| Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-2. | | | | | | | | |
| Note 2: If UE supports multiple CC Combinations in the CA Configuration with the same $N_{RB_agg}$, only the combination with the highest $N_{RB_PCC}$ is tested. | | | | | | | | |

1. Connect the SS to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure group A.32 as appropriate.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Table 6.6.2.3A.2_2.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.2.3A.2_2.4.3.

### 6.6.2.3A.2_2.4.2 Test procedure

Same test procedure as in clause 6.6.2.3A.2.4.2 with following exceptions:

- In step 2, instead of clause 6.6.2.3A.2.4.3 → use clause 6.6.2.3A.2_2.4.3.
- In step 4, instead of Table 6.6.2.3A.2.4.1-1 → use Table 6.6.2.3A.2_2.4.1-1.
- In step 6, instead of clause 6.2.3A.2.5-1 → use Table 6.2.3A.2_2.5-1.

#### 6.6.2.3A.2_2.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6. In test procedure step 2, for SCC configuration there are no additional message contents.

#### 6.6.2.3A.2_2.5 Test Requirements

Same test requirements as in clause 6.6.2.3A.2.5 with following exception:

- Instead of Table 6.2.3A.2.5-1 → use Table 6.2.3A.2_2.5-1.

### 6.6.2.3A.3 Adjacent Channel Leakage power Ratio for CA (intra-band non-contiguous DL CA and UL CA)

#### 6.6.2.3A.3.1 Test purpose

Same test purpose as defined in clause 6.6.2.3A.1.1.

### 6.6.2.3A.3_1 Adjacent Channel Leakage power Ratio for CA (intra-band non-contiguous DL CA and UL CA) for UL 64QAM

#### 6.6.2.3A.3_1.1 Test purpose

Same test purpose as defined in clause 6.6.2.3A.1.1.

#### 6.6.2.3A.3_1.2 Test applicability

This test case applies to all types of E-UTRA UE release 13 and forward that support intra-band non-contiguous DL CA and UL CA and UL 64QAM.

#### 6.6.2.3A.3_1.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.6.2.3A.0.

#### 6.6.2.3A.3_1.4 Test description

##### 6.6.2.3A.3_1.4.1 Initial condition

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 6.6.2.3A.3_1.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 6.6.2.3A.3_1.4.1-1: Test Configuration Table**

| Initial Conditions | |
|---|---|
| Test Environment as specified in TS 36.508[7] subclause 4.1 | NC, TL/VL, TL/VH, TH/VL, TH/VH |
| Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 6.1-2. | Refer to test points<br>A: Mid frequency, Maximum Wgap(low + high frequency) |
| Test CC Combination setting ($N_{RB}$) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE. | Refer to test point<br>Test only test points with<br>Lowest $N_{RB}$ for PCC and SCC<br>Highest $N_{RB}$ for PCC and SCC |

| Test Parameters for CA Configurations | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| ID | CA Configuration / $N_{RB_agg}$ | | $W_{gap}$ [MHz] | DL Allocation | | UL Allocation | | | |
| | PCC $N_{RB}$ | SCCs $N_{RB}$ | | CC MOD | PCC & SCC RB allocation | CC MOD | PCC $N_{RB_alloc}$ ($L_{CRB}$ @ $RB_{start}$) | CC MOD | SCC $N_{RB_alloc}$ ($L_{CRB}$ @ $RB_{start}$) |

| 1 | 25 | 25 | 35 | N/A | N/A | 64QAM | P_1@0 | 64QAM | S_1@24 |
| 2 | 25 | 25 | 35 | N/A | N/A | 64QAM | P_25@0 | 64QAM | S_25@0 |
| 3 | 25 | 25 | 5 | N/A | N/A | 64QAM | P_1@0 | 64QAM | S_1@24 |
| 4 | 25 | 25 | 5 | N/A | N/A | 64QAM | P_25@0 | 64QAM | S_25@0 |
| 5 | 100 | 100 | 5 | N/A | N/A | 64QAM | P_1@0 | 64QAM | S_1@99 |
| 6 | 100 | 100 | 5 | N/A | N/A | 64QAM | P_25@0 | 64QAM | S_25@75 |
| 7 | 100 | 100 | 5 | N/A | N/A | 64QAM | P_100@0 | 64QAM | S_100@0 |

1. Connect the SS to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure group A.32 as appropriate.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Table 6.6.2.3A.1.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.2.3A.1.4.3.

### 6.6.2.3A.3_1.4.2 Test procedure

Same test procedure as in clause 6.6.2.3A.3.4.2.

### 6.6.2.3A.3_1.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6. In test procedure step 2, for SCC configuration there are no additional message contents.

### 6.6.2.3A.3_1.5 Test Requirements

Same test requirements as in clause 6.6.2.3A.3.5.

### 6.6.2.3A.3.2 Test applicability

This test case applies to all types of E-UTRA UE release 11 and forward that support intra-band non-contiguous DL CA and UL CA but do not support UL 64QAM or UL 256QAM..

### 6.6.2.3A.3.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.6.2.3A.0.

### 6.6.2.3A.3.4 Test description

#### 6.6.2.3A.3.4.1 Initial condition

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 6.6.2.3A.3.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 6.6.2.3A.3.4.1-1: Test Configuration Table**

| **Initial Conditions** | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| Test Environment as specified in TS 36.508[7] subclause 4.1 | | | | NC, TL/VL, TL/VH, TH/VL, TH/VH | | | | | |
| Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 6.1-2. | | | | Refer to test points<br>A: Low Wgap, Maximum Wgap | | | | | |
| Test CC Combination setting ($N_{RB}$) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE. | | | | Refer to test point<br>Test only test points with<br>Lowest $N_{RB}$ for PCC and SCC<br>Highest $N_{RB}$ for PCC and SCC | | | | | |
| **Test Parameters for CA Configurations** | | | | | | | | | |
| **ID** | **CA Configuration / $N_{RB_agg}$** | | **$W_{gap}$ [MHz]** | **DL Allocation** | | **UL Allocation** | | | |
| | **PCC $N_{RB}$** | **SCCs $N_{RB}$** | | **CC MOD** | **PCC & SCC RB allocation** | **CC MOD** | **PCC $N_{RB_alloc}$ ($L_{CRB}$ @ $RB_{start}$)** | **CC MOD** | **SCC $N_{RB_alloc}$ ($L_{CRB}$ @ $RB_{start}$)** |
| **Test Parameters for CA_4A-4A Configurations** | | | | | | | | | |
| 1 | 25 | 25 | 35 | N/A | N/A | 16QAM | P_1@0 | 16QAM | S_1@24 |
| 2 | 25 | 25 | 35 | N/A | N/A | 16QAM | P_25@0 | 16QAM | S_25@0 |
| 3 | 25 | 25 | 5 | N/A | N/A | 16QAM | P_1@0 | 16QAM | S_1@24 |
| 4 | 25 | 25 | 5 | N/A | N/A | 16QAM | P_25@0 | 16QAM | S_25@0 |
| 5 | 100 | 100 | 5 | N/A | N/A | 16QAM | P_1@0 | 16QAM | S_1@99 |
| 6 | 100 | 100 | 5 | N/A | N/A | 16QAM | P_25@0 | 16QAM | S_25@75 |
| 7 | 100 | 100 | 5 | N/A | N/A | 16QAM | P_100@0 | 16QAM | S_100@0 |

1. Connect the SS to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure group A.32 as appropriate.

2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.

3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.

4. The UL Reference Measurement channels are set according to Table 6.6.2.3A.1.4.1-1.

5. Propagation conditions are set according to Annex B.0.

6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.2.3A.1.4.3.

#### 6.6.2.3A.3.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.0 for all downlink physical channels.

2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 6.6.2.3A.1.4.3

3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).

4. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 6.6.2.3A.3.4.1-1 on both PCC and SCC. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.

5. Send continuously uplink power control “up” commands in every uplink scheduling information to the UE until the UE transmits at $P_{UMAX}$ level.

6. Measure the mean power over all component carriers of the UE in the CA configuration of the radio access mode according to the test configuration, which shall meet the requirements described in Table 6.2.3A.3.5-1. The period of the measurement shall be at least the continuous duration of one sub-frame (1ms). For TDD slots with transient periods are not under test.

7. Measure the rectangular filtered mean power for E-UTRA.

8. Measure the rectangular filtered mean power of the CA E-UTRA adjacent channel on lower side of the lowest sub-clock, and the higher side of the highest sub-block (out of gap measurement).

9. If Wgap is larger or equal to either of the sub-block bandwidths, perform this step, otherwise continue to next step. Measure the rectangular filtered mean power of the CA E-UTRA adjacent channel on higher side of the lowest sub-clock, and the lower side of the highest sub-block (in gap measurement).

10. Measure the RRC filtered mean power of the first and the second UTRA adjacent channel on lower side of the lowest sub-clock, and the higher side of the highest sub-block (out of gap measurement).

11. If Wgap is larger or equal to 5 MHz, perform this step, otherwise continue to next step. Measure the rectangular filtered mean power of the first UTRA adjacent channel on higher side of the lowest sub-clock, and the lower side of the highest sub-block (in gap measurement).

12. If Wgap is larger or equal to 15 MHz, perform this step, otherwise continue to next step. Measure the rectangular filtered mean power of the second UTRA adjacent channel on higher side of the lowest sub-clock, and the lower side of the highest sub-block (in gap measurement).

13. Calculate the ratio of the power between the values measured in step 7 over step 8 for CA E-$UTRA_{ACLR}$ (out of gap measurement).

14. Calculate the ratio of the power between the values measured in step 7 over step 9 for CA E-$UTRA_{ACLR}$ (in gap measurement).

15. Calculate the ratio of the power between the values measured in step 7 over step 10 for $UTRA_{ACLR1}$, $UTRA_{ACLR2}$ (out of gap measurement).

16. Calculate the ratio of the power between the values measured in step 7 over step 11 and 12 for $UTRA_{ACLR1}$, $UTRA_{ACLR2}$ (in gap measurement).

#### 6.6.2.3A.3.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6. In test procedure step 2, for SCC configuration there are no additional message contents.

### 6.6.2.3A.3.5 Test Requirements

#### 6.6.2.3A.3.5.1 Test requirements E-UTRA

- The measured UE mean power, derived in step 6, shall fulfil requirements in Table 6.2.3A.3.5-1 as appropriate,

and

- if the measured adjacent channel power is greater than –50 dBm then the measured E-UTRA$_{ACLR}$, derived in step 13 and 14, shall be higher than the limits in table 6.6.2.3A.3.5.1-1.

**Table 6.6.2.3A.3.5.1-1: E-UTRA UE ACLR**

| | **Channel bandwidth / E-UTRA$_{ACLR1}$ / measurement bandwidth** | | | | | |
|---|---|---|---|---|---|---|
| | **1.4 MHz** | **3.0 MHz** | **5 MHz** | **10 MHz** | **15 MHz** | **20 MHz** |
| **E-UTRA$_{ACLR1}$** | 29.2 dB | 29.2 dB | 29.2 dB | 29.2 dB | 29.2 dB | 29.2 dB |
| **E-UTRA channel Measurement bandwidth** | 1.08 MHz | 2.7 MHz | 4.5 MHz | 9.0 MHz | 13.5 MHz | 18 MHz |
| **UE channel** | +1.4 MHz or -1.4 MHz | +3 MHz or -3 MHz | +5MHz or -5MHz | +10MHz or -10MHz | +15MHz or -15MHz | +20MHz or -20MHz |

#### 6.6.2.3A.3.5.2 Test requirements UTRA

If the measured UTRA channel power is greater than –50dBm then the measured UTRA$_{ACLR1}$, UTRA$_{ACLR2}$, derived in steps 15 and 16, shall be higher than the limits in table 6.6.2.3A.3.5.2-1.

**Table 6.6.2.3A.3.5.2-1: UTRA UE ACLR**

| | **Channel bandwidth / UTRA$_{ACLR1/2}$ / measurement bandwidth** | | | | | |
|---|---|---|---|---|---|---|
| | **1.4 MHz** | **3.0 MHz** | **5 MHz** | **10 MHz** | **15 MHz** | **20 MHz** |

| | | | | | | |
|---|---|---|---|---|---|---|
| **$UTRA_{ACLR1}$** | 32.2 dB | 32.2 dB | 32.2 dB | 32.2 dB | 32.2 dB | 32.2 dB |
| **Adjacent channel centre frequency offset (in MHz)** | 0.7+$BW_{UTRA}$/2 / -0.7-$BW_{UTRA}$/2 | 1.5+$BW_{UTRA}$/2 / -1.5-$BW_{UTRA}$/2 | 2.5+$BW_{UTRA}$/2 / -2.5-$BW_{UTRA}$/2 | 5+$BW_{UTRA}$/2 / -5-$BW_{UTRA}$/2 | 7.5+$BW_{UTRA}$/2 / -7.5-$BW_{UTRA}$/2 | 10+$BW_{UTRA}$/2 / -10-$BW_{UTRA}$/2 |
| **$UTRA_{ACLR2}$** | - | - | 35.2 dB | 35.2 dB | 35.2 dB | 35.2 dB |
| **Adjacent channel centre frequency offset (in MHz)** | - | - | 2.5+3*$BW_{UTRA}$/2 / -2.5-3*$BW_{UTRA}$/2 | 5+3*$BW_{UTRA}$/2 / -5-3*$BW_{UTRA}$/2 | 7.5+3*$BW_{UTRA}$/2 / -7.5-3*$BW_{UTRA}$/2 | 10+3*$BW_{UTRA}$/2 / -10-3*$BW_{UTRA}$/2 |
| **E-UTRA channel Measurement bandwidth** | 1.08 MHz | 2.7 MHz | 4.5 MHz | 9.0 MHz | 13.5 MHz | 18 MHz |
| **UTRA 5MHz channel Measurement bandwidth[1]** | 3.84 MHz | 3.84 MHz | 3.84 MHz | 3.84 MHz | 3.84 MHz | 3.84 MHz |
| **UTRA 1.6MHz channel measurement bandwidth[2]** | 1.28 MHz | 1.28 MHz | 1.28 MHz | 1.28 MHz | 1.28 MHz | 1.28 MHz |
| Note 1: Applicable for E-UTRA FDD co-existence with UTRA FDD in paired spectrum.<br>Note 2: Applicable for E-UTRA TDD co-existence with UTRA TDD in unpaired spectrum.<br>Note 3: $BW_{UTRA}$ for UTRA FDD is 5MHz and for UTRA TDD is 1.6MHz. | | | | | | |

Editor's Note: This test case is incomplete. The following items are missing or are incomplete:

-The test applicability needs to be added to TS36.521-2

- The test configuration table for inter-band CA is needed for FFS.

### 6.6.2.3A.4.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to adjacent channels in terms of Adjacent Channel Leakage power Ratio (ACLR) for CA.

### 6.6.2.3A.4.2 Test applicability

This test case applies to all types of E-UTRA UE release 13 and forward that support 3DL CA and 3UL CA.

### 6.6.2.3A.4.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.6.2.3A.0.

### 6.6.2.3A.4.4 Test description

#### 6.6.2.3A.4.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and CC combinations based on E-UTRA CA configurations specified in table 5.4.2A.1-1 and 5.4.2A.1-2. All of these configurations shall be tested with applicable test parameters for each CA Configuration, and are shown in table 6.6.2.3A.4.4.1-1 for intra-band contiguous CA, 6.6.2.3A.4.4.1-2 for inter-band CA and 6.6.2.3A.4.4.1-3 for intra-band non-contiguous CA. The details of the uplink reference measurement channels (RMCs) are specified in Annexe A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 6.6.2.3A.4.4.1-1: Test Configuration Table for intra-band contiguous CA**

| Initial Conditions | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| Test Environment as specified in TS 36.508[7] subclause 4.1 | | | NC, TL/VL, TL/VH, TH/VL, TH/VH | | | | | | |

|---|---|
| Note 1: | CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1. |
| Note 2: | If in the CA Configuration UE supports multiple CC Combinations with the same $N_{RB_agg}$ , only the first of those is tested, according to the order on the Test Configuration Table list. |

**Table 6.6.2.3A.4.4.1-2: Test Configuration Table for inter-band CA**

| **Initial Conditions** | | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| Test Environment as specified in TS 36.508[7] subclause 4.1 | | | | | NC, TL/VL, TL/VH, TH/VL, TH/VH | | | |
| Test Frequencies as specified in TS 36.508 [7] subclause 4.3.1 for different CA bandwidth classes | | | | | Low and High range for both PCC and SCC (Note 3) | | | |
| Test CC Combination setting (NRB_agg) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE. | | | | | Lowest $N_{RB_agg}$<br>Highest $N_{RB_agg}$<br>(Note 2) | | | |

Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-2.
Note 2: If in the CA Configuration UE supports multiple CC Combinations with the same NRB_agg. only the first of those is tested. according to the order on the Test Configuration Table list.
Note 3: For Low range place test point with RBstart=0. For High range place test point with $RB_{start}=RB_{max}-L_{CRB}+1$.

**Table 6.6.2.3A.4.4.1-3: Test Configuration Table for intra-band non-contiguous CA**

| Initial Conditions | |
|---|---|
| Test Environment as specified in TS 36.508[7] subclause 4.1 | NC, TL/VL, TL/VH, TH/VL, TH/VH |
| Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 6.1-2. | Refer to test points<br>A: Low Wgap, Maximum Wgap |
| Test CC Combination setting ($N_{RB}$) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE. | Refer to test point<br>Test only test points with<br>Lowest $N_{RB}$ for PCC and SCC<br>Highest $N_{RB}$ for PCC and SCC |

| Test Parameters for CA Configurations | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| ID | CA Configuration / $N_{RB_agg}$ | | $W_{gap}$ [MHz] | DL Allocation | | UL Allocation | | | | |

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A Figure group A.32 as appropriate.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1, and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channel is set according to Table 6.6.2.3A.4.4.1-1 for intra-band contiguous CA, 6.6.2.3A.4.4.1-2 for inter-band CA and 6.6.2.3A.4.4.1-3 for intra-band non-contiguous CA.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.2.3A.4.4.3.

### 6.6.2.3A.4.4.2 Test procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.0 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 6.6.2.3A.1.4.3
3. SS activates SCCs by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).

4. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 6.6.2.3A.1.4.1-1 for intra-band contiguous CA, 6.6.2.3A.4.4.1-2 for inter-band CA and 6.6.2.3A.4.4.1-3 for intra-band non-contiguous CA on all PCC and SCCs. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.

5. Send continuously uplink power control "up" commands in every uplink scheduling information to the UE until the UE transmits at $P_{UMAX}$ level.

6. Measure the mean power over all component carriers of the UE in the CA configuration of the radio access mode according to the test configuration, which shall meet the requirements described in Table 6.2.3A.1.5-1 for intra-band non-contiguous CA, 6.2.3A.2.5-1 for inter-band CA and 6.2.3A.3.5-1 for intra-band non-contiguous CA. The period of the measurement shall be at least the continuous duration of one sub-frame (1ms). For TDD slots with transient periods are not under test.

7. Measure the rectangular filtered mean power for CA E-UTRA (in the first band for inter-band CA UE).

8. For intra-band non-contiguous 3UL CA UE, execute steps 8a) to 8d):

   8a) Measure the rectangular filtered mean power of the first CA E-UTRA adjacent channel on both lower and upper side of the CA E-UTRA channel, respectively.

   8b) Measure the RRC filtered mean power of the first and the second UTRA adjacent channel on both lower and upper side of the CA E-UTRA channel, respectively.

   8c) Calculate the ratio of the power between the values measured in step 7 over step 8a) for CA E-$UTRA_{ACLR}$.

   8d) Calculate the ratio of the power between the values measured in step 7 over step 8b) for $UTRA_{ACLR1}$, $UTRA_{ACLR2}$

9. For inter-band 3UL CA UE, execute steps 9a) to 9e):

   9a) Measure the rectangular filtered mean power of the first CA E-UTRA adjacent channel on both lower and upper side of the CA E-UTRA channel in the first band of the CA configuration, respectively

   9b) Measure the RRC filtered mean power of the first and the second UTRA adjacent channel on both lower and upper side of the CA E-UTRA channel in the first band of the CA configuration, respectively.

   9c) Calculate the ratio of the power between the values measured in step 7 over step 9a) for CA E-$UTRA_{ACLR}$.

   9d) Calculate the ratio of the power between the values measured in step 7 over step 9b) for $UTRA_{ACLR1}$, $UTRA_{ACLR2}$.

   9e) Repeat steps 6 to 11 for the second band of the CA configuration.

10. For intra-band non-contiguous 3UL CA UE, execute steps 10a) to 10i):

    10a) Measure the rectangular filtered mean power of the CA E-UTRA adjacent channel on lower side of the lowest sub-clock, and the higher side of the highest sub-block (out of gap measurement).

    10b) If Wgap is larger or equal to either of the sub-block bandwidths, perform this step, otherwise continue to next step. Measure the rectangular filtered mean power of the CA E-UTRA adjacent channel on higher side of the lowest sub-clock, and the lower side of the highest sub-block (in gap measurement).

    10c) Measure the RRC filtered mean power of the first and the second UTRA adjacent channel on lower side of the lowest sub-clock, and the higher side of the highest sub-block (out of gap measurement).

    10d) If Wgap is larger or equal to 5 MHz, perform this step, otherwise continue to next step. Measure the rectangular filtered mean power of the first UTRA adjacent channel on higher side of the lowest sub-clock, and the lower side of the highest sub-block (in gap measurement).

    10e) If Wgap is larger or equal to 15 MHz, perform this step, otherwise continue to next step. Measure the rectangular filtered mean power of the second UTRA adjacent channel on higher side of the lowest sub-clock, and the lower side of the highest sub-block (in gap measurement).

    10f) Calculate the ratio of the power between the values measured in step 7 over step 10a) for CA E-$UTRA_{ACLR}$ (out of gap measurement).

10g) Calculate the ratio of the power between the values measured in step 7 over step 10b) for CA E-UTRA$_{ACLR}$ (in gap measurement).

10h) Calculate the ratio of the power between the values measured in step 7 over step 10c) for UTRA$_{ACLR1}$, UTRA$_{ACLR2}$ (out of gap measurement).

10i) Calculate the ratio of the power between the values measured in step 7 over step 10d) and 10e) for UTRA$_{ACLR1}$, UTRA$_{ACLR2}$ (in gap measurement).

#### 6.6.2.3A.4.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6. In test procedure step 2, for SCC configuration there are no additional message contents.

### 6.6.2.3A.4.5 Test Requirements

#### 6.6.2.3A.4.5.1 Test requirements of UTRA for CA

If the measured UTRA channel power is greater than –50dBm then the measured UTRA$_{ACLR1}$ and UTRA$_{ACLR2}$, derived in steps 8d), 9d) 10h)and 10i), shall be higher than the limits in table 6.6.2.3A.4.5.1-1.

**Table 6.6.2.3A.4.5.1-1: UTRA UE ACLR for CA**

| | **CA bandwidth class / UTRA$_{ACLR1/2}$ / measurement bandwidth** |
|---|---|
| | **CA bandwidth class D** |
| UTRA$_{ACLR1}$ | 32.2 dB |
| Adjacent channel centre frequency offset (in MHz) | + $BW_{Channel_CA}$ /2 + $BW_{UTRA}$/2<br>/<br>- $BW_{Channel_CA}$ / 2 - $BW_{UTRA}$/2 |
| UTRA$_{ACLR2}$ | 35.2 dB |
| Adjacent channel centre frequency offset (in MHz) | + $BW_{Channel_CA}$ /2 + 3*$BW_{UTRA}$/2<br>/<br>- $BW_{Channel_CA}$ /2 – 3*$BW_{UTRA}$/2 |
| CA E-UTRA channel Measurement bandwidth | $BW_{Channel_CA}$ - 2* $BW_{GB}$ |
| UTRA 5MHz channel Measurement bandwidth (Note 1) | 3.84 MHz |
| UTRA 1.6MHz channel measurement bandwidth (Note 2) | 1.28 MHz |
| Note 1: Applicable for E-UTRA FDD co-existence with UTRA FDD in paired spectrum.<br>Note 2: Applicable for E-UTRA TDD co-existence with UTRA TDD in unpaired spectrum. | |

#### 6.6.2.3A.4.5.2 Test requirements of CA E-UTRA

- The measured UE mean power in the channel bandwidth as specified in clause 5.4.2A, derived in step 6, shall fulfil requirements in Table 6.2.3A.1.5-1 for intra-band non-contiguous CA, 6.2.3A.2.5-1 for inter-band CA and 6.2.3A.3.5-1 for intra-band non-contiguous CA as appropriate,

and

- if the measured adjacent channel power is greater than –50 dBm then the measured CA E-UTRA$_{ACLR}$, derived in steps 8c), 9c) 10f)and 10g), shall be higher than the limits in table 6.6.2.3A.4.5.2-1.

**Table 6.6.2.3A.4.5.2-1: CA E-UTRA ACLR**

| | **CA bandwidth class / CA E-UTRA$_{ACLR}$ / Measurement bandwidth** |
|---|---|
| | **CA bandwidth class D** |

| | |
|---|---|
| CA E-UTRA$_{ACLR}$ | 29.2 dB |
| CA E-UTRA channel Measurement bandwidth | $BW_{Channel_CA}$ - 2* $BW_{GB}$ |
| Adjacent channel centre frequency offset (in MHz) | + $BW_{Channel_CA}$ / - $BW_{Channel_CA}$ |

## 6.6.2.3B Adjacent Channel Leakage power Ratio for UL-MIMO

### 6.6.2.3B.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to adjacent channels in terms of Adjacent Channel Leakage power Ratio (ACLR) for UL-MIMO.

### 6.6.2.3B.2 Test applicability

This test case applies to all types of E-UTRA UE release 10 and forward that support UL-MIMO.

### 6.6.2.3B.3 Minimum conformance requirements

For UE with multiple transmit antenna connectors, the requirements for ACLR are specified at each transmit antenna connector. ACLR requirements are specified for two scenarios for an adjacent E -UTRAACLR and UTRAACLR1/2 as shown in Figure 6.6.2.3B.3-1.

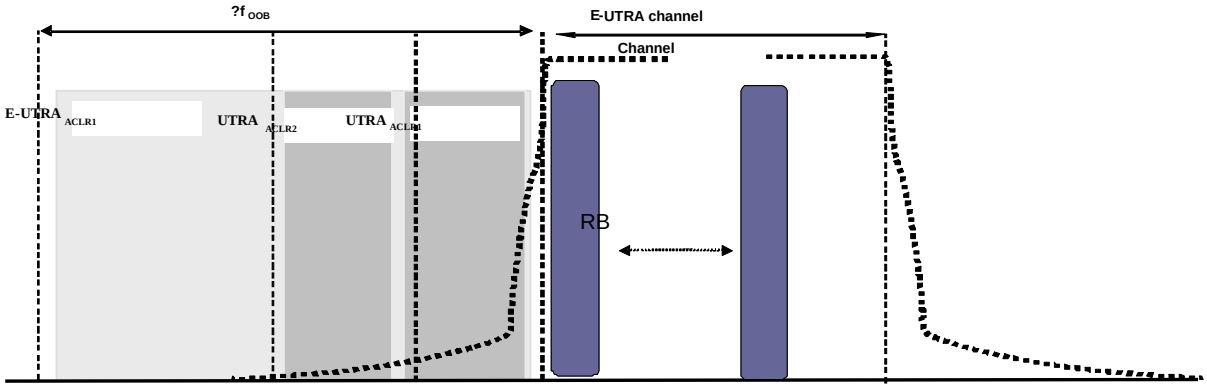

**Figure 6.6.2.3B.3-1: Adjacent Channel Leakage Power Ratio requirements**

#### 6.6.2.3B.3.1 Minimum conformance requirements for E-UTRA

E-UTRA ACLR (E-UTRAACLR) is the ratio of the filtered mean power centred on the assigned channel frequency to the filtered mean power centred on an adjacent channel frequency at nominal channel spacing. The assigned E-UTRA channel power and adjacent E-UTRA channel power are measured with rectangular filters with measurement bandwidth specified in Table 6.6.2.3B.3.1-1.

For UEs with two transmit antenna connectors in closed-loop spatial multiplexing scheme ,, the requirements in Table 6.6.2.3B.3.1-1 apply to each transmit antenna connector with the UL-MIMO configurations specified in Table 6.2.2B.3-2.

If the measured adjacent channel power is greater than -50dBm then the E-UTRAACLR shall be higher than the valued specified in Table 6.6.2.3B.3.1-1.

**Table 6.6.2.3B.3.1-1: General requirements for E-UTRA$_{ACLR}$**

| | Channel bandwidth / E-UTRA$_{ACLR1}$ / measurement bandwidth | | | | | |
|---|---|---|---|---|---|---|
| | 1.4 MHz | 3.0 MHz | 5 MHz | 10 MHz | 15 MHz | 20 MHz |

| | | | | | | |
|---|---|---|---|---|---|---|
| **E-UTRA$_{ACLR1}$** | 30 dB | 30 dB | 30 dB | 30 dB | 30 dB | 30 dB |
| **E-UTRA channel Measurement bandwidth** | 1.08 MHz | 2.7 MHz | 4.5 MHz | 9.0 MHz | 13.5 MHz | 18 MHz |

The normative reference for this requirement is TS 36.101 clause 6.6.2B.

### 6.6.2.3B.3.2 Minimum conformance requirements for UTRA

UTRA ACLR (UTRA$_{ACLR}$) is the ratio of the filtered mean power centred on the assigned E-UTRA channel frequency to the filtered mean power centred on an adjacent UTRA channel frequency.

UTRA ACLR is specified for both the first UTRA adjacent channel (UTRAACLR1) and the 2nd UTRA adjacent channel (UTRA$_{ACLR2}$).The UTRA channel power is measured with a RRC bandwidth filter with roll-off factor $\alpha$ = 0.22. The assigned E-UTRA channel power is measured with a rectangular filter with measurement bandwidth specified in Table 6.6.2.3B.3.2-1.

For UEs with two transmit antenna connectors in closed-loop spatial multiplexing scheme, the requirements in Table 6.6.2.3B.3.2-1 apply to each transmit antenna connector with the UL-MIMO configurations specified in Table 6.2.2B.3-2.

If the measured UTRA channel power is greater than -50dBm then the UTRAACLR1, and UTRAACLR2 shall be higher than the valued specified in Table 6.6.2.3B.3.2-1.

**Table 6.6.2.3B.3.2-1: General requirements for UTRA$_{ACLR1/2}$**

| | **Channel bandwidth / E-UTRA$_{ACLR1/2}$ / measurement bandwidth** | | | | | |
|---|---|---|---|---|---|---|
| | **1.4 MHz** | **3.0 MHz** | **5 MHz** | **10 MHz** | **15 MHz** | **20 MHz** |
| **E-UTRA$_{ACLR1}$** | 33 dB | 33 dB | 33 dB | 33 dB | 33 dB | 33 dB |
| **Adjacent channel centre frequency offset (in MHz)** | 0.7+BW$_{UTRA}$/2 / -0.7-BW$_{UTRA}$/2 | 1.5+BW$_{UTRA}$/2 / -1.5-BW$_{UTRA}$/2 | 2.5+BW$_{UTRA}$/2 / -2.5-BW$_{UTRA}$/2 | 5+BW$_{UTRA}$/2 / -5-BW$_{UTRA}$/2 | 7.5+BW$_{UTRA}$/2 / -7.5-BW$_{UTRA}$/2 | 10+BW$_{UTRA}$/2 / -10-BW$_{UTRA}$/2 |
| **UTRA$_{ACLR2}$** | - | - | 36 dB | 36 dB | 36 dB | 36 dB |
| **Adjacent channel centre frequency offset (in MHz)** | - | - | 2.5+3*BW$_{UTRA}$/2 / -2.5-3*BW$_{UTRA}$/2 | 5+3*BW$_{UTRA}$/2 / -5-3*BW$_{UTRA}$/2 | 7.5+3*BW$_{UTRA}$/2 / -7.5-3*BW$_{UTRA}$/2 | 10+3*BW$_{UTRA}$/2 / -10-3*BW$_{UTRA}$/2 |
| **E-UTRA channel Measurement bandwidth** | 1.08 MHz | 2.7 MHz | 4.5 MHz | 9.0 MHz | 13.5 MHz | 18 MHz |
| **UTRA 5MHz channel Measurement bandwidth[1]** | 3.84 MHz | 3.84 MHz | 3.84 MHz | 3.84 MHz | 3.84 MHz | 3.84 MHz |
| **UTRA 1.6MHz channel measurement bandwidth[2]** | 1.28 MHz | 1.28 MHz | 1.28 MHz | 1.28 MHz | 1.28 MHz | 1.28 MHz |
| Note 1: Applicable for E-UTRA FDD co-existence with UTRA FDD in paired spectrum.<br>Note 2: Applicable for E-UTRA TDD co-existence with UTRA TDD in unpaired spectrum. | | | | | | |

The normative reference for this requirement is TS 36.101 clause 6.6.2B.

### 6.6.2.3B.4 Test description

#### 6.6.2.3B.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 6.6.2.3B.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in AnnexeA.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 6.6.2.3B.4.1-1: Test Configuration Table**

| **Initial Conditions** | | | | | | |
|---|---|---|---|---|---|---|
| Test Environment (as specified in TS 36.508 [7] clause 4.1) | | | | NC, TL/VL, TL/VH, TH/VL, TH/VH | | |
| Test Frequencies (as specified in TS 36.508 [7] clause 4.3.1) | | | | Low range, Mid range, High range | | |
| Test Channel Bandwidths (as specified in TS 36.508 [7] clause 4.3.1) | | | | Lowest, 5MHz, 10MHz, Highest | | |
| **Test Parameters for Channel Bandwidths** | | | | | | |
| | **Downlink Configuration** | | | **Uplink Configuration** | | |
| Ch BW | Mod'n | RB allocation | | Mod'n | RB allocation | |
| | | FDD | TDD | | FDD | TDD |
| 1.4MHz | N/A for ACLR testing | | | QPSK | 6 | 6 |
| 1.4MHz | | | | QPSK | 5 | 5 |
| 1.4MHz | | | | 16QAM | 6 | 6 |
| 1.4MHz | | | | 16QAM | 5 | 5 |
| 3MHz | | | | QPSK | 15 | 15 |
| 3MHz | | | | QPSK | 4 | 4 |
| 3MHz | | | | 16QAM | 15 | 15 |
| 3MHz | | | | 16QAM | 4 | 4 |
| 5MHz | | | | QPSK | 25 | 25 |
| 5MHz | | | | QPSK | 8 | 8 |
| 5MHz | | | | 16QAM | 25 | 25 |
| 5MHz | | | | 16QAM | 8 | 8 |
| 10MHz | | | | QPSK | 50 | 50 |
| 10MHz | | | | QPSK | 12 | 12 |
| 10MHz | | | | 16QAM | 50 (Note 3) | 50 (Note 3) |
| 10MHz | | | | 16QAM | 12 | 12 |
| 15MHz | | | | QPSK | 75 | 75 |
| 15MHz | | | | QPSK | 16 | 16 |
| 15MHz | | | | 16QAM | 75 (Note 3) | 75 (Note 3) |
| 15MHz | | | | 16QAM | 16 | 16 |
| 20MHz | | | | QPSK | 100 | 100 |
| 20MHz | | | | QPSK | 18 | 18 |
| 20MHz | | | | 16QAM | 100 (Note 3) | 100 (Note 3) |
| 20MHz | | | | 16QAM | 18 | 18 |
| Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1.<br>Note 2: The RBstart of partial RB allocation shall be RB#0 and RB# (max + 1 - RB allocation) of the channel bandwidth.<br>Note 3: Applies only for UE-Categories [FFS]. | | | | | | |

1. Connect the SS to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure A.28.

2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.

3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.

4. The UL Reference Measurement channels are set according to Table 6.6.2.3B.4.1-1.

5. Propagation conditions are set according to Annex B.0.

6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.2.3B.4.3.

#### 6.6.2.3B.4.2 Test procedure

1. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 4 for C_RNTI to schedule the UL RMC according to Table 6.6.2.3B.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.

2. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE until the UE transmits at $P_{UMAX}$ level.

3. Measure the sum of the mean power at each antenna connector of UE in the channel bandwidth of the radio access mode according to the test configuration, which shall meet the requirements described in clause 6.2.3B.5. The period of the measurement shall be at least the continuous duration of one sub-frame (1ms). For TDD slots with transient periods are not under test.

4. Measure the rectangular filtered mean power for E-UTRA at each antenna connector of UE.

5. Measure the rectangular filtered mean power of the first E-UTRA adjacent channel at each antenna connector of UE.

6. Measure the RRC filtered mean power of the first and the second UTRA adjacent channel at each antenna connector of UE.

7. Calculate the ratio of the power between the values measured in step 4 over step 5 for $E\text{-}UTRA_{ACLR}$.

8. Calculated the ratio of the power between the values measured in step 4 over step 6 for $UTRA_{ACLR1}$, $UTRA_{ACLR2}$.

#### 6.6.2.3B.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6.

### 6.6.2.3B.5 Test requirement

#### 6.6.2.3B.5.1 Test requirements E-UTRA

- The measured sum of mean power at each transmit antenna connector for UE in the channel bandwidth, derived in step 3, shall fulfil requirements in clause 6.2.3B.5 as appropriate,

and

- The requirements apply to each transmit antenna connector.

- if the measured adjacent channel power is greater than -50 dBm then the measured E-UTRAACLR, derived in step 7, shall be higher than the limits in table 6.6.2.3B.5.1-1.

**Table 6.6.2.3B.5.1-1: E-UTRA UE ACLR**

| | Channel bandwidth / $E\text{-}UTRA_{ACLR1}$ / measurement bandwidth | | | | | |
|---|---|---|---|---|---|---|
| | **1.4 MHz** | **3.0 MHz** | **5 MHz** | **10 MHz** | **15 MHz** | **20 MHz** |
| **$E\text{-}UTRA_{ACLR1}$** | 29.2 dB | 29.2 dB | 29.2 dB | 29.2 dB | 29.2 dB | 29.2 dB |
| **E-UTRA channel Measurement bandwidth** | 1.08 MHz | 2.7 MHz | 4.5 MHz | 9.0 MHz | 13.5 MHz | 18 MHz |
| **UE channel** | +1.4 MHz or -1.4 MHz | +3 MHz or -3 MHz | +5MHz or -5MHz | +10MHz or -10MHz | +15MHz or -15MHz | +20MHz or -20MHz |

### 6.6.2.3B.5.2 Test requirements UTRA

The requirements apply to each transmit antenna connector.

If the measured UTRA channel power is greater than -50dBm then the measured $UTRA_{ACLR1}$, $UTRA_{ACLR2}$, derived in step 8, shall be higher than the limits in table 6.6.2.3B.5.2-1.

**Table 6.6.2.3B.5.2-1: UTRA UE ACLR**

| | Channel bandwidth / $E\text{-}UTRA_{ACLR1/2}$ / measurement bandwidth | | | | | |
|---|---|---|---|---|---|---|
| | **1.4 MHz** | **3.0 MHz** | **5 MHz** | **10 MHz** | **15 MHz** | **20 MHz** |
| **$UTRA_{ACLR1}$** | 32.2 dB | 32.2 dB | 32.2 dB | 32.2 dB | 32.2 dB | 32.2 dB |
| **Adjacent channel centre frequency offset (in MHz)** | $0.7+BW_{UTRA}/2$ / $-0.7-BW_{UTRA}/2$ | $1.5+BW_{UTRA}/2$ / $-1.5-BW_{UTRA}/2$ | $2.5+BW_{UTRA}/2$ / $-2.5-BW_{UTRA}/2$ | $5+BW_{UTRA}/2$ / $-5-BW_{UTRA}/2$ | $7.5+BW_{UTRA}/2$ / $-7.5-BW_{UTRA}/2$ | $10+BW_{UTRA}/2$ / $-10-BW_{UTRA}/2$ |
| **$UTRA_{ACLR2}$** | - | - | 35.2 dB | 35.2 dB | 35.2 dB | 35.2 dB |
| **Adjacent channel centre frequency offset (in MHz)** | - | - | $2.5+3*BW_{UTRA}/2$ / $-2.5-3*BW_{UTRA}/2$ | $5+3*BW_{UTRA}/2$ / $-5-3*BW_{UTRA}/2$ | $7.5+3*BW_{UTRA}/2$ / $-7.5-3*BW_{UTRA}/2$ | $10+3*BW_{UTRA}/2$ / $-10-3*BW_{UTRA}/2$ |
| **E-UTRA channel Measurement bandwidth** | 1.08 MHz | 2.7 MHz | 4.5 MHz | 9.0 MHz | 13.5 MHz | 18 MHz |
| **UTRA 5MHz channel Measurement bandwidth[1]** | 3.84 MHz | 3.84 MHz | 3.84 MHz | 3.84 MHz | 3.84 MHz | 3.84 MHz |
| **UTRA 1.6MHz channel measurement bandwidth[2]** | 1.28 MHz | 1.28 MHz | 1.28 MHz | 1.28 MHz | 1.28 MHz | 1.28 MHz |
| Note 1: Applicable for E-UTRA FDD co-existence with UTRA FDD in paired spectrum. | | | | | | |
| Note 2: Applicable for E-UTRA TDD co-existence with UTRA TDD in unpaired spectrum. | | | | | | |
| Note 3: $BW_{UTRA}$ for UTRA FDD is 5MHz and for UTRA TDD is 1.6MHz. | | | | | | |

## 6.6.2.3E Adjacent Channel Leakage power Ratio for UE category 0

### 6.6.2.3E.1 Test purpose

Same test purpose as in clause 6.6.2.3.1.

### 6.6.2.3E.2 Test applicability

This test case applies to all types of E-UTRA UE release 12 and forward of UE category 0.

### 6.6.2.3E.3 Minimum conformance requirements

Same minimum conformance requirements as in clause 6.6.2.3.3.

### 6.6.2.3E.4 Test description

#### 6.6.2.3E.4.1 Initial conditions

Same initial conditions as in clause 6.6.2.3.4.1 with following exceptions:

- Instead of Table 6.6.2.3.4.1-1 → use Table 6.6.2.3E.4.1-1.
- Connect SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.3 using only main UE Tx/Rx antenna.

**Table 6.6.2.3E.4.1-1: Test Configuration Table**

| **Initial Conditions** | | | | | | |
|---|---|---|---|---|---|---|
| Test Environment (as specified in TS 36.508 [7] subclause 4.1) | | | | NC, TL/VL, TL/VH, TH/VL, TH/VH | | |
| Test Frequencies (as specified in TS36.508 [7] subclause 4.3.1) | | | | Low range, Mid range, High range | | |
| Test Channel Bandwidths (as specified in TS 36.508 [7] subclause 4.3.1) | | | | Lowest, 5MHz, 10MHz, Highest | | |
| **Test Parameters for Channel Bandwidths** | | | | | | |
| | **Downlink Configuration** | | | **Uplink Configuration** | | |
| **Ch BW** | **Mod'n** | **RB allocation** | | **Mod'n** | **RB allocation** | |
| | | **FDD** | **TDD** | | **FDD and HD-FDD** | **TDD** |
| 1.4MHz | N/A for ACLR testing | | | QPSK | 6 | 6 |
| 1.4MHz | | | | QPSK | 5 | 5 |
| 1.4MHz | | | | 16QAM | 5 | 5 |
| 3MHz | | | | QPSK | 15 | 15 |
| 3MHz | | | | QPSK | 4 | 4 |
| 3MHz | | | | 16QAM | 5 | 5 |
| 3MHz | | | | 16QAM | 4 | 4 |
| 5MHz | | | | QPSK | 25 | 25 |

| 20MHz | | | | QPSK | 18 | 18 |
| 20MHz | | | | 16QAM | 5 | 5 |
| Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1. | | | | | | |
| Note 2: The $RB_{start}$ of partial RB allocation shall be RB#0 and RB# (max + 1 - RB allocation) of the channel bandwidth. | | | | | | |

#### 6.6.2.3E.4.2 Test procedure

Same test procedure as in clause 6.6.2.3.4.2 with following exception for HD-FDD:

- In step 3, slots with transient periods are not under test. Half-duplex guard subframe are not under test.

#### 6.6.2.3E.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6.

### 6.6.2.3E.5 Test requirement

#### 6.6.2.3E.5.1 Test requirements E-UTRA

- The measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.3E.5-1 as appropriate,

and

- if the measured adjacent channel power is greater than –50 dBm then the measured E-UTRA$_{ACLR}$, derived in step 7, shall be higher than the limits in table 6.6.2.3E.5.1-1.

**Table 6.6.2.3E.5.1-1: E-UTRA UE ACLR**

| | **Channel bandwidth / E-UTRA$_{ACLR1}$ / measurement bandwidth** | | | | | |
|---|---|---|---|---|---|---|
| | **1.4 MHz** | **3.0 MHz** | **5 MHz** | **10 MHz** | **15 MHz** | **20 MHz** |
| **E-UTRA$_{ACLR1}$** | 29.2 dB | 29.2 dB | 29.2 dB | 29.2 dB | 29.2 dB | 29.2 dB |
| **E-UTRA channel Measurement bandwidth** | 1.08 MHz | 2.7 MHz | 4.5 MHz | 9.0 MHz | 13.5 MHz | 18 MHz |
| **UE channel** | +1.4 MHz or -1.4 MHz | +3 MHz or -3 MHz | +5MHz or -5MHz | +10MHz or -10MHz | +15MHz or -15MHz | +20MHz or -20MHz |

Test requirements UTRA

If the measured UTRA channel power is greater than –50dBm then the measured UTRA$_{ACLR1}$, UTRA$_{ACLR2}$, derived in step 8, shall be higher than the limits in table 6.6.2.3E.5.2-1.

**Table 6.6.2.3E.5.2-1: UTRA UE ACLR**

| | **Channel bandwidth / UTRA$_{ACLR1/2}$ / measurement bandwidth** | | | | | |
|---|---|---|---|---|---|---|

## 6.6.2.3EA Adjacent Channel Leakage power Ratio for UE category M1

### 6.6.2.3EA.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to adjacent channels in terms of Adjacent Channel Leakage power Ratio (ACLR).

### 6.6.2.3EA.2 Test applicability

This test case applies to all types of E-UTRA UE release 13 and forward of UE category M1.

### 6.6.2.3EA.3 Minimum conformance requirements

ACLR requirements are specified for two scenarios for an adjacent E -UTRA$_{ACLR}$ and UTRA$_{ACLR1/2}$ as shown in Figure 6.6.2.3EA.3-1.

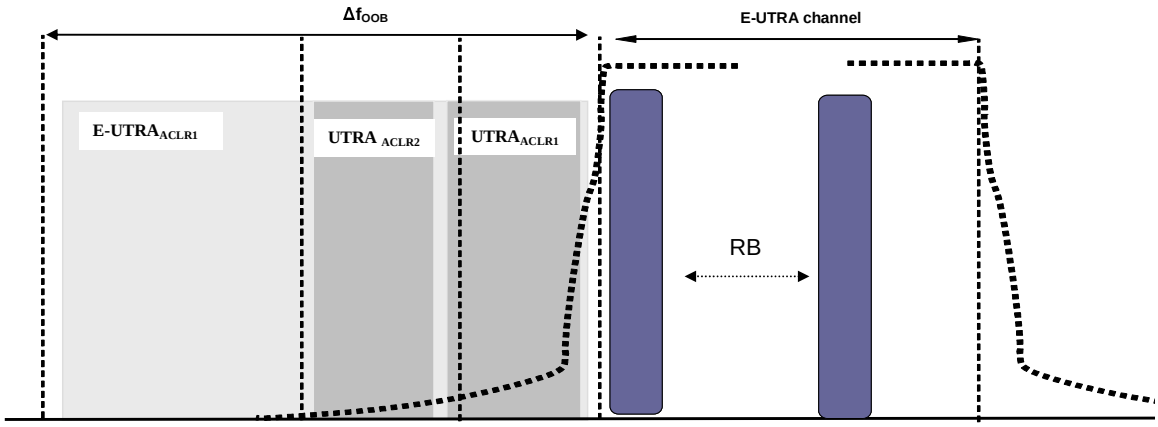

**Figure 6.6.2.3EA.3-1: Adjacent Channel Leakage Power Ratio requirements**

#### 6.6.2.3EA.3.1 Minimum conformance requirements for E-UTRA

E-UTRA ACLR (E-UTRA$_{ACLR}$) is the ratio of the filtered mean power centred on the assigned channel frequency to the filtered mean power centred on an adjacent channel frequency at nominal channel spacing. The assigned E-UTRA channel power and adjacent E-UTRA channel power are measured with rectangular filters with measurement bandwidth specified in Table 6.6.2.3EA.3.1-1.

If the measured adjacent channel power is greater than –50dBm then the E-UTRA$_{ACLR}$ shall be higher than the valued specified in Table 6.6.2.3EA.3.1-1.

**Table 6.6.2.3EA.3.1-1: General requirements for E-UTRA$_{ACLR}$**

| | **Channel bandwidth / E-UTRA$_{ACLR1}$ / measurement bandwidth** | | | | | |
|---|---|---|---|---|---|---|
| | **1.4 MHz** | **3.0 MHz** | **5 MHz** | **10 MHz** | **15 MHz** | **20 MHz** |
| **E-UTRA$_{ACLR1}$** | 30 dB | 30 dB | 30 dB | 30 dB | 30 dB | 30 dB |
| **E-UTRA channel Measurement bandwidth** | 1.08 MHz | 2.7 MHz | 4.5 MHz | 9.0 MHz | 13.5 MHz | 18 MHz |

The normative reference for this requirement is TS 36.101 [2] subclause 6.6.2.3.1.

#### 6.6.2.3EA.3.2 Minimum conformance requirements for UTRA

UTRA ACLR (UTRA$_{ACLR}$) is the ratio of the filtered mean power centred on the assigned E-UTRA channel frequency to the filtered mean power centred on an adjacent UTRA channel frequency.

UTRA ACLR is specified for both the first UTRA adjacent channel ($UTRA_{ACLR1}$) and the 2nd UTRA adjacent channel ($UTRA_{ACLR2}$). The UTRA channel power is measured with a RRC bandwidth filter with roll-off factor $\alpha = 0.22$. The assigned E-UTRA channel power is measured with a rectangular filter with measurement bandwidth specified in Table 6.6.2.3EA.3.2-1.

If the measured UTRA channel power is greater than –50dBm then the $UTRA_{ACLR1}$, and $UTRA_{ACLR2}$ shall be higher than the valued specified in Table 6.6.2.3EA.3.2-1.

**Table 6.6.2.3EA.3.2-1: General requirements for $UTRA_{ACLR1/2}$**

| | Channel bandwidth / $UTRA_{ACLR1/2}$ / measurement bandwidth | | | | | |
|---|---|---|---|---|---|---|
| | **1.4 MHz** | **3.0 MHz** | **5 MHz** | **10 MHz** | **15 MHz** | **20 MHz** |
| **$UTRA_{ACLR1}$** | 33 dB | 33 dB | 33 dB | 33 dB | 33 dB | 33 dB |
| **Adjacent channel centre frequency offset (in MHz)** | 0.7+$BW_{UTRA}$/2 / -0.7-$BW_{UTRA}$/2 | 1.5+$BW_{UTRA}$/2 / -1.5-$BW_{UTRA}$/2 | 2.5+$BW_{UTRA}$/2 / -2.5-$BW_{UTRA}$/2 | 5+$BW_{UTRA}$/2 / -5-$BW_{UTRA}$/2 | 7.5+$BW_{UTRA}$/2 / -7.5-$BW_{UTRA}$/2 | 10+$BW_{UTRA}$/2 / -10-$BW_{UTRA}$/2 |
| **$UTRA_{ACLR2}$** | - | - | 36 dB | 36 dB | 36 dB | 36 dB |
| **Adjacent channel centre frequency offset (in MHz)** | - | - | 2.5+3*$BW_{UTRA}$/2 / -2.5-3*$BW_{UTRA}$/2 | 5+3*$BW_{UTRA}$/2 / -5-3*$BW_{UTRA}$/2 | 7.5+3*$BW_{UTRA}$/2 / -7.5-3*$BW_{UTRA}$/2 | 10+3*$BW_{UTRA}$/2 / -10-3*$BW_{UTRA}$/2 |
| **E-UTRA channel Measurement bandwidth** | 1.08 MHz | 2.7 MHz | 4.5 MHz | 9.0 MHz | 13.5 MHz | 18 MHz |
| **UTRA 5MHz channel Measurement bandwidth[1]** | 3.84 MHz | 3.84 MHz | 3.84 MHz | 3.84 MHz | 3.84 MHz | 3.84 MHz |
| **UTRA 1.6MHz channel measurement bandwidth[2]** | 1.28 MHz | 1.28 MHz | 1.28 MHz | 1.28 MHz | 1.28 MHz | 1.28 MHz |
| Note 1: Applicable for E-UTRA FDD co-existence with UTRA FDD in paired spectrum. | | | | | | |
| Note 2: Applicable for E-UTRA TDD co-existence with UTRA TDD in unpaired spectrum. | | | | | | |

The normative reference for this requirement is TS 36.101 subclause 6.6.2.3.2.

## 6.6.2.3EA.4 Test description

### 6.6.2.3EA.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in clause 5.2E. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 6.6.2.3EA.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in AnnexeA.2. Configurations of PDSCH and MPDCCH before measurement are specified in Annex C.2.

**Table 6.6.2.3EA.4.1-1: Test Configuration Table**

| **Initial Conditions** | | | | | |
|---|---|---|---|---|---|
| Test Environment (as specified in TS 36.508 [7] subclause 4.1) | | | NC, TL/VL, TL/VH, TH/VL, TH/VH | | |
| Test Frequencies (as specified in TS36.508 [7] subclause 4.3.1) | | | Low range, Mid range, High range | | |
| Test Channel Bandwidths (as specified in TS 36.508 [7] subclause 4.3.1) | | | Lowest, 5MHz, 10MHz, Highest | | |
| **Test Parameters for Channel Bandwidths and Narrowband positions** | | | | | |
| | | **Downlink Configuration** | **Uplink Configuration** | | |
| Configuration ID | Ch BW | N/A for ACLR test case | Mod'n | RB allocation | |
| | | | | FDD and HD-FDD | Narrowband index (Note 1) |
| **Low range, Mid range** | | | | | |
| 1 | 1.4MHz | | QPSK | 2 | 0 |
| 2 | 1.4MHz | | QPSK | 5 | 0 |
| 3 | 1.4MHz | | QPSK | 6 | 0 |
| 4 | 1.4MHz | | 16QAM | 2 | 0 |
| 5 | 1.4MHz | | 16QAM | 5 | 0 |
| 6 | 3MHz | | QPSK | 2 | 0 |
| 7 | 3MHz | | QPSK | 5 | 0 |
| 8 | 3MHz | | QPSK | 6 | 0 |
| 9 | 3MHz | | 16QAM | 2 | 0 |
| 10 | 3MHz | | 16QAM | 5 | 0 |
| 11 | 5MHz | | QPSK | 6 | 0 |
| 12 (Note 4) | 5MHz | | 16QAM | 1 | 0 |
| 13 | 5MHz | | 16QAM | 3 | 0 |
| 14 | 5MHz | | 16QAM | 5 | 0 |
| 15 (Note 4) | 10MHz | | QPSK | 4 | 0 |
| 16 | 10MHz | | QPSK | 6 | 0 |
| 17 (Note 4) | 10MHz | | 16QAM | 3 | 0 |
| 18 | 10MHz | | 16QAM | 5 | 0 |
| 19 | 15MHz | | QPSK | 6 | 0 |
| 20 | 15MHz | | 16QAM | 5 | 0 |
| 21 | 20MHz | | 16QAM | 5 | 0 |
| **High range** | | | | | |
| 1 | 1.4MHz | | QPSK | 2 | 0 |
| 2 | 1.4MHz | | QPSK | 5 | 0 |
| 3 | 1.4MHz | | QPSK | 6 | 0 |
| 4 | 1.4MHz | | 16QAM | 2 | 0 |
| 5 | 1.4MHz | | 16QAM | 5 | 0 |
| 6 | 3MHz | | QPSK | 2 | 1 |
| 7 | 3MHz | | QPSK | 5 | 1 |
| 8 | 3MHz | | QPSK | 6 | 1 |
| 9 | 3MHz | | 16QAM | 2 | 1 |
| 10 | 3MHz | | 16QAM | 5 | 1 |
| 11 | 5MHz | | QPSK | 6 | 3 |
| 12 (Note 4) | 5MHz | | 16QAM | 1 | 3 |
| 13 | 5MHz | | 16QAM | 3 | 3 |
| 14 | 5MHz | | 16QAM | 5 | 3 |
| 15 (Note 4) | 10MHz | | QPSK | 4 | 7 |
| 16 | 10MHz | | QPSK | 6 | 7 |
| 17 (Note 4) | 10MHz | | 16QAM | 3 | 7 |
| 18 | 10MHz | | 16QAM | 5 | 7 |
| 19 | 15MHz | | QPSK | 6 | 11 |
| 20 | 15MHz | | 16QAM | 5 | 11 |
| 21 | 20MHz | | 16QAM | 5 | 15 |

Note 1: Denotes where in the channel Bandwidth the narrowband shall be placed. Narrowband and Narrowband index are defined in TS36.211, 5.2.4

Note 2: Test Channel Bandwidths are checked separately for each E-UTRA band, the applicable channel bandwidths are specified in Table 5.4.2.1-1.

| | |
|---|---|
| Note 3: | The $RB_{start}$ of partial RB allocation shall be RB#0 and RB# (6 - RB allocation) of the narrowband. |
| Note 4: | Only for power class 3 UE |

1. Connect SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.3 using only main UE Tx/Rx antenna.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Table 6.6.2.3EA.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF-CE according to TS 36.508 [7] clause 5.2A.2AA. Message contents are defined in clause 6.6.2.3EA.4.3.

#### 6.6.2.3EA.4.2 Test procedure

1. SS sends uplink scheduling information for each UL HARQ process via MPDCCH DCI format 6-0A for C_RNTI to schedule the UL RMC according to Table 6.6.2.3EA.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
2. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE until the UE transmits at $P_{UMAX}$ level.
3. Measure the mean power of the UE in the channel bandwidth of the radio access mode according to the test configuration, which shall meet the requirements described in Table 6.2.3EA.5-1 to 6.2.3EA.5-3. The period of the measurement shall be at least the continuous duration of one sub-frame (1ms). For TDD slots with transient periods are not under test. For HD-FDD slots with transient periods and Half-duplex guard subframe are not under test.
4. Measure the rectangular filtered mean power for E-UTRA.
5. Measure the rectangular filtered mean power of the first E-UTRA adjacent channel on both lower and upper side of the E-UTRA channel, respectively.
6. Measure the RRC filtered mean power of the first and the second UTRA adjacent channel on both lower and upper side of the E-UTRA channel, respectively.
7. Calculate the ratios of the power between the values measured in step 4 over step 5 for lower and upper E-$UTRA_{ACLR}$, respectively.
8. Calculated the ratios of the power between the values measured in step 4 over step 6 for lower and upper $UTRA_{ACLR1}$, $UTRA_{ACLR2}$, respectively.

#### 6.6.2.3EA.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6.

### 6.6.2.3EA.5 Test requirement

#### 6.6.2.3EA.5.1 Test requirements E-UTRA

- The measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in [Table 6.2.3EA.5-1, 6.2.3EA.5-2 and 6.2.3EA.5-3 as appropriate,

and

- if the measured adjacent channel power is greater than –50 dBm then the measured E-$UTRA_{ACLR}$, derived in step 7, shall be higher than the limits in table 6.6.2.3EA.5.1-1.

**Table 6.6.2.3EA.5.1-1: E-UTRA UE ACLR**

| | Channel bandwidth / E-UTRA$_{ACLR1}$ / measurement bandwidth | | | | | |
|---|---|---|---|---|---|---|
| | **1.4 MHz** | **3.0 MHz** | **5 MHz** | **10 MHz** | **15 MHz** | **20 MHz** |
| **E-UTRA$_{ACLR1}$** | 29.2 dB | 29.2 dB | 29.2 dB | 29.2 dB | 29.2 dB | 29.2 dB |
| **E-UTRA channel Measurement bandwidth** | 1.08 MHz | 2.7 MHz | 4.5 MHz | 9.0 MHz | 13.5 MHz | 18 MHz |
| **UE channel** | +1.4 MHz or -1.4 MHz | +3 MHz or -3 MHz | +5MHz or -5MHz | +10MHz or -10MHz | +15MHz or -15MHz | +20MHz or -20MHz |

Test requirements UTRA

If the measured UTRA channel power is greater than –50dBm then the measured UTRA$_{ACLR1}$, UTRA$_{ACLR2}$, derived in step 8, shall be higher than the limits in table 6.6.2.3EA.5.2-1.

**Table 6.6.2.3EA.5.2-1: UTRA UE ACLR**

| | Channel bandwidth / UTRA$_{ACLR1/2}$ / measurement bandwidth | | | | | |
|---|---|---|---|---|---|---|
| | **1.4 MHz** | **3.0 MHz** | **5 MHz** | **10 MHz** | **15 MHz** | **20 MHz** |
| **UTRA$_{ACLR1}$** | 32.2 dB | 32.2 dB | 32.2 dB | 32.2 dB | 32.2 dB | 32.2 dB |
| **Adjacent channel centre frequency offset (in MHz)** | 0.7+BW$_{UTRA}$/2 / -0.7-BW$_{UTRA}$/2 | 1.5+BW$_{UTRA}$/2 / -1.5-BW$_{UTRA}$/2 | 2.5+BW$_{UTRA}$/2 / -2.5-BW$_{UTRA}$/2 | 5+BW$_{UTRA}$/2 / -5-BW$_{UTRA}$/2 | 7.5+BW$_{UTRA}$/2 / -7.5-BW$_{UTRA}$/2 | 10+BW$_{UTRA}$/2 / -10-BW$_{UTRA}$/2 |
| **UTRA$_{ACLR2}$** | - | - | 35.2 dB | 35.2 dB | 35.2 dB | 35.2 dB |

## 6.6.2.3EB Adjacent Channel Leakage power Ratio for UE category 1bis

### 6.6.2.3EB.1 Test purpose

Same test purpose as in clause 6.6.2.3.1.

### 6.6.2.3EB.2 Test applicability

This test case applies to all types of E-UTRA UE release 13 and forward of UE category 1bis.

### 6.6.2.3EB.3 Minimum conformance requirements

Same minimum conformance requirements as in clause 6.6.2.3.3.

## 6.6.2.3EB.4 Test description

### 6.6.2.3EB.4.1 Initial conditions

Same initial conditions as in clause 6.6.2.3.4.1 with following exceptions:

- Connect SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.3 using only main UE Tx/Rx antenna.

### 6.6.2.3EB.4.2 Test procedure

Same test procedure as in clause 6.6.2.3.4.2

### 6.6.2.3EB.4.3 Message contents

Message contents same as clause 6.6.2.3.4.3.

## 6.6.2.3EB.5 Test requirement

### 6.6.2.3EB.5.1 Test requirements E-UTRA

- The measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.3EB.5-1 as appropriate,

and

- if the measured adjacent channel power is greater than –50 dBm then the measured E-UTRA$_{ACLR}$, derived in step 7, shall be higher than the limits in table 6.6.2.3EB.5.1-1.

**Table 6.6.2.3EB.5.1-1: E-UTRA UE ACLR**

| | **Channel bandwidth / E-UTRA$_{ACLR1}$ / measurement bandwidth** | | | | | |
|---|---|---|---|---|---|---|
| | **1.4 MHz** | **3.0 MHz** | **5 MHz** | **10 MHz** | **15 MHz** | **20 MHz** |
| **E-UTRA$_{ACLR1}$** | 29.2 dB | 29.2 dB | 29.2 dB | 29.2 dB | 29.2 dB | 29.2 dB |
| **E-UTRA channel Measurement bandwidth** | 1.08 MHz | 2.7 MHz | 4.5 MHz | 9.0 MHz | 13.5 MHz | 18 MHz |
| **UE channel** | +1.4 MHz or -1.4 MHz | +3 MHz or -3 MHz | +5MHz or -5MHz | +10MHz or -10MHz | +15MHz or -15MHz | +20MHz or -20MHz |

Test requirements UTRA

If the measured UTRA channel power is greater than –50dBm then the measured UTRA$_{ACLR1}$, UTRA$_{ACLR2}$, derived in step 8, shall be higher than the limits in table 6.6.2.3EB.5.2-1.

**Table 6.6.2.3EB.5.2-1: UTRA UE ACLR**

## 6.6.2.3F Adjacent Channel Leakage power Ratio for category NB1 and NB2

### 6.6.2.3F.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to adjacent channels in terms of Adjacent Channel Leakage power Ratio (ACLR).

### 6.6.2.3F.2 Test applicability

This test case applies to all types of UE release 13 and forward of category NB1.

This test case applies to all types of UE release 14 and forward of category NB2.

### 6.6.2.3F.3 Minimum conformance requirements

Adjacent Channel Leakage power Ratio is the ratio of the filtered mean power centred on the assigned channel frequency to the filtered mean power centred on an adjacent channel frequency. The assigned category NB1 or NB2 channel power and adjacent channel power are measured with filters and measurement bandwidths specified in Table 6.6.2.3F-1. If the measured adjacent channel power is greater than –50dBm then the category NB1 or NB2 UE ACLR shall be higher than the value specified in Table 6.6.2.3F-1. $GSM_{ACLR}$ requirement is intended for protection of GSM system. $UTRA_{ACLR}$ requirement is intended for protection of UTRA and E-UTRA systems.

**Table 6.6.2.3F-1: category NB1 and NB2 UE ACLR requirements**

| | $GSM_{ACLR}$ | $UTRA_{ACLR}$ |
|---|---|---|
| **ACLR** | 20 dB | 37 dB |
| **Adjacent channel centre frequency offset from category NB1 or NB2 Channel edge** | ±200 kHz | ±2.5 MHz |
| **Adjacent channel measurement bandwidth** | 180 kHz | 3.84 MHz |
| **Measurement filter** | Rectangular | RRC-filter α=0.22 |
| **Category NB1 and NB2 channel measurement bandwidth** | 180 kHz | 180 kHz |
| **Category NB1 and NB2 channel Measurement filter** | Rectangular | Rectangular |

The normative reference for this requirement is TS 36.101 subclause 6.6.2F.3.

## 6.6.2.3F.4 Test description

### 6.6.2.3F.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions and test frequencies based on the subset of E-UTRA operating bands defined for NB-IoT in clause 5.2F. All of these configurations shall be tested with applicable test parameters shown in table 6.6.2.3F.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2.4. Configurations of NPDSCH and NPDCCH before measurement are specified in Annex C.2.

**Table 6.6.2.3F.4.1-1: Test Configuration Table**

| **Initial Conditions** | | | | |
|---|---|---|---|---|
| Test Environment as specified in TS 36.508[7] subclause 8.1.1 | | NC, TL/VL, TL/VH, TH/VL, TH/VH | | |
| Test Frequencies as specified in TS 36.508 [7] subclause 8.1.3.1 | | Frequency ranges defined in Annex K.1.2 | | |
| **Test Parameters** | | | | |
| **Configuration ID** | **Downlink Configuration** | **Uplink Configuration** | | |
| | N/A | Modulation | $N_{tones}$ | Sub-carrier spacing (kHz) |
| 1 | | QPSK | 1@0 | 3.75kHz |
| 2 | | QPSK | 1@47 | 3.75kHz |
| 3 | | QPSK | 1@0 | 15kHz |
| 4 | | QPSK | 1@11 | 15kHz |
| 5 (Note 1) | | QPSK | 3@0 | 15kHz |
| 6 (Note 1) | | QPSK | 3@3 | 15kHz |
| 7 (Note 1) | | QPSK | 3@9 | 15kHz |
| 8 (Note 1) | | QPSK | 6@0 | 15kHz |
| 9 (Note 1) | | QPSK | 6@6 | 15kHz |
| 10 (Note 1) | | QPSK | 12@0 | 15kHz |
| Note 1: Applicable to UE supporting UL multi-tone transmissions | | | | |

1. Connect the SS to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure A.3 using only main Tx/Rx antenna.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 8.1.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.0, and uplink signals according to Annex H.1.1 and H.4.0.
4. The UL Reference Measurement channels are set according to Table 6.6.2.3F.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 2A-NB with CP CIoT Optimisation according to TS 36.508 [7] clause 8.1.5. Message contents are defined in clause 6.6.2.3F.4.3.

### 6.6.2.3F.4.2 Test procedure

1. SS sends uplink scheduling information for the UL HARQ process via NPDCCH DCI format N0 for C_RNTI to schedule the UL RMC according to Table 6.6.2.3F.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC. (UE should be already transmitting $P_{UMAX}$ after Initial Conditions setting).
2. Measure the mean power of the UE in the channel bandwidth of the radio access mode according to the test configuration, which shall meet the requirements described in Table 6.2.3F.5-1. The measurement period is at least one sub-frame **(**1ms) for 15 KHz channel spacing, and at least a 2ms slot (excluding the 2304Ts gap when UE is not transmitting) respectively for the 3.75 KHz channel spacing.
3. Measure the rectangular filtered mean power for category NB1 or NB2 UE channel.
4. Measure the rectangular filtered mean power of the GSM adjacent channel on both lower and upper side of the category NB1 or NB2 UE channel, respectively.
5. Measure the RRC filtered mean power of UTRA adjacent channel on both lower and upper side of the category NB1 or NB2 UE channel, respectively.
6. Calculate the ratios of the power between the value measured in step 3 over step 4 for lower and upper $GSM_{ACLR}$.
7. Calculated the ratio of the power between the value measured in step 3 over step 5 for lower and upper $UTRA_{ACLR}$.

NOTE 1: For configuration IDs applicable to UE depending on UE capability in Test Configuration Table with different UL sub-carrier spacing, the SS shall release the connection through State 3A-NB and finally ensure the UE is in State 2A-NB with CP CIoT Optimisation according to TS 36.508 [7] clause 8.1.5 using the appropriate UL subcarrier spacing in Random Access Response message.

### 6.6.2.3F.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 8.1.6.

## 6.6.2.3F.5 Test requirement

- The measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.3F.5-1 as appropriate,

and

- if the measured adjacent channel power is greater than –50 dBm then the measured $GSM_{ACLR}$ derived in step 7 and $UTRA_{ACLR}$ derived in step 8 shall be higher than the limits in table 6.6.2.3F.5-1.

**Table 6.6.2.3F.5-1: Category NB1 and UE ACLR Test requirements**

| | $GSM_{ACLR}$ | $UTRA_{ACLR}$ |
|---|---|---|
| **ACLR** | 19.2 dB | 36.2 dB |
| **Adjacent channel centre frequency offset from category NB1 or NB2 Channel edge** | ±200 kHz | ±2.5 MHz |
| **Adjacent channel measurement bandwidth** | 180 kHz | 3.84 MHz |
| **Measurement filter** | Rectangular | RRC-filter α=0.22 |
| **Category NB1 and NB2 channel measurement bandwidth** | 180 kHz | 180 kHz |
| **Category NB1 and NB2 channel Measurement filter** | Rectangular | Rectangular |

## 6.6.2.3G Adjacent Channel Leakage power Ratio for V2X Communication

### 6.6.2.3G.1 Adjacent Channel Leakage power Ratio for V2X Communication / Non-concurrent with E-UTRA uplink transmissions

#### 6.6.2.3G.1.1 Test purpose

To verify that V2X UE transmitter does not cause unacceptable interference to adjacent channels in terms of Adjacent Channel Leakage power Ratio (ACLR) when UE is configured for E-UTRA V2X sidelink transmissions non-concurrent with E-UTRA uplink transmissions.

#### 6.6.2.3G.1.2 Test applicability

This test case applies to E-UTRA UE release 14 and forward which support V2X communication.

#### 6.6.2.3G.1.3 Minimum conformance requirements

When UE is configured for E-UTRA V2X sidelink transmissions non-concurrent with E-UTRA uplink transmissions for E-UTRA V2X operating bands specified in Table 5.2G-1, the requirements in subclause 6.6.2.3 apply except for the ACLR requirements for power class 2 V2X UE.

For power class 2 V2X UE, the assigned channel power and adjacent channel power are measured with rectangular filters with measurement bandwidths specified in Table 6.6.2.3G.1.3-1. If the measured adjacent channel power is greater than –50dBm then ACLR shall be higher than the value specified in Table 6.6.2.3G.1.3-1.

**Table 6.6.2.3G.1.3-1: ACLR requirements for power class 2 V2X Communication**

| | **Channel bandwidth / ACLR / Measurement bandwidth** | |
|---|---|---|
| | **10 MHz** | **20 MHz** |
| ACLR | 31 dB | 31 dB |
| E-UTRA channel Measurement bandwidth | 9.0 MHz | 18 MHz |
| Adjacent channel centre frequency offset [MHz] | +10<br>/<br>-10 | +20<br>/<br>-20 |

The normative reference for this requirement is TS 36.101 [2] clause 6.6.2G, and clause 6.6.2.3.

### 6.6.2.3G.1.4 Test description

#### 6.6.2.3G.1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in sub-clause 5.2G. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 6.6.2.3G.1.4.1-1 the details of the V2X reference measurement channels (RMCs) are specified in sub-clause A.8.3 and the GNSS configuration in TS 36.508 [7] subclause 4.11.

**Table 6.6.2.3G.1.4.1-1: Test Configuration for V2X sidelink transmission**

| **Initial Conditions** | | |
|---|---|---|
| Test Environment (as specified in TS 36.508 [7] subclause 4.1) | | NC, TL/VL, TL/VH, TH/VL, TH/VH |
| Test Frequencies (as specified in TS36.508 [7] subclause 4.3.1) | | Low range, Mid range, High range |
| Test Channel Bandwidths (as specified in subclause 5.4.2G) | | Lowest, Mid, Highest |
| **Test Parameters for Channel Bandwidths** | | |
| | **V2X sidelink transmission** | |
| Ch BW | Mod'n | RB Allocation |
| 10MHz | QPSK | 12 |
| 10MHz | QPSK | 48 |
| 10MHz | 16QAM | 12 |
| 10MHz | 16QAM | 48 |
| 20MHz | QPSK | 18 |
| 20MHz | QPSK | 96 |
| 20MHz | 16QAM | 18 |
| 20MHz | 16QAM | 96 |
| Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in specified in subclause 5.4.2G. | | |
| Note 2: The $RB_{start}$ of partial RB allocation shall be RB#0 and RB# (max+1 - RB allocation) of the channel bandwidth. | | |

1. Connect the SS and GNSS simulator to the UE antenna connectors as shown in TS 36.508[7] Figure A.92.
2. The parameter settings for the V2X sidelink transmission over PC5 for both SS and UE are pre-configured according to TS 36.508 [7] subclause 4.10.1 with the exception specified in clause 6.6.2.3G.1.4.3.
3. The V2X reference measurement channel is set according to Table 6.6.2.3G.1.4.1-1
4. The GNSS simulator is configured for Scenario #1: static in Geographical area #1, as defined in TS36.508 [7] Table 4.11.2-2. Geographical area #1 is also pre-configured in the UE.
5. Propagation conditions are set according to Annex B.0;
6. Ensure the UE is in State 5A-V2X in Transmit Mode according to TS 36.508 [7] clause 4.5.9.
7. The GNSS simulator is triggered to start step 1 of Scenario #1 to simulate a location in the centre of Geographical area #1. Wait for the UE to acquire the GNSS signal and start to transmit.

#### 6.6.2.3G.1.4.2 Test procedure

1. The V2X UE schedules the V2X RMC with transmission power at $P_{UMAX}$ level according to *SL-V2X-Preconfiguration* which is in line with the test configuration in Table 6.6.2.3G.1.4.1-1;
2. Measure the mean power of the UE in the channel bandwidth of the radio access mode according to the test configuration, which shall meet the requirements described in subclass 6.2.3G.1 for power class 3 UE, and shall meet the requirements described in subclass 6.2.3G.2 for power class 2 UE. The period of the measurement shall be at least the continuous duration of one sub-frame (1ms). For TDD slots with transient periods are not under test.

3. Measure the rectangular filtered mean power for E-UTRA sidelink.

4. Measure the rectangular filtered mean power of the first E-UTRA adjacent channel on both lower and upper side of the E-UTRA sidelink channel, respectively.

6. Calculate the ratios of the power between the values measured in step 3 over step 4 for lower and upper E-UTRA$_{ACLR}$, respectively.

#### 6.6.2.3G.1.4.3 Message contents

Refer to the subclause 6.6.3G.1.4.3.

### 6.6.2.3G.1.5 Test requirements

- The measured UE mean power in the channel bandwidth, derived in step 2, shall fulfil requirements in subclause 6.2.3G.1 for power class 3 UE, and shall meet the requirements described in subclass 6.2.3G.2 for power class 2 UE as appropriate,

and

- if the measured adjacent channel power is greater than –50 dBm then the measured E-UTRA$_{ACLR}$, derived in step 6, shall be higher than the limits in table 6.6.2.3.5.1-1.

**Table6.6.2.3G.1.5-1: E-UTRA UE ACLR for power class 3 UE**

| | **Channel bandwidth / E-UTRA$_{ACLR1}$ / measurement bandwidth** | |
|---|---|---|
| | **10MHz** | **20MHz** |
| **E-UTRA$_{ACLR1}$** | 29.2dB | 29.2dB |
| **E-UTRA channel Measurement bandwidth** | 9.0 MHz | 18 MHz |
| **UE channel** | +10MHz or -10MHz | +20MHz or -20MHz |

**Table6.6.2.3G.1.5-2: E-UTRA UE ACLR for power class 2 UE**

| | **Channel bandwidth / E-UTRA$_{ACLR1}$ / measurement bandwidth** | |
|---|---|---|
| | **10MHz** | **20MHz** |
| **E-UTRA$_{ACLR1}$** | 30.2dB | 30.2dB |
| **E-UTRA channel Measurement bandwidth** | 9.0 MHz | 18 MHz |
| **UE channel** | +10MHz or -10MHz | +20MHz or -20MHz |

## 6.6.2.3G.2 Adjacent Channel Leakage power Ratio for V2X Communication / Simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions

### 6.6.2.3G.2.1 Test purpose

To verify that V2X UE transmitter does not cause unacceptable interference to adjacent channels in terms of Adjacent Channel Leakage power Ratio (ACLR) when UE is configured for E-UTRA V2X sidelink and E-UTRA uplink transmissions.

### 6.6.2.3G.2.2 Test applicability

This test case applies to E-UTRA UE release 14 and forward which support V2X communication.

### 6.6.2.3G.2.3 Minimum conformance requirements

When UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions for inter-band E-UTRA V2X / E-UTRA bands specified in Table 5.5G-2, the requirements in subclause 6.6.2 apply per V2X sidelink transmission and E-UTRA uplink transmission as specified for the corresponding inter-band con-current operation with uplink assigned to two bands.

The assigned channel power and adjacent channel power are measured with rectangular filters with measurement bandwidths specified in Table 6.6.2.3G.2.3-1 and 6.6.2.3G.2.3-2. If the measured adjacent channel power is greater than –50dBm then ACLR shall be higher than the value specified in Table 6.6.2.3G.2.3-1 and 6.6.2.3G.2.3-2.

**Table 6.6.2.3G.2.3-1: E-UTRA UE ACLR for power class 3 UE**

| | **Channel bandwidth / E-UTRA$_{ACLR1}$ / Measurement bandwidth** | | | | | |
|---|---|---|---|---|---|---|
| | **1.4 MHz** | **3.0 MHz** | **5 MHz** | **10 MHz** | **15 MHz** | **20 MHz** |
| E-UTRA$_{ACLR1}$ | 30 dB | 30 dB | 30 dB | 30 dB | 30 dB | 30 dB |
| E-UTRA channel Measurement bandwidth | 1.08 MHz | 2.7 MHz | 4.5 MHz | 9.0 MHz | 13.5 MHz | 18 MHz |
| Adjacent channel centre frequency offset [MHz] | +1.4 / -1.4 | +3.0 / -3.0 | +5 / -5 | +10 / -10 | +15 / -15 | +20 / -20 |

**Table 6.6.2.3G.2.3-2: E-UTRA UE ACLR for power class 2 UE**

| | **Channel bandwidth / E-UTRA$_{ACLR1}$ / Measurement bandwidth** | | | | | |
|---|---|---|---|---|---|---|
| | **1.4 MHz** | **3.0 MHz** | **5 MHz** | **10 MHz** | **15 MHz** | **20 MHz** |
| E-UTRA$_{ACLR1}$ | 31 dB | 31 dB | 31 dB | 31 dB | 31 dB | 31 dB |
| E-UTRA channel Measurement bandwidth | 1.08 MHz | 2.7 MHz | 4.5 MHz | 9.0 MHz | 13.5 MHz | 18 MHz |
| Adjacent channel centre frequency offset [MHz] | +1.4 / -1.4 | +3.0 / -3.0 | +5 / -5 | +10 / -10 | +15 / -15 | +20 / -20 |

The normative reference for this requirement is TS 36.101 [2] clause 6.6.2G, and clause 6.6.2.3.

### 6.6.2.3G.2.4 Test description

#### 6.6.2.3G.2.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and CC combinations based on E-UTRA CA configurations specified in table 5.4.2G.1-2. All of these configurations shall be tested with applicable test parameters for each CA Configuration, and are shown in table 6.6.2.3G.2.4.1-1. The details of the V2X reference measurement channels (RMCs) are specified in sub-clause A.8.3.

**Table 6.6.2.3G.2.4.1-1: Test Configuration**

| Initial Conditions | | | | | | |
|---|---|---|---|---|---|---|
| Test Environment as specified in TS 36.508 [7] subclause 4.1 | Normal | | | | | |
| Test Frequencies as specified in TS 36.508 [7] subclause 4.3.1 | Low range for uplink and Low range for V2X, High range for uplink and High range for V2X | | | | | |
| Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1 | Lowest $N_{RB_agg}$, Highest $N_{RB_agg}$ | | | | | |
| **Test Parameters for Channel Bandwidths** | | | | | | |
| | **Downlink** | **Uplink Configuration** | | **V2X Configuration** | | |
| Ch BW | N/A for Maximum Power Reduction (MPR) test case | Mod'n | RB allocation | Ch BW | Mod'n | RB allocation |
| 1.4MHz | | QPSK | 5 | 10 MHz | QPSK | 48@2 |
| 1.4MHz | | QPSK | 6 | 10 MHz | 16QAM | 48@2 |
| 1.4MHz | | 16QAM | 5 | 20 MHz | QPSK | 96@2 |
| 1.4MHz | | 16QAM | 6 | 20 MHz | 16QAM | 96@2 |
| 3MHz | | QPSK | 4 | | | |
| 3MHz | | QPSK | 15 | | | |
| 3MHz | | 16QAM | 4 | | | |
| 3MHz | | 16QAM | 15 | | | |
| 5MHz | | QPSK | 8 | | | |
| 5MHz | | QPSK | 25 | | | |
| 5MHz | | 16QAM | 8 | | | |
| 5MHz | | 16QAM | 25 | | | |
| 10MHz | | QPSK | 12 | | | |
| 10MHz | | QPSK | 50 | | | |
| 10MHz | | 16QAM | 12 | | | |
| 10MHz | | 16QAM | 50 (Note 3) | | | |
| 15MHz | | QPSK | 16 | | | |
| 15MHz | | QPSK | 75 | | | |
| 15MHz | | 16QAM | 16 | | | |
| 15MHz | | 16QAM | 75 (Note 3) | | | |
| 20MHz | | QPSK | 18 | | | |
| 20MHz | | QPSK | 100 | | | |
| 20MHz | | 16QAM | 18 | | | |
| 20MHz | | 16QAM | 100 (Note 3) | | | |
| Note 1: V2X con-current band configurations are checked separately for each band configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2G.1-2. | | | | | | |
| Note 2: For Low range the E-UTRA carrier uses only test points with RBstart=0. For High range the E-UTRA carrier uses only test points with RBstart=RBmax-LCRB+1. | | | | | | |

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.93a.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3. Message content exceptions are defined in clause 6.6.2.3G.2.4.3.
3. Downlink signals are initially set up according to Annex C.0, C.1, and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL and V2X Reference Measurement Channels are set according to table 6.6.2.3G.2.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in the state 3A-RF-V2X according to TS 36.508 [7] clause 5.2A.2C.

### 6.6.2.3G.2.4.2 Test procedure

1. The SS simultaneously sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC and V2X scheduling information via PDCCH DCI format 5A for SL_V_RNTI to schedule the V2X RMC according to Table 6.6.2.3G.2.4.1-1. Since the UE has no payload and no loopback data to send the UE sends MAC padding bits on the UL and V2X RMCs.

2. SS sends the appropriate TPC commands in the uplink scheduling information to the UE until the UE transmits at $P_{UMAX}$ level.

3. Measure the mean power of the UE in the channel bandwidth of the radio access mode according to the test configuration, which shall meet the requirements described in subclass 6.2.3G.1 for power class 3 UE, and shall meet the requirements described in subclass 6.2.3G.2 for power class 2 UE. The period of the measurement shall be at least the continuous duration of one sub-frame (1ms). For TDD slots with transient periods are not under test.

4. Measure the rectangular filtered mean power for E-UTRA V2X sidelink and E-UTRA uplink, respectively.

5. Measure the rectangular filtered mean power of the first E-UTRA adjacent channel on both lower and upper side of the E-UTRA V2X sidelink and E-UTRA uplink channel, respectively.

6. Calculate the ratios of the power between the values measured in step 4 over step 5 for lower and upper E-$UTRA_{ACLR}$, respectively.

#### 6.6.2.3G.2.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6, with the following exception:

**Table 6.6.2.3G.2.4.3-1: SL-CommResourcePoolV2X-r14-DEFAULT**

| numSubchannel-r14 | n1 | | |
| } | | | |

#### 6.6.2.3G.2.5 Test requirements

- The measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in subclause 6.2.3G.1 for power class 3 UE, and shall meet the requirements described in subclass 6.2.3G.2 for power class 2 UE as appropriate,

and

- if the measured adjacent channel power is greater than –50 dBm then the measured E-$UTRA_{ACLR}$, derived in step 6, shall be higher than the limits in table 6.6.2.3G.2.5-1 and 6.6.2.3G.2.5-2.

**Table 6.6.2.3G.2.5-1: E-UTRA UE ACLR for power class 3 UE**

| | **Channel bandwidth / E-$UTRA_{ACLR1}$ / measurement bandwidth** | | | | | |
|---|---|---|---|---|---|---|
| | **1.4 MHz** | **3.0 MHz** | **5 MHz** | **10 MHz** | **15 MHz** | **20 MHz** |
| **E-$UTRA_{ACLR1}$** | 29.2 dB | 29.2 dB | 29.2 dB | 29.2 dB | 29.2 dB | 29.2 dB |
| **E-UTRA channel Measurement bandwidth** | 1.08 MHz | 2.7 MHz | 4.5 MHz | 9.0 MHz | 13.5 MHz | 18 MHz |
| **UE channel** | +1.4 MHz or -1.4 MHz | +3 MHz or -3 MHz | +5MHz or -5MHz | +10MHz or -10MHz | +15MHz or -15MHz | +20MHz or -20MHz |

**Table 6.6.2.3G.2.5-2: E-UTRA UE ACLR for power class 2 UE**

| | **Channel bandwidth / E-$UTRA_{ACLR1}$ / measurement bandwidth** | | | | | |
|---|---|---|---|---|---|---|

|---|---|---|---|---|---|---|
| **E-UTRA channel Measurement bandwidth** | 1.08 MHz | 2.7 MHz | 4.5 MHz | 9.0 MHz | 13.5 MHz | 18 MHz |
| **UE channel** | +1.4 MHz or -1.4 MHz | +3 MHz or -3 MHz | +5MHz or -5MHz | +10MHz or -10MHz | +15MHz or -15MHz | +20MHz or -20MHz |

### 6.6.2.4 Void

## 6.6.3 Spurious emissions

Spurious emissions are emissions which are caused by unwanted transmitter effects such as harmonics emission, parasitic emissions, intermodulation products and frequency conversion products, but exclude out of band emissions. The spurious emission limits are specified in terms of general requirements inline with SM.329 [3] and E-UTRA operating band requirement to address UE co-existence.

Unless otherwise stated, the spurious emission limits apply for the frequency ranges that are more than $\Delta f_{OOB}$ (MHz) in Table6.6.3.1.3-1 from the edge of the channel bandwidth. To improve measurement accuracy, sensitivity and efficiency, the resolution bandwidth may be smaller than the measurement bandwidth. When the resolution bandwidth is smaller than the measurement bandwidth, the result should be integrated over the measurement bandwidth in order to obtain the equivalent noise bandwidth of the measurement bandwidth.

### 6.6.3.1 Transmitter Spurious emissions

#### 6.6.3.1.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to other channels or other systems in terms of transmitter spurious emissions.

#### 6.6.3.1.2 Test applicability

This test case applies to all types of E-UTRA UE release 8 and forward.

#### 6.6.3.1.3 Minimum conformance requirements

This clause specifies the requirements for the specified E-UTRA band for Transmitter Spurious emissions requirement with frequency range as indicated in table 6.6.3.1.3-2.

The spurious emission limits apply for the frequency ranges that are more than $\Delta f_{OOB}$ (MHz) from the edge of the channel bandwidth.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

**Table 6.6.3.1.3-1: $\Delta f_{OOB}$ boundary between E-UTRA channel and spurious emission domain**

| **Channel bandwidth** | **1.4 MHz** | **3.0 MHz** | **5 MHz** | **10 MHz** | **15 MHz** | **20 MHz** |
|---|---|---|---|---|---|---|
| **$\Delta f_{OOB}$ (MHz)** | 2.8 | 6 | 10 | 15 | 20 | 25 |

The spurious emission limits in Table 6.6.3.1.3-2 apply for all transmitter band configurations (RB) and channel bandwidths.

**Table 6.6.3.1.3-2: Spurious emissions limits**

| Frequency Range | Maximum Level | Measurement bandwidth | NOTE |
|---|---|---|---|
| 9 kHz ≤ f < 150 kHz | -36 dBm | 1 kHz | |
| 150 kHz ≤ f < 30 MHz | -36 dBm | 10 kHz | |
| 30 MHz ≤ f < 1000 MHz | -36 dBm | 100 kHz | |
| 1 GHz ≤ f < 12.75 GHz | -30 dBm | 1 MHz | |
| 12.75 GHz ≤ f < 5th harmonic of the upper frequency edge of the UL operating band in GHz | -30 dBm | 1 MHz | 1 |
| 12.75 GHz < f < 26GHz | -30dBm | 1MHz | 2 |
| NOTE 1: Applies for Band 22, Band 42, Band 43 and Band 48.<br>NOTE 2: Applies for Band 46 and Band 47. | | | |

### 6.6.3.1.4 Test description

#### 6.6.3.1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in Table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in Table 6.6.3.1.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annexe A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 6.6.3.1.4.1-1: Test Configuration Table**

| **Initial Conditions** | | | | | | |
|---|---|---|---|---|---|---|
| Test Environment (as specified in TS 36.508 [7] subclause 4.1) | | | | NC | | |
| Test Frequencies (as specified in TS36.508 [7] subclause 4.3.1) | | | | Low range, Mid range, High range | | |
| Test Channel Bandwidths (as specified in TS 36.508 [7] subclause 4.3.1) | | | | Lowest, 5MHz, Highest | | |
| **Test Parameters for Channel Bandwidths** | | | | | | |
| | **Downlink Configuration** | | | **Uplink Configuration** | | |

| 20MHz | | | | QPSK | 100 | 100 |
| 20MHz | | | | QPSK | 1 | 1 |
| Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1.<br>Note 2: The 1 RB allocation shall be tested at both RB #0 and RB #max. | | | | | | |

1. Connect the SS to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure A.7.

2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.

3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.

4. The UL Reference Measurement channels are set according to Table 6.6.3.1.4.1-1.

5. Propagation conditions are set according to Annex B.0.

6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.3.1.4.3.

#### 6.6.3.1.4.2 Test procedure

1. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 6.6.3.1.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.

2. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE until the UE transmits at $P_{UMAX}$ level.

3. Measure the power of the transmitted signal with a measurement filter of bandwidths according to table 6.6.3.1.5-1. The centre frequency of the filter shall be stepped in contiguous steps according to table 6.6.3.1.5-1. The measured power shall be verified for each step. The measurement period shall capture the active time slots.

#### 6.6.3.1.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6.

### 6.6.3.1.5 Test requirement

This clause specifies the requirements for the specified E-UTRA band for Transmitter Spurious emissions requirement with frequency range as indicated in Table 6.6.3.1.5-1.

The measured average power of spurious emission, derived in step 3, shall not exceed the described value in Table 6.6.3.1.5-1.

The spurious emission limits apply for the frequency ranges that are more than $\Delta f_{OOB}$ (MHz) from the edge of the channel bandwidth shown in Table 6.6.3.1.3-1.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

**Table 6.6.3.1.5-1: General spurious emissions test requirements**

| Frequency Range | Maximum Level | Measurement Bandwidth | Notes |
|---|---|---|---|
| 9 kHz ≤ f < 150 kHz | -36 dBm | 1 kHz | |
| 150 kHz ≤ f < 30 MHz | -36 dBm | 10 kHz | |
| 30 MHz ≤ f < 1000 MHz | -36 dBm | 100 kHz | |
| 1 GHz ≤ f < 12.75 GHz | -30 dBm | 1 MHz | |
| 12.75 GHz ≤ f < 5th harmonic of the upper frequency edge of the UL operating band in GHz | -30 dBm | 1 MHz | Note 1 |
| Note 1: Applies for Band 22, Band 42 and Band 43 | | | |

## 6.6.3.1_1 Transmitter Spurious emissions for Multi-Cluster PUSCH

### 6.6.3.1_1.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to other channels or other systems in terms of transmitter spurious emissions for Multi-Cluster PUSCH transmission.

### 6.6.3.1_1.2 Test applicability

This test case applies to all types of E-UTRA UE release 10 and forward that support multi cluster PUSCH within a component carrier for the tested band.

### 6.6.3.1_1.3 Minimum conformance requirements

This clause specifies the requirements for the specified E-UTRA band for Transmitter Spurious emissions requirement with frequency range as indicated in table 6.6.3.1_1.3-2.

The spurious emission limits apply for the frequency ranges that are more than $\Delta f_{OOB}$ (MHz) from the edge of the channel bandwidth.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

**Table 6.6.3.1_1.3-1: $\Delta f_{OOB}$ boundary between E-UTRA channel and spurious emission domain**

| Channel bandwidth | 1.4 MHz | 3.0 MHz | 5 MHz | 10 MHz | 15 MHz | 20 MHz |
|---|---|---|---|---|---|---|
| $\Delta f_{OOB}$ (MHz) | 2.8 | 6 | 10 | 15 | 20 | 25 |

The spurious emission limits in Table 6.6.3.1_1.3-2 apply for all transmitter band configurations (RB) and channel bandwidths.

**Table 6.6.3.1_1.3-2: Spurious emissions limits**

| Frequency Range | Maximum Level | Measurement Bandwidth | Notes |
|---|---|---|---|
| 9 kHz ≤ f < 150 kHz | -36 dBm | 1 kHz | |
| 150 kHz ≤ f < 30 MHz | -36 dBm | 10 kHz | |
| 30 MHz ≤ f < 1000 MHz | -36 dBm | 100 kHz | |
| 1 GHz ≤ f < 12.75 GHz | -30 dBm | 1 MHz | |
| 12.75 GHz ≤ f < 5th harmonic of the upper frequency edge of the UL operating band in GHz | -30 dBm | 1 MHz | Note 1 |
| Note 1: Applies for Band 22, Band 42 and Band 43 | | | |

The normative reference for this requirement is TS 36.101 [2] subclause 6.6.3.1.

### 6.6.3.1_1.4 Test description

#### 6.6.3.1_1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in Table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in Table 6.6.3.1_1.4.1-1. The details of the uplink reference measurement

channels (RMCs) are specified in Annexe A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 6.6.3.1_1.4.1-1: Test Configuration Table**

| Initial Conditions | | | | | |
|---|---|---|---|---|---|
| Test Environment as specified in TS 36.508[7] subclause 4.1 | | | Normal | | |
| Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 | | | Low range, Mid range, High range | | |
| Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1 | | | Highest | | |
| **Test Parameters for Channel Bandwidths** | | | | | |
| **Configuration ID** | **Downlink Configuration** | | **Uplink Configuration** | | |
| | Ch BW | N/A for SEM testing | Mod'n | Cluster1 RB allocations ($L_{CRB}$ @ $RB_{start}$) | Cluster2 RB allocations ($L_{CRB}$ @ $RB_{start}$) |
| 1 | 5MHz | | 16QAM | 2@0 | 1@24 |
| 2 | 5MHz | | 16QAM | 18@0 | 2@22 |
| 3 | 5MHz | | 16QAM | 2@0 | 18@6 |
| 4 | 10MHz | | 16QAM | 3@0 | 2@48 |
| 5 | 10MHz | | 16QAM | 42@0 | 3@45 |
| 6 | 10MHz | | 16QAM | 3@0 | 42@6 |
| 7 | 15MHz | | 16QAM | 8@0 | 7@68 |
| 8 | 15MHz | | 16QAM | 60@0 | 4@68 |
| 9 | 15MHz | | 16QAM | 4@0 | 60@12 |
| 10 | 20MHz | | 16QAM | 4@0 | 4@96 |
| 11 | 20MHz | | 16QAM | 92@0 | 4@96 |
| 12 | 20MHz | | 16QAM | 4@0 | 92@8 |
| Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, the applicable channel bandwidths are specified in Table 5.4.2.1-1. | | | | | |

1. Connect the SS to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure A.7.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Table 6.6.3.1_1.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.3.1_1.4.3.

### 6.6.3.1_1.4.2 Test procedure

1. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 6.6.3.1_1.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
2. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE until the UE transmits at $P_{UMAX}$ level.
3. Measure the power of the transmitted signal with a measurement filter of bandwidths according to table 6.6.3.1_1.5-1. The centre frequency of the filter shall be stepped in contiguous steps according to table 6.6.3.1_1.5-1. The measured power shall be verified for each step. The measurement period shall capture the active time slots.

### 6.6.3.1_1.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6.

#### 6.6.3.1_1.5 Test requirement

This clause specifies the requirements for the specified E-UTRA band for Transmitter Spurious emissions requirement with frequency range as indicated in table 6.6.3.1_1.5-1.

The measured average power of spurious emission, derived in step 3, shall not exceed the described value in Table 6.6.3.1_1.5-1.

The spurious emission limits apply for the frequency ranges that are more than $\Delta f_{OOB}$ (MHz) from the edge of the channel bandwidth shown in Table 6.6.3.1_1.5-1.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

**Table 6.6.3.1_1.5-1: General spurious emissions test requirements**

| Frequency Range | Maximum Level | Measurement Bandwidth | Notes |
|---|---|---|---|
| 9 kHz ≤ f < 150 kHz | -36 dBm | 1 kHz | |
| 150 kHz ≤ f < 30 MHz | -36 dBm | 10 kHz | |
| 30 MHz ≤ f < 1000 MHz | -36 dBm | 100 kHz | |
| 1 GHz ≤ f < 12.75 GHz | -30 dBm | 1 MHz | |
| 12.75 GHz ≤ f < 5th harmonic of the upper frequency edge of the UL operating band in GHz | -30 dBm | 1 MHz | Note 1 |
| Note 1: Applies for Band 22, Band 42 and Band 43 | | | |

### 6.6.3.1A Transmitter Spurious emissions for CA

#### 6.6.3.1A.0 Minimum conformance requirements

This clause specifies the spurious emission requirements for carrier aggregation.

NOTE 1: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

For inter-band carrier aggregation with uplink assigned to two E-UTRA bands, the spurious emission requirement Table 6.6.3.1.3-2 apply for the frequency ranges that are more than $F_{OOB}$ as defined in Table 6.6.3.1.3-1 away from edges of the assigned channel bandwidth on a component carrier. If for some frequency a spurious emission requirement of individual component carrier overlaps with the spectrum emission mask or channel bandwidth of another component carrier then it does not apply.

NOTE 2: For inter-band carrier aggregation with uplink assigned to two E-UTRA bands the requirements in Table 6.6.3.1.3-2 could be verified by measuring spurious emissions at the specific frequencies where second and third order intermodulation products generated by the two transmitted carriers can occur; in that case, the requirements for remaining applicable frequencies in Table 6.6.3.1.3-2 would be considered to be verified by the measurements verifying the one uplink inter-band CA spurious emission requirement.

For intra-band contiguous carrier aggregation the spurious emission limits apply for the frequency ranges that are more than FOOB (MHz) in Table 6.6.3.1A.0-1 from the edge of the aggregated channel bandwidth (Table 5.4.2A-1). For frequencies ΔfOOB greater than FOOB as specified in Table 6.6.3.1A.0-1the spurious emission requirements in Table 6.6.3.1.3-2 are applicable.

**Table 6.6.3.1A.0-1: Boundary between E-UTRA out of band and spurious emission domain for intra-band contiguous carrier aggregation**

| CA Bandwidth Class | OOB boundary $F_{OOB}$ (MHz) |
|---|---|
| A | Table 6.6.3.1.3-1 |
| B | $BW_{Channel_CA}$ + 5 |
| C | $BW_{Channel_CA}$ + 5 |

For intra-band non-contiguous carrier aggregation transmission the spurious emission requirement is defined as a composite spurious emission requirement. Composite spurious emission requirement applies to frequency ranges that are more than $F_{OOB}$ away from the edges of the sub-blocks. Composite spurious emission requirement is defined as follows

a) Composite spurious emission requirement is a combination of individual sub-block spurious emission requirements

b) In case the sub-block consist of one component carrier the sub-lock spurious emission requirement and $F_{OOB}$ are defined in subclause 6.6.3.1.3

c) If for some frequency an individual sub-block spurious emission requirement overlaps with the general spectrum emission mask or the sub-block bandwidth of another sub-block then it does not apply

The normative reference for this requirement is TS 36.101[2] clause 6.6.3.1A

## 6.6.3.1A.1 Transmitter Spurious emissions for CA (intra-band contiguous DL CA and UL CA)

### 6.6.3.1A.1.1 Test purpose

To verify that transmitter of UE that support CA does not cause unacceptable interference to other channels or other systems in terms of transmitter spurious emissions.

### 6.6.3.1A.1.2 Test applicability

This test case applies to all types of E-UTRA UE release 10 and forward that support intra-band contiguous DL CA and UL CA.

### 6.6.3.1A.1.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.6.3.1A.0.

### 6.6.3.1A.1.4 Test description

#### 6.6.3.1A.1.4.1 Initial condition

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and CC combinations based on E-UTRA CA bands specified in table 5.4.2A.1-1. All of these configurations shall be tested with applicable test parameters for each CA configuration, and are shown in table 6.6.3.1A.1.4.1-1. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 6.6.3.1A.1.4.1-1: Test Configuration Table**

| Initial Conditions | | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| Test Environment as specified in TS 36.508[7] subclause 4.1 | | | NC | | | | | |
| Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 6.1-2. | | | Low range, High range | | | | | |
| Test CC Combination setting ($N_{RB_agg}$) as specified in subclause 5.4.2A.1 for the CA Configuration | | | Lowest $N_{RB_agg}$, Highest $N_{RB_agg}$ (Note 2) | | | | | |

| |
|---|
| Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1<br>Note 2: If the UE supports multiple CC Combinations in the CA Configuration with the same $N_{RB_agg}$ , only the combination with the highest NRB_PCC is tested. |

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure group A.33 as appropriate.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1, and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channel is set according to Table 6.6.3.1A.1.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.3.1A.1.4.3.

#### 6.6.3.1A.1.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.0 for all downlink physical channels.

2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 6.6.3.1A.1.4.3

3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).

4. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 6.6.3.1A.1.4.1-1 on both PCC and SCC. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.

5. Send continuously uplink power control “up” commands in every uplink scheduling information to the UE until the UE transmits at $P_{UMAX}$ level.

6. Measure the power of the transmitted signal with a measurement filter of bandwidths according to Table 6.6.3.1A.1.5-1 for each component carrier. The centre frequency of the filter shall be stepped in contiguous steps according to Table 6.6.3.1A.1.5-1. The measured power shall be verified for each step. The measurement period shall capture the active time slots.

#### 6.6.3.1A.1.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6. In test procedure step 2, for SCC configuration there are no additional message contents.

### 6.6.3.1A.1.5 Test Requirements

This clause specifies the requirements for the specified E-UTRA band for Transmitter Spurious emissions requirement with frequency range as indicated in table 6.6.3.1A.1.5-1.

For frequencies $\Delta f_{OOB}$ greater than $F_{OOB}$ as specified in Table 6.6.3.1A.0-1the measured average power of spurious emission, derived in step 6, shall not exceed the described value in Table 6.6.3.1A.1.5-1.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

**Table 6.6.3.1A.1.5-1: Spurious emissions limits**

| Frequency Range | Maximum Level | Measurement Bandwidth | Notes |
|---|---|---|---|
| 9 kHz ≤ f < 150 kHz | -36 dBm | 1 kHz | |
| 150 kHz ≤ f < 30 MHz | -36 dBm | 10 kHz | |
| 30 MHz ≤ f < 1000 MHz | -36 dBm | 100 kHz | |
| 1 GHz ≤ f < 12.75 GHz | -30 dBm | 1 MHz | |
| 12.75 GHz ≤ f < 5th harmonic of the upper frequency edge of the UL operating band in GHz | -30 dBm | 1 MHz | Note 1 |
| 12.75 GHz < f < 26GHz | -30dBm | 1MHz | Note 2 |
| Note1: Applies for Band 22, Band 42, Band 43 and Band 48.<br>Note 2: Applies for Band 46 and Band 47. | | | |

## 6.6.3.1A.2 Transmitter Spurious emissions for CA (inter-band DL CA and UL CA)

### 6.6.3.1A.2.1 Test purpose

To verify that transmitter of UE that support CA does not cause unacceptable interference to other channels or other systems in terms of transmitter spurious emissions.

### 6.6.3.1A.2.2 Test applicability

This test case applies to all types of E-UTRA UE release 11 and forward that support inter-band DL CA and UL CA. The requirements also apply to all types of E-UTRA UE release 14 and forward that support uplink LAA.

### 6.6.3.1A.2.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.6.3.1A.0.

### 6.6.3.1A.2.4 Test description

#### 6.6.3.1A.2.4.1 Initial condition

Same as in clause 6.6.3.1A.1.4.1 with the following exceptions:

- Instead of Table 5.4.2A.1-1→ use Table 5.4.2A.1-2 for CA configurations with two bands or Table 5.4.2A.1-2a for CA configurations with three bands.
- Instead of Table 6.6.3.1A.1.4.1-1 → use Table 6.6.3.1A.2.4.1-1 or Table 6.6.3.1A.2.4.1-2.
- Instead of clause 6.6.3.1A.1.4.3 use clause 6.6.3.1A.2.4.3.

Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-2.

Note 2: If the UE supports multiple CC Combinations in the CA Configuration with the same $N_{RB_agg}$, only the combination with the highest NRB_PCC is tested.

6.6.3.1A.2.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.0 for all downlink physical channels.

2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 6.6.3.1A.2.4.3

3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).

4. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 (or DCI format 0A for SCC in the case of uplink LAA) for C_RNTI to schedule the UL RMC according to Table 6.6.3.1A.2.4.1-1 (or Table 6.6.3.1A.2.4.1-2 for SCC in the case of uplink LAA) on both PCC and SCC. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.

5. Send continuously uplink power control "up" commands in every uplink scheduling information to the UE until the UE transmits at $P_{UMAX}$ level.

6. Measure the power of the transmitted signal with a measurement filter of bandwidths according to Table 6.6.3.1A.2.5-1 for each component carrier. The centre frequency of the filter shall be stepped in contiguous steps according to Table 6.6.3.1A.2.5-1. The measured power shall be verified for each step. The measurement period shall capture the active time slots.

### 6.6.3.1A.2.4.3 Message contents

Message contents are according to TS 36.508 [7] clause 4.6 with exceptions as in clause 6.6.3.1A.1.4.3.

For SCC in the case of uplink LAA, message contents are according to TS 36.508[7] subclause4.6 with the following exceptions specified in Tables 6.6.3.1A.1.2.4.3-1 and 6.6.3.1A.1.2.4.3-2.

### 6.6.3.1A.2.5 Test requirement

This clause specifies the requirements for the specified E-UTRA band for Transmitter Spurious emissions requirement with frequency range as indicated in table 6.6.3.1A.2.5-1.

For frequencies $\Delta f_{OOB}$ greater than $F_{OOB}$ as specified in Table 6.6.3.1A.0-1the measured average power of spurious emission, derived in step 6, shall not exceed the described value in Table 6.6.3.1A.2.5-1.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

**Table 6.6.3.1A.2.5-1: Spurious emissions limits**

## 6.6.3.1A.3 Transmitter Spurious emissions for CA (intra-band non-contiguous DL CA and UL CA)

### 6.6.3.1A.3.1 Test purpose

To verify that transmitter of UE that support CA does not cause unacceptable interference to other channels or other systems in terms of transmitter spurious emissions.

### 6.6.3.1A.3.2 Test applicability

This test case applies to all types of E-UTRA UE release 11 and forward that support intra-band non-contiguous DL CA and UL CA.

### 6.6.3.1A.3.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.6.3.1A.0.

### 6.6.3.1A.3.4 Test description

#### 6.6.3.1A.3.4.1 Initial condition

Same as in clause 6.6.3.1A.1.4.1 with the following exceptions:

- Instead of Table 5.4.2A.1-1→ use Table 5.4.2A.1-3 for CA configurations.
- Instead of Table 6.6.3.1A.1.4.1-1 → use Table 6.6.3.1A.3.4.1-1.
- Instead of clause 6.6.3.1A.1.4.3 → use clause 6.6.3.1A.3.4.3.

**Table 6.6.3.1A.3.4.1-1: Test Configuration Table**

| Initial Conditions | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|

| Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-3.<br>Note 2: The measurements need to be executed for in-gap interferer positions when the sub-block gap size $W_{gap}$ allows. | | | | | | | | | |

6.6.3.1A.3.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.0 for all downlink physical channels.

2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 6.6.3.1A.3.4.3

3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).

4. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 6.6.3.1A.3.4.1-1 on both PCC and SCC. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.

5. Send continuously uplink power control “up” commands in every uplink scheduling information to the UE until the UE transmits at $P_{UMAX}$ level.

6. Measure the power of the transmitted signal with a measurement filter of bandwidths according to Table 6.6.3.1A.3.5-1 for each component carrier. The centre frequency of the filter shall be stepped in contiguous steps according to Table 6.6.3.1A.3.5-1. The measured power shall be verified for each step. The measurement period shall capture the active time slots.

7. Repeat the measurement for in-gap interferer positions when the sub-block gap size $W_{gap}$ allows.

#### 6.6.3.1A.3.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6. In test procedure step 2, for SCC configuration there are no additional message contents.

#### 6.6.3.1A.3.5 Test Requirements

This clause specifies the requirements for the specified E-UTRA band for Transmitter Spurious emissions requirement with frequency range as indicated in table 6.6.3.1A.3.5-1.

For frequencies $\Delta f_{OOB}$ greater than $F_{OOB}$ as specified in Table 6.6.3.1A.0-1the measured average power of spurious emission, derived in step 6, shall not exceed the described value in Table 6.6.3.1A.3.5-1.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

**Table 6.6.3.1A.3.5-1: Spurious emissions limits**

| Frequency Range | Maximum Level | Measurement Bandwidth | Notes |
|---|---|---|---|
| 9 kHz ≤ f < 150 kHz | -36 dBm | 1 kHz | |
| 150 kHz ≤ f < 30 MHz | -36 dBm | 10 kHz | |
| 30 MHz ≤ f < 1000 MHz | -36 dBm | 100 kHz | |
| 1 GHz ≤ f < 12.75 GHz | -30 dBm | 1 MHz | |

### 6.6.3.1A.4 Transmitter Spurious emissions for CA (3UL CA)

#### 6.6.3.1A.4.1 Transmitter Spurious emissions for CA (intra-band contiguous 3DL CA and 3UL CA)

Editor's Note: This test case is incomplete. The following items are missing or are incomplete:

-The test applicability needs to be added to TS36.521-2

#### 6.6.3.1A.4.1.1 Test purpose

To verify that transmitter of UE that support CA does not cause unacceptable interference to other channels or other systems in terms of transmitter spurious emissions.

#### 6.6.3.1A.4.1.2 Test applicability

This test case applies to all types of E-UTRA UE release 13 and forward that support intra-band contiguous 3DL CA and 3UL CA.

#### 6.6.3.1A.4.1.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.6.3.1A.0.

#### 6.6.3.1A.4.1.4 Test description

##### 6.6.3.1A.4.1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and CC combinations based on E-UTRA CA configurations specified in table 5.4.2A.1-1. All of these configurations shall be tested with applicable test

parameters for each CA Configuration, and are shown in table 6.6.3.1A.4.1.4.1-1. The details of the uplink and downlink reference measurement channels (RMCs) are specified in Annexe A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 6.6.3.1A.4.1.4.1-1: Test Configuration Table**

| Initial Conditions | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| Test Environment as specified in TS 36.508[7] subclause 4.1 | | | NC | | | | | | |
| Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 6.1-2. | | | Low range, High range | | | | | | |

| Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1<br>Note 2: If in the CA Configuration UE supports multiple CC Combinations with the same $N_{RB_agg}$ , only the first of those is tested, according to the order on the Test Configuration Table list. | | | | | | | | | |

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A Figure group A.32 as appropriate.

2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.

3. Downlink signals for PCC are initially set up according to Annex C.0, C.1, and C.3.0, and uplink signals according to Annex H.1 and H.3.0.

4. The UL Reference Measurement channel is set according to Table 6.6.3.1A.4.1.4.1-1.

5. Propagation conditions are set according to Annex B.0.

6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.3.1A.4.1.4.3.

#### 6.6.3.1A.4.1.4.2 Test procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.0 for all downlink physical channels.

2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4.

3. SS activates SCCs by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).

4. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 6.6.3.1A.1.4.1-1 on all PCC and SCCs. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.

5. Send continuously uplink power control "up" commands in every uplink scheduling information to the UE until the UE transmits at $P_{UMAX}$ level.

6. Measure the power of the transmitted signal with a measurement filter of bandwidths according to Table 6.6.3.1A.1.5-1 for each component carrier. The centre frequency of the filter shall be stepped in contiguous steps according to Table 6.6.3.1A.1.5-1. The measured power shall be verified for each step. The measurement period shall capture the active time slots.

#### 6.6.3.1A.4.1.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6.

### 6.6.3.1A.4.1.5 Test Requirements

This clause specifies the requirements for the specified E-UTRA band for Transmitter Spurious emissions requirement with frequency range as indicated in table 6.6.3.1A.4.1.5-1.

For frequencies $\Delta f_{OOB}$ greater than $F_{OOB}$ as specified in Table 6.6.3.1A.0-1the measured average power of spurious emission, derived in step 6, shall not exceed the described value in Table 6.6.3.1A.4.1.5-1.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

**Table 6.6.3.1A.4.1.5-1: Spurious emissions limits**

| Frequency Range | Maximum Level | Measurement Bandwidth | Notes |
|---|---|---|---|
| 9 kHz ≤ f < 150 kHz | -36 dBm | 1 kHz | |
| 150 kHz ≤ f < 30 MHz | -36 dBm | 10 kHz | |
| 30 MHz ≤ f < 1000 MHz | -36 dBm | 100 kHz | |
| 1 GHz ≤ f < 12.75 GHz | -30 dBm | 1 MHz | |
| 12.75 GHz ≤ f < 5th harmonic of the upper frequency edge of the UL operating band in GHz | -30 dBm | 1 MHz | Note 1 |
| Note1: Applicability of this test requirement is FFS. | | | |

## 6.6.3.1A.4.2 Transmitter Spurious emissions for CA (inter-band 3DL CA and 3UL CA)

Editor's Note: This test case is incomplete. The following items are missing or are incomplete:

-The test applicability needs to be added to TS36.521-2

- The test configuration table is needed for FFS.

#### 6.6.3.1A.4.2.1 Test purpose

Same as in clause 6.6.3.1A.4.1.1.

#### 6.6.3.1A.4.2.2 Test applicability

This test case applies to all types of E-UTRA UE release 13 and forward that support inter-band 3DL CA and 3UL CA.

#### 6.6.3.1A.4.2.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.6.3.1A.0.

#### 6.6.3.1A.4.2.4 Test description

##### 6.6.3.1A.4.2.4.1 Initial conditions

Same as in clause 6.6.3.1A.4.1.4.1 with the following exceptions:

- Instead of Table 5.4.2A.1-1→ use Table 5.4.2A.1-2 for CA configurations with two bands or Table 5.4.2A.1-2a for CA configurations with three bands.
- Instead of Table 6.6.3.1A.4.1.4.1-1 → use Table 6.6.3.1A.4.2.4.1-1.
- Instead of clause 6.6.3.1A.4.1.4.3 use clause 6.6.3.1A.4.2.4.3.

**Table 6.6.3.1A.4.2.4.1-1: Test Configuration Table**

| **Initial Conditions** | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| Test Environment as specified in TS 36.508[7] subclause 4.1 | | | NC | | | | | | |

Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-2.

Note 2: If in the CA Configuration UE supports multiple CC Combinations with the same $N_{RB_agg}$ , only the first of those is tested, according to the order on the Test Configuration Table list.

### 6.6.3.1A.4.2.4.2 Test procedure

Same test procedure as in clause 6.6.3.1A.4.1.4.2.

- Instead of Table 6.6.3.1A.4.1.4.1-1→ use Table 6.6.3.1A.4.2.4.1-1.

- Instead of Table 6.6.3.1A.4.1.5-1 → use Table 6.6.3.1A.4.2.5-1.
- Instead of clause 6.6.3.1A.4.1.4.3 use clause 6.6.3.1A.4.2.4.3.

#### 6.6.3.1A.4.2.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6.

### 6.6.3.1A.4.2.5 Test Requirements

This clause specifies the requirements for the specified E-UTRA band for Transmitter Spurious emissions requirement with frequency range as indicated in table 6.6.3.1A.4.2.5-1.

For frequencies $\Delta f_{OOB}$ greater than $F_{OOB}$ as specified in Table 6.6.3.1A.0-1the measured average power of spurious emission, derived in step 6, shall not exceed the described value in Table 6.6.3.1A.4.2.5-1.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

**Table 6.6.3.1A.4.2.5-1: Spurious emissions limits**

| Frequency Range | Maximum Level | Measurement Bandwidth | Notes |
|---|---|---|---|
| 9 kHz ≤ f < 150 kHz | -36 dBm | 1 kHz | |
| 150 kHz ≤ f < 30 MHz | -36 dBm | 10 kHz | |
| 30 MHz ≤ f < 1000 MHz | -36 dBm | 100 kHz | |
| 1 GHz ≤ f < 12.75 GHz | -30 dBm | 1 MHz | |
| 12.75 GHz ≤ f < 5th harmonic of the upper frequency edge of the UL operating band in GHz | -30 dBm | 1 MHz | Note 1 |
| Note1: Applicability of this test requirement is FFS. | | | |

## 6.6.3.1A.4.3 Transmitter Spurious emissions for CA (3UL CA) (intra-band non-contiguous 3DL CA and 3UL CA)

Editor's Note: This test case is incomplete. The following items are missing or are incomplete:

-The test applicability needs to be added to TS36.521-2

### 6.6.3.1A.4.3.1 Test purpose

Same as in clause 6.6.3.1A.4.1.1.

### 6.6.3.1A.4.3.2 Test applicability

This test case applies to all types of E-UTRA UE release 13 and forward that support intra-band non-contiguous 3DL CA and 3UL CA.

### 6.6.3.1A.4.3.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.6.3.1A.0

6.6.3.1A.4.3.4 Test description

6.6.3.1A.4.3.4.1 Initial conditions

Same as in clause 6.6.3.1A.4.1.4.1 with the following exceptions:

- Instead of Table 5.4.2A.1-1→ use Table 5.4.2A.1-2 for CA configurations with two bands or Table 5.4.2A.1-2a for CA configurations with three bands.
- Instead of Table 6.6.3.1A.4.1.4.1-1 → use Table 6.6.3.1A.4.3.4.1-1.
- Instead of clause 6.6.3.1A.4.1.4.3 use clause 6.6.3.1A.4.3.4.3.

| Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-3.<br>Note 2: The measurements need to be executed for in-gap interferer positions when the sub-block gap size $W_{gap}$ allows. | | | | | | | | | | |

6.6.3.1A.4.3.4.2 Test procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.0 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4.
3. SS activates SCCs by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).

4. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 6.6.3.1A.1.4.1-1 on all PCC and SCCs. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.

5. Send continuously uplink power control "up" commands in every uplink scheduling information to the UE until the UE transmits at $P_{UMAX}$ level.

6. Measure the power of the transmitted signal with a measurement filter of bandwidths according to Table 6.6.3.1A.1.5-1 for each component carrier. The centre frequency of the filter shall be stepped in contiguous steps according to Table 6.6.3.1A.1.5-1. The measured power shall be verified for each step. The measurement period shall capture the active time slots.

7. Repeat the measurement for in-gap interferer positions when the sub-block gap size $W_{gap}$ allows.

#### 6.6.3.1A.4.3.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6.

#### 6.6.3.1A.4.3.5 Test requirement

This clause specifies the requirements for the specified E-UTRA band for Transmitter Spurious emissions requirement with frequency range as indicated in table 6.6.3.1A.4.3.5-1.

For frequencies $\Delta f_{OOB}$ greater than $F_{OOB}$ as specified in Table 6.6.3.1A.0-1the measured average power of spurious emission, derived in step 6, shall not exceed the described value in Table 6.6.3.1A.4.3.5-1.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

**Table 6.6.3.1A.4.3.5-1: Spurious emissions limits**

| Frequency Range | Maximum Level | Measurement Bandwidth | Notes |
|---|---|---|---|
| 9 kHz ≤ f < 150 kHz | -36 dBm | 1 kHz | |
| 150 kHz ≤ f < 30 MHz | -36 dBm | 10 kHz | |
| 30 MHz ≤ f < 1000 MHz | -36 dBm | 100 kHz | |
| 1 GHz ≤ f < 12.75 GHz | -30 dBm | 1 MHz | |

### 6.6.3.2 Spurious emission band UE co-existence

Editor's note: This test case contains different requirements for different UE releases

#### 6.6.3.2.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to co-existing systems for the specified bands which has specific requirements in terms of transmitter spurious emissions.

#### 6.6.3.2.2 Test applicability

This test case applies to all types of E-UTRA UE release 8 and forward.

#### 6.6.3.2.3 Minimum conformance requirements

This clause specifies the requirements for the specified E-UTRA band for coexistence with protected bands as indicated in Table 6.6.3.2.3-1.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

**Table 6.6.3.2.3-1: Spurious emission band UE co-existence limits Rel-8**

| E-UTRA Band | Spurious emission | | | | | | |
|---|---|---|---|---|---|---|---|
| | Protected band | Frequency range (MHz) | | | Maximum Level (dBm) | MBW (MHz) | Comment |
| 1 | E-UTRA Band 1, 3, 7, 8, 9, 11, 34, 38, 40 | FDL_low | - | FDL_high | -50 | 1 | |
| | Frequency range | 860 | - | 895 | -50 | 1 | |
| | Frequency range | 1475.9 | - | 1510.9 | -50 | 1 | |
| | Frequency range | 1895 | - | 1915 | -15.5 | 5 | Note[14], Note[17] |
| | Frequency range | 1915 | - | 1920 | +1.6 | 5 | Note[14], Note[17] |

| | Frequency range | 860 | - | 895 | -50 | 1 | |
| | Frequency range | 1475.9 | - | 1510.9 | -50 | 1 | |
| | Frequency range | 1884.5 | - | 1915.7 | -41 | 0.3 | Note[8] |
| 35 | | | | | | | |
| 36 | | | | | | | |
| 37 | | | - | | | | |
| 38 | E-UTRA Band 1, 3, 8, 33, 34 | FDL_low | - | FDL_high | -50 | 1 | |
| | Frequency range | 2620 | - | 2645 | -15.5 | 5 | Note[14], Note[16], Note[18] |
| 39 | E-UTRA Band 34, 40 | FDL_low | - | FDL_high | -50 | 1 | |
| 40 | E-UTRA Band 1, 3, 33, 34, 39 | FDL_low | - | FDL_high | -50 | 1 | |

Note 1: FDL_low and FDL_high refer to each E-UTRA frequency band specified in Table 5.2-1

Note 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1.3-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2nd or 3rd harmonic spurious emissions. An exception is allowed if there is at least one individual RE within the transmission bandwidth (see Figure 5.4.2-1) for which the 2nd or 3rd harmonic, i.e. the frequency equal to two or three times the frequency of that RE, is within the measurement bandwidth (MBW).

Note 3: To meet these requirements some restriction will be needed for either the operating band or protected band

Note 4: N/A

Note 5: For non synchronised TDD operation to meet these requirements some restriction will be needed for either the operating band or protected band

Note 6: N/A.

Note 7: Applicable when co-existence with PHS system operating in 1884.5-1919.6MHz.

Note 8: Applicable when co-existence with PHS system operating in 1884.5-1915.7MHz.

Note 9: N/A

Note 10: N/A

Note 11: Whether the applicable frequency range should be 793-805MHz instead of 799-805MHz is TBD

Note 12: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB

Note 13: Applicable when UE transmits anywhere within 1749.9 – 1784.9MHz.Applicable when the assigned E-UTRA UL operating channel is ≥1 749.9MHz and ≤ 1 784.9MHz.

Note 14: These requirements also apply for the frequency ranges that are less than $\Delta f_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

Note 15: This requirement is applicable for an uplink transmission bandwidth less than or equal to 54 RB for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2560.5 - 2562.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2552 - 2560 MHz. This requirement is applicable without any other uplink transmission bandwidth restriction for channel bandwidths within the range 2500 - 2570 MHz.

Note 16: This requirement is applicable for an uplink transmission bandwidth less than or equal to 54 RB for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2605.5 - 2607.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2597 – 2605 MHz. This requirement is applicable without any other uplink transmission bandwidth restriction for channel bandwidths within the range 2570 – 2615 MHz. For assigned carriers with bandwidths overlapping the frequency range 2615-2620 MHz the requirements apply with the maximum output power configured to +19 dBm in the IE *P-Max*.

Note 17: This requirement is applicable for an uplink transmission bandwidth less than or equal to 54 RB for carriers of

15 MHz bandwidth when carrier centre frequency is within the range 1927.5 - 1929.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1930 - 1938 MHz. This requirement is applicable without any other uplink transmission bandwidth restriction for channel bandwidths within the range 1920 - 1980 MHz.

Note 18: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.

NOTE: The restriction on the maximum uplink transmission to 54 RB in Notes 15, 16, and 17 of Table 6.6.3.2.3-1 is intended for conformance testing and may be applied to network operation to facilitate coexistence when the aggressor and victim bands are deployed in the same geographical area. The applicable spurious emission requirement of -15.5 dBm/5MHz is a least restrictive technical condition for FDD/TDD coexistence and may have to be revised in the future.

**Table 6.6.3.2.3-1A: Spurious emission band UE co-existence limits Rel-9**

| E-UTRA Band | Spurious emission | | | | | | |
|---|---|---|---|---|---|---|---|
| | Protected band | Frequency range (MHz) | | | Maximum level (dBm) | MBW (MHz) | NOTE |
| 1 | E-UTRA Band 1, 3, 7, 8, 11, 20, 21, 34, 38, 40 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |

| 40 | E-UTRA Band 1, 3, 33, 34, 39 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |

Note 1: FDL_low and FDL_high refer to each E-UTRA frequency band specified in Table 5.2-1
Note 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1.3-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2nd or 3rd harmonic spurious emissions. An exception is allowed if there is at least one individual RE within the transmission bandwidth (see Figure 5.4.2-1) for which the 2nd or 3rd harmonic, i.e. the frequency equal to two or three times the frequency of that RE, is within the measurement bandwidth (MBW).
Note 3: To meet these requirements some restriction will be needed for either the operating band or protected band
Note 4: N/A
Note 5: For non synchronised TDD operation to meet these requirements some restriction will be needed for either the operating band or protected band
Note 6: N/A
Note 7: Applicable when co-existence with PHS system operating in 1884.5-1919.6MHz.
Note 8: Applicable when co-existence with PHS system operating in 1884.5 -1915.7MHz.
Note 9: N/A
Note 10: N/A
Note 11: Whether the applicable frequency range should be 793-805MHz instead of 799-805MHz is TBD
Note 12: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB
Note 13: Applicable when the assigned E-UTRA UL operating channel is ≥1744.9MHz and ≤ 1784.9MHz.
Note 14: These requirements also apply for the frequency ranges that are less than $\Delta f_{OOB}$ (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.
Note 15: This requirement is applicable for an uplink transmission bandwidth less than or equal to 54 RB for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2560.5 - 2562.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2552 - 2560 MHz. This requirement is applicable without any other uplink transmission bandwidth restriction for channel bandwidths within the range 2500 - 2570 MHz.
Note 16: This requirement is applicable for an uplink transmission bandwidth less than or equal to 54 RB for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2605.5 - 2607.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2597 – 2605 MHz. This requirement is applicable without any other uplink transmission bandwidth restriction for channel bandwidths within the

range 2570 – 2615 MHz. For assigned carriers with bandwidths overlapping the frequency range 2615-2620 MHz the requirements apply with the maximum output power configured to +19 dBm in the IE *P-Max*.

Note 17: For carriers of 5 MHz channel bandwidth with carrier centre frequencies ($F_c$) in the range 902.5MHz ≤ $F_c$ < 907.5 MHz, the requirement applies for uplink transmission bandwidths less than or equal to 20 RB. No restrictions apply in the range 907.5 MHz ≤ $F_c$ ≤ 912.5 MHz. For carriers of 10 MHz channel bandwidth, the requirement only applies for $F_c$ = 910 MHz and uplink transmission bandwidths less than or equal to 32 RB with $RB_{start}$ > 3.

Note 18: This requirement is applicable for an uplink transmission bandwidth less than or equal to 54 RB for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1927.5 - 1929.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1930 - 1938 MHz. This requirement is applicable without any other uplink transmission bandwidth restriction for channel bandwidths within the range 1920 - 1980 MHz.

Note 19: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.

NOTE: The restriction on the maximum uplink transmission to 54 RB in Notes 15, 16 and 18 of Table 6.6.3.2.3-1A is intended for conformance testing and may be applied to network operation to facilitate coexistence when the aggressor and victim bands are deployed in the same geographical area. The applicable spurious emission requirement of -15.5 dBm/5MHz is a least restrictive technical condition for FDD/TDD coexistence and may have to be revised in the future.

**Table 6.6.3.2.3-1B: Spurious emission band UE co-existence limits Rel-10**

| E-UTRA Band | Spurious emission | | | | | | |
|---|---|---|---|---|---|---|---|
| | Protected band | Frequency range (MHz) | | | Maximum Level (dBm) | MBW (MHz) | Note |
| 1 | E-UTRA Band 1, 7, 8, 11, 18, 19, 20, 21, 22, 38, 40, 42, 43 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 3, 34 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 15 |
| | Frequency range | 1880 | - | 1895 | -40 | 1 | 15,19 |
| | Frequency range | 1895 | - | 1915 | -15.5 | 5 | 15,19,20 |
| | Frequency range | 1915 | - | 1920 | +1.6 | 5 | 15,19,20 |
| | Frequency range | 1839.9 | - | 1879.9 | -50 | 1 | 15 |
| 2 | E-UTRA Band 4, 5, 10, 12, 13, 14, 17, 23, 24, 41, 42 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 2, 25 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 15 |
| | E-UTRA Band 43 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 2 |
| 3 | E-UTRA Band 1, 7, 8, 20, 33, 34, 38, 43 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 3 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 15 |

| 41 | E-UTRA Band 2, 4, 5, 10, 12, 13 , 14, 17, | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| | 23, 24, 25 | | | | | | |
| 42 | E-UTRA Band 1, 2, 3, 4, 5, 7, 8, 10, 11, 18, 19, 20, 21, 25, 33, 34, 38, 40 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | Frequency range | 1884.5 | - | 1915.7 | -41 | 0.3 | 8 |
| 43 | E-UTRA Band 1, 2, 3, 4, 5, 7, 8, 10, 20, 25, 33, 34, 38, 40 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |

Note 1: $F_{DL_low}$ and $F_{DL_high}$ refer to each E-UTRA frequency band specified in Table 5.2-1

Note 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1.3-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2nd, 3rd, 4th [or 5th ] harmonic spurious emissions. Due to spreading of the harmonic emission the exception is also allowed for the first 1 MHz frequency range immediately outside the harmonic emission on both sides of the harmonic emission. This results in an overall exception interval centred at the harmonic emission of (2MHz + N x $L_{CRB}$ x 180kHz), where N is 2, 3, 4, [5] for the 2nd, 3rd, 4th [or 5th ] harmonic respectively. The exception is allowed if the measurement bandwidth (MBW) totally or partially overlaps the overall exception interval.

Note 3: N/A

Note 4: N/A

Note 5: For non synchronised TDD operation to meet these requirements some restriction will be needed for either the operating band or protected band

Note 6: N/A

Note 7: Applicable when co-existence with PHS system operating in 1884.5-1919.6MHz.

Note 8: Applicable when co-existence with PHS system operating in 1884.5 -1915.7MHz.

Note 9: N/A

Note 10: N/A

Note 11: Whether the applicable frequency range should be 793-805MHz instead of 799-805MHz is TBD

Note 12: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB

Note 13: This requirement applies for 5, 10, 15 and 20 MHz E-UTRA channel bandwidth allocated within 1744.9MHz and 1784.9MHz.

Note 14: N/A

Note 15: These requirements also apply for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1.3-1 and Table 6.6.3.1A.1.3-1 from the edge of the channel bandwidth.

NOTE 16: This requirement is applicable for any channel bandwidths within the range 2500 - 2570 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2560.5 - 2562.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2552 - 2560 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.

NOTE 17: This requirement is applicable for any channel bandwidths within the range 2570 - 2615 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2605.5 - 2607.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2597 - 2605 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.
For carriers with channel bandwidth overlapping the frequency range 2615 - 2620 MHz the requirement applies with the maximum output power configured to +19 dBm in the IE *P-Max*.

NOTE 18: This requirement is applicable only for the following cases:
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 902.5 MHz ≤ $F_c$ < 907.5 MHz with an uplink transmission bandwidth less than or equal to 20 RB
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 907.5 MHz ≤ $F_c$ ≤ 912.5 MHz without any restriction on uplink transmission bandwidth
- for carriers of 10 MHz channel bandwidth when carrier centre frequency ($F_c$) is $F_c$ = 910 MHz with an uplink transmission bandwidth less than or equal to 32 RB with $RB_{start}$ > 3.

NOTE 19: This requirement is applicable for any channel bandwidths within the range 1920 - 1980 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1927.5 - 1929.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1930 - 1938 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.

Note 20: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.

Note 21 N/A

Note 22 N/A

NOTE: The restriction on the maximum uplink transmission to 54 RB in Notes 16, 17, and 19 of Table 6.6.3.2.3-1B is intended for conformance testing and may be applied to network operation to facilitate coexistence when the aggressor and victim bands are deployed in the same geographical area. The applicable spurious emission requirement of -15.5 dBm/5MHz is a least restrictive technical condition for FDD/TDD coexistence and may have to be revised in the future.

**Table 6.6.3.2.3-1C: Spurious emission band UE co-existence limits Rel-11**

| E-UTRA Band | Spurious emission | | | | | | |
|---|---|---|---|---|---|---|---|
| | Protected band | Frequency range (MHz) | | | Maximum Level (dBm) | MBW (MHz) | Note |
| 1 | E-UTRA Band 1, 7, 8, 11, 18, 19, 20, 21, 22, 26, 27, 28, 38, 40, 41, 42, 43, 44 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |

| | Frequency range | 1884.5 | - | 1915.7 | -41 | 0.3 | 8 |
| 43 | E-UTRA Band 1, 2, 3, 4, 5, 7, 8, 10, 20, 25, 26, 27, 28, 33, 34, 38, 40 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| 44 | E-UTRA Band 3, 5, 8, 34, 39, 41 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 1, 40, 42 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 2 |

Note 1: $F_{DL_low}$ and $F_{DL_high}$ refer to each E-UTRA frequency band specified in Table 5.2-1

Note 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1.3-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2nd, 3rd, 4th [or 5th] harmonic spurious emissions. Due to spreading of the harmonic emission the exception is also allowed for the first 1 MHz frequency range immediately outside the harmonic emission on both sides of the harmonic emission. This results in an overall exception interval centred at the harmonic emission of (2MHz + N x $L_{CRB}$ x 180kHz), where N is 2, 3, 4, [5] for the 2nd, 3rd, 4th [or 5th ] harmonic respectively. The exception is allowed if the measurement bandwidth (MBW) totally or partially overlaps the overall exception interval.

Note 3: N/A

Note 4: N/A

Note 5: For non synchronised TDD operation to meet these requirements some restriction will be needed for either the operating band or protected band

Note 6: N/A

Note 7: Applicable when co-existence with PHS system operating in 1884.5 -1919.6MHz.

Note 8: Applicable when co-existence with PHS system operating in 1884.5 -1915.7MHz.

Note 9: N/A

Note 10: N/A

Note 11: Whether the applicable frequency range should be 793-805MHz instead of 799-805MHz is TBD

Note 12: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB

Note 13: This requirement applies for 5, 10, 15 and 20 MHz E-UTRA channel bandwidth allocated within 1744.9MHz and 1784.9MHz.

Note 14: N/A

Note 15: These requirements also apply for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1.3-1 and Table 6.6.3.1A.1.3-1 from the edge of the channel bandwidth.

Note 16: N/A

Note 17: N/A

Note 18: N/A

Note 19: Applicable when the assigned E-UTRA carrier is confined within 718 MHz and 748 MHz and when the channel bandwidth used is 5 or 10 MHz.

Note 20: N/A

Note 21: This requirement is applicable for any channel bandwidths within the range 2500 - 2570 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2560.5 - 2562.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2552 - 2560 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.

Note 22: This requirement is applicable for any channel bandwidths within the range 2570 - 2615 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2605.5 - 2607.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2597 - 2605 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.
For carriers with channel bandwidth overlapping the frequency range 2615 - 2620 MHz the requirement applies with the maximum output power configured to +19 dBm in the IE *P-Max*.

Note 23: This requirement is applicable only for the following cases:
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 902.5 MHz ≤ $F_c$ < 907.5 MHz with an uplink transmission bandwidth less than or equal to 20 RB
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 907.5 MHz ≤ $F_c$ ≤ 912.5 MHz without any restriction on uplink transmission bandwidth
- for carriers of 10 MHz channel bandwidth when carrier centre frequency ($F_c$) is $F_c$ = 910 MHz with an uplink transmission bandwidth less than or equal to 32 RB with $RB_{start}$ > 3.

Note 24: As exceptions, measurements with a level up to the applicable requirement of -38 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 2nd harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the 2nd harmonic totally or partially overlaps the measurement bandwidth (MBW).

Note 25: As exceptions, measurements with a level up to the applicable requirement of -36 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 3rd harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the 3rd harmonic totally or partially overlaps the measurement bandwidth (MBW).

Note 26: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.

Note 27: This requirement is applicable for any channel bandwidths within the range 1920 - 1980 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1927.5 - 1929.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1930 - 1938 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.

Note 28: N/A
Note 29: N/A
Note 30: This requirement applies when the E-UTRA carrier is confined within 2545-2575 MHz and the channel bandwidth is 10 or 20 MHz
Note 31: This requirement is applicable for 5 and 10 MHz E-UTRA channel bandwidth allocated within 718-728MHz. For carriers of 10 MHz bandwidth, this requirement applies for an uplink transmission bandwidth less than or equal to 30 RB with RBstart > 1 and RBstart<48.
Note 32: This requirement is applicable in the case of a 10 MHz E-UTRA carrier confined within 703 MHz and 733 MHz, otherwise the requirement of -25 dBm with a measurement bandwidth of 8 MHz applies.

**Table 6.6.3.2.3-1D: Spurious emission band UE co-existence limits Rel-12**

| E-UTRA Band | Spurious emission | | | | | | |
|---|---|---|---|---|---|---|---|
| | **Protected band** | **Frequency range (MHz)** | | | **Maximum Level (dBm)** | **MBW (MHz)** | **Note** |
| 1 | E-UTRA Band 1, 5, 7, 8, 11, 18, 19, 20, 21, 22, 26, 27, 28, 31, 32, 38, 40, 41, 42, 43, 44 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 3, 34 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 15 |
| | Frequency range | 1880 | | 1895 | -40 | 1 | 15,27 |
| | Frequency range | 1895 | | 1915 | -15.5 | 5 | 15, 26, 27 |

| | Frequency range | 1884.5 | - | 1915.7 | -41 | 0.3 | 8 |
| 43 | E-UTRA Band 1, 2, 3, 4, 5, 7, 8, 10, 20, 25, 26, 27, 28, 31, 32, 33, 34, 38, 40 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| 44 | E-UTRA Band 3, 5, 8, 34, 39, 41 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 1, 40, 42 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 2 |

Note 1: $F_{DL_low}$ and $F_{DL_high}$ refer to each E-UTRA frequency band specified in Table 5.5-1

Note 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1.3-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2nd, 3rd, 4th [or 5th] harmonic spurious emissions. Due to spreading of the harmonic emission the exception is also allowed for the first 1 MHz frequency range immediately outside the harmonic emission on both sides of the harmonic emission. This results in an overall exception interval centred at the harmonic emission of (2MHz + N x $L_{CRB}$ x 180kHz), where N is 2, 3, 4, [5] for the 2nd, 3rd, 4th [or 5th ] harmonic respectively. The exception is allowed if the measurement bandwidth (MBW) totally or partially overlaps the overall exception interval.

Note 3: N/A

Note 4: N/A

Note 5: For non synchronised TDD operation to meet these requirements some restriction will be needed for either the operating band or protected band

Note 6: N/A

Note 7: Applicable when co-existence with PHS system operating in 1884.5 -1919.6MHz.

Note 8: Applicable when co-existence with PHS system operating in 1884.5 -1915.7MHz.

Note 9: N/A

Note 10: N/A

Note 11: Whether the applicable frequency range should be 793-805MHz instead of 799-805MHz is TBD

Note 12: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB

Note 13: This requirement applies for 5, 10, 15 and 20 MHz E-UTRA channel bandwidth allocated within 1744.9MHz and 1784.9MHz.

Note 14: N/A

Note 15: These requirements also apply for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1.3-1 and Table 6.6.3.1A.1.3-1 from the edge of the channel bandwidth.

Note 16: N/A

Note 17: N/A

Note 18: N/A

Note 19: Applicable when the assigned E-UTRA carrier is confined within 718 MHz and 748 MHz and when the channel bandwidth used is 5 or 10 MHz.

Note 20: N/A

Note 21: This requirement is applicable for any channel bandwidths within the range 2500 - 2570 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2560.5 - 2562.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2552 - 2560 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.

Note 22: This requirement is applicable for any channel bandwidths within the range 2570 - 2615 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2605.5 - 2607.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2597 - 2605 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.
For carriers with channel bandwidth overlapping the frequency range 2615 - 2620 MHz the requirement applies with the maximum output power configured to +19 dBm in the IE *P-Max*.

Note 23 This requirement is applicable only for the following cases:
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 902.5 MHz ≤ $F_c$ < 907.5 MHz with an uplink transmission bandwidth less than or equal to 20 RB
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 907.5 MHz ≤ $F_c$ ≤ 912.5 MHz without any restriction on uplink transmission bandwidth
- for carriers of 10 MHz channel bandwidth when carrier centre frequency ($F_c$) is $F_c$ = 910 MHz with an uplink transmission bandwidth less than or equal to 32 RB with $RB_{start}$ > 3.

Note 24: As exceptions, measurements with a level up to the applicable requirement of -38 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 2nd harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the 2nd harmonic totally or partially overlaps the measurement bandwidth (MBW).

Note 25: As exceptions, measurements with a level up to the applicable requirement of -36 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 3rd harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the 3rd harmonic totally or partially overlaps the measurement bandwidth (MBW).

Note 26: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.

Note 27: This requirement is applicable for any channel bandwidths within the range 1920 - 1980 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1927.5 - 1929.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1930 - 1938 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.

Note 28: N/A
Note 29: N/A
Note 30: This requirement applies when the E-UTRA carrier is confined within 2545-2575MHz or 2595-2645MHz and the channel bandwidth is 10 or 20 MHz
Note 31: N/A
Note 32: Void.
Note 33: This requirement is only applicable for carriers with bandwidth confined within 1885-1920 MHz (requirement for carriers with at least 1RB confined within 1880 - 1885 MHz is not specified). This requirement applies for an uplink transmission bandwidth less than or equal to [54 RB] for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1892.5 - 1894.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1895 - 1903 MHz.
Note 34: This requirement is applicable for 5 and 10 MHz E-UTRA channel bandwidth allocated within 718-728MHz. For carriers of 10 MHz bandwidth, this requirement applies for an uplink transmission bandwidth less than or equal to 30 RB with RBstart > 1 and RBstart<48.
Note 35: This requirement is applicable in the case of a 10 MHz E-UTRA carrier confined within 703 MHz and 733 MHz, otherwise the requirement of -25 dBm with a measurement bandwidth of 8 MHz applies.

**Table 6.6.3.2.3-1E: Spurious emission band UE co-existence limits Rel-13**

| E-UTRA Band | Spurious emission | | | | | | |
|---|---|---|---|---|---|---|---|
| | Protected band | Frequency range (MHz) | | | Maximum Level (dBm) | MBW (MHz) | NOTE |
| 1 | E-UTRA Band 1, 3, 5, 7, 8, 11, 18, 19, 20, 21, 22, 26, 27, 28, 31, 32, 38, 40, 41, 42, 43, 44, 45, 65, 67, 68 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 34 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 15 |
| | Frequency range | 1880 | - | 1895 | -40 | 1 | 15, 27 |
| | Frequency range | 1895 | | 1915 | -15.5 | 5 | 15, 26, 27 |
| | Frequency range | 1915 | | 1920 | +1.6 | 5 | 15, 26, 27, 39 |
| 2 | E-UTRA Band 4, 5, 10, 12, 13, 14, 17, 23, 24, 26, 27, 28, 29, 30, 41, 42, 66 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 2, 25 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 15 |
| | E-UTRA Band 43 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 2 |
| 3 | E-UTRA Band 1, 5, 7, 8, 11, 18, 19, 20, 21, 26, 27, 28, 31, 32, 33, 34, 38, 39, 40, 41, 43, 44, 45, 65, 67, 68 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |

| | Frequency range | 1900 | - | 1915 | -15.5 | 5 | 15, 26, 27 |
| | Frequency range | 1915 | - | 1920 | +1.6 | 5 | 15, 26, 27 |
| 66 | E-UTRA Band 2, 4, 5, 7, 10, 12, 13, 14, 17, 23, 24, 25, 26, 27, 28, 29, 30, 38, 41, 43, 66 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 42 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 2 |
| 68 | E-UTRA Band 3, 7, 8, 20, 22, 28, 31, 38, 40, 42, 43, 65 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 1 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 2 |

NOTE 1: $F_{DL_low}$ and $F_{DL_high}$ refer to each E-UTRA frequency band specified in Table 5.5-1
NOTE 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1.3-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2nd, 3rd, 4th [or 5th] harmonic spurious emissions. Due to spreading of the harmonic emission the exception is also allowed for the first 1 MHz frequency range immediately outside the harmonic emission on both sides of the harmonic emission. This results in an overall exception interval centred at the harmonic emission of (2MHz + N x $L_{CRB}$ x 180kHz), where N is 2, 3, 4, [5] for the 2nd, 3rd, 4th [or 5th] harmonic respectively. The exception is allowed if the measurement bandwidth (MBW) totally or partially overlaps the overall exception interval.
NOTE 3: N/A
NOTE 4: N/A
NOTE 5: For non synchronised TDD operation to meet these requirements some restriction will be needed for either the operating band or protected band
NOTE 6: N/A
NOTE 7: Applicable when co-existence with PHS system operating in 1884.5 -1919.6MHz.
NOTE 8: Applicable when co-existence with PHS system operating in 1884.5 -1915.7MHz.
NOTE 9: N/A
NOTE 10: N/A
NOTE 11: Whether the applicable frequency range should be 793-805MHz instead of 799-805MHz is TBD
NOTE 12: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB
NOTE 13: N/A
NOTE 14: N/A
NOTE 15: These requirements also apply for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1.3-1 and Table 6.6.3.1A.3-1 from the edge of the channel bandwidth.
NOTE 16: N/A
NOTE 17: N/A

NOTE 18: N/A
NOTE 19: Applicable when the assigned E-UTRA carrier is confined within 718 MHz and 748 MHz and when the channel bandwidth used is 5 or 10 MHz.
NOTE 20: N/A
NOTE 21: This requirement is applicable for any channel bandwidths within the range 2500 - 2570 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2560.5 - 2562.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2552 - 2560 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.
NOTE 22: This requirement is applicable for any channel bandwidths within the range 2570 - 2615 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2605.5 - 2607.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2597 - 2605 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.
For carriers with channel bandwidth overlapping the frequency range 2615 - 2620 MHz the requirement applies with the maximum output power configured to +19 dBm in the IE *P-Max*.
NOTE 23: This requirement is applicable only for the following cases:
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 902.5 MHz ≤ $F_c$ < 907.5 MHz with an uplink transmission bandwidth less than or equal to 20 RB
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 907.5 MHz ≤ $F_c$ ≤ 912.5 MHz without any restriction on uplink transmission bandwidth.
- for carriers of 10 MHz channel bandwidth when carrier centre frequency ($F_c$) is $F_c$ = 910 MHz with an uplink transmission bandwidth less than or equal to 32 RB with $RB_{start}$ > 3.
NOTE 24: As exceptions, measurements with a level up to the applicable requirement of -38 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 2nd harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the 2nd harmonic totally or partially overlaps the measurement bandwidth (MBW).
NOTE 25: As exceptions, measurements with a level up to the applicable requirement of -36 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 3rd harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the 3rd harmonic totally or partially overlaps the measurement bandwidth (MBW).
NOTE 26: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.
NOTE 27: This requirement is applicable for any channel bandwidths within the range 1920 - 1980 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1927.5 - 1929.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1930 - 1938 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.
NOTE 28: N/A
NOTE 29: N/A
NOTE 30: This requirement applies when the E-UTRA carrier is confined within 2545-2575MHz or 2595-2645MHz and the channel bandwidth is 10 or 20 MHz
NOTE 31: N/A
NOTE 32: Void
NOTE 33: This requirement is only applicable for carriers with bandwidth confined within 1885-1920 MHz (requirement for carriers with at least 1RB confined within 1880 - 1885 MHz is not specified). This requirement applies for an uplink transmission bandwidth less than or equal to 54 RB for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1892.5 - 1894.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1895 - 1903 MHz.
NOTE 34: This requirement is applicable for 5 and 10 MHz E-UTRA channel bandwidth allocated within 718-728MHz. For carriers of 10 MHz bandwidth, this requirement applies for an uplink transmission bandwidth less than or equal to 30 RB with RBstart > 1 and RBstart<48.
NOTE 35: This requirement is applicable in the case of a 10 MHz E-UTRA carrier confined within 703 MHz and 733 MHz, otherwise the requirement of -25 dBm with a measurement bandwidth of 8 MHz applies.
NOTE 36: This requirement is applicable for E-UTRA channel bandwidth allocated within 1920-1980 MHz.
NOTE 37: Applicable when the upper edge of the channel bandwidth frequency is greater than 1980MHz.
NOTE 38: Applicable only for UE category M1 and NB1.
NOTE 39: For category NB1 UE when carrier centre frequency is 1920.1 MHz, in case of single-tone uplink transmission the requirement is applicable only for sub-carrier index > 2.

NOTE: The restriction on the maximum uplink transmission to 54 RB in Notes 21, 22, and 27 of Table 6.6.3.2.3-1E and the restriction on the single-tone uplink transmission to sub-carrier index > 2 in Note 39 of Table 6.6.3.2.3-1E are intended for conformance testing and may be applied to network operation to facilitate coexistence when the aggressor and victim bands are deployed in the same geographical area. The applicable spurious emission requirement of -15.5 dBm/5MHz is a least restrictive technical condition for FDD/TDD coexistence and may have to be revised in the future.

**Table 6.6.3.2.3-1F: Spurious emission band UE co-existence limits Rel-14**

| E-UTRA Band | Spurious emission | | | | | | |
|---|---|---|---|---|---|---|---|
| | Protected band | Frequency range (MHz) | | | Maximum Level (dBm) | MBW (MHz) | NOTE |
| 1 | E-UTRA Band 1, 3, 5, 7, 8, 11, 18, 19, 20, 21, 22, 26, 27, 28, 31, 32, 38, 40, 41, 42, 43, 44, 45, 65, 67, 68, 69 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |

| 70 | E-UTRA Band 2, 4, 5, 10, 12, 13, 14, 17, 24, 25, 26, 29, 30, 41, 48, 66, 70 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 2 |

NOTE 1: $F_{DL_low}$ and $F_{DL_high}$ refer to each E-UTRA frequency band specified in Table 5.5-1
NOTE 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1.3-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2nd, 3rd, 4th [or 5th] harmonic spurious emissions. Due to spreading of the harmonic emission the exception is also allowed for the first 1 MHz frequency range immediately outside the harmonic emission on both sides of the harmonic emission. This results in an overall exception interval centred at the harmonic emission of (2MHz + N x $L_{CRB}$ x 180kHz), where N is 2, 3, 4, [5] for the 2nd, 3rd, 4th [or 5th] harmonic respectively. The exception is allowed if the measurement bandwidth (MBW) totally or partially overlaps the overall exception interval.
NOTE 3: N/A
NOTE 4: N/A
NOTE 5: For non synchronised TDD operation to meet these requirements some restriction will be needed for either the operating band or protected band
NOTE 6: N/A
NOTE 7: Applicable when co-existence with PHS system operating in 1884.5 -1919.6MHz.
NOTE 8: Applicable when co-existence with PHS system operating in 1884.5 -1915.7MHz.
NOTE 9: N/A
NOTE 10: N/A
NOTE 11: Whether the applicable frequency range should be 793-805MHz instead of 799-805MHz is TBD
NOTE 12: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB
NOTE 13: N/A
NOTE 14: N/A
NOTE 15: These requirements also apply for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1.3-1 and Table 6.6.3.1A.3-1 from the edge of the channel bandwidth.
NOTE 16: N/A
NOTE 17: N/A
NOTE 18: N/A
NOTE 19: Applicable when the assigned E-UTRA carrier is confined within 718 MHz and 748 MHz and when the channel bandwidth used is 5 or 10 MHz.
NOTE 20: N/A
NOTE 21: This requirement is applicable for any channel bandwidths within the range 2500 - 2570 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2560.5 - 2562.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2552 - 2560 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.
NOTE 22: This requirement is applicable for any channel bandwidths within the range 2570 - 2615 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2605.5 - 2607.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2597 - 2605 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.
For carriers with channel bandwidth overlapping the frequency range 2615 - 2620 MHz the requirement applies with the maximum output power configured to +19 dBm in the IE *P-Max*.
NOTE 23: This requirement is applicable only for the following cases:
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 902.5 MHz ≤ $F_c$ < 907.5 MHz with an uplink transmission bandwidth less than or equal to 20 RB
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 907.5 MHz ≤ $F_c$ ≤ 912.5 MHz without any restriction on uplink transmission bandwidth.
- for carriers of 10 MHz channel bandwidth when carrier centre frequency ($F_c$) is $F_c$ = 910 MHz with an uplink transmission bandwidth less than or equal to 32 RB with $RB_{start}$ > 3.
NOTE 24: As exceptions, measurements with a level up to the applicable requirement of -38 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 2nd harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.4.2-1) for which the 2nd harmonic totally or partially overlaps the measurement bandwidth (MBW).
NOTE 25: As exceptions, measurements with a level up to the applicable requirement of -36 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 3rd harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.4.2-1) for which the 3rd harmonic totally or partially overlaps the measurement bandwidth (MBW).
NOTE 26: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.
NOTE 27: This requirement is applicable for any channel bandwidths within the range 1920 - 1980 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1927.5 - 1929.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1930 - 1938 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.
NOTE 28: N/A

NOTE 29: N/A
NOTE 30: This requirement applies when the E-UTRA carrier is confined within 2545-2575MHz or 2595-2645MHz and the channel bandwidth is 10 or 20 MHz
NOTE 31: N/A
NOTE 32: Void
NOTE 33: This requirement is only applicable for carriers with bandwidth confined within 1885-1920 MHz (requirement for carriers with at least 1RB confined within 1880 - 1885 MHz is not specified). This requirement applies for an uplink transmission bandwidth less than or equal to 54 RB for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1892.5 - 1894.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1895 - 1903 MHz.
NOTE 34: This requirement is applicable for 5 and 10 MHz E-UTRA channel bandwidth allocated within 718-728MHz. For carriers of 10 MHz bandwidth, this requirement applies for an uplink transmission bandwidth less than or equal to 30 RB with RBstart > 1 and RBstart<48.
NOTE 35: This requirement is applicable in the case of a 10 MHz E-UTRA carrier confined within 703 MHz and 733 MHz, otherwise the requirement of -25 dBm with a measurement bandwidth of 8 MHz applies.
NOTE 36: This requirement is applicable for E-UTRA channel bandwidth allocated within 1920-1980 MHz.
NOTE 37: Applicable when the upper edge of the channel bandwidth frequency is greater than 1980MHz.
NOTE 38: Applicable when NS_33 or NS_34 is configured by the pre-configured radio parameters.
NOTE 39: Applicable only when the assigned E-UTRA carrier is confined within 824 MHz and 849 MHz for UE category M1, M2 and UE category NB1 and NB2.
NOTE 40: In the frequency range x-5950MHz, SE requirement of -30dBm/MHz should be applied; where x = max (5925, fc + 15), where fc is the channel centre frequency.
NOTE 41: The EIRP requirement is converted to conducted requirement depend on the supported post antenna connector gain $G_{post\ connector}$ declared by the UE following the principle described in annex I.
NOTE 42: For category NB1 and NB2 UE when carrier centre frequency is 1920.1 MHz, in case of single-tone uplink transmission the requirement is applicable only for sub-carrier index > 2.

NOTE: The restriction on the maximum uplink transmission to 54 RB in Notes 21, 22, and 27 of Table 6.6.3.2.3-1F and the restriction on the single-tone uplink transmission to sub-carrier index > 2 in Note 42 of Table 6.6.3.2.3-1F are intended for conformance testing and may be applied to network operation to facilitate coexistence when the aggressor and victim bands are deployed in the same geographical area. The applicable spurious emission requirement of -15.5 dBm/5MHz is a least restrictive technical condition for FDD/TDD coexistence and may have to be revised in the future.

**Table 6.6.3.2.3-1G: Spurious emission band UE co-existence limits Rel-15**

| E-UTRA Band | Spurious emission | | | | | | |
|---|---|---|---|---|---|---|---|
| | Protected band | Frequency range (MHz) | | | Maximum Level (dBm) | MBW (MHz) | NOTE |
| 1 | E-UTRA Band 1, 3, 5, 7, 8, 11, 18, 19, 20, 21, 22, 26, 27, 28, 31, 32, 38, 40, 41, 42, 43, 44, 45, 50, 51, 52, 65, 67, 68, 69, 72, 73, 74, 75, 76 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |

| | Frequency range | 1400 | - | 1427 | -32 | 27 | 15, 41 |
| | Frequency range | 1475 | - | 1488 | -50 | 1 | 42 |
| | Frequency range | 1488 | - | 1518 | -50 | 1 | 15 |
| 85 | E-UTRA Band 2, 5, 13, 14, 17, 24, 25, 26, 27, 30, 41, 48, 51, 71, 74 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 4, 10, 66, 70 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 2 |
| | E-UTRA Band 12, 85 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 15 |

NOTE 1: $F_{DL_low}$ and $F_{DL_high}$ refer to each E-UTRA frequency band specified in Table 5.5-1

NOTE 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1.3-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2nd, 3rd, 4th [or 5th] harmonic spurious emissions. Due to spreading of the harmonic emission the exception is also allowed for the first 1 MHz frequency range immediately outside the harmonic emission on both sides of the harmonic emission. This results in an overall exception interval centred at the harmonic emission of (2MHz + N x $L_{CRB}$ x 180kHz), where N is 2, 3, 4, [5] for the 2nd, 3rd, 4th [or 5th] harmonic respectively. The exception is allowed if the measurement bandwidth (MBW) totally or partially overlaps the overall exception interval.

NOTE 3: N/A

NOTE 4: N/A

NOTE 5: For non synchronised TDD operation to meet these requirements some restriction will be needed for either the operating band or protected band

NOTE 6: N/A

NOTE 7: Applicable when co-existence with PHS system operating in 1884.5-1919.6MHz.

NOTE 8: Applicable when co-existence with PHS system operating in 1884.5 -1915.7MHz.

NOTE 9: N/A

NOTE 10: N/A

NOTE 11: Whether the applicable frequency range should be 793-805MHz instead of 799-805MHz is TBD

NOTE 12: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB

NOTE 13: N/A

NOTE 14: N/A

NOTE 15: These requirements also apply for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1.3-1 and Table 6.6.3.1A.3-1 from the edge of the channel bandwidth.

NOTE 16: N/A

NOTE 17: N/A

NOTE 18: N/A

NOTE 19: Applicable when the assigned E-UTRA carrier is confined within 718 MHz and 748 MHz and when the channel bandwidth used is 5 or 10 MHz.

NOTE 20: N/A

NOTE 21: This requirement is applicable for any channel bandwidths within the range 2500 - 2570 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2560.5 - 2562.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2552 - 2560 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.

NOTE 22: This requirement is applicable for power class 3 UE for any channel bandwidths within the range

2570 - 2615 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2605.5 - 2607.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2597 - 2605 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB. For power class 2 UE for any channel bandwidths within the range 2570 - 2615 MHz, NS_44 shall apply.
For power class 2 or 3 UE for carriers with channel bandwidth overlapping the frequency range 2615 - 2620 MHz the requirement applies with the maximum output power configured to +19 dBm in the IE *P-Max*.

NOTE 23: This requirement is applicable only for the following cases:
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 902.5 MHz ≤ $F_c$ < 907.5 MHz with an uplink transmission bandwidth less than or equal to 20 RB
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 907.5 MHz ≤ $F_c$ ≤ 912.5 MHz without any restriction on uplink transmission bandwidth.
- for carriers of 10 MHz channel bandwidth when carrier centre frequency ($F_c$) is $F_c$ = 910 MHz with an uplink transmission bandwidth less than or equal to 32 RB with $RB_{start}$ > 3.

NOTE 24: As exceptions, measurements with a level up to the applicable requirement of -38 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 2nd harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the 2nd harmonic totally or partially overlaps the measurement bandwidth (MBW).

NOTE 25: As exceptions, measurements with a level up to the applicable requirement of -36 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 3rd harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the 3rd harmonic totally or partially overlaps the measurement bandwidth (MBW).

NOTE 26: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.

NOTE 27: This requirement is applicable for any channel bandwidths within the range 1920 - 1980 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1927.5 - 1929.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1930 - 1938 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.

NOTE 28: N/A

NOTE 29: N/A

NOTE 30: This requirement applies when the E-UTRA carrier is confined within 2545-2575MHz or 2595-2645MHz and the channel bandwidth is 10 or 20 MHz

NOTE 31: N/A

NOTE 32: Void

NOTE 33: This requirement is only applicable for carriers with bandwidth confined within 1885-1920 MHz (requirement for carriers with at least 1RB confined within 1880 - 1885 MHz is not specified). This requirement applies for an uplink transmission bandwidth less than or equal to 54 RB for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1892.5 - 1894.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1895 - 1903 MHz.

NOTE 34: This requirement is applicable for 5 and 10 MHz E-UTRA channel bandwidth allocated within 718-728MHz. For carriers of 10 MHz bandwidth, this requirement applies for an uplink transmission bandwidth less than or equal to 30 RB with RBstart > 1 and RBstart<48.

NOTE 35: This requirement is applicable in the case of a 10 MHz E-UTRA carrier confined within 703 MHz and 733 MHz, otherwise the requirement of -25 dBm with a measurement bandwidth of 8 MHz applies.

NOTE 36: This requirement is applicable for E-UTRA channel bandwidth allocated within 1920-1980 MHz.

NOTE 37: Applicable when the upper edge of the channel bandwidth frequency is greater than 1980MHz.

NOTE 38: Applicable when NS_33 or NS_34 is configured by the pre-configured radio parameters.

NOTE 39: Applicable only when the assigned E-UTRA carrier is confined within 824 MHz and 849 MHz for UE category M1, M2 and UE category NB1 and NB2.

NOTE 40: In the frequency range x-5950MHz, SE requirement of -30dBm/MHz should be applied; where x = max (5925, fc + 15), where fc is the channel centre frequency.

NOTE 41: Applicable for all bandwidths, and when the lower edge of the assigned E-UTRA UL channel bandwidth frequency is greater than or equal to 1427 MHz + the channel BW assigned for 1.4, 3, 5 and 10 MHz bandwidth, and when the lower edge of the assigned E-UTRA UL channel bandwidth frequency is greater than or equal to 1440 MHz for 15 and 20 MHz bandwidth. This requirement shall be verified with UE transmission power of 15 dBm.

NOTE 42: Applicable for 1.4 , 3 and 5 MHz bandwidth, and when the upper edge of the assigned E-UTRA UL channel bandwidth frequency is less than or equal to 1467 MHz assigned for10 MHz bandwidth, and when the upper edge of the assigned E-UTRA UL channel bandwidth frequency is less than or equal to 1463.8 MHz for 15 MHz bandwidth, and when the upper edge of the assigned E-UTRA UL channel bandwidth frequency is less than or equal to 1460.8 MHz for 20 MHz bandwidth.

NOTE 43: The EIRP requirement is converted to conducted requirement depend on the supported post antenna connector gain $G_{post\ connector}$ declared by the UE following the principle described in annex

| |
|---|
| I.<br>NOTE 44: For category NB1 and NB2 UE when carrier centre frequency is 1920.1 MHz, in case of single-tone uplink transmission the requirement is applicable only for sub-carrier index > 2. |

NOTE: The restriction on the maximum uplink transmission to 54 RB in Notes 21, 22, and 27 of Table 6.6.3.2.3-1G and the restriction on the single-tone uplink transmission to sub-carrier index > 2 in Note 44 of Table 6.6.3.2.3-1G are intended for conformance testing and may be applied to network operation to facilitate coexistence when the aggressor and victim bands are deployed in the same geographical area. The applicable spurious emission requirement of -15.5 dBm/5MHz is a least restrictive technical condition for FDD/TDD coexistence and may have to be revised in the future.

The normative reference for this requirement is TS 36.101 [2] subclause 6.6.3.2.

This test use minimum requirements from many releases of TS 36.101 [2] due to release independence defined in TS 36.307 [16]

### 6.6.3.2.4 Test description

#### 6.6.3.2.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in Table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in Table 6.6.3.2.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annexe A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 6.6.3.2.4.1-1: Test Configuration Table**

| **Initial Conditions** | | | | | | |
|---|---|---|---|---|---|---|
| Test Environment<br>(as specified in TS 36.508 [7] subclause 4.1) | | | | NC | | |
| Test Frequencies<br>(as specified in TS36.508 [7] subclause 4.3.1)<br>(Note 6, Note 7) | | | | Low range, Mid range, High range<br>(Note 6, 13, 16) | | |
| Test Channel Bandwidths<br>(as specified in TS 36.508 [7] subclause 4.3.1) | | | | Lowest, 5MHz, Highest<br>(Note 13, 16) | | |
| **Test Parameters for Channel Bandwidths** | | | | | | |
| | **Downlink Configuration** | | | **Uplink Configuration** | | |
| Ch BW | Mod'n | RB allocation | | Mod'n | RB allocation | |
| | | FDD | TDD | | FDD | TDD |
| 1.4MHz | N/A for Spurious Emissions testing | | | QPSK | 6 | 6 |
| 1.4MHz | | | | QPSK | 1 | 1 |
| 3MHz | | | | QPSK | 15 | 15 |
| 3MHz | | | | QPSK | 1 | 1 |
| 5MHz | | | | QPSK | 25 | 25[12] |
| 5MHz | | | | QPSK | 1 | 1[12] |

| 20MHz | | | | QPSK | 54[3, 11] | 54[4, 18] |
| 20MHz | | | | QPSK | 1 | 1[5] |

Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1.
Note 2: The 1 RB allocation shall be tested at both RB #0 and RB #max.
Note 3: To be used for requirements under note 15 in table 6.6.3.2.3-1 and table 6.6.3.2.3-1A, note 16 in table 6.6.3.2.3-1B, note 21 in table 6.6.3.2.3-1C in high range at RB#(full allocation – 54), instead of full allocation.
Note 4: To be used for requirements under note 16 in table 6.6.3.2.3-1 and table 6.6.3.2.3-1A, note 17 in table 6.6.3.2.3-1B, note 22 in table 6.6.3.2.3-1C in high range - 5MHz at RB#(full allocation – 54), instead of full allocation.
Note 5: For requirements under note 16 in table 6.6.3.2.-1 and table 6.6.3.2.3-1A, note 17 in table 6.6.3.2.3-1B, note 22 in table 6.6.3.2.3-1C (high range – 5MHz) is tested instead of high channel.
Note 6: Do not apply for requirements under Note 13 in Tables 6.6.3.2.3-1 to 6.6.3.2.3-1C. Test frequencies for these requirements are defined in Table 6.6.3.2.4.1-2.
Note 7: Void
Note 8: For requirements under note 17 in table 6.6.3.2.3-1A, note 18 in table 6.6.3.2.3-1B, note 23 in table 6.6.3.2.3-1C (high range – 10MHz) is tested with RB #0 to RB #19 used.
Note 9: For requirements under note 17 in table 6.6.3.2.3-1A, note 18 in table 6.6.3.2.3-1B, note 23 in table 6.6.3.2.3-1C high range is tested with RB #4 to RB #35 used.
Note 10: For requirements under note 17 in table 6.6.3.2.3-1A, note 18 in table 6.6.3.2.3-1B, note 23 in table 6.6.3.2.3-1C high range is tested with RB #4 and (RB#max -4) used.
Note 11: To be used for requirements under note 17 in table 6.6.3.2.3-1, note 18 in table 6.6.3.2.3-1A, note 19 in table 6.6.3.2.3-1B and note 27 in table 6.6.3.2.3-1C in low range at RB#0, instead of full allocation.
Note 12: For requirements under note 16 in table 6.6.3.2.3-1 and table 6.6.3.2.3-1A, note 17 in table 6.6.3.2.3-1B, note 22 in table 6.6.3.2.3-1C, the message exception in Table 6.6.3.2.4.3-1 is used to test with the high range.
Note 13: For requirements under note 31 in table 6.6.3.2.3-1C and note 34 in table 6.6.3.2.3-1D only 720.5 MHz is tested with 5 MHz and only 723 MHz is tested with 10 MHz.
Note 14: For requirements under note 31 in table 6.6.3.2.3-1C and note 34 in table 6.6.3.2.3-1D RB #2 and RB #47 used.
Note 15: To be used for requirements under note 31 in table 6.6.3.2.3-1C and note 34 in table 6.6.3.2.3-1D at RB#2, instead of full allocation.
Note 16: For requirements under note 32 in table 6.6.3.2.3-1C and note 35 in table 6.6.3.2.3-1D only low range and 728 MHz with 10 MHz is tested.
Note 17: Void.
Note 18: To be used for requirements under note 33 in table 6.6.3.2.3-1D, table 6.6.3.2.3-1E or table 6.6.3.2.3-1F (high range-18 MHz for 15MHz channel bandwidth and high range-7 MHz for 20MHz channel bandwidth), instead of full allocation and high range. RB allocation shall start at RBstart=0.

**Table 6.6.3.2.4.1-2: Test frequencies for E-UTRA channel bandwidth for operating band 3 with Note 13 (in Tables 6.6.3.2.3-1 to 6.6.3.2.3-1G)**

| Bandwidth [MHz] | $N_{UL}$ | Frequency of Uplink [MHz] | $N_{DL}$ | Frequency of Downlink [MHz] |
|---|---|---|---|---|
| 1.4 | 19942 | 1784.2 | 1942 | 1879.2 |
| 3 | 19934 | 1783.4 | 1934 | 1878.4 |
| 5 | 19924 | 1782.4 | 1924 | 1877.4 |
| 10 | 19899 | 1779.9 | 1899 | 1874.9 |
| 15 | 19874 | 1777.4 | 1874 | 1872.4 |
| 20 | 19849 | 1774.9 | 1849 | 1869.9 |
| Note: 1.4 and 3 MHz only tested for Rel8 and Rel9. | | | | |

1. Connect the SS to the UE to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure A.7.

2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.

3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.

4. The UL Reference Measurement channels are set according to Table 6.6.3.2.4.1-1.

5. Propagation conditions are set according to Annex B.0.

6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.3.2.4.3.

### 6.6.3.2.4.2 Test procedure

1. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 6.6.3.2.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.

2. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE until the UE transmits at $P_{UMAX}$ level.

3. Measure the power of the transmitted signal with a measurement filter of bandwidths according to table 6.6.3.2.3-1 to 6.6.3.2.3-1G. For band 14 measurements made in a bandwidth of 6.25kHz, measurement parameter settings defined in table 6.6.3.2.4.2-1 shall be used. The centre frequency of the filter shall be stepped in contiguous steps according to table 6.6.3.2.5-1. The measured power shall be verified for each step. The measurement period shall capture the active time slots.

**Table 6.6.3.2.4.2-1: Measurement setup for band 14**

| | **Option 1: Measurement with No RMS VBW available** | **Option2 Measurement with VBW Filtering on Power scale** |
|---|---|---|
| VBW | >=62.5 kHz<br><br>(10 times or more the RBW) | <=43Hz |
| RBW | <=6.25kHz | <=6.25kHz |
| Detector type | Averages signal envelope during each measurement point, such as "RMS detector" | Peak |
| Averaging mode (Trace averaging) | Power (RMS voltage) | Power (RMS voltage), as controlled by "Average Type" |
| Average Type (applies to detector) | Power (RMS voltage) (automatically occurs with "RMS detector") | Not applicable |
| Average Type (applies to VBW filter) | Not applicable | Power (RMS voltage) |
| Number of averages | 30, to reduce variance as required, or use an even longer sweep time | 1 or use an even narrower VBW filter, thus a longer sweep time |
| Sweep time | [Don't specify] | Sweep rate (span divided by sweep time) <= 0.8 * RBW*VBW |

### 6.6.3.2.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the following exceptions:

#### 6.6.3.2.5 Test requirement

Test requirements for Spurious Emissions UE Co-existence are the same as the minimum requirements and are not repeated in this section.

The measured average power of spurious emission, derived in step 3, shall not exceed the described value in tables 6.6.3.2.3-1 to 6.6.3.2.3-1G according to the following rule:

The requirements for the UE are release specific and can be found in Tables 6.6.3.2.3-1 to 6.6.3.2.3-1G. If the UE support a band, which is not defined in the table corresponding UE's release, the requirements for this band are taken from the table of earliest release where requirements for this band are defined. This has been described in following Table 6.6.3.2.5-1.

**Table 6.6.3.2.5-1: UE Requirements according to UE E-UTRA release and supported E-UTRA band**

| Band | UE Requirements per release | | | | | | | |

| Note 1: Operating band with number > 64 requires Rel-9 signalling (refer to TS 36.307 Ch. 3A.1 [16]) and tests can only be done from Rel-9 and onwards.<br>Note 2: Asymmetric operating band is release independent from release 10 (refer to TS 36.307 Ch. 3A.1 [16]) and tests can only be done from Rel-10 and onwards.<br>Note 3: Protected bands with Note 38 in Table 6.6.3.2.3-1E are tested in 6.6.3EA.2 or 6.6.3F.2. | | | | | | | | |

NOTE 1: The frequency range applicable with network signalled values of NS_05, NS_08, NS_09, NS_15,NS_16, NS_27, NS_36 are covered in 6.6.3.3 Additional Spurious Emissions.

NOTE 2: The following is applied to Note2 in Table 6.6.3.2.3-1, Table 6.6.3.2.3-1A, Table 6.6.3.2.3-1B, Table 6.6.3.2.3-1C and Table 6.6.3.2.3-1E. For frequency with 2nd, 3rd or 4th harmonic spurious emissions, the measurements are covered in 6.6.3.1.

NOTE 2: The restriction on the maximum uplink transmission to 54 RB in Notes 14 and 15 of Table 6.6.3.2.5-1 is intended for conformance testing and may be applied to network operation to facilitate coexistence when the aggressor and victim bands are deployed in the same geographical area. The applicable spurious emission requirement of -15.5 dBm/5MHz is a least restrictive technical condition for FDD/TDD coexistence and may have to be revised in the future.

## 6.6.3.2_1 Void

## 6.6.3.2A Spurious emission band UE co-existence for CA

Editor's note:

- This test case contains different requirements for different UE releases
- Additional TP analysis needs to be added to TR36.905

### 6.6.3.2A.0 Minimum conformance requirements

This clause specifies the requirements for the specified carrier aggregation configurations for coexistence with protected bands.

NOTE 1: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

For inter-band carrier aggregation with the uplink assigned to two E-UTRA bands, the requirements in Table 6.6.3.2A.0-1a to 6.6.3.2A.0-1d apply on each component carrier with both component carriers are active.

NOTE 2: For inter-band carrier aggregation with uplink assigned to two E-UTRA bands the requirements in Table 6.6.3.2A.0-1a to 6.6.3.2A.0-1d could be verified by measuring spurious emissions at the specific frequencies where second and third order intermodulation products generated by the two transmitted carriers can occur; in that case, the requirements for remaining applicable frequencies in Table 6.6.3.2A.0-1a to 6.6.3.2A.0-1d would be considered to be verified by the measurements verifying the one uplink inter-band CA UE to UE co-existence requirements.

**Table 6.6.3.2A.0-1a: Requirements for dual-uplink inter-band carrier aggregation limits for Rel-11 and Rel-12**

| E-UTRA CA Configuration | Spurious emission | | | | | | |
|---|---|---|---|---|---|---|---|
| | Protected band | Frequency range (MHz) | | | Maximum Level (dBm) | MBW (MHz) | Note |
| CA_1A-3A | E-UTRA Band 1, 5, 7, 8, 20, 26, 27, 28, 31, 32, 38, 40, 41, 43, 44 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |

| | Frequency range | 945 | - | 960 | -50 | 1 | |
| | Frequency range | 1884.5 | - | 1915.7 | -41 | 0.3 | 4 |
| | Frequency range | 1839.9 | - | 1879.9 | -50 | 1 | |
| | Frequency range | 2545 | - | 2575 | -50 | 1 | |
| | Frequency range | 2595 | - | 2645 | -50 | 1 | |
| CA 39A-41A | E-UTRA Band 1, 8, 26, 34, 40, 42, 44 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | Frequency range | 1805 | - | 1855 | -40 | 1 | 20 |
| | Frequency range | 1855 | - | 1880 | -15.5 | 5 | 3, 13, 20 |
| | Frequency range | 1884.5 | - | 1915.7 | -41 | 0.3 | 4, 18 |

NOTE 1: $F_{DL_low}$ and $F_{DL_high}$ refer to each E-UTRA frequency band specified in Table 5.2-1
NOTE 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1.3-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2nd, 3rd, 4th [or 5th] harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.4.2-1) for which the 2nd, 3rd or 4th harmonic totally or partially overlaps the measurement bandwidth (MBW).
NOTE 3: These requirements also apply for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1.3-1 and Table 6.6.3.1A.0-1 from the edge of the aggregated channel bandwidth.
NOTE 4: Applicable when co-existence with PHS system operating in 1884.5 -1915.7MHz.
NOTE 5: Applicable when the assigned E-UTRA carrier is confined within 718 MHz and 748 MHz and when the channel bandwidth used is 5 or 10 MHz.

NOTE 6: As exceptions, measurements with a level up to the applicable requirement of -36 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 3rd harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the 3rd harmonic totally or partially overlaps the measurement bandwidth (MBW).
NOTE 7: Applicable when NS_05 in section 6.6.3.3.3.2 is signalled by the network.
NOTE 8: Applicable when NS_08 in subclause 6.6.3.3.3.4 is signalled by the network
NOTE 9: Whether the applicable frequency range should be 793-805MHz instead of 799-805MHz is TBD.
NOTE10: This requirement applies for 5, 10, 15 and 20 MHz E-UTRA channel bandwidth allocated within 1744.9MHz and 1784.9MHz.
NOTE 11: This requirement is applicable only for the following cases:
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 902.5 MHz ≤ $F_c$ < 907.5 MHz with an uplink transmission bandwidth less than or equal to 20 RB
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 907.5 MHz ≤ $F_c$ ≤ 912.5 MHz without any restriction on uplink transmission bandwidth.
- for carriers of 10 MHz channel bandwidth when carrier centre frequency ($F_c$) is $F_c$ = 910 MHz with an uplink transmission bandwidth less than or equal to 32 RB with $RB_{start}$ > 3.
NOTE 12: This requirement is applicable for any channel bandwidths within the range 1920 - 1980 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1927.5 - 1929.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1930 - 1938 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.
NOTE13: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.
NOTE 14: This requirement is applicable for any channel bandwidths within the range 2500 - 2570 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2560.5 - 2562.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2552 - 2560 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.
NOTE 15: Applicable when NS_15 in subclause 6.6.3.3.3.10 is signalled by the network.
NOTE 16: Applicable when NS_09 in subclause 6.6.3.3.3.5 is signalled by the network
NOTE 17: This requirement is applicable only when Band 3 transmission frequency is less than or equal to 1765 MHz.
NOTE 18: This requirement applies when the E-UTRA carrier is confined within 2545-2575MHz or 2595-2645MHz and the channel bandwidth is 10 or 20 MHz
NOTE 19: Void.
NOTE 20: This requirement is only applicable for carriers with bandwidth confined within 1885-1920 MHz (requirement for carriers with at least 1RB confined within 1880 - 1885 MHz is not specified). This requirement applies for an uplink transmission bandwidth less than or equal to 54 RB for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1892.5 - 1894.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1895 - 1903 MHz.

**Table 6.6.3.2A.0-1b: Requirements for dual-uplink inter-band carrier aggregation limits for Rel-13**

| E-UTRA CA Configuration | Spurious emission | | | | | | |
|---|---|---|---|---|---|---|---|
| | Protected band | Frequency range (MHz) | | | Maximum Level (dBm) | MBW (MHz) | NOTE |
| CA_1A-3A | E-UTRA Band 1, 5, 7, 8, 20, 26, 27, 28, 31, 32, 38, 40, 41, 43, 44, 65, 67 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |

| CA 39A-41C | E-UTRA Band 1, 8, 26, 34, 40, 42, 44 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | Frequency range | 1805 | - | 1855 | -40 | 1 | 20 |
| | Frequency range | 1855 | - | 1880 | -15.5 | 5 | 3, 13, 20 |
| CA 39C-41A | E-UTRA Band 34, 40, 42, 44 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |

NOTE 1: $F_{DL_low}$ and $F_{DL_high}$ refer to each E-UTRA frequency band specified in Table 5.5-1

NOTE 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2nd, 3rd, 4th [or 5th] harmonic spurious emissions. In case the exceptions are allowed due to spreading of the harmonic emission the exception is also allowed for the first 1 MHz frequency range immediately outside the harmonic emission on both sides of the harmonic emission. This results in an overall exception interval centred at the harmonic emission of (2MHz + N x $L_{CRB}$ x 180kHz), where N is 2, 3 or 4 for the 2nd, 3rd or 4th harmonic respectively. The exception is allowed if the measurement bandwidth (MBW) totally or partially overlaps the overall exception interval.

NOTE 3: These requirements also apply for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1-1 and Table 6.6.3.1A-1 from the edge of the aggregated channel bandwidth.

NOTE 4: Applicable when co-existence with PHS system operating in 1884.5 -1915.7MHz.

NOTE 5: Applicable when the assigned E-UTRA carrier is confined within 718 MHz and 748 MHz and when the channel bandwidth used is 5 or 10 MHz.

NOTE 6: As exceptions, measurements with a level up to the applicable requirement of -36 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 3rd harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the 3rd harmonic totally or partially overlaps the measurement bandwidth (MBW).

NOTE 7: Applicable when NS_05 in section 6.6.3.3.3.2 is signalled by the network.

NOTE 8: Applicable when NS_08 in subclause 6.6.3.3.3.4 is signalled by the network

NOTE 9: Whether the applicable frequency range should be 793-805MHz instead of 799-805MHz is TBD.

NOTE10: This requirement applies for 5, 10, 15 and 20 MHz E-UTRA channel bandwidth allocated within 1744.9MHz and 1784.9MHz.

NOTE 11: This requirement is applicable only for the following cases:
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 902.5 MHz ≤ $F_c$ < 907.5 MHz with an uplink transmission bandwidth less than or equal to 20 RB
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 907.5 MHz ≤ $F_c$ ≤ 912.5 MHz without any restriction on uplink transmission bandwidth.
- for carriers of 10 MHz channel bandwidth when carrier centre frequency ($F_c$) is $F_c$ = 910 MHz with an uplink transmission bandwidth less than or equal to 32 RB with $RB_{start}$ > 3.

NOTE 12: This requirement is applicable for any channel bandwidths within the range 1920 - 1980 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1927.5 - 1929.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1930 - 1938 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.

NOTE13: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.

NOTE 14: This requirement is applicable for any channel bandwidths within the range 2500 - 2570 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2560.5 - 2562.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2552 - 2560 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.

NOTE 15: Applicable when NS_15 in subclause 6.6.3.3.3.10 is signalled by the network.

NOTE 16: Applicable when NS_09 in subclause 6.6.3.3.3.5 is signalled by the network

NOTE 17: This requirement is applicable only when Band 3 transmission frequency is less than or equal to 1765 MHz.

NOTE 18: This requirement applies when the E-UTRA carrier is confined within 2545-2575MHz or 2595-2645MHz and the channel bandwidth is 10 or 20 MHz

NOTE 19: Void.

NOTE 20: This requirement is only applicable for carriers with bandwidth confined within 1885-1920 MHz (requirement for carriers with at least 1RB confined within 1880 - 1885 MHz is not specified). This requirement applies for an uplink transmission bandwidth less than or equal to [54 RB] for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1892.5 - 1894.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1895 - 1903 MHz.

NOTE 21: As exceptions, measurements with a level up to the applicable requirement of -38 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 2nd harmonic

spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the 2nd harmonic totally or partially overlaps the measurement bandwidth (MBW).

NOTE 22: This requirement is applicable in the case of a 10 MHz E-UTRA carrier confined within 703 MHz and 733 MHz, otherwise the requirement of -25 dBm with a measurement bandwidth of 8 MHz applies.

NOTE 23: This requirement is applicable for 5 and 10 MHz E-UTRA channel bandwidth allocated within 718-728MHz. For carriers of 10 MHz bandwidth, this requirement applies for an uplink transmission bandwidth less than or equal to 30 RB with RBstart > 1 and RBstart<48.

**Table 6.6.3.2A.0-1c: Requirements for dual-uplink inter-band carrier aggregation limits for Rel-14**

| E-UTRA CA Configuration | Spurious emission | | | | | | |
|---|---|---|---|---|---|---|---|
| | Protected band | Frequency range (MHz) | | | Maximum Level (dBm) | MBW (MHz) | NOTE |
| CA_1A-3A | E-UTRA Band 1, 5, 7, 8, 20, 26, 27, 28, 31, 32, 38, 40, 41, 43, 44, 65, 67 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |

| | Frequency range | 1884.5 | | 1915.7 | -41 | 0.3 | 4, 18 |

NOTE 1: $F_{DL_low}$ and $F_{DL_high}$ refer to each E-UTRA frequency band specified in Table 5.5-1

NOTE 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2nd, 3rd, 4th [or 5th] harmonic spurious emissions. In case the exceptions are allowed due to spreading of the harmonic emission the exception is also allowed for the first 1 MHz frequency range immediately outside the harmonic emission on both sides of the harmonic emission. This results in an overall exception interval centred at the harmonic emission of (2MHz + N x $L_{CRB}$ x 180kHz), where N is 2, 3 or 4 for the 2nd, 3rd or 4th harmonic respectively. The exception is allowed if the

measurement bandwidth (MBW) totally or partially overlaps the overall exception interval.

NOTE 3: These requirements also apply for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1-1 and Table 6.6.3.1A-1 from the edge of the aggregated channel bandwidth.

NOTE 4: Applicable when co-existence with PHS system operating in 1884.5 -1915.7MHz.

NOTE 5: Applicable when the assigned E-UTRA carrier is confined within 718 MHz and 748 MHz and when the channel bandwidth used is 5 or 10 MHz.

NOTE 6: As exceptions, measurements with a level up to the applicable requirement of -36 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 3rd harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the 3rd harmonic totally or partially overlaps the measurement bandwidth (MBW).

NOTE 7: Applicable when NS_05 in section 6.6.3.3.3.2 is signalled by the network.

NOTE 8: Applicable when NS_08 in subclause 6.6.3.3.3.4 is signalled by the network

NOTE 9: Whether the applicable frequency range should be 793-805MHz instead of 799-805MHz is TBD.

NOTE10: This requirement applies for 5, 10, 15 and 20 MHz E-UTRA channel bandwidth allocated within 1744.9MHz and 1784.9MHz.

NOTE 11: This requirement is applicable only for the following cases:
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 902.5 MHz ≤ $F_c$ < 907.5 MHz with an uplink transmission bandwidth less than or equal to 20 RB
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 907.5 MHz ≤ $F_c$ ≤ 912.5 MHz without any restriction on uplink transmission bandwidth.
- for carriers of 10 MHz channel bandwidth when carrier centre frequency ($F_c$) is $F_c$ = 910 MHz with an uplink transmission bandwidth less than or equal to 32 RB with $RB_{start}$ > 3.

NOTE 12: This requirement is applicable for any channel bandwidths within the range 1920 - 1980 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1927.5 - 1929.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1930 - 1938 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.

NOTE13: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.

NOTE 14: This requirement is applicable for any channel bandwidths within the range 2500 - 2570 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2560.5 - 2562.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2552 - 2560 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.

NOTE 15: Applicable when NS_15 in subclause 6.6.3.3.3.10 is signalled by the network.

NOTE 16: Applicable when NS_09 in subclause 6.6.3.3.3.5 is signalled by the network

NOTE 17: This requirement is applicable only when Band 3 transmission frequency is less than or equal to 1765 MHz.

NOTE 18: This requirement applies when the E-UTRA carrier is confined within 2545-2575MHz or 2595-2645MHz and the channel bandwidth is 10 or 20 MHz

NOTE 19: Void

NOTE 20: This requirement is only applicable for carriers with bandwidth confined within 1885-1920 MHz (requirement for carriers with at least 1RB confined within 1880 - 1885 MHz is not specified). This requirement applies for an uplink transmission bandwidth less than or equal to 54 RB for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1892.5 - 1894.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1895 - 1903 MHz.

NOTE 21: As exceptions, measurements with a level up to the applicable requirement of -38 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 2nd harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the 2nd harmonic totally or partially overlaps the measurement bandwidth (MBW).

NOTE 22: This requirement is applicable in the case of a 10 MHz E-UTRA carrier confined within 703 MHz and 733 MHz, otherwise the requirement of -25 dBm with a measurement bandwidth of 8 MHz applies.

NOTE 23: This requirement is applicable for 5 and 10 MHz E-UTRA channel bandwidth allocated within 718-728MHz. For carriers of 10 MHz bandwidth, this requirement applies for an uplink transmission bandwidth less than or equal to 30 RB with RBstart > 1 and RBstart<48.

**Table 6.6.3.2A.0-1d: Requirements for dual-uplink inter-band carrier aggregation limits for Rel-15**

| E-UTRA CA Configuration | Spurious emission | | | | | | |
|---|---|---|---|---|---|---|---|
| | Protected band | Frequency range (MHz) | | | Maximum Level (dBm) | MBW (MHz) | NOTE |

| CA_41A-42A | E-UTRA Band 1, 3, 5, 8, 26, 28, 33, 34, 39, 40, 44, 45, 50, 51, 65, 73, 74 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 9, 11, 18, 19, 21 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 18 |
| | Frequency range | 1839.9 | | 1879.9 | -50 | 1 | 18 |
| | Frequency range | 1884.5 | | 1915.7 | -41 | 0.3 | 4, 18 |

NOTE 1: $F_{DL_low}$ and $F_{DL_high}$ refer to each E-UTRA frequency band specified in Table 5.2-1

NOTE 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1.3-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2nd, 3rd, 4th [or 5th] harmonic spurious emissions. In case the exceptions are allowed due to spreading of the harmonic emission the exception is also allowed for the first 1 MHz frequency range immediately outside the harmonic emission on both sides of the harmonic emission. This results in an overall exception interval centred at the harmonic emission of (2MHz + N x $L_{CRB}$ x 180kHz), where N is 2, 3 or 4 for the 2nd, 3rd or 4th harmonic respectively. The exception is allowed if the measurement bandwidth (MBW) totally or partially overlaps the overall exception interval.

NOTE 3: These requirements also apply for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1.3-1 and Table 6.6.3.1A.0-1 from the edge of the aggregated channel bandwidth.

NOTE 4: Applicable when co-existence with PHS system operating in 1884.5 -1915.7MHz.

NOTE 5: Applicable when the assigned E-UTRA carrier is confined within 718 MHz and 748 MHz and when the channel bandwidth used is 5 or 10 MHz.

NOTE 6: As exceptions, measurements with a level up to the applicable requirement of -36 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 3rd harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.4.2-1) for which the 3rd harmonic totally or partially overlaps the measurement bandwidth (MBW).

NOTE 7: Applicable when NS_05 in section 6.6.3.3.3.2 is signalled by the network.

NOTE 8: Applicable when NS_08 in subclause 6.6.3.3.3.4 is signalled by the network

NOTE 9: Whether the applicable frequency range should be 793-805MHz instead of 799-805MHz is TBD.

NOTE10: This requirement applies for 5, 10, 15 and 20 MHz E-UTRA channel bandwidth allocated within 1744.9MHz and 1784.9MHz.

NOTE 11: This requirement is applicable only for the following cases:
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 902.5 MHz ≤ $F_c$ < 907.5 MHz with an uplink transmission bandwidth less than or equal to 20 RB
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 907.5 MHz ≤ $F_c$ ≤ 912.5 MHz without any restriction on uplink transmission bandwidth.
- for carriers of 10 MHz channel bandwidth when carrier centre frequency ($F_c$) is $F_c$ = 910 MHz with an uplink transmission bandwidth less than or equal to 32 RB with $RB_{start}$ > 3.

NOTE 12: This requirement is applicable for any channel bandwidths within the range 1920 - 1980 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1927.5 - 1929.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1930 - 1938 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.

NOTE13: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.

NOTE 14: This requirement is applicable for any channel bandwidths within the range 2500 - 2570 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2560.5 - 2562.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2552 - 2560 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.

NOTE 15: Applicable when NS_15 in subclause 6.6.3.3.3.10 is signalled by the network.

NOTE 16: Applicable when NS_09 in subclause 6.6.3.3.3.5 is signalled by the network

NOTE 17: This requirement is applicable only when Band 3 transmission frequency is less than or equal to

1765 MHz.
NOTE 18: This requirement applies when the E-UTRA carrier is confined within 2545-2575MHz or 2595-2645MHz and the channel bandwidth is 10 or 20 MHz
NOTE 19: Void
NOTE 20: This requirement is only applicable for carriers with bandwidth confined within 1885-1920 MHz (requirement for carriers with at least 1RB confined within 1880 - 1885 MHz is not specified). This requirement applies for an uplink transmission bandwidth less than or equal to 54 RB for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1892.5 - 1894.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1895 - 1903 MHz.
NOTE 21: As exceptions, measurements with a level up to the applicable requirement of -38 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 2nd harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.4.2-1) for which the 2nd harmonic totally or partially overlaps the measurement bandwidth (MBW).
NOTE 22: This requirement is applicable in the case of a 10 MHz E-UTRA carrier confined within 703 MHz and 733 MHz, otherwise the requirement of -25 dBm with a measurement bandwidth of 8 MHz applies.
NOTE 23: This requirement is applicable for 5 and 10 MHz E-UTRA channel bandwidth allocated within 718-728MHz. For carriers of 10 MHz bandwidth, this requirement applies for an uplink transmission bandwidth less than or equal to 30 RB with RBstart > 1 and RBstart<48.NOTE 24: Void
NOTE 25: Void

**Table 6.6.3.2A.0-2a: Spurious emission band UE co-existence for intraband carrier aggregation limits for Rel10**

| E-UTRA CA Configuration | Spurious emission | | | | | | |
|---|---|---|---|---|---|---|---|
| | Protected band | Frequency range (MHz) | | | Maximum Level (dBm) | MBW (MHz) | Note |
| CA_1C | E-UTRA Band 1, 7, 8, 11, 18, 19, 20, 21, 22, 38, 40, 42, 43 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 3 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 8 |
| CA_40C | E-UTRA Band 1, 3, 7, 8, 20, 22, 33, 34, 38, 39, 42, 43 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |

NOTE 1: $F_{DL_low}$ and $F_{DL_high}$ refer to each E-UTRA frequency band specified in Table 5.2-1
NOTE 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1.3-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2nd , 3rd , 4th , [or 5th ] harmonic spurious emissions. Due to spreading of the harmonic emission the exception is also allowed for the first 1 MHz frequency range immediately outside the harmonic emission on both sides of the harmonic emission. This results in an overall exception interval centred at the harmonic emission of (2MHz + N x $L_{CRB}$ x 180kHz), where N is 2, 3, 4, [5] for the 2nd, 3rd, 4th [or 5th ] harmonic respectively. The exception is allowed if the measurement bandwidth (MBW) totally or partially overlaps the overall exception interval.

| CA_40D | E-UTRA Band 1, 3, 7, 8, 20, 22, 26, 27, 32, 33, 34, 38, 39, 41, 42, 43, 44, 65, 67 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| CA_41C | E-UTRA Band 1, 2, 3, 4, 5, 8, 10, 12, 13 , 14, 17, 24, 25, 26, 27, 28, 29, 30, 34, 39, 40, 42, 44, 65, 66, 70 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| CA_42C | E-UTRA Band 1, 2, 3, 4, 5, 7, 8, 10, 11, 18, 19, 20, 21, 25, 26, 27, 28, 31, 32, 33, 34, 38, 40, 41, 44, 65, 66, 67 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | Frequency range | 1884.5 | - | 1915.7 | -41 | 0.3 | |

NOTE 1: FDL_low and FDL_high refer to each E-UTRA frequency band specified in Table 5.5-1

NOTE 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2nd, 3rd, 4th [or 5th] harmonic spurious emissions. Due to spreading of the harmonic emission the exception is also allowed for the first 1 MHz frequency range immediately outside the harmonic emission on both sides of the harmonic emission. This results in an overall exception interval centred at the harmonic emission of (2MHz + N x $L_{CRB}$ x 180kHz), where N is 2, 3, 4, [5] for the 2nd, 3rd, 4th [or 5th] harmonic respectively. The exception is allowed if the measurement bandwidth (MBW) totally or partially overlaps the overall exception interval

NOTE 3: To meet these requirements some restriction will be needed for either the operating band or protected band

NOTE 4: N/A

NOTE 5: N/A

NOTE 6: N/A

NOTE 7: N/A

NOTE 8: N/A

NOTE 9: N/A

NOTE 10: The requirement also applies for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1-1 and Table 6.6.3.1A-1 from the edge of the aggregated channel bandwidth.

**Table 6.6.3.2A.0-3: Requirements for intraband non-contiguous CA**

| E-UTRA CA Configuration | Spurious emission | | | | | | |
|---|---|---|---|---|---|---|---|
| | Protected band | Frequency range (MHz) | | | Maximum Level (dBm) | MBW (MHz) | Note |
| CA_4A-4A | E-UTRA Band 2, 4, 5, 7, 10, 12, 13, 14, 17, 22, 23, 24, 25, 26, 27, 28, 29, 30, 41, 43, 66, 71 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 42 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 2 |
| NOTE 1: $F_{DL_low}$ and $F_{DL_high}$ refer to each E-UTRA frequency band specified in Table 5.2-1<br>NOTE 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1.3-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2nd or 3rd harmonic spurious emissions. An exception is allowed if there is at least one individual RE within the transmission bandwidth (see Figure 5.4.2-1) for which the 2nd or 3rd harmonic, i.e. the frequency equal to two or three times the frequency of that RE, is within the measurement bandwidth (MBW). | | | | | | | |

The normative reference for this requirement is TS 36.101 [2] subclause 6.6.3.2A.

This test use minimum requirements from many releases of TS 36.101 [2] due to release independence defined in TS 36.307 [16].

## 6.6.3.2A.1 Spurious emission band UE co-existence for CA (intra-band contiguous DL CA and UL CA)

- Editor's Note : Additional TP analysis needs to be added to TR36.905

### 6.6.3.2A.1.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to co-existing systems for the specified bands which has specific requirements in terms of transmitter spurious emissions for intra-band contiguous DL CA and UL CA.

### 6.6.3.2A.1.2 Test applicability

This test case applies to all types of E-UTRA UE release 10 and forward that support intra-band contiguous DL CA and UL CA.

### 6.6.3.2A.1.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.6.3.2A.0.

### 6.6.3.2A.1.4 Test description

#### 6.6.3.2A.1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in Table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in Table 6.6.3.2A.1.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annexe A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 6.6.3.2A.1.4.1-1: Test Configuration Table**

| **Initial Conditions** | | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| Test Environment as specified in TS 36.508[7] clause 4.1 | | | NC | | | | | |
| Test Frequencies as specified in TS36.508 [7] clause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 6.1-2. | | | Low range, High range | | | | | |
| Test CC Combination setting (NRB_agg) as specified in clause 5.4.2A.1 for the CA Configuration | | | Lowest $N_{RB_agg}$<br>Highest $N_{RB_agg}$<br>(Note 2) | | | | | |

| 100 | 75 | | QPSK | 2 | P_1@0 | S_1@74 | | |
| 100 | 75 | | QPSK | 175 | P_100@0 | S_75@0 | | |
| 100 | 100 | | QPSK | 2 | P_1@0 | S_1@99 | | |
| 100 | 100 | | QPSK | 200 | P_100@0 | S_100@0 | | |
| Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1.<br>Note 2: If the UE supports multiple CC Combinations in the CA Configuration with the same $N_{RB_agg}$ , only the combination with the highest NRB_PCC is tested. | | | | | | | | |

1. Connect the SS to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure group A.33 as appropriate.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and Annex C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Table 6.6.3.2A.1.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.3.2A.1.4.3.

### 6.6.3.2A.1.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.0 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 6.6.3.2A.1.4.3
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 6.6.3.2A.1.4.1-1 on both PCC and SCC. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.

5. Send continuously uplink power control "up" commands in every uplink scheduling information to the UE until the UE transmits at $P_{UMAX}$ level.

6. Measure the power of the transmitted signal with a measurement filter of bandwidths according to Table 6.6.3.2A.0-2a to 6.6.3.2A.0-2f. The centre frequency of the filter shall be stepped in contiguous steps according to Table 6.6.3.2A.0-2a to 6.6.3.2A.0-2f. The measured power shall be verified for each step. The measurement period shall capture the active time slots.

#### 6.6.3.2A.1.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6.

### 6.6.3.2A.1.5 Test requirement

Test requirements for Spurious Emissions UE Co-existence are the same as the minimum requirements and are not repeated in this section.

The measured average power of spurious emission, derived in step 6, shall not exceed the described value in Tables 6.6.3.2A.1.5-1.

The requirements for the UE are release specific and can be found in Tables 6.6.3.2A.0-2a to 6.6.3.2A.0-2f. If the UE support a band, which is not defined in the table corresponding UE's release, the requirements for this band are taken from the table of earliest release where requirements for this band are defined. This has been described in following Table 6.6.3.2A.1.5-1.

**Table 6.6.3.2A.1.5-1: UE Requirements according to UE E-UTRA release and supported E-UTRA CA configuration**

## 6.6.3.2A.2 Spurious emission band UE co-existence for CA (inter-band DL CA and UL CA)

### 6.6.3.2A.2.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to co-existing systems for the specified bands which has specific requirements in terms of transmitter spurious emissions for inter-band DL CA and UL CA.

### 6.6.3.2A.2.2 Test applicability

This test case applies to all types of E-UTRA UE release 11 and forward that support inter-band DL CA and UL CA.

### 6.6.3.2A.2.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.6.3.2A.0.

### 6.6.3.2A.2.4 Test description

#### 6.6.3.2A.2.4.1 Initial conditions

Same as in clause 6.6.3.2A.1.4.1 with the following exceptions:

- Instead of Table 5.4.2A.1-1→ use Table 5.4.2A.1-2 for CA configurations with two bands or Table 5.4.2A.1-2a for CA configurations with three bands.
- Instead of Table 6.6.3.2A.1.4.1-1 → use Table 6.6.3.2A.2.4.1-1.
- Instead of clause 6.6.3.2A.1.4.3 use clause 6.6.3.2A.2.4.3.

**Table 6.6.3.2A.2.4.1-1: Test Configuration Table**

| Initial Conditions | |
|---|---|
| Test Environment as specified in TS 36.508[7] subclause 4.1 | NC |
| Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes. | For test frequencies refer to “Range” columns. |
| Test CC Combination setting ($N_{RB_agg}$) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE. | Refer to “PCC $N_{RB}$”and “SCC $N_{RB}$ ” columns |

| Test Parameters for CA Configurations | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: Use CA Configuration – specific test points if present in the table. Otherwise use the Default Test Settings test points.
Note 3: X,Y correspond to the different bands in the CA Configuration. E.g. for CA_1A-19A,X=1,Y=19.
Note 4: For CA configurations CA_1A-18A, CA_1A-19A, CA_1A-21A , CA_3A-19A and CA_18A-28A each test point shall be tested. For all other CA configurations only test points with highest $N_{RB_agg}$ , according to UE supported BCS shall be tested.
Note 5: Test Point ID 7 for CA_3A-7A is applicable only for a Rel-13 and forward UE.
Note 6: Test Point ID 3 and Test Point ID 8 for CA_2A-4A are applicable only for a Rel-14 and forward UE.
Note 7: Test Point ID 4 for CA_1A-3A has the centre carrier frequency 1849.9 MHz, i.e. DL E-ARFCN is 1649.

Note 8: Test Point ID 1, 4 and 8 for CA_41A-42A have the centre carrier frequency of 2635 MHz in Band 41 (EARFCN=41040).
Note 9: Test Point ID 2, 3, 5, 6 and 9 for CA_41A-42A has the centre carrier frequency of 2555 MHz in Band 41 (EARFCN=40240).
Note 10: Test Point ID 7 for CA_41A-42A has the centre carrier frequency of 2674 MHz in Band 41 (EARFCN=41430).
Note 11: Test Point ID 2 for CA_41A-42A has the centre carrier frequency of 3421 MHz in Band 42 (EARFCN=41800).
Note 12: Test Point ID 2 for CA_1A-7A is applicable only for a Rel-15 and forward UE.
Note 13: Test Point ID 4 for CA_1A-42A is applicable only for a Rel-15 and forward UE.
Note 14: Test Point ID 10 for CA_41A-42A is applicable only for a Rel-15 and forward UE.
Note 15: Test Point ID 1 and 2 for CA_18A-28A have the centre carrier frequency of 778 MHz in Band 28 (EARFCN=9410).
Note 16: As an exception to Note 4, Test Point ID 3 for CA_1A-28A shall be tested for a UE supporting bandwidth combination set 0, even though it has not highest $N_{RB_agg}$ for this UE.

#### 6.6.3.2A.2.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.0 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 6.6.3.2A.2.4.3
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 6.6.3.2A.2.4.1-1 on both PCC and SCC. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
5. Send continuously uplink power control “up” commands in every uplink scheduling information to the UE until the UE transmits at $P_{UMAX}$ level.
6. Measure the power of the transmitted signal with a measurement filter of bandwidths according to Table 6.6.3.2A.2.5-1 to Table 6.6.3.2A.2.5-4. The centre frequency of the filter shall be stepped in contiguous steps according to Table 6.6.3.2A.2.5-1 to Table 6.6.3.2A.2.5-4. The measured power shall be verified for each step. The measurement period shall capture the active time slots.

#### 6.6.3.2A.2.4.3 Message contents

Message contents are according to TS 36.508 [7] clause 4.6. In test procedure step 2, for SCC configuration there are no additional message contents.

### 6.6.3.2A.2.5 Test requirement

The measured average power of spurious emission, derived in step 6, shall not exceed the described value in Tables 6.6.3.2A.2.5-1 to 6.6.3.2A.2.5-4 according to the following rule:

The requirements for the UE are release specific and can be found in Tables 6.6.3.2A.2.5-1 to 6.6.3.2A.2.5-4. If the UE supports a CA configuration, which is not defined in the table corresponding to UE’s release, the requirements for this CA configuration are taken from the table of earliest release where requirements for this CA Configuration are defined. This has been described in following Table 6.6.3.2A.2.5-0.

**Table 6.6.3.2A.2.5-0: UE Requirements according to UE E-UTRA release and supported E-UTRA CA Configuration**

| CA_4A-12A | No requirement | | | | | | |
| CA_4A-13A | E-UTRA Band 7, 41 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| CA_4A-17A | No requirement | | | | | | |
| CA_5A-7A | E-UTRA Band 5, 28, 42 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA band 26 | 859 | - | 869 | -27 | 1 | |
| CA_5A-12A | E-UTRA Band 24, 30 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| CA_5A-17A | E-UTRA Band 24, 30 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| CA_7A-20A | E-UTRA Band 28 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 20 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 3 |
| | E-UTRA Band 42 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 2 |
| CA_7A-28A | E-UTRA Band 3 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| CA_19A-21A | No requirement | | | | | | |
| CA_39A-41A | E-UTRA Band 42, 44 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |

NOTE 1: $F_{DL_low}$ and $F_{DL_high}$ refer to each E-UTRA frequency band specified in Table 5.2-1

NOTE 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1.3-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2nd, 3rd, 4th [or 5th] harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.4.2-1) for which the 2nd, 3rd or 4th harmonic totally or partially overlaps the measurement bandwidth (MBW).

NOTE 3: These requirements also apply for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1.3-1 and Table 6.6.3.1A.0-1 from the edge of the aggregated channel bandwidth.

NOTE 4-9: Void.

NOTE10: This requirement applies for 5, 10, 15 and 20 MHz E-UTRA channel bandwidth allocated within 1744.9MHz and 1784.9MHz.

NOTE 11: This requirement is applicable only for the following cases:
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 902.5 MHz ≤ $F_c$ < 907.5 MHz with an uplink transmission bandwidth less than or equal to 20 RB
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 907.5 MHz ≤ $F_c$ ≤ 912.5 MHz without any restriction on uplink transmission bandwidth.
- for carriers of 10 MHz channel bandwidth when carrier centre frequency ($F_c$) is $F_c$ = 910 MHz with an uplink transmission bandwidth less than or equal to 32 RB with $RB_{start}$ > 3.

NOTE 12: Void.
NOTE13: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.
NOTE 14: This requirement is applicable for any channel bandwidths within the range 2500 - 2570 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2560.5 - 2562.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2552 - 2560 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.
NOTE 15: Void.
NOTE 16: Void.
NOTE 17: This requirement is applicable only when Band 3 transmission frequency is less than or equal to 1765 MHz.
NOTE 18-20: Void.

**Table 6.6.3.2A.2.5-2: Requirements for dual-uplink inter-band carrier aggregation for Rel-13**

| E-UTRA CA Configuration | Spurious emission | | | | | | |
|---|---|---|---|---|---|---|---|
| | Protected band | Frequency range (MHz) | | | Maximum Level (dBm) | MBW (MHz) | Note |
| CA_1A-3A | E-UTRA Band 1, 32, 43, 65 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |

| | E-UTRA Band 42 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 2 |
| CA_7A-28A | E-UTRA Band 3 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| CA_18A-28A | Frequency range | 470 | - | 710 | -26.2 | 6 | 23 |
| CA_19A-21A | No requirement | | | | | | |
| CA_39A-41A | E-UTRA Band 42, 44 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |

NOTE 1: $F_{DL_low}$ and $F_{DL_high}$ refer to each E-UTRA frequency band specified in Table 5.2-1

NOTE 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1.3-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2nd, 3rd, 4th [or 5th] harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.4.2-1) for which the 2nd, 3rd or 4th harmonic totally or partially overlaps the measurement bandwidth (MBW).

NOTE 3: These requirements also apply for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1.3-1 and Table 6.6.3.1A.0-1 from the edge of the aggregated channel bandwidth.

NOTE 4-9: Void.

NOTE10: This requirement applies for 5, 10, 15 and 20 MHz E-UTRA channel bandwidth allocated within 1744.9MHz and 1784.9MHz.

NOTE 11: This requirement is applicable only for the following cases:
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 902.5 MHz ≤ $F_c$ < 907.5 MHz with an uplink transmission bandwidth less than or equal to 20 RB
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 907.5 MHz ≤ $F_c$ ≤ 912.5 MHz without any restriction on uplink transmission bandwidth.
- for carriers of 10 MHz channel bandwidth when carrier centre frequency ($F_c$) is $F_c$ = 910 MHz with an uplink transmission bandwidth less than or equal to 32 RB with $RB_{start}$ > 3.

NOTE 12: Void.

NOTE13: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.

NOTE 14: This requirement is applicable for any channel bandwidths within the range 2500 - 2570 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2560.5 - 2562.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2552 - 2560 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.

NOTE 15-21: Void.

NOTE 22: This requirement is applicable in the case of a 10 MHz E-UTRA carrier confined within 703 MHz and 733 MHz, otherwise the requirement of -25 dBm with a measurement bandwidth of 8 MHz applies.

NOTE 23: This requirement is applicable for 5 and 10 MHz E-UTRA channel bandwidth allocated within 718-728MHz. For carriers of 10 MHz bandwidth, this requirement applies for an uplink transmission bandwidth less than or equal to 30 RB with RBstart > 1 and RBstart<48.

**Table 6.6.3.2A.2.5-3: Requirements for dual-uplink inter-band carrier aggregation for Rel-14**

| E-UTRA CA Configuration | Spurious emission | | | | | | |
|---|---|---|---|---|---|---|---|
| | Protected band | Frequency range (MHz) | | | Maximum Level (dBm) | MBW (MHz) | NOTE |

| CA_7A-28A | E-UTRA Band 3 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| CA_18A-28A | Frequency range | 470 | - | 710 | -26.2 | 6 | 23 |
| CA_19A-21A | No requirement | | | | | | |
| CA_39A-41A | E-UTRA Band 42, 44 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| CA_41A-42A | E-UTRA Band 3, 5, 8, 26, 28, 33, 39, 44 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 9, 11, 18, 19, 21 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 18 |
| | Frequency range | 1839.9 | - | 1879.9 | -50 | 1 | 18 |
| | Frequency range | 1884.5 | - | 1915.7 | -41 | 0.3 | 4, 18 |

NOTE 1: $F_{DL_low}$ and $F_{DL_high}$ refer to each E-UTRA frequency band specified in Table 5.5-1

NOTE 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2nd, 3rd, 4th [or 5th] harmonic spurious emissions. In case the exceptions are allowed due to spreading of the harmonic emission the exception is also allowed for the first 1 MHz frequency range immediately outside the harmonic emission on both sides of the harmonic emission. This results in an overall exception interval centred at the harmonic emission of (2MHz + N x $L_{CRB}$ x 180kHz), where N is 2, 3 or 4 for the 2nd, 3rd or 4th harmonic respectively. The exception is allowed if the measurement bandwidth (MBW) totally or partially overlaps the overall exception interval.

NOTE 3: These requirements also apply for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1-1 and Table 6.6.3.1A-1 from the edge of the aggregated channel bandwidth.

NOTE 4: Applicable when co-existence with PHS system operating in 1884.5 -1915.7MHz.

NOTE 5-9: Void

NOTE10: This requirement applies for 5, 10, 15 and 20 MHz E-UTRA channel bandwidth allocated within 1744.9MHz and 1784.9MHz.

NOTE 11: This requirement is applicable only for the following cases:
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 902.5 MHz ≤ $F_c$ < 907.5 MHz with an uplink transmission bandwidth less than or equal to 20 RB
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 907.5 MHz ≤ $F_c$ ≤ 912.5 MHz without any restriction on uplink transmission bandwidth.
- for carriers of 10 MHz channel bandwidth when carrier centre frequency ($F_c$) is $F_c$ = 910 MHz with an uplink transmission bandwidth less than or equal to 32 RB with $RB_{start}$ > 3.

NOTE 12-16: Void

NOTE 17: This requirement is applicable only when Band 3 transmission frequency is less than or equal to 1765 MHz.

NOTE 18: This requirement applies when the E-UTRA carrier is confined within 2545-2575MHz or 2595-2645MHz and the channel bandwidth is 10 or 20 MHz

NOTE 19-21: Void

NOTE 22: This requirement is applicable in the case of a 10 MHz E-UTRA carrier confined within 703 MHz and 733 MHz, otherwise the requirement of -25 dBm with a measurement bandwidth of 8 MHz applies.

NOTE 23: This requirement is applicable for 5 and 10 MHz E-UTRA channel bandwidth allocated within 718-728MHz. For carriers of 10 MHz bandwidth, this requirement applies for an uplink transmission bandwidth less than or equal to 30 RB with RBstart > 1 and RBstart<48.

**Table 6.6.3.2A.2.5-4: Requirements for dual-uplink inter-band carrier aggregation for Rel-15**

| E-UTRA CA Configuration | Spurious emission | | | | | | |
|---|---|---|---|---|---|---|---|
| | Protected band | Frequency range (MHz) | | | Maximum Level (dBm) | MBW (MHz) | NOTE |
| CA_1A-3A | E-UTRA Band 1, 32, 43, 50, 65, 74, 75 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |

| CA_11A-18A | E-UTRA Band 1, 3, 11, 18, 19, 21, 28, 34, 42, 65 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | Frequency range | 860 | - | 890 | -40 | 1 | 3 |
| | Frequency range | 1884.5 | - | 1915.7 | -41 | 0.3 | 4 |
| | Frequency range | 2545 | - | 2575 | -50 | 1 | |
| | Frequency range | 2595 | - | 2645 | -50 | 1 | |
| | Frequency range | 945 | - | 960 | -50 | 1 | |
| CA_18A-28A | Frequency range | 470 | - | 710 | -26.2 | 6 | 23 |
| CA_19A-21A | No requirement | | | | | | |
| CA_39A-41A | E-UTRA Band 42, 44 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| CA_41A-42A | E-UTRA Band 3, 5, 8, 26, 28, 33, 39, 44, 50, 51, 74 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 9, 11, 18, 19, 21 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 18 |
| | Frequency range | 1839.9 | - | 1879.9 | -50 | 1 | 18 |
| | Frequency range | 1884.5 | - | 1915.7 | -41 | 0.3 | 4, 18 |

NOTE 1: $F_{DL_low}$ and $F_{DL_high}$ refer to each E-UTRA frequency band specified in Table 5.5-1

NOTE 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2nd, 3rd, 4th [or 5th] harmonic spurious emissions. In case the exceptions are allowed due to spreading of the harmonic emission the exception is also allowed for the first 1 MHz frequency range immediately outside the harmonic emission on both sides of the harmonic emission. This results in an overall exception interval centred at the harmonic emission of (2MHz + N x $L_{CRB}$ x 180kHz), where N is 2, 3 or 4 for the 2nd, 3rd or 4th harmonic respectively. The exception is allowed if the measurement bandwidth (MBW) totally or partially overlaps the overall exception interval.

NOTE 3: These requirements also apply for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1-1 and Table 6.6.3.1A-1 from the edge of the aggregated channel bandwidth.

NOTE 4: Applicable when co-existence with PHS system operating in 1884.5 -1915.7MHz.

NOTE 5-9: Void.

NOTE10: This requirement applies for 5, 10, 15 and 20 MHz E-UTRA channel bandwidth allocated within 1744.9MHz and 1784.9MHz.

NOTE 11: This requirement is applicable only for the following cases:
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 902.5 MHz ≤ $F_c$ < 907.5 MHz with an uplink transmission bandwidth less than or equal to 20 RB
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 907.5 MHz ≤ $F_c$ ≤ 912.5 MHz without any restriction on uplink transmission bandwidth.
- for carriers of 10 MHz channel bandwidth when carrier centre frequency ($F_c$) is $F_c$ = 910 MHz with an uplink transmission bandwidth less than or equal to 32 RB with $RB_{start}$ > 3.

NOTE 12-16: Void.

NOTE 17: This requirement is applicable only when Band 3 transmission frequency is less than or equal to 1765 MHz.

NOTE 18: This requirement applies when the E-UTRA carrier is confined within 2545-2575MHz or 2595-2645MHz and the channel bandwidth is 10 or 20 MHz

NOTE 19-21: Void

NOTE 22: This requirement is applicable in the case of a 10 MHz E-UTRA carrier confined within 703 MHz and 733 MHz, otherwise the requirement of -25 dBm with a measurement bandwidth of 8 MHz applies.

NOTE 23: This requirement is applicable for 5 and 10 MHz E-UTRA channel bandwidth allocated within 718-728MHz. For carriers of 10 MHz bandwidth, this requirement applies for an uplink transmission bandwidth less than or equal to 30 RB with RBstart > 1 and RBstart<48.

NOTE 24-25: Void.

## 6.6.3.2A.3 Spurious emission band UE co-existence for CA (intra-band non-contiguous DL CA and UL CA)

### 6.6.3.2A.3.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to co-existing systems for the specified bands which has specific requirements in terms of transmitter spurious emissions for intra-band non-contiguous DL CA and UL CA.

### 6.6.3.2A.3.2 Test applicability

This test case applies to all types of E-UTRA UE release 11 and forward that support intra-band non-contiguous DL CA and UL CA.

### 6.6.3.2A.3.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.6.3.2A.0.

### 6.6.3.2A.3.4 Test description

#### 6.6.3.2A.3.4.1 Initial conditions

Same as in clause 6.6.3.2A.1.4.1 with the following exceptions:

- Instead of Table 6.6.3.2A.1.4.1-1 → use Table 6.6.3.2A.3.4.1-1.
- Instead of clause 6.6.3.2A.1.4.3 → use clause 6.6.3.2A.3.4.3.

**Table 6.6.3.2A.3.4.1-1: Test Configuration Table**

| **Initial Conditions** | |
|---|---|
| Test Environment as specified in TS 36.508[7] subclause 4.1 | NC |
| Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 6.1-2. | Refer to test points<br>A: N/A (Range is not relevant),<br>Maximum Wgap(low + high frequency) |
| Test CC Combination setting ($N_{RB_agg}$) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE. | Refer to test points<br>Test only test points with<br>Lowest $N_{RB}$ for PCC and SCC<br>Highest $N_{RB}$ for PCC and SCC |

| **Test Parameters for CA Configurations** | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| **ID** | **CA Configuration / $N_{RB_agg}$** | | **$W_{gap}$ [MHz]** | **DL Allocation** | | **UL Allocation** | | | |
| | **PCC $N_{RB}$** | **SCCs $N_{RB}$** | | **CC MOD** | **PCC & SCC RB allocation** | **CC MOD** | **PCC $N_{RB_alloc}$ ($L_{CRB}$ @ $RB_{start}$)** | **CC MOD** | **SCC $N_{RB_alloc}$ ($L_{CRB}$ @ $RB_{start}$)** |
| **Test Parameters for CA_4A-4A Configurations** | | | | | | | | | |
| 1 | 25 | 25 | 35 | N/A | N/A | QPSK | P_1@0 | QPSK | S_1@24 |
| 2 | 25 | 25 | 35 | N/A | N/A | QPSK | P_25@0 | QPSK | S_25@0 |
| 3 | 100 | 100 | 5 | N/A | N/A | QPSK | P_1@0 | QPSK | S_1@99 |
| 4 | 100 | 100 | 5 | N/A | N/A | QPSK | P_100@0 | QPSK | S_100@0 |

#### 6.6.3.2A.3.4.2 Test procedure

Same test procedure as in clause 6.6.3.2A.1.4.2 with the following exceptions:

- Instead of Table 6.6.3.2A.1.4.1-1 → use Table 6.6.3.2A.3.4.1-1.
- Instead of Table 6.6.3.2A.0-2a to 6.6.3.2A.0-2c → use Table 6.6.3.2A.0-3
- Instead of clause 6.6.3.2A.1.4.3 → use clause 6.6.3.2A.3.4.3.

#### 6.6.3.2A.3.4.3 Message contents

Message contents are according to TS 36.508 [7] clause 4.6. In test procedure step 2, for SCC configuration there are no additional message contents.

### 6.6.3.2A.3.5 Test requirement

Test requirements for Spurious Emissions UE Co-existence are the same as the minimum requirements and are not repeated in this section.

The measured average power of spurious emission, derived in step 6, shall not exceed the described value in Table 6.6.3.2A.3.5-1.

The requirements for the UE are release specific and can be found in Table 6.6.3.2A.0-3. If the UE supports a band, which is not defined in the table corresponding UE's release, the requirements for this band are taken from the table of earliest release where requirements for this band are defined. This has been described in following Table 6.6.3.2A.3.5-1.

**Table 6.6.3.2A.3.5-1: UE Requirements according to UE E-UTRA release and supported E-UTRA CA configuration**

| E-UTRA CA Configuration | UE Requirements per release |
|---|---|
| | Rel-12 |
| CA_4A-4A | Table 6.6.3.2A.0-3 |

## 6.6.3.2A.4 Spurious emission band UE co-existence for CA (3UL CA)

Editor's notes: This test case is incomplete. The following items are missing or incomplete:

- Additional TP analysis needs to be added to TR36.905
- Test Configuration Table
- Applicability spec
-Test requirement is FFS

### 6.6.3.2A.4.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to co-existing systems for the specified bands which has specific requirements in terms of transmitter spurious emissions for 3UL CA.

### 6.6.3.2A.4.2 Test applicability

This test case applies to all types of E-UTRA UE release 13 and forward that support 3UL CA.

### 6.6.3.2A.4.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.6.3.2A.0.

### 6.6.3.2A.4.4 Test description

#### 6.6.3.2A.4.4.1 Initial conditions

Same as in clause 6.6.3.2A.1.4.1 with the following exceptions:

- Instead of Table 6.6.3.2A.1.4.1-1 → use Table 6.6.3.2A.4.4.1-1.
- Instead of clause 6.6.3.2A.1.4.3 → use clause 6.6.3.2A.4.4.3.

**Table 6.6.3.2A.4.4.1-1: Test Configuration Table**

| Initial Conditions | |
|---|---|
| Test Environment as specified in TS 36.508[7] subclause 4.1 | NC |
| Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes. | For test frequencies refer to “Range” columns |
| Test CC Combination setting ($N_{RB_agg}$) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE. | Refer to “PCC $N_{RB}$”and “SCC $N_{RB}$ ” columns |

**Test Parameters for CA Configurations**

| | CA Configuration / $N_{RB_agg}$ | | | | | | | | | | DL Allocation | | | | UL Al | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | CA Configuration | | | | | | | | | | PCC & SCC RB allocation | | | | | | |
| | PCC | | SCC1 | | SCC2 | | PCC | SCC1 | SCC2 | | | | | | | PCC & | |
| ID | Band | Range | Band | Range | Band | Range | $N_{RB}$ | $N_{RB}$ | $N_{RB}$ | CC MOD | PCC | SCC1 | SCC2 | CC MOD | RB all | | |
| TBD | TBD | TBD | TBD | TBD | TBD | TBD | TBD | TBD | TBD | TBD | TBD | TBD | TBD | TBD | TBD | T | |

#### 6.6.3.2A.4.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.0 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 6.6.3.2A.4.4.3
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 6.6.3.2A.4.4.1-1 on all PCC and SCCs. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
5. Send continuously uplink power control “up” commands in every uplink scheduling information to the UE until the UE transmits at $P_{UMAX}$ level.
6. Measure the power of the transmitted signal with a measurement filter of bandwidths according to Tables in 6.6.3.2A.4.5 (Tables are FFS). The centre frequency of the filter shall be stepped in contiguous steps according to Tables in 6.6.3.2A.4.5 (Tables are FFS). The measured power shall be verified for each step. The measurement period shall capture the active time slots.

#### 6.6.3.2A.4.4.3 Message contents

Message contents are according to TS 36.508 [7] clause 4.6. In test procedure step 2, for SCC configuration there are no additional message contents.

### 6.6.3.2A.4.5 Test requirement

FFS

## 6.6.3.3 Additional spurious emissions

Editor's notes: This test case is incomplete. The following items are missing or incomplete:

- Test configuration table for NS_38 and NS_39 is not defined.

### 6.6.3.3.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to other channels or other systems in terms of transmitter spurious emissions under the deployment scenarios where additional requirements are specified.

### 6.6.3.3.2 Test applicability

This test case applies to all types of E-UTRA UE release 8 and forward.

### 6.6.3.3.3 Minimum conformance requirements

These requirements are specified in terms of an additional spectrum emission requirement. Additional spurious emission requirements are signalled by the network to indicate that the UE shall meet an additional requirement for a specific deployment scenario as part of the cell handover/broadcast message.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

#### 6.6.3.3.3.1 Minimum requirement (network signalled value "NS_04")

When "NS 04" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.3.1-1. This requirement also applies for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.3.1-1: Additional requirements**

| Frequency band | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|---|
| | 5, 10, 15, 20 MHz | |
| 2490.5 MHz ≤ f < 2495 MHz | -13 | 1 MHz |
| 9 kHz < f < 2490.5 MHz | -25 | 1 MHz |

The normative reference for this requirement is TS 36.101[2] subclause 6.6.3.3.19.

#### 6.6.3.3.3.2 Minimum conformance requirements (network signalled value "NS_05")

When "NS_05" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.3.2-1. This requirement also applies for the frequency ranges that are less than $\Delta f_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.3.2-1: Additional requirements (PHS)**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | | | | Measurement bandwidth |
|---|---|---|---|---|---|
| | 5 MHz | 10 MHz | 15 MHz | 20 MHz | |
| 1884.5 ≤ f ≤1915.7*1 | -41 | -41 | -41 | -41 | 300 KHz |
| Note 1: Applicable when the lower edge of the assigned E-UTRA UL channel bandwidth frequency is larger than or equal to the upper edge of PHS band (1915.7 MHz) + 4 MHz + the Channel BW assigned, where Channel BW is as defined in sub-clause 5.4.2. Additional restrictions apply for operations below this point. | | | | | |

The normative reference for this requirement is TS 36.101[2] subclause 6.6.3.3.1.

### 6.6.3.3.3.3 Minimum conformance requirements (network signalled value "NS_07")

When "NS_07" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.3.3-1. These requirements also apply for the frequency ranges that are less than $\Delta f_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.3.3-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|---|
| | 10 MHz | |
| 769 ≤ f ≤ 775 | -57 | 6.25 kHz |
| Note: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB. | | |

The normative reference for this requirement is TS 36.101[2] subclause 6.6.3.3.2.

### 6.6.3.3.3.4 Minimum requirement (network signalled value "NS_08")

When "NS_08" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.3.4-1. This requirement also applies for the frequency ranges that are less than $\Delta f_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.3.4-1: Additional requirement**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | | | Measurement bandwidth |
|---|---|---|---|---|
| | 5MHz | 10MHz | 15MHz | |
| 860 ≤ f ≤ 895 | -40 | -40 | -40 | 1 MHz |

The normative reference for this requirement is TS 36.101[2] subclause 6.6.3.3.3.

### 6.6.3.3.3.5 Minimum requirement (network signalled value "NS_09")

When "NS 09" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.3.5-1. This requirement also applies for the frequency ranges that are less than $\Delta f_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.3.5-1: Additional requirement**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | | | Measurement bandwidth |
|---|---|---|---|---|
| | 5MHz | 10MHz | 15MHz | |
| 1475.9 ≤ f ≤ 1510.9 | -35 | -35 | -35 | 1 MHz |

NOTE 1: To improve measurement accuracy, A-MPR values for NS_09 specified in Table 6.2.4.3-1 in sub-clause 6.2.4 are derived based on 100 kHz RBW.

The normative reference for this requirement is TS 36.101[2] subclause 6.6.3.3.4.

#### 6.6.3.3.3.6 Minimum requirement (network signalled value "NS_11")

When “NS_11” is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.3.6-1. These requirements also apply for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.3.6-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth | Note |
|---|---|---|---|
| | 1.4, 3, 5, 10, 15, 20 MHz | | |
| E-UTRA Band 2 | -50 | 1 MHz | |
| 1998 ≤ f ≤ 1999 | -21 | 1 MHz | |
| 1997 ≤ f < 1998 | -27 | 1 MHz | |
| 1996 ≤ f < 1997 | -32 | 1 MHz | |
| 1995 ≤ f < 1996 | -37 | 1 MHz | |
| 1990 ≤ f < 1995 | -40 | 1 MHz | |

The normative reference for this requirement is TS 36.101[2] subclause 6.6.3.3.13.

#### 6.6.3.3.3.7 Minimum requirement (network signalled value "NS_12")

When "NS 12" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.3.7-1. This requirement also applies for the frequency ranges that are less than $\Delta f_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.3.7-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth/ Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|---|
| | 1.4 MHz, 3 MHz, 5 MHz, 10 MHz, 15 MHz | |
| 806 ≤ f ≤ 813.5 | -42 | 6.25 kHz |
| NOTE 1: The requirement applies for E-UTRA carriers with lower channel edge at or above 814.2 MHz.<br>NOTE 2: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB. | | |

The normative reference for this requirement is TS 36.101[2] subclause 6.6.3.3.5.

#### 6.6.3.3.3.8 Minimum requirement (network signalled value "NS_13")

When "NS 13" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.3.8-1. This requirement also applies for the frequency ranges that are less than $\Delta f_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.3.8-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth/ Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|---|
| | 1.4, 3, 5 MHz | |
| 806 ≤ f ≤ 816 | -42 | 6.25 kHz |
| NOTE 1: The requirement applies for E-UTRA carriers with lower channel edge at or above 819 MHz.<br>NOTE 2: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB. | | |

The normative reference for this requirement is TS 36.101[2] subclause 6.6.3.3.6.

### 6.6.3.3.3.9 Minimum requirement (network signalled value "NS_14")

When "NS 14" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.3.9-1. This requirement also applies for the frequency ranges that are less than $\Delta f_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.3.9-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth/ Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|---|
| | 10 MHz, 15 MHz | |
| 806 ≤ f ≤ 816 | -42 | 6.25 kHz |
| NOTE 1: The requirement applies for E-UTRA carriers with lower channel edge at or above 824 MHz.<br>NOTE 2: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB. | | |

The normative reference for this requirement is TS 36.101[2] subclause 6.6.3.3.7.

### 6.6.3.3.3.10 Minimum requirement (network signalled value "NS_15")

When "NS 15" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.3.10-1. This requirement also applies for the frequency ranges that are less than $\Delta f_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.3.10-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth | Note |
|---|---|---|---|
| | 1.4, 3, 5, 10, 15 MHz | | |
| 851 ≤ f ≤ 859 | -53 | 6.25 kHz | 1 |
| Note 1: The emissions measurement shall be sufficiently power averaged to ensure standard deviation < 0.5 dB. | | | |

The normative reference for this requirement is TS 36.101[2] subclause 6.6.3.3.8.

### 6.6.3.3.3.11 Minimum requirement (network signalled value "NS_16")

When “NS_16” is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.3.11-1. This requirement also applies for the frequency ranges that are less than $\Delta f_{OOB}$ (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.3.11-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth | Note |
|---|---|---|---|
| | 1.4, 3, 5, 10 MHz | | |
| 790 ≤ f ≤ 803 | -32 | 1 MHz | |

The normative reference for this requirement is TS 36.101[2] subclause 6.6.3.3.9.

6.6.3.3.3.12 Minimum requirement (network signalled value "NS_17")

When “NS_17” is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.3.12-1. This requirement also applies for the frequency ranges that are less than $\Delta f_{OOB}$ (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.3.12-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth | Note |
|---|---|---|---|
| | 5, 10 MHz | | |
| 470 ≤ f ≤ 710 | -26.2 | 6 MHz | 1 |
| Note 1: Applicable when the assigned E-UTRA carrier is confined within 718 MHz and 748 MHz and when the channel bandwidth used is 5 or 10 MHz. | | | |

The normative reference for this requirement is TS 36.101[2] subclause 6.6.3.3.10.

6.6.3.3.3.13 Minimum requirement (network signalled value "NS_18")

When “NS_18” is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.3.13-1. This requirement also applies for the frequency ranges that are less than $\Delta f_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.3.13-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth | Note |
|---|---|---|---|
| | 5, 10, 15, 20 MHz | | |
| 692 ≤ f ≤ 698 | -26.2 | 6 MHz | |

The normative reference for this requirement is TS 36.101[2] subclause 6.6.3.3.11.

6.6.3.3.3.14 Minimum requirement (network signalled value "NS_19")

When “NS_19” is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.3.14-1. This requirement also applies for the frequency ranges that are less than $\Delta f_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.3.14-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth | Note |
|---|---|---|---|
| | 3, 5, 10, 15, 20 MHz | | |
| 662 ≤ f ≤ 694 | -25 | 8 MHz | |

The normative reference for this requirement is TS 36.101[2] subclause 6.6.3.3.12.

6.6.3.3.3.15 Minimum requirement (network signalled value "NS_20")

When “NS_20” is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.3.15-1. These requirements also apply for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.3.15-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth | Note |
|---|---|---|---|
| | 5, 10, 15, 20 MHz | | |
| 1990 ≤ f < 1999 | -40 | 1 MHz | |
| 1999 ≤ f ≤ 2000 | -40 | Note 1 | |
| Note 1: The measurement bandwidth is 1% of the applicable E-UTRA channel bandwidth (5.4.2.1-1). | | | |

The normative reference for this requirement is TS 36.101[2] subclause 6.6.3.3.14.

6.6.3.3.3.16 Minimum requirement (network signalled value “NS_21”)

When “NS_21” is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.3.16-1. These requirements also apply for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1.3-1 and Table 6.6.3.1A-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.3.16-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|---|
| | 5, 10 MHz | |
| 2200 ≤ f < 2288 | -40 | 1 MHz |
| 2288 ≤ f < 2292 | -37 | 1 MHz |
| 2292 ≤ f < 2296 | -31 | 1 MHz |
| 2296 ≤ f < 2300 | -25 | 1 MHz |
| 2320 ≤ f < 2324 | -25 | 1 MHz |
| 2324 ≤ f < 2328 | -31 | 1 MHz |
| 2328 ≤ f < 2332 | -37 | 1 MHz |
| 2332 ≤ f ≤ 2395 | -40 | 1 MHz |

The normative reference for this requirement is TS 36.101[2] subclause 6.6.3.3.15.

6.6.3.3.3.17 Minimum requirement (network signalled value “NS_22”)

When "NS_22" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.3.17-1. This requirement also applies for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.3.17-1: Additional requirement**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | MBW |
|---|---|---|
| | 5, 10, 15, 20 MHz | |
| 3400 ≤ f ≤ 3800 | -23 (NOTE 1, NOTE 3) | 5 MHz |
| | -40 (NOTE 2) | 1 MHz |
| NOTE 1: This requirement applies within an offset between 5 MHz and 25 MHz from the lower and from the upper edge of the channel bandwidth, whenever these frequencies overlap with the specified frequency band.<br>NOTE 2: This requirement applies from 3400 MHz to 25 MHz below the lower E-UTRA channel edge and from 25 MHz above the upper E-UTRA channel edge to 3800 MHz.<br>NOTE 3: This emission limit might imply risk of harmful interference to UE(s) operating in the protected operating band | | |

The normative reference for this requirement is TS 36.101[2] subclause 6.6.3.3.16.

6.6.3.3.3.18 Minimum requirement (network signalled value “NS_23”)

When "NS_23" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.3.18-1. This requirement also applies for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

**6.6.3.3.3.18-1: Additional requirement**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | MBW |
|---|---|---|
| | 5, 10, 15, 20 MHz | |
| 3400 ≤ f ≤ 3800 | -23 (NOTE 1, NOTE 4) | 5 MHz |
| | -40 (NOTE 2) | 1 MHz |
| NOTE 1: This requirement applies within an offset between 5 MHz + $F_{offset_NS_23}$ and 25 MHz + $F_{offset_NS_23}$ from the lower and from the upper edges of the channel bandwidth, whenever these frequencies overlap with the specified frequency band. | | |
| NOTE 2: This requirement applies from 3400 MHz to 25 MHz + $F_{offset_NS_23}$ below the lower E-UTRA channel edge and from 25 MHz + Foffset$_{NS_23}$ above the upper E-UTRA channel edge to 3800 MHz. | | |
| NOTE 3: $F_{offset_NS_23}$ is:<br>0 MHz for 5 MHz channel BW,<br>5 MHz for 10 MHz channel BW,<br>9 MHz for 15 MHz channel BW and<br>12 MHz for 20 MHz channel BW. | | |
| NOTE 4: This emission limit might imply risk of harmful interference to UE(s) operating in the protected operating band. | | |

The normative reference for this requirement is TS 36.101[2] subclause 6.6.3.3.17.

6.6.3.3.3.19 Minimum requirement (network signalled value “NS_24”)

When "NS_24" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.3.19-1. This requirement also applies for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.3.19-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|---|
| | 5 MHz, 10 MHz, 15 MHz, 20 MHz | |
| Band 34 | -50 | MHz |
| Note 1: This requirement applies at a frequency offset equal or larger than 5 MHz from the upper edge of the channel bandwidth, whenever these frequencies overlap with the specified frequency band. | | |

The normative reference for this requirement is TS 36.101[2] subclause 6.6.3.3.20.

6.6.3.3.3.20 Minimum requirement (network signalled value “NS_25”)

When "NS_25" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.3.20-1. This requirement also applies for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.3.20-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|---|
| | 5 MHz, 10 MHz, 15 MHz, 20 MHz | |
| Band 34 | -40 | MHz |
| Note 1: This requirement applies at a frequency offset equal or larger than 5 MHz from the upper edge of the channel bandwidth, whenever these frequencies overlap with the specified frequency band. | | |

The normative reference for this requirement is TS 36.101[2] subclause 6.6.3.3.21.

6.6.3.3.3.21 Minimum requirement (network signalled value “NS_27”)

When "NS_27" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.3.21-1. This requirement also applies for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.3.21-1: Additional requirements**

| Frequency band | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|---|
| | 5, 10, 15, 20 MHz | |
| 9 kHz ≤ f ≤ 3530 MHz | -40 | 1 MHz |
| 3720 MHz ≤ f ≤ 5th harmonic of the upper frequency edge of the UL operating band | | |

The normative reference for this requirement is TS 36.101[2] subclause 6.6.3.3.23.

6.6.3.3.3.22 Minimum requirement (network signalled value “NS_28”)

When "NS_28" is indicated in the cell, the power of any UE emission for E-UTRA channels assigned within 5150-5350 MHz and 5470-5725 MHz shall not exceed the levels specified in Table 6.6.3.3.22-1. This requirement also applies for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.22-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|---|
| | 20 MHz | |
| 47 ≤ f ≤ 74 | -54 | 100 kHz |
| 87.5 ≤ f ≤ 118 | -54 | 100 kHz |
| 174 ≤ f ≤ 230 | -54 | 100 kHz |
| 470 ≤ f ≤ 862 | -54 | 100 kHz |
| 1000 ≤ f ≤ 5150 | -30 | 1 MHz |
| 5350 ≤ f ≤ 5470 | -30 | 1 MHz |
| 5725 ≤ f ≤ 26000 | -30 | 1 MHz |

The normative reference for this requirement is TS 36.101[2] subclause 6.6.3.3.24.

6.6.3.3.3.23 Minimum requirement (network signalled value “NS_29”)

When "NS_29" is indicated in the cell, the power of any UE emission for E-UTRA channels assigned within 5150-5350 and 5470-5725 MHz shall not exceed the levels specified in Table 6.6.3.3.3.25-1. This requirement also applies for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.3.23-1: Additional requirements**

| Centre Frequency Fc [MHz] | Protected range [MHz] | Frequency difference Δf between centre frequency – 5240 (for Fc=5180, 5200, 5220, 5240) 5260 (for Fc=5260, 5280, 5300, 5320) (MHz) | Minimum requirement [dBm] | Measurement bandwidth |
|---|---|---|---|---|
| 5180, 5200, 5220, 5240 | 5135 ≤ f ≤ 5142 | - | -26 | 1 MHz |
| | 5142 < f ≤ 5150 | - | -18 | |
| | 5250 ≤ f < 5251 | ≥ 10 and < 11 | 10(10 - Δf) | |
| | 5251 ≤ f < 5260 | ≥ 11 and < 20 | -10 – 8/9(Δf – 11) | |
| | 5260 ≤ f < 5266.7 | ≥ 20 and < 26.7 | -18 – 1.2(Δf – 20) | |
| | 5266.7 ≤ f ≤ 5365 | - | -26 | |
| 5260, 5280, 5300, 5320 | 5135 ≤ f ≤ 5233.3 | - | -26 | |
| | 5233.3 < f ≤ 5240 | ≥ 20 and < 26.7 | -18 – 1.2(Δf – 20) | |
| | 5240 < f ≤ 5249 | ≥ 11 and < 20 | -10 – 8/9(Δf – 11) | |
| | 5249 < f ≤ 5250 | ≥ 10 and < 11 | 10(10 - Δf) | |
| | 5350 ≤ f ≤ 5365 | - | -26 | |
| 5500, 5520, 5540, 5560, 5580, 5600, 5620, 5640, 5660, 5680, 5700 | 5455 ≤ f ≤ 5460 | - | -26 | |
| | 5460 < f ≤ 5470 | - | -19 | |
| | 5725 ≤ f < 5740 | - | -19 | |
| | 5740 ≤ f ≤ 5745 | - | -26 | |

The normative reference for this requirement is TS 36.101[2] subclause 6.6.3.3.25.

6.6.3.3.3.24 Minimum requirement (network signalled value “NS_30”)

When "NS_30" is indicated in the cell, the power of any UE emission for E-UTRA channels assigned within 5150-5350 MHz, 5470-5725 MHz and 5725-5850 MHz shall not exceed the levels specified in Table 6.6.3.3.3.24-1, Table 6.6.3.3.3.24-2 and Table 6.6.3.3.3.26-3, respectively. These requirements also apply for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.3.24-1: Additional requirements for E-UTRA channels assigned within 5150-5350 MHz**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|---|
| | 20 MHz | |
| 4500 ≤ f ≤ 5150 | -41 | 1 MHz |
| 5350 ≤ f ≤ 5460 | -41 | |

**Table 6.6.3.3.3.24-2: Additional requirements for E-UTRA channels assigned within 5470-5725 MHz**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|---|
| | 20 MHz | |
| 4500 ≤ f ≤ 5150 | -41 | 1 MHz |
| 5350 ≤ f ≤ 5460 | -41 | |
| 5460 < f ≤ 5470 | -27 | |
| 5725 ≤ f | -27 | |

**Table 6.6.3.3.24-3: Additional requirements for E-UTRA channels assigned within 5725-5850 MHz**

| Frequency offset of measurement filter -3dB point, Δf | Frequency offset of measurement filter centre frequency, f_offset | Minimum requirement [dBm] | Measurement bandwidth |
|---|---|---|---|
| 0 MHz ≤ Δf < 5 MHz | 0.5 MHz ≤ f_offset < 5.5 MHz | 27 – 2.28(f_offset/MHz – 0.5) | 1 MHz |
| 5 MHz ≤ Δf < 25 MHz | 5.5 MHz ≤ f_offset < 25.5 MHz | 15.6 – 0.28(f_offset/MHz – 0.5) | 1 MHz |
| 25 MHz ≤ Δf < 75 MHz | 25.5 MHz ≤ f_offset < 75.5 MHz | 10 – 0.74(f_offset/MHz – 0.5) | 1 MHz |
| 75 MHz ≤ Δf | 75.5 MHz ≤ f_offset | -27 | 1 MHz |
| NOTE 1: The frequency offset f_offset is below and above the range 5725-5850 MHz; the measurement filter -3dB point is that closest to the range 5725-5850 MHz<br>NOTE 2: The requirement applies when the offset of the measurement filter centre frequency is such that both -3 dB points of the measurement filter are confined within the frequency range 5725-5850 MHz. | | | |

The normative reference for this requirement is TS 36.101[2] subclause 6.6.3.3.26.

6.6.3.3.3.25 Minimum requirement (network signalled value “NS_31”)

When "NS_31" is indicated in the cell, the power of any UE emission for E-UTRA channels assigned within 5150-5250 MHz, 5250-5350 MHz, 5470-5725 MHz and 5725-5850 MHz shall not exceed the levels specified in Table 6.6.3.3.3.25-1, Table 6.6.3.3.3.25-2, Table 6.6.3.3.3.25-3 and Table 6.6.3.3.3.25-4, respectively. These requirements also apply for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.3.25-1: Additional requirements for E-UTRA channels assigned within 5150-5250 MHz**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|---|
| | 20 MHz | |
| f ≤ 5150 | -27 | 1 MHz |
| f ≥ 5250 | -27 | |

**Table 6.6.3.3.3.25-2: Additional requirements for E-UTRA channels assigned within 5250-5350 MHz**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|---|
| | 20 MHz | |
| f ≤ 5250 | -27 | 1 MHz |
| f ≥ 5350 | -27 | |

**Table 6.6.3.3.3.25-3: Additional requirements for E-UTRA channels assigned within 5470-5725 MHz**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|---|
| | 20 MHz | |
| f ≤ 5470 | -27 | 1 MHz |
| f ≥ 5725 | -27 | |

**Table 6.6.3.3.3.25-4: Additional requirements for E-UTRA channels assigned within 5725-5850 MHz**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|---|
| | 20 MHz | |
| f ≤ 5725 | -27 | 1 MHz |
| f ≥ 5850 | -27 | |

The normative reference for this requirement is TS 36.101[2] subclause 6.6.3.3.27.

6.6.3.3.3.26 Minimum requirement (network signalled value “NS_36”)

When "NS_36" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.26-1. This requirement also applies for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.3.26-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|---|
| | 5 MHz, 10 MHz and 15 MHz | |
| 470 ≤ f ≤ 694 | -42 | 8MHz |
| NOTE: For a 5 MHz E-UTRA carrier confined within 698MHz and 703MHz, this requirement shall be met in normal conditions only. The requirement is relaxed to -30dBm in extreme conditions. | | |

The normative reference for this requirement is TS 36.101[2] subclause 6.6.3.3.28.

6.6.3.3.3.27 Minimum requirement (network signalled value “NS_38”)

When "NS_38" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.27-1. This requirement also applies for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.3.27-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|---|
| | 1.4 MHz, 3 MHz, 5 MHz, 10 MHz, 15 MHz, 20 MHz | |
| 1400 ≤ f ≤ 1427 | -32 | 27MHz |
| NOTE 1: This requirement shall be verified with UE transmission power of 15 dBm. | | |

The normative reference for this requirement is TS 36.101[2] subclause 6.6.3.3.29.

6.6.3.3.3.28 Minimum requirement (network signalled value “NS_39”)

When "NS_36" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.28-1. This requirement also applies for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.3.28-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|---|
| | 1.4 MHz, 3 MHz, 5 MHz, 10 MHz, 15 MHz, 20 MHz | |
| 1475 ≤ f ≤ 1488 | -28 | 1MHz |

The normative reference for this requirement is TS 36.101[2] subclause 6.6.3.3.30.

### 6.6.3.3.4 Test description

#### 6.6.3.3.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA operating bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in Table 6.6.3.3.4.1-1 through Table 6.6.3.3.4.1-22. The details of the uplink reference measurement channels (RMCs) are specified in Annexes A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

| 48 (Note 7) | 15MHz | | QPSK | 75 | 0 |
| 49 (Note 7) | 15MHz | | 16QAM (Note 5) | 75 | 0 |
| 50 (Note 8) | 20MHz | | QPSK | 1 | 0 |
| 51 (Note 8) | 20MHz | | QPSK | 1 | 99 |
| 52 (Note 8) | 20MHz | | QPSK | 36 | 0 |
| 53 (Note 8) | 20MHz | | QPSK | 75 | 25 |
| 54 (Note 7) | 20MHz | | QPSK | 100 | 0 |
| 55 (Note 7) | 20MHz | | 16QAM (Note 5) | 100 | 0 |

Note 1: Test Channel Bandwidths are checked separately for E-UTRA band, the applicable channel bandwidths are specified in Table 5.4.2.1-1.
Note 2: The configuration ID will be used to map the applicable Test Configuration to be corresponding Test Requirement in subclause 6.2.4 as not all combinations are necessarily required based on the applicability of the UE.
Note 3: The $RB_{start}$ of partial RB allocation shall be RB# 0 and RB# (max +1 - RB allocation) of the channel bandwidth.
Note 4: Applies only for UE-Categories ≥2.
Note 5: The 16QAM configurations shall not apply to UEs which support UL 64QAM.
Note 6: Applies only for Rel-11 and earlier.
Note 7: Applies only for Rel-12 and later.
Note 8: Applies only for Rel-12 and later and Low Range.
Note 9: Applies only for Rel-12 and later and Mid, High Range and additional test frequencies.

| 16 | 20MHz | | | 16QAM (Note 2) | 100 (Note 3) |

Note 1: The 1 RB allocation shall be tested at both RB #0 and RB #max.
Note 2: The RBstart of partial RB allocation shall be RB# 0 and RB# (max +1 - RB allocation) of the channel bandwidth.
Note 3: Applies only for UE-Categories ≥2.
Note 2: The 16QAM configurations shall not apply to UEs which support UL 64QAM.

**Table 6.6.3.3.4.1-15: Test Configuration Table (network signalled value "NS_19")**

| Initial Conditions | | | | | |
|---|---|---|---|---|---|
| Test Environment<br>(as specified in TS 36.508[7] subclause 4.1) | | | | Normal | |

**Table 6.6.3.3.4.1-22: Test Configuration Table (network signalled value "NS_27")**

| **Initial Conditions** | | | | | | | |
|---|---|---|---|---|---|---|---|
| Test Environment (as specified in TS 36.508 [7] subclause 4.1) | | | | | Normal | | |
| Test Frequencies (as specified in TS 36.508 [7] subclause 4.3.1) | | | | | Refer to Frequency column in test parameters | | |
| Test Channel Bandwidths (as specified in TS 36.508 [7] subclause 4.3.1) | | | | | 5MHz, 10MHz, 15MHz, 20MHz | | |
| **Test Parameters for NS_27 A-MPR** | | | | | | | |
| | | | **Downlink Configuration** | | **Uplink Configuration** | | |
| **Configuration ID** | **Frequency** | **Ch BW** | **Mod'n** | **RB allocation FDD** | **Mod'n** | **RB allocation FDD** | **$RB_{start}$ FDD** |
| 1 | Low/Mid | 5MHz | N/A for A-MPR testing | | QPSK | 1 | 0 |
| 2 | High | 5MHz | | | QPSK | 1 | 24 |
| 3 | Low/Mid/High | 5MHz | | | QPSK | 25 | 0 |
| 4 | Low/Mid/High | 5MHz | | | 16QAM | 25 | 0 |
| 5 | Low/Mid | 10MHz | | | QPSK | 1 | 0 |
| 6 | High | 10MHz | | | QPSK | 1 | 49 |
| 7 | Low/Mid/High | 10MHz | | | QPSK | 50 | 0 |
| 8 (Note 2) | Low/Mid/High | 10MHz | | | 16QAM | 50 | 0 |
| 9 | Low/Mid | 15MHz | | | QPSK | 1 | 0 |
| 10 | Low | 15MHz | | | QPSK | 1 | 7 |
| 11 | Low/Mid | 15MHz | | | QPSK | 16 | 0 |
| 12 | High | 15MHz | | | QPSK | 1 | 74 |
| 13 | High | 15MHz | | | QPSK | 1 | 67 |
| 14 | High | 15MHz | | | QPSK | 16 | 74 |
| 15 | Low/Mid/High | 15MHz | | | QPSK | 75 | 0 |
| 16 (Note 2) | Low/Mid/High | 15MHz | | | 16QAM | 75 | 0 |
| 17 | Low/Mid | 20MHz | | | QPSK | 1 | 0 |
| 18 | Low | 20MHz | | | QPSK | 1 | 13 |
| 19 | Low | 20MHz | | | QPSK | 1 | 16 |
| 20 | Low/Mid | 20MHz | | | QPSK | 21 | 0 |
| 21 | High | 20MHz | | | QPSK | 1 | 99 |
| 22 | High | 20MHz | | | QPSK | 1 | 86 |
| 23 | High | 20MHz | | | QPSK | 1 | 83 |
| 24 | High | 20MHz | | | QPSK | 21 | 0 |
| 25 | Low/Mid/High | 20MHz | | | QPSK | 100 | 0 |
| 26 (Note 2) | Low/Mid/High | 20MHz | | | 16QAM | 100 | 0 |

Note 1: The Configuration ID will be used to map the applicable Test Configuration to the corresponding Test Requirement in subclause 6.2.4.5 as not all combinations are necessarily required based on the applicability of the UE.
Note 2: Applies only for UE-Categories ≥2.
Note 3: The 16QAM configurations shall not apply to UEs which support UL 64QAM.

**Table 6.6.3.3.4.1-23: Test Configuration Table (network signalled value "NS_36")**

| Initial Conditions | | | | | | | |
|---|---|---|---|---|---|---|---|
| Test Environment<br>(as specified in TS 36.508 [7] subclause 4.1) | | | | | Normal | | |
| Test Frequencies<br>(as specified in TS 36.508 [7] subclause 4.3.1) | | | | | Refer to $F_{UL}$ in test parameters with following:<br><br>5 MHz CH BW:<br>- 700.5 MHz ($N_{UL}$ = low range)<br>- 705.5 MHz ($N_{UL}$ =132747)<br>10 MHz CH BW:<br>- 703 MHz ($N_{UL}$ = low range)<br>- 708 MHz ($N_{UL}$ = 132772)<br>15 MHz CH BW:<br>- 705.5 MHz ($N_{UL}$ = low range)<br>- 710.5 MHz ($N_{UL}$ =132797 ) | | |
| Test Channel Bandwidths<br>(as specified in TS 36.508 [7] subclause 4.3.1) | | | | | 5MHz, 10MHz, 15MHz | | |
| **Test Parameters for NS_36 A-MPR** | | | | | | | |
| | | | **Downlink Configuration** | | **Uplink Configuration** | | |
| **Configuration ID** | **$F_{UL}$** | **Ch BW** | **Mod'n** | **RB allocation FDD** | **Mod'n** | **RB allocation FDD** | **$RB_{start}$ FDD** |
| 1 | 700.5 | 5MHz | N/A for A-MPR testing | | QPSK | 1 | 0 |
| 2 | 700.5 | 5MHz | | | QPSK | 25 | 0 |
| 3 | 700.5 | 5MHz | | | QPSK | 20 | 1 |
| 4 | 700.5 | 5MHz | | | QPSK | 24 | 1 |
| 5 | 700.5 | 5MHz | | | QPSK | 12 | 0 |
| 6 (Notes 2,3) | 700.5 | 5MHz | | | 16QAM | 12 | 0 |
| 7 | 705.5 | 5MHz | | | QPSK | 25 | 0 |
| 8 (Notes 2,3) | 705.5 | 5MHz | | | 16QAM | 25 | 0 |
| 9 | 703 | 10MHz | | | QPSK | 50 | 0 |
| 10 | 703 | 10MHz | | | QPSK | 1 | 0 |
| 11 | 703 | 10MHz | | | QPSK | 40 | 9 |
| 12 | 703 | 10MHz | | | QPSK | 36 | 13 |
| 13 | 703 | 10MHz | | | QPSK | 10 | 40 |
| 14 | 703 | 10MHz | | | QPSK | 6 | 44 |
| 15 | 708 | 10MHz | | | QPSK | 50 | 0 |
| 16 (Notes 2,3) | 708 | 10MHz | | | 16QAM | 50 | 0 |
| 17 | 705.5 | 15MHz | | | QPSK | 75 | 0 |
| 18 | 705.5 | 15MHz | | | QPSK | 50 | 17 |
| 19 | 705.5 | 15MHz | | | QPSK | 50 | 24 |
| 20 | 705.5 | 15MHz | | | QPSK | 1 | 57 |
| 21 | 705.5 | 15MHz | | | QPSK | 10 | 17 |
| 22 | 705.5 | 15MHz | | | QPSK | 18 | 24 |

| 24 | 710.5 | 15MHz | | | QPSK | 75 | 0 |
| 25 | 710.5 | 15MHz | | | 16QAM | 75 | 0 |
| Note 1: The Configuration ID will be used to map the applicable Test Configuration to the corresponding Test Requirement in subclause 6.2.4.5 as not all combinations are necessarily required based on the applicability of the UE.<br>Note 2: Applies only for UE-Categories ≥2.<br>Note 3: The 16QAM configurations shall not apply to UEs which support UL 64QAM. | | | | | | | |

Editor's note: The following lines belong at the end of section 6.2.4.4.1. As new tables are added to this section, these lines should always follow the tables.

1. Connect the SS to the UE to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure A.7.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Table 6.6.3.3.4.1-1to Table 6.6.3.3.4.1-23 depending on network signal value.

5. Propagation conditions are set according to Annex B.0.

6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.3.3.4.3.

#### 6.6.3.3.4.2 Test procedure

1. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 6.6.3.3.4.1-1 to 6.6.3.3.4.1-28. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.

2. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE until the UE transmits at $P_{UMAX}$ level.

3. Measure the mean power of the UE in the channel bandwidth of the radio access mode according to the test configuration, which shall meet the requirements described in Tables 6.2.4.5-1 to 6.2.4.5-27 for Power Class 3 UEs or 6.2.4_1.5-2 for Power Class 2 UEs as appropriate. The period of the measurement shall be at least one sub-frame (1ms).

4. Measure the power of the transmitted signal with a measurement filter of bandwidths according to Table 6.6.3.3.5.1-1 to 6.6.3.3.5.21-1 as appropriate. The centre frequency of the filter shall be stepped in contiguous steps according to the same table. For NS_07 measurements made in a bandwidth of 6.25kHz, measurement parameter settings defined in table 6.6.3.3.4.2-1 shall be used. The measured power shall be verified for each step. The measurement period shall capture the active time slots.

**Table 6.6.3.3.4.2-1: Measurement setup for NS_07**

| | **Option 1: Measurement with No RMS VBW available** | **Option2 Measurement with VBW Filtering on Power scale** |
|---|---|---|
| VBW | >=62.5 kHz (10 times or more the RBW) | <=43Hz |
| RBW | <=6.25kHz | <=6.25kHz |
| Detector type | Averages signal envelope during each measurement point, such as "RMS detector" | Peak |
| Averaging mode (Trace averaging) | Power (RMS voltage) | Power (RMS voltage), as controlled by "Average Type" |
| Average Type (applies to detector) | Power (RMS voltage) (automatically occurs with "RMS detector") | Not applicable |
| Average Type (applies to VBW filter) | Not applicable | Power (RMS voltage) |
| Number of averages | 30, to reduce variance as required, or use an even longer sweep time | 1 or use an even narrower VBW filter, thus a longer sweep time |
| Sweep time | [Don't specify] | Sweep rate (span divided by sweep time) <= 0.8 * RBW*VBW |

#### 6.6.3.3.4.3 Message contents

##### 6.6.3.3.4.3.1 Message contents exceptions (network signalled value "NS_04")

1. Information element additionalSpectrumEmission is set to NS_04. This can be set in the *SystemInformationblockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3.3.4.3.1-1: *SystemInformationBlockType2: A*dditional spurious emissions test requirement for "NS_04" for Power Class 2**

| Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1 | | | |
|---|---|---|---|
| **Information Element** | **Value/remark** | **Comment** | **Condition** |
| additionalSpectrumEmission | 4 (NS_04) | | |

6.6.3.3.4.3.2 Message contents (network signalled value "NS_05")

Message contents are according to TS 36.508 [7] subclause 4.6, with the following exceptions:

1. Information element additionalSpectrumEmission is set to NS_05. This can be set in the *SystemInformationblockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3.3.4.3.2-1: *SystemInformationBlockType2: A*dditional spurious emissions requirement**

| Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1 | | | |
|---|---|---|---|
| **Information Element** | **Value/remark** | **Comment** | **Condition** |
| additionalSpectrumEmission | 5 (NS_05) | | |

6.6.3.3.4.3.3 Message contents (network signalled value "NS_07")

Message contents are according to TS 36.508 [7] subclause 4.6, with the following exceptions:

1. Information element additionalSpectrumEmission is set to NS_07. This can be set in the *SystemInformationblockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3.3.4.3.3-1: *SystemInformationBlockType2: A*dditional spurious emissions requirement**

| Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1 | | | |
|---|---|---|---|
| **Information Element** | **Value/remark** | **Comment** | **Condition** |
| additionalSpectrumEmission | 7 (NS_07) | | |

6.6.3.3.4.3.4 Message contents (network signalled value "NS_08")

Message contents are according to TS 36.508 [7] subclause 4.6, with the following exceptions:

1. Information element additionalSpectrumEmission is set to NS_08. This can be set in the *SystemInformationblockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3.3.4.3.4-1: *SystemInformationBlockType2: A*dditional spurious emissions requirement**

| Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1 | | | |
|---|---|---|---|
| **Information Element** | **Value/remark** | **Comment** | **Condition** |
| additionalSpectrumEmission | 8 (NS_08) | | |

6.6.3.3.4.3.5 Message contents (network signalled value "NS_09")

Message contents are according to TS 36.508 [7] subclause 4.6, with the following exceptions:

1. Information element additionalSpectrumEmission is set to NS_09. This can be set in the *SystemInformationblockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3.3.4.3.5-1: *SystemInformationBlockType2: A*dditional spurious emissions requirement**

| Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1 | | | |
|---|---|---|---|
| **Information Element** | **Value/remark** | **Comment** | **Condition** |
| additionalSpectrumEmission | 9 (NS_09) | | |

6.6.3.3.4.3.6 Message contents exceptions (network signalled value "NS_11")

1. Information element additionalSpectrumEmission is set to NS_11. This can be set in the *SystemInformationblockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3.3.4.3.6-1: *SystemInformationBlockType2: A*dditional spurious emissions test requirement for "NS_11"**

| Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1 | | | |
|---|---|---|---|
| **Information Element** | **Value/remark** | **Comment** | **Condition** |
| additionalSpectrumEmission | 11 (NS_11) | | |

6.6.3.3.4.3.7 Message contents exceptions (network signalled value "NS_12")

1. Information element additionalSpectrumEmission is set to NS_12. This can be set in the *SystemInformationblockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3.3.4.3.7-1: *SystemInformationBlockType2: A*dditional spurious emissions test requirement for "NS_12"**

| Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1 | | | |
|---|---|---|---|
| **Information Element** | **Value/remark** | **Comment** | **Condition** |
| additionalSpectrumEmission | 12 (NS_12) | | |

6.6.3.3.4.3.8 Message contents exceptions (network signalled value "NS_13")

1. Information element additionalSpectrumEmission is set to NS_13. This can be set in the *SystemInformationblockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3.3.4.3.8-1: *SystemInformationBlockType2: A*dditional spurious emissions test requirement for "NS_13"**

| Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1 | | | |
|---|---|---|---|
| **Information Element** | **Value/remark** | **Comment** | **Condition** |
| additionalSpectrumEmission | 13 (NS_13) | | |

6.6.3.3.4.3.9 Message contents exceptions (network signalled value "NS_14")

1. Information element additionalSpectrumEmission is set to NS_14. This can be set in the *SystemInformationblockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3.3.4.3.9-1: *SystemInformationBlockType2: A*dditional spurious emissions test requirement for "NS_14"**

| Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1 | | | |
|---|---|---|---|
| **Information Element** | **Value/remark** | **Comment** | **Condition** |
| additionalSpectrumEmission | 14 (NS_14) | | |

6.6.3.3.4.3.10 Message contents exceptions (network signalled value "NS_15")

1. Information element additionalSpectrumEmission is set to NS_15. This can be set in the *SystemInformationblockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3.3.4.3.10-1: *SystemInformationBlockType2: A*dditional spurious emissions test requirement for "NS_15"**

| Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1 | | | |
|---|---|---|---|
| **Information Element** | **Value/remark** | **Comment** | **Condition** |
| additionalSpectrumEmission | 15 (NS_15) | | |

6.6.3.3.4.3.11 Message contents exceptions (network signalled value "NS_16")

1. Information element additionalSpectrumEmission is set to NS_16. This can be set in the *SystemInformationblockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3.3.4.3.11-1: *SystemInformationBlockType2: A*dditional spurious emissions test requirement for "NS_16"**

| Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1 | | | |
|---|---|---|---|
| **Information Element** | **Value/remark** | **Comment** | **Condition** |
| additionalSpectrumEmission | 16 (NS_16) | | |

6.6.3.3.4.3.12 Message contents exceptions (network signalled value "NS_17")

1. Information element additionalSpectrumEmission is set to NS_17. This can be set in the *SystemInformationblockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3.3.4.3.12-1: *SystemInformationBlockType2: A*dditional spurious emissions test requirement for "NS_17"**

|---|---|---|---|
| **Information Element** | **Value/remark** | **Comment** | **Condition** |
| additionalSpectrumEmission | 17 (NS_17) | | |

6.6.3.3.4.3.13 Message contents exceptions (network signalled value "NS_18")

1. Information element additionalSpectrumEmission is set to NS_18. This can be set in the *SystemInformationblockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3.3.4.3.13-1: *SystemInformationBlockType2: A*dditional spurious emissions test requirement for "NS_18"**

| Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1 | | | |
|---|---|---|---|
| **Information Element** | **Value/remark** | **Comment** | **Condition** |
| additionalSpectrumEmission | 18 (NS_18) | | |

6.6.3.3.4.3.14 Message contents exceptions (network signalled value "NS_19")

1. Information element additionalSpectrumEmission is set to NS_19. This can be set in the *SystemInformationblockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3.3.4.3.14-1: *SystemInformationBlockType2: A*dditional spurious emissions test requirement for "NS_19"**

| Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1 | | | |
|---|---|---|---|
| **Information Element** | **Value/remark** | **Comment** | **Condition** |
| additionalSpectrumEmission | 19 (NS_19) | | |

6.6.3.3.4.3.15 Message contents exceptions (network signalled value "NS_20")

1. Information element additionalSpectrumEmission is set to NS_20. This can be set in the *SystemInformationblockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3.3.4.3.15-1: *SystemInformationBlockType2: A*dditional spurious emissions test requirement for "NS_20"**

## 6.6.3.3.5 Test requirement

This clause specifies the requirements for the specified E-UTRA band for an additional spectrum emission requirement with protected bands as indicated from table 6.6.3.3.5.1-1 to table 6.6.3.3.5.22-1.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

### 6.6.3.3.5.1 Test requirement (network signalled value “NS_04”)

When "NS 04" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-3 or 6.2.4_1.5-2 as appropriate, and

- the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.5.1-1. This requirement also applies for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.5.1-1: Additional requirements**

| Frequency band | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|---|
| | 5, 10, 15, 20 MHz | |
| 2490.5 MHz ≤ f < 2495 MHz | -13 | 1 MHz |
| 9 kHz < f < 2490.5 MHz | -25 | 1 MHz |

6.6.3.3.5.2 Test requirement (network signalled value "NS_05")

When "NS_05" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-4 as appropriate,

and

the measured average power of spurious emission, derived in step 2, shall not exceed the described value in Table 6.6.3.3.5.2-1. This requirement also applies for the frequency ranges that are less than $\Delta f_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.5.2-1: Additional requirements (PHS) test requirements**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | | | | Measurement bandwidth |
|---|---|---|---|---|---|
| | 5 MHz | 10 MHz | 15 MHz | 20 MHz | |
| 1884.5 ≤ f ≤1915.7[*1] | -41 | -41 | -41 | -41 | 300 KHz |
| Note 1: Applicable when the lower edge of the assigned E-UTRA UL channel bandwidth frequency is larger than or equal to the upper edge of PHS band (1915.7 MHz) + 4 MHz + the Channel BW assigned, where Channel BW is as defined in sub-clause 5.4.2. Additional restrictions apply for operations below this point. | | | | | |

The requirements in Table 6.6.3.3.5.2-1 apply with the additional restrictions specified in Table 6.6.3.3.5.2-2 when the lower edge of the assigned E-UTRA UL channel bandwidth frequency is less than the upper edge of PHS band (1915.7 MHz) + 4 MHz + the channel BW assigned.

**Table 6.6.3.3.5.2-2: RB restrictions for additional requirement (PHS) (Rel-11 and earlier and bit number 1 in modifiedMPRbehavior = 0)**

| **15 MHz channel bandwidth with $f_c$ = 1932.5 MHz** | | | |
|---|---|---|---|
| $RB_{start}$ | 0-7 | 8-66 | 67-74 |
| $L_{CRB}$ | N/A | ≤ MIN(30, 67 – $RB_{start}$) | N/A |
| **20 MHz channel bandwidth with $f_c$ = 1930 MHz** | | | |
| $RB_{start}$ | 0-23 | 24-75 | 76-99 |
| $L_{CRB}$ | N/A | ≤ MIN(24, 76 – $RB_{start}$) | N/A |

6.6.3.3.5.3 Test requirement (network signalled value "NS_07")

When "NS_07" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-7 as appropriate,

and

- the measured average power of spurious emission, derived in step 4, shall not exceed the described value in Table 6.6.3.3.5.3-1. These requirements also apply for the frequency ranges that are less than $\Delta f_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.5.3-1: Additional requirements (network signalled value "NS_07")**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|---|
| | 10 MHz | |
| 769 ≤ f ≤ 775 | -55.5 | 6.25 kHz |
| Note: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB | | |

### 6.6.3.3.5.4 Test requirement (network signalled value "NS_08")

When "NS_08" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-8 as appropriate,

and

the measured average power of spurious emission, derived in step 4, shall not exceed the described value in Table 6.6.3.3.5.4-1. This requirement also applies for the frequency ranges that are less than $\Delta f_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.5.4-1: Additional requirements (network signalled value "NS_08")**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | | | Measurement bandwidth |
|---|---|---|---|---|
| | 5MHz | 10MHz | 15MHz | |
| 860 ≤ f ≤ 895 | -40 | -40 | -40 | 1 MHz |

### 6.6.3.3.5.5 Test requirement (network signalled value "NS_09")

When "NS_09" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-9 as appropriate,

and

- the measured average power of spurious emission, derived in step 4, shall not exceed the described value in table 6.6.3.3.5.5-1. This requirement also applies for the frequency ranges that are less than $\Delta f_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.5.5-1: Additional requirements (network signalled value "NS_09")**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | | | Measurement bandwidth |
|---|---|---|---|---|
| | 5MHz | 10MHz | 15MHz | |
| 1475.9 ≤ f ≤ 1510.9 | -35 | -35 | -35 | 1 MHz |

NOTE 1: To improve measurement accuracy, A-MPR values for NS_09 specified in Table 6.2.4.3-1 in sub-clause 6.2.4 are derived based on 100 kHz RBW.

6.6.3.3.5.6 Test requirement (network signalled value "NS_11")

When "NS 11" is indicated in the cell:

the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-11 as appropriate,

and

- the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.5.6-1. This requirement also applies for the frequency ranges that are less than $\Delta f_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.5.6-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth | Note |
|---|---|---|---|
| | 1.4, 3, 5, 10, 15, 20 MHz | | |
| E-UTRA Band 2 | -50 | 1 MHz | |
| 1998 ≤ f ≤ 1999 | -21 | 1 MHz | |
| 1997 ≤ f < 1998 | -27 | 1 MHz | |
| 1996 ≤ f < 1997 | -32 | 1 MHz | |
| 1995 ≤ f < 1996 | -37 | 1 MHz | |
| 1990 ≤ f < 1995 | -40 | 1 MHz | |

6.6.3.3.5.7 Test requirement (network signalled value "NS_12")

When "NS 12" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-12 as appropriate,

and

- the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.7-1. This requirement also applies for the frequency ranges that are less than $\Delta f_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.5.7-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth/ Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|---|
| | 1.4 MHz, 3 MHz, 5 MHz, 10 MHz, 15 MHz | |
| 806 ≤ f ≤ 813.5 | -42 | 6.25 kHz |
| NOTE 1: The requirement applies for E-UTRA carriers with lower channel edge at or above 814.2 MHz.<br>NOTE 2: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB. | | |

6.6.3.3.5.8 Test requirement (network signalled value "NS_13")

When "NS 13" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-13 as appropriate,

and

- the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.5.8-1. This requirement also applies for the frequency ranges that are less than $\Delta f_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.5.8-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth/ Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|---|
| | 1.4, 3, 5 MHz | |
| 806 ≤ f ≤ 816 | -42 | 6.25 kHz |
| NOTE 1: The requirement applies for E-UTRA carriers with lower channel edge at or above 819 MHz.<br>NOTE 2: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB. | | |

6.6.3.3.5.9 Test requirement (network signalled value "NS_14")

When "NS 14" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-14 as appropriate,

and

- the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.5.9-1. This requirement also applies for the frequency ranges that are less than $\Delta f_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.5.9-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth/ Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|---|
| | 10 MHz, 15 MHz | |
| 806 ≤ f ≤ 816 | -42 | 6.25 kHz |
| NOTE 1: The requirement applies for E-UTRA carriers with lower channel edge at or above 824 MHz.<br>NOTE 2: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB. | | |

6.6.3.3.5.10 Test requirement (network signalled value "NS_15")

When "NS 15" is indicated in the cell:

the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-15 as appropriate,

and

- the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.5.10-1. This requirement also applies for the frequency ranges that are less than $\Delta f_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.5.10-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth | Note |
|---|---|---|---|
| | 1.4, 3, 5, 10, 15 MHz | | |
| 851 ≤ f ≤ 859 | -53 | 6.25 kHz | |

6.6.3.3.5.11 Test requirement (network signalled value "NS_16")

When "NS 16" is indicated in the cell:

the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-16 as appropriate,

and

- the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.5.11-1. This requirement also applies for the frequency ranges that are less than $\Delta f_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.5.11-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth | Note |
|---|---|---|---|
| | 1.4, 3, 5, 10 MHz | | |
| 790 ≤ f ≤ 803 | -32 | 1 MHz | |

6.6.3.3.5.12 Test requirement (network signalled value "NS_17")

When "NS 17" is indicated in the cell:

the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-17 as appropriate,

and

- the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.5.12-1. This requirement also applies for the frequency ranges that are less than $\Delta f_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.5.12-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth | Note |
|---|---|---|---|
| | 5, 10 MHz | | |
| 470 ≤ f ≤ 710 | -26.2 | 6 MHz | 1 |
| Note 1: Applicable when the assigned E-UTRA carrier is confined within 718 MHz and 748 MHz and when the channel bandwidth used is 5 or 10 MHz. | | | |

6.6.3.3.5.13 Test requirement (network signalled value "NS_18")

When "NS 18" is indicated in the cell:

the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-18 as appropriate,

and

- the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.5.13-1. This requirement also applies for the frequency ranges that are less than $\Delta f_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.5.13-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth | Note |
|---|---|---|---|
| | 5, 10, 15, 20 MHz | | |
| 692 ≤ f ≤ 698 | -26.2 | 6 MHz | |

6.6.3.3.5.14 Test requirement (network signalled value "NS_19")

When "NS 19" is indicated in the cell:

the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-19 as appropriate,

and

- the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.5.14-1. This requirement also applies for the frequency ranges that are less than $\Delta f_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.5.14-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth | Note |
|---|---|---|---|
| | 3, 5, 10, 15, 20 MHz | | |
| 662 ≤ f ≤ 694 | -25 | 8 MHz | |

6.6.3.3.5.15 Test requirement (network signalled value "NS_20")

When "NS 20" is indicated in the cell:

the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-20 as appropriate,

and

- the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.5.15-1. This requirement also applies for the frequency ranges that are less than $\Delta f_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.5.15-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth | Note |
|---|---|---|---|
| | 5, 10, 15, 20 MHz | | |
| 1990 ≤ f < 1999 | -40 | 1 MHz | |
| 1999 ≤ f ≤ 2000 | -40 | Note 1 | |
| Note 1: The measurement bandwidth is 1% of the applicable E-UTRA channel bandwidth (5.4.2.1-1). | | | |

6.6.3.3.5.16 Test requirement (network signalled value “NS_21”)

When “NS_21” is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-21 as appropriate, and

- the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.5.16-1. These requirements also apply for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1.3-1 and Table 6.6.3.1A-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.5.16-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|---|
| | 5, 10 MHz | |
| 2200 ≤ f < 2288 | -40 | 1 MHz |
| 2288 ≤ f < 2292 | -37 | 1 MHz |
| 2292 ≤ f < 2296 | -31 | 1 MHz |
| 2296 ≤ f < 2300 | -25 | 1 MHz |
| 2320 ≤ f < 2324 | -25 | 1 MHz |
| 2324 ≤ f < 2328 | -31 | 1 MHz |
| 2328 ≤ f < 2332 | -37 | 1 MHz |
| 2332 ≤ f ≤ 2395 | -40 | 1 MHz |

6.6.3.3.5.17 Test requirement (network signalled value “NS_22”)

When "NS 22" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-22 as appropriate, and

- the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.5.17-1. This requirement also applies for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.5.17-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | MBW |
|---|---|---|
| | 5, 10, 15, 20 MHz | |
| 3400 ≤ f ≤ 3800 | -23 (NOTE 1, NOTE 3) | 5 MHz |
| | -40 (NOTE 2) | 1 MHz |
| NOTE 1: This requirement applies within an offset between 5 MHz and 25 MHz from the lower and from the upper edge of the channel bandwidth, whenever these frequencies overlap with the specified frequency band. | | |
| NOTE 2: This requirement applies from 3400 MHz to 25 MHz below the lower E-UTRA channel edge and from 25 MHz above the upper E-UTRA channel edge to 3800 MHz. | | |
| NOTE 3: This emission limit might imply risk of harmful interference to UE(s) operating in the protected operating band | | |

6.6.3.3.5.18 Test requirement (network signalled value “NS_23”)

When "NS 23" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-23 as appropriate, and

- the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.5.18-1. This requirement also applies for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.5.18-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | MBW |
|---|---|---|
| | 5, 10, 15, 20 MHz | |
| 3400 ≤ f ≤ 3800 | -23 (NOTE 1, NOTE 4) | 5 MHz |
| | -40 (NOTE 2) | 1 MHz |

NOTE 1: This requirement applies within an offset between 5 MHz + $F_{offset_NS_23}$ and 25 MHz + $F_{offset_NS_23}$ from the lower and from the upper edges of the channel bandwidth, whenever these frequencies overlap with the specified frequency band.
NOTE 2: This requirement applies from 3400 MHz to 25 MHz + $F_{offset_NS_23}$ below the lower E-UTRA channel edge and from 25 MHz + Foffset$_{NS_23}$ above the upper E-UTRA channel edge to 3800 MHz.
NOTE 3: $F_{offset_NS_23}$ is:
0 MHz for 5 MHz channel BW,
5 MHz for 10 MHz channel BW,
9 MHz for 15 MHz channel BW and
12 MHz for 20 MHz channel BW.
NOTE 4: This emission limit might imply risk of harmful interference to UE(s) operating in the protected operating band.

### 6.6.3.3.5.19 Test requirement (network signalled value “NS_24”)

When "NS 24" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-24 as appropriate, and

- the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.5.19-1. This requirement also applies for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.5.19-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|---|
| | 5 MHz, 10 MHz, 15 MHz, 20 MHz | |
| Band 34 | -50 | MHz |

Note 1: This requirement applies at a frequency offset equal or larger than 5 MHz from the upper edge of the channel bandwidth, whenever these frequencies overlap with the specified frequency band.

### 6.6.3.3.5.20 Test requirement (network signalled value “NS_25”)

When "NS 25" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-25 as appropriate, and

  - the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.5.20-1. This requirement also applies for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.5.20-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|---|
| | 5 MHz, 10 MHz, 15 MHz, 20 MHz | |
| Band 34 | -40 | MHz |
| Note 1: This requirement applies at a frequency offset equal or larger than 5 MHz from the upper edge of the channel bandwidth, whenever these frequencies overlap with the specified frequency band. | | |

6.6.3.3.5.21 Test requirement (network signalled value “NS_27”)

When "NS 27" is indicated in the cell:

the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-27 as appropriate,

and

- the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.5.21-1. This requirement also applies for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.5.21-1: Additional requirements**

| Frequency band | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|---|
| | 5, 10, 15, 20 MHz | |
| 9 kHz ≤ f ≤ 3530 MHz | -40 | 1 MHz |

6.6.3.3.5.22 Test requirement (network signalled value “NS_36”)

When "NS 36" is indicated in the cell:

the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-29 as appropriate,

and

- the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.5.22-1. This requirement also applies for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.5.22-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|---|
| | 5 MHz, 10 MHz and 15 MHz | |
| 470 ≤ f ≤ 694 | -42 | 8MHz |

6.6.3.3.5.23 Test requirement (network signalled value “NS_38”)

When "NS 38" is indicated in the cell:

the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-29 as appropriate,

and

- the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.5.23-1. This requirement also applies for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.5.23-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|---|
| | 1.4 MHz, 3 MHz, 5 MHz, 10 MHz, 15 MHz, 20 MHz | |
| 1400 ≤ f ≤ 1427 | -32 | 27MHz |
| NOTE 1: This requirement shall be verified with UE transmission power of 15 dBm. | | |

6.6.3.3.5.24 Test requirement (network signalled value “NS_39”)

When "NS 39" is indicated in the cell:

the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-29 as appropriate,

and

- the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3.5.24-1. This requirement also applies for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3.5.24-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|---|
| | 1.4 MHz, 3 MHz, 5 MHz, 10 MHz, 15 MHz, 20 MHz | |
| 1475 ≤ f ≤ 1488 | -28 | 1MHz |

## 6.6.3.3_1 Additional spurious emissions for UL 64QAM

### 6.6.3.3_1.1 Test purpose

Same test purpose as in clause 6.6.3.3.1.

### 6.6.3.3_1.2 Test applicability

This test case applies to all types of E-UTRA UE from release 13 and forward that support UL 64QAM.

### 6.6.3.3_1.3 Minimum conformance requirements

Same minimum conformance requirements as in clause 6.6.3.3.3.

### 6.6.3.3_1.4 Test description

#### 6.6.3.3_1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA operating bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in Table 6.6.3.3_1.4.1-1 through Table 6.6.3.3_1.4.1-21. The

details of the uplink reference measurement channels (RMCs) are specified in Annexes A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

| 3 | 15MHz | | | 64QAM | 45 |
| 4 | 20MHz | | | 64QAM | 50 |
| Note 1: The RBstart of partial RB allocation shall be RB# 0 and RB# (max +1 - RB allocation) of the channel bandwidth.<br>Note 2: The 64QAM configurations shall not apply to UEs for which TC 6.6.3.3_2 is executed with network signalled value NS_19. | | | | | |

**Table 6.6.3.3_1.4.1-15: Test Configuration Table (network signalled value "NS_20")**

| Initial Conditions | | | | | |
|---|---|---|---|---|---|
| Test Environment (as specified in TS 36.508 [7] subclause 4.1) | | | | Normal | |
| Test Frequencies (as specified in TS36.508 [7] subclause 4.3.1) | | | | For 5 MHz Channel Bandwidth<br>a. 2002.5 MHz ($N_{UL}$ = 25525)<br>b. 2007.5 MHz ($N_{UL}$ = 25575)<br>c. 2012.5 MHz ($N_{UL}$ = 25625)<br>d. 2017.5 MHz ($N_{UL}$ = 25675)<br><br>For 10 MHz Channel Bandwidth<br>a. 2005 MHz ($N_{UL}$ = 25550)<br>b. 2015 MHz ($N_{UL}$ = 25650)<br><br>For 15 MHz Channel Bandwidth<br>a. 2012.5 MHz ($N_{UL}$ = 25625)<br><br>For 20 MHz Channel Bandwidth<br>a. 2010 MHz ($N_{UL}$ = 25600) | |
| Test Channel Bandwidths (as specified in TS 36.508 [7] subclause 4.3.1) | | | | 5MHz, 10MHz, 15MHz, 20MHz | |
| **Test Parameters for NS_20 A-MPR** | | | | | |
| | | **Downlink Configuration** | | **Uplink Configuration** | |
| **Configuration ID** | **Ch BW** | **Mod'n** | **RB allocation FDD** | **Mod'n** | **RB allocation FDD** |
| 1 | 5MHz | N/A for Additional Spurious Emissions testing. | | 64QAM (Note 3) | 15 |
| 2 | 5MHz | | | 64QAM (Note 3) | 25 |
| 3 | 10MHz | | | 64QAM | 12 |
| 4 | 10MHz | | | 64QAM (Note 3) | 50 |
| 5 | 15MHz | | | 64QAM (Note 3) | 25 |
| 6 | 15MHz | | | 64QAM (Note 3) | 36 |
| 7 | 15MHz | | | 64QAM (Note 3) | 75 |
| 8 | 20MHz | | | 64QAM | 18 |
| 9 | 20MHz | | | 64QAM (Note 3) | 25 |
| 10 | 20MHz | | | 64QAM (Note 3) | 75 |
| 11 | 20MHz | | | 64QAM (Note 3) | 100 |

Note 1: The Configuration ID will be used to map the applicable Test Configuration to the corresponding Test Requirement in subclause 6.2.4.5 as not all combinations are necessarily required based on the applicability of the UE.

Note 2: The $RB_{start}$ of partial RB allocation shall be RB# 0 and RB# (max +1 - RB allocation) of the channel bandwidth.

Note 3: The 64QAM configurations shall not apply to UEs for which TC 6.6.3.3_2 is executed with network signalled value NS_20.

Editor's note: The following lines belong at the end of section 6.6.3.3_1.4.1. As new tables are added to this section, these lines should always follow the tables.

1. Connect the SS to the UE to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure A.7.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Table 6.6.3.3_1.4.1-1 to Table 6.6.3.3_1.4.1-22 depending on network signal value.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.3.3_1.4.3.

### 6.6.3.3_1.4.2 Test procedure

Same test procedure as in clause 6.6.3.3.4.2.

### 6.6.3.3_1.4.3 Message contents

Same message contents as in clause 6.6.3.3.4.3.

#### 6.6.3.3_1.5 Test requirement

Same test requirement as in clause 6.6.3.3.5.

### 6.6.3.3_2 Additional spurious emissions for UL 256QAM

#### 6.6.3.3_2.1 Test purpose

Same test purpose as in clause 6.6.3.3.1.

#### 6.6.3.3_2.2 Test applicability

This test case applies to all types of E-UTRA UE from release 14 and forward that support UL 256QAM.

#### 6.6.3.3_2.3 Minimum conformance requirements

Same minimum conformance requirements as in clause 6.6.3.3.3.

#### 6.6.3.3_2.4 Test description

##### 6.6.3.3_2.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA operating bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in Table 6.6.3.3_2.4.1-1 through Table 6.6.3.3_2.4.1-22. The details of the uplink reference measurement channels (RMCs) are specified in Annexes A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Editor's note: The following lines belong at the end of section 6.6.3.3_2.4.1. As new tables are added to this section, these lines should always follow the tables.

1. Connect the SS to the UE to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure A.7.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Table 6.6.3.3_2.4.1-1 to Table 6.6.3.3_2.4.1-22 depending on network signal value.
5. Propagation conditions are set according to Annex B.0.

6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.3.3_2.4.3.

#### 6.6.3.3_2.4.2 Test procedure

1. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 6.6.3.3_2.4.1-1 to 6.6.3.3_2.4.1-22. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.

2. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE until the UE transmits at $P_{UMAX}$ level.

3. Measure the mean power of the UE in the channel bandwidth of the radio access mode according to the test configuration, which shall meet the requirements described in Tables 6.2.4_4.5-1 to 6.2.4_4.5-29 for Power Class 3 UEs as appropriate. The period of the measurement shall be at least one sub-frame (1ms).

4. Measure the power of the transmitted signal with a measurement filter of bandwidths according to Table 6.6.3.3.5.1-1 to 6.6.3.3.5.22-1 as appropriate. The centre frequency of the filter shall be stepped in contiguous steps according to the same table. For NS_07 measurements made in a bandwidth of 6.25kHz, measurement parameter settings defined in table 6.6.3.3.4.2-1 shall be used. The measured power shall be verified for each step. The measurement period shall capture the active time slots.

#### 6.6.3.3_2.4.3 Message contents

Same message contents as in clause 6.6.3.3.4.3.

### 6.6.3.3_2.5 Test requirement

Same test requirement as in clause 6.6.3.3.5.

## 6.6.3.3A Additional spurious emissions for CA

### 6.6.3.3A.1 Additional spurious emissions for CA (intra-band contiguous DL CA and UL CA)

#### 6.6.3.3A.1.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to other channels or other systems in terms of transmitter spurious emissions in intra-band contiguous carrier aggregation under the deployment scenarios where additional requirements are specified.

#### 6.6.3.3A.1.2 Test applicability

This test case applies to all types of E-UTRA UE release 10 and forward that support intra-band contiguous DL CA and UL CA but do not support UL 64QAM or UL 256QAM.

#### 6.6.3.3A.1.3 Minimum conformance requirements

This clause specifies the requirements for the specified E-UTRA band for an additional spectrum emission for CA requirement with protected bands as indicated from Table 6.6.3.3A.1.3.1-1 to Table 6.6.3.3A.1.3.6-1.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

#### 6.6.3.3A.1.3.1 Minimum conformance requirements for CA_1C (network signalled value "CA_NS_01")

When "CA_NS_01" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3A.1.3.1-1. This requirement also applies for the frequency ranges that are less than $\Delta f_{OOB}$ (MHz) in Table 6.6.3.1A.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3A.1.3.1-1: Additional requirements (PHS) for CA**

| Protected band | Frequency range (MHz) | | | Maximum Level (dBm) | MBW (MHz) | Note |
|---|---|---|---|---|---|---|
| E-UTRA band 34 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| Frequency range | 1884.5 | - | 1915.7 | -41 | 0.3 | 1 |
| Note 1: Applicable when the aggregated channel bandwidth is confined within frequency range 1940 – 1980 MHz | | | | | | |

The normative reference for this requirement is TS 36.101[2] subclause 6.6.3.3A.1.

#### 6.6.3.3A.1.3.2 Minimum conformance requirements for CA_1C (network signalled value "CA_NS_02")

When "CA_NS_02" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3A.1.3.2-1. These requirements also apply for the frequency ranges that are less than $\Delta f_{OOB}$ (MHz) in Table 6.6.3.1A.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3A.1.3.2-1: Additional requirements for CA**

| Protected band | Frequency range (MHz) | | | Maximum Level (dBm) | MBW (MHz) |
|---|---|---|---|---|---|
| E-UTRA band 34 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 |
| Frequency range | 1900 | - | 1915 | -15.5 | 5 |
| Frequency range | 1915 | - | 1920 | +1.6 | 5 |

The normative reference for this requirement is TS 36.101[2] subclause 6.6.3.3A.2.

#### 6.6.3.3A.1.3.3 Minimum requirement for CA_1C (network signalled value "CA_NS_03")

When "CA_NS_03" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3A.1.3.3-1. This requirement also applies for the frequency ranges that are less than $\Delta f_{OOB}$ (MHz) in Table 6.6.3.1A.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3A.1.3.3-1: Additional requirement for CA**

| Protected band | Frequency range (MHz) | | | Maximum Level (dBm) | MBW (MHz) |
|---|---|---|---|---|---|
| E-UTRA band 34 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 |
| Frequency range | 1880 | - | 1895 | -40 | 1 |
| Frequency range | 1895 | - | 1915 | -15.5 | 5 |
| Frequency range | 1915 | - | 1920 | +1.6 | 5 |

#### 6.6.3.3A.1.3.4 Minimum requirement for CA_38C (network signalled value "CA_NS_05")

When "CA_NS_05" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3A.1.3.4-1. This requirement also applies for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1A.1.3-1 from the edge of the aggregated channel bandwidth.

**Table 6.6.3.3A.1.3.4-1: Additional requirements**

| Protected band | Frequency range (MHz) | | | Maximum Level (dBm) | MBW (MHz) |
|---|---|---|---|---|---|
| Frequency range | 2620 | - | 2645 | -15.5 | 5 |
| Frequency range | 2645 | - | 2690 | -40 | 1 |

6.6.3.3A.1.3.5 Minimum requirement for CA_7C (network signalled value "CA_NS_06")

When "CA_NS_06" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3A.1.3.5-1. This requirement also applies for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1A.3-1 from the edge of the aggregated channel bandwidth.

**Table 6.6.3.3A.1.3.5-1: Additional requirements**

| Protected band | Frequency range (MHz) | | | Maximum Level (dBm) | MBW (MHz) |
|---|---|---|---|---|---|
| Frequency range | 2570 | - | 2575 | +1.6 | 5 |
| Frequency range | 2575 | - | 2595 | -15.5 | 5 |
| Frequency range | 2595 | - | 2620 | -40 | 1 |

6.6.3.3A.1.3.6 Minimum requirement for CA_39C (network signalled value "CA_NS_07")

When "CA_NS_07" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3.3A.1.3.6-1. This requirement also applies for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1A.1.3-1 from the edge of the aggregated channel bandwidth.

**Table 6.6.3.3A.1.3.6-1: Additional requirements**

| Protected band | Frequency range (MHz) | | | Maximum Level (dBm) | MBW (MHz) | NOTE |
|---|---|---|---|---|---|---|
| Frequency range | 1805 | - | 1855 | -40 | 1 | 1 |
| Frequency range | 1855 | - | 1880 | -15.5 | 5 | 1, 2, 3 |
| NOTE 1: This requirement is applicable for carriers with aggregated channel bandwidths confined in 1885-1920 MHz.<br>NOTE 2: These requirements also apply for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1.3-1 and Table 6.6.3.1A.0-1 from the edge of the aggregated channel bandwidth.<br>NOTE 3: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band. | | | | | | |

The normative reference for this requirement is TS 36.101[2] subclause 6.6.3.3A.3.

6.6.3.3A.1.4 Test description

6.6.3.3A.1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and CC combinations based on E-UTRA CA configurations specified in table 5.4.2A.1-1. All of these configurations shall be tested with applicable test parameters for each CA Configuration, and are shown in tables' 6.6.3.3A.1.4.1-1 to 6.6.3.3A.1.4.1-3. The details of the uplink reference measurement channels (RMCs) are specified in Annexes A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 6.6.3.3A.1.4.1-1: Test Configuration Table for CA (network signalled value "CA_NS_01")**

| Initial Conditions | |
|---|---|
| Test Environment as specified in TS 36.508[7] subclause 4.1 | NC |
| Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 6.1-2. | C: Low and High range |
| Test CC Combination setting ($N_{RB_agg}$) as specified in subclause 5.4.2A.1 for the CA Configuration | Lowest $N_{RB_agg}$<br>Highest $N_{RB_agg}$ |

| 18 | 100 | 75 | | QPSK | 2 | P_1@0 | S_1@74 | | |
| Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1 | | | | | | | | | |

1. Connect the SS to the UE to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure group A.33 as appropriate.

2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.

3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.

4. The UL Reference Measurement channels are set according to Table 6.6.3.3A.1.4.1-1, Table 6.6.3.3A.1.4.1-2, Table 6.6.3.3A.1.4.1-3, Table 6.6.3.3A.1.4.1-4, Table 6.6.3.3A.1.4.1-5 or Table 6.6.3.3A.1.4.1-6 depending on network signal value.

5. Propagation conditions are set according to Annex B.0.

6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.3.3A.1.4.3.

#### 6.6.3.3A.1.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.0 for all downlink physical channels.

2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 6.6.3.3A.1.4.3

3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).

4. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC on both PCC and SCC, according to Table 6.6.3.3A.1.4.1-1, Table 6.6.3.3A.1.4.1-2, Table 6.6.3.3A.1.4.1-3, Table 6.6.3.3A.1.4.1-4, Table 6.6.3.3A.1.4.1-5 or Table 6.6.3.3A.1.4.1-6 depending on network signal value. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.

5. Send continuously uplink power control “up” commands in every uplink scheduling information to the UE until the UE transmits at $P_{UMAX}$ level.

6. Measure the mean power of the UE in the channel bandwidth of the radio access mode according to the test configuration, which shall meet the requirements described in Tables 6.2.4A.1.5-1 to 6.2.4A.1.5-7 as appropriate. The period of the measurement shall be at least one sub-frame (1ms).

7. Measure the power of the transmitted signal with a measurement filter of bandwidths according to Table 6.6.3.3A.1.5.1-1, 6.6.3.3A.1.5.2-1, 6.6.3.3A.1.5.3-1, 6.6.3.3A.1.5.4-1, 6.6.3.3A.1.5.5-1 and 6.6.3.3A.1.5.6-1 as appropriate. The centre frequency of the filter shall be stepped in contiguous steps according to the same table. The measured power shall be verified for each step. The measurement period shall capture the active time slots.

#### 6.6.3.3A.1.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6, with the following exceptions for each network signalled value.

##### 6.6.3.3A.1.4.3.1 Message contents (network signalled value "CA_NS_01")

1. Information element additionalSpectrumEmissionSCell-r10 is set to CA_NS_01. This can be set in the *RadioResourceConfigCommonSCell-r10-DEFAULT* as part of the common RRC messages. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3.3A.1.4.3.1-1: *RadioResourceConfigCommonSCell-r10-DEFAULT*: Additional spectrum emission test requirement for “CA_NS_01”**

| Derivation Path: TS 36.508 [7] clause 4.6.3, Table 4.6.3-13A | | | |
|---|---|---|---|
| **Information Element** | **Value/remark** | **Comment** | **Condition** |
| additionalSpectrumEmissionSCell-r10 | 1 (CA_NS_01) | | |

##### 6.6.3.3A.1.4.3.2 Message contents exceptions (network signalled value "CA_NS_02")

1. Information element additionalSpectrumEmissionSCell-r10 is set to CA_NS_02. This can be set in the *RadioResourceConfigCommonSCell-r10-DEFAULT* as part of the common RRC messages. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3.3A.1.4.3.2-1: *RadioResourceConfigCommonSCell-r10-DEFAULT*: Additional spectrum emission test requirement for "CA_NS_02"**

| Derivation Path: TS 36.508 [7] clause 4.6.3, Table 4.6.3-13A | | | |

| **Information Element** | **Value/remark** | **Comment** | **Condition** |
| additionalSpectrumEmissionSCell-r10 | 3 (CA_NS_03) | | |

6.6.3.3A.1.4.3.4 Message contents exceptions (network signalled value "CA_NS_05")

1. Information element additionalSpectrumEmission is set to CA_NS_05. This can be set in the *RadioResourceConfigCommonSCell-r10-DEFAULT* as part of the common RRC messages. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3.3A.1.4.3.4-1: *RadioResourceConfigCommonSCell-r10-DEFAULT*: Additional spectrum emission test requirement for "CA_NS_05"**

| Derivation Path: TS 36.508 [7] clause 4.6.3, Table 4.6.3-13A | | | |
|---|---|---|---|
| **Information Element** | **Value/remark** | **Comment** | **Condition** |
| additionalSpectrumEmissionSCell-r10 | 5 (CA_NS_05) | | |

6.6.3.3A.1.4.3.5 Message contents exceptions (network signalled value "CA_NS_06")

1. Information element additionalSpectrumEmission is set to CA_NS_06. This can be set in the *RadioResourceConfigCommonSCell-r10-DEFAULT* as part of the common RRC messages. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3.3A.1.4.3.5-1: *RadioResourceConfigCommonSCell-r10-DEFAULT*: Additional spectrum emission test requirement for "CA_NS_06"**

| Derivation Path: TS 36.508 [7] clause 4.6.3, Table 4.6.3-13A | | | |
|---|---|---|---|
| **Information Element** | **Value/remark** | **Comment** | **Condition** |
| additionalSpectrumEmissionSCell-r10 | 6 (CA_NS_06) | | |

6.6.3.3A.1.4.3.6 Message contents exceptions (network signalled value "CA_NS_07")

1. Information element additionalSpectrumEmission is set to CA_NS_07. This can be set in the *RadioResourceConfigCommonSCell-r10-DEFAULT* as part of the common RRC messages. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 6.6.3.3A.1.4.3.6-1: *RadioResourceConfigCommonSCell-r10-DEFAULT*: Additional spectrum emission test requirement for "CA_NS_07"**

| Derivation Path: TS 36.508 [7] clause 4.6.3, Table 4.6.3-13A | | | |
|---|---|---|---|
| **Information Element** | **Value/remark** | **Comment** | **Condition** |
| additionalSpectrumEmissionSCell-r10 | 7 (CA_NS_07) | | |

### 6.6.3.3A.1.5 Test requirement

This clause specifies the requirements for the specified E-UTRA band for an additional spectrum emission for CA requirement with protected bands as indicated from table 6.6.3.3A.1.5.1-1 to table 6.6.3.3A.1.5.6-1.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

#### 6.6.3.3A.1.5.1 Test requirement for CA (network signalled value "CA_NS_01")

When "CA_NS_01" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4A.1.5-1 as appropriate,

and

the measured average power of spurious emission, derived in step 2, shall not exceed the described value in Table 6.6.3.3A.1.5.1-1. This requirement also applies for the frequency ranges that are less than $\Delta f_{OOB}$ (MHz) in Table 6.6.3.1A.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3A.1.5.1-1: Additional requirements (PHS) for CA**

| Protected band | Frequency range (MHz) | | | Maximum Level (dBm) | MBW (MHz) | Note |
|---|---|---|---|---|---|---|
| E-UTRA band 34 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| Frequency range | 1884.5 | - | 1915.7 | -41 | 0.3 | 1 |
| Note 1: Applicable when the aggregated channel bandwidth is confined within frequency range 1940 – 1980 MHz. | | | | | | |

#### 6.6.3.3A.1.5.2 Test requirement for CA (network signalled value “CA_NS_02")

When “CA_NS_02” is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4A.1.5-2 as appropriate,

and

the measured average power of spurious emission, derived in step 2, shall not exceed the described value in Table 6.6.3.3A.1.5.2-1. This requirement also applies for the frequency ranges that are less than $\Delta f_{OOB}$ (MHz) in Table 6.6.3.1A.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3A.1.5.2-1: Additional requirements for CA**

| Protected band | Frequency range (MHz) | | | Maximum Level (dBm) | MBW (MHz) |
|---|---|---|---|---|---|
| E-UTRA band 34 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 |
| Frequency range | 1900 | - | 1915 | -15.5 | 5 |
| Frequency range | 1915 | - | 1920 | +1.6 | 5 |

#### 6.6.3.3A.1.5.3 Test requirement for CA (network signalled value “CA_NS_03")

When “CA_NS_03” is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4A.1.5-3 as appropriate,

and

the measured average power of spurious emission, derived in step 2, shall not exceed the described value in Table 6.6.3.3A.1.5.3-1. This requirement also applies for the frequency ranges that are less than $\Delta f_{OOB}$ (MHz) in Table 6.6.3.1A.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3A.1.5.3-1: Additional requirement for CA**

| Protected band | Frequency range (MHz) | | | Maximum Level (dBm) | MBW (MHz) |
|---|---|---|---|---|---|
| E-UTRA band 34 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 |
| Frequency range | 1880 | - | 1895 | -40 | 1 |
| Frequency range | 1895 | - | 1915 | -15.5 | 5 |
| Frequency range | 1915 | - | 1920 | +1.6 | 5 |

### 6.6.3.3A.1.5.4 Test requirement for CA (network signalled value “CA_NS_05")

When “CA_NS_05” is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4A.1.5-5 as appropriate,

and

the measured average power of spurious emission, derived in step 2, shall not exceed the described value in Table 6.6.3.3A.1.5.4-1. This requirement also applies for the frequency ranges that are less than $\Delta f_{OOB}$ (MHz) in Table 6.6.3.1A.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3A.1.5.4-1: Additional requirement for CA**

| Protected band | Frequency range (MHz) | | | Maximum Level (dBm) | MBW (MHz) |
|---|---|---|---|---|---|
| Frequency range | 2620 | - | 2645 | -15.5 | 5 |
| Frequency range | 2645 | - | 2690 | -40 | 1 |

### 6.6.3.3A.1.5.5 Test requirement for CA (network signalled value “CA_NS_06")

When “CA_NS_06” is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4A.1.5-6 as appropriate,

and

the measured average power of spurious emission, derived in step 2, shall not exceed the described value in Table 6.6.3.3A.1.5.5-1. This requirement also applies for the frequency ranges that are less than $\Delta f_{OOB}$ (MHz) in Table 6.6.3.1A.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3A.1.5.5-1: Additional requirements**

| Protected band | Frequency range (MHz) | | | Maximum Level (dBm) | MBW (MHz) |
|---|---|---|---|---|---|
| Frequency range | 2570 | - | 2575 | +1.6 | 5 |
| Frequency range | 2575 | - | 2595 | -15.5 | 5 |
| Frequency range | 2595 | - | 2620 | -40 | 1 |

### 6.6.3.3A.1.5.6 Test requirement for CA (network signalled value “CA_NS_07")

When “CA_NS_07” is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4A.1.5-7 as appropriate,

and

the measured average power of spurious emission, derived in step 2, shall not exceed the described value in Table 6.6.3.3A.1.5.6-1. This requirement also applies for the frequency ranges that are less than $\Delta f_{OOB}$ (MHz) in Table 6.6.3.1A.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3.3A.1.5.6-1: Additional requirement for CA**

| Protected band | Frequency range (MHz) | | | Maximum Level (dBm) | MBW (MHz) | NOTE |
|---|---|---|---|---|---|---|
| Frequency range | 1805 | - | 1855 | -40 | 1 | 1 |
| Frequency range | 1855 | - | 1880 | -15.5 | 5 | 1, 2, 3 |
| NOTE 1: This requirement is applicable for carriers with aggregated channel bandwidths confined in 1885-1920 MHz<br>NOTE 2: The requirement also applies for the frequency ranges that are less than FOOB (MHz) in Table 6.6.3.1.3-1 and Table 6.6.3.1A.0-1 from the edge of the channel bandwidth.<br>NOTE 3: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band. | | | | | | |

## 6.6.3.3A.1_1 Additional spurious emissions for CA (intra-band contiguous DL CA and UL CA) for UL 64QAM

Editor's note: For a transition period until RAN5#83, this test case in version 15.3.1 of 36.521-1 shall be used. This is to ensure no test coverage is lost before the UL 256QAM test case becomes available.

### 6.6.3.3A.1_1.1 Test purpose

Same test purpose as in clause 6.6.3.3A.1.1

### 6.6.3.3A.1_1.2 Test applicability

This test case applies to all types of E-UTRA UE from release 13 and forward that support intra-band contiguous DL CA, UL CA and UL 64QAM but do not support UL 256QAM.

### 6.6.3.3A.1_1.3 Minimum conformance requirements

Same minimum conformance requirements as in clause 6.6.3.3.3A.1.3

### 6.6.3.3A.1_1.4 Test description

#### 6.6.3.3A.1_1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and CC combinations based on E-UTRA CA configurations specified in table 5.4.2A.1-1. All of these configurations shall be tested with applicable test parameters for each CA Configuration, and are shown in tables' 6.6.3.3A.1_1.4.1-1 to 6.6.3.3A.1_1.4.1-3. The details of the uplink reference measurement channels (RMCs) are specified in Annexes A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 6.6.3.3A.1_1.4.1-1: Test Configuration Table for CA (network signalled value "CA_NS_01")**

| Initial Conditions | |
|---|---|
| Test Environment as specified in TS 36.508[7] subclause 4.1 | NC |

| Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1 | | | | | | | | | |

1. Connect the SS to the UE to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure group A.33 as appropriate.

2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.

3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.

4. The UL Reference Measurement channels are set according to Table 6.6.3.3A.1_1.4.1-1, Table 6.6.3.3A.1_1.4.1-2, Table 6.6.3.3A.1_1.4.1-3, Table 6.6.3.3A.1_1.4.1-4, Table 6.6.3.3A.1_1.4.1-5 or Table 6.6.3.3A.1_1.4.1-6 depending on network signal value.

5. Propagation conditions are set according to Annex B.0.

6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.3.3A.1_1.4.3.

#### 6.6.3.3A.1_1.4.2 Test procedure

Same test procedure as in clause 6.6.3.3A.1.4.2 with following exceptions:

- In step 2: Instead of clause 6.6.3.3A.1.4.3 → use clause 6.6.3.3A.1_1.4.3.

- In step 4: Instead of Table 6.6.3.3A.1.4.1-1, Table 6.6.3.3A.1.4.1-2, Table 6.6.3.3A.1.4.1-3, Table 6.6.3.3A.1.4.1-4, Table 6.6.3.3A.1.4.1-5 or Table 6.6.3.3A.1.4.1-6 → use Table 6.6.3.3A.1_1.4.1-1, Table 6.6.3.3A.1_1.4.1-2, Table 6.6.3.3A.1_1.4.1-3, Table 6.6.3.3A.1_1.4.1-4, Table 6.6.3.3A.1_1.4.1-5 or Table 6.6.3.3A.1_1.4.1-6.

- In step 6: Instead of Tables 6.2.4A.1.5-1 to 6.2.4A.1.5-7 → use Tables 6.2.4A.1_1.5-1 to 6.2.4A.1_1.5-7.

#### 6.6.3.3A.1_1.4.3 Message contents

Same message contents as in clause 6.6.3.3A.1.4.3.

### 6.6.3.3A.1_1.5 Test requirement

Same test requirements as in clause 6.6.3.3A.1.5.1 with following exceptions:

- Instead of Tables 6.2.4A.1.5-1 to 6.2.4A.1.5-7 → use Tables 6.2.4A.1_1.5-1 to 6.2.4A.1_1.5-7.

## 6.6.3.3A.1_2 Additional spurious emissions for CA (intra-band contiguous DL CA and UL CA) for UL 256QAM

### 6.6.3.3A.1_2.1 Test purpose

Same test purpose as in clause 6.6.3.3A.1.1

### 6.6.3.3A.1_2.2 Test applicability

This test case applies to all types of E-UTRA UE from release 14 and forward that support intra-band contiguous DL CA, UL CA and UL 256QAM.

### 6.6.3.3A.1_2.3 Minimum conformance requirements

Same minimum conformance requirements as in clause 6.6.3.3A.1.3

### 6.6.3.3A.1_2.4 Test description

#### 6.6.3.3A.1_2.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and CC combinations based on E-UTRA CA configurations specified in table 5.4.2A.1-1. All of these configurations shall be tested with applicable test parameters for each CA Configuration, and are shown in tables 6.6.3.3A.1_2.4.1-1 to 6.6.3.3A.1_2.4.1-6. The details of the uplink reference measurement channels (RMCs) are specified in Annexes A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 6.6.3.3A.1_2.4.1-1: Test Configuration Table for CA (network signalled value "CA_NS_01")**

| Initial Conditions | |
|---|---|
| Test Environment as specified in TS 36.508[7] subclause 4.1 | NC |
| Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 6.1-2. | C: Low and High range |
| Test CC Combination setting ($N_{RB_agg}$) as specified in subclause 5.4.2A.1 for the CA Configuration | Lowest $N_{RB_agg}$<br>Highest $N_{RB_agg}$ |

| Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1 | | | | | | | | | |

1. Connect the SS to the UE to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure group A.33 as appropriate.

2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.

3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.

4. The UL Reference Measurement channels are set according to Table 6.6.3.3A.1_2.4.1-1, Table 6.6.3.3A.1_2.4.1-2, Table 6.6.3.3A.1_2.4.1-3, Table 6.6.3.3A.1_2.4.1-4, Table 6.6.3.3A.1_2.4.1-5 or Table 6.6.3.3A.1_2.4.1-6 depending on network signal value.

5. Propagation conditions are set according to Annex B.0.

6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.3.3A.1_2.4.3.

#### 6.6.3.3A.1_2.4.2 Test procedure

Same test procedure as in clause 6.6.3.3A.1.4.2 with following exceptions:

- Instead of Tables 6.2.4A.1.5-1 to 6.2.4A.1.5-7 → use Tables 6.2.4A.1_2.5-1 to 6.2.4A.1_2.5-7.

#### 6.6.3.3A.1_2.4.3 Message contents

Same message contents as in clause 6.6.3.3A.1.4.3.

#### 6.6.3.3A.1_2.5 Test requirement

Same test requirements as in clause 6.6.3.3A.1.5.1 with following exceptions:

- Instead of Tables 6.2.4A.1.5-1 to 6.2.4A.1.5-7 → use Tables 6.2.4A.1_2.5-1 to 6.2.4A.1_2.5-7.

### 6.6.3.3A.2 Additional spurious emissions for CA (inter-band DL CA and UL CA)

#### 6.6.3.3A.2.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to other channels or other systems in terms of transmitter spurious emissions in inter-band carrier aggregation under the deployment scenarios where additional requirements are specified.

#### 6.6.3.3A.2.2 Test applicability

This test case applies to all types of E-UTRA UE release 11 and forward that support inter-band DL CA and UL CA but do not support UL 64QAM or UL 256QAM.

#### 6.6.3.3A.2.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.6.3.3.3.

#### 6.6.3.3A.2.4 Test description

##### 6.6.3.3A.2.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state. For the UE maximum output power modified by A-MPR specified in table 6.6.3.3A.2.4.1-1, the power limits specified in subclause 6.2.5A.2.3 apply

**Table 6.6.3.3A.2.4.1-1: Additional spurious emissions for inter-band CA**

Note 1: For CCs with NS_01, there are no additional requirements defined in 36.101. Only CCs with NS-value different than NS_01 and present in 6.6.3.3.3 needs to be tested.
Note 2: A-MPR values for NS-values in this table are the same as in section 6.2.4.3.
Note 3: No test required since the frequency range to test is unaffected by intermodulation products as described in section 4.3 in TR 36.905.

The initial test configurations consist of environmental conditions, test frequencies, and CC combinations based on E-UTRA CA configurations specified in table 5.4.2A.1-2. All of these configurations shall be tested with applicable test

parameters for each CA Configuration, and are shown in tables 6.6.3.3A.2.4.1-2 to 6.6.3.3A.2.4.1-9. The details of the uplink reference measurement channels (RMCs) are specified in Annexe A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 6.6.3.3A.2.4.1-2: Test Configuration Table (network signalled value NS_01/NS_12)**

| **Initial Conditions** | | | | | | | |
|---|---|---|---|---|---|---|---|
| Test Environment as specified in TS 36.508[7] subclause 4.1 | | | | | | NC | |
| Test Frequencies as specified in TS 36.508 [7] subclause 4.3.1 for different CA bandwidth classes | | | | | | Low and High range for both PCC and SCC (Note 3) | |
| Test CC Combination setting (NRB_agg) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE. | | | | | | Lowest and Highest $N_{RBagg}$(Note 2) | |
| **Test Parameters for CA Configurations** | | | | | | | |

| 20 | 100 | 100 | | 16QAM | 16QAM | 100 | L=10 |

Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-2.
Note 2: For simplifying test, PCC is mapped to the first band of the combination as listed in Uplink CA Configuration column in Table 6.2.4A.2.4.1-1.
Note 3: For partial RB allocation unless RBstart is explicitly defined, for Low range place test point with RBstart=0, for High range place test point with $RB_{start}=RB_{max}-L_{CRB}+1$.

1. Connect the SS to the UE to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure group A.33 as appropriate.

2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.

3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.

4. The UL Reference Measurement channels are set according to Tables 6.6.3.3A.2.4.1-2 to 6.6.3.3A.2.4.1-9 depending on network signal value.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.3.3A.2.4.3.

#### 6.6.3.3A.2.4.2 Test procedures

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.0 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 6.6.3.3A.2.4.3
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Tables 6.6.3.3A.2.4.1-2 to 6.6.3.3A.2.4.1-9 as appropriate on both PCC and SCC. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
5. Send continuously uplink power control “up” commands in every uplink scheduling information to the UE until the UE transmits at $P_{UMAX}$ level.
6. Measure the mean power of the UE in the channel bandwidth of the radio access mode according to the test configuration, which shall meet the requirements described in Tables 6.2.4A.2.5-1 to 6.2.4A.2.5-16 as appropriate. The period of the measurement shall be at least one sub-frame (1ms).
7. Measure the power of the transmitted signal with a measurement filter of bandwidths according to Tables 6.6.3.3.5.1-1 to 6.6.3.3.5.24-1 as appropriate. The centre frequency of the filter shall be stepped in contiguous steps according to the same table. The measured power shall be verified for each step. The measurement period shall capture the active time slots.

#### 6.6.3.3A.2.4.3 Message contents

Same message contents as in clause 6.2.4A.2.4.3.

#### 6.6.3.3A.2.5 Test requirement

Same test requirements as in clause 6.6.3.3.5 depending on network signal value.

### 6.6.3.3A.2_1 Additional spurious emissions for CA (inter-band DL CA and UL CA) for UL 64QAM

Editor's note: For a transition period until RAN5#83, this test case in version 15.3.1 of 36.521-1 shall be used. This is to ensure no test coverage is lost before the UL 256QAM test case becomes available.

#### 6.6.3.3A.2_1.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to other channels or other systems in terms of transmitter spurious emissions in inter-band carrier aggregation under the deployment scenarios where additional requirements are specified.

#### 6.6.3.3A.2_1.2 Test applicability

This test case applies to all types of E-UTRA UE release 13 and forward that support inter-band DL CA and UL CA and UL 64QAM but do not support UL 256QAM.

#### 6.6.3.3A.2_1.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.6.3.3.3.

### 6.6.3.3A.2_1.4 Test description

#### 6.6.3.3A.2_1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state. For the UE maximum output power modified by A-MPR specified in table 6.6.3.3A.2_1.4.1-1, the power limits specified in subclause 6.2.5A.2.3 apply

**6.6.3.3A.2_1.4.1-1 Additional spurious emissions for inter-band CA**

| CA_18A-28A | NS_01 | NS_17 | N/A | Table 6.6.3.3.5.12-1 |

Note 1: For CCs with NS_01, there are no additional requirements defined in 36.101. Only CCs with NS-value different than NS_01 needs to be tested.
Note 2: A-MPR values for NS-values in this table are the same as in section 6.2.4.3.
Note 3: No test required since only A-Spur requirements apply, and the frequency range to test is unaffected by intermodulation products as described in section 4.3 in TR 36.905.

The initial test configurations consist of environmental conditions, test frequencies, and CC combinations based on E-UTRA CA configurations specified in table 5.4.2A.1-2. All of these configurations shall be tested with applicable test parameters for each CA Configuration, and are shown in tables 6.6.3.3A.2_1.4.1-2 to 6.6.3.3A.2_1.4.1-5. The details of the uplink reference measurement channels (RMCs) are specified in Annexe A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 6.6.3.3A.2_1.4.1-2: Test Configuration Table (network signalled value NS_01/NS_12)**

| **Initial Conditions** | | | | | | | |
|---|---|---|---|---|---|---|---|
| Test Environment as specified in TS 36.508[7] subclause 4.1 | | | | | NC | | |
| Test Frequencies as specified in TS 36.508 [7] subclause 4.3.1 for different CA bandwidth classes | | | | | Low and High range for both PCC and SCC (Note 3) | | |
| Test CC Combination setting (NRB_agg) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE. | | | | | Lowest and Highest $N_{RBagg}$(Note 2) | | |
| **Test Parameters for CA Configurations** | | | | | | | |
| **Config ID** | **CA Configuration / NRB_agg** | | **DL Allocation** | **CC MOD** | | **UL Allocation** | |
| | **PCC (NS_01) NRB** | **SCC (NS_12) NRB** | **PCC & SCC RB allocation** | **PCC** | **SCC** | **PCC & SCC RB allocations ($L_{CRB}$ @ $RB_{start}$)** | |
| 1 | 25 | 25 | N/A for this test | QPSK | QPSK | 8 | 8@7 |
| 2 | 25 | 25 | | 64QAM | 64QAM | 10 | 8 |
| 3 | 25 | 25 | | QPSK | 64QAM | 8 | 8 |

| 12 | 100 | 50 | | 64QAM | QPSK | 50 | 12 |

Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1

Note 2: If the UE supports multiple CC Combinations in the CA Configuration with the same NRB_agg. Only the combination with the highest NRB_PCC is tested.

Note 3: For Low range place test point with RBstart=0. For High range place test point with $RB_{start}=RB_{max}-L_{CRB}+1$.

1. Connect the SS to the UE to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure group A.33 as appropriate.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Tables 6.6.3.3A.2_1.4.1-2 to 6.6.3.3A.2_1.4.1-6 depending on network signal value.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.3.3A.2_1.4.3.

### 6.6.3.3A.2_1.4.2 Test procedures

Same test procedure as in clause 6.6.3.3A.2.4.2 with following exceptions:

- In step 2: Instead of clause 6.6.3.3A.2.4.3 → use clause 6.6.3.3A.2_1.4.3.
- In step 4: Instead of Tables 6.6.3.3A.2.4.1-2 to 6.6.3.3A.2.4.1-9 → use Tables 6.6.3.3A.2_1.4.1-2 to 6.6.3.3A.2_1.4.1-6.
- In step 6: Instead of Tables 6.2.4A.2.5-1 to 6.2.4A.2.5-16 → use Tables 6.2.4A.2_1.5-1 to 6.2.4A.2_1.5-11.
- In step 7: Instead of Table 6.6.3.3A.2.4.1-1 → use Table 6.6.3.3A.2_1.4.1-1.

#### 6.6.3.3A.2_1.4.3 Message contents

Same message content as in clause 6.6.3.3A.2.4.3.

#### 6.6.3.3A.2_1.5 Test requirement

Same test requirements as in clause 6.6.3.3A.2.5.

### 6.6.3.3A.3 Additional spurious emissions for CA (intra-band non-contiguous DL CA and UL CA)

Editor's note: No test case details specified because the additional maximum power reduction and the additional spurious emissions cannot be verified for the intra-band non-contiguous UL CA case due to A-MPR is N/A and no additional requirement is needed in current non-contiguous Uplink CA configuration CA_4A-4A according to Table 6.2.4A-2 in TS 36.101.

## 6.6.3B Spurious emission for UL-MIMO

For UE supporting UL-MIMO, the requirements for Spurious emissions which are caused by unwanted transmitter effects such as harmonics emission, parasitic emissions, intermodulation products and frequency conversion products are specified at each transmit antenna connector.

For UEs with two transmit antenna connectors in closed-loop spatial multiplexing scheme, the requirements in subclause 6.6.3 apply to each transmit antenna connector. The requirements shall be met with the UL-MIMO configurations specified in Table 6.2.2B-1.

For single-antenna port scheme, the general requirements in subclause 6.6.2 apply.

### 6.6.3B.1 Transmitter Spurious emissions for UL-MIMO

#### 6.6.3B.1.1 Test purpose

To verify that UE transmitter with a UL-MIMO does not cause unacceptable interference to other channels or other systems in terms of transmitter spurious emissions.

#### 6.6.3B.1.2 Test applicability

This test case applies to all types of E-UTRA UE release 10 and forward that support UL-MIMO.

#### 6.6.3B.1.3 Minimum conformance requirements

For UE with multiple transmit antenna connectors, the requirements for Spurious emissions which are caused by unwanted transmitter effects such as harmonics emission, parasitic emissions, intermodulation products and frequency conversion products are specified at each transmit antenna connector.

For UEs with two transmit antenna connectors, the requirements in clause 6.6.3 apply to each transmit antenna with the UL-MIMO configurations specified in Table 6.2.2B-1 for closed-loop spatial multiplexing scheme.

The normative reference for this requirement is TS 36.101 [2] clause 6.6.3B.

### 6.6.3B.1.4 Test description

#### 6.6.3B.1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in Table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in Table 6.6.3B.1.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annexe A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 6.6.3B.1.4.1-1: Test Configuration Table**

| **Initial Conditions** | | | | | | |
|---|---|---|---|---|---|---|
| Test Environment (as specified in TS 36.508 [7] clause 4.1) | NC | | | | | |
| Test Frequencies (as specified in TS 36.508 [7] clause 4.3.1) | Low range, Mid range, High range | | | | | |
| Test Channel Bandwidths (as specified in TS 36.508 [7] clause 4.3.1) | Lowest, 5MHz, Highest | | | | | |
| **Test Parameters for Channel Bandwidths** | | | | | | |
| | **Downlink Configuration** | | | **Uplink Configuration** | | |
| Ch BW | Mod'n | RB allocation | | Mod'n | RB allocation | |
| | | FDD | TDD | | FDD | TDD |
| 1.4MHz | N/A for Spurious Emissions testing | | | QPSK | 6 | 6 |
| 1.4MHz | | | | QPSK | 1 | 1 |
| 3MHz | | | | QPSK | 15 | 15 |
| 3MHz | | | | QPSK | 1 | 1 |
| 5MHz | | | | QPSK | 25 | 25 |
| 5MHz | | | | QPSK | 1 | 1 |
| 10MHz | | | | QPSK | 50 | 50 |
| 10MHz | | | | QPSK | 1 | 1 |
| 15MHz | | | | QPSK | 75 | 75 |
| 15MHz | | | | QPSK | 1 | 1 |
| 20MHz | | | | QPSK | 100 | 100 |
| 20MHz | | | | QPSK | 1 | 1 |
| Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1.<br>Note 2: The 1 RB allocation shall be tested at both RB #0 and RB #max. | | | | | | |

1. Connect the SS to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure A.38.
2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Table 6.6.3B.1.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.3B.1.4.3.

#### 6.6.3B.1.4.2 Test procedure

1. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 4 for C_RNTI to schedule the UL RMC according to Table 6.6.3B.1.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.

2. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE until the UE transmits at PUMAX level.

3. Measure the power of the transmitted signal at each UE antenna connector with a measurement filter of bandwidths according to table 6.6.3B.1.5-1. The centre frequency of the filter shall be stepped in contiguous steps according to table 6.6.3B.1.5-1. The measured power shall be verified for each step. The measurement period shall capture the active time slots.

#### 6.6.3B.1.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6.

### 6.6.3B.1.5 Test requirement

The measured average power of spurious emission, derived in step 3, shall not exceed the described value in table 6.6.3B.1.5-1.

The spurious emission limits apply for the frequency ranges that are more than ΔfOOB (MHz) from the edge of the channel bandwidth shown in Table 6.6.3.1.3-1.

**Table 6.6.3B.1.5-1: General spurious emissions test requirements**

| Frequency Range | Maximum Level | Measurement Bandwidth | Notes |
|---|---|---|---|
| 9 kHz ≤ f < 150 kHz | -36 dBm | 1 kHz | |
| 150 kHz ≤ f < 30 MHz | -36 dBm | 10 kHz | |
| 30 MHz ≤ f < 1000 MHz | -36 dBm | 100 kHz | |
| 1 GHz ≤ f < 12.75 GHz | -30 dBm | 1 MHz | |
| 12.75 GHz ≤ f < 5th harmonic of the upper frequency edge of the UL operating band in GHz | -30 dBm | 1 MHz | Note 1 |
| Note 1: Applies for Band 22, Band 42 and Band 43. | | | |

NOTE: In order that the measurement of spurious emissions falls within the frequency ranges that are more than ΔfOOB (MHz) from the edge of the channel bandwidth, the minimum offset of the measurement frequency from each edge of the channel should be ΔfOOB + MBW/2. MBW denotes the measurement bandwidth defined in Table 6.6.3B.1.5-1.

## 6.6.3B.2 Spurious emission band UE co-existence for UL-MIMO

Editor's note: This test case contains different requirements for different UE releases

### 6.6.3B.2.1 Test purpose

To verify that UE transmitter with a UL-MIMO does not cause unacceptable interference to co-existing systems for the specified bands which has specific requirements in terms of transmitter spurious emissions.

### 6.6.3B.2.2 Test applicability

This test case applies to all types of E-UTRA UE release 10 and forward that support UL-MIMO.

### 6.6.3B.2.3 Minimum conformance requirements

For UE with multiple transmit antenna connectors, the requirements for Spurious emissions which are caused by unwanted transmitter effects such as harmonics emission, parasitic emissions, intermodulation products and frequency conversion products are specified at each transmit antenna connector.

For UEs with two transmit antenna connectors, the requirements in clause 6.6.3 apply to each transmit antenna with the UL-MIMO configurations specified in Table 6.2.2B-1 for closed-loop spatial multiplexing scheme.

The normative reference for this requirement is TS 36.101 [2] clause 6.6.3B.

This test use minimum requirements from many releases of TS 36.101 [2] due to release independence defined in TS 36.307 [16].

## 6.6.3B.2.4 Test description

### 6.6.3B.2.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in Table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in Table 6.6.3B.2.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annexe A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 6.6.3B.2.4.1-1: Test Configuration Table**

| **Initial Conditions** | | | | | | |
|---|---|---|---|---|---|---|
| Test Environment (as specified in TS 36.508 [7] clause 4.1) | | | | NC | | |
| Test Frequencies (as specified in TS 36.508 [7] clause 4.3.1) (Note 3) | | | | Low range, Mid range, High range (Note 3) | | |

1. Connect the SS to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure A.38.
2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Table 6.6.3B.2.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.3B.2.4.3.

### 6.6.3B.2.4.2 Test procedure

1. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 4 for C_RNTI to schedule the UL RMC according to Table 6.6.3B.2.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
2. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE until the UE transmits at $P_{UMAX}$ level.
3. Measure the power of the transmitted signal at each UE antenna connector with a measurement filter of bandwidths according to table 6.6.3B.2.5-1. For band 14 measurements made in a bandwidth of 6.25kHz, measurement parameter settings defined in table 6.6.3B.2.4.2-1 shall be used. The centre frequency of the filter shall be stepped in contiguous steps according to table 6.6.3B.2.5-1. The measured power shall be verified for each step. The measurement period shall capture the active time slots.

**Table 6.6.3B.2.4.2-1: Measurement setup for band 14**

| | **Option 1: Measurement with No RMS VBW available** | **Option2 Measurement with VBW Filtering on Power scale** |
|---|---|---|
| VBW | >=62.5 kHz<br><br>(10 times or more the RBW) | <=43Hz |
| RBW | <=6.25kHz | <=6.25kHz |
| Detector type | Averages signal envelope during each measurement point, such as "RMS detector" | Peak |
| Averaging mode (Trace averaging) | Power (RMS voltage) | Power (RMS voltage), as controlled by "Average Type" |
| Average Type (applies to detector) | Power (RMS voltage) (automatically occurs with "RMS detector") | Not applicable |
| Average Type (applies to VBW filter) | Not applicable | Power (RMS voltage) |
| Number of averages | 30, to reduce variance as required, or use an even longer sweep time | 1 or use an even narrower VBW filter, thus a longer sweep time |
| Sweep time | [Don't specify] | Sweep rate (span divided by sweep time) <= 0.8 * RBW*VBW |

### 6.6.3B.2.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the following exceptions:

## 6.6.3B.2.5 Test requirement

Test requirements for Spurious Emissions UE Co-existence for UL-MIMO are the same as the minimum requirements and are not repeated in this section.

The measured average power of spurious emission, derived in step 3, shall not exceed the described value in tables 6.6.3.2.3-1B to 6.6.3.2.3-1G according to the following rule:

The requirements for the UE are release specific and can be found in Tables 6.6.3.2.3-1B to 6.6.3.2.3-1G. If the UE support a band, which is not defined in the table corresponding UE's release, the requirements for this band are taken from the table of earliest release where requirements for this band are defined. This has been described in following Table 6.6.3B.2.5-1.

The spurious emission limits apply for the frequency ranges that are more than ΔfOOB (MHz) from the edge of the channel bandwidth shown in Table 6.6.3.1.3-1.

NOTE: The frequency range applicable with network signalled values of NS_05, NS_08, and NS_09 are covered in 6.6.3B.3 Additional Spurious Emissions for UL-MIMO.

## 6.6.3B.3 Additional spurious emissions for UL-MIMO

Editor's note: This clause is incomplete. for Rel-10 as it is also testing Rel-11 minimum requirements.

### 6.6.3B.3.1 Test purpose

To verify that UE transmitter with a UL-MIMO does not cause unacceptable interference to other channels or other systems in terms of transmitter spurious emissions under the deployment scenarios where additional requirements are specified.

### 6.6.3B.3.2 Test applicability

This test case applies to all types of E-UTRA UE release 10 and forward that support UL-MIMO.

### 6.6.3B.3.3 Minimum conformance requirements

For UE with multiple transmit antenna connectors, the requirements for Spurious emissions which are caused by unwanted transmitter effects such as harmonics emission, parasitic emissions, intermodulation products and frequency conversion products are specified at each transmit antenna connector.

For UEs with two transmit antenna connectors, the requirements in clause 6.6.3 apply to each transmit antenna with the UL-MIMO configurations specified in Table 6.2.2B-1 for closed-loop spatial multiplexing scheme.

The normative reference for this requirement is TS 36.101 [2] clause 6.6.3B.

### 6.6.3B.3.4 Test description

#### 6.6.3B.3.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA operating bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in Tables 6.6.3B.3.4.1-1 to 6.6.3B.3.4.1-19. The details of the uplink reference measurement channels (RMCs) are specified in Annexes A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

Note 1: Test Channel Bandwidths are checked separately for E-UTRA band, the applicable channel bandwidths are specified in Table 5.4.2.1-1.
Note 2: The configuration ID will be used to map the applicable Test Configuration to be corresponding Test Requirement in subclause 6.2.4 as not all combinations are necessarily required based on the applicability of the UE.
Note 3: The $RB_{start}$ of partial RB allocation shall be RB# 0 and RB# (max +1 - RB allocation) of the channel bandwidth.
Note 4: Applies only for UE-Categories ≥2.
Note 5: Void.
Note 6: Applies only for Rel-11 and earlier.
Note 7: Applies only for Rel-12 and later.
Note 8: Applies only for Rel-12 and later and Low Range.
Note 9: Applies only for Rel-12 and later and Mid, High Range and additional test frequencies.

Editor's note: The following lines belong at the end of section 6.2.4.4.1. As new tables are added to this section, these lines should always follow the tables.

1. Connect the SS to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure A.38.
2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Tables 6.6.3B.3.4.1-1 to 6.6.3B.3.4.1-20 depending on network signal value.

5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.6.3B.3.4.3.

#### 6.6.3B.3.4.2 Test procedure

Same test procedure as defined in clause 6.6.2.2.4.2.

#### 6.6.3B.3.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6, with the same exceptions as in clause 6.6.3.3.4.3.

### 6.6.3B.3.5 Test requirement

Same test requirements as defined in clause 6.6.3.3.5.

## 6.6.3E Spurious emission for UE category 0

### 6.6.3E.1 Transmitter Spurious emissions for UE category 0

#### 6.6.3E.1.1 Test purpose

Same test purpose as in clause 6.6.3.1.1.

#### 6.6.3E.1.2 Test applicability

This test case applies to all types of E-UTRA UE release 12 and forward of UE category 0.

#### 6.6.3E.1.3 Minimum conformance requirements

Same minimum conformance requirements as in clause 6.6.3.1.3.

#### 6.6.3E.1.4 Test description

##### 6.6.3E.1.4.1 Initial conditions

Same initial conditions as in clause 6.6.3.1.4.1 with following exceptions for HD-FDD:

- Instead of Table 6.6.3.1.4.1-1 → use Table 6.6.3E.1.4.1-1.
- Connect SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.3 using only main UE Tx/Rx antenna.

**Table 6.6.3E.1.4.1-1: Test Configuration Table**

| **Initial Conditions** | | | | | | |
|---|---|---|---|---|---|---|
| Test Environment (as specified in TS 36.508 [7] subclause 4.1) | | | | NC | | |
| Test Frequencies (as specified in TS36.508 [7] subclause 4.3.1) | | | | Low range, Mid range, High range | | |
| Test Channel Bandwidths (as specified in TS 36.508 [7] subclause 4.3.1) | | | | Lowest, 5MHz, Highest | | |
| **Test Parameters for Channel Bandwidths** | | | | | | |
| | **Downlink Configuration** | | | **Uplink Configuration** | | |
| **Ch BW** | **Mod'n** | **RB allocation** | | **Mod'n** | **RB allocation** | |
| | | **FDD** | **TDD** | | **FDD and HD-FDD** | **TDD** |
| 1.4MHz | N/A for Spurious Emissions testing | | | QPSK | 6 | 6 |
| 1.4MHz | | | | QPSK | 1 | 1 |
| 3MHz | | | | QPSK | 15 | 15 |
| 3MHz | | | | QPSK | 1 | 1 |
| 5MHz | | | | QPSK | 25 | 25 |
| 5MHz | | | | QPSK | 1 | 1 |
| 10MHz | | | | QPSK | 36 | 36 |
| 10MHz | | | | QPSK | 1 | 1 |
| 15MHz | | | | QPSK | 36 | 36 |
| 15MHz | | | | QPSK | 1 | 1 |
| 20MHz | | | | QPSK | 36 | 36 |
| 20MHz | | | | QPSK | 1 | 1 |
| Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1. | | | | | | |
| Note 2: The 1 RB allocation shall be tested at both RB #0 and RB #max. | | | | | | |

### 6.6.3E.1.4.2 Test procedure

Same test procedure as in clause 6.6.3E.1.4.2 with following exception for HD-FDD:

- In step 3, slots with transient periods are not under test. Half-duplex guard subframe are not under test.

### 6.6.3E.1.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6.

## 6.6.3E.1.5 Test requirement

This clause specifies the requirements for the specified E-UTRA band for Transmitter Spurious emissions requirement with frequency range as indicated in table 6.6.3E.1.5-1.

The measured average power of spurious emission, derived in step 3, shall not exceed the described value in Table 6.6.3E.1.5-1.

The spurious emission limits apply for the frequency ranges that are more than $\Delta f_{OOB}$ (MHz) from the edge of the channel bandwidth shown in Table 6.6.3.1.3-1.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

**Table 6.6.3E.1.5-1: General spurious emissions test requirements**

| Frequency Range | Maximum Level | Measurement Bandwidth | Notes |
|---|---|---|---|
| 9 kHz ≤ f < 150 kHz | -36 dBm | 1 kHz | |
| 150 kHz ≤ f < 30 MHz | -36 dBm | 10 kHz | |
| 30 MHz ≤ f < 1000 MHz | -36 dBm | 100 kHz | |
| 1 GHz ≤ f < 12.75 GHz | -30 dBm | 1 MHz | |

## 6.6.3E.2 Spurious emission band UE co-existence for UE category 0

### 6.6.3E.2.1 Test purpose

Same test purpose as in clause 6.6.3.2.1.

### 6.6.3E.2.2 Test applicability

This test case applies to all types of E-UTRA UE release 12 and forward of UE category 0.

### 6.6.3E.2.3 Minimum conformance requirements

Same minimum conformance requirements as in clause 6.6.3.2.3 with the following exceptions:

- Instead of Tables 6.6.3.2.3-1 through 6.6.3.2.3-1D → use Table 6.6.3E.2.3-1.

**Table 6.6.3E.2.3-1: Spurious emission band limits Rel-12**

| E-UTRA Band | Spurious emission | | | | | | |
|---|---|---|---|---|---|---|---|
| | **Protected band** | **Frequency range (MHz)** | | | **Maximum Level (dBm)** | **MBW (MHz)** | **Note** |
| 2 | E-UTRA Band 4, 5, 10, 12, 13, 14, 17, 22, 23, 24, 26, 27, 28, 29, 30, 41, 42 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |

| | Frequency range | 1875 | | 1880 | -15.5 | 5 | 15,26,33 |
| 41 | E-UTRA Band 1, 2, 3, 4, 5, 8, 10, 12, 13 , 14, 17, 23, 24, 25, 26, 27, 28, 29, 30, 34, 39, 40, 42, 44 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 9, 11, 18, 19, 21 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 30 |
| | Frequency range | 1839.9 | | 1879.9 | -50 | 1 | 30 |
| | Frequency range | 1884.5 | | 1915.7 | -41 | 0.3 | 8, 30 |

Note 1: $F_{DL_low}$ and $F_{DL_high}$ refer to each E-UTRA frequency band specified in Table 5.5-1.
Note 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1.3-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2nd, 3rd, 4th [or 5th] harmonic spurious emissions. Due to spreading of the harmonic emission the exception is also allowed for the first 1 MHz frequency range immediately outside the harmonic emission on both sides of the harmonic emission. This results in an overall exception interval centred at the harmonic emission of (2MHz + N x $L_{CRB}$ x 180kHz), where N is 2, 3, 4, [5] for the 2nd, 3rd, 4th [or 5th ] harmonic respectively. The exception is allowed if the measurement bandwidth (MBW) totally or partially overlaps the overall exception interval.
Note 3: To meet these requirements some restriction will be needed for either the operating band or protected band.
Note 4: N/A
Note 5: For non synchronised TDD operation to meet these requirements some restriction will be needed for either the operating band or protected band.
Note 6: N/A
Note 7: Applicable when co-existence with PHS system operating in 1884.5 -1919.6MHz.
Note 8: Applicable when co-existence with PHS system operating in 1884.5 -1915.7MHz.
Note 9: N/A
Note 10: N/A
Note 11: Whether the applicable frequency range should be 793-805MHz instead of 799-805MHz is TBD.
Note 12: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB.
Note 13: This requirement applies for 5, 10, 15 and 20 MHz E-UTRA channel bandwidth allocated within 1744.9MHz and 1784.9MHz.
Note 14: N/A
Note 15: These requirements also apply for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.
Note 16: N/A
Note 17: N/A
Note 18: N/A
Note 19: Applicable when the assigned E-UTRA carrier is confined within 718 MHz and 748 MHz and when the channel bandwidth used is 5 or 10 MHz.
Note 20: N/A
Note 21: This requirement is applicable for any channel bandwidths within the range 2500 - 2570 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2560.5 - 2562.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2552 - 2560 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.
Note 22: This requirement is applicable for any channel bandwidths within the range 2570 - 2615 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2605.5 - 2607.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2597 - 2605 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.
For carriers with channel bandwidth overlapping the frequency range 2615 - 2620 MHz the requirement applies with the maximum output power configured to +19 dBm in the IE *P-Max*.
Note 23: This requirement is applicable only for the following cases:
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 902.5 MHz ≤ $F_c$ < 907.5 MHz with an uplink transmission bandwidth less than or equal to 20 RB
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 907.5 MHz ≤ $F_c$ ≤ 912.5 MHz without any restriction on uplink transmission bandwidth
- for carriers of 10 MHz channel bandwidth when carrier centre frequency ($F_c$) is $F_c$ = 910 MHz with an uplink transmission bandwidth less than or equal to 32 RB with $RB_{start}$ > 3.
Note 24: As exceptions, measurements with a level up to the applicable requirement of -38 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 2nd harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the 2nd harmonic totally or partially overlaps the measurement bandwidth (MBW).
Note 25: As exceptions, measurements with a level up to the applicable requirement of -36 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 3rd harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the 3rd harmonic totally or partially overlaps the measurement bandwidth (MBW).
Note 26: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.
Note 27: This requirement is applicable for any channel bandwidths within the range 1920 - 1980 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1927.5 - 1929.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1930 - 1938 MHz the requirement is applicable only for an uplink

| | |
|---|---|
| | transmission bandwidth less than or equal to 54 RB. |
| Note 28: | N/A |
| Note 29: | N/A |
| Note 30: | This requirement applies when the E-UTRA carrier is confined within 2545-2575MHz or 2595-2645MHz and the channel bandwidth is 10 or 20 MHz. |
| Note 31: | N/A |
| Note 32: | This requirement is applicable for an uplink transmission bandwidth less than or equal to [54 RB] for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1887.5 - 1889.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1890 - 1898 MHz. |
| Note 33: | This requirement is only applicable for carriers with bandwidth confined within 1885-1920 MHz (requirement for carriers with at least 1RB confined within 1880 - 1885 MHz is not specified). This requirement applies for an uplink transmission bandwidth less than or equal to [54 RB] for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1892.5 - 1894.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1895 - 1903 MHz. |
| Note 34: | This requirement is applicable for 5 and 10 MHz E-UTRA channel bandwidth allocated within 718-728MHz. For carriers of 10 MHz bandwidth, this requirement applies for an uplink transmission bandwidth less than or equal to 30 RB with RBstart > 1 and RBstart<48. |
| Note 35: | This requirement is applicable in the case of a 10 MHz E-UTRA carrier confined within 703 MHz and 733 MHz, otherwise the requirement of -25 dBm with a measurement bandwidth of 8 MHz applies. |

The normative reference for this requirement is TS 36.101 [2] subclause 6.6.3E.2.

This test use minimum requirements from many releases of TS 36.101 [2] due to release independence defined in TS 36.307 [16]

## 6.6.3E.2.4 Test description

### 6.6.3E.2.4.1 Initial conditions

Same initial conditions as in clause 6.6.3.2.4.1 with the following exceptions:

- Instead of Table 6.6.3.2.4.1-1 and Table 6.6.3.2.4.1-2 → use Table 6.6.3E.2.4.1-1 and Table 6.6.3E.2.4.1-2.
- Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.3 using only main UE Tx/Rx antenna.

**Table 6.6.3E.2.4.1-1: Test Configuration Table**

| **Initial Conditions** | | | | | | |
|---|---|---|---|---|---|---|
| Test Environment<br>(as specified in TS 36.508 [7] subclause 4.1) | | | | NC | | |
| Test Frequencies<br>(as specified in TS36.508 [7] subclause 4.3.1)<br>(Note 6, Note 7) | | | | Low range, Mid range, High range<br>(Note 6, 13, 16) | | |
| Test Channel Bandwidths<br>(as specified in TS 36.508 [7] subclause 4.3.1) | | | | Lowest, 5MHz, Highest<br>(Note 13, 16) | | |

| 20MHz | | | | QPSK | 1 | 1[5] |

Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1.
Note 2: The 1 RB allocation shall be tested at both RB #0 and RB #max.
Note 3: To be used for requirements under note 15 in table 6.6.3.2.3-1 in high range at RB#, instead of full allocation.
Note 4: To be used for requirements under note 16 in table 6.6.3.2.3-1 and table 6.6.3.2.3-1A, note 17 in table 6.6.3.2.3-1B, note 22 in table 6.6.3.2.3-1C in high range - 5MHz at RB#(full allocation – 54), instead of full allocation.
Note 5: For requirements under note 16 in table 6.6.3.2.-1 and table 6.6.3.2.3-1A, note 17 in table 6.6.3.2.3-1B, note 22 in table 6.6.3.2.3-1C (high range – 5MHz) is tested instead of high channel.
Note 6: Do not apply for requirements under Note 13 in Tables 6.6.3.2.3-1 to 6.6.3.2.3-1C. Test frequencies for these requirements are defined in Table 6.6.3.2.4.1-2.
Note 7: Void
Note 8: For requirements under note 17 in table 6.6.3.2.3-1A, note 18 in table 6.6.3.2.3-1, note 23 in table 6.6.3.2.3-1C (high range – 10MHz) is tested with RB #0 to RB #19 used.
Note 9: For requirements under note 17 in table 6.6.3.2.3-1A, note 18 in table 6.6.3.2.3-1B, note 23 in table 6.6.3.2.3-1C high range is tested with RB #4 to RB #35 used.
Note 10: For requirements under note 17 in table 6.6.3.2.3-1A, note 18 in table 6.6.3.2.3-1B, note 23 in table 6.6.3E.2.3-1C high range is tested with RB #4 and (RB#max -4) used.
Note 11: To be used for requirements under note 17 in table 6.6.3.2.3-1, note 18 in table 6.6.3.2.3-1A, note 19 in table 6.6.3.2.3-1B and note 27 in table 6.6.3.2.3-1C in low range at RB#0, instead of full allocation.
Note 12: For requirements under note 16 in table 6.6.3E.2.3-1 and table 6.6.3.2.3-1A, note 17 in table 6.6.3.2.3-1B, note 22 in table 6.6.3.2.3-1C, the message exception in Table 6.6.3.2.4.3-1 is used to test with the high range.
Note 13: For requirements under note 31 in table 6.6.3.2.3-1C and note 34 in table 6.6.3E.2.3-1 only 720.5 MHz is tested with 5 MHz and only 723 MHz is tested with 10 MHz.
Note 14: For requirements under note 31 in table 6.6.3.2.3-1C and note 34 in table 6.6.3E.2.3-1 RB #2 and RB #47 used.
Note 15: To be used for requirements under note 31 in table 6.6.3.2.3-1C and note 34 in table 6.6.3E.2.3-1 at RB#2, instead of full allocation.
Note 16: For requirements under note 32 in table 6.6.3.2.3-1C and note 35 in table 6.6.3E.2.3-1 only low range and 728 MHz with 10 MHz is tested.
Note 17: To be used for requirements under note 32 in table 6.6.3E.2.3-1 in low range, instead of full allocation.
Note 18: To be used for requirements under note 33 in table 6.6.3E.2.3-1 (high range-7 MHz), instead of full allocation and high range.

**Table 6.6.3E.2.4.1-2: Test frequencies for E-UTRA channel bandwidth for operating band 3 with Note 13 (in Tables 6.6.3E.2.3-1)**

| Bandwidth [MHz] | $N_{UL}$ | Frequency of Uplink [MHz] | $N_{DL}$ | Frequency of Downlink [MHz] |
|---|---|---|---|---|
| 5 | 19924 | 1782.4 | 1924 | 1877.4 |
| 10 | 19899 | 1779.9 | 1899 | 1874.9 |
| 15 | 19874 | 1777.4 | 1874 | 1872.4 |
| 20 | 19849 | 1774.9 | 1849 | 1869.9 |

### 6.6.3E.2.4.2 Test procedure

Same test procedure as in clause 6.6.3.2.4.2 with the following exception for HD-FDD:

- In step 3, slots with transient periods are not under test. Half-duplex guard subframes are not under test.

### 6.6.3E.2.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the following exceptions:

## 6.6.3E.2.5 Test requirement

Test requirements for Spurious Emissions UE Co-existence are the same as the minimum requirements and are not repeated in this section.

The measured average power of spurious emission, derived in step 3, shall not exceed the described value in table 6.6.3E.2.3-1 according to the following rule:

The requirements for the UE are release specific and can be found in Tables 6.6.3E.2.3-1. If the UE support a band, which is not defined in the table corresponding UE's release, the requirements for this band are taken from the table of earliest release where requirements for this band are defined. This has been described in following Table 6.6.3E.2.5-1.

**Table 6.6.3E.2.5-1: UE Requirements according to UE E-UTRA release and supported E-UTRA band**

| Band | UE Requirements per release |
|---|---|
| | Rel-12 |
| 2 | Table 6.6.3E.2.3-1 |
| 3 | Table 6.6.3E.2.3-1 |
| 4 | Table 6.6.3E.2.3-1 |
| 5 | Table 6.6.3E.2.3-1 |
| 8 | Table 6.6.3E.2.3-1 |
| 13 | Table 6.6.3E.2.3-1 |
| 20 | Table 6.6.3E.2.3-1 |
| 39 | Table 6.6.3E.2.3-1 |
| 41 | Table 6.6.3E.2.3-1 |

NOTE 1: The following is applied to Note2 in Table 6.6.3E.2.3-1. For frequency with 2nd, 3rd or 4th harmonic spurious emissions, the measurements are covered in 6.6.3.1.

NOTE 2: The restriction on the maximum uplink transmission to 36 RB in Notes 14 and 15 of Table 6.6.3E.2.5-1 is intended for conformance testing and may be applied to network operation to facilitate coexistence when the aggressor and victim bands are deployed in the same geographical area. The applicable spurious emission requirement of -15.5 dBm/5MHz is a least restrictive technical condition for FDD/TDD coexistence and may have to be revised in the future.

## 6.6.3E.3 Additional spurious emissions for UE category 0

### 6.6.3E.3.1 Test purpose

Same test purpose as in clause 6.6.3.3.1.

### 6.6.3E.3.2 Test applicability

This test case applies to all types of E-UTRA UE release 12 and forward of UE category 0.

### 6.6.3E.3.3 Minimum conformance requirements

Same minimum conformance requirements as in clause 6.6.3.3.3.

### 6.6.3E.3.4 Test description

#### 6.6.3E.3.4.1 Initial conditions

Same initial conditions as in clause 6.2.3.4.1 with following exceptions for HD-FDD:

- Instead of Table 6.6.3.3.4.1-1 through 6.6.3.3.4.1-15 → use Table 6.6.3E.3.4.1-1 1.
- Connect SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.3 using only main UE Tx/Rx antenna.

**Table 6.6.3E.3.4.1-1: Test Configuration Table (network signalled value "NS_07")**

| **Initial Conditions** | | | | | | |
|---|---|---|---|---|---|---|
| Test Environment (as specified in TS 36.508 [7] subclause 4.1) | | | | NC | | |
| Test Frequencies (as specified in TS36.508 [7] subclause 4.3.1) | | | | Mid range | | |
| Test Channel Bandwidths (as specified in TS 36.508 [7] subclause 4.3.1) | | | | 10MHz | | |
| **Test Parameters for Channel Bandwidths** | | | | | | |
| | | **Downlink Configuration** | | **Uplink Configuration** | | |
| Test Number | Ch BW | Mod'n | RB allocation | Mod'n | RB allocation | $RB_{start}$ |
| 1 | 10MHz | N/A for Additional Spurious Emissions testing. | | QPSK | 1 | 0 |
| 2 | 10MHz | | | QPSK | 8 | 0 |
| 3 | 10MHz | | | QPSK | 6 | 13 |
| 4 | 10MHz | | | QPSK | 20 | 13 |
| 5 | 10MHz | | | QPSK | 12 | 13 |
| 6 | 10MHz | | | 16QAM | 5 | 13 |
| 7 | 10MHz | | | QPSK | 16 | 19 |
| 8 | 10MHz | | | QPSK | 12 | 19 |

| 12 | 10MHz | | | QPSK | 2 | 48 |
| 13 | 10MHz | | | QPSK | 36 | 0 |
| 14 | 10MHz | | | QPSK | 12 | 0 |

Editor's note: The following lines belong at the end of section 6.2.4.4.1. As new tables are added to this section, these lines should always follow the tables.

#### 6.6.3E.3.4.2 Test procedure

Same test procedure as in clause 6.2.3.4.2 with following exception for HD-FDD:

- In step 3, slots with transient periods are not under test. Half-duplex guard subframe are not under test.

**Table 6.6.3E.3.4.2-1: Measurement setup for NS_07**

| | Option 1: Measurement with No RMS VBW available | Option2 Measurement with VBW Filtering on Power scale |
|---|---|---|
| VBW | >=62.5 kHz (10 times or more the RBW) | <=43Hz |
| RBW | <=6.25kHz | <=6.25kHz |
| Detector type | Averages signal envelope during each measurement point, such as "RMS detector" | Peak |
| Averaging mode (Trace averaging) | Power (RMS voltage) | Power (RMS voltage), as controlled by "Average Type" |
| Average Type (applies to detector) | Power (RMS voltage) (automatically occurs with "RMS detector") | Not applicable |
| Average Type (applies to VBW filter) | Not applicable | Power (RMS voltage) |
| Number of averages | 30, to reduce variance as required, or use an even longer sweep time | 1 or use an even narrower VBW filter, thus a longer sweep time |
| Sweep time | [Don't specify] | Sweep rate (span divided by sweep time) <= 0.8 * RBW*VBW |

### 6.6.3E.3.4.3 Message contents

Same message contents as in clause 6.6.3.3.4.3.

## 6.6.3E.3.5 Test requirement

This clause specifies the requirements for the specified E-UTRA band for an additional spectrum emission requirement with protected bands as indicated from table 6.6.3E.3.5.1-1 to table 6.6.3E.3.5.2-1.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

### 6.6.3E.3.5.1 Test requirement (network signalled value "NS_07")

When "NS_07" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-7 as appropriate,

and

- the measured average power of spurious emission, derived in step 4, shall not exceed the described value in Table 6.6.3E.3.5.1-1. These requirements also apply for the frequency ranges that are less than $\Delta f_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3E.3.5.1-1: Additional requirements (network signalled value "NS_07")**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|---|
| | 10 MHz | |

| | | |
|---|---|---|
| 769 ≤ f ≤ 775 | -55.5 | 6.25 kHz |
| Note: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB. | | |

# 6.6.3EA Spurious emission for UE category M1

## 6.6.3EA.1 Transmitter Spurious emissions for UE category M1

### 6.6.3EA.1.1 Test purpose

Same test purpose as in clause 6.6.3.1.1.

### 6.6.3EA.1.2 Test applicability

This test case applies to all types of E-UTRA UE release 13 and forward of UE category M1.

### 6.6.3EA.1.3 Minimum conformance requirements

Same minimum conformance requirements as in clause 6.6.3.1.3.

### 6.6.3EA.1.4 Test description

#### 6.6.3EA.1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in clause 5.2E. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in Table 6.6.3EA.1.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annexe A.2. Configurations of PDSCH and MPDCCH before measurement are specified in Annex C.2.

**Table 6.6.3EA.1.4.1-1: Test Configuration Table**

| Initial Conditions | | | | | |
|---|---|---|---|---|---|
| Test Environment as specified in TS 36.508[7] subclause 4.1 | NC | | | | |
| Test Frequencies as specified in TS 36.508 [7] subclause 4.3.1 | Low range, Mid range, High range | | | | |
| Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1 | Lowest | | | | |
| **Test Parameters for Channel Bandwidths and Narrowband positions** | | | | | |
| | **Downlink Configuration** | **Uplink Configuration** | | | |
| Ch BW | N/A | Mod'n | RB allocation | | |
| | | | FDD and HD-FDD | TDD | Narrowband index (Note 1) |
| **Low range, Mid range** | | | | | |
| 1.4MHz | N/A | QPSK | 1 | 1 | 0 |
| 1.4MHz | | QPSK | 6 | 6 | 0 |
| 3.0MHz | | QPSK | 1 | 1 | 0 |
| 3.0MHz | | QPSK | 6 | 6 | 0 |
| 5MHz | | QPSK | 1 | 1 | 0 |
| 5MHz | | QPSK | 6 | 6 | 0 |
| **High range** | | | | | |
| 1.4MHz | N/A | QPSK | 1 | 1 | 0 |
| 1.4MHz | | QPSK | 6 | 6 | 0 |
| 3.0MHz | | QPSK | 1 | 1 | 1 |
| 3.0MHz | | QPSK | 6 | 6 | 1 |
| 5MHz | | QPSK | 1 | 1 | 3 |
| 5MHz | | QPSK | 6 | 6 | 3 |
| Note 1: Denotes where in the channel Bandwidth the narrowband shall be placed. Narrowband and Narrowband index are defined in TS36.211, 5.2.4<br>Note 2: Test Channel Bandwidths are checked separately for each E-UTRA band, the applicable channel bandwidths are specified in Table 5.4.2.1-1.<br>Note 3: The $RB_{start}$ of partial RB allocation shall be RB#0 and RB# (6 - RB allocation) of the narrowband. | | | | | |

1. Connect SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.7 using only main UE Tx/Rx antenna.

2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.

3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.

4. The UL Reference Measurement channels are set according to Table 6.6.3EA.1.4.1-1.

5. Propagation conditions are set according to Annex B.0.

6. Ensure the UE is in State 3A-RF-CE according to TS 36.508 [7] clause 5.2A.2AA. Message contents are defined in clause 6.6.3EA.1.4.3.

### 6.6.3EA.1.4.2 Test procedure

1. SS sends uplink scheduling information for each UL HARQ process via MPDCCH DCI format 6-0A for C_RNTI to schedule the UL RMC according to Table 6.6.3EA.1.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.

2. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE until the UE transmits at $P_{UMAX}$ level.

3. Measure the power of the transmitted signal with a measurement filter of bandwidths according to table 6.6.3EA.1.5-1. The centre frequency of the filter shall be stepped in contiguous steps according to table 6.6.3.EA 1.5-1. The measured power shall be verified for each step. The measurement period shall capture the active time slots.

#### 6.6.3EA.1.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the condition CEmodeA.

### 6.6.3EA.1.5 Test requirement

This clause specifies the requirements for the specified E-UTRA band for Transmitter Spurious emissions requirement with frequency range as indicated in table 6.6.3EA.1.5-1.

The measured average power of spurious emission, derived in step 3, shall not exceed the described value in Table 6.6.3EA.1.5-1.

The spurious emission limits apply for the frequency ranges that are more than $\Delta f_{OOB}$ (MHz) from the edge of the channel bandwidth shown in Table 6.6.3.1.3-1.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

**Table 6.6.3EA.1.5-1: General spurious emissions test requirements**

| Frequency Range | Maximum Level | Measurement Bandwidth | Notes |
|---|---|---|---|
| 9 kHz ≤ f < 150 kHz | -36 dBm | 1 kHz | |
| 150 kHz ≤ f < 30 MHz | -36 dBm | 10 kHz | |
| 30 MHz ≤ f < 1000 MHz | -36 dBm | 100 kHz | |
| 1 GHz ≤ f < 12.75 GHz | -30 dBm | 1 MHz | |

## 6.6.3EA.2 Spurious emission band UE co-existence for UE category M1

### 6.6.3EA.2.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to co-existing systems for the specified bands which has specific requirements in terms of transmitter spurious emissions.

### 6.6.3EA.2.2 Test applicability

This test case applies to all types of E-UTRA UE release 13 and forward of UE category M1.

### 6.6.3EA.2.3 Minimum conformance requirements

This clause specifies the requirements for the specified E-UTRA band for coexistence with protected bands as indicated in Tables 6.6.3EA.2.3-1, 6.6.3EA.2.3-1A and 6.6.3EA.2.3-1B.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

**Table 6.6.3EA.2.3-1: Spurious emission band limits Rel-13**

| E-UTRA Band | Spurious emission | | | | | | |
|---|---|---|---|---|---|---|---|
| | Protected band | Frequency range (MHz) | | | Maximum Level (dBm) | MBW (MHz) | NOTE |
| 1 | E-UTRA Band 1, 5, 7, 8, 11, 18, 19, 20, 21, 22, 26, 27, 28, 31, 32, 38, 40, 41, 42, 43, 44, 45, 65, 67, 68 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 3, 34 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 15 |
| | Frequency range | 1839.9 | - | 1879.9 | -50 | 1 | 15 |
| | Frequency range | 1880 | | 1895 | -40 | 1 | 15, 27 |
| | Frequency range | 1895 | | 1915 | -15.5 | 5 | 15, 26, 27 |
| | Frequency range | 1915 | | 1920 | +1.6 | 5 | 15, 26, 27 |
| 2 | E-UTRA Band 4, 5, 10, 12, 13, 14, 17, 23, 24, 26, 27, 28, 29, 30, 41, 42, 66 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 2, 25 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 15 |
| | E-UTRA Band 43 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 2 |
| 3 | E-UTRA Band 1, 5, 7, 8, 20, 26, 27, 28, 31, 32, 33, 34, 38, 39, 40, 41, 43, 44, 45, 65, 67, 68 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 3 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 15 |
| | E-UTRA Band 11, 18, 19, 21 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 13 |
| | E-UTRA Band 22, 42 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 2 |
| | Frequency range | 1884.5 | - | 1915.7 | -41 | 0.3 | 13 |
| 4 | E-UTRA Band 2, 4, 5, 7, 10, 12, 13, 14, 17, 23, 24, 25, 26, 27, 28, 29, 30, 41, 43, 66 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 42 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 2 |
| 5 | E-UTRA Band 1, 2, 3, 4, 5, 7, 8, 10, 12, 13, 14, 17, 23, 24, 25, 28, 29, 30, 31, 34, 38, 40, 42, 43, 45, 65, 66 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 26 | 859 | - | 869 | -27 | 1 | |
| | E-UTRA Band 41 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 2 |
| | E-UTRA Band 18, 19 | $F_{DL_low}$ | - | $F_{DL_high}$ | -40 | 1 | 38 |
| | E-UTRA Band 11, 21 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 38 |
| | Frequency range | 1884.5 | - | 1915.7 | -41 | 0.3 | 8, 38 |
| 7 | E-UTRA Band 1, 2, 3, 4, 5, 7, 8, 10, 12, 13, 14, 17, 20, 22, 26, 27, 28, 29, 30, 31, 32, 33, 34, 40, 42, 43, 65, 66, 67, 68 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | Frequency range | 2570 | - | 2575 | +1.6 | 5 | 15, 21, 26 |

| 31 | E-UTRA Band 1, 5, 7, 8, 20, 22, 26, 27, 28, 31, 32, 33, 34, 38, 40, 42, 43, 65, 67 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 3 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 2 |
| … | | | | | | | |
| 39 | E-UTRA Band 1, 8, 22, 26, 34, 40, 41, 42, 44, 45 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | Frequency range | 1805 | | 1855 | -40 | 1 | 33 |
| | Frequency range | 1855 | | 1880 | -15.5 | 5 | 15,26,33 |
| 41 | E-UTRA Band 1, 2, 3, 4, 5, 8, 10, 12, 13 , 14, 17, 23, 24, 25, 26, 27, 28, 29, 30, 34, 39, 40, 42, 44, 45, 65, 66 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 9, 11, 18, 19, 21 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 30 |
| | Frequency range | 1839.9 | | 1879.9 | -50 | 1 | 30 |
| | Frequency range | 1884.5 | | 1915.7 | -41 | 0.3 | 8, 30 |

NOTE 1: $F_{DL_low}$ and $F_{DL_high}$ refer to each E-UTRA frequency band specified in Table 5.5-1

NOTE 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2nd, 3rd, 4th [or 5th] harmonic spurious emissions. Due to spreading of the harmonic emission the exception is also allowed for the first 1 MHz frequency range immediately outside the harmonic emission on both sides of the harmonic emission. This results in an overall exception interval centred at the harmonic emission of (2MHz + N x $L_{CRB}$ x 180kHz), where N is 2, 3, 4, [5] for the 2nd, 3rd, 4th [or 5th] harmonic respectively. The exception is allowed if the measurement bandwidth (MBW) totally or partially overlaps the overall exception interval.

NOTE 3: To meet these requirements some restriction will be needed for either the operating band or protected band

NOTE 4: N/A

NOTE 5: For non synchronised TDD operation to meet these requirements some restriction will be needed for either the operating band or protected band

NOTE 6: N/A
NOTE 7: Applicable when co-existence with PHS system operating in 1884.5 -1919.6MHz.
NOTE 8: Applicable when co-existence with PHS system operating in 1884.5 -1915.7MHz.
NOTE 9: N/A
NOTE 10: N/A
NOTE 11: Whether the applicable frequency range should be 793-805MHz instead of 799-805MHz is TBD
NOTE 12: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB
NOTE 13: This requirement applies for 5, 10, 15 and 20 MHz E-UTRA channel bandwidth allocated within 1744.9MHz and 1784.9MHz.
NOTE 14: N/A
NOTE 15: These requirements also apply for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1-1 and Table 6.6.3.1A-1 from the edge of the channel bandwidth.
NOTE 16: N/A
NOTE 17: N/A
NOTE 18: N/A
NOTE 19: Applicable when the assigned E-UTRA carrier is confined within 718 MHz and 748 MHz and when the channel bandwidth used is 5 or 10 MHz.
NOTE 20: N/A
NOTE 21: This requirement is applicable for any channel bandwidths within the range 2500 - 2570 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2560.5 - 2562.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2552 - 2560 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.
NOTE 22: This requirement is applicable for any channel bandwidths within the range 2570 - 2615 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2605.5 - 2607.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2597 - 2605 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.
For carriers with channel bandwidth overlapping the frequency range 2615 - 2620 MHz the requirement applies with the maximum output power configured to +19 dBm in the IE *P-Max*.
NOTE 23: This requirement is applicable only for the following cases:
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 902.5 MHz ≤ $F_c$ < 907.5 MHz with an uplink transmission bandwidth less than or equal to 20 RB
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 907.5 MHz ≤ $F_c$ ≤ 912.5 MHz without any restriction on uplink transmission bandwidth.
- for carriers of 10 MHz channel bandwidth when carrier centre frequency ($F_c$) is $F_c$ = 910 MHz with an uplink transmission bandwidth less than or equal to 32 RB with $RB_{start}$ > 3.
NOTE 24: As exceptions, measurements with a level up to the applicable requirement of -38 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 2nd harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the 2nd harmonic totally or partially overlaps the measurement bandwidth (MBW).
NOTE 25: As exceptions, measurements with a level up to the applicable requirement of -36 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 3rd harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the 3rd harmonic totally or partially overlaps the measurement bandwidth (MBW).
NOTE 26: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.
NOTE 27: This requirement is applicable for any channel bandwidths within the range 1920 - 1980 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1927.5 - 1929.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1930 - 1938 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.
NOTE 28: N/A
NOTE 29: N/A
NOTE 30: This requirement applies when the E-UTRA carrier is confined within 2545-2575MHz or 2595-2645MHz and the channel bandwidth is 10 or 20 MHz
NOTE 31: N/A
NOTE 33: This requirement is only applicable for carriers with bandwidth confined within 1885-1920 MHz (requirement for carriers with at least 1RB confined within 1880 - 1885 MHz is not specified). This requirement applies for an uplink transmission bandwidth less than or equal to 54 RB for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1892.5 - 1894.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1895 - 1903 MHz.
NOTE 34: This requirement is applicable for 5 and 10 MHz E-UTRA channel bandwidth allocated within 718-728MHz. For carriers of 10 MHz bandwidth, this requirement applies for an uplink transmission bandwidth less than or equal to 30 RB with RBstart > 1 and RBstart<48.

NOTE 35: This requirement is applicable in the case of a 10 MHz E-UTRA carrier confined within 703 MHz and 733 MHz, otherwise the requirement of -25 dBm with a measurement bandwidth of 8 MHz applies.
NOTE 36: This requirement is applicable for E-UTRA channel bandwidth allocated within 1920-1980 MHz.
NOTE 37: Applicable when the upper edge of the channel bandwidth frequency is greater than 1980MHz.
NOTE 38: Applicable only for UE category M1 and NB1.

**Table 6.6.3EA.2.3-1A: Spurious emission band limits Rel-14**

| E-UTRA Band | Spurious emission | | | | | | |
|---|---|---|---|---|---|---|---|
| | Protected band | Frequency range (MHz) | | | Maximum Level (dBm) | MBW (MHz) | NOTE |
| 1 | E-UTRA Band 1, 5, 7, 8, 11, 18, 19, 20, 21, 22, 26, 27, 28, 31, 32, 38, 40, 41, 42, 43, 44, 45, 65, 67, 68, 69 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 3, 34 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 15 |
| | Frequency range | 1880 | | 1895 | -40 | 1 | 15, 27 |
| | Frequency range | 1895 | | 1915 | -15.5 | 5 | 15, 26, 27 |
| | Frequency range | 1915 | | 1920 | +1.6 | 5 | 15, 26, 27 |
| 2 | E-UTRA Band 4, 5, 10, 12, 13, 14, 17, 24, 26, 27, 28, 29, 30, 41, 42, 48, 66, 70 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 2, 25 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 15 |
| | E-UTRA Band 43 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 2 |
| 3 | E-UTRA Band 1, 5, 7, 8, 20, 26, 27, 28, 31, 32, 33, 34, 38, 39, 40, 41, 43, 44, 45, 65, 67, 68, 69 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 3 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 15 |
| | E-UTRA Band 11, 18, 19, 21 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 13 |
| | E-UTRA Band 22, 42 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 2 |
| | Frequency range | 1884.5 | - | 1915.7 | -41 | 0.3 | 13 |
| 4 | E-UTRA Band 2, 4, 5, 7, 10, 12, 13, 14, 17, 24, 25, 26, 27, 28, 29, 30, 41, 43, 48, 66, 70 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 42 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 2 |
| 5 | E-UTRA Band 1, 2, 3, 4, 5, 7, 8, 10, 12, 13, 14, 17, 24, 25, 28, 29, 30, 31, 34, 38, 40, 42, 43, 45, 48, 65, 66, 70 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 26 | 859 | - | 869 | -27 | 1 | |
| | E-UTRA Band 41 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 2 |
| | E-UTRA Band 18, 19 | $F_{DL_low}$ | - | $F_{DL_high}$ | -40 | 1 | 39 |
| | E-UTRA Band 11, 21 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 39 |
| | Frequency range | 1884.5 | - | 1915.7 | -41 | 0.3 | 8, 39 |
| 7 | E-UTRA Band 1, 2, 3, 4, 5, 7, 8, 10, 12, 13, 14, 17, 20, 22, 26, 27, 28, 29, 30, 31, 32, 33, 34, 40, 42, 43, 65, 66, 67, 68 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | Frequency range | 2570 | - | 2575 | +1.6 | 5 | 15, 21, 26 |
| | Frequency range | 2575 | - | 2595 | -15.5 | 5 | 15, 21, 26 |
| | Frequency range | 2595 | - | 2620 | -40 | 1 | 15, 21 |
| 8 | E-UTRA Band 1, 20, 28, 31, 32, 33, 34, 38, 39, 40, 45, 65, 67, 68, 69 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA band 3, 7, 22, 41, 42, 43 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 2 |
| | E-UTRA Band 8 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 15 |
| | E-UTRA Band 11, 21 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 23 |
| | Frequency range | 860 | - | 890 | -40 | 1 | 15, 23 |
| | Frequency range | 1884.5 | - | 1915.7 | -41 | 0.3 | 8, 23 |
| | E-UTRA Band 22, 42 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 2 |
| 11 | E-UTRA Band 1, 11, 18, 19, 21, 28, 34, 42, 65 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | Frequency range | 945 | - | 960 | -50 | 1 | |
| | Frequency range | 1839.9 | - | 1879.9 | -50 | 1 | |
| | Frequency range | 1884.5 | - | 1915.7 | -41 | 0.3 | 8 |
| | Frequency range | 2545 | - | 2575 | -50 | 1 | |
| | Frequency range | 2595 | - | 2645 | -50 | 1 | |

| | Frequency range | 773 | - | 803 | -50 | 1 | |
| | Frequency range | 1884.5 | - | 1915.7 | -41 | 0.3 | 8, 19 |
| 31 | E-UTRA Band 1, 5, 7, 8, 20, 22, 26, 27, 28, 31, 32, 33, 34, 38, 40, 42, 43, 65, 67, 68, 69 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 3 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 2 |
| | Frequency range | 470 | - | 694 | -42 | 8 | |
| 39 | E-UTRA Band 1, 8, 22, 26, 34, 40, 41, 42, 44, 45 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | Frequency range | 1805 | | 1855 | -40 | 1 | 33 |
| | Frequency range | 1855 | | 1880 | -15.5 | 5 | 15,26,33 |
| 40 | E-UTRA Band 1, 3, 5, 7, 8, 20, 22, 26, 27, 28, 31, 32, 33, 34, 38, 39, 41, 42, 43, 44, 45, 65, 67, 68, 69 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| 41 | E-UTRA Band 1, 2, 3, 4, 5, 8, 10, 12, 13 , 14, 17, 24, 25, 26, 27, 28, 29, 30, 34, 39, 40, 42, 44, 45, 48, 65, 66, 70 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 9, 11, 18, 19, 21 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 30 |
| | Frequency range | 1884.5 | | 1915.7 | -41 | 0.3 | 8, 30 |
| 66 | E-UTRA Band 2, 4, 5, 7, 10, 12, 13, 14, 17, 24, 25, 26, 27, 28, 29, 30, 38, 41, 43, 66, 70 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 42, 48 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 2 |

NOTE 1: $F_{DL_low}$ and $F_{DL_high}$ refer to each E-UTRA frequency band specified in Table 5.5-1
NOTE 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2nd, 3rd, 4th [or 5th] harmonic spurious emissions. Due to spreading of the harmonic emission the exception is also allowed for the first 1 MHz frequency range immediately outside the harmonic emission on both sides of the harmonic emission. This results in an overall exception interval centred at the harmonic emission of (2MHz + N x $L_{CRB}$ x 180kHz), where N is 2, 3, 4, [5] for the 2nd, 3rd, 4th [or 5th] harmonic respectively. The exception is allowed if the measurement bandwidth (MBW) totally or partially overlaps the overall exception interval.
NOTE 3: N/A
NOTE 4: N/A
NOTE 5: For non synchronised TDD operation to meet these requirements some restriction will be needed for either the operating band or protected band
NOTE 6: N/A
NOTE 7: Applicable when co-existence with PHS system operating in 1884.5 -1919.6MHz.
NOTE 8: Applicable when co-existence with PHS system operating in 1884.5 -1915.7MHz.
NOTE 9: N/A
NOTE 10: N/A
NOTE 11: Whether the applicable frequency range should be 793-805MHz instead of 799-805MHz is TBD
NOTE 12: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB
NOTE 13: This requirement applies for 5, 10, 15 and 20 MHz E-UTRA channel bandwidth allocated within 1744.9MHz and 1784.9MHz.
NOTE 14: N/A
NOTE 15: These requirements also apply for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1-1 and Table 6.6.3.1A-1 from the edge of the channel bandwidth.
NOTE 16: N/A
NOTE 17: N/A
NOTE 18: N/A
NOTE 19: Applicable when the assigned E-UTRA carrier is confined within 718 MHz and 748 MHz and when the channel bandwidth used is 5 or 10 MHz.
NOTE 20: N/A
NOTE 21: This requirement is applicable for any channel bandwidths within the range 2500 - 2570 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2560.5 - 2562.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2552 - 2560 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.
NOTE 22: This requirement is applicable for any channel bandwidths within the range 2570 - 2615 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2605.5 - 2607.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2597 - 2605 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.
For carriers with channel bandwidth overlapping the frequency range 2615 - 2620 MHz the requirement applies with the maximum output power configured to +19 dBm in the IE *P-Max*.
NOTE 23: This requirement is applicable only for the following cases:
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 902.5 MHz ≤ $F_c$ < 907.5 MHz with an uplink transmission bandwidth less than or equal to 20 RB
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 907.5 MHz ≤ $F_c$ ≤ 912.5 MHz without any restriction on uplink transmission bandwidth.
- for carriers of 10 MHz channel bandwidth when carrier centre frequency ($F_c$) is $F_c$ = 910 MHz with an uplink transmission bandwidth less than or equal to 32 RB with $RB_{start}$ > 3.
NOTE 24: As exceptions, measurements with a level up to the applicable requirement of -38 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 2nd harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the 2nd harmonic totally or partially overlaps the measurement bandwidth (MBW).
NOTE 25: As exceptions, measurements with a level up to the applicable requirement of -36 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 3rd harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the 3rd harmonic totally or partially overlaps the measurement bandwidth (MBW).
NOTE 26: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.
NOTE 27: This requirement is applicable for any channel bandwidths within the range 1920 - 1980 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1927.5 - 1929.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1930 - 1938 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.

NOTE 28: N/A
NOTE 29: N/A
NOTE 30: This requirement applies when the E-UTRA carrier is confined within 2545-2575 MHz or 2595-2645 MHz and the channel bandwidth is 10 or 20 MHz
NOTE 31: N/A
NOTE 32: Void
NOTE 33: This requirement is only applicable for carriers with bandwidth confined within 1885-1920 MHz (requirement for carriers with at least 1RB confined within 1880 - 1885 MHz is not specified). This requirement applies for an uplink transmission bandwidth less than or equal to 54 RB for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1892.5 - 1894.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1895 - 1903 MHz.
NOTE 34: This requirement is applicable for 5 and 10 MHz E-UTRA channel bandwidth allocated within 718-728MHz. For carriers of 10 MHz bandwidth, this requirement applies for an uplink transmission bandwidth less than or equal to 30 RB with RBstart > 1 and RBstart<48.
NOTE 35: This requirement is applicable in the case of a 10 MHz E-UTRA carrier confined within 703 MHz and 733 MHz, otherwise the requirement of -25 dBm with a measurement bandwidth of 8 MHz applies.
NOTE 36: This requirement is applicable for E-UTRA channel bandwidth allocated within 1920-1980 MHz.
NOTE 37: Applicable when the upper edge of the channel bandwidth frequency is greater than 1980MHz.
NOTE 38: Applicable when NS_33 or NS_34 is configured by the pre-configured radio parameters.
NOTE 39: Applicable only when the assigned E-UTRA carrier is confined within 824 MHz and 849 MHz for UE category M1, M2 and UE category NB1 and NB2.
NOTE 40: In the frequency range x-5950MHz, SE requirement of -30dBm/MHz should be applied; where x = max (5925, fc + 15), where fc is the channel centre frequency.

**Table 6.6.3EA.2.3-1B: Spurious emission band limits Rel-15**

| E-UTRA Band | Spurious emission | | | | | | |
|---|---|---|---|---|---|---|---|
| | Protected band | Frequency range (MHz) | | | Maximum Level (dBm) | MBW (MHz) | NOTE |
| 1 | E-UTRA Band 1, 5, 7, 8, 11, 18, 19, 20, 21, 22, 26, 27, 28, 31, 32, 38, 40, 41, 42, 43, 44, 45, 50, 51, 52, 65, 67, 68, 69, 72, 73, 74, 75, 76 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 3, 34 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 15 |
| | Frequency range | 1880 | | 1895 | -40 | 1 | 15, 27 |
| | Frequency range | 1895 | | 1915 | -15.5 | 5 | 15, 26, 27 |
| | Frequency range | 1915 | | 1920 | +1.6 | 5 | 15, 26, 27 |
| 2 | E-UTRA Band 4, 5, 10, 12, 13, 14, 17, 24, 26, 27, 28, 29, 30, 41, 42, 48, 50, 51, 66, 70, 71, 74, 85 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 2, 25 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 15 |
| | E-UTRA Band 43 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 2 |
| 3 | E-UTRA Band 1, 5, 7, 8, 20, 26, 27, 28, 31, 32, 33, 34, 38, 39, 40, 41, 43, 44, 45, 50, 51, 65, 67, 68, 69, 72, 73,74, 75, 76 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 3 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 15 |
| | E-UTRA Band 11, 18, 19, 21 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 13 |
| | E-UTRA Band 22, 42, 52 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 2 |
| | Frequency range | 1884.5 | - | 1915.7 | -41 | 0.3 | 13 |
| 4 | E-UTRA Band 2, 4, 5, 7, 10, 12, 13, 14, 17, 24, 25, 26, 27, 28, 29, 30, 41, 43, 48, 50, 51, 66, 70, 71, 74, 85 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 42 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 2 |
| 5 | E-UTRA Band 1, 2, 3, 4, 5, 7, 8, 10, 12, 13, 14, 17, 24, 25, 28, 29, 30, 31, 34, 38, 40, 42, 43, 45, 48, 50, 51, 65, 66, 70, 71, 73, 74, 85 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 26 | 859 | - | 869 | -27 | 1 | |
| | E-UTRA Band 41, 52 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 2 |
| | E-UTRA Band 18, 19 | $F_{DL_low}$ | - | $F_{DL_high}$ | -40 | 1 | 39 |
| | E-UTRA Band 11, 21 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 39 |
| | Frequency range | 1884.5 | - | 1915.7 | -41 | 0.3 | 8, 39 |
| 7 | E-UTRA Band 1, 2, 3, 4, 5, 7, 8, 10, 12, 13, 14, 17, 20, 22, 26, 27, 28, 29, 30, 31, 32, 33, 34, 40, 42, 43, 50, 51, 52, 65, 66, 67, 68, 72, 74, 75, 76, 85 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | Frequency range | 2570 | - | 2575 | +1.6 | 5 | 15, 21, 26 |
| | Frequency range | 2575 | - | 2595 | -15.5 | 5 | 15, 21, 26 |
| | Frequency range | 2595 | - | 2620 | -40 | 1 | 15, 21 |
| 8 | E-UTRA Band 1, 20, 28, 31, 32, 33, 34, 38, 39, 40, 45, 50, 51, 65, 67, 68, 69, 72, 73, 74, 75, 76 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA band 3, 7, 22, 41, 42, 43, 52 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 2 |
| | E-UTRA Band 8 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 15 |
| | E-UTRA Band 11, 21 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 23 |
| | Frequency range | 860 | - | 890 | -40 | 1 | 15, 23 |

| 41 | E-UTRA Band 1, 2, 3, 4, 5, 8, 10, 12, 13 , 14, 17, 24, 25, 26, 27, 28, 29, 30, 34, 39, | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| | 40, 42, 44, 45, 48, 50, 51, 52, 65, 66, 70, 71, 73, 74, 85 | | | | | | |
| | E-UTRA Band 9, 11, 18, 19, 21 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 30 |
| | Frequency range | 1884.5 | | 1915.7 | -41 | 0.3 | 8, 30 |
| 66 | E-UTRA Band 2, 4, 5, 7, 10, 12, 13, 14, 17, 24, 25, 26, 27, 28, 29, 30, 38, 41, 43, 50, 51, 66, 70, 71, 74, 85 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 42, 48 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 2 |
| 71 | E-UTRA Band 4, 5, 12, 13, 14, 17, 24, 26, 29, 30, 48, 66, 71, 85 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 2, 25, 41, 70 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 2 |
| | E-UTRA Band 71 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 15 |

NOTE 1: $F_{DL_low}$ and $F_{DL_high}$ refer to each E-UTRA frequency band specified in Table 5.5-1

NOTE 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2nd, 3rd, 4th [or 5th] harmonic spurious emissions. Due to spreading of the harmonic emission the exception is also allowed for the first 1 MHz frequency range immediately outside the harmonic emission on both sides of the harmonic emission. This results in an overall exception interval centred at the harmonic emission of (2MHz + N x $L_{CRB}$ x 180kHz), where N is 2, 3, 4, [5] for the 2nd, 3rd, 4th [or 5th] harmonic respectively. The exception is allowed if the measurement bandwidth (MBW) totally or partially overlaps the overall exception interval.

NOTE 3: N/A

NOTE 4: N/A

NOTE 5: N/A

NOTE 6: N/A

NOTE 7: N/A

NOTE 8: Applicable when co-existence with PHS system operating in 1884.5 -1915.7MHz.

NOTE 9: N/A

NOTE 10: N/A

NOTE 11: Whether the applicable frequency range should be 793-805MHz instead of 799-805MHz is TBD

NOTE 12: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB

NOTE 13: This requirement applies for 5, 10, 15 and 20 MHz E-UTRA channel bandwidth allocated within 1744.9MHz and 1784.9MHz.

NOTE 14: N/A

NOTE 15: These requirements also apply for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1-1 and Table 6.6.3.1A-1 from the edge of the channel bandwidth.

NOTE 16: N/A

NOTE 17: N/A

NOTE 18: N/A

NOTE 19: Applicable when the assigned E-UTRA carrier is confined within 718 MHz and 748 MHz and when the channel bandwidth used is 5 or 10 MHz.

NOTE 20: N/A

NOTE 21: This requirement is applicable for any channel bandwidths within the range 2500 - 2570 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2560.5 - 2562.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2552 - 2560 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.

NOTE 22: N/A

NOTE 23: This requirement is applicable only for the following cases:
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 902.5 MHz ≤ $F_c$ < 907.5 MHz with an uplink transmission bandwidth less than or equal to 20 RB
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 907.5 MHz ≤ $F_c$ ≤ 912.5 MHz without any restriction on uplink transmission bandwidth.
- for carriers of 10 MHz channel bandwidth when carrier centre frequency ($F_c$) is $F_c$ = 910 MHz with an uplink transmission bandwidth less than or equal to 32 RB with $RB_{start}$ > 3.

NOTE 24: As exceptions, measurements with a level up to the applicable requirement of -38 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 2nd harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the 2nd harmonic totally or partially overlaps the measurement bandwidth (MBW).

NOTE 25: As exceptions, measurements with a level up to the applicable requirement of -36 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 3rd harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the 3rd harmonic totally or partially overlaps the measurement bandwidth (MBW).

NOTE 26: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.

NOTE 27: This requirement is applicable for any channel bandwidths within the range 1920 - 1980 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1927.5 - 1929.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1930 - 1938 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.
NOTE 28: N/A
NOTE 29: N/A
NOTE 30: This requirement applies when the E-UTRA carrier is confined within 2545-2575MHz or 2595-2645MHz and the channel bandwidth is 10 or 20 MHz
NOTE 31: N/A
NOTE 32: Void
NOTE 33: This requirement is only applicable for carriers with bandwidth confined within 1885-1920 MHz (requirement for carriers with at least 1RB confined within 1880 - 1885 MHz is not specified). This requirement applies for an uplink transmission bandwidth less than or equal to 54 RB for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1892.5 - 1894.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1895 - 1903 MHz.
NOTE 34: This requirement is applicable for 5 and 10 MHz E-UTRA channel bandwidth allocated within 718-728MHz. For carriers of 10 MHz bandwidth, this requirement applies for an uplink transmission bandwidth less than or equal to 30 RB with RBstart > 1 and RBstart<48.
NOTE 35: This requirement is applicable in the case of a 10 MHz E-UTRA carrier confined within 703 MHz and 733 MHz, otherwise the requirement of -25 dBm with a measurement bandwidth of 8 MHz applies.
NOTE 36: N/A
NOTE 37: N/A
NOTE 38: N/A
NOTE 39: Applicable only when the assigned E-UTRA carrier is confined within 824 MHz and 849 MHz for UE category M1, M2 and UE category NB1 and NB2.
NOTE 40: N/A
NOTE 41: N/A
NOTE 42: N/A

The normative reference for this requirement is TS 36.101 [2] subclause 6.6.3.2.

This test use minimum requirements from many releases of TS 36.101 [2] due to release independence defined in TS 36.307 [16]

## 6.6.3EA.2.4 Test description

### 6.6.3EA.2.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in clause 5.2E. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in Table 6.6.3EA.2.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annexe A.2. Configurations of PDSCH and MPDCCH before measurement are specified in Annex C.2.

**Table 6.6.3EA.2.4.1-1: Test Configuration Table**

| Initial Conditions | | | | | | | |
|---|---|---|---|---|---|---|---|
| Test Environment (as specified in TS 36.508 [7] subclause 4.1) | | | | NC | | | |
| Test Frequencies (as specified in TS36.508 [7] subclause 4.3.1) (Note 6, Note 7) | | | | Low range, Mid range, High range (Note 6, 13, 16) | | | |
| Test Channel Bandwidths (as specified in TS 36.508 [7] subclause 4.3.1) | | | | Lowest, 5MHz, Highest (Note 13, 16) | | | |
| **Test Parameters for Channel Bandwidths** | | | | | | | |
| | **Downlink Configuration** | | | **Uplink Configuration** | | | |
| Ch BW | Mod'n | RB allocation | | Mod'n | RB allocation | | |
| | | FDD | TDD | | FDD | TDD | Narrowband index[1] |
| 1.4MHz | N/A for Spurious Emissions testing | | | QPSK | 6@0 | 6@0 | 0 |
| 1.4MHz | | | | QPSK | 1@0 | 1@0 | 0 |

| 20MHz | | | | QPSK | 1@0 | 1@0[5] | 0 |
| 20MHz | | | | QPSK | 1@5 | 1@5[5] | 15 |

Note 1: Denotes where in the channel Bandwidth the narrowband shall be placed. Narrowband and Narrowband index are defined in TS36.211, 5.2.4
Note 2: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1.
Note 3: For requirements under note 21 in table 6.6.3EA.2.3-1 in high range with max narrowband index.
Note 4: Void
Note 5: Void
Note 6: Do not apply for requirements under Note 13 in Table 6.6.3EA.2.3-1. Test frequencies for these requirements are defined in Table 6.6.3EA.2.4.1-2.
Note 7: Void
Note 8: For requirements under note 23 in table 6.6.3EA.2.3-1 (high range – 10MHz) is tested at RB #0 with narrowband index 0.
Note 9: For requirements under note 23 in table 6.6.3EA.2.3-1 high range is tested at RB #0 with narrowband index 1.
Note 10: For requirements under note 23 in table 6.6.3EA.2.3-1 high range is tested at RB #3 with narrowband index 0 and at RB#2 with narrowband index 7.
Note 11: For requirements under note 27 in table 6.6.3EA.2.3-1 in low range with narrowband index 0.
Note 12: Void
Note 13: For requirements under note 31 in table 6.6.3.2.3-1C and note 34 in table 6.6.3.2.3-1D only 720.5 MHz is tested with 5 MHz and only 723 MHz is tested with 10 MHz.
Note 14: For requirements under note 34 in table 6.6.3EA.2.3-1 RB#1 with narrowband index 0 and RB#4 with narrowband index 7 are used.
Note 15: For requirements under note 34 in table 6.6.3EA.2.3-1 RB#0 with narrowband index 1 is used
Note 16: For requirements under note 35 in table 6.6.3EA.2.3-1 only low range and 728 MHz with 10 MHz is tested.
Note 17: Void
Note 18: For requirements under note 33 in table 6.6.3EA.2.3-1 (high range-7 MHz) is tested.

**Table 6.6.3EA.2.4.1-2: Test frequencies for E-UTRA channel bandwidth for operating band 3 with Note 13 (in Tables 6.6.3EA.2.3-1)**

| Bandwidth [MHz] | $N_{UL}$ | Frequency of Uplink [MHz] | $N_{DL}$ | Frequency of Downlink [MHz] |
|---|---|---|---|---|
| 5 | 19924 | 1782.4 | 1924 | 1877.4 |
| 10 | 19899 | 1779.9 | 1899 | 1874.9 |
| 15 | 19874 | 1777.4 | 1874 | 1872.4 |
| 20 | 19849 | 1774.9 | 1849 | 1869.9 |

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.7 using only main UE Tx/Rx antenna.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Table 6.6.3EA.2.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF-CE according to TS 36.508 [7] clause 5.2A.2AA. Message contents are defined in clause 6.6.3EA.2.4.3.

#### 6.6.3EA.2.4.2 Test procedure

1. SS sends uplink scheduling information for each UL HARQ process via MPDCCH DCI format 6-0A for C_RNTI to schedule the UL RMC according to Table 6.6.3EA.2.4.1-1. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
2. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE until the UE transmits at $P_{UMAX}$ level.
3. Measure the power of the transmitted signal with a measurement filter of bandwidths according to table 6.6.3EA.2.3-1. The centre frequency of the filter shall be stepped in contiguous steps according to table 6.6.3EA.2.5-1. The measured power shall be verified for each step. The measurement period shall capture the active time slots.

#### 6.6.3EA.2.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the condition CEModeA.

### 6.6.3EA.2.5 Test requirement

Test requirements for Spurious Emissions UE Co-existence are the same as the minimum requirements and are not repeated in this section.

The measured average power of spurious emission, derived in step 3, shall not exceed the described value in table 6.6.3EA.2.3-1 according to the following rule:

The requirements for the UE are release specific and can be found in Tables 6.6.3EA.2.3-1. If the UE support a band, which is not defined in the table corresponding UE's release, the requirements for this band are taken from the table of earliest release where requirements for this band are defined. This has been described in following Table 6.6.3EA.2.5-1.

**Table 6.6.3EA.2.5-1: UE Requirements according to UE E-UTRA release and supported E-UTRA band**

| Band | UE Requirements per release | | |

| 71 | Table 6.6.3EA.2.3-1B | Table 6.6.3EA.2.3-1B | Table 6.6.3EA.2.3-1B |

NOTE 1: The following is applied to Note2 in Table 6.6.3EA.2.3-1. For frequency with 2nd, 3rd or 4th harmonic spurious emissions, the measurements are covered in 6.6.3.1.

NOTE 2: The restriction on the maximum uplink transmission to 36 RB in Notes 14 and 15 of Table 6.6.3EA.2.5-1 is intended for conformance testing and may be applied to network operation to facilitate coexistence when the aggressor and victim bands are deployed in the same geographical area. The applicable spurious emission requirement of -15.5 dBm/5MHz is a least restrictive technical condition for FDD/TDD coexistence and may have to be revised in the future.6.6.3EA.3 Additional spurious emissions for UE category M1

## 6.6.3EA.3 Additional spurious emissions for UE category M1

Editor's note: Following aspects missing or not yet determined:

- Test configuration tables and test requirement tables FFS for NS_12

### 6.6.3EA.3.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to other channels or other systems in terms of transmitter spurious emissions under the deployment scenarios where additional requirements are specified.

### 6.6.3EA.3.2 Test applicability

This test case applies to all types of E-UTRA UE release 13 and forward of UE category M1.

### 6.6.3EA.3.3 Minimum conformance requirements

These requirements are specified in terms of an additional spectrum emission requirement. Additional spurious emission requirements are signalled by the network to indicate that the UE shall meet an additional requirement for a specific deployment scenario as part of the cell handover/broadcast message.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

#### 6.6.3EA.3.3.1 Minimum requirement (network signalled value "NS_05")

When "NS_05" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3EA.3.1-1. This requirement also applies for the frequency ranges that are less than FOOB (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3EA.3.1-1: Additional requirements (PHS)**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | | | | Measurement bandwidth | NOTE |
|---|---|---|---|---|---|---|
| | 5 MHz | 10 MHz | 15 MHz | 20 MHz | | |
| 1884.5 ≤ f ≤1915.7 | -41 | -41 | -41 | -41 | 300 KHz | 1 |

#### 6.6.3EA.3.3.2 Minimum requirement (network signalled value "NS_07")

When "NS_07" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3EA.3.2-1. This requirement also applies for the frequency ranges that are less than FOOB (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3EA.3.2-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|---|
| | 10 MHz | |
| 769 ≤ f ≤ 775 | -57 | 6.25 kHz |
| NOTE: The emissions measurement shall be sufficiently power averaged to ensure standard deviation < 0.5 dB. | | |

#### 6.6.3EA.3.3.3 Minimum requirement (network signalled value "NS_08")

When "NS_08" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3EA.3.3.3-1. This requirement also applies for the frequency ranges that are less than $\Delta f_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3EA.3.3.3-1: Additional requirement**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | | | Measurement bandwidth |
|---|---|---|---|---|
| | 5MHz | 10MHz | 15MHz | |
| 860 ≤ f ≤ 895 | -40 | -40 | -40 | 1 MHz |

#### 6.6.3EA.3.3.4 Minimum requirement (network signalled value "NS_09")

When "NS 09" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3EA.3.3.4-1. This requirement also applies for the frequency ranges that are less than $\Delta f_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3EA.3.3.4-1: Additional requirement**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | | | Measurement bandwidth |
|---|---|---|---|---|
| | 5MHz | 10MHz | 15MHz | |
| 1475.9 ≤ f ≤ 1510.9 | -35 | -35 | -35 | 1 MHz |

NOTE 1: To improve measurement accuracy, A-MPR values for NS_09 specified Table 6.2.4EA -1 in sub-clause 6.2.4EA are derived based on 100 kHz RBW.

### 6.6.3EA.3.3.5 Minimum requirement (network signalled value "NS_12")

When "NS 12" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3EA.3.3.5-1. This requirement also applies for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3EA.3.3.5-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|---|
| | 1.4 MHz, 3 MHz, 5 MHz, 10 MHz, 15 MHz | |
| 806 ≤ f ≤ 813.5 | -42 | 6.25 kHz |
| NOTE 1: The requirement applies for E-UTRA carriers with lower channel edge at or above 814.2 MHz.<br>NOTE 2: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB. | | |

### 6.6.3EA.3.3.6 Minimum requirement (network signalled value "NS_13")

When "NS 13" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3EA.3.3.6-1. This requirement also applies for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3EA.3.3.6-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|---|
| | 1.4, 3, 5 MHz | |
| 806 ≤ f ≤ 816 | -42 | 6.25 kHz |
| NOTE 1: The requirement applies for E-UTRA carriers with lower channel edge at or above 819 MHz.<br>NOTE 2: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB. | | |

### 6.6.3EA.3.3.7 Minimum requirement (network signalled value "NS_14")

When "NS 14" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3EA.3.3.7-1. This requirement also applies for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3EA.3.3.7-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|---|
| | 10 MHz, 15 MHz | |
| 806 ≤ f ≤ 816 | -42 | 6.25 kHz |
| NOTE 1: The requirement applies for E-UTRA carriers with lower channel edge at or above 824 MHz.<br>NOTE 2: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB. | | |

6.6.3EA.3.3.8 Minimum requirement (network signalled value "NS_15")

When "NS 15" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3EA.3.3.8-1. This requirement also applies for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3EA.3.3.8-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|---|
| | 1.4 MHz, 3 MHz, 5 MHz, 10 MHz, 15 MHz | |
| 851 ≤ f ≤ 859 | -53 | 6.25 kHz |
| NOTE 1: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB. | | |

6.6.3EA.3.3.9 Minimum requirement (network signalled value "NS_16")

When "NS_16" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3EA.3.3.9-1. This requirement also applies for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3EA.3.3.9-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth | NOTE |
|---|---|---|---|
| | 1.4, 3, 5, 10 MHz | | |
| 790 ≤ f ≤ 803 | -32 | 1 MHz | |

6.6.3EA.3.3.10 Minimum requirement (network signalled value "NS_17")

When "NS_17" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3EA.3.3.10-1. This requirement also applies for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3EA.3.3.10-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth | NOTE |
|---|---|---|---|
| | 5, 10 MHz | | |
| 470 ≤ f ≤ 710 | -26.2 | 6 MHz | 1 |
| NOTE 1: Applicable when the assigned E-UTRA carrier is confined within 718 MHz and 748 MHz and when the channel bandwidth used is 5 or 10 MHz. | | | |

#### 6.6.3EA.3.3.11 Minimum requirement (network signalled value "NS_18")

When "NS_18" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3EA.3.3.11-1. This requirement also applies for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3EA.3.3.11-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth | NOTE |
|---|---|---|---|
| | 5, 10, 15, 20 MHz | | |
| 692-698 | -26.2 | 6 MHz | |

The normative reference for this requirement is TS 36.101 [2] subclause 6.6.3.3.

### 6.6.3EA.3.4 Test description

#### 6.6.3EA.3.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in clause 5.2E. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in Table 6.6.3EA.3.4.1-1 to Table 6.6.3EA.3.4.1-11. The details of the uplink reference measurement channels (RMCs) are specified in Annexe A.2. Configurations of PDSCH and MPDCCH before measurement are specified in Annex C.2.

**Table 6.6.3EA.3.4.1-1: Test Configuration Table (network signalled value "NS_05")**

| Initial Conditions | | | | | |
|---|---|---|---|---|---|
| Test Environment as specified in TS 36.508[7] subclause 4.1 | | | Normal | | |
| Test Frequencies as specified in TS 36.508 [7] subclause 4.3.1 | | | Low Range | | |
| Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1 | | | 5MHz | | |
| **Test Parameters for Channel Bandwidths and Narrowband positions** | | | | | |
| | | **Downlink Configuration** | **Uplink Configuration** | | |
| Configuration ID | Ch BW | N/A | Mod'n | RB allocation | |
| | | | | FDD and HD-FDD | Narrowband index (Note 1) |
| 1 | 5MHz | | QPSK | 1 | 0 |
| 2 | 5MHz | | QPSK | 6 | 0 |
| Note 1: Denotes where in the channel Bandwidth the narrowband shall be placed. Narrowband and Narrowband index are defined in TS36.211, 5.2.4<br>Note 2: Test Channel Bandwidths are checked separately for each E-UTRA band, the applicable channel bandwidths are specified in Table 5.4.2.1-1.<br>Note 3: The $RB_{start}$ of partial RB allocation shall be RB#0 and RB# (6 - RB allocation) of the narrowband. | | | | | |

**Table 6.6.3EA.3.4.1-2: Test Configuration Table (network signalled value "NS_07")**

| Initial Conditions | | | | | |
|---|---|---|---|---|---|
| Test Environment as specified in TS 36.508[7] subclause 4.1 | | | Normal | | |
| Test Frequencies as specified in TS 36.508 [7] subclause 4.3.1 | | | Low range | | |

1. Connect SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.7 using only main UE Tx/Rx antenna.

2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.

3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.0, and uplink signals according to Annex H.1 and H.3.0.

4. The UL Reference Measurement channels are set according to Table 6.6.3EA.3.4.1-1 to Table 6.6.3EA.3.4.1-11.

5. Propagation conditions are set according to Annex B.0.

6. Ensure the UE is in State 3A-RF-CE according to TS 36.508 [7] clause 5.2A.2AA. Message contents are defined in clause 6.6.3EA.3.4.3.

### 6.6.3EA.3.4.2 Test procedure

1. SS sends uplink scheduling information for each UL HARQ process via MPDCCH DCI format 6-0A for C_RNTI to schedule the UL RMC according to Table 6.6.3EA.3.4.1-1 to Table 6.6.3EA.3.4.1-11 depending on NS-value. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC

2. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE to ensure that the UE transmits at $P_{UMAX\ level}$.

3. Measure the mean power of the UE in the channel bandwidth of the radio access mode according to the test configuration, which shall meet the requirements described in Tables 6.2.4EA.5-1 to 6.2.4EA.5-17 as appropriate. The period of measurement shall be at least the continuous duration one sub-frame (1ms). For TDD slots with transient periods are not under test. For HD-FDD slots with transient periods and Half-duplex guard subframe are not under test.

4. Measure the power of the transmitted signal with a measurement filter of bandwidths according to Table 6.6.3EA.3.1-1, 6.6.3EA.3.3.3-1 to 6.6.3EA.3.3.11-1, and 6.6.3EA.3.5.1-1 as appropriate. The centre frequency of the filter shall be stepped in contiguous steps according to the same table. For NS_07 measurements made in a bandwidth of 6.25kHz, measurement parameter settings defined in table 6.6.3EA.3.4.2-1 shall be used. The measured power shall be verified for each step. The measurement period shall capture the active time slots.

**Table 6.6.3EA.3.4.2-1: Measurement setup for NS_07**

| | Option 1: Measurement with No RMS VBW available | Option2 Measurement with VBW Filtering on Power scale |
|---|---|---|
| VBW | >=62.5 kHz (10 times or more the RBW) | <=43Hz |
| RBW | <=6.25kHz | <=6.25kHz |
| Detector type | Averages signal envelope during each measurement point, such as "RMS detector" | Peak |
| Averaging mode (Trace averaging) | Power (RMS voltage) | Power (RMS voltage), as controlled by "Average Type" |
| Average Type (applies to detector) | Power (RMS voltage) (automatically occurs with "RMS detector") | Not applicable |
| Average Type (applies to VBW filter) | Not applicable | Power (RMS voltage) |
| Number of averages | 30, to reduce variance as required, or use an even longer sweep time | 1 or use an even narrower VBW filter, thus a longer sweep time |
| Sweep time | [Don't specify] | Sweep rate (span divided by sweep time) <= 0.8 * RBW*VBW |

### 6.6.3EA.3.4.3 Message contents

Message contents are same as in clause 6.2.4EA.4.3.

## 6.6.3EA.3.5 Test requirement

The measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Tables 6.2.4EA.5-1 to 6.2.4EA.5-17 as appropriate,

and

With the exception of NS_07, test requirements for Additional Spurious Emissions are the same as the minimum requirements and are not repeated in this section.

### 6.6.3EA.3.5.1 Test requirement (network signalled value "NS_07")

When "NS_07" is indicated in the cell, the power of any UE emission shall not exceed the levels specified in Table 6.6.3EA.3.5.1-1. This requirement also applies for the frequency ranges that are less than FOOB (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3EA.3.5.1-1: Additional requirements**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|---|
| | 10 MHz | |
| 769 ≤ f ≤ 775 | -55.5 | 6.25 kHz |
| NOTE: The emissions measurement shall be sufficiently power averaged to ensure standard deviation < 0.5 dB. | | |

# 6.6.3EB Spurious emission for UE category 1bis

## 6.6.3EB.1 Transmitter Spurious emissions for UE category 1bis

### 6.6.3EB.1.1 Test purpose

Same test purpose as in clause 6.6.3.1.1.

### 6.6.3EB.1.2 Test applicability

This test case applies to all types of E-UTRA UE release 13 and forward of UE category 1bis.

### 6.6.3EB.1.3 Minimum conformance requirements

Same minimum conformance requirements as in clause 6.6.3.1.3.

### 6.6.3EB.1.4 Test description

#### 6.6.3EB.1.4.1 Initial conditions

Same initial conditions as in clause 6.6.3.1.4.1

- Connect SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.3 using only main UE Tx/Rx antenna.

#### 6.6.3EB.1.4.2 Test procedure

Same test procedure as in clause 6.6.3.1.4.2

#### 6.6.3EB.1.4.3 Message contents

Message contents same clause 6.6.3.1.4.3.

### 6.6.3EB.1.5 Test requirement

This clause specifies the requirements for the specified E-UTRA band for Transmitter Spurious emissions requirement with frequency range as indicated in table 6.6.3EB.1.5-1.

The measured average power of spurious emission, derived in step 3, shall not exceed the described value in Table 6.6.3EB.1.5-1.

The spurious emission limits apply for the frequency ranges that are more than $\Delta f_{OOB}$ (MHz) from the edge of the channel bandwidth shown in Table 6.6.3.1.3-1.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

**Table 6.6.3EB.1.5-1: General spurious emissions test requirements**

| Frequency Range | Maximum Level | Measurement Bandwidth | Notes |
|---|---|---|---|
| 9 kHz ≤ f < 150 kHz | -36 dBm | 1 kHz | |
| 150 kHz ≤ f < 30 MHz | -36 dBm | 10 kHz | |
| 30 MHz ≤ f < 1000 MHz | -36 dBm | 100 kHz | |
| 1 GHz ≤ f < 12.75 GHz | -30 dBm | 1 MHz | |

## 6.6.3EB.2 Spurious emission band UE co-existence for UE category 1bis

### 6.6.3EB.2.1 Test purpose

Same test purpose as in clause 6.6.3.2.1.

### 6.6.3EB.2.2 Test applicability

This test case applies to all types of E-UTRA UE release 13 and forward of UE category 1bis.

### 6.6.3EB.2.3 Minimum conformance requirements

Same minimum conformance requirements as in clause 6.6.3.2.3

### 6.6.3EB.2.4 Test description

#### 6.6.3EB.2.4.1 Initial conditions

Same initial conditions as in clause 6.6.3.2.4.1

- Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.3 using only main UE Tx/Rx antenna.

#### 6.6.3EB.2.4.2 Test procedure

Same test procedure as in clause 6.6.3.2.4.2

#### 6.6.3EB.2.4.3 Message contents

Message contents same as 6.6.3.2.4.3

### 6.6.3EB.2.5 Test requirement

Test requirements for Spurious Emissions UE Co-existence are the same as the minimum requirements and are not repeated in this section.

## 6.6.3EB.3 Additional spurious emissions for UE category 1bis

### 6.6.3EB.3.1 Test purpose

Same test purpose as in clause 6.6.3.3.1.

### 6.6.3EB.3.2 Test applicability

This test case applies to all types of E-UTRA UE release 13 and forward of UE category 1bis.

### 6.6.3EB.3.3 Minimum conformance requirements

Same minimum conformance requirements as in clause 6.6.3.3.3.

### 6.6.3EB.3.4 Test description

#### 6.6.3EB.3.4.1 Initial conditions

Same initial conditions as in clause 6.2.3.4.1.

- Connect SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.3 using only main UE Tx/Rx antenna.

#### 6.6.3EB.3.4.2 Test procedure

Same test procedure as in clause 6.2.3.4.2

#### 6.6.3EB.3.4.3 Message contents

Same message contents as in clause 6.6.3.3.4.3.

### 6.6.3E.3.5 Test requirement

This clause specifies the requirements for the specified E-UTRA band for an additional spectrum emission requirement with protected bands as indicated from table 6.6.3.1.5-1 to table 6.6.3.2.5-1.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

#### 6.6.3E.3.5.1 Test requirement (network signalled value "NS_07")

When "NS_07" is indicated in the cell:

- the measured UE mean power in the channel bandwidth, derived in step 3, shall fulfil requirements in Table 6.2.4.5-7 as appropriate,

and

- the measured average power of spurious emission, derived in step 4, shall not exceed the described value in Table 6.6.3EB.3.5.1-1. These requirements also apply for the frequency ranges that are less than $\Delta f_{OOB}$ (MHz) in Table 6.6.3.1.3-1 from the edge of the channel bandwidth.

**Table 6.6.3EB.3.5.1-1: Additional requirements (network signalled value "NS_07")**

| Frequency band (MHz) | Channel bandwidth / Spectrum emission limit (dBm) | Measurement bandwidth |
|---|---|---|
| | 10 MHz | |
| 769 ≤ f ≤ 775 | -55.5 | 6.25 kHz |
| Note: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB. | | |

## 6.6.3F Spurious emission for category NB1 and NB2

### 6.6.3F.1 Transmitter Spurious emissions for category NB1 and NB2

#### 6.6.3F.1.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to other channels or other systems in terms of transmitter spurious emissions.

#### 6.6.3F.1.2 Test applicability

This test case applies to all types of UE release 13 and forward of category NB1.

This test case applies to all types of UE release 14 and forward of category NB2.

#### 6.6.3F.1.3 Minimum conformance requirements

Unless otherwise stated, the spurious emission limits apply for the frequency ranges that are more than FOOB (MHz) from the edge of the channel bandwidth. The spurious emission limits in Table 6.6.3F.1.3-1 apply for all transmitter band configurations (NRB) and channel bandwidths.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

**Table 6.6.3F.1.3-1: Spurious emissions limits**

| Frequency Range | Maximum Level | Measurement bandwidth | NOTE |
|---|---|---|---|
| 9 kHz ≤ f < 150 kHz | -36 dBm | 1 kHz | |
| 150 kHz ≤ f < 30 MHz | -36 dBm | 10 kHz | |
| 30 MHz ≤ f < 1000 MHz | -36 dBm | 100 kHz | |
| 1 GHz ≤ f < 12.75 GHz | -30 dBm | 1 MHz | |

…

When UE is configured for category NB1 or NB2 uplink transmissions the boundary between category NB1 or NB2 out of band and spurious emission domain shall be $F_{OOB}$ = 1.7 MHz.

The normative reference for this requirement is TS 36.101 [2] subclauses 6.6.3.1 and 6.6.3F.

## 6.6.3F.1.4 Test description

### 6.6.3F.1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions and test frequencies based on the subset of E-UTRA operating bands defined for NB-IoT in clause 5.2F. All of these configurations shall be tested with applicable test parameters, and are shown in table 6.6.3F.1.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2. Configurations of NPDSCH and NPDCCH before measurement are specified in Annex C.2.

**Table 6.6.3F.1.4.1-1: Test Configuration Table**

| **Initial Conditions** | | | | |
|---|---|---|---|---|
| Test Environment as specified in TS 36.508[7] subclause 8.1.1 | | NC | | |
| Test Frequencies as specified in TS 36.508 [7] subclause 8.1.3.1 | | Frequency ranges defined in Annex K.1.2 | | |
| **Test Parameters** | | | | |
| **Configuration ID** | **Downlink Configuration** | **Uplink Configuration** | | |
| | **N/A for Maximum Power Reduction (MPR) test case** | **Modulation** | **$N_{tones}$** | **Subcarrier spacing (kHz)** |
| 1 | | QPSK | 1@0 | 3.75 |
| 2 | | QPSK | 1@47 | 3.75 |
| 3 | | BPSK | 1@0 | 15 |
| 4 | | BPSK | 1@11 | 15 |
| 5 (Note 1) | | QPSK | 12@0 | 15 |
| Note 1: Applicable to UE supporting UL multi-tone transmissions | | | | |

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.3 using only main UE Tx/Rx antenna.

2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 8.1.4.3.

3. Downlink signals are initially set up according to Annex C.0, C.1, and C.3.0, and uplink signals according to Annex H.1.1 and H.4.0.

4. The UL Reference Measurement channels are set according to Table 6.6.3F.1.4.1-1.

5. Ensure the UE is in State 2A-NB with CP CIoT Optimisation according to TS 36.508 [7] clause 8.1.5. Message contents are defined in clause 6.6.3F.1.4.3.

#### 6.6.3E.1.4.2 Test procedure

1. SS sends uplink scheduling information via NPDCCH DCI format N0 for C_RNTI to schedule the UL RMC according to Table 6.6.3F.1.4.1-1 and with the scheduling pattern according to Annex A.2. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC

2. Measure the power of the transmitted signal with a measurement filter of bandwidths according to table 6.6.3F.1.5-1. The centre frequency of the filter shall be stepped in contiguous steps according to table 6.6.3F.1.5-1. The measured power shall be verified for each step. The measurement period shall capture the active time slots.

NOTE 1: For configuration IDs applicable to UE depending on UE capability in Test Configuration Table with different UL sub-carrier spacing, the SS shall release the connection through State 3A-NB and finally ensure the UE is in State 2A-NB with CP CIoT Optimisation according to TS 36.508 [7] clause 8.1.5 using the appropriate UL subcarrier spacing in Random Access Response message.

#### 6.6.3F.1.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 8.1.6.

### 6.6.3F.1.5 Test requirement

This clause specifies the requirements for the specified E-UTRA band for Transmitter Spurious emissions requirement with frequency range as indicated in table 6.6.3F.1.5-1.

The measured average power of spurious emission, derived in step 3, shall not exceed the described value in Table 6.6.3F.1.5-1.

The spurious emission limits apply for the frequency ranges that are more than $\Delta f_{OOB}$ (MHz) from the edge of the channel bandwidth.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

**Table 6.6.3F.1.5-1: General spurious emissions test requirements**

| Frequency Range | Maximum Level | Measurement Bandwidth | Notes |
|---|---|---|---|
| 9 kHz ≤ f < 150 kHz | -36 dBm | 1 kHz | |
| 150 kHz ≤ f < 30 MHz | -36 dBm | 10 kHz | |
| 30 MHz ≤ f < 1000 MHz | -36 dBm | 100 kHz | |
| 1 GHz ≤ f < 12.75 GHz | -30 dBm | 1 MHz | |

## 6.6.3F.2 Spurious emission band UE co-existence for category NB1 and NB2

Editor's note: This test case contains different requirements for different UE releases

### 6.6.3F.2.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to co-existing systems for the specified bands which has specific requirements in terms of transmitter spurious emissions.

### 6.6.3F.2.2 Test applicability

This test case applies to all types of UE release 13 and forward of category NB1.

This test case applies to all types of UE release 14 and forward of category NB2.

### 6.6.3F.2.3 Minimum conformance requirements

This clause specifies the requirements for the specified E-UTRA band for coexistence with protected bands as indicated in Tables 6.6.3F.2.3-1, 6.6.3F.2.3-1A and 6.6.3F.2.3-1B.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

**Table 6.6.3F.2.3-1: Spurious emission band UE co-existence limits Rel-13**

| E-UTRA Band | Spurious emission | | | | | | |
|---|---|---|---|---|---|---|---|
| | Protected band | Frequency range (MHz) | | | Maximum Level (dBm) | MBW (MHz) | NOTE |
| 1 | E-UTRA Band 1, 3, 5, 7, 8, 11, 18, 19, 20, 21, 22, 26, 27, 28, 31, 32, 38, 40, 41, 42, 43, 44, 45, 65, 67, 68 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |

| | Frequency range | 1900 | - | 1915 | -15.5 | 5 | 15, 26, 27 |
| | Frequency range | 1915 | - | 1920 | +1.6 | 5 | 15, 26, 27 |
| 66 | E-UTRA Band 2, 4, 5, 7, 10, 12, 13, 14, 17, 23, 24, 25, 26, 27, 28, 29, 30, 38, 41, 43, 66 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 42 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 2 |
| 68 | E-UTRA Band 3, 7, 8, 20, 22, 28, 31, 38, 40, 42, 43, 65 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 1 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 2 |

NOTE 1: $F_{DL_low}$ and $F_{DL_high}$ refer to each E-UTRA frequency band specified in Table 5.5-1
NOTE 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1.3-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2nd, 3rd, 4th [or 5th] harmonic spurious emissions. Due to spreading of the harmonic emission the exception is also allowed for the first 1 MHz frequency range immediately outside the harmonic emission on both sides of the harmonic emission. This results in an overall exception interval centred at the harmonic emission of (2MHz + N x $L_{CRB}$ x 180kHz), where N is 2, 3, 4, [5] for the 2nd, 3rd, 4th [or 5th] harmonic respectively. The exception is allowed if the measurement bandwidth (MBW) totally or partially overlaps the overall exception interval.
NOTE 3: N/A
NOTE 4: N/A
NOTE 5: For non synchronised TDD operation to meet these requirements some restriction will be needed for either the operating band or protected band
NOTE 6: N/A
NOTE 7: Applicable when co-existence with PHS system operating in 1884.5 -1919.6MHz.
NOTE 8: Applicable when co-existence with PHS system operating in 1884.5 -1915.7MHz.
NOTE 9: N/A
NOTE 10: N/A
NOTE 11: Whether the applicable frequency range should be 793-805MHz instead of 799-805MHz is TBD
NOTE 12: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB
NOTE 13: N/A
NOTE 14: N/A
NOTE 15: These requirements also apply for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1.3-1 and Table 6.6.3.1A.3-1 from the edge of the channel bandwidth.
NOTE 16: N/A
NOTE 17: N/A

NOTE 18: N/A
NOTE 19: Applicable when the assigned E-UTRA carrier is confined within 718 MHz and 748 MHz and when the channel bandwidth used is 5 or 10 MHz.
NOTE 20: N/A
NOTE 21: This requirement is applicable for any channel bandwidths within the range 2500 - 2570 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2560.5 - 2562.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2552 - 2560 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.
NOTE 22: This requirement is applicable for any channel bandwidths within the range 2570 - 2615 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2605.5 - 2607.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2597 - 2605 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.
For carriers with channel bandwidth overlapping the frequency range 2615 - 2620 MHz the requirement applies with the maximum output power configured to +19 dBm in the IE *P-Max*.
NOTE 23: This requirement is applicable only for the following cases:
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 902.5 MHz ≤ $F_c$ < 907.5 MHz with an uplink transmission bandwidth less than or equal to 20 RB
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 907.5 MHz ≤ $F_c$ ≤ 912.5 MHz without any restriction on uplink transmission bandwidth.
- for carriers of 10 MHz channel bandwidth when carrier centre frequency ($F_c$) is $F_c$ = 910 MHz with an uplink transmission bandwidth less than or equal to 32 RB with $RB_{start}$ > 3.
NOTE 24: As exceptions, measurements with a level up to the applicable requirement of -38 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 2nd harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the 2nd harmonic totally or partially overlaps the measurement bandwidth (MBW).
NOTE 25: As exceptions, measurements with a level up to the applicable requirement of -36 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 3rd harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the 3rd harmonic totally or partially overlaps the measurement bandwidth (MBW).
NOTE 26: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.
NOTE 27: This requirement is applicable for any channel bandwidths within the range 1920 - 1980 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1927.5 - 1929.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1930 - 1938 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.
NOTE 28: N/A
NOTE 29: N/A
NOTE 30: This requirement applies when the E-UTRA carrier is confined within 2545-2575MHz or 2595-2645MHz and the channel bandwidth is 10 or 20 MHz
NOTE 31: N/A
NOTE 32: Void
NOTE 33: This requirement is only applicable for carriers with bandwidth confined within 1885-1920 MHz (requirement for carriers with at least 1RB confined within 1880 - 1885 MHz is not specified). This requirement applies for an uplink transmission bandwidth less than or equal to 54 RB for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1892.5 - 1894.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1895 - 1903 MHz.
NOTE 34: This requirement is applicable for 5 and 10 MHz E-UTRA channel bandwidth allocated within 718-728MHz. For carriers of 10 MHz bandwidth, this requirement applies for an uplink transmission bandwidth less than or equal to 30 RB with RBstart > 1 and RBstart<48.
NOTE 35: This requirement is applicable in the case of a 10 MHz E-UTRA carrier confined within 703 MHz and 733 MHz, otherwise the requirement of -25 dBm with a measurement bandwidth of 8 MHz applies.
NOTE 36: This requirement is applicable for E-UTRA channel bandwidth allocated within 1920-1980 MHz.
NOTE 37: Applicable when the upper edge of the channel bandwidth frequency is greater than 1980MHz.
NOTE 38: Applicable only for UE category M1 and NB1.
NOTE 39: For category NB1 UE when carrier centre frequency is 1920.1 MHz, in case of single-tone uplink transmission the requirement is applicable only for sub-carrier index > 2.

NOTE: The restriction on the maximum uplink transmission to 54 RB in Notes 21, 22, and 27 of Table 6.6.3F.2.3-1 and the restriction on the single-tone uplink transmission to sub-carrier index > 2 in Note 39 of Table 6.6.3F.2.3-1 are intended for conformance testing and may be applied to network operation to facilitate coexistence when the aggressor and victim bands are deployed in the same geographical area. The applicable spurious emission requirement of -15.5 dBm/5MHz is a least restrictive technical condition for FDD/TDD coexistence and may have to be revised in the future.

**Table 6.6.3F.2.3-1A: Spurious emission band UE co-existence limits Rel-14**

| E-UTRA Band | Spurious emission | | | | | | |
|---|---|---|---|---|---|---|---|
| | Protected band | Frequency range (MHz) | | | Maximum Level (dBm) | MBW (MHz) | NOTE |
| 1 | E-UTRA Band 1, 3, 5, 7, 8, 11, 18, 19, 20, 21, 22, 26, 27, 28, 31, 32, 38, 40, 41, 42, 43, 44, 45, 65, 67, 68, 69 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |

NOTE 1: $F_{DL_low}$ and $F_{DL_high}$ refer to each E-UTRA frequency band specified in Table 5.5-1
NOTE 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1.3-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2nd, 3rd, 4th [or 5th] harmonic spurious emissions. Due to spreading of the harmonic emission the exception is also allowed for the first 1 MHz frequency range immediately outside the harmonic emission on both sides of the harmonic emission. This results in an overall exception interval centred at the harmonic emission of (2MHz + N x $L_{CRB}$ x 180kHz), where N is 2, 3, 4, [5] for the 2nd, 3rd, 4th [or 5th] harmonic respectively. The exception is allowed if the measurement bandwidth (MBW) totally or partially overlaps the overall exception interval.
NOTE 3: N/A
NOTE 4: N/A
NOTE 5: For non synchronised TDD operation to meet these requirements some restriction will be needed for either the operating band or protected band
NOTE 6: N/A
NOTE 7: Applicable when co-existence with PHS system operating in 1884.5 -1919.6MHz.
NOTE 8: Applicable when co-existence with PHS system operating in 1884.5 -1915.7MHz.
NOTE 9: N/A
NOTE 10: N/A
NOTE 11: Whether the applicable frequency range should be 793-805MHz instead of 799-805MHz is TBD
NOTE 12: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB
NOTE 13: N/A
NOTE 14: N/A
NOTE 15: These requirements also apply for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1.3-1 and Table 6.6.3.1A.3-1 from the edge of the channel bandwidth.
NOTE 16: N/A
NOTE 17: N/A
NOTE 18: N/A
NOTE 19: Applicable when the assigned E-UTRA carrier is confined within 718 MHz and 748 MHz and when the channel bandwidth used is 5 or 10 MHz.
NOTE 20: N/A
NOTE 21: This requirement is applicable for any channel bandwidths within the range 2500 - 2570 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2560.5 - 2562.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2552 - 2560 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.
NOTE 22: This requirement is applicable for any channel bandwidths within the range 2570 - 2615 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2605.5 - 2607.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2597 - 2605 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.
For carriers with channel bandwidth overlapping the frequency range 2615 - 2620 MHz the requirement applies with the maximum output power configured to +19 dBm in the IE *P-Max*.
NOTE 23: This requirement is applicable only for the following cases:
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 902.5 MHz ≤ $F_c$ < 907.5 MHz with an uplink transmission bandwidth less than or equal to 20 RB
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 907.5 MHz ≤ $F_c$ ≤ 912.5 MHz without any restriction on uplink transmission bandwidth.
- for carriers of 10 MHz channel bandwidth when carrier centre frequency ($F_c$) is $F_c$ = 910 MHz with an uplink transmission bandwidth less than or equal to 32 RB with $RB_{start}$ > 3.
NOTE 24: As exceptions, measurements with a level up to the applicable requirement of -38 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 2nd harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.4.2-1) for which the 2nd harmonic totally or partially overlaps the measurement bandwidth (MBW).
NOTE 25: As exceptions, measurements with a level up to the applicable requirement of -36 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 3rd harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.4.2-1) for which the 3rd harmonic totally or partially overlaps the measurement bandwidth (MBW).
NOTE 26: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.
NOTE 27: This requirement is applicable for any channel bandwidths within the range 1920 - 1980 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1927.5 - 1929.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1930 - 1938 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.
NOTE 28: N/A

NOTE 29: N/A
NOTE 30: This requirement applies when the E-UTRA carrier is confined within 2545-2575MHz or 2595-2645MHz and the channel bandwidth is 10 or 20 MHz
NOTE 31: N/A
NOTE 32: Void
NOTE 33: This requirement is only applicable for carriers with bandwidth confined within 1885-1920 MHz (requirement for carriers with at least 1RB confined within 1880 - 1885 MHz is not specified). This requirement applies for an uplink transmission bandwidth less than or equal to 54 RB for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1892.5 - 1894.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1895 - 1903 MHz.
NOTE 34: This requirement is applicable for 5 and 10 MHz E-UTRA channel bandwidth allocated within 718-728MHz. For carriers of 10 MHz bandwidth, this requirement applies for an uplink transmission bandwidth less than or equal to 30 RB with RBstart > 1 and RBstart<48.
NOTE 35: This requirement is applicable in the case of a 10 MHz E-UTRA carrier confined within 703 MHz and 733 MHz, otherwise the requirement of -25 dBm with a measurement bandwidth of 8 MHz applies.
NOTE 36: This requirement is applicable for E-UTRA channel bandwidth allocated within 1920-1980 MHz.
NOTE 37: Applicable when the upper edge of the channel bandwidth frequency is greater than 1980MHz.
NOTE 38: Applicable when NS_33 or NS_34 is configured by the pre-configured radio parameters.
NOTE 39: Applicable only when the assigned E-UTRA carrier is confined within 824 MHz and 849 MHz for UE category M1, M2 and UE category NB1 and NB2.
NOTE 40: In the frequency range x-5950MHz, SE requirement of -30dBm/MHz should be applied; where x = max (5925, fc + 15), where fc is the channel centre frequency.
NOTE 41: The EIRP requirement is converted to conducted requirement depend on the supported post antenna connector gain $G_{post\ connector}$ declared by the UE following the principle described in annex I.
NOTE 42: For category NB1 and NB2 UE when carrier centre frequency is 1920.1 MHz, in case of single-tone uplink transmission the requirement is applicable only for sub-carrier index > 2.

NOTE: The restriction on the maximum uplink transmission to 54 RB in Notes 21, 22, and 27 of Table 6.6.3F.2.3-1A and the restriction on the single-tone uplink transmission to sub-carrier index > 2 in Note 42 of Table 6.6.3F.2.3-1A are intended for conformance testing and may be applied to network operation to facilitate coexistence when the aggressor and victim bands are deployed in the same geographical area. The applicable spurious emission requirement of -15.5 dBm/5MHz is a least restrictive technical condition for FDD/TDD coexistence and may have to be revised in the future.

**Table 6.6.3F.2.3-1B: Spurious emission band UE co-existence limits Rel-15**

| E-UTRA Band | Spurious emission | | | | | | |
|---|---|---|---|---|---|---|---|
| | Protected band | Frequency range (MHz) | | | Maximum Level (dBm) | MBW (MHz) | NOTE |
| 1 | E-UTRA Band 1, 3, 5, 7, 8, 11, 18, 19, 20, 21, 22, 26, 27, 28, 31, 32, 38, 40, 41, 42, 43, 44, 45, 50, 51, 52, 65, 67, 68, 69, 72, 73, 74, 75, 76 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |

| | Frequency range | 470 | - | 694 | -42 | 8 | |
| 73 | E-UTRA Band 1, 26, 28, 33, 34, 39, 41, 42, 43, 44, 45, 47, 52 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 3, 5, 8, 27, 40 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 2 |
| 74 | E-UTRA Band 1, 2, 3, 4, 5, 7, 8, 12, 13, 17, 18, 19, 20, 26, 28, 29, 31, 34, 38, 39, 40, 41, 42, 43, 48, 52, 65, 66, 67, 68, 85 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | Frequency range | 1884.5 | - | 1915.7 | -41 | 0.3 | 8 |
| | Frequency range | 1400 | - | 1427 | -32 | 27 | 15, 41 |
| | Frequency range | 1475 | - | 1488 | -50 | 1 | 42 |
| | Frequency range | 1488 | - | 1518 | -50 | 1 | 15 |
| 85 | E-UTRA Band 2, 5, 13, 14, 17, 24, 25, 26, 27, 30, 41, 48, 51, 71, 74 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 4, 10, 66, 70 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 2 |
| | E-UTRA Band 12, 85 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 15 |

NOTE 1: $F_{DL_low}$ and $F_{DL_high}$ refer to each E-UTRA frequency band specified in Table 5.5-1

NOTE 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2nd, 3rd, 4th [or 5th] harmonic spurious emissions. Due to spreading of the harmonic emission the exception is also allowed for the first 1 MHz frequency range immediately outside the harmonic emission on both sides of the harmonic emission. This results in an overall exception interval centred at the harmonic emission of (2MHz + N x $L_{CRB}$ x 180kHz), where N is 2, 3, 4, [5] for the 2nd, 3rd, 4th [or 5th] harmonic respectively. The exception is allowed if the measurement bandwidth (MBW) totally or partially overlaps the overall exception interval.

NOTE 3: N/A

NOTE 4: N/A

NOTE 5: For non synchronised TDD operation to meet these requirements some restriction will be needed for either the operating band or protected band

NOTE 6: N/A

NOTE 7: Applicable when co-existence with PHS system operating in 1884.5-1919.6MHz.

NOTE 8: Applicable when co-existence with PHS system operating in 1884.5 -1915.7MHz.

NOTE 9: N/A

NOTE 10: N/A

NOTE 11: Whether the applicable frequency range should be 793-805MHz instead of 799-805MHz is TBD

NOTE 12: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB

NOTE 13: N/A

NOTE 14: N/A

NOTE 15: These requirements also apply for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1.3-1 and Table 6.6.3.1A.3-1 from the edge of the channel bandwidth.

NOTE 16: N/A

NOTE 17: N/A

NOTE 18: N/A

NOTE 19: Applicable when the assigned E-UTRA carrier is confined within 718 MHz and 748 MHz and when the channel bandwidth used is 5 or 10 MHz.

NOTE 20: N/A

NOTE 21: This requirement is applicable for any channel bandwidths within the range 2500 - 2570 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2560.5 - 2562.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2552 - 2560 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.

NOTE 22: This requirement is applicable for power class 3 UE for any channel bandwidths within the range

2570 - 2615 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2605.5 - 2607.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2597 - 2605 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB. For power class 2 UE for any channel bandwidths within the range 2570 - 2615 MHz, NS_44 shall apply.
For power class 2 or 3 UE for carriers with channel bandwidth overlapping the frequency range 2615 - 2620 MHz the requirement applies with the maximum output power configured to +19 dBm in the IE *P-Max*.

NOTE 23: This requirement is applicable only for the following cases:
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 902.5 MHz ≤ $F_c$ < 907.5 MHz with an uplink transmission bandwidth less than or equal to 20 RB
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 907.5 MHz ≤ $F_c$ ≤ 912.5 MHz without any restriction on uplink transmission bandwidth.
- for carriers of 10 MHz channel bandwidth when carrier centre frequency ($F_c$) is $F_c$ = 910 MHz with an uplink transmission bandwidth less than or equal to 32 RB with $RB_{start}$ > 3.

NOTE 24: As exceptions, measurements with a level up to the applicable requirement of -38 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 2nd harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the 2nd harmonic totally or partially overlaps the measurement bandwidth (MBW).

NOTE 25: As exceptions, measurements with a level up to the applicable requirement of -36 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 3rd harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the 3rd harmonic totally or partially overlaps the measurement bandwidth (MBW).

NOTE 26: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.

NOTE 27: This requirement is applicable for any channel bandwidths within the range 1920 - 1980 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1927.5 - 1929.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1930 - 1938 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.

NOTE 28: N/A

NOTE 29: N/A

NOTE 30: This requirement applies when the E-UTRA carrier is confined within 2545-2575MHz or 2595-2645MHz and the channel bandwidth is 10 or 20 MHz

NOTE 31: N/A

NOTE 32: Void

NOTE 33: This requirement is only applicable for carriers with bandwidth confined within 1885-1920 MHz (requirement for carriers with at least 1RB confined within 1880 - 1885 MHz is not specified). This requirement applies for an uplink transmission bandwidth less than or equal to 54 RB for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1892.5 - 1894.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1895 - 1903 MHz.

NOTE 34: This requirement is applicable for 5 and 10 MHz E-UTRA channel bandwidth allocated within 718-728MHz. For carriers of 10 MHz bandwidth, this requirement applies for an uplink transmission bandwidth less than or equal to 30 RB with RBstart > 1 and RBstart<48.

NOTE 35: This requirement is applicable in the case of a 10 MHz E-UTRA carrier confined within 703 MHz and 733 MHz, otherwise the requirement of -25 dBm with a measurement bandwidth of 8 MHz applies.

NOTE 36: This requirement is applicable for E-UTRA channel bandwidth allocated within 1920-1980 MHz.

NOTE 37: Applicable when the upper edge of the channel bandwidth frequency is greater than 1980MHz.

NOTE 38: Applicable when NS_33 or NS_34 is configured by the pre-configured radio parameters.

NOTE 39: Applicable only when the assigned E-UTRA carrier is confined within 824 MHz and 849 MHz for UE category M1, M2 and UE category NB1 and NB2.

NOTE 40: In the frequency range x-5950MHz, SE requirement of -30dBm/MHz should be applied; where x = max (5925, fc + 15), where fc is the channel centre frequency.

NOTE 41: Applicable for all bandwidths, and when the lower edge of the assigned E-UTRA UL channel bandwidth frequency is greater than or equal to 1427 MHz + the channel BW assigned for 1.4, 3, 5 and 10 MHz bandwidth, and when the lower edge of the assigned E-UTRA UL channel bandwidth frequency is greater than or equal to 1440 MHz for 15 and 20 MHz bandwidth. This requirement shall be verified with UE transmission power of 15 dBm.

NOTE 42: Applicable for 1.4 , 3 and 5 MHz bandwidth, and when the upper edge of the assigned E-UTRA UL channel bandwidth frequency is less than or equal to 1467 MHz assigned for10 MHz bandwidth, and when the upper edge of the assigned E-UTRA UL channel bandwidth frequency is less than or equal to 1463.8 MHz for 15 MHz bandwidth, and when the upper edge of the assigned E-UTRA UL channel bandwidth frequency is less than or equal to 1460.8 MHz for 20 MHz bandwidth.

NOTE 43: The EIRP requirement is converted to conducted requirement depend on the supported post antenna connector gain $G_{post\ connector}$ declared by the UE following the principle described in annex

| |
|---|
| I.<br>NOTE 44: For category NB1 and NB2 UE when carrier centre frequency is 1920.1 MHz, in case of single-tone uplink transmission the requirement is applicable only for sub-carrier index > 2. |

NOTE: The restriction on the maximum uplink transmission to 54 RB in Notes 21, 22, and 27 of Table 6.6.3F.2.3-1B and the restriction on the single-tone uplink transmission to sub-carrier index > 2 in Note 44 of Table 6.6.3F.2.3-1B are intended for conformance testing and may be applied to network operation to facilitate coexistence when the aggressor and victim bands are deployed in the same geographical area. The applicable spurious emission requirement of -15.5 dBm/5MHz is a least restrictive technical condition for FDD/TDD coexistence and may have to be revised in the future.

The normative reference for this requirement is TS 36.101 [2] subclause 6.6.3.2.

This test use minimum requirements from many releases of TS 36.101 [2] due to release independence defined in TS 36.307 [16]

## 6.6.3F.2.4 Test description

### 6.6.3F.2.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions and test frequencies based on the subset of E-UTRA operating bands defined for NB-IoT in clause 5.2F. All of these configurations shall be tested with applicable test parameters, and are shown in Table 6.6.3F.2.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2. Configurations of NPDSCH and NPDCCH before measurement are specified in Annex C.2.

**Table 6.6.3F.2.4.1-1: Test Configuration Table**

| **Initial Conditions** | | | | |
|---|---|---|---|---|
| Test Environment as specified in TS 36.508[7] subclause 8.1.1 | | NC | | |

1. Connect the SS to the UE to the UE antenna connectors as shown in Figure TS 36.508 [7] Annex A, Figure A.7 using only main Tx/Rx antenna.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 8.1.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.0, and uplink signals according to Annex H.1.1 and H.4.0.
4. The UL Reference Measurement channels are set according to Table 6.6.3F.2.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 2A-NB with CP CIoT Optimisation according to TS 36.508 [7] clause 8.1.5. Message contents are defined in clause 6.6.3F.2.4.3.

### 6.6.3F.2.4.2 Test procedure

1. SS sends uplink scheduling information via NPDCCH DCI format N0 for C_RNTI to schedule the UL RMC according to Table 6.6.3F.2.4.1-1. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC (UE should be already transmitting $P_{UMAX}$ after Initial Conditions setting).
2. Measure the power of the transmitted signal with a measurement filter of bandwidths according to tables 6.6.3F.2.3-1 to 6.6.3F.2.3-1A. The centre frequency of the filter shall be stepped in contiguous steps according to table 6.6.3F.2.5-1. The measured power shall be verified for each step. The measurement period shall capture the active time slots.

NOTE 1: For configuration IDs applicable to UE depending on UE capability in Test Configuration Table with different UL sub-carrier spacing, the SS shall release the connection through State 3A-NB and finally ensure the UE is in State 2A-NB with CP CIoT Optimisation according to TS 36.508 [7] clause 8.1.5 using the appropriate UL subcarrier spacing in Random Access Response message.

NOTE 2: For requirements under Note 39 in Table 6.6.3F.2.3-1, Note 42 in Table 6.6.3F.2.3-1A and Note 44 in Table 6.6.3F.2.3-1B, the resolution bandwidth is <=1 kHz to improve the measurement accuracy.

### 6.6.3F.2.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 8.1.6.

## 6.6.3F.2.5 Test requirement

Test requirements for Spurious Emissions UE Co-existence are the same as the minimum requirements and are not repeated in this section.

The measured average power of spurious emission, derived in step 2, shall not exceed the described value in tables 6.6.3F.2.3-1 to 6.6.3F.2.3-1B according to the following rule:

The requirements for the UE are release specific and can be found in Tables 6.6.3F.2.3-1 to 6.6.3F.2.3-1B. If the UE support a band, which is not defined in the table corresponding UE's release, the requirements for this band are taken from the table of earliest release where requirements for this band are defined. This has been described in following Table 6.6.3F.2.5-1.

**Table 6.6.3F.2.5-1: UE Requirements according to UE NB-IoT release and supported NB-IoT band**

| Band | UE Requirements per release | | |
|---|---|---|---|
| | Rel-13 | Rel-14 | Rel-15 |

# 6.6.3G Transmitter Spurious emissions for V2X

## 6.6.3G.1 Transmitter Spurious emissions for V2X Communication / Non-concurrent with E-UTRA uplink transmissions

### 6.6.3G.1.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to other channels or other systems in terms of transmitter spurious emissions for V2X Communication / Non-concurrent with E-UTRA uplink transmissions

### 6.6.3G.1.2 Test applicability

This test case applies to UE which support V2X Sidelink communication and Band 47.

### 6.6.3G.1.3 Minimum conformance requirements

When UE is configured for E-UTRA V2X sidelink transmissions non-concurrent with E-UTRA uplink transmissions for E-UTRA V2X operating bands specified in subclause 5.2G, the transmitter spurious emissions limit in table 6.6.3G.1.3-2 apply for the frequency ranges more than $F_{OOB}$ listed in table 6.6.3G.1.3-1 from the edge of the transmission bandwidth.

**Table 6.6.3G.1.3-1: Boundary between E-UTRA out of band and spurious emission domain**

| Channel bandwidth | 1.4 MHz | 3.0 MHz | 5 MHz | 10 MHz | 15 MHz | 20 MHz |
|---|---|---|---|---|---|---|
| OOB boundary $F_{OOB}$ (MHz) | 2.8 | 6 | 10 | 15 | 20 | 25 |

**Table 6.6.3G.1.3-2: Spurious emissions limits**

| Frequency Range | Maximum Level | Measurement bandwidth | NOTE |
|---|---|---|---|
| 9 kHz ≤ f < 150 kHz | -36 dBm | 1 kHz | |
| 150 kHz ≤ f < 30 MHz | -36 dBm | 10 kHz | |
| 30 MHz ≤ f < 1000 MHz | -36 dBm | 100 kHz | |
| 1 GHz ≤ f < 12.75 GHz | -30 dBm | 1 MHz | |
| 12.75 GHz ≤ f < 5th harmonic of the upper frequency edge of the UL operating band in GHz | -30 dBm | 1 MHz | 1 |
| 12.75 GHz < f < 26GHz | -30dBm | 1MHz | 2 |
| NOTE 1: Applies for Band 22, Band 42, Band 43 and Band 48.<br>NOTE 2: Applies for Band 46 and Band 47. | | | |

## 6.6.3G.1.4 Test description

### 6.6.3G.1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in sub-clause 5.2G. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 6.6.3G.1.4.1-1 the details of the V2X reference measurement channels (RMCs) are specified in sub-clause A.8.3 and the GNSS configuration in TS 36.508 [7] subclause 4.11.

**Table 6.6.3G.1.4.1-1: Test Configuration for V2X sidelink transmission**

| **Initial Conditions** | | |
|---|---|---|
| Test Environment<br>(as specified in TS 36.508 [7] subclause 4.1) | NC, TL/VL, TL/VH, TH/VL, TH/VH | |
| Test Frequencies<br>(as specified in TS36.508 [7] subclause 4.3.1) | Low range, Mid range, High range | |
| Test Channel Bandwidths<br>(as specified in subclause 5.4.2G) | Lowest, Mid, Highest | |
| **Test Parameters for Channel Bandwidths** | | |
| | **V2X sidelink transmission** | |
| Ch BW | Mod'n | RB Allocation |
| 10MHz | QPSK | 1 |
| 10MHz | QPSK | 48 |
| 20MHz | QPSK | 1 |
| 20MHz | QPSK | 96 |
| Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1.<br>Note 2: The 1 RB allocation shall be tested at both RB #0 and RB #max of the channel bandwidth. | | |

1. Connect the SS and GNSS simulator to the UE antenna connectors as shown in TS 36.508[7] Figure A.92.
2. The parameter settings for the V2X sidelink transmission over PC5 for both SS and UE are pre-configured according to TS 36.508 [7] subclause 4.10.1 with the exception specified in clause 6.6.2G.1.4.3-1.
3. The V2X reference measurement channel is set according to Table 6.6.3G.1.4.1-1
4. The GNSS simulator is configured for Scenario #1: static in Geographical area #1, as defined in TS36.508 [7] Table 4.11.2-2. Geographical area #1 is also pre-configured in the UE.
5. Propagation conditions are set according to Annex B.0;
6. Ensure the UE is in State 5A-V2X in Transmit Mode according to TS 36.508 [7] clause 4.5.9.

7. The GNSS simulator is triggered to start step 1 of Scenario #1 to simulate a location in the centre of Geographical area #1. Wait for the UE to acquire the GNSS signal and start to transmit.

### 6.6.3G.1.4.2 Test procedure

1. The V2X UE schedules the V2X RMC with transmission power at $P_{UMAX}$ level according to *SL-V2X-Preconfiguration* which is in line with the test configuration in Table 6.6.3G.1.4.1-1;

2. Measure the power of the transmitted signal with a measurement filter of bandwidths according to table 6.6.3G.1.5-1. The centre frequency of the filter shall be stepped in contiguous steps according to table 6.6.3G.1.5-1. The measured power shall be verified for each step. The measurement period shall capture the active time slots.

### 6.6.3G.1.4.3 Message contents

### 6.6.3G.1.5 Test requirement

The measured average power of transmitter spurious emissions measured in step2 shall not exceed the value in table 6.6.3G.1.5-1.The spurious emission limits apply for the frequency ranges that are more than $\Delta f_{OOB}$ (MHz) from the edge of the channel bandwidth shown in Table 6.6.3G.1.3-1.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

**Table 6.6.3G.1.5-1: General spurious emissions test requirements**

| Frequency Range | Maximum Level | Measurement bandwidth | NOTE |
|---|---|---|---|
| 9 kHz ≤ f < 150 kHz | -36 dBm | 1 kHz | |
| 150 kHz ≤ f < 30 MHz | -36 dBm | 10 kHz | |
| 30 MHz ≤ f < 1000 MHz | -36 dBm | 100 kHz | |
| 1 GHz ≤ f < 12.75 GHz | -30 dBm | 1 MHz | |
| 12.75 GHz ≤ f < 5th harmonic of the upper frequency edge of the UL operating band in GHz | -30 dBm | 1 MHz | 1 |
| 12.75 GHz < f < 26GHz | -30dBm | 1MHz | 2 |
| NOTE 1: Applies for Band 22, Band 42, Band 43 and Band 48.<br>NOTE 2: Applies for Band 46 and Band 47. | | | |

## 6.6.3G.1_1 Spurious emission band UE co-existence for V2X Communication / Non-concurrent with E-UTRA uplink transmissions

### 6.6.3G.1_1.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to co-existing systems for the specified bands which has specific requirements in terms of transmitter spurious emissions.

### 6.6.3G.1_1.2 Test applicability

This test case applies to UE which support V2X Sidelink communication and Band 47.

### 6.6.3G.1_1.3 Minimum conformance requirements

This clause specifies the requirements for the specified E-UTRA band for coexistence with protected bands as indicated in Tables 6.6.3G.1_1.3-1.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

**Table 6.6.3G.1_1.3-1: Spurious emission band UE co-existence limits Rel-14**

| E-UTRA Band | Spurious emission | | | | | | |
|---|---|---|---|---|---|---|---|
| | Protected band | Frequency range (MHz) | | | Maximum Level (dBm) | MBW (MHz) | NOTE |
| 1 | E-UTRA Band 1, 5, 7, 8, 11, 18, 19, 20, 21, 22, 26, 27, 28, 31, 32, 38, 40, 41, 42, 43, 44, 45, 65, 67, 68, 69 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |

| | E-UTRA Band 42, 48 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 2 |
| 68 | E-UTRA Band 3, 7, 8, 28, 38, 40 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 1 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 2 |
| … | | | | | | | |
| 70 | E-UTRA Band 2, 4, 5, 10, 12, 13, 14, 17, 24, 25, 26, 29, 30, 41, 48, 66, 70 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 2 |

NOTE 1: $F_{DL_low}$ and $F_{DL_high}$ refer to each E-UTRA frequency band specified in Table 5.5-1
NOTE 2: As exceptions, measurements with a level up to the applicable requirements defined in Table 6.6.3.1-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2nd, 3rd, 4th [or 5th] harmonic spurious emissions. Due to spreading of the harmonic emission the exception is also allowed for the first 1 MHz frequency range immediately outside the harmonic emission on both sides of the harmonic emission. This results in an overall exception interval centred at the harmonic emission of (2MHz + N x $L_{CRB}$ x 180kHz), where N is 2, 3, 4, [5] for the 2nd, 3rd, 4th [or 5th] harmonic respectively. The exception is allowed if the measurement bandwidth (MBW) totally or partially overlaps the overall exception interval.
NOTE 3: To meet these requirements some restriction will be needed for either the operating band or protected band
NOTE 4: N/A
NOTE 5: For non synchronised TDD operation to meet these requirements some restriction will be needed for either the operating band or protected band
NOTE 6: N/A
NOTE 7: Applicable when co-existence with PHS system operating in 1884.5 -1919.6MHz.
NOTE 8: Applicable when co-existence with PHS system operating in 1884.5 -1915.7MHz.
NOTE 9: N/A
NOTE 10: N/A
NOTE 11: Whether the applicable frequency range should be 793-805MHz instead of 799-805MHz is TBD
NOTE 12: The emissions measurement shall be sufficiently power averaged to ensure a standard deviation < 0.5 dB
NOTE 13: This requirement applies for 5, 10, 15 and 20 MHz E-UTRA channel bandwidth allocated within 1744.9MHz and 1784.9MHz.
NOTE 14: N/A
NOTE 15: These requirements also apply for the frequency ranges that are less than $F_{OOB}$ (MHz) in Table 6.6.3.1-1 and Table 6.6.3.1A-1 from the edge of the channel bandwidth.
NOTE 16: N/A
NOTE 17: N/A
NOTE 18: N/A
NOTE 19: Applicable when the assigned E-UTRA carrier is confined within 718 MHz and 748 MHz and when the channel bandwidth used is 5 or 10 MHz.
NOTE 20: N/A
NOTE 21: This requirement is applicable for any channel bandwidths within the range 2500 - 2570 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2560.5 - 2562.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2552 - 2560 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.
NOTE 22: This requirement is applicable for any channel bandwidths within the range 2570 - 2615 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 2605.5 - 2607.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 2597 - 2605 MHz the requirement is applicable only for an uplink transmission bandwidth less than or equal to 54 RB.
For carriers with channel bandwidth overlapping the frequency range 2615 - 2620 MHz the requirement applies with the maximum output power configured to +19 dBm in the IE *P-Max*.
NOTE 23: This requirement is applicable only for the following cases:
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 902.5 MHz ≤ $F_c$ < 907.5 MHz with an uplink transmission bandwidth less than or equal to 20 RB
- for carriers of 5 MHz channel bandwidth when carrier centre frequency ($F_c$) is within the range 907.5 MHz ≤ $F_c$ ≤ 912.5 MHz without any restriction on uplink transmission bandwidth.
- for carriers of 10 MHz channel bandwidth when carrier centre frequency ($F_c$) is $F_c$ = 910 MHz with an uplink transmission bandwidth less than or equal to 32 RB with $RB_{start}$ > 3.
NOTE 24: As exceptions, measurements with a level up to the applicable requirement of -38 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 2nd harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the 2nd harmonic totally or partially overlaps the measurement bandwidth (MBW).
NOTE 25: As exceptions, measurements with a level up to the applicable requirement of -36 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 3rd harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see Figure 5.6-1) for which the 3rd harmonic totally or partially overlaps the measurement bandwidth (MBW).
NOTE 26: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.
NOTE 27: This requirement is applicable for any channel bandwidths within the range 1920 - 1980 MHz with the following restriction: for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1927.5 - 1929.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1930 - 1938 MHz the requirement is applicable only for an uplink

transmission bandwidth less than or equal to 54 RB.
NOTE 28: N/A
NOTE 29: N/A
NOTE 30: This requirement applies when the E-UTRA carrier is confined within 2545-2575MHz or 2595-2645MHz and the channel bandwidth is 10 or 20 MHz
NOTE 31: N/A
NOTE 32: Void
NOTE 33: This requirement is only applicable for carriers with bandwidth confined within 1885-1920 MHz (requirement for carriers with at least 1RB confined within 1880 - 1885 MHz is not specified). This requirement applies for an uplink transmission bandwidth less than or equal to 54 RB for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1892.5 - 1894.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1895 - 1903 MHz.
NOTE 34: This requirement is applicable for 5 and 10 MHz E-UTRA channel bandwidth allocated within 718-728MHz. For carriers of 10 MHz bandwidth, this requirement applies for an uplink transmission bandwidth less than or equal to 30 RB with RBstart > 1 and RBstart<48.
NOTE 35: This requirement is applicable in the case of a 10 MHz E-UTRA carrier confined within 703 MHz and 733 MHz, otherwise the requirement of -25 dBm with a measurement bandwidth of 8 MHz applies.
NOTE 36: This requirement is applicable for E-UTRA channel bandwidth allocated within 1920-1980 MHz.
NOTE 37: Applicable when the upper edge of the channel bandwidth frequency is greater than 1980MHz.
NOTE 38: Applicable when NS_XX is configured by the pre-configured radio parameters.
NOTE 39: Applicable only when the assigned E-UTRA carrier is confined within 824 MHz and 849 MHz for UE category M1, M2 and UE category NB1 and NB2.
NOTE 40: In the frequency range x-5950MHz, SE requirement of -30dBm/MHz should be applied; where x = max (5925, fc + 15), where fc is the channel centre frequency.

The normative reference for this requirement is TS 36.101 [2] subclause 6.6.3.2.

## 6.6.3G.1_1.4 Test description

### 6.6.3G.1_1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in sub-clause 5.2G. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 6.6.3G.1_1.4.1-1 the details of the V2X reference measurement channels (RMCs) are specified in sub-clause A.8.3 and the GNSS configuration in TS 36.508 [7] subclause 4.11.

**Table 6.6.3G.1_1.4.1-1: Test Configuration for V2X sidelink transmission**

| **Initial Conditions** | | |
|---|---|---|
| Test Environment<br>(as specified in TS 36.508 [7] subclause 4.1) | | NC, TL/VL, TL/VH, TH/VL, TH/VH |
| Test Frequencies<br>(as specified in TS36.508 [7] subclause 4.3.1) | | Low range, Mid range, High range |
| Test Channel Bandwidths<br>(as specified in subclause 5.4.2G) | | Lowest, Mid, Highest |
| **Test Parameters for Channel Bandwidths** | | |
| | **V2X sidelink transmission** | |
| Ch BW | Mod'n | RB Allocation |
| 10MHz | QPSK | 1 |
| 10MHz | QPSK | 48 |
| 20MHz | QPSK | 1 |
| 20MHz | QPSK | 96 |
| Note 1: Test Channel Bandwidths are checked separately for operating bands for V2X sidelink communication specified in 5. 2G.<br>Note 2: The 1 RB allocation shall be tested at both RB #0 and RB #max.<br>Note 3: In case test frequency is operating on Band 47, NS_33 or NS_34 and no NS_XX indication shall be tested respectively. | | |

1. Connect the SS and GNSS simulator to the UE antenna connectors as shown in TS 36.508[7] Figure A.92.

2. The parameter settings for the V2X sidelink transmission over PC5 for both SS and UE are pre-configured according to TS 36.508 [7] subclause 4.10.1 with the exception specified in clause 6.6.3G.1_1.4.3-1.

3. The V2X reference measurement channel is set according to Table 6.6.3G.1_1.4.1-1

4. The GNSS simulator is configured for Scenario #1: static in Geographical area #1, as defined in TS36.508 [7] Table 4.11.2-2. Geographical area #1 is also pre-configured in the UE.

5. Propagation conditions are set according to Annex B.0;

6. Ensure the UE is in State 5A-V2X in Transmit Mode according to TS 36.508 [7] clause 4.5.9.

7. The GNSS simulator is triggered to start step 1 of Scenario #1 to simulate a location in the centre of Geographical area #1. Wait for the UE to acquire the GNSS signal and start to transmit.

### 6.6.3G.1_1.4.2 Test procedure

TP1: General requirement, applicable to test frequency operating on Band 47 without NS_33 or NS_34 signalled

1. The V2X UE schedules the V2X RMC with transmission power at $P_{UMAX}$ level (UE should be already transmitting $P_{UMAX}$ after Initial Conditions setting following the message contents for TP1) according to *SL-V2X-Preconfiguration* which is in line with the test configuration in Table 6.6.3G.1_1.4.1-1;

2. Measure the power of the transmitted signal with a measurement filter of bandwidths according to table 6.6.3G.1_1.5-1. The centre frequency of the filter shall be stepped in contiguous steps according to table 6.6.3G.1_1.5-1. The measured power shall be verified for each step. The measurement period shall capture the active time slots.

TP2: Additional requirement applicable to test frequency operating on Band 47 with NS_33 or NS_34 signalled

1. The V2X UE schedules the V2X RMC with transmission power at PUMAX level (UE should be already transmitting PUMAX after Initial Conditions setting following the message contents for TP2) according to SL-V2X-Preconfiguration which is in line with the test configuration in Table 6.6.3G.1_1.4.1-1;

2. Measure the power of the transmitted signal with a measurement filter of bandwidths according to table 6.6.3G.1_1.5-1. The centre frequency of the filter shall be stepped in contiguous steps according to table 6.6.3G.1_1.5-1. The measured power shall be verified for each step. The measurement period shall capture the active time slots.

### 6.6.3G.1_1.4.3 Message contents

For TP1: Refer to clause 6.6.3G.1.4.3.

For TP2: Refer to clause 6.6.3G.1.4.3 with the exception specified in Table 6.6.3G.1_1.4.3-1.

## 6.6.3G.1_1.5 Test requirement

The measured average power of spurious emission, derived in step 2, shall not exceed the described value in table 6.6.3G.1_1.5-1 for the operating bands for V2X sidelink communication specified in 5.2G.

**Table 6.6.3G.1_1.5-1: Spurious emission band UE co-existence limits Rel-14(TP2)**

| E-UTRA Band | Spurious emission | | | | | | |
|---|---|---|---|---|---|---|---|
| | **Protected band** | **Frequency range (MHz)** | | | **Maximum Level (dBm)** | **MBW (MHz)** | **NOTE** |
| 47 | E-UTRA Band 1, 3, 5, 7, 8, 22, 26, 28, 34, 39, 40, 41, 42, 44, 45, 65,68 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | Frequency range | 5925 | - | 5950 | -30 | 1 | 38, 40 |
| | Frequency range | 5815 | - | 5855 | -30 | 1 | 38 |
| | | | | | | | |
| NOTE 38: Applicable when NS_XX is configured by the pre-configured radio parameters.<br>NOTE 40: In the frequency range x-5950MHz, SE requirement of -30dBm/MHz should be applied; where x = max (5925, fc + 15), where fc is the channel centre frequency. | | | | | | | |

## 6.6.3G.2 Spurious emission for V2X Communication / Sidelink simultaneous with E-UTRA uplink transmissions

Editor's note: This test case is not complete. Following aspects are either missing or not yet determined:

- TT statement is TBD.

### 6.6.3G.2.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to other channels or other systems in terms of transmitter spurious emissions in case of simultaneous V2X sidelink and E-UTRA uplink transmissions for inter-band E-UTRA V2X/E-UTRAN bands specified in 36.101 [2] subclause 5.5G-2.

### 6.6.3G.2.2 Test applicability

This test case applies to all types of E-UTRA UE release 14 and forward that supports V2X communication and is capable of V2X sidelink communication simultaneous with E-UTRA uplink/downlink.

### 6.6.3G.2.3 Minimum conformance requirements

In this specification the Minimum Requirements are specified as general requirements and additional requirements. Where the Requirement is specified as a general requirement, the requirement is mandated to be met in all scenarios

In terms of general spurious emission requirement, refer to clauses 6.6.3.1.3 for single carrier and 6.6.3.1A.0.

When UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions for inter-band E-UTRA V2X / E-UTRA bands specified in 36.101 [2] Table 5.5G-2, the transmitter spurious emission limit in the table 6.6.3G.2.3-2 apply for the frequency ranges more than $F_{OOB}$ listed in table 6.6.3G.2.3-1 from the edge of the transmission bandwidth as specified for the corresponding inter-band con-current operation with uplink assigned to two bands.

**Table 6.6.3G.2.3-1: Boundary between E-UTRA out of band and spurious emission domain**

| Channel bandwidth | 1.4 MHz | 3.0 MHz | 5 MHz | 10 MHz | 15 MHz | 20 MHz |
|---|---|---|---|---|---|---|
| OOB boundary $F_{OOB}$ (MHz) | 2.8 | 6 | 10 | 15 | 20 | 25 |

**Table 6.6.3G.2.3-2: Spurious emissions limits**

| Frequency Range | Maximum Level | Measurement bandwidth | NOTE |
|---|---|---|---|
| 9 kHz ≤ f < 150 kHz | -36 dBm | 1 kHz | |
| 150 kHz ≤ f < 30 MHz | -36 dBm | 10 kHz | |
| 30 MHz ≤ f < 1000 MHz | -36 dBm | 100 kHz | |
| 1 GHz ≤ f < 12.75 GHz | -30 dBm | 1 MHz | |
| 12.75 GHz ≤ f < 5th harmonic of the upper frequency edge of the UL operating band in GHz | -30 dBm | 1 MHz | 1 |
| 12.75 GHz < f < 26GHz | -30dBm | 1MHz | 2 |
| NOTE 1: Applies for Band 22, Band 42, Band 43 and Band 48.<br>NOTE 2: Applies for Band 46 and Band 47. | | | |

The normative reference for this requirement is TS 36.101 [2] subclause 4.2, 4.3A and 6.6.3G.

### 6.6.3G.2.4 Test description

#### 6.6.3G.2.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and CC combinations based on Inter-band con-current V2X configurations specified in table clauses 5.2G and 5.4.2G. All of these configurations shall be tested with applicable test parameters for each V2X con-current band Configuration, and are shown in table 6.6.3G.2.4.1-1. The details of the uplink and V2X reference measurement channels (RMCs) are specified in sub-clause A.2 and A.8.3 respectively. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 6.6.3G.2.4.1-1 Test Configuration**

| **Initial Conditions** | | | | | |
|---|---|---|---|---|---|
| Test Environment as specified in TS 36.508 [7] subclause 4.1 | | | Normal | | |
| Test Frequencies as specified in TS 36.508 [7] subclause 4.3.1 | | | Low range for E-UTRA link and V2X sidelink,<br>High range for E-UTRA link and V2X sidelink | | |
| Test Channel Bandwidth combination sets as specified in table 5.4.2G.1-2 | | | Lowest of E-UTRA link and V2X sidelink bandwidth<br>Highest of E-UTRA link and V2X sidelink bandwidth | | |

| 100 | 100 | | QPSK | 1@99 | 1@99 |
| 100 | 100 | | QPSK | 100@0 | 100@0 |

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.93a.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3. Message content exceptions are defined in clause 6.6.3G.2.4.3
3. Downlink signals are initially set up according to Annex C.0, C.1, and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL and V2X Reference Measurement Channels are set according to table 6.6.3G.2.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in the state 3A-RF-V2X according to TS 36.508 [7] clause 5.2A.2C.

#### 6.6.3G.2.4.2 Test procedure

1. SS sends RRC reconfiguration message specified in clause 6.6.3G.2.4.3 to enable PSCCH and PSSCH transmission at the $P_{UMAX}$ level.
2. The SS simultaneously sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC and V2X scheduling information via PDCCH DCI format 5A for SL_V_RNTI to schedule the V2X RMC according to Table 6.6.3G.2.4.1-1. Since the UE has no payload and no loopback data to send the UE sends MAC padding bits on the UL and V2X RMCs.
3. SS sends continuously uplink power control "up" commands in the uplink scheduling information to the UE to ensure that the UE transmits at $P_{UMAX}$ level..
4. Measure the power of the transmitted signal for E-UTRA uplink with a measurement filter of bandwidths according to table 6.6.3G.2.5-1, as applicable. The centre frequency of the filter shall be stepped in continuous steps according to the same table. The measured power shall be recorded for each step. The measurement period shall capture the active TSs.
5. Measure the power of the transmitted signal for V2X sidelink with a measurement filter of bandwidths according to table 6.6.3G.2.5-1, as applicable. The centre frequency of the filter shall be stepped in continuous steps according to the same table. The measured power shall be recorded for each step. The measurement period shall capture the active TSs.

#### 6.6.3G.2.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6.

### 6.6.3G.2.5 Test requirement

For frequencies $\Delta f_{OOB}$ greater than $F_{OOB}$ as specified in Table 6.6.3G.2.3-1 the measured average power of spurious emission, derived in step 4 and 5, shall not exceed the described value in Table 6.6.3G.2.5-1.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

**Table 6.6.3G.2.5-1: Spurious emissions limits**

## 6.6.3G.2_1 Spurious emission band UE co-existence for V2X Communication / Sidelink simultaneous with E-UTRA uplink transmissions

Editor's note: This test case is not complete. Following aspects are either missing or not yet determined:

- The specific test requirement for each inter-band con-current V2X configuration is FFS.
- The specific configuration for each inter-band con-current V2X configuration is TBD.

### 6.6.3G.2_1.1 Test purpose

To verify that UE transmitter does not cause unacceptable interference to other channels or other systems in terms of transmitter spurious emissions band UE co-existence in case of simultaneous V2X sidelink and E-UTRA uplink transmissions for inter-band E-UTRA V2X/E-UTRAN bands specified in 36.101 [2] subclause 5.5G-2.

### 6.6.3G.2_1.2 Test applicability

This test case applies to all types of E-UTRA UE release 14 and forward that supports V2X communication and is capable of V2X sidelink communication simultaneous with E-UTRA uplink/downlink.

### 6.6.3G.2_1.3 Minimum conformance requirements

When UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions for inter-band E-UTRA V2X / E-UTRA bands specified in 36.101 [2] Table 5.5G-2, the UE-coexistence requirements in Table 6.6.3G.2_1.3-1 apply as specified for the corresponding inter-band con-current operation with uplink assigned to two bands.

**Table 6.6.3G.2_1.3-1: Requirements for inter-band con-current V2X operation**

| V2X con-current band Configuration | Spurious emission | | | | | | |
|---|---|---|---|---|---|---|---|
| | Protected band | Frequency range (MHz) | | | Maximum Level (dBm) | MBW (MHz) | NOTE |
| V2X_3A-47A | E-UTRA Band 1, 5, 7, 8, 26, 28, 34, 39, 40, 44, 45, 65 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 3 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 3 |

| | Frequency range | 1805 | - | 1855 | [-40] | 1 | 5 |
| | Frequency range | 1855 | - | 1880 | [-15.5] | 5 | 3, 4, 5 |
| | Frequency range | 5925 | - | 5950 | -30 | 1 | 7, 8 |
| | Frequency range | 5815 | - | 5855 | -30 | 1 | 7 |
| V2X_41A-47A | E-UTRA Band 1, 3, 5, 7, 8, 22, | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| | 26, 28, 34, 39, 40, 41, 42, 44, 45, 52, 65 | | | | | | |
| | Frequency range | 5925 | - | 5950 | -30 | 1 | 7, 8 |
| | Frequency range | 5815 | - | 5855 | -30 | 1 | 7 |
| V2X_71A-47A | E-UTRA Band 5, 26 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |
| | E-UTRA Band 41 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | 2 |
| | Frequency range | 5925 | - | 5950 | -30 | 1 | 7, 8 |
| | Frequency range | 5815 | - | 5855 | -30 | 1 | 7 |

NOTE 1: $F_{DL_low}$ and $F_{DL_high}$ refer to each E-UTRA frequency band specified in 36.101 [2] Table 5.5-1

NOTE 2: As exceptions, measurements with a level up to the applicable requirements defined in 36.101 [2] Table 6.6.3.1-2 are permitted for each assigned E-UTRA carrier used in the measurement due to 2nd, 3rd, 4th [or 5th] harmonic spurious emissions. In case the exceptions are allowed due to spreading of the harmonic emission the exception is also allowed for the first 1 MHz frequency range immediately outside the harmonic emission on both sides of the harmonic emission. This results in an overall exception interval centred at the harmonic emission of (2MHz + N x $L_{CRB}$ x 180kHz), where N is 2, 3 or 4 for the 2nd, 3rd or 4th harmonic respectively. The exception is allowed if the measurement bandwidth (MBW) totally or partially overlaps the overall exception interval.

NOTE 3: These requirements also apply for the frequency ranges that are less than $F_{OOB}$ (MHz) in 36.101 [2] Table 6.6.3.1-1 and 36.101 [2] Table 6.6.3.1A-1 from the edge of the aggregated channel bandwidth.

NOTE 4: For these adjacent bands, the emission limit could imply risk of harmful interference to UE(s) operating in the protected operating band.

NOTE 5: This requirement is only applicable for carriers with bandwidth confined within 1885-1920 MHz (requirement for carriers with at least 1RB confined within 1880 - 1885 MHz is not specified). This requirement applies for an uplink transmission bandwidth less than or equal to 54 RB for carriers of 15 MHz bandwidth when carrier centre frequency is within the range 1892.5 - 1894.5 MHz and for carriers of 20 MHz bandwidth when carrier centre frequency is within the range 1895 - 1903 MHz.

NOTE 6: As exceptions, measurements with a level up to the applicable requirement of -38 dBm/MHz is permitted for each assigned E-UTRA carrier used in the measurement due to 2nd harmonic spurious emissions. An exception is allowed if there is at least one individual RB within the transmission bandwidth (see 36.101 [2] Figure 5.6-1) for which the 2nd harmonic totally or partially overlaps the measurement bandwidth (MBW).

NOTE 7: Applicable when NS_33 or NS_34 is configured by the pre-configured radio parameters.

NOTE 8: In the frequency range x-5950MHz, SE requirement of -30dBm/MHz should be applied; where x = max (5925, fc + 15), where fc is the channel centre frequency.

NOTE 9: For non synchronised TDD operation to meet these requirements some restriction will be needed for either the operating band or protected band

The normative reference for this requirement is TS 36.101 [2] subclauses 4.3A, 6.6.3, and 6.6.3G.

## 6.6.3G.2_1.4 Test description

### 6.6.3G.2_1.4.1 Initial conditions

Refer to the subclause 6.6.3G.2.4.1 with the following exceptions:

Instead of Table 6.6.3G.2.4.1-1 → use of Table 6.6.3G.2_1.4.1-1

**Table 6.6.3G.2_1.4.1-1: Test Configuration Table**

| Initial Conditions | |
|---|---|
| Test Environment as specified in TS 36.508[7] subclause 4.1 | NC |
| Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes. | For test frequencies refer to “Range” columns. |
| Test Inter-band con-current V2X bandwidth combination sets as specified in Table 5.4.2G.1-2 for the Inter-band con-current V2X configuration across bandwidth combination sets supported by the UE. | Refer to “Uplink CC NRB”and “Sidelink CC NRB ” columns |

| Test Parameters for Inter-band con-current V2X Configurations | | | | | | | | | | | |

| Test settings for V2X_5A_47A Configuration | | | | | | | | | | | |
| 1 | 5 | Low | 47 | Low | 50 | 100 | QPSK | NA | QPSK | 1@0 | 1@0 |
| 2 | 5 | High | 47 | High | 50 | 100 | QPSK | NA | QPSK | 1@49 | 1@99 |
| Test settings for V2X_5A_47A Configuration | | | | | | | | | | | |
| 1 | 71 | Low | 47 | Low | 100 | 100 | QPSK | NA | QPSK | 1@0 | 1@0 |
| 2 | 71 | High | 47 | High | 100 | 100 | QPSK | NA | QPSK | 1@99 | 1@99 |

Note 1: Test Inter-band con-current V2X bandwidths combination sets are checked separately for each Inter-band con-current V2X Configuration.
Note 2: Use Inter-band con-current V2X Configuration – specific test points if present in the table. Otherwise use the Default Test Settings test points.
Note 3: X,Y correspond to the different bands in the Inter-band con-current V2X Configuration. E.g. for V2X_3A-47A,X=3,Y=47.

### 6.6.3G.2_1.4.2 Test procedure

Same as the subclause 6.6.3G.2.4.2, with the following exceptions:

Instead of Table 6.6.3G.2.5-1 → use Table [6.6.3G.2_1.5-1]

### 6.6.3G.2_1.4.3 Message contents

Refer to the subclause 6.6.3G.2.4.3

## 6.6.3G.2_1.5 Test requirement

The measurement average power of spurious emission, derived in step 4 and 5, shall not exceed the described value [FFS].

## 6.6.3G.2_2 Additional Spurious emission band UE co-existence for V2X Communication / Sidelink simultaneous with E-UTRA uplink transmissions

### 6.6.3G.2_2.1 Test purpose

Same test purpose as specified in clause 6.6.3G.2_1.1

### 6.6.3G.2_2.2 Test applicability

Same test applicability as specified in clause 6.6.3G. 2_1.2

### 6.6.3G.2_2.3 Minimum conformance requirements

Same minimum conformance requirements as specified in clause 6.6.3G. 2_1.3

### 6.6.3G.2_2.4 Test description

#### 6.6.3G.2_2.4.1 Initial conditions

Refer to the subclause 6.6.3G.2.4 with the following exceptions:

Instead of Table 6.6.3G.2.4.1-1 → use of Table 6.6.3G.2_2.4.1-1 for additional spurious emission requirements test;

**Table 6.6.3G.2_2.4.1-1: Test Configuration Table for Additional Spurious Emission Requirements**

| Initial Conditions | |
|---|---|
| Test Environment as specified in TS 36.508[7] subclause 4.1 | NC |
| Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different operating bands. | For test frequencies refer to "Range" columns. |
| Test Inter-band con-current V2X bandwidth combination sets as specified in Table 5.4.2G.1-2 for the Inter-band con-current V2X configuration across bandwidth combination sets supported by the UE. | Refer to "Uplink CC $N_{RB}$" and "Sidelink CC $N_{RB}$ " columns |

| **2** | 71 | High | 47 | High | 100 | 50 | QPSK | NA | QPSK | 1@99 | 1@49 |

Note 1: Test Inter-band con-current V2X bandwidths combination sets are checked separately for each Inter-band con-current V2X Configuration.
Note 2: Use Inter-band con-current V2X Configuration – specific test points if present in the table. Otherwise use the Default Test Settings test points.
Note 3: X,Y correspond to the different bands in the Inter-band con-current V2X Configuration. E.g. for V2X_3A-47A,X=3,Y=47.

### 6.6.3G.2_2.4.2 Test procedure

Same as the subclause 6.6.3G.2.4.2, with the following exceptions:

Instead of Table 6.6.3G.2.5-1 → use Table [6.6.3G.2_2.5-1]

### 6.6.3G.2_2.4.3 Message contents

Refer to the subclause 6.2.4G.2.4.3.

## 6.6.3G.2_2.5 Test requirement

The measurement average power of spurious emission, derived in step 4 and 5, shall not exceed the described value [FFS].

## 6.6.3G.3 Spurious emission for V2X Communication / Intra-band contiguous MCC operation

### 6.6.3G.3.1 Test purpose

To verify that transmitter of UE that support V2X MCC operation does not cause unacceptable interference to other channels or other systems in terms of transmitter spurious emissions.

### 6.6.3G.3.2 Test applicability

This test case applies to UE which support Intra-band contiguous multi-carrier operation V2X Sidelink communication and Band 47.

### 6.6.3G.3.3 Minimum conformance requirements

For intra-band contiguous carrier aggregation the spurious emission limits apply for the frequency ranges that are more than FOOB (MHz) in Table 6.6.3G.3.3-1from the edge of the aggregated channel bandwidth (Table 5.6A-1). For frequencies ΔfOOB greater than FOOB the spurious emission requirements in Table 6.6.3G.3.3-2 are applicable.

**Table 6.6.3G.3.3-1: Boundary between E-UTRA out of band and spurious emission domain for intra-band contiguous carrier aggregation**

| CA Bandwidth Class | OOB boundary $F_{OOB}$ (MHz) |
|---|---|
| A | Table 6.6.3.1.3-1 |
| B | $BW_{Channel_CA}$ + 5 |
| C | $BW_{Channel_CA}$ + 5 |

**Table 6.6.3G.3.3-2: Spurious emissions limits**

| Frequency Range | Maximum Level | Measurement bandwidth | NOTE |
|---|---|---|---|
| 9 kHz ≤ f < 150 kHz | -36 dBm | 1 kHz | |
| 150 kHz ≤ f < 30 MHz | -36 dBm | 10 kHz | |
| 30 MHz ≤ f < 1000 MHz | -36 dBm | 100 kHz | |
| 1 GHz ≤ f < 12.75 GHz | -30 dBm | 1 MHz | |
| 12.75 GHz ≤ f < 5th harmonic of the upper frequency edge of the UL operating band in GHz | -30 dBm | 1 MHz | 1 |
| 12.75 GHz < f < 26GHz | -30dBm | 1MHz | 2 |
| NOTE 1: Applies for Band 22, Band 42, Band 43 and Band 48.<br>NOTE 2: Applies for Band 46 and Band 47. | | | |

The normative reference for this requirement is TS 36.101 [2] subclause 6.6.3G.

### 6.6.3G.3.4 Test description

#### 6.6.3G.3.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in sub-clause 5.2G. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 6.6.3G.3.4.1-1 the details of the V2X reference measurement channels (RMCs) are specified in sub-clause A.8.3 and the GNSS configuration in TS 36.508 [7] subclause 4.11.

**Table 6.6.3G.3.4.1-1: Test Configuration for V2X sidelink transmission**

| Initial Conditions | | | | | | |
|---|---|---|---|---|---|---|
| Test Environment as specified in TS 36.508[7] subclause 4.1 | | | Normal | | | |
| Test Frequencies as specified in TS 36.508 [7] subclause 4.3.1 | | | Low range, High range | | | |
| Test Channel Bandwidths as specified in subclause 5.4.2G | | | Lowest $N_{RB_agg}$, Highest $N_{RB_agg}$ | | | |
| **Test Parameters for V2X MCC Configuration** | | | | | | |
| **V2X MCC Channel Bandwidth** | | | **V2X Sidelink Configuration** | | | |
| **Configuration ID** | **CC1 $N_{RB}$** | **CC2 $N_{RB}$** | **CC1 & CC2 Mod** | **$N_{RB_agg}$** | **CC1 and CC2 RB Allocation (LCRB @ RBstart)** | |
| 1 | 50 | 50 | QPSK | 48 | CC1_48@0 | CC2_0@0 |
| 2 | 50 | 50 | QPSK | 1 | CC1_1@0 | CC2_0@0 |
| 3 | 50 | 50 | QPSK | 1 | CC1_1@49 | CC2_0@0 |
| 4 | 50 | 50 | QPSK | 2 | CC1_1@0 | CC2_1@49 |
| 5 | 50 | 50 | QPSK | 96 | CC1_48@0 | CC2_48@2 |
| Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2G<br>Note 2: If the UE supports multiple CC Combinations in the CA Configuration with the same $N_{RB_agg}$ , only the combination with the highest NRB_PCC is tested. | | | | | | |

1. Connect the SS and GNSS simulator to the UE antenna connectors as shown in TS 36.508 [7] Figure A.89a.

2. Propagation conditions are set according to Annex B.0

3. Set the V2X sidelink communication parameters for both the V2X sidelink capable UE (hereinafter referred to as V2X UE) and SS according to SL-V2X-Preconfiguration in TS36.508 [7] subclause Table 6.8.2.1-1A with the exception specified in table 6.6.3G.3.4.3-1;

3a The GNSS simulator is configured for Scenario #1: static in Geographical area #1, as defined in TS36.508 [7] Table 4.11.2-2. Geographical area #1 is also pre-configured in the UE.

4. Ensure the UE is in Side link State 5A-V2X in Transmit Mode, according to TS 36.508 [7] clause 4.5.9. Message contents are defined in clause 6.6.3G.3.4.3.

5. The GNSS simulator is triggered to start step 1 of Scenario #1 to simulate a location in the centre of Geographical area #1. Wait for the UE to acquire the GNSS signal and start to transmit.

### 6.6.3G.3.4.2 Test procedure

1. The V2X UE schedules the V2X RMC with transmission power at $P_{UMAX}$ level according to *SL-V2X-Preconfiguration* which is in line with the test configuration in Table 6.6.3G.3.4.1-1;

2. Measure the power of the transmitted signal with a measurement filter of bandwidths according to table 6.6.3G.3.5-1. The centre frequency of the filter shall be stepped in contiguous steps according to table 6.6.3G.3.5-1. The measured power shall be verified for each step. The measurement period shall capture the active time slots.

### 6.6.3G.3.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6 with following exceptions.

### 6.6.3G.3.5 Test requirement

The measured average power of transmitter spurious emissions measured in step2 shall not exceed the value in table 6.6.3G.3.3-1.The spurious emission limits apply for the frequency ranges that are more than $\Delta f_{OOB}$ (MHz) from the edge of the channel bandwidth shown in Table 6.6.3G.3.3-2.

## 6.6.3G.3_1 Spurious emission band UE co-existence for V2X Communication / Intra-band contiguous MCC operation

### 6.6.3G.3_1.1 Test purpose

To verify that V2X UE transmitter does not cause unacceptable interference to co-existing systems for the specified bands which has specific requirements in terms of transmitter spurious emissions, when UE is configured for E-UTRA V2X sidelink transmissions with Intra-band contiguous MCC operation.

### 6.6.3G.3_1.2 Test Applicability

This test case applies to UE which support Intra-band contiguous multi-carrier operation V2X Sidelink communication and Band 47.

### 6.6.3G.3_1.3 Minimum conformance requirements

When UE is configured for E-UTRA V2X sidelink transmissions with Intra-band contiguous MCC operation, for intra-band contiguous multi-carrier operation, the spurious emission requirements in Table 6.6.3G.3_1.3-1 shall apply for coexistence with protected bands.

NOTE: For measurement conditions at the edge of each frequency range, the lowest frequency of the measurement position in each frequency range should be set at the lowest boundary of the frequency range plus MBW/2. The highest frequency of the measurement position in each frequency range should be set at the highest boundary of the frequency range minus MBW/2. MBW denotes the measurement bandwidth defined for the protected band.

**Table 6.6.3G.3_1.3-1: Requirements for intraband multi-carrier V2X operation**

| V2X multi-carrier Configuration | Spurious emission | | | | | |
|---|---|---|---|---|---|---|
| | Protected band | Frequency range (MHz) | | | Maximum Level (dBm) | MBW (MHz) | NOTE |
| V2X_47B | E-UTRA Band 1, 3, 5, 7, 8, 22, 26, 28, 34, 39, 40, 41, 42, 44, 45, 65 | $F_{DL_low}$ | - | $F_{DL_high}$ | -50 | 1 | |

The normative reference for this requirement is TS 36.101 [2] subclause 6.6.3G.

## 6.6.3G.3_1.4 Test Description

### 6.6.3G.3_1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in sub-clause 5.2G. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 6.6.3G.3_1.4.1-1 the details of the V2X reference measurement channels (RMCs) are specified in sub-clause A.8.3 and the GNSS configuration in TS 36.508 [7] subclause 4.11.

**Table 6.6.3G.3_1.4-1: Test Configuration for V2X sidelink transmission**

| Initial Conditions | | | | | | |
|---|---|---|---|---|---|---|
| Test Environment as specified in TS 36.508[7] subclause 4.1 | Normal | | | | | |
| Test Frequencies as specified in TS 36.508 [7] subclause 4.3.1 | Low range, High range | | | | | |
| Test Channel Bandwidths as specified in subclause 5.4.2G | Lowest $N_{RB_agg}$, Highest $N_{RB_agg}$ | | | | | |

| Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2G<br>Note 2: If the UE supports multiple CC Combinations in the CA Configuration with the same $N_{RB_agg}$ , only the combination with the highest NRB_PCC is tested. | | | | | | |

1. Connect the SS and GNSS simulator to the UE antenna connectors as shown in TS 36.508 [7] Figure A.89a.

2. Propagation conditions are set according to Annex B.0

3. Set the V2X sidelink communication parameters for both the V2X sidelink capable UE (hereinafter referred to as V2X UE) and SS according to SL-V2X-Preconfiguration in TS36.508 [7] subclause Table [6.8.2.1-1A] with the exception specified in subclause 6.6.3G.3_1.4.3.

3a The GNSS simulator is configured for Scenario #1: static in Geographical area #1, as defined in TS36.508 [7] Table 4.11.2-2. Geographical area #1 is also pre-configured in the UE.

4. Ensure the UE is in Side link State 5A-V2X, according to TS 36.508 [7] clause 4.5.9.

5. The GNSS simulator is triggered to start step 1 of Scenario #1 to simulate a location in the centre of Geographical area #1. Wait for the UE to acquire the GNSS signal and start to transmit.

#### 6.6.3G.3_1.4.2 Test procedure

1. The V2X UE schedules the V2X RMC with transmission power at $P_{UMAX}$ level according to *SL-V2X-Preconfiguration* which is in line with the test configuration in Table 6.6.3G.3_1.4.1-1;

2. Measure the power of the transmitted signal with a measurement filter of bandwidths according to table 6.6.3G.3_1.4-1. The centre frequency of the filter shall be stepped in contiguous steps according to table 6.6.3G.3_1.4-1. The measured power shall be verified for each step. The measurement period shall capture the active time slots.

#### 6.6.3G.3_1.4.3 Message contents

The message contents are the same as in clause 6.6.3G.3.4.3

### 6.6.3G.3_1.5 Test requirement

The measured average power of transmitter spurious emissions measured in step2 shall not exceed the value in table 6.6.3G.3_1.3-1.

# 6.7 Transmit intermodulation

## 6.7.1 Test purpose

To verify that the UE transmit intermodulation does not exceed the described value in the test requirement.

The transmit intermodulation performance is a measure of the capability of the transmitter to inhibit the generation of signals in its non linear elements caused by presence of the wanted signal and an interfering signal reaching the transmitter via the antenna.

## 6.7.2 Test applicability

This test applies to all types of E-UTRA UE release 8 and forward.

## 6.7.3 Minimum conformance requirements

User Equipment(s) transmitting in close vicinity of each other can produce intermodulation products, which can fall into the UE, or eNode B receive band as an unwanted interfering signal. The UE intermodulation attenuation is defined by the ratio of the mean power of the wanted signal to the mean power of the intermodulation product when an interfering CW signal is added at a level below the wanted signal at each of the transmitter antenna port with the other antenna port(s) if any is terminated. Both the wanted signal power and the intermodulation product power are measured through E-UTRA rectangular filter with measurement bandwidth shown in Table 6.7.3-1.

The requirement of transmitting intermodulation is prescribed in Table 6.7.3-1.

**Table 6.7.3-1: Transmit Intermodulation**

| BWChannel (UL) | 5MHz | | 10MHz | | 15MHz | | 20MHz | |
|---|---|---|---|---|---|---|---|---|
| Interference Signal Frequency Offset | 5MHz | 10MHz | 10MHz | 20MHz | 15MHz | 30MHz | 20MHz | 40MHz |
| Interference CW Signal Level | -40dBc | | | | | | | |
| Intermodulation Product | -29dBc | -35dBc | -29dBc | -35dBc | -29dBc | -35dBc | -29dBc | -35dBc |
| Measurement bandwidth | 4.5MHz | 4.5MHz | 9.0MHz | 9.0MHz | 13.5MHz | 13.5MHz | 18MHz | 18MHz |

The normative reference for this requirement is TS 36.101 [2] clause 6.7.1.

## 6.7.4 Test description

### 6.7.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA operating bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 6.7.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annexes A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 6.7.4.1-1: Test Configuration Table**

| **Initial Conditions** | | | | |
|---|---|---|---|---|
| Test Environment as specified in TS 36.508[7] subclause 4.1 | Normal | | | |
| Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 | Mid range | | | |
| Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1 | 5MHz and Highest | | | |
| **Test Parameters for Channel Bandwidths** | | | | |
| | **Downlink Configuration** | **Uplink Configuration** | | |
| Ch BW | N/A for Transmit Intermodulation | Mod'n | RB allocation | |
| | | | FDD | TDD |
| 5MHz | | QPSK | 8 | 8 |
| 10MHz | | QPSK | 12 | 12 |
| 15MHz | | QPSK | 16 | 16 |
| 20MHz | | QPSK | 18 | 18 |
| Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, the applicable channel bandwidths are specified in Table 5.4.2.1-1. | | | | |

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.2.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C.0, C.1, and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Table 6.7.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.7.4.3.

### 6.7.4.3 Test procedure

1. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 6.7.4.1-1. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
2. Send continuously uplink power control "up" commands to the UE until the UE transmits at its $P_{UMAX}$ level.
3. Measure the rectangular filtered mean power of the UE. For TDD slots with transient periods are not under test for the wanted signal and for the intermodulation product.
4. Set the interference signal frequency below the UL carrier frequency using the first offset in table 6.7.5-1.
5. Set the interference CW signal level according to table 6.7.5-1.
6. Search the intermodulation product signals below and above the UL carrier frequency, then measure the rectangular filtered mean power of transmitting intermodulation for both signals, and calculate the ratios with the power measured in step 3.
7. Set the interference signal frequency above the UL carrier frequency using the first offset in table 6.7.5-1.
8. Search the intermodulation product signals below and above the UL carrier frequency, then measure the rectangular filtered mean power of transmitting intermodulation for both signals, and calculate the ratios with the power measured in step 3.

Repeat the measurement using the second offset in table 6.7.5-1.

### 6.7.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6.

## 6.7.5 Test requirement

The ratio derived in step 5 and 7, shall not exceed the described value in table 6.7.5-1.

**Table 6.7.5-1: Transmit Intermodulation**

| BWChannel (UL) | 5MHz | | 10MHz | | 15MHz | | 20MHz | |
|---|---|---|---|---|---|---|---|---|
| Interference Signal Frequency Offset | 5MHz | 10MHz | 10MHz | 20MHz | 15MHz | 30MHz | 20MHz | 40MHz |
| Interference CW Signal Level | -40dBc | | | | | | | |
| Intermodulation Product | -29dBc | -35dBc | -29dBc | -35dBc | -29dBc | -35dBc | -29dBc | -35dBc |
| Measurement bandwidth | 4.5MHz | 4.5MHz | 9.0MHz | 9.0MHz | 13.5MHz | 13.5MHz | 18MHz | 18MHz |
| Note 1: The test requirements do not apply when the interfering signal overlaps with the channel bandwidth of the downlink signal. | | | | | | | | |

# 6.7A Transmit intermodulation for CA

## 6.7A.0 Minimum conformance requirements

User Equipment(s) transmitting in close vicinity of each other can produce intermodulation products, which can fall into the UE, or eNode B receive band as an unwanted interfering signal. The UE intermodulation attenuation is defined by the ratio of the mean power of the wanted signal to the mean power of the intermodulation product on both component carriers when an interfering CW signal is added at a level below the wanted signal at each of the transmitter antenna port with the other antenna port(s) if any is terminated. Both the wanted signal power and the intermodulation product power are measured through rectangular filter with measurement bandwidth shown in Table 6.7A.0-1.

For inter-band carrier aggregation with uplink assigned to two E-UTRA bands, the requirement is specified in Table 6.7.3-1 which shall apply on each component carrier with both component carriers active.

For intra-band contiguous carrier aggregation the requirement of transmitting intermodulation is specified in Table 6.7A.0-1.

**Table 6.7A.0-1: Transmit Intermodulation**

| CA bandwidth class(UL) | B and C | |
|---|---|---|
| Interference Signal Frequency Offset | $BW_{Channel_CA}$ | $2*BW_{Channel_CA}$ |
| Interference CW Signal Level | -40dBc | |
| Intermodulation Product | -29dBc | -35dBc |
| Measurement bandwidth | $BW_{Channel_CA}$- 2* $BW_{GB}$ | |

The normative reference for this requirement is TS 36.101 [2] clause 6.7.1A.

# 6.7A.1 Transmit intermodulation for CA (intra-band contiguous DL CA and UL CA)

## 6.7A.1.1 Test purpose

To verify that the UE transmit intermodulation does not exceed the described value in the test requirement.

The transmit intermodulation performance is a measure of the capability of the transmitter to inhibit the generation of signals in its non linear elements caused by presence of the wanted signal and an interfering signal reaching the transmitter via the antenna.

## 6.7A.1.2 Test applicability

This test applies to all types of E-UTRA UE release 10 and forward that supports intra-band contiguous DL CA and UL CA.

## 6.7A.1.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.7A.0.

## 6.7A.1.4 Test description

### 6.7A.1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 6.7A.1.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annexes A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 6.7A.1.4.1-1: Test Configuration Table**

| **Initial Conditions** | | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| Test Environment as specified in TS 36.508[7] subclause 4.1 | | | Normal | | | | | |
| Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 6.1-2. | | | Mid range | | | | | |
| Test CC Combination setting ($N_{RB_agg}$) as specified in subclause 5.4.2A.1 for the CA Configuration | | | Lowest $N_{RB_agg}$<br>Highest $N_{RB_agg}$<br>(Note 2) | | | | | |
| Test Parameters for CA Configurations | | | | | | | | |
| **CA Configuration / $N_{RB_agg}$** | | **DL Allocation** | **CC MOD** | **UL Allocation** | | | | |
| **PCC $N_{RB}$** | **SCCs $N_{RB}$** | **PCC & SCC RB allocation** | | **$N_{RB_alloc}$** | **PCC & SCC RB allocations ($L_{CRB}$ @ $RB_{start}$)** | | | |
| 25 | 50 | | QPSK | 8 | P_8@0 | S_0@0 | - | - |
| 50 | 50 | | QPSK | 12 | P_12@0 | S_0@0 | - | - |
| 75 | 75 | | QPSK | 16 | P_16@0 | S_0@0 | - | - |
| 100 | 25 | | QPSK | 8 | P_8@0 | S_0@0 | - | - |
| 100 | 50 | N/A | QPSK | 12 | P_12@0 | S_0@0 | - | - |
| 100 | 100 | | QPSK | 18 | P_18@0 | S_0@0 | - | - |
| Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1<br>Note 2: If the UE supports multiple CC Combinations in the CA Configuration with the same $N_{RB_agg}$ , only the combination with the highest NRB_PCC is tested. | | | | | | | | |

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure group A.37 as appropriate.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1, and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. Propagation conditions are set according to Annex B.0.
5. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.7A.1.4.3.

### 6.7A.1.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.0 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 6.7A.1.4.3
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 6.7A.1.4.1-1. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
5. Send continuously uplink power control "up" commands on PCC and SCC to the UE until the UE transmits at its $P_{UMAX}$ level; allow at least 200ms for the UE to reach PUMAX level.

6. Measure the rectangular filtered mean power of the UE. For TDD slots with transient periods are not under test for the wanted signal and for the intermodulation product.
7. Set the interference signal frequency below $F_{CA_low}$ using the first offset in table 6.7A.0-1.
8. Set the interference CW signal level according to table 6.7A.0-1.
9. Search the intermodulation product signals below and above the aggregated UL carrier, then measure the rectangular filtered mean power of transmitting intermodulation for both signals, and calculate the ratios with the power measured in step 6.
10. Set the interference signal frequency above $F_{CA_high}$ using the first offset in table 6.7A.0-1.
11. Search the intermodulation product signals below and above the aggregated UL carrier, then measure the rectangular filtered mean power of transmitting intermodulation for both signals, and calculate the ratios with the power measured in step 6.
12. Repeat the measurement using the second offset in table 6.7A.0-1.

#### 6.7A.1.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6. In test procedure step 2, for SCC configuration there are no additional message contents.

### 6.7A.1.5 Test requirement

The ratio derived in step 9 and 11, shall not exceed the described value in table 6.7A.1.5-1.

**Table 6.7A.1.5-1: Transmit Intermodulation**

| CA bandwidth class(UL) | B and C | |
|---|---|---|
| Interference Signal Frequency Offset | $BW_{Channel_CA}$ | $2*BW_{Channel_CA}$ |
| Interference CW Signal Level | -40dBc | |
| Intermodulation Product | -29dBc | -35dBc |
| Measurement bandwidth | $BW_{Channel_CA}$- 2* $BW_{GB}$ | |
| Note 1: The test requirements do not apply when the interfering signal overlaps with the channel bandwidth of any downlink CC. | | |

## 6.7A.2 Transmit intermodulation for CA (inter-band DL CA and UL CA)

### 6.7A.2.1 Test purpose

To verify that the UE transmit intermodulation does not exceed the described value in the test requirement.

The transmit intermodulation performance is a measure of the capability of the transmitter to inhibit the generation of signals in its non linear elements caused by presence of the wanted signal and an interfering signal reaching the transmitter via the antenna.

### 6.7A.2.2 Test applicability

This test applies to all types of E-UTRA UE release 11 and forward that supports inter-band DL CA and UL CA.

### 6.7A.2.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.7A.0.

## 6.7A.2.4 Test description

### 6.7A.2.4.1 Initial conditions

Same as in clause 6.7A.1.4.1 with the following exceptions:

- Instead of Table 5.4.2A.1-1 → use Table 5.4.2A.1-2 for CA configurations with two bands or Table 5.4.2A.1-2a for CA configurations with three bands.
- Instead of Table 6.7A.1.4.1-1 → use Table 6.7A.2.4.1-1.
- Instead of clause 6.7A.1.4.3 → use clause 6.7A.2.4.3.

**Table 6.7A.2.4.1-1: Test Configuration Table**

| **Initial Conditions** | | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| Test Environment as specified in TS 36.508[7] subclause 4.1 | | | Normal | | | | | |
| Test Frequencies as specified in TS 36.508 [7] subclause 4.3.1 for different CA bandwidth classes. | | | Mid range for PCC and SCC | | | | | |
| Test CC Combination setting ($N_{RB_agg}$) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE. | | | Lowest $N_{RB_agg}$<br>Highest $N_{RB_agg}$<br>(Note 2, 3) | | | | | |
| Test Parameters for CA Configurations | | | | | | | | |
| **CA Configuration / $N_{RB_agg}$** | | **DL Allocation** | **CC MOD** | **UL Allocation** | | | | |
| **PCC $N_{RB}$** | **SCCs $N_{RB}$** | **PCC & SCC RB allocation** | | **$N_{RB_alloc}$** | **PCC & SCC RB allocations ($L_{CRB}$ @ $RB_{start}$)** | | | |
| | | N/A for this test | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | |
| 25 | 25 | | QPSK | 16 | P_8@0 | S_8@0 | - | - |
| 25 | 50 | | QPSK | 20 | P_8@0 | S_12@0 | - | - |
| | | | | | | | | |
| | | | | | | | | |
| 50 | 25 | | QPSK | 20 | P_12@0 | S_8@0 | - | - |
| 50 | 50 | | QPSK | 24 | P_12@0 | S_12@0 | - | - |
| 50 | 75 | | QPSK | 28 | P_12@0 | S_16@0 | - | - |
| 50 | 100 | | QPSK | 30 | P_12@0 | S_18@0 | - | - |
| 75 | 25 | | QPSK | 24 | P_16@0 | S_8@0 | - | - |
| 75 | 50 | | QPSK | 28 | P_16@0 | S_12@0 | - | - |
| 75 | 75 | | QPSK | 32 | P_16@0 | S_16@0 | - | - |
| 75 | 100 | | QPSK | 34 | P_16@0 | S_18@0 | - | - |
| 100 | 50 | | QPSK | 30 | P_18@0 | S_12@0 | - | - |
| 100 | 75 | | QPSK | 34 | P_18@0 | S_16@0 | - | - |
| 100 | 100 | | QPSK | 36 | P_18@0 | S_18@0 | - | - |
| Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-2 | | | | | | | | |
| Note 2: If the UE supports multiple CC Combinations in the CA Configuration with the same $N_{RB_agg}$ , only the combination with the highest NRB_PCC is tested. | | | | | | | | |
| Note 3: If in the CA Configuration UE supports CC Combinations with channel BW below 5MHz on at least one CC, these CC Combinations are disregarded for Lowest $N_{RB_agg}$. Only CC Combinations which have channel BW 5MHz or above on both component carriers are considered for Lowest $N_{RB_agg}$. | | | | | | | | |

### 6.7A.2.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.0 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 6.7A.2.4.3
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 6.7A.2.4.1-1. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
5. Send continuously uplink power control "up" commands on PCC and SCC to the UE until the UE transmits at its $P_{UMAX}$ level; allow at least 200ms for the UE to reach PUMAX level.
6. Measure the rectangular filtered mean power of the UE. For TDD slots with transient periods are not under test for the wanted signal and for the intermodulation product.
7. Set the interference signal frequency below the UL carrier frequency of the PCC using the first offset in table 6.7.3-1.
8. Set the interference CW signal level according to table 6.7.3-1.
9. Search the intermodulation product signals below and above the UL carrier of the PCC, then measure the rectangular filtered mean power of transmitting intermodulation for both signals, and calculate the ratios with the power measured in step 6.
10. Set the interference signal frequency above the UL carrier frequency of the PCC using the first offset in table 6.7.3-1.
11. Search the intermodulation product signals below and above the UL carrier of the PCC, then measure the rectangular filtered mean power of transmitting intermodulation for both signals, and calculate the ratios with the power measured in step 6.
12. Set the interference signal frequency below the UL carrier frequency of the SCC using the first offset in table 6.7.3-1.
13. Search the intermodulation product signals below and above the UL carrier of the SCC, then measure the rectangular filtered mean power of transmitting intermodulation for both signals, and calculate the ratios with the power measured in step 6.
14. Set the interference signal frequency above the UL carrier frequency of the SCC using the first offset in table 6.7.3-1.
15. Search the intermodulation product signals below and above the UL carrier of the SCC, then measure the rectangular filtered mean power of transmitting intermodulation for both signals, and calculate the ratios with the power measured in step 6.
16. Repeat the measurement using the second offset in table 6.7.3-1.

### 6.7A.2.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6. In test procedure step 2, for SCC configuration there are no additional message contents.

## 6.7A.2.5 Test requirement

The ratio derived in step 9, 11, 13 and 15, shall not exceed the described value in table 6.7A.2.5-1.

**Table 6.7A.2.5-1: Transmit Intermodulation**

| BWChannel (UL) | 5MHz | | 10MHz | | 15MHz | | 20MHz | |
|---|---|---|---|---|---|---|---|---|
| Interference Signal Frequency Offset | 5MHz | 10MHz | 10MHz | 20MHz | 15MHz | 30MHz | 20MHz | 40MHz |
| Interference CW Signal Level | -40dBc | | | | | | | |
| Intermodulation Product | -29dBc | -35dBc | -29dBc | -35dBc | -29dBc | -35dBc | -29dBc | -35dBc |
| Measurement bandwidth | 4.5MHz | 4.5MHz | 9.0MHz | 9.0MHz | 13.5MHz | 13.5MHz | 18MHz | 18MHz |
| Note 1: The test requirements do not apply when the interfering signal overlaps with the channel bandwidth of any downlink CC. | | | | | | | | |

## 6.7A.3

## 6.7A.4 Transmit intermodulation for CA (3DL CA and 3UL CA)

Editor's Note: This test case is incomplete. The following items are missing or are incomplete:

- Table 6.6.1A.4.4.1-1 needs to be updated for Intra-band contiguous only CA configuration. This issue is under investigation.

-Intermodulation Product for intra-band contiguous only in Test Requirements Table is not specified

-The test applicability needs to be added to TS36.521-2

### 6.7A.4.1 Test purpose

To verify that the UE transmit intermodulation does not exceed the described value in the test requirement.

The transmit intermodulation performance is a measure of the capability of the transmitter to inhibit the generation of signals in its non-linear elements caused by presence of the wanted signal and an interfering signal reaching the transmitter via the antenna.

### 6.7A.4.2 Test applicability

This test applies to all types of E-UTRA UE release 13 and forward that supports 3DL CA and 3UL CA.

### 6.7A.4.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 6.7A.0.

### 6.7A.4.4 Test description

#### 6.7A.4.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1, 5.4.2.A1-2 and 5.4.2.A1-2a. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 6.7A.4.1.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annexes A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 6.7A.4.4.1-1: Test Configuration Table**

| **Initial Conditions** | | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| Test Environment as specified in TS 36.508[7] subclause 4.1 | | Normal | | | | | | |

| 100 | 100 | | QPSK | 54 | P_18@0 | S_18@0 | S_18@0 | - |
| Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1, 5.4.2.A1-2 and 5.4.2.A1-2a.<br>Note 2: If the UE supports multiple CC Combinations in the CA Configuration with the same $N_{RB_agg}$ , only the combination with the highest NRB_PCC is tested. | | | | | | | | |

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure group A.37 as appropriate.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1, and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. Propagation conditions are set according to Annex B.0.
5. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.7A.4.1.4.3.

### 6.7A.4.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.0 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 6.7A.4.1.4.3

3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).

4. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 6.7A.4.1.4.1-1. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.

5. Send continuously uplink power control "up" commands on PCC and SCC to the UE until the UE transmits at its $P_{UMAX}$ level; allow at least 200ms for the UE to reach PUMAX level.

6. Measure the rectangular filtered mean power of the UE. For TDD slots with transient periods are not under test for the wanted signal and for the intermodulation product.

7. Set the interference signal frequency below $F_{CA_low}$ using the first offset in table 6.7A.0-1.

8. Set the interference CW signal level according to table 6.7A.0-1.

9. Search the intermodulation product signals below and above the aggregated UL carrier, then measure the rectangular filtered mean power of transmitting intermodulation for both signals, and calculate the ratios with the power measured in step 6.

10. Set the interference signal frequency above $F_{CA_high}$ using the first offset in table 6.7A.0-1.

11. Search the intermodulation product signals below and above the aggregated UL carrier, then measure the rectangular filtered mean power of transmitting intermodulation for both signals, and calculate the ratios with the power measured in step 6.

12. Repeat the measurement using the second offset in table 6.7A.0-1.

### 6.7A.4.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6. In test procedure step 2, for SCC configuration there are no additional message contents.

## 6.7A.4.5 Test requirement

The ratio derived in step 9 and 11, shall not exceed the described value in table 6.7A.4.1.5-2 for interband. For combinations of intra-band and inter-band carrier aggregation with three uplink component carriers (up to two contiguously aggregated carriers per band) transmit intermodulations is defined as follows. For the E-UTRA band supporting one component carrier the requirement specified in Table 6.7A.4.1.5-2 apply. For the E-UTRA band supporting two contiguous component carriers the requirements specified in Table 6.7A.4.1.5-1 apply.

**Table 6.7A.4.1.5-1: Transmit Intermodulation for intra-band contiguous part**

| CA bandwidth class(UL) | B and C | |
|---|---|---|
| Interference Signal Frequency Offset | $BW_{Channel_CA}$ | $2*BW_{Channel_CA}$ |
| Interference CW Signal Level | -40dBc | |
| Intermodulation Product | -29dBc | -35dBc |
| Measurement bandwidth | $BW_{Channel_CA}$- 2* $BW_{GB}$ | |

**Table 6.7A.4.1.5-2 : Transmit Intermodulation for inter-band part**

| BWChannel (UL) | 5MHz | | 10MHz | | 15MHz | | 20MHz | |
|---|---|---|---|---|---|---|---|---|
| Interference Signal Frequency Offset | 5MHz | 10MHz | 10MHz | 20MHz | 15MHz | 30MHz | 20MHz | 40MHz |
| Interference CW Signal Level | -40dBc | | | | | | | |
| Intermodulation Product | -29dBc | -35dBc | -29dBc | -35dBc | -29dBc | -35dBc | -29dBc | -35dBc |
| Measurement bandwidth | 4.5MHz | 4.5MHz | 9.0MHz | 9.0MHz | 13.5MHz | 13.5MHz | 18MHz | 18MHz |
| Note 1: The test requirements do not apply when the interfering signal overlaps with the channel bandwidth of any downlink CC. | | | | | | | | |

# 6.7B Transmit intermodulation for UL-MIMO

## 6.7B.1 Test purpose

To verify that the UE transmit intermodulation at each transmit antenna does not exceed the described value in the test requirement.

The transmit intermodulation performance is a measure of the capability of the transmitter to inhibit the generation of signals in its non linear elements caused by presence of the wanted signal and an interfering signal reaching the transmitter via the antenna.

## 6.7B.2 Test applicability

This test applies to all types of E-UTRA UE release 10 and forward that support UL-MIMO.

## 6.7B.3 Minimum conformance requirements

For UE with multiple antenna transmit connectors, the transmit intermodulation requirements are specified at each transmit antenna connector and the wanted signal is defined as the sum of output power at each transmit antenna connector.

For UEs with two transmit antenna connectors supporting dual-layer transmission, the requirements in subclause 6.7.3-1 apply to each transmit antenna connector with the UL-MIMO configurations specified in Table 6.2.2B.3-2.

The normative reference for this requirement is TS 36.101 [2] clause 6.7.1B.

## 6.7B.4 Test description

### 6.7B.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA operating bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 6.7B.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annexes A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 6.7B.4.1-1: Test Configuration Table**

| **Initial Conditions** | | | | |
|---|---|---|---|---|
| Test Environment as specified in TS 36.508[7] subclause 4.1 | | Normal | | |
| Test Frequencies as specified in **TS36.508 [7] subclause 4.3.1** | | Mid range | | |
| Test Channel Bandwidths as specified in **TS 36.508 [7] subclause 4.3.1** | | 5MHz and Highest | | |
| **Test Parameters for Channel Bandwidths** | | | | |
| | **Downlink Configuration** | **Uplink Configuration** | | |
| Ch BW | N/A for Transmit Intermodulation | Mod'n | RB allocation | |
| | | | FDD | TDD |
| 5MHz | | QPSK | 8 | 8 |
| 10MHz | | QPSK | 12 | 12 |
| 15MHz | | QPSK | 16 | 16 |
| 20MHz | | QPSK | 18 | 18 |
| Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, the applicable channel bandwidths are specified in Table 5.4.2.1-1. | | | | |

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.39.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C.0, C.1, and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Table 6.7B.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.7B.4.3.

## 6.7B.4.2 Test procedure

1. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 4 for C_RNTI to schedule the UL RMC according to Table 6.7B.4.1-1. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
2. Send continuously uplink power control "up" commands to the UE until the UE transmits at its $P_{UMAX}$ level.
3. Measure the rectangular filtered mean power of the UE. For TDD slots with transient periods are not under test for the wanted signal and for the intermodulation product.
4. Set the interference signal frequency below the UL carrier frequency using the first offset in table 6.7B.5-1.
5. Set the interference CW signal level according to table 6.7B.5-1.
6. Search the intermodulation product signals below and above the UL carrier frequency, then measure the rectangular filtered mean power of transmitting intermodulation for both signals, and calculate the ratios with the power measured in step 3.
7. Set the interference signal frequency above the UL carrier frequency using the first offset in table 6.7B.5-1.
8. Search the intermodulation product signals below and above the UL carrier frequency, then measure the rectangular filtered mean power of transmitting intermodulation for both signals, and calculate the ratios with the power measured in step 3.
9. Repeat the measurement using the second offset in table 6.7B.5-1.
10. Repeat step 3) until 9) for each of transmit antenna of the UE.

### 6.7B.4.3 Message contents

Message contents are according to TS 36.508 [7] clause 4.6.6.7B.5 Test requirement

The ratio derived in step 5 and 7 at each transmit antenna of UE shall not exceed the described value in table 6.7B.5-1.

**Table 6.7B.5-1: Transmit Intermodulation**

| **BWChannel (UL)** | 5MHz | | 10MHz | | 15MHz | | 20MHz | |
|---|---|---|---|---|---|---|---|---|
| **Interference Signal Frequency Offset** | 5MHz | 10MHz | 10MHz | 20MHz | 15MHz | 30MHz | 20MHz | 40MHz (Note 1) |
| **Interference CW Signal Level** | -40dBc | | | | | | | |
| **Intermodulation Product** | -29dBc | -35dBc | -29dBc | -35dBc | -29dBc | -35dBc | -29dBc | -35dBc |
| **Measurement bandwidth** | 4.5MHz | 4.5MHz | 9.0MHz | 9.0MHz | 13.5MHz | 13.5MHz | 18MHz | 18MHz |
| Note 1: For Band 20, only applicable for interference signal frequency above the UL carrier frequency. | | | | | | | | |

## 6.7E Transmit intermodulation for UE category 0

### 6.7E.1 Test purpose

Same test purpose as in clause 6.7.1.

### 6.7E.2 Test applicability

This test case applies to all types of E-UTRA UE release 12 and forward of UE category 0.

### 6.7E.3 Minimum conformance requirements

Same minimum conformance requirements as in clause 6.7.3.

### 6.7E.4 Test description

#### 6.7E.4.1 Initial conditions

Same initial conditions as in clause 6.7.4.1 with following exceptions for HD-FDD:

- Connect SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.4 using only main UE Tx/Rx antenna.

#### 6.7E.4.2 Test procedure

Same test procedure as in clause 6.7.4.2 with following exception for HD-FDD:

- In step 3, slots with transient periods are not under test. Half-duplex guard subframe are not under test.

#### 6.7E.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6.

### 6.7E.5 Test requirement

The ratio derived in step 5 and 7, shall not exceed the described value in table 6.7E.5-1

**Table 6.7E.5-1: Transmit Intermodulation**

| BWChannel (UL) | 5MHz | | 10MHz | | 15MHz | | 20MHz | |
|---|---|---|---|---|---|---|---|---|
| Interference Signal Frequency Offset | 5MHz | 10MHz | 10MHz | 20MHz | 15MHz | 30MHz | 20MHz | 40MHz (Note 1) |
| Interference CW Signal Level | -40dBc | | | | | | | |
| Intermodulation Product | -29dBc | -35dBc | -29dBc | -35dBc | -29dBc | -35dBc | -29dBc | -35dBc |
| Measurement bandwidth | 4.5MHz | 4.5MHz | 9.0MHz | 9.0MHz | 13.5MHz | 13.5MHz | 18MHz | 18MHz |
| Note 1: For Band 20, only applicable for interference signal frequency above the UL carrier frequency. | | | | | | | | |

# 6.7EA Transmit intermodulation for UE category M1

## 6.7EA.1 Test purpose

To verify that the UE transmit intermodulation does not exceed the described value in the test requirement.

The transmit intermodulation performance is a measure of the capability of the transmitter to inhibit the generation of signals in its non linear elements caused by presence of the wanted signal and an interfering signal reaching the transmitter via the antenna.

## 6.7EA.2 Test applicability

This test case applies to all types of E-UTRA UE release 13 and forward of UE category M1.

## 6.7EA.3 Minimum conformance requirements

User Equipment(s) transmitting in close vicinity of each other can produce intermodulation products, which can fall into the UE, or eNode B receive band as an unwanted interfering signal. The UE intermodulation attenuation is defined by the ratio of the mean power of the wanted signal to the mean power of the intermodulation product when an interfering CW signal is added at a level below the wanted signal at each of the transmitter antenna port with the other antenna port(s) if any is terminated. Both the wanted signal power and the intermodulation product power are measured through E-UTRA rectangular filter with measurement bandwidth shown in Table 6.7EA.3-1.

The requirement of transmitting intermodulation is prescribed in Table 6.7EA.3-1.

**Table 6.7EA.3-1: Transmit Intermodulation**

| BWChannel (UL) | 5MHz | | 10MHz | | 15MHz | | 20MHz | |
|---|---|---|---|---|---|---|---|---|
| Interference Signal Frequency Offset | 5MHz | 10MHz | 10MHz | 20MHz | 15MHz | 30MHz | 20MHz | 40MHz |
| Interference CW Signal Level | -40dBc | | | | | | | |
| Intermodulation Product | -29dBc | -35dBc | -29dBc | -35dBc | -29dBc | -35dBc | -29dBc | -35dBc |
| Measurement bandwidth | 4.5MHz | 4.5MHz | 9.0MHz | 9.0MHz | 13.5MHz | 13.5MHz | 18MHz | 18MHz |

The normative reference for this requirement is TS 36.101 [2] clause 6.7.1.

# 6.7EA.4 Test description

## 6.7EA.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in sub-clause 5.2E. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 6.7EA.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annexes A.2. Configurations of PDSCH and MPDCCH before measurement are specified in Annex C.2.

**Table 6.7EA.4.1-1: Test Configuration Table**

| **Initial Conditions** | | | | | |
|---|---|---|---|---|---|
| Test Environment as specified in TS 36.508[7] subclause 4.1 | Normal | | | | |
| Test Frequencies as specified in TS 36.508 [7] subclause [4.3.1] | Mid range | | | | |
| Test Channel Bandwidths as specified in TS 36.508 [7] subclause [4.3.1] | 5MHz and Highest | | | | |
| **Test Parameters for Channel Bandwidths and Narrowband positions** | | | | | |
| | **Downlink Configuration** | **Uplink Configuration** | | | |
| Ch BW | N/A for Transmit Intermodulation test case | Mod'n | RB allocation | | |
| | | | FDD and HD-FDD | TDD | Narrowband index[1] |
| **Low range, Mid range** | | | | | |
| 5MHz | | QPSK | 6 | 6 | 0 |
| 10MHz | | QPSK | 6 | 6 | 0 |
| 15MHz | | QPSK | 6 | 6 | 0 |
| 20MHz | | QPSK | 6 | 6 | 0 |
| Note 1: Denotes where in the channel Bandwidth the narrowband shall be placed. Narrowband and Narrowband index are defined in TS36.211, 5.2.4<br>Note 2: Test Channel Bandwidths are checked separately for each E-UTRA band, the applicable channel bandwidths are specified in Table 5.4.2.1-1. | | | | | |

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.2 using only main UE Tx/Rx antenna.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C.0, C.1, and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channels are set according to Table 6.7EA.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF-CE according to TS 36.508 [7] clause 5.2A.2AA. Message contents are defined in clause 6.7EA.4.3.

## 6.7EA.4.2 Test procedure

1. SS sends uplink scheduling information via MPDCCH DCI format 6-0A for C_RNTI to schedule the UL RMC according to Table 6.7EA.4.1-1. Since the UE has no payload and no loopback data to send, the UE sends uplink MAC padding bits on the UL RMC.
2. Send continuously uplink power control "up" commands to the UE until the UE transmits at its $P_{UMAX}$ level.
3. Measure the rectangular filtered mean power of the UE. For TDD slots with transient periods are not under test for the wanted signal and for the intermodulation product. For HD-FDD slots with transient periods and Half-duplex guard subframe are not under test.

4. Set the interference signal frequency below the UL carrier frequency using the first offset in table 6.7EA.5-1.
5. Set the interference CW signal level according to table 6.7EA.5-1.
6. Search the intermodulation product signals below and above the UL carrier frequency, then measure the rectangular filtered mean power of transmitting intermodulation for both signals, and calculate the ratios with the power measured in step 3.
7. Set the interference signal frequency above the UL carrier frequency using the first offset in table 6.7EA.5-1.
8. Search the intermodulation product signals below and above the UL carrier frequency, then measure the rectangular filtered mean power of transmitting intermodulation for both signals, and calculate the ratios with the power measured in step 3.

Repeat the measurement using the second offset in table 6.7EA.5-1.

### 6.7EA.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the condition CEModeA.

## 6.7EA.5 Test requirement

The ratio derived in step 5 and 7, shall not exceed the described value in table 6.7EA.5-1

**Table 6.7EA.5-1: Transmit Intermodulation**

| BWChannel (UL) | 5MHz | | 10MHz | | 15MHz | | 20MHz | |
|---|---|---|---|---|---|---|---|---|
| Interference Signal Frequency Offset | 5MHz | 10MHz | 10MHz | 20MHz | 15MHz | 30MHz | 20MHz | 40MHz (Note 1) |
| Interference CW Signal Level | -40dBc | | | | | | | |
| Intermodulation Product | -29dBc | -35dBc | -29dBc | -35dBc | -29dBc | -35dBc | -29dBc | -35dBc |
| Measurement bandwidth | 4.5MHz | 4.5MHz | 9.0MHz | 9.0MHz | 13.5MHz | 13.5MHz | 18MHz | 18MHz |
| Note 1: The test requirements do not apply when the interfering signal overlaps with the channel bandwidth of the downlink signal | | | | | | | | |

# 6.7EB Transmit intermodulation for UE category 1bis

## 6.7EB.1 Test purpose

Same test purpose as in clause 6.7.1.

## 6.7EB.2 Test applicability

This test case applies to all types of E-UTRA UE release 13 and forward of UE category 1bis.

## 6.7EB.3 Minimum conformance requirements

Same minimum conformance requirements as in clause 6.7.3.

## 6.7EB.4 Test description

### 6.7EB.4.1 Initial conditions

Same initial conditions as in clause 6.7.4.1 with following exception.

- Connect SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.3 using only main UE Tx/Rx antenna.

### 6.7EB.4.2 Test procedure

Same test procedure as in clause 6.7.4.2

### 6.7EB.4.3 Message contents

Message contents same as 6.7.4.3.

## 6.7EB.5 Test requirement

The ratio derived in step 5 and 7, shall not exceed the described value in table 6.7EB.5-1

**Table 6.7EB.5-1: Transmit Intermodulation**

| BWChannel (UL) | 5MHz | | 10MHz | | 15MHz | | 20MHz | |
|---|---|---|---|---|---|---|---|---|
| Interference Signal Frequency Offset | 5MHz | 10MHz | 10MHz | 20MHz | 15MHz | 30MHz | 20MHz | 40MHz (Note 1) |
| Interference CW Signal Level | -40dBc | | | | | | | |
| Intermodulation Product | -29dBc | -35dBc | -29dBc | -35dBc | -29dBc | -35dBc | -29dBc | -35dBc |
| Measurement bandwidth | 4.5MHz | 4.5MHz | 9.0MHz | 9.0MHz | 13.5MHz | 13.5MHz | 18MHz | 18MHz |
| Note 1: For Band 20, only applicable for interference signal frequency above the UL carrier frequency. | | | | | | | | |

# 6.7F Transmit intermodulation for category NB1 and NB2

## 6.7F.1 Test purpose

To verify that the UE transmit intermodulation does not exceed the described value in the test requirement.

## 6.7F.2 Test applicability

This test case applies to all types of UE release 13 and forward of UE category NB1.

This test case applies to all types of UE release 14 and forward of UE category NB2.

## 6.7F.3 Minimum conformance requirements

The transmit intermodulation performance is a measure of the capability of the transmitter to inhibit the generation of signals in its non linear elements caused by presence of the wanted signal and an interfering signal reaching the transmitter via the antenna.

The UE category NB1 and NB2 transmitter intermodulation attenuation is defined by the ratio of the mean power of the wanted signal to the mean power of the intermodulation product as defined in Table 6.7F.3-1 when an interfering CW signal is added at a level below the wanted signal at the transmitter antenna port. Both the wanted signal power and the intermodulation product power are measured through rectangular filter with measurement bandwidth shown in Table 6.7F.3-1.

**Table 6.7F.3-1: UE category NB1 and NB2 transmitter IM requirement**

| Parameters for transmitter intermodulation | | |
|---|---|---|
| BW Channel (UL) | 15 kHz (1 tone at sub-carrier 5 or 6) | |
| Interference Signal Frequency Offset | 180 kHz | 360 kHz |
| Interference CW Signal Level | -40dBc | |
| Intermodulation Product | -20 dBc | -39 dBc |
| Measurement bandwidth | 30 kHz | 30 kHz |

The normative reference for this requirement is TS 36.101 [2] clause 6.7.1F.

## 6.7F.4 Test description

### 6.7F.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions and test frequencies based on the subset of E-UTRA operating bands defined for NB-IoT in clause 5.2F. All of these configurations shall be tested with applicable test parameters shown in table 6.7F.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annexes A.2.4. Configurations of NPDSCH and NPDCCH before measurement are specified in [Annex C.2].

**Table 6.7F.4.1-1: Test Configuration Table**

| Initial Conditions | | | | |
|---|---|---|---|---|
| Test Environment as specified in TS 36.508[7] subclause 8.1.1 | | Normal | | |
| Test Frequencies as specified in TS 36.508 [7] subclause 8.1.3.1 | | Frequency ranges defined in Annex K.1.1 | | |
| **Test Parameters** | | | | |
| **Configuration ID** | **Downlink Configuration** | **Uplink Configuration** | | |
| | N/A | Modulation | $N_{tones}$ | Sub-carrier spacing (kHz) |
| 1 | | QPSK | 1@5 | 15kHz |

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.2 using only main Tx/Rx antenna.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 8.1.4.3.
3. Downlink signals are initially set up according to Annex C.0, C.1, and C.3.0, and uplink signals according to Annex H.1.1 and H.4.0.
4. The UL Reference Measurement channels are set according to Table 6.7F.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 2A-NB with CP CIoT Optimisation according to TS 36.508 [7] clause 8.1.5. Message contents are defined in clause 6.7F.4.3.

### 6.7F.4.3 Test procedure

1. SS sends uplink scheduling information for the UL HARQ process via NPDCCH DCI format N0 for C_RNTI to schedule the UL RMC according to Table 6.7F.4.1-1. Since the UE has no payload and no loopback data to send

the UE sends uplink MAC padding bits on the UL RMC. (UE should be already transmitting $P_{UMAX}$ after Initial Conditions setting).

2. Measure the mean power of the UE in the channel bandwidth of the radio access mode according to the test configuration, which shall meet the requirements described in Table 6.2.3F.5-1. The measurement period is at least one sub-frame **(**1ms) for 15 KHz channel spacing.

3. Set the interference signal frequency below the UL carrier frequency using the first offset in table 6.7F.5-1.

4. Set the interference CW signal level according to table 6.7F.5-1.

5. Measure the rectangular filtered mean power of transmitting intermodulation product signals below and above the UL carrier frequency, and calculate the ratios with the power measured in step 2. The centre frequency of the measurement filter shall be (Interference signal frequency - Interference Signal Frequency Offset + 7.5kHz) and (UL carrier frequency - 15 kHz + Interference Signal Frequency Offset), respectively.

6. Set the interference signal frequency above the UL carrier frequency using the first offset in table 6.7F.5-1.

7. Measure the rectangular filtered mean power of transmitting intermodulation product signals below and above the UL carrier frequency, and calculate the ratios with the power measured in step 2. The centre frequency of the measurement filter shall be (UL carrier frequency - 15 kHz - Interference Signal Frequency Offset) and (Interference signal frequency + Interference Signal Frequency Offset + 7.5kHz) respectively.

Repeat the measurement using the second offset in table 6.7F.5-1.

### 6.7F.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 8.1.6.

## 6.7F.5 Test requirement

The ratio derived in step 5 and 7, shall not exceed the described value in table 6.7F.5-1

**Table 6.7F.5-1: Transmit Intermodulation**

| BW Channel (UL) | 15 kHz (1 tone) | |
|---|---|---|
| Interference Signal Frequency Offset | 180 kHz | 360 kHz |
| Interference CW Signal Level | -40dBc | |
| Intermodulation Product | -20 dBc | -39 dBc |
| Measurement bandwidth | 30 kHz | 30 kHz |

# 6.7G Transmit intermodulation for V2X Communication

## 6.7G.1 Transmit intermodulation for V2X Communication / Non-concurrent with E-UTRA uplink transmissions

### 6.7G.1.1 Test purpose

Same test purpose as in clause 6.7.1.

### 6.7G.1.2 Test applicability

This test case applies to all types of UE that support V2X Sidelink communication and Band 47.

## 6.7G.1.3 Minimum conformance requirements

When UE is configured for E-UTRA V2X sidelink transmissions non-concurrent with E-UTRA uplink transmissions for E-UTRA V2X operating bands specified in Table 5.5G-1, the requirements in subclause 6.7.1 apply for E-UTRA V2X sidelink transmission.

The normative reference for this requirement is TS 36.101 [2] clause 6.7.1G.

## 6.7G.1.4 Test description

### 6.7G.1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies and channel bandwidths based on E-UTRA operating bands specified in table 5.4.2G.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 6.7G.1.4.1-1. The details of the V2X reference measurement channels (RMCs) are specified in Annexes A.8.3 and the GNSS configuration in TS 36.508 [7] subclause 4.11.

**Table 6.7G.1.4.1-1: Test Configuration Table**

| **Initial Conditions** | | |
|---|---|---|
| Test Environment as specified in TS 36.508[7] subclause 4.1 | Normal | |
| Test Frequencies as specified in TS 36.508 [7] subclause 4.3.1 | Mid range | |
| Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1 | Lowest, Highest | |
| **Test Parameters for Channel Bandwidths** | | |
| | **V2X Configuration to Transmit** | |
| Ch BW | Modulation | RB allocation |
| 10MHz | QPSK | 48 |
| 20MHz | QPSK | 96 |

1. Connect the SS to the UE antenna connectors and connect the GNSS simulator to the UE GNSS RX antenna connector as shown in TS 36.508 [7] Annex A, Figure A.92.

2. The parameter settings for the V2X sidelink transmission over PC5 are pre-configured according to TS 36.508 [7] subclause 4.10.1. Message content exceptions are defined in clause 6.7G.1.4.3.

3. The V2X reference measurement channel is set according to Table 6.7G.1.4.1-1.

3a The GNSS simulator is configured for Scenario #1: static in Geographical area #1, as defined in TS36.508 [7] Table 4.11.2-2. Geographical area #1 is also pre-configured in the UE.

4. Propagation conditions are set according to Annex B.0.

5. Ensure the UE is in State 5A-V2X in Transmit Mode according to TS 36.508 [7] clause 4.5.9.

6. The GNSS simulator is triggered to start step 1 of Scenario #1 to simulate a location in the centre of Geographical area #1. Wait for the UE to acquire the GNSS signal and start to transmit.

### 6.7G.1.4.2 Test procedure

1. The UE starts to perform the V2X sidelink communication according to SL-V2X-Preconfiguration. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the V2X RMC.2. Send continuously uplink power control "up" commands to the UE until the UE transmits at its $P_{UMAX}$ level.

2. Measure the rectangular filtered mean power of the UE. For TDD slots with transient periods are not under test for the wanted signal and for the intermodulation product.

3. Set the interference signal frequency below the UL carrier frequency using the first offset in table 6.7G.1.5-1.
4. Set the interference CW signal level according to table 6.7G.1.5-1.
5. Search the intermodulation product signals below and above the UL carrier frequency, then measure the rectangular filtered mean power of transmitting intermodulation for both signals, and calculate the ratios with the power measured in step 3.
6. Set the interference signal frequency above the UL carrier frequency using the first offset in table 6.7G.1.5-1.
7. Search the intermodulation product signals below and above the UL carrier frequency, then measure the rectangular filtered mean power of transmitting intermodulation for both signals, and calculate the ratios with the power measured in step 2.

Repeat the measurement using the second offset in table 6.7G.1.5-1.

#### 6.7G.1.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.7.I and 4.10.

### 6.7G.1.5 Test requirements

The ratio derived in step 5 and 7, shall not exceed the described value in table 6.7G.1.5-1.

**Table 6.7G.1.5-1: Transmit Intermodulation**

| BW Channel (UL) | 5MHz | | 10MHz | | 15MHz | | 20MHz | |
|---|---|---|---|---|---|---|---|---|
| Interference Signal Frequency Offset | 5MHz | 10MHz | 10MHz | 20MHz | 15MHz | 30MHz | 20MHz | 40MHz |
| Interference CW Signal Level | -40dBc | | | | | | | |
| Intermodulation Product | -29dBc | -35dBc | -29dBc | -35dBc | -29dBc | -35dBc | -29dBc | -35dBc |
| Measurement bandwidth | 4.5MHz | 4.5MHz | 9.0MHz | 9.0MHz | 13.5MHz | 13.5MHz | 18MHz | 18MHz |

## 6.7G.2 Transmit intermodulation for V2X Communication / Simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions

### 6.7G.2.1 Test purpose

Same test purpose as in clause 6.7.1.

### 6.7G.2.2 Test applicability

This test case applies to all types of E-UTRA UE release 14 and forward that support E-UTRA and V2X sidelink communication.

### 6.7G.2.3 Minimum conformance requirements

When UE is configured for simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions for inter-band E-UTRA V2X / E-UTRA bands specified in Table 5.5G-2, the requirements in subclause 6.7.1 apply for V2X sidelink transmission and the E-UTRA uplink transmission.

The normative reference for this requirement is TS 36.101 [2] clause 6.7.1G.

## 6.7G.2.4 Test description

### 6.7G.2.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies and channel bandwidths based on E-UTRA operating bands specified in table 5.4.2G.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 6.7G.2.4.1-1. The details of the uplink and V2X reference measurement channels (RMCs) are specified in Annexes A.2 and Annexes A.8.3 respectively. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 6.7G.2.4.1-1: Test Configuration Table**

| **Initial Conditions** | | | | | | |
|---|---|---|---|---|---|---|
| Test Environment as specified in TS 36.508[7] subclause 4.1 | | Normal | | | | |
| Test Frequencies as specified in TS 36.508 [7] subclause 4.3.1 | | Mid range | | | | |
| Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1 | | Lowest $N_{RB_agg}$, Highest $N_{RB_agg}$ | | | | |
| **Test Parameters for Channel Bandwidths** | | | | | | |
| | **Downlink** | **Uplink Configuration** | | **V2X Configuration** | | |
| Ch BW | N/A for Occupied bandwidth | Mod'n | RB allocation | Ch BW | Mod'n | RB allocation |
| 5 MHz | | QPSK | 8 | 10 MHz | QPSK | [48] |
| 10 MHz | | QPSK | 12 | 20 MHz | QPSK | [96] |
| 15 MHz | | QPSK | 16 | | | |
| 20 MHz | | QPSK | 18 | | | |
| Note 1: V2X con-current band configurations are checked separately for each band configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2G.1-2. | | | | | | |

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure 93a.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3. Message content exceptions are defined in clause 6.7G.2.4.3.
3 Downlink signals are initially set up according to Annex C.0, C.1, and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL and V2X reference measurement channel is set according to Table 6.7G.2.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF-V2X according to TS 36.508 [7] clause 5.2A.2C.

### 6.7G.2.4.2 Test procedure

1. The SS simultaneously sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC and V2X scheduling information via PDCCH DCI format 5A for SL_V_RNTI to schedule the V2X RMC according to Table 6.7G.2.4.1-1. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL and V2X RMCs.
2. Send continuously uplink power control "up" commands to the UE until the UE transmits at its $P_{UMAX}$ level. Configure the UE to transmit PSCCH and PSSCH with the $P_{UMAX}$ level of each test points.
3. Measure the rectangular filtered mean power of the UE. For TDD slots with transient periods are not under test for the wanted signal and for the intermodulation product.
4. Set the interference signal frequency below the UL carrier frequency using the first offset in table 6.7G.2.5-1.
5. Set the interference CW signal level according to table 6.7G.2.5-1.

6. Search the intermodulation product signals below and above the UL carrier frequency, then measure the rectangular filtered mean power of transmitting intermodulation for both signals, and calculate the ratios with the power measured in step 3.

7. Set the interference signal frequency above the UL carrier frequency using the first offset in table 6.7G.2.5-1.

8. Search the intermodulation product signals below and above the UL carrier frequency, then measure the rectangular filtered mean power of transmitting intermodulation for both signals, and calculate the ratios with the power measured in step 3.

Repeat the measurement using the second offset in table 6.7G.2.5-1.

#### 6.7G.2.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6.

### 6.7G.2.5 Test requirements

The ratio derived in step 6 and 8, shall not exceed the described value in table 6.7G.2.5-1.

**Table 6.7G.2.5-1: Transmit Intermodulation**

| BW Channel (UL) | 5MHz | | 10MHz | | 15MHz | | 20MHz | |
|---|---|---|---|---|---|---|---|---|
| Interference Signal Frequency Offset | 5MHz | 10MHz | 10MHz | 20MHz | 15MHz | 30MHz | 20MHz | 40MHz |
| Interference CW Signal Level | -40dBc | | | | | | | |
| Intermodulation Product | -29dBc | -35dBc | -29dBc | -35dBc | -29dBc | -35dBc | -29dBc | -35dBc |
| Measurement bandwidth | 4.5MHz | 4.5MHz | 9.0MHz | 9.0MHz | 13.5MHz | 13.5MHz | 18MHz | 18MHz |

## 6.7G.3 Transmit intermodulation for V2X Communication / Intra-band contiguous multi-carrier operation

Editor's notes: This test case is incomplete. The following items are missing or incomplete:

- Applicability spec

### 6.7G.3.1 Test purpose

Same as in clause 6.7.1.

### 6.7G.3.2 Test applicability.

This test case applies to all types of UE that support Intra-band contiguous multi-carrier operation V2X Sidelink Communication and Band 47.

### 6.7G.3.3 Minimum conformance requirements

For intra-band contiguous MCC operation the transmit intermodulation requirement for Bandwidth Class B specified in subclause 6.7.1A shall apply.

The normative reference for this requirement is TS 36.101 [2] clause 6.7.1G.

## 6.7G.3.4 Test description

### 6.7G.3.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA operating bands specified in Table 5.4.2G.1-2. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 6.7G.3.4.1-1. The details of the V2X reference measurement channels (RMCs) are specified in Annexes A.8.3 and the GNSS configuration in TS 36.508 [7] subclause 4.11.

**Table 6.7G.3.4.1-1: Test Configuration Table**

| **Initial Conditions** | | | | | | |
|---|---|---|---|---|---|---|
| Test Environment as specified in TS 36.508[7] subclause 4.1 | | | Normal | | | |
| Test Frequencies as specified in TS 36.508 [7] subclause 4.3.1 | | | Mid range | | | |
| Test Channel Bandwidths as specified in subclause 5.4.2G | | | Lowest, Highest | | | |
| **Test Parameters for V2X MCC Configuration** | | | | | | |
| **V2X MCC Channel Bandwidth** | | | **V2X Sidelink Configuration** | | | |
| **Configuration ID** | **CC1 $N_{RB}$** | **CC2 $N_{RB}$** | **CC1 & CC2 Mod** | **$N_{RB_agg}$** | **CC1 and CC2 RB Allocation (LCRB @ RBstart)** | |
| 1 | 50 | 50 | QPSK | 48 | CC1_48@0 | CC2_0@0 |
| 2 | 50 | 50 | QPSK | 96 | CC1_48@0 | CC2_48@2 |
| Note1: The starting resource block shall be RB #0 and RB# (max+1 - RB allocation) of the aggregated channel bandwidth, each correspond to configuration ID 1 or 2. | | | | | | |

1. Connect the SS to the UE antenna connectors and connect the GNSS simulator to the UE GNSS RXantenna connector as shown in TS 36.508 [7] Annex A, in Figure A.89a.

2. The parameter settings for the V2X sidelink transmission over PC5 are pre-configured according to TS 36.508 [7] subclause4.10.1. Message content exceptions are defined in clause 6.7G.3.4.3.

3. The V2X Reference Measurement Channels are set according to Table 6.7G.3.4.1-1

3a The GNSS simulator is configured for Scenario #1: static in Geographical area #1, as defined in TS36.508 [7] Table 4.11.2-2. Geographical area #1 is also pre-configured in the UE.

4. Propagation conditions are set according to Annex B.0.

5. Ensure the UE is in State 5A-V2X according to TS 36.508 [7] clause 4.5.9.

6. The GNSS simulator is triggered to start step 1 of Scenario #1 to simulate a location in the centre of Geographical area #1. Wait for the UE to acquire the GNSS signal and start to transmit.

### 6.7G.3.4.2 Test procedure

1. The UE starts to perform the V2X sidelink communication according to SL-V2X-Preconfiguration. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the V2X RMCs.

2. Measure the rectangular filtered mean power of the UE. For TDD slots with transient periods are not under test for the wanted signal and for the intermodulation product.

3. Set the interference signal frequency below the UL carrier frequency using the first offset in table 6.7G.3.5-1.

4. Set the interference CW signal level according to table 6.7G.3.5-1.

5. Search the intermodulation product signals below and above the UL carrier frequency, then measure the rectangular filtered mean power of transmitting intermodulation for both signals, and calculate the ratios with the power measured in step 3.

6. Set the interference signal frequency above the UL carrier frequency using the first offset in table 6.7G.3.5-1.

7. Search the intermodulation product signals below and above the UL carrier frequency, then measure the rectangular filtered mean power of transmitting intermodulation for both signals, and calculate the ratios with the power measured in step 2.

Repeat the measurement using the second offset in table 6.7G.3.5-1.

#### 6.7G.3.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6, 4.7.I and 4.10 with the following exceptions:

| Interference Signal Frequency Offset | $BW_{Channel_CA}$ | 2*$BW_{Channel_CA}$ |
| Interference CW Signal Level | -40dBc | |
| Intermodulation Product | -29dBc | -35dBc |
| Measurement bandwidth | $BW_{Channel_CA}$- 2* $BW_{GB}$ | |

## 6.8 Time alignment

FFS.

### 6.8.1 Void

## 6.8A Void

## 6.8B Time alignment error for UL-MIMO

### 6.8B.1 Test purpose

To verify that the error of time alignment in UL MIMO does not exceed the range prescribed by the specified UL MIMO Time Alignment Error (TAE) and tolerance.

An excess time alignment error has the possibility to interfere to other channels or other systems and decrease UL MIMO performance because of the timing unsynchronization.

### 6.8B.2 Test applicability

This test case applies to all types of E-UTRA UE release 10 and forward that support UL MIMO.

## 6.8B.3 Minimum conformance requirements

For UE(s) with multiple transmit antenna connectors, the Time Alignment Error (TAE) shall not exceed 130 ns.

**Table 6.8B.3-1: UL-MIMO configuration in closed-loop spatial multiplexing scheme**

| Transmission mode | DCI format | Codebook Index |
|---|---|---|
| Mode 2 | DCI format 4 | Codebook index 0 |

The normative reference for this requirement is TS 36.101 [2] clause 6.8B.

## 6.8B.4 Test description

### 6.8B.4.1 Initial condition

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA operating bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 6.8B.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annexe A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 6.8B.4.1-1: Test Configuration Table**

| **Initial Conditions** | | | | |
|---|---|---|---|---|
| Test Environment as specified in TS 36.508[7] clause 4.1 | Normal | | | |
| Test Frequencies as specified in TS36.508 [7] clause 4.3.1 | Mid range | | | |
| Test Channel Bandwidths as specified in TS 36.508 [7] clause 4.3.1 | Lowest, 5MHz, Highest | | | |
| **Test Parameters for Channel Bandwidths** | | | | |
| | **Downlink Configuration** | **Uplink Configuration** | | |
| Ch BW | N/A | Mod'n | RB allocation | |
| | | | FDD | TDD |
| 1.4MHz | | QPSK | 6 | 6 |
| 3MHz | | QPSK | 15 | 15 |
| 5MHz | | QPSK | 25 | 25 |
| 10MHz | | QPSK | 50 | 50 |
| 15MHz | | QPSK | 75 | 75 |
| 20MHz | | QPSK | 100 | 100 |
| Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, the applicable channel bandwidths are specified in Table 5.4.2.1-1. | | | | |

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.28.
2. The parameter settings for the cell are set up according to TS 36.508 [7] clause 4.4.3.
3. Downlink signals are initially set up according to Annex C.0, C.1, and C.3.0, and uplink signals according to Annex H.1 and H.3.0.
4. The UL Reference Measurement channel is set according to Table 6.8B.4.1-1.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 6.8B.4.3.

### 6.8B.4.2 Test procedure

1. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 4 for C_RNTI to schedule the UL RMC according to Table 6.8B.4.1-1. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.

2. Send continuously uplink power control "up" commands in every uplink scheduling information to the UE; allow at least 200ms for the UE to reach PUMAX level for UE.

3. Measure the timing of one sub-frame at each antenna connector.

### 6.8B.4.3 Message contents

Message contents are according to TS 36.508 [7] clause 4.6.

## 6.8B.5 Test requirements

For UE(s) with multiple transmit antenna connectors, the Time Alignment Error (TAE) shall not exceed 155 ns.

# 7 Receiver Characteristics

## 7.1 General

Unless otherwise stated the receiver characteristics are specified at the antenna connector(s) of the UE. For UE(s) with an integral antenna only, a reference antenna(s) with a gain of 0 dBi is assumed for each antenna port(s). UE with an integral antenna(s) may be taken into account by converting these power levels into field strength requirements, assuming a 0 dBi gain antenna. For UEs with more than one receiver antenna connector, identical interfering signals shall be applied to each receiver antenna port if more than one of these is used (diversity).

Unless otherwise stated, the test signal levels are defined at each antenna port, and specified in the respective sections below. Any specific test conditions are defined in the paragraph for each test. Unless stated otherwise, power control of the Downlink is OFF.

In general, the UE is set into the correct state in the "Initial conditions" part of the test, using normal SS signalling procedures over the air interface under easy radio conditions to ensure reliable message exchange. In the "Test procedure" part of the test, specific radio conditions are applied according to the test requirement and the desired measurement is made or the desired response is tested.

The ACS, blocking, spurious emissions and intermodulation requirements in sections 7.5, 7.6, 7.7 and 7.8 are defined for full band width signals i.e. for signals where all resource blocks are allocated for a specific user.

With the exception of Clause 7.3, the requirements shall be verified with the network signalling value NS_01 configured (Table 6.2.4.3-1).

All the parameters in clause 7 are defined using the UL reference measurement channels specified in Annexes A.2.2 and A.2.3, the DL reference measurement channels specified in Annex A.3.2 and using the set-up specified in Annex C.3.1.

For the additional requirements for intra-band non-contiguous carrier aggregation of two component carriers (one component carrier per sub-block), an in-gap test refers to the case when the interfering signal is located at a negative offset with respect to the assigned channel frequency of the highest carrier frequency and located at a positive offset with respect to the assigned channel frequency of the lowest carrier frequency.

For the additional requirements for intra-band non-contiguous carrier aggregation of two component carriers (one component carrier per sub-block), an out-of-gap test refers to the case when the interfering signal(s) is (are) located at a positive offset with respect to the assigned channel frequency of the highest carrier frequency, or located at a negative offset with respect to the assigned channel frequency of the lowest carrier frequency.

For the additional requirements for intra-band non-contiguous carrier aggregation of two component carriers with channel bandwidth larger than or equal to 5 MHz (one component carrier per sub-block), the existing adjacent channel selectivity requirements, in-band blocking requirements (for each case), and narrow band blocking requirements apply for in-gap tests only if the corresponding interferer frequency offsets with respect to the two measured carriers satisfy the following condition in relation to the sub-block gap size $W_{gap}$ for at least one of these carriers *j*, *j* = 1,2, so that the interferer frequency position does not change the nature of the core requirement tested:

$$Wgap \geq 2 \cdot |FInterferer\ (offset)_j| - BWChannel(_j)$$

where $F_{Interferer\ (offset),j}$ is the interferer frequency offset with respect to carrier *j* as specified in subclause 7.5.1A, subclause 7.6.1A and subclause 7.6.3A for the respective requirement and $BW_{Channel(j)}$ the channel bandwidth of carrier *j*. The interferer frequency offsets for adjacent channel selectivity, each in-band blocking case and narrow- band blocking shall be tested separately with a single in-gap interferer at a time.

For a ProSe UE that supports both ProSe Direct Discovery and ProSe Direct Communication, the receiver characteristics specified in clause 7 for ProSe Direct Communication shall apply.

For ProSe Direct Discovery and ProSe Direct Communication on E-UTRA ProSe operating bands that correspond to TDD E-UTRA operating bands as specified in clause 5.2D, the only additional requirement for ProSe specified in clause 7.4.1D is applicable.

For CA tests, Cell ID = 0 applies to P-Cell, and Cell ID = n (where n is 1,2,3..) applies to S-Celln (where n is 1,2,3..), respectively.

Parameters given in table 7.1-1 are used throughout this section for CA, unless otherwise stated by the test case.

**Table 7.1-1: Common Test Parameters**

| Parameter | Value | Comments |
|---|---|---|
| Cross carrier scheduling | Not configured | |

For CA testing, unless otherwise stated, the logical carriers PCC / SCCs are mapped to physical frequencies as defined in Table 7.1-2.

**Table 7.1-2: PCC/SCCs frequency mapping**

| CA Configuration | PCC-SCC mapping | Notes |
|---|---|---|
| Intra-band contiguous CA | CC1-CC2 (Note 4) or CC2-CC1 (Note 5) | 1 |
| Inter-band CA (CA_x-y) | Bx-By and By-Bx | 2, 3 |
| Intra-band non-contiguous CA | CC2-CC1 (Note 4) or CC1-CC2 (Note 5) | 1 |
| Note 1: Notation CCi-CCj means PCC on component carrier CCi and SCC on component carrier CCj, with CCi/j frequencies defined in the corresponding intra-band contiguous / non-contiguous CA band in TS36.508 [7].<br>Note 2: Notation Bi–Bj means PCC on component Band i and SCC on component Band j, with single Band i/j frequencies defined in TS36.508 [7].<br>Note 3: Applicable for UE declared capability of UL support (within CA operation) in the individual bands. If UE does not support both PCC-SCC mappings, only the supported mapping is applicable.<br>Note 4: Applicable for TDD CA and FDD CA bands with UL frequency < DL frequency.<br>Note 5: Applicable for FDD CA bands with UL frequency > DL frequency and intra-band non-contiguous CA bands with wider DL operating bandwidth than UL. | | |

For naming of 5DL CA combination on test configuration table, test applicability and related release, unless otherwise stated, it is defined in Table 7.1-2a.

Editor's Note : The CA band for intra-band non-contiguous with 3 sub-blocks is defined in TS36.101 (v15.1.0), but not define the release in TS36.307. Applicable release version for CA band combinations with 3 sub-blocks is FFS in the Table 7.1-2a

**Table 7.1-2a: 3DL CA Name/Release mapping**

| Number of Bands | 3CA Band Combinations | Release for test applicability | Name |
|---|---|---|---|
| 1 | CA_XD | Rel-10 | 3DL CA with FDD CA_XD |

| | | Rel-12 | 5DL CA with FDD-TDD CA_XA-YA-ZA-RA-SA |
| Note 1: X, Y, Z, R and S in this table correspond to different bands i.e. X != Y != Z != R != S.<br>Note 2: The band combinations with difference appearance order of bands/sub-blocks in the band combination string are not distinguished. E.g. CA_XA-YA-YD represents the set of CA_XA-YD-YA, YD-YA-XA, YA-XA-YD and YA-YD-XA | | | |

For testing of category 0 HD-FDD UE in FDD operating bands, the SS shall ensure downlink transmission is only configured in downlink subframes and that UL grants are given to ensure UE is transmitting only in uplink subframes throughout the test. The subframes reserved for uplink and downlink respectively are specified in the RMC definition in Annex A.2 for uplink and Annex A.3 for downlink.

For ProSe testing, DRX configuration specified in Table 7.1-3 is used, so that Sidelink traffic takes place only in the DRX off part of the DRX cycle.

**Table 7.1-3: Reference DRX configuration**

| Parameter | Value | Comments |
|---|---|---|
| onDurationTimer | psf1 | |
| drx-InactivityTimer | psf1 | |
| drx-RetransmissionTimer | psf1 | |
| longDRX-CycleStartOffset | sf2560, 0 | |
| shortDRX | disabled | |
| NOTE: For further information see clause 6.3.2 in TS 36.331. | | |

For testing of category NB1 in all operation bands, standalone is used as default operation mode unless otherwise stated by the test case.

# 7.2 Diversity characteristics

The requirements in Section 7 assume that the receiver is equipped with two Rx port as a baseline. These requirements apply to all UE categories unless stated otherwise. Additional requirements apply for UE(s) equipped with four Rx ports. With the exception of clause 7.9, all requirements shall be verified by using both (all) antenna ports simultaneously.

NOTE 1: for an operating band in which the UE can operate using up to four Rx ports, it suffices to verify for conformance the additional requirements applicable for four Rx ports [except for REFSENS].

NOTE 2: Implementation of 4 antenna ports for all operating bands supported by the UE is not mandated.

For a category category 0, a category [M1], category 1bis, NB1 and NB2 UE the requirements in Section 7 assume that the receiver is equipped with single Rx port.

# 7.3 Reference sensitivity level

Editor's note: FDD/TDD aspects missing or not yet determined:

- The Maximum Sensitivity Degradation figures for large transmission configurations are not finalised in the core specification.

- This clause is also incomplete for CA_42A-46A and CA_7A-8A-20.

- $\Delta R_{IB,c}$ is in square brackets (awaiting for RAN4 decision).

- Clarification to the use of signalling the non-default Tx-Rx separation of 295MHz for Band 70 testing is under discussion.

## 7.3.1 Test purpose

To verify the UE's ability to receive data with a given average throughput for a specified reference measurement channel, under conditions of low signal level, ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the effective coverage area of an e-NodeB.

## 7.3.2 Test applicability

This test applies to all types of E-UTRA UE release 8 and forward.

## 7.3.3 Minimum conformance requirements

The throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3.3-1 and Table 7.3.3-2.

**Table 7.3.3-1: Reference sensitivity QPSK $P_{REFSENS}$**

| Channel bandwidth | | | | | | | |
|---|---|---|---|---|---|---|---|
| E-UTRA Band | 1.4 MHz (dBm) | 3 MHz (dBm) | 5 MHz (dBm) | 10 MHz (dBm) | 15 MHz (dBm) | 20 MHz (dBm) | Duplex Mode |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 66 | -104.2 | -101.2 | -99.5 | -96.5 | -94.7 | -93.5 | FDD |
| 68 | | | -98.5 | -95.5 | -93.7 | | FDD |
| … | | | | | | | |
| 70 | | | -100 | -97 | -95.2 | -94 | FDD |
| 71 | | | -97.2 | -94.2 | -92.0 | -87.5 | FDD |
| 72 | -99 | -95.7 | -93.5 | | | | FDD |
| 73 | -99.0 | -95.7 | -93.5 | | | | FDD |
| 74 | -104.7[8] | -101.7[8] | -99.5[8] | -96.5[8] | -94.7[8] | -93.5[8] | FDD |
| 85 | | | -97 | -94 | | | FDD |

Note 1: The transmitter shall be set to $P_{UMAX}$ as defined in subclause 6.2.5.
Note 2: The Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1
Note 3: The signal power is specified per port
Note 4: For the UE which supports both Band 3 and Band 9 the reference sensitivity level is FFS.
Note 5: For the UE which supports both Band 11 and Band 21 the reference sensitivity level is FFS.
Note 6: [6] indicates that the requirement is modified by -0.5 dB when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz.
Note 7: For a UE that support both Band 18 and Band 26, the reference sensitivity level for Band 26 applies for the applicable channel bandwidths.
Note 8: [8] indicates that the requirement is modified by -0.5 dB when the assigned E-UTRA channel bandwidth is confined within 1475.9-1510.9 MHz.

For UE(s) equipped with 4 antenna ports, the minimum requirement for reference sensitivity in Table 7.3.3-1 shall be modified by the amount given in $\Delta R_{IB,4R}$ in Table 7.3.3-1a for the applicable E-UTRA bands.

**Table 7.3.3-1a: $\Delta R_{IB,4R}$**

| E-UTRA Band | $\Delta R_{IB,4R}$ [dB] |
|---|---|
| 1, 2, 3, 4, 7, 20, 21, 25, 34, 39, 40, 41, 66 | - 2.7 |
| 42, 43, 52 | - 2.2 |

For UE(s) equipped with 8 antenna ports, the minimum requirement for reference sensitivity in Table 7.3.3-1 shall be modified by the amount given in $\Delta R_{IB,8R}$ in Table 7.3.3-1aa for the applicable E-UTRA bands.

**Table 7.3.3-1aa: $\Delta R_{IB,8R}$**

| E-UTRA Band | $\Delta R_{IB,8R}$ [dB] |
|---|---|
| 41, 42, 43 | - 4 |

The reference receive sensitivity (REFSENS) requirement specified in Table 7.3.3-1 (two antenna ports) and Table 7.3.3-1a (four antenna ports) shall be met for an uplink transmission bandwidth less than or equal to that specified in Table 7.3.3-2.

NOTE: Table 7.3.3-2 is intended for conformance tests and does not necessarily reflect the operational conditions of the network, where the number of uplink and downlink allocated resource blocks will be practically constrained by other factors. Typical receiver sensitivity performance with HARQ retransmission enabled and using a residual BLER metric relevant for e.g. Speech Services is given in the Annex G of TS 36.101 [2] (informative).

For the UE which supports inter-band carrier aggregation configuration with the uplink in one or two E-UTRA bands, the minimum requirement for reference sensitivity in Table 7.3.3-1 and Table 7.3.3-1a shall be increased by the amount given in $\Delta R_{IB,c}$ in Table 7.3.3-1A, Table 7.3.3-1B and Table 7.3.3-1C for the applicable E-UTRA bands where unless otherwise stated, the same $\Delta R_{IB,c}$ is applicable to E-UTRA band(s) part for CA configurations which have the same E-UTRA operating band combination..

**Table 7.3.3-1A: $\Delta R_{IB,c}$ (two bands)**

| E-UTRA operating band combination | E-UTRA Band | $\Delta R_{IB,c}$ [dB] |

NOTE 1: The above additional tolerances are only applicable for the E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations

NOTE 2: The above additional tolerances also apply in intra-band and non-aggregated operation for the supported E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations.

NOTE 3: In case the UE supports more than one of the above 2DL inter-band carrier aggregation configurations and a E-UTRA operating band belongs to more than one 2DL inter-band carrier aggregation configurations then:

- When the E-UTRA operating band frequency range is ≤ 1GHz, the applicable additional tolerance shall be the average of the 2DL tolerances in Table 7.3.3-1A, truncated to one decimal place that would apply for that operating band among the supported 2DL CA configurations. In case there is a harmonic relation between low band UL and high band DL, then the maximum tolerance among the different supported 2DL carrier aggregation configurations involving such band shall be applied
- When the E-UTRA operating band frequency range is >1GHz, the applicable additional tolerance shall be the maximum 2DL tolerance in Table 7.3.3-1A that would apply for that operating band among the supported 2DL CA configurations

NOTE 4: Only applicable for UE supporting inter-band carrier aggregation with uplink in one E-UTRA band and without simultaneous Rx/Tx.

NOTE 5: Unless otherwise specified, in case the UE supports more than one of the above 3DL inter-band carrier aggregation configurations and a E-UTRA operating band belongs to more than one 3DL inter-band carrier aggregation configurations then:

- When the E-UTRA operating band frequency range is ≤ 1GHz and the tolerances are the same, the value applies to the band. If the tolerances are different, the applicable additional 3DL tolerance is FFS. In case there is a harmonic relation between low band UL and high band DL, then the maximum tolerance among the different supported 3DL carrier aggregation configurations involving such band shall be applied.
- When the E-UTRA operating band frequency range is >1GHz, the applicable additional 3DL tolerance shall be the maximum tolerance above that applies for that operating band among the supported 3DL CA configurations.

NOTE 6: The above additional tolerances applicable for the E-UTRA operating bands that belong to the supported highest order inter-band carrier aggregation

configuration, also applies to the same E-UTRA operating bands that belong to a supported lower order CA configuration.
NOTE 7: Applicable for UE supporting inter-band carrier aggregation without simultaneous Rx/Tx.
NOTE 8: Only applicable for UE supporting inter-band carrier aggregation with the uplink active in the FDD band.
NOTE 9: For Band 28, the requirements only apply for the restricted frequency range specified for this CA configuration (Table 5.2A-2).
NOTE 10: The requirement is applied for UE transmitting on the frequency range of 2545-2690MHz.
NOTE 11: The requirement is applied for UE transmitting on the frequency range of 2496-2545MHz.
NOTE 12: For UE supporting E-UTRA band 42, 43 or 48 and CA configurations including Band 42, 43 or 48, the applicable $\Delta R_{IB,c}$ in Band 42, 43, or 48 is the max(Band 42 $\Delta R_{IB,c}$ , Band 43 $\Delta R_{IB,c}$, Band 48 $\Delta R_{IB,c}$).
NOTE 13: Only applicable for UE supporting inter-band carrier aggregation with the uplink active in Band 8.

NOTE: To meet the $\Delta R_{IB,c}$ requirements for CA_20A-28A state-of-the-art filter combiner technology is needed.

**Table 7.3.3-1B: $\Delta R_{IB,c}$ (three bands)**

NOTE 1: The above additional tolerances are only applicable for the E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations.

NOTE 2: The above additional tolerances also apply in intra-band and non-aggregated operation for the supported E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations.

NOTE 3: Unless otherwise specified, in case the UE supports more than one of the above 3DL inter-band carrier aggregation configurations and a E-UTRA operating band belongs to more than one 3DL inter-band carrier aggregation configurations then:

- When the E-UTRA operating band frequency range is ≤ 1GHz and the tolerances are the same, the value applies to the band. If the tolerances are different, the applicable additional 3DL tolerance is FFS. In case there is a harmonic relation between low band UL and high band DL, then the maximum tolerance among the different supported 3DL carrier aggregation configurations involving such band shall be applied.
- When the E-UTRA operating band frequency range is >1GHz, the applicable additional 3DL tolerance shall be the maximum tolerance above that applies for that operating band among the supported 3DL CA configurations.

NOTE 4: The above additional tolerances applicable for the E-UTRA operating bands that belong to the supported highest order inter-band carrier aggregation configuration, also applies to the same E-UTRA operating bands that belong to a supported lower order CA configuration.

NOTE 5: The requirement is specified for the frequency range of 2545-2690MHz.

NOTE 6: The requirement is specified for the frequency range of 2496-2545MHz.

NOTE 7: Only applicable for UE supporting inter-band carrier aggregation with the uplink active in Band 1 or Band 42.

NOTE 8: Only applicable for UE supporting inter-band carrier aggregation with uplink in one E-UTRA band and without simultaneous Rx/Tx on Band 41 and Band 42.

NOTE 9: Applicable for UE supporting inter-band carrier aggregation without simultaneous Rx/Tx among TDD bands.

NOTE 10: Only applicable for UE supporting inter-band carrier aggregation with the uplink active in Band 1 or Band 8.

NOTE 11: Only applicable for UE supporting inter-band carrier aggregation with the uplink active in Band 3 or Band 8.

NOTE 12: Applicable for UE supporting inter-band carrier aggregation without simultaneous Rx/Tx among TDD bands.

NOTE 13: Applicable for UE supporting inter-band carrier aggregation without

simultaneous Rx/Tx among TDD bands.

NOTE 14: Only applicable for UE supporting inter-band carrier aggregation with the uplink active in Band 8 or Band 41.

NOTE 15: For UE supporting E-UTRA band 42, 43 or 48 and CA configurations including Band 42, 43 or 48, the applicable $\Delta R_{IB,c}$ in Band 42, 43, or 48 is the max(Band 42 $\Delta R_{IB,c}$ , Band 43 $\Delta R_{IB,c}$, Band 48 $\Delta R_{IB,c}$).

NOTE 16: Only applicable for UE supporting inter-band carrier aggregation with the uplink active in Band 8 or Band 11.

NOTE17: Only applicable for UE supporting inter-band carrier aggregation with uplink in one E-UTRAN band and without simultaneous Rx/Tx on Band 39 and Band 41.

NOTE 18: Only applicable for UE supporting inter-band carrier aggregation with uplink in one E-UTRA band and without simultaneous Rx/Tx among TDD bands.

**Table 7.3.3-1C: $\Delta R_{IB,c}$ (four bands)**

NOTE 1: The above additional tolerances are only applicable for the E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations.
NOTE 2: The above additional tolerances also apply in intra-band and non-aggregated operation for the supported E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations.
NOTE 3: Tolerances for a UE supporting multiple 4DL inter-band CA configurations are FFS.
NOTE 4: The above additional tolerances applicable for the E-UTRA operating bands that belong to the supported highest order inter-band carrier aggregation configuration, also applies to the same E-UTRA operating bands that belong to a supported lower order CA configuration.
NOTE 5: For UE supporting E-UTRA band 42, 43 or 48 and CA configurations including Band 42, 43 or 48, the applicable $\Delta R_{IB,c}$ in Band 42, 43, or 48 is the max(Band 42 $\Delta R_{IB,c}$ , Band 43 $\Delta R_{IB,c}$, Band 48 $\Delta R_{IB,c}$).
NOTE 6: The requirement is applied for UE transmitting on the frequency range of 2545-2690MHz.
NOTE 7: The requirement is applied for UE transmitting on the frequency range of 2496-2545MHz.
NOTE 8: Only applicable for UE supporting inter-band carrier aggregation with the uplink active in Band 1, Band 3 or Band 8.
NOTE 9: Only applicable for UE supporting inter-band carrier aggregation with the uplink active in Band 1, Band 8 or Band 11.
NOTE 10: Only applicable for UE supporting inter-band carrier aggregation with the uplink active in Band 3, Band 8 or Band 11.
NOTE 11: Applicable for UE supporting inter-band carrier aggregation without simultaneous Rx/Tx among TDD bands.

**Table 7.3.3-1D: $\Delta R_{IB,c}$ (five bands)**

| E-UTRA operating band combination | E-UTRA Band | $\Delta R_{IB,c}$ [dB] |
|---|---|---|
| CA_1-3-7-20-28 | 1 | 0 |
| | 3 | 0 |
| | 7 | 0 |
| | 20 | 0.2 |

| | 3 | 0.2 |
| | 32 | 0 |
| | 42 | 0.5 |
| | 43 | 0.5 |

NOTE 1: The above additional tolerances are only applicable for the E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations.
NOTE 2: The above additional tolerances also apply in intra-band and non-aggregated operation for the supported E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations.
NOTE 3: Tolerances for a UE supporting multiple 5DL inter-band CA configurations are FFS.
NOTE 4: The above additional tolerances applicable for the E-UTRA operating bands that belong to the supported highest order inter-band carrier aggregation configuration, also applies to the same E-UTRA operating bands that belong to a supported lower order CA configuration.

NOTE: The above additional tolerances do not apply to supported UTRA operating bands with frequency range below 1 GHz that correspond to the E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations when such bands are belonging only to band combination(s) where one band is <1GHz and other bands are >1.7GHz and there is no harmonic relationship between the low band UL and high band DL. Otherwise the above additional tolerances also apply to supported UTRA operating bands that correspond to the E-UTRA operating bands that belong to the supported inter-band carrier aggregation configurations.

**Table 7.3.3-2: Uplink configuration for reference sensitivity**

| 85 | | | 20[1] | 20[1] | | | FDD |

Note 1: refers to the UL resource blocks shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).

Note 2: For the UE which supports both Band 11 and Band 21 the uplink configuration for reference sensitivity is FFS.

Note 3: refers to Band 20; in the case of 15MHz channel bandwidth, the UL resource blocks shall be located at $RB_{start}$=11 and in the case of 20MHz channel bandwidth, the UL resource blocks shall be located at $RB_{start}$=16.

Note 4: refers to Bands 31 and 72; in the case of 3 MHz channel bandwidth, the UL resource blocks shall be located at $RB_{start}$ 9 and in the case of 5 MHz channel bandwidth, the UL resource blocks shall be located at $RB_{start}$ 10.

Unless given by Table 7.3.3-3, the minimum requirements specified in Tables 7.3.3-1, 7.3.3-1a and 7.3.3-2 shall be verified with the network signalling value NS_01 (Table 6.2.4.3-1) configured.

**Table 7.3.3-3: Network Signalling Value for reference sensitivity**

| E-UTRA Band | Network Signalling value |
|---|---|
| 2 | NS_03 |
| 4 | NS_03 |
| 10 | NS_03 |
| 12 | NS_06 |
| 13 | NS_06 |

| 23 | NS_03 |
| 30 | NS_21 |
| 48 | NS_27 |
| 66 | NS_03 |
| 70 | NS_03 |
| 71 | NS_35 |
| 85 | NS_06 |

The normative reference for this requirement is TS 36.101 [2] clause 7.3.1.

## 7.3.4 Test description

### 7.3.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA bands specified in table 5.4.2.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in tables 7.3.4.1-1 and 7.3.4.1-2. The details of the downlink and uplink reference measurement channels (RMCs) are specified in Annexes A.2 and A.3. The details of the OCNG patterns used are specified in Annex A.5. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 7.3.4.1-1: Test Configuration Table**

| **Initial Conditions** | | | | | | |
|---|---|---|---|---|---|---|
| Test Environment as specified in TS 36.508[7] subclause 4.1 | | | NC, TL/VL, TL/VH, TH/VL, TH/VH | | | |
| Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 | | | Low range, Mid range, High range | | | |
| Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1 | | | Lowest, 5MHz, Highest | | | |
| **Test Parameters for Channel Bandwidths** | | | | | | |
| | **Downlink Configuration** | | | **Uplink Configuration** | | |

Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1.

Note 2. Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3.3-2 is tested per Test Channel Bandwidth. The allocation shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).

Note 3: For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used.

Note 4: Applicable only to E-UTRA FDD Bands 31 and 72. The UL resource blocks shall be located at RBstart 10 (according to Table 7.3.3-2).

**Table 7.3.4.1-2: Additional Test Configuration Table for Band 70**

1. Connect the SS to the UE antenna connectors as shown in TS 36.508 [7] Annex A, Figure A.3.
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals are initially set up according to Annex C0, C.1 and C.3.1, and uplink signals according to Annex H.1 and H.3.1.
4. The UL and DL Reference Measurement channels are set according to Tables 7.3.4.1-1 and 7.3.4.1-2.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.3.4.3.

## 7.3.4.2 Test procedure

1. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.3.4.1-1. The SS sends downlink MAC padding bits on the DL RMC.
2. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Tables 7.3.4.1-1 and 7.3.4.1-2. Since the UE has no payload data to send, the UE transmits uplink MAC padding bits on the UL RMC.
3. Set the Downlink signal level to the appropriate REFSENS value defined in Table 7.3.5-1. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE to ensure the UE transmits $P_{UMAX}$ level for at least the duration of the Throughput measurement.
4. Measure the average throughput for a duration sufficient to achieve statistical significance according to Annex G.2.

## 7.3.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the following exceptions.

### 7.3.4.3.1 Message contents exceptions (network signalled value "NS_01")

Message contents according to TS 36.508 [7] subclause 4.6 can be used without exceptions.

7.3.4.3.2 Message contents exceptions (network signalled value "NS_03")

1. Information element additionalSpectrumEmission is set to NS_03. This can be set in the *SystemInformationblockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 7.3.4.3.2-1: *SystemInformationBlockType2*: Additional spurious emissions test requirement for "NS_03"**

| Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1 | | | |
|---|---|---|---|
| **Information Element** | **Value/remark** | **Comment** | **Condition** |
| additionalSpectrumEmission | 3 (NS_03) | | |

7.3.4.3.3 Message contents exceptions (network signalled value "NS_06")

1. Information element additionalSpectrumEmission is set to NS_06. This can be set in the *SystemInformationblockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 7.3.4.3.3-1: *SystemInformationBlockType2*: Additional spurious emissions test requirement for "NS_06"**

| Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1 | | | |
|---|---|---|---|
| **Information Element** | **Value/remark** | **Comment** | **Condition** |
| additionalSpectrumEmission | 6 (NS_06) | | |

7.3.4.3.4 Message contents exceptions (network signalled value "NS_09")

1. Information element additionalSpectrumEmission is set to NS_09. This can be set in the *SystemInformationblockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 7.3.4.3.4-1: *SystemInformationBlockType2*: Additional spurious emissions test requirement for "NS_09"**

| Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1 | | | |
|---|---|---|---|
| **Information Element** | **Value/remark** | **Comment** | **Condition** |
| additionalSpectrumEmission | 9 (NS_09) | | |

7.3.4.3.5 Message contents exceptions (network signalled value "NS_08")

1. Information element additionalSpectrumEmission is set to NS_08. This can be set in the *SystemInformationblockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 7.3.4.3.5-1: *SystemInformationBlockType2*: Additional spurious emissions test requirement for "NS_08"**

| Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1 | | | |
|---|---|---|---|
| **Information Element** | **Value/remark** | **Comment** | **Condition** |
| additionalSpectrumEmission | 8 (NS_08) | | |

7.3.4.3.6 Message contents exceptions (network signalled value "NS_21")

1. Information element additionalSpectrumEmission is set to NS_21. This can be set in the *SystemInformationblockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 7.3.4.3.6-1: *SystemInformationBlockType2*: Additional spurious emissions test requirement for "NS_21"**

| Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1 | | | |
|---|---|---|---|
| **Information Element** | **Value/remark** | **Comment** | **Condition** |
| additionalSpectrumEmission | 21 (NS_21) | | |

7.3.4.3.7 Message contents exceptions (network signalled value "NS_27")

1. Information element additionalSpectrumEmission is set to NS_27. This can be set in the *SystemInformationblockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 7.3.4.3.7-1: *SystemInformationBlockType2*: Additional spurious emissions test requirement for "NS_27"**

| Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1 | | | |
|---|---|---|---|
| **Information Element** | **Value/remark** | **Comment** | **Condition** |
| additionalSpectrumEmission | 27 (NS_27) | | |

7.3.4.3.8 Message contents exceptions (Additional Band 70 test configurations in Table 7.3.4 for Tx-Rx frequency separation of 295 MHz)

1. Information element ul-CarrierFreq is set to UL EARFCN according to the test configuration ID. This can be set in the *SystemInformationblockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the reference sensitivity requirement for a specific deployment scenario using a non-default Tx-Rx frequency separation of 295 MHz.

**Table 7.3.4.3.8-1: *SystemInformationBlockType2*: UL carrier frequency test requirement for test configuration ID "1"**

| Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1 | | | |
|---|---|---|---|
| **Information Element** | **Value/remark** | **Comment** | **Condition** |
| ul-CarrierFreq-v9e0 | 133047 (5 MHz) | Paired Mid Range | |

**Table 7.3.4.3.8-2: *SystemInformationBlockType2*: UL carrier frequency test requirement for test configuration ID "2"**

|---|---|---|---|
| **Information Element** | **Value/remark** | **Comment** | **Condition** |
| ul-CarrierFreq-v9e0 | 133072 (10 MHz) | Paired High Range | |

7.3.4.3.9 Message contents exceptions (network signalled value "NS_35")

1. Information element additionalSpectrumEmission is set to NS_35. This can be set in the *SystemInformationblockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 7.3.4.3.9-1: *SystemInformationBlockType2*: Additional spurious emissions test requirement for "NS_35"**

| Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1 | | | |
|---|---|---|---|
| **Information Element** | **Value/remark** | **Comment** | **Condition** |
| additionalSpectrumEmission | 32 | When IE AdditionalSpectrumEmission - v10l0 is used, 32 should be set to IE AdditionalSpectrumEmission. | |
| AdditionalSpectrumEmission-v10l0 | 35 (NS_35) | | |

## 7.3.5 Test requirement

The throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables 7.3.5-1 and Table 7.3.5-2.

**Table 7.3.5-1: Reference sensitivity QPSK $P_{REFSENS}$**

| Channel bandwidth | | | | | | | |
|---|---|---|---|---|---|---|---|
| E-UTRA Band | 1.4 MHz (dBm) | 3 MHz (dBm) | 5 MHz (dBm) | 10 MHz (dBm) | 15 MHz (dBm) | 20 MHz (dBm) | Duplex Mode |
| 1 | - | - | -99.3 | -96.3 | -94.5 | -93.3 | FDD |

| 66 | -103.5 | -100.5 | -98.8 | -95.8 | -94 | -92.8 | FDD |
| … | | | | | | | |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 68 | | | -97.8 | -94.8 | -93.0 | | FDD |
| … | | | | | | | |
| 70 | | | -99.3 | -96.3 | -94.5 | | FDD |
| 71 | | | -96.5 | -93.5 | -91.3 | -86.8 | FDD |
| 72 | -98.3 | -95.0 | -92.8 | | | | FDD |
| … | | | | | | | |
| 74 | -104.0[8] | -101.0[8] | -98.8[8] | -95.8[8] | -94.0[8] | -92.8[8] | FDD |

Note 1: The transmitter shall be set to maximum output power level (Table 7.3.5-2)
Note 2: The reference measurement channel is specified in A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1
Note 3: The signal power is specified per port
Note 4: For the UE which supports both Band 3 and Band 9 the reference sensitivity level is FFS.
Note 5: For the UE which supports both Band 11 and Band 21 the reference sensitivity level is FFS.
Note 6: [6] indicates that the requirement is modified by -0.5 dB when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz.
Note 7: For a UE that support both Band 18 and Band 26, the reference sensitivity level for Band 26 applies for the applicable channel bandwidths.
Note 8: [8] indicates that the requirement is modified by -0.5 dB when the assigned E-UTRA channel bandwidth is confined within 1475.9-1510.9 MHz.

For the UE which supports inter-band carrier aggregation configurations the $\Delta R_{IB,c}$ in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C shall be applied for applicable bands.

In case the UE supports more than one of the inter-band carrier aggregation configurations and a E-UTRA operating band belongs to more than one inter-band carrier aggregation configurations then:

- When the E-UTRA operating band frequency range is ≤ 1GHz, the applicable additional tolerance shall be the average of the tolerances in Table 7.3.3-1A, truncated to one decimal place that would apply for that operating band among the supported CA configurations. In case there is a harmonic relation between low band UL and high band DL (i.e. bands listed in Table 7.3A.0-0a), then the maximum tolerance among the different supported carrier aggregation configurations involving such band shall be applied

- When the E-UTRA operating band frequency range is >1GHz, the applicable additional tolerance shall be the maximum tolerance in Table 7.3.3-1A that would apply for that operating band among the supported CA configurations

NOTE 1: The relation to the received PSD is $\left\langle \mathrm{REF}\,\hat{I}_{or} \right\rangle = P_{REFSENS}\left(N_{sc}^{RB} N_{RB} \Delta f\right)^{-1}$ with $N_{\mathrm{RB}}$ is the transmission bandwidth configuration according to Table 5.4.2-1.

The reference receive sensitivity (REFSENS) requirement specified in Table 7.3.5-1 shall be met for an uplink transmission bandwidth less than or equal to that specified in Table 7.3.5-2.

NOTE 2: Table 7.3.5-2 does not necessarily reflect the operational conditions of the network, where the number of uplink and downlink allocated resource blocks will be practically constrained by other factors.

**Table 7.3.5-2: Uplink configuration for reference sensitivity, $L_{CRB}$ @ $RB_{start}$ format**

| E-UTRA Band / Channel bandwidth / $N_{RB}$ / Duplex mode | | | | | | | |
|---|---|---|---|---|---|---|---|
| E-UTRA Band | 1.4 MHz / 6 | 3 MHz / 15 | 5 MHz / 25 | 10 MHz / 50 | 15 MHz / 75 | 20 MHz / 100 | Duplex Mode |

# 7.3_1 Reference sensitivity level with 4 Rx antenna ports

## 7.3_1.1 Test purpose

To verify the ability of UE that supports 4 Rx antenna ports to receive data with a given average throughput for a specified reference measurement channel, under conditions of low signal level, ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the effective coverage area of an e-NodeB.

## 7.3_1.2 Test applicability

This test applies to all types of E-UTRA UE release 10 and forward that supports 4 Rx antenna ports.

## 7.3_1.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.3.3.

## 7.3_1.4 Test description

### 7.3_1.4.1 Initial conditions

Same as in clause 7.3.4.1 with following exceptions:

- Instead of Table 7.3.4.1-1→ use Table 7.3_1.4.1-1.
- Instead of Figure A.3→ use Figure A.69.
- Instead of clause 7.3.4.3→ use clause 7.3_1.4.3.

**Table 7.3_1.4.1-1: Test Configuration Table**

| Initial Conditions | | | | | | |
|---|---|---|---|---|---|---|
| Test Environment as specified in TS 36.508[7] subclause 4.1 | NC, TL/VL, TL/VH, TH/VL, TH/VH | | | | | |
| Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 | Low range, Mid range, High range | | | | | |
| Test Channel Bandwidths as specified in TS 36.508 [7] subclause 4.3.1 | Lowest, 5MHz, Highest | | | | | |
| **Test Parameters for Channel Bandwidths** | | | | | | |
| | **Downlink Configuration** | | | **Uplink Configuration** | | |
| Ch BW | Mod'n | RB allocation | | Mod'n | RB allocation | |
| | | FDD | TDD | | FDD | TDD |
| 1.4MHz | QPSK | 6 | N/A | QPSK | 6 | N/A |
| 3MHz | QPSK | 15 | N/A | QPSK | 15 | N/A |
| 5MHz | QPSK | 25 | N/A | QPSK | 25 | N/A |
| 10MHz | QPSK | 50 | N/A | QPSK | 50 | N/A |
| 10MHz | QPSK | 50 | N/A | QPSK | 25 | N/A |
| 10MHz | QPSK | 50 | N/A | QPSK | 20 | N/A |
| 15MHz | QPSK | 75 | N/A | QPSK | 75 | N/A |
| 15MHz | QPSK | 75 | N/A | QPSK | 50 | N/A |
| 15MHz | QPSK | 75 | N/A | QPSK | 25 | N/A |
| 15MHz | QPSK | 75 | N/A | QPSK | 20 | N/A |
| 20MHz | QPSK | 100 | 100 | QPSK | 100 | 100 |
| 20MHz | QPSK | 100 | N/A | QPSK | 75 | N/A |
| 20MHz | QPSK | 100 | N/A | QPSK | 50 | N/A |
| 20MHz | QPSK | 100 | N/A | QPSK | 20 | N/A |
| Note 1: Test Channel Bandwidths are checked separately for each E-UTRA band, which applicable channel bandwidths are specified in Table 5.4.2.1-1. | | | | | | |
| Note 2. Depending on E-UTRA band, only the appropriate Uplink RB allocation value according to table 7.3.3-2 is tested per Test Channel Bandwidth. The allocation shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1). | | | | | | |
| Note 3: For the DL signal one sided dynamic OCNG Pattern OP.1 FDD/TDD is used. | | | | | | |

## 7.3_1.4.2 Test procedure

Same as in clause 7.3.4.2 with following exceptions:

- Instead of Table 7.3.4.1-1→ use Table 7.3_1.4.1-1.
- Instead of Table 7.3.5-1 → use Table 7.3_1.5-1.

## 7.3_1.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the following exceptions.

### 7.3_1.4.3.1 Message contents exceptions (network signalled value "NS_01")

Message contents according to TS 36.508 [7] subclause 4.6 can be used without exceptions.

### 7.3_1.4.3.2 Message contents exceptions (network signalled value "NS_03")

1. Information element additionalSpectrumEmission is set to NS_03. This can be set in the *SystemInformationblockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 7.3_1.4.3.2-1: *SystemInformationBlockType2*: Additional spurious emissions test requirement for "NS_03"**

| Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1 | | | |
|---|---|---|---|
| **Information Element** | **Value/remark** | **Comment** | **Condition** |
| additionalSpectrumEmission | 3 (NS_03) | | |

7.3_1.4.3.3 Message contents exceptions (network signalled value "NS_09")

1. Information element additionalSpectrumEmission is set to NS_09. This can be set in the *SystemInformationblockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 7.3_1.4.3.3-1: *SystemInformationBlockType2*: Additional spurious emissions test requirement for "NS_09"**

| Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1 | | | |
|---|---|---|---|
| **Information Element** | **Value/remark** | **Comment** | **Condition** |
| additionalSpectrumEmission | 9 (NS_09) | | |

## 7.3_1.5 Test requirement

Same as in clause 7.3.5 with the following exceptions:

- Instead of Table 7.3.5-1→ use Table 7.3_1.5-1.

**Table 7.3_1.5-1: Reference sensitivity QPSK $P_{REFSENS}$**

# 7.3A Reference sensitivity level for CA

## 7.3A.0 Minimum conformance requirements

For inter-band carrier aggregation with one component carrier per operating band and the uplink assigned to one E-UTRA band the throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3.3-1, Table 7.3.3-1a and Table 7.3.3-2. The reference sensitivity is defined to be met with all downlink component carriers active and one of the uplink carriers active. The uplink resource blocks shall be located as close as possible to the primary downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1). The primary

downlink operating band is the downlink band of the active uplink operating band. The UE shall meet the requirements specified in subclause 7.3.3 with the following exceptions.

For the bands supporting 4 antenna ports which are in Table 7.3.3-1a, the minimum requirements for reference sensitivity in the reference sensitivity exception tables shall be modified by the amount given in $\Delta R_{IB,4R}$ in Table 7.3.3-1a for the applicable E-UTRA bands unless otherwise specified.

For the bands supporting 8 antenna ports which are in Table 7.3.3-1aa, the minimum requirements for reference sensitivity in the reference sensitivity exception tables shall be modified by the amount given in $\Delta R_{IB,8R}$ in Table 7.3.3-1aa for the applicable E-UTRA bands unless otherwise specified.

For the UE that supports any of the E-UTRA CA configurations given in Table 7.3A.0-0a, exceptions to the requirements for band(s) specified in subclause 7.3.3 are allowed when the band(s) is impacted by harmonic interference from the uplink transmission in a lower-frequency band of the same CA configuration. For these exceptions, the UE shall meet the requirements specified in Table 7.3A.0-0a and Table 7.3A.0-0b.

**Table 7.3A.0-0a: Reference sensitivity for carrier aggregation QPSK $P_{REFSENS, CA}$ (exceptions due to harmonic issue)**

NOTE 1: The transmitter shall be set to $P_{UMAX}$ as defined in subclause 6.2.5A.

NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD/FS3 as described in Annex A.5.1.1/A.5.2.1/A.5.4.1.

NOTE 3: The signal power is specified per port

NOTE 4: No requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the low band for which the 2nd transmitter harmonic is within the downlink transmission bandwidth of the high band. The reference sensitivity for all active downlink component carriers is only verified when this is not the case (the requirements specified in clause 7.3.3 apply unless otherwise specified).

NOTE 5: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of a low band for which the 3rd transmitter harmonic is within the downlink transmission bandwidth of a high band.

NOTE 6: The requirements should be verified for UL EARFCN of a low band (superscript LB) such that $f_{UL}^{LB} = \lfloor f_{DL}^{HB} / 0.3 \rfloor 0.1$ in MHz and $F_{UL_low}^{LB} + BW_{Channel}^{LB} / 2 \le f_{UL}^{LB} \le F_{UL_high}^{LB} - BW_{Channel}^{LB} / 2$ with $f_{DL}^{HB}$ the carrier frequency of a high band in MHz and $BW_{Channel}^{LB}$ the channel bandwidth configured in the low band.

NOTE 7: Void.

NOTE 8: No requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the low band for which the 3rd transmitter harmonic is within the downlink transmission bandwidth of the high band. The reference sensitivity is only verified when this is not the case (the requirements specified in clause 7.3.3 apply).

NOTE 9: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the aggressor (lower) band for which the 2nd transmitter harmonic is within the downlink transmission bandwidth of a victim (higher) band and a range $\Delta F_{HD}$ above and below the edge of this downlink transmission bandwidth. The value $\Delta F_{HD}$ depends on the E-UTRA configuration: $\Delta F_{HD}$ = 10 MHz for CA_3A-42A, CA_3A-3A-42A, CA_3A-42A-42A, CA_1A-3A-20A-32A-42A, CA_3A-42A-43A, CA_3A-32A-42A-43A, CA_1A-3A-42A, CA_2A-13A-48A-66A, CA_2A-48A, CA_2A-48C, CA_2A-48D, CA_48A-66A, CA_3A-7A-42A, CA_3A-19A-42A, CA_3A-20A-42A, CA_3A-28A-42A, CA_1A-3A-7A-42A, CA_13A-48A-66A, CA_13A-48A-66B, CA_13A-48A-66C, CA_13A-48A-48A-66A, CA_13A-48C-66A, CA_48A-66A-66A, CA_48A-66B , CA_48A-66C, CA_48A-48A-66A, CA_48C-66A, CA_48A-48A-66A-66A, CA_48A-48A-66B, CA_48A-48A-66C, CA_48C-66B, CA_48C-66C, CA_48E-66A, CA_1A-3A-19A-42A, CA_1A-3A-32A-42A, CA_3A-7A-20A-42A, CA_3A-20A-32A-42A and CA_3A-28A-41A-42A. $\Delta F_{HD}$ = 0MHz for CA_11A-28A, CA_1A-11A-28A and CA_3A-11A-28A.

NOTE 10: The requirements should be verified for UL EARFCN of the aggressor (lower) band (superscript LB) such that $f_{UL}^{LB} = \lfloor f_{DL}^{HB} / 0.2 \rfloor 0.1$ in MHz and $F_{UL_low}^{LB} + BW_{Channel}^{LB} / 2 \le f_{UL}^{LB} \le F_{UL_high}^{LB} - BW_{Channel}^{LB} / 2$ with $f_{DL}^{HB}$ carrier frequency in the victim (higher) band in MHz and $BW_{Channel}^{LB}$ the channel bandwidth configured in the lower band.

NOTE 11: The requirements are only applicable to channel bandwidths with a carrier frequency at $\pm(20 + BW_{Channel}^{HB} / 2)$ MHz offset from $2 f_{UL}^{LB}$ in the victim (higher band) with $F_{UL_low}^{LB} + BW_{Channel}^{LB} / 2 \le f_{UL}^{LB} \le F_{UL_high}^{LB} - BW_{Channel}^{LB} / 2$, where $BW_{Channel}^{LB}$ and $BW_{Channel}^{HB}$ are the channel bandwidths configured in the aggressor (lower) and victim (higher) bands in MHz, respectively.

NOTE 12: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of a low band for which the 4th transmitter harmonic is within the downlink transmission bandwidth of a high band.

NOTE 13: The requirements should be verified for UL EARFCN of a low band (superscript LB) such that $f_{UL}^{LB} = \lfloor f_{DL}^{HB} / 0.4 \rfloor 0.1$ in MHz and $F_{UL_low}^{LB} + BW_{Channel}^{LB} / 2 \le f_{UL}^{LB} \le F_{UL_high}^{LB} - BW_{Channel}^{LB} / 2$ with $f_{DL}^{HB}$ the carrier frequency of a high band in MHz and $BW_{Channel}^{LB}$ the channel bandwidth configured in the low band.

NOTE 14: For the UE that supports CA_1A-18A-28A or CA_1A-19A-28A, no requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the low band for which the 3rd transmitter harmonic is within the downlink transmission bandwidth of the high band. The reference sensitivity should only be verified when this is not the case (the requirements specified in clause 7.3.3 apply).

NOTE 15: These requirements apply when there is at least one individual RE within the downlink transmission bandwidth of the victim (lower) band for which the 3rd harmonic is within the uplink transmission bandwidth or the uplink adjacent channel's transmission bandwidth of an aggressor (higher) band.

NOTE 16: The requirements should be verified for UL EARFCN of the aggressor (higher) band (superscript HB) such that $f_{DL}^{LB} = \lfloor f_{UL}^{HB} / 0.3 \rfloor 0.1$ in MHz and $F_{UL_low}^{LB} + BW_{Channel}^{LB} / 2 \le f_{UL}^{LB} \le F_{UL_high}^{LB} - BW_{Channel}^{LB} / 2$ with $f_{DL}^{LB}$ the carrier frequency in the victim (lower) band and $BW_{Channel}^{HB}$ the channel bandwidth configured in the higher band.

NOTE 17: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of a low band for which the 5th transmitter harmonic is within the downlink transmission bandwidth of a high band.

NOTE 18: The requirements should be verified for UL EARFCN of a low band (superscript LB) such that

$f_{UL}^{LB} = \lfloor f_{DL}^{HB} / 0.5 \rfloor 0.1$ in MHz and $F_{UL_low}^{LB} + BW_{Channel}^{LB} / 2 \leq f_{UL}^{LB} \leq F_{UL_high}^{LB} - BW_{Channel}^{LB} / 2$ with $f_{DL}^{HB}$ the carrier frequency of a high band in MHz and $BW_{Channel}^{LB}$ the channel bandwidth configured in the low band.

NOTE 19: No requirements apply for the case that there is at least one individual RE within the uplink transmission bandwidth of the relative higher band and when the frequency range of relative higher band's uplink channel bandwidth or uplink 1st adjacent channel bandwidth is fully or partially overlapped with the 3 times of the frequency range of the relative lower band's downlink channel bandwidth. The reference sensitivity is only verified when this is not the case (the requirements specified in clause 7.3.3 apply).

NOTE 20: Void

NOTE 21: No requirements apply when there is at least one individual RE on band 28 uplink outside frequencies 728 – 738 MHz. The reference sensitivity is only verified when all configured RE's are confined within frequencies 728 – 738 MHz (the requirements specified in clause 7.3.3 apply).

NOTE 22: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the aggressor (lower) band for which the 2nd transmitter harmonic is within the downlink transmission bandwidth of a victim (higher) band and a range $\Delta F_{HD}$ above and below the edge of this downlink transmission bandwidth. The value $\Delta F_{HD}$ depends on the E-UTRA configuration: $\Delta F_{HD}$ = 10 MHz for CA_1A-3A-21A-42A.

NOTE 23: The requirements should be verified for UL EARFCN of the aggressor (lower) band (superscript LB) such that $f_{UL}^{LB} = \lfloor f_{DL}^{HB} / 0.2 \rfloor 0.1$ in MHz and $F_{UL_low}^{LB} + BW_{Channel}^{LB}/2 < f_{UL}^{LB} < F_{UL_high}^{LB} - BW_{Channel}^{LB}/2$ with $f_{DL}^{HB}$ carrier frequency in the victim (higher) band in MHz and $BW_{Channel}^{LB}$ the channel bandwidth configured in the lower band.

NOTE 24: The requirements are only applicable to channel bandwidths with a carrier frequency at $\pm(20 + BW_{Channel}^{HB} / 2)$ MHz offset from $2 f_{UL}^{LB}$ in the victim (higher band) with $F_{UL_low}^{LB} + BW_{Channel}^{LB}/2 < f_{UL}^{LB} < F_{UL_high}^{LB} - BW_{Channel}^{LB}/2$, where $BW_{Channel}^{LB}$ and $BW_{Channel}^{HB}$ are the channel bandwidths configured in the aggressor (lower) and victim (higher) bands in MHz, respectively.

NOTE 25: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the aggressor (lower) band for which the 2nd transmitter harmonic is within the downlink transmission bandwidth of a victim (higher) band and a range $\Delta F_{HD}$ above and below the edge of this downlink transmission bandwidth. The value $\Delta F_{HD}$ depends on the E-UTRA configuration: $\Delta F_{HD}$ = 10 MHz for CA_3A-19A-21A-42A.

NOTE 26: The requirements should be verified for UL EARFCN of the aggressor (lower) band (superscript LB) such that $f_{UL}^{LB} = \lfloor f_{DL}^{HB} / 0.2 \rfloor 0.1$ in MHz and $F_{UL_low}^{LB} + BW_{Channel}^{LB}/2 < f_{UL}^{LB} < F_{UL_high}^{LB} - BW_{Channel}^{LB}/2$ with $f_{DL}^{HB}$ carrier frequency in the victim (higher) band in MHz and $BW_{Channel}^{LB}$ the channel bandwidth configured in the lower band.

NOTE 27: The requirements are only applicable to channel bandwidths with a carrier frequency at $\pm(20 + BW_{Channel}^{HB} / 2)$ MHz offset from $2 f_{UL}^{LB}$ in the victim (higher band) with $F_{UL_low}^{LB} + BW_{Channel}^{LB}/2 < f_{UL}^{LB} < F_{UL_high}^{LB} - BW_{Channel}^{LB}/2$, where $BW_{Channel}^{LB}$ and $BW_{Channel}^{HB}$ are the channel bandwidths configured in the aggressor (lower) and victim (higher) bands in MHz, respectively.

NOTE 28: No requirements apply when there is at least one individual RE within the uplink transmission bandwidth of either Band 5 or Band 8 for which the 3rd transmitter harmonic is within the downlink transmission bandwidth of Band 41. The reference sensitivity for all active downlink component carriers is only verified when this is not the case (the requirements specified in clause 7.3.3 apply).

NOTE 29: The B41 requirements are modified by -0.1dB when carrier frequency of the assigned E-UTRA channel bandwidth is within 2545-2690 MHz.

NOTE 30: Void

NOTE 31: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the aggressor (lower) band for which the 2nd transmitter harmonic is within the downlink transmission bandwidth of a victim (higher) band and a range $\Delta F_{HD}$ above and below the edge of this downlink transmission bandwidth. The value $\Delta F_{HD}$ depends on the E-UTRA configuration: $\Delta F_{HD}$ = 10 MHz for CA_2A-48A-48A and CA_2A-48A-48C

NOTE 32: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the aggressor (lower) band for which the 2nd transmitter harmonic is within the downlink transmission bandwidth of a victim (higher) band and a range $\Delta F_{HD}$ above and below the edge of this downlink transmission bandwidth. The value $\Delta F_{HD}$ depends on the E-UTRA configuration: $\Delta F_{HD}$ = 10 MHz for CA_2A-48A-66A and CA_2A-48C-66A

NOTE 33: Applicable for the operations with 2 or 4 antenna ports supported in the band with carrier aggregation configured.

NOTE 34: Void

NOTE 35: These exceptions for the intra-band class C carriers should be verified one carrier at a time, according to note 6 frequency arrangements. No exceptions apply for the carrier which is not under REFSENS exception test.

NOTE 36: These requirements apply when the lower edge frequency of the 5 MHz uplink channel in Band 71 is located at or below 668 MHz and the downlink channel in Band 2 is located with its upper edge at 1990 MHz.

NOTE 37: These requirements apply when the lower edge frequency of the 10 MHz, 15 MHz, or 20 MHz uplink channel in Band 71 is located at or below 668 MHz and the downlink channel in Band 2 is located with its upper edge

at 1990 MHz.

Note 38: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the aggressor (lower) band for which the 3nd transmitter harmonic is within the downlink transmission bandwidth of a victim (higher) band and a range $\Delta F_{HD}$ above and below the edge of this downlink transmission bandwidth. The value $\Delta F_{HD}$ depends on the E-UTRA configuration: $\Delta F_{HD}$ = 15 MHz for CA_26A-41A, CA_25A-26A-41A.

**Table 7.3A.0-0b: Uplink configuration for the low band (exceptions due to harmonic issue)**

| E-UTRA Band / Channel bandwidth of the high band / NRB / Duplex mode | | | | | | | | |

Note 1: refers to the UL resource blocks, which shall be centred within the transmission bandwidth configuration for the channel bandwidth

Note 2: the UL configuration applies regardless of the channel bandwidth of the low band unless the UL resource blocks exceed that specified in Table 7.3.3-2 for the uplink bandwidth in which case the allocation according to Table 7.3.3-2 applies.

Note 3: refers to the UL resource blocks shall be located between 2373-2400MHz.

NOTE 4: These configurations apply when there is at least one individual RE within the uplink transmission bandwidth of a low band for which the 3rd transmitter harmonic is within the downlink transmission bandwidth of a high band.

NOTE 5: These configurations apply when there is at least one individual RE within the uplink transmission bandwidth of a low band for which the 2nd transmitter harmonic is within the downlink transmission bandwidth of a high band.

For the UE that supports any of the E-UTRA CA configurations given in Table 7.3A.0-0bA, exceptions to the requirements for a band(s) specified in subclause 7.3.3 are allowed when the band(s) is impacted by the uplink being active within a specified frequency range as noted in Table 7.3A.0-0bA. For these exceptions, the UE shall meet the requirements specified in Table 7.3A.0-0bA and Table 7.3A.0-0bB.

**Table 7.3A.0-0bA: Reference sensitivity for carrier aggregation QPSK $P_{REFSENS, CA}$ (exceptions for two bands due to close proximity of UL to DL channel)**

| Channel bandwidth | | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| **EUTRA CA Configuration** | **EUTRA band** | **1.4 MHz (dBm)** | **3 MHz (dBm)** | **5 MHz (dBm)** | **10 MHz (dBm)** | **15 MHz (dBm)** | **20 MHz (dBm)** | **Duplex mode** |
| CA_1A-3A[4] | 3[9] | | [-95.7] | -94 | -91.5 | -90 | -89 | FDD |
| CA_1A-3A[5] | 3 | | -98.7 | -97 | -94 | -92.2 | -91 | FDD |
| CA_1A-1A-3A[4] | 3 | | | -94 | -91.5 | -90 | -89 | FDD |
| CA_1A-1A-3A[5] | 3 | | | -97 | -94 | -92.2 | -91 | FDD |
| CA_1A-3A-3A[4] | 3[9] | | | -94 | -91.5 | -90 | -89 | FDD |
| CA_1A-3A-3A[5] | 3 | | | -97 | -94 | -92.2 | -91 | FDD |
| CA_1A-3C[4] | 3[9] | | | -94 | -91.5 | -90 | -89 | FDD |
| CA_1A-3C[5] | 3 | | | -97 | -94 | -92.2 | -91 | FDD |
| CA_1A-1A-3C[4] | 3 | | | -94 | -91.5 | -90 | -89 | FDD |
| CA_1A-1A-3C[5] | 3 | | | -97 | -94 | -92.2 | -91 | FDD |
| CA_1C-3A[4] | 3[9] | | | -94 | -91.5 | -90 | -89 | FDD |
| CA_1C-3A[5] | 3 | | | -97 | -94 | -92.2 | -91 | FDD |
| CA_18A-28A[6] | 28 | | | -94 | -92.5 | | | FDD |
| CA_19A-28A[7] | 28 | | | -94 | -92 | | | FDD |

NOTE 1: The transmitter shall be set to $P_{UMAX}$ as defined in subclause 6.2.5A.
NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1
NOTE 3: The signal power is specified per port
NOTE 4: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz. For each channel bandwidth in Band 3, the requirement applies regardless of channel bandwidth in Band 1.
NOTE 5: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is ≥ 60 MHz. For each channel bandwidth in Band 3, the requirement applies regardless of channel bandwidth in Band 1.
NOTE 6: These requirements apply when the uplink is active in Band 18 and the downlink channels in Band 28 are confined within the restricted frequency range specified for this CA configuration (Table 5.2A-2). For each channel bandwidth in Band 28, the requirement applies regardless of channel bandwidth in Band 18.
NOTE 7: These requirements apply when the uplink is active in Band 19 and the downlink channels in Band 28 are allocated at the middle of the restricted frequency range specified for this CA configuration (Table 5.2A-2). For each channel bandwidth in Band 28, the requirement applies regardless of channel bandwidth in Band 19.
NOTE 8: Void
NOTE 9: Applicable for the operations with 2 or 4 antenna ports supported in the band with carrier aggregation configured.

**Table 7.3A.0-0bB: Uplink configuration for the uplink band (exceptions for two bands due to close proximity of UL to DL channel)**

| E-UTRA Band / Channel bandwidth / $N_{RB}$ / Duplex mode | | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| **EUTRA CA Configuration** | **UL band** | **1.4 MHz** | **3 MHz** | **5 MHz** | **10 MHz** | **15 MHz** | **20 MHz** | **Duplex mode** |

NOTE 1: refers to the UL resource blocks shall be located as close as possible to the downlink channel in Band 3 but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1) in the uplink channel in Band 1.
NOTE 2: UL allocation when the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz
NOTE 3: UL allocation when the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is ≥ 60 MHz.
NOTE 4: refers to the UL resource blocks shall be located as close as possible to the downlink channel in Band 28 but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).

For the UE that supports any of the E-UTRA CA configurations given in Table 7.3A.0-0bC, exceptions to the requirements for a band(s) specified in subclause 7.3.3 are allowed when the bands(s) is impacted by the uplink being active within a specified frequency range as noted in Table 7.3A.0-0bC. For these exceptions, the UE shall meet the requirements specified in Table 7.3A.0-0bC and Table 7.3A.0-0bD.

NOTE 1: The transmitter shall be set to $P_{UMAX}$ as defined in subclause 6.2.5A.
NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1
NOTE 3: The signal power is specified per port
NOTE 4: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz. For each channel bandwidth in the Bands other than Band 1, the requirement applies regardless of channel bandwidth in Band 1.
NOTE 5: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is ≥ 60 MHz. For each channel bandwidth in the Bands other than Band 1, the requirement applies regardless of channel bandwidth in Band 1.
NOTE 6: These requirements apply when the uplink is active in Band 18 and the downlink channels in Band 28 are confined within the restricted frequency range specified for this CA configuration (Table 5.2A-2). For each channel bandwidth in Band 28, the requirement applies regardless of channel bandwidth in Band 18.
NOTE 7: Void
NOTE 8: These requirements apply when the uplink is active in Band 19 and the downlink channels in Band 28 are allocated at the middle of the restricted frequency range specified for this CA configuration (Table 5.2A-2). For each channel bandwidth in Band 28, the requirement applies regardless of channel bandwidth in Band 19.
NOTE 9: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz. For each channel bandwidth in Band 3 and Band 7, the requirement applies regardless of channel bandwidth in Band 1.
NOTE 10: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is ≥ 60 MHz. For each channel bandwidth in Band 3 and Band 7, the requirement applies regardless of channel bandwidth in Band 1.
NOTE 11: Void
NOTE 12: Applicable for the operations with 2 or 4 antenna ports supported in the band with carrier aggregation configured.

NOTE 1: refers to the UL resource blocks shall be located as close as possible to the downlink channel in Band 3 but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1) in the uplink channel in Band 1.
NOTE 2: UL allocation when the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz.
NOTE 3: UL allocation when the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is ≥ 60 MHz.
NOTE 4: refers to the UL resource blocks shall be located as close as possible to the downlink channel in Band28 but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.6-1).

For the UE that supports any of the E-UTRA CA configurations given in Table 7.3A.0-0bD1, exceptions to the requirements for a band(s) specified in subclause 7.3.3 are allowed when the band(s) is impacted by the uplink being active within a specified frequency range as noted in Table 7.3A.0-0bD1. For these exceptions, the UE shall meet the requirements specified in Table 7.3A.0-0bD1 and Table 7.3A.0-0bD2.

**Table 7.3A.0-0bD1: Reference sensitivity for carrier aggregation QPSK $P_{REFSENS, CA}$ (exceptions for four bands due to close proximity of UL to DL channel)**

NOTE 1: The transmitter shall be set to $P_{UMAX}$ as defined in subclause 6.2.5A.
NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1
NOTE 3: The signal power is specified per port
NOTE 4: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz. For each channel bandwidth in the bands other than Band 1, the requirement applies regardless of channel bandwidth in Band 1.
NOTE 5: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is ≥ 60 MHz. For each channel bandwidth in the bands other than Band 1, the requirement applies regardless of channel bandwidth in Band 1.
NOTE 6: Void
NOTE 7: The Band 41 requirements are modified by -0.5dB when carrier frequency of the assigned E-UTRA channel bandwidth is within 2545-2690MHz.
NOTE 8: The Band 41 requirements also apply to the supported CA_1A-41A.
NOTE 9: Applicable for the operations with 2 or 4 antenna ports supported in the band with carrier aggregation configured.

**Table 7.3A.0-0bD2: Uplink configuration for the low band (exceptions for four bands due to close proximity of UL to DL channel)**

| E-UTRA Band / Channel bandwidth / $N_{RB}$ / Duplex mode | | | | | | | | |
|---|---|---|---|---|---|---|---|---|

NOTE 1: refers to the UL resource blocks shall be located as close as possible to the downlink channel in Band 3 but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1) in the uplink channel in Band 1.
NOTE 2: UL allocation when the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz
NOTE 3: UL allocation when the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is ≥ 60 MHz.

For the UE that supports any of the E-UTRA CA configurations given in Table 7.3A.0-0bD3, exceptions are allowed when the uplink is active within a specified frequency range as noted in Table 7.3A.0-0bD3. For these exceptions, the UE shall meet the requirements specified in Table 7.3A.0-0bD3 and Table 7.3A.0-0bD4.

**Table 7.3.0-0bD3: Reference sensitivity for carrier aggregation QPSK $P_{REFSENS, CA}$ (exceptions for five bands due to close proximity of UL to DL channel)**

NOTE 1: refers to the UL resource blocks shall be located as close as possible to the downlink channel in Band 3 but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1) in the uplink channel in Band 1.
NOTE 2: UL allocation when the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz.
NOTE 3: UL allocation when the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is ≥ 60 MHz.

For the UE that supports any of the E-UTRA CA configurations given in Table 7.3A.0-0bE, exceptions to the requirements for a band(s) specified in subclause 7.3.3 are allowed when the band(s) is impacted by the uplink being active in the applicable active UL bands of the same CA configuration in Table 7.3A.0-0bE. For these exceptions, the UE shall meet the reference sensitivities specified in Table 7.3A.0-0bE and Table 7.3A.0-0bF.

NOTE 1: The transmitter shall be set to $P_{UMAX}$ as defined in subclause 6.2.5A
NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1
NOTE 3: The signal power is specified per port
NOTE 4: These requirements apply regardless of the channel bandwidth and the location of UL band.
NOTE 5: The B41 requirements are modified by -0.5dB when carrier frequency of the assigned E-UTRA channel bandwidth is within 2545-2690 MHz.
NOTE 6: The antenna isolation for MSD calculation is assumed as 10 dB. For conducted mode REFSENS test such antenna isolation is not observed as the antennas are disconnected. Additionally antenna isolation assumption is under discussion depending on the frequency range
NOTE 7: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the aggressor (lower) band for which the 2nd transmitter harmonic is within the downlink transmission bandwidth of a victim (higher) band and a range $\Delta F_{HD}$ above and below the edge of this downlink transmission bandwidth. The value $\Delta F_{HD}$ depends on the E-UTRA configuration: $\Delta F_{HD}$ = 10 MHz for CA_3A-42A, CA_3A-42C, CA_3A-42D, CA_3A-3A-42C, CA_3A-42A-42C, CA_1A-3A-42A, CA_1A-3A-42C, CA_3A-19A-42A, CA_3A-19A-42C, CA_1A-3A-19A-42A, CA 3A-41A-42A, CA_3A-41A-42C, CA_3A-41C-42A, and CA_3A-41C-42C.
NOTE 8: The requirements should be verified for UL EARFCN of the aggressor (lower) band (superscript LB) such that $f_{UL}^{LB} = \lfloor f_{DL}^{HB} / 0.2 \rfloor 0.1$ in MHz and $F_{UL_low}^{LB} + BW_{Channel}^{LB} / 2 \le f_{UL}^{LB} \le F_{UL_high}^{LB} - BW_{Channel}^{LB} / 2$ with $f_{DL}^{HB}$ carrier frequency in the victim (higher) band in MHz and $BW_{Channel}^{LB}$ the channel bandwidth configured in the lower band.
NOTE 9: The requirements are only applicable to channel bandwidths with a carrier frequency at $\pm(20 + BW_{Channel}^{HB} / 2)$ MHz offset from $2 f_{UL}^{LB}$ in the victim (higher band) with $F_{UL_low}^{LB} + BW_{Channel}^{LB} / 2 \le f_{UL}^{LB} \le F_{UL_high}^{LB} - BW_{Channel}^{LB} / 2$, where $BW_{Channel}^{LB}$ and $BW_{Channel}^{HB}$ are the channel bandwidths configured in the aggressor (lower) and victim (higher) bands in MHz, respectively.
NOTE 10: Only applicable for UE supporting inter-band carrier aggregation with uplink in one E-UTRA band and without simultaneous Rx/Tx.
NOTE 11: Void
NOTE 12: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz. For each channel bandwidth in Band 3 and Band 41, the requirement applies regardless of channel bandwidth in Band 1.
NOTE 13: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is ≥ 60 MHz. For each channel bandwidth in Band 3 and Band 41, the requirement applies regardless of channel bandwidth in Band 1.
NOTE 14: The B41 requirements also apply to the supported CA_1A-41A.
NOTE 15: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz. For each channel bandwidth other than Band 1, the requirement applies regardless of channel bandwidth in Band 1
NOTE 16: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is ≥ 60 MHz. For each channel bandwidth other than Band 1, the requirement applies regardless of channel bandwidth in Band 1.
NOTE 17: The B41 requirements are modified by -0.1dB when carrier frequency of the assigned E-UTRA channel bandwidth is within 2545-2690 MHz.
NOTE 18: No requirements apply when there is at least one individual RE within the downlink transmission bandwidth of band5 for which the 3rd receiver harmonic is within the uplink transmission bandwidth of band41. The reference sensitivity is only verified when this is not the case (the requirements specified in clause 7.3.3 apply).
NOTE 19: Applicable for the operations with 2 or 4 antenna ports supported in the band with carrier aggregation configured.

**Table 7.3A.0-0bF: Uplink configuration for reference sensitivity (exceptions due to cross band isolation issues of TDD and FDD bands)**

| E-UTRA Band / Channel bandwidth of the affected DL band / $N_{RB}$ / Duplex mode | | | | | | | | |

NOTE 1: refers to the UL resource blocks shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).

NOTE 2: the UL configuration applies regardless of the channel bandwidth of the low band unless the UL resource blocks exceed that specified in Table 7.3.1-2 for the uplink bandwidth in which case the allocation according to Table 7.3.1-2 applies.

NOTE 3: UL allocation when the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz.

NOTE 4: UL allocation when the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is ≥ 60 MHz.
NOTE 5: refers to Band 20; in the case of 15MHz channel bandwidth, the UL resource blocks shall be located at $RB_{start}$ 11 and in the case of 20MHz channel bandwidth, the UL resource blocks shall be located at $RB_{start}$ 16

For band combinations including operating bands without uplink band (as noted in Table 5.2-1), the requirements are specified in Table 7.3A.0-0d and for any uplink band with uplink configuration specified in Table 7.3.3-2.

NOTE 1: The transmitter shall be set to $P_{UMAX}$ as defined in subclause 6.2.5A.
NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1
NOTE 3: The signal power is specified per port.
NOTE 4: Void
NOTE 5: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.
NOTE 6: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz. For each channel bandwidth in Band 3, the requirement applies regardless of channel bandwidth in Band 1.
NOTE 7: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is ≥ 60 MHz. For each channel bandwidth in Band 3, the requirement applies regardless of channel bandwidth in Band 1.

**Table 7.3A.0-0e: Void**

For band combinations including operating band 46 (Table 5.2-1), the requirements are specified in Table 7.3A.0-0eA for the uplink in any band other than band 46 with the uplink configuration specified in Table 7.3.3-2 and Table 7.3A.0-0eC.

For band combinations including operating band 49 (Table 5.5-1), the requirements are specified in Table 7.3A.0-0eA for the uplink in any band other than Band 49 with uplink configurations specified in Table 7.3.3-2 and measurement exclusion region in Table 7.3A.0-0eD.

**Table 7.3A.0-0eA: Reference sensitivity QPSK $P_{REFSENS}$ (CA with band 46)**

| Channel bandwidth | | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| **EUTRA CA Configuration** | **EUTRA band** | **1.4 MHz (dBm)** | **3 MHz (dBm)** | **5 MHz (dBm)** | **10 MHz (dBm)** | **15 MHz (dBm)** | **20 MHz (dBm)** | **Duplex mode** |

| | 71 | | | -97.2 | -94.2 | -92.0 | -87.5 | TDD |

NOTE 1: The transmitter shall be set to $P_{UMAX}$ as defined in subclause 6.2.5A.
NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD/FS3 as described in Annex A.5.1.1/A.5.2.1/A.5.4.1.
NOTE 3: The signal power is specified per port.
NOTE 4: Void
NOTE 5: The requirement for B46 does not apply when there is at least one individual RE within the B46 downlink transmission bandwidth which falls into the reference sensitivity exclusion region as specified in Table 7.3A.0-0eC.
NOTE 6: Void
NOTE 7: [7] indicates that the requirement is modified by -0.5 dB when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz.
NOTE 8: When Band 46 have self interference problems by dual uplink CA, then the requirements not apply in exclusion zone which is frequency range within (harmonics frequency region + $\Delta F_{HD}$) and IMD frequency region as follow.
NOTE 9: The requirement for B49 does not apply when there is at least one individual RE within the B49 downlink transmission bandwidth which falls into the reference sensitivity exclusion region as specified in Table 7.3A.0-0eD.
NOTE 10: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the aggressor (lower) band for which the 2nd transmitter harmonic is within the downlink transmission bandwidth of a victim (higher) band which excludes band 46 and a range ΔFHD above and below the edge of this downlink transmission bandwidth. The value ΔFHD depends on the E-UTRA configuration: ΔFHD = 10 MHz for CA_2-46-48, CA_46-48-66, and CA_2-46-48-66. For harmonic issue not related with band 46, the uplink configuration of CA_2-48, CA_48-66 and CA_2-48-66 in Table 7.3A.0-0b can be used.
NOTE 11: The requirements should be verified for UL EARFCN of the aggressor (lower) band (superscript LB) such that $f_{UL}^{LB} = \lfloor f_{DL}^{HB} / 0.2 \rfloor 0.1$ in MHz and $F_{UL_low}^{LB} + BW_{Channel}^{LB} / 2 \le f_{UL}^{LB} \le F_{UL_high}^{LB} - BW_{Channel}^{LB} / 2$ with $f_{DL}^{HB}$ carrier frequency in the victim (higher) band in MHz and $BW_{Channel}^{LB}$ the channel bandwidth configured in the lower band.
NOTE 12: The requirements are only applicable to channel bandwidths with a carrier frequency at $\pm\left(20 + BW_{Channel}^{HB} / 2\right)$ MHz offset from $2 f_{UL}^{LB}$ in the victim (higher band) with $F_{UL_low}^{LB} + BW_{Channel}^{LB} / 2 \le f_{UL}^{LB} \le F_{UL_high}^{LB} - BW_{Channel}^{LB} / 2$, where $BW_{Channel}^{LB}$ and $BW_{Channel}^{HB}$ are the channel bandwidths configured in the aggressor (lower) and victim (higher) bands in MHz, respectively.

IMD frequency range

| DL_CA configuration | UL_CA configuration | Exclusion zone center frequency | Exclusion zone BW |
|---|---|---|---|
| CA_1A-5A-46A | CA_1A-5A | 2*fc_1A + 2*fc_5A | 2*BW_1A + 2*BW_5A |
| CA_1A-7A-46A | CA_1A-7A | 3*fc_7A - fc_1A | 3*BW_7A + BW_1A |
| CA_5A-7A-46A | CA_5A-7A | 2*fc_7A + fc_5A | 2*BW_7A + BW_5A |

**Table 7.3A.0-0eB: Void**

Table 7.3A.0-0eC specifies the Band 46 reference measurement exclusion region for different licensed component carriers and channel bandwidth. The exclusion region is defined according to the licensed component carrier channel bandwidth. The UL configurations to be adopted for the test are specified in Table 7.3.3-2. The exclusion region in Table 7.3A.0-0eC is specified for the case of 10MHz and 20MHz channel bandwidth in Band 46..

**Table 7.3A.0-0eC: Band 46 Reference sensitivity measurement exclusion region in MHz**

| Licensed Component Carriers / E-UTRA Band / Harmonic order / Channel BW in UL | | | | | |
|---|---|---|---|---|---|
| **Licensed Component Carriers** | **Harmonic order** | **5MHz** | **10MHz** | **15MHz** | **20MHz** |
| 1 | 3 | +/- 11.25 | +/- 22.5 | +/- 33.75 | +/- 45 |
| 2 | 3 | +/- 11.25 | +/- 22.5 | +/- 33.75 | +/- 45 |
| 3 | 3 | +/- 11.25 | +/- 22.5 | +/- 33.75 | +/- 45 |
| 4 | 3 | +/- 11.25 | +/- 22.5 | +/- 33.75 | +/- 45 |

| 66 | 3 | +/- 11.25 | +/- 22.5 | +/- 33.75 | +/- 45 |
| NOTE 1: Even though UL harmonic does not fall directly into Band 46 the exclusion region still applies.<br>NOTE 2: The centre of the exclusion region is obtained by multiplying the UL channel centre frequency by the harmonic order. | | | | | |

Table 7.3A.0-0eD specifies the Band 49 reference measurement exclusion region for different licensed component carriers and channel bandwidth. The exclusion region is defined according to the licensed component carrier channel bandwidth. The UL configurations to be adopted for the test are specified in Table 7.3.3-2.

**Table 7.3A.0-0eD: Band 49 reference sensitivity measurement exclusion region in MHz.**

| Licensed Component Carriers / E-UTRA Band / Harmonic order / Channel BW in UL | | | | | |
|---|---|---|---|---|---|
| **Licensed Component Carriers** | **Harmonic order** | **5MHz** | **10MHz** | **15MHz** | **20MHz** |
| 2[1] | 2 | +/- 12.5 | +/- 25 | +/- 37.5 | +/- 50 |
| NOTE 1: Even though UL harmonic does not fall directly into Band 49 the exclusion region still applies.<br>NOTE 2: The center of the exclusion region is obtained by multiplying the UL channel center frequency by the harmonic order. | | | | | |

In all cases for single uplink inter-band CA, unless given by Table 7.3.3-3 for the band with the active uplink carrier, the applicable reference sensitivity requirements shall be verified with the network signalling value NS_01 (Table 6.2.4.3-1) configured.

For inter-band carrier aggregation with one component carrier per operating band (up to four downlinks) and the uplink assigned to two E-UTRA bands the throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3.3-1, Table 7.3.3-1a and Table 7.3.3-2. The reference sensitivity is defined to be met with all downlink component carriers active and both of the uplink carriers active.

For E-UTRA CA configurations with uplink and downlink assigned to two E-UTRA bands given in Table 7.3A.0-0f the reference sensitivity is defined only for the specific uplink and downlink test points which are specified in Table 7.3A.0-0f. For E-UTRA CA configurations with uplink assigned to two E-UTRA bands and downlink assigned to three E-UTRA bands given in Table 7.3.1A-0g the reference sensitivity is defined only for the specific uplink and downlink test points which are specified in Table 7.3.1A-0g. For these test points the reference sensitivity requirement specified in Table 7.3.3-1 and Table 7.3.3-1a are relaxed by the amount of the corresponding parameter MSD given in Table 7.3A.0-0f and Table 7.3A.0-0g.

The allowed exceptions defined in Table 7.3A.0-0a and Table 7.3A.0-0b for inter-band carrier aggregation with a single active uplink are also applicable for dual uplink operation.

**Table 7.3A.0-0f: 2DL/2UL interband Reference sensitivity QPSK $P_{REFSENS}$ and uplink/downlink configurations**

NOTE 1: Both of the transmitters shall be set min(+20 dBm, $P_{CMAX_L,c}$) as defined in subclause 6.2.5A
NOTE 2: $RB_{START}$ = 0
NOTE 3: No requirements apply when there is at least one individual RE within the intermodulation generated by the dual uplink is within the downlink transmission bandwidth of the FDD band. The reference sensitivity should only be verified when this is not the case (the requirements specified in clause 7.3.3 apply).
NOTE 4: This band is subject to IMD5 also which MSD is not specified.
NOTE 5: Void
NOTE 6: For operations with 4 antenna ports, the MSD in the applicable bands shall be modified by the absolute value of $\Delta R_{IB,4R}$ in Table 7.3.3-1a when MSD > 0.

NOTE 1: This band is subject to IMD3 also which MSD is not specified.
NOTE 1: Both of the transmitters shall be set min(+20 dBm, $P_{CMAX_L,c}$) as defined in subclause 6.2.5A
NOTE 2: $RB_{START}$ = 0
NOTE 3: Void
NOTE 4: This MSD requirement apply with both IMD2 and IMD3 products should be generated.
NOTE 5: For operations with 4 antenna ports, the MSD in the applicable bands shall be modified by the absolute value of $\Delta R_{IB,4R}$ in Table 7.3.3-1a when MSD > 0.
NOTE 6: Due to the spectrum holdings of the operator, the deployed frequency ranges do not result MSD to interested downlink channel. Therefore, no requirements apply for this CA configuration.

For intra-band contiguous carrier aggregation the throughput of each component carrier shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3.3-1, Table 7.3.3-1a, Table 7.3.3-1A, Table 7.3.3-1B, Table 7.3.3-1C, Table 7.3A.0-0h and Table 7.3A.0-1. For operating bands with an unpaired DL part (as noted in Table 5.2-1), the power levels in Table 7.3.1-1 and Table 7.3.3-1a also apply for an SCC assigned in the unpaired part. The requirement is verified using an uplink CA configuration with the largest number of carriers supported by the UE. Table 7.3A.0-0h, Table 7.3A.0-1 and Table 7.3A.0-2 specify the maximum number of allocated uplink resource blocks for which the intra-band contiguous carrier aggregation reference sensitivity requirement shall be met. The PCC and SCC allocations as defined in Table 7.3A.0-0h, Table 7.3A.0-1 and Table 7.3A.0-2 form a contiguous allocation where TX–RX frequency separations of the component carriers are as defined in Table 5.3-1. In case downlink CA configuration has additional SCC(s) compared to uplink CA configuration those are configured furthers away from uplink band. For UE(s) supporting one uplink carrier, the uplink configuration of the PCC shall be in accordance with Table 7.3.3-2 and the downlink PCC carrier center frequency shall be configured closer to uplink operating band than any of the downlink SCC centre frequency. Unless given by Table 7.3.3-3, the reference sensitivity requirements shall be verified with the network signalling value NS_01 (Table 6.2.4.3-1) configured.

**Table 7.3A.0-0h: Intra-band contiguous CA uplink configuration for reference sensitivity for Bandwidth Class B**

| CA configuration / CC combination / $N_{RB_agg}$ / Duplex mode | | | | | |
|---|---|---|---|---|---|
| Uplink CA configuration | 50RB+25RB | | 50RB+50RB | | Duplex Mode |
| | PCC | SCC | PCC | SCC | |
| CA_5B | 25 | 0 | 25 | 0 | FDD |
| CA_8B | 25 | 0 | 25 | 0 | FDD |

NOTE 1: The carrier centre frequency of SCC in the UL operating band is configured closer to the DL operating band.
NOTE 2: The transmitted power over both PCC and SCC shall be set to $P_{UMAX}$ as defined in subclause 6.2.5A.
NOTE 3: The UL resource blocks in both PCC and SCC shall be confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).
NOTE 4: The UL resource blocks in PCC shall be located as close as possible to the downlink operating band, while the UL resource blocks in SCC shall be located as far as possible from the downlink operating band.
NOTE 5: In case a CA configuration consists of CC channel bandwidths which are unequal in bandwidth the PCC channel bandwidth shall be the larger one for reference sensitivity test.

**Table 7.3A.0-1: Intra-band contiguous CA uplink configuration for reference sensitivity for Bandwidth Class C**

| CA configuration / CC combination / $N_{RB_agg}$ / Duplex mode | | | | | | | | | | | | | |

NOTE 1: The carrier centre frequency of SCC in the UL operating band is configured closer to the DL operating band.
NOTE 2: The transmitted power over both PCC and SCC shall be set to $P_{UMAX}$ as defined in subclause 6.2.5A.
NOTE 3: The UL resource blocks in both PCC and SCC shall be confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).
NOTE 4: The UL resource blocks in PCC shall be located as close as possible to the downlink operating band, while the UL resource blocks in SCC shall be located as far as possible from the downlink operating band.
NOTE 5: In case a CA configuration consists of CC channel bandwidths which are unequal in bandwidth the PCC channel bandwidth shall be the larger one for reference sensitivity test.
NOTE 6: Void.
NOTE 7: Void.

**Table 7.3A.0-2: Intra-band contiguous CA uplink configuration for reference sensitivity for Bandwidth Class D**

| CA configuration / CC combination / $N_{RB_agg}$ / Duplex mode | | | | |
|---|---|---|---|---|
| Uplink CA configuration | CC combination | Number of uplink resource blocks per CC | | |
| | | PCC | SCC | SCC |
| CA_40D | 75RB+75RB+75RB<br>100RB+75RB+75RB<br>100RB+100RB+50RB<br>100RB+100RB+75RB<br>100RB+100RB+100RB | NOTE 6 | | |

NOTE 1: The carrier centre frequency of SCC in the UL operating band is configured closer to the DL operating band.
NOTE 2: The transmitted power over both PCC and SCC shall be set to PUMAX as defined in subclause 6.2.5A.
NOTE 3: The UL resource blocks in both PCC and SCC shall be confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).
NOTE 4: The UL resource blocks in PCC shall be located as close as possible to the downlink operating band, while the UL resource blocks in SCC shall be located as far as possible from the downlink operating band.
NOTE 5: In case a CA configuration consists of CC channel bandwidths which are unequal in bandwidth the PCC channel bandwidth shall be the larger one for reference sensitivity test.
NOTE 6: All uplink CCs are fully allocated

For intra-band non-contiguous carrier aggregation with one uplink carrier and or more two downlink sub-blocks, the throughput of each downlink component carrier shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) and parameters specified in Table 7.3.3-1, Table 7.3.3-1a, Table 7.3.3-1A, Table 7.3.3-1B, Table 7.3.3-1C and Table7.3A.0-3 with the reference sensitivity power level increased by $\Delta R_{IBNC}$ given in Table 7.3A.0-3 for the SCC(s). For aggregation of more than two downlink FDD carriers with one uplink carrier the reference sensitivity is defined only for the specific uplink and downlink test points which are specified in Table 7.3A.0-3. The requirements apply with all downlink carriers active. Unless given by Table 7.3.3-3, the reference sensitivity requirements shall be verified with the network signalling value NS_01 (Table 6.2.4.3-1) configured.

**Table 7.3A.0-3: Intra-band non-contiguous CA with one uplink configuration for reference sensitivity**

| CA configuration | Aggregated channel bandwidth (PCC+SCC) | Wgap / [MHz] | UL PCC allocation | ΔRIBNC (dB) | Duplex mode |

NOTE 1: refers to the UL resource blocks shall be located as close as possible to the downlink operating band but confined within the transmission.
NOTE 2: $W_{gap}$ is the sub-block gap between the two sub-blocks.
NOTE 3: The carrier center frequency of PCC in the UL operating band is configured closer to the DL operating band.
NOTE 4: refers to the UL resource blocks shall be located at $RB_{start}$=33.
NOTE 5: For the TDD intra-band non-contiguous CA configurations, the minimum requirements apply only in synchronized operation between all component carriers.
NOTE 6: All combinations of channel bandwidths defined in Table 5.4.2A.1-3.
NOTE 7: All applicable sub-block gap sizes.
NOTE 8: The PCC allocation is same as Transmission bandwidth configuration $N_{RB}$ as defined in Table 5.4.2-1. In case of uplink sub-block is TDD intra-band contiguous CA then the uplink PCC and SCC allocations are the same as $N_{RB_agg}$ defined in Table 7.3A.0-1.
NOTE 9: refers to the UL resource blocks shall be located at $RB_{start}$=25.
NOTE 10: refers to the UL resource blocks shall be located at $RB_{start}$=35.
NOTE 11: refers to the UL resource blocks shall be located at $RB_{start}$=50.
NOTE 12: refers to the UL resource blocks shall be located at $RB_{start}$=39.
NOTE 13: refers to the UL resource blocks shall be located at $RB_{start}$=57.
NOTE 14: refers to the UL resource blocks shall be located at $RB_{start}$=44.
NOTE 15: refers to the UL resource blocks shall be located at $RB_{start}$=62.
NOTE 16: The carrier center frequency of PCC in the DL operating band is configured closer to the UL operating band.
NOTE 17: Void
NOTE 18: refers to the UL resource blocks shall be located at RBstart=12.
NOTE 19: For operations with 4 antenna ports, the MSD in the applicable bands shall be modified by the absolute value of $\Delta R_{IB,4R}$ in Table 7.3.3-1a when MSD > 0.

For intra-band non-contiguous carrier aggregation with two uplink and downlink carriers the reference sensitivity is defined to be met with both downlink and uplink carriers activated. The downlink PCC and SCC minimum requirements for reference sensitivity power level as specified in Table 7.3.3-1, Table 7.3.3-1a, Table 7.3.3-1A, Table 7.3.3-1B and Table 7.3.3-1C are increased by amount of $\Delta R_{2UL_PCC}$ and $\Delta R_{2UL_SCC}$ which are defined in Table 7.3A.0-4 when uplink PCC and SCC allocations are according to the Table 7.3A.0-4.

**Table 7.3A.0-4: Intra-band non-contiguous CA with two uplinks configuration for reference sensitivity**

| CA configuration | Aggregated channel bandwidth (PCC+SCC) | $W_{gap}$ / [MHz] | UL PCC allocation | UL SCC allocation | $\Delta R_{2UL_PCC}$ (dB) | $\Delta R_{2UL_SCC}$ (dB) | Duplex mode |
|---|---|---|---|---|---|---|---|
| CA_4A-4A | NOTE 2 | NOTE 3 | NOTE 4 | NOTE 5 | 0.0 | 0.0 | FDD |
| NOTE 1: The transmitter shall be set to $P_{UMAX}$ as defined in subclause 6.2.5A. | | | | | | | |
| NOTE 2: All combinations of channel bandwidths defined in Table 5.4.2A.1-3. | | | | | | | |
| NOTE 3: All applicable sub-block gap sizes. | | | | | | | |
| NOTE 4: The PCC allocation is same as Transmission bandwidth configuration $N_{RB}$ as defined in Table 5.4.2-1. | | | | | | | |
| NOTE 5: The SCC allocation is same as Transmission bandwidth configuration $N_{RB}$ as defined in Table 5.4.2-1. | | | | | | | |

For combinations of intra-band and inter-band carrier aggregation with up to five downlink carriers (up to two non-contiguous sub-blocks per band and up to four contiguously aggregated carriers per band) and up to three uplink carriers (up to two contiguously aggregated carriers per band), the requirement is defined with an uplink configuration in accordance with Table 7.3A.0-3 when the uplink is active in a band supporting two non-contigous component carriers, Table 7.3A.0-1 when the uplink (up to two contiguously aggregated uplink carriers) is active in a band supporting two contiguous component carriers and in accordance with Table 7.3.3-2 when an uplink is active in a band supporting one carrier per band. The downlink PCC shall be configured closer to the uplink operating band than the downlink SCC(s) when the uplink is active in band(s) supporting contiguous aggregation of up to four component carriers. The carrier center frequency of PCC in the UL operating band is configured closer to the DL operating band when the uplink is active in band(s) supporting non-contiguous aggregation of up to two sub-blocks. For these uplink configurations, the UE shall meet the reference sensitivity requirements for intra-band non-contiguous carrier aggregation of two downlink sub-blocks, the requirements for intra-band contiguous carrier aggregation for the contiguously aggregated downlink carriers and for any remaining component carrier(s) the requirements specified in subclause 7.3.3. For the two component carriers within the same band, $\Delta R_{IBNC}$ = 0 dB for all sub-block gaps (Table 7.3A.0-3) when the uplink is active in another band. All downlink carriers shall be active throughout the tests and the requirements for the downlinks shall be met with all uplink carriers active in each band capable of UL operation. For component carriers configured in Band 46, the said requirements for intra-band carrier aggregation of downlink carriers are replaced by the requirements in Table 7.3A.0-0eA for the uplink in any band other than band 46 with the uplink configuration specified in Table 7.3.3-2. Unless given by Table 7.3.3-3, the reference sensitivity requirements shall be verified with the network signalling value NS_01 (Table 6.2.4.3-1) configured.

For the UE that supports any of combinations of intra-band and inter-band carrier aggregation given in Table 7.3A.0-5, exceptions to the requirements for a band(s) specified in subclause 7.3.3 are allowed when the band(s) is impacted by harmonic interference from the uplink being active in a lower-frequency band of the same CA configuration. For these exceptions, the UE shall meet the requirements specified in Table 7.3A.0-5 and Table 7.3A.0-6.

**Table 7.3A.0-5: Reference sensitivity for carrier aggregation QPSK $P_{REFSENS, CA}$ (exceptions due to harmonic issues in the combinations of intra-band and inter-band CA)**

| CA_48D-66A[10] | 48 | | | -97.1 | -94.7 | -93.2 | -92.5 | TDD |

NOTE 1: The transmitter shall be set to $P_{UMAX}$ as defined in subclause 6.2.5A.

NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1

NOTE 3: The signal power is specified per port

NOTE 4: No requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the low band for which the 2nd transmitter harmonic is within the downlink transmission bandwidth of the high band. The reference sensitivity for all active downlink component carriers is only verified when this is not the case (the requirements specified in clause 7.3.3 apply unless otherwise specified).

NOTE 5: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of a low band for which the 3rd transmitter harmonic is within the downlink transmission bandwidth of a high band.

NOTE 6: The requirements should be verified for UL EARFCN of a low band (superscript LB) such that $f_{UL}^{LB} = \lfloor f_{DL}^{HB} / 0.3 \rfloor 0.1$ in MHz and $F_{UL_low}^{LB} + BW_{Channel}^{LB} / 2 \le f_{UL}^{LB} \le F_{UL_high}^{LB} - BW_{Channel}^{LB} / 2$ with $f_{DL}^{HB}$ the carrier frequency of a high band in MHz and $BW_{Channel}^{LB}$ the channel bandwidth configured in the low band.

NOTE 7: No requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the low band for which the 3rd transmitter harmonic is within the downlink transmission bandwidth of the high band. The reference sensitivity is only verified when this is not the case (the requirements specified in clause 7.3.3 apply).

NOTE 8: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the aggressor (lower) band for which the 2nd transmitter harmonic is within the downlink transmission bandwidth of a victim (higher) band and a range $\Delta F_{HD}$ above and below the edge of this downlink transmission bandwidth. The value $\Delta F_{HD}$ depends on the E-UTRA configuration: $\Delta F_{HD}$ = 10 MHz for CA_3A-42C, CA_3A-42D, CA_3A-3A-42C, CA_3A-42A-42C, CA_3A-42C-42C, CA_1A-3A-19A-42C, CA_1A-3A-21A-42C, CA_1A-3A-42C, CA_3A-28A-42C, CA_3A-28A-42D, CA_3A-19A-42C, CA_3A-19A-42D, CA_3A-21A-42D, CA_3A-28A-40C, CA_3A-28A-40D, CA_3A-28A-41A-42C, CA_3A-28A-41C-42A, CA_2A-48C-48C, CA_2A-48A-48D, CA_48A-48C-66C, CA_48A-48C-66B, CA_48A-48D-66A, CA_48C-48C-66A, CA_48D-66A, CA_48A-48C-66A, CA_2A-13A-48D, CA_2A-13A-48A-48C, CA_2A-13A-48C-66A, CA_2A-13A-48A-48A-66A, CA_2A-48D-66A, CA_2A-48A-48C-66A and CA_2A-48E.

NOTE 9: The requirements should be verified for UL EARFCN of the aggressor (lower) band (superscript LB) such that $f_{UL}^{LB} = \lfloor f_{DL}^{HB} / 0.2 \rfloor 0.1$ in MHz and $F_{UL_low}^{LB} + BW_{Channel}^{LB} / 2 \le f_{UL}^{LB} \le F_{UL_high}^{LB} - BW_{Channel}^{LB} / 2$ with $f_{DL}^{HB}$ carrier frequency in the victim (higher) band in MHz and $BW_{Channel}^{LB}$ the channel bandwidth configured in the lower band.

NOTE 10: The requirements are only applicable to channel bandwidths with a carrier frequency at $\pm(20 + BW_{Channel}^{HB} / 2)$ MHz offset from $2 f_{UL}^{LB}$ in the victim (higher band) with $F_{UL_low}^{LB} + BW_{Channel}^{LB} / 2 \le f_{UL}^{LB} \le F_{UL_high}^{LB} - BW_{Channel}^{LB} / 2$, where $BW_{Channel}^{LB}$ and $BW_{Channel}^{HB}$ are the channel bandwidths configured in the aggressor (lower) and victim (higher) bands in MHz, respectively.

NOTE 11: Void

NOTE 12: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of a low band for which the 5th transmitter harmonic is within the downlink transmission bandwidth of a high band.

NOTE 13: The requirements should be verified for UL EARFCN of a low band (superscript LB) such that

$f_{UL}^{LB} = \lfloor f_{DL}^{HB} / 0.5 \rfloor 0.1$ in MHz and $F_{UL_low}^{LB} + BW_{Channel}^{LB} / 2 \le f_{UL}^{LB} \le F_{UL_high}^{LB} - BW_{Channel}^{LB} / 2$ with $f_{DL}^{HB}$ the carrier frequency of a high band in MHz and $BW_{Channel}^{LB}$ the channel bandwidth configured in the low band.

NOTE 14: No requirements apply when there is at least one individual RE on band 28 uplink outside frequencies 728 – 738 MHz. The reference sensitivity is only verified when all configured RE's are confined within frequencies 728 – 738 MHz (the requirements specified in clause 7.3.1 of [6] apply).

NOTE 15: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of a low band for which the 4th transmitter harmonic is within the downlink transmission bandwidth of a high band.

NOTE 16: The requirements should be verified for UL EARFCN of a low band (superscript LB) such that $f_{UL}^{LB} = \lfloor f_{DL}^{HB} / 0.4 \rfloor 0.1$ in MHz and $F_{UL_low}^{LB} + BW_{Channel}^{LB} / 2 \le f_{UL}^{LB} \le F_{UL_high}^{LB} - BW_{Channel}^{LB} / 2$ with $f_{DL}^{HB}$ the carrier frequency of a high band in MHz and $BW_{Channel}^{LB}$ the channel bandwidth configured in the low band.

NOTE 17: These requirements apply when there is at least one individual RE within the downlink transmission bandwidth of the victim (lower) band for which the 3rd harmonic is within the uplink transmission bandwidth or the uplink adjacent channel's transmission bandwidth of an aggressor (higher) band.

NOTE 18: The requirements should be verified for UL EARFCN of the aggressor (higher) band (superscript HB) such that $f_{DL}^{LB} = \lfloor f_{UL}^{HB} / 0.3 \rfloor 0.1$ in MHz and $F_{UL_low}^{LB} + BW_{Channel}^{LB} / 2 \le f_{UL}^{LB} \le F_{UL_high}^{LB} - BW_{Channel}^{LB} / 2$ with $f_{DL}^{LB}$ the carrier frequency in the victim (lower) band and $BW_{Channel}^{HB}$ the channel bandwidth configured in the higher band.

NOTE 19: The requirement for B46 does not apply when there is at least one individual RE within the B46 downlink transmission bandwidth which falls into the reference sensitivity exclusion region as specified in Table 6.2.4.3-3.

NOTE 20: The B41 requirements are modified by -0.1dB when carrier frequency of the assigned E-UTRA channel bandwidth is within 2545-2690 MHz.

NOTE 21: Applicable for the operations with 2 or 4 antenna ports supported in the band with carrier aggregation configured.

NOTE 22: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the aggressor (lower) band for which the 2nd transmitter harmonic is within the downlink transmission bandwidth of a victim (higher) band and a range $\Delta F_{HD}$ above and below the edge of this downlink transmission bandwidth. The value $\Delta F_{HD}$ depends on the E-UTRA configuration: $\Delta F_{HD}$ = 10 MHz for CA_2A-48A-48C

**Table 7.3A.0-6: Uplink configuration for the low band (exceptions due to harmonic issues in the combinations of intra-band and inter-band CA)**

| E-UTRA Band / Channel bandwidth of the high band / $N_{RB}$ / Duplex mode | | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| **EUTRA CA Configuration** | **UL band** | **1.4 MHz** | **3 MHz** | **5 MHz** | **10 MHz** | **15 MHz** | **20 MHz** | **Duplex mode** |

NOTE 1: refers to the UL resource blocks, which shall be centred within the transmission bandwidth configuration for the channel bandwidth.
NOTE 2: the UL configuration applies regardless of the channel bandwidth of the low band unless the UL resource blocks exceed that specified in Table 7.3.3-2 for the uplink bandwidth in which case the allocation according to Table 7.3.3-2 applies.
NOTE 3: refers to the UL resource blocks shall be located between 2373-2400MHz.

The normative reference for this requirement is TS 36.101[2] clause 7.3.1 and 7.3.1A.

## 7.3A.1 Reference sensitivity level for CA (intra-band contiguous DL CA and UL CA)

### 7.3A.1.1 Test purpose

To verify the ability of UE that support CA to receive data with a given average throughput for a specified reference measurement channel, under conditions of low signal level, ideal propagation and no added noise.

A UE unable to meet the throughput requirement under these conditions will decrease the effective coverage area of an e-NodeB.

### 7.3A.1.2 Test applicability

This test case applies to all types of E-UTRA UE release 10 and forward that support intra-band contiguous DL CA and UL CA.

### 7.3A.1.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.3A.0.

### 7.3A.1.4 Test description

#### 7.3A.1.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.3A.1.4.1-1. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 7.3A.1.4.1-1: Test Configuration Table**

| Initial Conditions | |
|---|---|
| Test Environment as specified in TS 36.508[7] subclause 4.1 | NC, TL/VL, TL/VH, TH/VL, TH/VH |
| Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2 | C: Low range, High range |
| Test CC Combination setting ($N_{RB_agg}$) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE. | Lowest $N_{RB_agg}$, Highest $N_{RB_agg}$ (Note 3) |

Test Parameters for CA Configurations

| CA Configuration / $N_{RB_agg}$ | | DL Allocation | | UL Allocation | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| PCC $N_{RB}$ | SCC $N_{RB}$ | CC MOD | PCC & SCC RB allocation | CC MOD | $N_{RB_alloc}$ | PCC & SCC RB allocations ($L_{CRB}$ @ $RB_{start}$) | | | |
| 50 | 25 | QPSK | 50+25 | QPSK | 25 | P_25@25 | S_0@0 | - | - |
| 50 | 50 | QPSK | 50+50 | QPSK | 25 | P_25@25 | S_0@0 | - | - |
| 50 | 100 | QPSK | 50+100 | QPSK | 150 | P_50@0 | S_100@0 | - | - |
| 75 | 50 | QPSK | 75+50 | QPSK | 75 | P_75@0 | S_0@0 | - | - |
| 75 | 75 | QPSK | 75+75 | QPSK | 75 | P_75@0 | S_0@0 | - | - |
| 75 | 75 | QPSK | 75+75 | QPSK | 129 | P_75@0 | S_54@0 | - | - |
| 75 | 75 | QPSK | 75+75 | QPSK | 150 | P_75@0 | S_75@0 | - | - |
| 100 | 25 | QPSK | 100+25 | QPSK | 50 | P_50@50 | S_0@0 | - | - |
| 100 | 25 | QPSK | 100+25 | QPSK | 125 | P_100@0 | S_25@0 | - | - |
| 100 | 50 | QPSK | 100+50 | QPSK | 75 | P_75@25 | S_0@0 | - | - |
| 100 | 50 | QPSK | 100+50 | QPSK | 150 | P_100@0 | S_50@0 | - | - |
| 100 | 75 | QPSK | 100+75 | QPSK | 175 | P_100@0 | S_75@0 | - | - |
| 100 | 100 | QPSK | 100+100 | QPSK | 50 | P_50@50 | S_0@0 | - | - |
| 100 | 100 | QPSK | 100+100 | QPSK | 75 | P_75@25 | S_0@0 | - | - |
| 100 | 100 | QPSK | 100+100 | QPSK | 130 | P_100@0 | S_30@0 | - | - |
| 100 | 100 | QPSK | 100+100 | QPSK | 200 | P_100@0 | S_100@0 | - | - |

Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1.
Note 2: Depending on CA configurations, only the appropriate Uplink RB allocation value according to table 7.3A.0-1 for UE supporting two uplink carriers is tested per Test CA configuration.
Note 3: If the UE supports multiple CC Combinations in the CA Configuration with the same $N_{RB_agg}$, only the combination with the highest NRB_PCC is tested.

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure group A.32 as appropriate if the UE supports 2 Rx antennas or Figure A.80 if the UE supports 4 Rx antennas in the band.

2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.

3. Downlink signals for PCC are initially set up according to Annex C.0, C.1, and C.3.1, and uplink signals according to Annex H.1 and H.3.0.

4. The UL and DL Reference Measurement channels are set according to Table 7.3A.1.4.1-1.

5. Propagation conditions are set according to Annex B.0.

6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.3A.1.4.3.

### 7.3A.1.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.

2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.3A.1.4.3

3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).

4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Tables 7.3A.1.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.

5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.3A.1.4.1-1 on both PCC and SCC. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.

6. Set the Downlink signal level for PCC and SCC to the appropriate REFSENS value defined in Table 7.3A.1.5-1. Send continuously uplink power control "up" commands in every uplink scheduling information to the UE to ensure the UE transmits $P_{UMAX}$ level for at least the duration of the Throughput measurement.

7. Measure the average throughput for each component carrier for a duration sufficient to achieve statistical significance according to Annex G.2A.

### 7.3A.1.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6. In test procedure step 2, for SCC configuration there are no additional message contents.

## 7.3A.1.5 Test requirement

For intra-band contiguous carrier aggregation the throughput of each component carrier shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3A.1.5-1 and table 7.3A.1.5-2.

**Table 7.3A.1.5-1: Reference sensitivity QPSK $P_{REFSENS}$ for intra-band**

| CA Configuration | 100RB+25RB | | 100RB+50RB | | 75RB+75RB | | 75RB+50RB | | 100RB+75RB | | 100RB+100RB | |

| | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| CA_42C | -92 | -98 | -92 | -95 | - | - | - | - | -92 | -93.2 | -92 | -92 |
| | -94.2[4] | -100.2[4] | -94.2[4] | -97.2[4] | | | | | -94.2[4] | -95.4[4] | -94.2[4] | -94.2[4] |

Note 1: The transmitter shall be set to $P_{UMAX}$ as defined in subclause 6.2.5 for one uplink carrier and in subclause 6.2.5A for two u carriers.
Note 2: The reference measurement channel is specified in A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as desc Annex A.5.1.1/A.5.2.1
Note 3: The signal power is specified per port
Note 4: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.

For the UE which supports inter-band carrier aggregation configurations the $\Delta R_{IB,c}$ in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C shall be applied for applicable bands.

In case the UE supports more than one of the inter-band carrier aggregation configurations and a E-UTRA operating band belongs to more than one inter-band carrier aggregation configurations then:

- When the E-UTRA operating band frequency range is $\leq$ 1GHz, the applicable additional tolerance shall be the average of the tolerances in Table 7.3.3-1A, truncated to one decimal place that would apply for that operating band among the supported CA configurations. In case there is a harmonic relation between low band UL and high band DL (i.e. bands listed in Table 7.3A.0-0a), then the maximum tolerance among the different supported carrier aggregation configurations involving such band shall be applied
- When the E-UTRA operating band frequency range is >1GHz, the applicable additional tolerance shall be the maximum tolerance in Table 7.3.3-1A that would apply for that operating band among the supported CA configurations

The reference receive sensitivity (REFSENS) requirement for intra-band specified in Table 7.3A.1.5-1 shall be met for each uplink CA configurations less than or equal to that specified in Table 7.3A.1.5-2.

NOTE: Table 7.3A.1.5-2 does not necessarily reflect the operational conditions of the network, where the number of uplink and downlink allocated resource blocks will be practically constrained by other factors.

**Table 7.3A.1.5-2: Intra-band CA uplink configuration for reference sensitivity**

| CA_42C | 100 | 25 | 100 | 50 | N/A | N/A | N/A | N/A | 100 | 75 | 100 | 100 | TDD |

Note 1: The carrier centre frequency of SCC in the UL operating band is configured closer to the DL operating band.
Note 2: The transmitted power over both PCC and SCC shall be set to $P_{UMAX}$ as defined in subclause 6.2.5 for one uplink carrier and in subclause 6.2.5A for two uplink carriers.
Note 3: The UL resource blocks in both PCC and SCC shall be confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2A-1).
Note 4: The UL resource blocks in PCC shall be located as close as possible to the downlink operating band, while the UL resource blocks in SCC shall be located as far as possible from the downlink operating band.
Note 5: In case a CA configuration consists of CC channel bandwidths which are unequal in bandwidth the PCC channel bandwidth shall be the larger one for reference sensitivity test.

## 7.3A.2 Reference sensitivity level for CA (intra-band contiguous DL CA without UL CA)

### 7.3A.2.1 Test purpose

Same as in clause 7.3A.1.1.

### 7.3A.2.2 Test applicability

This test case applies to all types of E-UTRA UE release 10 and forward that support intra-band contiguous DL CA. This test case applies only for CA Configurations that do not support UL CA.

### 7.3A.2.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.3A.0.

### 7.3A.2.4 Test description

#### 7.3A.2.4.1 Initial conditions

Same as in clause 7.3A.1.4.1 with the following exceptions:

- Instead of Table 7.3A.1.4.1-1→ use Table 7.3A.2.4.1-1.

**Table 7.3A.2.4.1-1: Test Configuration Table**

| 100 | 100 | QPSK | 100+100 | QPSK | 100 | P_100@0 | - | - | - |
| Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-1. | | | | | | | | | |
| Note 2: Depending on CA configurations, only the appropriate Uplink RB allocation value according to table 7.3.3-2 for UE supporting one uplink carrier is tested per Test CA configuration. | | | | | | | | | |
| Note 3: If the UE supports multiple CC Combinations in the CA Configuration with the same $N_{RB_agg}$ , only the combination with the highest NRB_PCC is tested. | | | | | | | | | |
| Note 4: For CA_70C all test frequency IDs shall be tested according to table 4.3.1.1.70A-1, in TS 36.508 [7]. | | | | | | | | | |

## 7.3A.2.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.

2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.3A.1.4.3

3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).

4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Tables 7.3A.2.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.

5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.3A.2.4.1-1 on PCC. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.

6. Set the Downlink signal level for PCC and SCC to the appropriate REFSENS value defined in Tables 7.3A.1.5-1 to 7.3A.1.5-7. Send continuously uplink power control "up" commands in every uplink scheduling information to the UE to ensure the UE transmits $P_{UMAX}$ level for at least the duration of the Throughput measurement.

7. Measure the average throughput for each component carrier for a duration sufficient to achieve statistical significance according to Annex G.2A.

### 7.3A.2.4.3 Message contents

Same as in clause 7.3A.1.4.3.

## 7.3A.2.5 Test requirement

Same as in clause 7.3A.1.5 with the following test requirement defined in Table 7.3A.2.5-1 additions.

**Table 7.3A.2.5-1: Reference sensitivity QPSK $P_{REFSENS}$ for intra-band contiguous DL CA without UL CA**

| CA Configuration | 25RB+6RB | | 25RB+15RB | | 25RB+25RB | | 50RB+6RB | | 50RB+15RB | | Duplex Mode |
|---|---|---|---|---|---|---|---|---|---|---|---|
| | 25RB | 6RB | 25RB | 15RB | 25RB | 25RB | 50RB | 6RB | 50RB | 15RB | |
| CA_27B | -97.3 | -102.5 | -97.3 | -99.5 | -97.3 | -97.3 | -94.3 | -102.5 | -94.3 | -99.5 | FDD |

Note 1: The transmitter shall be set to $P_{UMAX}$ as defined in clause 6.2.5
Note 2: The reference measurement channel is specified in A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1
Note 3: The signal power is specified per port

**Table 7.3A.2.5-2: Reference sensitivity QPSK $P_{REFSENS}$ for intra-band contiguous DL CA without UL CA (table 2)**

| CA Configuration | 50RB+50RB | | 25RB+75RB | | | | | | | | Duplex Mode |
|---|---|---|---|---|---|---|---|---|---|---|---|
| | 50RB | 50RB | 25RB | 75RB | | | | | | | |
| CA_23B | -96.3 | -96.3 | -99.3 | -94.5 | | | | | | | FDD |

Note 1: The transmitter shall be set to $P_{UMAX}$ as defined in clause 6.2.5
Note 2: The reference measurement channel is specified in A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1
Note 3: The signal power is specified per port

**Table 7.3A.2.5-3: Reference sensitivity QPSK $P_{REFSENS}$ for intra-band contiguous DL CA without UL CA (table 3)**

| Configuration / CC combination / $N_{RB_agg}$ / Duplex mode | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| CA configuration | 100RB+25RB | | 100RB+50RB | | 75RB+75RB | | 75RB+50RB | | 100RB+75RB | | 100RB+100RB | | Duplex Mode |

## 7.3A.3 Reference sensitivity level for CA (inter-band DL CA without UL CA)

Editor's note: Band 70 CA configurations are missing test point analysis

### 7.3A.3.1 Test purpose

Same as in clause 7.3A.1.1.

### 7.3A.3.2 Test applicability

This test case applies to all types of E-UTRA UE release 10 and forward that support inter-band DL CA.

This test case also applies to all types of E-UTRA UE release 12 and forward that support 2DL CA with FDD-TDD inter-band CA.

This test case also applies to all types of E-UTRA UE release 13 and forward that support DL LAA.

### 7.3A.3.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.3A.0.

### 7.3A.3.4 Test description

#### 7.3A.3.4.1 Initial conditions

Same as in clause 7.3A.1.4.1 with the following exceptions:

- Instead of Table 7.3A.1.4.1-1→ use Table 7.3A.3.4.1-1.
- Instead of clause 7.3A.1.4.3 use clause 7.3A.3.4.3.

**Table 7.3A.3.4.1-1: Test Configuration Table**

| Initial Conditions | | | | | | |
|---|---|---|---|---|---|---|
| Test Environment as specified in TS 36.508[7] subclause 4.1 | | | | | NC, TL/VL, TL/VH, TH/VL, TH/VH | |
| Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2. | | | | | A: Mid range for PCC and SCC, unless otherwise specified in the Tables 7.3A.3.4.1-2 to 7.3A.3.4.1-33 | |
| Test CC Combination setting ($N_{RB_agg}$) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE. | | | | | Highest $N_{RB_agg}$, unless otherwise specified in the Tables 7.3A.3.4.1-2 to 7.3A.3.4.1-33 | |
| Network signalling value | | | | | NS_01<br><br>Unless given by Table 7.3.3.-3 for the band with active uplink carrier | |

| 100 | 100 | QPSK | 100 | 100 | QPSK | 100 |

Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-2.

Note 2: Depending on CA configurations, only the appropriate Uplink RB allocation value according to table 7.3A.3.5-2 for UE supporting one uplink carrier is tested per Test CA configuration.

Note 3: The UL resource blocks shall be located as close as possible to the downlink PCC but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.4.2-1).

Note 4: The frequencies of PCC and SCC shall be switched and tested in each configuration, according to the UE declared capability for UL support (within CA operation) in the individual bands.

**Table 7.3A.3.4.1-1a: Void**

**Table 7.3A.3.4.1-2: Test frequencies and Test CC combinations for CA_1A-3A**

| CBW | | | Band 3 | | |
|---|---|---|---|---|---|
| | | | 5MHz | 15MHz | 20MHz |
| | | | High range | | |
| Band 1 as PCC (Note 1) | 20MHz | Low range | X[2] | X[2] | X[2] |
| | | Mid range | - | - | X[3] |
| Band 1 as SCC | 20MHz | Low range | - | - | X |

Note 1: For Band 1 as PCC, the exceptions described in Table 7.3A.0-0bA are tested.
Note 2: This is the case that the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz. The appropriate Uplink RB allocation value according to Table 7.3A.0-0bB should be applied.
Note 3: This is the case that the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is ≥ 60 MHz. The appropriate Uplink RB allocation value according to Table 7.3A.0-0bB should be applied.

**Table 7.3A.3.4.1-3: Test frequencies and Test CC combinations for CA_1A-11A**

## 7.3A.3.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.

2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.3A3.4.3

3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).

4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Tables 7.3A.3.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.

5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.3A.3.4.1-1 on PCC. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.

6. Set the Downlink signal level for PCC and SCC to the appropriate REFSENS value defined in Table 7.3A.3.5-1. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE to ensure the UE transmits $P_{UMAX}$ level for at least the duration of the Throughput measurement.

7. Measure the average throughput for each component carrier for a duration sufficient to achieve statistical significance according to Annex G.2A.

### 7.3A.3.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the following exceptions.

#### 7.3A.3.4.3.1 Message contents exceptions (network signalled value "NS_01")

Message contents according to TS 36.508 [7] subclause 4.6 can be used without exceptions.

#### 7.3A.3.4.3.2 Message contents exceptions (network signalled value "NS_06")

1. Information element additionalSpectrumEmission is set to NS_06. This can be set in the *SystemInformationblockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 7.3A.3.4.3.2-1: *SystemInformationBlockType2*: Additional spurious emissions test requirement for "NS_06"**

| Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1 | | | |
|---|---|---|---|
| **Information Element** | **Value/remark** | **Comment** | **Condition** |
| additionalSpectrumEmission | 6 (NS_06) | | |

## 7.3A.3.5 Test requirement

For inter-band carrier aggregation with uplink assigned to one E-UTRA band the throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables 7.3A.3.5-1 and Table 7.3A.3.5-2 (originated from single carrier Tables 7.3.5-1 and 7.3.5-2). The reference sensitivity is defined to be met with both downlink component carriers active and either of the uplink component carriers active.

**Table 7.3A.3.5-1: Reference sensitivity QPSK $P_{REFSENS}$ for inter-band**

| Channel bandwidth | | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| **CA Configuration** | **E-UTRA Band** | **1.4 MHz (dBm)** | **3 MHz (dBm)** | **5 MHz (dBm)** | **10 MHz (dBm)** | **15 MHz (dBm)** | **20 MHz (dBm)** | **Duplex Mode** |

Note 1: The transmitter shall be set to maximum output power level (Table 7.3A.3.5-2)

Note 2: The reference measurement channel is specified in A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD/FS3 as described in Annex A.5.1.1/A.5.2.1/A.5.3.1.

Note 3: The signal power is specified per port

Note 4: Reference sensitivity for the high band for which the 3rd harmonic of the low band is within transmission bandwidth, as specified Note 5 in Table 7.3A.0-0a.

Note 5: [5] indicates that the requirement is modified by -0.5 dB when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz.

Note 6: Reference sensitivity for the case that the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz

Note 7: Reference sensitivity for the high band for which the 2nd harmonic of the low band is within transmission bandwidth, as specified Note 9 and 10 in Table 7.3A.0-0a.

Note 8: Reference sensitivity for the high band for which the 2nd harmonic of the low band is within transmission bandwidth, as specified Note 11 in Table 7.3A.0-0a.

Note 9: These requirements apply when the uplink is active in Band 19 and the downlink channels in Band 28 are allocated at the middle of the restricted frequency range specified for this CA configuration (Table 5.2A-2). For each channel bandwidth in Band 28, the requirement applies regardless of channel bandwidth in Band 19.

Note 10: The B41 requirements are modified by -0.5dB when carrier frequency of the assigned E-UTRA channel bandwidth is within 2545-2690 MHz.

Note 11: These requirements apply when the uplink is active in Band 41.

Note 12: These requirements apply when the uplink is active in Band 3.

Note 13: Reference sensitivity for the high band for which the 5th harmonic of the low band is within transmission bandwidth, as specified Note 15 and 16 in Table 7.3A.0-0a.

Note 14: These requirements apply when the uplink is active in Band 1.

Note 15: These requirements apply when the uplink is active in Band 40.

Note 16: Reference sensitivity for the high band for which the 4th harmonic of the low band is within transmission bandwidth, as specified Note 12 and 13 in Table 7.3A.0-0a.

Note 17: The requirements do not apply when there is at least one individual RE within the uplink transmission bandwidth of the lower band for which the transmitter harmonic is within the downlink transmission bandwidth of the higher band and a range $\Delta F_{HD}$ from lower and higher frequency of the uplink transmission bandwidth multiplied by the harmonic order. Negative $\Delta F_{HD}$ reduces the REFSENS exclusion range while positive $\Delta F_{HD}$ extends the range. $\Delta F_{HD}$ = [30] MHz for the E-UTRA configuration which has 2nd harmonic issue. $\Delta F_{HD}$ = 15 MHz for the E-UTRA configuration which has 3rd harmonic issue. $\Delta F_{HD}$ = [10] MHz for the E-UTRA configuration which has 4th harmonic issue. $\Delta F_{HD}$ = [-20] MHz for the E-UTRA configuration which has 6th harmonic issue. $\Delta F_{HD}$ = [-30] MHz for the E-UTRA configuration which has 7th harmonic issue. $\Delta F_{HD}$ = [-40] MHz for the E-UTRA configuration which has for 8th harmonic issue. For band combinations including more than one licensed band with band 46,

the value $\Delta F_{HD}$ depends on which licensed band is used for uplink transmission.

Note 18: The value $\Delta F_{HD}$ in Note 17 shall be scaled as $\Delta F_{HD}$ *($N_{RB}$/100) according to the uplink configuration defined in Table 7.3A.3.5-2.

Note 19: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.

Note 20: These requirements apply when the uplink is active in Band 28.

Note 21: These requirements apply when the uplink is active in Band 7.

Note 22: These requirements apply when the uplink is active in Band 42.

Note 23: These requirements apply when the uplink is active in Band 8.

Note 24: These requirements apply when the lower edge frequency of the 5 MHz uplink channel in Band 71 is located at or below 668 MHz and the downlink channel in Band 2 is located with its upper edge at 1990 MHz. These requirements also apply when the lower edge frequency of the 10 MHz, 15 MHz, or 20 MHz uplink channel in Band 71 is located at or below 668 MHz and the downlink channel in Band 2 is located with its upper edge at 1990 MHz.

Note 25: These requirements apply when there is at least one individual RE within the downlink transmission bandwidth of the victim (lower) band for which the 3rd harmonic is within the uplink transmission bandwidth or the uplink adjacent channel's transmission bandwidth of an aggressor (higher) band.

For the UE which supports inter-band carrier aggregation configurations the $\Delta R_{IB,c}$ in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C shall be applied for applicable bands.

In case the UE supports more than one of the inter-band carrier aggregation configurations and a E-UTRA operating band belongs to more than one inter-band carrier aggregation configurations then:

- When the E-UTRA operating band frequency range is ≤ 1GHz, the applicable additional tolerance shall be the average of the tolerances in Table 7.3.3-1A, truncated to one decimal place that would apply for that operating band among the supported CA configurations. In case there is a harmonic relation between low band UL and high band DL (i.e. bands listed in Table 7.3A.0-0a), then the maximum tolerance among the different supported carrier aggregation configurations involving such band shall be applied

- When the E-UTRA operating band frequency range is >1GHz, the applicable additional tolerance shall be the maximum tolerance in Table 7.3.3-1A that would apply for that operating band among the supported CA configurations

The reference receive sensitivity (REFSENS) requirement for inter-band specified in Table 7.3A.3.5-1 shall be met for an uplink CA configurations than or equal to that specified in Table 7.3A.3.5-2.

NOTE: Table 7.3A.3.5-2 does not necessarily reflect the operational conditions of the network, where the number of uplink and downlink allocated resource blocks will be practically constrained by other factors.

**Table 7.3A.3.5-2: Inter-band CA uplink configuration for reference sensitivity, $L_{CRB}$ @ $RB_{start}$ format**

| Channel bandwidth | | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| **CA Configuration** | **E-UTRA Band** | **1.4 MHz** | **3 MHz** | **5 MHz** | **10 MHz** | **15 MHz** | **20 MHz** | **Duplex Mode** |

Note 1: Void
Note 2: Configuration for the low band for which the 3rd harmonic is within transmission bandwidth of the high band, as specified in Table 7.3A.0-0a Note 5.
Note 3: Void
Note 4: Void
Note 5: UL allocation when the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz.
Note 6: UL allocation when the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is ≥ 60 MHz.
Note 7: Void
Note 8: Void
Note 9: Configuration for the low band for which the 2nd harmonic is within transmission bandwidth of the high band, as specified in Table 7.3A.0-0a Note 9 or Note 11.
Note 10: This configuration is used for testing the 3rd harmonic or 4th harmonic interfered high band only. It is for low band with multiple choices of RB number corresponding to different high band bandwidth as indicated in Table 7.3A.0-0aa: Uplink configuration for the low band (exceptions). Only one bandwidth option was used for simplicity.
Note 11: Configuration for the low band for which the 4th harmonic is within transmission bandwidth of the high band, as specified in Table 7.3A.0-0a Note 12 and 13.

## 7.3A.4 Reference sensitivity level for CA (intra-band non-contiguous DL CA without UL CA)

### 7.3A.4.1 Test purpose

Same as in clause 7.3A.1.1.

### 7.3A.4.2 Test applicability

This test case applies to all types of E-UTRA UE release 11 and forward that support intra-band non-contiguous DL CA but no UL CA.

### 7.3A.4.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.3A.0.

### 7.3A.4.4 Test description

#### 7.3A.4.4.1 Initial conditions

Same as in clause 7.3A.1.4.1 with the following exceptions:

- Instead of Table 7.3A.1.4.1-1→ use Table 7.3A.4.4.1-1.
- Instead of clause 7.3A.1.4.3 use clause 7.3A.3.4.3.

Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-3.
Note 2: The carrier centre frequency of PCC in the UL operating band is configured closer to the DL operating band.
Note 3: Applicable if only Bandwidth Combination Set 0 is supported by the UE for the CA Configuration.
Note 4: Not applicable if only Bandwidth Combination Set 0 is supported by the UE for the CA Configuration.
Note 5: Not applicable if operation with 4 antenna ports is supported in the band with carrier aggregation configured.
Note 6: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.
Note 7: Applicable if only Bandwidth Combination Set 1 is supported by the UE for the CA Configuration.
Note 8: Void
Note 9: Void
Note 10: Applicable test configuratons are specified in Table 7.3A.4.4.1-1a.
Note 11: Applicable test configurations are specified in Table 7.3A.4.4.1-1b.

### 7.3A.4.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.3A4.4.3
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Tables 7.3A.4.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.3A.4.4.1-1 on PCC. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCC to the appropriate REFSENS value defined in Table 7.3A.4.5-1. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE to ensure the UE transmits $P_{UMAX}$ level for at least the duration of the Throughput measurement.
7. Measure the average throughput for each component carrier for a duration sufficient to achieve statistical significance according to Annex G.2A.

### 7.3A.4.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6 with the following exceptions.

#### 7.3A.4.4.3.1 Message contents exceptions (network signalled value "NS_01")

Message contents according to TS 36.508 [7] subclause 4.6 can be used without exceptions.

#### 7.3A.4.4.3.2 Message contents exceptions (network signalled value "NS_03")

1. Information element additionalSpectrumEmission is set to NS_03. This can be set in the *SystemInformationblockType2* as part of the cell broadcast message. This exception indicates that the UE shall meet the additional spurious emission requirement for a specific deployment scenario.

**Table 7.3A.4.4.3.2-1: *SystemInformationBlockType2*: Additional spurious emissions test requirement for "NS_03"**

| Derivation Path: TS 36.508 [7] clause 4.4.3.3, Table 4.4.3.3-1 | | | |
|---|---|---|---|
| **Information Element** | **Value/remark** | **Comment** | **Condition** |
| additionalSpectrumEmission | 3 (NS_03) | | |

## 7.3A.4.5 Test requirement

For intra-band non-contiguous carrier aggregation with one uplink carrier on the PCC, the throughput of each downlink component carrier shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.3.2 with parameters specified in Table 7.3A.4.5-1.

**Table 7.3A.4.5-1: Reference sensitivity QPSK $P_{REFSENS}$ for intra-band Non-contiguous**

| ID/ CA configuration / $P_{REFSENS}$ | | | |

| Note 1: The transmitter shall be set to maximum output power level.<br>Note 2: The reference measurement channel is specified in A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.<br>Note 3: The signal power is specified per port.<br>Note 4: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured. | | | |

For the UE which supports inter-band carrier aggregation configurations the $\Delta R_{IB,c}$ in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C shall be applied for applicable bands.

In case the UE supports more than one of the inter-band carrier aggregation configurations and an E-UTRA operating band belongs to more than one inter-band carrier aggregation configurations then:

- When the E-UTRA operating band frequency range is ≤ 1GHz, the applicable additional tolerance shall be the average of the tolerances in Table 7.3.3-1A, truncated to one decimal place that would apply for that operating band among the supported CA configurations. In case there is a harmonic relation between low band UL and high band DL (i.e. bands listed in Table 7.3A.0-0a), then the maximum tolerance among the different supported carrier aggregation configurations involving such band shall be applied

- When the E-UTRA operating band frequency range is >1GHz, the applicable additional tolerance shall be the maximum tolerance in Table 7.3.3-1A that would apply for that operating band among the supported CA configurations

The reference receive sensitivity (REFSENS) requirement for intra-band non-contiguous specified in Table 7.3A.4.5-1 shall be met for an uplink CA configurations equal to that specified in Table 7.3A.4.4.1-1.

NOTE: Table 7.3A.4.4.1-1 does not necessarily reflect the operational conditions of the network, where the number of uplink and downlink allocated resource blocks will be practically constrained by other factors.

**Table 7.3A.4.5-2: Void**

## 7.3A.5 Reference sensitivity level for 3DL CA

Editor's note: This test case is incomplete. The following aspects are either missing or not yet determined:

- TR 36.905 test point analysis for CA_28A-40C is missing, meaning it is not yet determined if testing of fallback configuration CA_28A_40A can be skipped.

- Band 70 CA configurations are missing test point analysis.

### 7.3A.5.1 Test purpose

Same as in clause 7.3A.1.1.

### 7.3A.5.2 Test applicability

This test case applies to all types of E-UTRA UE and forward that support 3DL with CA configurations in Table 7.1-2a.

This test case also applies to all types of E-UTRA UE release 13 and forward that support 3DL CA involving Band 46.

### 7.3A.5.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.3A.0.

### 7.3A.5.4 Test description

#### 7.3A.5.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1 through table 5.4.2A.1-2a. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.3A.5.4.1-1 through table 7.3A.5.4.1-2 as appropriate. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2 and A.3. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 7.3A.5.4.1-1: Test Configuration Table**

| Initial Conditions | |
|---|---|
| Test Environment as specified in TS 36.508[7] subclause 4.1 | NC, TL/VL, TL/VH, TH/VL, TH/VH |
| Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes. | For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns |
| Test CC Combination setting ($N_{RB_agg}$) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE. | Refer to “PCC $N_{RB}$” and “SCCs $N_{RB}$” columns |
| Network signalling value | NS_01 by default, exceptions listed in Table 7.3.3-3, dependent on PCC Band |

Test Parameters for CA Configurations

| | QPSK | QPSK | | 50 | N/A | QPSK | | 75 | N/A | QPSK | | 50 |

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: **Intra-band contiguous & Intra-band contiguous + Inter-band:** Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.
Note 3: **Inter-band:** Use CA Configuration – specific test points if present in the table, Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use the Default Test Settings test points.
Note 4: **Inter-band & Intra-band contiguous + Inter-band:** If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 5: **Intra-band contiguous:** X corresponds to the band of the CA Configuration. E.g. for CA_41D, X=41
Note 6: **Inter-band:** X,Y,Z correspond to the different bands in the CA Configuration. E.g. for CA_1A-3A-19A,X=1,Y=3,Z=19
Note 7: **Intra-band contiguous + Inter-band:** X,Y correspond to the different bands in the CA Configuration, e.g. for CA_1C-3A, X=1,Y=3, for CA_1A_42C, X=1,Y=42.
Note 8: REFSENS refers to the PCC bands and PCC $N_{RB}$ 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.

Note 9: **Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same $N_{RB_agg}$ , choose for testing the Combination with maximum $N_{RB_PCC}$ and then select maximum $N_{RB_SCC1}$ for the chosen $N_{RB_PCC}$

Note 10: Band 12: $f_{UL}$ = 706.7 MHz ($N_{UL}$ = 23087), $f_{DL}$ = 736.7 MHz ($N_{DL}$ = 5087)
Band 4: $f_{DL}$ = 2120.1 MHz ($N_{DL}$ = 2051)

Note 11: Band 12: $f_{UL}$ = 710.9 MHz ($N_{UL}$ = 23129), $f_{DL}$ = 740.9 MHz ($N_{DL}$ = 5129)
Band 4: $f_{DL}$ = 2132.7 MHz ($N_{DL}$ = 2177)

Note 12: N/A

Note 13: Test points that fulfil criteria of Note 4 in Table 7.3A.5.5-3

Note 14: Only Band 1 and Band 42 need to be tested and Band 3 does not need to be tested

Note 15: Only Band 1 and Band 3 need to be tested and Band 42 does not need to be tested

Note 16: Band 3: fUL = 1720MHz (NUL = 19300), fDL = 1815MHz (NDL = 1300)
Band 42: fUL/DL = 3440MHz (NUL/DL = 41990)

Note 17: Band 3: fUL = 1775MHz (NUL = 19850), fDL = 1870MHz (NDL = 1850)
Band 42: fUL/DL = 3520MHz (NDL = 42790)

Note 18: N/A

Note 19: Only Band 1 and Band 19 need to be tested and Band 28 does not need to be tested

Note 20: **Intra-band contiguous + Inter-band:** If in the CA Configuration UE supports multiple CC Combinations with the same $N_{RB_agg}$ , choose the Combination with $N_{RB_PCC} = N_{RB_SCC1}$ for testing. If no such combination is supported, choose Combination with maximum $N_{RB_PCC}$ for testing.

Note 21: Band 42: $f_{UL/DL}$ for SCC1 = 3430.2MHz ($N_{UL/DL}$ = 41892), $f_{UL/DL}$ for SCC2 = 3450MHz ($N_{UL/DL}$ = 42090)

Note 22: Band 42: $f_{UL/DL}$ for SCC1 = 3500.2MHz ($N_{UL/DL}$ = 42592), $f_{UL/DL}$ for SCC2 = 3520MHz ($N_{UL/DL}$ = 42790).

Note 23: Band 28: $f_{UL}$ = 719.3MHz ($N_{UL}$ = 27373), $f_{DL}$ = 774.3MHz ($N_{DL}$ = 9373).

Note 24: Band 42: $f_{UL/DL}$ for SCC1 = 3515.8MHz ($N_{UL}$ = 42748), $f_{UL/DL}$ for SCC2 = 3527.5MHz ($N_{DL}$ = 42865).

Note 25: Band 8: $f_{UL}$ = 897.5MHz ($N_{UL}$ = 21625), $f_{DL}$ = 942.5MHz ($N_{DL}$ = 3625), Band 42: $f_{UL/DL}$ = 3590MHz ($N_{UL/DL}$ = 43490).

Note 26: Band 28: $f_{UL}$ = 722.5 MHz ($N_{UL}$ = 27405), $f_{DL}$ = 777.5 MHz ($N_{DL}$ = 9405), Band 1: $f_{DL}$ = 2167.5 MHz ($N_{DL}$ = 575).

Note 27: Band 28: $f_{UL}$ = 743 MHz ($N_{UL}$ = 27610), $f_{DL}$ = 798 MHz ($N_{DL}$ = 9610). Band 11: $f_{DL}$ = 1480.9 MHz ($N_{DL}$ = 4800).

Note 28: Band 12: $f_{UL}$ = 704MHz ($N_{UL}$ = 23060), $f_{DL}$ = 734MHz ($N_{DL}$ = 5060)
Band 66: $f_{UL}$ = 1712.5MHz ($N_{UL}$ = 131997), $f_{DL}$ = 2112.5MHz ($N_{DL}$ = 66461)

Note 29: Band 12: $f_{UL}$ = 707.5MHz ($N_{UL}$ = 23095), $f_{DL}$ = 737.5MHz ($N_{DL}$ = 5095)
Band 66: $f_{UL}$ = 1720MHz ($N_{UL}$ = 132072), $f_{DL}$ = 2120MHz ($N_{DL}$ = 66536)

Note 30: Band 12: $f_{UL}$ = 711MHz ($N_{UL}$ = 23130), $f_{DL}$ = 741MHz ($N_{DL}$ = 5130)
Band 66: $f_{UL}$ = 1717.5MHz ($N_{UL}$ = 132047), $f_{DL}$ = 2117.5MHz ($N_{DL}$ = 66511).

Note 31: Band 3: $f_{UL}$ = 1757.4MHz ($N_{UL}$ = 19674), $f_{DL}$ = 1852.4MHz ($N_{DL}$ = 1674),
Band 11: $f_{DL}$ = 1480.9MHz ($N_{DL}$ = 4800).

Note 32: Band 3: $f_{DL}$ = 1852.4MHz ($N_{DL}$ = 1674),
Band 11: $f_{UL}$ = 1432.9MHz ($N_{UL}$ = 22800), $f_{DL}$ = 1480.9MHz ($N_{DL}$ = 4800).

Note 33: Band 2: $f_{UL}$ = 1868.3MHz ($N_{UL}$ = 18783), $f_{DL}$ = 1948.3MHz ($N_{DL}$ = 783).
Band 4: $f_{UL}$ = 1735MHz ($N_{UL}$ = 20200), $f_{DL}$ = 2135MHz ($N_{DL}$ = 2200).

Note 34: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.

Note 35: Band 3: $f_{UL}$ = 1737MHz ($N_{UL}$ = 19470), $f_{DL}$ = 1832MHz ($N_{DL}$ = 1470).
Band 7: $f_{UL}$ = 2543MHz ($N_{UL}$ = 23430), $f_{DL}$ = 2663MHz ($N_{DL}$ = 3180).
Band 20: $f_{UL}$ = 847MHz ($N_{UL}$ = 24300), $f_{DL}$ = 806MHz ($N_{DL}$ = 6300).

Note 36: Band 3: $f_{UL}$ = 1775MHz ($N_{UL}$ = 19850), $f_{DL}$ = 1870MHz ($N_{DL}$ = 1850).
Band 7: $f_{UL}$ = 2510MHz ($N_{UL}$ = 23100), $f_{DL}$ = 2630MHz ($N_{DL}$ = 2850).
Band 20: $f_{UL}$ = 855MHz ($N_{UL}$ = 24380), $f_{DL}$ = 814MHz ($N_{DL}$ = 6380).

Note 37: Band 7: $f_{UL}$ = 2512MHz ($N_{UL}$ = 23120), $f_{DL}$ = 2632MHz ($N_{DL}$ = 2512).
Band 20: $f_{UL}$ = 851MHz ($N_{UL}$ = 24340), $f_{DL}$ = 851MHz ($N_{DL}$ = 6340).
Note 38: Test frequency for each CA configuration shall follow Table 7.3A.0-0f. If test configurations of each ID in a CA configuration are same, test frequency shall follow the order of Table 7.3A.0-0f.
Note 39: Test frequency for each CA configuration shall follow Table 7.3A.0-0g. If test configurations of each ID in a CA configuration are same, test frequency shall follow the order of Table 7.3A.0-0g.
Note 40: Band 71:$f_{UL}$ = 679.3 MHz ($N_{UL}$ = 133285), $f_{DL}$ = 633.3 MHz ($N_{DL}$ = 68749)

**Table 7.3A.5.4.1-2: Test Configuration Table $W_{gap}$**

| Initial Conditions | |
|---|---|
| Test Environment as specified in TS 36.508[7] subclause 4.1 | NC, TL/VL, TL/VH, TH/VL, TH/VH |
| Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes. | For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns |
| Test CC Combination setting ($N_{RB_agg}$) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE. | Refer to “PCC $N_{RB}$" and “SCCs $N_{RB}$ ” columns |
| Network signalling value | NS_01 by default, exceptions listed in Table 7.3.3-3, dependent on PCC Band |

Test Parameters for CA Configurations

| ID | PCC | | | | $W_{gap}$ [MHz] | SCC1 | | | | $W_{gap}$ [MHz] | SCC2 | | | |

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: **Intra-band non-contiguous + Inter-band:** Use CA Configuration – specific test points if present in the table. Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use Default Test Settings test points.
Note 3: **Intra-band non-contiguous + Intra-band contiguous:** Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.
Note 4: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 5: **Intra-band non-contiguous + Inter-band:** X and Y correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-5A,X=2,Y=5 or Y=5, X =2
Note 6: **Intra-band non-contiguous + Intra-band contiguous:** X corresponds to the band of the CA Configuration. E.g. for CA_41C-41A,X=41.
Note 7: REFSENS refers to the PCC bands and PCC $N_{RB}$ 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 8: **Intra-band non-contiguous + Inter-band:** Configuration for the low band for which the 3rd harmonic is within transmission bandwidth of the high band, as specified in Table 7.3A.0-0a Note 5.
Note 9: **Intra-band non-contiguous + Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same $N_{RB_agg}$ , choose the Combination with $N_{RB_CC1} = N_{RB_CC2}$ for testing. If no such combination is supported, choose Combination with maximum $N_{RB_CC1}$ for testing.
Note 10: Not applicable if operation with 4 antenna ports is supported in the band with carrier aggregation configured.
Note 11: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.

| Note 1: Associated CA_7A-7A BCS for each BCS of CA_7A-7A-XA or CA_XA-7A-7A is specified in Table 5.4.2A.1-1 to Table 5.4.2A.1-3. | | | | | | | |

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.55 if the UE supports 2 Rx antennas or Figure A.80 if the UE supports 4 Rx antennas in at least one band within the CA configuration.

2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.

3. Downlink signals for PCC are initially set up according to Annex C.0, C.1, and C.3.1, and uplink signals according to Annex H.1 and H.3.0.

4. The UL and DL Reference Measurement channels are set according to Table 7.3A.5.4.1-1 through Table7.3A.5.4.1-2 as appropriate.

5. Propagation conditions are set according to Annex B.0.

6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.3A.5.4.3.

### 7.3A.5.4.2 Test procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.

2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.3A.5.4.3

3. SS activates SCCs by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).

4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.3A.5.4.1-1 through Table7.3A.5.4.1-2 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.

5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.3A.5.4.1-1 through Table7.3A.5.4.1-2 as appropriate on PCC and SCCs. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.

6. Set the Downlink signal level for PCC and SCCs to the appropriate REFSENS value defined in Table 7.3A.5.5-1 through Table7.3A.5.5-7. Send continuously uplink power control "up" commands in every uplink scheduling information to the UE to ensure the UE transmits $P_{UMAX}$ level for at least the duration of the Throughput measurement.

7. Measure the average throughput for each component carrier for duration sufficient to achieve statistical significance according to Annex G.2A.

### 7.3A.5.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6. In test procedure step 2, for SCCs configuration there are no additional message contents.

## 7.3A.5.5 Test requirement

For intra-band contiguous carrier aggregation the throughput of each component carrier shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3A.5.5-1. The reference sensitivity is defined to be met with all downlink component carriers active and one of the uplink carriers active.

**Table 7.3A.5.5-1: Reference sensitivity QPSK $P_{REFSENS}$ for Intra-band contiguous**

| | | Channel bandwidth | | | | | | |
|---|---|---|---|---|---|---|---|---|
| **CA Configuration** | **E-UTRA Band** | **1.4 MHz (dBm)** | **3 MHz (dBm)** | **5 MHz (dBm)** | **10 MHz (dBm)** | **15 MHz (dBm)** | **20 MHz (dBm)** | **Duplex Mode** |
| CA_40D | 40 | - | - | - | -96.3 | -94.5 | -93.3 | TDD |
| | | - | - | - | -99.0[4] | -97.2[4] | -96.0[4] | |
| CA_41D | 41 | - | - | - | -94.3 | -92.5 | -91.3 | TDD |
| | | - | - | - | -97.0[4] | -95.2[4] | -94.0[4] | |
| Note 1: The transmitter shall be set to maximum output power level (Table 7.3A.5.5-2) | | | | | | | | |
| Note 2: The reference measurement channel is specified in A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 | | | | | | | | |
| Note 3: The signal power is specified per port | | | | | | | | |
| Note 4: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured. | | | | | | | | |

**Table 7.3A.5.5-2: Void**

For inter-band carrier aggregation with one component carrier per operating band and the uplink assigned to one E-UTRA band the throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as

specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3A.5.5-3 (originated from single carrier Tables 7.3.5-1). The reference sensitivity is defined to be met with all downlink component carriers active and one of the uplink carriers active.

**Table 7.3A.5.5-3: Reference sensitivity QPSK $P_{REFSENS}$ for inter-band**

| Channel bandwidth | | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| **CA Configuration** | **E-UTRA Band** | **1.4 MHz (dBm)** | **3 MHz (dBm)** | **5 MHz (dBm)** | **10 MHz (dBm)** | **15 MHz (dBm)** | **20 MHz (dBm)** | **Duplex Mode** |

Note 1: The transmitter shall be set to maximum output power level (Table 7.3A.5.5-4)
Note 2: The reference measurement channel is specified in A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1
Note 3: The signal power is specified per port
Note 4: Reference sensitivity for the case that the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz.
Note 5: Reference sensitivity for the case that the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is ≥ 60 MHz.
Note 6: [6] indicates that the requirement is modified by -0.5 dB when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz.
Note 7: These requirements apply when the uplink is active in Band 18 and the downlink channels in Band 28 are confined within the restricted frequency range specified for this CA configuration (Table 5.2A-2).
Note 8: Reference sensitivity for the high band for which the 3rd harmonic of the low band is within transmission bandwidth, as specified Note 5 and 6 in Table 7.3A.0-0a.
Note 9: Reference sensitivity for the high band for which the 2nd harmonic of the low band is within transmission

bandwidth, as specified Note 9 and 10 in Table 7.3A.0-0a.
Note 10: Reference sensitivity for the high band for which the 2nd harmonic of the low band is within transmission bandwidth, as specified Note 11 in Table 7.3A.0-0a.
Note 11: These requirements apply when the uplink is active in Band 19 and the downlink channels in Band 28 are allocated at the middle of the restricted frequency range specified for this CA configuration (Table 5.2A-2). For each channel bandwidth in Band 28, the requirement applies regardless of channel bandwidth in Band 19.
NOTE 12: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz. For each channel bandwidth in Band 3 and Band 41, the requirement applies regardless of channel bandwidth in Band 1.
NOTE 13: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is ≥ 60 MHz. For each channel bandwidth in Band 3 and Band 41, the requirement applies regardless of channel bandwidth in Band 1.
NOTE 14: The B41 requirements also apply to the supported CA_1A-41A.
NOTE 15: These requirements apply when the uplink is active in Band 1 or Band 8.
NOTE 16: These requirements apply when the uplink is active in Band 3 or Band 8.
NOTE 17: The B41 requirements are modified by -0.5dB when carrier frequency of the assigned E-UTRA channel bandwidth is within 2545-2690MHz.
NOTE 18: These requirements apply when the uplink is active in Band 41.
NOTE 19: These requirements apply when the uplink is active in Band 3.
NOTE 20: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.
NOTE 21: These requirements apply when the uplink is active in a lower-frequency band and is within a specified frequency range such that transmitter harmonics fall within the downlink transmission bandwidth assigned in a higher band.
NOTE 22: These requirements apply when the uplink is active in Band 42.
NOTE 23: Only applicable for UE supporting inter-band carrier aggregation with uplink in one E-UTRA band and without simultaneous Rx/Tx.
NOTE 24: These requirements apply when UL CA is configured and the uplink is active in Band 2 and Band 4.
NOTE 25: These requirements apply when the uplink is active in Band 40.
NOTE 26: These requirements apply when the uplink is active in Band 1.
NOTE 27: These requirements apply when UL CA is configured and the uplink is active in Band X and Band Y in CA_XA-YA-ZA.
NOTE 28: These requirements apply when UL CA is configured and the uplink is active in Band Y and Band Z in CA_XA-YA-ZA.
NOTE 29: These requirements apply when UL CA is configured and the uplink is active in Band Z and Band X in CA_XA-YA-ZA.
NOTE 30: These requirements apply when the lower edge frequency of the 5 MHz uplink channel in Band 71 is located at or below 668 MHz and the downlink channel in Band 2 is located with its upper edge at 1990 MHz. These requirements also apply when the lower edge frequency of the 10 MHz, 15 MHz, or 20 MHz uplink channel in Band 71 is located at or below 668 MHz and the downlink channel in Band 2 is located with its upper edge at 1990 MHz.
NOTE 31: These requirements apply when there is at least one individual RE within the downlink transmission bandwidth of the victim (lower) band for which the 3rd harmonic is within the uplink transmission bandwidth or the uplink adjacent channel's transmission bandwidth of an aggressor (higher) band.

For the UE which supports inter-band carrier aggregation configurations the $\Delta R_{IB,c}$ in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C shall be applied for applicable bands.

Unless otherwise specified, in case the UE supports more than one of the above 3DL inter-band carrier aggregation configurations and an E-UTRA operating band belongs to more than one 3DL inter-band carrier aggregation configurations then:

- When the E-UTRA operating band frequency range is ≤ 1GHz and the tolerances are the same, the value applies to the band. If the tolerances are different, the applicable additional 3DL tolerance is FFS. In case there is a harmonic relation between low band UL and high band DL, then the maximum tolerance among the different supported 3DL carrier aggregation configurations involving such band shall be applied

- When the E-UTRA operating band frequency range is >1GHz, the applicable additional 3DL tolerance shall be the maximum tolerance above that applies for that operating band among the supported 3DL CA configurations

The above additional tolerances applicable for the E-UTRA operating bands that belong to the supported highest order inter-band carrier aggregation configuration, also applies to the same E-UTRA operating bands that belong to a supported lower order CA configuration.

The reference receive sensitivity (REFSENS) requirement for inter-band specified in Table 7.3A.5.5-3 shall be met for an uplink CA configurations than or equal to that specified in Table 7.3.5-2.

NOTE: Table 7.3A.5.5-4 does not necessarily reflect the operational conditions of the network, where the number of uplink and downlink allocated resource blocks will be practically constrained by other factors.

**Table 7.3A.5.5-4: Void**

For combinations of intra-band contiguous and inter-band carrier aggregation with three downlink carriers and one uplink carrier assigned to one E-UTRA band the throughput of each component carrier shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3A.5.5-5. The reference sensitivity is defined to be met with all downlink component carriers active and one of the uplink carriers active.

**Table 7.3A.5.5-5: Reference sensitivity QPSK $P_{REFSENS}$ for intra-band contiguous + inter-band**

| Channel bandwidth | | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| **CA Configuration** | **E-UTRA Band** | **1.4 MHz (dBm)** | **3 MHz (dBm)** | **5 MHz (dBm)** | **10 MHz (dBm)** | **15 MHz (dBm)** | **20 MHz (dBm)** | **Duplex Mode** |

Note 1: The transmitter shall be set to maximum output power level (Table 7.3A.5.5-4)
Note 2: The reference measurement channel is specified in A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1
Note 3: The signal power is specified per port
Note 4: Reference sensitivity for the high band for which the 2nd harmonic of the low band is within transmission bandwidth, as specified Note 9 and 10 in Table 7.3A.0-0a.
Note 5: Reference sensitivity for the high band for which the 2nd harmonic of the low band is within transmission bandwidth, as specified Note 11 in Table 7.3A.0-0a.
Note 6: [6]indicates that the requirement is modified by -0.5 dB when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz.
Note 7: Reference sensitivity for the high band for which the 5th harmonic of the low band is within transmission bandwidth, as specified Note 15 and 16 in Table 7.3A.0-0a.
Note 8: Reference sensitivity for the high band for which the 4th harmonic of the low band is within transmission bandwidth, as specified Note 12 and 13 in Table 7.3A.0-0a.
Note 9: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz. For each channel bandwidth in Band 3, the requirement applies regardless of channel bandwidth in Band 1.
Note 10: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is ≥ 60 MHz. For each channel bandwidth in Band 3, the requirement applies regardless of channel bandwidth in Band 1.
Note 11: The B41 requirements are modified by -0.5dB when carrier frequency of the assigned E-UTRA channel bandwidth is within 2545-2690 MHz.
Note 12: These requirements apply when the uplink is active in Band 3.
Note 13: These requirements apply when the uplink is active in Band 40.
Note 14: These requirements apply when the uplink is active in Band 41.
Note 15: These requirements apply when the uplink is active in Band 28.
Note 16: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.
NOTE 17: These requirements apply when UL CA is configured and the uplink is active in Band X and Band Y in CA_XA-

| | |
|---|---|
| | YC. |
| Note 18: | Reference sensitivity for the high band for which the 3rd harmonic of the low band is within transmission bandwidth, as specified Note 5 and 6 in Table 7.3A.0-0a. |

For combinations of intra-band non-contiguous and inter-band carrier aggregation with three downlink carriers and one uplink carrier assigned to one E-UTRA band the throughput of each component carrier shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3A.5.5-6. The reference sensitivity is defined to be met with all downlink component carriers active and one of the uplink carriers active.

**Table 7.3A.5.5-6: Reference sensitivity QPSK $P_{REFSENS}$ for intra-band non-contiguous + inter-band**

Note 1: Requirements with additional relaxation ($\Delta R_{IBNC}$) as per Table 7.3A.0-3.
Note 2: "Testpoint ID" refers to IDs in Table 7.3A.5.4.1-4.
Note 3: The reference measurement channel is specified in A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.
Note 4: The signal power is specified per port.
Note 5: $P_{REFSENS}$ refers to the PCC band's single carrier reference sensitivity according to table 7.3.5-1.
Note 6: Void
Note 7: Reference sensitivity for the high band for which the 3rd harmonic of the low band is within transmission bandwidth, as specified Note 5 in Table 7.3A.0-0a.
Note 8: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.

For combinations of intra-band non-contiguous and intra-band contiguous carrier aggregation with three downlink carriers and one uplink carrier assigned to one E-UTRA band the throughput of each component carrier shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3A.5.5-7. The reference sensitivity is defined to be met with all downlink component carriers active and one of the uplink carriers active.

Note 1: Requirements with additional relaxation ($\Delta R_{IBNC}$) as per Table 7.3A.0-3.
Note 2: "Testpoint ID" refers to IDs in Table 7.3A.5.4.1-5.
Note 3: The reference measurement channel is specified in A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.
Note 4: The signal power is specified per port.
Note 5: $P_{REFSENS}$ refers to the PCC band's single carrier reference sensitivity according to table 7.3.5-1.
Note 6: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.

## 7.3A.6 Reference sensitivity level for CA (inter-band DL CA and UL CA)

### 7.3A.6.1 Test purpose

Same as in clause 7.3A.1.1.

### 7.3A.6.2 Test applicability

This test case applies to all types of E-UTRA UE release 11 and forward that support inter-band DL CA and UL CA.

### 7.3A.6.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.3A.0.

### 7.3A.6.4 Test description

#### 7.3A.6.4.1 Initial conditions

Same as in clause 7.3A.1.4.1 with the following exceptions:

- Instead of Table 7.3A.1.4.1-1→ use Table 7.3A.6.4.1-1.
- Instead of clause 7.3A.1.4.3 use clause 7.3A.6.4.3.

**Table 7.3A.6.4.1-1: Test Configuration Table**

| Initial Conditions | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Test Environment as specified in TS 36.508[7] subclause 4.1 | | | | | NC, TL/VL, TL/VH, TH/VL, TH/VH | | | | | | | |
| Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes. | | | | | For test frequencies refer to “Range” columns. | | | | | | | |
| Test CC Combination setting ($N_{RB_agg}$) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE. | | | | | Refer to “PCC $N_{RB}$”and “SCC $N_{RB}$ ” columns | | | | | | | |
| Network signalling value | | | | | NS_01<br>Unless given by Table 7.3.3-3 for the band with active uplink carrier | | | | | | | |
| **Test Parameters for CA Configurations** | | | | | | | | | | | | |

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: Use CA Configuration – specific test points if present in the table, Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use the Default Test Settings test points.
Note 3: X,Y correspond to the different bands in the CA Configuration. E.g. for CA_1A-3A,X=1,Y=3.
Note 4: REFSENS refers to the PCC bands and PCC $N_{RB}$ 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 5: Test frequency for each CA configuration shall follow Table 7.3A.0-0f. If test configurations of each ID in a CA configuration are same, test frequency shall follow the order of Table 7.3A.0-0f.
Note 6: Not applicable if the UE only supports Bandwidth Combination Set 1.

### 7.3A.6.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.

2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.3A.1.4.3

3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).

4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Tables 7.3A.6.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.

5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.3A.6.4.1-1 on both PCC and SCC. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.

6. Set the Downlink signal level for PCC and SCC to the appropriate REFSENS value defined in Table 7.3A.6.5-1. Send continuously uplink power control "up" commands in every uplink scheduling information to the UE to ensure the UE transmits $P_{UMAX}$ level for at least the duration of the Throughput measurement.

7. Measure the average throughput for each component carrier for duration sufficient to achieve statistical significance according to Annex G.2A.

### 7.3A.6.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6. In test procedure step 2, for SCC configuration there are no additional message contents.

## 7.3A.6.5 Test requirement

For inter-band carrier aggregation with uplink assigned to two E-UTRA bands the throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annex A.3.2 with parameters specified in Tables 7.3A.6.5-1 (originated from single carrier Tables 7.3.5-1). The reference sensitivity is defined to be met with both downlink component carriers active and both of the uplink component carriers active.

**Table 7.3A.6.5-1: Reference sensitivity QPSK PREFSENS**

| Channel bandwidth | | | | | | | | |
|---|---|---|---|---|---|---|---|---|

| | |
|---|---|
| Note 1: | Both of the transmitters shall be set min(+20 dBm, $P_{CMAX_L,c}$) as defined in subclause 6.2.5A |
| Note 2: | The reference measurement channel is specified in A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1 |
| Note 3: | The signal power is specified per port |
| Note 4: | Reference sensitivity for the high band for which the 3rd harmonic of the low band is within transmission bandwidth, as specified Note 5 in Table 7.3A.0-0a. |
| Note 5: | [5] indicates that the requirement is modified by -0.5 dB when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz. |
| Note 6: | Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured. |

## 7.3A.7 Reference sensitivity level for CA (intra-band non-contiguous DL CA and UL CA)

### 7.3A.7.1 Test purpose

Same as in clause 7.3A.1.1.

### 7.3A.7.2 Test applicability

This test case applies to all types of E-UTRA UE release 11 and forward that support intra-band non-contiguous DL CA and UL CA.

### 7.3A.7.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.3A.0.

### 7.3A.7.4 Test description

#### 7.3A.7.4.1 Initial conditions

Same as in clause 7.3A.1.4.1 with the following exceptions:

- Instead of Table 7.3A.1.4.1-1→ use Table 7.3A.7.4.1-1.
- Instead of clause 7.3A.1.4.3 use clause 7.3A.7.4.3.

**Table 7.3A.7.4.1-1: Test Configuration Table**

| Initial Conditions | |
|---|---|
| Test Environment as specified in TS 36.508[7] subclause 4.1 | NC, TL/VL, TL/VH, TH/VL, TH/VH |
| Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes, and PCC and SCCs are mapped onto physical frequencies according to Table 7.1-2. | A: N/A (Range is not relevant) |
| Test CC Combination setting ($N_{RB_agg}$) as specified in subclause 5.4.2A.1 for the CA Configuration. | Refer to test point |

| Test Parameters for CA Configurations | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| ID | CA Configuration / $N_{RB_agg}$ | | $W_{gap}$ [MHz] | DL Allocation | | UL Allocation | | | |
| | PCC $N_{RB}$ | SCCs $N_{RB}$ | | CC MOD | PCC & SCC RB allocation | CC MOD | PCC $N_{RB_alloc}$ ($L_{CRB}$ @ $RB_{start}$) | CC MOD | SCC $N_{RB_alloc}$ ($L_{CRB}$ @ $RB_{start}$) |
| **Test Parameters for CA_4A-4A Configurations** | | | | | | | | | |
| 1 | 100 | 25 | 35 | QPSK | 100+25 | QPSK | 100@0 | QPSK | 25@0 |
| 2 | 100 | 100 | 20 | QPSK | 100+100 | QPSK | 100@0 | QPSK | 100@0 |

Note 1: CA Configuration Test CC Combination settings are checked separately for each CA Configuration, which applicable aggregated channel bandwidths are specified in Table 5.4.2A.1-3.
Note 2: The carrier centre frequency of PCC in the UL operating band is configured closer to the DL operating band.

### 7.3A.7.4.2 Test procedure

1. Configure SCC according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCC as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.3A7.4.3
3. SS activates SCC by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Tables 7.3A.7.4.1-1 on both PCC and SCC. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.3A.7.4.1-1 on both PCC and SCC. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCC to the appropriate REFSENS value defined in Table 7.3A.7.5-1. Send continuously uplink power control "up" commands in the uplink scheduling information to the UE to ensure the UE transmits $P_{UMAX}$ level for at least the duration of the Throughput measurement.
7. Measure the average throughput for each component carrier for duration sufficient to achieve statistical significance according to Annex G.2A.

### 7.3A.7.4.3 Message contents

Same as in clause 7.3A.4.4.3.

## 7.3A.7.5 Test requirement

For intra-band non-contiguous carrier aggregation with two uplink carriers, the throughput of each downlink component carrier shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.3.2 with parameters specified in Table 7.3A.7.5-1.

**Table 7.3A.7.5-1: Reference sensitivity QPSK $P_{REFSENS}$ for intra-band Non-contiguous**

| ID/ CA configuration / $P_{REFSENS}$ | | | |
|---|---|---|---|
| **ID** | **CA configuration** | **PCC measurement (dBm)** | **SCC measurement (dBm)** |
| 1 | CA_4A-4A | -93.3 | -99.3 |
| | | -96[4] | -102[4] |
| 2 | | -93.3 | -93.3 |
| | | -96[4] | -96[4] |
| Note 1: The transmitter shall be set to maximum output power level<br>Note 2: The reference measurement channel is specified in A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1<br>Note 3: The signal power is specified per port<br>Note 4: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured. | | | |

For the UE which supports inter-band carrier aggregation configurations the $\Delta R_{IB,c}$ in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C shall be applied for applicable bands.

In case the UE supports more than one of the inter-band carrier aggregation configurations and an E-UTRA operating band belongs to more than one inter-band carrier aggregation configurations then:

- When the E-UTRA operating band frequency range is ≤ 1GHz, the applicable additional tolerance shall be the average of the tolerances in Table 7.3.3-1A, truncated to one decimal place that would apply for that operating band among the supported CA configurations. In case there is a harmonic relation between low band UL and high band DL (i.e. bands listed in Table 7.3A.0-0a), then the maximum tolerance among the different supported carrier aggregation configurations involving such band shall be applied.

- When the E-UTRA operating band frequency range is >1GHz, the applicable additional tolerance shall be the maximum tolerance in Table 7.3.3-1A that would apply for that operating band among the supported CA configurations.

## 7.3A.8

## 7.3A.9 Reference sensitivity level for 4DL CA

Editor's note: Following aspects missing or not yet determined:

- Reference sensitivity QPSK $P_{REFSENS}$ has defined and made for some CA bands, some of are incomplete.

### 7.3A.9.1 Test purpose

Same as in clause 7.3A.1.1.

### 7.3A.9.2 Test applicability

This test case applies to all types of E-UTRA UE and forward that support 4DL with CA configurations in Table 7.1-2b.

### 7.3A.9.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.3A.0.

### 7.3A.9.4 Test description

#### 7.3A.9.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1 through table 5.4.2A.1-2a. All of these configurations shall be

tested with applicable test parameters for each channel bandwidth, and are shown in table 7.3A.9.4.1-1 through table 7.3A.9.4.1-2 as appropriate. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2 and A.3. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 7.3A.9.4.1-1: Test Configuration Table**

| Initial Conditions | | | | | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Test Environment as specified in TS 36.508 [7] subclause 4.1 | | | | | | | | | NC, TL/VL, TL/VH, TH/VL, TH/VH | | | | | | | | |
| Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes. | | | | | | | | | For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns | | | | | | | | |
| Test CC Combination setting ($N_{RB_agg}$) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE. | | | | | | | | | Refer to “PCC NRB” and “SCCs NRB” columns | | | | | | | | |
| Network signalling value | | | | | | | | | NS_01 by default, exceptions listed in Table 7.3.3-3, dependent on PCC Band | | | | | | | | |
| Test Parameters for CA Configurations | | | | | | | | | | | | | | | | | |
| **ID** | **PCC** | | | | **SCC1** | | | | **SCC2** | | | | **SCC3** | | | | |
| | **Band** | **Range** | **NRB** | | **Band** | **Range** | **NRB** | | **Band** | **Range** | **NRB** | | **Band** | **Range** | **NRB** | | |

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: **Intra-band contiguous & Intra-band contiguous + Inter-band:** Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.
Note 3: **Inter-band:** Use CA Configuration – specific test points if present in the table, Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use the Default Test Settings test points.
Note 4: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 5: **Intra-band contiguous:** X corresponds to the band of the CA Configuration. E.g. for CA_41E, X=41.
Note 6: **Inter-band:** X,Y,Z,R correspond to the different bands in the CA Configuration. E.g. for CA_1A-3A-7A-8A,X=1,Y=3,Z=7,R=8.
Note 7: **Intra-band contiguous + Inter-band:** X,Y,Z correspond to the different bands in the CA Configuration. E.g. for CA_3C-7A-28A, X=3,Y=7 and Z=28.
Note 8: REFSENS refers to the PCC bands and PCC $N_{RB}$ 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 9: **Intra-band contiguous:** If in the CA Configuration UE supports multiple CC Combinations with the same $N_{RB_agg}$, choose for testing the Combination with maximum $N_{RB_PCC}$ and then select maximum $N_{RB_SCC1}$ for the chosen $N_{RB_PCC}$.
Note 10: **Intra-band contiguous + Inter-band:** If in the CA Configuration UE supports multiple CC Combinations with the same $N_{RB_agg}$, choose the Combination with $N_{RB_PCC}$ = $N_{RB_SCC1}$ for testing. If no such combination is supported, choose Combination with maximum $N_{RB_PCC}$ for testing.
Note 11: Test points that fulfil criteria of Note 4 in Table 7.3A.5.5-3.
Note 12: Only Band 1 and Band 42 need to be tested and Band 3 does not need to be tested.
Note 13: Band 3: fUL = 1720MHz (NUL = 19300), fDL = 1815MHz (NDL = 1300)
Band 42: fUL/DL = 3440MHz (NUL/DL = 41990)
Note 14: Only Band 1 and Band 3 need to be tested and Band 42 does not need to be tested.
Note 15: Band 3: fUL = 1775MHz (NUL = 19850), fDL = 1870MHz (NDL = 1850)
Band 42: fUL/DL = 3520MHz (NDL = 42790)
Note 16: Band 42: $f_{UL/DL}$ for SCC1 = 3430.2MHz ($N_{UL/DL}$ = 41892), $f_{UL/DL}$ for SCC2 = 3450MHz ($N_{UL/DL}$ = 42090)
Note 17: Band 42: $f_{UL/DL}$ for SCC1 = 3500.2MHz ($N_{UL/DL}$ = 42592), $f_{UL/DL}$ for SCC2 = 3520MHz ($N_{UL/DL}$ = 42790)
Note 18: Band 12: $f_{UL}$ = 706.7 MHz ($N_{UL}$ = 23087), $f_{DL}$ = 736.7 MHz ($N_{DL}$ = 5087)
Band 4: $f_{DL}$ = 2120.1 MHz ($N_{DL}$ = 2051)
Note 19: Band 12: $f_{UL}$ = 710.9 MHz ($N_{UL}$ = 23129), $f_{DL}$ = 740.9 MHz ($N_{DL}$ = 5129)
Band 4: $f_{DL}$ = 2132.7 MHz ($N_{DL}$ = 2177)
Note 20: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.
Note 21: Test point that fulfils criteria of Note 16 in Table 7.3A.0-0a.

| |
|---|
| Band 71: $f_{UL}$ = 679.3 MHz ($N_{UL}$ = 133285), $f_{DL}$ = 633.3 MHz ($N_{DL}$ = 68749) |

**Table 7.3A.9.4.1-2: Test Configuration Table with Wgap**

| Initial Conditions | |
|---|---|
| Test Environment as specified in TS 36.508 [7] subclause 4.1 | NC, TL/VL, TL/VH, TH/VL, TH/VH |
| Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes. | For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns |
| Test CC Combination setting ($N_{RB_agg}$) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE. | Highest $N_{RB}$ |
| Network signalling value | NS_01 by default, exceptions listed in Table 7.3.3-3, dependent on PCC Band |

Test Parameters for CA Configurations

| ID | PCC | | | | $W_{gap}$ [MHz] | SCC1 | | | | $W_{gap}$ [MHz] | SCC2 | | | | $W_{gap}$ [MHz] | SCC3 | | | |

Note 1: CA Configuration Test CC Combination test settings are checked separately for each CA Configuration.
Note 2: **Intra-band non-contiguous + Inter-band:** Use CA Configuration – specific test points if present in the table. Otherwise use test points from matching Group Test Settings, if present in the table. Otherwise use Default Test Settings test points.
Note 3: **Intra-band non-contiguous + Intra-band contiguous:** Use CA Configuration – specific test points if present in the table, otherwise use Default Test Settings test points.
Note 4: If, according to the UE declared capability, UE does not support UL in an individual band within the CA Configuration, test points with that individual band as PCC are not applicable.
Note 5: **Intra-band non-contiguous + Inter-band:** X, Y, Z correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-4A-12A,X=2,Y=4,Z=12.
Note 6: **Intra-band non-contiguous + Intra-band contiguous:** X corresponds to the band of the CA Configuration. E.g. for CA_41C-41A-41A,X=41.
Note 7: **Intra-band non-contiguous + Intra-band non-contiguous:** X,Y correspond to the different bands in the CA Configuration. E.g. for CA_2A-2A-4A-4A,X=2,Y=4.
Note 8: REFSENS refers to the PCC bands and PCC $N_{RB}$ 's single carrier Uplink RB allocation for reference sensitivity according to table 7.3.5-2.
Note 9: If in the CA Configuration UE supports multiple CC Combinations with the same $N_{RB_agg}$, choose the Combination with $N_{RB_CC1} = N_{RB_CC2}$ for testing. If no such combination is supported, choose Combination with maximum $N_{RB_CC1}$ for testing.
Note 10: Applicable if only Bandwidth Combination Set 0 is supported by the UE for the CA Configuration. (This note is not applicable for any existing test point and only reserved for future use)
Note 11: Not applicable if only Bandwidth Combination Set 0 is supported by the UE for the CA Configuration.
Note 12: Applicable if only Bandwidth Combination Set 1 is supported by the UE for the CA Configuration. (This note is not applicable for any existing test point and only reserved for future use)

Note 13: Not applicable if only Bandwidth Combination Set 1 is supported by the UE for the CA Configuration.
Note 14: Not applicable if operation with 4 antenna ports is supported in the band with carrier aggregation configured.
Note 15: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.
Note 16: Band 2: $f_{UL}$ = 1868.3MHz ($N_{UL}$ = 18783), $f_{DL}$ = 1948.3MHz ($N_{DL}$ = 783).
Band 4: $f_{UL}$ = 1735MHz ($N_{UL}$ = 20200), $f_{DL}$ = 2135MHz ($N_{DL}$ = 2200).
Note 17: The orders and numbering of SCCs in this table does not imply any order in test implementation of SCCs.

1. Connect the SS to the UE antenna connectors as shown in TS 36.508[7] Annex A Figure A.55 if the UE supports 2 Rx antennas or Figure A.80 if the UE supports 4 Rx antennas in at least one band within the CA configuration..
2. The parameter settings for the cell are set up according to TS 36.508 [7] subclause 4.4.3.
3. Downlink signals for PCC are initially set up according to Annex C.0, C.1, and C.3.1, and uplink signals according to Annex H.1 and H.3.0.
4. The UL and DL Reference Measurement channels are set according to Table 7.3A.9.4.1-1 through Table7.3A.9.4.1-6 as appropriate.
5. Propagation conditions are set according to Annex B.0.
6. Ensure the UE is in State 3A-RF according to TS 36.508 [7] clause 5.2A.2. Message contents are defined in clause 7.3A.9.4.3.

### 7.3A.9.4.2 Test procedure

1. Configure SCCs according to Annex C.0, C.1 and Annex C.3.1 for all downlink physical channels.
2. The SS shall configure SCCs as per TS 36.508 [7] clause 5.2A.4. Message contents are defined in clause 7.3A.9.4.3.
3. SS activates SCCs by sending the activation MAC-CE (Refer TS 36.321 [13], clauses 5.13, 6.1.3.8). Wait for at least 2 seconds (Refer TS 36.133, clauses 8.3.3.2).
4. SS transmits PDSCH via PDCCH DCI format 1A for C_RNTI to transmit the DL RMC according to Table 7.3A.9.4.1-1 through Table7.3A.9.4.1-2 as appropriate on PCC and SCCs. The SS sends downlink MAC padding bits on the DL RMC.
5. SS sends uplink scheduling information for each UL HARQ process via PDCCH DCI format 0 for C_RNTI to schedule the UL RMC according to Table 7.3A.9.4.1-1 through Table7.3A.9.4.1-2 as appropriate on PCC and SCCs. Since the UE has no payload and no loopback data to send the UE sends uplink MAC padding bits on the UL RMC.
6. Set the Downlink signal level for PCC and SCCs to the appropriate REFSENS value defined in Table 7.3A.9.5-1 through Table7.3A.9.5-7. Send continuously uplink power control "up" commands in every uplink scheduling information to the UE to ensure the UE transmits $P_{UMAX}$ level for at least the duration of the Throughput measurement.
7. Measure the average throughput for each component carrier for duration sufficient to achieve statistical significance according to Annex G.2A.

### 7.3A.9.4.3 Message contents

Message contents are according to TS 36.508 [7] subclause 4.6. In test procedure step 2, for SCCs configuration there are no additional message contents.

## 7.3A.9.5 Test requirement

For intra-band contiguous carrier aggregation the throughput of each component carrier shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3A.9.5-1. The reference sensitivity is defined to be met with all downlink component carriers active and one of the uplink carriers active.

**Table 7.3A.9.5-1: Reference sensitivity QPSK $P_{REFSENS}$ for Intra-band contiguous**

| Channel bandwidth | | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| **EUTRA CA Configuration** | **EUTRA band** | **1.4 MHz (dBm)** | **3 MHz (dBm)** | **5 MHz (dBm)** | **10 MHz (dBm)** | **15 MHz (dBm)** | **20 MHz (dBm)** | **Duplex mode** |
| CA_40E | 40 | - | - | -99.3 | -96.3 | -94.5 | -93.3 | TDD |
| | | - | - | -102[4] | -99[4] | -97.2[4] | -96[4] | |

NOTE 1: The transmitter shall be set to $P_{UMAX}$ as defined in subclause 6.2.5A.
NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.
NOTE 3: The signal power is specified per port.
NOTE 4: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.

**Table 7.3A.9.5-2: FFS**

For inter-band carrier aggregation with one component carrier per operating band and the uplink assigned to one E-UTRA band the throughput shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3A.9.5-3 (originated from single carrier Tables 7.3.5-1). The reference sensitivity is defined to be met with all downlink component carriers active and one of the uplink carriers active.

**Table 7.3A.9.5-3: Reference sensitivity QPSK $P_{REFSENS}$ for inter-band**

| Channel bandwidth | | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| **EUTRA CA Configuration** | **EUTRA band** | **1.4 MHz (dBm)** | **3 MHz (dBm)** | **5 MHz (dBm)** | **10 MHz (dBm)** | **15 MHz (dBm)** | **20 MHz (dBm)** | **Duplex mode** |
| CA_1A-3A-7A-8A | 1 | - | - | -99.3 | -96.3 | -94.5 | -93.3 | FDD |

| | 32 | | | -99.5 | -96.5 | -94.7 | -93.5 | |

NOTE 1: The transmitter shall be set to $P_{UMAX}$ as defined in subclause 6.2.5A.
NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.
NOTE 3: The signal power is specified per port.
NOTE 4: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.
NOTE 5: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the aggressor (lower) band for which the 2nd transmitter harmonic is within the downlink transmission bandwidth of a victim (higher) band and a range $\Delta F_{HD}$ above and below the edge of this downlink transmission bandwidth. The value $\Delta F_{HD}$ depends on the E-UTRA configuration: $\Delta F_{HD}$ = 10 MHz for CA_3A-42A, CA_3A-42C, CA_1A-3A-42A, CA_1A-3A-42C, CA_3A-19A-42A, CA_3A-19A-42C, CA_1A-3A-19A-42A and CA_1A-3A-19A-42C.
NOTE 6: The requirements should be verified for UL EARFCN of the aggressor (lower) band (superscript LB) such that $f_{UL}^{LB} = \lfloor f_{DL}^{HB} / 0.2 \rfloor 0.1$ in MHz and $F_{UL_low}^{LB} + BW_{Channel}^{LB}/2 < f_{UL}^{LB} < F_{UL_high}^{LB} - BW_{Channel}^{LB}/2$ with $f_{DL}^{HB}$ carrier frequency in the victim (higher) band in MHz and $BW_{Channel}^{LB}$ the channel bandwidth configured in the lower band.
NOTE 7: The requirements are only applicable to channel bandwidths with a carrier frequency at $\pm\left(20 + BW_{Channel}^{HB}/2\right)$ MHz offset from $2 f_{UL}^{LB}$ in the victim (higher band) with $F_{UL_low}^{LB} + BW_{Channel}^{LB}/2 < f_{UL}^{LB} < F_{UL_high}^{LB} - BW_{Channel}^{LB}/2$, where $BW_{Channel}^{LB}$ and $BW_{Channel}^{HB}$ are the channel bandwidths configured in the aggressor (lower) and victim (higher) bands in MHz, respectively.
NOTE 8: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz. For each channel bandwidth in the bands other than Band 1, the requirement applies regardless

of channel bandwidth in Band 1.
NOTE 9: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is ≥ 60 MHz. For each channel bandwidth in the bands other than Band 1, the requirement applies regardless of channel bandwidth in Band 1.
NOTE 10: Reference sensitivity for the high band for which the 3rd harmonic of the low band is within transmission bandwidth, as specified Note 5 and 6 in Table 7.3A.0-0a.
NOTE 11: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of a low band for which the 3rd transmitter harmonic is within the downlink transmission bandwidth of a high band.
NOTE 12: The requirements should be verified for UL EARFCN of a low band (superscript LB) such that $f_{UL}^{LB} = \lfloor f_{DL}^{HB} / 0.3 \rfloor 0.1$ in MHz and $F_{UL_low}^{LB} + BW_{Channel}^{LB} / 2 \le f_{UL}^{LB} \le F_{UL_high}^{LB} - BW_{Channel}^{LB} / 2$ with $f_{DL}^{HB}$ the carrier frequency of a high band in MHz and $BW_{Channel}^{LB}$ the channel bandwidth configured in the low band.
NOTE 13: These requirements apply when the uplink is active in Band 40.
NOTE 14: These requirements apply when the uplink is active in Band 3.
NOTE 15: These requirements apply when the uplink is active in Band 1.

For the UE which supports inter-band carrier aggregation configurations the $\Delta R_{IB,c}$ in Tables 7.3.3-1A, 7.3.3-1B and 7.3.3-1C shall be applied for applicable bands.

Unless otherwise specified, in case the UE supports more than one of the above 4DL inter-band carrier aggregation configurations and an E-UTRA operating band belongs to more than one 4DL inter-band carrier aggregation configurations then:

- When the E-UTRA operating band frequency range is ≤ 1GHz and the tolerances are the same, the value applies to the band. If the tolerances are different, the applicable additional 4DL tolerance is FFS. In case there is a harmonic relation between low band UL and high band DL, then the maximum tolerance among the different supported 4DL carrier aggregation configurations involving such band shall be applied

- When the E-UTRA operating band frequency range is >1GHz, the applicable additional 4DL tolerance shall be the maximum tolerance above that applies for that operating band among the supported 4DL CA configurations

The above additional tolerances applicable for the E-UTRA operating bands that belong to the supported highest order inter-band carrier aggregation configuration, also applies to the same E-UTRA operating bands that belong to a supported lower order CA configuration.

The reference receive sensitivity (REFSENS) requirement for inter-band specified in Table 7.3A.9.5-3 shall be met for an uplink CA configurations than or equal to that specified in Table 7.3.5-2.

NOTE: Table 7.3A.9.5-4 does not necessarily reflect the operational conditions of the network, where the number of uplink and downlink allocated resource blocks will be practically constrained by other factors.

**Table 7.3A.9.5-4: Void**

For combinations of intra-band contiguous and inter-band carrier aggregation with three downlink carriers and one uplink carrier assigned to one E-UTRA band the throughput of each component carrier shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3A.9.5-5. The reference sensitivity is defined to be met with all downlink component carriers active and one of the uplink carriers active.

**Table 7.3A.9.5-5: Reference sensitivity QPSK $P_{REFSENS}$ for intra-band contiguous + inter-band**

| Channel bandwidth | | | | | | | | |
|---|---|---|---|---|---|---|---|---|

| | 71 | | | -96.5 | -93.5 | -91.2 | -86.8 | |

NOTE 1: The transmitter shall be set to $P_{UMAX}$ as defined in subclause 6.2.5A.
NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1

NOTE 3: The signal power is specified per port.
NOTE 4: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.
NOTE 5: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is < 60 MHz. For each channel bandwidth in Band 3 and Band 5 or Band 8 or Band 19 or Band 20 or Band 26 or Band 28 or Band 42, the requirement applies regardless of channel bandwidth in Band 1.
NOTE 6: These requirements apply when the uplink is active in Band 1 and the separation between the lower edge of the uplink channel in Band 1 and the upper edge of the downlink channel in Band 3 is ≥ 60 MHz. For each channel bandwidth in Band 3 and Band 5 or Band 8 or Band 19 or Band 20 or Band 26 or Band 28 or Band 42, the requirement applies regardless of channel bandwidth in Band 1.
NOTE 7: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the aggressor (lower) band for which the 2nd transmitter harmonic is within the downlink transmission bandwidth of a victim (higher) band and a range $\Delta F_{HD}$ above and below the edge of this downlink transmission bandwidth. The value $\Delta F_{HD}$ depends on the E-UTRA configuration: $\Delta F_{HD}$ = 10 MHz for CA_3A-42C, CA_1A-3A-42C and CA_3A-19A-42C.
NOTE 8: The requirements should be verified for UL EARFCN of the aggressor (lower) band (superscript LB) such that $f_{UL}^{LB} = \lfloor f_{DL}^{HB} / 0.2 \rfloor 0.1$ in MHz and $F_{UL_low}^{LB} + BW_{Channel}^{LB}/2 < f_{UL}^{LB} < F_{UL_high}^{LB} - BW_{Channel}^{LB}/2$ with $f_{DL}^{HB}$ carrier frequency in the victim (higher) band in MHz and $BW_{Channel}^{LB}$ the channel bandwidth configured in the lower band.
NOTE 9: The requirements are only applicable to channel bandwidths with a carrier frequency at $\pm(20 + BW_{Channel}^{HB}/2)$ MHz offset from $2 f_{UL}^{LB}$ in the victim (higher band) with $F_{UL_low}^{LB} + BW_{Channel}^{LB}/2 < f_{UL}^{LB} < F_{UL_high}^{LB} - BW_{Channel}^{LB}/2$, where $BW_{Channel}^{LB}$ and $BW_{Channel}^{HB}$ are the channel bandwidths configured in the aggressor (lower) and victim (higher) bands in MHz, respectively.
NOTE 10: These requirements apply when there is at least one individual RE within the downlink transmission bandwidth of the victim (lower) band for which the 3rd harmonic is within the uplink transmission bandwidth or the uplink adjacent channel's transmission bandwidth of an aggressor (higher) band.
NOTE 11: The requirements should be verified for UL EARFCN of the aggressor (higher) band (superscript HB) such that $f_{DL}^{LB} = \lfloor f_{UL}^{HB} / 0.3 \rfloor 0.1$ in MHz and $F_{UL_low}^{LB} + BW_{Channel}^{LB} / 2 \le f_{UL}^{LB} \le F_{UL_high}^{LB} - BW_{Channel}^{LB} / 2$ with $f_{DL}^{LB}$ the carrier frequency in the victim (lower) band and $BW_{Channel}^{HB}$ the channel bandwidth configured in the higher band.
NOTE 12: These requirements apply when the lower edge frequency of the 5 MHz uplink channel in Band 71 is located at or below 668 MHz and the downlink channel in Band 2 is located with its upper edge at 1990 MHz.
NOTE 13: These requirements apply when the lower edge frequency of the 10 MHz, 15 MHz, or 20 MHz uplink channel in Band 71 is located at or below 668 MHz and the downlink channel in Band 2 is located with its upper edge at 1990 MHz.

For combinations of intra-band non-contiguous and inter-band carrier aggregation with three downlink carriers and one uplink carrier assigned to one E-UTRA band the throughput of each component carrier shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3A.9.5-6. The reference sensitivity is defined to be met with all downlink component carriers active and one of the uplink carriers active.

**Table 7.3A.9.5-6: Reference sensitivity QPSK $P_{REFSENS}$ for intra-band non-contiguous + inter-band**

| Channel bandwidth | | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| **EUTRA CA Configuration** | **EUTRA band** | **1.4 MHz (dBm)** | **3 MHz (dBm)** | **5 MHz (dBm)** | **10 MHz (dBm)** | **15 MHz (dBm)** | **20 MHz (dBm)** | **Duplex mode** |

NOTE 1: The transmitter shall be set to $P_{UMAX}$ as defined in subclause 6.2.5A.
NOTE 2: Reference measurement channel is A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1
NOTE 3: The signal power is specified per port
NOTE 4: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.
NOTE 5: No requirements apply when there is at least one individual RE within the uplink transmission bandwidth of the low band for which the 2nd transmitter harmonic is within the downlink transmission bandwidth of the high band. The reference sensitivity is only verified when this is not the case (the requirements specified in clause 7.3.1 apply).
NOTE 6: These requirements apply when there is at least one individual RE within the uplink transmission bandwidth of a low band for which the 3rd transmitter harmonic is within the downlink transmission bandwidth of a high band.
NOTE 7: The requirements should be verified for UL EARFCN of a low band (superscript LB) such that $f_{UL}^{LB} = \lfloor f_{DL}^{HB} / 0.3 \rfloor 0.1$ in MHz and $F_{UL_low}^{LB} + BW_{Channel}^{LB} / 2 \le f_{UL}^{LB} \le F_{UL_high}^{LB} - BW_{Channel}^{LB} / 2$ with $f_{DL}^{HB}$ the carrier frequency of a high band in MHz and $BW_{Channel}^{LB}$ the channel bandwidth configured in the low band.
NOTE 8: These requirements apply when UL CA is configured and the uplink is active in Band 2 and Band 4.

For combinations of intra-band non-contiguous and intra-band contiguous carrier aggregation with three downlink carriers and one uplink carrier assigned to one E-UTRA band the throughput of each component carrier shall be ≥ 95% of the maximum throughput of the reference measurement channels as specified in Annexes A.2.2, A.2.3 and A.3.2 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table 7.3A.9.5-7. The reference sensitivity is defined to be met with all downlink component carriers active and one of the uplink carriers active.

Note 1: Requirements with additional relaxation ($\Delta R_{IBNC}$) as per Table 7.3A.0-3.
Note 2: "ID" refers to IDs in Table 7.3A.9.4.1-6.
Note 3: The reference measurement channel is specified in A.3.2 with one sided dynamic OCNG Pattern OP.1 FDD/TDD as described in Annex A.5.1.1/A.5.2.1.
Note 4: The signal power is specified per port.
Note 5: Applicable only if operation with 4 antenna ports is supported in the band with carrier aggregation configured.

## 7.3A.10 Reference sensitivity level for 5DL CA

Editor's note: Following aspects missing or not yet determined:

- Test configuration table is under investigating
- Test requirement for some CA configuration is TBD
- Test applicability with related information in Table 7.1-2a needs to add to TS36.521-2

### 7.3A.10.1 Test purpose

Same as in clause 7.3A.1.1.

### 7.3A.10.2 Test applicability

This test case applies to all types of E-UTRA UE and forward that support 5DL with CA configurations in Table 7.1-2c.

### 7.3A.10.3 Minimum conformance requirements

The minimum conformance requirements are defined in clause 7.3A.0.

## 7.3A.10.4 Test description

### 7.3A.10.4.1 Initial conditions

Initial conditions are a set of test configurations the UE needs to be tested in and the steps for the SS to take with the UE to reach the correct measurement state.

The initial test configurations consist of environmental conditions, test frequencies, and channel bandwidths based on E-UTRA CA configurations specified in table 5.4.2A.1-1 through table 5.4.2A.1-2a. All of these configurations shall be tested with applicable test parameters for each channel bandwidth, and are shown in table 7.3A.10.4.1-1 through table 7.3A.10.4.1-2 as appropriate. The details of the uplink reference measurement channels (RMCs) are specified in Annex A.2 and A.3. Configurations of PDSCH and PDCCH before measurement are specified in Annex C.2.

**Table 7.3A.10.4.1-1: Test Configuration Table**

| Initial Conditions | |
|---|---|
| Test Environment as specified in TS 36.508 [7] subclause 4.1 | NC, TL/VL, TL/VH, TH/VL, TH/VH |
| Test Frequencies as specified in TS36.508 [7] subclause 4.3.1 for different CA bandwidth classes. | For test frequencies refer to “Range” columns. For mapping within Band refer to “CC” columns |
| Test CC Combination setting ($N_{RB_agg}$) as specified in subclause 5.4.2A.1 for the CA Configuration across bandwidth combination sets supported by the UE. | Refer to “PCC NRB” and “SCCs NRB” columns |
| Network signalling value | NS_01 by default, exceptions listed in Table 7.3.3-3, dependent on PCC Band |
