier while all downlink carriers are active.

For inter-band carrier aggregation with one component carrier per operating band and the uplink active in two E-UTRA bands, the spurious response requirements applicable specified above shall be met with the transmitter power for the uplink set to 7 dB below Pcmax_L,c for each serving cell $c$.

For E-UTRA CA configurations including an operating band without uplink band or an operating band with an unpaired DL part (as noted in Table 5.5-1), the requirements for all downlinks shall be met with the single uplink carrier active in each band capable of UL operation. For E-UTRA CA configurations listed in Table 7.3.1A-0a under conditions for which reference sensitivity for the operating band being tested is N/A, the spurious response requirements of subclause 7.7.1A do not apply.

For intra-band contiguous carrier aggregation the downlink SCC(s) shall be configured at nominal channel spacing to the PCC. For FDD, the PCC shall be configured closest to the uplink band. All downlink carriers shall be active throughout the test. The uplink output power shall be set as specified in Table 7.7.1A-1 with the uplink configuration set according to Table 7.3.1A-1 for the applicable carrier aggregation configuration. For UE(s) supporting one uplink carrier, the uplink configuration of the PCC shall be in accordance with Table 7.3.1-2. The throughput of each carrier shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP. 1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Tables 7.7.1A-1 and 7.7.1A-2. For operating bands with an unpaired DL part (as noted in Table 5.5-1), the requirements also apply for an SCC assigned in the unpaired part with parameters specified in Tables 7.7.1A-1 and 7.7.1A-2

For intra-band non-contiguous carrier aggregation with one uplink carrier and two or more downlink sub-blocks, the spurious response requirements are defined with the uplink configuration in accordance with Table 7.3.1A-3. For this uplink configuration, the UE shall meet the requirements for each sub-block as specified in subclauses 7.7.1 and 7.7.1A for one component carrier and two component carriers per sub-block, respectively. The requirements apply with all downlink carriers active.

For intra-band non-contiguous carrier aggregation with two uplink carriers and two or more downlink carriers, the spurious response requirements applicable specified above shall be met with the transmitter powers for the uplinks set to $\mathrm{P}_{\text {CMAX_L,c }}-7 \mathrm{dBm}$.

Table 7.7.1A-1: Spurious response parameters

| Rx Parameter | Units | CA Bandwidth Class |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | B | C | D | E | F |
| Pw in Transmission Bandwidth Configuration, per CC | dBm | REFSENS + CA Bandwidth Class specific value below |  |  |  |  |
|  |  | 9 | 9 | 9 | 9 | 9 |
| NOTE 1: The transmitter shall be set to 4dB below PсмAX_L, or PCMAX_L as defined in subclause 6.2.5A. <br> NOTE 2: Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP. 1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1. |  |  |  |  |  |  |

Table 7.7.1A-2: Spurious response

| Parameter | Unit | Level |
| :--- | :---: | :---: |
| Pinterferer <br> $(\mathrm{CW})$ | dBm | -44 |
| Finterferer | MHz | Spurious response frequencies |

For combinations of intra-band and inter-band carrier aggregation and one uplink carrier assigned to one E-UTRA band, the requirement is defined with the uplink active in a band other than that supporting the downlink(s) under test. The uplink configuration shall be in accordance with Table 7.3.1A-3 when the uplink is active in the band supporting two or more non-contiguous component carriers, Table 7.3.1A-1 when the uplink is active in a band supporting two contiguous component carriers and in accordance with Table 7.3.1-2 when the uplink is active in a band supporting one carrier per band. The downlink PCC shall be configured closer to the uplink operating band than the downlink SCC(s) when the uplink is active in band(s) supporting contiguous aggregation. For the two or more non-contiguous component carriers within the same band, $\mathrm{P}_{\text {wanted }}$ in Table 7.6.2.1A-0 is set using $\Delta \mathrm{R}_{\mathrm{IBNC}}=0 \mathrm{~dB}$ for all sub-block gaps (Table 7.3.1A-3) while a band supporting contiguously aggregated carriers the out-of-band blocking parameters in Table 7.7.1-1 are replaced by those specified in Table 7.7.1A-1. For each downlink the UE shall meet the spurious-response requirements applicable for inter-band carrier aggregation with one component carrier per operating band. All downlink carriers shall be active throughout the tests and the requirements for the downlinks shall be met with the single uplink carrier active in each band capable of UL operation.

### 7.7.1B Minimum requirements for UL-MIMO

For UE with two transmitter antenna connectors in closed-loop spatial multiplexing scheme, the minimum requirements in Clause 7.7 .1 shall be met with the UL-MIMO configurations specified in Table 6.2.2B-2. For UL-MIMO, the parameter Pcmax_L is defined as the total transmitter power over the two transmit antenna connectors.

### 7.7.1D Minimum requirements for ProSe

The throughput shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annex A.6.2 with parameters specified in Tables 7.7.1D-1, 7.7.1D-2, and 7.7.1D-3.

Table 7.7.1D-1: Spurious response parameters for ProSe Direct Discovery

| Rx parameter | Units | Channel bandwidth |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 1.4 MHz | 3 MHz | 5 MHz | 10 MHz | 15 MHz | 20 MHz |
| Power in | dBm | Prefsens_ProSe + channel bandwidth specific value below+ Poffset |  |  |  |  |  |
| Bandwidth Configuration |  |  |  | 6 | 6 | 7 | 9 |
| $\mathrm{P}_{\text {ofiset }}$ | dB |  |  | 10.9 | 13.9 | 15.7 | 16.9 |

Table 7.7.1D-2: Spurious response parameters for ProSe Direct Communication

| Rx parameter | Units | Channel bandwidth |  |  |  |  |  |

|  |  | 1.4 MHz | 3 MHz | 5 MHz | 10 MHz | 15 MHz | 20 MHz |
| Power in | dBm | Prefsens ProSe + channel bandwidth specific value below |  |  |  |  |  |
| Transmission Bandwidth Configuration |  |  |  | 6 | 6 | 7 | 9 |

Table 7.7.1D-3: Spurious response for ProSe

| Parameter | Unit | Level |
| :--- | :---: | :---: |
| PInterferer <br> $(\mathrm{CW})$ | dBm | -44 |
| Finterferer | MHz | Spurious response frequencies |

For the UE which supports inter-band CA configuration in Table 7.3.1-1A, $\mathrm{P}_{\text {interferer }}$ power defined in Table 7.7.1D-3 is increased by the amount given by $\Delta \mathrm{R}_{\mathrm{IB}, \mathrm{c}}$ in Table 7.3.1-1 A .

### 7.7.1F Minimum requirements for UE category NB1 and NB2

The category NB1 and NB2 UE throughput shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channel as specified in Annexe A.3.2 with parameters specified in Tables 7.7.1F-1.

Table 7.7.1F-1: Spurious response parameters for UE category NB1 and NB2

| Parameter | Unit | Level |
| :--- | :---: | :---: |
| $\mathrm{P}_{\text {signal }}$ | dBm | REFSENS+6 |
| Plinterferer (CW) | dBm | -44 |
| $\mathrm{~F}_{\text {Interferer }}$ | MHz | Spurious response frequencies |
| Number of spurious |  |  |
| response frequencies |  | 24 (in OOB range 1, 2, 3) |
| NOTE 1: Reference measurement channel is specified in Annex A.3.2. |  |  |
| NOTE 2: The REFSENS power level is specified in 7.3.1F.1-1. |  |  |
| NOTE 3: OOB range 1, 2, 3 refers to Table 7.6.2.1F-1. |  |  |

### 7.7.1G Minimum requirements for V2X

The throughput shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annex A.8.2 with parameters specified in Tables 7.7.1G-1.

Table 7.7.1G-1: Spurious response parameters

| Rx parameter | Units | Channel bandwidth |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 1.4 MHz | 3 MHz | 5 MHz | 10 MHz | 15 MHz | 20 MHz |
| Power in | dBm | Prefsens_v2x + channel bandwidth specific value below |  |  |  |  |  |
| Transmission Bandwidth Configuration |  |  |  |  | 6 |  | 9 |

Table 7.7.1G-2: Spurious response

| Parameter | Unit | Level |
| :--- | :---: | :---: |
| PInterferer <br> $(\mathrm{CW})$ | dBm | -44 |
| FInterferer | MHz | Spurious response frequencies |

When UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA downlink reception for inter-band EUTRA V2X / E-UTRA bands specified in Table 5.5G-2, the requirements in subclause 7.7.1G apply for the E-UTRA V2X sidelink reception and the requirements in subclause 7.7.1 apply for the E-UTRA downlink reception while all downlink carriers are active.

For intra-band contiguous multi-carrier operation, the V2X UE throughput shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annex A.8.2 with parameters specified in Table 7.7.1G-3 and Table 7.7.1G-4.

Table 7.7.1G-3: Spurious response parameters for intra-band contiguous multi-carrier for V2X UE

| Rx Parameter | Units | V2X Bandwidth Class |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

|  |  | 9 | 9 |  |  |  |
| NOTE 1: The requirement is applied for multi-carrier intra-band con-current receptions when 2 carrier transmissions are activated at the same time. |  |  |  |  |  |  |

Tables 7.7.1G-4: Spurious response for intra-band contiguous multi-carrier for V2X UE

| Parameter | Unit | Level |
| :--- | :---: | :---: |
| Pinterferer <br> (CW) | dBm | -44 |
| Finterferer | MHz | Spurious response frequencies |
| NOTE 1:The requirement is applied for multi-carrier intra-band con-current receptions <br> when 2 carrier transmissions are activated at the same time. |  |  |

### 7.8 Intermodulation characteristics

Intermodulation response rejection is a measure of the capability of the receiver to receiver a wanted signal on its assigned channel frequency in the presence of two or more interfering signals which have a specific frequency relationship to the wanted signal.

### 7.8.1 Wide band intermodulation

The wide band intermodulation requirement is defined following the same principles using modulated E-UTRA carrier and CW signal as interferer.

### 7.8.1.1 Minimum requirements

The throughput shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP. 1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.8.1.1 for the specified wanted signal mean power in the presence of two interfering signals. For operating bands with an unpaired DL part (as noted in Table 5.51 ), the requirements only apply for carriers assigned in the paired part.

Table 7.8.1.1-1: Wide band intermodulation

| Rx Parameter | Units | Channel bandwidth |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 1.4 MHz | 3 MHz | 5 MHz | 10 MHz | 15 MHz | 20 MHz |
| Power in Transmission Bandwidth Configuration | dBm | REFSENS + channel bandwidth specific value below |  |  |  |  |  |
|  |  | 12 | 8 | 6 | 6 | 7 | 9 |

For the UE which supports inter band CA configuration in Table 7.3.1-1A, $\mathrm{P}_{\text {interferer1 }}$ and $\mathrm{P}_{\text {interferer2 }}$ powers defined in Table 7.8.1.1-1 are increased by the amount given by $\Delta \mathrm{R}_{\mathrm{IB}, \mathrm{c}}$ in Table 7.3.1-1 A .

### 7.8.1A Minimum requirements for CA

For inter-band carrier aggregation with one component carrier per operating band and the uplink assigned to one EUTRA band the wide band intermodulation requirements are defined with the uplink active on the band(s) other than the band whose downlink is being tested. The UE shall meet the requirements specified in subclause 7.8.1.1 for each component carrier while all downlink carriers are active. For E-UTRA CA configurations including an operating band without uplink band or an operating band with an unpaired DL part (as noted in Table 5.5-1), the requirements for all downlinks shall be met with the single uplink carrier active in each band capable of UL operation. For a component carrier configured in Band 46 or Band 49, the requirements specified in subclause 7.8.1.1 are replaced by the requirements in Table 7.8.1-1A-0.

Table 7.8.1.1A-0: Wide band intermodulation

For E-UTRA CA configurations listed in Table 7.3.1A-0a under conditions for which reference sensitivity for the operating band being tested is N/A, the wideband intermodulation requirements of subclause 7.8 .1 A do not apply.

For intra-band contiguous carrier aggegation the downlink $\operatorname{SCC}(\mathrm{s})$ shall be configured at nominal channel spacing to the PCC, For FDD, the PCC shall be configured closest to the uplink band. All downlink carriers shall be active throughout the test. The uplink output power shall be set as specified in Table 7.8.1A-1 with the uplink configuration set according to Table 7.3.1A-1 for the applicable carrier aggreagation configuration. For UE(s) supporting one uplink carrier, the uplink configuration of the PCC shall be in accordance with Table 7.3.1-2. The UE shall fulfil the minimum requirement in presence of an interfering signal specified in Table 7.8.1A-1 being on either side of the aggregated signal. The throughput of each carrier shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP. 1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.8.1A-1. For operating bands with an unpaired DL part (as noted in Table 5.5-1), the requirements also apply for an SCC assigned in the unpaired part with parameters specified in Tables 7.8.1A-1.

Table 7.8.1A-1: Wide band intermodulation

| Rx parameter | Units | CA Bandwidth Class |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | B | C | D | E | F |
| $\mathrm{P}_{\mathrm{w}}$ in | dBm | REFSENS + CA Bandwidth Class specific value below |  |  |  |  |
| Transmission Bandwidth |  | 9 | 12 | 13.8 | 15 | 16 |

| Configuration, per CC |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| PInterferer 1 (CW) | dBm | -46 |  |  |  |  |
| PInterferer 2 (Modulated) | dBm | -46 |  |  |  |  |
| BW ${ }_{\text {Interferer } 2}$ | MHz | 5 | 5 | 5 | 5 | 5 |
| Finterferer 1 (Offset) | MHz | $\begin{aligned} & \text {-Foffset-7.5 } \\ & \quad / \\ & + \text { Foffset }^{2}+7.5 \\ & \hline \end{aligned}$ | $\begin{aligned} & \text {-Foffset-7.5 } \\ & 1 \\ & +\mathrm{F}_{\text {offset }}+7.5 \\ & \hline \end{aligned}$ | $\begin{aligned} & \text {-Foffset-7.5 } \\ & \quad / \\ & + \text { Foffset }+7.5 \\ & \hline \end{aligned}$ | $\begin{aligned} & \text {-Foffset-7.5 } \\ & \quad / \\ & +\mathrm{F}_{\text {offset }}+7.5 \\ & \hline \end{aligned}$ | $\begin{aligned} & \text {-Foffset-7.5 } \\ & \quad / \\ & +F_{\text {offset }}+7.5 \\ & \hline \end{aligned}$ |
| Finterferer 2 (Offset) | MHz | 2*FInterferer 1 |  |  |  |  |
| NOTE 1: The transmitter shall be set to 4dB below PсмAX_L, or PCMAX_L as defined in subclause 6.2.5A. <br> NOTE 2: Reference measurement channel is specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP. 1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1. |  |  |  |  |  |  |
| NOTE 3: The modulated interferer consists of the Reference measurement channel specified in Annex A.3.2 with one sided dynamic OCNG Pattern OP. 1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 with set-up according to Annex C.3.1. |  |  |  |  |  |  |
| NOTE 5: The Finterferer 1 (offset) is the frequency separation of the center frequency of the carrier closest to the interferer and the center frequency of the CW interferer and Finterfere 2 (offset) is the frequency separation of the center frequency of the carrier closest to the interferer and the center frequency of the modulated interferer. |  |  |  |  |  |  |

For intra-band non-contiguous carrier aggregation with one uplink carrier and two or more downlink sub-blocks, the wide band intermodulation requirements are defined with the uplink configuration in accordance with Table 7.3.1A-3. For this uplink configuration, the UE shall meet the requirements for each sub-block as specified in subclauses 7.8.1.1 and in this subclause for one component carrier and two or more component carriers per sub-block, respectively. The requirements apply for out-of-gap interferers while all downlink carriers are active.

For combinations of intra-band and inter-band carrier aggregation and one uplink carrier assigned to one E-UTRA band, the requirement is defined with the uplink active in a band other than that supporting the downlink(s) under test. The uplink configuration shall be in accordance with Table 7.3.1A-3 when the uplink is active in the band supporting two or more non-contiguous component carriers, Table 7.3.1A-1 when the uplink is active in a band supporting two contiguous component carriers and in accordance with Table 7.3.1-2 when the uplink is active in a band supporting one carrier per band. For these uplink configurations, the UE shall meet the wide-band intermodulation requirements for intra-band non-contiguous carrier aggregation with $\Delta \mathrm{R}_{\mathrm{IBNC}}=0 \mathrm{~dB}$ for all sub-block gaps (Table 7.3.1A-3) for the two or more noncontiguous downlink sub-blocks, the requirements for intra-band contiguous carrier aggregation for the contiguously aggregated downlink carriers and for any remaining component carrier(s) the requirements specified in subclause 7.8.1. For contiguously aggregated component carriers configured in Band 46, the said requirements for intra-band contiguous carrier aggregation of two or more downlink carriers are replaced by requirements in Table 7.8.1A-2. For noncontiguously aggregated component carriers configured in Band 46, the said requirements are applied to each sub-block for out-of-gap interferers. For the sub-block with a single component carrier, the requirement is replaced by Table 7.8.1.1A-0. For the sub-block with two or more contiguous component carriers, the requirement is replaced by Table 7.8.1.1A-2. All downlink carriers shall be active throughout the tests and the requirements for the downlinks shall be met with the single uplink carrier active in each band capable of UL operation.

Table 7.8.1A-2: Wide band intermodulation

| E-UTRA Band | Rx parameter | Units | CA Bandwidth Class |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | B | C | D | E | F |
| 46 | Power per CC in Aggregated Transmission Bandwidth Configuration | REFSENS + CA Bandwidth Class specific value below |  |  |  |  |  |
|  |  | dBm |  | 12 | 13.8 | 15 |  |
|  | $\begin{aligned} & \mathrm{P}_{\text {Interferer }} 1 \\ & (\mathrm{CW}) \\ & \hline \end{aligned}$ | dBm |  |  | -46 |  |  |
|  | PInterferer 2 (Modulated) | dBm |  |  | -46 |  |  |
|  | BW ${ }_{\text {Interferer } 2}$ | MHz |  | 20 | 20 | 20 |  |
|  | $\mathrm{F}_{\text {Interferer } 1}$ (Offset) | MHz |  | $-\mathrm{F}_{\text {offset }} \text { /30 }$ | $-\mathrm{F}_{\text {offset }}-30$ | $-\mathrm{F}_{\text {offset }}-30$ |  |

### 7.8.1B Minimum requirements for UL-MIMO

For UE(s) with two transmitter antenna connectors in closed-loop spatial multiplexing scheme, the minimum requirements in subclause 7.8 .1 shall be met with the UL-MIMO configurations specified in Table 6.2.2B-2. For ULMIMO, the parameter Pcmax_l is defined as the total transmitter power over the two transmit antenna connectors.

### 7.8.1D Minimum requirements for ProSe

The throughput shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annex A. 6.2 with parameters specified in Table 7.8.1D-1, Table 7.8.1D-2, and Table 7.8.1D-3 for the specified wanted signal mean power in the presence of two interfering signals

Table 7.8.1D-1: Wide band intermodulation parameters for ProSe Direct Discovery

| Rx parameter | Units | Channel bandwidth |  |  |  |  |  |

Table 7.8.1D-3: Wide band intermodulation for ProSe

| Rx Parameter | Units | Channel bandwidth |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 1.4 MHz | 3 MHz | 5 MHz | 10 MHz | 15 MHz | 20 MHz |
| Power in Transmission Bandwidth Configuration | dBm | Prefsens_ProSe + channel bandwidth specific value below+ Poffset |  |  |  |  |  |
|  |  | 12 | 8 | 6 | 6 | 7 | 9 |
| $\begin{aligned} & \text { Plinterferer } 1 \\ & \text { (CW) } \end{aligned}$ | dBm | -46 |  |  |  |  |  |
| Pinterferer 2 (Modulated) | dBm | -46 |  |  |  |  |  |
| BW ${ }_{\text {Interferer } 2}$ |  | 1.4 | 3 | 5 |  |  |  |
| Finterferer 1 (Offset) | MHz | $\begin{gathered} -\mathrm{BW} / 2-2.1 \\ / \\ +\mathrm{BW} / 2+2.1 \\ \hline \end{gathered}$ | $\begin{gathered} -\mathrm{BW} / 2-4.5 \\ / \\ +\mathrm{BW} / 2+4.5 \\ \hline \end{gathered}$ | $\begin{array}{r} -B W / 2-7.5 \\ / \\ +B W / 2+7.5 \\ \hline \end{array}$ |  |  |  |
| Finterferer 2 (Offset) | MHz | $2^{*} \mathrm{~F}_{\text {Interferer }} 1$ |  |  |  |  |  |
| NOTE 1: Reference measurement channel is specified in Annex A.6.2 <br> NOTE 2: The interferer is QPSK modulated PUSCH containing data and reference symbols. Normal cyclic prefix is used. The data content shall be uncorrelated to the wanted signal and modulated according to clause 5 of TS36.211 |  |  |  |  |  |  |  |

For the UE which supports inter band CA configuration in Table 7.3.1-1A, $\mathrm{P}_{\text {interferer1 }}$ and $\mathrm{P}_{\text {interferer2 }}$ powers defined in Table 7.8.1D-3 are increased by the amount given by $\Delta \mathrm{R}_{\mathrm{IB}, \mathrm{c}}$ in Table 7.3.1-1 A .

### 7.8.1F Minimum requirements for category NB1 and NB2

The throughput shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channel as specified in Annex A.3.2 with parameters specified in Table 7.8.1F-1 for the specified wanted signal mean power in the presence of two interfering signals.

Table 7.8.1F-1: Wide band intermodulation for category NB1 and NB2

| Parameters for wideband intermodulation |  |
| :---: | :---: |
| Category NB1 or NB2 signal power | REFSENS +12 dB |
| CW interferer signal power | -46 dBm |
| 1.4 MHz E-UTRA interferer signal power | -46 dBm |
| CW interferer offset | $\pm 2.2 \mathrm{MHz}$ |
| 1.4 MHz E-UTRA interferer offset | $\pm 4.4 \mathrm{MHz}$ |

### 7.8.1G Minimum requirements

The throughput shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annex A.8.2 with parameters specified in Table 7.8.1G-1 for the specified wanted signal mean power in the presence of two interfering signals

Table 7.8.1G-1: Wide band intermodulation

| Rx Parameter | Units | Channel bandwidth |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 1.4 MHz | 3 MHz | 5 MHz | 10 MHz | 15 MHz | 20 MHz |
| Power in Transmission Bandwidth Configuration | dBm | Prefsens_v2x + channel bandwidth specific value below |  |  |  |  |  |
|  |  |  |  |  | 6 |  | 9 |
| $\begin{aligned} & \text { Pinterferer } 1 \\ & \text { (CW) } \end{aligned}$ | dBm | -46 |  |  |  |  |  |
| PInterferer 2 (Modulated) | dBm | -46 |  |  |  |  |  |
| BW Interferer 2 |  |  |  |  | 10 |  | 10 |
| Finterferer 1 (Offset) | MHz |  |  |  | $\begin{gathered} \hline-\mathrm{BW} / 2- \\ 15 \\ 1 \\ +\mathrm{BW} / 2+ \\ 15 \\ \hline \end{gathered}$ |  | $\begin{gathered} -\mathrm{BW} / 2- \\ 15 \\ 1 \\ +\mathrm{BW} / 2 \\ +15 \end{gathered}$ |
| Finterferer 2 (Offset) | MHz | 2*FInterferer |  |  |  |  |  |
| NOTE 1: Reference measurement channel is specified in Annex A.8.2 <br> NOTE 2: The interferer is QPSK modulated PUSCH containing data and reference symbols. Normal cyclic prefix is used. The data content shall be uncorrelated to the wanted signal and modulated according to clause 5 of TS36.211 |  |  |  |  |  |  |  |

When UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA downlink reception for inter-band EUTRA V2X / E-UTRA bands specified in Table 5.5G-2, the requirements in subclause 7.8.1G apply for the E-UTRA V2X sidelink reception and the requirements in subclause 7.8.1 apply for the E-UTRA downlink reception while all downlink carriers are active.

For intra-band contiguous multi-carrier operation, the V2X UE throughput shall be $\geq 95 \%$ of the maximum throughput of the reference measurement channels as specified in Annex A.8.2 with parameters specified in Table 7.8.1G-2 for the specified wanted signal mean power in the presence of two interfering signals.

Table 7.8.1G-2: Wide band intermodulation for intra-band contiguous multi-carrier for V2X UE

### 7.8.2 Void

### 7.9 Spurious emissions

The spurious emissions power is the power of emissions generated or amplified in a receiver that appear at the UE antenna connector.

### 7.9.1 Minimum requirements

The power of any narrow band CW spurious emission shall not exceed the maximum level specified in Table 7.9.1-1
Table 7.9.1-1: General receiver spurious emission requirements

| Frequency band | Measurement <br> bandwidth | Maximum <br> level | NOTE |
| :---: | :---: | :---: | :---: |
| $30 \mathrm{MHz} \leq \mathrm{f}<1 \mathrm{GHz}$ | 100 kHz | -57 dBm |  |
| $1 \mathrm{GHz} \leq \mathrm{f} \leq 12.75 \mathrm{GHz}$ | 1 MHz | -47 dBm |  |
| $12.75 \mathrm{GHz} \leq \mathrm{f} \leq 5^{\text {th }}$ harmonic <br> of the upper frequency edge <br> of the DL operating band in <br> GHz | 1 MHz | -47 dBm | 1 |
| $12.75 \mathrm{GHz}-26 \mathrm{GHz}$ | 1 MHz | -47 dBm |  |
| NOTE 1: Applies only for Band 22, Band 42, Band 43, Band 48 and Band 49 <br> NOTE 2: Unused PDCCH resources are padded with resource element groups with power level given <br> by PDCCH_RA/RB as defined in Annex C.3.1. |  |  |  |
| NOTE 3: Applies for Band 46 and Band 47 |  |  |  |

In addition, for a V2X UE operating in Region 1, the power of any spurious emission shall not exceed the levels specified in Table 7.9.1-2.

Table 7.9.1-2: Additional RX spurious emissions limits in Region 1

| Frequency Range | Maximum <br> Level | Measurement <br> bandwidth | NOTE |
| :--- | :---: | :---: | :---: |
| $5795 \mathrm{MHz} \leq \mathrm{f}<5815 \mathrm{MHz}$ | -65 dBm (EIRP) | 1 MHz |  |
| NOTE: | The EIRP requirement is converted to conducted requirement depend on the supported <br> post antenna connector gain Gpost connector declared by the UE following the principle <br> described in annex I. The additional Rx spurious emission limits, only apply when the <br> network signaling value NS_33 or NS_34 is indicated. |  |  |

### 7.9.1A Minimum requirements

For E-UTRA CA configurations including an operating band without uplink band (as noted in Table 5.5-1), the power of any narrow band CW spurious emission shall not exceed the maximum level specified in Table 7.9.1A-1.

Table 7.9.1A-1: General receiver spurious emission requirements

| Frequency band | Measurement <br> bandwidth | Maximum <br> level | NOTE |
| :---: | :---: | :---: | :---: |
| $30 \mathrm{MHz} \leq \mathrm{f}<1 \mathrm{GHz}$ | 100 kHz | -57 dBm |  |
| $1 \mathrm{GHz} \leq \mathrm{f} \leq 12.75 \mathrm{GHz}$ | 1 MHz | -47 dBm |  |
| $12.75 \mathrm{GHz} \leq \mathrm{f} \leq 26 \mathrm{GHz}$ | 1 MHz | -47 dBm |  |
| NOTE 1: Unused PDCCH resources are padded with resource element groups with power level given |  |  |  |
| by PDCCH_RA/RB as defined in Annex C.3.1. |  |  |  |
| NOTE 2: The requirements apply when the UE is configured for carrier aggregation but is not |  |  |  |
| transmitting. |  |  |  |
| NOTE 3: Applies only for Band 46 |  |  |  |

### 7.10 Receiver image

### 7.10.1 Void

### 7.10.1A Minimum requirements for CA

Receiver image rejection is a measure of a receiver's ability to receive the E-UTRA signal on one component carrier while it is also configured to receive an adjacent aggregated carrier. Receiver image rejection ratio is the ratio of the wanted received power on a sub-carrier being measured to the unwanted image power received on the same sub-carrier when both sub-carriers are received with equal power at the UE antenna connector.

For intra-band contiguous carrier aggregation the UE shall fulfil the minimum requirement specified in Table 7.10.1A-1 for all values of aggregated input signal up to -22 dBm .

Table 7.10.1A-1: Receiver image rejection

|  | CA bandwidth class |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Rx parameter | Units | A | B | C | D | E | F |
| Receiver image <br> rejection | dB |  | 25 | 25 | 25 | 25 | 25 |

### 7.10.1G Minimum requirements for V2X Communication

Receiver image rejection is a measure of a receiver's ability to receive the E-UTRA V2X signal on one component carrier while it is also configured to receive another aggregated carrier. Receiver image rejection ratio is the ratio of the wanted received power on a sub-carrier being measured to the unwanted image power received on the same sub-carrier when both sub-carriers are received with equal power at the UE antenna connector.

For intra-band contiguous multi-carrier operation, the UE shall fulfil the minimum requirement specified in Table 7.10.1G-1 for all values of aggregated input signal.

Table 7.10.1G-1: Receiver image rejection

|  |  | V2X Bandwidth Class |  |  |  |  |  |
| :--- | :--- | :--- | :---: | :---: | :---: | :---: | :---: |
| Rx parameter | Units | A | B | C/ C | D | D | E |

| Receiver image <br> rejection | dB | 30 | 30 |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| NOTE 1: The requirement is applied for multi-carrier intra-band con-current receptions |  |  |  |  |  |  |
| when 2 carrier transmissions are activated at the same time. |  |  |  |  |  |  |

## 8 Performance requirement

This clause contains performance requirements for the physical channels specified in TS 36.211 [4]. The performance requirements for the UE in this clause are specified for the measurement channels specified in Annex A.3, the propagation conditions in Annex B and the downlink channels in Annex C.3.2.

NOTE: For the requirements in the following sections, similar Release 8 and 9 requirements apply for time domain measurements restriction under colliding CRS.

### 8.1 General

### 8.1.1 Receiver antenna capability

The performance requirements are based on UE(s) that utilize one or more antenna receivers.
For all test cases, the SNR is defined as

$$
S N R=\frac{\sum_{j=1}^{N_{R X}} \hat{E}_{s}^{(j)}}{\sum_{j=1}^{N_{R X}} N_{o c}^{(j)}}
$$

where $N_{R X}$ denotes the number of receiver antenna connectors and the superscript receiver antenna connector $j$. The above SNR definition assumes that the REs are not precoded. The SNR definition does not account for any gain which can be associated to the precoding operation. The relative power of physical channels transmitted is defined in Table C.3.2-1. The SNR requirement applies for the UE categories and CA capabilities given for each test.

For enhanced performance requirements type A, the SINR is defined as

$$
\operatorname{SINR}=\frac{\sum_{j=1}^{N_{R X}} \hat{E}_{s}^{(j)}}{\sum_{j=1}^{N_{R X}} N_{o c}^{(j)}}
$$

where $N_{R X}$ denotes the number of reciver antenna connectors and the superscript receiver antenna connector $j$. The above SINR definition assumes that the REs are not precoded. The SINR definition does not account for any gain which can be associated to the precoding operation. The relative power of physical channels transmitted is defined in Table C.3.2-1. The SINR requirement applies for the UE categories given for each test.

For the performance requirements specified in this clause, it is assumed that $N_{R X}=2$ unless otherwise stated.
Table 8.1.1-1: Void

### 8.1.1.1 Simultaneous unicast and MBMS operations

### 8.1.1.2 Dual-antenna receiver capability in idle mode

### 8.1.2 Applicability of requirements

### 8.1.2.1 Applicability of requirements for different channel bandwidths

In Clause 8 the test cases may be defined with different channel bandwidth to verify the same target FRC conditions with the same propagation conditions, correlation matrix and antenna configuration.

Test cases defined for 5 MHz channel bandwidth that reference this clause are applicable to UEs that support only Band 31, 72, 73, 87 and/or 88.

### 8.1.2.2 Definition of CA capability

The definition with respect to CA capabilities for 2CCs is given as in Table 8.1.2.2-1. The definition with respect to CA capabilities for 3CCs is given in Table 8.1.2.2-3.

Table 8.1.2.2-1: Definition of CA capability with 2DL CCs

| CA <br> Capability | CA Capability Description |
| :---: | :---: |
| CA2_C | Intra-band contiguous CA |
| CA2_A2 | Inter-band CA (two bands) |
| CA2_N2 | Intra-band non-contiguous CA (with two sub-blocks) |
| NOTE 1: | CA2_C corresponds to E-UTRA CA configurations and bandwidth |
| combination sets defined in Table 5.6A.1-1 for 2 DL CCs. |  |
| CA2_A2 corresponds to E-UTRA CA configurations and bandwidth <br> combination sets defined in Table 5.6A.1-2 for 2 DL CCs. <br> CA2_N2 corresponds to E-UTRA CA configurations and bandwidth <br> combination sets defined in Table 5.6A.1-3 for 2 DL CCs. |  |

The supported testable aggregated CA bandwidth combinations for 2CCs for each CA capability are listed in Table 8.1.2.2-2.

Table 8.1.2.2-2: Supported testable aggregated CA bandwidth combinations for different CA capability with 2DL CCs

| CA Capability | Bandwidth combination for FDD CA | Bandwidth combination for TDD CA | Bandwidth combination for TDDFDD CA | Bandwidth combination for CA with LAA SCell(s) |
| :---: | :---: | :---: | :---: | :---: |
| CA2_C | $\begin{gathered} \hline 5+5 \mathrm{MHz}, 5+10 \mathrm{MHz}, \\ 5+15 \mathrm{MHz}, \\ 10+10 \mathrm{MHz}, \\ 20+20 \mathrm{MHz} \\ \hline \end{gathered}$ | $\begin{gathered} \hline 20+20 \mathrm{MHz}, \\ 15+20 \mathrm{MHz} \end{gathered}$ | NA | NA |
| CA2_A2 | $\begin{gathered} 10+10 \mathrm{MHz}, \\ 20+5 \mathrm{MHz}, \\ 10+15 \mathrm{MHz}, \\ 10+20 \mathrm{MHz}, \\ 15+20 \mathrm{MHz}, \\ 20+20 \mathrm{MHz} \end{gathered}$ | $20+20 \mathrm{MHz}$ | $\begin{aligned} & \text { 10(FDD)+20(TDD)MHz, } \\ & \text { 15(FDD)+20(TDD)MHz, } \\ & 20(\text { FDD })+20(\text { TDD }) M H z \end{aligned}$ | $\begin{aligned} & \text { 20(FDD)+20(LAA)MHz, } \\ & \text { 10(FDD)+20(LAA)MHz, } \\ & 15(\text { FDD })+20(\text { LAA }) M H z, \\ & 20(T D D)+20(L A A) M H z \end{aligned}$ |
| CA2_N2 | $\begin{aligned} & 5+10 \mathrm{MHz}, \\ & 10+10 \mathrm{MHz}, \\ & 10+20 \mathrm{MHz}, \\ & 20+20 \mathrm{MHz} \end{aligned}$ | $20+20 \mathrm{MHz}$ | NA | NA |
| NOTE 1: This table is only for information and applicability and test rules of CA performance requirements are specified in 8.1.2.3 and 9.1.1.2. |  |  |  |  |

Table 8.1.2.2-3: Definition of CA capability with 3 DL CCs

| CA <br> Capability | CA Capability Description |
| :---: | :---: |
| CA3_C | Intra-band contiguous CA |
| CA3_A2 | Inter-band CA (two bands) |
| CA3_A3 | Inter-band CA (three bands) |
| CA3_N2 | Intra-band non-contiguous CA (with two sub-blocks) |
| NOTE 1: | CA3_C corresponds to E-UTRA CA configurations and bandwidth <br> combination sets defined in Table 5.6A.1-1 for 3 DL CCs. <br> CA3_A2 corresponds to E-UTRA CA configurations and bandwidth <br> combination sets defined in Table 5.6A.1-2 for 3 DL CCs. <br> CA3_A3 corresponds to E-UTRA CA configurations and bandwidth <br> combination sets defined in and Table 5.6A.1-2a for 3 DL CCs. <br> CA3_N2 corresponds to E-UTRA CA configurations and bandwidth <br> combination sets defined in Table 5.6A.1-3 for 3 DL CCs. |

The supported testable largest aggregated CA bandwidth combinations for 3CCs for each CA capability are listed in Table 8.1.2.2-4.

Table 8.1.2.2-4: Supported largest aggregated CA bandwidth combinations for different CA capability with 3 CCs

| CA capability | Bandwidth combination for FDD CA | Bandwidth combination for TDD CA | $\begin{gathered} \text { Bandwidth combination for TDD- } \\ \text { FDD CA } \end{gathered}$ | Bandwidth combination for CA with LAA SCell(s) |

|  | 8.1.2.3 and 9.1.1.2. |  | NA |

For test cases with more than one component carrier, "Fraction of Maximum Throughput" in the performance requirement refers to the ratio of the sum of throughput values of all component carriers to the sum of the nominal maximum throughput values of all component carriers, unless otherwise stated.

### 8.1.2.2A Definition of dual connectivity capability

The definition with respect to dual connectivity capabilities for configurations with 2 CC is given as in Table 8.1.2.2A-

1. The definition with respect to dual connectivity capabilities for configurations with 3 CCs is given as in Table 8.1.2.2A-3.

Table 8.1.2.2A-1: Definition of dual connectivity capability with 2DL CCs

| Dual <br> connectivity <br> Capability | Dual connectivity capability Description |
| :---: | :---: |
| DC_A_2 | Inter-band dual connecitivty (two bands) |
| NOTE 1:DC_A_2 corresponds to E-UTRA dual connectivity configurations and <br> bandwidth combination sets defined for inter-band dual connecitivty (two <br> bands) as specified in 5.6C . |  |

The supported testable dual connectivity bandwidth combinations for 2CCs for each dual connectivity capability are listed in Table 8.1.2.2A-2.

Table 8.1.2.2A-2: Supported testable dual connectivity bandwidth combinations for different dual connectivitys capability with 2DL CCs

| Dual connectivity <br> capability | Bandwidth combination <br> for FDD dual connectivity | Bandwidth combination <br> for TDD dual <br> connectivity | Bandwidth combination <br> for TDD-FDD dual <br> connectivity |
| :---: | :---: | :---: | :---: |
| DC_A_2 | $10+10 \mathrm{MHz}, 10+20 \mathrm{MHz}$, <br> $15+15 \mathrm{MHz}, 15+20 \mathrm{MHz}$, <br> $20+20 \mathrm{MHz}, 15+5 \mathrm{MHz}$ | $20+20 \mathrm{MHz}$ | $20($ FDD $)+20($ TDD $) \mathrm{MHz}$ |
| NOTE 1: This table is only for information and applicability and test rules of dual connectivity performance |  |  |  |
| requirements are specified in 8.1 .2 .3 A |  |  |  |

Table 8.1.2.2A-3: Definition of dual connectivity capability with 3DL CCs

| Dual <br> connectivity <br> Capability | Dual connectivity capability Description |
| :---: | :---: |
| DC_A_3 | Inter-band dual connecitivty (three bands) |
| NOTE 1: | DC_A_3 corresponds to E-UTRA dual connectivity configurations and <br> bandwidth combination sets defined for inter-band dual connecitivty (three <br> bands) as specified in 5.6C. |

The supported testable dual connectivity bandwidth combinations for 3CCs for each dual connectivity capability are listed in Table 8.1.2.2A-4.

Table 8.1.2.2A-4: Supported testable dual connectivity bandwidth combinations for different dual connectivitys capability with 3DL CCs
$\left.\begin{array}{|c|c|l|}\hline \text { Dual connectivity } \\ \text { capability }\end{array} \quad \begin{array}{c}\text { Bandwidth combination } \\ \text { for FDD dual connectivity }\end{array} \begin{array}{c}\text { Bandwidth combination } \\ \text { for TDD dual connectivity }\end{array}\right\}$

### 8.1.2.3 Applicability and test rules for different CA configurations and bandwidth combination sets

The performance requirement for CA UE demodulation tests in Clause 8 are defined independent of CA configurations and bandwidth combination sets specified in Clause 5.6A. For UEs supporting different CA configurations and bandwidth combination sets, the applicability and test rules are defined for the tests for 2 DL CCs in Table 8.1.2.3-1 and 3 or more DL CCs in Table 8.2.2.3-2. For simplicity, CA configuration below refers to combination of CA configuration and bandwidth combination set.

Table 8.1.2.3-1: Applicability and test rules for CA UE demodulation tests with 2 DL CCs

| Tests | CA capability where the tests apply | CA configuration from the selected CA capbility where the tests apply | CA Bandwidth combination to be tested in priority order |
| :---: | :---: | :---: | :---: |
| CA tests with 2CCs in Clause 8.2.1.1.1, 8.2.1.4.3 | Any one of the supported CA capabilities | Any one of the supported FDD CA configurations | $\begin{gathered} 10+10 \mathrm{MHz}, 20+20 \\ \mathrm{MHz}, 5+5 \mathrm{MHz}, \\ 10 \mathrm{MHz}+5 \mathrm{MHz}, \\ 15 \mathrm{MHz}+5 \mathrm{MHz} \\ \hline \end{gathered}$ |
| CA tests with 2CCs in Clause 8.2.1.3.1 | Each supported CA capability | Any one of the supported FDD CA configurations in each CA capability | $\begin{gathered} 10+10 \mathrm{MHz}, 20+20 \\ \mathrm{MHz}, 5+5 \mathrm{MHz}, \\ 10 \mathrm{MHz}+5 \mathrm{MHz} \text {, other } \\ \text { combinations } \end{gathered}$ |
| CA tests with 2CCs in Clause 8.2.1.3.1A, 8.7.1, 8.2.1.9.2 | Any one of the supported CA capabilities with largest aggregated CA bandwidth combination | Any one of the supported FDD CA configurations with largest aggregated CA bandwidth combination | Largest aggregated CA bandwidth combination |
| CA tests with 2CCs in Clause 8.2.1.7.1 | CA_C | Supported FDD intra-band contiguous CA configurations covering the lowest and highest operating bands | Largest aggregated CA bandwidth combinations |
| CA tests with 2CCs in Clause 8.2.2.1.1, 8.2.2.4.3, 8.2.2.9.2 | Any one of the supported CA capabilities with largest aggregated CA bandwidth combination | Any one of the supported TDD CA configurations with largest aggregated CA bandwidth combination | Largest aggregated CA bandwidth combination |
| CA tests with 2CCs in Clause 8.2.2.3.1 | Each supported CA capability | Any one of the supported TDD CA configurations in each CA capability with largest aggregated CA bandwidth combination | Largest aggregated CA bandwidth combination |
| CA tests with 2CCs in Clause 8.2.2.3.1A, 8.7.2 | Any one of the supported CA capabilities with largest aggregated CA bandwidth | Any one of the supported TDD CA configurations with largest aggregated CA bandwidth combination | Largest aggregated CA bandwidth combination |
| CA tests with 2CCs in 8.2.2.7.1 | CA_C | Supported TDD intra-band contiguous CA configurations covering the lowest and highest operating bands | Largest aggregated CA bandwidth combinations |
| CA tests with 2CCs in Clause 8.2.1.8.1 | CA_N | CA_3A-3A defined in Table 5.6A.1-3 | 10+10 MHz |
| CA tests with 2CCs in Clause 8.2.2.8.1 | CA2_C | CA 41C defined in Table 5.6A.1-1 | 20+20 MHz |

| CA tests in <br> Clause 8.2.1.10.1 <br> (NOTE 4) | CA2_C | CA_1C and CA_3C <br> defined in Table 5.6A.1-1 | Largest aggregated CA <br> bandwidth combinations |
| :---: | :---: | :---: | :---: |

NOTE 1: The applicability and test rules are specified in this table, unless otherwise stated.
NOTE 2: Number of the supported bandwidth combinations to be tested from each selected CA configuration is 1 .
NOTE 3: A single Uplink CC is configured for all tests.
NOTE 4: For FDD carriers with minimum channel spacing, UE only supports the carriers in the following scenarios:

- Inter-band CA with $\geq 3$ CCs, where Band 1 is with 1 CC and normal spacing (PCell) and Band 2 is with 2 intra-band contiguous CCs and minimum channel spacing (SCell), or
- Band 1 is configured with 1CC and normal spacing, and UE accesses the CC on Band 1, and then handed over to Band 2 with 2 intra-band contiguous CCs and minimum channel spacing.

Table 8.1.2.3-2: Applicability and test rules for CA UE demodulation tests with 3 or more DL CCs

| Tests | CA capability where the tests apply | CA configuration from the selected CA capbility where the tests apply | CA Bandwidth combination to be tested in priority order |
| :---: | :---: | :---: | :---: |
| $\begin{gathered} \text { CA tests with } 3 \text { or } \\ \text { more CCs in } \\ \text { Clause 8.2.1.1.1, } \\ \text { 8.2.1.4.3, 8.7.1, } \\ \text { 8.2.1.9.1 } \end{gathered}$ | Any one of the supported CA capabilities with largest aggregated CA bandwidth combination | Any one of the supported FDD CA configurations with largest aggregated CA bandwidth combination | Largest aggregated CA bandwidth combination |
| CA tests with 3 or more CCs in Clause 8.2.1.3.1 | Each supported CA capability | Any one of the supported FDD CA configurations in each CA capability with largest aggregated CA bandwidth combination | Largest aggregated CA bandwidth combination |
| $\begin{gathered} \text { CA tests with } 3 \text { or } \\ \text { more CCs in } \\ \text { Clause 8.2.2.1.1, } \\ \text { 8.2.2.4.3, 8.7.2, } \\ \text { 8.2.2.9.2 } \end{gathered}$ | Any one of the supported CA capabilities with largest aggregated CA bandwidth combination | Any one of the supported TDD CA configurations with largest aggregated CA bandwidth combination | Largest aggregated CA bandwidth combination |
| CA tests with 3 or more CCs in Clause 8.2.2.3.1 | Each supported CA capability | Any one of the supported TDD CA configurations in each CA capability with largest aggregated CA bandwidth combination | Largest aggregated CA bandwidth combination |
| CA tests with 3CCs in Clause 8.2.2.8.1 | CA3_C | CA 41D defined in Table 5.6A.1-1 | $20+20+20 \mathrm{MHz}$ |
| NOTE 1: The applicability and test rules are specified in this table, unless otherwise stated. <br> NOTE 2: Number of the supported bandwidth combinations to be tested from each selected CA configuration is 1 . <br> NOTE 3: A single Uplink CC is configured for all tests |  |  |  |

### 8.1.2.3A Applicability and test rules for different dual connectivity configuration and bandwidth combination set

The performance requirement for dual connectivity UE demodulation tests in Clause 8 are defined independent of dual connectivity configurations and bandwidth combination sets specified in Clause 5.6C.1. For UEs supporting difrerent dual connectivity configurations and bandwidth combination sets, the applicability and test rules are defined for the tests for the configurations with 2CCs in Table 8.1.2.3A-1 and 3 DL CCs in Table 8.1.2.3A-2. For simplicity, dual connectivity configuration below refers to combination of dual connectivity configuration and bandwidth set.

Both CA performance requirements and dual connectivity performance requirements are applied for dual connectivity capable UE.

Table 8.1.2.3A-1: Applicability and test rules for dual connectivity UE demodulation tests with 2DL CCs

| Tests | Dual connectivity capability where the tests apply | Dual connectivity configuration from the selected CA capbility where the tests apply | Dual connectivity Bandwidth combination to be tested in priority order |
| :---: | :---: | :---: | :---: |
| Dual connectivity test with 2CCs in Clause 8.2.1.4.3A, 8.7.6 | Any one of the supported dual connectivity capabilities with largest aggregated dual connectivity bandwidth combination | Any one of the supported FDD dual connectvity configurations with the largest aggregated dual connectivity bandwidth combimation | Largest dual connectivity aggregated bandwidth combination |
| Dual connectivity test with 2CCs in Clause 8.2.2.4.3A, 8.7.7 | Any one of the supported dual connectivity capabilities with largest aggregated dual connectivity bandwidth combination | Any one of the supported TDD dual connectvity configurations with the largest aggregated dual connectivity bandwidth combination | Largest dual connectivity aggregated bandwidth combination |
| Dual connectivity test with TDD FDD 2CCs in Clause 8.2.3.4, 8.7.8 | Any one of the supported dual connectivity capabilities with largest aggregated dual connectivity bandwidth combination | Any one of the supported TDD FDD dual connectvity configurations with the largest aggregated dual connectivity bandwidth combination | Largest dual connectivity aggregated bandwidth combination |

NOTE 1: The applicability and test rules are specified in this table, unless otherwise stated.
NOTE 2: Number of the supported bandwidth combinations to be tested from each selected DC or CA configuration is 1.

Table 8.1.2.3A-2: Applicability and test rules for dual connectivity UE demodulation tests with 3DL CCs
$\left.\begin{array}{|l|c|c|c|}\hline \text { Tests } & \begin{array}{c}\text { Dual connectivity } \\ \text { capability where the tests } \\ \text { apply }\end{array} & \begin{array}{c}\text { Dual connectivity } \\ \text { configuration from the } \\ \text { selected CA capbility } \\ \text { where the tests apply }\end{array} & \begin{array}{c}\text { Dual connectivity } \\ \text { Bandwidth combination } \\ \text { to be tested in priority } \\ \text { order }\end{array} \\ \hline \text { Dual connectivity test with } \\ \text { 3CCs in Clause 8.2.1.4.3A, } \\ 8.7 .6\end{array} \begin{array}{c}\text { Any one of the supported } \\ \text { dual connectivity capabilities } \\ \text { with largest aggregated dual } \\ \text { connectivity bandwidth } \\ \text { combination }\end{array} \quad \begin{array}{c}\text { Any one of the supported } \\ \text { FDD dual connectvity } \\ \text { configurations with the } \\ \text { largest aggregated dual } \\ \text { connectivity bandwidth } \\ \text { combimation }\end{array} \quad \begin{array}{c}\text { Largest dual connectivity } \\ \text { aggregated bandwidth } \\ \text { combination }\end{array}\right]$

### 8.1.2.3B Applicability and test rules for different TDD-FDD CA configurations and bandwidth combination sets

The performance requirement for TDD-FDD CA UE demodulation tests in Clause 8 are defined independent of CA configurations and bandwidth combination sets specified in Clause 5.6A.1. For UEs supporting different CA configurations and bandwidth combination sets, the applicability and test rules are defined for the tests for 2 DL TDDFDD CA in Table 8.1.2.3B-1 and in Table 8.1.2.3B-2 for 3 or more DL TDD-FDD CA. For simplicity, CA configuration below refers to combination of CA configuration and bandwidth combination set.

Table 8.1.2.3B-1: Applicability and test rules for CA UE demodulation tests for TDD-FDD CA with 2 DL CCs

| Tests | CA capability where <br> the tests apply | CA configuration from the <br> selected CA capbility <br> where the tests apply | CA Bandwidth <br> combination to be tested <br> in priority order |
| :---: | :---: | :---: | :---: |
| CA tests with 2CCs in <br> Clause 8.2.3.1.1, <br> 8.2 .3 .2 .1 A, | Any one of the <br> supported CA <br> capabilities with largest <br> aggregated CA | Any one of the supported <br> TDD-FDD CA configurations <br> with FDD PCell with largest <br> aggregated CA bandwidth <br> combination | Largest aggregated CA <br> bandwidth combination |

| CA tests with 2CCs in Clause 8.2.3.2.1 | Each supported CA capability | Any one of the supported TDD-FDD CA configurations with FDD PCell in each CA capability with largest aggregated CA bandwidth combination | Largest aggregated CA bandwidth combination |
| :---: | :---: | :---: | :---: |
| $\begin{gathered} \hline \text { CA tests with 2CCs in } \\ \text { Clause 8.2.3.1.2, } \\ \text { 8.2.3.2.2A, } \\ \text { 8.2.3.3.2, 8.7.5.2, } \\ \text { 8.2.3.5.2 } \\ \hline \end{gathered}$ | Any one of the supported CA capabilities with largest aggregated CA bandwidth combination | Any one of the supported TDD-FDD CA configurations with TDD PCell with largest aggregated CA bandwidth combination | Largest aggregated CA bandwidth combination |
| CA tests with 2CCs in Clause 8.2.3.2.2 | Each supported CA capability | Any one of the supported TDD-FDD CA configurations with TDD PCell in each CA capability with largest aggregated CA bandwidth combination | Largest aggregated CA bandwidth combination |
| NOTE 1: The applicability and test rules are specified in this table, unless otherwise stated. <br> NOTE 2: Number of the supported bandwidth combinations to be tested from each selected CA configuration is 1. <br> NOTE 3: A single Uplink CC is configured for all tests. |  |  |  |

Table 8.1.2.3B-2: Applicability and test rules for CA UE demodulation tests for TDD-FDD CA with 3 or more DL CCs

| Tests | CA capability where the tests apply | CA configuration from the selected CA capbility where the tests apply | CA Bandwidth combination to be tested in priority order |
| :---: | :---: | :---: | :---: |
| CA tests with 3CCs, $4 \mathrm{CCs}, 5 \mathrm{CCs}$ in Clause 8.2.3.1.1, 8.2.3.2.1A, 8.2.3.3.1, 8.7.5.1 | Any one of the supported CA capabilities with largest aggregated CA bandwidth combination | Any one of the supported TDD-FDD CA configurations with FDD PCell with largest aggregated CA bandwidth combination | Largest aggregated CA bandwidth combination |
| CA tests with 3CCs, 4 CCs , 5CCs in Clause 8.2.3.2.1 | Each supported CA capability | Any one of the supported TDD-FDD CA configurations with FDD PCell in each CA capability with largest aggregated CA bandwidth combination | Largest aggregated CA bandwidth combination |
| CA tests with 3CCs, 4CCs, 5CCs in Clause 8.2.3.1.2, 8.2.3.2.2A, 8.2.3.3.2, 8.7.5.2 | Any one of the supported CA capabilities with largest aggregated CA bandwidth combination | Any one of the supported TDD-FDD CA configurations with TDD PCell with largest aggregated CA bandwidth combination | Largest aggregated CA bandwidth combination |
| CA tests with 3CCs, 4CCs, 5CCs in Clause 8.2.3.2.2 | Each supported CA capability | Any one of the supported TDD-FDD CA configurations with TDD PCell in each CA capability with largest aggregated CA bandwidth combination | Largest aggregated CA bandwidth combination |
| NOTE 1: The applicability and test rules are specified in this table, unless otherwise stated. <br> NOTE 2: Number of the supported bandwidth combinations to be tested from each selected CA configuration is 1. <br> NOTE 3: A single Uplink CC is configured for all tests. |  |  |  |

### 8.1.2.3C Applicability and test rules for SDR tests for 4Rx capable UEs

For FDD single carrier or CA, UE is required to fulfill SDR tests specified in section 8.7.9. For TDD single carrier or CA, UE is required to fulfill SDR tests specified in section 8.7.10. For TDD-FDD CA, UE is required to fulfill SDR test in section 8.7.11.

For FDD DC, UE is required to fulfill SDR tests specified in section 8.7.13. For TDD DC, UE is required to fulfill SDR tests specified in section 8.7.14. For TDD-FDD DC, UE is required to fulfill SDR test in section 8.7.15.

For single carrier or CA SDR tests, CA configuration, bandwidth combination and MIMO layer on each CC is determined by following procedure.

- Select one CA bandwidth combination among all supported CA configurations with bandwidth combination and MIMO layer on each CC that leads to largest equivalent aggregated bandwidth among all CA bandwidth combinations supported by UE. Equivalent aggregated bandwidth is defined as

$$
B_{a g g}=\sum_{i=0}^{N-1} R_{i} B_{i}
$$

where $N$ is number of CCs, $R_{i} \in\{2,4\}$ and $B_{i} \in\{5,10,15,20\}$ is MIMO layer and bandwidth of CC $i$.

- When there are multiple sets of \{CA configuration, bandwidth combination, MIMO layer\} with same largest aggregated bandwidth, select one among sets with largest number of 4 layer CCs.
- The procedure applies also for single carrier using operating band instead of CA configuration, and bandwidth instead of bandwidth combination.

For DC SDR tests, DC configuration, bandwidth combination and MIMO layer on each CC is determined by following procedure.

- Select one DC bandwidth combination among all supported DC configurations with bandwidth combination and MIMO layer on each CC that leads to largest equivalent aggregated bandwidth among all DC bandwidth combinations supported by UE. Equivalent aggregated bandwidth is defined as

$$
B_{a g g}=\sum_{i=0}^{N-1} R_{i} B_{i}
$$

where $N$ is number of CCs, $R_{i} \in\{2,4\}$ and $B_{i} \in\{5,10,15,20\}$ is MIMO layer and bandwidth of CC $i$.

- When there are multiple sets of \{DC configuration, bandwidth combination, MIMO layer\} with same largest aggregated bandwidth, select one among sets with largest number of 4 layer CCs.

For UEs with no supported 4Rx RF bands the applicability rule in 8.1.2.3C is not applied for SDR tests.

### 8.1.2.3D Applicability and test rules for different CA with LAA SCell(s) configurations and bandwidth combination sets

The performance requirement for CA with LAA SCell(s) UE demodulation tests in Clause 8 are defined independent of CA configurations and bandwidth combination sets specified in Clause 5.6A.1. For UEs supporting different CA with LAA SCell(s) configurations and bandwidth combination sets, the applicability and test rules are defined for the tests for 2 DL CA with LAA SCell(s) in Table 8.1.2.3D-1 and in Table 8.1.2.3D-2 for 3 or more DL CA with LAA SCell(s). For simplicity, CA configuration below refers to combination of CA with LAA SCell(s) configuration and bandwidth combination set.

Table 8.1.2.3D-1: Applicability and test rules for CA UE demodulation tests for CA with LAA SCell(s) with 2 DL CCs

| Tests | CA capability where <br> the tests apply | CA configuration from the <br> selected CA capbility <br> where the tests apply | CA Bandwidth <br> combination to be tested <br> in priority order |
| :---: | :---: | :---: | :---: |
| CA tests with 2CCs in <br> Clause 8.2.4.1.1, <br> 8.3.3.1.1 | Any one of the <br> supported CA <br> capabilities with largest <br> aggregated CA <br> bandwidth combination | Any one of the supported CA <br> with LAA SCell(s) <br> configurations with FDD <br> PCell with largest <br> aggregated CA bandwidth <br> combination | Largest aggregated CA <br> bandwidth combination |
| CA tests with 2CCs in <br> Clause 8.2.4.1.2, <br> 8.3.3.1.2 | Any one of the <br> supported CA <br> capabilities with largest <br> aggregated CA <br> bandwidth combination | Any one of the supported CA <br> with LAA SCell(s) <br> configurations with TDD <br> PCell with largest | Largest aggregated CA |
| bandwidth combination |  |  |  |

|  |  | aggregated CA bandwidth <br> combination |  |
| :--- | :--- | :---: | :--- |
| NOTE 1: | The applicability and test rules are specified in this table, unless otherwise stated. |  |  |
| NOTE 2: | Number of the supported bandwidth combinations to be tested from each selected CA configuration is |  |  |
| NOTE 3: | A single Uplink CC is configured for all tests. |  |  |

Table 8.1.2.3D-2: Applicability and test rules for CA UE demodulation tests for CA with LAA SCell(s) with 3 or more DL CCs

| Tests | CA capability where <br> the tests apply | CA configuration from the <br> selected CA capbility <br> where the tests apply | CA Bandwidth <br> combination to be tested <br> in priority order |
| :---: | :---: | :---: | :---: |
| CA tests with 2CCs in <br> Clause 8.2.4.1.1, <br> 8.3.3.1.1 | Any one of the <br> supported CA <br> capabilities with largest <br> aggregated CA <br> bandwidth combination | Any one of the supported CA <br> with LAA SCell(s) <br> configurations with FDD <br> PCell with largest <br> aggregated CA bandwidth <br> combination | Largest aggregated CA <br> bandwidth combination |

| bandwidth combination |  |  |  |
| NOTE 1: The applicability and test rules are specified in this table, unless otherwise stated. |  |  |  |
| NOTE 2: Number of the supported bandwidth combinations to be tested from each selected CA configuration is |  |  |  |
| 1. |  |  |  |
| NOTE 3: A single Uplink CC is configured for all tests. |  |  |  |

### 8.1.2.3E Applicability and test rules for SDR tests for $8 R x$ capable UEs

UE with support of $8 R x$ RF bands is required to fulfill the specified SDR tests for $8 R x$ test in section 8.7.17.
For single carrier or CA SDR tests, CA configuration, bandwidth combination and MIMO layer on each CC is determined by following procedure.

- Select the set(s) of \{CA configuration, bandwidth combination, MIMO layer\} among all the supported CA configurations that leads to the largest equivalent aggregated bandwidth which does not cause the transport block bits within a TTI to exceed the capability of the category of UE under test when the defined reference channel applies on each CC. The equivalent aggregated bandwidth is defined as

$$
B_{a g g}=\sum_{i=0}^{N-1} a\left(R_{i}\right) R_{i} B_{i}
$$

where $N$ is the number of CCs, $R_{i} \in\{2,4,8\}$ and $B_{i} \in\{5,10,15,20\}$ are MIMO layer and bandwidth of CC $i$, and $a\left(R_{i}\right)=1$ for $R_{i}=2,4$ and $a\left(R_{i}\right)=0.75$ for $R_{i}=8$

- The procedure applies also for single carrier using operating band instead of CA configuration, and bandwidth instead of bandwidth combination.

### 8.1.2.4 Test coverage for different number of component carriers

For FDD tests specified in 8.2.1.1.1, 8.2.1.3.1, 8.2.1.4.3, and 8.7.1, if corresponding CA tests are tested, the test coverage can be considered fulfilled without executing single carrier tests.

For TDD tests specified in 8.2.2.1.1, 8.2.2.3.1, 8.2.2.4.3, and 8.7.2, if corresponding CA tests are tested, the test coverage can be considered fulfilled without executing single carrier tests.

For TDD FDD tests specified in 8.2.3.1, 8.2.3.2, 8.2.3.3, 8.2.3.5, and 8.7.5, if corresponding TDD FDD CA tests are tested, the test coverage can be considered fulfilled without executing both FDD and TDD single carrier tests.

For FDD CA tests specified in 8.2.1.1.1, 8.2.1.4.3, 8.7.1, 8.13.1.1.1 and 8.13.1.2.1, among all supported CA capabilities, if corresponding CA tests with the largest number of CCs supported by the UE are tested, the test coverage can be considered fulfilled without executing the CA tests with less than the largest number of CCs supported by the UE.

For FDD CA tests specified in 8.2.1.3.1, for each supported CA capability, if corresponding CA tests with the largest number of CCs supported by the UE are tested, the test coverage can be considered fulfilled without executing the CA tests with less than the largest number of CCs supported by the UE.

For TDD CA tests specified in 8.2.2.1.1, 8.2.2.4.3, 8.7.2, 8.13.2.1.1 and 8.13.2.2.1, among all supported CA capabilities, if corresponding CA tests with the largest number of CCs supported by the UE are tested, the test coverage can be considered fulfilled without executing the CA tests with less than the largest number of CCs supported by the UE.

For TDD CA tests specified in 8.2.2.3.1, for each supported CA capability, if corresponding CA tests with the largest number of CCs supported by the UE are tested, the test coverage can be considered fulfilled without executing the CA tests with less than the largest number of CCs supported by the UE.

For TDD FDD CA tests specified in 8.2.3.1, 8.2.3.3, 8.7.5, 8.13.3.1 and 8.13.3.2, among all supported CA capabilities, if corresponding CA tests with the largest number of CCs supported by the UE are tested, the test coverage can be considered fulfilled without executing the TDD FDD CA tests with less than the largest number of CCs supported by the UE.

For TDD FDD CA tests specified in 8.2.3.2 and 8.2.3.5, for each supported CA capability, if corresponding CA tests with the largest number of CCs supported by the UE are tested, the test coverage can be considered fulfilled without executing the TDD FDD CA tests with less than the largest number of CCs supported by the UE.

For FDD CA power imbalance tests specified in 8.2.1.7.1, if they are are tested with FDD intra-band contiguous CA configurations with 2 DL CCs, the test coverage can be considered fulfilled with FDD intra-band contiguous CA configurations with 3 or more DL CCs supported by the UE.

For TDD CA power imbalance tests specified in 8.2.2.7.1, if they are are tested with TDD intra-band contiguous CA configurations with 2 DL CCs, the test coverage can be considered fulfilled with TDD intra-band contiguous CA configurations with 3 or more DL CCs supported by the UE.

For FDD DC tests specified in 8.2.1.4.3A, 8.7.6 and 8.13.1.1.2, among all supported DC capabilities, if corresponding DC tests with the largest number of CCs supported by the UE are tested, the test coverage can be considered fulfilled without executing the DC tests with less than the largest number of CCs supported by the UE.

For TDD DC tests specified in 8.2.2.4.3A, 8.7.7 and 8.13.2.1.2, among all supported DC capabilities, if corresponding DC tests with the largest number of CCs supported by the UE are tested, the test coverage can be considered fulfilled without executing the DC tests with less than the largest number of CCs supported by the UE.

For TDD FDD DC tests specified in 8.2.3.4, 8.7.8 and 8.13.3.5, among all supported DC capabilities, if corresponding DC tests with the largest number of CCs supported by the UE are tested, the test coverage can be considered fulfilled without executing the DC tests with less than the largest number of CCs supported by the UE.

For LAA SCell(s) with FDD PCell tests specified in 8.2.4.1.1 and 8.3.3.1.1, for each supported CA capability, if corresponding CA with LAA SCell(s) tests with the largest number of CCs supported by the UE are tested, the test coverage can be considered fulfilled without executing the CA with LAA SCell(s) tests with less than the largest number of CCs supported by the UE.

For LAA SCell(s) with TDD PCell tests specified in 8.2.4.1.2 and 8.3.3.1.2, for each supported CA capability, if corresponding CA with LAA SCell(s) tests with the largest number of CCs supported by the UE are tested, the test coverage can be considered fulfilled without executing the CA with LAA SCell(s) tests with less than the largest number of CCs supported by the UE.

### 8.1.2.5 Applicability of performance requirements for Type B receiver

For TM10 capable UE, if corresponding tests specified in 8.3.1.1F, 8.3.2.1G, 9.3.8.3 are tested, the test coverage can be considered fulfilled without executing the tests specified in 8.3.1.1C, 8.3.2.1D, 9.3.8.2. For a UE which does not have TM10 capability, the tests specified in sections 8.3.1.1C, 8.3.2.1D, 9.3.8.2 should be used.

### 8.1.2.6 Applicability of performance requirements for 4Rx capable UEs

For 4Rx capable UEs, the 2Rx supported RF bands and 4Rx supported RF bands are up to UE's declaration.

### 8.1.2.6.1 Applicability rule and antenna connection for single carrier tests with $2 R x$

For 4Rx capable UEs all single carrier tests specified in 8.2 to 8.8 with 2 Rx are tested on any of the 2 Rx supported RF bands by connecting 2 out of the 4 Rx with data source from system simulator, and the other 2 Rx are connected with zero input, depending on UE's declaration and AP configuration. Same requirements specified with $2 R x$ should be applied.

For 4Rx capable UEs without any 2Rx RF bands, all single carrier tests specified in 8.2 to 8.8 with 2 Rx are tested on any of the $4 R x$ supported RF bands by duplicating the fading channel from each Tx antenna and add independent noise for each Rx antenna. Figure 8.1.2.6.1-1 shows an example of antenna connection for 4Rx UE in any one 4Rx supported RF band to perform a 2 Rx performance test with antenna configuration as $2 \times 2$ without interference for information. The SNR requirements should be applied with 1.5 dB less than the number specified with 2 Rx for test configuration with CRS-based TM and with 1.5 dB less than the number specified with 2 Rx for test configuration with DMRS-based TM.

Figure 8.1.2.6.1-1 Antenna connection example for $2 R x$ tests with antenna configuration as $2 \times 2$ without interference (informative)

For 4Rx capable UEs without any 2Rx supported RF bands, for all single carrier tests listed in Table 8.1.2.6.1-0 specified from 8.2 to 8.8 with 2 Rx can be skipped.

Table 8.1.2.6.1-0: Requirement lists for 4Rx capable UEs

| Requirement lists |
| ---: |
| Enhanced downlink control channel performance requirements type A |
| Enhanced downlink control channel performance requirements type B |
| Enhanced performance requirements type B |
| Enhanced performance requirements type C |
| Requirements with demodulation subframe overlaps with aggressor cell ABS |
| Requirements with demodulation subframe overlaps with aggressor cell ABS and CRS assistance information are |
| configured |
| Requirements with CRS assistance information configured |

For 4Rx capable UEs, if corresponding tests listed from the 4Rx test lists from Table 8.1.2.6.1-1 are tested, the test coverage can be considered fulfilled without executing the corresponding tests listed from the 2Rx test lists from Table 8.1.2.6.1-1.

Table 8.1.2.6.1-1: Applicability rules for single carrier tests with $2 R x$

| 8.10.4.2.2 Test 2 | 8.8.2.2 Test 2 |

### 8.1.2.6.2 Applicability rule and antenna connection for CA and DC tests with 2Rx

All tests specified in 8.2 to 8.8 with 2 Rx with CA, TDD-FDD CA and DC are tested with 4 Rx capable UEs.
Within the CA/DC configuration if any of the PCell and/or the SCells and/or PSCells is a 2Rx supported RF band, the antenna connection should follow the same method as defined in 8.1.2.6.1 for single carrier tests on any of the 2 Rx supported RF bands, with same requirements specified with 2Rx applied. Within the CA configuration if any of the PCell and/or the SCells and/or PSCells is a 4Rx supported RF band, the antenna connection should follow the same as defined in 8.1.2.6.1 for single carrier tests on any of the 4 Rx supported RF bands, with the SNR requirements applied with 1.5 dB less than the number specified with 2 Rx .

Same applicability rules defined in 8.1.2.3, 8.1.2.3A, and 8.1.2.3B for CA, TDD-FDD CA and DC applied for different CA and DC configurations and bandwidth combination sets should be applied for 4 Rx capable UEs.

### 8.1.2.6.3 Applicability rule and antenna connection for single carrier tests with $4 R x$

For 4Rx capable UEs all single carrier tests specified in 8.10 with $4 R x$ are tested on any of the $4 R x$ supported $R F$ bands by connecting all 4Rx with data source from system simulator.

### 8.1.2.6.4 Applicability rule for 256QAM tests

For 256QAM capable UE, if corresponding tests specified in 8.10.1.1.4 Test 2 and 8.10.1.2.4 Test 2 are tested, the test coverage can be considered fulfilled without executing the tests specified in 8.10.1.1.4 Test 1 and 8.10.1.2.4 Test 1. For a UE which does not have 256QAM capability, the test specified in 8.10.1.1.4 Test 1 and 8.10.1.2.4 Test 1 should be used.

### 8.1.2.6.5 Applicability rule and antenna connection for CA and DC tests with $4 R x$

All tests specified in 8.13 with FDD CA/DC, TDD CA/DC and TDD-FDD CA/DC are tested with 4 Rx capable UEs.
Within the CA/DC configuration if any of the PCell and/or the SCells/PSCell is a 2 Rx supported RF band, 2 out of the 4 Rx should be connected with data source from system simulator, and the other 2 Rx are connected with zero input, depending on UE's declaration and AP configuration. Within the CA/DC configuration if any of the PCell and/or the SCells is a 4Rx supported RF band, all 4Rx should be connected with data source from system simulator.

For 4Rx capable UEs supporting different CA/DC configurations and bandwidth combination sets, the applicability and test rules are defined in Table 8.1.2.6.5-1 for FDD CA/DC, TDD CA/DC and TDD-FDD CA/DC. For simplicity, $\mathrm{CA} / \mathrm{DC}$ configuration below refers to combination of $\mathrm{CA} / \mathrm{DC}$ configuration and bandwidth combination set.

Table 8.1.2.6.5-1: Applicability and test rules for CA/DC/TDD-FDD CA UE demodulation tests

| Tests | Step 1 | Step 2 | Step 3 | Step 4 |
| :---: | :---: | :---: | :---: | :---: |
| CA tests in |  |  |  |  |
| Clause |  |  |  |  |
| 8.13.1.1.1, <br> $8.13 .1 .2 .1 ~$ | Select FDD CA <br> configurations with <br> the maximum number <br> of CCs excluding the <br> 2Rx only CA <br> configuration among <br> all supported FDD CA <br> configurations with <br> any CA capability | Select FDD CA <br> configurations with maximum <br> number of 4Rx CCs among <br> all the selected FDD CA <br> configurations from Step 1 | Select any one of the FDD <br> CA configuration with the <br> largest aggregated CA <br> bandwidth combination <br> among all the selected <br> FDD CA configurations <br> from Step 2 |  |

|  | Select TDD DC <br> configurations with <br> the maximum number <br> of CCs excluding the <br> 2Rx only DC | Select TDD DC <br> Clause | Sonfigurations with maximum <br> number of 4Rx CCs among <br> all the selected TDD DC | Select any one of the TDD <br> DC configuration with the <br> largest aggregated DC <br> bandwidth combination <br> among all the selected |
| :---: | :---: | :---: | :---: | :---: |

| CA tests in Clause 8.13.1.1.4 | Select FDD CA configurations with the maximum number of CCs supporting 4 layers MIMO among all supported FDD CA configurations with any CA capability | Select any one of the FDD <br> CA configuration with the largest aggregated CA <br> bandwidth combinations on any 2CCs among all the CCs among all the slected FDD CA configuration from Step 1 | NA | NA |
| :---: | :---: | :---: | :---: | :---: |
| CA tests in Clause 8.13.2.1.4 | Select TDD CA configurations with the maximum number of CCs supporting 4 layers MIMO among all supported TDD CA configurations with any CA capability | Select any one of the TDD CA configuration with the largest aggregated CA bandwidth combinations on any 2CCs among all the CCs among all the slected TDD CA configuration from Step 1 | NA | NA |
| $\begin{aligned} & \text { CA tests in } \\ & \text { Clause } \\ & \text { 8.13.3.7.1, } \\ & \text { 8.13.3.7.2 } \end{aligned}$ | Select TDD-FDD CA configurations with the maximum number of CCs supporting 4 layers MIMO among all supported TDDFDD CA configurations with any CA capability | Select any one of the TDDFDD CA configuration with the largest aggregated CA bandwidth combinations on any 2CCs among all the CCs among all the slected TDDFDD CA configuration from Step 1 | NA | NA |
| NOTE 1: The applicability and test rules are specified in this table, unless otherwise stated. <br> NOTE 2: Number of the supported bandwidth combinations to be tested from each selected CA configuration is 1. <br> NOTE 3: A single Uplink CC is configured for all CA tests and 2 Uplink CCs are configured for all DC tests. |  |  |  |  |

For 4Rx capable UEs, if corresponding tests listed from the 4 Rx CA/DC test lists from Table 8.1.2.6.5-2 are tested, the test coverage can be considered fulfilled without executing the corresponding tests listed from the 2Rx CA/DC test lists from Table 8.1.2.6.5-2.

Table 8.1.2.6.5-2: Test lists for applicability rules for CA/DC/TDD-FDD CA tests with 4Rx

| 4Rx test lists | 2Rx test lists |
| :---: | :---: |

### 8.1.2.6.6 Applicability rule for Type $C$ with 4Rx

For Type $C$ with 4Rx capable UEs, if the tests from the 4Rx test lists are tested from Table 8.1.2.6.6-1, the test coverage can be considered fulfilled without executing the corresponding test from 2Rx test lists from Table 8.1.2.6.6-1.

Table 8.1.2.6.6-1: Applicability rules for Type C with 4Rx

| Test category | Type C with 2Rx test lists | Type C with 4Rx test lists |
| :---: | :---: | :---: |
| FDD Tests | 8.2 .1 .3 .1 B | 8.2 .1 .3 .1 B |
|  | 8.2 .1 .3 .1 C | 8.2 .1 .3 .1 C |
|  | 8.2 .1 .4 .2 A | 8.10 .1 .1 .4 A |
|  | 8.3 .1 .2 A | 8.10 .1 .1 .6 A |
| TDD Tests | 8.2 .2 .3 .1 B | 8.2 .2 .3 .1 B |
|  | 8.2 .2 .3 .1 C | 8.2 .2 .3 .1 C |
|  | 8.2 .2 .4 .2 A | 8.10 .1 .2 .4 A |
|  | 8.3 .2 .2 A | 8.10 .1 .2 .6 A |

### 8.1.2.6.7 Applicability rule for 1024QAM tests

For 1024QAM capable UE, if corresponding tests specified in 8.10.1.1.4 Test 3, 8.10.1.2.4 Test 3, 8.10.1.1.6B Test 1, and 8.10 .1 .2 .6 B Test 1 are tested, the test coverage can be considered fulfilled without executing the tests specified in 8.10.1.1.4 Test 1-2, 8.10.1.2.4 Test 1-2, 8.2.1.4.1A Test2, 8.2.2.4.1A Test 2, 8.3.1.1 Test 5, and 8.3.2.1A Test 5.

### 8.1.2.7 Applicability of Enhanced Downlink Control Channel Performance Requirements

For UE which supports downlink control channel Type A or Type B interference mitigation capabilities the tests from Table 8.1.2.7-1 rows corresponding should be applied in accordance to the supported UE-EUTRA-Capability [7].

Table 8.1.2.7-1: Applicability rules for enhanced downlink control channel performance requirements

| Test | UE-EUTRA-Capability [7] | Test category |  | Test list | Applicability notes |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | cch-InterfMitigation-RefRecTypeA-r13 (Enhanced downlink control channel interference mitigation Type A receiver for 2 CRS antenna ports for UEs with 2 receiver antenna ports) | FDD | PDCCH/PCFICH | 8.4.1.2.5 Test 1 8.4.1.2.6 Test 1 |  |

### 8.1.2.8 Applicability of performance requirements for CDM-multiplexed DM RS with interfering simultaneous transmission (FRC) with multiple CSI-RS configurations

For a UE which supports DMRS enhancement (dmrs-Enhancements-r13 UE-EUTRA-Capability [7]), if corresponding tests specified in 8.3.1.1H Test 1 and 8.3.2.1I Test 1 are tested, the test coverage can be considered fulfilled without executing the tests specified in 8.3.1.1 Test 2 and 8.3.2.1A Test 2. For a UE which does not have DMRS enhancement capability, the test specified in in 8.3.1.1 Test 2 and 8.3.2.1A Test 2 should be used.

### 8.1.2.8A Applicability of performance requirements for UE supporting coverage enhancement

The applicability and test rules are defined for the tests for UE supporting coverage enhancement with narrowband transmission in Table 8.1.2.8A-1 and 8.1.2.8A-2.

Table 8.1.2.8A-1: Applicability rules for PDSCH requirements (FDD)

|  | ue-Category or UE-CategoryDL |  |
| :---: | :---: | :---: |
| UE-EUTRA-Capability | M1, Cat-0, 1bis | $>=1$ (Note 1) |

### 8.1.2.9 Applicability of SDR requirements for CA and LAA

For UE supporting both CA and LAA, UE selects the corresponding SDR tests between CA and LAA as per the following applicab1ility rules:

- Select one CA bandwidth combination among all supported CA configurations with bandwidth combination and MIMO layer on each CC following the equation that leads to largest equivalent aggregated bandwidth among all CA bandwidth combinations supported by UE. Equivalent aggregated bandwidth is defined as

$$
B_{a g g}=\sum_{i=0}^{N-1} R_{i} B_{i}
$$

where $N$ is number of CCs, $R_{i} \in\{2,4\}$ and $B_{i} \in\{5,10,15,20\}$ is MIMO layer and bandwidth of CC $i$.

- When there are LAA and non-LAA CA configurations with the same largest aggregated bandwidth, select nonLAA CA configuration.

### 8.1.2.10 Applicability of performance requirements for Multi-user Superposed Transmission

For a UE which does not supports DMRS enhancement table (dmrs-Enhancements-r13 UE-EUTRA-Capability [7]), if corresponding tests specified in 8.3.1.1I Test 1, 8.3.2.1J Test 1 are tested, the test coverage can be considered fulfilled without executing other tests specified in 8.3.1.1I and 8.3.2.1J.

For a UE which supports DMRS enhancement table (dmrs-Enhancements-r13 UE-EUTRA-Capability [7]) and enahcned performance Type D in TM8/9 or TM10 with assistance information for up to 1 interfering layer, if corresponding tests specified in 8.3.1.1I Test 2,8.3.2.1J Test 2 are tested, the test coverage can be considered fulfilled without executing other tests specified in 8.3.1.1I and 8.3.2.1J.

For a UE which supports DMRS enhancement table (dmrs-Enhancements-r13 UE-EUTRA-Capability [7]) and enahcned performance Type D in TM8/9 or TM10 with assistance information for up to 3 interfering layer, if corresponding tests specified in 8.3.1.1I Test 3, 8.3.2.1J Test 3 are tested, the test coverage can be considered fulfilled without executing other tests specified in 8.3.1.1I and 8.3.2.1J.

### 8.1.2.11 Applicability CRS interference mitigation receivers performance requirements

For UE which supports CRS interference mitigation capabilities the tests from Table 8.1.2.11-1 should be applied in accordance to the support UE capabilities (UE-EUTRA-Capability [7]).

Table 8.1.2.11-1: Applicability rules for CRS interference mitigation performance requirements

| Testset | UE-EUTRA-Capability [7] | Test list |  | Notes |
| :---: | :---: | :---: | :---: | :---: |

### 8.1.2.12 Applicability of performance requirements for 8Rx capable UEs

For 8 Rx capable UEs, the 2 Rx supported RF bands, 4 Rx supported RF bands and 8 Rx supported RF bands are up to UE's declaration.

For any demodulation tests and CSI tests conducted in the 8 Rx supported RF band, four receive antenna ports that UE may use for control channel demodulation are clarified via UE declaration. When testing an $\mathrm{N}-\mathrm{Rx}(\mathrm{N}=2,4)$ demodulation or CSI test on the 8 Rx supported band, the fading duplication and antenna mapping should guarantee that the four receive antennas UE declares for the control channel demodulation collectively receives at least $4 / \mathrm{N}$ duplicated version of the fading channel seen at each receive antenna of the N -Rx test, i.e., the connection diagrams in Figure 8.1.2.12.1-1 to Figure 8.1.2.12.1-4 are valid under the condition that $\mathrm{Rx} 1, \mathrm{Rx} 3, \mathrm{Rx} 5$ and Rx 7 are the four receive antennas declared by UE for the control channel demodulation.

### 8.1.2.12.1 Applicability rule and antenna connection for single carrier PDSCH tests

8.1.2.12.1.1 Applicability rule and antenna connection for single carrier PDSCH tests with 2Rx and 4Rx

For 8 Rx capable UEs, all single carrier tests specified in 8.2 to 8.8 with 2 Rx are tested on any of the 2 Rx supported RF bands by connecting 2 out of the 8 Rx with data source from system simulator, and the other 6 Rx are connected with zero input, depending on UE's declaration and AP configuration. Same requirements specified with $2 R x$ should be applied.

For 8 Rx capable UEs, all single carrier test cases specified in 8.10 with $4 R x$ are tested on any of the $4 R x$ supported RF bands by connecting 4 out of 8 Rx with data source from system simulator, and the other 4 Rx are connected with zero input, depending on UE's declaration and AP configuration. Same requirements specified with 4Rx should be applied.

For 8Rx capable UEs without support of any 4Rx RF bands, all single carrier tests specified in 8.10 with 4Rx are tested on any of the $8 R x$ supported RF bands by duplicating the fading channel from each Tx antenna and add independent noise for each Rx antenna. The SNR requirements should be applied with 1.5 dB less than the number specified for 4 Rx tests.

For 8 Rx capable UEs without support of any $2 R x$ and $4 R x$ RF bands, all single carrier tests specified in 8.2 to 8.8 with $2 R x$ are tested on any of the $8 R x$ supported RF bands by duplicating the fading channel from each $T x$ antenna and add independent noise for each Rx antenna. The SNR requirements should be applied with 3 dB less than the number specified for 2 Rx tests.

For 8Rx capable UEs without support of any 2Rx RF bands but with support of 4Rx RF bands, all single carrier tests specified in 8.2 to 8.8 with 2 Rx are tested on any of the 4 Rx supported RF bands by duplicating the fading channel from each Tx antenna and add independent noise for each Rx antenna. 4 out of 8 Rx are connected with data source from system simulator, and the other 4 Rx are connected with zero input, depending on UE's declaration and AP configuration. SNR requirements should be applied with 1.5 dB less than the number specified for 2 Rx tests.

Figure 8.1.2.12.1-1 ~ Figure 8.1.2.12.1-4 show examples of antenna connection for 8Rx capable UE in any one 8Rx supported RF band to perform a 2 Rx or 4 Rx performance test with antenna configuration as 2 x 2 or 4 x 2 for 2 Rx tests and 2 x 4 or 4 x 4 for 4 Rx tests without interference for information.

Figure 8.1.2.12.1-1: Antenna connection example for $2 R x$ tests with antenna configuration as $\mathbf{2 x} \mathbf{2}$ without interference (informative)

Figure 8.1.2.12.1-2: Antenna connection example for $2 R x$ tests with antenna configuration as $4 \times 2$ without interference (informative)

Figure 8.1.2.12.1-3: Antenna connection example for $4 R x$ tests with antenna configuration as $2 \times 4$ without interference (informative)

Figure 8.1.2.12.1-4: Antenna connection example for $4 R x$ tests with antenna configuration as $4 \times 4$ without interference (informative)

For 8Rx capable UEs without any 2 Rx supported RF bands, for all single carrier tests listed in Table 8.1.2.12.1-1 specified from 8.2 to 8.8 with 2 Rx can be skipped.

Table 8.1.2.12.1-1: Requirement lists with 2Rx not applicable to $8 R x$ capable UEs

| Requirement lists |
| ---: |
| Enhanced downlink control channel performance requirements type A |
| Enhanced downlink control channel performance requirements type B |
| Enhanced performance requirements type A |
| Enhanced performance requirements type B |
| Enhanced performance requirements type C |
| Requirements with demodulation subframe overlaps with aggressor cell ABS and CRS assistance information are |
| configured |
| Requirements with CRS assistance information configured |
| Rement |

For 8Rx capable UEs without any 4Rx supported RF bands, for all single carrier tests listed in Table 8.1.2.12.1-2 specified in 8.10 with 4Rx can be skipped.

Table 8.1.2.12.1-2: Requirement lists with 4Rx not applicable to 8Rx capable UEs

| Requirement lists |
| :---: |
| Enhanced downlink control channel performance requirements type A |
| Enhanced performance requirements type A |
| Enhanced performance requirements type C |
| Requirements with CRS assistance information configured |

For $8 R x$ capable UEs, if corresponding tests listed from the $8 R x$ test lists from Table 8.1.2.12.1-3 are tested, the test coverage can be considered fulfilled without executing the corresponding tests listed from botht the 4 Rx test lists and the 2 Rx test lists from Table 8.1.2.12.1-3.

For 8 Rx capable UEs, if corresponding tests listed from the 4 Rx test lists from Table 8.1.2.12.1-3 are tested, the test coverage can be considered fulfilled without executing the corresponding tests listed from the 2Rx test lists from Table 8.1.2.12.1-3.

8.1.2.12.1.2 Applicability rule and antenna connection for single carrier PDSCH tests with 8Rx

For 8 Rx capable UEs all single carrier tests specified in 8.14 with 8 Rx are tested on any of the 8 Rx supported RF bands by connecting all $8 R x$ with data source from system simulator.

### 8.1.2.12.2 Applicability rule and antenna connection for control channel tests

### 8.1.2.12.2.1 Applicability rule and antenna connection for control channel tests with $2 R x$

For 8 Rx capable UEs, all single carrier tests specified in 8.2 to 8.8 for control channel with 2 Rx are tested on any of the $2 R x$ supported RF bands by connecting 2 out of the $8 R x$ with data source from system simulator, and the other 6 Rx are connected with zero input, depending on UE's declaration and AP configuration. Same requirements specified with 2Rx should be applied.

For $8 R x$ capable UEs without any $2 R x$ supported $R F$ bands and with $4 R x$ supported $R F$ bands, all single carrier tests specified in 8.2 to 8.8 for control channel with $2 R x$ are tested on any of the 4Rx supported RF bands by duplicating the fading channel from each $T x$ antenna and add independent noise for each $R x$ antenna. The SNR requirements should be applied with 1.5 dB less than the number specified for 2 Rx tests.

For 8Rx capable UEs without any 2 Rx and without 4 Rx supported RF bands, all single carrier tests specified in 8.2 to 8.8 for control channel with 2 Rx are tested on any of the 8 Rx supported RF bands by duplicating the fading channel from each Tx antenna and add independent noise for each Rx antenna, as illustrated in Figure 8.1.2.12.1-1 and Figure 8.1.2.12.1-2. The SNR requirements should be applied with 1.5 dB less than the number specified for 2 Rx tests.

### 8.1.2.12.2.2 Applicability rule and antenna connection for control channel tests with 4Rx

For 8 Rx capable UEs, all single carrier tests specified in 8.10 for control channel with 4 Rx are tested on any of the 4 Rx supported RF bands by connecting 4 out of the $8 R x$ with data source from system simulator, and the other 4 Rx are connected with zero input, depending on UE's declaration and AP configuration. Same requirements specified with 4Rx should be applied.

For 8 Rx capable UEs without any 4Rx supported RF bands, all single carrier tests specified in 8.10 for control channel with $4 R x$ are tested on any of the $8 R x$ supported RF bands by duplicating the fading channel from each Tx antenna and add independent noise for each Rx antenna, as illustrated in Figure 8.1.2.12.1-3 and Figure 8.1.2.12.1-4. Same requirements specified with 4Rx should be applied.

### 8.1.2.12.3 Applicability rule and antenna connection for CA and DC tests

### 8.1.2.12.3.1 Applicability rule and antenna connection for CA and DC tests with $2 R x$

All tests specified in 8.2 to 8.8 with 2 Rx with CA, TDD-FDD CA and DC are tested with 8 Rx capable UEs.
Within the CA/DC configuration if any of the PCell and/or the SCells and/or PSCells is a 2 Rx supported RF band, the antenna connection should follow the same method as defined in 8.1.2.12.1 and 8.1.2.12.2 for single carrier tests on any of the 2 Rx supported RF bands, with the same requirements specified with 2 Rx applied.

Within the CA configuration if any of the PCell and/or the SCells and/or PSCells is a 4Rx supported RF band, the antenna connection should follow the same as illustrated in Figure 8.1.2.12.1-1 and Figure 8.1.2.12.1-2 for single carrier tests on any of the 4 Rx supported RF bands, with the SNR requirements applied with 1.5 dB less than the number specified with $2 R x$.

Within the CA configuration if any of the PCell and/or the SCells and/or PSCells is an 8Rx supported RF band, the antenna connection should follow the same as illustrated in Figure 8.1.2.12.1-1 and Figure 8.1.2.12.1-2 for single carrier tests on any of the 8 Rx supported RF bands, with the SNR requirements applied with 3.0 dB less than the number specified with 2 Rx for PDSCH tests and 1.5 dB less than the number specified with 2 Rx for control channel tests.

Same applicability rules defined in 8.1.2.3, 8.1.2.3A, and 8.1.2.3B for CA, TDD-FDD CA and DC applied for different CA and DC configurations and bandwidth combination sets should be applied for 8 Rx capable UEs.

### 8.1.2.12.3.2 Applicability rule and antenna connection for CA tests with 4Rx

All tests specified in 8.13 with 4Rx with FDD CA/DC, TDD CA/DC and TDD-FDD CA/DC are tested with 8 Rx capable UEs.

Within the CA/DC configuration if any of the PCell and/or the SCells and/or PSCells is a 4Rx supported RF band, the antenna connection should follow the same method as defined in 8.1.2.12.1 and 8.1.2.12.2 for single carrier tests on any of the $4 R x$ supported RF bands, with the same requirements specified with $4 R x$ applied.

Within the CA configuration if any of the PCell and/or the SCells and/or PSCells is an 8Rx supported RF band, the antenna connection should follow the same as illustrated in Figure 8.1.2.12.1-3 and Figure 8.1.2.12.1-4 for single carrier PDSCH tests on any of the 8 Rx supported RF bands, with the SNR requirements applied with 1.5 dB less than the number specified with 4Rx for PDSCH tests, and with the same SNR requirements as specified with 4Rx applied for control channel test.

Same applicability rules defined in 8.1.2.6.5 for CA, TDD-FDD CA and DC applied for different CA and DC configurations and bandwidth combination sets should be applied for 8 Rx capable UEs.

### 8.1.2.12.3.3 Applicability rule and antenna connection for CA tests with 8 Rx

All tests specified in 8.14 .2 with 8 Rx with TDD CA are tested with 8 Rx capable UEs.
Within the CA configuration if any of the PCell and/or the SCells and/or PSCells is an 8Rx supported RF band, the antenna connection should follow the same method as defined in 8.1.2.12.1 for single carrier PDSCH tests on any of the 8 Rx supported RF bands, with the same requirements specified with 8 Rx applied.

For 8Rx capable UEs supporting different CA configurations and bandwidth combination sets, the applicability and test rules are defined in Table 8.1.2.12.3-1 for TDD CA. For simplicity, CA configuration below refers to combination of CA configuration and bandwidth combination set.

Table 8.1.2.12.3-1: Applicability and test rules for CA UE demodulation tests

| Tests | Step 1 | Step 2 | Step <br> $\mathbf{3}$ | Step <br> $\mathbf{4}$ |
| :---: | :---: | :---: | :---: | :---: |
|  | Select TDD CA configurations with the |  |  |  | | Select any one of the TDD CA configuration |
| :---: |
| CA tests in |
| Clause |
| 8.14.2.2.1 | | maximum number of CCs supporting 8 <br> layers MIMO among all supported TDD <br> CA configurations with any CA <br> capability |
| :---: | | combinations on any 2CCs among all the <br> CCs among all the slected TDD CA <br> configuration from Step 1 |
| :---: |

NOTE 1: The applicability and test rules are specified in this table, unless otherwise stated.
NOTE 2: Number of the supported bandwidth combinations to be tested from each selected CA configuration is 1 .
NOTE 3: A single Uplink CC is configured for all CA tests.

### 8.1.3 UE category and UE DL category

UE category and UE DL category refer to ue-Category and ue-CategoryDL define in 4.1 and 4.1A from [12]. A UE that belongs to either a UE category or a UE DL category indicated in UE performance requirements in subclause 8,9 , 10 shall fulfil the corresponding requirements.

A UE indicating DL category 13 may indicate category 9 or 10 and shall thereby fulfil all requirements in subclause 8 , 9,10 that are indicated for either cat 9 or DL Cat 13 UEs. For SDR tests in section 8.7 both cat 9 and cat 13 test shall be used for this UE while for the other test only Cat 13 tests needs to be done.

### 8.2 Demodulation of PDSCH (Cell-Specific Reference Symbols)

### 8.2.1 FDD (Fixed Reference Channel)

The parameters specified in Table 8.2.1-1 are valid for all FDD tests unless otherwise stated.
Table 8.2.1-1: Common Test Parameters (FDD)

| Parameter | Unit | Value |
| :---: | :---: | :---: |
| Inter-TTI Distance |  | 1 |

| Number of HARQ <br> processes per <br> component carrier | Processes | 8 |
| :---: | :---: | :---: |
| Maximum number of <br> HARQ transmission |  | 4 |
| Redundancy version <br> coding sequence |  | $\{0,1,2,3\}$ for QPSK and 16QAM <br> $\{0,0,1,2\}$ for 64QAM, 256QAM and <br> 1024 QAM |
| Number of OFDM <br> symbols for PDCCH per <br> component carrier | OFDM symbols | 4 for 1.4 MHz bandwidth, 3 for 3 MHz and <br> 5 MHz bandwidths, <br> 2 for $10 \mathrm{MHz}, 15 \mathrm{MHz}$ and 20 MHz <br> bandwidths unless otherwise stated |
| Cyclic Prefix | Normal |  |
| Cell_ID | 0 |  |
| Cross carrier scheduling |  | Not configured |

### 8.2.1.1 Single-antenna port performance

The single-antenna performance in a given multi-path fading environments is determined by the SNR for which a certain relative information bit throughput of the reference measurement channels in Annex A.3.3 is achieved. The purpose of these tests is to verify the single-antenna performance with different channel models and MCS. The QPSK and 64QAM cases are also used to verify the performance for all bandwidths specified in Table 5.6.1-1.

### 8.2.1.1.1 Minimum Requirement

For single carrier, the requirements are specified in Table 8.2.1.1.1-2, with the addition of the parameters in Table 8.2.1.1.1-1 and the downlink physical channel setup according to Annex C.3.2.

For CA with 2 DL CCs, the requirements are specified in Table 8.2.1.1.1-4, with the addition of the parameters in Table 8.2.1.1.1-3 and the downlink physical channel setup according to Annex C.3.2.

For CA with 3 DL CCs, the requirements are speicifed in Table 8.2.1.1.1-6, based on single carrier requirement speicified in Table 8.2.1.1.1-5, with the addition of the parameters in Table 8.2.1.1.1-3 and the downlink physical channel setup according to Annex C.3.2.

For CA with 4 DL CCs, the requirements are speicifed in Table 8.2.1.1.1-7, based on single carrier requirement speicified in Table 8.2.1.1.1-5, with the addition of the parameters in Table 8.2.1.1.1-3 and the downlink physical channel setup according to Annex C.3.2.

For CA with 5 DL CCs, the requirements are speicifed in Table 8.2.1.1.1-8, based on single carrier requirement speicified in Table 8.2.1.1.1-5, with the addition of the parameters in Table 8.2.1.1.1-3 and the downlink physical channel setup according to Annex C.3.2.

For CA with 6 DL CCs, the requirements are speicifed in Table 8.2.1.1.1-9, based on single carrier requirement speicified in Table 8.2.1.1.1-5, with the addition of the parameters in Table 8.2.1.1.1-3 and the downlink physical channel setup according to Annex C.3.2.

For CA with 7 DL CCs, the requirements are speicifed in Table 8.2.1.1.1-10, based on single carrier requirement speicified in Table 8.2.1.1.1-5, with the addition of the parameters in Table 8.2.1.1.1-3 and the downlink physical channel setup according to Annex C.3.2.

The test coverage for different number of component carriers is defined in 8.1.2.4.
Table 8.2.1.1.1-1: Test Parameters

| Parameter |  | Unit | Test 1-5 | Test 6-8 | Test 9-15 | Test 16-18 | Test 19 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Downlink power <br> allocation | $\rho_{A}$ | dB | 0 | 0 | 0 | 0 | 0 |
|  | $\rho_{B}$ | dB | 0 (NOTE 1) | $0($ NOTE 1) | 0 (NOTE 1) | 0 (NOTE 1) | 0 (NOTE 1) |
|  | $\sigma$ | dB | 0 | 0 | 0 | 0 | 0 |
| $N_{o c \mid}$ at antenna port |  | $\mathrm{dBm} / 15 \mathrm{kHz}$ | -98 | -98 | -98 | -98 | -98 |
| Symbols for unused PRBs |  |  | OCNG <br> (NOTE 2) | OCNG <br> (NOTE 2) | OCNG <br> (NOTE 2) | OCNG <br> (NOTE 2) | OCNG <br> (NOTE 2) |

| Modulation |  | QPSK | 16QAM | 64QAM | 16QAM | QPSK |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| PDSCH transmission mode | 1 | 1 | 1 | 1 | 1 |  |
| NOTE 1 $\quad P=0$ |  |  |  |  |  |  |

NOTE 1: $\quad P_{B}=0$.
NOTE 2: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated.
NOTE 3: Void.
NOTE 4: Void.

Table 8.2.1.1.1-2: Minimum performance (FRC)

| Test num. | Bandwidth | Reference channel | OCNG pattern | Propagation condition | Correlation matrix and antenna config. | Reference value |  | UE cate gor y |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

8.2.1.1.2 Void

### 8.2.1.1.3 Void

### 8.2.1.1.4 Minimum Requirement 1 PRB allocation in presence of MBSFN

The requirements are specified in Table 8.2.1.1.4-2, with the addition of the parameters in Table 8.2.1.1.4-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the single-antenna performance with a single PRB allocated at the lower band edge in presence of MBSFN.

Table 8.2.1.1.4-1: Test Parameters for Testing 1 PRB allocation

| Parameter |  | Unit | Test 1 |
| :---: | :---: | :---: | :---: |
| Downlink power <br> allocation | $\rho_{A}$ | dB | 0 |
|  | $\rho_{B}$ | dB | 0 (NOTE 1) |
|  | $\sigma$ | dB | 0 |

### 8.2.1.2 Transmit diversity performance

### 8.2.1.2.1 Minimum Requirement 2 Tx Antenna Port

The requirements are specified in Table 8.2.1.2.1-2, with the addition of the parameters in Table 8.2.1.2.1-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of transmit diversity (SFBC) with 2 transmitter antennas.

Table 8.2.1.2.1-1: Test Parameters for Transmit diversity Performance (FRC)

| Parameter |  | Unit | Test 1-2 |
| :---: | :---: | :---: | :---: |
| Downlink power <br> allocation | $\rho_{A}$ | dB | -3 |
|  | $\rho_{B}$ | dB | -3 (NOTE 1) |
|  | $\sigma$ | dB | 0 |
| $N_{o c}$ at antenna port |  | $\mathrm{dBm} / 15 \mathrm{kHz}$ | -98 |
| PDSCH transmission mode |  |  |  |
| NOTE 1: $\quad P_{B}=1$. |  |  |  |

Table 8.2.1.2.1-2: Minimum performance Transmit Diversity (FRC)

### 8.2.1.2.2 Minimum Requirement 4 Tx Antenna Port

The requirements are specified in Table 8.2.1.2.2-2, with the addition of the parameters in Table 8.2.1.2.2-1 and the downlink physical channel setup according Annex C.3.2. The purpose is to verify the performance of transmit diversity (SFBC-FSTD) with 4 transmitter antennas.

Table 8.2.1.2.2-1: Test Parameters for Transmit diversity Performance (FRC)

| Parameter |  | Unit | Test 1-2 |
| :---: | :---: | :---: | :---: |
| Downlink power <br> allocation | $\rho_{A}$ | dB | -3 |
|  | $\rho_{B}$ | dB | -3 (NOTE 1) |
|  | $\sigma$ | dB | 0 |
| $N_{o c}$ at antenna port |  | $\mathrm{dBm} / 15 \mathrm{kHz}$ | -98 |

| PDSCH transmission mode |  | 2 |
| :--- | :--- | :--- |
| NOTE 1: $P_{B}=1$. |  |  |

Table 8.2.1.2.2-2: Minimum performance Transmit Diversity (FRC)

| $\begin{gathered} \text { Test } \\ \text { number } \end{gathered}$ | Bandwidth | Reference Channel | OCNG Pattern | Propagation Condition | Correlation Matrix and Antenna Configuration | Reference value |  | UE Category |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  | Fraction of Maximum Throughput (\%) | SNR (dB) |  |
| 1 | 1.4 MHz | R. 12 FDD | OP. 1 FDD | EPA5 | $4 \times 2$ Medium | 70 | 0.6 | $\geq 1$ |
| 2 | 10 MHz | R. 13 FDD | OP. 1 FDD | ETU70 | $4 \times 2$ Low | 70 | -0.9 | $\geq 1$ |

### 8.2.1.2.3 Minimum Requirement 2 Tx Antenna Port (demodulation subframe overlaps with aggressor cell ABS)

The requirements are specified in Table 8.2.1.2.3-2, with the addition of parameters in Table 8.2.1.2.3-1 and the downlink physical channel setup according to Annex C.3.2 and Annex C.3.3. The purpose is to verify the performance of transmit diversity (SFBC) with 2 transmit antennas if the PDSCH transmission in the serving cell takes place in subframes that overlap with ABS [9] of the aggressor cell. In Table 8.2.1.2.3-1, Cell 1 is the serving cell, and Cell 2 is the aggressor cell. The downlink physical channel setup for Cell 1 is according to Annex C.3.2 and for Cell 2 is according to Annex C.3.3, respectively.

Table 8.2.1.2.3-1: Test Parameters for Transmit diversity Performance (FRC)

| Parameter |  | Unit | Cell 1 | Cell 2 |
| :---: | :---: | :---: | :---: | :---: |
| Downlink power allocation | $\rho_{A}$ | dB | -3 | -3 |
|  | $\rho_{B}$ | dB | -3 (NOTE 1) | -3 |
|  | $\sigma$ | dB | 0 | N/A |
| $N_{o c}$ at antenna port | $N_{o c 1}$ | $\mathrm{dBm} / 15 \mathrm{kHz}$ | -102 (NOTE 2) | N/A |
|  | $N_{o c 2}$ | $\mathrm{dBm} / 15 \mathrm{kHz}$ | -98 (NOTE 3) | N/A |
|  | $N_{\text {oc } 3}$ | $\mathrm{dBm} / 15 \mathrm{kHz}$ | -94.8 (NOTE 4) | N/A |
| $\hat{E}_{s} / N_{o c 2}$ |  | dB | Reference Value in Table 8.2.1.2.32 | 6 |
| BW Channel |  | MHz | 10 | 10 |
| Subframe Configuration |  |  | Non-MBSFN | Non-MBSFN |
| Time Offset between Cells |  | $\mu \mathrm{s}$ | 2.5 (synch | us cells) |
| Cell Id |  |  | 0 | 1 |
| ABS pattern (NOTE 5) |  |  | N/A | $\begin{aligned} & 11000100 \\ & 11000000 \\ & 11000000 \\ & 11000000 \\ & 11000000 \end{aligned}$ |
| RLM/RRM Measurement Subframe Pattern (NOTE 6) |  |  | $\begin{aligned} & 10000000 \\ & 10000000 \\ & 10000000 \\ & 10000000 \\ & 10000000 \\ & \hline \end{aligned}$ | N/A |
| CSI Subframe Sets (NOTE7) | Ccsi,0 |  | $\begin{aligned} & 11000100 \\ & 11000000 \\ & 11000000 \\ & 11000000 \\ & 11000000 \\ & \hline \end{aligned}$ | N/A |

Table 8.2.1.2.3-2: Minimum Performance Transmit Diversity (FRC)

| Test Number | Reference Channel | OCNG Pattern |  | Propagation Conditions (NOTE 1) |  | Correlation Matrix and Antenna Configurati on | Reference Value |  | UE Category |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Cell 1 | Cell 2 | Cell 1 | Cell 2 |  | Fraction of Maximum Throughput (\%) NOTE 5 | SNR <br> (dB) <br> (Note <br> 2) |  |
| 1 | R.11-4 FDD (NOTE 4) | $\begin{aligned} & \hline \text { OP. } 1 \\ & \text { FDD } \end{aligned}$ | $\begin{aligned} & \hline \text { OP. } 1 \\ & \text { FDD } \end{aligned}$ | EVA5 | EVA 5 | 2x2 Medium | 70 | 3.4 | $\geq 2$ |

NOTE 1: The propagation conditions for Cell 1 and Cell2 are statistically independent.
NOTE 2: SNR corresponds to $\widehat{E}_{s} / N_{o c 2}$ of cell 1.
NOTE 3: The correlation matrix and antenna configuration apply for Cell 1 and Cell 2.
NOTE 4: Cell 1 Reference channel is modified: PDSCH other than SIB1/paging and its associated PDCCH/PCFICH are transmitted in the serving cell subframe when the subframe is overlapped with the ABS subframe of aggressor cell and the subframe is available in the definition of the reference channel.
NOTE 5: The maximum Throughput is calculated from the total Payload in 9 subframes, averaged over 40 ms .

### 8.2.1.2.3A Minimum Requirement 2 Tx Antenna Ports (demodulation subframe overlaps with aggressor cell ABS and CRS assistance information are configured)

The requirements are specified in Table 8.2.1.2.3A-2, with the addition of parameters in Table 8.2.1.2.3A-1. The purpose is to verify the performance of transmit diversity (SFBC) with 2 transmit antennas if the PDSCH transmission in the serving cell takes place in subframes that overlap with ABS [9] of the aggressor cells with CRS assistance information. In Table 8.2.1.2.3A-1, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The downlink physical channel setup for Cell 1 is according to Annex C.3.2 and for Cell 2 and Cell 3 is according to Annex C.3.3, respectively. The CRS assistance information [7] includes Cell 2 and Cell 3.

Table 8.2.1.2.3A-1: Test Parameters for Transmit diversity Performance (FRC)

| Parameter |  | Unit | Cell 1 | Cell 2 | Cell 3 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Downlink power <br> allocation | $\rho_{A}$ | dB | -3 | -3 | -3 |
|  | $\rho_{B}$ | dB | $-3($ NOTE 1) | -3 (NOTE 1) | -3 (NOTE 1) |
|  | $\sigma$ | dB | 0 | $\mathrm{~N} / \mathrm{A}$ | N/A |
| $N_{o c}$ at antenna port | $N_{o c 1}$ | $\mathrm{dBm} / 15 \mathrm{kHz}$ | -98 (NOTE 2) | $\mathrm{N} / \mathrm{A}$ | $\mathrm{N} / \mathrm{A}$ |

NOTE 1: The propagation conditions for Cell 1, Cell 2 and Cell 3 are statistically independent.
NOTE 2: The correlation matrix and antenna configuration apply for Cell 1, Cell 2 and Cell 3.
NOTE 3: SNR corresponds to $\widehat{E}_{s} / N_{o c 2}$ of cell 1.
NOTE 4: Cell 1 Reference channel is modified: PDSCH other than SIB1/paging and its associated PDCCH/PCFICH are transmitted in the serving cell subframe when the subframe is overlapped with the ABS subframe of aggressor cell and the subframe is available in the definition of the reference channel.
NOTE 5: The maximum Throughput is calculated from the total Payload in 9 subframes, averaged over 40 ms .

### 8.2.1.2.4 Enhanced Performance Requirement Type A-2 Tx Antenna Ports with TM3 interference model

The requirements are specified in Table 8.2.1.2.4-2, with the addition of parameters in Table 8.2.1.2.4-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of transmit diversity (SFBC) with 2 transmit antennas when the PDSCH transmission in the serving cell is interfered by PDSCH of two dominant interfering cells applying transmission mode 3 interference model defined in clause B.5.2. In Table 8.2.1.2.4-1, Cell 1 is the serving cell, and Cell 2,3 are interfering cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively.

Table 8.2.1.2.4-1: Test Parameters for Transmit diversity Performance (FRC) with TM3 interference model

| Parameter |  | Unit | Cell 1 | Cell 2 | Cell 3 |
| :---: | :---: | :---: | :---: | :---: | :---: |

| cqi-pmi-ConfigurationIndex |  |  | 2 | N/A | N/A |
| NOTE 1: $\quad P_{B}=1$ <br> NOTE 2: The respective received power spectral density of each interfering cell relative to $N_{o c}$ ' is defined by its associated DIP value as specified in clause B.5.1. |  |  |  |  |  |
| NOTE 3: Cell 1 is the serving cell. Cell 2,3 are the interfering cells. <br> NOTE 4: Cell 2 transmission is delayed with respect to Cell 1 by 0.33 ms and Cell 3 transmission is delayed with respect to Cell 1 by 0.67 ms . |  |  |  |  |  |
| Note 5: To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF\#1 and \#6 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF\#5 and \#0. |  |  |  |  |  |

Table 8.2.1.2.4-2: Enhanced Performance Requirement Type A, Transmit Diversity (FRC) with TM3 interference model

| Test Number | Reference Channel | OCNG Pattern |  |  | Propagation Conditions |  |  | Correlation Matrix and Antenna Configurati on (NOTE 3) | Reference Value |  | UE Cate gory |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | $\begin{gathered} \text { Cell } \\ 1 \end{gathered}$ | $\begin{gathered} \text { Cell } \\ 2 \end{gathered}$ | $\begin{gathered} \text { Cell } \\ 3 \end{gathered}$ | $\begin{gathered} \text { Cell } \\ 1 \end{gathered}$ | $\begin{gathered} \text { Cell } \\ 2 \end{gathered}$ | $\begin{gathered} \text { Cell } \\ 3 \end{gathered}$ |  | Fraction of Maximum Throughput (\%) | $\begin{gathered} \text { SINR } \\ \text { (dB) } \\ \text { (NOTE } \\ 2) \\ \hline \end{gathered}$ |  |
| 1 | R. 46 FDD | $\begin{gathered} \hline \text { OP. } \\ 1 \\ \text { FD } \\ D \end{gathered}$ | N/A | N/A | $\begin{gathered} \hline \text { EV } \\ \text { A70 } \end{gathered}$ | $\begin{gathered} \hline \text { EV } \\ \text { A70 } \end{gathered}$ | $\begin{gathered} \hline \text { EV } \\ \text { A70 } \end{gathered}$ | 2x2 Low | 70 | -1.1 | $\geq 1$ |

NOTE 1: The propagation conditions for Cell 1, Cell 2 and Cell 3 are statistically independent.
NOTE 2: SINR corresponds to $\widehat{E}_{s} / N_{o c}^{\prime}$ of Cell 1 as defined in clause 8.1.1.
NOTE 3: Correlation matrix and antenna configuration parameters apply for each of Cell 1, Cell 2 and Cell 3.

### 8.2.1.2.5 Enhanced Performance Requirement Type B-2 Tx Antenna Ports with TM2 interference model

The requirements are specified in Table 8.2.1.2.5-2, with the addition of parameters in Table 8.2.1.2.5-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of transmit diversity (SFBC) with 2 transmit antennas when the PDSCH transmission in the serving cell is interfered by PDSCH of two interfering cells applying transmission mode 2 interference model defined in clause B.6.1. In Table 8.2.1.2.5-1, Cell 1 is the serving cell, and Cell 2, 3 are interfering cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively.

Table 8.2.1.2.5-1: Test Parameters for Transmit Diversity Performance (FRC) with TM2 interference model

| Parameter |  |  | Unit | Cell 1 | Cell 2 | Cell 3 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

### 8.2.1.2.6 Enhanced Performance Requirement Type B-2 Tx Antenna Ports with TM9 interference model

The requirements are specified in Table 8.2.1.2.6-2, with the addition of parameters in Table 8.2.1.2.6-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of transmit diversity (SFBC) with 2 transmit antennas when the PDSCH transmission in the serving cell is interfered by PDSCH of two interfering cells applying transmission mode 9 interference model defined in clause B.6.4. In Table 8.2.1.2.6-1, Cell 1 is the serving cell, and Cell 2, 3 are interfering cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively.

Table 8.2.1.2.6-1: Test Parameters for Transmit Diversity Performance (FRC) with TM9 interference model

| Parameter |  | Unit | Cell 1 | Cell 2 | Cell 3 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Downlink power allocation | $\rho_{\text {A }}$ | dB | -3 | 0 | 0 |
|  | $\rho_{B}$ | dB | -3 (Note 1) | 0 | 0 |
|  | $\sigma$ | dB | 0 | -3 | -3 |
| Cell-specific reference signals |  |  | Antenna ports 0,1 | Antenna ports 0,1 | Antenna ports 0,1 |
| $N_{o c}$ at antenna port |  | $\mathrm{dBm} / 15 \mathrm{kHz}$ | -98 |  |  |
| $\hat{E}_{s} / N_{o c}$ |  | dB | N/A | 3.28 | 0.74 |

| Note 1: <br> Note 2: <br> Note 3: | SNR corresponds to $\widehat{E}_{s} / N_{o c}$ of Cell 1 as defined in clause 8.1.1. |  |  |  |  |  |  |  |  |  |  |

### 8.2.1.2.7 Minimum Requirement 2 Tx Antenna Port (Superposed transmission)

The requirements are specified in Table 8.2.1.2.7-2, with the addition of the parameters in Table 8.2.1.2.7-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the minimun performance of transmit diversity (SFBC) with 2 transmitter antennas superposed with simultaneous PDSCH interference.

Table 8.2.1.2.7-1: Test Parameters for Minimum Requirement 2 Tx Antenna Port - Superposed transmission (FRC)

| Parameter | Unit |  |  |
| :---: | :---: | :---: | :---: |
| Downlink power allocation | $\rho_{A}$ | dB | -3 |
|  | $\rho_{B}$ | dB | -3 (NOTE 1) |
|  | $\sigma$ | dB | 0 |
| $N_{o c}$ at antenna port |  | $\mathrm{dBm} / 15 \mathrm{kHz}$ | -98 |
| PDSCH transmission mode |  |  | 2 |
| MUSTIdx (Note 2) |  |  | 11 |
| p-a-must-r14 (Note 3) |  |  | N/A |
| Note 1: $\quad P_{B}=1$. <br> Note 2: MUSTIdx is decribed in subclause 6.3.3 of [4]. <br> Note 3: p -a-must-r14 is decribed in subclause 6.3 .2 of [7]. |  |  |  |

Table 8.2.1.2.7-2: Minimum Performance for Minimum Requirement 2 Tx Antenna Port - Superposed transmission (FRC)

| Test <br> number | Band- <br> width | Reference <br> Channel | OCNG <br> Pattern | Propagation <br> Condition | Correlation <br> Matrix and <br> Antenna <br> Configuration | Fraction of <br> Maximum <br> Throughput <br> $(\%)$ | SNR <br> (dB) | UE <br> Category |

| 1 | 10 MHz | R.aa FDD | OP.1 FDD | EVA5 | $2 \times 2$ Low | 70 | 14.1 | $\geq 1$ |

### 8.2.1.3 Open-loop spatial multiplexing performance

### 8.2.1.3.1 Minimum Requirement 2 Tx Antenna Port

For single carrier, the requirements are specified in Table 8.2.1.3.1-2, with the addition of the parameters in Table 8.2.1.3.1-1 and the downlink physical channel setup according to Annex C.3.2.

For CA with 2 DL CC, the requirements are specified in Table 8.2.1.3.1-4, with the addition of the parameters in Table 8.2.1.3.1-3 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of large delay CDD with 2 transmitter antennas.

For CA with 3 DL CCs, the requirements are specified in Table 8.2.1.3.1-6, based on single carrier requirement specified in Table 8.2.1.3.1-5, with the addition of the parameters in Table 8.2.1.3.1-3 and the downlink physical channel setup according to Annex C.3.2.

For CA with 4 DL CCs, the requirements are specified in Table 8.2.1.3.1-7, based on single carrier requirement specified in Table 8.2.1.3.1-5, with the addition of the parameters in Table 8.2.1.3.1-3 and the downlink physical channel setup according to Annex C.3.2.

For CA with 5 DL CCs, the requirements are specified in Table 8.2.1.3.1-8, based on single carrier requirement specified in Table 8.2.1.3.1-5, with the addition of the parameters in Table 8.2.1.3.1-3 and the downlink physical channel setup according to Annex C.3.2.

For CA with 6 DL CCs, the requirements are specified in Table 8.2.1.3.1-9, based on single carrier requirement specified in Table 8.2.1.3.1-5, with the addition of the parameters in Table 8.2.1.3.1-3 and the downlink physical channel setup according to Annex C.3.2.

For CA with 7 DL CCs, the requirements are specified in Table 8.2.1.3.1-10, based on single carrier requirement specified in Table 8.2.1.3.1-5, with the addition of the parameters in Table 8.2.1.3.1-3 and the downlink physical channel setup according to Annex C.3.2.

The test coverage for different number of component carriers is defined in 8.1.2.4.
Table 8.2.1.3.1-1: Test Parameters for Large Delay CDD (FRC)

| Parameter |  | Unit | Test 1-4 |
| :--- | :---: | :---: | :---: |
| Downlink power <br> allocation | $\rho_{A}$ | dB | -3 |
|  | $\rho_{B}$ | dB | -3 (NOTE 1) |
|  | $\sigma$ | dB | 0 |
| $N_{o c}$ at antenna port |  |  | $\mathrm{dBm} / 15 \mathrm{kHz}$ |
| PDSCH transmission mode | -98 |  |  |
| NOTE 1: $\quad P_{B}=1$. |  |  |  |
| NOTE 2: Void. |  |  |  |
| NOTE 3: Void. |  |  |  |

Table 8.2.1.3.1-2: Minimum performance Large Delay CDD (FRC)

|  |  |  |  |  |  | Reference value |  | UE cate gory |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Test num | $\begin{gathered} \text { Bandwidt } \end{gathered}$ | Referenc e channel | OCNG pattern | gation <br> condition | matrix and antenna config. | Fraction of maximum Throughput (\%) | SNR <br> (dB) |  |
| 1 (NOTE <br> 4) | 10 MHz | R. 11 FDD | OP. 1 FDD | EVA70 | 2x2 Low | 70 | 13.0 | $\geq 2$ |

| 2 <br> (NOTE <br> $3)$ | 5 MHz | R.11-2 <br> FDD | OP.1 FDD | EVA70 | $2 \times 2$ Low | 70 | 12.7 | $\geq 2$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 3 | 10 MHz | R.35 FDD | OP.1 FDD | EVA200 | $2 \times 2$ Low | 70 | 20.2 | $\geq 2$ |
| 4 | 10 MHz | R.35-4 <br> FDD | OP.1 FDD | ETU600 | $2 \times 2$ Low | 70 | 20.8 | $\geq 2$ |

NOTE 1: Void.
NOTE 2: Test 1 may not be executed for UE-s for which Test 1 or 2 in Table 8.2.1.3.1-4 is applicable.
NOTE 3: Test case applicability is defined in 8.1.2.1.
NOTE 4: For UE that supports CRS interference handling, the CRS assistance information defined in [7] is provided. The CRS assistance information includes two aggressor cells with 2 CRS ports and cell ID of agressor cells are 1 and 128. For UE that does not support CRS interference handling, CRS assistance information is not provided.

Table 8.2.1.3.1-3: Test Parameters for Large Delay CDD (FRC) for CA

| Parameter |  | Unit | Value |
| :---: | :---: | :---: | :---: |
| Downlink power <br> allocation | $\rho_{A}$ | dB | -3 |
|  | $\rho_{B}$ | dB | -3 (NOTE 1) |
|  | $\sigma$ | dB | 0 |

### 8.2.1.3.1A Soft buffer management test

For CA, the requirements are specified in Table 8.2.1.3.1A-2, with the addition of the parameters in Table 8.2.1.3.1A-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the UE performance with proper instantaneous buffer implementation. The test points are applied to UE category and bandwidth combination with maximum aggregated bandwidth as specified inTable 8.2.1.3.1A-3.

Table 8.2.1.3.1A-1: Test Parameters for soft buffer management test (FRC) for CA

| Parameter |  | Unit | Test 1-7 |
| :--- | :---: | :---: | :---: |
| Downlink power <br> allocation | $\rho_{A}$ | dB | -3 |
|  | $\rho_{B}$ | dB | -3 (NOTE 1) |
|  | $\sigma$ | dB | 0 |
| $N_{o c}$ at antenna port |  | $\mathrm{dBm} / 15 \mathrm{kHz}$ | -98 |
| PDSCH transmission mode | 3 |  |  |
| NOTE 1: $\quad P_{B}=1$. |  |  |  |

### 8.2.1.3.1C Enhanced Performance Requirement Type C-2 Tx Antenna Ports with TM1 interference

The requirements are specified in Table 8.2.1.3.1C-2, with the addition of parameters in Table 8.2.1.3.1C-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of open-loop spatial multiplexing performence with 2 transmit antennas when the PDSCH transmission in the serving cell is interfered by PDSCH of one dominant interfering cell with transmission mode 1. In Table 8.2.1.3.1C-1, Cell 1 is the serving cell, and Cell 2 is interfering cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1 and Cell 2 respectively.

Table 8.2.1.3.1C-1 Test parameters for Larger Delay CDD (FRC) with TM1 interference

| Parameter |  | Unit | Cell 1 | Cell 2 |
| :---: | :---: | :---: | :---: | :---: |
| Bandwidth |  | MHz | 10 MHz |  |
| Downlink power allocation | $\rho_{A}$ | dB | -3 | 0 |
|  | $\rho_{B}$ |  | -3 (NOTE 1) | 0 |
|  | $\sigma$ |  | 0 | 0 |

NOTE 2: SNR corresponds to $\widehat{E}_{s} / N_{o c}$ of Cell 1.

### 8.2.1.3.2 Minimum Requirement 4 Tx Antenna Port

The requirements are specified in Table 8.2.1.3.2-2, with the addition of the parameters in Table 8.2.1.3.2-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of large delay CDD with 4 transmitter antennas.

Table 8.2.1.3.2-1: Test Parameters for Large Delay CDD (FRC)

| Parameter |  | Unit | Test 1 |
| :--- | :---: | :---: | :---: |
| Downlink power <br> allocation | $\rho_{A}$ | dB | -6 |
|  | $\rho_{B}$ | dB | -6 (NOTE 1) |
|  | $\sigma$ | dB | 3 |
| $N_{o c}$ at antenna port |  |  | $\mathrm{dBm} / 15 \mathrm{kHz}$ |
| PDSCH transmission mode | -98 |  |  |
| NOTE 1: $\quad P_{B}=1$ |  |  |  |

| 1 | 10 MHz | R.14 FDD | OP.1 FDD | EVA70 | $4 \times 2$ Low | 70 | 14.3 | $\geq 2$ |

### 8.2.1.3.3 Minimum Requirement 2 Tx Antenna Port (demodulation subframe overlaps with aggressor cell ABS)

The requirements for non-MBSFN ABS are specified in Table 8.2.1.3.3-2, with the addition of parameters in Table 8.2.1.3.3-1 and the downlink physical channel setup according to Annex C.3.2 and Annex C.3.3.

The requirements for MBSFN ABS are specified in Table 8.2.1.3.3-4, with the addition of parameters in Table 8.2.1.3.3-3 and the downlink physical channel setup according to Annex C.3.2 and Annex C.3.3.

The purpose is to verify the performance of large delay CDD with 2 transmitter antennas if the PDSCH transmission in the serving cell takes place in subframes that overlap with ABS [9] of the aggressor cell. In Tables 8.2.1.3.3-1 and 8.2.1.3.3-3, Cell 1 is the serving cell, and Cell 2 is the aggressor cell. The downlink physical channel setup for Cell 1 is according to Annex C.3.2 and for Cell 2 is according to Annex C.3.3, respectively.

Table 8.2.1.3.3-1: Test Parameters for Large Delay CDD (FRC) - Non-MBSFN ABS

| Parameter |  | Unit | Cell 1 | Cell 2 |
| :---: | :---: | :---: | :---: | :---: |
| Downlink power allocation | $\rho_{A}$ | dB | -3 | -3 |
|  | $\rho_{B}$ | dB | -3 (NOTE 1) | -3 |
|  | $\sigma$ | dB | 0 | $\mathrm{~N} / \mathrm{A}$ |
|  | $N_{o c 1}$ | $\mathrm{dBm} / 15 \mathrm{kHz}$ | -102 (NOTE 2) | $\mathrm{N} / \mathrm{A}$ |
|  | $N_{o c 2}$ | $\mathrm{dBm} / 15 \mathrm{kHz}$ | $-98($ NOTE 3) | $\mathrm{N} / \mathrm{A}$ |
|  | $N_{o c 3}$ | $\mathrm{dBm} / 15 \mathrm{kHz}$ | $-94.8($ NOTE 4) | $\mathrm{N} / \mathrm{A}$ |

| $\widehat{E}_{s} / N_{o c 2}$ |  | dB | Reference Value in Table 8.2.1.3.3-2 | 6 |
| :---: | :---: | :---: | :---: | :---: |
| BW ${ }_{\text {Channel }}$ |  | MHz | 10 | 10 |
| Subframe Configuration |  |  | Non-MBSFN | Non-MBSFN |

### 8.2.1.3.4 Minimum Requirement 2 Tx Antenna Port (demodulation subframe overlaps with aggressor cell ABS and CRS assistance information are configured)

The requirements for non-MBSFN ABS are specified in Table 8.2.1.3.4-2, with the addition of parameters in Table 8.2.1.3.4-1. The purpose is to verify the performance of large delay CDD with 2 transmit antennas if the PDSCH transmission in the serving cell takes place in subframes that overlap with ABS [9] of the aggressor cells with CRS assistance information. In Table 8.2.1.3.4-1, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The downlink physical channel setup for Cell 1 is according to Annex C.3.2 and for Cell 2 and Cell 3 is according to Annex C.3.3, respectively. The CRS assistance information [7] includes Cell 2 ad Cell3.

Table 8.2.1.3.4-1: Test Parameters for Large Delay CDD (FRC) - Non-MBSFN ABS

| Parameter |  | Unit | Cell 1 | Cell 2 | Cell 3 |

### 8.2.1.3.5 Minimum Requirement 2 Tx Antenna Port (Superposed transmission)

The requirements are specified in Table 8.2.1.3.5-2, with the addition of the parameters in Table 8.2.1.3.5-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the minimun performance of openloop spatial multiplexing with 2 transmitter antennas superposed with simultaneous PDSCH interference.

Table 8.2.1.3.5-1: Test Parameters for Minimum Requirement 2 Tx Antenna Port - Superposed transmission (FRC)

| Parameter |  | Unit | Test 1 |
| :---: | :---: | :---: | :---: |
| Downlink power allocation | $\rho_{\text {A }}$ | dB | 0 |
|  | $\rho_{B}$ | dB | 0 (NOTE 1) |
|  | $\sigma$ | dB | 0 |

### 8.2.1.3.6 Minimum Requirement 2 Tx Antenna Port (network-based CRS interference mitigation)

The requirements are specified in Table 8.2.1.3.6-2, with the addition of parameters in Table 8.2.1.3.6-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of open-loop spatial multiplexing performence with 2 transmit antennas when the PDSCH transmission in the serving cell is interfered by CRS of one dominant interfering cell with network-based CRS interference mitigation. In Table 8.2.1.3.61, Cell 1 is the serving cell, and Cell 2 is interfering cell. The downlink physical channel setup is according to Annex
C.3.2 for each of Cell 1 and Cell 2 respectively.

Table 8.2.1.3.6-1: Test parameters for Larger Delay CDD (FRC) with network-based CRS interference mitigation

| Parameter |  | Unit | Cell 1 | Cell 2 |
| :---: | :---: | :---: | :---: | :---: |

| Note 1: <br> Note 2: | The propagation conditions for Cell 1 and Cell 2 are statistically independent. SNR corresponds to $\widehat{E}_{S} / N_{o c}$ of Cell 1. |  |  |  |  |  |  |  |

### 8.2.1.4 Closed-loop spatial multiplexing performance

### 8.2.1.4.1 Minimum Requirement Single-Layer Spatial Multiplexing 2 Tx Antenna Port

The requirements are specified in Table 8.2.1.4.1-2, with the addition of the parameters in Table 8.2.1.4.1-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the closed loop rankone performance with wideband and frequency selective precoding.

Table 8.2.1.4.1-1: Test Parameters for Single-Layer Spatial Multiplexing (FRC)

| Parameter |  | Unit | Test 1 | Test 1A | Test 2 |
| :---: | :---: | :---: | :---: | :---: | :---: |

### 8.2.1.4.1B Enhanced Performance Requirement Type A - Single-Layer Spatial Multiplexing 2 Tx Antenna Port with TM4 interference model

The requirements are specified in Table 8.2.1.4.1B-2, with the addition of the parameters in Table 8.2.1.4.1B-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the closed loop rankone performance with wideband precoding with two transmit antennas when the PDSCH transmission in the serving cell is interfered by PDSCH of two dominant interfering cells applying transmission mode 4 interference model defined in clause B.5.3. In Table 8.2.1.4.1B-1, Cell 1 is the serving cell, and Cell 2, 3 are interfering cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively.

Table 8.2.1.4.1B-1: Test Parameters for Single-Layer Spatial Multiplexing (FRC) with TM4 interference model

| Parameter |  | Unit | Cell 1 | Cell 2 | Cell 3 |
| :---: | :---: | :---: | :---: | :---: | :---: |

### 8.2.1.4.1C Minimum Requirement Single-Layer Spatial Multiplexing 2 Tx Antenna Ports (demodulation subframe overlaps with aggressor cell ABS and CRS assistance information are configured)

The requirements are specified in Table 8.2.1.4.1C-2, with the addition of parameters in Table 8.2.1.4.1C-1. The purpose is to verify the closed loop rank-one performance with wideband precoding if the PDSCH transmission in the serving cell takes place in subframes that overlap with ABS [9] of the aggressor cell with CRS assistance information. In Table 8.2.1.4.1C-1, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The downlink physical channel setup for Cell 1 is according to Annex C.3.2 and for Cell 2 and Cell 3 is according to Annex C.3.3, respectively. The CRS assistance information [7] includes Cell 2 and Cell 3.

Table 8.2.1.4.1C-1: Test Parameters for Single-Layer Spatial Multiplexing (FRC) - Non-MBSFN ABS

Note 1: The propagation conditions for Cell 1, Cell 2 and Cell 3 are statistically independent.
Note 2: The correlation matrix and antenna configuration apply for Cell 1, Cell 2 and Cell 3.
Note 3: SNR corresponds to $\widehat{E}_{s} / N_{o c 2}$ of cell 1.
Note 4: Cell 1 Reference channel is modified: PDSCH other than SIB1/paging and its associated PDCCH/PCFICH are transmitted in the serving cell subframe when the subframe is overlapped with the ABS subframe of aggressor cell and the subframe is available in the definition of the reference channel.
Note 5: The maximum Throughput is calculated from the total Payload in 9 subframes, averaged over 40 ms .

### 8.2.1.4.1D Enhanced Performance Requirement Type B - Single-layer Spatial Multiplexing 2 Tx Antenna Port with TM4 interference model

The requirements are specified in Table 8.2.1.4.1D-2, with the addition of the parameters in Table 8.2.1.4.1D-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the closed loop rank-
one performance with wideband precoding with two transmit antennas when the PDSCH transmission in the serving cell is interfered by PDSCH of two interfering cells applying transmission mode 4 interference model defined in clause B.6.3. In Table 8.2.1.4.1D-1, Cell 1 is the serving cell, and Cell 2, 3 are interfering cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively.

Table 8.2.1.4.1D-1: Test Parameters for Single-layer Spatial Multiplexing (FRC) with TM4 interference model

| Parameter |  | Unit | Cell 1 | Cell 2 | Cell 3 |
| :---: | :---: | :---: | :---: | :---: | :---: |

Note 1: The propagation conditions for Cell 1, Cell 2 and Cell 3 are statistically independent.
Note 2: $\quad$ SNR corresponds to $\hat{E}_{s} / N_{o c}$ of Cell 1 as defined in clause 8.1.1.
Note 3: Correlation matrix and antenna configuration parameters apply for each of Cell 1, Cell 2 and Cell 3.

### 8.2.1.4.1E Minimum Requirement Single-Layer Spatial Multiplexing 2 Tx Antenna Ports with CRS assistance information

The requirements are specified in Table 8.2.1.4.1E-2, with the addition of parameters in Table 8.2.1.4.1E-1. The purpose is to verify the closed loop rank-one performance with wideband precoding when CRS assistance information [7] is configured. In Table 8.2.1.4.1E-1, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively. The CRS assistance information [7] includes Cell 2 and Cell 3.

Table 8.2.1.4.1E-1: Test Parameters for Single-Layer Spatial Multiplexing (FRC)

Note 1: The propagation conditions for Cell 1, Cell 2 and Cell 3 are statistically independent.
Note 2: The correlation matrix and antenna configuration apply for Cell 1, Cell 2 and Cell 3.
Note 3: $\quad \mathrm{SNR}$ corresponds to $\widehat{\mathrm{E}}_{\mathrm{s}} / \mathrm{N}_{\mathrm{oc}}$ of cell 1.

### 8.2.1.4.1F Minimum Requirement Single-Layer Spatial Multiplexing 4 Tx Antenna Ports with CRS assistance information

The requirements are specified in Table 8.2.1.4.1F-2, with the addition of parameters in Table 8.2.1.4.1F-1. In Table 8.2.1.4.1F-1, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively. The CRS assistance information [7] is provided to the UE and includes information on Cell 2 and Cell 3.

The purpose of the test is to verify the closed loop single layer TM4 performance under assumption that UE applies CRS interference mitigation in the scenario with 4 CRS antenna ports in the serving and aggressor cells.

Table 8.2.1.4.1F-1: Test Parameters

| Parameter |  | Unit | Cell 1 | Cell 2 | Cell 3 |
| :---: | :---: | :---: | :---: | :---: | :---: |

Note 1: The propagation conditions for Cell 1, Cell 2 and Cell 3 are statistically independent.
Note 2: The correlation matrix and antenna configuration apply for Cell 1, Cell 2 and Cell 3.
Note 3: $\quad$ SNR corresponds to $\widehat{E}_{s} / N_{o c}$ of cell 1.

### 8.2.1.4.2 Minimum Requirement Multi-Layer Spatial Multiplexing 2 Tx Antenna Port

The requirements are specified in Table 8.2.1.4.2-2, with the addition of the parameters in Table 8.2.1.4.2-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the closed loop ranktwo performance with wideband and frequency selective precoding.

Table 8.2.1.4.2-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC)

| Parameter |  | Unit | Test 1-2 | Test 2A | Test 3 |
| :---: | :---: | :---: | :---: | :---: | :---: |

### 8.2.1.4.2A Enhanced Performance Requirement Type C - Multi-layer Spatial Multiplexing 2Tx Antenna Ports

The requirements are specified in Table 8.2.1.4.2A-2, with the addition of the parameters in Table 8.2.1.4.2A-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the closed loop ranktwo performance with wideband precoding.

Table 8.2.1.4.2A-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC)

| Parameter |  | Unit | Test 1 |
| :---: | :---: | :---: | :---: |
| Downlink power allocation | $\rho_{A}$ | dB | -3 |
|  | $\rho_{B}$ | dB | -3 (Note 1) |
|  | $\sigma$ | dB | 0 |
| $N_{o c}$ at antenna port |  | $\mathrm{dBm} / 15 \mathrm{kHz}$ | -98 |
| Precoding granularity |  | PRB | 50 |

| 1 | 10 MHz | R. 11 FDD | OP 1 FDD | ETU70 | 2x2 Medium | 70 | 18.3 | $\geq 2$ |

### 8.2.1.4.3 Minimum Requirement Multi-Layer Spatial Multiplexing 4 Tx Antenna Port

For single carrier, the requirements are specified in Table 8.2.1.4.3-2, with the addition of the parameters in Table 8.2.1.4.3-1 and the downlink physical channel setup according to Annex C.3.2.

For CA with 2 DL CCs, the requirements are specified in Table 8.2.1.4.3-4, with the addition of the parameters in Table 8.2.1.4.3-3 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the closed loop rank-two performance with wideband and frequency selective precoding.

For CA with 3 DL CCs, the requirements are specified in Table 8.2.1.4.3-6, based on single carrier requirement specified in Table 8.2.1.4.3-5, with the addition of the parameters in Table 8.2.1.4.3-3 and the downlink physical channel setup according to Annex C.3.2.

For CA with4 DL CCs, the requirements are specified in Table 8.2.1.4.3-7, based on single carrier requirement specified in Table 8.2.1.4.3-5, with the addition of the parameters in Table 8.2.1.4.3-3 and the downlink physical channel setup according to Annex C.3.2.

For CA with 5 DL CCs, the requirements are specified in Table 8.2.1.4.3-8, based on single carrier requirement specified in Table 8.2.1.4.3-5, with the addition of the parameters in Table 8.2.1.4.3-3 and the downlink physical channel setup according to Annex C.3.2.

For CA with 6 DL CCs, the requirements are specified in Table 8.2.1.4.3-9, based on single carrier requirement specified in Table 8.2.1.4.3-5, with the addition of the parameters in Table 8.2.1.4.3-3 and the downlink physical channel setup according to Annex C.3.2.

For CA with 7 DL CCs, the requirements are specified in Table 8.2.1.4.3-10, based on single carrier requirement specified in Table 8.2.1.4.3-5, with the addition of the parameters in Table 8.2.1.4.3-3 and the downlink physical channel setup according to Annex C.3.2.

The test coverage for different number of component carriers is defined in 8.1.2.4.
Table 8.2.1.4.3-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC)

| Parameter |  | Unit | Test 1 |
| :---: | :---: | :---: | :---: |
| Downlink power allocation | $\rho_{A}$ | dB | -6 |
|  | $\rho_{B}$ | dB | -6 (Note 1) |

### 8.2.1.4.3A Minimum Requirement Multi-Layer Spatial Multiplexing 4 Tx Antenna Port for dual connectivity

For dual connectivity the requirements are specified in Table 8.2.1.4.3A-3 for 2DL CCs and Table 8.2.1.4.3A-4 for 3DL CCs, based on single carrier requirement specified in Table 8.2.1.4.3A-2, with the addition of the parameters in Table 8.2.1.4.3A-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the closed loop rank-two performance with wideband and frequency selective precoding by using dual connectivity transmission.

Table 8.2.1.4.3A-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC) for dual connectivity

| Parameter |  | Unit | Values |
| :---: | :---: | :---: | :---: |
| Downlink power allocation | $\rho_{\text {A }}$ | dB | -6 |
|  | $\rho_{B}$ | dB | -6 (Note 1) |
|  | $\sigma$ | dB | 3 |
| $N_{o c}$ at antenna port |  | $\mathrm{dBm} / 15 \mathrm{kHz}$ | -98 |
| Precoding granularity |  | PRB | 6 for $1.4 \mathrm{MHz}, 4$ for 3 MHz and 5 MHz CCs, 6 for 10 MHz CCs, and 8 for 15 MHz CCs and 20 MHz CCs |
| PMI delay (Note 2) |  | ms |  |

### 8.2.1.4.4 Minimum Requirement Multi-Layer Spatial Multiplexing 2 Tx Antenna Port (Superposed transmission)

The requirements are specified in Table 8.2.1.4.4-2, with the addition of the parameters in Table 8.2.1.4.4-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the minimun performance of closed-loop spatial multiplexing with 2 transmitter antennas superposed with simultaneous PDSCH interference.

Table 8.2.1.4.4-1: Test Parameters for Minimum Requirement Multi-Layer Spatial Multiplexing 2 Tx Antenna Port - Superposed transmission (FRC)

| Parameter |  | Unit | Test 1 |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Downlink power allocation | $\rho_{A}$ | dB | 0 |
|  |  | $\rho_{B}$ | dB | 0 (NOTE 1) |
|  |  | $\sigma$ | dB | 0 |
|  |  | PDSCH_RA | dB | -3 |
|  |  | PDSCH_RB | dB | -3 |
|  | $N_{o c}$ at antenna port |  | $\mathrm{dBm} / 15 \mathrm{kHz}$ | -98 |
|  | PDSCH transmission mode |  |  | 4 |
|  | Precoding |  |  | Random wideband precoding per TTI |
|  | MUSTIdx for transport block 1 (Note 2) |  |  | 10 |
|  | MUSTIdx for transport block 2 <br> (Note 2) |  |  | 00 |
|  | p-a-must-r14 (Note 3) |  |  | -3 |
|  | Note 1: $\quad P_{B}=1$. <br> Note 2: MUSTIdx is decribed in subclause 6.3.3 of [4]. <br> Note 3: p-a-must-r14 is decribed in subclause 6.3.2 of [7]. |  |  |  |

Table 8.2.1.4.4-2: Minimum Performance for Minimum Requirement Multi-Layer Spatial Multiplexing 2 Tx Antenna Port - Superposed transmission (FRC)

| Test <br> number | Band- <br> width | Reference <br> Channel | OCNG <br> Pattern | Propagation <br> Condition | Correlation <br> Matrix and <br> Antenna <br> Configuration | Reference value | Uraction of <br> Maximum <br> Throughput <br> (\%) | UNR <br> (dB) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 10 MHz | R.bb FDD | OP.1 FDD | EVA5 | $2 \times 2$ Low | 70 | 17.3 | $\geq 2$ |

### 8.2.1.5 MU-MIMO

8.2.1.6 [Control channel performance: D-BCH and PCH]

### 8.2.1.7 Carrier aggregation with power imbalance

For CA, the requirements in this section verify the ability of an intraband adjacent carrier aggregation UE to demodulate the signal transmitted by the PCell or SCell in the presence of a stronger SCell or PCell signal on an adjacent frequency. Throughput is measured on the PCell or SCell only.

### 8.2.1.7.1 Minimum Requirement

The requirements are specified in Table 8.2.1.7.1-2, with the addition of the parameters in Table 8.2.1.7.1-1 and the downlink physical channel setup according to Annex C.3.2.

Table 8.2.1.7.1-1: Test Parameters for CA

| Parameter |  | Unit | Test 1 | Test 2-3 |
| :--- | :---: | :---: | :---: | :---: |
| Downlink power <br> allocation | $\rho_{A}$ | dB | 0 | 0 |
|  | $\rho_{B}$ | dB | $0($ Note 1) | $0($ Note 1) |
|  | $\sigma$ | dB | 0 | 0 |

| $N_{o c}$ at antenna port |  | dBm/15kHz | Off (Note 2) | Off (Note 2) |
| :---: | :---: | :---: | :---: | :---: |
| Symbols for unused PRBs |  |  | $\begin{gathered} \hline \text { OCNG } \\ \text { (Note 3) } \\ \hline \end{gathered}$ | $\begin{gathered} \hline \text { OCNG } \\ \text { (Note 3) } \\ \hline \end{gathered}$ |
| Modulation |  |  | 64 QAM | 64 QAM |
| Maximum number of HARQ transmission |  |  | 1 | 1 |
| Redundancy version coding sequence |  |  | \{0\} | \{0\} |
| PDSCH transmission mode of PCell |  |  | 1 | 3 |
| PDSCH tramsmission mode of SCell |  |  | 3 | 1 |
| OCNG Pattern | PCell |  | OP. 1 FDD | OP. 5 FDD |
|  | SCell |  | OP.5 FDD | OP. 1 FDD |
| Propagation Conditions | PCell |  | Clause B. 1 | Clause B. 1 |
|  | SCell |  | Clause B. 1 | Clause B. 1 |
| Correlation Matrix and Antenna | PCell |  | 1x2 | 2x2 |
|  | SCell |  | 2x2 | $1 \times 2$ |

Note 1: $\quad P_{B}=0$ for $1 \times 2$ and $P_{B}=1$ for $2 \times 2$ antenna configuration.
Note 2: $\quad$ No external noise sources are applied
Note 3: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated. pseudo random data.
Note 4: Void

Table 8.2.1.7.1-2: Minimum performance (FRC) for CA

| Test <br> Number | Bandwidth (MHz) |  | Reference channel |  |  | Power at antenna <br> port (dBm/15KHz) |  | Reference value <br> Fraction of Maximum <br> Throughput (\%) | UE <br> Category |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | PCell | SCell | PCell | SCell | $\hat{E}_{s_{-} \text {PCell }}$ <br> for PCell | $\hat{E}_{s_{-} \text {Scell }}$ <br> for Scell | PCell | SCell |  |
| 1 | 20 | 20 | R.49 FDD | NA | -85 | -79 | 85 | NA | $\geq 5$ |
| 2 | 10 | 10 | NA | R.49-1 FDD | -79 | -85.8 | NA | 85 | $\geq 5$ |
| 3 | 5 | 5 | NA | R.49-2 FDD | -79 | -85.9 | NA | 85 | $\geq 5$ |

Note 1: The OCNG pattern for PCell is used to fill the control channel. The OCNG pattern for SCell is used to fill the control channel and PDSCH.
Note 2: The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 8.1.2.3.

### 8.2.1.8 Intra-band non-contiguous carrier aggregation with timing offset

The requirements in this section verify the ability of an intraband non-contiguous carrier aggregation UE to demodulate the signal transmitted by the PCell and SCell in the presence of timing offset between the cells. Throughput is measured on both cells.

### 8.2.1.8.1 Minimum Requirement

For CA the requirements are specified in Table 8.2.1.8.1-2, with the addition of the parameters in Table 8.2.1.8.1-1 and the downlink physical channel setup according to Annex C.3.2.

Table 8.2.1.8.1-1: Test Parameters for CA

| Parameter |  | Unit | Test 1 |
| :---: | :---: | :---: | :---: |
| Downlink power <br> allocation | $\rho_{A}$ | dB | -3 |
|  | $\rho_{B}$ | dB | -3 (Note 1) |
|  | $\sigma$ | dB | 0 |
| $N_{o c}$ at antenna port |  | $\mathrm{dBm} / 15 \mathrm{kHz}$ | -98 |

| Modulation |  | 64 QAM |
| :---: | :---: | :---: |
| Maximum number of HARQ <br> transmission | 4 |  |
| Redundancy version coding <br> sequence |  | $\{0,0,1,2\}$ |
| PDSCH transmission mode |  |  |
| of PCell |  |  |$\quad 3$

Table 8.2.1.8.1-2: Minimum performance (FRC) for CA

| Test Numbe r | Cell | Bandwidth | Referenc e Channel | OCNG Patter n | Propagati on Condition s | Correlati on Matrix and Antenna | Refence value |  | Timing relative to PCell ( $\mu \mathrm{s}$ ) | $\begin{gathered} \text { UE } \\ \text { Catego } \\ \text { ry } \end{gathered}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  | Fraction of Maximum Throughput (\%) | $\begin{aligned} & \hline \text { SNR } \\ & \text { (dB) } \end{aligned}$ |  |  |
| 1 | PCell | $\underset{\mathrm{z}}{\mathrm{10MH}}$ | $\begin{gathered} \text { R.35-4 } \\ \text { FDD } \end{gathered}$ | OP. 1 FDD | EPA200 | 2x2 Low | 70 | 21.15 | N/A | $\geq 3$ |
|  | SCell | $\begin{gathered} 10 \mathrm{MH} \\ \mathrm{z} \end{gathered}$ | $\begin{gathered} \hline \text { R.35-3 } \\ \text { FDD } \end{gathered}$ |  | EPA200 | 2x2 Low | 60 | 15.18 | -30.26 |  |

Note 1: The EPA200 propagation channels applied to PCell and SCell are statistically independent.
Note 2: The applicability and test rules of requirements for different CA configurations and bandwidth combination sets are defined in 8.1.2.3.

### 8.2.1.9 HST-SFN performance

### 8.2.1.9.1 Minimum Requirement

The purpose of this test is to verify UE performance in the HST-SFN scenario defined in B.3A when highSpeedEnhancedDemodulationFlag [7] is received.

For single carrier, the requirements are specified in Table 8.2.1.9.1-2, with the addition of the parameters in Table 8.2.1.9.1-1 and the downlink physical channel setup according to Annex C.3.2.

For CA with 2 DL CC, the requirements are specified in Table 8.2.1.9.1-5, based on single carrier requirement speicified in Table 8.2.1.9.1-4, with the addition of the parameters in Table 8.2.1.9.1-3 and the downlink physical channel setup according to Annex C.3.2.

For CA with 3 DL CCs, the requirements are specified in Table 8.2.1.9.1-6, based on single carrier requirement specified in Table 8.2.1.9.1-4, with the addition of the parameters in Table 8.2.1.9.1-3 and the downlink physical channel setup according to Annex C.3.2.

For CA with 4 DL CCs, the requirements are specified in Table 8.2.1.9.1-7, based on single carrier requirement specified in Table 8.2.1.9.1-4, with the addition of the parameters in Table 8.2.1.9.1-3 and the downlink physical channel setup according to Annex C.3.2.

For CA with 5 DL CCs, the requirements are specified in Table 8.2.1.9.1-8, based on single carrier requirement specified in Table 8.2.1.9.1-4, with the addition of the parameters in Table 8.2.1.9.1-3 and the downlink physical channel setup according to Annex C.3.2.

The test coverage for different number of component carriers is defined in 8.1.2.4.
Table 8.2.1.9.1-1: Test Parameters for UE performance in HST-SFN scenario (FRC)

| Parameter |  | Unit |  | Test 1 |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |
|  | Downlink power <br> allocation | $\rho_{A}$ | dB | -3 |  |
|  | $\rho_{B}$ | dB | -3 (NOTE 1) |  |  |

|  | $\sigma$ | dB | 0 |
| :--- | :--- | :--- | :--- |
| $N_{o c}$ at antenna port | $\mathrm{dBm} / 15 \mathrm{kHz}$ | -98 |  |
| PDSCH transmission mode |  | 3 |  |
| NOTE 1: $P_{B}=1$. |  |  |  |

Table 8.2.1.9.1-2: Minimum performance UE in HST-SFN scenario (FRC)
$\left.\begin{array}{|c|c|c|c|c|c|c|c|c|}\hline \begin{array}{c}\text { Test } \\ \text { number }\end{array} & \begin{array}{c}\text { Band- } \\ \text { width }\end{array} & \begin{array}{c}\text { Reference } \\ \text { Channel }\end{array} & \begin{array}{c}\text { OCNG } \\ \text { Pattern }\end{array} & \begin{array}{c}\text { Propagation } \\ \text { Condition }\end{array} & \begin{array}{c}\text { Correlation } \\ \text { Matrix and } \\ \text { Antenna } \\ \text { Configuration }\end{array} & \begin{array}{c}\text { Reference value }\end{array} & \begin{array}{c}\text { Uraction } \\ \text { of } \\ \text { Maximum }\end{array} & \begin{array}{c}\text { SNR } \\ \text { (dB) }\end{array} \\ \text { Chroughp } \\ \text { Category }\end{array}\right]$

NOTE 1: The requirement defined is based on the normarliazed channel model, i.e.the power of each tap is normalized to the instantaneous total received power from four taps.

Table 8.2.1.9.1-3: Test Parameters for Large Delay CDD (FRC) for CA

| Parameter |  | Unit | Value |
| :--- | :---: | :---: | :---: |
| Downlink power <br> allocation | $\rho_{A}$ | dB | -3 |
|  | $\rho_{B}$ | dB | -3 (NOTE 1) |
|  | $\sigma$ | dB | 0 |
| $N_{o c}$ at antenna port |  | $\mathrm{dBm} / 15 \mathrm{kHz}$ | -98 |
| PDSCH transmission mode |  |  |  |
| NOTE 1: | $P_{B}=1$. |  |  |
| NOTE 2: | PUCCH format 1b with channel selection is used to <br> feedback ACK/NACK for Tests in Table 8.2.1.3.1-4, |  |  |
| PUCCH format 3 is used to feedback ACK/NACK for <br> Tests in Table 8.2.1.3.1-6. |  |  |  |
| NOTE 3:The same PDSCH transmission mode is applied to each <br> component carrier. |  |  |  |

Table 8.2.1.9.1-4: Single carrier performance for multiple CA configurations

### 8.2.1.9.2 Minimum Requirement for Rel-16 further enhanced HST

The requirements are specified in Table 8.2.1.9.2-2, with the addition of the parameters in Table 8.2.1.9.2-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify UE performance in the HST-SFN-500 and HST-500 scenario. The test for HST-SFN-500 scenario defined in B.3B is applied when highSpeedEnhDemodFlag2-r16 [7] is received. The test for HST-500 scenario defined in B.3C is applied when highSpeedEnhDemodFlag2-r16 [7] is not received. HST-500 test is not applicable to UE that has passed HST-SFN-500 test.

Table 8.2.1.9.2-1: Test Parameters for UE performance in HST-SFN-500 and HST-500 scenario (FRC)

| Parameter |  | Unit |  | Test 1 |  |
| :--- | :--- | :--- | :--- | :--- | :--- |

Table 8.2.1.9.2-2: Minimum performance UE in HST-SFN-500 and HST-500 scenario (FRC)

| $\begin{gathered} \text { Test } \\ \text { number } \end{gathered}$ | Bandwidth | Reference Channel | OCNG Pattern | Propagation Condition | Correlation Matrix and Antenna Configuration | Reference value |  | UE Category |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  | $\begin{aligned} & \text { Fraction } \\ & \text { of } \\ & \text { Maximum } \\ & \text { Throughp } \\ & \text { ut (\%) } \\ & \hline \end{aligned}$ | $\begin{aligned} & \text { SNR } \\ & \text { (dB) } \end{aligned}$ |  |
| 1 NOTE 2 | 10 MHz | R.87-1 FDD | OP. 1 FDD | $\begin{gathered} \text { HST-SFN- } \\ 500 \end{gathered}$ | 2x2 | 70 | 9.7 | $\geq 1$ |
| 2 | 10 MHz | R. 87 FDD | OP. 1 FDD | HST-500 | 2x2 | 70 | 11.4 | $\geq 1$ |

NOTE 1: Test case applicability is defined in 8.1.2.6.
NOTE 2: The requirement defined is based on the normarliazed channel model, i.e.the power of each tap is normalized to the instantaneous total received power from four taps.

### 8.2.1.10 Intra-band contiguous carrier aggregation with minimum channel spacing

The requirements in this section verify the ability of an UE supporting intra-band contiguous carrier aggregation with minimum channel spacing to demodulate the signal transmitted by the PCell and SCell(s). Throughput is measured on each cell. The minimum channel spacing of intra-band contiguous carrier aggregation refers to the possible minimum channel spacing as any multiple of 300 kHz less than the nominal channel spacing defined in 5.7 .1 A .

### 8.2.1.10.1 Minimum Requirement

For CA the requirements are specified in Table 8.2.1.10.1-2, with the addition of the parameters in Table 8.2.1.10.1-1 and the downlink physical channel setup according to Annex C.3.2.

Table 8.2.1.10.1-1: Test Parameters for CA

| Parameter |  | Unit | Test 1-2 |
| :--- | :--- | :---: | :---: |
| Downlink <br> power <br> allocation | $\rho_{A}$ | dB | 0 |
|  | $\rho_{B}$ | dB | 0 (Note 1) |
|  | $\sigma$ | dB | 0 |
| $N_{o c}$ at antenna port |  | $\mathrm{dBm} / 15 \mathrm{kHz}$ | -98 |
| Symbols for unused PRBs |  |  |  |
| Modulation |  |  | OCNG (Note 2) |

| ACK/NACK feedback mode |  | PUCCH format 1b with channel selection |
| :--- | :---: | :---: |
| PDSCH transmission mode |  |  |
| Note 1: $\quad P_{B}=0$ |  |  |
| Note 2: $\quad$ These physical resource blocks are assigned to an arbitrary number of virtual UEs with one |  |  |
| PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated |  |  |
| Note 3: The same PDSCH transmission mode is applied to each component carrier. |  |  |

Table 8.2.1.10.1-2: Single carrier performance for multiple CA configurations with minimum channel spacing

| Bandwidth | Reference channel | OCNG pattern | Propagation condition | Correlation matrix and antenna config. | Reference value |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  | Fraction of maximum throughput (\%) | SNR <br> (dB) |
| 5 MHz | R. 6 FDD | OP. 1 FDD | EVA5 | 1x2 Low | 70 | 17.4 |
| 10MHz | R. 7 FDD | OP. 1 FDD | EVA5 | 1x2 Low | 70 | 17.7 |
| 15 MHz | R. 8 FDD | OP. 1 FDD | EVA5 | 1x2 Low | 70 | 17.7 |
| 20 MHz | R. 9 FDD | OP. 1 FDD | EVA5 | 1x2 Low | 70 | 17.6 |

Table 8.2.1.10.1-3: Minimum performance (FRC) for intra-band CA with minimum channel spacing for CA with 2DL CCs

| Test num. | CA Band-width <br> combination | Requirement | UE category |
| :---: | :---: | :---: | :---: |
| 1 | $20 \mathrm{MHz}+20 \mathrm{MHz}$ | As specified in Table 8.2.1.10.1-2 per CC | $\geq 5$ |
| 2 | $20 \mathrm{MHz}+15 \mathrm{MHz}$ | As specified in Table 8.2.1.10.1-2 per CC | $\geq 5$ |
| 3 | $20 \mathrm{MHz}+10 \mathrm{MHz}$ | As specified in Table 8.2.1.10.1-2 per CC | $\geq 5$ |
| 4 | $20 \mathrm{MHz}+5 \mathrm{MHz}$ | As specified in Table 8.2.1.10.1-2 per CC | $\geq 5$ |
| 5 | $15 \mathrm{MHz}+15 \mathrm{MHz}$ | As specified in Table 8.2.1.10.1-2 per CC | $\geq 5$ |
| 6 | $10 \mathrm{MHz}+10 \mathrm{MHz}$ | As specified in Table 8.2.1.10.1-2 per CC | $\geq 5$ |
| 7 | $5 \mathrm{MHz}+10 \mathrm{MHz}$ | As specified in Table 8.2.1.10.1-2 per CC | $\geq 5$ |
| Note 1: | The applicability and test rules of requirements for different CA configurations and <br> bandwidth combination sets are defined in 8.1.2.3. |  |  |

### 8.2.2 TDD (Fixed Reference Channel)

The parameters specified in Table 8.2.2-1 are valid for all TDD tests unless otherwise stated.
Table 8.2.2-1: Common Test Parameters (TDD)

| Parameter | Unit | Value |  |
| :---: | :---: | :---: | :---: |
|  | Uplink downlink <br> configuration (Note 1) |  | 1 |
| Special subframe <br> configuration (Note 2) |  | 4 |  |
|  | Cyclic prefix |  | Normal |
|  | Cell ID |  | 0 |
|  | Inter-TTI Distance |  | 1 |
|  | Number of HARQ <br> processes per <br> component carrier | Processes | 7 |
| Maximum number of <br> HARQ transmission |  | 4 |  |
|  | Redundancy version <br> coding sequence |  | $\{0,1,2,3\}$ for QPSK and 16QAM <br> $\{0,0,1,2\}$ <br> for 64QAM, 256QAM and <br> 1024QAM |

| Number of OFDM <br> symbols for PDCCH per <br> component carrier | OFDM symbols | 4 for 1.4 MHz bandwidth, 3 for 3 MHz and <br> 5 MHz bandwidths, <br> 2 for $10 \mathrm{MHz}, 15 \mathrm{MHz}$ and 20 MHz <br> bandwidths unless otherwise stated |
| :--- | :---: | :---: |
| Cross carrier scheduling |  | Not configured |

### 8.2.2.1 Single-antenna port performance

The single-antenna performance in a given multi-path fading environments is determined by the SNR for which a certain relative information bit throughput of the reference measurement channels in Annex A.3.4 is achieved. The purpose of these tests is to verify the single-antenna performance with different channel models and MCS. The QPSK and 64QAM cases are also used to verify the performance for all bandwidths specified in Table 5.6.1-1.

### 8.2.2.1.1 Minimum Requirement

For single carrier, the requirements are specified in Table 8.2.2.1.1-2, with the addition of the parameters in Table 8.2.2.1.1-1 and the downlink physical channel setup according to Annex C.3.2.

For CA with 2 DL CCs, the requirements are specified in Table 8.2.2.1.1-4, with the addition of the parameters in Table 8.2.2.1.1-3 and the downlink physical channel setup according to Annex C.3.2.

For CA with 3 DL CCs, the requirements are specified in Table 8.2.2.1.1-7, based on single carrier requirement specified in Table 8.2.2.1.1-5, with the addition of the parameters in Table 8.2.2.1.1-3 and the downlink physical channel setup according to Annex C.3.2.

For CA with 4 DL CCs, the requirements are specified in Table 8.2.2.1.1-8, based on single carrier requirement specified in Table 8.2.2.1.1-5, with the addition of the parameters in Table 8.2.2.1.1-3 and the downlink physical channel setup according to Annex C.3.2.

For CA with 5 DL CCs, the requirements are speicifed in Table 8.2.1.1.1-9, based on single carrier requirement speicified in Table 8.2.2.1.1-5, with the addition of the parameters in Table 8.2.2.1.1-3 and the downlink physical channel setup according to Annex C.3.2.

For CA with 6 DL CCs, the requirements are speicifed in Table 8.2.1.1.1-10, based on single carrier requirement speicified in Table 8.2.2.1.1-5, with the addition of the parameters in Table 8.2.2.1.1-3 and the downlink physical channel setup according to Annex C.3.2.

For CA with 7 DL CCs, the requirements are speicifed in Table 8.2.1.1.1-11, based on single carrier requirement speicified in Table 8.2.2.1.1-5, with the addition of the parameters in Table 8.2.2.1.1-3 and the downlink physical channel setup according to Annex C.3.2.

The test coverage for different number of component carriers is defined in 8.1.2.4.
Table 8.2.2.1.1-1: Test Parameters

| Parameter |  | Unit | Test 1-5 | Test 6-8 | Test 9-15 | Test 16- | Test 19 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Downlink power allocation | $\rho_{A}$ | dB | 0 | 0 | 0 | 0 | 0 |
|  | $\rho_{B}$ | dB | 0 (Note 1) | 0 (Note 1) | 0 (Note 1) | 0 (Note 1) | 0 (Note 1) |
|  | $\sigma$ | dB | 0 | 0 | 0 | 0 | 0 |
| $N_{o c}$ at antenna port |  | dBm/15kHz | -98 | -98 | -98 | -98 | -98 |
| Symbols for unused PRBs |  |  | $\begin{aligned} & \text { OCNG (Note } \\ & \text { 2) } \end{aligned}$ | $\begin{aligned} & \text { OCNG } \\ & \text { (Note 2) } \\ & \hline \end{aligned}$ | $\begin{aligned} & \text { OCNG } \\ & \text { (Note 2) } \\ & \hline \end{aligned}$ | $\begin{gathered} \hline \text { OCNG } \\ \text { (Note 2) } \\ \hline \end{gathered}$ | $\begin{gathered} \hline \text { OCNG } \\ \text { (Note 2) } \\ \hline \end{gathered}$ |
| Modulation |  |  | QPSK | 16QAM | 64QAM | 16QAM | QPSK |
| ACK/NACK feedback mode |  |  | Multiplexing | Multiplexin | Multiplexin <br> g | Multiplexin g | Multiplexin g |
| PDSCH transmission mode |  |  | 1 | , | 1 | , | , |

Note 1: $\quad P_{B}=0$
Note 2: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated.
Note 3: Void
Note 4: Void

### 8.2.2.1.2 Void

### 8.2.2.1.3 Void

### 8.2.2.1.4 Minimum Requirement 1 PRB allocation in presence of MBSFN

The requirements are specified in Table 8.2.2.1.4-2, with the addition of the parameters in Table 8.2.2.1.1.4-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the single-antenna performance with a single PRB allocated at the lower band edge in presence of MBSFN.

Table 8.2.2.1.4-1: Test Parameters for Testing 1 PRB allocation

Note 1: $\quad P_{B}=0$
Note 2: The MBSFN portion of an MBSFN subframe comprises the whole MBSFN subframe except the first two symbols in the first slot.
Note 3: The MBSFN portion of the MBSFN subframes shall contain QPSK modulated data. Cell-specific reference signals are not inserted in the MBSFN portion of the MBSFN subframes, QPSK modulated MBSFN data is used instead.

Table 8.2.2.1.4-2: Minimum performance 1PRB (FRC)

| Test <br> number | Bandwidth | Reference <br> Channel | OCNG <br> Pattern | Propagation <br> Condition | Correlation <br> Matrix and <br> Antenna <br> Configuration | Reference value | Fraction of <br> Maximum <br> Throughput <br> $(\%)$ | SNR <br> (dB) |

### 8.2.2.2 Transmit diversity performance

### 8.2.2.2.1 Minimum Requirement 2 Tx Antenna Port

The requirements are specified in Table 8.2.2.2.1-2, with the addition of the parameters in Table 8.2.2.2.1-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of transmit diversity (SFBC) with 2 transmitter antennas.

Table 8.2.2.2.1-1: Test Parameters for Transmit diversity Performance (FRC)

| Parameter |  | Unit |  | Test 1-2 |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Downlink power <br> allocation | $\rho_{A}$ | dB | -3 |  |  |  |
|  | $\rho_{B}$ | dB | -3 (Note 1) |  |  |  |

|  | $\sigma$ | dB | 0 |
| :---: | :---: | :---: | :---: |
| $N_{o c}$ at antenna port | $\mathrm{dBm} / 15 \mathrm{kHz}$ | -98 |  |
| ACK/NACK feedback mode |  | Multiplexing |  |
| PDSCH transmission mode |  | 2 |  |
| Note 1: $\quad P_{B}=1$ |  |  |  |

| 2 | 10 MHz | R.10 TDD | OP.1 TDD | HST | $2 \times 2$ | 70 | -2.3 | $\geq 1$ |

### 8.2.2.2.2 Minimum Requirement 4 Tx Antenna Port

The requirements are specified in Table 8.2.2.2.2-2, with the addition of the parameters in Table 8.2.2.2.2-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of transmit diversity (SFBC-FSTD) with 4 transmitter antennas.

Table 8.2.2.2.2-1: Test Parameters for Transmit diversity Performance (FRC)

| Parameter |  |  | est 1-2 |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Downlink power allocation | $\rho_{A}$ | dB | -3 |

### 8.2.2.2.3 Minimum Requirement 2 Tx Antenna Port (demodulation subframe overlaps with aggressor cell ABS)

The requirements are specified in Table 8.2.2.2.3-2, with the addition of parameters in Table 8.2.2.2.3-1 and the downlink physical channel setup according to Annex C.3.2 and Annex C.3.3. The purpose is to verify the performance of transmit diversity (SFBC) with 2 transmit antennas if the PDSCH transmission in the serving cell takes place in subframes that overlap with ABS [9] of the aggressor cell. In Table 8.2.2.2.3-1, Cell 1 is the serving cell, and Cell 2 is
the aggressor cell. The downlink physical channel setup for Cell 1 is according to Annex C.3.2 and for Cell 2 is according to Annex C.3.3, respectively.

Table 8.2.2.2.3-1: Test Parameters for Transmit diversity Performance (FRC)

| Parameter |  | Unit | Cell 1 | Cell 2 |
| :---: | :---: | :---: | :---: | :---: |
| Uplink downlink configuration |  |  | 1 | 1 |

|  |  |  |  |  |  |  |  |  |  |

Note 1: The propagation conditions for Cell 1 and Cell2 are statistically independent.
Note 2: SNR corresponds to $\widehat{E}_{s} / N_{o c 2}$ of cell 1.
Note 3: The correlation matrix and antenna configuration apply for Cell 1 and Cell 2.
Note 4: Cell 1 Reference channel is modified: PDSCH other than SIB1/paging and its associated PDCCH/PCFICH are transmitted in the serving cell subframe when the subframe is overlapped with the ABS subframe of aggressor cell and the subframe is available in the definition of the reference channel.
Note 5: The maximum Throughput is calculated from the total Payload in 2 subframes, averaged over 20 ms .

### 8.2.2.2.3A Minimum Requirement 2 Tx Antenna Ports (demodulation subframe overlaps with aggressor cell ABS and CRS assistance information are configured)

The requirements are specified in Table 8.2.2.2.3A-2, with the addition of parameters in Table 8.2.2.2.3A-1. The purpose is to verify the performance of transmit diversity (SFBC) with 2 transmit antennas if the PDSCH transmission in the serving cell takes place in subframes that overlap with ABS [9] of the aggressor cell with CRS assistance information. In Table 8.2.2.2.3A-1, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The downlink physical channel setup for Cell 1 is according to Annex C.3.2 and for Cell 2 and Cell 3 is according to Annex C.3.3, respectively. The CRS assistance information [7] includes Cell 2 and Cell 3.

Table 8.2.2.2.3A-1: Test Parameters for Transmit diversity Performance (FRC)

| Parameter |  | Unit | Cell 1 | Cell 2 | Cell 3 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Uplink downlink configuration |  |  | 1 | 1 | 1 |
| Special subframe configuration |  |  | 4 | 4 | 4 |
| Downlink power allocation | $\rho_{A}$ | dB | -3 | -3 | -3 |
|  | $\rho_{B}$ | dB | -3 (Note 1) | -3 (Note 1) | -3 (Note 1) |
|  | $\sigma$ | dB | 0 | N/A | N/A |

|  | $N_{o c 2}$ | dBm/15kHz | -98 (Note 3) | N/A | N/A |
|  | $N_{o c 3}$ | dBm/15kHz | -93 (Note 4) | N/A | N/A |
| $\hat{E}_{s} / N_{o c 2}$ |  | dB | Reference Value in Table 8.2.2.2.3A-2 | 12 | 10 |
| BW Channel |  | MHz | 10 | 10 | 10 |
| Subframe Configuration |  |  | Non-MBSFN | Non-MBSFN | Non-MBSFN |
| Time Offset between Cells |  | $\mu \mathrm{s}$ | N/A | 3 | -1 |
| Frequency shift between Cells |  | Hz | N/A | 300 | -100 |
| Cell Id |  |  | 0 | 126 | 1 |
| ABS pattern (Note 5) |  |  | N/A | $\begin{aligned} & 0000000001 \\ & 0000000001 \end{aligned}$ | $\begin{aligned} & 0000000001 \\ & 0000000001 \end{aligned}$ |
| RLM/RRM Measurement Subframe Pattern (Note 6) |  |  | $\begin{aligned} & 0000000001 \\ & 0000000001 \\ & \hline \end{aligned}$ | N/A | N/A |
| CSI Subframe Sets (Note7) | Ccss,0 |  | $\begin{aligned} & 0000000001 \\ & 0000000001 \end{aligned}$ | N/A | N/A |
|  | Ccsi,1 |  | $\begin{aligned} & 1100111000 \\ & 1100111000 \end{aligned}$ | N/A | N/A |
| Number of control OFDM symbols |  |  | 2 | Note 8 | Note 8 |
| ACK/NACK feedback mode |  |  | Multiplexing | N/A | N/A |
| PDSCH transmission mode |  |  | 2 | Note 9 | Note 9 |
| Cyclic prefix |  |  | Normal | Normal | Normal |

Note 1: $\quad P_{B}=1$.
Note 2: This noise is applied in OFDM symbols \#1, \#2, \#3, \#5, \#6, \#8, \#9, \#10, \#12, \#13 of a subframe overlapping with the aggressor ABS.
Note 3: This noise is applied in OFDM symbols \#0, \#4, \#7, \#11 of a subframe overlapping with the aggressor ABS.
Note 4: This noise is applied in all OFDM symbols of a subframe overlapping with aggressor non-ABS
Note 5: ABS pattern as defined in [9].
Note 6: Time-domain measurement resource restriction pattern for PCell measurements as defined in [7]
Note 7: As configured according to the time-domain measurement resource restriction pattern for CSI measurements defined in [7].
Note 8: The number of control OFDM symbols is not available for ABS and is 2 for the subframe indicated by " 0 " of ABS pattern.
Note 9: Downlink physical channel setup in Cell 2 and Cell 3 in accordance with Annex C.3.3 applying OCNG pattern as defined in Annex A.5.
Note 10: The number of the CRS ports in Cell 1, Cell 2 and Cell 3 is the same.
Note 11: SIB-1 will not be transmitted in Cell 2 and Cell 3 in this test.

Table 8.2.2.2.3A-2: Minimum Performance Transmit Diversity (FRC)

### 8.2.2.2.4 Enhanced Performance Requirement Type A-2 Tx Antenna Ports with TM3 interference model

The requirements are specified in Table 8.2.2.2.4-2, with the addition of parameters in Table 8.2.2.2.4-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of transmit diversity (SFBC) with 2 transmit antennas when the PDSCH transmission in the serving cell is interfered by PDSCH of two dominant interfering cells applying transmission mode 3 interference model defined in clause B.5.2. In Table 8.2.2.2.4-1, Cell 1 is the serving cell, and Cell 2,3 are interfering cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively.

Table 8.2.2.2.4-1: Test Parameters for Transmit diversity Performance (FRC) with TM3 interference model

| Parameter |  | Unit | Cell 1 | Cell 2 | Cell 3 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Downlink power allocation | $\rho_{A}$ | dB | -3 | -3 | -3 |
|  | $\rho_{B}$ | dB | -3 (Note 1) | -3 | -3 |
|  | $\sigma$ | dB | 0 | 0 | 0 |
| Cell-specific reference signals |  |  | Antenna ports 0,1 | $\begin{gathered} \text { Antenna ports } \\ 0,1 \end{gathered}$ | $\begin{gathered} \text { Antenna ports } \\ 0,1 \end{gathered}$ |
| $N_{o c}$ at antenna port |  | $\mathrm{dBm} / 15 \mathrm{kHz}$ | -98 | N/A | N/A |
| DIP (Note 2) |  | dB | N/A | -1.73 | -8.66 |
| BW Channel |  | MHz | 10 | 10 | 10 |

| Cyclic Prefix |  |  | Normal | Normal | Normal |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Cell Id |  |  | 0 | 1 | 2 |
| Number of control OFDM symbols |  |  | 2 | 2 | 2 |
| PDSCH transmission mode |  |  | 2 | N/A | N/A |
| Interference model |  |  | N/A | As specified in clause B.5.2 | As specified in clause B.5.2 |
| Probability of occurrence of transmission rank in interfering cells | Rank 1 | \% | N/A | 80 | 80 |
|  | Rank 2 | \% | N/A | 20 | 20 |
| Reporting interval |  | ms | 5 | N/A | N/A |
| Reporting mode |  |  | PUCCH 1-0 | N/A | N/A |
| ACK/NACK feedback mode |  |  | Multiplexing | N/A | N/A |
| Physical channel for CQI reporting |  |  | PUSCH(Note <br> 5) | N/A | N/A |
| cqi-pmi-ConfigurationIndex |  |  | 4 | N/A | N/A |
| Note 1: $\quad P_{B}=1$ |  |  |  |  |  |
| Note 2: The respective received power spectral density of each interfering cell relative to $N_{o c}{ }^{\prime}$ is defined by its associated DIP value as specified in clause B.5.1. |  |  |  |  |  |
| Note 3: Cell 1 is the serving cell. Cell 2,3 are the interfering cells. |  |  |  |  |  |
| Note 4: All cells are time-synchronous. |  |  |  |  |  |
| Note 5: To avoid collision instead of PUCCH periodic CQI to m | tween C <br> lex with |  | Q-ACK it is ne transmitted in USCH in uplin | sary to report b wnlink SF\#4 an subframe SF\#8 | on PUSCH \# to allow \# \#3. |

Table 8.2.2.2.4-2: Enhanced Performance Requirement Type A, Transmit Diversity (FRC) with TM3 interference model

| Test Number | Reference Channel | OCNG Pattern |  |  | Propagation Conditions |  |  | Correlation Matrix and Antenna Configurati on (Note 3) | Reference Value |  | UE Cate gory |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | $\begin{gathered} \hline \text { Cell } \\ 1 \end{gathered}$ | $\begin{gathered} \text { Cell } \\ 2 \end{gathered}$ | $\begin{gathered} \text { Cell } \\ 3 \end{gathered}$ | $\begin{gathered} \hline \text { Cell } \\ 1 \end{gathered}$ | $\begin{gathered} \text { Cell } \\ 2 \end{gathered}$ | $\begin{gathered} \hline \text { Cell } \\ 3 \end{gathered}$ |  | Fraction of Maximum Throughput (\%) | SINR <br> (dB) <br> (Note <br> 2) |  |
| 1 | R. 46 TDD | $\begin{gathered} \hline \text { OP. } \\ 1 \\ \text { TD } \\ D \end{gathered}$ | N/A | N/A | $\begin{gathered} \hline \text { EV } \\ \text { A70 } \end{gathered}$ | $\begin{gathered} \hline \text { EV } \\ \text { A70 } \end{gathered}$ | $\begin{gathered} \hline \text { EV } \\ \text { A70 } \end{gathered}$ | 2x2 Low | 70 | -1.4 | $\geq 1$ |

Note 1: The propagation conditions for Cell 1, Cell 2 and Cell 3 are statistically independent.
Note 2: $\quad$ SINR corresponds to $\widehat{E}_{s} / N_{o c}^{\prime}$ of Cell 1 as defined in clause 8.1.1.
Note 3: Correlation matrix and antenna configuration parameters apply for each of Cell 1, Cell 2 and Cell 3.

### 8.2.2.2.5 Minimum Requirement 2 Tx Antenna Port (when EIMTA-MainConfigServCell-r12 is configured)

The requirements are specified in Table 8.2.2.2.5-2 with the addition of the parameters in Table 8.2.2.2.5-1 and the downlink physical channel setup according to Annex C.3.2. The test purpose is to verify the performance of transmit diversity (SFBC) with 2 transmitter antennas in case of using eIMTA TDD UL-DL reconfiguration for TDD serving cell(s) via monitoring PDCCH with eIMTA-RNTI on a PCell.

Table 8.2.2.2.5-1: Test Parameters for Transmit diversity Performance (FRC) when EIMTA-MainConfigServCell-r12 is configured

| Parameter |  |  | Unit |
| :--- | :--- | :---: | :---: |
| Downlink power allocation | $\rho_{A}$ | dB | Value |
|  | $\rho_{B}$ | dB | -3 |
|  | $\sigma$ | dB | -3 (Note 1) |
| $N_{o c}$ at antenna port | $\mathrm{dBm} / 15 \mathrm{kHz}$ | 0 |  |
| Uplink downlink configuration in SIB1 (Note 2) |  | -98 |  |

| Downlink HARQ reference configuration (eimta- <br> HarqReferenceConfig-r12) (Note 2) |  | 5 |

### 8.2.2.2.6 Enhanced Performance Requirement Type B-2 Tx Antenna Ports with TM2 interference model

The requirements are specified in Table 8.2.2.2.6-2, with the addition of parameters in Table 8.2.2.2.6-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of transmit diversity (SFBC) with 2 transmit antennas when the PDSCH transmission in the serving cell is interfered by PDSCH of two interfering cells applying transmission mode 2 interference model defined in clause B.6.1. In Table 8.2.2.2.6-1, Cell 1 is the serving cell, and Cell 2, 3 are interfering cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively.

Table 8.2.2.2.6-1: Test Parameters for Transmit Diversity Performance (FRC) with TM2 interference model

| Parameter |  | Unit | Cell 1 | Cell 2 | Cell 3 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Uplink downlink Configuration |  |  | 1 | 1 | 1 |
| Special subframe configuration |  |  | 4 | 4 | 4 |

| TestNumber | Reference Channel | OCNG Pattern |  |  | Propagation Conditions |  |  | Correlation Matrix and Antenna Configurati on (Note 3) | Reference Value |  | UE Cate gory |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | $\begin{gathered} \hline \text { Cell } \\ 1 \end{gathered}$ | $\begin{gathered} \hline \text { Cell } \\ 2 \end{gathered}$ | $\begin{gathered} \hline \text { Cell } \\ 3 \end{gathered}$ | $\begin{gathered} \text { Cell } \\ 1 \end{gathered}$ | $\begin{gathered} \text { Cell } \\ 2 \end{gathered}$ | $\begin{gathered} \text { Cell } \\ 3 \end{gathered}$ |  | Fraction of Maximum Throughput (\%) | SNR <br> (dB) <br> (Note <br> 2) |  |
| 1 | $\begin{gathered} \text { R.11-12 } \\ \text { TDD } \end{gathered}$ | $\begin{gathered} \hline \text { OP. } \\ 1 \\ \text { TD } \\ D \end{gathered}$ | N/A | N/A | $\begin{aligned} & \text { EP } \\ & \text { A5 } \end{aligned}$ | $\begin{aligned} & \text { EP } \\ & \text { A5 } \end{aligned}$ | $\begin{aligned} & \text { EP } \\ & \text { A5 } \end{aligned}$ | 2x2 Low | 85 | 15.3 | $\geq 1$ |

Note 1: The propagation conditions for Cell 1, Cell 2 and Cell 3 are statistically independent.
Note 2: $\quad$ SNR corresponds to $\widehat{E}_{s} / N_{o c}$ of Cell 1 as defined in clause 8.1.1.
Note 3: Correlation matrix and antenna configuration parameters apply for each of Cell 1, Cell 2 and Cell 3.

### 8.2.2.2.7 Enhanced Performance Requirement Type B-2 Tx Antenna Ports with TM9 interference model

The requirements are specified in Table 8.2.2.2.7-2, with the addition of parameters in Table 8.2.2.2.7-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of transmit diversity (SFBC) with 2 transmit antennas when the PDSCH transmission in the serving cell is interfered by PDSCH of two interfering cells applying transmission mode 9 interference model defined in clause B.6.4. In Table 8.2.2.2.7-1, Cell 1 is the serving cell, and Cell 2, 3 are interfering cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively.

Table 8.2.2.2.7-1: Test Parameters for Transmit Diversity Performance (FRC) with TM9 interference model

| Parameter |  | Unit | Cell 1 | Cell 2 | Cell 3 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Uplink downlink Configuration |  |  | 1 | 1 | 1 |
| Special subframe configuration |  |  | 4 | 4 | 4 |
| Downlink power allocation | $\rho_{\text {A }}$ | dB | -3 | 0 | 0 |
|  | $\rho_{B}$ | dB | -3 (Note 1) | 0 | 0 |
|  | $\sigma$ | dB | 0 | -3 | -3 |
| Cell-specific reference signals |  |  | Antenna ports 0,1 | Antenna ports 0,1 | Antenna ports 0,1 |
| $N_{o c}$ at antenna port |  | $\mathrm{dBm} / 15 \mathrm{kHz}$ |  | -98 |  |

| $\widehat{E}_{s} / N_{o c}$ |  | dB | N/A | 3.28 | 0.74 |

| Note 1: <br> Note 2: <br> Note 3: | The propagation conditions for Cell 1, Cell 2 and Cell 3 are statistically independent. <br> SNR corresponds to $\widehat{E}_{s} / N_{o c}$ of Cell 1 as defined in clause 8.1.1. <br> Correlation matrix and antenna configuration parameters apply for each of Cell 1, Cell 2 and Cell 3. |  |  |  |  |  |  |  |  |  |  |

### 8.2.2.2.8 Minimum Requirement 2 Tx Antenna Port (Superposed transmission)

The requirements are specified in Table 8.2.2.2.8-2, with the addition of the parameters in Table 8.2.2.2.8-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the minimun performance of transmit diversity (SFBC) with 2 transmitter antennas superposed with simultaneous PDSCH interference.

## Table 8.2.2.2.8-1: Test Parameters for Minimum Requirement 2 Tx Antenna Port - Superposed

 transmission (FRC)| Parameter |  | Unit | Test 1-2 |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Downlink power allocation | $\rho_{A}$ | dB | -3 |
|  |  | $\rho_{B}$ | dB | -3 (Note 1) |
|  |  | $\sigma$ | dB | 0 |
|  | $N_{o c}$ at antenna port |  | $\mathrm{dBm} / 15 \mathrm{kHz}$ | -98 |
|  | ACK/NACK feedback mode |  |  | Multiplexing |
|  | PDSCH transmission mode |  |  | 2 |
|  | MUSTIdx (Note 2) |  |  | 11 |
|  | p-a-must-r14 (Note 3) |  |  | N/A |
|  | Note 1: $\quad P_{B}=1$ <br> Note 2: MUSTIdx is decribed in subclause 6.3.3 of [4]. <br> Note 3: p -a-must-r14 is decribed in subclause 6.3 .2 of [7]. |  |  |  |

Table 8.2.2.2.8-2: Minimum Performance for Minimum Requirement 2 Tx Antenna Port - Superposed transmission (FRC)

| Test number | $\begin{gathered} \text { Bandw } \\ \text { idth } \end{gathered}$ | Reference Channel | OCNG <br> Pattern | Propagation Condition | Correlation Matrix and Antenna Configuration | Reference value |  | UE Category |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  | Fraction of Maximum Throughput (\%) | $\begin{aligned} & \text { SNR } \\ & \text { (dB) } \end{aligned}$ |  |
| 1 | 10 MHz | R.aa TDD | OP. 1 TDD | EVA5 | 2x2 Low | 70 | 13.9 | $\geq 1$ |

### 8.2.2.3 Open-loop spatial multiplexing performance

### 8.2.2.3.1 Minimum Requirement 2 Tx Antenna Port

For single carrier, the requirements are specified in Table 8.2.2.3.1-2, with the addition of the parameters in Table 8.2.2.3.1-1 and the downlink physical channel setup according to Annex C.3.2.

For CA with 2 DL CCs, the requirements are specified in Table 8.2.2.3.1-4, with the addition of the parameters in Table 8.2.2.3.1-3 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of large delay CDD with 2 transmitter antennas.

For CA with 3 DL CCs, the requirements are specified in Table 8.2.2.3.1-7, based on single carrier requirement specified in Table 8.2.2.3.1-5, with the addition of the parameters in Table 8.2.2.3.1-3 and the downlink physical channel setup according to Annex C.3.2.

For CA with 4 DL CCs, the requirements are specified in Table 8.2.2.3.1-8, based on single carrier requirement specified in Table 8.2.2.3.1-5, with the addition of the parameters in Table 8.2.2.3.1-3 and the downlink physical channel setup according to Annex C.3.2.

For CA with 5 DL CCs, the requirements are specified in Table 8.2.2.3.1-9, based on single carrier requirement specified in Table 8.2.2.3.1-5, with the addition of the parameters in Table 8.2.2.3.1-3 and the downlink physical channel setup according to Annex C.3.2.

For CA with 6 DL CCs, the requirements are specified in Table 8.2.2.3.1-10, based on single carrier requirement specified in Table 8.2.2.3.1-5, with the addition of the parameters in Table 8.2.2.3.1-3 and the downlink physical channel setup according to Annex C.3.2.

For CA with 7 DL CCs, the requirements are specified in Table 8.2.2.3.1-11, based on single carrier requirement specified in Table 8.2.2.3.1-5, with the addition of the parameters in Table 8.2.2.3.1-3 and the downlink physical channel setup according to Annex C.3.2.

The test coverage for different number of component carriers is defined in 8.1.2.4.
Table 8.2.2.3.1-1: Test Parameters for Large Delay CDD (FRC)

| Parameter |  | Unit | Test 1-3 |
| :--- | :---: | :---: | :---: |
| Downlink power <br> allocation | $\rho_{A}$ | dB | -3 |
|  | $\rho_{B}$ | dB | $-3($ Note 1) |
|  | $\sigma$ | dB | 0 |
| $N_{o c}$ at antenna port |  | $\mathrm{dBm} / 15 \mathrm{kHz}$ | -98 |
| ACK/NACK feedback mode |  | Bundling |  |
| PDSCH transmission mode | 3 |  |  |
| Note 1: $\quad P_{B}=1$ <br> Note 2: $\quad$ Void. <br> Note 3: Void. |  |  |  |

Table 8.2.2.3.1-2: Minimum performance Large Delay CDD (FRC)

### 8.2.2.3.1C Enhanced Performance Requirement Type C-2 Tx Antenna Ports with TM1 interference

The requirements are specified in Table 8.2.2.3.1C-2, with the addition of parameters in Table 8.2.2.3.1C-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of open-loop spatial multiplexing performence with 2 transmit antennas when the PDSCH transmission in the serving cell is interfered by PDSCH of one dominant interfering cell with transmission mode 1. In Table 8.2.2.3.1C-1, Cell 1 is the serving cell, and Cell 2 is interfering cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1 and Cell 2 respectively.

Table 8.2.2.3.1C-1 Test parameters for Larger Delay CDD (FRC) with TM1 interference

| Parameter |  | Unit |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Bandwidth |  | MHz | 10 MHz |  |
| Downlink power allocation | $\rho_{A}$ | dB | -3 | 0 |
|  | $\rho_{B}$ |  | -3 (Note 1) | 0 |
|  | $\sigma$ |  | 0 | 0 |
| Cell-specific reference signals |  |  | Antenna ports 0,1 | Antenna port 0 |
| Cyclic Prefix |  |  | Normal | Normal |
| Cell ID |  |  | 0 | 1 |
| Transmission mode |  |  | 3 | Note 2 |
| $N_{o c}$ at antenna port |  | $\mathrm{dBm} / 15 \mathrm{kHz}$ | -98 | N/A |
| $\widehat{E}_{s} / N_{o c}($ Note 3) |  | dB | Reference Value in Table 8.2.2.3.1C-2 | 12.95 |
| Correlation and antenna configuration |  |  | Medium (2x2) | Medium(1x2) |
| Number of OFDM symbols for PDCCH |  |  | 2 | N/A |
| Max number of HARQ transmissions |  |  | 4 | N/A |

Table 8.2.2.3.1C-2 Enhanced Performance Requirement Type C, Larger Delay CDD (FRC) with TM1 interference

| Test Number | Reference Channel | OCNG Pattern |  | Propagation Conditions (Note 1) |  | Reference Value |  | UE Category |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Cell 1 | Cell 2 | Cell 1 | Cell 2 | Fraction of Maximum Throughput (\%) | SNR (dB) (Note 2) |  |
| 1 | $\begin{gathered} \text { R.11-10 } \\ \text { TDD } \\ \hline \end{gathered}$ | OP. 1 TDD | $\begin{aligned} & \text { OP. } 5 \\ & \text { TDD } \end{aligned}$ | EVA70 | EVA70 | 70 | 19.6 | $\geq 2$ |
| Note 1: <br> Note 2: | The propagation conditions for Cell 1 and Cell 2 are statistically independent. SNR corresponds to $\widehat{E}_{S} / N_{o c}$ of Cell 1. |  |  |  |  |  |  |  |

### 8.2.2.3.2 Minimum Requirement 4 Tx Antenna Port

The requirements are specified in Table 8.2.2.3.2-2, with the addition of the parameters in Table 8.2.2.3.2-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of large delay CDD with 4 transmitter antennas.

Table 8.2.2.3.2-1: Test Parameters for Large Delay CDD (FRC)

| Parameter |  | Unit | Test 1 |
| :---: | :---: | :---: | :---: |
| Downlink power <br> allocation | $\rho_{A}$ | dB | -6 |
|  | $\rho_{B}$ | dB | -6 (Note 1) |
|  | $\sigma$ | dB | 3 |
| $N_{o c}$ at antenna port |  |  |  |
| ACK/NACK feedback mode | $\mathrm{dBm} / 15 \mathrm{kHz}$ | -98 |  |
| PDSCH transmission mode | Bundling |  |  |
| Note 1: $\quad P_{B}=1$. |  |  |  |

8.2.2.3.3 $\begin{aligned} & \text { Minimum Requirement 2Tx antenna port (demodulation subframe overlaps with } \\ & \text { aggressor cell ABS) }\end{aligned}$

The requirements for non-MBSFN ABS are specified in Table 8.2.2.3.3-2, with the addition of parameters in Table 8.2.2.3.3-1 and the downlink physical channel setup according to Annex C.3.2 and Annex C.3.3.

The requirements for MBSFN ABS are specified in Table 8.2.2.3.3-4, with the addition of parameters in Table 8.2.2.3.3-3 and the downlink physical channel setup according to Annex C.3.2 and Annex C.3.3.

The purpose is to verify the performance of large delay CDD with 2 transmitter antennas if the PDSCH transmission in the serving cell takes place in subframes that overlap with ABS [9] of the aggressor cell. In Tables 8.2.2.3.3-1 and 8.2.2.3.3-3, Cell 1 is the serving cell, and Cell 2 is the aggressor cell. The downlink physical channel setup for Cell 1 is according to Annex C.3.2 and for Cell 2 is according to Annex C.3.3, respectively.

Table 8.2.2.3.3-1: Test Parameters for Large Delay CDD (FRC) - Non-MBSFN ABS

| Parameter |  | Unit | Cell 1 | Cell 2 |
| :---: | :---: | :---: | :---: | :---: |
| Uplink downlink configuration |  |  | 1 | 1 |

### 8.2.2.3.4 Minimum Requirement 2 Tx Antenna Port (demodulation subframe overlaps with aggressor cell ABS and CRS assistance information are configured)

The requirements for non-MBSFN ABS are specified in Table 8.2.2.3.4-2, with the addition of parameters in Table 8.2.2.3.4-1. The purpose is to verify the performance of large delay CDD with 2 transmitter antennas if the PDSCH transmission in the serving cell takes place in subframes that overlap with ABS [9] of the aggressor cell with CRS assistance information. In Table 8.2.2.3.4-1, Cell 1 is the serving cell, and Cell 2 and Cell3 are the aggressor cells. The downlink physical channel setup for Cell 1 is according to Annex C.3.2 and for Cell 2 and Cell 3 is according to Annex C.3.3, respectively. The CRS assistance information [7] includes Cell 2 and Cell 3.

Table 8.2.2.3.4-1: Test Parameters for Large Delay CDD (FRC) - Non-MBSFN ABS

| Parameter |  | Unit | Cell 1 | Cell 2 | Cell 3 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Uplink downlink configuration |  | 1 | 1 | 1 |  |

Note 1: The propagation conditions for Cell 1, Cell 2 and Cell 3 are statistically independent.
Note 2: The correlation matrix and antenna configuration apply for Cell 1, Cell 2 and Cell 3.
Note 3: $\quad$ SNR corresponds to $\widehat{E}_{s} / N_{o c 2}$ of cell 1.
Note 4: Cell 1 Reference channel is modified: PDSCH other than SIB1/paging and its associated PDCCH/PCFICH are transmitted in the serving cell subframe when the subframe is overlapped with the ABS subframe of aggressor cell and the subframe is available in the definition of the reference channel.
Note 5: The maximum Throughput is calculated from the total Payload in 2 subframes, averaged over 20 ms.

### 8.2.2.3.5 Minimum Requirement 2 Tx Antenna Port (Superposed transmission)

The requirements are specified in Table 8.2.2.3.5-2, with the addition of the parameters in Table 8.2.2.3.5-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the minimun performance of openloop spatial multiplexing with 2 transmitter antennas superposed with simultaneous PDSCH interference.

Table 8.2.2.3.5-1: Test Parameters for Minimum Requirement 2 Tx Antenna Port - Superposed
transmission (FRC)

| Parameter |  | Unit | Test 1 |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Downlink power allocation | $\rho_{A}$ | dB | 0 |
|  |  | $\rho_{B}$ | dB | 0 (NOTE 1) |
|  |  | $\sigma$ | dB | 0 |
|  |  | PDSCH_RA | dB | -3 |
|  |  | PDSCH_RB | dB | -3 |
|  | $N_{o c}$ at antenna port |  | $\mathrm{dBm} / 15 \mathrm{kHz}$ | -98 |

### 8.2.2.3.6 Minimum Requirement 2 Tx Antenna Port (network-based CRS interference mitigation)

The requirements are specified in Table 8.2.2.3.6-2, with the addition of parameters in Table 8.2.2.3.6-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of open-loop spatial multiplexing performence with 2 transmit antennas when the PDSCH transmission in the serving cell is interfered by CRS of one dominant interfering cell with network-based CRS interference mitigation. In Table 8.2.2.3.6-
1, Cell 1 is the serving cell, and Cell 2 is interfering cell. The downlink physical channel setup is according to Annex
C.3.2 for each of Cell 1 and Cell 2 respectively.

Table 8.2.2.3.6-1: Test parameters for Larger Delay CDD (FRC) with network-based CRS interference mitigation

|  |  | Unit | Cell 1 | Cell 2 |
| :---: | :---: | :---: | :---: | :---: |
| Parameter |  | MHz | 10 MHz |  |

### 8.2.2.4 Closed-loop spatial multiplexing performance

### 8.2.2.4.1 Minimum Requirement Single-Layer Spatial Multiplexing 2 Tx Antenna Port

The requirements are specified in Table 8.2.2.4.1-2, with the addition of the parameters in Table 8.2.2.4.1-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the closed loop rankone performance with wideband and frequency selective precoding.

Table 8.2.2.4.1-1: Test Parameters for Single-Layer Spatial Multiplexing (FRC)

| Parameter |  | Unit | Test 1 | Test 2 |
| :---: | :---: | :---: | :---: | :---: |

### 8.2.2.4.1B Enhanced Performance Requirement Type A - Single-Layer Spatial Multiplexing 2 Tx Antenna Port with TM4 interference model

The requirements are specified in Table 8.2.2.4.1B-2, with the addition of the parameters in Table 8.2.2.4.1B-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the closed loop rankone performance with wideband precoding with two transmit antennas when the PDSCH transmission in the serving cell is interfered by PDSCH of two dominant interfering cells applying transmission mode 4 interference model defined in clause B.5.3. In Table 8.2.2.4.1B-1, Cell 1 is the serving cell, and Cell 2, 3 are interfering cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively.

Table 8.2.2.4.1B-1: Test Parameters for Single-Layer Spatial Multiplexing (FRC) with TM4 interference model

| Parameter |  | Unit | Cell 1 | Cell 2 | Cell 3 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Downlink power allocation | $\rho_{A}$ | dB | -3 | -3 | -3 |
|  | $\rho_{B}$ | dB | $-3($ Note 1) | -3 | -3 |
|  | $\sigma$ | dB | 0 | 0 | 0 |
| Cell-specific reference signals |  | Antenna ports <br> 0,1 | Antenna ports <br> 0,1 | Antenna ports <br> 0,1 |  |
| $N_{\text {oc }}$ at antenna port | $\mathrm{dBm} / 15 \mathrm{kHz}$ | -98 | $\mathrm{~N} / \mathrm{A}$ | $\mathrm{N} / \mathrm{A}$ |  |
| DIP (Note 2) | dB | $\mathrm{N} / \mathrm{A}$ | -1.73 | -8.66 |  |
| BWChannel | MHz | 10 | 10 | 10 |  |
| Cyclic Prefix |  |  | Normal | Normal | Normal |
| Cell Id |  | 0 | 1 | 2 |  |
| Number of control OFDM symbols |  | 2 | 2 | 2 |  |
| PDSCH transmission mode |  | 6 | $\mathrm{~N} / \mathrm{A}$ | $\mathrm{N} / \mathrm{A}$ |  |

| Interference model |  |  | N/A | As specified in clause B.5.3 | As specified in clause B.5.3 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Probability of occurrence of transmission rank in interfering cells | Rank 1 | \% | N/A | 80 | 80 |
|  | Rank 2 | \% | N/A | 20 | 20 |
| Precoding granularity |  | PRB | 50 | 6 | 6 |
| PMI delay (Note 4) |  | ms | 10 or 11 | N/A | N/A |
| Reporting interval |  | ms | 5 | N/A | N/A |
| Reporting mode |  |  | PUCCH 1-1 | N/A | N/A |
| CodeBookSubsetRestriction bitmap |  |  | 1111 | N/A | N/A |
| ACK/NACK feedback mode |  |  | Multiplexing | N/A | N/A |
| Physical channel for CQI reporting |  |  | $\begin{aligned} & \text { PUSCH(Note } \\ & 6 \text { ) } \end{aligned}$ | N/A | N/A |
| cqi-pmi-ConfigurationIndex |  |  | 4 | N/A | N/A |

Note 1: $\quad P_{B}=1$
Note 2: The respective received power spectral density of each interfering cell relative to $N_{o c}{ }^{\prime}$ ' is defined by its associated DIP value as specified in clause B.5.1.
Note 3: Cell 1 is the serving cell. Cell 2, 3 are the interfering cells.
Note 4: If the UE reports in an available uplink reporting instance at subrame SF\#n based on PMI estimation at a downlink SF not later than SF\#(n-4), this reported PMI cannot be applied at the eNB downlink before SF\#(n+4).
Note 5: All cells are time-synchronous.
Note 6: To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF\#4 and \#9 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF\#8 and \#3.

Table 8.2.2.4.1B-2: Enhanced Performance Requirement Type A, Single-Layer Spatial Multiplexing (FRC) with TM4 interference model

| Test Number | Reference Channel | OCNG Pattern |  |  | Propagation Conditions |  |  | Correlation Matrix and Antenna Configurati on (Note 3) | Reference Value |  | UE Cate gory <br> gory |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | $\begin{gathered} \hline \text { Cell } \\ 1 \end{gathered}$ | $\begin{gathered} \text { Cell } \\ 2 \end{gathered}$ | $\begin{gathered} \hline \text { Cell } \\ 3 \end{gathered}$ | $\begin{gathered} \hline \text { Cell } \\ 1 \end{gathered}$ | $\begin{gathered} \text { Cell } \\ 2 \end{gathered}$ | $\begin{gathered} \hline \text { Cell } \\ 3 \end{gathered}$ |  | Fraction of Maximum Throughput (\%) | SINR <br> (dB) <br> (Note <br> 2) |  |
| 1 | R. 47 TDD | $\begin{gathered} \text { OP. } \\ 1 \\ \text { TD } \\ D \end{gathered}$ | N/A | N/A | $\begin{aligned} & \text { EV } \\ & \text { A5 } \end{aligned}$ | $\begin{aligned} & \text { EV } \\ & \text { A5 } \end{aligned}$ | $\begin{aligned} & \text { EV } \\ & \text { A5 } \end{aligned}$ | 2x2 Low | 70 | 1.1 | $\geq 1$ |

Note 1: The propagation conditions for Cell 1, Cell 2 and Cell 3 are statistically independent.
Note 2: $\quad$ SINR corresponds to $\widehat{E}_{s} / N_{o c}{ }^{\prime}$ ' of Cell 1 as defined in clause 8.1.1.
Note 3: Correlation matrix and antenna configuration parameters apply for each of Cell 1, Cell 2 and Cell 3.
8.2.2.4.1C Minimum Requirement Single-Layer Spatial Multiplexing 2 Tx Antenna Ports (demodulation subframe overlaps with aggressor cell ABS and CRS assistance information are configured)

The requirements are specified in Table 8.2.2.4.1C-2, with the addition of parameters in Table 8.2.2.4.1C-1. The purpose is to verify the closed loop rank-one performance with wideband precoding if the PDSCH transmission in the serving cell takes place in subframes that overlap with ABS [9] of the aggressor cell with CRS assistance information. In Table 8.2.2.4.1 C-1, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The downlink physical channel setup for Cell 1 is according to Annex C.3.2 and for Cell 2 and Cell 3 is according to Annex C.3.3, respectively. The CRS assistance information [7] includes Cell 2 and Cell 3.

Table 8.2.2.4.1C-1: Test Parameters for Single-Layer Spatial Multiplexing (FRC) - Non-MBSFN ABS

Note 1: The propagation conditions for Cell 1, Cell 2 and Cell 3 are statistically independent.
Note 2: The correlation matrix and antenna configuration apply for Cell 1, Cell 2 and Cell 3.
Note 3: $\quad$ SNR corresponds to $\widehat{E}_{s} / N_{o c 2}$ of cell 1.
Note 4: Cell 1 Reference channel is modified: PDSCH other than SIB1/paging and its associated PDCCH/PCFICH are transmitted in the serving cell subframe when the subframe is overlapped with the ABS subframe of aggressor cell and the subframe is available in the definition of the reference channel.
Note 5: The maximum Throughput is calculated from the total Payload in 2 subframes, averaged over 20 ms.

### 8.2.2.4.1D Enhanced Performance Requirement Type B - Single-layer Spatial Multiplexing 2 Tx Antenna Port with TM4 interference model

The requirements are specified in Table 8.2.2.4.1D-2, with the addition of the parameters in Table 8.2.2.4.1D-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the closed loop rankone performance with wideband precoding with two transmit antennas when the PDSCH transmission in the serving cell is interfered by PDSCH of two interfering cells applying transmission mode 4 interference model defined in clause B.6.3. In Table 8.2.2.4.1D-1, Cell 1 is the serving cell, and Cell 2, 3 are interfering cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively.

Table 8.2.2.4.1D-1: Test Parameters for Single-layer Spatial Multiplexing (FRC) with TM4 interference model

| Parameter |  | Unit | Cell 1 | Ce |  |  |  |

Note 1: The propagation conditions for Cell 1 , Cell 2 and Cell 3 are statistically independent.
Note 2: $\quad$ SNR corresponds to $\hat{E}_{s} / N_{o c}$ of Cell 1 as defined in clause 8.1.1.
Note 3: Correlation matrix and antenna configuration parameters apply for each of Cell 1, Cell 2 and Cell 3.

### 8.2.2.4.1E Minimum Requirement Single-Layer Spatial Multiplexing 2 Tx Antenna Ports with CRS assistance information

The requirements are specified in Table 8.2.2.4.1E-2, with the addition of parameters in Table 8.2.2.4.1E-1. The purpose is to verify the closed loop rank-one performance with wideband precoding when CRS assistance information [7] is configured. In Table 8.2.2.4.1E-1, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively. The CRS assistance information [7] includes Cell 2 and Cell 3.

Table 8.2.2.4.1E-1: Test Parameters for Single-Layer Spatial Multiplexing (FRC)

Note 1: The propagation conditions for Cell 1, Cell 2 and Cell 3 are statistically independent.
Note 2: The correlation matrix and antenna configuration apply for Cell 1, Cell 2 and Cell 3.
Note 3: $\quad$ SNR corresponds to $\widehat{\mathrm{E}}_{\mathrm{s}} / N_{o c}$ of cell 1.

### 8.2.2.4.1F Minimum Requirement Single-Layer Spatial Multiplexing 4 Tx Antenna Ports with CRS assistance information

The requirements are specified in Table 8.2.2.4.1F-2, with the addition of parameters in Table 8.2.2.4.1F-1. In Table 8.2.2.4.1F-1, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively. The CRS assistance information [7] is provided to the UE and includes information on Cell 2 and Cell 3.

The purpose of the test is to verify the closed loop single layer TM4 performance under assumption that UE applies CRS interference mitigation in the scenario with 4 CRS antenna ports in the serving and aggressor cells.

Table 8.2.2.4.1F-1: Test Parameters

| Parameter | Unit | Cell 1 | Cell 2 | Cell 3 |
| :---: | :---: | :---: | :---: | :---: |
| Uplink downlink configuration |  | 1 | 1 | 1 |
| Special subframe configuration |  | 4 | 4 | 4 |
|  | $\rho_{A}$ | dB | -6 | -6 |

| Downlink power allocation | $\rho_{B}$ | dB | -6 (Note 1) | -6 (Note 1) | -6 (Note 1) |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\sigma$ | dB | 3 | 3 | 3 |
| $N_{o c}$ at antenna port |  | dBm/15kHz | -98 | N/A | N/A |
| $\hat{E}_{s} / N_{o c}$ |  | dB | Reference Value in Table 8.2.2.4.1F-2 | 10.45 | 4.6 |
| BW Channel |  | MHz | 10 | 10 | 10 |
| Cyclic prefix |  |  | Normal | Normal | Normal |
| Subframe Configuration |  |  | Non-MBSFN | Non-MBSFN | Non-MBSFN |

Note 1: The propagation conditions for Cell 1, Cell 2 and Cell 3 are statistically independent.
Note 2: The correlation matrix and antenna configuration apply for Cell 1, Cell 2 and Cell 3.
Note 3: $\quad$ SNR corresponds to $\widehat{E}_{s} / N_{o c}$ of cell 1.

### 8.2.2.4.2 Minimum Requirement Multi-Layer Spatial Multiplexing 2 Tx Antenna Port

The requirements are specified in Table 8.2.2.4.2-2, with the addition of the parameters in Table 8.2.2.4.2-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the closed loop ranktwo performance with wideband and frequency selective precoding.

Table 8.2.2.4.2-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC)

| Parameter | Unit | Test 1-2 | Test 3 |
| :---: | :---: | :---: | :---: |

| Downlink power <br> allocation | $\rho_{A}$ | dB | -3 | -3 |
| :---: | :---: | :---: | :---: | :---: |
|  | $\rho_{B}$ | dB | -3 (Note 1) | -3 (Note 1) |
|  | $\sigma$ | dB | 0 | 0 |
| $N_{o c}$ at antenna port | $\mathrm{dBm} / 15 \mathrm{kHz}$ | -98 | -98 |  |
| Precoding granularity | PRB | 50 | 8 |  |
| PMI delay (Note 2) | ms | 10 or 11 | 10 or 11 |  |
| Reporting interval | ms | 1 or 4 (Note 3) | 1 or 4 (Note 3) |  |
| Reporting mode |  | PUSCH 3-1 | PUSCH 1-2 |  |
| ACK/NACK feedback mode | Bundling | Bundling |  |  |
| CodeBookSubsetRestriction |  |  |  |  |
| bitmap |  |  |  |  |$\quad 110000 \quad 110000$

Table 8.2.2.4.2-2: Minimum performance Multi-Layer Spatial Multiplexing (FRC)

| Test <br> number | Band- <br> width | Reference <br> Channel | OCNG <br> Pattern | Propagation <br> Condition | Correlation <br> Matrix and <br> Antenna <br> Configuration | Reference value | Craction of <br> Maximum <br> Throughput <br> (\%) | UNR <br> (dB) | UE DL <br> Category <br> category |

### 8.2.2.4.2A Enhanced Performance Requirement Type C Multi-Layer Spatial Multiplexing 2 Tx Antenna Port

The requirements are specified in Table 8.2.2.4.2A-2, with the addition of the parameters in Table 8.2.2.4.2A-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the closed loop ranktwo performance with wideband precoding.

Table 8.2.2.4.2A-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC)

| Parameter |  | Unit | Test 1 |
| :---: | :---: | :---: | :---: |
| Downlink power <br> allocation | $\rho_{A}$ | dB | -3 |
|  | $\rho_{B}$ | dB | $-3($ Note 1) |
|  | $\sigma$ | dB | 0 |
| $N_{o c}$ at antenna port | $\mathrm{dBm} / 15 \mathrm{kHz}$ | -98 |  |
| Precoding granularity |  | PRB | 50 |
| PMI delay (Note 2) | ms | 10 or 11 |  |
| Reporting interval | ms | 1 or 4 (Note 3) |  |
| Reporting mode |  | PUSCH 3-1 |  |
| ACK/NACK feedback mode |  | Bundling |  |
| CodeBookSubsetRestriction <br> bitmap |  | 110000 |  |
| PDSCH transmission mode |  | 4 |  |

Note 2: If the UE reports in an available uplink reporting instance at
subrame SF\#n based on PMI estimation at a downlink SF
not later than SF\#(n-4), this reported PMI cannot be
applied at the eNB downlink before SF\#( $n+4$ ).

Note 3: For Uplink - downlink configuration 1 the reporting interval will alternate between 1 ms and 4 ms .

Table 8.2.2.4.2A-2: Enhanced Performance Requirement Type C for Multi-Layer Spatial Multiplexing (FRC)

| Test <br> number | Band- <br> width | Reference <br> Channel | OCNG <br> Pattern | Propagation <br> Condition | Correlation <br> Matrix and <br> Antenna <br> Configuration | Reference value | Fraction of <br> Maximum <br> Throughput <br> (\%) | SNR <br> (dB) | Category |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 10 MHz | R.11-1 TDD | OP.1 TDD | ETU70 | $2 \times 2$ Medium | 70 | 17.8 | $\geq 2$ |  |

### 8.2.2.4.3 Minimum Requirement Multi-Layer Spatial Multiplexing 4 Tx Antenna Port

For single carrier, the requirements are specified in Table 8.2.2.4.3-2, with the addition of the parameters in Table 8.2.2.4.3-1 and the downlink physical channel setup according to Annex C.3.2.

For CA with 2 DL CCs, the requirements are specified in Table 8.2.2.4.3-4, with the addition of the parameters in Table 8.2.2.4.3-3 and the downlink physical channel setup according to Annex C.3.2.The purpose of these tests is to verify the closed loop rank-two performance with wideband and frequency selective precoding.

For CA with 3 DL CCs, the requirements are specified in Table 8.2.2.4.3-7, based on single carrier requirement specified in Table 8.2.2.4.3-5, with the addition of the parameters in Table 8.2.2.4.3-3 and the downlink physical channel setup according to Annex C.3.2.

For CA with 4 DL CCs, the requirements are specified in Table 8.2.2.4.3-8, based on single carrier requirement specified in Table 8.2.2.4.3-5, with the addition of the parameters in Table 8.2.2.4.3-3 and the downlink physical channel setup according to Annex C.3.2.

For CA with 5 DL CCs, the requirements are specified in Table 8.2.2.4.3-9, based on single carrier requirement specified in Table 8.2.2.4.3-5, with the addition of the parameters in Table 8.2.2.4.3-3 and the downlink physical channel setup according to Annex C.3.2.

For CA with 6 DL CCs, the requirements are specified in Table 8.2.2.4.3-10, based on single carrier requirement specified in Table 8.2.2.4.3-5, with the addition of the parameters in Table 8.2.2.4.3-3 and the downlink physical channel setup according to Annex C.3.2.

For CA with 7 DL CCs, the requirements are specified in Table 8.2.2.4.3-11, based on single carrier requirement specified in Table 8.2.2.4.3-5, with the addition of the parameters in Table 8.2.2.4.3-3 and the downlink physical channel setup according to Annex C.3.2.

The test coverage for different number of component carriers is defined in 8.1.2.4.
Table 8.2.2.4.3-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC)

| Parameter |  | Unit | Test 1 |
| :---: | :---: | :---: | :---: |
| Downlink power <br> allocation | $\rho_{A}$ | dB | -6 |
|  | $\rho_{B}$ | dB | -6 (Note 1) |
|  | $\sigma$ | dB | 3 |

### 8.2.2.4.3A Minimum Requirement Multi-Layer Spatial Multiplexing 4 Tx Antenna Port for dual connectivity

For dual connectivity the requirements are specified in Table 8.2.2.4.3A-3, for 2DL CCs, in Table 8.2.2.4.3A-4 for 3DL CCs, and Table 8.2.2.4.3A-5 for 4DL CCs, based on single carrier requirement specified in Table 8.2.2.4.3A-2, with the addition of the parameters in Table 8.2.2.4.3A-1 and the downlink physical channel setup according to Annex C.3.2.The purpose of these tests is to verify the closed loop rank-two performance with wideband and frequency selective precoding by using dual connectivity.

Table 8.2.2.4.3A-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC) for dual connectivity

| Parameter |  | Unit | Value |
| :--- | :--- | :---: | :---: |
| Downlink power <br> allocation | $\rho_{A}$ | dB | -6 |
|  | $\rho_{B}$ | dB | -6 (Note 1) |

Note 1: $\quad P_{B}=1$.
Note 2: If the UE reports in an available uplink reporting instance at subrame SF\#n based on PMI estimation at a downlink SF not later than SF\#(n-4), this reported PMI cannot be applied at the eNB downlink before SF\#( $n+4$ )
Note 3: For Uplink - downlink configuration 1 the reporting interval will alternate between 1 ms and 4 ms .
Note 4: The same PDSCH transmission mode is applied to each component carrier.
Note 5: As defined in TS36.300 [11].
Note 6: If the UE supports both SCG bearer and Split bearer, the SCG bearer is configured.

Table 8.2.2.4.3A-2: Single carrier performance for multiple dual connectivity configurations

| Bandwidth | Reference channel | OCNG pattern | Propagation condition | Correlation matrix and antenna config. | Reference value |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

### 8.2.2.4.4 Void

8.2.2.4.5 Minimum Requirement Multi-Layer Spatial Multiplexing 2 Tx Antenna Port (Superposed transmission)

The requirements are specified in Table 8.2.2.4.5-2, with the addition of the parameters in Table 8.2.2.4.5-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the minimun performance of closed-loop spatial multiplexing with 2 transmitter antennas superposed with simultaneous PDSCH interference.

Table 8.2.2.4.5-1: Test Parameters for Minimum Requirement Multi-Layer Spatial Multiplexing 2 Tx Antenna Port - Superposed transmission (FRC)

| Parameter |  | Unit | Test 1 |
| :--- | :---: | :---: | :---: |
| Downlink <br> power <br> allocation | $\rho_{A}$ | dB | 0 |
|  | $\rho_{B}$ | dB | 0 (NOTE 1) |
|  | $\sigma$ | dB | 0 |
|  | PDSCH_RA | dB | -3 |
| $N_{o c}$ at antenna port | dB | -3 |  |
| ACK/NACK feedback mode | $\mathrm{dBm} / 15 \mathrm{kHz}$ | -98 |  |
| PDSCH transmission mode |  | Multiplexing |  |
| Precoding | Random wideband <br> precoding per TTI |  |  |
| MUSTIdx for transport block 1 <br> (Note 2) |  | 10 |  |
| MUSTIdx for transport block 2 <br> (Note 2) |  | 00 |  |
| p-a-must-r14 (Note 3) |  | -3 |  |
| Note 1: <br> Note 2:$\quad$MUSTIdx is decribed in subclause 6.3.3 of [4]. <br> Note 3: <br> p-a-must-r14 is decribed in subclause 6.3.2 of [7]. |  |  |  |

| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

### 8.2.2.5 MU-MIMO

8.2.2.6 [Control channel performance: D-BCH and PCH]

### 8.2.2.7 Carrier aggregation with power imbalance

The requirements in this section verify the ability of an intraband adjacent carrier aggregation UE to demodulate the signal transmitted by the PCell or SCell in the presence of a stronger SCell or PCell signal on an adjacent frequency. Throughput is measured on the PCell or SCell only.

### 8.2.2.7.1 Minimum Requirement

For CA, the requirements are specified in Table 8.2.2.7.1-2, with the addition of the parameters in Table 8.2.2.7.1-1 and the downlink physical channel setup according to Annex C.3.2.

Table 8.2.2.7.1-1: Test Parameters for CA

| Parameter |  | Unit | Test 1 | Test 2 |
| :---: | :---: | :---: | :---: | :---: |
| Downlink power allocation | $\rho_{A}$ | dB | 0 | 0 |
|  | $\rho_{B}$ | dB | 0 (Note 1) | 0 (Note 1) |
|  | $\sigma$ | dB | 0 | 0 |
| $N_{o c}$ at antenna port |  | dBm/15kHz | Off (Note 2) | Off (Note 2) |
| Symbols for unused PRBs |  |  | OCNG (Note 3) | OCNG (Note 3) |
| Modulation <br> Maximum number of HARQ transmission |  |  | 64 QAM | 64 QAM |
|  |  |  | 1 | 1 |
| Redundancy version coding sequence |  |  | \{0\} | \{0\} |
| PDSCH transmission mode of PCell |  |  | 1 | 3 |
| PDSCH transmission mode of SCell |  |  | 3 | 1 |
| OCNG Pattern | PCell |  | OP. 1 TDD | OP. 5 TDD |
|  | SCell |  | OP. 5 TDD | OP. 1 TDD |
| Propagation Conditions | PCell |  | Clause B. 1 | Clause B. 1 |
|  | SCell |  | Clause B. 1 | Clause B. 1 |
| Correlation Matrix and Antenna | PCell |  | 1x2 | 2x2 |
|  | SCell |  | 2x2 | $1 \times 2$ |

Note 1: $\quad P_{B}=0$ for $1 \times 2$ and $P_{B}=1$ for $2 \times 2$ antenna configuration.
Note 2: $\quad$ No external noise sources are applied.
Note 3: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data.
Note 4: Void.

Table 8.2.2.7.1-2: Minimum performance (FRC) for CA

| Test <br> Number | Bandwidth (MHz) |  | Reference channel |  |  | Power at antenna <br> port (dBm/15KHz) |  | Reference value <br> Fraction of Maximum <br> Throughput (\%) | UE <br> Category |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | PCell | SCell | PCell | SCell | $\hat{E}_{s_{-} \text {Pcell }}$ <br> for PCell | $\hat{E}_{s_{-} \text {Scell }}$ <br> for Scell | PCell | SCell |  |
| 1 | 20 | 20 | R.49 TDD | NA | -85 | -79 | 85 | NA | $\geq 5$ |
| 2 | 20 | 15 | NA | R.49-1 TDD | -79 | -85.8 | NA | 85 | $\geq 5$ |

Note 1: The OCNG pattern for PCell is used to fill the control channel. The OCNG pattern for SCell is used to fill the control channel and PDSCH.
Note 2: The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 8.1.2.3.

### 8.2.2.8 Intra-band contiguous carrier aggregation with minimum channel spacing

The requirements in this section verify the ability of an UE supporting intraband contiguous carrier aggregation with minimum channel spacing to demodulate the signal transmitted by the PCell and SCell(s). Throughput is measured on each cell. The minimum channel spacing of intra-band contiguous carrier aggregation refers to the possible minimum channel spacing as any multiple of 300 kHz less than the nominal channel spacing defined in 5.7.1A.

### 8.2.2.8.1 Minimum Requirement

For CA the requirements are specified in Table 8.2.2.8.1-2, with the addition of the parameters in Table 8.2.2.8.1-1 and the downlink physical channel setup according to Annex C.3.2.

Table 8.2.2.8.1-1: Test Parameters for CA

| Parameter |  | Unit | Test 1-2 |
| :--- | :--- | :---: | :---: |
| Downlink <br> power <br> allocation | $\rho_{A}$ | dB | 0 |
|  | $\rho_{B}$ | dB | 0 (Note 1) |
|  | $\sigma$ | dB | 0 |
| $N_{o c}$ at antenna port | $\mathrm{dBm} / 15 \mathrm{kHz}$ | -98 |  |
| Symbols for unused PRBs |  | OCNG (Note 2) |  |
| Modulation |  | 64 QAM |  |
| ACK/NACK feedback mode | PUCCH format 1b with channel selection <br> for Test 1; PUCCH format 3 for Test 2 |  |  |
| PDSCH transmission mode | 1 |  |  |
| Note 1: <br> Note 2:$\quad$$P_{B}=0$ <br> These physical resource blocks are assigned to an arbitrary number of virtual UEs with one <br> PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated <br> pseudo random data, which is QPSK modulated. |  |  |  |
| Note 3:The same PDSCH transmission mode is applied to each component carrier. |  |  |  |

Table 8.2.2.8.1-2: Minimum performance (FRC) for intra-band CA with minimum channel spacing

| Test numbe r | $\begin{aligned} & \text { Bandwidt } \\ & \mathrm{h} \end{aligned}$ | Referenc e Channel | OCNG Pattern | Propagatio n Condition | Correlation Matrix and Antenna Configurati on | Reference value |  | $\begin{gathered} \text { UE } \\ \text { Categor } \end{gathered}$$y$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  | Fraction of Maximum Throughput (\%) | $\begin{aligned} & \hline \text { SNR } \\ & \text { (dB) } \end{aligned}$ |  |
| 1 | $2 \times 20 \mathrm{MHz}$ | R. 9 TDD | OP. 1 TDD (Note 1) | EVA5 | 1x2 Low | 70 | 17.16 | $\geq 5$ |
|  |  | R. 9 TDD | OP. 1 TDD (Note 1) |  |  | 70 | 17.16 |  |
| 2 | $3 \times 20 \mathrm{MHz}$ | R. 9 TDD | OP. 1 TDD (Note 1) | EVA5 | 1x2 Low | 70 | 17.16 | $\geq 5$ |
|  |  | R. 9 TDD | OP. 1 TDD (Note 1) |  |  | 70 | 17.16 |  |
|  |  | R. 9 TDD | $\begin{aligned} & \text { OP. } 1 \text { TDD } \\ & \text { (Note 1) } \\ & \hline \end{aligned}$ |  |  | 70 | 17.16 |  |

Note 1: The OCNG pattern applies for each CC.
Note 2: The applicability and test rules of requirements for different CA configurations and bandwidth combination sets are defined in 8.1.2.3.

### 8.2.2.9 HST-SFN performance

### 8.2.2.9.1 Minimum Requirement

The purpose of this test is to verify UE performance in the HST-SFN scenario defined in B.3A when highSpeedEnhancedDemodulationFlag [7] is received.

For single carrier, the requirements are specified in Table 8.2.2.9.1-2, with the addition of the parameters in Table 8.2.2.9.1-1 and the downlink physical channel setup according to Annex C.3.2.

For CA with 2 DL CCs, the requirements are specified in Table 8.2.2.9.1-5, based on single carrier requirement specified in Table 8.2.2.9.1-4, with the addition of the parameters in Table 8.2.2.9.1-3 and the downlink physical channel setup according to Annex C.3.2.

For CA with 3 DL CCs, the requirements are specified in Table 8.2.2.9.1-6, based on single carrier requirement specified in Table 8.2.2.9.1-4, with the addition of the parameters in Table 8.2.2.9.1-3 and the downlink physical channel setup according to Annex C.3.2.

For CA with 4 DL CCs, the requirements are specified in Table 8.2.2.9.1-7, based on single carrier requirement specified in Table 8.2.2.9.1-4, with the addition of the parameters in Table 8.2.2.9.1-3 and the downlink physical channel setup according to Annex C.3.2.

For CA with 5 DL CCs, the requirements are specified in Table 8.2.2.9.1-8, based on single carrier requirement specified in Table 8.2.2.9.1-4, with the addition of the parameters in Table 8.2.2.9.1-3 and the downlink physical channel setup according to Annex C.3.2.

The test coverage for different number of component carriers is defined in 8.1.2.4.
Table 8.2.2.9.1-1: Test Parameters for UE performance in HST-SFN scenario (FRC)

| Parameter |  | Unit | Test 1 |
| :--- | :--- | :--- | :--- |
| Downlink power <br> allocation | $\rho_{A}$ | dB | -3 |
|  | $\rho_{B}$ | dB | -3 (NOTE 1) |
|  | $\sigma$ | dB | 0 |
| $N_{o c}$ at antenna port | $\mathrm{dBm} / 15 \mathrm{kHz}$ | -98 |  |
| ACK/NACK feedback mode |  | Multiplexing |  |
| PDSCH transmission mode |  | 3 |  |
| NOTE 1: $P_{B}=1$. |  |  |  |

Table 8.2.2.9.1-2: Minimum performance UE in HST-SFN scenario (FRC)
$\left.\begin{array}{|c|c|c|c|c|c|c|c|c|}\hline \text { Test } & \begin{array}{c}\text { Band- } \\ \text { width }\end{array} & \begin{array}{c}\text { Reference } \\ \text { Channel }\end{array} & \begin{array}{c}\text { OCNG } \\ \text { Pattern }\end{array} & \begin{array}{c}\text { Propagation } \\ \text { Condition }\end{array} & \begin{array}{c}\text { Correlation } \\ \text { Matrix and } \\ \text { Antenna } \\ \text { Configuration }\end{array} & \begin{array}{c}\text { Reference value }\end{array} & \begin{array}{c}\text { Fraction } \\ \text { of } \\ \text { Maximum } \\ \text { Throughp }\end{array} & \begin{array}{c}\text { SNR } \\ \text { (dB) }\end{array} \\ \text { Category }\end{array}\right]$

NOTE 1: Test case applicability is defined in 8.1.2.1.
NOTE 2: The requirement defined is based on the normarliazed channel model, i.e.the power of each tap is normalized to the instantaneous total received power from four taps.

Table 8.2.2.9.1-3: Test Parameters for Large Delay CDD (FRC) for CA

| Parameter |  | Unit | Value |
| :---: | :---: | :---: | :---: |
| Downlink power <br> allocation | $\rho_{A}$ | dB | -3 |
|  | $\rho_{B}$ | dB | -3 (Note 1) |

### 8.2.2.9.2 Minimum Requirement for Rel-16 further enhanced HST

The requirements are specified in Table 8.2.2.9.2-2, with the addition of the parameters in Table 8.2.2.9.2-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify UE performance in the HST-SFN-500 and HST-500 scenario. The test for HST-SFN-500 scenario defined in B.3B is applied when highSpeedEnhDemodFlag2-r16 [7] is received. The test for HST-500 scenario defined in B.3C is applied when
highSpeedEnhDemodFlag2-r16 [7] is not received. HST-500 test is not applicable to UE that has passed HST-SFN-500 test.

Table 8.2.2.9.2-1: Test Parameters for UE performance in HST-SFN-500 and HST-500 scenario (FRC)

| Parameter |  | Unit | Test 1 |
| :--- | :--- | :--- | :--- |
| Downlink power <br> allocation | $\rho_{A}$ | dB | -3 |
|  | $\rho_{B}$ | dB | -3 (NOTE 1) |
|  | $\sigma$ | dB | 0 |
| $N_{o c}$ at antenna port | $\mathrm{dBm} / 15 \mathrm{kHz}$ | -98 |  |
| ACK/NACK feedback mode |  | Multiplexing |  |
| PDSCH transmission mode |  | 3 |  |
| NOTE 1: $P_{B}=1$. |  |  |  |

Table 8.2.2.9.2-2: Minimum performance UE in HST-SFN scenario (FRC)

| $\begin{gathered} \text { Test } \\ \text { number } \end{gathered}$ | Bandwidth | Reference Channel | OCNG Pattern | Propagation Condition | Correlation Matrix and Antenna Configuration | Reference value |  | UE Category |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  | ```Fraction of Maximum Throughp ut (\%)``` | $\begin{aligned} & \text { SNR } \\ & \text { (dB) } \end{aligned}$ |  |
| $1^{\text {NOTE } 2}$ | 10 MHz | R.87-1 TDD | OP. 1 TDD | $\begin{gathered} \text { HST-SFN- } \\ 500 \end{gathered}$ | 2x2 | 70 | 9.6 | $\geq 1$ |
| 2 | 10 MHz | R. 87 TDD | OP. 1 TDD | HST-500 | 2x2 | 70 | 11.4 | $\geq 1$ |

NOTE 1: Test case applicability is defined in 8.1.2.1 and 8.1.2.6.
NOTE 2: The requirement defined is based on the normalized channel model, i.e.the power of each tap is normalized to the instantaneous total received power from four taps.

### 8.2.3 TDD FDD CA (Fixed Reference Channel)

The parameters specified in Table 8.2.3-1 are valid for all the TDD FDD CA tests unless otherwise stated.
Table 8.2.3-1: Common Test Parameters

| Parameter | Unit | Value |
| :--- | :---: | :---: |
| Uplink downlink configuration (Note 1) <br> for TDD CC only |  | 1 |
| Special subframe configuration (Note <br> 2) for TDD CC only |  | 4 |
| Inter-TTI Distance |  | 1 |
| Maximum number of <br> HARQ processes per <br> component carrier | FDD PCell | Processes |

| Cross carrier scheduling |  |  |
| :--- | :--- | :--- |
| ACK/NACK feedback mode |  |  |
| Downlink HARQ-ACK <br> timing | FDD PCell |  |
|  |  |  |
|  | TDD PCell |  |
| Note 1: <br> Note 2: as specified in Table 4.2-2 in TS 36.211 [4]. |  |  |

The applicability of ther requirements are specified in Clause 8.1.2.3. The single carrier performance with different bandwidths for multiple CA configurations specified in Clause 8.2.3 cannot be applied for UE single carrier test.

### 8.2.3.1 Single-antenna port performance

The single-antenna performance in a given multi-path fading environments is determined by the SNR for which a certain relative information bit throughput of the reference measurement channels in Annex A.3.3 is achieved. The purpose of these tests is to verify the single-antenna performance with different channel models and MCS.

### 8.2.3.1.1 Minimum Requirement for FDD PCell

For TDD FDD CA with FDD PCell and 2DL CCs, the requirements are specified in Table 8.2.3.1.1-4 based on single carrier requirement specified in Table 8.2.3.1.1-2 and Table 8.2.3.1.1-3, with the addition of the parameters in Table 8.2.3.1.1-1 and the downlink physical channel setup according to Annex C.3.2.

For TDD FDD CA with FDD PCell and 3DL CCs, the requirements are specified in Table 8.2.3.1.1-5 based on single carrier requirement specified in Table 8.2.3.1.1-2 and Table 8.2.3.1.1-3, with the addition of the parameters in Table 8.2.3.1.1-1 and the downlink physical channel setup according to Annex C.3.2.

For TDD FDD CA with FDD PCell and 4DL CCs, the requirements are specified in Table 8.2.3.1.1-6 based on single carrier requirement specified in Table 8.2.3.1.1-2 and Table 8.2.3.1.1-3, with the addition of the parameters in Table 8.2.3.1.1-1 and the downlink physical channel setup according to Annex C.3.2.

For TDD FDD CA with FDD PCell and 5DL CCs, the requirements are specified in Table 8.2.3.1.1-7 based on single carrier requirement specified in Table 8.2.3.1.1-2 and Table 8.2.3.1.1-3, with the addition of the parameters in Table 8.2.3.1.1-1 and the downlink physical channel setup according to Annex C.3.2.

For TDD FDD CA with FDD PCell and 6DL CCs, the requirements are specified in Table 8.2.3.1.1-8 based on single carrier requirement specified in Table 8.2.3.1.1-2 and Table 8.2.3.1.1-3, with the addition of the parameters in Table 8.2.3.1.1-1 and the downlink physical channel setup according to Annex C.3.2.

For TDD FDD CA with FDD PCell and 7DL CCs, the requirements are specified in Table 8.2.3.1.1-9 based on single carrier requirement specified in Table 8.2.3.1.1-2 and Table 8.2.3.1.1-3, with the addition of the parameters in Table 8.2.3.1.1-1 and the downlink physical channel setup according to Annex C.3.2.

The test coverage for different number of component carriers is defined in 8.1.2.4.
Table 8.2.3.1.1-1: Test Parameters for CA

| Parameter |  | Unit | Value |
| :---: | :---: | :---: | :---: |
| Downlink <br> power <br> allocation | $\rho_{A}$ | dB | 0 |
|  | $\rho_{B}$ | dB | 0 (Note 1) |
| $N_{o c \mid}$ at antenna port | dB | 0 |  |
| Symbols for unused PRBs |  | $\mathrm{dBm} / 15 \mathrm{kHz}$ | -98 |
| Modulation |  |  | OCNG (Note 2) |
| PDSCH transmission mode |  | QPSK |  |
| Note 1:$\quad$$P_{B}=0$. |  |  |  |
| Note 2:These physical resource blocks are assigned to an arbitrary number of virtual UEs <br> with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs <br> shall be uncorrelated pseudo random data, which is QPSK modulated. |  |  |  |
| Note 3:The same PDSCH transmission mode is applied to each component carrier. |  |  |  |

Table 8.2.3.1.1-2: Single carrier performance with different bandwidths for multiple CA configurations for FDD PCell and SCell (FRC)

| Bandwidth | Reference Channel | OCNG Pattern | Propagation Condition | Correlation Matrix and Antenna Configuration | Reference value |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  | Fraction of Maximum Throughput (\%) | $\begin{aligned} & \text { SNR } \\ & \text { (dB) } \end{aligned}$ |
| 1.4 MHz | R. 4 FDD | OP. 1 FDD | EVA5 | 1x2 Low | 70 | -1.3 |
| 3 MHz | $\begin{gathered} \hline \text { R.42-1 } \\ \text { FDD } \end{gathered}$ | OP. 1 FDD | EVA5 | 1x2 Low | 70 | -1.1 |
| 5 MHz | $\begin{gathered} \text { R.42-2 } \\ \text { FDD } \end{gathered}$ | OP. 1 FDD | EVA5 | 1x2 Low | 70 | -1.0 |
| 10 MHz | R. 2 FDD | OP. 1 FDD | EVA5 | 1x2 Low | 70 | -1.7 |
| 15 MHz | $\begin{aligned} & \text { R.42-3 } \\ & \text { FDD } \end{aligned}$ | OP. 1 FDD | EVA5 | 1x2 Low | 70 | -1.6 |
| 20 MHz | R. 42 FDD | OP. 1 FDD | EVA5 | 1x2 Low | 70 | -1.7 |

### 8.2.3.1.2 Minimum Requirement for TDD PCell

For TDD FDD CA with TDD PCell and 2DL CCs, the requirements are specified in Table 8.2.3.1.2-4 based on single carrier requirement specified in Table 8.2.3.1.2-2 and Table 8.2.3.1.2-3, with the addition of the parameters in Table 8.2.3.1.2-1 and the downlink physical channel setup according to Annex C.3.2.

For TDD FDD CA with TDD PCell with 3DL CCs, the requirements are specified in Table 8.2.3.1.2-5 based on single carrier requirement specified in Table 8.2.3.1.2-2 and Table 8.2.3.1.2-3, with the addition of the parameters in Table 8.2.3.1.2-1 and the downlink physical channel setup according to Annex C.3.2.

For TDD FDD CA with TDD PCell with 4DL CCs, the requirements are specified in Table 8.2.3.1.2-6 based on single carrier requirement specified in Table 8.2.3.1.2-2 and Table 8.2.3.1.2-3, with the addition of the parameters in Table 8.2.3.1.2-1 and the downlink physical channel setup according to Annex C.3.2.

For TDD FDD CA with TDD PCell with 5DL CCs, the requirements are specified in Table 8.2.3.1.2-7 based on single carrier requirement specified in Table 8.2.3.1.2-2 and Table 8.2.3.1.2-3, with the addition of the parameters in Table 8.2.3.1.2-1 and the downlink physical channel setup according to Annex C.3.2.

For TDD FDD CA with TDD PCell with 6DL CCs, the requirements are specified in Table 8.2.3.1.2-8 based on single carrier requirement specified in Table 8.2.3.1.2-2 and Table 8.2.3.1.2-3, with the addition of the parameters in Table 8.2.3.1.2-1 and the downlink physical channel setup according to Annex C.3.2.

For TDD FDD CA with TDD PCell with 7DL CCs, the requirements are specified in Table 8.2.3.1.2-9 based on single carrier requirement specified in Table 8.2.3.1.2-2 and Table 8.2.3.1.2-3, with the addition of the parameters in Table 8.2.3.1.2-1 and the downlink physical channel setup according to Annex C.3.2.

The test coverage for different number of component carriers is defined in 8.1.2.4.
Table 8.2.3.1.2-1: Test Parameters for CA

| Parameter |  | Unit | Value |
| :---: | :---: | :---: | :---: |
| Downlink power allocation | $\rho_{A}$ | dB | 0 |
|  | $\rho_{B}$ | dB | 0 (Note 1) |
|  | $\sigma$ | dB | 0 |
| $N_{o c}$ at antenna port |  | $\mathrm{dBm} / 15 \mathrm{kHz}$ | -98 |
| Symbols for unused PRBs |  |  | OCNG (Note 2) |
| Modulation |  |  | QPSK |
| PDSCH transmission mode |  |  | 1 |
| Note 1: $\quad P_{B}=0$. <br> Note 2: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated. <br> Note 3: The same PDSCH transmission mode is applied to each component carrier. |  |  |  |
|  |  |  |  |
|  |  |  |  |

Table 8.2.3.1.2-2: Single carrier performance with different bandwidths for multiple CA configurations for FDD SCell (FRC)

| Band- <br> width | Reference <br> Channel | OCNG <br> Pattern | Propagation <br> Condition | Correlation <br> Matrix and <br> Antenna <br> Configuration | Reference value <br> Maximum <br> Throughput <br> (\%) | SNR <br> (dB) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1.4 MHz | R.4 FDD | OP.1 FDD | EVA5 | $1 \times 2$ Low | 70 | -1.3 |
| 3 MHz | R.42-1 <br> FDD | OP.1 FDD | EVA5 | $1 \times 2$ Low | 70 | -1.1 |
| 5 MHz | R.42-2 <br> FDD | OP.1 FDD | EVA5 | $1 \times 2$ Low | 70 | -1.0 |
| 10 MHz | R.2 FDD | OP.1 FDD | EVA5 | $1 \times 2$ Low | 70 | -1.7 |
| 15 MHz | R.42-3 | OP.1 FDD | EVA5 | $1 \times 2$ Low | 70 | -1.6 |
| 20 MHz | R.42 FDD | OP.1 FDD | EVA5 | $1 \times 2$ Low | 70 | -1.7 |

Table 8.2.3.1.2-3: Single carrier performance with different bandwidths for multiple CA configurations for TDD PCell and SCell (FRC)

| Bandwidth | Reference Channel | OCNG Pattern | Propagation Condition | Correlation Matrix and Antenna Configuration | Reference value |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  | Fraction of Maximum Throughput (\%) | $\begin{aligned} & \hline \text { SNR } \\ & \text { (dB) } \end{aligned}$ |
| 1.4 MHz | R. 4 TDD | OP. 1 TDD | EVA5 | 1x2 Low | 70 | -0.6 |
| 3 MHz | $\begin{aligned} & \text { R.42-1 } \\ & \text { TDD } \end{aligned}$ | OP. 1 TDD | EVA5 | 1x2 Low | 70 | -0.8 |
| 5 MHz | $\begin{aligned} & \text { R.42-2 } \\ & \text { TDD } \end{aligned}$ | OP. 1 TDD | EVA5 | 1x2 Low | 70 | -1.2 |

| 10 MHz | R.2 TDD | OP.1 TDD | EVA5 | $1 \times 2$ Low | 70 | -1.6 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 15 MHz | R.42-3 <br> TDD | OP.1 TDD | EVA5 | $1 \times 2$ Low | 70 | -1.4 |
| 20 MHz | R.42 TDD | OP.1 TDD | EVA5 | $1 \times 2$ Low | 70 | -1.4 |

Table 8.2.3.1.2-4: Minimum performance for multiple CA configurations with 2DL CCs (FRC)

| Test <br> numbe <br> $\mathbf{r}$ | Aggregated Bandwidth (MHz) |  | Minimum performance requirement | UE <br> Category |  |

### 8.2.3.2 Open-loop spatial multiplexing performance 2Tx Antenna port

### 8.2.3.2.1 Minimum Requirement for FDD PCell

For TDD FDD CA with FDD PCell and 2DL CCs, the requirements are specified in Table 8.2.3.2.1-4 based on single carrier requirement specified in Table 8.2.3.2.1-2 and Table 8.2.3.2.1-3, with the addition of the parameters in Table 8.2.3.2.1-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of large delay CDD with 2 transmitter antennas.

For TDD FDD CA with FDD PCell and 3DL CCs, the requirements are specified in Table 8.2.3.2.1-5 based on single carrier requirement specified in Table 8.2.3.2.1-2 and Table 8.2.3.2.1-3, with the addition of the parameters in Table 8.2.3.2.1-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of large delay CDD with 2 transmitter antennas.

For TDD FDD CA with FDD PCell and 4DL CCs, the requirements are specified in Table 8.2.3.2.1-6 based on single carrier requirement specified in Table 8.2.3.2.1-2 and Table 8.2.3.2.1-3, with the addition of the parameters in Table 8.2.3.2.1-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of large delay CDD with 2 transmitter antennas.

For TDD FDD CA with FDD PCell and 5DL CCs, the requirements are specified in Table 8.2.3.2.1-7 based on single carrier requirement specified in Table 8.2.3.2.1-2 and Table 8.2.3.2.1-3, with the addition of the parameters in Table 8.2.3.2.1-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of large delay CDD with 2 transmitter antennas.

For TDD FDD CA with FDD PCell and 6DL CCs, the requirements are specified in Table 8.2.3.2.1-8 based on single carrier requirement specified in Table 8.2.3.2.1-2 and Table 8.2.3.2.1-3, with the addition of the parameters in Table 8.2.3.2.1-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of large delay CDD with 2 transmitter antennas.

For TDD FDD CA with FDD PCell and 7DL CCs, the requirements are specified in Table 8.2.3.2.1-9 based on single carrier requirement specified in Table 8.2.3.2.1-2 and Table 8.2.3.2.1-3, with the addition of the parameters in Table 8.2.3.2.1-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of large delay CDD with 2 transmitter antennas.

The test coverage for different number of component carriers is defined in 8.1.2.4.
Table 8.2.3.2.1-1: Test Parameters for Large Delay CDD (FRC) for CA

| Parameter |  | Unit | Value |
| :---: | :---: | :---: | :---: |
| Downlink power <br> allocation | $\rho_{A}$ | dB | -3 |
|  | $\rho_{B}$ | dB | -3 (Note 1) |
|  | $\sigma$ | dB | 0 |
| $N_{o c}$ at antenna port |  | $\mathrm{dBm} / 15 \mathrm{kHz}$ | -98 |
| PDSCH transmission mode |  |  | 3 |

Note 1: $\quad P_{B}=1$.
Note 2: The same PDSCH transmission mode is applied to each component carrier.

Table 8.2.3.2.1-2: Single carrier performance with different bandwidths for multiple CA configurations for FDD PCell and SCell (FRC)

| Band- <br> width | Reference <br> Channel | OCNG <br> Pattern | Propagation <br> Condition | Correlation <br> Matrix and <br> Antenna <br> Configuration | Reference value <br>  |  |

### 8.2.3.2.1A Soft buffer management test for FDD PCell

For TDD-FDD CA, the requirements are specified in Table 8.2.3.2.1A-2, with the addition of the parameters in Table 8.2.3.2.1A-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the UE performance with proper instantaneous buffer implementation for FDD as PCell.

Table 8.2.3.2.1A-1: Test Parameters for CA

| Parameter | Unit | Value |  |
| :--- | :---: | :---: | :---: |
|  |  | FDD Carrier | TDD Carrier |

| Downlink power allocation | $\rho_{A}$ | dB | -3 | -3 |
| :---: | :---: | :---: | :---: | :---: |
|  | $\rho_{B}$ | dB | -3 (Note 1) | -3 (Note 1) |
|  | $\sigma$ | dB | 0 | 0 |
| $N_{o c}$ at antenna port |  | $\mathrm{dBm} / 15 \mathrm{kHz}$ | -98 | -98 |
| PDSCH transmission mode |  |  | 3 | 3 |
| Note 1: $\quad P_{B}=1$. <br> Note 2: The same PDSCH transmission mode is applied to each component carrier. |  |  |  |  |

Table 8.2.3.2.1A-2: Minimum performance (FRC) for CA

### 8.2.3.2.2 Minimum Requirement for TDD PCell

For TDD FDD CA with TDD PCell and 2DL CCs, the requirements are specified in Table 8.2.3.2.2-4 based on single carrier requirement specified in Table 8.2.3.2.2-2 and Table 8.2.3.2.2-3, with the addition of the parameters in Table 8.2.3.2.2-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of large delay CDD with 2 transmitter antennas.

For TDD FDD CA with TDD PCell and 3DL CCs, the requirements are specified in Table 8.2.3.2.2-5 based on single carrier requirement specified in Table 8.2.3.2.2-2 and Table 8.2.3.2.2-3, with the addition of the parameters in Table 8.2.3.2.2-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of large delay CDD with 2 transmitter antennas.

For TDD FDD CA with TDD PCell and 4DL CCs, the requirements are specified in Table 8.2.3.2.2-6 based on single carrier requirement specified in Table 8.2.3.2.2-2 and Table 8.2.3.2.2-3, with the addition of the parameters in Table
8.2.3.2.2-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of large delay CDD with 2 transmitter antennas.

For TDD FDD CA with TDD PCell and 5DL CCs, the requirements are specified in Table 8.2.3.2.2-7 based on single carrier requirement specified in Table 8.2.3.2.2-2 and Table 8.2.3.2.2-3, with the addition of the parameters in Table 8.2.3.2.2-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of large delay CDD with 2 transmitter antennas.

For TDD FDD CA with TDD PCell and 6DL CCs, the requirements are specified in Table 8.2.3.2.2-8 based on single carrier requirement specified in Table 8.2.3.2.2-2 and Table 8.2.3.2.2-3, with the addition of the parameters in Table 8.2.3.2.2-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of large delay CDD with 2 transmitter antennas.

For TDD FDD CA with TDD PCell and 7DL CCs, the requirements are specified in Table 8.2.3.2.2-9 based on single carrier requirement specified in Table 8.2.3.2.2-2 and Table 8.2.3.2.2-3, with the addition of the parameters in Table 8.2.3.2.2-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of large delay CDD with 2 transmitter antennas.

The test coverage for different number of component carriers is defined in 8.1.2.4.

## Table 8.2.3.2.2-1: Test Parameters for Large Delay CDD (FRC) for CA

| Parameter |  | Unit | Value |
| :---: | :---: | :---: | :---: |
| Downlink power <br> allocation | $\rho_{A}$ | dB | -3 |
|  | $\rho_{B}$ | dB | -3 (Note 1) |
|  | $\sigma$ | dB | 0 |
| $N_{o c}$ at antenna port |  | $\mathrm{dBm} / 15 \mathrm{kHz}$ | -98 |
| PDSCH transmission mode | 3 |  |  |
| Note 1: $\quad P_{B}=1$. <br> Note 2: <br> The same PDSCH transmission mode is applied to each <br> component carrier. |  |  |  |

Table 8.2.3.2.2-2: Single carrier performance with different bandwidths for multiple CA configurations for FDD SCell (FRC)

| Band- <br> width | Reference <br> Channel | OCNG <br> Pattern | Propagation <br> Condition | Correlation <br> Matrix and <br> Antenna <br> Configuration | Reference value <br>  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Fraction of <br> Maximum <br> Throughput <br> (\%) | SNR <br> (dB) |  |  |  |  |
| 1.4 MHz | R.11-5 <br> FDD | OP.1 <br> FDD | EVA70 | $2 \times 2$ Low | 70 | 13.6 |
| 3 MHz | R.11-6 <br> FDD | OP.1 <br> FDD | EVA70 | $2 \times 2$ Low | 70 | 12.3 |
| 5 MHz | R.11-2 <br> FDD | OP.1 <br> FDD | EVA70 | $2 \times 2$ Low | 70 | 12.3 |
| 10 MHz | R.11 FDD | OP.1 <br> FDD | EVA70 | $2 \times 2$ Low | 70 | 12.9 |
| 15 MHz | R.11-7 <br> FDD | OP.1 <br> FDD | EVA70 | $2 \times 2$ Low | 70 | 12.8 |
| 20 MHz | R.30 FDD | OP.1 <br> FDD | EVA70 | $2 \times 2$ Low | 70 | 12.9 |

Table 8.2.3.2.2-3: Single carrier performance with different bandwidths for multiple CA configurations for TDD PCell and SCell (FRC)

| Bandwidth | Reference Channel | OCNG Pattern | Propagation Condition | Correlation Matrix and Antenna Configuration | Reference value |  |

### 8.2.3.2.2A Soft buffer management test for TDD PCell

For TDD-FDD CA, the requirements are specified in Table 8.2.3.2.2A-2, with the addition of the parameters in Table 8.2.3.2.2A-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the UE performance with proper instantaneous buffer implementation for TDD as PCell.

Table 8.2.3.2.2A-1: Test Parameters for CA

| Parameter |  | Unit | Value |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | FDD Carrier | TDD Carrier |
| Downlink power allocation | $\rho_{A}$ |  | dB | -3 | -3 |
|  | $\rho_{B}$ | dB | -3 (Note 1) | -3 (Note 1) |
|  | $\sigma$ | dB | 0 | 0 |
| $N_{o c}$ at antenna port |  | $\mathrm{dBm} / 15 \mathrm{kHz}$ | -98 | -98 |
| PDSCH transmission mode |  |  | 3 | 3 |
| Note 1: $\quad P_{B}=1$. <br> Note 2: The same PDSCH transmission mode is applied to each component carrier. |  |  |  |  |

Table 8.2.3.2.2A-2: Minimum performance (FRC) for CA

| Test num. | Band-width |  | Reference channel | OCNG pattern | Propagation condition | Correl ation matrix and anten na config | Reference value |  | UE cate gory |

|  | SCell | 15 MHz | R.35-2 FDD | $\begin{gathered} \hline \text { OP. } 1 \text { FDD } \\ \text { (Note 1) } \\ \hline \end{gathered}$ |  |  | 70 | 15.8 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 6 | PCell | 20 MHz | R.35-1 TDD | OP. 1 TDD (Note 1) | EVA70 | $\begin{aligned} & 2 \times 2 \\ & \text { Low } \end{aligned}$ | 70 | 16.2 | 4 |
|  | SCell | 15 MHz | R.35-2 FDD | OP. 1 FDD (Note 1) |  |  | 70 | 15.8 |  |

Note 1: The OCNG pattern applies for each CC.
Note 2: The applicability and test rules of requirements for different CA configurations and bandwidth combination sets are defined in 8.1.2.3B.

### 8.2.3.3 Closed-loop spatial multiplexing performance 4Tx Antenna Port

### 8.2.3.3.1 Minimum Requirement for FDD PCell

For TDD FDD CA with FDD PCell and 2DL CCs, the requirements are specified in Table 8.2.3.3.1-4 based on single carrier requirement specified in Table 8.2.3.3.1-2 and Table 8.2.3.3.1-3, with the addition of the parameters in Table 8.2.3.3.1-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the closed loop rank-two performance with wideband and frequency selective precoding.

For TDD FDD CA with FDD PCell and 3DL CCs, the requirements are specified in Table 8.2.3.3.1-5 based on single carrier requirement specified in Table 8.2.3.3.1-2 and Table 8.2.3.3.1-3, with the addition of the parameters in Table 8.2.3.3.1-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the closed loop rank-two performance with wideband and frequency selective precoding.

For TDD FDD CA with FDD PCell and 4DL CCs, the requirements are specified in Table 8.2.3.3.1-6 based on single carrier requirement specified in Table 8.2.3.3.1-2 and Table 8.2.3.3.1-3, with the addition of the parameters in Table 8.2.3.3.1-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the closed loop rank-two performance with wideband and frequency selective precoding.

For TDD FDD CA with FDD PCell and 5DL CCs, the requirements are specified in Table 8.2.3.3.1-7 based on single carrier requirement specified in Table 8.2.3.3.1-2 and Table 8.2.3.3.1-3, with the addition of the parameters in Table 8.2.3.3.1-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the closed loop rank-two performance with wideband and frequency selective precoding.

For TDD FDD CA with FDD PCell and 6DL CCs, the requirements are specified in Table 8.2.3.3.1-8 based on single carrier requirement specified in Table 8.2.3.3.1-2 and Table 8.2.3.3.1-3, with the addition of the parameters in Table 8.2.3.3.1-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the closed loop rank-two performance with wideband and frequency selective precoding.

For TDD FDD CA with FDD PCell and 7DL CCs, the requirements are specified in Table 8.2.3.3.1-9 based on single carrier requirement specified in Table 8.2.3.3.1-2 and Table 8.2.3.3.1-3, with the addition of the parameters in Table 8.2.3.3.1-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the closed loop rank-two performance with wideband and frequency selective precoding.

The test coverage for different number of component carriers is defined in 8.1.2.4.
Table 8.2.3.3.1-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC) for CA

| Parameter |  | Unit | Value |
| :---: | :---: | :---: | :---: |
| Downlink power allocation | $\rho_{A}$ | dB | -6 |
|  | $\rho_{B}$ | dB | -6 (Note 1) |
|  | $\sigma$ | dB | 3 |
| $N_{o c}$ at antenna port |  | $\mathrm{dBm} / 15 \mathrm{kHz}$ | -98 |
| Precoding granularity |  | PRB | Wideband precoding for $1.4 \mathrm{MHz}, 4$ for 3 MHz and 5 MHz CCs, 6 for 10 MHz CCs, 8 for 15 MHz and 20 MHz CCs |
| PMI delay (Note 2) | FDD CC | ms | 8 |
|  | TDD CC | ms | 10 or 11 |
| Reporting interval | FDD CC | ms | 1 |
|  | TDD CC | ms | 1 or 4 (Note 3) |
| Reporting mode |  |  | PUSCH 1-2 |

| CodeBookSubsetRestriction <br> bitmap | 0000000000000000000000000000 <br> 000011111111111111100000000 <br> 0000000 |  |
| :--- | :---: | :---: |
| CSI request field (Note 3) |  | 4 |
| PDSCH transmission mode |  |  |
| Note 1: | $P_{B}=1$. |  |
| Note 2: | If the UE reports in an available uplink reporting instance at subrame SF\#n <br> based on PMI estimation at a downlink SF not later than SF\#(n-4), this <br> reported PMI cannot be applied at the eNB downlink before SF\#(n+4). |  |
| Note 3: | Multiple CC-s under test are configured as the 1st set of serving cells by higher <br> layers. |  |
| Note 4: | ACK/NACK bits are transmitted using PUSCH with PUCCH format 3. |  |
| Note 5: | The same PDSCH transmission mode is applied to each component carrier. |  |

Table 8.2.3.3.1-2: Single carrier performance with different bandwidths for multiple CA configurations for FDD PCell and SCell (FRC)

| Band- <br> width | Reference <br> Channel | OCNG <br> Pattern | Propagation <br> Condition | Correlation <br> Matrix and <br> Antenna <br> Configuration | Reference value |  |

### 8.2.3.3.2 Minimum Requirement for TDD PCell

For TDD FDD CA with TDD PCell and 2DL CCs, the requirements are specified in Table 8.2.3.3.2-4 based on single carrier requirement specified in Table 8.2.3.3.2-2 and Table 8.2.3.3.2-3, with the addition of the parameters in Table
8.2.3.3.2-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the closed loop rank-two performance with wideband and frequency selective precoding.

For TDD FDD CA with TDD PCell and 3DL CCs, the requirements are specified in Table 8.2.3.3.2-5 based on single carrier requirement specified in Table 8.2.3.3.2-2 and Table 8.2.3.3.2-3, with the addition of the parameters in Table 8.2.3.3.2-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the closed loop rank-two performance with wideband and frequency selective precoding.

For TDD FDD CA with TDD PCell and 4DL CCs, the requirements are specified in Table 8.2.3.3.2-6 based on single carrier requirement specified in Table 8.2.3.3.2-2 and Table 8.2.3.3.2-3, with the addition of the parameters in Table 8.2.3.3.2-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the closed loop rank-two performance with wideband and frequency selective precoding.

For TDD FDD CA with TDD PCell and 5DL CCs, the requirements are specified in Table 8.2.3.3.2-7 based on single carrier requirement specified in Table 8.2.3.3.2-2 and Table 8.2.3.3.2-3, with the addition of the parameters in Table 8.2.3.3.2-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the closed loop rank-two performance with wideband and frequency selective precoding.

For TDD FDD CA with TDD PCell and 6DL CCs, the requirements are specified in Table 8.2.3.3.2-8 based on single carrier requirement specified in Table 8.2.3.3.2-2 and Table 8.2.3.3.2-3, with the addition of the parameters in Table 8.2.3.3.2-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the closed loop rank-two performance with wideband and frequency selective precoding.

For TDD FDD CA with TDD PCell and 7DL CCs, the requirements are specified in Table 8.2.3.3.2-9 based on single carrier requirement specified in Table 8.2.3.3.2-2 and Table 8.2.3.3.2-3, with the addition of the parameters in Table 8.2.3.3.2-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the closed loop rank-two performance with wideband and frequency selective precoding.

The test coverage for different number of component carriers is defined in 8.1.2.4.
Table 8.2.3.3.2-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC) for CA

| Parameter |  | Unit | Value |
| :---: | :---: | :---: | :---: |
| Downlink power allocation | $\rho_{A}$ | dB | -6 |
|  | $\rho_{B}$ | dB | -6 (Note 1) |
|  | $\sigma$ | dB | 3 |
| $N_{o c}$ at antenna port |  | dBm/15kHz | -98 |
| Precoding granularity |  | PRB | Widelband pre-coding for $1.4 \mathrm{MHz}, 4$ for 3 MHz and $5 \mathrm{MHz} \mathrm{CCs}, 6$ for 10 MHz CCs, 8 for 15 MHz and 20 MHz CCs |
| PMI delay (Note 2) | FDD CC | ms | 8 |
|  | TDD CC | ms | 10 or 11 |

### 8.2.3.4 Minimum Requirement for Closed-loop spatial multiplexing performance 4Tx Antenna Port for dual connectivity

For dual connectivity the requirements are specified in Table 8.2.3.4-4, based on single carrier requirement specified in Table 8.2.3.4-2 and Table 8.2.3.4-3, with the addition of the parameters in Table 8.2.3.4-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the closed loop rank-two performance with wideband and frequency selective precoding by using dual connectivity transmission.

Table 8.2.3.4-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC) for TDD-FDD dual

| Parameter |  | Unit | Values |
| :---: | :---: | :---: | :---: |
| Downlink power <br> allocation | $\rho_{A}$ | dB | -6 |
|  | $\rho_{B}$ | dB | -6 (Note 1) |
|  | $\sigma$ | dB | -3 |

| $N_{o c}$ at antenna port | dBm/15kHz | -98 |
| :---: | :---: | :---: |
| Precoding granularity | PRB | 6 for $1.4 \mathrm{MHz}, 4$ for 3 MHz and 5 MHz CCs, 6 for 10 MHz CCs, and 8 for 15 MHz CCs and 20 MHz CCs |

| Note 1: T <br> Note 2: T <br>   | The OCNG pattern applies for each CC. <br> The applicability of requirements for different dual connectvity configurations and bandwidth combination sets is defined in 8.1.2.3A. |  |  |

### 8.2.3.5 HST-SFN performance

### 8.2.3.5.0 General

The purpose of this test is to verify UE performance in the HST-SFN scenario defined in B.3A when highSpeedEnhancedDemodulationFlag [7] is received.

### 8.2.3.5.1 Minimum Requirement for FDD PCell

For TDD FDD CA with FDD PCell and 2DL CCs, the requirements are specified in Table 8.2.3.5.1-4 based on single carrier requirement specified in Table 8.2.3.5.1-2 and Table 8.2.3.5.1-3, with the addition of the parameters in Table 8.2.3.5.1-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of large delay CDD with 2 transmitter antennas.

For TDD FDD CA with FDD PCell and 3DL CCs, the requirements are specified in Table 8.2.3.5.1-5 based on single carrier requirement specified in Table 8.2.3.5.1-2 and Table 8.2.3.5.1-3, with the addition of the parameters in Table 8.2.3.5.1-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of large delay CDD with 2 transmitter antennas.

For TDD FDD CA with FDD PCell and 4DL CCs, the requirements are specified in Table 8.2.3.5.1-6 based on single carrier requirement specified in Table 8.2.3.5.1-2 and Table 8.2.3.5.1-3, with the addition of the parameters in Table 8.2.3.5.1-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of large delay CDD with 2 transmitter antennas.

For TDD FDD CA with FDD PCell and 5DL CCs, the requirements are specified in Table 8.2.3.5.1-7 based on single carrier requirement specified in Table 8.2.3.5.1-2 and Table 8.2.3.5.1-3, with the addition of the parameters in Table 8.2.3.5.1-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of large delay CDD with 2 transmitter antennas.

The test coverage for different number of component carriers is defined in 8.1.2.4.
Table 8.2.3.5.1-1: Test Parameters for Large Delay CDD (FRC) for CA

| Parameter |  | Unit | Value |
| :---: | :---: | :---: | :---: |
| Downlink power <br> allocation | $\rho_{A}$ | dB | -3 |
|  | $\rho_{B}$ | dB | $-3($ Note 1) |
|  | $\sigma$ | dB | 0 |

| $N_{o c}$ at antenna port | $\mathrm{dBm} / 15 \mathrm{kHz}$ | -98 |
| :---: | :---: | :---: |
| PDSCH transmission mode |  |  |
| NOTE 1: $\quad P_{B}=1$. |  |  |
| NOTE 2:The same PDSCH transmission mode is applied to each <br> component carrier. |  |  |

Table 8.2.3.5.1-2: Single carrier performance for multiple CA configurations for FDD PCell and SCell (FRC)

| Bandwidth | Reference channel | OCNG pattern | Propagation condition | Correlation matrix and antenna config. | Reference value |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  | Fraction of maximum throughput (\%) | SNR <br> (dB) |
| 5 MHz | R.87-2 FDD | $\begin{aligned} & \hline \text { OP. } 1 \\ & \text { FDD } \end{aligned}$ | HST-SFN | 2x2 Low | 70 | [13.9] |
| 10 MHz | R. 87 FDD | $\begin{aligned} & \text { OP. } 1 \\ & \text { FDD } \\ & \hline \end{aligned}$ | HST-SFN | 2x2 Low | 70 | [13.3] |
| 15 MHz | R.87-3 FDD | $\begin{aligned} & \text { OP. } 1 \\ & \text { FDD } \end{aligned}$ | HST-SFN | 2x2 Low | 70 | [13.9] |
| 20 MHz | R.87-4 FDD | $\begin{aligned} & \text { OP. } 1 \\ & \text { FDD } \end{aligned}$ | HST-SFN | 2x2 Low | 70 | [14.1] |

### 8.2.3.5.2 Minimum Requirement for TDD PCell

For TDD FDD CA with TDD PCell and 2DL CCs, the requirements are specified in Table 8.2.3.5.2-4 based on single carrier requirement specified in Table 8.2.5.2.2-2 and Table 8.2.3.5.2-3, with the addition of the parameters in Table 8.2.3.5.2-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of large delay CDD with 2 transmitter antennas.

For TDD FDD CA with TDD PCell and 3DL CCs, the requirements are specified in Table 8.2.3.5.2-5 based on single carrier requirement specified in Table 8.2.3.5.2-2 and Table 8.2.3.5.2-3, with the addition of the parameters in Table 8.2.3.5.2-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of large delay CDD with 2 transmitter antennas.

For TDD FDD CA with TDD PCell and 4DL CCs, the requirements are specified in Table 8.2.3.5.2-6 based on single carrier requirement specified in Table 8.2.3.5.2-2 and Table 8.2.3.5.2-3, with the addition of the parameters in Table 8.2.3.5.2-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of large delay CDD with 2 transmitter antennas.

For TDD FDD CA with TDD PCell and 5DL CCs, the requirements are specified in Table 8.2.3.5.2-7 based on single carrier requirement specified in Table 8.2.3.5.2-2 and Table 8.2.3.5.2-3, with the addition of the parameters in Table 8.2.3.5.2-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of large delay CDD with 2 transmitter antennas.

The test coverage for different number of component carriers is defined in 8.1.2.4.
Table 8.2.3.5.2-1: Test Parameters for Large Delay CDD (FRC) for CA

| Parameter |  | Unit | Value |
| :---: | :---: | :---: | :---: |
| Downlink power allocation | $\rho_{\text {A }}$ | dB | -3 |
|  | $\rho_{B}$ | dB | -3 (Note 1) |
|  | $\sigma$ | dB | 0 |
| $N_{o c}$ at antenna port |  | $\mathrm{dBm} / 15 \mathrm{kHz}$ | -98 |
| PDSCH transmission mode |  |  | 3 |
| NOTE 1: $\quad P_{B}=1$. <br> NOTE 2: The same PDSCH transmission mode is applied to each component carrier. |  |  |  |

Table 8.2.3.5.2-2: Single carrier performance with different bandwidths for multiple CA configurations for FDD SCell (FRC)
$\begin{array}{|l|c|c|c|c|c|c|}\hline \begin{array}{l}\text { Band- } \\ \text { width }\end{array} & \begin{array}{c}\text { Reference } \\ \text { Channel }\end{array} & \begin{array}{c}\text { OCNG } \\ \text { Pattern }\end{array} & \begin{array}{c}\text { Propagation } \\ \text { Condition }\end{array} & \begin{array}{c}\text { Correlation } \\ \text { Matrix and } \\ \text { Antenna } \\ \text { Configuration }\end{array} & \begin{array}{c}\text { Reference value } \\$\cline { 5 - 6 }\end{array} \& $\left.\begin{array}{c}\text { Fraction of } \\ \text { Maximum } \\ \text { Throughput } \\ (\%)\end{array}\end{array} \begin{array}{c}\text { SNR } \\ \text { (dB) }\end{array}\right]$
