(3GPP TS 36.331 version 14.4.0 Release 14)
Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for ETSI members and non-members, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs): Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (https://ipr.etsi.org/).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under http://webapp.etsi.org/key/queryform.asp.

Modal verbs terminology

In the present document "shall", "shall not", "should", "should not", "may", "need not", "will", "will not", "can" and "cannot" are to be interpreted as described in clause 3.2 of the ETSI Drafting Rules (Verbal forms for the expression of provisions).

"must" and "must not" are NOT allowed in ETSI deliverables except when used in direct citation.

5.8a.1.3 SC-MCCH information validity and notification of changes

5.8a.1.4 Procedures

5.8a.2 SC-MCCH information acquisition

5.8a.2.1 General

5.8a.2.2 Initiation

5.8a.2.3 SC-MCCH information acquisition by the UE

5.8a.2.4 Actions upon reception of the SCPTMConfiguration message

5.8a.3 SC-PTM radio bearer configuration

5.8a.3.1 General

5.8a.3.2 Initiation

5.8a.3.3 SC-MRB establishment

5.8a.3.4 SC-MRB release

5.9 RN procedures

5.9.1 RN reconfiguration

5.9.1.1 General

5.9.1.2 Initiation

5.9.1.3 Reception of the RNReconfiguration by the RN

5.10 Sidelink

5.10.1 Introduction

5.10.1a Conditions for sidelink communication operation

5.10.1d Conditions for V2X sidelink communication operation

5.10.2 Sidelink UE information

5.10.2.1 General

5.10.2.2 Initiation

5.10.2.3 Actions related to transmission of SidelinkUEInformation message

5.10.3 Sidelink communication monitoring

5.10.4 Sidelink communication transmission

5.10.5 Sidelink discovery monitoring

5.10.6 Sidelink discovery announcement

5.10.6a Sidelink discovery announcement pool selection

5.10.6b Sidelink discovery announcement reference carrier selection

5.10.7 Sidelink synchronisation information transmission

5.10.7.1 General

5.10.7.2 Initiation

5.10.7.3 Transmission of SLSS

5.10.7.4 Transmission of MasterInformationBlock-SL or MasterInformationBlock-SL-V2X message

5.10.7.5 Void

5.10.8 Sidelink synchronisation reference

5.10.8.1 General

5.10.8.2 Selection and reselection of synchronisation reference

5.10.9 Sidelink common control information

5.10.9.1 General

5.10.9.2 Actions related to reception of MasterInformationBlock-SL or MasterInformationBlock-SL-V2X message

5.10.10 Sidelink relay UE operation

5.10.10.1 General

5.10.10.2 AS-conditions for relay related sidelink communication transmission by sidelink relay UE

5.10.10.3 AS-conditions for relay PS related sidelink discovery transmission by sidelink relay UE

5.10.10.4 Sidelink relay UE threshold conditions

5.10.11 Sidelink remote UE operation

5.10.11.1 General

5.10.11.2 AS-conditions for relay related sidelink communication transmission by sidelink remote UE

5.10.11.3 AS-conditions for relay PS related sidelink discovery transmission by sidelink remote UE

5.10.11.4 Selection and reselection of sidelink relay UE

5.10.11.5 Sidelink remote UE threshold conditions

5.10.12 V2X sidelink communication monitoring

5.10.13 V2X sidelink communication transmission

5.10.13.1 Transmission of V2X sidelink communication

5.10.13.2 V2X sidelink communication transmission pool selection

5.10.13.3 V2X sidelink communication transmission reference cell selection

5.10.14 DFN derivation from GNSS

ETSI
Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

x the first digit:
   1 presented to TSG for information;
   2 presented to TSG for approval;
   3 or greater indicates TSG approved document under change control.

y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.

z the third digit is incremented when editorial only changes have been incorporated in the document.
1 Scope

The present document specifies the Radio Resource Control protocol for the radio interface between UE and E-UTRAN as well as for the radio interface between RN and E-UTRAN.

The scope of the present document also includes:

- the radio related information transported in a transparent container between source eNB and target eNB upon inter eNB handover;
- the radio related information transported in a transparent container between a source or target eNB and another system upon inter RAT handover.

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document in the same Release as the present document.

ETSI
3 Definitions, symbols and abbreviations

3.1 Definitions

For the purposes of the present document, the terms and definitions given in TR 21.905 [1] and the following apply. A term defined in the present document takes precedence over the definition of the same term, if any, in TR 21.905 [1].

**Anchor carrier:** In NB-IoT, a carrier where the UE assumes that NPSS/NSSS/NPBCH/SIB-NB are transmitted.

**Bandwidth Reduced:** Refers to operation in downlink and uplink with a limited channel bandwidth of 6 PRBs.

**Cellular IoT EPS Optimisation:** Provides improved support of small data transfer, as defined in TS 24.301 [35].

**Commercial Mobile Alert System:** Public Warning System that delivers *Warning Notifications* provided by *Warning Notification Providers* to CMAS capable UEs.

**Common access barring parameters:** The common access barring parameters refer to the access class barring parameters that are broadcast in *SystemInformationBlockType2* outside the list of PLMN specific parameters (i.e. in *ac-BarringPerPLMN-List*).
Control plane CIoT EPS optimisation: Enables support of efficient transport of user data (IP, non-IP or SMS) over control plane via the MME without triggering data radio bearer establishment, as defined in TS 24.301 [35].

CSG member cell: A cell broadcasting the identity of the selected PLMN, registered PLMN or equivalent PLMN and for which the CSG whitelist of the UE includes an entry comprising cell's CSG ID and the respective PLMN identity.

Dual Connectivity: A UE in RRC_CONNECTED is configured with Dual Connectivity when configured with a Master and a Secondary Cell Group.

EU-Alert: Public Warning System that delivers Warning Notifications provided by Warning Notification Providers using the same AS mechanisms as defined for CMAS.

Field: The individual contents of an information element are referred as fields.

Floor: Mathematical function used to ‘round down’ i.e. to the nearest integer having a lower or equal value.

Information element: A structural element containing a single or multiple fields is referred as information element.

Korean Public Alert System (KPAS): Public Warning System that delivers Warning Notifications provided by Warning Notification Providers using the same AS mechanisms as defined for CMAS.

Master Cell Group: For a UE not configured with DC, the MCG comprises all serving cells. For a UE configured with DC, the MCG concerns a subset of the serving cells comprising of the PCell and zero or more secondary cells.

MBMS service: MBMS bearer service as defined in TS 23.246 [56] (i.e. provided via an MRB or an SC-MRB).

NB-IoT: NB-IoT allows access to network services via E-UTRA with a channel bandwidth limited to 200 kHz.

NB-IoT UE: A UE that uses NB-IoT.

NCSG: Network controlled small gap as defined in TS 36.133 [16].

Non-anchor carrier: In NB-IoT, a carrier where the UE does not assume that NPSS/NSSS/NPBCH/SIB-NB are transmitted.

Primary Cell: The cell, operating on the primary frequency, in which the UE either performs the initial connection establishment procedure or initiates the connection re-establishment procedure, or the cell indicated as the primary cell in the handover procedure.

Primary Secondary Cell: The SCG cell in which the UE is instructed to perform random access or initial PUSCH transmission if random access procedure is skipped when performing the SCG change procedure.

Primary Timing Advance Group: Timing Advance Group containing the PCell or the PSCell.

PUCCH SCell: An SCell configured with PUCCH.

Secondary Cell: A cell, operating on a secondary frequency, which may be configured once an RRC connection is established and which may be used to provide additional radio resources.

Secondary Cell Group: For a UE configured with DC, the subset of serving cells not part of the MCG, i.e. comprising of the PSCell and zero or more other secondary cells.

Secondary Timing Advance Group: Timing Advance Group neither containing the PCell nor the PSCell. A secondary timing advance group contains at least one cell with configured uplink.

Serving Cell: For a UE in RRC_CONNECTED not configured with CA/ DC there is only one serving cell comprising of the primary cell. For a UE in RRC_CONNECTED configured with CA/ DC the term ‘serving cells' is used to denote the set of one or more cells comprising of the primary cell and all secondary cells.

Sidelink: UE to UE interface for sidelink communication, V2X sidelink communication and sidelink discovery. The sidelink corresponds to the PC5 interface as defined in TS 23.303 [68].

Sidelink communication: AS functionality enabling ProSe Direct Communication as defined in TS 23.303 [68], between two or more nearby UEs, using E-UTRA technology but not traversing any network node. In this version, the terminology “sidelink communication” without “V2X” prefix only concerns PS unless specifically stated otherwise.
Sidelink discovery: AS functionality enabling ProSe Direct Discovery as defined in TS 23.303 [68], using E-UTRA technology but not traversing any network node.

Sidelink operation: Includes sidelink communication, V2X sidelink communication and sidelink discovery.

User plane CIoT EPS optimisation: Enables support for change from EMM-IDLE mode to EMM-CONNECTED mode without the need for using the Service Request procedure, as defined in TS 24.301 [35].

Timing Advance Group: A group of serving cells that is configured by RRC and that, for the cells with an UL configured, use the same timing reference cell and the same Timing Advance value. A Timing Advance Group only includes cells of the same cell group i.e. it either includes MCG cells or SCG cells.

V2X Sidelink communication: AS functionality enabling V2X Communication as defined in TS 23.285 [78], between nearby UEs, using E-UTRA technology but not traversing any network node.

3.2 Abbreviations

For the purposes of the present document, the abbreviations given in TR 21.905 [1], TS 36.300 [9] and the following apply. An abbreviation defined in the present document takes precedence over the definition of the same abbreviation, if any, in TR 21.905 [1] or TS 36.300 [9].

4 General

4.1 Introduction

In this specification, (parts of) procedures and messages specified for the UE equally apply to the RN for functionality necessary for the RN. There are also (parts of) procedures and messages which are only applicable to the RN in its communication with the E-UTRAN, in which case the specification denotes the RN instead of the UE. Such RN-specific aspects are not applicable to the UE.

NB-IoT is a non backward compatible variant of E-UTRAN supporting a reduced set of functionality. In this specification, (parts of) procedures and messages specified for the UE equally apply to the UE in NB-IoT. There are also some features and related procedures and messages that are not supported by UEs in NB-IoT.

In particular, the following features are not supported in NB-IoT and corresponding procedures and messages do not apply to the UE in NB-IoT:

- Connected mode mobility (Handover and measurement reporting);
- Inter-RAT cell reselection or inter-RAT mobility in connected mode;
- CSG;
- Relay Node (RN);
- Carrier Aggregation (CA);
- Dual connectivity (DC);
- GBR (QoS);
- ACB, EAB, SSAC and ACDC;
- MBMS, except for MBMS via SC-PTM in Idle mode;
- Self-configuration and self-optimisation;
- Measurement logging and reporting for network performance optimisation;
- Public warning systems e.g. CMAS, ETWS and PWS;
- Real time services (including emergency call);
- CS services and CS fallback;
- In-device coexistence;
- RAN assisted WLAN interworking;

In the ASN.1, lower case may be used for some (parts) of the above abbreviations e.g. c-RNTI.
Network-assisted interference cancellation/suppression;
- Sidelink (including direct communication and direct discovery).

NOTE: In regard to mobility, NB-IoT is a separate RAT from E-UTRAN.

In this specification, there are also (parts of) procedures and messages which are only applicable to UEs in NB-IoT, in which case this is stated explicitly.

This specification is organised as follows:
- sub-clause 4.2 describes the RRC protocol model;
- sub-clause 4.3 specifies the services provided to upper layers as well as the services expected from lower layers;
- sub-clause 4.4 lists the RRC functions;
- clause 5 specifies RRC procedures, including UE state transitions;
- clause 6 specifies the RRC message in a mixed format (i.e. tabular & ASN.1 together);
- clause 7 specifies the variables (including protocol timers and constants) and counters to be used by the UE;
- clause 8 specifies the encoding of the RRC messages;
- clause 9 specifies the specified and default radio configurations;
- clause 10 specifies the RRC messages transferred across network nodes;
- clause 11 specifies the UE capability related constraints and performance requirements.

4.2 Architecture

4.2.1 UE states and state transitions including inter RAT

A UE is in RRC_CONNECTED when an RRC connection has been established. If this is not the case, i.e. no RRC connection is established, the UE is in RRC_IDLE state. The RRC states can further be characterised as follows:

- **RRC_IDLE**:
  - A UE specific DRX may be configured by upper layers (not applicable for NB-IoT);
  - UE controlled mobility;
  - The UE:
    - Monitors a Paging channel to detect incoming calls, system information change, for ETWS capable UEs, ETWS notification, and for CMAS capable UEs, CMAS notification;
    - Performs neighbouring cell measurements and cell (re-)selection;
    - Acquires system information.
    - Performs logging of available measurements together with location and time for logged measurement configured UEs.

- **RRC_CONNECTED**:
  - Transfer of unicast data to/from UE.
  - At lower layers, the UE may be configured with a UE specific DRX.
  - For UEs supporting CA, use of one or more SCells, aggregated with the PCell, for increased bandwidth;
  - For UEs supporting DC, use of one SCG, aggregated with the MCG, for increased bandwidth;
- Network controlled mobility, i.e. handover and cell change order with optional network assistance (NACC) to GERAN (not applicable for NB-IoT);

- The UE:
  - Monitors a Paging channel and/or System Information Block Type 1 contents to detect system information change, for ETWS capable UEs, ETWS notification, and for CMAS capable UEs, CMAS notification (not applicable for NB-IoT);
  - Monitors control channels associated with the shared data channel to determine if data is scheduled for it;
  - Provides channel quality and feedback information (not applicable for NB-IoT);
  - Performs neighbouring cell measurements and measurement reporting (not applicable for NB-IoT);
  - Acquires system information (not applicable for NB-IoT).

The following figure not only provides an overview of the RRC states in E-UTRA, but also illustrates the mobility support between E-UTRAN, UTRAN and GERAN.

![Figure 4.2.1-1: E-UTRA states and inter RAT mobility procedures, 3GPP](image)

The following figure illustrates the mobility support between E-UTRAN, CDMA2000 1xRTT and CDMA2000 HRPD. The details of the CDMA2000 state models are out of the scope of this specification.

![Figure 4.2.1-2: Mobility procedures between E-UTRA and CDMA2000](image)
The inter-RAT handover procedure(s) supports the case of signalling, conversational services, non-conversational services and combinations of these.

In addition to the state transitions shown in Figure 4.2.1-1 and Figure 4.2.1-2, there is support for connection release with redirection information from E-UTRA RRC_CONNECTED to GERAN, UTRAN and CDMA2000 (HRPD Idle/1xRTT Dormant mode).

For NB-IoT, mobility between E-UTRA and UTRAN, GERAN and between E-UTRA and CDMA2000 1xRTT and CDMA2000 HRPD is not supported at AS level and hence only the E-UTRA states depicted in Figure 4.2.1-1 are applicable.

4.2.2 Signalling radio bearers

"Signalling Radio Bearers" (SRBs) are defined as Radio Bearers (RB) that are used only for the transmission of RRC and NAS messages. More specifically, the following SRBs are defined:

- SRB0 is for RRC messages using the CCCH logical channel;
- SRB1 is for RRC messages (which may include a piggybacked NAS message) as well as for NAS messages prior to the establishment of SRB2, all using DCCH logical channel;
- For NB-IoT, SRB1bis is for RRC messages (which may include a piggybacked NAS message) as well as for NAS messages prior to the activation of security, all using DCCH logical channel;
- SRB2 is for RRC messages which include logged measurement information as well as for NAS messages, all using DCCH logical channel. SRB2 has a lower-priority than SRB1 and is always configured by E-UTRAN after security activation. SRB2 is not applicable for NB-IoT.

In downlink piggybacking of NAS messages is used only for one dependant (i.e. with joint success/failure) procedure: bearer establishment/modification/release. In uplink NAS message piggybacking is used only for transferring the initial NAS message during connection setup.

**NOTE:** The NAS messages transferred via SRB2 are also contained in RRC messages, which however do not include any RRC protocol control information.

Once security is activated, all RRC messages on SRB1 and SRB2, including those containing NAS or non-3GPP messages, are integrity protected and ciphered by PDCP. NAS independently applies integrity protection and ciphering to the NAS messages.

For a UE configured with DC, all RRC messages, regardless of the SRB used and both in downlink and uplink, are transferred via the MCG.

4.3 Services

4.3.1 Services provided to upper layers

The RRC protocol offers the following services to upper layers:

- Broadcast of common control information;
- Notification of UEs in RRC_IDLE, e.g. about a terminating call, for ETWS, for CMAS;
- Transfer of dedicated control information, i.e. information for one specific UE.
4.3.2 Services expected from lower layers

In brief, the following are the main services that RRC expects from lower layers:

- PDCP: integrity protection and ciphering;
- RLC: reliable and in-sequence transfer of information, without introducing duplicates and with support for segmentation and concatenation.

Further details about the services provided by Packet Data Convergence Protocol layer (e.g. integrity and ciphering) are provided in TS 36.323 [8]. The services provided by Radio Link Control layer (e.g. the RLC modes) are specified in TS 36.322 [7]. Further details about the services provided by Medium Access Control layer (e.g. the logical channels) are provided in TS 36.321 [6]. The services provided by physical layer (e.g. the transport channels) are specified in TS 36.302 [3].

4.4 Functions

The RRC protocol includes the following main functions:

- Broadcast of system information:
  - Including NAS common information;
  - Information applicable for UEs in RRC_IDLE, e.g. cell (re-)selection parameters, neighbouring cell information and information (also) applicable for UEs in RRC_CONNECTED, e.g. common channel configuration information.
  - Including ETWS notification, CMAS notification (not applicable for NB-IoT);
- RRC connection control:
  - Paging;
  - Establishment/ modification/ suspension / resumption / release of RRC connection, including e.g. assignment/ modification of UE identity (C-RNTI), establishment/ modification/ release of SRB1, SRB1bis and SRB2, access class barring;
  - Initial security activation, i.e. initial configuration of AS integrity protection (SRBs) and AS ciphering (SRBs, DRBs);
  - For RNs, configuration of AS integrity protection for DRBs;
  - RRC connection mobility including e.g. intra-frequency and inter-frequency handover, associated security handling, i.e. key/ algorithm change, specification of RRC context information transferred between network nodes;

NOTE 1: In NB-IoT, only key change (but no re-keying) at RRC Connection Resumption and RRC context information transfer are applicable.

- Establishment/ modification/ release of RBs carrying user data (DRBs);
- Radio configuration control including e.g. assignment/ modification of ARQ configuration, HARQ configuration, DRX configuration;
- For RNs, RN-specific radio configuration control for the radio interface between RN and E-UTRAN;
- In case of CA, cell management including e.g. change of PCell, addition/ modification/ release of SCell(s) and addition/modification/release of STAG(s);
- In case of DC, cell management including e.g. change of PSCell, addition/ modification/ release of SCG cell(s) and addition/modification/release of SCG TAG(s);
- QoS control including assignment/ modification of semi-persistent scheduling (SPS) configuration information for DL and UL, assignment/ modification of parameters for UL rate control in the UE, i.e. allocation of a priority and a prioritised bit rate (PBR) for each RB (not applicable for NB-IoT);
- Recovery from radio link failure;
- In case of LWA, RCLWI and LWIP, WLAN mobility set management including e.g. addition/ modification/ release of WLAN(s) from the WLAN mobility set;
- Inter-RAT mobility including e.g. security activation, transfer of RRC context information (not applicable for NB-IoT);
- Measurement configuration and reporting (not applicable for NB-IoT):
  - Establishment/ modification/ release of measurements (e.g. intra-frequency, inter-frequency and inter- RAT measurements);
  - Setup and release of measurement gaps;
  - Measurement reporting;
- Other functions including e.g. transfer of dedicated NAS information and non-3GPP dedicated information, transfer of UE radio access capability information, support for E-UTRAN sharing (multiple PLMN identities);
- Generic protocol error handling;
- Support of self-configuration and self-optimisation (not applicable for NB-IoT);
- Support of measurement logging and reporting for network performance optimisation [60] (not applicable for NB-IoT);

NOTE 2: Random access is specified entirely in the MAC including initial transmission power estimation.

4.5 Data available for transmission for NB-IoT

For the purpose of MAC Data Volume and Power Headroom reporting, the NB-IoT UE shall consider the following as data available for transmission in the RRC layer:
- For SDUs to be submitted to lower layers:
  - the SDU itself, if the SDU has not yet been processed by RRC, or
  - the PDU if the SDU has been processed by RRC; or
- The data available for transmission in upper layers not submitted to the RRC layer.

5 Procedures

5.1 General

5.1.1 Introduction

The procedural requirements are structured according to the main functional areas: system information (5.2), connection control (5.3), inter-RAT mobility (5.4) and measurements (5.5). In addition, sub-clause 5.6 covers other aspects e.g. NAS dedicated information transfer, UE capability transfer, sub-clause 5.7 specifies the generic error handling, sub-clause 5.8 covers MBMS (i.e. MBMS service reception via MRB), sub-clause 5.8a covers SC-PTM (i.e. MBMS service reception via SC-MRB), sub-clause 5.9 covers RN-specific procedures and sub-clause 5.10 covers sidelink.

For NB-IoT, only a subset of the above procedural requirements applies: system information (5.2), connection control (5.3), some part of other aspects (5.6), general error handling (5.7), and SC-PTM (5.8a). Subclauses inter-RAT mobility (5.4), measurements (5.5), MBMS (5.8), RN procedures (5.9) and Sidelink (5.10) are not applicable in NB-IoT.
5.1.2 General requirements

The UE shall:

1. process the received messages in order of reception by RRC, i.e. the processing of a message shall be completed before starting the processing of a subsequent message;

NOTE 1: E-UTRAN may initiate a subsequent procedure prior to receiving the UE's response of a previously initiated procedure.

1. within a sub-clause execute the steps according to the order specified in the procedural description;

1. consider the term 'radio bearer' (RB) to cover SRBs and DRBs but not MRBs or SC-MRBs unless explicitly stated otherwise;

1. set the $\text{rrc-TransactionIdentifier}$ in the response message, if included, to the same value as included in the message received from E-UTRAN that triggered the response message;

1. upon receiving a choice value set to $\text{setup}$:
   
   2. apply the corresponding received configuration and start using the associated resources, unless explicitly specified otherwise;

1. upon receiving a choice value set to $\text{release}$:
   
   2. clear the corresponding configuration and stop using the associated resources;

NOTE 1a: Following receipt of choice value set to release, the UE considers the field as if it was never configured.

1. upon handover to E-UTRA; or

1. upon receiving an $\text{RRCConnectionReconfiguration}$ message including the $\text{fullConfig}$:
   
   2. apply the Conditions in the ASN.1 for inclusion of the fields for the DRB/PDCP/RLC setup during the reconfiguration of the DRBs included in the $\text{drb-ToAddModList}$;

NOTE 2: At each point in time, the UE keeps a single value for each field except for during handover when the UE temporarily stores the previous configuration so it can revert back upon handover failure. In other words: when the UE reconfigures a field, the existing value is released except for during handover.

NOTE 3: Although not explicitly stated, the UE initially considers all functionality to be deactivated/ released until it is explicitly stated that the functionality is setup/ activated. Correspondingly, the UE initially considers lists to be empty e.g. the list of radio bearers, the list of measurements.

1. upon receiving an extension field comprising the entries in addition to the ones carried by the original field (regardless of whether E-UTRAN may signal more entries in total); apply the following generic behaviour if explicitly stated to be applicable:
   
   2. create a combined list by concatenating the additional entries included in the extension field to the original field while maintaining the order among both the original and the additional entries;

   2. for the combined list, created according to the previous, apply the same behaviour as defined for the original field;

NOTE 4: A field comprising a list of entries normally includes 'list' in the field name. The typical way to extend (the size of) such a list is to introduce a field comprising the additional entries, which should include 'listExt' in the name of the field/ IE. E.g. $\text{field1List-RAT}, \text{field1ListExt-RAT}$.  

5.2 System information

5.2.1 Introduction

5.2.1.1 General

System information is divided into the MasterInformationBlock (MIB) and a number of SystemInformationBlocks (SIBs). The MIB includes a limited number of most essential and most frequently transmitted parameters that are needed to acquire other information from the cell, and is transmitted on BCH. SIBs other than SystemInformationBlockType1 are carried in SystemInformation (SI) messages and mapping of SIBs to SI messages is flexibly configurable by schedulingInfoList included in SystemInformationBlockType1, with restrictions that: each SIB is contained only in a single SI message, and at most once in that message; only SIBs having the same scheduling requirement (periodicity) can be mapped to the same SI message; SystemInformationBlockType2 is always mapped to the SI message that corresponds to the first entry in the list of SI messages in schedulingInfoList. There may be multiple SI messages transmitted with the same periodicity. SystemInformationBlockType1 and all SI messages are transmitted on DL-SCH.

The Bandwidth reduced Low Complexity (BL) UEs and UEs in Coverage Enhancement (CE) apply Bandwidth Reduced (BR) version of the SIB or SI messages. A UE considers itself in enhanced coverage as specified in TS 36.304 [4]. In this and subsequent clauses, anything applicable for a particular SIB or SI message equally applies to the corresponding BR version unless explicitly stated otherwise.

For NB-IoT, a reduced set of system information block with similar functionality but different content is defined; the UE applies the NB-IoT (NB) version of the MIB and the SIBs. These are denoted MasterInformationBlock-NB and SystemInformationBlockTypeX-NB in this specification. All other system information blocks (without NB suffix) are not applicable to NB-IoT; this is not further stated in the corresponding text.

NOTE 1: The physical layer imposes a limit to the maximum size a SIB can take. When DCI format 1C is used the maximum allowed by the physical layer is 1736 bits (217 bytes) while for format 1A the limit is 2216 bits (277 bytes), see TS 36.212 [22] and TS 36.213 [23]. For BL UEs and UEs in CE, the maximum SIB and SI message size is 936 bits, see TS 36.213 [23]. For NB-IoT, the maximum SIB and SI message size is 680 bits, see TS 36.213 [23].

In addition to broadcasting, E-UTRAN may provide SystemInformationBlockType1 and/or SystemInformationBlockType2, including the same parameter values, via dedicated signalling i.e., within an RRCConnectionReconfiguration message.

The UE applies the system information acquisition and change monitoring procedures for the PCell, except when being a BL UE or a UE in CE or a NB-IoT UE in RRC_CONNECTED mode while T311 is not running. For an SCell, E-UTRAN provides, via dedicated signalling, all system information relevant for operation in RRC_CONNECTED when adding the SCell. However, a UE that is configured with DC shall acquire the Master Information Block of the PSCell but use it only to determine the SFN timing of the SCG, which may be different from the MCG. Upon change of the relevant system information of a configured SCell, E-UTRAN releases and subsequently adds the concerned SCell, which may be done with a single RRCConnectionReconfiguration message. If the UE is receiving or interested to receive an MBMS service in a cell, the UE shall apply the system information acquisition and change monitoring procedure to acquire parameters relevant for MBMS operation and apply the parameters acquired from system information only for MBMS operation for this cell.

NOTE 2: E-UTRAN may configure via dedicated signalling different parameter values than the ones broadcast in the concerned SCell.

In MBMS-dedicated cell, non-MBSFN subframes are used for providing MasterInformationBlock-MBMS (MIB-MBMS) and SystemInformationBlockType1-MBMS. SIBs other than SystemInformationBlockType1-MBMS are carried in SystemInformation-MBMS message which is also provided on non-MBSFN subframes.

An RN configured with an RN subframe configuration does not need to apply the system information acquisition and change monitoring procedures. Upon change of any system information relevant to an RN, E-UTRAN provides the system information blocks containing the relevant system information to an RN configured with an RN subframe configuration via dedicated signalling using the RNReconfiguration message. For RNs configured with an RN subframe configuration, the system information contained in this dedicated signalling replaces any corresponding stored system information and takes precedence over any corresponding system information acquired through the system information acquisition procedure. The dedicated system information remains valid until overridden.
NOTE 3: E-UTRAN may configure an RN, via dedicated signalling, with different parameter values than the ones broadcast in the concerned cell.

5.2.1.2 Scheduling

The MIB uses a fixed schedule with a periodicity of 40 ms and repetitions made within 40 ms. The first transmission of the MIB is scheduled in subframe #0 of radio frames for which the SFN mod 4 = 0, and repetitions are scheduled in subframe #0 of all other radio frames. For TDD/FDD system with a bandwidth larger than 1.4 MHz that supports BL UEs or UEs in CE, MIB transmission may additionally be repeated in subframe#0 of the same radio frame, and in subframe#9 of the previous radio frame for FDD and subframe #5 of the same radio frame for TDD.

NOTE: The UE may assume the scheduling of MIB repetitions does not change.

The MIB-MBMS uses a fixed schedule with a periodicity of 160 ms and repetitions made within 160 ms. The first transmission of the MIB-MBMS is scheduled in subframe #0 of radio frames for which the SFN mod 16 = 0, and repetitions are scheduled in subframe #0 of all other radio frames for which the SFN mod 4 = 0.

The SystemInformationBlockType1 uses a fixed schedule with a periodicity of 80 ms and repetitions made within 80 ms. The first transmission of SystemInformationBlockType1 is scheduled in subframe #5 of radio frames for which the SFN mod 8 = 0, and repetitions are scheduled in subframe #5 of all other radio frames for which SFN mod 2 = 0.

For BL UEs or UEs in CE, MIB is applied which may be provided with additional repetitions, while for SIB1 and further SI messages, separate messages are used which are scheduled independently and with content that may differ. The separate instance of SIB1 is named as SystemInformationBlockType1-BR. The SystemInformationBlockType1-BR uses a schedule with a periodicity of 80ms. TBS for SystemInformationBlockType1-BR and the repetitions made within 80ms are indicated via schedulingInfoSIB1-BR in MIB.

The SystemInformationBlockType1-MBMS uses fixed schedule with a periodicity of 160 ms. The first transmission of SystemInformationBlockType1-MBMS is scheduled in subframe #0 of radio frames for which the SFN mod 16 = 0, and repetitions are scheduled in subframe #0 of all other radio frames for which SFN mod 8 = 0. Additionally, the SystemInformationBlockType1-MBMS and other system informations blocks may be scheduled in additional non-MBSFN subframes indicated in MasterInformationBlock-MBMS.

The SI messages are transmitted within periodically occurring time domain windows (referred to as SI-windows) using dynamic scheduling. Each SI message is associated with a SI-window and the SI-windows of different SI messages do not overlap. That is, within one SI-window only the corresponding SI is transmitted. The length of the SI-window is common for all SI messages, and is configurable. Within the SI-window, the corresponding SI message can be transmitted a number of times in any subframe other than MBSFN subframes, uplink subframes in TDD, and subframe #5 of radio frames for which SFN mod 2 = 0. The UE acquires the detailed time-domain scheduling (and other information, e.g. frequency-domain scheduling, used transport format) from decoding SI-RNTI on PDCCH (see TS 36.321 [6]). For a BL UE or a UE in CE, the detailed time/frequency domain scheduling information for the SI messages is provided in SystemInformationBlockType1-BR.

For UEs other than BL UE or UEs in CE SI-RNTI is used to address SystemInformationBlockType1 as well as all SI messages. On MBMS-dedicated cell and on FeMBMS/Unicast-mixed cell, SI-RNTI1 with value in accordance with TS 36.321 [6] is used to address all SI messages whereas SI-RNTI with value in accordance with TS 36.321 [6] is used to address SystemInformationBlockType1-MBMS.

SystemInformationBlockType1 configures the SI-window length and the transmission periodicity for the SI messages.

5.2.1.2a Scheduling for NB-IoT

The MasterInformationBlock-NB (MIB-NB) uses a fixed schedule with a periodicity of 640 ms and repetitions made within 640 ms. The first transmission of the MIB-NB is scheduled in subframe #0 of radio frames for which the SFN mod 64 = 0 and repetitions are scheduled in subframe #0 of all other radio frames. The transmissions are arranged in 8 independently decodable blocks of 80 ms duration.

The SystemInformationBlockType1-NB (SIB1-NB) uses a fixed schedule with a periodicity of 2560 ms. SIB1-NB transmission occurs in subframe #4 of every other frame in 16 continuous frames. The starting frame for the first transmission of the SIB1-NB is derived from the cell PCID and the number of repetitions within the 2560 ms period and repetitions are made, equally spaced, within the 2560 ms period (see TS 36.213 [23]). TBS for SystemInformationBlockType1-NB and the repetitions made within the 2560 ms are indicated by schedulingInfoSIB1 field in the MIB-NB.
The SI messages are transmitted within periodically occurring time domain windows (referred to as SI-windows) using scheduling information provided in SystemInformationBlockType1-NB. Each SI message is associated with a SI-window and the SI-windows of different SI messages do not overlap. That is, within one SI-window only the corresponding SI is transmitted. The length of the SI-window is common for all SI messages, and is configurable.

Within the SI-window, the corresponding SI message can be transmitted a number of times over 2 or 8 consecutive NB-IoT downlink subframes depending on TBS. The UE acquires the detailed time/frequency domain scheduling information and other information, e.g. used transport format for the SI messages from schedulingInfoList field in SystemInformationBlockType1-NB. The UE is not required to accumulate several SI messages in parallel but may need to accumulate a SI message across multiple SI windows, depending on coverage condition.

SystemInformationBlockType1-NB configures the SI-window length and the transmission periodicity for all SI messages.

5.2.1.3 System information validity and notification of changes

Change of system information (other than for ETWS, CMAS and EAB parameters and other than for AB parameters for NB-IoT) only occurs at specific radio frames, i.e. the concept of a modification period is used. System information may be transmitted a number of times with the same content within a modification period, as defined by its scheduling. The modification period boundaries are defined by SFN values for which SFN mod m = 0, where m is the number of radio frames comprising the modification period. The modification period is configured by system information. If H-SFN is provided in SystemInformationBlockType1-BR, modification period boundaries for BL UEs and UEs in CE are defined by SFN values for which (H-SFN mod 1024 + SFN) mod m = 0. For NB-IoT, H-SFN is always provided and the modification period boundaries are defined by SFN values for which (H-SFN mod 1024 + SFN) mod m = 0.

To enable system information update notification for RRC_IDLE UEs configured to use a DRX cycle longer than the modification period, an eDRX acquisition period is defined. The boundaries of the eDRX acquisition period are determined by H-SFN values for which H-SFN mod 256 = 0. For NB-IoT, the boundaries of the eDRX acquisition period are determined by H-SFN values for which H-SFN mod 1024 = 0.

When the network changes (some of the) system information, it first notifies the UEs about this change, i.e. this may be done throughout a modification period. In the next modification period, the network transmits the updated system information. These general principles are illustrated in figure 5.2.1.3-1, in which different colours indicate different system information. Upon receiving a change notification, the UE not configured to use a DRX cycle that is longer than the modification period acquires the new system information immediately from the start of the next modification period. Upon receiving a change notification applicable to eDRX, a UE in RRC_IDLE configured to use a DRX cycle that is longer than the modification period acquires the updated system information immediately from the start of the next eDRX acquisition period. The UE applies the previously acquired system information until the UE acquires the new system information. The possible boundaries of modification for SystemInformationBlockType1-BR are defined by SFN values for which SFN mod 512 = 0 except for notification of ETWS/CMAS for which the eNB may change SystemInformationBlockType1-BR content at any time. For NB-IoT, the possible boundaries of modification for SystemInformationBlockType1-NB are defined by SFN values for which (H-SFN mod 1024 + SFN) mod 4096 = 0.

![Figure 5.2.1.3-1: Change of system Information](image_url)

The Paging message is used to inform UEs in RRC_IDLE and UEs in RRC_CONNECTED about a system information change. If the UE is in RRC_CONNECTED or is not configured to use a DRX cycle longer than the modification period in RRC_IDLE, and receives a Paging message including the systemInfoModification, it knows that the system information will change at the next modification period boundary. A UE in RRC_IDLE that is configured to use a DRX cycle longer than the modification period, and receives in an eDRX acquisition period at least one Paging message including the systemInfoModification-eDRX, shall acquire the updated system information at the next eDRX acquisition period boundary. Although the UE may be informed about changes in system information, no further details are
provided e.g. regarding which system information will change, except if systemInfoValueTagSI is received by BL UEs or UEs in CE.

In RRC_CONNECTED, BL UEs or UEs in CE or NB-IoT UEs are not required to acquire system information except when T311 is running or upon handover where the UE is only required to acquire the MasterInformationBlock in the target PCell. In RRC_IDLE, E-UTRAN may notify BL UEs or UEs in CE or NB-IoT UEs about SI update, and except for NB-IoT, ETWS and CMAS notification and EAB modification, using Direct Indication information, as specified in 6.6 (or 6.7.5 in NB-IoT) and TS 36.212 [22].

NOTE: Upon system information change essential for BL UEs, UEs in CE, or NB-IoT UEs in RRC_CONNECTED, E-UTRAN may initiate connection release.

SystemInformationBlockType1 (or MasterInformationBlock-NB in NB-IoT) includes a value tag systemInfoValueTag, that indicates if a change has occurred in the SI messages. UEs may use systemInfoValueTag, e.g. upon return from out of coverage, to verify if the previously stored SI messages are still valid. Additionally, for other than BL UEs or UEs in CE or NB-IoT UEs, the UE considers stored system information to be invalid after 3 hours from the moment it was successfully confirmed as valid, unless specified otherwise. BL UE or UE in CE considers stored system information to be invalid after 24 hours from the moment it was successfully confirmed as valid, unless the UE is configured by parameter si-ValidityTime to consider stored system information to be invalid 3 hours after validity confirmation. NB-IoT UE considers stored system information to be invalid after 24 hours from the moment it was successfully confirmed as valid. If a BL UE, UE in CE or NB-IoT UE in RRC_CONNECTED state considers the stored system information invalid, the UE shall continue using the stored system information while in RRC_CONNECTED state in the serving cell.

For BL UEs or UEs in CE or NB-IoT UEs, the change of specific SI message can additionally be indicated by a SI message specific value tag systemInfoValueTagSI. If systemInfoValueTag included in the SystemInformationBlockType1-BR (or MasterInformationBlock-NB in NB-IoT) is different from the one of the stored system information and if systemInfoValueTagSI is included in the SystemInformationBlockType1-BR (or SystemInformationBlockType1-NB in NB-IoT) for a specific SI message and is different from the stored one, the UE shall consider this specific SI message to be invalid. If only systemInfoValueTag is included and is different from the stored one, the BL UE or UE in CE should consider any stored system information except SystemInformationBlockType10, SystemInformationBlockType11, SystemInformationBlockType12 and SystemInformationBlockType14 to be invalid; the NB-IoT UE should consider any stored system information except SystemInformationBlockType14-NB to be invalid.

On MBMS-dedicated cell and on FeMBMS/Unicast-mixed cell, the change of system information and ETWS/CMAS notification is indicated by using Direct Indication FeMBMS defined in 6.6a. The modification periodicity follows MCCH modification periodicity as defined in 5.8.1.3.

E-UTRAN may not update systemInfoValueTag upon change of some system information e.g. ETWS information, CMAS information, regularly changing parameters like time information (SystemInformationBlockType8, SystemInformationBlockType16, hyperSFN-MSB in SystemInformationBlockType1-NB), EAB and AB parameters. Similarly, E-UTRAN may not include the systemInfoModification within the Paging message upon change of some system information.

The UE that is not configured to use a DRX cycle longer than the modification period verifies that stored system information remains valid by either checking systemInfoValueTag in SystemInformationBlockType1 (or MasterInformationBlock-NB in NB-IoT) after the modification period boundary, or attempting to find the systemInfoModification indication at least modificationPeriodCoeff times during the modification period in case no paging is received, in every modification period. If no paging message is received by the UE during a modification period, the UE may assume that no change of system information will occur at the next modification period boundary. If UE in RRC_CONNECTED, during a modification period, receives one paging message, it may deduce from the presence/absence of systemInfoModification whether a change of system information other than ETWS information, CMAS information and EAB parameters will occur in the next modification period or not.

When the RRC_IDLE UE is configured with a DRX cycle that is longer than the modification period, and at least one modification period boundary has passed since the UE last verified validity of stored system information, the UE verifies that stored system information remains valid by checking the systemInfoValueTag before establishing or resuming an RRC connection.

ETWS and/or CMAS capable UEs in RRC_CONNECTED shall attempt to read paging at least once every defaultPagingCycle to check whether ETWS and/or CMAS notification is present or not.
5.2.1.4 Indication of ETWS notification

ETWS primary notification and/or ETWS secondary notification can occur at any point in time. The Paging message is used to inform ETWS capable UEs in RRC_IDLE and UEs in RRC_CONNECTED about presence of an ETWS primary notification and/or ETWS secondary notification. If the UE receives a Paging message including the etws-Indication, it shall start receiving the ETWS primary notification and/or ETWS secondary notification according to schedulingInfoList contained in SystemInformationBlockType1. If the UE receives Paging message including the etws-Indication while it is acquiring ETWS notification(s), the UE shall continue acquiring ETWS notification(s) based on the previously acquired schedulingInfoList until it re-acquires schedulingInfoList in SystemInformationBlockType1.

NOTE: The UE is not required to periodically check schedulingInfoList contained in SystemInformationBlockType1, but Paging message including the etws-Indication triggers the UE to re-acquire schedulingInfoList contained in SystemInformationBlockType1 for scheduling changes for SystemInformationBlockType10 and SystemInformationBlockType11. The UE may or may not receive a Paging message including the etws-Indication and/or systemInfoModification when ETWS is no longer scheduled.

ETWS primary notification is contained in SystemInformationBlockType10 and ETWS secondary notification is contained in SystemInformationBlockType11. Segmentation can be applied for the delivery of a secondary notification. The segmentation is fixed for transmission of a given secondary notification within a cell (i.e. the same segment size for a given segment with the same messageIdentifier, serialNumber and warningMessageSegmentNumber). An ETWS secondary notification corresponds to a single CB data IE as defined according to TS 23.041 [37].

5.2.1.5 Indication of CMAS notification

CMAS notification can occur at any point in time. The Paging message is used to inform CMAS capable UEs in RRC_IDLE and UEs in RRC_CONNECTED about presence of one or more CMAS notifications. If the UE receives a Paging message including the cmas-Indication, it shall start receiving the CMAS notifications according to schedulingInfoList contained in SystemInformationBlockType1. If the UE receives Paging message including the cmas-Indication while it is acquiring CMAS notification(s), the UE shall continue acquiring CMAS notification(s) based on the previously acquired schedulingInfoList until it re-acquires schedulingInfoList in SystemInformationBlockType1.

NOTE: The UE is not required to periodically check schedulingInfoList contained in SystemInformationBlockType1, but Paging message including the cmas-Indication triggers the UE to re-acquire schedulingInfoList contained in SystemInformationBlockType1 for scheduling changes for SystemInformationBlockType12. The UE may or may not receive a Paging message including the cmas-Indication and/or systemInfoModification when SystemInformationBlockType12 is no longer scheduled.

CMAS notification is contained in SystemInformationBlockType12. Segmentation can be applied for the delivery of a CMAS notification. The segmentation is fixed for transmission of a given CMAS notification within a cell (i.e. the same segment size for a given segment with the same messageIdentifier, serialNumber and warningMessageSegmentNumber). E-UTRAN does not interleave transmissions of CMAS notifications, i.e. all segments of a given CMAS notification transmission are transmitted prior to those of another CMAS notification. A CMAS notification corresponds to a single CB data IE as defined according to TS 23.041 [37].

5.2.1.6 Notification of EAB parameters change

Change of EAB parameters can occur at any point in time. The EAB parameters are contained in SystemInformationBlockType14. The Paging message is used to inform EAB capable UEs in RRC_IDLE about a change of EAB parameters or that SystemInformationBlockType14 is no longer scheduled. If the UE receives a Paging message including the eab-ParamModification, it shall acquire SystemInformationBlockType14 according to schedulingInfoList contained in SystemInformationBlockType1. If the UE receives a Paging message including the eab-ParamModification while it is acquiring SystemInformationBlockType14, the UE shall continue acquiring SystemInformationBlockType14 based on the previously acquired schedulingInfoList until it re-acquires schedulingInfoList in SystemInformationBlockType1.

NOTE: The EAB capable UE is not expected to periodically check schedulingInfoList contained in SystemInformationBlockType1.
5.2.1.7 Access Barring parameters change in NB-IoT

Change of Access Barring (AB) parameters can occur at any point in time. The AB parameters are contained in SystemInformationBlockType14-NB. Update of the AB parameters does not impact the systemInfoValueTag in the MasterInformationBlock-NB or the systemInfoValueTagSI in SystemInformationBlockType1-NB.

A NB-IoT UE checks ab-Enabled indication in the MasterInformationBlock-NB to know whether access barring is enabled. If access barring is enabled the UE shall not initiate the RRC connection establishment / resume for all access causes except mobile terminating calls until the UE has a valid version of SystemInformationBlockType14-NB.

5.2.2 System information acquisition

5.2.2.1 General

The UE applies the system information acquisition procedure to acquire the AS- and NAS- system information that is broadcasted by the E-UTRAN. The procedure applies to UEs in RRC_IDLE and UEs in RRC_CONNECTED.

For BL UE, UE in CE and NB-IoT UE, specific conditions apply, as specified below.

5.2.2.2 Initiation

The UE shall apply the system information acquisition procedure upon selecting (e.g. upon power on) and upon re-selecting a cell, after handover completion, after entering E-UTRA from another RAT, upon return from out of coverage, upon receiving a notification that the system information has changed, upon receiving an indication about the presence of an ETWS notification, upon receiving an indication about the presence of a CMAS notification, upon receiving a notification that the EAB parameters have changed, upon receiving a request from CDMA2000 upper layers and upon exceeding the maximum validity duration. Unless explicitly stated otherwise in the procedural specification, the system information acquisition procedure overwrites any stored system information, i.e. delta configuration is not applicable for system information and the UE discontinues using a field if it is absent in system information unless explicitly specified otherwise.

In RRC_CONNECTED, BL UEs and UEs in CE are required to acquire system information when T311 is running or upon handover where the UE is only required to acquire the MasterInformationBlock in the target PCell.

NOTE: Upon handover, E-UTRAN provides system information required by the UE in RRC_CONNECTED except MIB with RRC signalling, i.e. systemInformationBlockType1Dedicated and mobilityControlInfo.

5.2.2.3 System information required by the UE

The UE shall:

1> ensure having a valid version, as defined below, of (at least) the following system information, also referred to as the ’required’ system information:

2> if in RRC_IDLE:

3> if the UE is a NB-IoT UE:
4> the MasterInformationBlock-NB and SystemInformationBlockType1-NB as well as SystemInformationBlockType2-NB through SystemInformationBlockType5-NB, SystemInformationBlockType22-NB;

3> else:

4> the MasterInformationBlock and SystemInformationBlockType1 (or SystemInformationBlockType1-BR depending on whether the UE is a BL UE or the UE in CE) as well as SystemInformationBlockType2 through SystemInformationBlockType8 (depending on support of the concerned RATs), SystemInformationBlockType17 (depending on support of RAN-assisted WLAN interworking);

2> if in RRC_CONNECTED; and

2> the UE is not a BL UE; and

2> the UE is not in CE; and

2> the UE is not a NB-IoT UE:

3> the MasterInformationBlock, SystemInformationBlockType1 and SystemInformationBlockType2 as well as SystemInformationBlockType8 (depending on support of CDMA2000), SystemInformationBlockType17 (depending on support of RAN-assisted WLAN interworking);

2> if in RRC_CONNECTED and T311 is running; and

2> the UE is a BL UE or the UE is in CE or the UE is a NB-IoT UE;

3> the MasterInformationBlock (or MasterInformationBlock-NB in NB-IoT), SystemInformationBlockType1-BR (or SystemInformationBlockType1-NB in NB-IoT) and SystemInformationBlockType2 (or SystemInformationBlockType2-NB in NB-IoT), and for NB-IoT SystemInformationBlockType22-NB;

1> delete any stored system information after 3 hours or 24 hours from the moment it was confirmed to be valid as defined in 5.2.1.3, unless specified otherwise;

1> consider any stored system information except SystemInformationBlockType10, SystemInformationBlockType11, SystemInformationBlockType12 and SystemInformationBlockType14 (systemInformationBlockType14-NB in NB-IoT) to be invalid if systemInfoValueTag included in the SystemInformationBlockType1 (MasterInformationBlock-NB in NB-IoT) is different from the one of the stored system information and in case of NB-IoT UEs, BL UEs and UEs in CE, systemInfoValueTagSI is not broadcasted. Otherwise consider system information validity as defined in 5.2.1.3;

5.2.2.4 System information acquisition by the UE

The UE shall:

1> apply the specified BCCH configuration defined in 9.1.1.1 or BR-BCCH configuration defined in 9.1.1.8;

1> if the procedure is triggered by a system information change notification:

2> if the UE uses an idle DRX cycle longer than the modification period:

3> start acquiring the required system information, as defined in 5.2.2.3, from the next eDRX acquisition period boundary;

2> else

3> start acquiring the required system information, as defined in 5.2.2.3, from the beginning of the modification period following the one in which the change notification was received;

NOTE 1: The UE continues using the previously received system information until the new system information has been acquired.

1> if the UE is in RRC_IDLE and enters a cell for which the UE does not have stored a valid version of the system information required in RRC_IDLE, as defined in 5.2.2.3:
2> acquire, using the system information acquisition procedure as defined in 5.2.3, the system information required in RRC_IDLE, as defined in 5.2.2.3;

1> following successful handover completion to a PCell for which the UE does not have stored a valid version of the system information required in RRC_CONNECTED, as defined in 5.2.2.3:

2> acquire, using the system information acquisition procedure as defined in 5.2.3, the system information required in RRC_CONNECTED, as defined in 5.2.2.3;

2> upon acquiring the concerned system information:

3> discard the corresponding radio resource configuration information included in the radioResourceConfigCommon previously received in a dedicated message, if any;

1> following a request from CDMA2000 upper layers:

2> acquire SystemInformationBlockType8, as defined in 5.2.3;

1> neither initiate the RRC connection establishment/resume procedure nor initiate transmission of the RRCConnectionReestablishmentRequest message until the UE has a valid version of the MasterInformationBlock (MasterInformationBlock-NB in NB-IoT) and SystemInformationBlockType1 (SystemInformationBlockType1-NB in NB-IoT) messages as well as SystemInformationBlockType2 (SystemInformationBlockType2-NB in NB-IoT), and for NB-IoT, SystemInformationBlockType22-NB;

1> not initiate the RRC connection establishment/resume procedure subject to EAB until the UE has a valid version of SystemInformationBlockType14, if broadcast;

1> if the UE is ETWS capable:

2> upon entering a cell during RRC_IDLE, following successful handover or upon connection re-establishment:

3> discard any previously buffered warningMessageSegment;

3> clear, if any, the current values of messageIdentifier and serialNumber for SystemInformationBlockType11;

2> when the UE acquires SystemInformationBlockType1 following ETWS indication, upon entering a cell during RRC_IDLE, following successful handover or upon connection re-establishment:

3> if schedulingInfoList indicates that SystemInformationBlockType10 is present:

4> if the UE is in CE:

5> start acquiring SystemInformationBlockType10;

4> else

5> start acquiring SystemInformationBlockType10 immediately;

3> if schedulingInfoList indicates that SystemInformationBlockType11 is present:

4> start acquiring SystemInformationBlockType11 immediately;

NOTE 2: UEs shall start acquiring SystemInformationBlockType10 and SystemInformationBlockType11 as described above even when systemInfoValueTag in SystemInformationBlockType1 has not changed.

1> if the UE is CMAS capable:

2> upon entering a cell during RRC_IDLE, following successful handover or upon connection re-establishment:

3> discard any previously buffered warningMessageSegment;

3> clear, if any, stored values of messageIdentifier and serialNumber for SystemInformationBlockType12 associated with the discarded warningMessageSegment;

2> when the UE acquires SystemInformationBlockType1 following CMAS indication, upon entering a cell during RRC_IDLE, following successful handover and upon connection re-establishment:
3> if $\text{schedulingInfoList}$ indicates that $\text{SystemInformationBlockType12}$ is present:

4> acquire $\text{SystemInformationBlockType12}$;

NOTE 3: UEs shall start acquiring $\text{SystemInformationBlockType12}$ as described above even when $\text{systemInfoValueTag}$ in $\text{SystemInformationBlockType1}$ has not changed.

1> if the UE is interested to receive MBMS services:

2> if the UE is capable of MBMS reception as specified in 5.8:

3> if $\text{schedulingInfoList}$ indicates that $\text{SystemInformationBlockType13}$ is present and the UE does not have stored a valid version of this system information block:

4> acquire $\text{SystemInformationBlockType13}$;

3> else if $\text{SystemInformationBlockType13}$ is present in $\text{SystemInformationBlockType1-MBMS}$ and the UE does not have stored a valid version of this system information block:

4> acquire $\text{SystemInformationBlockType13}$ from $\text{SystemInformationBlockType1-MBMS}$;

2> if the UE is capable of SC-PTM reception as specified in 5.8a:

3> if $\text{schedulingInfoList}$ indicates that $\text{SystemInformationBlockType20}$ ($\text{SystemInformationBlockType20-NB}$ in NB-IoT) is present and the UE does not have stored a valid version of this system information block:

4> acquire $\text{SystemInformationBlockType20}$ ($\text{SystemInformationBlockType20-NB}$ in NB-IoT);

2> if the UE is capable of MBMS Service Continuity:

3> if $\text{schedulingInfoList}$ indicates that $\text{SystemInformationBlockType15}$ ($\text{SystemInformationBlockType15-NB}$ in NB-IoT) is present and the UE does not have stored a valid version of this system information block:

4> acquire $\text{SystemInformationBlockType15}$ ($\text{SystemInformationBlockType15-NB}$ in NB-IoT);

1> if the UE is EAB capable:

2> when the UE does not have stored a valid version of $\text{SystemInformationBlockType14}$ upon entering RRC_IDLE, or when the UE acquires $\text{SystemInformationBlockType1}$ following EAB parameters change notification, or upon entering a cell during RRC_IDLE, or before establishing an RRC connection if using eDRX with DRX cycle longer than the modification period:

3> if $\text{schedulingInfoList}$ indicates that $\text{SystemInformationBlockType14}$ is present:

4> start acquiring $\text{SystemInformationBlockType14}$ immediately;

3> else:

4> discard $\text{SystemInformationBlockType14}$, if previously received;

NOTE 4: EAB capable UEs start acquiring $\text{SystemInformationBlockType14}$ as described above even when $\text{systemInfoValueTag}$ in $\text{SystemInformationBlockType1}$ has not changed.

NOTE 5: EAB capable UEs maintain an up to date $\text{SystemInformationBlockType14}$ in RRC_IDLE.

1> if the UE is capable of sidelink communication and is configured by upper layers to receive or transmit sidelink communication:

2> if the cell used for sidelink communication meets the $S$-criteria as defined in TS 36.304 [4]; and

2> if $\text{schedulingInfoList}$ indicates that $\text{SystemInformationBlockType18}$ is present and the UE does not have stored a valid version of this system information block:

3> acquire $\text{SystemInformationBlockType18}$;

1> if the UE is capable of sidelink discovery and is configured by upper layers to receive or transmit sidelink discovery announcements on the primary frequency:
2> if schedulingInfoList of the serving cell/ PCell indicates that SystemInformationBlockType19 is present and the UE does not have stored a valid version of this system information block:

3> acquire SystemInformationBlockType19;

1> if the UE is capable of sidelink discovery and, for each of the one or more frequencies included in discInterFreqList, if included in SystemInformationBlockType19 and for which the UE is configured by upper layers to receive sidelink discovery announcements on:

2> if SystemInformationBlockType19 of the serving cell/ PCell does not provide the corresponding reception resources; and

2> if schedulingInfoList of the cell on the concerned frequency indicates that SystemInformationBlockType19 is present and the UE does not have stored a valid version of this system information block:

3> acquire SystemInformationBlockType19;

1> if the UE is capable of sidelink discovery and, for each of the one or more frequencies included in discInterFreqList, if included in SystemInformationBlockType19 and for which the UE is configured by upper layers to transmit sidelink discovery announcements on:

2> if SystemInformationBlockType19 of the serving cell/ PCell includes discTxResourcesInterFreq which is set to acquireSI-FromCarrier; and

2> if schedulingInfoList of the cell on the concerned frequency indicates that SystemInformationBlockType19 is present and the UE does not have stored a valid version of this system information block:

3> acquire SystemInformationBlockType19;

1> if the UE is a NB-IoT UE and if ab-Enabled included in MasterInformationBlock-NB is set to TRUE:

2> not initiate the RRC connection establishment/resume procedure for all access causes except mobile terminating calls until the UE has acquired the SystemInformationBlockType14-NB;

1> if the UE is capable of V2X sidelink communication and is configured by upper layers to receive or transmit V2X sidelink communication on a frequency:

2> if the concerned frequency is primary frequency; or if SystemInformationBlockType21 of the serving cell/ PCell does not provide transmission or reception resource pool for V2X sidelink communication for the concerned frequency; and

2> if the cell used for V2X sidelink communication meets the S-criteria as defined in TS 36.304 [4]; and

2> if schedulingInfoList on the concerned frequency indicates that SystemInformationBlockType21 is present and the UE does not have stored a valid version of this system information block:

3> acquire SystemInformationBlockType21;

The UE may apply the received SIBs immediately, i.e. the UE does not need to delay using a SIB until all SI messages have been received. The UE may delay applying the received SIBs until completing lower layer procedures associated with a received or a UE originated RRC message, e.g. an ongoing random access procedure.

NOTE 6: While attempting to acquire a particular SIB, if the UE detects from schedulingInfoList that it is no longer present, the UE should stop trying to acquire the particular SIB.

5.2.2.5 Essential system information missing

The UE shall:

1> if in RRC_IDLE or in RRC_CONNECTED while T311 is running:

2> if the UE is unable to acquire the MasterInformationBlock (MasterInformationBlock-NB in NB-IoT); or

2> if the UE is neither a BL UE nor in CE nor in NB-IoT and the UE is unable to acquire the SystemInformationBlockType1; or
2> if the BL UE or UE in CE is unable to acquire SystemInformationBlockType1-BR or SystemInformationBlockType1-BR is not scheduled; or
2> if the NB-IoT UE is unable to acquire the SystemInformationBlockType1-NB:
   3> consider the cell as barred in accordance with TS 36.304 [4]; and
   3> perform barring as if intraFreqReselection is set to allowed, and as if the csg-Indication is set to FALSE;
2> else if the UE is unable to acquire the SystemInformationBlockType2 (or SystemInformationBlockType2-NB in NB-IoT) and for NB-IoT, SystemInformationBlockType22-NB if scheduled:
   3> treat the cell as barred in accordance with TS 36.304 [4];

5.2.2.6 Actions upon reception of the MasterInformationBlock message

Upon receiving the MasterInformationBlock message the UE shall:
1> apply the radio resource configuration included in the phich-Config;
1> if the UE is in RRC_IDLE or if the UE is in RRC_CONNECTED while T311 is running:
   2> if the UE has no valid system information stored according to 5.2.2.3 for the concerned cell:
      3> apply the received value of dl-Bandwidth to the ul-Bandwidth until SystemInformationBlockType2 is received;
Upon receiving the MasterInformationBlock-NB message the UE shall:
1> apply the radio resource configuration included in accordance with the operationModeInfo.
No UE requirements related to the contents of MasterInformationBlock-MBMS apply other than those specified elsewhere e.g. within procedures using the concerned system information, and/ or within the corresponding field descriptions.

5.2.2.7 Actions upon reception of the SystemInformationBlockType1 message

Upon receiving the SystemInformationBlockType1 or SystemInformationBlockType1-BR either via broadcast or via dedicated signalling, the UE shall:
1> if the cellAccessRelatedInfoList contains an entry with the PLMN-Identity of the selected PLMN:
   2> in the remainder of the procedures use plmn-IdentityList, trackingAreaCode, and cellIdentity for the cell as received in the corresponding cellAccessRelatedInfoList containing the selected PLMN;
1> if in RRC_IDLE or in RRC_CONNECTED while T311 is running; and
1> if the UE is a category 0 UE according to TS 36.306 [5]; and
1> if category0Allowed is not included in SystemInformationBlockType1:
   2> consider the cell as barred in accordance with TS 36.304 [4];
1> if in RRC_CONNECTED while T311 is not running, and the UE supports multi-band cells as defined by bit 31 in featureGroupIndicators:
   2> disregard the freqBandIndicator and multiBandInfoList, if received, while in RRC_CONNECTED;
   2> forward the cellIdentity to upper layers;
   2> forward the trackingAreaCode to upper layers;
1> else:
   2> if the frequency band indicated in the freqBandIndicator is part of the frequency bands supported by the UE and it is not a downlink only band; or
2> if the UE supports multiBandInfoList, and if one or more of the frequency bands indicated in the multiBandInfoList are part of the frequency bands supported by the UE and they are not downlink only bands:

3> forward the cellIdentity to upper layers;
3> forward the trackingAreaCode to upper layers;
3> forward the ims-EmergencySupport to upper layers, if present;
3> forward the eCallOverIMS-Support to upper layers, if present;
3> if, for the frequency band selected by the UE (from freqBandIndicator or multiBandInfoList), the freqBandInfo or the multiBandInfoList-v10j0 is present and the UE capable of multiNS-Pmax supports at least one additionalSpectrumEmission in the NS-PmaxList within the freqBandInfo or multiBandInfoList-v10j0:

4> apply the first listed additionalSpectrumEmission which it supports among the values included in NS-PmaxList within freqBandInfo or multiBandInfoList-v10j0;

4> if the additionalPmax is present in the same entry of the selected additionalSpectrumEmission within NS-PmaxList:

5> apply the additionalPmax;

4> else:

5> apply the p-Max;

3> else:

4> apply the additionalSpectrumEmission in SystemInformationBlockType2 and the p-Max;

2> else:

3> consider the cell as barred in accordance with TS 36.304 [4]; and
3> perform barring as if intraFreqReselection is set to notAllowed, and as if the csg-Indication is set to FALSE;

Upon receiving the SystemInformationBlockType1-NB, the UE shall:

1> if the frequency band indicated in the freqBandIndicator is part of the frequency bands supported by the UE; or
1> if one or more of the frequency bands indicated in the multiBandInfoList are part of the frequency bands supported by the UE:

2> forward the cellIdentity to upper layers;
2> forward the trackingAreaCode to upper layers;
2> if attachWithoutPDN-Connectivity is received for the selected PLMN:

3> forward the attachWithoutPDN-Connectivity to upper layers;
2> else

3> indicate to upper layers that attachWithoutPDN-Connectivity is not present;

2> if, for the frequency band selected by the UE (from freqBandIndicator or multiBandInfoList), the freqBandInfo is present and the UE capable of multiNS-Pmax supports at least one additionalSpectrumEmission in the NS-PmaxList within the freqBandInfo:

3> apply the first listed additionalSpectrumEmission which it supports among the values included in NS-PmaxList within freqBandInfo;
if the additionalPmax is present in the same entry of the selected additionalSpectrumEmission within NS-PmaxList:
  apply the additionalPmax;
else:
  apply the p-Max;
if upper layers indicate that a (UE specific) paging cycle is configured:
  apply the shortest of the (UE specific) paging cycle and the defaultPagingCycle included in the radioResourceConfigCommon;
if the mbsfn-SubframeConfigList is included:
  consider that DL assignments may occur in the MBSFN subframes indicated in the mbsfn-SubframeConfigList under the conditions specified in [23, 7.1];
apply the specified PCCH configuration defined in 9.1.1.3;
not apply the timeAlignmentTimerCommon;
if in RRC_CONNECTED and UE is configured with RLF timers and constants values received within rlf-TimersAndConstants:
  not update its values of the timers and constants in ue-TimersAndConstants except for the value of timer T300;
if in RRC_CONNECTED while T311 is not running; and the UE supports multi-band cells as defined by bit 31 in featureGroupIndicators or multipleNS-Pmax:
  disregard the additionalSpectrumEmission and ul-CarrierFreq, if received, while in RRC_CONNECTED;
if attachWithoutPDN-Connectivity is received for the selected PLMN:
  forward attachWithoutPDN-Connectivity to upper layers;
else

No UE requirements related to the contents of SystemInformationBlockType1-MBMS apply other than those specified elsewhere e.g. within procedures using the concerned system information, and/or within the corresponding field descriptions.

5.2.2.8 Actions upon reception of SystemInformation messages

No UE requirements related to the contents of the SystemInformation messages apply other than those specified elsewhere e.g. within procedures using the concerned system information, and/or within the corresponding field descriptions.

5.2.2.9 Actions upon reception of SystemInformationBlockType2

Upon receiving SystemInformationBlockType2, the UE shall:
apply the configuration included in the radioResourceConfigCommon;
apply the shortest of the (UE specific) paging cycle and the defaultPagingCycle included in the radioResourceConfigCommon;
if the mbsfn-SubframeConfigList is included:
  consider that DL assignments may occur in the MBSFN subframes indicated in the mbsfn-SubframeConfigList under the conditions specified in [23, 7.1];
apply the specified PCCH configuration defined in 9.1.1.3;
not apply the timeAlignmentTimerCommon;
if in RRC_CONNECTED and UE is configured with RLF timers and constants values received within rlf-TimersAndConstants:
  not update its values of the timers and constants in ue-TimersAndConstants except for the value of timer T300;
if in RRC_CONNECTED while T311 is not running; and the UE supports multi-band cells as defined by bit 31 in featureGroupIndicators or multipleNS-Pmax:
  disregard the additionalSpectrumEmission and ul-CarrierFreq, if received, while in RRC_CONNECTED;
if attachWithoutPDN-Connectivity is received for the selected PLMN:
  forward attachWithoutPDN-Connectivity to upper layers;
else
indicate to upper layers that attachWithoutPDN-Connectivity is not present;
if cp-CIoT-EPS-Optimisation is received for the selected PLMN:
forward cp-CIoT-EPS-Optimisation to upper layers;
else
indicate to upper layers that cp-CIoT-EPS-Optimisation is not present;
if up-CIoT-EPS-Optimisation is received for the selected PLMN:
forward up-CIoT-EPS-Optimisation to upper layers;
else
indicate to upper layers that up-CIoT-EPS-Optimisation is not present;

Upon receiving SystemInformationBlockType2-NB, the UE shall:
apply the configuration included in the radioResourceConfigCommon;
apply the defaultPagingCycle included in the radioResourceConfigCommon;
if SystemInformationBlockType22-NB is scheduled:
read and act on information sent in SystemInformationBlockType22-NB;
apply the specified PCCH configuration defined in 9.1.1.3.
if in RRC_CONNECTED and UE is configured with RLF timers and constants values received within rlf-TimersAndConstants:
not update its values of the timers and constants in ue-TimersAndConstants except for the value of timer T300;

5.2.2.10 Actions upon reception of SystemInformationBlockType3
Upon receiving SystemInformationBlockType3, the UE shall:
if in RRC_IDLE, the redistributionServingInfo is included and the UE is redistribution capable:
perform E-UTRAN inter-frequency redistribution procedure as specified in TS 36.304 [4, 5.2.4.10];
if in RRC_IDLE, or in RRC_CONNECTED while T311 is running:
if, for the frequency band selected by the UE (from the procedure in Section 5.2.2.7) to represent the serving cell’s carrier frequency, the freqBandInfo or the multiBandInfoList-v10j0 is present in SystemInformationBlockType3 and the UE capable of multiNS-Pmax supports at least one additionalSpectrumEmission in the NS-PmaxList within the freqBandInfo or multiBandInfoList-v10j0:
apply the first listed additionalSpectrumEmission which it supports among the values included in NS-PmaxList within freqBandInfo or multiBandInfoList-v10j0;
if the additionalPmax is present in the same entry of the selected additionalSpectrumEmission within NS-PmaxList:
apply the additionalPmax;
else:
apply the p-Max;
else:
apply the p-Max;
Upon receiving `SystemInformationBlockType3-NB`, the UE shall:

1> if in RRC_IDLE, or in RRC_CONNECTED while T311 is running:

2> if, for the frequency band selected by the UE (from the procedure in subclause 5.2.2.7) to represent the serving cell’s carrier frequency, the `freqBandInfo` or the `multiBandInfoList` is present in `SystemInformationBlockType3-NB` and the UE capable of `multiNS-Pmax` supports at least one `additionalSpectrumEmission` in the `NS-PmaxList` within the `freqBandInfo` or the `multiBandInfoList`:

3> apply the first listed `additionalSpectrumEmission` which it supports among the values included in `NS-PmaxList` within `freqBandInfo` or `multiBandInfoList`;

3> if the `additionalPmax` is present in the same entry of the selected `additionalSpectrumEmission` within `NS-PmaxList`:

4> apply the `additionalPmax`;

3> else:

4> apply the `p-Max`;

2> else:

3> apply the `p-Max`;

5.2.2.11 Actions upon reception of `SystemInformationBlockType4`

No UE requirements related to the contents of this `SystemInformationBlock` (SystemInformationBlockType4 or SystemInformationBlockType4-NB) apply other than those specified elsewhere e.g. within procedures using the concerned system information, and/ or within the corresponding field descriptions.

5.2.2.12 Actions upon reception of `SystemInformationBlockType5`

Upon receiving `SystemInformationBlockType5`, the UE shall:

1> if in RRC_IDLE, the `redistributionInterFreqInfo` is included and the UE is redistribution capable:

2> perform E-UTRAN inter-frequency redistribution procedure as specified in TS 36.304 [4, 5.2.4.10];

1> if in RRC_IDLE, or in RRC_CONNECTED while T311 is running:

2> if the frequency band selected by the UE to represent a non-serving E-UTRA carrier frequency is not a downlink only band:

3> if, for the selected frequency band, the `freqBandInfo` or the `multiBandInfoList-v10j0` is present and the UE capable of `multiNS-Pmax` supports at least one `additionalSpectrumEmission` in the `NS-PmaxList` within `freqBandInfo` or `multiBandInfoList-v10j0`:

4> apply the first listed `additionalSpectrumEmission` which it supports among the values included in `NS-PmaxList` within `freqBandInfo` or `multiBandInfoList-v10j0`;

4> if the `additionalPmax` is present in the same entry of the selected `additionalSpectrumEmission` within `NS-PmaxList`:

5> apply the `additionalPmax`;

4> else:

5> apply the `p-Max`;

3> else:

4> apply the `p-Max`;

Upon receiving `SystemInformationBlockType5-NB`, the UE shall:
1> if in RRC_IDLE, or in RRC_CONNECTED while T311 is running:
   2> if, for the frequency band selected by the UE (from multiBandInfoList) to represent a non-serving NB-IoT carrier frequency, the freqBandInfo is present and the UE capable of multiNS-Pmax supports at least one additionalSpectrumEmission in the NS-PmaxList within the freqBandInfo:
      3> apply the first listed additionalSpectrumEmission which it supports among the values included in NS-PmaxList within freqBandInfo;
      3> if the additionalPmax is present in the same entry of the selected additionalSpectrumEmission within NS-PmaxList:
         4> apply the additionalPmax;
      3> else:
         4> apply the p-Max;
   2> else:
      3> apply the p-Max;

5.2.2.13 Actions upon reception of SystemInformationBlockType6

No UE requirements related to the contents of this SystemInformationBlock apply other than those specified elsewhere e.g. within procedures using the concerned system information, and/or within the corresponding field descriptions.

5.2.2.14 Actions upon reception of SystemInformationBlockType7

No UE requirements related to the contents of this SystemInformationBlock apply other than those specified elsewhere e.g. within procedures using the concerned system information, and/or within the corresponding field descriptions.

5.2.2.15 Actions upon reception of SystemInformationBlockType8

Upon receiving SystemInformationBlockType8, the UE shall:

1> if sib8-PerPLMN-List is included and the UE is capable of network sharing for CDMA2000:
   2> apply the CDMA2000 parameters below corresponding to the RPLMN;
1> if the systemTimeInfo is included:
   2> forward the systemTimeInfo to CDMA2000 upper layers;
1> if the UE is in RRC_IDLE and if searchWindowSize is included:
   2> forward the searchWindowSize to CDMA2000 upper layers;
1> if parametersHRPD is included:
   2> forward the preRegistrationInfoHRPD to CDMA2000 upper layers only if the UE has not received the preRegistrationInfoHRPD within an RRCConnectionReconfiguration message after entering this cell;
   2> if the cellReselectionParametersHRPD is included:
      3> forward the neighCellList to the CDMA2000 upper layers;
1> if the parameters1XRTT is included:
   2> if the csfb-RegistrationParam1XRTT is included:
      3> forward the csfb-RegistrationParam1XRTT to the CDMA2000 upper layers which will use this information to determine if a CS registration/re-registration towards CDMA2000 1xRTT in the EUTRA cell is required;
   2> else:
3GPP TS 36.331 version 14.4.0 Release 14

5.2.2.16 Actions upon reception of SystemInformationBlockType9

Upon receiving SystemInformationBlockType9, the UE shall:

1> if hnb-Name is included, forward the hnb-Name to upper layers;

5.2.2.17 Actions upon reception of SystemInformationBlockType10

Upon receiving SystemInformationBlockType10, the UE shall:

1> forward the received warningType, messageIdentifier and serialNumber to upper layers;

5.2.2.18 Actions upon reception of SystemInformationBlockType11

Upon receiving SystemInformationBlockType11, the UE shall:

1> if there is no current value for messageIdentifier and serialNumber for SystemInformationBlockType11; or

1> if either the received value of messageIdentifier or of serialNumber or of both are different from the current values of messageIdentifier and serialNumber for SystemInformationBlockType11:

2> use the received values of messageIdentifier and serialNumber for SystemInformationBlockType11 as the current values of messageIdentifier and serialNumber for SystemInformationBlockType11;

2> discard any previously buffered warningMessageSegment;

2> if all segments of a warning message have been received:

3> assemble the warning message from the received warningMessageSegment;

3> forward the received warning message, messageIdentifier, serialNumber and dataCodingScheme to upper layers;

3> stop reception of SystemInformationBlockType11;

3> discard the current values of messageIdentifier and serialNumber for SystemInformationBlockType11;

3> indicate to CDMA2000 upper layers that CSFB Registration to CDMA2000 1xRTT is not allowed;

2> if the longCodeState1XRTT is included:

3> forward the longCodeState1XRTT to CDMA2000 upper layers;

2> if the cellReselectionParameters1XRTT is included:

3> forward the neighCellList to the CDMA2000 upper layers;

2> if the csfb-SupportForDualRxUEs is included:

3> forward csfb-SupportForDualRxUEs to the CDMA2000 upper layers;

2> else:

3> forward csfb-SupportForDualRxUEs, with its value set to FALSE, to the CDMA2000 upper layers;

2> if ac-BarringConfig1XRTT is included:

3> forward ac-BarringConfig1XRTT to the CDMA2000 upper layers;

2> if the csfb-DualRxTxSupport is included:

3> forward csfb-DualRxTxSupport to the CDMA2000 upper layers;

2> else:

3> forward csfb-DualRxTxSupport, with its value set to FALSE, to the CDMA2000 upper layers;
else:
    store the received warningMessageSegment;
    continue reception of SystemInformationBlockType11;

else if all segments of a warning message have been received:
    assemble the warning message from the received warningMessageSegment;
    forward the received complete warning message, messageIdentifier, serialNumber and dataCodingScheme to upper layers;
    stop reception of SystemInformationBlockType11;
    discard the current values of messageIdentifier and serialNumber for SystemInformationBlockType11;

else:
    store the received warningMessageSegment;
    continue reception of SystemInformationBlockType11;

The UE should discard any stored warningMessageSegment and the current value of messageIdentifier and serialNumber for SystemInformationBlockType11 if the complete warning message has not been assembled within a period of 3 hours.

5.2.2.19 Actions upon reception of SystemInformationBlockType12

Upon receiving SystemInformationBlockType12, the UE shall:

1> if the SystemInformationBlockType12 contains a complete warning message:
   2> forward the received warning message, messageIdentifier, serialNumber and dataCodingScheme to upper layers;
   2> continue reception of SystemInformationBlockType12;

1> else:
   2> if the received values of messageIdentifier and serialNumber are the same (each value is the same) as a pair for which a warning message is currently being assembled:
      3> store the received warningMessageSegment;
      3> if all segments of a warning message have been received:
         4> assemble the warning message from the received warningMessageSegment;
         4> forward the received warning message, messageIdentifier, serialNumber and dataCodingScheme to upper layers;
         4> stop assembling a warning message for this messageIdentifier and serialNumber and delete all stored information held for it;
      3> continue reception of SystemInformationBlockType12;
   2> else if the received values of messageIdentifier and/or serialNumber are not the same as any of the pairs for which a warning message is currently being assembled:
      3> start assembling a warning message for this messageIdentifier and serialNumber pair;
      3> store the received warningMessageSegment;
      3> continue reception of SystemInformationBlockType12;
The UE should discard warningMessageSegment and the associated values of messageIdentifier and serialNumber for SystemInformationBlockType12 if the complete warning message has not been assembled within a period of 3 hours.

NOTE: The number of warning messages that a UE can re-assemble simultaneously is a function of UE implementation.

5.2.2.20 Actions upon reception of SystemInformationBlockType13

No UE requirements related to the contents of this SystemInformationBlock apply other than those specified elsewhere e.g. within procedures using the concerned system information, and/ or within the corresponding field descriptions.

5.2.2.21 Actions upon reception of SystemInformationBlockType14

No UE requirements related to the contents of this SystemInformationBlock (SystemInformationBlockType14 or SystemInformationBlockType14-NB) apply other than those specified elsewhere e.g. within procedures using the concerned system information, and/ or within the corresponding field descriptions.

5.2.2.22 Actions upon reception of SystemInformationBlockType15

No UE requirements related to the contents of this SystemInformationBlock (SystemInformationBlockType15 or SystemInformationBlockType15-NB) apply other than those specified elsewhere e.g. within procedures using the concerned system information, and/ or within the corresponding field descriptions.

5.2.2.23 Actions upon reception of SystemInformationBlockType16

No UE requirements related to the contents of this SystemInformationBlock (SystemInformationBlockType16 or SystemInformationBlockType16-NB) apply other than those specified elsewhere e.g. within procedures using the concerned system information, and/ or within the corresponding field descriptions.

5.2.2.24 Actions upon reception of SystemInformationBlockType17

Upon receiving SystemInformationBlockType17, the UE shall:

1> if wlan-OffloadConfigCommon corresponding to the RPLMN is included:
   2> if the UE is not configured with rclwi-Configuration with command set to steerToWLAN:
      3> apply the wlan-Id-List corresponding to the RPLMN;
   2> if not configured with the wlan-OffloadConfigDedicated:
      3> apply the wlan-OffloadConfigCommon corresponding to the RPLMN;

5.2.2.25 Actions upon reception of SystemInformationBlockType18

Upon receiving SystemInformationBlockType18, the UE shall:

1> if SystemInformationBlockType18 message includes the commConfig:
   2> if configured to receive sidelink communication:
      3> from the next SC period, as defined by sc-Period, use the resource pool indicated by commRxPool for sidelink communication monitoring, as specified in 5.10.3;
   2> if configured to transmit sidelink communication:
      3> from the next SC period, as defined by sc-Period, use the resource pool indicated by commTxPoolNormalCommon, commTxPoolNormalCommonExt or by commTxPoolExceptional for sidelink communication transmission, as specified in 5.10.4;
5.2.2.26 Actions upon reception of SystemInformationBlockType19

Upon receiving SystemInformationBlockType19, the UE shall:

1> if SystemInformationBlockType19 message includes the discConfig or discConfigPS:
   2> from the next discovery period, as defined by discPeriod, use the resources indicated by discRxPool, discRxResourcesInterFreq or discRxPoolPS for sidelink discovery monitoring, as specified in 5.10.5;

2> if SystemInformationBlockType19 message includes the discTxPoolCommon or discTxPoolPS-Common; and the UE is in RRC_IDLE:
   3> from the next discovery period, as defined by discPeriod, use the resources indicated by discTxPoolCommon or discTxPoolPS-Common for sidelink discovery announcement, as specified in 5.10.6;

2> if the SystemInformationBlockType19 message includes the discTxPowerInfo:
   3> use the power information included in discTxPowerInfo for sidelink discovery transmission on the serving frequency, as specified in TS 36.213 [23];

1> if SystemInformationBlockType19 message includes the discConfigRelay:

2> if the SystemInformationBlockType19 message includes the txPowerInfo:
   3> use the power information included in txPowerInfo for sidelink discovery transmission on the corresponding non-serving frequency, as specified in TS 36.213 [23];

5.2.2.27 Actions upon reception of SystemInformationBlockType20

No UE requirements related to the contents of this SystemInformationBlock (SystemInformationBlockType20 or SystemInformationBlockType20-NB) apply other than those specified elsewhere e.g. within procedures using the concerned system information, and/ or within the corresponding field descriptions.

5.2.2.28 Actions upon reception of SystemInformationBlockType21

Upon receiving SystemInformationBlockType21, the UE shall:

1> if SystemInformationBlockType21 message includes sl-V2X-ConfigCommon:

2> if configured to receive V2X sidelink communication:
   3> use the resource pool indicated by v2x-CommRxPool in sl-V2X-ConfigCommon for V2X sidelink communication monitoring, as specified in 5.10.12;

2> if configured to transmit V2X sidelink communication:
   3> use the resource pool indicated by v2x-CommTxPoolNormalCommon, p2x-CommTxPoolNormalCommon, v2x-CommTxPoolNormal, p2x-CommTxPoolNormal or by v2x-CommTxPoolExceptional for V2X sidelink communication transmission, as specified in 5.10.13;
   3> perform CBR measurement on the transmission resource pool(s) indicated by v2x-CommTxPoolNormalCommon, v2x-CommTxPoolNormal and v2x-CommTxPoolExceptional for V2X sidelink communication transmission, as specified in 5.5.3;

5.2.2.29 Actions upon reception of SystemInformationBlockType22-NB

No UE requirements related to the contents of this SystemInformationBlock apply other than those specified elsewhere e.g. within procedures using the concerned system information, and/ or within the corresponding field descriptions.

5.2.3 Acquisition of an SI message

When acquiring an SI message, the UE shall:
1> determine the start of the SI-window for the concerned SI message as follows:

2> for the concerned SI message, determine the number \( n \) which corresponds to the order of entry in the list of SI messages configured by \( \text{schedulingInfoList} \) in \( \text{SystemInformationBlockType1} \);

2> determine the integer value \( x = (n - 1)w \), where \( w \) is the \( \text{si-WindowLength} \);

2> the SI-window starts at the subframe \( \#a \), where \( a = x \mod 10 \), in the radio frame for which \( \text{SFN} \mod T = \text{FLOOR}(x/10) \), where \( T \) is the \( \text{si-Periodicity} \) of the concerned SI message;

NOTE: E-UTRAN should configure an SI-window of 1 ms only if all SIs are scheduled before subframe \( \#5 \) in radio frames for which \( \text{SFN} \mod 2 = 0 \).

1> receive DL-SCH using the SI-RNTI from the start of the SI-window and continue until the end of the SI-window whose absolute length in time is given by \( \text{si-WindowLength} \), or until the SI message was received, excluding the following subframes:

2> subframe \( \#5 \) in radio frames for which \( \text{SFN} \mod 2 = 0 \);

2> any MBSFN subframes;

2> any uplink subframes in TDD;

1> if the SI message was not received by the end of the SI-window, repeat reception at the next SI-window occasion for the concerned SI message;

5.2.3a Acquisition of an SI message by BL UE or UE in CE or a NB-IoT UE

When acquiring an SI message, the BL UE or UE in CE or NB-IoT UE shall:

1> determine the start of the SI-window for the concerned SI message as follows:

2> for the concerned SI message, determine the number \( n \) which corresponds to the order of entry in the list of SI messages configured by \( \text{schedulingInfoList} \) in \( \text{SystemInformationBlockType1-BR} \) (or \( \text{SystemInformationBlockType1-NB} \) in NB-IoT);

2> determine the integer value \( x = (n - 1)w \), where \( w \) is the \( \text{si-WindowLength-BR} \) (or \( \text{si-WindowLength} \) in NB-IoT);

2> if the UE is a NB-IoT UE:

3> the SI-window starts at the subframe \( \#0 \) in the radio frame for which \( \text{(H-SFN} * 1024 + \text{SFN}) \mod T = \text{FLOOR}(x/10) + \text{Offset} \), where \( T \) is the \( \text{si-Periodicity} \) of the concerned SI message and, \( \text{Offset} \) is the offset of the start of the SI-Window \( \text{(si-RadioFrameOffset)} \);

2> else:

3> the SI-window starts at the subframe \( \#0 \) in the radio frame for which \( \text{SFN} \mod T = \text{FLOOR}(x/10) \), where \( T \) is the \( \text{si-Periodicity} \) of the concerned SI message;

1> if the UE is a NB-IoT UE:

2> receive and accumulate SI message transmissions on DL-SCH from the start of the SI-window and continue until the end of the SI-window whose absolute length in time is given by \( \text{si-WindowLength} \), starting from the radio frames as provided in \( \text{si-RepetitionPattern} \) and in subframes as provided in \( \text{downlinkBitmap} \), or until successful decoding of the accumulated SI message transmissions excluding the subframes used for transmission of NPSS, NSSS, \( \text{MasterInformationBlock-NB} \) and \( \text{SystemInformationBlockType1-NB} \). If there are not enough subframes for one SI message transmission in the radio frames as provided in \( \text{si-RepetitionPattern} \), the UE shall continue to receive the SI message transmission in the radio frames following the radio frame indicated in \( \text{si-RepetitionPattern} \);

1> else:

2> receive and accumulate SI message transmissions on DL-SCH on narrowband provided by \( \text{si-Narrowband} \), from the start of the SI-window and continue until the end of the SI-window whose absolute length in time is
5.2.3b Acquisition of an SI message from MBMS-dedicated cell

When acquiring an SI message, the UE shall:

1> determine the start of the SI-window for the concerned SI message as follows:

2> for the concerned SI message, determine the number \( n \) which corresponds to the order of entry in the list of SI messages configured by \( \text{schedulingInfoList} \) in \( \text{SystemInformationBlockType1-MBMS} \);

2> determine the integer value \( x = (n - 1) \times w \), where \( w \) is the \( \text{si-WindowLength} \);

2> the SI-window starts always at the subframe \( a \), where \( a = x \mod 10 \), in the radio frame for which \( \text{SFN} \mod T = \text{FLOOR}(x/10) \), where \( T \) is the \( \text{si-Periodicity} \) of the concerned SI message;

1> receive DL-SCH using SI-RNTI with value in accordance with 36.321 [6] from the start of the SI-window and continue until the end of the SI-window whose absolute length in time is given by \( \text{si-WindowLength} \), or until the SI message was received, excluding the following subframes:

2> any MBSFN subframes;

1> if the SI message was not received by the end of the SI-window, repeat reception at the next SI-window occasion for the concerned SI message;

5.3 Connection control

5.3.1 Introduction

5.3.1.1 RRC connection control

RRC connection establishment involves the establishment of SRB1. E-UTRAN completes RRC connection establishment prior to completing the establishment of the SI connection, i.e. prior to receiving the UE context information from the EPC. Consequently, AS security is not activated during the initial phase of the RRC connection. During this initial phase of the RRC connection, the E-UTRAN may configure the UE to perform measurement reporting, but the UE only sends the corresponding measurement reports after successful security activation. However, the UE only accepts a handover message when security has been activated.

NOTE: In case the serving frequency broadcasts multiple overlapping bands, E-UTRAN can only configure measurements after having obtained the UE capabilities, as the measurement configuration needs to be set according to the band selected by the UE.

Upon receiving the UE context from the EPC, E-UTRAN activates security (both ciphering and integrity protection) using the initial security activation procedure. The RRC messages to activate security (command and successful response) are integrity protected, while ciphering is started only after completion of the procedure. That is, the response to the message used to activate security is not ciphered, while the subsequent messages (e.g. used to establish SRB2 and DRBs) are both integrity protected and ciphered.

After having initiated the initial security activation procedure, E-UTRAN initiates the establishment of SRB2 and DRBs, i.e. E-UTRAN may do this prior to receiving the confirmation of the initial security activation from the UE. In any case, E-UTRAN will apply both ciphering and integrity protection for the RRC connection reconfiguration messages used to establish SRB2 and DRBs. E-UTRAN should release the RRC connection if the initial security activation and/or the radio bearer establishment fails (i.e. security activation and DRB establishment are triggered by a joint SI-procedure, which does not support partial success).
For SRB2 and DRBs, security is always activated from the start, i.e. the E-UTRAN does not establish these bearers prior to activating security.

For some radio configuration fields, a critical extension has been defined. A switch from the original version of the field to the critically extended version is allowed using any connection reconfiguration. The UE reverts to the original version of some critically extended fields upon handover and re-establishment as specified elsewhere in this specification. Otherwise, switching a field from the critically extended version to the original version is only possible using the handover or re-establishment procedure with the full configuration option. This also applies for fields that are critically extended within a release (i.e. original and extended version defined in same release).

After having initiated the initial security activation procedure, E-UTRAN may configure a UE that supports CA, with one or more SCells in addition to the PCell that was initially configured during connection establishment. The PCell is used to provide the security inputs and upper layer system information (i.e. the NAS mobility information e.g. TAI). SCells are used to provide additional downlink and optionally uplink radio resources. When not configured with DC all SCells the UE is configured with, if any, are part of the MCG. When configured with DC however, some of the SCells are part of a SCG. In this case, user data carried by a DRB may either be transferred via MCG (i.e. MCG-DRB), via SCG (SCG-DRB) or via both MCG and SCG in DL while E-UTRAN configures the CG used in UL (split DRB). An RRC connection reconfiguration message may be used to change the DRB type from MCG-DRB to SCG-DRB or to split DRB, as well as from SCG-DRB or split DRB to MCG-DRB.

SCG change is a synchronous SCG reconfiguration procedure (i.e. involving RA to the PSCell) including reset/ re-establishment of layer 2 and, if SCG DRBs are configured, refresh of security. The procedure is used in a number of different scenarios e.g. SCG establishment, PSCell change, Key refresh, change of DRB type. The UE performs the SCG change related actions upon receiving an RRCConnectionReconfiguration message including mobilityControlInfoSCG, see 5.3.10.10.

The release of the RRC connection normally is initiated by E-UTRAN. The procedure may be used to re-direct the UE to an E-UTRA frequency or an inter-RAT carrier frequency. Only in exceptional cases, as specified within this specification, TS 36.300 [9], TS 36.304 [4] or TS 24.301 [35], may the UE abort the RRC connection, i.e. move to RRC_IDLE without notifying E-UTRAN.

The suspension of the RRC connection is initiated by E-UTRAN. When the RRC connection is suspended, the UE stores the UE AS context and the resumIdentity, and transitions to RRC_IDLE state. The RRC message to suspend the RRC connection is integrity protected and ciphered. Suspension can only be performed when at least 1 DRB is successfully established.

The resumption of a suspended RRC connection is initiated by upper layers when the UE has a stored UE AS context, RRC connection resume is permitted by E-UTRAN and the UE needs to transit from RRC_IDLE state to RRC_CONNECTED state. When the RRC connection is resumed, RRC configures the UE according to the RRC connection resume procedure based on the stored UE AS context and any RRC configuration received from E-UTRAN. The RRC connection resume procedure re-activates security and re-establishes SRB(s) and DRB(s). The request to resume the RRC connection includes the resumIdentity. The request is not ciphered, but protected with a message authentication code.

In response to a request to resume the RRC connection, E-UTRAN may resume the suspended RRC connection, reject the request to resume and instruct the UE to either keep or discard the stored context, or setup a new RRC connection.

5.3.1.2 Security

AS security comprises of the integrity protection of RRC signalling (SRBs) as well as the ciphering of RRC signalling (SRBs) and user data (DRBs).

RRC handles the configuration of the security parameters which are part of the AS configuration: the integrity protection algorithm, the ciphering algorithm and two parameters, namely the keyChangeIndicator and the nextHopChainingCount, which are used by the UE to determine the AS security keys upon handover, connection re-establishment and/ or connection resume.

The integrity protection algorithm is common for signalling radio bearers SRB1 and SRB2. The ciphering algorithm is common for all radio bearers (i.e. SRB1, SRB2 and DRBs). Neither integrity protection nor ciphering applies for SRB0.

RRC integrity and ciphering are always activated together, i.e. in one message/ procedure. RRC integrity and ciphering are never de-activated. However, it is possible to switch to a 'NULL' ciphering algorithm (eea0).
The 'NULL' integrity protection algorithm (eia0) is used only for the UE in limited service mode [32, TS33.401]. In case the 'NULL' integrity protection algorithm is used, 'NULL' ciphering algorithm is also used.

NOTE 1: Lower layers discard RRC messages for which the integrity check has failed and indicate the integrity verification check failure to RRC.

The AS applies three different security keys: one for the integrity protection of RRC signalling ($K_{RRCint}$), one for the ciphering of RRC signalling ($K_{RRCenc}$) and one for the ciphering of user data ($K_{UPenc}$). All three AS keys are derived from the $K_{eNB}$ key. The $K_{eNB}$ is based on the $K_{ASME}$ key, which is handled by upper layers.

Upon connection establishment new AS keys are derived. No AS-parameters are exchanged to serve as inputs for the derivation of the new AS keys at connection establishment.

The integrity and ciphering of the RRC message used to perform handover is based on the security configuration used prior to the handover and is performed by the source eNB.

The integrity and ciphering algorithms can only be changed upon handover. The four AS keys ($K_{eNB}$, $K_{RRCint}$, $K_{RRCenc}$ and $K_{UPenc}$) change upon every handover, connection re-establishment and connection resume. The $keyChangeIndicator$ is used upon handover and indicates whether the UE should use the keys associated with the $K_{ASME}$ key taken into use with the latest successful NAS SMC procedure. The $nextHopChainingCount$ parameter is used upon handover, connection re-establishment and connection resume by the UE when deriving the new $K_{eNB}$ that is used to generate $K_{RRCint}$, $K_{RRCenc}$ and $K_{UPenc}$ (see TS 33.401 [32]). An intra cell handover procedure may be used to change the keys in $RRC\_CONNECTED$.

For each radio bearer an independent counter (COUNT, as specified in TS 36.323 [8]) is maintained for each direction. For each DRB, the COUNT is used as input for ciphering. For each SRB, the COUNT is used as input for both ciphering and integrity protection. It is not allowed to use the same COUNT value more than once for a given security key. At connection resume the COUNT is reset. In order to limit the signalling overhead, individual messages/ packets include a short sequence number (PDCP SN, as specified in TS 36.323 [8]). In addition, an overflow counter mechanism is used: the hyper frame number (TX_HFN and RX_HFN, as specified in TS 36.323 [8]). The HFN needs to be synchronized between the UE and the eNB. The eNB is responsible for avoiding reuse of the COUNT with the same RB identity and with the same $K_{eNB}$, e.g. due to the transfer of large volumes of data, release and establishment of new RBs. In order to avoid such re-use, the eNB may e.g. use different RB identities for successive RB establishments, trigger an intra cell handover or an $RRC\_CONNECTED$ to $RRC\_IDLE$ to $RRC\_CONNECTED$ transition.

For each SRB, the value provided by RRC to lower layers to derive the 5-bit BEARER parameter used as input for ciphering and for integrity protection is the value of the corresponding $srb\_Identity$ with the MSBs padded with zeroes.

In case of DC, a separate $K_{eNB}$ is used for SCG-DRBs (S-$K_{eNB}$). This key is derived from the key used for the MCG ($K_{eNB}$) and an SCG counter that is used to ensure freshness. To refresh the S-$K_{eNB}$ e.g. when the COUNT will wrap around, E-UTRAN employs an SCG change, i.e. an $RRCConnectionReconfiguration$ message including $mobilityControlInfoSCG$. When performing handover, while at least one SCG-DRB remains configured, both $K_{eNB}$ and S-$K_{eNB}$ are refreshed. In such case E-UTRAN performs handover with SCG change i.e. an $RRCConnectionReconfiguration$ message including both $mobilityControlInfo$ and $mobilityControlInfoSCG$. The ciphering algorithm is common for all radio bearers within a CG but may be different between MCG and SCG. The ciphering algorithm for SCG DRBs can only be changed upon SCG change.

5.3.1.2a RN security

For RNs, AS security follows the procedures in 5.3.1.2. Furthermore, E-UTRAN may configure per DRB whether or not integrity protection is used. The use of integrity protection may be configured only upon DRB establishment and reconfigured only upon handover or upon the first reconfiguration following RRC connection re-establishment.

To provide integrity protection on DRBs between the RN and the E-UTRAN, the $K_{UPenc}$ key is derived from the $K_{eNB}$ key as described in TS33.401 [32]. The same integrity protection algorithm used for SRBs also applies to the DRBs. The $K_{UPenc}$ changes at every handover and RRC connection re-establishment and is based on an updated $K_{eNB}$ which is derived by taking into account the $nextHopChainingCount$. The COUNT value maintained for DRB ciphering is also used for integrity protection, if the integrity protection is configured for the DRB.

5.3.1.3 Connected mode mobility

In $RRC\_CONNECTED$, the network controls UE mobility, i.e. the network decides when the UE shall connect to which E-UTRA cell(s), or inter-RAT cell. For network controlled mobility in $RRC\_CONNECTED$, the PCell can be
changed using an `RRCConnectionReconfiguration` message including the `mobilityControlInfo` (handover), whereas the SCell(s) can be changed using the `RRCConnectionReconfiguration` message either with or without the `mobilityControlInfo`.

An SCG can be established, reconfigured or released by using an `RRCConnectionReconfiguration` message with or without the `mobilityControlInfo`. In case Random Access to the PCell or initial PUSCH transmission to the PCell if `rach-SkipSCG` is configured is required upon SCG reconfiguration, E-UTRAN employs the SCG change procedure (i.e. an `RRCConnectionReconfiguration` message including the `mobilityControlInfoSCG`). The PCell can only be changed using the SCG change procedure and by release and addition of the PCell.

The network triggers the handover procedure e.g. based on radio conditions, load. To facilitate this, the network may configure the UE to perform measurement reporting (possibly including the configuration of measurement gaps). The network may also initiate handover blindly, i.e. without having received measurement reports from the UE.

Before sending the handover message to the UE, the source eNB prepares one or more target cells. The source eNB selects the target PCell. The source eNB may also provide the target eNB with a list of best cells on each frequency for which measurement information is available, in order of decreasing RSRP. The source eNB may also include available measurement information for the cells provided in the list. The target eNB decides which SCells are configured for use after handover, which may include cells other than the ones indicated by the source eNB. If an SCG is configured, handover involves either SCG release or SCG change. In case the UE was configured with DC, the target eNB indicates in the handover message whether the UE shall release the entire SCG configuration. Upon connection re-establishment, the UE releases the entire SCG configuration except for the DRB configuration, while E-UTRAN in the first reconfiguration message following the re-establishment either releases the DRB(s) or reconfigures the DRB(s) to MCG DRB(s).

The target eNB generates the message used to perform the handover, i.e. the message including the AS-configuration to be used in the target cell(s). The source eNB transparently (i.e. does not alter values/ content) forwards the handover message/ information received from the target to the UE. When appropriate, the source eNB may initiate data forwarding for (a subset of) the DRBs.

After receiving the handover message, the UE attempts to access the target PCell at the first available RACH occasion according to Random Access resource selection defined in TS 36.321 [6], i.e. the handover is asynchronous, or at the first available PUSCH occasion if `rach-Skip` is configured. Consequently, when allocating a dedicated preamble for the random access in the target PCell, E-UTRA shall ensure it is available from the first RACH occasion the UE may use. The first available PUSCH occasion is provided by `ul-ConfigInfo`, if configured, otherwise UE shall monitor the PDCCH of target eNB. Upon successful completion of the handover, the UE sends a message used to confirm the handover.

If the target eNB does not support the release of RRC protocol which the source eNB used to configure the UE, the target eNB may be unable to comprehend the UE configuration provided by the source eNB. This case, the target eNB should use the full configuration option to reconfigure the UE for Handover and Re-establishment. Full configuration option includes an initialization of the radio configuration, which makes the procedure independent of the configuration used in the source cell(s) with the exception that the security algorithms are continued for the RRC re-establishment.

After the successful completion of handover, PDCP SDUs may be re-transmitted in the target cell(s). This only applies for DRBs using RLC-AM mode and for handovers not involving full configuration option. The further details are specified in TS 36.323 [8]. After the successful completion of handover not involving full configuration option, the SN and the HFN are reset except for the DRBs using RLC-AM mode (for which both SN and HFN continue). For reconfigurations involving the full configuration option, the PDCP entities are newly established (SN and HFN do not continue) for all DRBs irrespective of the RLC mode. The further details are specified in TS 36.323 [8].

One UE behaviour to be performed upon handover is specified, i.e. this is regardless of the handover procedures used within the network (e.g. whether the handover includes X2 or S1 signalling procedures).

The source eNB should, for some time, maintain a context to enable the UE to return in case of handover failure. After having detected handover failure, the UE attempts to resume the RRC connection either in the source PCell or in another cell using the RRC re-establishment procedure. This connection resumption succeeds only if the accessed cell is prepared, i.e. concerns a cell of the source eNB or of another eNB towards which handover preparation has been performed. The cell in which the re-establishment procedure succeeds becomes the PCell while SCells and STAGs, if configured, are released.

Normal measurement and mobility procedures are used to support handover to cells broadcasting a CSG identity. In addition, E-UTRAN may configure the UE to report that it is entering or leaving the proximity of cell(s) included in its
CSG whitelist. Furthermore, E-UTRAN may request the UE to provide additional information broadcast by the handover candidate cell e.g. global cell identity, CSG identity, CSG membership status.

NOTE: E-UTRAN may use the ‘proximity report’ to configure measurements as well as to decide whether or not to request additional information broadcast by the handover candidate cell. The additional information is used to verify whether or not the UE is authorised to access the target PCell and may also be needed to identify handover candidate cell (PCI confusion i.e. when the physical layer identity that is included in the measurement report does not uniquely identify the cell).

5.3.1.4 Connection control in NB-IoT

In NB-IoT, during the RRC connection establishment procedure, SRB1bis is established implicitly with SRB1. SRB1bis uses the logical channel identity defined in 9.1.2a, with the same configuration as SRB1 but no PDCP entity. SRB1bis is used until security is activated. The RRC messages to activate security (command and successful response) are sent over SRB1 being integrity protected and ciphering is started after completion of the procedure. Once security is activated, new RRC messages shall be transmitted using SRB1. A NB-IoT UE that only supports the Control Plane CIoT EPS optimisation (see TS 24.301 [35]) only establishes SRB1bis.

A NB-IoT UE only supports 0, 1 or 2 DRBs, depending on its capability. A NB-IoT UE that only supports the Control Plane CIoT EPS optimisation (see TS 24.301 [35]) does not need to support any DRBs and associated procedures.

Table 5.3.1.4-1 lists the procedures that are applicable for NB-IoT. All other procedures are not applicable; this is not further stated in the corresponding procedures.

5.3.2 Paging

5.3.2.1 General

![Figure 5.3.2.1-1: Paging](image)

The purpose of this procedure is:

- to transmit paging information to a UE in RRC_IDLE and/ or;
- to inform UEs in RRC_IDLE and UEs other than NB-IoT UEs in RRC_CONNECTED about a system information change and/or;
- to inform UEs other than NB-IoT UEs about an ETWS primary notification and/or ETWS secondary notification and/or;
- to inform UEs other than NB-IoT UEs about a CMAS notification and/or;
- to inform UEs other than NB-IoT UEs in RRC_IDLE about an EAB parameters modification and/or;
- to inform UEs other than NB-IoT UEs in RRC_IDLE to perform E-UTRAN inter-frequency redistribution procedure.

The paging information is provided to upper layers, which in response may initiate RRC connection establishment, e.g. to receive an incoming call.

5.3.2.2 Initiation

E-UTRAN initiates the paging procedure by transmitting the Paging message at the UE’s paging occasion as specified in TS 36.304 [4]. E-UTRAN may address multiple UEs within a Paging message by including one PagingRecord for each UE. E-UTRAN may also indicate a change of system information, and/or provide an ETWS notification or a CMAS notification in the Paging message.

5.3.2.3 Reception of the Paging message by the UE

Upon receiving the Paging message, the UE shall:

1> if in RRC_IDLE, for each of the PagingRecord, if any, included in the Paging message:
   2> if the ue-Identity included in the PagingRecord matches one of the UE identities allocated by upper layers:
      3> forward the ue-Identity and, except for NB-IoT, the cn-Domain to the upper layers;
1> if the UE is not configured with a DRX cycle longer than the modification period and the systemInfoModification is included; or
1> if the UE is configured with a DRX cycle longer than the modification period and the systemInfoModification-eDRX is included:
   2> re-acquire the required system information using the system information acquisition procedure as specified in 5.2.2.
1> if the etws-Indication is included and the UE is ETWS capable:
   2> re-acquire SystemInformationBlockType1 immediately, i.e., without waiting until the next system information modification period boundary;
   2> if the schedulingInfoList indicates that SystemInformationBlockType10 is present:
      3> acquire SystemInformationBlockType10;
NOTE: If the UE is in CE, it is up to UE implementation when to start acquiring SystemInformationBlockType10.
   2> if the schedulingInfoList indicates that SystemInformationBlockType11 is present:
      3> acquire SystemInformationBlockType11;
1> if the cmas-Indication is included and the UE is CMAS capable:
   2> re-acquire SystemInformationBlockType1 immediately, i.e., without waiting until the next system information modification period boundary as specified in 5.2.1.5;
   2> if the schedulingInfoList indicates that SystemInformationBlockType12 is present:
      3> acquire SystemInformationBlockType12;
1> if in RRC_IDLE, the eab-ParamModification is included and the UE is EAB capable:
2> consider previously stored SystemInformationBlockType14 as invalid;

2> re-acquire SystemInformationBlockType1 immediately, i.e., without waiting until the next system information modification period boundary as specified in 5.2.1.6;

2> re-acquire SystemInformationBlockType14 using the system information acquisition procedure as specified in 5.2.2.4;

1> if in RRC_IDLE, the redistributionIndication is included and the UE is redistribution capable:

2> Perform E-UTRAN inter-frequency redistribution procedure as specified in TS 36.304 (5.2.4.10, [4]);

5.3.3 RRC connection establishment

5.3.3.1 General

Figure 5.3.3.1-1: RRC connection establishment, successful

Figure 5.3.3.1-2: RRC connection establishment, network reject
The purpose of this procedure is to establish or resume an RRC connection. RRC connection establishment involves SRB1 (and SRB1bis for NB-IoT) establishment. The procedure is also used to transfer the initial NAS dedicated information/message from the UE to E-UTRAN.

E-UTRAN applies the procedure as follows:

- When establishing an RRC connection:
  - to establish SRB1 and, for NB-IoT, SRB1bis;
- When resuming an RRC connection:
  - to restore the AS configuration from a stored context including resuming SRB(s) and DRB(s).
5.3.3.1a Conditions for establishing RRC Connection for sidelink communication/discovery/V2X sidelink communication

For sidelink communication an RRC connection is initiated only in the following case:

1. if configured by upper layers to transmit non-relay related sidelink communication and related data is available for transmission:
   2. if SystemInformationBlockType18 is broadcast by the cell on which the UE camps; and if the valid version of SystemInformationBlockType18 does not include commTxPoolNormalCommon;

For V2X sidelink communication an RRC connection is initiated only in the following case:

1. if configured by upper layers to transmit non-P2X related V2X sidelink communication and related data is available for transmission:
   2. if the frequency on which the UE is configured to transmit non-P2X related V2X sidelink communication concerns the camped frequency; and if SystemInformationBlockType21 is broadcast by the cell on which the UE camps; and if the valid version of SystemInformationBlockType21 includes sl-V2X-ConfigCommon; and sl-V2X-ConfigCommon does not include v2x-CommTxPoolNormalCommon; or

For sidelink discovery an RRC connection is initiated only in the following case:

1. if configured by upper layers to transmit non-PS related sidelink discovery announcements:
   2. if the frequency on which the UE is configured to transmit non-PS related sidelink discovery announcements concerns the camped frequency; and SystemInformationBlockType19 of the cell on which the UE camps does not include discTxPoolCommon-r12; or

1. if configured by upper layers to transmit non-relay PS related sidelink discovery announcements:
2> if the frequency on which the UE is configured to transmit non-relay PS related sidelink discovery announcements concerns the camped frequency; and SystemInformationBlockType19 of the cell on which the UE camps includes discConfigPS but does not include discTxPoolPS-Common; or

2> if the frequency on which the UE is configured to transmit non-relay PS related sidelink discovery announcements (e.g. group member discovery) is included in discInterFreqList in SystemInformationBlockType19 broadcast by the cell on which the UE camps, with discTxResourcesInterFreq within discResourcesPS included and set to requestDedicated;

1> if configured by upper layers to transmit relay PS related sidelink discovery announcements:

2> if the UE is acting as sidelink relay UE; and if the sidelink relay UE threshold conditions as specified in 5.10.10.4 are met; or

2> if the UE is selecting a sidelink relay UE / has a selected sidelink relay UE; and if the sidelink remote UE threshold conditions as specified in 5.10.11.5 are met:

3> if the frequency on which the UE is configured to transmit relay PS related sidelink discovery announcements concerns the camped frequency; and SystemInformationBlockType19 of the cell on which the UE camps includes discConfigRelay and discConfigPS but does not include discTxPoolPS-Common;

NOTE: Upper layers initiate an RRC connection. The interaction with NAS is left to UE implementation.

5.3.3.2 Initiation

The UE initiates the procedure when upper layers request establishment or resume of an RRC connection while the UE is in RRC_IDLE.

Except for NB-IoT, upon initiation of the procedure, the UE shall:

1> if SystemInformationBlockType2 includes ac-BarringPerPLMN-List and the ac-BarringPerPLMN-List contains an AC-BarringPerPLMN entry with the plmn-IdentityIndex corresponding to the PLMN selected by upper layers (see TS 23.122 [11], TS 24.301 [35]):

2> select the AC-BarringPerPLMN entry with the plmn-IdentityIndex corresponding to the PLMN selected by upper layers;

2> in the remainder of this procedure, use the selected AC-BarringPerPLMN entry (i.e. presence or absence of access barring parameters in this entry) irrespective of the common access barring parameters included in SystemInformationBlockType2;

1> else:

2> in the remainder of this procedure use the common access barring parameters (i.e. presence or absence of these parameters) included in SystemInformationBlockType2;

1> if SystemInformationBlockType2 contains acdc-BarringPerPLMN-List and the acdc-BarringPerPLMN-List contains an ACDC-BarringPerPLMN entry with the plmn-IdentityIndex corresponding to the PLMN selected by upper layers (see TS 23.122 [11], TS 24.301 [35]):

2> select the ACDC-BarringPerPLMN entry with the plmn-IdentityIndex corresponding to the PLMN selected by upper layers;

2> in the remainder of this procedure, use the selected ACDC-BarringPerPLMN entry for ACDC barring check (i.e. presence or absence of access barring parameters in this entry) irrespective of the acdc-BarringForCommon parameters included in SystemInformationBlockType2;

1> else:

2> in the remainder of this procedure use the acdc-BarringForCommon (i.e. presence or absence of these parameters) included in SystemInformationBlockType2 for ACDC barring check;

1> if upper layers indicate that the RRC connection is subject to EAB (see TS 24.301 [35]):

2> if the result of the EAB check, as specified in 5.3.3.12, is that access to the cell is barred:
3GPP TS 36.331 version 14.4.0 Release 14

3> inform upper layers about the failure to establish the RRC connection or failure to resume the RRC connection with suspend indication and that EAB is applicable, upon which the procedure ends;

1> if upper layers indicate that the RRC connection is subject to ACDC (see TS 24.301 [35]), SystemInformationBlockType2 contains BarringPerACDC-CategoryList, and acdc-HPLMNonly indicates that ACDC is applicable for the UE:

2> if the BarringPerACDC-CategoryList contains a BarringPerACDC-Category entry corresponding to the ACDC category selected by upper layers:

3> select the BarringPerACDC-Category entry corresponding to the ACDC category selected by upper layers;

2> else:

3> select the last BarringPerACDC-Category entry in the BarringPerACDC-CategoryList;

2> stop timer T308, if running;

2> perform access barring check as specified in 5.3.3.13, using T308 as “Tbarring” and acdc-BarringConfig in the BarringPerACDC-Category as "ACDC barring parameter";

2> if access to the cell is barred:

3> inform upper layers about the failure to establish the RRC connection or failure to resume the RRC connection with suspend indication and that access barring is applicable due to ACDC, upon which the procedure ends;

1> else if the UE is establishing the RRC connection for mobile terminating calls:

2> if timer T302 is running:

3> inform upper layers about the failure to establish the RRC connection or failure to resume the RRC connection with suspend indication and that access barring for mobile terminating calls is applicable, upon which the procedure ends;

1> else if the UE is establishing the RRC connection for emergency calls:

2> if SystemInformationBlockType2 includes the ac-BarringInfo:

3> if the ac-BarringForEmergency is set to TRUE:

4> if the UE has one or more Access Classes, as stored on the USIM, with a value in the range 11..15, which is valid for the UE to use according to TS 22.011 [10] and TS 23.122 [11]:

NOTE 1: ACs 12, 13, 14 are only valid for use in the home country and ACs 11, 15 are only valid for use in the HPLMN/ EHPLMN.

5> if the ac-BarringInfo includes ac-BarringForMO-Data, and for all of these valid Access Classes for the UE, the corresponding bit in the ac-BarringForSpecialAC contained in ac-BarringForMO-Data is set to one:

6> consider access to the cell as barred;

4> else:

5> consider access to the cell as barred;

2> if access to the cell is barred:

3> inform upper layers about the failure to establish the RRC connection or failure to resume the RRC connection with suspend indication, upon which the procedure ends;

1> else if the UE is establishing the RRC connection for mobile originating calls:

2> perform access barring check as specified in 5.3.3.11, using T303 as "Tbarring" and ac-BarringForMO-Data as "AC barring parameter";
if access to the cell is barred:

3> if `SystemInformationBlockType2` includes `ac-BarringForCSFB` or the UE does not support CS fallback:

4> inform upper layers about the failure to establish the RRC connection or failure to resume the RRC connection with suspend indication and that access barring for mobile originating calls is applicable, upon which the procedure ends;

3> else (`SystemInformationBlockType2` does not include `ac-BarringForCSFB` and the UE supports CS fallback):

4> if timer T306 is not running, start T306 with the timer value of T303;

4> inform upper layers about the failure to establish the RRC connection or failure to resume the RRC connection with suspend indication and that access barring for mobile originating calls and mobile originating CS fallback is applicable, upon which the procedure ends;

1> else if the UE is establishing the RRC connection for mobile originating signalling:

2> perform access barring check as specified in 5.3.3.11, using T305 as "Tbarring" and `ac-BarringForMO-Signalling` as "AC barring parameter";

2> if access to the cell is barred:

3> inform upper layers about the failure to establish the RRC connection or failure to resume the RRC connection with suspend indication and that access barring for mobile originating signalling is applicable, upon which the procedure ends;

1> else if the UE is establishing the RRC connection for mobile originating CS fallback:

2> if `SystemInformationBlockType2` includes `ac-BarringForCSFB`:

3> perform access barring check as specified in 5.3.3.11, using T306 as "Tbarring" and `ac-BarringForCSFB` as "AC barring parameter";

3> if access to the cell is barred:

4> inform upper layers about the failure to establish the RRC connection or failure to resume the RRC connection with suspend indication and that access barring for mobile originating CS fallback is applicable, due to `ac-BarringForCSFB`, upon which the procedure ends;

2> else:

3> perform access barring check as specified in 5.3.3.11, using T306 as "Tbarring" and `ac-BarringForMO-Data` as "AC barring parameter";

3> if access to the cell is barred:

4> if timer T303 is not running, start T303 with the timer value of T306;

4> inform upper layers about the failure to establish the RRC connection or failure to resume the RRC connection with suspend indication and that access barring for mobile originating CS fallback and mobile originating calls is applicable, due to `ac-BarringForMO-Data`, upon which the procedure ends;

1> else if the UE is establishing the RRC connection for mobile originating MMTEL voice, mobile originating MMTEL video, mobile originating SMS/SoIP or mobile originating SMS:

2> if the UE is establishing the RRC connection for mobile originating MMTEL voice and `SystemInformationBlockType2` includes `ac-BarringSkipForMMTELVoice`; or

2> if the UE is establishing the RRC connection for mobile originating MMTEL video and `SystemInformationBlockType2` includes `ac-BarringSkipForMMTELVideo`; or

2> if the UE is establishing the RRC connection for mobile originating SMS/SoIP or SMS and `SystemInformationBlockType2` includes `ac-BarringSkipForSMS`:

3> consider access to the cell as not barred;
2> else:

3> if establishmentCause received from higher layers is set to mo-Signalling (including the case that mo-
Signalling is replaced by highPriorityAccess according to 3GPP TS 24.301 [35] or by mo-VoiceCall
according to the subclause 5.3.3.3):

4> perform access barring check as specified in 5.3.3.11, using T305 as "Tbarring" and ac-
BarringForMO-Signalling as "AC barring parameter";

4> if access to the cell is barred:

5> inform upper layers about the failure to establish the RRC connection or failure to resume the RRC
connection with suspend indication and that access barring for mobile originating signalling is
applicable, upon which the procedure ends;

3> if establishmentCause received from higher layers is set to mo-Data (including the case that mo-Data is
replaced by highPriorityAccess according to 3GPP TS 24.301 [35] or by mo-VoiceCall according to the
subclause 5.3.3.3):

4> perform access barring check as specified in 5.3.3.11, using T303 as "Tbarring" and ac-
BarringForMO-Data as "AC barring parameter";

4> if access to the cell is barred:

5> if SystemInformationBlockType2 includes ac-BarringForCSFB or the UE does not support CS
fallback:

6> inform upper layers about the failure to establish the RRC connection or failure to resume the RRC
connection with suspend indication and that access barring for mobile originating calls is
applicable, upon which the procedure ends;

5> else (SystemInformationBlockType2 does not include ac-BarringForCSFB and the UE supports CS
fallback):

6> if timer T306 is not running, start T306 with the timer value of T303;

6> inform upper layers about the failure to establish the RRC connection or failure to resume the
RRC connection with suspend indication and that access barring for mobile originating calls and
mobile originating CS fallback is applicable, upon which the procedure ends;

1> if the UE is resuming an RRC connection:

2> release the MCG SCell(s), if configured, in accordance with 5.3.10.3a;

2> release powerPrefIndicationConfig, if configured and stop timer T340, if running;

2> release reportProximityConfig and clear any associated proximity status reporting timer;

2> release obtainLocationConfig, if configured;

2> release idc-Config, if configured;

2> release measSubframePatternPCell, if configured;

2> release the entire SCG configuration, if configured, except for the DRB configuration (as configured by drb-
ToAddModListSCG);

2> release naics-Info for the PCell, if configured;

2> release the LWA configuration, if configured, as described in 5.6.14.3;

2> release the LWIP configuration, if configured, as described in 5.6.17.3;

2> release bw-PreferenceIndicationTimer, if configured and stop timer T341, if running;

2> release delayBudgetReportingConfig, if configured and stop timer T342, if running;
apply the default physical channel configuration as specified in 9.2.4;
apply the default semi-persistent scheduling configuration as specified in 9.2.3;
apply the default MAC main configuration as specified in 9.2.2;
apply the CCCH configuration as specified in 9.1.1.2;
apply the timeAlignmentTimerCommon included in SystemInformationBlockType2;
start timer T300;
if the UE is resuming an RRC connection:
  initiate transmission of the RRCConnectionResumeRequest message in accordance with 5.3.3.3a;
else:
  if stored, discard the UE AS context and resumeIdentity;
  initiate transmission of the RRCConnectionRequest message in accordance with 5.3.3.3;

NOTE 2: Upon initiating the connection establishment procedure, the UE is not required to ensure it maintains up to date system information applicable only for UEs in RRC_IDLE state. However, the UE needs to perform system information acquisition upon cell re-selection.

For NB-IoT, upon initiation of the procedure, the UE shall:
if the UE is establishing or resuming the RRC connection for mobile originating exception data; or
if the UE is establishing or resuming the RRC connection for mobile originating data; or
if the UE is establishing or resuming the RRC connection for delay tolerant access; or
if the UE is establishing or resuming the RRC connection for mobile originating signalling;
  perform access barring check as specified in 5.3.3.14;
  if access to the cell is barred:
    inform upper layers about the failure to establish the RRC connection or failure to resume the RRC connection with suspend indication and that access barring is applicable, upon which the procedure ends;
apply the default physical channel configuration as specified in 9.2.4;
apply the default MAC main configuration as specified in 9.2.2;
apply the CCCH configuration as specified in 9.1.1.2;
start timer T300;
if the UE is establishing an RRC connection:
  initiate transmission of the RRCConnectionRequest message in accordance with 5.3.3.3;
else if the UE is resuming an RRC connection:
  initiate transmission of the RRCConnectionResumeRequest message in accordance with 5.3.3.3a;

NOTE 3: Upon initiating the connection establishment or resumption procedure, the UE is not required to ensure it maintains up to date system information applicable only for UEs in RRC_IDLE state. However, the UE needs to perform system information acquisition upon cell re-selection.

5.3.3.3 Actions related to transmission of RRCConnectionRequest message

The UE shall set the contents of RRCConnectionRequest message as follows:
  set the ue-Identity as follows:
if upper layers provide an S-TMSI:

- set the \textit{ue-Identity} to the value received from upper layers;

else:

- draw a random value in the range $0 \ldots 2^{40}-1$ and set the \textit{ue-Identity} to this value;

\textbf{NOTE 1:} Upper layers provide the S-TMSI if the UE is registered in the TA of the current cell.

1> if the UE supports \textit{mo-VoiceCall} establishment cause and UE is establishing the RRC connection for mobile originating MMTEL voice and \textit{SystemInformationBlockType2} includes \textit{voiceServiceCauseIndication}:

2> set the \textit{establishmentCause} to \textit{mo-VoiceCall};

1> else if the UE supports \textit{mo-VoiceCall} establishment cause for mobile originating MMTEL video and UE is establishing the RRC connection for mobile originating MMTEL video and \textit{SystemInformationBlockType2} includes \textit{videoServiceCauseIndication}:

2> set the \textit{establishmentCause} to \textit{mo-VoiceCall};

1> else:

2> set the \textit{establishmentCause} in accordance with the information received from upper layers;

1> if the UE is a NB-IoT UE:

2> if the UE supports multi-tone transmission, include \textit{multiToneSupport};

2> if the UE supports multi-carrier operation, include \textit{multiCarrierSupport};

The UE shall submit the \textit{RRCConnectionRequest} message to lower layers for transmission.

The UE shall continue cell re-selection related measurements as well as cell re-selection evaluation. If the conditions for cell re-selection are fulfilled, the UE shall perform cell re-selection as specified in 5.3.3.5.

5.3.3.3a \hspace{1em} Actions related to transmission of \textit{RRCConnectionResumeRequest} message

The UE shall set the contents of \textit{RRCConnectionResumeRequest} message as follows:

1> if the UE is a NB-IoT UE; or

1> if field \textit{useFullResumeID} is signalled in \textit{SystemInformationBlockType2}:

2> set the \textit{resumeID} to the stored \textit{resumeIdentity};

1> else

2> set the \textit{truncatedResumeID} to include bits in bit position 9 to 20 and 29 to 40 from the left in the stored \textit{resumeIdentity}.

1> if the UE supports \textit{mo-VoiceCall} establishment cause and UE is resuming the RRC connection for mobile originating MMTEL voice and \textit{SystemInformationBlockType2} includes \textit{voiceServiceCauseIndication}:

2> set the \textit{resumeCause} to \textit{mo-VoiceCall};

1> else if the UE supports \textit{mo-VoiceCall} establishment cause for mobile originating MMTEL video and UE is resuming the RRC connection for mobile originating MMTEL video and \textit{SystemInformationBlockType2} includes \textit{videoServiceCauseIndication}:

2> set the \textit{resumeCause} to \textit{mo-VoiceCall};

1> else

2> set the \textit{resumeCause} in accordance with the information received from upper layers;

1> set the \textit{shortResumeMAC-I} to the 16 least significant bits of the MAC-I calculated.
2> over the ASN.1 encoded as per section 8 (i.e., a multiple of 8 bits) VarShortResumeMAC-Input (or VarShortResumeMAC-Input-NB in NB-IoT);
2> with the KRRCint key and the previously configured integrity protection algorithm; and
2> with all input bits for COUNT, BEARER and DIRECTION set to binary ones;
1> restore the RRC configuration and security context from the stored UE AS context:
1> restore the PDCP state and re-establish PDCP entities for SRB1;
1> resume SRB1;

NOTE: Until successful connection resumption, SRB1 is used only for the transfer RRCConnectionResume message.

The UE shall submit the RRCConnectionResumeRequest message to lower layers for transmission.

The UE shall continue cell re-selection related measurements as well as cell re-selection evaluation. If the conditions for cell re-selection are fulfilled, the UE shall perform cell re-selection as specified in 5.3.3.5.

5.3.3.4 Reception of the RRCConnectionSetup by the UE

NOTE: Prior to this, lower layer signalling is used to allocate a C-RNTI. For further details see TS 36.321 [6];

The UE shall:
1> if the RRCConnectionSetup is received in response to an RRCConnectionResumeRequest:
   2> discard the stored UE AS context and resumeIdentity;
   2> indicate to upper layers that the RRC connection resume has been fallbacked;
1> perform the radio resource configuration procedure in accordance with the received radioResourceConfigDedicated and as specified in 5.3.10;
1> if stored, discard the cell reselection priority information provided by the idleModeMobilityControlInfo or inherited from another RAT;
1> if stored, discard the dedicated offset provided by the redirectedCarrierOffsetDedicated;
1> stop timer T300;
1> stop timer T302, if running;
1> stop timer T303, if running;
1> stop timer T305, if running;
1> stop timer T306, if running;
1> stop timer T308, if running;
1> perform the actions as specified in 5.3.3.7;
1> stop timer T320, if running;
1> stop timer T350, if running;
1> perform the actions as specified in 5.6.12.4;
1> release rclwi-Configuration, if configured, as specified in 5.6.16.2;
1> stop timer T360, if running;
1> stop timer T322, if running;
1> enter RRC_CONNECTED;
1> stop the cell re-selection procedure;
1> consider the current cell to be the PCell;
1> set the content of `RRCConnectionSetupComplete` message as follows:

2> if the `RRCConnectionSetup` is received in response to an `RRCConnectionResumeRequest`:
   3> if upper layers provide an S-TMSI:
      4> set the s-TMSI to the value received from upper layers;
   2> set the `selectedPLMN-Identity` to the PLMN selected by upper layers (see TS 23.122 [11], TS 24.301 [35]) from the PLMN(s) included in the `plmn-IdentityList` in `SystemInformationBlockType1` (or `SystemInformationBlockType1-NB` in NB-IoT);
2> if upper layers provide the 'Registered MME', include and set the `registeredMME` as follows:
   3> if the PLMN identity of the 'Registered MME' is different from the PLMN selected by the upper layers:
      4> include the `plmnIdentity` in the `registeredMME` and set it to the value of the PLMN identity in the 'Registered MME' received from upper layers;
   3> set the `mmegi` and the `mmec` to the value received from upper layers;
2> if upper layers provided the 'Registered MME':
   3> include and set the `gummei-Type` to the value provided by the upper layers;
2> if the UE supports CIoT EPS optimisation(s):
   3> include `attachWithoutPDN-Connectivity` if received from upper layers;
   3> include `up-CIoT-EPS-Optimisation` if received from upper layers;
   3> except for NB-IoT, include `cp-CIoT-EPS-Optimisation` if received from upper layers;
2> if connecting as an RN:
   3> include the `rn-SubframeConfigReq`;
2> set the `dedicatedInfoNAS` to include the information received from upper layers;
2> except for NB-IoT:
   3> if the UE has radio link failure or handover failure information available in `VarRLF-Report` and if the RPLMN is included in `plmn-IdentityList` stored in `VarRLF-Report`:
      4> include `rlf-InfoAvailable`;
   3> if the UE has MBSFN logged measurements available for E-UTRA and if the RPLMN is included in `plmn-IdentityList` stored in `VarLogMeasReport`:
      4> include `logMeasAvailableMBSFN`;
   3> else if the UE has logged measurements available for E-UTRA and if the RPLMN is included in `plmn-IdentityList` stored in `VarLogMeasReport`:
      4> include `logMeasAvailable`;
   3> if the UE has connection establishment failure information available in `VarConnEstFailReport` and if the RPLMN is equal to `plmn-Identity` stored in `VarConnEstFailReport`:
      4> include `connEstFailInfoAvailable`;
   3> include the `mobilityState` and set it to the mobility state (as specified in TS 36.304 [4]) of the UE just prior to entering RRC_CONNECTED state;
3> if the UE supports storage of mobility history information and the UE has mobility history information available in VarMobilityHistoryReport:

4> include the mobilityHistoryAvail;

2> include dcn-ID if a DCN-ID value (see TS 23.401 [41]) is received from upper layers;

2> if UE needs UL gaps during continuous uplink transmission:

3> include ue-CE-NeedULGaps;

2> submit the RRCConnectionSetupComplete message to lower layers for transmission, upon which the procedure ends;

5.3.3.4a Reception of the RRCConnectionResume by the UE

The UE shall:

1> stop timer T300;

1> restore the PDCP state and re-establish PDCP entities for SRB2 and all DRBs;

1> if drb-ContinueROHC is included:

2> indicate to lower layers that stored UE AS context is used and that drb-ContinueROHC is configured;

2> continue the header compression protocol context for the DRBs configured with the header compression protocol;

1> else:

2> indicate to lower layers that stored UE AS context is used;

2> reset the header compression protocol context for the DRBs configured with the header compression protocol;

1> discard the stored UE AS context and resumeIdentity;

1> perform the radio resource configuration procedure in accordance with the received radioResourceConfigDedicated and as specified in 5.3.10;

1> resume SRB2 and all DRBs;

1> if stored, discard the cell reselection priority information provided by the idleModeMobilityControlInfo or inherited from another RAT;

1> if stored, discard the dedicated offset provided by the redirectedCarrierOffsetDedicated;

1> if the RRCConnectionResume message includes the measConfig:

2> perform the measurement configuration procedure as specified in 5.5.2;

1> stop timer T302, if running;

1> stop timer T303, if running;

1> stop timer T305, if running;

1> stop timer T306, if running;

1> stop timer T308, if running;

1> perform the actions as specified in 5.3.3.7;

1> stop timer T320, if running;

1> stop timer T350, if running;
1> perform the actions as specified in 5.6.12.4;
1> stop timer T360, if running;
1> stop timer T322, if running;
1> update the K_{NB} key based on the K_{ASME} key to which the current K_{NB} is associated, using the
nextHopChainingCount value indicated in the RRCConnectionResume message, as specified in TS 33.401 [32];
1> store the nextHopChainingCount value;
1> derive the K_{RRCint} key associated with the previously configured integrity algorithm, as specified in TS 33.401
[32];
1> request lower layers to verify the integrity protection of the RRCConnectionResume message, using the
previously configured algorithm and the K_{RRCint} key;
1> if the integrity protection check of the RRCConnectionResume message fails:
   2> perform the actions upon leaving RRC_CONNECTED as specified in 5.3.12, with release cause 'other', upon
which the procedure ends;
1> derive the K_{RRCenc} key and the K_{UPenc} key associated with the previously configured ciphering algorithm, as
specified in TS 33.401 [32];
1> configure lower layers to resume integrity protection using the previously configured algorithm and the K_{RRCint}
key immediately, i.e., integrity protection shall be applied to all subsequent messages received and sent by the
UE;
1> configure lower layers to resume ciphering and to apply the ciphering algorithm, the K_{RRCenc} key and the K_{UPenc}
key, i.e. the ciphering configuration shall be applied to all subsequent messages received and sent by the UE;
1> enter RRC_CONNECTED;
1> indicate to upper layers that the suspended RRC connection has been resumed;
1> stop the cell re-selection procedure;
1> consider the current cell to be the PCell;
1> set the content of RRCConnectionResumeComplete message as follows:
   2> set the selectedPLMN-Identity to the PLMN selected by upper layers (see TS 23.122 [11], TS 24.301 [35])
from the PLMN(s) included in the plmn-IdentityList in SystemInformationBlockType1;
2> set the dedicatedInfoNAS to include the information received from upper layers;
2> except for NB-IoT:
   3> if the UE has radio link failure or handover failure information available in VarRLF-Report and if the
RPLMN is included in plmn-IdentityList stored in VarRLF-Report:
      4> include rlf-InfoAvailable;
   3> if the UE has MBSFN logged measurements available for E-UTRA and if the RPLMN is included in
plmn-IdentityList stored in VarLogMeasReport:
      4> include logMeasAvailableMBSFN;
   3> else if the UE has logged measurements available for E-UTRA and if the RPLMN is included in plmn-
IdentityList stored in VarLogMeasReport:
      4> include logMeasAvailable;
   3> if the UE has connection establishment failure information available in VarConnEstFailReport and if the
RPLMN is equal to plmn-Identity stored in VarConnEstFailReport:
4> include connEstFailInfoAvailable;

3> include the mobilityState and set it to the mobility state (as specified in TS 36.304 [4]) of the UE just prior to entering RRC_CONNECTED state;

3> if the UE supports storage of mobility history information and the UE has mobility history information available in VarMobilityHistoryReport:

4> include mobilityHistoryAvail;

1> submit the RRCConnectionResumeComplete message to lower layers for transmission;

1> the procedure ends.

5.3.3.5 Cell re-selection while T300, T302, T303, T305, T306, or T308 is running

The UE shall:

1> if cell reselection occurs while T300, T302, T303, T305, T306, or T308 is running:

2> if timer T302, T303, T305,T306, and/or T308 is running:

3> stop timer T302, T303, T305, T306, and T308, whichever ones were running;

3> perform the actions as specified in 5.3.3.7;

2> if timer T300 is running:

3> stop timer T300;

3> reset MAC, release the MAC configuration and re-establish RLC for all RBs that are established;

3> inform upper layers about the failure to establish the RRC connection or failure to resume the RRC connection with suspend indication;

5.3.3.6 T300 expiry

The UE shall:

1> if timer T300 expires:

2> reset MAC, release the MAC configuration and re-establish RLC for all RBs that are established;

2> if the UE is a NB-IoT UE:

3> if connEstFailOffset is included in SystemInformationBlockType2-NB:

4> use connEstFailOffset for the parameter Qoffsettemp for the concerned cell when performing cell selection and reselection according to TS 36.304 [4];

3> else:

4> use value of infinity for the parameter Qoffsettemp for the concerned cell when performing cell selection and reselection according to TS 36.304 [4];

NOTE 0: For NB-IoT, the number of times that the UE detects T300 expiry on the same cell before applying connEstFailOffset and the amount of time that the UE applies connEstFailOffset before removing the offset from evaluation of the cell is up to UE implementation.

2> else if the UE supports RRC Connection Establishment failure temporary Qoffset and T300 has expired a consecutive connEstFailCount times on the same cell for which txFailParams is included in SystemInformationBlockType2:

3> for a period as indicated by connEstFailOffsetValidity:
use connEstFailOffset for the parameter Qoffsettemp for the concerned cell when performing cell selection and reselection according to TS 36.304 [4] and TS 25.304 [40];

NOTE 1: When performing cell selection, if no suitable or acceptable cell can be found, it is up to UE implementation whether to stop using connEstFailOffset for the parameter Qoffsettemp during connEstFailOffsetValidity for the concerned cell.

except for NB-IoT, store the following connection establishment failure information in the VarConnEstFailReport by setting its fields as follows:

1> clear the information included in VarConnEstFailReport, if any;

2> set the plmn-Identity to the PLMN selected by upper layers (see TS 23.122 [11], TS 24.301 [35]) from the PLMN(s) included in the plmn-IdentityList in SystemInformationBlockType1;

3> set the failedCellId to the global cell identity of the cell where connection establishment failure is detected;

3> set the measResultFailedCell to include the RSRP and RSRQ, if available, of the cell where connection establishment failure is detected and based on measurements collected up to the moment the UE detected the failure;

3> if available, set the measResultNeighCells, in order of decreasing ranking-criterion as used for cell re-selection, to include neighbouring cell measurements for at most the following number of neighbouring cells: 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency/ set of frequencies (GERAN) per RAT and according to the following:

4> for each neighbour cell included, include the optional fields that are available;

NOTE 2: The UE includes the latest results of the available measurements as used for cell reselection evaluation, which are performed in accordance with the performance requirements as specified in TS 36.133 [16].

3> if detailed location information is available, set the content of the locationInfo as follows:

4> include the locationCoordinates;

4> include the horizontalVelocity, if available;

3> set the numberOfPreamblesSent to indicate the number of preambles sent by MAC for the failed random access procedure;

3> set contentionDetected to indicate whether contention resolution was not successful as specified in TS 36.321 [6] for at least one of the transmitted preambles for the failed random access procedure;

3> set maxTxPowerReached to indicate whether or not the maximum power level was used for the last transmitted preamble, see TS 36.321 [6];

2> inform upper layers about the failure to establish the RRC connection or failure to resume the RRC connection with suspend indication, upon which the procedure ends;

The UE may discard the connection establishment failure information, i.e. release the UE variable VarConnEstFailReport, 48 hours after the failure is detected, upon power off or upon detach.

5.3.3.7 T302, T303, T305, T306, or T308 expiry or stop

The UE shall:

1> if timer T302 expires or is stopped:

2> inform upper layers about barring alleviation for mobile terminating access;

2> if timer T303 is not running:

3> inform upper layers about barring alleviation for mobile originating calls;

2> if timer T305 is not running:
3GPP TS 36.331 version 14.4.0 Relea

3GPP TS 36.331 version 14.4.0 Release 14

78

ETSI

ETSI TS 136 331 V14.4.0 (2017-10)

3> inform upper layers about barring alleviation for mobile originating signalling;

2> if timer T306 is not running:

3> inform upper layers about barring alleviation for mobile originating CS fallback;

2> if timer T308 is not running:

3> inform upper layers about barring alleviation for ACDC;

1> if timer T303 expires or is stopped:

2> if timer T302 is not running:

3> inform upper layers about barring alleviation for mobile originating calls;

1> if timer T305 expires or is stopped:

2> if timer T302 is not running:

3> inform upper layers about barring alleviation for mobile originating signalling;

1> if timer T306 expires or is stopped:

2> if timer T302 is not running:

3> inform upper layers about barring alleviation for mobile originating CS fallback;

1> if timer T308 expires or is stopped:

2> if timer T302 is not running:

3> inform upper layers about barring alleviation for ACDC;

5.3.3.8 Reception of the **RRCConnectionReject** by the UE

The UE shall:

1> stop timer T300;

1> reset MAC and release the MAC configuration;

1> except for NB-IoT, start timer T302, with the timer value set to the waitTime;

1> if the UE is a NB-IoT UE; or

1> if deprioritisationReq is included and the UE supports RRC Connection Reject with deprioritisation:

2> start or restart timer T325 with the timer value set to the deprioritisationTimer signalled;

2> store the deprioritisationReq until T325 expiry;

NOTE: The UE stores the deprioritisation request irrespective of any cell reselection absolute priority assignments (by dedicated or common signalling) and regardless of RRC connections in E-UTRAN or other RATs unless specified otherwise.

1> if the **RRCConnectionReject** is received in response to an **RRCConnectionResumeRequest**:

2> if the rrc-SuspendIndication is not present:

3> discard the stored UE AS context and resumeIdentity;
3> inform upper layers about the failure to resume the RRC connection without suspend indication and that access barring for mobile originating calls, mobile originating signalling, mobile terminating access and except for NB-IoT for mobile originating CS fallback is applicable, upon which the procedure ends;

2> else:

3> suspend SRB1;

3> inform upper layers about the failure to resume the RRC connection with suspend indication and that access barring for mobile originating calls, mobile originating signalling, mobile terminating access and except for NB-IoT for mobile originating CS fallback is applicable, upon which the procedure ends;

1> else

2> inform upper layers about the failure to establish the RRC connection and that access barring for mobile originating calls, mobile originating signalling, mobile terminating access and except for NB-IoT, for mobile originating CS fallback is applicable, upon which the procedure ends;

5.3.3.9 Abortion of RRC connection establishment

If upper layers abort the RRC connection establishment procedure while the UE has not yet entered RRC_CONNECTED, the UE shall:

1> stop timer T300, if running;

1> reset MAC, release the MAC configuration and re-establish RLC for all RBs that are established;

5.3.3.10 Handling of SSAC related parameters

Upon request from the upper layers, the UE shall:

1> if SystemInformationBlockType2 includes ac-BarringPerPLMN-List and the ac-BarringPerPLMN-List contains an AC-BarringPerPLMN entry with the plmn-IdentityIndex corresponding to the PLMN selected by upper layers (see TS 23.122 [11], TS 24.301 [35]):

2> select the AC-BarringPerPLMN entry with the plmn-IdentityIndex corresponding to the PLMN selected by upper layers;

2> in the remainder of this procedure, use the selected AC-BarringPerPLMN entry (i.e. presence or absence of access barring parameters in this entry) irrespective of the common access barring parameters included in SystemInformationBlockType2;

1> else:

2> in the remainder of this procedure use the common access barring parameters (i.e. presence or absence of these parameters) included in SystemInformationBlockType2;

1> set the local variables BarringFactorForMMTEL-Voice and BarringTimeForMMTEL-Voice as follows:

2> if ssac-BarringForMMTEL-Voice is present:

3> if the UE has one or more Access Classes, as stored on the USIM, with a value in the range 11..15, which is valid for the UE to use according to TS 22.011 [10] and TS 23.122 [11], and

NOTE: ACs 12, 13, 14 are only valid for use in the home country and ACs 11, 15 are only valid for use in the HPLMN/ EHPLMN.

3> if, for at least one of these Access Classes, the corresponding bit in the ac-BarringForSpecialAC contained in ssac-BarringForMMTEL-Voice is set to zero:

4> set BarringFactorForMMTEL-Voice to one and BarringTimeForMMTEL-Voice to zero;

3> else:
4> set BarringFactorForMMTEL-Voice and BarringTimeForMMTEL-Voice to the value of ac-
BarringFactor and ac-BarringTime included in ssac-BarringForMMTEL-Voice, respectively;
2> else set BarringFactorForMMTEL-Voice to one and BarringTimeForMMTEL-Voice to zero;
1> set the local variables BarringFactorForMMTEL-Video and BarringTimeForMMTEL-Video as follows:
2> if ssac-BarringForMMTEL-Video is present:
3> if the UE has one or more Access Classes, as stored on the USIM, with a value in the range 11..15, which
is valid for the UE to use according to TS 22.011 [10] and TS 23.122 [11], and
3> if, for at least one of these Access Classes, the corresponding bit in the ac-BarringForSpecialAC
contained in ssac-BarringForMMTEL-Video is set to zero:
4> set BarringFactorForMMTEL-Video to one and BarringTimeForMMTEL-Video to zero;
3> else:
4> set BarringFactorForMMTEL-Video and BarringTimeForMMTEL-Video to the value of ac-
BarringFactor and ac-BarringTime included in ssac-BarringForMMTEL-Video, respectively;
2> else set BarringFactorForMMTEL-Video to one and BarringTimeForMMTEL-Video to zero;
1> forward the variables BarringFactorForMMTEL-Voice, BarringTimeForMMTEL-Voice,
BarringFactorForMMTEL-Video and BarringTimeForMMTEL-Video to the upper layers;

5.3.3.11 Access barring check
1> if timer T302 or "Tbarring" is running:
2> consider access to the cell as barred;
1> else if SystemInformationBlockType2 includes "AC barring parameter":
2> if the UE has one or more Access Classes, as stored on the USIM, with a value in the range 11..15, which is
valid for the UE to use according to TS 22.011 [10] and TS 23.122 [11], and
NOTE: ACs 12, 13, 14 are only valid for use in the home country and ACs 11, 15 are only valid for use in the
HPLMN/ EHPLMN.
2> for at least one of these valid Access Classes the corresponding bit in the ac-BarringForSpecialAC contained
in "AC barring parameter" is set to zero:
3> consider access to the cell as not barred;
2> else:
3> draw a random number 'rand' uniformly distributed in the range: 0 ≤ rand < 1;
3> if 'rand' is lower than the value indicated by ac-BarringFactor included in "AC barring parameter":
4> consider access to the cell as not barred;
3> else:
4> consider access to the cell as barred;
1> else:
2> consider access to the cell as not barred;
1> if access to the cell is barred and both timers T302 and "Tbarring" are not running:
2> draw a random number 'rand' that is uniformly distributed in the range 0 ≤ rand < 1;
start timer "Tbarring" with the timer value calculated as follows, using the ac-BarringTime included in "AC barring parameter":

"Tbarring" = (0.7+ 0.6 * rand) * ac-BarringTime;

5.3.3.12 EAB check

The UE shall:

1> if SystemInformationBlockType14 is present and includes the eab-Param:

2> if the eab-Common is included in the eab-Param:

3> if the UE belongs to the category of UEs as indicated in the eab-Category contained in eab-Common; and

3> if for the Access Class of the UE, as stored on the USIM and with a value in the range 0..9, the corresponding bit in the eab-BarringBitmap contained in eab-Common is set to one:

4> consider access to the cell as barred;

3> else:

4> consider access to the cell as not barred due to EAB;

2> else (the eab-PerPLMN-List is included in the eab-Param):

3> select the entry in the eab-PerPLMN-List corresponding to the PLMN selected by upper layers (see TS 23.122 [11], TS 24.301 [35]);

3> if the eab-Config for that PLMN is included:

4> if the UE belongs to the category of UEs as indicated in the eab-Category contained in eab-Config; and

4> if for the Access Class of the UE, as stored on the USIM and with a value in the range 0..9, the corresponding bit in the eab-BarringBitmap contained in eab-Config is set to one:

5> consider access to the cell as barred;

4> else:

5> consider access to the cell as not barred due to EAB;

3> else:

4> consider access to the cell as not barred due to EAB;

1> else:

2> consider access to the cell as not barred due to EAB;

5.3.3.13 Access barring check for ACDC

The UE shall:

1> if timer T302 is running:

2> consider access to the cell as barred;

1> else if SystemInformationBlockType2 includes "ACDC barring parameter":

2> draw a random number 'rand' uniformly distributed in the range: 0 ≤ rand < 1;

2> if 'rand' is lower than the value indicated by ac-BarringFactor included in "ACDC barring parameter":

3> consider access to the cell as not barred;
else:
    consider access to the cell as not barred;

if access to the cell is barred and timer T302 is not running:

draw a random number \textit{rand} that is uniformly distributed in the range \(0 \leq \textit{rand} < 1\);

start timer "Tbarring" with the timer value calculated as follows, using the \textit{ac-BarringTime} included in "ACDC barring parameter":

\[ Tbarring = (0.7 + 0.6 \times \textit{rand}) \times \textit{ac-BarringTime}. \]

### 5.3.3.14 Access Barring check for NB-IoT

The UE shall:

1. if \textit{ab-Enabled} included in \textit{MasterInformationBlock-NB} is set to \textit{TRUE} and \textit{SystemInformationBlockType14-NB} is broadcast:

2. if the \textit{ab-Common} is included in \textit{ab-Param}:

   3. if the UE belongs to the category of UEs as indicated in the \textit{ab-Category} contained in \textit{ab-Common}; and

   3. if for the Access Class of the UE, as stored on the USIM and with a value in the range 0..9, the corresponding bit in the \textit{ab-BarringBitmap} contained in \textit{ab-Common} is set to one:

   4. if the \textit{establishmentCause} received from higher layers is set to \textit{mo-ExceptionData} and \textit{ab-BarringForExceptionData} is set to \textit{FALSE} in the \textit{ab-Common}:

      5. consider access to the cell as not barred;

   4. else:

      5. if the UE has one or more Access Classes, as stored on the USIM, with a value in the range 11..15, which is valid for the UE to use according to TS 22.011 [10] and TS 23.122 [11] and for at least one of these valid Access Classes for the UE, the corresponding bit in the \textit{ab-BarringForSpecialAC} contained in \textit{ab-Common} is set to zero:

      NOTE 1: ACs 12, 13, 14 are only valid for use in the home country and ACs 11, 15 are only valid for use in the HPLMN/ EHPLMN.

      6. consider access to the cell as not barred;

   5. else:

      6. consider access to the cell as barred;

3. else:

4. consider access to the cell as not barred;

2. else (the \textit{ab-PerPLMN-List} is included in the \textit{ab-Param}):

3. select the \textit{ab-PerPLMN} entry in \textit{ab-PerPLMN-List} corresponding to the PLMN selected by upper layers (see TS 23.122 [11], TS 24.301 [35]);

3. if the \textit{ab-Config} for that PLMN is included:

4. if the UE belongs to the category of UEs as indicated in the \textit{ab-Category} contained in \textit{ab-Config}; and

4. if for the Access Class of the UE, as stored on the USIM and with a value in the range 0..9, the corresponding bit in the \textit{ab-BarringBitmap} contained in \textit{ab-Config} is set to one:
5> if the \textit{establishmentCause} received from higher layers is set to \textit{mo-ExceptionData} and \textit{ab-BarringForExceptionData} is set to \textit{FALSE} in the \textit{ab-Config}:

6> consider access to the cell as not barred;

5> else:

6> if the UE has one or more Access Classes, as stored on the USIM, with a value in the range 11..15, which is valid for the UE to use according to TS 22.011 [10] and TS 23.122 [11] and for at least one of these valid Access Classes for the UE, the corresponding bit in the \textit{ab-BarringForSpecialAC} contained in \textit{ab-Config} is set to \textit{zero}:

7> consider access to the cell as not barred;

6> else:

7> consider access to the cell as barred;

4> else:

5> consider access to the cell as not barred;

3> else:

4> consider access to the cell as not barred;

1> else:

2> consider access to the cell as not barred;

\textbf{5.3.3.15 Failure to deliver NAS information in RRCConnectionSetupComplete message}

The UE shall:

1> if the UE is a NB-IoT UE and radio link failure occurs before the successful delivery of \textit{RRCConnectionSetupComplete} message has been confirmed by lower layers:

2> inform upper layers about the possible failure to deliver the NAS information contained in the \textit{RRCConnectionSetupComplete} message:

\textbf{5.3.4 Initial security activation}

\textbf{5.3.4.1 General}

\begin{center}
\begin{tikzpicture}
  \node[draw=black] (UE) at (0,0) {UE};
  \node[draw=black] (EUTRAN) at (3,0) {EUTRAN};
  \draw[->] (UE) -- node[midway,above] {\textit{SecurityModeCommand}} (EUTRAN);
  \draw[->] (EUTRAN) -- node[midway,above] {\textit{SecurityModeComplete}} (UE);
\end{tikzpicture}
\end{center}

\textit{Figure 5.3.4.1-1: Security mode command, successful}
The purpose of this procedure is to activate AS security upon RRC connection establishment.

5.3.4.2 Initiation

E-UTRAN initiates the security mode command procedure to a UE in RRC_CONNECTED. Moreover, E-UTRAN applies the procedure as follows:

- when only SRB1, or for NB-IoT SRB1 and SRB1bis, is established, i.e. prior to establishment of SRB2 and/or DRBs.

5.3.4.3 Reception of the SecurityModeCommand by the UE

The UE shall:

1> derive the $K_{\text{SNB}}$ key, as specified in TS 33.401 [32];

1> derive the $K_{\text{RRCint}}$ key associated with the integrityProtAlgorithm indicated in the SecurityModeCommand message, as specified in TS 33.401 [32];

1> request lower layers to verify the integrity protection of the SecurityModeCommand message, using the algorithm indicated by the integrityProtAlgorithm as included in the SecurityModeCommand message and the $K_{\text{RRCint}}$ key;

1> if the SecurityModeCommand message passes the integrity protection check:

2> derive the $K_{\text{RRCenc}}$ key and the $K_{\text{UPenc}}$ key associated with the cipheringAlgorithm indicated in the SecurityModeCommand message, as specified in TS 33.401 [32];

2> if connected as an RN:

3> derive the $K_{\text{UPint}}$ key associated with the integrityProtAlgorithm indicated in the SecurityModeCommand message, as specified in TS 33.401 [32];

2> configure lower layers to apply integrity protection using the indicated algorithm and the $K_{\text{RRCint}}$ key immediately, i.e. integrity protection shall be applied to all subsequent messages received and sent by the UE, including the SecurityModeComplete message;

2> configure lower layers to apply ciphering using the indicated algorithm, the $K_{\text{RRCenc}}$ key and the $K_{\text{UPenc}}$ key after completing the procedure, i.e. ciphering shall be applied to all subsequent messages received and sent by the UE, except for the SecurityModeComplete message which is sent unciphered;

2> if connected as an RN:

3> configure lower layers to apply integrity protection using the indicated algorithm and the $K_{\text{UPint}}$ key, for DRBs that are subsequently configured to apply integrity protection, if any;

2> consider AS security to be activated;

2> upon RRC connection establishment, if UE does not need UL gaps during continuous uplink transmission:
3GPP TS 36.331 version 14.4.0 Release 14

5.3.5 RRC connection reconfiguration

5.3.5.1 General

The purpose of this procedure is to modify an RRC connection, e.g. to establish/ modify/ release RBs, to perform handover, to setup/ modify/ release measurements, to add/ modify/ release SCells. As part of the procedure, NAS dedicated information may be transferred from E-UTRAN to the UE.

5.3.5.2 Initiation

E-UTRAN may initiate the RRC connection reconfiguration procedure to a UE in RRC_CONNECTED. E-UTRAN applies the procedure as follows:

- the mobilityControlInfo is included only when AS-security has been activated, and SRB2 with at least one DRB are setup and not suspended;
- the establishment of RBs (other than SRB1, that is established during RRC connection establishment) is included only when AS security has been activated;
- the addition of SCells is performed only when AS security has been activated;
5.3.5.3 Reception of an RRCConnectionReconfiguration not including the mobilityControlInfo by the UE

If the RRCConnectionReconfiguration message does not include the mobilityControlInfo and the UE is able to comply with the configuration included in this message, the UE shall:

1> if this is the first RRCConnectionReconfiguration message after successful completion of the RRC connection re-establishment procedure:

2> re-establish PDCP for SRB2 and for all DRBs that are established, if any;
2> re-establish RLC for SRB2 and for all DRBs that are established, if any;
2> if the RRCConnectionReconfiguration message includes the fullConfig:
   3> perform the radio configuration procedure as specified in 5.3.5.8;
2> if the RRCConnectionReconfiguration message includes the radioResourceConfigDedicated:
   3> perform the radio resource configuration procedure as specified in 5.3.10;
2> resume SRB2 and all DRBs that are suspended, if any;

NOTE 1: The handling of the radio bearers after the successful completion of the PDCP re-establishment, e.g. the re-transmission of unacknowledged PDCP SDUs (as well as the associated status reporting), the handling of the SN and the HFN, is specified in TS 36.323 [8].

NOTE 2: The UE may discard SRB2 messages and data that it receives prior to completing the reconfiguration used to resume these bearers.

1> else:

2> if the RRCConnectionReconfiguration message includes the radioResourceConfigDedicated:
   3> perform the radio resource configuration procedure as specified in 5.3.10;

NOTE 3: If the RRCConnectionReconfiguration message includes the establishment of radio bearers other than SRB1, the UE may start using these radio bearers immediately, i.e. there is no need to wait for an outstanding acknowledgment of the SecurityModeComplete message.

1> if the received RRCConnectionReconfiguration includes the sCellToReleaseList:
   2> perform SCell release as specified in 5.3.10.3a;
1> if the received RRCConnectionReconfiguration includes the sCellToAddModList:
   2> perform SCell addition or modification as specified in 5.3.10.3b;
1> if the received RRCConnectionReconfiguration includes the scg-Configuration; or
1> if the current UE configuration includes one or more split DRBs and the received RRCConnectionReconfiguration includes radioResourceConfigDedicated including drb-ToAddModList:
   2> perform SCG reconfiguration as specified in 5.3.10.10;
1> if the received RRCConnectionReconfiguration includes the systemInformationBlockType1Dedicated:
   2> perform the actions upon reception of the SystemInformationBlockType1 message as specified in 5.2.2.7;
1> if the RRCConnectionReconfiguration message includes the dedicatedInfoNASList:
   2> forward each element of the dedicatedInfoNASList to upper layers in the same order as listed;
1> if the RRCConnectionReconfiguration message includes the measConfig:
   2> perform the measurement configuration procedure as specified in 5.5.2;
1> perform the measurement identity autonomous removal as specified in 5.5.2.2a;
if the \textit{RRCConnectionReconfiguration} message includes the \textit{otherConfig}:

2\> perform the other configuration procedure as specified in 5.3.10.9;

if the \textit{RRCConnectionReconfiguration} message includes the \textit{sl-DiscConfig} or \textit{sl-CommConfig}:

2\> perform the sidelink dedicated configuration procedure as specified in 5.3.10.15;

if the \textit{RRCConnectionReconfiguration} message includes the \textit{sl-V2X-ConfigDedicated}:

2\> perform the V2X sidelink communication dedicated configuration procedure as specified in 5.3.10.15a;

if the \textit{RRCConnectionReconfiguration} message includes \textit{wlan-OffloadInfo}:

2\> perform the dedicated WLAN offload configuration procedure as specified in 5.6.12.2;

if the \textit{RRCConnectionReconfiguration} message includes \textit{rclwi-Configuration}:

2\> perform the WLAN traffic steering command procedure as specified in 5.6.16.2;

if the \textit{RRCConnectionReconfiguration} message includes \textit{lwa-Configuration}:

2\> perform the LWA configuration procedure as specified in 5.6.14.2;

if the \textit{RRCConnectionReconfiguration} message includes \textit{lwip-Configuration}:

2\> perform the LWIP reconfiguration procedure as specified in 5.6.17.2;

upon RRC connection establishment, if UE does not need UL gaps during continuous uplink transmission:

2\> configure lower layers to stop using UL gaps during continuous uplink transmission in FDD for \textit{RRCConnectionReconfigurationComplete} message and subsequent uplink transmission in RRC\_CONNECTED except for UL transmissions as specified in TS36.211 [21];

set the content of \textit{RRCConnectionReconfigurationComplete} message as follows:

2\> if the \textit{RRCConnectionReconfiguration} message includes \textit{perCC-GapIndicationRequest}:

3\> include \textit{perCC-GapIndicationList} and \textit{numFreqEffective};

2\> if the frequencies are configured for reduced measurement performance:

3\> include \textit{numFreqEffectiveReduced};

submit the \textit{RRCConnectionReconfigurationComplete} message to lower layers for transmission using the new configuration, upon which the procedure ends;

5.3.5.4 Reception of an \textit{RRCConnectionReconfiguration} including the \textit{mobilityControlInfo} by the UE (handover)

If the \textit{RRCConnectionReconfiguration} message includes the \textit{mobilityControlInfo} and the UE is able to comply with the configuration included in this message, the UE shall:

1\> stop timer T310, if running;

1\> stop timer T312, if running;

1\> start timer T304 with the timer value set to \textit{t304}, as included in the \textit{mobilityControlInfo};

1\> stop timer T370, if running;

1\> if the \textit{carrierFreq} is included:

2\> consider the target PCell to be one on the frequency indicated by the \textit{carrierFreq} with a physical cell identity indicated by the \textit{targetPhysCellId};

1\> else:
2> consider the target PCell to be one on the frequency of the source PCell with a physical cell identity indicated by the `targetPhysCellId`;

1> start synchronising to the DL of the target PCell;

NOTE 1: The UE should perform the handover as soon as possible following the reception of the RRC message triggering the handover, which could be before confirming successful reception (HARQ and ARQ) of this message.

1> if BL UE or UE in CE:

2> if `sameSFN-Indication` is not present in `mobilityControlInfo`:

3> acquire the `MasterInformationBlock` in the target PCell;

1> if `makeBeforeBreak` is configured:

2> perform the remainder of this procedure including and following resetting MAC after the UE has stopped the uplink transmission/downlink reception with the source cell(s);

NOTE 1a: It is up to UE implementation when to stop the uplink transmission/ downlink reception with the source cell(s) to initiate re-tuning for connection to the target cell [16], if `makeBeforeBreak` is configured.

1> reset MCG MAC and SCG MAC, if configured;

1> re-establish PDCP for all RBs that are established;

NOTE 2: The handling of the radio bearers after the successful completion of the PDCP re-establishment, e.g. the re-transmission of unacknowledged PDCP SDUs (as well as the associated status reporting), the handling of the SN and the HFN, is specified in TS 36.323 [8].

1> re-establish MCG RLC and SCG RLC, if configured, for all RBs that are established;

1> configure lower layers to consider the SCell(s) other than the PSCell, if configured, to be in deactivated state;

1> apply the value of the `newUE-Identity` as the C-RNTI;

1> if the `RRCConnectionReconfiguration` message includes the `fullConfig`:

2> perform the radio configuration procedure as specified in 5.3.5.8;

1> configure lower layers in accordance with the received `radioResourceConfigCommon`;

1> if the received `RRCConnectionReconfiguration` message includes the `rach-Skip`:

2> configure lower layers to apply the `rach-Skip` for the target MCG, as specified in TS 36.213 [23] and 36.321 [6];

1> configure lower layers in accordance with any additional fields, not covered in the previous, if included in the received `mobilityControlInfo`;

1> if the received `RRCConnectionReconfiguration` includes the `sCellToReleaseList`:

2> perform SCell release as specified in 5.3.10.3a;

1> if the received `RRCConnectionReconfiguration` includes the `scg-Configuration`; or

1> if the current UE configuration includes one or more split DRBs and the received `RRCConnectionReconfiguration` includes `radioResourceConfigDedicated` including `drb-ToAddModList`:

2> perform SCG reconfiguration as specified in 5.3.10.10;

1> if the `RRCConnectionReconfiguration` message includes the `radioResourceConfigDedicated`:

2> perform the radio resource configuration procedure as specified in 5.3.10;

1> if the `keyChangeIndicator` received in the `securityConfigHO` is set to `TRUE`:
update the $K_{\text{NB}}$ key based on the $K_{\text{NAS}}$ key taken into use with the latest successful NAS SMC procedure, as specified in TS 33.401 [32];

else:

update the $K_{\text{NB}}$ key based on the current $K_{\text{NB}}$ or the NH, using the \textit{nextHopChainingCount} value indicated in the \textit{securityConfigHO}, as specified in TS 33.401 [32];

store the \textit{nextHopChainingCount} value;

if the \textit{securityAlgorithmConfig} is included in the \textit{securityConfigHO}:

derive the $K_{\text{RRCint}}$ key associated with the \textit{integrityProtAlgorithm}, as specified in TS 33.401 [32];

if connected as an RN:

derive the $K_{\text{UPint}}$ key associated with the \textit{integrityProtAlgorithm}, as specified in TS 33.401 [32];

derive the $K_{\text{RRCenc}}$ key and the $K_{\text{UPenc}}$ key associated with the \textit{cipheringAlgorithm}, as specified in TS 33.401 [32];

else:

derive the $K_{\text{RRCint}}$ key associated with the current integrity algorithm, as specified in TS 33.401 [32];

if connected as an RN:

derive the $K_{\text{UPint}}$ key associated with the current integrity algorithm, as specified in TS 33.401 [32];

derive the $K_{\text{RRCenc}}$ and the $K_{\text{UPenc}}$ key associated with the current ciphering algorithm, as specified in TS 33.401 [32];

configure lower layers to apply the integrity protection algorithm and the $K_{\text{RRCint}}$ key, i.e. the integrity protection configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;

configure lower layers to apply the ciphering algorithm, the $K_{\text{RRCenc}}$ key and the $K_{\text{UPenc}}$ key, i.e. the ciphering configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;

if connected as an RN:

configure lower layers to apply the integrity protection algorithm and the $K_{\text{UPint}}$ key, for current or subsequently established DRBs that are configured to apply integrity protection, if any;

if the received RRCConnectionReconfiguration includes the sCellToAddModList:

perform SCell addition or modification as specified in 5.3.10.3b;

if the received RRCConnectionReconfiguration includes the systemInformationBlockType1Dedicated:

perform the actions upon reception of the SystemInformationBlockType1 message as specified in 5.2.2.7;

perform the measurement related actions as specified in 5.5.6.1;

if the RRCConnectionReconfiguration message includes the measConfig:

perform the measurement configuration procedure as specified in 5.5.2;

perform the measurement identity autonomous removal as specified in 5.5.2.2a;

release reportProximityConfig and clear any associated proximity status reporting timer;

if the RRCConnectionReconfiguration message includes the otherConfig:

perform the other configuration procedure as specified in 5.3.10.9;

if the RRCConnectionReconfiguration message includes the sl-DiscConfig or sl-CommConfig:
2> perform the sidelink dedicated configuration procedure as specified in 5.3.10.15;

1> if the `RRCConnectionReconfiguration` message includes `wlan-OffloadInfo`:
   2> perform the dedicated WLAN offload configuration procedure as specified in 5.6.12.2;

1> if `handoverWithoutWT-Change` is not configured:
   2> release the LWA configuration, if configured, as described in 5.6.14.3;

1> if the `RRCConnectionReconfiguration` message includes `rclwi-Configuration`:
   2> perform the WLAN traffic steering command procedure as specified in 5.6.16.2;

1> if the `RRCConnectionReconfiguration` message includes `lwa-Configuration`:
   2> perform the LWA configuration procedure as specified in 5.6.14.2;

1> if the `RRCConnectionReconfiguration` message includes `lwip-Configuration`:
   2> perform the LWIP reconfiguration procedure as specified in 5.6.17.2;

1> if the `RRCConnectionReconfiguration` message includes the `sl-V2X-ConfigDedicated` or `mobilityControlInfoV2X`:
   2> perform the V2X sidelink communication dedicated configuration procedure as specified in 5.3.10.15a;

1> set the content of `RRCConnectionReconfigurationComplete` message as follows:
   2> if the UE has radio link failure or handover failure information available in `VarRLF-Report` and if the RPLMN is included in `plmn-IdentityList` stored in `VarRLF-Report`:
      3> include `rlf-InfoAvailable`;

   2> if the UE has MBSFN logged measurements available for E-UTRA and if the RPLMN is included in `plmn-IdentityList` stored in `VarLogMeasReport` and if T330 is not running:
      3> include `logMeasAvailableMBSFN`;

   2> else if the UE has logged measurements available for E-UTRA and if the RPLMN is included in `plmn-IdentityList` stored in `VarLogMeasReport`:
      3> include `logMeasAvailable`;

   2> if the UE has connection establishment failure information available in `VarConnEstFailReport` and if the RPLMN is equal to `plmn-Identity` stored in `VarConnEstFailReport`:
      3> include `connEstFailInfoAvailable`;

   2> if the `RRCConnectionReconfiguration` message includes `perCC-GapIndicationRequest`:
      3> include `perCC-GapIndicationList` and `numFreqEffective`;

   2> if the frequencies are configured for reduced measurement performance:
      3> include `numFreqEffectiveReduced`;

1> submit the `RRCConnectionReconfigurationComplete` message to lower layers for transmission;

1> if MAC successfully completes the random access procedure; or

1> if MAC indicates the successful reception of a PDCCH transmission addressed to C-RNTI and if `rach-Skip` is configured:
   2> stop timer T304;
release ul-ConfigInfo, if configured;

apply the parts of the CQI reporting configuration and the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the target PCell, if any;

apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the target PCell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of the target PCell;

NOTE 3: Whenever the UE shall setup or reconfigure a configuration in accordance with a field that is received it applies the new configuration, except for the cases addressed by the above statements.

if the UE is configured to provide IDC indications:

if the UE has transmitted an InDeviceCoexIndication message during the last 1 second preceding reception of the RRCConnectionReconfiguration message including mobilityControlInfo:

initiate transmission of the InDeviceCoexIndication message in accordance with 5.6.9.3;

if the UE is configured to provide power preference indications, SPS assistance information, delay budget report or maximum bandwidth preference indications:

if the UE has transmitted a UEAssistanceInformation message during the last 1 second preceding reception of the RRCConnectionReconfiguration message including mobilityControlInfo:

initiate transmission of the UEAssistanceInformation message in accordance with 5.6.10.3;

if SystemInformationBlockType15 is broadcast by the PCell:

if the UE has transmitted a MBMSInterestIndication message during the last 1 second preceding reception of the RRCConnectionReconfiguration message including mobilityControlInfo:

ensure having a valid version of SystemInformationBlockType15 for the PCell;

determine the set of MBMS frequencies of interest in accordance with 5.8.5.3;

determine the set of MBMS services of interest in accordance with 5.8.5.3a;

initiate transmission of the MBMSInterestIndication message in accordance with 5.8.5.4;

if SystemInformationBlockType18 is broadcast by the target PCell; and the UE transmitted a SidelinkUEInformation message indicating a change of sidelink communication related parameters relevant in target PCell (i.e. change of commRxInterestedFreq or commTxResourceReq, commTxResourceReqUC if SystemInformationBlockType18 includes commTxResourceUC-Allowed or commTxResourceInfoReqRelay if PCell broadcasts SystemInformationBlockType19 including discConfigRelay) during the last 1 second preceding reception of the RRCConnectionReconfiguration message including mobilityControlInfo; or

if SystemInformationBlockType19 is broadcast by the target PCell; and the UE transmitted a SidelinkUEInformation message indicating a change of sidelink discovery related parameters relevant in target PCell (i.e. change of discRxInterest or discTxResourceReq, discTxResourceReqPS if SystemInformationBlockType19 includes discConfigPS or discRxGapReq or discTxGapReq if the UE is configured with gapRequestsAllowedDedicated set to true or if the UE is not configured with gapRequestsAllowedDedicated and SystemInformationBlockType19 includes gapRequests AllowedCommon) during the last 1 second preceding reception of the RRCConnectionReconfiguration message including mobilityControlInfo; or

if SystemInformationBlockType21 is broadcast by the target PCell; and the UE transmitted a SidelinkUEInformation message indicating a change of V2X sidelink communication related parameters relevant in target PCell (i.e. change of v2x-CommRxInterestedFreqList or v2x-CommTxResourceReq) during the last 1 second preceding reception of the RRCConnectionReconfiguration message including mobilityControlInfo; or

initiate transmission of the SidelinkUEInformation message in accordance with 5.10.2.3;

the procedure ends;
NOTE 4: The UE is not required to determine the SFN of the target PCell by acquiring system information from that cell before performing RACH access in the target PCell, except for BL UEs or UEs in CE when sameSFN-Indication is not present in mobilityControlInfo.

5.3.5.5 Reconfiguration failure

The UE shall:

1> if the UE is unable to comply with (part of) the configuration included in the RRCConnectionReconfiguration message:
   2> continue using the configuration used prior to the reception of RRCConnectionReconfiguration message;
   2> if security has not been activated:
      3> perform the actions upon leaving RRC_CONNECTED as specified in 5.3.12, with release cause other;
   2> else:
      3> initiate the connection re-establishment procedure as specified in 5.3.7, upon which the connection reconfiguration procedure ends;

NOTE 1: The UE may apply above failure handling also in case the RRCConnectionReconfiguration message causes a protocol error for which the generic error handling as defined in 5.7 specifies that the UE shall ignore the message.

NOTE 2: If the UE is unable to comply with part of the configuration, it does not apply any part of the configuration, i.e. there is no partial success/failure.

5.3.5.6 T304 expiry (handover failure)

The UE shall:

1> if T304 expires (handover failure):

   NOTE 1: Following T304 expiry any dedicated preamble, if provided within the rach-ConfigDedicated, is not available for use by the UE anymore.
   2> revert back to the configuration used in the source PCell, excluding the configuration configured by the physicalConfigDedicated, the mac-MainConfig and the sps-Config;

   NOTE 1a: In the context above, "the configuration" includes state variables and parameters of each radio bearer. PDCP entities associated with RLC UM and SRB bearers are reset after the successful RRC connection re-establishment procedure according to Section 5.2 in TS 36.323 [8].
   2> store the following handover failure information in VarRLF-Report by setting its fields as follows:
      3> clear the information included in VarRLF-Report, if any;
      3> set the plmn-IdentityList to include the list of EPLMNs stored by the UE (i.e. includes the RPLMN);
      3> set the measResultLastServCell to include the RSRP and RSRQ, if available, of the source PCell based on measurements collected up to the moment the UE detected handover failure and in accordance with the following;
         4> if the UE includes rsrqResult, include the lastServCellRSRQ-Type;
      3> set the measResultNeighCells to include the best measured cells, other than the source PCell, ordered such that the best cell is listed first, and based on measurements collected up to the moment the UE detected handover failure, and set its fields as follows;
         4> if the UE was configured to perform measurements for one or more EUTRA frequencies, include the measResultListEUTRA;
         4> if the UE includes rsrqResult, include the rsrq-Type;
4> if the UE was configured to perform measurement reporting for one or more neighbouring UTRA frequencies, include the measResultListUTRA;

4> if the UE was configured to perform measurement reporting for one or more neighbouring GERAN frequencies, include the measResultListGERAN;

4> if the UE was configured to perform measurement reporting for one or more neighbouring CDMA2000 frequencies, include the measResultsCDMA2000;

4> for each neighbour cell included, include the optional fields that are available;

NOTE 2: The measured quantities are filtered by the L3 filter as configured in the mobility measurement configuration. The measurements are based on the time domain measurement resource restriction, if configured. Blacklisted cells are not required to be reported.

3> if detailed location information is available, set the content of the locationInfo as follows:

4> include the locationCoordinates;

4> include the horizontalVelocity, if available;

3> set the failedPCellId to the global cell identity, if available, and otherwise to the physical cell identity and carrier frequency of the target PCell of the failed handover;

3> include previousPCellId and set it to the global cell identity of the PCell where the last RRCConnectionReconfiguration message including mobilityControlInfo was received;

3> set the timeConnFailure to the elapsed time since reception of the last RRCConnectionReconfiguration message including the mobilityControlInfo;

3> set the connectionFailureType to 'hof';

3> set the c-RNTI to the C-RNTI used in the source PCell;

2> initiate the connection re-establishment procedure as specified in 5.3.7, upon which the RRC connection reconfiguration procedure ends;

The UE may discard the handover failure information, i.e. release the UE variable VarRLF-Report, 48 hours after the failure is detected, upon power off or upon detach.

NOTE 3: E-UTRAN may retrieve the handover failure information using the UE information procedure with rlf-ReportReq set to true, as specified in 5.6.5.3.

5.3.5.7 Void

5.3.5.7a T307 expiry (SCG change failure)

The UE shall:

1> if T307 expires:

NOTE 1: Following T307 expiry any dedicated preamble, if provided within the rach-ConfigDedicatedSCG, is not available for use by the UE anymore.

2> initiate the SCG failure information procedure as specified in 5.6.13 to report SCG change failure;

5.3.5.8 Radio Configuration involving full configuration option

The UE shall:

1> release/ clear all current dedicated radio configurations except the MCG C-RNTI, the MCG security configuration and the PDCP, RLC, logical channel configurations for the RBs and the logged measurement configuration;
NOTE 1: Radio configuration is not just the resource configuration but includes other configurations like MeasConfig and OtherConfig.

if the RRCConnectionReconfiguration message includes the mobilityControlInfo:
  2> release/clear all current common radio configurations;
  2> use the default values specified in 9.2.5 for timer T310, T311 and constant N310, N311;
else:
  2> use values for timers T301, T310, T311 and constants N310, N311, as included in ue-TimersAndConstants received in SystemInformationBlockType2 (or SystemInformationBlockType2-NB in NB-IoT);

apply the default physical channel configuration as specified in 9.2.4;
apply the default semi-persistent scheduling configuration as specified in 9.2.3;
apply the default MAC main configuration as specified in 9.2.2;
if the UE is a NB-IoT UE; or
for each srb-Identity value included in the srb-ToAddModList (SRB reconfiguration):
  2> apply the specified configuration defined in 9.1.2 for the corresponding SRB;
  2> apply the corresponding default RLC configuration for the SRB specified in 9.2.1.1 for SRB1 or in 9.2.1.2 for SRB2;
  2> apply the corresponding default logical channel configuration for the SRB as specified in 9.2.1.1 for SRB1 or in 9.2.1.2 for SRB2;

NOTE 2: This is to get the SRBs (SRB1 and SRB2 for handover and SRB2 for reconfiguration after reestablishment) to a known state from which the reconfiguration message can do further configuration.

for each eps-BearerIdentity value included in the drb-ToAddModList that is part of the current UE configuration:
  2> release the PDCP entity;
  2> release the RLC entity or entities;
  2> release the DTCH logical channel;
  2> release the drb-identity;

NOTE 3: This will retain the eps-bearerIdentity but remove the DRBs including drb-identity of these bearers from the current UE configuration and trigger the setup of the DRBs within the AS in Section 5.3.10.3 using the new configuration. The eps-bearerIdentity acts as the anchor for associating the released and re-setup DRB. In the AS the DRB re-setup is equivalent with a new DRB setup (including new PDCP and logical channel configurations).

for each eps-BearerIdentity value that is part of the current UE configuration but not part of the drb-ToAddModList:
  2> perform DRB release as specified in 5.3.10.2;
5.3.6 Counter check

5.3.6.1 General

The counter check procedure is used by E-UTRAN to request the UE to verify the amount of data sent/received on each DRB. More specifically, the UE is requested to check if, for each DRB, the most significant bits of the COUNT match with the values indicated by E-UTRAN.

NOTE: The procedure enables E-UTRAN to detect packet insertion by an intruder (a 'man in the middle').

5.3.6.2 Initiation

E-UTRAN initiates the procedure by sending a CounterCheck message.

NOTE: E-UTRAN may initiate the procedure when any of the COUNT values reaches a specific value.

5.3.6.3 Reception of the CounterCheck message by the UE

Upon receiving the CounterCheck message, the UE shall:

1> for each DRB that is established:

2> if no COUNT exists for a given direction (uplink or downlink) because it is a uni-directional bearer configured only for the other direction:

3> assume the COUNT value to be 0 for the unused direction;

2> if the drb-Identity is not included in the drb-CountMSB-InfoList:

3> include the DRB in the drb-CountInfoList in the CounterCheckResponse message by including the drb-Identity, the count-Uplink and the count-Downlink set to the value of the corresponding COUNT;

2> else if, for at least one direction, the most significant bits of the COUNT are different from the value indicated in the drb-CountMSB-InfoList:

3> include the DRB in the drb-CountInfoList in the CounterCheckResponse message by including the drb-Identity, the count-Uplink and the count-Downlink set to the value of the corresponding COUNT;

1> for each DRB that is included in the drb-CountMSB-InfoList in the CounterCheck message that is not established:

2> include the DRB in the drb-CountInfoList in the CounterCheckResponse message by including the drb-Identity, the count-Uplink and the count-Downlink with the most significant bits set identical to the corresponding values in the drb-CountMSB-InfoList and the least significant bits set to zero;

1> submit the CounterCheckResponse message to lower layers for transmission upon which the procedure ends;
5.3.7 RRC connection re-establishment

5.3.7.1 General

The purpose of this procedure is to re-establish the RRC connection, which involves the resumption of SRB1 (SRB1bis for a NB-IoT UE for which AS security has not been activated) operation, the re-activation of security (except for a NB-IoT UE for which AS security has not been activated) and the configuration of only the PCell.

Except for a NB-IoT UE for which AS security has not been activated, a UE in RRC_CONNECTED, for which security has been activated, may initiate the procedure in order to continue the RRC connection. The connection re-establishment succeeds only if the concerned cell is prepared i.e. has a valid UE context. In case E-UTRAN accepts the re-establishment, SRB1 operation resumes while the operation of other radio bearers remains suspended. If AS security has not been activated, the UE does not initiate the procedure but instead moves to RRC_IDLE directly.

When AS security has not been activated, a NB-IoT UE supporting RRC connection re-establishment for the Control Plane CIoT EPS optimisation in RRC_CONNECTED may initiate the procedure in order to continue the RRC connection.

E-UTRAN applies the procedure as follows:

- When AS security has been activated:
  - to reconfigure SRB1 and to resume data transfer only for this RB;
  - to re-activate AS security without changing algorithms.

- For a NB-IoT UE supporting RRC connection re-establishment for the Control Plane CIoT EPS optimisation, when AS security has not been activated:
  - to re-establish SRB1bis and to continue data transfer for this RB.
5.3.7.2 Initiation

The UE shall only initiate the procedure either when AS security has been activated or for a NB-IoT UE supporting RRC connection re-establishment for the Control Plane CIoT EPS optimisation. The UE initiates the procedure when one of the following conditions is met:

1. upon detecting radio link failure, in accordance with 5.3.11; or
2. upon handover failure, in accordance with 5.3.5.6; or
3. upon mobility from E-UTRA failure, in accordance with 5.4.3.5; or
4. upon integrity check failure indication from lower layers; or
5. upon an RRC connection reconfiguration failure, in accordance with 5.3.5.5;

Upon initiation of the procedure, the UE shall:

1. stop timer T310, if running;
2. stop timer T312, if running;
3. stop timer T313, if running;
4. stop timer T307, if running;
5. start timer T311;
6. stop timer T370, if running;
7. suspend all RBs except SRB0;
8. reset MAC;
9. release the MCG SCell(s), if configured, in accordance with 5.3.10.3a;
10. apply the default physical channel configuration as specified in 9.2.4;
11. except for NB-IoT, for the MCG, apply the default semi-persistent scheduling configuration as specified in 9.2.3;
12. for the MCG, apply the default MAC main configuration as specified in 9.2.2;
13. release powerPrefIndicationConfig, if configured and stop timer T340, if running;
14. release reportProximityConfig, if configured and clear any associated proximity status reporting timer;
15. release obtainLocationConfig, if configured;
16. release idc-Config, if configured;
17. release measSubframePatternPCell, if configured;
18. release the entire SCG configuration, if configured, except for the DRB configuration (as configured by drb-ToAddModListSCG);
19. release naics-Info for the PCell, if configured;
20. if connected as an RN and configured with an RN subframe configuration:
   21. release the RN subframe configuration;
22. release the LWA configuration, if configured, as described in 5.6.14.3;
23. release the LWIP configuration, if configured, as described in 5.6.17.3;
24. release delayBudgetReportingConfig, if configured and stop timer T342, if running;
25. perform cell selection in accordance with the cell selection process as specified in TS 36.304 [4];
5.3.7.3 Actions following cell selection while T311 is running

Upon selecting a suitable E-UTRA cell, the UE shall:

1> stop timer T311;
1> start timer T301;
1> apply the timeAlignmentTimerCommon included in SystemInformationBlockType2;
1> if the UE is a NB-IoT UE supporting RRC connection re-establishment for the Control Plane CIoT EPS optimisation and AS security has not been activated; and
1> if cp-reestablishment is not included in SystemInformationBlockType2-NB:

2> perform the actions upon leaving RRC_CONNECTED as specified in 5.3.12, with release cause ‘RRC connection failure’;
1> else:

2> initiate transmission of the RRCConnectionReestablishmentRequest message in accordance with 5.3.7.4;

NOTE: This procedure applies also if the UE returns to the source PCell.

Upon selecting an inter-RAT cell, the UE shall:

1> if the selected cell is a UTRA cell, and if the UE supports Radio Link Failure Report for Inter-RAT MRO, include selectedUTRA-CellId in the VarRLF-Report and set it to the physical cell identity and carrier frequency of the selected UTRA cell;
1> perform the actions upon leaving RRC_CONNECTED as specified in 5.3.12, with release cause ‘RRC connection failure’;

5.3.7.4 Actions related to transmission of RRCConnectionReestablishmentRequest message

Except for NB-IoT, if the procedure was initiated due to radio link failure or handover failure, the UE shall:

1> set the reestablishmentCellId in the VarRLF-Report to the global cell identity of the selected cell;

The UE shall set the contents of RRCConnectionReestablishmentRequest message as follows:

1> except for a NB-IoT UE for which AS security has not been activated, set the ue-Identity as follows:

2> set the c-RNTI to the C-RNTI used in the source PCell (handover and mobility from E-UTRA failure) or used in the PCell in which the trigger for the re-establishment occurred (other cases);
2> set the physCellId to the physical cell identity of the source PCell (handover and mobility from E-UTRA failure) or of the PCell in which the trigger for the re-establishment occurred (other cases);
2> set the shortMAC-I to the 16 least significant bits of the MAC-I calculated:

3> over the ASN.1 encoded as per section 8 (i.e., a multiple of 8 bits) VarShortMAC-Input (or VarShortMAC-Input-NB in NB-IoT);
3> with the KRRCint key and integrity protection algorithm that was used in the source PCell (handover and mobility from E-UTRA failure) or of the PCell in which the trigger for the re-establishment occurred (other cases); and
3> with all input bits for COUNT, BEARER and DIRECTION set to binary ones;
1> for a NB-IoT UE for which AS security has not been activated, set the ue-Identity as follows:
 request upper layers for calculated ul-NAS-MAC and ul-NAS-Count using the cellIdentity of the PCell in which the trigger for the re-establishment occurred;

2> set the s-TMSI to the S-TMSI provided by upper layers;

2> set the ul-NAS-MAC to the ul-NAS-MAC value provided by upper layers;

2> set the ul-NAS-Count to the ul-NAS-Count value provided by upper layers;

1> set the reestablishmentCause as follows:

2> if the re-establishment procedure was initiated due to reconfiguration failure as specified in 5.3.5.5 (the UE is unable to comply with the reconfiguration):

3> set the reestablishmentCause to the value reconfigurationFailure;

2> else if the re-establishment procedure was initiated due to handover failure as specified in 5.3.5.6 (intra-LTE handover failure) or 5.4.3.5 (inter-RAT mobility from EUTRA failure):

3> set the reestablishmentCause to the value handoverFailure;

2> else:

3> set the reestablishmentCause to the value otherFailure;

The UE shall submit the RRCConnectionReestablishmentRequest message to lower layers for transmission.

5.3.7.5 Reception of the RRCConnectionReestablishment by the UE

NOTE 1: Prior to this, lower layer signalling is used to allocate a C-RNTI. For further details see TS 36.321 [6];

The UE shall:

1> stop timer T301;

1> consider the current cell to be the PCell;

1> except for a NB-IoT UE for which AS security has not been activated:

2> re-establish PDCP for SRB1;

2> re-establish RLC for SRB1;

2> perform the radio resource configuration procedure in accordance with the received radioResourceConfigDedicated and as specified in 5.3.10;

2> resume SRB1;

NOTE 2: E-UTRAN should not transmit any message on SRB1 prior to receiving the RRCConnectionReestablishmentComplete message.

2> update the Knb key based on the KASME key to which the current Knb is associated, using the nextHopChainingCount value indicated in the RRCConnectionReestablishment message, as specified in TS 33.401 [32];

2> store the nextHopChainingCount value;

2> derive the Krcint key associated with the previously configured integrity algorithm, as specified in TS 33.401 [32];

2> derive the Krcenc key and the Kupenc key associated with the previously configured ciphering algorithm, as specified in TS 33.401 [32];

2> if connected as an RN:

3> derive the Kupint key associated with the previously configured integrity algorithm, as specified in TS 33.401 [32];
configure lower layers to activate integrity protection using the previously configured algorithm and the $K_{RRC\text{int}}$ key immediately, i.e., integrity protection shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;

if connected as an RN:

configure lower layers to apply integrity protection using the previously configured algorithm and the $K_{UP\text{int}}$ key, for subsequently resumed or subsequently established DRBs that are configured to apply integrity protection, if any;

configure lower layers to apply ciphering using the previously configured algorithm, the $K_{RRC\text{enc}}$ key and the $K_{UP\text{enc}}$ key immediately, i.e., ciphering shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;

if the UE is not a NB-IoT UE:

set the content of $RRC\text{ConnectionReestablishmentComplete}$ message as follows:

if the UE has radio link failure or handover failure information available in $VarRLF\text{-Report}$ and if the RPLMN is included in $plmn\text{-IdentityList}$ stored in $VarRLF\text{-Report}$:

include the $rlf\text{-InfoAvailable}$;

if the UE has MBSFN logged measurements available for E-UTRA and if the RPLMN is included in $plmn\text{-IdentityList}$ stored in $VarLogMeasReport$ and if T330 is not running:

include logMeasAvailableMBSFN;

else if the UE has logged measurements available for E-UTRA and if the RPLMN is included in $plmn\text{-IdentityList}$ stored in $VarLogMeasReport$:

include the logMeasAvailable;

if the UE has connection establishment failure information available in $VarConnEstFailReport$ and if the RPLMN is equal to $plmn\text{-Identity}$ stored in $VarConnEstFailReport$:

include the connEstFailInfoAvailable;

perform the measurement related actions as specified in 5.5.6.1;

perform the measurement identity autonomous removal as specified in 5.5.2.2a;

submit the $RRC\text{ConnectionReestablishmentComplete}$ message to lower layers for transmission;

if $SystemInformationBlockType15$ is broadcast by the PCell:

if the UE has transmitted an $MBMS\text{InterestIndication}$ message during the last 1 second preceding detection of radio link failure:

ensure having a valid version of $SystemInformationBlockType15$ for the PCell;

determine the set of MBMS frequencies of interest in accordance with 5.8.5.3;

determine the set of MBMS services of interest in accordance with 5.8.5.3a;

initiate transmission of the $MBMS\text{InterestIndication}$ message in accordance with 5.8.5.4;

if $SystemInformationBlockType18$ is broadcast by the PCell; and the UE transmitted a $Sidelink\text{UEInformation}$ message indicating a change of sidelink communication related parameters relevant in PCell (i.e. change of $commRx\text{InterestedFreq}$ or $commTxB\text{ResourceReq}$, $commTxB\text{ResourceReqUC}$ if $SystemInformationBlockType18$ includes $commTxB\text{ResourceUC-Req Allowed}$ or $commTxB\text{ResourceInfoReqRelay}$ if PCell broadcasts $SystemInformationBlockType19$ including $discConfigRelay$) during the last 1 second preceding detection of radio link failure; or

if $SystemInformationBlockType19$ is broadcast by the PCell; and the UE transmitted a $Sidelink\text{UEInformation}$ message indicating a change of sidelink discovery related parameters relevant in PCell (i.e. change of $discRx\text{Interest}$ or $discTxB\text{ResourceReq}$, $discTxB\text{ResourceReqPS}$ if $SystemInformationBlockType19$ includes
discConfigPS or discRxGapReq or discTxGapReq if the UE is configured with gapRequestsAllowedDedicated set to true or if the UE is not configured with gapRequestsAllowedDedicated and SystemInformationBlockType19 includes gapRequestsAllowedCommon) during the last 1 second preceding detection of radio link failure; or

2> if SystemInformationBlockType21 including sl-V2X-ConfigCommon is broadcast by the PCell; and the UE transmitted a SidelinkUEInformation message indicating a change of V2X sidelink communication related parameters relevant in PCell (i.e. change of v2x-CommRxInterestedFreqList or v2x-CommTxResourceReq) during the last 1 second preceding detection of radio link failure:

3> initiate transmission of the SidelinkUEInformation message in accordance with 5.10.2.3;

1> for a NB-IoT UE for which AS security has not been activated:

2> validate dl-NAS-MAC, as specified in TS 33.401 [32];

2> if dl-NAS-MAC check fails:

3> perform the actions upon leaving RRC_CONNECTED as specified in 5.3.12, with release cause 'RRC connection failure', upon which the procedure ends;

2> except for a UE that only supports the Control Plane CIoT EPS optimisation:

3> re-establish PDCP for SRB1;

3> re-establish RLC for SRB1;

2> re-establish RLC for SRB1bis;

2> perform the radio resource configuration procedure in accordance with the received radioResourceConfigDedicated and as specified in 5.3.10;

2> except for a UE that only supports the Control Plane CIoT EPS optimisation:

3> resume SRB1;

2> resume SRB1bis;

NOTE 3: E-UTRAN should not transmit any message on SRB1bis prior to receiving the RRCConnectionReestablishmentComplete message.

2> submit the RRCConnectionReestablishmentComplete message to lower layers for transmission;

1> the procedure ends;

5.3.7.6 T311 expiry

Upon T311 expiry, the UE shall:

1> perform the actions upon leaving RRC_CONNECTED as specified in 5.3.12, with release cause 'RRC connection failure';

5.3.7.7 T301 expiry or selected cell no longer suitable

The UE shall:

1> if timer T301 expires; or

1> if the selected cell becomes no longer suitable according to the cell selection criteria as specified in TS 36.304 [4]:

2> perform the actions upon leaving RRC_CONNECTED as specified in 5.3.12, with release cause 'RRC connection failure';
5.3.7.8 Reception of $RRC\text{ConnectionReestablishmentReject}$ by the UE

Upon receiving the $RRC\text{ConnectionReestablishmentReject}$ message, the UE shall:

1> perform the actions upon leaving RRC\_CONNECTED as specified in 5.3.12, with release cause 'RRC connection failure';

5.3.8 RRC connection release

5.3.8.1 General

![Diagram](image)

$RRC\text{ConnectionRelease}$

**Figure 5.3.8.1-1: RRC connection release, successful**

The purpose of this procedure is:

- to release the RRC connection, which includes the release of the established radio bearers as well as all radio resources;

or:

- to suspend the RRC connection, which includes the suspension of the established radio bearers.

5.3.8.2 Initiation

E-UTRAN initiates the RRC connection release procedure to a UE in RRC\_CONNECTED.

5.3.8.3 Reception of the $RRC\text{ConnectionRelease}$ by the UE

The UE shall:

1> except for NB-IoT, BL UEs or UEs in CE, delay the following actions defined in this sub-clause 60 ms from the moment the $RRC\text{ConnectionRelease}$ message was received or optionally when lower layers indicate that the receipt of the $RRC\text{ConnectionRelease}$ message has been successfully acknowledged, whichever is earlier;

1> for BL UEs or UEs in CE, delay the following actions defined in this sub-clause 1.25 seconds from the moment the $RRC\text{ConnectionRelease}$ message was received or optionally when lower layers indicate that the receipt of the $RRC\text{ConnectionRelease}$ message has been successfully acknowledged, whichever is earlier;

1> for NB-IoT, delay the following actions defined in this sub-clause 10 seconds from the moment the $RRC\text{ConnectionRelease}$ message was received or optionally when lower layers indicate that the receipt of the $RRC\text{ConnectionRelease}$ message has been successfully acknowledged, whichever is earlier;

1> if the $RRC\text{ConnectionRelease}$ message includes the $idleModeMobilityControlInfo$:

2> store the cell reselection priority information provided by the $idleModeMobilityControlInfo$;

2> if the $t320$ is included:

3> start timer T320, with the timer value set according to the value of $t320$;

1> else:

2> apply the cell reselection priority information broadcast in the system information;

1> for NB-IoT, if the $RRC\text{ConnectionRelease}$ message includes the $redirectedCarrierInfo$:
2> if the redirectedCarrierOffsetDedicated is included in the redirectedCarrierInfo:

3> store the dedicated offset for the frequency in redirectedCarrierInfo;

3> start timer T322, with the timer value set according to the value of T322 in redirectedCarrierInfo;

1> if the releaseCause received in the RRCConnectionRelease message indicates loadBalancingTAURequired:

2> perform the actions upon leaving RRC_CONNECTED as specified in 5.3.12, with release cause 'load balancing TAU required';

1> else if the releaseCause received in the RRCConnectionRelease message indicates cs-FallbackHighPriority:

2> perform the actions upon leaving RRC_CONNECTED as specified in 5.3.12, with release cause 'CS Fallback High Priority';

1> else:

2> if the extendedWaitTime is present; and

2> if the UE supports delay tolerant access or the UE is a NB-IoT UE:

3> forward the extendedWaitTime to upper layers;

2> if the extendedWaitTime-CPdata is present and the NB-IoT UE only supports the Control Plane CIoT EPS optimisation:

3> forward the extendedWaitTime-CPdata to upper layers;

2> if the releaseCause received in the RRCConnectionRelease message indicates rrc-Suspend:

3> perform the actions upon leaving RRC_CONNECTED as specified in 5.3.12, with release cause 'RRC suspension';

2> else:

3> perform the actions upon leaving RRC_CONNECTED as specified in 5.3.12, with release cause 'other';

5.3.8.4 T320 expiry

The UE shall:

1> if T320 expires:

2> if stored, discard the cell reselection priority information provided by the idleModeMobilityControlInfo or inherited from another RAT;

2> apply the cell reselection priority information broadcast in the system information;

5.3.8.5 T322 expiry

The UE shall:

1> if T322 expires:

2> discard the redirectedCarrierOffsetDedicated provided in RRCConnectionRelease message;

5.3.8.6 UE actions upon receiving the expiry of DataInactivityTimer

Upon receiving the expiry of DataInactivityTimer from lower layers, the UE shall:

1> perform the actions upon leaving RRC_CONNECTED as specified in 5.3.12, with release cause 'RRC connection failure';
5.3.9 RRC connection release requested by upper layers

5.3.9.1 General

The purpose of this procedure is to release the RRC connection. Access to the current PCell may be barred as a result of this procedure.

NOTE: Upper layers invoke the procedure, e.g. upon determining that the network has failed an authentication check, see TS 24.301 [35].

5.3.9.2 Initiation

The UE initiates the procedure when upper layers request the release of the RRC connection. The UE shall not initiate the procedure for power saving purposes.

The UE shall:

1> if the upper layers indicate barring of the PCell:
   2> treat the PCell used prior to entering RRC_IDLE as barred according to TS 36.304 [4];
1> perform the actions upon leaving RRC_CONNECTED as specified in 5.3.12, with release cause 'other';

5.3.10 Radio resource configuration

5.3.10.0 General

The UE shall:

1> if the received radioResourceConfigDedicated includes the srb-ToAddModList:
   2> perform the SRB addition or reconfiguration as specified in 5.3.10.1;
1> if the received radioResourceConfigDedicated includes the drb-ToReleaseList:
   2> perform DRB release as specified in 5.3.10.2;
1> if the received radioResourceConfigDedicated includes the drb-ToAddModList:
   2> perform DRB addition or reconfiguration as specified in 5.3.10.3;
1> if the received radioResourceConfigDedicated includes the mac-MainConfig:
   2> perform MAC main reconfiguration as specified in 5.3.10.4;
1> if the received radioResourceConfigDedicated includes sps-Config:
   2> perform SPS reconfiguration according to 5.3.10.5;
1> if the received radioResourceConfigDedicated includes the physicalConfigDedicated:
   2> reconfigure the physical channel configuration as specified in 5.3.10.6.
1> if the received radioResourceConfigDedicated includes the rlf-TimersAndConstants:
   2> reconfigure the values of timers and constants as specified in 5.3.10.7;
1> if the received radioResourceConfigDedicated includes the measSubframePatternPCell:
   2> reconfigure the time domain measurement resource restriction for the serving cell as specified in 5.3.10.8;
1> if the received radioResourceConfigDedicated includes the naics-Info:
   2> perform NAICS neighbour cell information reconfiguration for the PCell as specified in 5.3.10.13;
1> if the received RadioResourceConfigDedicatedPSCell includes the naics-Info:
   2> perform NAICS neighbour cell information reconfiguration for the PSCell as specified in 5.3.10.13;

1> if the received RadioResourceConfigDedicatedSCell-r10 includes the naics-Info:
   2> perform NAICS neighbour cell information reconfiguration for the SCell as specified in 5.3.10.13;

5.3.10.1  SRB addition/ modification

The UE shall:

1> if the UE is a NB-IoT UE and SRB1 is not established; or

1> for each srb-Identity value included in the srb-ToAddModList that is not part of the current UE configuration (SRB establishment):
   2> if the UE is not a NB-IoT UE that only supports the Control Plane CIoT EPS optimisation:
      3> apply the specified configuration defined in 9.1.2 for the corresponding SRB;
      3> establish a PDCP entity and configure it with the current (MCG) security configuration, if applicable;
      3> establish an (MCG) RLC entity in accordance with the received rlc-Config;
      3> establish a (MCG) DCCH logical channel in accordance with the received logicalChannelConfig and with the logical channel identity set in accordance with 9.1.2;
   2> if the UE is a NB-IoT UE:
      3> apply the specified configuration defined in 9.1.2 for SRB1bis;
      3> establish an (MCG) RLC entity in accordance with the received rlc-Config;
      3> establish a (MCG) DCCH logical channel in accordance with the received logicalChannelConfig and with the logical channel identity set in accordance with 9.1.2.1a;

1> if the UE is a NB-IoT UE and SRB1 is established; or

1> for each srb-Identity value included in the srb-ToAddModList that is part of the current UE configuration (SRB reconfiguration):
   2> reconfigure the RLC entity in accordance with the received rlc-Config;
   2> reconfigure the DCCH logical channel in accordance with the received logicalChannelConfig;

5.3.10.2  DRB release

The UE shall:

1> for each drb-Identity value included in the drb-ToReleaseList that is part of the current UE configuration (DRB release); or

1> for each drb-identity value that is to be released as the result of full configuration option according to 5.3.5.8:
   2> release the PDCP entity;
   2> release the RLC entity or entities;
   2> release the DTCH logical channel;

1> if the procedure was triggered due to handover:
   2> indicate the release of the DRB(s) and the eps-BearerIdentity of the released DRB(s) to upper layers after successful handover;

1> else:
2> indicate the release of the DRB(s) and the eps-BearerIdentity of the released DRB(s) to upper layers immediately.

NOTE: The UE does not consider the message as erroneous if the drb-ToReleaseList includes any drb-Identity value that is not part of the current UE configuration.

5.3.10.3 DRB addition/ modification

The UE shall:

1> for each drb-Identity value included in the drb-ToAddModList that is not part of the current UE configuration (DRB establishment including the case when full configuration option is used):

2> if the concerned entry of drb-ToAddModList includes the drb-TypeLWA set to TRUE (i.e. add LWA DRB):
   3> perform the LWA specific DRB addition or reconfiguration as specified in 5.3.10.3a2;
2> if the concerned entry of drb-ToAddModList includes the drb-TypeLWIP (i.e. add LWIP DRB):
   3> perform LWIP specific DRB addition or reconfiguration as specified in 5.3.10.3a3;
2> else if drb-ToAddModListSCG is not received or does not include the drb-Identity value (i.e. add MCG DRB):
   3> establish a PDCP entity and configure it with the current MCG security configuration and in accordance with the received pdcp-Config;
   3> establish an MCG RLC entity or entities in accordance with the received rlc-Config;
   3> establish an MCG DTCH logical channel in accordance with the received logicalChannelIdentity and the received logicalChannelConfig;
2> if the RRCConnectionReconfiguration message includes the fullConfig IE:
   3> associate the established DRB with corresponding included eps-BearerIdentity;
2> else:
   3> indicate the establishment of the DRB(s) and the eps-BearerIdentity of the established DRB(s) to upper layers;

1> for each drb-Identity value included in the drb-ToAddModList that is part of the current UE configuration (DRB reconfiguration):

2> if the DRB indicated by drb-Identity is an LWA DRB (i.e. LWA to LTE only or reconfigure LWA DRB):
   3> perform the LWA specific DRB reconfiguration as specified in 5.3.10.3a2;
2> else if the concerned entry of drb-ToAddModList includes the drb-TypeLWA set to TRUE (i.e. LTE only to LWA DRB):
   3> perform the LWA specific DRB reconfiguration as specified in 5.3.10.3a2;
2> if the concerned entry of drb-ToAddModList includes the drb-TypeLWIP (i.e. add or reconfigure LWIP DRB):
   3> perform LWIP specific DRB addition or reconfiguration as specified in 5.3.10.3a3;
2> if drb-ToAddModListSCG is not received or does not include the drb-Identity value:
   3> if the DRB indicated by drb-Identity is an MCG DRB (reconfigure MCG):
      4> if the pdcp-Config is included:
         5> reconfigure the PDCP entity in accordance with the received pdcp-Config;
      4> if the rlc-Config is included:
5> reconfigure the RLC entity or entities in accordance with the received \textit{rlc-Config};

4> if the \textit{logicalChannelConfig} is included:

5> reconfigure the DTCH logical channel in accordance with the received \textit{logicalChannelConfig};

\textbf{NOTE:} Removal and addition of the same \textit{drb-Identity} in a single \textit{radioResourceConfigDedicated} is not supported. In case \textit{drb-Identity} is removed and added due to handover or re-establishment with the full configuration option, the eNB can use the same value of \textit{drb-Identity}.

5.3.10.3a1 DC specific DRB addition or reconfiguration

For the \textit{drb-Identity} value for which this procedure is initiated, the UE shall:

1> if \textit{drb-ToAddModListSCG} is received and includes the \textit{drb-Identity} value; and \textit{drb-Identity} value is not part of the current UE configuration (i.e. DC specific DRB establishment):

2> if \textit{drb-ToAddModList} is received and includes the \textit{drb-Identity} value (i.e. add split DRB):

3> establish a PDCP entity and configure it with the current MCG security configuration and in accordance with the \textit{pdcp-Config} included in \textit{drb-ToAddModList};

3> establish an MCG RLC entity and an MCG DTCH logical channel in accordance with the \textit{rlc-Config}, \textit{logicalChannelIdentity} and \textit{logicalChannelConfig} included in \textit{drb-ToAddModList};

3> establish an SCG RLC entity and an SCG DTCH logical channel in accordance with the \textit{rlc-ConfigSCG}, \textit{logicalChannelIdentitySCG} and \textit{logicalChannelConfigSCG} included in \textit{drb-ToAddModListSCG};

2> else (i.e. add SCG DRB):

3> establish a PDCP entity and configure it with the current SCG security configuration and in accordance with the \textit{pdcp-Config} included in \textit{drb-ToAddModListSCG};

3> establish an SCG RLC entity or entities and an SCG DTCH logical channel in accordance with the \textit{rlc-ConfigSCG}, \textit{logicalChannelIdentitySCG} and \textit{logicalChannelConfigSCG} included in \textit{drb-ToAddModListSCG};

2> indicate the establishment of the DRB(s) and the \textit{eps-BearerIdentity} of the established DRB(s) to upper layers;

1> else (i.e. DC specific DRB modification; \textit{drb-ToAddModList} and/ or \textit{drb-ToAddModListSCG} received):

2> if the DRB indicated by \textit{drb-Identity} is a split DRB:

3> if \textit{drb-ToAddModList} is received and includes the \textit{drb-Identity} value, while for this entry \textit{drb-TypeChange} is included and set to \textit{toMCG} (i.e. split to MCG):

4> release the SCG RLC entity and the SCG DTCH logical channel;

4> reconfigure the PDCP entity in accordance with the \textit{pdcp-Config}, if included in \textit{drb-ToAddModList};

4> reconfigure the MCG RLC entity and/ or the MCG DTCH logical channel in accordance with the \textit{rlc-Config} and \textit{logicalChannelConfig}, if included in \textit{drb-ToAddModList};

3> else (i.e. reconfigure split):

4> reconfigure the PDCP entity in accordance with the \textit{pdcp-Config}, if included in \textit{drb-ToAddModList};

4> reconfigure the MCG RLC entity and/ or the MCG DTCH logical channel in accordance with the \textit{rlc-Config} and \textit{logicalChannelConfig}, if included in \textit{drb-ToAddModList};

4> reconfigure the SCG RLC entity and/ or the SCG DTCH logical channel in accordance with the \textit{rlc-ConfigSCG} and \textit{logicalChannelConfigSCG}, if included in \textit{drb-ToAddModListSCG};

2> if the DRB indicated by \textit{drb-Identity} is an SCG DRB:
if \( \text{drb-ToAddModList} \) is received and includes the \( \text{drb-Identity} \) value, while for this entry \( \text{drb-TypeChange} \) is included and set to toMCG (i.e. SCG to MCG):

1. reconfigure the PDCP entity with the current MCG security configuration and in accordance with the \( \text{pdcp-Config} \), if included in \( \text{drb-ToAddModList} \);
2. reconfigure the SCG RLC entity or entities and the SCG DTCH logical channel to be an MCG RLC entity or entities and an MCG DTCH logical channel;
3. reconfigure the MCG RLC entity or entities and/or the MCG DTCH logical channel in accordance with the \( \text{rlc-Config} \), \( \text{logicalChannelIdentity} \) and \( \text{logicalChannelConfig} \), if included in \( \text{drb-ToAddModList} \);

else (i.e. \( \text{drb-ToAddModListSCG} \) is received and includes the \( \text{drb-Identity} \) value i.e. reconfigure SCG):

1. reconfigure the PDCP entity in accordance with the \( \text{pdcp-Config} \), if included in \( \text{drb-ToAddModListSCG} \);
2. reconfigure the SCG RLC entity or entities and/or the SCG DTCH logical channel in accordance with the \( \text{rlc-ConfigSCG} \), \( \text{logicalChannelIdentitySCG} \) and \( \text{logicalChannelConfigSCG} \), if included in \( \text{drb-ToAddModListSCG} \);

else (i.e. \( \text{drb-Type} \) is included and set to scg i.e. MCG to SCG):

1. reconfigure the PDCP entity with the current SCG security configuration and in accordance with the \( \text{pdcp-Config} \), if included in \( \text{drb-ToAddModListSCG} \);
2. reconfigure the MCG RLC entity or entities and the MCG DTCH logical channel to be an SCG RLC entity or entities and an SCG DTCH logical channel;
3. reconfigure the SCG RLC entity or entities and/or the SCG DTCH logical channel in accordance with the \( \text{rlc-ConfigSCG} \), \( \text{logicalChannelIdentitySCG} \) and \( \text{logicalChannelConfigSCG} \), if included in \( \text{drb-ToAddModListSCG} \);

5.3.10.3a2 LWA specific DRB addition or reconfiguration

For the \( \text{drb-Identity} \) value for which this procedure is initiated, the UE shall:

1. if the \( \text{drb-Identity} \) value is not part of the current UE configuration (i.e. add LWA DRB):

2. establish a PDCP entity and configure it with the current security configuration and in accordance with the \( \text{pdcp-Config} \), included in \( \text{drb-ToAddModList} \);
3. establish an RLC entity and a DTCH logical channel in accordance with the \( \text{rlc-Config}, \text{logicalChannelIdentity} \) and \( \text{logicalChannelConfig} \), included in \( \text{drb-ToAddModList} \);
4. enable data handling for this DRB at the LWAAP entity;
5. if \( \text{lwa-WLAN-AC} \) is configured:
6. apply the received \( \text{lwa-WLAN-AC} \) when performing transmissions of packets for this DRB over WLAN;
7. indicate the establishment of the DRB and the \( \text{eps-BearerIdentity} \) of the established DRB to upper layers;
else if the DRB indicated by \texttt{drb-Identity} is not an LWA DRB (i.e. LTE only to LWA DRB):

1. reconfigure the PDCP entity in accordance with the \texttt{pdcp-Config}, if included in \texttt{drb-ToAddModList};
2. reconfigure the RLC entity and/ or the DTCH logical channel in accordance with the \texttt{rlc-Config} and \texttt{logicalChannelConfig}, if included in \texttt{drb-ToAddModList};
3. enable data handling for this DRB at the LWAAP entity;
4. if \texttt{lwa-WLAN-AC} is configured:

   1. apply the received \texttt{lwa-WLAN-AC} when performing transmissions of packets for this DRB over WLAN;

else if the concerned entry of \texttt{drb-ToAddModList} includes the \texttt{drb-TypeLWA} set to \texttt{FALSE} (i.e. LWA to LTE only DRB):

1. reconfigure the PDCP entity in accordance with the \texttt{pdcp-Config}, if included in \texttt{drb-ToAddModList};
2. reconfigure the RLC entity and/ or the DTCH logical channel in accordance with the \texttt{rlc-Config} and \texttt{logicalChannelConfig}, if included in \texttt{drb-ToAddModList};
3. perform PDCP data recovery as specified in TS 36.323 [8] if bearer is configured with RLC AM;
4. disable data handling for this DRB at the LWAAP entity;
5. else (i.e. reconfigure LWA DRB):

1. reconfigure the PDCP entity in accordance with the \texttt{pdcp-Config}, if included in \texttt{drb-ToAddModList};
2. reconfigure the RLC entity and/ or the DTCH logical channel in accordance with the \texttt{rlc-Config} and \texttt{logicalChannelConfig}, if included in \texttt{drb-ToAddModList};
3. apply the received \texttt{lwa-WLAN-AC} when performing transmissions of packets for this DRB over WLAN;

\subsection{5.3.10.3a3 LWIP specific DRB addition or reconfiguration}

For the \texttt{drb-Identity} value for which this procedure is initiated, the UE shall:

1. if the \texttt{drb-TypeLWIP} is set to \texttt{lwip}:

   1. indicate to higher layers to use LWIP resources in both UL and DL for the DRB associated with the \texttt{drb-Identity};
   2. if \texttt{lwip-DL-Aggregation} is set to TRUE:

      1. indicate to higher layers to apply decoding of LWIPEP header with GRE sequence number for both LTE and WLAN DL reception for the DRB associated with the \texttt{drb-Identity};
   3. if \texttt{lwip-DL-Aggregation} is set to FALSE:

      1. indicate to higher layers to stop decoding of LWIPEP header with GRE sequence number for both LTE and WLAN DL reception for the DRB associated with the \texttt{drb-Identity};
   2. if \texttt{lwip-UL-Aggregation} is set to TRUE:

      1. indicate to higher layers to insert LWIPEP header with GRE sequence number for both LTE and WLAN UL transmissions for the DRB associated with the \texttt{drb-Identity};
   3. if \texttt{lwip-UL-Aggregation} is set to FALSE:

      1. indicate to higher layers to stop inserting LWIPEP header with GRE sequence number for both LTE and WLAN UL transmissions for the DRB associated with the \texttt{drb-Identity};

1. if the \texttt{drb-TypeLWIP} is set to \texttt{lwip-DL-only}:
2. indicate to higher layers to use LWIP resources in the DL only for the DRB associated with the `drb-Identity`;

2. if `lwip-DL-Aggregation` is set to TRUE:

3. indicate to higher layers to apply decoding of LWIPEP header with GRE sequence number for both LTE and WLAN DL reception for the DRB associated with the `drb-Identity`;

1. if the `drb-TypeLWIP` is set to `lwip-UL-only`:

2. indicate to higher layers to use LWIP resources in the UL only for the DRB associated with the `drb-Identity`;

2. if `lwip-UL-Aggregation` is set to TRUE:

3. indicate to higher layers to insert LWIPEP header with GRE sequence number for both LTE and WLAN UL transmissions for the DRB associated with the `drb-Identity`;

1. if the `drb-TypeLWIP` is set to `eutran`:

2. indicate to higher layers to stop using LWIP resources for the DRB associated with the `drb-Identity`;

5.3.10.3a SCell release

The UE shall:

1. if the release is triggered by reception of the `sCellToReleaseList` or the `sCellToReleaseListSCG`:

2. for each `sCellIndex` value included either in the `sCellToReleaseList` or in the `sCellToReleaseListSCG`:

3. if the current UE configuration includes an SCell with value `sCellIndex`:

4. release the SCell;

1. if the release is triggered by RRC connection re-establishment:

2. release all SCells that are part of the current UE configuration;

5.3.10.3b SCell addition/ modification

The UE shall:

1. for each `sCellIndex` value included either in the `sCellToAddModList` or in the `sCellToAddModListSCG` that is not part of the current UE configuration (SCell addition):

2. add the SCell, corresponding to the `cellIdentification`, in accordance with the `radioResourceConfigCommonSCell` and `radioResourceConfigDedicatedSCell`, both included either in the `sCellToAddModList` or in the `sCellToAddModListSCG`;

2. configure lower layers to consider the SCell to be in deactivated state;

2. for each `measId` included in the `measIdList` within `VarMeasConfig`:

3. if SCells are not applicable for the associated measurement; and

3. if the concerned SCell is included in `cellsTriggeredList` defined within the `VarMeasReportList` for this `measId`:

4. remove the concerned SCell from `cellsTriggeredList` defined within the `VarMeasReportList` for this `measId`;

1. for each `sCellIndex` value included either in the `sCellToAddModList` or in the `sCellToAddModListSCG` that is part of the current UE configuration (SCell modification):

2. modify the SCell configuration in accordance with the `radioResourceConfigDedicatedSCell`, included either in the `sCellToAddModList` or in the `sCellToAddModListSCG`;
5.3.10.3c PSCell addition or modification

The UE shall:

1> if the PSCell is not part of the current UE configuration (i.e. PSCell addition):
   
   2> add the PSCell, corresponding to the cellIdentification, in accordance with the received radioResourceConfigCommonPSCell and radioResourceConfigDedicatedPSCell;

   2> configure lower layers to consider the PSCell to be in activated state;

1> if the PSCell is part of the current UE configuration (i.e. PSCell modification):

   2> modify the PSCell configuration in accordance with the received radioResourceConfigDedicatedPSCell;

5.3.10.4 MAC main reconfiguration

Except for NB-IoT, the UE shall:

1> if the procedure is triggered to perform SCG MAC main reconfiguration:

   2> if SCG MAC is not part of the current UE configuration (i.e. SCG establishment):
      
      3> create an SCG MAC entity;

   2> reconfigure the SCG MAC main configuration as specified in the following i.e. assuming it concerns the SCG MAC whenever MAC main configuration is referenced and that it is based on the received mac-MainConfigSCG instead of mac-MainConfig:

1> reconfigure the MAC main configuration in accordance with the received mac-MainConfig other than stag-ToReleaseList and stag-ToAddModList;

1> if the received mac-MainConfig includes the stag-ToReleaseList:

   2> for each STAG-Id value included in the stag-ToReleaseList that is part of the current UE configuration:
      
      3> release the STAG indicated by STAG-Id;

1> if the received mac-MainConfig includes the stag-ToAddModList:

   2> for each stag-Id value included in stag-ToAddModList that is not part of the current UE configuration (STAG addition):
      
      3> add the STAG, corresponding to the stag-Id, in accordance with the received timeAlignmentTimerSTAG;

   2> for each stag-Id value included in stag-ToAddModList that is part of the current UE configuration (STAG modification):
      
      3> reconfigure the STAG, corresponding to the stag-Id, in accordance with the received timeAlignmentTimerSTAG;

For NB-IoT, the UE shall:

1> reconfigure the MAC main configuration in accordance with the received mac-MainConfig;

5.3.10.5 Semi-persistent scheduling reconfiguration

The UE shall:

1> reconfigure the semi-persistent scheduling in accordance with the received sps-Config;

5.3.10.6 Physical channel reconfiguration

Except for NB-IoT, the UE shall:
1> if the antennaInfo-r10 is included in the received physicalConfigDedicated and the previous version of this field that was received by the UE was antennaInfo (without suffix i.e. the version defined in REL-8):

2> apply the default antenna configuration as specified in 9.2.4;

1> if the cqi-ReportConfig-r10 is included in the received physicalConfigDedicated and the previous version of this field that was received by the UE was cqi-ReportConfig (without suffix i.e. the version defined in REL-8):

2> apply the default CQI reporting configuration as specified in 9.2.4;

NOTE: Application of the default configuration involves release of all extensions introduced in REL-9 and later.

1> reconfigure the physical channel configuration in accordance with the received physicalConfigDedicated;

1> if the antennaInfo is included and set to explicitValue:

2> if the configured transmissionMode is tm1, tm2, tm5, tm6 or tm7; or

2> if the configured transmissionMode is tm8 and pmi-RI-Report is not present; or

2> if the configured transmissionMode is tm9 and pmi-RI-Report is not present; or

2> if the configured transmissionMode is tm9 and pmi-RI-Report is present and antennaPortsCount within csi-RS is set to an1:

3> release ri-ConfigIndex in cqi-ReportPeriodic, if previously configured;

1> else if the antennaInfo is included and set to defaultValue:

2> release ri-ConfigIndex in cqi-ReportPeriodic, if previously configured;

1> if the pusch-EnhancementsConfig is included in the received physicalConfigDedicated, for the associated serving cell:

2> if PUSCH enhancement mode is previously released or not configured and pusch-EnhancementsConfig is set to setup, or

2> if PUSCH enhancement mode is previously configured and pusch-EnhancementConfig is set to release:

3> instruct the associated MAC entity to perform partial reset;

1> if the procedure was not triggered due to handover and ce-Mode is included in the received physicalConfigDedicated, for the associated serving cell:

2> if ce-Mode is not currently configured and ce-Mode is set to setup, or

2> if ce-Mode is currently configured and ce-Mode is set to release:

3> instruct the associated MAC entity to perform partial reset;

For NB-IoT, the UE shall:

1> if the carrierConfigDedicated is not included in the received physicalConfigDedicated:

2> if the UE is configured with a carrier configuration previously received in carrierConfigDedicated:

3> use the carrier configuration received in carrierConfigDedicated;

2> else:

3> use the carrier configuration received in system information for the uplink and downlink carrier used during the random access procedure;

1> else:

2> use the carrier configuration received in carrierConfigDedicated;
2> start to use the new carrier immediately after the last transport block carrying the RRC message has been acknowledged by the MAC layer, and any subsequent RRC response message sent for the current RRC procedure is therefore sent on the new carrier;

1> reconfigure the physical channel configuration in accordance with the received \textit{physicalConfigDedicated}.

\subsection*{5.3.10.7 Radio Link Failure Timers and Constants reconfiguration}

The UE shall:

1> if the received \textit{rlf-TimersAndConstants} is set to release:

2> use values for timers T301, T310, T311 and constants N310, N311, as included in \textit{ue-TimersAndConstants} received in \textit{SystemInformationBlockType2} (or \textit{SystemInformationBlockType2-NB} in NB-IoT);

1> else:

2> reconfigure the value of timers and constants in accordance with received \textit{rlf-TimersAndConstants};

1> if the received \textit{rlf-TimersAndConstantsSCG} is set to release:

2> stop timer T313, if running, and

2> release the value of timer \textit{t313} as well as constants \textit{n313} and \textit{n314};

1> else:

2> reconfigure the value of timers and constants in accordance with received \textit{rlf-TimersAndConstantsSCG};

\subsection*{5.3.10.8 Time domain measurement resource restriction for serving cell}

The UE shall:

1> if the received \textit{measSubframePatternPCell} is set to release:

2> release the time domain measurement resource restriction for the PCell, if previously configured

1> else:

2> apply the time domain measurement resource restriction for the PCell in accordance with the received \textit{measSubframePatternPCell};

\subsection*{5.3.10.9 Other configuration}

The UE shall:

1> if the received \textit{otherConfig} includes the \textit{reportProximityConfig}:

2> if \textit{proximityIndicationEUTRA} is set to \textit{enabled}:

3> consider itself to be configured to provide proximity indications for E-UTRA frequencies in accordance with 5.3.14;

2> else:

3> consider itself not to be configured to provide proximity indications for E-UTRA frequencies;

2> if \textit{proximityIndicationUTRA} is set to \textit{enabled}:

3> consider itself to be configured to provide proximity indications for UTRA frequencies in accordance with 5.3.14;

2> else:

3> consider itself not to be configured to provide proximity indications for UTRA frequencies;
1> if the received otherConfig includes the obtainLocation:

2> attempt to have detailed location information available for any subsequent measurement report;

NOTE: The UE is requested to attempt to have valid detailed location information available whenever sending a measurement report for which it is configured to include available detailed location information. The UE may not succeed e.g. because the user manually disabled the GPS hardware, due to no/poor satellite coverage. Further details, e.g. regarding when to activate GNSS, are up to UE implementation.

1> if the received otherConfig includes the idc-Config:

2> if idc-Indication is included (i.e. set to setup):

3> consider itself to be configured to provide IDC indications in accordance with 5.6.9;

3> if idc-Indication-UL-CA is included (i.e. set to setup):

4> consider itself to be configured to indicate UL CA related information in IDC indications in accordance with 5.6.9;

2> else:

3> consider itself not to be configured to provide IDC indications;

2> if autonomousDenialParameters is included:

3> consider itself to be allowed to deny any transmission in a particular UL subframe if during the number of subframes indicated by autonomousDenialValidity, preceding and including this particular subframe, it autonomously denied fewer UL subframes than indicated by autonomousDenialSubframes;

2> else:

3> consider itself not to be allowed to deny any UL transmission;

1> if the received otherConfig includes the powerPrefIndicationConfig:

2> if powerPrefIndicationConfig is set to setup:

3> consider itself to be configured to provide power preference indications in accordance with 5.6.10;

2> else:

3> consider itself not to be configured to provide power preference indications;

1> if the received otherConfig includes the sps-AssistanceInfoReport:

2> if sps-AssistanceInfoReport is set to TRUE:

3> consider itself to be configured to provide SPS assistance information in accordance with 5.6.10;

2> else

3> consider itself not to be configured to provide SPS assistance information;

1> if the received otherConfig includes the bw-PreferenceIndicationTimer:

2> consider itself to be configured to provide maximum PDSCH/PUSCH bandwidth preference indication in accordance with 5.6.10;

1> else:

2> consider itself not to be configured to provide maximum PDSCH/PUSCH bandwidth indication preference;

1> if the received otherConfig includes the delayBudgetReportingConfig:

2> if delayBudgetReportingConfig is set to setup:

3> consider itself to be configured to send delay budget reports in accordance with 5.6.18;
else:
   consider itself not to be configured to send delay budget reports and stop timer T342, if running;

for BL UEs or UEs in CE, if the received otherConfig includes the rlm-ReportConfig:
   if rlm-ReportConfig is set to setup:
      consider itself to be configured to detect "early-out-of-sync" and "early-in-sync" RLM events as specified in 5.3.11;
      if rlmReportRep-MPDCCH is set to setup:
         consider itself to be configured to report rlmReportRep-MPDCCH in accordance with 5.6.10;
      else:
         consider itself not to be configured to detect "early-out-of-sync" and "early-in-sync" RLM events and stop timer T343, timer T344, timer T314 and timer T315 if running;

5.3.10.10 SCG reconfiguration

The UE shall:

if makeBeforeBreakSCG is configured:
   stop timer T313, if running;
   start timer T307 with the timer value set to t307, as included in the mobilityControlInfoSCG;
   start synchronising to the DL of the target PSCell, if needed;
   perform the remainder of this procedure including and following resetting MAC after the UE has stopped the uplink transmission/downlink reception with the source SCG cell(s);

NOTE 0a: It is up to UE implementation when to stop the uplink transmission/downlink reception with the source SCG cell(s) to initiate re-tuning for the connection to the target cell [16], if makeBeforeBreakSCG is configured.

if the received scg-Configuration is set to release or includes the mobilityControlInfoSCG (i.e. SCG release/change):
   if mobilityControlInfo is not received (i.e. SCG release/change without HO):
      reset SCG MAC, if configured;
      for each drb-Identity value that is part of the current UE configuration:
         if the DRB indicated by drb-Identity is an SCG DRB:
            re-establish the PDCP entity and the SCG RLC entity or entities;
         if the DRB indicated by drb-Identity is a split DRB:
            perform PDCP data recovery and re-establish the SCG RLC entity;
         if the DRB indicated by drb-Identity is an MCG DRB; and
         if drb-ToAddModListSCG is received and includes the drb-Identity value, while for this entry drb-Type is included and set to scg (i.e. MCG to SCG):
            re-establish the PDCP entity and the MCG RLC entity or entities;
      configure lower layers to consider the SCG SCell(s), except for the PSCell, to be in deactivated state;

if the received scg-Configuration is set to release:
2> release the entire SCG configuration, except for the DRB configuration (i.e. as configured by drb-ToAddModListSCG);

2> if the current UE configuration includes one or more split or SCG DRBs and the received RRCConnectionReconfiguration message includes radioResourceConfigDedicated including drb-ToAddModList:

3> reconfigure the SCG or split DRB by drb-ToAddModList as specified in 5.3.10.12;

2> stop timer T313, if running;

2> stop timer T307, if running;

1> else:

2> if the received scg-ConfigPartMCG includes the scg-Counter:

3> update the S-K_{NB} key based on the K_{NB} key and using the received scg-Counter value, as specified in TS 33.401 [32];

3> derive the K_{UPenc} key associated with the cipheringAlgorithmSCG included in mobilityControlInfoSCG within the received scg-ConfigPartSCG, as specified in TS 33.401 [32];

3> configure lower layers to apply the ciphering algorithm and the K_{UPenc} key;

2> if the received scg-ConfigPartSCG includes the radioResourceConfigDedicatedSCG:

3> reconfigure the dedicated radio resource configuration for the SCG as specified in 5.3.10.11;

2> if the current UE configuration includes one or more split or SCG DRBs and the received RRCConnectionReconfiguration message includes radioResourceConfigDedicated including drb-ToAddModList:

3> reconfigure the SCG or split DRB by drb-ToAddModList as specified in 5.3.10.12;

2> if the received scg-ConfigPartSCG includes the sCellToReleaseListSCG:

3> perform SCell release for the SCG as specified in 5.3.10.3a;

2> if the received scg-ConfigPartSCG includes the pSCellToAddMod:

3> perform PSCell addition or modification as specified in 5.3.10.3c;

NOTE 0: This procedure is also used to release the PSCell e.g. PSCell change, SI change for the PSCell.

2> if the received scg-ConfigPartSCG includes the sCellToAddModListSCG:

3> perform SCell addition or modification as specified in 5.3.10.3b;

2> configure lower layers in accordance with mobilityControlInfoSCG, if received;

2> if rach-SkipSCG is configured:

3> configure lower layers to apply the rach-SkipSCG for the target SCG, as specified in TS 36.213 [23] and TS 36.321 [6];

2> if the received scg-ConfigPartSCG includes the mobilityControlInfoSCG (i.e. SCG change):

3> resume all SCG DRBs and resume SCG transmission for split DRBs, if suspended;

3> stop timer T313, if running;

3> start timer T307 with the timer value set to t307, as included in the mobilityControlInfoSCG, if makeBeforeBreakSCG is not configured;

3> start synchronising to the DL of the target PSCell;
3> initiate the random access procedure on the PSCell, as specified in TS 36.321 [6], if \textit{rach-SkipSCG} is not configured:

\begin{verbatim}
NOTE 1: The UE is not required to determine the SFN of the target PSCell by acquiring system information from that cell before performing RACH access in the target PSCell.
\end{verbatim}

3> the procedure ends, except that the following actions are performed when MAC successfully completes the random access procedure on the PSCell or when MAC indicates the successful reception of a PDCCH transmission addressed to C-RNTI and if \textit{rach-skipSCG} is configured:

4> stop timer T307;

4> release \textit{ul-ConfigInfo}, if configured;

4> apply the parts of the CQI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the target PSCell, if any;

4> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the target PSCell (e.g. periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of the target PSCell;

\begin{verbatim}
NOTE 2: Whenever the UE shall setup or reconfigure a configuration in accordance with a field that is received it applies the new configuration, except for the cases addressed by the above statements.
\end{verbatim}

\subsection{5.3.10.11 SCG dedicated resource configuration}

The UE shall:

1> if the received \textit{radioResourceConfigDedicatedSCG} includes the \textit{drb-ToAddModListSCG}:

2> for each \textit{drb-Identity} value included in the \textit{drb-ToAddModListSCG} perform the DC specific DRB addition or reconfiguration as specified in 5.3.10.3a1

1> if the received \textit{radioResourceConfigDedicatedSCG} includes the \textit{mac-MainConfigSCG}:

2> perform the SCG MAC main reconfiguration as specified in 5.3.10.4;

1> if the received \textit{radioResourceConfigDedicatedSCG} includes the \textit{rlf-TimersAndConstantsSCG}:

2> reconfigure the values of timers and constants as specified in 5.3.10.7;

\subsection{5.3.10.12 Reconfiguration SCG or split DRB by \textit{drb-ToAddModList}}

The UE shall:

1> for each split or SCG DRBs that is part of the current configuration:

2> if the corresponding \textit{drb-Identity} value is included in the received \textit{drb-ToAddModList}; and

2> if the corresponding \textit{drb-Identity} value is not included in the received \textit{drb-ToAddModListSCG} (i.e. reconfigure split, split to MCG or SCG to MCG):

3> perform the DC specific DRB addition or reconfiguration as specified in 5.3.10.3a1;

\subsection{5.3.10.13 Neighbour cell information reconfiguration}

The UE shall:

1> if the received \textit{naics-Info} is set to \textit{release}:

2> instruct lower layer to release all the NAICS neighbour cell information for the concerned cell, if previously configured;

1> if the received \textit{naics-Info} includes the \textit{neighCellsToReleaseList-r12}:
2> for each physCellId-r12 value included in the neighCellsToReleaseList-r12 that is part of the current NAICS neighbour cell information of the concerned cell:

3> instruct lower layer to release the NAICS neighbour cell information for the concerned cell;

1> if the received naics-Info includes the NeighCellsToAddModList-r12:

2> for each physCellId-r12 value included in the neighCellsToAddModList-r12 that is not part of the current NAICS neighbour cell information of the concerned cell:

3> instruct lower layer to add the NAICS neighbour cell information for the concerned cell;

2> for each physCellId-r12 value included in the neighCellsToAddModList-r12 that is part of the current NAICS neighbour cell information of the concerned cell:

3> instruct lower layer to modify the NAICS neighbour cell information in accordance with the received NeighCellsInfo for the concerned cell;

5.3.10.14 Void

5.3.10.15 Sidelink dedicated configuration

The UE shall:

1> if the RRCConnectionReconfiguration message includes the sl-CommConfig:

2> if commTxResources is included and set to setup:

3> from the next SC period use the resources indicated by commTxResources for sidelink communication transmission, as specified in 5.10.4;

2> else if commTxResources is included and set to release:

3> from the next SC period, release the resources allocated for sidelink communication transmission previously configured by commTxResources;

1> if the RRCConnectionReconfiguration message includes the sl-DiscConfig:

2> if discTxResources is included and set to setup:

3> from the next discovery period, as defined by discPeriod, use the resources indicated by discTxResources for sidelink discovery announcement, as specified in 5.10.6;

2> else if discTxResources is included and set to release:

3> from the next discovery period, as defined by discPeriod, release the resources allocated for sidelink discovery announcement previously configured by discTxResources;

2> if discTxResourcesPS is included and set to setup:

3> from the next discovery period, as defined by discPeriod, use the resources indicated by discTxResourcesPS for sidelink discovery announcement, as specified in 5.10.6;

2> else if discTxResourcesPS is included and set to release:

3> from the next discovery period, as defined by discPeriod, release the resources allocated for sidelink discovery announcement previously configured by discTxResourcesPS;

2> if discTxInterFreqInfo is included and set to setup:

3> from the next discovery period, as defined by discPeriod, use the resources indicated by discTxInterFreqInfo for sidelink discovery announcement, as specified in 5.10.6;

2> else if discTxInterFreqInfo is included and set to release:
3GPP TS 36.331 version 14.4.0 Release 14

5.3.10.15a V2X sidelink Communication dedicated configuration

The UE shall:

1> if the RRCConnectionReconfiguration message includes the sl-V2X-ConfigDedicated:

2> if commTxResources is included and set to setup:

3> use the resources indicated by commTxResources for V2X sidelink communication transmission, as specified in 5.10.13;

3> perform CBR measurement on the transmission resource pool indicated in commTxResources for V2X sidelink communication transmission, as specified in 5.5.3;

2> else if commTxResources is included and set to release:

3> release the resources allocated for V2X sidelink communication transmission previously configured by commTxResources;

2> if v2x-InterFreqInfoList is included:

3> use the synchronization configuration and resource configuration parameters for V2X sidelink communication on frequencies included in v2x-InterFreqInfoList, as specified in 5.10.13;

3> perform CBR measurement on the transmission resource pool indicated in v2x-InterFreqInfoList for V2X sidelink communication transmission, as specified in 5.5.3;

1> if the RRCConnectionReconfiguration message includes the mobilityControlInfoV2X:

2> if v2x-CommRxPool is included:

3> use the resources indicated by v2x-CommRxPool for V2X sidelink communication reception, as specified in 5.10.12;

2> if v2x-CommTxPoolExceptional is included:
3GPP TS 36.331 version 14.4.0 Release 14

5.10.13 T370 expiry

The UE shall:

1> if T370 expires:

2> release discSysInfoToReportConfig;

5.11 Radio link failure related actions

5.11.1 Detection of physical layer problems in RRC_CONNECTED

The UE shall:

1> upon receiving N310 consecutive "out-of-sync" indications for the PCell from lower layers while neither T300, T301, T304 nor T311 is running:

2> start timer T310;

1> upon receiving N313 consecutive "out-of-sync" indications for the PSCell from lower layers while T307 is not running:

2> start T313;

NOTE: Physical layer monitoring and related autonomous actions do not apply to SCells except for the PSCell.

5.11.1a Early detection of physical layer problems in RRC_CONNECTED

The UE shall:

1> upon receiving N310 consecutive "early-out-of-sync" indications for the PCell from lower layers:

2> start timer T314 with the timer value set to the value of T310;

5.11.1b Detection of physical layer improvements in RRC_CONNECTED

The UE shall:

1> upon receiving N311 consecutive "early-in-sync" indications for the PCell from lower layers:

2> start timer T315 with the timer value set to the value of T310;

5.11.2 Recovery of physical layer problems

Upon receiving N311 consecutive "in-sync" indications for the PCell from lower layers while T310 is running, the UE shall:

1> stop timer T310;

1> stop timer T312, if running;

NOTE 1: In this case, the UE maintains the RRC connection without explicit signalling, i.e. the UE maintains the entire radio resource configuration.

NOTE 2: Periods in time where neither "in-sync" nor "out-of-sync" is reported by layer 1 do not affect the evaluation of the number of consecutive "in-sync" or "out-of-sync" indications.
Upon receiving N314 consecutive “in-sync” indications for the PSCell from lower layers while T313 is running, the UE shall:

1> stop timer T313;

5.3.11.2a Recovery of early detection of physical layer problems

Upon receiving N311 consecutive “in-sync” indications for the PCell from lower layers while T314 is running, the UE shall:

1> stop timer T314;

5.3.11.2b Cancellation of physical layer improvements in RRC_CONNECTED

Upon receiving N311 consecutive “in-sync” indications for the PCell from lower layers while T315 is running, the UE shall:

1> stop timer T315;

5.3.11.3 Detection of radio link failure

The UE shall:

1> upon T310 expiry; or
1> upon T312 expiry; or
1> upon random access problem indication from MCG MAC while neither T300, T301, T304 nor T311 is running; or
1> upon indication from MCG RLC that the maximum number of retransmissions has been reached for an SRB or for an MCG or split DRB:

2> consider radio link failure to be detected for the MCG i.e. RLF;
2> except for NB-IoT, store the following radio link failure information in the VarRLF-Report by setting its fields as follows:
3> clear the information included in VarRLF-Report, if any;
3> set the plmn-IdentityList to include the list of EPLMNs stored by the UE (i.e. includes the RPLMN);
3> set the measResultLastServCell to include the RSRP and RSRQ, if available, of the PCell based on measurements collected up to the moment the UE detected radio link failure;
3> set the measResultNeighCells to include the best measured cells, other than the PCell, ordered such that the best cell is listed first, and based on measurements collected up to the moment the UE detected radio link failure, and set its fields as follows;
4> if the UE was configured to perform measurements for one or more EUTRA frequencies, include the measResultListEUTRA;
4> if the UE was configured to perform measurement reporting for one or more neighbouring UTRA frequencies, include the measResultListUTRA;
4> if the UE was configured to perform measurement reporting for one or more neighbouring GERAN frequencies, include the measResultListGERAN;
4> if the UE was configured to perform measurement reporting for one or more neighbouring CDMA2000 frequencies, include the measResultsCDMA2000;
4> for each neighbour cell included, include the optional fields that are available;
NOTE 1: The measured quantities are filtered by the L3 filter as configured in the mobility measurement configuration. The measurements are based on the time domain measurement resource restriction, if configured. Blacklisted cells are not required to be reported.

3> if detailed location information is available, set the content of the locationInfo as follows:
   4> include the locationCoordinates;
   4> include the horizontalVelocity, if available;

3> set the failedPCellId to the global cell identity, if available, and otherwise to the physical cell identity and carrier frequency of the PCell where radio link failure is detected;

3> set the tac-FailedPCell to the tracking area code, if available, of the PCell where radio link failure is detected;

3> if an RRCConnectionReconfiguration message including the mobilityControlInfo was received before the connection failure:
   4> if the last RRCConnectionReconfiguration message including the mobilityControlInfo concerned an intra E-UTRA handover:
      5> include the previousPCellId and set it to the global cell identity of the PCell where the last RRCConnectionReconfiguration message including mobilityControlInfo was received;
      5> set the timeConnFailure to the elapsed time since reception of the last RRCConnectionReconfiguration message including mobilityControlInfo;
   4> if the last RRCConnectionReconfiguration message including the mobilityControlInfo concerned a handover to E-UTRA from UTRA and if the UE supports Radio Link Failure Report for Inter-RAT MRO:
      5> include the previousUTRA-CellId and set it to the physical cell identity, the carrier frequency and the global cell identity, if available, of the UTRA Cell in which the last RRCConnectionReconfiguration message including mobilityControlInfo was received;
      5> set the timeConnFailure to the elapsed time since reception of the last RRCConnectionReconfiguration message including mobilityControlInfo;

3> if the UE supports QCI1 indication in Radio Link Failure Report and has a DRB for which QCI is 1:
   4> include the drb-EstablishedWithQCI-1;

3> set the connectionFailureType to rlf;

3> set the c-RNTI to the C-RNTI used in the PCell;

3> set the rlf-Cause to the trigger for detecting radio link failure;

2> if AS security has not been activated:

3> if the UE is a NB-IoT UE:
   4> if the UE supports RRC connection re-establishment for the Control Plane CIoT EPS optimisation:
      5> initiate the RRC connection re-establishment procedure as specified in 5.3.7;
   4> else:
      5> perform the actions upon leaving RRC_CONNECTED as specified in 5.3.12, with release cause 'RRC connection failure';

3> else:
   4> perform the actions upon leaving RRC_CONNECTED as specified in 5.3.12, with release cause 'other';
else:

initiate the connection re-establishment procedure as specified in 5.3.7;

The UE shall:

1> upon T313 expiry; or
1> upon random access problem indication from SCG MAC; or
1> upon indication from SCG RLC that the maximum number of retransmissions has been reached for an SCG or split DRB:

2> consider radio link failure to be detected for the SCG i.e. SCG-RLF;

2> initiate the SCG failure information procedure as specified in 5.6.13 to report SCG radio link failure;

The UE may discard the radio link failure information, i.e. release the UE variable VarRLF-Report, 48 hours after the radio link failure is detected, upon power off or upon detach.

5.3.11.3a Detection of early-out-of-sync event

The UE shall:

1> upon T314 expiry;

2> consider "early-out-of-sync" event to be detected and initiate transmission of the UEAssistanceInformation message in accordance with 5.6.10;

5.3.11.3b Detection of early-in-sync event

The UE shall:

1> upon T315 expiry;

2> consider "early-in-sync" event to be detected and initiate transmission of the UEAssistanceInformation message in accordance with 5.6.10;

5.3.12 UE actions upon leaving RRC_CONNECTED

Upon leaving RRC_CONNECTED, the UE shall:

1> reset MAC;

1> stop all timers that are running except T320, T322, T325, T330;

1> if leaving RRC_CONNECTED was triggered by suspension of the RRC:

2> re-establish RLC entities for all SRBs and DRBs;

2> store the UE AS Context including the current RRC configuration, the current security context, the PDCP state including ROHC state, C-RNTI used in the source PCell, the cellIdentity and the physical cell identity of the source PCell;

2> store the following information provided by E-UTRAN:

3> the resumIdentity;

2> suspend all SRB(s) and DRB(s), except SRB0;

2> indicate the suspension of the RRC connection to upper layers;

2> configure lower layers to suspend integrity protection and ciphering;

NOTE 1: Ciphering is not applied for the subsequent RRCConnectionResume message used to resume the connection. An integrity check is performed by lower layers, but merely upon request from RRC.
1> else:
  2> release all radio resources, including release of the RLC entity, the MAC configuration and the associated PDCP entity for all established RBs;
  2> indicate the release of the RRC connection to upper layers together with the release cause;
1> if leaving RRC_CONNECTED was triggered neither by reception of the MobilityFromEUTRACommand message nor by selecting an inter-RAT cell while T311 was running:
  2> if timer T350 is configured:
    3> start timer T350;
    3> apply rclwi-Configuration if configured, otherwise apply the wlan-Id-List corresponding to the RPLMN included in SystemInformationBlockType17;
  2> else:
    3> release the wlan-OffloadConfigDedicated, if received;
    3> if the wlan-OffloadConfigCommon corresponding to the RPLMN is broadcast by the cell:
      4> apply the wlan-OffloadConfigCommon corresponding to the RPLMN included in SystemInformationBlockType17;
      4> apply steerToWLAN if configured, otherwise apply the wlan-Id-List corresponding to the RPLMN included in SystemInformationBlockType17;
  2> enter RRC_IDLE and perform procedures as specified in TS 36.304 [4, 5.2.7];
1> else:
  2> release the wlan-OffloadConfigDedicated, if received;

NOTE 2: BL UEs or UEs in CE verifies validity of SI when released to RRC_IDLE.
1> release the LWA configuration, if configured, as described in 5.6.14.3;
1> release the LWIP configuration, if configured, as described in 5.6.17.3;

5.3.13 UE actions upon PUCCH/ SRS release request

Upon receiving a PUCCH release request from lower layers, for an indicated serving cell the UE shall:
  1> apply the default physical channel configuration for cqi-ReportConfig for the indicated serving cell as specified in 9.2.4 and release cqi-ReportConfigSCell, for each SCell that sends HARQ feedback on the indicated serving cell, if any;
  1> apply the default physical channel configuration for schedulingRequestConfig as specified in 9.2.4, for the concerned CG;

Upon receiving an SRS release request from lower layers, for an indicated serving cell the UE shall:
  1> apply the default physical channel configuration for soundingRS-UL-ConfigDedicated, as specified in 9.2.4;

NOTE: Upon PUCCH/ SRS release request, the UE does not modify the soundingRS-UL-ConfigDedicatedAperiodic i.e. it does not apply the default for this field (release).
5.3.14 Proximity indication

5.3.14.1 General

The purpose of this procedure is to indicate that the UE is entering or leaving the proximity of one or more CSG member cells. The detection of proximity is based on an autonomous search function as defined in TS 36.304 [4].

5.3.14.2 Initiation

A UE in RRC_CONNECTED shall:

1> if the UE enters the proximity of one or more CSG member cell(s) on an E-UTRA frequency while proximity indication is enabled for such E-UTRA cells; or

1> if the UE enters the proximity of one or more CSG member cell(s) on a UTRA frequency while proximity indication is enabled for such UTRA cells; or

1> if the UE leaves the proximity of all CSG member cell(s) on an E-UTRA frequency while proximity indication is enabled for such E-UTRA cells; or

1> if the UE leaves the proximity of all CSG member cell(s) on a UTRA frequency while proximity indication is enabled for such UTRA cells:

2> if the UE has previously not transmitted a ProximityIndication for the RAT and frequency during the current RRC connection, or if more than 5 s has elapsed since the UE has last transmitted a ProximityIndication (either entering or leaving) for the RAT and frequency:

3> initiate transmission of the ProximityIndication message in accordance with 5.3.14.3;

NOTE: In the conditions above, "if the UE enters the proximity of one or more CSG member cell(s)" includes the case of already being in the proximity of such cell(s) at the time proximity indication for the corresponding RAT is enabled.

5.3.14.3 Actions related to transmission of ProximityIndication message

The UE shall set the contents of ProximityIndication message as follows:

1> if the UE applies the procedure to report entering the proximity of CSG member cell(s):

2> set type to entering;

1> else if the UE applies the procedure to report leaving the proximity of CSG member cell(s):

2> set type to leaving;

1> if the proximity indication was triggered for one or more CSG member cell(s) on an E-UTRA frequency:

2> set the carrierFreq to eutra with the value set to the E-ARFCN value of the E-UTRA cell(s) for which proximity indication was triggered;
1> else if the proximity indication was triggered for one or more CSG member cell(s) on a UTRA frequency:

2> set the `carrierFreq` to `utra` with the value set to the ARFCN value of the UTRA cell(s) for which proximity indication was triggered;

The UE shall submit the `ProximityIndication` message to lower layers for transmission.

5.3.15 Void

5.4 Inter-RAT mobility

5.4.1 Introduction

The general principles of connected mode mobility are described in 5.3.1.3. The general principles of the security handling upon connected mode mobility are described in 5.3.1.2.

For the (network controlled) inter RAT mobility from E-UTRA for a UE in RRC_CONNECTED, a single procedure is defined that supports both handover, cell change order with optional network assistance (NACC) and enhanced CS fallback to CDMA2000 1xRTT. In case of mobility to CDMA2000, the eNB decides when to move to the other RAT while the target RAT determines to which cell the UE shall move.

5.4.2 Handover to E-UTRA

5.4.2.1 General

![Figure 5.4.2.1-1: Handover to E-UTRA, successful](image)

The purpose of this procedure is to, under the control of the network, transfer a connection between the UE and another Radio Access Network (e.g. GERAN or UTRAN) to E-UTRAN.

The handover to E-UTRA procedure applies when SRBs, possibly in combination with DRBs, are established in another RAT. Handover from UTRAN to E-UTRAN applies only after integrity has been activated in UTRAN.

5.4.2.2 Initiation

The RAN using another RAT initiates the handover to E-UTRA procedure, in accordance with the specifications applicable for the other RAT, by sending the `RRCConnectionReconfiguration` message via the radio access technology from which the inter-RAT handover is performed.

E-UTRAN applies the procedure as follows:

- to activate ciphering, possibly using NULL algorithm, if not yet activated in the other RAT;
- to establish SRB1, SRB2 and one or more DRBs, i.e. at least the DRB associated with the default EPS bearer is established;
5.4.2.3 Reception of the **RRCConnectionReconfiguration** by the UE

If the UE is able to comply with the configuration included in the **RRCConnectionReconfiguration** message, the UE shall:

1> apply the default physical channel configuration as specified in 9.2.4;
1> apply the default semi-persistent scheduling configuration as specified in 9.2.3;
1> apply the default MAC main configuration as specified in 9.2.2;
1> start timer T304 with the timer value set to \( t_{304} \), as included in the \( mobilityControlInfo \);
1> consider the target PCell to be one on the frequency indicated by the \( carrierFreq \) with a physical cell identity indicated by the \( targetPhysCellId \);
1> start synchronising to the DL of the target PCell;
1> set the C-RNTI to the value of the \( newUE-Identity \);
1> for the target PCell, apply the downlink bandwidth indicated by the \( dl-Bandwidth \);
1> for the target PCell, apply the uplink bandwidth indicated by (the absence or presence of) the \( ul-Bandwidth \);
1> configure lower layers in accordance with the received \( radioResourceConfigCommon \);
1> configure lower layers in accordance with any additional fields, not covered in the previous, if included in the received \( mobilityControlInfo \);
1> perform the radio resource configuration procedure as specified in 5.3.10;
1> forward the \( nas-SecurityParamToEUTRA \) to the upper layers;
1> derive the \( K_{NB} \) key, as specified in TS 33.401 [32];
1> derive the \( K_{RRCint} \) key associated with the \( integrityProtAlgorithm \), as specified in TS 33.401 [32];
1> derive the \( K_{RRCenc} \) key and the \( K_{UPenc} \) key associated with the \( cipheringAlgorithm \), as specified in TS 33.401 [32];
1> configure lower layers to apply the indicated integrity protection algorithm and the \( K_{RRCint} \) key immediately, i.e. the indicated integrity protection configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
1> configure lower layers to apply the indicated ciphering algorithm, the \( K_{RRCenc} \) key and the \( K_{UPenc} \) key immediately, i.e. the indicated ciphering configuration shall be applied to all subsequent messages received and sent by the UE, including the message used to indicate the successful completion of the procedure;
1> if the received **RRCConnectionReconfiguration** includes the \( sCellToAddModList \):
   2> perform SCell addition as specified in 5.3.10.3b;
1> if the **RRCConnectionReconfiguration** message includes the \( measConfig \):
   2> perform the measurement configuration procedure as specified in 5.5.2;
1> perform the measurement identity autonomous removal as specified in 5.5.2.2a;
1> if the **RRCConnectionReconfiguration** message includes the \( otherConfig \):
   2> perform the other configuration procedure as specified in 5.3.10.9;
1> if the **RRCConnectionReconfiguration** message includes \( wlan-OffloadInfo \):
   2> perform the dedicated WLAN offload configuration procedure as specified in 5.6.12.2;
1> if the **RRCConnectionReconfiguration** message includes \( rclwi-Configuration \):
   2> perform the WLAN traffic steering command procedure as specified in 5.6.16.2;
1> if the RRCConnectionReconfiguration message includes lwa-Configuration:
   2> perform the LWA configuration procedure as specified in 5.6.14.2;
1> if the RRCConnectionReconfiguration message includes lwip-Configuration:
   2> perform the LWIP reconfiguration procedure as specified in 5.6.17.2;
1> set the content of RRCConnectionReconfigurationComplete message as follows:
   2> if the UE has radio link failure or handover failure information available in VarRLF-Report and if the RPLMN is included in plmn-IdentityList stored in VarRLF-Report:
      3> include rlf-InfoAvailable;
   2> if the UE has MBSFN logged measurements available for E-UTRA and if the RPLMN is included in plmn-IdentityList stored in VarLogMeasReport and if T330 is not running:
      3> include logMeasAvailableMBSFN;
   2> else if the UE has logged measurements available for E-UTRA and if the RPLMN is included in plmn-IdentityList stored in VarLogMeasReport:
      3> include the logMeasAvailable;
   2> if the UE has connection establishment failure information available in VarConnEstFailReport and if the RPLMN is equal to plmn-Identity stored in VarConnEstFailReport:
      3> include connEstFailInfoAvailable;
1> submit the RRCConnectionReconfigurationComplete message to lower layers for transmission using the new configuration;
1> if the RRCConnectionReconfiguration message does not include rlf-TimersAndConstants set to setup:
   2> use the default values specified in 9.2.5 for timer T310, T311 and constant N310, N311;
1> if MAC successfully completes the random access procedure:
   2> stop timer T304;
   2> apply the parts of the CQI reporting configuration, the scheduling request configuration and the sounding RS configuration that do not require the UE to know the SFN of the target PCell, if any;
   2> apply the parts of the measurement and the radio resource configuration that require the UE to know the SFN of the target PCell (e.g. measurement gaps, periodic CQI reporting, scheduling request configuration, sounding RS configuration), if any, upon acquiring the SFN of the target PCell;

NOTE 1: Whenever the UE shall setup or reconfigure a configuration in accordance with a field that is received it applies the new configuration, except for the cases addressed by the above statements.

2> enter E-UTRA RRC_CONNECTED, upon which the procedure ends;

NOTE 2: The UE is not required to determine the SFN of the target PCell by acquiring system information from that cell before performing RACH access in the target PCell.

5.4.2.4 Reconfiguration failure

The UE shall:
1> if the UE is unable to comply with (part of) the configuration included in the RRCConnectionReconfiguration message:
   2> perform the actions defined for this failure case as defined in the specifications applicable for the other RAT;
NOTE 1: The UE may apply above failure handling also in case the RRCConnectionReconfiguration message causes a protocol error for which the generic error handling as defined in 5.7 specifies that the UE shall ignore the message.

NOTE 2: If the UE is unable to comply with part of the configuration, it does not apply any part of the configuration, i.e. there is no partial success/failure.

5.4.2.5 T304 expiry (handover to E-UTRA failure)

The UE shall:

1> upon T304 expiry (handover to E-UTRA failure):
2> reset MAC;
2> perform the actions defined for this failure case as defined in the specifications applicable for the other RAT;

5.4.3 Mobility from E-UTRA

5.4.3.1 General

The purpose of this procedure is to move a UE in RRC_CONNECTED to a cell using another Radio Access Technology (RAT), e.g. GERAN, UTRA or CDMA2000 systems. The mobility from E-UTRA procedure covers the following type of mobility:

- handover, i.e. the MobilityFromEUTRACCommand message includes radio resources that have been allocated for the UE in the target cell;
- cell change order, i.e. the MobilityFromEUTRACCommand message may include information facilitating access of and/ or connection establishment in the target cell, e.g. system information. Cell change order is applicable only to GERAN; and
- enhanced CS fallback to CDMA2000 1xRTT, i.e. the MobilityFromEUTRACCommand message includes radio resources that have been allocated for the UE in the target cell. The enhanced CS fallback to CDMA2000 1xRTT may be combined with concurrent handover or redirection to CDMA2000 HRPD.
NOTE: For the case of dual receiver/transmitter enhanced CS fallback to CDMA2000 1xRTT, the DLInformationTransfer message is used instead of the MobilityFromEUTRACommand message (see TS 36.300 [9]).

5.4.3.2 Initiation

E-UTRAN initiates the mobility from E-UTRA procedure to a UE in RRC_CONNECTED, possibly in response to a MeasurementReport message or in response to reception of CS fallback indication for the UE from MME, by sending a MobilityFromEUTRACommand message. E-UTRAN applies the procedure as follows:
- the procedure is initiated only when AS-security has been activated, and SRB2 with at least one DRB are setup and not suspended;

5.4.3.3 Reception of the MobilityFromEUTRACommand by the UE

The UE shall be able to receive a MobilityFromEUTRACommand message and perform a cell change order to GERAN, even if no prior UE measurements have been performed on the target cell.

The UE shall:
1> stop timer T310, if running;
1> stop timer T312, if running;
1> if the MobilityFromEUTRACommand message includes the purpose set to handover:
   2> if the targetRAT-Type is set toutra or geran:
      3> consider inter-RAT mobility as initiated towards the RAT indicated by the targetRAT-Type included in the MobilityFromEUTRACommand message;
      3> forward the nas-SecurityParamFromEUTRA to the upper layers;
      3> access the target cell indicated in the inter-RAT message in accordance with the specifications of the target RAT;
      3> if the targetRAT-Type is set to geran:
         4> use the contents of systemInformation, if provided for PS Handover, as the system information to begin access on the target GERAN cell;
   2> else if the targetRAT-Type is set to cdma2000-1XRTT or cdma2000-HRPD:
      3> forward the targetRAT-Type and the targetRAT-MessageContainer to the CDMA2000 upper layers for the UE to access the cell(s) indicated in the inter-RAT message in accordance with the specifications of the CDMA2000 target-RAT;
1> else if the MobilityFromEUTRACommand message includes the purpose set to cellChangeOrder:
   2> start timer T304 with the timer value set to t304, as included in the MobilityFromEUTRACommand message;
   2> if the targetRAT-Type is set to geran:
      3> if networkControlOrder is included in the MobilityFromEUTRACommand message:
         4> apply the value as specified in TS 44.060 [36];
   3> else:
4> acquire networkControlOrder and apply the value as specified in TS 44.060 [36];

3> use the contents of systemInformation, if provided, as the system information to begin access on the target GERAN cell;

2> establish the connection to the target cell indicated in the CellChangeOrder;

NOTE 3: The criteria for success or failure of the cell change order to GERAN are specified in TS 44.060[36].

1> if the MobilityFromEUTRACCommand message includes the purpose set to e-CSFB:

2> if messageContCDMA2000-1XRTT is present:

3> forward the messageContCDMA2000-1XRTT to the CDMA2000 upper layers for the UE to access the cell(s) indicated in the inter-RAT message in accordance with the specification of the target RAT;

2> if mobilityCDMA2000-HRPD is present and is set to handover:

3> forward the messageContCDMA2000-HRPD to the CDMA2000 upper layers for the UE to access the cell(s) indicated in the inter-RAT message in accordance with the specification of the target RAT;

2> if mobilityCDMA2000-HRPD is present and is set to redirection:

3> forward the redirectCarrierCDMA2000-HRPD to the CDMA2000 upper layers;

NOTE 4: When the CDMA2000 upper layers in the UE receive both the messageContCDMA2000-1XRTT and messageContCDMA2000-HRPD the UE performs concurrent access to both CDMA2000 1xRTT and CDMA2000 HRPD RAT.

NOTE 5: The UE should perform the handover, the cell change order or enhanced 1xRTT CS fallback as soon as possible following the reception of the RRC message MobilityFromEUTRACCommand, which could be before confirming successful reception (HARQ and ARQ) of this message.

5.4.3.4 Successful completion of the mobility from E-UTRA

Upon successfully completing the handover, the cell change order or enhanced 1xRTT CS fallback, the UE shall:

1> perform the actions upon leaving RRC_CONNECTED as specified in 5.3.12, with release cause 'other';

NOTE: If the UE performs enhanced 1xRTT CS fallback along with concurrent mobility to CDMA2000 HRPD and the connection to either CDMA2000 1xRTT or CDMA2000 HRPD succeeds, then the mobility from E-UTRA is considered successful.

5.4.3.5 Mobility from E-UTRA failure

The UE shall:

1> if T304 expires (mobility from E-UTRA failure); or

1> if the UE does not succeed in establishing the connection to the target radio access technology; or

1> if the UE is unable to comply with (part of) the configuration included in the MobilityFromEUTRACCommand message; or

1> if there is a protocol error in the inter RAT information included in the MobilityFromEUTRACCommand message, causing the UE to fail the procedure according to the specifications applicable for the target RAT:

2> stop T304, if running;

2> if the cs-FallbackIndicator in the MobilityFromEUTRACCommand message was set to TRUE or e-CSFB was present:

3> indicate to upper layers that the CS fallback procedure has failed;

2> revert back to the configuration used in the source PCell, excluding the configuration configured by the physicalConfigDedicated, mac-MainConfig and sps-Config;
2> initiate the connection re-establishment procedure as specified in 5.3.7;

NOTE: For enhanced CS fallback to CDMA2000 1xRTT, the above UE behavior applies only when the UE is attempting the enhanced 1xRTT CS fallback and connection to the target radio access technology fails or if the UE is attempting enhanced 1xRTT CS fallback along with concurrent mobility to CDMA2000 HRPD and connection to both the target radio access technologies fails.

5.4.4 Handover from E-UTRA preparation request (CDMA2000)

5.4.4.1 General

The purpose of this procedure is to trigger the UE to prepare for handover or enhanced 1xRTT CS fallback to CDMA2000 by requesting a connection with this network. The UE may use this procedure to concurrently prepare for handover to CDMA2000 HRPD along with preparation for enhanced CS fallback to CDMA2000 1xRTT. This procedure applies to CDMA2000 capable UEs only.

This procedure is also used to trigger the UE which supports dual Rx/Tx enhanced 1xCSFB to redirect its second radio to CDMA2000 1xRTT.

The handover from E-UTRA preparation request procedure applies when signalling radio bearers are established.

5.4.4.2 Initiation

E-UTRAN initiates the handover from E-UTRA preparation request procedure to a UE in RRC_CONNECTED, possibly in response to a MeasurementReport message or CS fallback indication for the UE, by sending a HandoverFromEUTRAPreparationRequest message. E-UTRA initiates the procedure only when AS security has been activated.

5.4.4.3 Reception of the HandoverFromEUTRAPreparationRequest by the UE

Upon reception of the HandoverFromEUTRAPreparationRequest message, the UE shall:

1> if dualRxTxRedirectIndicator is present in the received message:

2> forward dualRxTxRedirectIndicator to the CDMA2000 upper layers;

2> forward redirectCarrierCDMA2000-1XRTT to the CDMA2000 upper layers, if included;

1> else:

2> indicate the request to prepare handover or enhanced 1xRTT CS fallback and forward the cdma2000-Type to the CDMA2000 upper layers;

2> if cdma2000-Type is set to type1XRTT:

3> forward the rand and the mobilityParameters to the CDMA2000 upper layers;

2> if concurrPrepCDMA2000-HRPD is present in the received message:

3> forward concurrPrepCDMA2000-HRPD to the CDMA2000 upper layers;

2> else:
3> forward `concurrPrepCDMA2000-HRPD`, with its value set to `FALSE`, to the CDMA2000 upper layers;

5.4.5    UL handover preparation transfer (CDMA2000)

5.4.5.1    General

A UE in RRC_CONNECTED initiates the UL handover preparation transfer procedure whenever there is a need to transfer handover or enhanced 1xRTT CS fallback related non-3GPP dedicated information. The UE initiates the UL handover preparation transfer procedure by sending the `ULHandoverPreparationTransfer` message.

5.4.5.3    Actions related to transmission of the `ULHandoverPreparationTransfer` message

The UE shall set the contents of the `ULHandoverPreparationTransfer` message as follows:

1> include the `cdma2000-Type` and the `dedicatedInfo`;

1> if the `cdma2000-Type` is set to `type1XRTT`:

2> include the `meid` and set it to the value received from the CDMA2000 upper layers;

1> submit the `ULHandoverPreparationTransfer` message to lower layers for transmission, upon which the procedure ends;

5.4.5.4    Failure to deliver the `ULHandoverPreparationTransfer` message

The UE shall:

1> if the UE is unable to guarantee successful delivery of `ULHandoverPreparationTransfer` messages:

2> inform upper layers about the possible failure to deliver the information contained in the concerned `ULHandoverPreparationTransfer` message;

5.4.6    Inter-RAT cell change order to E-UTRAN

5.4.6.1    General

The purpose of the inter-RAT cell change order to E-UTRAN procedure is to transfer, under the control of the source radio access technology, a connection between the UE and another radio access technology (e.g. GSM/ GPRS) to E-UTRAN.
5.4.6.2 Initiation

The procedure is initiated when a radio access technology other than E-UTRAN, e.g. GSM/GPRS, using procedures specific for that RAT, orders the UE to change to an E-UTRAN cell. In response, upper layers request the establishment of an RRC connection as specified in subclause 5.3.3.

NOTE: Within the message used to order the UE to change to an E-UTRAN cell, the source RAT should specify the identity of the target E-UTRAN cell as specified in the specifications for that RAT.

The UE shall:

1. upon receiving an \textit{RRCConnectionSetup} message;
2. consider the inter-RAT cell change order procedure to have completed successfully;

5.4.6.3 UE fails to complete an inter-RAT cell change order

If the inter-RAT cell change order fails the UE shall return to the other radio access technology and proceed as specified in the appropriate specifications for that RAT.

The UE shall:

1. upon failure to establish the RRC connection as specified in subclause 5.3.3;
2. consider the inter-RAT cell change order procedure to have failed;

NOTE: The cell change was network ordered. Therefore, failure to change to the target PCell should not cause the UE to move to UE-controlled cell selection.

5.5 Measurements

5.5.1 Introduction

The UE reports measurement information in accordance with the measurement configuration as provided by E-UTRAN. E-UTRAN provides the measurement configuration applicable for a UE in RRC\_CONNECTED by means of dedicated signalling, i.e. using the \textit{RRCConnectionReconfiguration} or \textit{RRCConnectionResume} message.

The UE can be requested to perform the following types of measurements:

- Intra-frequency measurements: measurements at the downlink carrier frequency(ies) of the serving cell(s).
- Inter-frequency measurements: measurements at frequencies that differ from any of the downlink carrier frequency(ies) of the serving cell(s).
- Inter-RAT measurements of UTRA frequencies.
- Inter-RAT measurements of GERAN frequencies.
- Inter-RAT measurements of CDMA2000 HRPD or CDMA2000 1xRTT or WLAN frequencies.
- CBR measurements.

The measurement configuration includes the following parameters:

1. **Measurement objects**: The objects on which the UE shall perform the measurements.

   - For intra-frequency and inter-frequency measurements a measurement object is a single E-UTRA carrier frequency. Associated with this carrier frequency, E-UTRAN can configure a list of cell specific offsets, a list of ‘blacklisted’ cells and a list of ‘whitelisted’ cells. Blacklisted cells are not considered in event evaluation or measurement reporting.
   - For inter-RAT UTRA measurements a measurement object is a set of cells on a single UTRA carrier frequency.
- For inter-RAT GERAN measurements a measurement object is a set of GERAN carrier frequencies.
- For inter-RAT CDMA2000 measurements a measurement object is a set of cells on a single (HRPD or 1xRTT) carrier frequency.
- For inter-RAT WLAN measurements a measurement object is a set of WLAN identifiers and optionally a set of WLAN frequencies.
- For CBR measurements a measurement object is a set of transmission resource pools for V2X sidelink communication.

NOTE 1: Some measurements using the above mentioned measurement objects, only concern a single cell, e.g. measurements used to report neighbouring cell system information, PCell UE Rx-Tx time difference, or a pair of cells, e.g. SSTD measurements between the PCell and the PSCell.

2. Reporting configurations: A list of reporting configurations where each reporting configuration consists of the following:
   - Reporting criterion: The criterion that triggers the UE to send a measurement report. This can either be periodical or a single event description.
   - Reporting format: The quantities that the UE includes in the measurement report and associated information (e.g. number of cells to report).

3. Measurement identities: A list of measurement identities where each measurement identity links one measurement object with one reporting configuration. By configuring multiple measurement identities it is possible to link more than one measurement object to the same reporting configuration, as well as to link more than one reporting configuration to the same measurement object. The measurement identity is used as a reference number in the measurement report.

4. Quantity configurations: One quantity configuration is configured per RAT type. The quantity configuration defines the measurement quantities and associated filtering used for all event evaluation and related reporting of that measurement type. One filter can be configured per measurement quantity.

5. Measurement gaps: Periods that the UE may use to perform measurements, i.e. no (UL, DL) transmissions are scheduled.

E-UTRAN only configures a single measurement object for a given frequency (except for WLAN and except for CBR measurements), i.e. it is not possible to configure two or more measurement objects for the same frequency with different associated parameters, e.g. different offsets and/ or blacklists. E-UTRAN may configure multiple instances of the same event e.g. by configuring two reporting configurations with different thresholds.

The UE maintains a single measurement object list, a single reporting configuration list, and a single measurement identities list. The measurement object list includes measurement objects, that are specified per RAT type, possibly including intra-frequency object(s) (i.e. the object(s) corresponding to the serving frequency(ies)), inter-frequency object(s) and inter-RAT objects. Similarly, the reporting configuration list includes E-UTRA and inter-RAT reporting configurations. Any measurement object can be linked to any reporting configuration of the same RAT type. Some reporting configurations may not be linked to a measurement object. Likewise, some measurement objects may not be linked to a reporting configuration.

The measurement procedures distinguish the following types of cells:

1. The serving cell(s) - these are the PCell and one or more SCells, if configured for a UE supporting CA.
2. Listed cells - these are cells listed within the measurement object(s) or, for inter-RAT WLAN, the WLANs matching the WLAN identifiers configured in the measurement object or the WLAN the UE is connected to.
3. Detected cells - these are cells that are not listed within the measurement object(s) but are detected by the UE on the carrier frequency(ies) indicated by the measurement object(s) or, for inter-RAT WLAN, the WLANs not included in the measObjectWLAN but meeting the triggering requirements.

For E-UTRA, the UE measures and reports on the serving cell(s), listed cells, detected cells, transmission resource pools for V2X sidelink communication, and, for RSSI and channel occupancy measurements, the UE measures and reports on any reception on the indicated frequency. For inter-RAT UTRA, the UE measures and reports on listed cells and optionally on cells that are within a range for which reporting is allowed by E-UTRAN. For inter-RAT GERAN,
the UE measures and reports on detected cells. For inter-RAT CDMA2000, the UE measures and reports on listed cells. For inter-RAT WLAN, the UE measures and reports on listed cells.

NOTE 2: For inter-RAT UTRA and CDMA2000, the UE measures and reports also on detected cells for the purpose of SON.

NOTE 3: This specification is based on the assumption that typically CSG cells of home deployment type are not indicated within the neighbour list. Furthermore, the assumption is that for non-home deployments, the physical cell identity is unique within the area of a large macro cell (i.e. as for UTRAN).

Whenever the procedural specification, other than contained in sub-clause 5.5.2, refers to a field it concerns a field included in the VarMeasConfig unless explicitly stated otherwise i.e. only the measurement configuration procedure covers the direct UE action related to the received measConfig.

5.5.2 Measurement configuration

5.5.2.1 General

E-UTRAN applies the procedure as follows:

- to ensure that, whenever the UE has a measConfig, it includes a measObject for each serving frequency;
- to configure at most one measurement identity using a reporting configuration with the purpose set to reportCGI;
- for serving frequencies, set the EARFCN within the corresponding measObject according to the band as used for reception/transmission;
- to configure at most one measurement identity using a reporting configuration with ul-DelayConfig;

The UE shall:

1> if the received measConfig includes the measObjectToRemoveList:
   2> perform the measurement object removal procedure as specified in 5.5.2.4;
1> if the received measConfig includes the measObjectToAddModList:
   2> perform the measurement object addition/modification procedure as specified in 5.5.2.5;
1> if the received measConfig includes the reportConfigToRemoveList:
   2> perform the reporting configuration removal procedure as specified in 5.5.2.6;
1> if the received measConfig includes the reportConfigToAddModList:
   2> perform the reporting configuration addition/modification procedure as specified in 5.5.2.7;
1> if the received measConfig includes the quantityConfig:
   2> perform the quantity configuration procedure as specified in 5.5.2.8;
1> if the received measConfig includes the measIdToRemoveList:
   2> perform the measurement identity removal procedure as specified in 5.5.2.2;
1> if the received measConfig includes the measIdToAddModList:
   2> perform the measurement identity addition/modification procedure as specified in 5.5.2.3;
1> if the received measConfig includes the measGapConfig or measGapConfigPerCC-List:
   2> perform the measurement gap configuration procedure as specified in 5.5.2.9;
1> if the received measConfig includes the measGapSharingConfig:
2> perform the measurement gap sharing configuration procedure as specified in 5.5.2.12;

1> if the received measConfig includes the s-Measure:
   2> set the parameter s-Measure within VarMeasConfig to the lowest value of the RSRP ranges indicated by the received value of s-Measure;

1> if the received measConfig includes the preRegistrationInfoHRPD:
   2> forward the preRegistrationInfoHRPD to CDMA2000 upper layers;

1> if the received measConfig includes the speedStatePars:
   2> set the parameter speedStatePars within VarMeasConfig to the received value of speedStatePars;

1> if the received measConfig includes the allowInterruptions:
   2> set the parameter allowInterruptions within VarMeasConfig to the received value of allowInterruptions;

5.5.2.2 Measurement identity removal

The UE shall:

1> for each measId included in the received measIdToRemoveList that is part of the current UE configuration in VarMeasConfig:
   2> remove the entry with the matching measId from the measIdList within the VarMeasConfig;
   2> remove the measurement reporting entry for this measId from the VarMeasReportList, if included;
   2> stop the periodical reporting timer or timer T321, whichever one is running, and reset the associated information (e.g. timeToTrigger) for this measId;

NOTE: The UE does not consider the message as erroneous if the measIdToRemoveList includes any measId value that is not part of the current UE configuration.

5.5.2.2a Measurement identity autonomous removal

The UE shall:

1> for each measId included in the measIdList within VarMeasConfig:
   2> if the associated reportConfig concerns an event involving a serving cell while the concerned serving cell is not configured; or
   2> if the associated reportConfig concerns an event involving a WLAN mobility set while the concerned WLAN mobility set is not configured; or
   2> if the associated reportConfig concerns an event involving a transmission resource pool for V2X sidelink communication while the concerned resource pool is not configured:
      3> remove the measId from the measIdList within the VarMeasConfig;
      3> remove the measurement reporting entry for this measId from the VarMeasReportList, if included;
      3> stop the periodical reporting timer if running, and reset the associated information (e.g. timeToTrigger) for this measId;

NOTE 1: The above UE autonomous removal of measIds applies only for measurement events A1, A2, A6, and also applies for events A3 and A5 if configured for PSCell and W2 and W3 and V1 and V2, if configured.

NOTE 2: When performed during re-establishment, the UE is only configured with a primary frequency (i.e. the SCell(s) and WLAN mobility set are released, if configured).
5.5.2.3 Measurement identity addition/ modification

E-UTRAN applies the procedure as follows:

- configure a measId only if the corresponding measurement object, the corresponding reporting configuration and the corresponding quantity configuration, are configured;

The UE shall:

1> for each measId included in the received measIdToAddModList:
   2> if an entry with the matching measId exists in the measIdList within the VarMeasConfig:
      3> replace the entry with the value received for this measId;
   2> else:
      3> add a new entry for this measId within the VarMeasConfig;
   2> remove the measurement reporting entry for this measId from the VarMeasReportList, if included;
   2> stop the periodical reporting timer or timer T321, whichever one is running, and reset the associated information (e.g. timeToTrigger) for this measId;
   2> if the triggerType is set to periodical and the purpose is set to reportCGI in the reportConfig associated with this measId:
      3> if the measObject associated with this measId concerns E-UTRA:
         4> if the si-RequestForHO is included in the reportConfig associated with this measId:
            5> if the UE is a category 0 UE according to TS 36.306 [5]:
               6> start timer T321 with the timer value set to 190 ms for this measId;
               5> else:
                  6> start timer T321 with the timer value set to 150 ms for this measId;
            4> else:
               5> start timer T321 with the timer value set to 1 second for this measId;
         3> else if the measObject associated with this measId concerns UTRA:
            4> if the si-RequestForHO is included in the reportConfig associated with this measId:
               5> for UTRA FDD, start timer T321 with the timer value set to 2 seconds for this measId;
               5> for UTRA TDD, start timer T321 with the timer value set to [1 second] for this measId;
            4> else:
               5> start timer T321 with the timer value set to 8 seconds for this measId;
         3> else:
            4> start timer T321 with the timer value set to 8 seconds for this measId;

5.5.2.4 Measurement object removal

The UE shall:

1> for each measObjectId included in the received measObjectToRemoveList that is part of the current UE configuration in VarMeasConfig:
   2> remove the entry with the matching measObjectId from the measObjectList within the VarMeasConfig;
5.5.2.5 Measurement object addition/ modification

The UE shall:

1> for each measObjectId included in the received measObjectToAddModList:

2> if an entry with the matching measObjectId exists in the measObjectList within the VarMeasConfig, for this entry:

3> reconfigure the entry with the value received for this measObject, except for the fields cellsToAddModList, blackCellsToAddModList, whiteCellsToAddModList, altTTT-CellsToAddModList, cellsToRemoveList, blackCellsToRemoveList, whiteCellsToRemoveList, altTTT-CellsToRemoveList, measSubframePatternConfigNeigh, measDS-Config, wlan-ToAddModList, wlan-ToRemoveList, tx-ResourcePoolToRemoveList and tx-ResourcePoolToAddList;

3> if the received measObject includes the cellsToRemoveList:

4> for each cellIndex included in the cellsToRemoveList:

5> remove the entry with the matching cellIndex from the cellsToAddModList;

3> if the received measObject includes the cellsToAddModList:

4> for each cellIndex value included in the cellsToAddModList:

5> if an entry with the matching cellIndex exists in the cellsToAddModList:

6> replace the entry with the value received for this cellIndex;

5> else:

6> add a new entry for the received cellIndex to the cellsToAddModList;

3> if the received measObject includes the blackCellsToRemoveList:

4> for each cellIndex included in the blackCellsToRemoveList:

5> remove the entry with the matching cellIndex from the blackCellsToAddModList;

NOTE 1: For each cellIndex included in the blackCellsToRemoveList that concerns overlapping ranges of cells, a cell is removed from the black list of cells only if all cell indexes containing it are removed.

3> if the received measObject includes the blackCellsToAddModList:

4> for each cellIndex included in the blackCellsToAddModList:

5> if an entry with the matching cellIndex is included in the blackCellsToAddModList:

6> replace the entry with the value received for this cellIndex;

5> else:

6> add a new entry for the received cellIndex to the blackCellsToAddModList;

3> if the received measObject includes the whiteCellsToRemoveList:

4> for each cellIndex included in the whiteCellsToRemoveList:

5> if an entry with the matching cellIndex is included in the whiteCellsToAddModList:

6> replace the entry with the value received for this cellIndex;

5> else:

6> add a new entry for the received cellIndex to the whiteCellsToAddModList;
for each `cellIndex` included in the `whiteCellsToRemoveList`:

5> remove the entry with the matching `cellIndex` from the `whiteCellsToAddModList`;

NOTE 2: For each `cellIndex` included in the `whiteCellsToRemoveList` that concerns overlapping ranges of cells, a cell is removed from the white list of cells only if all cell indexes containing it are removed.

3> if the received `measObject` includes the `whiteCellsToAddModList`:

4> for each `cellIndex` included in the `whiteCellsToAddModList`:

5> if an entry with the matching `cellIndex` is included in the `whiteCellsToAddModList`:

6> replace the entry with the value received for this `cellIndex`;

5> else:

6> add a new entry for the received `cellIndex` to the `whiteCellsToAddModList`;

3> if the received `measObject` includes the `altTTT-CellsToRemoveList`:

4> for each `cellIndex` included in the `altTTT-CellsToRemoveList`:

5> remove the entry with the matching `cellIndex` from the `altTTT-CellsToAddModList`;

NOTE 3: For each `cellIndex` included in the `altTTT-CellsToRemoveList` that concerns overlapping ranges of cells, a cell is removed from the list of cells only if all cell indexes containing it are removed.

3> if the received `measObject` includes the `altTTT-CellsToAddModList`:

4> for each `cellIndex` value included in the `altTTT-CellsToAddModList`:

5> if an entry with the matching `cellIndex` exists in the `altTTT-CellsToAddModList`:

6> replace the entry with the value received for this `cellIndex`;

5> else:

6> add a new entry for the received `cellIndex` to the `altTTT-CellsToAddModList`;

3> if the received `measObject` includes `measSubframePatternConfigNeigh`:

4> set `measSubframePatternConfigNeigh` within the `VarMeasConfig` to the value of the received field

3> if the received `measObject` includes `measDS-Config`:

4> if `measDS-Config` is set to `setup`:

5> if the received `measDS-Config` includes the `measCSI-RS-ToRemoveList`:

6> for each `measCSI-RS-Id` included in the `measCSI-RS-ToRemoveList`:

7> remove the entry with the matching `measCSI-RS-Id` from the `measCSI-RS-ToAddModList`;

5> if the received `measDS-Config` includes the `measCSI-RS-ToAddModList`, for each `measCSI-RS-Id` value included in the `measCSI-RS-ToAddModList`:

6> if an entry with the matching `measCSI-RS-Id` exists in the `measCSI-RS-ToAddModList`:

7> replace the entry with the value received for this `measCSI-RS-Id`;

6> else:

7> add a new entry for the received `measCSI-RS-Id` to the `measCSI-RS-ToAddModList`;

5> set other fields of the `measDS-Config` within the `VarMeasConfig` to the value of the received fields;
5> perform the discovery signals measurement timing configuration procedure as specified in 5.5.2.10;
4> else:
5> release the discovery signals measurement configuration;
3> for each measId associated with this measObjectId in the measIdList within the VarMeasConfig, if any:
4> remove the measurement reporting entry for this measId from the VarMeasReportList, if included;
4> stop the periodical reporting timer or timer T321, whichever one is running, and reset the associated information (e.g. timeToTrigger) for this measId;
3> if the received measObject includes the wlan-ToRemoveList:
4> for each WLAN-Identifiers included in the wlan-ToRemoveList:
5> remove the entry with the matching WLAN-Identifiers from the wlan-ToAddModList;
NOTE 3a: Matching of WLAN-Identifiers requires that all WLAN identifier fields should be same.
3> if the received measObject includes the wlan-ToAddModList:
4> for each WLAN-Identifiers included in the wlan-ToAddModList:
5> add a new entry for the received WLAN-Identifiers to the wlan-ToAddModList;
3> if the received measObject includes the tx-ResourcePoolToRemoveList:
4> for each transmission resource pool indicated in tx-ResourcePoolToRemoveList:
5> remove the entry with the matching identity of the transmission resource pool from the tx-ResourcePoolToAddList;
3> if the received measObject includes the tx-ResourcePoolToAddList:
4> for each transmission resource pool indicated in tx-ResourcePoolToAddList:
5> add a new entry for the received identity of the transmission resource pool to the tx-ResourcePoolToAddList;
2> else:
3> add a new entry for the received measObject to the measObjectList within VarMeasConfig;
NOTE 4: UE does not need to retain cellForWhichToReportCGI in the measObject after reporting cgi-Info.

5.5.2.6 Reporting configuration removal

The UE shall:
1> for each reportConfigId included in the received reportConfigToRemoveList that is part of the current UE configuration in VarMeasConfig:
2> remove the entry with the matching reportConfigId from the reportConfigList within the VarMeasConfig;
2> remove all measId associated with the reportConfigId from the measIdList within the VarMeasConfig, if any;
2> if a measId is removed from the measIdList:
3> remove the measurement reporting entry for this measId from the VarMeasReportList, if included;
3> stop the periodical reporting timer or timer T321, whichever one is running, and reset the associated information (e.g. timeToTrigger) for this measId;
NOTE: The UE does not consider the message as erroneous if the reportConfigToRemoveList includes any reportConfigId value that is not part of the current UE configuration.

5.5.2.7 Reporting configuration addition/ modification

The UE shall:

1> for each reportConfigId included in the received reportConfigToAddModList:

2> if an entry with the matching reportConfigId exists in the reportConfigList within the VarMeasConfig, for this entry:

3> reconfigure the entry with the value received for this reportConfig;

3> for each measId associated with this reportConfigId included in the measIdList within the VarMeasConfig, if any:

4> remove the measurement reporting entry for this measId from in VarMeasReportList, if included;

4> stop the periodical reporting timer or timer T321, whichever one is running, and reset the associated information (e.g. timeToTrigger) for this measId;

2> else:

3> add a new entry for the received reportConfig to the reportConfigList within the VarMeasConfig;

5.5.2.8 Quantity configuration

The UE shall:

1> for each RAT for which the received quantityConfig includes parameter(s):

2> set the corresponding parameter(s) in quantityConfig within VarMeasConfig to the value of the received quantityConfig parameter(s);

1> for each measId included in the measIdList within VarMeasConfig:

2> remove the measurement reporting entry for this measId from the VarMeasReportList, if included;

2> stop the periodical reporting timer or timer T321, whichever one is running, and reset the associated information (e.g. timeToTrigger) for this measId;

5.5.2.9 Measurement gap configuration

The UE shall:

1> if measGapConfig is set to setup:

2> if a measurement gap configuration measGapConfig or measGapConfigPerCC-List is already setup, release the measurement gap configuration;

2> if the gapOffset in measGapConfig indicates a non-uniform gap pattern:

3> setup the measurement gap configuration indicated by the measGapConfig in accordance with the received gapOffset, i.e., the first subframe of the first gap of each non-uniform gap pattern occurs at an SFN and subframe meeting the following condition (SFN and subframe of MCG cells):

\[ \text{SFN mod } T = \text{FLOOR}(\text{gapOffset}/10); \]

\[ \text{subframe} = \text{gapOffset} \mod 10; \]

with \( T = \text{LMGRP}/10 \) as defined in TS 36.133 [16];

2> else:
3> setup the measurement gap configuration indicated by the measGapConfig in accordance with the received gapOffset, i.e., the first subframe of each gap occurs at an SFN and subframe meeting the following condition (SFN and subframe of MCG cells):

\[
\text{SFN mod } T = \text{FLOOR}(\text{gapOffset} / 10);
\]

\[
\text{subframe } = \text{gapOffset} \text{ mod } 10;
\]

with \( T = \text{MGRP/10} \) as defined in TS 36.133 [16];

NOTE 1: The UE applies a single gap, which timing is relative to the MCG cells, even when configured with DC.

1> else if measGapConfig is set to release:

2> release the measurement gap configuration measGapConfig;

1> if measGapConfigPerCC-List is set to setup:

2> if a measurement gap configuration measGapConfig is already setup, release measGapConfig;

2> if measGapConfigToRemoveList is included:

3> for each ServCellIndex included in the measGapConfigToRemoveList:

4> release measGapConfigCC for the serving cell indicated by servCellId;

2> if measGapConfigToAddModList is included:

3> for each ServCellIndex included in the measGapConfigToAddModList:

4> store measGapConfigCC for the serving cell indicated by servCellId;

2> for each serving cell with stored measGapConfigCC indicating a non-uniform gap pattern, setup the measurement gap configuration indicated by the measGapConfigCC in accordance with the received gapOffset, i.e., the first subframe of each non-uniform gap pattern occurs at an SFN and subframe meeting the following condition (SFN and subframe of MCG cells):

\[
\text{SFN mod } T = \text{FLOOR}(\text{gapOffset} / 10);
\]

\[
\text{subframe } = \text{gapOffset} \text{ mod } 10;
\]

with \( T = \text{LMGRP/10} \) as defined in TS 36.133 [16];

2> for each serving cell with stored measGapConfigCC not indicating a non-uniform gap pattern, setup the measurement gap configuration indicated by the measGapConfigCC in accordance with the received gapOffset, i.e., the first subframe of each gap occurs at an SFN and subframe meeting the following condition (SFN and subframe of MCG cells):

\[
\text{SFN mod } T = \text{FLOOR}(\text{gapOffset} / 10);
\]

\[
\text{subframe } = \text{gapOffset} \text{ mod } 10;
\]

with \( T = \text{MGRP/10} \) as defined in TS 36.133 [16];

NOTE 2: The UE applies gap timing relative to the MCG cells, even when configured with DC.

1> else (measGapConfigPerCC-List is set to release):

2> release the measurement gap configuration measGapConfigPerCC-List;

NOTE 3: When a SCell is released, the UE is not required to apply a per CC measurement gap configuration associated to the SCell.
5.5.2.10 Discovery signals measurement timing configuration

The UE shall setup the discovery signals measurement timing configuration (DMTC) in accordance with the received \texttt{dmtc-PeriodOffset}, i.e., the first subframe of each DMTC occasion occurs at an SFN and subframe of the PCell meeting the following condition:

\[
\text{SFN mod } T = \text{FLOOR}(\text{dmtc-Offset}/10);
\]

\[
\text{subframe } = \text{dmtc-Offset} \text{ mod } 10;
\]

with \( T = \text{dmtc-Periodicity}/10; \)

On the concerned frequency, the UE shall not consider discovery signals transmission in subframes outside the DMTC occasion for measurements including RRM measurements.

5.5.2.11 RSSI measurement timing configuration

The UE shall setup the RSSI measurement timing configuration (RMTC) in accordance with the received \texttt{rmtc-Period}, \texttt{rmtc-SubframeOffset} if configured otherwise determined by the UE randomly, i.e. the first symbol of each RMTC occasion occurs at first symbol of an SFN and subframe of the PCell meeting the following condition:

\[
\text{SFN mod } T = \text{FLOOR}(\text{rmtc-SubframeOffset}/10);
\]

\[
\text{subframe } = \text{rmtc-SubframeOffset} \text{ mod } 10;
\]

with \( T = \text{rmtc-Period}/10; \)

On the concerned frequency, the UE shall not consider RSSI measurements outside the configured RMTC occasion which lasts for \texttt{measDuration} for RSSI and channel occupancy measurements.

5.5.2.12 Measurement gap sharing configuration

The UE shall:

1> if \texttt{measGapSharingConfig} is set to \texttt{setup}:

2> if a measurement gap sharing configuration is already setup, release the measurement gap sharing configuration;

2> setup the measurement gap sharing configuration indicated by the \texttt{measGapSharingConfig} in accordance with the received \texttt{measGapSharingScheme} as defined in TS 36.133 [16];

1> else:

2> release the measurement gap sharing configuration;

5.5.3 Performing measurements

5.5.3.1 General

For all measurements, except for UE Rx–Tx time difference measurements, RSSI, UL PDCP Packet Delay per QCI measurement, channel occupancy measurements, CBR measurement, and except for WLAN measurements of Band, Carrier Info, Available Admission Capacity, Backhaul Bandwidth, Channel Utilization, and Station Count, the UE applies the layer 3 filtering as specified in 5.5.3.2, before using the measured results for evaluation of reporting criteria or for measurement reporting.

The UE shall:

1> whenever the UE has a \texttt{measConfig}, perform RSRP and RSRQ measurements for each serving cell as follows:

2> for the PCell, apply the time domain measurement resource restriction in accordance with \texttt{measSubframePatternPCell}, if configured;

2> if the UE supports CRS based discovery signals measurement:
for each SCell in deactivated state, apply the discovery signals measurement timing configuration in accordance with measDS-Config, if configured within the measObject corresponding to the frequency of the SCell;

1> if the UE has a measConfig with rs-sinr-Config configured, perform RS-SINR (as indicated in the associated reportConfig) measurements as follows:

2> perform the corresponding measurements on the frequency indicated in the associated measObject using available idle periods or using autonomous gaps as necessary;

1> for each measId included in the measIdList within VarMeasConfig:

2> if the purpose for the associated reportConfig is set to reportCGI:

3> if si-RequestForHO is configured for the associated reportConfig:

4> perform the corresponding measurements on the frequency and RAT indicated in the associated measObject using autonomous gaps as necessary;

3> else:

4> perform the corresponding measurements on the frequency and RAT indicated in the associated measObject using available idle periods or using autonomous gaps as necessary;

NOTE 1: If autonomous gaps are used to perform measurements, the UE is allowed to temporarily abort communication with all serving cell(s), i.e. create autonomous gaps to perform the corresponding measurements within the limits specified in TS 36.133 [16]. Otherwise, the UE only supports the measurements with the purpose set to reportCGI only if E-UTRAN has provided sufficient idle periods.

3> try to acquire the global cell identity of the cell indicated by the cellForWhichToReportCGI in the associated measObject by acquiring the relevant system information from the concerned cell;

3> if an entry in the cellAccessRelatedInfoList includes the selected PLMN, acquire the relevant system information from the concerned cell;

3> if the cell indicated by the cellForWhichToReportCGI included in the associated measObject is an E-UTRAN cell:

4> try to acquire the CSG identity, if the CSG identity is broadcast in the concerned cell;

4> try to acquire the trackingAreaCode in the concerned cell;

4> try to acquire the list of additional PLMN Identities, as included in the plmn-IdentityList, if multiple PLMN identities are broadcast in the concerned cell;

4> if cellAccessRelatedInfoList is included, use trackingAreaCode and plmn-IdentityList from the entry of cellAccessRelatedInfoList containing the selected PLMN;

4> if the includeMultiBandInfo is configured:

5> try to acquire the freqBandIndicator in the SystemInformationBlockType1 of the concerned cell;

5> try to acquire the list of additional frequency band indicators, as included in the multiBandInfoList, if multiple frequency band indicators are included in the SystemInformationBlockType1 of the concerned cell;

5> try to acquire the freqBandIndicatorPriority, if the freqBandIndicatorPriority is included in the SystemInformationBlockType1 of the concerned cell;

NOTE 2: The 'primary' PLMN is part of the global cell identity.

3> if the cell indicated by the cellForWhichToReportCGI included in the associated measObject is a UTRAN cell:

4> try to acquire the LAC, the RAC and the list of additional PLMN Identities, if multiple PLMN identities are broadcast in the concerned cell;
4> try to acquire the CSG identity, if the CSG identity is broadcast in the concerned cell;
3> if the cell indicated by the cellForWhichToReportCGI included in the associated measObject is a GERAN cell:
4> try to acquire the RAC in the concerned cell;
3> if the cell indicated by the cellForWhichToReportCGI included in the associated measObject is a CDMA2000 cell and the cdma2000-Type included in the measObject is typeHRPD:
4> try to acquire the Sector ID in the concerned cell;
3> if the cell indicated by the cellForWhichToReportCGI included in the associated measObject is a CDMA2000 cell and the cdma2000-Type included in the measObject is type1XRTT:
4> try to acquire the BASE ID, SID and NID in the concerned cell;
2> if the ul-DelayConfig is configured for the associated reportConfig:
3> ignore the measObject;
3> configure the PDCP layer to perform UL PDCP Packet Delay per QCI measurement;
2> else:
3> if a measurement gap configuration is setup; or
3> if the UE does not require measurement gaps to perform the concerned measurements:
4> if s-Measure is not configured; or
4> if s-Measure is configured and the PCell RSRP, after layer 3 filtering, is lower than this value; or
4> if measDS-Config is configured in the associated measObject:
5> if the UE supports CSI-RS based discovery signals measurement; and
5> if the eventId in the associated reportConfig is set to eventC1 or eventC2, or if reportStrongestCSI-RSs is included in the associated reportConfig:
6> perform the corresponding measurements of CSI-RS resources on the frequency indicated in the concerned measObject, applying the discovery signals measurement timing configuration in accordance with measDS-Config in the concerned measObject;
6> if reportCRS-Meas is included in the associated reportConfig, perform the corresponding measurements of neighbouring cells on the frequencies indicated in the concerned measObject as follows:
7> for neighbouring cells on the primary frequency, apply the time domain measurement resource restriction in accordance with measSubframePatternConfigNeigh, if configured in the concerned measObject;
7> apply the discovery signals measurement timing configuration in accordance with measDS-Config in the concerned measObject;
5> else:
6> perform the corresponding measurements of neighbouring cells on the frequencies and RATs indicated in the concerned measObject as follows:
7> for neighbouring cells on the primary frequency, apply the time domain measurement resource restriction in accordance with measSubframePatternConfigNeigh, if configured in the concerned measObject;
7> if the UE supports CRS based discovery signals measurement, apply the discovery signals measurement timing configuration in accordance with measDS-Config, if configured in the concerned measObject;
4> if the \textit{ue-RxTsTimeDiffPeriodical} is configured in the associated reportConfig:
   5> perform the UE Rx–Tx time difference measurements on the PCell;
4> if the \textit{reportSSTD-Meas} is set to true in the associated reportConfig:
   5> perform SSTD measurements between the PCell and the PCell;
4> if the \textit{measRSSI-ReportConfig} is configured in the associated reportConfig:
   5> perform the RSSI and channel occupancy measurements on the frequency indicated in the associated measObject;

2> perform the evaluation of reporting criteria as specified in 5.5.4;

The UE capable of CBR measurement when configured to transmit non-P2X related V2X sidelink communication shall:

1> if in coverage on the frequency used for V2X sidelink communication transmission as defined in TS 36.304 [4, 11.4]; or
1> if the concerned frequency is included in \textit{v2x-InterFreqInfoList} in \textit{RRCConnectionReconfiguration} or in \textit{v2x-InterFreqInfoList} within SystemInformationBlockType21:

2> if the UE is in RRC\_IDLE:
   3> if the concerned frequency is the camped frequency:
      4> perform CBR measurement on the pools in \textit{v2x-CommTxPoolNormalCommon} and \textit{v2x-CommTxPoolExceptional} if included in SystemInformationBlockType21;
   3> else if \textit{v2x-CommTxPoolNormal} or \textit{v2x-CommTxPoolExceptional} is included in \textit{v2x-InterFreqInfoList} for the concerned frequency within SystemInformationBlockType21:
      4> perform CBR measurement on pools in \textit{v2x-CommTxPoolNormal} and \textit{v2x-CommTxPoolExceptional} in \textit{v2x-InterFreqInfoList} for the concerned frequency in SystemInformationBlockType21;
   3> else if the concerned frequency broadcasts SystemInformationBlockType21:
      4> perform CBR measurement on pools in \textit{v2x-CommTxPoolNormalCommon} and \textit{v2x-CommTxPoolExceptional} if included in SystemInformationBlockType21 broadcast on the concerned frequency;

2> if the UE is in RRC\_CONNECTED:
   3> if \textit{tx-ResourcePoolToAddList} is included in VarMeasConfig:
      4> perform CBR measurements on each resource pool indicated in \textit{tx-ResourcePoolToAddList};
   3> if the concerned frequency is the PCell’s frequency:
      4> perform CBR measurement on the pools in \textit{v2x-CommTxPoolNormalDedicated} or \textit{v2x-SchedulingPool} if included in RRCConnectionReconfiguration, \textit{v2x-CommTxPoolExceptional} if included in SystemInformationBlockType21 for the concerned frequency and \textit{v2x-CommTxPoolExceptional} if included in mobilityControlInfoV2X;
   3> else if \textit{v2x-CommTxPoolNormal}, \textit{v2x-SchedulingPool} or \textit{v2x-CommTxPoolExceptional} is included in \textit{v2x-InterFreqInfoList} for the concerned frequency within RRCConnectionReconfiguration:
      4> perform CBR measurement on pools in \textit{v2x-CommTxPoolNormal}, \textit{v2x-SchedulingPool}, and \textit{v2x-CommTxPoolExceptional} if included in \textit{v2x-InterFreqInfoList} for the concerned frequency in RRCConnectionReconfiguration;
   3> else if the concerned frequency broadcasts SystemInformationBlockType21:
      4> perform CBR measurement on pools in \textit{v2x-CommTxPoolNormalCommon} and \textit{v2x-CommTxPoolExceptional} if included in SystemInformationBlockType21 for the concerned frequency;
else:

2> perform CBR measurement on pools in v2x-CommTxPoolList in SL-V2X-Preconfiguration for the concerned frequency;

NOTE 3: The s-Measure defines when the UE is required to perform measurements. The UE is however allowed to perform measurements also when the PCell RSRP exceeds s-Measure, e.g., to measure cells broadcasting a CSG identity following use of the autonomous search function as defined in TS 36.304 [4].

NOTE 4: The UE may not perform the WLAN measurements it is configured with e.g. due to connection to another WLAN based on user preferences as specified in TS 23.402 [75] or due to turning off WLAN.

5.5.3.2 Layer 3 filtering

The UE shall:

1> for each measurement quantity that the UE performs measurements according to 5.5.3.1:

NOTE 1: This does not include quantities configured solely for UE Rx-Tx time difference, SSTD measurements and RSSI, channel occupancy measurements, WLAN measurements of Band, Carrier Info, Available Admission Capacity, Backhaul Bandwidth, Channel Utilization, and Station Count, CBR measurement, and UL PDCP Packet Delay per QCI measurement i.e. for those types of measurements the UE ignores the triggerQuantity and reportQuantity.

2> filter the measured result, before using for evaluation of reporting criteria or for measurement reporting, by the following formula:

\[ F_n = (1 - a) \cdot F_{n-1} + a \cdot M_n \]

where

- \( M_n \) is the latest received measurement result from the physical layer;
- \( F_n \) is the updated filtered measurement result, that is used for evaluation of reporting criteria or for measurement reporting;
- \( F_{n-1} \) is the old filtered measurement result, where \( F_0 \) is set to \( M_1 \) when the first measurement result from the physical layer is received; and
- \( a = 1/2^{k(m)} \), where \( k \) is the filterCoefficient for the corresponding measurement quantity received by the quantityConfig;

2> adapt the filter such that the time characteristics of the filter are preserved at different input rates, observing that the filterCoefficient \( k \) assumes a sample rate equal to 200 ms;

NOTE 2: If \( k \) is set to 0, no layer 3 filtering is applicable.

NOTE 3: The filtering is performed in the same domain as used for evaluation of reporting criteria or for measurement reporting, i.e., logarithmic filtering for logarithmic measurements.

NOTE 4: The filter input rate is implementation dependent, to fulfil the performance requirements set in [16]. For further details about the physical layer measurements, see TS 36.133 [16].

5.5.4 Measurement report triggering

5.5.4.1 General

If security has been activated successfully, the UE shall:

1> for each measId included in the measIdList within VarMeasConfig:

2> if the corresponding reportConfig includes a purpose set to reportStrongestCellsForSON:

3> consider any neighbouring cell detected on the associated frequency to be applicable;
2> else if the corresponding reportConfig includes a purpose set to reportCGI:

3> consider any neighbouring cell detected on the associated frequency/ set of frequencies (GERAN) which has a physical cell identity matching the value of the cellForWhichToReportCGI included in the corresponding measObject within the VarMeasConfig to be applicable;

2> else if the corresponding reportConfig includes a purpose set to reportLocation:

3> consider only the PCell to be applicable;

2> else:

3> if the corresponding measObject concerns E-UTRA:

4> if the ue-RxTxTimeDiffPeriodical is configured in the corresponding reportConfig:

5> consider only the PCell to be applicable;

4> else if the reportSSTD-Meas is set to true in the corresponding reportConfig:

5> consider the PSCell to be applicable;

4> else if the eventA1 or eventA2 is configured in the corresponding reportConfig:

5> consider only the serving cell to be applicable;

4> else if eventC1 or eventC2 is configured in the corresponding reportConfig; or if reportStrongestCSI-RSs is included in the corresponding reportConfig:

5> consider a CSI-RS resource on the associated frequency to be applicable when the concerned CSI-RS resource is included in the measCSI-RS-ToAddModList defined within the VarMeasConfig for this measId;

4> else if measRSSI-ReportConfig is configured in the corresponding reportConfig:

5> consider the resource indicated by the rmte-Config on the associated frequency to be applicable;

4> else if tx-ResourcePoolToAddList is configured in the measObject:

5> consider the transmission resource pools indicated by the tx-ResourcePoolToAddList defined within the VarMeasConfig for this measId to be applicable;

4> else:

5> if useWhiteCellList is set to TRUE:

6> consider any neighbouring cell detected on the associated frequency to be applicable when the concerned cell is included in the whiteCellsToAddModList defined within the VarMeasConfig for this measId;

5> else:

6> consider any neighbouring cell detected on the associated frequency to be applicable when the concerned cell is not included in the blackCellsToAddModList defined within the VarMeasConfig for this measId;

5> for events involving a serving cell on one frequency and neighbours on another frequency, consider the serving cell on the other frequency as a neighbouring cell;

4> if the corresponding reportConfig includes alternativeTimeToTrigger and if the UE supports alternativeTimeToTrigger:

5> use the value of alternativeTimeToTrigger as the time to trigger instead of the value of timeToTrigger in the corresponding reportConfig for cells included in the altTTT-CellsToAddModList of the corresponding measObject;

3> else if the corresponding measObject concerns UTRA or CDMA2000:
4> consider a neighbouring cell on the associated frequency to be applicable when the concerned cell is included in the `cellsToAddModList` defined within the `VarMeasConfig` for this `measId` (i.e. the cell is included in the white-list);

NOTE 0: The UE may also consider a neighbouring cell on the associated UTRA frequency to be applicable when the concerned cell is included in the `csg-allowedReportingCells` within the `VarMeasConfig` for this `measId`, if configured in the corresponding `measObjectUTRA` (i.e. the cell is included in the range of physical cell identities for which reporting is allowed).

3> else if the corresponding `measObject` concerns GERAN:

4> consider a neighbouring cell on the associated set of frequencies to be applicable when the concerned cell matches the `ncc-Permitted` defined within the `VarMeasConfig` for this `measId`;

3> else if the corresponding `measObject` concerns WLAN:

4> consider a WLAN on the associated set of frequencies, as indicated by `carrierFreq` or on all WLAN frequencies when `carrierFreq` is not present, to be applicable if the WLAN matches all WLAN identifiers of at least one entry within `wlan-Id-List` for this `measId`;

2> if the `triggerType` is set to `event` and if the entry condition applicable for this event, i.e. the event corresponding with the `eventId` of the corresponding `reportConfig` within `VarMeasConfig`, is fulfilled for one or more applicable cells for all measurements after layer 3 filtering taken during `timeToTrigger` defined for this event within the `VarMeasConfig`, while the `VarMeasReportList` does not include a measurement reporting entry for this `measId` (a first cell triggers the event):

3> include a measurement reporting entry within the `VarMeasReportList` for this `measId`;

3> set the `numberOfReportsSent` defined within the `VarMeasReportList` for this `measId` to 0;

3> include the concerned cell(s) in the `cellsTriggeredList` defined within the `VarMeasReportList` for this `measId`;

3> if the UE supports T312 and if `useT312` is included for this event and if T310 is running:

4> if T312 is not running:

5> start timer T312 with the value configured in the corresponding `measObject`;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

2> if the `triggerType` is set to `event` and if the entry condition applicable for this event is fulfilled for one or more of the cells included in the `cellsTriggeredList` defined within the `VarMeasReportList` for this `measId` for all measurements after layer 3 filtering taken during `timeToTrigger` defined for this event within the `VarMeasConfig` for this event:

3> set the `numberOfReportsSent` defined within the `VarMeasReportList` for this `measId` to 0;

3> include the concerned cell(s) in the `cellsTriggeredList` defined within the `VarMeasReportList` for this `measId`;

3> if the UE supports T312 and if `useT312` is included for this event and if T310 is running:

4> if T312 is not running:

5> start timer T312 with the value configured in the corresponding `measObject`;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

2> if the `triggerType` is set to `event` and if the leaving condition applicable for this event is fulfilled for one or more of the cells included in the `cellsTriggeredList` defined within the `VarMeasReportList` for this `measId` for all measurements after layer 3 filtering taken during `timeToTrigger` defined within the `VarMeasConfig` for this event:
3> remove the concerned cell(s) in the `cellsTriggeredList` defined within the `VarMeasReportList` for this `measId`;

3> if the UE supports T312 and if `useT312` is included for this event and if T310 is running:
   4> if T312 is not running:
      5> start timer T312 with the value configured in the corresponding `measObject`;

3> if `reportOnLeave` is set to `TRUE` for the corresponding reporting configuration or if `a6-ReportOnLeave` is set to `TRUE` for the corresponding reporting configuration:
   4> initiate the measurement reporting procedure, as specified in 5.5.5;

3> if the `cellsTriggeredList` defined within the `VarMeasReportList` for this `measId` is empty:
   4> remove the measurement reporting entry within the `VarMeasReportList` for this `measId`;
   4> stop the periodical reporting timer for this `measId`, if running;

2> if the `triggerType` is set to `event` and if the entry condition applicable for this event, i.e. the event corresponding with the `eventId` of the corresponding `reportConfig` within `VarMeasConfig`, is fulfilled for one or more applicable CSI-RS resources for all measurements after layer 3 filtering taken during `timeToTrigger` defined for this event within the `VarMeasConfig`, while the `VarMeasReportList` does not include an measurement reporting entry for this `measId` (i.e. a first CSI-RS resource triggers the event):
   3> include a measurement reporting entry within the `VarMeasReportList` for this `measId`;
   3> set the `numberOfReportsSent` defined within the `VarMeasReportList` for this `measId` to 0;
   3> include the concerned CSI-RS resource(s) in the `csi-RS-TriggeredList` defined within the `VarMeasReportList` for this `measId`;
   3> initiate the measurement reporting procedure, as specified in 5.5.5;

2> if the `triggerType` is set to `event` and if the entry condition applicable for this event, i.e. the event corresponding with the `eventId` of the corresponding `reportConfig` within `VarMeasConfig`, is fulfilled for one or more applicable CSI-RS resources not included in the `csi-RS-TriggeredList` for all measurements after layer 3 filtering taken during `timeToTrigger` defined for this event within the `VarMeasConfig` (i.e. a subsequent CSI-RS resource triggers the event):
   3> set the `numberOfReportsSent` defined within the `VarMeasReportList` for this `measId` to 0;
   3> include the concerned CSI-RS resource(s) in the `csi-RS-TriggeredList` defined within the `VarMeasReportList` for this `measId`;
   3> initiate the measurement reporting procedure, as specified in 5.5.5;

2> if the `triggerType` is set to `event` and if the leaving condition applicable for this event is fulfilled for one or more of the CSI-RS resources included in the `csi-RS-TriggeredList` defined within the `VarMeasReportList` for this `measId` for all measurements after layer 3 filtering taken during `timeToTrigger` defined within the `VarMeasConfig` for this event:
   3> remove the concerned CSI-RS resource(s) in the `csi-RS-TriggeredList` defined within the `VarMeasReportList` for this `measId`;
   3> if `c1-ReportOnLeave` is set to `TRUE` for the corresponding reporting configuration or if `c2-ReportOnLeave` is set to `TRUE` for the corresponding reporting configuration:
      4> initiate the measurement reporting procedure, as specified in 5.5.5;
   3> if the `csi-RS-TriggeredList` defined within the `VarMeasReportList` for this `measId` is empty:
      4> remove the measurement reporting entry within the `VarMeasReportList` for this `measId`;
      4> stop the periodical reporting timer for this `measId`, if running;
2> if the triggerType is set to event and if the entry condition applicable for this event, i.e. the event corresponding with the eventId of the corresponding reportConfig within VarMeasConfig, is fulfilled for one or more applicable transmission resource pools for all measurements taken during timeToTrigger defined for this event within the VarMeasConfig, while the VarMeasReportList does not include an measurement reporting entry for this measId (a first transmission resource pool triggers the event):

3> include a measurement reporting entry within the VarMeasReportList for this measId;
3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;
3> include the concerned transmission resource pool(s) in the poolsTriggeredList defined within the VarMeasReportList for this measId;
3> initiate the measurement reporting procedure, as specified in 5.5.5;

2> if the triggerType is set to event and if the entry condition applicable for this event, i.e. the event corresponding with the eventId of the corresponding reportConfig within VarMeasConfig, is fulfilled for one or more applicable transmission resource pools not included in the poolsTriggeredList for all measurements taken during timeToTrigger defined for this event within the VarMeasConfig (a subsequent transmission resource pool triggers the event):

3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;
3> include the concerned transmission resource pool(s) in the poolsTriggeredList defined within the VarMeasReportList for this measId;
3> initiate the measurement reporting procedure, as specified in 5.5.5;

2> if the triggerType is set to event and if the leaving condition applicable for this event is fulfilled for one or more applicable transmission resource pools included in the poolsTriggeredList defined within the VarMeasReportList for this measId for all measurements taken during timeToTrigger defined within the VarMeasConfig for this event:

3> remove the concerned transmission resource pool(s) from the poolsTriggeredList defined within the VarMeasReportList for this measId;
3> if the poolsTriggeredList defined within the VarMeasReportList for this measId is empty:
4> remove the measurement reporting entry within the VarMeasReportList for this measId;
4> stop the periodical reporting timer for this measId, if running;

2> if measRSSI-ReportConfig is included and if a (first) measurement result is available:

3> include a measurement reporting entry within the VarMeasReportList for this measId;
3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;
3> initiate the measurement reporting procedure as specified in 5.5.5 immediately when RSSI sample values are reported by the physical layer after the first L1 measurement duration;

2> else if the purpose is included and set to reportStrongestCells, reportStrongestCellsForSON, reportLocation or sidelink and if a (first) measurement result is available:

3> include a measurement reporting entry within the VarMeasReportList for this measId;
3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;
3> if the purpose is set to reportStrongestCells and reportStrongestCSI-RSs is not included:
4> if the triggerType is set to periodical and the corresponding reportConfig includes the ul-DelayConfig:
5> initiate the measurement reporting procedure, as specified in 5.5.5, immediately after a first measurement result is provided by lower layers;
4> else if the corresponding measurement object concerns WLAN:
5> initiate the measurement reporting procedure, as specified in 5.5.5, immediately after the quantity to be reported becomes available for the PCell and for the applicable WLAN(s);

4> else if the reportAmount exceeds 1:

5> initiate the measurement reporting procedure, as specified in 5.5.5, immediately after the quantity to be reported becomes available for the PCell;

4> else (i.e. the reportAmount is equal to 1):

5> initiate the measurement reporting procedure, as specified in 5.5.5, immediately after the quantity to be reported becomes available for the PCell and for the strongest cell among the applicable cells, or becomes available for the pair of PCell and the PSCell in case of SSTD measurements;

3> else if the purpose is set to reportLocation:

4> initiate the measurement reporting procedure, as specified in 5.5.5, immediately after both the quantity to be reported for the PCell and the location information become available;

3> else if the purpose is set to sidelink:

4> initiate the measurement reporting procedure as specified in 5.5.5 immediately after both the quantity to be reported for the PCell and the CBR measurement result become available;

3> else:

4> initiate the measurement reporting procedure, as specified in 5.5.5, when it has determined the strongest cells on the associated frequency;

2> upon expiry of the periodical reporting timer for this measId:

3> initiate the measurement reporting procedure, as specified in 5.5.5;

2> if the purpose is included and set to reportCGI and if the UE acquired the information needed to set all fields of cgi-Info for the requested cell:

3> include a measurement reporting entry within the VarMeasReportList for this measId;

3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;

3> stop timer T321;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

2> upon expiry of the T321 for this measId:

3> include a measurement reporting entry within the VarMeasReportList for this measId;

3> set the numberOfReportsSent defined within the VarMeasReportList for this measId to 0;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

NOTE 2: The UE does not stop the periodical reporting with triggerType set to event or to periodical while the corresponding measurement is not performed due to the PCell RSRP being equal to or better than s-Measure or due to the measurement gap not being setup.

NOTE 3: If the UE is configured with DRX, the UE may delay the measurement reporting for event triggered and periodical triggered measurements until the Active Time, which is defined in TS 36.321 [6].

5.5.4.2 Event A1 (Serving becomes better than threshold)

The UE shall:

1> consider the entering condition for this event to be satisfied when condition A1-1, as specified below, is fulfilled;

1> consider the leaving condition for this event to be satisfied when condition A1-2, as specified below, is fulfilled;
1> for this measurement, consider the primary or secondary cell that is configured on the frequency indicated in the associated measObjectEUTRA to be the serving cell;

Inequality A1-1 (Entering condition)

\[ Ms - Hys > \text{Thresh} \]

Inequality A1-2 (Leaving condition)

\[ Ms + Hys < \text{Thresh} \]

The variables in the formula are defined as follows:

- \( Ms \) is the measurement result of the serving cell, not taking into account any offsets.
- \( Hys \) is the hysteresis parameter for this event (i.e. hysteresis as defined within reportConfigEUTRA for this event).
- \( \text{Thresh} \) is the threshold parameter for this event (i.e. a1-Threshold as defined within reportConfigEUTRA for this event).

\( Ms \) is expressed in dBm in case of RSRP, or in dB in case of RSRQ and RS-SINR.

\( Hys \) is expressed in dB.

\( \text{Thresh} \) is expressed in the same unit as \( Ms \).

5.5.4.3 Event A2 (Serving becomes worse than threshold)

The UE shall:

1> consider the entering condition for this event to be satisfied when condition A2-1, as specified below, is fulfilled;

1> consider the leaving condition for this event to be satisfied when condition A2-2, as specified below, is fulfilled;

1> for this measurement, consider the primary or secondary cell that is configured on the frequency indicated in the associated measObjectEUTRA to be the serving cell;

Inequality A2-1 (Entering condition)

\[ Ms + Hys < \text{Thresh} \]

Inequality A2-2 (Leaving condition)

\[ Ms - Hys > \text{Thresh} \]

The variables in the formula are defined as follows:

- \( Ms \) is the measurement result of the serving cell, not taking into account any offsets.
- \( Hys \) is the hysteresis parameter for this event (i.e. hysteresis as defined within reportConfigEUTRA for this event).
- \( \text{Thresh} \) is the threshold parameter for this event (i.e. a2-Threshold as defined within reportConfigEUTRA for this event).

\( Ms \) is expressed in dBm in case of RSRP, or in dB in case of RSRQ and RS-SINR.

\( Hys \) is expressed in dB.

\( \text{Thresh} \) is expressed in the same unit as \( Ms \).

5.5.4.4 Event A3 (Neighbour becomes offset better than PCell/ PSCell)

The UE shall:

1> consider the entering condition for this event to be satisfied when condition A3-1, as specified below, is fulfilled;

1> consider the leaving condition for this event to be satisfied when condition A3-2, as specified below, is fulfilled;
1> if usePSCell of the corresponding reportConfig is set to true:

2> use the PSCell for \( Mp, Ofp \) and \( Ocp \);

1> else:

2> use the PCell for \( Mp, Ofp \) and \( Ocp \);

NOTE The cell(s) that triggers the event is on the frequency indicated in the associated measObject which may be different from the frequency used by the PCell/ PSCell.

Inequality A3-1 (Entering condition)
\[ Mn + Ofn + Ocn - Hys > Mp + Ofp + Ocp + Off \]

Inequality A3-2 (Leaving condition)
\[ Mn + Ofn + Ocn + Hys < Mp + Ofp + Ocp + Off \]

The variables in the formula are defined as follows:

- \( Mn \) is the measurement result of the neighbouring cell, not taking into account any offsets.
- \( Ofn \) is the frequency specific offset of the frequency of the neighbour cell (i.e. offsetFreq as defined within measObjectEUTRA corresponding to the frequency of the neighbour cell).
- \( Ocn \) is the cell specific offset of the neighbour cell (i.e. cellIndividualOffset as defined within measObjectEUTRA corresponding to the frequency of the neighbour cell), and set to zero if not configured for the neighbour cell.
- \( Mp \) is the measurement result of the PCell/ PSCell, not taking into account any offsets.
- \( Ofp \) is the frequency specific offset of the frequency of the PCell/ PSCell (i.e. offsetFreq as defined within measObjectEUTRA corresponding to the frequency of the PCell/ PSCell).
- \( Ocp \) is the cell specific offset of the PCell/ PSCell (i.e. cellIndividualOffset as defined within measObjectEUTRA corresponding to the frequency of the PCell/ PSCell), and is set to zero if not configured for the PCell/ PSCell.
- \( Hys \) is the hysteresis parameter for this event (i.e. hysteresis as defined within reportConfigEUTRA for this event).
- \( Off \) is the offset parameter for this event (i.e. a3-Offset as defined within reportConfigEUTRA for this event).

\( Mn, Mp \) are expressed in dBm in case of RSRP, or in dB in case of RSRQ and RS-SINR.

\( Ofn, Ocn, Ofp, Ocp, Hys, Off \) are expressed in dB.

5.5.4.5 Event A4 (Neighbour becomes better than threshold)

The UE shall:

1> consider the entering condition for this event to be satisfied when condition A4-1, as specified below, is fulfilled;

1> consider the leaving condition for this event to be satisfied when condition A4-2, as specified below, is fulfilled;

Inequality A4-1 (Entering condition)
\[ Mn + Ofn + Ocn - Hys > Thresh \]

Inequality A4-2 (Leaving condition)
\[ Mn + Ofn + Ocn + Hys < Thresh \]

The variables in the formula are defined as follows:

- \( Mn \) is the measurement result of the neighbouring cell, not taking into account any offsets.
- \( Ofn \) is the frequency specific offset of the frequency of the neighbour cell (i.e. offsetFreq as defined within measObjectEUTRA corresponding to the frequency of the neighbour cell).
Ocn is the cell specific offset of the neighbour cell (i.e. cellIndividualOffset as defined within measObjectEUTRA corresponding to the frequency of the neighbour cell), and set to zero if not configured for the neighbour cell.

Hys is the hysteresis parameter for this event (i.e. hysteresis as defined within reportConfigEUTRA for this event).

Thresh is the threshold parameter for this event (i.e. a4-Threshold as defined within reportConfigEUTRA for this event).

Mn is expressed in dBm in case of RSRP, or in dB in case of RSRQ and RS-SINR.

Ocn, Ocn, Hys are expressed in dB.

Thresh is expressed in the same unit as Mn.

5.5.4.6 Event A5 (PCell/ PSCell becomes worse than threshold1 and neighbour becomes better than threshold2)

The UE shall:

1> consider the entering condition for this event to be satisfied when both condition A5-1 and condition A5-2, as specified below, are fulfilled;

1> consider the leaving condition for this event to be satisfied when condition A5-3 or condition A5-4, i.e. at least one of the two, as specified below, is fulfilled;

1> if usePSCell of the corresponding reportConfig is set to true:

2> use the PSCell for Mp;

1> else:

2> use the PCell for Mp;

NOTE: The cell(s) that triggers the event is on the frequency indicated in the associated measObject which may be different from the frequency used by the PCell/ PSCell.

Inequality A5-1 (Entering condition 1)

Mp + Hys < Thresh

Inequality A5-2 (Entering condition 2)

Mn + Ofn + Ocn − Hys > Thresh2

Inequality A5-3 (Leaving condition 1)

Mp − Hys > Thresh

Inequality A5-4 (Leaving condition 2)

Mn + Ofn + Ocn + Hys < Thresh2

The variables in the formula are defined as follows:

Mp is the measurement result of the PCell/ PSCell, not taking into account any offsets.

Mn is the measurement result of the neighbouring cell, not taking into account any offsets.

Ofn is the frequency specific offset of the frequency of the neighbour cell (i.e. offsetFreq as defined within measObjectEUTRA corresponding to the frequency of the neighbour cell).

Ocn is the cell specific offset of the neighbour cell (i.e. cellIndividualOffset as defined within measObjectEUTRA corresponding to the frequency of the neighbour cell), and set to zero if not configured for the neighbour cell.

Hys is the hysteresis parameter for this event (i.e. hysteresis as defined within reportConfigEUTRA for this event).
**Thresh1** is the threshold parameter for this event (i.e. a5-Threshold1 as defined within reportConfigEUTRA for this event).

**Thresh2** is the threshold parameter for this event (i.e. a5-Threshold2 as defined within reportConfigEUTRA for this event).

**Mn, Mp** are expressed in dBm in case of RSRP, or in dB in case of RSRQ and RS-SINR.

**Ofn, Ocn, Hys** are expressed in dB.

**Thresh1** is expressed in the same unit as **Mp**.

**Thresh2** is expressed in the same unit as **Mn**.

### 5.5.4.6a Event A6 (Neighbour becomes offset better than SCell)

The UE shall:

1> consider the entering condition for this event to be satisfied when condition A6-1, as specified below, is fulfilled;

1> consider the leaving condition for this event to be satisfied when condition A6-2, as specified below, is fulfilled;

1> for this measurement, consider the (secondary) cell that is configured on the frequency indicated in the associated measObjectEUTRA to be the serving cell;

**NOTE:** The neighbour(s) is on the same frequency as the SCell i.e. both are on the frequency indicated in the associated measObject.

#### Inequality A6-1 (Entering condition)

\[ Mn + Ocn - Hys > Ms + Ocs + Off \]

#### Inequality A6-2 (Leaving condition)

\[ Mn + Ocn + Hys < Ms + Ocs + Off \]

The variables in the formula are defined as follows:

**Mn** is the measurement result of the neighbouring cell, not taking into account any offsets.

**Ocn** is the cell specific offset of the neighbour cell (i.e. cellIndividualOffset as defined within measObjectEUTRA corresponding to the frequency of the neighbour cell), and set to zero if not configured for the neighbour cell.

**Ms** is the measurement result of the serving cell, not taking into account any offsets.

**Ocs** is the cell specific offset of the serving cell (i.e. cellIndividualOffset as defined within measObjectEUTRA corresponding to the serving frequency), and is set to zero if not configured for the serving cell.

**Hys** is the hysteresis parameter for this event (i.e. hysteresis as defined within reportConfigEUTRA for this event).

**Off** is the offset parameter for this event (i.e. a6-Offset as defined within reportConfigEUTRA for this event).

**Mn, Ms** are expressed in dBm in case of RSRP, or in dB in case of RSRQ and RS-SINR.

**Ocn, Ocs, Hys, Off** are expressed in dB.

### 5.5.4.7 Event B1 (Inter RAT neighbour becomes better than threshold)

The UE shall:

1> for UTRA and CDMA2000, only trigger the event for cells included in the corresponding measurement object;

1> consider the entering condition for this event to be satisfied when condition B1-1, as specified below, is fulfilled;

1> consider the leaving condition for this event to be satisfied when condition B1-2, as specified below, is fulfilled;

#### Inequality B1-1 (Entering condition)

**NOTE:**
\[ Mn + Ofn - Hys > Thresh \]

Inequality B1-2 (Leaving condition)

\[ Mn + Ofn + Hys < Thresh \]

The variables in the formula are defined as follows:

- \( Mn \) is the measurement result of the inter-RAT neighbour cell, not taking into account any offsets. For CDMA 2000 measurement result, \( pilotStrength \) is divided by -2.

- \( Ofn \) is the frequency specific offset of the frequency of the inter-RAT neighbour cell (i.e. \( offsetFreq \) as defined within the \( measObject \) corresponding to the frequency of the neighbour inter-RAT cell).

- \( Hys \) is the hysteresis parameter for this event (i.e. \( hysteresis \) as defined within \( reportConfigInterRAT \) for this event).

- \( Thresh \) is the threshold parameter for this event (i.e. \( b1\text{-Threshold} \) as defined within \( reportConfigInterRAT \) for this event). For CDMA2000, \( b1\text{-Threshold} \) is divided by -2.

\( Mn \) is expressed in dBm or in dB, depending on the measurement quantity of the inter-RAT neighbour cell.

\( Ofn, Hys \) are expressed in dB.

\( Thresh \) is expressed in the same unit as \( Mn \).

5.5.4.8 Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2)

The UE shall:

1. for UTRA and CDMA2000, only trigger the event for cells included in the corresponding measurement object;
1. consider the entering condition for this event to be satisfied when both condition B2-1 and condition B2-2, as specified below, are fulfilled;
1. consider the leaving condition for this event to be satisfied when condition B2-3 or condition B2-4, i.e. at least one of the two, as specified below, is fulfilled;

Inequality B2-1 (Entering condition 1)

\[ Mp + Hys < Thresh1 \]

Inequality B2-2 (Entering condition 2)

\[ Mn + Ofn - Hys > Thresh2 \]

Inequality B2-3 (Leaving condition 1)

\[ Mp - Hys > Thresh1 \]

Inequality B2-4 (Leaving condition 2)

\[ Mn + Ofn + Hys < Thresh2 \]

The variables in the formula are defined as follows:

- \( Mp \) is the measurement result of the PCell, not taking into account any offsets.

- \( Mn \) is the measurement result of the inter-RAT neighbour cell, not taking into account any offsets. For CDMA2000 measurement result, \( pilotStrength \) is divided by -2.

- \( Ofn \) is the frequency specific offset of the frequency of the inter-RAT neighbour cell (i.e. \( offsetFreq \) as defined within the \( measObject \) corresponding to the frequency of the inter-RAT neighbour cell).

- \( Hys \) is the hysteresis parameter for this event (i.e. \( hysteresis \) as defined within \( reportConfigInterRAT \) for this event).
**Threshold1** is the threshold parameter for this event (i.e. b2-Threshold1 as defined within reportConfigInterRAT for this event).

**Threshold2** is the threshold parameter for this event (i.e. b2-Threshold2 as defined within reportConfigInterRAT for this event). For CDMA2000, b2-Threshold2 is divided by -2.

**Mp** is expressed in dBm in case of RSRP, or in dB in case of RSRQ.

**Mn** is expressed in dBm or dB, depending on the measurement quantity of the inter-RAT neighbour cell.

**Ofn, Hys** are expressed in dB.

**Threshold1** is expressed in the same unit as **Mp**.

**Threshold2** is expressed in the same unit as **Mn**.

### 5.5.4.9 Event C1 (CSI-RS resource becomes better than threshold)

The UE shall:

1. consider the entering condition for this event to be satisfied when condition C1-1, as specified below, is fulfilled;
2. consider the leaving condition for this event to be satisfied when condition C1-2, as specified below, is fulfilled;

#### Inequality C1-1 (Entering condition)

\[
Mcr + Ocr - Hys > Thresh
\]

#### Inequality C1-2 (Leaving condition)

\[
Mcr + Ocr + Hys < Thresh
\]

The variables in the formula are defined as follows:

**Mcr** is the measurement result of the CSI-RS resource, not taking into account any offsets.

**Ocr** is the CSI-RS specific offset (i.e. \( csi-\text{RS-IndividualOffset} \) as defined within measObjectEUTRA corresponding to the frequency of the CSI-RS resource), and set to zero if not configured for the CSI-RS resource.

**Hys** is the hysteresis parameter for this event (i.e. \( \text{hysteresis} \) as defined within reportConfigEUTRA for this event).

**Thresh** is the threshold parameter for this event (i.e. \( c1-\text{Threshold} \) as defined within reportConfigEUTRA for this event).

**Mcr, Thresh** are expressed in dBm.

**Ocr, Hys** are expressed in dB.

### 5.5.4.10 Event C2 (CSI-RS resource becomes offset better than reference CSI-RS resource)

The UE shall:

1. consider the entering condition for this event to be satisfied when condition C2-1, as specified below, is fulfilled;
2. consider the leaving condition for this event to be satisfied when condition C2-2, as specified below, is fulfilled;

**NOTE:** The CSI-RS resource(s) that triggers the event is on the same frequency as the reference CSI-RS resource, i.e. both are on the frequency indicated in the associated measObject.

#### Inequality C2-1 (Entering condition)

\[
Mcr + Ocr - \text{Hys} > Mref + Oref + \text{Off}
\]

#### Inequality C2-2 (Leaving condition)
\[ \text{Mcr} + \text{Ocr} + \text{Hys} < \text{Mref} + \text{Oref} + \text{Off} \]

The variables in the formula are defined as follows:

- **Mcr** is the measurement result of the CSI-RS resource, not taking into account any offsets.
- **Ocr** is the CSI-RS specific offset of the CSI-RS resource (i.e. \text{csi-RS-IndividualOffset} as defined within \text{measObjectEUTRA} corresponding to the frequency of the CSI-RS resource), and set to zero if not configured for the CSI-RS resource.
- **Mref** is the measurement result of the reference CSI-RS resource (i.e. \text{c2-RefCSI-RS} as defined within \text{reportConfigEUTRA} for this event), not taking into account any offsets.
- **Oref** is the CSI-RS specific offset of the reference CSI-RS resource (i.e. \text{csi-RS-IndividualOffset} as defined within \text{measObjectEUTRA} corresponding to the frequency of the reference CSI-RS resource), and is set to zero if not configured for the reference CSI-RS resource.
- **Hys** is the hysteresis parameter for this event (i.e. \text{hysteresis} as defined within \text{reportConfigEUTRA} for this event).
- **Off** is the offset parameter for this event (i.e. \text{c2-Offset} as defined within \text{reportConfigEUTRA} for this event).

**Mcr, Mref** are expressed in dBm.

**Ocr, Oref, Hys, Off** are expressed in dB.

### 5.5.4.11 Event W1 (WLAN becomes better than a threshold)

The UE shall:

1. Consider the entering condition for this event to be satisfied when \text{wlan-MobilitySet} within \text{VarWLAN-MobilityConfig} does not contain any entries and condition W1-1, as specified below, is fulfilled;
2. Consider the leaving condition for this event to be satisfied when condition W1-2, as specified below, is fulfilled;

**Inequality W1-1 (Entering condition)**

\[ \text{Mn} - \text{Hys} > \text{Thresh} \]

**Inequality W1-2 (Leaving condition)**

\[ \text{Mn} + \text{Hys} < \text{Thresh} \]

The variables in the formula are defined as follows:

- **Mn** is the measurement result of WLAN(s) configured in the measurement object, not taking into account any offsets.
- **Hys** is the hysteresis parameter for this event.
- **Thresh** is the threshold parameter for this event (i.e. \text{w1-Threshold} as defined within \text{reportConfigInterRAT} for this event).

**Mn** is expressed in dBm.

**Hys** is expressed in dB.

**Thresh** is expressed in the same unit as **Mn**.

### 5.5.4.12 Event W2 (All WLAN inside WLAN mobility set becomes worse than threshold1 and a WLAN outside WLAN mobility set becomes better than threshold2)

The UE shall:
1> consider the entering condition for this event to be satisfied when both conditions W2-1 and W2-2 as specified below are fulfilled;

1> consider the leaving condition for this event to be satisfied when condition W2-3 or condition W2-4, i.e. at least one of the two, as specified below is fulfilled;

Inequality W2-1 (Entering condition 1)

\[Ms + Hys < Thresh1\]

Inequality W2-2 (Entering condition 2)

\[Mn - Hys > Thresh2\]

Inequality W2-3 (Leaving condition 1)

\[Ms - Hys > Thresh1\]

Inequality W2-4 (Leaving condition 2)

\[Mn + Hys < Thresh2\]

The variables in the formula are defined as follows:

- **Ms** is the measurement result of WLAN(s) which matches all WLAN identifiers of at least one entry within wlan-MobilitySet in VarWLAN-MobilityConfig, not taking into account any offsets.

- **Mn** is the measurement result of WLAN(s) configured in the measurement object which does not match all WLAN identifiers of any entry within wlan-MobilitySet in VarWLAN-MobilityConfig, not taking into account any offsets.

- **Hys** is the hysteresis parameter for this event.

- **Thresh1** is the threshold parameter for this event (i.e. w2-Threshold1 as defined within reportConfigInterRAT for this event).

- **Thresh2** is the threshold parameter for this event (i.e. w2-Threshold2 as defined within reportConfigInterRAT for this event).

- **Mn, Ms** are expressed in dBm.

- **Hys** is expressed in dB.

- **Thresh1** is expressed in the same unit as **Ms**.

- **Thresh2** is expressed in the same unit as **Mn**.

5.5.4.13 Event W3 (All WLAN inside WLAN mobility set becomes worse than a threshold)

The UE shall:

1> consider the entering condition for this event to be satisfied when condition W3-1, as specified below, is fulfilled;

1> consider the leaving condition for this event to be satisfied when condition W3-2, as specified below, is fulfilled;

Inequality W3-1 (Entering condition)

\[Ms + Hys < Thresh\]

Inequality W3-2 (Leaving condition)

\[Ms - Hys > Thresh\]

The variables in the formula are defined as follows:
**Ms** is the measurement result of WLAN(s) which matches all WLAN identifiers of at least one entry within wlan-MobilitySet in VarWLAN-MobilityConfig, not taking into account any offsets.

**Hys** is the hysteresis parameter for this event.

**Thresh** is the threshold parameter for this event (i.e. w3-Threshold as defined within reportConfigInterRAT for this event).

**Ms** is expressed in dBm.

**Hys** is expressed in dB.

**Thresh** is expressed in the same unit as **Ms**.

5.5.4.14 Event V1 (The channel busy ratio is above a threshold)

The UE shall:

1> consider the entering condition for this event to be satisfied when condition V1-1, as specified below, is fulfilled;

1> consider the leaving condition for this event to be satisfied when condition V1-2, as specified below, is fulfilled;

Inequality V1-1 (Entering condition)

**Ms** > **Thresh**

Inequality V1-2 (Leaving condition)

**Ms** < **Thresh**

The variables in the formula are defined as follows:

**Ms** is the measurement result of channel busy ratio of the transmission resource pool, not taking into account any offsets.

**Thresh** is the threshold parameter for this event (i.e. v1-Threshold as defined within ReportConfigEUTRA).

**Ms** is expressed in decimal from 0 to 1 in steps of 0.01.

**Thresh** is expressed in the same unit as **Ms**.

5.5.4.15 Event V2 (The channel busy ratio is below a threshold)

The UE shall:

1> consider the entering condition for this event to be satisfied when condition V2-1, as specified below, is fulfilled;

1> consider the leaving condition for this event to be satisfied when condition V2-2, as specified below, is fulfilled;

Inequality V2-1 (Entering condition)

**Ms** < **Thresh**

Inequality V2-2 (Leaving condition)

**Ms** > **Thresh**

The variables in the formula are defined as follows:

**Ms** is the measurement result of channel busy ratio of the transmission resource pool, not taking into account any offsets.

**Thresh** is the threshold parameter for this event (i.e. v2-Threshold as defined within ReportConfigEUTRA).

**Ms** is expressed in decimal from 0 to 1 in steps of 0.01.

**Thresh** is expressed in the same unit as **Ms**.
5.5.5 Measurement reporting

The purpose of this procedure is to transfer measurement results from the UE to E-UTRAN. The UE shall initiate this procedure only after successful security activation.

For the measId for which the measurement reporting procedure was triggered, the UE shall set the measResults within the MeasurementReport message as follows:

1> set the measId to the measurement identity that triggered the measurement reporting;
1> set the measResultPCell to include the quantities of the PCell;
1> set the measResultServFreqList to include for each SCell that is configured, if any, within measResultSCell the quantities of the concerned SCell, if available according to performance requirements in [16], except if purpose for the reportConfig associated with the measId that triggered the measurement reporting is set to reportLocation;
1> if the reportConfig associated with the measId that triggered the measurement reporting includes reportAddNeighMeas:
   2> for each serving frequency for which measObjectId is referenced in the measIdList, other than the frequency corresponding with the measId that triggered the measurement reporting:
      3> set the measResultServFreqList to include within measResultBestNeighCell the physCellId and the quantities of the best non-serving cell, based on RSRP, on the concerned serving frequency;
1> if there is at least one applicable neighbouring cell to report:
   2> set the measResultNeighCells to include the best neighbouring cells up to maxReportCells in accordance with the following:
      3> if the triggerType is set to event:
         4> include the cells included in the cellsTriggeredList as defined within the VarMeasReportList for this measId;
      3> else:
         4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

NOTE 1: The reliability of the report (i.e. the certainty it contains the strongest cells on the concerned frequency) depends on the measurement configuration i.e. the reportInterval. The related performance requirements are specified in TS 36.133 [16].

3> for each cell that is included in the measResultNeighCells, include the physCellId;
3> if the triggerType is set to event; or the purpose is set to reportStrongestCells or to reportStrongestCellsForSON:
   4> for each included cell, include the layer 3 filtered measured results in accordance with the reportConfig for this measId, ordered as follows:
      5> if the measObject associated with this measId concerns E-UTRA:
6> set the $measResult$ to include the quantity(ies) indicated in the $reportQuantity$ within the concerned $reportConfig$ in order of decreasing $triggerQuantity$, i.e. the best cell is included first;

5> if the $measObject$ associated with this $measId$ concerns UTRA FDD and if $ReportConfigInterRAT$ includes the $reportQuantityUTRA-FDD$:

6> set the $measResult$ to include the quantities indicated by the $reportQuantityUTRA-FDD$ in order of decreasing $measQuantityUTRA-FDD$ within the $quantityConfig$, i.e. the best cell is included first;

5> if the $measObject$ associated with this $measId$ concerns UTRA FDD and if $ReportConfigInterRAT$ does not include the $reportQuantityUTRA-FDD$; or

5> if the $measObject$ associated with this $measId$ concerns UTRA TDD, GERAN or CDMA2000:

6> set the $measResult$ to include the quantities indicated by the $reportQuantityUTRA-FDD$ in order of decreasing $measQuantityUTRA-FDD$ within the $quantityConfig$, i.e. the best cell is included first;

3> else if the $purpose$ is set to $reportCGI$:

4> if the mandatory present fields of the $cgi-Info$ for the cell indicated by the $cellForWhichToReportCGI$ in the associated $measObject$ have been obtained:

5> if the $includeMultiBandInfo$ is configured:

6> include the $freqBandIndicator$;

6> if the cell broadcasts the $multiBandInfoList$, include the $multiBandInfoList$;

6> if the cell broadcasts the $freqBandIndicatorPriority$, include the $freqBandIndicatorPriority$;

5> if the cell broadcasts a CSG identity:

6> include the $csg-Identity$;

6> include the $csg-MemberStatus$ and set it to $member$ if the cell is a CSG member cell;

5> if the $si-RequestForHO$ is configured within the $reportConfig$ associated with this $measId$:

6> include the $cgi-Info$ containing all the fields other than the $plmn-IdentityList$ that have been successfully acquired;

6> include, within the $cgi-Info$, the field $plmn-IdentityList$ in accordance with the following:

7> if the cell is a CSG member cell, determine the subset of the PLMN identities, starting from the second entry of PLMN identities in the broadcast information, that meet the following conditions:

a) equal to the RPLMN or an EPLMN; and

b) the CSG whitelist of the UE includes an entry comprising of the concerned PLMN identity and the CSG identity broadcast by the cell;

7> if the subset of PLMN identities determined according to the previous includes at least one PLMN identity, include the $plmn-IdentityList$ and set it to include this subset of the PLMN identities;

7> if the cell is a CSG member cell, include the $primaryPLMN-Suitable$ if the primary PLMN meets conditions a) and b) specified above;

5> else:

6> include the $cgi-Info$ containing all the fields that have been successfully acquired and in accordance with the following:
7> include in the plmn-IdentityList the list of identities starting from the second entry of PLMN Identities in the broadcast information;

1> for the cells included according to the previous (i.e. covering the PCell, the SCells, the best non-serving cells on serving frequencies as well as neighbouring EUTRA cells) include results according to the extended RSRQ if corresponding results are available according to the associated performance requirements defined in 36.133 [16];

1> if there is at least one applicable CSI-RS resource to report:

2> set the measResultCSI-RS-List to include the best CSI-RS resources up to maxReportCells in accordance with the following:

3> if the triggerType is set to event:

4> include the CSI-RS resources included in the csi-RS-TriggeredList as defined within the VarMeasReportList for this measId;

3> else:

4> include the applicable CSI-RS resources for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

NOTE 2: The reliability of the report (i.e. the certainty it contains the strongest CSI-RS resources on the concerned frequency) depends on the measurement configuration i.e. the reportInterval. The related performance requirements are specified in TS 36.133 [16].

3> for each CSI-RS resource that is included in the measResultCSI-RS-List:

4> include the measCSI-RS-Id;

4> include the layer 3 filtered measured results in accordance with the reportConfig for this measId, ordered as follow:

5> set the csi-RSRP-Result to include the quantity indicated in the reportQuantity within the concerned reportConfig in order of decreasing triggerQuantityCSI-RS, i.e. the best CSI-RS resource is included first;

4> if reportCRS-Meas is included within the associated reportConfig, and the cell indicated by physCellId of this CSI-RS resource is not a serving cell:

5> set the measResultNeighCells to include the cell indicated by physCellId of this CSI-RS resource, and include the physCellId;

5> set the rsrpResult to include the RSRP of the concerned cell, if available according to performance requirements in [16];

5> set the rsrqResult to include the RSRQ of the concerned cell, if available according to performance requirements in [16];

1> if the ue-RxTxTimeDiffPeriodical is configured within the corresponding reportConfig for this measId;

2> set the ue-RxTxTimeDiffResult to the measurement result provided by lower layers;

2> set the currentSFN;

1> if the measRSSI-ReportConfig is configured within the corresponding reportConfig for this measId:

2> set the rssi-Result to the average of sample value(s) provided by lower layers in the reportInterval;

2> set the channelOccupancy to the rounded percentage of sample values which are beyond to the channelOccupancyThreshold within all the sample values in the reportInterval;

1> if uplink PDCP delay results are available:

2> set the ul-PDCP-DelayResultList to include the uplink PDCP delay results available;
if the `includeLocationInfo` is configured in the corresponding `reportConfig` for this `measId` or if `purpose` for the `reportConfig` associated with the `measId` that triggered the measurement reporting is set to `reportLocation`; and detailed location information that has not been reported is available, set the content of the `locationInfo` as follows:

1> include the `locationCoordinates`;

2> if available, include the `gnss-TOD-msec`, except if `purpose` for the `reportConfig` associated with the `measId` that triggered the measurement reporting is set to `reportLocation`;

1> if the `reportSSSTD-Meas` is set to `true` within the corresponding `reportConfig` for this `measId`:

2> set the `measResultSSSTD` to the measurement results provided by lower layers;

1> if there is at least one applicable transmission resource pool to report:

2> set the `measResultListCBR` to include the CBR measurement results in accordance with the following:

3> if the `triggerType` is set to `event`:

4> include the transmission resource pools included in the `poolsTriggeredList` as defined within the `VarMeasReportList` for this `measId`;

3> else:

4> include the applicable transmission resource pools for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

3> for each transmission resource pool to be reported:

4> set the `poolIdentity` to the `poolReportId` of this transmission resource pool;

4> if `adjacencyPSCCH-PSSCH` is set to `TRUE` for this transmission resource pool:

5> set the `cbr-PSSCH` to the CBR measurement result on PSSCH and PSCCH of this transmission resource pool provided by lower layers;

4> else:

5> set the `cbr-PSSCH` to the CBR measurement result on PSSCH of this transmission resource pool provided by lower layers if available;

5> set the `cbr-PSCCH` to the CBR measurement result on PSCCH of this transmission resource pool provided by lower layers if available;

1> increment the `numberOfReportsSent` as defined within the `VarMeasReportList` for this `measId` by 1;

1> stop the periodical reporting timer, if running;

1> if the `numberOfReportsSent` as defined within the `VarMeasReportList` for this `measId` is less than the `reportAmount` as defined within the corresponding `reportConfig` for this `measId`:

2> start the periodical reporting timer with the value of `reportInterval` as defined within the corresponding `reportConfig` for this `measId`;

1> else:

2> if the `triggerType` is set to `periodical`:

3> remove the entry within the `VarMeasReportList` for this `measId`;

3> remove this `measId` from the `measIdList` within `VarMeasConfig`;

1> if the measured results are for CDMA2000 HRPD:

2> set the `preRegistrationStatusHRPD` to the UE's CDMA2000 upper layer's HRPD `preRegistrationStatus`;

1> if the measured results are for CDMA2000 1xRTT:
2> set the preRegistrationStatusHRPD to \textit{FALSE};

1> if the measured results are for WLAN:

2> set the \texttt{measResultsListWLAN} to include the quantities within the \texttt{quantityConfigWLAN} for up to \texttt{maxReportCells WLAN\text{(s)}, determined according to the following:

3> include WLAN the UE is connected to, if any;

3> if \texttt{reportAnyWLAN} is set to \texttt{TRUE}:

4> consider WLAN with any WLAN identifiers to be applicable for measurement reporting;

3> else:

4> consider only WLANs which do not match all WLAN identifiers of any entry within \texttt{wlan-MobilitySet} in \texttt{VarWLAN-MobilityConfig} to be applicable for measurement reporting;

3> include applicable WLAN in order of decreasing WLAN RSSI, i.e. the best WLAN is included first;

2> for each included WLAN:

3> set \texttt{wlan-Identifiers} to include all WLAN identifiers that can be acquired for the WLAN measured;

3> set \texttt{connectedWLAN} to \texttt{TRUE} if the UE is connected to the WLAN measured;

3> if \texttt{reportQuantityWLAN} exists within the \texttt{ReportConfigInterRAT} within the \texttt{VarMeasConfig} for this \texttt{measId}:

4> if \texttt{bandRequestWLAN} is set to \texttt{TRUE}:

5> set \texttt{bandWLAN} to include WLAN band of the WLAN measured;

4> if \texttt{carrierInfoRequestWLAN} is set to \texttt{TRUE}:

5> set \texttt{carrierInfoWLAN} to include WLAN carrier information of the WLAN measured if it can be acquired;

4> if \texttt{availableAdmissionCapacityRequestWLAN} is set to \texttt{TRUE}:

5> set the \texttt{measResult} to include \texttt{availableAdmissionCapacityWLAN} if it can be acquired;

4> if \texttt{backhaulDL-BandwidthRequestWLAN} is set to \texttt{TRUE}:

5> set the \texttt{measResult} to include \texttt{backhaulDL-BandwidthWLAN} if it can be acquired;

4> if \texttt{backhaulUL-BandwidthRequestWLAN} is set to \texttt{TRUE}:

5> set the \texttt{measResult} to include \texttt{backhaulUL-BandwidthWLAN} if it can be acquired;

4> if \texttt{channelUtilizationRequestWLAN} is set to \texttt{TRUE}:

5> set the \texttt{measResult} to include \texttt{channelUtilizationWLAN} if it can be acquired;

4> if \texttt{stationCountRequestWLAN} is set to \texttt{TRUE}:

5> set the \texttt{measResult} to include \texttt{stationCountWLAN} if it can be acquired;

1> submit the \texttt{MeasurementReport} message to lower layers for transmission, upon which the procedure ends;

5.5.6 Measurement related actions

5.5.6.1 Actions upon handover and re-establishment

E-UTRAN applies the handover procedure as follows:
- when performing the handover procedure, as specified in 5.3.5.4, ensure that a measObjectId corresponding to each handover target serving frequency is configured as a result of the procedures described in this sub-clause and in 5.3.5.4;

- when changing the band while the physical frequency remains unchanged, E-UTRAN releases the measObject corresponding to the source frequency and adds a measObject corresponding to the target frequency (i.e. it does not reconfigure the measObject);

E-UTRAN applies the re-establishment procedure as follows:

- when performing the connection re-establishment procedure, as specified in 5.3.7, ensure that a measObjectId corresponding each target serving frequency is configured as a result of the procedure described in this sub-clause and the subsequent connection reconfiguration procedure immediately following the re-establishment procedure;

- in the first reconfiguration following the re-establishment when changing the band while the physical frequency remains unchanged, E-UTRAN releases the measObject corresponding to the source frequency and adds a measObject corresponding to the target frequency (i.e. it does not reconfigure the measObject);

The UE shall:

1> for each measId included in the measIdList within VarMeasConfig:

2> if the triggerType is set to periodical:

3> remove this measId from the measIdList within VarMeasConfig:

1> if the procedure was triggered due to a handover or successful re-establishment and the procedure involves a change of primary frequency, update the measId values in the measIdList within VarMeasConfig as follows:

2> if a measObjectId value corresponding to the target primary frequency exists in the measObjectList within VarMeasConfig:

3> for each measId value in the measIdList:

4> if the measId value is linked to the measObjectId value corresponding to the source primary frequency:

5> link this measId value to the measObjectId value corresponding to the target primary frequency;

4> else if the measId value is linked to the measObjectId value corresponding to the target primary frequency:

5> link this measId value to the measObjectId value corresponding to the source primary frequency;

2> else:

3> remove all measId values that are linked to the measObjectId value corresponding to the source primary frequency;

1> remove all measurement reporting entries within VarMeasReportList;

1> stop the periodical reporting timer or timer T321, whichever one is running, as well as associated information (e.g. timeToTrigger) for all measId;

1> release the measurement gaps, if activated;

NOTE: If the UE requires measurement gaps to perform inter-frequency or inter-RAT measurements, the UE resumes the inter-frequency and inter-RAT measurements after the E-UTRAN has setup the measurement gaps.

5.5.6.2 Speed dependant scaling of measurement related parameters

The UE shall adjust the value of the following parameter configured by the E-UTRAN depending on the UE speed: timeToTrigger. The UE shall apply 3 different levels, which are selected as follows:
The UE shall:

1> perform mobility state detection using the mobility state detection as specified in TS 36.304 [4] with the following modifications:

2> counting handovers instead of cell reselections;

2> applying the parameter applicable for RRC_CONNECTED as included in speedStatePars within VarMeasConfig;

1> if high mobility state is detected:

2> use the timeToTrigger value multiplied by sf-High within VarMeasConfig;

1> else if medium mobility state is detected:

2> use the timeToTrigger value multiplied by sf-Medium within VarMeasConfig;

1> else:

2> no scaling is applied;

5.5.7 Inter-frequency RSTD measurement indication

5.5.7.1 General

![Diagram](InterFreqRSTDMeasurementIndication)

Figure 5.5.7.1-1: Inter-frequency RSTD measurement indication

The purpose of this procedure is to indicate to the network that the UE is going to start/stop OTDOA inter-frequency RSTD measurements which require measurement gaps as specified in [16, 8.1.2.6]. The procedure is also used to indicate to the network that the UE is going to start/stop OTDOA intra-frequency RSTD measurements which require measurement gaps.

NOTE: It is a network decision to configure the measurement gap.

5.5.7.2 Initiation

The UE shall:

1> if and only if upper layers indicate to start performing inter-frequency RSTD measurements and the UE requires measurement gaps for these measurements while measurement gaps are either not configured or not sufficient:

2> initiate the procedure to indicate start;

NOTE 1: The UE verifies the measurement gap situation only upon receiving the indication from upper layers. If at this point in time sufficient gaps are available, the UE does not initiate the procedure. Unless it receives a new indication from upper layers, the UE is only allowed to further repeat the procedure in the same PCell once per frequency if the provided measurement gaps are insufficient.

1> if and only if upper layers indicate to stop performing inter-frequency RSTD measurements:

2> initiate the procedure to indicate stop;
NOTE 2: The UE may initiate the procedure to indicate stop even if it did not previously initiate the procedure to indicate start.

5.5.7.3 Actions related to transmission of $\text{InterFreqRSTDMeasurementIndication}$ message

The UE shall set the contents of $\text{InterFreqRSTDMeasurementIndication}$ message as follows:

1> if the procedure is initiated to indicate start or stop of inter-frequency RSTD measurements:
   
   2> set the $\text{rstd-InterFreqIndication}$ as follows:
      
      3> if the procedure is initiated to indicate start of inter-frequency RSTD measurements:
         
         4> set the $\text{rstd-InterFreqInfoList}$ according to the information received from upper layers;
      
      3> else if the procedure is initiated to indicate stop of inter-frequency RSTD measurements:
         
         4> set the $\text{rstd-InterFreqIndication}$ to the value $\text{stop}$;

1> else:

2> set the $\text{rstd-InterFreqIndication}$ as follows:

3> if the procedure is initiated to indicate start of intra-frequency RSTD measurements:
   
   4> set the $\text{carrierFreq}$ in the $\text{rstd-InterFreqInfoList}$ to the carrier frequency of the serving cell;

3> else if the procedure is initiated to indicate stop of inter-frequency RSTD measurements:
   
   4> set the $\text{rstd-InterFreqIndication}$ to the value $\text{stop}$;

1> submit the $\text{InterFreqRSTDMeasurementIndication}$ message to lower layers for transmission, upon which the procedure ends;

5.6 Other

5.6.0 General

For NB-IoT, only a subset of the procedures described in this sub-clause apply.

Table 5.6.0-1 specifies the procedures that are applicable to NB-IoT. All other procedures are not applicable to NB-IoT; this is not further stated in the corresponding procedures.

<table>

</tbody>
</table>
5.6.1 DL information transfer

5.6.1.1 General

The purpose of this procedure is to transfer NAS or (tunnelled) non-3GPP dedicated information from E-UTRAN to a UE in RRC_CONNECTED.

5.6.1.2 Initiation

E-UTRAN initiates the DL information transfer procedure whenever there is a need to transfer NAS or non-3GPP dedicated information. E-UTRAN initiates the DL information transfer procedure by sending the DLInformationTransfer message.

5.6.1.3 Reception of the DLInformationTransfer by the UE

Upon receiving DLInformationTransfer message, the UE shall:

1. if the UE is a NB-IoT UE; or
2. if the dedicatedInfoType is set to dedicatedInfoNAS:
   2.1 forward the dedicatedInfoNAS to the NAS upper layers.
3. if the dedicatedInfoType is set to dedicatedInfoCDMA2000-1XRTT or to dedicatedInfoCDMA2000-HRPD:
   3.1 forward the dedicatedInfoCDMA2000 to the CDMA2000 upper layers;

5.6.2 UL information transfer

5.6.2.1 General

The purpose of this procedure is to transfer NAS or (tunnelled) non-3GPP dedicated information from the UE to E-UTRAN.

5.6.2.2 Initiation

A UE in RRC_CONNECTED initiates the UL information transfer procedure whenever there is a need to transfer NAS or non-3GPP dedicated information, except at RRC connection establishment or resume in which case the NAS information is piggybacked to the RRCCollectionSetupComplete or RRCCollectionResumeComplete message.
correspondingly. The UE initiates the UL information transfer procedure by sending the ULInformationTransfer message. When CDMA2000 information has to be transferred, the UE shall initiate the procedure only if SRB2 is established.

5.6.2.3 Actions related to transmission of ULInformationTransfer message

The UE shall set the contents of the ULInformationTransfer message as follows:

1> if there is a need to transfer NAS information:
   2> if the UE is a NB-IoT UE:
      3> set the dedicatedInfoNAS to include the information received from upper layers;
   2> else, set the dedicatedInfoType to include the dedicatedInfoNAS;
1> if there is a need to transfer CDMA2000 1XRTT information:
   2> set the dedicatedInfoType to include the dedicatedInfoCDMA2000-1XRTT;
1> if there is a need to transfer CDMA2000 HRPD information:
   2> set the dedicatedInfoType to include the dedicatedInfoCDMA2000-HRPD;
1> upon RRC connection establishment, if UE supports the Control Plane CIoT EPS optimisation and UE does not need UL gaps during continuous uplink transmission:
   2> configure lower layers to stop using UL gaps during continuous uplink transmission in FDD for ULInformationTransfer message and subsequent uplink transmission in RRC_CONNECTED except for UL transmissions as specified in TS36.211 [21];
1> submit the ULInformationTransfer message to lower layers for transmission, upon which the procedure ends;

5.6.2.4 Failure to deliver ULInformationTransfer message

The UE shall:

1> if the UE is a NB-IoT UE, AS security is not started and radio link failure occurs before the successful delivery of ULInformationTransfer messages has been confirmed by lower layers; or
1> if mobility (i.e. handover, RRC connection re-establishment) occurs before the successful delivery of ULInformationTransfer messages has been confirmed by lower layers:
   2> inform upper layers about the possible failure to deliver the information contained in the concerned ULInformationTransfer messages;

5.6.3 UE capability transfer

5.6.3.1 General

![UE Capability Transfer Diagram](figure)

Figure 5.6.3.1-1: UE capability transfer
The purpose of this procedure is to transfer UE radio access capability information from the UE to E-UTRAN.

If the UE has changed its E-UTRAN radio access capabilities, the UE shall request higher layers to initiate the necessary NAS procedures (see TS 23.401 [41]) that would result in the update of UE radio access capabilities using a new RRC connection.

NOTE: Change of the UE's GERAN UE radio capabilities in RRC_IDLE is supported by use of Tracking Area Update.

5.6.3.2 Initiation

E-UTRAN initiates the procedure to a UE in RRC_CONNECTED when it needs (additional) UE radio access capability information.

5.6.3.3 Reception of the UECapabilityEnquiry by the UE

The UE shall:

1> for NB-IoT, set the contents of UECapabilityInformation message as follows:
   2> include the UE Radio Access Capability Parameters within the ue-Capability-Container;
   2> include ue-RadioPagingInfo;
   2> submit the UECapabilityInformation message to lower layers for transmission, upon which the procedure ends;
1> else, set the contents of UECapabilityInformation message as follows:
   2> if the ue-CapabilityRequest includes eutra:
      3> include the UE-EUTRA-Capability within a ue-CapabilityRAT-Container and with the rat-Type set to eutra;
      3> if the UE supports FDD and TDD:
         4> set all fields of UECapabilityInformation, except field fdd-Add-UE-EUTRA-Capabilities and tdd-Add-UE-EUTRA-Capabilities (including their sub-fields), to include the values applicable for both FDD and TDD (i.e. functionality supported by both modes);
         4> if (some of) the UE capability fields have a different value for FDD and TDD:
            5> if for FDD, the UE supports additional functionality compared to what is indicated by the previous fields of UECapabilityInformation:
               6> include field fdd-Add-UE-EUTRA-Capabilities and set it to include fields reflecting the additional functionality applicable for FDD;
            5> if for TDD, the UE supports additional functionality compared to what is indicated by the previous fields of UECapabilityInformation:
               6> include field tdd-Add-UE-EUTRA-Capabilities and set it to include fields reflecting the additional functionality applicable for TDD;

NOTE 1: The UE includes fields of XDD-Add-UE-EUTRA-Capabilities in accordance with the following:
- The field is included only if one or more of its sub-fields (or bits in the feature group indicators string) has a value that is different compared to the value signalled elsewhere within UE-EUTRA-Capability; (this value signalled elsewhere is also referred to as the Common value, that is supported for both XDD modes)
- For the fields that are included in XDD-Add-UE-EUTRA-Capabilities, the UE sets:
  - the sub-fields (or bits in the feature group indicators string) that are not allowed to be different to the same value as the Common value;
- the sub-fields (or bits in the feature group indicators string) that are allowed to be different to a value indicating at least the same functionality as indicated by the Common value;

3> else (UE supports single xDD mode):

4> set all fields of UECapabilityInformation, except field fdd-Add-UE-EUTRA-Capabilities and tdd-Add-UE-EUTRA-Capabilities (including their sub-fields), to include the values applicable for the xDD mode supported by the UE;

3> compile a list of band combinations, candidate for inclusion in the UECapabilityInformation message, comprising of band combinations supported by the UE according to the following priority order (i.e. listed in order of decreasing priority):

4> include all non-CA bands, regardless of whether UE supports carrier aggregation, only:
   - if the UE includes ue-Category-v1020 (i.e. indicating category 6 to 8); or
   - if for at least one of the non-CA bands, the UE supports more MIMO layers with TM9 and TM10 than implied by the UE category; or
   - if the UE supports TM10 with one or more CSI processes;

4> if the UECapabilityEnquiry message includes requestedFrequencyBands and UE supports requestedFrequencyBands:

5> include all 2DL+1UL CA band combinations, only consisting of bands included in requestedFrequencyBands;

5> include all other CA band combinations, only consisting of bands included in requestedFrequencyBands, and prioritized in the order of requestedFrequencyBands, (i.e. first include remaining band combinations containing the first-listed band, then include remaining band combinations containing the second-listed band, and so on);

4> else (no requested frequency bands):

5> include all 2DL+1UL CA band combinations;

5> include all other CA band combinations;

4> if UE supports maximumCCsRetrieval and if the UECapabilityEnquiry message includes the requestedMaxCCsDL and the requestedMaxCCsUL (i.e. both UL and DL maximums are given):

5> remove from the list of candidates the band combinations for which the number of CCs in DL exceeds the value indicated in the requestedMaxCCsDL or for which the number of CCs in UL exceeds the value indicated in the requestedMaxCCsUL;

5> indicate in requestedCCsUL the same value as received in requestedMaxCCsUL;

5> indicate in requestedCCsDL the same value as received in requestedMaxCCsDL;

4> else if UE supports maximumCCsRetrieval and if the UECapabilityEnquiry message includes the requestedMaxCCsDL (i.e. only DL maximum limit is given):

5> remove from the list of candidates the band combinations for which the number of CCs in DL exceeds the value indicated in the requestedMaxCCsDL;

5> indicate value in requestedCCsDL the same value as received in requestedMaxCCsDL;

4> else if UE supports maximumCCsRetrieval and if the UECapabilityEnquiry message includes the requestedMaxCCsUL (i.e. only UL maximum limit is given):

5> remove from the list of candidates the band combinations for which the number of CCs in UL exceeds the value indicated in the requestedMaxCCsUL;

5> indicate in requestedCCsUL the same value as received in requestedMaxCCsUL;
if the UE supports `requestReducedIntNonContComb` and the `UECapabilityEnquiry` message includes `requestReducedIntNonContComb`

5> set `reducedIntNonContCombRequested` to true;

5> remove from the list of candidates the intra-band non-contiguous CA band combinations which support is implied by another intra-band non-contiguous CA band combination included in the list of candidates as specified in TS 36.306 [5, 4.3.5.21]:

if the UE supports `requestReducedFormat` and UE supports `skipFallbackCombinations` and `UECapabilityEnquiry` message includes `requestSkipFallbackComb`:

5> set `skipFallbackCombRequested` to true;

5> for each band combination included in the list of candidates (including 2DL+1UL CA band combinations), starting with the ones with the lowest number of DL and UL carriers, that concerns a fallback band combination of another band combination included in the list of candidates as specified in TS 36.306 [5]:

6> remove the band combination from the list of candidates;

6> include `differentFallbackSupported` in the band combination included in the list of candidates whose fallback concerns the removed band combination, if its capabilities differ from the removed band combination;

if the UE supports `requestReducedFormat` and `diffFallbackCombReport`, and `UECapabilityEnquiry` message includes `requestDiffFallbackCombList`:

5> if the UE does not support `skipFallbackCombinations` or `UECapabilityEnquiry` message does not include `requestSkipFallbackComb`:

6> remove all band combination from the list of candidates;

5> for each CA band combination indicated in `requestDiffFallbackCombList`:

6> include the CA band combination, if not already in the list of candidates;

6> include the fallback combinations for which the supported UE capabilities are different from the capability of the CA band combination;

5> include CA band combinations indicated in `requestDiffFallbackCombList` into `requestedDiffFallbackCombList`;

3> if the `UECapabilityEnquiry` message includes `requestReducedFormat` and UE supports `requestReducedFormat`:

4> include in `supportedBandCombinationReduced` as many as possible of the band combinations included in the list of candidates, including the non-CA combinations, determined according to the rules and priority order defined above;

3> else

4> if the `UECapabilityEnquiry` message includes `requestedFrequencyBands` and UE supports `requestedFrequencyBands`:

5> include in `supportedBandCombination` as many as possible of the band combinations included in the list of candidates, including the non-CA combinations and up to 5DL+5UL CA band combinations, determined according to the rules and priority order defined above;

5> include in `supportedBandCombinationAdd` as many as possible of the remaining band combinations included in the list of candidates, (i.e. the candidates not included in `supportedBandCombination`), up to 5DL+5UL CA band combinations, determined according to the rules and priority order defined above;

4> else
5> include in supportedBandCombination as many as possible of the band combinations included in the list of candidates, including the non-CA combinations and up to 5DL+5UL CA band combinations, determined according to the rules defined above;

5> if it is not possible to include in supportedBandCombination all the band combinations to be included according to the above, selection of the subset of band combinations to be included is left up to UE implementation;

3> indicate in requestedBands the same bands and in the same order as included in requestedFrequencyBands, if received;

3> if the UE is a category 0, M1 or M2 UE, or supports any UE capability information in ue-RadioPagingInfo, according to TS 36.306 [5]:

4> include ue-RadioPagingInfo and set the fields according to TS 36.306 [5];

2> if the ue-CapabilityRequest includes geran-cs and if the UE supports GERAN CS domain:

3> include the UE radio access capabilities for GERAN CS within a ue-CapabilityRAT-Container and with the rat-Type set to geran-cs;

2> if the ue-CapabilityRequest includes geran-ps and if the UE supports GERAN PS domain:

3> include the UE radio access capabilities for GERAN PS within a ue-CapabilityRAT-Container and with the rat-Type set to geran-ps;

2> if the ue-CapabilityRequest includes utra and if the UE supports UTRA:

3> include the UE radio access capabilities for UTRA within a ue-CapabilityRAT-Container and with the rat-Type set to utra;

2> if the ue-CapabilityRequest includes cdma2000-1XRTT and if the UE supports CDMA2000 1xRTT:

3> include the UE radio access capabilities for CDMA2000 within a ue-CapabilityRAT-Container and with the rat-Type set to cdma2000-1XRTT;

1> submit the UECapabilityInformation message to lower layers for transmission, upon which the procedure ends;

5.6.4 CSFB to 1x Parameter transfer

5.6.4.1 General

The purpose of this procedure is to transfer the CDMA2000 1xRTT parameters required to register the UE in the CDMA2000 1xRTT network for CSFB support.
5.6.4.2 Initiation

A UE in RRC_CONNECTED initiates the CSFB to 1x parameter transfer procedure upon request from the CDMA2000 upper layers. The UE initiates the CSFB to 1x parameter transfer procedure by sending the CSFBParametersRequestCDMA2000 message.

5.6.4.3 Actions related to transmission of CSFBParametersRequestCDMA2000 message

The UE shall:

1> submit the CSFBParametersRequestCDMA2000 message to lower layers for transmission using the current configuration;

5.6.4.4 Reception of the CSFBParametersResponseCDMA2000 message

Upon reception of the CSFBParametersResponseCDMA2000 message, the UE shall:

1> forward the rand and the mobilityParameters to the CDMA2000 1xRTT upper layers;

5.6.5 UE Information

5.6.5.1 General

Figure 5.6.5.1-1: UE information procedure

The UE information procedure is used by E-UTRAN to request the UE to report information.

5.6.5.2 Initiation

E-UTRAN initiates the procedure by sending the UEInformationRequest message. E-UTRAN should initiate this procedure only after successful security activation.

5.6.5.3 Reception of the UEInformationRequest message

Upon receiving the UEInformationRequest message, the UE shall, only after successful security activation:

1> if rach-ReportReq is set to true, set the contents of the rach-Report in the UEInformationResponse message as follows:

2> set the numberOfPreamblesSent to indicate the number of preambles sent by MAC for the last successfully completed random access procedure;

2> if contention resolution was not successful as specified in TS 36.321 [6] for at least one of the transmitted preambles for the last successfully completed random access procedure:

3> set the contentionDetected to true;

2> else:

3> set the contentionDetected to false;
1> if rlf-ReportReq is set to true and the UE has radio link failure information or handover failure information available in VarRLF-Report and if the RPLMN is included in plmn-IdentityList stored in VarRLF-Report:

2> set timeSinceFailure in VarRLF-Report to the time that elapsed since the last radio link or handover failure in E-UTRA;

2> set the rlf-Report in the UEInformationResponse message to the value of rlf-Report in VarRLF-Report;

2> discard the rlf-Report from VarRLF-Report upon successful delivery of the UEInformationResponse message confirmed by lower layers;

1> if connEstFailReportReq is set to true and the UE has connection establishment failure information in VarConnEstFailReport and if the RPLMN is equal to plmn-Identity stored in VarConnEstFailReport:

2> set timeSinceFailure in VarConnEstFailReport to the time that elapsed since the last connection establishment failure in E-UTRA;

2> set the connEstFailReport in the UEInformationResponse message to the value of connEstFailReport in VarConnEstFailReport;

2> discard the connEstFailReport from VarConnEstFailReport upon successful delivery of the UEInformationResponse message confirmed by lower layers;

1> if the logMeasReportReq is present and if the RPLMN is included in plmn-IdentityList stored in VarLogMeasReport:

2> if VarLogMeasReport includes one or more logged measurement entries, set the contents of the logMeasReport in the UEInformationResponse message as follows:

3> include the absoluteTimeStamp and set it to the value of absoluteTimeInfo in the VarLogMeasReport;

3> include the traceReference and set it to the value of traceReference in the VarLogMeasReport;

3> include the traceRecordingSessionRef and set it to the value of traceRecordingSessionRef in the VarLogMeasReport;

3> include the tce-Id and set it to the value of tce-Id in the VarLogMeasReport;

3> include the logMeasInfoList and set it to include one or more entries from VarLogMeasReport starting from the entries logged first;

3> if the VarLogMeasReport includes one or more additional logged measurement entries that are not included in the logMeasInfoList within the UEInformationResponse message:

4> include the logMeasAvailable;

1> if mobilityHistoryReportReq is set to true:

2> include the mobilityHistoryReport and set it to include entries from VarMobilityHistoryReport;

2> include in the mobilityHistoryReport an entry for the current cell, possibly after removing the oldest entry if required, and set its fields as follows:

3> set visitedCellId to the global cell identity of the current cell:

3> set field timeSpent to the time spent in the current cell;

1> else:

2> submit the UEInformationResponse message to lower layers for transmission via SRB1;
5.6.6 Logged Measurement Configuration

5.6.6.1 General

![LoggedMeasurementConfiguration](image)

**Figure 5.6.6.1-1: Logged measurement configuration**

The purpose of this procedure is to configure the UE to perform logging of measurement results while in RRC_IDLE and to perform logging of measurement results for MBSFN in both RRC_IDLE and RRC_CONNECTED. The procedure applies to logged measurements capable UEs that are in RRC_CONNECTED.

**NOTE:** E-UTRAN may retrieve stored logged measurement information by means of the UE information procedure.

5.6.6.2 Initiation

E-UTRAN initiates the logged measurement configuration procedure to UE in RRC_CONNECTED by sending the \textit{LoggedMeasurementConfiguration} message.

5.6.6.3 Reception of the \textit{LoggedMeasurementConfiguration} by the UE

Upon receiving the \textit{LoggedMeasurementConfiguration} message the UE shall:

1> discard the logged measurement configuration as well as the logged measurement information as specified in 5.6.7;

1> store the received \textit{loggingDuration}, \textit{loggingInterval} and \textit{areaConfiguration}, if included, in \textit{VarLogMeasConfig};

1> if the \textit{LoggedMeasurementConfiguration} message includes \textit{plmn-IdentityList}:

2> set \textit{plmn-IdentityList} in \textit{VarLogMeasReport} to include the RPLMN as well as the PLMNs included in \textit{plmn-IdentityList};

1> else:

2> set \textit{plmn-IdentityList} in \textit{VarLogMeasReport} to include the RPLMN;

1> store the received \textit{absoluteTimeInfo}, \textit{traceReference}, \textit{traceRecordingSessionRef} and \textit{tce-Id} in \textit{VarLogMeasReport};

1> store the received \textit{targetMBSFN-AreaList}, if included, in \textit{VarLogMeasConfig};

1> start timer T330 with the timer value set to the \textit{loggingDuration};

5.6.6.4 T330 expiry

Upon expiry of T330 the UE shall:

1> release \textit{VarLogMeasConfig};
The UE is allowed to discard stored logged measurements, i.e. to release \textit{VarLogMeasReport}, 48 hours after T330 expiry.

5.6.7 Release of Logged Measurement Configuration

5.6.7.1 General

The purpose of this procedure is to release the logged measurement configuration as well as the logged measurement information.

5.6.7.2 Initiation

The UE shall initiate the procedure upon receiving a logged measurement configuration in another RAT. The UE shall also initiate the procedure upon power off or detach.

The UE shall:

1. stop timer T330, if running;
2. if stored, discard the logged measurement configuration as well as the logged measurement information, i.e. release the UE variables \textit{VarLogMeasConfig} and \textit{VarLogMeasReport};

5.6.8 Measurements logging

5.6.8.1 General

This procedure specifies the logging of available measurements by a UE in RRC_IDLE that has a logged measurement configuration and the logging of available measurements by a UE in both RRC_IDLE and RRC_CONNECTED if \textit{targetMBSFN-AreaList} is included in \textit{VarLogMeasConfig}.

5.6.8.2 Initiation

While T330 is running, the UE shall:

1. if measurement logging is suspended:
   2. if during the last logging interval the IDC problems detected by the UE is resolved, resume measurement logging;
2. if \textit{targetMBSFN-AreaList} is included in \textit{VarLogMeasConfig}:
   3. if the UE is camping normally on an E-UTRA cell or is connected to E-UTRA; and
   4. if the RPLMN is included in \textit{plmn-IdentityList} stored in \textit{VarLogMeasReport}; and
   5. if the PCell (in RRC_CONNECTED) or cell where the UE is camping (in RRC_IDLE) is part of the area indicated by \textit{areaConfiguration} if configured in \textit{VarLogMeasConfig};
   6. for MBSFN areas, indicated in \textit{targetMBSFN-AreaList}, from which the UE is receiving MBMS service:
   7. perform MBSFN measurements in accordance with the performance requirements as specified in TS 36.133 [16];

\textbf{NOTE 1:} When configured to perform MBSFN measurement logging by \textit{targetMBSFN-AreaList}, the UE is not required to receive additional MBSFN subframes, i.e. logging is based on the subframes corresponding to the MBMS services the UE is receiving.
5> perform logging at regular time intervals as defined by the loggingInterval in VarLogMeasConfig, but only for those intervals for which MBSFN measurement results are available as specified in TS 36.133 [16];

2> else if the UE is camping normally on an E-UTRA cell and if the RPLMN is included in plmn-IdentityList stored in VarLogMeasReport and, if the cell is part of the area indicated by areaConfiguration if configured in VarLogMeasConfig:

3> perform the logging at regular time intervals, as defined by the loggingInterval in VarLogMeasConfig;

2> when adding a logged measurement entry in VarLogMeasReport, include the fields in accordance with the following:

3> if the UE detected IDC problems during the last logging interval;

4> if measResultServCell in VarLogMeasReport is not empty;

5> include InDeviceCoexDetected;

5> suspend measurement logging from the next logging interval;

4> else;

5> suspend measurement logging;

NOTE 1A: The UE may detect the start of IDC problems as early as Phase 1 as described in 23.4 of TS 36.300 [9].

3> set the relativeTimeStamp to indicate the elapsed time since the moment at which the logged measurement configuration was received;

3> if detailed location information became available during the last logging interval, set the content of the locationInfo as follows:

4> include the locationCoordinates;

3> if targetMBSFN-AreaList is included in VarLogMeasConfig:

4> for each MBSFN area, for which the mandatory measurements result fields became available during the last logging interval:

5> set the rsrpResultMBSFN, rsrqResultMBSFN to include measurement results that became available during the last logging interval;

5> include the fields signallingBLER-Result or dataBLER-MCH-ResultList if the concerned BLER results are available,

5> set the mbsfn-AreaId and carrierFrequency to indicate the MBSFN area in which the UE is receiving MBSFN transmission;

4> if in RRC_CONNECTED:

5> set the servCellIdentity to indicate global cell identity of the PCell;

5> set the measResultServCell to include the layer 3 filtered measured results of the PCell;

5> if available, set the measResultNeighCells to include the layer 3 filtered measured results of SCell(s) and neighbouring cell(s) measurements that became available during the last logging interval, in order of decreasing RSRP, for at most the following number of cells: 6 intra-frequency and 3 inter-frequency cells per frequency and according to the following:

6> for each cell included, include the optional fields that are available;

5> if available, optionally set the measResultNeighCells to include the layer 3 filtered measured results of neighbouring cell(s) measurements that became available during the last logging interval, in order of decreasing RSCP(UTRA)/RSSI(GERAN)/PilotStrength(cdma2000), for at most the following number of cells: 3 inter-RAT cells per frequency (UTRA, cdma2000)/set of frequencies (GERAN), and according to the following:
6.> for each cell included, include the optional fields that are available;

4.> if in RRC_IDLE:

5.> set the servCellIdentity to indicate global cell identity of the serving cell;

5.> set the measResultServCell to include the quantities of the serving cell;

5.> if available, set the measResultNeighCells, in order of decreasing ranking-criterion as used for cell re-selection, to include neighbouring cell measurements that became available during the last logging interval for at most the following number of neighbouring cells: 6 intra-frequency and 3 inter-frequency neighbours per frequency and according to the following:

6.> for each neighbour cell included, include the optional fields that are available;

5.> if available, optionally set the measResultNeighCells, in order of decreasing ranking-criterion as used for cell re-selection, to include neighbouring cell measurements that became available during the last logging interval, for at most the following number of cells: 3 inter-RAT cells per frequency (UTRA, cdma2000)/set of frequencies (GERAN), and according to the following:

6.> for each cell included, include the optional fields that are available;

4.> for the cells included according to the previous (i.e. covering previous and current serving cells as well as neighbouring EUTRA cells) include results according to the extended RSRQ if corresponding results are available according to the associated performance requirements defined in TS 36.133 [16];

4.> for the cells included according to the previous (i.e. covering previous and current serving cells as well as neighbouring EUTRA cells) include RSRQ type if the result was based on measurements using a wider band or using all OFDM symbols;

NOTE 2: The UE includes the latest results in accordance with the performance requirements as specified in TS 36.133 [16]. E.g. RSRP and RSRQ results are available only if the UE has a sufficient number of results/ receives a sufficient number of subframes during the logging interval.

3.> else:

4.> set the servCellIdentity to indicate global cell identity of the cell the UE is camping on;

4.> set the measResultServCell to include the quantities of the cell the UE is camping on;

4.> if available, set the measResultNeighCells, in order of decreasing ranking-criterion as used for cell re-selection, to include neighbouring cell measurements that became available during the last logging interval for at most the following number of neighbouring cells: 6 intra-frequency and 3 inter-frequency neighbours per frequency as well as 3 inter-RAT neighbours, per frequency/ set of frequencies (GERAN) per RAT and according to the following:

5.> for each neighbour cell included, include the optional fields that are available;

4.> for the cells included according to the previous (i.e. covering previous and current serving cells as well as neighbouring EUTRA cells) include results according to the extended RSRQ if corresponding results are available according to the associated performance requirements defined in TS 36.133 [16];

4.> for the cells included according to the previous (i.e. covering previous and current serving cells as well as neighbouring EUTRA cells) include RSRQ type if the result was based on measurements using a wider band or using all OFDM symbols;

NOTE 3: The UE includes the latest results of the available measurements as used for cell reselection evaluation in RRC_IDLE or as used for evaluation of reporting criteria or for measurement reporting according to 5.5.3 in RRC_CONNECTED, which are performed in accordance with the performance requirements as specified in TS 36.133 [16].

2.> when the memory reserved for the logged measurement information becomes full, stop timer T330 and perform the same actions as performed upon expiry of T330, as specified in 5.6.6.4;
5.6.9 In-device coexistence indication

5.6.9.1 General

![Diagram of UE and EUTRAN with RRC connection reconfiguration and InDeviceCoexIndication message]

**Figure 5.6.9.1-1: In-device coexistence indication**

The purpose of this procedure is to inform E-UTRAN about (a change of) the In-Device Coexistence (IDC) problems experienced by the UE in RRC_CONNECTED, as described in TS 36.300 [9], and to provide the E-UTRAN with information in order to resolve them.

5.6.9.2 Initiation

A UE capable of providing IDC indications may initiate the procedure when it is configured to provide IDC indications and upon change of IDC problem information.

Upon initiating the procedure, the UE shall:

1> if configured to provide IDC indications:
   2> if the UE did not transmit an `InDeviceCoexIndication` message since it was configured to provide IDC indications:
      3> if on one or more frequencies for which a `measObjectEUTRA` is configured, the UE is experiencing IDC problems that it cannot solve by itself; or
      3> if configured to provide IDC indications for UL CA; and if on one or more supported UL CA combination comprising of carrier frequencies for which a measurement object is configured, the UE is experiencing IDC problems that it cannot solve by itself:
         4> initiate transmission of the `InDeviceCoexIndication` message in accordance with 5.6.9.3;
   2> else:
      3> if the set of frequencies, for which a `measObjectEUTRA` is configured and on which the UE is experiencing IDC problems that it cannot solve by itself, is different from the set indicated in the last transmitted `InDeviceCoexIndication` message; or
      3> if for one or more of the frequencies in the previously reported set of frequencies, the `interferenceDirection` is different from the value indicated in the last transmitted `InDeviceCoexIndication` message; or
      3> if the TDM assistance information is different from the assistance information included in the last transmitted `InDeviceCoexIndication` message; or
      3> if configured to provide IDC indications for UL CA; and if the `victimSystemType` is different from the value indicated in the last transmitted `InDeviceCoexIndication` message; or
      3> if configured to provide IDC indications for UL CA; and if the set of supported UL CA combinations on which the UE is experiencing IDC problems that it cannot solve by itself and that the UE includes in `affectedCarrierFreqCombList` according to 5.6.9.3, is different from the set indicated in the last transmitted `InDeviceCoexIndication` message:
NOTE 1: The term “IDC problems” refers to interference issues applicable across several subframes/slots where not necessarily all the subframes/slots are affected.

NOTE 2: For the frequencies on which a serving cell or serving cells is configured that is activated, IDC problems consist of interference issues that the UE cannot solve by itself, during either active data exchange or upcoming data activity which is expected in up to a few hundred milliseconds. For frequencies on which a SCell or SCells is configured that is deactivated, reporting IDC problems indicates an anticipation that the activation of the SCell or SCells would result in interference issues that the UE would not be able to solve by itself. For a non-serving frequency, reporting IDC problems indicates an anticipation that if the non-serving frequency or frequencies became a serving frequency or serving frequencies then this would result in interference issues that the UE would not be able to solve by itself.

5.6.9.3 Actions related to transmission of InDeviceCoexIndication message

The UE shall set the contents of the InDeviceCoexIndication message as follows:

1> if there is at least one E-UTRA carrier frequency, for which a measurement object is configured, that is affected by IDC problems:
   2> include the field affectedCarrierFreqList with an entry for each affected E-UTRA carrier frequency for which a measurement object is configured;
   2> for each E-UTRA carrier frequency included in the field affectedCarrierFreqList, include interferenceDirection and set it accordingly;
   2> include Time Domain Multiplexing (TDM) based assistance information, unless idc-HardwareSharingIndication is configured and the UE has no Time Domain Multiplexing based assistance information that could be used to resolve the IDC problems:
      3> if the UE has DRX related assistance information that could be used to resolve the IDC problems:
         4> include drx-CycleLength, drx-Offset and drx-ActiveTime;
      3> else (the UE has desired subframe reservation patterns related assistance information that could be used to resolve the IDC problems):
         4> include idc-SubframePatternList;
      3> use the MCG as timing reference if TDM based assistance information regarding the SCG is included;
1> if the UE is configured to provide UL CA information and there is a supported UL CA combination comprising of carrier frequencies for which a measurement object is configured, that is affected by IDC problems:
   2> include victimSystemType in ul-CA-AssistanceInfo;
   2> if the UE sets victimSystemType to wlan or Bluetooth:
      3> include affectedCarrierFreqCombList in ul-CA-AssistanceInfo with an entry for each supported UL CA combination comprising of carrier frequencies for which a measurement object is configured, that is affected by IDC problems;
   2> else:
      3> optionally include affectedCarrierFreqCombList in ul-CA-AssistanceInfo with an entry for each supported UL CA combination comprising of carrier frequencies for which a measurement object is configured, that is affected by IDC problems;
1> if idc-HardwareSharingIndication is configured, and there is at least one E-UTRA carrier frequency, for which a measurement object is configured, the UE is experiencing hardware sharing problems that it cannot solve by itself:
   2> include the hardwareSharingProblem and set it accordingly;
NOTE 1: When sending an InDeviceCoexIndication message to inform E-UTRAN the IDC problems, the UE includes all assistance information (rather than providing e.g. the changed part(s) of the assistance information).

NOTE 2: Upon not anymore experiencing a particular IDC problem that the UE previously reported, the UE provides an IDC indication with the modified contents of the InDeviceCoexIndication message (e.g. by an empty message).

The UE shall submit the InDeviceCoexIndication message to lower layers for transmission.

5.6.10 UE Assistance Information

5.6.10.1 General

The purpose of this procedure is to inform E-UTRAN of the UE’s power saving preference and SPS assistance information, maximum PDSCH/PUSCH bandwidth configuration preference, or the UE’s delay budget report carrying desired increment/decrement in the Uu air interface delay or connected mode DRX cycle length and for BL UEs or UEs in CE of the RLM event (“early-out-of-sync” or “early-in-sync”) and RLM information. Upon configuring the UE to provide power preference indications E-UTRAN may consider that the UE does not prefer a configuration primarily optimised for power saving until the UE explicitly indicates otherwise.

5.6.10.2 Initiation

A UE capable of providing power preference indications in RRC_CONNECTED may initiate the procedure in several cases including upon being configured to provide power preference indications and upon change of power preference. A UE capable of providing SPS assistance information in RRC_CONNECTED may initiate the procedure in several cases including upon being configured to provide SPS assistance information and upon change of SPS assistance information.

A UE capable of providing delay budget report in RRC_CONNECTED may initiate the procedure in several cases, including upon being configured to provide delay budget report and upon change of delay budget preference.

A UE capable of CE mode and providing maximum PDSCH/PUSCH bandwidth preference in RRC_CONNECTED may initiate the procedure upon being configured to provide maximum PDSCH/PUSCH bandwidth preference and/or upon change of maximum PDSCH/PUSCH bandwidth preference.

Upon initiating the procedure, the UE shall:

1> if configured to provide power preference indications:

2> if the UE did not transmit a UEAssistanceInformation message with powerPrefIndication since it was configured to provide power preference indications; or

2> if the current power preference is different from the one indicated in the last transmission of the UEAssistanceInformation message and timer T340 is not running:

3> initiate transmission of the UEAssistanceInformation message in accordance with 5.6.10.3;

1> if configured to provide maximum PDSCH/PUSCH bandwidth preference:
if the UE did not transmit a `UEAssistanceInformation` message with `bw-Preference` since it was configured to provide maximum PDSCH/PUSCH bandwidth preference; or:

if the current maximum PDSCH/PUSCH bandwidth preference is different from the one indicated in the last transmission of the `UEAssistanceInformation` message and timer T341 is not running;

initiate transmission of the `UEAssistanceInformation` message in accordance with 5.6.10.3;

if configured to provide SPS assistance information:

if the UE did not transmit a `UEAssistanceInformation` message with `sps-AssistanceInformation` since it was configured to provide SPS assistance information; or

if the current SPS assistance information is different from the one indicated in the last transmission of the `UEAssistanceInformation` message:

initiate transmission of the `UEAssistanceInformation` message in accordance with 5.6.10.3;

if configured to report RLM events:

if "early-out-of-sync" event has been detected and T343 is not running; or:

if "early-in-sync" event has been detected and T344 is not running:

initiate transmission of the `UEAssistanceInformation` message in accordance with 5.6.10.3;

if configured to provide delay budget report:

if the UE did not transmit a `UEAssistanceInformation` message with `delayBudgetReport` since it was configured to provide delay budget report; or

if the current delay budget is different from the one indicated in the last transmission of the `UEAssistanceInformation` message and timer T342 is not running:

initiate transmission of the `UEAssistanceInformation` message in accordance with 5.6.10.3;

5.6.10.3 Actions related to transmission of `UEAssistanceInformation` message

The UE shall set the contents of the `UEAssistanceInformation` message for power preference indications:

if configured to provide power preference indication and if the UE prefers a configuration primarily optimised for power saving:

set `powerPrefIndication` to `lowPowerConsumption`;

else if configured to provide power preference indication:

start or restart timer T340 with the timer value set to the `powerPrefIndicationTimer`;

set `powerPrefIndication` to `normal`;

The UE shall set the contents of the `UEAssistanceInformation` message for SPS assistance information:

if configured to provide SPS assistance information:

if there is any traffic for V2X sidelink communication which needs to report SPS assistance information:

include `trafficPatternInfoListSL` in the `UEAssistanceInformation` message;

if there is any traffic for uplink communication which needs to report SPS assistance information:

include `trafficPatternInfoListUL` in the `UEAssistanceInformation` message;

The UE shall set the contents of the `UEAssistanceInformation` message for bandwidth preference indications:

start timer T341 with the timer value set to the `bw-PreferenceIndicationTimer`;
The UE shall set the contents of the `UEAssistanceInformation` message for delay budget report:

1. set `bw-Preference` to its preferred configuration;

The UE shall set the contents of the `UEAssistanceInformation` message for delay budget report:

1. if configured to provide delay budget report:
   2. if the UE prefers an adjustment in the connected mode DRX cycle length:
      3. set `delayBudgetReport` to `type1` according to a desired value;
   2. else if the UE prefers coverage enhancement configuration change:
      3. set `delayBudgetReport` to `type2` according to a desired value;
   2. start or restart timer T342 with the timer value set to the `delayBudgetReportingProhibitTimer`;

The UE shall set the contents of the `UEAssistanceInformation` message for the RLM report:

1. if T314 has expired:
   2. set `rlm-event` to `earlyOutOfSync`;
   2. start timer T343 with the timer value set to the `rlmReportTimer`;
1. if T315 has expired:
   2. set `rlm-event` to `earlyInSync`;
   2. start timer T344 with the timer value set to the `rlmReportTimer`;
   2. if configured to report `rlmReportRep-MPDCCH`:
      3. set `excessRep-MPDCCH` to the value indicated by lower layers;

The UE shall submit the `UEAssistanceInformation` message to lower layers for transmission.

NOTE 1: It is up to UE implementation when and how to trigger SPS assistance information.

NOTE 2: It is up to UE implementation to set the content of `trafficPatternInfoListSL` and `trafficPatternInfoListUL`.

NOTE 3: Traffic patterns for different Destination Layer 2 IDs are provided in different entries in `trafficPatternInfoListSL`.

5.6.11 Mobility history information

5.6.11.1 General

This procedure specifies how the mobility history information is stored by the UE, covering RRC_CONNECTED and RRC_IDLE.

5.6.11.2 Initiation

If the UE supports storage of mobility history information, the UE shall:

1. Upon change of cell, consisting of PCell in RRC_CONNECTED or serving cell in RRC_IDLE, to another E-UTRA or inter-RAT cell or when entering out of service:
   2. include an entry in variable `VarMobilityHistoryReport` possibly after removing the oldest entry, if necessary, according to following:
      3. if the global cell identity of the previous PCell/ serving cell is available:
         4. include the global cell identity of that cell in the field `visitedCellId` of the entry;
      3. else:
4> include the physical cell identity and carrier frequency of that cell in the field \textit{visitedCellId} of the entry;

3> set the field \textit{timeSpent} of the entry as the time spent in the previous PCell/ serving cell;

1> upon entering E-UTRA (in RRC\textunderscore CONNECTED or RRC\textunderscore IDLE) while previously out of service and/ or using another RAT:

2> include an entry in variable \textit{VarMobilityHistoryReport} possibly after removing the oldest entry, if necessary, according to following:

3> set the field \textit{timeSpent} of the entry as the time spent outside E-UTRA;

5.6.12 RAN-assisted WLAN interworking

5.6.12.1 General

The purpose of this procedure is to facilitate access network selection and traffic steering between E-UTRAN and WLAN.

If required by upper layers (see TS 24.312 [66], the UE shall provide an up-to-date set of the applicable parameters provided by wlan\textendash OffloadConfigCommon or wlan\textendash OffloadConfigDedicated to upper layers, and inform upper layers when no parameters are configured. The parameter set from either wlan\textendash OffloadConfigCommon or wlan\textendash OffloadConfigDedicated is selected as specified in subclauses 5.2.2.24, 5.3.12, 5.6.12.2 and 5.6.12.4.

5.6.12.2 Dedicated WLAN offload configuration

The UE shall:

1> if the received wlan\textendash OffloadInfo is set to \textit{release}:

2> release wlan\textendash OffloadConfigDedicated and t350;

2> if the wlan\textendash OffloadConfigCommon corresponding to the RPLMN is broadcast by the cell:

3> apply the wlan\textendash OffloadConfigCommon corresponding to the RPLMN included in SystemInformationBlockType17;

1> else:

2> apply the received wlan\textendash OffloadConfigDedicated;

5.6.12.3 WLAN offload RAN evaluation

The UE shall:

1> if the UE is configured with either wlan\textendash OffloadConfigCommon or wlan\textendash OffloadConfigDedicated; and

1> if the UE is in RRC\textunderscore IDLE or none of rclwi\textendash Configuration, lwa\textendash Configuration and lwip\textendash Configuration is configured:

2> provide measurement results required for the evaluation of the network selection and traffic steering rules as defined in TS 24.312 [66] to upper layers;

2> evaluate the network selection and traffic steering rules as defined in TS 36.304 [4] using WLAN identifiers as indicated in other subclauses (either provided in steerToWLAN included in rclwi\textendash Configuration or in wlan\textendash Id\textendash List included in SystemInformationBlockType17);

5.6.12.4 T350 expiry or stop

The UE shall:

1> if T350 expires or is stopped:
2> release the wlan-OffloadConfigDedicated and t350;
2> release rclwi-Configuration if configured;
2> if the wlan-OffloadConfigCommon corresponding to the RPLMN is broadcast by the cell:
3> apply the wlan-OffloadConfigCommon and the wlan-Id-List corresponding to the RPLMN included in SystemInformationBlockType17;

5.6.12.5 Cell selection/ re-selection while T350 is running

The UE shall:
1> if, while T350 is running, the UE selects/ reselects a cell which is not the PCell when the wlan-OffloadDedicated was configured:
2> stop timer T350;
2> perform the actions as specified in 5.6.12.4;

5.6.13 SCG failure information

5.6.13.1 General

![Figure 5.6.13.1-1: SCG failure information](image)

The purpose of this procedure is to inform E-UTRAN about an SCG failure the UE has experienced i.e. SCG radio link failure, SCG change failure.

5.6.13.2 Initiation

A UE initiates the procedure to report SCG failures when SCG transmission is not suspended and when one of the following conditions is met:
1> upon detecting radio link failure for the SCG, in accordance with 5.3.11; or
1> upon SCG change failure, in accordance with 5.3.5.7a; or
1> upon stopping uplink transmission towards the PSCell due to exceeding the maximum uplink transmission timing difference when powerControlMode is configured to 1, in accordance with subclause 7.17.2 of TS 36.133 [29].

Upon initiating the procedure, the UE shall:
1> suspend all SCG DRBs and suspend SCG transmission for split DRBs;
1> reset SCG-MAC;
1> stop T307;
1> initiate transmission of the SCGFailureInformation message in accordance with 5.6.13.3;
5.6.13.3 Actions related to transmission of *SCGFailureInformation* message

The UE shall set the contents of the *SCGFailureInformation* message as follows:

1. if the UE initiates transmission of the *SCGFailureInformation* message to provide SCG radio link failure information:
   2. include *failureType* and set it to the trigger for detecting SCG radio link failure;

1. else if the UE initiates transmission of the *SCGFailureInformation* message to provide SCG change failure information:
   2. include *failureType* and set it to *scg-ChangeFailure*;

1. else if the UE initiates transmission of the *SCGFailureInformation* message due to exceeding maximum uplink transmission timing difference:
   2. include *failureType* and set it to *maxUL-TimingDiff*;

1. set the *measResultServFreqList* to include for each SCG cell that is configured, if any, within *measResultSCell* the quantities of the concerned SCell, if available according to performance requirements in [16];

1. for each SCG serving frequency included in *measResultServFreqList*, include within *measResultBestNeighCell* the *physCellId* and the quantities of the best non-serving cell, based on RSRP, on the concerned serving frequency;

1. set the *measResultNeighCells* to include the best measured cells on non-serving E-UTRA frequencies, ordered such that the best cell is listed first, and based on measurements collected up to the moment the UE detected the failure, and set its fields as follows;
   2. if the UE was configured to perform measurements for one or more non-serving EUTRA frequencies and measurement results are available, include the *measResultListEUTRA*;
   2. for each neighbour cell included, include the optional fields that are available;

**NOTE 2:** The measured quantities are filtered by the L3 filter as configured in the mobility measurement configuration. The measurements are based on the time domain measurement resource restriction, if configured. Blacklisted cells are not required to be reported.

The UE shall submit the *SCGFailureInformation* message to lower layers for transmission.

5.6.14 LTE-WLAN Aggregation

5.6.14.1 Introduction

E-UTRAN can configure the UE to connect to a WLAN and configure bearers for LWA (referred to as LWA DRBs). The UE uses the WLAN parameters received from E-UTRAN in performing WLAN measurements. The UE also performs WLAN connection management as described in 5.6.15 while LWA is configured.

5.6.14.2 Reception of LWA configuration

Upon reception of LWA configuration, the UE shall:

1. if the received *lwa-Configuration* is set to *release*:
   2. release the LWA configuration as described in 5.6.14.3;

1. else:
   2. if the received *lwa-Config* includes *lwa-WT-Counter*:
      3. determine the S-KWT key based on the *K_{SNB}* key and received *lwa-WT-Counter* value, as specified in TS 33.401 [32];
3GPP TS 36.331 version 14.4.0 Release 14

5.6.14.3 Release of LWA configuration

To release the LWA configuration, the UE shall:

1> for each LWA DRB that is part of the current UE configuration:
   2> disable data handling for this DRB at the LWAAP entity;
   2> perform PDCP data recovery as specified in TS 36.323 [8];
1> delete any existing values in VarWLAN-MobilityConfig and VarWLAN-Status;
1> stop timer T351, if running;
1> stop WLAN status monitoring and WLAN connection attempts for LWA;
1> indicate the release of LWA configuration, if configured, to upper layers;

5.6.15 WLAN connection management

5.6.15.1 Introduction

WLAN connection management procedures in this section are triggered as specified in other sections where the UE is using a WLAN connection for LWA, RCLWI or LWIP.

The UE stores the current WLAN mobility set, which is a set of one or more WLAN identifier(s) (e.g. BSSID, SSID, HESSID) in wlan-MobilitySet in VarWLAN-MobilityConfig. This WLAN mobility set can be configured and updated by the eNB. A WLAN is considered to be inside the WLAN mobility set if its identifiers match all WLAN identifiers of at least one entry in wlan-MobilitySet and outside the WLAN mobility set otherwise. When the UE receives a new or updated WLAN mobility set, it initiates connection to a WLAN inside the WLAN mobility set, if not already connected to such a WLAN, and starts WLAN status monitoring as described in 5.6.15.4. The UE can perform WLAN mobility within the WLAN mobility set (connect or reconnect to a WLAN inside the WLAN mobility set) without any signalling to E-UTRAN.
The UE reports the WLAN connection status information to E-UTRAN as described in 5.6.15.2. The information in this report is based on the monitoring of WLAN connection as described in 5.6.15.4.

5.6.15.2 WLAN connection status reporting

5.6.15.2.1 General

The purpose of this procedure is to inform E-UTRAN about the status of WLAN connection for LWA, RCLWI, or LWIP.

5.6.15.2.2 Initiation

The UE in RRC_CONNECTED initiates the WLAN status reporting procedure when:

1> it connects successfully to a WLAN inside WLAN mobility set while T351 is running after a WLAN mobility set change; or
1> after a lwa-WT-Counter update or after a lwip-Counter update (if success report is requested by the eNB); or
1> its connection or connection attempts to all WLAN(s) inside WLAN mobility set fails in accordance with WLAN Status Monitoring described in 5.6.15.4; or
1> T351 expires; or
1> its WLAN connection to all WLAN(s) inside WLAN mobility set becomes temporarily unavailable; or
1> its WLAN connection to a WLAN inside the WLAN mobility set is successfully established after its previous WLAN Connection Status Report indicating WLAN temporary suspension;

Upon initiating the procedure, the UE shall:

1> initiate transmission of the WLANConnectionStatusReport message in accordance with 5.6.15.2.3;

5.6.15.2.3 Actions related to transmission of WLANConnectionStatusReport message

The UE shall set the contents of the WLANConnectionStatusReport message as follows:

1> set wlan-status to status in VarWLAN-Status;
1> submit the WLANConnectionStatusReport message to lower layers for transmission, upon which the procedure ends;

5.6.15.3 T351 Expiry (WLAN connection attempt timeout)

Upon T351 expiry, the UE shall:

1> set the status in VarWLAN-Status to failureTimeout;
1> perform WLAN connection status reporting procedure in 5.6.15.2;
1> stop WLAN status monitoring and WLAN connection attempts;
5.6.15.4  WLAN status monitoring

To perform WLAN status monitoring, the UE shall:

1> if UE is not configured with rclwi-Configuration and WLAN connection to a WLAN inside the WLAN mobility set is successfully established or maintained after a WLAN mobility set configuration update, after a lwa-WT-Counter update or after a lwip-Counter update:

2> set the status in VarWLAN-Status to successfulAssociation;

2> stop timer T351, if running;

2> if successReportRequested in VarWLAN-MobilityConfig is set to TRUE:

3> perform WLAN Connection Status Reporting procedure in 5.6.15.2;

1> if WLAN connection or connection attempts to all WLAN(s) inside WLAN mobility set fails:

2> if the failure is due to WLAN radio link issues:

3> set the status in VarWLAN-Status to failureWlanRadioLink;

2> else if the failure is due to UE internal problems related to WLAN:

3> set the status in VarWLAN-Status to failureWlanUnavailable;

NOTE 1: The UE internal problems related to WLAN include connection to another WLAN based on user preferences or turning off WLAN connection or connection rejection from WLAN or other WLAN problems.

3> remove all WLAN related measurement reporting entries within VarMeasReportList;

2> stop timer T351, if running;

2> perform WLAN Connection Status Reporting procedure in 5.6.15.2;

2> if the UE is configured with rclwi-Configuration:

3> release rclwi-Configuration and inform upper layers of a move-traffic-from-WLAN indication (see TS 24.302 [74]);

2> stop WLAN Status Monitoring and WLAN connection attempts;

1> if wlan-SuspendResumeAllowed in wlan-SuspendConfig within VarWLAN-MobilityConfig is set to TRUE:

2> if WLAN connection to all WLAN(s) inside WLAN mobility set becomes temporarily unavailable:

3> set the status in VarWLAN-Status to suspended;

3> if wlan-SuspendTriggersStatusReport in wlan-SuspendConfig within VarWLAN-MobilityConfig is set to TRUE:

4> trigger PDCP Status Report as specified in [8];

3> perform WLAN Connection Status Reporting procedure in 5.6.15.2;

2> if the status in VarWLAN-Status in the last WLAN Connection Status Report by this UE was suspended and WLAN connection to a WLAN inside the WLAN mobility set is successfully established:

3> set the status in VarWLAN-Status to resumed;

3> perform WLAN Connection Status Reporting procedure in 5.6.15.2;
5.6.16  RAN controlled LTE-WLAN interworking

5.6.16.1  General

The purpose of this procedure is to perform RAN-controlled LTE-WLAN interworking (RCLWI) i.e. control access network selection and traffic steering between E-UTRAN and WLAN.

5.6.16.2  WLAN traffic steering command

The UE shall:

1> if the received rclwi-Configuration is set to setup:
   2> if the command is set to steerToWLAN:
      3> inform the upper layers of a move-traffic-to-WLAN indication along with the WLAN identifier lists in steerToWLAN (see TS 24.302 [74]);
      3> store steerToWLAN in wlan-MobilitySet in VarWLAN-MobilityConfig;
      3> perform the WLAN status monitoring procedure as specified in 5.6.15.4 using steerToWLAN as the WLAN mobility set;
   2> else:
      3> inform the upper layers of a move-traffic-from-WLAN indication (see TS 24.302 [74]);
      3> clear wlan-MobilitySet in VarWLAN-MobilityConfig;
      3> stop performing the WLAN status monitoring procedure as specified in 5.6.15.4;
      3> delete any existing values in VarWLAN-Status;
1> else (the rclwi-Configuration is released):
   2> clear wlan-MobilitySet in VarWLAN-MobilityConfig;
   2> stop performing the WLAN status monitoring procedure as specified in 5.6.15.4;
   2> delete any existing values in VarWLAN-Status;
1> inform the upper layers of release of the rclwi-Configuration.

5.6.17  LTE-WLAN aggregation with IPsec tunnel

5.6.17.1  General

The WLAN resources that are used over the LWIP tunnel as described in TS 36.300 [9] established as part of LWIP procedures are referred to as 'LWIP resources'. The purpose of this section is to specify procedures to indicate to higher layers to initiate the establishment/ release of the LWIP tunnel over WLAN and to indicate which DRB(s) shall use the LWIP resources.

5.6.17.2  LWIP reconfiguration

The UE shall:

1> if the received lwip-Configuration is set to release:
   2> release the LWIP configuration, if configured, as described in 5.6.17.3;
1> else:
   2> if lwip-MobilityConfig is included:
3> if the received lwip-MobilityConfig includes wlan-ToReleaseList:
   4> for each WLAN-Identifiers included in wlan-ToReleaseList:
      5> remove the WLAN-Identifiers if already part of the current wlan-MobilitySet in VarWLAN-MobilityConfig;
3> if the received lwip-MobilityConfig includes wlan-ToAddList:
   4> for each WLAN-Identifiers included in wlan-ToAddList:
      5> add the WLAN-Identifiers to the current wlan-MobilitySet in VarWLAN-MobilityConfig;
3> if the received lwip-MobilityConfig includes associationTimer:
   4> start timer T351 with the timer value set according to the value of associationTimer;
3> if the received lwip-MobilityConfig includes successReportRequested:
   4> set successReportRequested in VarWLAN-MobilityConfig to the value of successReportRequested;
2> if tunnelConfigLWIP is included:
   3> indicate to higher layers to configure the LWIP tunnel according to the received tunnelConfigLWIP [32];
3> if lwip-Counter is included:
   4> determine the LWIP-PSK based on the K_{enb} key and received lwip-Counter value, as specified in TS 33.401 [32];
      4> forward the LWIP-PSK to upper layers for LWIP tunnel establishment;
2> start WLAN Status Monitoring as described in 5.6.15.4;

5.6.17.3 LWIP release

The UE shall:
1> delete any existing values in VarWLAN-MobilityConfig and VarWLAN-Status;
1> stop timer T351, if running;
1> release the lwip-Configuration;
1> indicate to higher layers to stop all DRBs from using the LWIP resources;
1> indicate to higher layers to release the LWIP tunnel [32];
1> stop WLAN status monitoring and WLAN connection attempts for LWIP;

5.6.18 Void

5.7 Generic error handling

5.7.1 General

The generic error handling defined in the subsequent sub-clauses applies unless explicitly specified otherwise e.g. within the procedure specific error handling.

The UE shall consider a value as not comprehended when it is set:

- to an extended value that is not defined in the version of the transfer syntax supported by the UE.
- to a spare or reserved value unless the specification defines specific behaviour that the UE shall apply upon receiving the concerned spare/ reserved value.

The UE shall consider a field as not comprehended when it is defined:

- as spare or reserved unless the specification defines specific behaviour that the UE shall apply upon receiving the concerned spare/ reserved field.

5.7.2 ASN.1 violation or encoding error

The UE shall:

1> when receiving an RRC message on the BCCH, BR-BCCH, PCCH, CCCH, MCCH, SC-MCCH or SBCCH for which the abstract syntax is invalid [13]:

2> ignore the message;

NOTE: This section applies in case one or more fields is set to a value, other than a spare, reserved or extended value, not defined in this version of the transfer syntax. E.g. in the case the UE receives value 12 for a field defined as INTEGER (1..11). In cases like this, it may not be possible to reliably detect which field is in the error hence the error handling is at the message level.

5.7.3 Field set to a not comprehended value

The UE shall, when receiving an RRC message on any logical channel:

1> if the message includes a field that has a value that the UE does not comprehend:

2> if a default value is defined for this field:

3> treat the message while using the default value defined for this field;

2> else if the concerned field is optional:

3> treat the message as if the field were absent and in accordance with the need code for absence of the concerned field;

2> else:

3> treat the message as if the field were absent and in accordance with sub-clause 5.7.4;

5.7.4 Mandatory field missing

The UE shall:

1> if the message includes a field that is mandatory to include in the message (e.g. because conditions for mandatory presence are fulfilled) and that field is absent or treated as absent:

2> if the RRC message was received on DCCH or CCCH:

3> ignore the message;

2> else:

3> if the field concerns a (sub-field of) an entry of a list (i.e. a SEQUENCE OF):

4> treat the list as if the entry including the missing or not comprehended field was not present;

3> else if the field concerns a sub-field of another field, referred to as the 'parent' field i.e. the field that is one nesting level up compared to the erroneous field:

4> consider the 'parent' field to be set to a not comprehended value;

4> apply the generic error handling to the subsequent 'parent' field(s), until reaching the top nesting level i.e. the message level;
else (field at message level):

ignore the message;

NOTE 1: The error handling defined in these sub-clauses implies that the UE ignores a message with the message type or version set to a not comprehended value.

NOTE 2: The nested error handling for messages received on logical channels other than DCCH and CCCH applies for errors in extensions also, even for errors that can be regarded as invalid E-UTRAN operation e.g. E-UTRAN not observing conditional presence.

The following ASN.1 further clarifies the levels applicable in case of nested error handling for errors in extension fields.

```
-- /example/ ASN1START

-- Example with extension addition group

ItemInfoList ::= SEQUENCE {SIZE (1..max)) OF ItemInfo

ItemInfo ::= SEQUENCE {
  itemIdentity INTEGER (1..max),
  field1 Field1,
  field2 Field2 OPTIONAL, -- Need ON
  ...
  [[ field3-r9 Field3-r9 OPTIONAL, -- Cond Cond1
    field4-r9 Field4-r9 OPTIONAL -- Need ON
  ]]
}

-- Example with traditional non-critical extension (empty sequence)

BroadcastInfoBlock1 ::= SEQUENCE {
  itemIdentity INTEGER (1..max),
  field1 Field1,
  field2 Field2 OPTIONAL, -- Need ON
  nonCriticalExtension BroadcastInfoBlock1-v940-Ies OPTIONAL
}

BroadcastInfoBlock1-v940-Ies ::= SEQUENCE {
  field3-r9 Field3-r9 OPTIONAL, -- Cond Cond1
  field4-r9 Field4-r9 OPTIONAL, -- Need ON
  nonCriticalExtension SEQUENCE {} OPTIONAL -- Need ON
}

-- ASN1STOP
```

The UE shall, apply the following principles regarding the levels applicable in case of nested error handling:

- an extension addition group is not regarded as a level on its own. E.g. in the ASN.1 extract in the previous, a error regarding the conditionality of field3 would result in the entire itemInfo entry to be ignored (rather than just the extension addition group containing field3 and field4)

- a traditional nonCriticalExtension is not regarded as a level on its own. E.g. in the ASN.1 extract in the previous, a error regarding the conditionality of field3 would result in the entire BroadcastInfoBlock1 to be ignored (rather than just the non critical extension containing field3 and field4).

5.7.5 Not comprehended field

The UE shall, when receiving an RRC message on any logical channel:

1> if the message includes a field that the UE does not comprehend:

2> treat the rest of the message as if the field was absent;

NOTE: This section does not apply to the case of an extension to the value range of a field. Such cases are addressed instead by the requirements in section 5.7.3.
5.8 MBMS

5.8.1 Introduction

5.8.1.1 General

In general the control information relevant only for UEs supporting MBMS is separated as much as possible from unicast control information. Most of the MBMS control information is provided on a logical channel specific for MBMS common control information: the MCCH. E-UTRA employs one MCCH logical channel per MBSFN area. In case the network configures multiple MBSFN areas, the UE acquires the MBMS control information from the MCCHs that are configured to identify if services it is interested to receive are ongoing. The action applicable when the UE is unable to simultaneously receive MBMS and unicast services is up to UE implementation. In this release of the specification, an MBMS capable UE is only required to support reception of a single MBMS service at a time, and reception of more than one MBMS service (also possibly on more than one MBSFN area) in parallel is left for UE implementation. The MCCH carries the MBSFNAreaConfiguration message, which indicates the MBMS sessions that are ongoing as well as the (corresponding) radio resource configuration. The MCCH may also carry the MBMSCountingRequest message, when E-UTRAN wishes to count the number of UEs in RRC_CONNECTED that are receiving or interested to receive one or more specific MBMS services.

A limited amount of MBMS control information is provided on the BCCH. This primarily concerns the information needed to acquire the MCCH(s). This information is carried by means of a single MBMS specific SystemInformationBlock: SystemInformationBlockType13. An MBSFN area is identified solely by the mbsfn-AreaId in SystemInformationBlockType13. At mobility, the UE considers that the MBSFN area is continuous when the source cell and the target cell broadcast the same value in the mbsfn-AreaId.

5.8.1.2 Scheduling

The MCCH information is transmitted periodically, using a configurable repetition period. Scheduling information is not provided for MCCH i.e. both the time domain scheduling as well as the lower layer configuration are semi-statically configured, as defined within SystemInformationBlockType13.

For MBMS user data, which is carried by the MTCH logical channel, E-UTRAN periodically provides MCH scheduling information (MSI) at lower layers (MAC). This MCH information only concerns the time domain scheduling i.e. the frequency domain scheduling and the lower layer configuration are semi-statically configured. The periodicity of the MSI is configurable and defined by the MCH scheduling period.

5.8.1.3 MCCH information validity and notification of changes

Change of MCCH information only occurs at specific radio frames, i.e. the concept of a modification period is used. Within a modification period, the same MCCH information may be transmitted a number of times, as defined by its scheduling (which is based on a repetition period). The modification period boundaries are defined by SFN values for which SFN mod \( m \) = 0, where \( m \) is the number of radio frames comprising the modification period. The modification period is configured by means of SystemInformationBlockType13.

When the network changes (some of) the MCCH information, it notifies the UEs about the change during a first modification period. In the next modification period, the network transmits the updated MCCH information. These general principles are illustrated in figure 5.8.1.3-1, in which different colours indicate different MCCH information. Upon receiving a change notification, a UE interested to receive MBMS services acquires the new MCCH information immediately from the start of the next modification period. The UE applies the previously acquired MCCH information until the UE acquires the new MCCH information.
Indication of an MBMS specific RNTI, the M-RNTI (see TS 36.321 [6]), on PDCCH is used to inform UEs in RRC_IDLE and UEs in RRC_CONNECTED about an MCCH information change. When receiving an MCCH information change notification, the UE knows that the MCCH information will change at the next modification period boundary. The notification on PDCCH indicates which of the MCCHs will change, which is done by means of an 8-bit bitmap. Within this bitmap, the bit at the position indicated by the field notificationIndicator is used to indicate changes for that MBSFN area: if the bit is set to "1", the corresponding MCCH will change. No further details are provided e.g. regarding which MCCH information will change. The MCCH information change notification is used to inform the UE about a change of MCCH information upon session start or about the start of MBMS counting.

The MCCH information change notifications on PDCCH are transmitted periodically and are carried on MBSFN subframes only except on MBMS-dedicated cell or FeMBMS/Unicast-mixed cell where the MCCH information change is provided on non-MBSFN subframes. These MCCH information change notification occasions are common for all MCCHs that are configured, and configurable by parameters included in SystemInformationBlockType13: a repetition coefficient, a radio frame offset and a subframe index. These common notification occasions are based on the MCCH with the shortest modification period.

NOTE 1: E-UTRAN may modify the MBMS configuration information provided on MCCH at the same time as updating the MBMS configuration information carried on BCCH i.e. at a coinciding BCCH and MCCH modification period. Upon detecting that a new MCCH is configured on BCCH, a UE interested to receive one or more MBMS services should acquire the MCCH, unless it knows that the services it is interested in are not provided by the corresponding MBSFN area.

A UE that is receiving an MBMS service via MRB shall acquire the MCCH information from the start of each modification period. A UE interested to receive MBMS from a carrier on which dl-Bandwidth included in MasterInformationBlock is set to n6 shall acquire the MCCH information at least once every MCCH modification period. A UE that is not receiving an MBMS service via MRB, as well as UEs that are receiving an MBMS service via MRB but potentially interested to receive other services not started yet in another MBSFN area from a carrier on which dl-Bandwidth included in MasterInformationBlock is other than n6, shall verify that the stored MCCH information remains valid by attempting to find the MCCH information change notification at least notificationRepetitionCoeff times during the modification period of the applicable MCCH(s), if no MCCH information change notification is received.

NOTE 2: In case the UE is aware which MCCH(s) E-UTRAN uses for the service(s) it is interested to receive, the UE may only need to monitor change notifications for a subset of the MCCHs that are configured, referred to as the 'applicable MCCH(s)' in the above.
The UE applies the MCCH information acquisition procedure to acquire the MBMS control information that is broadcasted by the E-UTRAN. The procedure applies to MBMS capable UEs that are in RRC_IDLE or in RRC_CONNECTED.

5.8.2.2 Initiation

A UE interested to receive MBMS services shall apply the MCCH information acquisition procedure upon entering the corresponding MBSFN area (e.g. upon power on, following UE mobility) and upon receiving a notification that the MCCH information has changed. A UE that is receiving an MBMS service shall apply the MCCH information acquisition procedure to acquire the MCCH, that corresponds with the service that is being received, at the start of each modification period.

Unless explicitly stated otherwise in the procedural specification, the MCCH information acquisition procedure overwrites any stored MCCH information, i.e. delta configuration is not applicable for MCCH information and the UE discontinues using a field if it is absent in MCCH information unless explicitly specified otherwise.

5.8.2.3 MCCH information acquisition by the UE

An MBMS capable UE shall:

1> if the procedure is triggered by an MCCH information change notification:

2> start acquiring the MBSFNAreaConfiguration message and the MBMSCountingRequest message if present, from the beginning of the modification period following the one in which the change notification was received;

NOTE 1: The UE continues using the previously received MCCH information until the new MCCH information has been acquired.

1> if the UE enters an MBSFN area:

2> acquire the MBSFNAreaConfiguration message and the MBMSCountingRequest message if present, at the next repetition period;

1> if the UE is receiving an MBMS service:

2> start acquiring the MBSFNAreaConfiguration message and the MBMSCountingRequest message if present, that both concern the MBSFN area of the service that is being received, from the beginning of each modification period;

5.8.2.4 Actions upon reception of the MBSFNAreaConfiguration message

No UE requirements related to the contents of this MBSFNAreaConfiguration apply other than those specified elsewhere e.g. within procedures using the concerned system information, the corresponding field descriptions.

5.8.2.5 Actions upon reception of the MBMSCountingRequest message

Upon receiving MBMSCountingRequest message, the UE shall perform the MBMS Counting procedure as specified in 5.8.4.

5.8.3 MBMS PTM radio bearer configuration

5.8.3.1 General

The MBMS PTM radio bearer configuration procedure is used by the UE to configure RLC, MAC and the physical layer upon starting and/or stopping to receive an MRB. The procedure applies to UEs interested to receive one or more MBMS services.

NOTE: In case the UE is unable to receive an MBMS service due to capability limitations, upper layers may take appropriate action e.g. terminate a lower priority unicast service.
5.8.3.2 Initiation

The UE applies the MRB establishment procedure to start receiving a session of a service it has an interest in. The procedure may be initiated e.g. upon start of the MBMS session, upon (re-)entry of the corresponding MBSFN service area, upon becoming interested in the MBMS service, upon removal of UE capability limitations inhibiting reception of the concerned service.

The UE applies the MRB release procedure to stop receiving a session. The procedure may be initiated e.g. upon stop of the MBMS session, upon leaving the corresponding MBSFN service area, upon losing interest in the MBMS service, when capability limitations start inhibiting reception of the concerned service.

5.8.3.3 MRB establishment

Upon MRB establishment, the UE shall:

1. establish an RLC entity in accordance with the configuration specified in 9.1.1.4;
2. configure an MTCH logical channel in accordance with the received \text{logicalChannelIdentity}, applicable for the MRB, as included in the \text{MBSFN\text{Area}\text{Configuration}} message;
3. configure the physical layer in accordance with the \text{pmch-Config}, applicable for the MRB, as included in the \text{MBSFN\text{Area}\text{Configuration}} message;
4. inform upper layers about the establishment of the MRB by indicating the corresponding \text{tmgi} and \text{sessionId};

5.8.3.4 MRB release

Upon MRB release, the UE shall:

1. release the RLC entity as well as the related MAC and physical layer configuration;
2. inform upper layers about the release of the MRB by indicating the corresponding \text{tmgi} and \text{sessionId};

5.8.4 MBMS Counting Procedure

5.8.4.1 General

The MBMS Counting procedure is used by the E-UTRAN to count the number of RRC\_CONNECTED mode UEs which are receiving via an MRB or interested to receive via an MRB the specified MBMS services.

The UE determines interest in an MBMS service, that is identified by the TMGI, by interaction with upper layers.

5.8.4.2 Initiation

E-UTRAN initiates the procedure by sending an \text{MBMS\text{Counting}\text{Request}} message.
5.8.4.3 Reception of the **MBMSCountingRequest** message by the UE

Upon receiving the **MBMSCountingRequest** message, the UE in RRC_CONNECTED mode shall:

1. if the `SystemInformationBlockType1`, that provided the scheduling information for the `systemInformationBlockType13` that included the configuration of the MCCH via which the **MBMSCountingRequest** message was received, contained the identity of the Registered PLMN; and

2. if the UE is receiving via an MRB or interested to receive via an MRB at least one of the services in the received `countingRequestList`:
   
   1. if more than one entry is included in the `mbsfn-AreaInfoList` received in the `SystemInformationBlockType13` that included the configuration of the MCCH via which the **MBMSCountingRequest** message was received:
      
      1. include the `mbsfn-AreaIndex` in the **MBMSCountingResponse** message and set it to the index of the entry in the `mbsfn-AreaInfoList` within the received `SystemInformationBlockType13` that corresponds with the MBSFN area used to transfer the received **MBMSCountingRequest** message;

   2. for each MBMS service included in the received `countingRequestList`:
      
      3. if the UE is receiving via an MRB or interested to receive via an MRB this MBMS service:
         
         4. include an entry in the `countingResponseList` within the **MBMSCountingResponse** message with `countingResponseService` set it to the index of the entry in the `countingRequestList` within the received **MBMSCountingRequest** that corresponds with the MBMS service the UE is receiving or interested to receive;

   2. submit the **MBMSCountingResponse** message to lower layers for transmission upon which the procedure ends;

**NOTE 1:** UEs that are receiving an MBMS User Service [56] by means of a Unicast Bearer Service [57] (i.e. via a DRB), but are interested to receive the concerned MBMS User Service [56] via an MBMS Bearer Service (i.e. via an MRB), respond to the counting request.

**NOTE 2:** If ciphering is used at upper layers, the UE does not respond to the counting request if it can not decipher the MBMS service for which counting is performed (see TS 22.146 [62, 5.3]).

**NOTE 3:** The UE treats the **MBMSCountingRequest** messages received in each modification period independently. In the unlikely case E-UTRAN would repeat an **MBMSCountingRequest** (i.e. including the same services) in a subsequent modification period, the UE responds again. The UE provides at most one **MBMSCountingResponse** message to multiple transmission attempts of an **MBMSCountingRequest** messages in a given modification period.

5.8.5 MBMS interest indication

5.8.5.1 General

![Figure 5.8.5.1-1: MBMS interest indication](image)

The purpose of this procedure is to inform E-UTRAN that the UE is receiving or is interested to receive MBMS service(s) via an MRB or SC-MRB, and if so, to inform E-UTRAN about the priority of MBMS versus unicast reception.
5.8.5.2 Initiation

An MBMS or SC-PTM capable UE in RRC_CONNECTED may initiate the procedure in several cases including upon successful connection establishment, upon entering or leaving the service area, upon session start or stop, upon change of interest, upon change of priority between MBMS reception and unicast reception or upon change to a PCell broadcasting SystemInformationBlockType15.

Upon initiating the procedure, the UE shall:

1. if SystemInformationBlockType15 is broadcast by the PCell:
   2. ensure having a valid version of SystemInformationBlockType15 for the PCell;
   2. if the UE did not transmit an MBMSInterestIndication message since last entering RRC_CONNECTED state; or
   2. if since the last time the UE transmitted an MBMSInterestIndication message, the UE connected to a PCell not broadcasting SystemInformationBlockType15:
      3. if the set of MBMS frequencies of interest, determined in accordance with 5.8.5.3, is not empty:
         4. initiate transmission of the MBMSInterestIndication message in accordance with 5.8.5.4;
      2. else:
         3. if the set of MBMS frequencies of interest, determined in accordance with 5.8.5.3, has changed since the last transmission of the MBMSInterestIndication message; or
         3. if the prioritisation of reception of all indicated MBMS frequencies compared to reception of any of the established unicast bearers has changed since the last transmission of the MBMSInterestIndication message:
            4. initiate transmission of the MBMSInterestIndication message in accordance with 5.8.5.4;

NOTE: The UE may send an MBMSInterestIndication even when it is able to receive the MBMS services it is interested in i.e. to avoid that the network allocates a configuration inhibiting MBMS reception.

3. else if SystemInformationBlockType20 is broadcast by the PCell:
   4. if since the last time the UE transmitted an MBMSInterestIndication message, the UE connected to a PCell not broadcasting SystemInformationBlockType20; or
   4. if the set of MBMS services of interest determined in accordance with 5.8.5.3a is different from mbms-Services included in the last transmission of the MBMSInterestIndication message;
      5. initiate the transmission of the MBMSInterestIndication message in accordance with 5.8.5.4.

5.8.5.3 Determine MBMS frequencies of interest

The UE shall:

1. consider a frequency to be part of the MBMS frequencies of interest if the following conditions are met:
   2. at least one MBMS session the UE is receiving or interested to receive via an MRB or SC-MRB is ongoing or about to start; and

NOTE 1: The UE may determine whether the session is ongoing from the start and stop time indicated in the User Service Description (USD), see 3GPP TS 36.300 [9] or 3GPP TS 26.346 [57].

2. for at least one of these MBMS sessions SystemInformationBlockType15 acquired from the PCell includes for the concerned frequency one or more MBMS SAIs as indicated in the USD for this session; and

NOTE 2: The UE considers a frequency to be part of the MBMS frequencies of interest even though E-UTRAN may (temporarily) not employ an MRB or SC-MRB for the concerned session. I.e. the UE does not verify if the session is indicated on (SC-)MCCH
NOTE 3: The UE considers the frequencies of interest independently of any synchronization state, e.g. [9, Annex J.1]

2> the UE is capable of simultaneously receiving MRBs and/or is capable of simultaneously receiving SC-MRBs on the set of MBMS frequencies of interest, regardless of whether a serving cell is configured on each of these frequencies or not; and

2> the supportedBandCombination the UE included in UE-EUTRA-Capability contains at least one band combination including the set of MBMS frequencies of interest;

NOTE 4: Indicating a frequency implies that the UE supports SystemInformationBlockType13 or SystemInformationBlockType20 acquisition for the concerned frequency i.e. the indication should be independent of whether a serving cell is configured on that frequency.

NOTE 5: When evaluating which frequencies it can receive simultaneously, the UE does not take into account the serving frequencies that are currently configured i.e. it only considers MBMS frequencies it is interested to receive.

NOTE 6: The set of MBMS frequencies of interest includes at most one frequency for a given physical frequency. The UE only considers a physical frequency to be part of the MBMS frequencies of interest if it supports at least one of the bands indicated for this physical frequency in SystemInformationBlockType1 (for serving frequency) or SystemInformationBlockType15 (for neighbouring frequencies). In this case, E-UTRAN may assume the UE supports MBMS reception on any of the bands supported by the UE (i.e. according to supportedBandCombination).

5.8.5.3a Determine MBMS services of interest

The UE shall:

1> consider a MBMS service to be part of the MBMS services of interest if the following conditions are met:

2> the UE is SC-PTM capable; and

2> the UE is receiving or interested to receive this service via an SC-MRB; and

2> one session of this service is ongoing or about to start; and

2> one or more MBMS SAIs in the USD for this service is included in SystemInformationBlockType15 acquired from the PCell for a frequency belonging to the set of MBMS frequencies of interest, determined according to 5.8.5.3.

5.8.5.4 Actions related to transmission of MBMSInterestIndication message

The UE shall set the contents of the MBMSInterestIndication message as follows:

1> if the set of MBMS frequencies of interest, determined in accordance with 5.8.5.3, is not empty:

2> include mbms-FreqList and set it to include the MBMS frequencies of interest sorted by decreasing order of interest, using the EARFCN corresponding with freqBandIndicator included in SystemInformationBlockType1 (for serving frequency), if applicable, and the EARFCN(s) as included in SystemInformationBlockType15 (for neighbouring frequencies);

NOTE 1: The EARFCN included in mbms-FreqList is merely used to indicate a physical frequency the UE is interested to receive i.e. the UE may not support the band corresponding to the included EARFCN (but it does support at least one of the bands indicated in system information for the concerned physical frequency).

2> include mbms-Priority if the UE prioritises reception of all indicated MBMS frequencies above reception of any of the unicast bearers;

2> if SystemInformationBlockType20 is broadcast by the PCell:

3> include mbms-Services and set it to indicate the set of MBMS services of interest determined in accordance with 5.8.5.3a;
NOTE 2: If the UE prioritises MBMS reception and unicast data cannot be supported because of congestion on the MBMS carrier(s), E-UTRAN may initiate release of unicast bearers. It is up to E-UTRAN implementation whether all bearers or only GBR bearers are released. E-UTRAN does not initiate re-establishment of the released unicast bearers upon alleviation of the congestion.

The UE shall submit the MBMSInterestIndication message to lower layers for transmission.

5.8a SC-PTM

5.8a.1 Introduction

5.8a.1.1 General

SC-PTM control information is provided on a specific logical channel: the SC-MCCH. The SC-MCCH carries the SCPTMConfiguration message which indicates the MBMS sessions that are ongoing as well as the (corresponding) information on when each session may be scheduled, i.e. scheduling period, scheduling window and start offset. The SCPTMConfiguration message also provides information about the neighbour cells transmitting the MBMS sessions which are ongoing on the current cell.

A limited amount of SC-PTM control information is provided on the BCCH or BR-BCCH. This primarily concerns the information needed to acquire the SC-MCCH.

NOTE: For BL UEs and UEs in CE, SC-MCCH transmission uses a 1.4 MHz channel bandwidth and a maximum TBS of 936 bits, see TS 36.213 [23]. For NB-IoT UEs, the maximum TBS for SC-MCCH transmission is 680 bits, see TS 36.213 [23].

5.8a.1.2 SC-MCCH scheduling

The SC-MCCH information (i.e. information transmitted in messages sent over SC-MCCH) is transmitted periodically, using a configurable repetition period. SC-MCCH transmissions (and the associated radio resources and MCS) are indicated on PDCCH.

5.8a.1.3 SC-MCCH information validity and notification of changes

Change of SC-MCCH information only occurs at specific radio frames, i.e. the concept of a modification period is used. Within a modification period, the same SC-MCCH information may be transmitted a number of times, as defined by its scheduling (which is based on a repetition period). The modification period boundaries are defined by SFN values for which SFN mod m= 0, where m is the number of radio frames comprising the modification period. The modification period is configured by means of SystemInformationBlockType20 (SystemInformationBlockType20-NB in NB-IoT). If H-SFN is provided in SystemInformationBlockType1-BR, modification period boundaries for BL UEs or UEs in CE are defined by SFN values for which (H-SFN * 1024 + SFN) mod m=0. The modification period boundaries for NB-IoT UEs are defined by SFN values for which (H-SFN * 1024 + SFN) mod m=0.

When the network changes (some of) the SC-MCCH information, it notifies the UEs, other than BL UEs, UEs in CE or NB-IoT UEs, about the change in the first subframe which can be used for SC-MCCH transmission in a repetition period. LSB bit in 8-bit bitmap when set to ‘1’ indicates the change in SC-MCCH. Upon receiving a change notification, a UE interested to receive MBMS services transmitted using SC-PTM acquires the new SC-MCCH information starting from the same subframe. The UE applies the previously acquired SC-MCCH information until the UE acquires the new SC-MCCH information.

When the network changes (some of) the SC-MCCH information for start of new MBMS service(s) transmitted using SC-PTM, it notifies BL UEs, UEs in CE or NB-IoT UEs about the change in every PDCCH which schedules the first SC-MCCH in a repetition period in the current modification period. The notification is transmitted with 1 bit. The bit, when set to ‘1’, indicates the start of new MBMS service(s), see TS 36.212 [22, 5.3.3.1.14 & 6.4.3.3]. Upon receiving a change notification, a BL UE, UE in CE or NB-IoT UE interested to receive MBMS services transmitted using SC-PTM acquires the new SC-MCCH information scheduled by the PDCCH. The BL UE, UE in CE or NB-IoT UE applies the previously acquired SC-MCCH information until the BL UE, UE in CE or NB-IoT UE acquires the new SC-MCCH information.
When the network changes SC-MTCH specific information e.g. start of new MBMS service(s) transmitted using SC-PTM or change of ongoing MBMS service(s) transmitted using SC-PTM, it notifies the BL UEs, UEs in CE or NB-IoT UEs in the PDCCH which schedules the SC-MTCH in the current modification period. The notification is transmitted with a 2 bit bitmap. The LSB in the 2-bit bitmap, when set to ‘1’, indicates the change of the on-going MBMS service and the MSB in the 2-bit bitmap, when set to ‘1’, indicates the start of new MBMS service(s), see TS 36.212 [22, 5.3.3.1.12 & 5.3.3.1.13 & 6.4.3.2]. In the case the network changes an on-going SC-MTCH transmission in the next modification period, it notifies the BL UEs, UEs in CE or NB-IoT UEs in the PDCCH which schedules this SC-MTCH in the current modification period. In the case the network starts new MBMS service(s) transmitted using SC-PTM, the network notifies the UEs which have on-going SC-MTCH in the PDCCH scheduling each of the SC-MTCH. Upon receiving such notification, a BL UE, UE in CE or NB-IoT UE acquires the new SC-MCCH information at the start of the next modification period. The BL UE, UE in CE or NB-IoT UE applies the previously acquired SC-MCCH information until the BL UE, UE in CE or NB-IoT UE acquires the new SC-MCCH information.

5.8a.1.4 Procedures

The SC-PTM capable UE receiving or interested to receive MBMS service(s) via SC-MRB applies SC-PTM procedures described in 5.8a and, except for NB-IoT UE, the MBMS interest indication procedure as specified in 5.8.5.

5.8a.2 SC-MCCH information acquisition

5.8a.2.1 General

![Figure 5.8a.2.1-1: SC-MCCH information acquisition](chart)

The UE applies the SC-MCCH information acquisition procedure to acquire the SC-PTM control information that is broadcast by the E-UTRAN. The procedure applies to SC-PTM capable UEs that are in RRC_IDLE. This procedure also applies to SC-PTM capable UEs that are in RRC_CONNECTED except for BL UEs, UEs in CE or NB-IoT UEs.

5.8a.2.2 Initiation

A UE interested to receive MBMS services via SC-MRB shall apply the SC-MCCH information acquisition procedure upon entering the cell broadcasting SystemInformationBlockType20 (SystemInformationBlockType20-NB in NB-IoT) (e.g. upon power on, following UE mobility) and upon receiving a notification that the SC-MCCH information has changed. A UE, except for BL UE, UE in CE or NB-IoT UE, that is receiving an MBMS service via SC-PTM shall apply the SC-MCCH information acquisition procedure to acquire the SC-MCCH information that corresponds with the service that is being received, at the start of each modification period. The BL UE, UE in CE or NB-IoT UE that is receiving an MBMS service via SC-PTM shall apply the SC-MCCH information acquisition procedure upon receiving a notification that the SC-MCCH information that corresponds with the service that is being received is about to be changed. The BL UE, UE in CE or NB-IoT UE that is receiving an MBMS service via SC-PTM may apply the SC-MCCH information acquisition procedure upon receiving a notification that the SC-MCCH information is about to be changed due to start of a new service.

Unless explicitly stated otherwise in the procedural specification, the SC-MCCH information acquisition procedure overwrites any stored SC-MCCH information, i.e. delta configuration is not applicable for SC-MCCH information and the UE discontinues using a field if it is absent in SC-MCCH information unless explicitly specified otherwise.

5.8a.2.3 SC-MCCH information acquisition by the UE

A SC-PTM capable UE shall:
1> if the procedure is triggered by an SC-MCCH information change notification and the UE has no ongoing MBMS service:

2> except for a BL UE, UE in CE or NB-IoT UE, start acquiring the SCPTMConfiguration message from the subframe in which the change notification was received;

2> for a BL UE, UE in CE or NB-IoT UE, acquire the SCPTMConfiguration message scheduled by the PDCCH in which the change notification was received;

NOTE 1: The UE continues using the previously received SC-MCCH information until the new SC-MCCH information has been acquired.

1> if the UE enters a cell broadcasting SystemInformationBlockType20 (SystemInformationBlockType20-NB in NB-IoT):

2> acquire the SCPTMConfiguration message at the next repetition period;

1> if the UE is receiving an MBMS service via an SC-MRB:

2> except for BL UE, UE in CE or NB-IoT UE, start acquiring the SCPTMConfiguration message from the beginning of each modification period;

2> a BL UE, UE in CE or NB-IoT UE shall start acquiring the SCPTMConfiguration message at the start of the next modification period upon receiving a notification that the SC-MCCH information that corresponds with the service that is being received is about to be changed;

2> a BL UE, UE in CE or NB-IoT UE may start acquiring the SCPTMConfiguration message at the start of the next modification period upon receiving a notification that the SC-MCCH information is about to be changed due to start of a new service;

5.8a.2.4 Actions upon reception of the SCPTMConfiguration message

No UE requirements related to the contents of this SCPTMConfiguration apply other than those specified elsewhere e.g. within procedures using the concerned system information, the corresponding field descriptions.

5.8a.3 SC-PTM radio bearer configuration

5.8a.3.1 General

The SC-PTM radio bearer configuration procedure is used by the UE to configure RLC, MAC and the physical layer upon starting and/or stopping to receive an SC-MRB transmitted on SC-MTCH. The procedure applies to SC-PTM capable UEs that are in RRC_IDLE and to SC-PTM capable UEs that are not BL UEs, UEs in CE or NB-IoT UEs in RRC_CONNECTED, and are interested to receive one or more MBMS services via SC-MRB.

NOTE: In case the UE is unable to receive an MBMS service via an SC-MRB due to capability limitations, upper layers may take appropriate action e.g. terminate a lower priority unicast service.

5.8a.3.2 Initiation

The UE applies the SC-MRB establishment procedure to start receiving a session of a MBMS service it has an interest in. The procedure may be initiated e.g. upon start of the MBMS session, upon entering a cell providing via SC-MRB a MBMS service in which the UE has interest, upon becoming interested in the MBMS service, upon removal of UE capability limitations inhibiting reception of the concerned service.

The UE applies the SC-MRB release procedure to stop receiving a session. The procedure may be initiated e.g. upon stop of the MBMS session, upon leaving the cell where a SC-MRB is established, upon losing interest in the MBMS service, when capability limitations start inhibiting reception of the concerned service.

5.8a.3.3 SC-MRB establishment

Upon SC-MRB establishment, the UE shall:
1> establish an RLC entity in accordance with the configuration specified in 9.1.1.7;

1> configure a SC-MTCH logical channel applicable for the SC-MRB and instruct MAC to receive DL-SCH on the cell where the SCPTMConfiguration message was received for the MBMS service for which the SC-MRB is established and using g-RNTI and sc-mtch-SchedulingInfo (if included) in this message for this MBMS service;

1> configure the physical layer in accordance with the sc-mtch-InfoList, applicable for the SC-MRB, as included in the SCPTMConfiguration message;

1> inform upper layers about the establishment of the SC-MRB by indicating the corresponding tmgi and sessionId;

5.8a.3.4 SC-MRB release

Upon SC-MRB release, the UE shall:

1> release the RLC entity as well as the related MAC and physical layer configuration;

1> inform upper layers about the release of the SC-MRB by indicating the corresponding tmgi and sessionId;

5.9 RN procedures

5.9.1 RN reconfiguration

5.9.1.1 General

![Diagram of RN reconfiguration](Diagram)

**Figure 5.9.1.1-1: RN reconfiguration**

The purpose of this procedure is to configure/reconfigure the RN subframe configuration and/or to update the system information relevant for the RN in RRC_CONNECTED.

5.9.1.2 Initiation

E-UTRAN may initiate the RN reconfiguration procedure to an RN in RRC_CONNECTED when AS security has been activated.

5.9.1.3 Reception of the **RNReconfiguration** by the RN

The RN shall:

1> if the **rn-SystemInfo** is included:

2> if the **systemInformationBlockType1** is included:

3> act upon the received **SystemInformationBlockType1** as specified in 5.2.2.7;

2> if the **SystemInformationBlockType2** is included:

3> act upon the received **SystemInformationBlockType2** as specified in 5.2.2.9;
if the $rn\text{-SubframeConfig}$ is included:

2> reconfigure lower layers in accordance with the received $subframeConfigPatternFDD$ or $subframeConfigPatternTDD$;

2> if the $rpdcch\text{-Config}$ is included:

3> reconfigure lower layers in accordance with the received $rpdcch\text{-Config}$;

1> submit the $RNReconfigurationComplete$ message to lower layers for transmission, upon which the procedure ends;

5.10 Sidelink

5.10.1 Introduction

The sidelink communication and associated synchronisation resource configuration applies for the frequency at which it was received/ acquired. Moreover, for a UE configured with one or more SCells, the sidelink communication and associated synchronisation resource configuration provided by dedicated signalling applies for the PCell/ the primary frequency. The sidelink discovery and associated synchronisation resource configuration applies for the frequency at which it was received/ acquired or the indicated frequency in the configuration. For a UE configured with one or more SCells, the sidelink discovery and associated synchronisation resource configuration provided by dedicated signalling applies for the the PCell/ the primary frequency / any other indicated frequency.

NOTE 1: Upper layers configure the UE to receive or transmit sidelink communication on a specific frequency, to monitor or transmit non-PS related sidelink discovery announcements on one or more frequencies or to monitor or transmit PS related sidelink discovery announcements on a specific frequency, but only if the UE is authorised to perform these particular ProSe related sidelink activities.

NOTE 2: It is up to UE implementation which actions to take (e.g. termination of unicast services, detach) when it is unable to perform the desired sidelink activities, e.g. due to UE capability limitations.

Sidelink communication consists of one-to-many and one-to-one sidelink communication. One-to-many sidelink communication consists of relay related and non-relay related one-to-many sidelink communication. One-to-one sidelink communication consists of relay related and non-relay related one-to-one sidelink communication. In relay related one-to-one sidelink communication the communicating parties consist of one sidelink relay UE and one sidelink remote UE.

Sidelink discovery consists of public safety related (PS related) and non-PS related sidelink discovery. PS related sidelink discovery consists of relay related and non-relay related PS related sidelink discovery. Upper layers indicate to RRC whether a particular sidelink announcement is PS related or non-PS related.

Upper layers indicate to RRC whether a particular sidelink procedure is V2X related or not.

The specification covers the use of UE to network sidelink relays by specifying the additional requirements that apply for a sidelink relay UE and a sidelink remote UE, i.e. for such UEs the regular sidelink UE requirements equally apply unless explicitly stated otherwise.

5.10.1a Conditions for sidelink communication operation

When it is specified that the UE shall perform sidelink communication operation only if the conditions defined in this section are met, the UE shall perform sidelink communication operation only if:

1> if the UE’s serving cell is suitable (RRC\text{-}IDLE or RRC\text{-}CONNECTED); and if either the selected cell on the frequency used for sidelink communication operation belongs to the registered or equivalent PLMN as specified in TS 24.334 [69] or the UE is out of coverage on the frequency used for sidelink communication operation as defined in TS 36.304 [4, 11.4]; or

1> if the UE is camped on a serving cell (RRC\text{-}IDLE) on which it fulfils the conditions to support sidelink communication in limited service state as specified in TS 23.303 [68, 4.5.6]; and if either the serving cell is on the frequency used for sidelink communication operation or the UE is out of coverage on the frequency used for sidelink communication operation as defined in TS 36.304 [4, 11.4]; or
1> if the UE has no serving cell (RRC_IDLE);

5.10.1b Conditions for PS related sidelink discovery operation

When it is specified that the UE shall perform PS related sidelink discovery operation only if the conditions defined in this section are met, the UE shall perform PS related sidelink discovery operation only if:

1> if the UE’s serving cell is suitable (RRC_IDLE or RRC_CONNECTED); and if either the selected cell on the frequency used for PS related sidelink discovery operation belongs to the registered or other PLMN as specified in TS 24.334 [69] or the UE is out of coverage on the frequency used for PS related sidelink discovery operation as defined in TS 36.304 [4, 11.4]; or

1> if the UE is camped on a serving cell (RRC_IDLE) on which it fulfils the conditions to support sidelink discovery in limited service state as specified in TS 23.303 [68, 4.5.6]; and if either the serving cell is on the frequency used for PS related sidelink discovery operation or the UE is out of coverage on the frequency used for PS related sidelink discovery operation as defined in TS 36.304 [4, 11.4]; or

1> if the UE has no serving cell (RRC_IDLE);

5.10.1c Conditions for non-PS related sidelink discovery operation

When it is specified that the UE shall perform non-PS related sidelink discovery operation only if the conditions defined in this section are met, the UE shall perform non-PS related sidelink discovery operation only if:

1> if the UE’s serving cell (RRC_IDLE) or PCell (RRC_CONNECTED) is suitable; and if the selected cell on the frequency used for non-PS related sidelink discovery operation belongs to the registered or other PLMN as specified in TS 24.334 [69].

5.10.1d Conditions for V2X sidelink communication operation

When it is specified that the UE shall perform V2X sidelink communication operation only if the conditions defined in this section are met, the UE shall perform V2X sidelink communication operation only if:

1> if the UE’s serving cell is suitable (RRC_IDLE or RRC_CONNECTED); and if either the selected cell on the frequency used for V2X sidelink communication operation belongs to the registered or equivalent PLMN as specified in TS 24.334 [69] or the UE is out of coverage on the frequency used for V2X sidelink communication operation as defined in TS 36.304 [4, 11.4]; or

1> if the UE’s serving cell (for RRC_IDLE or RRC_CONNECTED) fulfils the conditions to support V2X sidelink communication in limited service state as specified in TS 23.285 [78, 4.4.8]; and if either the serving cell is on the frequency used for V2X sidelink communication operation or the UE is out of coverage on the frequency used for V2X sidelink communication operation as defined in TS 36.304 [4, 11.4]; or

1> if the UE has no serving cell (RRC_IDLE);
5.10.2 Sidelink UE information

5.10.2.1 General

The purpose of this procedure is to inform E-UTRAN that the UE is interested or no longer interested to receive sidelink communication or discovery, to receive V2X sidelink communication, as well as to request assignment or release of transmission resources for sidelink communication or discovery announcements or V2X sidelink communication or sidelink discovery gaps, to report parameters related to sidelink discovery from system information of inter-frequency/PLMN cells and to report the synchronization reference used by the UE for V2X sidelink communication.
5.10.2.2 Initiation

A UE capable of sidelink communication or V2X sidelink communication or sidelink discovery that is in RRC_CONNECTED may initiate the procedure to indicate it is (interested in) receiving sidelink communication or V2X sidelink communication or sidelink discovery in several cases including upon successful connection establishment, upon change of interest, upon change to a PCell broadcasting SystemInformationBlockType18 or SystemInformationBlockType19 or SystemInformationBlockType21 including sl-V2X-ConfigCommon. A UE capable of sidelink communication or V2X sidelink communication or sidelink discovery may initiate the procedure to request assignment of dedicated resources for the concerned sidelink communication transmission or discovery announcements or V2X sidelink communication transmission or to request sidelink discovery gaps for sidelink discovery transmission or sidelink discovery reception and a UE capable of inter-frequency/PLMN sidelink discovery parameter reporting may initiate the procedure to report parameters related to sidelink discovery from system information of inter-frequency/PLMN cells.

NOTE 1: A UE in RRC_IDLE that is configured to transmit sidelink communication / V2X sidelink communication / sidelink discovery announcements, while SystemInformationBlockType18/ SystemInformationBlockType19/ SystemInformationBlockType21 including sl-V2X-ConfigCommon does not include the resources for transmission (in normal conditions), initiates connection establishment in accordance with 5.3.3.1a.

Upon initiating the procedure, the UE shall:

1> if SystemInformationBlockType18 is broadcast by the PCell:
   2> ensure having a valid version of SystemInformationBlockType18 for the PCell;
   2> if configured by upper layers to receive sidelink communication:
      3> if the UE did not transmit a SidelinkUEInformation message since last entering RRC_CONNECTED state; or
      3> if since the last time the UE transmitted a SidelinkUEInformation message the UE connected to a PCell not broadcasting SystemInformationBlockType18; or
   NOTE 2: After handover/ re-establishment from a source PCell not broadcasting SystemInformationBlockType18 the UE repeats the same interest information that it provided previously as such a source PCell may not forward the interest information.
      3> if the last transmission of the SidelinkUEInformation message did not include commRxInterestedFreq; or
      if the frequency configured by upper layers to receive sidelink communication on has changed since the last transmission of the SidelinkUEInformation message:
         4> initiate transmission of the SidelinkUEInformation message to indicate the sidelink communication reception frequency of interest in accordance with 5.10.2.3;
   2> else:
      3> if the last transmission of the SidelinkUEInformation message included commRxInterestedFreq:
         4> initiate transmission of the SidelinkUEInformation message to indicate it is no longer interested in sidelink communication reception in accordance with 5.10.2.3;
   2> if configured by upper layers to transmit non-relay related one-to-many sidelink communication:
      3> if the UE did not transmit a SidelinkUEInformation message since last entering RRC_CONNECTED state; or
      3> if since the last time the UE transmitted a SidelinkUEInformation message the UE connected to a PCell not broadcasting SystemInformationBlockType18; or
      3> if the last transmission of the SidelinkUEInformation message did not include commTxResourceReq; or
      if the information carried by the commTxResourceReq has changed since the last transmission of the SidelinkUEInformation message:
         4> initiate transmission of the SidelinkUEInformation message to indicate the non-relay related one-to-many sidelink communication transmission resources required by the UE in accordance with 5.10.2.3;
else:
    if the last transmission of the SidelinkUEInformation message included commTxResourceReq:
        initiate transmission of the SidelinkUEInformation message to indicate it no longer requires non-relay related one-to-many sidelink communication transmission resources in accordance with 5.10.2.3;
    if configured by upper layer to transmit relay related one-to-many sidelink communication:
        if the UE did not transmit a SidelinkUEInformation message since entering RRC_CONNECTED state; or
        if since the last time the UE transmitted a SidelinkUEInformation message the UE connected to a PCell not broadcasting SystemInformationBlockType18, connected to a PCell not broadcasting SystemInformationBlockType19 or broadcasting SystemInformationBlockType19 not including discConfigRelay; or
    if the last transmission of SidelinkUEInformation message did not include commTxResourceReqRelay; or
    if the information carried by the commTxResourceReqRelay has changed since the last transmission of the SidelinkUEInformation message:
        if the UE is acting as sidelink relay UE:
            initiate transmission of the SidelinkUEInformation message to indicate the relay related one-to-many sidelink communication transmission resources required by the UE in accordance with 5.10.2.3;
        else:
            if the last transmission of the SidelinkUEInformation message included commTxResourceReqRelay:
                initiate transmission of the SidelinkUEInformation message to indicate it no longer requires relay related one-to-many sidelink communication transmission resources in accordance with 5.10.2.3;
    if configured by upper layers to transmit non-relay related one-to-one sidelink communication:
        if the UE did not transmit a SidelinkUEInformation message since last entering RRC_CONNECTED state; or
        if since the last time the UE transmitted a SidelinkUEInformation message the UE connected to a PCell not broadcasting SystemInformationBlockType18 or connected to a PCell broadcasting SystemInformationBlockType18 not including commTxResourceUC-ReqAllowed; or
    if the last transmission of the SidelinkUEInformation message did not include commTxResourceReqUC; or
    if the information carried by the commTxResourceReqUC has changed since the last transmission of the SidelinkUEInformation message:
        if commTxResourceUC-ReqAllowed is included in SystemInformationBlockType18:
            initiate transmission of the SidelinkUEInformation message to indicate the non-relay related one-to-one sidelink communication transmission resources required by the UE in accordance with 5.10.2.3;
        else:
            if the last transmission of the SidelinkUEInformation message included commTxResourceReqUC:
                initiate transmission of the SidelinkUEInformation message to indicate it no longer requires non-relay related one-to-one sidelink communication transmission resources in accordance with 5.10.2.3;
    if configured by upper layers to transmit relay related one-to-one sidelink communication:
        if the UE did not transmit a SidelinkUEInformation message since last entering RRC_CONNECTED state; or
        if since the last time the UE transmitted a SidelinkUEInformation message the UE connected to a PCell not broadcasting SystemInformationBlockType18, connected to a PCell not broadcasting SystemInformationBlockType19 or broadcasting SystemInformationBlockType19 not including discConfigRelay; or
3GPP TS 36.331 version 14.4.0 Release 14

SystemInformationBlockType19 or broadcasting SystemInformationBlockType19 not including discConfigRelay; or

3> if the last transmission of the SidelinkUEInformation message did not include commTxResourceReqRelayUC, or if the information carried by the commTxResourceReqRelayUC has changed since the last transmission of the SidelinkUEInformation message:

4> if the UE is acting as sidelink relay UE; or:

4> if the UE has a selected sidelink relay UE; and if SystemInformationBlockType19 is broadcast by the PCell and includes discConfigRelay; and if the sidelink remote UE threshold conditions as specified in 5.10.11.5 are met;

5> initiate transmission of the SidelinkUEInformation message to indicate the relay related one-to-one sidelink communication transmission resources required by the UE in accordance with 5.10.2.3;

2> else:

3> if the last transmission of the SidelinkUEInformation message included commTxResourceReqRelayUC:

4> initiate transmission of the SidelinkUEInformation message to indicate it no longer requires relay related one-to-one sidelink communication transmission resources in accordance with 5.10.2.3;

1> if SystemInformationBlockType19 is broadcast by the PCell:

2> ensure having a valid version of SystemInformationBlockType19 for the PCell;

2> if configured by upper layers to receive sidelink discovery announcements on a serving frequency or on one or more frequencies included in discInterFreqList, if included in SystemInformationBlockType19 of the PCell:

3> if the UE did not transmit a SidelinkUEInformation message since last entering RRC_CONNECTED state; or

3> if since the last time the UE transmitted a SidelinkUEInformation message the UE connected to a PCell not broadcasting SystemInformationBlockType19; or

3> if the last transmission of the SidelinkUEInformation message did not include discRxInterest:

4> initiate transmission of the SidelinkUEInformation message to indicate it is interested in sidelink discovery reception in accordance with 5.10.2.3;

2> else:

3> if the last transmission of the SidelinkUEInformation message included discRxInterest:

4> initiate transmission of the SidelinkUEInformation message to indicate it is no longer interested in sidelink discovery reception in accordance with 5.10.2.3;

2> if the UE is configured by upper layers to transmit non-PS related sidelink discovery announcements on the primary frequency or on one or more frequencies included in discInterFreqList, if included in SystemInformationBlockType19 of the PCell, with discTxResourcesInterFreq included within discResourcesNonPS and not set to noTxOnCarrier:

3> if the UE did not transmit a SidelinkUEInformation message since last entering RRC_CONNECTED state; or

3> if since the last time the UE transmitted a SidelinkUEInformation message the UE connected to a PCell not broadcasting SystemInformationBlockType19 or connected to a PCell broadcasting SystemInformationBlockType19 not including discTxResourcesInterFreq within discResourcesNonPS or discTxResourcesInterFreq did not include all frequencies for which the UE will request resources; or

3> if the last transmission of the SidelinkUEInformation message did not include discTxResourceReq; or if the non-PS related sidelink discovery announcement resources required by the UE have changed (i.e. resulting in a change of discTxResourceReq) since the last transmission of the SidelinkUEInformation message:
2> initiate transmission of the *SidelinkUEInformation* message to indicate the non-PS related sidelink discovery announcement resources required by the UE in accordance with 5.10.2.3;

2> else:

3> if the last transmission of the *SidelinkUEInformation* message included *discTxResourceReq*:

4> initiate transmission of the *SidelinkUEInformation* message to indicate it no longer requires non-PS related sidelink discovery announcement resources in accordance with 5.10.2.3;

2> if configured by upper layers to transmit PS related sidelink discovery announcements on the primary frequency or, in case of non-relay PS related sidelink discovery announcements, on a frequency included in *discInterFreqList*, if included in *SystemInformationBlockType19*, with *discTxResourcesInterFreq* included within *discResourcesPS* and not set to *noTxOnCarrier*:

3> if the UE did not transmit a *SidelinkUEInformation* message since last entering RRC_CONNECTED state; or

3> if since the last time the UE transmitted a *SidelinkUEInformation* message the UE connected to a PCell not broadcasting *SystemInformationBlockType19*, connected to a PCell broadcasting *SystemInformationBlockType19* not including *discConfigPS*, or in case of non-relay PS related transmission: (connected to a PCell broadcasting *SystemInformationBlockType19* not including *discTxResourcesInterFreq* within *discResourcesPS* or for which *discTxResourcesInterFreq* did not include all frequencies for which the UE will request resources), or in case of relay related PS sidelink discovery announcements: (connected to a PCell broadcasting *SystemInformationBlockType19* not including *discConfigRelay*) sidelink; or

3> if the last transmission of the *SidelinkUEInformation* message did not include *discTxResourceReqPS*; or if the PS related sidelink discovery announcement resources required by the UE have changed (i.e. resulting in a change of *discTxResourceReqPS*) since the last transmission of the *SidelinkUEInformation* message:

4> if configured by upper layers to transmit non-relay PS related sidelink discovery announcements; or

4> if the UE is acting as sidelink relay UE; and if *SystemInformationBlockType19* includes *discConfigRelay*; and if the sidelink relay UE threshold conditions as specified in 5.10.10.4 are met; or

4> if the UE is selecting a sidelink relay UE / has a selected sidelink relay UE; and if *SystemInformationBlockType19* includes *discConfigRelay*; and if the sidelink remote UE threshold conditions as specified in 5.10.11.5 are met:

5> initiate transmission of the *SidelinkUEInformation* message to indicate the PS related sidelink discovery announcement resources required by the UE in accordance with 5.10.2.3;

2> else:

3> if the last transmission of the *SidelinkUEInformation* message included *discTxResourceReqPS*:

4> initiate transmission of the *SidelinkUEInformation* message to indicate it no longer requires PS related sidelink discovery announcement resources in accordance with 5.10.2.3;

2> if configured by upper layers to monitor or transmit sidelink discovery announcements; and if the UE requires sidelink discovery gaps, to perform such actions:

3> if the UE did not transmit a *SidelinkUEInformation* message since last entering RRC_CONNECTED state; or

3> if since the last time the UE transmitted a *SidelinkUEInformation* message the UE connected to a PCell not broadcasting *SystemInformationBlockType19* or connected to a PCell broadcasting *SystemInformationBlockType19* not including *gapRequestsAllowedCommon* while at the same time the UE was not configured with *gapRequestsAllowedDedicated*; or

3> if the last transmission of the *SidelinkUEInformation* message did not include the gaps required to monitor or transmit the sidelink discovery announcements (i.e. UE requiring gaps to monitor discovery announcements while *discRxGapReq* was not included or UE requiring gaps to transmit discovery announcements while *discTxGapReq* was not included); or if the sidelink discovery gaps required by the
 UE have changed (i.e. resulting in a change of discRxFreqReq or discTxFreqReq) since the last transmission of the SidetlinkUEInformation message:

4> if the UE is configured with gapRequestsAllowedDedicated set to true; or

4> if the UE is not configured with gapRequestsAllowedDedicated and gapRequestsAllowedCommon is included in SystemInformationBlockType19:

5> initiate transmission of the SidetlinkUEInformation message to indicate the sidetlink discovery gaps required by the UE in accordance with 5.10.2.3;

2> else:

3> if the last transmission of the SidetlinkUEInformation message included discRxFreqReq or discRxFreqReq:

4> initiate transmission of the SidetlinkUEInformation message to indicate it no longer requires sidetlink discovery gaps in accordance with 5.10.2.3;

2> if the UE acquired the relevant parameters from the system information of one or more cells on a carrier included in the discSysInfoToReportConfig and T370 is running:

3> if the UE has configured lower layers to transmit or monitor the sidetlink discovery announcements on those cells:

4> initiate transmission of the SidetlinkUEInformation message to report the acquired system information parameters and stop T370;

1> if SystemInformationBlockType21 including sl-V2X-ConfigCommon is broadcast by the PCell:

2> ensure having a valid version of SystemInformationBlockType21 for the PCell;

2> if configured by upper layers to receive V2X sidetlink communication on a primary frequency or on one or more frequencies included in \( v2x-\) InterFreqInfoList, if included in SystemInformationBlockType21 of the PCell:

3> if the UE did not transmit a SidetlinkUEInformation message since last entering RRC_CONNECTED state; or

3> if since the last time the UE transmitted a SidetlinkUEInformation message the UE connected to a PCell not broadcasting SystemInformationBlockType21 including sl-V2X-ConfigCommon; or

3> if the last transmission of the SidetlinkUEInformation message did not include \( v2x-\) CommRxInterestedFreqList; or if the frequency(ies) configured by upper layers to receive V2X sidetlink communication on has changed since the last transmission of the SidetlinkUEInformation message:

4> initiate transmission of the SidetlinkUEInformation message to indicate the V2X sidetlink communication reception frequency(ies) of interest in accordance with 5.10.2.3;

2> else:

3> if the last transmission of the SidetlinkUEInformation message included \( v2x-\) CommRxInterestedFreqList:

4> initiate transmission of the SidetlinkUEInformation message to indicate it is no longer interested in V2X sidetlink communication reception in accordance with 5.10.2.3;

2> if configured by upper layers to transmit V2X sidetlink communication on a primary frequency or on one or more frequencies included in \( v2x-\) InterFreqInfoList, if included in SystemInformationBlockType21 of the PCell:

3> if the UE did not transmit a SidetlinkUEInformation message since last entering RRC_CONNECTED state; or

3> if since the last time the UE transmitted a SidetlinkUEInformation message the UE connected to a PCell not broadcasting SystemInformationBlockType21 including sl-V2X-ConfigCommon; or
if the last transmission of the SidelinkUEInformation message did not include v2x-CommTxResourceReq; or if the information carried by the v2x-CommTxResourceReq has changed since the last transmission of the SidelinkUEInformation message:

initiate transmission of the SidelinkUEInformation message to indicate the V2X sidelink communication transmission resources required by the UE in accordance with 5.10.2.3;

else:

if the last transmission of the SidelinkUEInformation message included v2x-CommTxResourceReq:

initiate transmission of the SidelinkUEInformation message to indicate it no longer requires V2X sidelink communication transmission resources in accordance with 5.10.2.3;

5.10.2.3 Actions related to transmission of SidelinkUEInformation message

The UE shall set the contents of the SidelinkUEInformation message as follows:

if the UE initiates the procedure to indicate it is (no more) interested to receive sidelink communication or discovery or receive V2X sidelink communication or to request (configuration/release) of sidelink communication or V2X sidelink communication or sidelink discovery transmission resources (i.e. UE includes all concerned information, irrespective of what triggered the procedure):

else if SystemInformationBlockType18 is broadcast by the PCell:

if configured by upper layers to receive sidelink communication:

include commRxInterestedFreq and set it to the sidelink communication frequency;

if configured by upper layers to transmit non-relay related one-to-many sidelink communication:

include commTxResourceReq and set its fields as follows:

set carrierFreq to indicate the sidelink communication frequency i.e. the same value as indicated in commRxInterestedFreq if included;

set destinationInfoList to include the non-relay related one-to-many sidelink communication transmission destination(s) for which it requests E-UTRAN to assign dedicated resources;

if configured by upper layers to transmit non-relay related one-to-one sidelink communication; and

if commTxResourceUC-ReqAllowed is included in SystemInformationBlockType18:

include commTxResourceReqUC and set its fields as follows:

set carrierFreq to indicate the one-to-one sidelink communication frequency i.e. the same value as indicated in commRxInterestedFreq if included;

set destinationInfoList to include the non-relay related one-to-one sidelink communication transmission destination(s) for which it requests E-UTRAN to assign dedicated resources;

if configured by upper layers to transmit relay related one-to-one sidelink communication; and

if SystemInformationBlockType19 is broadcast by the PCell including discConfigRelay; and

if the UE is acting as sidelink relay UE; or if the UE has a selected sidelink relay UE; and if the sidelink remote UE threshold conditions as specified in 5.10.11.5 are met:

include commTxResourceReqRelayUC and set its fields as follows:

set destinationInfoList to include the one-to-one sidelink communication transmission destination(s) for which it requests E-UTRAN to assign dedicated resources;

include ue-Type and set it to relayUE if the UE is acting as sidelink relay UE and to remoteUE otherwise;

if configured by upper layers to transmit relay related one-to-many sidelink communication; and
3> if SystemInformationBlockType19 is broadcast by the PCell including discConfigRelay; and

3> if the UE is acting as sidelink relay UE:

4> include commTxResourceReqRelay and set its fields as follows:

5> set destinationInfoList to include the one-to-many sidelink communication transmission destination(s) for which it requests E-UTRAN to assign dedicated resources;

4> include ue-Type and set it to relayUE;

2> if SystemInformationBlockType19 is broadcast by the PCell:

3> if configured by upper layers to receive sidelink discovery announcements on a serving frequency or one or more frequencies included in discInterFreqList, if included in SystemInformationBlockType19:

4> include discRxInterest;

3> if the UE is configured by upper layers to transmit non-PS related sidelink discovery announcements:

4> for each frequency on which the UE is configured to transmit non-PS related sidelink discovery announcements that concerns the primary frequency or that is included in discInterFreqList with discTxResourcesInterFreq included within discResourcesNonPS and not set to noTxOnCarrier:

5> for the first frequency, include discTxResourceReq and set it to indicate the number of discovery messages for sidelink discovery announcement(s) for which it requests E-UTRAN to assign dedicated resources as well as the concerned frequency, if different from the primary;

5> for any additional frequency, include discTxResourceReqAddFreq and set it to indicate the number of discovery messages for sidelink discovery announcement(s) for which it requests E-UTRAN to assign dedicated resources as well as the concerned frequency;

3> if configured by upper layers to transmit PS related sidelink discovery announcements; and

3> if the frequency on which the UE is configured to transmit PS related sidelink discovery announcements either concerns the primary frequency or, in case of non-relay PS related sidelink discovery announcements, is included in discInterFreqList with discTxResourcesInterFreq included within discResourcesPS and not set to noTxOnCarrier:

4> if configured by upper layers to transmit non-relay PS related sidelink discovery announcements and SystemInformationBlockType19 includes discConfigPS; or

4> if the UE is acting as sidelink relay UE; and if SystemInformationBlockType19 includes discConfigRelay; and if the sidelink relay UE threshold conditions as specified in 5.10.10.4 are met; or

4> if the UE is selecting a sidelink relay UE / has a selected sidelink relay UE; and if SystemInformationBlockType19 includes discConfigRelay; and if the sidelink remote UE threshold conditions as specified in 5.10.11.5 are met:

5> include discTxResourceReqPS and set it to indicate the number of discovery messages for PS related sidelink discovery announcement(s) for which it requests E-UTRAN to assign dedicated resources as well as the concerned frequency, if different from the primary;

2> if SystemInformationBlockType21 is broadcast by the PCell and SystemInformationBlockType21 includes sl-V2X-ConfigCommon:

3> if configured by upper layers to receive V2X sidelink communication:

4> include v2x-CommRxInterestedFreqList and set it to the frequency(ies) for V2X sidelink communication reception;

3> if configured by upper layers to transmit V2X sidelink communication:

4> if configured by upper layers to transmit P2X related V2X sidelink communication:

5> include p2x-CommTxType set to true;
4> include \texttt{v2x-CommTxResourceReq} and set its fields as follows for each frequency on which the UE is configured for V2X sidelink communication transmission:

5> set \texttt{carrierFreqCommTx} to indicate the frequency for V2X sidelink communication transmission;

5> set \texttt{v2x-TypeTxSync} to the current synchronization reference type used on the associated \texttt{carrierFreqCommTx} for V2X sidelink communication transmission;

5> set \texttt{v2x-DestinationInfoList} to include the V2X sidelink communication transmission destination(s) for which it requests E-UTRAN to assign dedicated resources;

1> else if the UE initiates the procedure to request sidelink discovery transmission and/or reception gaps:

2> if the UE is configured with \texttt{gapRequestsAllowedDedicated} set to \texttt{true}; or

2> if the UE is not configured with \texttt{gapRequestsAllowedDedicated} and \texttt{gapRequestsAllowedCommon} is included in \texttt{SystemInformationBlockType19}:

3> if the UE requires sidelink discovery gaps to monitor the sidelink discovery announcements the UE is configured to monitor by upper layers:

4> include \texttt{discRxGapReq} and set it to indicate, for each frequency that either concerns the primary frequency or is included in \texttt{discInterFreqList} on which the UE is configured to monitor sidelink discovery announcements and for which it requires sidelink discovery gaps to do so, the gap pattern(s) as well as the concerned frequency, if different from the primary;

3> if the UE requires sidelink discovery gaps to transmit the sidelink discovery announcements the UE is configured to transmit by upper layers:

4> include \texttt{discTxGapReq} and set it to indicate, for each frequency that either concerns the primary or is included in \texttt{discInterFreqList} on which the UE is configured to transmit sidelink discovery announcements and for which it requires sidelink discovery gaps to do so, the gap pattern(s) as well as the concerned frequency, if different from the primary;

1> else if the UE initiates the procedure to report the system information parameters related to sidelink discovery of carriers other than the primary:

2> include \texttt{discSysInfoReportFreqList} and set it to report the system information parameter acquired from the cells on those carriers;

The UE shall submit the \texttt{SidelinkUEInformation} message to lower layers for transmission.

5.10.3 Sidelink communication monitoring

A UE capable of sidelink communication that is configured by upper layers to receive sidelink communication shall:

1> if the conditions for sidelink communication operation as defined in 5.10.1a are met:

2> if in coverage on the frequency used for sidelink communication, as defined in TS 36.304 [4, 11.4]:

3> if the cell chosen for sidelink communication reception broadcasts \texttt{SystemInformationBlockType18} including \texttt{commRxPool}:

4> configure lower layers to monitor sidelink control information and the corresponding data using the pool of resources indicated by \texttt{commRxPool};

NOTE 1: If \texttt{commRxPool} includes one or more entries including \texttt{rxParametersNCell}, the UE may only monitor such entries if the associated PSS/SSS or SLSSIDs is detected. When monitoring such pool(s), the UE applies the timing of the concerned PSS/SSS or SLSS.

2> else (i.e. out of coverage on the sidelink carrier):

3> configure lower layers to monitor sidelink control information and the corresponding data using the pool of resources that were preconfigured (i.e. \texttt{preconfigComm} in \texttt{SL-Preconfiguration} defined in 9.3);
NOTE 2: The UE may monitor in accordance with the timing of the selected SyncRef UE, or if the UE does not have a selected SyncRef UE, based on the UE’s own timing.
5.10.4 Sidelink communication transmission

A UE capable of sidelink communication that is configured by upper layers to transmit non-relay related sidelink communication and has related data to be transmitted or a UE capable of relay related sidelink communication that is configured by upper layers to transmit relay related sidelink communications and satisfies the conditions for relay related sidelink communication specified in this section shall:

1> if the conditions for sidelink communication operation as defined in 5.10.1a are met:

2> if in coverage on the frequency used for sidelink communication, as defined in TS 36.304 [4, 11.4]:

3> if the UE is in RRC_CONNECTED and uses the PCell for sidelink communication:

4> if the UE is configured, by the current PCell/ the PCell in which physical layer problems or radio link failure was detected, with commTxResources set to scheduled:

5> if T310 or T311 is running; and if the PCell at which the UE detected physical layer problems or radio link failure broadcasts SystemInformationBlockType18 including commTxPoolExceptional; or

5> if T301 is running and the cell on which the UE initiated connection re-establishment broadcasts SystemInformationBlockType18 including commTxPoolExceptional:

6> configure lower layers to transmit the sidelink control information and the corresponding data using the pool of resources indicated by the first entry in commTxPoolExceptional;

5> else:

6> configure lower layers to request E-UTRAN to assign transmission resources for sidelink communication;

4> else if the UE is configured with commTxPoolNormalDedicated or commTxPoolNormalDedicatedExt:

5> if priorityList is included for the entries of commTxPoolNormalDedicated or commTxPoolNormalDedicatedExt:

6> configure lower layers to transmit the sidelink control information and the corresponding data using the one or more pools of resources indicated by commTxPoolNormalDedicated or commTxPoolNormalDedicatedExt i.e. indicate all entries of this field to lower layers;

5> else:

6> configure lower layers to transmit the sidelink control information and the corresponding data using the pool of resources indicated by the first entry in commTxPoolNormalDedicated;

3> else (i.e. sidelink communication in RRC_IDLE or on cell other than PCell in RRC_CONNECTED):

4> if the cell chosen for sidelink communication transmission broadcast SystemInformationBlockType18:

5> if SystemInformationBlockType18 includes commTxPoolNormalCommon:

6> if priorityList is included for the entries of commTxPoolNormalCommon or commTxPoolNormalCommonExt:

7> configure lower layers to transmit the sidelink control information and the corresponding data using the one or more pools of resources indicated by commTxPoolNormalCommon and/or commTxPoolNormalCommonExt i.e. indicate all entries of these fields to lower layers;

6> else:

7> configure lower layers to transmit the sidelink control information and the corresponding data using the pool of resources indicated by the first entry in commTxPoolNormalCommon;
5> else if SystemInformationBlockType18 includes commTxPoolExceptional:

6> from the moment the UE initiates connection establishment until receiving an
RRConnectionReconfiguration including sl-CommConfig or until receiving an
RRConnectionRelease or an RRConnectionReject;

7> configure lower layers to transmit the sidelink control information and the
 corresponding data using the pool of resources indicated by the first entry in
commTxPoolExceptional;

2> else (i.e. out of coverage on sidelink carrier):

3> if priorityList is included for the entries of preconfigComm in SL-Preconfiguration defined in 9.3:

4> configure lower layers to transmit the sidelink control information and the corresponding data using
the one or more pools of resources indicated preconfigComm i.e. indicate all entries of this field to
lower layers and in accordance with the timing of the selected SyncRef UE, or if the UE does not have
a selected SyncRef UE, based on the UEs own timing;

3> else:

4> configure lower layers to transmit the sidelink control information and the corresponding data using
the pool of resources that were preconfigured i.e. indicated by the first entry in preconfigComm in SL-
Preconfiguration defined in 9.3 and in accordance with the timing of the selected SyncRef UE, or if
the UE does not have a selected SyncRef UE, based on the UEs own timing;

The conditions for relay related sidelink communication are as follows:

1> if the transmission concerns sidelink relay communication; and the UE is capable of sidelink relay or sidelink
remote operation:

2> if the UE is in RRC_IDLE; and if the UE has a selected sidelink relay UE: configure lower layers to transmit
the sidelink control information and the corresponding data using the resources, as specified previously in
this section, only if the following condition is met:

3> if the sidelink remote UE threshold conditions as specified in 5.10.11.5 are met; and if the UE configured
lower layers with a pool of resources included in SystemInformationBlockType18 (i.e.
commTxPoolNormalCommon, commTxPoolNormalCommonExt or commTxPoolExceptional); and
commTxAllowRelayCommon is included in SystemInformationBlockType18;

2> if the UE is in RRC_CONNECTED: configure lower layers to transmit the sidelink control information and
the corresponding data using the resources, as specified previously in this section, only if the following
condition is met:

3> if the UE configured lower layers with resources provided by dedicated signalling (i.e.
commTxResources); and the UE is configured with commTxAllowRelayDedicated set to true;

5.10.5 Sidelink discovery monitoring

A UE capable of non-PS related sidelink discovery that is configured by upper layers to monitor non-PS related sidelink
discovery announcements shall:

1> for each frequency the UE is configured to monitor non-PS related sidelink discovery announcements on,
prioritising the frequencies included in discInterFreqList, if included in SystemInformationBlockType19;

2> if the PCell or the cell the UE is camping on indicates the pool of resources to monitor sidelink discovery
announcements on by discRxResourcesInterFreq in discResourcesNonPS within discInterFreqList in
SystemInformationBlockType19:

3> configure lower layers to monitor sidelink discovery announcements using the pool of resources indicated
by discRxResourcesInterFreq in discResourcesNonPS within SystemInformationBlockType19;

2> else if the cell used for sidelink discovery monitoring broadcasts SystemInformationBlockType19:
A UE capable of PS related sidelink discovery that is configured by upper layers to monitor PS related sidelink discovery announcements shall:

1> if out of coverage on the frequency, as defined in TS 36.304 [4, 11.4]:
   2> configure lower layers to monitor sidelink discovery announcements using the pool of resources that were preconfigured (i.e. indicated by discRxPoolList within preconfigDisc in SL-Preconfiguration defined in 9.3);
1> else if configured by upper layers to monitor non-relay PS related discovery announcements; and if the PCell or the cell the UE is camping on indicates a pool of resources to monitor sidelink discovery announcements on by discRxResourcesInterFreq in discResourcesPS within discInterFreqList in SystemInformationBlockType19:
   2> configure lower layers to monitor sidelink discovery announcements using the pool of resources indicated by discRxResourcesInterFreq in discResourcesPS in SystemInformationBlockType19;
1> else if configured by upper layers to monitor PS related sidelink discovery announcements; and if the cell used for sidelink discovery monitoring broadcasts SystemInformationBlockType19:
   2> configure lower layers to monitor sidelink discovery announcements using the pool of resources indicated by discRxPoolPS in SystemInformationBlockType19;
1> if the UE is configured with discRxGapConfig and requires sidelink discovery gaps to monitor sidelink discovery announcements on the concerned frequency:
   2> configure lower layers to monitor the concerned frequency using the sidelink discovery gaps indicated by discRxGapConfig;
1> else:
   2> configure lower layers to monitor the concerned frequency without affecting normal operation;

NOTE 1: The requirement not to affect normal UE operation also applies for the acquisition of sidelink discovery related system and synchronisation information from inter-frequency cells.

NOTE 2: The UE is not required to monitor all pools simultaneously.

NOTE 3: It is up to UE implementation to decide whether a cell is sufficiently good to be used to monitor sidelink discovery announcements.

NOTE 4: If discRxPool, discRxPoolPS or discRxResourcesInterFreq includes one or more entries including rxParameters, the UE may only monitor such entries if the associated SLSSIDs are detected. When monitoring such pool(s) the UE applies the timing of the corresponding SLSS.

5.10.6 Sidelink discovery announcement

A UE capable of non-PS related sidelink discovery that is configured by upper layers to transmit non-PS related sidelink discovery announcements shall, for each frequency the UE is configured to transmit such announcements on:

NOTE: In case the configured resources are insufficient it is up to UE implementation to decide which sidelink discovery announcements to transmit.

1> if the frequency used to transmit sidelink discovery announcements concerns the serving frequency (RRC_IDLE) or primary frequency (RRC_CONNECTED):
if the UE’s serving cell (RRC_IDLE) or PCell (RRC_CONNECTED) is suitable as defined in TS 36.304 [4];

if the UE is in RRC_CONNECTED (i.e. PCell is used for sidelink discovery announcement):

if the UE is configured with \textit{discTxResources} set to \textit{scheduled}:

configure lower layers to transmit the sidelink discovery announcement using the assigned resources indicated by \textit{scheduled} in \textit{discTxResources};

else if the UE is configured with \textit{discTxPoolDedicated} (i.e. \textit{discTxResources} set to \textit{ue-Selected}):

select an entry of the list of resource pool entries in \textit{discTxPoolDedicated} and configure lower layers to use it to transmit the sidelink discovery announcements as specified in 5.10.6a;

else if T300 is not running (i.e. UE in RRC_IDLE, announcing via serving cell):

if \textit{SystemInformationBlockType19} of the serving cell includes \textit{discTxPoolCommon}:

select an entry of the list of resource pool entries in \textit{discTxPoolCommon} and configure lower layers to use it to transmit the sidelink discovery announcements as specified in 5.10.6a;

else if, for the frequency used to transmit sidelink discovery announcements on, the UE is configured with dedicated resources (i.e. with \textit{discTxResources-r12}, if \textit{discTxCarrierFreq} is included in \textit{discTxInterFreqInfo}, or with \textit{discTxResources} within \textit{discTxInfoInterFreqListAdd} in \textit{discTxInterFreqInfo}); and the conditions for non-PS related sidelink discovery operation as defined in 5.10.1c are met:

if the UE is configured with \textit{discTxResources} set to \textit{scheduled}:

configure lower layers to transmit the sidelink discovery announcement using the assigned resources indicated by \textit{scheduled} in \textit{discTxResources};

else if the UE is configured with \textit{discTxResources} set to \textit{ue-Selected}:

select an entry of the list of resource pool entries in \textit{ue-Selected} and configure lower layers to use it to transmit the sidelink discovery announcements as specified in 5.10.6a;

else if the frequency used to transmit sidelink discovery announcements on is included in \textit{discInterFreqList} within \textit{SystemInformationBlockType19} of the serving cell/ PCell, and \textit{discTxResourcesInterFreq} within \textit{discResourcesNonPS} in the corresponding entry of \textit{discInterFreqList} is set to \textit{discTxPoolCommon} (i.e. serving cell/ PCell broadcasts pool of resources) and the conditions for non-PS related sidelink discovery operation as defined in 5.10.1c are met; or

else if \textit{discTxPoolCommon} is included in \textit{SystemInformationBlockType19} acquired from cell selected on the sidelink discovery announcement frequency; and the conditions for non-PS related sidelink discovery operation as defined in 5.10.1c are met:

select an entry of the list of resource pool entries in \textit{discTxPoolCommon} and configure lower layers to use it to transmit the sidelink discovery announcements as specified in 5.10.6a;

if the UE is configured with \textit{discTxGapConfig} and requires sidelink discovery gaps to transmit sidelink discovery announcements on the concerned frequency:

configure lower layers to transmit on the concerned frequency using the sidelink discovery gaps indicated by \textit{discTxGapConfig};

else:

configure lower layers to transmit on the concerned frequency without affecting normal operation;

A UE capable of PS related sidelink discovery that is configured by upper layers to transmit PS related sidelink discovery announcements shall:

if out of coverage on the frequency used to transmit PS related sidelink discovery announcements as defined in TS 36.304 [4, 11.4] and the conditions for PS-related sidelink discovery operation as defined in 5.10.1b are met:

if configured by upper layers to transmit non-relay PS related sidelink discovery announcements; or
2> if the UE is selecting a sidelink relay UE/ has a selected sidelink relay UE:

3> configure lower layers to transmit sidelink discovery announcements using the pool of resources that were preconfigured and in accordance with the following:

4> randomly select, using a uniform distribution, an entry of preconfigDisc in SL-Preconfiguration defined in 9.3;

4> using the timing of the selected SyncRef UE, or if the UE does not have a selected SyncRef UE, based on the UEs own timing;

1> else if the frequency used to transmit sidelink discovery announcements concerns the serving frequency (RRC_IDLE) or primary frequency (RRC_CONNECTED) and the conditions for PS related sidelink discovery operation as defined in 5.10.1b are met:

2> if configured by upper layers to transmit non-relay PS related sidelink discovery announcements; or

2> if the UE is acting as sidelink relay UE; and if the UE is in RRC_IDLE; and if the sidelink relay UE threshold conditions as specified in 5.10.10.4 are met; or

2> if the UE is acting as sidelink relay UE; and if the UE is in RRC_CONNECTED; or

2> if the UE is selecting a sidelink relay UE / has a selected sidelink relay UE; and if the sidelink remote UE threshold conditions as specified in 5.10.11.5 are met:

3> if the UE is configured with discTxPoolPS-Dedicated; or

3> if the UE is in RRC_IDLE; and if discTxPoolPS-Common is included in SystemInformationBlockType19:

4> select an entry of the list of resource pool entries and configure lower layers to use it to transmit the sidelink discovery announcements as specified in 5.10.6a;

3> else if the UE is configured with discTxResourcesPS set to scheduled:

4> configure lower layers to transmit the sidelink discovery announcement using the assigned resources indicated by scheduled in discTxResourcesPS;

1> else if, for the frequency used to transmit sidelink discovery announcements on, the UE is configured with dedicated resources (i.e. with discTxResourcesPS in discTxInterFreqInfo within sl-DiscConfig); and the conditions for PS related sidelink discovery operation as defined in 5.10.1b are met:

2> if configured by upper layers to transmit non-relay PS related sidelink discovery announcements:

3> if the UE is configured with discTxResourcesPS set to scheduled:

4> configure lower layers to transmit the sidelink discovery announcement using the assigned resources indicated by scheduled in discTxResourcesPS;

3> else if the UE is configured with discTxResourcesPS set to ue-Selected:

4> select an entry of the list of resource pool entries in ue-Selected and configure lower layers to use it to transmit the sidelink discovery announcements as specified in 5.10.6a;

1> else if the frequency used to transmit sidelink discovery announcements on is included in discInterFreqList within SystemInformationBlockType19 of the serving cell/ PCell, while discTxResourcesInterFreq within discResourcesPS in the corresponding entry of discInterFreqList is set to discTxPoolCommon (i.e. serving cell/ PCell broadcasts pool of resources) and the conditions for PS related sidelink discovery operation as defined in 5.10.1b are met:

2> if configured by upper layers to transmit non-relay PS related sidelink discovery announcements:

3> select an entry of the list of resource pool entries in discTxPoolCommon and configure lower layers to use it to transmit the sidelink discovery announcements as specified in 5.10.6a;

1> else if discTxPoolPS-Common is included in SystemInformationBlockType19 acquired from cell selected on the sidelink discovery announcement frequency; and the conditions for PS related sidelink discovery operation as defined in 5.10.1b are met:
2> if configured by upper layers to transmit non-relay PS related sidelink discovery announcements:
3> select an entry of the list of resource pool entries in $discTxPoolPS-Common$ and configure lower layers to use it to transmit the sidelink discovery announcements as specified in 5.10.6a;

1> if the UE is configured with $discTxGapConfig$ and requires gaps to transmit sidelink discovery announcements on the concerned frequency;
2> configure lower layers to transmit on the concerned frequency using the gaps indicated by $discTxGapConfig$;
1> else:
2> configure lower layers to transmit on the concerned frequency without affecting normal operation;

5.10.6a Sidelink discovery announcement pool selection

A UE that is configured with a list of resource pool entries for sidelink discovery announcement transmission (i.e. by $SL-DiscTxPoolList$) shall:

1> if $poolSelection$ is set to $rsrpBased$:
2> select a pool from the list of pools the UE is configured with for which the RSRP measurement of the reference cell selected as defined in 5.10.6b, after applying the layer 3 filter defined by $quantityConfig$ as specified in 5.5.3.2, is in-between $threshLow$ and $threshHigh$;
1> else:
2> randomly select, using a uniform distribution, a pool from the list of pools the UE is configured with;
1> configure lower layers to transmit the sidelink discovery announcement using the selected pool of resources;

NOTE 1: When performing resource pool selection based on RSRP, the UE uses the latest results of the available measurements used for cell reselection evaluation in RRC_IDLE/ for measurement report triggering evaluation in RRC_CONNECTED, which are performed in accordance with the performance requirements specified in TS 36.133 [16].

5.10.6b Sidelink discovery announcement reference carrier selection

A UE capable of sidelink discovery that is configured by upper layers to transmit sidelink discovery announcements shall:

1> for each frequency the UE is transmitting sidelink discovery announcements on, select a cell to be used as reference for synchronisation and DL measurements in accordance with the following:
2> if the frequency concerns the primary frequency:
3> use the PCell as reference;
2> else if the frequency concerns a secondary frequency:
3> use the concerned SCell as reference;
2> else if the UE is configured with $discTxRefCarrierDedicated$ for the frequency:
3> use the cell indicated by this field as reference;
2> else if the UE is configured with $refCarrierCommon$ for the frequency:
3> use the serving cell (RRC_IDLE)/ PCell (RRC_CONNECTED) as reference;
2> else:
3> use the DL frequency paired with the one used to transmit sidelink discovery announcements on as reference;
5.10.7 Sidelink synchronisation information transmission

5.10.7.1 General

The purpose of this procedure is to provide synchronisation information to a UE. For sidelink discovery, the synchronisation information concerns a Sidelink Synchronisation Signal (SLSS) and, in case of PS related discovery, also timing information and some additional configuration parameters (i.e. the MasterInformationBlock-SL message), while for sidelink communication or V2X sidelink communication it concerns an SLSS and the MasterInformationBlock-SL or MasterInformationBlock-SL-V2X message. A UE transmits synchronisation information either when E-UTRAN configures it to do so by dedicated signalling (i.e. network based), or when not configured by dedicated signalling (i.e. UE based) and E-UTRAN broadcasts (in coverage) or pre-configures a threshold (out of coverage).

The synchronisation information transmitted by the UE may be derived from information/ signals received from E-UTRAN (in coverage) or received from a UE acting as synchronisation reference for the transmitting UE or received from GNSS. In the remainder, the UE acting as synchronisation reference is referred to as SyncRef UE.
5.10.7.2 Initiation

A UE capable of SLSS transmission shall, when transmitting sidelink discovery announcements in accordance with 5.10.6 and when the following conditions are met:

1> if in coverage on the frequency used for sidelink discovery, as defined in TS 36.304 [4, 11.4];
2> if in RRC_CONNECTED; and if networkControlledSyncTx is configured and set to on; or
2> if networkControlledSyncTx is not configured; and syncTxThreshIC is included in SystemInformationBlockType19; and the RSRP measurement of the reference cell, selected as defined in 5.10.6b, is below the value of syncTxThreshIC:
3> if the sidelink discovery announcements are not PS related; or if syncTxPeriodic is not included:
4> transmit SLSS on the frequency used for sidelink discovery in accordance with 5.10.7.3 and TS 36.211 [21];
3> else:
4> transmit SLSS on the frequency used for sidelink discovery in accordance with 5.10.7.3 and TS 36.211 [21];
4> transmit the MasterInformationBlock-SL message on the frequency used for sidelink discovery, in the same subframe as SLSS, and in accordance with 5.10.7.4;
1> else (i.e. out of coverage, PS):
2> if syncTxThreshOoC is included in the preconfigured sidelink parameters (i.e. SL-Preconfiguration defined in 9.3); and the UE has not selected SyncRef UE or the S-RSRP measurement result of the selected SyncRef UE is below the value of syncTxThreshOoC:
3> transmit SLSS on the frequency used for sidelink discovery in accordance with 5.10.7.3 and TS 36.211 [21];
3> transmit the MasterInformationBlock-SL message on the frequency used for sidelink discovery, in the same subframe as SLSS, and in accordance with 5.10.7.4;

A UE capable of sidelink communication that is configured by upper layers to transmit sidelink communication shall, irrespective of whether or not it has data to transmit:

1> if the conditions for sidelink communication operation as defined in 5.10.1a are met:
2> if in RRC_CONNECTED; and if networkControlledSyncTx is configured and set to on:
3> transmit SLSS in accordance with 5.10.7.3 and TS 36.211 [21];
3> transmit the MasterInformationBlock-SL message, in the same subframe as SLSS, and in accordance with 5.10.7.4;

A UE shall, when transmitting sidelink communication in accordance with 5.10.4 and when the following conditions are met:

1> if in coverage on the frequency used for sidelink communication, as defined in TS 36.304 [4, 11.4];
2> if the UE is in RRC_CONNECTED; and networkControlledSyncTx is not configured; and syncTxThreshIC is included in SystemInformationBlockType18; and the RSRP measurement of the cell chosen for sidelink communication transmission is below the value of syncTxThreshIC; or
2> if the UE is in RRC_IDLE; and syncTxThreshIC is included in SystemInformationBlockType18; and the RSRP measurement of the cell chosen for sidelink communication transmission is below the value of syncTxThreshIC:
3> transmit SLSS in accordance with 5.10.7.3 and TS 36.211 [21];
3> transmit the MasterInformationBlock-SL message, in the same subframe as SLSS, and in accordance with 5.10.7.4;
3.5.3.2 If the UE has not selected a SyncRef UE:

1. else (i.e. out of coverage):

2. if \( \text{syncTxThreshOoC} \) is included in the preconfigured sidelink parameters (i.e. SL-Preconfiguration defined in 9.3); and the UE has no selected SyncRef UE or the S-RSRP measurement result of the selected SyncRef UE is below the value of \( \text{syncTxThreshOoC} \):

3. transmit SLSS in accordance with 5.10.7.3 and TS 36.211 [21];

4. transmit the \( \text{MasterInformationBlock-SL} \) message, in the same subframe as SLSS, and in accordance with 5.10.7.4;

A UE capable of V2X sidelink communication and SLSS/PSBCH transmission shall, when transmitting non-P2X related V2X sidelink communication in accordance with 5.10.13, and if the conditions for V2X sidelink communication operation as defined in 5.10.1d are met and when the following conditions are met:

1. if in coverage on the frequency used for V2X sidelink communication, as defined in TS 36.304 [4, 11.4]; and has selected GNSS or the cell as synchronization reference as defined in 5.10.13.3; or

2. if out of coverage on the frequency used for V2X sidelink communication, as defined in TS 36.304 [4, 11.4], and the frequency used to transmit V2X sidelink communication is included in \( \text{v2x-InterFreqInfoList} \) in RRCConnectionReconfiguration or in \( \text{v2x-InterFreqInfoList} \) within SystemInformationBlockType21 of the serving cell/ PCell; and has selected GNSS or the cell as synchronization reference as defined in 5.10.13.3:

   2.1. if \( \text{networkControlledSyncTx} \) is configured and set to \( \text{on} \); or

   2.2. if \( \text{networkControlledSyncTx} \) is not configured; and for the concerned frequency \( \text{syncTxThreshIC} \) is configured; and the RSRP measurement of the reference cell, selected as defined in 5.10.13.3, for V2X sidelink communication transmission is below the value of \( \text{syncTxThreshIC} \):

      3. transmit SLSS on the frequency used for V2X sidelink communication in accordance with 5.10.7.3 and TS 36.211 [21];

      4. transmit the \( \text{MasterInformationBlock-SL-V2X} \) message on the frequency used for V2X sidelink communication, in the same subframe as SLSS, and in accordance with 5.10.7.4;

1. else:

   2. for the frequency used for V2X sidelink communication, if \( \text{syncOffsetIndicators} \) is included in SL-V2X-Preconfiguration:

      3. if \( \text{syncTxThreshOoC} \) is included in SL-V2X-Preconfiguration; and the UE is not directly synchronized to GNSS, and the UE has no selected SyncRef UE or the S-RSRP measurement result of the selected SyncRef UE is below the value of \( \text{syncTxThreshOoC} \); or

      3.1. if the UE selects GNSS as the synchronization reference source:

         4. transmit SLSS in accordance with 5.10.7.3 and TS 36.211 [21];

         4. transmit the \( \text{MasterInformationBlock-SL-V2X} \) message, in the same subframe as SLSS, and in accordance with 5.10.7.4;

5.10.7.3 Transmission of SLSS

The UE shall select the SLSSID and the subframe in which to transmit SLSS as follows:

1. if triggered by sidelink discovery announcement and in coverage on the frequency used for sidelink discovery, as defined in TS 36.304 [4, 11.4]:

   2. select the SLSSID included in the entry of \( \text{discSyncConfig} \) included in the received SystemInformationBlockType19, that includes txParameters;

   2. use \( \text{syncOffsetIndicator} \) corresponding to the selected SLSSID;

   2. for each pool used for the transmission of discovery announcements (each corresponding to the selected SLSSID):
if a subframe indicated by $\textit{syncOffsetIndicator}$ corresponds to the first subframe of the discovery transmission pool;

4> if $\textit{discTxGapConfig}$ is configured and includes the concerned subframe; or the subframe is not used for regular uplink transmission:

5> select the concerned subframe;

3> else

4> if $\textit{discTxGapConfig}$ is configured and includes the concerned subframe; or the subframe is not used for regular uplink transmission:

5> select the subframe indicated by $\textit{syncOffsetIndicator}$ that precedes and which, in time domain, is nearest to the first subframe of the discovery transmission pool;

3> if the sidelink discovery announcements concern PS; and if $\textit{syncTxPeriodic}$ is included:

4> additionally select each subframe that periodically occurs 40 subframes after the selected subframe;

1> if triggered by sidelink communication and in coverage on the frequency used for sidelink communication, as defined in TS 36.304 [4, 11.4]:

2> select the SLSSID included in the entry of $\textit{commSyncConfig}$ that is included in the received $\textit{SystemInformationBlockType18}$ and includes $\textit{txParameters}$;

2> use $\textit{syncOffsetIndicator}$ corresponding to the selected SLSSID;

2> if in RRC\_CONNECTED; and if $\textit{networkControlledSyncTx}$ is configured and set to \textit{on}:

3> select the subframe(s) indicated by $\textit{syncOffsetIndicator}$;

2> else (when transmitting communication):

3> select the subframe(s) indicated by $\textit{syncOffsetIndicator}$ within the SC period in which the UE intends to transmit sidelink control information or data;

1> if triggered by V2X sidelink communication and in coverage on the frequency used for V2X sidelink communication, as defined in TS 36.304 [4, 11.4]; or

1> if triggered by V2X sidelink communication, and out of coverage on the frequency used for V2X sidelink communication, and the concerned frequency is included in \textit{v2x-InterFreqInfoList} in \textit{RRCConnectionReconfiguration} or in \textit{v2x-InterFreqInfoList} within \textit{SystemInformationBlockType21} of the serving cell/ PCell;

2> if the UE has selected GNSS as synchronization reference in accordance with 5.10.8.2:

3> select SLSSID 0;

3> use $\textit{syncOffsetIndicator}$ included in the entry of \textit{v2x-SyncConfig} corresponding to the concerned frequency in \textit{v2x-InterFreqInfoList} or within \textit{SystemInformationBlockType21}, that includes $\textit{txParameters}$ and $\textit{gnss-Sync}$;

3> select the subframe(s) indicated by $\textit{syncOffsetIndicator}$;

2> if the UE has selected a cell as synchronization reference in accordance with 5.10.8.2:

3> select the SLSSID included in the entry of \textit{v2x-SyncConfig} configured for the concerned frequency in \textit{v2x-InterFreqInfoList} or within \textit{SystemInformationBlockType21}, that includes $\textit{txParameters}$ and does not include $\textit{gnss-Sync}$;

3> use $\textit{syncOffsetIndicator}$ corresponding to the selected SLSSID;

3> select the subframe(s) indicated by $\textit{syncOffsetIndicator}$;

1> else if triggered by V2X sidelink communication and the UE has GNSS as the synchronization reference:
select SLSSID 0;

if syncOffsetIndicator3 is configured for the frequency used for V2X sidelink communication in SL-V2X-Preconfiguration:

select the subframe(s) indicated by syncOffsetIndicator3;

else:

select the subframe(s) indicated by syncOffsetIndicator1;

else:

select the synchronisation reference UE (i.e. SyncRef UE) as defined in 5.10.8;

if the UE has a selected SyncRef UE and inCoverage in the MasterInformationBlock-SL or MasterInformationBlock-SL-V2X message received from this UE is set to TRUE; or

if the UE has a selected SyncRef UE and inCoverage in the MasterInformationBlock-SL or MasterInformationBlock-SL-V2X message received from this UE is set to FALSE while the SLSS from this UE is part of the set defined for out of coverage, see TS 36.211 [21]:

select the same SLSSID as the SLSSID of the selected SyncRef UE;

select the subframe in which to transmit the SLSS according to the syncOffsetIndicator1 or syncOffsetIndicator2 included in the preconfigured sidelink parameters (i.e. preconfigSync in SL-Preconfiguration or v2x-CommPreconfigSync in SL-V2X-Preconfiguration defined in 9.3) corresponding to the concerned frequency, such that the subframe timing is different from the SLSS of the selected SyncRef UE;

else if the UE has a selected SyncRef UE and the SLSS from this UE was transmitted on the subframe indicated by syncOffsetIndicator3 that is included in the syncOffsetIndicators in SL-V2X-Preconfiguration, and is corresponding to the frequency used for V2X sidelink communication:

select SLSSID 169;

select the subframe(s) indicated by syncOffsetIndicator2;

else if the UE has a selected SyncRef UE:

select the SLSSID from the set defined for out of coverage having an index that is 168 more than the index of the SLSSID of the selected SyncRef UE, see TS 36.211 [21];

select the subframe in which to transmit the SLSS according to syncOffsetIndicator1 or syncOffsetIndicator2 included in the preconfigured sidelink parameters (i.e. preconfigSync in SL-Preconfiguration or v2x-CommPreconfigSync in SL-V2X-Preconfiguration defined in 9.3), such that the subframe timing is different from the SLSS of the selected SyncRef UE;

else (i.e. no SyncRef UE selected):

if triggered by V2X sidelink communication, randomly select, using a uniform distribution, an SLSSID from the set of sequences defined for out of coverage except SLSSID 168 and 169, see TS 36.211 [21];

else, randomly select, using a uniform distribution, an SLSSID from the set of sequences defined for out of coverage, see TS 36.211 [21];

select the subframe in which to transmit the SLSS according to the syncOffsetIndicator1 or syncOffsetIndicator2 (arbitrary selection between these) included in the preconfigured sidelink parameters (i.e. preconfigSync in SL-Preconfiguration or v2x-CommPreconfigSync in SL-V2X-Preconfiguration defined in 9.3);
5.10.7.4 Transmission of MasterInformationBlock-SL or MasterInformationBlock-SL-V2X message

The UE shall set the contents of the MasterInformationBlock-SL or MasterInformationBlock-SL-V2X message as follows:

1. if in coverage on the frequency used for the sidelink operation that triggered this procedure as defined in TS 36.304 [4, 11.4]:
   2. set inCoverage to TRUE;
   3. set sl-Bandwidth to the value of ul-Bandwidth as included in the received SystemInformationBlockType2 of the cell chosen for the concerned sidelink operation;
   4. if tdd-Config is included in the received SystemInformationBlockType1:
      5. set subframeAssignmentSL to the value representing the same meaning as of subframeAssignment that is included in tdd-Config in the received SystemInformationBlockType1;
   5. else:
      6. set subframeAssignmentSL to none;
   7. if triggered by sidelink communication; and if syncInfoReserved is included in an entry of commSyncConfig from the received SystemInformationBlockType18:
      8. set reserved to the value of syncInfoReserved in the received SystemInformationBlockType18;
   9. if triggered by sidelink discovery; and if syncInfoReserved is included in an entry of discSyncConfig from the received SystemInformationBlockType19:
      10. set reserved to the value of syncInfoReserved in the received SystemInformationBlockType19;
   11. if triggered by V2X sidelink communication; and if syncInfoReserved is included in an entry of v2x-SyncConfig from the received SystemInformationBlockType21:
      12. set reserved to the value of syncInfoReserved in the received SystemInformationBlockType21;
   13. else:
      14. set all bits in reserved to 0;
   15. else if out of coverage on the frequency used for V2X sidelink communication as defined in TS 36.304 [4, 11.4]; and the concerned frequency is included in v2x-InterFreqInfoList in RRConnectionReconfiguration or in v2x-InterFreqInfoList within SystemInformationBlockType21 of the serving cell/ PCell:
      16. set inCoverage to TRUE;
   17. set sl-Bandwidth to the value of the corresponding field included in v2x-InterFreqInfoList;
   18. set subframeAssignmentSL and reserved to the value of the corresponding field included in the preconfigured sidelink parameters (i.e. v2x-CommPreconfigGeneral in SL-V2X-Preconfiguration defined in 9.3);
   19. else if out of coverage on the frequency used for V2X sidelink communication as defined in TS 36.304 [4, 11.4]; and the UE selects GNSS timing as the synchronization reference source and syncOffsetIndicator3 is not included in SL-V2X-Preconfiguration:
      20. set inCoverage to TRUE;
   21. set sl-Bandwidth, subframeAssignmentSL and reserved to the value of the corresponding field included in the preconfigured sidelink parameters (i.e. v2x-CommPreconfigGeneral in SL-V2X-Preconfiguration defined in 9.3);
   22. else if the UE has a selected SyncRef UE (as defined in 5.10.8):
      23. set inCoverage to FALSE;
2> set sl-Bandwidth, subframeAssignmentSL and reserved to the value of the corresponding field included in the received MasterInformationBlock-SL or MasterInformationBlock-SL-V2X;

1> else:

2> set inCoverage to FALSE;

2> set sl-Bandwidth, subframeAssignmentSL and reserved to the value of the corresponding field included in the preconfigured sidelink parameters (i.e. preconfigGeneral in SL-Preconfiguration or v2x-CommPreconfigGeneral in SL-V2X-Preconfiguration defined in 9.3);

1> set directFrameNumber and directSubframeNumber according to the subframe used to transmit the SLSS, as specified in 5.10.7.3;

1> submit the MasterInformationBlock-SL or MasterInformationBlock-SL-V2X message to lower layers for transmission upon which the procedure ends;

5.10.7.5   Void

5.10.8   Sidelink synchronisation reference

5.10.8.1   General

The purpose of this procedure is to select a synchronisation reference and used a.o. when transmitting sidelink communication, V2X sidelink communication, sidelink discovery or synchronisation information.

5.10.8.2   Selection and reselection of synchronisation reference

The UE shall:

1> if triggered by V2X sidelink communication, and in coverage on the frequency for V2X sidelink communication; or

1> if triggered by V2X sidelink communication, and out of coverage on the frequency for V2X sidelink communication, and the frequency used to transmit V2X sidelink communication is included in v2x-InterFreqInfoList in RRCConnectionReconfiguration or in v2x-InterFreqInfoList within SystemInformationBlockType21 of the serving cell/ PCell:

2> if typeTxSync is configured for the concerned frequency and set to enb:

3> select a cell as the synchronization reference source as defined in 5.10.13.3;

2> else if typeTxSync for the concerned frequency is not configured or is set to gnss, and GNSS is reliable in accordance with TS 36.101 [42] and TS 36.133 [16]:

3> select GNSS as the synchronization reference source;

2> else (i.e., there is no GNSS which is reliable in accordance with TS 36.101 [42] and TS 36.133 [16]):

3> search SLSSID=0 on the concerned frequency to detect candidate SLSS, in accordance with TS 36.101 [42] and TS 36.133 [16];

3> when evaluating the detected SLSS, apply layer 3 filtering as specified in 5.5.3.2 using the preconfigured filterCoefficient as defined in 9.3, before using the S-RSRP measurement results;

3> if the S-RSRP of the SyncRef UE identified by the detected SLSS exceeds the minimum requirement defined in TS 36.133 [16]:

4> select the SyncRef UE;

3> else (i.e., no SLSSID=0 detected):

4> select a cell as the synchronization reference source as defined in 5.10.13.3;
else, if triggered by V2X sidelink communication, and out of coverage on the frequency for V2X sidelink communication, and for the frequency used for V2X sidelink communication, if \textit{syncPriority} in \textit{SL-V2X-Preconfiguration} is set to \textit{gnss} and GNSS is reliable in accordance with TS 36.101 [42] and TS 36.133 [16]:

2> select GNSS as the synchronization reference source;

else, for the frequency used for sidelink communication, V2X sidelink communication or sidelink discovery, if out of coverage on that frequency as defined in TS 36.304 [4, 11.4]:

2> perform a full search (i.e. covering all subframes and all possible SLSSIDs) to detect candidate SLSS, in accordance with TS 36.133 [16];

2> when evaluating the one or more detected SLSSIDs, apply layer 3 filtering as specified in 5.5.3.2 using the preconfigured \textit{filterCoefficient} as defined in 9.3, before using the S-RSRP measurement results;

2> if the UE has selected a SyncRef UE:

3> if the S-RSRP of the strongest candidate SyncRef UE exceeds the minimum requirement TS 36.133 [16] by \textit{syncRefMinHyst} and the strongest candidate SyncRef UE belongs to the same priority group as the current SyncRef UE and the S-RSRP of the strongest candidate SyncRef UE exceeds the S-RSRP of the current SyncRef UE by \textit{syncRefDiffHyst}; or

3> if the S-RSRP of the candidate SyncRef UE exceeds the minimum requirement TS 36.133 [16] by \textit{syncRefMinHyst} and the candidate SyncRef UE belongs to a higher priority group than the current SyncRef UE; or

3> if GNSS becomes reliable in accordance with TS 36.101 [42] and TS 36.133 [16], and GNSS belongs to a higher priority group than the current SyncRef UE; or

3> if the S-RSRP of the current SyncRef UE is less than the minimum requirement defined in TS 36.133 [16]:

4> consider no SyncRef UE to be selected;

2> if the UE has selected GNSS as the synchronization reference for V2X sidelink communication:

3> if the S-RSRP of the candidate SyncRef UE exceeds the minimum requirement defined in TS 36.133 [16] by \textit{syncRefMinHyst} and the candidate SyncRef UE belongs to a higher priority group than GNSS; or

3> if GNSS becomes not reliable in accordance with TS 36.101 [42] and TS 36.133 [16]:

4> consider GNSS not to be selected;

2> if the UE has not selected a SyncRef UE and has not selected GNSS as synchronization reference source:

3> if not concerning V2X sidelink communication, and if the UE detects one or more SLSSIDs for which the S-RSRP exceeds the minimum requirement defined in TS 36.133 [16] by \textit{syncRefMinHyst} and for which the UE received the corresponding \textit{MasterInformationBlock-\textit{SL}} message (candidate SyncRef UEs), select a SyncRef UE according to the following priority group order:

4> UEs of which \textit{inCoverage}, included in the \textit{MasterInformationBlock-\textit{SL}} message received from this UE, is set to \textit{TRUE}, starting with the UE with the highest S-RSRP result (priority group 1);

4> UEs of which SLSSID is part of the set defined for in coverage, starting with the UE with the highest S-RSRP result (priority group 2);

4> Other UEs, starting with the UE with the highest S-RSRP result (priority group 3);

3> for V2X sidelink communication, if the UE detects one or more SLSSIDs for which the S-RSRP exceeds the minimum requirement defined in TS 36.133 [16] by \textit{syncRefMinHyst} and for which the UE received the corresponding \textit{MasterInformationBlock-\textit{SL-V2X}} message (candidate SyncRef UEs), or if the UE detects GNSS that is reliable in accordance with TS 36.101 [42] and TS 36.133 [16], select a synchronization reference according to the following priority group order:

4> if \textit{syncPriority} corresponding to the concerned frequency in \textit{SL-V2X-Preconfiguration} is set to \textit{enb}:
5> UEs of which SLSSID is part of the set defined for in coverage, and inCoverage, included in the MasterInformationBlock-SL-V2X message received from this UE, is set to TRUE, starting with the UE with the highest S-RSRP result (priority group 1);

5> UE of which SLSSID is part of the set defined for in coverage, and inCoverage, included in the MasterInformationBlock-SL-V2X message received from this UE, is set to FALSE, starting with the UE with the highest S-RSRP result (priority group 2);

5> UEs of which SLSSID is 0, and inCoverage, included in the MasterInformationBlock-SL-V2X message received from this UE, is set to TRUE, or of which SLSSID is 0 and SLSS is transmitted on subframes indicated by syncOffsetIndicator3, starting with the UE with the highest S-RSRP result (priority group 4);

5> UEs of which SLSSID is 0 and is not transmitted on subframes indicated by syncOffsetIndicator3, and inCoverage, included in the MasterInformationBlock-SL-V2X message received from this UE, is set to FALSE, starting with the UE with the highest S-RSRP result (priority group 5);

5> UEs of which SLSSID is 169, and inCoverage, included in the MasterInformationBlock-SL-V2X message received from this UE, is set to FALSE, starting with the UE with the highest S-RSRP result (priority group 5);

5> Other UEs, starting with the UE with the highest S-RSRP result (priority group 6);

4> if syncPriority corresponding to the concerned frequency in SL-V2X-Preconfiguration is set to gnss:

5> GNSS that is reliable in accordance with TS 36.101 [42] and TS 36.133 [16] (priority group 1);

5> UEs of which SLSSID is part of the set defined for in coverage, and inCoverage, included in the MasterInformationBlock-SL-V2X message received from this UE, is set to TRUE, starting with the UE with the highest S-RSRP result (priority group 2);

5> UEs of which SLSSID is 0, and inCoverage, included in the MasterInformationBlock-SL-V2X message received from this UE, is set to TRUE, or of which SLSSID is 0 and SLSS is transmitted on subframes indicated by syncOffsetIndicator3, starting with the UE with the highest S-RSRP result (priority group 2);

5> UE of which SLSSID is part of the set defined for in coverage, and inCoverage, included in the MasterInformationBlock-SL-V2X message received from this UE, is set to FALSE, starting with the UE with the highest S-RSRP result (priority group 3);

5> UEs of which SLSSID is 0 and is not transmitted on subframes indicated by syncOffsetIndicator3, and inCoverage, included in the MasterInformationBlock-SL-V2X message received from this UE, is set to FALSE, starting with the UE with the highest S-RSRP result (priority group 3);

5> UEs of which SLSSID is 169, and inCoverage, included in the MasterInformationBlock-SL-V2X message received from this UE, is set to FALSE, starting with the UE with the highest S-RSRP result (priority group 3);

5> Other UEs, starting with the UE with the highest S-RSRP result (priority group 4);

5.10.9 Sidelink common control information

5.10.9.1 General

The sidelink common control information is carried by a single message, the MasterInformationBlock-SL (MIB-SL) message for sidelink discovery and sidelink communication or the MasterInformationBlock-SL-V2X (MIB-SL-V2X) message for V2X sidelink communication. The MIB-SL or MIB-SL-V2X includes timing information as well as some configuration parameters and is transmitted via SL-BCH.

The MIB-SL for sidelink discovery and sidelink communication uses a fixed schedule with a periodicity of 40 ms without repetitions. In particular, the MIB-SL is scheduled in subframes indicated by syncOffsetIndicator-r12 i.e. for which \((10^*DFN + \text{subframe number}) \mod 40 = \text{syncOffsetIndicator-r12}\).
The MIB-SL-V2X for V2X sidelink communication uses a fixed schedule with a periodicity of 160 ms without repetitions. In particular, the MIB-SL-V2X is scheduled in subframes indicated by \( SL-OffsetIndicatorSync \) i.e. for which \((10 \times DFN + \text{subframe number}) \mod 160 = SL-OffsetIndicatorSync\).

The sidelink common control information may change at any transmission i.e. neither a modification period nor a change notification mechanism is used.

A UE configured to receive or transmit sidelink communication or PS related sidelink discovery shall:

1> if the UE has a selected SyncRef UE, as specified in 5.10.8.2:
   2> ensure having a valid version of the \( \text{MasterInformationBlock-SL} \) message of that SyncRefUE;

A UE configured to receive or transmit V2X sidelink communication shall:

1> if the UE has a selected SyncRef UE, as specified in 5.10.8.2:
   2> ensure having a valid version of the \( \text{MasterInformationBlock-SL-V2X} \) message of that SyncRefUE;

5.10.9.2 Actions related to reception of \( \text{MasterInformationBlock-SL/ MasterInformationBlock-SL-V2X} \) message

Upon receiving \( \text{MasterInformationBlock-SL} \) or \( \text{MasterInformationBlock-SL-V2X} \), the UE shall:

1> apply the values of \( sl-\text{Bandwidth}, \text{subframeAssignmentSL}, \text{directFrameNumber} \) and \( \text{directSubframeNumber} \) included in the received \( \text{MasterInformationBlock-SL} \) or \( \text{MasterInformationBlock-SL-V2X} \) message;

5.10.10 Sidelink relay UE operation

5.10.10.1 General

This procedure is used by a UE supporting sidelink relay UE operation and involves evaluation of the AS-layer conditions that need to be met in order for upper layers to configure a sidelink relay UE to receive/ transmit relay related PS sidelink discovery/ relay related sidelink communication. The AS-layer conditions merely comprise of being configured with radio resources that can be used for transmission.

A UE that fulfils the criteria specified in 5.10.10.2 and 5.10.10.3 and that is configured by higher layers accordingly is acting as a sidelink relay UE.

5.10.10.2 AS-conditions for relay related sidelink communication transmission by sidelink relay UE

A UE capable of sidelink relay UE operation shall inform upper layers that it is configured with radio resources that can be used for relay related sidelink communication transmission if the following conditions are met:

1> if in RRC_CONNECTED; and if the UE is configured with \( \text{commTxResources} \); and the UE is configured with \( \text{commTxAllowRelayDedicated} \) set to \( \text{true} \);

5.10.10.3 AS-conditions for relay PS related sidelink discovery transmission by sidelink relay UE

A UE capable of sidelink relay UE operation shall inform upper layers that it is configured with radio resources that can be used for relay PS related sidelink discovery transmission if the following conditions are met:

1> if in RRC_IDLE; and if the UE’s serving cell is suitable as defined in TS 36.304 [4]; and if \( \text{SystemInformationBlockType19} \) includes \( \text{discConfigPS} \) including \( \text{discTxPoolPS-Common} \) and \( \text{discConfigRelay} \);
   and if the sidelink relay UE threshold conditions as specified in 5.10.10.4 are met;

1> else if in RRC_CONNECTED; and if \( \text{discTxResourcesPS} \) is configured;
5.10.10.4 Sidelink relay UE threshold conditions

A UE capable of sidelink relay UE operation shall:

1> if the threshold conditions specified in this section were not met:
   2> if neither $threshHigh$ nor $threshLow$ is included in $relayUE-Config$ within $SystemInformationBlockType19$:
      3> consider the threshold conditions to be met (entry);
   2> else if $threshHigh$ is not included in $relayUE-Config$ within $SystemInformationBlockType19$; or the RSRP measurement of the PCell, or the cell on which the UE camps, is below $threshHigh$ by $hystMax$ (also included within $relayUE-Config$); and
   2> if $threshLow$ is not included in $relayUE-Config$ within $SystemInformationBlockType19$; or the RSRP measurement of the PCell, or the cell on which the UE camps, is above $threshLow$ by $hystMin$ (also included within $relayUE-Config$):
      3> consider the threshold conditions to be met (entry);
1> else:
   2> if $threshHigh$ is included in $relayUE-Config$ within $SystemInformationBlockType19$; and the RSRP measurement of the PCell, or the cell on which the UE camps, is above $threshHigh$ (also included within $relayUE-Config$); or
   2> if $threshLow$ is included in $relayUE-Config$ within $SystemInformationBlockType19$; and the RSRP measurement of the PCell, or the cell on which the UE camps, is below $threshLow$ (also included within $relayUE-Config$);
      3> consider the threshold conditions not to be met (leave);

5.10.11 Sidelink remote UE operation

5.10.11.1 General

This procedure is used by a UE supporting sidelink remote UE operation and involves evaluation of the AS-layer conditions that need to be met in order for upper layers to configure a sidelink remote UE to receive/ transmit relay related sidelink PS discovery/ relay related sidelink communication. The AS-layer conditions merely comprise of being configured with radio resources that can be used for transmission, as well as whether or not having a selected sidelink relay UE.

5.10.11.2 AS-conditions for relay related sidelink communication transmission by sidelink remote UE

A UE capable of sidelink remote UE operation shall inform upper layers whether it is configured with radio resources that can be used for relay related sidelink communication transmission if the following conditions are met:

1> if the UE is out of coverage; and is preconfigured with $SL-Preconfiguration$ including $discTxPoolList$ and $preconfigRelay$;
1> else if in RRC_IDLE; and if the UE’s serving cell is suitable as defined in TS 36.304 [4]; and if $SystemInformationBlockType18$ includes $commTxPoolNormalCommon$ and $commTxAllowRelayCommon$; and if $SystemInformationBlockType19$ includes $discConfigRelay$; and if the sidelink remote UE threshold conditions as specified in 5.10.11.5 are met;
1> else if in RRC_CONNECTED; and if the UE is configured with $commTxResources$; and the UE is configured with $commTxAllowRelayDedicated$ set to true;
5.10.11.3  AS-conditions for relay PS related sidelink discovery transmission by sidelink remote UE

A UE capable of sidelink remote UE operation shall inform upper layers whether it is configured with radio resources that can be used for relay PS related sidelink discovery transmission if the following conditions are met:

1> if the UE is out of coverage; and is preconfigured with \textit{SL-Preconfiguration} including \textit{discTxPoolList} and \textit{preconfigRelay};

1> else if in RRC\_IDLE; and if the UE’s serving cell is suitable as defined in TS 36.304 [4]; and if \textit{SystemInformationBlockType19} includes \textit{discConfigPS} including \textit{discTxPoolPS-Common} and \textit{discConfigRelay}; and if the sidelink remote UE threshold conditions as specified in 5.10.11.5 are met;

1> else if in RRC\_CONNECTED; and if \textit{discTxResourcesPS} is configured;

5.10.11.4  Selection and reselection of sidelink relay UE

A UE capable of sidelink remote UE operation that is configured by upper layers to search for a sidelink relay UE shall:

1> if out of coverage on the frequency used for sidelink communication, as defined in TS 36.304 [4, 11.4]; or

1> if the serving frequency is used for sidelink communication and the RSRP measurement of the cell on which the UE camps (RRC\_IDLE)/ the PCell (RRC\_CONNECTED) is below \textit{threshHigh} within \textit{remoteUE-Config}:

2> search for candidate sidelink relay UEs, in accordance with TS 36.133 [16]

2> when evaluating the one or more detected sidelink relay UEs, apply layer 3 filtering as specified in 5.5.3.2 across measurements that concern the same ProSe Relay UE ID and using the \textit{filterCoefficient} in \textit{SystemInformationBlockType19} (in coverage) or the preconfigured \textit{filterCoefficient} as defined in 9.3(out of coverage), before using the SD-RSRP measurement results;

NOTE 1: The details of the interaction with upper layers are up to UE implementation.

2> if the UE does not have a selected sidelink relay UE:

3> select a candidate sidelink relay UE which SD-RSRP exceeds \textit{q-RxLevMin} included in either \textit{reselectionInfoIC} (in coverage) or \textit{reselectionInfoOoC} (out of coverage) by \textit{minHyst};

2> else if SD-RSRP of the currently selected sidelink relay UE is below \textit{q-RxLevMin} included in either \textit{reselectionInfoIC} (in coverage) or \textit{reselectionInfoOoC} (out of coverage); or if upper layers indicate not to use the currently selected sidelink relay: (i.e. sidelink relay UE reselection):

3> select a candidate sidelink relay UE which SD-RSRP exceeds \textit{q-RxLevMin} included in either \textit{reselectionInfoIC} (in coverage) or \textit{reselectionInfoOoC} (out of coverage) by \textit{minHyst};

2> else if the UE did not detect any candidate sidelink relay UE which SD-RSRP exceeds \textit{q-RxLevMin} included in either \textit{reselectionInfoIC} (in coverage) or \textit{reselectionInfoOoC} (out of coverage); or if upper layers indicate not to use the currently selected sidelink relay:

3> consider no sidelink relay UE to be selected;

NOTE 2: The UE may perform sidelink relay UE reselection in a manner resulting in selection of the sidelink relay UE, amongst all candidate sidelink relay UEs meeting higher layer criteria, that has the best radio link quality. Further details, including interaction with upper layers, are up to UE implementation.

5.10.11.5  Sidelink remote UE threshold conditions

A UE capable of sidelink remote UE operation shall:

1> if the threshold conditions specified in this section were not met:

2> if \textit{threshHigh} is not included in \textit{remoteUE-Config} within \textit{SystemInformationBlockType19}; or

2> if \textit{threshHigh} is included in \textit{remoteUE-Config} within \textit{SystemInformationBlockType19}; and the RSRP measurement of the PCell, or the cell on which the UE camps, is below \textit{threshHigh} by \textit{hystMax} (also included within \textit{remoteUE-Config});
3> consider the threshold conditions to be met (entry);

1> else:

2> if threshHigh is included in remoteUE-Config within SystemInformationBlockType19; and the RSRP measurement of the PCell, or the cell on which the UE camps, is above threshHigh (also included within remoteUE-Config):

3> consider the threshold conditions not to be met (leave);

5.10.12 V2X sidelink communication monitoring

A UE capable of V2X sidelink communication that is configured by upper layers to receive V2X sidelink communication shall:

1> if the conditions for sidelink operation as defined in 5.10.1d are met:

2> if in coverage on the frequency used for V2X sidelink communication, as defined in TS 36.304 [4, 11.4]:

3> if the frequency used to receive V2X sidelink communication is included in v2x-InterFreqInfoList within RRCConnectionReconfiguration or in v2x-InterFreqInfoList within SystemInformationBlockType21 of the serving cell/PCell, and v2x-CommRxPool is included in SL-V2X-InterFreqUE-Config within v2x-UE-ConfigList:

4> configure lower layers to monitor sidelink control information and the corresponding data using the pool of resources indicated in v2x-CommRxPool;

3> else:

4> if the cell chosen for V2X sidelink communication reception broadcasts SystemInformationBlockType21 including v2x-CommRxPool in sl-V2X-ConfigCommon or,

4> if the UE is configured with v2x-CommRxPool included in mobilityControlInfoV2X in RRCConnectionReconfiguration:

5> configure lower layers to monitor sidelink control information and the corresponding data using the pool of resources indicated in v2x-CommRxPool;

2> else (i.e. out of coverage on the frequency used for V2X sidelink communication, as defined in TS 36.304 [4, 11.4]):

3> if the frequency used to receive V2X sidelink communication is included in v2x-InterFreqInfoList within RRCConnectionReconfiguration or in v2x-InterFreqInfoList within SystemInformationBlockType21 of the serving cell/PCell, and v2x-CommRxPool is included in SL-V2X-InterFreqUE-Config within v2x-UE-ConfigList for the concerned frequency:

4> configure lower layers to monitor sidelink control information and the corresponding data using the pool of resources indicated in v2x-CommRxPool;

3> else:

4> configure lower layers to monitor sidelink control information and the corresponding data using the pool of resources that were preconfigured (i.e. v2x-CommRxPoolList in SL-V2X-Preconfiguration defined in 9.3);

5.10.13 V2X sidelink communication transmission

5.10.13.1 Transmission of V2X sidelink communication

A UE capable of V2X sidelink communication that is configured by upper layers to transmit V2X sidelink communication and has related data to be transmitted shall:

1> if the conditions for sidelink operation as defined in 5.10.1d are met:
2> if in coverage on the frequency used for V2X sidelink communication as defined in TS 36.304 [4, 11.4]; or

2> if the frequency used to transmit V2X sidelink communication is included in v2x-InterFreqInfoList in RRCConnectionReconfiguration or in v2x-InterFreqInfoList within SystemInformationBlockType21;

3> if the UE is in RRC_CONNECTED and uses the PCell or the frequency included in v2x-InterFreqInfoList in RRCConnectionReconfiguration for V2X sidelink communication:

4> if the UE is configured, by the current PCell with commTxResources set to scheduled:

5> if T310 or T311 is running; and if the PCell at which the UE detected physical layer problems or radio link failure broadcasts SystemInformationBlockType21 including v2x-CommTxPoolExceptional in sl-V2X-ConfigCommon, or v2x-CommTxPoolExceptional is included in v2x-InterFreqInfoList for the concerned frequency in SystemInformationBlockType21 or RRCConnectionReconfiguration; or

5> if T301 is running and the cell on which the UE initiated connection re-establishment broadcasts SystemInformationBlockType21 including v2x-CommTxPoolExceptional in sl-V2X-ConfigCommon, or v2x-CommTxPoolExceptional is included in v2x-InterFreqInfoList for the concerned frequency in SystemInformationBlockType21; or

5> if T304 is running and the UE is configured with v2x-CommTxPoolExceptional included in mobilityControlInfoV2X in RRCConnectionReconfiguration or in v2x-InterFreqInfoList for the concerned frequency in RRCConnectionReconfiguration:

6> configure lower layers to transmit the sidelink control information and the corresponding data based on random selection using the pool of resources indicated by v2x-CommTxPoolExceptional as defined in TS 36.321 [6];

5> else:

6> configure lower layers to request E-UTRAN to assign transmission resources for V2X sidelink communication;

4> else if the UE is configured with v2x-CommTxPoolNormalDedicated or v2x-CommTxPoolNormal in the entry of v2x-InterFreqInfoList for the concerned frequency in sl-V2X-ConfigDedicated in RRCConnectionReconfiguration and the UE is configured to transmit non-P2X related V2X sidelink communication:

5> if a result of sensing on the resources configured in v2x-CommTxPoolNormalDedicated or v2x-CommTxPoolNormal in the entry of v2x-InterFreqInfoList for the concerned frequency in RRCConnectionReconfiguration is not available in accordance with TS 36.213 [23]:

6> if v2x-CommTxPoolExceptional is included in mobilityControlInfoV2X in RRCConnectionReconfiguration (i.e., handover case); or

6> if v2x-CommTxPoolExceptional is included in the entry of v2x-InterFreqInfoList for the concerned frequency in RRCConnectionReconfiguration; or

6> if the PCell broadcasts SystemInformationBlockType21 including v2x-CommTxPoolExceptional in sl-V2X-ConfigCommon or v2x-CommTxPoolExceptional in v2x-InterFreqInfoList for the concerned frequency:

7> configure lower layers to transmit the sidelink control information and the corresponding data based on random selection using the pool of resources indicated by v2x-CommTxPoolExceptional as defined in TS 36.321 [6];

5> else:

6> configure lower layers to transmit the sidelink control information and the corresponding data based on sensing (as defined in TS 36.321 [6] and TS 36.213 [23]) using one of the resource pools indicated by v2x-commTxPoolNormalDedicated or v2x-CommTxPoolNormal in the entry of v2x-InterFreqInfoList for the concerned frequency, which is selected according to 5.10.13.2;

4> else if the UE is configured with v2x-CommTxPoolNormalDedicated in sl-V2X-ConfigDedicated or p2x-CommTxPoolNormal in the entry of v2x-InterFreqInfoList for the concerned frequency in
RRConnectionReconfiguration and the UE is configured to transmit P2X related V2X sidelink communication:

5> select a resource pool according to 5.10.13.2;

5> transmit P2X related V2X sidelink communication according to 5.10.13.1a;

3> else:

4> if the cell chosen for V2X sidelink communication transmission broadcasts SystemInformationBlockType21:

5> if the UE is configured to transmit non-P2X related V2X sidelink communication, and if SystemInformationBlockType21 includes v2x-CommTxPoolNormalCommon or v2x-CommTxPoolNormal in v2x-InterFreqInfoList for the concerned frequency in sl-V2X-ConfigCommon and a result of sensing on the resources configured in v2x-CommTxPoolNormalCommon or v2x-CommTxPoolNormal in v2x-InterFreqInfoList for the concerned frequency is available in accordance with TS 36.213 [23]:

6> configure lower layers to transmit the sidelink control information and the corresponding data based on sensing (as defined in TS 36.321 [6] and TS 36.213 [23]) using one of the resource pools indicated by v2x-CommTxPoolNormalCommon or v2x-CommTxPoolNormal in v2x-InterFreqInfoList for the concerned frequency, which is selected according to 5.10.13.2;

5> else if the UE is configured to transmit P2X related V2X sidelink communication, and if SystemInformationBlockType21 includes p2x-CommTxPoolNormalCommon or p2x-CommTxPoolNormal in v2x-InterFreqInfoList for the concerned frequency in sl-V2X-ConfigCommon:

6> select a resource pool from p2x-CommTxPoolNormalCommon or p2x-CommTxPoolNormal in v2x-InterFreqInfoList for the concerned frequency according to 5.10.13.2, but ignoring zoneConfig in SystemInformationBlockType21;

6> transmit P2X related V2X sidelink communication according to 5.10.13.1a;

5> else if SystemInformationBlockType21 includes v2x-CommTxPoolExceptional in sl-V2X-ConfigCommon or v2x-CommTxPoolExceptional in v2x-InterFreqInfoList for the concerned frequency:

6> from the moment the UE initiates connection establishment until receiving an RRConnectionReconfiguration including sl-V2X-ConfigDedicated, or until receiving an RRConnectionRelease or an RRConnectionReject; or

6> if the UE is in RRC_IDLE and a result of sensing on the resources configured in v2x-CommTxPoolNormalCommon or v2x-CommTxPoolNormal in v2x-InterFreqInfoList for the concerned frequency in SystemInformationBlockType21 is not available in accordance with TS 36.213 [23]:

7> configure lower layers to transmit the sidelink control information and the corresponding data based on random selection (as defined in TS 36.321 [6]) using the pool of resources indicated in v2x-CommTxPoolExceptional;

2> else:

3> configure lower layers to transmit the sidelink control information and the corresponding data based on sensing (as defined in TS 36.321 [6] and TS 36.213 [23]) using one of the resource pools indicated by v2x-CommTxPoolList in SL-V2X-Preconfiguration in case of non-P2X related V2X sidelink communication, which is selected according to 5.10.13.2, or using one of the resource pools indicated by p2x-CommTxPoolList in SL-V2X-Preconfiguration in case of P2X related V2X sidelink communication, which is selected according to 5.10.13.2, and in accordance with the timing of the selected reference as defined in 5.10.8;

The UE capable of non-P2X related V2X sidelink communication that is configured by upper layers to transmit V2X sidelink communication shall perform sensing on all pools of resources which may be used for transmission of the sidelink control information and the corresponding data. The pools of resources are indicated by SL-V2X-
Preconfiguration, v2x-CommTxPoolNormalCommon, v2x-CommTxPoolNormalDedicated in sl-V2X-ConfigDedicated, or v2x-CommTxPoolNormal in v2x-InterFreqInfoList for the concerned frequency, as configured above.

NOTE 1: If there are multiple frequencies for which normal or exceptional pools are configured, it is up to UE implementation which frequency is selected for V2X sidelink communication transmission.

5.10.13.1a Transmission of P2X related V2X sidelink communication

A UE configured to transmit P2X related V2X sidelink communication shall:

1> if partialSensing is included and randomSelection is not included in resourceSelectionConfigP2X of the pool selected; or

1> if both partialSensing and randomSelection are included in resourceSelectionConfigP2X of the pool selected, and the UE selects to use partial sensing:

2> configure lower layers to transmit the sidelink control information and the corresponding data based on partial sensing (as defined in TS 36.321 [6] and TS 36.213 [23]) using the selected resource pool, if the UE supports partial sensing;

1> if partialSensing is not included and randomSelection is included in resourceSelectionConfigP2X of the pool selected.

2> configure lower layers to transmit the sidelink control information and the corresponding data based on random selection (as defined in TS 36.321 [6] and TS 36.213 [23]) using the selected resource pool;

1> if both partialSensing and randomSelection is included in resourceSelectionConfigP2X of the pool selected, and the UE selects to use random selection:

2> configure lower layers to transmit the sidelink control information and the corresponding data based on random selection using the selected resource pool and indicates to lower layers that transmissions of multiple MAC PDUs are allowed (as defined in TS 36.321 [6] and TS 36.213 [23]).

NOTE: If both partialSensing and randomSelection is included in resourceSelectionConfigP2X of the pool selected, the selection between partial sensing and random selection is left to UE implementation.

5.10.13.2 V2X sidelink communication transmission pool selection

For a frequency used for V2X sidelink communication, if zoneConfig is not ignored as specified in 5.10.13.1, the UE configured by upper layers for V2X sidelink communication shall only use the pool which corresponds to geographical coordinates of the UE, if zoneConfig is included in SystemInformationBlockType21 of the serving cell (RRC_IDLE)/PCell (RRC_CONNECTED) or in RRCConnectionReconfiguration for the concerned frequency, and the UE is configured to use resource pools provided by RRC signalling for the concerned frequency; or if zoneConfig is included in SL-V2X-Preconfiguration for the concerned frequency, and the UE is configured to use resource pools in SL-V2X-Preconfiguration for the frequency, according to 5.10.13.1. The UE shall only use the pool which is associated with the synchronization reference source selected in accordance with 5.10.8.2.

1> if the UE is configured to transmit on p2x-CommTxPoolNormalCommon or on p2x-CommTxPoolNormal in v2x-InterFreqInfoList in SystemInformationBlockType21 according to 5.10.13.1; or

1> if the UE is configured to transmit on p2x-CommTxPoolList-r14 in SL-V2X-Preconfiguration according to 5.10.13.1; or

1> if zoneConfig is not included in SystemInformationBlockType21 and the UE is configured to transmit on v2x-CommTxPoolNormalCommon or v2x-CommTxPoolNormalDedicated; or

1> if zoneConfig is included in SystemInformationBlockType21 and the UE is configured to transmit on v2x-CommTxPoolNormalDedicated for P2X related V2X sidelink communication and zoneID is not included in v2x-CommTxPoolNormalDedicated; or

1> if zoneConfig is not included in the entry of v2x-InterFreqInfoList for the concerned frequency and the UE is configured to transmit on v2x-CommTxPoolNormal in v2x-InterFreqInfoList or p2x-CommTxPoolNormal in v2x-InterFreqInfoList in RRCConnectionReconfiguration; or
1> if `zoneConfig` is not included in `SL-V2X-Preconfiguration` for the concerned frequency and the UE is configured to transmit on `v2x-CommTxPoolList` in `SL-V2X-Preconfiguration` for the concerned frequency:
   2> select the first pool associated with the synchronization reference source selected in accordance with 5.10.8.2;

1> if `zoneConfig` is included in `SystemInformationBlockType21` and the UE is configured to transmit on `v2x-CommTxPoolNormalCommon` or `v2x-CommTxPoolNormalDedicated` for non-P2X related V2X sidelink communication; or

1> if `zoneConfig` is included in `SystemInformationBlockType21` and the UE is configured to transmit on `v2x-CommTxPoolNormalDedicated` for P2X related V2X sidelink communication and `zoneID` is included in `v2x-CommTxPoolNormalDedicated`; or

1> if `zoneConfig` is included in the entry of `v2x-InterFreqInfoList` for the concerned frequency and the UE is configured to transmit on `v2x-CommTxPoolNormal` in `v2x-InterFreqInfoList` or `p2x-CommTxPoolNormal` in `v2x-InterFreqInfoList` in `RRCConnectionReconfiguration`; or

1> if `zoneConfig` is included in `SL-V2X-Preconfiguration` for the concerned frequency and the UE is configured to transmit on `v2x-CommTxPoolList` in `SL-V2X-Preconfiguration` for the concerned frequency:
   2> select the pool configured with `zoneID` equal to the zone identity determined below and associated with the synchronization reference source selected in accordance with 5.10.8.2;

The UE shall determine an identity of the zone (i.e. `Zone_id`) in which it is located using the following formulae, if `zoneConfig` is included in `SystemInformationBlockType21` or in `SL-V2X-Preconfiguration`:

\[
x_1 = \text{Floor} \left( \frac{x}{L} \right) \mod N_x;
\]

\[
y_1 = \text{Floor} \left( \frac{y}{W} \right) \mod N_y;
\]

\[
Zone_id = y_1 \times N_x + x_1.
\]

The parameters in the formulae are defined as follows:

- `L` is the value of `zoneLength` included in `zoneConfig` in `SystemInformationBlockType21` or in `SL-V2X-Preconfiguration`;
- `W` is the value of `zoneWidth` included in `zoneConfig` in `SystemInformationBlockType21` or in `SL-V2X-Preconfiguration`;
- `Nx` is the value of `zoneIdLongiMod` included in `zoneConfig` in `SystemInformationBlockType21` or in `SL-V2X-Preconfiguration`;
- `Ny` is the value of `zoneIdLatiMod` included in `zoneConfig` in `SystemInformationBlockType21` or in `SL-V2X-Preconfiguration`;
- `x` is the distance in longitude between UE’s current location and geographical coordinates (0, 0) and it is expressed in meters;
- `y` is the distance in latitude between UE’s current location and geographical coordinates (0, 0) and it is expressed in meters.

The UE shall select a pool of resources which includes a `zoneID` equals to the `Zone_id` calculated according to the above mentioned formulae and indicated by `v2x-CommTxPoolNormalDedicated`, `v2x-CommTxPoolNormalCommon`, `v2x-CommTxPoolNormal` in `v2x-InterFreqInfoList` or `p2x-CommTxPoolNormal` in `v2x-InterFreqInfoList` in `RRCConnectionReconfiguration`, or `v2x-CommTxPoolList` according to 5.10.13.1.

NOTE 1: The UE uses its latest geographical coordinates to perform resource pool selection.

### 5.10.13.3 V2X sidelink communication transmission reference cell selection

A UE capable of V2X sidelink communication that is configured by upper layers to transmit V2X sidelink communication shall:
1> for each frequency used to transmit V2X sidelink communication, select a cell to be used as reference for synchronisation and DL measurements in accordance with the following:

2> if the frequency concerns the primary frequency:
   3> use the PCell (RRC_CONNECTED) or the serving cell (RRC_IDLE) as reference;
2> else if the frequency concerns a secondary frequency:
   3> use the concerned SCell as reference;
2> else if the UE is in coverage of the concerned frequency:
   3> use the DL frequency paired with the one used to transmit V2X sidelink communication as reference;
2> else (i.e., out of coverage on the concerned frequency):
   3> use the PCell (RRC_CONNECTED) or the serving cell (RRC_IDLE) as reference, if needed;

5.10.14 DFN derivation from GNSS

When the UE selects GNSS as the synchronization reference source, the DFN used for V2X sidelink communication is derived from the current UTC time, by the following formulae:

\[
DFN = \text{Floor} \left( 0.1 \times (T_{\text{current}} - T_{\text{ref}} - \text{offsetDFN}) \right) \mod 1024
\]

\[
\text{SubframeNumber} = \text{Floor} \left( T_{\text{current}} - T_{\text{ref}} - \text{offsetDFN} \right) \mod 10
\]

Where:

- \( T_{\text{current}} \) is the current UTC time that obtained from GNSS. This value is expressed in milliseconds;
- \( T_{\text{ref}} \) is the reference UTC time 00:00:00 on Gregorian calendar date 1 January, 1900 (midnight between Thursday, December 31, 1899 and Friday, January 1, 1900). This value is expressed in milliseconds;
- \( \text{OffsetDFN} \) is the value \( \text{offsetDFN} \) if configured, otherwise it is zero. This value is expressed in milliseconds.

NOTE: In case of leap second change event, how V2X UE obtains the scheduled time of leap second change to adjust \( T_{\text{current}} \) correspondingly is left to UE implementation. How V2X UE handles the sudden discontinuity of DFN is left to UE implementation.

6 Protocol data units, formats and parameters (tabular & ASN.1)

6.1 General

The contents of each RRC message is specified in sub-clause 6.2 using ASN.1 to specify the message syntax and using tables when needed to provide further detailed information about the fields specified in the message syntax. The syntax of the information elements that are defined as stand-alone abstract types is further specified in a similar manner in sub-clause 6.3.

The need for fields to be present in a message or an abstract type, i.e., the ASN.1 fields that are specified as OPTIONAL in the abstract notation (ASN.1), is specified by means of comment text tags attached to the OPTIONAL statement in the abstract syntax. All comment text tags are available for use in the downlink direction only. The meaning of each tag is specified in table 6.1-1.
Table 6.1-1: Meaning of abbreviations used to specify the need for fields to be present

<table>
<thead>
<tr>
<th>Abbreviation</th>
<th>Meaning</th>
</tr>
</thead>
</table>
| Cond (conditionTag) (Used in downlink only) | Conditionally present  
A field for which the need is specified by means of conditions. For each conditionTag, the need is specified in a tabular form following the ASN.1 segment. In case, according to the conditions, a field is not present, the UE takes no action and where applicable shall continue to use the existing value (and/ or the associated functionality) unless explicitly stated otherwise (e.g. in the conditional presence table or in the description of the field itself). |
| Need OP (Used in downlink only) | Optionally present  
A field that is optional to signal. For downlink messages, the UE is not required to take any special action on absence of the field beyond what is specified in the procedural text or the field description table following the ASN.1 segment. The UE behaviour on absence should be captured either in the procedural text or in the field description. |
| Need ON (Used in downlink only) | Optionally present, No action  
A field that is optional to signal. If the message is received by the UE, and in case the field is absent, the UE takes no action and where applicable shall continue to use the existing value (and/ or the associated functionality). |
| Need OR (Used in downlink only) | Optionally present, Release  
A field that is optional to signal. If the message is received by the UE, and in case the field is absent, the UE shall discontinue/ stop using/ delete any existing value (and/ or the associated functionality). |

Any field with Need ON in system information shall be interpreted as Need OR.

Need codes may not be specified for a parent extension field/ extension group, used in downlink, which includes one or more child extension fields. Upon absence of such a parent extension field/ extension group, the UE shall:

- For each individual child extension field, including extensions that are mandatory to include in the optional group, act in accordance with the need code that is defined for the extension;
- Apply this behaviour not only for child extension fields included directly within the optional parent extension field/ extension group, but also for extension fields defined at further nesting levels as long as for none of the fields in-between the concerned extension field and the parent extension field a need code is specified;

**NOTE 1:** The above applies for groups of non critical extensions using double brackets (referred to as extension groups), as well as non-critical extensions at the end of a message or at the end of a structure contained in a BIT STRING or OCTET STRING (referred to as parent extension fields).

Need codes, conditions and ASN.1 defaults specified for a particular (child) field only apply in case the (parent) field including the particular field is present. This rule does not apply for optional parent extension fields/ extension groups without need codes,

**NOTE 2:** The previous rule implies that E-UTRAN has to include such a parent extension field to release a child field that is either:
- Optional with need OR, or
- Conditional while the UE releases the child field when absent.

The handling of need codes as specified in the previous is illustrated by means of an example, as shown in the following ASN.1.

```asn1
RRCMessage-r8-IEs ::=  SEQUENCE {
  field1         InformationElement1,
  field2         InformationElement2    OPTIONAL, -- Need ON
  nonCriticalExtension     RRCMessage-v8a0-IEs    OPTIONAL
}
RRCMessage-v8a0-IEs ::=  SEQUENCE {

```
The handling of need codes as specified in the previous implies that:

- if \texttt{field}\_2 in \texttt{RRCMessage-v940-IEs} is absent, the UE does not modify \texttt{field21};
- if \texttt{field}\_2 in \texttt{RRCMessage-v940-IEs} is present but does not include \texttt{field21}, the UE releases \texttt{field21};
- if the extension group containing \texttt{field}\_13 is absent, the UE releases \texttt{field13} and does not modify \texttt{field14};
- if \texttt{nonCriticalExtension} defined by IE \texttt{RRCMessage-v8a0-IEs} is absent, the UE does not modify \texttt{field3} and releases \texttt{field4};

In the ASN.1 of this specification, the first bit of a bit string refers to the leftmost bit, unless stated otherwise.

### 6.2 RRC messages

**NOTE:** The messages included in this section reflect the current status of the discussions. Additional messages may be included at a later stage.

#### 6.2.1 General message structure

---

**EUTRA-RRC-Definitions**

This ASN.1 segment is the start of the E-UTRA RRC PDU definitions.

---

**BCCH-BCH-Message**

The \texttt{BCCH-BCH-Message} class is the set of RRC messages that may be sent from the E-UTRAN to the UE via BCH on the BCCH logical channel.
BCCH-BCH-MessageType ::= MasterInformationBlock

BCCH-BCH-Message-MBMS

The **BCCH-BCH-Message-MBMS** class is the set of RRC messages that may be sent from the E-UTRAN to the UE via BCH on the BCCH logical channel in an MBMS-dedicated cell.

```
BCCH-BCH-Message-MBMS ::= SEQUENCE {
    message          BCCH-BCH-MessageType-MBMS-r14
}
BCCH-BCH-MessageType-MBMS-r14 ::= MasterInformationBlock-MBMS-r14
```

BCCH-DL-SCH-Message

The **BCCH-DL-SCH-Message** class is the set of RRC messages that may be sent from the E-UTRAN to the UE via DL-SCH on the BCCH logical channel.

```
BCCH-DL-SCH-Message ::= SEQUENCE {
    message          BCCH-DL-SCH-MessageType
}
BCCH-DL-SCH-MessageType ::= CHOICE {
    c1      CHOICE {
        systemInformation      SystemInformation,
        systemInformationBlockType1    SystemInformationBlockType1
    },
    messageClassExtension SEQUENCE {}
}
```

BCCH-DL-SCH-Message-BR

The **BCCH-DL-SCH-Message-BR** class is the set of RRC messages that may be sent from the E-UTRAN to the UE via DL-SCH on the BR-BCCH logical channel.

```
BCCH-DL-SCH-Message-BR ::= SEQUENCE {
    message          BCCH-DL-SCH-MessageType-BR-r13
}
BCCH-DL-SCH-MessageType-BR-r13 ::= CHOICE {
    c1      CHOICE {
        systemInformation-BR-r13    SystemInformation-BR-r13,
        systemInformationBlockType1-BR-r13  SystemInformationBlockType1-BR-r13
    },
    messageClassExtension SEQUENCE {}
}
```

BCCH-DL-SCH-Message-MBMS

The **BCCH-DL-SCH-Message-MBMS** class is the set of RRC messages that may be sent from the E-UTRAN to the UE via DL-SCH on the BCCH logical channel in an MBMS-dedicated cell.
The **MCCH-Message** class is the set of RRC messages that may be sent from the E-UTRAN to the UE on the MCCH logical channel.

-- ASN1START
MCCH-Message ::= SEQUENCE {
  message  MCCH-MessageType
}
MCCH-MessageType ::= CHOICE {
  c1  CHOICE {
    mbsfnAreaConfiguration-r9  MBSFNAreaConfiguration-r9
  },
  later  CHOICE {
    c2  CHOICE{
      mbmsCountingRequest-r10  MBMSCountingRequest-r10
    },
    messageClassExtension  SEQUENCE {}
  }
}
-- ASN1STOP

The **PCCH-Message** class is the set of RRC messages that may be sent from the E-UTRAN to the UE on the PCCH logical channel.

-- ASN1START
PCCH-Message ::= SEQUENCE {
  message  PCCH-MessageType
}
PCCH-MessageType ::= CHOICE {
  c1  CHOICE {
    paging   Paging
  },
  messageClassExtension  SEQUENCE {}
}
-- ASN1STOP

The **DL-CCCH-Message** class is the set of RRC messages that may be sent from the E-UTRAN to the UE on the downlink CCCH logical channel.

-- ASN1START
DL-CCCH-Message ::= SEQUENCE {
}
message DL-CCCH-MessageType
}

DL-CCCH-MessageType ::= CHOICE {
  c1          CHOICE {
    rrcConnectionReestablishment RRCConnectionReestabilishment,
    rrcConnectionReestablishmentReject RRCConnectionReestablishmentReject,
    rrcConnectionReject RRCConnectionReject,
    rrcConnectionSetup RRCConnectionSetup
  },
  messageClassExtension SEQUENCE {}
}

-- ASN1STOP

-- DL-DCCH-Message

The **DL-DCCH-Message** class is the set of RRC messages that may be sent from the E-UTRAN to the UE or from the E-UTRAN to the RN on the downlink DCCH logical channel.

-- ASN1START

DL-DCCH-Message ::= SEQUENCE {
  message DL-DCCH-MessageType
}

DL-DCCH-MessageType ::= CHOICE {
  c1          CHOICE {
    csfbParametersResponseCDMA2000 CSFBParametersResponseCDMA2000,

6.2.2 Message definitions

-- CounterCheck

The *CounterCheck* message is used by the E-UTRAN to indicate the current COUNT MSB values associated to each DRB and to request the UE to compare these to its COUNT MSB values and to report the comparison results to E-UTRAN.

Signalling radio bearer: SRB1

RLC-SAP: AM

Logical channel: DCCH

Direction: E-UTRAN to UE

**CounterCheck message**

CounterCheck ::= SEQUENCE {
  rrc-TransactionIdentifier   RRC-TransactionIdentifier,
  criticalExtensions     CHOICE {
    c1         CHOICE {

  nonCriticalExtension    SEQUENCE {}       OPTIONAL
}

DRB-CountMSB-InfoList ::= SEQUENCE (SIZE (1..maxDRB)) OF DRB-CountMSB-Info

DRB-CountMSB-Info ::= SEQUENCE {
  drb-Identity     DRB-Identity,
  countMSB-Uplink     INTEGER(0..33554431),
  countMSB-Downlink    INTEGER(0..33554431)
}

**CounterCheck field descriptions**

- **count-MSB-Downlink**
  Indicates the value of 25 MSBs from downlink COUNT associated to this DRB.

- **count-MSB-Uplink**
  Indicates the value of 25 MSBs from uplink COUNT associated to this DRB.

- **drb-CountMSB-InfoList**
  Indicates the MSBs of the COUNT values of the DRBs.
CounterCheckResponse

The CounterCheckResponse message is used by the UE to respond to a CounterCheck message.

- Signalling radio bearer: SRB1
- RLC-SAP: AM
- Logical channel: DCCH
- Direction: UE to E-UTRAN

CounterCheckResponse message

```asn
CounterCheckResponse ::=   SEQUENCE {
   rrc-TransactionIdentifier   RRC-TransactionIdentifier,
   criticalExtensions     CHOICE {
      counterCheckResponse-r8    CounterCheckResponse-r8-IEs,

   count-Uplink     INTEGER(0..4294967295),
   count-Downlink     INTEGER(0..4294967295)
}
```

CounterCheckResponse field descriptions

- **count-Downlink**: Indicates the value of downlink COUNT associated to this DRB.
- **count-Uplink**: Indicates the value of uplink COUNT associated to this DRB.
- **drb-CountInfoList**: Indicates the COUNT values of the DRBs.

CSFBParametersRequestCDMA2000

The CSFBParametersRequestCDMA2000 message is used by the UE to obtain the CDMA2000 1xRTT Parameters from the network. The UE needs these parameters to generate the CDMA2000 1xRTT Registration message used to register with the CDMA2000 1xRTT Network which is required to support CSFB to CDMA2000 1xRTT.

- Signalling radio bearer: SRB1
- RLC-SAP: AM
- Logical channel: DCCH
- Direction: UE to E-UTRAN

HandoverFromEUTRAPreparationRequest (CDMA2000)

The `HandoverFromEUTRAPreparationRequest` message is used to trigger the handover preparation procedure with a CDMA2000 RAT. This message is also used to trigger a tunneled preparation procedure with a CDMA2000 1xRTT RAT to obtain traffic channel resources for the enhanced CS fallback to CDMA2000 1xRTT, which may also involve a concurrent preparation for handover to CDMA2000 HRPD. Also, this message is used to trigger the dual Rx/Tx redirection procedure with a CDMA2000 1xRTT RAT.

Signalling radio bearer: SRB1

  nonCriticalExtension     SEQUENCE {}     OPTIONAL
}

HandoverFromEUTRAPreparationRequest field descriptions

concurrPrepCDMA2000-HRPD
Value TRUE indicates that upper layers should initiate concurrent preparation for handover to CDMA2000 HRPD in addition to preparation for enhanced CS fallback to CDMA2000 1xRTT.

dualRxTxRedirectIndicator
Value TRUE indicates that the second radio of the dual Rx/Tx UE is being redirected to CDMA2000 1xRTT [51].

redirectCarrierCDMA2000-1XRTT
Used to indicate the CDMA2000 1xRTT carrier frequency where the UE is being redirected to.

InDeviceCoexIndication message

The InDeviceCoexIndication message is used to inform E-UTRAN about IDC problems which can not be solved by the UE itself, as well as to provide information that may assist E-UTRAN when resolving these problems.

Signalling radio bearer: SRB1
RLC-SAP: AM
Logical channel: DCCH
Direction: UE to E-UTRAN

<table>
<thead>
<tr>
<th><strong>InDeviceCoexIndication field descriptions</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>AffectedCarrierFreq</strong>&lt;br&gt; If carrierFreq-v1310 is included, carrierFreq-r11 is ignored by eNB.</td>
</tr>
<tr>
<td><strong>affectedCarrierFreqCombList</strong>&lt;br&gt; Indicates a list of E-UTRA carrier frequencies that are affected by IDC problems due to Inter-Modulation Distortion and harmonics from E-UTRA when configured with UL CA. affectedCarrierFreqCombList-r13 is used when more than 5 serving cells are configured or affected combinations contain MeasObjectId larger than 32. If affectedCarrierFreqCombList-r13 is included, affectedCarrierFreqCombList-r11 shall not be included.</td>
</tr>
<tr>
<td><strong>affectedCarrierFreqList</strong>&lt;br&gt; List of E-UTRA carrier frequencies affected by IDC problems. If E-UTRAN includes affectedCarrierFreqList-v1310 it includes the same number of entries, and listed in the same order, as in affectedCarrierFreqList-r11.</td>
</tr>
<tr>
<td><strong>drx-ActiveTime</strong>&lt;br&gt; Indicates the desired active time that the E-UTRAN is recommended to configure. Value in number of subframes. Value sf20 corresponds to 20 subframes, sf30 corresponds to 30 subframes and so on.</td>
</tr>
<tr>
<td><strong>drx-CycleLength</strong>&lt;br&gt; Indicates the desired DRX cycle length that the E-UTRAN is recommended to configure. Value in number of subframes. Value sf40 corresponds to 40 subframes, sf64 corresponds to 64 subframes and so on.</td>
</tr>
</tbody>
</table>
| **drx-Offset**<br> Indicates the desired DRX starting offset that the E-UTRAN is recommended to configure. The UE shall set the value of drx-Offset smaller than the value of drx-CycleLength. The starting frame and subframe satisfy the relation: 
\[
\text{drx-Offset} = \left(\frac{\text{SFN} \times 10 + \text{subframe number}}{\text{drx-CycleLength}}\right) \mod \text{drx-CycleLength}
\] |
| **hardwareSharingProblem**<br> Indicates whether the UE has hardware sharing problems that the UE cannot solve by itself. The field is present (i.e. value true), if the UE has such hardware sharing problems. Otherwise the field is absent. |
| **idc-SubframePatternList**<br> A list of one or more subframe patterns indicating which HARQ process E-UTRAN is requested to abstain from using. Value 0 indicates that E-UTRAN is requested to abstain from using the subframe. For FDD, the radio frame in which the pattern starts (i.e. the radio frame in which the first/lefmost bit of the subframePatternFDD corresponds to subframe #0) occurs when SFN mod 2 = 0. For TDD, the first/lefmost bit corresponds to the subframe #0 of the radio frame satisfying SFN mod x = 0, where x is the size of the bit string divided by 10. The UE shall indicate a subframe pattern that follows HARQ time line, as specified in TS 36.213 [23], i.e, if a subframe is set to 1 in the subframe pattern, also the corresponding subframes carrying the potential UL grant [23, 8.0], the UL HARQ retransmission [23, 8.0] and the DL/UL HARQ feedback [23, 7.3, 8.3 and 9.1.2] shall be set to 1. |
| **interferenceDirection**<br> Indicates the direction of IDC interference. Value eutra indicates that only E-UTRA is victim of IDC interference, value other indicates that only another radio is victim of IDC interference and value both indicates that both E-UTRA and another radio are victims of IDC interference. The other radio refers to either the ISM radio or GNSS (see 3GPP TR 36.816 [63]). |
| **victimSystemType**<br> Indicate the list of victim system types to which IDC interference is caused from E-UTRA when configured with UL CA. Value gps, glonass, bds and galileo indicates the type of GNSS. Value wlan indicates WLAN and value bluetooth indicates Bluetooth. |

---

**InterFreqRSTDMeasurementIndication**

The **InterFreqRSTDMeasurementIndication** message is used to indicate that the UE is going to either start or stop OTDOA inter-frequency RSTD measurement which requires measurement gaps as specified in TS 36.133 [16, 8.1.2.6]. The **InterFreqRSTDMeasurementIndication** message is also used to indicate to the network that the UE is going to start/stop OTDOA intra-frequency RSTD measurements which require measurement gaps.

- Signalling radio bearer: SRB1
- RLC-SAP: AM
- Logical channel: DCCH
- Direction: UE to E-UTRAN

**InterFreqRSTDMeasurementIndication message**

```asn1
InterFreqRSTDMeasurementIndication-r10 ::= SEQUENCE {
  criticalExtensions CHOICE {
    cl CHOICE {
      InterFreqRSTDMeasurementIndication-r10 InterFreqRSTDMeasurementIndication-r10-IEs,
      spare3 NULL, spare2 NULL, spare1 NULL
    }
  }
}
```
InterFreqRSTDMeasurementIndication field descriptions

carrierFreq
The EARFCN value of the carrier received from upper layers for which the UE needs to perform the inter-frequency RSTD measurements. If the UE includes carrierFreq-v1090, it shall set carrierFreq-r10 to maxEARFCN. In case the UE starts intra-frequency RSTD measurements the carrierFreq indicates the carrier frequency of the serving cell.

measPRS-Offset
Indicates the requested gap offset for performing inter-frequency or intra-frequency RSTD measurements. It is the smallest subframe offset from the beginning of subframe 0 of SFN=0 of the serving cell of the requested gap for measuring PRS positioning occasions in the carrier frequency carrierFreq for which the UE needs to perform the inter-frequency or intra-frequency RSTD measurements. The PRS positioning occasion information is received from upper layers. The value of measPRS-Offset is obtained by mapping the starting subframe of the PRS positioning occasion in the measured cell onto the corresponding subframe in the serving cell and is calculated as the serving cell's number of subframes from SFN=0 mod 40.

The UE shall take into account any additional time required by the UE to start PRS measurements on the other carrier when it does this mapping for determining the measPRS-Offset.

NOTE: Figure 6.2.2-1 illustrates the measPRS-Offset field.

rstd-InterFreqIndication
Indicates the inter-frequency or intra-frequency RSTD measurement action, i.e. the UE is going to start or stop inter-frequency or intra-frequency RSTD measurement.
The \textit{LoggedMeasurementConfiguration} message is used by E-UTRAN to configure the UE to perform logging of measurement results while in RRC\_IDLE or to perform logging of measurement results for MBSFN while in both RRC\_IDLE and RRC\_CONNECTED. It is used to transfer the logged measurement configuration for network performance optimisation, see TS 37.320 [60].

\end{verbatim}
LoggedMeasurementConfiguration field descriptions

absoluteTimeInfo
Indicates the absolute time in the current cell.

areaConfiguration
Used to restrict the area in which the UE performs measurement logging to cells broadcasting either one of the included cell identities or one of the included tracking area codes/identities.

plmn-IdentityList
Indicates a set of PLMNs defining when the UE performs measurement logging as well as the associated status indication and information retrieval i.e. the UE performs these actions when the RPLMN is part of this set of PLMNs.

targetMBSFN-AreaList
Used to indicate logging of MBSFN measurements and further restrict the area and frequencies for which the UE performs measurement logging for MBSFN. If both MBSFN area id and carrier frequency are present, a specific MBSFN area is indicated. If only carrier frequency is present, all MBSFN areas on that carrier frequency are indicated. If there is no entry in the list, any MBSFN area is indicated.

tce-Id
Parameter Trace Collection Entity Id: See TS 32.422 [58].

traceRecordingSessionRef
Parameter Trace Recording Session Reference: See TS 32.422 [58].

}

--- ASN1STOP

MasterInformationBlock field descriptions

dl-Bandwidth
Parameter: transmission bandwidth configuration, NRE in downlink, see TS 36.101 [42, table 5.6-1]. n6 corresponds to 6 resource blocks, n15 to 15 resource blocks and so on.

phich-Config
Specifies the PHICH configuration. If the UE is a BL UE or UE in CE, it shall ignore this field.

schedulingInfoSIB1-BR
This field contains an index to a table that defines SystemInformationBlockType1-BR scheduling information. The table is specified in TS 36.213 [23, Table 7.1.6-1 and Table 7.1.7.2.7-1]. Value 0 means that SystemInformationBlockType1-BR is not scheduled.

systemFrameNumber
Defines the 8 most significant bits of the SFN. As indicated in TS 36.211 [21, 6.6.1], the 2 least significant bits of the SFN are acquired implicitly in the P-BCH decoding, i.e. timing of 40ms P-BCH TTI indicates 2 least significant bits (within 40ms P-BCH TTI, the first radio frame: 00, the second radio frame: 01, the third radio frame: 10, the last radio frame: 11). One value applies for all serving cells of a Cell Group (i.e. MCG or SCG). The associated functionality is common (i.e. not performed independently for each cell).
The **MasterInformationBlock-MBMS** includes the system information transmitted on BCH.

**MasterInformationBlock-MBMS**

```asn1
MasterInformationBlock-MBMS-r14 ::= SEQUENCE {
    dl-Bandwidth-MBMS-r14 ENUMERATED {
        n6, n15, n25, n50, n75, n100},
    systemFrameNumber-r14 BIT STRING (SIZE (6)),
    additionalNonMBSFSFNSubframes-r14 INTEGER (0..3),
    spare BIT STRING (SIZE (13))
}
```

---

**MasterInformationBlock-MBMS field descriptions**

- **additionalNonMBSFSFNSubframes**
  Configures additional non-MBSFN subframes where *SystemInformationBlockType1-MBMS* and *SystemInformation-MBMS* may be transmitted. Value 0, 1, 2, 3 mean zero, one, two, three additional non-MBSFN subframes are configured after each subframe which has PBCH.

- **dl-Bandwidth-MBMS**
  Parameter: transmission bandwidth configuration, NRB in downlink, see TS 36.101 [42, table 5.6-1]. n6 corresponds to 6 resource blocks, n15 to 15 resource blocks and so on.

- **systemFrameNumber**
  Defines the 6 most significant bits of the SFN of the MBMS-dedicated cell. As indicated in TS 36.211 [21, 6.6.1], the 4 least significant bits of the SFN are acquired implicitly in the P-BCH decoding, i.e. timing of 160ms P-BCH TTI indicates 4 least significant bits (within 40ms P-BCH TTI, the first radio frame: 00, the fourth radio frame: 01, the eighth radio frame: 10, the last radio frame: 11).

---

**MBMSCountingRequest**

The **MBMSCountingRequest** message is used by E-UTRAN to count the UEs that are receiving or interested to receive specific MBMS services.

Signalling radio bearer: N/A

RLC-SAP: UM

Logical channel: MCCH

Direction: E-UTRAN to UE

---

**MBMSCountingRequest message**

```asn1
MBMSCountingRequest-r10 ::= SEQUENCE {
    countingRequestList-r10 CountingRequestList-r10, OPTIONAL,
    lateNonCriticalExtension OCTET STRING OPTIONAL,
    nonCriticalExtension SEQUENCE () OPTIONAL
}
```

```asn1
CountingRequestList-r10 ::= SEQUENCE (SIZE (1..maxServiceCount)) OF CountingRequestInfo-r10
```

```asn1
CountingRequestInfo-r10 ::= SEQUENCE {
    tmgi-r10 TMGI-r9,
    ...
}
```
-- MBMSCountingResponse

The MBMSCountingResponse message is used by the UE to respond to an MBMSCountingRequest message.

Signalling radio bearer: SRB1

RLC-SAP: AM

Logical channel: DCCH

Direction: UE to E-UTRAN

---

MBMSCountingResponse message

```asn1
MBMSCountingResponse-r10 ::=   SEQUENCE {
   criticalExtensions     CHOICE {
      cl       CHOICE {
         countingResponse-r10    MBMSCountingResponse-r10-IEs,
         spare3 NULL, spare2 NULL, spare1 NULL
      },
      criticalExtensionsFuture   SEQUENCE {}
   }
}
```

MBMSCountingResponse-r10-IEs ::= SEQUENCE {
   mbsfn-AreaIndex-r10    INTEGER (0..maxMBSFN-Area-1)       OPTIONAL,
   countingResponseList-r10  CountingResponseList-r10   OPTIONAL,

   nonCriticalExtension   SEQUENCE {}       OPTIONAL
}

CountingResponseList-r10 ::=  SEQUENCE (SIZE (1..maxServiceCount)) OF CountingResponseInfo-r10

CountingResponseInfo-r10 ::=  SEQUENCE {
   countingResponseService-r10 INTEGER (0..maxServiceCount-1),
   ...
}

---

MBMSCountingResponse field descriptions

**countingResponseList**
List of MBMS services which the UE is receiving or interested to receive. Value 0 for field countingResponseService corresponds to the first entry in countingRequestList within MBMSCountingRequest, value 1 corresponds to the second entry in this list and so on.

**mbsfn-AreaIndex**
Index of the entry in field mbsfn-AreaInfoList within SystemInformationBlockType13. Value 0 corresponds to the first entry in mbsfn-AreaInfoList within SystemInformationBlockType13, value 1 corresponds to the second entry in this list and so on.
The **MBMSInterestIndication** message is used to inform E-UTRAN that the UE is receiving/interested to receive or no longer receiving/interested to receive MBMS via an MRB or SC-MRB.

**Signalling radio bearer:** SRB1

**RLC-SAP:** AM

**Logical channel:** DCCH

**Direction:** UE to E-UTRAN

### MBMSInterestIndication message

```asn1
-- ASN1START
MBMSInterestIndication-r11 ::= SEQUENCE {
  criticalExtensions CHOICE {
    c1 CHOICE {
      interestIndication-r11 MBMSInterestIndication-r11-IEs,
      spare3 NULL, spare2 NULL, spare1 NULL
    },
    criticalExtensionsFuture SEQUENCE {}
  }
}
MBMSInterestIndication-r11-IEs ::= SEQUENCE {
  mbms-FreqList-r11 CarrierFreqListMBMS-r11 OPTIONAL,
  mbms-Priority-r11 ENUMERATED {true} OPTIONAL,
  lateNonCriticalExtension OCTET STRING OPTIONAL,
  nonCriticalExtension MBMSInterestIndication-v1310-IEs OPTIONAL
}
MBMSInterestIndication-v1310-IEs ::= SEQUENCE {
  mbms-Services-r13 MBMS-ServiceList-r13 OPTIONAL,
  nonCriticalExtension SEQUENCE {} OPTIONAL
}
-- ASN1STOP
```

### MBMSInterestIndication field descriptions

- **mbms-FreqList**
  List of MBMS frequencies on which the UE is receiving or interested to receive MBMS via an MRB or SC-MRB.

- **mbms-Priority**
  Indicates whether the UE prioritises MBMS reception above unicast reception. The field is present (i.e. value **true**), if the UE prioritises reception of all listed MBMS frequencies above reception of any of the unicast bearers. Otherwise the field is absent.

---

**MBSFNAreaConfiguration**

The **MBSFNAreaConfiguration** message contains the MBMS control information applicable for an MBSFN area. For each MBSFN area included in **SystemInformationBlockType13** E-UTRAN configures an MCCH (i.e. the MCCH identifies the MBSFN area) and signals the **MBSFNAreaConfiguration** message.

**Signalling radio bearer:** N/A

**RLC-SAP:** UM

**Logical channel:** MCCH

**Direction:** E-UTRAN to UE

### MBSFNAreaConfiguration message

```asn1
-- ASN1START
MBSFNAreaConfiguration-r9 ::= SEQUENCE {
}
-- ASN1STOP
```
MBSFNAreaConfiguration field descriptions

**commonSF-Alloc**
Indicates the subframes allocated to the MBSFN area. E-UTRAN always sets this field to cover at least the subframes configured by SystemInformationBlockType13 for this MCCH, regardless of whether any MBMS sessions are ongoing.

**commonSF-AllocPeriod**
Indicates the period during which resources corresponding with field commonSF-Alloc are divided between the (P)MCH that are configured for this MBSFN area. The subframe allocation patterns, as defined by commonSF-Alloc, repeat continuously during this period. Value rf4 corresponds to 4 radio frames, rf8 corresponds to 8 radio frames and so on. The commonSF-AllocPeriod starts in the radio frames for which: SFN mod commonSF-AllocPeriod = 0.

EUTRAN may include pmch-InfoListExt even if pmch-InfoList does not include maxPMCH-PerMBSFN entries. EUTRAN configures at most maxPMCH-PerMBSFN entries i.e. across pmch-InfoList and pmch-InfoListExt.

---

**MeasurementReport**

The MeasurementReport message is used for the indication of measurement results.

Signalling radio bearer: SRB1

RLC-SAP: AM

Logical channel: DCCH

Direction: UE to E-UTRAN

MeasurementReport message

```asn1
MeasurementReport ::= SEQUENCE {
  criticalExtensions     CHOICE {

**MobilityFromEUTRACommand field descriptions**

<table>
<thead>
<tr>
<th>Field Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>bandIndicator</td>
<td>Indicates how to interpret the ARFCN of the target GERAN cell.</td>
</tr>
<tr>
<td>carrierFreq</td>
<td>contains the carrier frequency of the target GERAN cell.</td>
</tr>
<tr>
<td>cs-FallbackIndicator</td>
<td>Value true indicates that the CS fallback procedure to UTRAN or GERAN is triggered.</td>
</tr>
<tr>
<td>messageContCDMA2000-1XRTT</td>
<td>This field contains a message specified in CDMA2000 1xRTT standard that either tells the UE to move to specific 1xRTT target cell(s) or indicates a failure to allocate resources for the enhanced CS fallback to CDMA2000 1xRTT.</td>
</tr>
<tr>
<td>messageContCDMA2000-HRPD</td>
<td>This field contains a message specified in CDMA2000 HRPD standard that either tells the UE to move to specific HRPD target cell(s) or indicates a failure to allocate resources for the handover to CDMA2000 HRPD.</td>
</tr>
<tr>
<td>mobilityCDMA2000-HRPD</td>
<td>This field indicates whether or not mobility to CDMA2000 HRPD is to be performed by the UE and it also indicates the type of mobility to CDMA2000 HRPD that is to be performed; If this field is not present the UE shall perform only the enhanced CS fallback to CDMA2000 1xRTT.</td>
</tr>
<tr>
<td>nas-SecurityParamFromEUTRA</td>
<td>Used to deliver the key synchronisation and Key freshness for the E-UTRAN to UTRAN handovers as specified in TS 33.401. The content of the parameter is defined in TS24.301.</td>
</tr>
<tr>
<td>networkControlOrder</td>
<td>Parameter NETWORK_CONTROL_ORDER in TS 44.060 [36].</td>
</tr>
<tr>
<td>purpose</td>
<td>Indicates which type of mobility procedure the UE is requested to perform. EUTRAN always applies value e-CSFB in case of enhanced CS fallback to CDMA2000 (e.g. also when that procedure results in handover to CDMA2000 1xRTT only, in handover to CDMA2000 HRPD only or in redirection to CDMA2000 HRPD only).</td>
</tr>
<tr>
<td>redirectCarrierCDMA2000-HRPD</td>
<td>The redirectCarrierCDMA2000-HRPD indicates a CDMA2000 carrier frequency and is used to redirect the UE to a HRPD carrier frequency.</td>
</tr>
<tr>
<td>SystemInfoListGERAN</td>
<td>If purpose = CellChangeOrder and if the field is not present, the UE has to acquire SI/PSI from the GERAN cell.</td>
</tr>
<tr>
<td>t304</td>
<td>Timer T304 as described in section 7.3. Value ms100 corresponds with 100 ms, ms200 corresponds with 200 ms and so on. EUTRAN includes extended value ms10000-v1310 only when UE supports CE.</td>
</tr>
<tr>
<td>targetRAT-Type</td>
<td>Indicates the target RAT type.</td>
</tr>
<tr>
<td>targetRAT-MessageContainer</td>
<td>The field contains a message specified in another standard, as indicated by the targetRAT-Type, and carries information about the target cell identifier(s) and radio parameters relevant for the target radio access technology.</td>
</tr>
<tr>
<td>NOTE 1:</td>
<td>A complete message is included, as specified in the other standard.</td>
</tr>
</tbody>
</table>

### Conditional presence Explanation

<table>
<thead>
<tr>
<th>Field Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>concHO</td>
<td>The field is mandatory present if the mobilityCDMA2000-HRPD is set to “handover”; otherwise the field is optional present, need ON.</td>
</tr>
<tr>
<td>concRedir</td>
<td>The field is mandatory present if the mobilityCDMA2000-HRPD is set to “redirection”; otherwise the field is not present.</td>
</tr>
<tr>
<td>GERAN</td>
<td>The field should be present if the purpose is set to “handover” and the targetRAT-Type is set to “geran”; otherwise the field is not present.</td>
</tr>
<tr>
<td>PSHO</td>
<td>The field is mandatory present in case of PS handover toward GERAN; otherwise the field is optionally present, but not used by the UE.</td>
</tr>
<tr>
<td>UTRAGERAN</td>
<td>The field is mandatory present if the targetRAT-Type is set to “utra” or “geran”; otherwise the field is not present.</td>
</tr>
</tbody>
</table>

**NOTE 1:** The correspondence between the value of the targetRAT-Type, the standard to apply and the message contained within the targetRAT-MessageContainer is shown in the table below:
-- Paging

The Paging message is used for the notification of one or more UEs.

Signalling radio bearer: N/A

RLC-SAP: TM

PagingUE-Identity ::= CHOICE {
  s-TMSI S-TMSI,
  imsi IMSI,
  ...
}
```
**Paging field descriptions**

**cmas-Indication**
If present: indication of a CMAS notification.

**cn-Domain**
Indicates the origin of paging.

**eab-ParamModification**
If present: indication of an EAB parameters (SIB14) modification.

**etws-Indication**
If present: indication of an ETWS primary notification and/or ETWS secondary notification.

**imsi**
The International Mobile Subscriber Identity, a globally unique permanent subscriber identity, see TS 23.003 [27]. The first element contains the first IMSI digit, the second element contains the second IMSI digit and so on.

**redistributionIndication**
If present: indication to trigger E-UTRAN inter-frequency redistribution procedure as specified in TS 36.304 [4, 5.2.4.10]

**systemInfoModification**
If present: indication of a BCCH modification other than SIB10, SIB11, SIB12 and SIB14. This indication does not apply to UEs using eDRX cycle longer than the BCCH modification period.

**systemInfoModification-eDRX**
If present: indication of a BCCH modification other than SIB10, SIB11, SIB12 and SIB14. This indication applies only to UEs using eDRX cycle longer than the BCCH modification period.

**ue-Identity**
Provides the NAS identity of the UE that is being paged.

---

**ProximityIndication**

The *ProximityIndication* message is used to indicate that the UE is entering or leaving the proximity of one or more CSG member cell(s).

- Signalling radio bearer: SRB1
- RLC-SAP: AM
- Logical channel: DCCH
- Direction: UE to E-UTRAN

**ProximityIndication message**

```

}

-- ASN1STOP
```
ProximityIndication-v930-IEs ::= SEQUENCE {
    lateNonCriticalExtension OCTET STRING OPTIONAL,
    nonCriticalExtension SEQUENCE {} OPTIONAL
}

-- ASN1STOP

ProximityIndication field descriptions

*carrierFreq*
Indicates the RAT and frequency of the CSG member cell(s), for which the proximity indication is sent. For E-UTRA and UTRA frequencies, the UE shall set the ARFCN according to a band it previously considered suitable for accessing (one of) the CSG member cell(s), for which the proximity indication is sent.

*type*
Used to indicate whether the UE is entering or leaving the proximity of CSG member cell(s).

---

**RNReconfiguration**

The *RNReconfiguration* is a command to modify the RN subframe configuration and/or to convey changed system information.

Signalling radio bearer: SRB1
RLC-SAP: AM
Logical channel: DCCH
Direction: E-UTRAN to RN

**RNReconfiguration message**

-- ASN1START

|
**RRConnectionReconfiguration field descriptions**

**dedicatedInfoNASList**
This field is used to transfer UE specific NAS layer information between the network and the UE. The RRC layer is transparent for each PDU in the list.

**fullConfig**
Indicates the full configuration option is applicable for the RRC Connection Reconfiguration message.

**keyChangeIndicator**
true is used only in an intra-cell handover when a K_{meNB} key is derived from a K_{NASME} key taken into use through the latest successful NAS SMC procedure, as described in TS 33.401 [32] for K_{meNB} re-keying. false is used in an intra-LTE handover when the new K_{meNB} key is obtained from the current K_{meNB} key or from the NH as described in TS 33.401 [32].

**lwa-Configuration**
This field is used to provide parameters for LWA configuration. E-UTRAN does not simultaneously configure LWA with DC, LWIP or RCLWI for a UE.

**lwip-Configuration**
This field is used to provide parameters for LWIP configuration. E-UTRAN does not simultaneously configure LWIP with DC, LWA or RCLWI for a UE.

**nas-securityParamToEUTRA**
This field is used to transfer UE specific NAS layer information between the network and the UE. The RRC layer is transparent for this field, although it affects activation of AS- security after inter-RAT handover to E-UTRA. The content is defined in TS 24.301.

**networkControlledSyncTx**
This field indicates whether the UE shall transmit synchronisation information (i.e. become synchronisation source). Value On indicates the UE to transmit synchronisation information while value Off indicates the UE to not transmit such information.

**nextHopChainingCount**
Parameter NCC: See TS 33.401 [32]

**perCC-GapIndicationRequest**
Indicates that UE shall include perCC-GapIndicationList and numFreqEffective in the RRConnectionReconfigurationComplete message. numFreqEffectiveReduced may also be included if frequencies are configured for reduced measurement performance.

**p-MeNB**
Indicates the guaranteed power for the MeNB, as specified in TS 36.213 [23]. The value N corresponds to N-1 in TS 36.213 [23].

**powerControlMode**
Indicates the power control mode used in DC. Value 1 corresponds to DC power control mode 1 and value 2 indicates DC power control mode 2, as specified in TS 36.213 [23].

**p-SeNB**
Indicates the guaranteed power for the SeNB as specified in TS 36.213 [23, Table 5.1.4.2-1]. The value N corresponds to N-1 in TS 36.213 [23].

**rclwi-Configuration**
WLAN traffic steering command as specified in 5.6.16.2. E-UTRAN does not simultaneously configure RCLWI with DC, LWA or LWIP for a UE.

**sCellIndex**
In case of DC, the SCeLLIndex is unique within the scope of the UE i.e. an SCG cell can not use the same value as used for an MCG cell. For pSCellToAddMod, if sCellIndex-r13 is present the UE shall ignore sCellIndex-r12.

**sCellIndex-r13** in sCellToAddModListExt-r13 shall not have same values as sCellIndex-r10 in sCellToAddModList-r10.

**sCellToAddModList, sCellToAddModListExt**
Indicates the SCell to be added or modified. Field sCellToAddModList is used to add the first 4 SCells for a UE with sCellIndex-r10 while sCellToAddModListExt is used to add the rest. If E-UTRAN includes SCellToAddModListExt-v1430 it includes the same number of entries, and listed in the same order, as in SCellToAddModListExt-r13. If E-UTRAN includes SCellToAddModList-v1000 it includes the same number of entries, and listed in the same order, as in SCellToAddModList-v1000. If E-UTRAN includes SCellToAddModListExt-v1370 it includes the same number of entries, and listed in the same order, as in SCellToAddModListExt-v1370. If E-UTRAN includes SCellToAddModListExt-r13.

**sCellToAddModListSCG, sCellToAddModListSCG-Ext**
Indicates the SCG cell to be added or modified. The field is used for SCG cells other than the PSCell (which is added/modified by field pSCellToAddMod). Field sCellToAddModListSCG is used to add the first 4 SCG cells for a UE with sCellIndex-r10 while sCellToAddModListSCG-Ext is used to add the rest. If E-UTRAN includes sCellToAddModListSCG-v1000 it includes the same number of entries, and listed in the same order, as in sCellToAddModListSCG-r12. If E-UTRAN includes sCellToAddModListSCG-Ext-v1370 it includes the same number of entries, and listed in the same order, as in sCellToAddModListSCG-Ext-r13.

**sCellToReleaseListSCG, sCellToReleaseListSCG-Ext**
Indicates the SCG cell to be released. The field is also used to release the PSCell e.g. upon change of PCell, upon system information change for the PSCell.

**scg-Counter**
A counter used upon initial configuration of SCG security as well as upon refresh of S-K_{meNB}. E-UTRAN includes the field upon SCG change when one or more SCG DRBs are configured. Otherwise E-UTRAN does not include the field.
### RRCConnectionReconfiguration field descriptions

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>sl-V2X-ConfigDedicated</td>
<td>Indicates sidelink configuration for non-P2X related V2X sidelink communication as well as P2X related V2X sidelink communication.</td>
</tr>
<tr>
<td>srs-SwitchFromServCellIndex</td>
<td>Indicates the serving cell whose UL transmission may be interrupted during SRS transmission on a PUSCH-less cell. During SRS transmission on a PUSCH-less cell, the UE may temporarily suspend the UL transmission on a serving cell. The PUSCH-less cell is always a TDD cell but the serving cell with PUSCH may be either a FDD or TDD cell.</td>
</tr>
<tr>
<td>systemInformationBlockType1Dedicated</td>
<td>This field is used to transfer SystemInformationBlockType1 or SystemInformationBlockType1-BR to the UE.</td>

RRCConnectionReconfigurationComplete field descriptions

numFreqEffective
This field is used to indicate the number of effective frequencies that a UE measures in series according to TS 36.133 [16]. Simultaneous measurement in parallel on multiple frequencies can be equivalent to a single effective frequency. The frequencies configured for reduced measurement performance should not be included.

numFreqEffectiveReduced
This field is used to indicate the number of effective frequencies that a UE measures in series according to TS 36.133 [16] for frequencies configured for reduced measurement performance. Simultaneous measurement in parallel on multiple frequencies can be equivalent to a single effective frequency.

perCC-GapIndicationList
This field is used to indicate per CC measurement gap preference by the UE.

```
RRCConnectionReject field descriptions

deprioritisationReq
Indicates whether the current frequency or RAT is to be de-prioritised. The UE shall be able to store a deprioritisation request for up to 8 frequencies (applicable when receiving another frequency specific deprioritisation request before T325 expiry).

deprioritisationTimer
Indicates the period for which either the current carrier frequency or E-UTRA is deprioritised. Value minN corresponds to N minutes.

extendedWaitTime
Value in seconds for the wait time for Delay Tolerant access requests.

rrc-SuspendIndication
If present, this field indicates that the UE should remain suspended and not release its stored context.

waitTime
Wait time value in seconds.

RRCConnectionRelease field descriptions

carrierFreq or bandClass
The carrier frequency (UTRA and E-UTRA) and band class (HRPD and 1xRTT) for which the associated cellReselectionPriority is applied.

carrierFreqs
The list of GERAN carrier frequencies organised into one group of GERAN carrier frequencies.

cellInfoList
Used to provide system information of one or more cells on the redirected inter-RAT carrier frequency. The system information can be used if, upon redirection, the UE selects an inter-RAT cell indicated by the physCellId and carrierFreq (GERAN and UTRA TDD) or by the physCellId (other RATs). The choice shall match the redirectedCarrierInfo. In particular, E-UTRAN only applies valueutra-TDD-r10 in case redirectedCarrierInfo is set toutra-TDD-r10.

extendedWaitTime
Value in seconds for the wait time for Delay Tolerant access requests.

freqPriorityListX
Provides a cell reselection priority for each frequency, by means of separate lists for each RAT (including E-UTRA). The UE shall be able to store at least 3 occurrences of FreqsPriorityGERAN. If E-UTRAN includes freqPriorityListEUTRA-v80 and/or freqPriorityListEUTRA-v1310 it includes the same number of entries, and listed in the same order, as in freqPriorityListEUTRA (i.e. without suffix). Field freqPriorityListExt includes additional neighbouring inter-frequencies, i.e. extending the size of the inter-frequency carrier list using the general principles specified in 5.1.2. EUTRAN only includes freqPriorityListExtEUTRA if freqPriorityListEUTRA includes maxFreq entries. If E-UTRAN includes freqPriorityListExtEUTRA-v1310 it includes the same number of entries, and listed in the same order, as in freqPriorityListExtEUTRA-r12.

idleModeMobilityControlInfo
Provides dedicated cell reselection priorities. Used for cell reselection as specified in TS 36.304 [4]. For E-UTRA and UTRA frequencies, a UE that supports multi-band cells for the concerned RAT considers the dedicated priorities to be common for all overlapping bands (i.e. regardless of the ARFCN that is used).

redirectedCarrierInfo
The redirectedCarrierInfo indicates a carrier frequency (downlink for FDD) and is used to redirect the UE to an E-UTRA or an inter-RAT carrier frequency, by means of the cell selection upon leaving RRC_CONNECTED as specified in TS 36.304 [4].

releaseCause
The releaseCause is used to indicate the reason for releasing the RRC Connection. The cause value cs-FallbackHighPriority is only applicable when redirectedCarrierInfo is present with the value set toutra-FDD,utra-TDD orutra-TDD-r10. E-UTRAN should not set the releaseCause to loadBalancingTAURequired or to cs-FallbackHighPriority if the extendedWaitTime is present.

systemInformation
Container for system information of the GERAN cell i.e. one or more System Information (SI) messages as defined in TS 44.018 [45, table 9.1.1].

T320
Timer T320 as described in section 7.3. Value minN corresponds to N minutes.

utra-BCCH-Container
Contains System Information Container message as defined in TS 25.331 [19].

<table>

RRCConnectionRequest

The RRCConnectionRequest message is used to request the establishment of an RRC connection.
Signalling radio bearer: SRB0
RLC-SAP: TM
Logical channel: CCCH
Direction: UE to E-UTRAN

---

**RRConnectionRequest message**

```
-- ASN1START
RRConnectionRequest ::= SEQUENCE {
  criticalExtensions     CHOICE {
    rrcConnectionRequest-r8    RRCConnectionRequest-r8-IEs,
    criticalExtensionsFuture   SEQUENCE {}
  }
}
RRConnectionRequest-r8-IEs ::=  SEQUENCE {
  ue-Identity       InitialUE-Identity,
  establishmentCause     EstablishmentCause,
  spare        BIT STRING (SIZE (1))
}
InitialUE-Identity ::=    CHOICE {
  s-TMSI        S-TMSI,
  randomValue       BIT STRING (SIZE (40))
}
EstablishmentCause ::=    ENUMERATED {
  emergency, highPriorityAccess, mt-Access, mo-Signalling,
  mo-Data, delayTolerantAccess-v1020, mo-VoiceCall-v1280,
  spare1
}
-- ASN1STOP
```

**RRConnectionRequest field descriptions**

- **establishmentCause**
  Provides the establishment cause for the RRC connection request as provided by the upper layers. W.r.t. the cause value names: highPriorityAccess concerns AC11..AC15, ‘mt’ stands for ‘Mobile Terminating’ and ‘mo’ for ‘Mobile Originating. eNB is not expected to reject a **RRConnectionRequest** due to unknown cause value being used by the UE.

- **randomValue**
  Integer value in the range 0 to $2^{40} - 1$.

- **ue-Identity**
  UE identity included to facilitate contention resolution by lower layers.

---

**RRConnectionResume**

The **RRConnectionResume** message is used to resume the suspended RRC connection.

Signalling radio bearer: SRB1
RLC-SAP: AM
Logical channel: DCCH
Direction: E-UTRAN to UE

---

**RRConnectionResume message**

```
-- ASN1START
RRConnectionResume-r13 ::=  SEQUENCE {

}

-- ASN1STOP

**RRCConnectionResume field descriptions**

**drb-ContinueROHC**

This field indicates whether to continue or reset the header compression protocol context for the DRBs configured with the header compression protocol. Presence of the field indicates that the header compression protocol context continues while absence indicates that the header compression protocol context is reset.

---

**RRCConnectionResumeComplete**

The **RRCConnectionResumeComplete** message is used to confirm the successful completion of an RRC connection resumption.

}

-- ASN1STOP
**attachWithoutPDN-Connectivity**
This field is used to indicate that the UE performs an Attach without PDN connectivity procedure, as indicated by the upper layers and specified in TS 24.301 [35].

**cp-CIoT-EPS-Optimisation**
This field is included when the UE supports the Control plane CIoT EPS Optimisation, as indicated by the upper layers, see TS 24.301 [35].

**ce-ModeB**
Indicates whether the UE supports operation in CE mode B, as specified in TS 36.306 [5].

**dcn-ID**
The Dedicated Core Network Identity, see TS 23.401 [41].

**gummeli-Type**
This field is used to indicate whether the GUMMEI included is native (assigned by EPC) or mapped (from 2G/3G identifiers).

**mmegi**
Provides the Group Identity of the registered MME within the PLMN, as provided by upper layers, see TS 23.003 [27].

**mobilityState**
This field indicates the UE mobility state (as defined in TS 36.304 [4, 5.2.4.3]) just prior to UE going into RRC_CONNECTED state. The UE indicates the value of medium and high when being in Medium-mobility and High-mobility states respectively. Otherwise the UE indicates the value normal.

**registeredMME**
This field is used to transfer the GUMMEI of the MME where the UE is registered, as provided by upper layers.

**rn-SubframeConfigReq**
If present, this field indicates that the connection establishment is for an RN and whether a subframe configuration is requested or not.

**selectedPLMN-Identity**
Index of the PLMN selected by the UE from the plmn-IdentityList fields included in SIB1. 1 if the 1st PLMN is selected from the 1st plmn-IdentityList included in SIB1, 2 if the 2nd PLMN is selected from the same plmn-IdentityList, or when no more PLMN are present within the same plmn-IdentityList, then the PLMN listed 1st in the subsequent plmn-IdentityList within the same SIB1 and so on.

**up-CIoT-EPS-Optimisation**
This field is included when the UE supports the User plane CIoT EPS Optimisation, as indicated by the upper layers, see TS 24.301 [35].

**ue-CE-NeedULGaps**
Indicates whether the UE needs uplink gaps during continuous uplink transmission in FDD as specified in TS 36.211 [21] and TS 36.306 [5].

---

### SCGFailureInformation

The SCGFailureInformation message is used to provide information regarding failures detected by the UE.

The `SCPTMConfiguration-BR` message contains the control information applicable for MBMS services transmitted via SC-MRB for BL UEs or UEs in CE.

Signalling radio bearer: N/A

RLC-SAP: UM

Logical channel: SC-MCCH

Direction: E-UTRAN to UE

#### SCPTMConfiguration-BR message

```asn1
SCPTMConfiguration-BR-r14 ::= SEQUENCE {
  sc-mtch-InfoList-r14   SC-MTCH-InfoList-BR-r14,  
  scptm-NeighbourCellList-r14  SCPTM-NeighbourCellList-r13   OPTIONAL, -- Need OP 
  p-b-r14       INTEGER (0..3)      OPTIONAL, -- Need OR 
  lateNonCriticalExtension  OCTET STRING      OPTIONAL, 
  nonCriticalExtension   SEQUENCE {}       OPTIONAL
}
```

### SCPTMConfiguration-BR field descriptions

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>p-b</strong></td>
<td>Parameter: ( P_g ) for the PDSCH scrambled by G-RNTI, see TS 36.213 [23, Table 5.2-1].</td>
</tr>
<tr>
<td><strong>sc-mtch-InfoList</strong></td>
<td>Provides the configuration of each SC-MTCH in the current cell for BL UEs or UEs in CE.</td>
</tr>
<tr>
<td><strong>scptm-NeighbourCellList</strong></td>
<td>List of neighbour cells providing MBMS services via SC-MRB. When absent, the BL UE or UE in CE shall assume that MBMS services listed in the <code>SCPTMConfiguration-BR</code> message are not provided via SC-MRB in any neighbour cell.</td>
</tr>
</tbody>
</table>

### SecurityModeCommand

The `SecurityModeCommand` message is used to command the activation of AS security.

Signalling radio bearer: SRB1

RLC-SAP: AM

Logical channel: DCCH

Direction: E-UTRAN to UE

#### SecurityModeCommand message

```asn1
SecurityModeCommand ::=    SEQUENCE {
  rrc-TransactionIdentifier   RRC-TransactionIdentifier, 
  criticalExtensions       CHOICE {
...
```

---

**ETSI**
The **SecurityModeComplete** message is used to confirm the successful completion of a security mode command.

Signalling radio bearer: SRB1

RLC-SAP: AM

Logical channel: DCCH

Direction: UE to E-UTRAN

**SecurityModeComplete message**

```asn1
-- ASN1START
SecurityModeComplete ::= SEQUENCE {
  rrc-TransactionIdentifier   RRC-TransactionIdentifier,
  criticalExtensions     CHOICE {
    securityModeComplete-r8    SecurityModeComplete-r8-IEs,
    criticalExtensionsFuture   SEQUENCE {}
  }
}

SecurityModeComplete-r8-IEs ::= SEQUENCE {
  nonCriticalExtension    SecurityModeComplete-v8a0-IEs  OPTIONAL
}

SecurityModeComplete-v8a0-IEs ::= SEQUENCE {
  lateNonCriticalExtension   OCTET STRING      OPTIONAL,
  nonCriticalExtension    SEQUENCE {}       OPTIONAL
}
  securityAlgorithmConfig     SecurityAlgorithmConfig,
}

SecurityModeConfigSMC ::=     SEQUENCE {
  securityAlgorithmConfig     SecurityAlgorithmConfig,
  ...
}
-- ASN1STOP
```

The **SecurityModeComplete** message is used to confirm the successful completion of a security mode command.

-- ASN1START

```asn1
-- ASN1STOP
```

---

**SecurityModeFailure**

The **SecurityModeFailure** message is used to indicate an unsuccessful completion of a security mode command.
Signalling radio bearer: SRB1
RLC-SAP: AM
Logical channel: DCCH
Direction: UE to E-UTRAN

**SecurityModeFailure message**

```plaintext
-- ASN1START
SecurityModeFailure ::= SEQUENCE {
  rrc-TransactionIdentifier   RRC-TransactionIdentifier,
  criticalExtensions     CHOICE {
    securityModeFailure-r8    SecurityModeFailure-r8-IEs,
    criticalExtensionsFuture   SEQUENCE {}
  }
}
SecurityModeFailure-r8-IEs ::= SEQUENCE {

### SidelinkUEInformation field descriptions

<table>
<thead>
<tr>
<th>Field Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>carrierFreqCommTx</td>
<td>Indicates the index of the frequency on which the UE is interested to transmit V2X sidelink communication. The value 1 corresponds to the frequency of first entry in v2x-InterFreqInfoList broadcast in SIB21, the value 2 corresponds to the frequency of second entry in v2x-InterFreqInfoList broadcast in SIB21 and so on. The value 0 corresponds the PCell's frequency.</td>
</tr>
<tr>
<td>carrierFreqDiscTx</td>
<td>Indicates the frequency by the index of the entry field discInterFreqList within SystemInformationBlockType19. Value 1 corresponds to the first entry in discInterFreqList within SystemInformationBlockType19, value 2 corresponds to the second entry in this list and so on.</td>
</tr>
<tr>
<td>commRxInterestedFreq</td>
<td>Indicates the frequency on which the UE is interested to receive sidelink communication.</td>
</tr>
<tr>
<td>commTxResourceReq</td>
<td>Indicates the frequency on which the UE is interested to transmit non-relay related sidelink communication as well as the one-to-many sidelink communication transmission destination(s) for which the UE requests E-UTRAN to assign dedicated resources. NOTE 1.</td>
</tr>
<tr>
<td>commTxResourceReqRelay</td>
<td>Indicates the relay related one-to-many sidelink communication transmission destination(s) for which the sidelink relay UE requests E-UTRAN to assign dedicated resources.</td>
</tr>
<tr>
<td>commTxResourceReqRelayUC</td>
<td>Indicates the relay related one-to-one sidelink communication transmission destination(s) for which the sidelink relay UE or sidelink remote UE requests E-UTRAN to assign dedicated resources i.e. either contains the unicast destination identity of the sidelink relay UE or of the sidelink remote UE.</td>
</tr>
<tr>
<td>commTxResourceReqUC</td>
<td>Indicates the relay related one-to-one sidelink communication transmission destination(s) for which the UE requests E-UTRAN to assign dedicated resources. NOTE 1.</td>
</tr>
<tr>
<td>destinationInfoList</td>
<td>Indicates the destination(s) for relay or non-relay related one-to-one or one-to-many sidelink communication. For one-to-one sidelink communication the destination is identified by the ProSe UE ID for unicast communication, while for one-to-many the destination it is identified by the ProSe Layer-2 Group ID as specified in TS 23.303 [68].</td>
</tr>
<tr>
<td>discRxInterest</td>
<td>Indicates that the UE is interested to monitor sidelink discovery announcements.</td>
</tr>
<tr>
<td>discSysInfoReportFreqList</td>
<td>Indicates, for one or more frequencies, a list of sidelink discovery related parameters acquired from system information of cells on configured inter-frequency carriers.</td>
</tr>
<tr>
<td>discTxResourceReq</td>
<td>Indicate the number of separate discovery message(s) the UE wants to transmit every discovery period. This field concerns the resources the UE requires every discovery period for transmitting sidelink discovery announcement(s).</td>
</tr>
<tr>
<td>discTxResourceReqAddFreq</td>
<td>Indicates, for any frequencies in addition to the one covered by discTxResourceReq, the number of separate discovery message(s) the UE wants to transmit every discovery period. This field concerns the resources the UE requires every discovery period for transmitting sidelink discovery announcement(s).</td>
</tr>
<tr>
<td>discTxResourceReqPS</td>
<td>Indicates the number of separate PS related discovery message(s) the UE wants to transmit every discovery period. This field concerns the resources the UE requires every discovery period for transmitting PS related sidelink discovery announcement(s).</td>
</tr>
<tr>
<td>p2x-CommTxType</td>
<td>Indicates that the requested transmission resource pool is for P2X related V2X sidelink communication.</td>
</tr>
<tr>
<td>v2x-CommRxInterestedFreqList</td>
<td>Indicates the index(es) of the frequency(ies) on which the UE is interested to receive V2X sidelink communication. The value 1 corresponds to the frequency of first entry in v2x-InterFreqInfoList broadcast in SIB21, the value 2 corresponds to the frequency of second entry in v2x-InterFreqInfoList broadcast in SIB21 and so on. The value 0 corresponds the PCell's frequency.</td>
</tr>
<tr>
<td>v2x-DestinationInfoList</td>
<td>Indicates the destination(s) for V2X sidelink communication.</td>
</tr>
<tr>
<td>v2x-TypeTxSync</td>
<td>Indicates the synchronization reference used by the UE.</td>
</tr>
</tbody>
</table>

**NOTE 1:** When configuring commTxResourceReq, commTxResourceReqUC, commTxResourceReqRelay and commTxResourceReqRelayUC, E-UTRAN configures at most maxSL-Dest-r12 destinations in total (i.e. as included in the four fields together).
SystemInformation

The SystemInformation message is used to convey one or more System Information Blocks. All the SIBs included are transmitted with the same periodicity. SystemInformation-BR and SystemInformation-MBMS use the same structure as SystemInformation.

Signalling radio bearer: N/A

RLC-SAP: TM

Logical channels: BCCH and BR-BCCH

Direction: E-UTRAN to UE

**SystemInformationBlockType1 field descriptions**

<table>
<thead>
<tr>
<th>Field Description</th>
<th>Details</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>bandwithReducedAccessRelatedInfo</strong></td>
<td>Access related information for BL UEs and UEs in CE. NOTE 3.</td>
</tr>
<tr>
<td><strong>category0Allowed</strong></td>
<td>The presence of this field indicates category 0 UEs are allowed to access the cell.</td>
</tr>
<tr>
<td><strong>cellAccessRelatedInfoList</strong></td>
<td>This field contains a list allowing signalling of access related information per PLMN. One PLMN can be included in only one entry of this list. NOTE 4.</td>
</tr>
<tr>
<td><strong>cellBarred</strong></td>
<td>barred means the cell is barred, as defined in TS 36.304 [4].</td>
</tr>
<tr>
<td><strong>cellIdentity</strong></td>
<td>Indicates the cell identity. NOTE 2.</td>
</tr>
<tr>
<td><strong>cellReservedForOperatorUse</strong></td>
<td>As defined in TS 36.304 [4].</td>
</tr>
<tr>
<td><strong>cellSelectionInfoCE</strong></td>
<td>Cell selection information for BL UEs and UEs in CE. NOTE 3.</td>
</tr>
<tr>
<td><strong>cellSelectionInfoCE1</strong></td>
<td>Cell selection information for BL UEs and UEs in CE supporting CE Mode B. E-UTRAN includes this IE only if <strong>cellSelectionInfoCE</strong> is present in <strong>SystemInformationBlockType1-BR</strong>. NOTE 3.</td>
</tr>
<tr>
<td><strong>csg-Identity</strong></td>
<td>Identity of the Closed Subscriber Group the cell belongs to.</td>
</tr>
<tr>
<td><strong>csg-Indication</strong></td>
<td>If set to TRUE the UE is only allowed to access the cell if it is a CSG member cell, if selected during manual CSG selection or to obtain limited service, see TS 36.304 [4].</td>
</tr>
<tr>
<td><strong>eCallOverIMS-Support</strong></td>
<td>Indicates whether the cell supports eCall over IMS services for UEs as defined in TS 23.401 [41]. If absent, eCall over IMS is not supported by the network in the cell. NOTE 2.</td>
</tr>
<tr>
<td><strong>eDRX-Allowed</strong></td>
<td>The presence of this field indicates if idle mode extended DRX is allowed in the cell. The UE shall stop using extended DRX in idle mode if <strong>eDRX-Allowed</strong> is not present.</td>
</tr>
<tr>
<td><strong>fdd-DownlinkOrTddSubframeBitmapBR</strong></td>
<td>The set of valid subframes for FDD downlink or TDD transmissions, see TS 36.213 [23]. If this field is not present, the set of valid subframes is the set of non-MBSFN subframes as indicated by <strong>mbsfn-SubframeConfigList</strong>. If neither this field nor <strong>mbsfn-SubframeConfigList</strong> is present, all subframes are considered as valid subframes for FDD downlink transmission, all DL subframes according to the uplink-downlink configuration (see TS 36.211 [21]) are considered as valid subframes for TDD DL transmission, and all UL subframes according to the uplink-downlink configuration (see TS 36.211 [21]) are considered as valid subframes for TDD UL transmission. The first/leftmost bit corresponds to the subframe #0 of the radio frame satisfying SFN mod x = 0, where x is the size of the bit string divided by 10. Value 0 in the bitmap indicates that the corresponding subframe is invalid for transmission. Value 1 in the bitmap indicates that the corresponding subframe is valid for transmission.</td>
</tr>
<tr>
<td><strong>fdd-UplinkSubframeBitmapBR</strong></td>
<td>The set of valid subframes for FDD uplink transmissions for BL UEs, see TS 36.213 [23]. If the field is not present, then UE considers all uplink subframes as valid subframes for FDD uplink transmissions. The first/leftmost bit corresponds to the subframe #0 of the radio frame satisfying SFN mod x = 0, where x is the size of the bit string divided by 10. Value 0 in the bitmap indicates that the corresponding subframe is invalid for transmission. Value 1 in the bitmap indicates that the corresponding subframe is valid for transmission.</td>
</tr>
<tr>
<td><strong>freqBandIndicatorPriority</strong></td>
<td>If the field is present and supported by the UE, the UE shall prioritize the frequency bands in the <strong>multiBandInfoList</strong> field in decreasing priority order. Only if the UE does not support any of the frequency band in <strong>multiBandInfoList</strong>, the UE shall use the value in <strong>freqBandIndicator</strong> field. Otherwise, the UE applies frequency band according to the rules defined in <strong>multiBandInfoList</strong>. NOTE 2.</td>

**SystemInformationBlockType1 field descriptions**

**startSymbolBR**
For BL UEs and UEs in CE, indicates the OFDM starting symbol for any MPDCCH, PDSCH scheduled on the same cell except the PDSCH carrying *SystemInformationBlockType1-BR*, see TS 36.213 [23]. Values 1, 2, and 3 are applicable for *dl-Bandwidth* greater than 10 resource blocks. Values 2, 3, and 4 are applicable otherwise.

**systemInfoValueTagList**
Indicates SI message specific value tags for BL UEs and UEs in CE. It includes the same number of entries, and listed in the same order, as in `schedulingInfoList` (without suffix).

**systemInfoValueTagSI**
SI message specific value tag as specified in subclause 5.2.1.3. Common for all SIBs within the SI message other than MIB, SIB1, SIB10, SIB11, SIB12 and SIB14.

**systemInfoValueTag**
Common for all SIBs other than MIB, MIB-MBMS, SIB1, SIB1-MBMS, SIB10, SIB11, SIB12 and SIB14. Change of MIB, MIB-MBMS, SIB1 and SIB1-MBMS is detected by acquisition of the corresponding message.

**tdd-Config**
Specifies the TDD specific physical channel configurations. NOTE 2.

**trackingAreaCode**
A `trackingAreaCode` that is common for all the PLMNs listed. NOTE 2. NOTE 5.

---

**NOTE 1:** The value the UE applies for parameter “Q\_valid” in TS 36.304 [4] depends on the *q-QualMin* fields signalled by E-UTRAN and supported by the UE. In case multiple candidate options are available, the UE shall select the highest priority candidate option according to the priority order indicated by the following table (top row is highest priority).

<table>

</tbody>
</table>

**NOTE 2:** E-UTRAN sets this field to the same value for all instances of SIB1 message that are broadcasted within the same cell.

**NOTE 3:** E-UTRAN configures this field only in the BR version of SIB1 message.

**NOTE 4:** E-UTRAN configures at most 6 PLMNs in total (i.e. across all the PLMN lists in SIB1).

**NOTE 5:** E-UTRAN configures only one value for this parameter per PLMN.
**Conditional presence** | **Explanation**
---|---
**BW-reduced** | The field is optional present, Need OR, if `schedulingInfoSIB1-BR` in MIB is set to a value greater than 0. Otherwise the field is not present.

**FBI-max** | The field is mandatory present if `freqBandIndicator` (i.e. without suffix) is set to `maxFBI`. Otherwise the field is not present.

**mFBI** | The field is optional present, Need OR, if `multiBandInfoList` is present. Otherwise the field is not present.

**mFBI-max** | The field is mandatory present if one or more entries in `multiBandInfoList` (i.e. without suffix, introduced in -v8h0) is set to `maxFBI`. Otherwise the field is not present.

**RSRQ** | The field is mandatory present if SIB3 is being broadcast and `threshServingLowQ` is present in SIB3; otherwise optionally present, Need OP.

**RSRQ2** | The field is mandatory present if `q-QualMinRSRQ-OnAllSymbols` is present in SIB3; otherwise it is not present and the UE shall delete any existing value for this field.

**Hopping** | The field is mandatory present if `si-HoppingConfigCommon` field is broadcasted and set to on. Otherwise the field is optionally present, need OP.

**QrxlevminCE1** | The field is optionally present, Need OR, if `q-RxLevMinCE1-r13` is set below -140 dBm. Otherwise the field is not present.

**TDD** | This field is mandatory present for TDD; it is not present for FDD and the UE shall delete any existing value for this field.

**TDD-OR** | The field is optional present for TDD, need OR; it is not present for FDD.

**WB-RSRQ** | The field is optionally present, need OP if the measurement bandwidth indicated by `allowedMeasBandwidth` in `systemInformationBlockType3` is 50 resource blocks or larger; otherwise it is not present.

**SI-BR** | The field is mandatory present if `schedulingInfoSIB1-BR` is included in MIB with a value greater than 0. Otherwise the field is not present.

---

**SystemInformationBlockType1-MBMS**

`SystemInformationBlockType1-MBMS` contains information relevant for receiving service from MBMS-dedicated cell and defines the scheduling of other system information.

Signalling radio bearer: N/A

ETSI
SystemInformationBlockType1-MBMS field descriptions

**cellAccessRelatedInfoList**
This field contains a list allowing signalling of access related information per PLMN. One PLMN can be included in only one entry of this list. NOTE 2.

**cellIdentity**
Indicates the cell identity. NOTE 1.

**freqBandIndicator**
A list of as defined in TS 36.101 [42, table 6.2.4-1] for the frequency band in freqBandIndicator.

**multiBandInfoList**
A list of additional frequency band indicators, as defined in TS 36.101 [42, table 5.5-1] that the cell belongs to. If the UE supports the frequency band in the freqBandIndicator field it shall apply that frequency band. Otherwise, the UE shall apply the first listed band which it supports in the multiBandInfoList field.

**nonMBSFN-SubframeConfig**
Defines the non-MBSFN subframes within the radio frame allocation period defined by the radioFrameAllocationPeriod and the radioFrameAllocationOffset.

**plmn-IdentityList**
List of PLMN identities. The first listed PLMN-Identity is the primary PLMN. NOTE 1.

**radioFrameAllocationPeriod, radioFrameAllocationOffset**
Radio-frames that contain non-MBSFN subframes occur when equation SFN mod radioFrameAllocationPeriod = radioFrameAllocationOffset is satisfied. Value rf4 for radioFrameAllocationPeriod denotes 4 radio frames, rf8 detones 8 radio frames, and so on.

**schedulingInfoList-MBMS**
Indicates additional scheduling information of SI messages on MBMS-dedicated cell.

**sib-MappingInfo**
List of the SIBs mapped to this SystemInformation message.

**si-Periodicity**
Periodicity of the SI-message in radio frames, such that rf16 denotes 16 radio frames, rf32 denotes 32 radio frames, and so on.

**si-WindowLength**
Common SI scheduling window for all SIs. Unit in milliseconds, where ms1 denotes 1 millisecond, ms2 denotes 2 milliseconds and so on.

**subframeAllocation**
Defines the subframes that are allocated for non-MBSFN within the radio frame allocation period defined by the radioFrameAllocationPeriod and the radioFrameAllocationOffset. "0" denotes that the corresponding subframe is a MBSFN subframe. "1" denotes that the corresponding subframe is a non-MBSFN subframe. If E-UTRAN configures a value other than "0" for additionalNonMBSFNSubframes within MasterInformationBlock-MBMS, subframeAllocation configuration should also indicate subframes pointed out by additionalNonMBSFNSubframes as non-MBSFN subframes.

**systemInformationBlockType13**
E-UTRAN does not configure this field if schedulingInfoList–MBMS indicates that SystemInformationBlockType13 is present.

**systemInfoValueTag**
Common for all SIBs other than MIB, SIB1, SIB10, SIB11, SIB12 and SIB14. Change of MIB and SIB1 is detected by acquisition of the corresponding message.

**trackingAreaCode**
A trackingAreaCode that is common for all the PLMNs listed. NOTE 1.

NOTE 1: E-UTRAN sets this field to the same value for all instances of SIB1-MBMS message that are broadcasted within the same cell.
---

**UEAssistanceInformation**

The **UEAssistanceInformation** message is used for the indication of UE assistance information to the eNB.

**Signalling radio bearer:** SRB1

**UEAssistanceInformation** field descriptions

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>delayBudgetReport</strong></td>
<td>Indicates the UE-preferred adjustment to connected mode DRX or coverage enhancement configuration.</td>
</tr>
<tr>
<td><strong>dl-Preference</strong></td>
<td>Indicates UE's preference on configuration of maximum PDSCH bandwidth. The value mhz1dot4 corresponds to CE mode usage in 1.4MHz bandwidth, mhz5 corresponds to CE mode usage in 5MHz bandwidth, and mhz20 corresponds to CE mode usage in 20MHz bandwidth or normal coverage.</td>
</tr>
<tr>
<td><strong>excessRep-MPDCCH</strong></td>
<td>Indicates the excess number of repetitions on MPDCCH. Value excessRep1 and excessRep2 indicate the excess number of repetitions defined in TS 36.133 [16].</td>
</tr>
<tr>
<td><strong>logicalChannelIdentityUL</strong></td>
<td>Indicates the logical channel identity associated with the reported traffic pattern in the uplink logical channel.</td>
</tr>
<tr>
<td><strong>messageSize</strong></td>
<td>Indicates the maximum TB size based on the observed traffic pattern. The value refers to the index of TS 36.321 [6, table 6.1.3.1-1].</td>
</tr>
<tr>
<td><strong>powerPrefIndication</strong></td>
<td>Value lowPowerConsumption indicates the UE prefers a configuration that is primarily optimised for power saving. Otherwise the value is set to normal.</td>
</tr>
<tr>
<td><strong>priorityInfoSL</strong></td>
<td>Indicates the traffic priority (i.e., PPPP) associated with the reported traffic pattern for V2X sidelink communication.</td>
</tr>
<tr>
<td><strong>rlm-Event</strong></td>
<td>This field provides the RLM event (&quot;early-out-of-sync&quot; or &quot;early-in-sync&quot;).</td>
</tr>
<tr>
<td><strong>rlm-Report</strong></td>
<td>This field provides the RLM report for BL UEs and UEs in CE.</td>
</tr>
<tr>
<td><strong>spS-AssistanceInformation</strong></td>
<td>Indicates the UE assistance information to assist E-UTRAN to configure SPS.</td>
</tr>
<tr>
<td><strong>timingOffset</strong></td>
<td>This field indicates the estimated timing for a packet arrival in a SL/UL logical channel. Specifically, the value indicates the timing offset with respect to subframe#0 of SFN#0 in milliseconds.</td>
</tr>
<tr>
<td><strong>trafficPatternInfoListUL</strong></td>
<td>This field provides the traffic characteristics of uplink logical channel(s).</td>
</tr>
<tr>
<td><strong>trafficPeriodicity</strong></td>
<td>This field indicates the estimated data arrival periodicity in a SL/UL logical channel. Value sf20 corresponds to 20 ms, sf50 corresponds to 50 ms and so on.</td>
</tr>
<tr>
<td><strong>type1</strong></td>
<td>Indicates the preferred amount of increment/decrement to the connected mode DRX cycle length with respect to the current configuration. Value in number of milliseconds. Value ms40 corresponds to 40 milliseconds, msMinus40 corresponds to -40 milliseconds and so on.</td>
</tr>
<tr>
<td><strong>type2</strong></td>
<td>Indicates the preferred amount of increment/decrement to the coverage enhancement configuration with respect to the current configuration so that the Uu air interface delay changes by the indicated amount. Value in number of milliseconds. Value ms24 corresponds to 24 milliseconds, msMinus24 corresponds to -24 milliseconds and so on.</td>
</tr>
<tr>
<td><strong>ul-Preference</strong></td>
<td>Indicates UE's preference on configuration of maximum PUSCH bandwidth. The value mhz1dot4 corresponds to CE mode usage in 1.4MHz bandwidth, and mhz5 corresponds to CE mode usage in 5MHz bandwidth.</td>
</tr>

```

-- ASN1STOP
**UECapabilityEnquiry field descriptions**

**requestDiffFallbackCombList**
List of CA band combinations for which the UE is requested to provide different capabilities for their fallback band combinations in conjunction with the capabilities supported for the CA band combinations in this list. The UE shall exclude fallback band combinations for which their supported UE capabilities are the same as the CA band combination indicated in this list.

**requestReducedFormat**
Indicates that the UE if supported is requested to provide supported CA band combinations in the supportedBandCombinationReduced-r13 instead of the supportedBandCombination-r10. The E-UTRAN includes this field if requestSkipFallbackComb or requestDiffFallbackCombList is included in the message.

**requestSkipFallbackComb**
Indicates that the UE shall explicitly exclude fallback CA band combinations in capability signalling.

**requestFrequencyBands**
List of frequency bands for which the UE is requested to provide supported CA band combinations and non CA bands.

**requestedMaxCCsDL, requestedMaxCCsUL**
Indicates the maximum number of CCs for which the UE is requested to provide supported CA band combinations and non-CA bands.

**requestReducedIntNonContComb**
Indicates that the UE shall explicitly exclude supported intra-band non-contiguous CA band combinations other than included in capability signalling as specified in TS 36.306 [5, 4.3.5.21].

---

-- ASN1STOP
**UEInformationResponse field descriptions**

**absoluteTimeStamp**
Indicates the absolute time when the logged measurement configuration logging is provided, as indicated by E-UTRAN within `absoluteTimeInfo`.

**bler**
Indicates the measured BLER value. The coding of BLER value is defined in TS 36.133 [16].

**blocksReceived**
Indicates total number of MCH blocks, which were received by the UE and used for the corresponding BLER calculation, within the measurement period as defined in TS 36.133 [16].

**carrierFreq**
In case the UE includes `carrierFreq-v9e0` and/or `carrierFreq-v1090`, the UE shall set the corresponding entry of `carrierFreq-r9` and/or `carrierFreq-r10` respectively to `maxEARFCN`. For E-UTRA and UTRA frequencies, the UE sets the ARFCN according to the band used when obtaining the concerned measurement results.

**connectionFailureType**
This field is used to indicate whether the connection failure is due to radio link failure or handover failure.

**contentionDetected**
This field is used to indicate that contention was detected for at least one of the transmitted preambles, see TS 36.321 [6].

**c-RNTI**
This field indicates the C-RNTI used in the PCell upon detecting radio link failure or the C-RNTI used in the source PCell upon handover failure.

**dataBLER-MCH-ResultList**
Includes a BLER result per MCH on subframes using `dataMCS`, with the applicable MCH(s) listed in the same order as in `pmch-InfoList` within `MBSFNAreaConfiguration`.

**drb-EstablishedWithQCI-1**
This field is used to indicate the radio link failure occurred while a bearer with QCI value equal to 1 was configured, see TS 24.301 [35].

**failedCellId**
This field is used to indicate the cell in which connection establishment failed.

**failedPCellId**
This field is used to indicate the PCell in which RLF is detected or the target PCell of the failed handover. The UE sets the EARFCN according to the band used for transmission/reception when the failure occurred.

**inDeviceCoexDetected**
Indicates that measurement logging is suspended due to IDC problem detection.

**maxTxPowerReached**
This field is used to indicate whether or not the maximum power level was used for the last transmitted preamble, see TS 36.321 [6].

**mch-Index**
Indicates the MCH by referring to the entry as listed in `pmch-InfoList` within `MBSFNAreaConfiguration`.

**measResultFailedCell**
This field refers to the last measurement results taken in the cell, where connection establishment failure happened. For BL UEs or UEs in CE, when operating in CE Mode B, `measResultFailedCell-v1360` is reported if the measured RSRP is less than -140 dBm.

**measResultLastServCell**
This field refers to the log measurement results taken in the Serving cell. For BL UEs or UEs in CE, when operating in CE Mode B, `measResultLastServCell-v1360` is reported if the measured RSRP is less than -140 dBm.

**mobilityHistoryReport**
This field is used to indicate the time of stay in 16 most recently visited E-UTRA cells or of stay out of E-UTRA.

**numberOfPreamblesSent**
This field is used to indicate the number of RACH preambles that were transmitted. Corresponds to parameter `PREAMBLE_TRANSMISSION_COUNTER` in TS 36.321 [6].
**UEInformationResponse field descriptions**

**previousPCellId**
This field is used to indicate the source PCell of the last handover (source PCell when the last RRC-Connection-Reconfiguration message including mobilityControlInfo was received).

**previousUTRA-CellId**
This field is used to indicate the source UTRA cell of the last successful handover to E-UTRAN, when RLF occurred at the target PCell. The UE sets the ARFCN according to the band used for transmission/reception on the concerned cell.

**reestablishmentCellId**
This field is used to indicate the cell in which the re-establishment attempt was made after connection failure.

**relativeTimeStamp**
Indicates the time of logging measurement results, measured relative to the absoluteTimeStamp. Value in seconds.

**rlf-Cause**
This field is used to indicate the cause of the last radio link failure that was detected. In case of handover failure information reporting (i.e., the connectionFailureType is set to 'hof'), the UE is allowed to set this field to any value.

**selectedUTRA-CellId**
This field is used to indicate the UTRA cell that the UE selects after RLF is detected, while T311 is running. The UE sets the ARFCN according to the band selected for transmission/reception on the concerned cell.

**signallingBLER-Result**
Includes a BLER result of MBSFN subframes using signallingMCS.

**tac-FailedPCell**
This field is used to indicate the Tracking Area Code of the PCell in which RLF is detected.

**tce-id**
Parameter Trace Collection Entity Id: See TS 32.422 [58].

**timeConnFailure**
This field is used to indicate the time elapsed since the last HO initialization until connection failure. Actual value = field value * 100ms. The maximum value 1023 means 102.3s or longer.

**timeSinceFailure**
This field is used to indicate the time that elapsed since the connection (establishment) failure. Value in seconds. The maximum value 172800 means 172800s or longer.

**traceRecordingSessionRef**
Parameter Trace Recording Session Reference: See TS 32.422 [58].

—

**ULHandoverPreparationTransfer (CDMA2000)**

The **ULHandoverPreparationTransfer** message is used for the uplink transfer of handover related CDMA2000 information when requested by the higher layers.

Signalling radio bearer: SRB1

RLC-SAP: AM

Logical channel: DCCH

Direction: UE to E-UTRAN

**ULHandoverPreparationTransfer message**

```asn1
ULHandoverPreparationTransfer ::= SEQUENCE {
  criticalExtensions CHOICE {
    c1 CHOICE {
      ulHandoverPreparationTransfer-r8  ULHandoverPreparationTransfer-r8-IEs,
      spare3 NULL, spare2 NULL, spare1 NULL
    }
  }
}

ULHandoverPreparationTransfer-r8-IEs ::= SEQUENCE {
  cdma2000-Type CDMA2000-Type,
  meid        BIT STRING (SIZE (56)) OPTIONAL,
  dedicatedInfo DedicatedInfoCDMA2000,

}

ULHandoverPreparationTransfer-v8a0-IEs ::= SEQUENCE {
}
```
lateNonCriticalExtension OCTET STRING OPTIONAL,
nonCriticalExtension SEQUENCE {} OPTIONAL
}
-- ASN1STOP

---

**ULHandoverPreparationTransfer field descriptions**

*meid*  
The 56 bit mobile identification number provided by the CDMA2000 Upper layers.

---

**ULInformationTransfer**  
The *ULInformationTransfer* message is used for the uplink transfer of NAS or non-3GPP dedicated information.

Signalling radio bearer: SRB2 or SRB1 (only if SRB2 not established yet). If SRB2 is suspended, the UE does not send this message until SRB2 is resumed

RLC-SAP: AM  
Logical channel: DCCH  
Direction: UE to E-UTRAN

**ULInformationTransfer message**

---

---

**WLANConnectionStatusReport**  
The *WLANConnectionStatusReport* message is used to inform the successful connection to WLAN or failure of the WLAN connection or connection attempt(s).
Signalling radio bearer: SRB1
RLC-SAP: AM
Logical channel: DCCH
Direction: UE to E-UTRAN

**WLANConnectionStatusReport message**

```
-- ASN1START
WLANConnectionStatusReport-r13 ::= SEQUENCE {
criticalExtensions     CHOICE {
 c1         CHOICE {
 wlanConnectionStatusReport-r13 WLANConnectionStatusReport-r13-IEs,
spare3 NULL, spare2 NULL, spare1 NULL
 },
criticalExtensionsFuture    SEQUENCE {}
}
}
WLANConnectionStatusReport-r13-IEs ::= SEQUENCE {
wlan-Status-r13 WLAN-Status-r13,
lateNonCriticalExtension OCTET STRING      OPTIONAL,
nonCriticalExtension    WLANConnectionStatusReport-v1430-IEs OPTIONAL
}
WLANConnectionStatusReport-v1430-IEs ::= SEQUENCE {
wlan-Status-v1430 WLAN-Status-v1430,
nonCriticalExtension    SEQUENCE ()      OPTIONAL
}
-- ASN1STOP
```

**WLANConnectionStatusReport field descriptions**

* wlan-Status
  Indicates the connection status to WLAN and the cause of failures. If the wlan-Status-v1430 is included, E-UTRAN ignores the wlan-Status-r13.

### 6.3 RRC information elements

#### 6.3.1 System information blocks

-- **SystemInformationBlockType2**

The IE `SystemInformationBlockType2` contains radio resource configuration information that is common for all UEs.

**NOTE:** UE timers and constants related to functionality for which parameters are provided in another SIB are included in the corresponding SIB.

**SystemInformationBlockType2 information element**

```

**SystemInformationBlockType3**

The IE SystemInformationBlockType3 contains cell re-selection information common for intra-frequency, inter-frequency and/or inter-RAT cell re-selection (i.e. applicable for more than one type of cell re-selection but not necessarily all) as well as intra-frequency cell re-selection information other than neighbouring cell related.

**SystemInformationBlockType3 field descriptions**

**allowedMeasBandwidth**
If absent, the value corresponding to the downlink bandwidth indicated by the \textit{dl-Bandwidth} included in \textit{MasterInformationBlock} applies.

**cellSelectionInfoCE**
Parameters included in coverage enhancement S criteria. They may be used by the UE to select/reselect a cell in which it works in CE mode on the concerned non serving frequency. If absent, the UE acquires the information from the target cell on the concerned frequency.

**cellSelectionInfoCE1**
Parameters included in coverage enhancement S criteria. They may be used by the UE to select/reselect a cell in which it works in CE mode on the concerned non serving frequency. E-UTRA includes this IE only if \textit{cellSelectionInfoCE} in SIB3 is present.

**cellReselectionInfoCommon**
Cell re-selection information common for cells.

**cellReselectionServingFreqInfo**
Information common for Cell re-selection to inter-frequency and inter-RAT cells.

**freqBandInfo**
A list of \textit{additionalPmax} and \textit{additionalSpectrumEmission} values, as defined in TS 36.101 [42, table 6.2.4-1] for UEs neither in CE nor BL UEs and TS 36.101 [42, table 6.2.4E-1] for UEs in CE or BL UEs, applicable for the intra-frequency neighbouring E-UTRA cells if the UE selects the frequency band from \textit{freqBandIndicator} in \textit{SystemInformationBlockType1}. If E-UTRAN includes \textit{freqBandInfo-v10l0} it includes the same number of entries, and listed in the same order, as in \textit{freqBandInfo-v10j0}.

**freqBandInfo-v10l0**
A list of \textit{additionalPmax} and \textit{additionalSpectrumEmission} values, as defined in TS 36.101 [42, table 6.2.4-1] for UEs neither in CE nor BL UEs and TS 36.101 [42, table 6.2.4E-1] for UEs in CE or BL UEs, applicable for the intra-frequency neighbouring E-UTRA cells if the UE selects the frequency bands in \textit{multiBandInfoList} (i.e. without suffix) or \textit{multiBandInfoList-v9e0}. If E-UTRAN includes \textit{multiBandInfoList-v10j0}, it includes the same number of entries, and listed in the same order, as in \textit{multiBandInfoList} (i.e. without suffix). If E-UTRAN includes \textit{multiBandInfoList-v10j0} it includes the same number of entries, and listed in the same order, as in \textit{multiBandInfoList-v10j0}.

**intraFreqCellReselectionInfo**
Cell re-selection information common for intra-frequency cells.

**multiBandInfoList**
A list of \textit{additionalPmax} and \textit{additionalSpectrumEmission} values, as defined in TS 36.101 [42, table 6.2.4-1] for UEs neither in CE nor BL UEs and TS 36.101 [42, table 6.2.4E-1] for UEs in CE or BL UEs, applicable for the intra-frequency neighbouring E-UTRA cells if the UE selects the frequency bands in \textit{multiBandInfoList} (i.e. without suffix) or \textit{multiBandInfoList-v9e0}. If E-UTRAN includes \textit{multiBandInfoList-v10j0}, it includes the same number of entries, and listed in the same order, as in \textit{multiBandInfoList} (i.e. without suffix). If E-UTRAN includes \textit{multiBandInfoList-v10j0} it includes the same number of entries, and listed in the same order, as in \textit{multiBandInfoList-v10j0}.

**p-Max**
Value applicable for the intra-frequency neighbouring E-UTRA cells. If absent the UE applies the maximum power according to the UE capability.

**redistOnPagingOnly**
If this field is present and the UE is redistribution capable, the UE shall only wait for the paging message to trigger E-UTRAN inter-frequency redistribution procedure as specified in 5.2.4.10 of TS 36.304 [4].

**q-Hyst**

**q-HystSF**
Parameter “Speed dependent ScalingFactor for \textit{Qhyst}” in TS 36.304 [4]. The sf-Medium and sf-High concern the additional hysteresis to be applied, in Medium and High Mobility state respectively, to \textit{Qhyst} as defined in TS 36.304 [4]. In dB. Value dB-6 corresponds to -6dB, dB-4 corresponds to -4dB and so on.

**q-QualMin**
Parameter “\textit{Qqualmin}” in TS 36.304 [4], applicable for intra-frequency neighbour cells. If the field is not present, the UE applies the (default) value of negative infinity for \textit{Qqualmin}. NOTE 1.

**q-QualMinWB**
If this field is present and supported by the UE, the UE shall, when performing RSRQ measurements, use a wider bandwidth in accordance with TS 36.133 [16]. NOTE 1.

**q-RxLevMin**
Parameter “\textit{Qrxlevmin}” in TS 36.304 [4], applicable for intra-frequency neighbour cells.

**redistributionFactorCell**
If \textit{redistributionFactorCell} is present, \textit{redistributionFactorServing} is only applicable for the serving cell otherwise it is applicable for serving frequency.

**redistributionFactorServing**
Parameter \textit{redistributionFactorServing} in TS 36.304 [4].

**s-IntraSearch**
Parameter “\textit{SIntraSearchP}” in TS 36.304 [4]. If the field \textit{s-IntraSearchP} is present, the UE applies the value of \textit{s-IntraSearchP} instead. Otherwise if neither \textit{s-IntraSearch} nor \textit{s-IntraSearchP} is present, the UE applies the (default) value of infinity for \textit{SIntraSearchP}.

**s-IntraSearchP**
Parameter “\textit{SIntraSearch}” in TS 36.304 [4]. See descriptions under \textit{s-IntraSearch}.
**SystemInformationBlockType3 field descriptions**

- **s-IntraSearchQ**
  Parameter “SIntraSearchQ” in TS 36.304 [4]. If the field is not present, the UE applies the (default) value of 0 dB for SIntraSearchQ.

- **s-NonIntraSearch**
  Parameter “SnonIntraSearchP” in TS 36.304 [4]. If the field s-NonIntraSearchP is present, the UE applies the value of s-NonIntraSearchP instead. Otherwise if neither s-NonIntraSearch nor s-NonIntraSearchP is present, the UE applies the (default) value of infinity for SnonIntraSearchP.

- **s-NonIntraSearchP**

- **s-NonIntraSearchQ**
  Parameter “SnonIntraSearchQ” in TS 36.304 [4]. If the field is not present, the UE applies the (default) value of 0 dB for SnonIntraSearchQ.

- **speedStateReselectionPars**
  Speed dependent reselection parameters, see TS 36.304 [4]. If this field is absent, i.e., mobilityStateParameters is also not present, UE behaviour is specified in TS 36.304 [4].

- **t360**
  Parameter “T360” in TS 36.304 [4]. Value min4 corresponds to 4 minutes, value min8 corresponds to 8 minutes, and so on.

- **threshServingLow**
  Parameter “ThreshServing, LowP” in TS 36.304 [4].

- **threshServingLowQ**
  Parameter “ThreshServing, LowQ” in TS 36.304 [4].

- **t-ReselectionEUTRA**
  Parameter “TreselectionEUTRA” in TS 36.304 [4].

- **t-ReselectionEUTRA-SF**
  Parameter “Speed dependent ScalingFactor for TreselectionEUTRA” in TS 36.304 [4]. If the field is not present, the UE behaviour is specified in TS 36.304 [4].

**NOTE 1:** The value the UE applies for parameter “Q qualmin” in TS 36.304 [4] depends on the q-QualMin fields signalled by E-UTRAN and supported by the UE. In case multiple candidate options are available, the UE shall select the highest priority candidate option according to the priority order indicated by the following table (top row is highest priority).

**Conditional presence**

- **QrxlevminCE1**
  The field is optionally present, Need OR, if q-RxLevMinCE1-r13 is set below -140 dBm. Otherwise the field is not present.

- **RSRQ**
  The field is optionally present, Need OR, if threshServingLowQ is present in SIB3; otherwise it is not present.

- **WB-RSRQ**
  The field is optionally present, need OP if the measurement bandwidth indicated by allowedMeasBandwidth is 50 resource blocks or larger; otherwise it is not present.

---

**SystemInformationBlockType4**

The IE SystemInformationBlockType4 contains neighbouring cell related information relevant only for intra-frequency cell re-selection. The IE includes cells with specific re-selection parameters as well as blacklisted cells.

**SystemInformationBlockType4 information element**

```asn1
-- ASN1START
SystemInformationBlockType4 ::= SEQUENCE {
  intraFreqNeighCellList  IntraFreqNeighCellList  OPTIONAL,  -- Need OR

IntraFreqNeighCellList ::= SEQUENCE (SIZE (1..maxCellIntra)) OF IntraFreqNeighCellInfo

IntraFreqNeighCellInfo ::= SEQUENCE {
  physCellId        PhysCellId,
  q-OffsetCell       Q-OffsetRange,
  ...
}

IntraFreqBlackCellList ::= SEQUENCE (SIZE (1..maxCellBlack)) OF PhysCellIdRange

SystemInformationBlockType4 field descriptions

csg-PhysCellIdRange
Set of physical cell identities reserved for CSG cells on the frequency on which this field was received. The received csg-PhysCellIdRange applies if less than 24 hours has elapsed since it was received and the UE is camped on a cell of the same primary PLMN where this field was received. The 3 hour validity restriction (section 5.2.1.3) does not apply to this field. The UE shall not apply any stored csg-PhysCellIdRange when it is in any cell selection state defined in TS 36.304 [4].

intraFreqBlackCellList
List of blacklisted intra-frequency neighbouring cells.

intraFreqNeighbCellList
List of intra-frequency neighbouring cells with specific cell re-selection parameters.

q-OffsetCell
Parameter “Qoffsets,n” in TS 36.304 [4].

SystemInformationBlockType5

The IE SystemInformationBlockType5 contains information relevant only for inter-frequency cell re-selection i.e. information about other E-UTRA frequencies and inter-frequency neighbouring cells relevant for cell re-selection. The IE includes cell re-selection parameters common for a frequency as well as cell specific re-selection parameters.

<table>
<thead>
<tr>
<th>Field Description</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>cellSelectionInfoCE1</strong></td>
<td>Parameters included in coverage enhancement S criteria. E-UTRAN includes this IE only in an entry of InterFreqCarrierFreqList-v1350 or InterFreqCarrierFreqListExt-v1350 if cellSelectionInfoCE1 is present in the corresponding entry of InterFreqCarrierFreqList-v1310 or InterFreqCarrierFreqListExt-v1310 is present.</td>
</tr>
<tr>
<td><strong>freqBandInfo</strong></td>
<td>A list of additionalPmax and additionalSpectrumEmission values, as defined in TS 36.101 [42, table 6.2.4-1] for UEs neither in CE nor BL UEs and TS 36.101 [42, table 6.2.4E-1] for UEs in CE or BL UEs, for the frequency band represented by dl-CarrierFreq for which cell reselection parameters are common. If E-UTRAN includes freqBandInfo-v1010 it includes the same number of entries, and listed in the same order, as in freqBandInfo-r10.</td>
</tr>
<tr>
<td><strong>interFreqCarrierFreqList</strong></td>
<td>List of neighbouring inter-frequencies. E-UTRAN does not configure more than one entry for the same physical frequency regardless of the E-ARFCN used to indicate this. If E-UTRAN includes InterFreqCarrierFreqList-v8h0, InterFreqCarrierFreqList-v9e0, InterFreqCarrierFreqList-v1250 InterFreqCarrierFreqList-v1310 and/or InterFreqCarrierFreqList-v1350, it includes the same number of entries, and listed in the same order, as in interFreqCarrierFreqList (i.e. without suffix). See Annex D for more descriptions.</td>
</tr>
<tr>
<td><strong>interFreqCarrierFreqListExt</strong></td>
<td>List of additional inter-frequencies, i.e. extending the size of the inter-frequency carrier list using the general principles specified in 5.1.2. E-UTRAN does not configure more than one entry for the same physical frequency regardless of the E-ARFCN used to indicate this. EUTRAN may include interFreqCarrierFreqListExt even if interFreqCarrierFreqList (i.e without suffix) does not include maxFreq entries. If E-UTRAN includes InterFreqCarrierFreqListExt-v1310 and/or InterFreqCarrierFreqListExt-v1350, it includes the same number of entries, and listed in the same order, as in interFreqCarrierFreqList (i.e. without suffix). If E-UTRAN includes InterFreqCarrierFreqListExt-v1010 it includes the same number of entries, and listed in the same order, as in interFreqCarrierFreqList-v1010.</td>
</tr>
<tr>
<td><strong>interFreqNeighCellList</strong></td>
<td>List of inter-frequency neighbouring cells.</td>
</tr>
<tr>
<td><strong>multiBandInfoList</strong></td>
<td>Indicates the list of frequency bands in addition to the band represented by dl-CarrierFreq for which cell reselection parameters are common. E-UTRAN indicates at most maxMultiBands frequency bands (i.e. the total number of entries across both multiBandInfoList and multiBandInfoList-v9e0 is below this limit).</td>
</tr>
<tr>
<td><strong>multiBandInfoList-v10j0</strong></td>
<td>A list of additionalPmax and additionalSpectrumEmission values, as defined in TS 36.101 [42, table 6.2.4-1] for UEs neither in CE nor BL UEs and TS 36.101 [42, table 6.2.4E-1] for UEs in CE or BL UEs, for the frequency bands in multiBandInfoList (i.e. without suffix) and multiBandInfoList-v9e0. If E-UTRAN includes multiBandInfoList-v10j0, it includes the same number of entries, and listed in the same order, as in multiBandInfoList (i.e. without suffix). If E-UTRAN includes multiBandInfoList-v1010 it includes the same number of entries, and listed in the same order, as in multiBandInfoList-v10j0.</td>
</tr>
<tr>
<td><strong>p-Max</strong></td>
<td>Value applicable for the neighbouring E-UTRA cells on this carrier frequency. If absent the UE applies the maximum power according to the UE capability.</td>
</tr>

SystemInformationBlockType6 field descriptions

carrierFreqListUTRA-FDD
List of carrier frequencies of UTRA FDD. E-UTRAN does not configure more than one entry for the same physical frequency regardless of the ARFCN used to indicate this. If E-UTRAN includes carrierFreqListUTRA-FDD-v8h0 and/or carrierFreqListUTRA-FDD-v1250, it includes the same number of entries, and listed in the same order, as in carrierFreqListUTRA-FDD (i.e. without suffix). See Annex D for more descriptions.

carrierFreqListUTRA-FDD-Ext
List of additional carrier frequencies of UTRA FDD. E-UTRAN does not configure more than one entry for the same physical frequency regardless of the ARFCN used to indicate this. EUTRAN may include carrierFreqListUTRA-FDD-Ext even if carrierFreqListUTRA-FDD (i.e without suffix) does not include maxUTRA-FDD-Carrier entries.

carrierFreqListUTRA-TDD
List of carrier frequencies of UTRA TDD. E-UTRAN does not configure more than one entry for the same physical frequency regardless of the ARFCN used to indicate this. If E-UTRAN includes carrierFreqListUTRA-TDD-v1250, it includes the same number of entries, and listed in the same order, as in carrierFreqListUTRA-TDD (i.e. without suffix).

carrierFreqListUTRA-TDD-Ext
List of additional carrier frequencies of UTRA TDD. E-UTRAN does not configure more than one entry for the same physical frequency regardless of the ARFCN used to indicate this. EUTRAN may include carrierFreqListUTRA-TDD-Ext even if carrierFreqListUTRA-TDD (i.e without suffix) does not include maxUTRA-TDD-Carrier entries.

multiBandInfoList
Indicates the list of frequency bands in addition to the band represented by carrierFreq in the CarrierFreqUTRA-FDD for which UTRA cell reselection parameters are common.

p-MaxUTRA
The maximum allowed transmission power on the (uplink) carrier frequency, see TS 25.304 [40]. In dBm

g-QualMin
Parameter “Qqualmin” in TS 25.304 [40]. Actual value = field value [dB].

g-RxLevMin
Parameter “Qrxlevmin” in TS 25.304 [40]. Actual value = field value * 2+1 [dBm].

reducedMeasPerformance
Value TRUE indicates that the UTRA carrier frequency is configured for reduced measurement performance, see TS 36.133 [16]. If the field is not included, the UTRA carrier frequency is configured for normal measurement performance, see TS 36.133 [16].

threshX-High

threshX-HighQ
Parameter “ThreshX, HighQ” in TS 36.304 [4].

threshX-Low

threshX-LowQ
Parameter “ThreshX, LowQ” in TS 36.304 [4].

Conditional presence | Explanation
--- | ---
RSRQ | The field is mandatory present if the threshServingLowQ is present in systemInformationBlockType3; otherwise it is not present.
UTRA-FDD | The field is optionally present, need OR, if the carrierFreqListUTRA-FDD is present. Otherwise it is not present.
UTRA-TDD | The field is optionally present, need OR, if the carrierFreqListUTRA-TDD is present. Otherwise it is not present.
-- SystemInformationBlockType7

The IE SystemInformationBlockType7 contains information relevant only for inter-RAT cell re-selection i.e. information about GERAN frequencies relevant for cell re-selection. The IE includes cell re-selection parameters for each frequency.

SystemInformationBlockType7 information element

```
-- ASN1START

    threshX-Low       ReselectionThreshold
  },
}

-- ASN1STOP
```

SystemInformationBlockType7 field descriptions

carrierFreqs
The list of GERAN carrier frequencies organised into one group of GERAN carrier frequencies.

carrierFreqsInfoList
Provides a list of neighbouring GERAN carrier frequencies, which may be monitored for neighbouring GERAN cells. The GERAN carrier frequencies are organised in groups and the cell reselection parameters are provided per group of GERAN carrier frequencies.

commonInfo
Defines the set of cell reselection parameters for the group of GERAN carrier frequencies.

ncc-Permitted
Field encoded as a bit map, where bit N is set to "0" if a BCCH carrier with NCC = N-1 is not permitted for monitoring and set to "1" if the BCCH carrier with NCC = N-1 is permitted for monitoring; N = 1 to 8; bit 1 of the bitmap is the leading bit of the bit string.

p-MaxGERAN
Maximum allowed transmission power for GERAN on an uplink carrier frequency, see TS 45.008 [28]. Value in dBm. Applicable for the neighbouring GERAN cells on this carrier frequency. If pmaxGERAN is absent, the maximum power according to the UE capability is used.

q-RxLevMin
Parameter "Q_{rxlevmin}" in TS 36.304 [4], minimum required RX level in the GSM cell. The actual value of Q_{rxlevmin} in dBm = (field value * 2) − 115.

threshX-High
Parameter "ThreshX_{HighP}" in TS 36.304 [4].

threshX-Low
Parameter "ThreshX_{LowP}" in TS 36.304 [4].

t-ReselectionGERAN
Parameter "T_{reselectionGERAN}" in TS 36.304 [4].

t-ReselectionGERAN-SF
Parameter "Speed dependent ScalingFactor for T_{reselectionGERAN}" in TS 36.304 [4]. If the field is not present, the UE behaviour is specified in TS 36.304 [4].
The **SystemInformationBlockType8** contains information relevant only for inter-RAT cell re-selection i.e. information about CDMA2000 frequencies and CDMA2000 neighbouring cells relevant for cell re-selection. The IE includes cell re-selection parameters common for a frequency as well as cell specific re-selection parameters.

REG-1XRTT-PerPLMN
### SystemInformationBlockType8 field descriptions

**ac-BarringConfig1XRTT**
Contains the access class barring parameters the UE uses to calculate the access class barring factor, see C.S0097 [53].

**ac-Barring0to9**
Parameter used for calculating the access class barring factor for access overload classes 0 through 9. It is the parameter “PSIST” in C.S0004 [34] for access overload classes 0 through 9.

**ac-BarringEmg**
Parameter used for calculating the access class barring factor for emergency calls and emergency message transmissions for access overload classes 0 through 9. It is the parameter “PSIST_EMG” in C.S0004 [34].

**ac-BarringMsg**
Parameter used for modifying the access class barring factor for message transmissions. It is the parameter “MSG_PSIST” in C.S0004 [34].

**ac-BarringN**
Parameter used for calculating the access class barring factor for access overload class N (N = 10 to 15). It is the parameter “PSIST” in C.S0004 [34] for access overload class N.

**ac-BarringReg**
Parameter used for modifying the access class barring factor for autonomous registrations. It is the parameter “REG_PSIST” in C.S0004 [34].

**bandClass**
Identifies the Frequency Band in which the Carrier can be found. Details can be found in C.S0057 [24, Table 1.5].

**bandClassList**
List of CDMA2000 frequency bands.

**cellReselectionParameters1XRTT**
Cell reselection parameters applicable only to CDMA2000 1xRTT system.

**cellReselectionParameters1XRTT-Ext**
Cell reselection parameters applicable for cell reselection to CDMA2000 1XRTT system.

**cellReselectionParameters1XRTT-v920**
Cell reselection parameters applicable for cell reselection to CDMA2000 1XRTT system. The field is not present if cellReselectionParameters1XRTT is not present; otherwise it is optionally present.

**cellReselectionParametersHRPD**
Cell reselection parameters applicable for cell reselection to CDMA2000 HRPD system

**cellReselectionParametersHRPD-Ext**
Cell reselection parameters applicable for cell reselection to CDMA2000 HRPD system.

**cellReselectionParametersHRPD-v920**
Cell reselection parameters applicable for cell reselection to CDMA2000 HRPD system. The field is not present if cellReselectionParametersHRPD is not present; otherwise it is optionally present.

**csfb-DualRxTxSupport**
Value TRUE indicates that the network supports dual Rx/Tx enhanced 1xCSFB, which enables UEs capable of dual Rx/Tx enhanced 1xCSFB to switch off their 1xRTT receiver/transmitter while camped in E-UTRAN [51].

**csfb-RegistrationParam1XRTT**
Contains the parameters the UE will use to determine if it should perform a CDMA2000 1xRTT Registration/Re-Registration. This field is included if either CSFB or enhanced CS fallback to CDMA2000 1xRTT is supported.

**csfb-SupportForDualRxUEs**
Value TRUE indicates that the network supports dual Rx CSFB [51].

**longCodeState1XRTT**
The state of long code generation registers in CDMA2000 1XRTT system as defined in C.S0002 [12, Section 1.3] at ⎛ ⎞\( \lfloor t/10 \rfloor \times 10 + 320 \) ms, where \( t \) equals to the cdma-SystemTime. This field is required for reporting CGI for 1xRTT, SRVCC handover and enhanced CS fallback to CDMA2000 1xRTT operation. Otherwise this IE is not needed. This field is excluded when estimating changes in system information, i.e. changes of longCodeState1XRTT should neither result in system information change notifications nor in a modification of systemInfoValueTag in SIB1.
### SystemInformationBlockType8 field descriptions

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>neighCellList</td>
<td>List of CDMA2000 neighbouring cells. The total number of neighbouring cells in neighCellList for each RAT (1XRTT or HRPD) is limited to 32.</td>
</tr>
<tr>
<td>neighCellList-v920</td>
<td>Extended List of CDMA2000 neighbouring cells. The combined total number of CDMA2000 neighbouring cells in both neighCellList and neighCellList-v920 is limited to 32 for HRPD and 40 for 1xRTT.</td>
</tr>
<tr>
<td>neighCellsPerFreqList</td>
<td>List of carrier frequencies and neighbour cell ids in each frequency within a CDMA2000 Band, see C.S0002 [12] or C.S0024 [26].</td>
</tr>
<tr>
<td>neighCellsPerFreqList-v920</td>
<td>Extended list of neighbour cell ids, in the same CDMA2000 Frequency Band as the corresponding instance in “NeighCellListCDMA2000”</td>
</tr>
<tr>
<td>parameters1XRTT</td>
<td>Parameters applicable for interworking with CDMA2000 1XRTT system.</td>
</tr>
<tr>
<td>parametersCDMA2000</td>
<td>Provides the corresponding SIB8 parameters for the CDMA2000 network associated with the PLMN indicated in plmn-Identity.</td>
</tr>
<tr>
<td>parametersHRPD</td>
<td>Parameters applicable only for interworking with CDMA2000 HRPD systems.</td>
</tr>
<tr>
<td>physCellIdList</td>
<td>Identifies the list of CDMA2000 cell ids, see C.S0002 [12] or C.S0024 [26].</td>
</tr>
<tr>
<td>physCellIdList-v920</td>
<td>Extended list of CDMA2000 cell ids, in the same CDMA2000 ARFCN as the corresponding instance in “NeighCellListCDMA2000”.</td>
</tr>
<tr>
<td>plmn-Identity</td>
<td>Indicates the PLMN associated with this CDMA2000 network. Value 1 indicates the PLMN listed 1st in the 1st plmn-IdentityList included in SIB1, value 2 indicates the PLMN listed 2nd in the same plmn-IdentityList, or when no more PLMN are present within the same plmn_identityList, then the PLMN listed 1st in the subsequent plmn-IdentityList within the same SIB1 and so on. A PLMN which identity is not indicated in the sib8-PerPLMN-List, does not support inter-working with CDMA2000.</td>
</tr>
<tr>
<td>preRegistrationInfoHRPD</td>
<td>The CDMA2000 HRPD Pre-Registration Information tells the UE if it should pre-register with the CDMA2000 HRPD network and identifies the Pre-registration zone to the UE.</td>
</tr>
<tr>
<td>searchWindowSize</td>
<td>The search window size is a CDMA2000 parameter to be used to assist in searching for the neighbouring pilots. For values see C.S0005 [25, Table 2.6.6.2.1-1] and C.S0024 [26, Table 8.7.6.2.4]. This field is required for a UE with rx-ConfigHRPD= single and/ or rx-Config1XRTT= single to perform handover, cell re-selection, UE measurement based redirection and enhanced 1xRTT CS fallback from E-UTRAN to CDMA2000 according to this specification and TS 36.304 [4].</td>
</tr>
<tr>
<td>sib8-PerPLMN-List</td>
<td>This field provides the values for the interworking CDMA2000 networks corresponding, if any, to the UE’s RPLMN.</td>
</tr>
<tr>
<td>systemTimeInfo</td>
<td>Information on CDMA2000 system time. This field is required for a UE with rx-ConfigHRPD= single and/ or rx-Config1XRTT= single to perform handover, cell re-selection, UE measurement based redirection and enhanced 1xRTT CS fallback from E-UTRAN to CDMA2000 according to this specification and TS 36.304 [4]. This field is excluded when estimating changes in system information, i.e. changes of systemTimeInfo should neither result in system information change notifications nor in a modification of systemInfoValueTag in SIB1. For the field included in ParametersCDMA2000, a choice is used to indicate whether for this PLMN the parameters are signalled explicitly or set to the (default) value common for all PLMNs i.e. the value not included in sib8-PerPLMN-List.</td>
</tr>
<tr>
<td>threshX-High</td>
<td>Parameter “Threshx_high” in TS 36.304 [4]. This specifies the high threshold used in reselection towards this CDMA2000 band class expressed as an unsigned binary number equal to FLOOR (-2 x 10 x log10 Ec/Io) in units of 0.5 dB, as defined in C.S0005 [25].</td>
</tr>
<tr>
<td>threshX-Low</td>
<td>Parameter “Threshx_low” in TS 36.304 [4]. This specifies the low threshold used in reselection towards this CDMA2000 band class expressed as an unsigned binary number equal to FLOOR (-2 x 10 x log10 Ec/Io) in units of 0.5 dB, as defined in C.S0005 [25].</td>
</tr>
<tr>
<td>t-ReselectionCDMA2000</td>
<td>Parameter “TreselectionCDMA_HRPD” or “TreselectionCDMA_1xRTT” in TS 36.304 [4].</td>
</tr>
</tbody>
</table>
SystemInformationBlockType8 field descriptions

t-ReselectionCDMA2000-SF
Parameter “Speed dependent ScalingFactor for TreseleCCTioCDMA2000-HRPD” or TreseleCCTioCDMA2000-1xRTT” in TS 36.304 [4]. If the field is not present, the UE behaviour is specified in TS 36.304 [4].

-- SystemInformationBlockType9
The IE SystemInformationBlockType9 contains a home eNB name (HNB Name).

SystemInformationBlockType9 information element

```asn1
SystemInformationBlockType9 ::= SEQUENCE {
  hnb-Name       OCTET STRING (SIZE(1..48))  OPTIONAL,  -- Need OR
  ...,
  lateNonCriticalExtension   OCTET STRING    OPTIONAL
}
```

-- SystemInformationBlockType9 field descriptions

hnb-Name
Carries the name of the home eNB, coded in UTF-8 with variable number of bytes per character, see TS 22.011 [10].

-- SystemInformationBlockType10
The IE SystemInformationBlockType10 contains an ETWS primary notification.

SystemInformationBlockType10 information element

```asn1
SystemInformationBlockType10 ::= SEQUENCE {
  messageIdentifier     BIT STRING (SIZE (16)),
  serialNumber      BIT STRING (SIZE (16)),
  warningType       OCTET STRING (SIZE (2)),
  dummy        OCTET STRING (SIZE (50)) OPTIONAL,  -- Need OR
  ...,
  lateNonCriticalExtension   OCTET STRING    OPTIONAL
}
```

-- SystemInformationBlockType10 field descriptions

hnb-Name
Carries the name of the home eNB, coded in UTF-8 with variable number of bytes per character, see TS 22.011 [10].
**SystemInformationBlockType10 field descriptions**

**messageIdentifier**
Identifies the source and type of ETWS notification. The leading bit (which is equivalent to the leading bit of the equivalent IE defined in TS 36.413 [39, 9.2.1.44]) contains bit 7 of the first octet of the equivalent IE, defined in and encoded according to TS 23.041 [37, 9.4.3.2.1], while the trailing bit contains bit 0 of the second octet of the same equivalent IE.

**serialNumber**
Identifies variations of an ETWS notification. The leading bit (which is equivalent to the leading bit of the equivalent IE defined in TS 36.413 [39, 9.2.1.45]) contains bit 7 of the first octet of the equivalent IE, defined in and encoded according to TS 23.041 [37, 9.4.3.2.2], while the trailing bit contains bit 0 of the second octet of the same equivalent IE.

**dummy**
This field is not used in the specification. If received it shall be ignored by the UE.

**warningType**
Identifies the warning type of the ETWS primary notification and provides information on emergency user alert and UE popup. The first octet (which is equivalent to the first octet of the equivalent IE defined in TS 36.413 [39, 9.2.1.50]) contains the first octet of the equivalent IE defined in and encoded according to TS 23.041 [37, 9.3.24], and so on.

---

**SystemInformationBlockType11**
The IE `SystemInformationBlockType11` contains an ETWS secondary notification.

**SystemInformationBlockType11 information element**

```
SystemInformationBlockType11 ::= SEQUENCE {
  messageIdentifier     BIT STRING (SIZE (16)),
  serialNumber      BIT STRING (SIZE (16)),
  warningMessageSegmentType   ENUMERATED {notLastSegment, lastSegment},
  warningMessageSegmentNumber   INTEGER (0..63),
  warningMessageSegment    OCTET STRING,
  dataCodingScheme     OCTET STRING (SIZE (1))   OPTIONAL,  -- Cond Segment1
  ...,
  lateNonCriticalExtension    OCTET STRING    OPTIONAL
}
```

**SystemInformationBlockType11 field descriptions**

**dataCodingScheme**
Identifies the alphabet/coding and the language applied variations of an ETWS notification. The octet (which is equivalent to the octet of the equivalent IE defined in TS 36.413 [39, 9.2.1.52]) contains the octet of the equivalent IE defined in TS 23.041 [37, 9.4.3.2.3] and encoded according to TS 23.038 [38].

**messageIdentifier**
Identifies the source and type of ETWS notification. The leading bit (which is equivalent to the leading bit of the equivalent IE defined in TS 36.413 [39, 9.2.1.44]) contains bit 7 of the first octet of the equivalent IE, defined in and encoded according to TS 23.041 [37, 9.4.3.2.1], while the trailing bit contains bit 0 of second octet of the same equivalent IE.

**serialNumber**
Identifies variations of an ETWS notification. The leading bit (which is equivalent to the leading bit of the equivalent IE defined in TS 36.413 [39, 9.2.1.45]) contains bit 7 of the first octet of the equivalent IE, defined in and encoded according to TS 23.041 [37, 9.4.3.2.2], while the trailing bit contains bit 0 of second octet of the same equivalent IE.

**warningMessageSegment**
Carries a segment of the Warning Message Contents IE defined in TS 36.413 [39, 9.2.1.53]. The first octet of the Warning Message Contents IE is equivalent to the first octet of the CB data IE defined in and encoded according to TS 23.041 [37, 9.4.2.2.5] and so on.

**warningMessageSegmentNumber**
Segment number of the ETWS warning message segment contained in the SIB. A segment number of zero corresponds to the first segment, one corresponds to the second segment, and so on.

**warningMessageSegmentType**
Indicates whether the included ETWS warning message segment is the last segment or not.
---

**SystemInformationBlockType12**

The IE `SystemInformationBlockType12` contains a CMAS notification.

### `SystemInformationBlockType12` information element

```asn
SystemInformationBlockType12-r9 ::= SEQUENCE {
  messageIdentifier-r9    BIT STRING (SIZE (16)),
  serialNumber-r9      BIT STRING (SIZE (16)),
  warningMessageSegmentType-r9  ENUMERATED {notLastSegment, lastSegment},
  warningMessageSegmentNumber-r9  INTEGER (0..63),
  warningMessageSegment-r9   OCTET STRING,
  dataCodingScheme-r9     OCTET STRING (SIZE (1))   OPTIONAL,  -- Cond Segment1
  lateNonCriticalExtension   OCTET STRING     OPTIONAL,
  ...
}
```

**SystemInformationBlockType12 field descriptions**

- **dataCodingScheme**
  Identifies the alphabet/coding and the language applied variations of a CMAS notification. The octet (which is equivalent to the octet of the equivalent IE defined in TS 36.413 [39, 9.2.1.52]) contains the octet of the equivalent IE defined in TS 23.041 [37, 9.4.3.2.3] and encoded according to TS 23.038 [38].

- **messageIdentifier**
  Identifies the source and type of CMAS notification. The leading bit (which is equivalent to the leading bit of the equivalent IE defined in TS 36.413 [39, 9.2.1.44]) contains bit 7 of the first octet of the equivalent IE, defined in and encoded according to TS 23.041 [37, 9.4.3.2.1], while the trailing bit contains bit 0 of second octet of the same equivalent IE.

- **serialNumber**
  Identifies variations of a CMAS notification. The leading bit (which is equivalent to the leading bit of the equivalent IE defined in TS 36.413 [39, 9.2.1.45]) contains bit 7 of the first octet of the equivalent IE, defined in and encoded according to TS 23.041 [37, 9.4.3.2.2], while the trailing bit contains bit 0 of second octet of the same equivalent IE.

- **warningMessageSegment**
  Carries a segment of the Warning Message Contents IE defined in TS 36.413 [39]. The first octet of the Warning Message Contents IE is equivalent to the first octet of the CB data IE defined in and encoded according to TS 23.041 [37, 9.4.2.2.5] and so on.

- **warningMessageSegmentNumber**
  Segment number of the CMAS warning message segment contained in the SIB. A segment number of zero corresponds to the first segment, one corresponds to the second segment, and so on.

- **warningMessageSegmentType**
  Indicates whether the included CMAS warning message segment is the last segment or not.

---

**SystemInformationBlockType13**

The IE `SystemInformationBlockType13` contains the information required to acquire the MBMS control information associated with one or more MBSFN areas.

### `SystemInformationBlockType13` information element

```asn
SystemInformationBlockType13-r9 ::= SEQUENCE {
  mbsfn-AreaInfoList-r9    MBSFN-AreaInfoList-r9,
  notificationConfig-r9    MBMS-NotificationConfig-r9,
  lateNonCriticalExtension   OCTET STRING     OPTIONAL,
  ...
}
```

---

<tbody>
<tr>
<td>The field is mandatory present in the first segment of SIB11, otherwise it is not present.</td>
<td></td>
</tr>
</tbody>
</table>
SystemInformationBlockType13 field descriptions

notificationConfig
Indicates the MBMS notification related configuration parameters. The UE shall ignore this field when dl-Bandwidth included in MasterInformationBlock is set to n6.

SystemInformationBlockType14
The IE SystemInformationBlockType14 contains the EAB parameters.

SystemInformationBlockType14 information element

SystemInformationBlockType14 field descriptions

eab-BarringBitmap
Extended access class barring for AC 0-9. The first/ leftmost bit is for AC 0, the second bit is for AC 1, and so on.

eab-Category
Indicates the category of UEs for which EAB applies. Value a corresponds to all UEs, value b corresponds to the UEs that are neither in their HPLMN nor in a PLMN that is equivalent to it, and value c corresponds to the UEs that are neither in the PLMN listed as most preferred PLMN of the country where the UEs are roaming in the operator-defined PLMN selector list on the USIM, nor in their HPLMN nor in a PLMN that is equivalent to their HPLMN, see TS 22.011 [10].

eab-Common
The EAB parameters applicable for all PLMN(s).

eab-PerPLMN-List
The EAB parameters per PLMN, listed in the same order as the PLMN(s) listed across the plmn-IdentityList fields in SystemInformationBlockType1.

SystemInformationBlockType15
The IE SystemInformationBlockType15 contains the MBMS Service Area Identities (SAI) of the current and/ or neighbouring carrier frequencies.

SystemInformationBlockType15 information element

carrierType-r14 ENUMERATED {mbms, fembmsMixed, fembmsDedicated},
frameOffset-r14 INTEGER (0..3) OPTIONAL -- Need OR
}
-- ASN1STOP

**SystemInformationBlockType15 field descriptions**

**carrierType**
Indicates whether the carrier is pre-Rel-14 MBMS carrier (mbms) or FeMBMS/Unicast mixed carrier (fembmsMixed) or MBMS-dedicated carrier (fembmsDedicated).

**frameOffset**
For MBMS-dedicated carrier, the frameOffset gives the radio frame which contains PBCH by SFN mod 4 = frameOffset.

**mbms-InterFreqCarrierTypeList**
Indicates whether this is an FeMBMS carrier. The field is included only if mbms-SAI-InterFreqList-r11 is included. The number of entries is the same in both fields and carrier type relates to the frequency indicated in mbms-SAI-InterFreqList-r11 in the corresponding entry index.

**mbms-IntraFreqCarrierType**
Contains indication whether the carrier is pre-Rel-14 MBMS carrier, FeMBMS/Unicast mixed carrier or MBMS-dedicated carrier.

**mbms-SAI-InterFreqList**
Contains a list of neighboring frequencies including additional bands, if any, that provide MBMS services and the corresponding MBMS SAIs.

**mbms-SAI-IntraFreq**
Contains a list of MBMS SAI for the current frequency. A duplicate MBMS SAI indicates that this and all following SAIs are not offered by this cell but only by neighbour cells on the current frequency. For MBMS service continuity, the UE shall use all MBMS SAIs listed in mbms-SAI-IntraFreq to derive the MBMS frequencies of interest.

**mbms-SAI-List**
Contains a list of MBMS SAI for a specific frequency.

**multiBandInfoList**
A list of additional frequency bands applicable for the cells participating in the MBSFN transmission.

</tbody>
</table>
The IE \textit{SystemInformationBlockType16} contains information related to GPS time and Coordinated Universal Time (UTC). The UE may use the parameters provided in this system information block to obtain the UTC, the GPS and the local time.

\textbf{NOTE:} The UE may use the time information for numerous purposes, possibly involving upper layers e.g. to assist GPS initialisation, to synchronise the UE clock (a.o. to determine MBMS session start/ stop).

\textbf{SystemInformationBlockType16 information element}

\begin{verbatim}
-- ASN1START
SystemInformationBlockType16-r11 ::= SEQUENCE {
  timeInfo-r11       SEQUENCE {
    timeInfoUTC-r11    INTEGER (0..549755813887),
    dayLightSavingTime-r11   BIT STRING (SIZE (2)) OPTIONAL, -- Need OR
    leapSeconds-r11    INTEGER (-127..128) OPTIONAL, -- Need OR
    localTimeOffset-r11 INTEGER (-63..64) OPTIONAL -- Need OR
  } OPTIONAL, -- Need OR
  lateNonCriticalExtension OCTET STRING OPTIONAL,
  ...}
-- ASN1STOP
\end{verbatim}

\textbf{SystemInformationBlockType16 field descriptions}

\textit{dayLightSavingTime}
It indicates if and how daylight saving time (DST) is applied to obtain the local time. The semantics is the same as the semantics of the \textit{Daylight Saving Time} IE in TS 24.301 [35] and TS 24.008 [49]. The first/leftmost bit of the bit string contains the b2 of octet 3, i.e. the value part of the \textit{Daylight Saving Time} IE, and the second bit of the bit string contains b1 of octet 3.

\textit{leapSeconds}
Number of leap seconds offset between GPS Time and UTC. UTC and GPS time are related i.e. GPS time - leapSeconds = UTC time.

\textit{localTimeOffset}
Offset between UTC and local time in units of 15 minutes. Actual value = field value * 15 minutes. Local time of the day is calculated as UTC time + localTimeOffset.

\textit{timeInfoUTC}
Coordinated Universal Time corresponding to the SFN boundary at or immediately after the ending boundary of the SI-window in which \textit{SystemInformationBlockType16} is transmitted. The field counts the number of UTC seconds in 10 ms units since 00:00:00 on Gregorian calendar date 1 January, 1900 (midnight between Sunday, December 31, 1899 and Monday, January 1, 1900). NOTE 1.

This field is excluded when estimating changes in system information, i.e. changes of timeInfoUTC should neither result in system information change notifications nor in a modification of systemInfoValueTag in SIB1.

\textbf{NOTE 1:} The UE may use this field together with the leapSeconds field to obtain GPS time as follows: GPS Time (in seconds) = timeInfoUTC (in seconds) - 2,524,953,600 (seconds) + leapSeconds, where 2,524,953,600 is the number of seconds between 00:00:00 on Gregorian calendar date 1 January, 1900 and 00:00:00 on Gregorian calendar date 6 January, 1980 (start of GPS time).

\textbf{SystemInformationBlockType17}

The IE \textit{SystemInformationBlockType17} contains information relevant for traffic steering between E-UTRAN and WLAN.

\textbf{SystemInformationBlockType17 information element}

\begin{verbatim}
-- ASN1START

**SystemInformationBlockType17 field descriptions**

**bssid**
Basic Service Set Identifier (BSSID) defined in IEEE 802.11-2012 [67].

**hessid**
Homogenous Extended Service Set Identifier (HESSID) defined in IEEE 802.11-2012 [67].

**ssid**
Service Set Identifier (SSID) defined in IEEE 802.11-2012 [67].

**wlan-OffloadInfoPerPLMN-List**
The WLAN offload configuration per PLMN includes the same number of entries, listed in the same order as the PLMN(s) listed across the plmn-IdentityList fields in SystemInformationBlockType1.

-- SystemInformationBlockType17

**SystemInformationBlockType18**
The IE SystemInformationBlockType18 indicates E-UTRAN supports the sidelink UE information procedure and may contain sidelink communication related resource configuration information.

**SystemInformationBlockType18 information element**

-- ASN1START

SystemInformationBlockType18-r12 ::= SEQUENCE {

   ]]

-- ASN1STOP
**SystemInformationBlockType18 field descriptions**

**commRxPool**
Indicates the resources by which the UE is allowed to receive sidelink communication while in RRC_IDLE and while in RRC_CONNECTED.

**commSyncConfig**
Indicates the configuration by which the UE is allowed to receive and transmit synchronisation information. E-UTRAN configures commSyncConfig including txParameters when configuring UEs by dedicated signalling to transmit synchronisation information.

**commTxAllowRelayCommon**
Indicates whether the UE is allowed to transmit relay related sidelink communication data using the transmission pools included in SystemInformationBlockType18 i.e. either via commTxPoolNormalCommon, commTxPoolNormalCommonExt or via commTxPoolExceptional.

**commTxPoolExceptional**
Indicates the resources by which the UE is allowed to transmit sidelink communication in exceptional conditions, as specified in 5.10.4.

**commTxPoolNormalCommon**
Indicates the resources by which the UE is allowed to transmit sidelink communication while in RRC_IDLE or when in RRC_CONNECTED while transmitting sidelink via a frequency other than the primary.

**commTxPoolNormalCommonExt**
Indicates transmission resource pool(s) in addition to the pool(s) indicated by field commTxPoolNormalCommon, by which the UE is allowed to transmit sidelink communication while in RRC_IDLE or when in RRC_CONNECTED while transmitting sidelink via a frequency other than the primary. E-UTRAN configures commTxPoolNormalCommonExt only when it configures commTxPoolNormalCommon.

**commTxResourceUC-ReqAllowed**
Indicates whether the UE is allowed to request transmission pools for non-relay related one-to-one sidelink communication.

**SystemInformationBlockType19**

The IE SystemInformationBlockType19 indicates E-UTRAN supports the sidelink UE information procedure and may contain sidelink discovery related resource configuration information.

SystemInformationBlockType19 field descriptions

**discCellSelectionInfo**
Parameters that may be used by the UE to select/ reselect a cell on the concerned non serving frequency. If absent, the UE acquires the information from the target cell on the concerned frequency. See TS 36.304 [4, 11.4].

**discInterFreqList**
Indicates the neighbouring frequencies on which sidelink discovery announcement is supported. May also provide further information i.e. reception resource pool and/ or transmission resource pool, or an indication how resources could be obtained.

**discRxPool**
Indicates the resources by which the UE is allowed to receive non-PS related sidelink discovery announcements while in RRC_IDLE and while in RRC_CONNECTED.

**discRxPoolPS**
Indicates the resources by which the UE is allowed to receive PS related sidelink discovery announcements while in RRC_IDLE and while in RRC_CONNECTED.

**discRxResourcesInterFreq**
Indicates the resource pool configuration for receiving discovery announcements on a carrier frequency.

**discSyncConfig**
Indicates the configuration by which the UE is allowed to receive and transmit synchronisation information. E-UTRAN configures `discSyncConfig` including `txParameters` when configuring UEs by dedicated signalling to transmit synchronisation information.

**discTxPoolCommon**
Indicates the resources by which the UE is allowed to transmit non-PS related sidelink discovery announcements while in RRC_IDLE.

**discTxPoolPS-Common**
Indicates the resources by which the UE is allowed to transmit PS related sidelink discovery announcements while in RRC_IDLE.

**discTxResourcesInterFreq**
For the concerned frequency, either provides the UE with a pool of sidelink discovery announcement transmission resources the UE is allowed to use while in RRC_IDLE, or indicates whether such transmission is allowed, and if so how the UE may obtain the required resources. Value `noTxOnCarrier` indicates that the UE is not allowed to transmit sidelink discovery announcements on the concerned frequency. Value `acquireSI-FromCarrier` indicates that the required resources are to be obtained by autonomously acquiring SIB19 and other relevant SIBs from the concerned frequency. Value `requestDedicated` indicates, that for the concerned carrier, the required sidelink discovery resources are to be obtained by means of a dedicated resource request using the SidelenkUEIInformation message.

**plmn-IdentityList**
List of PLMN identities for the neighbouring frequency indicated by `carrierFreq`. Absence of the field indicates the same PLMN identities as listed across the `plmn-IdentityList` fields (without suffix) within `SystemInformationBlockType1`. 

**plmn-Index**
Index of the corresponding entry across the `plmn-IdentityList` fields (without suffix) within `SystemInformationBlockType1`.

**refCarrierCommon**
Indicates if the PCell (RRC_CONNECTED)/ serving cell (RRC_IDLE) is to be used as reference for DL measurements and synchronization, instead of the DL frequency paired with the one used to transmit sidelink discovery announcements on, see TS 36.213 [23, 14.3.1].

**reselectionInfoIC**
Includes the parameters used by the UE when selecting/ reselecting a sidelink relay UE.

**SL-CarrierFreqInfoList-v1310**
If included, the UE shall include the same number of entries, and listed in the same order, as in SL-CarrierFreqInfoList-v12.

**threshHigh, threshLow (relayUE)**
Indicates when a sidelink remote UE or sidelink relay UE that is in network coverage may use the broadcast PS related sidelink discovery Tx resource pool, if broadcast, or request Tx resources by dedicated signalling otherwise. For remote UEs, this parameter is used similarly for relay related sidelink communication.

```
### SystemInformationBlockType21 field descriptions

**anchorCarrierFreqList**
Indicates carrier frequencies which may include inter-carrier resource configuration for V2X sidelink communication.

**cbr-CommonTxConfigList**
Indicates the common list of CBR ranges and the list of PSSCH transmissions parameter configurations available to configure congestion control to the UE for V2X sidelink communication.

**offsetDFN**
Indicates the timing offset for the UE to determine DFN timing when GNSS is used for timing reference for the PCell. Value 0 corresponds to 0 milliseconds, value 1 corresponds to 0.001 milliseconds, value 2 corresponds to 0.002 milliseconds, and so on.

**p2x-CommTxPoolNormalCommon**
Indicates the resources by which the UE is allowed to transmit P2X related V2X sidelink communication. zoneID is not configured in the pools in this field.

**thresSL-TxPrioritization**
Indicates the threshold used to determine whether SL V2X transmission is prioritized over uplink transmission if they overlap in time (see TS 36.321 [6]). This value shall overwrite thresSL-TxPrioritization configured in SL-V2X-Preconfiguration if any.

**typeTxSync**
Indicates the prioritized synchronization type (i.e. eNB or GNSS) for performing V2X sidelink communication on the carrier frequency on which this field is broadcast.

**v2x-CommRxPool**
Indicates the resources by which the UE is allowed to receive V2X sidelink communication while in RRC_IDLE and in RRC_CONNECTED.

**v2x-CommTxPoolExceptional**
Indicates the resources by which the UE is allowed to transmit V2X sidelink communication in exceptional conditions, as specified in 5.10.13.

**v2x-CommTxPoolNormalCommon**
Indicates the resources by which the UE is allowed to transmit non-P2X related V2X sidelink communication when in RRC_IDLE or when in RRC_CONNECTED while transmitting V2X sidelink communication via a frequency other than the primary. E-UTRAN configures one resource pool per zone.

**v2x-InterFreqInfoList**
Indicates synchronization and resource allocation configurations of neighboring frequencies for V2X sidelink communication.

**v2x-ResourceSelectionConfig**
Indicates V2X sidelink communication configurations used for UE autonomous resource selection.

**v2x-SyncConfig**
Indicates the configuration by which the UE is allowed to receive and transmit synchronisation information for V2X sidelink communication. E-UTRAN configures v2x-SyncConfig including txParameters when configuring UEs to transmit synchronisation information.

**zoneConfig**
Indicates zone configurations used for V2X sidelink communication in 5.10.13.2.

### 6.3.2 Radio resource control information elements

---

### AntennaInfo

The IE AntennaInfoCommon and the AntennaInfoDedicated are used to specify the common and the UE specific antenna configuration respectively.

#### AntennaInfo information elements

```asn1
-- ASN1START
AntennaInfoCommon ::= SEQUENCE {
  antennaPortsCount ENUMERATED {an1, an2, an4, spare1}
}
AntennaInfoDedicated ::= SEQUENCE {

### AntennaInfo field descriptions

**alternativeCodebookEnabledFor4TX**
Indicates whether code book in TS 36.213 [23] Table 7.2.4-0A to Table 7.2.4-0D is being used for deriving CSI feedback and reporting. E-UTRAN only configures the field if the UE is configured with a) *tm8* with 4 CRS ports, *tm9* or *tm10* with 4 CSI-RS ports and b) PMI/RI reporting.

**antennaPortsCount**
Parameter represents the number of cell specific antenna ports where an1 corresponds to 1, an2 to 2 antenna ports etc. see TS 36.211 [21, 6.2.1].

**ce-ue-TxAntennaSelection-config**
Configuration of UL closed-loop transmit antenna selection for non-BL UE in CE Mode A, see TS 36.212 [22].

**codebookSubsetRestriction**
Parameter: *codebookSubsetRestriction*, see TS 36.213 [23, 7.2] and TS 36.211 [21, 6.3.4.2.3]. The number of bits in the *codebookSubsetRestriction* for applicable transmission modes is defined in TS 36.213 [23, Table 7.2-1b]. If the UE is configured with *transmissionMode* *tm8*, E-UTRAN configures the field *codebookSubsetRestriction* if PMI/RI reporting is configured. If the UE is configured with *transmissionMode* *tm9*, E-UTRAN configures the field *codebookSubsetRestriction* if PMI/RI reporting is configured and if the number of CSI-RS ports is greater than 1. E-UTRAN does not configure the field *codebookSubsetRestriction* in other cases where the UE is configured with *transmissionMode* *tm8* or *tm9*. Furthermore, E-UTRAN does not configure the field *codebookSubsetRestriction* if the UE is configured with *eMIMO-Type* unless it is set to *beamformed*, *alternativeCodebookEnabledBeamformed* is set to *FALSE* and *csi-RS-ConfigNZPIdListExt* is not configured.

**maxLayersMIMO**
Indicates the maximum number of layers for spatial multiplexing used to determine the rank indication bit width and Kc determination of the soft buffer size for the corresponding serving cell according to TS 36.212 [22]. EUTRAN configures this field only when *transmissionMode* is set to *tm3*, *tm4*, *tm9* or *tm10* for the corresponding serving cell. When configuring the field for a serving cell which *transmissionMode* is set to *tm3* or *tm4*, EUTRAN only configures value *fourLayers*: For a serving cell which *transmissionMode* is set to *tm9* or *tm10*, EUTRAN only configures the field only if *intraBandContiguousCC-InfoList* is indicated for the band and the band combination of the corresponding serving cell or the UE supports *maxLayersMIMO-Indication*.

**transmissionMode**
Points to one of Transmission modes defined in TS 36.213 [23, 7.1] where *tm1* refers to transmission mode 1, *tm2* to transmission mode 2 etc.

**ue-TransmitAntennaSelection**
For value *setup* the field indicates whether UE transmit antenna selection control is closed-loop or open-loop as described in TS 36.213 [23, 8.7]. EUTRAN configures the same value for all serving cells.

</tr>
</tbody>
</table>
AntennaInfoUL field descriptions

fourAntennaPortActivated
Parameter indicates if four antenna ports are used. See TS 36.213 [23, 8.2]. E-UTRAN optionally configures fourAntennaPortActivated only if transmissionModeUL is set to tm2.

transmissionModeUL
Points to one of UL Transmission modes defined in TS 36.213 [23, 8.0] where tm1 refers to transmission mode 1, tm2 to transmission mode 2 etc.

CQI-ReportConfig field descriptions

altCQI-Table
Indicates the applicability of the alternative CQI table (i.e. Table 7.2.3-2 in TS 36.213 [23]) for both aperiodic and periodic CSI reporting for the concerned serving cell. Value allSubframes means the alternative CQI table applies to all the subframes and CSI processes, if configured, and value csi-SubframeSet1 means the alternative CQI table applies to CSI subframe set 1, and value csi-SubframeSet2 means the alternative CQI table applies to CSI subframe set 2. EUTRAN sets the value to csi-SubframeSet1 or csi-SubframeSet2 only if transmissionMode is set in range tm1 to tm9 and csi-SubframePatternConfig-r10 is configured for the concerned serving cell and different CQI tables apply to the two CSI subframe sets; otherwise EUTRAN sets the value to allSubframes. If this field is not present, the UE shall use Table 7.2.3-1 in TS 36.213 [23] for all subframes and CSI processes, if configured.

aperiodicCSI-Trigger
Indicates for which serving cell(s) the aperiodic CSI report is triggered when one or more SCells are configured. trigger1 corresponds to the CSI request field 10 or 0101, trigger2 corresponds to the CSI request field 11 or 011, trigger3 corresponds to the CSI request field 100, see TS 36.213 [23, table 7.2.1-1A], and so on. The leftmost bit, bit 0 in the bit string corresponds to the cell with ServCellIndex=0 and bit 1 in the bit string corresponds to the cell with ServCellIndex=1 etc. Each bit has either value 0 (means no aperiodic CSI report is triggered) or value 1 (means the aperiodic CSI report is triggered). At most 5 bits can be set to value 1 in the bit string in aperiodicCSI-Trigger-r10 and in aperiodicCSI-Trigger-v1250 and at most 32 bits can be set to value 1 in the bit string in aperiodicCSI-Trigger-v1310. E-UTRAN configures value 1 only for cells configured with transmissionMode set in range tm1 to tm9. One value applies for all serving cells configured with transmissionMode set in range tm1 to tm9 (the associated functionality is common i.e. not performed independently for each cell).

trigger0If-IndicatorN, trigger10-IndicatorN, trigger11-IndicatorN
Indicates for which eMIMO-Type the aperiodic CSI report is triggered (the corresponding CSI process, CSI subframe set)-pair(s) and/or a serving cell as applicable, See TS 36.213 [23, table 7.2.1-1D, 7.2.1-1E].

trigger001-IndicatorN.. trigger111-IndicatorN
Indicates for which eMIMO-Type the aperiodic CSI report is triggered (the corresponding CSI process, CSI subframe set)-pair(s) and/or a serving cell) as applicable, See TS 36.213 [23, table 7.2.1-1A, 7.2.1-1B, and 7.2.1-1C].

cqi-Mask
Limits CQI/PMI/PTI/RI reports to the on-duration period of the DRX cycle, see TS 36.321 [6]. One value applies for all CSI processes and all serving cells (the associated functionality is common i.e. not performed independently for each cell).

cqi-FormatIndicatorPeriodic
Parameter: PUCCH CQI Feedback Type, see TS 36.213 [23, table 7.2.2.1]. Depending on transmissionMode, reporting mode is implicitly given from the table.

cqi-pmi-ConfigIndex
Parameter: CQI/PMI Periodicity and Offset Configuration Index _ICQI/PMI, see TS 36.213 [23, tables 7.2.2-1A and 7.2.2-1C]. If subframe patterns for CSI (CQI/PMI/PTI/RI) reporting are configured (i.e. csi-SubframePatternConfig is configured), the parameter applies to the subframe pattern corresponding to csi-MeasSubframeSet1 or corresponding to the CSI subframe set 1 indicated by csi-MeasSubframeSets-r12.

cqi-pmi-ConfigIndex2
Parameter: CQI/PMI Periodicity and Offset Configuration Index _ICQI/PMI, see TS 36.213 [23, tables 7.2.2-1A and 7.2.2-1C]. The parameter applies to the subframe pattern corresponding to csi-MeasSubframeSet2 or corresponding to the CSI subframe set 2 indicated by csi-MeasSubframeSets-r12.

cqi-PUCCH-ResourceIndex, cqi-PUCCH-ResourceIndexP1
Parameter n_PUCCH (p, l) for antenna port P0 and for antenna port P1 respectively, see TS 36.213 [23, 7.2]. E-UTRAN does not apply value 1185. One value applies for all CSI processes.

cqi-ReportAperiodic
E-UTRAN does not configure CQI-ReportAperiodic when transmission mode 10 is configured for all serving cells. E-UTRAN configures cqi-ReportAperiodic-v250 only if cqi-ReportAperiodic-r10 and csi-MeasSubframeSets-r12 are configured. E-UTRAN configures cqi-ReportAperiodic-v1310 only if cqi-ReportAperiodic-r10 is configured.

cqi-ReportModeAperiodic
Parameter: reporting mode. Value rm12 corresponds to Mode 1-2, rm20 corresponds to Mode 2-0, rm22 corresponds to Mode 2-2 etc. PUSCH reporting modes are described in TS 36.213 [23, 7.2.1]. The UE shall ignore cqi-ReportModeAperiodic-r10 when transmission mode 10 is configured for the serving cell on this carrier frequency. The UE shall ignore cqi-ReportModeAperiodic-r10 configured for the PCell/ PSCell when the transmission bandwidth of the PCell/PSCell in downlink is 6 resource blocks.

CQI-ReportPeriodicProcExt
A set of periodic CQI related parameters for which E-UTRAN may configure different values for each CSI process. For a serving frequency E-UTRAN configures one or more CQI-ReportPeriodicProcExt only when transmission mode 10 is configured for the serving cell on this carrier frequency.

cri-ConfigIndex
Parameter: cri-ConfigIndex _ICRI see TS 36.213 [23]. The parameter applies to the subframe pattern corresponding to csi-MeasSubframeSet1. EUTRAN configures the field if subframe patterns for CSI (CQI/PMI/PTI/RI/CRI) reporting are configured (i.e. csi-SubframePatternConfig is configured).
**CQI-ReportConfig** field descriptions

**cri-ConfigIndex2**
Parameter: cri-ConfigIndexref see TS 36.213 [23]. The parameter applies to the subframe pattern corresponding to csi-MeasSubframeSet2 or corresponding to the CSI subframe set 2 indicated by csi-MeasSubframeSets. E-UTRAN configures cri-ConfigIndex2 only if cri-ConfigIndex is configured.

**cri-ReportConfig**
E-UTRAN configures the field only if the UE is configured with eMIMO-Type set to “beamformed” and if multiple references to RS configuration using non-zero power transmission are configured (i.e. if csi-RS-ConfigNZPIdListExt is configured).

**csi-ConfigIndex**
E-UTRAN configures csi-ConfigIndex only for PCell and only if csi-SubframePatternConfig is configured. The UE shall release csi-ConfigIndex if csi-SubframePatternConfig is released.

**csi-IM-ConfigToAddModList**
For a serving frequency E-UTRAN configures one or more CSI-IM-Config only when transmission mode 10 is configured for the serving cell on this carrier frequency.

**csi-MeasSubframeSets**
Indicates the two CSI subframe sets. Value 0 means the subframe belongs to CSI subframe set 1 and value 1 means the subframe belongs to CSI subframe set 2. CSI subframe set 1 refers to $CCSI,0$ in TS 36.213 [23, 7.2] and CSI subframe set 2 refers to $CCSI,1$ in TS 36.213 [23, 7.2]. EUTRAN does not configure csi-MeasSubframeSet1-r10 and csi-MeasSubframeSet2-r10 if either csi-MeasSubframeSets-r12 for PCell or eimta-MainConfigPCell-r12 is configured.

**csi-MeasSubframeSet1, csi-MeasSubframeSet2**
Indicates the CSI measurement subframe sets. csi-MeasSubframeSet1 refers to $CCSI,0$ in TS 36.213 [23, 7.2] and csi-MeasSubframeSet2 refers to $CCSI,1$ in TS 36.213 [23, 7.2]. E-UTRAN only configures the two CSI measurement subframe sets for the PCell.

**csi-ProcessToAddModList**
For a serving frequency E-UTRAN configures one or more CSI-Process only when transmission mode 10 is configured for the serving cell on this carrier frequency.

**csi-ReportMode**
Parameter: PUCCH_format1-1_CSI_reporting_mode, see TS 36.213 [23, 7.2.2].

**K**
Parameter: K, see TS 36.213 [23, 7.2.2].

**nomPDSCH-RS-EPRE-Offset**
Parameter: $\Delta_{\text{offset}}$ see TS 36.213 [23, 7.2.3]. Actual value = field value * 2 [dB].

**periodicityFactor, periodicityFactorWB**
Parameter: $H^1$, see TS 36.213 [23, 7.2.2]. EUTRAN configures field periodicityFactorWB only when the UE is configured with eMIMO-Type set to nonPrecoded and with cqi-FormatIndicatorPeriodic set to widebandCQI.

**pmi-RI-Report**
See TS 36.213 [23, 7.2]. The presence of this field means PMI/RI reporting is configured; otherwise the PMI/RI reporting is not configured. EUTRAN configures this field only when transmissionMode is set to tm8, tm9 or tm10. The UE shall ignore pmi-RI-Report-r9/ pmi-RI-Report-r10 when transmission mode 10 is configured for the serving cell on this carrier frequency.

**ri-ConfigIndex**
Parameter: RI Config Index ref, see TS 36.213 [23, 7.2.2-1B]. If subframe patterns for CSI (CQI/PMI/PTI/RI/CRI) reporting are configured (i.e. csi-SubframePatternConfig is configured), the parameter applies to the subframe pattern corresponding to csi-MeasSubframeSet1.

**ri-ConfigIndex2**
Parameter: RI Config Index ref, see TS 36.213 [23, 7.2.2-1B]. The parameter applies to the subframe pattern corresponding to csi-MeasSubframeSet2 or corresponding to the CSI subframe set 2 indicated by csi-MeasSubframeSets-r12. E-UTRAN configures ri-ConfigIndex2 only if ri-ConfigIndex is configured.

**ri-Ref-CSI-ProcessId**
CSI process whose RI value the UE inherits when reporting RI, in the same subframe, for CSI reporting. E-UTRAN ensures that the CSI process that inherits the RI value is configured in accordance with the conditions specified in TS 36.213 [23, 7.2.1, 7.2.2].

**simultaneousAckNackAndCQI**
Parameter: Simultaneous-AN-and-CQI, see TS 36.213 [23, 10.1]. TRUE indicates that simultaneous transmission of ACK/NACK and CQI is allowed. One value applies for all CSI processes. For SCells except for the PSCell and PUCCH SCell this field is not applicable and the UE shall ignore the value.

**simultaneousAckNackAndCQI-Format3**
Indicates that the UE shall perform simultaneous transmission of HARQ A/N and periodic CQI report multiplexing on PUCCH format 3, see TS 36.213 [23, 7.2, 10.1]. E-UTRAN configures this information only when pucch-Format is set to format3. One value applies for all CSI processes. For SCells except for the PSCell and PUCCH SCell this field is not applicable and the UE shall ignore the value.

**simultaneousAckNackAndCQI-Format4-Format5**
Indicates that the UE shall perform simultaneous transmission of HARQ A/N and periodic CSI report multiplexing on PUCCH format 4 and format 5, see TS 36.213 [23, 10.1]. E-UTRAN configures this information only when pucch-Format is set to format4 or format5. One value applies for all CSI processes. For SCells except for the PSCell and PUCCH SCell this field is not applicable and the UE shall ignore the value.
### CQI-ReportConfig field descriptions

<table>
<thead>
<tr>
<th>Field Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>trigger01</td>
<td>Indicates whether or not reporting for this CSI-process or reporting for this CSI-process corresponding to a CSI subframe set is triggered by CSI request field set to 01, for a CSI request applicable for the serving cell on the same frequency as the CSI process, see TS 36.213 [23, table 7.2.1-1D and 7.2.1-1E].</td>
</tr>
<tr>
<td>trigger10, trigger11</td>
<td>Indicates whether or not reporting for this CSI-process or reporting for this CSI-process corresponding to a CSI subframe set is triggered by CSI request field set to 10 or 11, see TS 36.213 [23, table 7.2.1-1B]. EUTRAN configures at most 5 CSI processes, across all serving frequencies within each CG, to be triggered by a CSI request field set to value 10. The same restriction applies for value 11. In case E-UTRAN simultaneously triggers CSI requests for more than 5 CSI processes some limitations apply, see TS 36.213 [23].</td>
</tr>
<tr>
<td>trigger001</td>
<td>Indicates whether or not reporting for this CSI-process or reporting for this CSI-process corresponding to a CSI subframe set is triggered by CSI request field set to 001, for a CSI request applicable for the serving cell on the same frequency as the CSI process, see TS 36.213 [23, table 7.2.1-1D and 7.2.1-1E].</td>
</tr>
<tr>
<td>trigger010, trigger011, trigger100, trigger101, Trigger110, Trigger111</td>
<td>Indicates whether or not reporting for this CSI-process or reporting for this CSI-process corresponding to a CSI subframe set is triggered by CSI request field set to 010, 011, 100, 101, 110 or 111, see TS 36.213 [23, table 7.2.1-1D and 7.2.1-1E].</td>
</tr>
<tr>
<td>trigger-SubframeSetIndicator</td>
<td>For a serving cell configured with csi-MeasSubframeSets-r12, indicates for which CSI subframe set the aperiodic CSI report is triggered for the serving cell if the aperiodic CSI is triggered by the CSI request field 0 or 001, see TS 36.213 [23, table 7.2.1-1C or table 7.2.1-1E]. Value s1 corresponds to CSI subframe set 1 and value s2 corresponds to CSI subframe set 2.</td>
</tr>
<tr>
<td>trigger1-SubframeSetIndicator</td>
<td>If signalled in the aperiodicCSI-Trigger-v1250, indicates for which CSI subframe set the aperiodic CSI report is triggered when aperiodic CSI is triggered by the CSI request field 10, see TS 36.213 [23, table 7.2.1-1C] or by the CSI request field 010, see TS 36.213 [23, table 7.2.1-1E]. The leftmost bit, bit 0 in the bit string corresponds to the cell with ServCellIndex=0 and bit 1 in the bit string corresponds to the cell with ServCellIndex=1 etc. Each bit has either value 0 (means that aperiodic CSI report is triggered for CSI subframe set 1) or value 1 (means that aperiodic CSI report is triggered for CSI subframe set 2).</td>
</tr>
<tr>
<td>trigger2-SubframeSetIndicator</td>
<td>If signalled in the aperiodicCSI-Trigger-v1250, indicates for which CSI subframe set the aperiodic CSI report is triggered when aperiodic CSI is triggered by the CSI request field 11, see TS 36.213 [23, table 7.2.1-1C] or by the CSI request field 011, see TS 36.213 [23, table 7.2.1-1E]. The leftmost bit, bit 0 in the bit string corresponds to the cell with ServCellIndex=0 and bit 1 in the bit string corresponds to the cell with ServCellIndex=1 etc. Each bit has either value 0 (means that aperiodic CSI report is triggered for CSI subframe set 1) or value 1 (means that aperiodic CSI report is triggered for CSI subframe set 2).</td>
</tr>
<tr>
<td>trigger3-SubframeSetIndicator</td>
<td>Indicates for which CSI subframe set the aperiodic CSI report is triggered in the event of a periodic CSI report being triggered when aperiodic CSI is triggered by the CSI request field 100, see TS 36.213 [23, table 7.2.1-1E]. The leftmost bit, bit 0 in the bit string corresponds to the cell with ServCellIndex=0 and bit 1 in the bit string corresponds to the cell with ServCellIndex=1 etc. Each bit has either value 0 (means that aperiodic CSI report is triggered for CSI subframe set 1) or value 1 (means that aperiodic CSI report is triggered for CSI subframe set 2).</td>
</tr>
<tr>
<td>trigger4-SubframeSetIndicator</td>
<td>Indicates for which CSI subframe set the aperiodic CSI report is triggered when aperiodic CSI is triggered by the CSI request field 101, see TS 36.213 [23, table 7.2.1-1E]. The leftmost bit, bit 0 in the bit string corresponds to the cell with ServCellIndex=0 and bit 1 in the bit string corresponds to the cell with ServCellIndex=1 etc. Each bit has either value 0 (means that aperiodic CSI report is triggered for CSI subframe set 1) or value 1 (means that aperiodic CSI report is triggered for CSI subframe set 2).</td>
</tr>
<tr>
<td>trigger5-SubframeSetIndicator</td>
<td>Indicates for which CSI subframe set the aperiodic CSI report is triggered when aperiodic CSI is triggered by the CSI request field 110, see TS 36.213 [23, table 7.2.1-1E]. The leftmost bit, bit 0 in the bit string corresponds to the cell with ServCellIndex=0 and bit 1 in the bit string corresponds to the cell with ServCellIndex=1 etc. Each bit has either value 0 (means that aperiodic CSI report is triggered for CSI subframe set 1) or value 1 (means that aperiodic CSI report is triggered for CSI subframe set 2).</td>
</tr>
<tr>
<td>trigger6-SubframeSetIndicator</td>
<td>Indicates for which CSI subframe set the aperiodic CSI report is triggered when aperiodic CSI is triggered by the CSI request field 111, see TS 36.213 [23, table 7.2.1-1E]. The leftmost bit, bit 0 in the bit string corresponds to the cell with ServCellIndex=0 and bit 1 in the bit string corresponds to the cell with ServCellIndex=1 etc. Each bit has either value 0 (means that aperiodic CSI report is triggered for CSI subframe set 1) or value 1 (means that aperiodic CSI report is triggered for CSI subframe set 2).</td>
</tr>
</tbody>
</table>
### Conditional presence

<table>
<thead>
<tr>
<th>Field</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>cqi-Setup</td>
<td>This field is not present for an Scell except for the PSCell, while it is conditionally present for the PCell and the PSCell according to the following. The field is optional present, need OR, if the cqi-ReportPeriodic in the cqi-ReportConfig is set to setup. If the field cqi-ReportPeriodic is present and set to release, the field is not present and the UE shall delete any existing value for this field. Otherwise the field is not present.</td>
</tr>
<tr>
<td>PMIRi</td>
<td>The field is optional present, need OR, if cqi-ReportPeriodic is included and set to setup, or cqi-ReportModeAperiodic is included. If the field cqi-ReportPeriodic is present and set to release and cqi-ReportModeAperiodic is absent, the field is not present and the UE shall delete any existing value for this field. Otherwise the field is not present.</td>
</tr>
<tr>
<td>PMIRiPCell</td>
<td>The field is optional present, need OR, if cqi-ReportPeriodic is included in the CQI-ReportConfig-r10 and set to setup. If the field cqi-ReportPeriodic is present in the CQI-ReportConfig-r10 and set to release and cqi-ReportModeAperiodic is included in the CQI-ReportConfig-r10 and set to release, the field is not present and the UE shall delete any existing value for this field. Otherwise the field is not present.</td>
</tr>
<tr>
<td>PMIRiSCell</td>
<td>The field is optional present, need OR, if cqi-ReportPeriodicSCell is included and set to setup, or cqi-ReportModeAperiodic-r10 is included in the CQI-ReportConfigSCell. If the field cqi-ReportPeriodicSCell is present and set to release and cqi-ReportModeAperiodic-r10 is absent in the CQI-ReportConfigSCell, the field is not present and the UE shall delete any existing value for this field. Otherwise the field is not present.</td>
</tr>
</tbody>
</table>

---

### CQI-ReportPeriodicProcExtId

The IE CQI-ReportPeriodicProcExtId is used to identify a periodic CQI reporting configuration that E-UTRAN may configure in addition to the configuration specified by the IE CQI-ReportPeriodic-r10. These additional configurations are specified by the IE CQI-ReportPeriodicProcExt-r11. The identity is unique within the scope of a carrier frequency.

#### CQI-ReportPeriodicProcExtId information elements

```asn1
CQI-ReportPeriodicProcExtId-r11 ::= INTEGER (1..maxCQI-ProcExt-r11)
```

---

### CrossCarrierSchedulingConfig

The IE CrossCarrierSchedulingConfig is used to specify the configuration when the cross carrier scheduling is used in a cell.

#### CrossCarrierSchedulingConfig information elements

```asn1
CrossCarrierSchedulingConfig-r10 ::= SEQUENCE {
  schedulingCellInfo-r10    CHOICE {
    own-r10        SEQUENCE {     -- No cross carrier
      cif-Presence-r10      BOOLEAN
    },
    other-r10        SEQUENCE {     -- Cross carrier
      schedulingCellId-r10    ServCellIndex-r10,
      pdsch-Start-r10      INTEGER (1..4)
    }
  }
}
CrossCarrierSchedulingConfig-r13 ::= SEQUENCE {
  schedulingCellInfo-r13    CHOICE {
    own-r13        SEQUENCE {     -- No cross carrier
      cif-Presence-r13      BOOLEAN
    },
    other-r13       SEQUENCE {     -- Cross carrier scheduling
      schedulingCellId-r13    ServCellIndex-r13,
      pdsch-Start-r13      INTEGER (1..4)
    }
  }
}
```

```
crossCarrierSchedulingConfigLAA-UL-r14 ::= SEQUENCE {
schedulingCellId-r14       ServCellIndex-r13,
cif-InSchedulingCell-r14      INTEGER (1..7)}

-- ASN1STOP
```

---

**crossCarrierSchedulingConfig field descriptions**

**cif-Presence**
The field is used to indicate whether carrier indicator field is present (value TRUE) or not (value FALSE) in PDCCH/EPDCCH DCI formats, see TS 36.212 [22, 5.3.3.1].

**cif-InSchedulingCell**
The field indicates the CIF value used in the scheduling cell to indicate this cell, see TS 36.212 [22, 5.3.3.1]. In case of carrier indicator field is present, the CIF value is 0.

**pdsch-Start**
The starting OFDM symbol of PDSCH for the concerned SCell, see TS 36.213 [23. 7.1.6.4]. Values 1, 2, 3 are applicable when \( dl-Bandwidth \) for the concerned SCell is greater than 10 resource blocks, values 2, 3, 4 are applicable when \( dl-Bandwidth \) for the concerned SCell is less than or equal to 10 resource blocks, see TS 36.211 [21, Table 6.7-1].

**schedulingCellId**
Indicates which cell signals the downlink allocations and uplink grants, if applicable, for the concerned SCell. In case the UE is configured with DC, the scheduling cell is part of the same cell group (i.e. MCG or SCG) as the scheduled cell. In case the UE is configured with crossCarrierSchedulingConfigLAA-UL, schedulingCellId indicated in crossCarrierSchedulingConfigLAA-UL only indicates which cell signals the uplink grants.

---

**CSI-IM-Config**
The IE CSI-IM-Config is the CSI Interference Measurement (IM) configuration that E-UTRAN may configure on a serving frequency, see TS 36.213 [23, 7.2.6].

**CSI-IM-Config information elements**

```
-- ASN1START

CSI-IM-Config-r11 ::= SEQUENCE {
csi-IM-ConfigId-r11   CSI-IM-ConfigId-r11,
resourceConfig-r11     INTEGER (0..31),
subframeConfig-r11     INTEGER (0..154),
...,
  [[ interferenceMeasRestriction-r13 BOOLEAN OPTIONAL -- Need ON ]]
}

CSI-IM-ConfigExt-r12 ::= SEQUENCE {
csi-IM-ConfigId-v1250   CSI-IM-ConfigId-v1250,
resourceConfig-r12     INTEGER (0..31),
subframeConfig-r12     INTEGER (0..154),
...,
  [[ interferenceMeasRestriction-r13 BOOLEAN OPTIONAL, -- Need ON
csi-IM-ConfigId-v1310 CSI-IM-ConfigId-v1310 OPTIONAL -- Need ON ]]
}

-- ASN1STOP
```

---

**CSI-IM-Config field descriptions**

**resourceConfig**
Parameter: CSI reference signal configuration, see TS 36.213 [23. 7.2.6] and TS 36.211 [21, table 6.10.5.2-1 and 6.10.5.2-2] for 4 REs.

**subframeConfig**
Parameter: \( I_{CSI-RS} \), see TS 36.213 [23, 7.2.6] and TS 36.211 [21, table 6.10.5.3-1].
CSI-IM-ConfigId

The IE CSI-IM-ConfigId is used to identify a CSI-IM configuration that is configured by the IE CSI-IM-Config. The identity is unique within the scope of a carrier frequency.

CSI-IM-ConfigId information elements

---

CSI-Process

The IE CSI-Process is the CSI process configuration that E-UTRAN may configure on a serving frequency.

CSI-Process information elements

---
CSI-Process field descriptions

**advancedCodebookEnabled**
Value TRUE indicates that the UE should use the advanced code book defined in TS 36.213 [23]. EUTRAN does not configure the field when the UE is configured with eMIMO-Type is set to beamformed, when the UE is configured with eMIMO-Hybrid or when the UE is configured with semiOpenLoop.

**alternativeCodebookEnabledFor4TXProc**
Indicates whether code book in TS 36.213 [23] Table 7.2.4-0A to Table 7.2.4-0D is being used for deriving CSI feedback and reporting for a CSI process. EUTRAN may configure the field only if the number of CSI-RS ports for non-zero power transmission CSI-RS configuration is 4.

**cqi-ReportAperiodicProc**
If csi-MeasSubframeSets-r12 is configured for the same frequency as the CSI process, cqi-ReportAperiodicProc applies for CSI subframe set 1. If csi-MeasSubframeSet1-r10 or csi-MeasSubframeSet2-r10 are configured for the same frequency as the CSI process, cqi-ReportAperiodicProc applies for CSI subframe set 1 or CSI subframe set 2. Otherwise, cqi-ReportAperiodicProc applies for all subframes. E-UTRAN configures cqi-ReportAperiodicProc-v1310 only if cqi-ReportAperiodicProc-r11 is configured.

**cqi-ReportAperiodicProc2**

**cqi-ReportBothProc**
Includes CQI configuration parameters applicable for both aperiodic and periodic CSI reporting, for which CSI process specific values may be configured. E-UTRAN configures the field if and only if cqi-ReportPeriodicProcId is included and/or if cqi-ReportAperiodicProc is included.

**cqi-ReportPeriodicProcId**
Refers to a periodic CQI reporting configuration that is configured for the same frequency as the CSI process. Value 0 refers to the set of parameters defined by the REL-10 CQI reporting configuration fields, while the other values refer to the additional configurations E-UTRAN assigns by CQI-ReportPeriodicProcExt-r11 (and as covered by CQI-ReportPeriodicProcExtId).

**csi-IM-ConfigId**
Refers to a CSI-IM configuration that is configured for the same frequency as the CSI process.

**csi-IM-ConfigIdList**
Refers to one or two CSI-IM configurations that are configured for the same frequency as the CSI process. csi-IM-ConfigIdList can include 2 entries only if csi-MeasSubframeSets-r12 is configured for the same frequency as the CSI process. UE shall ignore csi-IM-ConfigId-r11 if csi-IM-ConfigIdList-r12 is configured.

**csi-RS-ConfigNZPId**
Refers to a CSI RS configuration using non-zero power transmission that is configured for the same frequency as the CSI process.

**eMIMO-Type**
Parameter: eMIMO-Type, see TS 36.213 [23], TS 36.211 [21]. If eMIMO-Type is set to nonPrecoded, the codebooks used for deriving CSI feedback are in TS 36.213 [23, Table 7.2.4-10 to Table 7.2.4-17]. Choice values nonPrecoded and beamformed correspond to ‘CLASS A’ and ‘CLASS B’ respectively, see TS 36.212 [22] and TS 36.213 [23].

**p-C-AndCBSRList**
The UE shall ignore p-C-AndCBSRList-r11 if configured with eMIMO-Type unless it is set to beamformed, alternativeCodebookEnabledBeamformed is set to FALSE and csi-RS-ConfigNZPIdListExt is not configured.

---

**CSI-ProcessId**
The IE CSI-ProcessId is used to identify a CSI process that is configured by the IE CSI-Process. The identity is unique within the scope of a carrier frequency.

**CSI-ProcessId information elements**

```asn1
CSI-ProcessId-r11 ::= INTEGER (1..maxCSI-Proc-r11)
```

---

**CSI-RS-Config**
The IE CSI-RS-Config is used to specify the CSI (Channel-State Information) reference signal configuration.
CSI-RS-Config information elements

-- ASN1START

CSI-RS-Config-r10 ::= SEQUENCE {
  csi-RS-r10  CHOICE {
    release     NULL,
    setup       SEQUENCE {

ZeroTxPowerCSI-RS-r12 ::= SEQUENCE {
  zeroTxPowerResourceConfigList-r12 BIT STRING (SIZE (16)),
  zeroTxPowerSubframeConfig-r12 INTEGER (0..154)
}

-- ASN1STOP
CSI-RS-Config field descriptions

ace-For4Tx-PerResourceConfigList
The field indicates the alternativeCodeBookEnabledFor4TX-r12 per CSI-RS resource. E-UTRAN configures the field only if csi-RS-ConfigNZPIdListExt is configured.

antennaPortsCount
Parameter represents the number of antenna ports used for transmission of CSI reference signals where value an1 corresponds to 1 antenna port, an2 to 2 antenna ports and so on, see TS 36.211 [21, 6.10.5].

ds-ZeroTxPowerCSI-RS
Parameter for additional zeroTxPowerCSI-RS for a serving cell, concerning the CSI-RS included in discovery signals.

p-C
Parameter: P_c, see TS 36.213 [23, 7.2.5]. The UE shall ignore p-C-r10 if configured with eMIMO-Type unless it is set to beamformed, alternativeCodebookEnabledBeamformed is set to FALSE and csi-RS-ConfigNZPIdListExt is not configured.

resourceConfig
Parameter: CSI reference signal configuration, see TS 36.211 [21, table 6.10.5.2-1 and 6.10.5.2-2].

subframeConfig
Parameter: ICSI-RS, see TS 36.211 [21, table 6.10.5.3-1].

zeroTxPowerCSI-RS2
Parameter for additional zeroTxPowerCSI-RS for a serving cell. E-UTRAN configures the field only if csi-MeasSubframeSets-r12 and TM 1 – 9 are configured for the serving cell.

zeroTxPowerResourceConfigList
Parameter: ZeroPowerCSI-RS, see TS 36.213 [23, 7.2.7].

zeroTxPowerSubframeConfig
Parameter: ICSI-RS, see TS 36.211 [21, table 6.10.5.3-1].

CSI-RS-ConfigEMIMO
The IE CSI-RS-ConfigEMIMO is used to specify the CSI (Channel-State Information) reference signal configuration for EBF/ FD-MIMO.

CSI-RS-ConfigEMIMO information elements

```asn1
CSI-RS-ConfigEMIMO-r13 ::= CHOICE {
  release      NULL,
  setup      CHOICE {
    nonPrecoded-r13     CSI-RS-ConfigNonPrecoded-r13,

ETSI
CSI-RS-ConfigEMIMO field descriptions

activatedResources
The number of activated CSI-RS resources, which concerns a subset of the aperiodic CSI-RS resources (for both semi-persistent and aperiodic mode). E-UTRAN configures at most the minimum between nMaxResource as configured by MIMO-UE-ParametersPerTM-r1430 and the number of resources as configured by csi-RS-ConfigNZP-ApList-r14.

alternativeCodebookEnabledBeamformed
The field indicates whether code book in TS 36.213 [23, Table 7.2.4-18 to Table 7.2.4-20] is being used for deriving CSI feedback and reporting for a CSI process. E-UTRAN configures the field only for a process referring to a single RS configuration using non-zero power transmission (i.e. a process for which csi-RS-ConfigNZPIdListExt-r13 is not configured). Field alternativeCodebookEnabledBeamformed corresponds to parameter alternativeCodebookEnabledCLASSB_K1 in TS 36.212 [22] and TS 36.213 [23].

codebookConfig
Indicates a sub-set of the codebook entry, see TS 36.213 [23].

codebookConfigNx
Indicates the number of antenna ports per polarization in dimension x as used for transmission of CSI reference signals. Value n1 corresponds to 1, value n2 corresponds to 2 and so on, see TS 36.213 [23]. E-UTRAN configures the field in accordance with the restrictions as specified in TS 36.213 [23].

codebookOverSamplingRateConfig-Ox
Indicates the spatial over-sampling rate in dimension x as used for transmission of CSI reference signals. Value n4 corresponds to 4 and value n8 corresponds to 8, see TS 36.213 [23].

csi-IM-ConfigId(List)
E-UTRAN configures the field csi-IM-ConfigIdList only if the IE is included in CSI-Process is configured (i.e. when TM10 is configured for the serving cell).

csi-RS-ConfigNZPIdListExt (in CSI-RS-ConfigBeamformed)
Indicates the NZP configuration(s) in addition to the original NZP configuration, as defined by csi-RS-Config-r10 (TM9) or csi-RS-ConfigNZPId-r11 (TM10). i.e. extends the size of the NZP configuration list (originally a single entry i.e. list of size 1) using the general principles specified in 5.1.2.

CSI-RS-ConfigBeamformed
If csi-RS-ConfigNZPIdListExt-r13 is configured, E-UTRAN configures the same total number of entries for NZP, csi-IM-ConfigIdList-r13 and p-C-AndCBSR-PerResourceConfigList-r13.

csi-RS-ConfigNZP-EMIMO
The field is used to configure NZP configurations additional to the one defined by the original NZP configuration as included in CSI-RS-ConfigCSI-Process when using 12 and 16 ports CSI-RS.

csi-RS-ConfigNZP-ApList
The field is used to configure NZP configurations for aperiodic or semi-persistent CSI RS reporting for which MAC controls activation. EUTRAN configures this field only when the UE is configured to use 2, 4 or 8 ports CSI-RS, in which case EUTRAN configures the number of entries to be the same as the number of NZP resource configurations. For all these entries the UE shall ignore field subframeConfig. EUTRAN always configures this field together with csi-RS-NZP-Activation. Furthermore, for a given process, E-UTRAN does not simultaneously configure the periodic NZP configuration(s) and NZP CSI RS configurations for aperiodic or semi-persistent reporting.

p-C-AndCBSR-PerResourceConfigList
E-UTRAN does not configure the field p-C-AndCBSR-PerResourceConfigList if the UE is configured with eMIMO-Type set to beamformed, alternativeCodebookEnabledBeamformed is set to FALSE and csi-RS-ConfigNZPIdListExt is not configured.

periodicityOffsetIndex
This parameter is associated with the first EMIMO configuration of the hybrid eMIMO configuration.

 CSI-RS-ConfigNZP
The IE CSI-RS-ConfigNZP is the CSI-RS resource configuration using non-zero power transmission that E-UTRAN may configure on a serving frequency.

**CSI-RS-ConfigNZPId**

The IE CSI-RS-ConfigNZPId is used to identify a CSI-RS resource configuration using non-zero transmission power, as configured by the IE CSI-RS-ConfigNZP. The identity is unique within the scope of a carrier frequency.

**CSI-RS-ConfigNZPId information elements**

```asn1
CSI-RS-ConfigNZPId-r11 ::= INTEGER (1..maxCSI-RS-NZP-r11)
CSI-RS-ConfigNZPId-v1310 ::= INTEGER (minCSI-RS-NZP-r13..maxCSI-RS-NZP-r13)
CSI-RS-ConfigNZPId-r13 ::= INTEGER (1..maxCSI-RS-NZP-r13)
```

**CSI-RS-ConfigZP**

The IE CSI-RS-ConfigZP is the CSI-RS resource configuration, for which UE assumes zero transmission power, that E-UTRAN may configure on a serving frequency.

**CSI-RS-ConfigZP information elements**

```asn1
CSI-RS-ConfigZP-r11 ::= SEQUENCE {
  csi-RS-ConfigZPId-r11  CSI-RS-ConfigZPId-r11,
  resourceConfigList-r11 BIT STRING (SIZE (16)),
  subframeConfig-r11    INTEGER (0..154),
  ...}
CSI-RS-ConfigZP- ApList-r14 ::= CHOICE {
  release             NULL,
  setup               SEQUENCE (SIZE (1.. maxCSI-RS-ZP-r11)) OF CSI-RS-ConfigZP-r11
}
```
CSI-RS-ConfigZP field descriptions

CSI-RS-ConfigZP-ApList
Indicates the aperiodic zero power CSI-RS present in a given subframe. See 36.213 [23, Table 7.1.9-2]. First entry in the list corresponds to aperiodic trigger 00, second entry in the list corresponds to aperiodic trigger 01 and so on.

resourceConfigList
Parameter: ZeroPowerCSI-RS, see TS 36.213 [23, 7.2.7].

subframeConfig
Parameter: $I_{\text{CSI-RS}}$, see TS 36.211 [21, table 6.10.5.3-1].

---

CSI-RS-ConfigZPId
The IE CSI-RS-ConfigZPId is used to identify a CSI-RS resource configuration for which UE assumes zero transmission power, as configured by the IE CSI-RS-ConfigZP. The identity is unique within the scope of a carrier frequency.

CSI-RS-ConfigZPId information elements

---

DataInactivityTimer
The IE DataInactivityTimer is used to control Data inactivity operation. Corresponds to the timer for data inactivity monitoring in TS 36.321 [6]. Value $s_1$ corresponds to 1 second, $s_2$ corresponds to 2 seconds and so on.

DataInactivityTimer information element

---

DMRS-Config
The IE DMRS-Config is the DMRS configuration that E-UTRAN may configure on a serving frequency.

DMRS-Config information elements
### DMRS-Config field descriptions

**EPDCCH-Config field descriptions**

<table>
<thead>
<tr>
<th>Field Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>csi-NumRepetitionCE</strong></td>
<td>Number of subframes for CSI reference resource, see TS 36.213 [23]. Value sf1 corresponds to 1 subframe, sf2 corresponds to 2 subframes and so on.</td>
</tr>
<tr>
<td><strong>csi-RS-Config2PId2</strong></td>
<td>Indicates the rate matching parameters in addition to those indicated by <code>re-MappingQCL-ConfigId</code>. E-UTRAN configures this field only when tm10 is configured.</td>
</tr>
<tr>
<td><strong>dmrs-ScramblingSequenceIndex</strong></td>
<td>The DMRS scrambling sequence initialization parameter $n_{ID}^{EPDCCH}$ or $n_{ID}^{MPDCCH}$ defined in TS 36.211 [21, 6.10.3A.1].</td>
</tr>
<tr>
<td><strong>EPDCCH-SetConfig</strong></td>
<td>Provides EPDCCH configuration set. See TS 36.213 [23, 9.1.4]. E-UTRAN configures at least one EPDCCH-SetConfig when EPDCCH-Config is configured. For BL UEs or UEs in CE, EUTRAN does not configure more than one EPDCCH-SetConfig.</td>
</tr>
<tr>
<td><strong>mpdcch-Narrowband</strong></td>
<td>Parameter: $n_{NB}^{MPDCCH}$. Field values (1..maxAvailNarrowBands-r13) correspond to narrowband indices (0..[maxAvailNarrowBands-r13-1]) as specified in TS 36.211 [21].</td>
</tr>
<tr>
<td><strong>mpdcch-NumRepetition</strong></td>
<td>Maximum numbers of repetitions for UE-SS for MPDCCH, see TS 36.211 [21].</td>
</tr>
<tr>
<td><strong>mpdcch-Format</strong></td>
<td>Frequency hopping activation/deactivation for unicast MPDCCH/PDSCH, see TS 36.211 [21]. E-UTRAN does not configure the value on if freqHoppingParametersDL is not present in SystemInformationBlockType1.</td>
</tr>
<tr>
<td><strong>mpdcch-StartSF-UESS</strong></td>
<td>Starting subframe configuration for an MPDCCH UE-specific search space, see TS 36.211 [21]. Value v1 corresponds to 1, value v1.5 corresponds to 1.5, and so on.</td>
</tr>
<tr>
<td><strong>numberPRB-Pairs</strong></td>
<td>Indicates the number of physical resource-block pairs used for the EPDCCH set. Value n2 corresponds to 2 physical resource-block pairs; n4 corresponds to 4 physical resource-block pairs and so on. Value n8 is not supported if dl-Bandwidth is set to 6 resource blocks. EUTRAN configures value up to n6 only for BL UEs or UEs in CE. Value n6 is only applicable to BL UEs or UEs in CE.</td>
</tr>
<tr>
<td><strong>pucch-ResourceStartOffset</strong></td>
<td>PUCCH format 1a, 1b and 3 resource starting offset for the EPDCCH set. See TS 36.213 [23, 10.1].</td>
</tr>
<tr>
<td><strong>re-MappingQCL-ConfigId</strong></td>
<td>Indicates the starting OFDM symbol, the related rate matching parameters and quasi co-location assumption for EPDCCH when the UE is configured with tm10. This field provides the identity of a configured PDSCH-RE-MappingQCL-Config. E-UTRAN configures this field only when tm10 is configured.</td>
</tr>
<tr>
<td><strong>resourceBlockAssignment</strong></td>
<td>Indicates the index to a specific combination of physical resource-block pair for EPDCCH set. See TS 36.213 [23, 9.1.4.4]. The size of resourceBlockAssignment is specified in TS 36.213 [23, 9.1.4.4] and based on numberPRB-Pairs and the signalled value of dl-Bandwidth. If numberPRB-Pairs-v1310 field is present, the total number of physical resource-block pairs is 6 and it is composed of one subset of 2 physical resource-block pairs and another subset of 4 physical resource-block pairs, and the resourceBlockAssignment field defines the subset of 2 physical resource-block pairs.</td>
</tr>
<tr>
<td><strong>setConfigId</strong></td>
<td>Indicates the identity of the EPDCCH configuration set.</td>
</tr>
<tr>
<td><strong>startSymbol</strong></td>
<td>Indicates the OFDM starting symbol for any EPDCCH and PDSCH scheduled by EPDCCH on the same cell, see TS 36.213 [23, 9.1.4.1]. If not present, the UE shall release the configuration and shall derive the starting OFDM symbol of EPDCCH and PDSCH scheduled by EPDCCH from PCFICH. Values 1, 2, and 3 are applicable for dl-Bandwidth greater than 10 resource blocks. Values 2, 3, and 4 are applicable otherwise. E-UTRAN does not configure the field for UEs configured with tm10.</td>
</tr>
<tr>
<td><strong>subframePatternConfig</strong></td>
<td>Configures the subframes which the UE shall monitor the UE-specific search space on EPDCCH, except for pre-defined rules in TS 36.213 [23, 9.1.4]. If the field is not configured when EPDCCH is configured, the UE shall monitor the UE-specific search space on EPDCCH in all subframes except for pre-defined rules in TS 36.213 [23, 9.1.4].</td>
</tr>
<tr>
<td><strong>transmissionType</strong></td>
<td>Indicates whether distributed or localized EPDCCH transmission mode is used as defined in TS 36.211 [21, 6.8A.1].</td>
</tr>
</tbody>
</table>

---

**EIMTA-MainConfig**

The IE EIMTA-MainConfig is used to specify the eIMTA-RNTI used for eIMTA and the subframes used for monitoring PDCCH with eIMTA-RNTI. The IE EIMTA-MainConfigServCell is used to specify the eIMTA related parameters applicable for the concerned serving cell.
**EIMTA-MainConfig field descriptions**

**eimta-CommandPeriodicity**  
Configures the periodicity to monitor PDCCH with eIMTA-RNTI, see TS 36.213 [23, 13.1]. Value sf10 corresponds to 10 subframes, sf20 corresponds to 20 subframes and so on.

**eimta-CommandSubframeSet**  
Configures the subframe(s) to monitor PDCCH with eIMTA-RNTI within the periodicity configured by `eimta-CommandPeriodicity`. The 10 bits correspond to all subframes in the last radio frame within each periodicity. The left most bit is for subframe 0 and so on. Each bit can be of value 0 or 1. The value of 1 means that the corresponding subframe is configured for monitoring PDCCH with eIMTA-RNTI, and the value of 0 means otherwise. In case of TDD as PCell, only the downlink subframes indicated by the UL/DL configuration in SIB1 can be configured for monitoring PDCCH with eIMTA-RNTI. In case of FDD as PCell, any of the ten subframes can be configured for monitoring PDCCH with eIMTA-RNTI.

**eimta-HARQ-ReferenceConfig**  
Indicates UL/DL configuration used as the DL HARQ reference configuration for this serving cell. Value sa2 corresponds to Configuration2, sa4 to Configuration4 etc, as specified in TS 36.211 [21, table 4.2-2]. E-UTRAN configures the same value for all serving cells residing on same frequency band.

**eimta-UL-DL-ConfigIndex**  
Index of $I$, see TS 36.212 [22, 5.3.3.1.4]. E-UTRAN configures the same value for all serving cells residing on same frequency band.

**mbsfn-SubframeConfigList**  
Configure the MBSFN subframes for the UE on this serving cell. An uplink subframe indicated by the DL/UL subframe configuration in SIB1 can be configured as MBSFN subframe.

---

**LogicalChannelConfig**  
The IE LogicalChannelConfig is used to configure the logical channel parameters.

**LogicalChannelConfig information element**

```
LogicalChannelConfig ::= SEQUENCE {
    ul-SpecificParameters  SEQUENCE {
        priority       INTEGER (1..16),
        prioritisedBitRate ENUMERATED {
            kBps0, kBps8, kBps16, kBps32, kBps64, kBps128,
            kBps256, infinity, kBps512-v1020, kBps1024-v1020,
            kBps2048-v1020, spare5, spare4, spare3, spare2,
            spare1},
        bucketSizeDuration ENUMERATED {
            ms50, ms100, ms150, ms300, ms500, ms1000, spare2,
```

<td>bitRateQueryProhibitTimer</td>
<td>The timer is used for bit rate recommendation query in TS 36.321 [6, 5.x], in seconds. Value s0 means 0s, s0dot4 means 0.4s and so on.</td>
</tr>
<tr>
<td>bucketSizeDuration</td>
<td>Bucket Size Duration for logical channel prioritization in TS 36.321 [6]. Value in milliseconds. Value ms50 corresponds to 50 ms, ms100 corresponds to 100 ms and so on.</td>
</tr>
<tr>
<td>laa-UL-Allowed</td>
<td>Indicates whether the data of a logical channel is allowed to be transmitted via UL of LAA SCells. Value TRUE indicates that the logical channel is allowed to be sent via UL of LAA SCells. Value FALSE indicates that the logical channel is not allowed to be sent via UL of LAA SCells.</td>
</tr>
<tr>
<td>logicalChannelGroup</td>
<td>Mapping of logical channel to logical channel group for BSR reporting in TS 36.321 [6].</td>
</tr>
<tr>
<td>logicalChannelSR-Mask</td>
<td>Controlling SR triggering on a logical channel basis when an uplink grant is configured. See TS 36.321 [6].</td>
</tr>
<tr>
<td>logicalChannelSR-Prohibit</td>
<td>Value TRUE indicates that the logicalChannelSR-ProhibitTimer is enabled for the logical channel. E-UTRAN only (optionally) configures the field (i.e. indicates value TRUE) if logicalChannelSR-ProhibitTimer is configured. See TS 36.321 [6].</td>
</tr>
<tr>
<td>prioritisedBitRate</td>
<td>Prioritized Bit Rate for logical channel prioritization in TS 36.321 [6]. Value in kilobytes/second. Value kBps0 corresponds to 0 kB/second, kBps8 corresponds to 8 kB/second, kBps16 corresponds to 16 kB/second and so on. Infinity is the only applicable value for SRB1 and SRB2</td>
</tr>
<tr>
<td>priority</td>
<td>Logical channel priority in TS 36.321 [6]. Value is an integer.</td>
</tr>
</tbody>
</table>

**LWA-Configuration**

The IE `LWA-Configuration` is used to setup/modify/release LTE-WLAN Aggregation.

```asn1
-- ASN1START
LWA-Configuration-r13 ::= CHOICE {
  release    NULL,
  setup      SEQUENCE {
    lwa-Config-r13 LWA-Config-r13
  }
}
LWA-Config-r13 ::= SEQUENCE {
  lwa-MobilityConfig-r13 WLAN-MobilityConfig-r13 OPTIONAL, -- Need ON
  lwa-WT-Counter-r13 INTEGER (0..65535) OPTIONAL, -- Need ON
  ...
  wt-MAC-Address-r14 OCTET STRING (SIZE (6)) OPTIONAL -- Need ON
}
-- ASN1STOP
```
---

**LWA-Configuration** field descriptions

**lwa-MobilityConfig**  
Indicates the parameters used for WLAN mobility.

**lwa-WT-Counter**  
Indicates the parameter used by UE for WLAN authentication.

**wt-MAC-Address**  
Indicates the WT MAC address of the WT handling the LWA operation for the UE. The UE uses this MAC address in uplink transmissions to enable routing of LWA uplink data from the AP to the WT. E-UTRAN configures the field only if *ul-LWA-Config-r14* is configured for at least one LWA bearer.

---

**LWIP-Configuration**

The IE *LWIP-Configuration* is used to add, modify or release DRBs that are using LWIP Tunnel.

---

**LWIP-Configuration** field descriptions

**lwip-MobilityConfig**  
Indicates the WLAN mobility set for LWIP.

**tunnelConfigLWIP**  
Indicates the parameters used for establishing the LWIP tunnel.

---

**MAC-MainConfig**

The IE *MAC-MainConfig* is used to specify the MAC main configuration for signalling and data radio bearers. All MAC main configuration parameters can be configured independently per Cell Group (i.e. MCG or SCG), unless explicitly specified otherwise.

---

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>onDurationTimer</strong></td>
<td>Timer for DRX in TS 36.321 [6]. Value in number of PDCCH sub-frames. Value psf1 corresponds to 1 PDCCH sub-frame, psf2 corresponds to 2 PDCCH sub-frames and so on. In case onDurationTimer-v1310 is signalled, the UE shall ignore onDurationTimer (i.e. without suffix).</td>
</tr>
<tr>
<td><strong>periodicBSR-Timer</strong></td>
<td>Timer for BSR reporting in TS 36.321 [6]. Value in number of sub-frames. Value sf10 corresponds to 10 sub-frames, sf20 corresponds to 20 sub-frames and so on.</td>
</tr>
<tr>
<td><strong>periodicPHR-Timer</strong></td>
<td>Timer for PHR reporting in TS 36.321 [6]. Value in number of sub-frames. Value sf10 corresponds to 10 sub-frames, sf20 corresponds to 20 sub-frames and so on.</td>
</tr>
<tr>
<td><strong>phr-ModeOtherCG</strong></td>
<td>Indicates the mode (i.e. real or virtual) used for the PHR of the activated cells that are part of the other Cell Group (i.e. MCG or SCG), when DC is configured.</td>
</tr>
<tr>
<td><strong>prohibitPHR-Timer</strong></td>
<td>Timer for PHR reporting in TS 36.321 [6]. Value in number of sub-frames. Value sf0 corresponds to 0 subframes and behaviour as specified in 7.3.2 applies, sf100 corresponds to 100 subframes and so on.</td>
</tr>
<tr>
<td><strong>retxBSR-Timer</strong></td>
<td>Timer for BSR reporting in TS 36.321 [6]. Value in number of sub-frames. Value sf640 corresponds to 640 sub-frames, sf1280 corresponds to 1280 sub-frames and so on.</td>
</tr>
<tr>
<td><strong>sCellDeactivationTimer</strong></td>
<td>SCell deactivation timer in TS 36.321 [6]. Value in number of radio frames. Value rf4 corresponds to 4 radio frames, value rf8 corresponds to 8 radio frames and so on. E-UTRAN only configures the field if the UE is configured with one or more SCells other than the PSCell and PUCCH SCell. If the field is absent, the UE shall delete any existing value for this field and assume the value to be set to infinity. The same value applies for each SCell of a Cell Group (i.e. MCG or SCG) (although the associated functionality is performed independently for each SCell). Field sCellDeactivationTimer does not apply for the PUCCH SCell.</td>
</tr>
<tr>
<td><strong>shortDRX-Cycle</strong></td>
<td>Short DRX cycle in TS 36.321 [6]. Value in number of sub-frames. Value sf2 corresponds to 2 sub-frames, sf5 corresponds to 5 subframes and so on. In case shortDRX-Cycle-v1130 is signalled, the UE shall ignore shortDRX-Cycle (i.e. without suffix). Short DRX cycle is not configured for UEs in CE.</td>
</tr>
<tr>
<td><strong>skipUplinkTxDynamic</strong></td>
<td>If configured, the UE skips UL transmissions for an uplink grant other than a configured uplink grant if no data is available for transmission in the UE buffer as described in TS 36.321 [6].</td>
</tr>
<tr>
<td><strong>skipUplinkTxSPS</strong></td>
<td>If configured, the UE skips UL transmissions for a configured uplink grant if no data is available for transmission in the UE buffer as described in TS 36.321 [6]. E-UTRAN always configures skipUplinkTxSPS when semiPersistSchedIntervalUL is shorter than sf10.</td>
</tr>
<tr>
<td><strong>sr-ProhibitTimer</strong></td>
<td>Timer for SR transmission on PUCCH in TS 36.321 [6]. Value in number of SR period(s) of shortest SR period of any serving cell with PUCCH. Value 0 means that behaviour as specified in 7.3.2 applies. Value 1 corresponds to one SR period. Value 2 corresponds to 2*SR periods and so on. SR period is defined in TS 36.213 [23, table 10.1.5-1].</td>
</tr>
<tr>
<td><strong>stag-id</strong></td>
<td>Indicates the TAG of an SCell, see TS 36.321 [6]. Uniquely identifies the TAG within the scope of a Cell Group (i.e. MCG or SCG). If the field is not configured for an SCell (e.g. absent in MAC-MainConfigSCell), the SCell is part of the PTAG.</td>
</tr>
<tr>
<td><strong>stag-ToAddModList, stag-ToReleaseList</strong></td>
<td>Used to configure one or more STAGs. E-UTRAN ensures that a STAG contains at least one SCell with configured uplink. If, due to SCell release a reconfiguration would result in an ‘empty’ TAG, E-UTRAN includes release of the concerned TAG.</td>
</tr>
<tr>
<td><strong>timeAlignmentTimerSTAG</strong></td>
<td>Indicates the value of the time alignment timer for an STAG, see TS 36.321 [6].</td>
</tr>
<tr>
<td><strong>ttiBundling</strong></td>
<td>TRUE indicates that TTI bundling TS 36.321 [6] is enabled while FALSE indicates that TTI bundling is disabled. TTI bundling can be enabled for FDD and for TDD for configurations 0, 1 and 6 and additionally for configurations 2 and 3 when symPUSCH-UpPTS-r14 is configured. The functionality is performed independently per Cell Group (i.e. MCG or SCG), but E-UTRAN does not configure TTI bundling for the SCG. For a TDD PCell, E-UTRAN does not simultaneously enable TTI bundling and semi-persistent scheduling in this release of specification. Furthermore, for a Cell Group, E-UTRAN does not simultaneously configure TTI bundling and SCells with configured uplink, and E-UTRAN does not simultaneously configure TTI bundling and eIMTA.</td>
</tr>
</tbody>
</table>
P-C-AndCBSR

The IE P-C-AndCBSR is used to specify the power control and codebook subset restriction configuration.

P-C-AndCBSR information elements

P-C-AndCBSR-r11 ::= SEQUENCE {
  p-C-r11      INTEGER {-8..15},
  codebookSubsetRestriction-r11 BIT STRING

P-C-AndCBSR-Pair-r13 ::= SEQUENCE (SIZE (1..2)) OF P-C-AndCBSR-r13

P-C-AndCBSR field descriptions

cbsr-Selection
Indicates which codebook subset restriction parameter(s) are to be used. E-UTRAN applies values nonPrecoded when eMIMO-Type is set to nonPrecoded. E-UTRAN applies value beamformedK1a when eMIMO-Type is set to beamformed. alternativeCodebookEnabledBeamformed is set to TRUE and csi-RS-ConfigNZPIdListExt is not configured. E-UTRAN applies value beamformedKN when csi-RS-ConfigNZPIdListExt is configured. E-UTRAN applies value beamformedKN when eMIMO-Type is set to beamformed, alternativeCodebookEnabledBeamformed is set to FALSE.

codebookSubsetRestriction
Parameter: codebookSubsetRestriction, see TS 36.213 [23] and TS 36.211 [21]. The number of bits in the codebookSubsetRestriction for applicable transmission modes is defined in TS 36.213 [23].

codebookSubsetRestriction1
Parameter: codebookSubsetRestriction1, see TS 36.213 [23, Table 7.2-1d]. The number of bits in the codebookSubsetRestriction1 for applicable transmission modes is defined in TS 36.213 [23].

codebookSubsetRestriction2
Parameter: codebookSubsetRestriction2, see TS 36.213 [23, Table 7.2-1e]. The number of bits in the codebookSubsetRestriction2 for applicable transmission modes is defined in TS 36.213 [23].

codebookSubsetRestriction3
Parameter: codebookSubsetRestriction3, see TS 36.213 [23, Table 7.2-1f]. The UE shall ignore codebookSubsetRestriction-r11 or codebookSubsetRestriction-r10 if codebookSubsetRestriction3-r13 is configured. The number of bits in the codebookSubsetRestriction3 for applicable transmission modes is defined in TS 36.213 [23].

p-C
Parameter: P_c, see TS 36.213 [23, 7.2.5].

P-C-AndCBSR-Pair
E-UTRAN includes a single entry if the UE is configured with TM9. If the UE is configured with TM10 and E-UTRAN includes 2 entries, this indicates that the subframe patterns configured for CSI (CQI/PMI/PTI/R/RI/CRI) reporting (i.e. as defined by field csi-MeasSubframeSet1 and csi-MeasSubframeSet2, or as defined by csi-MeasSubframeSets-r12) are to be used for this CSI process, while including a single entry indicates that the subframe patterns are not to be used for this CSI process. For a UE configured with TM10, E-UTRAN does not include 2 entries with csi-MeasSubframeSet1 and csi-MeasSubframeSet2 for CSI processes concerning a secondary frequency. Furthermore, E-UTRAN includes 2 entries when configuring both cqi-pmi-ConfigIndex and cqi-pmi-ConfigIndex2.
The IE *PDCCH-ConfigSCell* specifies PDCCH monitoring parameters that E-UTRAN may configure for a serving cell.

**PDCCH-ConfigSCell**

**PDCCH-ConfigSCell information element**

```
**PDCCH-ConfigSCell field descriptions**

- **maxNumberOfSchedSubframes-Format0B**
  Indicates maximum number of schedulable subframes for DCI format 0B as specified in TS 36.213 [23]. Value sf2 corresponds to 2 subframes, value sf3 corresponds to 3 subframes and so on.

- **maxNumberOfSchedSubframes-Format4B**
  Indicates maximum number of schedulable subframes for DCI format 4B as specified in TS 36.213 [23]. Value sf2 corresponds to 2 subframes, value sf3 corresponds to 3 subframes and so on.

- **skipMonitoringDCI-format0-1A**
  Indicates whether the UE is configured to omit monitoring DCI format 0/1A, see TS 36.213 [23, 9.1.1].

- **skipMonitoringDCI-Format0A**
  Indicates whether the UE is configured to omit monitoring DCI format 0A as specified in TS 36.213 [23].

- **skipMonitoringDCI-Format4A**
  Indicates whether the UE is configured to omit monitoring DCI format 4A as specified in TS 36.213 [23].

- **pdcch-candidateReductionALx**
  Indicates reduced (E)PDCCH monitoring requirements on UE specific search space of the x-th aggregation level, see TS 36.213 [23, 9.1.1]. Value n0 corresponds to 0%, value n33 corresponds to 33% and so on.

- **pdcch-CandidateReductions-Formatx**
  Indicates number of blind detections on UE specific search space for each aggregation layer as specified in TS 36.213 [23]. The field can only be present when the UE is configured with uplink of an LAA SCell. If pdcch-CandidateReductions-Formatx is not configured, pdcch-CandidateReductions-r13 applies to the corresponding DCIs (if configured).

```
**PDCP-Config field descriptions**

**discardTimer**
Indicates the discard timer value specified in TS 36.323 [8]. Value in milliseconds. Value ms50 means 50 ms, ms100 means 100 ms and so on.

**headerCompression**
E-UTRAN does not reconfigure header compression for an MCG DRB except for upon handover and upon the first reconfiguration after RRC connection re-establishment. E-UTRAN does not reconfigure header compression for a SCG DRB except for upon SCG change involving PDCP re-establishment. For split and LWA DRBs E-UTRAN configures only notUsed.

If headerCompression is configured, the UE shall apply the configured ROHC profile(s) in both uplink and downlink.

**maxCID**
Indicates the value of the MAX_CID parameter as specified in TS 36.323 [8]. The total value of MAX_CIDs across all bearers for the UE should be less than or equal to the value of maxNumberROHC-ContextSessions parameter as indicated by the UE. E-UTRAN configures the same value for maxCID in both headerCompression and uplinkOnlyHeaderCompression.

**pdcp-SN-Size**
Indicates the PDCP Sequence Number length in bits. For RLC UM: value len7bits means that the 7-bit PDCP SN format is used and len12bits means that the 12-bit PDCP SN format is used. For RLC AM: value len15bits means that the 15-bit PDCP SN format is used, value len18bits means that the 18-bit PDCP SN format is used, otherwise if the field is not included upon setup of the PCDP entity 12-bit PDCP SN format is used, as specified in TS 36.323 [8].

**profiles**
The profiles used by both compressor and decompressor in both UE and E-UTRAN. The field indicates which of the ROHC profiles specified in TS 36.323 [8] are supported, i.e. value true indicates that the profile is supported. Profile 0x0000 shall always be supported when the use of ROHC is configured. If support of two ROHC profile identifiers with the same 8 LSB’s is signalled, only the profile corresponding to the highest value shall be applied. E-UTRAN does not configure ROHC while t-Reordering is configured (i.e. for split DRBs, for LWA bearers or upon reconfiguration from split or LWA to MCG DRB).

**statusFeedback**
Indicates whether the UE shall send PDCP Status Report periodically or by E-UTRAN polling as specified in TS 36.323 [8]. E-UTRAN configures this field only for LWA DRB.

**statusPDU-TypeForPolling**
Indicates the PDCP Control PDU option when it is triggered by E-UTRAN polling. Value type1 indicates using the legacy PDCP Control PDU for PDCP status reporting and value type2 indicates using the LWA specific PDCP Control PDU for LWA status reporting as specified in TS 36.323 [8].

**statusPDU-Periodicity-Type1**
Indicates the value of the PDCP Status reporting periodicity for type1 Status PDU, as specified in TS 36.323 [8]. Value in milliseconds. Value ms5 means 5 ms, ms10 means 10 ms and so on.

**statusPDU-Periodicity-Type2**
Indicates the value of the PDCP Status reporting periodicity for type2 Status PDU, as specified in TS 36.323 [8]. Value in milliseconds. Value ms5 means 5 ms, ms10 means 10 ms and so on.

**statusPDU-Periodicity-Offset**
Indicates the value of the offset for type2 Status PDU periodicity, as specified in TS 36.323 [8]. Value in milliseconds. Value ms1 means 1 ms, ms2 means 2 ms and so on.

**t-Reordering**
Indicates the value of the reordering timer, as specified in TS 36.323 [8]. Value in milliseconds. Value ms0 means 0 ms and behaviour as specified in 7.3.2 applies, ms20 means 20 ms and so on.

**rm-IntegrityProtection**
Indicates that integrity protection or verification shall be applied for all subsequent packets received and sent by the RN on the DRB.

**statusReportRequired**
Indicates whether or not the UE shall send a PDCP Status Report upon re-establishment of the PDCP entity and upon PDCP data recovery as specified in TS 36.323 [8].

**ul-DataSplitDRB-ViaSCG**
Indicates whether the UE shall send PDCP PDUs via SCG as specified in TS 36.323 [8]. E-UTRAN only configures the field (i.e. indicates value TRUE) for split DRBs.

**ul-DataSplitThreshold**
Indicates the threshold value for uplink data split operation specified in TS 36.323 [8]. Value b100 means 100 Bytes, b200 means 200 Bytes and so on. E-UTRAN only configures this field for split DRBs.

**ul-LWA-DRB-ViaWLAN**
Indicates whether the UE shall send PDCP PDUs via the LWAAP entity as specified in TS 36.323 [8]. E-UTRAN only configures this field (i.e. indicates value TRUE) for LWA DRBs.

**ul-LWA-DataSplitThreshold**
Indicates the threshold value for uplink data split operation as specified in TS 36.323 [8]. Value b0 means 0 Bytes, b100 means 100 Bytes and so on. E-UTRAN only configures this field for LWA DRBs.
The field is mandatory present upon setup of a PDCP entity for a radio bearer configured with RLC AM. The field is optional, need ON, in case of reconfiguration of a PDCP entity at handover, at the first reconfiguration after RRC re-establishment or at SCG change involving PDCP re-establishment or PDCP data recovery for a radio bearer configured with RLC AM. Otherwise the field is not present.

Rlc-AM2
The field is optionally present, need OP, upon setup of a PDCP entity for a radio bearer configured with RLC AM. Otherwise the field is not present.

Rlc-AM3
The field is optionally present, need OP, upon setup of a PDCP entity for a radio bearer configured with RLC AM, if pdcp-SN-Size-v1130 is absent. Otherwise the field is not present.

Rlc-UM
The field is mandatory present upon setup of a PDCP entity for a radio bearer configured with RLC UM. It is optionally present, Need ON, upon handover within E-UTRA, upon the first reconfiguration after re-establishment and upon SCG change involving PDCP re-establishment. Otherwise the field is not present.

RN
The field is optionally present when signalled to the RN, need OR. Otherwise the field is not present.

Setup
The field is mandatory present in case of radio bearer setup. Otherwise the field is optionally present, need ON.

SetupS
The field is mandatory present in case of setup of or reconfiguration to a split DRB or LWA DRB. The field is optionally present upon reconfiguration of a split DRB or LWA DRB or upon DRB type change from split to MCG DRB or from LWA to LTE only, need ON. Otherwise the field is not present.

---

**PDSCH-Config**

The IE PDSCH-ConfigCommon and the IE PDSCH-ConfigDedicated are used to specify the common and the UE specific PDSCH configuration respectively.

---

**PDSCH-Config information element**

---

---

---

---
### PDSCH-ConfigDedicated-v1280

```asn1
  PDSCH-ConfigDedicated-v1280 ::= SEQUENCE {

    }
  }
```

---

**ASN1STOP**
### PDSCH-Config field descriptions

#### ce-HARQ-AckBundling
Activation of PDSCH HARQ-ACK bundling in half duplex FDD in CE mode A, see TS 36.212 [22] and TS 36.213 [23].

#### ce-PDSCH-MaxBandwidth
Maximum PDSCH channel bandwidth in CE mode A and B, see TS 36.212 [22] and TS 36.213 [23]. Value bw5 corresponds to 5 MHz, and value bw20 corresponds to 20 MHz. If this field is absent, the UE shall release any existing value and set the maximum PDSCH channel bandwidth in CE mode A and B to 1.4 MHz. Parameter: transmission bandwidth configuration, see TS 36.101 [42, table 5.6-1]. The max bandwidth can be configured to 5MHz for BL UEs and 5MHz or 20MHz for UEs in CE.

#### ce-PDSCH-TenProcesses
Configuration of 10 (instead of 8) DL HARQ processes in FDD in CE mode A, see TS 36.212 [22] and TS 36.213 [23].

#### ce-SchedulingEnhancement
Activation of dynamic HARQ-ACK delay for PDSCH in CE mode A controlled by the DCI, see TS 36.212 [22] and TS 36.213 [23]. Value range1 corresponds to the first range of HARQ-ACK delays, and value range2 corresponds to second range of HARQ-ACK delays.

#### mbsfn-SubframeConfigList
Indicates the MBSFN configuration for the CSI-RS resources. If optionalSetOfFields is absent, the field is released.

#### optionalSetOfFields
If absent, the UE releases the configuration provided previously, if any, and applies the values from the serving cell configured on the same frequency.

#### p-a
Parameter: \( P_a \), see TS 36.213 [23, 5.2]. Value dB-6 corresponds to -6 dB, dB-4.77 corresponds to -4.77 dB etc.

#### p-b
Parameter: \( P_b \), see TS 36.213 [23, Table 5.2-1].

#### pdsch-maxNumRepetitionCEmodeA
Maximum value to indicate the set of PDSCH repetition numbers for CE mode A, see TS 36.211 [21] and TS 36.213 [23].

#### pdsch-maxNumRepetitionCEmodeB
Maximum value to indicate the set of PDSCH repetition numbers for CE mode B, see TS 36.211 [21] and TS 36.213 [23].

#### pdsch-Start
The starting OFDM symbol of PDSCH for the concerned serving cell, see TS 36.213 [23, 7.1.6.4]. Values 1, 2, 3 are applicable when \( dl\text{-Bandwidth} \) for the concerned serving cell is greater than 10 resource blocks, values 2, 3, 4 are applicable when \( dl\text{-Bandwidth} \) for the concerned serving cell is less than or equal to 10 resource blocks, see TS 36.211 [21, Table 6.7-1]. Value \( n1 \) corresponds to 1, value \( n2 \) corresponds to 2 and so on.

#### qcl-CSI-RS-ConfigNZPId
Indicates the CSI-RS resource that is quasi co-located with the PDSCH antenna ports, see TS 36.213 [23, 7.1.9]. E-UTRAN configures this field if and only if the UE is configured with qcl-Operation set to typeB.

#### qcl-Operation
Indicates the quasi co-location behaviour to be used by the UE, type A and type B, as described in TS 36.213 [23, 7.1.10].

#### referenceSignalPower
Parameter: Reference-signal power, which provides the downlink reference-signal EPRE, see TS 36.213 [23, 5.2]. The actual value in dBm.

#### re-MappingQCLConfigToAddModList, re-MappingQCLConfigToReleaseList
For a serving frequency E-UTRAN configures at least one PDSCH-RE-MappingQCL-Config when transmission mode 10 is configured for the serving cell on this carrier frequency. Otherwise it does not configure this field.

#### tbsIndexAlt
Indicates the applicability of the alternative TBS index for the ITBS 26 and 33 (see TS 36.213 [23, Table 7.1.7.2.1-1]) to all subframes scheduled by DCI format 2C or 2D. Value a26 refers to the alternative TBS index \( I_{TBS\ 26} \), and value a33 refers to the alternative TBS index \( I_{TBS\ 33} \). If this field is not configured, the UE shall use \( I_{TBS\ 26} \) specified in Table 7.1.7.2.1-1 in TS 36.213 [23] for all subframes instead. If neither this field nor tbsIndexAlt2 configures an alternative TBS index for \( I_{TBS\ 33} \), the UE shall use \( I_{TBS\ 33} \) specified in Table 7.1.7.2.1-1 in TS 36.213 [23] for all subframes instead.

#### tbsIndexAlt2
Indicates the applicability of the alternative TBS index for the \( h_{TBS\ 33} \) (see TS 36.213 [23, Table 7.1.7.2.1-1]) to all subframes. Value b33 refers to the alternative TBS index \( h_{TBS\ 33} \). If neither this field nor tbsIndexAlt2 configures an alternative TBS index for \( h_{TBS\ 33} \), the UE shall use \( h_{TBS\ 33} \) specified in Table 7.1.7.2.1-1 in TS 36.213 [23] for all subframes instead.

---

**PDSCH-RE-MappingQCL-ConfigId**

The IE **PDSCH-RE-MappingQCL-ConfigId** is used to identify a set of PDSCH parameters related to resource element mapping and quasi co-location, as configured by the IE **PDSCH-RE-MappingQCL-Config**. The identity is unique within the scope of a carrier frequency.
**PDSCH-RE-MappingQCL-ConfigId** information elements

-- ASN1START

PDSCH-RE-MappingQCL-ConfigId-r11 ::= INTEGER (1..maxRE-MapQCL-r11)

-- ASN1STOP

---

**PerCC-GapIndicationList**

The IE *PerCC-GapIndicationList* is used to specify the UE measurement gap preference.

**PerCC-GapIndication** information elements

-- ASN1START

PerCC-GapIndicationList-r14 ::= SEQUENCE (SIZE (1..maxServCell-r13)) OF PerCC-GapIndication-r14

PerCC-GapIndication-r14 ::= SEQUENCE {
  servCellId-r14        ServCellIndex-r13,
  gapIndication-r14     ENUMERATED {gap, ncsg, nogap-noNcsg}
}

-- ASN1STOP

**PerCC-GapIndication** field descriptions

**servCellId**

This field identifies the serving cell for which the measurement gap preference is provided.

**gapIndication**

This field is used to indicate the measurement gap preference per component carrier (serving cell) by the UE. Value *gap* indicates that a measurement gap is needed for the associated *servCellId*, value *nogap-noNcsg* indicates that neither a measurement gap nor a ncsg is needed for the associated *servCellId*, value *ncsg* indicates that ncsg is needed for the associated *servCellId*. The UE shall indicate the per CC measurement gap preference consistently for the same CA and measurement configuration during the same RRC connection.

---

**PHICH-Config**

The IE *PHICH-Config* is used to specify the PHICH configuration.

**PHICH-Config** information element

-- ASN1START

PHICH-Config ::= SEQUENCE {
  phich-Duration       ENUMERATED {normal, extended},
  phich-Resource       ENUMERATED {oneSixth, half, one, two}
}

-- ASN1STOP

**PHICH-Config** field descriptions

**phich-Duration**

Parameter: *PHICH-Duration*, see TS 36.211 [21, Table 6.9.3-1].

**phich-Resource**

Parameter: *Ng*, see TS 36.211 [21, 6.9]. Value oneSixth corresponds to 1/6, half corresponds to 1/2 and so on.

---

**PhysicalConfigDedicated**

The IE *PhysicalConfigDedicated* is used to specify the UE specific physical channel configuration.

**PhysicalConfigDedicated** information element

-- ASN1START
PhysicalConfigDedicated ::= SEQUENCE {

**PhysicalConfigDedicated** field descriptions

<table>
<thead>
<tr>
<th>Field Description</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>absenceOfAnyOtherTechnology</td>
<td>Presence of this field indicates absence on a long term basis (e.g. by level of regulation) of any other technology sharing the carrier; absence of this field indicates the potential presence of any other technology sharing the carrier, as specified in TS 36.213 [23].</td>
</tr>
<tr>
<td>additionalSpectrumEmissionPCell</td>
<td>E-UTRAN does not configure this field in this release of the specification.</td>
</tr>
<tr>
<td>antennaInfo</td>
<td>A choice is used to indicate whether the antennaInfo is signalled explicitly or set to the default antenna configuration as specified in section 9.2.4.</td>
</tr>
<tr>
<td>ce-Mode</td>
<td>Indicates the CE mode as specified in TS 36.213 [23].</td>
</tr>
<tr>
<td>ce-pdsch-pusch-Enhancement-Config</td>
<td>Activation of new numbers of repetitions for PUSCH and modulation restrictions for PDSCH/PUSCH in CE mode A, see TS 36.212 [22] and TS 36.213 [23].</td>
</tr>
<tr>
<td>csi-RS-Config</td>
<td>For a serving frequency E-UTRAN does not configure csi-RS-Config (includes zeroTxPowerCSI-RS) when transmission mode 10 is configured for the serving cell on this carrier frequency.</td>
</tr>
<tr>
<td>csi-RS-ConfigNZPToAddModList</td>
<td>For a serving frequency E-UTRAN configures one or more CSl-RS-ConfigNZP only when transmission mode 9 or 10 is configured for the serving cell on this carrier frequency. For a serving frequency, EUTRAN configures a maximum number of CSl-RS-ConfigNZP in accordance with transmission mode (including CSI processes), eMIMO (including class) and associated UE capabilities (e.g. k-Max, n-MaxList).</td>
</tr>
<tr>
<td>csi-RS-ConfigZP-ApList</td>
<td>The aperiodic ZP CSI-RS for PDSCH rate matching. The field subframeConfig is applicable to semi-persistent CSI RS reporting. In other cases, the UE shall ignore field subframeConfig.</td>
</tr>
<tr>
<td>csi-RS-ConfigNZPToAddModList</td>
<td>For a serving frequency E-UTRAN configures one or more CSI-RS-ConfigNZP only when transmission mode 10 is configured for the serving cell on this carrier frequency.</td>
</tr>
<tr>
<td>eimta-MainConfigPCell, eimta-MainConfigSCell</td>
<td>If E-UTRAN configures eimta-MainConfigPCell or eimta-MainConfigSCell for one serving cell in a frequency band, E-UTRAN configures eimta-MainConfigPCell or eimta-MainConfigSCell for all serving cells residing on the frequency band. E-UTRAN configures eimta-MainConfigPCell or eimta-MainConfigSCell only if eimta-MainConfig is configured.</td>
</tr>
<tr>
<td>energyDetectionThresholdOffset</td>
<td>Indicates the offset to the default maximum energy detection threshold value. Unit in dB. Value -13 corresponds to -13dB, value -12 corresponds to -12dB, and so on (i.e. in steps of 1dB) as specified in TS 36.213 [23].</td>
</tr>
<tr>
<td>epdcch-Config</td>
<td>Indicates the EPDCCH-Config for the cell. E-UTRAN does not configure EPDCCH-Config for an SCell that is configured with value other for schedulingCellInfo in CrossCarrierSchedulingConfig.</td>
</tr>
<tr>
<td>k-max</td>
<td>Indicates the maximum number of interfering spatial layers signaled in the assistance information for MUST. Value 1 corresponds to 1 layer, Value 3 corresponds to 3 layers.</td>
</tr>
<tr>
<td>laa-SCellSubframeConfig</td>
<td>A bit-map indicating LAA SCell subframe configuration, &quot;1&quot; denotes that the corresponding subframe is allocated as MBSFN subframe. The bitmap is interpreted as follows: Starting from the first/leftmost bit in the bitmap, the allocation applies to subframes #1, #2, #3, #4, #6, #7, #8, and #9.</td>
</tr>
<tr>
<td>maxEnergyDetectionThreshold</td>
<td>Indicates the absolute maximum energy detection threshold value. Unit in dB. Value -85 corresponds to -85 dBm, value -84 corresponds to -84 dBm, and so on (i.e. in steps of 1dB) as specified in TS 36.213 [23]. If the field is not configured, the UE shall use a default maximum energy detection threshold value as specified in TS 36.213 [23].</td>
</tr>
<tr>
<td>p-a-must</td>
<td>Parameter: $P_A$, see TS 36.213 [23, 5.2]. Value dB-6 corresponds to -6 dB, dB-4 corresponds to -4.77 dB etc.</td>
</tr>

<tr>
<td>pdsch-ConfigDedicated-v1280</td>
<td>For a serving frequency E-UTRAN configures pdsch-ConfigDedicated-v1280 only when transmission mode 9 or 10 is configured for the serving cell on this carrier frequency.</td>
</tr>
<tr>
<td>pucch-Cell</td>
<td>If present, PUCCH feedback of this SCell is sent on the PUCCH SCell. If absent, PUCCH feedback of this SCell is sent on PCell or PSCell, or if the cell concerns the PUCCH SCell, on the concerned cell. If this field is not modified upon change of PUCCH SCell, the UE shall always send the PUCCH feedback of the concerned SCell using the configured PUCCH SCell.</td>
</tr>
<tr>
<td>pucch-ConfigDedicated-r13</td>
<td>E-UTRAN configures pucch-ConfigDedicated-r13 only if pucch-ConfigDedicated is not configured.</td>
</tr>
<tr>
<td>pucch-ConfigDedicated-v1370</td>
<td>E-UTRAN only configures pucch-ConfigDedicated-v1370 if pucch-ConfigDedicated-r13 is configured.</td>
</tr>
</tbody>
</table>
**PhysicalConfigDedicated** field descriptions

**pucch-SCell**
If present, the concerned SCell is the PUCCH SCell. E-UTRAN only configures this field upon SCell addition i.e. this field is only released when the SCell is released.

**pusch-ConfigDedicated-r13**
E-UTRAN configures **pusch-ConfigDedicated-r13** only if **pusch-ConfigDedicated** is not configured.

**pusch-ConfigDedicated-v1250**
E-UTRAN configures **pusch-ConfigDedicated-v1250** only if **tpc-SubframeSet** is configured.

**pusch-EnhancementsConfig**
Indicates that the UE shall transmit in the PUSCH enhancement mode if **pusch-EnhancementsConfig** is set to **setup**, see TS 36.211 [21] and TS 36.213 [23].

**semiOpenLoop**
Value TRUE indicates that semi-open-loop transmission is used for deriving CSI reporting and corresponding PDSCH transmission (DMRS).

**soundingRS-UL-PeriodicConfigDedicatedList**
Indicates periodic soundingRS configuration except for the extension sounding symbols of the UpPTs subframe.

**soundingRS-UL-PeriodicConfigDedicatedUpPTsExtList**
Indicates periodic soundingRS configuration in extension sounding symbols of the UpPTs subframe.

**soundingRS-UL-AperiodicConfigDedicatedList**
Indicates aperiodic soundingRS configuration except for the extension sounding symbols of the UpPTs subframe.

**soundingRS-UL-DedicatedApUpPTsExtList**
Indicates aperiodic soundingRS configuration in extension sounding symbols of the UpPTs subframe.

**srs-CC-SetIndexList**
Indicates the **srs-CC-SetIndex** list which the **soundingRS-UL-ConfigDedicatedAperiodic** and **soundingRS-UL-ConfigDedicatedAperiodicUpPTsExt** belongs to.

**subframeStartPosition**
Indicates possible starting positions of transmission in the first subframe of the DL transmission burst, see TS 36.211 [21]. Value s0 means the starting position is subframe boundary, s07 means the starting position is either subframe boundary or slot boundary.

**tpc-PDCCH-ConfigPUCCH**
PDCCH configuration for power control of PUCCH using format 3/3A, see TS 36.212 [22].

**tpc-PDCCH-ConfigPUSCH**
PDCCH configuration for power control of PUSCH using format 3/3A, see TS 36.212 [22].

**typeA-SRS-TPC-PDCCH-Group**
Indicates Type A trigger configuration for SRS transmission on a PUSCH-less SCell. E-UTRAN configures the UE with either **typeA-SRS-TPC-PDCCH-Group** or **typeB-SRS-TPC-PDCCH-Group**, if any.

**uplinkPowerControlDedicated**
E-UTRAN configures **uplinkPowerControlDedicated-v1130** only if **uplinkPowerControlDedicated** (without suffix) is configured.

**uplinkPowerControlDedicatedSCell**
E-UTRAN configures **uplinkPowerControlDedicatedSCell-v1130** only if **uplinkPowerControlDedicatedSCell-r10** is configured for this serving cell.
### Conditional presence

<table>

<tr>
<td>PUSCH-SCell</td>
<td>The field is optionally present, need ON, if pusch-ConfigDedicatedSCell-r10 and pusch-ConfigDedicated-v1130 are absent. Otherwise the field is not present.</td>
</tr>
<tr>
<td>PUSCH-SCell1</td>
<td>The field is optionally present, need ON, for SCell not configured with pucch-configDedicated-r13. Otherwise it is not present.</td>
</tr>
<tr>
<td>SCellAdd</td>
<td>The field is mandatory present if cellIdentification is present; otherwise it is optional, need ON.</td>
</tr>
<tr>
<td>SRS-Trigger-TypeA</td>
<td>The field is mandatory present if typeA-SRS-TPC-PDCCH-Group-r14 is present. Otherwise the field is not present and the UE shall delete any existing value for this field.</td>
</tr>
</tbody>
</table>

**NOTE 1:** During handover, the UE performs a MAC reset, which involves reverting to the default CQI/ SRS/ SR configuration in accordance with subclause 5.3.13 and TS 36.321 [6, 5.9 & 5.2]. Hence, for these parts of the dedicated radio resource configuration, the default configuration (rather than the configuration used in the source PCell) is used as the basis for the delta signalling that is included in the message used to perform handover.

**NOTE 2:** Since delta signalling is not supported for the common SCell configuration, E-UTRAN can only add or release the uplink of an SCell by releasing and adding the concerned SCell.

---

**P-Max**

The IE P-Max is used to limit the UE’s uplink transmission power on a carrier frequency and is used to calculate the parameter Pcompensation defined in TS 36.304 [4]. Corresponds to parameter P_{MAX} or P_{Max} in TS 36.101 [42]. The UE transmit power on one serving cell shall not exceed the configured maximum UE output power of the serving cell determined by this value as specified in TS 36.101 [42, 6.2.5 or 6.2.5A] or, when transmitting sidelink discovery announcements within the coverage of the concerned cell, as specified in TS 36.101 [42, 6.2.5D].

**P-Max information element**

```asn1
P-Max ::= INTEGER (-30..33)
```

---
The IE PRACH-ConfigSIB and IE PRACH-Config are used to specify the PRACH configuration in the system information and in the mobility control information, respectively.

---

**PRACH-Config information elements**

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>initial-CE-level</strong></td>
<td>Indicates initial PRACH CE level at random access, see TS 36.321 [6]. If not configured, UE selects PRACH CE level based on measured RSRP level, see TS 36.321 [6].</td>
</tr>
<tr>
<td><strong>highSpeedFlag</strong></td>
<td>Parameter: High-speed-flag, see TS 36.211 [21, 5.7.2]. TRUE corresponds to Restricted set and FALSE to Unrestricted set.</td>
</tr>
<tr>
<td><strong>maxNumPreambleAttemptCE</strong></td>
<td>Maximum number of preamble transmission attempts per CE level. See TS 36.321 [6]. If the field is absent, the UE shall use the default value n3.</td>
</tr>
<tr>
<td><strong>mpdcch-NarrowbandsToMonitor</strong></td>
<td>Narrowbands to monitor for MPDCCH for RAR, see TS 36.213 [23, 6.2]. Field values (1..maxAvailNarrowBands-r13) correspond to narrowband indices (0..[maxAvailNarrowBands-r13-1]) as specified in TS 36.211 [21].</td>
</tr>
<tr>
<td><strong>mpdcch-NumRepetition-RA</strong></td>
<td>Maximum number of repetitions for MPDCCH common search space (CSS) for RAR, Msg3 and Msg4, see TS 36.211 [21].</td>
</tr>
<tr>
<td><strong>prach-ConfigIndex</strong></td>
<td>Parameter: prach-ConfigurationIndex, see TS 36.211 [21, 5.7.1].</td>
</tr>
<tr>
<td><strong>prach-ConfigIndexHighSpeed</strong></td>
<td>Parameter: prach-ConfigurationIndexHighSpeed, see TS 36.211 [21, 5.7.1]. If this field is present, the UE shall ignore prach-ConfigIndex.</td>
</tr>
<tr>
<td><strong>prach-FreqOffset</strong></td>
<td>Parameter: prach-FrequencyOffset, see TS 36.211 [21, 5.7.1]. For TDD the value range is dependent on the value of prach-ConfigIndex.</td>
</tr>
<tr>
<td><strong>prach-FreqOffsetHighSpeed</strong></td>
<td>Parameter: prach-FrequencyOffsetHighSpeed, see TS 36.211 [21, 5.7.1]. For TDD the value range is dependent on the value of prach-ConfigIndexHighSpeed. If this field is present, the UE shall ignore prach-FreqOffset.</td>
</tr>
<tr>
<td><strong>prach-HoppingConfig</strong></td>
<td>Coverage level specific frequency hopping configuration for PRACH.</td>
</tr>
<tr>
<td><strong>prach-HoppingOffset</strong></td>
<td>Parameter: PRACH frequency hopping offset, expressed as a number of resource blocks, see TS 36.211 [21, 5.7.1]</td>
</tr>
<tr>
<td><strong>prach-ParametersListCE</strong></td>
<td>Configures PRACH parameters for each CE level. The first entry in the list is the PRACH parameters of CE level 0, the second entry in the list is the PRACH parameters of CE level 1, and so on.</td>
</tr>
<tr>
<td><strong>prach-StartingSubframe</strong></td>
<td>PRACH starting subframe periodicity, expressed in number of subframes available for preamble transmission (PRACH opportunities), see TS 36.211 [21]. Value sf2 corresponds to 2 subframes, sf4 corresponds to 4 subframes and so on. EUTRAN configures the PRACH starting subframe periodicity larger than or equal to the number of PRACH repetitions per attempt for each CE level (numRepetitionPerPreambleAttempt). If the field is absent, the value is determined implicitly in TS 36.211 [21, 5.7.1].</td>
</tr>
<tr>
<td><strong>rootSequenceIndex</strong></td>
<td>Parameter: RACH_ROOT_SEQUENCE, see TS 36.211 [21, 5.7.1].</td>
</tr>
<tr>
<td><strong>rootSequenceIndexHighSpeed</strong></td>
<td>The field indicates starting logical root sequence index used to derive the 64 random access preambles based on restricted set type B in high speed scenario, see TS 36.211 [21, 5.7.2]. If this field is present, the UE shall generate random access preambles based on restricted set type B and ignore rootSequenceIndex.</td>
</tr>
<tr>
<td><strong>rsrp-ThresholdsPrachInfoList</strong></td>
<td>The criterion for BL UEs and UEs in CE to select PRACH resource set. Up to 3 RSRP threshold values are signalled to determine the CE level for PRACH, see TS 36.213 [23]. The first element corresponds to RSRP threshold 1, the second element corresponds to RSRP threshold 2 and so on, see TS 36.321 [6]. The UE shall ignore this field if only one CE level, i.e. CE level 0, is configured in prach-ParametersListCE. The number of RSRP thresholds present in rsrp-ThresholdsPrachInfoList is equal to the number of CE levels configured in prach-ParametersListCE minus one.</td>
</tr>
<tr>
<td><strong>zeroCorrelationZoneConfig</strong></td>
<td>Parameter: Ncs configuration, see TS 36.211 [21, 5.7.2: table 5.7.2-2] for preamble format 0..3 and TS 36.211 [21, 5.7.2: table 5.7.2-3] for preamble format 4.</td>
</tr>
<tr>
<td><strong>zeroCorrelationZoneConfigHighSpeed</strong></td>
<td>The field indicates Ncs configuration for the restricted set type B in high speed scenario, see TS 36.211 [21, 5.7.2]. If this field is present, the UE shall generate random access preambles based on restricted set type B and ignore zeroCorrelationZoneConfig.</td>
</tr>
</tbody>
</table>
---

**PresenceAntennaPort1**

The IE *PresenceAntennaPort1* is used to indicate whether all the neighbouring cells use Antenna Port 1. When set to *TRUE*, the UE may assume that at least two cell-specific antenna ports are used in all neighbouring cells.

### PUCCH-Config field descriptions

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>ackNackRepetition</strong></td>
<td>Parameter indicates whether ACK/NACK repetition is configured, see TS 36.213 [23, 10.1].</td>
</tr>
<tr>
<td><strong>cmd-index-format5</strong></td>
<td>Parameter $n_{\text{c}}^{\text{m}}$, see TS 36.211 [21, 5.4.2.c] for determining PUCCH resource(s) of PUCCH format 5.</td>
</tr>
<tr>
<td><strong>codebooksizeDetermination</strong></td>
<td>Parameter indicates whether HARQ codebook size is determined with downlink assignment indicator based solution or number of configured CCs, see TS 36.212 [22, 5.2.2.6, 5.2.3.1 and 5.3.3.1.2] and TS 36.213 [23, 10.1.2.2.3, 10.1.3.2.3.1, 10.1.3.2.3.2 and 10.1.3.2.4].</td>
</tr>
<tr>
<td><strong>deltaPUCCH-Shift</strong></td>
<td>Parameter: $\Delta_{\text{PUCCH-Shift}}$, see TS 36.211 [21, 5.4.1], where ds1 corresponds to value 1, ds2 corresponds to value 2 etc.</td>
</tr>
<tr>
<td><strong>harq-TimingTDD</strong></td>
<td>Parameter indicates for a TDD SCell when aggregated with a TDD PCell of different UL/DL configurations whether deriving the HARQ timing for such a cell is done in the same way as the DL HARQ timing of an FDD SCell with a TDD PCell, see TS 36.213 [23, 10.2].</td>
</tr>
<tr>
<td><strong>maximumPayloadCoderate</strong></td>
<td>Maximum payload or code rate for multi P-CSI on each PUCCH resource, see TS 36.213 [23, 10.1.1].</td>
</tr>
<tr>
<td><strong>n1PUCCH-AN</strong></td>
<td>Parameter: $N^{(1)}_{\text{PUCCH}}$, see TS 36.213 [23, 10.1].</td>
</tr>
<tr>
<td><strong>n1PUCCH-AN-r11</strong></td>
<td>Indicates UE-specific PUCCH AN resource offset, see TS 36.213 [23, 10.1].</td>
</tr>
<tr>
<td><strong>n1PUCCH-AN-CS-List</strong></td>
<td>$(n)$ Parameter: $n_{\text{PUCCH}}^{(n)}$ for antenna port $p_{0}$ for PUCCH format 1b with channel selection, see TS 36.213 [23, 10.1.2.2.1, 10.1.3.2.1].</td>
</tr>
<tr>
<td><strong>n1PUCCH-AN-CS-ListP1</strong></td>
<td>Parameter: $n_{\text{PUCCH}}^{(1,1)}$ for antenna port $p_{1}$ for PUCCH format 1b with channel selection, see TS 36.213 [23, 10.1]. E-UTRAN configures this field only when pucch-Format is set to channelSelection.</td>
</tr>
<tr>
<td><strong>n1PUCCH-AN-Rep, n1PUCCH-AN-RepP1</strong></td>
<td>Parameter: $n_{\text{PUCCH,ANRep}}^{(1)}$ for antenna port P0 and for antenna port P1 respectively, see TS 36.213 [23, 10.1].</td>
</tr>
<tr>
<td><strong>n3PUCCH-AN-List, n3PUCCH-AN-ListP1</strong></td>
<td>Parameter: $n_{\text{PUCCH}}^{(3,1)}$ for antenna port P0 and for antenna port P1 respectively, see TS 36.213 [23, 10.1].</td>
</tr>
<tr>
<td><strong>nCS-An</strong></td>
<td>Parameter: $N^{(1)}_{\text{cs}}$, see TS 36.211 [21, 5.4].</td>
</tr>
<tr>
<td><strong>nkaPUCCH-AN</strong></td>
<td>Parameter: $N^{K_{A}}_{\text{PUCCH}}$, see TS 36.213 [23, 10.1.3].</td>
</tr>
<tr>
<td><strong>nkaPUCCH-AN-r12</strong></td>
<td>Indicates PUCCH format 1a/1b starting offset for the subframe set $K^{A}$, see TS 36.213 [23, 10.1.3]. E-UTRAN configures nkaPUCCH-AN only if eimta-MainConfig is configured.</td>
</tr>
<tr>
<td><strong>nPUCCH-Identity</strong></td>
<td>Parameter: $n_{\text{ID}}^{\text{PUCCH}}$, see TS 36.211 [21, 5.5.1.5].</td>
</tr>
<tr>
<td><strong>nRB-CQI</strong></td>
<td>Parameter: $N^{(2)}_{\text{RB}}$, see TS 36.211 [21, 5.4].</td>
</tr>
<tr>
<td><strong>numberOfPRB-format4</strong></td>
<td>Parameter: $n_{\text{PUCCH}}^{(1)}$, see TS 36.213 [23, Table 10.1.1-2] for determining PUCCH resource(s) of PUCCH format 4.</td>
</tr>
<tr>
<td><strong>n1PUCCH-AN-InfoList</strong></td>
<td>Starting offsets of the PUCCH resource(s) indicated by SIB1-BR. The first entry in the list is the starting offset of the PUCCH resource(s) of CE level 0, the second entry in the list is the starting offset of the PUCCH resource(s) of CE level 1, and so on. If E-UTRAN includes n1PUCCH-AN-InfoList, it includes the same number of entries as in prach-ParametersListCE. See TS 36.213 [23].</td>
</tr>
<tr>
<td><strong>pucch-Format</strong></td>
<td>Parameter indicates one of the PUCCH formats for transmission of HARQ-ACK, see TS 36.213 [23, 10.1]. For TDD, if the UE is configured with PCell only, the channelSelection parameter indicates the transmission of HARQ-ACK multiplexing as defined in Tables 10.1.3-5, 10.1.3-6, and 10.1.3-7 in TS 36.213 [23] for PUCCH, and in 7.3 in TS 36.213 [23] for PUSCH. E-UTRAN only configures pucch-Format-v1370 when pucch-Format-r13 is configured and set to format4 or format5.</td>
</tr>
</tbody>
</table>
**PUCCH-Config field descriptions**

**pucch-NumRepetitionCE**  
Number of PUCCH repetitions for PUCCH format 1/1a and for PUCCH format 2/2a/2b for CE modes A and B, see TS 36.211 [21] and TS 36.213 [23]. The UE shall ignore pucch-NumRepetitionCE-format2-r13, if received, for CE mode B in this release of specification. For UE in CE mode B supporting extended PUCCH repetition, if pucch-NumRepetitionCE-format1-r14 is included then the UE shall ignore pucch-NumRepetitionCE-format1-r13.

**pucch-NumRepetitionCE-Msg4-Level0**, **pucch-NumRepetitionCE-Msg4-Level1**, **pucch-NumRepetitionCE-Msg4-Level2**, **pucch-NumRepetitionCE-Msg4-Level3**  
Number of repetitions for PUCCH carrying HARQ response to PDSCH containing Msg4 for PRACH CE levels 0, 1, 2 and 3, see TS 36.211 [21] and TS 36.213 [23]. Value n1 corresponds to 1 repetition, value n2 corresponds to 2 repetitions, and so on. For BL UEs or non-BL UEs in enhanced coverage supporting extended PUCCH repetition, if pucch-NumRepetitionCE-Msg4-Level3-r14 is included then the UE shall ignore pucch-NumRepetitionCE-Msg4-Level3-r13.

**repetitionFactor**  
Parameter \( N_{\text{ANRep}} \) see TS 36.213 [23, 10.1] where n2 corresponds to repetition factor 2, n4 to 4.

**simultaneousPUCCH-PUSCH**  
Parameter indicates whether simultaneous PUCCH and PUSCH transmissions is configured, see TS 36.213 [23, 10.1 and 5.1.1]. E-UTRAN configures this field for the PCell, only when the nonContiguousUL-RA-WithinCC-Info is set to supported in the band on which PCell is configured. Likewise, E-UTRAN configures this field for the PSCell, only when the nonContiguousUL-RA-WithinCC-Info is set to supported in the band on which PSCell is configured. Likewise, E-UTRAN configures this field for the PUCCH SCell, only when the nonContiguousUL-RA-WithinCC-Info is set to supported in the band on which PUCCH SCell is configured.

**spatialBundlingPUCCH**  
Parameter indicates whether spatial bundling is enabled or not for PUCCH, see TS 36.212 [22, 5.2.3.1].

**spatialBundlingPUSCH**  
Parameter indicates whether spatial bundling is enabled or not for PUSCH, see TS 36.212 [22, 5.2.2.6].

**startingPRB-format4**  
Parameter \( n^{(4)}_{\text{PUSCH}} \) see TS 36.211 [21, 5.4.3] for determining PUCCH resource(s) of PUCCH format 4.

**startingPRB-format5**  
Parameter \( n^{(5)}_{\text{PUSCH}} \) see TS 36.211 [21, 5.4.3] for determining PUCCH resource(s) of PUCCH format 5.

**tdd-AckNackFeedbackMode**  
Parameter indicates one of the TDD ACK/NACK feedback modes used, see TS 36.213 [23, 7.3 and 10.1.3]. The value bundling corresponds to use of ACK/NACK bundling whereas, the value multiplexing corresponds to ACK/NACK multiplexing as defined in Tables 10.1.3-2, 10.1.3-3, and 10.1.3-4 in TS 36.213 [23]. The same value applies to both ACK/NACK feedback modes on PUCCH as well as on PUSCH.

**twoAntennaPortActivatedPUCCH-Format1a1b**  
Indicates whether two antenna ports are configured for PUCCH format 1a/1b for HARQ-ACK, see TS 36.213 [23, 10.1]. The field also applies for PUCCH format 1a/1b transmission when format3 is configured, see TS 36.213 [23, 10.1.2.2.2, 10.1.3.2.2].

**twoAntennaPortActivatedPUCCH-Format3**  
Indicates whether two antenna ports are configured for PUCCH format 3 for HARQ-ACK, see TS 36.213 [23, 10.1].

<table>
<thead>
<tr>
<th>Conditional presence</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>TDD</td>
<td>The field is mandatory present for TDD if the pucch-Format is not present. If the pucch-Format is present, the field is not present and the UE shall delete any existing value for this field. It is not present for FDD and the UE shall delete any existing value for this field.</td>
</tr>
</tbody>
</table>

---

**PUSCH-Config**

The IE PUSCH-ConfigCommon is used to specify the common PUSCH configuration and the reference signal configuration for PUSCH and PUCCH. The IE PUSCH-ConfigDedicated is used to specify the UE specific PUSCH configuration.

**PUSCH-Config information element**

```asn1

### PUSCH-Config field descriptions

<table>
<thead>
<tr>
<th>Field Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>betaOffset-ACK-Index</td>
<td>Parameters: ( I_{\text{ACK}}^{\text{off,p}} ) and ( I_{\text{ACK}}^{\text{off,m}} ) for single- and multiple-codeword respectively, see TS 36.213 [23, Table 8.6.3-1]. betaOffset-ACK-Index is used when up to 22 HARQ-ACK bits are transmitted otherwise. It is configured if betaOffset2-ACK-Index is configured; betaOffset2-ACK-Index is used when up to 22 HARQ-ACK bits are transmitted otherwise betaOffset2-ACK-Index is used. If betaOffset2-ACK-Index is configured; betaOffset2-ACK-Index is used when up to 22 HARQ-ACK bits are transmitted otherwise betaOffset2-ACK-Index is used. One value applies for subframe set 2 of all serving cells with an uplink in a cell group (MCG or SCG or the group of cells configured to send PUCCH on the same cell in case PUCCH SCell is configured) and not configured with uplink power control subframe sets. The same value applies for subframe set 1 of all serving cells with an uplink in that cell group and configured with uplink power control subframe sets (the associated functionality is common i.e. not performed independently for each cell).</td>
</tr>
<tr>
<td>betaOffset2-ACK-Index</td>
<td>Parameters: ( I_{\text{ACK}}^{\text{off,p}} ) and ( I_{\text{ACK}}^{\text{off,m}} ) for single- and multiple-codeword respectively, see TS 36.213 [23, Table 8.6.3-1]. betaOffset2-ACK-Index is used when up to 22 HARQ-ACK bits are transmitted otherwise betaOffset2-ACK-Index is used. If betaOffset2-ACK-Index is configured; betaOffset2-ACK-Index is used when up to 22 HARQ-ACK bits are transmitted otherwise betaOffset2-ACK-Index is used. One value applies for subframe set 2 of all serving cells with an uplink in a cell group (MCG or SCG or the group of cells configured to send PUCCH on the same cell in case PUCCH SCell is configured) and configured with uplink power control subframe sets (the associated functionality is common i.e. not performed independently for each cell configured with uplink power control subframe sets).</td>
</tr>
<tr>
<td>betaOffset-CQI-Index</td>
<td>Parameters: ( I_{\text{CQI}}^{\text{off,p}} ) and ( I_{\text{CQI}}^{\text{off,m}} ) for single- and multiple-codeword respectively, see TS 36.213 [23, Table 8.6.3-3]. One value applies for all serving cells with an uplink in a cell group (MCG or SCG or the group of cells configured to send PUCCH on the same cell in case PUCCH SCell is configured) and not configured with uplink power control subframe sets. The same value also applies for subframe set 1 of all serving cells with an uplink in that cell group and configured with uplink power control subframe sets (the associated functionality is common i.e. not performed independently for each cell).</td>
</tr>
<tr>
<td>betaOffset-RI-Index</td>
<td>Parameters: ( I_{\text{RI}}^{\text{off,p}} ) and ( I_{\text{RI}}^{\text{off,m}} ) for single- and multiple-codeword respectively, see TS 36.213 [23, Table 8.6.3-2]. One value applies for all serving cells with an uplink in a cell group (MCG or SCG or the group of cells configured to send PUCCH on the same cell in case PUCCH SCell is configured) and configured with uplink power control subframe sets (the associated functionality is common i.e. not performed independently for each cell configured with uplink power control subframe sets).</td>
</tr>
<tr>
<td>ce-PUSCH-MaxBandwidth</td>
<td>Maximum PUSCH channel bandwidth in CE mode A, see TS 36.212 [22] and TS 36.213 [23]. Value bw5 corresponds to 5 MHz. If this field is not configured, the maximum PUSCH channel bandwidth in CE mode A set to 1.4 MHz. The maximum PUSCH channel bandwidth in CE mode B is 1.4 MHz regardless of the setting of this parameter. Parameter: transmission bandwidth configuration, see TS 36.101 [42, table 5.6-1].</td>
</tr>
<tr>
<td>ce-PUSCH-NB-MaxTBS</td>
<td>Activation of 2984 bits maximum PUSCH TBS in 1.4 MHz in CE mode A, see TS 36.212 [22] and TS 36.213 [23].</td>
</tr>
<tr>
<td>cyclicShift</td>
<td>Parameters: cyclicShift, see TS 36.211 [21, Table 5.5.2.1.1-2].</td>
</tr>
<tr>
<td>dmrs-LessUpPTS-Config</td>
<td>Indicates the UE not to transmit DMRS for PUSCH in UpPTS, see TS36.211 [21, 5.5.2.1.2].</td>
</tr>
</tbody>
</table>
PUSCH-Config field descriptions

**dmrs-WithOCC-Activated**
Parameter: Activate-DMRS-with OCC, see TS 36.211 [21, 5.5.2.1].

**enable256QAM**
See TS 36.213 [23, 8.6.1]. If enable256QAM is included and if uplink power control subframe sets are configured by tpc-SubframeSet, the field indicates (if set to TRUE) per uplink power control subframe set and DCI format 0 and 4 that 256QAM is allowed for UE UL categories 16 to 20 indicated in ue-CategoryUL-v1430, while FALSE indicates that 256 QAM is not allowed. If enable256QAM is included and if uplink power control subframe sets are not configured by tpc-SubframeSet, the field indicates (if set to TRUE) per uplink power control subframe set and DCI format 0 and 4 that 256QAM is allowed for UE UL categories 16 to 20 indicated in ue-CategoryUL-v1430, while FALSE indicates that 256 QAM is not allowed.

**enable64QAM**
See TS 36.213 [23, 8.6.1]. If enable64QAM (without suffix) is set to TRUE, it indicates that 64QAM is allowed for UE categories 5 and 8 indicated in ue-Category and UL categories indicated in ue-CategoryUL-v1430, while FALSE indicates that 64QAM is not allowed. If enable64QAM-v1270 is set to TRUE, it indicates that 64QAM is allowed for UL categories indicated in ue-CategoryUL which support UL 64QAM but cannot fallback category 5 or 8, see TS 36.306 [5, Table 4.1A-2 and Table 4.1A-6]. E-UTRAN configures enable64QAM-v1270 only when enable64QAM (without suffix) is set to TRUE.

**interval-ULHoppingPUSCH-Enh**
Number of consecutive absolute subframes over which PUSCH stays at the same PRBs before hopping to other PRBs. For interval-FDD-PUSCH-Enh, int1 corresponds to 1 subframe, int2 corresponds to 2 subframes, and so on. For interval-TDD-PUSCH-Enh, int1 corresponds to 1 subframe, int5 corresponds to 5 subframes, and so on. See TS 36.211 [21, 5.3.4].

**nPUSCH-Identity**
Parameter: PUSCH ID n, see TS 36.211 [21, 5.5.1.5].

**nSB**
Parameter: NsB see TS 36.211 [21, 5.3.4].

**pusch-HoppingConfig**
For BL UEs and UEs in CE, frequency hopping activation/deactivation for unicast PUSCH, see TS 36.211 [21].

**pusch-HoppingOffset**
Except for BL UEs and UEs in CE, parameter: \(N_{\text{PUSCH}}^{\text{HO}}\), see TS 36.211 [21, 5.3.4]. For BL UEs and UEs in CE, the pusch-hoppingOffset-v1310 indicates the parameter \(N_{\text{PUSCH}}^{\text{HO}}\), see TS 36.211 [21, 5.3.4]. In case pusch-hoppingOffset-v1310 is signalled, the BL UEs and UEs in CE shall ignore pusch-hoppingOffset (i.e. without suffix).

**pusch-HoppingOffsetPUSCH-Enh**
Indicates the frequency domain hopping offset between PRBs for PUSCH in frequency hopping, see TS 36.211 [21, 5.3.4]. Value 1 corresponds to 1 PRB, value 2 corresponds to 2 PRBs, and so on.

**pusch-maxNumRepetitionCEmodeA**
Maximum value to indicate the set of PUSCH repetition numbers for CE mode A, see TS 36.211 [21] and TS 36.213 [23]. E-UTRAN does not configure value r8. If the field is not configured, the UE shall apply the default value as defined in TS 36.213 [23, 8.0].

**pusch-maxNumRepetitionCEmodeB**
Maximum value to indicate the set of PUSCH repetition numbers for CE mode B, see TS 36.211 [21] and TS 36.213 [23].

**sequenceHoppingEnabled**
Parameter: Sequence-hopping-enabled, see TS 36.211 [21, 5.5.1.4].

**symPUSCH-UpPTS**
Indicates the number of data symbols that configured for PUSCH transmission in UpPTS. Values sym2, sym3, sym4, sym5 and sym6 can be used for normal cyclic prefix and values sym1, sym2, sym3, sym4 and sym5 can be used for extended cyclic prefix, see TS 36.213 [23, 8.6.2] and TS 36.211 [21, 5.3.4].

**ul-DMRS-IFDMA**
Value TRUE indicates that the UE is configured with enhanced UL DMRS.

**ul-ReferenceSignalsPUSCH**
Used to specify parameters needed for the transmission on PUSCH (or PUCCH).
RACH-ConfigCommon

The IE RACH-ConfigCommon is used to specify the generic random access parameters.

### RadioResourceConfigCommon field descriptions

<table>
<thead>
<tr>
<th>Field Description</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>additionalSpectrumEmissionSCell</td>
<td>The UE requirements related to <code>additionalSpectrumEmissionSCell</code> are defined in TS 36.101 [42]. E-UTRAN configures the same value in <code>additionalSpectrumEmissionSCell</code> for all SCell(s) of the same band with UL configured. The <code>additionalSpectrumEmissionSCell</code> is applicable for all serving cells (including PCell) of the same band with UL configured.</td>
</tr>
<tr>
<td>defaultPagingCycle</td>
<td>Default paging cycle, used to derive ‘T’ in TS 36.304 [4]. Value rf32 corresponds to 32 radio frames, rf64 corresponds to 64 radio frames and so on.</td>
</tr>
<tr>
<td>dummy</td>
<td>This field is not used in the specification. If received it shall be ignored by the UE.</td>
</tr>
<tr>
<td>harq-ReferenceConfig</td>
<td>Indicates UL/ DL configuration used as the DL HARQ reference configuration for this serving cell. Value sa2 corresponds to Configuration2, sa4 to Configuration4 etc, as specified in TS 36.211 [21, table 4.2-2]. E-UTRAN configures the same value for all serving cells residing on same frequency band.</td>
</tr>
<tr>
<td>highSpeedEnhancedMeasFlag</td>
<td>If the field is present, the UE shall apply the high speed measurement enhancements as specified in TS 36.133 [16].</td>
</tr>
<tr>
<td>highSpeedEnhancedDemodulationFlag</td>
<td>If the field is present, the UE shall apply the advanced receiver in SFN scenario as specified in TS 36.101 [6].</td>
</tr>
<tr>
<td>interval-DLHoppingConfigCommonModeX</td>
<td>Number of consecutive absolute subframes over which MPDCCH or PDSCH for CE mode X stays at the same narrowband before hopping to another narrowband. For interval-FDD, int1 corresponds to 1 subframe, int2 corresponds to 2 subframes, and so on. For interval-TDD, int1 corresponds to 1 subframe, int5 corresponds to 5 subframes, and so on.</td>
</tr>
<tr>
<td>interval-ULHoppingConfigCommonModeX</td>
<td>Number of consecutive absolute subframes over which PUCCH or PUSCH for CE mode X stays at the same narrowband before hopping to another narrowband. For interval-FDD, int1 corresponds to 1 subframe, int2 corresponds to 2 subframes, and so on. For interval-TDD, int1 corresponds to 1 subframe, int5 corresponds to 5 subframes, and so on.</td>
</tr>
<tr>
<td>modificationPeriodCoeff</td>
<td>Actual modification period, expressed in number of radio frames= <code>modificationPeriodCoeff</code> * <code>defaultPagingCycle</code>. n2 corresponds to value 2, n4 corresponds to value 4, n8 corresponds to value 8, n16 corresponds to value 16, and n64 corresponds to value 64.</td>
</tr>
<tr>
<td>mpdcch-NumRepetition-Paging</td>
<td>Maximum number of repetitions for MPDCCH common search space (CSS) for paging, see TS 36.211 [21].</td>
</tr>
<tr>
<td>mpdcch-pdsch-HoppingOffset</td>
<td>Parameter: see TS 36.211 [21, 6.4.1].</td>
</tr>
<tr>
<td>mpdcch-pdsch-HoppingNB</td>
<td>The number of narrowbands for MPDCCH/PDSCH frequency hopping. Value nb2 corresponds to 2 narrowbands and value nb4 corresponds to 4 narrowbands.</td>
</tr>
<tr>
<td>nB</td>
<td>Parameter: nB is used as one of parameters to derive the Paging Frame and Paging Occasion according to TS 36.304 [4]. A value of fourT corresponds to 4 * T, a value of twoT corresponds to 2 * T and so on. In case nB-v1310 is signalled, the UE shall ignore nB (i.e. without suffix). EUTRAN configures nB-v1310 only in the BR version of SI message.</td>
</tr>
<tr>
<td>paging-narrowBands</td>
<td>Number of narrowbands used for paging, see TS 36.304 [4], TS 36.212 [22] and TS 36.213 [23].</td>
</tr>
<tr>
<td>p-Max</td>
<td>Pmax to be used in the target cell. If absent the UE applies the maximum power according to the UE capability.</td>
</tr>
<tr>
<td>prach-ConfigSCell</td>
<td>Indicates a PRACH configuration for an SCell. The field is not applicable for an LAA SCell in this release.</td>
</tr>
<tr>
<td>rach-ConfigCommonSCell</td>
<td>Indicates a RACH configuration for an SCell. The field is not applicable for an LAA SCell in this release.</td>
</tr>
<tr>
<td>soundingRS-FlexibleTiming</td>
<td>Indicates the SRS flexible timing (if configured) for aperiodic SRS triggered by DL grant. If the SRS transmission is collided with ACK/NACK, postpone once to the next configured SRS transmission opportunity.</td>
</tr>
<tr>
<td>ul-Bandwidth</td>
<td>Parameter: transmission bandwidth configuration, Ns, in uplink, see TS 36.101 [42, table 5.6-1]. Value n6 corresponds to 6 resource blocks, n15 to 15 resource blocks and so on. If for FDD this parameter is absent, the uplink bandwidth is equal to the downlink bandwidth. For TDD this parameter is absent and it is equal to the downlink bandwidth.</td>
</tr>
<tr>
<td>ul-CarrierFreq</td>
<td>For FDD: If absent, the (default) value determined from the default TX-RX frequency separation defined in TS 36.101 [42, table 5.7.3-1] applies. For TDD: This parameter is absent and it is equal to the downlink frequency.</td>
</tr>
</tbody>
</table>
### RadioResourceConfigCommon field descriptions

**additionalSpectrumEmissionSCell**
The UE requirements related to `additionalSpectrumEmissionSCell` are defined in TS 36.101 [42]. E-UTRAN configures the same value in `additionalSpectrumEmissionSCell` for all SCell(s) of the same band with UL configured. The `additionalSpectrumEmissionSCell` is applicable for all serving cells (including PCell) of the same band with UL configured.

**ul-CyclicPrefixLength**
Parameter: Uplink cyclic prefix length see TS 36.211 [21, 5.2.1] where len1 corresponds to normal cyclic prefix and len2 corresponds to extended cyclic prefix.

<table>

RadioResourceConfigDedicated field descriptions

crs-PortsCount
Parameter represents the number of antenna ports for cell-specific reference signal used by the signaled neighboring cell where n1 corresponds to 1 antenna port, n2 to 2 antenna ports etc. see TS 36.211 [21, 6.10.1].

drb-Identity
In case of DC, the DRB identity is unique within the scope of the UE i.e. an SCG DRB can not use the same value as used for an MCG or split DRB. For a split DRB the same identity is used for the MCG- and SCG parts of the configuration.

drb-ToAddModListSCG
When an SCG is configured, E-UTRAN configures at least one SCG or split DRB.

drb-Type
This field indicates whether the DRB is split or SCG DRB. E-UTRAN does not configure split and SCG DRBs simultaneously for the UE.

drb-TypeChange
Indicates that a split/SCG DRB is reconfigured to an MCG DRB (i.e. E-UTRAN only signals the field in case the DRB type changes).

drb-TypeLWA
Indicates whether a DRB is (re)configured as an LWA DRB or an LWA DRB is reconfigured not to use WLAN resources. NOTE 1

drb-TypeLWIP
Indicates whether a DRB is (re)configured to use LWIP Tunnel in UL and DL (value lwip), DL only (value lwip-DL-only), UL only (value lwip-UL-only) or not to use LWIP Tunnel (value eutran).

logicalChannelConfig
For SRBs a choice is used to indicate whether the logical channel configuration is signalled explicitly or set to the default logical channel configuration for SRB1 as specified in 9.2.1.1 or for SRB2 as specified in 9.2.1.2.

logicalChannelIdentity
The logical channel identity for both UL and DL.

lwa-WLAN-AC
For LWA bearers, indicates the corresponding WLAN access category for uplink. AC-BK (value ac-bk) corresponds to Background access category, AC-BE (value ac-be) corresponds to Best Effort access category, AC-VI (value ac-vi) corresponds to Video access category and AC-VO (value ac-vo) corresponds to Voice access category as defined by IEEE 802.11-2012 [67]. If lwa-WLAN-AC is not configured, it is left up to UE to decide which IEEE 802.11 AC value to use when performing transmissions of packets for this DRB over WLAN in the uplink.

lwip-DL-Aggregation, lwip-UL-Aggregation
Indicates whether LWIP is configured to utilize LWIP aggregation in DL or UL.

mac-MainConfig
Although the ASN.1 includes a choice that is used to indicate whether the mac-MainConfig is signalled explicitly or set to the default MAC main configuration as specified in 9.2.2, EUTRAN does not apply "defaultValue".

mbsfn-SubframeConfig
Defines the MBSFN subframe configuration used by the signaled neighboring cell. If absent, UE assumes no MBSFN configuration for the neighboring cell.

measSubframePatternPCell
Time domain measurement resource restriction pattern for the PCell measurements (RSRP, RSRQ and the radio link monitoring).

neighCellsCRS-Info, neighCellsCRS-InfoSCell, neighCellsCRS-InfoPSCell
This field contains assistance information used by the UE to mitigate interference from CRS while performing RRM/RLM/CSI measurement or data demodulation or DL control channel demodulation. When the received CRS assistance information is for a cell with CRS non-colliding with that of the CRS of the cell to measure, the UE may use the CRS assistance information to mitigate CRS interference RRM/RLM (as specified in TS 36.133 [16]) and for CSI (as specified in TS 36.101 [42]) on the subframes indicated by measSubframePatternPCell, measSubframePatternConfigNeigh, csi-MeasSubframeSet1 if configured, and the CSI subframe set 1 if csi-MeasSubframeSets-r12 is configured. The UE may use CRS assistance information to mitigate CRS interference from the cells in the CRS-AssistanceInfoList for the demodulation purpose or DL control channel demodulation as specified in TS 36.101 [42]. EUTRAN does not configure neighCellsCRS-Info-r11 or neighCellsCRS-Info-r13 if eimta-MainConfigPCell-r12 is configured.

neighCellsToAddModList
This field contains assistance information used by the UE to cancel and suppress interference of a neighbouring cell. If this field is present for a neighbouring cell, the UE assumes that the transmission parameters listed in the sub-fields are used by the neighbouring cell. If this field is present for a neighbouring cell, the UE assumes the neighbour cell is subframe and SFN synchronized to the serving cell, has the same system bandwidth, UL/DL and special subframe configuration, and cyclic prefix length as the serving cell.

p-AltList
Indicates the restricted subset of power offset for QPSK, 16QAM, and 64QAM PDSCH transmissions for the neighbouring cell by using the parameter $P_A$, see TS 36.213 [23, 5.2]. Value dB-6 corresponds to -6 dB, dB-4.77 corresponds to -4.77 dB etc.
### RadioResourceConfigDedicated field descriptions

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>p-b</strong></td>
<td>Parameter: $P_{b}$, indicates the cell-specific ratio used by the signaled neighboring cell, see TS 36.213 [23, Table 5.2-1].</td>
</tr>
<tr>
<td><strong>physicalConfigDedicated</strong></td>
<td>The default dedicated physical configuration is specified in 9.2.4.</td>
</tr>
<tr>
<td><strong>resAllocGranularity</strong></td>
<td>Indicates the resource allocation and precoding granularity in PRB pair level of the signaled neighboring cell, see TS 36.213 [23, 7.1.6].</td>
</tr>
<tr>
<td><strong>rlc-Config</strong></td>
<td>For SRBs a choice is used to indicate whether the RLC configuration is signalled explicitly or set to the values defined in the default RLC configuration for SRB1 in 9.2.1.1 or for SRB2 in 9.2.1.2. RLC AM is the only applicable RLC mode for SRB1 and SRB2. E-UTRAN does not reconfigure the RLC mode of DRBs except when a full configuration option is used, and may reconfigure the RLC SN field size and the AM RLC LI field size only upon handover within E-UTRA or upon the first reconfiguration after RRC connection re-establishment or upon SCG Change for SCG and split DRBs.</td>
</tr>
<tr>
<td><strong>servCellp-a</strong></td>
<td>Indicates the power offset for QPSK C-RNTI based PDSCH transmissions used by the serving cell, see TS 36.213 [23, 5.2]. Value dB-6 corresponds to -6 dB, dB-4.77 corresponds to -4.77 dB etc.</td>
</tr>
<tr>
<td><strong>sps-Config</strong></td>
<td>The default SPS configuration is specified in 9.2.3. Except for handover or releasing SPS for MCG, E-UTRAN does not reconfigure sps-Config for MCG when there is a configured downlink assignment or a configured uplink grant for MCG (see TS 36.321 [6]). Except for SCG change or releasing SPS for SCG, E-UTRAN does not reconfigure sps-Config for SCG when there is a configured downlink assignment or a configured uplink grant for SCG (see TS 36.321 [6]).</td>
</tr>
<tr>
<td><strong>srb-Identity</strong></td>
<td>Value 1 is applicable for SRB1 only. Value 2 is applicable for SRB2 only.</td>
</tr>
<tr>
<td><strong>transmissionModeList</strong></td>
<td>Indicates a subset of transmission mode 1, 2, 3, 4, 6, 8, 9, 10, for the signaled neighboring cell for which NeighCellsInfo applies. When TM10 is signalled, other signalled transmission parameters in NeighCellsInfo are not applicable to up to 8 layer transmission scheme of TM10. E-UTRAN may indicate TM9 when TM10 with QCL type A and DMRS scrambling with $n_{ID}^{(i)} = N_{ID}^{cell}$ in TS 36.211 [21, 6.10.3.1] is used in the signalled neighbour cell and TM9 or TM10 with QCL type A and DMRS scrambling with $n_{ID}^{(i)} = N_{ID}^{cell}$ in TS 36.211 [21, 6.10.3.1] is used in the serving cell. UE behaviour with NAICS when TM10 is used is only defined when QCL type A and DMRS scrambling with $n_{ID}^{(i)} = N_{ID}^{cell}$ in TS 36.211 [21, 6.10.3.1] is used for the serving cell and all signalled neighbour cells. The first/ leftmost bit is for transmission mode 1, the second bit is for transmission mode 2, and so on.</td>
</tr>
</tbody>
</table>

**NOTE 1:** It is up to eNB to ensure that the field indicating LWA bearer type is set to FALSE when LWA bearer is no longer used (e.g. during handover or re-establishment where LWA configuration is released).
<table>
<thead>
<tr>
<th>Conditional presence</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>UL-LWA</td>
<td>The field is optionally present, need ON if ul-LWA-Config-r14 is present. Otherwise the field is not present.</td>

-- ASN1STOP
**RLC-Config field descriptions**

**dl-extended-RLC-LI-Field, ul-extended-RLC-LI-Field**
Indicates the RLC LI field size. Value TRUE means that 15 bit LI length shall be used, otherwise 11 bit LI length shall be used; see TS 36.322 [7]. E-UTRAN enables this field only when RLC-Config (without suffix) is set to am.

**maxRetxThreshold**
Parameter for RLC AM in TS 36.322 [7]. Value t1 corresponds to 1 retransmission, t2 to 2 retransmissions and so on.

**pollByte**
Parameter for RLC AM in TS 36.322 [7]. Value kB25 corresponds to 25 kBytes, kB50 to 50 kBytes and so on. kBInfinity corresponds to an infinite amount of kBytes. In case pollByte-r14 is signalled, the UE shall ignore pollByte (i.e. without suffix).

**pollPDU**
Parameter for RLC AM in TS 36.322 [7]. Value p4 corresponds to 4 PDUs, p8 to 8 PDUs and so on. pInfinity corresponds to an infinite number of PDUs. In case pollPDU-v1310 is signalled, the UE shall ignore pollPDU (i.e. without suffix). E-UTRAN enables pollPDU-v1310 field only when RLC-Config (without suffix) is set to am.

**sn-FieldLength**
Indicates the UM RLC SN field size, see TS 36.322 [7], in bits. Value size5 means 5 bits, size10 means 10 bits.

**t-PollRetransmit**
Timer for RLC AM in TS 36.322 [7], in milliseconds. Value ms5 means 5ms, ms10 means 10ms and so on. EUTRAN configures values msX-v1310 (with suffix) only if UE supports CE.

**t-Reordering**
Timer for reordering in TS 36.322 [7], in milliseconds. Value ms0 means 0ms and behaviour as specified in 7.3.2 applies, ms5 means 5ms and so on.

**t-StatusProhibit**
Timer for status reporting in TS 36.322 [7], in milliseconds. Value ms0 means 0ms and behaviour as specified in 7.3.2 applies, ms5 means 5ms and so on. EUTRAN configures values msX-v1310 (with suffix) only if UE supports operation in CE.

**ul-extended-RLC-AM-SN, dl-extended-RLC-AM-SN**
Indicates whether or not the UE shall use the extended SN and SO length for AM bearer. Value TRUE means that 16 bit SN length and 16 bit SO length shall be used, otherwise 10 bit SN length and 15 bit SO length shall be used; see TS 36.322 [7].

---

**RLF-TimersAndConstants**

The IE RLF-TimersAndConstants contains UE specific timers and constants applicable for UEs in RRC_CONNECTED.

**RLF-TimersAndConstants information element**

-- ASN1START

```
RLF-TimersAndConstants-r9 ::= CHOICE {
  release  NULL,
  setup    SEQUENCE {
    t301-r9    ENUMERATED {
                  ms100, ms200, ms300, ms400, ms600, ms1000, ms1500,

  setup    SEQUENCE {
    t301-v1310 ENUMERATED {
                   ms2500, ms3000, ms3500, ms4000, ms5000,
                       ms6000, ms8000, ms10000},
    ...' [t310-v1330 ENUMERATED {ms4000, ms6000} OPTIONAL -- Need ON]
    }
  }

ETSI
RLF-TimersAndConstantsSCG-r12 ::=  
   CHOICE {
      release        NULL,
      setup        SEQUENCE {
         t313-r12       ENUMERATED {
            ms0, ms50, ms100, ms200, ms500, ms1000, ms2000},
         n313-r12       ENUMERATED {
             n1, n2, n3, n4, n6, n8, n10, n20},
         n314-r12       ENUMERATED {
             n1, n2, n3, n4, n5, n6, n8, n10},
         ...
       }
   }
-- ASN1STOP

**RLF-TimersAndConstants field descriptions**

**n3xy**

Constants are described in section 7.4. n1 corresponds with 1, n2 corresponds with 2 and so on.

**t3xy**

Timers are described in section 7.3. Value ms0 corresponds with 0 ms, ms50 corresponds with 50 ms and so on.

E-UTRAN configures `RLF-TimersAndConstants-r13` only if UE supports `ce-ModeB`. UE shall use the extended values `t3xy-v1310` and `t3xy-v1330`, if present, and ignore the values signaled by `t3xy-r9`.

---

**RN-SubframeConfig**

The IE `RN-SubframeConfig` is used to specify the subframe configuration for an RN.

**RN-SubframeConfig information element**

```asn1
RN-SubframeConfig-r10 ::=  SEQUENCE {
   subframeConfigPattern-r10    CHOICE {
      subframeConfigPatternFDD-r10 BIT STRING (SIZE(8)),
      subframeConfigPatternTDD-r10 INTEGER (0..31)
   }                 OPTIONAL, -- Need ON
   rpdcch-Config-r10    SEQUENCE {
      resourceAllocationType-r10  ENUMERATED {type0, type1, type2Localized, type2Distributed,
                                               spare4, spare3, spare2, spare1},
      resourceBlockAssignment-r10 CHOICE {

SchedulingRequestConfig field descriptions

dsr-TransMax
Parameter for SR transmission in TS 36.321 [6, 5.4.4]. The value n4 corresponds to 4 transmissions, n8 corresponds to 8 transmissions and so on. EUTRAN configures the same value for all serving cells for which this field is configured.

sr-ConfigIndex
Parameter $I_{SR}$. See TS 36.213 [23,10.1]. The values 156 and 157 are not applicable for Release 8.

sr-PUCCH-ResourceIndex, sr-PUCCH-ResourceIndexP1
Parameter: $n_{PUCCH,SR}^p$ for antenna port P0 and for antenna port P1 respectively, see TS 36.213 [23, 10.1]. E-UTRAN configures sr-PUCCH-ResourceIndexP1 only if sr-PUCCHResourceIndex is configured.

— SoundingRS-UL-Config

The IE SoundingRS-UL-Config is used to specify the uplink Sounding RS configuration for periodic and aperiodic sounding.

SoundingRS-UL-Config information element

-- ASN1STOP
**SoundingRS-UL-Config field descriptions**

**ackNackSRS-SimultaneousTransmission**  
Parameter: *Simultaneous-AN-and-SRS*, see TS 36.213 [23, 8.2]. For SCells without PUCCH configured, this field is not applicable and the UE shall ignore the value.

**cyclicShift, cyclicShiftAp**  
Parameter: \( n_{\text{SRS}} \) for periodic and aperiodic sounding reference signal transmission respectively except for an LAA SCell. See TS 36.211 [21, 5.5.3.1], where \( c_{s0} \) corresponds to 0 etc.

**duration**  
Parameter: Duration for periodic sounding reference signal transmission except for an LAA SCell. See TS 36.213 [21, 8.2]. FALSE corresponds to “single” and value TRUE to “indefinite”.

**freqDomainPosition, freqDomainPositionAp**  
Parameter: \( n_{\text{RC}} \) for periodic and aperiodic sounding reference signal transmission respectively, see TS 36.211 [21, 5.5.3.2].

**srs-AntennaPort, srs-AntennaPortAp**  
Indicates the number of antenna ports used for periodic and aperiodic sounding reference signal transmission respectively, see TS 36.211 [21, 5.5.3]. UE shall release srs-AntennaPort if SoundingRS-UL-ConfigDedicated is released.

**srs-Bandwidth, srs-BandwidthAp**  
Parameter: \( B_{\text{SRS}} \) for periodic and aperiodic sounding reference signal transmission respectively, see TS 36.211 [21, tables 5.5.3.2-1, 5.5.3.2-2, 5.5.3.2-3 and 5.5.3.2-4]. For LAA SCell only bw0 is applied.

**srs-BandwidthConfig**  
Parameter: SRS Bandwidth Configuration. See TS 36.211, [21, table 5.5.3.2-1, 5.5.3.2-2, 5.5.3.2-3 and 5.5.3.2-4]. Actual configuration depends on UL bandwidth. bw0 corresponds to value 0, bw1 to value 1 and so on.

**srs-ConfigAPDCI-Format0 / srs-ConfigAPDCI-Format1a2b2c / srs-ConfigAPDCI-Format4**  
Parameters indicate the resource configurations for aperiodic sounding reference signal transmissions triggered by DCI formats 0, 1A, 2B, 2C, 4. See TS 36.213 [23, 8.2].

**srs-ConfigIndex, srs-ConfigIndexAp**  

**srs-HoppingBandwidth**  
Parameter: SRS hopping bandwidth \( b_{\text{hop}} \in \{0,1,2,3\} \) for periodic sounding reference signal transmission except for an LAA SCell, see TS 36.211 [21, 5.5.3.2] where hbw0 corresponds to value 0, hbw1 to value 1 and so on.

**srs-MaxUpPts**  
Parameter: srsMaxUpPts, see TS 36.211 [21, 5.5.3.2]. If this field is present, reconfiguration of \( m_{\text{SRS,0}}^{\text{max}} \) applies for UpPts, otherwise reconfiguration does not apply.

**srs-SubframeConfig**  
Parameter: SRS SubframeConfiguration except for an LAA SCell. See TS 36.211, [21, table 5.5.3.3-1] applies for FDD whereas TS 36.211 [21, table 5.5.3.3-2] applies for TDD, sc0 corresponds to value 0, sc1 corresponds to value 1 and so on.

**srs-SubframeIndication**  
Parameter: SRS subframe indication in SRS parameter set configuration for aperiodic sounding reference signal transmission on an LAA SCell configured with uplink, see TS 36.213 [23].

**srs-UpPtsAdd**  
The field only applies for TDD and frame structure type 3, see TS 36.211 [21]. If E-UTRAN configures both soundingRS-UL-ConfigDedicatedUpPtsExt and soundingRS-UL-ConfigDedicatedAperiodicUpPtsExt srs-UpPtsAdd in both fields is set to the same value.

**transmissionComb, transmissionCombAp**  
Parameter: \( k_{TC} \in \{0..3\} \) for periodic and aperiodic sounding reference signal transmission respectively, see TS 36.211 [21, 5.5.3.2].

}

SPS-ConfigIndex-r14 ::= INTEGER (1..maxConfigSPS-r14)

N1PUCCH-AN-PersistentList ::= SEQUENCE (SIZE (1..4)) OF INTEGER (0..2047)

-- ASN1STOP
SPS-Config field descriptions

fixedRV-NonAdaptive
If this field is present and skipUplinkTxSPS is configured, non-adaptive retransmissions on configured uplink grant uses redundancy version 0, otherwise the redundancy version for each retransmission is updated based on the sequence of redundancy versions as described in TS 36.321 [6].

implicitReleaseAfter
Number of empty transmissions before implicit release, see TS 36.321 [6, 5.10.2]. Value 2 corresponds to 2 transmissions, 3 corresponds to 3 transmissions and so on. If skipUplinkTxSPS is configured, the UE shall ignore this field.

n1PUCCH-AN-PersistentList, n1PUCCH-AN-PersistentListP1
List of parameter: \( n_{PUCCH} \) for antenna port P0 and for antenna port P1 respectively, see TS 36.213 [23, 10.1]. Field \( n_{1-PUCCH-AN-PersistentListP1} \) is applicable only if the twoAntennaPortActivatedPUCCH-Format1a1b in PUCCH-ConfigDedicated-v1020 is set to true. Otherwise the field is not configured.

numberOfConfSPS-Processes
The number of configured HARQ processes for downlink Semi-Persistent Scheduling, see TS 36.321 [6].

numberOfConfULSPS-Processes
The number of configured HARQ processes for uplink Semi-Persistent Scheduling, see TS 36.321 [6]. E-UTRAN always configures this field for asynchronous UL HARQ. Otherwise it does not configure this field.

p0-NominalPUSCH-Persistent
Parameter: \( P_{\text{UL}}(0) \). See TS 36.213 [23, 5.1.1.1], unit dBm step 1. This field is applicable for persistent scheduling, only. If choice setup is used and p0-Persistent is absent, apply the value of p0-NominalPUSCH for p0-NominalPUSCH-Persistent. If uplink power control subframe sets are configured by tpc-SubframeSet, this field applies for uplink power control subframe set 1.

p0-NominalPUSCH-PersistentSubframeSet2
Parameter: \( P_{\text{UL}}(0) \). See TS 36.213 [23, 5.1.1.1], unit dBm step 1. This field is applicable for persistent scheduling, only. If p0-PersistentSubframeSet2-r12 is not configured, apply the value of p0-NominalPUSCH-SubframeSet2-r12 for p0-NominalPUSCH-PersistentSubframeSet2. E-UTRAN configures this field only if uplink power control subframe sets are configured by tpc-SubframeSet, in which case this field applies for uplink power control subframe set 2.

p0-UE-PUSCH-Persistent
Parameter: \( P_{\text{UL}}(0) \). See TS 36.213 [23, 5.1.1.1], unit dB. This field is applicable for persistent scheduling, only. If choice setup is used and p0-Persistent is absent, apply the value of p0-UE-PUSCH for p0-UE-PUSCH-Persistent. If uplink power control subframe sets are configured by tpc-SubframeSet, this field applies for uplink power control subframe set 1.

p0-UE-PUSCH-PersistentSubframeSet2
Parameter: \( P_{\text{UL}}(0) \). See TS 36.213 [23, 5.1.1.1], unit dB. This field is applicable for persistent scheduling, only. If p0-PersistentSubframeSet2-r12 is not configured, apply the value of p0-UE-PUSCH-SubframeSet2-r12 for p0-UE-PUSCH-PersistentSubframeSet2. E-UTRAN configures this field only if uplink power control subframe sets are configured by tpc-SubframeSet, in which case this field applies for uplink power control subframe set 2.

semiPersistSchedC-RNTI
Semi-persistent Scheduling C-RNTI, see TS 36.321 [6].

semiPersistSchedIntervalDL
Semi-persistent scheduling interval in downlink, see TS 36.321 [6]. Value in number of sub-frames. Value sf10 corresponds to 10 sub-frames, sf20 corresponds to 20 sub-frames and so on. For TDD, the UE shall round this parameter down to the nearest integer (of 10 sub-frames), e.g. sf10 corresponds to 10 sub-frames, sf32 corresponds to 30 sub-frames, sf128 corresponds to 120 sub-frames.

semiPersistSchedIntervalSL
Semi-persistent scheduling interval in sidelink, see TS 36.321 [6]. Value in number of sub-frames. Value sf20 corresponds to 20 sub-frames, sf50 corresponds to 50 sub-frames and so on.

semiPersistSchedIntervalUL
Semi-persistent scheduling interval in uplink, see TS 36.321 [6]. Value in number of sub-frames. Value sf10 corresponds to 10 sub-frames, sf20 corresponds to 20 sub-frames and so on. For TDD, when the configured Semi-persistent scheduling interval is greater than or equal to 10 sub-frames, the UE shall round this parameter down to the nearest integer (of 10 sub-frames), e.g. sf10 corresponds to 10 sub-frames, sf32 corresponds to 30 sub-frames, sf128 corresponds to 120 sub-frames. If semiPersistSchedIntervalUL-v1430 is configured, the UE only considers this extension (and ignores semiPersistSchedIntervalUL i.e. without suffix).

si-SPS-V-RNTI
SL Semi-Persistent Scheduling V-RNTI for V2X sidelink communication, see TS 36.321 [6].

sps-ConfigIndex
Indicates the index of one of multiple SL/UL SPS configurations.

sps-ConfigSL-ToAddModList
Indicates the SL SPS configurations to be added or modified, identified by SPS-ConfigIndex.

sps-ConfigSL-ToReleaseList
Indicates the SL SPS configurations to be released, identified by SPS-ConfigIndex.
### SPS-Config field descriptions

**sps-ConfigUL-ToAddModList**
Indicates the UL SPS configurations to be added or modified, identified by `SPS-ConfigIndex`.

**sps-ConfigUL-ToReleaseList**
Indicates the UL SPS configurations to be released, identified by `SPS-ConfigIndex`.

**twoIntervalsConfig**
Trigger of two-intervals-Semi-Persistent Scheduling in uplink. See TS 36.321 [6, 5.10]. If this field is present and the configured Semi-persistent scheduling interval greater than or equal to 10 sub-frames, two-intervals-SPS is enabled for uplink. Otherwise, two-intervals-SPS is disabled.

**ul-SPS-V-RNTI**
UL Semi-Persistent Scheduling V-RNTI for UEs capable of multiple uplink SPS configurations and which support V2X communication, see TS 36.321 [6].

---

**SRS-TPC-PDCCH-Config**

The IE `SRS-TPC-PDCCH-Config` is used to specify the RNTIs and indexes for A-SRS trigger and TPC according to TS 36.212 [22].

**SRS-TPC-PDCCH-Config information element**

```asn1
SRS-TPC-PDCCH-Config-r14 ::= CHOICE {
  release         NULL,
  setup           SEQUENCE {
    srs-TPC-RNTI-r14         BIT STRING (SIZE (16)),
    startingBitOfFormat3B-r14       INTEGER (0..31),
    fieldTypeFormat3B-r14        INTEGER (1..4),
    srs-CC-SetIndexlist-r14     SEQUENCE (SIZE(1..4)) OF SRS-CC-
SetIndex-r14 OPTIONAL -- Cond SRS-Trigger-TypeA
  }
}
SRS-CC-SetIndex-r14 ::= SEQUENCE {
  cc-SetIndex-r14    INTEGER (0..3),
  cc-IndexInOneCC-Set-r14 INT (0..7)
}
```

---

**ETSI**
**SRS-TPC-PDCCH-Config field descriptions**

- **cc-IndexInOneCC-Set**
  Indicates the CC index in one CC set for Type A associated with the group DCI with SRS request field (optional) and TPC commands for a PUSCH-less SCell.

- **cc-SetIndex**
  Indicates the CC set index for Type A associated with the group DCI with SRS request field (optional) and TPC commands for a PUSCH-less SCell.

- **fieldTypeFormat3B**
  The type of a field within the group DCI with SRS request fields (optional) and TPC commands for a PUSCH-less SCell, which indicates how many bits in the field are for SRS request (0 or 1/2) and how many bits in the field are for TPC (1 or 2). Note that for Type A, there is a common SRS request field for all SCells in the set, but each SCell has its own TPC command bits. See TS 36.212 [22, 5.3.3.1.7A]. EUTRAN configures this field with the same value for all PUSCH-less SCells.

- **srs-CC-SetIndexList**
  Indicates the index of the SRS-TPC-PDCCH-Config for Type A trigger by the group DCI with SRS request field (optional) and TPC commands for a PUSCH-less SCell. Each set may contain at most 8 CCs.

- **srs-TPC-RNTI**
  RNTI for SRS trigger and power control using DCI format 3B, see TS 36.212 [22, 5.1.3.1].

- **startingBitOfFormat3B**
  The starting bit position of a block within the group DCI with SRS request fields (optional) and TPC commands for a PUSCH-less SCell.

---

**Conditional presence**

---

**TDD-Config**

The IE *TDD-Config* is used to specify the TDD specific physical channel configuration.

---

**TDD-Config information element**

```
-- ASN1START

TDD-Config ::= SEQUENCE {
  subframeAssignment ENUMERATED {
    sa0, sa1, sa2, sa3, sa4, sa5, sa6,
  }

  specialSubframePatterns ENUMERATED {
    ssp0, ssp1, ssp2, ssp3, ssp4,ssp5, ssp6, ssp7, ssp8
  }
}

TDD-Config-v1130 ::= SEQUENCE {
  specialSubframePatterns-v1130 ENUMERATED {ssp7,ssp9}
}

TDD-Config-v1430 ::= SEQUENCE {
  specialSubframePatterns-v1430 ENUMERATED {ssp10}
}

TDD-ConfigSL-r12 ::= SEQUENCE {
  subframeAssignmentSL-r12 ENUMERATED {
    none, sa0, sa1, sa2, sa3, sa4, sa5, sa6
  }
}

-- ASN1STOP
```
**specialSubframePatterns**
Indicates Configuration as in TS 36.211 [21, table 4.2-1] where ssp0 points to Configuration 0, ssp1 to Configuration 1 etc. Value ssp7 points to Configuration 7 for extended cyclic prefix, value ssp9 points to Configuration 9 for normal cyclic prefix and value ssp10 points to Configuration 10 for normal cyclic prefix. E-UTRAN signals ssp7 only when setting specialSubframePatterns (without suffix i.e. the version defined in REL-8) to ssp4. E-UTRAN signals value ssp9 only when setting specialSubframePatterns (without suffix) to ssp5. E-UTRAN signals value ssp10 only when setting specialSubframePatterns (without suffix) to ssp0 or ssp5. If specialSubframePatterns-v1130 or specialSubframePatterns-v1430 is present, the UE shall ignore specialSubframePatterns (without suffix). If both specialSubframePatterns-v1130 and specialSubframePatterns-v1430 are present, the UE shall ignore specialSubframePatterns-v1130.

**subframeAssignment**
Indicates DL/UL subframe configuration where sa0 points to Configuration 0, sa1 to Configuration 1 etc. as specified in TS 36.211 [21, table 4.2-2]. E-UTRAN configures the same value for serving cells residing on same frequency band.

**subframeAssignmentSL**
Indicates UL/ DL subframe configuration where sa0 points to Configuration 0, sa1 to Configuration 1 etc. as specified in TS 36.211 [21, table 4.2-2]. The value none means that no TDD specific physical channel configuration is applicable (i.e. the carrier on which MasterInformationBlock-SL is transmitted is an FDD UL carrier or the carrier on which MasterInformationBlock-SL-V2X is transmitted is a carrier for V2X sidelink communication).

---

**TimeAlignmentTimer**
The IE TimeAlignmentTimer is used to control how long the UE considers the serving cells belonging to the associated TAG to be uplink time aligned. Corresponds to the Timer for time alignment in TS 36.321 [6]. Value in number of sub-frames. Value sf500 corresponds to 500 sub-frames, sf750 corresponds to 750 sub-frames and so on.

**TimeAlignmentTimer information element**

```asn1
TimeAlignmentTimer ::= ENUMERATED {
  sf500, sf750, sf1280, sf1920, sf2560, sf5120,
  sf10240, infinity}
```

---

**TPC-PDCCH-Config**
The IE TPC-PDCCH-Config is used to specify the RNTIs and indexes for PUCCH and PUSCH power control according to TS 36.212 [22]. The power control function can either be setup or released with the IE.

**TPC-PDCCH-Config information element**

```asn1
TPC-PDCCH-Config ::= CHOICE {
  release        NULL,
  setup        SEQUENCE {
    tpc-RNTI       BIT STRING (SIZE (16)),
    tpc-Index       TPC-Index
  }
}

TPC-PDCCH-ConfigSCell-r13 ::= CHOICE {
  release        NULL,
  setup        SEQUENCE {
    tpc-Index-SCell-r13  TPC-Index
  }
}

TPC-Index ::=       CHOICE {
  indexOfFormat3       INTEGER (1..15),
  indexOfFormat3A       INTEGER (1..31)
}
```

---

UplinkPowerControl field descriptions

accumulationEnabled
Parameter: Accumulation-enabled, see TS 36.213 [23, 5.1.1.1, 5.1.3.1]. TRUE corresponds to “enabled” whereas FALSE corresponds to “disabled”.

alpha
Parameter: α See TS 36.213 [23, 5.1.1.1] where al0 corresponds to 0, al04 corresponds to value 0.4, al05 to 0.5, al06 to 0.6, al07 to 0.7, al08 to 0.8, al09 to 0.9 and al1 corresponds to 1. This field applies for uplink power control subframe set 1 if uplink power control subframe sets are configured by tpc-SubframeSet.

alpha-SRS
Parameter: α See TS 36.213 [23, 5.1.3.1] where al0 corresponds to 0, al04 corresponds to value 0.4, al05 to 0.5, al06 to 0.6, al07 to 0.7, al08 to 0.8, al09 to 0.9 and al1 corresponds to 1. This field applies for SRS power control on a PUSCH-less SCell.

alpha-SubframeSet2
Parameter: α. See TS 36.213 [23, 5.1.1.1] where al0 corresponds to 0, al04 corresponds to value 0.4, al05 to 0.5, al06 to 0.6, al07 to 0.7, al08 to 0.8, al09 to 0.9 and al1 corresponds to 1. This field applies for uplink power control subframe set 2 if uplink power control subframe sets are configured by tpc-SubframeSet.

deltaF-PUCCH-FormatX
Parameter: \( F_{\Delta} \) for the PUCCH formats 1, 1b, 2, 2a, 2b, 3, 4, 5 and 1b with channel selection. See TS 36.213 [23, 5.1.2] where deltaF-2 corresponds to -2 dB, deltaF0 corresponds to 0 dB and so on.

deltaMCS-Enabled
Parameter: Ks See TS 36.213 [23, 5.1.1.1]. en0 corresponds to value 0 corresponding to state “disabled”. en1 corresponds to value 1.25 corresponding to “enabled”.

deltaPreambleMsg3
Parameter: \( \Delta_{\text{PREAMBLE,Msg3}} \) see TS 36.213 [23, 5.1.1.1]. Actual value = field value * 2 [dB].

deltaTxD-OffsetPUCCH-FormatX
Parameter: \( \Delta_{\text{TXD, Offset}} \) for the PUCCH formats 1, 1a/1b, 1b with channel selection, 2/2a/2b and 3 when two antenna ports are configured for PUCCH transmission. See TS 36.213 [23, 5.1.2.1] where dB0 corresponds to 0 dB, dB-1 corresponds to -1 dB, dB-2 corresponds to -2 dB. EUTRAN configures the field deltaTxD-OffsetPUCCH-Format1bCS-r11 for the PCell and/or the PSCell only.

filterCoefficient
Specifies the filtering coefficient for RSRP measurements used to calculate path loss, as specified in TS 36.213 [23, 5.1.1.1]. The same filtering mechanism applies as for quantityConfig described in 5.5.3.2.

p0-Nominal-AperiodicSRS
Parameter: \( P_{O,NOMINAL, SRS,c} \) where \( m = 1 \). See TS 36.213 [23, 5.1.3.1], unit dBm.

p0-Nominal-PeriodicSRS
Parameter: \( P_{O,NOMINAL, SRS,c} \) where \( m = 0 \). See TS 36.213 [23, 5.1.3.1], unit dBm.

p0-NominalPUCCH
Parameter: \( P_{O,NOMINAL, PUCCH} \) See TS 36.213 [23, 5.1.2.1], unit dBm.

p0-NominalPUSCH
Parameter: \( P_{O,NOMINAL, PUSCH} \) See TS 36.213 [23, 5.1.2.1], unit dBm. This field is applicable for non-persistent scheduling only. This field applies for uplink power control subframe set 1 if uplink power control subframe sets are configured by tpc-SubframeSet.

p0-NominalPUSCH-SubframeSet2
Parameter: \( P_{O,NOMINAL, PUSCH} \). See TS 36.213 [23, 5.1.1.1], unit dBm. This field is applicable for non-persistent scheduling only. This field applies for uplink power control subframe set 2 if uplink power control subframe sets are configured by tpc-SubframeSet.

p0-UE-AperiodicSRS
Parameter: \( P_{O,UE, SRS,c} \) where \( m = 1 \). See TS 36.213 [23, 5.1.3.1], unit dB.

p0-UE-PeriodicSRS
Parameter: \( P_{O,UE, SRS,c} \) where \( m = 0 \). See TS 36.213 [23, 5.1.3.1], unit dB.

p0-UE-PUCCH
Parameter: \( P_{O,UE,PUCCH} \) See TS 36.213 [23, 5.1.2.1]. Unit dB

p0-UE-PUSCH
Parameter: \( P_{O,UE,PUSCH} \) (1) See TS 36.213 [23, 5.1.1.1], unit dB. This field is applicable for non-persistent scheduling, only. This field applies for uplink power control subframe set 1 if uplink power control subframe sets are configured by tpc-SubframeSet.
### UplinkPowerControl Field Descriptions

#### p0-UE-PUSCH-SubframeSet2
Parameter: \( P_{O,\text{UE-PUSCH}} \) (\( I \)) See TS 36.213 [23, 5.1.1.1], unit dB. This field is applicable for non-persistent scheduling, only. This field applies for uplink power control subframe set 2 if uplink power control subframe sets are configured by `tpc-SubframeSet`.

#### pathlossReferenceLinking
Indicates whether the UE shall apply as pathloss reference either the downlink of the PCell or of the SCell that corresponds with this uplink (i.e. according to the `cellIdentification` within the field `sCellToAddMod`). For SCells part of an STAG E-UTRAN sets the value to `sCell`.

#### pSRS-Offset, pSRS-OffsetAp
Parameter: \( P_{\text{SRS OFFSET}} \) for periodic and aperiodic sounding reference signal transmission respectively. See TS 36.213 [23, 5.1.3.1]. For \( K_s=1.25 \), the actual parameter value is \( pSRS-Offset \) value – 3. For \( K_s=0 \), the actual parameter value is \( -10.5 + 1.5 \times pSRS-Offset \) value.

If `pSRS-Offset-v1130` is included, the UE ignores `pSRS-Offset` (i.e., without suffix). Likewise, if `pSRS-OffsetAp-v1130` is included, the UE ignores `pSRS-OffsetAp-r10`. For \( K_s=0 \), E-UTRAN does not set values larger than 26.

#### tpc-SubframeSet
Indicates the uplink subframes (including UpPTS in special subframes) of the uplink power control subframe sets. Value 0 means the subframe belongs to uplink power control subframe set 1, and value 1 means the subframe belongs to uplink power control subframe set 2.

---

### WLAN-Id-List
The IE `WLAN-Id-List` is used to list WLAN(s) for configuration of WLAN measurements and WLAN mobility set.

```asn1
WLAN-Id-List-r13 ::= SEQUENCE (SIZE (1..maxWLAN-Id-r13)) OF WLAN-Identifiers-r12
```

---

### WLAN-MobilityConfig
The IE `WLAN-MobilityConfig` is used for configuration of WLAN mobility set and WLAN Status Reporting. E-UTRAN configures at least one WLAN identifier in the `WLAN-MobilityConfig`.

```asn1
WLAN-MobilityConfig-r13 ::= SEQUENCE {
    wlan-ToReleaseList-r13 WLAN-Id-List-r13 OPTIONAL, -- Need ON
    wlan-ToAddList-r13 WLAN-Id-List-r13 OPTIONAL, -- Need ON
    associationTimer-r13 ENUMERATED {s10, s30, s60, s120, s240} OPTIONAL, -- Need OR
    successReportRequested-r13 ENUMERATED {true} OPTIONAL, -- Need OR
    ..., [[ wlan-SuspendConfig-r14 WLAN-SuspendConfig-r14 OPTIONAL -- Need ON ]]
}
```

---

### WLAN-MobilityConfig Field Descriptions

#### associationTimer
Indicates the maximum time for connection to WLAN before connection failure reporting is initiated. Value s10 means 10 seconds, value s30 means 30 seconds and so on. E-UTRAN includes `associationTimer` only upon change in WLAN mobility set, `lwa-WT-Counter` or `lwip-Counter`.

#### successReportRequested
Indicates whether the UE shall report successful connection to WLAN. Applicable to LWA and LWIP.

#### wlan-ToAddList
Indicates the WLAN identifiers to be added to the WLAN mobility set.

#### wlan-ToReleaseList
Indicates the WLAN identifiers to be removed from the WLAN mobility set.
6.3.3 Security control information elements

- NextHopChainingCount

The IE NextHopChainingCount is used to update the $K_{SNR}$ key and corresponds to parameter NCC: See TS 33.401 [32, 7.2.8.4].

**NextHopChainingCount information element**

```markdown
-- ASN1START
NextHopChainingCount := INTEGER (0..7)
-- ASN1STOP
```

- SecurityAlgorithmConfig

The IE SecurityAlgorithmConfig is used to configure AS integrity protection algorithm (SRBs) and AS ciphering algorithm (SRBs and DRBs). For RNs, the IE SecurityAlgorithmConfig is also used to configure AS integrity protection algorithm for DRBs between the RN and the E-UTRAN.

**SecurityAlgorithmConfig information element**

```markdown
-- ASN1START
SecurityAlgorithmConfig ::= SEQUENCE {
  cipheringAlgorithm     CipheringAlgorithm-r12,
  integrityProtAlgorithm    ENUMERATED {
    eia0-v920, eia1, eia2, eia3-v1130, spare4, spare3,
    spare2, spare1, ...}
}
CipheringAlgorithm-r12 ::= ENUMERATED {
  eea0, eea1, eea2, eea3-v1130, spare4, spare3,
  spare2, spare1, ...}
-- ASN1STOP
```

**SecurityAlgorithmConfig field descriptions**

- **cipheringAlgorithm**
  Indicates the ciphering algorithm to be used for SRBs and DRBs, as specified in TS 33.401 [32, 5.1.3.2].

- **integrityProtAlgorithm**
  Indicates the integrity protection algorithm to be used for SRBs, as specified in TS 33.401 [32, 5.1.4.2]. For RNs, also indicates the integrity protection algorithm to be used for integrity protection-enabled DRB(s).

- ShortMAC-I

The IE ShortMAC-I is used to identify and verify the UE at RRC connection re-establishment. The 16 least significant bits of the MAC-I calculated using the security configuration of the source PCell, as specified in 5.3.7.4.

**ShortMAC-I information element**

```markdown
-- ASN1START
ShortMAC-I := BIT STRING (SIZE (16))
-- ASN1STOP
```
6.3.4 Mobility control information elements

– **AdditionalSpectrumEmission**

If an extension is signalled using the extended value range (as defined by IE \textit{AdditionalSpectrumEmission-v10l0}), the corresponding original field, using the value range as defined by IE \textit{AdditionalSpectrumEmission} i.e. without suffix) shall be set to value 32, if signalled. UE supporting an LTE band assigned NS values larger than 32 as defined in TS 36.101 [42, 6.2.4], needs to support extension signaling (as defined by IE \textit{AdditionalSpectrumEmission-v10l0}).

\textbf{AdditionalSpectrumEmission information element}

\begin{verbatim}
-- ASN1START
AdditionalSpectrumEmission ::= INTEGER (1..32)
AdditionalSpectrumEmission-v10l0 ::= INTEGER (33..288)
-- ASN1STOP
\end{verbatim}

– **ARFCN-ValueCDMA2000**

The IE \textit{ARFCN-ValueCDMA2000} used to indicate the CDMA2000 carrier frequency within a CDMA2000 band, see C.S0002 [12].

\textbf{ARFCN-ValueCDMA2000 information element}

\begin{verbatim}
-- ASN1START
ARFCN-ValueCDMA2000 ::= INTEGER (0..2047)
-- ASN1STOP
\end{verbatim}

– **ARFCN-ValueEUTRA**

The IE \textit{ARFCN-ValueEUTRA} is used to indicate the ARFCN applicable for a downlink, uplink or bi-directional (TDD) E-UTRA carrier frequency, as defined in TS 36.101 [42]. If an extension is signalled using the extended value range (as defined by IE \textit{ARFCN-ValueEUTRA-v9e0}), the UE shall only consider this extension (and hence ignore the corresponding original field, using the value range as defined by IE \textit{ARFCN-ValueEUTRA} i.e. without suffix, if signalled). In dedicated signalling, E-UTRAN only provides an EARFCN corresponding to an E-UTRA band supported by the UE.

\textbf{ARFCN-ValueEUTRA information element}

\begin{verbatim}
-- ASN1START
ARFCN-ValueEUTRA ::= INTEGER (0..maxEARFCN)
ARFCN-ValueEUTRA-v9e0 ::= INTEGER (maxEARFCN-Plus1..maxEARFCN2)
ARFCN-ValueEUTRA-r9 ::= INTEGER (0..maxEARFCN2)
-- ASN1STOP
\end{verbatim}

\textbf{NOTE:} For fields using the original value range, as defined by IE \textit{ARFCN-ValueEUTRA} i.e. without suffix, value \textit{maxEARFCN} indicates that the E-UTRA carrier frequency is indicated by means of an extension. In such a case, UEs not supporting the extension consider the field to be set to a not supported value.
— **ARFCN-ValueGERAN**

The IE *ARFCN-ValueGERAN* is used to specify the ARFCN value applicable for a GERAN BCCH carrier frequency, see TS 45.005 [20].

**ARFCN-ValueGERAN information element**

```plaintext
-- ASN1START
ARFCN-ValueGERAN ::= INTEGER (0..1023)
-- ASN1STOP
```

— **ARFCN-ValueUTRA**

The IE *ARFCN-ValueUTRA* is used to indicate the ARFCN applicable for a downlink (Nd, FDD) or bi-directional (Nt, TDD) UTRA carrier frequency, as defined in TS 25.331 [19].

**ARFCN-ValueUTRA information element**

```plaintext
-- ASN1START
ARFCN-ValueUTRA ::= INTEGER (0..16383)
-- ASN1STOP
```

— **BandclassCDMA2000**

The IE *BandclassCDMA2000* is used to define the CDMA2000 band in which the CDMA2000 carrier frequency can be found, as defined in C.S0057 [24, table 1.5-1].

**BandclassCDMA2000 information element**

```plaintext
-- ASN1START
BandclassCDMA2000 ::= ENUMERATED {
  bc0, bc1, bc2, bc3, bc4, bc5, bc6, bc7, bc8,
  bc9, bc10, bc11, bc12, bc13, bc14, bc15, bc16,
  bc17, bc18-v9a0, bc19-v9a0, bc20-v9a0, bc21-v9a0,
  spare10, spare9, spare8, spare7, spare6, spare5, spare4,
  spare3, spare2, spare1, ...}
-- ASN1STOP
```

— **BandIndicatorGERAN**

The IE *BandIndicatorGERAN* indicates how to interpret an associated GERAN carrier ARFCN, see TS 45.005 [20]. More specifically, the IE indicates the GERAN frequency band in case the ARFCN value can concern either a DCS 1800 or a PCS 1900 carrier frequency. For ARFCN values not associated with one of these bands, the indicator has no meaning.

**BandIndicatorGERAN information element**

```plaintext
-- ASN1START
BandIndicatorGERAN ::= ENUMERATED {dcs1800, pcs1900}
-- ASN1STOP
```

— **CarrierFreqCDMA2000**

The IE *CarrierFreqCDMA2000* used to provide the CDMA2000 carrier information.
**CarrierFreqCDMA2000** information element

```asn1
CarrierFreqCDMA2000 ::= SEQUENCE {
    bandClass       BandclassCDMA2000,
    arfcn       ARFCN-ValueCDMA2000
}
```

---

**CarrierFreqGERAN**

The IE **CarrierFreqGERAN** is used to provide an unambiguous carrier frequency description of a GERAN cell.

**CarrierFreqGERAN** information element

```asn1
CarrierFreqGERAN ::= SEQUENCE {
    arfcn       ARFCN-ValueGERAN,
    bandIndicator     BandIndicatorGERAN
}
```

---

**CarrierFreqGERAN** field descriptions

<table>
<thead>
<tr>

</tr>
<tr>
<td>bandIndicator</td>
<td>Indicates how to interpret the ARFCN of the BCCH carrier.</td>
</tr>
</tbody>
</table>

---

**CarrierFreqsGERAN**

The IE **CarrierFreqListGERAN** is used to provide one or more GERAN ARFCN values, as defined in TS 45.005 [43], which represents a list of GERAN BCCH carrier frequencies.

**CarrierFreqsGERAN** information element

```asn1
CarrierFreqsGERAN ::= SEQUENCE {
    startingARFCN      ARFCN-ValueGERAN,
    bandIndicator      BandIndicatorGERAN,
    followingARFCNs      CHOICE {
        explicitListOfARFCNs    ExplicitListOfARFCNs,
        equallySpacedARFCNs     SEQUENCE {
            arfcn-Spacing      INTEGER (1..8),
            numberOfFollowingARFCNs    INTEGER (0..31)
        },
        variableBitMapOfARFCNs    OCTET STRING (SIZE (1..16))
    },
    variableBitMapOfARFCNs    OCTET STRING (SIZE (1..16))
}
```

---

ExplicitListOfARFCNs ::= SEQUENCE (SIZE (0..31)) OF ARFCN-ValueGERAN

---

**ASN1STOP**
---

### CarrierFreqsGERAN field descriptions

<table>

</tbody>
</table>

---

### CarrierFreqListMBMS

The IE CarrierFreqListMBMS is used to indicate the E-UTRA ARFCN values of the one or more MBMS frequencies the UE is interested to receive.

**CarrierFreqListMBMS information element**

Listing source code:

```asn1
CarrierFreqListMBMS-r11 ::= SEQUENCE (SIZE (1..maxFreqMBMS-r11)) OF ARFCN-ValueEUTRA-r9
```

---

### CDMA2000-Type

The IE CDMA2000-Type is used to describe the type of CDMA2000 network.

**CDMA2000-Type information element**

Listing source code:

```asn1
CDMA2000-Type ::= ENUMERATED {type1XRTT, typeHRPD}
```

---

### CellIdentity

The IE CellIdentity is used to unambiguously identify a cell within a PLMN.

**CellIdentity information element**

Listing source code:

```asn1
CellIdentity ::= BIT STRING (SIZE (28))
```

---

### CellIndexList

The IE CellIndexList concerns a list of cell indices, which may be used for different purposes.

Listing source code:

```asn1
CellIndexList ::= 
```
CellIndexList information element

```
CellIndexList ::= SEQUENCE (SIZE (1..maxCellMeas)) OF CellIndex
CellIndex ::= INTEGER (1..maxCellMeas)
```

CellReselectionPriority information element

The IE CellReselectionPriority concerns the absolute priority of the concerned carrier frequency/ set of frequencies (GERAN)/ bandclass (CDMA2000), as used by the cell reselection procedure. Corresponds with parameter "priority" in TS 36.304 [4]. Value 0 means: lowest priority. The UE behaviour for the case the field is absent, if applicable, is specified in TS 36.304 [4].

```
CellReselectionPriority ::= INTEGER (0..7)
```

CellSelectionInfoCE information element

The IE CellSelectionInfoCE contains cell selection information for CE. The q-RxLevMinCE corresponds to parameter Q\text{levmin\_CE} in TS 36.304 [4]. The q-QualMinRSRQ-CE corresponds to parameter Q\text{qualmin\_CE} in TS 36.304 [4]. If q-QualMinRSRQ-CE is not present, the UE applies the (default) value of negative infinity for Q\text{qualmin}.

```
CellSelectionInfoCE-r13 ::= SEQUENCE {
  q-RxLevMinCE-r13    Q-RxLevMin,
  q-QualMinRSRQ-CE-r13   Q-QualMin-r9      OPTIONAL
}
```

CellSelectionInfoCE1 information element

The IE CellSelectionInfoCE1 contains cell selection information for BL UEs or UEs in CE supporting CE Mode B. The q-RxLevMinCE1 corresponds to parameter Q\text{levmin\_CE1} in TS 36.304 [4]. If delta-RxLevMinCE1 is not included, actual value Q_{\text{levmin\_CE1}} = q-RxLevMinCE1 * 2 [dBm]. If delta-RxLevMinCE1 is included, the actual value Q_{\text{levmin\_CE1}} = (q-RxLevMinCE1 + delta-RxLevMinCE1) * 2 [dBm]. The q-QualMinRSRQ-CE1 corresponds to parameter Q\text{qualmin\_CE1} in TS 36.304 [4]. If q-QualMinRSRQ-CE1 is not present, the UE applies the (default) value of negative infinity for Q\text{qualmin}.

```
CellSelectionInfoCE1-r13 ::= SEQUENCE {
  q-RxLevMinCE1-r13    Q-RxLevMin,
  q-QualMinRSRQ-CE1-r13   Q-QualMin-r9      OPTIONAL
}
```

```
CellSelectionInfoCE1-v1360 ::= SEQUENCE {
  delta-RxLevMinCE1-v1360     INTEGER (-8..-1)
}
```
– **CellReselectionSubPriority**

The IE **CellReselectionSubPriority** indicates a fractional value to be added to the value of cellReselectionPriority to obtain the absolute priority of the concerned carrier frequency for E-UTRA. Value oDot2 corresponds to 0.2, oDot4 corresponds to 0.4 and so on.

**CellReselectionSubPriority information element**

```plaintext
-- ASN1START
CellReselectionSubPriority-r13 ::= ENUMERATED {oDot2, oDot4, oDot6, oDot8}
-- ASN1STOP
```

– **CSFB-RegistrationParam1XRTT**

The IE **CSFB-RegistrationParam1XRTT** is used to indicate whether or not the UE shall perform a CDMA2000 1xRTT pre-registration if the UE does not have a valid / current pre-registration.

```plaintext
-- ASN1START
CSFB-RegistrationParam1XRTT ::= SEQUENCE {
  sid         BIT STRING (SIZE (15)),
  nid         BIT STRING (SIZE (16)),
  multipleSID       BOOLEAN,
  multipleNID       BOOLEAN,
  homeReg        BOOLEAN,
  foreignSIDReg      BOOLEAN,
  foreignNIDReg      BOOLEAN,
  parameterReg      BOOLEAN,
  powerUpReg       BOOLEAN,
  registrationPeriod  BIT STRING (SIZE (7)),
  registrationZone   BIT STRING (SIZE (12)),
  totalZone        BIT STRING (SIZE (3)),
  zoneTimer        BIT STRING (SIZE (3))
}
CSFB-RegistrationParam1XRTT-v920 ::= SEQUENCE {
  powerDownReg-r9  ENUMERATED {true}
}
-- ASN1STOP
```
<table>

</tbody>
</table>

---

CellGlobalIdEUTRA

The IE CellGlobalIdEUTRA specifies the Evolved Cell Global Identifier (ECGI), the globally unique identity of a cell in E-UTRA.

**CellGlobalIdEUTRA information element**

```asn1
CellGlobalIdEUTRA ::= SEQUENCE {
  plmn-Identity   PLMN-Identity,
  cellIdentity    CellIdentity
}
```

**CellGlobalIdEUTRA field descriptions**

- **cellIdentity**: Identity of the cell within the context of the PLMN.
- **plmn-Identity**: Identifies the PLMN of the cell as given by the first PLMN entry in the plmn-IdentityList in SystemInformationBlockType1.

---

CellGlobalIdUTRA

The IE CellGlobalIdUTRA specifies the global UTRAN Cell Identifier, the globally unique identity of a cell in UTRA.

**CellGlobalIdUTRA information element**

```asn1
CellGlobalIdUTRA ::= SEQUENCE {
}
```
CellGlobalIdUTRA ::= SEQUENCE {
    plmn-Identity       PLMN-Identity,
    cellIdentity       BIT STRING (SIZE (28))
}

CellGlobalIdUTRA field descriptions

cellIdentity
UTRA Cell Identifier which is unique within the context of the identified PLMN as defined in TS 25.331 [19].

plmn-Identity
Identifies the PLMN of the cell as given by the common PLMN broadcast in the MIB, as defined in TS 25.331 [19].

-- CellGlobalIdGERAN

The IE CellGlobalIdGERAN specifies the Cell Global Identification (CGI), the globally unique identity of a cell in GERAN.

CellGlobalIdGERAN information element

CellGlobalIdGERAN ::= SEQUENCE {
    plmn-Identity       PLMN-Identity,
    locationAreaCode      BIT STRING (SIZE (16)),
    cellIdentity      BIT STRING (SIZE (16))
}

CellGlobalIdGERAN field descriptions

cellIdentity
Cell Identifier which is unique within the context of the GERAN location area as defined in TS 23.003 [27].

locationAreaCode
A fixed length code identifying the location area within a PLMN as defined in TS 23.003 [27].

plmn-Identity
Identifies the PLMN of the cell, as defined in TS 23.003 [27].

-- CellGlobalIdCDMA2000

The IE CellGlobalIdCDMA2000 specifies the Cell Global Identification (CGI), the globally unique identity of a cell in CDMA2000.

CellGlobalIdCDMA2000 information element

CellGlobalIdCDMA2000 ::= CHOICE {
    cellGlobalId1XRTT      BIT STRING (SIZE (47)),
    cellGlobalIdHRPD      BIT STRING (SIZE (128))
}

CellGlobalIdCDMA2000 field descriptions

cellGlobalId1XRTT
Unique identifier for a CDMA2000 1xRTT cell, corresponds to BASEID, SID and NID parameters (in that order) defined in C.S0005 [25].

cellGlobalIdHRPD
Unique identifier for a CDMA2000 HRPD cell, corresponds to SECTOR ID parameter defined in C.S0024 [26, 14.9].
– **CellSelectionInfoNFreq**

The IE *CellSelectionInfoNFreq* includes the parameters used for cell selection on a neighbouring frequency, see TS 36.304 [4].

**CellSelectionInfoNFreq** information element

```asn1
CellSelectionInfoNFreq-r13 ::= SEQUENCE {
  -- Cell selection information as in SIB1
  q-RxLevMin-r13     Q-RxLevMin,
  q-RxLevMinOffset     INTEGER (1..8)   OPTIONAL, -- Need OP
  -- Cell re-selection information as in SIB3
  q-Hyst-r13       ENUMERATED {
    dB0, dB1, dB2, dB3, dB4, dB5, dB6, dB8, dB10,
    dB12, dB14, dB16, dB18, dB20, dB22, dB24},
  q-RxLevMinReselection-r13   Q-RxLevMin,
  t-ReselectionEUTRA-r13    T-Reselection
}
```

– **CSG-Identity**

The IE *CSG-Identity* is used to identify a Closed Subscriber Group.

**CSG-Identity** information element

```asn1
CSG-Identity ::=     BIT STRING (SIZE (27))
```

– **FreqBandIndicator**

The IE *FreqBandIndicator* indicates the E-UTRA operating band as defined in TS 36.101 [42, table 5.5-1]. If an extension is signalled using the extended value range (as defined by IE *FreqBandIndicator-v9e0*), the UE shall only consider this extension (and hence ignore the corresponding original field, using the value range as defined by IE *FreqBandIndicator* i.e. without suffix, if signalled).

**FreqBandIndicator** information element

```asn1
FreqBandIndicator ::=     INTEGER (1..maxFBI)
FreqBandIndicator-v9e0 ::=    INTEGER (maxFBI-Plus1..maxFBI2)
FreqBandIndicator-r11 ::=    INTEGER (1..maxFBI2)
```

**NOTE:** For fields using the original value range, as defined by IE *FreqBandIndicator* i.e. without suffix, value `maxFBI` indicates that the frequency band is indicated by means of an extension. In such a case, UEs not supporting the extension consider the field to be set to a not supported value.

– **MobilityControlInfo**

The IE *MobilityControlInfo* includes parameters relevant for network controlled mobility to/within E-UTRA.
--- ASN1START

**MobilityControlInfo field descriptions**

**additionalSpectrumEmission**
For a UE with no SCells configured for UL in the same band as the PCell, the UE shall apply the value for the PCell instead of the corresponding value from SystemInformationBlockType2 or SystemInformationBlockType1. For a UE with SCell(s) configured for UL in the same band as the PCell, the UE shall, in case all SCells configured for UL in that band are released after handover completion, apply the value for the PCell instead of the corresponding value from SystemInformationBlockType2 or SystemInformationBlockType1. The UE requirements related to IE AdditionalSpectrumEmission are defined in TS 36.101 [42, table 6.2.4-1] for UEs neither in CE nor BL UEs and TS 36.101 [42, table 6.2.4E-1] for UEs in CE or BL UEs.

carrierBandwidth
Provides the parameters Downlink bandwidth, and Uplink bandwidth, see TS 36.101 [42].

carrierFreq
Provides the EARFCN to be used by the UE in the target cell.

cbr-MobilityTxConfigList
Indicates the list of CBR ranges and the list of PSSCH transmission parameter configurations available to configure congestion control to the UE for V2X sidelink communication during handover.

cipheringAlgorithmSCG
Indicates the ciphering algorithm to be used for SCG DRBs. E-UTRAN includes the field upon SCG change when one or more SCG DRBs are configured. Otherwise E-UTRAN does not include the field.

di-Bandwidth
Parameter: Downlink bandwidth, see TS 36.101 [42].

**drb-ContinueROHC**
This field indicates whether to continue or reset, for this handover, the header compression protocol context for the RLC UM bearers configured with the header compression protocol. Presence of the field indicates that the header compression protocol context continues while absence indicates that the header compression protocol context is reset. E-UTRAN includes the field only in case of a handover within the same eNB.

**handoverWithoutWT-Change**
Indicates whether UE performs handover where LWA configuration is retained with the same WT If sendEndMarker is configured, the LWA end-marker for PDCP key change indication is used as defined in [8]. If value keepLWA-Config is configured, LWA end marker is not used and UE shall only retain the LWA configuration.

**makeBeforeBreak**
Indicates that the UE shall continue uplink transmission/ downlink reception with the source cell(s) before performing the first transmission through PRACH to the target intra-frequency PCell, or performing initial PUSCH transmission to the target intra-frequency PCell while rach-Skip is configured.

**makeBeforeBreakSCG**
Indicates that the UE shall continue uplink transmission/ downlink reception with the source cell(s) before performing the first transmission through PRACH to the target intra-frequency PSCell, or performing initial PUSCH transmission to the target intra-frequency PSCell while rach-SkipSCG is configured.

**mobilityControlInfoV2X**
Indicates the sidelink configurations of the target cell for V2X sidelink communication during handover.

**numberOfConfUL-Processes**
The number of configured HARQ processes for preallocated uplink grant, see TS 36.321 [6, 5.20].

**rach-ConfigDedicated**
The dedicated random access parameters. If absent the UE applies contention based random access as specified in TS 36.321 [6].

cipheringAlgorithmSCG
Indicates the ciphering algorithm to be used for SCG DRBs. E-UTRAN includes the field upon SCG change when one or more SCG DRBs are configured. Otherwise E-UTRAN does not include the field.

**rach-Skip**
This field indicates whether random access procedure for the target PCell is skipped.

cipheringAlgorithmSCG
Indicates the ciphering algorithm to be used for SCG DRBs. E-UTRAN includes the field upon SCG change when one or more SCG DRBs are configured. Otherwise E-UTRAN does not include the field.

**sameSFN-Indication**
This field indicates that the target cell has the same SFN as the source cell and that the BL UE or UE in CE is not required to acquire MasterInformationBlock in the target PCell during handover to obtain the SFN of the target cell, as specified in section 5.3.5.4.

**t304**
Timer T304 as described in section 7.3. ms50 corresponds with 50 ms, ms100 corresponds with 100 ms and so on. EUTRAN includes extended value ms10000-v1310 only when UE supports CE.

**t307**
Timer T307 as described in section 7.3. ms50 corresponds with 50 ms, ms100 corresponds with 100 ms and so on.

**targetTA**
This field refers to the timing adjustment indication, see TS 36.213 [23], indicating the NTA value which the UE shall use for the target PTAG of handover or the target PSTAG of SCG change. t0 corresponds to NTA=0. mcs-PTAG corresponds to the latest NTA value of the PTAG associated with MCG. mcs-PTAG corresponds to the latest NTA value of the PTAG associated with SCG. mcs-STAG corresponds to the latest NTA value of a MCG STAG indicated by the STAG-ld. mcs-STAG corresponds to the latest NTA value of a SCG STAG indicated by the STAG-ld.

**ul-Bandwidth**
Parameter: Uplink bandwidth, see TS 36.101 [42, table 5.6-1]. For TDD, the parameter is absent and it is equal to downlink bandwidth. If absent for FDD, apply the same value as applies for the downlink bandwidth.
MobilityControlInfo field descriptions

additionalSpectrumEmission
For a UE with no SCells configured for UL in the same band as the PCell, the UE shall apply the value for the PCell instead of the corresponding value from SystemInformationBlockType2 or SystemInformationBlockType1. For a UE with SCell(s) configured for UL in the same band as the PCell, the UE shall, in case all SCells configured for UL in that band are released after handover completion, apply the value for the PCell instead of the corresponding value from SystemInformationBlockType2 or SystemInformationBlockType1. The UE requirements related to IE AdditionalSpectrumEmission are defined in TS 36.101 [42, table 6.2.4-1] for UEs neither in CE nor BL UEs and TS 36.101 [42, table 6.2.4E-1] for UEs in CE or BL UEs.

ul-Grant
Indicates the resources of the target PCell/PSCell to be used for the uplink transmission of PUSCH [23, 8.8].

ul-SchedInterval
Indicates the scheduling interval in uplink, see TS 36.321 [6, 5.20]. Value in number of sub-frames. Value sf2 corresponds to 2 subframes, sf5 corresponds to 5 subframes and so on.

ul-StartSubframe
Indicates the subframe in which the UE may initiate the uplink transmission, see TS 36.321 [6, 5.20]. Value 0 corresponds to subframe number 0, 1 corresponds to subframe number 1 and so on. The subframe indicating a valid uplink grant according to the calculation of UL grant configured by ul-StartSubframe and ul-SchedInterval, see TS 36.321 [6, 5.20], is the same across all radio frames.

v2x-CommRxPool
Indicates reception pools for receiving V2X sidelink communication during handover.

v2x-CommSyncConfig
Indicates synchronization configurations for performing V2X sidelink communication during handover.

v2x-CommTxPoolExceptional
Indicates the transmission resources by which the UE is allowed to transmit V2X sidelink communication during handover.

MobilityParametersCDMA2000 (1xRTT)

The MobilityParametersCDMA2000 contains the parameters provided to the UE for handover and (enhanced) CSFB to 1xRTT support, as defined in C.S0097 [53].

MobilityParametersCDMA2000 information element

-- ASN1START
MobilityParametersCDMA2000 ::= OCTET STRING
-- ASN1STOP

-- MobilityStateParameters

The IE MobilityStateParameters contains parameters to determine UE mobility state.

MobilityStateParameters information element

-- ASN1START
MobilityStateParameters ::= SEQUENCE {
  t-Evaluation        ENUMERATED {
    s30, s60, s120, s180, s240, spare3, spare2, spare1},
  t-HystNormal        ENUMERATED {
    s30, s60, s120, s180, s240, spare3, spare2, spare1},
  n-CellChangeMedium  INTEGER (1..16),
  n-CellChangeHigh    INTEGER (1..16)
}
-- ASN1STOP

**MobilityStateParameters field descriptions**

**n-CellChangeHigh**
The number of cell changes to enter high mobility state. Corresponds to NCR_H in TS 36.304 [4].

**n-CellChangeMedium**
The number of cell changes to enter medium mobility state. Corresponds to NCR_M in TS 36.304 [4].

**t-Evaluation**
The duration for evaluating criteria to enter mobility states. Corresponds to TCRmax in TS 36.304 [4]. Value in seconds, s30 corresponds to 30 s and so on.

**t-HystNormal**
The additional duration for evaluating criteria to enter normal mobility state. Corresponds to TCRmaxHyst in TS 36.304 [4]. Value in seconds, s30 corresponds to 30 s and so on.

---

**MultiBandInfoList**

**MultiBandInfoList** information element

-- ASN1START

MultiBandInfoList ::= SEQUENCE (SIZE (1..maxMultiBands)) OF FreqBandIndicator
MultiBandInfoList-v9e0 ::= SEQUENCE (SIZE (1..maxMultiBands)) OF MultiBandInfo-v9e0
MultiBandInfoList-v10j0 ::= SEQUENCE (SIZE (1..maxMultiBands)) OF MultiBandInfo-v10j0

MultiBandInfoList-r11 ::= SEQUENCE (SIZE (1..maxMultiBands)) OF FreqBandIndicator-r11
MultiBandInfo-v9e0 ::=  SEQUENCE {
  freqBandIndicator-v9e0    FreqBandIndicator-v9e0  OPTIONAL -- Need OP
}
-- ASN1STOP

---

**NS-PmaxList**
The IE **NS-PmaxList** concerns a list of **additionalPmax** and **additionalSpectrumEmission**, as defined in TS 36.101 [42, table 6.2.4-1] for UEs neither in CE nor BL UEs and TS 36.101 [42, table 6.2.4E-1] for UEs in CE or BL UEs, for a given frequency band. E-UTRAN does not include the same value of **additionalSpectrumEmission** in SystemInformationBlockType2 within this list.

**NS-PmaxList** information element

-- ASN1START

NS-PmaxList-r10 ::=    SEQUENCE (SIZE (1..maxNS-Pmax-r10)) OF NS-PmaxValue-r10
NS-PmaxList-v10j0 ::=   SEQUENCE (SIZE (1..maxNS-Pmax-r10)) OF NS-PmaxValue-v10j0
NS-PmaxValue-r10 ::=   SEQUENCE {
  additionalPmax-r10     P-Max       OPTIONAL, -- Need OP
  additionalSpectrumEmission   AdditionalSpectrumEmission
}
NS-PmaxValue-v10j0 ::=   SEQUENCE {
  additionalSpectrumEmission-v10j0 AdditionalSpectrumEmission-v10j0 OPTIONAL -- Need OP
}
-- ASN1STOP
The IE *PhysCellId* is used to indicate the physical layer identity of the cell, as defined in TS 36.211 [21].

**PhysCellId information element**

```asn1
PhysCellId ::= INTEGER (0..503)
```

**PhysCellIdRange**

The IE *PhysCellIdRange* is used to encode either a single or a range of physical cell identities. The range is encoded by using a start value and by indicating the number of consecutive physical cell identities (including start) in the range. For fields comprising multiple occurrences of *PhysCellIdRange*, E-UTRAN may configure overlapping ranges of physical cell identities.

**PhysCellIdRange information element**

```asn1
PhysCellIdRange ::= SEQUENCE {
    start       PhysCellId,
    range       ENUMERATED {
        n4, n8, n12, n16, n24, n32, n48, n64, n84,
        n96, n128, n168, n252, n304, spare2,
        spare1} OPTIONAL
}
```

**PhysCellIdRange field descriptions**

- **range** Indicates the number of physical cell identities in the range (including start). Value n4 corresponds with 4, n8 corresponds with 8 and so on. The UE shall apply value 1 in case the field is absent, in which case only the physical cell identity value indicated by start applies.
- **start** Indicates the lowest physical cell identity in the range.

**PhysCellIdRangeUTRA-FDDList**

The IE *PhysCellIdRangeUTRA-FDDList* is used to encode one or more of *PhysCellIdRangeUTRA-FDD*. While the IE *PhysCellIdRangeUTRA-FDD* is used to encode either a single physical layer identity or a range of physical layer identities, i.e. primary scrambling codes. Each range is encoded by using a start value and by indicating the number of consecutive physical cell identities (including start) in the range.

**PhysCellIdRangeUTRA-FDDList information element**

```asn1
PhysCellIdRangeUTRA-FDDList-r9 ::= SEQUENCE (SIZE (1..maxPhysCellIdRange-r9)) OF
    PhysCellIdRangeUTRA-FDD-r9
PhysCellIdRangeUTRA-FDD-r9 ::= SEQUENCE {
    start-r9       PhysCellIdUTRA-FDD,
    range-r9       INTEGER (2..512) OPTIONAL
}
```

**PhysCellIdUTRA-FDD**

The IE `PhysCellIdUTRA-FDD` is used to indicate the physical layer identity of the cell, i.e. the primary scrambling code, as defined in TS 25.331 [19].

**PhysCellIdUTRA-FDD information element**

```asn1
PhysCellIdUTRA-FDD ::= INTEGER (0..511)
```

—  

**PhysCellIdUTRA-TDD**

The IE `PhysCellIdUTRA-TDD` is used to indicate the physical layer identity of the cell, i.e. the cell parameters ID (TDD), as specified in TS 25.331 [19]. Also corresponds to the Initial Cell Parameter Assignment in TS 25.223 [46].
**PhysCellIdUTRA-TDD information element**

```
PhysCellIdUTRA-TDD ::= INTEGER (0..127)
```

---

**PLMN-Identity**

The IE **PLMN-Identity** identifies a Public Land Mobile Network. Further information regarding how to set the IE are specified in TS 23.003 [27].

**PLMN-Identity information element**

```
PLMN-Identity ::= SEQUENCE {
    mcc        MCC     OPTIONAL,     -- Cond MCC
    mnc        MNC
}
MCC ::= SEQUENCE (SIZE (3)) OF MCC-MNC-Digit
MNC ::= SEQUENCE (SIZE (2..3)) OF MCC-MNC-Digit
MCC-MNC-Digit ::= INTEGER (0..9)
```

</tr>
</tbody>
</table>

---

**PLMN-IdentityList3**

Includes a list of PLMN identities.

**PLMN-IdentityList3 information element**

```
PLMN-IdentityList3 ::= SEQUENCE (SIZE (1..16)) OF PLMN-Identity
```

---

**PreRegistrationInfoHRPD**

```
PreRegistrationInfoHRPD ::= SEQUENCE {
```

---
preRegistrationAllowed BOOLEAN, 
preRegistrationZoneId PreRegistrationZoneIdHRPD OPTIONAL, -- cond PreRegAllowed 
secondaryPreRegistrationZoneIdList SecondaryPreRegistrationZoneIdListHRPD OPTIONAL -- Need OR 
}

SecondaryPreRegistrationZoneIdListHRPD ::= SEQUENCE (SIZE (1..2)) OF PreRegistrationZoneIdHRPD

PreRegistrationZoneIdHRPD ::= INTEGER (0..255)

--- ASN1STOP

PreRegistrationInfoHRPD field descriptions

preRegistrationAllowed
TRUE indicates that a UE shall perform a CDMA2000 HRPD pre-registration if the UE does not have a valid / current pre-registration. FALSE indicates that the UE is not allowed to perform CDMA2000 HRPD pre-registration in the current cell.

preRegistrationZoneID
ColorCode (see C.S0024 [26], C.S0087 [44]) of the CDMA2000 Reference Cell corresponding to the HRPD sector under the HRPD AN that is configured for this LTE cell. It is used to control when the UE should register or re-register.

secondaryPreRegistrationZoneIdList
List of SecondaryColorCodes (see C.S0024 [26], C.S0087 [44]) of the CDMA2000 Reference Cell corresponding to the HRPD sector under the HRPD AN that is configured for this LTE cell. They are used to control when the UE should re-register.

</tbody>
</table>

---

Q-QualMin

The IE Q-QualMin is used to indicate for cell selection/ re-selection the required minimum received RSRQ level in the (E-UTRA) cell. Corresponds to parameter Q_{qualmin} in TS 36.304 [4]. Actual value Q_{qualmin} = field value [dB].

Q-QualMin information element

---

Q-RxLevMin

The IE Q-RxLevMin is used to indicate for cell selection/ re-selection the required minimum received RSRP level in the (E-UTRA) cell. Corresponds to parameter Q_{rxlevmin} in TS 36.304 [4]. Actual value Q_{rxlevmin} = field value * 2 [dBm].

Q-RxLevMin information element

---

Q-OffsetRange

The IE Q-OffsetRange is used to indicate a cell, CSI-RS resource or frequency specific offset to be applied when evaluating candidates for cell re-selection or when evaluating triggering conditions for measurement reporting. The value in dB. Value dB-24 corresponds to -24 dB, dB-22 corresponds to -22 dB and so on.
**Q-OffsetRange** information element

```
Q-OffsetRange ::= ENumerated {
    dB-24, dB-22, dB-20, dB-18, dB-16, dB-14,
    dB-12, dB-10, dB-8, dB-6, dB-5, dB-4, dB-3,
    dB-2, dB-1, dB0, dB1, dB2, dB3, dB4, dB5,
    dB6, dB8, dB10, dB12, dB14, dB16, dB18,
    dB20, dB22, dB24}
```

**Q-OffsetRangeInterRAT**

The IE **Q-OffsetRangeInterRAT** is used to indicate a frequency specific offset to be applied when evaluating triggering conditions for measurement reporting. The value in dB.

**Q-OffsetRangeInterRAT** information element

```
Q-OffsetRangeInterRAT ::= INTEGER (-15..15)
```

**ReselectionThreshold**

The IE **ReselectionThreshold** is used to indicate an Rx level threshold for cell reselection. Actual value of threshold = field value * 2 [dB].

**ReselectionThreshold** information element

```
ReselectionThreshold ::= INTEGER (0..31)
```

**ReselectionThresholdQ**

The IE **ReselectionThresholdQ** is used to indicate a quality level threshold for cell reselection. Actual value of threshold = field value [dB].

**ReselectionThresholdQ** information element

```
ReselectionThresholdQ-r9 ::= INTEGER (0..31)
```

**SCellIndex**

The IE **SCellIndex** concerns a short identity, used to identify an SCell.

**SCellIndex** information element

```
SCellIndex-r10 ::= INTEGER (1..7)
SCellIndex-r13 ::= INTEGER (1..31)
```
---

**ServCellIndex**

The IE *ServCellIndex* concerns a short identity, used to identify a serving cell (i.e. the PCell or an SCell). Value 0 applies for the PCell, while the *SCellIndex* that has previously been assigned applies for SCells.

---

**SpeedStateScaleFactors**

The IE *SpeedStateScaleFactors* concerns factors, to be applied when the UE is in medium or high speed state, used for scaling a mobility control related parameter.

---

**SystemInfoListGERAN**

The IE *SystemInfoListGERAN* contains system information of a GERAN cell.

---
-- SystemTimeInfoCDMA2000

The IE SystemTimeInfoCDMA2000 informs the UE about the absolute time in the current cell. The UE uses this absolute time knowledge to derive the CDMA2000 Physical cell identity, expressed as PNOffset, of neighbour CDMA2000 cells.

NOTE: The UE needs the CDMA2000 system time with a certain level of accuracy for performing measurements as well as for communicating with the CDMA2000 network (HRPD or 1xRTT).

SystemTimeInfoCDMA2000 information element

--- ASN1START
SystemTimeInfoCDMA2000 ::=   SEQUENCE {
    cdma-EUTRA-Synchronisation   BOOLEAN,
    cdma-SystemTime      CHOICE {
        synchronousSystemTime    BIT STRING (SIZE (39)),
        asynchronousSystemTime    BIT STRING (SIZE (49))
    }
}
-- ASN1STOP

SystemTimeInfoCDMA2000 field descriptions

asynchronousSystemTime
The CDMA2000 system time corresponding to the SFN boundary at or after the ending boundary of the SI-Window in which SystemInformationBlockType8 is transmitted. E-UTRAN includes this field if the E-UTRA frame boundary is not aligned to the start of CDMA2000 system time. This field size is 49 bits and the unit is 8 CDMA chips based on 1.2288 Mcps.

cdma-EUTRA-Synchronisation
TRUE indicates that there is no drift in the timing between E-UTRA and CDMA2000. FALSE indicates that the timing between E-UTRA and CDMA2000 can drift. NOTE 1

synchronousSystemTime
CDMA2000 system time corresponding to the SFN boundary at or after the ending boundary of the SI-window in which SystemInformationBlockType8 is transmitted. E-UTRAN includes this field if the E-UTRA frame boundary is aligned to the start of CDMA2000 system time. This field size is 39 bits and the unit is 10 ms based on a 1.2288 Mcps chip rate.

NOTE 1: The following table shows the recommended combinations of the cdma-EUTRA-Synchronisation field and the choice of cdma-SystemTime included by E-UTRAN for FDD and TDD:

<table>
<thead>
<tr>
<th>FDD/TDD</th>

</table>

-- TrackingAreaCode

The IE TrackingAreaCode is used to identify a tracking area within the scope of a PLMN, see TS 24.301 [35].

TrackingAreaCode information element

--- ASN1START
TrackingAreaCode ::=    BIT STRING (SIZE (16))
-- ASN1STOP
- **T-Reselection**

  The IE *T-Reselection* concerns the cell reselection timer \(T_{\text{reselectionRAT}}\) for E-UTRA, UTRA, GERAN or CDMA2000. Value in seconds. For value 0, behaviour as specified in 7.3.2 applies.

  **T-Reselection** information element

  ```
  T-Reselection ::= INTEGER (0..7)
  ```

- **T-ReselectionEUTRA-CE**

  The IE *T-ReselectionEUTRA-CE* concerns the cell reselection timer \(T_{\text{reselectionEUTRA_CE}}\) as specified in TS 36.304 [4]. Value in seconds. For value 0, behaviour as specified in 7.3.2 applies.

  **T-ReselectionEUTRA-CE** information element

  ```
  T-ReselectionEUTRA-CE ::= INTEGER (0..15)
  ```

6.3.5 Measurement information elements

- **AllowedMeasBandwidth**

  The IE *AllowedMeasBandwidth* is used to indicate the maximum allowed measurement bandwidth on a carrier frequency as defined by the parameter Transmission Bandwidth Configuration "\(N_{RB}\)" TS 36.104 [47]. The values mbw6, mbw15, mbw25, mbw50, mbw75, mbw100 indicate 6, 15, 25, 50, 75 and 100 resource blocks respectively.

  **AllowedMeasBandwidth** information element

  ```
  AllowedMeasBandwidth ::= ENUMERATED {mbw6, mbw15, mbw25, mbw50, mbw75, mbw100}
  ```

- **CSI-RSRP-Range**

  The IE *CSI-RSRP-Range* specifies the value range used in CSI-RSRP measurements and thresholds. Integer value for CSI-RSRP measurements according to mapping table in TS 36.133 [16].

  **CSI-RSRP-Range** information element

  ```
  CSI-RSRP-Range-r12 ::= INTEGER(0..97)
  ```

- **Hysteresis**

  The IE *Hysteresis* is a parameter used within the entry and leave condition of an event triggered reporting condition. The actual value is field value * 0.5 dB.
---

### Hysteresis information element

```
Hysteresis ::= INTEGER (0..30)
```

---

### LocationInfo

The IE *LocationInfo* is used to transfer detailed location information available at the UE to correlate measurements and UE position information.

### LocationInfo information element

```
LocationInfo ::= SEQUENCE {
  locationCoordinates-r10     CHOICE {
    ellipsoid-Point-r10      OCTET STRING,
    ellipsoidPointWithAltitude-r10   OCTET STRING,
    ellipsoidPointWithUncertaintyCircle-r11 OCTET STRING,
    ellipsoidPointWithUncertaintyEllipse-r11   OCTET STRING,
    ellipsoidPointWithAltitudeAndUncertaintyEllipsoid-r11 OCTET STRING,
    ellipsoidArc-r11           OCTET STRING
  },
  horizontalVelocity-r10     OCTET STRING    OPTIONAL,
  gnss-TOD-msec-r10      OCTET STRING    OPTIONAL,
  ...
}
```

---

### LocationInfo field descriptions

- **ellipsoidArc**
  - Parameter *Ellipsoid-Arc* defined in TS36.355 [54]. The first/leftmost bit of the first octet contains the most significant bit.

- **ellipsoid-Point**
  - Parameter *Ellipsoid-Point* defined in TS36.355 [54]. The first/leftmost bit of the first octet contains the most significant bit.

- **ellipsoidPointWithAltitude**
  - Parameter *EllipsoidPointWithAltitude* defined in TS36.355 [54]. The first/leftmost bit of the first octet contains the most significant bit.

- **ellipsoidPointWithUncertaintyCircle**
  - Parameter *EllipsoidPointWithUncertaintyCircle* defined in TS36.355 [54]. The first/leftmost bit of the first octet contains the most significant bit.

- **ellipsoidPointWithUncertaintyEllipse**
  - Parameter *EllipsoidPointWithUncertaintyEllipse* defined in TS36.355 [54]. The first/leftmost bit of the first octet contains the most significant bit.

- **gnss-TOD-msec**
  - Parameter *Gnss-TOD-msec* defined in TS36.355 [54]. The first/leftmost bit of the first octet contains the most significant bit.

- **horizontalVelocity**
  - Parameter *HorizontalVelocity* defined in TS36.355 [54]. The first/leftmost bit of the first octet contains the most significant bit.

- **polygon**
  - Parameter *Polygon* defined in TS36.355 [54]. The first/leftmost bit of the first octet contains the most significant bit.

---

### MBSFN-RSRQ-Range

The IE *MBSFN-RSRQ-Range* specifies the value range used in MBSFN RSRQ measurements. Integer value for MBSFN RSRQ measurements according to mapping table in TS 36.133 [16].
— **MeasConfig**

The IE *MeasConfig* specifies measurements to be performed by the UE, and covers intra-frequency, inter-frequency and inter-RAT mobility as well as configuration of measurement gaps.

---

**MeasConfig information element**

```asn1
-- ASN1START

ReportConfigToRemoveList ::= SEQUENCE (SIZE (1..maxReportConfigId)) OF ReportConfigId
-- ASN1STOP
```
### MeasConfig field descriptions

**allowInterruptions**
Value TRUE indicates that the UE is allowed to cause interruptions to serving cells when performing measurements of deactivated SCell carriers for `measCycleSCell` of less than 640ms, as specified in TS 36.133 [16]. E-UTRAN enables this field only when an SCell is configured.

**measGapConfig**
Used to setup and release measurement gaps. E-UTRAN includes either `measGapConfig` or `measGapConfigPerCC-List`, if any.

**measGapConfigPerCC-List**
Used to setup and release serving cell specific measurement gaps. E-UTRAN includes either `measGapConfig` or `measGapConfigPerCC-List`, if any.

**measGapSharingConfig**
Used to setup and release measurement gap sharing for intra- and inter-frequency measurement for BL UEs.

**measIdToAddModList**
List of measurement identities. Field `measIdToAddModListExt` includes additional measurement identities i.e. extends the size of the measurement identity list using the general principles specified in 5.1.2. If E-UTRAN includes `measIdToAddModList-v1310` it includes the same number of entries, and listed in the same order, as in `measIdToAddModList` (i.e. without suffix). If E-UTRAN includes `measIdToAddModListExt-v1310`, it includes the same number of entries, and listed in the same order, as in `measIdToAddModListExt-r12`.

**measIdToRemoveList**
List of measurement identities to remove. Field `measIdToRemoveListExt` includes additional measurement identities i.e. extends the size of the measurement identity list using the general principles specified in 5.1.2.

**measObjectToAddModList**
If E-UTRAN includes `measObjectToAddModList-v9e0` it includes the same number of entries, and listed in the same order, as in `measObjectToAddModList` (i.e. without suffix). Field `measObjectToAddModListExt` includes additional measurement object identities i.e. extends the size of the measurement object identity list using the general principles specified in 5.1.2.

**measObjectToRemoveList**
List of measurement objects to remove. Field `measObjectToRemoveListExt` includes additional measurement object identities i.e. extends the size of the measurement object identity list using the general principles specified in 5.1.2.

**measRSRQ-OnAllSymbols**
Value TRUE indicates that the UE shall, when performing RSRQ measurements, perform RSRQ measurement on all OFDM symbols in accordance with TS 36.214 [48]. If `widebandRSRQ-Meas` is enabled for the frequency in `MeasObjectEUTRA`, the UE shall, when performing RSRQ measurements, perform RSRQ measurement on all OFDM symbols with wider bandwidth for concerned frequency in accordance with TS 36.214 [48].

**measScaleFactor**
Even if `reducedMeasPerformance` is not included in any `measObjectEUTRA` or `measObjectUTRA`, E-UTRAN may configure this field. The UE behavior is specified in TS 36.133 [16].

**preRegistrationInfoHRPD**
The CDMA2000 HRPD Pre-Registration Information tells the UE if it should pre-register with the CDMA2000 HRPD network and identifies the Pre-registration zone to the UE.

**reportConfigToRemoveList**
List of measurement reporting configurations to remove.

**s-Measure**
PCell quality threshold controlling whether or not the UE is required to perform measurements of intra-frequency, inter-frequency and inter-RAT neighbouring cells. Value “0” indicates to disable `s-Measure`.

**timeToTrigger-SF**
The `timeToTrigger` in `ReportConfigEUTRA` and in `ReportConfigInterRAT` are multiplied with the scaling factor applicable for the UE’s speed state.

---

### MeasDS-Config

The IE `MeasDS-Config` specifies information applicable for discovery signals measurement.

**MeasDS-Config information elements**

```
-- ASN1START
MeasDS-Config-r12 ::= CHOICE {
  release NULL,  
  setup SEQUENCE {
    dmtc-PeriodOffset-r12 CHOICE {
      ms40-r12 INTEGER(0..39),
      ms80-r12 INTEGER(0..79),
      ms160-r12 INTEGER(0..159),
      ...  
    }
  }
}
-- ASN1END
```
MeasDS-Config field descriptions

**csi-RS-IndividualOffset**
CSI-RS individual offset applicable to a specific CSI-RS resource. Value dB-24 corresponds to -24 dB, dB-22 corresponds to -22 dB and so on.

**dmtc-PeriodOffset**
Indicates the discovery signals measurement timing configuration (DMTC) periodicity (dmtc-Periodicity) and offset (dmtc-Offset) for this frequency. For DMTC periodicity, value ms40 corresponds to 40ms, ms80 corresponds to 80ms and so on. The value of DMTC offset is in number of subframe(s). The duration of a DMTC occasion is 6ms.

**ds-OccasionDuration**
Indicates the duration of discovery signal occasion for this frequency. Discovery signal occasion duration is common for all cells transmitting discovery signals on one frequency. If the carrierFreq in the measurement object is on an unlicensed band as specified in [42], the UE shall ignore the field ds-OccasionDuration for the carrier frequency and apply a value 1 instead.

**measCSI-RS-ToAddModList**
List of CSI-RS resources to add/modify in the CSI-RS resource list for discovery signals measurement.

**measCSI-RS-ToRemoveList**
List of CSI-RS resources to remove from the CSI-RS resource list for discovery signals measurement.

**physCellId**
Indicates the physical cell identity where UE may assume that the CSI-RS and the PSS/SSS/CRS corresponding to the indicated physical cell identity are quasi co-located with respect to average delay and doppler shift.

**resourceConfig**
Parameter: CSI reference signal configuration, see TS 36.211 [21, table 6.10.5.2-1 and 6.10.5.2-2]. If the carrierFreq in the measurement object is on an unlicensed band as specified in [42], E-UTRAN does not configure the values {0, 4, 5, 9, 10, 11, 18, 19}.

**scramblingIdentity**
Parameter: Pseudo-random sequence generator parameter, \( I_{ID} \), see TS 36.213 [23, 7.2.5].

**subframeOffset**
Indicates the subframe offset between SSS of the cell indicated by physCellId and the CSI-RS resource in a discovery signal occasion. The field subframeOffset is set to values 0 if the carrierFreq in the measurement object is on an unlicensed band as specified in [42].

---

**MeasGapConfig**

The IE MeasGapConfig specifies the measurement gap configuration and controls setup/release of measurement gaps.

**MeasGapConfig** information element

---
MeasGapConfig ::= CHOICE {
  release NULL,
  setup  SEQUENCE {
    gapOffset CHOICE {
      gp0     INTEGER (0..39),
      gp1     INTEGER (0..79),
      ...
      gp2-r14 INTEGER (0..39),

      gp-nonUniform2-r14 INTEGER (0..2559),
      gp-nonUniform3-r14 INTEGER (0..5119),
      gp-nonUniform4-r14 INTEGER (0..10239)
    }
  }
}

-- ASN1STOP

MeasGapConfig field descriptions

gapOffset
Value gapOffset of gp0 corresponds to gap offset of Gap Pattern Id “0” with MGRP = 40ms, gapOffset of gp1 corresponds to gap offset of Gap Pattern Id “1” with MGRP = 80ms, gapOffset of gp2 corresponds to gap offset of Gap Pattern Id “2” with MGRP = 40ms and MGL = 3ms, gapOffset of gp3 Gap Pattern Id “3” with MGRP = 80ms and MGL = 3ms, gapOffset of gp-ncsg0 corresponds to gap offset of NCSG Pattern Id “0” with VIRP = 40ms and ML = 4ms, gapOffset of gp-ncsg1 corresponds to gap offset of of NCSG Pattern Id “1” with VIRP = 80ms and ML = 4ms, gapOffset of gp-ncsg2 corresponds to gap offset of of NCSG Pattern Id “2” with VIRP = 40ms and ML = 3ms, gapOffset of gp-ncsg3 corresponds to gap offset of of NCSG Pattern Id “3” with VIRP = 40ms and ML = 3ms, gapOffset of gp-nonUniform1 corresponds to gap offset of of non uniform gap pattern Id “1” with LMGRP = 1280ms, gapOffset of gp-nonUniform2 corresponds to gap offset of of non uniform gap pattern Id “2” with LMGRP = 2560ms, gapOffset of gp-nonUniform3 corresponds to gap offset of of non uniform gap pattern Id “3” with LMGRP = 5120ms, gapOffset of gp-nonUniform4 corresponds to gap offset of of non uniform gap pattern Id “4” with LMGRP = 10240ms. Also used to specify the measurement gap pattern to be applied, as defined in TS 36.133 [16]. For Gap Patterns (including non-uniform gap patterns, but excluding NCSG patterns), E-UTRAN includes the same gapOffset value (gap pattern id and gap offset) for all serving cells that are configured with a Gap Pattern. For NCSG Patterns, E-UTRAN includes gapOffset value indicating VIRP and gap offset consistent with the Gap Pattern configuration (MGRP and gap offset).

servCellId
Identifies the serving cell for which measurement gap configuration is provided (setup) or deleted (release).

-- ASN1START

MeasGapConfigPerCC-List ::= CHOICE {
  release NULL,

MeasGapSharingConfig

The IE `MeasGapSharingConfig` specifies the measurement gap sharing scheme and controls setup/release of measurement gap sharing.

MeasGapSharingConfig information element

MeasGapSharingConfig-r14 ::=   CHOICE {
  release        NULL,
  setup        SEQUENCE {
    measGapSharingScheme-r14    ENUMERATED {scheme00, scheme01, scheme10, scheme11}
  }
}

MeasGapSharingConfig field descriptions

measGapSharingScheme

Indicates the measurement gaps sharing scheme for BL UEs in CE mode A and CE mode B, see TS 36.133 [16, Table 8.13.2.1.1.1-2 and Table 8.13.3.1.1.1-3]. Value `scheme00` corresponds to “00”, value `scheme01` corresponds to “01”, and so on.

MeasId

The IE `MeasId` is used to identify a measurement configuration, i.e., linking of a measurement object and a reporting configuration.

MeasId information element

MeasId ::=       INTEGER (1..maxMeasId)
MeasId-v1250 ::=     INTEGER (maxMeasId-Plus1..maxMeasId-r12)

MeasIdToAddModList

The IE `MeasIdToAddModList` concerns a list of measurement identities to add or modify, with for each entry the `measId`, the associated `measObjectId` and the associated `reportConfigId`. Field `measIdToAddModListExt` includes additional measurement identities i.e. extends the size of the measurement identity list using the general principles specified in 5.1.2.

MeasIdToAddModList information element

MeasIdToAddModList ::=    SEQUENCE (SIZE (1..maxMeasId)) OF MeasIdToAddMod
MeasIdToAddModList-v1310 ::=  SEQUENCE (SIZE (1..maxMeasId)) OF MeasIdToAddMod-v1310
MeasIdToAddModListExt-r12 ::= SEQUENCE (SIZE (1..maxMeasId)) OF MeasIdToAddModExt-r12
MeasIdToAddModExt-v1310 ::= SEQUENCE (SIZE (1..maxMeasId)) OF MeasIdToAddMod-v1310
MeasIdToAddMod ::= SEQUENCE {
    measId        MeasId,
    measObjectId      MeasObjectId,
    reportConfigId      ReportConfigId
}
MeasIdToAddModExt-r12 ::= SEQUENCE {
    measId-v1250      MeasId-v1250,
    measObjectId-r12     MeasObjectId,
    reportConfigId-r12     ReportConfigId
}
MeasIdToAddMod-v1310 ::= SEQUENCE {
    measObjectId-v1310   MeasObjectId-v1310  OPTIONAL
}
-- ASN1STOP

MeasIdToAddModList field descriptions

measObjectId
If the measObjectId-v1310 is included, the measObjectId or measObjectId-r12 is ignored by the UE.

MeasObjectCDMA2000

The IE MeasObjectCDMA2000 specifies information applicable for inter-RAT CDMA2000 neighbouring cells.

MeasObjectCDMA2000 information element

-- ASN1START
MeasObjectCDMA2000 ::= SEQUENCE {
    cdma2000-Type    CDMA2000-Type,
    carrierFreq      CarrierFreqCDMA2000,

    ...
}
CellsToAddModListCDMA2000 ::= SEQUENCE (SIZE (1..maxCellMeas)) OF CellsToAddModCDMA2000
CellsToAddModCDMA2000 ::= SEQUENCE {
    cellIndex        INTEGER (1..maxCellMeas),
    physCellId       PhysCellIdCDMA2000
}
-- ASN1STOP
MeasObjectCDMA2000 field descriptions

- **carrierInfo**
  Identifies CDMA2000 carrier frequency for which this configuration is valid.

- **cdma2000-Type**
  The type of CDMA2000 network: CDMA2000 1xRTT or CDMA2000 HRPD.

- **cellIndex**
  Entry index in the neighbouring cell list.

- **cellsToAddModList**
  List of cells to add/modify in the neighbouring cell list.

- **cellsToRemoveList**
  List of cells to remove from the neighbouring cell list.

- **physCellId**
  CDMA2000 Physical cell identity of a cell in neighbouring cell list expressed as PNOffset.

- **searchWindowSize**
  Provides the search window size to be used by the UE for the neighbouring pilot, see C.S0005 [25].

---

MeasObjectEUTRA

The IE MeasObjectEUTRA specifies information applicable for intra-frequency or inter-frequency E-UTRA cells.

**MeasObjectEUTRA information element**

```asn1
MeasObjectEUTRA ::= SEQUENCE {
  carrierFreq       ARFCN-ValueEUTRA,

<tr>
<td>measCycleSCell</td>
<td>The parameter is used only when an SCell is configured on the frequency indicated by the measObject and is in deactivated state, see TS 36.133 [16, 8.3.3]. E-UTRAN configures the parameter whenever an SCell is configured on the frequency indicated by the measObject, but the field may also be signalled when an SCell is not configured. Value $s160$ corresponds to 160 sub-frames, $s256$ corresponds to 256 sub-frames and so on.</td>
</tr>
<tr>
<td>measDuration</td>
<td>Number of consecutive symbols for which the Physical Layer reports samples of RSSI, see TS 36.214 [48]. Value $sym1$ corresponds to one symbol, $sym14$ corresponds to 14 symbols, and so on.</td>
</tr>
<tr>
<td>measSubframeCellList</td>
<td>List of cells for which measSubframePatternNeigh is applied.</td>
</tr>
<tr>
<td>measSubframePatternNeigh</td>
<td>Time domain measurement resource restriction pattern applicable to neighbour cell RSRP and RSRQ measurements on the carrier frequency indicated by carrierFreq. For cells in measSubframeCellList the UE shall assume that the subframes indicated by measSubframePatternNeigh are non-MBSFN subframes, and have the same special subframe configuration as PCell.</td>
</tr>
<tr>
<td>offsetFreq</td>
<td>Offset value applicable to the carrier frequency. Value dB-24 corresponds to -24 dB, dB-22 corresponds to -22 dB and so on.</td>
</tr>
<tr>
<td>physCellId</td>
<td>Physical cell identity of a cell in the cell list.</td>
</tr>
<tr>
<td>physCellIdRange</td>
<td>Physical cell identity or a range of physical cell identities.</td>
</tr>
<tr>
<td>ReducedMeasPerformance</td>
<td>If set to TRUE, the EUTRA carrier frequency is configured for reduced measurement performance, otherwise it is configured for normal measurement performance, see TS 36.133 [16].</td>
</tr>
<tr>
<td>rmtc-Config</td>
<td>Parameters applicable to RSSI and channel occupancy measurement on the carrier frequency indicated by carrierFreq.</td>
</tr>
<tr>
<td>rmtc-Period</td>
<td>Indicates the RSSI measurement timing configuration (RMTC) periodicity for this frequency. Value $ms40$ corresponds to 40 ms periodicity, $ms80$ corresponds to 80 ms periodicity and so on, see TS 36.214 [48].</td>
</tr>
<tr>
<td>rmtc-SubframeOffset</td>
<td>Indicates the RSSI measurement timing configuration (RMTC) subframe offset for this frequency. The value of rmtc-SubframeOffset should be smaller than the value of rmtc-Period, see TS 36.214 [48]. For inter-frequency measurements, this field is optional present and if it is not configured, the UE chooses a random value as rmtc-SubframeOffset for measDuration which shall be selected to be between 0 and the configured rmtc-Period with equal probability.</td>
</tr>
</tbody>
</table>
### MeasObjectEUTRA field descriptions

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>t312</td>
<td>The value of timer T312. Value ms0 represents 0 ms, ms50 represents 50 ms and so on.</td>
</tr>
<tr>
<td>tx-ResourcePoolToAddList</td>
<td>List of transmission pools identities to be added to the list of pools configured for CBR measurements and for which poolReportId is included in SL-V2X-ConfigDedicated or SystemInformationBlockType21.</td>
</tr>
<tr>
<td>tx-ResourcePoolToRemoveList</td>
<td>List of transmission resource pools identities to be removed from the list of pools configured for CBR measurements and for which poolReportId is included in SL-V2X-ConfigDedicated or SystemInformationBlockType21.</td>
</tr>
<tr>
<td>widebandRSRQ-Meas</td>
<td>If this field is set to TRUE, the UE shall, when performing RSRQ measurements, use a wider bandwidth in accordance with TS 36.133 [16].</td>
</tr>
<tr>
<td>whiteCellsToAddModList</td>
<td>List of cells to add/modify in the white list of cells.</td>
</tr>
<tr>
<td>whiteCellsToRemoveList</td>
<td>List of cells to remove from the white list of cells.</td>
</tr>
</tbody>
</table>

**Conditional presence**

<tr>
<th>Field</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>always</td>
<td>The field is mandatory present.</td>
</tr>
<tr>
<td>WB-RSRQ</td>
<td>The field is optionally present, need ON, if the measurement bandwidth indicated by allowedMeasBandwidth is 50 resource blocks or larger; otherwise it is not present and the UE shall delete any existing value for this field, if configured.</td>
</tr>
</tbody>
</table>

### MeasObjectGERAN

The IE MeasObjectGERAN specifies information applicable for inter-RAT GERAN neighbouring frequencies.

**MeasObjectGERAN information element**

```asn1
MeasObjectGERAN ::= SEQUENCE {
  carrierFreqs      CarrierFreqsGERAN,
  offsetFreq        Q-OffsetRangeInterRAT  DEFAULT 0,
  ncc-Permitted     BIT STRING(SIZE (8))  DEFAULT '11111111'B,
  cellForWhichToReportCGI     PhysCellIdGERAN    OPTIONAL,  -- Need ON
  ...
}
```

**MeasObjectGERAN field descriptions**

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ncc-Permitted</td>
<td>Field encoded as a bit map, where bit N is set to &quot;0&quot; if a BCCH carrier with NCC = N-1 is not permitted for monitoring and set to &quot;1&quot; if a BCCH carrier with NCC = N-1 is permitted for monitoring; N = 1 to 8; bit 1 of the bitmap is the leading bit of the bit string.</td>
</tr>
<tr>
<td>carrierFreqs</td>
<td>If E-UTRAN includes cellForWhichToReportCGI, it includes only one GERAN ARFCN value in carrierFreqs.</td>
</tr>
</tbody>
</table>

### MeasObjectId

The IE MeasObjectId used to identify a measurement object configuration.

**MeasObjectId information element**

```asn1
MeasObjectId ::= INTEGER (1..maxObjectId)
MeasObjectId-v1310 ::= INTEGER (maxObjectId-Plus1-r13..maxObjectId-r13)
MeasObjectId-r13 ::= INTEGER (1..maxObjectId-r13)
```
-- *MeasObjectToAddModList*

The IE *MeasObjectToAddModList* concerns a list of measurement objects to add or modify.

**MeasObjectToAddModList information element**

```asn1
-- ASN1START
MeasObjectToAddModList ::= SEQUENCE (SIZE (1..maxObjectId)) OF MeasObjectToAddMod
MeasObjectToAddModListExt-r13 ::= SEQUENCE (SIZE (1..maxObjectId)) OF MeasObjectToAddModExt-r13
MeasObjectToAddModList-v9e0 ::= SEQUENCE (SIZE (1..maxObjectId)) OF MeasObjectToAddMod-v9e0
MeasObjectToAddMod ::= SEQUENCE {
  measObjectId      MeasObjectId,
  measObject       CHOICE {
    measObjectEUTRA      MeasObjectEUTRA,
    measObjectUTRA      MeasObjectUTRA,
    measObjectGERAN      MeasObjectGERAN,
    measObjectCDMA2000     MeasObjectCDMA2000,
    ...,
    measObjectWLAN-r13     MeasObjectWLAN-r13
  }
}
MeasObjectToAddModExt-r13 ::= SEQUENCE {
  measObjectId-r13     MeasObjectId-v1310,
  measObject-r13       CHOICE {
    measObjectEUTRA-r13      MeasObjectEUTRA,
    measObjectUTRA-r13      MeasObjectUTRA,
    measObjectGERAN-r13      MeasObjectGERAN,
    measObjectCDMA2000-r13     MeasObjectCDMA2000,
    ...,
    measObjectWLAN-v1320     MeasObjectWLAN-r13
  }
}
MeasObjectToAddMod-v9e0 ::= SEQUENCE {
  measObjectEUTRA-v9e0    MeasObjectEUTRA-v9e0  OPTIONAL -- Cond eutra
}
-- ASN1STOP
```

---

### Conditional presence

<table>
<thead>
<tr>
<th>eutra</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The field is optional present, need OR, if for the corresponding entry in MeasObjectToAddModList or MeasObjectToAddModListExt-r13 field measObject is set to measObjectEUTRA and its sub-field carrierFreq is set to maxEARFCN. Otherwise the field is not present and the UE shall delete any existing value for this field.</td>
</tr>
</tbody>
</table>

-- **MeasObjectUTRA**

The IE *MeasObjectUTRA* specifies information applicable for inter-RAT UTRA neighbouring cells.

**MeasObjectUTRA information element**

```asn1
-- ASN1START
MeasObjectUTRA ::= SEQUENCE {
  carrierFreq       ARFCN-ValueUTRA,
  offsetFreq       Q-OffsetRangeInterRAT  DEFAULT 0,
  cellsToRemoveList     CellIndexList    OPTIONAL,   -- Need ON
  cellsToAddModList     CHOICE {
    cellsToAddModListUTRA-FDD   CellsToAddModListUTRA-FDD,
    cellsToAddModListUTRA-TDD   CellsToAddModListUTRA-TDD
  }                OPTIONAL,   -- Need ON
  cellForWhichToReportCGI    CHOICE {
    utra-FDD       PhysCellIdUTRA-FDD,
    utra-TDD       PhysCellIdUTRA-TDD
  } OPTIONAL,   -- Need ON
}
-- ASN1STOP
```
MeasObjectUTRA field descriptions

carrierFreq
Identifies UTRA carrier frequency for which this configuration is valid. E-UTRAN does not configure more than one measurement object for the same physical frequency regardless of the ARFCN used to indicate this.

cellIndex
Entry index in the neighbouring cell list.

cellsToAddModListUTRA-FDD
List of UTRA FDD cells to add/modify in the neighbouring cell list.

cellsToAddModListUTRA-TDD
List of UTRA TDD cells to add/modify in the neighbouring cell list.

cellsToRemoveList
List of cells to remove from the neighbouring cell list.

csg-allowedReportingCells
One or more ranges of physical cell identities for which UTRA-FDD reporting is allowed.

reducedMeasPerformance
If set to TRUE the UTRA carrier frequency is configured for reduced measurement performance, otherwise it is configured for normal measurement performance, see TS 36.133 [16].

-- MeasObjectWLAN

The IE MeasObjectWLAN specifies information applicable for inter-RAT WLAN measurements. E-UTRAN configures at least one WLAN identifier in the MeasObjectWLAN.
**MeasObjectWLAN field descriptions**

- **bandIndicatorListWLAN**
  Includes the list of WLAN bands. Value band2dot4 indicates the 2.4GHz band, value band5 indicates the 5GHz band and value band60 indicates the 60GHz band.

- **carrierInfoListWLAN**
  Includes the list of WLAN carrier information for the measurement object.

- **wlan-ToAddModList**
  Includes the list of WLAN identifiers to be added to the measurement configuration.

- **wlan-ToRemoveList**
  Includes the list of WLAN identifiers to be removed from the measurement configuration.

---

**MeasResults**

The IE *MeasResults* covers measured results for intra-frequency, inter-frequency and inter-RAT mobility.

**MeasResults information element**

```
MeasResults ::= SEQUENCE {
    measId MeasId,

MeasResults field descriptions

<table>
<thead>
<tr>
<th>Field Description</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>availableAdmissionCapacityWLAN</td>
<td>Indicates the available admission capacity of WLAN as defined in IEEE 802.11-2012 [67].</td>
</tr>
<tr>
<td>backhaulDL-BandwidthWLAN</td>
<td>Indicates the backhaul available downlink bandwidth of WLAN, equal to Downlink Speed times Downlink Load defined in Wi-Fi Alliance Hotspot 2.0 [76].</td>
</tr>
<tr>
<td>backhaulUL-BandwidthWLAN</td>
<td>Indicates the backhaul available uplink bandwidth of WLAN, equal to Uplink Speed times Uplink Load defined in Wi-Fi Alliance Hotspot 2.0 [76].</td>
</tr>
<tr>
<td>bandWLAN</td>
<td>Indicates the WLAN band.</td>
</tr>
<tr>
<td>carrierInfoWLAN</td>
<td>Indicates the WLAN channel information.</td>
</tr>
<tr>
<td>cbr-PSSCH</td>
<td>Indicates the CBR measurement results on the PSSCH of the pool indicated by poolIdentity. If adjacencyPSCCH-PSSCH is set to TRUE for the pool indicated by poolIdentity, this field indicates the CBR measurement of both the PSSCH and PSCCH resources which are measured together.</td>
</tr>
<tr>
<td>cbr-PSCCH</td>
<td>Indicates the CBR measurement results on the PSCCH of the pool indicated by poolIdentity. This field is only included if adjacencyPSCCH-PSSCH is set to FALSE for the pool indicated by poolIdentity.</td>
</tr>
<tr>
<td>channelOccupancy</td>
<td>Indicates the percentage of samples when the RSSI was above the configured channelOccupancyThreshold for the associated reportConfig.</td>
</tr>
<tr>
<td>channelUtilizationWLAN</td>
<td>Indicates WLAN channel utilization as defined in IEEE 802.11-2012 [67].</td>
</tr>
<tr>
<td>connectedWLAN</td>
<td>Indicates whether the UE is connected to the WLAN for which the measurement results are applicable.</td>
</tr>
<tr>
<td>csg-MemberStatus</td>
<td>Indicates whether or not the UE is a member of the CSG of the neighbour cell.</td>
</tr>
<tr>
<td>currentSFN</td>
<td>Indicates the current system frame number when receiving the UE Rx-Tx time difference measurement results from lower layer.</td>
</tr>
<tr>
<td>excessDelay</td>
<td>Indicates excess queueing delay ratio in UL, according to excess delay ratio measurement report mapping table, as defined in TS 36.314 [71, Table 4.2.1.1.1-1]</td>
</tr>
<tr>
<td>locationAreaCode</td>
<td>A fixed length code identifying the location area within a PLMN, as defined in TS 23.003 [27].</td>
</tr>
<tr>
<td>measId</td>
<td>Identifies the measurement identity for which the reporting is being performed. If the measId-v1250 is included, the measId (i.e. without a suffix) is ignored by eNB.</td>
</tr>
<tr>
<td>measResult</td>
<td>Measured result of an E-UTRA cell; Measured result of a UTRA cell; Measured result of a GERAN cell or frequency; Measured result of a CDMA2000 cell; Measured result of a WLAN; Measured result of UE Rx–Tx time difference; Measured result of UE SFN, radio frame and subframe timing difference; or Measured result of RSSI and channel occupancy.</td>
</tr>
<tr>
<td>measResultCSI-RS-List</td>
<td>Measured results of the CSI-RS resources in discovery signals measurement.</td>
</tr>
<tr>
<td>measResultListCDMA2000</td>
<td>List of measured results for the maximum number of reported best cells for a CDMA2000 measurement identity.</td>
</tr>
<tr>
<td>measResultListEUTRA</td>
<td>List of measured results for the maximum number of reported best cells for an E-UTRA measurement identity. For BL UEs or UEs in CE, when operating in CE Mode B, measResult-v1360 is reported if the measured RSRP is less than -140 dBm.</td>
</tr>
<tr>
<td>measResultListGERAN</td>
<td>List of measured results for the maximum number of reported best cells or frequencies for a GERAN measurement identity.</td>
</tr>
<tr>
<td>measResultListUTRA</td>
<td>List of measured results for the maximum number of reported best cells for a UTRA measurement identity.</td>
</tr>
<tr>
<td>measResultListWLAN</td>
<td>List of measured results for the maximum number of reported best WLAN outside the WLAN mobility set and connected WLAN, if any, for a WLAN measurement identity.</td>
</tr>
<tr>
<td>Field</td>
<td>Description</td>
</tr>
<tr>
<td>------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>measResultPCell</td>
<td>Measured result of the PCell. For BL UEs or UEs in CE, when operating in CE Mode B, measResultPCell-v1360 is reported if the measured RSRP is less than -140 dBm.</td>
</tr>
<tr>
<td>measResultsCDMA2000</td>
<td>Contains the CDMA2000 HRPD pre-registration status and the list of CDMA2000 measurements.</td>
</tr>
<tr>
<td>pilotPnPhase</td>
<td>Indicates the arrival time of a CDMA2000 pilot, measured relative to the UE’s time reference in units of PN chips, see C.S0005 [25]. This information is used in either SRVCC handover or enhanced 1xRTT CS fallback procedure to CDMA2000 1xRTT.</td>
</tr>
<tr>
<td>poolIdentity</td>
<td>The identity of the transmission resource pool which is corresponding to the poolReportld configured in a resource pool for V2X sidelink communication.</td>
</tr>
<tr>
<td>plmnIdentityList</td>
<td>The list of PLMN Identity read from broadcast information when the multiple PLMN Identities are broadcast.</td>
</tr>
<tr>
<td>preRegistrationStatusHRPD</td>
<td>Set to TRUE if the UE is currently pre-registered with CDMA2000 HRPD. Otherwise set to FALSE. This can be ignored by the eNB for CDMA2000 1xRTT.</td>
</tr>
<tr>
<td>qci-id</td>
<td>Indicates QCI value for which excessDelay is provided, according to TS 36.314 [71].</td>
</tr>
<tr>
<td>routingAreaCode</td>
<td>The RAC identity read from broadcast information, as defined in TS 23.003 [27].</td>
</tr>
<tr>
<td>rsrpResult</td>
<td>Measured RSRP result of an E-UTRA cell. The rsrpResult is only reported if configured by the eNB.</td>
</tr>
<tr>
<td>rsrqResult</td>
<td>Measured RSRQ result of an E-UTRA cell. The rsrqResult is only reported if configured by the eNB.</td>
</tr>
<tr>
<td>rs-sinr-Result</td>
<td>Measured RS-SINR result of an E-UTRA cell. The rs-sinr-Result is only reported if configured by the eNB.</td>
</tr>
<tr>
<td>rssiWLAN</td>
<td>Measured WLAN RSSI result in dBm.</td>
</tr>
<tr>
<td>stationCountWLAN</td>
<td>Indicates the total number stations currently associated with this WLAN as defined in IEEE 802.11-2012 [67].</td>
</tr>
<tr>
<td>ue-RxTxTimeDiffResult</td>
<td>UE Rx-Tx time difference measurement result of the PCell, provided by lower layers. If ue-RxTxTimeDiffPeriodicalTDD-r13 is set to TRUE, the measurement mapping is according to EUTRAN TDD UE Rx-Tx time difference report mapping in TS 36.133 [16] and measurement result includes N/Aoffset, else the measurement mapping is according to EUTRAN FDD UE Rx-Tx time difference report mapping in TS 36.133 [16].</td>
</tr>
<tr>
<td>utra-EcN0</td>
<td>According to CPICH_Ec/No in TS 25.133 [29] for FDD. Fourteen spare values. The field is not present for TDD.</td>
</tr>
<tr>
<td>wlanIdentifiers</td>
<td>Indicates the WLAN parameters used for identification of the WLAN for which the measurement results are applicable.</td>
</tr>
</tbody>
</table>

## MeasResultSSTD

The IE MeasResultSSTD consists of SFN, radio frame and subframe boundary difference between the PCell and the PSCell as specified in TS 36.214 [48] and TS 36.133 [16].
MeasResultSSTD information element

```asn1
MeasResultSSTD-r13 ::= SEQUENCE {
  sfn-OffsetResult-r13      INTEGER (0..1023),
  frameBoundaryOffsetResult-r13    INTEGER (-5..4),
  subframeBoundaryOffsetResult-r13   INTEGER (0..127)
}
```

**MeasResultSSTD field descriptions**

- **sfn-OffsetResult**
  Indicates the SFN difference between the PCell and the PSCell as an integer value according to TS 36.214 [48].

- **frameBoundaryOffsetResult**
  Indicates the frame boundary difference between the PCell and the PSCell as an integer value according to TS 36.214 [48].

- **subframeBoundaryOffsetResult**
  Indicates the subframe boundary difference between the PCell and the PSCell as an integer value according to the mapping table in TS 36.133 [16].

---

**MeasScaleFactor**

The IE **MeasScaleFactor** specifies the factor for scaling the measurement performance requirements in TS 36.133 [16].

```asn1
MeasScaleFactor-r12 ::= ENUMERATED {sf-EUTRA-cf1, sf-EUTRA-cf2}
```

**NOTE:** If the reducedMeasPerformance is not included in any measObjectEUTRA or measObjectUTRA and the measScaleFactor is included in the measConfig, E-UTRAN can configure any of the values for the measScaleFactor as specified in TS 36.133 [16].

---

**QuantityConfig**

The IE **QuantityConfig** specifies the measurement quantities and layer 3 filtering coefficients for E-UTRA and inter-RAT measurements.

```asn1
QuantityConfig ::= SEQUENCE {
  quantityConfigEUTRA     QuantityConfigEUTRA     OPTIONAL, -- Need ON
  quantityConfigUTRA     QuantityConfigUTRA     OPTIONAL, -- Need ON
  quantityConfigGERAN     QuantityConfigGERAN     OPTIONAL, -- Need ON

QuantityConfig field descriptions

filterCoefficient2-FDD
Specifies the filtering coefficient used for the UTRAN FDD measurement quantity, which is not included in measQuantityUTRA-FDD when reportQuantityUTRA-FDD is present in ReportConfigInterRAT.

filterCoefficientCSI-RSRP
Specifies the filtering coefficient used for CSI-RSRP.

filterCoefficientRSRP
Specifies the filtering coefficient used for RSRP.

filterCoefficientRSRQ
Specifies the filtering coefficient used for RSRQ.

filterCoefficientRS-SINR
Specifies the filtering coefficient used for RS-SINR.

measQuantityCDMA2000
Measurement quantity used for CDMA2000 measurements. pilotPnPhaseAndPilotStrength is only applicable for MeasObjectCDMA2000 of cdma2000-Type = type1XRTT.

measQuantityGERAN
Measurement quantity used for GERAN measurements.

measQuantityUTRA
Measurement quantity used for UTRA measurements.

measQuantityWLAN
Measurement quantity used for WLAN measurements.

quantityConfigCDMA2000
Specifies quantity configurations for CDMA2000 measurements.

quantityConfigEUTRA
Specifies filter configurations for E-UTRA measurements.

quantityConfigGERAN
Specifies quantity and filter configurations for GERAN measurements.

quantityConfigUTRA
Specifies quantity and filter configurations for UTRA measurements. Field quantityConfigUTRA-v1020 is applicable only when reportQuantityUTRA-FDD is configured.

quantityConfigWLAN
Specifies quantity and filter configurations for WLAN measurements.
The IE ReportConfigEUTRA specifies criteria for triggering of an E-UTRA measurement reporting event. The E-UTRA measurement reporting events concerning CRS are labelled AN with \( N \) equal to 1, 2 and so on.

- **Event A1**: Serving becomes better than absolute threshold;
- **Event A2**: Serving becomes worse than absolute threshold;
- **Event A3**: Neighbour becomes amount of offset better than PCell/ PSCell;
- **Event A4**: Neighbour becomes better than absolute threshold;
- **Event A5**: PCell/ PSCell becomes worse than absolute threshold AND Neighbour becomes better than another absolute threshold2;
- **Event A6**: Neighbour becomes amount of offset better than SCell.

The E-UTRA measurement reporting events concerning CSI-RS are labelled CN with \( N \) equal to 1 and 2.

- **Event C1**: CSI-RS resource becomes better than absolute threshold;
- **Event C2**: CSI-RS resource becomes amount of offset better than reference CSI-RS resource.

The E-UTRA measurement reporting events concerning CBR are labelled VN with \( N \) equal to 1 and 2.

- **Event V1**: CBR becomes larger than absolute threshold;
- **Event V2**: CBR becomes smaller than absolute threshold.

The actual value is field value – 140 dBm. EUTRAN configures the same threshold quantity for all the thresholds of an event.</td>
</tr>
<tr>
<td>timeToTrigger</td>
<td>Time during which specific criteria for the event needs to be met in order to trigger a measurement report.</td>
</tr>
</tbody>
</table>
**ReportConfigEUTRA field descriptions**

**triggerQuantity**
The quantity used to evaluate the triggering condition for the event concerning CRS. EUTRAN sets the value according to the quantity of the ThresholdEUTRA for this event. The values rsrp, rsrq and sinr correspond to Reference Signal Received Power (RSRP), Reference Signal Received Quality (RSRQ) and Reference Signal to Noise and Interference Ratio (RS-SINR), see TS 36.214 [48]. If triggerQuantity-v1310 is configured, the UE only considers this extension (and ignores triggerQuantity i.e. without suffix).

**triggerQuantityCSI-RS**
The quantity used to evaluate the triggering condition for the event concerning CSI-RS. The value TRUE corresponds to CSI Reference Signal Received Power (CSI-RSRP), see TS 36.214 [48]. E-UTRAN configures value TRUE if and only if the measurement reporting event concerns CSI-RS.

**ue-RxTxTimeDiffPeriodical**
If this field is present, the UE shall perform UE Rx-Tx time difference measurement reporting and ignore the fields triggerQuantity, reportQuantity and maxReportCells. If the field is present, the only applicable values for the corresponding triggerType and purpose are periodical and reportStrongestCells respectively.

**ue-RxTxTimeDiffPeriodicalTDD**
If this field is set to TRUE, the UE shall perform UE Rx-Tx time difference measurement reporting according to EUTRAN TDD UE Rx-Tx time difference report mapping in TS 36.133 [16]. If the field is configured, the ue-RxTxTimeDiffPeriodical shall be configured. The field is applicable for TDD only.

**usePSCell**
If this field is set to TRUE the UE shall use the PSCell instead of the PCell. E-UTRAN configures value TRUE only for events A3 and A5, see 5.5.4.4 and 5.5.4.6.

**useT312**
If value TRUE is configured, the UE shall use the timer T312 with the value t312 as specified in the corresponding measObject. If the corresponding measObject does not include the timer T312 then the timer T312 is considered as not configured. E-UTRAN configures value TRUE only if triggerType is set to event.

**useWhiteCellList**
Indicates whether only the cells included in the white-list of the associated measObject are applicable as specified in 5.5.4.1. E-UTRAN does not configure the field for events A1, A2, C1 and C2.

**ul-DelayConfig**
If the field is present, E-UTRAN configures UL PDCP Packet Delay per QCI measurement and the UE shall ignore the fields triggerQuantity and maxReportCells. The applicable values for the corresponding triggerType and reportInterval are periodical and (one of the) ms1024, ms2048, ms5120 or ms10240 respectively. The reportInterval indicates the periodicity for performing and reporting of UL PDCP Delay per QCI measurement as specified in TS 36.314 [71].

---

### Conditional presence

<table>
<thead>
<tr>
<th>Explanation</th>
<th>reportCGI</th>
</tr>
</thead>
<tbody>
<tr>
<td>The field is optional, need OR, in case purpose is included and set to reportCGI; otherwise the field is not present and the UE shall delete any existing value for this field.</td>
<td></td>
</tr>
</tbody>
</table>

---

### ReportConfigId

The IE ReportConfigId is used to identify a measurement reporting configuration.

**ReportConfigId information element**

```asn1
ReportConfigId ::= INTEGER (1..maxReportConfigId)
```

---

### ReportConfigInterRAT

The IE ReportConfigInterRAT specifies criteria for triggering of an inter-RAT measurement reporting event. The inter-RAT measurement reporting events for UTRAN, GERAN and CDMA2000 are labelled BY with N equal to 1, 2 and so on. The inter-RAT measurement reporting events for WLAN are labelled WN with N equal to 1, 2 and so on.
Event B1: Neighbour becomes better than absolute threshold;

Event B2: PCell becomes worse than absolute threshold1 AND Neighbour becomes better than another absolute threshold2.

Event W1: WLAN becomes better than a threshold;

Event W2: All WLAN inside WLAN mobility set become worse than a threshold1 and a WLAN outside WLAN mobility set becomes better than a threshold2;

Event W3: All WLAN inside WLAN mobility set become worse than a threshold.

The b1 and b2 event thresholds for CDMA2000 are the CDMA2000 pilot detection thresholds are expressed as an unsigned binary number equal to \([-2 \times 10 \log_{10} Ec/Io]\) in units of 0.5dB, see C.S0005 [25] for details.

---

The IE ReportConfigToAddModList concerns a list of reporting configurations to add or modify
**ReportConfigToAddModList** information element

```asn1
ReportConfigToAddModList ::= SEQUENCE { 
  reportConfigId ReportConfigId, 
  reportConfig CHOICE { 
    reportConfigEUTRA ReportConfigEUTRA, 
    reportConfigInterRAT ReportConfigInterRAT 
  } 
} 
```

---

**ReportInterval**

The *ReportInterval* indicates the interval between periodical reports. The *ReportInterval* is applicable if the UE performs periodical reporting (i.e. when reportAmount exceeds 1), for triggerType event as well as for triggerType periodical. Value ms120 corresponds with 120 ms, ms240 corresponds with 240 ms and so on, while value min1 corresponds with 1 min, min6 corresponds with 6 min and so on.

**ReportInterval** information element

```asn1
ReportInterval ::= ENUMERATED { 
  ms120, ms240, ms480, ms640, ms1024, ms2048, ms5120, ms10240, 
  min1, min6, min12, min30, min60, spare3, spare2, spare1 
}
```

---

**RSRP-Range**

The IE *RSRP-Range* specifies the value range used in RSRP measurements and thresholds. Integer value for RSRP measurements according to mapping table in TS 36.133 [16]. A given field using *RSRP-Range-v1360* shall only be signalled if the corresponding original field (using *RSRP-Range* i.e. without suffix) is set to value 0.

**RSRP-Range** information element

```asn1
RSRP-Range ::= INTEGER(0..97) 
RSRP-Range-v1360 ::= INTEGER(-17..-1) 
RSRP-RangeSL-r12 ::= INTEGER(0..13) 
RSRP-RangeSL2-r12 ::= INTEGER(0..7) 
RSRP-RangeSL3-r12 ::= INTEGER(0..11) 
RSRP-RangeSL4-r13 ::= INTEGER(0..49) 
```
### RSRP-Range field descriptions

**RSRP-Range**
For BL UEs or UEs in CE, when operating in CE Mode B, `RSRP-Range-v1360` (i.e., with suffix) is reported if the measured RSRP is less than -140 dBm.

**RSRP-RangeSL**
Value 0 corresponds to -infinity, value 1 to -115dBm, value 2 to -110dBm, and so on (i.e. in steps of 5dBm) until value 12, which corresponds to -60dBm, while value 13 corresponds to +infinity.

**RSRP-RangeSL2**
Value 0 corresponds to -infinity, value 1 to -110dBm, value 2 to -100dBm, and so on (i.e. in steps of 10dBm) until value 6, which corresponds to -60dBm, while value 7 corresponds to +infinity.

**RSRP-RangeSL3**
Value 0 corresponds to -110dBm, value 1 to -105dBm, value 2 to -100dBm, and so on (i.e. in steps of 5dBm) until value 10, which corresponds to -60dBm, while value 11 corresponds to +infinity.

**RSRP-RangeSL4**
Indicates the range for SD-RSRP. Value 0 corresponds to -130dBm, value 1 to -128dBm, value 2 to -126dBm, and so on (i.e. in steps of 2dBm) until value 48, which corresponds to -34dBm, while value 49 corresponds to +infinity.

---

### RSRQ-Range

The IE `RSRQ-Range` specifies the value range used in RSRQ measurements and thresholds. Integer value for RSRQ measurements is according to mapping table in TS 36.133 [16]. A given field using `RSRQ-Range-v1250` shall only be signalled if the corresponding original field (using `RSRQ-Range` i.e. without suffix) is set to value 0 or 34. Only a UE indicating support of `extendedRSRQ-LowerRange-r12` or `rsrq-OnAllSymbols-r12` may report `RSRQ-Range-v1250`, and this may be done without explicit configuration from the E-UTRAN. If received, the UE shall use the value indicated by the `RSRQ-Range-v1250` and ignore the value signalled by `RSRQ-Range` (without the suffix). `RSRQ-Range-r13` covers the original range and extended `RSRQ-Range-v1250`. `RSRQ-Range-r13` may be signalled without the corresponding original field and without any requirements for indicated support of `extendedRSRQ-LowerRange-r12` or `rsrq-OnAllSymbols-r12`.

#### RSRQ-Range information element

```asn1
-- ASN1START
RSRQ-Range ::= INTEGER(0..34)
RSRQ-Range-v1250 ::= INTEGER(-30..46)
RSRQ-Range-r13 ::= INTEGER(-30..46)
-- ASN1STOP
```

---

### RSRQ-Type

The IE `RSRQ-Type` specifies the RSRQ value type used in RSRQ measurements, see TS 36.214 [48].

#### RSRQ-Type information element

```asn1
-- ASN1START
RSRQ-Type-r12 ::= SEQUENCE {
  allSymbols-r12 BOOLEAN,
  wideBand-r12 BOOLEAN
}
-- ASN1STOP
```

---

### RSRQ-Type field descriptions

**allSymbols**
Value TRUE indicates use of all OFDM symbols when performing RSRQ measurements.

**wideBand**
Value TRUE indicates use of a wider bandwidth when performing RSRQ measurements.
RS-SINR-Range

The IE RS-SINR-Range specifies the value range used in RS-SINR measurements and thresholds. Integer value for RS-SINR measurements is according to mapping table in TS 36.133 [16].

RS-SINR-Range information element

```plaintext
RS-SINR-Range-r13 ::= INTEGER(0..127)
```

RSSI-Range-r13

The IE RSSI-Range specifies the value range used in RSSI measurements and thresholds. Integer value for RSSI measurements is according to mapping table in TS 36.133 [16].

RSSI-Range information element

```plaintext
RSSI-Range-r13 ::= INTEGER(0..76)
```

TimeToTrigger

The IE TimeToTrigger specifies the value range used for time to trigger parameter, which concerns the time during which specific criteria for the event needs to be met in order to trigger a measurement report. Value ms0 corresponds to 0 ms and behaviour as specified in 7.3.2 applies, ms40 corresponds to 40 ms, and so on.

TimeToTrigger information element

```plaintext
TimeToTrigger ::= ENUMERATED {
    ms0, ms40, ms64, ms80, ms100, ms128, ms160, ms256, 
    ms320, ms480, ms512, ms640, ms1024, ms1280, ms2560, 
    ms5120}
```

UL-DelayConfig

The IE UL-DelayConfig IE specifies the configuration of the UL PDCP Packet Delay per QCI measurement specified in TS36.314 [71].

UL-DelayConfig information element

```plaintext
UL-DelayConfig-r13 ::= CHOICE {
    release        NULL,
    setup        SEQUENCE {
        delayThreshold-r13       ENUMERATED {
            ms30, ms40, ms50, ms60, ms70, ms80, 
            ms90, ms100, ms150, ms300, ms500, ms750, spare4, 
            spare3, spare2, spare1}
    }
}
```
UL-DelayConfig field descriptions

delayThreshold
Indicates the delay threshold value used by UE to provide results of UL PDCP Packet Delay per QCI measurement as specified in TS 36.314 [71]. Value in milliseconds. Value ms30 means 30 ms and so on.

---

WLAN-CarrierInfo

The IE WLAN-CarrierInfo is used to identify the WLAN frequency band information, as specified in Annex E in [67].

WLAN-CarrierInfo information element

```asn1
WLAN-CarrierInfo-r13 ::= SEQUENCE {
  operatingClass-r13  INTEGER (0..255)   OPTIONAL, -- Need ON
  countryCode-r13   ENUMERATED {unitedStates, europe, japan, global, ...} OPTIONAL, -- Need ON
  channelNumbers-r13  WLAN-ChannelList-r13  OPTIONAL, -- Need ON
...
}
WLAN-ChannelList-r13 ::= SEQUENCE (SIZE (1..maxWLAN-Channels-r13)) OF WLAN-Channel-r13
WLAN-Channel-r13 ::= INTEGER(0..255)
```

WLAN-CarrierInfo field descriptions

channelNumbers
Indicates the WLAN channels as defined in IEEE 802.11-2012 [67]. Value 0 is not used.

countryCode
Indicates the country code of WLAN as defined in IEEE 802.11-2012 [67].

operatingClass
Indicates the Operating Class of WLAN as defined in IEEE 802.11-2012 [67].

---

WLAN-RSSI-Range

The IE WLAN-RSSI-Range specifies the value range used in WLAN RSSI measurements and thresholds. Integer value for WLAN RSSI measurements is according to mapping table in TS 36.133 [16]. Value 0 corresponds to -infinity, value 1 to -100dBm, value 2 to -99dBm, and so on (i.e. in steps of 1dBm) until value 140, which corresponds to 39dBm, while value 141 corresponds to +infinity.

WLAN-RSSI-Range information element

```asn1
WLAN-RSSI-Range-r13 ::= INTEGER(0..141)
```

---

WLAN-Status

The IE WLAN-Status indicates the current status of WLAN connection. The values are set as described in Sections 5.6.15.2 and 5.6.15.4.

WLAN-Status information element

```asn1
WLAN-Status-r13 ::= ENUMERATED {successfulAssociation, failureWlanRadioLink, failureWlanUnavailable, failureTimeout}
```
WLAN-Status-v1430 ::= ENUMERATED {suspended, resumed}
-- ASN1STOP

-- WLAN-SuspendConfig

The IE WLAN-SuspendConfig is used for configuration of WLAN suspend/resume functionality.

-- ASN1START

WLAN-SuspendConfig-r14 ::= SEQUENCE {
    wlan-SuspendResumeAllowed-r14   BOOLEAN  OPTIONAL, -- Need ON
    wlan-SuspendTriggersStatusReport-r14  BOOLEAN  OPTIONAL -- Need ON
}
-- ASN1STOP

WLAN-SuspendConfig field descriptions

wlan-SuspendResumeAllowed
Indicates whether the UE is allowed to use suspend-resume mechanism, i.e., to indicate WLAN being temporarily unavailable and WLAN being available again after temporary unavailability.

wlan-SuspendTriggersStatusReport
Indicates whether the UE shall trigger PDCP status report as defined in [8] when WLAN is temporarily unavailable and UE reports this status.

6.3.6 Other information elements

-- AbsoluteTimeInfo

The IE AbsoluteTimeInfo indicates an absolute time in a format YY-MM-DD HH:MM:SS and using BCD encoding. The first/ leftmost bit of the bit string contains the most significant bit of the most significant digit of the year and so on.

AbsoluteTimeInfo information element

-- ASN1START

AbsoluteTimeInfo-r10 ::= BIT STRING (SIZE (48))
-- ASN1STOP

-- AreaConfiguration

The AreaConfiguration indicates area for which UE is requested to perform measurement logging. If not configured, measurement logging is not restricted to specific cells or tracking areas but applies as long as the RPLMN is contained in plmn-IdentityList stored in VarLogMeasReport.

AreaConfiguration information element

-- ASN1START

AreaConfiguration-r10 ::= CHOICE {
    cellGlobalIdList-r10             CellGlobalIdList-r10,
    trackingAreaCodeList-r10         TrackingAreaCodeList-r10
}

AreaConfiguration-v1130 ::= SEQUENCE {
    trackingAreaCodeList-v1130      TrackingAreaCodeList-v1130
}

CellGlobalIdList-r10 ::= SEQUENCE (SIZE (1..32)) OF CellGlobalIdEUTRA

TrackingAreaCodeList-r10 ::= SEQUENCE (SIZE (1..8)) OF TrackingAreaCode

TrackingAreaCodeList-v1130 ::= SEQUENCE {
AreaConfiguration field descriptions

plmn-Identity-perTAC-List
Includes the PLMN identity for each of the TA codes included in trackingAreaCodeList. The PLMN identity listed first in plmn-Identity-perTAC-List corresponds with the TA code listed first in trackingAreaCodeList and so on.

– BandCombinationList
The IE BandCombinationList contains a list of CA band combinations.

BandCombinationList information element

– C-RNTI
The IE C-RNTI identifies a UE having a RRC connection within a cell.

C-RNTI information element

– DedicatedInfoCDMA2000
The DedicatedInfoCDMA2000 is used to transfer UE specific CDMA2000 information between the network and the UE. The RRC layer is transparent for this information.

DedicatedInfoCDMA2000 information element

– DedicatedInfoNAS
The IE DedicatedInfoNAS is used to transfer UE specific NAS layer information between the network and the UE. The RRC layer is transparent for this information.

DedicatedInfoNAS information element
-- DedicatedInfoNAS ::= OCTET STRING

-- FilterCoefficient

The IE FilterCoefficient specifies the measurement filtering coefficient. Value $fc0$ corresponds to $k = 0$, $fc1$ corresponds to $k = 1$, and so on.

**FilterCoefficient information element**

-- FilterCoefficient ::= ENUMERATED {
  $fc0$, $fc1$, $fc2$, $fc3$, $fc4$, $fc5$,
  $fc6$, $fc7$, $fc8$, $fc9$, $fc11$, $fc13$,
  $fc15$, $fc17$, $fc19$, spare1, ...
}

-- LoggingDuration

The LoggingDuration indicates the duration for which UE is requested to perform measurement logging. Value $\text{min}10$ corresponds to 10 minutes, value $\text{min}20$ corresponds to 20 minutes and so on.

**LoggingDuration information element**

-- LoggingDuration ::= ENUMERATED {
  $\text{min}10$, $\text{min}20$, $\text{min}40$, $\text{min}60$, $\text{min}90$, $\text{min}120$, spare2, spare1
}

-- LoggingInterval

The LoggingInterval indicates the periodicity for logging measurement results. Value ms1280 corresponds to 1.28s, value ms2560 corresponds to 2.56s and so on.

**LoggingInterval information element**

-- LoggingInterval ::= ENUMERATED {
  ms1280, ms2560, ms5120, ms10240, ms20480,
  ms30720, ms40960, ms61440
}

-- MeasSubframePattern

The IE MeasSubframePattern is used to specify a subframe pattern. The first/leftmost bit corresponds to the subframe #0 of the radio frame satisfying SFN mod $x = 0$, where SFN is that of PCell and $x$ is the size of the bit string divided by 10. "1" denotes that the corresponding subframe is used.

**MeasSubframePattern information element**

-- MeasSubframePattern ::= CHOICE {
  subframePatternFDD-r10 BIT STRING (SIZE (40)),
  subframePatternTDD-r10 CHOICE {
    subframeConfig1-5-r10 BIT STRING (SIZE (20)),
  }

subframeConfig0-r10 BIT STRING (SIZE (70)),
subframeConfig6-r10 BIT STRING (SIZE (60)),
...
},
...}

-- ASN1STOP

— **MMEC**

The IE **MMEC** identifies an MME within the scope of an MME Group within a PLMN, see TS 23.003 [27].

**MMEC information element**

```
MMEC ::=       BIT STRING (SIZE (8))
```

-- ASN1STOP

— **NeighCellConfig**

The IE **NeighCellConfig** is used to provide the information related to MBSFN and TDD UL/DL configuration of neighbour cells.

**NeighCellConfig information element**

```
NeighCellConfig ::=   BIT STRING (SIZE (2))
```

-- ASN1STOP

**NeighCellConfig field descriptions**

- `neighCellConfig`
  - Provides information related to MBSFN and TDD UL/DL configuration of neighbour cells of this frequency
  - 00: Not all neighbour cells have the same MBSFN subframe allocation as the serving cell on this frequency, if configured, and as the PCell otherwise
  - 10: The MBSFN subframe allocations of all neighbour cells are identical to or subsets of that in the serving cell on this frequency, if configured, and of that in the PCell otherwise
  - 01: No MBSFN subframes are present in all neighbour cells
  - 11: Different UL/DL allocation in neighbouring cells for TDD compared to the serving cell on this frequency, if configured, and compared to the PCell otherwise

For TDD, 00, 10 and 01 are only used for same UL/DL allocation in neighbouring cells compared to the serving cell on this frequency, if configured, and compared to the PCell otherwise.

— **OtherConfig**

The IE **OtherConfig** contains configuration related to other configuration

**OtherConfig information element**

```
OtherConfig-r9 ::= SEQUENCE {
  reportProximityConfig-r9   ReportProximityConfig-r9   OPTIONAL, -- Need ON
  ...
  ...
  [ [ idc-Config-r11     IDC-Config-r11     OPTIONAL, -- Need ON
    powerPrefIndicationConfig-r11 PowerPrefIndicationConfig-r11 OPTIONAL, -- Need ON
    obtainLocationConfig-r11  ObtainLocationConfig-r11  OPTIONAL -- Need ON
  ]],
```
bw-PreferenceIndicationTimer-r14 ENUMERATED \{s0, s0dot5, s1, s2, s5, s10, s20, s30, s60, s90, s120, s300, s600, spare3, spare2, spare1\} OPTIONAL, -- Need OR

sps-AssistanceInfoReport-r14 BOOLEAN OPTIONAL, -- Need ON
delayBudgetReportingConfig-r14 CHOICE{
  release NULL,
  setup SEQUENCE{
    delayBudgetReportingProhibitTimer-r14 ENUMERATED \{s0, s0dot4, s0dot8, s1dot6, s3, s6, s12, s30\}\}
} OPTIONAL, -- Need ON

rlm-ReportConfig-r14 CHOICE {
  release NULL,
  setup SEQUENCE{

  proximityIndicationUTRA-r9 ENUMERATED \{enabled\} OPTIONAL -- Need OR
}

-- ASN1STOP
### OtherConfig field descriptions

<table>
<thead>
<tr>
<th>Field Description</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>autonomousDenialSubframes</strong></td>
<td>Indicates the maximum number of the UL subframes for which the UE is allowed to deny any UL transmission. Value n2 corresponds to 2 subframes, n5 to 5 subframes and so on. E-UTRAN does not configure autonomous denial for frequencies on which SCG cells are configured.</td>
</tr>
<tr>
<td><strong>autonomousDenialValidity</strong></td>
<td>Indicates the validity period over which the UL autonomous denial subframes shall be counted. Value st200 corresponds to 200 subframes, st500 corresponds to 500 subframes and so on.</td>
</tr>
<tr>
<td><strong>bw-PreferencedIndicationTimer</strong></td>
<td>Prohibit timer for bandwidth preference indication reporting. Value in seconds. Value s0 means prohibit timer is set to 0 second, value s0dot5 means prohibit timer is set to 0.5 second, value s1 means prohibit timer is set to 1 second and so on.</td>
</tr>
<tr>
<td><strong>delayBudgetReportingProhibitTimer</strong></td>
<td>Prohibit timer for delay budget reporting. Value in seconds. Value s0 means prohibit timer is set to 0 second, value s0dot4 means prohibit timer is set to 0.4 second, and so on.</td>
</tr>
<tr>
<td><strong>idc-HardwareSharingIndication</strong></td>
<td>The field is used to indicate whether the UE is allowed to indicate in InDeviceCoexIndication that the cause of the problems are due to hardware sharing, and whether the UE is allowed to omit the TDM assistance information.</td>
</tr>
<tr>
<td><strong>idc-Indication</strong></td>
<td>The field is used to indicate whether the UE is configured to initiate transmission of the InDeviceCoexIndication message to the network.</td>
</tr>
<tr>
<td><strong>idc-Indication-UL-CA</strong></td>
<td>The field is used to indicate whether the UE is configured to provide IDC indications for UL CA using the InDeviceCoexIndication message.</td>
</tr>
<tr>
<td><strong>obtainLocation</strong></td>
<td>Requests the UE to attempt to have detailed location information available using GNSS. E-UTRAN configures the field only if includeLocationInfo is configured for one or more measurements.</td>
</tr>
<tr>
<td><strong>powerPrefIndicationTimer</strong></td>
<td>Prohibit timer for Power Preference Indication reporting. Value in seconds. Value s0 means prohibit timer is set to 0 second, value s0dot5 means prohibit timer is set to 0.5 second, value s1 means prohibit timer is set to 1 second and so on.</td>
</tr>
<tr>
<td><strong>reportProximityConfig</strong></td>
<td>Indicates, for each of the applicable RATs (EUTRA, UTRA), whether or not proximity indication is enabled for CSG member cell(s) of the concerned RAT. Note.</td>
</tr>
<tr>
<td><strong>rlmReportTimer</strong></td>
<td>Prohibit timer for RLM event reporting, i.e. &quot;early-out-of-sync&quot; and &quot;early-in-sync&quot; event reporting, as specified in section 5.6.10. Value in seconds. Value s0 means prohibit timer is set to 0 second, value s0dot5 means prohibit timer is set to 0.5 second, value s1 means prohibit timer is set to 1 second and so on.</td>
</tr>
<tr>
<td><strong>rlmReportRep-MPDCCH</strong></td>
<td>The field is used to indicate whether the UE is configured to report excess repetitions on MPDCCH.</td>
</tr>
<tr>
<td><strong>sps-AssistanceInfoReport</strong></td>
<td>Value TRUE indicates that the UE is allowed to report SPS-AssistanceInformation.</td>
</tr>
</tbody>
</table>

**NOTE:** Enabling/ disabling of proximity indication includes enabling/ disabling of the related functionality e.g. autonomous search in connected mode.

---

### RAND-CDMA2000 (1xRTT)

The RAND-CDMA2000 concerns a random value, generated by the eNB, to be passed to the CDMA2000 upper layers.

#### RAND-CDMA2000 information element

```asn1
-- ASN1START
RAND-CDMA2000 ::= BIT STRING (SIZE (32))
-- ASN1STOP
```
- **RAT-Type**

The IE `RAT-Type` is used to indicate the radio access technology (RAT), including E-UTRA, of the requested/ transferred UE capabilities.

**RAT-Type information element**

```asn1
RAT-Type ::= 
  ENUMERATED {
    eutra, utra, geran-cs, geran-ps, cdma2000-1XRTT,
    spare3, spare2, spare1, ...
  }
```

- **ResumeIdentity**

The IE `ResumeIdentity` is used to identify the suspended UE context.

**ResumeIdentity information element**

```asn1
ResumeIdentity-r13 ::= 
  BIT STRING (SIZE(40))
```

- **RRC-TransactionIdentifier**

The IE `RRC-TransactionIdentifier` is used, together with the message type, for the identification of an RRC procedure (transaction).

**RRC-TransactionIdentifier information element**

```asn1
RRC-TransactionIdentifier ::= 
  INTEGER (0..3)
```

- **S-TMSI**

The IE `S-TMSI` contains an S-Temporary Mobile Subscriber Identity, a temporary UE identity provided by the EPC which uniquely identifies the UE within the tracking area, see TS 23.003 [27].

**S-TMSI information element**

```asn1
S-TMSI ::= 
  SEQUENCE {
    mmec        MMEC,
    m-TMSI        BIT STRING (SIZE (32))
  }
```

**S-TMSI field descriptions**

- **m-TMSI**

  The first/leftmost bit of the bit string contains the most significant bit of the M-TMSI.
---

**TraceReference**

The *TraceReference* contains parameter Trace Reference as defined in TS 32.422 [58].

**TraceReference information element**

```asn
TraceReference-r10 ::= SEQUENCE {
  plmn-Identity-r10   PLMN-Identity,
  traceId-r10      OCTET STRING (SIZE (3))
}
```

---

**UE-CapabilityRAT-ContainerList**

The IE *UE-CapabilityRAT-ContainerList* contains list of containers, one for each RAT for which UE capabilities are transferred, if any.

**UE-CapabilityRAT-ContainerList information element**

```asn
UE-CapabilityRAT-ContainerList ::=SEQUENCE (SIZE (0..maxRAT-Capabilities)) OF UE-CapabilityRAT-Container

UE-CapabilityRAT-Container ::= SEQUENCE {
  rat-Type       RAT-Type,
  ueCapabilityRAT-Container   OCTET STRING
}
```

---

**UECapabilityRAT-ContainerList field descriptions**

**ueCapabilityRAT-Container**

Container for the UE capabilities of the indicated RAT. The encoding is defined in the specification of each RAT:
- For E-UTRA: the encoding of UE capabilities is defined in IE *UE-EUTRA-Capability*.
- For UTRA: the octet string contains the INTER RAT HANDOVER INFO message defined in TS 25.331 [19].
- For GERAN CS: the octet string contains the concatenated string of the Mobile Station Classmark 2 and Mobile Station Classmark 3. The first 5 octets correspond to Mobile Station Classmark 2 and the following octets correspond to Mobile Station Classmark 3. The Mobile Station Classmark 2 is formatted as 'TLV' and is coded in the same way as the *Mobile Station Classmark 2* information element in TS 24.008 [49]. The first octet is the *Mobile station classmark 2 IEI* and its value shall be set to 33H. The second octet is the Length of mobile station classmark 2 and its value shall be set to 3. The octet 3 contains the first octet of the value part of the *Mobile Station Classmark 2* information element, the octet 4 contains the second octet of the value part of the *Mobile Station Classmark 2* information element and so on. For each of these octets, the first/ leftmost/ most significant bit of the octet contains b8 of the corresponding octet of the Mobile Station Classmark 2. The Mobile Station Classmark 3 is formatted as 'V' and is coded in the same way as the value part in the *Mobile station classmark 3* information element in TS 24.008 [49]. The sixth octet of this octet string contains octet 1 of the value part of *Mobile station classmark 3*, the seventh of octet of this octet string contains octet 2 of the value part of *Mobile station classmark 3* and so on. Note.
- For GERAN PS: the encoding of UE capabilities is formatted as 'V' and is coded in the same way as the value part in the *MS Radio Access Capability* information element in TS 24.008 [49].
- For CDMA2000-1XRTT: the octet string contains the A21 Mobile Subscription Information and the encoding of this is defined in A.S0008 [33]. The A21 Mobile Subscription Information contains the supported CDMA2000 1xRTT band class and band sub-class information.

**NOTE:** The value part is specified by means of CSN.1, which encoding results in a bit string, to which final padding may be appended up to the next octet boundary TS 24.008 [49]. The first/ leftmost bit of the CSN.1 bit string is placed in the first/ leftmost/ most significant bit of the first octet. This continues until the last bit of the CSN.1 bit string, which is placed in the last/ rightmost/ least significant bit of the last octet.
The IE **UE-EUTRA-Capability** is used to convey the E-UTRA UE Radio Access Capability Parameters, see TS 36.306 [5], and the Feature Group Indicators for mandatory features (defined in Annexes B.1 and C.1) to the network. The IE **UE-EUTRA-Capability** is transferred in E-UTRA or in another RAT.

**NOTE 0:** For (UE capability specific) guidelines on the use of keyword OPTIONAL, see Annex A.3.5.

### **UE-EUTRA-Capability** information element

```asn1
UE-EUTRA-Capability ::= SEQUENCE {
    accessStratumRelease    AccessStratumRelease,
    ue-Category       INTEGER (1..5),
    pdcp-Parameters      PDCP-Parameters,

UE-EUTRA-Capability field descriptions

<table>
<thead>
<tr>
<th>Field Description</th>
<th>FDD/ TDD diff</th>
</tr>
</thead>
<tbody>
<tr>
<td>cch-InterMitigation-RefRecTypeA, cch-InterMitigation-RefRecTypeB, cch-InterMitigation-MaxNumCCs</td>
<td>-</td>
</tr>
<tr>
<td>The field cch-InterMitigation-RefRecTypeA defines whether the UE supports Type A downlink control channel interference mitigation (CCH-IM) receiver &quot;LMMSE-IRC + CRS-IC&quot; for PDCCH/PCFICH/PHICH/EPDCCH receive processing (Enhanced downlink control channel performance requirements Type A in the TS 36.101 [6]). The field cch-InterMitigation-RefRecTypeB defines whether the UE supports Type B downlink CCH-IM receiver &quot;E-LMMSE-IRC + CRS-IC&quot; for PDCCH/PCFICH/PHICH receive processing in synchronous networks (Enhanced downlink control channel performance requirements Type B in the TS 36.101 [6]). The UE supporting the capability defined by cch-InterMitigation-RefRecTypeB-r13 shall also support the capability defined by cch-InterMitigation-RefRecTypeA-r13.</td>
<td></td>
</tr>
</tbody>
</table>

If the UE sets one or more of the fields cch-InterMitigation-RefRecTypeA and cch-InterMitigation-RefRecTypeB to "supported", the UE shall include the parameter cch-InterMitigation-MaxNumCCs to indicate that the UE supports CCH-IM on at least one arbitrary downlink CC for up to cch-InterMitigation-MaxNumCCs downlink CC CA configuration. The UE shall not include the parameter cch-InterMitigation-MaxNumCCs if neither cch-InterMitigation-RefRecTypeA nor cch-InterMitigation-RefRecTypeB is present. The UE may not perform CCH-IM on more than 1 DL CCs. For example, the UE sets "cch-InterMitigation-MaxNumCCs = 3" to indicate that UE supports CCH-IM on at least one DL CC for supported non-CA, 2DL CA and 3DL CA configurations. For CA scenarios, the CCH-IM is guaranteed to be supported on at least one arbitrary component carrier.

cdma2000-NW-Sharing
Indicates whether the UE supports network sharing for CDMA2000.

Yes

closedLoopTxAntennaSelection
Indicates whether the UE supports UL closed-loop Tx antenna selection in CE mode A, as specified in TS 36.212 [22].

Yes

c-HARQ-AckBundling
Indicates whether the UE supports HARQ-ACK bundling in half duplex FDD in CE mode A, as specified in TS 36.212 [22] and TS 36.213 [23].

- 

c-ModeA, ce-ModeB
Indicates whether the UE supports operation in CE mode A and/or B, as specified in TS 36.211 [21] and TS 36.213 [23].

- 

cMeasurements
Indicates whether the UE supports intra-frequency RSRQ measurements and inter-frequency RSRP and RSRQ measurements in RRC_CONNECTED, as specified in TS 36.133 [16] and TS 36.304 [4].

- 

c-PDSCH-PUSCH-Enhancement
Indicates whether the UE supports new numbers of repetitions for PUSCH and modulation restrictions for PDSCH/PUSCH in CE mode A as specified in TS 36.212 [22] and TS 36.213 [23].

No 

c-PDSCH-PUSCH-MaxBandwidth
Indicates the maximum supported PDSCH/PUSCH channel bandwidth in CE mode A and B, as specified in TS 36.212 [22] and TS 36.213 [23]. Value bw5 corresponds to 5 MHz and value bw20 corresponds to 20 MHz. If the field is absent the maximum PDSCH/PUSCH channel bandwidth in CE mode A and B is 1.4 MHz. If the setting of this parameter is 20 MHz, the max supported PUSCH channel bandwidth in CE mode A is 5 MHz. The maximum PUSCH channel bandwidth in CE mode B is 1.4 MHz regardless of the setting of this parameter. Parameter: transmission bandwidth configuration, see TS 36.101 [42, table 5.6-1].

Yes 

c-PDSCH-TenProcesses
Indicates whether the UE supports 10 DL HARQ processes in FD FDD in CE mode A.

- 

c-PUCCH-Enhancement
Indicates whether the UE supports repetition levels 64 and 128 for PUCCH in CE Mode B, as specified in TS 36.211 [21] and in TS 36.213 [23].

No 

c-PUSCH-NB-MaxTBS
Indicates whether the UE supports 2984 bits max UL TBS in 1.4 MHz in CE mode A operation, as specified in TS 36.212 [22] and TS 36.213 [23].

Yes 

c-RetuningSymbols
Indicates the number of retuning symbols in CE mode A and B as specified in TS 36.211 [21]. Value n0 corresponds to 0 retuning symbols and value n1 corresponds to 1 retuning symbol. If the field is absent the number of retuning symbols in CE mode A and B is 2.

No 

c-SchedulingEnhancement
Indicates whether the UE supports dynamic HARQ-ACK delay in CE mode A as specified in TS 36.212 [22] and TS 36.213 [23].

No

## UE-EUTRA-Capability field descriptions

<table>
<thead>
<tr>
<th>Field Description</th>
<th>FDD/TDD diff</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>crs-InterMitigationTM1toTM9</strong></td>
<td>Indicates whether the UE supports CRS interference mitigation (IM) while operating in the following transmission modes (TM): TM 1, TM 2, ..., TM 8 and TM 9. The UE shall not include the field if it does not support CRS IM in TMs 1-9. If the field is present, the UE supports CRS-IM on at least one arbitrary downlink CC for up to <code>crs-InterMitigationTM1toTM9-r13</code> downlink CC CA configuration. The UE signals <code>crs-InterMitigationTM1toTM9-r13</code> value to indicate the maximum <code>crs-InterMitigationTM1toTM9-r13</code> downlink CC CA configuration where UE may apply CRS IM. For example, the UE sets &quot;crs-InterMitigationTM1toTM9-r13 = 3&quot; to indicate that the UE supports CRS-IM on at least one DL CC for supported non-CA, 2DL CA and 3DL CA configurations. The UE supporting the <code>crs-InterMitigationTM1toTM9-r13</code> capability shall also support the <code>crs-InterHandl-r11</code> capability.</td>
</tr>
<tr>
<td><strong>csi-RS-DiscoverySignalsMeas</strong></td>
<td>Indicates whether the UE supports CSI-RS based discovery signals measurement. If this field is included, the UE shall also include <code>csi-DiscoverySignalsMeas</code>.</td>
</tr>
<tr>
<td><strong>csi-RS-DRS-RRM-MeasurementsLAA</strong></td>
<td>Indicates whether the UE supports performing RRM measurements on LAA cell(s) based on CSI-RS-based DRS. This field can be included only if <code>downlinkLAA</code> is included.</td>
</tr>
<tr>
<td><strong>csi-RS-EnhancementsTDD</strong></td>
<td>Indicates for a particular transmission mode whether the UE supports CSI-RS enhancements applicable for TDD.</td>
</tr>
<tr>
<td><strong>csi-SubframeSet</strong></td>
<td>Indicates whether the UE supports REL-12 DL CSI subframe set configuration, REL-12 DL CSI subframe set dependent CSI measurement/feedback, configuration of up to 2 CSI-IM resources for a CSI process with no more than 4 CSI-IM resources for all CSI processes of one frequency if the UE supports tm10, configuration of two ZP-CI-RS for tm1 to tm9, PDSCH RE mapping with two ZP-CI-RS configurations, and EPDCCH RE mapping with two ZP-CI-RS configurations if the UE supports EPDCCH. This field is only applicable for UEs supporting TDD.</td>
</tr>
<tr>
<td><strong>dataInactMon</strong></td>
<td>Indicates whether the UE supports the data inactivity monitoring as specified in TS 36.321 [6].</td>
</tr>
<tr>
<td><strong>dc-Support</strong></td>
<td>Including this field indicates that the UE supports synchronous DC and power control mode 1. Including this field for a band combination entry comprising of single band entry indicates that the UE supports intra-band contiguous DC. Including this field for a band combination entry comprising of two or more band entries, indicates that the UE supports DC for these bands and that the serving cells corresponding to a band entry shall belong to one cell group (i.e. MCG or SCG). Including field <code>asynchronous</code> indicates that the UE supports asynchronous DC and power control mode 2. Including this field for a TDD/FDD band combination indicates that the UE supports TDD/FDD DC for this band combination.</td>
</tr>
<tr>
<td><strong>delayBudgetReporting</strong></td>
<td>Indicates whether the UE supports delay budget reporting.</td>
</tr>
<tr>
<td><strong>demodulationEnhancements</strong></td>
<td>This field defines whether the UE supports advanced receiver in SFN scenario as specified in TS 36.101 [42].</td>
</tr>
<tr>
<td><strong>deviceType</strong></td>
<td>UE may set the value to &quot;noBenFromBatConsumpOpt&quot; when it does not foresee to particularly benefit from NW-based battery consumption optimisation. Absence of this value means that the device does benefit from NW-based battery consumption optimisation.</td>
</tr>
<tr>
<td><strong>diffFallbackCombReport</strong></td>
<td>Indicates that the UE supports reporting of UE radio access capabilities for the CA band combinations asked by the eNB as well as, if any, reporting of different UE radio access capabilities for their fallback band combination as specified in TS 36.331 [5]. The UE does not report fallback combinations if their UE radio access capabilities are the same as the ones for the CA band combination asked by the eNB.</td>
</tr>
<tr>
<td><strong>differentFallbackSupported</strong></td>
<td>Indicates that the UE supports different capabilities for at least one fallback case of this band combination.</td>
</tr>
<tr>
<td><strong>discInterFreqTx</strong></td>
<td>Indicates whether the UE support sidelink discovery announcements either a) on the primary frequency only or b) on other frequencies also, regardless of the UE configuration (e.g. CA, DC). The UE may set <code>discInterFreqTx</code> to supported when having a separate transmitter or if it can request sidelink discovery transmission gaps.</td>
</tr>
</tbody>
</table>
**UE-EUTRA-Capability field descriptions**

<table>
<thead>
<tr>
<th>Field Description</th>
<th>FDD/ TDD diff</th>
</tr>
</thead>
<tbody>
<tr>
<td>discoverySignalsInDeactSCell</td>
<td>Indicates whether the UE supports the behaviour on DL signals and physical channels when SCell is deactivated and discovery signals measurement is configured as specified in TS 36.211 [21, 6.11A]. This field is included only if UE supports carrier aggregation and includes crs-DiscoverySignalsMeas.</td>
</tr>
<tr>
<td>discPeriodicSLSS</td>
<td>Indicates whether the UE supports periodic (i.e. not just one time before sidelink discovery announcement) Sidelink Synchronization Signal (SLSS) transmission and reception for sidelink discovery.</td>
</tr>
<tr>
<td>discScheduledResourceAlloc</td>
<td>Indicates whether the UE supports transmission of discovery announcements based on network scheduled resource allocation.</td>
</tr>
<tr>
<td>disc-UE-SelectedResourceAlloc</td>
<td>Indicates whether the UE supports transmission of discovery announcements based on UE autonomous resource selection.</td>
</tr>
<tr>
<td>disc-SLSS</td>
<td>Indicates whether the UE supports Sidelink Synchronization Signal (SLSS) transmission and reception for sidelink discovery.</td>
</tr>
<tr>
<td>discSupportedBands</td>
<td>Indicates the bands on which the UE supports sidelink discovery. One entry corresponding to each supported E-UTRA band, listed in the same order as in supportedBandListEUTRA.</td>
</tr>
<tr>
<td>discSupportedProc</td>
<td>Indicates the number of processes supported by the UE for sidelink discovery.</td>
</tr>
<tr>
<td>discSysInfoReporting</td>
<td>Indicates whether the UE supports reporting of system information for inter-frequency/PLMN sidelink discovery.</td>
</tr>
<tr>
<td>dl-256QAM</td>
<td>Indicates whether the UE supports 256QAM in DL on the band.</td>
</tr>
<tr>
<td>dmrs-Enhancements (in MIMO-CA-ParametersPerBoBCPerTM)</td>
<td>If signalled, the field indicates for a particular transmission mode, that for the concerned band combination the DMRS enhancements are different than the value indicated by field dmrs-Enhancements in MIMO-UE-ParametersPerTM.</td>
</tr>
<tr>
<td>dmrs-Enhancements (in MIMO-UE-ParametersPerTM)</td>
<td>Indicates for a particular transmission mode whether the UE supports DMRS enhancements for the indicated transmission mode.</td>
</tr>
<tr>
<td>dmrs-LessUpPTS</td>
<td>Indicates whether the UE supports not to transmit DMRS for PUSCH in UpPTS.</td>
</tr>
<tr>
<td>downlinkLAA</td>
<td>Presence of the field indicates that the UE supports downlink LAA operation including identification of downlink transmissions on LAA cell(s) for full downlink subframes, decoding of common downlink control signalling on LAA cell(s), CSI feedback for LAA cell(s), RRM measurements on LAA cell(s) based on CRS-based DRS.</td>
</tr>
<tr>
<td>drb-TypeSCG</td>
<td>Indicates whether the UE supports SCG bearer.</td>
</tr>
<tr>
<td>drb-TypeSplit</td>
<td>Indicates whether the UE supports split bearer except for PDCP data transfer in UL.</td>
</tr>
<tr>
<td>dtm</td>
<td>Indicates whether the UE supports DTM in GERAN.</td>
</tr>
<tr>
<td>e-CSFB-1XRTT</td>
<td>Indicates whether the UE supports enhanced CS fallback to CDMA2000 1xRTT or not.</td>
</tr>
<tr>
<td>e-CSFB-ConcPS-Mob1XRTT</td>
<td>Indicates whether the UE supports concurrent enhanced CS fallback to CDMA2000 1xRTT and PS handover/ redirection to CDMA2000 HRPD.</td>
</tr>
<tr>
<td>e-CSFB-dual-1XRTT</td>
<td>Indicates whether the UE supports enhanced CS fallback to CDMA2000 1xRTT for dual Rx/Tx configuration. This bit can only be set to supported if tx-Config1XRTT and rx-Config1XRTT are both set to dual.</td>
</tr>
<tr>
<td>e-HARQ-Pattern-FDD</td>
<td>Indicates whether the UE supports enhanced HARQ pattern for TTI bundling operation for FDD.</td>
</tr>
<tr>
<td>emptyUnicastRegion</td>
<td>Indicates whether the UE supports unicast reception in subframes with empty unicast control region as described in TS 36.213 [23] Section 12. This field can be included only if unicast-fembmsMixedSCell and crossCarrierScheduling are included.</td>
</tr>
</tbody>
</table>
### UE-EUTRA-Capability field descriptions

<table>
<thead>
<tr>

<tr>
<td><strong>SupportedBandListHRPD</strong></td>
<td>One entry corresponding to each supported CDMA2000 HRPD band class.</td>
</tr>
</tbody>
</table>
**supportedBandListWLAN**
Indicates the supported WLAN bands by the UE.

**SupportedBandUTRA-FDD**
UTRA band as defined in TS 25.101 [17].

**SupportedBandUTRA-TDD128**
UTRA band as defined in TS 25.102 [18].

**SupportedBandUTRA-TDD384**
UTRA band as defined in TS 25.102 [18].

**SupportedBandUTRA-TDD768**
UTRA band as defined in TS 25.102 [18].

**supportedBandwidthCombinationSet**
The supportedBandwidthCombinationSet indicated for a band combination is applicable to all bandwidth classes indicated by the UE in this band combination. The field encoded as a bit map, where bit N is set to "1" if UE support Bandwidth Combination Set N for this band combination, see 36.101 [42]. The leading / leftmost bit (bit 0) corresponds to the Bandwidth Combination Set 0, the next bit corresponds to the Bandwidth Combination Set 1 and so on. The UE shall neither include the field for a non-CA band combination, nor for a CA band combination for which the UE only supports Bandwidth Combination Set 0.

**supportedCellGrouping**
This field indicates for which mapping of serving cells to cell groups (i.e. MCG or SCG) the UE supports asynchronous DC. This field is only present for a band combination with more than two but less than six band entries where the UE supports asynchronous DC. If this field is not present but asynchronous operation is supported, the UE supports all possible mappings of serving cells to cell groups for the band combination. The bitmap size is selected based on the number of entries in the combinations, i.e., in case of three entries, the bitmap corresponding to threeEntries is selected and so on. A bit in the bit string set to 1 indicates that the UE supports asynchronous DC for the cell grouping option represented by the concerned bit position. Each bit position represents a different cell grouping option, as illustrated by a table, see NOTE 5. A cell grouping option is represented by a number of bits, each representing a particular band entry in the band combination with the left-most bit referring to the band listed first in the band combination, etc. Value 0 indicates that the carriers of the corresponding band entry are mapped to a first cell group, while value 1 indicates that the carriers of the corresponding band entry are mapped to a second cell group. It is noted that the mapping table does not include entries with all bits set to the same value (0 or 1) as this does not represent a DC scenario (i.e. indicating that the UE supports that all carriers of the corresponding band entry are in one cell group).

**supportedCSI-Proc**
Indicates the maximum number of CSI processes supported on a component carrier within a band. Value n1 corresponds to 1 CSI process, value n3 corresponds to 3 CSI processes, and value n4 corresponds to 4 CSI processes. If this field is included, the UE shall include the same number of entries listed in the same order as in BandParameters. If the UE supports at least 1 CSI process on any component carrier, then the UE shall include this field in all bands in all band combinations.

**supportedNAICS-2CRS-AP**
If included, the UE supports NAICS for the band combination. The UE shall include a bitmap of the same length, and in the same order, as in naics-Capability-List, to indicate 2 CRS AP NAICS capability of the band combination. The first/ leftmost bit points to the first entry of naics-Capability-List, the second bit points to the second entry of naics-Capability-List, and so on.

For band combinations with a single component carrier, UE is only allowed to indicate (numberOfNAICS-CapableCC, numberOfAggregatedPRB) = (1, 100) if NAICS is supported.

**supportRohcContextContinue**
Indicates whether the UE supports ROHC context continuation operation where the UE does not reset the current ROHC context upon handover.

**supportedROHC-Profiles**
Indicates the ROHC profiles that UE supports in both uplink and downlink.

**supportedUplinkOnlyROHC-Profiles**
Indicates the ROHC profiles that UE supports in uplink and not in downlink, see TS 36.323 [8]

**switchingBandA, switchingBandB**
Indicates the two bands in the band pair for SRS transmission on a PUSCH-less SCell, as specified in 36.212 [22] and 36.213 [23]. switchingBandA can be equal to switchingBandB.

**tdd-SpecialSubframe**
Indicates whether the UE supports TDD special subframe defined in TS 36.211 [21]. A UE shall indicate tdd-SpecialSubframe-r11 if it supports the TDD special subframes ssp7 and ssp9. A UE shall indicate tdd-SpecialSubframe-r14 if it supports the TDD special subframe ssp10.
### UE-EUTRA-Capability field descriptions

<table>
<thead>
<tr>
<th>Field Description</th>
<th>FDD/TDD diff</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>tdd-FDD-CA-PCellDuplex</strong></td>
<td></td>
</tr>
<tr>
<td>The presence of this field indicates that the UE supports TDD/FDD CA in any supported band combination including at least one FDD band with bandParametersUL and at least one TDD band with bandParametersUL. The first bit is set to &quot;1&quot; if UE supports the TDD PCell. The second bit is set to &quot;1&quot; if UE supports FDD PCell. This field is included only if the UE supports band combination including at least one FDD band with bandParametersUL and at least one TDD band with bandParametersUL. If this field is included, the UE shall set at least one of the bits as &quot;1&quot;. If this field is included with DC, then it is applicable within a CG, and the presence of this field indicates the capability of the UE to support TDD/FDD CA with at least one FDD band and at least one TDD band in the same CG, with the value indicating the support for TDD/FDD PCell (PScell).</td>
<td></td>
</tr>
<tr>
<td><strong>tdd-TTI-Bunding</strong></td>
<td>No</td>
</tr>
<tr>
<td>The presence of this field indicates whether the UE supporting TDD special subframe configuration 10 also supports TTI bundling for TDD configuration 2 and 3 when PUSCH transmission in UpPDSCH is configured, see TS 36.213 [23, 8.0]. If this field is present, the tdd-SpecialSubframe-r14 shall be present.</td>
<td></td>
</tr>
<tr>
<td><strong>timerT312</strong></td>
<td>No</td>
</tr>
<tr>
<td>Indicates whether the UE supports T312.</td>
<td></td>
</tr>
<tr>
<td><strong>tm5-FDD</strong></td>
<td>-</td>

<tr>
<td><strong>ue-SSTD-Meas</strong></td>
<td></td>
</tr>
<tr>
<td>Indicates whether the UE supports SSTD measurements between the PCell and the PSCell as specified in TS 36.214 [48] and TS 36.133 [16].</td>
<td></td>
</tr>
<tr>
<td><strong>ue-TxAntennaSelectionSupported</strong></td>
<td></td>
</tr>
<tr>
<td>TRUE indicates that the UE is capable of supporting UE transmit antenna selection as described in TS 36.213 [23, 8.7].</td>
<td></td>
</tr>
<tr>
<td><strong>ul-CoMP</strong></td>
<td></td>
</tr>
<tr>
<td>Indicates whether the UE supports UL Coordinated Multi-Point operation.</td>
<td></td>
</tr>
<tr>
<td><strong>ul-64QAM</strong></td>
<td></td>
</tr>
<tr>
<td>Indicates whether the UE supports 64QAM in UL on the band. This field is only present when the field <strong>ue-CategoryUL</strong> indicates UL UE category that supports UL 64QAM, see TS 36.306 [5, Table 4.1A-2]. If the field is present for one band, the field shall be present for all bands including downlink only bands.</td>
<td></td>
</tr>
<tr>
<td><strong>ul-256QAM</strong></td>
<td></td>
</tr>
<tr>
<td>Indicates whether the UE supports 256QAM in UL on the band in the band combination. The number of entries is equal to the number of component carriers in the corresponding bandwidth class. The UE shall support the setting indicated in each entry of the list regardless of the order of entries in the list. This field is only present when the field <strong>ue-CategoryUL</strong> indicates UL UE category that supports 256QAM in UL, see TS 36.306 [5, Table 4.1A-2]. The UE includes this field only if the field <strong>ul-256QAM-perCC-InfoList</strong> is not included.</td>
<td></td>
</tr>
<tr>
<td><strong>ul-256QAM-perCC-InfoList</strong></td>
<td></td>
</tr>
<tr>
<td>Indicates, per serving carrier of which the corresponding bandwidth class includes multiple serving carriers (i.e. bandwidth class B, C, D and so on), whether the UE supports 256QAM in the band combination. The number of entries is equal to the number of component carriers in the corresponding bandwidth class. The UE shall support the setting indicated in each entry of the list regardless of the order of entries in the list. This field is only present when the field <strong>ue-CategoryUL</strong> indicates UL UE category that supports 256QAM in UL, see TS 36.306 [5, Table 4.1A-2]. The UE includes this field only if the field <strong>ul-256QAM</strong> is not included.</td>
<td></td>
</tr>
<tr>
<td><strong>ul-PDCP-Delay</strong></td>
<td></td>
</tr>
<tr>
<td>Indicates whether the UE supports UL PDCP Packet Delay per QCI measurement as specified in TS 36.314 [71].</td>
<td></td>
</tr>
<tr>
<td><strong>uplinkLAA</strong></td>
<td></td>
</tr>
<tr>
<td>Presence of the field indicates that the UE supports uplink LAA operation.</td>
<td></td>
</tr>
<tr>
<td><strong>uss-BlindDecodingAdjustment</strong></td>
<td></td>
</tr>
<tr>
<td>Indicates whether the UE supports blind decoding adjustment on UE specific search space as defined in TS 36.213 [22]. This field can be included only if uplinkLAA is included.</td>
<td></td>
</tr>
<tr>
<td><strong>uss-BlindDecodingReduction</strong></td>
<td></td>
</tr>
<tr>
<td>Indicates whether the UE supports blind decoding reduction on UE specific search space by not monitoring DCI format 0A/0B/4A/4B as defined in TS 36.213 [22]. This field can be included only if uplinkLAA is included.</td>
<td></td>
</tr>

<tr>
<td>Indicates whether the UE supports reception of 20 PSCCH in a subframe and decoding of 136 RBs per subframe counting both PSCCH and PSSCH in a band for V2X sidelink communication.</td>
<td></td>
</tr>
<tr>
<td><strong>v2x-nonAdjacentPSCCH-PSSCH</strong></td>
<td></td>
</tr>
<tr>
<td>Indicates whether the UE supports transmission and reception in the configuration of non-adjacent PSCCH and PSSCH for V2X sidelink communication.</td>
<td></td>
</tr>
<tr>
<td><strong>v2x-numberTxRxTiming</strong></td>
<td></td>
</tr>
<tr>
<td>Indicates the number of multiple reference TX/RX timings counted over all the configured sidelink carriers for V2X sidelink communication.</td>
<td></td>
</tr>
<tr>
<td><strong>v2x-SupportedBandCombinationList</strong></td>
<td></td>
</tr>
<tr>
<td>Indicates the supported band combination list on which the UE supports simultaneous transmission and/or reception of V2X sidelink communication.</td>
<td></td>
</tr>
<tr>
<td><strong>v2x-SupportedBandCombListPerBC</strong></td>
<td></td>
</tr>
<tr>
<td>Indicates, for a particular band combination of EUTRA, the supported band combination list among v2x-SupportedBandCombinationList on which the UE supports simultaneous transmission and/or reception of EUTRA and V2X sidelink communication respectively.</td>
<td></td>
</tr>
<tr>
<td><strong>v2x-TxWithShortResvInterval</strong></td>
<td></td>
</tr>
<tr>
<td>Indicates whether the UE supports 20 ms and 50 ms resource reservation periods for UE autonomous resource selection and eNB scheduled resource allocation for V2X sidelink communication.</td>
<td></td>
</tr>
<tr>
<td><strong>voiceOverPS-HS-UTRA-FDD</strong></td>
<td></td>
</tr>
<tr>
<td>Indicates whether UE supports IMS voice according to GSMA IR.58 profile in UTRA FDD.</td>
<td></td>
</tr>
<tr>
<td><strong>voiceOverPS-HS-UTRA-TDD128</strong></td>
<td></td>
</tr>
<tr>
<td>Indicates whether UE supports IMS voice in UTRA TDD 1.28Mcps.</td>
<td></td>
</tr>
<tr>
<td><strong>whiteCellList</strong></td>
<td></td>
</tr>
<tr>
<td>Indicates whether the UE supports EUTRA white cell listing to limit the set of cells applicable for measurements.</td>
<td></td>
</tr>
<tr>
<td><strong>wlan-IW-RAN-Rules</strong></td>
<td></td>
</tr>
<tr>
<td>Indicates whether the UE supports RAN-assisted WLAN interworking based on access network selection and traffic steering rules.</td>
<td></td>
</tr>
<tr>
<td><strong>wlan-IW-ANDSF-Policies</strong></td>
<td></td>
</tr>
<tr>
<td>Indicates whether the UE supports RAN-assisted WLAN interworking based on ANDSF policies.</td>
<td></td>
</tr>
<tr>
<td><strong>wlan-MAC-Address</strong></td>
<td></td>
</tr>
<tr>
<td>Indicates the WLAN MAC address of this UE.</td>
<td></td>
</tr>
<tr>
<td><strong>wlan-PeriodicMeas</strong></td>
<td></td>
</tr>
<tr>
<td>Indicates whether the UE supports periodic reporting of WLAN measurements.</td>
<td></td>
</tr>
</tbody>
</table>
NOTE 1: The IE `UE-EUTRA-Capability` does not include AS security capability information, since these are the same as the security capabilities that are signalled by NAS. Consequently AS need not provide "man-in-the-middle" protection for the security capabilities.

NOTE 2: The column FDD/ TDD diff indicates if the UE is allowed to signal, as part of the additional capabilities for an XDD mode i.e. within `UE-EUTRA-CapabilityAddXDD-Mode-xNM`, a different value compared to the value signalled elsewhere within `UE-EUTRA-Capability` (i.e. the common value, supported for both XDD modes). A '-' is used to indicate that it is not possible to signal different values (used for fields for which the field description is provided for other reasons). Annex E specifies for which TDD and FDD serving cells a UE supporting TDD/FDD CA shall support a capability for which it indicates support within the capability signalling.

NOTE 3: The `BandCombinationParameters` for the same band combination can be included more than once.

NOTE 4: UE CA and measurement capabilities indicate the combinations of frequencies that can be configured as serving frequencies.

NOTE 5: The grouping of the cells to the first and second cell group, as indicated by `supportedCellGrouping`, is shown in the table below. The leading / leftmost bit of `supportedCellGrouping` corresponds to the Bit String Position 1.

<table>
<thead>
<tr>
<th>Nr of Band Entries:</th>

</tbody>
</table>

NOTE 6: UE includes the `intraBandContiguousCC-InfoList-r12` also for bandwidth class A because of the presence conditions in `BandCombinationParameters-v1270`. For example, if UE supports CA_1A_41D band combination, if UE includes the field `intraBandContiguousCC-InfoList-r12` for band 41, the UE includes `intraBandContiguousCC-InfoList-r12` also for band 1.
NOTE 7: For a UE that indicates release X in field accessStratumRelease but supports a feature specified in release X+N (i.e. early UE implementation), the ASN.1 comprehension requirement are specified in Annex F.

— **UE-RadioPagingInfo**

The **UE-RadioPagingInfo** IE contains UE capability information needed for paging.

**UE-RadioPagingInfo information element**

```asn1
UE-RadioPagingInfo-r12 ::= SEQUENCE {
    ue-Category-v1250         INTEGER (0)   OPTIONAL,
    ...,
    [[
        ue-CategoryDL-v1310          ENUMERATED {ml}            OPTIONAL,
        ce-ModeA-r13             ENUMERATED {true}       OPTIONAL,
        ce-ModeB-r13             ENUMERATED {true}       OPTIONAL
    ]]
}
```

**UE-RadioPagingInfo field descriptions**

- **ce-ModeA, ce-ModeB**
  Indicates whether the UE supports operation in CE mode A and/or B, as specified in TS 36.211 [21] and TS 36.213 [23].

- **ue-Category, ue-CategoryDL**
  UE category as defined in TS 36.306 [5]. A category M2 UE shall always include the field ue-CategoryDL-v1310 in this version of the specification.

— **UE-TimersAndConstants**

The IE **UE-TimersAndConstants** contains timers and constants used by the UE in either RRC_CONNECTED or RRC_IDLE.

**UE-TimersAndConstants information element**

```asn1
UE-TimersAndConstants ::= SEQUENCE {
    t300        ENUMERATED {
        ms100, ms200, ms300, ms400, ms600, ms1000, ms1500,

        ms10000}    OPTIONAL -- Need OR
    ]],
    ][[ t310-v1330         ENUMERATED {ms4000, ms6000}
        OPTIONAL -- Need OR
    ]]
```
---

**UE-TimersAndConstants field descriptions**

| n3xy | Constants are described in section 7.4. n1 corresponds with 1, n2 corresponds with 2 and so on. |
| t3xy | Timers are described in section 7.3. Value ms0 corresponds with 0 ms, ms50 corresponds with 50 ms and so on. EUTRAN includes an extended value t3xy-v1310 and t3xy-v1330 only in the Bandwidth Reduced (BR) version of the SIB. UEs that support Coverage Enhancement (CE) mode B shall use the extended values t3xy-v1310 and t3xy-v1330, if present, and ignore the value signaled by t3xy (without the suffix). |

---

**VisitedCellInfoList**

The IE VisitedCellInfoList includes the mobility history information of maximum of 16 most recently visited cells or time spent outside E-UTRA. The most recently visited cell is stored first in the list. The list includes cells visited in RRC_IDLE and RRC_CONNECTED states.

**VisitedCellInfoList information element**

```asn1
VisitedCellInfoList-r12 ::= SEQUENCE (SIZE (1..maxCellHistory-r12)) OF VisitedCellInfo-r12

VisitedCellInfo-r12 ::= SEQUENCE { visitedCellId-r12 CHOICE { cellGlobalId-r12 CellGlobalIdEUTRA, pci-arfcn-r12 SEQUENCE { physCellId-r12 PhysCellId, carrierFreq-r12 ARFCN-ValueEUTRA-r9 } } OPTIONAL, timeSpent-r12 INTEGER (0..4095), ... }
```

---

**VisitedCellInfoList field descriptions**

| timeSpent | This field indicates the duration of stay in the cell or outside E-UTRA approximated to the closest second. If the duration of stay exceeds 4095s, the UE shall set it to 4095s. |

---

**WLAN-OffloadConfig**

The IE WLAN-OffloadConfig includes information for traffic steering between E-UTRAN and WLAN. The fields are applicable to both RAN-assisted WLAN interworking based on access network selection and traffic steering rules and RAN-assisted WLAN interworking based on ANDSF policies unless stated otherwise in the field description.

**WLAN-OffloadConfig information element**

```asn1

-- ASN1STOP
**WLAN-OffloadConfig field descriptions**

- **offloadPreferenceIndicator**
  Indicates the offload preference indicator. Parameter: OPI in TS 24.312 [66]. Only applicable to RAN-assisted WLAN interworking based on ANDSF policies.

- **thresholdBackhaulDLBandwidth-High**
  Indicates the backhaul available downlink bandwidth threshold used by the UE for traffic steering to WLAN. Parameter: Thresh\(_{\text{BackhaulRateDLWLAN, High}}\) in TS 36.304 [4]. Value in kilobits/second. Value \( rN \) corresponds to \( N \) kbps.

- **thresholdBackhaulDLBandwidth-Low**
  Indicates the backhaul available downlink bandwidth threshold used by the UE for traffic steering to E-UTRAN. Parameter: Thresh\(_{\text{BackhaulRateDLWLAN, Low}}\) in TS 36.304 [4]. Value in kilobits/second. Value \( rN \) corresponds to \( N \) kbps.

- **thresholdBackhaulULBandwidth-High**
  Indicates the backhaul available uplink bandwidth threshold used by the UE for traffic steering to WLAN. Parameter: Thresh\(_{\text{BackhaulRateULWLAN, High}}\) in TS 36.304 [4]. Value in kilobits/second. Value \( rN \) corresponds to \( N \) kbps.

- **thresholdBackhaulULBandwidth-Low**
  Indicates the backhaul available uplink bandwidth threshold used by the UE for traffic steering to E-UTRAN. Parameter: Thresh\(_{\text{BackhaulRateULWLAN, Low}}\) in TS 36.304 [4]. Value in kilobits/second. Value \( rN \) corresponds to \( N \) kbps.

- **thresholdChannelUtilization-High**
  Indicates the WLAN channel utilization (BSS load) threshold used by the UE for traffic steering to E-UTRAN. Parameter: Thresh\(_{\text{ChUtilWLAN, High}}\) in TS 36.304 [4].

- **thresholdChannelUtilization-Low**
  Indicates the WLAN channel utilization (BSS load) threshold used by the UE for traffic steering to WLAN. Parameter: Thresh\(_{\text{ChUtilWLAN, Low}}\) in TS 36.304 [4].

- **thresholdRSRP-High**
  Indicates the RSRP threshold (in dBm) used by the UE for traffic steering to E-UTRAN. Parameter: Thresh\(_{\text{ServingOffloadWLAN, High}}\) in TS 36.304 [4].

- **thresholdRSRP-Low**
  Indicates the RSRP threshold (in dBm) used by the UE for traffic steering to WLAN. Parameter: Thresh\(_{\text{ServingOffloadWLAN, Low}}\) in TS 36.304 [4].

- **thresholdRSRQ-High, thresholdRSRQ-OnAllSymbolsHigh, thresholdRSRQ-WB-High, thresholdRSRQ-OnAllSymbolsWithWB-High**
  Indicates the RSRQ threshold (in dB) used by the UE for traffic steering to E-UTRAN. Parameter: Thresh\(_{\text{ServingOffloadWLAN, HighQ}}\) in TS 36.304 [4]. The UE shall only apply one of threshold values of thresholdRSRQ-\( OnAllSymbolsWithWB-High \), thresholdRSRQ-\( OnAllSymbolsHigh \), thresholdRSRQ-\( WB-High \) and thresholdRSRQ-High as present in wlan-OffloadConfigCommon and forward this to upper layer. NOTE 1.

- **thresholdRSRQ-Low, thresholdRSRQ-OnAllSymbolsLow, thresholdRSRQ-WB-Low, thresholdRSRQ-OnAllSymbolsWithWB-Low**
  Indicates the RSRQ threshold (in dB) used by the UE for traffic steering to WLAN. Parameter: Thresh\(_{\text{ServingOffloadWLAN, LowQ}}\) in TS 36.304 [4]. The UE shall only apply one of threshold values of thresholdRSRQ-\( OnAllSymbolsWithWB-Low \), thresholdRSRQ-\( OnAllSymbolsLow \), thresholdRSRQ-\( WB-Low \) and thresholdRSRQ-Low as present in wlan-OffloadConfigCommon and forward this to upper layer. NOTE 1.

- **thresholdWLAN-RSSI-High**
  Indicates the WLAN RSSI threshold used by the UE for traffic steering to WLAN. Parameter: Thresh\(_{\text{WLANRSSI, High}}\) in TS 36.304 [4]. Value 0 corresponds to -128dBm, 1 corresponds to -127dBm and so on.

- **thresholdWLAN-RSSI-Low**
  Indicates the WLAN RSSI threshold used by the UE for traffic steering to E-UTRAN. Parameter: Thresh\(_{\text{WLANRSSI, Low}}\) in TS 36.304 [4]. Value 0 corresponds to -128dBm, 1 corresponds to -127dBm and so on.

- **t-SteeringWLAN**
  Indicates the timer value during which the rules should be fulfilled before starting traffic steering between E-UTRAN and WLAN. Parameter: Tsteering\(_{\text{WLAN}}\) in TS 36.304 [4]. Only applicable to RAN-assisted WLAN interworking based on access network selection and traffic steering rules.

**NOTE 1:** Within SIB17, E-UTRAN includes the fields corresponding to same RSRQ types as included in SIB1. E.g. if E-UTRAN includes \( q_{-}\text{QualMinRSRQ-\( OnAllSymbols \)} \) in SIB1 it also includes thresholdRSRQ-\( OnAllSymbols \) in SIB17. Within the RRCConnectionReconfiguration message E-UTRAN only includes thresholdRSRQ, setting the value according to the RSRQ type used for E-UTRAN. The UE shall apply the RSRQ fields (RSRQ threshold, high and low) corresponding to one RSRQ type i.e. the same as it applies for E-UTRAN.
6.3.7 MBMS information elements

– MBMS-NotificationConfig

The IE MBMS-NotificationConfig specifies the MBMS notification related configuration parameters, that are applicable for all MBSFN areas.

**MBMS-NotificationConfig** information element

```
-- ASN1START
MBMS-NotificationConfig-r9 ::= SEQUENCE {
    notificationRepetitionCoeff-r9    ENUMERATED {n2, n4},
    notificationOffset-r9    INTEGER (0..10),
    notificationSF-Index-r9    INTEGER (1..6)
}

MBMS-NotificationConfig-v1430 ::= SEQUENCE {
    notificationSF-Index-v1430    INTEGER (7..10)
}
-- ASN1STOP
```

**MBMS-NotificationConfig** field descriptions

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>notificationOffset</td>
<td>Indicates, together with the notificationRepetitionCoeff, the radio frames in which the MCCH information change notification is scheduled i.e. the MCCH information change notification is scheduled in radio frames for which: SFN mod notification repetition period = notificationOffset.</td>
</tr>
<tr>
<td>notificationRepetitionCoeff</td>
<td>Actual change notification repetition period common for all MCCHs that are configured= shortest modification period/ notificationRepetitionCoeff. The ‘shortest modification period’ corresponds with the lowest value of mcch-ModificationPeriod of all MCCHs that are configured. Value n2 corresponds to coefficient 2, and so on.</td>
</tr>
<tr>
<td>notificationSF-Index</td>
<td>Indicates the subframe used to transmit MCCH change notifications on PDCCH. FDD: Value 1, 2, 3, 4, 5 and 6 correspond with subframe #1, #2, #3 #6, #7, and #8 respectively. Value 7, 8 and 10 correspond with subframe #0, #4, #5 and #9 respectively. If notificationSF-Index-v1430 is included, UE ignores notificationSF-Index-r9. TDD: Value 1, 2, 3, 4, and 5 correspond with subframe #3, #4, #7, #8, and #9 respectively.</td>
</tr>
</tbody>
</table>

– MBMS-ServiceList

The IE MBMS-ServiceList provides the list of MBMS services which the UE is receiving or interested to receive.

**MBMS-ServiceList** information element

```
-- ASN1START
MBMS-ServiceList-r13 ::= SEQUENCE (SIZE (0..maxMBMS-ServiceListPerUE-r13)) OF MBMS-ServiceInfo-r13

MBMS-ServiceInfo-r13 ::= SEQUENCE {
    tmgi-r13       TMGI-r9
}
-- ASN1STOP
```

– MBSFN-AreaId

The IE MBSFN-AreaId identifies an MBSFN area by means of a locally unique value at lower layers i.e. it concerns parameter \( N_{ID}^{MBSFN} \) in TS 36.211 [21, 6.10.2.1].

**MBSFN-AreaId** information element

```
-- ASN1START
```
The IE MBSFN-AreaInfoList contains the information required to acquire the MBMS control information associated with one or more MBSFN areas.

MBSFN-AreaInfoList information element

-- ASN1START

MBSFN-AreaInfoList-r9 ::= SEQUENCE (SIZE(1..maxMBSFN-Area)) OF MBSFN-AreaInfo-r9

MBSFN-AreaInfo-r9 ::= SEQUENCE { mbsfn-AreaId-r9 MBSFN-AreaId-r12, non-MBSFNregionLength ENUMERATED {s1, s2}, notificationIndicator-r9 INTEGER (0..7), mcch-Config-r9 SEQUENCE { mcch-RepetitionPeriod-r9 ENUMERATED {rf32, rf64, rf128, rf256}, mcch-Offset-r9 INTEGER (0..10), mcch-ModificationPeriod-r9 ENUMERATED {rf512, rf1024}, sf-AllocInfo-r9 BIT STRING (SIZE(6)), signallingMCS-r9 ENUMERATED {n2, n7, n13, n19} }, ...}

[[ mcch-Config-v1430 SEQUENCE { mcch-RepetitionPeriod-v1430 ENUMERATED {rf1, rf2, rf4, rf8, rf16 } OPTIONAL, -- Need OR mcch-ModificationPeriod-v1430 ENUMERATED {rf1, rf2, rf4, rf8, rf16, rf32, rf64, rf128, rf256, spare7} OPTIONAL -- Need OR } OPTIONAL, -- Need OR subcarrierSpacingMBMS-r14 ENUMERATED {khz-7dot5, khz-1dot25} OPTIONAL -- Need OR ]]]

-- ASN1STOP
**MBSFN-AreaInfoList field descriptions**

**mcch-ModificationPeriod**
Defines periodically appearing boundaries, i.e. radio frames for which SFN mod mcch-ModificationPeriod = 0. The contents of different transmissions of MCCH information can only be different if there is at least one such boundary in-between them. In case mcch-ModificationPeriod-v1430 is configured, the UE shall ignore the mcch-ModificationPeriod-r9.

**mcch-Offset**
Indicates, together with the mcch-RepetitionPeriod, the radio frames in which MCCH is scheduled i.e. MCCH is scheduled in radio frames for which: SFN mod mcch-RepetitionPeriod = mcch-Offset.

**mcch-RepetitionPeriod**
Defines the interval between transmissions of MCCH information, in radio frames. Value r32 corresponds to 32 radio frames, r64 corresponds to 64 radio frames and so on. In case mcch-RepetitionPeriod-v1430 is configured, the UE shall ignore the mcch-RepetitionPeriod-r9.

**non-MBSFNregionLength**
Indicates how many symbols from the beginning of the subframe constitute the non-MBSFN region. This value applies in all subframes of the MBSFN area used for PMCH transmissions as indicated in the MSI. The values s1 and s2 correspond with 1 and 2 symbols, respectively: see TS 36.211 [21, Table 6.7-1].

**notificationIndicator**
Indicates which PDCCH bit is used to notify the UE about change of the MCCH applicable for this MBSFN area. Value 0 corresponds with the least significant bit as defined in TS 36.212 [22, 5.3.3.1] and so on.

**sf-AlloCinfo**
Indicates the subframes of the radio frames indicated by the mcch-RepetitionPeriod and the mcch-Offset, that may carry MCCH. Value “1” indicates that the corresponding subframe is allocated. The following mapping applies: FDD: The first/ leftmost bit defines the allocation for subframe #1 of the radio frame indicated by mcch-RepetitionPeriod and mcch-Offset, the second bit for #2, the third bit for #3, the fourth bit for #7, the fifth bit for #7 and the sixth bit for #8.
TDD: The first/leftmost bit defines the allocation for subframe #3 of the radio frame indicated by mcch-RepetitionPeriod and mcch-Offset, the second bit for #4, third bit for #7, fourth bit for #8, fifth bit for #9. Uplink subframes are not allocated. The last bit is not used.

**signallingMCS**
Indicates the MCS applicable for the subframes indicated by the field sf-AlloCinfo and for each (P)MCH that is configured for this MBSFN area, for the first subframe allocated to the (P)MCH within each MCH scheduling period (which may contain the MCH scheduling information provided by MAC). Value n2 corresponds with the value 2 for parameter \( \text{MCS} \) in TS 36.213 [23, Table 7.1.7.1-1], and so on.

**subcarrierSpacingMBMS**
The value indicates subcarrier spacing for MBSFN subframes and khz-7dot5 refers to 7.5kHz subcarrier spacing and khz-1dot25 refers to 1.25 kHz subcarrier spacing as defined in TS36.211 [21, 6.12]. These subframes do not have non-MBSFN region. If subcarrierSpacingMBMS is present, then non-MBSFNregionLength shall be ignored. EUTRAN configures parameter subcarrierSpacingMBMS only when the MBSFN subframes have subcarrier spacing other than 15kHz.

---

**MBSFN-SubframeConfig**
The IE MBSFN-SubframeConfig defines subframes that are reserved for MBSFN in downlink.

---

**MBSFN-SubframeConfig** information element

```asn1
MBSFN-SubframeConfig ::= SEQUENCE {
    radioframeAllocationPeriod ENUMERATED {n1, n2, n4, n8, n16, n32},
    radioframeAllocationOffset INTEGER (0..7),
    subframeAllocation CHOICE {
        oneFrame BIT STRING (SIZE(6)),
        fourFrames BIT STRING (SIZE(24))
    }
}
MBSFN-SubframeConfig-v1430 ::= SEQUENCE {
    subframeAllocation-v1430 CHOICE {
        oneFrame-v1430 BIT STRING (SIZE(2)),
        fourFrames-v1430 BIT STRING (SIZE(8))
    }
}
```
### MBSFN-SubframeConfig field descriptions

**fourFrames**
A bit-map indicating MBSFN subframe allocation in four consecutive radio frames, “1” denotes that the corresponding subframe is allocated for MBSFN. The bitmap is interpreted as follows:
- **FDD:** Starting from the first radioframe and from the first/leftmost bit in the bitmap, the allocation applies to subframes #1, #2, #3, #6, #7, and #8 in the sequence of the four radio-frames.
- **TDD:** Starting from the first radioframe and from the first/leftmost bit in the bitmap, the allocation applies to subframes #3, #4, #7, #8, and #9 in the sequence of the four radio-frames. The last four bits are not used. E-UTRAN allocates uplink subframes only if `eimta-MainConfig` is configured.

**fourFrames-v1430**
A bit-map indicating MBSFN subframe allocation in four consecutive radio frames, “1” denotes that the corresponding subframe is allocated for MBSFN. The bitmap is interpreted as follows:
- **FDD:** Starting from the first radioframe and from the first/leftmost bit in the bitmap, the allocation applies to subframes #4 and #9 in the sequence of the four radio-frames.

**oneFrame**
“1” denotes that the corresponding subframe is allocated for MBSFN. The following mapping applies:
- **FDD:** The first/leftmost bit defines the MBSFN allocation for subframe #1, the second bit for #2, third bit for #3, fourth bit for #6, fifth bit for #7, sixth bit for #8.
- **TDD:** The first/leftmost bit defines the allocation for subframe #3, the second bit for #4, third bit for #7, fourth bit for #8, fifth bit for #9. E-UTRAN allocates uplink subframes only if `eimta-MainConfig` is configured. The last bit is not used.

**oneFrame-v1430**
“1” denotes that the corresponding subframe is allocated for MBSFN. The following mapping applies:
- **FDD:** The first/leftmost bit defines the MBSFN allocation for subframe #4 and the second bit for #9.

**radioFrameAllocationPeriod, radioFrameAllocationOffset**
Radio-frames that contain MBSFN subframes occur when equation `SFN mod radioFrameAllocationPeriod = radioFrameAllocationOffset` is satisfied. Value `n1` for `radioFrameAllocationPeriod` denotes value 1, `n2` denotes value 2, and so on. When `fourFrames` is used for `subframeAllocation`, the equation defines the first radio frame referred to in the description below. Values `n1` and `n2` are not applicable when `fourFrames` is used.

**subframeAllocation**
Defines the subframes that are allocated for MBSFN within the radio frame allocation period defined by the `radioFrameAllocationPeriod` and the `radioFrameAllocationOffset`.

---

### PMCH-InfoList

The IE `PMCH-InfoList` specifies configuration of all PMCHs of an MBSFN area, while IE `PMCH-InfoListExt` includes additional PMCHs, i.e. extends the PMCH list using the general principles specified in 5.1.2. The information provided for an individual PMCH includes the configuration parameters of the sessions that are carried by the concerned PMCH. For all PMCH that E-UTRAN includes in `PMCH-InfoList`, the list of ongoing sessions has at least one entry.

**PMCH-InfoList information element**

```asn1
-- ASN1START
PMCH-InfoList-r9 ::= SEQUENCE (SIZE (0..maxPMCH-PerMBSFN)) OF PMCH-Info-r9
PMCH-InfoListExt-r12 ::= SEQUENCE (SIZE (0..maxPMCH-PerMBSFN)) OF PMCH-InfoExt-r12
PMCH-Info-r9 ::= SEQUENCE {
    pmch-Config-r9      PMCH-Config-r9,
    mbms-SessionInfoList-r9   MBMS-SessionInfoList-r9,
    ...
}
PMCH-InfoExt-r12 ::= SEQUENCE {
    pmch-Config-r12      PMCH-Config-r12,
    mbms-SessionInfoList-r12   MBMS-SessionInfoList-r9,
    ...
}
MBMS-SessionInfoList-r9 ::= SEQUENCE (SIZE (0..maxSessionPerPMCH)) OF MBMS-SessionInfo-r9
MBMS-SessionInfo-r9 ::= SEQUENCE {
    tmgi-r9        TMGI-r9,
    sessionId-r9      OCTET STRING (SIZE (1))   OPTIONAL,  -- Need OR
    logicalChannelIdentity-r9   INTEGER (0..maxSessionPerPMCH-1),
    ...
}
PMCH-Config-r9 ::= SEQUENCE {
```
**PMCH-InfoList field descriptions**

**dataMCS**
Indicates the value for parameter $I_{MCS}$ in TS 36.213 [23], which defines the MCS applicable for the subframes of this (P)MCH as indicated by the field commonSF-Alloc. Value normal corresponds to Table 7.1.7.1-1 and value higherOrder corresponds to Table 7.1.7.1-1A. The MCS does however neither apply to the subframes that may carry MCCH i.e. the subframes indicated by the field sf-AllocInfo within SystemInformationBlockType13 nor for the first subframe allocated to this (P)MCH within each MCH scheduling period (which may contain the MCH scheduling information provided by MAC).

**mch-SchedulingPeriod**
Indicates the MCH scheduling period i.e. the periodicity used for providing MCH scheduling information at lower layers (MAC) applicable for an MCH. Value rf8 corresponds to 8 radio frames, rf16 corresponds to 16 radio frames and so on. The mch-SchedulingPeriod starts in the radio frames for which: SFN mod mch-SchedulingPeriod = 0. E-UTRAN configures mch-SchedulingPeriod of the (P)MCH listed first in PMCH-InfoList to be smaller than or equal to mch-RepititionPeriod. In case mch-SchedulingPeriod-v1430 is configured, the UE shall ignore mch-SchedulingPeriod-r12.

**plmn-Index**
Index of the entry across the plmn-IdentityList fields within SystemInformationBlockType1.

**sessionId**
Indicates the optional MBMS Session Identity, which together with TMGI identifies a transmission or a possible retransmission of a specific MBMS session: see TS 29.061 [51, Sections 20.5, 17.7.11, 17.7.15]. The field is included whenever upper layers have assigned a session identity i.e. one is available for the MBMS session in E-UTRAN.

**serviceId**
Uniquely identifies the identity of an MBMS service within a PLMN. The field contains octet 3-5 of the IE Temporary Mobile Group Identity (TMGI) as defined in TS 24.008 [49]. The first octet contains the third octet of the TMGI, the second octet contains the fourth octet of the TMGI and so on.

**sf-AllocEnd**
Indicates the last subframe allocated to this (P)MCH within a period identified by field commonSF-AllocPeriod. The subframes allocated to (P)MCH corresponding with the n-th entry in pmch-InfoList are the subsequent subframes starting from either the next subframe after the subframe identified by sf-AllocEnd of the (n-1)th listed (P)MCH or, for n=1, the first subframe defined by field commonSF-Alloc, through the subframe identified by sf-AllocEnd of the n-th listed (P)MCH. Value 0 corresponds with the first subframe defined by field commonSF-Alloc.
6.3.7a SC-PTM information elements

-- SC-MTCH-InfoList

The IE SC-MTCH-InfoList provides the list of ongoing MBMS sessions transmitted via SC-MRB and for each MBMS session, the associated G-RNTI and scheduling information.

**SC-MTCH-InfoList** information element

```asn1
-- ASN1START
SC-MTCH-InfoList-r13 ::= SEQUENCE (SIZE (0..maxSC-MTCH-r13)) OF SC-MTCH-Info-r13

SC-MTCH-Info-r13 ::= SEQUENCE {

**SCPTM-NeighbourCellList**

The IE SCPTM-NeighbourCellList indicates a list of neighbour cells where ongoing MBMS sessions provided via SC-MRb in the current cells are also provided.

```asn1
-- ASN1START
SCPTM-NeighbourCellList-r13 ::= SEQUENCE (SIZE (1..maxNeighCell-SCPTM-r13)) OF PCI-ARFCN-r13

PCI-ARFCN-r13 ::= SEQUENCE {
  physCellId-r13     PhysCellId,
  carrierFreq-r13    ARFCN-ValueEUTRA-r9  OPTIONAL
}
-- ASN1STOP
```
### SCPTM-NeighbourCellList field description

**carrierFreq**

Indicates the frequency of the neighbour cell indicated by `physCellId`. Absence of the IE means that the neighbour cell is on the same frequency as the current cell.

### 6.3.8 Sidelink information elements

#### – SL-AnchorCarrierFreqList-V2X

The IE `SL-AnchorCarrierFreqList-V2X` specifies the SL V2X anchor frequencies i.e. frequencies that include inter-carrier resource configuration for V2X sidelink communication.

**SL-AnchorCarrierFreqList-V2X information element**

```asn1
SL-AnchorCarrierFreqList-V2X-r14 ::= SEQUENCE (SIZE (1..maxFreqV2X-r14)) OF ARFCN-ValueEUTRA-r9
```

#### – SL-CBR-CommonTxConfigList

The IE `SL-CBR-CommonTxConfigList` indicates the list of PSSCH transmission parameters (such as MCS, sub-channel number, retransmission number, CR limit) in `sl-CBR-PSSCH-TxConfigList`, and the list of CBR ranges in `cbr-RangeCommonConfigList`, to configure congestion control to the UE for V2X sidelink communication.

**SL-CBR-CommonTxConfigList information element**

```asn1
SL-CBR-CommonTxConfigList-r14 ::= SEQUENCE {
  cbr-RangeCommonConfigList-r14 SEQUENCE (SIZE (1..maxSL-V2X-CBRConfig-r14)) OF SL-CBR-Levels-Config-r14,
  sl-CBR-PSSCH-TxConfigList-r14 SEQUENCE (SIZE (1..maxSL-V2X-TxConfig-r14)) OF SL-CBR-PSSCH-TxConfig-r14
}

SL-CBR-Levels-Config-r14 ::=  SEQUENCE (SIZE (1..maxCBR-Level-r14)) OF SL-CBR-r14

SL-CBR-PSSCH-TxConfig-r14 ::=  SEQUENCE {
  cr-Limit-r14     INTEGER(0..10000),
  tx-Parameters-r14    SL-PSSCH-TxParameters-r14
}

SL-CBR-r14 ::=      INTEGER(0..100)
```

---
### SL-CBR-CommonTxConfigList field descriptions

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>cbr-RangeCommonConfigList</td>
<td>Indicates the list of CBR ranges. Each entry of the list indicates in SL-CBR-Levels-Config the upper bound of the CBR range for the respective entry. The upper bounds of the CBR ranges are configured in ascending order for consecutive entries of cbr-RangeCommonConfigList. For the first entry of cbr-RangeCommonConfigList the lower bound of the CBR range is 0.</td>
</tr>
<tr>
<td>cr-Limit</td>
<td>Indicates the maximum limit on the occupancy ratio. Value 0 corresponds to 0, value 1 to 0.0001, value 2 to 0.0002, and so on (i.e. in steps of 0.0001) until value 10000, which corresponds to 1.</td>
</tr>
<tr>
<td>sl-CBR-PSSCH-TxConfigList</td>
<td>Indicates the list of available PSSCH transmission parameters (such as MCS, sub-channel number, retransmission number and CR limit) configurations.</td>
</tr>
<tr>
<td>SL-CBR</td>
<td>Value 0 corresponds to 0, value 1 to 0.01, value 2 to 0.02, and so on.</td>
</tr>
<tr>
<td>tx-Parameters</td>
<td>Indicates PSSCH transmission parameters.</td>
</tr>
</tbody>
</table>

---

### SL-CBR-PPPP-TxConfigList

The IE SL-CBR-PPPP-TxConfigList indicates the mapping between PSSCH transmission parameter (such as MCS, PRB number, retransmission number, CR limit) sets by using the indexes of the configurations provided in sl-CBR-PSSCH-TxConfigList, CBR ranges by an index to the entry of the CBR range configuration in cbr-RangeCommonConfigList, and PPPP ranges. It also indicates the default PSSCH transmission parameters to be used when CBR measurement results are not available.

### SL-CBR-PPPP-TxConfigList information element

```asciidoc
-- ASN1START
SL-CBR-PPPP-TxConfigList-r14 ::= SEQUENCE (SIZE (1..8)) OF SL-PPPP-TxConfigIndex-r14
SL-PPPP-TxConfigIndex-r14 ::= SEQUENCE {
  priorityThreshold-r14             SL-Priority-r13,
  defaultTxConfigIndex-r14          INTEGER(0..maxCBR-Level-1-r14),
  cbr-ConfigIndex-r14               INTEGER(0..maxSL-V2X-CBRConfig-1-r14),
  tx-ConfigIndexList-r14            SEQUENCE (SIZE (1..maxCBR-Level-r14)) OF Tx-ConfigIndex-r14
}
Tx-ConfigIndex-r14 ::= INTEGER(0..maxSL-V2X-TxConfig-1-r14)
-- ASN1STOP
```

### SL-CBR-PPPP-TxConfigList field descriptions

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>cbr-ConfigIndex</td>
<td>Indicates the CBR ranges to be used by an index to the entry of the CBR range configuration in cbr-RangeCommonConfigList.</td>
</tr>
<tr>
<td>defaultTxConfigIndex</td>
<td>Indicates the PSSCH transmission parameters to be used by the UEs which do not have available CBR measurement results, by means of an index to the corresponding entry in tx-ConfigIndexList. Value 0 indicates the first entry in tx-ConfigIndexList. The field is ignored if the UE has available CBR measurement results.</td>
</tr>
<tr>
<td>priorityThreshold</td>
<td>Indicates the upper bound of PPPP range which is associated with the configurations in cbr-ConfigIndex and in tx-ConfigIndexList. The upper bounds of the PPPP ranges are configured in ascending order for consecutive entries of SL-PPPP-TxConfigIndex in SL-CBR-PPPP-TxConfigList. For the first entry of SL-PPPP-TxConfigIndex, the lower bound of the PPPP range is 1.</td>
</tr>
<tr>
<td>tx-ConfigIndexList</td>
<td>Indicates the list of the PSSCH transmission parameters and CR limit by the indexes to the entries of the configurations in sl-CBR-PSSCH-TxConfigList. Each index in tx-ConfigIndexList sequentially maps to each CBR range indicated by cbr-ConfigIndex.</td>
</tr>
</tbody>
</table>
---

**SL-CommConfig**

The IE **SL-CommConfig** specifies the dedicated configuration information for sidelink communication. In particular it concerns the transmission resource configuration for sidelink communication on the primary frequency.

**SL-CommConfig** information element

```asn
-- ASN1START

SL-CommConfig-r12 ::= SEQUENCE {
  commTxResources-r12     CHOICE {

}

-- ASN1STOP
```
**SL-CommConfig** field descriptions

**commTxAllowRelayDedicated**  
Indicates whether the UE is allowed to transmit relay related sidelink communication using the configured dedicated transmission resources i.e. either via scheduled or via UE selected resources.

**commTxPoolNormalDedicated**  
Indicates a pool of transmission resources the UE is allowed to use while in RRC_CONNECTED.

**logicalChGroupInfoList**  
Indicates for each logical channel group the list of associated priorities, used as specified in TS 36.321 [6], in order of increasing logical channel group identity.

**mcs**  
Indicates the MCS as defined in TS 36.212 [23, 14.2.1]. If not configured, the selection of MCS is up to UE implementation.

**multipleTx**  
Indicates whether the UE should perform multiple transmissions to different destinations in one SC period in accordance with TS 36.321 [6, 5.14.1.1]. Value TRUE indicates that multiple transmissions should be performed.

**sc-CommTxConfig**  
Indicates a pool of resources for SC when E-UTRAN schedules Tx resources (i.e. when indices included in DCI format 5 indicate the actual data resources to be used as specified in TS 36.212 [22, 5.3.3.1.9]).

**scheduled**  
Indicates the configuration for the case E-UTRAN schedules the transmission resources based on sidelink specific BSR from the UE.

**ue-Selected**  
Indicates the configuration for the case the UE selects the transmission resources from a pool of resources configured by E-UTRAN.

---

**SL-CommResourcePool**

The IE **SL-CommResourcePool** and **SL-CommResourcePoolV2X** specifies the configuration information for an individual pool of resources for sidelink communication and V2X sidelink communication respectively. The IE covers the configuration of both the sidelink control information and the data.

**SL-CommResourcePool information element**

```asn1
-- ASN1START

### SL-CommResourcePool field descriptions

**adjacencyPSCCH-PSSCH**  
Indicates whether a UE shall always transmit PSCCH and PSSCH in adjacent RBs (indicated by TRUE) or in non-adjacent RBs (indicated by FALSE) (see TS 36.213 [23]).

**cbr-pssch-TxConfigList**  
Indicates the mapping between PPPPs, CBR ranges by using indexes of the entry in cbr-RangeCommonConfigList, and PSSCH transmission parameters and CR limit by using indexes of the entry in sl-CBR-PSSCH-TxConfigList. If SL-CommResourcePoolV2X is included in MobilityControlInformationV2X, it refers to cbr-MobilityTxConfigList for cbr-RangeCommonConfigList and sl-CBR-PSSCH-TxConfigList. If SL-CommResourcePoolV2X is included in SL-V2XConfigDedicated, it refers to cbr-DedicatedTxConfigList for cbr-RangeCommonConfigList and sl-CBR-PSSCH-TxConfigList. Otherwise, it refers to cbr-CommonTxConfigList included in the SystemInformationBlockType21 of the serving cell / PCell for cbr-RangeCommonConfigList and sl-CBR-PSSCH-TxConfigList.

**numSubchannel**  
Indicates the number of subchannels in the corresponding resource pool (see TS 36.213 [23]).

**poolReportId**  
The identity of the transmission resource pool used for CBR measurement reporting, which is corresponding to the poolIdentity reported in measReportListCBR. This field is only present in the transmission pools configured in RRCConnectionReconfiguration and v2x-CommTxPoolExceptional, p2x-CommTxPoolNormalCommon, v2x-CommTxPoolNormalCommon, v2x-CommTxPoolNormal in SystemInformationBlockType21. Otherwise, the field is absent.

**resourceSelectionConfigP2X**  
Indicates the allowed resource selection mechanism(s), i.e., partial sensing and/or random selection, for P2X related V2X sidelink communication.

**restrictResourceReservationPeriod**  
If configured, the field restrictResourceReservationPeriod configured in v2x-ResourceSelectionConfig shall be ignored for transmission on this pool.

**sc-Period**  
Indicates the period over which resources are allocated in a cell for SC and over which scheduled and UE selected data transmissions occur, see PSCCH period in TS 36.213 [23]. Value in number of subframes. Value sf40 corresponds to 40 subframes, sf80 corresponds to 80 subframes and so on. E-UTRAN configures values sf40, sf80, sf160 and sf320 for FDD and for TDD config 1 to 5, values sf70, sf140 and sf280 for TDD config 0, and finally values sf60, sf120 and sf240 for TDD config 6.

**sizeSubchannel**  
Indicates the number of PRBs of each subchannel in the corresponding resource pool (see TS 36.213 [23]). The value n5 denotes 5 PRBs; n6 denotes 6 PRBs and so on. E-UTRAN configures values n5, n6, n10, n15, n20, n25, n50, n75 and n100 in the case of adjacencyPSCCH-PSSCH set to TRUE; otherwise, E-UTRAN configures values n4, n5, n6, n8, n9, n10, n12, n15, n18, n20, n30, n48, n72 and n96 in the case of adjacencyPSCCH-PSSCH set to FALSE.

**sl-OffsetIndicator**  
Indicates the offset of the first subframe of a resource pool, i.e., the starting subframe of the repeating bitmap sl-Subframe, within a SFN cycle. If absent, the resource pool starts from first subframe of SFN=0.

**sl-Subframe**  
Indicates the bitmap of the resource pool, which is defined by repeating the bitmap within a SFN cycle (see TS 36.213 [23]).

**startRB-PSCCH-Pool**  
Indicates the lowest RB index of the PSCCH pool (see TS 36.213 [23]). This field is absent when a pool is (pre)configured such that a UE always transmits SC and data in adjacent RBs in the same subframe.

**startRB-Subchannel**  
Indicates the lowest RB index of the subchannel with the lowest index (see TS 36.213 [23]).

**syncAllowed**  
Indicates the allowed synchronization reference(s) which is (are) allowed to use the configured resource pool.

**syncConfigIndex**  
Indicates the synchronisation configuration that is associated with a reception pool, by means of an index to the corresponding entry of commSyncConfig in SystemInformationBlockType18 for sidelink communication, or by means of an index to the corresponding entry of v2x-SyncConfig in SystemInformationBlockType21 for V2X sidelink communication.

**tdd-Config**  
TDD configuration associated with the reception pool of the cell indicated by syncConfigIndex. Absence of the field indicates the same duplex mode as the cell providing this field and the same UL/DL configuration as indicated by subframeAssignment in SystemInformationBlockType1 in case of TDD.

**threshS-RSSI-CBR**  
Indicates the S-RSSI threshold for determining the contribution of a sub-channel to the CBR measurement, as specified in TS 36.214 [48]. Value 0 corresponds to -112 dBm, value 1 to -110 dBm, value n to (-112 + n*2) dBm, and so on.

**trpl-Subset**  
Indicates the subset of T-RPT available (see TS 36.213 [23, 14.1.1.1.1]). Consists of a bitmap which is used to indicate the set of available ‘k’ values to be used for sidelink communication (see TS 36.213 [23, 14.1.1.3]). If T-RPT subset configuration is not signaled/preconfigured then UE assumes the whole T-RPT set is available.
**SL-CommResourcePool field descriptions**

**adjacencyPSCCH-PSSCH**
Indicates whether a UE shall always transmit PSCCH and PSSCH in adjacent RBs (indicated by TRUE) or in non-adjacent RBs (indicated by FALSE) (see TS 36.213 [23]).

**zoneID**
Indicates the zone ID for which the UE shall use this resource pool as described in 5.10.13.2. The field is absent in v2x-CommTxPoolExceptional, p2x-CommTxPoolNormalCommon and v2x-CommRxPool in SIB21 or in mobilityControlInfoV2X.

**ETSI TS 136 331 V14.4.0 (2017-10)**

---

**ETSI**
**SL-CommTxPoolSensingConfig field descriptions**

**gapCandidateSensing**
Indicates which subframe should be sensed when a certain subframe is considered as a candidate resource (see TS 36.213 [23]).

**minNumCandidateSF**
Indicates the minimum number of subframes that are included in the possible candidate resources.

**p2x-SensingConfig**
Indicates the sensing configuration for P2X related V2X sidelink communication transmission only.

**probResourceKeep**
Indicates the probability with which the UE keeps the current resource when the resource reselection counter reaches zero for sensing based UE autonomous resource selection (see TS 36.321 [6]).

**pssch-TxConfigList**
Indicates PSSCH TX parameters such as MCS, PRB number, retransmission number, associated to different UE absolute speeds and different synchronization reference types for UE autonomous resource selection (see TS 36.213 [23]).

**restrictResourceReservationPeriod**
Indicates which values are allowed for the signaling of the resource reservation period in PSCCH.

**sl-ReselectAfter**
Indicates the number of consecutive skipped transmissions before triggering resource reselection for V2X sidelink communication (see TS 36.321 [6]).

**thresPSSCH-RSRP-List**
Indicates a list of 64 thresholds, and the threshold should be selected based on the priority in the decoded SCI and the priority in the SCI to be transmitted (see TS 36.213 [23]). A resource is excluded if it is indicated or reserved by a decoded SCI and PSSCH RSRP in the associated data resource is above a threshold.

---

**SL-CP-Len**

The IE **SL-CP-Len** indicates the cyclic prefix length, see TS 36.211 [21].

### SL-DiscTxConfig field descriptions

- **discCellSelectionInfo**
  Parameters that may be used by the UE to select/reselect a cell on the concerned non-serving frequency. If absent, the UE acquires the information from the target cell on the concerned frequency. See TS 36.304 [4, 11.4].

- **discSysInfoToReportConfig**
  Indicates the request to start a Sidelink UE Information procedure for reporting system information acquired during an inter-frequency discovery procedure.

- **discTF-IndexList**
  A list of time-frequency resource indices pair where each pair of indices corresponds to one discovery message. E-UTRAN only configures `discTF-IndexList-r12b` when configuring the UE with scheduled SL discovery Tx resources. When receiving `discTF-IndexList-r12b`, the UE shall only consider this field (and hence ignore `discTF-IndexList-r12`, if included or previously configured).

- **discTxConfig**
  Indicates the configuration used when E-UTRAN schedules Tx resources (i.e. the fields `discSF-Index` and `discPRB-Index` indicate the actual resources to be used).

- **discTxInterFreqInfo**
  Indicates frequency applicable for the resources indicated by `discTxResources-r12` (i.e. original resource field may cover first inter-frequency), and possibly resource allocations on additional frequencies as may be indicated by field `discTxInInterFreqListAdd`.

- **discTxRefCarrierDedicated**
  Indicates if the PCell or an SCell is to be used as reference for DL measurements and synchronization, instead of the DL frequency paired with the one used to transmit sidelink discovery announcements on, see TS 36.213 [23, 14.3.1].

- **discTxResources**
  Indicates the resources assigned to the UE for discovery announcements, which can either be a pool from which the UE may select or a set of resources specifically assigned for use by the UE.

- **discTxResourcesPS**
  Indicates the resources assigned to the UE for PS discovery announcements, which can either be a pool from which the UE may select or a set of resources specifically assigned for use by the UE.

- **SL-TF-IndexPair**
  A pair of indices, one for the time domain and one for the frequency domain, indicating the start of resources within the pool covered by `discTxConfig`, see TS 36.211 [21, 9.5.6] for one discovery message. The upper limits of `discSF-Index` and `discPRB-Index` are defined in TS 36.213 [23, 14.3.1].
The IE \textit{SL-DiscResourcePool} specifies the configuration information for an individual pool of resources for sidelink discovery.

}]

PhysCellIdList-r13 ::= SEQUENCE (SIZE (1..maxSL-DiscCells-r13)) OF PhysCellId
```
---

**SL-DiscResourcePool field descriptions**

**discPeriod**
Indicates the period over which resources are allocated in a cell for discovery message transmission/reception, see PSDCH period in TS 36.213 [23]. Value in number of radio frames. Value rf32 corresponds to 32 radio frames, rf64 corresponds to 64 radio frames and so on. The extended values apply for PS discovery (not only for sidelink relaying). When broadcasting an extended value, E-UTRAN sets the original field to spare to ensure legacy UEs ignore the concerned pool entry.

**numRepetition**
Indicates the number of times subframeBitmap is repeated for mapping to subframes that occurs within a discPeriod. The highest value E-UTRAN uses is value 5 for FDD and TDD configuration 0, value 13 for TDD configuration 1, value 25 for TDD configuration 2, value 17 for TDD configuration 3, value 40 for TDD configuration 4, value 50 for TDD configuration 5 and value 7 for TDD configuration 6. E-UTRAN configures numRepetition and subframeBitmap such that the mapped subframes do not exceed the discPeriod.

**poolSelection**
Indicates the mechanism for selecting a (transmission) pool when multiple candidates are provided. E-UTRAN configures the same value (i.e. a pool selection method) for all candidate pools within one pool list (discTxPoolCommon or discTxPoolDedicated) but the pool selection method in different pool lists may or may not be the same.

**syncConfigIndex**
Indicates the synchronisation configuration that is associated with a reception or transmission pool, by means of an index to the corresponding entry of discSyncConfig in SystemInformationBlockType19.

**threshLow, threshHigh**
Specifies the thresholds used to select a resource pool in RSRP based pool selection. The E-UTRAN should configure threshLow and threshHigh such that the UE selects only one resource pool upon RSRP based pool selection.

**txProbability**
Indicates the probability of transmitting announcement in a discovery period when configured with a pool of resources, see TS 36.321 [6].

-- ASN1STOP

**SL-DiscSysInfoReport field descriptions**

*carrierFreqInfo*
Indicates the frequency of the cell from which the UE acquired the system information relevant for discovery

*cellIdentity*
Indicated the identity of the cell from which the UE acquired the system information relevant for discovery

*plmn-IdentityList*
Indicates the list of PLMN identity of the cell from which the UE acquired the system information relevant for discovery

---

**SL-DiscTxPowerInfo**

The IE **SL-DiscTxPowerInfo** specifies power control parameters for one or more power classes.

**SL-DiscTxPowerInfo** information element

```
-- ASN1START

SL-DiscTxPowerInfoList-r12 ::= SEQUENCE (SIZE (maxSL-DiscPowerClass-r12)) OF SL-DiscTxPowerInfo-r12
SL-DiscTxPowerInfo-r12 ::= SEQUENCE {
  discMaxTxPower-r12  P-Max,  
  ...
}

-- ASN1STOP
```

**SL-DiscTxPowerInfo field descriptions**

*discMaxTxPower*
Indicates the P-Max parameter used to calculate the maximum transmit power a UE configured with the concerned range class, see TS 24.333 [70, 4.2.11]. The first entry in **SL-DiscTxPowerInfoList** corresponds to UE range class 'short', the second entry corresponds to 'medium' and the third entry corresponds to 'long'.

---

**SL-GapConfig**

The IE **SL-GapConfig** indicates the gaps, requested or assigned, to enable the UE to receive or transmit sidelink discovery, intra or inter frequency (including inter-PLMN).

**SL-GapConfig** information element

```
-- ASN1START

SL-GapConfig-r13 ::= SEQUENCE {
  gapPatternList-r13  SL-GapPatternList-r13
}
SL-GapPatternList-r13 ::= SEQUENCE (SIZE (l..maxSL-GP-r13)) OF SL-GapPattern-r13
```

---
SL-GapPattern-r13 ::= SEQUENCE {
  gapPeriod-r13 ENUMERATED {sf40, sf60, sf70, sf80, sf120, sf140, sf160, sf240, sf280, sf320, sf640, sf1280, sf2560, sf5120, sf10240},
  gapOffset-r12  SL-OffsetIndicator-r12,
  gapSubframeBitmap-r13  BIT STRING (SIZE (1..10240)),
  ...
}  
-- ASN1STOP

**SL-GapConfig field descriptions**

**gapOffset**
Indicates the offset from the start of SFN 0 to the start of the first `gapPeriod`. If the SFN period is not an integer multiple of `gapPeriod`, no subframes within this period (i.e. from SFN 0 to offset) are considered part of the gap.

**gapPeriod**
Indicates the period by which `gapSubframeBitmap` is repeated.

**gapSubframeBitmap**
Indicates the subframes of one or more individual gaps, not only covering the subframes of the associated discovery resources but also including e.g. re-tuning and synchronisation delays. The UE and E-UTRAN signal bit strings of valid sizes only i.e. sizes equal to or less than `gapPeriod`. Value 1 indicates that the UE is allowed to use the subframe for sidelink discovery.

---

**SL-GapRequest**

The IE `SL-GapRequest` indicates the gaps requested by the UE to receive or transmit sidelink discovery, intra or inter frequency (including inter-PLMN).

---

**SL-GapRequest information element**

---

**SL-HoppingConfig**

The IE `SL-HoppingConfig` indicates the hopping configuration used for sidelink.

---

**SL-HoppingConfig information element**

SL-InterFreqInfoListV2X field descriptions

*plmn-IdentityList*
Indicates PLMN identities of this frequency for reception of V2X sidelink communication. If this field is not present, the UE considers this frequency for reception of V2X sidelink communication concerns the first PLMN entry in the *plmn-IdentityList* in *SystemInformationBlockType1*.

*sl-MaxTxPower*
Indicates the maximum transmission power for transmitting V2X sidelink communication on the corresponding frequency.

*additionalSpectrumEmissionV2X*
Indicates the `additionalSpectrumEmission` value defined in TS 36.101 [42, 6.2.4] for V2X sidelink communication.

*v2x-SchedulingPool*
Indicates the resource pool for inter-carrier scheduled resource allocation. This field is configured in RRC dedicated signalling only when `scheduled` is configured in IE SL-V2X-ConfigDedicated.

*v2x-UE-ConfigList*
Indicates the inter-carrier resource configuration. If there is only one entry in the list without *physCellId* configured, the configuration is applied to the frequency identified by *v2x-CommCarrierFreq* (i.e. carrier specific configuration); if the entry of this field includes *physCellIdList*, the configuration is applied to the cell(s) identified by *physCellIdList* (i.e. cell specific configuration).

---

**SL-V2X-UE-ConfigList**

The IE *SL-V2X-UE-ConfigList* indicates inter-frequency resource configuration per-carrier or per-cell.

**SL-V2X-UE-ConfigList** information element

```
-- ASN1START

SL-V2X-UE-ConfigList-r14 ::= SEQUENCE (SIZE (1.. maxCellIntra)) OF SL-V2X-InterFreqUE-Config-r14

SL-V2X-InterFreqUE-Config-r14 ::= SEQUENCE {

}

-- ASN1STOP
```
### SL-V2X-UE-ConfigList field descriptions

**offsetDFN**
Indicates the timing offset for the UE to determine DFN timing when GNSS is used for timing reference. Value 0 corresponds to 0 milliseconds, value 1 corresponds to 0.001 milliseconds, value 2 corresponds to 0.002 milliseconds, and so on.

**p2x-CommTxPoolNormal**
Indicates the resources on a carrier frequency by which the UE may transmit P2X related V2X sidelink communication.

**physCellIdList**
If configured, the resource configuration is applicable for the cell(s) identified by this field. Otherwise, the resource configuration is for a given carrier frequency.

**typeTxSync**
Indicates the prioritized synchronization type (i.e. eNB or GNSS) for performing V2X sidelink communication on a carrier frequency.

**v2x-CommRxPool**
Indicates the resources on a carrier frequency by which the UE may receive V2X sidelink communication.

**v2x-CommTxPoolExceptional**
Indicates the resources on a carrier frequency by which the UE may transmit V2X sidelink communication in exceptional conditions, as specified in 5.10.13.

**v2x-CommTxPoolNormal**
Indicates the resources on a carrier frequency by which the UE may transmit V2X sidelink communication.

**v2x-SyncConfig**
Indicates the synchronization configuration used for transmission/reception of SLSS on the given frequency.

---

### SL-OffsetIndicator

The IE **SL-OffsetIndicator** indicates the offset of the pool of resources relative to SFN 0 of the cell from which it was obtained or, when out of coverage, relative to DFN 0.

### SL-OffsetIndicator information element

```
-- ASN1START
SL-OffsetIndicator-r12 ::= CHOICE {
  small-r12        INTEGER (0..319),
  large-r12        INTEGER (0..10239)
}
SL-OffsetIndicatorSync-r12 ::= INTEGER (0..39)
SL-OffsetIndicatorSync-r14 ::= INTEGER (0..159)
-- ASN1STOP
```

### SL-OffsetIndicator field descriptions

**SL-OffsetIndicator**
In *sc-TF-ResourceConfig*, it indicates the offset of the first period of pool of resources within a SFN cycle. For *data-TF-ResourceConfig*, it corresponds to the offsetIndicator as defined in TS 36.213 [23, 14.1.3].

**SL-OffsetIndicatorSync**
For sidelink discovery and sidelink communication, synchronisation resources are present in those SFN and subframes which satisfy the relation: (SFN*10 + Subframe Number) mod 40 = SL-OffsetIndicatorSync. For V2X sidelink communication, synchronisation resources are present in those SFN and subframes which satisfy the relation: (SFN*10 + Subframe Number) mod 160 = SL-OffsetIndicatorSync.

---

### SL-P2X-ResourceSelectionConfig

The IE **SL-P2X-ResourceSelectionConfig** includes the configuration of resource selection for P2X related V2X sidelink communication. E-UTRAN configures at least one resource selection mechanism.
**SL-P2X-ResourceSelectionConfig** field descriptions

- **partialSensing**
  Indicates that partial sensing is allowed for UE autonomous resource selection in a resource pool.

- **randomSelection**
  Indicates that random selection is allowed for UE autonomous resource selection in a resource pool.

---

**SL-PeriodComm**

The IE **SL-PeriodComm** indicates the period over which resources allocated in a cell for sidelink communication.

**SL-PeriodComm information element**

---

**SL-Priority**

The IE **SL-Priority** indicates the one or more priorities of resource pool used for sidelink communication, or of a logical channel group used in case of scheduled sidelink communication resources, see TS 36.321 [6].

**SL-Priority information element**

---

**SL-PSSCH-TxConfigList**

The IE **SL-PSSCH-TxConfigList** indicates PSSCH transmission parameters. When lower layers select parameters from the range indicated in IE **SL-PSSCH-TxConfigList**, the UE considers both configurations in IE **SL-PSSCH-TxConfigList** and the CBR-dependent configurations represented in IE **SL-CBR-PPP-TxConfigList**. Only one IE **SL-PSSCH-TxConfig** is provided per `typeTxSync`.

**SL-PSSCH-TxConfigList information element**

---
**minMCS-PSSCH-r14** INTEGER {0..31},

**maxMCS-PSSCH-r14** INTEGER {0..31},

**minSubChannel-NumberPSSCH-r14** INTEGER {1..20},

**maxSubchannel-NumberPSSCH-r14** INTEGER {1..20},

**allowedRetxNumberPSSCH-r14** ENUMERATED {n0, n1, both, spare},

**maxTxPower-r14** SL-TxPower-r14 OPTIONAL -- Cond CBR

**-- ASN1STOP**

**SL-PSSCH-TxConfigList field descriptions**

**allowedRetxNumberPSSCH** Indicates the allowed retransmission number for transmissions on PSSCH (see TS 36.213 [23]). The value n0 indicates no retransmission for a transport block allowed; the value n1 indicates that the UE shall perform one retransmission for a transport block; and the value both indicates that the UE may autonomously select no retransmission or one retransmission for a transport block.

**maxTxPower** Indicates the maximum transmission power for transmission on PSSCH and PSCCH (see TS 36.213 [23]).

**minMCS-PSSCH, maxMCS-PSSCH** Indicates the minimum and maximum MCS values used for transmissions on PSSCH (see TS 36.213 [23]).

**minSubchannel-NumberPSSCH, maxSubchannel-NumberPSSCH** Indicates the minimum and maximum number of sub-channels which may be used for transmissions on PSSCH (see TS 36.213 [23]).

**thresUE-Speed** Indicates a UE speed threshold.

**typeTxSync** Indicates the synchronization reference type (see TS 36.213 [23]). For configurations by the eNB, only gnss and enb can be configured; and for pre-configuration, only gnss and ue can be configured. If the field is absent, the configuration is applicable for all synchronization reference types.

**parametersAboveThres** Indicates TX parameters for the UE speed above thresUE-Speed.

**parametersBelowThres** Indicates TX parameters for the UE speed below thresUE-Speed.

<table>
<thead>
<tr>
<th>Conditional presence</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>CBR</td>
<td>The field is optionally present, need OR, in IE SL-CBR-CommonTxConfigList-r14, or in IE SL-CBR-PreconfigTxConfigList-r14. Otherwise the field is not present. Need OR.</td>
</tr>
</tbody>
</table>

**SL-RestrictResourceReservationPeriodList**

The IE **SL-RestrictResourceReservationPeriodList** indicates which values are allowed for the signaling of the resource reservation period in PSCCH for V2X sidelink communication, see TS 36.321 [6].

**SL-RestrictResourceReservationPeriodList information element**

---

**SL-RestrictResourceReservationPeriodList field descriptions**

**SL-RestrictResourceReservationPeriod** Value v0dot2 means SL-RestrictResourceReservationPeriod is set to 0.2, value v0dot5 means SL-RestrictResourceReservationPeriod is set to 0.5, value v1 means SL-RestrictResourceReservationPeriod is set to 1, and so on. Value v0dot2 and value v0dot5 are configured in a pool-specific manner only. E-UTRAN should not set value v0dot2 and v0dot5 for transmission pool for P2X related V2X sidelink communication.
-- **SLSSID**

The IE **SLSSID** identifies a cell and is used by the receiving UE to detect asynchronous neighbouring cells, and by transmitting UEs to extend the synchronisation signals beyond the cell’s coverage area.

### **SLSSID** information element

```asn1
SLSSID-r12 ::= INTEGER (0..167)
```

-- **SL-SyncAllowed**

The IE **SL-SyncAllowed** indicates the allowed the synchronization references for a transmission resource pool for V2X sidelink communication.

### **SL-SyncAllowed** information element

```asn1
SL-SyncAllowed-r14 ::= SEQUENCE {
  gnss-Sync-r14      ENUMERATED {true}    OPTIONAL, -- Need OR
  enb-Sync-r14      ENUMERATED {true}    OPTIONAL, -- Need OR
  ue-Sync-r14       ENUMERATED {true}    OPTIONAL -- Need OR
}
```

### **SL-SyncAllowed** field descriptions

- **enb-Sync**
  If configured, the (pre-) configured resources can be used if the UE is directly or indirectly synchronized to eNB (i.e., synchronized to a reference UE which is directly synchronized to eNB).

- **gnss-Sync**
  If configured, the (pre-) configured resources can be used if the UE is directly or indirectly synchronized to GNSS (i.e., synchronized to a reference UE which is directly synchronized to GNSS).

- **ue-Sync**
  If configured, the (pre-) configured resources can be used if the UE is synchronized to a reference UE which is synchronized to neither GNSS nor eNB directly or indirectly.

-- **SL-SyncConfig**

The IE **SL-SyncConfig** specifies the configuration information concerning reception of synchronisation signals from neighbouring cells as well as concerning the transmission of synchronisation signals for sidelink communication and sidelink discovery.

### **SL-SyncConfig** information element

```asn1
SL-SyncConfigList-r12 ::= SEQUENCE (SIZE (1..maxSL-SyncConfig-r12)) OF SL-SyncConfig-r12
SL-SyncConfigListV2X-r14 ::= SEQUENCE (SIZE (1.. maxSL-V2X-SyncConfig-r14)) OF SL-SyncConfig-r12
SL-SyncConfig-r12 ::= SEQUENCE {

  } OPTIONAL, -- Need OR
  txParameters-r13 SEQUENCE {
    syncTxParameters-r13 SL-TxParameters-r12,
    syncTxThreshIC-r13 RSRP-RangeSL-r12,
    syncInfoReserved-r13 BIT STRING (SIZE {19}) OPTIONAL, -- Need OR
    syncTxPeriodic-r13 ENUMERATED {true} OPTIONAL -- Need OR
  } OPTIONAL, -- Need OR
  rxParameters-r13 SEQUENCE {
    discSyncWindow-r13 ENUMERATED {w1, w2}
  } OPTIONAL, -- Need OR
  ...,
  [[ syncOffsetIndicator-v1430 SL-OffsetIndicatorSync-v1430 OPTIONAL, -- Need OR
    gnss-Sync-r14 ENUMERATED {true} OPTIONAL -- Need OR ]]
}

-- ASN1STOP
### SL-SyncConfig field descriptions

**discSyncWindow**
Indicates the synchronization window over which the UE expects that SLSS or discovery resources indicated by the pool configuration (see TS 36.213 [23, 14.4]). The value \( w_1 \) denotes 5 milliseconds. The value \( w_2 \) denotes the length corresponding to normal cyclic prefix divided by 2.

**syncCP-Len**
In case of V2X sidelink communications this field is always configured to normal.

**syncInfoReserved**
Reserved for future use.

**syncOffsetIndicator**
E-UTRAN should ensure syncOffsetIndicator is set to the same value as syncOffsetIndicator1 or syncOffsetIndicator2 in preconfigSync within SL-Preconfiguration, if configured. If syncOffsetIndicator-v1430 is configured, the UE shall ignore the field syncOffsetIndicator-r12. E-UTRAN should ensure syncOffsetIndicators is set to syncOffsetIndicator1 in v2x-CommPreconfigSync within SL-V2X-Preconfiguration, if syncOffsetIndicator3 is pre-configured in SL-V2X-Preconfiguration or if gnss-Sync is included in the corresponding entry and syncOffsetIndicator3 is not pre-configured in SL-V2X-Preconfiguration for a concerned frequency.

**syncTxPeriodic**
Indicates whether in each discovery period in which UE transmits discovery, the UE transmits SLSS once or periodically (i.e. every 40ms). In the latter case (periodic) the UE also transmits the MasterInformationBlock-SL message alongside. E-UTRAN configures this field only for synchronisation configurations applicable for PS discovery.

**syncTxThreshIC**
Indicates the threshold used while in coverage. In case the RSRP measurement of the cell chosen for transmission of sidelink communication/ discovery announcements/ V2X sidelink communication, or of the cell used as reference for DL measurements and synchronization, is below the level indicated by this field, the UE may transmit SLSS (i.e. become synchronisation reference) when performing the corresponding sidelink transmission.

**txParameters**
Includes parameters relevant only for transmission. E-UTRAN includes the field in one entry per list, as included in commSyncConfig or discSyncConfig.

**gnss-Sync**
If configured, the synchronization configuration is used for SLSS transmission/reception when the UE is synchronized to GNSS, by using slssid=0 and ignoring slssid-r12 configured. If not configured, the synchronization configuration is used for SLSS transmission/reception when the UE is synchronized to eNB, by using the configured slssid-r12.

---

### SL-TF-ResourceConfig

The IE SL-TF-ResourceConfig specifies a set of time/ frequency resources used for sidelink.

#### SL-TF-ResourceConfig information element

```asn1
-- ASN1START
SL-TF-ResourceConfig-r12 ::= SEQUENCE {
  prb-Num-r12          INTEGER (1..100),
  prb-Start-r12        INTEGER (0..99),
  prb-End-r12          INTEGER (0..99),
  offsetIndicator-r12     SL-OffsetIndicator-r12,
  subframeBitmap-r12     SubframeBitmapSL-r12
}

SubframeBitmapSL-r12 ::= CHOICE {
  bs4-r12              BIT STRING (SIZE (4)),
  bs8-r12              BIT STRING (SIZE (8)),
  bs12-r12             BIT STRING (SIZE (12)),
  bs16-r12             BIT STRING (SIZE (16)),
  bs30-r12             BIT STRING (SIZE (30)),
  bs40-r12             BIT STRING (SIZE (40)),
  bs42-r12             BIT STRING (SIZE (42))
}

SubframeBitmapSL-r14 ::= CHOICE {
  bs10-r14             BIT STRING (SIZE (10)),
  bs16-r14             BIT STRING (SIZE (16)),
  bs20-r14             BIT STRING (SIZE (20)),
  bs30-r14             BIT STRING (SIZE (30)),
  bs40-r14             BIT STRING (SIZE (40)),
  bs50-r14             BIT STRING (SIZE (50)),
  bs60-r14             BIT STRING (SIZE (60)),
  bs100-r14            BIT STRING (SIZE (100))
}
-- ASN1END
```
**SL-TF-ResourceConfig field descriptions**

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>prb-Start, prb-End, prb-Num</td>
<td>Sidelink transmissions on a sub-frame can occur on PRB with index greater than or equal to prb-Start and less than prb-Start + prb-Num, and on PRB with index greater than prb-End - prb-Num and less than or equal to prb-End. Even for neighbouring cells, prb-Start and prb-End are relative to PRB #0 of the cell from which it was obtained. See TS 36.213 [23, 14.1.3, 14.2.3, 14.3.3].</td>
</tr>
<tr>
<td>subframeBitmap</td>
<td>Indicates the subframe bitmap indicating resources used for sidelink. For sidelink communication, E-UTRAN configures value bs40 for FDD and the following values for TDD: value bs42 for configuration0, value bs16 for configuration1, value bs8 for configuration2, value bs12 for configuration3, value bs8 for configuration4, value bs4 for configuration5 and value bs30 for configuration6. For V2X sidelink communication, E-UTRAN configures value bs16, bs20 or bs100 for FDD and the following values for TDD: value bs80 for configuration0, value bs40 for configuration1, value bs20 for configuration2, value bs30 for configuration3, value bs20 for configuration4, value bs10 for configuration5 and value bs50 for configuration6.</td>
</tr>
</tbody>
</table>

-- **SL-TxPower**

The IE **SL-TxPower** is used to limit the UE’s sidelink transmission power on a carrier frequency. The unit is dBm. Value minusinfinity corresponds to −infinity.

**SL-TxPower information element**

```
-- ASN1START
SL-TxPower-r14 ::= CHOICE {
    minusinfinity-r14    NULL,
    txPower-r14      INTEGER (-41..31)
}
-- ASN1STOP
```

-- **SL-TypeTxSync**

The IE **SL-TypeTxSync** indicates the synchronization reference type.

**SL-TypeTxSync information element**

```
-- ASN1START
SL-TypeTxSync-r14 ::= ENUMERATED {gnss, enb, ue}
-- ASN1STOP
```

-- **SL-ThresPSSCH-RSRP-List**

IE **SL-ThresPSSCH-RSRP-List** indicates a threshold used for sensing based UE autonomous resource selection (see TS 36.213 [23]). A resource is excluded if it is indicated or reserved by a decoded SCI and PSSCH RSRP in the associated data resource is above the threshold defined by IE **SL-ThresPSSCH-RSRP-List**.

**SL-ThresPSSCH-RSRP-List information element**

```
-- ASN1START
SL-ThresPSSCH-RSRP-List-r14 ::= SEQUENCE (SIZE (64)) OF SL-ThresPSSCH-RSRP-r14
SL-ThresPSSCH-RSRP-r14 ::= INTEGER (0..66)
-- ASN1STOP
```
---

**SL-TxParameters**

The IE **SL-TxParameters** identifies a set of parameters configured for sidelink transmission, used for communication, discovery and synchronisation.

**SL-TxParameters information element**

```asn1
-- ASN1START
SL-TxParameters-r12 ::=  SEQUENCE {
  alpha-r12        Alpha-r12,
  p0-r12         P0-SL-r12
}

P0-SL-r12 ::=  INTEGER (-126..31)
-- ASN1STOP
```

**SL-TxParameters field descriptions**

### alpha

Parameter(s): \( \alpha_{PSSCH,1}, \alpha_{PSSCH,2}, \alpha_{PSSCH,3}, \alpha_{PSCCH,4}, \alpha_{PSCCH,2}, \alpha_{PSDCCH}, \alpha_{PSSS} \). See TS 36.213 [23, 14.1.1.5, 14.2.1.3, 14.3.1, 14.4] where \( \alpha_0 \) corresponds to 0, \( \alpha_{04} \) corresponds to value 0.4, \( \alpha_{05} \) to 0.5, \( \alpha_{06} \) to 0.6, \( \alpha_{07} \) to 0.7, \( \alpha_{08} \) to 0.8, \( \alpha_{09} \) to 0.9 and \( \alpha_{1} \) corresponds to 1. This field applies for sidelink power control.

### p0

Parameter: \( P_{O_{PSSCH,1}}, P_{O_{PSSCH,2}}, P_{O_{PSSCH,3}}, P_{O_{PSCCH,4}}, P_{O_{PSCCH,2}}, P_{O_{PSDCCH}}, P_{O_{PSSS}} \). See TS 36.213 [23, 14.1.1.5, 14.2.1.3, 14.3.1, 14.4], unit dBm.

---

**SL-TxPoolIdentity**

The IE **SL-TxPoolIdentity** identifies an individual pool entry configured for sidelink transmission, used for communication and discovery.

**SL-TxPoolIdentity information element**

```asn1
-- ASN1START
SL-TxPoolIdentity-r12 ::=  INTEGER (1.. maxSL-TxPool-r12)
SL-TxPoolIdentity-v1310 ::=  INTEGER (maxSL-TxPool-r12Plus1-r13.. maxSL-TxPool-r13)
SL-V2X-TxPoolIdentity-r14 ::=  INTEGER (1.. maxSL-V2X-TxPool-r14)
-- ASN1STOP
```

---

**SL-TxPoolToReleaseList**

The IE **SL-TxPoolToReleaseList** is used to release one or more individual pool entries used for sidelink transmission, for communication and discovery.

**SL-TxPoolToReleaseList information element**

```asn1
-- ASN1START
SL-TxPoolToReleaseList-r12 ::=  SEQUENCE (SIZE (1..maxSL-TxPool-r12)) OF SL-TxPoolIdentity-r12
SL-TxPoolToReleaseListExt-r13 ::=  SEQUENCE (SIZE (1..maxSL-TxPool-v1310)) OF SL-TxPoolIdentity-v1310
-- ASN1STOP
```
--- ASNISTOP

--- SL-V2X-ConfigDedicated

The IE SL-V2X-ConfigDedicated specifies the dedicated configuration information for V2X sidelink communication.

**SL-V2X-ConfigDedicated** information element

--- ASNISTART

```
SL-V2X-ConfigDedicated-r14 ::= SEQUENCE {
  commTxResources-r14     CHOICE {
    release              NULL,
    setup                CHOICE {

<tr>
<td>thresSL-TxPrioritization</td>
<td>Indicates the threshold used to determine whether SL V2X transmission is prioritized over uplink transmission if they overlap in time (see TS 36.321 [6]). This value shall overwrite thresSL-TxPrioritization configured in SIB21 or SL-V2X-Precollfiguration if any.</td>
</tr>
<tr>
<td>typeTxSync</td>
<td>Indicates the prioritized synchronization type (i.e. eNB or GNSS) for performing V2X sidelink communication on PCell.</td>
</tr>
<tr>
<td>ue-Selected</td>
<td>Indicates the configuration for the case the UE selects the transmission resources from a pool of resources configured by E-UTRAN.</td>
</tr>
<tr>
<td>v2x-InterFreqInfoList</td>
<td>Indicates synchronization and resource allocation configurations of other carrier frequencies than the serving carrier frequency for V2X sidelink communication. For inter-carrier scheduled resource allocation, CIF=1 in DCI-5A corresponds to the first entry in this frequency list, CIF=2 corresponds to the second entry, and so on (see TS 36.213 [23]). CIF=0 in DCI-5A corresponds to the frequency where the DCI is received.</td>
</tr>
<tr>
<td>v2x-SchedulingPool</td>
<td>Indicates a pool of resources when E-UTRAN schedules Tx resources for V2X sidelink communications.</td>
</tr>
</tbody>
</table>

---

### SL-ZoneConfig

The **SL-ZoneConfig** indicates zone configurations used for V2X sidelink communication.

#### SL-ZoneConfig information element

```
-- ASN1START
SL-ZoneConfig-r14 ::= SEQUENCE {
    zoneLength-r14 ENUMERATED { m5, m10, m20, m50, m100, m200, m500, spare1 },
    zoneWidth-r14 ENUMERATED { m5, m10, m20, m50, m100, m200, m500, spare1 },
    zoneIdLongiMod-r14 INTEGER (1..4),
    zoneIdLatiMod-r14 INTEGER (1..4)
}
-- ASN1STOP
```

#### SL-ZoneConfig field descriptions

<table>
<thead>
<tr>
<th>Field Description</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>zoneLength</td>
<td>Indicates the length of each geographic zone. Value m5 corresponds to 5 meters, m10 corresponds to 10 meters and so on.</td>
</tr>
<tr>
<td>zoneWidth</td>
<td>Indicates the width of each geographic zone. Value m5 corresponds to 5 meters, m10 corresponds to 10 meters and so on.</td>
</tr>
<tr>
<td>zoneIdLongiMod</td>
<td>Indicates the total number of zones that is configured with respect to longitude.</td>
</tr>
<tr>
<td>zoneIdLatiMod</td>
<td>Indicates the total number of zones that is configured with respect to latitude.</td>
</tr>
</tbody>
</table>
6.4 RRC multiplicity and type constraint values

– Multiplicity and type constraint definitions

-- ASN1START

maxACDC-Cat-r13 INTEGER ::= 16 -- Maximum number of ACDC categories (per PLMN)
maxAvailNarrowBands-r13 INTEGER ::= 16 -- Maximum number of narrowbands
maxBandComb-r10 INTEGER ::= 128 -- Maximum number of band combinations.
maxBandComb-r13 INTEGER ::= 384 -- Maximum number of band combinations in Rel-13
maxBands INTEGER ::= 64 -- Maximum number of bands listed in EUTRA UE caps
maxBandwidthClass-r10 INTEGER ::= 16 -- Maximum number of CA BW classes per band
maxBandwidthCombSet-r10 INTEGER ::= 32 -- Maximum number of bandwidth combination sets per
-- supported band combination
maxCBR-Level-r14 INTEGER ::= 16 -- Maximum number of CBR levels
maxCBR-Level-1-r14 INTEGER ::= 15
maxCBR-Report-r14 INTEGER ::= 72 -- Maximum number of CBR results in a report
maxCDMA-BandClass INTEGER ::= 32 -- Maximum value of the CDMA band classes
maxCE-Level-r13 INTEGER ::= 4 -- Maximum number of CE levels
maxCellBlack INTEGER ::= 16 -- Maximum number of blacklisted physical cell identity
-- ranges listed in SIB type 4 and 5
maxCellHistory-r12 INTEGER ::= 16 -- Maximum number of visited EUTRA cells reported
maxCellInfoGERAN-r9 INTEGER ::= 32 -- Maximum number of GERAN cells for which system in-
-- formation can be provided as redirection assistance
maxCellInfoUTRA-r9 INTEGER ::= 16 -- Maximum number of UTRA cells for which system
-- information can be provided as redirection assistance
maxCombIDC-r11 INTEGER ::= 328 -- Maximum number of reported UL CA combinations
maxCSI-IM-r11 INTEGER ::= 3 -- Maximum number of CSI-IM configurations
-- (per carrier frequency)
maxCSI-IM-r12 INTEGER ::= 4 -- Maximum number of CSI-IM configurations
-- (per carrier frequency)
minCSI-IM-r13 INTEGER ::= 5 -- Minimum number of CSI IM configurations from which
-- REL-13 extension is used
maxCSI-IM-r13 INTEGER ::= 24 -- Maximum number of CSI-IM configurations
-- (per carrier frequency)
maxCSI-IM-v1310 INTEGER ::= 20 -- Maximum number of additional CSI-IM configurations
maxCSI-Proc-r11 INTEGER ::= 4 -- Maximum number of CSI processes (per carrier
-- frequency)
maxCSI-RS-NZP-r11 INTEGER ::= 3 -- Maximum number of CSI RS resource
-- configurations using non-zero Tx power
-- (per carrier frequency)
minCSI-RS-NZP-r13 INTEGER ::= 4 -- Minimum number of CSI RS resource from which
-- REL-13 extension is used
maxCSI-RS-NZP-r13 INTEGER ::= 24 -- Maximum number of CSI RS resource
-- configurations using non-zero Tx power
-- (per carrier frequency)
maxCSI-RS-NZP-v1310 INTEGER ::= 21 -- Maximum number of additional CSI RS resource
-- configurations using non-zero Tx power
-- (per carrier frequency)
maxCSI-RS-ZP-r11 INTEGER ::= 4 -- Maximum number of CSI RS resource
-- configurations using zero Tx power (per carrier
-- frequency)
maxCQI-ProcExt-r11 INTEGER ::= 3 -- Maximum number of additional periodic CQI
-- configurations (per carrier frequency)
maxFreqUTRA-TDD-r10 INTEGER ::= 6 -- Maximum number of UTRA TDD carrier frequencies for
-- which system information can be provided as
-- redirection assistance
maxCellInter INTEGER ::= 16 -- Maximum number of neighbouring inter-frequency
-- cells listed in SIB type 5
maxCellIntra INTEGER ::= 16 -- Maximum number of neighbouring intra-frequency
-- cells listed in SIB type 4
maxCellListGERAN INTEGER ::= 3 -- Maximum number of lists of GERAN cells
maxCellMeas INTEGER ::= 32 -- Maximum number of entries in each of the
-- cell lists in a measurement object
maxCellReport INTEGER ::= 8 -- Maximum number of reported cells/CSI-RS resources
maxConfigSPS-r14 INTEGER ::= 8 -- Maximum number of simultaneous SPS configurations
maxCSI-RS-Meas-r12 INTEGER ::= 96 -- Maximum number of entries in the CSI-RS list
-- in a measurement object
maxDRB INTEGER ::= 11 -- Maximum number of Data Radio Bearers
maxDS-Duration-r12 INTEGER ::= 5 -- Maximum number of subframes in a discovery signals
-- occasion
maxDS-ZTP-CSI-RS-r12 INTEGER ::= 5 -- Maximum number of zero transmission power CSI-RS for
-- a serving cell concerning discovery signals

6.5 PC5 RRC messages

NOTE: The messages included in this section reflect the current status of the discussions. Additional messages may be included at a later stage.

6.5.1 General message structure

PC5-RRC-Definitions

This ASN.1 segment is the start of the PC5 RRC PDU definitions.

SBCCH-SL-BCH-Message

The SBCCH-SL-BCH-Message class is the set of RRC messages that may be sent from the UE to the UE via SL-BCH on the SBCCH logical channel.

SBCCH-SL-BCH-Message-V2X

The SBCCH-SL-BCH-Message-V2X class is the set of RRC messages that may be sent from the UE to the UE via SL-BCH on the SBCCH logical channel for V2X sidelink communication.
6.5.2 Message definitions

-- MasterInformationBlock-SL

The MasterInformationBlock-SL includes the information transmitted by a UE transmitting SLSS, i.e. acting as synchronisation reference, via SL-BCH.

Signalling radio bearer: N/A

6.6 Direct Indication Information

Direct Indication information is transmitted on MPDCCH using P-RNTI but without associated Paging message. Table 6.6-1 defines the Direct Indication information, see TS 36.212 [22, 5.3.3.1.14].

When bit n is set to 1, UE shall behave as if the corresponding field is set in the Paging message, see 5.3.2.3. Bit 1 is the least significant bit.

<table>

</tr>
<tr>
<td>6, 7, 8</td>
<td>Not used, and shall be ignored by UE if received.</td>
</tr>
</tbody>
</table>

6.6a Direct Indication FeMBMS

On MBMS-dedicated cell and on FeMBMS/Unicast-mixed cell, a Direct Indication FeMBMS is transmitted on PDCCH together with 8-bit MCCH change notification using M-RNTI, see TS 36.212 [22, 5.3.3.1.4]. Table 6.6a-1 defines the Direct Indication FeMBMS.

When the first bit is set to 1, UE shall behave as if systemInfoModification field is set in the Paging message and when the second bit is set to 1, UE shall behave as if both etws-Indication and cmas-Indication are set in the Paging message, see 5.3.2.3. Bit 1 is the least significant bit.

  rasterOffset-r13                ChannelRasterOffset-NB-r13,
  spare                           BIT STRING (SIZE (2))
}

Standalone-NB-r13 ::= SEQUENCE {
  spare                           BIT STRING (SIZE (5))
}````
MasterInformationBlock-NB field descriptions

**ab-Enabled**
Value TRUE indicates that access barring is enabled and that the UE shall acquire SystemInformationBlockType14-NB before initiating RRC connection establishment or resume.

**eutra-CRS-SequenceInfo**
Information of the carrier containing NPS/SSS/NPBCH. Each value is associated with an E-UTRA PRB index as an offset from the middle of the LTE system sorted out by channel raster offset. See TS 36.211[21] and TS 36.213[23].

**eutra-NumCRS-Ports**
Number of E-UTRA CRS antenna ports, either the same number of ports as NRS or 4 antenna ports. See TS 36.211[21], TS 36.212[22], and TS 36.213[23].

**hyperSFN-LSB**
Indicates the 2 least significant bits of hyper SFN. The remaining bits are present in SystemInformationBlockType1-NB.

**operationModeInfo**
Deployment scenario (in-band/guard-band/standalone) and related information. See TS 36.211[21] and TS 36.213[23].

- **Inband-SamePCI** indicates an in-band deployment and that the NB-IoT and LTE cell share the same physical cell id and have the same number of NRS and CRS ports.
- **Inband-DifferentPCI** indicates an in-band deployment and that the NB-IoT and LTE cell have different physical cell id.
- **guardband** indicates a guard-band deployment.
- **standalone** indicates a standalone deployment.

**rasterOffset**
NB-IoT offset from LTE channel raster. Unit in kHz in set { -7.5, -2.5, 2.5, 7.5} See TS 36.211[21] and TS 36.213[23].

**schedulingInfoSIB1**
This field contains an index to a table specified in TS 36.213[23, Table 16.4.1.3-3] that defines SystemInformationBlockType1-NB scheduling information.

**systemFrameNumber-MSB**
Defines the 4 most significant bits of the SFN. As indicated in TS 36.211[21], the 6 least significant bits of the SFN are acquired implicitly by decoding the NPBCH.

**systemInfoValueTag**
Common for all SIBs other than MIB-NB, SIB14-NB and SIB16-NB.

---

**Paging-NB**

The Paging-NB message is used for the notification of one or more UEs.

Signalling radio bearer: N/A

RLC-SAP: TM

Logical channel: PCCH

Direction: E-UTRAN to UE

---

systemInfoModification-eDRX-r13          ENUMERATED {true}    OPTIONAL, -- Need ON
nonCriticalExtension                     SEQUENCE {}      OPTIONAL
}
PagingRecordList-NB-r13 ::= SEQUENCE (SIZE (1..maxPageRec)) OF PagingRecord-NB-r13
PagingRecord-NB-r13 ::= SEQUENCE {
ue-Identity-r13                          PagingUE-Identity,
...                                        ...
}
```

---

ETSI
Paging-NB field descriptions

**systemInfoModification**
If present: indication of a BCCH modification other than for SystemInformationBlockType14-NB (SIB14-NB) and SystemInformationBlockType16-NB (SIB16-NB). This indication does not apply to UEs using eDRX cycle longer than the BCCH modification period.

**systemInfoModification-eDRX**
If present: indication of a BCCH modification other than for SystemInformationBlockType14-NB (SIB14-NB) and SystemInformationBlockType16-NB (SIB16-NB). This indication applies only to UEs using eDRX cycle longer than the BCCH modification period.

**ue-Identity**
Provides the NAS identity of the UE that is being paged.

RRConnectionReconfiguration-NB

The RRConnectionReconfiguration-NB message is the command to modify an RRC connection. It may convey information for resource configuration (including RBs, MAC main configuration and physical channel configuration) including any associated dedicated NAS information.

- Signalling radio bearer: SRB1
- RLC-SAP: AM
- Logical channel: DCCH
- Direction: E-UTRAN to UE

**RRConnectionReconfiguration-NB message**

```
-- ASN1START
RRConnectionReconfiguration-NB ::= SEQUENCE {
  rrc-TransactionIdentifier    RRC-TransactionIdentifier, 
  criticalExtensions      CHOICE {
    c1          CHOICE{
      rrcConnectionReconfiguration-r13  RRCConnectionReconfiguration-NB-r13-IEs,
      spare1 NULL
    },
    criticalExtensionsFuture   SEQUENCE {}
  }
}

RRConnectionReconfiguration-NB-r13-IEs ::= SEQUENCE {

RRCConnectionReestablishmentRequest-NB field descriptions

reestablishmentCause
Indicates the failure cause that triggered the re-establishment procedure. eNB is not expected to reject a RRCConnectionReestablishmentRequest due to unknown cause value being used by the UE.

ue-Identity
UE identity included to retrieve UE context and to facilitate contention resolution by lower layers.

ul-NAS-Count
For description of this field see TS 33.401 [32].

ul-NAS-MAC
For description of this field see TS 33.401 [32].

RRCConnectionReject-NB
The RRCConnectionReject-NB message is used to reject the RRC connection establishment or RRC connection resume.

Signalling radio bearer: SRB0
RLC-SAP: TM
Logical channel: CCCH
Direction: E-UTRAN to UE
lateNonCriticalExtension OCTET STRING OPTIONAL,  
nonCriticalExtension SEQUENCE () OPTIONAL
}

}

ReleaseCause-NB-r13 ::= ENUMERATED {loadBalancingTAUrequired, other,  
  rrc-Suspend, spare1}

RedirectedCarrierInfo-NB-r13 ::= CarrierFreq-NB-r13

RedirectedCarrierInfo-NB-v1430 ::= SEQUENCE {
  redirectedCarrierOffsetDedicated-r14 ENUMERATED{  
    dB1, dB2, dB3, dB4, dB5, dB6, dB8, dB10,  
    dB12, dB14, dB16, dB18, dB20, dB22, dB24, dB26},  
  t322-r14 ENUMERATED{  
    min5, min10, min20, min30, min60, min120, min180,  
    spare1}
}
```
**RRConnectionRelease-NB** field descriptions

- **extendedWaitTime**
  Value in seconds.

- **extendedWaitTime-CPdata**
  Wait time for data transfer using the Control Plane CIoT EPS optimisation. Value in seconds. See TS 24.301 [35].

- **redirectedCarrierInfo**
  The redirectedCarrierInfo indicates a carrier frequency (downlink for FDD) and is used to redirect the UE to a NB-IoT carrier frequency, by means of the cell selection upon leaving RRC_CONNECTED as specified in TS 36.304 [4].

- **redirectedCarrierOffsetDedicated**
  Parameter “Qoffsetdedicatedfrequency” in TS 36.304 [4]. For NB-IoT carrier frequencies, a UE that supports multi-band cells considers the redirectedCarrierOffsetDedicated to be common for all overlapping bands (i.e. regardless of the EARFCN that is used).

- **releaseCause**
  The releaseCause is used to indicate the reason for releasing the RRC Connection. E-UTRAN should not set the releaseCause to loadBalancingTAURequired if the extendedWaitTime is present.

<table>

**RRConnectionRequest-NB**

The **RRConnectionRequest-NB** message is used to request the establishment of an RRC connection.

- Signalling radio bearer: SRB0
- RLC-SAP: TM
- Logical channel: CCCH
- Direction: UE to E-UTRAN

**RRConnectionRequest-NB message**

```
-- ASN1START
RRConnectionRequest-NB ::= SEQUENCE {
  criticalExtensions     CHOICE {
    rrcConnectionRequest-r13   RRCConnectionRequest-NB-r13-IEs,
    criticalExtensionsFuture   SEQUENCE {}   
  }

RRCConnectionRequest-NB-r13-IEs ::=  SEQUENCE {
  ue-Identity-r13       InitialUE-Identity,
  establishmentCause-r13     EstablishmentCause-NB-r13,
  multiCarrierSupport-r13     ENUMERATED {true}    OPTIONAL,
  spare         BIT STRING (SIZE (22))
}

-- ASN1STOP
```
**RRCConnectionRequest-NB field descriptions**

**establishmentCause**
Provides the establishment cause for the RRC connection request as provided by the upper layers. eNB is not expected to reject a RRCConnectionRequest due to unknown cause value being used by the UE.

**multiCarrierSupport**
If present, this field indicates that the UE supports multi-carrier operation.

**multiToneSupport**
If present, this field indicates that the UE supports UL multi-tone transmissions on NPUSCH.

**ue-identity**
UE identity included to facilitate contention resolution by lower layers.

---

**RRCConnectionResume-NB**

The RRCConnectionResume-NB message is used to resume the suspended RRC connection.

Signalling radio bearer: SRB1

RLC-SAP: AM

Logical channel: DCCH

Direction: E-UTRAN to UE

**RRCConnectionResume-NB message**

```asn1
RRCConnectionResume-NB ::= SEQUENCE {
  rrc-TransactionIdentifier   RRC-TransactionIdentifier,  
  criticalExtensions     CHOICE {
    c1         CHOICE {
      rrcConnectionResume-r13    RRCConnectionResume-NB-r13-IEs, 
      spare1         NULL 
    },
    criticalExtensionsFuture   SEQUENCE {}  
  }
}

RRCConnectionResume-NB-r13-IEs ::= SEQUENCE {
  radioResourceConfigDedicated-r13  RadioResourceConfigDedicated-NB-r13 OPTIONAL,   -- Need ON
  nextHopChainingCount-r13    NextHopChainingCount,  
  drb-ContinueROHC-r13     ENUMERATED {true}    OPTIONAL,  -- Need OP
  lateNonCriticalExtension    OCTET STRING     OPTIONAL,  
  nonCriticalExtension     SEQUENCE {}      OPTIONAL
}
```

---

**RRCConnectionResume-NB field descriptions**

**drb-ContinueROHC**
This field indicates whether to continue or reset the header compression protocol context for the DRBs configured with the header compression protocol. Presence of the field indicates that the header compression protocol context continues while absence indicates that the header compression protocol context is reset.

---

**RRCConnectionResumeComplete-NB**

The RRCConnectionResumeComplete-NB message is used to confirm the successful completion of an RRC connection resumption
Signalling radio bearer: SRB1
RLC-SAP: AM
Logical channel: DCCH
Direction: UE to E-UTRAN

**RRCConnectionResumeComplete-NB message**

```asn1
RRCConnectionResumeComplete-NB ::= SEQUENCE {
    rrc-TransactionIdentifier    RRC-TransactionIdentifier,
    criticalExtensions       CHOICE {
        rrcConnectionResumeComplete-r13    RRCConnectionResumeComplete-NB-r13-IEs,
        criticalExtensionsFuture     SEQUENCE {}
    }
}
RRCConnectionResumeComplete-NB-r13-IEs ::= SEQUENCE {

    resumeCause-r13        EstablishmentCause-NB-r13,
    spare          BIT STRING (SIZE (9))
}
```
**RRConnectionResumeRequest-NB field descriptions**

**resumeCause**
Provides the resume cause for the RRC connection resume request as provided by the upper layers. eNB is not expected to reject a **RRConnectionResumeRequest** due to unknown cause value being used by the UE.

**resumeID**
UE identity to facilitate UE context retrieval at eNB.

**shortResumeMAC-I**
Authentication token to facilitate UE authentication at eNB.

---

**RRConnectionSetup-NB**

The **RRConnectionSetup-NB** message is used to establish SRB1 and SRB1bis.

- Signalling radio bearer: SRB0

-- ASN1STOP

RRCConnectionSetupComplete-NB field descriptions

attachWithoutPDN-Connectivity
This field is used to indicate that the UE performs an Attach without PDN connectivity procedure, as indicated by the upper layers, TS 24.301 [35].

dcn-ID
The Dedicated Core Network Identity, see TS 23.401 [41].

gummei-Type
This field is used to indicate that the GUMMEI included is mapped (from 2G/3G identifiers) as indicated by the upper layers, TS 24.301 [35].

registeredMME
This field is used to transfer the GUMMEI of the MME where the UE is registered, as provided by upper layers.

selectedPLMN-Identity
Index of the PLMN selected by the UE from the plmn-IdentityList included in SystemInformationBlockType1-NB. 1 if the 1st PLMN is selected from the plmn-IdentityList included in SIB1, 2 if the 2nd PLMN is selected from the plmn-IdentityList included in SIB1 and so on.

up-CIoT-EPS-Optimisation
This field is included when the UE supports S1-U data transfer or the User plane CIoT EPS Optimisation, as indicated by the upper layers, see TS 24.301 [35].

-- SCPTMConfiguration-NB

### SystemInformationBlockType1-NB field descriptions

<table>
<thead>
<tr>
<th>Field Description</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>attachWithoutPDN-Connectivity</strong></td>
<td>If present, the field indicates that attach without PDN connectivity as specified in TS 24.301 [35] is supported for this PLMN.</td>
</tr>
<tr>
<td><strong>ce-authorisationOffset</strong></td>
<td>Parameter “Qoffsetauthorization” in TS 36.304 [4]. Value in dB. Value dB5 corresponds to 5 dB, dB10 corresponds to 10 dB and so on. If the field is absent, the value of 0 dB shall be used for “Qoffsetauthorization”.</td>
</tr>
<tr>
<td><strong>cellBarred</strong></td>
<td>Barred means the cell is barred, as defined in TS 36.304 [4].</td>
</tr>
<tr>
<td><strong>cellIdentity</strong></td>
<td>Indicates the cell identity.</td>
</tr>
<tr>
<td><strong>cellReservedForOperatorUse</strong></td>
<td>As defined in TS 36.304 [4].</td>
</tr>
<tr>
<td><strong>cellSelectionInfo</strong></td>
<td>Cell selection information as specified in TS 36.304 [4].</td>
</tr>
<tr>
<td><strong>downlinkBitmap</strong></td>
<td>NB-IoT downlink subframe configuration for downlink transmission. If the bitmap is not present, the UE shall assume that all subframes are valid (except for subframes carrying NPSS/NSSS/NPBCH/SIB1-NB) as specified in TS 36.213 [23, 16.4].</td>
</tr>
<tr>
<td><strong>utraControlRegionSize</strong></td>
<td>Indicates the control region size of the E-UTRA cell for the in-band operation mode, see TS 36.213 [23]. Unit is in number of OFDM symbols.</td>
</tr>
<tr>
<td><strong>freqBandInfo</strong></td>
<td>A list of additionalPmax and additionalSpectrumEmission values as defined in TS 36.101 [42, 6.2.4F] for the frequency band in freqBandIndicator.</td>
</tr>
<tr>
<td><strong>hyperSFN-MSB</strong></td>
<td>Indicates the 8 most significant bits of hyper-SFN. Together with hyperSFN-LSB in MIB-NB, the complete hyper-SFN is built up. hyper-SFN is incremented by one when the SFN wraps around.</td>
</tr>
<tr>
<td><strong>intraFreqReselection</strong></td>
<td>Used to control cell reselection to intra-frequency cells when the highest ranked cell is barred, or treated as barred by the UE, as specified in TS 36.304 [4].</td>
</tr>
<tr>
<td><strong>multiBandInfoList</strong></td>
<td>A list of additional frequency band indicators, additionalPmax and additionalSpectrumEmission values, as defined in TS 36.101 [42, table 5.5-1]. If the UE supports the frequency band in the freqBandIndicator IE it shall apply that frequency band. Otherwise, the UE shall apply the first listed band which it supports in the multiBandInfoList IE.</td>
</tr>
<tr>
<td><strong>nrs-CRS-PowerOffset</strong></td>
<td>NRS power offset between NRS and E-UTRA CRS, see TS 36.213 [23, 16.2.2]. Unit in dB. Default value of 0.</td>
</tr>
<tr>
<td><strong>plmn-IdentityList</strong></td>
<td>List of PLMN identities. The first listed PLMN-Identity is the primary PLMN.</td>
</tr>
<tr>
<td><strong>p-Max</strong></td>
<td>Value applicable for the cell. If absent the UE applies the maximum power according to the UE capability.</td>
</tr>
<tr>
<td><strong>q-QualMin</strong></td>
<td>Parameter “Qmin” in TS 36.304 [4].</td>
</tr>
<tr>
<td><strong>q-RxLevMin, delta-RxLevMin</strong></td>
<td>Parameter Qmin in TS 36.304 [4]. If delta-RxLevMin is not included, actual value Qmin = q-RxLevMin * 2 [dBm]. If delta-RxLevMin is included, actual value Qmin = (q-RxLevMin + delta-RxLevMin) * 2 [dBm].</td>
</tr>
<tr>
<td><strong>schedulingInfoList</strong></td>
<td>Indicates additional scheduling information of SI messages.</td>
</tr>
<tr>
<td><strong>si-Periodicity</strong></td>
<td>Periodicity of the SI-message in radio frames, such that rf256 denotes 256 radio frames, rf512 denotes 512 radio frames, and so on.</td>
</tr>
<tr>
<td><strong>si-RadioFrameOffset</strong></td>
<td>Offset in number of radio frames to calculate the start of the SI window. If the field is absent, no offset is applied.</td>
</tr>
<tr>
<td><strong>si-RepetitionPattern</strong></td>
<td>Indicates the starting radio frames within the SI window used for SI message transmission. Value every2ndRF corresponds to every 2 radio frames, value every4thRF corresponds to every 4 radio frames and so on. The first transmission of the SI message is transmitted from the first radio frame of the SI window.</td>
</tr>
</tbody>
</table>
### SystemInformationBlockType1-NB field descriptions

**si-TB**  
This field indicates the transport block size in number of bits and the corresponding number of consecutive NB-IoT downlink subframes that are used to broadcast the SI message. Value b56 corresponds to 56 bits, b120 corresponds to 120 bits and so on. TBS of 56 bits and 120 bits are transmitted over 2 sub-frames, other TBS are transmitted over 8 sub-frames, see TS 36.213 [23, Table 16.4.1.5.1-1].

**si-WindowLength**  
Common SI scheduling window for all SIs. Unit in milliseconds, where ms160 denotes 160 milliseconds, ms320 denotes 320 milliseconds and so on.

**sib-MappingInfo**  
List of the SIBs mapped to this SystemInformation message. There is no mapping information of SIB2-NB; it is always present in the first SystemInformation message listed in the schedulingInfoList list.

**systemInfoValueTagList**  
Indicates SI message specific value tags. It includes the same number of entries, and listed in the same order, as in schedulingInfoList.

**systemInfoValueTagSI**  
SI message specific value tag as specified in Clause 5.2.1.3. Common for all SIBs within the SI message other than SIB14-NB.

**trackingAreaCode**  
A trackingAreaCode that is common for all the PLMNs listed.

  nonCriticalExtension     SEQUENCE {}       OPTIONAL
}`
6.7.3 NB-IoT information elements

6.7.3.1 NB-IoT System information blocks

– **SystemInformationBlockType2-NB**

The IE **SystemInformationBlockType2-NB** contains radio resource configuration information that is common for all UEs.

**NOTE:** UE timers and constants related to functionality for which parameters are provided in another SIB are included in the corresponding SIB.

**SystemInformationBlockType2-NB information element**

---

**SystemInformationBlockType2-NB** field descriptions

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>additionalSpectrumEmission</strong></td>
<td>The UE requirements related to IE <strong>AdditionalSpectrumEmission</strong> are defined in TS 36.101 [42, 6.2.4F].</td>
</tr>
<tr>
<td><strong>cp-Reestablishment</strong></td>
<td>This field indicates if the NB-IoT UE is allowed to trigger RRC connection re-establishment when AS security has not been activated.</td>
</tr>
<tr>
<td><strong>multiBandInfoList</strong></td>
<td>A list of <strong>additionalSpectrumEmission</strong> i.e. one for each additional frequency band included in <strong>multiBandInfoList</strong> in <strong>SystemInformationBlockType1-NB</strong>, listed in the same order.</td>
</tr>
<tr>
<td><strong>ul-CarrierFreq</strong></td>
<td>Uplink carrier frequency as defined in TS 36.101 [42, 5.7.3F]. If <strong>operationModeInfo</strong> in the MIB-NB is set to <strong>standalone</strong> and the field is absent, the value of the carrier frequency is determined by the TX-RX frequency separation defined in TS 36.101 [42, table 5.7.4-1] and the value of the carrier frequency offset is 0. If <strong>operationModeInfo</strong> in the MIB-NB is not set to <strong>standalone</strong>, the field is mandatory present.</td>
</tr>
</tbody>
</table>

---

– **SystemInformationBlockType3-NB**

The IE **SystemInformationBlockType3-NB** contains cell re-selection information common for intra-frequency, and inter-frequency cell re-selection as well as intra-frequency cell re-selection information other than neighbouring cell related.

**SystemInformationBlockType3-NB information element**

---
**SystemInformationBlockType3-NB field descriptions**

*ce-AuthorisationOffset*
Parameter "Qoffsetauthorization" in TS 36.304 [4]. Value in dB. Value dB5 corresponds to 5 dB, dB10 corresponds to 10 dB and so on.
If the field is absent, the UE applies the value of ce-authorisationOffset in SystemInformationBlockType1-NB.

*multiBandInfoList*
A list of additionalPmax and additionalSpectrumEmission values as defined in TS 36.101 [42, 6.2.4F] applicable for the intra-frequency neighbouring NB-IoT cells if the UE selects the frequency band from freqBandIndicator in SystemInformationBlockType1-NB.

*powerClass14dBm-Offset*
Parameter "Poffset" in TS 36.304 [4], only applicable for UE supporting powerClassNB-14dBm. Value in dB. Value dB-6 corresponds to -6 dB, dB-3 corresponds to -3 dB and so on. If the field is absent, the UE applies the (default) value of 0 dB for "Poffset" in TS 36.304 [4].

*p-Max*
Value applicable for the intra-frequency neighbouring E-UTRA cells. If absent the UE applies the maximum power according to the UE capability.

*q-Hyst*
Parameter Qhyst in TS 36.304 [4]. Value in dB. Value dB1 corresponds to 1 dB, dB2 corresponds to 2 dB and so on.

*q-QualMin*
Parameter "Qqualmin" in TS 36.304 [4], applicable for intra-frequency neighbour cells. If the field is not present, the UE applies the (default) value of negative infinity for Qqualmin.

*q-RxLevMin, delta-RxLevMin*
Parameter "Qrxlevmin" in TS 36.304 [4], applicable for intra-frequency neighbour cells. If delta-RxLevMin is not included, actual value Qrxlevmin = q-RxLevMin * 2 [dBm]. If delta-RxLevMin is included, actual value Qrxlevmin = (q-RxLevMin + delta-RxLevMin) * 2 [dBm].

*s-IntraSearchP*
Parameter "SIntraSearchP" in TS 36.304 [4].
In case s-IntraSearchP-v1360 is included, the UE shall ignore s-IntraSearchP (i.e. without suffix).

*s-NonIntraSearch*
Parameter "SnonIntraSearchP" in TS 36.304 [4].

*t-Reselection*
Parameter "TreselectionNB-IoT_Intra" in TS 36.304 [4].

---

**SystemInformationBlockType4-NB**

The IE SystemInformationBlockType4-NB contains neighbouring cell related information relevant only for intra-frequency cell re-selection. The IE includes cells with specific re-selection parameters.

**SystemInformationBlockType4-NB information element**

```
-- ASN1START
SystemInformationBlockType4-NB-r13 ::= SEQUENCE {
  intraFreqNeighCellList-r13       IntraFreqNeighCellList OPTIONAL, -- Need OR

### SystemInformationBlockType5-NB field descriptions

**ce-AuthorisationOffset**  
Parameter “Qoffsetauthorization” in TS 36.304 [4]. Value in dB. Value dB5 corresponds to 5 dB, dB10 corresponds to 10 dB and so on. If the field is absent, the UE applies the value of ce-authorizationOffset in SystemInformationBlockType1-NB.

**p-Max**  
Value applicable for the neighbouring NB-IoT cells on this carrier frequency. If absent the UE applies the maximum power according to the UE capability.

**interFreqBlackCellList**  
List of blacklisted inter-frequency neighbouring cells.

**interFreqCarrierFreqList**  
List of neighbouring inter-frequency carriers. E-UTRAN does not configure more than one entry for the same physical frequency regardless of the E-ARFCN used to indicate this.

**interFreqNeighCellList**  
List of inter-frequency neighbouring cells.

**multiBandInfoList**  
Indicates the list of frequency bands, with the associated additionalPmax and additionalSpectrumEmission values as defined in TS 36.101 [42, 6.2.4], in addition to the band represented by dl-CarrierFreq for which cell reselection parameters are common.

**powerClass14dBm-Offset**  
Parameter “Poffset” in TS 36.304 [4], only applicable for UE supporting powerClassNB-14dBm. Value in dB. Value dB-6 corresponds to -6 dB, dB-3 corresponds to -3 dB and so on. If the field is absent, the UE applies the (default) value of 0 dB for “Poffset” in TS 36.304 [4].

**q-OffsetFreq**  
Parameter “Qoffsetfrequency” in TS 36.304 [4].

**q-QualMin**  
Parameter “Qqualmin” in TS 36.304 [4]. If the field is not present, the UE applies the (default) value of negative infinity for Qqualmin.

**q-RxlevMin, delta-RxLevMin**  
Parameter “QRxLevmin” in TS 36.304 [4]. If delta-RxLevMin is not included, actual value Qrxlevmin = q-RxLevMin * 2 [dBm]. If delta-RxLevMin is included, actual value Qrxlevmin = (q-RxLevMin + delta-RxLevMin) * 2 [dBm].

**scptm-FreqOffset**  
Parameter QoffsetSCPTM in TS 36.304 [4]. Actual value QoffsetSCPTM = field value * 2 [dB]. If the field is absent, the UE uses infinite dBs for the SC-PTM frequency offset with cell ranking as specified in TS 36.304 [4].

**t-Reselection**  
Parameter “TreselectionNB-IoT_inter” in TS 36.304 [4].

<table>

**SystemInformationBlockType14-NB**  
The IE SystemInformationBlockType14-NB contains the AB parameters.

### SystemInformationBlockType14-NB information element

```
-- ASN1START

SystemInformationBlockType14-NB-r13 ::= SEQUENCE {
  ab-Config-r13   CHOICE {
    ab-Common-r13    AB-Config-NB-r13  OPTIONAL -- Need OR
    ab-PerPLMN-List-r13    SEQUENCE (SIZE (1..maxPLMN-r11)) OF AB-ConfigPLMN-NB-r13  OPTIONAL, -- Need OR
  }
  lateNonCriticalExtension  OCTET STRING  OPTIONAL,
  ...}

AB-ConfigPLMN-NB-r13 ::= SEQUENCE {
  ab-Config-r13    AB-Config-NB-r13  OPTIONAL -- Need OR
}

AB-Config-NB-r13 ::= SEQUENCE {
  ab-Category-r13    ENUMERATED {a, b, c},
  ab-BarringBitmap-r13  BIT STRING (SIZE(10)),
  ab-BarringForExceptionData-r13    ENUMERATED {true}  OPTIONAL, -- Need OP

-- ASN1END
```
### SystemInformationBlockType14-NB field descriptions

**ab-BarringBitmap**  
Access class barring for AC 0-9. The first/ leftmost bit is for AC 0, the second bit is for AC 1, and so on.

**ab-BarringForExceptionData**  
Indicates whether ExceptionData is subject to access barring.

**ab-BarringForSpecialAC**  
Access class barring for AC 11-15. The first/ leftmost bit is for AC 11, the second bit is for AC 12, and so on.

**ab-Category**  
Indicates the category of UEs for which AB applies. Value a corresponds to all UEs, value b corresponds to the UEs that are neither in their HPLMN nor in a PLMN that is equivalent to it, and value c corresponds to the UEs that are neither in the PLMN listed as most preferred PLMN of the country where the UEs are roaming in the operator-defined PLMN selector list on the USIM, nor in their HPLMN nor in a PLMN that is equivalent to their HPLMN, see TS 22.011 [10].

**ab-Common**  
The AB parameters applicable for all PLMN(s).

**ab-PerPLMN-List**  
The AB parameters per PLMN, listed in the same order as the PLMN(s) occur in plmn-IdentityList in SystemInformationBlockType1-NB.

### SystemInformationBlockType15-NB

The IE `SystemInformationBlockType15-NB` contains the MBMS Service Area Identities (SAI) of the current and/ or neighbouring carrier frequencies.

---

### SystemInformationBlockType15-NB information element

```asn
SystemInformationBlockType15-NB-r14 ::= SEQUENCE {

```

---

### SystemInformationBlockType15-NB field descriptions

**mbms-SAI-InterFreqList**  
Contains a list of neighboring frequencies including additional frequency bands, if any, that provide MBMS services and the corresponding MBMS SAIs.

**mbms-SAI-IntraFreq**  
Contains the list of MBMS SAIs for the current frequency. A duplicate MBMS SAI indicates that this and all following SAIs are not offered by this cell but only by neighbour cells on the current frequency. For MBMS service continuity, the UE shall use all MBMS SAIs listed in mbms-SAI-IntraFreq to derive the MBMS frequencies of interest.

**mbms-SAI-List**  
Contains a list of MBMS SAIs for a specific frequency.

**multiBandInfoList**  
A list of additional frequency bands applicable for the cells participating in the SC-PTM transmission.
-- SystemInformationBlockType16-NB

The IE SystemInformationBlockType16-NB contains information related to GPS time and Coordinated Universal Time (UTC). The UE may use the parameters provided in this system information block to obtain the UTC, the GPS and the local time.

-- ASN1START
SystemInformationBlockType16-NB-r13 ::= SystemInformationBlockType16-r11
-- ASN1STOP

-- SystemInformationBlockType20-NB

The IE SystemInformationBlockType20-NB contains the information required to acquire the control information associated with transmission of MBMS using SC-PTM.

### SystemInformationBlockType20-NB field descriptions

**dl-CarrierConfig**  
Downlink carrier used for SC-MCCH.

**dl-CarrierIndex**  
Index to a downlink carrier signalled in system information. Value ‘0’ corresponds to the anchor carrier, value ‘1’ corresponds to the first entry in dl-ConfigList in SystemInformationBlockType22-NB, value ‘2’ corresponds to the second entry in dl-ConfigList and so on.

**drx-InactivityTimerSCPTM**  
Timer for SC-MCCH reception in TS 36.321 [6]. Value in number of NPDCCH periods. Value pp1 corresponds to 1 NPDCCH period, pp2 corresponds to 2 NPDCCH periods and so on.

**npdcch-NumRepetitions-SC-MCCH**  
The maximum number of NPDCCH repetitions the UE needs to monitor for SC-MCCH multicast search space, see TS 36.213 [23].

**npdcch-Offset-SC-MCCH**  
Fractional period offset of starting subframe for NPDCCH multicast search space for SC-MCCH, see TS 36.213 [23].

**npdcch-StartSF-SC-MCCH**  
Starting subframes configuration of the NPDCCH multicast search space for SC-MCCH, see TS 36.213 [23].

**onDurationTimerSCPTM**  
Timer for SC-MCCH reception in TS 36.321 [6]. Value in number of NPDCCH periods. Value pp1 corresponds to 1 NPDCCH period, pp2 corresponds to 2 NPDCCH periods and so on.

**schedulingPeriodStartOffsetSCPTM**  
SCPTM-SchedulingCycle and SCPTM-SchedulingOffset in TS 36.321 [6]. The value of SCPTM-SchedulingCycle is in number of sub-frames. Value sf10 corresponds to 10 sub-frames, sf20 corresponds to 20 sub-frames and so on. The value of SCPTM-SchedulingOffset is in number of sub-frames.

**sc-mcch-CarrierConfig**  
Downlink carrier that is used for SC-MCCH.

**sc-mcch-ModificationPeriod**  
Defines periodically appearing boundaries, i.e. radio frames for which (H-SFN * 1024 + SFN) mod sc-mcch-ModificationPeriod = 0. The contents of different transmissions of SC-MCCH information can only be different if there is at least one such boundary in-between them. Value rf32 corresponds to 32 radio frames, value rf128 corresponds to 128 radio frames and so on.

**sc-mcch-Offset**  
Indicates, together with the sc-mcch-RepetitionPeriod, the boundary of the repetition period: (H-SFN * 1024 + SFN) mod sc-mcch-RepetitionPeriod = sc-mcch-Offset.

**sc-mcch-RepetitionPeriod**  
Defines the interval between transmissions of SC-MCCH information, in radio frames. Value rf32 corresponds to 32 radio frames, rf128 corresponds to 128 radio frames and so on.

**sc-mcch-SchedulingInfo**  
DRX information for the SC-MCCH. If the field is absent, DRX is not used for SC-MCCH reception.

---

**SystemInformationBlockType22-NB**

The IE `SystemInformationBlockType22-NB` contains radio resource configuration for paging and random access procedure on non-anchor carriers.

---

NPRACH-ProbabilityAnchor-NB-r14 ::= SEQUENCE {
    npdcch-ProbabilityAnchor-r14 ENUMERATED {
        zero, oneSixteenth, oneFifteenth, oneFourteenth,
        oneThirteenth, oneTwelfth, oneEleventh, oneTenth,
        oneNinth, oneEighth, oneSeventh, oneSixth,
        oneFifth, oneFourth, oneThird, oneHalf}
       OPTIONAL -- Need OP
    ...
}
nprach-SubcarrierOffset

The start subcarrier indices that the UE is allowed to randomly select from, are given by:

\[ \text{nprach-SubcarrierOffset} + [0, \text{nprach-NumCBRA-StartSubcarriers} - 1] \]

If the field is absent, the value of nprach-NumSubcarriers configured in SystemInformationBlockType2-NB for the NPRACH resource in the corresponding entry of nprach-ParametersList applies.

nprach-NumCBRA-StartSubcarriers

The number of start subcarriers from which a UE can randomly select a start subcarrier as specified in TS 36.321 [6]. The start subcarrier indices that the UE is allowed to randomly select from, are given by:

\[ \text{nprach-SubcarrierOffset} + [0, \text{nprach-NumCBRA-StartSubcarriers} - 1] \]

If the field is absent, the value of nprach-NumSubcarriers configured in SystemInformationBlockType2-NB for the NPRACH resource in the corresponding entry of nprach-ParametersList applies.

nprach-NumSubcarriers

Number of sub-carriers in a NPRACH resource, see TS 36.211 [21, 10.1.6]. In number of subcarriers.

nprach-ParametersList

Configure NPRACH parameters for each NPRACH resource on one non-anchor UL carrier. Up to three NPRACH resources can be configured on one non-anchor UL carrier. Each NPRACH resource is associated with a different number of NPRACH repetitions. E-UTRAN includes the same number of entries, and listed in the same order, as in nprach-ParametersList in SystemInformationBlockType2-NB.

nprach-Periodicity

Periodicity of a NPRACH resource, see TS 36.211 [21, 10.1.6]. Unit in millisecond.

If the field is absent, the value of nprach-Periodicity configured in SystemInformationBlockType2-NB for the NPRACH resource in the corresponding entry of nprach-ParametersList applies.

nprach-ProbabilityAnchor

Configure the selection probability for the anchor carrier NPRACH resource. Value zero corresponds to a probability of 0, oneSixteenth corresponds to the probability of 1/16, oneFifteenth corresponds to the probability of 1/15, and so on.

If the field is absent, the selection probability of the anchor carrier NPRACH resource is 1. All non-anchor carriers NPRACH resources have equal probability between them. The probability of selecting a non-anchor carrier NPRACH resource is (1 - nprach-ProbabilityAnchor).

nprach-ProbabilityAnchorList

Configures the selection probability for each NPRACH resource on the anchor carrier. E-UTRAN includes the same number of entries, and listed in the same order, as in nprach-ParametersList in SystemInformationBlockType2-NB.

nprach-StartTime

Start time of the NPRACH resource in one period, see TS 36.211 [21, 10.1.6]. Unit in millisecond.

If the field is absent, the value of nprach-StartTime configured in SystemInformationBlockType2-NB for the NPRACH resource in the corresponding entry of nprach-ParametersList applies.

nprach-SubcarrierOffset

Frequency location of the NPRACH resource, see TS 36.211 [21, 10.1.6]. In number of subcarriers, offset from subcarrier 0.

If the field is absent, the value of nprach-SubcarrierOffset configured in SystemInformationBlockType2-NB for the NPRACH resource in the corresponding entry of nprach-ParametersList applies.
nprach-SubcarrierMSG3-RangeStart
Fraction for calculating the starting subcarrier index of the range reserved for indication of UE support for multi-tone Msg3 transmission, within the NPRACH resource, see TS 36.211 [21, 10.1.6]. Multi-tone Msg3 transmission is not supported for {32, 64, 128} repetitions of NPRACH. For at least one of the NPRACH resources with the number of NPRACH repetitions other than {32, 64, 128}, the value of nprach-SubcarrierMSG3-RangeStart should not be 0. If nprach-SubcarrierMSG3-RangeStart is equal to oneThird or twoThird the start subcarrier indexes for the two partitions are given by:

\[ \text{nprach-SubcarrierOffset} + \left\lfloor \frac{0.0}{\text{nprach-NumCBRA-StartSubcarriers} \times \text{nprach-SubcarrierMSG3-RangeStart}} - 1 \right\rfloor \]

for the single-tone Msg3 NPRACH partition;

\[ \text{nprach-SubcarrierOffset} + \left\lfloor \frac{0.0}{\text{nprach-NumCBRA-StartSubcarriers} \times \text{nprach-SubcarrierMSG3-RangeStart}} \right\rfloor \]

for the multi-tone Msg3 NPRACH partition;

If the field is absent, the value of nprach-SubcarrierMSG3-RangeStart configured in SystemInformationBlockType2-NB for the NPRACH resource in the corresponding entry of nprach-ParametersList applies.

delingWeight
Weight of the non-anchor paging carrier for uneven paging load distribution across the carriers. Value w1 corresponds to a relative weight of 1, w2 corresponds to a relative weight of 2, and so on.

The paging load for a carrier \( i \) is equal to \( w(i)/W \) where \( i \) is equal to 0 for the anchor carrier and equal to the index of the carrier in the dl-ConfigList for a non-anchor carrier, \( W \) is the sum of the weights of all paging carriers.

To avoid correlation between paging carrier and paging occasion, the weights should be assigned such that: \( nB \times W \leq 16384 \).

delingWeightAnchor
Weight of the anchor carrier for uneven paging load distribution across the carriers. Value w1 corresponds to a relative weight of 1, w2 corresponds to a relative weight of 2, and so on.

If the field is absent, the (default) value of w0 is applied, i.e. the anchor carrier is not used for paging.

pcch-Config
Configure the PCCH parameters for the non-anchor DL carrier.

ul-CarrierFreq
UL carrier frequency of the non-anchor carrier as defined in TS 36.101 [42, 5.7.3F].

ul-ConfigList
List of UL non-anchor carriers and associated configuration that can be used for random access.

<table>

6.7.3.2 NB-IoT Radio resource control information elements

– CarrierConfigDedicated-NB

The IE CarrierConfigDedicated-NB is used to specify a carrier in NB-IoT.

---

**CarrierConfigDedicated-NB**

```asn1
CarrierConfigDedicated-NB-r13 ::= SEQUENCE {
  dl-CarrierConfig-r13  DL-CarrierConfigDedicated-NB-r13,
  ul-CarrierConfig-r13  UL-CarrierConfigDedicated-NB-r13
}
```

```asn1
DL-CarrierConfigDedicated-NB-r13 ::= SEQUENCE {
  dl-CarrierFreq-r13      CarrierFreq-NB-r13,
  downlinkBitmapNonAnchor-r13  CHOICE {
    useNoBitmap-r13       NULL,,
    useAnchorBitmap-r13      NULL,
    explicitBitmapConfiguration-r13   DL-Bitmap-NB-r13,
    spare         NULL
  }  OPTIONAL,  -- Need ON
  dl-GapNonAnchor-r13     NULL
}
```
CarrierConfigDedicated-NB field descriptions

dl-CarrierConfig
Downlink carrier used for all unicast transmissions.

dl-CarrierFreq
DL carrier frequency. The downlink carrier is not in a E-UTRA PRB which contains E-UTRA PSS/SSS/PBCH.

dl-GapNonAnchor
Downlink transmission gap configuration for the non-anchor carrier, see TS 36.211 [21, 10.2.3.4].

downloadBitmapNonAnchor
NB-IoT downlink subframe configuration for downlink transmission on the non-anchor carrier. See TS 36.213 [23, 16.4].

eutraControlRegionSize
Indicates the control region size of the E-UTRA cell for the in-band operation mode, see TS 36.213 [23]. Unit is in number of OFDM symbols. If operationModeInfo in MIB-NB is set to inband-SamePCI or inband-DifferentPCI, it should be set to the value broadcast in SIB1-NB.

eutraNumCRS-Ports
Number of E-UTRA CRS antenna ports, either the same number of ports as NRS or 4 antenna ports. See TS 36.211 [21], TS 36.212 [22], and TS 36.213 [23].

inbandCarrierInfo
Provides the configuration of a non-anchor inband carrier.

indexToMidPRB
The PRB index is signaled by offset from the middle of the EUTRA system.

nrs-PowerOffsetNonAnchor
Provides the power offset of the downlink narrowband reference-signal EPRE of the non-anchor carrier relative to the anchor carrier, unit in dB. Value dB-12 corresponds to -12 dB, dB-10 corresponds to -10 dB and so on. See TS 36.213 [23, 16.4.2].

samePCI-Indicator
This parameter specifies whether the non-anchor carrier reuses the same PCI as the EUTRA carrier.

ul-CarrierConfig
Uplink non-anchor carrier used for all unicast transmissions.

ul-CarrierFreq
UL carrier frequency as defined in TS 36.101 [42, 5.7.3F]. If absent, the same TX-RX frequency separation and carrier frequency offset as for the anchor carrier applies.

<table>
<thead>
<tr>

</tr>
</tbody>
</table>
DL-CarrierConfigCommon-NB field descriptions

**dl-CarrierFreq**
DL carrier frequency. The downlink carrier is not in a E-UTRA PRB which contains E-UTRA PSS/SSS/PBCH.

**dl-GapNonAnchor**
Downlink transmission gap configuration for the non-anchor carrier, see TS 36.211 [21, 10.2.3.4].

**downlinkBitmapNonAnchor**
NB-IoT downlink subframe configuration for downlink transmission on the non-anchor carrier. See TS 36.213 [23, 16.4].

**eutraControlRegionSize**
Indicates the control region size of the E-UTRA cell for the in-band operation mode, see TS 36.213 [23]. Unit is in number of OFDM symbols. If operationModeInfo in MIB-NB is set to inband-SamePCI or inband-DifferentPCI, it should be set to the value broadcast in SIB1-NB.

**eutra-NumCRS-Ports**
Number of E-UTRA CRS antenna ports, either the same number of ports as NRS or 4 antenna ports. See TS 36.211 [21], TS 36.212 [22], and TS 36.213 [23].

**inbandCarrierInfo**
Provides the configuration of a non-anchor inband carrier.

**indexToMidPRB**
The PRB index is signaled by offset from the middle of the EUTRA system.

**nrs-PowerOffsetNonAnchor**
Provides the downlink narrowband reference-signal EPRE offset of the non-anchor carrier relative to the downlink narrowband reference-signal EPRE of the anchor carrier, unit in dB. Value dB-12 corresponds to -12 dB, dB-10 corresponds to -10 dB and so on. See TS 36.213 [23, 16.2.2].

---

**DL-GapConfig-NB**

The IE **DL-GapConfig-NB** is used to specify the downlink gap configuration for NPDCCH and NPDSCH. Downlink gaps apply to all NPDCCH/NPDSCH transmissions except for BCCH.

**DL-GapConfig-NB information element**
**DL-GapDurationCoeff**

Coefficient to calculate the gap duration of a DL transmission: dl-GapDurationCoeff \* dl-GapPeriodicity, Duration in number of subframes. See TS 36.211 [21, 10.2.3.4].

**dl-GapPeriodicity**

Periodicity of a DL transmission gap in number of subframes. See TS 36.211 [21, 10.2.3.4].

**dl-GapThreshold**

Threshold on the maximum number of repetitions configured for NPDCCH before application of DL transmission gap configuration. See TS 36.211 [21, 10.2.3.4].

---

**LogicalChannelConfig-NB**

The IE **LogicalChannelConfig-NB** is used to configure the logical channel parameters.

**LogicalChannelConfig-NB field descriptions**

**logicalChannelSR-Prohibit**

Value TRUE indicates that the logicalChannelSR-ProhibitTimer is enabled for the logical channel. If logicalChannelSR-Prohibit is configured (i.e. indicates value TRUE), E-UTRAN also configures logicalChannelSR-ProhibitTimer. See TS 36.321 [6].

**priority**

Logical channel priority in TS 36.321 [6]. Value is an integer.

**MAC-MainConfig-NB**

The IE **MAC-MainConfig-NB** is used to specify the MAC main configuration for signalling and data radio bearers.

**MAC-MainConfig-NB field descriptions**

**dl-GapDurationCoeff**

Coefficient to calculate the gap duration of a DL transmission: dl-GapDurationCoeff \* dl-GapPeriodicity, Duration in number of subframes. See TS 36.211 [21, 10.2.3.4].

**dl-GapPeriodicity**

Periodicity of a DL transmission gap in number of subframes. See TS 36.211 [21, 10.2.3.4].

**dl-GapThreshold**

Threshold on the maximum number of repetitions configured for NPDCCH before application of DL transmission gap configuration. See TS 36.211 [21, 10.2.3.4].

### MAC-MainConfig-NB field descriptions

**drx-Config**
Used to configure DRX as specified in TS 36.321 [6].

**drx-Cycle**
longDRX-Cycle in TS 36.321 [6]. The value of longDRX-Cycle is in number of sub-frames. Value sf256 corresponds to 256 sub-frames, sf512 corresponds to 512 sub-frames and so on. In case drx-Cycle-v1430 is signalled, the UE shall ignore drx-Cycle-r13.

**drx-StartOffset**
drxStartOffset in TS 36.321 [6]. Value is in number of sub-frames by step of (drx-cycle / 256).

**drx-InactivityTimer**
Timer for DRX in TS 36.321 [6]. Value in number of PDCCH periods. Value pp0 corresponds to 0 PDCCH period and behaviour as specified in 7.3.2 applies, pp1 corresponds to 1 PDCCH period, pp2 corresponds to 2 PDCCH periods and so on.

**drx-RetransmissionTimer**
Timer for DRX in TS 36.321 [6]. Value in number of PDCCH periods. Value pp0 corresponds to 0 PDCCH period and behaviour as specified in 7.3.2 applies, pp1 corresponds to 1 PDCCH period, pp2 corresponds to 2 PDCCH periods and so on.

**drx-ULRetransmissionTimer**
Timer for DRX in TS 36.321 [6]. Value in number of PDCCH periods. Value pp0 corresponds to 0 PDCCH period and behaviour as specified in 7.3.2 applies, pp1 corresponds to 1 PDCCH period, pp2 corresponds to 2 PDCCH periods and so on.

**logicalChannelSR-ProhibitTimer**
Timer used to delay the transmission of an SR. See TS 36.321 [6]. Value in number of PDCCH periods. Value pp2 corresponds to 2 PDCCH periods, pp8 corresponds to 8 PDCCH periods and so on.

**periodicBSR-Timer**
Timer for BSR reporting in TS 36.321 [6]. Value in number of PDCCH periods. Value pp2 corresponds to 2 PDCCH periods, pp4 corresponds to 4 PDCCH periods and so on.

**ra-CFRA-Config**
Activation of contention free random access (CFRA), see TS 36.321 [6].

**rai-Activation**
Activation of release assistance indication (RAI) in TS 36.321 [6].

**retxBSR-Timer**
Timer for BSR reporting in TS 36.321 [6]. Value in number of PDCCH periods. Value pp4 corresponds to 4 PDCCH periods, pp16 corresponds to 16 PDCCH periods and so on.

**onDurationTimer**
Timer for DRX in TS 36.321 [6]. Value in number of PDCCH periods. Value pp1 corresponds to 1 PDCCH period, pp2 corresponds to 2 PDCCH periods and so on.

**timeAlignmentTimer**
Indicates the value of the time alignment timer, see TS 36.321 [6].

---

### NPDCCH-ConfigDedicated-NB

The IE NPDCCH-ConfigDedicated-NB specifies the subframes and resource blocks for NPDCCH monitoring.

#### NPDCCH-ConfigDedicated-NB information element

```asn
NPDCCH-ConfigDedicated-NB-r13 ::= SEQUENCE {
  npdch-NumRepetitions-r13 ENUMERATED {r1, r2, r4, r8, r16, r32, r64, r128, r256, r512, r1024, r2048, spare4, spare3, spare2, spare1},
  npdch-StartSF-USS-r13 ENUMERATED {v1dot5, v2, v4, v8, v16, v32, v48, v64},
  npdch-Offset-USS-r13 ENUMERATED {zero, oneEighth, oneFourth, threeEighth}
}
```

---

ETSI
**NPDCCH-ConfigDedicated-NB field descriptions**

**npdcch-NumRepetitions**  
Maximum number of repetitions for NPDCCH UE specific search space (USS), see TS 36.213 [23, 16.6]. UE monitors one set of values (consisting of aggregation level, number of repetitions and number of blind decodes) according to the configured maximum number of repetitions.

**npdcch-Offset-USS**  
Fractional period offset of starting subframe for NPDCCH UE specific search space (USS), see TS 36.213 [23, 16.6].

**npdcch-StartSF-USS**  
Starting subframe configuration for an NPDCCH UE-specific search space, see TS 36.213 [23, 16.6]. Value v1dot5 corresponds to 1.5, value 2 corresponds to 2 and so on.

---

**NPDSCH-ConfigCommon-NB**

The IE **NPDSCH-ConfigCommon-NB** is used to specify the common NPDSCH configuration.

**NPDSCH-ConfigCommon-NB information element**

```
NPDSCH-ConfigCommon-NB-r13 ::= SEQUENCE {
  nrs-Power-r13     INTEGER (-60..50)
}
```

---

**NPDSCH-ConfigCommon-NB field descriptions**

**nrs-Power**  
Provides the downlink narrowband reference-signal EPRE, see TS 36.213 [23, 16.2]. The actual value in dBm.

---

**NPRACH-ConfigSIB-NB**

The IE **NPRACH-ConfigSIB-NB** is used to specify the NPRACH configuration for the anchor carrier.

**NPRACH-ConfigSIB-NB information elements**

```
NPRACH-ConfigSIB-NB-r13 ::= SEQUENCE {
  nprrach-CP-Length-r13     ENUMERATED {us66dot7, us266dot7},
  rsrp-ThresholdsPrachInfoList-r13 RSRP-ThresholdsNPRACH-InfoList-NB-r13 OPTIONAL, -- need OR
  nprrach-ParametersList-r13  NPRACH-ParametersList-NB-r13
}
```

```
NPRACH-ParametersList-NB-r13 ::= SEQUENCE (SIZE (1.. maxNPRACH-Resources-NB-r13)) OF NPRACH-Parameters-NB-r13
```

```
NPRACH-Parameters-NB-r13::=   SEQUENCE {
  nprrach-Periodicity-r13      ENUMERATED {ms40, ms80, ms160, ms240, ms320, ms640, ms1280, ms2560},
  nprrach-StartTime-r13     ENUMERATED {ms8, ms16, ms32, ms64, ms128, ms256, ms512, ms1024},
  nprrach-SubcarrierOffset-r13    ENUMERATED {n0, n12, n24, n36, n2, n18, n34, spare1},
  nprrach-NumSubcarriers-r13    ENUMERATED {n3, n4, n5, n6, n7, n8, n10, spare1},
  numRepetitionsPerPreambleAttempt-r13 ENUMERATED {n1, n2, n4, n8, n16, n32, n64, n128},
  npdcch-NumRepetitions-RA-r13   ENUMERATED {r1, r2, r4, r8, r16, r32, r64, r128, r256, r512, r1024, r2048, spare4, spare3, spare2, spare1},
```

---
NPRACH-ConfigSIB-NB field descriptions

**maxNumPreambleAttemptCE**
Maximum number of preamble transmission attempts per NPRACH resource. See TS 36.321 [6].

**npdcch-NumRepetitions-RA**
Maximum number of repetitions for NPDCCH common search space (CSS) for RAR, Msg3 retransmission and Msg4, see TS 36.213 [23, 16.6].

**npdcch-Offset-RA**
Fractional period offset of starting subframe for NPDCCH common search space (CSS Type 2), see TS 36.213 [23, 16.6].

**npdcch-StartSF-CSS-RA**
Starting subframe configuration for NPDCCH common search space (CSS), including RAR, Msg3 retransmission, and Msg4, see TS 36.213 [23, 16.6].

**nprach-CP-Length**
Cyclic prefix length for NPRACH transmission (\(T_{CP}\)), see TS 36.211 [21, 10.1.6]. Value us66dot7 corresponds to 66.7 microseconds and value us266dot7 corresponds to 266.7 microseconds.

**nprach-NumCBRA-StartSubcarriers**
The number of start subcarriers from which a UE can randomly select a start subcarrier as specified in TS 36.321 [6]. The start subcarrier indices that the UE is allowed to randomly select from, are given by:

\[
nprach-SubcarrierOffset + \lfloor nprach-NumCBRA-StartSubcarriers \cdot nprach-SubcarrierMSG3-RangeStart \rfloor - 1
\]

**nprach-NumSubcarriers**
Number of sub-carriers in a NPRACH resource, see TS 36.211 [21, 10.1.6]. In number of subcarriers.

**nprach-ParametersList**
Configures NPRACH parameters for each NPRACH resource. Up to three PRACH resources can be configured in a cell. Each NPRACH resource is associated with a different number of NPRACH repetitions.

**nprach-Periodicity**
Periodicity of a NPRACH resource, see TS 36.211 [21, 10.1.6]. Unit in millisecond.

**nprach-StartTime**
Start time of the NPRACH resource in one period, see TS 36.211 [21, 10.1.6]. Unit in millisecond.

**nprach-SubcarrierOffset**
Frequency location of the NPRACH resource, see TS 36.211 [21, 10.1.6]. In number of subcarriers, offset from subcarrier 0.

**nprach-SubcarrierMSG3-RangeStart**
Fraction for calculating the starting subcarrier index of the range reserved for indication of UE support for multi-tone Msg3 transmission, within the NPRACH resource, see TS 36.211 [21, 10.1.6]. Multi-tone Msg3 transmission is not supported for \(32, 64, 128\) repetitions of NPRACH. For at least one of the NPRACH resources with the number of NPRACH repetitions other than \(32, 64, 128\), the value of **nprach-SubcarrierMSG3-RangeStart** should not be 0. If **nprach-SubcarrierMSG3-RangeStart** is equal to oneThird or twoThird the start subcarrier indexes for the two partitions are given by:

\[
nprach-SubcarrierOffset + \lfloor \text{floor}(nprach-NumCBRA-StartSubcarriers \cdot nprach-SubcarrierMSG3-RangeStart) \rfloor - 1
\]

\[
nprach-SubcarrierOffset + \lfloor \text{floor}(nprach-NumCBRA-StartSubcarriers \cdot nprach-SubcarrierMSG3-RangeStart) \rfloor - 1
\]

for the single-tone Msg3 NPRACH partition;

for the multi-tone Msg3 NPRACH partition;

\[
numRepetitionsPerPreambleAttempt
\]
Number of NPRACH repetitions per attempt for each NPRACH resource. See TS 36.211 [21, 10.1.6].

**rsrp-ThresholdsPrachInfoList**
The criterion for UEs to select a NPRACH resource. Up to 2 RSRP threshold values can be signalled. The first element corresponds to RSRP threshold 1, the second element corresponds to RSRP threshold 2. See TS 36.321 [6]. If absent, there is only one NPRACH resource. A UE that supports \(\text{powerClassNB-14dBm-r14} \) shall correct the RSRP threshold values before applying them as follows:

\[
\text{RSRP threshold} = \text{Signalled RSRP threshold} - \text{min}(0, (14-\text{min}(23, P-Max))) \quad \text{where } P-Max \text{ is the value of } P-Max \text{ field in } \text{SystemInformationBlockType1-NB}.
\]
NPUSCH-Config-NB

The IE NPUSCH-ConfigCommon-NB is used to specify the common NPUSCH configuration. The IE NPUSCH-ConfigDedicated-NB is used to specify the UE specific NPUSCH configuration.

NPUSCH-Config-NB information element

```
-- ASN1START

NPUSCH-ConfigCommon-NB-r13 ::= SEQUENCE {

}

ACK-NACK-NumRepetitions-NB-r13 ::= ENUMERATED (r1, r2, r4, r8, r16, r32, r64, r128)

-- ASN1STOP
```
### NPUSCH-Config-NB field descriptions

**ack-NACK-NumRepetitions**
Number of repetitions for the ACK NACK resource unit carrying HARQ response to NPDSCH, see TS 36.213 [23, 16.4.2]. If absent, the value of `ack-NACK-NumRepetitions-Msg4` signalled in SIB2 is used.

**ack-NACK-NumRepetitions-Msg4**
Number of repetitions for ACK/NACK HARQ response to NPDSCH containing Msg4 per NPRACH resource, see TS 36.213 [23, 16.4.2].

**groupAssignmentNPUSCH**
See TS 36.211 [21, 10.1.4.1.3].

**groupHoppingDisabled**
See TS 36.211 [21, 10.1.4.1.3].

**groupHoppingEnabled**
See TS 36.211 [21, 10.1.4.1.3].

**npusch-AllSymbols**
If set to TRUE, the UE shall use all NB-IoT symbols for NPUSCH transmission. If set to FALSE, the UE punctures the NPUSCH transmissions in the symbols that collides with SRS. If the field is not present, the UE uses all NB-IoT symbols for NPUSCH transmission. See TS 36.211 [21, 10.1.3.6].

**sixTone-BaseSequence**
The base sequence of DMRS sequence in a cell for 6 tones transmission; see TS 36.211 [21, 10.1.4.1.2]. If absent, it is given by NB-IoT CellID mod 14. Value 14 is not used.

**sixTone-CyclicShift**
Define 4 cyclic shifts for the 6-tone case, see TS 36.211 [21, 10.1.4.1.2].

**srs-SubframeConfig**
SRS SubframeConfiguration. See TS 36.211 [21, table 5.5.3.3-1]. Value sc0 corresponds to value 0, sc1 to value 1 and so on.

**threeTone-BaseSequence**
The base sequence of DMRS sequence in a cell for 3 tones transmission; see TS 36.211 [21, 10.1.4.1.2]. If absent, it is given by NB-IoT CellID mod 12. Value 12 is not used.

**threeTone-CyclicShift**
Define 3 cyclic shifts for the 3-tone case, see TS 36.211 [21, 10.1.4.1.2].

**twelveTone-BaseSequence**
The base sequence of DMRS sequence in a cell for 12 tones transmission; see TS 36.211 [21, 10.1.4.1.2]. If absent, it is given by NB-IoT CellID mod 30. Value 30 is not used.

**ul-ReferenceSignalsNPUSCH**
Used to specify parameters needed for the transmission on NPUSCH.

    ]],
  [[ interferenceRandomisationConfig-r14 ENUMERATED {true} OPTIONAL -- Need OR
    ]]
}
```

### PhysicalConfigDedicated-NB field descriptions

- **carrierConfigDedicated**
  Non-anchor carrier used for all unicast transmissions.

- **interferenceRandomisationConfig**
  Interference randomisation enabled in connected mode, see TS 36.211 [21].

- **npdcdch-ConfigDedicated**
  NPDCCH configuration.

- **npusch-ConfigDedicated**
  UL unicast configuration.

- **twoHARQ-ProcessesConfig**
  Activation of two HARQ processes, see TS 36.212 [22] and TS 36.213 [23].

- **uplinkPowerControlDedicated**
  UL power control parameter.
The IE RACH-ConfigCommon-NB is used to specify the generic random access parameters.

RACH-ConfigCommon-NB information element

RACH-Info-NB-r13 ::= SEQUENCE {
  ra-ResponseWindowSize-r13 ENUMERATED {
    pp2, pp3, pp4, pp5, pp6, pp7, pp8, pp10},
  mac-ContentionResolutionTimer-r13 ENUMERATED {
    pp1, pp2, pp3, pp4, pp8, pp16, pp32, pp64}
}

RadiusResourceConfigCommonSIB-NB

The IE RadioResourceConfigCommonSIB-NB is used to specify common radio resource configurations in the system information, e.g., the random access parameters and the static physical layer parameters.

RadioResourceConfigCommonSIB-NB information element

BCCH-Config-NB-r13 ::= SEQUENCE {
  bcch-Config-r13 BCCH-Config-NB-r13,
  pch-Config-r13 PCH-Config-NB-r13,
  npch-ConfigCommon-r13 NPRACH-Config-SIB-NB-r13,
  npdsch-ConfigCommon-r13 NPDSCH-ConfigCommon-NB-r13,
  npusch-ConfigCommon-r13 NPUSCH-ConfigCommon-NB-r13,
  dl-Gap-r13 DL-GapConfig-NB-r13 OPTIONAL,  -- Need OP
  uplinkPowerControlCommon-r13 UplinkPowerControlCommon-NB-r13,
  ... [[[ npusch-Config-v1330 NPRACH-ConfigSIB-NB-v1330 OPTIONAL  -- Need OR
   ]]}
}
RadioResourceConfigCommonSIB-NB field descriptions

**defaultPagingCycle**
Default paging cycle, used to derive T in TS 36.304 [4]. Value rf128 corresponds to 128 radio frames, rf256 corresponds to 256 radio frames and so on.

**dl-Gap**
Downlink transmission gap configuration for the anchor carrier. See TS 36.211 [21, 10.2.3.4]. If the field is absent, there is no gap.

**modificationPeriodCoeff**
Actual modification period, expressed in number of radio frames = modificationPeriodCoeff * defaultPagingCycle. n16 corresponds to value 16, n32 corresponds to value 32, and so on. The BCCH modification period should be larger or equal to 40.96s.

**nB**
Parameter: nB is used as one of parameters to derive the Paging Frame and Paging Occasion according to TS 36.304 [4]. Value in multiples of T as defined in TS 36.304 [4]. A value of fourT corresponds to 4 * T, a value of twoT corresponds to 2 * T and so on.

**npdcch-NumRepetitionPaging**
Maximum number of repetitions for NPDCCH common search space (CSS) for paging, see TS 36.213 [23, 16.6].

---

**RadioResourceConfigDedicated-NB**

The IE RadioResourceConfigDedicated-NB is used to setup/modify/release RBs, to modify the MAC main configuration, and to modify dedicated physical configuration.

**RadioResourceConfigDedicated-NB information element**

---
RadioResourceConfigDedicated-NB field descriptions

logicalChannelConfig
For SRB a choice is used to indicate whether the logical channel configuration is signalled explicitly or set to the default logical channel configuration for SRB1 as specified in 9.2.1.1.

logicalChannelIdentity
The logical channel identity for both UL and DL for a DRB. Value 3 is not used.

mac-MainConfig
The default MAC MAIN configuration is specified in 9.2.2.

physicalConfigDedicated
The default dedicated physical configuration is specified in 9.2.4.

rlc-Config
For SRBs a choice is used to indicate whether the RLC configuration is signalled explicitly or set to the values defined in the default RLC configuration for SRB1 in 9.2.1.1. RLC AM is the only applicable RLC mode.

Conditional presence | Explanation
--- | ---
DRB-Setup | The field is mandatory present if the corresponding DRB is being set up; otherwise it is not present.
Setup | The field is mandatory present if the corresponding SRB/DRB is being setup; otherwise the field is optionally present, need ON.

-- RLC-Config-NB

The IE RLC-Config-NB is used to specify the RLC configuration of SRBs and DRBs.

RLC-Config-NB information element

-- ASN1START

RLC-Config-NB-r13 ::= CHOICE {
  am  SEQUENCE {
    ul-AM-RLC-r13  UL-AM-RLC-NB-r13,
    dl-AM-RLC-r13  DL-AM-RLC-NB-r13
  },
  ...
}

RLC-Config-NB-v1430 ::= SEQUENCE {

  ms90000, ms120000, ms180000, spare1}

**RLC-Config-NB field descriptions**

**enableStatusReportSN-Gap**
Indicates that status reporting due to detection of reception failure is enabled, as specified in TS 36.322 [7].

**maxRetxThreshold**
Parameter for RLC AM in TS 36.322 [7]. Value t1 corresponds to 1 retransmission, t2 to 2 retransmissions and so on.

**T-PollRetransmit**
Timer for RLC AM in TS 36.322 [7], in milliseconds. Value msX means X ms, msY means Y ms and so on.

**T-Reordering**
Timer for reordering in TS 36.322 [7], in milliseconds.

<table>
<thead>
<tr>

<tbody>
<tr>
<td>twoHARQ</td>
<td>The field is mandatory present if twoHARQ-ProcessesConfig is set to TRUE. Otherwise, the field is not present and, if previously configured, the timer is released.</td>
</tr>
</tbody>
</table>

**RLF-TimersAndConstants-NB**

The IE RLF-TimersAndConstants-NB contains UE specific timers and constants applicable for UEs in RRC_CONNECTED.

**RLF-TimersAndConstants-NB information element**

n3xy
Constants are described in section 7.4. n1 corresponds with 1, n2 corresponds with 2 and so on.

t3xy
Timers are described in section 7.3. Value ms0 corresponds with 0 ms, ms200 corresponds with 200 ms and so on. The UE shall use the extended value t311-v1350, if present, and ignore the value signaled by t311-r13.
The IE `UplinkPowerControlCommon-NB` and IE `UplinkPowerControlDedicated-NB` are used to specify parameters for uplink power control in the system information and in the dedicated signalling, respectively.

### UplinkPowerControl-NB information elements

**-- ASN1START**

UplinkPowerControlCommon-NB-r13 ::= SEQUENCE {
  p0-NominalNPUSCH-r13    INTEGER (-126..24),
  alpha-r13       ENUMERATED {al0, a04, a05, a06, a07, a08, a09, a1},
  deltaPreambleMsg3-r13    INTEGER (-1..6)
}

UplinkPowerControlDedicated-NB-r13 ::= SEQUENCE {
  p0-UE-NPUSCH-r13      INTEGER (-8..7)
}

**-- ASN1STOP**

#### UplinkPowerControl-NB field descriptions

**alpha**

Parameter: $\alpha(1)$. See TS 36.213 [23, 16.2.1.1] where al0 corresponds to 0, al04 corresponds to value 0.4, al05 to 0.5, al06 to 0.6, al07 to 0.7, al08 to 0.8, al09 to 0.9 and al1 corresponds to 1.

**deltaPreambleMsg3**

Parameter: $\Delta_{PREAMBLE_{Msg3}}$. See TS 36.213 [23, 16.2.1.1]. Actual value = IE value * 2 [dB].

**p0-NominalNPUSCH**

Parameter: $P_{O_{NOMINALNPUSCH}}(1)$. See TS 36.213 [23, 16.2.1.1], unit dBm.

**p0-UE-NPUSCH**

Parameter: $P_{O_{UE-NPUSCH}}(1)$. See TS 36.213 [23, 16.2.1.1], unit dB.

### 6.7.3.3 NB-IoT Security control information elements

Void

### 6.7.3.4 NB-IoT Mobility control information elements

- **AdditionalBandInfoList-NB**

  **AdditionalBandInfoList-NB information element**

  **-- ASN1START**

  AdditionalBandInfoList-NB-r14 ::= SEQUENCE (SIZE (1..maxMultiBands)) OF FreqBandIndicator-NB-r13

  **-- ASN1STOP**

- **FreqBandIndicator-NB**

  The IE `FreqBandIndicator-NB` indicates the E-UTRA operating band as defined in TS 36.101 [42, table 5.5-1].

  **FreqBandIndicator-NB information element**

  **-- ASN1START**

  FreqBandIndicator-NB-r13 ::= INTEGER (1.. maxFBI2)
- **MultiBandInfoList-NB**

  **MultiBandInfoList-NB information element**

  ```asn1
  MultiBandInfoList-NB-r13 ::= SEQUENCE (SIZE (1..maxMultiBands)) OF MultiBandInfo-NB-r13

  MultiBandInfo-NB-r13 ::= SEQUENCE {
    freqBandIndicator-r13   FreqBandIndicator-NB-r13  OPTIONAL,  -- Need OR
    freqBandInfo-r13    NS-PmaxList-NB-r13    OPTIONAL  -- Need OR
  }
  ```

- **NS-PmaxList-NB**

  The IE `NS-PmaxList-NB` concerns a list of `additionalPmax` and `additionalSpectrumEmission` as defined in TS 36.101 [42, 6.2.4F] for a given frequency band. E-UTRAN does not include the same value of `additionalSpectrumEmission` in `SystemInformationBlockType2-NB` within this list.

  **NS-PmaxList-NB information element**

  ```asn1
  NS-PmaxList-NB-r13 ::=   SEQUENCE (SIZE (1..maxNS-Pmax-NB-r13)) OF NS-PmaxValue-NB-r13

  NS-PmaxValue-NB-r13 ::=   SEQUENCE {
    additionalPmax-r13    P-Max      OPTIONAL, -- Need OR
    additionalSpectrumEmission-r13 AdditionalSpectrumEmission
  }
  ```

- **ReselectionThreshold-NB**

  The IE `ReselectionThreshold-NB` is used to indicate an Rx level threshold for cell reselection. Actual value of threshold = field value * 2 [dB].

  **ReselectionThreshold-NB information element**

  ```asn1
  ReselectionThreshold-NB-v1360 ::=   INTEGER (32..63)
  ```

- **T-Reselection-NB**

  The IE `T-Reselection-NB` concerns the cell reselection timer `TreselectionRAT` for NB-IoT.

  Value in seconds. s0 means 0 second and behaviour as specified in 7.3.2 applies, s3 means 3 seconds and so on.

  **T-Reselection-NB information element**

  ```asn1
  T-Reselection-NB-r13 ::=  ENUMERATED {s0, s3, s6, s9, s12, s15, s18, s21}
  ```
6.7.3.5 NB-IoT Measurement information elements

Void

6.7.3.6 NB-IoT Other information elements

– EstablishmentCause-NB

The IE EstablishmentCause-NB provides the establishment cause for the RRC connection request or the RRC connection resume request as provided by the upper layers.

EstablishmentCause-NB information element

```plaintext
-- ASN1START
EstablishmentCause-NB-r13 ::=   ENUMERATED {
  mt-Access, mo-Signalling, mo-Data, mo-ExceptionData,
  delayTolerantAccess-v1330, spare3, spare2, spare1}
-- ASN1STOP
```

– UE-Capability-NB

The IE UE-Capability-NB is used to convey the NB-IoT UE Radio Access Capability Parameters, see TS 36.306 [5]. The IE UE-Capability-NB is transferred in NB-IoT only.

UE-Capability-NB information element

```plaintext
-- ASN1START
UE-Capability-NB-r13 ::=  SEQUENCE {
  accessStratumRelease-r13  AccessStratumRelease-NB-r13,

### UE-Capability-NB field descriptions

<table>
<thead>
<tr>
<th>Field Description</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>accessStratumRelease</td>
<td>Set to rel14 in this version of the specification.</td>
</tr>
<tr>
<td>datalnactMon</td>
<td>Indicates whether the UE supports the data inactivity monitoring as specified in TS 36.321 [6].</td>
</tr>
<tr>
<td>interferenceRandomisation</td>
<td>Indicates whether the UE supports interference randomisation in connected mode as defined in TS 36.211 [21].</td>
</tr>
<tr>
<td>maxNumberROHC-ContextSessions</td>
<td>Set to the maximum number of concurrently active ROHC contexts supported by the UE, excluding context sessions that leave all headers uncompressed. cs2 corresponds with 2 (context sessions), cs4 corresponds with 4 and so on. The network ignores this field if the UE supports none of the ROHC profiles in supportedROHC-Profiles.</td>
</tr>
<tr>
<td>multiCarrier</td>
<td>Defines whether the UE supports multi-carrier operation.</td>
</tr>
<tr>
<td>multicarrier-NPRACH</td>
<td>Defines whether the UE supports NPRACH on non-anchor carrier as specified in TS 36.321 [6].</td>
</tr>
<tr>
<td>multipleDRB</td>
<td>Defines whether the UE supports multiple DRBs.</td>
</tr>
<tr>
<td>multiNS-Pmax</td>
<td>Defines whether the UE supports the mechanisms defined for NB-IoT cells broadcasting NS-PmaxList-NB.</td>
</tr>
<tr>
<td>multiTone</td>
<td>Defines whether the UE supports UL multi-tone transmissions on NPUSCH.</td>
</tr>
<tr>
<td>powerClassNB-14dBm</td>
<td>Defines whether the UE supports power class 14dBm in all the bands supported by the UE as specified in TS 36.101 [42]. If powerClassNB-20dBm is included, the UE shall not include the field powerClassNB-14dBm.</td>
</tr>
<tr>
<td>powerClassNB-20dBm</td>
<td>Defines whether the UE supports power class 20dBm in NB-IoT for the band, as specified in TS 36.101 [42]. If neither powerClassNB-14dBm nor powerClassNB-20dBm is included, the UE supports power class 23 dBm in the NB-IoT band.</td>
</tr>
<tr>
<td>rai-Support</td>
<td>Defines whether the UE supports release assistance indication (RAI) as specified in TS 36.321 [6].</td>
</tr>
<tr>
<td>supportedBandList</td>
<td>Includes the supported NB-IoT bands as defined in TS 36.101 [42].</td>
</tr>
<tr>
<td>supportedROHC-Profiles</td>
<td>List of supported ROHC profiles as defined in TS 36.323 [8].</td>
</tr>
<tr>
<td>twoHARQ-Processes</td>
<td>Defines whether the UE supports two HARQ processes operation in DL and UL as specified in TS 36.212 [22] and TS 36.213 [23].</td>
</tr>
<tr>
<td>ue-Category-NB-r13</td>
<td>UE category as defined in TS 36.306 [5]. Value nb1 corresponds to UE category NB1, value nb2 corresponds to UE category NB2. A UE shall always include the field ue-Category-NB-r13 in this version of the specification.</td>
</tr>
</tbody>
</table>

**NOTE 1:** The IE UE-Capability-NB does not include AS security capability information, since these are the same as the security capabilities that are signalled by NAS. Consequently AS need not provide "man-in-the-middle" protection for the security capabilities.

#### UE-RadioPagingInfo-NB

The IE UE-RadioPagingInfo-NB contains UE NB-IoT capability information needed for paging.

**UE-RadioPagingInfo-NB information element**

```asn1
UE-RadioPagingInfo-NB-r13 ::= SEQUENCE {
  ue-Category-NB-r13 ENUMERATED {nb1} OPTIONAL,
  ...,
  [ [ multiCarrierPaging-r14 ENUMERATED {true} OPTIONAL ] ]
}
```
UE-RadioPagingInfo-NB field descriptions

**multiCarrierPaging**
Indicates whether the UE supports paging on non-anchor carriers as defined in TS 36.304 [4].

**ue-Category-NB**
UE NB-IoT category as defined in TS 36.306 [5]. A UE shall always include the field `ue-Category-NB-r13` in this version of the specification.

---

**UE-TimersAndConstants-NB**
The IE `UE-TimersAndConstants-NB` contains timers and constants used by the UE in either RRC_CONNECTED or RRC_IDLE.

**UE-TimersAndConstants-NB information element**

```asn1
UE-TimersAndConstants-NB-r13 ::= SEQUENCE {
  t300-r13       ENUMERATED {
      ms2500, ms4000, ms6000, ms10000,
      ms15000, ms25000, ms40000, ms60000},
  t301-r13       ENUMERATED {
      ms2500, ms4000, ms6000, ms10000,
      ms15000, ms25000, ms40000, ms60000},
  t310-r13       ENUMERATED {
      ms0, ms200, ms500, ms1000, ms2000, ms4000, ms8000},
  n310-r13       ENUMERATED {
      n1, n2, n3, n4, n6, n8, n10, n20},
  t311-r13       ENUMERATED {
      ms1000, ms3000, ms5000, ms10000, ms15000,
      ms20000, ms30000},
  n311-r13       ENUMERATED {
      n1, n2, n3, n4, n5, n6, n8, n10},
  ...,
  [ t311-v1350   ENUMERATED {
      ms40000, ms60000, ms90000, ms120000} ]
      OPTIONAL -- Need OR
}
```

**UE-TimersAndConstants-NB field descriptions**

**n3xy**
Constants are described in section 7.4. n1 corresponds with 1, n2 corresponds with 2 and so on.

**t3xy**
Timers are described in section 7.3. Value ms0 corresponds with 0 ms, ms200 corresponds with 200 ms and so on. The UE shall use the extended value `t311-v1350`, if present, and ignore the value signaled by `t311-r13`.

---

6.7.3.7 NB-IoT MBMS information elements
Void

6.7.3.7a NB-IoT SC-PTM information elements

---

**SC-MTCH-InfoList-NB**
The IE `SC-MTCH-InfoList-NB` provides the list of ongoing MBMS sessions transmitted via SC-MRB and for each MBMS session, the associated G-RNTI and scheduling information.

**SC-MTCH-InfoList-NB information element**
SC-MTCH-InfoList-NB-r14 ::= SEQUENCE (SIZE (0.. maxSC-MTCH-NB-r14)) OF SC-MTCH-Info-NB-r14

### 6.7.4 NB-IoT RRC multiplicity and type constraint values

**– Multiplicity and type constraint definitions**

```asn1
-- ASN1START

maxNPRACH-Resources-NB-r13 INTEGER ::= 3  -- Maximum number of NPRACH resources for NB-IoT
maxNonAnchorCarriers-NB-r14 INTEGER ::= 15  -- Maximum number of non-anchor carriers for NB-IoT
maxDRB-NB-r13 INTEGER ::= 2  -- Maximum number of Data Radio Bearers for NB-IoT
maxNeighCell-SCPTM-NB-r14 INTEGER ::= 8  -- Maximum number of SCPTM neighbour cells
maxNS-Pmax-NB-r13 INTEGER ::= 4  -- Maximum number of NS and P-Max values per band
maxSC-MTCH-NB-r14 INTEGER ::= 64  -- Maximum number of SC-MTCHs in one cell for NB-IoT
maxSI-Message-NB-r13 INTEGER ::= 8  -- Maximum number of SI messages for NB-IoT

-- ASN1STOP
```

### 6.7.5 Direct Indication Information

Direct Indication information is transmitted on NPDCCH using P-RNTI but without associated Paging-NB message. Table 6.7.5-1 defines the Direct Indication information, see TS 36.212 [22, 6.4.3.3].

When bit $n$ is set to 1, the UE shall behave as if the corresponding field is set in the Paging-NB message, see 5.3.2.3. Bit 1 is the least significant bit.

**Table 6.7.5-1: Direct Indication information**

<td>3, 4, 5,</td>
<td>6, 7, 8</td>
</tr>
<tr>
<td></td>
<td>Not used, and shall be ignored by UE if received</td>
</tr>
</tbody>
</table>

### 7 Variables and constants

#### 7.1 UE variables

**NOTE:** To facilitate the specification of the UE behavioural requirements, UE variables are represented using ASN.1. Unless explicitly specified otherwise, it is however up to UE implementation how to store the variables. The optionality of the IEs in ASN.1 is used only to indicate that the values may not always be available.
ETSI-UE-Variables

This ASN.1 segment is the start of the E-UTRA UE variable definitions.

-- ASN1STOP

VarConnEstFailReport

The UE variable VarConnEstFailReport includes the connection establishment failure information.

VarConnEstFailReport UE variable

-- ASN1START
-- VarLogMeasConfig

The UE variable VarLogMeasConfig includes the configuration of the logging of measurements to be performed by the UE while in RRC_IDLE, covering intra-frequency, inter-frequency, inter-RAT mobility and MBSFN related measurements. If MBSFN logging is configured, the UE performs logging of measurements while in both RRC_IDLE and RRC_CONNECTED. Otherwise, the UE performs logging of measurements only while in RRC_IDLE.

VarLogMeasConfig UE variable

-- ASN1START

VarLogMeasConfig-r10 ::= SEQUENCE {
  areaConfiguration-r10          AreaConfiguration-r10 OPTIONAL,
  loggingDuration-r10           LoggingDuration-r10,
  loggingInterval-r10           LoggingInterval-r10
}
VarLogMeasConfig-r11 ::= SEQUENCE {

-- ASN1STOP
VarMeasConfig

The UE variable `VarMeasConfig` includes the accumulated configuration of the measurements to be performed by the UE, covering intra-frequency, inter-frequency and inter-RAT mobility related measurements.

NOTE: The amount of measurement configuration information, which a UE is required to store, is specified in subclause 11.1. If the number of frequencies configured for a particular RAT exceeds the minimum performance requirements specified in [16], it is up to UE implementation which frequencies of that RAT are measured. If the total number of frequencies for all RATs provided to the UE in the measurement configuration exceeds the minimum performance requirements specified in [16], it is up to UE implementation which frequencies/RATs are measured.

VarMeasConfig UE variable

<td>Set to C-RNTI that the UE had in the PCell it was connected to prior to the failure.</td>
</tr>
<tr>
<td>physCellId</td>
<td>Set to the physical cell identity of the PCell the UE was connected to prior to the failure.</td>
</tr>
</tbody>
</table>
The UE variable \textit{VarShortResumeMAC-Input} specifies the input used to generate the \textit{shortResumeMAC-I} during RRC Connection Resume procedure.

\begin{verbatim}VarShortResumeMAC-Input := SEQUENCE {
cellIdentity, 
physCellId, 
c-RNTI, 
resumeDiscriminator 
}VarShortResumeMAC-Input field descriptions

\textit{cellIdentity} 
Set to CellIdentity of the current cell.

\textit{c-RNTI} 
Set to C-RNTI that the UE had in the PCell it was connected to prior to suspension of the RRC connection.

\textit{physCellId} 
Set to the physical cell identity of the PCell the UE was connected to prior to suspension of the RRC connection.

\textit{resumeDiscriminator} 
A constant that allows differentiation in the calculation of the MAC-I for \textit{shortResumeMAC-I}.
The resumeDiscriminator is set to ‘1’
\end{verbatim}

The UE variable \textit{VarWLAN-MobilityConfig} includes information about WLAN for access selection and mobility.

\begin{verbatim}VarWLAN-MobilityConfig := SEQUENCE {
wlan-MobilitySet, 
successReportRequested, 
wlan-SuspendConfig 
}VarWLAN-MobilityConfig field descriptions

\textit{wlan-MobilitySet} 
Indicates the WLAN mobility set configured.

\textit{successReportRequested} 
Indicates whether the UE shall report successful connection to WLAN. Applicable to LWA and LWIP.
\end{verbatim}

The UE variable \textit{VarWLAN-Status} includes information about the status of WLAN connection for LWA, RCLWI or LWIP.

\begin{verbatim}VarWLAN-Status := SEQUENCE {
status, 
status-v1430 
}

Protocol data unit abstract syntax

8.1 General

The RRC PDU contents in clause 6, clause 9.3.2 and clause 10 are described using abstract syntax notation one (ASN.1) as specified in ITU-T Rec. X.680 [13] and X.681 [14]. Transfer syntax for RRC PDUs is derived from their ASN.1 definitions by use of Packed Encoding Rules, unaligned as specified in ITU-T Rec. X.691 [15].

The following encoding rules apply in addition to what has been specified in X.691:

- When a bit string value is placed in a bit-field as specified in 15.6 to 15.11 in X.691, the leading bit of the bit string value shall be placed in the leading bit of the bit-field, and the trailing bit of the bit string value shall be placed in the trailing bit of the bit-field.

  NOTE: The terms 'leading bit' and 'trailing bit' are defined in ITU-T Rec. X.680. When using the 'bstring' notation, the leading bit of the bit string value is on the left, and the trailing bit of the bit string value is on the right.

- When decoding types constrained with the ASN.1 Contents Constraint ("CONTAINING"), automatic decoding of the contained type should not be performed because errors in the decoding of the contained type should not cause the decoding of the entire RRC message PDU to fail. It is recommended that the decoder first decodes the outer PDU type that contains the OCTET STRING or BIT STRING with the Contents Constraint, and then decodes the contained type that is nested within the OCTET STRING or BIT STRING as a separate step.

- When decoding a) RRC message PDUs, b) BIT STRING constrained with a Contents Constraint, or c) OCTET STRING constrained with a Contents Constraint, PER decoders are required to never report an error if there are extraneous zero or non-zero bits at the end of the encoded RRC message PDU, BIT STRING or OCTET STRING.

8.2 Structure of encoded RRC messages

An RRC PDU, which is the bit string that is exchanged between peer entities/ across the radio interface contains the basic production as defined in X.691.

RRC PDUs shall be mapped to and from PDCP SDUs (in case of DCCH) or RLC SDUs (in case of PCCH, BCCH, BR-BCCH, CCCH or MCCH) upon transmission and reception as follows:

- when delivering an RRC PDU as an PDCP SDU to the PDCP layer for transmission, the first bit of the RRC PDU shall be represented as the first bit in the PDCP SDU and onwards; and

- when delivering an RRC PDU as an RLC SDU to the RLC layer for transmission, the first bit of the RRC PDU shall be represented as the first bit in the RLC SDU and onwards; and

- upon reception of an PDCP SDU from the PDCP layer, the first bit of the PDCP SDU shall represent the first bit of the RRC PDU and onwards; and

- upon reception of an RLC SDU from the RLC layer, the first bit of the RLC SDU shall represent the first bit of the RRC PDU and onwards.

8.3 Basic production

The 'basic production' is obtained by applying UNALIGNED PER to the abstract syntax value (the ASN.1 description) as specified in X.691. It always contains a multiple of 8 bits.

8.4 Extension

The following rules apply with respect to the use of protocol extensions:
- A transmitter compliant with this version of the specification shall, unless explicitly indicated otherwise on a PDU type basis, set the extension part empty. Transmitters compliant with a later version may send non-empty extensions;
- A transmitter compliant with this version of the specification shall set spare bits to zero;

### 8.5 Padding

If the encoded RRC message does not fill a transport block, the RRC layer shall add padding bits. This applies to PCCH, BCCH and BR-BCCH.

Padding bits shall be set to 0 and the number of padding bits is a multiple of 8.

![Figure 8.5-1: RRC level padding](image)

### 9 Specified and default radio configurations

Specified and default configurations are configurations of which the details are specified in the standard. Specified configurations are fixed while default configurations can be modified using dedicated signalling.

#### 9.1 Specified configurations

##### 9.1.1 Logical channel configurations

#### 9.1.1.1 BCCH configuration

Parameters

<table>
<thead>
<tr>
<th>Name</th>
<th>Value</th>
<th>Semantics description</th>
<th>Ver</th>
</tr>
</thead>
<tbody>
<tr>
<td>PDCP configuration</td>
<td>N/A</td>
<td></td>
<td></td>
</tr>
<tr>
<td>RLC configuration</td>
<td>TM</td>
<td></td>
<td></td>
</tr>
<tr>
<td>MAC configuration</td>
<td>TM</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
NOTE: RRC will perform padding, if required due to the granularity of the TF signalling, as defined in 8.5.

9.1.1.2 CCCH configuration

Parameters

<table>
<thead>
<tr>
<th>Name</th>
<th>Value</th>
<th>Semantics description</th>
<th>Ver</th>
</tr>
</thead>
<tbody>
<tr>
<td>PDCP configuration</td>
<td>N/A</td>
<td></td>
<td></td>
</tr>
<tr>
<td>RLC configuration</td>
<td>TM</td>
<td></td>
<td></td>
</tr>
<tr>
<td>MAC configuration</td>
<td></td>
<td>Normal MAC headers are used</td>
<td></td>
</tr>
<tr>
<td>Logical channel configuration</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>priority</td>
<td>1</td>
<td>Highest priority</td>
<td></td>
</tr>
<tr>
<td>prioritisedBitRate</td>
<td>infinity</td>
<td></td>
<td></td>
</tr>
<tr>
<td>bucketSizeDuration</td>
<td>N/A</td>
<td></td>
<td></td>
</tr>
<tr>
<td>logicalChannelGroup</td>
<td>0</td>
<td></td>
<td></td>
</tr>
<tr>
<td>logicalChannelSR-Mask-r9</td>
<td>release</td>
<td></td>
<td>v920</td>
</tr>
</tbody>
</table>

9.1.1.3 PCCH configuration

Parameters

<table>
<thead>
<tr>
<th>Name</th>
<th>Value</th>
<th>Semantics description</th>
<th>Ver</th>
</tr>
</thead>
<tbody>
<tr>
<td>PDCP configuration</td>
<td>N/A</td>
<td></td>
<td></td>
</tr>
<tr>
<td>RLC configuration</td>
<td>TM</td>
<td></td>
<td></td>
</tr>
<tr>
<td>MAC configuration</td>
<td>TM</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

NOTE: RRC will perform padding, if required due to the granularity of the TF signalling, as defined in 8.5.

9.1.1.4 MCCH and MTCH configuration

Parameters

<table>
<thead>
<tr>
<th>Name</th>
<th>Value</th>
<th>Semantics description</th>
<th>Ver</th>
</tr>
</thead>
<tbody>
<tr>
<td>PDCP configuration</td>
<td>N/A</td>
<td></td>
<td></td>
</tr>
<tr>
<td>RLC configuration</td>
<td>UM</td>
<td></td>
<td></td>
</tr>
<tr>
<td>sn-FieldLength</td>
<td>size5</td>
<td></td>
<td></td>
</tr>
<tr>
<td>t-Reordering</td>
<td>0</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

9.1.1.5 SBCCH configuration

Parameters
### 9.1.1.6 STCH configuration

#### Parameters

<table>
<thead>
<tr>
<th>Name</th>
<th>Value</th>
<th>Semantics description</th>
<th>Ver</th>
</tr>
</thead>
<tbody>
<tr>
<td>PDCP configuration</td>
<td>N/A</td>
<td></td>
<td></td>
</tr>
<tr>
<td>RLC configuration</td>
<td>TM</td>
<td></td>
<td></td>
</tr>
<tr>
<td>MAC configuration</td>
<td>TM</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

NOTE: RRC will perform padding, if required due to the granularity of the TF signalling, as defined in 8.5.

### 9.1.1.7 SC-MCCH and SC-MTCH configuration

#### Parameters

<table>
<thead>
<tr>
<th>Name</th>
<th>Value</th>
<th>Semantics description</th>
<th>Ver</th>
</tr>
</thead>
<tbody>
<tr>
<td>PDCP configuration</td>
<td>N/A</td>
<td></td>
<td></td>
</tr>
<tr>
<td>RLC configuration</td>
<td>UM</td>
<td></td>
<td></td>
</tr>
<tr>
<td>sn-FieldLength</td>
<td>size5</td>
<td></td>
<td></td>
</tr>
<tr>
<td>t-Reordering</td>
<td>0</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### 9.1.1.8 BR-BCCCH configuration

#### Parameters

<table>
<thead>
<tr>
<th>Name</th>
<th>Value</th>
<th>Semantics description</th>
<th>Ver</th>
</tr>
</thead>
<tbody>
<tr>
<td>PDCP configuration</td>
<td>N/A</td>
<td></td>
<td></td>
</tr>
<tr>
<td>RLC configuration</td>
<td>TM</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
NOTE: RRC will perform padding, if required due to the granularity of the TF signalling, as defined in 8.5.

9.1.2 SRB configurations

9.1.2.1 SRB1

Parameters

<table>
<thead>
<tr>
<th>Name</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>MAC configuration</td>
<td>TM</td>
</tr>
</tbody>
</table>

9.1.2.1a SRB1bis

Parameters

<table>
<thead>
<tr>
<th>Name</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>logicalChannelIdentity</td>
<td>1</td>
</tr>
</tbody>
</table>

9.1.2.2 SRB2

Parameters

<table>
<thead>
<tr>
<th>Name</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>RLC configuration</td>
<td></td>
</tr>
</tbody>
</table>

9.2 Default radio configurations

The following sections only list default values for REL-8 parameters included in protocol version v8.5.0. For all fields introduced in a later protocol version, the default value is "released" unless explicitly specified otherwise. If UE is to apply default configuration while it is configured with some critically extended fields, the UE shall apply the original version with only default values. For the following fields, introduced in a protocol version later than v8.5.0, the default corresponds with "value not applicable":

- codeBookSubsetRestriction-v920;
- pmi-RI-Report;

NOTE 1: Value "N/A" indicates that the UE does not apply a specific value (i.e. upon switching to a default configuration, E-UTRAN can not assume the UE keeps the previously configured value). This implies that E-UTRAN needs to configure a value before invoking the related functionality.

NOTE 2: In general, the signalling should preferably support a "release" option for fields introduced after v8.5.0. The "value not applicable" should be used restrictively, mainly limited to for fields which value is relevant only if another field is set to a value other than its default.
9.2.1 SRB configurations

9.2.1.1 SRB1

Parameters

<table>
<thead>
<tr>
<th>Name</th>
<th>Value</th>
<th>NB-IoT</th>
<th>Semantics description</th>
<th>Ver</th>
</tr>
</thead>
<tbody>
<tr>
<td>RLC configuration CHOICE</td>
<td>am</td>
<td>am</td>
<td></td>
<td></td>
</tr>
<tr>
<td>ul-RLC-Config</td>

<td></td>
</tr>
<tr>
<td>preconfigSync</td>
<td>ms1000</td>
<td></td>
<td></td>
</tr>
<tr>
<td>preconfigComm</td>
<td>n1</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

9.3.2 Pre-configurable parameters

This ASN.1 segment is the start of the E-UTRA definitions of pre-configured sidelink parameters.

NOTE 1: Upper layers are assumed to provide a set of pre-configured parameters that are valid at the current UE location if any, see TS 24.334 [69, 10.2].

### SL-Preconfiguration field descriptions

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>carrierFreq</strong></td>
<td>Indicates the carrier frequency for out of coverage sidelink communication and sidelink discovery. In case of FDD it is the uplink carrier frequency and the corresponding downlink frequency can be determined from the default TX-RX frequency separation defined in TS 36.101 [42, table 5.7.3-1].</td>
</tr>
<tr>
<td><strong>additionalSpectrumEmission</strong></td>
<td>The UE requirements related to IE AdditionalSpectrumEmission are defined in TS 36.101 [42, 6.2.4]. If additionalSpectrumEmissionExt-r14 is configured, the UE only considers additionalSpectrumEmissionExt-r14 (and ignores additionalSpectrumEmission-r12).</td>
</tr>
<tr>
<td><strong>commRxPoolList</strong></td>
<td>Indicates a list of reception pools for sidelink communication in addition to the resource pools indicated by preconfigComm.</td>
</tr>
<tr>
<td><strong>commTxPoolList</strong></td>
<td>Indicates a list of transmission pools for sidelink communication in addition to the first resource pool within preconfigComm.</td>
</tr>
<tr>
<td><strong>preconfigComm</strong></td>
<td>Indicates a list of resource pools. The first resource pool in the list is used for both reception and transmission of sidelink communication. The other resource pools, if present, are only used for reception of sidelink communication.</td>
</tr>
<tr>
<td><strong>syncRefDiffHyst</strong></td>
<td>Hysteresis when evaluating a SyncRef UE using relative comparison. Value $dB0$ corresponds to 0 dB, $dB3$ to 3 dB and so on. value $dBinf$ corresponds to infinite dB.</td>
</tr>
<tr>
<td><strong>syncRefMinHyst</strong></td>
<td>Hysteresis when evaluating a SyncRef UE using absolute comparison. Value $dB0$ corresponds to 0 dB, $dB3$ to 3 dB and so on.</td>
</tr>
</tbody>
</table>

**NOTE 1:** The network may configure one or more of the reception only resource pools in preconfigComm to cover reception from in coverage UEs using scheduled resource allocation. For such a resource pool the network should set all bits of subframeBitmap to 1 and offsetIndicator to indicate the subframe immediately following the sidelink control information.

**NOTE 2:** The network should ensure that the resources defined by the first entry in preconfigComm (used for transmission by an out of coverage UE) do not overlap with those of the pool(s) covering scheduled transmissions by in coverage UEs. Furthermore, the network should ensure that for none of the entries in preconfigComm the resources defined by sc-TF-ResourceConfig overlap.

### SL-V2X-Preconfiguration

The IE SL-V2X-Preconfiguration includes the sidelink pre-configured parameters used for V2X sidelink communication.

### SL-V2X-Preconfiguration information elements

```asn1
-- ASN1START

SL-V2X-Preconfiguration-r14 ::= SEQUENCE {
  v2x-PreconfigFreqList-r14 SL-V2X-PreconfigFreqList-r14,

### SL-V2X-Preconfiguration field descriptions

<table>
<thead>
<tr>
<th>Field Description</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>adjacencyPSCCH-PSSCH</strong></td>
<td>Indicates whether a UE always transmits PSCCH and PSSCH in adjacent RBs (indicated by TRUE) or it may transmit PSCCH and PSSCH in non-adjacent RBs (indicated by FALSE). This parameter appears only when a pool is configured such that a UE transmits PSCCH and the associated PSSCH in the same subframe.</td>
</tr>
<tr>
<td><strong>anchorCarrierFreqList</strong></td>
<td>Indicates carrier frequencies which may include inter-carrier resource configuration for V2X sidelink communication.</td>
</tr>
<tr>
<td><strong>cbr-PreconfigList</strong></td>
<td>Indicates the preconfigured list of CBR ranges and the list of PSSCH transmission configurations available to configure congestion control to the UE for V2X sidelink communication.</td>
</tr>
<tr>
<td><strong>cbr-pssch-TxConfigList</strong></td>
<td>Indicates the mapping between PPPPs, CBR ranges by using indexes of the entry in cbr-RangeCommonConfigList in cbr-PreconfigList, and PSSCH transmission parameters and CR limits by using indexes of the entry in sl-CBR-PSSCH-TxConfigList in cbr-PreconfigList.</td>
</tr>
<tr>
<td><strong>numSubchannel</strong></td>
<td>Indicates the number of subchannels in the corresponding resource pool.</td>
</tr>
<tr>
<td><strong>offsetDFN</strong></td>
<td>Indicates the timing offset for the UE to determine DFN timing when GNSS is used for timing reference. Value 0 corresponds to 0 milliseconds, value 1 corresponds to 0.001 milliseconds, value 2 corresponds to 0.002 milliseconds, and so on.</td>
</tr>
<tr>
<td><strong>resourceSelectionConfigP2X</strong></td>
<td>Indicates the allowed resource selection mechanism(s), i.e. partial sensing and/or random selection, for P2X related V2X sidelink communication.</td>
</tr>
<tr>
<td><strong>restrictResourceReservationPeriod</strong></td>
<td>If configured, the field restrictResourceReservationPeriod configured in v2x-ResourceSelectionConfig shall be ignored for transmission on this pool.</td>
</tr>
<tr>
<td><strong>sizeSubchannel</strong></td>
<td>Indicates the number of PRBs of each subchannel in the corresponding resource pool. The value n5 denotes 5 PRBs; n6 denotes 6 PRBs and so on. The values n5, n6, n10, n15, n20, n25, n50, n75 and n100 apply in the case of adjacencyPSCCH-PSSCH set to TRUE; the values n4, n5, n6, n8, n9, n10, n12, n15, n16, n18, n20, n30, n48, n72 and n96 apply in the case of adjacencyPSCCH-PSSCH set to FALSE.</td>
</tr>
<tr>
<td><strong>sl-OffsetIndicator</strong></td>
<td>Indicates the offset of the first subframe of a resource pool within a SFN cycle. If absent, the resource pool starts from first subframe of SFN=0.</td>
</tr>
<tr>
<td><strong>sl-Subframe</strong></td>
<td>Indicates the bitmap of the resource pool, which is defined by repeating the bitmap within a SFN cycle (see TS 36.213 [23]).</td>
</tr>
<tr>
<td><strong>startRB-Subchannel</strong></td>
<td>Indicates the lowest RB index of the subchannel with the lowest index.</td>
</tr>
<tr>
<td><strong>startRB-PSCCH-Pool</strong></td>
<td>Indicates the lowest RB index of the PSCCH pool.</td>
</tr>
<tr>
<td><strong>syncAllowed</strong></td>
<td>Indicates the allowed synchronization reference(s) which is (are) allowed to use the pre-configured resource pool.</td>
</tr>
<tr>
<td><strong>syncPriority</strong></td>
<td>Indicates the synchronization priority order. In case the UE does not detect any cell which configures synchronization configuration on the carrier frequency in anchorCarrierFreqList, if this field is set to gnss, the UE shall prioritize GNSS over the UE directly synchronized to eNB; if this field is set to enb, the UE shall prioritize the UE directly synchronized to eNB over GNSS.</td>
</tr>
<tr>
<td><strong>thresSL-TxPrioritization</strong></td>
<td>Indicates the threshold used to determine whether SL V2X transmission is prioritized over uplink transmission if they overlap in time (see TS 36.321 [6]).</td>
</tr>
<tr>
<td><strong>threshS-RSSI-CBR</strong></td>
<td>Indicates the S-RSSI threshold for determining the contribution of a sub-channel to the CBR measurement, as specified in TS 36.214 [48]. Value 0 corresponds to -112 dBm, value 1 to -110 dBm, value n to (-112 + n*2) dBm, and so on.</td>
</tr>
<tr>
<td><strong>v2x-CommRxPoolList</strong></td>
<td>Indicates a list of reception pools for V2X sidelink communication.</td>
</tr>
<tr>
<td><strong>v2x-CommTxPoolList</strong></td>
<td>Indicates a list of transmission pools for V2X sidelink communication.</td>
</tr>
<tr>
<td><strong>v2x-ResourceSelectionConfig</strong></td>
<td>Indicates V2X sidelink communication configurations used for UE autonomous resource selection.</td>
</tr>
<tr>
<td><strong>zoneConfig</strong></td>
<td>Indicates zone configurations used for V2X sidelink communication in 5.10.13.2.</td>
</tr>
<tr>
<td><strong>zoneID</strong></td>
<td>Indicates the zone ID for which the UE shall use this resource pool as described in 5.10.13.2. The field is absent in v2x-CommRxPoolList and p2x-CommTxPoolList in SL-V2X-PreconfigFreqInfo.</td>
</tr>
</tbody>
</table>
10 Radio information related interactions between network nodes

10.1 General

This section specifies RRC messages that are transferred between network nodes. These RRC messages may be transferred to or from the UE via another Radio Access Technology. Consequently, these messages have similar characteristics as the RRC messages that are transferred across the E-UTRA radio interface, i.e. the same transfer syntax and protocol extension mechanisms apply.

10.2 Inter-node RRC messages

10.2.1 General

This section specifies RRC messages that are sent either across the X2- or the S1-interface, either to or from the eNB, i.e. a single 'logical channel' is used for all RRC messages transferred across network nodes. The information could originate from or be destined for another RAT.

---

**EUTRA-InterNodeDefinitions**

This ASN.1 segment is the start of the E-UTRA inter-node PDU definitions.

10.2.2 Message definitions

– **HandoverCommand**

This message is used to transfer the handover command generated by the target eNB.

Direction: target eNB to source eNB/ source RAN

**HandoverCommand message**

```asn1
-- ASN1START
HandoverCommand ::= SEQUENCE {
  criticalExtensions     CHOICE {
    c1         CHOICE{
      handoverCommand-r8     HandoverCommand-r8-IEs,
      spare7 NULL,
      spare6 NULL, spare5 NULL, spare4 NULL,
      spare3 NULL, spare2 NULL, spare1 NULL,
    },
    criticalExtensionsFuture   SEQUENCE {}       OPTIONAL
  }
}
HandoverCommand-r8-IEs ::= SEQUENCE {
  handoverCommandMessage    OCTET STRING (CONTAINING DL-DCCH-Message),
  nonCriticalExtension    SEQUENCE {}       OPTIONAL
}
-- ASN1STOP
```

**HandoverCommand field descriptions**

*handoverCommandMessage*
Contains the entire DL-DCCH-Message including the `RRConnectionReconfiguration` message used to perform handover within E-UTRAN or handover to E-UTRAN, generated (entirely) by the target eNB.
NOTE: The source BSC, in case of inter-RAT handover from GERAN to E-UTRAN, expects that the HandoverCommand message includes DL-DCCH-Message only. Thus, criticalExtensionsFuture, spare1-spare7 and nonCriticalExtension should not be used regardless whether the source RAT is E-UTRAN, UTRAN or GERAN.

– HandoverPreparationInformation

This message is used to transfer the E-UTRA RRC information used by the target eNB during handover preparation, including UE capability information.

Direction: source eNB/ source RAN to target eNB

}
```
HandoverPreparationInformation field descriptions

**as-Config**
The radio resource configuration. Applicable in case of intra-E-UTRA handover. If the target receives an incomplete MeasConfig and RadioResourceConfigDedicated in the as-Config, the target eNB may decide to apply the full configuration option based on the ue-ConfigRelease.

**as-Context**
Local E-UTRAN context required by the target eNB.

**makeBeforeBreakReq**
To request the target eNB to add the makeBeforeBreak indication in the mobilityControlInfo in case of intra-frequency handover.

**rrm-Config**
Local E-UTRAN context used depending on the target node’s implementation, which is mainly used for the RRM purpose.

**ue-ConfigRelease**
Indicates the RRC protocol release or version applicable for the current UE configuration. This could be used by target eNB to decide if the full configuration approach should be used. If this field is not present, the target assumes that the current UE configuration is based on the release 8 version of RRC protocol. NOTE 1.

**ue-RadioAccessCapabilityInfo**
For E-UTRA radio access capabilities, it is up to E-UTRA how the backward compatibility among supportedBandCombinationReduced, supportedBandCombination and supportedBandCombinationAdd is ensured. If supportedBandCombinationReduced and supportedBandCombinationAdd supportedBandCombinationAdd are included into ueCapabilityRAT-Container, it can be assumed that the value of fields, requestedBands, reducedIntNonContCombRequested and requestedCCsXL are consistent with all supported band combination fields. NOTE 2.

**ue-SupportedEARFCN**
Includes UE supported EARFCN of the handover target E-UTRA cell if the target E-UTRA cell belongs to multiple frequency bands.

---

**NOTE 1:** The source typically sets the ue-ConfigRelease to the release corresponding with the current dedicated radio configuration. The source may however also consider the common radio resource configuration e.g. in case interoperability problems would appear if the UE temporary continues extensions of this part of the configuration in a target PCell not supporting them.

**NOTE 2:** The following table indicates per source RAT whether RAT capabilities are included or not.

<table>
<thead>
<tr>
<th>Source RAT</th>
<th>E-UTRA capabilities</th>
<th>UTRA capabilities</th>
<th>GERAN capabilities</th>
</tr>
</thead>
<tbody>

<td>May be included</td>
<td>May be included</td>
</tr>
</tbody>
</table>
### Conditional presence | Explanation
---|---
**HO** | The field is mandatory present in case of handover within E-UTRA; otherwise the field is not present.
**HO2** | The field is optional present in case of handover within E-UTRA; otherwise the field is not present.
**HO3** | The field is optional present in case of handover from GERAN to E-UTRA, otherwise the field is not present.

---

**SCG-Config**

This message is used to transfer the SCG radio configuration generated by the SeNB.

**Direction:** Secondary eNB to master eNB

---

**SCG-Config message**

```
-- ASN1START

SCG-Config-r12 ::= SEQUENCE {
  criticalExtensions     CHOICE {
    c1         CHOICE{

  nonCriticalExtension    SEQUENCE {}       OPTIONAL
}

-- ASN1STOP
```

---

**SCG-Config field descriptions**

**scg-RadioConfig-r12**

Includes the change of the dedicated SCG configuration and, upon addition of an SCG cell, the common SCG configuration.

The SeNB only includes a new SCG cell in response to a request from MeNB, but may include release of an SCG cell release or release of the SCG part of an SCG/Split DRB without prior request from MeNB. The SeNB does not use this field to initiate release of the SCG.

---

**SCG-ConfigInfo**

This message is used by MeNB to request the SeNB to perform certain actions e.g. to establish, modify or release an SCG, and it may include additional information e.g. to assist the SeNB with assigning the SCG configuration.

**Direction:** Master eNB to secondary eNB

---

**SCG-ConfigInfo field descriptions**

**drb-ToAddModListSCG**
Includes DRBs the SeNB is requested to establish or modify (DRB type change).

**drb-ToReleaseListSCG**
Includes DRBs the SeNB is requested to release.

**makeBeforeBreakSCG-Req**
To request the target eNB to add the makeBeforeBreakSCG indication in the mobilityControlInfoSCG in case of intra-frequency SCG change.

**maxSCH-TB-BitsXL**
Indicates the maximum DL-SCH/UL-SCH TB bits that may be scheduled in a TTI. Specified as a percentage of the value defined for the applicable UE category.

**measGapConfig**
Includes the current measurement gap configuration.

**measResultListRSSI-SCG**
Includes RSSI measurement results of SCG (serving) cells

**measResultSSSTD**
Includes measurement results of UE SFN and Subframe Timing Difference between the PCell and the PSCell.

**measResultServCellListSCG**
Includes measurement results of SCG (serving) cells.

**radioResourceConfigDedMCG**
Includes the current dedicated MCG radio resource configuration.

**sCellIndex**
If sCellIndex-r13 is present, sCellIndex-r12 shall be ignored.

**sCellToAddModListMCG, sCellToAddModListMCG-Ext**
Includes the current MCG SCell configuration. Field sCellToAddModListMCG is used to add the first 4 SCells with sCellIndex-r10 while sCellToAddModListMCG-Ext is used to add the rest.

**sCellToAddModListSCG, sCellToAddModListSCG-Ext**
Includes SCG cells the SeNB is requested to establish. Measurement results may be provided for these cells. Field sCellToAddModListSCG is used to add the first 4 SCells with sCellIndex-r12 while sCellToAddModListSCG-Ext is used to add the rest.

**sCellToReleaseListSCG, sCellToReleaseListSCG-Ext**
Includes SCG cells the SeNB is requested to release.

**scg-RadioConfig**
Includes the current dedicated SCG configuration.

**scg-ConfigRestrictInfo**
Includes fields for which MeNB explicitly indicates the restriction to be observed by SeNB.

**servCellId**
If servCellId-r13 is present, servCellId-r12 shall be ignored.

**p-Max**
Cell specific value i.e. as broadcast by PCell.
### Conditional presence

<table>

**UERadioAccessCapabilityInformation field descriptions**

- **ue-RadioAccessCapabilityInfo**
  
  OCTET STRING (CONTAINING UECapabilityInformation).
nonCriticalExtension SEQUENCE () OPTIONAL

-- ASN1STOP

UERadioAccessCapabilityInformation field descriptions

ue-RadioAccessCapabilityInfo
Including E-UTRA, GERAN, and CDMA2000-1xRTT Bandclass radio access capabilities (separated). UTRA radio access capabilities are not included. For E-UTRA radio access capabilities, it is up to E-UTRA how the backward compatibility among supportedBandCombinationReduced, supportedBandCombination and supportedBandCombinationAdd is ensured. If supportedBandCombinationReduced and supportedBandCombination/supportedBandCombinationAdd are included into ueCapabilityRAT-Container, it can be assumed that the value of fields, requestedBands, reducedIntNonContCombRequested and requestedCCsXL are consistent with all supported band combination fields.

-- UERadioPagingInformation

This message is used to transfer radio paging information, covering both upload to and download from the EPC.

Direction: eNB to/ from EPC

UERadioPagingInformation message

}

-- ASN1STOP

UERadioPagingInformation field descriptions

ue-RadioPagingInfo
The field is used to transfer UE capability information used for paging. The eNB generates the ue-RadioPagingInfo and the contained UE capability information is absent when not supported by the UE.

supportedBandListEUTRAForPaging
Indicates the UE supported frequency bands which is derived by the eNB from UE-EUTRA-Capability.

10.3 Inter-node RRC information element definitions

-- AS-Config

The AS-Config IE contains information about RRC configuration information in the source eNB which can be utilized by target eNB to determine the need to change the RRC configuration during the handover preparation phase. The
information can also be used after the handover is successfully performed or during the RRC connection re-establishment or resume.

**AS-Config information element**

```plaintext

-- ASN1START

AS-Config ::= SEQUENCE {
  sourceMeasConfig               MeasConfig,  
  sourceRadioResourceConfig      RadioResourceConfigDedicated,

  sourceWLAN-MeasResult-r14    MeasResultListWLAN-r13    OPTIONAL
}

-- ASN1STOP

NOTE: The AS-Config re-uses information elements primarily created to cover the radio interface signalling requirements. Consequently, the information elements may include some parameters that are not relevant for the target eNB e.g. the SFN as included in the MasterInformationBlock.
```
### AS-Config field descriptions

#### antennaInfoCommon
This field provides information about the number of antenna ports in the source PCell.

#### sourceDL-CarrierFreq
Provides the parameter Downlink EARFCN in the source PCell, see TS 36.101 [42]. If the source eNB provides AS-Config-v9e0, it sets sourceDi-CarrierFreq (i.e. without suffix) to maxEARFCN.

#### sourceLWA-Config
LWA configuration in the source PCell when handover is triggered.

#### sourceOtherConfig
Provides other configuration in the source PCell.

#### sourceMasterInformationBlock
MasterInformationBlock transmitted in the source PCell.

#### sourceMeasConfig
Measurement configuration in the source cell. The measurement configuration for all measurements existing in the source eNB when handover is triggered shall be included. See 10.5.

#### sourceRCLWI-Configuration
RCLWI Configuration in the source PCell.

#### sourceSL-CommConfig
This field covers the sidelink communication configuration.

#### sourceSL-DiscConfig
This field covers the sidelink discovery configuration.

#### sourceRadioResourceConfig
Radio configuration in the source PCell. The radio resource configuration for all radio bearers existing in the source PCell when handover is triggered shall be included. See 10.5.

#### sourceSCellConfigList
Radio resource configuration (common and dedicated) of the SCells configured in the source eNB.

#### sourceSecurityAlgorithmConfig
This field provides the AS integrity protection (SRBs) and AS ciphering (SRBs and DRBs) algorithm configuration used in the source PCell.

#### sourceSystemInformationBlockType1
SystemInformationBlockType1 (or SystemInformationBlockType1-BR) transmitted in the source PCell.

#### sourceSystemInformationBlockType2
SystemInformationBlockType2 transmitted in the source PCell.

#### sourceSL-V2X-CommConfig
Indicates the V2X sidelink communication related configurations configured in the source eNB.

#### sourceWLAN-MeasResult
WLAN measurement results in the source PCell when handover is triggered.

---

#### AS-Context
The IE AS-Context is used to transfer local E-UTRAN context required by the target eNB.

---

**AS-Context information element**

```asn1
-- ASN1START
AS-Context ::= SEQUENCE {
  reestablishmentInfo ... OPTIONAL -- Cond HO
}

AS-Context-v1130 ::= SEQUENCE {
  idc-Indication-r11 OCTET STRING (CONTAINING
                       InDeviceCoexIndication-r11) OPTIONAL, -- Cond HO2

**AS-Context field descriptions**

<table>
<thead>
<tr>
<th>idc-Indication</th>
<th>Including information used for handling the IDC problems.</th>
</tr>
</thead>
<tbody>
<tr>
<td>reestabInfo</td>
<td>Including information needed for the RRC connection re-establishment.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Conditional presence</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>HO</td>
<td>The field is mandatory present in case of handover within E-UTRA; otherwise the field is not present.</td>
</tr>
<tr>
<td>HO2</td>
<td>The field is optional present in case of handover within E-UTRA; otherwise the field is not present.</td>
</tr>
</tbody>
</table>

---

**ReestablishmentInfo**

The **ReestablishmentInfo** IE contains information needed for the RRC connection re-establishment.

---

**ReestablishmentInfo information element**

```asn1
ReestablishmentInfo ::= SEQUENCE {
  sourcePhysCellId     PhysCellId,
  targetCellShortMAC-I  ShortMAC-I,
  additionalReestabInfoList   AdditionalReestabInfoList    OPTIONAL,
  ...
}
AdditionalReestabInfoList ::= SEQUENCE ( SIZE (1..maxReestabInfo) ) OF AdditionalReestabInfo
AdditionalReestabInfo ::= SEQUENCE{
  cellIdentity      CellIdentity,
  key-eNodeB-Star     Key-eNodeB-Star,
  shortMAC-I       ShortMAC-I
}
Key-eNodeB-Star ::= BIT STRING (SIZE (256))
```

---

**ReestablishmentInfo field descriptions**

- **additionalReestabInfoList**
  Contains a list of shortMAC-I and KeNB* for cells under control of the target eNB, required for potential re-establishment by the UE in these cells to succeed.

- **Key-eNodeB-Star**
  Parameter KeNB*: See TS 33.401 [32, 7.2.8.4]. If the cell identified by `cellIdentity` belongs to multiple frequency bands, the source eNB selects the DL-EARFCN for the KeNB* calculation using the same logic as UE uses when selecting the DL-EARFCN in IDLE as defined in section 6.2.2. This parameter is only used for X2 handover, and for S1 handover, it shall be ignored by target eNB.

- **sourcePhysCellId**
  The physical cell identity of the source PCell, used to determine the UE context in the target eNB at re-establishment.

- **targetCellShortMAC-I**
  The ShortMAC-I for the handover target PCell, in order for potential re-establishment to succeed.

---

**RRM-Config**

The **RRM-Config** IE contains information about UE specific RRM information before the handover which can be utilized by target eNB.
RRM-Config information element

```asn1
RRM-Config ::= SEQUENCE {
  ue-InactiveTime ENUMERATED {
    s1, s2, s3, s5, s7, s10, s15, s20,
    s25, s30, s40, s50, min1, min1s20c, min1s40,
    min2, min2s30, min3, min3s30, min4, min5, min6,
    min7, min8, min9, min10, min12, min14, min17, min20,
    min24, min28, min33, min38, min44, min50, hr1,
    hr1min30, hr2, hr2min30, hr3, hr3min30, hr4, hr5, hr6,
    hr8, hr10, hr13, hr16, hr20, day1, day1hr12, day2,
    day2hr12, day3, day4, day5, day7, day10, day14, day19,
    day24, day30, dayMoreThan30}  OPTIONAL,
  ...,
  [ [ candidateCellInfoList-r10  CandidateCellInfoList-r10  OPTIONAL ] ]
}

CandidateCellInfoList-r10 ::= SEQUENCE (SIZE (1..maxFreq)) OF CandidateCellInfo-r10

CandidateCellInfo-r10 ::= SEQUENCE {
  -- cell identification
  physCellId-r10  PhysCellId,
  dl-CarrierFreq-r10  ARFCN-ValueEUTRA,
  -- available measurement results
  rsrpResult-r10  RSRP-Range  OPTIONAL,
  rsrqResult-r10  RSRQ-Range  OPTIONAL,
  ...,
  [ [ dl-CarrierFreq-v1090  ARFCN-ValueEUTRA-v9e0  OPTIONAL ] ],
  [ [ rsrqResult-v1250  RSRQ-Range-v1250  OPTIONAL ] ],
  [ [ rs-sinr-Result-r13  RS-SINR-Range-r13  OPTIONAL ] ]
}
```

-- ASN1STOP

**RRM-Config field descriptions**

- **candidateCellInfoList**
  A list of the best cells on each frequency for which measurement information was available, in order of decreasing RSRP.

- **dl-CarrierFreq**
  The source includes `dl-CarrierFreq-v1090` if and only if `dl-CarrierFreq-r10` is set to `maxEARFCN`.

- **ue-InactiveTime**
  Duration while UE has not received or transmitted any user data. Thus the timer is still running in case e.g., UE measures the neighbour cells for the HO purpose. Value s1 corresponds to 1 second, s2 corresponds to 2 seconds and so on. Value min1 corresponds to 1 minute, value min1s20 corresponds to 1 minute and 20 seconds, value min1s40 corresponds to 1 minute and 40 seconds and so on. Value hr1 corresponds to 1 hour, hr1min30 corresponds to 1 hour and 30 minutes and so on.

### 10.4 Inter-node RRC multiplicity and type constraint values

- **Multiplicity and type constraints definitions**

  -- ASN1START

  maxReestabInfo INTEGER ::= 32 -- Maximum number of KeNB* and shortMAC-I forwarded -- at handover for re-establishment preparation

  -- ASN1STOP

  -- End of EUTRA-InterNodeDefinitions

  -- ASN1START
10.5 Mandatory information in AS-Config

The AS-Config transferred between source eNB and target-eNB shall include all IEs necessary to describe the AS context. The conditional presence in section 6 is only applicable for eNB to UE communication.

The "need" or "cond" statements are not applied in case of sending the IEs from source eNB to target eNB. Some fields shall be included regardless of the "need" or "cond" e.g. discardTimer. The AS-Config re-uses information elements primarily created to cover the radio interface signalling requirements. The information elements may include some parameters that are not relevant for the target eNB e.g. the SFN as included in the MasterInformationBlock.

All the fields in the AS-Config as defined in 10.3 that are introduced after v9.2.0 and that are optional for eNB to UE communication shall be included, if the functionality is configured. The fields in the AS-Config that are defined before and including v9.2.0 shall be included as specified in the following.

Within the sourceRadioResourceConfig, sourceMeasConfig and sourceOtherConfig, the source eNB shall include fields that are optional for eNB to UE communication, if the functionality is configured unless explicitly specified otherwise in the following:

- in accordance with a condition that is explicitly stated to be applicable; or
- a default value is defined for the concerned field; and the configured value is the same as the default value that is defined; or
- the need of the field is OP and the current UE configuration corresponds with the behaviour defined for absence of the field;

The following fields, if the functionality is configured, are not mandatory for the source eNB to include in the AS-Config since delta signalling by the target eNB for these fields is not supported:

- semiPersistSchedC-RNTI
- measGapConfig

For the measurement configuration, a corresponding operation as 5.5.6.1 and 5.5.2.2a is executed by target eNB.

10.6 Inter-node NB-IoT messages

10.6.1 General

This section specifies NB-IoT RRC messages that are sent either across the X2- or the S1-interface, either to or from the eNB, i.e. a single 'logical channel' is used for all NB-IoT RRC messages transferred across network nodes.

-- NB-IoT-InterNodeDefinitions

This ASN.1 segment is the start of the NB-IoT inter-node PDU definitions.
10.6.2 Message definitions

---

**HandoverPreparationInformation-NB**

This message is used to transfer the UE context from the eNB where the RRC connection has been suspended and transfer it to the eNB where the RRC Connection has been requested to be resumed.

Direction: source eNB to target eNB

**HandoverPreparationInformation-NB field descriptions**

UERadioPagingInformation-NB field descriptions

ue-RadioPagingInfo
The field is used to transfer UE NB-IoT capability information used for paging. The eNB generates the ue-RadioPagingInfo and the contained UE capability information is absent when not supported by the UE.

10.7 Inter-node NB-IoT RRC information element definitions

— AS-Config-NB

The AS-Config-NB IE contains information about NB-IoT RRC configuration information in the source eNB which can be utilized by target eNB.

AS-Config-NB information element

— ASN1START

AS-Config-NB ::=     SEQUENCE {
  sourceRadioResourceConfig-r13   RadioResourceConfigDedicated-NB-r13,
  sourceSecurityAlgorithmConfig-r13  SecurityAlgorithmConfig,
  sourceUE-Identity-r13     C-RNTI,
  sourceDl-CarrierFreq-r13    CarrierFreq-NB-r13,
  ...
}

— ASN1STOP

AS-Config-NB field descriptions

sourceDl-CarrierFreq
Provides the parameter Downlink EARFCN in the source PCell, see TS 36.101 [42].

sourceRadioResourceConfig
Radio configuration in the source PCell. The radio resource configuration for all radio bearers existing in the source PCell shall be included. See 10.9.

sourceSecurityAlgorithmConfig
This field provides the AS integrity protection (SRBs) and AS ciphering (SRBs and DRBs) algorithm configuration used in the source PCell.

— AS-Context-NB

The IE AS-Context-NB is used to transfer the UE context required by the target eNB.

AS-Context-NB information element

— ASN1START

AS-Context-NB ::=     SEQUENCE {
  reestablishmentInfo-r13     ReestablishmentInfo-NB   OPTIONAL,
  ...
}

— ASN1STOP
**AS-Context-NB field descriptions**

*reestablishmentInfo*
Including information needed for the RRC connection re-establishment.

---

**ReestablishmentInfo-NB**
The *ReestablishmentInfo-NB* IE contains information needed for the RRC connection re-establishment.

**ReestablishmentInfo-NB information element**

```asn1
-- ASN1START
ReestablishmentInfo-NB ::=   SEQUENCE {
   sourcePhysCellId-r13     PhysCellId,
   targetCellShortMAC-I-r13    ShortMAC-I,
   additionalReestabInfoList-r13   AdditionalReestabInfoList    OPTIONAL,
   ...                       
}   
-- ASN1STOP
```

**ReestablishmentInfo-NB field descriptions**

*additionalReestabInfoList*
Contains a list of shortMAC-I and KeNB for cells under control of the target eNB, required for potential re-establishment by the UE in these cells to succeed.

*sourcePhysCellId*
The physical cell identity of the source PCell, used to determine the UE context in the target eNB at re-establishment.

*targetCellShortMAC-I*
The ShortMAC-I for the target PCell, in order for potential re-establishment to succeed.

---

**RRM-Config-NB**
The *RRM-Config-NB* IE contains information about UE specific RRM information which can be utilized by target eNB.

**RRM-Config-NB information element**

```asn1
-- ASN1START
RRM-Config-NB ::=   SEQUENCE {
   ue-InactiveTime    ENUMERATED {   
      s1, s2, s3, s5, s7, s10, s15, s20,  
      s25, s30, s40, s50, min1, min1s20, min1s40,  
      min2, min2s30, min3, min3s30, min4, min5, min6,  
      min7, min8, min9, min10, min12, min14, min17, min20,  
      min24, min28, min33, min38, min44, min50, hr1,  
      hr1min30, hr2, hr2min30, hr3, hr3min30, hr4, hr5, hr6,  
      hr8, hr10, hr13, hr16, hr20, day1, day1hr12, day2,  
      day2hr12, day3, day4, day5, day7, day10, day14, day19,  
      day24, day30, dayMoreThan30}  OPTIONAL,  
   ...                       
}   
-- ASN1STOP
```
10.8 Inter-node RRC multiplicity and type constraint values

- Multiplicity and type constraints definitions

- End of NB-IoT-InterNodeDefinitions

10.9 Mandatory information in AS-Config-NB

The AS-Config-NB transferred between source eNB and target-eNB shall include all IEs necessary to describe the AS context. The conditional presence in section 6 is only applicable for eNB to UE communication.

The "Need" or "Cond" statements are not applied in case of sending the IEs from source eNB to target eNB. Some information elements shall be included regardless of the "Need" or "Cond" e.g. discardTimer. The AS-Config-NB re-uses information elements primarily created to cover the radio interface signalling requirements.

Within the sourceRadioResourceConfig, the source eNB shall include fields that are optional for eNB to UE communication, if the functionality is configured unless explicitly specified otherwise in the following:

- in accordance with a condition that is explicitly stated to be applicable; or
- a default value is defined for the concerned field; and the configured value is the same as the default value that is defined; or
- the need of the field is OP and the current UE configuration corresponds with the behaviour defined for absence of the field;

11 UE capability related constraints and performance requirements

11.1 UE capability related constraints

The following table lists constraints regarding the UE capabilities that E-UTRAN is assumed to take into account.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
<th>Value</th>
<th>NB-IoT</th>
</tr>
</thead>
<tbody>
<tr>
<td>#DRBs</td>
<td>The number of DRBs that a UE shall support</td>
<td>8</td>
<td>(0, 1, 2)</td>
</tr>
</tbody>
</table>

NOTE1
### Parameter Description

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
<th>NB-IoT</th>
</tr>
</thead>
<tbody>
<tr>
<td>#RLC-AM</td>
<td>10</td>
<td>(2, 3)</td>
</tr>
<tr>
<td>minCellperMeasObjectEUTRA</td>
<td>32</td>
<td>N/A</td>
</tr>
<tr>
<td>minBlackCellRangeeperMeasObjectEUTRA</td>
<td>32</td>
<td>N/A</td>
</tr>
<tr>
<td>minCellperMeasObjectUTRA</td>
<td>32</td>
<td>N/A</td>
</tr>
<tr>
<td>minCellperMeasObjectGERAN</td>
<td>32</td>
<td>N/A</td>
</tr>
<tr>
<td>minCellperMeasObjectCDMA2000</td>
<td>32</td>
<td>N/A</td>
</tr>
<tr>
<td>minCellTotal</td>
<td>256</td>
<td>N/A</td>
</tr>
</tbody>
</table>

#### NOTE:

In case of CGI reporting, the limit regarding the cells E-UTRAN can configure includes the cell for which the UE is requested to report CGI i.e. the amount of neighbour cells that can be included is at most (# minCellperMeasObjectRAT - 1), where RAT represents EUTRA/UTRA/GERAN/CDMA2000 respectively.

#### NOTE:

#DRBs based on UE capability, #RLC-AM = #DRBs + 2.

### 11.2 Processing delay requirements for RRC procedures

The UE performance requirements for RRC procedures are specified in the following tables, by means of a value N:

\[
N = \text{the number of 1ms subframes from the end of reception of the E-UTRAN -> UE message on the UE physical layer up to when the UE shall be ready for the reception of uplink grant for the UE -> E-UTRAN response message with no access delay other than the TTI-alignment (e.g. excluding delays caused by scheduling, the random access procedure or physical layer synchronisation).}
\]

#### NOTE:

No processing delay requirements are specified for RN-specific procedures.

### 11.3 Void
Annex A (informative): Guidelines, mainly on use of ASN.1

Editor's note: No agreements have been reached concerning the extension of RRC PDUs so far. Any statements in this section about the protocol extension mechanism should be considered as FFS.

A.1 Introduction

The following clauses contain guidelines for the specification of RRC protocol data units (PDUs) with ASN.1.

A.2 Procedural specification

A.2.1 General principles

The procedural specification provides an overall high level description regarding the UE behaviour in a particular scenario.

It should be noted that most of the UE behaviour associated with the reception of a particular field is covered by the applicable parts of the PDU specification. The procedural specification may also include specific details of the UE behaviour upon reception of a field, but typically this should be done only for cases that are not easy to capture in the PDU section e.g. general actions, more complicated actions depending on the value of multiple fields.

Likewise, the procedural specification need not specify the UE requirements regarding the setting of fields within the messages that are send to E-UTRAN i.e. this may also be covered by the PDU specification.

A.2.2 More detailed aspects

The following more detailed conventions should be used:

- Bullets:
  - Capitals should be used in the same manner as in other parts of the procedural text i.e. in most cases no capital applies since the bullets are part of the sentence starting with 'The UE shall:'
  - All bullets, including the last one in a sub-clause, should end with a semi-colon i.e. an ‘;’
- Conditions
  - Whenever multiple conditions apply, a semi-colon should be used at the end of each conditions with the exception of the last one, i.e. as in 'if cond1; or cond2:

A.3 PDU specification

A.3.1 General principles

A.3.1.1 ASN.1 sections

The RRC PDU contents are formally and completely described using abstract syntax notation (ASN.1), see X.680 [13], X.681 (02/2002) [14].

The complete ASN.1 code is divided into a number of ASN.1 sections in the specifications. In order to facilitate the extraction of the complete ASN.1 code from the specification, each ASN.1 section begins with a text paragraph consisting entirely of an ASN.1 start tag, which consists of a double hyphen followed by a single space and the text string "ASN1START" (in all upper case letters). Each ASN.1 section ends with a text paragraph consisting entirely of an ASN.1 stop tag, which consists of a double hyphen followed by a single space and the text "ASN1STOP" (in all upper case letters):

-- ASN1START
The text paragraphs containing the ASN.1 start and stop tags should not contain any ASN.1 code significant for the complete description of the RRC PDU contents. The complete ASN.1 code may be extracted by copying all the text paragraphs between an ASN.1 start tag and the following ASN.1 stop tag in the order they appear, throughout the specification.

NOTE: A typical procedure for extraction of the complete ASN.1 code consists of a first step where the entire RRC PDU contents description (ultimately the entire specification) is saved into a plain text (ASCII) file format, followed by a second step where the actual extraction takes place, based on the occurrence of the ASN.1 start and stop tags.

A.3.1.2 ASN.1 identifier naming conventions

The naming of identifiers (i.e., the ASN.1 field and type identifiers) should be based on the following guidelines:

- Message (PDU) identifiers should be ordinary mixed case without hyphenation. These identifiers, e.g., the `RRCConnectionModificationCommand`, should be used for reference in the procedure text. Abbreviated forms of these identifiers should not be used.

- Type identifiers other than PDU identifiers should be ordinary mixed case, with hyphenation used to set off acronyms only where an adjacent letter is a capital, e.g., `EstablishmentCause`, `SelectedPLMN` (not `Selected-PLMN`, since the "d" in "Selected" is lowercase), `InitialUE-Identity` and `MeasSFN-SFN-TimeDifference`.

- Field identifiers shall start with a lowercase letter and use mixed case thereafter, e.g., `establishmentCause`. If a field identifier begins with an acronym (which would normally be in upper case), the entire acronym is lowercase (`plmn-Identity`, not `pLMN-Identity`). The acronym is set off with a hyphen (`ue-Identity`, not `ueIdentity`), in order to facilitate a consistent search pattern with corresponding type identifiers.

- Identifiers that are likely to be keywords of some language, especially widely used languages, such as C++ or Java, should be avoided to the extent possible.

- Identifiers, other than PDU identifiers, longer than 25 characters should be avoided where possible. It is recommended to use abbreviations, which should be done in a consistent manner i.e. use 'Meas' instead of 'Measurement' for all occurrences. Examples of typical abbreviations are given in table A.3.1.2.1-1 below.

- For future extension: When an extension is introduced a suffix is added to the identifier of the concerned ASN.1 field and/ or type. A suffix of the form "-rX" is used, with X indicating the release, for ASN.1 fields or types introduced in a later release (i.e. a release later than the original/ first release of the protocol) as well as for ASN.1 fields or types for which a revision is introduced in a later release replacing a previous version, e.g., `Foo-r9` for the Rel-9 version of the ASN.1 type `Foo`. A suffix of the form "-rXb" is used for the first revision of a field that it appears in the same release (X) as the original version of the field, "-rXc" for a second intra-release revision and so on. A suffix of the form "-vXYZ" is used for ASN.1 fields or types that only are an extension of a corresponding earlier field or type (see sub-clause A.4), e.g., `AnElement-v10b0` for the extension of the ASN.1 type `AnElement` introduced in version 10.11.0 of the specification. A number 0...9, 10, 11, etc. is used to represent the first part of the version number, indicating the release of the protocol. Lower case letters a, b, c, etc. are used to represent the second (and third) part of the version number if they are greater than 9. In the procedural specification, in field descriptions as well as in headings suffices are not used, unless there is a clear need to distinguish the extension from the original field.

- More generally, in case there is a need to distinguish different variants of an ASN.1 field or IE, a suffix should be added at the end of the identifiers e.g. `MeasObjectUTRA`, `ConfigCommon`. When there is no particular need to distinguish the fields (e.g. because the field is included in different IEs), a common field identifier name may be used. This may be attractive e.g. in case the procedural specification is the same for the different variants.
### Table A.3.1.2-1: Examples of typical abbreviations used in ASN.1 identifiers

<td>Transmission</td>
</tr>
<tr>
<td>UL</td>
<td>Uplink</td>
</tr>
</tbody>
</table>

**NOTE:** The table A.3.1.2-1 is not exhaustive. Additional abbreviations may be used in ASN.1 identifiers when needed.

### A.3.1.3 Text references using ASN.1 identifiers

A text reference into the RRC PDU contents description from other parts of the specification is made using the ASN.1 field or type identifier of the referenced element. The ASN.1 field and type identifiers used in text references should be in the *italic font style*. The "do not check spelling and grammar" attribute in Word should be set. Quotation marks (i.e., " ") should not be used around the ASN.1 field or type identifier.

A reference to an RRC PDU type should be made using the corresponding ASN.1 type identifier followed by the word "message", e.g., a reference to the `RRCConnectionRelease` message.

A reference to a specific part of an RRC PDU, or to a specific part of any other ASN.1 type, should be made using the corresponding ASN.1 field identifier followed by the word "field", e.g., a reference to the `prioritisedBitRate` field in the example below.

```asciidoc
-- /example/ ASN1START
LogicalChannelConfig ::=   SEQUENCE {
   ul-SpecificParameters    SEQUENCE {
      priority       Priority,
      prioritisedBitRate     PrioritisedBitRate,
      bucketSizeDuration     BucketSizeDuration,
      logicalChannelGroup     INTEGER (0..3)  
   }  OPTIONAL
}
-- ASN1STOP
```

**NOTE:** All the ASN.1 start tags in the ASN.1 sections, used as examples in this annex to the specification, are deliberately distorted, in order not to include them when the ASN.1 description of the RRC PDU contents is extracted from the specification.

A reference to a specific type of information element should be made using the corresponding ASN.1 type identifier preceded by the acronym "IE", e.g., a reference to the IE `LogicalChannelConfig` in the example above.
References to a specific type of information element should only be used when those are generic, i.e., without regard to the particular context wherein the specific type of information element is used. If the reference is related to a particular context, e.g., an RRC PDU type (message) wherein the information element is used, the corresponding field identifier in that context should be used in the text reference.

A reference to a specific value of an ASN.1 field should be made using the corresponding ASN.1 value without using quotation marks around the ASN.1 value, e.g., 'if the status field is set to value true'.

### A.3.2 High-level message structure

Within each logical channel type, the associated RRC PDU (message) types are alternatives within a CHOICE, as shown in the example below.

```asn1
-- /example/ ASN1START
DL-DCCCH-Message ::= SEQUENCE {
   message     DL-DCCCH-MessageType
}
DL-DCCCH-MessageType ::= CHOICE {
   c1      CHOICE {
      dlInformationTransfer     DLInformationTransfer,
      handoverFromEUTRAPreparationRequest  HandoverFromEUTRAPreparationRequest,
      mobilityFromEUTRACommand    MobilityFromEUTRACommand,
      rrcConnectionReconfiguration   RRCConnectionReconfiguration,
      rrcConnectionRelease     RRCConnectionRelease,
      securityModeCommand      SecurityModeCommand,
      ueCapabilityEnquiry      UECapabilityEnquiry,
      spare1 NULL
   },
   messageClassExtension SEQUENCE {}
}
-- ASN1STOP
```

A nested two-level CHOICE structure is used, where the alternative PDU types are alternatives within the inner level `c1` CHOICE.

Spare alternatives (i.e., `spare1` in this case) may be included within the `c1` CHOICE to facilitate future extension. The number of such spare alternatives should not extend the total number of alternatives beyond an integer-power-of-two number of alternatives (i.e., eight in this case).

Further extension of the number of alternative PDU types is facilitated using the `messageClassExtension` alternative in the outer level CHOICE.

### A.3.3 Message definition

Each PDU (message) type is specified in an ASN.1 section similar to the one shown in the example below.

```asn1
-- /example/ ASN1START
RRCConnectionReconfiguration ::= SEQUENCE {
   rrc-TransactionIdentifier   RRC-TransactionIdentifier,
   criticalExtensions     CHOICE {
      c1         CHOICE{
         rrcConnectionReconfiguration-r8  RRCConnectionReconfiguration-r8-IEs,
         spare3 NULL, spare2 NULL, spare1 NULL
      },
      criticalExtensionsFuture   SEQUENCE {}
   },
   messageClassExtension SEQUENCE {}
}
RRCConnectionReconfiguration-r8-IEs ::= SEQUENCE {
   -- Enter the IEs here.
   ...
}
-- ASN1STOP
```
Hooks for critical and non-critical extension should normally be included in the PDU type specification. How these hooks are used is further described in sub-clause A.4.

Critical extensions are characterised by a redefinition of the PDU contents and need to be governed by a mechanism for protocol version agreement between the encoder and the decoder of the PDU, such that the encoder is prevented from sending a critically extended version of the PDU type, which is not comprehended by the decoder.

Critical extension of a PDU type is facilitated by a two-level CHOICE structure, where the alternative PDU contents are alternatives within the inner level c1 CHOICE. Spare alternatives (i.e., spare3 down to spare1 in this case) may be included within the c1 CHOICE. The number of spare alternatives to be included in the original PDU specification should be decided case by case, based on the expected rate of critical extension in the future releases of the protocol.

Further critical extension, when the spare alternatives from the original specifications are used up, is facilitated using the criticalExtensionsFuture in the outer level CHOICE.

In PDU types where critical extension is not expected in the future releases of the protocol, the inner level c1 CHOICE and the spare alternatives may be excluded, as shown in the example below.

```asn1
RRCConnectionReconfigurationComplete ::= SEQUENCE {
  rrc-TransactionIdentifier   RRC-TransactionIdentifier,
  criticalExtensions     CHOICE {
    rrcConnectionReconfigurationComplete-r8
      RRCConnectionReconfigurationComplete-r8-IEs,
    criticalExtensionsFuture   SEQUENCE {}}
}
```

-- /example/ ASN1STOP

Non-critical extensions are characterised by the addition of new information to the original specification of the PDU type. If not comprehended, a non-critical extension may be skipped by the decoder, whilst the decoder is still able to complete the decoding of the comprehended parts of the PDU contents.

Non-critical extensions at locations other than the end of the message or other than at the end of a field contained in a BIT or OCTET STRING are facilitated by use of the ASN.1 extension marker "...". The original specification of a PDU type should normally include the extension marker at the end of the sequence of information elements contained.

Non-critical extensions at the end of the message or at the end of a field that is contained in a BIT or OCTET STRING are facilitated by use of an empty sequence that is marked OPTIONAL e.g. as shown in the following example:

```asn1
RRCMessage-r8-IEs ::=  SEQUENCE {
  field1         InformationElement1,
  field2         InformationElement2,
  nonCriticalExtension     SEQUENCE {}  OPTIONAL
}
```

-- ASN1STOP

The ASN.1 section specifying the contents of a PDU type may be followed by a field description table where a further description of, e.g., the semantic properties of the fields may be included. The general format of this table is shown in the example below. The field description table is absent in case there are no fields for which further description needs to be provided e.g. because the PDU does not include any fields, or because an IE is defined for each field while there is nothing specific regarding the use of this IE that needs to be specified.
The field description table has one column. The header row shall contain the ASN.1 type identifier of the PDU type.

The following rows are used to provide field descriptions. Each row shall include a first paragraph with a field identifier (in **bold and italic** font style) referring to the part of the PDU to which it applies. The following paragraphs at the same row may include (in regular font style), e.g., semantic description, references to other specifications and/or specification of value units, which are relevant for the particular part of the PDU.

The parts of the PDU contents that do not require a field description shall be omitted from the field description table.

### A.3.4 Information elements

Each IE (information element) type is specified in an ASN.1 section similar to the one shown in the example below.

```-- /example/ ASN1START
PRACH-ConfigSIB ::= SEQUENCE {
  rootSequenceIndex     INTEGER (0..1023),
  prach-ConfigInfo     PRACH-ConfigInfo     OPTIONAL
}
PRACH-Config ::= SEQUENCE {
  rootSequenceIndex     INTEGER (0..1023),
  prach-ConfigInfo     PRACH-ConfigInfo
}
PRACH-ConfigInfo ::= SEQUENCE {
  prach-ConfigIndex     ENUMERATED {ffs},
  highSpeedFlag      ENUMERATED {ffs},
  zeroCorrelationZoneConfig   ENUMERATED {ffs}
}
-- ASN1STOP```

IEs should be introduced whenever there are multiple fields for which the same set of values apply. IEs may also be defined for other reasons e.g. to break down a ASN.1 definition in to smaller pieces.

A group of closely related IE type definitions, like the IEs `PRACH-ConfigSIB` and `PRACH-Config` in this example, are preferably placed together in a common ASN.1 section. The IE type identifiers should in this case have a common base, defined as the *generic type identifier*. It may be complemented by a suffix to distinguish the different variants. The "`PRACH-Config`" is the generic type identifier in this example, and the "`SIB`" suffix is added to distinguish the variant. The sub-clause heading and generic references to a group of closely related IEs defined in this way should use the generic type identifier.

The same principle should apply if a new version, or an extension version, of an existing IE is created for critical or non-critical extension of the protocol (see sub-clause A.4). The new version, or the extension version, of the IE is included in the same ASN.1 section defining the original. A suffix is added to the type identifier, using the naming conventions defined in sub-clause A.3.1.2, indicating the release or version of the where the new version, or extension version, was introduced.

Local IE type definitions, like the IE `PRACH-ConfigInfo` in the example above, may be included in the ASN.1 section and be referenced in the other IE types defined in the same ASN.1 section. The use of locally defined IE types should be encouraged, as a tool to break up large and complex IE type definitions. It can improve the readability of the code. There may also be a benefit for the software implementation of the protocol end-points, as these IE types are typically provided by the ASN.1 compiler as independent data elements, to be used in the software implementation.

An IE type defined in a local context, like the IE `PRACH-ConfigInfo`, should not be referenced directly from other ASN.1 sections in the RRC specification. An IE type which is referenced in more than one ASN.1 section should be defined in a separate sub-clause, with a separate heading and a separate ASN.1 section (possibly as one in a set of
closely related IE types, like the IEs \textit{PRACH-ConfigSIB} and \textit{PRACH-Config} in the example above). Such IE types are also referred to as 'global IEs'.

\textbf{NOTE:} Referring to an IE type, that is defined as a local IE type in the context of another ASN.1 section, does not generate an ASN.1 compilation error. Nevertheless, using a locally defined IE type in that way makes the IE type definition difficult to find, as it would not be visible at an outline level of the specification. It should be avoided.

The ASN.1 section specifying the contents of one or more IE types, like in the example above, may be followed by a \textit{field description} table, where a further description of, e.g., the semantic properties of the fields of the information elements may be included. This table may be absent, similar as indicated in sub-clause A.3.3 for the specification of the PDU type. The general format of the \textit{field description} table is the same as shown in sub-clause A.3.3 for the specification of the PDU type.

\textbf{A.3.5 Fields with optional presence}

A field with optional presence may be declared with the keyword DEFAULT. It identifies a default value to be assumed, if the sender does not include a value for that field in the encoding:

\begin{verbatim}
-- /example/ ASN1START
PreambleInfo ::= SEQUENCE {
    numberOfRA-Preambles INTEGER (1..64) DEFAULT 1,
    ...
} -- ASN1STOP
\end{verbatim}

Alternatively, a field with optional presence may be declared with the keyword OPTIONAL. It identifies a field for which a value can be omitted. The omission carries semantics, which is different from any normal value of the field:

\begin{verbatim}
-- /example/ ASN1START
PRACH-Config ::= SEQUENCE {
    rootSequenceIndex INTEGER (0..1023),
    prach-ConfigInfo     PRACH-ConfigInfo OPTIONAL -- Need ON
} -- ASN1STOP
\end{verbatim}

The semantics of an optionally present field, in the case it is omitted, should be indicated at the end of the paragraph including the keyword OPTIONAL, using a short comment text with a need statement. The need statement includes the keyword "Need", followed by one of the predefined semantics tags (OP, ON or OR) defined in sub-clause 6.1. If the semantics tag OP is used, the semantics of the absent field are further specified either in the field description table following the ASN.1 section, or in procedure text.

The addition of OPTIONAL keywords for capability groups is based on the following guideline. If there is more than one field in the lower level IE, then OPTIONAL keyword is added at the group level. If there is only one field in the lower level IE, OPTIONAL keyword is not added at the group level.

\textbf{A.3.6 Fields with conditional presence}

A field with conditional presence is declared with the keyword OPTIONAL. In addition, a short comment text shall be included at the end of the paragraph including the keyword OPTIONAL. The comment text includes the keyword "Cond", followed by a condition tag associated with the field ("UL" in this example):

\begin{verbatim}
-- /example/ ASN1START
LogicalChannelConfig ::= SEQUENCE {
    ul-SpecificParameters SEQUENCE {
        priority INTEGER (0),
        ...
    OPTIONAL -- Cond UL
} -- ASN1STOP
\end{verbatim}
When conditionally present fields are included in an ASN.1 section, the field description table after the ASN.1 section shall be followed by a *conditional presence* table. The conditional presence table specifies the conditions for including the fields with conditional presence in the particular ASN.1 section.

<table>
<thead>
<tr>
<th>Conditional presence</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>UL</td>
<td>Specification of the conditions for including the field associated with the condition tag = &quot;UL&quot;. Semantics in case of optional presence under certain conditions may also be specified.</td>
</tr>
</tbody>
</table>

The conditional presence table has two columns. The first column (heading: "Conditional presence") contains the condition tag (in *italic* font style), which links the fields with a condition tag in the ASN.1 section to an entry in the table. The second column (heading: "Explanation") contains a text specification of the conditions and requirements for the presence of the field. The second column may also include semantics, in case of an optional presence of the field, under certain conditions i.e. using the same predefined tags as defined for optional fields in A.3.5.

Conditional presence should primarily be used when presence of a field depends on the presence and/or value of other fields within the same message. If the presence of a field depends on whether another feature/function has been configured, while this function can be configured independently e.g. by another message and/or at another point in time, the relation is best reflected by means of a statement in the field description table.

If the ASN.1 section does not include any fields with conditional presence, the conditional presence table shall not be included.

Whenever a field is only applicable in specific cases e.g. TDD, use of conditional presence should be considered.

### A.3.7 Guidelines on use of lists with elements of SEQUENCE type

Where an information element has the form of a list (the SEQUENCE OF construct in ASN.1) with the type of the list elements being a SEQUENCE data type, an information element shall be defined for the list elements even if it would not otherwise be needed.

For example, a list of PLMN identities with reservation flags is defined as in the following example:

```plaintext
-- /example/ ASN1START
PLMN-IdentityInfoList ::=    SEQUENCE (SIZE (1..6)) OF PLMN-IdentityInfo
PLMN-IdentityInfo ::=    SEQUENCE {
    plmn-Identity    PLMN-Identity,
    cellReservedForOperatorUse   ENUMERATED {reserved, notReserved}
}
-- ASN1STOP
```

rather than as in the following (bad) example, which may cause generated code to contain types with unpredictable names:

```plaintext
-- /bad example/ ASN1START
PLMN-IdentityList ::=     SEQUENCE (SIZE (1..6)) OF SEQUENCE {
    plmn-Identity       PLMN-Identity,
    cellReservedForOperatorUse    ENUMERATED {reserved, notReserved}
}
-- ASN1STOP
```
A.4 Extension of the PDU specifications

A.4.1 General principles to ensure compatibility

It is essential that extension of the protocol does not affect interoperability i.e. it is essential that implementations based on different versions of the RRC protocol are able to interoperate. In particular, this requirement applies for the following kind of protocol extensions:

- Introduction of new PDU types (i.e. these should not cause unexpected behaviour or damage).
- Introduction of additional fields in an extensible PDUs (i.e. it should be possible to ignore uncomprehended extensions without affecting the handling of the other parts of the message).
- Introduction of additional values of an extensible field of PDUs. If used, the behaviour upon reception of an uncomprehended value should be defined.

It should be noted that the PDU extension mechanism may depend on the logical channel used to transfer the message e.g. for some PDUs an implementation may be aware of the protocol version of the peer in which case selective ignoring of extensions may not be required.

The non-critical extension mechanism is the primary mechanism for introducing protocol extensions i.e. the critical extension mechanism is used merely when there is a need to introduce a 'clean' message version. Such a need appears when the last message version includes a large number of non-critical extensions, which results in issues like readability, overhead associated with the extension markers. The critical extension mechanism may also be considered when it is complicated to accommodate the extensions by means of non-critical extension mechanisms.

A.4.2 Critical extension of messages and fields

The mechanisms to critically extend a message are defined in A.3.3. There are both "outer branch" and "inner branch" mechanisms available. The "outer branch" consists of a CHOICE having the name criticalExtensions, with two values, c1 and criticalExtensionsFuture. The criticalExtensionsFuture branch consists of an empty SEQUENCE, while the c1 branch contains the "inner branch" mechanism.

The "inner branch" structure is a CHOICE with values of the form "MessageName-rX-IEs" (e.g., "RRCConnectionReconfiguration-r8-IEs") or "spareX", with the spare values having type NULL. The "-rX-IEs" structures contain the complete structure of the message IEs for the appropriate release; i.e., the critical extension branch for the Rel-10 version of a message includes all Rel-8 and Rel-9 fields (that are not obviated in the later version), rather than containing only the additional Rel-10 fields.

The following guidelines may be used when deciding which mechanism to introduce for a particular message, i.e. only an 'outer branch', or an 'outer branch' in combination with an 'inner branch' including a certain number of spares:

- For certain messages, e.g. initial uplink messages, messages transmitted on a broadcast channel, critical extension may not be applicable.
- An outer branch may be sufficient for messages not including any fields.
- The number of spares within inner branch should reflect the likelihood that the message will be critically extended in future releases (since each release with a critical extension for the message consumes one of the spare values). The estimation of the critical extension likelyhood may be based on the number, size and changeability of the fields included in the message.
- In messages where an inner branch extension mechanism is available, all spare values of the inner branch should be used before any critical extensions are added using the outer branch.

The following example illustrates the use of the critical extension mechanism by showing the ASN.1 of the original and of a later release:

```asciidoc
--- /example/ ASN1START
RRCMessage ::= SEQUENCE {
  rrc-TransactionIdentifier RRC-TransactionIdentifier,
  criticalExtensions CHOICE {
    c1 CHOICE{
    }"--- Original release
--- /example/ ASN1END
```
It is important to note that critical extensions may also be used at the level of individual fields i.e. a field may be replaced by a critically extended version. When sending the extended version, the original version may also be included (e.g. original field is mandatory, EUTRAN is unaware if UE supports the extended version). In such cases, a UE supporting both versions may be required to ignore the original field. The following example illustrates the use of the critical extension mechanism by showing the ASN.1 of the original and of a later release

--- Original release

```asn1
RRCMessage ::=  SEQUENCE {
  rrc-TransactionIdentifier    RRC-TransactionIdentifier,
  criticalExtensions     CHOICE {
    c1             CHOICE{
      rrcMessage-r8      RRCMessage-r8-IEs,
      rrcMessage-r10      RRCMessage-r10-IEs,
      rrcMessage-r11      RRCMessage-r11-IEs,
      rrcMessage-r14      RRCMessage-r14-IEs
    },
    later            CHOICE {
      c2             CHOICE{
        rrcMessage-r16      RRCMessage-r16-IEs,
        spare7 NULL, spare6 NULL, spare5 NULL, spare4 NULL,
        spare3 NULL, spare2 NULL, spare1 NULL
      },
      criticalExtensionsFuture    SEQUENCE {} 
    }
  }
  criticalExtensionsFuture    SEQUENCE {} 
}
```

--- Later release

```asn1
RRCMessage ::=  SEQUENCE {
  rrc-TransactionIdentifier    RRC-TransactionIdentifier,
  criticalExtensions     CHOICE {
    c1             CHOICE{
      rrcMessage-r8      RRCMessage-r8-IEs,
      rrcMessage-r10      RRCMessage-r10-IEs,
      rrcMessage-r11      RRCMessage-r11-IEs,
      rrcMessage-r14      RRCMessage-r14-IEs
    },
    later            CHOICE {
      c2             CHOICE{
        rrcMessage-r16      RRCMessage-r16-IEs,
        spare7 NULL, spare6 NULL, spare5 NULL, spare4 NULL,
        spare3 NULL, spare2 NULL, spare1 NULL
      },
      criticalExtensionsFuture    SEQUENCE {} 
    }
  }
  criticalExtensionsFuture    SEQUENCE {} 
}
```

--- Conditional presence

<table>
<thead>
<tr>
<th>Conditional presence</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>NoField2-rN</td>
<td>The field is optionally present, need ON, if field2-rN is absent. Otherwise the field is not present</td>
</tr>
</tbody>
</table>
Finally, it is noted that a critical extension may be introduced in the same release as the one in which the original field was introduced e.g. to correct an essential ASN.1 error. In such cases a UE capability may be introduced, to assist E-UTRAN in deciding whether or not to use the critically extension.

A.4.3 Non-critical extension of messages

A.4.3.1 General principles

The mechanisms to extend a message in a non-critical manner are defined in A.3.3. W.r.t. the use of extension markers, the following additional guidelines apply:

- When further non-critical extensions are added to a message that has been critically extended, the inclusion of these non-critical extensions in earlier critical branches of the message should be avoided when possible.

- The extension marker ("…") is the primary non-critical extension mechanism that is used unless a length determinant is not required. Examples of cases where a length determinant is not required:
  - at the end of a message,
  - at the end of a structure contained in a BIT STRING or OCTET STRING

- When an extension marker is available, non-critical extensions are preferably placed at the location (e.g. the IE) where the concerned parameter belongs from a logical/functional perspective (referred to as the 'default extension location')

- It is desirable to aggregate extensions of the same release or version of the specification into a group, which should be placed at the lowest possible level.

- In specific cases it may be preferable to place extensions elsewhere (referred to as the 'actual extension location') e.g. when it is possible to aggregate several extensions in a group. In such a case, the group should be placed at the lowest suitable level in the message. <TBD: ref to separate example>

- In case placement at the default extension location affects earlier critical branches of the message, locating the extension at a following higher level in the message should be considered.

- In case an extension is not placed at the default extension location, an IE should be defined. The IE's ASN.1 definition should be placed in the same ASN.1 section as the default extension location. In case there are intermediate levels in-between the actual and the default extension location, an IE may be defined for each level. Intermediate levels are primarily introduced for readability and overview. Hence intermediate levels need not always be introduced e.g. they may not be needed when the default and the actual extension location are within the same ASN.1 section. <TBD: ref to separate example>

A.4.3.2 Further guidelines

Further to the general principles defined in the previous section, the following additional guidelines apply regarding the use of extension markers:

- Extension markers within SEQUENCE
  - Extension markers are primarily, but not exclusively, introduced at the higher nesting levels
  - Extension markers are introduced for a SEQUENCE comprising several fields as well as for information elements whose extension would result in complex structures without it (e.g. re-introducing another list)
  - Extension markers are introduced to make it possible to maintain important information structures e.g. parameters relevant for one particular RAT
  - Extension markers are also used for size critical messages (i.e. messages on BCCH, BR-BCCH, PCCH and CCCH), although introduced somewhat more carefully
  - The extension fields introduced (or frozen) in a specific version of the specification are grouped together using double brackets.

- Extension markers within ENUMERATED
- Spare values are used until the number of values reaches the next power of 2, while the extension marker caters for extension beyond that limit.

- A suffix of the form "vXYZ" is used for the identifier of each new value, e.g. "value-vXYZ".

- Extension markers within CHOICE:

  - Extension markers are introduced when extension is foreseen and when comprehension is not required by the receiver i.e. behaviour is defined for the case where the receiver cannot comprehend the extended value (e.g. ignoring an optional CHOICE field). It should be noted that defining the behaviour of a receiver upon receiving a not comprehended choice value is not required if the sender is aware whether or not the receiver supports the extended value.

  - A suffix of the form "vXYZ" is used for the identifier of each new choice value, e.g. "choice-vXYZ".

Non-critical extensions at the end of a message/ of a field contained in an OCTET or BIT STRING:

- When a nonCriticalExtension is actually used, a "Need" statement should not be provided for the field, which always is a group including at least one extension and a field facilitating further possible extensions. For simplicity, it is recommended not to provide a "Need" statement when the field is not actually used either.

Further, more general, guidelines:

- In case a need statement is not provided for a group, a "Need" statement is provided for all individual extension fields within the group i.e. including for fields that are not marked as OPTIONAL. The latter is to clarify the action upon absence of the whole group.

A.4.3.3 Typical example of evolution of IE with local extensions

The following example illustrates the use of the extension marker for a number of elementary cases (sequence, enumerated, choice). The example also illustrates how the IE may be revised in case the critical extension mechanism is used.

NOTE In case there is a need to support further extensions of release n while the ASN.1 of release (n+1) has been frozen, without requiring the release n receiver to support decoding of release (n+1) extensions, more advanced mechanisms are needed e.g. including multiple extension markers.

```
-- /example/ ASN1START

InformationElement1 ::= SEQUENCE {
  field1 ENUMERATED {
    value1, value2, value3, value4-v880,
    ..., value5-v960 },
  field2 CHOICE {
    field2a BOOLEAN,
    field2b InformationElement2b,
    ...,
    field2c-v960 InformationElement2c-r9
  },
  ...,
  [[ field3-r9 InformationElement3-r9 OPTIONAL -- Need OR ]],
  [[ field3-v9a0 InformationElement3-v9a0 OPTIONAL, -- Need OR
    InformationElement4 OPTIONAL -- Need OR ]]
}

InformationElement1-r10 ::= SEQUENCE {
  field1 ENUMERATED {
    value1, value2, value3, value4-v880,
    value5-v960, value6-v1170, spare2, spare1, ... },
  field2 CHOICE {
    field2a BOOLEAN,
    field2b InformationElement2b,
    field2c-v960 InformationElement2c-r9,
    ...,
    field2d-v12b0 INTEGER (0..63)
  },
  field3-r9 InformationElement3-r10 OPTIONAL -- Need OR
  field4-r9 InformationElement4 OPTIONAL -- Need OR
  field5-r10 BOOLEAN,
}
```
Some remarks regarding the extensions of InformationElement1 as shown in the above example:

– The InformationElement1 is initially extended with a number of non-critical extensions. In release 10 however, a critical extension is introduced for the message using this IE. Consequently, a new version of the IE InformationElement1 (i.e. InformationElement1-r10) is defined in which the earlier non-critical extensions are incorporated by means of a revision of the original field.

– The value4-v880 is replacing a spare value defined in the original protocol version for field1. Likewise value6-v1170 replaces spare3 that was originally defined in the r10 version of field1

– Within the critically extended release 10 version of InformationElement1, the names of the original fields/ IEs are not changed, unless there is a real need to distinguish them from other fields/ IEs. E.g. the field1 and InformationElement4 were defined in the original protocol version (release 8) and hence not tagged. Moreover, the field3-r9 is introduced in release 9 and not re-tagged; although, the InformationElement3 is also critically extended and therefore tagged InformationElement3-r10 in the release 10 version of InformationElement1.

A.4.3.4 Typical examples of non critical extension at the end of a message

The following example illustrates the use of non-critical extensions at the end of the message or at the end of a field that is contained in a BIT or OCTET STRING i.e. when an empty sequence is used.

-- /example/ ASN1START

RRCMessage-r8-IEs ::= SEQUENCE {
  field1       InformationElement1,  
  field2       InformationElement2,  
  field3       InformationElement3     OPTIONAL, -- Need ON  
  nonCriticalExtension   RRCMessage-v860-IEs     OPTIONAL
}

RRCMessage-v860-IEs ::= SEQUENCE {
  field4-v860      InformationElement4     OPTIONAL, -- Need OP  
  field5-v860      BOOLEAN        OPTIONAL, -- Cond C54  
  nonCriticalExtension   RRCMessage-v940-IEs     OPTIONAL
}

RRCMessage-v940-IEs ::= SEQUENCE {
  field6-v940      InformationElement6-r9     OPTIONAL, -- Need OR  
  nonCriticalExtensions   SEQUENCE {}        OPTIONAL
}

-- ASN1STOP

Some remarks regarding the extensions shown in the above example:

– The InformationElement4 is introduced in the original version of the protocol (release 8) and hence no suffix is used.

A.4.3.5 Examples of non-critical extensions not placed at the default extension location

The following example illustrates the use of non-critical extensions in case an extension is not placed at the default extension location.
ParentIE-WithEM

The IE ParentIE-WithEM is an example of a high level IE including the extension marker (EM). The root encoding of this IE includes two lower level IEs ChildIE1-WithoutEM and ChildIE2-WithoutEM which not include the extension marker. Consequently, non-critical extensions of the Child-IEs have to be included at the level of the Parent-IE.

The example illustrates how the two extension IEs ChildIE1-WithoutEM-vNx0 and ChildIE2-WithoutEM-vNx0 (both in release N) are used to connect non-critical extensions with a default extension location in the lower level IEs to the actual extension location in this IE.

ParentIE-WithEM information element

ParentIE-WithEM ::= SEQUENCE {
   -- Root encoding, including:
   childIE1-WithoutEM     ChildIE1-WithoutEM    OPTIONAL,  -- Need ON
   childIE2-WithoutEM     ChildIE2-WithoutEM    OPTIONAL,  -- Need ON
   ...
   [ [ childIE1-WithoutEM-vNx0    ChildIE1-WithoutEM-vNx0  OPTIONAL,  -- Need ON
      childIE2-WithoutEM-vNx0    ChildIE2-WithoutEM-vNx0  OPTIONAL  -- Need ON
   ] ]
}

ChildIE1-WithoutEM

The IE ChildIE1-WithoutEM is an example of a lower level IE, used to control certain radio configurations including a configurable feature which can be setup or released using the local IE ChIE1-ConfigurableFeature. The example illustrates how the new field chIE1-NewField is added in release N to the configuration of the configurable feature. The example is based on the following assumptions:

- when initially configuring as well as when modifying the new field, the original fields of the configurable feature have to be provided also i.e. as if the extended ones were present within the setup branch of this feature.
- when the configurable feature is released, the new field should be released also.
- when omitting the original fields of the configurable feature the UE continues using the existing values (which is used to optimise the signalling for features that typically continue unchanged upon handover).
- when omitting the new field of the configurable feature the UE releases the existing values and discontinues the associated functionality (which may be used to support release of unsupported functionality upon handover to an eNB supporting an earlier protocol version).

The above assumptions, which affect the use of conditions and need codes, may not always apply. Hence, the example should not be re-used blindly.

ChildIE1-WithoutEM information elements

ChildIE1-WithoutEM ::= SEQUENCE {
   -- Root encoding, including:
   chIE1-ConfigurableFeature   ChIE1-ConfigurableFeature  OPTIONAL   -- Need ON
}
The field is optional present, need OR, in case of chIE1-ConfigurableFeature is included and set to "setup"; otherwise the field is not present and the UE shall delete any existing value for this field.

---

**ChildIE2-WithoutEM**

The IE **ChildIE2-WithoutEM** is an example of a lower level IE, typically used to control certain radio configurations. The example illustrates how the new field chIE1-NewField is added in release N to the configuration of the configurable feature.

---

**A.5 Guidelines regarding inclusion of transaction identifiers in RRC messages**

The following rules provide guidance on which messages should include a Transaction identifier.

1: DL messages on CCCH that move UE to RRC-Idle should not include the RRC transaction identifier.

2: All network initiated DL messages by default should include the RRC transaction identifier.

3: All UL messages that are direct response to a DL message with an RRC Transaction identifier should include the RRC Transaction identifier.

4: All UL messages that require a direct DL response message should include an RRC transaction identifier.
5: All UL messages that are not in response to a DL message nor require a corresponding response from the network should not include the RRC Transaction identifier.

A.6 Protection of RRC messages (informative)

The following list provides information which messages can be sent (unprotected) prior to security activation and which messages can be sent unprotected after security activation. Those messages indicated “-” in “P” column should never be sent unprotected by eNB or UE. Further requirements are defined in the procedural text.

P…Messages that can be sent (unprotected) prior to security activation
A - I…Messages that can be sent without integrity protection after security activation
A - C…Messages that can be sent unciphered after security activation
NA… Message can never be sent after security activation

### A.7 Miscellaneous

The following miscellaneous conventions should be used:

- References: Whenever another specification is referenced, the specification number and optionally the relevant subclause, table or figure, should be indicated in addition to the pointer to the References section e.g. as follows: ‘see TS 36.212 [22, 5.3.3.1.6]’.

- UE capabilities: TS 36.306 [5] specifies that E-UTRAN should in general respect the UE’s capabilities. Hence there is no need to include statement clarifying that E-UTRAN, when setting the value of a certain configuration field, shall respect the related UE capabilities unless there is a particular need e.g. particularly complicated cases.
Annex B (normative): Release 8 and 9 AS feature handling

B.1 Feature group indicators

This annex contains the definitions of the bits in fields featureGroupIndicators (in Table B.1-1) and featureGroupIndRel9Add (in Table B.1-1a).

In this release of the protocol, the UE shall include the fields featureGroupIndicators in the IE UE-EUTRA-Capability and featureGroupIndRel9Add in the IE UE-EUTRA-Capability-v9a0. All the functionalities defined within the field featureGroupIndicators defined in Table B.1-1 or Table B.1-1a are mandatory for the UE (with exceptions for category M1 and M2 UEs), if the related capability (frequency band, RAT, SR-VCC or Inter-RAT ANR) is also supported. For a specific indicator, if all functionalities for a feature group listed in Table B.1-1 have been implemented and tested, the UE shall set the indicator as one (1), else (i.e. if any one of the functionalities in a feature group listed in Table B.1-1 or Table B.1-1a, which have not been implemented or tested), the UE shall set the indicator as zero (0).

The UE shall set all indicators that correspond to RATs not supported by the UE as zero (0).

The UE shall set all indicators, which do not have a definition in Table B.1-1 or Table B.1-1a, as zero (0).

If the optional fields featureGroupIndicators or featureGroupIndRel9Add are not included by a UE of a future release, the network may assume that all features pertaining to the RATs supported by the UE, respectively listed in Table B.1-1 or Table B.1-1a and deployed in the network, have been implemented and tested by the UE.

In Table B.1-1, a ‘VoLTE capable UE’ corresponds to a UE which is IMS voice capable and a ‘MCPTT capable UE’ corresponds to a UE which supports MCPTT voice application as defined in TS 23.179 [73].

The indexing in Table B.1-1a starts from index 33, which is the leftmost bit in the field featureGroupIndRel9Add.

### Table B.1-1: Definitions of feature group indicators

<table>

NOTE: The column FDD/ TDD diff indicates if the UE is allowed to signal different values for FDD and TDD. Annex E specifies for which TDD and FDD serving cells a UE supporting TDD/FDD CA shall support a feature for which it indicates support within the FGI signalling.

Clarification for mobility from EUTRAN and inter-frequency handover within EUTRAN

There are several feature groups related to mobility from E-UTRAN and inter-frequency handover within EUTRAN. The description of these features is based on the assumption that we have 5 main "functions" related to mobility from E-UTRAN:

A. Support of measurements and cell reselection procedure in idle mode
B. Support of RRC release with redirection procedure in connected mode
C. Support of Network Assisted Cell Change in connected mode
D. Support of measurements and reporting in connected mode
E. Support of handover procedure in connected mode

All functions can be applied for mobility to Inter-frequency to EUTRAN, GERAN, UTRAN, CDMA2000 HRPD and CDMA2000 1xRTT except for function C) which is only applicable for mobility to GERAN. Table B.1-2 below summarises the mobility functions that are supported based on the UE capability signaling (band support) and the setting of the feature group support indicators.
### Table B.1-2: Mobility from E-UTRAN

</tbody>
</table>

In case measurements and reporting function is not supported by UE, the network may still issue the mobility procedures redirection (B) and CCO (C) in a blind fashion.

### B.2 CSG support

In this release of the protocol, it is mandatory for the UE to support a minimum set of CSG functionality consisting of:

- Identifying whether a cell is CSG or not;
- Ignoring CSG cells in cell selection/reselection.

Additional CSG functionality in AS, i.e. the requirement to detect and camp on CSG cells when the “CSG whitelist” is available or when manual CSG selection is triggered by the user, are related to the corresponding NAS features. This additional AS functionality consists of:

- Manual CSG selection;
- Autonomous CSG search;
- Implicit priority handling for cell reselection with CSG cells.

It is possible that this additional CSG functionality in AS is not supported or tested in early UE implementations.

Note that since the above AS features relate to idle mode operations, the capability support is not signalled to the network. For these reasons, no “feature group indicator” is assigned to this feature to indicate early support in Rel-8.
Annex C (normative): Release 10 AS feature handling

C.1 Feature group indicators

This annex contains the definitions of the bits in field featureGroupIndRel10.

In this release of the protocol, the UE shall include the field featureGroupIndRel10 in the IE UE-EUTRA-Capability-v1020-IEs. All the functionalities defined within the field featureGroupIndRel10 defined in Table C.1-1 are mandatory for the UE, if the related capability (spatial multiplexing in UL, PDSCH transmission mode 9, carrier aggregation, handover to EUTRA, or RAT) is also supported. For a specific indicator, if all functionalities for a feature group listed in Table C.1-1 have been implemented and tested, the UE shall set the indicator as one (1), else (i.e. if any one of the functionalities in a feature group listed in Table C.1-1 have not been implemented or tested), the UE shall set the indicator as zero (0).

The UE shall set all indicators that correspond to RATs not supported by the UE as zero (0).

The UE shall set all indicators, which do not have a definition in Table C.1-1, as zero (0).

If the optional field featureGroupIndRel10 is not included by a UE of a future release, the network may assume that all features, listed in Table C.1-1 and deployed in the network, have been implemented and tested by the UE.

The indexing in Table C.1-1 starts from index 101, which is the leftmost bit in the field featureGroupIndRel10.

<table>

**NOTE:** The column FDD/ TDD diff indicates if the UE is allowed to signal different values for FDD and TDD. Annex E specifies for which TDD and FDD serving cells a UE supporting TDD/FDD CA shall support a feature for which it indicates support within the FGI signalling.
Annex D (informative): Descriptive background information

D.1   Signalling of Multiple Frequency Band Indicators (Multiple FBI)

D.1.1   Mapping between frequency band indicator and multiple frequency band indicator

This subclause describes the use of the Multiple Frequency Band Indicator (MFBI) lists and the E-UTRA frequency bands in SystemInformationBlockType1 by means of an example as shown in Figure D.1.1-1. In this example:

- E-UTRAN cell belongs to band B90 and also bands B6, B7, B91, and B92.
- The freqBandIndicatorPriority field is not present in SystemInformationBlockType1.
- E-UTRAN uses B64 to indicate the presence of B90 in freqBandIndicator-v9e0.
- For the MFBI list of this cell, E-UTRAN uses B64 in MultiBandInfoList to indicate the position and priority of the bands in MultiBandInfoList-v9e0.
- The UE, after reading SystemInformationBlockType1, generates an MFBI list with priority of B91, B6, B92, and B7. If the UE supports the frequency band in the freqBandIndicator-v9e0 IE it applies that frequency band. Otherwise, the UE applies the first listed band in the MFBI list which it supports.

\[
\begin{align*}
freqBandIndicator & \quad MultiBandInfoList \text{ (size 8)} \\
B64, B90, & \quad B64, B6, B91, B64, B7 \\
\end{align*}
\]

\[
\begin{align*}
freqBandIndicator-v9e0 & \quad MultiBandInfoList-v9e0 \text{ (size 8)} \\
B91, B92, & \quad B91, B6, B92, B7 \\
\end{align*}
\]

The band list at the UE with priority

Figure D.1.1-1: Mapping of frequency bands to MultiBandInfoList/MultiBandInfoList-v9e0

D.1.2   Mapping between inter-frequency neighbour list and multiple frequency band indicator

This subclause describes the use of the Multiple Frequency Band Indicator (MFBI) lists and the E-UTRA frequencies signalled in SystemInformationBlockType5 by means of an example as shown in Figure D.1.2-1. In this example:

- E-UTRAN includes 4 frequencies (EARFCNs): the bands associated with f1 and f4 belong to bands lower than 64; the bands associated with f2 and f3 belong to bands larger than 64. The reserved EARFCN value of 65535 is used to indicate the presence of ARFCN-ValueEUTRA-v9e0.
3GPP TS 36.331 version 14.4.0 Release 14

ETSI TS 136 331 V14.4.0 (2017-10)

- The band associated with f1 has two overlapping bands, B1 and B2 (lower than 64); the band associated with f2 has one overlapping band, B91; the band associated with f3 has four overlapping bands B3, B4, B92, and B93; the band associated with f4 does not have overlapping bands.

- E-UTRAN includes 4 lists in both interFreqCarrierFreqList-v8h0 and interFreqCarrierFreqList-v9e0 and ensure the order of the lists is matching. Each list corresponds to one EARFCN and contains up to 8 bands. The first list corresponds to f1, the second list corresponds to f2, and so on. The grey lists mean not including MultiBandInfoList or MultiBandInfoList-v9e0, i.e. the corresponding EARFCN does not have any overlapping frequency bands in MultiBandInfoList or MultiBandInfoList-v9e0.

![Diagram](image)

**Figure D.1.2-1: Mapping of EARFCNs to MultiBandInfoList/MultiBandInfoList-v9e0**

**D.1.3 Mapping between UTRA FDD frequency list and multiple frequency band indicator**

This subclause describes the use of the Multiple Frequency Band Indicator (MFB) lists and the UTRA FDD frequencies signalled in SystemInformationBlockType6 by means of an example as shown in Figure D.1.3-1. In this example:

- E-UTRAN includes 4 UTRA FDD frequencies (UARFCNs).

- The bands associated with f1 and f4 have no overlapping bands. The band associated with f2 has two overlapping bands, B1 and B2. The band associated with f3 has one overlapping band, B3.

- E-UTRAN includes 4 lists in carrierFreqListUTRA-FDD-v8h0 with the first and fourth entry not including MultiBandInfoList.
Figure D.1.3-1: Mapping of UARFCNs to MultiBandInfoList
Annex E (normative):
TDD/FDD differentiation of FGIs/capabilities in TDD-FDD CA

Annex E specifies for which TDD and FDD serving cells a UE supporting TDD/FDD CA shall support a feature/capability for which it indicates support within the FGI/capability signalling.

A UE that indicates support for TDD/ FDD CA:

- For the fields for which the UE is allowed to indicate different support for FDD and TDD, the UE shall support the feature on the PCell and/or SCell(s), as specified in tables E-1, E-2 and E-3 in accordance to the following rules:
  - PCell: the UE shall support the feature for the PCell, if the UE indicates support of the feature for the PCell duplex mode;
  - SCell: the UE shall support the feature for SCell(s), if the UE indicates support of the feature for the SCell duplex mode;
  - Per serving cell: the UE shall support the feature for a serving cell if the UE indicates support of the feature for the serving cell’s duplex mode;
  - All serving cells: UE shall support the feature if the UE indicates support of the feature for both TDD and FDD duplex modes;
- For the fields where the UE is not allowed to indicate different support for FDD and TDD, the UE shall support the feature for PCell and SCell(s) if the UE indicates support of the feature via the common FGI/capability bit.

Annex F (normative): UE requirements on ASN.1 comprehension

This subclause specifies UE requirements regarding the ASN.1 transfer syntax support i.e. the ASN.1 definitions to be comprehended by the UE.

A UE that indicates release X in field `accessStratumRelease` shall comprehend the entire transfer syntax (ASN.1) of release X, in particular at least the first version upon ASN.1 freeze. The UE is however not required to support dedicated signalling related transfer syntax associated with optional features it does not support.

In case a UE that indicates release X in field `accessStratumRelease` supports a feature specified in release X+ N (i.e. early UE implementation) additional requirements apply.

Critical extensions (dedicated signaling)

If the early implemented feature involves one or more critical extensions (i.e. case of dedicated signaling), the UE shall comprehend the parts of the transfer syntax (ASN.1) of release X+ N that are related to the feature implemented early. This in particular concerns the ASN.1 parts related to configuration of the feature. The UE obviously also has to support the ASN.1 parts related to indicating support of the feature (in UE capabilities).

If configuration of an early implemented feature introduced in release X+ N involves a message or field that has been critically extended, the UE shall support configuration of all features supported by the UE that are associated with sub-fields of this critical extension. Apart from the early implemented feature(s), the UE need however not support functionality beyond what is defined in the release the UE indicates in access stratum release.

Let’s consider the example of a UE indicating value X in field `accessStratumRelease` that supports the features associated with fields A1, A3 and A5 of `InformationElementA` (see ASN.1 below). The feature implemented early is associated with field A5, and can only be configured by the –rX+N version of `InformationElementA`. In such case, the UE should support configuration of the features associated with fields A1, A3 and A5 by the –rX+N version of `InformationElementA`. If however one of the features was modified, e.g. the feature associated with fieldA3, E-UTRAN should assume the UE only supports the feature according to the release it indicated in field `accessStratumRelease` (X). I.e. UE is neither required to support the additional code-point (n80-vX+N0) nor the additional sub-field (fieldA3a).

InformationElementA-rX ::=  SEQUENCE {
    fieldA1-rX     InformationElementA1-rX    OPTIONAL, -- Need ON
    fieldA2-rX     InformationElementA2-rX    OPTIONAL, -- Need OR
    fieldA3-rX     InformationElementA3-rX    OPTIONAL -- Need OR
}

InformationElementA-rX+N ::= SEQUENCE {
    fieldA1-rX+N     InformationElementA1-rX    OPTIONAL, -- Need ON
    fieldA2-rX+N     InformationElementA2-rX    OPTIONAL, -- Need OR
    fieldA3-rX+N     InformationElementA3-rX    OPTIONAL -- Need OR
    fieldA4-rX+N     InformationElementA4-rX+N   OPTIONAL, -- Need OR
    fieldA5-rX+N     InformationElementA5-rX+N   OPTIONAL -- Need OR
}

InformationElementA3-rX+N ::= SEQUENCE {
    fieldA1a-rX+N     InformationElementA1a-rX   OPTIONAL, -- Need ON
    fieldA2a-rX+N     ENUMERATED {n10, n20, n40, n80-vX+N0} OPTIONAL, -- Need OR
    fieldA3a-rX+N     InformationElementA3a-rX+N   OPTIONAL -- Need OR
}

Non-critical extensions (broadcast signaling)

If the early implemented feature involves one or more non-critical extensions in broadcast signaling (i.e. system information), the UE shall comprehend the parts of the transfer syntax (ASN.1) of release X+ N that are related to the feature implemented early. The SIB(s) containing the release X+ N fields related to the early implemented features may also include other extensions concerning releases from X upto X+N. The UE shall comprehend such intermediate fields (but again is not required to support the functionality associated with these intermediate fields, in case this concerns optional features not supported by the UE).

Corrections to 3GPP TS 36.331 Version 14.4.0 Release 14

- Clarification on stop condition for timer T3330
- User consent for MDT
- Correction on the range of CQI resource index
- Small corrections to ETWS & CMAS system information
- VE capability signaling structure w.r.t carrier aggregation, MIMO and measurement gap
- Normal PHR and the multiple uplink carriers
- Corrections to TS36.331 on SIB2 handling
- Adding a Power Management indication in PHR
- Clarification for CA and TTI bundling in RRC
- Updates to FGI settings
- Add MBMS counting procedure to processing delay requirement for RRC procedure Section 11.2
- Add pre Rel-10 procedures to processing delay requirement for RRC procedure Section 11.2
- Addition of a specific reference for physical configuration fields
- Clarification of inter-frequency RSTD measurement indication procedure
- Clarification of optionality of UE features without capability
- Clarification on the definition of maxCellBlack
- Clarification on upper layer requested connection release
- Clarification regarding elIC measurements
- CR for s-measure handling
- CA on clarification of RLF Report in Carrier Aggregation
- FGI bit for handover between LTE FDD/TDD
- Further updates on L1 parameters
- General error handling for extension fields
- Additional information for RLF report
- Introduction of TCE ID for logged MDT
- Miscellaneous corrections (related to review in preparation for ASN.1 freeze)
- PLMN check for MDT logging
- UE actions upon leaving RRC_CONNECTED
- Clarification on bandEUTRA-r10 and supportedBandListEUTRA
- Updated value range for the Extended Wait Timer
- Value range of DRX-InactivityTimer
- Correction for SR-VCC and QCI usage
- Restructuring of QCI-ReportConfig-r10
- Correction on DL allocations in MBSFN subframes
- Reference SFN for MeasSubframePattern
- Clarifications to CA related field descriptions
- Corrections to codebookSubsetRestriction and SRS parameters
- Corrections to the handling of n-ConfIndex for TM9
- UE capabilities for Rel-10 LTE features with elIC measurement restrictions as FGI (Alt.1)
- CR to 36.331 on redirected utra-TDD carrier frequency
- Explicit AS signalling for mapped PTMSI/GUTI
- Counter proposal for Updates of mandatory information in AS-Config
- CR for Reconfiguration of discardTimer in PDCP-Config
- On the missing multiplicity of UE capability parameters
- Radio frame alignment of CSA and MSP
- Reconfiguration involving critically extended IEs (using fullFieldConfig i.e. option 2)
- Counter proposal to R2-112753 on CR to remove CSG Identity validity limited to CSG cell
- Increase of prioritisedBitRate
- CA and MIMO Capabilities in LTE Rel-10
- TS36.331 Correction
- maxNumberROHC-ContextSessions when no ROHC profile is supported
- Correction to Subframe Allocation End in PMCH-Info
- Correction on PUCCH configuration for Un interface
- Miscellaneous corrections to 36.331
- 36.331 correction on CSG Identity validity to allow introduction of CSG
- AdditionalSpectrumEmissions in CA
- CR to 36.331 on Small correction of PHR parameter
- Clarifications to P-max on CA
- Clarification on for which subframes signalling MCS applies
- Corrections in RRC
- Replace the tables with exception list in 10.5 AS
- Corrections to the field descriptions
- Configuration of simultaneous PUCCH&PUSCH
- Corrections to release of csi-SubframePatternConfig and cqi-Mask
Clarification for Multiple Correction of the signaling for Uncertainty and Confidence
Clarification of SR period
CR on scell measurement cycle
Introducing MBMS enhancements for REL
Introducing MDT enhancements for REL
Introduction of a new security algorithm ZUC
Korean Public Alert System (KPAS) in relation to CMAS
Clarification on setting of dedicated NS value for CA by E-UTRAN
CR on scell measurement cycle
Minor correction regarding limited service access on non-CSG-member cell
Clarification on SRB2 resumption upon connection re-establishment
Correction of Limited service access on non-CSG-member cell
Clarification on parallel message transmission upon connection re-establishment
Corrections to enhancedDualLayerTDD
Clarification on SR period
Clarification on HandoverCommand message
Clarification on mobility related issues
Correction of the signaling for Uncertainty and Confidence
Corrections to MBMS Service Continuity
CR to 36.331 on SIB15 acquisition
Handling of 1xCSFB failure
Miscellaneous corrections
RAN overload control using RRC connection Rejection
RRC support for CoMP in UL
Some clarification to Carrier aggregation enhancements
Validity of EAB SIB and acquisition of SIB1
Clarification for Multiple Frequency Band Indicators feature
Moving the TMS capability

RP-62: RP-131984 1397 - Correction to InterFreqRSTDMeasurementIndication field descriptions 11.6.0
RP-62: RP-131984 1404 - Correction of Inter-frequency RSTD indication for multiple frequencies 11.6.0
RP-62: RP-131993 1405 1 Enabling SRVCC from GERAN without forwarding UE-EUTRA-Capability 11.6.0
RP-62: RP-131995 1409 1 System information and change monitoring procedure 11.6.0
RP-62: RP-131981 1410 1 Correction on presence of codebookSubsetRestriction-r10 11.6.0
RP-62: RP-13198 1376 - Introducing UE support for inbound mobility to a shared CSG cell 12.0.0
RP-62: RP-132002 1378 2 Introduction of support of further DL MIMO enhancement 12.0.0
RP-62: RP-131988 1379 - CR for SSAC in CONNECTED 12.0.0
RP-62: RP-132002 1406 - Update of CMAS reference to E-UTRAN specific sections in TS23.041 12.0.0
03/2014 RP-63: RP-140359 1424 1 CR on introduction of Cell-specific time-to-trigger 12.1.0
RP-63: RP-140346 1435 - UE autonomous modification of cellsTriggered upon serving cell addition/release 12.1.0
RP-63: RP-140359 1436 1 Introduction of T312 12.1.0
RP-63: RP-140362 1439 1 Introduction of UE-supported EARFCN list in handover preparation information for MBFI 12.1.0
RP-63: RP-140352 1442 1 Correction of Connection Establishment Failure Report 12.1.0
RP-63: RP-140356 1450 1 Clarification on the presence of TDD special subframe 12.1.0
RP-63: RP-140359 1453 1 Introduction of UE mobility history reporting (option 2) 12.1.0
RP-63: RP-140340 1455 1 Clarification regarding need codes, conditions and ASN.1 defaults for extension fields 12.1.0
RP-63: RP-140340 1456 - ASN.1 issue with inter-node signalling (AS-Config) 12.1.0
RP-63: RP-140357 1457 1 Clarification for the SIB occurrence in a single SI message 12.1.0
RP-63: RP-140364 1462 - New UE categories for DL 450Mbps class 12.1.0
RP-63: RP-140354 1463 - IoT indication for inter-band TDD CA with different UL/DL configuration 12.1.0
06/2014 RP-64: RP-140869 1471 - Removal of comment line from EUTRA-UE-Variables imports 12.2.0
RP-64: RP-140871 1475 - Correction on measObjectList in VarMeasConfig 12.2.0
RP-64: RP-140879 1477 - Minor correction inbound mobility to shared CSG cell 12.2.0
RP-64: RP-140873 1478 - Clarification on precedence of SCell SI provided dedicatedly 12.2.0
RP-64: RP-14087 1479 - Support of the enhancement for TTI bundling for FDD 12.2.0
RP-64: RP-140887 1490 - Corrections on timer T312 12.2.0
RP-64: RP-140885 1486 - Correction to the description of physCellIdRange in MeasObjectEUTRA 12.2.0
RP-64: RP-140885 1506 - Corrections to UE mobility history information 12.2.0
RP-64: RP-140873 1489 - ACK/NACK feedback mode on PUSCH 12.2.0
RP-64: RP-140878 1556 - SIB15 enhancement for service availability information 12.2.0
RP-64: RP-140888 1557 - Introduction of FDD/TDD CA UE capability 12.2.0
RP-64: RP-140871 1545 - Clarification of E-UTRA MBFI signalling 12.2.0
RP-64: RP-140892 1522 1 Extended RLC LI field 12.2.0
RP-64: RP-140873 1517 1 Network-requested CA Band Combination Capability Signalling 12.2.0
RP-64: RP-140873 1554 1 Allowing TDD/FDD split for FGI111 and FGI112 12.2.0
RP-64: RP-140871 1551 1 Inter-RAT ANR capability signalling in FGI33 when UE supports UTRA TDD only 12.2.0
RP-64: RP-140884 1495 1 Introduction of TDD eIMTA 12.2.0
RP-64: RP-140885 1499 1 Minor Corrections to T312 12.2.0
RP-64: RP-140892 1510 1 Introduction of RRC Connection Establishment failure temporary Gofset handling 12.2.0
RP-64: RP-140849 1555 2 Introduction of UE capability for eMBMS reception on SCCell and Non-Serving Cell 12.2.0
09/2014 RP-65: RP-141494 1632 - FDD&TDD split for CA 12.3.0
RP-65: RP-141505 1599 - UE capabilities for Hetnet mobility in TS 36.331 12.3.0
RP-65: RP-141499 1584 - Introduction of UE eIMTA capabilities 12.3.0
RP-65: RP-141511 1567 - Corrections to extended RLC LI field 12.3.0
RP-65: RP-141511 1603 - TAI reporting of last serving cell 12.3.0
RP-65: RP-141498 1630 1 Correction to Network-requested CA Band Combination Capability Signalling 12.3.0
RP-65: RP-141496 1577 1 Clarification on double indication of SAI in SIB15 12.3.0
RP-65: RP-141496 1597 - Clarification on MBMSCountingResponse 12.3.0
RP-65: RP-141496 1623 - Clarification on the setting of SupportedBandCombination-v1130 12.3.0
RP-65: RP-141489 1574 1 Correction of E-UTRAN UE capabilities description in HandoverPreparationInformation message field descriptions 12.3.0
RP-65: RP-141507 1570 - Introducing MBSFN measurement by extension of logged measurements 12.3.0
RP-65: RP-141510 1572 1 Introduction of ACB skip for MMTEL voice/video and SMS 12.3.0
RP-65: RP-141496 1615 1 Clarification on determining MBMS frequencies of interest in MBMSinterestIndication 12.3.0
RP-65: RP-141506 1579 1 Introduction of signalling support for low complexity UEs 12.3.0
RP-65: RP-141499 1601 1 Rel-12 ASN.1 correction 12.3.0
RP-65: RP-141511 1560 1 Introduction of shorter MCH scheduling period 12.3.0

ETSI
Clarification on Cell barring for downlink only bands
Mandatory present of supportedMIMO
Conditions for establishing RRC Connection for sidelink transmission
Miscellaneous corrections (a.o. Sidelink)
Clarifications on use of
Correction to SCG and split bearer configuration
CR on ROHC for split bearer
Minor corrections for PSCell configuration in DC
Clarification on PDCP reconfiguration
Reconfiguration of SPS
RRC_CONNECTED
Correction on handling of wlan-OffloadConfigDedicated upon leaving
Correction field description of networkControlledSyncTx
Miscellaneous changes resulting from review for REL
Presence of codebookSubsetRestriction
dedicated uplink power control parameter signalling
MCC
UE capability signaling for WLAN/3GPP radio interworking
MCH BLER and RSRQ update for MBSFN
Clarification on statusReportRequired handling
Extended RLC
Correction for p0
Introduction of increased number of frequencies to monitor
Support of 256QAM in TS 36.331 (per band 256QAM
Introduction of Dual Connectivity
Correction of remaining TBD for Rel
Support of TTI bundling without resource allocation restriction for LTE
Reduction of possible values for WLAN backhaul rate thresholds in LTE
Corrections to WLAN/3GPP Radio Interworking for LTE
Correction to stop condition for "Chiba offset"
ETSI TS 136 331 V14.4.0 (2017 r10)

Steering command during T350
Correction on system information handling in eMTC
Correction on condition nonFullConfig in dual connectivity
Correction on frequency hopping signaling
Correction of backhaul bandwidth description
Miscellaneous RRC corrections for LWA
Avoiding simultaneous configuration of signalling
GNSS
Clarification regarding IDC indication upon change of UL CA affecting Configuration of LWA and LWIP upon handover
Small eSL related corrections
Small corrections to LWIP
Corrections for sidelink communication transmission
Correction on conditions for establishing RRC Connection for sidelink communication
Corrections for conditions of sidelink operation
Corrections for conditions of CA enhancement
Miscellaneous correction for sidelink drb
Corrections to MTCe in TS 36.331
MBMS interest indication by SC
SC
Introduction of sf60 DRX cycle
The correction on the description of 5.5.4.1
Clarification on initial RSSI measurement reporting
Clarification on uplink reuse in TDD
Modification of network requested CA band combination retrieval for intra-band non-contiguous CA
ANR in case of MFBI
Clarification on the leftmost bit for the supportedCellGrouping
Clarification on the value range of guaranteed power for the MeNB and SeNB
36.331 CR on TM10 CRS-IM UE capability report signalling introduction
Miscellaneous corrections to TS 36.331 related to eDRX
Guideline on handling of uplink spare values
In-Device Coexistence for UL CA change of victim system
Clarification on initial RSSI measurement reporting
Introduction of capability on PDSCH collision handling
Introduction of the extension of measObjectld range
The correction on the description of 5.5.4.1
Introduction of s680 DRX cycle
Clarification on NAICS subset capability
SC-PTM reception on non-Pcell
MBMS interest indication by SC-PTM capable UE
Additional Layer 1 capabilities for Rel-13 CA enhancements
Corrections to MTCe in TS 36.331
Miscellaneous corrections to TS 36.331
Inter-node signalling
Clarification on SC-PTM
UE capability of an additional Rx and Tx requirement for a CA band combination
drb-identity change in full configuration
Miscellaneous correction for sidelink
Corrections for conditions of sidelink operation
Correction on conditions for establishing RRC Connection for sidelink communication
Corrections for conditions of sidelink operation
Corrections for sidelink communication transmission
Correction to WLAN measurements
Small corrections to LWIP
Small eSL related corrections
Alignment of RCLWI configuration
Configuration of LWA and LWIP upon handover
Introducing EBF/FD-MIMO capabilities
Clarification regarding IDC indication upon change of UL CA affecting GNSS
Correction of periodic CSI reporting and clarification on p-c and CBSR signalling
CR on SI window combining for MTC
Avoiding simultaneous configuration of LWA and DC for a UE
Miscellaneous RRC corrections for LWA
Automatic WLAN measurement ID removal
Correction to channel number range
Correction of backhaul bandwidth description
Correction on frequency hopping signalling
Support of CRS-Assistance signalling for the DL Control Channel IM
Correction on condition nonFullConfig in dual connectivity
Correction on system information handling in eMTC
Correction on essential system information missing

 RP-75  RP-170652  2576  1  A  Providing SIB1-BR via dedicated RRC signalling  14.2.0
 RP-75  RP-170641  2577  1  B  Introduction of eDECOR  14.2.0
 RP-75  RP-170636  2578  1  B  Introduction of SC-PTM for feMTC and NB-IoT enhancements  14.2.0
 RP-75  RP-170629  2580  1  B  Introducing RRC parameters for eFD-MIMO (REL-14)  14.2.0
 RP-75  RP-170657  2582  1  A  Indication of S1-U data transfer  14.2.0
 RP-75  RP-170650  2585  1  A  Addition of extended EARFCNs in SCGFailureInformation message  14.2.0
 RP-75  RP-170632  2587  -  A  Clarification on the configuration of the extended values for NB  14.2.0
 RP-75  RP-170652  2589  -  A  Clarification on the support of FGI 42 for category M1 UE  14.2.0
 RP-75  RP-170656  2591  -  A  Miscellaneous corrections to NB-IoT  14.2.0
 RP-75  RP-170643  2592  1  A  Corrections to resource reservation period for V2X  14.2.0
 RP-75  RP-170651  2598  -  A  Correction on the initiation of WLAN connection status report  14.2.0
 RP-75  RP-170654  2600  -  A  Correction on longDRX-CycleStartOffset  14.2.0
 RP-75  RP-170643  2601  2  F  Correction and Clarification to TS 36.331  14.2.0
 RP-75  RP-170633  2603  2  A  Correction on mpdcch-pdsch-HoppingConfig  14.2.0
 RP-75  RP-170636  2613  3  B  FeMTC UE CE mode and maximum PDSCH/PUSCH BW preference indication  14.2.0
 RP-75  RP-170635  2615  2  B  Introduce V2X in TS 36.331  14.2.0
 RP-75  RP-170643  2616  2  F  Introduce a new parameter for V2X resource reselection  14.2.0
 RP-75  RP-170656  2622  2  A  Extension of QHInvd value range  14.2.0
 RP-75  RP-170655  2624  -  A  Clarification on prioritization of multiple Pmax values  14.2.0
 RP-75  RP-170637  2625  2  B  Introduction of NB-IoT Enhancements other than Multicast  14.2.0
 RP-75  RP-170651  2627  1  A  Corrections to WLAN AN status monitoring  14.2.0
 RP-75  RP-170642  2635  1  B  Introduction of data inactivity timer  14.2.0
 RP-75  RP-170654  2637  -  A  Clarification of reference to GERAN specification  14.2.0
 RP-75  RP-170652  2641  1  A  IOT indication for unicast MPDCCH/PDSCH/PUSCH frequency hopping  14.2.0
 RP-75  RP-170632  2642  3  B  Introducing 256QAM in UL  14.2.0
 RP-75  RP-170654  2644  -  A  Correction Clot cell indications to UE NAS  14.2.0
 RP-75  RP-170633  2645  1  B  Introduction of FeMBMS to 36.331  14.2.0
 RP-75  RP-170643  2646  1  F  Corrections to the exceptional pool  14.2.0
 RP-75  RP-170653  2651  2  A  New S-criteria for enhanced coverage in idle mode  14.2.0
 RP-75  RP-170651  2655  -  A  Corrections in UE capability reporting  14.2.0
 RP-75  RP-170642  2660  2  C  Functional modification of retrieving different UE capabilities for a fallback band combination  14.2.0
 RP-75  RP-170638  2663  2  B  Introduction of Voice and Video enhancements for LTE  14.2.0
 RP-75  RP-170654  2665  1  A  The support of UL 64QAM  14.2.0
 RP-75  RP-170645  2666  1  F  Miscellaneous Corrections on SRS Switching  14.2.0
 RP-75  RP-170646  2667  1  B  Introduction of SRS switching capability for LTE  14.2.0
 RP-75  RP-170652  2671  -  A  Clarification for pucch-NumRepitionCEO-format2-r13 for CE mode B  14.2.0
 RP-75  RP-170643  2673  -  F  Correction on the preconfigured power control parameter for V2X sidelink communication  14.2.0
 RP-75  RP-170653  2675  2  A  Correction of pucch-hoppingOffset  14.2.0
 RP-75  RP-170628  2678  3  B  Introduction of Enhanced LTE-WLAN Aggregation (eLWA)  14.2.0
 RP-75  RP-170651  2679  -  A  Need behaviour of availableAdmissionCapacityRequestWLAN  14.2.0
 RP-75  RP-170644  2685  1  B  Addition of geographical location reporting in 36.331  14.2.0
 RP-75  RP-170630  2689  3  B  Introduction of mobility enhancement solutions in RRC  14.2.0
 RP-75  RP-170651  2694  -  A  Clarification on data handling for LWA bearer  14.2.0
 RP-75  RP-170634  2696  2  B  CR for introduction of NCSG and per CC measurement gap  14.2.0
 RP-75  RP-170634  2697  1  B  CR for introduction of NCSG, short measurement gaps and configuration of CC measurement gap  14.2.0
 RP-75  RP-170321  2698  -  F  Correction to PRACH resource configuration for high speed scenario  14.2.0
 RP-75  RP-170807  2701  1  A  Feature optionality for Cat.1bis UE  14.2.0
 RP-75  RP-170656  2703  -  A  Extension of timer T311  14.2.0
 RP-75  RP-171226  2705  2  F  Correction to exceptional pool usage in TS 36.331  14.2.0
 RP-76  RP-171237  2706  1  F  Support eDECOR for NB-IoT  14.3.0
 RP-76  RP-171231  2709  1  F  Correction on UE capabilities for eLAA  14.3.0
 RP-76  RP-171243  2711  3  A  Correction on WLAN connection status report monitoring for LWIP  14.3.0
 RP-76  RP-171236  2712  3  F  Correction on eLWA  14.3.0
 RP-76  RP-171221  2713  2  B  Introduction of new Transport Block Size for DL 256QAM  14.3.0
 RP-76  RP-171226  2714  2  F  UE capabilities for eLWA  14.3.0
 RP-76  RP-171227  2715  2  B  Introducing a new SL master information block for V2X sidelink communication  14.3.0
 RP-76  RP-171236  2720  2  F  Clarifications to eLWA  14.3.0
 RP-76  RP-171247  2728  2  B  Introduction of a new UL UE category for 300Mbps with 64QAM  14.3.0
 RP-76  RP-171425  2872  3  F  Miscellaneous general corrections and clarifications resulting from ASN.1 review  14.3.0
 RP-76  RP-171223  2734  2  F  Introduction of SFN indication in handover message  14.3.0

ETSI
| RP-76 | RP-171224 | 2737 | 1 | F | Correction to SIB-Type-NB | 14.3.0 |
| RP-76 | RP-171233 | 2741 | 5 | F | Clarification of intra-frequency applicability of makeBeforeBreak HO | 14.3.0 |

| RP-76 | RP-171244 | 2919 | - | A | Clarification on additionalSpectrumEmission for eMTC | 14.3.0 |
| RP-76 | RP-171245 | 2920 | - | A | Clarification on additionalSpectrumEmission for NB-IoT | 14.3.0 |
| RP-76 | RP-171224 | 2927 | - | F | Correction to CarrierConfigDedicated-NB | 14.3.0 |
| RP-76 | RP-171224 | 2929 | 2 | F | Miscellaneous NB-IoT corrections and clarifications resulting from ASN.1 review | 14.3.0 |
| RP-76 | RP-171245 | 2931 | 2 | A | Extension of SIntraSearchP value range | 14.3.0 |
| RP-76 | RP-171223 | 2932 | - | F | Maximum PDSCH/PUSCH BW preference indication handling for handover | 14.3.0 |
| RP-76 | RP-171225 | 2938 | 3 | F | Revert PDCP state variable HFN and SN back to the values used in the source cell | 14.3.0 |
RP-76  2942  1  F  ASN.1 corrections for eLWA
RP-76  2943  1  F  clarification on UE capability and early feature support
RP-76  2944  1  F  clarification regarding EBF-FDMA configuration (REL-13)
RP-76  2945  1  F  Generic clarification of "first bit" as leftmost bit
RP-76  2948  1  F  Introduction of UE capabilities for high speed
RP-76  2949  1  F  Correction of high speed
RP-76  2950  1  F  CR on reduction of SIB21 size
RP-76  2952  1  F  Configuration of preamble groups for CE levels and preamble groups A/B
RP-76  2954  1  F  Extension of RSRP range for eMTC
RP-76  2958  1  F  FeMBMS/unicast-mixed carrier flag in measurement object
08/2017
RP-77  2807  4  A  Correction to PUCCH-ConfigDedication
RP-77  2961  2  F  Correction on SPS assistance information in TS 36.331
RP-77  2977  2  B  Miscellaneous correction to V2X in TS 36.531
RP-77  2978  2  A  Introduction of new NS values for V2X sidelink communication
RP-77  2980  2  A  Adding abstract syntax notation one chapter of sidelink pre-configuration
RP-77  2983  1  F  Correction on TTI bundling for TDD configurations 2 and 3
RP-77  2984  2  F  Corrections on the use of plmn-IdentityList in field descriptions
RP-77  2985  2  F  RRC Connection Re-establishment for Control Plane CIoT EPS Optimization
RP-77  2989  1  F  Clarification that DL only bands are not supported in NB-IoT
RP-77  2990  1  F  Cleanup for NB-IoT Enhancements
RP-77  2992  2  A  Clarification on SI repetition pattern
RP-77  2993  2  F  CR on condition for RRC connection establishment and condition for sidelink UE information for V2X sidelink communication
RP-77  2994  2  F  Correction on RACH-less SeNB Change
RP-77  2995  2  F  Corrections on eVoLTE
RP-77  2997  2  F  Corrections to random selection for P2X related V2X sidelink communication
RP-77  3002  2  A  additionalSpectrumEmission extension
RP-77  3008  1  F  Correction of field descriptions for recommendedBlistRate and recommendedBlistRateQuery
RP-77  3014  2  A  RPM Measurement Clarification on Discovery Signals for LAA
RP-77  3018  1  F  Correction in PUSCH Config description
RP-77  3022  1  F  Cat-M1 indication by Cat-M2 UE
RP-77  3025  1  A  Clarification on the freeHoppingParametersDL during handover
RP-77  3027  1  A  Clarification on nsp-ThresholdsPrachInfoList during handover
RP-77  3028  1  F  Clarification on systemlnformationBlockType2Dedicated
RP-77  3030  2  A  Clarification on Bandwidth Reduced operation
RP-77  3036  1  F  Correction for connEstFailOffset
RP-77  3040  1  F  Clarification on LWIP aggregation
RP-77  3041  1  F  Correction to eLAA configuration
RP-77  3042  2  C  Packet Reordering for Sidelink
RP-77  3044  1  A  Corrections on TS 36.331 for Rel-13 MTC
RP-77  3047  1  F  Corrections on Bandwidth preference indication for Rel-14 MTC
RP-77  3048  1  F  Corrections on TS 36.331 for Rel-14 MTC
RP-77  3051  2  F  Clarification on NCSG UE capability
RP-77  3052  1  F  Corrections to UL 256 QAM capability field descriptions
RP-77  3054  1  F  Clarification on per CC measurement gap
RP-77  3055  1  C  Introduction of RLC UM support for LWA
RP-77  3057  1  A  Correction on eCA with Dual Connectivity
RP-77  3059  1  F  Clarification of the PTAG value for the RACH-less handover
RP-77  3063  1  A  Clarification on number of RACH CE levels vs number of RSRP thresholds
RP-77  3064  1  F  Correction to contention free random access
RP-77  3065  2  C  Introduction of Release Assistance Indication
RP-77  3067  2  A  TM9 capabilities in CE mode
RP-77  3068  1  F  Introduction of interference randomisation in NB-IoT
RP-77  3070  1  A  Clarification on PUCCH SCell change
