Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for ETSI members and non-members, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (http://webapp.etsi.org/IPR/home.asp).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under http://webapp.etsi.org/key/queryform.asp.

Annex A (informative): Change history .............................................................................................................. 53

History ............................................................................................................................................................... 54
Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

x the first digit:
  1 presented to TSG for information;
  2 presented to TSG for approval;
  3 or greater indicates TSG approved document under change control.

y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.

z the third digit is incremented when editorial only changes have been incorporated in the document.
1 Scope

The present document specifies the E-UTRAN radio network layer signalling protocol for the M3 interface. The M3 Application Protocol (M3AP) supports the functions of M3 interface by signalling procedures defined in this document. M3AP is developed in accordance to the general principles stated in TS 36.401 [2] and TS 36.300 [3].

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document in the same Release as the present document.

3 Definitions, symbols and abbreviations

3.1 Definitions

For the purposes of the present document, the terms and definitions given in TR 21.905 [1] and the following apply. A term defined in the present document takes precedence over the definition of the same term, if any, in TR 21.905 [1].
**Elementary Procedure:** M3AP consists of Elementary Procedures (EPs). An Elementary Procedure is a unit of interaction between MCEs and the EPC. These Elementary Procedures are defined separately and are intended to be used to build up complete sequences in a flexible manner. If the independence between some EPs is restricted, it is described under the relevant EP description. Unless otherwise stated by the restrictions, the EPs may be invoked independently of each other as stand alone procedures, which can be active in parallel. The usage of several M3AP EPs together or together with EPs from other interfaces is specified in stage 2 specifications (e.g. TS 23.246 [6] and TS 36.300 [3]).

An EP consists of an initiating message and possibly a response message. Two kinds of EPs are used:

- **Class 1:** Elementary Procedures with response (success and/or failure).
- **Class 2:** Elementary Procedures without response.

For Class 1 EPs, the types of responses can be as follows:

**Successful:**
- A signalling message explicitly indicates that the elementary procedure successfully completed with the receipt of the response.

**Unsuccessful:**
- A signalling message explicitly indicates that the EP failed.
- On time supervision expiry (i.e. absence of expected response).

**Successful and Unsuccessful:**
- One signalling message reports both successful and unsuccessful outcome for the different included requests. The response message used is the one defined for successful outcome.

Class 2 EPs are considered always successful.

**MCE MBMS M3AP ID:** Unique identity, referencing the MBMS-service-associated logical M3-connection within an MCE.

**MME MBMS M3AP ID:** Unique identity, referencing the MBMS-service-associated logical M3-connection within an MME.

**MBMS E-RAB:** An MBMS E-RAB refers to the concatenation of an M1 bearer and the corresponding radio bearer, as defined in TS 36.300 [3].

**MBMS-service-associated signalling:** When M3AP messages associated to one MBMS service uses the MBMS-service-associated logical M3-connection for association of the message to the MBMS service in MCE and EPC.

**MBMS-service-associated logical M3-connection:** The MBMS-service-associated logical M3-connection uses the identities MME MBMS M3AP ID and MCE MBMS M3AP ID. For a received MBMS service associated M3AP message the MME identifies the associated MBMS service based on the MME MBMS M3AP ID IE and the MCE identifies the associated MBMS service based on the MCE MBMS M3AP ID IE.

### 3.2 Symbols

Not applicable.

### 3.3 Abbreviations

For the purposes of the present document, the abbreviations given in TR 21.905 [1] and the following apply. An abbreviation defined in the present document takes precedence over the definition of the same abbreviation, if any, in TR 21.905 [1].

- **DL**  Downlink
- **E-RAB**  E-UTRAN Radio Access Bearer
- **eNB**  E-UTRAN NodeB
4 General

4.1 Procedure specification principles

The principle for specifying the procedure logic is to specify the functional behaviour of the MCE exactly and completely. The EPC functional behaviour is left unspecified.

The following specification principles have been applied for the procedure text in clause 8:

- The procedure text discriminates between:

  1) Functionality which "shall" be executed

  The procedure text indicates that the receiving node "shall" perform a certain function Y under a certain condition. If the receiving node supports procedure X but cannot perform functionality Y requested in the REQUEST message of a Class 1 EP, the receiving node shall respond with the message used to report unsuccessful outcome for this procedure, containing an appropriate cause value.

  2) Functionality which "shall, if supported" be executed

  The procedure text indicates that the receiving node "shall, if supported," perform a certain function Y under a certain condition. If the receiving node supports procedure X, but does not support functionality Y, the receiving node shall proceed with the execution of the EP, possibly informing the requesting node about the not supported functionality.

- Any required inclusion of an optional IE in a response message is explicitly indicated in the procedure text. If the procedure text does not explicitly indicate that an optional IE shall be included in a response message, the optional IE shall not be included. For requirements on including Criticality Diagnostics IE, see section 10.

4.2 Forwards and backwards compatibility

The forwards and backwards compatibility of the protocol is assured by mechanism where all current and future messages, and IEs or groups of related IEs, include ID and criticality fields that are coded in a standard format that will not be changed in the future. These parts can always be decoded regardless of the standard version.

4.3 Specification notations

For the purposes of the present document, the following notations apply:

Procedure When referring to an elementary procedure in the specification the Procedure Name is written with the first letters in each word in upper case characters followed by the word "procedure", e.g. MBMS procedure.
Message When referring to a message in the specification the MESSAGE NAME is written with all letters in upper case characters followed by the word "message", e.g. MESSAGE NAME message.

IE When referring to an information element (IE) in the specification the Information Element Name is written with the first letters in each word in upper case characters and all letters in Italic font followed by the abbreviation "IE", e.g. Information Element IE.

Value of an IE When referring to the value of an information element (IE) in the specification the "Value" is written as it is specified in subclause 9.2 enclosed by quotation marks, e.g. "Value".

5 M3AP Services

M3AP provides the signalling service between MCE and EPC that is required to fulfil the M3AP functions described in clause 7. M3AP services are defined as

- MBMS associated services: They are related to the whole M3 interface instance between the MCE and MME utilising an MBMS associated signalling connection.
- Non MBMS associated services: They are related to the whole M3 interface instance between the MCE and MME utilising a Non MBMS associated signalling connection.

6 Services Expected from Signalling Transport

The signalling connection shall provide in sequence delivery of M3AP messages. M3AP shall be notified if the signalling connection breaks.

7 Functions of M3AP

The M3AP protocol provides the following functions:

- Session Management. This overall functionality is responsible for starting, stopping and updating MBMS sessions.
- Reset functionality to ensure a well defined initialisation on the M3 interface.
- Error Indication functionality to allow a proper error reporting/handling in cases where no failure messages are defined.

The mapping between the above functions and M3 EPs is shown in the table below.

<table>
<thead>
<tr>
<th>Function</th>
<th>Elementary Procedure(s)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Session Management</td>
<td>a) MBMS Session Start</td>
</tr>
<tr>
<td></td>

</tr>
</tbody>
</table>

8 M3AP Procedures

8.1 Elementary procedures

In the following tables, all EPs are divided into Class 1 and Class 2 EPs (see subclause 3.1 for explanation of the different classes):
### Table 8-1: Class 1 procedures

<table>
<thead>
<tr>
<th>Elementary Procedure</th>
<th>Initiating Message</th>
<th>Successful Outcome Response message</th>
<th>Unsuccessful Outcome Response message</th>
</tr>
</thead>
<tbody>
<tr>
<td>MBMS Session Start</td>
<td>MBMS SESSION START REQUEST</td>
<td>MBMS SESSION START RESPONSE</td>
<td>MBMS SESSION START FAILURE</td>
</tr>
<tr>
<td>MBMS Session Stop</td>
<td>MBMS SESSION STOP REQUEST</td>
<td>MBMS SESSION STOP RESPONSE</td>
<td></td>
</tr>
<tr>
<td>MBMS Session Update</td>
<td>MBMS SESSION UPDATE REQUEST</td>
<td>MBMS SESSION UPDATE RESPONSE</td>
<td>MBMS SESSION UPDATE FAILURE</td>
</tr>
<tr>
<td>Reset</td>
<td>RESET</td>
<td>RESET ACKNOWLEDGE</td>
<td></td>
</tr>
</tbody>
</table>

### Table 8-2: Class 2 procedures

<table>
<thead>
<tr>
<th>Elementary Procedure</th>
<th>Message</th>
</tr>
</thead>
<tbody>
<tr>
<td>Error Indication</td>
<td>ERROR INDICATION</td>
</tr>
</tbody>
</table>

The following applies concerning interference between Elementary Procedures:

- The Reset procedure takes precedence over all other EPs.

### 8.2 MBMS Session Start

#### 8.2.1 General

The purpose of the MBMS Session Start procedure is to request the MCE to determine whether an MBMS E-RAB for an upcoming MBMS Session for a given MBMS Bearer Service can be accommodated by the E-UTRAN. The MCE is also requested to establish an MBMS service associated logical M3 connection. The MBMS Session Start procedure is triggered by the EPC (MME).

The procedure uses MBMS Service associated signaling.

#### 8.2.2 Successful Operation

The MME initiates the procedure by sending an MBMS SESSION START REQUEST message to the MCE.

The MCE shall use the information in the MBMS E-RAB QoS parameters IE to determine whether the requested configuration can be accommodated within E-UTRAN.

The MCE shall report to the MME, in the MBMS SESSION START RESPONSE message the result of the requested MBMS E-RAB.
The MCE shall establish or modify the resources according to the values of the Allocation and Retention Priority IE (priority level and pre-emption indicators) and the resource situation as follows:

- The MCE shall consider the priority level of the requested session, when deciding on the resource allocation.

- The priority levels and the pre-emption indicators may (individually or in combination) be used to determine whether the session has to be started unconditionally and immediately. If the requested session is marked as 'may trigger pre-emption' and the resource situation requires so, the MCE may trigger the pre-emption procedure which may then cause the forced release of a lower priority session which is marked as 'pre-emptable'. Whilst the process and the extent of the pre-emption procedure is operator-dependent, the pre-emption indicators shall be treated as follows:

1. If the Pre-emption Capability IE is set to 'may trigger pre-emption', then this allocation request is allowed to trigger a pre-emption procedure.

2. If the Pre-emption Capability IE is set to 'shall not trigger pre-emption', then this allocation request is not allowed to trigger a pre-emption procedure.

3. If the Pre-emption Vulnerability IE is set to 'pre-emptable', then this session shall be included in the pre-emption process.

4. If the Pre-emption Vulnerability IE is set to 'not pre-emptable', then this session shall not be included in the pre-emption process.

5. If the Priority Level IE is set to 'no priority' the given values for the Pre-emption Capability IE and Pre-emption Vulnerability IE shall not be considered. Instead the values 'shall not trigger pre-emption' and 'not pre-emptable' shall prevail.

- The E-UTRAN pre-emption process shall keep the following rule: E-UTRAN shall only pre-empt sessions with lower priority, in ascending order of priority.

8.2.3 Unsuccessful Operation

If the MCE determines that the E-UTRAN is not able to accommodate the requested configuration (e.g. the necessary MBMS resources for the MBMS Session could not be established), the MME shall be informed by the MBMS SESSION START FAILURE message including a suitable cause value.

8.2.4 Abnormal Conditions

Not applicable.
8.3 MBMS Session Stop

8.3.1 General

The purpose of the MBMS Session Stop procedure is to inform the MCE about the end of an ongoing MBMS Session for a given MBMS Bearer Service, and that the E-UTRAN should release the allocated MBMS E-RAB resources and that the associated MBMS service associated logical M3 connection should also be released. The MBMS Session Stop procedure is triggered by the EPC (MME).

The procedure uses MBMS Service associated signaling.

8.3.2 Successful Operation

![Figure 8.3.2-1: MBMS Session Stop procedure. Successful operation.]

The MME initiates the procedure by sending an MBMS SESSION STOP REQUEST message to the MCE. Upon receipt of the MBMS SESSION STOP REQUEST message, the MCE shall send the MBMS SESSION STOP RESPONSE message after the MCE releases the affected resources and removes the MBMS bearer context.

8.3.3 Unsuccessful Operation

Not applicable.

8.3.4 Abnormal Conditions

Not applicable.

8.4 Error Indication

8.4.1 General

The Error Indication procedure is initiated by a node to report detected errors in one incoming message, provided they cannot be reported by an appropriate failure message.

If the error situation arises due to reception of a message utilising MBMS-service-associated signalling, then the Error Indication procedure uses MBMS-service-associated signalling. Otherwise the procedure uses non MBMS-service-associated signalling.
8.4.2 Successful Operation

When the conditions defined in clause 10 are fulfilled, the Error Indication procedure is initiated by an ERROR INDICATION message sent from the receiving node.

The ERROR INDICATION message shall contain at least either the Cause IE or the Criticality Diagnostics IE.

In case the Error Indication procedure is triggered by utilising MBMS-service-associated signalling the MCE MBMS M3AP ID IE and the MME MBMS M3AP IE shall be included in the ERROR INDICATION message. If one or both of MCE MBMS M3AP ID IE and the MME MBMS M3AP IE are not correct, the cause shall be set to appropriate value e.g. "Unknown or already allocated MCE MBMS M3AP ID", "Unknown or already allocated MME MBMS M3AP ID" or "Unknown or inconsistent pair of MBMS M3AP ID".

8.4.3 Abnormal Conditions

8.5 Reset

8.5.1 General

The purpose of the Reset procedure is to initialise or re-initialise the E-UTRAN, or part of E-UTRAN M3AP MBMS-related contexts, in the event of a failure in the EPC or vice versa.

The procedure uses non MBMS-service associated signalling.
8.5.2 Successful Operation

8.5.2.1 Reset Procedure Initiated from the MME

In the event of a failure at the MME, which has resulted in the loss of some or all transaction reference information, a RESET message shall be sent to the MCE.

At reception of RESET message the MCE shall release all allocated resources on M3 related to MBMS-service association(s) indicated explicitly or implicitly in the RESET message and remove the MBMS-service contexts including MBMS M3AP IDs for the indicated MBMS service associations.

After the MCE has released all assigned M3 resources and the MBMS M3AP IDs for all indicated MBMS service associations which can be used for new MBMS-service-associated logical M3-connections over the M3 interface, the MCE shall respond with the RESET ACKNOWLEDGE message. The MCE does not need to wait for the release of resources and contexts to be completed before returning the RESET ACKNOWLEDGE message.

If the RESET message contains the MBMS-Service-associated logical M3-connection list IE, then:

- The MCE shall use the MME MBMS M3AP ID IE and/or the MCE MBMS M3AP ID IE to explicitly identify the MBMS service association(s) to be reset.

- The MCE shall in the RESET ACKNOWLEDGE message include, for each MBMS service association to be reset, the MBMS-Service-associated logical M3-connection Item IE in the MBMS-Service-associated logical M3-connection list IE. The MBMS-Service-associated logical M3-connection Item IEs shall be in the same order as received in the RESET message and shall include also unknown MBMS-Service-associated logical M3-connections. Empty MBMS-Service-associated logical M3-connection Item IEs, received in the RESET message, may be omitted in the RESET ACKNOWLEDGE message.

- If the MME MBMS M3AP ID IE is included in the MBMS-Service-associated logical M3-connection Item IE for an MBMS service association, the MCE shall include the MME MBMS M3AP ID IE in the corresponding MBMS-Service-associated logical M3-connection Item IE in the RESET ACKNOWLEDGE message.

- If the MCE MBMS M3AP ID IE is included in an MBMS-Service-associated logical M3-connection Item IE for an MBMS service association, the MCE shall include the MCE MBMS M3AP ID IE in the corresponding MBMS-Service-associated logical M3-connection Item IE in the RESET ACKNOWLEDGE message.

Interactions with other procedures:

If the RESET message is received, any other ongoing procedure (except another Reset procedure) on the same M3 interface related to an MBMS service association, indicated explicitly or implicitly in the RESET message, shall be aborted.
8.5.2.2 Reset Procedure Initiated from the E-UTRAN

In the event of a failure at the MCE, which has resulted in the loss of some or all transaction reference information, a RESET message shall be sent to the MME.

At reception of RESET message the MME shall release all allocated resources on M3 related to the MBMS service association(s) indicated explicitly or implicitly in the RESET message and remove the MBMS M3AP ID for the indicated MBMS service associations.

After the MME has released all assigned M3 resources and the MBMS M3AP IDs for all indicated MBMS service associations which can be used for new MBMS-service-associated logical M3-connections over the M3 interface, the MME shall respond with the RESET ACKNOWLEDGE message.

If the RESET message contains the MBMS-Service-associated logical M3-connection list IE, then:

- The MME shall use the MME MBMS M3AP ID IE and/or the MCE MBMS M3AP ID IE to explicitly identify the MBMS service association(s) to be reset.

- The MME shall in the RESET ACKNOWLEDGE message include, for each MBMS service association to be reset, the MBMS-Service-associated logical M3-connection Item IE in the MBMS-Service-associated logical M3-connection list IE. The MBMS-Service-associated logical M3-connection Item IEs shall be in the same order as received in the RESET message and shall include also unknown MBMS-Service-associated logical M3-connections. Empty MBMS-Service-associated logical M3-connection Item IEs, received in the RESET message, may be omitted in the RESET ACKNOWLEDGE message.

- If the MME MBMS M3AP ID IE is included in the MBMS-Service-associated logical M3-connection Item IE for an MBMS service association, the MME shall include the MME MBMS M3AP ID IE in the corresponding MBMS-Service-associated logical M3-connection Item IE in the RESET ACKNOWLEDGE message.

- If the MCE MBMS M3AP ID IE is included in an MBMS-Service-associated logical M3-connection Item IE for an MBMS service association, the MME shall include the MCE MBMS M3AP ID IE in the corresponding MBMS-Service-associated logical M3-connection Item IE in the RESET ACKNOWLEDGE message.

Interactions with other procedures:

If the RESET message is received, any other ongoing procedure (except another Reset procedure) on the same M3 interface related to an MBMS service association, indicated explicitly or implicitly in the RESET message, shall be aborted.

Figure 8.5.2.2-1: Reset procedure initiated from the E-UTRAN. Successful operation.
8.5.3 Abnormal Conditions

8.5.3.1 Abnormal Condition at the EPC

If the RESET message includes the MBMS-Service-associated logical M3-connection list IE, but neither the MME MBMS M3AP ID IE nor the MCE MBMS M3AP ID IE is present for an MBMS-Service-associated logical M3-connection Item IE, then the MME shall ignore the MBMS-Service-associated logical M3-connection Item IE. The MME may return the empty MBMS-Service-associated logical M3-connection Item IE in the MBMS-Service-associated logical M3-connection list IE in the RESET ACKNOWLEDGE message.

8.5.3.2 Abnormal Condition at the E-UTRAN

If the RESET message includes the MBMS-Service-associated logical M3-connection list IE, but neither the MME MBMS M3AP ID IE nor the MCE MBMS M3AP ID IE is present for an MBMS-Service-associated logical M3-connection Item IE, then the MCE shall ignore the MBMS-Service-associated logical M3-connection Item IE. The MCE may return the empty MBMS-Service-associated logical M3-connection Item IE in the MBMS-Service-associated logical M3-connection list IE in the RESET ACKNOWLEDGE message.

8.5.3.3 Crossing of Reset Messages

If Reset procedure is ongoing in MCE and the MCE receives a RESET message from the peer entity on the same M3 interface related to one or several MBMS service associations previously requested to be reset, indicated explicitly or implicitly in the received RESET message, the MCE shall respond with RESET ACKNOWLEDGE message as described in 8.5.2.1.

If Reset procedure is ongoing in MME and the MME receives a RESET message from the peer entity on the same M3 interface related to one or several MBMS service associations previously requested to be reset, indicated explicitly or implicitly in the received RESET message, the MME shall respond with RESET ACKNOWLEDGE message as described in 8.5.2.2.

8.6 MBMS Session Update

8.6.1 General

The purpose of the MBMS Session Update procedure is to inform the MCE about changing characteristics of the MBMS session, e.g. changing the service area information of one service session.

The procedure uses MBMS-Service-associated signalling.

8.6.2 Successful Operation

![Diagram](image)

**Figure 8.6.2-1. MBMS Session Update procedure. Successful operation.**

The MME initiates the procedure by sending an MBMS SESSION UPDATE REQUEST message to the MCE.
The MCE shall use the information contained in the MBMS SESSION UPDATE REQUEST message to update its own parameters of this session such as the service area parameters. The MCE shall then transfer the updated parameters to the involved eNBs according to the service area.

After receiving the response from the involved eNBs the MCE shall report to the MME in the MBMS SESSION UPDATE RESPONSE message the result of the update.

8.6.3 Unsuccessful Operation

If the MCE determines that the E-UTRAN is not able to accommodate the requested updating, the eNB shall send to the MME the MBMS SESSION UPDATE FAILURE message.

8.6.4 Abnormal Conditions

Not applicable.

9 Elements for M3AP Communication

9.1 Message Functional Definition and Content

9.1.1 General

Subclauses 9.1 and 9.2 describe the structure of the messages and information elements required for the M3AP protocol in tabular format. Subclause 9.3 provides the corresponding ASN.1 definition.

The following attributes are used for the tabular description of the messages and information elements: Presence, Range Criticality and Assigned Criticality.

9.1.2 Message Contents

9.1.2.1 Presence

All information elements in the message descriptions below are marked mandatory, optional or conditional according to table 4.
Table 9-1: Meaning of abbreviations used in M3AP messages

<table>
<thead>
<tr>
<th>Abbreviation</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>M</td>
<td>IEs marked as Mandatory (M) shall always be included in the message.</td>
</tr>
<tr>
<td>O</td>
<td>IEs marked as Optional (O) may or may not be included in the message.</td>
</tr>
<tr>
<td>C</td>
<td>IEs marked as Conditional (C) shall be included in a message only if the condition is satisfied. Otherwise the IE shall not be included.</td>
</tr>
</tbody>
</table>

9.1.2.2 Criticality

Each Information Element or Group of Information Elements may have criticality information applied to it. Following cases are possible:

Table 9-2: Meaning of content within "Criticality" column

<table>
<thead>
<tr>
<th>Abbreviation</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>–</td>
<td>No criticality information is applied explicitly.</td>
</tr>
<tr>
<td>YES</td>
<td>Criticality information is applied. This is usable only for non-repetable IEs</td>
</tr>
<tr>
<td>GLOBAL</td>
<td>The IE and all its repetitions together have one common criticality information. This is usable only for repeatable IEs.</td>
</tr>
<tr>
<td>EACH</td>
<td>Each repetition of the IE has its own criticality information. It is not allowed to assign different criticality values to the repetitions. This is usable only for repeatable IEs.</td>
</tr>
</tbody>
</table>

9.1.2.3 Range

The Range column indicates the allowed number of copies of repetitive IEs/IE groups.

9.1.2.4 Assigned Criticality

This column provides the actual criticality information as defined in subclause 10.3.2, if applicable.

9.1.3 MBMS SESSION START REQUEST

This message is sent by the MME to establish an MBMS E-RAB and an M3AP signalling connection.

Direction: MME → MCE.

<table>

9.2 Information Element Definitions

9.2.1 Radio Network Layer Related IEs

9.2.1.1 Message Type

The Message Type IE uniquely identifies the message being sent. It is mandatory for all messages.

<table>
<thead>
<tr>
<th>IE/Group Name</th>
<th>Presence</th>
<th>Range</th>
<th>IE type and reference</th>
<th>Semantics description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Message Type</td>
<td>M</td>
<td></td>
<td></td>
<td>Assumed max no of messages is 256.</td>
</tr>
<tr>
<td>&gt;Procedure Code</td>
<td>M</td>
<td></td>
<td>(MBMS Session Start, MBMS Session Stop, MBMS Session Update, Error Indication, Reset, …)</td>
<td></td>
</tr>
<tr>
<td>&gt;Type of Message</td>
<td>M</td>
<td></td>
<td>CHOICE (Initiating Message, Successful Outcome, Unsuccessful Outcome, …)</td>
<td></td>
</tr>
</tbody>
</table>

9.2.1.2 Cause

The purpose of the Cause IE is to indicate the reason for a particular event for the M3AP protocol.
<table>
<thead>
<tr>
<th>IE/Group Name</th>
<th>Presence</th>
<th>Range</th>
<th>IE Type and Reference</th>
</tr>
</thead>
<tbody>
<tr>
<td>CHOICE Cause Group</td>
<td>M</td>
<td></td>
<td></td>

<tr>
<td>&gt; Radio Network Layer</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>&gt;&gt; Radio Network Layer</td>
<td>M</td>
<td></td>
<td>ENUMERATED</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>(Unknown or already allocated MCE MBMS M3AP ID, Unknown or already allocated MME</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>MBMS M3AP ID, Unknown or inconsistent pair of MBMS M3AP IDs, Radio resources not</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>available, Invalid QoS combination, Interaction with other procedure, Not supported</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>QCI value, Unspecified, …)</td>
</tr>
<tr>
<td>&gt; Transport Layer</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>&gt;&gt; Transport Layer Cause</td>
<td>M</td>
<td></td>
<td>ENUMERATED</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>(Transport Resource Unavailable, Unspecified, …)</td>
</tr>
<tr>
<td>&gt; NAS</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>&gt;&gt; NAS Cause</td>
<td>M</td>
<td></td>
<td>ENUMERATED</td>
</tr>
<tr>

<tr>
<td></td>
<td></td>
<td></td>
<td>Failure, O&amp;M Intervention, Unspecified, …)</td>
</tr>
</tbody>
</table>

The meaning of the different cause values is described in the following table. In general, "not supported" cause values indicate that the related capability is missing. On the other hand, "not available" cause values indicate that the related capability is present, but insufficient resources were available to perform the requested action.
<table>
<thead>
<tr>
<th>Radio Network Layer cause</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Unknown or already allocated MCE MBMS M3AP ID</td>
<td>The action failed because the MCE MBMS M3AP ID is either unknown, or (for a first message received at the MCE) is known and already allocated to an existing MBMS service related context.</td>
</tr>
<tr>
<td>Unknown or already allocated MME MBMS M3AP ID</td>
<td>The action failed because the MME MBMS M3AP ID is either unknown, or (for a first message received at the MCE) is known and already allocated to an existing context.</td>
</tr>
<tr>
<td>Unknown or inconsistent pair of MBMS M3AP IDs</td>
<td>The action failed because both MBMS M3AP IDs are unknown, or are known but do not define a single MBMS context.</td>
</tr>
<tr>
<td>Radio resources not available</td>
<td>No requested radio resources are available.</td>
</tr>
<tr>
<td>Invalid QoS combination</td>
<td>The action was failed because of invalid QoS combination.</td>
</tr>
<tr>
<td>Interaction with other procedure</td>
<td>The action is due to an ongoing interaction with another procedure.</td>
</tr>
<tr>
<td>Not supported QCI Value</td>
<td>The E-RAB setup failed because the requested QCI is not supported.</td>
</tr>
<tr>
<td>Unspecified</td>
<td>Sent for radio network layer cause when none of the specified cause values applies.</td>

</table>

9.2.1.3 MBMS E-RAB QoS parameters

This IE defines the QoS to be applied to an MBMS E-RAB.
IE/Group Name | Presence | Range | IE type and reference | Semantics description | Criticality | Assigned Criticality
---|---|---|---|---|---|---
MBMS E-RAB QoS Parameters

>QCI
M
INTEGER
QoS Class Identifier defined in TS 23.246 [6]. Coding is specified in TS 23.203 [7].

>GBR QoS Information
O
9.2.1.5
This IE applies to GBR bearers only and shall be ignored otherwise.

>Allocation and Retention Priority
M
9.2.1.8
YES ignore

9.2.1.4 Void

9.2.1.5 GBR QoS Information
This IE indicates the maximum and guaranteed bit rates of a GBR bearer for downlink and uplink.

IE/Group Name | Presence | Range | IE type and reference | Semantics description
---|---|---|---|---
MBMS E-RAB Maximum Bit Rate Downlink
M
Bit Rate
9.2.1.6
Desc.: This IE indicates the maximum downlink MBMS E-RAB Bit Rate (i.e. from the EPC to E-UTRAN) for this bearer.

MBMS E-RAB Guaranteed Bit Rate Downlink
M
Bit Rate
9.2.1.6
Desc.: This IE indicates the downlink guaranteed MBMS E-RAB Bit Rate (provided that there is data to deliver) from the EPC to the E-UTRAN for this bearer.

9.2.1.6 Bit Rate
This IE indicates the number of bits delivered by E-UTRAN in DL within a period of time, divided by the duration of the period. It is used, for example, to indicate the maximum or guaranteed bit rate for a GBR bearer, or an aggregated maximum bit rate.

IE/Group Name | Presence | Range | IE type and reference | Semantics description
---|---|---|---|---
Bit Rate
INTEGER
(0..10,000,000,000)
The unit is: bit/s

9.2.1.7 Criticality Diagnostics
The Criticality Diagnostics IE is sent by the MME or the MCE when parts of a received message have not been comprehended or were missing, or if the message contained logical errors. When applicable, it contains information about which IEs were not comprehended or were missing.

For further details on how to use the Criticality Diagnostics IE, (see section 10).
### IE/Group Name | Presence | Range | IE type and reference | Semantics description
--- | --- | --- | --- | ---
Procedure Code | O | | INTEGER (0..255) | Procedure Code is to be used if Criticality Diagnostics is part of Error Indication procedure, and not within the response message of the same procedure that caused the error.

Triggering Message | O | | ENUMERATED( | The Triggering Message is used only if the Criticality Diagnostics is part of Error Indication procedure.

Procedure Criticality | O | | ENUMERATED( reject, ignore, notify) | This Procedure Criticality is used for reporting the Criticality of the Triggering message (Procedure).

Information Element Criticality Diagnostics | | | 0 to <maxnoof errors> |

<table>
<thead>

<th>Presence</th>
<th>Range</th>
<th>IE type and reference</th>
<th>Semantics description</th>
</tr>
</thead>
</table>
| >Pre-emption Vulnerability | M | | ENUMERATED(not pre-emptable, pre-emptable) | This IE indicates the vulnerability of the MBMS E-RAB to preemption of other MBMS E-RABs.
9.2.2 Transport Network Layer Related IEs

9.2.2.1 IP Address

This information element is an IP address to be used for the user plane transport.

<table>
<thead>
<tr>
<th>IE/Group Name</th>
<th>Presence</th>
<th>Range</th>
<th>IE type and reference</th>
<th>Semantics description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Transport Layer Address</td>
<td>M</td>
<td></td>
<td>OCTET STRING (4..16)</td>
<td>The Radio Network Layer is not supposed to interpret the address information. It should pass it to the transport layer for interpretation. For details on the Transport Layer Address, see ref. TS 36.445 [9].</td>
</tr>
</tbody>
</table>

9.2.2.2 GTP-TEID

This information element is the GTP Tunnel Endpoint Identifier to be used for the user plane transport between eNB and the MBMS-GW.

<table>
<thead>
<tr>
<th>IE/Group Name</th>
<th>Presence</th>
<th>Range</th>
<th>IE type and reference</th>
<th>Semantics description</th>
</tr>
</thead>
<tbody>
<tr>
<td>GTP TEID</td>
<td>M</td>
<td></td>
<td>OCTET STRING (4)</td>
<td>For details and range, see TS 29.281 [12].</td>
</tr>
</tbody>
</table>

9.2.3 NAS Related IEs

9.2.3.1 MCE MBMS M3AP ID

The MCE MBMS M3AP ID uniquely identifies the MBMS Service association over the M3 interface within the MCE.

<table>
<thead>
<tr>
<th>IE/Group Name</th>
<th>Presence</th>
<th>Range</th>
<th>IE type and reference</th>
<th>Semantics description</th>
</tr>
</thead>
<tbody>
<tr>
<td>MCE MBMS M3AP ID</td>
<td>M</td>
<td></td>
<td>INTEGER (0 .. 65535)</td>
<td></td>
</tr>
</tbody>
</table>

9.2.3.2 MME MBMS M3AP ID

The MME MBMS M3AP ID uniquely identifies the MBMS Service association over the M3 interface within the MME.

<table>
<thead>
<tr>
<th>IE/Group Name</th>
<th>Presence</th>
<th>Range</th>
<th>IE type and reference</th>
<th>Semantics description</th>
</tr>
</thead>
<tbody>
<tr>
<td>MME MBMS M3AP ID</td>
<td>M</td>
<td></td>
<td>INTEGER (0 .. 65535)</td>
<td></td>
</tr>
</tbody>
</table>

9.2.3.3 TMGI

The TMGI uniquely identifies the MBMS Bearer Service.

<table>
<thead>
<tr>
<th>IE/Group Name</th>
<th>Presence</th>
<th>Range</th>
<th>IE type and reference</th>
<th>Semantics description</th>
</tr>
</thead>
<tbody>
<tr>
<td>TMGI</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>&gt;PLMN identity</td>
<td>M</td>
<td></td>
<td>9.2.3.7</td>
<td></td>
</tr>
<tr>
<td>&gt;Service ID</td>
<td>M</td>
<td></td>
<td>OCTET STRING (SIZE (3))</td>
<td></td>
</tr>
</tbody>
</table>
9.2.3.4 MBMS Session Identity

The MBMS Session Identity identifies the session of a MBMS Bearer Service in E-UTRAN and is used by the UE to recognise repetitions of a session.

This IE is transparent to RAN.

<table>
<thead>
<tr>
<th>IE/Group Name</th>
<th>Presence</th>
<th>Range</th>
<th>IE type and reference</th>
<th>Semantics description</th>
</tr>
</thead>
<tbody>
<tr>
<td>MBMS Session Identity</td>
<td>M</td>
<td></td>
<td>OCTET STRING (SIZE (1))</td>
<td>Coded same way as the MBMS Session Identity IE as defined in TS 29.061 [8].</td>
</tr>
</tbody>
</table>

9.2.3.5 MBMS Session Duration

This IE defines the duration of the MBMS Session.

<table>
<thead>
<tr>
<th>IE/Group Name</th>
<th>Presence</th>
<th>Range</th>
<th>IE type and reference</th>
<th>Semantics description</th>
</tr>
</thead>
<tbody>
<tr>
<td>MBMS Session Duration</td>
<td>M</td>
<td></td>
<td>OCTET STRING (SIZE (3))</td>
<td>Coded as the value part of MBMS-Session-Duration AVP as defined in TS 29.061 [8].</td>
</tr>
</tbody>
</table>

9.2.3.6 MBMS Service Area

The MBMS Service Area IE consists of a list of one or several MBMS Service Area Identities where each MBMS Service Area Identity is frequency agnostic and can be mapped onto one or more cells.

<table>
<thead>
<tr>
<th>IE/Group Name</th>
<th>Presence</th>
<th>Range</th>
<th>IE type and reference</th>
<th>Semantics description</th>
</tr>
</thead>
<tbody>
<tr>
<td>MBMS Service Area</td>
<td>M</td>
<td></td>
<td>OCTET STRING</td>
<td>Value part coded per MBMS Service Area AVP as defined in TS 29.061 [8].</td>
</tr>
</tbody>
</table>

9.2.3.7 PLMN Identity

This information element indicates the PLMN Identity.

<table>
<thead>
<tr>
<th>IE/Group Name</th>
<th>Presence</th>
<th>Range</th>
<th>IE type and reference</th>
<th>Semantics description</th>
</tr>
</thead>
<tbody>
<tr>
<td>PLMN identity</td>
<td>M</td>
<td></td>
<td>OCTET STRING (SIZE (3))</td>
<td>- digits 0 to 9, encoded 0000 to 1001,</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>- 1111 used as filler digit,</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>two digits per octet,</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>- bits 4 to 1 of octet n encoding digit 2n-1,</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>- bits 8 to 5 of octet n encoding digit 2n.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>- The Selected PLMN identity consists of 3 digits from MCC</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>followed by either</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>- a filler digit plus 2 digits from MNC (in case of 2 digit MNC)</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>or</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>- 3 digits from MNC (in case of a 3 digit MNC).</td>
</tr>
</tbody>
</table>
9.2.3.8 Minimum Time to MBMS Data Transfer

This IE denotes the minimum time occurring between the transmission of the MBMS SESSION START REQUEST message to the MCE and the actual start of the data transfer. The coding of this element is described in TS 48.018 [10].

<table>
<thead>
<tr>
<th>IE/Group Name</th>
<th>Presence</th>
<th>Range</th>
<th>IE type and reference</th>
<th>Semantics description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Minimum Time to MBMS Data Transfer</td>
<td>M</td>
<td>OCTET STRING (SIZE (1))</td>
<td></td>
<td>Coded as the value part of Time to MBMS Data Transfer IE defined in TS 48.018 [10].</td>
</tr>
</tbody>
</table>
9.3  Message and Information Element Abstract Syntax (with ASN.1)

9.3.1  General

Sub clause 9.3 presents the Abstract Syntax of the M3AP protocol with ASN.1. In case there is contradiction between the ASN.1 definition in this sub clause and the tabular format in sub clause 9.1 and 9.2, the ASN.1 shall take precedence, except for the definition of conditions for the presence of conditional elements, in which the tabular format shall take precedence.

The ASN.1 definition specifies the structure and content of M3AP messages. M3AP messages can contain any IEs specified in the object set definitions for that message without the order or number of occurrence being restricted by ASN.1. However, for this version of the standard, a sending entity shall construct a M3AP message according to the PDU definitions module and with the following additional rules (Note that in the following IE means an IE in the object set with an explicit id. If one IE needed to appear more than once in one object set, then the different occurrences have different IE ids):

- IEs shall be ordered (in an IE container) in the order they appear in object set definitions.
- Object set definitions specify how many times IEs may appear. An IE shall appear exactly once if the presence field in an object has value "mandatory". An IE may appear at most once if the presence field in an object has value "optional" or "conditional". If in a tabular format there is multiplicity specified for an IE (i.e. an IE list) then in the corresponding ASN.1 definition the list definition is separated into two parts. The first part defines an IE container list in which the list elements reside. The second part defines list elements. The IE container list appears as an IE of its own. For this version of the standard an IE container list may contain only one kind of list elements.

If a M3AP message that is not constructed as defined above is received, this shall be considered as Abstract Syntax Error, and the message shall be handled as defined for Abstract Syntax Error in clause 10.

9.3.2  Usage of Private Message Mechanism for Non-standard Use

The private message mechanism for non-standard use may be used:

- for special operator (and/or vendor) specific features considered not to be part of the basic functionality, i.e. the functionality required for a complete and high-quality specification in order to guarantee multivendor inter-operability.
- by vendors for research purposes, e.g. to implement and evaluate new algorithms/features before such features are proposed for standardisation.

The private message mechanism shall not be used for basic functionality. Such functionality shall be standardised.
