Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for ETSI members and non-members, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (http://ipr.etsi.org).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under http://webapp.etsi.org/key/queryform.asp.

Modal verbs terminology

In the present document "shall", "shall not", "should", "should not", "may", "need not", "will", "will not", "can" and "cannot" are to be interpreted as described in clause 3.2 of the ETSI Drafting Rules (Verbal forms for the expression of provisions).

"must" and "must not" are NOT allowed in ETSI deliverables except when used in direct citation.

History ............................................................................................................................................................. 464
Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

x  the first digit:

1  presented to TSG for information;

2  presented to TSG for approval;

3  or greater indicates TSG approved document under change control.

y  the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc;

z  the third digit is incremented when editorial only changes have been incorporated in the document.
1 Scope

The present document specifies the Radio Resource Control protocol for the radio interface between UE and E-UTRAN as well as for the radio interface between RN and E-UTRAN.

The scope of the present document also includes:

- the radio related information transported in a transparent container between source eNB and target eNB upon inter eNB handover;
- the radio related information transported in a transparent container between a source or target eNB and another system upon inter RAT handover.

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document in the same Release as the present document.

3 Definitions, symbols and abbreviations

3.1 Definitions

For the purposes of the present document, the terms and definitions given in TR 21.905 [1] and the following apply. A term defined in the present document takes precedence over the definition of the same term, if any, in TR 21.905 [1].

**Commercial Mobile Alert System**: Public Warning System that delivers Warning Notifications provided by Warning Notification Providers to CMAS capable UEs.

**CSG member cell**: A cell broadcasting the identity of the selected PLMN, registered PLMN or equivalent PLMN and for which the CSG whitelist of the UE includes an entry comprising cell's CSG ID and the respective PLMN identity.

**EU-Alert**: Public Warning System that delivers Warning Notifications provided by Warning Notification Providers using the same AS mechanisms as defined for CMAS.

**Field**: The individual contents of an information element are referred as fields.

**Floor**: Mathematical function used to 'round down' i.e. to the nearest integer having a lower or equal value.

**Information element**: A structural element containing a single or multiple fields is referred as information element.

**Korean Public Alert System (KPAS)**: Public Warning System that delivers Warning Notifications provided by Warning Notification Providers using the same AS mechanisms as defined for CMAS.

**MBMS service**: MBMS bearer service as defined in TS 23.246 [56] (i.e. provided via an MRB).

**Primary Cell**: The cell, operating on the primary frequency, in which the UE either performs the initial connection establishment procedure or initiates the connection re-establishment procedure, or the cell indicated as the primary cell in the handover procedure.

**Primary Timing Advance Group**: Timing Advance Group containing the PCell.

**Secondary Cell**: A cell, operating on a secondary frequency, which may be configured once an RRC connection is established and which may be used to provide additional radio resources.

**Secondary Timing Advance Group**: Timing Advance Group not containing the PCell. A secondary timing advance group contains at least one cell with configured uplink.

**Serving Cell**: For a UE in RRC_CONNECTED not configured with CA there is only one serving cell comprising of the primary cell. For a UE in RRC_CONNECTED configured with CA the term 'serving cells' is used to denote the set of one or more cells comprising of the primary cell and all secondary cells.

**Timing Advance Group**: A group of serving cells that is configured by RRC and that, for the cells with an UL configured, use the same timing reference cell and the same Timing Advance value.

3.2 Abbreviations

For the purposes of the present document, the abbreviations given in TR 21.905 [1] and the following apply. An abbreviation defined in the present document takes precedence over the definition of the same abbreviation, if any, in TR 21.905 [1].

4 General

4.1 Introduction

In this specification, (parts of) procedures and messages specified for the UE equally apply to the RN for functionality necessary for the RN. There are also (parts of) procedures and messages which are only applicable to the RN in its communication with the E-UTRAN, in which case the specification denotes the RN instead of the UE. Such RN-specific aspects are not applicable to the UE.
This specification is organised as follows:

- sub-clause 4.2 describes the RRC protocol model;
- sub-clause 4.3 specifies the services provided to upper layers as well as the services expected from lower layers;
- sub-clause 4.4 lists the RRC functions;
- clause 5 specifies RRC procedures, including UE state transitions;
- clause 6 specifies the RRC message in a mixed format (i.e. tabular & ASN.1 together);
- clause 7 specifies the variables (including protocol timers and constants) and counters to be used by the UE;
- clause 8 specifies the encoding of the RRC messages;
- clause 9 specifies the specified and default radio configurations;
- clause 10 specifies the RRC messages transferred across network nodes;
- clause 11 specifies the UE capability related constraints and performance requirements.

4.2 Architecture

4.2.1 UE states and state transitions including inter RAT

A UE is in RRC_CONNECTED when an RRC connection has been established. If this is not the case, i.e. no RRC connection is established, the UE is in RRC_IDLE state. The RRC states can further be characterised as follows:

- **RRC_IDLE**:
  - A UE specific DRX may be configured by upper layers.
  - UE controlled mobility;
  - The UE:
    - Monitors a Paging channel to detect incoming calls, system information change, for ETWS capable UEs, ETWS notification, and for CMAS capable UEs, CMAS notification;
    - Performs neighbouring cell measurements and cell (re-)selection;
    - Acquires system information.
    - Performs logging of available measurements together with location and time for logged measurement configured UEs.

- **RRC_CONNECTED**:
  - Transfer of unicast data to/from UE.
  - At lower layers, the UE may be configured with a UE specific DRX.
  - For UEs supporting CA, use of one or more SCells, aggregated with the PCell, for increased bandwidth;
  - Network controlled mobility, i.e. handover and cell change order with optional network assistance (NACC) to GERAN;
  - The UE:
    - Monitors a Paging channel and/ or System Information Block Type 1 contents to detect system information change, for ETWS capable UEs, ETWS notification, and for CMAS capable UEs, CMAS notification;
    - Monitors control channels associated with the shared data channel to determine if data is scheduled for it;
    - Provides channel quality and feedback information;
- Performs neighbouring cell measurements and measurement reporting;
- Acquires system information.

The following figure not only provides an overview of the RRC states in E-UTRA, but also illustrates the mobility support between E-UTRAN, UTRAN and GERAN.

Figure 4.2.1-1: E-UTRA states and inter RAT mobility procedures, 3GPP

The following figure illustrates the mobility support between E-UTRAN, CDMA2000 1xRTT and CDMA2000 HRPD. The details of the CDMA2000 state models are out of the scope of this specification.

Figure 4.2.1-2: Mobility procedures between E-UTRA and CDMA2000

The inter-RAT handover procedure(s) supports the case of signalling, conversational services, non-conversational services and combinations of these.

In addition to the state transitions shown in Figure 4.2.1-1 and Figure 4.2.1-2, there is support for connection release with redirection information from E-UTRA RRC_CONNECTED to GERAN, UTRAN and CDMA2000 (HRPD Idle/1xRTT Dormant mode).

4.2.2 Signalling radio bearers

"Signalling Radio Bearers" (SRBs) are defined as Radio Bearers (RB) that are used only for the transmission of RRC and NAS messages. More specifically, the following three SRBs are defined:
- SRB0 is for RRC messages using the CCCH logical channel;
- SRB1 is for RRC messages (which may include a piggybacked NAS message) as well as for NAS messages prior to the establishment of SRB2, all using DCCH logical channel;
- SRB2 is for RRC messages which include logged measurement information as well as for NAS messages, all using DCCH logical channel. SRB2 has a lower-priority than SRB1 and is always configured by E-UTRAN after security activation.

In downlink piggybacking of NAS messages is used only for one dependant (i.e. with joint success/failure) procedure: bearer establishment/modification/release. In uplink NAS message piggybacking is used only for transferring the initial NAS message during connection setup.

NOTE: The NAS messages transferred via SRB2 are also contained in RRC messages, which however do not include any RRC protocol control information.

Once security is activated, all RRC messages on SRB1 and SRB2, including those containing NAS or non-3GPP messages, are integrity protected and ciphered by PDCP. NAS independently applies integrity protection and ciphering to the NAS messages.

4.3 Services

4.3.1 Services provided to upper layers

The RRC protocol offers the following services to upper layers:

- Broadcast of common control information;
- Notification of UEs in RRC_IDLE, e.g. about a terminating call, for ETWS, for CMAS;
- Transfer of dedicated control information, i.e. information for one specific UE.

4.3.2 Services expected from lower layers

In brief, the following are the main services that RRC expects from lower layers:

- PDCP: integrity protection and ciphering;
- RLC: reliable and in-sequence transfer of information, without introducing duplicates and with support for segmentation and concatenation.

Further details about the services provided by Packet Data Convergence Protocol layer (e.g. integrity and ciphering) are provided in TS 36.323 [8]. The services provided by Radio Link Control layer (e.g. the RLC modes) are specified in TS 36.322 [7]. Further details about the services provided by Medium Access Control layer (e.g. the logical channels) are provided in TS 36.321 [6]. The services provided by physical layer (e.g. the transport channels) are specified in TS 36.302 [3].

4.4 Functions

The RRC protocol includes the following main functions:

- Broadcast of system information:
  - Including NAS common information;
  - Information applicable for UEs in RRC_IDLE, e.g. cell (re-)selection parameters, neighbouring cell information and information (also) applicable for UEs in RRC_CONNECTED, e.g. common channel configuration information.
  - Including ETWS notification, CMAS notification;
- RRC connection control:
- Paging;
- Establishment/ modification/ release of RRC connection, including e.g. assignment/ modification of UE identity (C-RNTI), establishment/ modification/ release of SRB1 and SRB2, access class barring;
- Initial security activation, i.e. initial configuration of AS integrity protection (SRBs) and AS ciphering (SRBs, DRBs);
- For RNs, configuration of AS integrity protection for DRBs;
- RRC connection mobility including e.g. intra-frequency and inter-frequency handover, associated security handling, i.e. key/ algorithm change, specification of RRC context information transferred between network nodes;
- Establishment/ modification/ release of RBs carrying user data (DRBs);
- Radio configuration control including e.g. assignment/ modification of ARQ configuration, HARQ configuration, DRX configuration;
- For RNs, RN-specific radio configuration control for the radio interface between RN and E-UTRAN;
- In case of CA, cell management including e.g. change of PCell, addition/ modification/ release of SCell(s) and addition/ modification/ release of STAG(s);
- QoS control including assignment/ modification of semi-persistent scheduling (SPS) configuration information for DL and UL, assignment/ modification of parameters for UL rate control in the UE, i.e. allocation of a priority and a prioritised bit rate (PBR) for each RB;
- Recovery from radio link failure;
- Inter-RAT mobility including e.g. security activation, transfer of RRC context information;
- Measurement configuration and reporting:
  - Establishment/ modification/ release of measurements (e.g. intra-frequency, inter-frequency and inter-RAT measurements);
  - Setup and release of measurement gaps;
  - Measurement reporting;
- Other functions including e.g. transfer of dedicated NAS information and non-3GPP dedicated information, transfer of UE radio access capability information, support for E-UTRAN sharing (multiple PLMN identities);
- Generic protocol error handling;
- Support of self-configuration and self-optimisation;
- Support of measurement logging and reporting for network performance optimisation [60];

NOTE: Random access is specified entirely in the MAC including initial transmission power estimation.

5 Procedures

5.1 General

5.1.1 Introduction

The procedural requirements are structured according to the main functional areas: system information (5.2), connection control (5.3), inter-RAT mobility (5.4) and measurements (5.5). In addition sub-clause 5.6 covers other aspects e.g. NAS dedicated information transfer, UE capability transfer, sub-clause 5.7 specifies the generic error handling, sub-clause 5.8 covers MBMS and sub-clause 5.9 covers RN-specific procedures.
5.1.2 General requirements

The UE shall:

1. process the received messages in order of reception by RRC, i.e. the processing of a message shall be completed before starting the processing of a subsequent message;

NOTE 1: E-UTRAN may initiate a subsequent procedure prior to receiving the UE's response of a previously initiated procedure.

1. within a sub-clause execute the steps according to the order specified in the procedural description;

1. consider the term 'radio bearer' (RB) to cover SRBs and DRBs but not MRBs unless explicitly stated otherwise;

1. set the rrc-TransactionIdentifier in the response message, if included, to the same value as included in the message received from E-UTRAN that triggered the response message;

1. upon receiving a choice value set to setup:

   2. apply the corresponding received configuration and start using the associated resources, unless explicitly specified otherwise;

1. upon receiving a choice value set to release:

   2. clear the corresponding configuration and stop using the associated resources;

1. upon handover to E-UTRA; or

1. upon receiving an RRCConnectionReconfiguration message including the fullConfig:

   2. apply the Conditions in the ASN.1 for inclusion of the fields for the DRB/PDCP/RLC setup during the reconfiguration of the DRBs included in the drb-ToAddModList;

NOTE 2: At each point in time, the UE keeps a single value for each field except for during handover when the UE temporarily stores the previous configuration so it can revert back upon handover failure. In other words: when the UE reconfigures a field, the existing value is released except for during handover.

NOTE 3: Although not explicitly stated, the UE initially considers all functionality to be deactivated/released until it is explicitly stated that the functionality is setup/activated. Correspondingly, the UE initially considers lists to be empty e.g. the list of radio bearers, the list of measurements.

5.2 System information

5.2.1 Introduction

5.2.1.1 General

System information is divided into the MasterInformationBlock (MIB) and a number of SystemInformationBlocks (SIBs). The MIB includes a limited number of most essential and most frequently transmitted parameters that are needed to acquire other information from the cell, and is transmitted on BCH. SIBs other than SystemInformationBlockType1 are carried in SystemInformation (SI) messages and mapping of SIBs to SI messages is flexibly configurable by schedulingInfoList included in SystemInformationBlockType1, with restrictions that: each SIB is contained only in a single SI message, and at most once in that message; only SIBs having the same scheduling requirement (periodicity) can be mapped to the same SI message; SystemInformationBlockType2 is always mapped to the SI message that corresponds to the first entry in the list of SI messages in schedulingInfoList. There may be multiple SI messages transmitted with the same periodicity. SystemInformationBlockType1 and all SI messages are transmitted on DL-SCH.

NOTE 1: The physical layer imposes a limit to the maximum size a SIB can take. When DCI format 1C is used the maximum allowed by the physical layer is 1736 bits (217 bytes) while for format 1A the limit is 2216 bits (277 bytes), see TS 36.212 [22] and TS 36.213 [23].
In addition to broadcasting, E-UTRAN may provide `SystemInformationBlockType1`, including the same parameter values, via dedicated signalling i.e., within an `RRCConnectionReconfiguration` message.

The UE applies the system information acquisition and change monitoring procedures for the PCell. For an SCell, E-UTRAN provides, via dedicated signalling, all system information relevant for operation in RRC_CONNECTED when adding the SCell. Upon change of the relevant system information of a configured SCell, E-UTRAN releases and subsequently adds the concerned SCell, which may be done with a single `RRCConnectionReconfiguration` message. If the UE is receiving or interested to receive an MBMS service in a cell, the UE shall apply the system information acquisition and change monitoring procedure to acquire parameters relevant for MBMS operation and apply the parameters acquired from system information only for MBMS operation for this cell.

NOTE 2: E-UTRAN may configure via dedicated signalling different parameter values than the ones broadcast in the concerned SCell.

An RN configured with an RN subframe configuration does not need to apply the system information acquisition and change monitoring procedures. Upon change of any system information relevant to an RN, E-UTRAN provides the system information blocks containing the relevant system information to an RN configured with an RN subframe configuration via dedicated signalling using the `RNReconfiguration` message. For RNs configured with an RN subframe configuration, the system information contained in this dedicated signalling replaces any corresponding stored system information and takes precedence over any corresponding system information acquired through the system information acquisition procedure. The dedicated system information remains valid until overridden.

NOTE 3: E-UTRAN may configure an RN, via dedicated signalling, with different parameter values than the ones broadcast in the concerned cell.

### 5.2.1.2 Scheduling

The MIB uses a fixed schedule with a periodicity of 40 ms and repetitions made within 40 ms. The first transmission of the MIB is scheduled in subframe #0 of radio frames for which the SFN mod 4 = 0, and repetitions are scheduled in subframe #0 of all other radio frames.

The `SystemInformationBlockType1` uses a fixed schedule with a periodicity of 80 ms and repetitions made within 80 ms. The first transmission of `SystemInformationBlockType1` is scheduled in subframe #5 of radio frames for which the SFN mod 8 = 0, and repetitions are scheduled in subframe #5 of all other radio frames for which SFN mod 2 = 0.

The SI messages are transmitted within periodically occurring time domain windows (referred to as SI-windows) using dynamic scheduling. Each SI message is associated with a SI-window and the SI-windows of different SI messages do not overlap. That is, within one SI-window only the corresponding SI is transmitted. The length of the SI-window is common for all SI messages, and is configurable. Within the SI-window, the corresponding SI message can be transmitted a number of times in any subframe other than MBSFN subframes, uplink subframes in TDD, and subframe #5 of radio frames for which SFN mod 2 = 0. The UE acquires the detailed time-domain scheduling (and other information, e.g. frequency-domain scheduling, used transport format) from decoding SI-RNTI on PDCCH (see TS 36.321 [6]).

A single SI-RNTI is used to address `SystemInformationBlockType1` as well as all SI messages.

`SystemInformationBlockType1` configures the SI-window length and the transmission periodicity for the SI messages.

### 5.2.1.3 System information validity and notification of changes

Change of system information (other than for ETWS, CMAS and EAB parameters) only occurs at specific radio frames, i.e. the concept of a modification period is used. System information may be transmitted a number of times with the same content within a modification period, as defined by its scheduling. The modification period boundaries are defined by SFN values for which SFN mod \( m \) = 0, where \( m \) is the number of radio frames comprising the modification period. The modification period is configured by system information.

When the network changes (some of the) system information, it first notifies the UEs about this change, i.e. this may be done throughout a modification period. In the next modification period, the network transmits the updated system information. These general principles are illustrated in figure 5.2.1.3-1, in which different colours indicate different system information. Upon receiving a change notification, the UE acquires the new system information immediately from the start of the next modification period. The UE applies the previously acquired system information until the UE acquires the new system information.
The Paging message is used to inform UEs in RRC_IDLE and UEs in RRC_CONNECTED about a system information change. If the UE receives a Paging message including the systemInfoModification, it knows that the system information will change at the next modification period boundary. Although the UE may be informed about changes in system information, no further details are provided e.g. regarding which system information will change.

SystemInformationBlockType1 includes a value tag, systemInfoValueTag, that indicates if a change has occurred in the SI messages. UEs may use systemInfoValueTag, e.g. upon return from out of coverage, to verify if the previously stored SI messages are still valid. Additionally, the UE considers stored system information to be invalid after 3 hours from the moment it was successfully confirmed as valid, unless specified otherwise.

E-UTRAN may not update systemInfoValueTag upon change of some system information e.g. ETWS information, CMAS information, regularly changing parameters like time information (SystemInformationBlockType8, SystemInformationBlockType16), EAB parameters. Similarly, E-UTRAN may not include the systemInfoModification within the Paging message upon change of some system information.

The UE verifies that stored system information remains valid by either checking systemInfoValueTag in SystemInformationBlockType1 after the modification period boundary, or attempting to find the systemInfoModification indication at least modificationPeriodCoeff times during the modification period in case no paging is received, in every modification period. If no paging message is received by the UE during a modification period, the UE may assume that no change of system information will occur at the next modification period boundary. If UE in RRC_CONNECTED, during a modification period, receives one paging message, it may deduce from the presence/absence of systemInfoModification whether a change of system information other than ETWS information, CMAS information and EAB parameters will occur in the next modification period or not.

ETWS and/or CMAS capable UEs in RRC_CONNECTED shall attempt to read paging at least once every defaultPagingCycle to check whether ETWS and/or CMAS notification is present or not.

5.2.1.4 Indication of ETWS notification

ETWS primary notification and/or ETWS secondary notification can occur at any point in time. The Paging message is used to inform ETWS capable UEs in RRC_IDLE and UEs in RRC_CONNECTED about presence of an ETWS primary notification and/or ETWS secondary notification. If the UE receives a Paging message including the etws-Indication, it shall start receiving the ETWS primary notification and/or ETWS secondary notification according to schedulingInfoList contained in SystemInformationBlockType1. If the UE receives Paging message including the etws-Indication while it is acquiring ETWS notification(s), the UE shall continue acquiring ETWS notification(s) based on the previously acquired schedulingInfoList in SystemInformationBlockType1.

NOTE: The UE is not required to periodically check schedulingInfoList contained in SystemInformationBlockType1, but Paging message including the etws-Indication triggers the UE to re-acquire schedulingInfoList contained in SystemInformationBlockType1 for scheduling changes for SystemInformationBlockType10 and SystemInformationBlockType11. The UE may or may not receive a Paging message including the etws-Indication and/or systemInfoModification when ETWS is no longer scheduled.

ETWS primary notification is contained in SystemInformationBlockType10 and ETWS secondary notification is contained in SystemInformationBlockType11. Segmentation can be applied for the delivery of a secondary notification. The segmentation is fixed for transmission of a given secondary notification within a cell (i.e. the same segment size for a given segment with the same messageIdentifier, serialNumber and warningMessageSegmentNumber). An ETWS secondary notification corresponds to a single CB data IE as defined according to TS 23.041 [37].
5.2.1.5 Indication of CMAS notification

CMAS notification can occur at any point in time. The Paging message is used to inform CMAS capable UEs in RRC_IDLE and UEs in RRC_CONNECTED about presence of one or more CMAS notifications. If the UE receives a Paging message including the cmas-Indication, it shall start receiving the CMAS notifications according to schedulingInfoList contained in SystemInformationBlockType1. If the UE receives Paging message including the cmas-Indication while it is acquiring CMAS notification(s), the UE shall continue acquiring CMAS notification(s) based on the previously acquired schedulingInfoList until it re-acquires schedulingInfoList in SystemInformationBlockType1.

NOTE: The UE is not required to periodically check schedulingInfoList contained in SystemInformationBlockType1, but Paging message including the cmas-Indication triggers the UE to re-acquire schedulingInfoList contained in SystemInformationBlockType1 for scheduling changes for SystemInformationBlockType12. The UE may or may not receive a Paging message including the cmas-Indication and/or systemInfoModification when SystemInformationBlockType12 is no longer scheduled.

CMAS notification is contained in SystemInformationBlockType12. Segmentation can be applied for the delivery of a CMAS notification. The segmentation is fixed for transmission of a given CMAS notification within a cell (i.e. the same segment size for a given segment with the same messageIdentifier, serialNumber and warningMessageSegmentNumber). E-UTRAN does not interleave transmissions of CMAS notifications, i.e. all segments of a given CMAS notification transmission are transmitted prior to those of another CMAS notification. A CMAS notification corresponds to a single CB data IE as defined according to TS 23.041 [37].

5.2.1.6 Notification of EAB parameters change

Change of EAB parameters can occur at any point in time. The EAB parameters are contained in SystemInformationBlockType14. The Paging message is used to inform EAB capable UEs in RRC_IDLE about a change of EAB parameters or that SystemInformationBlockType14 is no longer scheduled. If the UE receives a Paging message including the eab-ParamModification, it shall acquire SystemInformationBlockType14 according to schedulingInfoList contained in SystemInformationBlockType1. If the UE receives a Paging message including the eab-ParamModification while it is acquiring SystemInformationBlockType14, the UE shall continue acquiring SystemInformationBlockType14 based on the previously acquired schedulingInfoList until it re-acquires schedulingInfoList in SystemInformationBlockType1.

NOTE: The EAB capable UE is not expected to periodically check schedulingInfoList contained in SystemInformationBlockType1.

5.2.2 System information acquisition

5.2.2.1 General

![Diagram of System Information Acquisition](image)

**Figure 5.2.2.1-1: System information acquisition, normal**

The UE applies the system information acquisition procedure to acquire the AS- and NAS- system information that is broadcasted by the E-UTRAN. The procedure applies to UEs in RRC_IDLE and UEs in RRC_CONNECTED.
5.2.2.2 Initiation

The UE shall apply the system information acquisition procedure upon selecting (e.g. upon power on) and upon re-selecting a cell, after handover completion, after entering E-UTRA from another RAT, upon return from out of coverage, upon receiving a notification that the system information has changed, upon receiving an indication about the presence of an ETWS notification, upon receiving an indication about the presence of a CMAS notification, upon receiving a notification that the EAB parameters have changed, upon receiving a request from CDMA2000 upper layers and upon exceeding the maximum validity duration. Unless explicitly stated otherwise in the procedural specification, the system information acquisition procedure overwrites any stored system information, i.e. delta configuration is not applicable for system information and the UE discontinues using a field if it is absent in system information unless explicitly specified otherwise.

5.2.2.3 System information required by the UE

The UE shall:

1. ensure having a valid version, as defined below, of (at least) the following system information, also referred to as the 'required' system information:

2. if in RRC_IDLE:
   3. the MasterInformationBlock and SystemInformationBlockType1 as well as SystemInformationBlockType2 through SystemInformationBlockType8, depending on support of the concerned RATs;

2. if in RRC_CONNECTED:
   3. the MasterInformationBlock, SystemInformationBlockType1 and SystemInformationBlockType2 as well as SystemInformationBlockType8, depending on support of CDMA2000;

1. delete any stored system information after 3 hours from the moment it was confirmed to be valid as defined in 5.2.1.3, unless specified otherwise;

1. consider any stored system information except SystemInformationBlockType10, SystemInformationBlockType11, systemInformationBlockType12 and systemInformationBlockType14 to be invalid if systemInfoValueTag included in the SystemInformationBlockType1 is different from the one of the stored system information;

5.2.2.4 System information acquisition by the UE

The UE shall:

1. apply the specified BCCH configuration defined in 9.1.1.1;

1. if the procedure is triggered by a system information change notification:
   2. start acquiring the required system information, as defined in 5.2.2.3, from the beginning of the modification period following the one in which the change notification was received;

NOTE 1: The UE continues using the previously received system information until the new system information has been acquired.

1. if the UE is in RRC_IDLE and enters a cell for which the UE does not have stored a valid version of the system information required in RRC_IDLE, as defined in 5.2.2.3:
   2. acquire, using the system information acquisition procedure as defined in 5.2.3, the system information required in RRC_IDLE, as defined in 5.2.2.3;

1. following successful handover completion to a PCell for which the UE does not have stored a valid version of the system information required in RRC_CONNECTED, as defined in 5.2.2.3:
   2. acquire, using the system information acquisition procedure as defined in 5.2.3, the system information required in RRC_CONNECTED, as defined in 5.2.2.3;

2. upon acquiring the concerned system information:
3> discard the corresponding radio resource configuration information included in the radioResourceConfigCommon previously received in a dedicated message, if any;

1> following a request from CDMA2000 upper layers:

2> acquire SystemInformationBlockType8, as defined in 5.2.3;

1> neither initiate the RRC connection establishment procedure nor initiate transmission of the RRConnectionReestablishmentRequest message until the UE has a valid version of the MasterInformationBlock and SystemInformationBlockType1 messages as well as SystemInformationBlockType2;

1> not initiate the RRC connection establishment subject to EAB until the UE has a valid version of SystemInformationBlockType14, if broadcast;

1> if the UE is ETWS capable:

2> upon entering a cell during RRC_IDLE, following successful handover or upon connection re-establishment:

3> discard any previously buffered warningMessageSegment;

3> clear, if any, the current values of messageIdentifier and serialNumber for SystemInformationBlockType11;

2> when the UE acquires SystemInformationBlockType1 following ETWS indication, upon entering a cell during RRC_IDLE, following successful handover or upon connection re-establishment:

3> if schedulingInfoList indicates that SystemInformationBlockType10 is present:

4> start acquiring SystemInformationBlockType10 immediately;

3> if schedulingInfoList indicates that SystemInformationBlockType11 is present:

4> start acquiring SystemInformationBlockType11 immediately;

NOTE 2: UEs shall start acquiring SystemInformationBlockType10 and SystemInformationBlockType11 as described above even when systemInfoValueTag in SystemInformationBlockType1 has not changed.

1> if the UE is CMAS capable:

2> upon entering a cell during RRC_IDLE, following successful handover or upon connection re-establishment:

3> discard any previously buffered warningMessageSegment;

3> clear, if any, stored values of messageIdentifier and serialNumber for SystemInformationBlockType12 associated with the discarded warningMessageSegment;

2> when the UE acquires SystemInformationBlockType1 following CMAS indication, upon entering a cell during RRC_IDLE, following successful handover and upon connection re-establishment:

3> if schedulingInfoList indicates that SystemInformationBlockType12 is present:

4> acquire SystemInformationBlockType12;

NOTE 3: UEs shall start acquiring SystemInformationBlockType12 as described above even when systemInfoValueTag in SystemInformationBlockType1 has not changed.

1> if the UE is interested to receive MBMS services:

2> if schedulingInfoList indicates that SystemInformationBlockType13 is present and the UE does not have stored a valid version of this system information block:

3> acquire SystemInformationBlockType13;

2> if the UE is capable of MBMS Service Continuity:

3> if schedulingInfoList indicates that SystemInformationBlockType15 is present and the UE does not have stored a valid version of this system information block:

4> acquire SystemInformationBlockType15;
1> if the UE is EAB capable:

2> when the UE does not have stored a valid version of SystemInformationBlockType14 upon entering RRC_IDLE, or when the UE acquires SystemInformationBlockType1 following EAB parameters change notification or upon entering a cell during RRC_IDLE:

3> if schedulingInfoList indicates that SystemInformationBlockType14 is present:

4> start acquiring SystemInformationBlockType14 immediately;

3> else:

4> discard SystemInformationBlockType14, if previously received;

NOTE 4: EAB capable UEs start acquiring SystemInformationBlockType14 as described above even when systemInfoValueTag in SystemInformationBlockType1 has not changed.

NOTE 5: EAB capable UEs maintain an up to date SystemInformationBlockType14 in RRC_IDLE.

The UE may apply the received SIBs immediately, i.e. the UE does not need to delay using a SIB until all SI messages have been received. The UE may delay applying the received SIBs until completing lower layer procedures associated with a received or a UE originated RRC message, e.g. an ongoing random access procedure.

NOTE 6: While attempting to acquire a particular SIB, if the UE detects from schedulingInfoList that it is no longer present, the UE should stop trying to acquire the particular SIB.

5.2.2.5 Essential system information missing

The UE shall:

1> if in RRC_IDLE or in RRC_CONNECTED while T311 is running:

2> if the UE is unable to acquire the MasterInformationBlock or the SystemInformationBlockType1:

3> consider the cell as barred in accordance with TS 36.304 [4]; and

3> perform barring as if intraFreqReselection is set to allowed, and as if the csg-Indication is set to FALSE;

2> else if the UE is unable to acquire the SystemInformationBlockType2:

3> treat the cell as barred in accordance with TS 36.304 [4];

5.2.2.6 Actions upon reception of the MasterInformationBlock message

Upon receiving the MasterInformationBlock message the UE shall:

1> apply the radio resource configuration included in the phich-Config;

1> if the UE is in RRC_IDLE or if the UE is in RRC_CONNECTED while T311 is running:

2> if the UE has no valid system information stored according to 5.2.2.3 for the concerned cell:

3> apply the received value of dl-Bandwidth to the ul-Bandwidth until SystemInformationBlockType2 is received;

5.2.2.7 Actions upon reception of the SystemInformationBlockType1 message

Upon receiving the SystemInformationBlockType1 either via broadcast or via dedicated signalling, the UE shall:

1> if in RRC_CONNECTED while T311 is not running, and the UE supports multi-band cells as defined by bit 31 in featureGroupIndicators:

2> disregard the freqBandIndicator and multiBandInfoList, if received, while in RRC_CONNECTED;

2> forward the cellIdentity to upper layers;

2> forward the trackingAreaCode to upper layers;
1> else:

2> if the frequency band indicated in the freqBandIndicator is part of the frequency bands supported by the UE;

or

2> if the UE supports multiBandInfoList, and if one or more of the frequency bands indicated in the multiBandInfoList are part of the frequency bands supported by the UE:

3> forward the cellIdentity to upper layers;

3> forward the trackingAreaCode to upper layers;

2> else:

3> consider the cell as barred in accordance with TS 36.304 [4]; and

3> perform barring as if intraFreqReselection is set to notAllowed, and as if the csg-Indication is set to FALSE;

5.2.2.8 Actions upon reception of SystemInformation messages

No UE requirements related to the contents of the SystemInformation messages apply other than those specified elsewhere e.g. within procedures using the concerned system information, and/ or within the corresponding field descriptions.

5.2.2.9 Actions upon reception of SystemInformationBlockType2

Upon receiving SystemInformationBlockType2, the UE shall:

1> apply the configuration included in the radioResourceConfigCommon;

1> if upper layers indicate that a (UE specific) paging cycle is configured:

2> apply the shortest of the (UE specific) paging cycle and the defaultPagingCycle included in the radioResourceConfigCommon;

1> if the mbsfn-SubframeConfigList is included:

2> consider that DL assignments may occur in the MBSFN subframes indicated in the mbsfn-SubframeConfigList under the conditions specified in [23, 7.1];

1> apply the specified PCCH configuration defined in 9.1.1.3;

1> not apply the timeAlignmentTimerCommon;

1> if in RRC_CONNECTED and UE is configured with RLF timers and constants values received within rlf-TimersAndConstants:

2> not update its values of the timers and constants in ue-TimersAndConstants except for the value of timer T300;

1> if in RRC_CONNECTED while T311 is not running; and the UE supports multi-band cells as defined by bit 31 in featureGroupIndicators:

2> disregard the additionalSpectrumEmission and ul-CarrierFreq, if received, while in RRC_CONNECTED;

5.2.2.10 Actions upon reception of SystemInformationBlockType3

No UE requirements related to the contents of this SystemInformationBlock apply other than those specified elsewhere e.g. within procedures using the concerned system information, and/ or within the corresponding field descriptions.

5.2.2.11 Actions upon reception of SystemInformationBlockType4

No UE requirements related to the contents of this SystemInformationBlock apply other than those specified elsewhere e.g. within procedures using the concerned system information, and/ or within the corresponding field descriptions.
5.2.2.12 Actions upon reception of SystemInformationBlockType5

No UE requirements related to the contents of this SystemInformationBlock apply other than those specified elsewhere e.g. within procedures using the concerned system information, and/or within the corresponding field descriptions.

5.2.2.13 Actions upon reception of SystemInformationBlockType6

No UE requirements related to the contents of this SystemInformationBlock apply other than those specified elsewhere e.g. within procedures using the concerned system information, and/or within the corresponding field descriptions.

5.2.2.14 Actions upon reception of SystemInformationBlockType7

No UE requirements related to the contents of this SystemInformationBlock apply other than those specified elsewhere e.g. within procedures using the concerned system information, and/or within the corresponding field descriptions.

5.2.2.15 Actions upon reception of SystemInformationBlockType8

Upon receiving SystemInformationBlockType8, the UE shall:

1> if sib8-PerPLMN-List is included and the UE is capable of network sharing for CDMA2000:
   2> apply the CDMA2000 parameters below corresponding to the RPLMN;
1> if the systemTimeInfo is included:
   2> forward the systemTimeInfo to CDMA2000 upper layers;
1> if the UE is in RRC_IDLE and if searchWindowSize is included:
   2> forward the searchWindowSize to CDMA2000 upper layers;
1> if parametersHRPD is included:
   2> forward the preRegistrationInfoHRPD to CDMA2000 upper layers only if the UE has not received the preRegistrationInfoHRPD within an RRCCConnectionReconfiguration message after entering this cell;
   2> if the cellReselectionParametersHRPD is included:
   3> forward the neighCellList to the CDMA2000 upper layers;
1> if the parameters1XRTT is included:
   2> if the csfb-RegistrationParam1XRTT is included:
   3> forward the csfb-RegistrationParam1XRTT to the CDMA2000 upper layers which will use this information to determine if a CS registration/re-registration towards CDMA2000 1xRTT in the EUTRA cell is required;
   2> else:
   3> forward neighCellList to the CDMA2000 upper layers;
1> if the csfb-SupportForDualRxUEs is included:
   2> if the csfb-SupportForDualRxUEs is included:
   3> forward csfb-SupportForDualRxUEs to the CDMA2000 upper layers;
   2> else:
   3> forward csfb-SupportForDualRxUEs, with its value set to FALSE, to the CDMA2000 upper layers;
2> if `ac-BarringConfig1XRTT` is included:
3> forward `ac-BarringConfig1XRTT` to the CDMA2000 upper layers;

2> if the `csfb-DualRxTxSupport` is included:
3> forward `csfb-DualRxTxSupport` to the CDMA2000 upper layers;
2> else:
3> forward `csfb-DualRxTxSupport`, with its value set to `FALSE`, to the CDMA2000 upper layers;

5.2.2.16 Actions upon reception of `SystemInformationBlockType9`

Upon receiving `SystemInformationBlockType9`, the UE shall:

1> if `hnb-Name` is included, forward the `hnb-Name` to upper layers;

5.2.2.17 Actions upon reception of `SystemInformationBlockType10`

Upon receiving `SystemInformationBlockType10`, the UE shall:

1> forward the received `warningType`, `messageIdentifier` and `serialNumber` to upper layers;

5.2.2.18 Actions upon reception of `SystemInformationBlockType11`

Upon receiving `SystemInformationBlockType11`, the UE shall:

1> if there is no current value for `messageIdentifier` and `serialNumber` for `SystemInformationBlockType11`; or
1> if either the received value of `messageIdentifier` or of `serialNumber` or of both are different from the current values of `messageIdentifier` and `serialNumber` for `SystemInformationBlockType11`:
2> use the received values of `messageIdentifier` and `serialNumber` for `SystemInformationBlockType11` as the current values of `messageIdentifier` and `serialNumber` for `SystemInformationBlockType11`;
2> discard any previously buffered `warningMessageSegment`;
2> if all segments of a warning message have been received:
3> assemble the warning message from the received `warningMessageSegment`;
3> forward the received warning message, `messageIdentifier`, `serialNumber` and `dataCodingScheme` to upper layers;
3> stop reception of `SystemInformationBlockType11`;
3> discard the current values of `messageIdentifier` and `serialNumber` for `SystemInformationBlockType11`;
2> else:
3> store the received `warningMessageSegment`;
3> continue reception of `SystemInformationBlockType11`;
1> else if all segments of a warning message have been received:
2> assemble the warning message from the received `warningMessageSegment`;
2> forward the received complete warning message, `messageIdentifier`, `serialNumber` and `dataCodingScheme` to upper layers;
2> stop reception of `SystemInformationBlockType11`;
2> discard the current values of `messageIdentifier` and `serialNumber` for `SystemInformationBlockType11`;
1> else:
2> store the received warningMessageSegment;
2> continue reception of SystemInformationBlockType11;

The UE should discard any stored warningMessageSegment and the current value of messageIdentifier and serialNumber for SystemInformationBlockType11 if the complete warning message has not been assembled within a period of 3 hours.

5.2.2.19 Actions upon reception of SystemInformationBlockType12

Upon receiving SystemInformationBlockType12, the UE shall:
1> if the SystemInformationBlockType12 contains a complete warning message:
   2> forward the received warning message, messageIdentifier, serialNumber and dataCodingScheme to upper layers;
   2> continue reception of SystemInformationBlockType12;
1> else:
   2> if the received values of messageIdentifier and serialNumber are the same (each value is the same) as a pair for which a warning message is currently being assembled:
   3> store the received warningMessageSegment;
3> if all segments of a warning message have been received:
   4> assemble the warning message from the received warningMessageSegment;
   4> forward the received warning message, messageIdentifier, serialNumber and dataCodingScheme to upper layers;
   4> stop assembling a warning message for this messageIdentifier and serialNumber and delete all stored information held for it;
3> continue reception of SystemInformationBlockType12;
   2> else if the received values of messageIdentifier and/or serialNumber are not the same as any of the pairs for which a warning message is currently being assembled:
3> start assembling a warning message for this messageIdentifier and serialNumber pair;
3> store the received warningMessageSegment;
3> continue reception of SystemInformationBlockType12;

The UE should discard warningMessageSegment and the associated values of messageIdentifier and serialNumber for SystemInformationBlockType12 if the complete warning message has not been assembled within a period of 3 hours.

NOTE: The number of warning messages that a UE can re-assemble simultaneously is a function of UE implementation.

5.2.2.20 Actions upon reception of SystemInformationBlockType13

No UE requirements related to the contents of this SystemInformationBlock apply other than those specified elsewhere e.g. within procedures using the concerned system information, and/or within the corresponding field descriptions.

5.2.2.21 Actions upon reception of SystemInformationBlockType14

No UE requirements related to the contents of this SystemInformationBlock apply other than those specified elsewhere e.g. within procedures using the concerned system information, and/or within the corresponding field descriptions.
5.2.2.22 Actions upon reception of SystemInformationBlockType15

No UE requirements related to the contents of this SystemInformationBlock apply other than those specified elsewhere e.g. within procedures using the concerned system information, and/or within the corresponding field descriptions.

5.2.2.23 Actions upon reception of SystemInformationBlockType16

No UE requirements related to the contents of this SystemInformationBlock apply other than those specified elsewhere e.g. within procedures using the concerned system information, and/or within the corresponding field descriptions.

5.2.3 Acquisition of an SI message

When acquiring an SI message, the UE shall:

1> determine the start of the SI-window for the concerned SI message as follows:

2> for the concerned SI message, determine the number \( n \) which corresponds to the order of entry in the list of SI messages configured by schedulingInfoList in SystemInformationBlockType1;

2> determine the integer value \( x = (n - 1) \times w \), where \( w \) is the si-WindowLength;

2> the SI-window starts at the subframe \( a \), where \( a = x \mod 10 \), in the radio frame for which SFN mod \( T \) = FLOOR\((x/10)\), where \( T \) is the si-Periodicity of the concerned SI message;

NOTE: E-UTRAN should configure an SI-window of 1 ms only if all SIs are scheduled before subframe \#5 in radio frames for which SFN mod 2 = 0.

1> receive DL-SCH using the SI-RNTI from the start of the SI-window and continue until the end of the SI-window whose absolute length in time is given by si-WindowLength, or until the SI message was received, excluding the following subframes:

2> subframe \#5 in radio frames for which SFN mod 2 = 0;

2> any MBSFN subframes;

2> any uplink subframes in TDD;

1> if the SI message was not received by the end of the SI-window, repeat reception at the next SI-window occasion for the concerned SI message;

5.3 Connection control

5.3.1 Introduction

5.3.1.1 RRC connection control

RRC connection establishment involves the establishment of SRB1. E-UTRAN completes RRC connection establishment prior to completing the establishment of the S1 connection, i.e. prior to receiving the UE context information from the EPC. Consequently, AS security is not activated during the initial phase of the RRC connection. During this initial phase of the RRC connection, the E-UTRAN may configure the UE to perform measurement reporting. However, the UE only accepts a handover message when security has been activated.

NOTE: In case the serving frequency broadcasts multiple overlapping bands, E-UTRAN can only configure measurements after having obtained the UE capabilities, as the measurement configuration needs to be set according to the band selected by the UE.

Upon receiving the UE context from the EPC, E-UTRAN activates security (both ciphering and integrity protection) using the initial security activation procedure. The RRC messages to activate security (command and successful response) are integrity protected, while ciphering is started only after completion of the procedure. That is, the response to the message used to activate security is not ciphered, while the subsequent messages (e.g. used to establish SRB2 and DRBs) are both integrity protected and ciphered.
After having initiated the initial security activation procedure, E-UTRAN initiates the establishment of SRB2 and DRBs, i.e. E-UTRAN may do this prior to receiving the confirmation of the initial security activation from the UE. In any case, E-UTRAN will apply both ciphering and integrity protection for the RRC connection reconfiguration messages used to establish SRB2 and DRBs. E-UTRAN should release the RRC connection if the initial security activation and/or the radio bearer establishment fails (i.e. security activation and DRB establishment are triggered by a joint S1-procedure, which does not support partial success).

For SRB2 and DRBs, security is always activated from the start, i.e. the E-UTRAN does not establish these bearers prior to activating security.

For some radio configuration fields, a critical extension has been defined. A switch from the original version of the field to the critically extended version is allowed using any connection reconfiguration. The UE reverts to the original version of some critically extended fields upon handover and re-establishment as specified elsewhere in this specification. Otherwise, switching a field from the critically extended version to the original version is only possible using the handover or re-establishment procedure with the full configuration option.

After having initiated the initial security activation procedure, E-UTRAN may configure a UE that supports CA, with one or more SCells in addition to the PCell that was initially configured during connection establishment. The PCell is used to provide the security inputs and upper layer system information (i.e. the NAS mobility information e.g. TAI). SCells are used to provide additional downlink and optionally uplink radio resources.

The release of the RRC connection normally is initiated by E-UTRAN. The procedure may be used to re-direct the UE to an E-UTRA frequency or an inter-RAT carrier frequency. Only in exceptional cases, as specified within this specification, TS 36.300 [9], TS 36.304 [4] or TS 24.301 [35], may the UE abort the RRC connection, i.e. move to RRC_IDLE without notifying E-UTRAN.

5.3.1.2 Security

AS security comprises of the integrity protection of RRC signalling (SRBs) as well as the ciphering of RRC signalling (SRBs) and user data (DRBs).

RRC handles the configuration of the security parameters which are part of the AS configuration: the integrity protection algorithm, the ciphering algorithm and two parameters, namely the keyChangeIndicator and the nextHopChainingCount, which are used by the UE to determine the AS security keys upon handover and/or connection re-establishment.

The integrity protection algorithm is common for signalling radio bearers SRB1 and SRB2. The ciphering algorithm is common for all radio bearers (i.e. SRB1, SRB2 and DRBs). Neither integrity protection nor ciphering applies for SRB0.

RRC integrity and ciphering are always activated together, i.e. in one message/procedure. RRC integrity and ciphering are never de-activated. However, it is possible to switch to a ‘NULL’ ciphering algorithm (eea0).

The ‘NULL’ integrity protection algorithm (eia0) is used only for the UE in limited service mode [32, TS33.401]. In case the ‘NULL’ integrity protection algorithm is used, ‘NULL’ ciphering algorithm is also used.

NOTE 1: Lower layers discard RRC messages for which the integrity check has failed and indicate the integrity verification check failure to RRC.

The AS applies three different security keys: one for the integrity protection of RRC signalling (K_{RRCint}), one for the ciphering of RRC signalling (K_{RRCenc}) and one for the ciphering of user data (K_{UPenc}). All three AS keys are derived from the K_{eNB} key. The K_{eNB} is based on the K_{ASME} key, which is handled by upper layers.

Upon connection establishment new AS keys are derived. No AS-parameters are exchanged to serve as inputs for the derivation of the new AS keys at connection establishment.

The integrity and ciphering of the RRC message used to perform handover is based on the security configuration used prior to the handover and is performed by the source eNB.

The integrity and ciphering algorithms can only be changed upon handover. The four AS keys (K_{eNB}, K_{RRCint}, K_{RRCenc} and K_{UPenc}) change upon every handover and connection re-establishment. The keyChangeIndicator is used upon handover and indicates whether the UE should use the keys associated with the K_{ASME} key taken into use with the latest successful NAS SMC procedure. The nextHopChainingCount parameter is used upon handover and connection re-establishment by the UE when deriving the new K_{eNB} that is used to generate K_{RRCint}, K_{RRCenc} and K_{UPenc} (see TS 33.401 [32]). An intra cell handover procedure may be used to change the keys in RRC_CONNECTED.
For each DRB, the COUNT is used as input for ciphering. For each SRB, the COUNT is used as input for both ciphering and integrity protection. It is not allowed to use the same COUNT value more than once for a given security key. In order to limit the signalling overhead, individual messages/packets include a short sequence number (PDCP SDU), derived by taking into account the COUNT value maintained for DRB ciphering and for integrity protection is the value of the corresponding srb-Identity with the MSBs padded with zeroes.

5.3.1.2a RN security

For RNs, AS security follows the procedures in 5.3.1.2. Furthermore, E-UTRAN may configure per DRB whether or not integrity protection is used. The use of integrity protection may be configured only upon DRB establishment and reconfigured only upon handover and RRC re-establishment. The COUNT value maintained for DRB ciphering is also used in the source cell(s) with the exception that the security algorithms are continued for the RRC re-establishment. Full configuration option includes an initialization of the radio configuration, which makes the procedure independent of the configuration used in the source cell(s) with the exception that the security algorithms are continued for the RRC re-establishment.

After receiving the handover message, the UE attempts to access the target PCell at the first available RACH occasion according to Random Access resource selection defined in TS 36.321 [6], i.e. the handover is asynchronous. Consequently, when allocating a dedicated preamble for the random access in the target PCell, E-UTRA shall ensure it is available from the first RACH occasion the UE may use. Upon successful completion of the handover, the UE sends a message used to confirm the handover.

If the target eNB does not support the release of RRC protocol which the source eNB used to configure the UE, the target eNB may be unable to comprehend the UE configuration provided by the source eNB. In this case, the target eNB should use the full configuration option to reconfigure the UE for Handover and Re-establishment. Full configuration option includes an initialization of the radio configuration, which makes the procedure independent of the configuration used in the source cell(s) with the exception that the security algorithms are continued for the RRC re-establishment.

After the successful completion of handover, PDCP SDUs may be re-transmitted in the target cell(s). This only applies for DRBs using RLC-AM mode and for handovers not involving full configuration option. The further details are specified in TS 36.323 [8]. After the successful completion of handover not involving full configuration option, the SN
and the HFN are reset except for the DRBs using RLC-AM mode (for which both SN and HFN continue). For reconfigurations involving the full configuration option, the PDCP entities are newly established (SN and HFN do not continue) for all DRBs irrespective of the RLC mode. The further details are specified in TS 36.323 [8].

One UE behaviour to be performed upon handover is specified, i.e. this is regardless of the handover procedures used within the network (e.g. whether the handover includes X2 or S1 signalling procedures).

The source eNB should, for some time, maintain a context to enable the UE to return in case of handover failure. After having detected handover failure, the UE attempts to resume the RRC connection either in the source PCell or in another cell using the RRC re-establishment procedure. This connection resumption succeeds only if the accessed cell is prepared, i.e. concerns a cell of the source eNB or of another eNB towards which handover preparation has been performed. The cell in which the re-establishment procedure succeeds becomes the PCell while SCells and STAGs, if configured, are released.

Normal measurement and mobility procedures are used to support handover to cells broadcasting a CSG identity. In addition, E-UTRAN may configure the UE to report that it is entering or leaving the proximity of cell(s) included in its CSG whitelist. Furthermore, E-UTRAN may request the UE to provide additional information broadcast by the handover candidate cell e.g. global cell identity, CSG identity, CSG membership status.

NOTE: E-UTRAN may use the "proximity report" to configure measurements as well as to decide whether or not to request additional information broadcast by the handover candidate cell. The additional information is used to verify whether or not the UE is authorised to access the target PCell and may also be needed to identify handover candidate cell (PCI confusion i.e. when the physical layer identity that is included in the measurement report does not uniquely identify the cell).

5.3.2 Paging

5.3.2.1 General

![Figure 5.3.2.1-1: Paging](image)

The purpose of this procedure is:

- to transmit paging information to a UE in RRC_IDLE and/ or;
- to inform UEs in RRC_IDLE and UEs in RRC_CONNECTED about a system information change and/ or;
- to inform about an ETWS primary notification and/ or ETWS secondary notification and/ or;
- to inform about a CMAS notification.

The paging information is provided to upper layers, which in response may initiate RRC connection establishment, e.g. to receive an incoming call.

5.3.2.2 Initiation

E-UTRAN initiates the paging procedure by transmitting the Paging message at the UE's paging occasion as specified in TS 36.304 [4]. E-UTRAN may address multiple UEs within a Paging message by including one PagingRecord for each UE. E-UTRAN may also indicate a change of system information, and/ or provide an ETWS notification or a CMAS notification in the Paging message.
5.3.2.3 Reception of the Paging message by the UE

Upon receiving the Paging message, the UE shall:

1> if in RRC_IDLE, for each of the PagingRecord, if any, included in the Paging message:
   2> if the ue-Identity included in the PagingRecord matches one of the UE identities allocated by upper layers:
   3> forward the ue-Identity and the cn-Domain to the upper layers;

1> if the systemInfoModification is included:
   2> re-acquire the required system information using the system information acquisition procedure as specified in 5.2.2.

1> if the etws-Indication is included and the UE is ETWS capable:
   2> re-acquire SystemInformationBlockType1 immediately, i.e., without waiting until the next system information modification period boundary;
   2> if the schedulingInfoList indicates that SystemInformationBlockType10 is present:
      3> acquire SystemInformationBlockType10;
      2> if the schedulingInfoList indicates that SystemInformationBlockType11 is present:
      3> acquire SystemInformationBlockType11;

1> if the cmas-Indication is included and the UE is CMAS capable:
   2> re-acquire SystemInformationBlockType1 immediately, i.e., without waiting until the next system information modification period boundary as specified in 5.2.1.5;
   2> if the schedulingInfoList indicates that SystemInformationBlockType12 is present:
      3> acquire SystemInformationBlockType12;

1> if in RRC_IDLE, the eab-ParamModification is included and the UE is EAB capable:
   2> consider previously stored SystemInformationBlockType14 as invalid;
   2> re-acquire SystemInformationBlockType1 immediately, i.e., without waiting until the next system information modification period boundary as specified in 5.2.1.6;
   2> re-acquire SystemInformationBlockType14 using the system information acquisition procedure as specified in 5.2.2.4;
5.3.3 RRC connection establishment

5.3.3.1 General

The purpose of this procedure is to establish an RRC connection. RRC connection establishment involves SRB1 establishment. The procedure is also used to transfer the initial NAS dedicated information/message from the UE to E-UTRAN.

E-UTRAN applies the procedure as follows:

- to establish SRB1 only.

5.3.3.2 Initiation

The UE initiates the procedure when upper layers request establishment of an RRC connection while the UE is in RRC_IDLE.

Upon initiation of the procedure, the UE shall:

1> if upper layers indicate that the RRC connection is subject to EAB (see TS 24.301 [35]):
   2> if the result of the EAB check, as specified in 5.3.3.12, is that access to the cell is barred:

3> inform upper layers about the failure to establish the RRC connection and that EAB is applicable, upon which the procedure ends;

1> if the UE is establishing the RRC connection for mobile terminating calls:
   2> if timer T302 is running:
inform upper layers about the failure to establish the RRC connection and that access barring for mobile terminating calls is applicable, upon which the procedure ends;

else if the UE is establishing the RRC connection for emergency calls:

if SystemInformationBlockType2 includes the ac-BarringInfo:

if the ac-BarringForEmergency is set to TRUE:

if the UE has one or more Access Classes, as stored on the USIM, with a value in the range 11..15, which is valid for the UE to use according to TS 22.011 [10] and TS 23.122 [11]:

NOTE 1: ACs 12, 13, 14 are only valid for use in the home country and ACs 11, 15 are only valid for use in the HPLMN/ EHPLMN.

5> if the ac-BarringInfo includes ac-BarringForMO-Data, and for all of these valid Access Classes for the UE, the corresponding bit in the ac-BarringForSpecialAC contained in ac-BarringForMO-Data is set to one:

6> consider access to the cell as barred;

else:

5> consider access to the cell as barred;

2> if access to the cell is barred:

3> inform upper layers about the failure to establish the RRC connection, upon which the procedure ends;

else if the UE is establishing the RRC connection for mobile originating calls:

perform access barring check as specified in 5.3.3.11, using T303 as "Tbarring" and ac-BarringForMO-Data as "AC barring parameter";

if access to the cell is barred:

if SystemInformationBlockType2 includes ac-BarringForCSFB or the UE does not support CS fallback:

4> inform upper layers about the failure to establish the RRC connection and that access barring for mobile originating calls is applicable, upon which the procedure ends;

3> else (SystemInformationBlockType2 does not include ac-BarringForCSFB and the UE supports CS fallback):

4> if timer T306 is not running, start T306 with the timer value of T303;

4> inform upper layers about the failure to establish the RRC connection and that access barring for mobile originating calls and mobile originating CS fallback is applicable, upon which the procedure ends;

else if the UE is establishing the RRC connection for mobile originating signalling:

perform access barring check as specified in 5.3.3.11, using T305 as "Tbarring" and ac-BarringForMO-Signalling as "AC barring parameter";

if access to the cell is barred:

3> inform upper layers about the failure to establish the RRC connection and that access barring for mobile originating signalling is applicable, upon which the procedure ends;

else (the UE is establishing the RRC connection for mobile originating CS fallback):

2> if SystemInformationBlockType2 includes ac-BarringForCSFB:

3> perform access barring check as specified in 5.3.3.11, using T306 as "Tbarring" and ac-BarringForCSFB as "AC barring parameter";

3> if access to the cell is barred:
inform upper layers about the failure to establish the RRC connection and that access barring for mobile originating CS fallback is applicable, due to ac-BarringForCSFB, upon which the procedure ends;

else:

perform access barring check as specified in 5.3.3.11, using T306 as "Tbarring" and ac-BarringForMO-Data as "AC barring parameter";

if access to the cell is barred:

if timer T303 is not running, start T303 with the timer value of T306;

inform upper layers about the failure to establish the RRC connection and that access barring for mobile originating CS fallback and mobile originating calls is applicable, due to ac-BarringForMO-Data, upon which the procedure ends;

apply the default physical channel configuration as specified in 9.2.4;

apply the default semi-persistent scheduling configuration as specified in 9.2.3;

apply the default MAC main configuration as specified in 9.2.2;

apply the CCCH configuration as specified in 9.1.1.2;

start timer T300;

initiate transmission of the RRCConnectionRequest message in accordance with 5.3.3.3;

NOTE 2: Upon initiating the connection establishment procedure, the UE is not required to ensure it maintains up to date system information applicable only for UEs in RRC_IDLE state. However, the UE needs to perform system information acquisition upon cell re-selection.

5.3.3.3 Actions related to transmission of RRCConnectionRequest message

The UE shall set the contents of RRCConnectionRequest message as follows:

set the ue-Identity as follows:

if upper layers provide an S-TMSI:

set the ue-Identity to the value received from upper layers;

else:

draw a random value in the range 0 .. 2^{30}-1 and set the ue-Identity to this value;

NOTE 1: Upper layers provide the S-TMSI if the UE is registered in the TA of the current cell.

set the establishmentCause in accordance with the information received from upper layers;

The UE shall submit the RRCConnectionRequest message to lower layers for transmission.

The UE shall continue cell re-selection related measurements as well as cell re-selection evaluation. If the conditions for cell re-selection are fulfilled, the UE shall perform cell re-selection as specified in 5.3.3.5.

5.3.3.4 Reception of the RRCConnectionSetup by the UE

NOTE: Prior to this, lower layer signalling is used to allocate a C-RNTI. For further details see TS 36.321 [6];

The UE shall:

perform the radio resource configuration procedure in accordance with the received radioResourceConfigDedicated and as specified in 5.3.10;
if stored, discard the cell reselection priority information provided by the \textit{idleModeMobilityControlInfo} or inherited from another RAT;

1> stop timer T300;

1> stop timer T302, if running;

1> stop timer T303, if running;

1> stop timer T305, if running;

1> stop timer T306, if running;

1> perform the actions as specified in 5.3.3.7;

1> stop timer T320, if running;

1> enter RRC\_CONNECTED;

1> stop the cell re-selection procedure;

1> consider the current cell to be the PCell;

1> set the content of \textit{RRCConnectionSetupComplete} message as follows:

2> set the \textit{selectedPLMN-Identity} to the PLMN selected by upper layers (see TS 23.122 [11], TS 24.301 [35]) from the PLMN(s) included in the \textit{plmn-IdentityList} in \textit{SystemInformationBlockType1};

2> if upper layers provide the ‘Registered MME’, include and set the \textit{registeredMME} as follows:

3> if the PLMN identity of the ‘Registered MME’ is different from the PLMN selected by the upper layers:

4> include the \textit{plmnIdentity} in the \textit{registeredMME} and set it to the value of the PLMN identity in the ‘Registered MME’ received from upper layers;

3> set the \textit{mmegi} and the \textit{mmec} to the value received from upper layers;

2> if upper layers provided the ‘Registered MME’:

3> include and set the \textit{gummei-Type} to the value provided by the upper layers;

2> if connecting as an RN:

3> include the \textit{rn-SubframeConfigReq};

2> set the \textit{dedicatedInfoNAS} to include the information received from upper layers;

2> if the UE has radio link failure or handover failure information available in \textit{VarRLF-Report} and if the RPLMN is included in \textit{plmn-IdentityList} stored in \textit{VarRLF-Report}:

3> include \textit{rlf-InfoAvailable};

2> if the UE has logged measurements available for E-UTRA and if the RPLMN is included in \textit{plmn-IdentityList} stored in \textit{VarLogMeasReport}:

3> include \textit{logMeasAvailable};

2> if the UE has connection establishment failure information available in \textit{VarConnEstFailReport} and if the RPLMN is equal to \textit{plmn-Identity} stored in \textit{VarConnEstFailReport}:

3> include \textit{connEstFailInfoAvailable};

2> submit the \textit{RRCConnectionSetupComplete} message to lower layers for transmission, upon which the procedure ends;
5.3.3.5 Cell re-selection while T300, T302, T303, T305 or T306 is running

The UE shall:

1> if cell reselection occurs while T300, T302, T303, T305 or T306 is running:

2> if timer T302, T303, T305 and/ or T306 is running:

3> stop timer T302, T303, T305 and T306, whichever ones were running;

3> perform the actions as specified in 5.3.3.7;

2> if timer T300 is running:

3> stop timer T300;

3> reset MAC, release the MAC configuration and re-establish RLC for all RBs that are established;

3> inform upper layers about the failure to establish the RRC connection;

5.3.3.6 T300 expiry

The UE shall:

1> if timer T300 expires:

2> reset MAC, release the MAC configuration and re-establish RLC for all RBs that are established;

2> store the following connection establishment failure information in the VarConnEstFailReport by setting its fields as follows:

3> clear the information included in VarConnEstFailReport, if any;

3> set the plmn-Identity to the PLMN selected by upper layers (see TS 23.122 [11], TS 24.301 [35]) from the PLMN(s) included in the plmn-IdentityList in SystemInformationBlockType1;

3> set the failedCellId to the global cell identity of the cell where connection establishment failure is detected;

3> set the_measResultFailedCell to include the RSRP and RSRQ, if available, of the cell where connection establishment failure is detected and based on measurements collected up to the moment the UE detected the failure;

3> if available, set the measResultNeighCells, in order of decreasing ranking-criterion as used for cell re-selection, to include neighbouring cell measurements for at most the following number of neighbouring cells: 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency/ set of frequencies (GERAN) per RAT and according to the following:

4> for each neighbour cell included, include the optional fields that are available;

NOTE: The UE includes the latest results of the available measurements as used for cell reselection evaluation, which are performed in accordance with the performance requirements as specified in TS 36.133 [16].

3> if detailed location information is available, set the content of the locationInfo as follows:

4> include the locationCoordinates;

4> include the horizontalVelocity, if available;

3> set the numberOfPreamblesSent to indicate the number of preambles sent by MAC for the failed random access procedure;

3> set contentionDetected to indicate whether contention resolution was not successful as specified in TS 36.321 [6] for at least one of the transmitted preambles for the failed random access procedure;

3> set maxTxPowerReached to indicate whether or not the maximum power level was used for the last transmitted preamble, see TS 36.321 [6];

2> inform upper layers about the failure to establish the RRC connection, upon which the procedure ends;
The UE may discard the connection establishment failure information, i.e. release the UE variable \textit{VarConnEstFailReport}, 48 hours after the failure is detected, upon power off or upon detach.

5.3.3.7 T302, T303, T305 or T306 expiry or stop

The UE shall:

1> if timer T302 expires or is stopped:
   2> inform upper layers about barring alleviation for mobile terminating access;
   2> if timer T303 is not running:
3> inform upper layers about barring alleviation for mobile originating calls;
   2> if timer T305 is not running:
3> inform upper layers about barring alleviation for mobile originating signalling;
   2> if timer T306 is not running:
3> inform upper layers about barring alleviation for mobile originating CS fallback;

1> if timer T303 expires or is stopped:
   2> if timer T302 is not running:
3> inform upper layers about barring alleviation for mobile originating calls;

1> if timer T305 expires or is stopped:
   2> if timer T302 is not running:
3> inform upper layers about barring alleviation for mobile originating signalling;

1> if timer T306 expires or is stopped:
   2> if timer T302 is not running:
3> inform upper layers about barring alleviation for mobile originating CS fallback;

5.3.3.8 Reception of the \textit{RRCConnectionReject} by the UE

The UE shall:

1> stop timer T300;
1> reset MAC and release the MAC configuration;
1> start timer T302, with the timer value set to the \textit{waitTime};
1> if the \textit{extendedWaitTime} is present and the UE supports delay tolerant access:
   2> forward the \textit{extendedWaitTime} to upper layers;
1> if \textit{deprioritisationReq} is included and the UE supports RRC Connection Reject with deprioritisation:
   2> start or restart timer T325 with the timer value set to the \textit{deprioritisationTimer} signalled;
   2> store the \textit{deprioritisationReq} until T325 expiry;

\textbf{NOTE:} The UE stores the deprioritisation request irrespective of any cell reselection absolute priority assignments (by dedicated or common signalling) and regardless of RRC connections in E-UTRAN or other RATs unless specified otherwise.
inform upper layers about the failure to establish the RRC connection and that access barring for mobile originating calls, mobile originating signalling, mobile terminating access and mobile originating CS fallback is applicable, upon which the procedure ends;

### 5.3.3.9 Abortion of RRC connection establishment

If upper layers abort the RRC connection establishment procedure while the UE has not yet entered RRC_CONNECTED, the UE shall:

1. stop timer T300, if running;
2. reset MAC, release the MAC configuration and re-establish RLC for all RBs that are established;

### 5.3.3.10 Handling of SSAC related parameters

Upon request from the upper layers, the UE shall:

1. set the local variables \( BarringFactorForMMTEL-Voice \) and \( BarringTimeForMMTEL-Voice \) as follows:
2. if the UE is in RRC_IDLE and \( ssac-BarringForMMTEL-Voice \) is present:
3. if the UE has one or more Access Classes, as stored on the USIM, with a value in the range 11..15, which is valid for the UE to use according to TS 22.011 [10] and TS 23.122 [11], and

   **NOTE:** ACs 12, 13, 14 are only valid for use in the home country and ACs 11, 15 are only valid for use in the HPLMN/EHPLMN.
4. if, for at least one of these Access Classes, the corresponding bit in the \( ac-BarringForSpecialAC \) contained in \( ssac-BarringForMMTEL-Voice \) is set to zero:
5. set \( BarringFactorForMMTEL-Voice \) to one and \( BarringTimeForMMTEL-Voice \) to zero;
6. else:
   1. set \( BarringFactorForMMTEL-Voice \) to one and \( BarringTimeForMMTEL-Voice \) to zero;

1. if the UE has one or more Access Classes, as stored on the USIM, with a value in the range 11..15, which is valid for the UE to use according to TS 22.011 [10] and TS 23.122 [11], and
3. if, for at least one of these Access Classes, the corresponding bit in the \( ac-BarringForSpecialAC \) contained in \( ssac-BarringForMMTEL-Video \) is set to zero:
4. set \( BarringFactorForMMTEL-Video \) to one and \( BarringTimeForMMTEL-Video \) to zero;
3. else:
   1. set \( BarringFactorForMMTEL-Video \) to one and \( BarringTimeForMMTEL-Video \) to zero;

### 5.3.3.11 Access barring check

1. if timer T302 or "Tbarring" is running:
2> consider access to the cell as barred;
1> else if SystemInformationBlockType2 includes "AC barring parameter":
  2> if the UE has one or more Access Classes, as stored on the USIM, with a value in the range 11..15, which is valid for the UE to use according to TS 22.011 [10] and TS 23.122 [11], and

NOTE: ACs 12, 13, 14 are only valid for use in the home country and ACs 11, 15 are only valid for use in the HPLMN/ EHPLMN.

2> for at least one of these valid Access Classes the corresponding bit in the ac-BarringForSpecialAC contained in "AC barring parameter" is set to zero:

3> consider access to the cell as not barred;
2> else:

3> draw a random number 'rand' uniformly distributed in the range: 0 ≤ rand < 1;
3> if 'rand' is lower than the value indicated by ac-BarringFactor included in "AC barring parameter":
    4> consider access to the cell as not barred;
3> else:
    4> consider access to the cell as barred;
1> else:

2> consider access to the cell as not barred;
1> if access to the cell is barred and both timers T302 and "Tbarring" are not running:

2> draw a random number 'rand' that is uniformly distributed in the range 0 ≤ rand < 1;
2> start timer "Tbarring" with the timer value calculated as follows, using the ac-BarringTime included in "AC barring parameter":

"Tbarring" = (0.7 + 0.6 * rand) * ac-BarringTime.

5.3.3.12 EAB check

The UE shall:

1> if SystemInformationBlockType14 is present and includes the eab-Param:

2> if the eab-Common is included in the eab-Param:

3> if the UE belongs to the category of UEs as indicated in the eab-Category contained in eab-Common; and

3> if for the Access Class of the UE, as stored on the USIM and with a value in the range 0..9, the corresponding bit in the eab-BarringBitmap contained in eab-Common is set to one:
    4> consider access to the cell as barred;
3> else:
    4> consider access to the cell as not barred due to EAB;
2> else (the eab-PerPLMN-List is included in the eab-Param):

3> select the entry in the eab-PerPLMN-List corresponding to the PLMN selected by upper layers (see TS 23.122 [11], TS 24.301 [35]);

3> if the eab-Config for that PLMN is included:
4> if the UE belongs to the category of UEs as indicated in the \textit{eab-Category} contained in \textit{eab-Config};
and
4> if for the Access Class of the UE, as stored on the USIM and with a value in the range 0..9, the corresponding bit in the \textit{eab-BarringBitmap} contained in \textit{eab-Config} is set to \textit{one};

5> consider access to the cell as barred;
4> else:

5> consider access to the cell as not barred due to EAB;
3> else:

4> consider access to the cell as not barred due to EAB;
1> else:

2> consider access to the cell as not barred due to EAB;

5.3.4 Initial security activation

5.3.4.1 General

The purpose of this procedure is to activate AS security upon RRC connection establishment.

5.3.4.2 Initiation

E-UTRAN initiates the security mode command procedure to a UE in RRC\_CONNECTED. Moreover, E-UTRAN applies the procedure as follows:

- when only SRB1 is established, i.e. prior to establishment of SRB2 and/or DRBs.
5.3.4.3 Reception of the SecurityModeCommand by the UE

The UE shall:

1> derive the $K_{eNB}$ key, as specified in TS 33.401 [32];

1> derive the $K_{RRCint}$ key associated with the integrityProtAlgorithm indicated in the SecurityModeCommand message, as specified in TS 33.401 [32];

1> request lower layers to verify the integrity protection of the SecurityModeCommand message, using the algorithm indicated by the integrityProtAlgorithm as included in the SecurityModeCommand message and the $K_{RRCint}$ key;

1> if the SecurityModeCommand message passes the integrity protection check:

2> derive the $K_{RRCenc}$ key and the $K_{UPc}$ key associated with the cipheringAlgorithm indicated in the SecurityModeCommand message, as specified in TS 33.401 [32];

2> if connected as an RN:

3> derive the $K_{UPint}$ key associated with the integrityProtAlgorithm indicated in the SecurityModeCommand message, as specified in TS 33.401 [32];

2> configure lower layers to apply integrity protection using the indicated algorithm and the $K_{RRCint}$ key immediately, i.e. integrity protection shall be applied to all subsequent messages received and sent by the UE, including the SecurityModeComplete message;

2> configure lower layers to apply ciphering using the indicated algorithm, the $K_{RRCenc}$ key and the $K_{UPc}$ key after completing the procedure, i.e. ciphering shall be applied to all subsequent messages received and sent by the UE, except for the SecurityModeComplete message which is sent unciphered;

2> if connected as an RN:

3> configure lower layers to apply integrity protection using the indicated algorithm and the $K_{UPint}$ key, for DRBs that are subsequently configured to apply integrity protection, if any;

2> consider AS security to be activated;

2> submit the SecurityModeComplete message to lower layers for transmission, upon which the procedure ends;

1> else:

2> continue using the configuration used prior to the reception of the SecurityModeCommand message, i.e. neither apply integrity protection nor ciphering.

2> submit the SecurityModeFailure message to lower layers for transmission, upon which the procedure ends;

5.3.5 RRC connection reconfiguration

5.3.5.1 General

![Diagram of RRC connection reconfiguration](image here)

Figure 5.3.5.1-1: RRC connection reconfiguration, successful
The purpose of this procedure is to modify an RRC connection, e.g. to establish/modify/release RBs, to perform handover, to setup/modify/release measurements, to add/modify/release SCells. As part of the procedure, NAS dedicated information may be transferred from E-UTRAN to the UE.

5.3.5.2 Initiation

E-UTRAN may initiate the RRC connection reconfiguration procedure to a UE in RRC_CONNECTED. E-UTRAN applies the procedure as follows:

- the mobilityControlInfo is included only when AS-security has been activated, and SRB2 with at least one DRB are setup and not suspended;
- the establishment of RBs (other than SRB1, that is established during RRC connection establishment) is included only when AS security has been activated;
- the addition of SCells is performed only when AS security has been activated;

5.3.5.3 Reception of an RRCConnectionReconfiguration not including the mobilityControlInfo by the UE

If the RRCConnectionReconfiguration message does not include the mobilityControlInfo and the UE is able to comply with the configuration included in this message, the UE shall:

1> if this is the first RRCConnectionReconfiguration message after successful completion of the RRC Connection Re-establishment procedure:
   2> re-establish PDCP for SRB2 and for all DRBs that are established, if any;
   2> re-establish RLC for SRB2 and for all DRBs that are established, if any;
   2> if the RRCConnectionReconfiguration message includes the fullConfig:
      3> perform the radio configuration procedure as specified in section 5.3.5.8;
      3> if the RRCConnectionReconfiguration message includes the radioResourceConfigDedicated:
         2> resume SRB2 and all DRBs that are suspended, if any;
   3> perform the radio resource configuration procedure as specified in 5.3.10;

   NOTE 1: The handling of the radio bearers after the successful completion of the PDCP re-establishment, e.g. the re-transmission of unacknowledged PDCP SDUs (as well as the associated status reporting), the handling of the SN and the HFN, is specified in TS 36.323 [8].

   NOTE 2: The UE may discard SRB2 messages and data that it receives prior to completing the reconfiguration used to resume these bearers.

1> else:
   2> if the RRCConnectionReconfiguration message includes the radioResourceConfigDedicated:
3> perform the radio resource configuration procedure as specified in 5.3.10;

NOTE 3: If the **RRCConnectionReconfiguration** message includes the establishment of radio bearers other than SRB1, the UE may start using these radio bearers immediately, i.e. there is no need to wait for an outstanding acknowledgment of the **SecurityModeComplete** message.

1> if the received **RRCConnectionReconfiguration** includes the **sCellToReleaseList**:
   2> perform SCell release as specified in 5.3.10.3a;

1> if the received **RRCConnectionReconfiguration** includes the **sCellToAddModList**:
   2> perform SCell addition or modification as specified in 5.3.10.3b;

1> if the received **RRCConnectionReconfiguration** includes the **systemInformationBlockType1Dedicated**:
   2> perfom the actions upon reception of the **SystemInformationBlockType1** message as specified in 5.2.2.7;

1> if the **RRCConnectionReconfiguration** message includes the **dedicatedInfoNASList**:
   2> forward each element of the **dedicatedInfoNASList** to upper layers in the same order as listed;

1> if the **RRCConnectionReconfiguration** message includes the **measConfig**:
   2> perform the measurement configuration procedure as specified in 5.5.2;

1> perform the measurement identity autonomous removal as specified in 5.5.2.2a;

1> if the **RRCConnectionReconfiguration** message includes the **otherConfig**:
   2> perform the other configuration procedure as specified in 5.3.10.9;

1> submit the **RRCConnectionReconfigurationComplete** message to lower layers for transmission using the new configuration, upon which the procedure ends;

### 5.3.5.4 Reception of an **RRCConnectionReconfiguration** including the **mobilityControlInfo** by the UE (handover)

If the **RRCConnectionReconfiguration** message includes the **mobilityControlInfo** and the UE is able to comply with the configuration included in this message, the UE shall:

1> stop timer T310, if running;

1> start timer T304 with the timer value set to $t304$, as included in the **mobilityControlInfo**;

1> if the **carrierFreq** is included:
   2> consider the target PCell to be one on the frequency indicated by the **carrierFreq** with a physical cell identity indicated by the **targetPhysCellId**;

1> else:
   2> consider the target PCell to be one on the frequency of the source PCell with a physical cell identity indicated by the **targetPhysCellId**;

1> start synchronising to the DL of the target PCell;

NOTE 1: The UE should perform the handover as soon as possible following the reception of the RRC message triggering the handover, which could be before confirming successful reception (HARQ and ARQ) of this message.

1> reset MAC;

1> re-establish PDCP for all RBs that are established;
NOTE 2: The handling of the radio bearers after the successful completion of the PDCP re-establishment, e.g. the re-transmission of unacknowledged PDCP SDUs (as well as the associated status reporting), the handling of the SN and the HFN, is specified in TS 36.323 [8].

1. re-establish RLC for all RBs that are established;
2. configure lower layers to consider the SCell(s), if configured, to be in deactivated state;
3. apply the value of the newUE-Identity as the C-RNTI;
4. if the RRCConnectionReconfiguration message includes the fullConfig:
   1. perform the radio configuration procedure as specified in section 5.3.5.8;
5. configure lower layers in accordance with the received radioResourceConfigCommon;
6. configure lower layers in accordance with any additional fields, not covered in the previous, if included in the received mobilityControlInfo;
7. if the RRCConnectionReconfiguration message includes the radioResourceConfigDedicated:
6. perform the radio resource configuration procedure as specified in 5.3.10;
8. if the keyChangeIndicator received in the securityConfigHO is set to TRUE:
   1. update the K_{ENB} key based on the K_{ASME} key taken into use with the latest successful NAS SMC procedure, as specified in TS 33.401 [32];
   2. else:
      1. update the K_{ENB} key based on the current K_{ENB} or the NH, using the nextHopChainingCount value indicated in the securityConfigHO, as specified in TS 33.401 [32];
      2. store the nextHopChainingCount value;
9. if the securityAlgorithmConfig is included in the securityConfigHO:
   1. derive the K_{RRCint} key associated with the integrityProtAlgorithm, as specified in TS 33.401 [32];
   2. else:
      1. derive the K_{RRCint} key associated with the current integrity algorithm, as specified in TS 33.401 [32];
      2. if connected as an RN:
         1. derive the K_{UPlat} key associated with the integrityProtAlgorithm, as specified in TS 33.401 [32];
         2. else:
            1. derive the K_{RRCenc} key and the K_{UPlat} key associated with the cipheringAlgorithm, as specified in TS 33.401 [32];
            2. if connected as an RN:
               1. derive the K_{RRCenc} key and the K_{RRCenc} key associated with the current ciphering algorithm, as specified in TS 33.401 [32];
               2. configure lower layers to apply the integrity protection algorithm and the K_{RRCint} key, i.e. the integrity protection configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
               3. configure lower layers to apply the ciphering algorithm, the K_{RRCenc} key and the K_{UPlat} key, i.e. the ciphering configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
               4. if connected as an RN:
2> configure lower layers to apply the integrity protection algorithm and the K_{UPint} key, for current or subsequently established DRBs that are configured to apply integrity protection, if any;

1> if the received RRConnectionReconfiguration includes the sCellToReleaseList:
2> perform SCell release as specified in 5.3.10.3a;

1> if the received RRConnectionReconfiguration includes the sCellToAddModList:
2> perform SCell addition or modification as specified in 5.3.10.3b;

1> if the received RRConnectionReconfiguration includes the systemInformationBlockType1Dedicated:
2> perform the actions upon reception of the SystemInformationBlockType1 message as specified in 5.2.2.7;

1> perform the measurement related actions as specified in 5.5.6.1;
1> if the RRConnectionReconfiguration message includes the measConfig:
2> perform the measurement configuration procedure as specified in 5.5.2;
1> perform the measurement identity autonomous removal as specified in 5.5.2.2a;
1> release reportProximityConfig and clear any associated proximity status reporting timer;
1> if the RRConnectionReconfiguration message includes the otherConfig:
2> perform the other configuration procedure as specified in 5.3.10.9;

1> if the content of RRConnectionReconfigurationComplete message as follows:
2> if the UE has radio link failure or handover failure information available in VarRLF-Report and if the RPLMN is included in plmn-IdentityList stored in VarRLF-Report:
3> include rlf-InfoAvailable;
2> if the UE has logged measurements available for E-UTRA and if the RPLMN is included in plmn-IdentityList stored in VarLogMeasReport:
3> include logMeasAvailable;
2> if the UE has connection establishment failure information available in VarConnEstFailReport and if the RPLMN is equal to plmn-Identity stored in VarConnEstFailReport:
3> include connEstFailInfoAvailable;

1> submit the RRConnectionReconfigurationComplete message to lower layers for transmission;
1> if MAC successfully completes the random access procedure:
2> stop timer T304;
2> apply the parts of the CQI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the target PCell, if any;
2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the target PCell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of the target PCell;

NOTE 3: Whenever the UE shall setup or reconfigure a configuration in accordance with a field that is received it applies the new configuration, except for the cases addressed by the above statements.

2> if the UE is configured to provide IDC indications:
3> if the UE has transmitted an InDeviceCoexIndication message during the last 1 second preceding reception of the RRConnectionReconfiguration message including mobilityControlInfo:
4> initiate transmission of the InDeviceCoexIndication message in accordance with 5.6.9.3;
2> if the UE is configured to provide power preference indications:

3> if the UE has transmitted a **UEAssistanceInformation** message during the last 1 second preceding reception of the **RRCConnectionReconfiguration** message including **mobilityControlInfo**:

   4> initiate transmission of the **UEAssistanceInformation** message in accordance with 5.6.10.3;

2> if **SystemInformationBlockType15** is broadcast by the PCell:

3> if the UE has transmitted a **MBMSInterestIndication** message during the last 1 second preceding reception of the **RRCConnectionReconfiguration** message including **mobilityControlInfo**:

   4> ensure having a valid version of **SystemInformationBlockType15** for the PCell;

   4> determine the set of MBMS frequencies of interest in accordance with 5.8.5.3;

   4> initiate transmission of the **MBMSInterestIndication** message in accordance with 5.8.5.4;

2> the procedure ends;

**NOTE 4:** The UE is not required to determine the SFN of the target PCell by acquiring system information from that cell before performing RACH access in the target PCell.

### 5.3.5.5 Reconfiguration failure

The UE shall:

1> if the UE is unable to comply with (part of) the configuration included in the **RRCConnectionReconfiguration** message:

   2> continue using the configuration used prior to the reception of **RRCConnectionReconfiguration** message;

   2> if security has not been activated:

3> perform the actions upon leaving RRC_CONNECTED as specified in 5.3.12, with release cause other;

2> else:

3> initiate the connection re-establishment procedure as specified in 5.3.7, upon which the connection reconfiguration procedure ends;

**NOTE 1:** The UE may apply above failure handling also in case the **RRCConnectionReconfiguration** message causes a protocol error for which the generic error handling as defined in 5.7 specifies that the UE shall ignore the message.

**NOTE 2:** If the UE is unable to comply with part of the configuration, it does not apply any part of the configuration, i.e. there is no partial success/failure.

### 5.3.5.6 T304 expiry (handover failure)

The UE shall:

1> if T304 expires (handover failure):

**NOTE 1:** Following T304 expiry any dedicated preamble, if provided within the **rach-ConfigDedicated**, is not available for use by the UE anymore.

2> revert back to the configuration used in the source PCell, excluding the configuration configured by the **physicalConfigDedicated**, the **mac-MainConfig** and the **sps-Config**;

2> store the following handover failure information in **VarRLF-Report** by setting its fields as follows:

3> clear the information included in **VarRLF-Report**, if any;

3> set the **plmn-IdentityList** to include the list of EPLMNs stored by the UE (i.e. includes the RPLMN);
3> set the \textit{measResultLastServCell} to include the RSRP and RSRQ, if available, of the source PCell based on measurements collected up to the moment the UE detected handover failure;

3> set the \textit{measResultNeighCells} to include the best measured cells, other than the source PCell, ordered such that the best cell is listed first, and based on measurements collected up to the moment the UE detected handover failure, and set its fields as follows:

4> if the UE was configured to perform measurements for one or more EUTRA frequencies, include the \textit{measResultListEUTRA};

4> if the UE was configured to perform measurement reporting for one or more neighbouring UTRA frequencies, include the \textit{measResultListUTRA};

4> if the UE was configured to perform measurement reporting for one or more neighbouring GERAN frequencies, include the \textit{measResultListGERAN};

4> if the UE was configured to perform measurement reporting for one or more neighbouring CDMA2000 frequencies, include the \textit{measResultsCDMA2000};

4> for each neighbour cell included, include the optional fields that are available;

\textbf{NOTE 2:} The measured quantities are filtered by the L3 filter as configured in the mobility measurement configuration. The measurements are based on the time domain measurement resource restriction, if configured. Blacklisted cells are not required to be reported.

3> if detailed location information is available, set the content of the \textit{locationInfo} as follows:

4> include the \textit{locationCoordinates};

4> include the \textit{horizontalVelocity}, if available;

3> set the \textit{failedPCellId} to the global cell identity, if available, and otherwise to the physical cell identity and carrier frequency of the target PCell of the failed handover;

3> include \textit{previousPCellId} and set it to the global cell identity of the PCell where the last \textit{RRCConnectionReconfiguration} message including \textit{mobilityControlInfo} was received;

3> set the \textit{timeConnFailure} to the elapsed time since reception of the last \textit{RRCConnectionReconfiguration} message including \textit{mobilityControlInfo};

3> set the \textit{connectionFailureType} to 'hof';

3> set the \textit{c-RNTI} to the C-RNTI used in the source PCell;

2> initiate the connection re-establishment procedure as specified in 5.3.7, upon which the RRC connection reconfiguration procedure ends;

The UE may discard the handover failure information, i.e. release the UE variable \textit{VarRLF-Report}, 48 hours after the failure is detected, upon power off or upon detach.

\textbf{NOTE 3:} E-UTRAN may retrieve the handover failure information using the UE information procedure with \textit{rlf-ReportReq} set to \textit{true}, as specified in 5.6.5.3.

\subsection{5.3.5.7 Void}

\subsection{5.3.5.8 Radio Configuration involving full configuration option}

The UE shall:

1> release/clear all current dedicated radio configurations except the C-RNTI, the security configuration and the PDCP, RLC, logical channel configurations for the RBs and the logged measurement configuration;

\textbf{NOTE 1:} Radio configuration is not just the resource configuration but includes other configurations like \textit{MeasConfig} and \textit{OtherConfig}.
if the RRCConnectionReconfiguration message includes the mobilityControlInfo:

1> release/clear all current common radio configurations;
2> use the default values specified in 9.2.5 for timer T310, T311 and constant N310, N311;

else:

2> use values for timers T301, T310, T311 and constants N310, N311, as included in ue-TimersAndConstants received in SystemInformationBlockType2;

apply the default physical channel configuration as specified in 9.2.4;

apply the default semi-persistent scheduling configuration as specified in 9.2.3;

apply the default MAC main configuration as specified in 9.2.2;

for each srb-Identity value included in the srb-ToAddModList (SRB reconfiguration):

2> apply the specified configuration defined in 9.1.2 for the corresponding SRB;
2> apply the corresponding default RLC configuration for the SRB specified in 9.2.1.1 for SRB1 or in 9.2.1.2 for SRB2;
2> apply the corresponding default logical channel configuration for the SRB as specified in 9.2.1.1 for SRB1 or in 9.2.1.2 for SRB2;

NOTE 2: This is to get the SRBs (SRB1 and SRB2 for handover and SRB2 for reconfiguration after reestablishment) to a known state from which the reconfiguration message can do further configuration.

for each eps-BearerIdentity value included in the drb-ToAddModList that is part of the current UE configuration:

2> release the PDCP entity;
2> release the RLC entity or entities;
2> release the DTCH logical channel;
2> release the drb-identity;

NOTE 3: This will retain the eps-bearerIdentity but remove the DRBs including drb-identity of these bearers from the current UE configuration and trigger the setup of the DRBs within the AS in Section 5.3.10.3 using the new configuration. The eps-bearerIdentity acts as the anchor for associating the released and re-setup DRB.

for each eps-BearerIdentity value that is part of the current UE configuration but not part of the drb-ToAddModList:

2> perform DRB release as specified in 5.3.10.2;
5.3.6 Counter check

5.3.6.1 General

The counter check procedure is used by E-UTRAN to request the UE to verify the amount of data sent/received on each DRB. More specifically, the UE is requested to check if, for each DRB, the most significant bits of the COUNT match with the values indicated by E-UTRAN.

NOTE: The procedure enables E-UTRAN to detect packet insertion by an intruder (a 'man in the middle').

5.3.6.2 Initiation

E-UTRAN initiates the procedure by sending a CounterCheck message.

NOTE: E-UTRAN may initiate the procedure when any of the COUNT values reaches a specific value.

5.3.6.3 Reception of the CounterCheck message by the UE

Upon receiving the CounterCheck message, the UE shall:

1> for each DRB that is established:

2> if no COUNT exists for a given direction (uplink or downlink) because it is a uni-directional bearer configured only for the other direction:

3> assume the COUNT value to be 0 for the unused direction;

2> if the drb-Identity is not included in the drb-CountMSB-InfoList:

3> include the DRB in the drb-CountInfoList in the CounterCheckResponse message by including the drb-Identity, the count-Uplink and the count-Downlink set to the value of the corresponding COUNT;

2> else if, for at least one direction, the most significant bits of the COUNT are different from the value indicated in the drb-CountMSB-InfoList:

3> include the DRB in the drb-CountInfoList in the CounterCheckResponse message by including the drb-Identity, the count-Uplink and the count-Downlink set to the value of the corresponding COUNT;

1> for each DRB that is included in the drb-CountMSB-InfoList in the CounterCheck message that is not established:

2> include the DRB in the drb-CountInfoList in the CounterCheckResponse message by including the drb-Identity, the count-Uplink and the count-Downlink with the most significant bits set identical to the corresponding values in the drb-CountMSB-InfoList and the least significant bits set to zero;

1> submit the CounterCheckResponse message to lower layers for transmission upon which the procedure ends;
5.3.7 RRC connection re-establishment

5.3.7.1 General

The purpose of this procedure is to re-establish the RRC connection, which involves the resumption of SRB1 operation, the re-activation of security and the configuration of only the PCell.

A UE in RRC_CONNECTED, for which security has been activated, may initiate the procedure in order to continue the RRC connection. The connection re-establishment succeeds only if the concerned cell is prepared i.e. has a valid UE context. In case E-UTRAN accepts the re-establishment, SRB1 operation resumes while the operation of other radio bearers remains suspended. If AS security has not been activated, the UE does not initiate the procedure but instead moves to RRC_IDLE directly.

E-UTRAN applies the procedure as follows:

- to reconfigure SRB1 and to resume data transfer only for this RB;
- to re-activate AS security without changing algorithms.

5.3.7.2 Initiation

The UE shall only initiate the procedure when AS security has been activated. The UE initiates the procedure when one of the following conditions is met:

1. upon detecting radio link failure, in accordance with 5.3.11; or
2. upon handover failure, in accordance with 5.3.5.6; or
3. upon mobility from E-UTRA failure, in accordance with 5.4.3.5; or
4. upon integrity check failure indication from lower layers; or

Figure 5.3.7.1-1: RRC connection re-establishment, successful

Figure 5.3.7.1-2: RRC connection re-establishment, failure
Upon an RRC connection reconfiguration failure, in accordance with 5.3.5.5;

Upon initiation of the procedure, the UE shall:

1> stop timer T310, if running;
1> start timer T311;
1> suspend all RBs except SRB0;
1> reset MAC;
1> release the SCell(s), if configured, in accordance with 5.3.10.3a;
1> apply the default physical channel configuration as specified in 9.2.4;
1> apply the default semi-persistent scheduling configuration as specified in 9.2.3;
1> apply the default MAC main configuration as specified in 9.2.2;
1> release powerPrefIndicationConfig, if configured and stop timer T340, if running;
1> release reportProximityConfig and clear any associated proximity status reporting timer;
1> release obtainLocationConfig, if configured;
1> release idc-Config, if configured;
1> release measSubframePatternPCell, if configured;

1> if connected as an RN and configured with an RN subframe configuration:
   2> release the RN subframe configuration;
1> perform cell selection in accordance with the cell selection process as specified in TS 36.304 [4];

5.3.7.3 Actions following cell selection while T311 is running

Upon selecting a suitable E-UTRA cell, the UE shall:

1> stop timer T311;
1> start timer T301;
1> apply the timeAlignmentTimerCommon included in SystemInformationBlockType2;
1> initiate transmission of the RRCConnectionReestablishmentRequest message in accordance with 5.3.7.4;

NOTE: This procedure applies also if the UE returns to the source PCell.

Upon selecting an inter-RAT cell, the UE shall:

1> if the selected cell is a UTRA cell, and if the UE supports Radio Link Failure Report for Inter-RAT MRO, include selectedUTRA-CellId in the VarRLF-Report and set it to the physical cell identity and carrier frequency of the selected UTRA cell;
1> perform the actions upon leaving RRC_CONNECTED as specified in 5.3.12, with release cause 'RRC connection failure';

5.3.7.4 Actions related to transmission of RRCConnectionReestabilishmentRequest message

If the procedure was initiated due to radio link failure or handover failure, the UE shall:

1> set the reestablishmentCellId in the VarRLF-Report to the global cell identity of the selected cell;

The UE shall set the contents of RRCConnectionReestabilishmentRequest message as follows:
1> set the \textit{ue-Identity} as follows:
2> set the \textit{c-RNTI} to the C-RNTI used in the source PCell (handover and mobility from E-UTRA failure) or used in the PCell in which the trigger for the re-establishment occurred (other cases);
3> set the \textit{physCellId} to the physical cell identity of the source PCell (handover and mobility from E-UTRA failure) or of the PCell in which the trigger for the re-establishment occurred (other cases);
4> set the \textit{shortMAC-I} to the 16 least significant bits of the MAC-I calculated:
5> over the ASN.1 encoded as per section 8 (i.e., a multiple of 8 bits) \textit{VarShortMAC-Input};
6> with the \textit{KRRCint} key and integrity protection algorithm that was used in the source PCell (handover and mobility from E-UTRA failure) or of the PCell in which the trigger for the re-establishment occurred (other cases); and
7> with all input bits for COUNT, BEARER and DIRECTION set to binary ones;
8> set the \textit{reestablishmentCause} as follows:
9> if the re-establishment procedure was initiated due to reconfiguration failure as specified in 5.3.5.5 (the UE is unable to comply with the reconfiguration):
10> set the \textit{reestablishmentCause} to the value \textit{reconfigurationFailure};
11> else if the re-establishment procedure was initiated due to handover failure as specified in 5.3.5.6 (intra-LTE handover failure) or 5.4.3.5 (inter-RAT mobility from EUTRA failure):
12> set the \textit{reestablishmentCause} to the value \textit{handoverFailure};
13> else:
14> set the \textit{reestablishmentCause} to the value \textit{otherFailure};
The UE shall submit the \textit{RRCConnectionReestablishmentRequest} message to lower layers for transmission.

5.3.7.5 Reception of the \textit{RRCConnectionReestablishment} by the UE

NOTE 1: Prior to this, lower layer signalling is used to allocate a C-RNTI. For further details see TS 36.321 [6];
The UE shall:
1> stop timer T301;
2> consider the current cell to be the PCell;
3> re-establish PDCP for SRB1;
4> re-establish RLC for SRB1;
5> perform the radio resource configuration procedure in accordance with the received \textit{radioResourceConfigDedicated} and as specified in 5.3.10;
6> resume SRB1;

NOTE 2: E-UTRAN should not transmit any message on SRB1 prior to receiving the \textit{RRCConnectionReestablishmentComplete} message.
7> update the \textit{K_{NB}} key based on the \textit{K_{ASMB}} key to which the current \textit{K_{NB}} is associated, using the \textit{nextHopChainingCount} value indicated in the \textit{RRCConnectionReestablishment} message, as specified in TS 33.401 [32];
8> store the \textit{nextHopChainingCount} value;
9> derive the \textit{K_{RCM}} key associated with the previously configured integrity algorithm, as specified in TS 33.401 [32];
derive the $K_{RRCenc}$ key and the $K_{UPenc}$ key associated with the previously configured ciphering algorithm, as specified in TS 33.401 [32];

if connected as an RN:

derive the $K_{UPint}$ key associated with the previously configured integrity algorithm, as specified in TS 33.401 [32];

configure lower layers to activate integrity protection using the previously configured algorithm and the $K_{RRCint}$ key immediately, i.e., integrity protection shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;

if connected as an RN:

configure lower layers to apply integrity protection using the previously configured algorithm and the $K_{UPint}$ key, for subsequently resumed or subsequently established DRBs that are configured to apply integrity protection, if any;

configure lower layers to apply ciphering using the previously configured algorithm, the $K_{RRCenc}$ key and the $K_{UPenc}$ key immediately, i.e., ciphering shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;

set the content of $RRC_{ConnectionReestablishmentComplete}$ message as follows:

if the UE has radio link failure or handover failure information available in $VarRLF-Report$ and if the RPLMN is included in $plmn-IdentityList$ stored in $VarRLF-Report$:

include the $rlf-InfoAvailable$;

if the UE has logged measurements available for E-UTRA and if the RPLMN is included in $plmn-IdentityList$ stored in $VarLogMeasReport$:

include the $logMeasAvailable$;

if the UE has connection establishment failure information available in $VarConnEstFailReport$ and if the RPLMN is equal to $plmn-Identity$ stored in $VarConnEstFailReport$:

include the $connEstFailInfoAvailable$;

perform the measurement related actions as specified in 5.5.6.1;

perform the measurement identity autonomous removal as specified in 5.5.2.2a;

submit the $RRC_{ConnectionReestablishmentComplete}$ message to lower layers for transmission;

if $SystemInformationBlockType15$ is broadcast by the PCell:

if the UE has transmitted an $MBMSInterestIndication$ message during the last 1 second preceding detection of radio link failure:

ensure having a valid version of $SystemInformationBlockType15$ for the PCell;

determine the set of MBMS frequencies of interest in accordance with 5.8.5.3;

initiate transmission of the $MBMSInterestIndication$ message in accordance with 5.8.5.4;

the procedure ends;

5.3.7.6 T311 expiry

Upon T311 expiry, the UE shall:

perform the actions upon leaving RRC_CONNECTED as specified in 5.3.12, with release cause 'RRC connection failure';
5.3.7.7 T301 expiry or selected cell no longer suitable

The UE shall:
1> if timer T301 expires; or
1> if the selected cell becomes no longer suitable according to the cell selection criteria as specified in TS 36.304 [4]:
2> perform the actions upon leaving RRC_CONNECTED as specified in 5.3.12, with release cause 'RRC connection failure';

5.3.7.8 Reception of RRCConnectionReestablishmentReject by the UE

Upon receiving the RRCConnectionReestablishmentReject message, the UE shall:
1> perform the actions upon leaving RRC_CONNECTED as specified in 5.3.12, with release cause 'RRC connection failure';

5.3.8 RRC connection release

5.3.8.1 General

The purpose of this procedure is to release the RRC connection, which includes the release of the established radio bearers as well as all radio resources.

5.3.8.2 Initiation

E-UTRAN initiates the RRC connection release procedure to a UE in RRC_CONNECTED.

5.3.8.3 Reception of the RRCConnectionRelease by the UE

The UE shall:
1> delay the following actions defined in this sub-clause 60 ms from the moment the RRCConnectionRelease message was received or optionally when lower layers indicate that the receipt of the RRCConnectionRelease message has been successfully acknowledged, whichever is earlier;
1> if the RRCConnectionRelease message includes the idleModeMobilityControlInfo:
2> store the cell reselection priority information provided by the idleModeMobilityControlInfo;
2> if the t320 is included:
3> start timer T320, with the timer value set according to the value of t320;
1> else:
2> apply the cell reselection priority information broadcast in the system information;
1> if the releaseCause received in the RRCConnectionRelease message indicates loadBalancingTAURequired:
2> perform the actions upon leaving RRC_CONNECTED as specified in 5.3.12, with release cause 'load balancing TAU required';

1> else if the releaseCause received in the RRCConnectionRelease message indicates cs-FallbackHighPriority:

2> perform the actions upon leaving RRC_CONNECTED as specified in 5.3.12, with release cause 'CS Fallback High Priority';

1> else:

2> if the extendedWaitTime is present and the UE supports delay tolerant access:

3> forward the extendedWaitTime to upper layers;

2> perform the actions upon leaving RRC_CONNECTED as specified in 5.3.12, with release cause 'other';

### 5.3.8.4 T320 expiry

The UE shall:

1> if T320 expires:

2> if stored, discard the cell reselection priority information provided by the idleModeMobilityControlInfo or inherited from another RAT;

2> apply the cell reselection priority information broadcast in the system information;

### 5.3.9 RRC connection release requested by upper layers

#### 5.3.9.1 General

The purpose of this procedure is to release the RRC connection. Access to the current PCell may be barred as a result of this procedure.

NOTE: Upper layers invoke the procedure, e.g. upon determining that the network has failed an authentication check, see TS 24.301 [35].

#### 5.3.9.2 Initiation

The UE initiates the procedure when upper layers request the release of the RRC connection. The UE shall not initiate the procedure for power saving purposes.

The UE shall:

1> if the upper layers indicate barring of the PCell:

2> treat the PCell used prior to entering RRC_IDLE as barred according to TS 36.304 [4];

1> perform the actions upon leaving RRC_CONNECTED as specified in 5.3.12, with release cause 'other';

### 5.3.10 Radio resource configuration

#### 5.3.10.0 General

The UE shall:

1> if the received radioResourceConfigDedicated includes the srb-ToAddModList:

2> perform the SRB addition or reconfiguration as specified in 5.3.10.1;

1> if the received radioResourceConfigDedicated includes the drb-ToReleaseList:

2> perform DRB release as specified in 5.3.10.2;
1> if the received radioResourceConfigDedicated includes the drb-ToAddModList:
   2> perform DRB addition or reconfiguration as specified in 5.3.10.3;
1> if the received radioResourceConfigDedicated includes the mac-MainConfig:
   2> perform MAC main reconfiguration as specified in 5.3.10.4;
1> if the received radioResourceConfigDedicated includes sps-Config:
   2> perform SPS reconfiguration according to 5.3.10.5;
1> if the received radioResourceConfigDedicated includes the physicalConfigDedicated:
   2> reconfigure the physical channel configuration as specified in 5.3.10.6.
1> if the received radioResourceConfigDedicated includes the rlf-TimersAndConstants:
   2> reconfigure the values of timers and constants as specified in 5.3.10.7;
1> if the received radioResourceConfigDedicated includes the measSubframePatternPCell:
   2> reconfigure the time domain measurement resource restriction for the serving cell as specified in 5.3.10.8;

5.3.10.1 SRB addition/ modification

The UE shall:

1> for each srb-Identity value included in the srb-ToAddModList that is not part of the current UE configuration (SRB establishment):
   2> apply the specified configuration defined in 9.1.2 for the corresponding SRB;
   2> establish a PDCP entity and configure it with the current security configuration, if applicable;
   2> establish an RLC entity in accordance with the received rlc-Config;
   2> establish a DCCH logical channel in accordance with the received logicalChannelConfig and with the logical channel identity set in accordance with 9.1.2;
1> for each srb-Identity value included in the srb-ToAddModList that is part of the current UE configuration (SRB reconfiguration):
   2> reconfigure the RLC entity in accordance with the received rlc-Config;
   2> reconfigure the DCCH logical channel in accordance with the received logicalChannelConfig;

5.3.10.2 DRB release

The UE shall:

1> for each drb-Identity value included in the drb-ToReleaseList that is part of the current UE configuration (DRB release); or
1> for each drb-identity value that is to be released as the result of full configuration option according to 5.3.5.8:
   2> release the PDCP entity;
   2> release the RLC entity or entities;
   2> release the DTCH logical channel;
1> if the procedure was triggered due to handover:
   2> indicate the release of the DRB(s) and the eps-BearerIdentity of the released DRB(s) to upper layers after successful handover;
else:
    2> indicate the release of the DRB(s) and the \textit{eps-BearerIdentity} of the released DRB(s) to upper layers immediately.

\textbf{NOTE:} The UE does not consider the message as erroneous if the \textit{drb-ToReleaseList} includes any \textit{drb-Identity} value that is not part of the current UE configuration.

\subsection*{5.3.10.3 DRB addition/ modification}

The UE shall:

1> for each \textit{drb-Identity} value included in the \textit{drb-ToAddModList} that is not part of the current UE configuration (DRB establishment including the case when full configuration option is used):

2> establish a PDCP entity and configure it with the current security configuration and in accordance with the received \textit{pdcp-Config};

2> establish an RLC entity or entities in accordance with the received \textit{rlc-Config};

2> establish a DTCH logical channel in accordance with the received \textit{logicalChannelIdentity} and the received \textit{logicalChannelConfig};

2> if the \textit{RRCConnectionReconfiguration} message includes the fullConfig IE:

3> associate the established DRB with corresponding included \textit{eps-BearerIdentity};

2> else:

3> indicate the establishment of the DRB and the \textit{eps-BearerIdentity} of the established DRB(s) to upper layers;

1> for each \textit{drb-Identity} value included in the \textit{drb-ToAddModList} that is part of the current UE configuration (DRB reconfiguration):

2> if the \textit{pdcp-Config} is included:

3> reconfigure the PDCP entity in accordance with the received \textit{pdcp-Config};

2> if the \textit{rlc-Config} is included:

3> reconfigure the RLC entity or entities in accordance with the received \textit{rlc-Config};

2> if the \textit{logicalChannelConfig} is included:

3> reconfigure the DTCH logical channel in accordance with the received \textit{logicalChannelConfig};

\textbf{NOTE:} Removal and addition of the same \textit{drb-Identity} in single \textit{radioResourceConfiguration} is not supported.

\subsection*{5.3.10.3a SCell release}

The UE shall:

1> if the release is triggered by reception of the \textit{sCellToReleaseList}:

2> for each \textit{sCellIndex} value included in the \textit{sCellToReleaseList};

3> if the current UE configuration includes an SCell with value \textit{sCellIndex}:

4> release the SCell;

1> if the release is triggered by RRC connection re-establishment:

2> release all SCells that are part of the current UE configuration;
5.3.10.3b SCell addition/ modification

The UE shall:

1> for each sCellIndex value included in the sCellToAddModList that is not part of the current UE configuration (SCell addition):
   2> add the SCell, corresponding to the cellIdentification, in accordance with the received radioResourceConfigCommonSCell and radioResourceConfigDedicatedSCell;
   2> configure lower layers to consider the SCell to be in deactivated state;

1> for each sCellIndex value included in the sCellToAddModList that is part of the current UE configuration (SCell modification):
   2> modify the SCell configuration in accordance with the received radioResourceConfigDedicatedSCell;

5.3.10.4 MAC main reconfiguration

The UE shall:

1> reconfigure the MAC main configuration in accordance with the received mac-MainConfig other than stag-ToReleaseList and stag-ToAddModList;

1> if the received mac-MainConfig includes the stag-ToReleaseList:
   2> for each STAG-Id value included in the stag-ToReleaseList that is part of the current UE configuration:
      3> release the STAG indicated by STAG-Id;

1> if the received mac-MainConfig includes the stag-ToAddModList:
   2> for each stag-Id value included in stag-ToAddModList that is not part of the current UE configuration (STAG addition):
      3> add the STAG, corresponding to the stag-Id, in accordance with the received timeAlignmentTimerSTAG;
   2> for each stag-Id value included in stag-ToAddModList that is part of the current UE configuration (STAG modification):
      3> reconfigure the STAG, corresponding to the stag-Id, in accordance with the received timeAlignmentTimerSTAG;

5.3.10.5 Semi-persistent scheduling reconfiguration

The UE shall:

1> reconfigure the semi-persistent scheduling in accordance with the received sps-Config;

5.3.10.6 Physical channel reconfiguration

The UE shall:

1> if the antennaInfo-r10 is included in the received physicalConfigDedicated and the previous version of this field that was received by the UE was antennaInfo (without suffix i.e. the version defined in REL-8):
   2> apply the default antenna configuration as specified in section 9.2.4;

1> if the cqi-ReportConfig-r10 is included in the received physicalConfigDedicated and the previous version of this field that was received by the UE was cqi-ReportConfig (without suffix i.e. the version defined in REL-8):
   2> apply the default CQI reporting configuration as specified in 9.2.4;

NOTE: Application of the default configuration involves release of all extensions introduced in REL-9 and later.

1> reconfigure the physical channel configuration in accordance with the received physicalConfigDedicated;
if the \textit{antennaInfo} is included and set to \textit{explicitValue}:

\begin{itemize}
  \item if the configured \textit{transmissionMode} is \textit{tm1}, \textit{tm2}, \textit{tm5}, \textit{tm6} or \textit{tm7}; or
  \item if the configured \textit{transmissionMode} is \textit{tm8} and \textit{pmi-RI-Report} is not present; or
  \item if the configured \textit{transmissionMode} is \textit{tm9} and \textit{pmi-RI-Report} is not present; or
  \item if the configured \textit{transmissionMode} is \textit{tm9} and \textit{pmi-RI-Report} is present and \textit{antennaPortsCount} within \textit{csi-RS} is set to \textit{an1}:
\end{itemize}

\begin{itemize}
  \item release \textit{ri-ConfigIndex} in \textit{cqi-ReportPeriodic}, if previously configured;
\end{itemize}

\begin{itemize}
  \item else if the \textit{antennaInfo} is included and set to \textit{defaultValue}:
\end{itemize}

\begin{itemize}
  \item release \textit{ri-ConfigIndex} in \textit{cqi-ReportPeriodic}, if previously configured;
\end{itemize}

5.3.10.7 Radio Link Failure Timers and Constants reconfiguration

The UE shall:

\begin{itemize}
  \item if the received \textit{rlf-TimersAndConstants} is set to release:
  \begin{itemize}
    \item use values for timers T301, T310, T311 and constants N310, N311, as included in \textit{ue-TimersAndConstants} received in \textit{SystemInformationBlockType2};
  \end{itemize}
\end{itemize}

\begin{itemize}
  \item else:
\end{itemize}

\begin{itemize}
  \item reconfigure the value of timers and constants in accordance with received \textit{rlf-TimersAndConstants};
\end{itemize}

5.3.10.8 Time domain measurement resource restriction for serving cell

The UE shall:

\begin{itemize}
  \item if the received \textit{measSubframePatternPCell} is set to \textit{release}:
  \begin{itemize}
    \item release the time domain measurement resource restriction for the PCell, if previously configured
  \end{itemize}
\end{itemize}

\begin{itemize}
  \item else:
\end{itemize}

\begin{itemize}
  \item apply the time domain measurement resource restriction for the PCell in accordance with the received \textit{measSubframePatternPCell};
\end{itemize}

5.3.10.9 Other configuration

The UE shall:

\begin{itemize}
  \item if the received \textit{otherConfig} includes the \textit{reportProximityConfig}:
  \begin{itemize}
    \item if \textit{proximityIndicationEUTRA} is set to \textit{enabled}:
  \end{itemize}
\end{itemize}

\begin{itemize}
  \item consider itself to be configured to provide proximity indications for E-UTRA frequencies in accordance with 5.3.14;
\end{itemize}

\begin{itemize}
  \item else:
\end{itemize}

\begin{itemize}
  \item consider itself not to be configured to provide proximity indications for E-UTRA frequencies;
\end{itemize}

\begin{itemize}
  \item if \textit{proximityIndicationUTRA} is set to \textit{enabled}:
\end{itemize}

\begin{itemize}
  \item consider itself to be configured to provide proximity indications for UTRA frequencies in accordance with 5.3.14;
\end{itemize}

\begin{itemize}
  \item else:
\end{itemize}

\begin{itemize}
  \item consider itself not to be configured to provide proximity indications for UTRA frequencies;
\end{itemize}

\begin{itemize}
  \item if the received \textit{otherConfig} includes the \textit{obtainLocation}:
2> attempt to have detailed location information available for any subsequent measurement report;

NOTE: The UE is requested to attempt to have valid detailed location information available whenever sending a measurement report for which it is configured to include available detailed location information. The UE may not succeed e.g. because the user manually disabled the GPS hardware, due to no/poor satellite coverage. Further details, e.g. regarding when to activate GNSS, are up to UE implementation.

1> if the received otherConfig includes the idc-Config:

2> if idc-Indication is included (i.e. set to setup):

3> consider itself to be configured to provide IDC indications in accordance with 5.6.9;

2> else:

3> consider itself not to be configured to provide IDC indications;

2> if autonomousDenialParameters is included:

3> consider itself to be allowed to deny any transmission in a particular UL subframe if during the number of subframes indicated by autonomousDenialValidity, preceeding and including this particular subframe, it autonomously denied fewer UL subframes than indicated by autonomousDenialSubframes;

2> else:

3> consider itself not to be allowed to deny any UL transmission;

1> if the received otherConfig includes the powerPrefIndicationConfig:

2> if powerPrefIndicationConfig is set to setup:

3> consider itself to be configured to provide power preference indications in accordance with 5.6.10;

2> else:

3> consider itself not to be configured to provide power preference indications;

5.3.11 Radio link failure related actions

5.3.11.1 Detection of physical layer problems in RRC_CONNECTED

The UE shall:

1> upon receiving N310 consecutive "out-of-sync" indications for the PCell from lower layers while neither T300, T301, T304 nor T311 is running:

2> start timer T310;

NOTE: Physical layer monitoring and related autonomous actions do not apply to SCells.

5.3.11.2 Recovery of physical layer problems

Upon receiving N311 consecutive "in-sync" indications for the PCell from lower layers while T310 is running, the UE shall:

1> stop timer T310;

NOTE 1: In this case, the UE maintains the RRC connection without explicit signalling, i.e. the UE maintains the entire radio resource configuration.

NOTE 2: Periods in time where neither "in-sync" nor "out-of-sync" is reported by layer 1 do not affect the evaluation of the number of consecutive "in-sync" or "out-of-sync" indications.
5.3.11.3 Detection of radio link failure

The UE shall:

1. upon T310 expiry; or
2. upon random access problem indication from MAC while neither T300, T301, T304 nor T311 is running; or
3. upon indication from RLC that the maximum number of retransmissions has been reached:
   1. consider radio link failure to be detected;
   2. store the following radio link failure information in the VarRLF-Report by setting its fields as follows:

   1. clear the information included in VarRLF-Report, if any;
   2. set the plmn-IdentityList to include the list of EPLMNs stored by the UE (i.e. includes the RPLMN);
   3. set the measResultLastServCell to include the RSRP and RSRQ, if available, of the PCell based on measurements collected up to the moment the UE detected radio link failure;
   4. set the measResultNeighCells to include the best measured cells, other than the PCell, ordered such that the best cell is listed first, and based on measurements collected up to the moment the UE detected radio link failure, and set its fields as follows:

   1. if the UE was configured to perform measurements for one or more EUTRA frequencies, include the measResultListEUTRA;
   2. if the UE was configured to perform measurement reporting for one or more neighbouring UTRA frequencies, include the measResultListUTRA;
   3. if the UE was configured to perform measurement reporting for one or more neighbouring GERAN frequencies, include the measResultListGERAN;
   4. if the UE was configured to perform measurement reporting for one or more neighbouring CDMA2000 frequencies, include the measResultsCDMA2000;
   5. for each neighbour cell included, include the optional fields that are available;

   NOTE: The measured quantities are filtered by the L3 filter as configured in the mobility measurement configuration. The measurements are based on the time domain measurement resource restriction, if configured. Blacklisted cells are not required to be reported.

   1. if detailed location information is available, set the content of the locationInfo as follows:

   1. include the locationCoordinates;
   2. include the horizontalVelocity, if available;
   3. set the failedPCellId to the global cell identity, if available, and otherwise to the physical cell identity and carrier frequency of the PCell where radio link failure is detected;
   4. if an RRCConnectionReconfiguration message including the mobilityControlInfo was received before the connection failure:

      1. if the last RRCConnectionReconfiguration message including the mobilityControlInfo concerned an intra E-UTRA handover:
         1. include the previousPCellId and set it to the global cell identity of the PCell where the last RRCConnectionReconfiguration message including mobilityControlInfo was received;
   2. set the timeConnFailure to the elapsed time since reception of the last RRCConnectionReconfiguration message including the mobilityControlInfo;
   3. if the last RRCConnectionReconfiguration message including the mobilityControlInfo concerned a handover to E-UTRA from UTRA and if the UE supports Radio Link Failure Report for Inter-RAT MRO:
5> include the previousUTRA-CellId and set it to the physical cell identity, the carrier frequency and the global cell identity, if available, of the UTRA Cell in which the last RRCConnectionReconfiguration message including mobilityControlInfo was received;

5> set the timeConnFailure to the elapsed time since reception of the last RRCConnectionReconfiguration message including the mobilityControlInfo;

3> set the connectionFailureType to rlf;
3> set the c-RNTI to the C-RNTI used in the PCell;
3> set the rlf-Cause to the trigger for detecting radio link failure;

2> if AS security has not been activated:
3> perform the actions upon leaving RRC_CONNECTED as specified in 5.3.12, with release cause 'other';
3> else:
3> initiate the connection re-establishment procedure as specified in 5.3.7;

The UE may discard the radio link failure information, i.e. release the UE variable VarRLF-Report, 48 hours after the radio link failure is detected, upon power off or upon detach.

5.3.12 UE actions upon leaving RRC_CONNECTED

Upon leaving RRC_CONNECTED, the UE shall:

1> reset MAC;
1> stop all timers that are running except T320, T325 and T330;
1> release all radio resources, including release of the RLC entity, the MAC configuration and the associated PDCP entity for all established RBs;
1> indicate the release of the RRC connection to upper layers together with the release cause;
1> if leaving RRC_CONNECTED was triggered neither by reception of the MobilityFromEUTRACommand message nor by selecting an inter-RAT cell while T311 was running:
2> enter RRC_IDLE and perform procedures as specified in TS 36.304 [4, 5.2.7];

5.3.13 UE actions upon PUCCH/ SRS release request

Upon receiving a PUCCH/ SRS release request from lower layers, the UE shall:

1> apply the default physical channel configuration for cqi-ReportConfig as specified in 9.2.4 and release cqi-ReportConfigSCell, for each SCell that is configured, if any;
1> apply the default physical channel configuration for soundingRS-UL-ConfigDedicated as specified in 9.2.4, for all serving cells;
1> apply the default physical channel configuration for schedulingRequestConfig as specified in 9.2.4;

Upon receiving an SRS release request from lower layers, the UE shall:

1> apply the default physical channel configuration for soundingRS-UL-ConfigDedicated, as specified in 9.2.4, for the cells of the concerned TAG;

NOTE: Upon PUCCH/ SRS release request, the UE does not modify the soundingRS-UL-ConfigDedicatedAperiodic i.e. it does not apply the default for this field (release).
5.3.14 Proximity indication

5.3.14.1 General

The purpose of this procedure is to indicate that the UE is entering or leaving the proximity of one or more CSG member cells. The detection of proximity is based on an autonomous search function as defined in TS 36.304 [4].

5.3.14.2 Initiation

A UE in RRC_CONNECTED shall:

1> if the UE enters the proximity of one or more CSG member cell(s) on an E-UTRA frequency while proximity indication is enabled for such E-UTRA cells; or

1> if the UE enters the proximity of one or more CSG member cell(s) on an UTRA frequency while proximity indication is enabled for such UTRA cells; or

1> if the UE leaves the proximity of all CSG member cell(s) on an E-UTRA frequency while proximity indication is enabled for such E-UTRA cells; or

1> if the UE leaves the proximity of all CSG member cell(s) on an UTRA frequency while proximity indication is enabled for such UTRA cells;

2> if the UE has previously not transmitted a ProximityIndication for the RAT and frequency during the current RRC connection, or if more than 5 s has elapsed since the UE has last transmitted a ProximityIndication (either entering or leaving) for the RAT and frequency;

3> initiate transmission of the ProximityIndication message in accordance with 5.3.14.3;

NOTE: In the conditions above, "if the UE enters the proximity of one or more CSG member cell(s)" includes the case of already being in the proximity of such cell(s) at the time proximity indication for the corresponding RAT is enabled.

5.3.14.3 Actions related to transmission of ProximityIndication message

The UE shall set the contents of ProximityIndication message as follows:

1> if the UE applies the procedure to report entering the proximity of CSG member cell(s):

2> set type to entering;

1> else if the UE applies the procedure to report leaving the proximity of CSG member cell(s):

2> set type to leaving;

1> if the proximity indication was triggered for one or more CSG member cell(s) on an E-UTRA frequency:

2> set the carrierFreq to eutra with the value set to the E-ARFCN value of the E-UTRA cell(s) for which proximity indication was triggered;
1> else if the proximity indication was triggered for one or more CSG member cell(s) on a UTRA frequency:

2> set the carrierFreq to utra with the value set to the ARFCN value of the UTRA cell(s) for which proximity indication was triggered;

The UE shall submit the ProximityIndication message to lower layers for transmission.

5.3.15 Void

5.4 Inter-RAT mobility

5.4.1 Introduction

The general principles of connected mode mobility are described in 5.3.1.3. The general principles of the security handling upon connected mode mobility are described in 5.3.1.2.

For the (network controlled) inter RAT mobility from E-UTRA for a UE in RRC_CONNECTED, a single procedure is defined that supports both handover, cell change order with optional network assistance (NACC) and enhanced CS fallback to CDMA2000 1xRTT. In case of mobility to CDMA2000, the eNB decides when to move to the other RAT while the target RAT determines to which cell the UE shall move.

5.4.2 Handover to E-UTRA

5.4.2.1 General

The purpose of this procedure is to, under the control of the network, transfer a connection between the UE and another Radio Access Network (e.g. GERAN or UTRAN) to E-UTRAN.

The handover to E-UTRA procedure applies when SRBs, possibly in combination with DRBs, are established in another RAT. Handover from UTRAN to E-UTRAN applies only after integrity has been activated in UTRAN.

5.4.2.2 Initiation

The RAN using another RAT initiates the Handover to E-UTRA procedure, in accordance with the specifications applicable for the other RAT, by sending the RRCConnectionReconfiguration message via the radio access technology from which the inter-RAT handover is performed.

E-UTRAN applies the procedure as follows:

- to activate ciphering, possibly using NULL algorithm, if not yet activated in the other RAT;
- to establish SRB1, SRB2 and one or more DRBs, i.e. at least the DRB associated with the default EPS bearer is established;
5.4.2.3 Reception of the **RRCConnectionReconfiguration** by the UE

If the UE is able to comply with the configuration included in the **RRCConnectionReconfiguration** message, the UE shall:

1. apply the default physical channel configuration as specified in 9.2.4;
2. apply the default semi-persistent scheduling configuration as specified in 9.2.3;
3. apply the default MAC main configuration as specified in 9.2.2;
4. start timer T304 with the timer value set to \( t_{304} \), as included in the **mobilityControlInfo**;
5. consider the target PCell to be one on the frequency indicated by the **carrierFreq** with a physical cell identity indicated by the **targetPhysCellId**;
6. start synchronising to the DL of the target PCell;
7. set the C-RNTI to the value of the **newUE-Identity**;
8. for the target PCell, apply the downlink bandwidth indicated by the **dl-Bandwidth**;
9. for the target PCell, apply the uplink bandwidth indicated by (the absence or presence of) the **ul-Bandwidth**;
10. configure lower layers in accordance with the received **radioResourceConfigCommon**;
11. configure lower layers in accordance with any additional fields, not covered in the previous, if included in the received **mobilityControlInfo**;
12. perform the radio resource configuration procedure as specified in 5.3.10;
13. forward the **nas-SecurityParamToEUTRA** to the upper layers;
14. derive the **K_{anb}** key, as specified in TS 33.401 [32];
15. derive the **K_{RRCint}** key associated with the **integrityProtAlgorithm**, as specified in TS 33.401 [32];
16. derive the **K_{RRCenc}** key and the **K_{UPenc}** key associated with the **cipheringAlgorithm**, as specified in TS 33.401 [32];
17. configure lower layers to apply the indicated integrity protection algorithm and the **K_{RRCint}** key immediately, i.e. the indicated integrity protection configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
18. configure lower layers to apply the indicated ciphering algorithm, the **K_{RRCenc}** key and the **K_{UPenc}** key immediately, i.e. the indicated ciphering configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
19. if the received **RRCConnectionReconfiguration** includes the **sCellToAddModList**:
   1. perform SCell addition as specified in 5.3.10.3b;
20. if the **RRCConnectionReconfiguration** message includes the **measConfig**:
   1. perform the measurement configuration procedure as specified in 5.5.2;
21. perform the measurement identity autonomous removal as specified in 5.5.2.2a;
22. if the **RRCConnectionReconfiguration** message includes the **otherConfig**:
   1. perform the other configuration procedure as specified in 5.3.10.9;
23. set the content of **RRCConnectionReconfigurationComplete** message as follows:
   1. if the UE has radio link failure or handover failure information available in **VarRLF-Report** and if the RPLMN is included in **plmn-IdentityList** stored in **VarRLF-Report**:
      1. include **rlf-InfoAvailable**;
2> if the UE has logged measurements available for E-UTRA and if the RPLMN is included in \texttt{plmn-IdentityList} stored in \texttt{VarLogMeasReport}:

3> include the \texttt{logMeasAvailable};

2> if the UE has connection establishment failure information available in \texttt{VarConnEstFailReport} and if the RPLMN is equal to \texttt{plmn-Identity} stored in \texttt{VarConnEstFailReport}:

3> include \texttt{connEstFailInfoAvailable};

1> submit the \texttt{RRCConnectionReconfigurationComplete} message to lower layers for transmission using the new configuration;

1> if the \texttt{RRCConnectionReconfiguration} message does not include \texttt{rlf-TimersAndConstants} set to \texttt{setup}:

2> use the default values specified in 9.2.5 for timer T310, T311 and constant N310, N311;

1> if MAC successfully completes the random access procedure:

2> stop timer T304;

2> apply the parts of the CQI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the target PCell, if any;

2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the target PCell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of the target PCell;

NOTE 1: Whenever the UE shall setup or reconfigure a configuration in accordance with a field that is received it applies the new configuration, except for the cases addressed by the above statements.

2> enter E-UTRA RRC\_CONNECTED, upon which the procedure ends;

NOTE 2: The UE is not required to determine the SFN of the target PCell by acquiring system information from that cell before performing RACH access in the target PCell.

5.4.2.4 Reconfiguration failure

The UE shall:

1> if the UE is unable to comply with (part of) the configuration included in the \texttt{RRCConnectionReconfiguration} message:

2> perform the actions defined for this failure case as defined in the specifications applicable for the other RAT;

NOTE 1: The UE may apply above failure handling also in case the \texttt{RRCConnectionReconfiguration} message causes a protocol error for which the generic error handling as defined in 5.7 specifies that the UE shall ignore the message.

NOTE 2: If the UE is unable to comply with part of the configuration, it does not apply any part of the configuration, i.e. there is no partial success/ failure.

5.4.2.5 T304 expiry (handover to E-UTRA failure)

The UE shall:

1> upon T304 expiry (handover to E-UTRA failure):

2> reset MAC;

2> perform the actions defined for this failure case as defined in the specifications applicable for the other RAT;
5.4.3 Mobility from E-UTRA

5.4.3.1 General

The purpose of this procedure is to move a UE in RRC_CONNECTED to a cell using another Radio Access Technology (RAT), e.g. GERAN, UTRA or CDMA2000 systems. The mobility from E-UTRA procedure covers the following type of mobility:

- handover, i.e. the MobilityFromEUTRACommand message includes radio resources that have been allocated for the UE in the target cell;
- cell change order, i.e. the MobilityFromEUTRACommand message may include information facilitating access of and/or connection establishment in the target cell, e.g. system information. Cell change order is applicable only to GERAN; and
- enhanced CS fallback to CDMA2000 1xRTT, i.e. the MobilityFromEUTRACommand message includes radio resources that have been allocated for the UE in the target cell. The enhanced CS fallback to CDMA2000 1xRTT may be combined with concurrent handover or redirection to CDMA2000 HRPD.

NOTE: For the case of dual receiver/transmitter enhanced CS fallback to CDMA2000 1xRTT, the DLInformationTransfer message is used instead of the MobilityFromEUTRACommand message (see TS 36.300 [9]).

5.4.3.2 Initiation

E-UTRAN initiates the mobility from E-UTRA procedure to a UE in RRC_CONNECTED, possibly in response to a MeasurementReport message or in response to reception of CS fallback indication for the UE from MME, by sending a MobilityFromEUTRACommand message. E-UTRAN applies the procedure as follows:

- the procedure is initiated only when AS-security has been activated, and SRB2 with at least one DRB are setup and not suspended;

5.4.3.3 Reception of the MobilityFromEUTRACommand by the UE

The UE shall be able to receive a MobilityFromEUTRACommand message and perform a cell change order to GERAN, even if no prior UE measurements have been performed on the target cell.
The UE shall:

1> stop timer T310, if running;

1> if the MobilityFromEUTRACommand message includes the purpose set to handover:

2> if the targetRAT-Type is set to utra or geran:

3> consider inter-RAT mobility as initiated towards the RAT indicated by the targetRAT-Type included in the MobilityFromEUTRACommand message;

3> forward the nas-SecurityParamFromEUTRA to the upper layers;

3> access the target cell indicated in the inter-RAT message in accordance with the specifications of the target RAT;

3> if the targetRAT-Type is set to geran:

4> use the contents of systemInformation, if provided for PS Handover, as the system information to begin access on the target GERAN cell;

NOTE 1: If there are DRBs for which no radio bearers are established in the target RAT as indicated in the targetRAT-MessageContainer in the message, the E-UTRA RRC part of the UE does not indicate the release of the concerned DRBs to the upper layers. Upper layers may derive which bearers are not established from information received from the AS of the target RAT.

NOTE 2: In case of SR-VCC, the DRB to be replaced is specified in [61].

2> else if the targetRAT-Type is set to cdma2000-1XRTT or cdma2000-HRPD:

3> forward the targetRAT-Type and the targetRAT-MessageContainer to the CDMA2000 upper layers for the UE to access the cell(s) indicated in the inter-RAT message in accordance with the specifications of the CDMA2000 target-RAT;

1> else if the MobilityFromEUTRACommand message includes the purpose set to cellChangeOrder:

2> start timer T304 with the timer value set to $t304$, as included in the MobilityFromEUTRACommand message;

2> if the targetRAT-Type is set to geran:

3> if networkControlOrder is included in the MobilityFromEUTRACommand message:

4> apply the value as specified in TS 44.060 [36];

3> else:

4> acquire networkControlOrder and apply the value as specified in TS 44.060 [36];

3> use the contents of systemInformation, if provided, as the system information to begin access on the target GERAN cell;

2> establish the connection to the target cell indicated in the CellChangeOrder;

NOTE 3: The criteria for success or failure of the cell change order to GERAN are specified in TS 44.060[36].

1> if the MobilityFromEUTRACommand message includes the purpose set to e-CSFB:

2> if messageContCDMA2000-1XRTT is present:

3> forward the messageContCDMA2000-1XRTT to the CDMA2000 upper layers for the UE to access the cell(s) indicated in the inter-RAT message in accordance with the specification of the target RAT;

2> if mobilityCDMA2000-HRPD is present and is set to handover:

3> forward the messageContCDMA2000-HRPD to the CDMA2000 upper layers for the UE to access the cell(s) indicated in the inter-RAT message in accordance with the specification of the target RAT;

2> if mobilityCDMA2000-HRPD is present and is set to redirection:
3> forward the redirectCarrierCDMA2000-HRPD to the CDMA2000 upper layers;

NOTE 4: When the CDMA2000 upper layers in the UE receive both the messageContCDMA2000-1XRTT and messageContCDMA2000-HRPD the UE performs concurrent access to both CDMA2000 1xRTT and CDMA2000 HRPD RAT.

NOTE 5: The UE should perform the handover, the cell change order or enhanced 1xRTT CS fallback as soon as possible following the reception of the RRC message MobilityFromEUTRACommand, which could be before confirming successful reception (HARQ and ARQ) of this message.

5.4.3.4 Successful completion of the mobility from E-UTRA

Upon successfully completing the handover, the cell change order or enhanced 1xRTT CS fallback, the UE shall:

1> perform the actions upon leaving RRC_CONNECTED as specified in 5.3.12, with release cause 'other';

NOTE: If the UE performs enhanced 1xRTT CS fallback along with concurrent mobility to CDMA2000 HRPD and the connection to either CDMA2000 1xRTT or CDMA2000 HRPD succeeds, then the mobility from E-UTRA is considered successful.

5.4.3.5 Mobility from E-UTRA failure

The UE shall:

1> if T304 expires (mobility from E-UTRA failure); or

1> if the UE does not succeed in establishing the connection to the target radio access technology; or

1> if the UE is unable to comply with (part of) the configuration included in the MobilityFromEUTRACommand message; or

1> if there is a protocol error in the inter RAT information included in the MobilityFromEUTRACommand message, causing the UE to fail the procedure according to the specifications applicable for the target RAT:

2> stop T304, if running;

2> if the cs-FallbackIndicator in the MobilityFromEUTRACommand message was set to TRUE or e-CSFB was present:

3> indicate to upper layers that the CS Fallback procedure has failed;

2> revert back to the configuration used in the source PCell, excluding the configuration configured by the physicalConfigDedicated, mac-MainConfig and sps-Config;

2> initiate the connection re-establishment procedure as specified in 5.3.7;

NOTE: For enhanced CS fallback to CDMA2000 1xRTT, the above UE behavior applies only when the UE is attempting the enhanced 1xRTT CS fallback and connection to the target radio access technology fails or if the UE is attempting enhanced 1xRTT CS fallback along with concurrent mobility to CDMA2000 HRPD and connection to both the target radio access technologies fails.
5.4.4 Handover from E-UTRA preparation request (CDMA2000)

5.4.4.1 General

![Diagram of HandoverFromEUTRAPreparationRequest](image)

Figure 5.4.4.1-1: Handover from E-UTRA preparation request

The purpose of this procedure is to trigger the UE to prepare for handover or enhanced 1xRTT CS fallback to CDMA2000 by requesting a connection with this network. The UE may use this procedure to concurrently prepare for handover to CDMA2000 HRPD along with preparation for enhanced CS fallback to CDMA2000 1xRTT. This procedure applies to CDMA2000 capable UEs only.

This procedure is also used to trigger the UE which supports dual Rx/Tx enhanced 1xCSFB to redirect its second radio to CDMA2000 1xRTT.

The handover from E-UTRA preparation request procedure applies when signalling radio bearers are established.

5.4.4.2 Initiation

E-UTRAN initiates the handover from E-UTRA preparation request procedure to a UE in RRC_CONNECTED, possibly in response to a MeasurementReport message or CS fallback indication for the UE, by sending a HandoverFromEUTRAPreparationRequest message. E-UTRAN initiates the procedure only when AS security has been activated.

5.4.4.3 Reception of the HandoverFromEUTRAPreparationRequest by the UE

Upon reception of the HandoverFromEUTRAPreparationRequest message, the UE shall:

1> if dualRxTxRedirectIndicator is present in the received message:
   2> forward dualRxTxRedirectIndicator to the CDMA2000 upper layers;
   2> forward redirectCarrierCDMA2000-1XRTT to the CDMA2000 upper layers, if included;
1> else:
   2> indicate the request to prepare handover or enhanced 1xRTT CS fallback and forward the cdma2000-Type to the CDMA2000 upper layers;
   2> if cdma2000-Type is set to type1XRTT:
      3> forward the rand and the mobilityParameters to the CDMA2000 upper layers;
      2> if concurrPrepCDMA2000-HRPD is present in the received message:
         3> forward concurrPrepCDMA2000-HRPD to the CDMA2000 upper layers;
      2> else:
         3> forward concurrPrepCDMA2000-HRPD, with its value set to FALSE, to the CDMA2000 upper layers;
5.4.5 UL handover preparation transfer (CDMA2000)

5.4.5.1 General

![Figure 5.4.5.1-1: UL handover preparation transfer](image)

The purpose of this procedure is to tunnel the handover related CDMA2000 dedicated information or enhanced 1xRTT CS fallback related CDMA2000 dedicated information from UE to E-UTRAN when requested by the higher layers. The procedure is triggered by the higher layers on receipt of \textit{HandoverFromEUTRAPreparationRequest} message. If preparing for enhanced CS fallback to CDMA2000 1xRTT and handover to CDMA2000 HRPD, the UE sends two consecutive \textit{ULHandoverPreparationTransfer} messages to E-UTRAN, one per addressed CDMA2000 RAT Type. This procedure applies to CDMA2000 capable UEs only.

5.4.5.2 Initiation

A UE in RRC\_CONNECTED initiates the UL Handover Preparation Transfer procedure whenever there is a need to transfer handover or enhanced 1xRTT CS fallback related non-3GPP dedicated information. The UE initiates the UL handover preparation transfer procedure by sending the \textit{ULHandoverPreparationTransfer} message.

5.4.5.3 Actions related to transmission of the \textit{ULHandoverPreparationTransfer} message

The UE shall set the contents of the \textit{ULHandoverPreparationTransfer} message as follows:

1. include the \textit{cdma2000-Type} and the \textit{dedicatedInfo};
2. if the \textit{cdma2000-Type} is set to \textit{type1XRTT}:
   1. include the \textit{meid} and set it to the value received from the CDMA2000 upper layers;
3. submit the \textit{ULHandoverPreparationTransfer} message to lower layers for transmission, upon which the procedure ends;

5.4.5.4 Failure to deliver the \textit{ULHandoverPreparationTransfer} message

The UE shall:

1. if the UE is unable to guarantee successful delivery of \textit{ULHandoverPreparationTransfer} messages:
   1. inform upper layers about the possible failure to deliver the information contained in the concerned \textit{ULHandoverPreparationTransfer} message;

5.4.6 Inter-RAT cell change order to E-UTRAN

5.4.6.1 General

The purpose of the inter-RAT cell change order to E-UTRAN procedure is to transfer, under the control of the source radio access technology, a connection between the UE and another radio access technology (e.g. GSM/ GPRS) to E-UTRAN.
5.4.6.2 Initiation

The procedure is initiated when a radio access technology other than E-UTRAN, e.g. GSM/GPRS, using procedures specific for that RAT, orders the UE to change to an E-UTRAN cell. In response, upper layers request the establishment of an RRC connection as specified in subclause 5.3.3.

NOTE: Within the message used to order the UE to change to an E-UTRAN cell, the source RAT should specify the identity of the target E-UTRAN cell as specified in the specifications for that RAT.

The UE shall:

1> upon receiving an `RRCConnectionSetup` message:
2> consider the inter-RAT cell change order procedure to have completed successfully;

5.4.6.3 UE fails to complete an inter-RAT cell change order

If the inter-RAT cell change order fails the UE shall return to the other radio access technology and proceed as specified in the appropriate specifications for that RAT.

The UE shall:

1> upon failure to establish the RRC connection as specified in subclause 5.3.3:
2> consider the inter-RAT cell change order procedure to have failed;

NOTE: The cell change was network ordered. Therefore, failure to change to the target PCell should not cause the UE to move to UE-controlled cell selection.

5.5 Measurements

5.5.1 Introduction

The UE reports measurement information in accordance with the measurement configuration as provided by E-UTRAN. E-UTRAN provides the measurement configuration applicable for a UE in RRC_CONNECTED by means of dedicated signalling, i.e. using the `RRCConnectionReconfiguration` message.

The UE can be requested to perform the following types of measurements:

- Intra-frequency measurements: measurements at the downlink carrier frequency(ies) of the serving cell(s).
- Inter-frequency measurements: measurements at frequencies that differ from any of the downlink carrier frequency(ies) of the serving cell(s).
- Inter-RAT measurements of UTRA frequencies.
- Inter-RAT measurements of GERAN frequencies.
- Inter-RAT measurements of CDMA2000 HRPD or CDMA2000 1xRTT frequencies.

The measurement configuration includes the following parameters:

1. Measurement objects: The objects on which the UE shall perform the measurements.
   - For intra-frequency and inter-frequency measurements a measurement object is a single E-UTRA carrier frequency. Associated with this carrier frequency, E-UTRAN can configure a list of cell specific offsets and a list of 'blacklisted' cells. Blacklisted cells are not considered in event evaluation or measurement reporting.
   - For inter-RAT UTRA measurements a measurement object is a set of cells on a single UTRA carrier frequency.
   - For inter-RAT GERAN measurements a measurement object is a set of GERAN carrier frequencies.
For inter-RAT CDMA2000 measurements a measurement object is a set of cells on a single (HRPD or 1xRTT) carrier frequency.

NOTE 1: Some measurements using the above mentioned measurement objects, only concern a single cell, e.g. measurements used to report neighbouring cell system information, PCell UE Rx-Tx time difference.

2. Reporting configurations: A list of reporting configurations where each reporting configuration consists of the following:
   - Reporting criterion: The criterion that triggers the UE to send a measurement report. This can either be periodical or a single event description.
   - Reporting format: The quantities that the UE includes in the measurement report and associated information (e.g. number of cells to report).

3. Measurement identities: A list of measurement identities where each measurement identity links one measurement object with one reporting configuration. By configuring multiple measurement identities it is possible to link more than one measurement object to the same reporting configuration, as well as to link more than one reporting configuration to the same measurement object. The measurement identity is used as a reference number in the measurement report.

4. Quantity configurations: One quantity configuration is configured per RAT type. The quantity configuration defines the measurement quantities and associated filtering used for all event evaluation and related reporting of that measurement type. One filter can be configured per measurement quantity.

5. Measurement gaps: Periods that the UE may use to perform measurements, i.e. no (UL, DL) transmissions are scheduled.

E-UTRAN only configures a single measurement object for a given frequency, i.e. it is not possible to configure two or more measurement objects for the same frequency with different associated parameters, e.g. different offsets and/or blacklists. E-UTRAN may configure multiple instances of the same event e.g. by configuring two reporting configurations with different thresholds.

The UE maintains a single measurement object list, a single reporting configuration list, and a single measurement identities list. The measurement object list includes measurement objects, that are specified per RAT type, possibly including intra-frequency object(s) (i.e. the object(s) corresponding to the serving frequency(ies)), inter-frequency object(s) and inter-RAT objects. Similarly, the reporting configuration list includes E-UTRA and inter-RAT reporting configurations. Any measurement object can be linked to any reporting configuration of the same RAT type. Some reporting configurations may not be linked to a measurement object. Likewise, some measurement objects may not be linked to a reporting configuration.

The measurement procedures distinguish the following types of cells:

1. The serving cell(s)– these are the PCell and one or more SCells, if configured for a UE supporting CA.
2. Listed cells - these are cells listed within the measurement object(s).
3. Detected cells - these are cells that are not listed within the measurement object(s) but are detected by the UE on the carrier frequency(ies) indicated by the measurement object(s).

For E-UTRA, the UE measures and reports on the serving cell(s), listed cells and detected cells. For inter-RAT UTRA, the UE measures and reports on listed cells and optionally on cells that are within a range for which reporting is allowed by E-UTRAN. For inter-RAT GERAN, the UE measures and reports on detected cells. For inter-RAT CDMA2000, the UE measures and reports on listed cells.

NOTE 2: For inter-RAT UTRA and CDMA2000, the UE measures and reports also on detected cells for the purpose of SON.

NOTE 3: This specification is based on the assumption that typically CSG cells of home deployment type are not indicated within the neighbour list. Furthermore, the assumption is that for non-home deployments, the physical cell identity is unique within the area of a large macro cell (i.e. as for UTRAN).

Whenever the procedural specification, other than contained in sub-clause 5.5.2, refers to a field it concerns a field included in the VarMeasConfig unless explicitly stated otherwise i.e. only the measurement configuration procedure covers the direct UE action related to the received measConfig.
5.5.2 Measurement configuration

5.5.2.1 General

E-UTRAN applies the procedure as follows:

- to ensure that, whenever the UE has a measConfig, it includes a measObject for each serving frequency;
- to configure at most one measurement identity using a reporting configuration with the purpose set to reportCGI;
- for serving frequencies, set the EARFCN within the corresponding measObject according to the band as used for reception/ transmission;

The UE shall:

1> if the received measConfig includes the measObjectToRemoveList:
   2> perform the measurement object removal procedure as specified in 5.5.2.4;
1> if the received measConfig includes the measObjectToAddModList:
   2> perform the measurement object addition/ modification procedure as specified in 5.5.2.5;
1> if the received measConfig includes the reportConfigToRemoveList:
   2> perform the reporting configuration removal procedure as specified in 5.5.2.6;
1> if the received measConfig includes the reportConfigToAddModList:
   2> perform the reporting configuration addition/ modification procedure as specified in 5.5.2.7;
1> if the received measConfig includes the quantityConfig:
   2> perform the quantity configuration procedure as specified in 5.5.2.8;
1> if the received measConfig includes the measIdToRemoveList:
   2> perform the measurement identity removal procedure as specified in 5.5.2.2;
1> if the received measConfig includes the measIdToAddModList:
   2> perform the measurement identity addition/ modification procedure as specified in 5.5.2.3;
1> if the received measConfig includes the measGapConfig:
   2> perform the measurement gap configuration procedure as specified in 5.5.2.9;
1> if the received measConfig includes the s-Measure:
   2> set the parameter s-Measure within VarMeasConfig to the lowest value of the RSRP ranges indicated by the received value of s-Measure;
1> if the received measConfig includes the preRegistrationInfoHRPD:
   2> forward the preRegistrationInfoHRPD to CDMA2000 upper layers;
1> if the received measConfig includes the speedStatePars:
   2> set the parameter speedStatePars within VarMeasConfig to the received value of speedStatePars;
1> if the received measConfig includes the allowInterruptions:
   2> set the parameter allowInterruptions within VarMeasConfig to the received value of allowInterruptions;
5.5.2.2 Measurement identity removal

The UE shall:

1> for each measId included in the received measIdToRemoveList that is part of the current UE configuration in VarMeasConfig:

2> remove the entry with the matching measId from the measIdList within the VarMeasConfig;

2> remove the measurement reporting entry for this measId from the VarMeasReportList, if included;

2> stop the periodical reporting timer or timer T321, whichever one is running, and reset the associated information (e.g. timeToTrigger) for this measId;

NOTE: The UE does not consider the message as erroneous if the measIdToRemoveList includes any measId value that is not part of the current UE configuration.

5.5.2.2a Measurement identity autonomous removal

The UE shall:

1> for each measId included in the measIdList within VarMeasConfig:

2> if the associated reportConfig concerns an event involving a serving cell while the concerned serving cell is not configured:

3> remove the measId from the measIdList within the VarMeasConfig;

3> remove the measurement reporting entry for this measId from the VarMeasReportList, if included;

3> stop the periodical reporting timer if running, and reset the associated information (e.g. timeToTrigger) for this measId;

NOTE 1: The above UE autonomous removal of measId’s applies only for measurement events A1, A2 and A6.

NOTE 2: When performed during re-establishment, the UE is only configured with a primary frequency (i.e. the SCell(s) are released, if configured).

5.5.2.3 Measurement identity addition/ modification

E-UTRAN applies the procedure as follows:

- configure a measId only if the corresponding measurement object, the corresponding reporting configuration and the corresponding quantity configuration, are configured;

The UE shall:

1> for each measId included in the received measIdToAddModList:

2> if an entry with the matching measId exists in the measIdList within the VarMeasConfig:

3> replace the entry with the value received for this measId;

3> else:

3> add a new entry for this measId within the VarMeasConfig;

3> remove the measurement reporting entry for this measId from the VarMeasReportList, if included;

3> stop the periodical reporting timer or timer T321, whichever one is running, and reset the associated information (e.g. timeToTrigger) for this measId;

3> if the triggerType is set to periodical and the purpose is set to reportCGI in the reportConfig associated with this measId:

3> if the measObject associated with this measId concerns E-UTRA:
4> if the si-RequestForHO is included in the reportConfig associated with this measId:
5> start timer T321 with the timer value set to 150 ms for this measId;
4> else:
5> start timer T321 with the timer value set to 1 second for this measId;
3> else if the measObject associated with this measId concerns UTRA:
4> if the si-RequestForHO is included in the reportConfig associated with this measId:
5> for UTRA FDD, start timer T321 with the timer value set to 2 seconds for this measId;
5> for UTRA TDD, start timer T321 with the timer value set to [1 second] for this measId;
4> else:
5> start timer T321 with the timer value set to 8 seconds for this measId;
3> else:
4> start timer T321 with the timer value set to 8 seconds for this measId;

5.5.2.4 Measurement object removal

The UE shall:
1> for each measObjectId included in the received measObjectToRemoveList that is part of the current UE configuration in VarMeasConfig:
2> remove the entry with the matching measObjectId from the measObjectList within the VarMeasConfig;
2> remove all measId associated with this measObjectId from the measIdList within the VarMeasConfig, if any;
2> if a measId is removed from the measIdList:
3> remove the measurement reporting entry for this measId from the VarMeasReportList, if included;
3> stop the periodical reporting timer or timer T321, whichever one is running, and reset the associated information (e.g. timeToTrigger) for this measId;

NOTE: The UE does not consider the message as erroneous if the measObjectToRemoveList includes any measObjectId value that is not part of the current UE configuration.

5.5.2.5 Measurement object addition/ modification

The UE shall:
1> for each measObjectId included in the received measObjectToAddModList:
2> if an entry with the matching measObjectId exists in the measObjectList within the VarMeasConfig, for this entry:
3> reconfigure the entry with the value received for this measObject, except for the fields cellsToAddModList, blackCellsToAddModList, cellsToRemoveList, blackCellsToRemoveList and measSubframePatternConfigNeigh;
3> if the received measObject includes the cellsToRemoveList:
4> for each cellIndex included in the cellsToRemoveList:
5> remove the entry with the matching cellIndex from the cellsToAddModList;
3> if the received measObject includes the cellsToAddModList:
4> for each cellIndex value included in the cellsToAddModList:
5> if an entry with the matching cellIndex exists in the cellsToAddModList:
   6> replace the entry with the value received for this cellIndex;
5> else:
   6> add a new entry for the received cellIndex to the cellsToAddModList;
3> if the received measObject includes the blackCellsToRemoveList:
   4> for each cellIndex included in the blackCellsToRemoveList:
5> remove the entry with the matching cellIndex from the blackCellsToAddModList;
   NOTE 1: For each cellIndex included in the blackCellsToRemoveList that concerns overlapping ranges of cells, a cell is removed from the black list of cells only if all cell indexes containing it are removed.
3> if the received measObject includes the blackCellsToAddModList:
   4> for each cellIndex included in the blackCellsToAddModList:
5> if an entry with the matching cellIndex is included in the blackCellsToAddModList:
   6> replace the entry with the value received for this cellIndex;
5> else:
   6> add a new entry for the received cellIndex to the blackCellsToAddModList;
3> if the received measObject includes measSubframePatternConfigNeigh:
   4> set measSubframePatternConfigNeigh within the VarMeasConfig to the value of the received field
3> for each measId associated with this measObjectId in the measIdList within the VarMeasConfig, if any:
   4> remove the measurement reporting entry for this measId from the VarMeasReportList, if included;
   4> stop the periodical reporting timer or timer T321, whichever one is running, and reset the associated information (e.g. timeToTrigger) for this measId;
2> else:
3> add a new entry for the received measObject to the measObjectList within VarMeasConfig;
   NOTE 2: The UE does not need to retain the cellForWhichToReportCGI in the measObject after reporting cgi-Info.

5.5.2.6 Reporting configuration removal

The UE shall:
1> for each reportConfigId included in the received reportConfigToRemoveList that is part of the current UE configuration in VarMeasConfig:
   2> remove the entry with the matching reportConfigId from the reportConfigList within the VarMeasConfig;
   2> remove all measId associated with the reportConfigId from the measIdList within the VarMeasConfig, if any;
   2> if a measId is removed from the measIdList:
3> remove the measurement reporting entry for this measId from the VarMeasReportList, if included;
3> stop the periodical reporting timer or timer T321, whichever one is running, and reset the associated information (e.g. timeToTrigger) for this measId;
   NOTE: The UE does not consider the message as erroneous if the reportConfigToRemoveList includes any reportConfigId value that is not part of the current UE configuration.
5.5.2.7 Reporting configuration addition/ modification

The UE shall:

1> for each reportConfigId included in the received reportConfigToAddModList:

2> if an entry with the matching reportConfigId exists in the reportConfigList within the VarMeasConfig, for this entry:

3> reconfigure the entry with the value received for this reportConfig;

3> for each measId associated with this reportConfigId included in the measIdList within the VarMeasConfig, if any:

4> remove the measurement reporting entry for this measId from in VarMeasReportList, if included;

4> stop the periodical reporting timer or timer T321, whichever one is running, and reset the associated information (e.g. timeToTrigger) for this measId;

2> else:

3> add a new entry for the received reportConfig to the reportConfigList within the VarMeasConfig;

5.5.2.8 Quantity configuration

The UE shall:

1> for each RAT for which the received quantityConfig includes parameter(s):

2> set the corresponding parameter(s) in quantityConfig within VarMeasConfig to the value of the received quantityConfig parameter(s);

1> for each measId included in the measIdList within VarMeasConfig:

2> remove the measurement reporting entry for this measId from the VarMeasReportList, if included;

2> stop the periodical reporting timer or timer T321, whichever one is running, and reset the associated information (e.g. timeToTrigger) for this measId;

5.5.2.9 Measurement gap configuration

The UE shall:

1> if measGapConfig is set to setup:

2> if a measurement gap configuration is already setup, release the measurement gap configuration;

2> setup the measurement gap configuration indicated by the measGapConfig in accordance with the received gapOffset, i.e., the first subframe of each gap occurs at an SFN and subframe meeting the following condition:

\[
\text{SFN mod } T = \text{FLOOR}(\text{gapOffset}/10);
\]

\[
\text{subframe} = \text{gapOffset} \mod 10;
\]

with \(T = \text{MGRP}/10\) as defined in TS 36.133 [16];

1> else:

2> release the measurement gap configuration;
5.5.3 Performing measurements

5.5.3.1 General

For all measurements the UE applies the layer 3 filtering as specified in 5.5.3.2, before using the measured results for evaluation of reporting criteria or for measurement reporting.

The UE shall:

1. whenever the UE has a measConfig, perform RSRP and RSRQ measurements for each serving cell, applying for the PCell the time domain measurement resource restriction in accordance with measSubframePatternPCell, if configured;

2. for each measId included in the measIdList within VarMeasConfig:

   a. if the purpose for the associated reportConfig is set to reportCGI:

      1. if si-RequestForHO is configured for the associated reportConfig:

         a. perform the corresponding measurements on the frequency and RAT indicated in the associated measObject using autonomous gaps as necessary;

      2. else:

         a. perform the corresponding measurements on the frequency and RAT indicated in the associated measObject using available idle periods or using autonomous gaps as necessary;

   b. try to acquire the global cell identity of the cell indicated by the cellForWhichToReportCGI in the associated measObject by acquiring the relevant system information from the concerned cell;

   c. if the cell indicated by the cellForWhichToReportCGI included in the associated measObject is an E-UTRAN cell:

      a. try to acquire the CSG identity, if the CSG identity is broadcast in the concerned cell;

      b. try to acquire the trackingAreaCode in the concerned cell;

      c. try to acquire the list of additional PLMN Identities, as included in the plmn-IdentityList, if multiple PLMN identities are broadcast in the concerned cell;

   d. if the cell indicated by the cellForWhichToReportCGI included in the associated measObject is a UTRAN cell:

      a. try to acquire the LAC, the RAC and the list of additional PLMN Identities, if multiple PLMN identities are broadcast in the concerned cell;

      b. try to acquire the CSG identity, if the CSG identity is broadcast in the concerned cell;

   e. if the cell indicated by the cellForWhichToReportCGI included in the associated measObject is a GERAN cell:

      a. try to acquire the RAC in the concerned cell;

   f. if the cell indicated by the cellForWhichToReportCGI included in the associated measObject is a CDMA2000 cell and the cdma2000-Type included in the measObject is typeHRPD:

      a. try to acquire the Sector ID in the concerned cell;

   g. if the cell indicated by the cellForWhichToReportCGI included in the associated measObject is a CDMA2000 cell and the cdma2000-Type included in the measObject is type1XRTT:

      a. try to acquire the BASE ID, SID and NID in the concerned cell;
2> else:

3> if a measurement gap configuration is setup; or

3> if the UE does not require measurement gaps to perform the concerned measurements:

4> if \( s\text{-Measure} \) is not configured; or

4> if \( s\text{-Measure} \) is configured and the PCell RSRP, after layer 3 filtering, is lower than this value:

5> perform the corresponding measurements of neighbouring cells on the frequencies and RATs indicated in the concerned \textit{measObject}, applying for neighbouring cells on the primary frequency the time domain measurement resource restriction in accordance with \textit{measSubframePatternConfigNeigh}, if configured in the concerned \textit{measObject};

4> if the \textit{ue-RxTxTimeDiffPeriodical} is configured in the associated \textit{reportConfig};

5> perform the UE Rx–Tx time difference measurements on the PCell;

2> perform the evaluation of reporting criteria as specified in 5.5.4;

NOTE 3: The \( s\text{-Measure} \) defines when the UE is required to perform measurements. The UE is however allowed to perform measurements also when the PCell RSRP exceeds \( s\text{-Measure} \), e.g., to measure cells broadcasting a CSG identity following use of the autonomous search function as defined in TS 36.304 [4].

5.5.3.2 Layer 3 filtering

The UE shall:

1> for each measurement quantity that the UE performs measurements according to 5.5.3.1:

NOTE 1: This does not include quantities configured solely for UE Rx-Tx time difference measurements i.e. for those type of measurements the UE ignores the triggerQuantity and reportQuantity.

2> filter the measured result, before using for evaluation of reporting criteria or for measurement reporting, by the following formula:

\[
F_n = (1 - a) \cdot F_{n-1} + a \cdot M_n
\]

where

\( M_n \) is the latest received measurement result from the physical layer;

\( F_n \) is the updated filtered measurement result, that is used for evaluation of reporting criteria or for measurement reporting;

\( F_{n-1} \) is the old filtered measurement result, where \( F_0 \) is set to \( M_1 \) when the first measurement result from the physical layer is received; and

\( a = 1/2^{k(4)} \), where \( k \) is the filterCoefficient for the corresponding measurement quantity received by the quantityConfig;

2> adapt the filter such that the time characteristics of the filter are preserved at different input rates, observing that the filterCoefficient \( k \) assumes a sample rate equal to 200 ms;

NOTE 2: If \( k \) is set to 0, no layer 3 filtering is applicable.

NOTE 3: The filtering is performed in the same domain as used for evaluation of reporting criteria or for measurement reporting, i.e., logarithmic filtering for logarithmic measurements.

NOTE 4: The filter input rate is implementation dependent, to fulfil the performance requirements set in [16]. For further details about the physical layer measurements, see TS 36.133 [16].
5.5.4 Measurement report triggering

5.5.4.1 General

The UE shall:

1> for each measId included in the measIdList within VarMeasConfig:
   2> if the corresponding reportConfig includes a purpose set to reportStrongestCellsForSON:
      3> consider any neighbouring cell detected on the associated frequency to be applicable;
   2> else if the corresponding reportConfig includes a purpose set to reportCGI:
      3> consider any neighbouring cell detected on the associated frequency/ set of frequencies (GERAN) which has a physical cell identity matching the value of the cellForWhichToReportCGI included in the corresponding measObject within the VarMeasConfig to be applicable;
   2> else:
      3> if the corresponding measObject concerns E-UTRA:
         4> if the ue-RxTxTimeDiffPeriodical is configured in the corresponding reportConfig:
            5> consider only the PCell to be applicable;
         4> else if the eventA1 or eventA2 is configured in the corresponding reportConfig:
            5> consider only the serving cell to be applicable;
         4> else:
            5> consider any neighbouring cell detected on the associated frequency to be applicable when the concerned cell is not included in the blackCellsToAddModList defined within the VarMeasConfig for this measId;
      3> else if the corresponding measObject concerns UTRA or CDMA2000:
         4> consider a neighbouring cell on the associated frequency to be applicable when the concerned cell is included in the cellsToAddModList defined within the VarMeasConfig for this measId (i.e. the cell is included in the white-list);
      3> else if the corresponding measObject concerns GERAN:
         4> consider a neighbouring cell on the associated set of frequencies to be applicable when the concerned cell matches the ncc-Permitted defined within the VarMeasConfig for this measId;
         2> if the triggerType is set to event and if the entry condition applicable for this event, i.e. the event corresponding with the eventId of the corresponding reportConfig within VarMeasConfig, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during timeToTrigger defined for this event within the VarMeasConfig, while the VarMeasReportList does not include an measurement reporting entry for this measId (a first cell triggers the event):
            3> include a measurement reporting entry within the VarMeasReportList for this measId;
         3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;
      3> include the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;

NOTE 0: The UE may also consider a neighbouring cell on the associated UTRA frequency to be applicable when the concerned cell is included in the csg-allowedReportingCells within the VarMeasConfig for this measId, if configured in the corresponding measObjectUTRA (i.e. the cell is included in the range of physical cell identities for which reporting is allowed).
3> initiate the measurement reporting procedure, as specified in 5.5.5;
   2> if the triggerType is set to event and if the entry condition applicable for this event, i.e. the event corresponding with the eventId of the corresponding reportConfig within VarMeasConfig, is fulfilled for one or more applicable cells not included in the cellsTriggeredList for all measurements after layer 3 filtering taken during timeToTrigger defined for this event within the VarMeasConfig (a subsequent cell triggers the event):

3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;
3> include the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;
3> initiate the measurement reporting procedure, as specified in 5.5.5;
   2> if the triggerType is set to event and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the cellsTriggeredList defined within the VarMeasReportList for this measId for all measurements after layer 3 filtering taken during timeToTrigger defined within the VarMeasConfig for this event:

3> remove the concerned cell(s) in the cellsTriggeredList defined within the VarMeasReportList for this measId;
3> if reportOnLeave is set to TRUE for the corresponding reporting configuration or if a6-ReportOnLeave is set to TRUE for the corresponding reporting configuration:
   4> initiate the measurement reporting procedure, as specified in 5.5.5;
3> if the cellsTriggeredList defined within the VarMeasReportList for this measId is empty:
   4> remove the measurement reporting entry within the VarMeasReportList for this measId;
   4> stop the periodical reporting timer for this measId, if running;
   2> if the purpose is included and set to reportStrongestCells or to reportStrongestCellsForSON and if a (first) measurement result is available:

3> include a measurement reporting entry within the VarMeasReportList for this measId;
3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;
3> initiate the measurement reporting procedure, as specified in 5.5.5;
NOTE 1: If the purpose is set to reportStrongestCells and reportAmount > 1, the UE initiates a first measurement report immediately after the quantity to be reported becomes available for the PCell. If the purpose is set to reportStrongestCells and reportAmount = 1, the UE initiates a first measurement report immediately after the quantity to be reported becomes available for the PCell and for the strongest cell among the applicable cells. If the purpose is set to reportStrongestCellsForSON, the UE initiates a first measurement report when it has determined the strongest cells on the associated frequency.

2> upon expiry of the periodical reporting timer for this measId:
3> initiate the measurement reporting procedure, as specified in 5.5.5;
   2> if the purpose is included and set to reportCGI and if the UE acquired the information needed to set all fields of cgi-Info for the requested cell:

3> include a measurement reporting entry within the VarMeasReportList for this measId;
3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;
3> stop timer T321;
3> initiate the measurement reporting procedure, as specified in 5.5.5;
   2> upon expiry of the T321 for this measId:

3> include a measurement reporting entry within the VarMeasReportList for this measId;
3> set the `numberOfReportsSent` defined within the `VarMeasReportList` for this `measId` to 0;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 2: The UE does not stop the periodical reporting with `triggerType` set to `event` or to `periodical` while the corresponding measurement is not performed due to the PCell RSRP being equal to or better than `s-Measure` or due to the measurement gap not being setup.

NOTE 3: If the UE is configured with DRX, the UE may delay the measurement reporting for event triggered and periodical triggered measurements until the Active Time, which is defined in TS 36.321 [6].

### 5.5.4.2 Event A1 (Serving becomes better than threshold)

The UE shall:

1> consider the entering condition for this event to be satisfied when condition A1-1, as specified below, is fulfilled;

1> consider the leaving condition for this event to be satisfied when condition A1-2, as specified below, is fulfilled;

1> for this measurement, consider the primary or secondary cell that is configured on the frequency indicated in the associated `measObjectEUTRA` to be the serving cell;

**Inequality A1-1 (Entering condition)**

\[ Ms - Hys > Thresh \]

**Inequality A1-2 (Leaving condition)**

\[ Ms + Hys < Thresh \]

The variables in the formula are defined as follows:

- \( Ms \) is the measurement result of the serving cell, not taking into account any offsets.
- \( Hys \) is the hysteresis parameter for this event (i.e. hysteresis as defined within `reportConfigEUTRA` for this event).
- \( Thresh \) is the threshold parameter for this event (i.e. `a1-Threshold` as defined within `reportConfigEUTRA` for this event).

\( Ms \) is expressed in dBm in case of RSRP, or in dB in case of RSRQ.

\( Hys \) is expressed in dB.

\( Thresh \) is expressed in the same unit as \( Ms \).

### 5.5.4.3 Event A2 (Serving becomes worse than threshold)

The UE shall:

1> consider the entering condition for this event to be satisfied when condition A2-1, as specified below, is fulfilled;

1> consider the leaving condition for this event to be satisfied when condition A2-2, as specified below, is fulfilled;

1> for this measurement, consider the primary or secondary cell that is configured on the frequency indicated in the associated `measObjectEUTRA` to be the serving cell;

**Inequality A2-1 (Entering condition)**

\[ Ms + Hys < Thresh \]

**Inequality A2-2 (Leaving condition)**

\[ Ms - Hys > Thresh \]

The variables in the formula are defined as follows:
**Ms** is the measurement result of the serving cell, not taking into account any offsets.

**Hys** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigEUTRA* for this event).

**Thresh** is the threshold parameter for this event (i.e. *a2-Threshold* as defined within *reportConfigEUTRA* for this event).

**Ms** is expressed in dBm in case of RSRP, or in dB in case of RSRQ.

**Hys** is expressed in dB.

**Thresh** is expressed in the same unit as **Ms**.

### 5.5.4.4 Event A3 (Neighbour becomes offset better than PCell)

The UE shall:

1. consider the entering condition for this event to be satisfied when condition A3-1, as specified below, is fulfilled;
2. consider the leaving condition for this event to be satisfied when condition A3-2, as specified below, is fulfilled;

**NOTE** The cell(s) that triggers the event is on the frequency indicated in the associated *measObject* which may be different from the (primary) frequency used by the PCell.

Inequality A3-1 (Entering condition)

\[
Mn + Ofn + Ocn - Hys > Mp + Ofp + Ocp + Off
\]

Inequality A3-2 (Leaving condition)

\[
Mn + Ofn + Ocn + Hys < Mp + Ofp + Ocp + Off
\]

The variables in the formula are defined as follows:

- **Mn** is the measurement result of the neighbouring cell, not taking into account any offsets.
- **Ofn** is the frequency specific offset of the frequency of the neighbour cell (i.e. *offsetFreq* as defined within *measObjectEUTRA* corresponding to the frequency of the neighbour cell).
- **Ocn** is the cell specific offset of the neighbour cell (i.e. *cellIndividualOffset* as defined within *measObjectEUTRA* corresponding to the frequency of the neighbour cell), and set to zero if not configured for the neighbour cell.
- **Mp** is the measurement result of the PCell, not taking into account any offsets.
- **Ofp** is the frequency specific offset of the primary frequency (i.e. *offsetFreq* as defined within *measObjectEUTRA* corresponding to the primary frequency).
- **Ocp** is the cell specific offset of the PCell (i.e. *cellIndividualOffset* as defined within *measObjectEUTRA* corresponding to the primary frequency), and is set to zero if not configured for the PCell.
- **Hys** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigEUTRA* for this event).
- **Off** is the offset parameter for this event (i.e. *a3-Offset* as defined within *reportConfigEUTRA* for this event).

**Mn, Mp** are expressed in dBm in case of RSRP, or in dB in case of RSRQ.

**Ofn, Ocn, Ofp, Ocp, Hys, Off** are expressed in dB.

### 5.5.4.5 Event A4 (Neighbour becomes better than threshold)

The UE shall:

1. consider the entering condition for this event to be satisfied when condition A4-1, as specified below, is fulfilled;
2. consider the leaving condition for this event to be satisfied when condition A4-2, as specified below, is fulfilled;

Inequality A4-1 (Entering condition)
Inequality A4-2 (Leaving condition)

\[ Mn + Ofn + Ocn + Hys < \text{Thresh} \]

The variables in the formula are defined as follows:

- **Mn** is the measurement result of the neighbouring cell, not taking into account any offsets.
- **Ofn** is the frequency specific offset of the frequency of the neighbour cell (i.e. offsetFreq as defined within measObjectEUTRA corresponding to the frequency of the neighbour cell).
- **Ocn** is the cell specific offset of the neighbour cell (i.e. cellIndividualOffset as defined within measObjectEUTRA corresponding to the frequency of the neighbour cell), and set to zero if not configured for the neighbour cell.
- **Hys** is the hysteresis parameter for this event (i.e. hysteresis as defined within reportConfigEUTRA for this event).
- **Thresh** is the threshold parameter for this event (i.e. a4-Threshold as defined within reportConfigEUTRA for this event).
- **Mn** is expressed in dBm in case of RSRP, or in dB in case of RSRQ.
- **Ofn, Ocn, Hys** are expressed in dB.
- **Thresh** is expressed in the same unit as **Mn**.

### 5.5.4.6 Event A5 (PCell becomes worse than threshold1 and neighbour becomes better than threshold2)

The UE shall:

1. consider the entering condition for this event to be satisfied when both condition A5-1 and condition A5-2, as specified below, are fulfilled;
2. consider the leaving condition for this event to be satisfied when condition A5-3 or condition A5-4, i.e. at least one of the two, as specified below, is fulfilled;

**NOTE:** The cell(s) that triggers the event is on the frequency indicated in the associated measObject which may be different from the (primary) frequency used by the PCell.

Inequality A5-1 (Entering condition 1)

\[ Mp + Hys < \text{Thresh} \]

Inequality A5-2 (Entering condition 2)

\[ Mn + Ofn + Ocn - Hys > \text{Thresh2} \]

Inequality A5-3 (Leaving condition 1)

\[ Mp - Hys > \text{Thresh} \]

Inequality A5-4 (Leaving condition 2)

\[ Mn + Ofn + Ocn + Hys < \text{Thresh2} \]

The variables in the formula are defined as follows:

- **Mp** is the measurement result of the PCell, not taking into account any offsets.
- **Mn** is the measurement result of the neighbouring cell, not taking into account any offsets.
- **Ofn** is the frequency specific offset of the frequency of the neighbour cell (i.e. offsetFreq as defined within measObjectEUTRA corresponding to the frequency of the neighbour cell).
$Ocn$ is the cell specific offset of the neighbour cell (i.e. $cellIndividualOffset$ as defined within $measObjectEUTRA$ corresponding to the frequency of the neighbour cell), and set to zero if not configured for the neighbour cell.

$Hys$ is the hysteresis parameter for this event (i.e. $hysteresis$ as defined within $reportConfigEUTRA$ for this event).

$Thresh1$ is the threshold parameter for this event (i.e. $a5-Threshold1$ as defined within $reportConfigEUTRA$ for this event).

$Thresh2$ is the threshold parameter for this event (i.e. $a5-Threshold2$ as defined within $reportConfigEUTRA$ for this event).

$Mn, Mp$ are expressed in dBm in case of RSRP, or in dB in case of RSRQ.

$Ocn, Ocs, Hys$ are expressed in dB.

$Thresh1$ is expressed in the same unit as $Mp$.

$Thresh2$ is expressed in the same unit as $Mn$.

5.5.4.6a Event A6 (Neighbour becomes offset better than SCell)

The UE shall:

1. consider the entering condition for this event to be satisfied when condition A6-1, as specified below, is fulfilled;
2. consider the leaving condition for this event to be satisfied when condition A6-2, as specified below, is fulfilled;
3. for this measurement, consider the (secondary) cell that is configured on the frequency indicated in the associated $measObjectEUTRA$ to be the serving cell;

NOTE: The neighbour(s) is on the same frequency as the SCell i.e. both are on the frequency indicated in the associated $measObject$.

Inequality A6-1 (Entering condition)

$$Mn + Ocn - Hys > Ms + Ocs + Off$$

Inequality A6-2 (Leaving condition)

$$Mn + Ocn + Hys < Ms + Ocs + Off$$

The variables in the formula are defined as follows:

$Mn$ is the measurement result of the neighbouring cell, not taking into account any offsets.

$Ocn$ is the cell specific offset of the neighbour cell (i.e. $cellIndividualOffset$ as defined within $measObjectEUTRA$ corresponding to the frequency of the neighbour cell), and set to zero if not configured for the neighbour cell.

$Ms$ is the measurement result of the serving cell, not taking into account any offsets.

$Ocs$ is the cell specific offset of the serving cell (i.e. $cellIndividualOffset$ as defined within $measObjectEUTRA$ corresponding to the serving frequency), and is set to zero if not configured for the serving cell.

$Hys$ is the hysteresis parameter for this event (i.e. $hysteresis$ as defined within $reportConfigEUTRA$ for this event).

$Off$ is the offset parameter for this event (i.e. $a6-Offset$ as defined within $reportConfigEUTRA$ for this event).

$Mn, Ms$ are expressed in dBm in case of RSRP, or in dB in case of RSRQ.

$Ocn, Ocs, Hys, Off$ are expressed in dB.

5.5.4.7 Event B1 (Inter RAT neighbour becomes better than threshold)

The UE shall:

1. for UTRA and CDMA2000, only trigger the event for cells included in the corresponding measurement object;
1> consider the entering condition for this event to be satisfied when condition B1-1, as specified below, is fulfilled;
1> consider the leaving condition for this event to be satisfied when condition B1-2, as specified below, is fulfilled;

Inequality B1-1 (Entering condition)
\[ Mn + Ofn - Hys > Thresh \]

Inequality B1-2 (Leaving condition)
\[ Mn + Ofn + Hys < Thresh \]

The variables in the formula are defined as follows:

\( Mn \) is the measurement result of the inter-RAT neighbour cell, not taking into account any offsets. For CDMA 2000 measurement result, \( \text{pilotStrength} \) is divided by \(-2\).

\( Ofn \) is the frequency specific offset of the frequency of the inter-RAT neighbour cell (i.e. \( \text{offsetFreq} \) as defined within the \( \text{measObject} \) corresponding to the frequency of the neighbour inter-RAT cell).

\( Hys \) is the hysteresis parameter for this event (i.e. \( \text{hysteresis} \) as defined within \( \text{reportConfigInterRAT} \) for this event).

\( Thresh \) is the threshold parameter for this event (i.e. \( b1\)-Threshold as defined within \( \text{reportConfigInterRAT} \) for this event). For CDMA2000, \( b1\)-Threshold is divided by \(-2\).

\( Mn \) is expressed in dBm or in dB, depending on the measurement quantity of the inter-RAT neighbour cell.

\( Ofn, Hys \) are expressed in dB.

\( Thresh \) is expressed in the same unit as \( Mn \).

5.5.4.8 Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2)

The UE shall:

1> for UTRA and CDMA2000, only trigger the event for cells included in the corresponding measurement object;
1> consider the entering condition for this event to be satisfied when both condition B2-1 and condition B2-2, as specified below, are fulfilled;
1> consider the leaving condition for this event to be satisfied when condition B2-3 or condition B2-4, i.e. at least one of the two, as specified below, is fulfilled;

Inequality B2-1 (Entering condition 1)
\[ Mp + Hys < Thresh1 \]

Inequality B2-2 (Entering condition 2)
\[ Mn + Ofn - Hys > Thresh2 \]

Inequality B2-3 (Leaving condition 1)
\[ Mp - Hys > Thresh1 \]

Inequality B2-4 (Leaving condition 2)
\[ Mn + Ofn + Hys < Thresh2 \]

The variables in the formula are defined as follows:

\( Mp \) is the measurement result of the PCell, not taking into account any offsets.

\( Mn \) is the measurement result of the inter-RAT neighbour cell, not taking into account any offsets. For CDMA2000 measurement result, \( \text{pilotStrength} \) is divided by \(-2\).
**O

** is the frequency specific offset of the frequency of the inter-RAT neighbour cell (i.e. *offsetFreq* as defined within the *measObject* corresponding to the frequency of the inter-RAT neighbour cell).

**Hys** is the hysteresis parameter for this event (i.e. *hysteresis* as defined within *reportConfigInterRAT* for this event).

**Thresh1** is the threshold parameter for this event (i.e. *b2-Threshold1* as defined within *reportConfigInterRAT* for this event).

**Thresh2** is the threshold parameter for this event (i.e. *b2-Threshold2* as defined within *reportConfigInterRAT* for this event). For CDMA2000, *b2-Threshold2* is divided by -2.

**Mp** is expressed in dBm in case of RSRP, or in dB in case of RSRQ.

**Mn** is expressed in dBm or dB, depending on the measurement quantity of the inter-RAT neighbour cell.

**Ofn, Hys** are expressed in dB.

**Thresh1** is expressed in the same unit as **Mp**.

**Thresh2** is expressed in the same unit as **Mn**.

### 5.5.5 Measurement reporting

![Measurement reporting diagram](image)

**Figure 5.5.5-1: Measurement reporting**

The purpose of this procedure is to transfer measurement results from the UE to E-UTRAN.

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

1. set the *measId* to the measurement identity that triggered the measurement reporting;
2. set the *measResultPCell* to include the quantities of the PCell;
3. set the *measResultServFreqList* to include for each SCell that is configured, if any, within *measResultSCell* the quantities of the concerned SCell, if available according to performance requirements in [16];
4. if the *reportConfig* associated with the *measId* that triggered the measurement reporting includes *reportAddNeighMeas*:
   1. for each serving frequency for which *measObjectId* is referenced in the *measIdList*, other than the frequency corresponding with the *measId* that triggered the measurement reporting:
      1. set the *measResultServFreqList* to include within *measResultBestNeighCell* the *physCellId* and the quantities of the best non-serving cell, based on RSRP, on the concerned serving frequency;
     2. else:

   1. if there is at least one applicable neighbouring cell to report:
      1. set the *measResultNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:
         1. if the *triggerType* is set to *event*:
            1. include the cells included in the *cellsTriggeredList* as defined within the *VarMeasReportList* for this *measId*;
         3. else:
NOTE: The reliability of the report (i.e. the certainty it contains the strongest cells on the concerned frequency) depends on the measurement configuration i.e. the reportInterval. The related performance requirements are specified in TS 36.133 [16].

3> for each cell that is included in the measResultNeighCells, include the physCellId;

3> if the triggerType is set to event; or the purpose is set to reportStrongestCells or to reportStrongestCellsForSON:

4> for each included cell, include the layer 3 filtered measured results in accordance with the reportConfig for this measId, ordered as follows:

5> if the measObject associated with this measId concerns E-UTRA:

6> set the measResult to include the quantity(ies) indicated in the reportQuantity within the concerned reportConfig in order of decreasing triggerQuantity, i.e. the best cell is included first;

5> if the measObject associated with this measId concerns UTRA FDD and if ReportConfigInterRAT includes the reportQuantityUTRA-FDD:

6> set the measResult to include the quantities indicated by the reportQuantityUTRA-FDD in order of decreasing measQuantityUTRA-FDD within the quantityConfig, i.e. the best cell is included first;

5> if the measObject associated with this measId concerns UTRA FDD and if ReportConfigInterRAT does not include the reportQuantityUTRA-FDD; or

5> if the measObject associated with this measId concerns UTRA TDD, GERAN or CDMA2000:

6> set the measResult to the quantity as configured for the concerned RAT within the quantityConfig in order of either decreasing quantity for UTRA and GERAN or increasing quantity for CDMA2000 pilotStrength, i.e. the best cell is included first;

3> else if the purpose is set to reportCGI:

4> if the mandatory present fields of the cgi-Info for the cell indicated by the cellForWhichToReportCGI in the associated measObject have been obtained:

5> if the cell broadcasts a CSG identity:

6> include the csg-Identity;

6> include the csg-MemberStatus and set it to member if the cell is a CSG member cell;

5> if the si-RequestForHO is configured within the reportConfig associated with this measId:

6> include the cgi-Info containing all the fields that have been successfully acquired, except for the plmn-IdentityList;

5> else:

6> include the cgi-Info containing all the fields that have been successfully acquired;

1> if the ue-RxTxTimeDiffPeriodical is configured within the corresponding reportConfig for this measId;

2> set the ue-RxTxTimeDiffResult to the measurement result provided by lower layers;

2> set the currentSFN;

1> if the includeLocationInfo is configured in the corresponding reportConfig for this measId and detailed location information that has not been reported is available, set the content of the locationInfo as follows:

2> include the locationCoordinates;
E-UTRAN applies the handover procedure as follows:
- when performing the handover procedure, as specified in 5.3.5.4, ensure that a measObjectId corresponding to each handover target serving frequency is configured as a result of the procedures described in this sub-clause and in 5.3.5.4;
- when changing the band while the physical frequency remains unchanged, E-UTRAN releases the measObject corresponding to the source frequency and adds a measObject corresponding to the target frequency (i.e. it does not reconfigure the measObject);

E-UTRAN applies the re-establishment procedure as follows:
- when performing the connection re-establishment procedure, as specified in 5.3.7, ensure that a measObjectId corresponding each target serving frequency is configured as a result of the procedure described in this sub-clause and the subsequent connection reconfiguration procedure immediately following the re-establishment procedure;
- in the first reconfiguration following the re-establishment when changing the band while the physical frequency remains unchanged, E-UTRAN releases the measObject corresponding to the source frequency and adds a measObject corresponding to the target frequency (i.e. it does not reconfigure the measObject);

The UE shall:
1> for each measId included in the measIdList within VarMeasConfig:
   2> if the triggerType is set to periodical:
3> remove this measId from the measIdList within VarMeasConfig:
   1> if the procedure was triggered due to a handover or successful re-establishment and the procedure involves a change of primary frequency, update the measId values in the measIdList within VarMeasConfig as follows:
2> if a measObjectId value corresponding to the target primary frequency exists in the measObjectList within VarMeasConfig:

3> for each measId value in the measIdList:

4> if the measId value is linked to the measObjectId value corresponding to the source primary frequency:

5> link this measId value to the measObjectId value corresponding to the target primary frequency;

4> else if the measId value is linked to the measObjectId value corresponding to the target primary frequency:

5> link this measId value to the measObjectId value corresponding to the source primary frequency;

2> else:

3> remove all measId values that are linked to the measObjectId value corresponding to the source primary frequency;

1> remove all measurement reporting entries within VarMeasReportList;

1> stop the periodical reporting timer or timer T321, whichever one is running, as well as associated information (e.g. timeToTrigger) for all measId;

1> release the measurement gaps, if activated;

NOTE: If the UE requires measurement gaps to perform inter-frequency or inter-RAT measurements, the UE resumes the inter-frequency and inter-RAT measurements after the E-UTRAN has setup the measurement gaps.

5.5.6.2 Speed dependant scaling of measurement related parameters

The UE shall adjust the value of the following parameter configured by the E-UTRAN depending on the UE speed: timeToTrigger. The UE shall apply 3 different levels, which are selected as follows:

The UE shall:

1> perform mobility state detection using the mobility state detection as specified in TS 36.304 [4] with the following modifications:

2> counting handovers instead of cell reselections;

2> applying the parameter applicable for RRC_CONNECTED as included in speedStatePars within VarMeasConfig;

1> if high mobility state is detected:

2> use the timeToTrigger value multiplied by sf-High within VarMeasConfig;

1> else if medium mobility state is detected:

2> use the timeToTrigger value multiplied by sf-Medium within VarMeasConfig;

1> else:

2> no scaling is applied;

5.5.7 Inter-frequency RSTD measurement indication

5.5.7.1 General
The purpose of this procedure is to indicate to the network that the UE is going to start/stop OTDOA inter-frequency RSTD measurements which require measurement gaps as specified in [16, 8.1.2.6].

NOTE: It is a network decision to configure the measurement gap.

5.5.7.2 Initiation

The UE shall:

1> if and only if upper layers indicate to start performing inter-frequency RSTD measurements and the UE requires measurement gaps for these measurements while measurement gaps are either not configured or not sufficient:
   2> initiate the procedure to indicate start;

NOTE 1: The UE verifies the measurement gap situation only upon receiving the indication from upper layers. If at this point in time sufficient gaps are available, the UE does not initiate the procedure. Unless it receives a new indication from upper layers, the UE is only allowed to further repeat the procedure in the same PCell once per frequency if the provided measurement gaps are insufficient.

1> if and only if upper layers indicate to stop performing inter-frequency RSTD measurements:
   2> initiate the procedure to indicate stop;

NOTE 2: The UE may initiate the procedure to indicate stop even if it did not previously initiate the procedure to indicate start.

5.5.7.3 Actions related to transmission of InterFreqRSTDMeasurementIndication message

The UE shall set the contents of InterFreqRSTDMeasurementIndication message as follows:

1> set the rstd-InterFreqIndication as follows:
   2> if the procedure is initiated to indicate start of inter-frequency RSTD measurements:
   3> set the rstd-InterFreqInfoList according to the information received from upper layers;
   2> else if the procedure is initiated to indicate stop of inter-frequency RSTD measurements:
   3> set the rstd-InterFreqIndication to the value stop;

1> submit the InterFreqRSTDMeasurementIndication message to lower layers for transmission, upon which the procedure ends;
5.6 Other

5.6.1 DL information transfer

5.6.1.1 General

![Diagram](image)

**Figure 5.6.1.1-1: DL information transfer**

The purpose of this procedure is to transfer NAS or (tunnelled) non-3GPP dedicated information from E-UTRAN to a UE in RRC_CONNECTED.

5.6.1.2 Initiation

E-UTRAN initiates the DL information transfer procedure whenever there is a need to transfer NAS or non-3GPP dedicated information. E-UTRAN initiates the DL information transfer procedure by sending the `DLInformationTransfer` message.

5.6.1.3 Reception of the `DLInformationTransfer` by the UE

Upon receiving `DLInformationTransfer` message, the UE shall:

1. if the `dedicatedInfoType` is set to `dedicatedInfoNAS`:
   2. forward the `dedicatedInfoNAS` to the NAS upper layers.

1. if the `dedicatedInfoType` is set to `dedicatedInfoCDMA2000-1XRTT` or to `dedicatedInfoCDMA2000-HRPD`:
   2. forward the `dedicatedInfoCDMA2000` to the CDMA2000 upper layers;

5.6.2 UL information transfer

5.6.2.1 General

![Diagram](image)

**Figure 5.6.2.1-1: UL information transfer**

The purpose of this procedure is to transfer NAS or (tunnelled) non-3GPP dedicated information from the UE to E-UTRAN.

5.6.2.2 Initiation

A UE in RRC_CONNECTED initiates the UL information transfer procedure whenever there is a need to transfer NAS or non-3GPP dedicated information, except at RRC connection establishment in which case the NAS information is
piggybacked to the $\text{RRConnectionSetupComplete}$ message. The UE initiates the UL information transfer procedure by sending the $\text{ULInformationTransfer}$ message. When CDMA2000 information has to be transferred, the UE shall initiate the procedure only if SRB2 is established.

5.6.2.3 Actions related to transmission of $\text{ULInformationTransfer}$ message

The UE shall set the contents of the $\text{ULInformationTransfer}$ message as follows:

1> if there is a need to transfer NAS information:
   2> set the $\text{dedicatedInfoType}$ to include the $\text{dedicatedInfoNAS}$;
1> if there is a need to transfer CDMA2000 1XRTT information:
   2> set the $\text{dedicatedInfoType}$ to include the $\text{dedicatedInfoCDMA2000-1XRTT}$;
1> if there is a need to transfer CDMA2000 HRPD information:
   2> set the $\text{dedicatedInfoType}$ to include the $\text{dedicatedInfoCDMA2000-HRPD}$;
1> submit the $\text{ULInformationTransfer}$ message to lower layers for transmission, upon which the procedure ends;

5.6.2.4 Failure to deliver $\text{ULInformationTransfer}$ message

The UE shall:

1> if mobility (i.e. handover, RRC connection re-establishment) occurs before the successful delivery of $\text{ULInformationTransfer}$ messages has been confirmed by lower layers:
   2> inform upper layers about the possible failure to deliver the information contained in the concerned $\text{ULInformationTransfer}$ messages;

5.6.3 UE capability transfer

5.6.3.1 General

![Diagram](image)

**Figure 5.6.3.1-1: UE capability transfer**

The purpose of this procedure is to transfer UE radio access capability information from the UE to E-UTRAN.

If the UE has changed its E-UTRAN radio access capabilities, the UE shall request higher layers to initiate the necessary NAS procedures (see TS 23.401 [41]) that would result in the update of UE radio access capabilities using a new RRC connection.

**NOTE:** Change of the UE’s GERAN UE radio capabilities in RRC_IDLE is supported by use of Tracking Area Update.
5.6.3.2 Initiation

E-UTRAN initiates the procedure to a UE in RRC_CONNECTED when it needs (additional) UE radio access capability information.

5.6.3.3 Reception of the UECapabilityEnquiry by the UE

The UE shall:

1> set the contents of UECapabilityInformation message as follows:

2> if the ue-CapabilityRequest includes eutra:

3> include the UE-EUTRA-Capability within a ue-CapabilityRAT-Container and with the rat-Type set to eutra;

3> if the UE supports FDD and TDD:

4> set all fields of UECapabilityInformation, except field fdd-Add-UE-EUTRA-Capabilities and tdd-Add-UE-EUTRA-Capabilities (including their sub-fields), to include the values applicable for both FDD and TDD (i.e. functionality supported by both modes);

4> if (some of) the UE capability fields have a different value for FDD and TDD:

5> if for FDD, the UE supports additional functionality compared to what is indicated by the previous fields of UECapabilityInformation:

6> include field fdd-Add-UE-EUTRA-Capabilities and set it to include fields reflecting the additional functionality applicable for FDD;

5> if for TDD, the UE supports additional functionality compared to what is indicated by the previous fields of UECapabilityInformation:

6> include field tdd-Add-UE-EUTRA-Capabilities and set it to include fields reflecting the additional functionality applicable for TDD;

NOTE: The UE includes fields of XDD-Add-UE-EUTRA-Capabilities in accordance with the following:
- The field is included only if one or more of its sub-fields has a value that is different compared to the value signalled elsewhere within UE-EUTRA-Capability;
(this value signalled elsewhere is also referred to as the Common value, that is supported for both XDD modes)
- For the fields that are included in XDD-Add-UE-EUTRA-Capabilities, the UE sets:
  - the sub-fields that are not allowed to be different the same as the Common value;
  - the sub-fields that are allowed to be different to a value indicating at least the same functionality as indicated by the Common value;

3> else (UE supports single xDD mode):

4> set all fields of UECapabilityInformation, except field fdd-Add-UE-EUTRA-Capabilities and tdd-Add-UE-EUTRA-Capabilities (including their sub-fields), to include the values applicable for the xDD mode supported by the UE;

3> if the UECapabilityEnquiry message includes requestedFrequencyBands and UE supports requestedFrequencyBands:

4> create a set of band combinations supported by the UE, including non-CA combinations, target for being included in supportedBandCombination while observing the following order (i.e. listed in order of decreasing priority):

- include all non-CA bands, regardless of whether UE supports carrier aggregation, only:
  - if the UE includes ue-Category-v1020 (i.e. indicating category 6 to 8); or
  - if for at least one of the non-CA bands, the UE supports more MIMO layers with TM9 and TM10 than implied by the UE category; or
- the UE supports TM10 with one or more CSI processes;

- include all 2DL+1UL CA band combinations, only consisting of bands included in requestedFrequencyBands;

- include all other 2DL+1UL CA band combinations;

- include all other CA band combinations, only consisting of bands included in requestedFrequencyBands, and prioritized in the order of requestedFrequencyBands, (i.e. first include remaining band combinations containing the first-listed band, then include remaining band combinations containing the second-listed band, and so on);

  4> include in supportedBandCombination as many of the target band combinations as possible, determined according to the above, while observing the priority order;

  4> include in supportedBandCombinationAdd as many of the remaining target band combinations as possible, i.e. the target band combinations the UE was not able to include in supportedBandCombination, and limited to those consisting of bands included in requestedFrequencyBands, while observing the priority order;

  4> indicate in requestedBands the same bands and in the same order as included in the received requestedFrequencyBands;

3> else

  4> create a set of band combinations supported by the UE, including non-CA combinations, target for being included in supportedBandCombination:

- include all non-CA bands, regardless of whether UE supports carrier aggregation, only:
  - if the UE includes ue-Category-v1020 (i.e. indicating category 6 to 8); or
  - if for at least one of the non-CA bands, the UE supports more MIMO layers with TM9 and TM10 than implied by the UE category; or
  - the UE supports TM10 with one or more CSI processes;

- include all 2DL+1UL CA band combinations;

- include all other CA band combinations;

  4> include in supportedBandCombination as many of the target band combinations as possible, determined according to the above;

  4> if the number of non-CA and CA band combinations supported by UE exceeds the maximum number of band combinations of supportedBandCombination, the selection of subset of band combinations is up to UE implementation;

NOTE: If the UECapabilityEnquiry message does not include requestedFrequencyBands, UE does not include supportedBandCombinationAdd.

2> if the ue-CapabilityRequest includes geran-cs and if the UE supports GERAN CS domain:

3> include the UE radio access capabilities for GERAN CS within a ue-CapabilityRAT-Container and with the rat-Type set to geran-cs;

2> if the ue-CapabilityRequest includes geran-ps and if the UE supports GERAN PS domain:

3> include the UE radio access capabilities for GERAN PS within a ue-CapabilityRAT-Container and with the rat-Type set to geran-ps;

2> if the ue-CapabilityRequest includes utra and if the UE supports UTRA:

3> include the UE radio access capabilities for UTRA within a ue-CapabilityRAT-Container and with the rat-Type set to utra;

2> if the ue-CapabilityRequest includes cdma2000-1XRTT and if the UE supports CDMA2000 1xRTT:

3> include the UE radio access capabilities for CDMA2000 within a ue-CapabilityRAT-Container and with the rat-Type set to cdma2000-1XRTT;
1> submit the UECapabilityInformation message to lower layers for transmission, upon which the procedure ends;

5.6.4 CSFB to 1x Parameter transfer

5.6.4.1 General

The purpose of this procedure is to transfer the CDMA2000 1xRTT parameters required to register the UE in the CDMA2000 1xRTT network for CSFB support.

5.6.4.2 Initiation

A UE in RRC_CONNECTED initiates the CSFB to 1x Parameter transfer procedure upon request from the CDMA2000 upper layers. The UE initiates the CSFB to 1x Parameter transfer procedure by sending the CSFBParametersRequestCDMA2000 message.

5.6.4.3 Actions related to transmission of CSFBParametersRequestCDMA2000 message

The UE shall:

1> submit the CSFBParametersRequestCDMA2000 message to lower layers for transmission using the current configuration;

5.6.4.4 Reception of the CSFBParametersResponseCDMA2000 message

Upon reception of the CSFBParametersResponseCDMA2000 message, the UE shall:

1> forward the rand and the mobilityParameters to the CDMA2000 1xRTT upper layers;
5.6.5 UE Information

5.6.5.1 General

The UE information procedure is used by E-UTRAN to request the UE to report information.

5.6.5.2 Initiation

E-UTRAN initiates the procedure by sending the `UEInformationRequest` message.

5.6.5.3 Reception of the `UEInformationRequest` message

Upon receiving the `UEInformationRequest` message, the UE shall:

1> if `rach-ReportReq` is set to `true`, set the contents of the `rach-Report` in the `UEInformationResponse` message as follows:
   2> set the `numberOfPreamblesSent` to indicate the number of preambles sent by MAC for the last successfully completed random access procedure;
   3> if contention resolution was not successful as specified in TS 36.321 [6] for at least one of the transmitted preambles for the last successfully completed random access procedure:
      3> set the `contentionDetected` to `true`;
      2> else:
      3> set the `contentionDetected` to `false`;

1> if `rlf-ReportReq` is set to `true` and the UE has radio link failure information or handover failure information available in `VarRLF-Report` and if the RPLMN is included in `plmn-IdentityList` stored in `VarRLF-Report`:
   2> set `timeSinceFailure` in `VarRLF-Report` to the time that elapsed since the last radio link or handover failure in E-UTRA;
   2> set the `rlf-Report` in the `UEInformationResponse` message to the value of `rlf-Report` in `VarRLF-Report`;
   2> discard the `rlf-Report` from `VarRLF-Report` upon successful delivery of the `UEInformationResponse` message confirmed by lower layers;

1> if `connEstFailReportReq` is set to `true` and the UE has connection establishment failure information in `VarConnEstFailReport` and if the RPLMN is equal to `plmn-Identity` stored in `VarConnEstFailReport`:
   2> set `timeSinceFailure` in `VarConnEstFailReport` to the time that elapsed since the last connection establishment failure in E-UTRA;
   2> set the `connEstFailReport` in the `UEInformationResponse` message to the value of `connEstFailReport` in `VarConnEstFailReport`;

Figure 5.6.5.1-1: UE information procedure
2> discard the connEstFailReport from VarConnEstFailReport upon successful delivery of the UEInformationResponse message confirmed by lower layers;

1> if the logMeasReportReq is present and if the RPLMN is included in plmn-IdentityList stored in VarLogMeasReport:

2> if VarLogMeasReport includes one or more logged measurement entries, set the contents of the logMeasReport in the UEInformationResponse message as follows:

3> include the absoluteTimeStamp and set it to the value of absoluteTimeInfo in the VarLogMeasReport;

3> include the traceReference and set it to the value of traceReference in the VarLogMeasReport;

3> include the traceRecordingSessionRef and set it to the value of traceRecordingSessionRef in the VarLogMeasReport;

3> include the tce-Id and set it to the value of tce-Id in the VarLogMeasReport;

3> include the logMeasInfoList and set it to include one or more entries from VarLogMeasReport starting from the entries logged first;

3> if the VarLogMeasReport includes one or more additional logged measurement entries that are not included in the logMeasInfoList within the UEInformationResponse message:

4> include the logMeasAvailable;

1> if the logMeasReport is included in the UEInformationResponse:

2> submit the UEInformationResponse message to lower layers for transmission via SRB2;

2> discard the logged measurement entries included in the logMeasInfoList from VarLogMeasReport upon successful delivery of the UEInformationResponse message confirmed by lower layers;

1> else:

2> submit the UEInformationResponse message to lower layers for transmission via SRB1;

5.6.6  Logged Measurement Configuration

5.6.6.1  General

![LoggedMeasurementConfiguration](image)

**Figure 5.6.6.1-1: Logged measurement configuration**

The purpose of this procedure is to configure the UE to perform logging of measurement results while in RRC_IDLE. The procedure applies to logged measurements capable UEs that are in RRC_CONNECTED.

**NOTE** E-UTRAN may retrieve stored logged measurement information by means of the UE Information procedure.
5.6.6.2 Initiation
E-UTRAN initiates the logged measurement configuration procedure to UE in RRC_CONNECTED by sending the LoggedMeasurementConfiguration message.

5.6.6.3 Reception of the LoggedMeasurementConfiguration by the UE
Upon receiving the LoggedMeasurementConfiguration message the UE shall:

1> discard the logged measurement configuration as well as the logged measurement information as specified in 5.6.7;
1> store the received loggingDuration, loggingInterval and areaConfiguration, if included, in VarLogMeasConfig;
1> if the LoggedMeasurementConfiguration message includes plmn-IdentityList:
  2> set plmn-IdentityList in VarLogMeasReport to include the RPLMN as well as the PLMNs included in plmn-IdentityList;
1> else:
  2> set plmn-IdentityList in VarLogMeasReport to include the RPLMN;
1> store the received absoluteTimeInfo, traceReference, traceRecordingSessionRef and tce-Id in VarLogMeasReport;
1> start timer T330 with the timer value set to the loggingDuration;

5.6.6.4 T330 expiry
Upon expiry of T330 the UE shall:

1> release VarLogMeasConfig;

The UE is allowed to discard stored logged measurements, i.e. to release VarLogMeasReport, 48 hours after T330 expiry.

5.6.7 Release of Logged Measurement Configuration

5.6.7.1 General
The purpose of this procedure is to release the logged measurement configuration as well as the logged measurement information.

5.6.7.2 Initiation
The UE shall initiate the procedure upon receiving a logged measurement configuration in another RAT. The UE shall also initiate the procedure upon power off or detach.

The UE shall:

1> stop timer T330, if running;
1> if stored, discard the logged measurement configuration as well as the logged measurement information, i.e. release the UE variables VarLogMeasConfig and VarLogMeasReport;

5.6.8 Measurements logging

5.6.8.1 General
This procedure specifies the logging of available measurements by a UE in RRC_IDLE that has a logged measurement configuration.
### 5.6.8.2 Initiation

While T330 is running, the UE shall:

1. perform the logging in accordance with the following:
   2. if the UE is camping normally on an E-UTRA cell and if the RPLMN is included in `plmn-IdentityList` stored in `VarLogMeasReport` and, if the cell is part of the area indicated by `areaConfiguration` if configured in `VarLogMeasConfig`:
   3. perform the logging at regular time intervals, as defined by the `loggingInterval` in `VarLogMeasConfig`;
   4. when adding a logged measurement entry in `VarLogMeasReport`, include the fields in accordance with the following:
      5. set the `relativeTimeStamp` to indicate the elapsed time since the moment at which the logged measurement configuration was received;
      6. if detailed location information became available during the last logging interval, set the content of the `locationInfo` as follows:
         7. include the `locationCoordinates`;
      8. set the `servCellIdentity` to indicate global cell identity of the cell the UE is camping on;
      9. set the `measResultServCell` to include the quantities of the cell the UE is camping on;
   3. if available, set the `measResultNeighCells`, in order of decreasing ranking-criterion as used for cell re-selection, to include neighbouring cell measurements that became available during the last logging interval for at most the following number of neighbouring cells: 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency/ set of frequencies (GERAN) per RAT and according to the following:
      4. for each neighbour cell included, include the optional fields that are available;

   **NOTE:** The UE includes the latest results of the available measurements as used for cell reselection evaluation, which are performed in accordance with the performance requirements as specified in TS 36.133 [16].

2. when the memory reserved for the logged measurement information becomes full, stop timer T330 and perform the same actions as performed upon expiry of T330, as specified in 5.6.6.4;

### 5.6.9 In-device coexistence indication

#### 5.6.9.1 General

![Figure 5.6.9.1-1: In-device coexistence indication](image)

The purpose of this procedure is to inform E-UTRAN about (a change of) the In-Device Coexistence (IDC) problems experienced by the UE in RRC_CONNECTED, as described in TS 36.300 [9], and to provide the E-UTRAN with information in order to resolve them.
5.6.9.2 Initiation

A UE capable of providing IDC indications may initiate the procedure when it is configured to provide IDC indications and upon change of IDC problem information.

Upon initiating the procedure, the UE shall:

1> if configured to provide IDC indications:

2> if the UE did not transmit an InDeviceCoexIndication message since it was configured to provide IDC indications:

3> if on one or more frequencies for which a measObjectEUTRA is configured, the UE is experiencing IDC problems that it cannot solve by itself:

4> initiate transmission of the InDeviceCoexIndication message in accordance with 5.6.9.3;

2> else:

3> if the set of frequencies, for which a measObjectEUTRA is configured and on which the UE is experiencing IDC problems that it cannot solve by itself, is different from the set indicated in the last transmitted InDeviceCoexIndication message; or

3> if for one or more of the frequencies in the previously reported set of frequencies, the interferenceDirection is different from the value indicated in the last transmitted InDeviceCoexIndication message; or

3> if the TDM assistance information is different from the assistance information included in the last transmitted InDeviceCoexIndication message:

4> initiate transmission of the InDeviceCoexIndication message in accordance with 5.6.9.3;

5.6.9.3 Actions related to transmission of InDeviceCoexIndication message

The UE shall set the contents of the InDeviceCoexIndication message as follows:

1> if there is at least one E-UTRA carrier frequency, for which a measurement object is configured, that is affected by IDC problems:

2> include the IE affectedCarrierFreqList with an entry for each affected E-UTRA carrier frequency for which a measurement object is configured;

2> for each E-UTRA carrier frequency included in the the IE affectedCarrierFreqList, include interferenceDirection and set it accordingly;

2> include Time Domain Multiplexing (TDM) based assistance information:

3> if the UE has DRX related assistance information that could be used to resolve the IDC problems:

4> include drx-CycleLength, drx-Offset and drx-ActiveTime;

3> else (the UE has desired subframe reservation patterns related assistance information that could be used to resolve the IDC problems):

4> include idc-SubframePatternList;

NOTE 1: When sending an InDeviceCoexIndication message to inform E-UTRAN the IDC problems, the UE includes all assistance information (rather than providing e.g. the changed part(s) of the assistance information).

The UE shall submit the InDeviceCoexIndication message to lower layers for transmission.
5.6.10 UE Assistance Information

5.6.10.1 General

The purpose of this procedure is to inform E-UTRAN of the UE”s power saving preference. Upon configuring the UE to provide power preference indications E-UTRAN may consider that the UE does not prefer a configuration primarily optimised for power saving until the UE explicitly indicates otherwise.

5.6.10.2 Initiation

A UE capable of providing power preference indications in RRC_CONNECTED may initiate the procedure in several cases including upon being configured to provide power preference indications and upon change of power preference.

Upon initiating the procedure, the UE shall:

1> if configured to provide power preference indications:

2> if the UE did not transmit a UEAssistanceInformation message since it was configured to provide power preference indications; or

2> if the current power preference is different from the one indicated in the last transmission of the UEAssistanceInformation message and timer T340 is not running:

3> initiate transmission of the UEAssistanceInformation message in accordance with 5.6.10.3;

5.6.10.3 Actions related to transmission of UEAssistanceInformation message

The UE shall set the contents of the UEAssistanceInformation message:

1> if the UE prefers a configuration primarily optimised for power saving:

2> set powerPrefIndication to lowPowerConsumption;

1> else:

2> start or restart timer T340 with the timer value set to the powerPrefIndicationTimer;

2> set powerPrefIndication to normal;

The UE shall submit the UEAssistanceInformation message to lower layers for transmission.

5.7 Generic error handling

5.7.1 General

The generic error handling defined in the subsequent sub-clauses applies unless explicitly specified otherwise e.g. within the procedure specific error handling.
The UE shall consider a value as not comprehended when it is set:
- to an extended value that is not defined in the version of the transfer syntax supported by the UE.
- to a spare or reserved value unless the specification defines specific behaviour that the UE shall apply upon receiving the concerned spare/reserved value.

The UE shall consider a field as not comprehended when it is defined:
- as spare or reserved unless the specification defines specific behaviour that the UE shall apply upon receiving the concerned spare/reserved field.

### 5.7.2 ASN.1 violation or encoding error

The UE shall:

1. when receiving an RRC message on the BCCH, PCCH, CCCH, or MCCH for which the abstract syntax is invalid [13]:
   2. ignore the message;

**NOTE** This section applies in case one or more fields is set to a value, other than a spare, reserved or extended value, not defined in this version of the transfer syntax. E.g. in the case the UE receives value 12 for a field defined as INTEGER (1..11). In cases like this, it may not be possible to reliably detect which field is in the error hence the error handling is at the message level.

### 5.7.3 Field set to a not comprehended value

The UE shall, when receiving an RRC message on any logical channel:

1. if the message includes a field that has a value that the UE does not comprehend:
   2. if a default value is defined for this field:
   3. treat the message while using the default value defined for this field;
   4. else if the concerned field is optional:
   5. treat the message as if the field were absent and in accordance with the need code for absence of the concerned field;
   6. else:
   7. treat the message as if the field were absent and in accordance with sub-clause 5.7.4;

### 5.7.4 Mandatory field missing

The UE shall:

1. if the message includes a field that is mandatory to include in the message (e.g. because conditions for mandatory presence are fulfilled) and that field is absent or treated as absent:
   2. if the RRC message was received on DCCH or CCCH:
   3. ignore the message;
   4. else:
   5. if the field concerns a (sub-field of) an entry of a list (i.e. a SEQUENCE OF):
      4. treat the list as if the entry including the missing or not comprehended field was not present;
   6. else if the field concerns a sub-field of another field, referred to as the 'parent' field i.e. the field that is one nesting level up compared to the erroneous field:
      4. consider the 'parent' field to be set to a not comprehended value;
4> apply the generic error handling to the subsequent 'parent' field(s), until reaching the top nesting level i.e. the message level;

3> else (field at message level):

4> ignore the message;

NOTE 1: The error handling defined in these sub-clauses implies that the UE ignores a message with the message type or version set to a not comprehended value.

NOTE 2: The nested error handling for messages received on logical channels other than DCCH and CCCH applies for errors in extensions also, even for errors that can be regarded as invalid E-UTRAN operation e.g. E-UTRAN not observing conditional presence.

The following ASN.1 further clarifies the levels applicable in case of nested error handling for errors in extension fields.

```
-- /example/ ASN1START

-- Example with extension addition group

ItemInfoList ::=      SEQUENCE (SIZE (1..max)) OF ItemInfo

ItemInfo ::=      SEQUENCE {
  itemIdentity      INTEGER (1..max),
  field1            Field1,
  field2            Field2 OPTIONAL,   -- Need ON
  ...
  [ field3-r9 Field3-r9 OPTIONAL,   -- Cond Cond1
    field4-r9 Field4-r9 OPTIONAL   -- Need ON
  ]
}

-- Example with traditional non-critical extension (empty sequence)

BroadcastInfoBlock1 ::=      SEQUENCE {
  itemIdentity      INTEGER (1..max),
  field1            Field1,
  field2            Field2 OPTIONAL,   -- Need ON
  nonCriticalExtension BroadcastInfoBlock1-v940-IEs OPTIONAL
}

BroadcastInfoBlock1-v940-IEs ::=      SEQUENCE {
```
The UE shall, when receiving an RRC message on any logical channel:

1> if the message includes a field that the UE does not comprehend:
2> treat the rest of the message as if the field was absent;

NOTE: This section does not apply to the case of an extension to the value range of a field. Such cases are addressed instead by the requirements in section 5.7.3.

5.8 MBMS

5.8.1 Introduction

5.8.1.1 General

In general the control information relevant only for UEs supporting MBMS is separated as much as possible from unicast control information. Most of the MBMS control information is provided on a logical channel specific for MBMS common control information: the MCCH. E-UTRA employs one MCCH logical channel per MBSFN area. In case the network configures multiple MBSFN areas, the UE acquires the MBMS control information from the MCCHs that are configured to identify if services it is interested to receive are ongoing. The action applicable when the UE is unable to simultaneously receive MBMS and unicast services is up to UE implementation. In this release of the specification, an MBMS capable UE is only required to support reception of a single MBMS service at a time, and reception of more than one MBMS service (also possibly on more than one MBSFN area) in parallel is left for UE implementation. The MCCH carries the \texttt{MBSFNAreaConfiguration} message, which indicates the MBMS sessions that are ongoing as well as the (corresponding) radio resource configuration. The MCCH may also carry the \texttt{MBMSCountingRequest} message, when E-UTRAN wishes to count the number of UEs in RRC\_CONNECTED that are receiving or interested to receive one or more specific MBMS services.

A limited amount of MBMS control information is provided on the BCCH. This primarily concerns the information needed to acquire the MCCH(s). This information is carried by means of a single MBMS specific \texttt{SystemInformationBlock; SystemInformationBlockType13}. An MBSFN area is identified solely by the \texttt{mbsfn-AreaId} in \texttt{SystemInformationBlockType13}. At mobility, the UE considers that the MBSFN area is continuous when the source cell and the target cell broadcast the same value in the \texttt{mbsfn-AreaId}. 

---

```asn1
field3-r9  Field3-r9  OPTIONAL,     -- Cond Cond1
field4-r9  Field4-r9  OPTIONAL,     -- Need ON
nonCriticalExtension  SEQUENCE {}  OPTIONAL     -- Need OP
}
-- ASN1STOP
```
5.8.1.2 Scheduling

The MCCH information is transmitted periodically, using a configurable repetition period. Scheduling information is not provided for MCCH i.e. both the time domain scheduling as well as the lower layer configuration are semi-statically configured, as defined within SystemInformationBlockType13.

For MBMS user data, which is carried by the MTCH logical channel, E-UTRAN periodically provides MCH scheduling information (MSI) at lower layers (MAC). This MCH information only concerns the time domain scheduling i.e. the frequency domain scheduling and the lower layer configuration are semi-statically configured. The periodicity of the MSI is configurable and defined by the MCH scheduling period.

5.8.1.3 MCCH information validity and notification of changes

Change of MCCH information only occurs at specific radio frames, i.e. the concept of a modification period is used. Within a modification period, the same MCCH information may be transmitted a number of times, as defined by its scheduling (which is based on a repetition period). The modification period boundaries are defined by SFN values for which SFN mod m = 0, where m is the number of radio frames comprising the modification period. The modification period is configured by means of SystemInformationBlockType13.

When the network changes (some of) the MCCH information, it notifies the UEs about the change during a first modification period. In the next modification period, the network transmits the updated MCCH information. These general principles are illustrated in figure 5.8.1.3-1, in which different colours indicate different MCCH information. Upon receiving a change notification, a UE interested to receive MBMS services acquires the new MCCH information immediately from the start of the next modification period. The UE applies the previously acquired MCCH information until the UE acquires the new MCCH information.

![Figure 5.8.1.3-1: Change of MCCH Information](image_url)

Indication of an MBMS specific RNTI, the M-RNTI (see TS 36.321 [6]), on PDCCH is used to inform UEs in RRC_IDLE and UEs in RRC_CONNECTED about an MCCH information change. When receiving an MCCH information change notification, the UE knows that the MCCH information will change at the next modification period boundary. The notification on PDCCH indicates which of the MCCHs will change, which is done by means of an 8-bit bitmap. Within this bitmap, the bit at the position indicated by the field notificationIndicator is used to indicate changes for that MBSFN area: if the bit is set to “1”, the corresponding MCCH will change. No further details are provided e.g. regarding which MCCH information will change. The MCCH information change notification is used to inform the UE about a change of MCCH information upon session start or about the start of MBMS counting.

The MCCH information change notifications on PDCCH are transmitted periodically and are carried on MBSFN subframes only. These MCCH information change notification occasions are common for all MCCHs that are configured, and configurable by parameters included in SystemInformationBlockType13: a repetition coefficient, a radio frame offset and a subframe index. These common notification occasions are based on the MCCH with the shortest modification period.

**NOTE 1:** E-UTRAN may modify the MBMS configuration information provided on MCCH at the same time as updating the MBMS configuration information carried on BCCH i.e. at a coinciding BCCH and MCCH modification period. Upon detecting that a new MCCH is configured on BCCH, a UE interested to receive one or more MBMS services should acquire the MCCH, unless it knows that the services it is interested in are not provided by the corresponding MBSFN area.

A UE that is receiving an MBMS service shall acquire the MCCH information from the start of each modification period. A UE that is not receiving an MBMS service, as well as UEs that are receiving an MBMS service but potentially interested to receive other services not started yet in another MBSFN area, shall verify that the stored MCCH information remains valid by attempting to find the MCCH information change notification at least...
**5.8.2 MCCH information acquisition**

**5.8.2.1 General**

The UE applies the MCCH information acquisition procedure to acquire the MBMS control information that is broadcasted by the E-UTRAN. The procedure applies to MBMS capable UEs that are in RRC_IDLE or in RRC_CONNECTED.

**5.8.2.2 Initiation**

A UE interested to receive MBMS services shall apply the MCCH information acquisition procedure upon entering the corresponding MBSFN area (e.g. upon power on, following UE mobility) and upon receiving a notification that the MCCH information has changed. A UE that is receiving an MBMS service shall apply the MCCH information acquisition procedure to acquire the MCCH, that corresponds with the service that is being received, at the start of each modification period.

Unless explicitly stated otherwise in the procedural specification, the MCCH information acquisition procedure overwrites any stored MCCH information, i.e. delta configuration is not applicable for MCCH information and the UE discontinues using a field if it is absent in MCCH information unless explicitly specified otherwise.

**5.8.2.3 MCCH information acquisition by the UE**

An MBMS capable UE shall:

1. if the procedure is triggered by an MCCH information change notification:
   2. start acquiring the `MBSFNAreaConfiguration` message and the `MBMSCountingRequest` message if present, from the beginning of the modification period following the one in which the change notification was received;

   **NOTE 1:** The UE continues using the previously received MCCH information until the new MCCH information has been acquired.

1. if the UE enters an MBSFN area:
   2. acquire the `MBSFNAreaConfiguration` message and the `MBMSCountingRequest` message if present, at the next repetition period;

1. if the UE is receiving an MBMS service:
   2. start acquiring the `MBSFNAreaConfiguration` message and the `MBMSCountingRequest` message if present, that both concern the MBSFN area of the service that is being received, from the beginning of each modification period;

**NOTE 2:** In case the UE is aware which MCCH(s) E-UTRAN uses for the service(s) it is interested to receive, the UE may only need to monitor change notifications for a subset of the MCCHs that are configured, referred to as the 'applicable MCCH(s)' in the above.
5.8.2.4 Actions upon reception of the \textit{MBSFNAreaConfiguration} message

No UE requirements related to the contents of this \textit{MBSFNAreaConfiguration} apply other than those specified elsewhere e.g. within procedures using the concerned system information, the corresponding field descriptions.

5.8.2.5 Actions upon reception of the \textit{MBMSCountingRequest} message

Upon receiving \textit{MBMSCountingRequest} message, the UE shall perform the MBMS Counting procedure as specified in section 5.8.4.

5.8.3 MBMS PTM radio bearer configuration

5.8.3.1 General

The MBMS PTM radio bearer configuration procedure is used by the UE to configure RLC, MAC and the physical layer upon starting and/or stopping to receive an MRB. The procedure applies to UEs interested to receive one or more MBMS services.

\textbf{NOTE:} In case the UE is unable to receive an MBMS service due to capability limitations, upper layers may take appropriate action e.g. terminate a lower priority unicast service.

5.8.3.2 Initiation

The UE applies the MRB establishment procedure to start receiving a session of a service it has an interest in. The procedure may be initiated e.g. upon start of the MBMS session, upon (re-)entry of the corresponding MBSFN service area, upon becoming interested in the MBMS service, upon removal of UE capability limitations inhibiting reception of the concerned service.

The UE applies the MRB release procedure to stop receiving a session. The procedure may be initiated e.g. upon stop of the MBMS session, upon leaving the corresponding MBSFN service area, upon losing interest in the MBMS service, when capability limitations start inhibiting reception of the concerned service.

5.8.3.3 MRB establishment

Upon MRB establishment, the UE shall:

1> establish an RLC entity in accordance with the configuration specified in 9.1.1.4;

1> configure an MTCH logical channel in accordance with the received \textit{logicalChannelIdentity}, applicable for the MRB, as included in the \textit{MBSFNAreaConfiguration} message;

1> configure the physical layer in accordance with the \textit{pmch-Config}, applicable for the MRB, as included in the \textit{MBSFNAreaConfiguration} message;

1> inform upper layers about the establishment of the MRB by indicating the corresponding \textit{tmgi} and \textit{sessionId};

5.8.3.4 MRB release

Upon MRB release, the UE shall:

1> release the RLC entity as well as the related MAC and physical layer configuration;

1> inform upper layers about the release of the MRB by indicating the corresponding \textit{tmgi} and \textit{sessionId};

5.8.4 MBMS Counting Procedure

5.8.4.1 General
The MBMS Counting procedure is used by the E-UTRAN to count the number of RRC_CONNECTED mode UEs which are receiving via an MRB or interested to receive via an MRB the specified MBMS services.

The UE determines interest in an MBMS service, that is identified by the TMGI, by interaction with upper layers.

### 5.8.4.2 Initiation

E-UTRAN initiates the procedure by sending an \texttt{MBMSCountingRequest} message.

### 5.8.4.3 Reception of the \texttt{MBMSCountingRequest} message by the UE

Upon receiving the \texttt{MBMSCountingRequest} message, the UE in RRC_CONNECTED mode shall:

1. if the \texttt{SystemInformationBlockType1}, that provided the scheduling information for the \texttt{SystemInformationBlockType13} that included the configuration of the MCCH via which the \texttt{MBMSCountingRequest} message was received, contained the identity of the Registered PLMN; and

2. if the UE is receiving via an MRB or interested to receive via an MRB at least one of the services in the received \texttt{countingRequestList}:

   1. if more than one entry is included in the \texttt{mbsfn-AreaInfoList} received in the \texttt{SystemInformationBlockType13} that included the configuration of the MCCH via which the \texttt{MBMSCountingRequest} message was received:

      2. include the \texttt{mbsfn-AreaIndex} in the \texttt{MBMSCountingResponse} message and set it to the index of the entry in the \texttt{mbsfn-AreaInfoList} within the received \texttt{SystemInformationBlockType13} that corresponds with the MBSFN area used to transfer the received \texttt{MBMSCountingRequest} message;

   3. for each MBMS service included in the received \texttt{countingRequestList}:

      1. if the UE is receiving via an MRB or interested to receive via an MRB this MBMS service:

         4. include an entry in the \texttt{countingResponseList} within the \texttt{MBMSCountingResponse} message with \texttt{countingResponseService} set it to the index of the entry in the \texttt{countingRequestList} within the received \texttt{MBMSCountingRequest} that corresponds with the MBMS service the UE is receiving or interested to receive;

   2. submit the \texttt{MBMSCountingResponse} message to lower layers for transmission upon which the procedure ends;

**NOTE 1:** UEs that are receiving an MBMS User Service [56] by means of a Unicast Bearer Service [57] (i.e. via a DRB), but are interested to receive the concerned MBMS User Service [56] via an MBMS Bearer Service (i.e. via an MRB), respond to the counting request.

**NOTE 2:** If ciphering is used at upper layers, the UE does not respond to the counting request if it cannot decipher the MBMS service for which counting is performed (see TS 22.146 [62, 5.3]).
NOTE 3: The UE treats the MBMSCountingRequest messages received in each modification period independently. In the unlikely case E-UTRAN would repeat an MBMSCountingRequest (i.e. including the same services) in a subsequent modification period, the UE responds again. The UE provides at most one MBMSCountingResponse message to multiple transmission attempts of an MBMSCountingRequest messages in a given modification period.

5.8.5 MBMS interest indication

5.8.5.1 General

The purpose of this procedure is to inform E-UTRAN that the UE is receiving or is interested to receive MBMS via an MRB, and if so, to inform E-UTRAN about the priority of MBMS versus unicast reception.

5.8.5.2 Initiation

An MBMS capable UE in RRC_CONNECTED may initiate the procedure in several cases including upon successful connection establishment, upon entering or leaving the service area, upon session start or stop, upon change of interest, upon change of priority between MBMS reception and unicast reception or upon change to a PCell broadcasting SystemInformationBlockType15.

Upon initiating the procedure, the UE shall:

1> if SystemInformationBlockType15 is broadcast by the PCell:

2> ensure having a valid version of SystemInformationBlockType15 for the PCell;

2> if the UE did not transmit an MBMSInterestIndication message since last entering RRC_CONNECTED state; or

2> if since the last time the UE transmitted an MBMSInterestIndication message, the UE connected to a PCell not broadcasting SystemInformationBlockType15;

3> if the set of MBMS frequencies of interest, determined in accordance with 5.8.5.3, is not empty:

4> initiate transmission of the MBMSInterestIndication message in accordance with 5.8.5.4;

2> else:

3> if the set of MBMS frequencies of interest, determined in accordance with 5.8.5.3, has changed since the last transmission of the MBMSInterestIndication message; or

3> if the prioritisation of reception of all indicated MBMS frequencies compared to reception of any of the established unicast bearers has changed since the last transmission of the MBMSInterestIndication message:

4> initiate transmission of the MBMSInterestIndication message in accordance with 5.8.5.4;

NOTE: The UE may send an MBMSInterestIndication even when it is able to receive the MBMS services it is interested in i.e. to avoid that the network allocates a configuration inhibiting MBMS reception.
5.8.5.3 Determine MBMS frequencies of interest

The UE shall:

1> consider a frequency to be part of the MBMS frequencies of interest if the following conditions are met:

2> at least one MBMS session the UE is receiving or interested to receive via an MRB is ongoing or about to start; and

NOTE 1: The UE may determine whether the session is ongoing from the start and stop time indicated in the User Service Description (USD), see 3GPP TS 36.300 [9] or 3GPP TS 26.346 [57].

2> for at least one of these MBMS sessions SystemInformationBlockType15 acquired from the PCell includes for the concerned frequency one or more MBMS SAIs as indicated in the USD for this session; and

NOTE 2: The UE considers a frequency to be part of the MBMS frequencies of interest even though E-UTRAN may (temporarily) not employ an MRB for the concerned session. I.e. the UE does not verify if the session is indicated on MCCCH

NOTE 3: The UE considers the frequencies of interest independently of any synchronization state, e.g. [9, Annex J.1].

2> the UE is capable of simultaneously receiving the set of MBMS frequencies of interest, regardless of whether a serving cell is configured on each of these frequencies or not; and

2> the supportedBandCombination the UE included in UE-EUTRA-Capability contains at least one band combination including the set of MBMS frequencies of interest;

NOTE 4: Indicating a frequency implies that the UE supports SystemInformationBlockType13 acquisition for the concerned frequency i.e. the indication should be independent of whether a serving cell is configured on that frequency.

NOTE 5: When evaluating which frequencies it can receive simultaneously, the UE does not take into account the serving frequencies that are currently configured i.e. it only considers MBMS frequencies it is interested to receive.

NOTE 6: The set of MBMS frequencies of interest includes at most one frequency for a given physical frequency. The UE only considers a physical frequency to be part of the MBMS frequencies of interest if it supports at least one of the bands indicated for this physical frequency in SystemInformationBlockType1 (for serving frequency) or SystemInformationBlockType15 (for neighbouring frequencies). In this case, E-UTRAN may assume the UE supports MBMS reception on any of the bands supported by the UE (i.e. according to supportedBandCombination).

5.8.5.4 Actions related to transmission of MBMSInterestIndication message

The UE shall set the contents of the MBMSInterestIndication message as follows:

1> if the set of MBMS frequencies of interest, determined in accordance with 5.8.5.3, is not empty:

2> include mbms-FreqList and set it to include the MBMS frequencies of interest, using the EARFCN corresponding with freqBandIndicator included in SystemInformationBlockType1 (for serving frequency) or SystemInformationBlockType15 (for neighbouring frequencies); if applicable, and the EARFCN(s) as included in SystemInformationBlockType15 (for neighbouring frequencies);

NOTE 1: The EARFCN included in mbms-FreqList is merely used to indicate a physical frequency the UE is interested to receive i.e. the UE may not support the band corresponding to the included EARFCN (but it does support at least one of the bands indicated in system information for the concerned physical frequency).

2> include mbms-Priority if the UE prioritises reception of all indicated MBMS frequencies above reception of any of the unicast bearers;
NOTE 2: If the UE prioritises MBMS reception and unicast data cannot be supported because of congestion on the MBMS carrier(s), E-UTRAN may initiate release of unicast bearers. It is up to E-UTRAN implementation whether all bearers or only GBR bearers are released. E-UTRAN does not initiate re-establishment of the released unicast bearers upon alleviation of the congestion.

The UE shall submit the MBMSInterestIndication message to lower layers for transmission.

## 5.9 RN procedures

### 5.9.1 RN reconfiguration

#### 5.9.1.1 General

![Figure 5.9.1.1-1: RN reconfiguration](image)

The purpose of this procedure is to configure/reconfigure the RN subframe configuration and/or to update the system information relevant for the RN in RRC_CONNECTED.

#### 5.9.1.2 Initiation

E-UTRAN may initiate the RN reconfiguration procedure to an RN in RRC_CONNECTED when AS security has been activated.

#### 5.9.1.3 Reception of the RNReconfiguration by the RN

The RN shall:

1. if the rn-SystemInfo is included:
   2. if the systemInformationBlockType1 is included:
      3. act upon the received SystemInformationBlockType1 as specified in 5.2.2.7;
   2. if the SystemInformationBlockType2 is included:
      3. act upon the received SystemInformationBlockType2 as specified in 5.2.2.9;
1. if the rn-SubframeConfig is included:
   2. reconfigure lower layers in accordance with the received subframeConfigPatternFDD or subframeConfigPatternTDD;
   2. if the rpdcch-Config is included:
      3. reconfigure lower layers in accordance with the received rpdcch-Config;
1. submit the RNReconfigurationComplete message to lower layers for transmission, upon which the procedure ends;
6 Protocol data units, formats and parameters (tabular & ASN.1)

6.1 General

The contents of each RRC message is specified in sub-clause 6.2 using ASN.1 to specify the message syntax and using tables when needed to provide further detailed information about the information elements specified in the message syntax. The syntax of the information elements that are defined as stand-alone abstract types is further specified in a similar manner in sub-clause 6.3.

The need for information elements to be present in a message or an abstract type, i.e., the ASN.1 fields that are specified as OPTIONAL in the abstract notation (ASN.1), is specified by means of comment text tags attached to the OPTIONAL statement in the abstract syntax. All comment text tags are available for use in the downlink direction only. The meaning of each tag is specified in table 6.1-1.

Table 6.1-1: Meaning of abbreviations used to specify the need for information elements to be present

<table>
<thead>
<tr>
<th>Abbreviation</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cond conditionTag (Used in downlink only)</td>
<td>Conditionally present An information element for which the need is specified by means of conditions. For each conditionTag, the need is specified in a tabular form following the ASN.1 segment. In case, according to the conditions, a field is not present, the UE takes no action and where applicable shall continue to use the existing value (and/ or the associated functionality) unless explicitly stated otherwise (e.g. in the conditional presence table or in the description of the field itself).</td>
</tr>
<tr>
<td>Need OP (Used in downlink only)</td>
<td>Optionally present An information element that is optional to signal. For downlink messages, the UE is not required to take any special action on absence of the IE beyond what is specified in the procedural text or the field description table following the ASN.1 segment. The UE behaviour on absence should be captured either in the procedural text or in the field description.</td>
</tr>
<tr>
<td>Need ON (Used in downlink only)</td>
<td>Optionally present, No action An information element that is optional to signal. If the message is received by the UE, and in case the information element is absent, the UE takes no action and where applicable shall continue to use the existing value (and/ or the associated functionality).</td>
</tr>
<tr>
<td>Need OR (Used in downlink only)</td>
<td>Optionally present, Release An information element that is optional to signal. If the message is received by the UE, and in case the information element is absent, the UE shall discontinue/ stop using/ delete any existing value (and/ or the associated functionality).</td>
</tr>
</tbody>
</table>

Any IE with Need ON in system information shall be interpreted as Need OR.

Need codes may not be specified for a parent extension field/ extension group, used in downlink, which includes one or more child extension fields. Upon absence of such a parent extension field/ extension group, the UE shall:

- For each individual child extension field, including extensions that are mandatory to include in the optional group, act in accordance with the need code that is defined for the extension;
- Apply this behaviour not only for child extension fields included directly within the optional parent extension field/ extension group, but also for extension fields defined at further nesting levels as long as for none of the fields in-between the concerned extension field and the parent extension field a need code is specified;

NOTE 1: The above applies for groups of non critical extensions using double brackets (referred to as extension groups), as well as non-critical extensions at the end of a message or at the end of a structure contained in a BIT STRING or OCTET STRING (referred to as parent extension fields).
Need codes, conditions and ASN.1 defaults specified for a particular (child) field only apply in case the (parent) field including the particular field is present. This rule does not apply for optional parent extension fields/extension groups without need codes.

NOTE 2: The previous rule implies that E-UTRAN has to include such a parent extension field to release a child field that is either:

- Optional with need OR, or
- Conditional while the UE releases the child field when absent.

The handling of need codes as specified in the previous is illustrated by means of an example, as shown in the following ASN.1.

```asn1
-- /example/ ASN1START

RRCMessage-r8-IEs ::= SEQUENCE {
  field1          InformationElement1,  
  field2         InformationElement2 OPTIONAL, -- Need ON
  nonCriticalExtension     RRCMessage-v8a0-IEs OPTIONAL
}

RRCMessage-v8a0-IEs ::= SEQUENCE {
  field3         InformationElement3 OPTIONAL, -- Need ON
  nonCriticalExtension     RRCMessage-v940-IEs OPTIONAL
}

RRCMessage-v940-IEs ::= SEQUENCE {
  field4         InformationElement4 OPTIONAL, -- Need OR
  nonCriticalExtension     SEQUENCE {} OPTIONAL
}

InformationElement1 ::= SEQUENCE {
  field11        InformationElement11 OPTIONAL, -- Need ON
  field12        InformationElement12 OPTIONAL, -- Need OR
  ...,          
  [ [ field13       InformationElement13 OPTIONAL, -- Need OR
    field14       InformationElement14 OPTIONAL -- Need ON
  ]]          
}

InformationElement2 ::= SEQUENCE {
```

The handling of need codes as specified in the previous implies that:

- if field2 in RRCMessage-r8-IEs is absent, the UE does not modify field21;
  
  if field2 in RRCMessage-r8-IEs is present but does not include field21, the UE releases field21;

- if the extension group containing field13 is absent, the UE releases field13 and does not modify field14;

- if nonCriticalExtension defined by IE RRCMessage-v8a0-IEs is absent, the UE does not modify field3 and releases field4;

6.2 RRC messages

NOTE: The messages included in this section reflect the current status of the discussions. Additional messages may be included at a later stage.

6.2.1 General message structure

– EUTRA-RRC-Definitions

This ASN.1 segment is the start of the E-UTRA RRC PDU definitions.

6.2.2 Message definitions

– CounterCheck

The CounterCheck message is used by the E-UTRAN to indicate the current COUNT MSB values associated to each DRB and to request the UE to compare these to its COUNT MSB values and to report the comparison results to E-UTRAN.

Signalling radio bearer: SRB1
RLC-SAP: AM
Logical channel: DCCH
Direction: E-UTRAN to UE

CounterCheck message

-- CSFBParametersRequestCDMA2000 

The `CSFBParametersRequestCDMA2000` message is used by the UE to obtain the CDMA2000 1xRTT Parameters from the network. The UE needs these parameters to generate the CDMA2000 1xRTT Registration message used to register with the CDMA2000 1xRTT Network which is required to support CSFB to CDMA2000 1xRTT.
Signalling radio bearer: SRB1
RLC-SAP: AM
Logical channel: DCCH
Direction: UE to E-UTRAN

HandoverFromEUTRAPreparationRequest (CDMA2000)

The **HandoverFromEUTRAPreparationRequest** message is used to trigger the handover preparation procedure with a CDMA2000 RAT. This message is also used to trigger a tunneled preparation procedure with a CDMA2000 1xRTT RAT to obtain traffic channel resources for the enhanced CS fallback to CDMA2000 1xRTT, which may also involve a concurrent preparation for handover to CDMA2000 HRPD. Also, this message is used to trigger the dual Rx/Tx redirection procedure with a CDMA2000 1xRTT RAT.

Signalling radio bearer: SRB1

<table>
<thead>
<tr>
<th>Field Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>affectedCarrierFreqList</td>
<td>List of E-UTRA carrier frequencies affected by IDC problems.</td>
</tr>
<tr>
<td>drx-ActiveTime</td>
<td>Indicates the desired active time that the E-UTRAN is recommended to configure. Value in number of subframes. Value sf20 corresponds to 20 subframes, sf30 corresponds to 30 subframes and so on.</td>
</tr>
<tr>
<td>drx-CycleLength</td>
<td>Indicates the desired DRX cycle length that the E-UTRAN is recommended to configure. Value in number of subframes. Value sf40 corresponds to 40 subframes, sf64 corresponds to 64 subframes and so on.</td>
</tr>
<tr>
<td>drx-Offset</td>
<td>Indicates the desired DRX starting offset that the E-UTRAN is recommended to configure. The UE shall set the value of drx-Offset smaller than the value of drx-CycleLength. The starting frame and subframe satisfy the relation: ([SFN * 10] + subframe number) modulo (drx-CycleLength) = drx-Offset.</td>
</tr>
<tr>
<td>idc-SubframePatternList</td>
<td>A list of one or more subframe patterns indicating which HARQ process E-UTRAN is requested to abstain from using. Value 0 indicates that E-UTRAN is requested to abstain from using the subframe. For FDD, the radio frame in which the pattern starts (i.e. the radio frame in which the first/leftmost bit of the subframePatternFDD corresponds to subframe #0) occurs when SFN mod 2 = 0. For TDD, the first/leftmost bit corresponds to the subframe #0 of the radio frame satisfying SFN mod x = 0, where x is the size of the bit string divided by 10. The UE shall indicate a subframe pattern that follows HARQ time line, as specified in TS 36.213 [23], i.e. if a subframe is set to 1 in the subframe pattern, also the corresponding subframes carrying the potential UL grant [23, 8.0], the UL HARQ retransmission [23, 8.0] and the DL/UL HARQ feedback [23, 7.3, 8.3 and 9.1.2] shall be set to 1.</td>
</tr>
<tr>
<td>interferenceDirection</td>
<td>Indicates the direction of IDC interference. Value eutra indicates that only E-UTRA is victim of IDC interference, value other indicates that only another radio is victim of IDC interference and value both indicates that both E-UTRA and another radio are victims of IDC interference. The other radio refers to either the ISM radio or GNSS (see 3GPP TR 36.816 [63]).</td>
</tr>
</tbody>
</table>

InterFreqRSTDMeasurementIndication

The InterFreqRSTDMeasurementIndication message is used to indicate that the UE is going to either start or stop OTDOA inter-frequency RSTD measurement which requires measurement gaps as specified in TS 36.133 [16, 8.1.2.6].

Signalling radio bearer: SRB1
RLC-SAP: AM
Logical channel: DCCH
Direction: UE to E-UTRAN

InterFreqRSTDMeasurementIndication message

```asn1
InterFreqRSTDMeasurementIndication-r10 ::= SEQUENCE {
  criticalExtensions     CHOICE {
    c1  CHOICE {
      interFreqRSTDMeasurementIndication-r10 InterFreqRSTDMeasurementIndication-r10-IEs,
      spare3 NULL, spare2 NULL, spare1 NULL
    },
  },
  criticalExtensionsFuture SEQUENCE { }
}
```
InterFreqRSTDMeasurementIndication-r10-IEs ::= SEQUENCE {
  rstd-InterFreqIndication-r10 CHOICE {
    start SEQUENCE {
      rstd-InterFreqInfoList-r10 RSTD-InterFreqInfoList-r10
    },
    stop NULL
  },
  lateNonCriticalExtension OCTET STRING OPTIONAL,
  nonCriticalExtension SEQUENCE {} OPTIONAL
}

RSTD-InterFreqInfoList-r10 ::= SEQUENCE (SIZE(1..maxRSTD-Freq-r10)) OF RSTD-InterFreqInfo-r10

RSTD-InterFreqInfo-r10 ::= SEQUENCE {
  carrierFreq-r10 ARFCN-ValueEUTRA,
  measPRS-Offset-r10 INTEGER (0..39),
  ...,[[ carrierFreq-v1090 ARFCN-ValueEUTRA-v9e0 OPTIONAL
  ]]
}
**InterFreqRSTDMeasurementIndication** field descriptions

- **carrierFreq**
The EARFCN value of the carrier received from upper layers for which the UE needs to perform the inter-frequency RSTD measurements. If the UE includes `carrierFreq-v1090`, it shall set `carrierFreq-r10` to `maxEARFCN`.

- **measPRS-Offset**
Indicates the requested gap offset for performing inter-frequency RSTD measurements. It is the smallest subframe offset from the beginning of subframe 0 of SFN=0 of the serving cell of the requested gap for measuring PRS positioning occasions in the carrier frequency `carrierFreq` for which the UE needs to perform the inter-frequency RSTD measurements. The PRS positioning occasion information is received from upper layers. The value of `measPRS-Offset` is obtained by mapping the starting subframe of the PRS positioning occasion in the measured cell onto the corresponding subframe in the serving cell and is calculated as the serving cell’s number of subframes from SFN=0 mod 40.

  The UE shall take into account any additional time required by the UE to start PRS measurements on the other carrier when it does this mapping for determining the `measPRS-Offset`.

  NOTE: Figure 6.2.2-1 illustrates the `measPRS-Offset` field.

- **rstd-InterFreqIndication**
Indicates the inter-frequency RSTD measurement action, i.e. the UE is going to start or stop inter-frequency RSTD measurement.

---

**LoggedMeasurementConfiguration**

The `LoggedMeasurementConfiguration` message is used by E-UTRAN to configure the UE to perform logging of measurement results while in RRC_IDLE. It is used to transfer the logged measurement configuration for network performance optimisation, see TS 37.320 [60].

- Signalling radio bearer: SRB1
- RLC-SAP: AM
- Logical channel: DCCH
- Direction: E-UTRAN to UE

**LoggedMeasurementConfiguration message**

```
 LoggedMeasurementConfiguration-r10 ::= SEQUENCE {
   criticalExtensions     CHOICE {

    nonCriticalExtension   SEQUENCE {}     OPTIONAL
    }

-- ASN1STOP
LoggedMeasurementConfiguration field descriptions

**absoluteTimeInfo**
Indicates the absolute time in the current cell.

**areaConfiguration**
Used to restrict the area in which the UE performs measurement logging to cells broadcasting either one of the included cell identities or one of the included tracking area codes/identities.

**plmn-IdentityList**
Indicates a set of PLMNs defining when the UE performs measurement logging as well as the associated status indication and information retrieval i.e. the UE performs these actions when the RPLMN is part of this set of PLMNs.

**traceRecordingSessionRef**
Parameter Trace Recording Session Reference: See TS 32.422 [58]

---

**MasterInformationBlock**

The *MasterInformationBlock* includes the system information transmitted on BCH.

- Signalling radio bearer: N/A
- RLC-SAP: TM
- Logical channel: BCCH
- Direction: E-UTRAN to UE

---

**MasterInformationBlock**

--- ASN1START

```
MasterInformationBlock ::= SEQUENCE {
  dl-Bandwidth       ENUMERATED {
    n6, n15, n25, n50, n75, n100},
  phich-Config      PHICH-Config,
  systemFrameNumber     BIT STRING (SIZE (8)),
  spare         BIT STRING (SIZE (10))
}
```

--- ASN1STOP

---

**MasterInformationBlock field descriptions**

**dl-Bandwidth**
Parameter: transmission bandwidth configuration, N_{rb} in downlink, see TS 36.101 [42, table 5.6-1]. n6 corresponds to 6 resource blocks, n15 to 15 resource blocks and so on.

**systemFrameNumber**
Defines the 8 most significant bits of the SFN. As indicated in TS 36.211 [21, 6.6.1], the 2 least significant bits of the SFN are acquired implicitly in the P-BCH decoding, i.e. timing of 40ms P-BCH TTI indicates 2 least significant bits (within 40ms P-BCH TTI, the first radio frame: 00, the second radio frame: 01, the third radio frame: 10, the last radio frame: 11). One value applies for all serving cells (the associated functionality is common i.e. not performed independently for each cell).
MBMSCountingRequest

The MBMSCountingRequest message is used by E-UTRAN to count the UEs that are receiving or interested to receive specific MBMS services.

MBSFNAreaConfiguration

The MBSFNAreaConfiguration message contains the MBMS control information applicable for an MBSFN area. E-UTRAN configures an MCCH for each MBSFN area i.e. the MCCH identifies the MBSFN area.

Signalling radio bearer: N/A
RLC-SAP: UM
Logical channel: MCCH
Direction: E-UTRAN to UE

MBSFNAreaConfiguration field descriptions

| commonSF-Alloc | Indicates the subframes allocated to the MBSFN area |
| commonSF-AllocPeriod | Indicates the period during which resources corresponding with field commonSF-Alloc are divided between the (P)MCH that are configured for this MBSFN area. The subframe allocation patterns, as defined by commonSF-Alloc, repeat continuously during this period. Value rf4 corresponds to 4 radio frames, rf8 corresponds to 8 radio frames and so on. The commonSF-AllocPeriod starts in the radio frames for which: SFN mod commonSF-AllocPeriod = 0. |

-- MeasurementReport

The MeasurementReport message is used for the indication of measurement results.

### MobilityFromEUTRACommand field descriptions

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>bandIndicator</strong></td>
<td>Indicates how to interpret the ARFCN of the BCCH carrier.</td>
</tr>
<tr>
<td><strong>carrierFreq</strong></td>
<td>contains the carrier frequency of the target GERAN cell.</td>
</tr>
<tr>
<td><strong>cs-FallbackIndicator</strong></td>
<td>Value true indicates that the CS Fallback procedure to UTRAN or GERAN is triggered.</td>
</tr>
<tr>
<td><strong>messageContCDMA2000-1xRTT</strong></td>
<td>This field contains a message specified in CDMA2000 1xRTT standard that either tells the UE to move to specific 1xRTT target cell(s) or indicates a failure to allocate resources for the enhanced CS fallback to CDMA2000 1xRTT.</td>
</tr>
<tr>
<td><strong>messageContCDMA2000-HRPD</strong></td>
<td>This field contains a message specified in CDMA2000 HRPD standard that either tells the UE to move to specific HRPD target cell(s) or indicates a failure to allocate resources for the handover to CDMA2000 HRPD.</td>
</tr>
<tr>
<td><strong>mobilityCDMA2000-HRPD</strong></td>
<td>This field indicates whether or not mobility to CDMA2000 HRPD is to be performed by the UE and it also indicates the type of mobility to CDMA2000 HRPD that is to be performed; If this field is not present the UE shall perform only the enhanced CS fallback to CDMA2000 1xRTT.</td>
</tr>
<tr>
<td><strong>nas-SecurityParamFromEUTRA</strong></td>
<td>Used to deliver the key synchronisation and Key freshness for the E-UTRAN to UTRAN handovers as specified in TS 33.401. The content of the parameter is defined in TS24.301.</td>
</tr>
<tr>
<td><strong>networkControlOrder</strong></td>
<td>Parameter NETWORK_CONTROL_ORDER in TS 44.060 [36].</td>
</tr>
<tr>
<td><strong>purpose</strong></td>
<td>Indicates which type of mobility procedure the UE is requested to perform. EUTRAN always applies value e-CSFB in case of enhanced CS fallback to CDMA2000 (e.g. also when that procedure results in handover to CDMA2000 1XRRT only, in handover to CDMA2000 HRPD only or in redirection to CDMA2000 HRPD only).</td>
</tr>
<tr>
<td><strong>redirectCarrierCDMA2000-HRPD</strong></td>
<td>The redirectCarrierCDMA2000-HRPD indicates a CDMA2000 carrier frequency and is used to redirect the UE to a HRPD carrier frequency.</td>
</tr>
<tr>
<td><strong>SystemInfoListGERAN</strong></td>
<td>If purpose = CellChangeOrder and if the field is not present, the UE has to acquire SI/PSI from the GERAN cell.</td>
</tr>
<tr>
<td><strong>t304</strong></td>
<td>Timer T304 as described in section 7.3. Value ms100 corresponds with 100 ms, ms200 corresponds with 200 ms and so on.</td>
</tr>
<tr>
<td><strong>targetRAT-Type</strong></td>
<td>Indicates the target RAT type.</td>
</tr>
<tr>
<td><strong>targetRAT-MessageContainer</strong></td>
<td>The field contains a message specified in another standard, as indicated by the targetRAT-Type, and carries information about the target cell identifier(s) and radio parameters relevant for the target radio access technology.</td>
</tr>
</tbody>
</table>

A complete message is included, as specified in the other standard.

### Conditional presence

<table>
<thead>
<tr>
<th>Condition</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>concHO</strong></td>
<td>The field is mandatory present if the mobilityCDMA2000-HRPD is set to ‘handover’; otherwise the field is optional present, need ON.</td>
</tr>
<tr>
<td><strong>concRedir</strong></td>
<td>The field is mandatory present if the mobilityCDMA2000-HRPD is set to ‘redirection’; otherwise the field is not present.</td>
</tr>
<tr>
<td><strong>GERAN</strong></td>
<td>The field should be present if the purpose is set to ‘handover’ and the targetRAT-Type is set to ‘geran’; otherwise the field is not present.</td>
</tr>
<tr>
<td><strong>PSHO</strong></td>
<td>The field is mandatory present in case of PS handover toward GERAN; otherwise the field is optionally present, but not used by the UE.</td>
</tr>
<tr>
<td><strong>UTRAGERAN</strong></td>
<td>The field is mandatory present if the targetRAT-Type is set to ‘utra’ or ‘geran’; otherwise the field is not present.</td>
</tr>
</tbody>
</table>

NOTE 1: The correspondence between the value of the targetRAT-Type, the standard to apply and the message contained within the targetRAT-MessageContainer is shown in the table below:
### Paging

The *Paging* message is used for the notification of one or more UEs.

- Signalling radio bearer: N/A
- RLC-SAP: TM
- Logical channel: PCCH
- Direction: E-UTRAN to UE

**Paging message**

```
-- ASN1START

Paging ::= SEQUENCE {

  ...
}

IMSI ::= SEQUENCE (SIZE (6..21)) OF IMSI-Digit

IMSI-Digit ::= INTEGER (0..9)

--- ASN1STOP

### Paging field descriptions

**cmas-Indication**
If present: indication of a CMAS notification.

**cn-Domain**
Indicates the origin of paging.

**eab-ParamModification**
If present: indication of an EAB parameters (SIB14) modification.

**etws-Indication**
If present: indication of an ETWS primary notification and/ or ETWS secondary notification.

**imsi**
The International Mobile Subscriber Identity, a globally unique permanent subscriber identity, see TS 23.003 [27]. The first element contains the first IMSI digit, the second element contains the second IMSI digit and so on.

**systemInfoModification**
If present: indication of a BCCH modification other than SIB10, SIB11, SIB12 and SIB14.

**ue-Identity**
Provides the NAS identity of the UE that is being paged.
ProximityIndication

The ProximityIndication message is used to indicate that the UE is entering or leaving the proximity of one or more CSG member cell(s).

Signalling radio bearer: SRB1

RLC-SAP: AM

Logical channel: DCCH

Direction: UE to E-UTRAN

ProximityIndication message

RRCConnectionReconfiguration field descriptions

dedicatedInfoNASList
This field is used to transfer UE specific NAS layer information between the network and the UE. The RRC layer is transparent for each PDU in the list.

fullConfig
Indicates the full configuration option is applicable for the RRC Connection Reconfiguration message.

keyChangeIndicator
true is used only in an intra-cell handover when a $K_{\text{new}}$ key is derived from a $K_{\text{ASME}}$ key taken into use through the latest successful NAS SMC procedure, as described in TS 33.401 [32] for $K_{\text{new}}$ re-keying. false is used in an intra-LTE handover when the new $K_{\text{new}}$ key is obtained from the current $K_{\text{new}}$ key or from the NH as described in TS 33.401 [32].

nas-SecurityParamToEUTRA
This field is used to transfer UE specific NAS layer information between the network and the UE. The RRC layer is transparent for this field, although it affects activation of AS- security after inter-RAT handover to E-UTRA. The content is defined in TS 24.301.

nextHopChainingCount
Parameter NCC: See TS 33.401 [32]
Conditional presence | Explanation
--- | ---
EARFCN-max | The field is mandatory present if dl-CarrierFreq-r10 is included and set to maxEARFCN. Otherwise the field is not present.
fullConfig | This field is mandatory present for handover within E-UTRA when the fullConfig is included; otherwise it is optionally present, Need OP.
HO | The field is mandatory present in case of handover within E-UTRA or to E-UTRA; otherwise the field is not present.
HO-Reestab | This field is optionally present, need ON, in case of handover within E-UTRA or upon the first reconfiguration after RRC connection re-establishment; otherwise the field is not present.
HO-toEUTRA | The field is mandatory present in case of handover to E-UTRA or for reconfigurations when fullConfig is included; otherwise the field is optionally present, need ON.
nonHO | The field is not present in case of handover within E-UTRA or to E-UTRA; otherwise it is optionally present, need ON.
SCellAdd | The field is mandatory present upon SCell addition; otherwise it is not present.
SCellAdd2 | The field is mandatory present upon SCell addition; otherwise it is optionally present, need ON.

-- RRCConnectionReconfigurationComplete

The **RRCConnectionReconfigurationComplete** message is used to confirm the successful completion of an RRC connection reconfiguration.

- Signalling radio bearer: SRB1
- RLC-SAP: AM
- Logical channel: DCCH
- Direction: UE to E-UTRAN

**RRCConnectionReconfigurationComplete message**

```asn1
RRCConnectionReconfigurationComplete ::= SEQUENCE {

**RRConnectionRelease field descriptions**

**carrierFreq or bandClass**
The carrier frequency (UTRA and E-UTRA) and band class (HRPD and 1xRTT) for which the associated cellReselectionPriority is applied.

**carrierFreqs**
The list of GERAN carrier frequencies organised into one group of GERAN carrier frequencies.

**cellInfoList**
Used to provide system information of one or more cells on the redirected inter-RAT carrier frequency. The system information can be used if, upon redirection, the UE selects an inter-RAT cell indicated by the physCellId and carrierFreq (GERAN and UTRA TDD) or by the physCellId (other RATs). The choice shall match the redirectedCarrierInfo. In particular, E-UTRAN only applies value `utra-TDD-r10` in case redirectedCarrierInfo is set to `utra-TDD-r10`.

**extendedWaitTime**
Value in seconds for the wait time for Delay Tolerant access requests.

**freqPriorityListX**
Provides a cell reselection priority for each frequency, by means of separate lists for each RAT (including E-UTRA). The UE shall be able to store at least 3 occurrences of `FreqPriorityGERAN`. If E-UTRAN includes `freqPriorityListEUTRA-v9e0` it includes the same number of entries, and listed in the same order, as in `freqPriorityListEUTRA` (i.e. without suffix).

**idleModeMobilityControlInfo**
Provides dedicated cell reselection priorities. Used for cell reselection as specified in TS 36.304 [4]. For E-UTRA and UTRA frequencies, a UE that supports multi-band cells for the concerned RAT considers the dedicated priorities to be common for all overlapping bands (i.e. regardless of the ARFCN that is used).

**redirectedCarrierInfo**
The redirectedCarrierInfo indicates a carrier frequency (downlink for FDD) and is used to redirect the UE to an E-UTRA or an inter-RAT carrier frequency, by means of the cell selection upon leaving RRC_CONNECTED as specified in TS 36.304 [4].

**releaseCause**
The releaseCause is used to indicate the reason for releasing the RRC Connection. The cause value `cs-FallbackHighPriority` is only applicable when redirectedCarrierInfo is present with the value set to `utra-FDD`, `utra-TDD` or `utra-TDD-r10`. E-UTRAN should not set the releaseCause to `loadBalancingTAURequired` or to `cs-FallbackHighPriority` if the extendedWaitTime is present.

**systemInformation**
Container for system information of the GERAN cell i.e. one or more System Information (SI) messages as defined in TS 44.018 [45, table 9.1.1].

**t320**
Timer T320 as described in section 7.3. Value minN corresponds to N minutes.

**utra-BCCH-Container**
Contains System Information Container message as defined in TS 25.331 [19].
### Conditional presence

<table>
<thead>
<tr>
<th>Field</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>EARFCN-max</td>
<td>The field is mandatory present if the corresponding carrierFreq (i.e. without suffix) is set to maxEARFCN. Otherwise the field is not present.</td>
</tr>
<tr>
<td>IdleInfoEUTRA</td>
<td>The field is optionally present, need OP, if the IdleModeMobilityControlInfo (i.e. without suffix) is included and includes freqPriorityListEUTRA; otherwise the field is not present.</td>
</tr>
<tr>
<td>NoRedirect-r8</td>
<td>The field is optionally present, need OP, if the redirectedCarrierInfo (i.e. without suffix) is not included; otherwise the field is not present.</td>
</tr>
<tr>
<td>Redirection</td>
<td>The field is optionally present, need ON, if the redirectedCarrierInfo is included and set to gern, utra-FDD, utra-TDD or utra-TDD-r10; otherwise the field is not present.</td>
</tr>
</tbody>
</table>

### – RRCConnectionRequest

The RRCConnectionRequest message is used to request the establishment of an RRC connection.

NOTE 1: The value the UE applies for parameter 'Q_{qualmin}' in TS 36.304 [4] depends on the \(q\)-QualMin fields signalled by E-UTRAN and supported by the UE. In case multiple candidate options are available, the UE shall select the highest priority candidate option according to the priority order indicated by the following table (top row is highest priority).

<table>
<thead>
<tr>
<th>Conditional presence</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>FBI-max</td>
<td>The field is mandatory present if freqBandIndicator (i.e. without suffix) is set to maxFBI. Otherwise the field is not present.</td>
</tr>
<tr>
<td>mFBI-max</td>
<td>The field is mandatory present if one or more entries in multiBandInfoList (i.e. without suffix, introduced in -v8h0) is set to maxFBI. Otherwise the field is not present.</td>
</tr>
<tr>
<td>RSRQ</td>
<td>The field is mandatory present if SIB3 is being broadcast and threshServingLowQ is present in SIB3; otherwise optionally present, Need OP.</td>
</tr>
<tr>
<td>TDD</td>
<td>This field is mandatory present for TDD; it is not present for FDD and the UE shall delete any existing value for this field.</td>
</tr>
<tr>
<td>TDD-OR</td>
<td>The field is optional present for TDD, need OR; it is not present for FDD.</td>
</tr>
<tr>
<td>WB-RSRQ</td>
<td>The field is optionally present, need OP if the measurement bandwidth indicated by allowedMeasBandwidth in systemInformationBlockType3 is 50 resource blocks or larger; otherwise it is not present.</td>
</tr>
</tbody>
</table>

The **UEAssistanceInformation** message is used for the indication of UE assistance information to the eNB.

**UEInformationResponse field descriptions**

<table>
<thead>
<tr>
<th>Field Description</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>absoluteTimeStamp</strong></td>
<td>Indicates the absolute time when the logged measurement configuration logging is provided, as indicated by E-UTRAN within <code>absoluteTimeInfo</code>.</td>
</tr>
<tr>
<td><strong>carrierFreq</strong></td>
<td>In case the UE includes <code>carrierFreq-v9e0</code> and/or <code>carrierFreq-v1090</code>, the UE shall set the corresponding entry of <code>carrierFreq-r9</code> and/or <code>carrierFreq-r10</code> respectively to <code>maxEARFCN</code>. For E-UTRA and UTRA frequencies, the UE sets the ARFCN according to the band used when obtaining the concerned measurement results.</td>
</tr>
<tr>
<td><strong>connectionFailureType</strong></td>
<td>This field is used to indicate whether the connection failure is due to radio link failure or handover failure.</td>
</tr>
<tr>
<td><strong>contentionDetected</strong></td>
<td>This field is used to indicate that contention was detected for at least one of the transmitted preambles, see TS 36.321 [6].</td>
</tr>
<tr>
<td><strong>c-RNTI</strong></td>
<td>This field indicates the C-RNTI used in the PCell upon detecting radio link failure or the C-RNTI used in the source PCell upon handover failure.</td>
</tr>
<tr>
<td><strong>failedCellId</strong></td>
<td>This field is used to indicate the cell in which connection establishment failed.</td>
</tr>
<tr>
<td><strong>failedPCellId</strong></td>
<td>This field is used to indicate the PCell in which RLF is detected or the target PCell of the failed handover. The UE sets the EARFCN according to the band for transmission/reception when the failure occurred.</td>
</tr>
<tr>
<td><strong>maxTxPowerReached</strong></td>
<td>This field is used to indicate whether or not the maximum power level was used for the last transmitted preamble, see TS 36.321 [6].</td>
</tr>
<tr>
<td><strong>measResultListEUTRA</strong></td>
<td>If <code>measResultListEUTRA-v9e0</code>, <code>measResultListEUTRA-v1090</code> or <code>measResultListEUTRA-v1130</code> is included, the UE shall include the same number of entries, and listed in the same order, as in <code>measResultListEUTRA-r9</code>, <code>measResultListEUTRA-r10</code> and/or <code>measResultListEUTRA-r11</code> respectively.</td>
</tr>
<tr>
<td><strong>numberOfPreamblesSent</strong></td>
<td>This field is used to indicate the number of RACH preambles that were transmitted. Corresponds to parameter <code>PREAMBLE_TRANSMISSION_COUNTER</code> in TS 36.321 [6].</td>
</tr>
<tr>
<td><strong>previousPCellId</strong></td>
<td>This field is used to indicate the source PCell of the last handover (source PCell when the last <code>RRC-Connection- Reconfiguration</code> message including <code>mobilityControlInfo</code> was received).</td>
</tr>
<tr>
<td><strong>previousUTRA-CellId</strong></td>
<td>This field is used to indicate the source UTRA cell of the last successful handover to E-UTRAN, when RLF occurred at the target PCell. The UE sets the ARFCN according to the band selected for transmission/reception on the concerned cell.</td>
</tr>
<tr>
<td><strong>reestablishmentCellId</strong></td>
<td>This field is used to indicate the cell in which the re-establishment attempt was made after connection failure.</td>
</tr>
<tr>
<td><strong>relativeTimeStamp</strong></td>
<td>Indicates the time of logging measurement results, measured relative to the <code>absoluteTimeStamp</code>. Value in seconds.</td>
</tr>
<tr>
<td><strong>rlf-Cause</strong></td>
<td>This field is used to indicate the cause of the last radio link failure that was detected. In case of handover failure information reporting (i.e., the <code>connectionFailureType</code> is set to 'hof'), the UE is allowed to set this field to any value.</td>
</tr>
<tr>
<td><strong>selectedUTRA-CellId</strong></td>
<td>This field is used to indicate the UTRA cell that the UE selects after RLF is detected, while T311 is running. The UE sets the ARFCN according to the band selected for transmission/reception on the concerned cell.</td>
</tr>
<tr>
<td><strong>tce-Id</strong></td>
<td>Parameter Trace Collection Entity Id: See TS 32.422 [58].</td>
</tr>
<tr>
<td><strong>timeConnFailure</strong></td>
<td>This field is used to indicate the time elapsed since the last HO initialization until connection failure. Actual value = IE value * 100ms. The maximum value 1023 means 102.3s or longer.</td>
</tr>
<tr>
<td><strong>timeSinceFailure</strong></td>
<td>This field is used to indicate the time that elapsed since the connection (establishment) failure. Value in seconds.</td>
</tr>
<tr>
<td><strong>traceRecordingSessionRef</strong></td>
<td>Parameter Trace Recording Session Reference: See TS 32.422 [58].</td>
</tr>

-- ULInformationTransfer

The ULInformationTransfer message is used for the uplink transfer of NAS or non-3GPP dedicated information.

- Signalling radio bearer: SRB2 or SRB1 (only if SRB2 not established yet). If SRB2 is suspended, the UE does not send this message until SRB2 is resumed.
- RLC-SAP: AM
- Logical channel: DCCH
- Direction: UE to E-UTRAN

6.3 RRC information elements

6.3.1 System information blocks

– SystemInformationBlockType2

The IE SystemInformationBlockType2 contains radio resource configuration information that is common for all UEs.

NOTE: UE timers and constants related to functionality for which parameters are provided in another SIB are included in the corresponding SIB.

SystemInformationBlockType2 information element

SystemInformationBlockType2 ::= SEQUENCE {
  ac-BarringInfo          SEQUENCE {

  ac-BarringForSpecialAC BIT STRING (SIZE(5))
}

MBSFN-SubframeConfigList ::= SEQUENCE (SIZE (1..maxMBSFN-Allocations)) OF MBSFN-SubframeConfig

-- ASN1STOP
**ac-BarringFactor**
If the random number drawn by the UE is lower than this value, access is allowed. Otherwise the access is barred. The values are interpreted in the range [0,1): p00 = 0, p05 = 0.05, p10 = 0.10,..., p95 = 0.95. Values other than p00 can only be set if all bits of the corresponding ac-BarringForSpecialAC are set to 0.

**ac-BarringForCSFB**
Access class barring for mobile originating CS fallback.

**ac-BarringForEmergency**
Access class barring for AC 10.

**ac-BarringForMO-Data**
Access class barring for mobile originating calls.

**ac-BarringForMO-Signalling**
Access class barring for mobile originating signalling.

**ac-BarringForSpecialAC**
Access class barring for AC 11-15. The first/ leftmost bit is for AC 11, the second bit is for AC 12, and so on.

**ac-BarringTime**
Mean access barring time value in seconds.

**additionalSpectrumEmission**
The UE requirements related to IE AdditionalSpectrumEmission are defined in TS 36.101 [42, table 6.2.4.1].

**mbsfn-SubframeConfigList**
Defines the subframes that are reserved for MBSFN in downlink.

**multiBandInfoList**
A list of additionalSpectrumEmission i.e. one for each additional frequency band included in multiBandInfoList in SystemInformationBlockType1, listed in the same order.

**ssac-BarringForMMTEL-Video**
Service specific access class barring for MMTEL video originating calls.

**ssac-BarringForMMTEL-Voice**
Service specific access class barring for MMTEL voice originating calls.

**ul-Bandwidth**
Parameter: transmission bandwidth configuration, NRB, in uplink, see TS 36.101 [42, table 5.6-1]. Value n6 corresponds to 6 resource blocks, n15 to 15 resource blocks and so on. If for FDD this parameter is absent, the uplink bandwidth is equal to the downlink bandwidth. For TDD this parameter is absent and it is equal to the downlink bandwidth.

**ul-CarrierFreq**
For FDD: If absent, the (default) value determined from the default TX-RX frequency separation defined in TS 36.101 [42, table 5.7.3-1] applies.
For TDD: This parameter is absent and it is equal to the downlink frequency.

### Conditional presence

]]
}

-- ASN1STOP
**SystemInformationBlockType3 field descriptions**

**allowedMeasBandwidth**
If absent, the value corresponding to the downlink bandwidth indicated by the `dl-Bandwidth` included in `MasterInformationBlock` applies.

**cellReselectionInfoCommon**
Cell re-selection information common for cells.

**cellReselectionServingFreqInfo**
Information common for Cell re-selection to inter-frequency and inter-RAT cells.

**intraFreqcellReselectionInfo**
Cell re-selection information common for intra-frequency cells.

**p-Max**
Value applicable for the intra-frequency neighbouring E-UTRA cells. If absent the UE applies the maximum power according to the UE capability.

**q-Hyst**
Parameter $Q_{hyst}$ in 36.304 [4]. Value in dB. Value dB1 corresponds to 1 dB, dB2 corresponds to 2 dB and so on.

**q-HystSF**
Parameter ‘Speed dependent ScalingFactor for $Q_{hyst}$’ in TS 36.304 [4]. The sf-Medium and sf-High concern the additional hysteresis to be applied, in Medium and High Mobility state respectively, to $Q_{hyst}$ as defined in TS 36.304 [4]. In dB. Value dB-6 corresponds to -6dB, dB-4 corresponds to -4dB and so on.

**q-QualMin**
Parameter ‘$Q_{qualmin}$’ in TS 36.304 [4], applicable for intra-frequency neighbour cells. If the field is not present, the UE applies the (default) value of negative infinity for $Q_{qualmin}$. NOTE 1.

**q-QualMinWB**
If this field is present and supported by the UE, the UE shall, when performing RSRQ measurements, use a wider bandwidth in accordance with TS 36.133 [16]. NOTE 1.

**q-RxLevMin**
Parameter ‘$Q_{rxlevmin}$’ in TS 36.304 [4], applicable for intra-frequency neighbour cells.

**s-IntraSearch**
Parameter ‘s-IntraSearchP’ in TS 36.304 [4]. If the field s-IntraSearchP is present, the UE applies the value of s-IntraSearchP instead. Otherwise if neither s-IntraSearch nor s-IntraSearchP is present, the UE applies the (default) value of infinity for s-IntraSearchP.

**s-IntraSearchQ**
Parameter ‘s-IntraSearchQ’ in TS 36.304 [4]. If the field is not present, the UE applies the (default) value of 0 dB for s-IntraSearchQ.

**s-NonIntraSearch**
Parameter ‘s-NonIntraSearchP’ in TS 36.304 [4]. If the field s-NonIntraSearchP is present, the UE applies the value of s-NonIntraSearchP instead. Otherwise if neither s-NonIntraSearch nor s-NonIntraSearchP is present, the UE applies the (default) value of infinity for s-NonIntraSearchP.

**s-NonIntraSearchQ**
Parameter ‘s-NonIntraSearchQ’ in TS 36.304 [4]. If the field is not present, the UE applies the (default) value of 0 dB for s-NonIntraSearchQ.

**speedStateReselectionPars**
Speed dependent reselection parameters, see TS 36.304 [4]. If this field is absent, i.e. `mobilityStateParameters` is also not present, UE behaviour is specified in TS 36.304 [4].

**threshServingLow**
Parameter ‘ThreshServing_LowP’ in TS 36.304 [4].

**threshServingLowQ**
Parameter ‘ThreshServing_LowQ’ in TS 36.304 [4].

**t-ReselectionEUTRA**
Parameter ‘tReselectionEUTRA’ in TS 36.304 [4].

**t-ReselectionEUTRA-SF**
Parameter ‘Speed dependent ScalingFactor for tReselectionEUTRA’ in TS 36.304 [4]. If the field is not present, the UE behaviour is specified in TS 36.304 [4].

**NOTE 1:** The value the UE applies for parameter ‘$Q_{qualmin}$’ in TS 36.304 [4] depends on the $q-QualMin$ fields signalled by E-UTRAN and supported by the UE. In case multiple candidate options are available, the UE shall select the highest priority candidate option according to the priority order indicated by the following table (top row is highest priority).
<table>

SystemInformationBlockType6 field descriptions

**carrierFreqListUTRA-FDD**
List of carrier frequencies of UTRA FDD. E-UTRAN does not configure more than one entry for the same physical frequency regardless of the ARFCN used to indicate this. If E-UTRAN includes `carrierFreqListUTRA-FDD-v8h0` it includes the same number of entries, and listed in the same order, as in `carrierFreqListUTRA-FDD` (i.e. without suffix). See Annex D for more descriptions.

**carrierFreqListUTRA-TDD**
List of carrier frequencies of UTRA TDD. E-UTRAN does not configure more than one entry for the same physical frequency regardless of the ARFCN used to indicate this.

**multiBandInfoList**
Indicates the list of frequency bands in addition to the band represented by `carrierFreq` in the `CarrierFreqUTRA-FDD` for which UTRA cell reselection parameters are common.

**p-MaxUTRA**
The maximum allowed transmission power on the (uplink) carrier frequency, see TS 25.304 [40]. In dBm

**q-QualMin**
Parameter ‘Q\textunderscore\subscript{qualmin}’ in TS 25.304 [40]. Actual value = IE value [dB].

**q-RxLevMin**
Parameter ‘Q\textunderscore\subscript{rxlevmin}’ in TS 25.304 [40]. Actual value = IE value * 2 + 1 [dBm].

**t-ReselectionUTRA**
Parameter ‘T\textunderscore\textsubscript{reselection}\textunderscore\textsubscript{UTRAN}’ in TS 36.304 [4].

**t-ReselectionUTRA-SF**
Parameter ‘Speed dependent ScalingFactor for T\textunderscore\textsubscript{reselection}\textunderscore\textsubscript{UTRAN}’ in TS 36.304 [4]. If the field is not present, the UE behaviour is specified in TS 36.304 [4].

**threshX-High**
Parameter ‘Thresh\textunderscore\textsubscript{X, HighP}’ in TS 36.304 [4].

**threshX-HighQ**
Parameter ‘Thresh\textunderscore\textsubscript{X, HighQ}’ in TS 36.304 [4].

**threshX-Low**
Parameter ‘Thresh\textunderscore\textsubscript{X, LowP}’ in TS 36.304 [4].

**threshX-LowQ**
Parameter ‘Thresh\textunderscore\textsubscript{X, LowQ}’ in TS 36.304 [4].

---

**SystemInformationBlockType7**

The IE `SystemInformationBlockType7` contains information relevant only for inter-RAT cell re-selection i.e. information about GERAN frequencies relevant for cell re-selection. The IE includes cell re-selection parameters for each frequency.

*SystemInformationBlockType7 field descriptions*

carrierFreqs
The list of GERAN carrier frequencies organised into one group of GERAN carrier frequencies.
carrierFreqsInfoList
Provides a list of neighbouring GERAN carrier frequencies, which may be monitored for neighbouring GERAN cells.
The GERAN carrier frequencies are organised in groups and the cell reselection parameters are provided per group of GERAN carrier frequencies.

commonInfo
Defines the set of cell reselection parameters for the group of GERAN carrier frequencies.
ncc-Permitted
Field encoded as a bit map, where bit N is set to "0" if a BCCH carrier with NCC = N-1 is not permitted for monitoring and set to "1" if the BCCH carrier with NCC = N-1 is permitted for monitoring; N = 1 to 8; bit 1 of the bitmap is the leading bit of the bit string.
p-MaxGERAN
Maximum allowed transmission power for GERAN on an uplink carrier frequency, see TS 45.008 [28]. Value in dBm. Applicable for the neighbouring GERAN cells on this carrier frequency. If pmaxGERAN is absent, the maximum power according to the UE capability is used.
q-RxLevMin
Parameter ‘Qrxlevmin’ in TS 36.304 [1], minimum required RX level in the GSM cell. The actual value of Qrxlevmin in dBm = (IE value * 2) – 115.
threshX-High
threshX-Low
Parameter ‘ThreshX, LowP’ in TS 36.304 [4].
t-ReselectionGERAN
Parameter ‘TreselectionGERAN’ in TS 36.304 [4].
t-ReselectionGERAN-SF
Parameter ‘Speed dependent ScalingFactor for TreselectionGERAN’ in TS 36.304 [4]. If the field is not present, the UE behaviour is specified in TS 36.304 [4].
The IE `SystemInformationBlockType8` contains information relevant only for inter-RAT cell re-selection i.e. information about CDMA2000 frequencies and CDMA2000 neighbouring cells relevant for cell re-selection. The IE includes cell re-selection parameters common for a frequency as well as cell specific re-selection parameters.

The SystemInformationBlockType8 field descriptions:

- **ac-BarringConfig1XRTT**: Contains the access class barring parameters the UE uses to calculate the access class barring factor, see C.S0097 [53].

- **ac-Barring0to9**: Parameter used for calculating the access class barring factor for access overload classes 0 through 9. It is the parameter 'PSIST' in C.S0004 [34] for access overload classes 0 through 9.

- **ac-BarringEmg**: Parameter used for calculating the access class barring factor for emergency calls and emergency message transmissions for access overload classes 0 through 9. It is the parameter 'PSIST_EMG' in C.S0004 [34].

- **ac-BarringMsg**: Parameter used for modifying the access class barring factor for message transmissions. It is the parameter 'MSG_PSIST' in C.S0004 [34].

- **ac-BarringN**: Parameter used for calculating the access class barring factor for access overload class N (N = 10 to 15). It is the parameter 'PSIST' in C.S0004 [34] for access overload class N.

- **ac-BarringReg**: Parameter used for modifying the access class barring factor for autonomous registrations. It is the parameter 'REG_PSIST' in C.S0004 [34].

- **bandClass**: Identifies the Frequency Band in which the Carrier can be found. Details can be found in C.S0057 [24, Table 1.5].

- **bandClassList**: List of CDMA2000 frequency bands.

- **cellReSelectionParameters1XRTT**: Cell reselection parameters applicable only to CDMA2000 1xRTT system.

- **cellReSelectionParameters1XRTT-Ext**: Cell reselection parameters applicable for cell reselection to CDMA2000 1XRTT system.

- **cellReSelectionParameters1XRTT-v920**: Cell reselection parameters applicable for cell reselection to CDMA2000 1XRTT system. The field is not present if cellReSelectionParameters1XRTT is not present; otherwise it is optionally present.

- **cellReSelectionParametersHRPD**: Cell reselection parameters applicable for cell reselection to CDMA2000 HRPD system.

- **cellReSelectionParametersHRPD-Ext**: Cell reselection parameters applicable for cell reselection to CDMA2000 HRPD system.

- **cellReSelectionParametersHRPD-v920**: Cell reselection parameters applicable for cell reselection to CDMA2000 HRPD system. The field is not present if cellReSelectionParametersHRPD is not present; otherwise it is optionally present.

<tr>
<td><strong>searchWindowSize</strong></td>
<td>The search window size is a CDMA2000 parameter to be used to assist in searching for the neighbouring pilots. For values see C.S0005 [25, Table 2.6.6.2.1-1] and C.S0024 [26, Table 8.7.6.2-4]. This field is required for a UE with rx-ConfigHRPD= single and/ or rx-Config1XRTT= single to perform handover, cell re-selection, UE measurement based redirection and enhanced 1xRTT CS fallback from E-UTRAN to CDMA2000 according to this specification and TS 36.304 [4].</td>
</tr>
<tr>
<td><strong>sib8-PerPLMN-List</strong></td>
<td>This field provides the values for the interworking CDMA2000 networks corresponding, if any, to the UE’s RPLMN.</td>
</tr>
</tbody>
</table>
SystemInformationBlockType8 field descriptions

_systemTimeInfo_
Information on CDMA2000 system time. This field is required for a UE with rx-ConfigHRPD= single and/or rx-Config1XRTT= single to perform handover, cell re-selection, UE measurement based redirection and enhanced 1xRTT CS fallback from E-UTRAN to CDMA2000 according to this specification and TS 36.304 [4]. This field is excluded when estimating changes in system information, i.e. changes of_systemTimeInfo_ should neither result in system information change notifications nor in a modification of_systemInfoValueTag_ in SIB1.

For the field included in_ParametersCDMA2000_, a choice is used to indicate whether for this PLMN the parameters are signalled explicitly or set to the (default) value common for all PLMNs i.e. the value not included in_sib8-PerPLMN-List_.

**threshX-High**
Parameter ‘ThreshX, Highp’ in TS 36.304 [4]. This specifies the high threshold used in reselection towards this CDMA2000 band class expressed as an unsigned binary number equal to FLOOR (-2 x 10 x log10 Ec/Io) in units of 0.5 dB, as defined in C.S0005 [25].

**threshX-Low**
Parameter ‘ThreshX, Lowp’ in TS 36.304 [4]. This specifies the low threshold used in reselection towards this CDMA2000 band class expressed as an unsigned binary number equal to FLOOR (-2 x 10 x log10 Ec/Io) in units of 0.5 dB, as defined in C.S0005 [25].

**I-ReselectionCDMA2000**
Parameter ‘TreselectionCDMA_HRPD’ or ‘TreselectionCDMA_1xRTT’ in TS 36.304 [4].

**I-ReselectionCDMA2000-SF**
Parameter ‘Speed dependent ScalingFactor for TreselectionCDMA_HRPD’ or ‘TreselectionCDMA_1xRTT’ in TS 36.304 [4]. If the field is not present, the UE behaviour is specified in TS 36.304 [4].

-- ASN1STOP

SystemInformationBlockType11 field descriptions

dataCodingScheme
Identifies the alphabet/coding and the language applied variations of an ETWS notification. The octet (which is equivalent to the octet of the equivalent IE defined in TS 36.413 [39, 9.2.1.52]) contains the octet of the equivalent IE defined in TS 23.041 [37, 9.4.2.2.4] and encoded according to TS 23.038 [38].

messageIdentifier
Identifies the source and type of ETWS notification. The leading bit (which is equivalent to the leading bit of the equivalent IE defined in TS 36.413 [39, 9.2.1.44]) contains bit 7 of the first octet of the equivalent IE, defined in and encoded according to TS 23.041 [37, 9.4.1.2.2], while the trailing bit contains bit 0 of second octet of the same equivalent IE.

serialNumber
Identifies variations of an ETWS notification. The leading bit (which is equivalent to the leading bit of the equivalent IE defined in TS 36.413 [39, 9.2.1.45]) contains bit 7 of the first octet of the equivalent IE, defined in and encoded according to TS 23.041 [37, 9.4.1.2.2], while the trailing bit contains bit 0 of second octet of the same equivalent IE.

warningMessageSegment
Carries a segment of the Warning Message Contents IE defined in TS 36.413 [39, 9.2.1.53]. The first octet of the Warning Message Contents IE is equivalent to the first octet of the CB data IE defined in and encoded according to TS 23.041 [37, 9.4.2.2.5] and so on.

warningMessageSegmentNumber
Segment number of the ETWS warning message segment contained in the SIB. A segment number of zero corresponds to the first segment, one corresponds to the second segment, and so on.

warningMessageSegmentType
Indicates whether the included ETWS warning message segment is the last segment or not.

```
MBMS-SAI-InterFreq-v1140 ::= SEQUENCE {
    multiBandInfoList-r11 MultiBandInfoList-r11 OPTIONAL -- Need OR
}

SystemInformationBlockType15 field descriptions

- **mbms-SAI-InterFreqList**
  - Contains a list of neighboring frequencies including additional bands, if any, that provide MBMS services and the corresponding MBMS SAIs.

- **mbms-SAI-IntraFreq**
  - Contains the list of MBMS SAIs for the current frequency. A duplicate MBMS SAI indicates that this and all following SAIs are not offered by this cell but only by neighbour cells on the current frequency. For MBMS service continuity, the UE shall use all MBMS SAIs listed in `mbms-SAI-IntraFreq` to derive the MBMS frequencies of interest.

- **mbms-SAI-List**
  - Contains a list of MBMS SAIs for a specific frequency.

- **multiBandInfoList**
  - A list of additional frequency bands applicable for the cells participating in the MBSFN transmission.

---

**SystemInformationBlockType16**

The IE `SystemInformationBlockType16` contains information related to GPS time and Coordinated Universal Time (UTC). The UE may use the parameters provided in this system information block to obtain the UTC, the GPS and the local time.

**NOTE:** The UE may use the time information for numerous purposes, possibly involving upper layers e.g. to assist GPS initialisation, to synchronise the UE clock (a.o. to determine MBMS session start/stop).

**SystemInformationBlockType16 information element**

SystemInformationBlockType16-r11 ::= SEQUENCE {
    timeInfo-r11 SEQUENCE {
        timeInfoUTC-r11 INTEGER (0..549755813887),
        dayLightSavingTime-r11 BIT STRING (SIZE (2)) OPTIONAL, -- Need OR
        leapSeconds-r11 INTEGER (-127..128) OPTIONAL, -- Need OR
        localTimeOffset-r11 INTEGER (-63..64) OPTIONAL -- Need OR
    } OPTIONAL, -- Need OR
    lateNonCriticalExtension OCTET STRING OPTIONAL,
}
dayLightSavingTime
It indicates if and how daylight saving time (DST) is applied to obtain the local time. The semantics is the same as the semantics of the Daylight Saving Time IE in TS 24.301 [35] and TS 24.008 [49]. The first/leftmost bit of the bit string contains the b2 of octet 3, i.e. the value part of the Daylight Saving Time IE, and the second bit of the bit string contains b1 of octet 3.

leapSeconds
Number of leap seconds offset between GPS Time and UTC. UTC and GPS time are related i.e. GPS time - leapSeconds = UTC time.

localTimeOffset
Offset between UTC and local time in units of 15 minutes. Actual value = IE value * 15 minutes. Local time of the day is calculated as UTC time + localTimeOffset.

timeInfoUTC
Coordinated Universal Time corresponding to the SFN boundary at or immediately after the ending boundary of the SI-window in which SystemInformationBlockType16 is transmitted. The field counts the number of UTC seconds in 10 ms units since 00:00:00 on Gregorian calendar date 1 January, 1900 (midnight between Sunday, December 31, 1899 and Monday, January 1, 1900), including leap seconds and other additions prior to 1972. NOTE 1. This field is excluded when estimating changes in system information, i.e. changes of timeInfoUTC should neither result in system information change notifications nor in a modification of systemInfoValueTag in SIB1.

NOTE 1: For the sake of the field definition, it is assumed UTC existed prior to 1 January 1972. As this field counts total elapsed time, conversion to calendar UTC time needs to allow for leap second and other calendar adjustments since 1 January 1900. For example, time 00:00 on 1 January 1972 UTC corresponds to a timeInfoUTC of 2,272,060,800 seconds.

6.3.2 Radio resource control information elements

– AntennaInfo
The IE AntennaInfoCommon and the AntennaInfoDedicated are used to specify the common and the UE specific antenna configuration respectively.

  ue-TransmitAntennaSelection  CHOICE{
    release       NULL,
    setup       ENUMERATED {closedLoop, openLoop}
  }
}
AntennaInfo field descriptions

antennaPortsCount
Parameter represents the number of cell specific antenna ports where an1 corresponds to 1, an2 to 2 antenna ports etc. see TS 36.211 [21, 6.2.1].

codebookSubsetRestriction
Parameter: codebookSubsetRestriction, see TS 36.213 [23, 7.2] and TS 36.211 [21, 6.3.4.2.3]. The number of bits in the codebookSubsetRestriction for applicable transmission modes is defined in TS 36.213 [23, Table 7.2-1b]. If the UE is configured with transmissionMode tm8, E-UTRAN configures the field codebookSubsetRestriction if PMI/RI reporting is configured. If the UE is configured with transmissionMode tm9, E-UTRAN configures the field codebookSubsetRestriction if PMI/RI reporting is configured and if the number of CSI-RS ports is greater than 1. E-UTRAN does not configure the field codebookSubsetRestriction in other cases where the UE is configured with transmissionMode tm8 or tm9.

transmissionMode
Points to one of Transmission modes defined in TS 36.213 [23, 7.1] where tm1 refers to transmission mode 1, tm2 to transmission mode 2 etc.

ue-TransmitAntennaSelection
For value setup the field indicates whether UE transmit antenna selection control is closed-loop or open-loop as described in TS 36.213 [23, 8.7]. EUTRAN configures the same value for all serving cells.

Conditional presence | Explanation
--- | ---
TM | The field is mandatory present if the transmissionMode is set to tm3, tm4, tm5 or tm6. Otherwise the field is not present and the UE shall delete any existing value for this field.
TM8 | The field is optional present, need OR, if AntennaInfoDedicated is included and transmissionMode is set to tm8. If AntennaInfoDedicated is included and transmissionMode is set to a value other than tm8, the field is not present and the UE shall delete any existing value for this field. Otherwise the field is not present.
TMX | The field is mandatory present if the transmissionMode-r10 is set to tm3, tm4, tm5 or tm6. The field is optionally present, need OR, if the transmissionMode-r10 is set to tm8 or tm9. Otherwise the field is not present and the UE shall delete any existing value for this field.

AntennaInfoUL
The IE AntennaInfoUL is used to specify the UL antenna configuration.

AntennaInfoUL information elements

-- ASN1START

AntennaInfoUL-r10 ::= SEQUENCE {
  transmissionModeUL-r10 ENUMERATED {tm1, tm2, spare6, spare5,
                                    spare4, spare3, spare2, spare1} OPTIONAL, -- Need OR
  fourAntennaPortActivated-r10 ENUMERATED {setup} OPTIONAL -- Need OR
}

-- ASN1STOP

-- ASN1STOP
CQI-ReportConfig field descriptions

aperiodicCSI-Trigger
Indicates for which serving cell(s) the aperiodic CSI report is triggered when one or more SCells are configured. trigger1 corresponds to the CSI request field 10 and trigger2 corresponds to the CSI request field 11, see TS 36.213 [23, table 7.2.1-1A]. The leftmost bit, bit 0 in the bit string corresponds to the cell with ServCellIndex=0 and bit 1 in the bit string corresponds to the cell with ServCellIndex=1 etc. Each bit has either value 0 (means no aperiodic CSI report is triggered) or value 1 (means the aperiodic CSI report is triggered). At most 5 bits can be set to value 1 in the bit string. E-UTRAN configures value 1 only for cells configured with transmissionMode set in range tm1 to tm9. One value applies for all serving cells configured with transmissionMode set in range tm1 to tm9 (the associated functionality is common i.e. not performed independently for each cell).

cqi-Mask
Limits CQI/PMI/PTI/RI reports to the on-duration period of the DRX cycle, see TS 36.321 [6]. One value applies for all CSI processes and all serving cells (the associated functionality is common i.e. not performed independently for each cell).

cqi-FormatIndicatorPeriodic
Parameter: PUCCH CQI Feedback Type, see TS 36.213 [23, table 7.2.2-1]. Depending on transmissionMode, reporting mode is implicitly given from the table.

cqi-pmi-ConfigIndex
Parameter: CQI/PMI Periodicity and Offset Configuration Index \( \Delta_{CQI,PMI} \), see TS 36.213 [23, tables 7.2.2-1A and 7.2.2-1C]. If subframe patterns for CSI (CQI/PMI/PTI/RI) reporting are configured (i.e. csi-SubframePatternConfig is configured), the parameter applies to the subframe pattern corresponding to csi-MeasSubframeSet1.

cqi-pmi-ConfigIndex2
Parameter: CQI/PMI Periodicity and Offset Configuration Index \( \Delta_{CQI,PMI} \), see TS 36.213 [23, tables 7.2.2-1A and 7.2.2-1C]. The parameter applies to the subframe pattern corresponding to csi-MeasSubframeSet2.

cqi-PUCCH-ResourceIndex, cqi-PUCCH-ResourceIndexP1
Parameter \( n_{PUCCH}^{(2,p)} \) for antenna port P0 and for antenna port P1 respectively, see TS 36.213 [23, 7.2]. E-UTRAN does not apply value 1185. One value applies for all CSI processes.

cqi-ReportAperiodic
E-UTRAN does not configure CQI-ReportAperiodic when transmission mode 10 is configured for all serving cells.

cqi-ReportModeAperiodic
Parameter: reporting mode. Value rm12 corresponds to Mode 1-2, rm20 corresponds to Mode 2-0, rm22 corresponds to Mode 2-2 etc. PUSCH reporting modes are described in TS 36.213 [23, 7.2.1]. The UE shall ignore cqi-ReportModeAperiodic when transmission mode 10 is configured for the serving cell on this carrier frequency.

CQI-ReportPeriodicProcExt
A set of periodic CQI related parameters for which E-UTRAN may configure different values for each CSI process. For a serving frequency E-UTRAN configures one or more CQI-ReportPeriodicProcExt only when transmission mode 10 is configured for the serving cell on this carrier frequency.

csi-ConfigIndex
E-UTRAN configures csi-ConfigIndex only for PCell and only if csi-SubframePatternConfig is configured. The UE shall release csi-ConfigIndex if csi-SubframePatternConfig is released.

csi-IM-ConfigToAddModList
For a serving frequency E-UTRAN configures one or more CSI-IM-Config only when transmission mode 10 is configured for the serving cell on this carrier frequency.

csi-MeasSubframeSet1, csi-MeasSubframeSet2
Indicates the CSI measurement subframe sets. csi-MeasSubframeSet1 refers to \( C_{CSI,0} \) in TS 36.213 [23, 7.2] and csi-MeasSubframeSet2 refers to \( C_{CSI,1} \) in TS 36.213 [23, 7.2].

csi-ProcessToAddModList
For a serving frequency E-UTRAN configures one or more CSI-Process only when transmission mode 10 is configured for the serving cell on this carrier frequency.

csi-ReportMode
Parameter: PUCCH_format1-1_CSI_reporting_mode, see TS 36.213 [23, 7.2.2].

\( K \)
Parameter: K, see TS 36.213 [23, 7.2.2].

nomPDSCH-RS-EPRE-Offset
Parameter: \( \Delta_{offset} \), see TS 36.213 [23, 7.2.3]. Actual value = IE value * 2 [dB].

periodicityFactor
Parameter: \( R \), see TS 36.213 [23, 7.2.2].

pmi-RI-Report
See TS 36.213 [23, 7.2]. The presence of this field means PMI/RI reporting is configured; otherwise the PMI/RI reporting is not configured. EUTRAN configures this field only when transmissionMode is set to tm8, tm9 or tm10. The UE shall ignore pmi-RI-Report-r9, pmi-RI-Report-r10 when transmission mode 10 is configured for the serving cell on this carrier frequency.

ri-ConfigIndex
Parameter: RI Config Index \( I_{RI} \), see TS 36.213 [23, 7.2.2-1B]. If subframe patterns for CSI (CQI/PMI/PTI/RI) reporting are configured (i.e. csi-SubframePatternConfig is configured), the parameter applies to the subframe pattern corresponding to csi-MeasSubframeSet1.
### CQI-ReportConfig field descriptions

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ri-ConfigIndex2</td>
<td>Parameter: RI Config Index <code>I_{ri}</code>, see TS 36.213 [23, 7.2.2.18]. The parameter applies to the subframe pattern corresponding to <code>csi-MeasSubframeSet2</code>. E-UTRAN configures <code>ri-ConfigIndex2</code> only if <code>ri-ConfigIndex</code> is configured.</td>
</tr>
<tr>
<td>ri-Ref-CSI-ProcessId</td>
<td>CSI process whose RI value the UE inherits when reporting RI, in the same subframe, for CSI reporting. E-UTRAN ensures that the CSI process that inherits the RI value is configured in accordance with the conditions specified in 36.213 [23, 7.2.1, 7.2.2].</td>
</tr>
<tr>
<td>simultaneousAckNackAndCQI</td>
<td>Parameter: Simultaneous-AN-and-CQI. see TS 36.213 [23, 10.1] TRUE indicates that simultaneous transmission of ACK/NACK and CQI is allowed. One value applies for all CSI processes. For SCells this field is not applicable and the UE shall ignore the value.</td>
</tr>
<tr>
<td>simultaneousAckNackAndCQI-Format3</td>
<td>Indicates that the UE shall perform simultaneous transmission of HARQ A/N and periodic CQI report multiplexing on PUCCH format 3, see TS 36.213 [23, 7.2, 10.1.1]. E-UTRAN configures this information only when <code>pucch-Format</code> is set to <code>format3</code>. One value applies for all CSI processes. For SCells this field is not applicable and the UE shall ignore the value.</td>
</tr>
<tr>
<td>trigger01</td>
<td>Indicates whether or not reporting for this CSI-process is triggered by CSI request field set to 01, for a CSI request applicable for the serving cell on the same frequency as the CSI process, see TS 36.213 [23, table 7.2.1-1B].</td>
</tr>
<tr>
<td>trigger10, trigger11</td>
<td>Indicates whether or not reporting for this CSI-process is triggered by CSI request field set to 10 or 11, see TS 36.213 [23, table 7.2.1-1B]. EUTRAN configures at most 5 CSI processes, across all serving frequencies, to be triggered by a CSI request field set to value 10. The same restriction applies for value 11.</td>
</tr>
</tbody>

        } OPTIONAL, -- Need OR
        ...
    }
}

-- ASN1STOP

CSI-RS-ConfigNZP field descriptions

antennaPortsCount Parameter represents the number of antenna ports used for transmission of CSI reference signals where an1 corresponds to 1, an2 to 2 antenna ports etc. see TS 36.211 [21, 6.10.5].

qcl-CRS-Info Indicates CRS antenna ports that is quasi co-located with the CSI-RS antenna ports, see TS 36.213 [23, 7.2.5]. EUTRAN configures this field if and only if the UE is configured with qcl-Operation set to typeB.

resourceConfig Parameter: CSI reference signal configuration, see TS 36.211 [21, table 6.10.5.2-1 and 6.10.5.2-2].

subframeConfig Parameter: \( I_{CSI-RS} \), see TS 36.211 [21, table 6.10.5.3-1].

scramblingIdentity Parameter: Pseudo-random sequence generator parameter, \( n_{ID} \), see TS 36.213 [23, 7.2.5].
CSI-RS-ConfigNZPId

The IE CSI-RS-ConfigNZPId is used to identify a CSI-RS resource configuration using non-zero transmission power, as configured by the IE CSI-RS-ConfigNZP. The identity is unique within the scope of a carrier frequency.

**CSI-RS-ConfigNZPId information elements**

```asn1
CSI-RS-ConfigNZPId-r11 ::= INTEGER (1..maxCSI-RS-NZP-r11)
```

CSI-RS-ConfigZP

The IE CSI-RS-ConfigZP is the CSI-RS resource configuration, for which UE assumes zero transmission power, that E-UTRAN may configure on a serving frequency.

**CSI-RS-ConfigZP information elements**

```asn1
CSI-RS-ConfigZP-r11 ::= SEQUENCE {
      csi-RS-ConfigZPId-r11  CSI-RS-ConfigZPId-r11,
      resourceConfigList-r11  BIT STRING (SIZE (16)),
      subframeConfig-r11     INTEGER (0..154),
      ...
    }
```

LogicalChannelConfig field descriptions

bucketSizeDuration
Bucket Size Duration for logical channel prioritization in TS 36.321 [6]. Value in milliseconds. Value ms50 corresponds to 50 ms, ms100 corresponds to 100 ms and so on.

logicalChannelGroup
Mapping of logical channel to logical channel group for BSR reporting in TS 36.321 [6].

logicalChannelSR-Mask
Controlling SR triggering on a logical channel basis when an uplink grant is configured. See TS 36.321 [6].

prioritisedBitRate
Prioritized Bit Rate for logical channel prioritization in TS 36.321 [6]. Value in kilobytes/second. Value kBps0 corresponds to 0 kB/second, kBps8 corresponds to 8 kB/second, kBps16 corresponds to 16 kB/second and so on. Infinity is the only applicable value for SRB1 and SRB2

priority
Logical channel priority in TS 36.321 [6]. Value is an integer.

### MAC-MainConfig field descriptions

**dl-PathlossChange**
DL Pathloss Change and the change of the required power backoff due to power management (as allowed by P-MPRc [42]) for PHR reporting in TS 36.321 [6]. Value in dB. Value dB1 corresponds to 1 dB, dB3 corresponds to 3 dB and so on. The same value applies for each serving cell (although the associated functionality is performed independently for each cell).

**drx-Config**
Used to configure DRX as specified in TS 36.321 [6]. E-UTRAN configures the values in `DRX-Config-v1130` only if the UE indicates support for IDC indication. E-UTRAN configures `drx-Config-v1130` only if `drx-Config` (without suffix) is configured.

**drx-InactivityTimer**
Timer for DRX in TS 36.321 [6], Value in number of PDCCH sub-frames. Value psf1 corresponds to 1 PDCCH sub-frame, psf2 corresponds to 2 PDCCH sub-frames and so on.

**drx-RetransmissionTimer**
Timer for DRX in TS 36.321 [6], Value in number of PDCCH sub-frames. Value psf1 corresponds to 1 PDCCH sub-frame, psf2 corresponds to 2 PDCCH sub-frames and so on. In case `drx-RetransmissionTimer-v1130` is signalled, the UE shall ignore `drx-RetransmissionTimer` (i.e. without suffix).

**drxShortCycleTimer**
Timer for DRX in TS 36.321 [6], Value in multiples of shortDRX-Cycle. A value of 1 corresponds to shortDRX-Cycle, a value of 2 corresponds to 2 * shortDRX-Cycle and so on.

**extendedBSR-Sizes**
If value `setup` is configured, the BSR index indicates extended BSR size levels as defined in TS 36.321 [6, Table 6.1.3.1-2].

**extendedPHR**
Indicates if power headroom shall be reported using the Extended Power Headroom Report MAC control element defined in TS 36.321 [6] (value `setup`). Otherwise the power headroom shall be reported using the Power Headroom Report MAC control element defined in TS 36.321 [6]. E-UTRAN always configures the value `setup` if more than one Serving Cell with uplink is configured. E-UTRAN configures `extendedPHR` only if `phr-Config` is configured. The UE shall release `extendedPHR` if `phr-Config` is released.

**longDRX-CycleStartOffset**
`longDRX-Cycle` and `drxStartOffset` in TS 36.321 [6]. The value of `longDRX-Cycle` is in number of sub-frames. Value sf10 corresponds to 10 sub-frames, sf20 corresponds to 20 sub-frames and so on. If `shortDRX-Cycle` is configured, the value of `longDRX-Cycle` shall be a multiple of the `shortDRX-Cycle` value. The value of `drxStartOffset` value is in number of sub-frames. In case `longDRX-CycleStartOffset-v1130` is signalled, the UE shall ignore `longDRX-CycleStartOffset` (i.e. without suffix).

**maxHARQ-Tx**
Maximum number of transmissions for UL HARQ in TS 36.321 [6].

**onDurationTimer**
Timer for DRX in TS 36.321 [6], Value in number of PDCCH sub-frames. Value psf1 corresponds to 1 PDCCH sub-frame, psf2 corresponds to 2 PDCCH sub-frames and so on.

**periodicBSR-Timer**
Timer for BSR reporting in TS 36.321 [6], Value in number of sub-frames. Value sf10 corresponds to 10 sub-frames, sf20 corresponds to 20 sub-frames and so on.

**periodicPHR-Timer**
Timer for PHR reporting in TS 36.321 [6], Value in number of sub-frames. Value sf10 corresponds to 10 sub-frames, sf20 corresponds to 20 sub-frames and so on.

**prohibitPHR-Timer**
Timer for PHR reporting in TS 36.321 [6], Value in number of sub-frames. Value sf0 corresponds to 0 sub-frames, sf100 corresponds to 100 subframes and so on.

**retxBSR-Timer**
Timer for BSR reporting in TS 36.321 [6], Value in number of sub-frames. Value sf640 corresponds to 640 sub-frames, sf1280 corresponds to 1280 sub-frames and so on.

**sCellDeactivationTimer**
SCell deactivation timer in TS 36.321 [6], Value in number of radio frames. Value rf4 corresponds to 4 radio frames, rf8 corresponds to 8 radio frames and so on. E-UTRAN only configures the field if the UE is configured with one or more SCells. If the field is absent, the UE shall delete any existing value for this field and assume the value to be set to `infinity`. The same value applies for each SCell (although the associated functionality is performed independently for each SCell).

**shortDRX-Cycle**
Short DRX cycle in TS 36.321 [6], Value in number of sub-frames. Value sf2 corresponds to 2 sub-frames, sf5 corresponds to 5 subframes and so on. In case `shortDRX-Cycle-v1130` is signalled, the UE shall ignore `shortDRX-Cycle` (i.e. without suffix).

**sr-ProhibitTimer**
Timer for SR transmission on PUCCH in TS 36.321 [6], Value in number of SR period(s). Value 0 means no timer for SR transmission on PUCCH is configured. Value 1 corresponds to one SR period, Value 2 corresponds to 2*SR periods and so on. SR period is defined in TS 36.213 [23, table 10.1.5-1].
### PDCP-Config

The IE **PDCP-Config** is used to set the configurable PDCP parameters for data radio bearers.

---

**PDCP-Config information element**

```asn1
PDCP-Config ::= SEQUENCE {
  discardTimer ENUMERATED {
    ms50, ms100, ms150, ms300, ms500,
    ms750, ms1500, infinity
  } OPTIONAL, -- Cond Setup
  rlc-AM SEQUENCE {
    statusReportRequired BOOLEAN
  } OPTIONAL, -- Cond Rlc-AM
  rlc-UM SEQUENCE {
    pdcp-SN-Size ENUMERATED {len7bits, len12bits}
  } OPTIONAL, -- Cond Rlc-UM
  headerCompression CHOICE {
    notUsed NULL,
    rohc SEQUENCE {
      maxCID INTEGER (1..16383) DEFAULT 15,
      profiles SEQUENCE {
        profile0x0001 BOOLEAN,
        profile0x0002 BOOLEAN,
        profile0x0003 BOOLEAN,
        profile0x0004 BOOLEAN,
        profile0x0006 BOOLEAN,
      }
    }
  }
}
```
PDCP-Config field descriptions

discardTimer
Indicates the discard timer value specified in TS 36.323 [8]. Value in milliseconds. Value ms50 means 50 ms, ms100 means 100 ms and so on.

maxCID
Indicates the value of the MAX_CID parameter as specified in TS 36.323 [8]. The total value of MAX_CIDs across all bearers for the UE should be less than or equal to the value of maxNumberROHC-ContextSessions parameter as indicated by the UE.

pdcp-SN-Size
Indicates the PDCP Sequence Number length in bits. For RLC UM: value len7bits means that the 7-bit PDCP SN format is used and len12bits means that the 12-bit PDCP SN format is used. For RLC AM: value len15bits means that the 15-bit PDCP SN format is used, otherwise if the field is not included upon setup of the PCDP entity 12-bit PDCP SN format is used, as specified in TS 36.323 [8].

profiles
The profiles used by both compressor and decompressor in both UE and E-UTRAN. The field indicates which of the ROHC profiles specified in TS 36.323 [8] are supported, i.e. value true indicates that the profile is supported. Profile 0x0000 shall always be supported when the use of ROHC is configured. If support of two ROHC profile identifiers with the same 8 LSB’s is signalled, only the profile corresponding to the highest value shall be applied.

rn-IntegrityProtection
Indicates that integrity protection or verification shall be applied for all subsequent packets received and sent by the RN on the DRB.

statusReportRequired
Indicates whether or not the UE shall send a PDCP Status Report upon re-establishment of the PDCP entity as specified in TS 36.323 [8].
### Conditional presence

<table>
<thead>
<tr>
<th></th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Rlc-AM</strong></td>

}

-- ASN1STOP
PDSCH-Config field descriptions

optionalSetOfFields
If absent, the UE releases the configuration provided previously, if any, and applies the values from the serving cell configured on the same frequency.

p-a
Parameter: \( P_a \), see TS 36.213 [23, 5.2]. Value dB-6 corresponds to -6 dB, dB-4.77 corresponds to -4.77 dB etc.

p-b
Parameter: \( P_b \), see TS 36.213 [23, Table 5.2-1].

pdsch-Start
The starting OFDM symbol of PDSCH for the concerned serving cell, see TS 36.213 [23, 7.1.6.4]. Values 1, 2, 3 are applicable when \( dl-Bandwidth \) for the concerned serving cell is greater than 10 resource blocks, values 2, 3, 4 are applicable when \( dl-Bandwidth \) for the concerned serving cell is less than or equal to 10 resource blocks, see TS 36.211 [21, Table 6.7-1]. Value \( n1 \) corresponds to 1, value \( n2 \) corresponds to 2 and so on.

qcl-CSI-RS-ConfigNZPId
Indicates the CSI-RS resource that is quasi co-located with the PDSCH antenna ports, see TS 36.213 [23, 7.1.9]. E-UTRAN configures this field if and only if the UE is configured with \texttt{qcl-Operation} set to \texttt{typeB}.

qcl-Operation
Indicates the quasi co-location behaviour to be used by the UE, type A and type B, as described in TS 36.213 [23, 7.1.10].

referenceSignalPower
Parameter: Reference-signal power, which provides the downlink reference-signal EPRE, see TS 36.213 [23, 5.2]. The actual value in dBm.

re-MappingQCLConfigToAddModList, re-MappingQCLConfigToReleaseList
For a serving frequency E-UTRAN configures at least one \texttt{PDSCH-RE-MappingQCL-Config} when transmission mode 10 is configured for the serving cell on this carrier frequency. Otherwise it does not configure this IE.

– PDSCH-RE-MappingQCL-ConfigId

The IE \texttt{PDSCH-RE-MappingQCL-ConfigId} is used to identify a set of PDSCH parameters related to resource element mapping and quasi co-location, as configured by the IE \texttt{PDSCH-RE-MappingQCL-Config}. The identity is unique within the scope of a carrier frequency.

\texttt{PDSCH-RE-MappingQCL-ConfigId} information elements

-- ASN1START

PDSCH-RE-MappingQCL-ConfigId-r11 ::= INTEGER {1..maxRE-MapQCL-r11}

-- ASN1STOP

– PHICH-Config

The IE \texttt{PHICH-Config} is used to specify the PHICH configuration.

\texttt{PHICH-Config} information element

-- ASN1START

PHICH-Config ::= SEQUENCE {
  phich-Duration ENUMERATED {normal, extended},
  phich-Resource ENUMERATED {oneSixth, half, one, two}
}

-- ASN1STOP
PHICH-Config field descriptions

**PHICH-Duration**
Parameter: PHICH-Duration, see TS 36.211 [21, Table 6.9.3-1].

**PHICH-Resource**
Parameter: Ng, see TS 36.211 [21, 6.9]. Value oneSixth corresponds to 1/6, half corresponds to 1/2 and so on.

---

PhysicalConfigDedicated

The IE PhysicalConfigDedicated is used to specify the UE specific physical channel configuration.

**PhysicalConfigDedicated information element**

**PhysicalConfigDedicated field descriptions**

---

**additionalSpectrumEmissionPCell**
The UE requirements related to IE "AdditionalSpectrumEmissionPCell" are defined in TS 36.101 [42]. EUTRAN does not configure "AdditionalSpectrumEmissionPCell" if there are no other serving cells configured. E-UTRAN does not configure the field in case of contiguous intra-band carrier aggregation.

**antennaInfo**
A choice is used to indicate whether the "antennaInfo" is signalled explicitly or set to the default antenna configuration as specified in section 9.2.4.

**csi-RS-Config**
For a serving frequency E-UTRAN does not configure "csi-RS-Config" (includes zeroTxPowerCSI-RS) when transmission mode 10 is configured for the serving cell on this carrier frequency.

**csi-RS-ConfigNZPToAddModList**
For a serving frequency E-UTRAN configures one or more CSI-RS-ConfigNZP only when transmission mode 10 is configured for the serving cell on this carrier frequency. EUTRAN configures a maximum of one CSI-RS-ConfigNZP for a serving frequency on which the UE supports only one CSI process (i.e., supportedCSI-Proc is indicated as n1).

**csi-RS-ConfigZPToAddModList**
For a serving frequency E-UTRAN configures one or more CSI-RS-ConfigZP only when transmission mode 10 is configured for the serving cell on this carrier frequency.

**epdcch-Config**
indicates the EPDCCH-Config for the cell. E-UTRAN does not configure EPDCCH-Config for an SCell that is configured with value other for schedulingCellInfo in CrossCarrierSchedulingConfig.

**pdsch-ConfigDedicated-v1130**
For a serving frequency E-UTRAN configures pdsch-ConfigDedicated-v1130 only when transmission mode 10 is configured for the serving cell on this carrier frequency.

**tpc-PDCCH-ConfigPUCCH**
PDCCH configuration for power control of PUCCH using format 3/3A, see TS 36.212 [22].

**tpc-PDCCH-ConfigPUSCH**
PDCCH configuration for power control of PUSCH using format 3/3A, see TS 36.212 [22].

**uplinkPowerControlDedicated**
E-UTRAN configures uplinkPowerControlDedicated-v1130 only if uplinkPowerControlDedicated (without suffix) is configured.

**uplinkPowerControlDedicatedSCell**
E-UTRAN configures uplinkPowerControlDedicatedSCell-v1130 only if uplinkPowerControlDedicatedSCell-r10 is configured for this serving cell.
### Conditional presence

<table>
<thead>
<tr>
<th>Presence</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>AI-r8</strong></td>
<td>The field is optionally present, need ON, if <code>antennaInfoDedicated-r10</code> is absent. Otherwise the field is not present</td>
</tr>
<tr>
<td><strong>AI-r10</strong></td>
<td>The field is optionally present, need ON, if <code>antennaInfoDedicated</code> is absent. Otherwise the field is not present</td>

<tr>
<td><strong>CommonUL</strong></td>
<td>The field is mandatory present if <code>ul-Configuration of RadioResourceConfigCommonSCell-r10</code> is present; otherwise it is optional, need ON.</td>
</tr>
<tr>
<td><strong>CQI-r8</strong></td>
<td>The field is optionally present, need ON, if <code>cqi-ReportConfig-r10</code> is absent. Otherwise the field is not present</td>
</tr>
<tr>
<td><strong>CQI-r10</strong></td>
<td>The field is optionally present, need ON, if <code>cqi-ReportConfig</code> is absent. Otherwise the field is not present</td>
</tr>
<tr>
<td><strong>SCellAdd</strong></td>
<td>The field is mandatory present if <code>cellIdentification</code> is present; otherwise it is optional, need ON.</td>
</tr>
</tbody>
</table>

**NOTE 1:** During handover, the UE performs a MAC reset, which involves reverting to the default CQI/ SRS/ SR configuration in accordance with subclause 5.3.13 and TS 36.321 [6, 5.9 & 5.2]. Hence, for these parts of the dedicated radio resource configuration, the default configuration (rather than the configuration used in the source PCell) is used as the basis for the delta signalling that is included in the message used to perform handover.

**NOTE 2:** Since delta signalling is not supported for the common SCell configuration, E-UTRAN can only add or release the uplink of an SCell by releasing and adding the concerned SCell.

---

### P-Max

The IE `P-Max` is used to limit the UE's uplink transmission power on a carrier frequency and is used to calculate the parameter `Pcompensation` defined in TS 36.304 [4]. Corresponds to parameter `P_{E_{MAX}}` or `P_{E_{MAX,c}}` in TS 36.101 [42]. The UE transmit power on one serving cell shall not exceed the configured maximum UE output power of the serving cell determined by this value as specified in TS 36.101 [42, 6.2.5 or 6.2.5A].

**P-Max information element**

```asn1
P-Max ::= INTEGER (-30..33)
```

---

### PRACH-Config

The IE `PRACH-ConfigSIB` and IE `PRACH-Config` are used to specify the PRACH configuration in the system information and in the mobility control information, respectively.

**PRACH-Config information elements**

```asn1
PRACH-ConfigSIB ::= SEQUENCE {
  rootSequenceIndex          INTEGER (0..837),
  prach-ConfigInfo           PRACH-ConfigInfo
}
```
PRACH-Config ::= SEQUENCE {
  rootSequenceIndex     INTEGER (0..837),
  prach-ConfigInfo     PRACH-ConfigInfo     OPTIONAL -- Need ON
}

PRACH-ConfigSCell-r10 ::= SEQUENCE {
  prach-ConfigIndex-r10     INTEGER (0..63)
}

PRACH-ConfigInfo ::= SEQUENCE {
  prach-ConfigIndex     INTEGER (0..63),
  highSpeedFlag      BOOLEAN,
  zeroCorrelationZoneConfig   INTEGER (0..15),
  prach-FreqOffset     INTEGER (0..94)
}

-- ASN1STOP

**PRACH-Config field descriptions**

<table>

    }
}

N1PUCCH-AN-CS-r10 ::= SEQUENCE (SIZE (1..4)) OF INTEGER (0..2047)
**PUCCH-Config field descriptions**

**ackNackRepetition**
Parameter indicates whether ACK/NACK repetition is configured, see TS 36.213 [23, 10.1].

**deltaPUCCH-Shift**
Parameter: \( \Delta_{\text{shift}}^{\text{PUCCH}} \), see 36.211 [21, 5.4.1], where \( \Delta_{\text{shift}} \) corresponds to value 1 \( \Delta_{\text{shift}} \) to 2 etc.

**n1PUCCH-AN**
Parameter: \( N_{\text{PUCCH}}^{(1)} \), see TS 36.213 [23, 10.1].

**n1PUCCH-AN-r11** indicates UE-specific PUCCH AN resource offset, see TS 36.213 [23, 10.1].

**n1PUCCH-AN-CS-List**
Parameter: \( n_{\text{PUCCH}}^{(1)} \) for antenna port \( p_0 \) for PUCCH format 1b with channel selection, see TS 36.213 [23, 10.1.2.2.1, 10.1.3.2.1].

**n1PUCCH-AN-CS-ListP1**
Parameter: \( n_{\text{PUCCH}}^{(1,p)} \) for antenna port \( p_1 \) for PUCCH format 1b with channel selection, see TS 36.213 [23, 10.1]. E-UTRAN configures this field only when \( \text{pucch-Format} \) is set to \( \text{channelSelection} \).

**n1PUCCH-AN-Rep**
Parameter: \( n_{\text{PUCCH,ANRep}}^{(1,p)} \) for antenna port \( P_0 \) and for antenna port \( P_1 \) respectively, see TS 36.213 [23, 10.1].

**n3PUCCH-AN-List**
Parameter: \( n_{\text{PUCCH}}^{(3,p)} \) for antenna port \( P_0 \) and for antenna port \( P_1 \) respectively, see TS 36.213 [23, 10.1].

**nCS-An**
Parameter: \( N_{\text{cs}}^{(1)} \) see TS 36.211 [21, 5.4].

**nPUCCH-Identity**
Parameter: \( n_{\text{ID}}^{\text{PUCCH}} \), see TS 36.211 [21, 5.5.1.5].

**nRB-CQI**
Parameter: \( N_{\text{RI}}^{(2)} \), see TS 36.211 [21, 5.4].

**pucch-Format**
Parameter indicates one of the PUCCH formats for transmission of HARQ-ACK, see TS 36.213 [23, 10.1]. For TDD, if the UE is configured with PCell only, the \( \text{channelSelection} \) indicates the transmission of HARQ-ACK multiplexing as defined in Tables 10.1.3-5, 10.1.3-6, and 10.1.3-7 in TS 36.213 [23] for PUCCH, and in 7.3 in TS 36.213 [23] for PUSCH.

**repetitionFactor**
Parameter \( N_{\text{ANRep}}^{(2)} \), see TS 36.213 [23, 10.1] where \( n_2 \) corresponds to repetition factor 2, \( n_4 \) to 4.

**simultaneousPUCCH-PUSCH**
Parameter indicates whether simultaneous PUCCH and PUSCH transmissions is configured, see TS 36.213 [23, 10.1 and 5.1.1]. E-UTRAN configures this field, only when the \( \text{nonContiguousUL-RA-WithinCC-Info} \) is set to \( \text{supported} \) in the band on which PCell is configured.

**tdd-AckNackFeedbackMode**
Parameter indicates one of the TDD ACK/NACK feedback modes used, see TS 36.213 [23, 7.3 and 10.1.3]. The value bundling corresponds to use of ACK/NACK bundling whereas, the value multiplexing corresponds to ACK/NACK multiplexing as defined in Tables 10.1.3-2, 10.1.3-3, and 10.1.3-4 in TS 36.213 [23]. The same value applies to both ACK/NACK feedback modes on PUCCH as well as on PUSCH.

**twoAntennaPortActivatedPUCCH-Format1a1b**
Indicates whether two antenna ports are configured for PUCCH format 1a/1b for HARQ-ACK, see TS 36.213 [23, 10.1]. The field also applies for PUCCH format 1a/1b transmission when \( \text{format3} \) is configured, see TS 36.213 [23, 10.1.2.2.2, 10.1.3.2.2].

**twoAntennaPortActivatedPUCCH-Format3**
Indicates whether two antenna ports are configured for PUCCH format 3 for HARQ-ACK, see TS 36.213 [23, 10.1].

<table>

### RadioResourceConfigCommon field descriptions

<table>
<thead>
<tr>
<th>Field Description</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>additionalSpectrumEmissionSCell</td>
<td>The UE requirements related to IE <code>additionalSpectrumEmissionSCell</code> are defined in TS 36.101 [42].</td>
</tr>
<tr>
<td>defaultPagingCycle</td>
<td>Default paging cycle, used to derive &quot;T&quot; in TS 36.304 [4]. Value rf32 corresponds to 32 radio frames, rf64 corresponds to 64 radio frames and so on.</td>
</tr>
<tr>
<td>modificationPeriodCoeff</td>
<td>Actual modification period, expressed in number of radio frames = ( \text{modificationPeriodCoeff} \times \text{defaultPagingCycle} ). Value n2 corresponds to value 2, n4 corresponds to value 4, n8 corresponds to value 8, and n16 corresponds to value 16.</td>
</tr>
<tr>
<td>nB</td>
<td>Parameter: nB is used as one of parameters to derive the Paging Frame and Paging Occasion according to TS 36.304 [4]. Value in multiples of 'T' as defined in TS 36.304 [4]. A value of fourT corresponds to 4 ( \times T ), a value of twoT corresponds to 2 ( \times T ) and so on.</td>
</tr>
<tr>
<td>p-Max</td>
<td>Pmax to be used in the target cell. If absent the UE applies the maximum power according to the UE capability.</td>
</tr>
<tr>
<td>ul-Bandwidth</td>
<td>Parameter: transmission bandwidth configuration, ( N_{RB} ), in uplink, see TS 36.101 [42, table 5.6-1]. Value n6 corresponds to 6 resource blocks, n15 to 15 resource blocks and so on. If for FDD this parameter is absent, the uplink bandwidth is equal to the downlink bandwidth. For TDD this parameter is absent and it is equal to the downlink bandwidth.</td>
</tr>
<tr>
<td>ul-CarrierFreq</td>
<td>For FDD: If absent, the (default) value determined from the default TX-RX frequency separation defined in TS 36.101 [42, table 5.7.3-1] applies. For TDD: This parameter is absent and it is equal to the downlink frequency.</td>
</tr>
<tr>
<td>UL-CyclicPrefixLength</td>
<td>Parameter: Uplink cyclic prefix length see 36.211 [21, 5.2.1] where len1 corresponds to normal cyclic prefix and len2 corresponds to extended cyclic prefix.</td>
</tr>
</tbody>
</table>
Conditional presence | Explanation
--- | ---
TDD | The field is optional for TDD, Need ON; it is not present for FDD and the UE shall delete any existing value for this field.
TDD2 | If tdd-Config-r10 is present, the field is optional, Need OR. Otherwise the field is not present and the UE shall delete any existing value for this field.
TDD3 | If tdd-Config is present, the field is optional, Need OR. Otherwise the field is not present and the UE shall delete any existing value for this field.
TDD-OR-NoR11 | If prach-ConfigSCell-r11 is absent, the field is optional for TDD, Need OR. Otherwise the field is not present and the UE shall delete any existing value for this field.
TDDSCell | This field is mandatory present for TDD; it is not present for FDD and the UE shall delete any existing value for this field.
UL | If the SCell is part of the STAG and if ul-Configuration is included, the field is optional, Need OR. Otherwise the field is not present and the UE shall delete any existing value for this field.

-- ASN1STOP
RadioResourceConfigDedicated field descriptions

**logicalChannelConfig**
For SRBs a choice is used to indicate whether the logical channel configuration is signalled explicitly or set to the default logical channel configuration for SRB1 as specified in 9.2.1.1 or for SRB2 as specified in 9.2.1.2.

**logicalChannelIdentity**
The logical channel identity for both UL and DL.

**mac-MainConfig**
Although the ASN.1 includes a choice that is used to indicate whether the mac-MainConfig is signalled explicitly or set to the default MAC main configuration as specified in 9.2.2, EUTRAN does not apply "defaultValue".

**measSubframePatternPCell**
Time domain measurement resource restriction pattern for the PCell measurements (RSRP, RSRQ and the radio link monitoring).

**neighCellsCRS-Info**
This field contains assistance information, concerning the primary frequency, used by the UE to mitigate interference from CRS while performing RRM/RLM/CSI measurement or data demodulation. When the received CRS assistance information is for a cell with CRS colliding with that of the CRS of the cell to measure, the UE may use the CRS assistance information to mitigate CRS interference (as specified in TS 36.101 [42]) on the subframes indicated by measSubframePatternPCell, measSubframePatternConfigNeigh and csi-MeasSubframeSet1. Furthermore, the UE may use CRS assistance information to mitigate CRS interference from the cells in the IE for the demodulation purpose as specified in TS 36.101 [42].

**physicalConfigDedicated**
The default dedicated physical configuration is specified in 9.2.4.

**rlc-Config**
For SRBs a choice is used to indicate whether the RLC configuration is signalled explicitly or set to the values defined in the default RLC configuration for SRB1 in 9.2.1.1 or for SRB2 in 9.2.1.2. RLC AM is the only applicable RLC mode for SRB1 and SRB2. E-UTRAN does not reconfigure the RLC mode of DRBs except when a full configuration option is used, and may reconfigure the UM RLC SN field size only upon handover within E-UTRA or upon the first reconfiguration after RRC connection re-establishment.

**sps-Config**
The default SPS configuration is specified in 9.2.3. Except for handover or releasing SPS, E-UTRAN does not reconfigure sps-Config when there is a configured downlink assignment or a configured uplink grant (see 36.321 [6]).

**srb-Identity**
Value 1 is applicable for SRB1 only.
Value 2 is applicable for SRB2 only.

### Conditional presence

    }
  }
},
fdd  SEQUENCE {
-- ASN1STOP

---

**RN-SubframeConfig field descriptions**

**demodulationRS**
Indicates which reference signals are used for R-PDCCH demodulation according to TS 36.216 [55, 7.4.1]. Value interleaving corresponds to cross-interleaving and value noInterleaving corresponds to no cross-interleaving according to TS 36.216 [55, 7.4.2 and 7.4.3].

**n1PUCCH-AN-List**
Parameter: \( n_{PUCCH}^{\{1\}} \), see TS 36.216, [55, 7.5.1]. This parameter is only applicable for TDD. Configures PUCCH HARQ-ACK resources if the RN is configured to use HARQ-ACK channel selection, HARQ-ACK multiplexing or HARQ-ACK bundling.

**n1PUCCH-AN-P0, n1PUCCH-AN-P1**
Parameter: \( n_{PUCCH}^{\{1,p\}} \) for antenna port P0 and for antenna port P1 respectively, see TS 36.216, [55, 7.5.1] for FDD and [55, 7.5.2] for TDD.

**pdsch-Start**
Parameter: \( DL-StartSymbol \), see TS 36.216 [55, Table 5.4-1].

**resourceAllocationType**
Represents the resource allocation used: type 0, type 1 or type 2 according to TS 36.213 [23, 7.1.6]. Value type0 corresponds to type 0, value type1 corresponds to type 1, value type2Localized corresponds to type 2 with localized virtual resource blocks and value type2Distributed corresponds to type 2 with distributed virtual resource blocks.

**resourceBlockAssignment**
Indicates the resource block assignment bits according to TS 36.213 [23, 7.1.6]. Value type01 corresponds to type 0 and type 1, and the value type2 corresponds to type 2. Value nrb6 corresponds to a downlink system bandwidth of 6 resource blocks, value nrb15 corresponds to a downlink system bandwidth of 15 resource blocks, and so on.

**subframeConfigPatternFDD**
Parameter: \( SubframeConfigurationFDD \), see TS 36.216 [55, Table 5.2-1]. Defines the DL subframe configuration for eNB-to-RN transmission, i.e. those subframes in which the eNB may indicate downlink assignments for the RN. The radio frame in which the pattern starts (i.e. the radio frame in which the first bit of the \( subframeConfigPatternFDD \) corresponds to subframe #0) occurs when SFN mod 4 = 0.

**subframeConfigPatternTDD**
Parameter: \( SubframeConfigurationTDD \), see TS 36.216 [55, Table 5.2-2]. Defines the DL and UL subframe configuration for eNB-RN transmission.

**SoundingRS-UL-Config** field descriptions

- **ackNackSRS-SimultaneousTransmission**
  Parameter: Simultaneous-AN-and-SRS, see TS 36.213 [23, 8.2]. For SCells this field is not applicable and the UE shall ignore the value.

- **cyclicShift, cyclicShiftAp**
  Parameter: n_SRS for periodic and aperiodic sounding reference signal transmission respectively. See TS 36.211 [21, 5.5.3.1], where cs0 corresponds to 0 etc.

- **duration**
  Parameter: Duration for periodic sounding reference signal transmission. See TS 36.213 [21, 8.2]. FALSE corresponds to ‘single’ and value TRUE to ‘indefinite’.

- **freqDomainPosition, freqDomainPositionAp**
  Parameter: n_RRC for periodic and aperiodic sounding reference signal transmission respectively, see TS 36.211 [21, 5.5.3.2].

- **srs-AntennaPort, srs-AntennaPortAp**
  Indicates the number of antenna ports used for periodic and aperiodic sounding reference signal transmission respectively, see TS 36.211 [21, 5.5.3]. UE shall release *srs-AntennaPort* if *SoundingRS-UL-ConfigDedicated* is released.

- **srs-Bandwidth, srs-BandwidthAp**
  Parameter: B_SRS for periodic and aperiodic sounding reference signal transmission respectively, see TS 36.211 [21, tables 5.5.3.2-1, 5.5.3.2-2, 5.5.3.2-3 and 5.5.3.2-4].

- **srs-BandwidthConfig**
  Parameter: SRS Bandwidth Configuration. See TS 36.211, [21, table 5.5.3.2-1, 5.5.3.2-2, 5.5.3.2-3 and 5.5.3.2-4]. Actual configuration depends on UL bandwidth. bw0 corresponds to value 0, bw1 to value 1 and so on.

- **srs-ConfigApDCI-Format0 / srs-ConfigApDCI-Format1a2b2c / srs-ConfigApDCI-Format4**
  Parameters indicate the resource configurations for aperiodic sounding reference signal transmissions triggered by DCI formats 0, 1A, 2B, 2C, 4. See TS 36.213 [23, 8.2].

- **srs-ConfigIndex, srs-ConfigIndexAp**

- **srs-HoppingBandwidth**
  Parameter: SRS hopping bandwidth \( b_{hop} \) \( \in \{0,1,2,3\} \) for periodic sounding reference signal transmission, see TS 36.211 [21, 5.5.3.2] where hbw0 corresponds to value 0, hbw1 to value 1 and so on.

- **srs-MaxUpPts**
  Parameter: srsMaxUpPts, see TS 36.211 [21, 5.5.3.2]. If this field is present, reconfiguration of \( m_{SRS,0}^{max} \) applies for UpPts, otherwise reconfiguration does not apply.

- **srs-SubframeConfig**
  Parameter: SRS SubframeConfiguration. See TS 36.211, [21, table 5.5.3.3-1] applies for FDD whereas TS 36.211, [21, table 5.5.3.3-2] applies for TDD. sc0 corresponds to value 0, sc1 to value 1 and so on.

- **transmissionComb, transmissionCombAp**
  Parameter: \( k_{TC} \) \( \in \{0,1\} \) for periodic and aperiodic sounding reference signal transmission respectively, see TS 36.211 [21, 5.5.3.2].

### Conditional presence

| **TDD** | This field is optional present for TDD, need OR; it is not present for FDD and the UE shall delete any existing value for this field. |

twoIntervalsConfig ENUMERATED {true} OPTIONAL, -- Cond TDD
...
}

N1PUCCH-AN-PersistentList ::= SEQUENCE {SIZE (1..4)} OF INTEGER (0..2047)

--- ASN1STOP

**SPS-Config field descriptions**

*implicitReleaseAfter*
Number of empty transmissions before implicit release, see TS 36.321 [6, 5.10.2]. Value e2 corresponds to 2 transmissions, e3 corresponds to 3 transmissions and so on.

*n1PUCCH-AN-PersistentList, n1PUCCH-AN-PersistentListP1*
List of parameter: \( P_{\text{PUCCH}}^{(1)} \) for antenna port P0 and for antenna port P1 respectively, see TS 36.213 [23, 10.1]. Field n1-PUCCH-AN-PersistentListP1 is applicable only if the twoAntennaPortActivatedPUCCH-Format1a1b in PUCCH-ConfigDedicated-v1020 is set to true. Otherwise the field is not configured.

*numOfConfSPS-Processes*
The number of configured HARQ processes for Semi-Persistent Scheduling, see TS 36.321 [6].

*p0-NominalPUSCH-Persistent*
Parameter: \( P_{\text{NominalPUSCH}}^{(0)} \). See TS 36.213 [23, 5.1.1.1]. This field is applicable for persistent scheduling, only. If choice setup is used and p0-Persistent is absent, apply the value of p0-NominalPUSCH for p0-NominalPUSCH-Persistent.

*p0-UE-PUSCH-Persistent*
Parameter: \( P_{\text{UE_PUSCH}}^{(0)} \). See TS 36.213 [23, 5.1.1.1], unit dB. This field is applicable for persistent scheduling, only. If choice setup is used and p0-Persistent is absent, apply the value of p0-UE-PUSCH for p0-UE-PUSCH-Persistent.

*semiPersistSchedC-RNTI*
Semi-persistent Scheduling C-RNTI, see TS 36.321 [6].

*semiPersistSchedIntervalDL*
Semi-persistent scheduling interval in downlink, see TS 36.321 [6]. Value in number of sub-frames. Value sf10 corresponds to 10 sub-frames, sf20 corresponds to 20 sub-frames and so on. For TDD, the UE shall round this parameter down to the nearest integer (of 10 sub-frames), e.g. sf10 corresponds to 10 sub-frames, sf32 corresponds to 30 sub-frames, sf128 corresponds to 120 sub-frames.

*semiPersistSchedIntervalUL*
Semi-persistent scheduling interval in uplink, see TS 36.321 [6]. Value in number of sub-frames. Value sf10 corresponds to 10 sub-frames, sf20 corresponds to 20 sub-frames and so on. For TDD, the UE shall round this parameter down to the nearest integer (of 10 sub-frames), e.g. sf10 corresponds to 10 sub-frames, sf32 corresponds to 30 sub-frames, sf128 corresponds to 120 sub-frames.

*twoIntervalsConfig*
Trigger of two-intervals-Semi-Persistent Scheduling in uplink. See TS 36.321 [6, 5.10]. If this field is present, two-intervals-SPS is enabled for uplink. Otherwise, two-intervals-SPS is disabled.

<table>
<thead>
<tr>

<td><strong>TDD</strong></td>
<td>This field is optional present for TDD, need OR; it is not present for FDD and the UE shall delete any existing value for this field.</td>
</tr>
</tbody>
</table>
TDD-Config

The IE TDD-Config is used to specify the TDD specific physical channel configuration.

**TDD-Config information element**

```asn1
TDD-Config ::= SEQUENCE {
  subframeAssignment ENUMERATED {
    sa0, sa1, sa2, sa3, sa4, sa5, sa6},

  specialSubframePatterns ENUMERATED {
    ssp0, ssp1, ssp2, ssp3, ssp4, ssp5, ssp6, ssp7, ssp8}
}

TDD-Config-v1130 ::= SEQUENCE {
  specialSubframePatterns-v1130 ENUMERATED {ssp7, ssp9}
}
```

**TDD-Config field descriptions**

- **specialSubframePatterns**
  Indicates Configuration as in TS 36.211 [21, table 4.2-1] where ssp0 points to Configuration 0, ssp1 to Configuration 1 etc. Value ssp7 points to Configuration 7 for extended cyclic prefix and value ssp9 points to Configuration 9 for normal cyclic prefix. E-UTRAN signals ssp7 only when setting specialSubframePatterns (without suffix i.e. the version defined in REL-8) to ssp4. E-UTRAN signals value ssp9 only when setting specialSubframePatterns (without suffix) to ssp5. If specialSubframePatterns-v1130 is present, the UE shall ignore specialSubframePatterns (without suffix).

- **subframeAssignment**
  Indicates DL/UL subframe configuration where sa0 point to Configuration 0, sa1 to Configuration 1 etc. as specified in TS 36.211 [21, table 4.2-2]. E-UTRAN configures the same value for serving cells residing on same frequency band.

TimeAlignmentTimer

The IE TimeAlignmentTimer is used to control how long the UE considers the serving cells belonging to the associated TAG to be uplink time aligned. Corresponds to the Timer for time alignment in TS 36.321 [6]. Value in number of sub-frames. Value sf500 corresponds to 500 sub-frames, sf750 corresponds to 750 sub-frames and so on.

**TimeAlignmentTimer information element**

```asn1
TimeAlignmentTimer ::= ENUMERATED {
  sf500, sf750, sf1280, sf1920, sf2560, sf5120, sf10240, infinity}
```
TPC-PDCCH-Config

The IE **TPC-PDCCH-Config** is used to specify the RNTIs and indexes for PUCCH and PUSCH power control according to TS 36.212 [22]. The power control function can either be setup or released with the IE.

**TPC-PDCCH-Config** information element

<td>Parameter: (P_{RS_{S_OFFSET}}) for periodic and aperiodic sounding reference signal transmission respectively. See TS 36.213 [23, 5.1.3.1]. For Ks=1.25, the actual parameter value is pRS-Offset value – 3. For Ks=0, the actual parameter value is -10.5 + 1.5*pRS-S-Offset value. If pRS-S-Offset-v1130 is included, the UE ignores pRS-Offset (i.e., without suffix). Likewise, if pRS-S-OffsetAp-v1130 is included, the UE ignores pRS-S-OffsetAp-r10. For Ks=0, E-UTRAN does not set values larger than 26.</td>
</tr>
</tbody>
</table>
6.3.3 Security control information elements

– NextHopChainingCount

The IE NextHopChainingCount is used to update the $K_{SNR}$ key and corresponds to parameter NCC: See TS 33.401 [32, 7.2.8.4].

**NextHopChainingCount information element**

```
NextHopChainingCount ::= INTEGER (0..7)
```

– SecurityAlgorithmConfig

The IE SecurityAlgorithmConfig is used to configure AS integrity protection algorithm (SRBs) and AS ciphering algorithm (SRBs and DRBs). For RNs, the IE SecurityAlgorithmConfig is also used to configure AS integrity protection algorithm for DRBs between the RN and the E-UTRAN.

**SecurityAlgorithmConfig information element**

```
SecurityAlgorithmConfig ::= SEQUENCE {
    cipheringAlgorithm     ENUMERATED {
        eea0, eea1, eea2, eea3-v1130, spare4, spare3,
        spare2, spare1, ...},
    integrityProtAlgorithm    ENUMERATED {
        eia0-v920, eia1, eia2, eia3-v1130, spare4, spare3,
        spare2, spare1, ...}
}
```

<td>cipheringAlgorithm</td>
<td>Indicates the ciphering algorithm to be used for SRBs and DRBs, as specified in TS 33.401 [32, 5.1.3.2].</td>
</tr>
<tr>
<td>integrityProtAlgorithm</td>
<td>Indicates the integrity protection algorithm to be used for SRBs, as specified in TS 33.401 [32, 5.1.4.2]. For RNs, also indicates the integrity protection algorithm to be used for integrity protection-enabled DRB(s).</td>
</tr>
</tbody>
</table>
– ShortMAC-I

The IE ShortMAC-I is used to identify and verify the UE at RRC connection re-establishment. The 16 least significant bits of the MAC-I calculated using the security configuration of the source PCell, as specified in 5.3.7.4.

**ShortMAC-I information element**

```plaintext
ShortMAC-I ::= BIT STRING (SIZE (16))
```

6.3.4 Mobility control information elements

– AdditionalSpectrumEmission

**AdditionalSpectrumEmission information element**

```plaintext
AdditionalSpectrumEmission ::= INTEGER (1..32)
```

– ARFCN-ValueCDMA2000

The IE ARFCN-ValueCDMA2000 used to indicate the CDMA2000 carrier frequency within a CDMA2000 band, see C.S0002 [12].

**ARFCN-ValueCDMA2000 information element**

```plaintext
ARFCN-ValueCDMA2000 ::= INTEGER (0..2047)
```

– ARFCN-ValueEUTRA

The IE ARFCN-ValueEUTRA is used to indicate the ARFCN applicable for a downlink, uplink or bi-directional (TDD) E-UTRA carrier frequency, as defined in TS 36.101 [42]. If an extension is signalled using the extended value range (as defined by IE ARFCN-ValueEUTRA-v9e0), the UE shall only consider this extension (and hence ignore the corresponding original field, using the value range as defined by IE ARFCN-ValueEUTRA i.e. without suffix, if signalled). In dedicated signalling, E-UTRAN only provides an EARFCN corresponding to an E-UTRA band supported by the UE.
**ARFCN-ValueEUTRA** information element

---

ARFCN-ValueEUTRA ::= INTEGER (0..maxEARFCN)

ARFCN-ValueEUTRA-v9e0 ::= INTEGER (maxEARFCN-Plus1..maxEARFCN2)

ARFCN-ValueEUTRA-r9 ::= INTEGER (0..maxEARFCN2)

---

**NOTE:** For fields using the original value range, as defined by IE ARFCN-ValueEUTRA i.e. without suffix, value maxEARFCN indicates that the E-UTRA carrier frequency is indicated by means of an extension. In such a case, UEs not supporting the extension consider the field to be set to a not supported value.

-- ARFCN-ValueGERAN

The IE ARFCN-ValueGERAN is used to specify the ARFCN value applicable for a GERAN BCCH carrier frequency, see TS 45.005 [20].

**ARFCN-ValueGERAN** information element

---

ARFCN-ValueGERAN ::= INTEGER (0..1023)

---

-- ARFCN-ValueUTRA

The IE ARFCN-ValueUTRA is used to indicate the ARFCN applicable for a downlink (Nd, FDD) or bi-directional (Nt, TDD) UTRA carrier frequency, as defined in TS 25.331 [19].

**ARFCN-ValueUTRA** information element

---

ARFCN-ValueUTRA ::= INTEGER (0..16383)
-- BandclassCDMA2000

The IE `BandclassCDMA2000` is used to define the CDMA2000 band in which the CDMA2000 carrier frequency can be found, as defined in C.S0057 [24, table 1.5-1].

**BandclassCDMA2000 information element**

```
BandclassCDMA2000 ::=     ENUMERATED { 
    bc0, bc1, bc2, bc3, bc4, bc5, bc6, bc7, bc8, 
    bc9, bc10, bc11, bc12, bc13, bc14, bc15, bc16, 
    bc17, bc18-v9a0, bc19-v9a0, bc20-v9a0, bc21-v9a0, 
    spare10, spare9, spare8, spare7, spare6, spare5, spare4, 
    spare3, spare2, spare1, ...}
```

-- ASN1STOP

-- BandIndicatorGERAN

The IE `BandIndicatorGERAN` indicates how to interpret an associated GERAN carrier ARFCN, see TS 45.005 [20]. More specifically, the IE indicates the GERAN frequency band in case the ARFCN value can concern either a DCS 1800 or a PCS 1900 carrier frequency. For ARFCN values not associated with one of these bands, the indicator has no meaning.

**BandIndicatorGERAN information element**

```
BandIndicatorGERAN ::=   ENUMERATED {dcs1800, pcs1900}
```

-- ASN1STOP

-- CarrierFreqCDMA2000

The IE `CarrierFreqCDMA2000` used to provide the CDMA2000 carrier information.

**CarrierFreqCDMA2000 information element**

```
CarrierFreqCDMA2000 ::=   SEQUENCE { 
    bandClass       BandclassCDMA2000, 
    arfcn       ARFCN-ValueCDMA2000
}
```

-- ASN1STOP
The IE CarrierFreqGERAN is used to provide an unambiguous carrier frequency description of a GERAN cell.

**CarrierFreqGERAN information element**

```
CarrierFreqGERAN ::= SEQUENCE {
    arfcn       ARFCN-ValueGERAN,
    bandIndicator     BandIndicatorGERAN
}
```

**CarrierFreqGERAN field descriptions**

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>

</thead>
<tbody>
<tr>
<td>arfcn</td>
<td>GERAN ARFCN of BCCH carrier.</td>
</tr>
<tr>
<td>bandIndicator</td>
<td>Indicates how to interpret the ARFCN of the BCCH carrier.</td>
</tr>
</tbody>
</table>

The IE CarrierFreqListGERAN is used to provide one or more GERAN ARFCN values, as defined in TS 44.005 [43], which represents a list of GERAN BCCH carrier frequencies.

**CarrierFreqsGERAN information element**

```
CarrierFreqsGERAN ::= SEQUENCE {
    startingARFCN      ARFCN-ValueGERAN,
    bandIndicator      BandIndicatorGERAN,
    followingARFCNs      CHOICE {
        explicitListOfARFCNs    ExplicitListOfARFCNs,
        equallySpacedARFCNs     SEQUENCE {
            arfcn-Spacing      INTEGER (1..8),
            numberOfFollowingARFCNs    INTEGER (0..31)
        }
    }
}
```

variableBitMapOfARFCNs ::= OCTET STRING (SIZE (1..16))

ExplicitListOfARFCNs ::= SEQUENCE (SIZE (0..31)) OF ARFCN-ValueGERAN

CarrierFreqsGERAN field descriptions

<table>

<td>Bitmap field representing the remaining ARFCN values in the set. The leading bit of the first octet in the bitmap corresponds to the ARFCN = ((s + 1) mod 1024), the next bit to the ARFCN = ((s + 2) mod 1024), and so on. If the bitmap consist of N octets, the trailing bit of octet N corresponds to ARFCN = ((s + 8*N) mod 1024). The complete set of ARFCN values consists of ARFCN = s and the ARFCN values, where the corresponding bit in the bitmap is set to &quot;1&quot;.</td>
</tr>
</tbody>
</table>

– CarrierFreqListMBMS

The IE CarrierFreqListMBMS is used to indicate the E-UTRA ARFCN values of the one or more MBMS frequencies the UE is interested to receive.

CarrierFreqListMBMS information element

– CDMA2000-Type

The IE CDMA2000-Type is used to describe the type of CDMA2000 network.

CDMA2000-Type information element
CDMA2000-Type ::= ENUMERATED {type1XRTT, typeHRPD}

-- ASN1STOP

– CellIdentity

The IE CellIdentity is used to unambiguously identify a cell within a PLMN.

CellIdentity information element

-- ASN1START

CellIdentity ::= BIT STRING (SIZE (28))

-- ASN1STOP

– CellIndexList

The IE CellIndexList concerns a list of cell indices, which may be used for different purposes.

CellIndexList information element

-- ASN1START

CellIndexList ::= SEQUENCE (SIZE (1..maxCellMeas)) OF CellIndex

CellIndex ::= INTEGER (1..maxCellMeas)

-- ASN1STOP

– CellReselectionPriority

The IE CellReselectionPriority concerns the absolute priority of the concerned carrier frequency/ set of frequencies (GERAN)/ bandclass (CDMA2000), as used by the cell reselection procedure. Corresponds with parameter "priority" in TS 36.304 [4]. Value 0 means: lowest priority. The UE behaviour for the case the field is absent, if applicable, is specified in TS 36.304 [4].

CellReselectionPriority information element

-- ASN1START

CellReselectionPriority ::= INTEGER (0..7)
-- ASN1STOP

-- CSFB-RegistrationParam1XRTT

The IE CSFB-RegistrationParam1XRTT is used to indicate whether or not the UE shall perform a CDMA2000 1xRTT pre-registration if the UE does not have a valid / current pre-registration.

-- ASN1START

CSFB-RegistrationParam1XRTT ::= SEQUENCE {
  sid BIT STRING (SIZE (15)),
  nid BIT STRING (SIZE (16)),

### CellGlobalIdEUTRA

The IE `CellGlobalIdEUTRA` specifies the Evolved Cell Global Identifier (ECGI), the globally unique identity of a cell in E-UTRA.

#### CellGlobalIdEUTRA information element

```asn1
CellGlobalIdEUTRA ::= SEQUENCE {
  plmn-Identity PLMN-Identity,
  cellIdentity CellIdentity
}
```

### CellGlobalIdEUTRA field descriptions

<table>
<thead>
<tr>

</tr>
<tr>
<td>plmn-Identity</td>
<td>Identifies the PLMN of the cell, as defined in TS 23.003 [27].</td>
</tr>
</tbody>
</table>
CellGlobalIdCDMA2000

The IE CellGlobalIdCDMA2000 specifies the Cell Global Identification (CGI), the globally unique identity of a cell in CDMA2000.

**CellGlobalIdCDMA2000** information element

---

```
CellGlobalIdCDMA2000 ::=    CHOICE {
    cellGlobalId1XRTT      BIT STRING (SIZE (47)),
    cellGlobalIdHRPD      BIT STRING (SIZE (128))
}
```

---

**CellGlobalIdCDMA2000** field descriptions

- **cellGlobalId1XRTT**: Unique identifier for a CDMA2000 1xRTT cell, corresponds to BASEID, SID and NID parameters (in that order) defined in C.S0005 [25].

- **cellGlobalIdHRPD**: Unique identifier for a CDMA2000 HRPD cell, corresponds to SECTOR ID parameter defined in C.S0024 [26, 14.9].

--

CSG-Identity

The IE CSG-Identity is used to identify a Closed Subscriber Group.

**CSG-Identity** information element

---

```
CSG-Identity ::=     BIT STRING (SIZE (27))
```

---

--

FreqBandIndicator

The IE FreqBandIndicator indicates the E-UTRA operating band as defined in TS 36.101 [42, table 5.5-1]. If an extension is signalled using the extended value range (as defined by IE FreqBandIndicator-v9e0), the UE shall only consider this extension (and hence ignore the corresponding original field, using the value range as defined by IE FreqBandIndicator i.e. without suffix, if signalled).

**FreqBandIndicator** information element

---

```
FreqBandIndicator ::=     INTEGER (1..maxFBI)
```

---
NOTE: For fields using the original value range, as defined by IE *FreqBandIndicator* i.e. without suffix, value *maxFBI* indicates that the frequency band is indicated by means of an extension. In such a case, UEs not supporting the extension consider the field to be set to a not supported value.

—

**MobilityControlInfo**

The IE *MobilityControlInfo* includes parameters relevant for network controlled mobility to/within E-UTRA.

**MobilityControlInfo information element**

```text
MobilityControlInfo ::= SEQUENCE {
    targetPhysCellId             PhysCellId,

<tr>
<td><strong>HO</strong></td>
<td>This field is optionally present, need OP, in case of handover within E-UTRA when the fullConfig is not included; otherwise the field is not present.</td>
</tr>
<tr>
<td><strong>HO-toEUTRA</strong></td>
<td>The field is mandatory present in case of inter-RAT handover to E-UTRA; otherwise the field is optionally present, need ON.</td>
</tr>
<tr>
<td><strong>HO-toEUTRA2</strong></td>
<td>The field is absent if carrierFreq-v9e0 is present. Otherwise it is mandatory present in case of inter-RAT handover to E-UTRA and optionally present, need ON, in all other cases.</td>
</tr>
</tbody>
</table>

---

- **MobilityParametersCDMA2000 (1xRTT)**

The *MobilityParametersCDMA2000* contains the parameters provided to the UE for handover and (enhanced) CSFB to 1xRTT support, as defined in C.S0097 [53].

**MobilityParametersCDMA2000 information element**

```asn1
MobilityParametersCDMA2000 ::= OCTET STRING
```

---

- **MobilityStateParameters**

The IE *MobilityStateParameters* contains parameters to determine UE mobility state.

**MobilityStateParameters information element**

```asn1
MobilityStateParameters ::= SEQUENCE {
  t-Evaluation          ENUMERATED {
    s30, s60, s120, s180, s240, spare3, spare2, spare1},
  t-HystNormal          ENUMERATED {
    s30, s60, s120, s180, s240, spare3, spare2, spare1},
  n-CellChangeMedium    INTEGER (1..16),
  n-CellChangeHigh      INTEGER (1..16)
}
```

---
### MobilityStateParameters field descriptions

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>

<td>The number of cell changes to enter medium mobility state. Corresponds to $N_{CR, M}$ in TS 36.304 [4].</td>
</tr>
<tr>
<td>t-Evaluation</td>
<td>The duration for evaluating criteria to enter mobility states. Corresponds to $T_{CRmax}$ in TS 36.304 [4]. Value in seconds, $s30$ corresponds to 30 s and so on.</td>
</tr>
<tr>
<td>t-HystNormal</td>
<td>The additional duration for evaluating criteria to enter normal mobility state. Corresponds to $T_{CRmaxHyst}$ in TS 36.304 [4]. Value in seconds, $s30$ corresponds to 30 s and so on.</td>
</tr>
</tbody>
</table>

---

#### MultiBandInfoList

**MultiBandInfoList information element**

```asn1
MultiBandInfoList ::= SEQUENCE (SIZE (1..maxMultiBands)) OF FreqBandIndicator
MultiBandInfoList-v9e0 ::= SEQUENCE (SIZE (1..maxMultiBands)) OF MultiBandInfo-v9e0
MultiBandInfoList-r11 ::= SEQUENCE (SIZE (1..maxMultiBands)) OF FreqBandIndicator-r11
MultiBandInfo-v9e0 ::= SEQUENCE {
  freqBandIndicator-v9e0    FreqBandIndicator-v9e0  OPTIONAL -- Need OP
}

MultiBandInfo-v9e0 ::= SEQUENCE {
  freqBandIndicator-v9e0    FreqBandIndicator-v9e0  OPTIONAL -- Need OP
}

MultiBandInfo-r11 ::= SEQUENCE {
  freqBandIndicator-r11    FreqBandIndicator-r11  OPTIONAL -- Need OP
}

MultiBandInfo-r11 ::= SEQUENCE {
  freqBandIndicator-r11    FreqBandIndicator-r11  OPTIONAL -- Need OP
}
```

---

#### PhysCellId

The IE **PhysCellId** is used to indicate the physical layer identity of the cell, as defined in TS 36.211 [21].

**PhysCellId information element**

```asn1
PhysCellId ::= INTEGER (0..503)
```

---

**ETSI**
The IE **PhysCellIdRange** is used to encode either a single or a range of physical cell identities. The range is encoded by using a *start* value and by indicating the number of consecutive physical cell identities (including *start*) in the range. For fields comprising multiple occurrences of **PhysCellIdRange**, E-UTRAN may configure overlapping ranges of physical cell identities.

**PhysCellIdRange information element**

```asn1
PhysCellIdRange ::= SEQUENCE {
  start        PhysCellId, 
  range        ENUMERATED {
    n4, n8, n12, n24, n32, n48, n64, n84, 
    n96, n128, n168, n252, n504, spare2,
    spare1 } OPTIONAL -- Need OP
}
```

**PhysCellIdRange field descriptions**

- **range**
  Indicates the number of physical cell identities in the range (including *start*). Value n4 corresponds with 4, n8 corresponds with 8 and so on. The UE shall apply value 1 in case the field is absent, in which case only the physical cell identity value indicated by *start* applies.

- **start**
  Indicates the lowest physical cell identity in the range.

---

The IE **PhysCellIdRangeUTRA-FDDList** is used to encode one or more of **PhysCellIdRangeUTRA-FDD**. While the IE **PhysCellIdRangeUTRA-FDD** is used to encode either a single physical layer identity or a range of physical layer identities, i.e. primary scrambling codes. Each range is encoded by using a *start* value and by indicating the number of consecutive physical cell identities (including *start*) in the range.

**PhysCellIdRangeUTRA-FDDList information element**

```asn1
PhysCellIdRangeUTRA-FDDList-r9::=  SEQUENCE (SIZE (1..maxPhysCellIdRange-r9)) OF
  PhysCellIdRangeUTRA-FDD-r9
PhysCellIdRangeUTRA-FDD-r9 ::=   SEQUENCE {
    start-r9        PhysCellIdUTRA-FDD, 
    range-r9        INTEGER (2..512) OPTIONAL -- Need OP
}
```
PhysCellIdRangeUTRA-FDDList field descriptions

| range | Indicates the number of primary scrambling codes in the range (including start). The UE shall apply value 1 in case the field is absent, in which case only the primary scrambling code value indicated by start applies. |
| start | Indicates the lowest primary scrambling code in the range. |

– PhysCellIdCDMA2000

The IE PhysCellIdCDMA2000 identifies the PNOffset that represents the "Physical cell identity" in CDMA2000.

PhysCellIdCDMA2000 information element

-- ASN1START

PhysCellIdCDMA2000 ::= INTEGER (0..maxPNOffset)

-- ASN1STOP

– PhysCellIdGERAN

The IE PhysCellIdGERAN contains the Base Station Identity Code (BSIC).

PhysCellIdGERAN information element

-- ASN1START

PhysCellIdGERAN ::= SEQUENCE {
    networkColourCode    BIT STRING (SIZE (3)),
    baseStationColourCode    BIT STRING (SIZE (3))
}

-- ASN1STOP

PhysCellIdGERAN field descriptions

| baseStationColourCode | Base station Colour Code as defined in TS 23.003 [27]. |
| networkColourCode    | Network Colour Code as defined in TS 23.003 [27]. |
– PhysCellIdUTRA-FDD

The IE *PhysCellIdUTRA-FDD* is used to indicate the physical layer identity of the cell, i.e. the primary scrambling code, as defined in TS 25.331 [19].

*PhysCellIdUTRA-FDD* information element

```
-- ASN1START

PhysCellIdUTRA-FDD ::=    INTEGER (0..511)

-- ASN1STOP
```

– PhysCellIdUTRA-TDD

The IE *PhysCellIdUTRA-TDD* is used to indicate the physical layer identity of the cell, i.e. the cell parameters ID (TDD), as specified in TS 25.331 [19]. Also corresponds to the Initial Cell Parameter Assignment in TS 25.223 [46].

*PhysCellIdUTRA-TDD* information element

```
-- ASN1START

PhysCellIdUTRA-TDD ::=    INTEGER (0..127)

-- ASN1STOP
```

– PLMN-Identity

The IE *PLMN-Identity* identifies a Public Land Mobile Network. Further information regarding how to set the IE are specified in TS 23.003 [27].

*PLMN-Identity* information element

```
-- ASN1START

PLMN-Identity ::=     SEQUENCE {
    mcc         MCC     OPTIONAL,     -- Cond MCC
    mnc          M N C
}

MCC ::=        SEQUENCE (SIZE (3)) OF
    MCC-MNC-Digit

MNC ::=        SEQUENCE (SIZE (2..3)) OF

-- ASN1STOP
```
**PLMN-Identity field descriptions**

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>mcc</strong></td>
<td>The first element contains the first MCC digit, the second element the second MCC digit and so on. If the field is absent, it takes the same value as the mcc of the immediately preceding IE PLMN-Identity. See TS 23.003 [27].</td>
</tr>
<tr>
<td><strong>mnc</strong></td>
<td>The first element contains the first MNC digit, the second element the second MNC digit and so on. See TS 23.003 [27].</td>
</tr>
</tbody>

</table>

---

### Q-QualMin

The IE `Q-QualMin` is used to indicate for cell selection/ re-selection the required minimum received RSRQ level in the (E-UTRA) cell. Corresponds to parameter `Qqualmin` in 36.304 [4]. Actual value `Qqualmin = IE value [dB]`.

**Q-QualMin information element**

-- ASN1START

Q-QualMin-r9 ::= INTEGER (-34..-3)

-- ASN1STOP

---

### Q-RxLevMin

The IE `Q-RxLevMin` is used to indicate for cell selection/ re-selection the required minimum received RSRP level in the (E-UTRA) cell. Corresponds to parameter `Qrxlevmin` in 36.304 [4]. Actual value `Qrxlevmin = IE value * 2 [dBm]`.

**Q-RxLevMin information element**

-- ASN1START

Q-RxLevMin ::= INTEGER (-70..-22)

-- ASN1STOP
- **Q-OffsetRange**

The IE *Q-OffsetRange* is used to indicate a cell or frequency specific offset to be applied when evaluating candidates for cell re-selection or when evaluating triggering conditions for measurement reporting. The value in dB. Value dB-24 corresponds to -24 dB, dB-22 corresponds to -22 dB and so on.

**Q-OffsetRange information element**

```asn1
Q-OffsetRange ::= ENUMERATED {
  dB-24, dB-22, dB-20, dB-18, dB-16, dB-14,
  dB-12, dB-10, dB-8, dB-6, dB-5, dB-4, dB-3,
  dB-2, dB-1, dB0, dB2, dB3, dB4, dB5,
  dB6, dB8, dB10, dB12, dB14, dB16, dB18,
  dB20, dB22, dB24}
```

- **Q-OffsetRangeInterRAT**

The IE *Q-OffsetRangeInterRAT* is used to indicate a frequency specific offset to be applied when evaluating triggering conditions for measurement reporting. The value in dB.

**Q-OffsetRangeInterRAT information element**

```asn1
Q-OffsetRangeInterRAT ::= INTEGER (-15..15)
```

- **ReselectionThreshold**

The IE *ReselectionThreshold* is used to indicate an Rx level threshold for cell reselection. Actual value of threshold = IE value * 2 [dB].

**ReselectionThreshold information element**

```asn1
ReselectionThreshold ::= INTEGER (0..31)
```
– ReselectionThresholdQ

The IE *ReselectionThresholdQ* is used to indicate a quality level threshold for cell reselection. Actual value of threshold = IE value [dB].

*ReselectionThresholdQ information element*

```asn1
-- ASN1START

ReselectionThresholdQ-r9 ::= INTEGER (0..31)

-- ASN1STOP
```

– SCellIndex

The IE *SCellIndex* concerns a short identity, used to identify an SCell.

*SCellIndex information element*

```asn1
-- ASN1START

SCellIndex-r10 ::= INTEGER (1..7)

-- ASN1STOP
```

– ServCellIndex

The IE *ServCellIndex* concerns a short identity, used to identify a serving cell (i.e. the PCell or an SCell). Value 0 applies for the PCell, while the *SCellIndex* that has previously been assigned applies for SCells.

*ServCellIndex information element*

```asn1
-- ASN1START

ServCellIndex-r10 ::= INTEGER (0..7)

-- ASN1STOP
```

– SpeedStateScaleFactors

The IE *SpeedStateScaleFactors* concerns factors, to be applied when the UE is in medium or high speed state, used for scaling a mobility control related parameter.
**SpeedStateScaleFactors** information element

-- ASN1START

```
SpeedStateScaleFactors ::=   SEQUENCE {
   sf-Medium       ENUMERATED {oDot25, oDot5, oDot75, lDot0},
   sf-High        ENUMERATED {oDot25, oDot5, oDot75, lDot0}
}
```

-- ASN1STOP

**SpeedStateScaleFactors** field descriptions

<table>

<tbody>
<tr>
<td>The concerned mobility control related parameter is multiplied with this factor if the UE is in Medium Mobility state as defined in TS 36.304 [4]. Value oDot25 corresponds to 0.25, oDot5 corresponds to 0.5, oDot75 corresponds to 0.75 and so on.</td>
</tr>
</tbody>
</table>

---

**SystemInfoListGERAN**

The IE **SystemInfoListGERAN** contains system information of a GERAN cell.

**SystemInfoListGERAN** information element

-- ASN1START

```
SystemInfoListGERAN ::=    SEQUENCE (SIZE (1..maxGERAN-SI)) OF 
                           OCTET STRING (SIZE (1..23))
```

-- ASN1STOP

**SystemInfoListGERAN** field descriptions

<table>
<thead>
<tr>
<th>SystemInfoListGERAN</th>
</tr>
</thead>
<tbody>
<tr>
<td>Each OCTET STRING contains one System Information (SI) message as defined in TS 44.018 [45, table 9.1.1] excluding the L2 Pseudo Length, the RR management Protocol Discriminator and the Skip Indicator or a complete Packet System Information (PSI) message as defined in TS 44.060 [36, table 11.2.1].</td>
</tr>
</tbody>
</table>

---

**SystemTimeInfoCDMA2000**

The IE **SystemTimeInfoCDMA2000** informs the UE about the absolute time in the current cell. The UE uses this absolute time knowledge to derive the CDMA2000 Physical cell identity, expressed as PNOffset, of neighbour CDMA2000 cells.

**NOTE:** The UE needs the CDMA2000 system time with a certain level of accuracy for performing measurements as well as for communicating with the CDMA2000 network (HRPD or 1xRTT).
SystemTimeInfoCDMA2000 information element

-- ASN1START

SystemTimeInfoCDMA2000 ::= SEQUENCE {
    cdma-EUTRA-Synchronisation BOOLEAN,
    cdma-SystemTime CHOICE {
        synchronousSystemTime BIT STRING (SIZE (39)),
        asynchronousSystemTime BIT STRING (SIZE (49))
    }
}

-- ASN1STOP

SystemTimeInfoCDMA2000 field descriptions

asynchronousSystemTime
The CDMA2000 system time corresponding to the SFN boundary at or after the ending boundary of the SI-Window in which SystemInformationBlockType8 is transmitted. E-UTRAN includes this field if the E-UTRA frame boundary is not aligned to the start of CDMA2000 system time. This field size is 49 bits and the unit is 8 CDMA chips based on 1.2288 Mcps.

cdma-EUTRA-Synchronisation
TRUE indicates that there is no drift in the timing between E-UTRA and CDMA2000. FALSE indicates that the timing between E-UTRA and CDMA2000 can drift. NOTE 1

synchronousSystemTime
CDMA2000 system time corresponding to the SFN boundary at or after the ending boundary of the SI-window in which SystemInformationBlockType8 is transmitted. E-UTRAN includes this field if the E-UTRA frame boundary is aligned to the start of CDMA2000 system time. This field size is 39 bits and the unit is 10 ms based on a 1.2288 Mcps chip rate.

NOTE 1: The following table shows the recommended combinations of the cdma-EUTRA-Synchronisation field and the choice of cdma-SystemTime included by E-UTRAN for FDD and TDD:

<table>
<thead>
<tr>
<th>FDD/TDD</th>

</tbody>
</table>

TrackingAreaCode

The IE TrackingAreaCode is used to identify a tracking area within the scope of a PLMN, see TS 24.301 [35].

TrackingAreaCode information element

-- ASN1START

TrackingAreaCode ::= BIT STRING (SIZE (16))
– T-Reselection
The IE \textit{T-Reselection} concerns the cell reselection timer \textit{Treselection\textsubscript{RAT}} for E-UTRA, UTRA, GERAN or CDMA2000. Value in seconds.

\textbf{T-Reselection information element}

\begin{verbatim}
-- ASN1START
T-Reselection ::= INTEGER (0..7)
-- ASN1STOP
\end{verbatim}

\subsection*{6.3.5 Measurement information elements}

– AllowedMeasBandwidth
The IE \textit{AllowedMeasBandwidth} is used to indicate the maximum allowed measurement bandwidth on a carrier frequency as defined by the parameter Transmission Bandwidth Configuration "$N_{RB}$" TS 36.104 [47]. The values mbw6, mbw15, mbw25, mbw50, mbw75, mbw100 indicate 6, 15, 25, 50, 75 and 100 resource blocks respectively.

\textbf{AllowedMeasBandwidth information element}

\begin{verbatim}
-- ASN1START
AllowedMeasBandwidth ::= ENUMERATED {mbw6, mbw15, mbw25, mbw50, mbw75, mbw100}
-- ASN1STOP
\end{verbatim}

– Hysteresis
The IE \textit{Hysteresis} is a parameter used within the entry and leave condition of an event triggered reporting condition. The actual value is IE value $\times$ 0.5 dB.

\textbf{Hysteresis information element}

\begin{verbatim}
-- ASN1START
Hysteresis ::= INTEGER (0..30)
-- ASN1STOP
\end{verbatim}
-- LocationInfo

The IE LocationInfo is used to transfer detailed location information available at the UE to correlate measurements and UE position information.

LocationInfo information element

-- ASN1START

LocationInfo-r10 ::= SEQUENCE {
  locationCoordinates-r10 CHOICE {
    ellipsoid-Point-r10 OCTET STRING,
    ellipsoidPointWithAltitude-r10 OCTET STRING,
    ...,

---

#### MeasConfig

The IE MeasConfig specifies measurements to be performed by the UE, and covers intra-frequency, inter-frequency and inter-RAT mobility as well as configuration of measurement gaps.

**MeasConfig information element**

```asn1
MeasConfig ::= SEQUENCE {
  -- Measurement objects
  measObjectToRemoveList MeasObjectToRemoveList OPTIONAL, -- Need ON
  measObjectToAddModList MeasObjectToAddModList OPTIONAL, -- Need ON
  -- Reporting configurations
  reportConfigToRemoveList ReportConfigToRemoveList OPTIONAL, -- Need ON
  reportConfigToAddModList ReportConfigToAddModList OPTIONAL, -- Need ON
  -- Measurement identities
  measIdToRemoveList MeasIdToRemoveList OPTIONAL, -- Need ON
  measIdToAddModList MeasIdToAddModList OPTIONAL, -- Need ON
  -- Other parameters
  quantityConfig QuantityConfig OPTIONAL, -- Need ON
  measGapConfig MeasGapConfig OPTIONAL, -- Need ON
  s-Measure RSRP-Range OPTIONAL, -- Need ON
}
```
MeasIdToRemoveList ::= SEQUENCE (SIZE (1..maxMeasId)) OF MeasId

MeasObjectToRemoveList ::= SEQUENCE (SIZE (1..maxObjectId)) OF MeasObjectId

ReportConfigToRemoveList ::= SEQUENCE (SIZE (1..maxReportConfigId)) OF ReportConfigId

-- ASN1STOP

MeasConfig field descriptions

allowInterruptions
Value TRUE indicates that the UE is allowed to cause interruptions to serving cells when performing measurements of deactivated SCell carriers for measCycleSCell of less than 640ms, as specified in TS 36.133 [16]. E-UTRAN enables this field only when an SCell is configured.

measGapConfig
Used to setup and release measurement gaps.

measObjectToAddModList
If E-UTRAN includes measObjectToAddModList-v9e0 it includes the same number of entries, and listed in the same order, as in measObjectToAddModList (i.e. without suffix).

measIdToRemoveList
List of measurement identities to remove.

measObjectToRemoveList
List of measurement objects to remove.

PreRegistrationInfoHRPD
The CDMA2000 HRPD Pre-Registration Information tells the UE if it should pre-register with the CDMA2000 HRPD network and identifies the Pre-registration zone to the UE.
MeasConfig field descriptions

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>reportConfigToRemoveList</td>
<td>List of measurement reporting configurations to remove.</td>
</tr>
<tr>
<td>s-Measure</td>
<td>PCell quality threshold controlling whether or not the UE is required to perform measurements of intra-frequency, inter-frequency and inter-RAT neighbouring cells. Value '0' indicates to disable s-Measure.</td>
</tr>
<tr>
<td>timeToTrigger-SF</td>
<td>The timeToTrigger in ReportConfigEUTRA and in ReportConfigInterRAT are multiplied with the scaling factor applicable for the UE’s speed state.</td>
</tr>
</tbody>
</table>

---

MeasGapConfig

The IE MeasGapConfig specifies the measurement gap configuration and controls setup/ release of measurement gaps.

MeasGapConfig information element

```
MeasGapConfig ::=     CHOICE {
    release        NULL,
    setup         SEQUENCE {
        gapOffset        CHOICE {
            gp0          INTEGER (0..39),
            gp1          INTEGER (0..79),
            ...
        }
    }
}
```

MeasGapConfig field descriptions

gapOffset
Value gapOffset of gp0 corresponds to gap offset of Gap Pattern Id '0' with MGRP = 40ms, gapOffset of gp1 corresponds to gap offset of Gap Pattern Id '1' with MGRP = 80ms. Also used to specify the measurement gap pattern to be applied, as defined in TS 36.133 [16].

---

MeasId

The IE MeasId is used to identify a measurement configuration, i.e., linking of a measurement object and a reporting configuration.

MeasId information element

```
MeasId ::=       INTEGER (1..maxMeasId)
```

MeasIdToAddModList

The IE MeasIdToAddModList concerns a list of measurement identities to add or modify, with for each entry the measId, the associated measObjectId and the associated reportConfigId.

**MeasIdToAddModList information element**

```asn1
MeasIdToAddModList ::= SEQUENCE (SIZE (1..maxMeasId)) OF MeasIdToAddMod

MeasIdToAddMod ::= SEQUENCE {
    measId        MeasId,
    measObjectId      MeasObjectId,
    reportConfigId      ReportConfigId
}
```

MeasObjectCDMA2000

The IE MeasObjectCDMA2000 specifies information applicable for inter-RAT CDMA2000 neighbouring cells.

**MeasObjectCDMA2000 information element**

```asn1
MeasObjectCDMA2000 ::= SEQUENCE {
    cdma2000-Type      CDMA2000-Type,
    carrierFreq       CarrierFreqCDMA2000,
    searchWindowSize     INTEGER (0..15) OPTIONAL, -- Need ON
    offsetFreq       Q-OffsetRangeInterRAT DEFAULT 0,
    cellsToRemoveList     CellIndexList OPTIONAL, -- Need ON
    cellsToAddModList     CellsToAddModListCDMA2000 OPTIONAL, -- Need ON
    cellForWhichToReportCGI    PhysCellIdCDMA2000 OPTIONAL, -- Need ON
    ...
}
```
CellsToAddModListCDMA2000 ::= SEQUENCE (SIZE (1..maxCellMeas)) OF CellsToAddModCDMA2000

CellsToAddModCDMA2000 ::= SEQUENCE {
  cellIndex       INTEGER (1..maxCellMeas),
  physCellId       PhysCellIdCDMA2000
}

-- ASN1STOP

  sf640, sf1024, sf1280, spare1}

MeasSubframePatternConfigNeigh-r10 ::= CHOICE {

MeasObjectEUTRA field descriptions

**blackCellsToAddModList**
List of cells to add/ modify in the black list of cells.

**blackCellsToRemoveList**
List of cells to remove from the black list of cells.

**carrierFreq**
Identifies E-UTRA carrier frequency for which this configuration is valid. E-UTRAN does not configure more than one measurement object for the same physical frequency regardless of the E-ARFCN used to indicate this.

**cellIndex**
Enter index in the cell list. An entry may concern a range of cells, in which case this value applies to the entire range.

**cellIndividualOffset**
Cell individual offset applicable to a specific cell. Value dB-24 corresponds to -24 dB, dB-22 corresponds to -22 dB and so on.

**cellsToAddModList**
List of cells to add/ modify in the cell list.

**cellsToRemoveList**
List of cells to remove from the cell list.

**measCycleSCell**
The parameter is used only when an SCell is configured on the frequency indicated by the measObject and is in deactivated state, see TS 36.133 [16, 8.3.3]. E-UTRAN configures the parameter whenever an SCell is configured on the frequency indicated by the measObject, but the field may also be signalled when an SCell is not configured. Value sf160 corresponds to 160 sub-frames, sf256 corresponds to 256 sub-frames and so on.

**measSubframeCellList**
List of cells for which measSubframePatternNeigh is applied.

**measSubframePatternNeigh**
Time domain measurement resource restriction pattern applicable to neighbour cell RSRP and RSRQ measurements on the carrier frequency indicated by carrierFreq. For cells in measSubframeCellList the UE shall assume that the subframes indicated by measSubframePatternNeigh are non-MBSFN subframes, and have the same special subframe configuration as PCell.

**offsetFreq**
Offset value applicable to the carrier frequency. Value dB-24 corresponds to -24 dB, dB-22 corresponds to -22 dB and so on.

**physCellId**
Physical cell identity of a cell in the cell list.

**physCellIdRange**
Physical cell identity or a range of physical cell identities of cells in the black list.

**widebandRSRQ-Meas**
If this field is set to TRUE, the UE shall, when performing RSRQ measurements, use a wider bandwidth in accordance with TS 36.133 [16].
## Conditional presence

<table>
<thead>
<tr>
<th>Field</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>always</td>
<td>The field is mandatory present.</td>
</tr>
<tr>
<td>WB-RSRQ</td>
<td>The field is optionally present, need ON, if the measurement bandwidth indicated by allowedMeasBandwidth is 50 resource blocks or larger; otherwise it is not present and the UE shall delete any existing value for this field, if configured.</td>
</tr>
</tbody>
</table>

## MeasObjectGERAN

The IE *MeasObjectGERAN* specifies information applicable for inter-RAT GERAN neighbouring frequencies.

### MeasObjectGERAN information element

```asn1
MeasObjectGERAN ::= SEQUENCE {
    carrierFreqs    CarrierFreqsGERAN,
    offsetFreq      Q-OffsetRangeInterRAT DEFAULT 0,
    ncc-Permitted   BIT STRING(SIZE (8)) DEFAULT '11111111'B,
    cellForWhichToReportCGI PhysCellIdGERAN OPTIONAL, -- Need ON
    ...
}
```

### MeasObjectGERAN field descriptions

- **ncc-Permitted**
  Field encoded as a bit map, where bit N is set to "0" if a BCCH carrier with NCC = N-1 is not permitted for monitoring and set to "1" if a BCCH carrier with NCC = N-1 is permitted for monitoring; N = 1 to 8; bit 1 of the bitmap is the leading bit of the bit string.

- **carrierFreqs**
  If E-UTRAN includes cellForWhichToReportCGI, it includes only one GERAN ARFCN value in carrierFreqs.

## MeasObjectId

The IE *MeasObjectId* used to identify a measurement object configuration.

### MeasObjectId information element

```asn1
MeasObjectId ::= INTEGER (1..maxObjectId)
```

---

**Note:** The table and code snippets are placeholders and the actual content is included in the text. The shading and text formatting are consistent with the original document's style.
MeasObjectToAddModList

The IE *MeasObjectToAddModList* concerns a list of measurement objects to add or modify

**MeasObjectToAddModList information element**

```plaintext
-- ASN1START

MeasObjectToAddModList ::= SEQUENCE (SIZE (1..maxObjectId)) OF MeasObjectToAddMod

MeasObjectToAddModList-v9e0 ::= SEQUENCE (SIZE (1..maxObjectId)) OF MeasObjectToAddMod-v9e0

MeasObjectToAddMod ::= SEQUENCE {
  measObjectId      MeasObjectId,
  measObject       CHOICE {
    measObjectEUTRA      MeasObjectEUTRA,
    measObjectUTRA      MeasObjectUTRA,
    measObjectGERAN      MeasObjectGERAN,
    measObjectCDMA2000     MeasObjectCDMA2000,
    ...
  }
}

MeasObjectToAddMod-v9e0 ::= SEQUENCE {
  measObjectEUTRA-v9e0    MeasObjectEUTRA-v9e0  OPTIONAL -- Cond eutra
}

-- ASN1STOP
```

<table>
<thead>
<tr>
<th>Conditional presence</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>eutra</td>
<td>The field is optional present, need OR, if for the corresponding entry in <em>MeasObjectToAddModList</em> field <em>measObject</em> is set to <em>measObjectEUTRA</em> and its sub-field <em>carrierFreq</em> is set to <em>maxEARFCN</em>. Otherwise the field is not present and the UE shall delete any existing value for this field.</td>
</tr>
</tbody>
</table>

MeasObjectUTRA

The IE *MeasObjectUTRA* specifies information applicable for inter-RAT UTRA neighbouring cells.

**MeasObjectUTRA information element**

```plaintext
-- ASN1START
```
MeasObjectUTRA ::= SEQUENCE {
    carrierFreq          ARFCN-ValueUTRA,

### MeasResults field descriptions

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>csg-MemberStatus</strong></td>
<td>Indicates whether or not the UE is a member of the CSG of the neighbour cell.</td>
</tr>
<tr>
<td><strong>currentSFN</strong></td>
<td>Indicates the current system frame number when receiving the UE Rx-Tx time difference measurement results from lower layer.</td>
</tr>
<tr>
<td><strong>locationAreaCode</strong></td>
<td>A fixed length code identifying the location area within a PLMN, as defined in TS 23.003 [27].</td>
</tr>
<tr>
<td><strong>measId</strong></td>
<td>Identifies the measurement identity for which the reporting is being performed.</td>
</tr>
<tr>
<td><strong>measResult</strong></td>
<td>Measured result of an E-UTRA cell; Measured result of a UTRA cell; Measured result of a GERAN cell or frequency; or Measured result of a CDMA2000 cell.</td>
</tr>
<tr>
<td><strong>measResultListCDMA2000</strong></td>
<td>List of measured results for the maximum number of reported best cells for a CDMA2000 measurement identity.</td>
</tr>
<tr>
<td><strong>measResultListEUTRA</strong></td>
<td>List of measured results for the maximum number of reported best cells for an E-UTRA measurement identity.</td>
</tr>
<tr>

}

QuantityConfigGERAN ::= SEQUENCE {
  measQuantityGERAN     ENUMERATED {rssi},
  filterCoefficient     FilterCoefficient     DEFAULT fc2
}
```
QuantityConfigCDMA2000 ::= SEQUENCE {
  measQuantityCDMA2000 ENUMERATED {pilotStrength, pilotPnPhaseAndPilotStrength}
}

--- ASN1STOP

**QuantityConfig field descriptions**

*filterCoefficient2-FDD*
Specifies the filtering coefficient used for the UTRAN FDD measurement quantity, which is not included in `measQuantityUTRA-FDD`, when `reportQuantityUTRA-FDD` is present in `ReportConfigInterRAT`.

*filterCoefficientRSRP*
Specifies the filtering coefficient used for RSRP.

*filterCoefficientRSRQ*
Specifies the filtering coefficient used for RSRQ.

*measQuantityCDMA2000*
Measurement quantity used for CDMA2000 measurements. `pilotPnPhaseAndPilotStrength` is only applicable for `MeasObjectCDMA2000` of `cdma2000-Type = type1XRTT`.

*measQuantityGERAN*
Measurement quantity used for GERAN measurements.

*measQuantityUTRA*
Measurement quantity used for UTRA measurements.

*quantityConfigCDMA2000*
Specifies quantity configurations for CDMA2000 measurements.

*quantityConfigEUTRA*
Specifies filter configurations for E-UTRA measurements.

*quantityConfigGERAN*
Specifies quantity and filter configurations for GERAN measurements.

*quantityConfigUTRA*
Specifies quantity and filter configurations for UTRA measurements. Field `quantityConfigUTRA-v1020` is applicable only when `reportQuantityUTRA-FDD` is configured.

---

**ReportConfigEUTRA**

The IE `ReportConfigEUTRA` specifies criteria for triggering of an E-UTRA measurement reporting event. The E-UTRA measurement reporting events are labelled A_N with N equal to 1, 2 and so on.

- **Event A1**: Serving becomes better than absolute threshold;
- **Event A2**: Serving becomes worse than absolute threshold;
- **Event A3**: Neighbour becomes amount of offset better than PCell;
- **Event A4**: Neighbour becomes better than absolute threshold;
- **Event A5**: PCell becomes worse than absolute threshold1 AND Neighbour becomes better than another absolute threshold2.
- **Event A6**: Neighbour becomes amount of offset better than SCell.

### ReportConfigId

The IE ReportConfigId is used to identify a measurement reporting configuration.

#### ReportConfigId information element

```plaintext
-- ASN1START

ReportConfigId ::= INTEGER (1..maxReportConfigId)

-- ASN1STOP
```
The IE ReportConfigInterRAT specifies criteria for triggering of an inter-RAT measurement reporting event. The inter-RAT measurement reporting events are labelled BN with N equal to 1, 2 and so on.

Event B1: Neighbour becomes better than absolute threshold;

Event B2: PCell becomes worse than absolute threshold1 AND Neighbour becomes better than another absolute threshold2.

The b1 and b2 event thresholds for CDMA2000 are the CDMA2000 pilot detection thresholds are expressed as an unsigned binary number equal to \([-2 \times 10 \log_{10} E_c/I_o]\) in units of 0.5dB, see C.S0005 [25] for details.

---ASN1START---

```
ReportConfigInterRAT ::= SEQUENCE {
  triggerType        CHOICE {
    event         SEQUENCE {
      eventId         CHOICE {
        eventB1         SEQUENCE {
          b1-Threshold      CHOICE {
            b1-ThresholdUTRA     ThresholdUTRA,
            b1-ThresholdGERAN     ThresholdGERAN,
            b1-ThresholdCDMA2000    ThresholdCDMA2000
          }
        },
        eventB2         SEQUENCE {
          b2-Threshold1      ThresholdEUTRA,

          }
        }
      }
    }
  }
  hysteresis      Hysteresis,
  timeToTrigger     TimeToTrigger
}.
```

---ASN1END---
ThresholdUTRA ::=  
  CHOICE{
    ultra-RSCP       INTEGER (-5..91),
    ultra-EcN0       INTEGER (0..49)
  }

ThresholdGERAN ::=  INTEGER (0..63)

ThresholdCDMA2000 ::=  INTEGER (0..63)
ReportConfigInterRAT field descriptions

| bN-ThresholdM | Threshold to be used in inter RAT measurement report triggering condition for event number bN. If multiple thresholds are defined for event number bN, the thresholds are differentiated by M. |
| eventld | Choice of inter-RAT event triggered reporting criteria. |
| maxReportCells | Max number of cells, excluding the serving cell, to include in the measurement report. In case purpose is set to reportStrongestCellsForSON only value 1 applies. |
| Purpose | reportStrongestCellsForSON applies only in case reportConfig is linked to a measObject set to measObjectUTRA or measObjectCDMA2000. |
| reportAmount | Number of measurement reports applicable for triggerType event as well as for triggerType periodic. In case purpose is set to reportCGI or reportStrongestCellsForSON only value 1 applies. |
| reportQuantityUTRA-FDD | The quantities to be included in the UTRA measurement report. The value both means that both the cpich RSCP and cpich EcN0 quantities are to be included in the measurement report. |
| si-RequestForHO | The field applies to the reportCGI functionality, and when the field is included, the UE is allowed to use autonomous gaps in acquiring system information from the neighbour cell, applies a different value for T321, and includes different fields in the measurement report. |
| ThresholdGERAN | The actual value is IE value – 110 dBm. |
| Purpose |utra-RSCP corresponds to CPICH_RSCP in TS 25.133 [29] for FDD and P-CCPCH_RSCP in TS 25.123 [30] for TDD.utra-EcN0 corresponds to CPICH_Ec/No in TS 25.133 [29] for FDD, and is not applicable for TDD. Forutra-RSCP: The actual value is IE value – 115 dBm. Forutra-EcN0: The actual value is (IE value – 49)/2 dB. |
| timeToTrigger | Time during which specific criteria for the event needs to be met in order to trigger a measurement report. |

Conditional presence | Explanation  
reportCGI | The field is optional, need OR, in case purpose is included and set to reportCGI; otherwise the field is not present and the UE shall delete any existing value for this field.  

--- ReportConfigToAddModList

The IE ReportConfigToAddModList concerns a list of reporting configurations to add or modify

ReportConfigToAddModList information element

```asn1
ReportConfigToAddModList ::= SEQUENCE (SIZE (1..maxReportConfigId)) OF ReportConfigToAddMod

ReportConfigToAddMod ::= SEQUENCE {
  reportConfigId ReportConfigId,
  reportConfig CHOICE {
    reportConfigEUTRA ReportConfigEUTRA,
    reportConfigInterRAT ReportConfigInterRAT
  }
}
```

-- ASN1START

ReportConfigToAddModList := SEQUENCE (SIZE (1..maxReportConfigId)) OF ReportConfigToAddMod

ReportConfigToAddMod := SEQUENCE {
  reportConfigId ReportConfigId,
  reportConfig CHOICE {
    reportConfigEUTRA ReportConfigEUTRA,
    reportConfigInterRAT ReportConfigInterRAT
  }
}
ReportInterval

The `ReportInterval` indicates the interval between periodical reports. The `ReportInterval` is applicable if the UE performs periodical reporting (i.e. when `reportAmount` exceeds 1), for `triggerType` event as well as for `triggerType` periodical. Value ms120 corresponds with 120 ms, ms240 corresponds with 240 ms and so on, while value min1 corresponds with 1 min, min6 corresponds with 6 min and so on.

**ReportInterval information element**

```asciidoc
ReportInterval ::=     ENUMERATED {
    ms120, ms240, ms480, ms640, ms1024, ms2048, ms5120, ms10240, 
    min1, min6, min12, min30, min60, spare3, spare2, spare1}
```

RSRP-Range

The IE `RSRP-Range` specifies the value range used in RSRP measurements and thresholds. Integer value for RSRP measurements according to mapping table in TS 36.133 [16].

**RSRP-Range information element**

```asciidoc
RSRP-Range ::=     INTEGER(0..97)
```

RSRQ-Range

The IE `RSRQ-Range` specifies the value range used in RSRQ measurements and thresholds. Integer value for RSRQ measurements according to mapping table in TS 36.133 [16].

**RSRQ-Range information element**

```asciidoc
RSRQ-Range ::=     INTEGER(0..34)
```
3GPP TS 36.331 version 11.11.0 Release 11

### TimeToTrigger

The IE *TimeToTrigger* specifies the value range used for time to trigger parameter, which concerns the time during which specific criteria for the event needs to be met in order to trigger a measurement report. Value ms0 corresponds to 0 ms, ms40 corresponds to 40 ms, and so on.

**TimeToTrigger information element**

```asn1
TimeToTrigger ::= ENUMERATED {
  ms0, ms40, ms64, ms80, ms100, ms160, ms256,
  ms320, ms480, ms512, ms640, ms1024, ms1280, ms2560, ms5120}
```

### 6.3.6 Other information elements

#### AbsoluteTimeInfo

The IE *AbsoluteTimeInfo* indicates an absolute time in a format YY-MM-DD HH:MM:SS and using BCD encoding. The first/ leftmost bit of the bit string contains the most significant bit of the most significant digit of the year and so on.

**AbsoluteTimeInfo information element**

```asn1
AbsoluteTimeInfo-r10 ::= BIT STRING (SIZE (48))
```

#### AreaConfiguration

The *AreaConfiguration* indicates area for which UE is requested to perform measurement logging. If not configured, measurement logging is not restricted to specific cells or tracking areas but applies as long as the RPLMN is contained in *plmn-IdentityList* stored in *VarLogMeasReport*.

**AreaConfiguration information element**

```asn1
AreaConfiguration-r10 ::= CHOICE {
  ```
AreaConfiguration field descriptions

<table>
<thead>
<tr>
<th>plmn-Identity-perTAC-List</th>
</tr>
</thead>
<tbody>
<tr>
<td>Includes the PLMN identity for each of the TA codes included in trackingAreaCodeList. The PLMN identity listed first in plmn-Identity-perTAC-List corresponds with the TA code listed first in trackingAreaCodeList and so on.</td>
</tr>
</tbody>
</table>

– C-RNTI

The IE **C-RNTI** identifies a UE having a RRC connection within a cell.

**C-RNTI information element**

<table>
<thead>
<tr>
<th>C-RNTI</th>
</tr>
</thead>
<tbody>
<tr>
<td>BIT STRING (SIZE (16))</td>
</tr>
</tbody>
</table>

– DedicatedInfoCDMA2000

The **DedicatedInfoCDMA2000** is used to transfer UE specific CDMA2000 information between the network and the UE. The RRC layer is transparent for this information.
DedicatedInfoCDMA2000 information element

DedicatedInfoCDMA2000 ::= OCTET STRING

– DedicatedInfoNAS

The IE DedicatedInfoNAS is used to transfer UE specific NAS layer information between the network and the UE. The RRC layer is transparent for this information.

DedicatedInfoNAS information element

DedicatedInfoNAS ::= OCTET STRING

– FilterCoefficient

The IE FilterCoefficient specifies the measurement filtering coefficient. Value fc0 corresponds to k = 0, fc1 corresponds to k = 1, and so on.

FilterCoefficient information element

FilterCoefficient ::= ENUMERATED {
    fc0, fc1, fc2, fc3, fc4, fc5,
    fc6, fc7, fc8, fc9, fc11, fc13,
    fc15, fc17, fc19, spare1, ...}

-- ASN1STOP
LoggingDuration

The LoggingDuration indicates the duration for which UE is requested to perform measurement logging. Value min10 corresponds to 10 minutes, value min20 corresponds to 20 minutes and so on.

LoggingDuration information element

LoggingDuration-r10 ::= ENUMERATED {
    min10, min20, min40, min60, min90, min120, spare2, spare1
}

LoggerInterval

The LoggerInterval indicates the periodicity for logging measurement results. Value ms1280 corresponds to 1.28s, value ms2560 corresponds to 2.56s and so on.

LoggerInterval information element

LoggerInterval-r10 ::= ENUMERATED {
    ms1280, ms2560, ms5120, ms10240, ms20480,
    ms30720, ms40960, ms61440
}

MeasSubframePattern

The IE MeasSubframePattern is used to specify a subframe pattern. The first/leftmost bit corresponds to the subframe #0 of the radio frame satisfying SFN mod x = 0, where SFN is that of PCell and x is the size of the bit string divided by 10. "1" denotes that the corresponding subframe is used.

MeasSubframePattern information element

MeasSubframePattern-r10 ::= CHOICE {
    subframePatternFDD-r10 BIT STRING (SIZE (40)),
    subframePatternTDD-r10 CHOICE {
        subframeConfig1-5-r10 BIT STRING (SIZE (20)),
        subframeConfig0-r10 BIT STRING (SIZE (70))
    }
}
subframeConfig6-r10 BIT STRING (SIZE (60)),
...
},
...
}

-- ASN1STOP

— MMEC

The IE MMEC identifies an MME within the scope of an MME Group within a PLMN, see TS 23.003 [27].

MMEC information element

-- ASN1START

MMEC ::= BIT STRING (SIZE (8))

-- ASN1STOP

— NeighCellConfig

The IE NeighCellConfig is used to provide the information related to MBSFN and TDD UL/DL configuration of neighbour cells.

NeighCellConfig information element

-- ASN1START

NeighCellConfig ::= BIT STRING (SIZE (2))

-- ASN1STOP
**NeighCellConfig field descriptions**

*neighCellConfig*

Provides information related to MBSFN and TDD UL/DL configuration of neighbour cells of this frequency

00: Not all neighbour cells have the same MBSFN subframe allocation as the serving cell on this frequency, if configured, and as the PCell otherwise

10: The MBSFN subframe allocations of all neighbour cells are identical to or subsets of that in the serving cell on this frequency, if configured, and of that in the PCell otherwise

01: No MBSFN subframes are present in all neighbour cells

11: Different UL/DL allocation in neighbouring cells for TDD compared to the serving cell on this frequency, if configured, and compared to the PCell otherwise

For TDD, 00, 10 and 01 are only used for same UL/DL allocation in neighbouring cells compared to the serving cell on this frequency, if configured, and compared to the PCell otherwise.

---

**OtherConfig**

The IE *OtherConfig* contains configuration related to other configuration

---

**OtherConfig information element**

-- ASN1START

```
OtherConfig-r9 ::= SEQUENCE { 
  reportProximityConfig-r9    ReportProximityConfig-r9  OPTIONAL, -- Need ON
  ...

NOTE: Enabling/ disabling of proximity indication includes enabling/ disabling of the related functionality e.g. autonomous search in connected mode.

— RAND-CDMA2000 (1xRTT)

The RAND-CDMA2000 concerns a random value, generated by the eNB, to be passed to the CDMA2000 upper layers.
**RAND-CDMA2000 information element**

```
RAND-CDMA2000 ::=     BIT STRING (SIZE (32))
```

**– RAT-Type**

The IE `RAT-Type` is used to indicate the radio access technology (RAT), including E-UTRA, of the requested/ transferred UE capabilities.

**RAT-Type information element**

```
RAT-Type ::=     ENUMERATED {
    eutra, utra, geran-cs, geran-ps, cdma2000-1XRTT,
    spare3, spare2, spare1, ...
}
```

**– RRC-TransactionIdentifier**

The IE `RRC-TransactionIdentifier` is used, together with the message type, for the identification of an RRC procedure (transaction).

**RRC-TransactionIdentifier information element**

```
RRC-TransactionIdentifier ::=     INTEGER (0..3)
```

**– S-TMSI**

The IE `S-TMSI` contains an S-Temporary Mobile Subscriber Identity, a temporary UE identity provided by the EPC which uniquely identifies the UE within the tracking area, see TS 23.003 [27].

**S-TMSI information element**

```
S-TMSI ::=     OCTET STRING (SIZE (32))
```
S-TMSI ::= SEQUENCE {
  mmec            MMEC,
  m-TMSI           BIT STRING (SIZE (32))
}

--- ASN1STOP

### S-TMSI field descriptions

| m-TMSI | The first/leftmost bit of the bit string contains the most significant bit of the M-TMSI. |

---

- **TraceReference**

The *TraceReference* contains parameter Trace Reference as defined in TS 32.422 [58].

**TraceReference information element**

--- ASN1START

TraceReference-r10 ::= SEQUENCE {
  plmn-Identity-r10    PLMN-Identity,
  traceId-r10      OCTET STRING (SIZE (3))
}

--- ASN1STOP

- **UE-CapabilityRAT-ContainerList**

The IE *UE-CapabilityRAT-ContainerList* contains list of containers, one for each RAT for which UE capabilities are transferred, if any.

**UE-CapabilityRAT-ContainerList information element**

--- ASN1START

UE-CapabilityRAT-ContainerList ::=SEQUENCE (SIZE (0..maxRAT-Capabilities)) OF UE-CapabilityRAT-Container

UE-CapabilityRAT-Container ::= SEQUENCE {
  rat-Type       RAT-Type,

### UE-EUTRA-Capability field descriptions

<table>
<thead>
<tr>
<th>Field Description</th>
<th>FDD/ TDD diff</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>accessStratumRelease</strong></td>
<td>Set to rel11 in this version of the specification.</td>
</tr>
<tr>
<td><strong>bandCombinationListEUTRA</strong></td>
<td>One entry corresponding to each supported band combination listed in the same order as in supportedBandCombination.</td>
</tr>
<tr>
<td><strong>BandCombinationParameters-v1090</strong></td>
<td>If included, the UE shall include the same number of entries, and listed in the same order, as in BandCombinationParameters-r10.</td>
</tr>
<tr>
<td><strong>BandCombinationParameters-v1130</strong></td>
<td>The field is applicable to each supported CA bandwidth class combination (i.e. CA configuration in TS 36.101 [42, Section 5.6A.1]) indicated in the corresponding band combination. If included, the UE shall include the same number of entries, and listed in the same order, as in BandCombinationParameters-r10.</td>
</tr>
<tr>
<td><strong>bandEUTRA</strong></td>
<td>E-UTRA band as defined in TS 36.101 [42]. In case the UE includes bandEUTRA-v9e0 or bandEUTRA-v1090, the UE shall set the corresponding entry of bandEUTRA (i.e. without suffix) or bandEUTRA-r10 respectively to maxFBI.</td>
</tr>
<tr>
<td><strong>bandListEUTRA</strong></td>
<td>One entry corresponding to each supported E-UTRA band listed in the same order as in supportedBandListEUTRA.</td>
</tr>
<tr>
<td><strong>benefitsFrom INTERRUPTION</strong></td>
<td>Indicates whether the UE power consumption would benefit from being allowed to cause interruptions to serving cells when performing measurements of deactivated SCell carriers for measCycleSCell of less than 640ms, as specified in TS 36.133 [16].</td>
</tr>
<tr>
<td><strong>CA-BandwidthClass</strong></td>
<td>The CA bandwidth class supported by the UE as defined in TS 36.101 [42, Table 5.6A-1]. The UE explicitly includes all the supported CA bandwidth class combinations in the band combination signalling. Support for one CA bandwidth class does not implicitly indicate support for another CA bandwidth class.</td>
</tr>
<tr>
<td><strong>cdma2000-NW-Sharing</strong></td>
<td>Indicates whether the UE supports network sharing for CDMA2000.</td>
</tr>
<tr>
<td><strong>crossCarrierScheduling</strong></td>
<td>Indicates whether the UE supports CRS interference handling.</td>
</tr>
<tr>
<td><strong>deviceType</strong></td>
<td>Indicates whether the UE sets the value to ‘noBenFromBatConsumpOpt’ when it does not foresee to particularly benefit from NW-based battery consumption optimisation. Absence of this value means that the device does not benefit from NW-based battery consumption optimisation.</td>
</tr>
<tr>
<td><strong>dtm</strong></td>
<td>Indicates whether the UE supports DTM in GERAN.</td>
</tr>
<tr>
<td><strong>e-CSFB-1XRTT</strong></td>
<td>Indicates whether the UE supports enhanced CS fallback to CDMA2000 1xRTT or not.</td>
</tr>
<tr>
<td><strong>e-CSFB-ConcPS-Mob1XRTT</strong></td>
<td>Indicates whether the UE supports concurrent enhanced CS fallback to CDMA2000 1xRTT and PS handover/ redirection to CDMA2000 HRPD.</td>
</tr>
<tr>
<td><strong>e-CSFB-dual-1XRTT</strong></td>
<td>Indicates whether the UE supports enhanced CS fallback to CDMA2000 1xRTT for dual Rx/Tx configuration. This bit can only be set to supported if tx-Config1XRTT and rx-Config1XRTT are both set to dual.</td>
</tr>
<tr>
<td><strong>enhancedDualLayerTDD</strong></td>
<td>Indicates whether the UE supports enhanced dual layer (PDSCH transmission mode 8) for TDD or not.</td>
</tr>
<tr>
<td><strong>ePDCCH</strong></td>
<td>Indicates whether the UE can receive DCI on UE specific search space on Enhanced PDCCH.</td>
</tr>
<tr>
<td><strong>e-RedirectionUTRA</strong></td>
<td>Indicates whether the UE supports enhanced redirection to UTRA TDD to multiple carrier frequencies both with and without using related SIB provided by RRCConnectionRelease or not.</td>
</tr>
<tr>
<td><strong>featureGroupIndicators, featureGroupIndRel9Add, featureGroupIndRel10</strong></td>
<td>The definitions of the bits in the bit string are described in Annex B.1 (for featureGroupIndicators and featureGroupIndRel9Add) and in Annex C.1.(for featureGroupIndRel10).</td>
</tr>
<tr>
<td><strong>freqBandRetrieval</strong></td>
<td>Indicates whether the UE supports reception of requestedFrequencyBands.</td>
</tr>
<tr>
<td>Field Description</td>
<td>FDD/ TDD diff</td>
</tr>
<tr>
<td>--------------------------------------------------------</td>
<td>--------------</td>
</tr>
<tr>
<td><strong>halfDuplex</strong></td>
<td></td>
</tr>
<tr>
<td>If <code>halfDuplex</code> is set to true, only half duplex operation is supported, otherwise full duplex operation is supported.</td>
<td></td>
</tr>
<tr>
<td><strong>inDeviceCoexInd</strong></td>
<td>Yes</td>
</tr>
<tr>
<td>Indicates whether the UE supports in-device coexistence indication as well as autonomous denial functionality.</td>
<td></td>
</tr>
<tr>
<td><strong>interBandTDD-CA-WithDifferentConfig</strong></td>
<td></td>
</tr>
<tr>
<td>Indicates whether the UE supports inter-band TDD carrier aggregation with different UL/DL configuration combinations. The first bit indicates UE supports the configuration combination of SCell DL subframes are a subset of PCell by SIB1 configuration and the configuration combination of SCell DL subframes are a superset of PCell by SIB1 configuration; the second bit indicates UE supports the configuration combination of SCell DL subframes are neither superset nor subset of PCell by SIB1 configuration. This field is included only if UE supports inter-band TDD carrier aggregation.</td>
<td></td>
</tr>
<tr>
<td><strong>interFreqBandList</strong></td>
<td></td>
</tr>
<tr>
<td>One entry corresponding to each supported E-UTRA band listed in the same order as in <code>supportedBandListEUTRA</code>.</td>
<td></td>
</tr>
<tr>
<td><strong>interFreqNeedForGaps</strong></td>
<td></td>
</tr>
<tr>
<td>Indicates need for measurement gaps when operating on the E-UTRA band given by the entry in <code>bandListEUTRA</code> or on the E-UTRA band combination given by the entry in <code>bandCombinationListEUTRA</code> and measuring on the E-UTRA band given by the entry in <code>interFreqBandList</code>.</td>
<td></td>
</tr>
<tr>
<td><strong>interFreqProximityIndication</strong></td>
<td></td>
</tr>
<tr>
<td>Indicates whether the UE supports proximity indication for inter-frequency E-UTRAN CSG member cells.</td>
<td></td>
</tr>
<tr>
<td><strong>interFreqRSTD-Measurement</strong></td>
<td>Yes</td>
</tr>
<tr>
<td>Indicates whether the UE supports inter-frequency RSTD measurements for OTDOA positioning [54].</td>
<td></td>
</tr>
<tr>
<td><strong>interFreqSI-AcquisitionForHO</strong></td>
<td>Yes</td>
</tr>
<tr>
<td>Indicates whether the UE supports, upon configuration of <code>si-RequestForHO</code> by the network, acquisition and reporting of relevant information using autonomous gaps by reading the SI from a neighbouring inter-frequency cell.</td>
<td></td>
</tr>
<tr>
<td><strong>interRAT-BandList</strong></td>
<td></td>
</tr>

</table>

It indicates if the UE supports the signalling requirements of multiple radio frequency bands in a UTRA FDD cell, as defined in TS 25.307 [65].

The number of supported layers for spatial multiplexing in DL.

The number of supported layers for spatial multiplexing in UL. Absence of the field means that the number of supported layers is 1.

Field encoded as a bit map, where at least one bit N is set to "1" if UE supports modified MPR/A-MPR behaviour N, see TS 36.101 [42]. All remaining bits of the field are set to '0'. The leading / leftmost bit (bit 0) corresponds to modified MPR/A-MPR behaviour 0, the next bit corresponds to modified MPR/A-MPR behaviour 1 and so on. Absence of this field means that UE does not support any modified MPR/A-MPR behaviour.

Indicates whether the UE supports multi-cell HARQ ACK and periodic CSI reporting and SR on PUCCH format 3.

Indicates whether the UE supports UE-assisted OTDOA positioning [54].

Indicates the frequency bands requested by E-UTRAN.

Indicates whether the UE supports delivery of rachReport.

Indicates whether the UE supports simultaneous reception and transmission on different bands for each band combination listed in supportedBandCombination. This field is only applicable for inter-band TDD carrier aggregation.

Indicates whether UE supports SRVCC handover from UTRA FDD PS HS to GERAN CS.

Indicates whether UE supports SRVCC handover from UTRA FDD PS HS to UTRA FDD CS.

Indicates whether UE supports SRVCC handover from UTRA TDD 1.28Mcps PS HS to GERAN CS.

Indicates whether UE supports SRVCC handover from UTRA TDD 1.28Mcps PS HS to UTRA TDD 1.28Mcps CS.

Indicates whether the UE supports synchronisation signal and common channel interference handling.

Indicates whether the UE is equipped with a standalone GNSS receiver that may be used to provide detailed location information in RRC measurement report and logged measurements.

Includes the supported CA band combinations, if any, and may include all the supported non-

</table>

**NOTE 1:** The IE **UE-EUTRA-Capability** does not include AS security capability information, since these are the same as the security capabilities that are signalled by NAS. Consequently AS need not provide "man-in-the-middle" protection for the security capabilities.

**NOTE 2:** The column FDD/ TDD diff indicates if the UE is allowed to signal, as part of the additional capabilities for an XDD mode i.e. within **UE-EUTRA-CapabilityAddXDD-Mode-xNM**, a different value compared to the value signalled elsewhere within **UE-EUTRA-Capability** (i.e. the common value, supported for both XDD modes). A '-' is used to indicate that it is not possible to signal different values (used for fields for which the field description is provided for other reasons).

**NOTE 3:** All the combinations of **CA-MIMO-ParametersUL** and **CA-MIMO-ParametersDL** for one band and across all the bands in each **BandCombinationParameters** are supported by the UE and have the same measurement gap requirement (i.e. the same **BandInfoEUTRA** applies). The **BandCombinationParameters** for the same band combination can be included more than once.

**NOTE 4:** UE CA and measurement capabilities indicate the combinations of frequencies that can be configured as serving frequencies.

---

### UE-TimersAndConstants

The IE **UE-TimersAndConstants** contains timers and constants used by the UE in either RRC_CONNECTED or RRC_IDLE.

#### UE-TimersAndConstants information element

```
-- ASN1START

UE-TimersAndConstants ::= SEQUENCE {
  t300 ENUMERATED {
    ms100, ms200, ms300, ms400, ms600, ms1000, ms1500,
    ms2000},
  t301 ENUMERATED {
    ms100, ms200, ms300, ms400, ms600, ms1000, ms1500,
    ms2000},
  t310 ENUMERATED {
    ms0, ms50, ms100, ms200, ms500, ms1000, ms2000},

-- ASN1END
```
UE-TimersAndConstants field descriptions

| n3xy  | Constants are described in section 7.4. n1 corresponds with 1, n2 corresponds with 2 and so on. |
| t3xy  | Timers are described in section 7.3. Value ms0 corresponds with 0 ms, ms50 corresponds with 50 ms and so on. |

6.3.7 MBMS information elements

– MBMS-NotificationConfig

The IE MBMS-NotificationConfig specifies the MBMS notification related configuration parameters, that are applicable for all MBSFN areas.

MBMS-NotificationConfig information element

-- ASN1START

MBMS-NotificationConfig-r9 ::= SEQUENCE {
  notificationRepetitionCoeff-r9  ENUMERATED {n2, n4},
  notificationOffset-r9    INTEGER (0..10),
  notificationSF-Index-r9    INTEGER (1..6)
}

-- ASN1STOP
### MBMS-NotificationConfig field descriptions

**notificationOffset**
Indicates, together with the **notificationRepetitionCoeff**, the radio frames in which the MCCH information change notification is scheduled i.e. the MCCH information change notification is scheduled in radio frames for which: SFN mod notification repetition period = notificationOffset.

**notificationRepetitionCoeff**
Actual change notification repetition period common for all MCCHs that are configured= shortest modification period/ notificationRepetitionCoeff. The "shortest modification period" corresponds with the lowest value of mcch-ModificationPeriod of all MCCHs that are configured. Value n2 corresponds to coefficient 2, and so on.

**notificationSF-Index**
Indicates the subframe used to transmit MCCH change notifications on PDCCH.
FDD: Value 1, 2, 3, 4, 5 and 6 correspond with subframe #1, #2, #3 #6, #7, and #8 respectively.
TDD: Value 1, 2, 3, 4, and 5 correspond with subframe #3, #4, #7, #8, and #9 respectively.

---

**MBSFN-AreaInfoList**

The IE **MBSFN-AreaInfoList** contains the information required to acquire the MBMS control information associated with one or more MBSFN areas.

**MBSFN-AreaInfoList information element**

```asciidoc
 -- ASN1START

MBSFN-AreaInfoList-r9 ::=   SEQUENCE (SIZE(1..maxMBSFN-Area)) OF MBSFN-AreaInfo-r9

MBSFN-AreaInfo-r9 ::=    SEQUENCE {
    mbsfn-AreaId-r9      INTEGER (0..255),
    non-MBSFNregionLength    ENUMERATED {s1, s2},
    notificationIndicator-r9    INTEGER (0..7),
    mcch-Config-r9      SEQUENCE {
        mcch-RepetitionPeriod-r9   ENUM ERATED {rf32, rf64, rf128, rf256},
        mcch-Offset-r9      INTEGER (0..10),
        mcch-ModificationPeriod-r9   ENUMERATED {rf512, rf1024},
        sf-AllocInfo-r9      BIT STRING (SIZE(6)),
        signallingMCS-r9     ENUMERATED {n2, n7, n13, n19}
    },
    ...
}

-- ASN1STOP
```
**MBSFN-AreaInfoList field descriptions**

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>mbsfn-AreaId</td>
<td>Indicates the MBSFN area ID, parameter $N_{\text{MBSFN}}$ in TS 36.211 [21, 6.10.2.1].</td>
</tr>
<tr>
<td>mcch-ModificationPeriod</td>
<td>Defines periodically appearing boundaries, i.e. radio frames for which SFN mod $\text{mcch-ModificationPeriod} = 0$. The contents of different transmissions of MCCH information can only be different if there is at least one such boundary in-between them.</td>
</tr>
<tr>
<td>mcch-Offset</td>
<td>Indicates, together with the $\text{mcch-RepetitionPeriod}$, the radio frames in which MCCH is scheduled in radio frames for which: SFN mod $\text{mcch-ModificationPeriod} = \text{mcch-Offset}$.</td>
</tr>
<tr>
<td>mcch-RepetitionPeriod</td>
<td>Defines the interval between transmissions of MCCH information, in radio frames, Value rf32 corresponds to 32 radio frames, rf64 corresponds to 64 radio frames and so on.</td>
</tr>
<tr>
<td>non-MBSFNregionLength</td>
<td>Indicates how many symbols from the beginning of the subframe constitute the non-MBSFN region. This value applies in all subframes of the MBSFN area used for PMCH transmissions as indicated in the MSI. The values s1 and s2 correspond with 1 and 2 symbols, respectively: see TS 36.211 [21, Table 6.7-1].</td>
</tr>
<tr>
<td>notificationIndicator</td>
<td>Indicates which PDCCH bit is used to notify the UE about change of the MCCH applicable for this MBSFN area. Value 0 corresponds with the least significant bit as defined in TS 36.212 [22, Section 5.3.3.1] and so on.</td>
</tr>
<tr>
<td>sf-AlloCinfo</td>
<td>Indicates the subframes of the radio frames indicated by the $\text{mcch-RepetitionPeriod}$ and the $\text{mcch-Offset}$, that may carry MCCH. Value '1' indicates that the corresponding subframe is allocated. The following mapping applies: FDD: The first/ leftmost bit defines the allocation for subframe #1 of the radio frame indicated by $\text{mcch-RepetitionPeriod}$ and $\text{mcch-Offset}$; the second bit for #2, the third bit for #3, the fourth bit for #6, the fifth bit for #7 and the sixth bit for #8. TDD: The first/leftmost bit defines the allocation for subframe #3 of the radio frame indicated by $\text{mcch-RepetitionPeriod}$ and $\text{mcch-Offset}$, the second bit for #4, third bit for #7, fourth bit for #8, fifth bit for #9. Uplink subframes are not allocated. The last bit is not used.</td>
</tr>
<tr>
<td>signallingMCS</td>
<td>Indicates the Modulation and Coding Scheme (MCS) applicable for the subframes indicated by the field sf-AlloCinfo and for each (P)MCH that is configured for this MBSFN area, for the first subframe allocated to the (P)MCH within each MCH scheduling period (which may contain the MCH scheduling information provided by MAC). Value n2 corresponds with the value 2 for parameter $I_{\text{MCS}}$ in TS 36.213 [23, Table 7.1.7.1-1], and so on.</td>
</tr>
</tbody>
</table>

---

**MBSFN-SubframeConfig**

The IE **MBSFN-SubframeConfig** defines subframes that are reserved for MBSFN in downlink.

**MBSFN-SubframeConfig information element**

```
-- ASN1START

MBSFN-SubframeConfig ::= SEQUENCE {
  radioframeAllocationPeriod ENUMERATED {n1, n2, n4, n8, n16, n32},
  radioframeAllocationOffset INTEGER (0..7),
  subframeAllocation CHOICE {
    oneFrame BIT STRING (SIZE(6)),
    fourFrames BIT STRING (SIZE(24))
  }
}

-- ASN1STOP
```

---
**MBSFN-SubframeConfig field descriptions**

**fourFrames**
A bit-map indicating MBSFN subframe allocation in four consecutive radio frames, ‘1’ denotes that the corresponding subframe is allocated for MBSFN. The bitmap is interpreted as follows:
- FDD: Starting from the first radioframe and from the first/leftmost bit in the bitmap, the allocation applies to subframes #1, #2, #3, #6, #7, and #8 in the sequence of the four radio-frames.
- TDD: Starting from the first radioframe and from the first/leftmost bit in the bitmap, the allocation applies to subframes #3, #4, #7, #8, and #9 in the sequence of the four radio-frames. The last four bits are not used. Uplink subframes are not allocated.

**oneFrame**
‘1’ denotes that the corresponding subframe is allocated for MBSFN. The following mapping applies:
- FDD: The first/leftmost bit defines the MBSFN allocation for subframe #1, the second bit for #2, third bit for #3, fourth bit for #6, fifth bit for #7, sixth bit for #8.
- TDD: The first/leftmost bit defines the allocation for subframe #3, the second bit for #4, third bit for #7, fourth bit for #8, fifth bit for #9. Uplink subframes are not allocated. The last bit is not used.

**radioFrameAllocationPeriod, radioFrameAllocationOffset**
Radio-frames that contain MBSFN subframes occur when equation `SFN mod radioFrameAllocationPeriod = radioFrameAllocationOffset` is satisfied. Value n1 for radioFrameAllocationPeriod denotes value 1, n2 denotes value 2, and so on. When `fourFrames` is used for `subframeAllocation`, the equation defines the first radio frame referred to in the description below. Values n1 and n2 are not applicable when `fourFrames` is used.

**subframeAllocation**
Defines the subframes that are allocated for MBSFN within the radio frame allocation period defined by the `radioFrameAllocationPeriod` and the `radioFrameAllocationOffset`.

---

**PMCH-InfoList**

The IE `PMCH-InfoList` specifies configuration of all PMCHs of an MBSFN area. The information provided for an individual PMCH includes the configuration parameters of the sessions that are carried by the concerned PMCH.

**PMCH-InfoList information element**

```plaintext
-- ASN1START

PMCH-InfoList-r9 ::= SEQUENCE (SIZE (0..maxPMCH-PerMBSFN)) OF PMCH-Info-r9

PMCH-Info-r9 ::= SEQUENCE {
    pmch-Config-r9     PMCH-Config-r9,
    mbms-SessionInfoList-r9   MBMS-SessionInfoList-r9,
    ...            }

MBMS-SessionInfoList-r9 ::= SEQUENCE (SIZE (0..maxSessionPerPMCH)) OF MBMS-SessionInfo-r9

MBMS-SessionInfo-r9 ::= SEQUENCE {
    tmgi-r9            TMGI-r9,
    sessionId-r9      OCTET STRING (SIZE (1)) OPTIONAL, -- Need OR
    logicalChannelIdentity-r9   INTEGER (0..maxSessionPerPMCH-1),
    ...            }

-- ASN1END
```
PMCH-Config-r9 ::= SEQUENCE {
    sf-AllocEnd-r9 INTEGER (0..1535),
    dataMCS-r9    INTEGER (0..28),
    mch-SchedulingPeriod-r9 ENUMERATED {
        rf8, rf16, rf32, rf64, rf128, rf256, rf512, rf1024},
    ...
}

TMGI-r9 ::= SEQUENCE {
    plmn-Id-r9 CHOICE {
        plmn-Index-r9 INTEGER (1..maxPLMN-r11),
        explicitValue-r9 PLMN-Identity
    },
    serviceId-r9 OCTET STRING (SIZE (3))
}

-- ASN1STOP

**PMCH-InfoList field descriptions**

**dataMCS**
Indicates the value for parameter $I_{MCS}$ in TS 36.213 [23, Table 7.1.7.1-1], which defines the Modulation and Coding Scheme (MCS) applicable for the subframes of this (P)MCH as indicated by the field commonSF-Alloc. The MCS does however neither apply to the subframes that may carry MCCH i.e. the subframes indicated by the field sf-AlloctInfo within SystemInformationBlockType13 nor for the first subframe allocated to this (P)MCH within each MCH scheduling period (which may contain the MCH scheduling information provided by MAC).

**mch-SchedulingPeriod**
Indicates the MCH scheduling period i.e. the periodicity used for providing MCH scheduling information at lower layers (MAC) applicable for an MCH. Value rf8 corresponds to 8 radio frames, rf16 corresponds to 16 radio frames and so on. The mch-SchedulingPeriod starts in the radio frames for which: SFN mod mch-SchedulingPeriod = 0. E-UTRAN configures mch-SchedulingPeriod of the (P)MCH listed first in PMCH-InfoList to be smaller than or equal to mcch-RepetitionPeriod.

**plmn-Index**
Index of the entry in field plmn-IdentityList within SystemInformationBlockType1.

**sessionId**
Indicates the optional MBMS Session Identity, which together with TMGI identifies a transmission or a possible retransmission of a specific MBMS session: see TS 29.061 [51, Sections 20.5, 17.7.11, 17.7.15]. The field is included whenever upper layers have assigned a session identity i.e. one is available for the MBMS session in E-UTRAN.

**serviceld**
Uniquely identifies the identity of an MBMS service within a PLMN. The field contains octet 3- 5 of the IE Temporary Mobile Group Identity (TMGI) as defined in TS 24.008 [49]. The first octet contains the third octet of the TMGI, the second octet contains the fourth octet of the TMGI and so on.

**sf-AlloctEnd**
Indicates the last subframe allocated to this (P)MCH within a period identified by field commonSF-AlloctPeriod. The subframes allocated to (P)MCH corresponding with the $n^{th}$ entry in pmch-InfoList are the subsequent subframes starting from either the next subframe after the subframe identified by sf-AlloctEnd of the $(n-1)^{th}$ listed (P)MCH or, for $n=1$, the first subframe defined by field commonSF-Alloct, through the subframe identified by sf-AlloctEnd of the $n^{th}$ listed (P)MCH. Value 0 corresponds with the first subframe defined by field commonSF-Alloct.
6.4 RRC multiplicity and type constraint values

-- Multiplicity and type constraint definitions

maxBandComb-r10 INTEGER ::= 128 -- Maximum number of band combinations.
maxBandComb-r11 INTEGER ::= 256 -- Maximum number of additional band combinations.

7 Variables and constants

7.1 UE variables

NOTE: To facilitate the specification of the UE behavioural requirements, UE variables are represented using ASN.1. Unless explicitly specified otherwise, it is however up to UE implementation how to store the variables. The optionality of the IEs in ASN.1 is used only to indicate that the values may not always be available.

-- EUTRA-UE-Variables

This ASN.1 segment is the start of the E-UTRA UE variable definitions.

LogMeasInfoList2-r10 ::= SEQUENCE (SIZE (1..maxLogMeas-r10)) OF LogMeasInfo-r10

-- ASN1STOP

-- VarMeasConfig

The UE variable VarMeasConfig includes the accumulated configuration of the measurements to be performed by the UE, covering intra-frequency, inter-frequency and inter-RAT mobility related measurements.

NOTE: The amount of measurement configuration information, which a UE is required to store, is specified in subclause 11.1. If the number of frequencies configured for a particular RAT exceeds the minimum performance requirements specified in [16], it is up to UE implementation which frequencies of that RAT are measured. If the total number of frequencies for all RATs provided to the UE in the measurement configuration exceeds the minimum performance requirements specified in [16], it is up to UE implementation which frequencies/RATs are measured.

VarMeasConfig UE variable

</table>

### 8 Protocol data unit abstract syntax

#### 8.1 General

The RRC PDU contents in clause 6 and clause 10 are described using abstract syntax notation one (ASN.1) as specified in ITU-T Rec. X.680 [13] and X.681 [14]. Transfer syntax for RRC PDUs is derived from their ASN.1 definitions by use of Packed Encoding Rules, unaligned as specified in ITU-T Rec. X.691 [15].

The following encoding rules apply in addition to what has been specified in X.691:

- When a bit string value is placed in a bit-field as specified in 15.6 to 15.11 in X.691, the leading bit of the bit string value shall be placed in the leading bit of the bit-field, and the trailing bit of the bit string value shall be placed in the trailing bit of the bit-field.

  **NOTE:** The terms 'leading bit' and 'trailing bit' are defined in ITU-T Rec. X.680. When using the 'bstring' notation, the leading bit of the bit string value is on the left, and the trailing bit of the bit string value is on the right.

- When decoding types constrained with the ASN.1 Contents Constraint ("CONTAINING"), automatic decoding of the contained type should not be performed because errors in the decoding of the contained type should not cause the decoding of the entire RRC message PDU to fail. It is recommended that the decoder first decodes the outer PDU type that contains the OCTET STRING or BIT STRING with the Contents Constraint, and then decodes the contained type that is nested within the OCTET STRING or BIT STRING as a separate step.

- When decoding a) RRC message PDUs, b) BIT STRING constrained with a Contents Constraint, or c) OCTET STRING constrained with a Contents Constraint, PER decoders are required to never report an error if there are extraneous zero or non-zero bits at the end of the encoded RRC message PDU, BIT STRING or OCTET STRING.
8.2 Structure of encoded RRC messages

An RRC PDU, which is the bit string that is exchanged between peer entities across the radio interface contains the basic production as defined in X.691.

RRC PDUs shall be mapped to and from PDCP SDUs (in case of DCCH) or RLC SDUs (in case of PCCH, BCCH, CCCH or MCCH) upon transmission and reception as follows:

- when delivering an RRC PDU as an PDCP SDU to the PDCP layer for transmission, the first bit of the RRC PDU shall be represented as the first bit in the PDCP SDU and onwards; and

- when delivering an RRC PDU as an RLC SDU to the RLC layer for transmission, the first bit of the RRC PDU shall be represented as the first bit in the RLC SDU and onwards; and

- upon reception of an PDCP SDU from the PDCP layer, the first bit of the PDCP SDU shall represent the first bit of the RRC PDU and onwards; and

- upon reception of an RLC SDU from the RLC layer, the first bit of the RLC SDU shall represent the first bit of the RRC PDU and onwards.

8.3 Basic production

The 'basic production' is obtained by applying UNALIGNED PER to the abstract syntax value (the ASN.1 description) as specified in X.691. It always contains a multiple of 8 bits.

8.4 Extension

The following rules apply with respect to the use of protocol extensions:

- A transmitter compliant with this version of the specification shall, unless explicitly indicated otherwise on a PDU type basis, set the extension part empty. Transmitters compliant with a later version may send non-empty extensions;

- A transmitter compliant with this version of the specification shall set spare bits to zero;

8.5 Padding

If the encoded RRC message does not fill a transport block, the RRC layer shall add padding bits. This applies to PCCH and BCCH.

Padding bits shall be set to 0 and the number of padding bits is a multiple of 8.
9 Specified and default radio configurations

Specified and default configurations are configurations of which the details are specified in the standard. Specified configurations are fixed while default configurations can be modified using dedicated signalling.

9.1 Specified configurations

9.1.1 Logical channel configurations

9.1.1.1 BCCH configuration

Parameters

<table>
<thead>
<tr>
<th>Name</th>
<th>Value</th>
<th>Semantics description</th>
<th>Ver</th>
</tr>
</thead>
<tbody>
<tr>
<td>PDCP configuration</td>
<td>N/A</td>
<td></td>
<td></td>
</tr>
<tr>
<td>RLC configuration</td>
<td>TM</td>
<td></td>
<td></td>
</tr>
<tr>
<td>MAC configuration</td>
<td>TM</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

NOTE: RRC will perform padding, if required due to the granularity of the TF signalling, as defined in 8.5.

9.1.1.2 CCCH configuration

Parameters

<table>
<thead>
<tr>
<th>Name</th>
<th>Value</th>
<th>Semantics description</th>
<th>Ver</th>
</tr>
</thead>
<tbody>
<tr>
<td>PDCP configuration</td>
<td>N/A</td>
<td></td>
<td></td>
</tr>
<tr>
<td>RLC configuration</td>
<td>TM</td>
<td></td>
<td></td>
</tr>
<tr>
<td>MAC configuration</td>
<td></td>
<td>Normal MAC headers are used</td>
<td></td>
</tr>
<tr>
<td>Logical channel configuration</td>
<td>priority</td>
<td>1 Highest priority</td>
<td></td>
</tr>
<tr>
<td></td>
<td>prioritisedBitRate</td>
<td>infinity</td>
<td></td>
</tr>
<tr>
<td></td>
<td>bucketSizeDuration</td>
<td>N/A</td>
<td></td>
</tr>
<tr>
<td></td>
<td>logicalChannelGroup</td>
<td>0</td>
<td></td>
</tr>
</tbody>
</table>
9.1.1.3 PCCH configuration

Parameters

<table>
<thead>
<tr>
<th>Name</th>
<th>Value</th>
<th>Semantics description</th>
<th>Ver</th>
</tr>
</thead>
<tbody>
<tr>
<td>logicalChannelSR-Mask-r9</td>
<td>release</td>
<td></td>
<td>v920</td>
</tr>
</tbody>
</table>

NOTE: RRC will perform padding, if required due to the granularity of the TF signalling, as defined in 8.5.

9.1.1.4 MCCH and MTCH configuration

Parameters

<table>
<thead>
<tr>
<th>Name</th>
<th>Value</th>
<th>Semantics description</th>
<th>Ver</th>
</tr>
</thead>
<tbody>
<tr>
<td>PDCP configuration</td>
<td>N/A</td>
<td></td>
<td></td>
</tr>
<tr>
<td>RLC configuration</td>
<td>TM</td>
<td></td>
<td></td>
</tr>
<tr>
<td>MAC configuration</td>
<td>TM</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Sn-FieldLength</td>
<td>size5</td>
<td></td>
<td></td>
</tr>
<tr>
<td>t-Reordering</td>
<td>0</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

9.1.2 SRB configurations

9.1.2.1 SRB1

Parameters

<table>
<thead>
<tr>
<th>Name</th>
<th>Value</th>
<th>Semantics description</th>
<th>Ver</th>
</tr>
</thead>
<tbody>
<tr>
<td>RLC configuration</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>logicalChannelIdentity</td>
<td>1</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

9.1.2.2 SRB2

Parameters

<table>
<thead>
<tr>
<th>Name</th>
<th>Value</th>
<th>Semantics description</th>
<th>Ver</th>
</tr>
</thead>
<tbody>
<tr>
<td>RLC configuration</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>logicalChannelIdentity</td>
<td>2</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

9.2 Default radio configurations

The following sections only list default values for REL-8 parameters included in protocol version v8.5.0. For all fields introduced in a later protocol version, the default value is "released" unless explicitly specified otherwise. If UE is to apply default configuration while it is configured with some critically extended fields, the UE shall apply the original version with only default values. For the following fields, introduced in a protocol version later than v8.5.0, the default corresponds with "value not applicable":

- codeBookSubsetRestriction-v920;
- pmi-RI-Report;
NOTE 1: Value "N/A" indicates that the UE does not apply a specific value (i.e. upon switching to a default configuration, E-UTRAN can not assume the UE keeps the previously configured value). This implies that E-UTRAN needs to configure a value before invoking the related functionality.

NOTE 2: In general, the signalling should preferably support a "release" option for fields introduced after v8.5.0. The "value not applicable" should be used restrictively, mainly limited to for fields which value is relevant only if another field is set to a value other than its default.

### 9.2.1 SRB configurations

10 Radio information related interactions between network nodes

10.1 General

This section specifies RRC messages that are transferred between network nodes. These RRC messages may be transferred to or from the UE via another Radio Access Technology. Consequently, these messages have similar characteristics as the RRC messages that are transferred across the E-UTRA radio interface, i.e. the same transfer syntax and protocol extension mechanisms apply.

10.2 Inter-node RRC messages

10.2.1 General

This section specifies RRC messages that are sent either across the X2- or the S1-interface, either to or from the eNB, i.e. a single 'logical channel' is used for all RRC messages transferred across network nodes. The information could originate from or be destined for another RAT.

– EUTRA-InterNodeDefinitions

This ASN.1 segment is the start of the E-UTRA inter-node PDU definitions.

-- ASN1START

10.2.2 Message definitions

- HandoverCommand

This message is used to transfer the handover command generated by the target eNB.

Direction: target eNB to source eNB/ source RAN

**HandoverCommand message**

```asn1
HandoverCommand ::= SEQUENCE {
criticalExtensions CHOICE {
c1 CHOICE {
  handoverCommand-r8 HandoverCommand-r8-IEs,
  spare7 NULL,
  spare6 NULL, spare5 NULL, spare4 NULL,
  spare3 NULL, spare2 NULL, spare1 NULL
},
criticalExtensionsFuture SEQUENCE {}
}
```

-- ASN1START

HandoverCommand-r8-IEs ::= SEQUENCE {
    handoverCommandMessage OCTET STRING (CONTAINING DL-DCCH-Message),
    nonCriticalExtension SEQUENCE {} OPTIONAL
}

HandoverCommand field descriptions

handoverCommandMessage
Contains the entire DL-DCCH-Message including the RRCConnectionReconfiguration message used to perform handover within E-UTRAN or handover to E-UTRAN, generated (entirely) by the target eNB.

NOTE: The source BSC, in case of inter-RAT handover from GERAN to E-UTRAN, expects that the HandoverCommand message includes DL-DCCH-Message only. Thus, criticalExtensionsFuture, spare1-spare7 and nonCriticalExtension should not be used regardless whether the source RAT is E-UTRAN, UTRAN or GERAN.

-- HandoverPreparationInformation

This message is used to transfer the E-UTRA RRC information used by the target eNB during handover preparation, including UE capability information.

   Direction: source eNB/ source RAN to target eNB

HandoverPreparationInformation message

  nonCriticalExtension    SEQUENCE {} OPTIONAL
}

-- ASN1STOP
**HandoverPreparationInformation field descriptions**

**as-Config**
The radio resource configuration. Applicable in case of intra-E-UTRA handover. If the target receives an incomplete MeasConfig and RadioResourceConfigDedicated in the as-Config, the target eNB may decide to apply the full configuration option based on the ue-ConfigRelease.

**as-Context**
Local E-UTRAN context required by the target eNB.

**rrm-Config**
Local E-UTRAN context used depending on the target node’s implementation, which is mainly used for the RRM purpose.

**ue-ConfigRelease**
Indicates the RRC protocol release applicable for the current UE configuration. This could be used by target eNB to decide if the full configuration approach should be used. If this field is not present, the target assumes that the current UE configuration is based on the release 8 version of RRC protocol. NOTE 1.

**ue-RadioAccessCapabilityInfo**

NOTE 1: The source typically sets the **ue-ConfigRelease** to the release corresponding with the current dedicated radio configuration. The source may however also consider the common radio resource configuration e.g. in case interoperability problems would appear if the UE temporary continues extensions of this part of the configuration in a target PCell not supporting them.

NOTE 2: The following table indicates per source RAT whether RAT capabilities are included or not.

<table>
<thead>
<tr>
<th>Source RAT</th>
<th>E-UTRA capabilities</th>
<th>UTRA capabilities</th>
<th>GERAN capabilities</th>
</tr>
</thead>
<tbody>

</tr>
</tbody>
</table>
–  **UERadioAccessCapabilityInformation**

This message is used to transfer UE radio access capability information, covering both upload to and download from the EPC.

Direction: eNB to/ from EPC

**UERadioAccessCapabilityInformation message**

```asn1
UERadioAccessCapabilityInformation ::= SEQUENCE {
    criticalExtensions     CHOICE {
        c 1          CHOICE {
            ueRadioAccessCapabilityInformation-r8
                UERadioAccessCapabilityInformation-r8-IEs,
                spare7 NULL,
                spare6 NULL, spare5 NULL, spare4 NULL,
                spare3 NULL, spare2 NULL, spare1 NULL
        },
        criticalExtensionsFuture   SEQUENCE {}
    }
}
```

**UERadioAccessCapabilityInformation field descriptions**

- **ue-RadioAccessCapabilityInfo**
  
  Including E-UTRA, GERAN, and CDMA2000-1xRTT Bandclass radio access capabilities (separated). UTRA radio access capabilities are not included.

10.3  Inter-node RRC information element definitions

-  **AS-Config**

The **AS-Config** IE contains information about RRC configuration information in the source eNB which can be utilized by target eNB to determine the need to change the RRC configuration during the handover preparation phase. The
information can also be used after the handover is successfully performed or during the RRC connection re-

establishment.

**AS-Config information element**

```asn1
-- ASN1START

AS-Config ::= SEQUENCE {
    sourceMeasConfig MeasConfig,
    sourceRadioResourceConfig RadioResourceConfigDedicated,
    sourceSecurityAlgorithmConfig SecurityAlgorithmConfig,
    sourceUE-Identity C-RNTI,
    sourceMasterInformationBlock MasterInformationBlock,
    sourceSystemInformationBlockType1 SystemInformationBlockType1(WITH COMPONENTS {..., nonCriticalExtension ABSENT}),
    sourceSystemInformationBlockType2 SystemInformationBlockType2,
    antennaInfoCommon AntennaInfoCommon,
    sourceDl-CarrierFreq ARFCN-ValueEUTRA,
    ...
    [[ sourceSystemInformationBlockType1Ext OCTET STRING (CONTAINING SystemInformationBlockType1-v890-Ies) OPTIONAL,
      sourceOtherConfig-r9 OtherConfig-r9
      -- sourceOtherConfig-r9 should have been optional. A target eNB compliant with this transfer
      -- syntax should support receiving an AS-Config not including this extension addition group
      -- e.g. from a legacy source eNB
      ]],
    [[ sourceSCellConfigList-r10 SCellToAddModList-r10 OPTIONAL ]]
}

AS-Config-v9e0 ::= SEQUENCE {
    sourceDl-CarrierFreq-v9e0 ARFCN-ValueEUTRA-v9e0
}

-- ASN1STOP

NOTE: The AS-Config re-uses information elements primarily created to cover the radio interface signalling
requirements. Consequently, the information elements may include some parameters that are not relevant
for the target eNB e.g. the SFN as included in the MasterInformationBlock.
```
### AS-Config field descriptions

<table>
<thead>
<tr>
<th>Field Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>antennaInfoCommon</strong></td>
<td>This field provides information about the number of antenna ports in the source PCell.</td>
</tr>
<tr>
<td><strong>sourceDL-CarrierFreq</strong></td>
<td>Provides the parameter Downlink EARFCN in the source PCell, see TS 36.101 [42]. If the source eNB provides AS-Config-v9e0, it sets sourceDL-CarrierFreq (i.e. without suffix) to maxEARFCN.</td>
</tr>
<tr>
<td><strong>sourceOtherConfig</strong></td>
<td>Provides other configuration in the source PCell.</td>
</tr>
<tr>
<td><strong>sourceMasterInformationBlock</strong></td>
<td>MasterInformationBlock transmitted in the source PCell.</td>
</tr>
<tr>
<td><strong>sourceMeasConfig</strong></td>
<td>Measurement configuration in the source cell. The measurement configuration for all measurements existing in the source eNB when handover is triggered shall be included. See 10.5.</td>
</tr>
<tr>

</tr>
</tbody>
</table>

---

### AS-Context

The IE AS-Context is used to transfer local E-UTRAN context required by the target eNB.

#### AS-Context information element

```asn
AS-Context ::= SEQUENCE {
  reestablishmentInfo ReestablishmentInfo OPTIONAL -- Cond HO
}

AS-Context-v1130 ::= SEQUENCE {
  idc-Indication-r11 OCTET STRING (CONTAINING InDeviceCoexIndication-r11) OPTIONAL, -- Cond HO2
  mbmsInterestIndication-r11 OCTET STRING (CONTAINING MBMSInterestIndication-r11) OPTIONAL, -- Cond HO2
  powerPrefIndication-r11 OCTET STRING (CONTAINING UEAssistanceInformation-r11) OPTIONAL, -- Cond HO2
  ...
}
```
AS-Context field descriptions

**idc-Indication**
Including information used for handling the IDC problems.

**reestablishmentInfo**
Including information needed for the RRC connection re-establishment.

<table>
<thead>
<tr>
<th>Conditional presence</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>HO</td>
<td>The field is mandatory present in case of handover within E-UTRA; otherwise the field is not present.</td>
</tr>
<tr>
<td>HO2</td>
<td>The field is optional present in case of handover within E-UTRA; otherwise the field is not present.</td>
</tr>
</tbody>
</table>

-- ReestablishmentInfo

The *ReestablishmentInfo* IE contains information needed for the RRC connection re-establishment.

**ReestablishmentInfo** information element

-- ASN1START

```asn1
ReestablishmentInfo ::= SEQUENCE {
  sourcePhysCellId      PhysCellId,
  targetCellShortMAC-I   ShortMAC-I,
  additionalReestabInfoList   AdditionalReestabInfoList OPTIONAL,
  ...
}

AdditionalReestabInfoList ::= SEQUENCE ( SIZE (1..maxReestabInfo) ) OF AdditionalReestabInfo

AdditionalReestabInfo ::= SEQUENCE{
  cellIdentity      CellIdentity,
  key-eNodeB-Star    Key-eNodeB-Star,
  shortMAC-I         ShortMAC-I
}

Key-eNodeB-Star ::= BIT STRING (SIZE (256))
```

-- ASN1STOP
**ReestablishmentInfo field descriptions**

**additionalReestabInfoList**
Contains a list of shortMAC-I and KeNB* for cells under control of the target eNB, required for potential re-establishment by the UE in these cells to succeed.

**Key-eNodeB-Star**
Parameter KeNB*: See TS 33.401 [32, 7.2.8.4]. If the cell identified by cellIdentity belongs to multiple frequency bands, the source eNB selects the DL-EARFCN for the KeNB* calculation using the same logic as UE uses when selecting the DL-EARFCN in IDLE as defined in section 6.2.2. This parameter is only used for X2 handover, and for S1 handover, it shall be ignored by target eNB.

**sourcePhyCellId**
The physical cell identity of the source PCell, used to determine the UE context in the target eNB at re-establishment.

**targetCellShortMAC-I**
The ShortMAC-I for the handover target PCell, in order for potential re-establishment to succeed.

---

**RRM-Config**

The **RRM-Config** IE contains information about UE specific RRM information before the handover which can be utilized by target eNB.

**RRM-Config information element**

```asn1
RRM-Config ::= SEQUENCE {
    ue-InactiveTime   ENUMERATED {
        s1, s2, s3, s5, s7, s10, s15, s20,
        s25, s30, s40, s50, min1, min1s20c, min1s40,
        min2, min2s30, min3, min3s30, min4, min5, min6,
        min7, min8, min9, min10, min12, min14, min17, min20,
        min24, min28, min33, min38, min44, min50, hr1,
        hr1min30, hr2, hr2min30, hr3, hr3min30, hr4, hr5, hr6,
        hr8, hr10, hr13, hr16, hr20, day1, day1hr12, day2,
        day2hr12, day3, day4, day5, day7, day10, day14, day19,
        day24, day30, dayMoreThan30} OPTIONAL,
    ...,
    [[ candidateCellInfoList-r10 CandidateCellInfoList-r10 OPTIONAL ]]
}

CandidateCellInfoList-r10 ::= SEQUENCE (SIZE (1..maxFreq)) OF CandidateCellInfo-r10

CandidateCellInfo-r10 ::= SEQUENCE {
    -- cellIdentification
    physCellId-r10   PhysCellId,
}
```
RRM-Config field descriptions

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>candidateCellInfoList</td>
<td>A list of the best cells on each frequency for which measurement information was available, in order of decreasing RSRP.</td>
</tr>
<tr>
<td>dl-CarrierFreq</td>
<td>The source includes dl-CarrierFreq-v1090 if and only if dl-CarrierFreq-r10 is set to maxEARFCN.</td>
</tr>
<tr>
<td>ue-InactiveTime</td>
<td>Duration while UE has not received or transmitted any user data. Thus the timer is still running in case e.g., UE measures the neighbour cells for the HO purpose. Value s1 corresponds to 1 second, s2 corresponds to 2 seconds and so on. Value min1 corresponds to 1 minute, value min1s20 corresponds to 1 minute and 20 seconds, value min1s40 corresponds to 1 minute and 40 seconds and so on. Value hr1 corresponds to 1 hour, hr1min30 corresponds to 1 hour and 30 minutes and so on.</td>
</tr>
</tbody>
</table>

10.4 Inter-node RRC multiplicity and type constraint values

– Multiplicity and type constraints definitions

-- ASN1START

maxReestabInfo INTEGER ::= 32 -- Maximum number of KeNB* and shortMAC-I forwarded

-- at handover for re-establishment preparation

-- ASN1STOP

– End of EUTRA-InterNodeDefinitions

-- ASN1START

END

-- ASN1STOP
10.5 Mandatory information in AS-Config

The AS-Config transferred between source eNB and target-eNB shall include all IEs necessary to describe the AS context. The conditional presence in section 6 is only applicable for eNB to UE communication.

The "need" or "cond" statements are not applied in case of sending the IEs from source eNB to target eNB. Some information elements shall be included regardless of the "need" or "cond" e.g. discardTimer. The AS-Config re-uses information elements primarily created to cover the radio interface signalling requirements. The information elements may include some parameters that are not relevant for the target eNB e.g. the SFN as included in the MasterInformationBlock.

All the fields in the AS-Config as defined in 10.3 that are introduced after v9.2.0 and that are optional for eNB to UE communication shall be included, if the functionality is configured. The fields in the AS-Config that are defined before and including v9.2.0 shall be included as specified in the following.

Within the sourceRadioResourceConfig, sourceMeasConfig and sourceOtherConfig, the source eNB shall include fields that are optional for eNB to UE communication, if the functionality is configured unless explicitly specified otherwise in the following:

- in accordance with a condition that is explicitly stated to be applicable; or
- a default value is defined for the concerned field; and the configured value is the same as the default value that is defined; or
- the need of the field is OP and the current UE configuration corresponds with the behaviour defined for absence of the field;

The following fields, if the functionality is configured, are not mandatory for the source eNB to include in the AS-Config since delta signalling by the target eNB for these fields is not supported:

- semiPersistSchedC-RNTI
- measGapConfig

For the measurement configuration, a corresponding operation as 5.5.6.1 and 5.5.2.2a is executed by target eNB.

11 UE capability related constraints and performance requirements

11.1 UE capability related constraints

The following table lists constraints regarding the UE capabilities that E-UTRAN is assumed to take into account.
### 11.2 Processing delay requirements for RRC procedures

The UE performance requirements for RRC procedures are specified in the following table, by means of a value N:

N = the number of 1ms subframes from the end of reception of the E-UTRAN -> UE message on the UE physical layer up to when the UE shall be ready for the reception of uplink grant for the UE -> E-UTRAN response message with no access delay other than the TTI-alignment (e.g. excluding delays caused by scheduling, the random access procedure or physical layer synchronisation).

NOTE: No processing delay requirements are specified for RN-specific procedures.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>#DRBs</td>
<td>The number of DRBs that a UE shall support</td>
<td>8</td>
</tr>
<tr>
<td>#RLC-AM</td>
<td>The number of RLC AM entities that a UE shall support</td>
<td>10</td>
</tr>
<tr>
<td>#minCellperMeasObjectEUTRA</td>
<td>The minimum number of neighbour cells (excluding black list cells) that a UE shall be able to store within a MeasObjectEUTRA. NOTE.</td>
<td>32</td>
</tr>
<tr>
<td>#minBlackCellRangePerMeasObjectEUTRA</td>
<td>The minimum number of blacklist cell PCI ranges that a UE shall be able to store within a MeasObjectEUTRA</td>
<td>32</td>
</tr>
<tr>
<td>#minCellperMeasObjectUTRA</td>
<td>The minimum number of neighbour cells that a UE shall be able to store within a MeasObjectUTRA. NOTE.</td>
<td>32</td>
</tr>
<tr>
<td>#minCellperMeasObjectGERAN</td>
<td>The minimum number of neighbour cells that a UE shall be able to store within a MeasObjectGERAN. NOTE.</td>
<td>32</td>
</tr>
<tr>
<td>#minCellperMeasObjectCDMA2000</td>
<td>The minimum number of neighbour cells that a UE shall be able to store within a MeasObjectCDMA2000. NOTE.</td>
<td>32</td>
</tr>
<tr>
<td>#minCellTotal</td>
<td>The minimum number of neighbour cells (excluding black list cells) that UE shall be able to store in total in all measurement objects configured</td>
<td>256</td>
</tr>
</tbody>
</table>

NOTE: In case of CGI reporting, the limit regarding the cells E-UTRAN can configure includes the cell for which the UE is requested to report CGI i.e. the amount of neighbour cells that can be included is at most (# minCellperMeasObjectRAT - 1), where RAT represents EUTRA/UTRA/GERAN/CDMA2000 respectively.

11.3 Void
Annex A (informative):
Guidelines, mainly on use of ASN.1

Editor's note  No agreements have been reached concerning the extension of RRC PDUs so far. Any statements in
this section about the protocol extension mechanism should be considered as FFS.

A.1 Introduction

The following clauses contain guidelines for the specification of RRC protocol data units (PDUs) with ASN.1.

A.2 Procedural specification

A.2.1 General principles

The procedural specification provides an overall high level description regarding the UE behaviour in a particular
scenario.

It should be noted that most of the UE behaviour associated with the reception of a particular field is covered by the
applicable parts of the PDU specification. The procedural specification may also include specific details of the UE
behaviour upon reception of a field, but typically this should be done only for cases that are not easy to capture in the
PDU section e.g. general actions, more complicated actions depending on the value of multiple fields.

Likewise, the procedural specification need not specify the UE requirements regarding the setting of fields within the
messages that are send to E-UTRAN i.e. this may also be covered by the PDU specification.

A.2.2 More detailed aspects

The following more detailed conventions should be used:

- Bullets:
  - Capitals should be used in the same manner as in other parts of the procedural text i.e. in most cases no
capital applies since the bullets are part of the sentence starting with 'The UE shall:'
  - All bullets, including the last one in a sub-clause, should end with a semi-colon i.e. an ';'

- Conditions
  - Whenever multiple conditions apply, a semi-colon should be used at the end of each conditions with the
exception of the last one, i.e. as in 'if cond1; or cond2:

A.3 PDU specification

A.3.1 General principles

A.3.1.1 ASN.1 sections

The RRC PDU contents are formally and completely described using abstract syntax notation (ASN.1), see X.680 [13],
X.681 (02/2002) [14].

The complete ASN.1 code is divided into a number of ASN.1 sections in the specifications. In order to facilitate the
extraction of the complete ASN.1 code from the specification, each ASN.1 section begins with a text paragraph
consisting entirely of an ASN.1 start tag, which consists of a double hyphen followed by a single space and the text
string "ASN1START" (in all upper case letters). Each ASN.1 section ends with a text paragraph consisting entirely of
an ASN.1 stop tag, which consists of a double hyphen followed by a single space and the text "ASN1STOP" (in all
upper case letters):
The text paragraphs containing the ASN.1 start and stop tags should not contain any ASN.1 code significant for the complete description of the RRC PDU contents. The complete ASN.1 code may be extracted by copying all the text paragraphs between an ASN.1 start tag and the following ASN.1 stop tag in the order they appear, throughout the specification.

NOTE: A typical procedure for extraction of the complete ASN.1 code consists of a first step where the entire RRC PDU contents description (ultimately the entire specification) is saved into a plain text (ASCII) file format, followed by a second step where the actual extraction takes place, based on the occurrence of the ASN.1 start and stop tags.

A.3.1.2 ASN.1 identifier naming conventions

The naming of identifiers (i.e., the ASN.1 field and type identifiers) should be based on the following guidelines:

- Message (PDU) identifiers should be ordinary mixed case without hyphenation. These identifiers, e.g., the `RRCConnectionModificationCommand`, should be used for reference in the procedure text. Abbreviated forms of these identifiers should not be used.

- Type identifiers other than PDU identifiers should be ordinary mixed case, with hyphenation used to set off acronyms only where an adjacent letter is a capital, e.g., `EstablishmentCause`, `SelectedPLMN` (not `Selected-PLMN`, since the "d" in "Selected" is lowercase), `InitialUE-Identity` and `MeasSFN-SFN-TimeDifference`.

- Field identifiers shall start with a lowercase letter and use mixed case thereafter, e.g., `establishmentCause`. If a field identifier begins with an acronym (which would normally be in upper case), the entire acronym is lowercase (`plmn-Identity`, not `pLMN-Identity`). The acronym is set off with a hyphen (ue-Identity, not ueIdentity), in order to facilitate a consistent search pattern with corresponding type identifiers.

- Identifiers that are likely to be keywords of some language, especially widely used languages, such as C++ or Java, should be avoided to the extent possible.

- Identifiers, other than PDU identifiers, longer than 25 characters should be avoided where possible. It is recommended to use abbreviations, which should be done in a consistent manner i.e. use 'Meas' instead of 'Measurement' for all occurrences. Examples of typical abbreviations are given in table A.3.1.2.1-1 below.

- For future extension: When an extension is introduced a suffix is added to the identifier of the concerned ASN.1 field and/or type. A suffix of the form "-rX" is used, with X indicating the release, for ASN.1 fields or types introduced in a later release (i.e. a release later than the original/first release of the protocol) as well as for ASN.1 fields or types for which a revision is introduced in a later release replacing a previous version, e.g., `Foo-r9` for the Rel-9 version of the ASN.1 type `Foo`. A suffix of the form "-vXYZ" is used for ASN.1 fields or types that only are an extension of a corresponding earlier field or type (see sub-clause A.4), e.g., `AnElement-v10b0` for the extension of the ASN.1 type `AnElement` introduced in version 10.11.0 of the specification. A number 0...9, 10, 11, etc. is used to represent the first part of the version number, indicating the release of the protocol. Lower case letters a, b, c, etc. are used to represent the second (and third) part of the version number if they are greater than 9. In the procedural specification, in field descriptions as well as in headings suffices are not used, unless there is a clear need to distinguish the extension from the original field.

- More generally, in case there is a need to distinguish different variants of an ASN.1 field or IE, a suffix should be added at the end of the identifiers e.g. `MeasObjectUTRA`, `ConfigCommon`. When there is no particular need to distinguish the fields (e.g. because the field is included in different IEs), a common field identifier name may be used. This may be attractive e.g. in case the procedural specification is the same for the different variants.

NOTE: The table A.3.1.2.1-1 is not exhaustive. Additional abbreviations may be used in ASN.1 identifiers when needed.

A.3.1.3 Text references using ASN.1 identifiers

A text reference into the RRC PDU contents description from other parts of the specification is made using the ASN.1 field or type identifier of the referenced element. The ASN.1 field and type identifiers used in text references should be in the italic font style. The "do not check spelling and grammar" attribute in Word should be set. Quotation marks (i.e., " ") should not be used around the ASN.1 field or type identifier.

A reference to an RRC PDU type should be made using the corresponding ASN.1 type identifier followed by the word "message", e.g., a reference to the RRCConnectionRelease message.

A reference to a specific part of an RRC PDU, or to a specific part of any other ASN.1 type, should be made using the corresponding ASN.1 field identifier followed by the word "field", e.g., a reference to the prioritisedBitRate field in the example below.

```asn1
-- /example/ ASN1START

LogicalChannelConfig ::=SEQUENCE {
  ul-SpecificParameters SEQUENCE {
    priority            Priority,
    prioritisedBitRate  PrioritisedBitRate,
    bucketSizeDuration  BucketSizeDuration,
    logicalChannelGroup INTEGER (0..3)
  } OPTIONAL
}

-- ASN1STOP```
NOTE: All the ASN.1 start tags in the ASN.1 sections, used as examples in this annex to the specification, are deliberately distorted, in order not to include them when the ASN.1 description of the RRC PDU contents is extracted from the specification.

A reference to a specific type of information element should be made using the corresponding ASN.1 type identifier preceded by the acronym "IE", e.g., a reference to the IE LogicalChannelConfig in the example above.

References to a specific type of information element should only be used when those are generic, i.e., without regard to the particular context wherein the specific type of information element is used. If the reference is related to a particular context, e.g., an RRC PDU type (message) wherein the information element is used, the corresponding field identifier in that context should be used in the text reference.

A reference to a specific value of an ASN.1 field should be made using the corresponding ASN.1 value without using quotation marks around the ASN.1 value, e.g., ‘if the status field is set to value true’.

A.3.2 High-level message structure

Within each logical channel type, the associated RRC PDU (message) types are alternatives within a CHOICE, as shown in the example below.

```
-- /example/ ASN1START

DL-DCCH-Message ::= SEQUENCE {
    message     DL-DCCH-MessageType
}

DL-DCCH-MessageType ::= CHOICE {
    dlInformationTransfer     DLInformationTransfer,
    handoverFromEUTRAPreparationRequest  HandoverFromEUTRAPreparationRequest,
    mobilityFromEUTRACommand    MobilityFromEUTRACommand,
    rrcConnectionReconfiguration   RRCConnectionReconfiguration,
    rrcConnectionRelease     RRCConnectionRelease,
    securityModeCommand      SecurityModeCommand,
    ueCapabilityEnquiry      UECapabilityEnquiry,
    spare1 NULL
},

messageClassExtension SEQUENCE {}

} -- ASN1STOP
```
A nested two-level CHOICE structure is used, where the alternative PDU types are alternatives within the inner level $c1$ CHOICE.

Spare alternatives (i.e., $spare1$ in this case) may be included within the $c1$ CHOICE to facilitate future extension. The number of such spare alternatives should not extend the total number of alternatives beyond an integer-power-of-two number of alternatives (i.e., eight in this case).

Further extension of the number of alternative PDU types is facilitated using the $messageClassExtension$ alternative in the outer level CHOICE.

### A.3.3 Message definition

Each PDU (message) type is specified in an ASN.1 section similar to the one shown in the example below.

```asciidoc
RRConnectionReconfiguration ::= SEQUENCE {
    rrc-TransactionIdentifier   RRC-TransactionIdentifier,
    criticalExtensions     CHOICE {
        c1          CHOICE {
            rrcConnectionReconfiguration-r8  RRCConnectionReconfiguration-r8-IEs,
            spare3 NULL, spare2 NULL, spare1 NULL
        },
        criticalExtensionsFuture   SEQUENCE {}
    }
}

RRConnectionReconfiguration-r8-IEs ::= SEQUENCE {
    -- Enter the IEs here.
    ...
}
```

Hooks for critical and non-critical extension should normally be included in the PDU type specification. How these hooks are used is further described in sub-clause A.4.

Critical extensions are characterised by a redefinition of the PDU contents and need to be governed by a mechanism for protocol version agreement between the encoder and the decoder of the PDU, such that the encoder is prevented from sending a critically extended version of the PDU type, which is not comprehended by the decoder.

Critical extension of a PDU type is facilitated by a two-level CHOICE structure, where the alternative PDU contents are alternatives within the inner level $c1$ CHOICE. Spare alternatives (i.e., $spare3$ down to $spare1$ in this case) may be included within the $c1$ CHOICE. The number of spare alternatives to be included in the original PDU specification should be decided case by case, based on the expected rate of critical extension in the future releases of the protocol.

Further critical extension, when the spare alternatives from the original specifications are used up, is facilitated using the $criticalExtensionsFuture$ in the outer level CHOICE.
In PDU types where critical extension is not expected in the future releases of the protocol, the inner level c1 CHOICE and the spare alternatives may be excluded, as shown in the example below.

```asn1
RRCConnectionReconfigurationComplete ::= SEQUENCE {
    rrc-TransactionIdentifier   RRC-TransactionIdentifier,
    criticalExtensions     CHOICE {
        rrcConnectionReconfigurationComplete-r8
            RRCConnectionReconfigurationComplete-r8-IEs,
        criticalExtensionsFuture   SEQUENCE {}
    }
}
```

Non-critical extensions are characterised by the addition of new information to the original specification of the PDU type. If not comprehended, a non-critical extension may be skipped by the decoder, whilst the decoder is still able to complete the decoding of the comprehended parts of the PDU contents.

Non-critical extensions at locations other than the end of the message or other than at the end of a field contained in a BIT or OCTET STRING are facilitated by use of the ASN.1 extension marker "...". The original specification of a PDU type should normally include the extension marker at the end of the sequence of information elements contained.

Non-critical extensions at the end of the message or at the end of a field that is contained in a BIT or OCTET STRING are facilitated by use of an empty sequence that is marked OPTIONAL e.g. as shown in the following example:

```asn1
RRCMessage-r8-IEs ::=      SEQUENCE {
    field1          InformationElement1,
    field2          InformationElement2,
    nonCriticalExtension     SEQUENCE {}      OPTIONAL
}
```

```asn1
RRCMessage-r8-IEs ::=      SEQUENCE {
    field1          InformationElement1,
    field2          InformationElement2,
    nonCriticalExtension     SEQUENCE {}      OPTIONAL
}
```
The ASN.1 section specifying the contents of a PDU type may be followed by a field description table where a further description of, e.g., the semantic properties of the fields may be included. The general format of this table is shown in the example below. The field description table is absent in case there are no fields for which further description needs to be provided e.g. because the PDU does not include any fields, or because an IE is defined for each field while there is nothing specific regarding the use of this IE that needs to be specified.

<table>
<thead>
<tr>
<th>%PDU-TypeIdentifier% field descriptions</th>
</tr>
</thead>
<tbody>
<tr>
<td>%field identifier%</td>
</tr>
<tr>
<td>Field description.</td>
</tr>
<tr>
<td>%field identifier%</td>
</tr>
<tr>
<td>Field description.</td>
</tr>
</tbody>
</table>

The field description table has one column. The header row shall contain the ASN.1 type identifier of the PDU type.

The following rows are used to provide field descriptions. Each row shall include a first paragraph with a field identifier (in **bold and italic** font style) referring to the part of the PDU to which it applies. The following paragraphs at the same row may include (in regular font style), e.g., semantic description, references to other specifications and/ or specification of value units, which are relevant for the particular part of the PDU.

The parts of the PDU contents that do not require a field description shall be omitted from the field description table.

### A.3.4 Information elements

Each IE (information element) type is specified in an ASN.1 section similar to the one shown in the example below.

```asn1
-- /example/ ASN1START

PRACH-ConfigSIB ::= SEQUENCE {
    rootSequenceIndex INTEGER (0..1023),
    prach-ConfigInfo  PRACH-ConfigInfo
}

PRACH-Config ::= SEQUENCE {
    rootSequenceIndex INTEGER (0..1023),
    prach-ConfigInfo  PRACH-ConfigInfo  OPTIONAL  -- Need ON
}

PRACH-ConfigInfo ::= SEQUENCE {
    prach-ConfigIndex ENUMERATED {fff},
    highSpeedFlag    ENUMERATED {fff},
    zeroCorrelationZoneConfig ENUMERATED {fff}
}

-- ASN1STOP
```
IEs should be introduced whenever there are multiple fields for which the same set of values apply. IEs may also be defined for other reasons e.g. to break down a ASN.1 definition in to smaller pieces.

A group of closely related IE type definitions, like the IEs PRACH-ConfigSIB and PRACH-Config in this example, are preferably placed together in a common ASN.1 section. The IE type identifiers should in this case have a common base, defined as the generic type identifier. It may be complemented by a suffix to distinguish the different variants. The "PRACH-Config" is the generic type identifier in this example, and the "SIB" suffix is added to distinguish the variant. The sub-clause heading and generic references to a group of closely related IEs defined in this way should use the generic type identifier.

The same principle should apply if a new version, or an extension version, of an existing IE is created for critical or non-critical extension of the protocol (see sub-clause A.4). The new version, or the extension version, of the IE is included in the same ASN.1 section defining the original. A suffix is added to the type identifier, using the naming conventions defined in sub-clause A.3.1.2, indicating the release version of the where the new version, or extension version, was introduced.

Local IE type definitions, like the IE PRACH-ConfigInfo in the example above, may be included in the ASN.1 section and be referenced in the other IE types defined in the same ASN.1 section. The use of locally defined IE types should be encouraged, as a tool to break up large and complex IE type definitions. It can improve the readability of the code. There may also be a benefit for the software implementation of the protocol end-points, as these IE types are typically provided by the ASN.1 compiler as independent data elements, to be used in the software implementation.

An IE type defined in a local context, like the IE PRACH-ConfigInfo, should not be referenced directly from other ASN.1 sections in the RRC specification. An IE type which is referenced in more than one ASN.1 section should be defined in a separate sub-clause, with a separate heading and a separate ASN.1 section (possibly as one in a set of closely related IE types, like the IEs PRACH-ConfigSIB and PRACH-Config in the example above). Such IE types are also referred to as 'global IEs'.

NOTE: Referring to an IE type, that is defined as a local IE type in the context of another ASN.1 section, does not generate an ASN.1 compilation error. Nevertheless, using a locally defined IE type in that way makes the IE type definition difficult to find, as it would not be visible at an outline level of the specification. It should be avoided.

The ASN.1 section specifying the contents of one or more IE types, like in the example above, may be followed by a field description table, where a further description of, e.g., the semantic properties of the fields of the information elements may be included. This table may be absent, similar as indicated in sub-clause A.3.3 for the specification of the PDU type. The general format of the field description table is the same as shown in sub-clause A.3.3 for the specification of the PDU type.

A.3.5 Fields with optional presence

A field with optional presence may be declared with the keyword DEFAULT. It identifies a default value to be assumed, if the sender does not include a value for that field in the encoding:

```asn1
-- /example/ ASN1START

PreambleInfo ::= SEQUENCE {
    numberOfRA-Preambles INTEGER (1..64) DEFAULT 1,
    ...
}

-- ASN1STOP
```

Alternatively, a field with optional presence may be declared with the keyword OPTIONAL. It identifies a field for which a value can be omitted. The omission carries semantics, which is different from any normal value of the field:
The semantics of an optionally present field, in the case it is omitted, should be indicated at the end of the paragraph including the keyword OPTIONAL, using a short comment text with a need statement. The need statement includes the keyword "Need", followed by one of the predefined semantics tags (OP, ON or OR) defined in sub-clause 6.1. If the semantics tag OP is used, the semantics of the absent field are further specified either in the field description table following the ASN.1 section, or in procedure text.

### A.3.6 Fields with conditional presence

A field with conditional presence is declared with the keyword OPTIONAL. In addition, a short comment text shall be included at the end of the paragraph including the keyword OPTIONAL. The comment text includes the keyword "Cond", followed by a condition tag associated with the field ("UL" in this example):

--- /example/ ASN1START

```
LogicalChannelConfig ::=    SEQUENCE {
  ul-SpecificParameters    SEQUENCE {
    priority       INTEGER (0),
    ...
  }  OPTIONAL                 -- Cond UL
}
```

--- ASN1STOP

When conditionally present fields are included in an ASN.1 section, the field description table after the ASN.1 section shall be followed by a conditional presence table. The conditional presence table specifies the conditions for including the fields with conditional presence in the particular ASN.1 section.

<table>
<thead>
<tr>
<th>Conditional presence</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>UL</td>
<td>Specification of the conditions for including the field associated with the condition tag = &quot;UL&quot;. Semantics in case of optional presence under certain conditions may also be specified.</td>
</tr>
</tbody>
</table>

The conditional presence table has two columns. The first column (heading: "Conditional presence") contains the condition tag (in italic font style), which links the fields with a condition tag in the ASN.1 section to an entry in the table. The second column (heading: "Explanation") contains a text specification of the conditions and requirements for
the presence of the field. The second column may also include semantics, in case of an optional presence of the field, under certain conditions i.e. using the same predefined tags as defined for optional fields in A.3.5.

Conditional presence should primarily be used when presence of a field depends on the presence and/ or value of other fields within the same message. If the presence of a field depends on whether another feature/ function has been configured, while this function can be configured independently e.g. by another message and/ or at another point in time, the relation is best reflected by means of a statement in the field description table.

If the ASN.1 section does not include any fields with conditional presence, the conditional presence table shall not be included.

Whenever a field is only applicable in specific cases e.g. TDD, use of conditional presence should be considered.

A.3.7 Guidelines on use of lists with elements of SEQUENCE type

Where an information element has the form of a list (the SEQUENCE OF construct in ASN.1) with the type of the list elements being a SEQUENCE data type, an information element shall be defined for the list elements even if it would not otherwise be needed.

For example, a list of PLMN identities with reservation flags is defined as in the following example:

```asciidoc
-- /example/ ASN1START

PLMN-IdentityInfoList ::= SEQUENCE (SIZE (1..6)) OF PLMN-IdentityInfo

PLMN-IdentityInfo ::= SEQUENCE {
  plmn-Identity      PLMN-Identity,
  cellReservedForOperatorUse   ENUMERATED {reserved, notReserved}
}

-- ASN1STOP
```

rather than as in the following (bad) example, which may cause generated code to contain types with unpredictable names:

```asciidoc
-- /bad example/ ASN1START

PLMN-IdentityList ::= SEQUENCE (SIZE (1..6)) OF SEQUENCE {
  plmn-Identity       PLMN-Identity,
  cellReservedForOperatorUse    ENUMERATED {reserved, notReserved}
}

-- ASN1STOP
```
A.4 Extension of the PDU specifications

A.4.1 General principles to ensure compatibility

It is essential that extension of the protocol does not affect interoperability i.e. it is essential that implementations based on different versions of the RRC protocol are able to interoperate. In particular, this requirement applies for the following kind of protocol extensions:

- Introduction of new PDU types (i.e. these should not cause unexpected behaviour or damage).
- Introduction of additional fields in an extensible PDUs (i.e. it should be possible to ignore uncomprehended extensions without affecting the handling of the other parts of the message).
- Introduction of additional values of an extensible field of PDUs. If used, the behaviour upon reception of an uncomprehended value should be defined.

It should be noted that the PDU extension mechanism may depend on the logical channel used to transfer the message e.g. for some PDUs an implementation may be aware of the protocol version of the peer in which case selective ignoring of extensions may not be required.

The non-critical extension mechanism is the primary mechanism for introducing protocol extensions i.e. the critical extension mechanism is used merely when there is a need to introduce a 'clean' message version. Such a need appears when the last message version includes a large number of non-critical extensions, which results in issues like readability, overhead associated with the extension markers. The critical extension mechanism may also be considered when it is complicated to accommodate the extensions by means of non-critical extension mechanisms.

A.4.2 Critical extension of messages

The mechanisms to critically extend a message are defined in A.3.3. There are both "outer branch" and "inner branch" mechanisms available. The "outer branch" consists of a CHOICE having the name criticalExtensions, with two values, c1 and criticalExtensionsFuture. The criticalExtensionsFuture branch consists of an empty SEQUENCE, while the c1 branch contains the "inner branch" mechanism.

The "inner branch" structure is a CHOICE with values of the form "MessageName-rX-IEs" (e.g., "RRCConnectionReconfiguration-r8-IEs") or "spareX", with the spare values having type NULL. The "-rX-IEs" structures contain the complete structure of the message IEs for the appropriate release; i.e., the critical extension branch for the Rel-10 version of a message includes all Rel-8 and Rel-9 fields (that are not obviated in the later version), rather than containing only the additional Rel-10 fields.

The following guidelines may be used when deciding which mechanism to introduce for a particular message, i.e. only an 'outer branch', or an 'outer branch' in combination with an 'inner branch' including a certain number of spares:

- For certain messages, e.g. initial uplink messages, messages transmitted on a broadcast channel, critical extension may not be applicable.
- An outer branch may be sufficient for messages not including any fields.
- The number of spares within inner branch should reflect the likelihood that the message will be critically extended in future releases (since each release with a critical extension for the message consumes one of the spare values). The estimation of the critical extension likelyhood may be based on the number, size and changeability of the fields included in the message.
- In messages where an inner branch extension mechanism is available, all spare values of the inner branch should be used before any critical extensions are added using the outer branch.

The following example illustrates the use of the critical extension mechanism by showing the ASN.1 of the original and of a later release

```
-- /example/ ASN1START
-- Original release

RRCMessage ::= SEQUENCE {
```
RRCMessage ::= SEQUENCE {
    rrc-TransactionIdentifier            RRC-TransactionIdentifier,
    criticalExtensions                  CHOICE {
        c1                              CHOICE {
            rrcMessage-r8              RRCMessage-r8-IEs,
            rrcMessage-r10             RRCMessage-r10-IEs,
            rrcMessage-r11             RRCMessage-r11-IEs,
            rrcMessage-r14             RRCMessage-r14-IEs
        } ,
        criticalExtensionsFuture   SEQUENCE {}
    }
    later                       CHOICE {
        c2                              CHOICE {
            rrcMessage-r16             RRCMessage-r16-IEs,
            spare7 NULL, spare6 NULL, spare5 NULL, spare4 NULL,
            spare3 NULL, spare2 NULL, spare1 NULL
        } ,
        criticalExtensionsFuture   SEQUENCE {}
    }
}

-- ASN1STOP
A.4.3 Non-critical extension of messages

A.4.3.1 General principles

The mechanisms to extend a message in a non-critical manner are defined in A.3.3. W.r.t. the use of extension markers, the following additional guidelines apply:

- When further non-critical extensions are added to a message that has been critically extended, the inclusion of these non-critical extensions in earlier critical branches of the message should be avoided when possible.

- The extension marker ("…") is the primary non-critical extension mechanism that is used unless a length determinant is not required. Examples of cases where a length determinant is not required:
  - at the end of a message,
  - at the end of a structure contained in a BIT STRING or OCTET STRING

- When an extension marker is available, non-critical extensions are preferably placed at the location (e.g. the IE) where the concerned parameter belongs from a logical/ functional perspective (referred to as the 'default extension location')

- It is desirable to aggregate extensions of the same release or version of the specification into a group, which should be placed at the lowest possible level.

- In specific cases it may be preferable to place extensions elsewhere (referred to as the 'actual extension location') e.g. when it is possible to aggregate several extensions in a group. In such a case, the group should be placed at the lowest suitable level in the message. <TBD: ref to separate example>

- In case placement at the default extension location affects earlier critical branches of the message, locating the extension at a following higher level in the message should be considered.

- In case an extension is not placed at the default extension location, an IE should be defined. The IE's ASN.1 definition should be placed in the same ASN.1 section as the default extension location. In case there are intermediate levels in-between the actual and the default extension location, an IE may be defined for each level. Intermediate levels are primarily introduced for readability and overview. Hence intermediate levels need not always be introduced e.g. they may not be needed when the default and the actual extension location are within the same ASN.1 section. <TBD: ref to separate example>

A.4.3.2 Further guidelines

Further to the general principles defined in the previous section, the following additional guidelines apply regarding the use of extension markers:

- Extension markers within SEQUENCE
  - Extension markers are primarily, but not exclusively, introduced at the higher nesting levels
  - Extension markers are introduced for a SEQUENCE comprising several fields as well as for information elements whose extension would result in complex structures without it (e.g. re-introducing another list)
  - Extension markers are introduced to make it possible to maintain important information structures e.g. parameters relevant for one particular RAT
  - Extension markers are also used for size critical messages (i.e. messages on BCCH, PCCH and CCCH), although introduced somewhat more carefully
  - The extension fields introduced (or frozen) in a specific version of the specification are grouped together using double brackets.

- Extension markers within ENUMERATED
- Spare values are used until the number of values reaches the next power of 2, while the extension marker caters for extension beyond that limit.

- A suffix of the form "vXYZ" is used for the identifier of each new value, e.g. "value-vXYZ".

- Extension markers within CHOICE:

  - Extension markers are introduced when extension is foreseen and when comprehension is not required by the receiver, i.e. behaviour is defined for the case where the receiver cannot comprehend the extended value (e.g. ignoring an optional CHOICE field). It should be noted that defining the behaviour of a receiver upon receiving a not comprehended choice value is not required if the sender is aware whether or not the receiver supports the extended value.

  - A suffix of the form "vXYZ" is used for the identifier of each new choice value, e.g. "choice-vXYZ".

Non-critical extensions at the end of a message/ of a field contained in an OCTET or BIT STRING:

- When a nonCriticalExtension is actually used, a "Need" statement should not be provided for the field, which always is a group including at least one extension and a field facilitating further possible extensions. For simplicity, it is recommended not to provide a "Need" statement when the field is not actually used either.

Further, more general, guidelines:

- In case a need statement is not provided for a group, a "Need" statement is provided for all individual extension fields within the group i.e. including for fields that are not marked as OPTIONAL. The latter is to clarify the action upon absence of the whole group.

A.4.3.3 Typical example of evolution of IE with local extensions

The following example illustrates the use of the extension marker for a number of elementary cases (sequence, enumerated, choice). The example also illustrates how the IE may be revised in case the critical extension mechanism is used.

    NOTE In case there is a need to support further extensions of release n while the ASN.1 of release (n+1) has been frozen, without requiring the release n receiver to support decoding of release (n+1) extensions, more advanced mechanisms are needed e.g. including multiple extension markers.

```
-- /example/ ASN1START

InformationElement1 ::= SEQUENCE {
    field1       ENUMERATED {
        value1, value2, value3, value4-v880,
        ..., value5-v960 },
    field2       CHOICE {
        field2a       BOOLEAN,
        field2b       InformationElement2b,
        ..., field2c-v960      InformationElement2c-r9
    },
    ..., [ field3-r9 InformationElement3-r9 OPTIONAL -- Need OR ]
}.
```
Some remarks regarding the extensions of $\text{InformationElement1}$ as shown in the above example:

- The $\text{InformationElement1}$ is initially extended with a number of non-critical extensions. In release 10 however, a critical extension is introduced for the message using this IE. Consequently, a new version of the IE $\text{InformationElement1}$ (i.e. $\text{InformationElement1-r10}$) is defined in which the earlier non-critical extensions are incorporated by means of a revision of the original field.

- The $\text{value4-v880}$ is replacing a spare value defined in the original protocol version for $\text{field1}$. Likewise $\text{value6-v1170}$ replaces $\text{spare3}$ that was originally defined in the r10 version of $\text{field1}$.

- Within the critically extended release 10 version of $\text{InformationElement1}$, the names of the original fields/ IEs are not changed, unless there is a real need to distinguish them from other fields/ IEs. E.g. the $\text{field1}$ and $\text{InformationElement4}$ were defined in the original protocol version (release 8) and hence not tagged. Moreover,
the field3-r9 is introduced in release 9 and not re-tagged; although, the InformationElement3 is also critically extended and therefore tagged InformationElement3-r10 in the release 10 version of InformationElement1.

A.4.3.4 Typical examples of non-critical extension at the end of a message

The following example illustrates the use of non-critical extensions at the end of the message or at the end of a field that is contained in a BIT or OCTET STRING i.e. when an empty sequence is used.

```
-- /example/ ASN1START

RRCMessage-r8-IEs ::= SEQUENCE {
  field1        InformationElement1,
  field2        InformationElement2,
  field3        InformationElement3     OPTIONAL, -- Need ON
  nonCriticalExtension   RRCMessage-v860-IEs     OPTIONAL
}

RRCMessage-v860-IEs ::= SEQUENCE {
  field4-v860      InformationElement4     OPTIONAL, -- Need OP
  field5-v860      BOOLEAN         OPTIONAL, -- Cond C54
  nonCriticalExtension   RRCMessage-v940-IEs     OPTIONAL
}

RRCMessage-v940-IEs ::= SEQUENCE {
  field6-v940      InformationElement6-r9     OPTIONAL, -- Need OR
  nonCriticalExtensions   SEQUENCE {}        OPTIONAL
}

-- ASN1STOP
```

Some remarks regarding the extensions shown in the above example:

– The InformationElement4 is introduced in the original version of the protocol (release 8) and hence no suffix is used.

A.4.3.5 Examples of non-critical extensions not placed at the default extension location

The following example illustrates the use of non-critical extensions in case an extension is not placed at the default extension location.
ParentIE-WithEM

The IE ParentIE-WithEM is an example of a high level IE including the extension marker (EM). The root encoding of this IE includes two lower level IEs ChildIE1-WithoutEM and ChildIE2-WithoutEM which not include the extension marker. Consequently, non-critical extensions of the Child-IEs have to be included at the level of the Parent-IE.

The example illustrates how the two extension IEs ChildIE1-WithoutEM-vNx0 and ChildIE2-WithoutEM-vNx0 (both in release N) are used to connect non-critical extensions with a default extension location in the lower level IEs to the actual extension location in this IE.

ParentIE-WithEM information element

```asn1
ParentIE-WithEM ::=     SEQUENCE {
    childIE1-WithoutEM     ChildIE1-WithoutEM    OPTIONAL,  -- Need ON
    childIE2-WithoutEM     ChildIE2-WithoutEM    OPTIONAL,  -- Need ON
    ...,
    childIE1-WithoutEM-vNx0 ChildIE1-WithoutEM-vNx0  OPTIONAL,  -- Need ON
    childIE2-WithoutEM-vNx0 ChildIE2-WithoutEM-vNx0  OPTIONAL  -- Need ON
}
```

Some remarks regarding the extensions shown in the above example:

- The fields childIEEx-WithoutEM-vNx0 may not really need to be optional (depends on what is defined at the next lower level).
- In general, especially when there are several nesting levels, fields should be marked as optional only when there is a clear reason.

---

ChildIE1-WithoutEM

The IE ChildIE1-WithoutEM is an example of a lower level IE, used to control certain radio configurations including a configurable feature which can be setup or released using the local IE ChIE1-ConfigurableFeature. The example illustrates how the new field chIE1-NewField is added in release N to the configuration of the configurable feature. The example is based on the following assumptions:

- when initially configuring as well as when modifying the new field, the original fields of the configurable feature have to be provided also i.e. as if the extended ones were present within the setup branch of this feature.
- when the configurable feature is released, the new field should be released also.
- when omitting the original fields of the configurable feature the UE continues using the existing values (which is used to optimise the signalling for features that typically continue unchanged upon handover).
when omitting the new field of the configurable feature the UE releases the existing values and discontinues the
associated functionality (which may be used to support release of unsupported functionality upon handover to an
eNB supporting an earlier protocol version).

The above assumptions, which affect the use of conditions and need codes, may not always apply. Hence, the example
should not be re-used blindly.

ChildIE1-WithoutEM information elements

```asn1
ChildIE1-WithoutEM ::= SEQUENCE {
    -- Root encoding, including:
    chIE1-ConfigurableFeature ChIE1-ConfigurableFeature OPTIONAL -- Need ON
}

ChildIE1-WithoutEM-vNx0 ::= SEQUENCE {
    chIE1-ConfigurableFeature-vNx0 ChIE1-ConfigurableFeature-vNx0 OPTIONAL -- Cond ConfigF
}

ChIE1-ConfigurableFeature ::= CHOICE {
    release NULL,
    setup SEQUENCE {
        -- Root encoding
    }
}

ChIE1-ConfigurableFeature-vNx0 ::= SEQUENCE {
    chIE1-NewField-rN INTEGER (0..31)
}
```

<table>
<thead>
<tr>
<th>Conditional presence</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>ConfigF</td>
<td>The field is optional present, need OR, in case of <code>chIE1-ConfigurableFeature</code> is included and set to &quot;setup&quot;; otherwise the field is not present and the UE shall delete any existing value for this field.</td>
</tr>
</tbody>
</table>
The IE ChildIE2-WithoutEM is an example of a lower level IE, typically used to control certain radio configurations. The example illustrates how the new field chIE1-NewField is added in release N to the configuration of the configurable feature.

**ChildIE2-WithoutEM information element**

```asn1
ChildIE2-WithoutEM ::=    CHOICE {
    release         NULL,
    setup         SEQUENCE {
        -- Root encoding
    }
}
ChildIE2-WithoutEM-vNx0 ::=   SEQUENCE {
    chIE2-NewField-rN     INTEGER (0..31)     OPTIONAL -- Cond ConfigF
}
```

### Conditional presence

<td>The field is optional present, need OR, in case of chIE2-ConfigurableFeature is included and set to &quot;setup&quot;; otherwise the field is not present and the UE shall delete any existing value for this field.</td>
</tr>
</tbody>
</table>

### A.5 Guidelines regarding inclusion of transaction identifiers in RRC messages

The following rules provide guidance on which messages should include a Transaction identifier:

1. DL messages on CCCH that move UE to RRC-Idle should not include the RRC transaction identifier.
2. All network initiated DL messages by default should include the RRC transaction identifier.
3. All UL messages that are direct response to a DL message with an RRC Transaction identifier should include the RRC Transaction identifier.
4. All UL messages that require a direct DL response message should include an RRC transaction identifier.
5. All UL messages that are not in response to a DL message nor require a corresponding response from the network should not include the RRC Transaction identifier.
A.6 Protection of RRC messages (informative)

The following list provides information which messages can be sent (unprotected) prior to security activation and which messages can be sent unprotected after security activation.

P…Messages that can be sent (unprotected) prior to security activation

A - I…Messages that can be sent without integrity protection after security activation

A - C…Messages that can be sent unciphered after security activation

NA… Message can never be sent after security activation

Annex B (normative): Release 8 and 9 AS feature handling

B.1 Feature group indicators

This annex contains the definitions of the bits in fields featureGroupIndicators (in Table B.1-1) and featureGroupIndRel9Add (in Table B.1-1a).

In this release of the protocol, the UE shall include the fields featureGroupIndicators in the IE UE-EUTRA-Capability and featureGroupIndRel9Add in the IE UE-EUTRA-Capability-v9a0. All the functionalities defined within the field featureGroupIndicators defined in Table B.1-1 or Table B.1-1a are mandatory for the UE, if the related capability (frequency band, RAT, SR-VCC or Inter-RAT ANR) is also supported. For a specific indicator, if all functionalities for a feature group listed in Table B.1-1 have been implemented and tested, the UE shall set the indicator as one (1), else (i.e. if any one of the functionalities in a feature group listed in Table B.1-1 or Table B.1-1a, which have not been implemented or tested), the UE shall set the indicator as zero (0).

The UE shall set all indicators that correspond to RATs not supported by the UE as zero (0).

The UE shall set all indicators, which do not have a definition in Table B.1-1 or Table B.1-1a, as zero (0).

If the optional fields featureGroupIndicators or featureGroupIndRel9Add are not included by a UE of a future release, the network may assume that all features pertaining to the RATs supported by the UE, respectively listed in Table B.1-1 or Table B.1-1a and deployed in the network, have been implemented and tested by the UE.

In Table B.1-1, a 'VoLTE capable UE' corresponds to a UE which is IMS voice capable.

The indexing in Table B.1-1 starts from index 33, which is the leftmost bit in the field featureGroupIndRel9Add.

Table B.1-1: Definitions of feature group indicators

<table>
<thead>

| 9 | - EUTRA RRC_CONNECTED to GERAN GSM_Dedicated handover  
- related to SR-VCC  
- can only be set to 1 if the UE has set bit number 23 to 1 | Yes, if UE supports SRVCC to EUTRAN from GERAN. | Yes |   |
| 10 | - EUTRA RRC_CONNECTED to GERAN (Packet_) Idle by Cell Change Order  
- EUTRA RRC_CONNECTED to GERAN (Packet_) Idle by Cell Change Order with NACC (Network Assisted Cell Change) | Yes |   |   |
| 11 | - EUTRA RRC_CONNECTED to CDMA2000 1xRTT CS Active handover  
- related to SR-VCC  
- can only be set to 1 if the UE has set bit number 24 to 1 | Yes |   |   |
| 12 | - EUTRA RRC_CONNECTED to CDMA2000 HRPD Active handover  
- can only be set to 1 if the UE has set bit number 26 to 1 | Yes |   |   |
| 13 | - Inter-frequency handover (within FDD or TDD)  
- can only be set to 1 if the UE has set bit number 25 to 1 | Yes, unless UE only supports band 13 | No |   |
| 14 | - Measurement reporting event: Event A4  
- Neighbour > threshold  
- Measurement reporting event: Event A5  
- Serving < threshold1 & Neighbour > threshold2 | Yes | No |   |
| 15 | - Measurement reporting event: Event B1  
- Neighbour > threshold for UTRAN FDD or UTRAN TDD, if the UE supports either only UTRAN FDD or only UTRAN TDD and has set bit number 22 to 1  
- Measurement reporting event: Event B1  
- Neighbour > threshold for UTRAN FDD or UTRAN TDD, if the UE supports both UTRAN FDD and UTRAN TDD and has set bit number 22 or 39 to 1, respectively  
- Measurement reporting event: Event B1  
- Neighbour > threshold for GERAN, 1xRTT or HRPD, if the UE has set bit number 23, 24 or 26 to 1, respectively  
- can only be set to 1 if the UE has set at least one of the bit number 22, 23, 24, 26 or 39 to 1.  
- even if the UE sets bits 41, it shall still set bit 15 to 1 if measurement reporting event B1 is tested for all RATs supported by UE | Yes for FDD, if UE supports only UTRAN FDD and does not support UTRAN TDD or GERAN or 1xRTT or HRPD | Yes |   |
| 16 | - Intra-frequency periodical measurement reporting where triggerType is set to periodical and purpose is set to reportStrongestCells  
- Inter-frequency periodical measurement reporting where triggerType is set to periodical and purpose is set to reportStrongestCells, if the UE has set bit number 25 to 1 | Yes | No |   |
- Inter-RAT periodical measurement reporting where `triggerType` is set to `periodical` and `purpose` is set to `reportStrongestCells` for UTRAN FDD or UTRAN TDD, if the UE supports either only UTRAN FDD or only UTRAN TDD and has set bit number 22 to 1

- Inter-RAT periodical measurement reporting where `triggerType` is set to `periodical` and `purpose` is set to `reportStrongestCells` for UTRAN FDD or UTRAN TDD, if the UE supports both UTRAN FDD and UTRAN TDD and has set bit number 22 or 39 to 1, respectively

- Inter-RAT periodical measurement reporting where `triggerType` is set to `periodical` and `purpose` is set to `reportStrongestCells` for GERAN, 1xRTT or HRPD, if the UE has set bit number 23, 24 or 26 to 1, respectively.

NOTE: Event triggered periodical reporting (i.e., with `triggerType` set to `event` and with `reportAmount` > 1) is a mandatory functionality of event triggered reporting and therefore not the subject of this bit.

17 Intra-frequency ANR features including:
- Intra-frequency periodical measurement reporting where `triggerType` is set to `periodical` and `purpose` is set to `reportStrongestCells`
- Intra-frequency periodical measurement reporting where `triggerType` is set to `periodical` and `purpose` is set to `reportCGI`

- can only be set to 1 if the UE has set bit number 5 to 1.

<table>
<thead>
<tr>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
</table>

18 Inter-frequency ANR features including:
- Inter-frequency periodical measurement reporting where `triggerType` is set to `periodical` and `purpose` is set to `reportStrongestCells`
- Inter-frequency periodical measurement reporting where `triggerType` is set to `periodical` and `purpose` is set to `reportCGI`

- can only be set to 1 if the UE has set bit number 5 and bit number 25 to 1.

| Yes, unless UE only supports band 13 | No |

19 Inter-RAT ANR features including:
- Inter-RAT periodical measurement reporting where `triggerType` is set to `periodical` and `purpose` is set to `reportStrongestCells` for GERAN, if the UE has set bit number 23 to 1
- Inter-RAT periodical measurement reporting where `triggerType` is set to `periodical` and `purpose` is set to `reportStrongestCellsForSON` for UTRAN FDD or UTRAN TDD, if the UE supports either only UTRAN FDD or only UTRAN TDD and has set bit number 22 to 1
- Inter-RAT periodical measurement reporting where `triggerType` is set to `periodical` and `purpose` is set to `reportStrongestCellsForSON` for UTRAN FDD or UTRAN TDD, if the UE supports both UTRAN FDD and UTRAN TDD and has set bit number 22 or 39 to 1, respectively

- can only be set to 1 if the UE has set bit number 5 to 1 and the UE has set at least one of the bit number 22, 23, 24 or 26 to 1.
- even if the UE sets bits 33 to 37, it shall still set bit 19 to 1 if inter-RAT ANR features are tested for all RATs for which inter-RAT measurement reporting is indicated as tested

| Yes |
- Inter-RAT periodical measurement reporting where `triggerType` is set to `periodical` and `purpose` is set to `reportStrongestCellsForSON` for 1xRTT or HRPD, if the UE has set bit number 24 or 26 to 1, respectively
- Inter-RAT periodical measurement reporting where `triggerType` is set to `periodical` and `purpose` is set to `reportCGI` for UTRAN FDD or UTRAN TDD, if the UE supports either only UTRAN FDD or only UTRAN TDD and has set bit number 22 to 1
- Inter-RAT periodical measurement reporting where `triggerType` is set to `periodical` and `purpose` is set to `reportCGI` for GERAN, 1xRTT or HRPD, if the UE has set bit number 23, 24 or 26 to 1, respectively

### Clarification for mobility from EUTRAN and inter-frequency handover within EUTRAN

There are several feature groups related to mobility from E-UTRAN and inter-frequency handover within EUTRAN. The description of these features is based on the assumption that we have 5 main "functions" related to mobility from E-UTRAN:

- **A. Support of measurements and cell reselection procedure in idle mode**
- **B. Support of RRC release with redirection procedure in connected mode**
- **C. Support of Network Assisted Cell Change in connected mode**
- **D. Support of measurements and reporting in connected mode**
- **E. Support of handover procedure in connected mode**

All functions can be applied for mobility to Inter-frequency to EUTRAN, GERAN, UTRAN, CDMA2000 HRPD and CDMA2000 1xRTT except for function C) which is only applicable for mobility to GERAN. Table B.1-2 below summarises the mobility functions that are supported based on the UE capability signaling (band support) and the setting of the feature group support indicators.
Table B.1-2: Mobility from E-UTRAN

</tr>
</tbody>
</table>

In case measurements and reporting function is not supported by UE, the network may still issue the mobility procedures redirection (B) and CCO (C) in a blind fashion.

B.2 CSG support

In this release of the protocol, it is mandatory for the UE to support a minimum set of CSG functionality consisting of:

- Identifying whether a cell is CSG or not;
- Ignoring CSG cells in cell selection/reselection.

Additional CSG functionality in AS, i.e. the requirement to detect and camp on CSG cells when the “CSG whitelist” is available or when manual CSG selection is triggered by the user, are related to the corresponding NAS features. This additional AS functionality consists of:

- Manual CSG selection;
- Autonomous CSG search;
- Implicit priority handling for cell reselection with CSG cells.

It is possible that this additional CSG functionality in AS is not supported or tested in early UE implementations.

Note that since the above AS features relate to idle mode operations, the capability support is not signalled to the network. For these reasons, no “feature group indicator” is assigned to this feature to indicate early support in Rel-8.
Annex C (normative): Release 10 AS feature handling

C.1 Feature group indicators

This annex contains the definitions of the bits in field featureGroupIndRel10.

In this release of the protocol, the UE shall include the field featureGroupIndRel10 in the IE UE-EUTRA-Capability-v1020-IEs. All the functionalities defined within the field featureGroupIndRel10 defined in Table C.1-1 are mandatory for the UE, if the related capability (spatial multiplexing in UL, PDSCH transmission mode 9, carrier aggregation, handover to EUTRA, or RAT) is also supported. For a specific indicator, if all functionalities for a feature group listed in Table C.1-1 have been implemented and tested, the UE shall set the indicator as one (1), else (i.e. if any one of the functionalities in a feature group listed in Table C.1-1 have not been implemented or tested), the UE shall set the indicator as zero (0).

The UE shall set all indicators that correspond to RATs not supported by the UE as zero (0).

The UE shall set all indicators, which do not have a definition in Table C.1-1, as zero (0).

If the optional field featureGroupIndRel10 is not included by a UE of a future release, the network may assume that all features, listed in Table C.1-1 and deployed in the network, have been implemented and tested by the UE.

The indexing in Table C.1-1 starts from index 101, which is the leftmost bit in the field featureGroupIndRel10.

Annex D (informative):
Descriptive background information

D.1 Signalling of Multiple Frequency Band Indicators (Multiple FBI)

D.1.1 Mapping between frequency band indicator and multiple frequency band indicator

This subclause describes the use of the Multiple Frequency Band Indicator (MFBI) lists and the E-UTRA frequency bands in SystemInformationBlockType1 by means of an example as shown in Figure D.1.1-1. In this example:

- E-UTRAN cell belongs to band B90 and also bands B6, B7, B91, and B92.
- E-UTRAN uses B64 to indicate the presence of B90 in freqBandIndicator-v9e0.
- For the MFBI list of this cell, E-UTRAN uses B64 in MultiBandInfoList to indicate the position and priority of the bands in MultiBandInfoList-v9e0.
- The UE, after reading SystemInformationBlockType1, generates an MFBI list with priority of B91, B6, B92, and B7. The UE applies the first listed band which it supports.

![Figure D.1.1-1: Mapping of frequency bands to MultiBandInfoList/MultiBandInfoList-v9e0](image)

D.1.2 Mapping between inter-frequency neighbour list and multiple frequency band indicator

This subclause describes the use of the Multiple Frequency Band Indicator (MFBI) lists and the E-UTRA frequencies signalled in SystemInformationBlockType5 by means of an example as shown in Figure D.1.2-1. In this example:

- E-UTRAN includes 4 frequencies: the bands associated with f1 and f4 belong to bands lower than 64; the bands associated with f2 and f3 belong to bands larger than 64. The reserved EARFCN value of 65535 is used to indicate the presence of ARFCN-ValueEUTRA-v9e0.
- The band associated with f1 has two overlapping bands, B1 and B2 (lower than 64); the band associated with f2 has one overlapping band, B91; the bands associated with f3 has four overlapping bands B3, B4, B92, and B93; the band associated with f4 does not have overlapping bands.
E-UTRAN includes 4 lists in both `interFreqCarrierFreqList-v8h0` and `interFreqCarrierFreqList-v9e0` and ensure the order of the lists is matching. Each list corresponds to one EARFCN and contains up to 8 bands. The first list corresponds to f1, the second list corresponds to f2, and so on. The grey lists mean not including `MultiBandInfoList` or `MultiBandInfoList-v9e0`, i.e. the corresponding EARFCN does not have any overlapping frequency bands in `MultiBandInfoList` or `MultiBandInfoList-v9e0`.

**Figure D.1.2-1: Mapping of EARFCNs to MultiBandInfoList/MultiBandInfoList-v9e0**

D.1.3 Mapping between UTRA FDD frequency list and multiple frequency band indicator

This subclause describes the use of the Multiple Frequency Band Indicator (MFBI) lists and the UTRA FDD frequencies signalled in `SystemInformationBlockType6` by means of an example as shown in Figure D.1.3-1. In this example:

- E-UTRA includes 4 UTRAN FDD frequencies.
- The bands associated with f1 and f4 have no overlapping bands. The band associated f2 has two overlapping bands, B1 and B2. The band associated with f3 has one overlapping band, B3.
- E-UTRA include 4 lists in `carrierFreqListUTRA-FDD-v8h0` with the first and fourth entry not including `MultiBandInfoList`.

![Figure D.1.2-1: Mapping of EARFCNs to MultiBandInfoList/MultiBandInfoList-v9e0](image-url)
Figure D.1.3-1: Mapping of UARFCNs to MultiBandInfoList

Clarification on UE maximum transmission power
UTRA

Clarification on proximity indication configuration in handover to E-

Draft CR to 36.331 on Network ordered SI reporting

CR to 36.331 for Introduction of Dual Layer Transmission

Renaming Allowed CSG List (36.331 Rel-9)

Maximum number of CDMA2000 neighbors in SIB8

SR prohibit mechanism for UL SPS

Stage 3 correction for CMAS

Correction and completion of extension guidelines

Clarification of

Capturing agreements on inbound mobility

Emergency Support Indicator in BCCH

RB combinations in feature group indicator 20

Correction regarding SRVCC

Correction regarding applied dedicated resource
configuration upon handover

REL-9 protocol extensions in RRC

In-order delivery of NAS PDU sets at RRC connection reconfiguration

Correction on Threshold of Measurement Event

Clarification on dedicated resource of RA procedure

Cell barring when MasterInformationBlock or
SystemInformationBlock1 is missing

Clarification on supported handover types in feature grouping

Handling of unsupported / non-comprehended frequency band and
emission requirement

- RB combinations in feature group indicator 20
- Introduction of Per-QCI radio link failure timers (option 1)
- Null integrity protection algorithm
- Emergency Support Indicator in BCCH
- CR to 36.331 for Enhanced CSFB to 1xRTT with concurrent PS
  handover
- REL-9 on Miscellaneous editorial corrections
- Periodic CQI/PMI/RI masking
- Introduction of CMAS
- (Rel-9)-clarification on the description of redirectedCarrierInfo
- Adding references to RRC processing delay for inter-RAT mobility
  messages
- Alignment of srs-Bandwidth with 36.211
- Baseline CR capturing eMBMS agreements
- Capturing agreements on inbound mobility
- Clarification of preRegistrationZoneID/secondaryPreRegistrationZoneID
- Clarification on RCC for IRAT HO
- Clarification on P-max
- Clarification on the definition of maxCellMeas
- Correction of q-RxLevMin reference in SIB7
- Correction on SPS-Comlg field descriptions
- correction on the definition of CellsTriggeredList
- Correction relating to CMAS UE capability
- Feature grouping bit for SRVCC handover
- Correction and completion of extension guidelines
- RACH optimization Stage-3
- Stage 3 correction for CMAS
- SR prohibit mechanism for UL SPS
- Parameters used for enhanced 1xRTT CS fallback
- Correction on UTRAN UE Capability transfer
- Maximum number of CDMA2000 neighbors in SIB8
- Introduction of UE Rx-Tx Time Difference measurement
- Introduction of SR prohibit timer
- Remove FFs from RANZ specifications
- Renaming Allowed CSQ List (36.331 Rel-9)
- Re-introduction of message segment discard time
- Application of ASN.1 extension guidelines
- Support for Dual Radio txCsFB
- Shorter SR periodicity
- CR to 36.331 for Introduction of Dual Layer Transmission
- Draft CR to 36.331 on Network ordered SI reporting
- UE e1xcsb capabilities correction
- Clarification on coding of ETWS related IEs

03/2010

- Clarification of CGI reporting
- Clarification on MCCCH change notification
- Clarification on measurement for serving cell only
- Clarification on proximity indication configuration in handover to E-UTRA
- Clarification on radio resource configuration in handover to E-UTRA
- Clarification on UE maximum transmission power
Correction to field descriptions of UE-EUTRA-Capability
Correction to MBMS scheduling terminology
Corrections to SIB8
CR 36.331 R9 for Unifying SI reading for ANR and inbound mobility
CR 36.331 for 1xRTT pre-registration information in SIB8
CR 50 to 36.331 on corrections for MBMS
CR to 36.331 on CSG identity reporting
CR to 36.331 on Optionality of Rel-9 UE features
CR to 36.331 on Service Specific Acces Control (SSAC)
Introduction of power-limited device indication in UE capability.
Missing agreement in MCC change notification.
Corrections related to MCC change notification and value ranges
Prohibit timer for proximity indication
Proximity Indication after handover and re-establishment
Specifying the exact mapping of notificationIndicator in SIB13 to PDCCH bits
Corrections out of ASN.1 review scope
CR on clarification of system information change
Measurement Result CDMA2000 Cell
Correction on the range of UE Rx-1x time difference measurement result
Small clarifications regarding MBMS
Introduction of REL-9 indication within field accessStratumRelease
Extending mobility description to cover inbound mobility
Clarification regarding enhanced CSFB to 1xRTT
Handing of dedicated RLF timers
Clarification on UE's behavior of receiving MBMS service
MBMS Service ID and Session ID
Inclusion of non-MBSFN region length in SIB13
CR to 36.331 for e1xCSFB access class barring parameters in SIB8
Multiple 1xRTT/HRPD target cells in MobilityFromEUTRACommand
Independent support indicators for Dual-Rx CSFB and ST20 in SIB8
Clarification on DRX StartOffset for TDD
Miscellaneous corrections from REL-9 ASN.1 review
Need codes and missing conventions
Introduction of Full Configuration Handover for handling earlier eNB releases
Clarification to SFN reference in RRC
RSRP and RSRQ based Thresholds
Redirection enhancements to GERAN
Cell reselection enhancements CR for 36.331
IGR on UE-originated RLF Reporting for MRO SON use case
CR to 36.331 on Redirection enhancements to UTRAN
Proximity status indication handling at mobility
Upper layer aspect of MBSFN area id
Redirection for enhanced 1xRTT CS fallback with concurrent PSHO
Avoiding interleaving transmission of CMAS notifications
Introduction of UE GERAN DTM capability indicator
Introducing provisions for late ASN.1 corrections
Correction/ alignment of REL-9 UE capability signalling
Clariﬁcation for mapping between warning message and CB-data
Clariﬁcation of radio link failure related actions
Clariﬁcation on UE actions upon leaving RRC_CONNECTED
Clariﬁcation on CMAS system information
Corrections to MBMS
Decoding of unknown future extensions
Miscellaneous small corrections and clarifications
Prohibit timer for proximity indication
HLF report for MRO correction
Missing UTRA bands in IRAT-ParametersUTRA-FDD
Correction on handling of dedicated RLF timers
Protection of RRC messages
Handling missing Essential system information
Clarification on UMTS CSG detected cell reporting in LTE
Introducing provisions for late corrections
Clarification regarding / alignment of REL-9 UE capabilities
Correction to 3GPP2 reference for interworking with cdma2000 1x
Clarification on UL handover preparation transfer
Clarifications regarding fullConfiguration

</table>
- Update of R2-110807 on CSI measurement resource restriction for time domain ICIC
- Update of R2-110821 on RRM/RLM resource restriction for time domain ICIC
- Corrections on UE capability related parameters
- Validity time for location information in Immediate MDT
- CR to 36.331 adding UE capability indicator for dual Rx/Tx e1xCSFB
- Correction to CA
- Further correction to combined measurement report of UTRAN
- Correction to the reference of ETWS
- Introduction of OTDOA inter-freq RSTD measurement indication procedure
- Correction of use of RRCConnectionReestablishment message for contention resolution
- CR to 36.331 on MDT neighbour cell measurements logging
- Minor ASN.1 corrections for the UEInformationResponse message
- Clarification regarding dedicated RLP timers and constants
- Release of Logged Measurement Configuration
- Some corrections on TS 36.331
- AC barring procedure clean up
- Counter proposal to R2-110826 on UE capabilities for MDT
- UE information report for RACH
- Measurement on the deactivated Scells
- Trace configuration parameters for Logged MDT
- Clarification on stop condition for timer T3330
- User consent for MDT
- Correction on the range of CQI resource index
- Small corrections to ETWS & CMS system information
- UE capability signaling structure w.r.t carrier aggregation, MIMO and measurement gap
- Normal PHR and the multiple uplink carriers
- Corrections to TS36.331 on SIB2 handling
- Adding a Power Management indication in PHR
- Clarification for CA and TTI bundling in RRC
- Updates to FGI settings
- Add MBMS counting procedure to processing delay requirement for RRC procedure Section 11.2
- Add pre Rel-10 procedures to processing delay requirement for RRC procedure Section 11.2
- Addition of a specific reference for physical configuration fields
- Clarification of inter-frequency RSTD measurement indication procedure
- Clarification of optionality of UE features without capability
- Clarification on the definition of maxCellBlack
- Clarification on upper layer requested connection release
- Clarification regarding eICIC measurements
- CR for s-measure handling
- CR on clarification of RLF Report in Carrier Aggregation
- FGI bit for handover between LTE FDD/TDD
- Further updates on L1 parameters
- General error handling for extension fields
- Additional information for RLF report
- Introduction of TCE ID for logged MDT
- Miscellaneous corrections (related to review in preparation for ASN.1 freeze)
- PLMN check for MDT logging
- UE actions upon leaving RRC_CONNECTED
- Clarification on bandeutra-r10 and supportedBandListEUTRA
- Updated value range for the Extended Wait Timer
- Value range of DRX-InactiveTimer
- Correction for SR-VCC and QCI usage
- Restructuring of CQI-ReportConfig-r10
- Correction on L1 allocations in MBSFN subframes
- Reference SFN for MecaSubframePattern
- Clarifications to CA related field descriptions
- Corrections to codebookSubsetRestriction and SRS parameters
- Corrections to the handling of ni-ConfIndex for TM9
- 2 UE capabilities for Rel-10 LTE features with eICIC measurement restrictions as FGI (Alt)
- CR to 36.331 on redirectedutra-TDD carrier frequency
- Explicit AS signalling for mapped PTMSI/GUTI
- Counter proposal for Updates of mandatory information in AS-Config
Introducing MDT enhancements for REL-11 reselection in CELL_FACH State in 36.331

Introduction of absolute priority based measurements and 36.331 CR introducing In-Device Coexistence (IDC)

Introduction of EAB

Introduction of multiple frequency band indicator

Korean Public Alert System (KPAS) in relation to CMAS

Introducing means to signal different REL-10 FDD/TDD Change in Scheduling Information for CMAS

Change in Scheduling Information for ETWS establishment (parallel message transmission)

Minor correction regarding limited service access on non-CSG- On SIB10/11 Reception Timing

CR to 36.331 on cdma2000 band classes and references Limiting MBMS counting responses to within the PLMN

Replace the tables with exception list in 10.5 AS-Config ETWS

Replace the tables with exception list in 10.5 AS-Config ETWS

Geran SI format for cell change order&PS handover& enhanced redirection to GERAN

Clarification on PCI range for CSG cells 10.3.0 10.4.0

ETSI
Corrections to field description of pdsch-Start-r11
Clarification on NZP CSI-RS resource configuration for UE
Conditions RI reference inheriting CSI process (DL CoMP)
Correction on multi-TA capability
CSFB High Priority
Clarification on the redirection to UTRA-TDD frequency in case of
Mandating the settings of FGI bit 14, 27 and 28 to true
The presence of bandcombination for non-CA capable UEs
Optional support of RLF report for inter-RAT MRO
Introduction of wideband RSRQ measurements in RRC_IDLE
IDC-SubframePattern length for FDD
Behaviour in case of excessive dedicated priority information
PPI and IDC indication upon handover
Invalid measurement configuration with different (E)ARFCN
Extension of FBI and EARFCN
IDC Problem Reporting
Clarification on MBMS Service Continuity
15) DL COMP capability related correction
Miscellaneous corrections from review preceeding ASN.1 freeze
Broadcast of Time Info by Using a New SIB
Introduction of network sharing for CDMA2000 inter-working
SIB1 provisioning via dedicated signalling
Correction on  Power preference indication
CR to 36.331 on additional information in RLF report for inter-RAT handover
Clarification for Multiple Frequency Band Indicators feature
Validity of EAB SIB and acquisition of SIB1
Some clarification to Carrier aggregation enhancements
RAN overload control using RRC connection Rejection
Some clarification to Carrier aggregation enhancements
Clarification and alignment of handling of other configuration
Introducing support for Coordinated Multi-Point (CoMP) operation
Introducing further UE aspects regarding multi band cells
CR to 36.331 on additional information in RLF report for inter-RAT MRO
Correction on Power preference indication
SIB1 provisioning via dedicated signalling
Measurement reporting of Scells
Introduction of EPDCCH parameters in TS 36.331
Introduction of Rel-11 UE capabilities
Introduction of wideband RSRQ measurements
Introduction of network sharing for CDMA2000 inter-working
Broadcast of Time Info by Using a New SIB
GERAN measurement object at ANR
Mandating the settings of FGI bit 14, 27 and 28 to true
Clarification on the redirection to UTRA-TDD frequency in case of CSFB High Priority
Correction of wrong reference
Clarification to support of deoptimisation feature
Clarification on KASME key usage
Correction on multi-TA capability
MBMS interest indication upon handover/re-establishment
Conditions RI reference inheriting CSI process (DL CoMP)
Correction on NZP CSI-RS resource configuration for UE supporting 1 CSI process
Corrections to field description of pdsch-Start-r11

RP-60 RP-130809 1277 - Need code corrections in Rel-11 RRC 11.3.0 11.4.0

RP-64 RP-140873 1488 - ACK/NACK feedback mode on PUSCH 11.7.0 11.8.0
RP-64 RP-140873 1515 1 Network-requested CA Band Combination Capability Signalling 11.7.0 11.8.0
RP-64 RP-140848 1535 2 Introduction of UE capability for eMBMS reception on SCell and Non-Serving Cell 11.7.0 11.8.0
RP-64 RP-140878 1539 1 SIB15 enhancement for service availability information 11.7.0 11.8.0
RP-64 RP-140871 1544 - Clarification of E-UTRA MFBI signalling 11.7.0 11.8.0
RP-64 RP-140871 1550 1 Inter-RAT ANR capability signalling in FGI33 when UE supports UTRA TDD only 11.7.0 11.8.0
RP-64 RP-140873 1553 1 Allowing TDD/FDD split for FGI111 and FGI112 11.7.0 11.8.0
09/2014 RP-65 RP-141494 1631 - FDD&TDD split for CA 11.8.0 11.9.0
RP-65 RP-141498 1627 1 Correction to Network-requested CA Band Combination Capability Signalling 11.8.0 11.9.0
RP-65 RP-141496 1576 - Clarification on double indication of SAI in SIB15 11.8.0 11.9.0
RP-65 RP-141496 1596 - Clarification on MBSCountingResponse 11.8.0 11.9.0
RP-65 RP-141496 1622 - Clarification on the setting of SupportedBandCombination-v1130 11.8.0 11.9.0
RP-65 RP-141489 1573 1 Correction of E-UTRAN UE capabilities description in HandoverPreparationInformation message field descriptions 11.8.0 11.9.0
RP-65 RP-141496 1614 1 Clarification on determining MBMS frequencies of interest in 11.8.0 11.9.0
| RP-65 | RP-141493 | 1610 | - | Clarification for time-domain resource restriction pattern applicable to neighbour cell RSRQ measurements | 11.8.0 | 11.9.0 |
| RP-65 | RP-141114 | 1635 | - | Mandating the FGI bit 31 to true | 11.8.0 | 11.9.0 |
| 12/2014 | RP-66 | RP-142115 | 1658 | - | Correction of remaining TBD for Rel-10 FGIs | 11.9.0 | 11.10.0 |
| RP-66 | RP-142117 | 1662 | - | New UE categories for DL 600Mbps | 11.9.0 | 11.10.0 |
| RP-66 | RP-142115 | 1649 | 1 | Introduction of signalling for serving cell interruptions | 11.9.0 | 11.10.0 |
| RP-66 | RP-142113 | 1685 | 1 | UE capability for modified MPR behavior | 11.9.0 | 11.10.0 |
| 03/2015 | RP-67 | RP-150371 | 1746 | - | Clarification on Measurement Configuration handling | 11.10.0 | 11.11.0 |
| RP-67 | RP-150368 | 1782 | - | Handling of WB RSRQ parameters | 11.10.0 | 11.11.0 |
| RP-67 | RP-150371 | 1764 | - | Clarification to usage of field deltaTxD-OffsetPUCCH-Format1bCS-r11 in dedicated uplink power control parameter signalling | 11.10.0 | 11.11.0 |
| RP-67 | RP-150370 | 1749 | - | Clarification on CSI measurement subframe set | 11.10.0 | 11.11.0 |
| RP-67 | RP-150371 | 1772 | - | Correction of DRB establishment in case of fullConfig | 11.10.0 | 11.11.0 |
| RP-67 | RP-150368 | 1794 | - | The absence of supportedMIMO-CapabilityUL-r10 | 11.10.0 | 11.11.0 |
| RP-67 | RP-150370 | 1797 | - | Presence of codebookSubsetRestriction | 11.10.0 | 11.11.0 |
