For V2V side link transmission over PC5, Table A.8.2-1 is applicable for measurements on the Receiver Characteristics (clause 7) with the exception of Maximum input level (subclause 7.4G). Table A.8.2-2 and Table A.8.2-3, are applicable for Maximum input level (subclause 7.4G).

**Table A.8.2-1: Fixed Reference measurement channel for V2V receiver requirements**

| Parameter | Unit | Value | | | | | |
|---|---|---|---|---|---|---|---|
| Channel bandwidth | MHz | 1.4 | 3 | 5 | 10 | 15 | 20 |
| Allocated resource blocks | | | | | 48 | | 96 |
| Subcarriers per resource block | | | | | 12 | | 12 |
| Packets per period | | | | | 1 | | 1 |
| Modulation | | | | | QPSK | | QPSK |
| Target Coding Rate | | | | | 1/3 | | 1/3 |
| Transport Block Size | | | | | 3496 | | 6968 |
| Transport block CRC | Bits | | | | 24 | | 24 |
| Number of Code Blocks per Sub-Frame | | | | | 1 | | 2 |
| Maximum number of HARQ transmissions | | | | | 1 | | 1 |
| Binary Channel Bits per subframe | Bits | | | | 11520 | | 23040 |
| Max. Throughput averaged over 1 period of 100ms | kbps | | | | 34.96 | | 69.68 |
| UE Category | | | | | ≥ 1 | | ≥ 1 |
| Note 1: 2RBs allocated to SA transmission and 4 symbols allocated to RS.<br>Note 2: Throughput (in kbps) will depend on SA period configuration.<br>Note 3: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit). | | | | | | | |

**Table A.8.2-2: Fixed Reference measurement channel for V2V maximum input level requirements for UE category 2-8**

| Parameter | Unit | Value | | | | | |
|---|---|---|---|---|---|---|---|
| Channel bandwidth | MHz | 1.4 | 3 | 5 | 10 | 15 | 20 |
| Allocated resource blocks | | | | | 48 | | 96 |
| Subcarriers per resource block | | | | | 12 | | 12 |
| Packets per period | | | | | 1 | | 1 |
| Modulation | | | | | 16QAM | | 16QAM |
| Target Coding Rate | | | | | 2/3 | | 2/3 |
| Transport Block Size | | | | | 15840 | | 31704 |
| Transport block CRC | Bits | | | | 24 | | 24 |
| Number of Code Blocks per Sub-Frame | | | | | 3 | | 6 |
| Maximum number of HARQ transmissions | | | | | 1 | | 1 |
| Binary Channel Bits per subframe | Bits | | | | 23040 | | 46080 |
| Max. Throughput averaged over 1 period of 100ms | kbps | | | | 158.4 | | 317.04 |
| Note 1: 2RBs allocated to SA transmission and 4 symbols allocated to RS.<br>Note 2: Throughput (in kbps) will depend on SA period configuration.<br>Note 3: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit). | | | | | | | |

**Table A.8.2-3: Fixed Reference measurement channel for V2V maximum input level for UE category 1**

| Parameter | Unit | Value | | | | | |
|---|---|---|---|---|---|---|---|
| Channel bandwidth | MHz | 1.4 | 3 | 5 | 10 | 15 | 20 |
| Allocated resource blocks | | | | | 32 | | 32 |
| Subcarriers per resource block | | | | | 12 | | 12 |
| Packets per period | | | | | 1 | | 1 |
| Modulation | | | | | 16QAM | | 16QAM |
| Target Coding Rate | | | | | 2/3 | | 2/3 |
| Transport Block Size | | | | | 10296 | | 10296 |
| Transport block CRC | Bits | | | | 24 | | 24 |
| Number of Code Blocks per Sub-Frame | | | | | 2 | | 2 |
| Maximum number of HARQ transmissions | | | | | 1 | | 1 |
| Binary Channel Bits per subframe | Bits | | | | 15360 | | 15360 |
| Max. Throughput averaged over 1 period of 100ms | kbps | | | | 102.96 | | 102.96 |
| Note 1: 2RBs allocated to SA transmission and 4 symbols allocated to RS.<br>Note 2: Throughput (in kbps) will depend on SA period configuration.<br>Note 3: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit). | | | | | | | |

## A.8.3 Reference measurement channel for transmitter characteristics

For V2V side link transmission over PC5, Table A.8.3-1 and Table A.8.3-2 are applicable for measurements on the Transmitter Characteristics (clause 6).

**Table A.8.3-1: Fixed Reference measurement channel for V2V Transmitter requirements for QPSK**

| Parameter | Ch BW | Allocated RBs | DFT-OFDM Symbols per Sub-Frame | Mod'n | Target Coding rate | Payload size | Transport block CRC | Number of code blocks per Sub-Frame (Note 1) | Total number of bits per Sub-Frame | Total symbols per Sub-Frame | UE Category |
|---|---|---|---|---|---|---|---|---|---|---|---|
| Unit | MHz | | | | | Bits | Bits | | Bits | | |
| | 10, 20 | 3 | 10 | QPSK | 1/3 | 208 | 24 | 1 | 720 | 360 | ≥ 1 |
| | 10, 20 | 4 | 10 | QPSK | 1/3 | 256 | 24 | 1 | 960 | 480 | ≥ 1 |
| | 10, 20 | 5 | 10 | QPSK | 1/3 | 328 | 24 | 1 | 1200 | 600 | ≥ 1 |
| | 10, 20 | 6 | 10 | QPSK | 1/3 | 408 | 24 | 1 | 1440 | 720 | ≥ 1 |
| | 10, 20 | 8 | 10 | QPSK | 1/3 | 552 | 24 | 1 | 1920 | 960 | ≥ 1 |
| | 10, 20 | 9 | 10 | QPSK | 1/3 | 632 | 24 | 1 | 2160 | 1080 | ≥ 1 |
| | 10, 20 | 10 | 10 | QPSK | 1/3 | 696 | 24 | 1 | 2400 | 1200 | ≥ 1 |
| | 10, 20 | 12 | 10 | QPSK | 1/3 | 840 | 24 | 1 | 2880 | 1440 | ≥ 1 |
| | 10, 20 | 15 | 10 | QPSK | 1/3 | 1064 | 24 | 1 | 3600 | 1800 | ≥ 1 |
| | 10, 20 | 16 | 10 | QPSK | 1/3 | 1128 | 24 | 1 | 3840 | 1920 | ≥ 1 |

## A.8.4 Reference measurement for PSCCH performance requirements

**Table A.8.4-1: Fixed reference measurement channel for PSCCH performance requirement**

| Parameter | Unit | Value |
|---|---|---|
| Reference channel | | CC.8 |
| Allocated resource blocks | | 2 |
| DFT-OFDM Symbols per subframe (see Note 1) | | 9 |
| Modulation | | QPSK |
| Payload (without CRC) | Bits | 32 |
| CRC | Bits | 16 |
| SCI Format | | 1 |
| Number of PSCCH transmissions | | 1 |
| Binary Channel Bits (see Note 2) | Bits | 432 |
| Note 1: PSCCH transmissions are rate-matched for 10 DFT-OFDM symbols per subframe, and the last symbol shall be punctured as per TS 36.211.<br>Note 2: Binary Channel Bits are calculated under assumption of 9 symbols.<br>Note 3: Un-used or redundant bits/code-points in SCI format 1 are randomized. | | |

## A.8.5 Reference measurement for PSSCH performance requirements

**Table A.8.5-1: Fixed reference measurement channel for PSSCH performance requirement**

| Parameter | Unit | Value | | | | |
|---|---|---|---|---|---|---|
| Reference channel | | CD.8 | CD.9 | CD.10 | CD.11 | CD.12 |
| Channel bandwidth | MHz | 20 | 10 | 20 | 20 | 20 |
| Allocated resource blocks | | 8 | 3 | 3 | 96 | 8 |
| DFT-OFDM Symbols per subframe (see Note 1) | | 9 | 9 | 9 | 9 | 9 |
| Modulation | | 16QAM | QPSK | QPSK | 16QAM | QPSK |
| Transport Block Size | | 1800 | 208 | 504 | 31704 | 552 |
| Transport block CRC | Bits | 24 | 24 | 24 | 24 | 24 |
| Number of PSSCH transmissions | | 1 | 2 | 1 | 2 | 1 |
| Binary Channel Bits (see Note 2) | Bits | 3456 | 648 | 648 | 41472 | 1728 |
| Note 1: PSSCH transmissions are rate-matched for 10 DFT-OFDM symbols per subframe, and the last symbol shall be punctured as per TS 36.211.<br>Note 2: Binary Channel Bits are calculated under assumption of 9 symbols.<br>Note 3: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit). | | | | | | |

## A.8.6 Reference measurement for PSBCH performance requirements

**Table A.8.6-1: Fixed reference measurement channel for PSBCH performance requirement**

| Parameter | Unit | Value |
|---|---|---|
| Reference channel | | CP.2 |
| Reference channel | | CP.2 |
| Channel bandwidth | MHz | 20 |
| Allocated resource blocks | | 6 |
| DFT-OFDM Symbols per subframe (see Note 1) | | 6 |
| Modulation | | QPSK |
| Transport Block Size | | 48 |
| Transport block CRC | Bits | 16 |
| Binary Channel Bits (see Note 2) | Bits | 864 |
| Note 1: PSBCH transmissions are rate-matched for 7 DFT-OFDM symbols per subframe, and the last symbol shall be punctured as per TS 36.211.<br>Note 2: Binary Channel Bits are calculated under assumption of 6 symbols. | | |

# A.9 V2X reference resource pool configurations

**Table A.9-1: V2X sidelink communication pre-configuration for PSSCH/PSCCH tests (Configuration #1-V2X)**

# Annex B (normative): Propagation Conditions

The propagation conditions and channel models for various environments are specified. For each environment a propagation model is used to evaluate the propagation pathless due to the distance. Channel models are formed by combining delay profiles with a Doppler spectrum, with the addition of correlation properties in the case of a multi-antenna scenario.

## B.0 No interference

The downlink connection between the System Simulator and the UE is without Additive White Gaussian Noise, and has no fading or multipath effects.

## B.1 Static propagation condition

The downlink connection between the System Simulator and the UE is an Additive White Gaussian Noise (AWGN) environment (unless otherwise stated) with no fading or multipath effects.

For 1 port transmission to UE Receiver with 2Rx the channel matrix is defined in the frequency domain by

$$\mathbf{H} = \begin{pmatrix} 1 \\ 1 \end{pmatrix}.$$

For 2 port transmission to UE Receiver with 2Rx the channel matrix is defined in the frequency domain by

$$\mathbf{H} = \begin{pmatrix} 1 & j \\ 1 & -j \end{pmatrix}$$

For 4 port transmission to UE Receiver with 2Rx the channel matrix is defined in the frequency domain by

$$\mathbf{H} = \begin{bmatrix} 1 & 1 & j & j \\ 1 & 1 & -j & -j \end{bmatrix}$$

For 8 port transmission to UE Receiver with 2Rx the channel matrix is defined in the frequency domain by

$$\mathbf{H} = \begin{bmatrix} 1 & 1 & 1 & 1 & j & j & j & j \\ 1 & 1 & 1 & 1 & -j & -j & -j & -j \end{bmatrix}$$

For 1 port transmission to UE Receiver with 4Rx the channel matrix is defined in the frequency domain by

$$\mathbf{H} = \begin{bmatrix} 1 \\ 1 \\ 1 \\ 1 \end{bmatrix}.$$

For 2 port transmission to UE Receiver with 4Rx the channel matrix is defined in the frequency domain by

$$\mathbf{H} = \begin{bmatrix} 1 & j \\ 1 & -j \\ 1 & j \\ 1 & -j \end{bmatrix}.$$

For 4 port transmission to UE Receiver with 4Rx the channel matrix is defined in the frequency domain by

$$\mathbf{H} = \begin{bmatrix} 1 & 1 & j & j \\ 1 & 1 & -j & -j \\ 1 & -1 & j & -j \\ 1 & -1 & -j & j \end{bmatrix}.$$

For 8 port transmission to UE Receiver with 4Rx the channel matrix is defined in the frequency domain by

$$\mathbf{H} = \begin{bmatrix} 1 & 1 & 1 & 1 & j & j & j & j \\ 1 & 1 & 1 & 1 & -j & -j & -j & -j \\ 1 & 1 & -1 & -1 & j & j & -j & -j \\ 1 & 1 & -1 & -1 & -j & -j & j & j \end{bmatrix}$$

### B.1.1 Definition of Additive White Gaussian Noise (AWGN) Interferer

Note that the AWGN interferer can be used in static propagation conditions, or in conjunction with multi-path fading.

The acceptable uncertainties of the AWGN interferer are defined in Annex F.

## B.2 Multi-path fading Propagation Conditions

The multipath propagation conditions consist of several parts:

- A delay profile in the form of a "tapped delay-line", characterized by a number of taps at fixed positions on a sampling grid. The profile can be further characterized by the r.m.s. delay spread and the maximum delay spanned by the taps.
- A combination of channel model parameters that include the Delay profile and the Doppler spectrum that is characterized by a classical spectrum shape and a maximum Doppler frequency
- A set of correlation matrices defining the correlation between the UE and eNodeB antennas in case of multi-antenna systems.

### B.2.1 Delay profiles

The delay profiles are selected to be representative of low, medium and high delay spread environments. The resulting model parameters are defined in Table B.2.1-1 and the tapped delay line models are defined in Tables B.2.1-2, B.2.1-3 and B.2.1-4.

**Table B.2.1-1: Delay profiles for E-UTRA channel models**

| Model | Number of channel taps | Delay spread (r.m.s.) | Maximum excess tap delay (span) |
|---|---|---|---|
| Extended Pedestrian A (EPA) | 7 | 45 ns | 410 ns |
| Extended Vehicular A model (EVA) | 9 | 357 ns | 2510 ns |
| Extended Typical Urban model (ETU) | 9 | 991 ns | 5000 ns |

**Table B.2.1-2: Extended Pedestrian A model (EPA)**

| Excess tap delay [ns] | Relative power [dB] |
|---|---|
| 0 | 0.0 |
| 30 | -1.0 |
| 70 | -2.0 |
| 90 | -3.0 |
| 110 | -8.0 |
| 190 | -17.2 |
| 410 | -20.8 |

**Table B.2.1-3: Extended Vehicular A model (EVA)**

| Excess tap delay [ns] | Relative power [dB] |
|---|---|
| 0 | 0.0 |
| 30 | -1.5 |
| 150 | -1.4 |
| 310 | -3.6 |
| 370 | -0.6 |
| 710 | -9.1 |
| 1090 | -7.0 |
| 1730 | -12.0 |
| 2510 | -16.9 |

**Table B.2.1-4: Extended Typical Urban model (ETU)**

| Excess tap delay [ns] | Relative power [dB] |
|---|---|
| 0 | -1.0 |
| 50 | -1.0 |
| 120 | -1.0 |
| 200 | 0.0 |
| 230 | 0.0 |
| 500 | 0.0 |
| 1600 | -3.0 |
| 2300 | -5.0 |
| 5000 | -7.0 |

## B.2.2 Combinations of channel model parameters

The propagation conditions used for the performance measurements in multi-path fading environment are indicated as EVA[number], EPA[number] or ETU[number] where 'number' indicates the maximum Doppler frequency (Hz).

**Table B.2.2-1: Void**

## B.2.3 MIMO Channel Correlation Matrices

The MIMO channel correlation matrices defined in B.2.3 apply for the antenna configuration using uniform linear arrays at both eNodeB and UE.

## B.2.3.1 Definition of MIMO Correlation Matrices

Table B.2.3.1-1 defines the correlation matrix for the eNodeB

**Table B.2.3.1-1: eNodeB correlation matrix**

| | One antenna | Two antennas | Four antennas |
|---|---|---|---|
| eNode B Correlation | $R_{eNB} = 1$ | $R_{eNB} = \begin{pmatrix} 1 & \alpha \\ \alpha^* & \mathbf{1} \end{pmatrix}$ | $R_{eNB} = \begin{pmatrix} 1 & \alpha^{1/9} & \alpha^{4/9} & \alpha \\ \alpha^{1/9*} & 1 & \alpha^{1/9} & \alpha^{4/9} \\ \alpha^{4/9*} & \alpha^{1/9*} & 1 & \alpha^{1/9} \\ \alpha^* & \alpha^{4/9*} & \alpha^{1/9*} & 1 \end{pmatrix}$ |

Table B.2.3.1-2 defines the correlation matrix for the UE:

**Table B.2.3.1-2: UE correlation matrix**

| | One antenna | Two antennas | Four antennas |
|---|---|---|---|
| UE Correlation | $R_{UE} = 1$ | $R_{UE} = \begin{pmatrix} 1 & \beta \\ \beta^* & \mathbf{1} \end{pmatrix}$ | $R_{UE} = \begin{pmatrix} 1 & \beta^{1/9} & \beta^{4/9} & \beta \\ \beta^{1/9*} & 1 & \beta^{1/9} & \beta^{4/9} \\ \beta^{4/9*} & \beta^{1/9*} & 1 & \beta^{1/9} \\ \beta^* & \beta^{4/9*} & \beta^{1/9*} & 1 \end{pmatrix}$ |

Table B.2.3.1-3 defines the channel spatial correlation matrix $R_{spat}$. The parameters, α and β in Table B.2.3.1-3 defines the spatial correlation between the antennas at the eNodeB and UE.

**Table B.2.3.1-3: $R_{spat}$ correlation matrices**

| | |
|---|---|
| 1x2 case | $R_{spat} = R_{UE} = \begin{bmatrix} 1 & \beta \\ \beta^* & 1 \end{bmatrix}$ |
| **2x1 case** | $R_{spat} = R_{eNB} = \begin{bmatrix} 1 & \alpha \\ \alpha^* & 1 \end{bmatrix}$ |
| 2x2 case | $R_{spat} = R_{eNB} \otimes R_{UE} = \begin{bmatrix} 1 & \alpha \\ \alpha^* & 1 \end{bmatrix} \otimes \begin{bmatrix} 1 & \beta \\ \beta^* & 1 \end{bmatrix} = \begin{bmatrix} 1 & \beta & \alpha & \alpha\beta \\ \beta^* & 1 & \alpha\beta^* & \alpha \\ \alpha^* & \alpha^*\beta & 1 & \beta \\ \alpha^*\beta^* & \alpha^* & \beta^* & 1 \end{bmatrix}$ |
| 4x2 case | $R_{spat} = R_{eNB} \otimes R_{UE} = \begin{bmatrix} 1 & \alpha^{1/9} & \alpha^{4/9} & \alpha \\ \alpha^{1/9*} & 1 & \alpha^{1/9} & \alpha^{4/9} \\ \alpha^{4/9*} & \alpha^{1/9*} & 1 & \alpha^{1/9} \\ \alpha^* & \alpha^{4/9*} & \alpha^{1/9*} & 1 \end{bmatrix} \otimes \begin{bmatrix} 1 & \beta \\ \beta^* & 1 \end{bmatrix}$ |
| 4x4 case | $R_{spat} = R_{eNB} \otimes R_{UE} = \begin{bmatrix} 1 & \alpha^{1/9} & \alpha^{4/9} & \alpha \\ \alpha^{1/9*} & 1 & \alpha^{1/9} & \alpha^{4/9} \\ \alpha^{4/9*} & \alpha^{1/9*} & 1 & \alpha^{1/9} \\ \alpha^* & \alpha^{4/9*} & \alpha^{1/9*} & 1 \end{bmatrix} \otimes \begin{pmatrix} 1 & \beta^{1/9} & \beta^{4/9} & \beta \\ \beta^{1/9*} & 1 & \beta^{1/9} & \beta^{4/9} \\ \beta^{4/9*} & \beta^{1/9*} & 1 & \beta^{1/9} \\ \beta^* & \beta^{4/9*} & \beta^{1/9*} & 1 \end{pmatrix}$ |

For cases with more antennas at either eNodeB or UE or both, the channel spatial correlation matrix can still be expressed as the Kronecker product of $R_{eNB}$ and $R_{UE}$ according to $R_{spat} = R_{eNB} \otimes R_{UE}$ .

## B.2.3.2 MIMO Correlation Matrices at High, Medium and Low Level

The $\alpha$ and $\beta$ for different correlation types are given in Table B.2.3.2-1.

**Table B.2.3.2-1**

| Low correlation | | Medium Correlation | | High Correlation | |
|---|---|---|---|---|---|
| α | β | α | β | α | β |
| 0 | 0 | 0.3 | 0.9 | 0.9 | 0.9 |

The correlation matrices for high, medium and low correlation are defined in Table B.2.3.2-2, B.2.3.2-3 and B.2.3.2-4,as below.

The values in the Table B.2.3.2-2 table have been adjusted for the 4x2 and 4x4 high correlation cases to insure the correlation matrix is positive semi-definite after round-off to 4 digit precision. This is done using the equation:

$$\mathbf{R}_{high} = [\mathbf{R}_{spatial} + aI_n]/(1+a)$$

Where the value "a" is a scaling factor such that the smallest value is used to obtain a positive semi-definite result. For the 4x2 high correlation case, a=0.00010. For the 4x4 high correlation case, a=0.00012.

The same method is used to adjust the 4x4 medium correlation matrix in Table B.2.3.2-3 to insure the correlation matrix is positive semi-definite after round-off to 4 digit precision with a = 0.00012.

**Table B.2.3.2-2: MIMO correlation matrices for high correlation**

| | |
|---|---|
| 1x2 case | $R_{high} = \begin{pmatrix} 1 & 0.9 \\ 0.9 & 1 \end{pmatrix}$ |
| 2x1 case | $R_{high} = \begin{pmatrix} 1 & 0.9 \\ 0.9 & 1 \end{pmatrix}$ |
| 2x2 case | $R_{high} = \begin{pmatrix} 1 & 0.9 & 0.9 & 0.81 \\ 0.9 & 1 & 0.81 & 0.9 \\ 0.9 & 0.81 & 1 & 0.9 \\ 0.81 & 0.9 & 0.9 & 1 \end{pmatrix}$ |
| 4x2 case | $R_{high} = \begin{bmatrix} 1.0000 & 0.8999 & 0.9883 & 0.8894 & 0.9542 & 0.8587 & 0.8999 & 0.8099 \\ 0.8999 & 1.0000 & 0.8894 & 0.9883 & 0.8587 & 0.9542 & 0.8099 & 0.8999 \\ 0.9883 & 0.8894 & 1.0000 & 0.8999 & 0.9883 & 0.8894 & 0.9542 & 0.8587 \\ 0.8894 & 0.9883 & 0.8999 & 1.0000 & 0.8894 & 0.9883 & 0.8587 & 0.9542 \\ 0.9542 & 0.8587 & 0.9883 & 0.8894 & 1.0000 & 0.8999 & 0.9883 & 0.8894 \\ 0.8587 & 0.9542 & 0.8894 & 0.9883 & 0.8999 & 1.0000 & 0.8894 & 0.9883 \\ 0.8999 & 0.8099 & 0.9542 & 0.8587 & 0.9883 & 0.8894 & 1.0000 & 0.8999 \\ 0.8099 & 0.8999 & 0.8587 & 0.9542 & 0.8894 & 0.9883 & 0.8999 & 1.0000 \end{bmatrix}$ |
| 4x4 case | $R_{high} = \begin{bmatrix} 1.0000 & 0.9882 & 0.9541 & 0.8999 & 0.9882 & 0.9767 & 0.9430 & 0.8894 & 0.9541 & 0.9430 & 0.9105 & 0.8587 & 0.8999 & 0.8894 & 0.8587 & 0.8099 \\ 0.9882 & 1.0000 & 0.9882 & 0.9541 & 0.9767 & 0.9882 & 0.9767 & 0.9430 & 0.9430 & 0.9541 & 0.9430 & 0.9105 & 0.8894 & 0.8999 & 0.8894 & 0.8587 \\ 0.9541 & 0.9882 & 1.0000 & 0.9882 & 0.9430 & 0.9767 & 0.9882 & 0.9767 & 0.9105 & 0.9430 & 0.9541 & 0.9430 & 0.8587 & 0.8894 & 0.8999 & 0.8894 \\ 0.8999 & 0.9541 & 0.9882 & 1.0000 & 0.8894 & 0.9430 & 0.9767 & 0.9882 & 0.8587 & 0.9105 & 0.9430 & 0.9541 & 0.8099 & 0.8587 & 0.8894 & 0.8999 \\ 0.9882 & 0.9767 & 0.9430 & 0.8894 & 1.0000 & 0.9882 & 0.9541 & 0.8999 & 0.9882 & 0.9767 & 0.9430 & 0.8894 & 0.9541 & 0.9430 & 0.9105 & 0.8587 \\ 0.9767 & 0.9882 & 0.9767 & 0.9430 & 0.9882 & 1.0000 & 0.9882 & 0.9541 & 0.9767 & 0.9882 & 0.9767 & 0.9430 & 0.9430 & 0.9541 & 0.9430 & 0.9105 \\ 0.9430 & 0.9767 & 0.9882 & 0.9767 & 0.9541 & 0.9882 & 1.0000 & 0.9882 & 0.9430 & 0.9767 & 0.9882 & 0.9767 & 0.9105 & 0.9430 & 0.9541 & 0.9430 \\ 0.8894 & 0.9430 & 0.9767 & 0.9882 & 0.8999 & 0.9541 & 0.9882 & 1.0000 & 0.8894 & 0.9430 & 0.9767 & 0.9882 & 0.8587 & 0.9105 & 0.9430 & 0.9541 \\ 0.9541 & 0.9430 & 0.9105 & 0.8587 & 0.9882 & 0.9767 & 0.9430 & 0.8894 & 1.0000 & 0.9882 & 0.9541 & 0.8999 & 0.9882 & 0.9767 & 0.9430 & 0.8894 \\ 0.9430 & 0.9541 & 0.9430 & 0.9105 & 0.9767 & 0.9882 & 0.9767 & 0.9430 & 0.9882 & 1.0000 & 0.9882 & 0.9541 & 0.9767 & 0.9882 & 0.9767 & 0.9430 \\ 0.9105 & 0.9430 & 0.9541 & 0.9430 & 0.9430 & 0.9767 & 0.9882 & 0.9767 & 0.9541 & 0.9882 & 1.0000 & 0.9882 & 0.9430 & 0.9767 & 0.9882 & 0.9767 \\ 0.8587 & 0.9105 & 0.9430 & 0.9541 & 0.8894 & 0.9430 & 0.9767 & 0.9882 & 0.8999 & 0.9541 & 0.9882 & 1.0000 & 0.8894 & 0.9430 & 0.9767 & 0.9882 \\ 0.8999 & 0.8894 & 0.8587 & 0.8099 & 0.9541 & 0.9430 & 0.9105 & 0.8587 & 0.9882 & 0.9767 & 0.9430 & 0.8894 & 1.0000 & 0.9882 & 0.9541 & 0.8999 \\ 0.8894 & 0.8999 & 0.8894 & 0.8587 & 0.9430 & 0.9541 & 0.9430 & 0.9105 & 0.9767 & 0.9882 & 0.9767 & 0.9430 & 0.9882 & 1.0000 & 0.9882 & 0.9541 \\ 0.8587 & 0.8894 & 0.8999 & 0.8894 & 0.9105 & 0.9430 & 0.9541 & 0.9430 & 0.9430 & 0.9767 & 0.9882 & 0.9767 & 0.9541 & 0.9882 & 1.0000 & 0.9882 \\ 0.8099 & 0.8587 & 0.8894 & 0.8999 & 0.8587 & 0.9105 & 0.9430 & 0.9541 & 0.8894 & 0.9430 & 0.9767 & 0.9882 & 0.8999 & 0.9541 & 0.9882 & 1.0000 \end{bmatrix}$ |

**Table B.2.3.2-4: MIMO correlation matrices for low correlation**

| | |
|---|---|
| 1x2 case | $R_{low} = \mathbf{I}_2$ |
| 2x1 case | $R_{low} = \mathbf{I}_2$ |
| 2x2 case | $R_{low} = \mathbf{I}_4$ |
| 4x2 case | $R_{low} = \mathbf{I}_8$ |
| 4x4 case | $R_{low} = \mathbf{I}_{16}$ |

In Table B.2.3.2-4, $\mathbf{I}_d$ is the $d \times d$ identity matrix.

# B.2.3A MIMO Channel Correlation Matrices using cross polarized antennas

The MIMO channel correlation matrices defined in B.2.3A apply for the antenna configuration using cross polarized (XP/X-pol) antennas at both eNodeB and UE. The cross-polarized antenna elements with +/-45 degrees polarization

slant angles are deployed at eNB and cross-polarized antenna elements with +90/0 degrees polarization slant angles are deployed at UE.

For the cross-polarized antennas, the N antennas are labelled such that antennas for one polarization are listed from 1 to N/2 and antennas for the other polarization are listed from N/2+1 to N, where N is the number of transmit or receive antennas.

### B.2.3A.1 Definition of MIMO Correlation Matrices using cross polarized antennas

For the channel spatial correlation matrix, the following is used:

$$R_{spat} = P\left(R_{eNB} \otimes \Gamma \otimes R_{UE}\right)P^{T}$$

Where

- $R_{UE}$ is the spatial correlation matrix at the UE with same polarization,
- $R_{eNB}$ is the spatial correlation matrix at the eNB with same polarization,
- $\Gamma$ is a polarization correlation matrix, and
- $(\bullet)^{T}$ denotes transpose.

The matrix $\Gamma$ is defined as

$$\Gamma = \begin{bmatrix} 1 & 0 & -\gamma & 0 \\ 0 & 1 & 0 & \gamma \\ -\gamma & 0 & 1 & 0 \\ 0 & \gamma & 0 & 1 \end{bmatrix}$$

A permutation matrix $P$ element is defined as:

$$P(a,b) = \begin{cases} 1 & for \quad a = (j-1)Nr + i \quad and \quad b = 2(j-1)Nr + i, \qquad i = 1,\cdots,Nr,\ j = 1,\cdots Nt/2 \\ 1 & for \quad a = (j-1)Nr + i \quad and \quad b = 2(j-Nt/2)Nr - Nr + i, \quad i = 1,\cdots,Nr,\ j = Nt/2+1,\cdots,Nt \\ 0 & otherwise \end{cases}$$

Where $N_t$ and $N_r$ is the number of transmitter and receiver respectively. This is used to map the spatial correlation coefficients in accordance with the antenna element labelling system described in B.2.3A.

### B.2.3A.2 Spatial Correlation Matrices using cross polarized antennas at eNB and UE sides

#### B.2.3A.2.1 Spatial Correlation Matrices at eNB side

For 2-antenna transmitter using one pair of cross-polarized antenna elements, $R_{eNB} = 1$.

For 4-antenna transmitter using two pairs of cross-polarized antenna elements, $R_{eNB} = \begin{pmatrix} 1 & \alpha \\ \alpha^{*} & \boldsymbol{1} \end{pmatrix}$.

For 8-antenna transmitter using four pairs of cross-polarized antenna elements, $R_{eNB} = \begin{pmatrix} 1 & \alpha^{1/9} & \alpha^{4/9} & \alpha \\ \alpha^{1/9*} & 1 & \alpha^{1/9} & \alpha^{4/9} \\ \alpha^{4/9*} & \alpha^{1/9*} & 1 & \alpha^{1/9} \\ \alpha^{*} & \alpha^{4/9*} & \alpha^{1/9*} & 1 \end{pmatrix}$.

### B.2.3A.2.2 Spatial Correlation Matrices at UE side

For 2-antenna transmitter using one pair of cross-polarized antenna elements, $R_{UE} = 1$.

For 4-antenna transmitter using two pairs of cross-polarized antenna elements, $R_{UE} = \begin{pmatrix} 1 & \beta \\ \beta^* & \mathbf{1} \end{pmatrix}$.

### B.2.3A.3 MIMO Correlation Matrices using cross polarized antennas

The values for parameters α, β and γ for low correlation and high spatial correlation are given in Table B.2.3A.3-1.

**Table B.2.3A.3-1: The $\alpha$ and $\beta$ parameters for cross-polarized MIMO correlation matrices**

| Correlation Model | α | β | γ |
|---|---|---|---|
| **Medium Correlation A** | 0.3 | 0.6 | 0.2 |
| **High Correlation** | 0.9 | 0.9 | 0.3 |
| Note 1: Value of $\alpha$ applies when more than one pair of cross-polarized antenna elements at eNB side. | | | |
| Note 2: Value of β applies when more than one pair of cross-polarized antenna elements at UE side. | | | |

The correlation matrices for high spatial and low correlation are defined in Table B.2.3A.3-2 and Table B.2.3A.3-3 as below.

The values in Table B.2.3A.3-2 have been adjusted to insure the correlation matrix is positive semi-definite after round-off to 4 digit precision. This is done using the equation:

$$\mathbf{R}_{high} = [\mathbf{R}_{spat} + aI_n]/(1+a)$$

Where the value "a" is a scaling factor such that the smallest value is used to obtain a positive semi-definite result. For the 8x2 high spatial correlation case, a=0.00010.

## B.2.3A.4 Beam steering approach

Given the channel spatial correlation matrix in B.2.3A.1, the corresponding random channel matrix ***H*** can be calculated. The signal model for the k-th subframe is denoted as:

$$y = HD_{\theta_k}Wx + n$$

Where

- H is the N¬r xNt channel matrix per subcarrier.
- $D_{\theta_k}$ is the steering matrix,

For 8 transmission antennas, $D_{\theta_k} = \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix} \otimes \begin{bmatrix} 1 & 0 & 0 & 0 \\ 0 & e^{j\theta_k} & 0 & 0 \\ 0 & 0 & e^{j2\theta_k} & 0 \\ 0 & 0 & 0 & e^{j3\theta_k} \end{bmatrix}$;

For 4 transmission antennas, $D_{\theta_k} = \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix} \otimes \begin{bmatrix} 1 & 0 \\ 0 & e^{j\theta_k} \end{bmatrix}$.

- $\theta_k$ controls the phase variation, and the phase for k-th subframe is denoted by $\theta_k = \theta_0 + \Delta\theta \cdot k$, where $\theta_0$ is the random start value with the uniform distribution, i.e. $\theta_0 \in [0, 2\pi]$, $\Delta\theta$ is the step of phase variation, which is defined in Table B.2.3A.4-1, and ***k*** is the linear increment of 1 for every subframe throughout the simulation,
- $W$ is the precoding matrix for Nt transmission antennas,
- $y$ is the received signal, $x$ is the transmitted signal, and $n$ is AWGN.

**Table B.2.3A.4-1: The step of phase variation**

| Variation Step | Value (rad/subframe) |
|---|---|
| $\Delta\theta$ | $1.2566 \times 10^{-3}$ |

## B.2.4 Propagation conditions for CQI tests

[For Channel Quality Indication (CQI) tests, the following additional multi-path profile is used:

$$h(t,\tau) = \delta(\tau) + a\exp(-i2\pi f_D t)\delta(\tau - \tau_d)$$

in continuous time $(t,\tau)$ representation, with $\tau_d$ the delay, $a$ a constant and $f_D$ the Doppler frequency.]

## B.2.5 FFS

## B.2.6 MBSFN Propagation Channel Profile

Table B.2.6-1 shows propagation conditions that are used for the MBSFN performance requirements in multi-path fading environment in an extended delay spread environment.

**Table B.2.6-1: Propagation Conditions for Multi-Path Fading Environments for MBSFN Performance Requirements in an extended delay spread environment**

| Extended Delay Spread | |
|---|---|
| Maximum Doppler frequency [5Hz] | |
| Relative Delay [ns] | Relative Mean Power [dB] |
| 0 | 0 |
| 30 | -1.5 |
| 150 | -1.4 |
| 310 | -3.6 |
| 370 | -0.6 |
| 1090 | -7.0 |
| 12490 | -10 |
| 12520 | -11.5 |
| 12640 | -11.4 |
| 12800 | -13.6 |
| 12860 | -10.6 |
| 13580 | -17.0 |
| 27490 | -20 |
| 27520 | -21.5 |
| 27640 | -21.4 |
| 27800 | -23.6 |
| 27860 | -20.6 |
| 28580 | -27.0 |

# B.3 High speed train scenario

The high speed train condition for the test of the baseband performance is a non fading propagation channel with one tap. Doppler shift is given by

$$f_s(t) = f_d \cos\theta(t) \quad \text{(B.3.1)}$$

where $f_s(t)$ is the Doppler shift and $f_d$ is the maximum Doppler frequency. The cosine of angle $\theta(t)$ is given by

$$\cos\theta(t) = \frac{D_s/2 - vt}{\sqrt{D_{\min}{}^2 + (D_s/2 - vt)^2}},\ 0 \le t \le D_s/v \quad \text{(B.3.2)}$$

$$\cos\theta(t) = \frac{-1.5D_s + vt}{\sqrt{D_{\min}{}^2 + (-1.5D_s + vt)^2}},\ D_s/v < t \le 2D_s/v \quad \text{(B.3.3)}$$

$$\cos\theta(t) = \cos\theta(t \mod (2D_s/v)),\ t > 2D_s/v \quad \text{(B.3.4)}$$

where $D_s/2$ is the initial distance of the train form eNodeB, and $D_{\min}$ is eNodeB Railway track distance, both in meters; $v$ is the velocity of the train in m/s, $t$ is time in seconds.

Doppler shift and cosine angle are given by equation B.3.1 and B.3.2-B.3.4 respectively, where the required input parameters listed in table B.3-1 and the resulting Doppler shift is shown in Figure B.3-1 are applied for all frequency bands.

**Table B.3-1: High speed train scenario**

| Parameter | Value |
|---|---|
| $D_s$ | 300 m |
| $D_{\min}$ | 2 m |
| $v$ | 300 km/h |
| $f_d$ | 750 Hz |

NOTE 1: Parameters for HST conditions in table B.3-1 including $f_d$ and Doppler shift trajectories presented on figure B.3-1 were derived from Band7 and are applied for performance verification in all frequency bands.

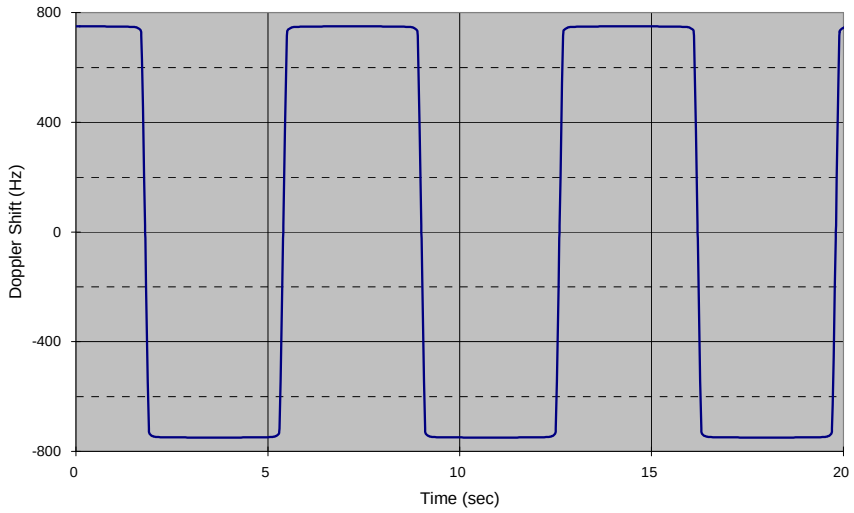

**Figure B.3-1: Doppler shift trajectory**

For 1x2 antenna configuration, the same $h(t,\tau)$ is used to describe the channel between every pair of Tx and Rx.

For 2x2 antenna configuration, the same $h(t,\tau)$ is used to describe the channel between every pair of Tx and Rx with phase shift according to $\mathbf{H} = \begin{pmatrix} 1 & j \\ 1 & -j \end{pmatrix}$.

# B.3A HST-SFN scenario

There is an infinite number of RRHs distributed equidistantly along the track with the same Cell ID as depicted in figure B.3A-1.

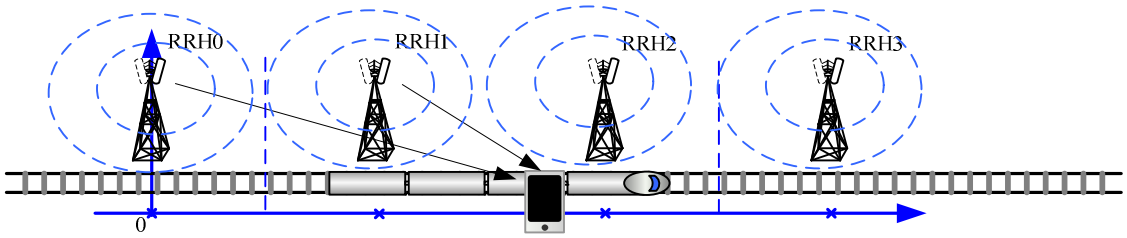

**Figure B.3A-1: Deployment of HST-SFN**

The location of RRH *k* is given as:

$$x_k = k * D_s + j * D_{\min} \qquad \text{(B.3A.1)}$$

where: $k \in [-\infty, \infty]$, $j = sqrt(-1)$ and $D_{\min}$ is the distance between the RRHs and railway track, while $D_s$ is the distance of two RRHs, both in meters.

The train location is denoted as:

$$y = a + j * 0 \qquad \text{(B.3A.2)}$$

where: $a \in [0, \infty]$ and *a* means distance in meters, which means the train is right on the track.

The HST-SFN scenario for the test of the baseband performance is a non fading propagation channel with four taps, namely the four nearest RRHs. Thus RRH *k* is visible for the train only in the range:

$$k * D_s - 2 * D_s \le a < k * D_s + 2 * D_s \qquad \text{(B.3A.3)}$$

Power level $P_k$ (dB) for the signal from *k*th RRH, normalized to the total power received from all visible RRHs, is given by:

$$P_k = -20\lg(|y - x_k|) + 20\lg(|D_S|) - 10\lg\left(\sum_{i \in \{i \mid i*D_S - 2*D_S \le a < i*D_S + 2*D_S\}} \frac{|D_S|^2}{|y - x_i|^2}\right) \text{ for}$$

$$k * D_s - 2 * D_s \le a < k * D_s + 2 * D_s \qquad \text{(B.3A.4)}$$

Doppler shift $F_{D,k}$ (Hz) from *k*th RRH is given by:

$$F_{D,k} = f_C \times real\left[-v \times \frac{y - x_k}{|y - x_k| \times C}\right] \text{ for } k * D_s - 2 * D_s \le a < k * D_s + 2 * D_s \qquad \text{(B.3A.5)}$$

The relative delay $T_k$ (s) for the signal from *k*th RRH can be derived as:

$$T_k = \frac{|y - x_k|}{C} \text{ for } k * D_s - 2 * D_s \le a < k * D_s + 2 * D_s \qquad \text{(B.3A.6)}$$

In the above *v* (m/s) is the moving speed of the train, $f_C$ (Hz) is the centre frequency, and *C* (m/s) is the velocity of light.

Power level, Doppler shift and relative delay are given by equations B.3A.4 ~ B.3A.6 respectively, where the required input parameters listed in table B.3A-1 and the resulting Doppler shift shown in Figure B.3A-3 are applied for all frequency bands.

**Table B.3A-1: HST-SFN scenario**

| Parameter | Value |
|---|---|
| $D_s$ | 1000 m |
| $D_{\min}$ | 50m |
| $v$ | 350 km/h |
| $f_d$ | 872 Hz |

NOTE 1: Parameters for HST-SFN scenario in Table B.3A-1 including $f_d$ and Doppler shift trajectories presented in Figure B.3A-2 were derived from Band 7 and are applied for performance verification in all frequency bands. And the trajectories of relative power, Doppler shifts and relative delay presented in Figures B.3A-2~ B.3A-4 are derived from the equations B.3A.4 ~ B.3A.6 respectively.

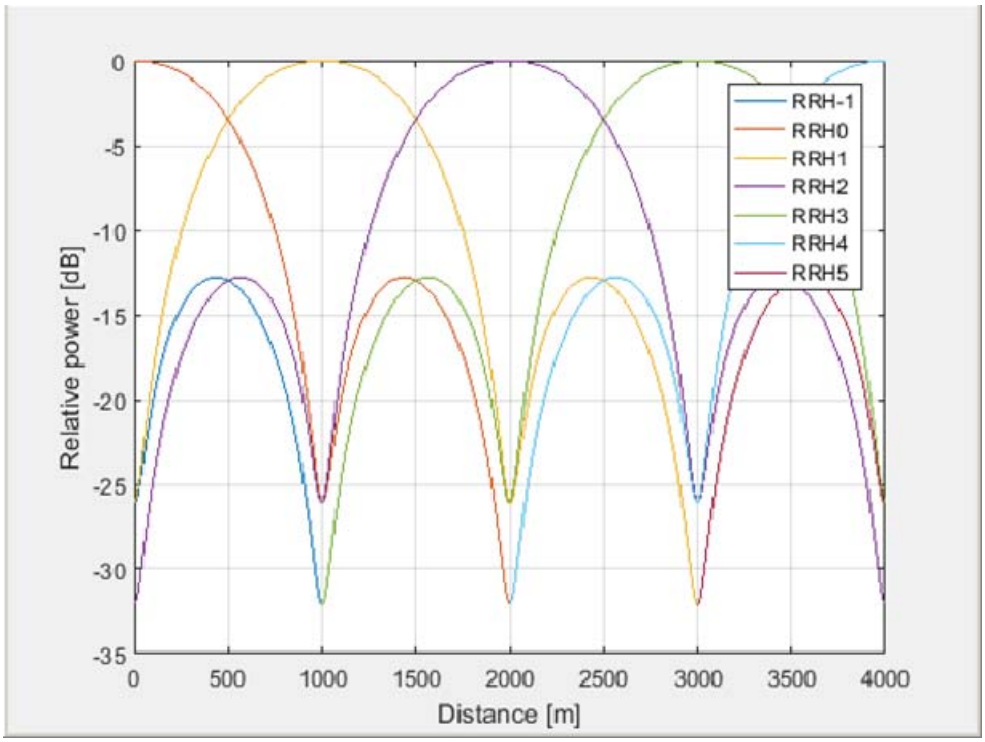

**Figure B.3A-2: Relative power level trajectories**

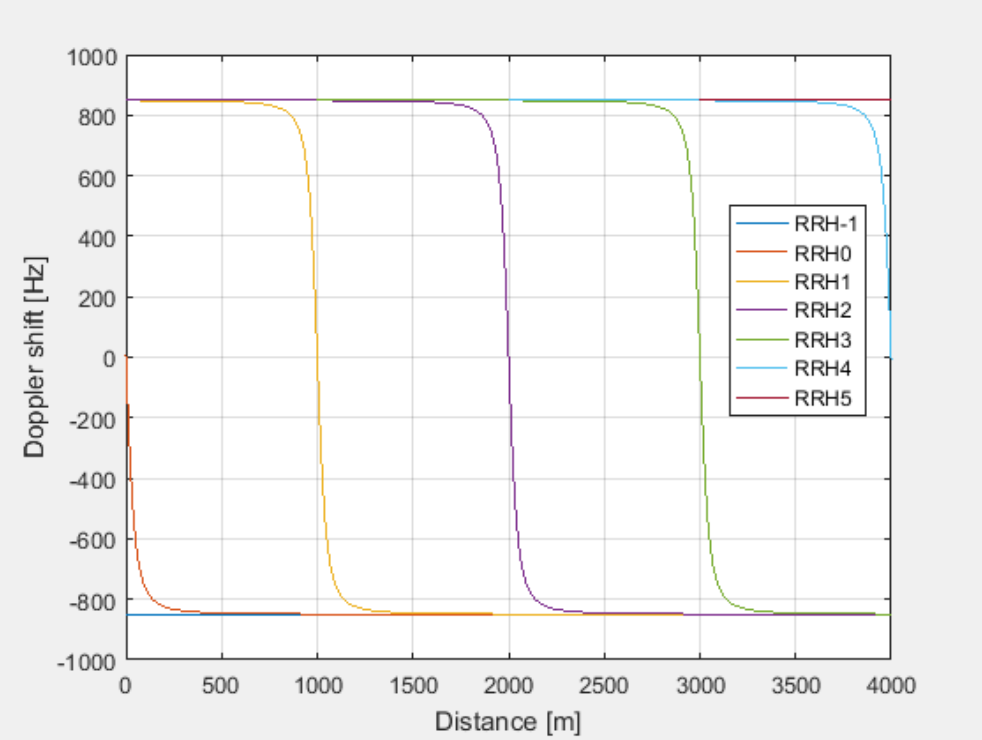

**Figure B.3A-3: Doppler shifts trajectories**

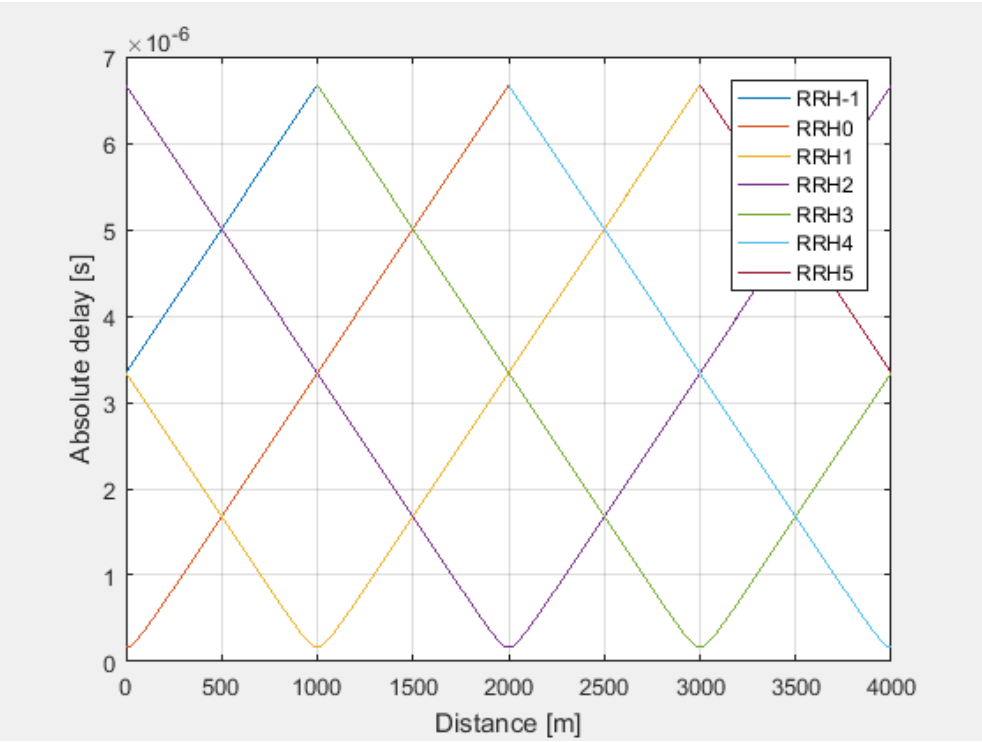

**Figure B.3A-4: Relative delay trajectories**

For 2x2 antenna configuration, the same $h(t,\tau)$ is used to describe the channel between every pair of Tx and Rx with phase shift according to $\mathbf{H} = \begin{pmatrix} 1 & j \\ 1 & -j \end{pmatrix}$.

# B.4 Beamforming Model

## B.4.1 Single-layer random beamforming (Antenna port 5, 7 or 8)

Single-layer transmission on antenna port 5 or on antenna port 7 or 8 without a simultaneous transmission on the other antenna port, is defined by using a precoder vector $W(i)$ of size $2\times 1$ randomly selected with the number of layers $\upsilon = 1$ from Table 6.3.4.2.3-1 in TS 36.211 [8] as beamforming weights. This precoder takes as an input the signal $y^{(p)}(i)$, $i = 0,1,...,M_{\text{symb}}^{\text{ap}} - 1$, for antenna port $p \in \{5, 7, 8\}$, with $M_{\text{symb}}^{\text{ap}}$ the number of modulation symbols including the user-specific reference symbols (DRS), and generates a block of signals $y_{bf}(i) = \left[y_{bf}(i) \quad \tilde{y}_{bf}(i)\right]^T$ the elements of which are to be mapped onto the same physical RE but transmitted on different antenna elements:

$$\begin{bmatrix} y_{bf}(i) \\ \tilde{y}_{bf}(i) \end{bmatrix} = W(i) y^{(p)}(i)$$

Single-layer transmission on antenna port 7 or 8 with a simultaneous transmission on the other antenna port, is defined by using a pair of precoder vectors $W_1(i)$ and $W_2(i)$ each of size $2\times 1$, which are not identical and randomly selected with the number of layers $\upsilon = 1$ from Table 6.3.4.2.3-1 in TS 36.211 [8], as beamforming weights, and normalizing the transmit power as follows:

$$\begin{bmatrix} y_{bf}(i) \\ \tilde{y}_{bf}(i) \end{bmatrix} = \frac{1}{\sqrt{2}} \left(W_1(i) y^{(7)}(i) + W_2(i) y^{(8)}(i)\right)$$

The precoder update granularity is specific to a test case.

The CSI reference symbols $a_{k,l}^{(p)}$ satisfying $p \bmod 2 = 1$, $p \in \{15,16,..,22\}$, are transmitted on the same physical antenna element as the modulation symbols $y_{bf}(i)$. The CSI reference symbols $a_{k,l}^{(p)}$ satisfying $p \bmod 2 = 0$, $p \in \{15,16,..,22\}$, are transmitted on the same physical antenna element as the modulation symbols $\tilde{y}_{bf}(i)$.

## B.4.1A Single-layer random beamforming (Antenna port 7, 8, 11 or 13 with enhanced DMRS table configured)

Single-layer transmission on antenna port 11 with a simultaneous transmission on one antenna port from antenna port 7,8 or 13, is defined by using a pair of precoder vectors $W_1(i)$ and $W_2(i)$ each of size $2\times 1$, which are not identical and randomly selected with the number of layers $\upsilon = 1$ from Table 6.3.4.2.3-1 in [4], as beamforming weights, and normalizing the transmit power as follows:

$$\begin{bmatrix} y_{bf}(i) \\ \tilde{y}_{bf}(i) \end{bmatrix} = \frac{1}{\sqrt{2}} \left(W_1(i) y^{(11)}(i) + W_2(i) y^{(p_1)}(i)\right)$$

The precoders takes $y^{(11)}(i)$ and $y^{(p_1)}(i)$ as the input the signals, $i = 0,1,...,M_{\text{symb}}^{\text{ap}} - 1$, with $M_{\text{symb}}^{\text{ap}}$ the number of modulation symbols including the user-specific reference symbols (DM-RS), and generates a block of signals $y_{bf}(i) = \left[y_{bf}(i) \quad \tilde{y}_{bf}(i)\right]^T$ the elements of which are to be mapped onto the same physical RE but transmitted on different antenna elements.

The antenna port $p_1 \in \{7,8,13\}$ update granularity is specific to a test case.

The precoder update granularity is specific to a test case.

The CSI reference symbols $a_{k,l}^{(p)}$ satisfying $p \bmod 2 = 1$, $p \in \{15,16,..,22\}$, are transmitted on the same physical antenna element as the modulation symbols $y_{bf}(i)$. The CSI reference symbols $a_{k,l}^{(p)}$ satisfying $p \bmod 2 = 0$, $p \in \{15,16,..,22\}$, are transmitted on the same physical antenna element as the modulation symbols $\tilde{y}_{bf}(i)$.

## B.4.2 Dual-layer random beamforming (antenna ports 7 and 8)

Dual-layer transmission on antenna ports 7 and 8 is defined by using a precoder matrix $W(i)$ of size $2 \times 2$ randomly selected with the number of layers $\upsilon = 2$ from Table 6.3.4.2.3-1 in TS 36.211 [8] as beamforming weights. This precoder takes as an input a block of signals for antenna ports 7 and 8, $y(i) = \left[y^{(7)}(i) \quad y^{(8)}(i)\right]^T$, $i = 0,1,..., M_{\text{symb}}^{\text{ap}} - 1$, with $M_{\text{symb}}^{\text{ap}}$ being the number of modulation symbols per antenna port including the user-specific reference symbols, and generates a block of signals $y_{bf}(i) = \left[y_{bf}(i) \quad \tilde{y}_{bf}(i)\right]^T$ the elements of which are to be mapped onto the same physical RE but transmitted on different antenna elements:

$$\begin{bmatrix} y_{bf}(i) \\ \tilde{y}_{bf}(i) \end{bmatrix} = W(i) \begin{bmatrix} y^{(7)}(i) \\ y^{(8)}(i) \end{bmatrix},$$

The precoder update granularity is specific to a test case.

The CSI reference symbols $a_{k,l}^{(p)}$ satisfying $p \bmod 2 = 1$, $p \in \{15,16,..,22\}$, are transmitted on the same physical antenna element as the modulation symbols $y_{bf}(i)$. The CSI reference symbols $a_{k,l}^{(p)}$ satisfying $p \bmod 2 = 0$, $p \in \{15,16,..,22\}$, are transmitted on the same physical antenna element as the modulation symbols $\tilde{y}_{bf}(i)$.

## B.4.3 Generic beamforming model (antenna ports 7-14)

The transmission on antenna port(s) $p = 7,8,..., \upsilon + 6$ is defined by using a precoder matrix $W(i)$ of size $N_{CSI} \times \upsilon$, where $N_{CSI}$ is the number of CSI reference signals configured per test and $\upsilon$ is the number of spatial layers. This precoder takes as an input a block of signals for antenna port(s) $p = 7,8,..., \upsilon + 6$, $y^{(p)}(i) = \left[y^{(7)}(i) \quad y^{(8)}(i) \quad \cdots \quad y^{(6+\upsilon)}(i)\right]$, $i = 0,1,..., M_{\text{symb}}^{\text{ap}} - 1$, with $M_{\text{symb}}^{\text{ap}}$ being the number of modulation symbols per antenna port including the user-specific reference symbols (DM-RS), and generates a block of signals $y_{bf}^{(q)}(i) = \left[y_{bf}^{(0)}(i) \quad y_{bf}^{(1)}(i) \quad \cdots \quad y_{bf}^{(N_{CSI}-1)}(i)\right]^T$ the elements of which are to be mapped onto the same time-frequency index pair $(k,l)$ but transmitted on different physical antenna elements:

$$\begin{bmatrix} y_{bf}^{(0)}(i) \\ y_{bf}^{(1)}(i) \\ \vdots \\ y_{bf}^{(N_{CSI}-1)}(i) \end{bmatrix} = W(i) \begin{bmatrix} y^{(7)}(i) \\ y^{(8)}(i) \\ \vdots \\ y^{(6+\upsilon)}(i) \end{bmatrix}$$

The precoder matrix $W(i)$ is specific to a test case.

The physical antenna elements are identified by indices $j = 0,1,..., N_{ANT} - 1$, where $N_{ANT} = N_{CSI}$ is the number of physical antenna elements configured per test.

Modulation symbols $y_{bf}^{(q)}(i)$ with (i.e. beamformed PDSCH and DM-RS) are mapped to the physical antenna index.

Modulation symbols with $p \in \{0,1,...,P-1\}$ (i.e. PBCH, PDCCH, PHICH, PCFICH) are mapped to the physical antenna index $j = p$, where $P$ is the number of cell-specific reference signals configured per test.

Modulation symbols $a_{k,l}^{(p)}$ with $p \in \{0,1,...,P-1\}$ (i.e. CRS) are mapped to the physical antenna index $j = p$, where $P$ is the number of cell-specific reference signals configured per test.

Modulation symbols $a_{k,l}^{(p)}$ with $p \in \{15,16,...,14+N_{CSI}\}$ (i.e. CSI-RS) are mapped to the physical antenna index $j = p-15$, where $N_{CSI}$ is the number of CSI reference signals configured per test.

## B.4.4 Random beamforming for EPDCCH distributed transmission (Antenna port 107 and 109)

EPDCCH distributed transmission on antenna port 107 and antenna port 109 is defined by using a pair of precoder vectors $W_1(i)$ and $W_2(i)$ each of size $2\times1$, which are not identical and randomly selected per EPDCCH PRB pair with the number of layers $\upsilon = 1$ from Table 6.3.4.2.3-1 in [8], as beamforming weights. This precoder takes as an input the signal $y^{(p)}(i)$, $i = 0,1,...,M_{\text{symb}}^{\text{ap}}-1$, for antenna port $p \in \{107,109\}$, with $M_{\text{symb}}^{\text{ap}}$ the number of modulation symbols including the user-specific reference symbols (DMRS), and generates a block of signals $y_{bf}(i) = \left[y_{bf}(i) \quad \tilde{y}_{bf}(i)\right]^T$. When EPDCCH is associated with port 107, the transmitted block of signals is denoted as

$$\begin{bmatrix} y_{bf}(i) \\ \tilde{y}_{bf}(i) \end{bmatrix} = W_1(i) y^{(107)}(i).$$

When EPDCCH is associated with port 109, the transmitted block of signals is denoted as

$$\begin{bmatrix} y_{bf}(i) \\ \tilde{y}_{bf}(i) \end{bmatrix} = W_2(i) y^{(109)}(i).$$

## B.4.5 Random beamforming for EPDCCH localized transmission (Antenna port 107, 108, 109 or 110)

EPDCCH localized transmission on antenna port 107, 108, 109 or 110 is defined by using a precoder vector $W(i)$ of size 2×1 randomly selected with the number of layers $\upsilon = 1$ from Table 6.3.4.2.3-1 in [8] as beamforming weights. This precoder takes as an input the signal $y^{(p)}(i)$, $i = 0,1,...,M_{\text{symb}}^{\text{ap}}-1$, for antenna port $p \in \{107,108,109,110\}$, with $M_{\text{symb}}^{\text{ap}}$ the number of modulation symbols including the user-specific reference symbols (DMRS), and generates a block of signals $y_{bf}(i) = \left[y_{bf}(i) \quad \tilde{y}_{bf}(i)\right]^T$ the elements of which are to be mapped onto the same physical RE but transmitted on different antenna elements:

$$\begin{bmatrix} y_{bf}(i) \\ \tilde{y}_{bf}(i) \end{bmatrix} = W(i) y^{(p)}(i).$$

## B.4.6 Beamforming model for CRI test

The transmission on antenna port(s) $p = 7,8,...,\upsilon+6$ is defined by using a precoder matrix $W(i)$ of size $N_{CSI} \times \upsilon$, where $N_{CSI}$ is the number of CSI reference signals configured per test and $\upsilon$ is the number of spatial layers. This precoder takes as an input a block of signals for antenna port(s) $p = 7,8,...,\upsilon+6$, $y^{(p)}(i) = \left[y^{(7)}(i) \quad y^{(8)}(i) \quad \cdots \quad y^{(6+\upsilon)}(i)\right]$, $i = 0,1,...,M_{\text{symb}}^{\text{ap}}-1$, with $M_{\text{symb}}^{\text{ap}}$ being the number of modulation symbols per antenna port including the user-specific reference symbols (DM-RS), and generates a block of signals

$y_{bf}^{(q)}(i) = \left[ y_{bf}^{(0)}(i) \quad y_{bf}^{(1)}(i) \quad \ldots \quad y_{bf}^{(N_{CSI}-1)}(i) \right]^T$ the elements of which are to be mapped onto the same time-frequency index pair $(k,l)$ but transmitted on different physical antenna elements:

$$\begin{bmatrix} y_{bf}^{(0)}(i) \\ y_{bf}^{(1)}(i) \\ \vdots \\ y_{bf}^{(N_{CSI}-1)}(i) \end{bmatrix} = \alpha(n) W(i) \begin{bmatrix} y^{(7)}(i) \\ y^{(8)}(i) \\ \vdots \\ y^{(6+\upsilon)}(i) \end{bmatrix}$$

- $W(i)$ is precoder matrix
- $\alpha(n)$ is amplitude scaling factor for CRI test, $\alpha(n) = 10^{P_{\theta_m}(n)/20}$
- $P_{\theta_m}(n)$ is power scaling factor as following definition:
  - $P_{\theta_m}(n) = A\cos\left(\theta_{\mathrm{m}} + \frac{2\pi n}{K}\right) + B$, A = 5 dB, B = -1.3351 dB.
  - $\theta_m$ controls the phase variation, and the phase for m-th subframe is denoted by $\theta_m = \theta_0 + \Delta\theta \cdot m$, where $\theta_0$ is the random start value with the uniform distribution, i.e., $\theta_0 \in [0, 2\pi]$, $\Delta\theta$ is the step of phase variation which is defined in Table B.4.6-1, and m is the linear increment of 1 for every sub-frame throughout the simulation.
  - K is the number of configured CSI-RS resources
  - $n \in \{0,1,\ldots,K-1\}$
- For following CRI with multiple CSI-RS resources configured, $n$ equals to CRI value reported by UE
- For fixed CRI with single CSI-RS resource configure, $n$ equals to 0.

**Table B.4.6-1: The step of phase variation**

| Variation Step | Value (rad/subframe) |
|---|---|
| $\Delta\theta$ | $1.2566\times10^{-3}$ |

The physical antenna elements are identified by indices $j = 0,1,\ldots,N_{ANT}-1$, where $N_{ANT} = N_{CSI}$ is the number of physical antenna elements configured per test.

Modulation symbols $y_{bf}^{(q)}(i)$ with $q \in \{0,1,\ldots,N_{CSI}-1\}$ (i.e. beamformed PDSCH and DM-RS) are mapped to the physical antenna index $j = q$.

For the k-th configured CSI-RS resource, modulation symbols $a_{k,l}^{(p)}$ with $p \in \{15,16,\ldots,14+N_{CSI}\}$ (i.e. CSI-RS) are firstly multiplied by amplitude scaling factor $\alpha(n)$ to generate power scaled symbols $y_{k,l}^{(p)}$:

$$y_{k,l}^{(p)} = \alpha(n) a_{k,l}^{(p)}$$

- $n$ equals to CSI-RS resource index (k-th)

And power scaled symbols $y_{k,l}^{(p)}$ with $p \in \{15,16,\ldots,14+N_{CSI}\}$ (i.e. power scaled CSI-RS) are mapped to the physical antenna index $j = p-15$, where $N_{CSI}$ is the number of CSI reference signals configured per test.

Modulation symbols $y^{(p)}(i)$ with $p \in \{0,1,...,P-1\}$ (i.e. PBCH, PDCCH, PHICH, PCFICH) are mapped to the physical antenna index $j = p$, where $P$ is the number of cell-specific reference signals configured per test.

Modulation symbols $a_{k,l}^{(p)}$ with $p \in \{0,1,...,P-1\}$ (i.e. CRS) are mapped to the physical antenna index $j = p$, where $P$ is the number of cell-specific reference signals configured per test.

# B.5 Interference models for enhanced performance requirements Type-A

This clause provides a description for the modelling of interfering cell transmissions for enhanced performance requirements Type-A including: definition of dominant interferer proportion, transmission mode 3, 4 and 9 type of interference modelling.

## B.5.1 Dominant interferer proportion

Each interfering cell involved in enhanced performance requirements Type-A is characterized by its associated dominant interferer proportion (DIP) value:

$$DIP_i = \frac{\hat{I}_{or(i+1)}}{N_{oc}'}$$

where is $\hat{I}_{or(i+1)}$ is the average received power spectral density from the i-th strongest interfering cell involved in the requirement scenario ( $\hat{I}_{or(1)}$ is assumed to be the power spectral density associated with the serving cell) and $N_{oc}' = \sum_{j=2}^{N} \hat{I}_{or(j)} + N_{oc}$ where $N_{oc}$ is the average power spectral density of a white noise source consistent with the definition provided in subclause 3.2 and $N$ is the total number of cells involved in a given requirement scenario.

## B.5.2 Transmission mode 3 interference model

This subclause provides transmission mode 3 interference modelling for each explicitly modelled interfering cell in the requirement scenario. In each subframe, each interfering cell shall transmit randomly modulated data over the entire PDSCH region and the full transmission bandwidth. Transmitted physical channels shall include PSS, SSS and PBCH.

For each subframe and each CQI subband as defined in subclause 7.2 of [10], a transmission rank shall be randomly determined independently from other CQI subbands as well as other interfering cells. Probabilities of occurrence of each possible transmission rank are as specified in the requirement scenario.

For rank-1 transmission over a subband, precoding for transmit diversity for the number of antenna ports in the requirement scenario shall be applied to 16QAM randomly modulated layer symbols, as specified in subclause 6.3.4.3 of [8].

For rank-2 transmission over a subband, precoding for spatial multiplexing with large delay CDD over two layers for the number of antenna ports in the requirement scenario shall be applied to 16QAM randomly modulated layer symbols, as specified in subclause 6.3.4.2.2 of [8].

For unallocated REs in the control region, precoding for transmit diversity for the number of antenna ports in the requirement scenario shall be applied to QPSK randomly modulated layer symbols, as specified in subclause 6.3.4.3 of [8]. The EPRE ratio for these REs shall be as defined for PDCCH in Annex C.3.2.

## B.5.3 Transmission mode 4 interference model

This subclause provides transmission mode 4 interference modelling for each explicitly modelled interfering cell in the requirement scenario. In each subframe, each interfering cell shall transmit randomly modulated data over the entire PDSCH region and the full transmission bandwidth. Transmitted physical channels shall include PSS, SSS and PBCH.

For each subframe and each CQI subband as defined in subclause 7.2 of [10], a transmission rank shall be randomly determined independently from other CQI subbands as well as other interfering cells. Probabilities of occurrence of each possible transmission rank are as specified in the requirement scenario.

For each subframe and CQI subband, a precoding matrix for the number of layers $\upsilon$ associated to the selected rank shall be selected randomly from Table 6.3.4.2.3-1 of [8]. Note that codebook index 0 shall be excluded from random precoder selection when the number of layers is $\upsilon = 2$.

Precoding for spatial multiplexing with cell-specific reference signals for the number of antenna ports in the requirement scenario shall be applied to 16QAM randomly modulated layer symbols, as specified in subclause 6.3.4.2.1 of [8] with the selected precoding matrices for each subframe and each CQI subband.

For unallocated REs in the control region, precoding for transmit diversity for the number of antenna ports in the requirement scenario shall be applied to QPSK randomly modulated layer symbols, as specified in subclause 6.3.4.3 of [8]. The EPRE ratio for these REs shall be as defined for PDCCH in Annex C.3.2.

## B.5.4 Transmission mode 9 interference model

This subclause provides transmission mode 9 interference modelling for each explicitly modelled interfering cell in the requirement scenario. In each subframe, each interfering cell shall transmit randomly modulated data over the entire PDSCH region and the full transmission bandwidth. Transmitted physical channels shall include PSS, SSS and PBCH.

For each subframe and each CQI subband as defined in subclause 7.2 of [10], a transmission rank shall be randomly determined independently from other CQI subbands as well as other interfering cells. Probabilities of occurrence of each possible transmission rank are as specified in the requirement scenario.

For each subframe and each CQI subband, a precoding matrix for the number of layers $\upsilon$ associated to the selected rank shall be selected randomly from Table 6.3.4.2.3-2 of [8].

The generic beamforming model in subclause B.4.3 shall be applied assuming cell-specific reference signals and CSI reference signals as specified in the requirement scenario. Random precoding with selected rank and precoding matrices for each subframe and each CQI subband shall be applied to 16QAM randomly modulated layer symbols including the user-specific reference symbols over antenna port 7 when the rank is one and antenna ports 7, 8 when the rank is two.

For unallocated REs in the control region, precoding for transmit diversity for the number of antenna ports in the requirement scenario shall be applied to QPSK randomly modulated layer symbols, as specified in subclause 6.3.4.3 of [8]. The EPRE ratio for these REs shall be as defined for PDCCH in Annex C.3.2.

# B.6 Interference models for enhanced performance requirements Type-B

This clause provides a description for the modelling of interfering cell transmissions for enhanced performance requirements Type-B including: transmission mode 2, 3, 4 and 9 type of interference modelling and a definition of the random interference model.

## B.6.1 Transmission mode 2 interference model

This subclause provides transmission mode 2 interference modelling for each explicitly modelled interfering cell in the requirement scenario. In each subframe, each interfering cell shall transmit randomly modulated data over the PDSCH region as specified in subclause B.6.6. Transmitted physical channels shall include PSS, SSS and PBCH.

The MCS shall be randomly determined with probabilities of occurrence of each possible MCS as specified in subclause B.6.6.

Precoding for transmit diversity for the number of antenna ports in the requirement scenario shall be applied to the randomly modulated layer symbols, as specified in subclause 6.3.4.3 of [8].

For unallocated REs in the control region, precoding for transmit diversity for the number of antenna ports in the requirement scenario shall be applied to QPSK randomly modulated layer symbols, as specified in subclause 6.3.4.3 of [8]. The EPRE ratio for these REs shall be as defined for PDCCH in Annex C.3.2.

## B.6.2 Transmission mode 3 interference model

This subclause provides transmission mode 3 interference modelling for each explicitly modelled interfering cell in the requirement scenario. In each subframe, each interfering cell shall transmit randomly modulated data over the PDSCH region as specified in subclause B.6.6. Transmitted physical channels shall include PSS, SSS and PBCH.

The transmission rank shall be randomly determined for each user defined in section B.6.6 with probabilities of occurrence of each possible transmission rank as specified in subclause B.6.6.

The MCS shall be randomly determined with probabilities of occurrence of each possible MCS as specified in subclause B.6.6.

For rank-1 transmission, precoding for transmit diversity for the number of antenna ports in the requirement scenario shall be applied to the randomly modulated layer symbols, as specified in subclause 6.3.4.3 of [8].

For rank-2 transmission, precoding for spatial multiplexing with large delay CDD over two layers for the number of antenna ports in the requirement scenario shall be applied to the randomly modulated layer symbols, as specified in subclause 6.3.4.2.2 of [8].

For unallocated REs in the control region, precoding for transmit diversity for the number of antenna ports in the requirement scenario shall be applied to QPSK randomly modulated layer symbols, as specified in subclause 6.3.4.3 of [8]. The EPRE ratio for these REs shall be as defined for PDCCH in Annex C.3.2.

## B.6.3 Transmission mode 4 interference model

This subclause provides transmission mode 4 interference modelling for each explicitly modelled interfering cell in the requirement scenario. In each subframe, each interfering cell shall transmit randomly modulated data over the PDSCH region as specified in subclause B.6.6. Transmitted physical channels shall include PSS, SSS and PBCH.

The transmission rank shall be randomly determined with probabilities of occurrence of each possible transmission rank as specified in subclause B.6.6.

The MCS shall be randomly determined with probabilities of occurrence of each possible MCS as specified in subclause B.6.6.

For each TTI, for each user defined in B.6.6, a single precoding matrix for the number of layers $\upsilon$ associated to the selected rank shall be selected randomly from Table 6.3.4.2.3-1 of [8]. Note that codebook index 0 shall be excluded from random precoder selection when the number of layers is $\upsilon = 2$.

Precoding for spatial multiplexing with cell-specific reference signals for the number of antenna ports in the requirement scenario shall be applied to randomly modulated layer symbols, as specified in subclause 6.3.4.2.1 of [8] with the selected precoding matrices as specified in subclause B.6.6.

For unallocated REs in the control region, precoding for transmit diversity for the number of antenna ports in the requirement scenario shall be applied to QPSK randomly modulated layer symbols, as specified in subclause 6.3.4.3 of [8]. The EPRE ratio for these REs shall be as defined for PDCCH in Annex C.3.2.

## B.6.4 Transmission mode 9 interference model

This subclause provides transmission mode 9 interference modelling for each explicitly modelled interfering cell in the requirement scenario. In each subframe, each interfering cell shall transmit randomly modulated data over the PDSCH region as specified in subclause B.6.6. Transmitted physical channels shall include PSS, SSS and PBCH.

The transmission rank shall be randomly determined with probabilities of occurrence of each possible transmission rank as specified in subclause B.6.6.

The MCS shall be randomly determined with probabilities of occurrence of each possible MCS as specified in subclause B.6.6.

For each TTI, for each user defined in B.6.6, a single precoding matrix for the number of layers $\upsilon$ associated to the selected rank shall be selected randomly from Table 6.3.4.2.3-1 of [8]. Note that codebook index 0 shall be excluded from random precoder selection when the number of layers is $\upsilon = 2$.

The generic beamforming model in subclause B.4.3 shall be applied assuming cell-specific reference signals and CSI reference signals as specified in the requirement scenario. Random precoding with selected rank and precoding matrices for each subframe shall be applied to randomly modulated layer symbols including the user-specific reference symbols over antenna port 7 when the rank is one and antenna ports 7, 8 when the rank is two.

For each TTI, for each user defined in B.6.6, the scrambling ID value nSCID is randomly assigned from the set of $\{0,1\}$.

For unallocated REs in the control region, precoding for transmit diversity for the number of antenna ports in the requirement scenario shall be applied to QPSK randomly modulated layer symbols, as specified in subclause 6.3.4.3 of [8]. The EPRE ratio for these REs shall be as defined for PDCCH in Annex C.3.2.

## B.6.5 CRS interference model

This subclause provides for the CRS interference modelling for each explicitly modelled interfering cell in the requirement scenario. In each subframe there is no PDSCH transmitted. Transmitted physical channels shall include PSS, SSS and PBCH.

For unallocated REs in the control region, precoding for transmit diversity for the number of antenna ports in the requirement scenario shall be applied to QPSK randomly modulated layer symbols, as specified in subclause 6.3.4.3 of [8]. The EPRE ratio for these REs shall be as defined for PDCCH in Annex C.3.2.

## B.6.6 Random interference model

This subclause presents the interference model which defines the resource allocation, MCS and rank for the two interference cells. The model includes approximately 10% DTX on these interference cells. Table B.6.6-1 shows the resource allocation for four users in two different configurations for each of the two interferers. Table B.6.6-2 shows the resource allocation to be used for special subframes with TM9 interference. Table B.6.6-3 shows the probabilities for the MSC and rank for these users.

**Table B.6.6-1: Resource allocation for the random interference model**

| Resource allocation configurations Indexes | User Index | Resource allocation for random interference model | | | | Probability |
|---|---|---|---|---|---|---|
| | | Resource allocation type | Bitmap for resource allocation (Note 1) | | | |
| | | | 1st field bitmap | 2nd field bitmap | 3rd field bitmap | |
| **Configuration 1** | User 0 | 1 | 00 | 0 | 10101000101010 | 50% |
| | User 1 | 1 | 00 | 0 | 01010101010101 | |
| | User 2 | 0 | 01001001001001001 | | | |
| | User 3 | 0 | 00100100100100100 | | | |
| **Configuration 2** | User 0 | 1 | 00 | 0 | 10101010101010 | 50% |
| | User 1 | 1 | 00 | 1 | 01010100010101 | |
| | User 2 | 0 | 01001001001001001 | | | |
| | User 3 | 0 | 00100100100100100 | | | |

NOTE 1: The 1st, 2nd, and 3rd field bitmaps are only valid for resource allocation type 1 which was defined in [10].
NOTE 2: The resource allocation model is used for both 1st and 2nd interfering cells and the resource allocation is independent for each interfering cell.

**Table B.6.6-2: Resource allocation for the random interference model for TM9 special subframes**

| Resource allocation configurations Indexes | User Index | Resource allocation for random interference model | | | | Probability |
|---|---|---|---|---|---|---|
| | | Resource allocation type | Bitmap for resource allocation (Note 1) | | | |
| | | | 1st field bitmap | 2nd field bitmap | 3rd field bitmap | |
| **Configuration 1** | User 0 | 1 | 00 | 0 | 10101000101010 | 50% |
| | User 1 | 1 | 00 | 0 | 01010101000001 | |
| | User 2 | 0 | 01001000001001001 | | | |
| | User 3 | 0 | 00100100000100100 | | | |
| **Configuration 2** | User 0 | 1 | 00 | 0 | 10101000101010 | 50% |
| | User 1 | 1 | 00 | 1 | 01010000010101 | |
| | User 2 | 0 | 01001000001001001 | | | |
| | User 3 | 0 | 00100100000100100 | | | |

NOTE 1: The 1st, 2nd, and 3rd field bitmaps are only valid for resource allocation type 1 which was defined in [10].
NOTE 2: The resource allocation model is used for both 1st and 2nd interfering cells and the resource allocation is independent for each interfering cell.

**Table B.6.6-3: MCS and rank configuration for the random interference model**

| MCS probability | | | Rank probability | |
|---|---|---|---|---|
| **MCS5** | **MCS14** | **MCS25** | **Rank 1** | **Rank 2** |
| 50% | 25% | 25% | 80% | 20% |

NOTE 1: The MCS and rank should follow the probability indicated in the table randomly per UE per TTI.
NOTE 2: The probabilities for MCS and rank configuration are used for both 1st and 2nd interfering cells. The MCS and rank configurations are independent for each interfering cell.

# B.7 FFS

# B.8 Burst transmission models for Frame structure type 3

## B.8.1 Burst transmission model for one LAA SCell

This clause provides a description for burst transmission models for Frame structure type 3.

One burst is defined as downlink transmissions which occupy one or more consecutive subframes. The burst transmission format is determined according to the steps below:

1) Select the number of subframes $N$ randomly from a given set of the number of subframes $S_1$ with equal probability as the total length of burst transmission format. The length includes both occupied OFDM symbols and non-occupied OFDM symbols within the burst format. $S_1$ is given per test case.

2) If $N$ is equal to 1, the subframe is set as fully occupied, otherwise:

   - For demodulation test, the starting position for the first subframe is randomly selected from OFDM symbol 0 and OFDM symbol 7 with equal probability. For CSI test, the starting position for the first subframe is OFDM symbol 0.

   - The configuration of occupied OFDM symbols in the last subframe is randomly selected from configuration set $S_2$. $S_2$ is given per test case.

A uniform random variable from [0, 1] is generated. If the random variable is less than *p* which is given per test case,

- If both the last subframe of previous burst and first subframe of new burst format are fully occupied, start burst transmission after deferring one subframe from the last subframe of previous burst. Otherwise, start burst transmission at the end of last subframe of previous burst.

- Otherwise, the burst transmission is muted and the muting duration is the same as the number of subframes for determined burst format.

# Annex C (normative): Downlink Physical Channels

This annex specifies the downlink physical channels that are needed for setting a connection and channels that are needed during a connection.

## C.0 Downlink signal levels

The downlink power settings in Table C.0-1 or Table C.0-2 are used unless otherwise specified in a test case.

If the UE has more than one Rx antenna, the downlink signal is applied to each one. All UE Rx antennas shall be connected.

If the UE has one Rx antenna, the downlink signal is applied to it.

**Table C.0-1: Default Downlink power levels for E-UTRA**

| | Unit | Channel bandwidth | | | | | |
|---|---|---|---|---|---|---|---|
| | | 1.4 MHz | 3 MHz | 5 MHz | 10 MHz | 15 MHz | 20 MHz |
| Number of RBs | | 6 | 15 | 25 | 50 | 75 | 100 |
| Channel BW Power | dBm | -66 | -62 | -60 | -57 | -55 | -54 |
| RS EPRE | dBm/15kHz | -85 | -85 | -85 | -85 | -85 | -85 |
| Note 1: The channel bandwidth powers and RB allocations are informative, based on -85dBm/15kHz RS_EPRE, then scaled according to the number of RBs and rounded to the nearest integer dBm value. Full RE allocation with no boost or deboost is assumed in this calculation, but allocation may vary during setup.<br>Note 2: The power level is specified at each UE Rx antenna. | | | | | | | |

**Table C.0-2: Default Downlink power levels for NB-IoT**

| | Unit | |
|---|---|---|
| Subcarriers | | 12 |
| Channel BW Power | dBm | -74 |
| NRS EPRE | dBm/15kHz | -85 |
| Note 1: The channel bandwidth power is informative, based on -85dBm/15kHz NRS_EPRE, then scaled according to the number of subcarriers and rounded to the nearest integer dBm value. Full RE allocation with no boost or deboost is assumed in this calculation, but allocation may vary during setup.<br>Note 2: The power level is specified at the UE Rx antenna | | |

The default signal level uncertainty is +/-3dB at each test port, for any level specified. If the uncertainty value is critical for the test purpose, a tighter uncertainty is specified for the related test case in Annex F.

## C.1 General

Table C.1-1 describes the mapping of downlink physical channels and signals to physical resources for E-UTRA FDD.

Table C.1-2 describes the mapping of downlink physical channels and signals to physical resources for E-UTRA TDD.

Table C.1-3 describes the mapping of downlink physical channels and signals to physical resources for NB-IoT.

**Table C.1-1: Mapping of downlink physical channels and signals to physical resources for E-UTRA FDD**

| Physical channel | Time Domain Location | Frequency Domain Location | Note |
|---|---|---|---|
| RS | Symbols 0, 4 of each subframe for antenna port 0 & 1<br>Symbol 1 of each subframe for antenna port 2 & 3 | Downlink system bandwidth dependent | Mapping rule is specified in TS 36.211 6.10.1.2<br>- CELL_ID = 0 |
| PBCH | Symbols 0 to 3 of slot 1 of subframe 0 of each radio frame | Occupies 72 subcarriers centred on the DC subcarrier | Mapping rule is specified in TS 36.211 Section 6.6.4 (Note 2) |
| PSS | Symbol 6 of slot 0 and 10 of each radio frame | Occupies 62 subcarriers centred on the DC subcarrier. Additional 10 subcarriers (5 on each side) adjacent to the centred 62 subcarriers are reserved. | Mapping rule is specified in TS 36.211 Section 6.11.1.2 |
| SSS | Symbol 5 of slots 0 and 10 of each radio frame | Occupies 62 subcarriers centred on the DC subcarrier. Additional 10 subcarriers (5 on each side) adjacent to the centred 62 subcarriers are reserved. | Mapping rule is specified in TS 36.211 Section 6.11.2.2 |
| PCFICH | Symbol 0 of each subframe | Downlink system bandwidth dependent. Maps into 4 REGs uniformly spread in the frequency domain over the whole system bandwidth. | Mapping rule is specified in TS 36.211 Section 6.7.4 (Note 1)<br>- CELL_ID = 0 |
| PHICH | Symbol 0 of each subframe | Downlink system bandwidth dependent. Each PHICH group maps into 3 REGs in the frequency domain on the REGs not assigned to PCFICH over the whole system bandwidth | Mapping rule is specified in TS 36.211 Section 6.9.3 (Note 1)<br>- CELL_ID = 0<br>- Ng = 1<br>- Normal PHICH duration<br>-Number of PHICH groups = 1(BW=1.4MHz)/2(BW=3MHz)/ 4(BW=5MHz)/7(BW=10MHz)/ 10(BW=15MHz)/13(BW=20MHz)<br><br>Not required for UE category M1 testing |
| PDCCH | Symbols 0, 1, 2, 3 of each subframe for 1.4 MHz<br><br>Symbols 0, 1, 2, of each subframe for 3 and 5 MHz<br><br>Symbols 0, 1 of each subframe for 10, 15 and 20 MHz | The remaining REGs not allocated to both PCFICH and PHICH are used for PDCCH | Mapping rule is specified in TS 36.211 Section 6.8.5 (Note 1) |
| MPDCCH | Same as PDSCH | For Subframe 0, subcarriers corresponding to resource elements not allocated to RS, PSS, SSS and PBCH (core set and repetitions) and reserved for PBCH antenna ports 3 and 4 on the 72 central subcarriers.<br><br>For Subframe 5, subcarriers corresponding to resource elements not allocated to RS, PSS and SSS.<br><br>For Subframe 9, subcarriers corresponding to resource elements not allocated to RS, PSS, SSS and PBCH (repetitions).<br><br>For other subframes, subcarriers corresponding to resource elements not allocated to RS. | Mapping rule is specified in TS 36.211 Section 6.8B.5 (Note 1)<br><br>Only required for UE category M1 testing |
| PDSCH | All remaining OFDM symbols of | For Subframe 0, | Note that there are reserved |

| | | | |
|---|---|---|---|
| | each subframe not allocated to PDCCH | REs not allocated to RS, PSS, SSS and PBCH, is allocated to PDSCH<br><br>For Subframe 5,<br>REs not allocated to RS, PSS and SSS, is allocated to PDSCH<br><br>For other subframes,<br>REs not allocated to RS, is allocated to PDSCH | REs that are not used for transmission of any physical channels (Note 3 ) & (Note 4) which need to be taken into account when allocating REs to PDSCH |

Note 1: In case a single cell-specific RS is configured, cell-specific RS shall be assume to be present on antenna ports 0 and 1 for the purpose of mapping a symbol-quadruplet to a REG (resource-element group). (See TS 36.211 Section 6.2.4).

Note 2: PBCH is mapped into RE assuming RS from 4 antennas are used at the eNB transmitter, irrespective of the actual number of Tx antenna. Resource elements assumed to be reserved for RS but not used for transmission of RS shall not be used for transmission of any physical channel. (See TS 36.211 Section 6.6.4).

Note 3: In slot 0 and slot 10 of each radio frame, there are reserved REs for PSS and SSS that are not used for transmission of any physical channels. (See TS 36.211 Section 6.11.1.2 & 6.11.2.2).

Note 4: REs used for RS transmission on any of the antenna ports in a slot shall not be used for any transmission on any other antenna port in the same slot and set to zero. (See TS 36.211 Section 6.10.1.2).

**Table C.1-2: Mapping of downlink physical channels and signals to physical resources for E-UTRA TDD**

| Physical channel | Time Domain Location | Frequency Domain Location | Note |
|---|---|---|---|
| RS | Symbols 0, 4 of each subframe for antenna port 0 & 1<br>Symbol 1 of each subframe for antenna port 2 & 3 | Downlink system bandwidth dependent. | Mapping rule is specified in TS 36.211[8] 6.10.1.2<br>- CELL_ID = 0 |
| PBCH | Symbols 0 to 3 of slot 1 of subframe 0 of each radio frame | Occupies 72 subcarriers centred on the DC subcarrier | Mapping rule is specified in TS 36.211[8] Section 6.6.4 (Note 3) |
| PSS | Symbol 2 of slot 2 and 12 of each radio frame | Occupies 62 subcarriers centred on the DC subcarrier. Additional 10 subcarriers (5 on each side) adjacent to the centred 62 subcarriers are reserved. | Mapping rule is specified in TS 36.211[8] Section 6.11.1.2 |
| SSS | Symbol 6 of slots 1 and 11 of each radio frame | Occupies 62 subcarriers centred on the DC subcarrier. Additional 10 subcarriers (5 on each side) adjacent to the centred 62 subcarriers are reserved. | Mapping rule is specified in TS 36.211[8] Section 6.11.2.2 |
| PCFICH | Symbol 0 of each subframe and special subframe | Downlink system bandwidth dependent. Maps into 4 REGs uniformly spread in the frequency domain over the whole system bandwidth | Mapping rule is specified in TS 36.211[8] Section 6.7.4 (Note 2)<br>- CELL_ID = 0 |
| PHICH | Symbol 0 of each subframe and special subframe | Downlink system bandwidth dependent. Each PHICH group maps into 3 REGs in the frequency domain on the REGs not assigned to PCFICH over the whole system bandwidth | Mapping rule is specified in TS 36.211[8] Section 6.9.3 (Note 2)<br>- CELL_ID = 0<br>- Ng = 1<br>- Normal PHICH duration<br>-Number of PHICH groups = 1(BW=1.4MHz)/2(BW=3MHz)/ 4(BW=5MHz)/7(BW=10MHz)/ 10(BW=15MHz)/13(BW=20MHz)<br><br>Not required for UE category M1 testing |
| PDCCH | For normal subframes(0,4,5,9)<br>Symbols 0, 1, 2, 3 of each subframe for 1.4 MHz<br>Symbols 0, 1, 2, of each subframe for 3 and 5 MHz<br>Symbols 0, 1 of each subframe for 10, 15 and 20 MHz<br><br>For special subframe (1&6)<br>Symbols 0, 1 of each subframe for all BWs | The remaining REGs not allocated to both PCFICH and PHICH are used for PDCCH | Mapping rule is specified in TS 36.211[8] Section 6.8.5 (Note 2) |
| MPDCCH | Same as PDSCH | For Subframe 0, subcarriers corresponding to resource elements not allocated to RS, SSS and PBCH (core set and repetitions) and reserved for PBCH antenna ports 3 and 4 on the 72 central subcarriers.<br><br>For Subframe 5, subcarriers corresponding to resource elements not allocated to RS, SSS and PBCH (repetitions).<br><br>For Subframe 1 and 6, resource elements not allocated to RS, PSS, GP and UpPTS.<br><br>For other subframes, subcarriers corresponding to resource elements not allocated to RS. | Mapping rule is specified in TS 36.211[8] Section 6.8B.5 (Note 2)<br><br>Only required for UE category M1 testing |

| | | | |
|---|---|---|---|
| PDSCH | ,All remaining OFDM symbols of each subframe not allocated to PDCCH with the following exception:<br>For 1.4MHz,no data shall be scheduled on special subframes (1&6) to avoid problems with insufficient PDCCH performance | For Subframe 0,<br>REs not allocated to RS, SSS and PBCH, is allocated to PDSCH<br><br>For Subframe 5,<br>REs not allocated to RS and SSS, is allocated to PDSCH<br><br>For Subframe 1 and 6,<br>REs not allocated to RS, PSS, GP and UpPTS is allocated to PDSCH<br><br>For other downlink subframes,<br>REs not allocated to RS is allocated to PDSCH | Note that there are reserved REs that are not used for transmission of any physical channels (Note 4 ) & (Note 5) which need to be taken into account when allocating REs to PDSCH |

Note 1: The mapping is based on the default TDD configuration for subframe assignment and special subframe patterns (see 36.508 [7]subclause 4.6.3)

Note 2: In case a single cell-specific RS is configured, cell-specific RS shall be assume to be present on antenna ports 0 and 1 for the purpose of mapping a symbol-quadruplet to a REG (resource-element group). (See TS 36.211[8] Section 6.2.4).

Note 3: PBCH is mapped into RE assuming RS from 4 antennas are used at the eNB transmitter, irrespective of the actual number of Tx antenna. Resource elements assumed to be reserved for RS but not used for transmission of RS shall not be used for transmission of any physical channel. (See TS 36.211[8] Section 6.6.4).

Note 4: In slot 1,2,11 and 12 of each radio frame, there are reserved REs for PSS and SSS that are not used for transmission of any physical channels. (See TS 36.211[8] Section 6.11.1.2 & 6.11.2.2).

Note 5: REs used for RS transmission on any of the antenna ports in a slot shall not be used for any transmission on any other antenna port in the same slot and set to zero. (See TS 36.211[8] Section 6.10.1.2).

**Table C.1-3: Mapping of downlink physical channels and signals to physical resources for NB-IoT**

| Physical channel | Time Domain Location | Frequency Domain Location | Note |
|---|---|---|---|
| NPBCH | NPBCH is transmitted in subframe 0 in every radio frame.<br>NPBCH consists of 8 independently decodable blocks of 80 ms duration.<br>The time interval where MIB remains unchanged is 640 ms.<br>NPBCH does not use the first 3 symbols in a subframe in in-band operation.<br>For stand-alone and guard-band, the first 3 symbols (of the subframe transmitting NPBCH) contain no NPBCH. | Occupies any of the 12 subcarriers not reserved for transmission of reference signals | Mapping rule is specified in TS 36.211 [8] sub clause 10.2.4.4 |
| NPSS | NPSS is transmitted in subframe 5.<br>NPSS uses the last 11 OFDM symbols of subframes in which NB-PSS occurs for normal CP.<br>NB-IoT PSS/SSS do not use:<br>- the LTE PDCCH control region<br>- REs used by LTE CRS<br>NSSS periodicity is 10ms. | NPSS is mapped to sub-carriers #0-10 of the NB-IoT carrier | Mapping rule is specified in TS 36.211 [8] sub clause 10.2.7.1.2 |
| NSSS | NSSS is transmitted in subframe 9.<br>NSSS uses the last 11 OFDM symbols of subframes in which NB-SSS occurs for normal CP.<br>NB-IoT PSS/SSS do not use:<br>- the LTE PDCCH control region<br>- REs used by LTE CRS<br>NSSS periodicity is 20ms. | The number of subcarriers for NSSS is 12 | Mapping rule is specified in TS 36.211 [8] sub clause 10.2.7.2.2 |
| NPDCCH | NPDCCH on a given NB-IoT carrier are not mapped to the subframes containing NPSS/NSSS/PBCH on that carrier.<br>NPDCCH are not be mapped onto resources elements used for NRS.<br>NPDCCH are not overlapped with PBCH, PSS, SSS, or CRS.<br>One or two NPDCCHs can be transmitted in a subframe.<br>In in-band, first 3 OFDM symbols are not used for NPDCCH.<br>In stand-alone and guard-band, all OFDM symbols are available for NPDCCH.<br>NPDCCH and NPDSCH are multiplexed only based on TDM at subframe level:<br>- It means that only cross subframe scheduling is supported<br>- The start of an NPDCCH search space is >=4ms after the end of the last NPDCCH search space | NPDCCH is transmitted on an aggregation of one or two consecutive narrowband control channel elements (NCCEs), where a narrowband control channel element corresponds to 6 consecutive subcarriers in a subframe where NCCE 0 occupies subcarriers 0 through 5 and NCCE 1 occupies subcarriers 6 through 11 | Mapping rule is specified in TS36.211 [8] sub clause 10.2.5.5 |
| NPDSCH | The start of NB-PDSCH transmission is >=4ms later than the end of its associated DL assignment.<br>NPDSCH on a given NB-IoT | Occupies any of the 12 subcarriers not reserved for transmission of reference signals | Mapping rule is specified in TS 36.211 [8] sub clause 10.2.3.4 |

| | | | |
|---|---|---|---|
| | carrier are not mapped to the subframes containing NPSS/NSSS/PBCH on that carrier.<br>NPDSCH resource elements should be different from the ones used for NRS.<br>NPDSCH resource elements should be different from the ones used for CRS. | | |
| NRS | Narrowband reference signals are transmitted in all NB-IoT downlink subframes in a cell supporting NPDSCH transmission.<br>NRS is not transmitted in subframes that are not NB-IoT downlink subframes, except if these subframes contain NPBCH or NPDSCH carrying SystemInformationBlockType1-NB where NRS shall be transmitted<br>Narrowband reference signals are transmitted in subframes #0 and #4 and in subframes #9 not containing NSSS [when no NB-IoT downlink subframes configuration has not been established].<br>The narrowband reference signals shall not be mapped to subframes containing NPSS or NSSS.<br>NRS are transmitted on one or two antenna ports 0 to 1 (Figure 10.2.6.2-1 in TS 36.211 [8]). | 2 subcarriers per antenna port in any OFDM symbol where NRS is transmitted | |

# C.2 Set-up

Table C.2-1 describes the downlink Physical Channels that are required for E-UTRA connection set up.

**Table C.2-1: Downlink Physical Channels required for E-UTRA connection set-up**

| Physical Channel | EPRE Ratio | Note |
|---|---|---|
| **PBCH** | PBCH_RA = 0 dB | |
| | PBCH_RB = 0 dB | |
| **PSS** | PSS_RA = 0 dB | |
| **SSS** | SSS_RA = 0 dB | |
| **PCFICH** | PCFICH_RB = 0 dB | |
| **PDCCH** | PDCCH_RA = 0 dB | |
| | PDCCH_RB = 0 dB | |
| **MPDCCH** | MPDCCH_RA = 0 dB | Only required for UE category M1 testing |
| | MPDCCH_RB = 0 dB | |
| **PDSCH** | PDSCH_RA = 0 dB | |
| | PDSCH_RB = 0 dB | |
| **PHICH** | PHICH_RA = 0 dB | Note 2 Not required for UE category M1 testing |
| | PHICH_RB = 0 dB | |
| Note 1: No boosting is applied.<br>Note 2: PHICH group power, i.e. the total power of all active PHICH sequences within a PHICH group. | | |

Table C.2-2 describes the configuration of PDSCH and PDCCH before measurement for E-UTRA FDD and Table C.2-3 for E-UTRA TDD.

Table C.2-4 describes the configuration of PDSCH and MPDCCH before measurement for FDD and Table C.2-5 for TDD.

**Table C.2-2: PDSCH and PDCCH configuration for E-UTRA FDD**

| Parameter | Unit | Value | Comments |
|---|---|---|---|
| Allocated resource blocks | | 6 | |
| MCS Index | | - | TB Size with transmitting message in 1TTI |
| Number of HARQ processes | Processes | 8 | |
| Maximum number of HARQ transmission | | 5 | |
| Aggregation level | CCE | 2 | Note 4 |
| DCI Format for PDSCH | | Format 1A | |
| DCI Format for PUSCH | | Format 0 | |
| Note 1: 2 symbols allocated to PDCCH for 20 MHz, 15 MHz and 10 MHz channel BW. 3 symbols allocated to PDCCH for 5 MHz and 3 MHz. 4 symbols allocated to PDCCH for 1.4 MHz.<br>Note 2: Reference signal, Synchronization signals and PBCH allocated as per TS 36.211 [8].<br>Note 3: The PDSCH shall be occupied 6 resource blocks centred on the DC subcarrier.<br>Note 4: For PDCCH using SI-RNTI, Aggregation level:<br>a)Tables C.3.0-3, C.3.1-3, and C.3.2-3 for RF tests<br>b)Table A.2.1-1 of 36.521-3 for RRM tests. | | | |

**Table C.2-3: PDSCH and PDCCH configuration for E-UTRA TDD**

| Parameter | Unit | Value | Comments |
|---|---|---|---|
| Allocated resource blocks | | 6 | |
| MCS Index | | 0 | TB Size with transmitting message in 1TTI |
| Number of HARQ processes (Note 1) | Processes | 7 | |
| Maximum number of HARQ transmission | | 4 | |
| Aggregation level | CCE | 2 | Note 5 |
| DCI Format for PDSCH | | Format 1A | |
| DCI Format for PUSCH | | Format 0 | |

Note 1: Number of HARQ processes shall be determined by UL/DL configuration, for configuration other than 1,the process number shall be set per TS 36.213 [10] Table 8-1.
Note 2: For normal downlink subframes, 2 symbols allocated to PDCCH for 20 MHz, 15 MHz and 10 MHz channel BW. 3 symbols allocated to PDCCH for 5 MHz and 3 MHz. 4 symbols allocated to PDCCH for 1.4 MHz. For special subframe (1&6), only 2 OFDM symbols are allocated to PDCCH for all BWs.
Note 3: Reference signal, Synchronization signals and PBCH allocated as per TS 36.211 [8].
Note 4: The PDSCH shall be occupied 6 resource blocks centred on the DC subcarrier.
Note 5: For PDCCH using SI-RNTI, Aggregation level:
a)Tables C.3.0-3, C.3.1-3, and C.3.2-3 for RF tests
b)Table A.2.2-1 of 36.521-3 for RRM tests

**Table C.2-4: PDSCH and MPDCCH configuration for FDD**

| Parameter | Unit | Value | Comments |
|---|---|---|---|
| Allocated resource blocks | | [6] | |
| MCS Index | | - | TB Size with transmitting message in 1TTI |
| Number of HARQ processes, CE Mode A | Processes | [8] | |
| Number of HARQ processes, CE Mode B | Processes | [2] | |
| Maximum number of HARQ transmission | | [5] | |
| Aggregation level | CCE | [2] | Note 4 |
| DCI Format for PDSCH | | Format 6-1A | CE Mode A |
| DCI Format for PDSCH | | Format 6-1B | CE mode B |
| DCI Format for PUSCH | | Format 6-0A | CE Mode A |
| DCI Format for PUSCH | | Format 6-0B | CE mode B |

Note 1: [2] symbols allocated to PDCCH for 20 MHz, 15 MHz and 10 MHz channel BW. [3] symbols allocated to PDCCH for 5 MHz and 3 MHz. [4] symbols allocated to PDCCH for 1.4 MHz.
Note 2: Reference signal, Synchronization signals and PBCH allocated as per TS 36.211 [8].
Note 3: Void.
Note 4: For MPDCCH using SI-RNTI, Aggregation level:
a)Tables C.3.0-3, C.3.1-3, and C.3.2-3 for RF tests
b)Table A.2.1-1 of 36.521-3 for RRM tests.

**Table C.2-5: PDSCH and MPDCCH configuration for TDD**

| Parameter | Unit | Value | Comments |
|---|---|---|---|
| Allocated resource blocks | | [6] | |
| MCS Index | | [0] | TB Size with transmitting message in 1TTI |
| Number of HARQ processes, CE Mode A (Note 1) | Processes | [7] | |
| Number of HARQ processes, CE Mode B | Processes | [2] | |
| Maximum number of HARQ transmission | | [4] | |
| Aggregation level | CCE | [2] | Note 5 |
| DCI Format for PDSCH | | Format 6-1A | CE Mode A |
| DCI Format for PDSCH | | Format 6-1B | CE mode B |
| DCI Format for PUSCH | | Format 6-0A | CE Mode A |
| DCI Format for PUSCH | | Format 6-0B | CE mode B |
| Note 1: Number of HARQ processes shall be determined by UL/DL configuration, for configuration other than 1,the process number shall be set per TS 36.213 [10] Table 8-1.<br>Note 2: For normal downlink subframes, [2] symbols allocated to PDCCH for 20 MHz, 15 MHz and 10 MHz channel BW. [3] symbols allocated to PDCCH for 5 MHz and 3 MHz. [4] symbols allocated to PDCCH for 1.4 MHz. For special subframe (1&6), only [2] OFDM symbols are allocated to PDCCH for all BWs.<br>Note 3: Reference signal, Synchronization signals and PBCH allocated as per TS 36.211 [8].<br>Note 4: Void.<br>Note 5: For MPDCCH using SI-RNTI, Aggregation level:<br>a)Tables C.3.0-3, C.3.1-3, and C.3.2-3 for RF tests<br>b)Table A.2.2-1 of 36.521-3 for RRM tests | | | |

**Table C.2-6: Downlink Physical Channels required for connection set-up, NB-IoT**

| Physical Channel | EPRE Ratio | Note |
|---|---|---|
| **NPBCH** | NPBCH_RA = 0 dB | |
| | NPBCH_RB = 0 dB | |
| **NPSS** | NPSS_RA = 0 dB | |
| **NSSS** | NSSS_RA = 0 dB | |
| **NPDCCH** | NPDCCH_RA = 0 dB | |
| | NPDCCH_RB = 0 dB | |
| **NPDSCH** | NPDSCH_RA = 0 dB | |
| | NPDSCH_RB = 0 dB | |
| Note 1: No boosting is applied. | | |

Table C.2-7 describes the configuration of NPDSCH and NPDCCH before measurement for NB-IoT.

**Table C.2-7: NPDSCH and NPDCCH configuration for NB-IoT**

| Parameter | Unit | Value | Comments |
|---|---|---|---|
| Allocated subcarriers | | [FFS] | |
| MCS Index | | - | TB Size with transmitting message in 1TTI |
| Number of HARQ processes | Processes | 1 | |
| Maximum number of HARQ transmission | | 1 | |
| Aggregation level | NCCE | 2 | |
| DCI Format for NPDSCH | | Format N1 | |
| DCI Format for NPUSCH | | Format N0 | |
| Note 1: Reference signal NRS, Synchronization signals NPSS, NSSS and NPBCH allocated as per TS 36.211 [8] | | | |

# C.3 Connection

The following clauses describes the downlink Physical Channels that are transmitted during a connection i.e., when measurements are done.

# C.3.0 Measurement of Transmitter Characteristics

Table C.3.0-1 is applicable for measurements on the Transmitter Characteristics (clause 6).

**Table C.3.0-1: Downlink Physical Channels transmitted during a connection (FDD and TDD)**

| Physical Channel | EPRE Ratio | Note |
|---|---|---|
| PBCH | PBCH_RA = 0 dB | |
| | PBCH_RB = 0 dB | |
| PSS | PSS_RA = 0 dB | |
| SSS | SSS_RA = 0 dB | |
| PCFICH | PCFICH_RB = 0 dB | |
| PDCCH | PDCCH_RA = 0 dB | |
| | PDCCH_RB = 0 dB | |
| MPDCCH | MPDCCH_RA = 0 dB | Only required for UE category M1 testing |
| | MPDCCH_RB = 0 dB | |
| PDSCH | PDSCH_RA = 0 dB | |
| | PDSCH_RB = 0 dB | |
| PHICH | PHICH_RB = 0 dB | Note 1, Note 2 Not required for UE category M1 testing |
| Note 1: PHICH group power, i.e. the total power of all active PHICH sequences within a PHICH group.<br>Note 2: For CA tests with 1 UL, no PHICH resources are assigned to the DUT in the SCell.<br>Note 3: Unused PDCCH or MPDCCH resources and PHICH groups are padded with resource element groups with power level given respectively by PDCCH_RA/RB or MPDCCH_RA/RB and PHICH_RB, such that a total power spectral density in the control region that is constant on an OFDM symbol basis is targeted. | | |

NOTE 1: No boosting is applied.

**Table C.3.0-2: Power allocation for OFDM symbols and reference signals**

| Parameter | Unit | Value | Note |
|---|---|---|---|
| Transmitted power spectral density $I_{or}$ | dBm/15 kHz | Test specific | 1. $I_{or}$ shall be kept constant throughout all OFDM symbols |
| Cell-specific reference signal power ratio $E_{RS} / I_{or}$ | | 0 dB | |

**Table C.3.0-3: PDCCH Aggregation Level (in CCE-s)**

| Bandwidth | DCI for DL (SI-RNTI) | DCI for DL (C-RNTI) | DCI for UL (C-RNTI) | Notes |
|---|---|---|---|---|
| 1.4 MHz | 4 | 1 | 1 | Note 1 |
| 3 MHz | 4 | 4 | 4 | Note 1 |
| 5 MHz | 4 | 4 | 4 | Note 1 |
| 10 MHz | 8 | 8 | 8 | Note 1 |
| 15 MHz | 8 | 8 | 8 | Note 1 |
| 20 MHz | 8 | 8 | 8 | Note 1 |
| Note 1: No DL data allocated on TDD special subframes | | | | |

**Table C.3.0-3a: MPDCCH Aggregation Level (in ECCE-s)**

| Bandwidth | DCI for DL (C-RNTI) | DCI for UL (C-RNTI) |
|---|---|---|
| 1.4 MHz | 2 | 4 |
| 3 MHz | 2 | 4 |
| 5 MHz | 2 | 4 |
| 10 MHz | 2 | 4 |
| 15 MHz | 2 | 4 |
| 20 MHz | 2 | 4 |

## C.3.1 Measurement of Receiver Characteristics

Table C.3.1-1 or Table C.3.1-5 is applicable for measurements on the Receiver Characteristics (clause 7).

**Table C.3.1-1: Downlink Physical Channels transmitted during a connection (E-UTRA FDD and TDD)**

| Physical Channel | EPRE Ratio | Note |
|---|---|---|
| PBCH | PBCH_RA = 0 dB | |
| | PBCH_RB = 0 dB | |
| PSS | PSS_RA = 0 dB | |
| SSS | SSS_RA = 0 dB | |
| PCFICH | PCFICH_RB = 0 dB | |
| PDCCH | PDCCH_RA = 0 dB | |
| | PDCCH_RB = 0 dB | |
| MPDCCH | MPDCCH_RA = 0 dB | Only required for UE category M1 testing |
| | MPDCCH_RB = 0 dB | |
| PDSCH | PDSCH_RA = 0 dB | |
| | PDSCH_RB = 0 dB | |
| PHICH | PHICH_RB = 0 dB | Note 1, Note 2 Not required for UE category M1 testing |
| OCNG | OCNG_RA = 0 dB | |
| | OCNG_RB = 0 dB | |
| Note 1: PHICH group power, i.e. the total power of all active PHICH sequences within a PHICH group.<br>Note 2: For CA tests with 1 UL, no PHICH resources are assigned to the DUT in the SCell. In such case PHICH of SCell is entirely part of OCNG pattern used. | | |

NOTE 1: No boosting is applied.

**Table C.3.1-2: Power allocation for OFDM symbols and reference signals**

| Parameter | Unit | Value | Note |
|---|---|---|---|
| Transmitted power spectral density $I_{or}$ | dBm/15 kHz | Test specific | 1. $I_{or}$ shall be kept constant throughout all OFDM symbols |
| Cell-specific reference signal power ratio $E_{RS} / I_{or}$ | | 0 dB | |

**Table C.3.1-3: PDCCH Aggregation Level (in CCE-s)**

| Bandwidth | DCI for DL (SI-RNTI) | DCI for DL (C-RNTI) | DCI for UL (C-RNTI) | Notes |
|---|---|---|---|---|
| 1.4 MHz | 4 | 4 | 2 | Note 1, 2 |
| 3 MHz | 4 | 4 | 2 | Note 2 |
| 5 MHz | 8 | 8 | 4 | Note 2 |
| 10 MHz | 8 | 8 | 8 | Note 2 |
| 15 MHz | 8 | 8 | 8 | Note 2 |
| 20 MHz | 8 | 8 | 8 | Note 2 |
| Note 1: No DL data allocated on TDD special subframes<br>Note 2: No DL data allocated on subframe 5 | | | | |

**Table C.3.1-3a: MPDCCH Aggregation Level (in ECCE-s)**

| Bandwidth | DCI for DL (C-RNTI) | DCI for UL (C-RNTI) |
|---|---|---|
| 1.4 MHz | 2 | 4 |
| 3 MHz | 2 | 4 |
| 5 MHz | 2 | 4 |
| 10 MHz | 2 | 4 |
| 15 MHz | 2 | 4 |
| 20 MHz | 2 | 4 |

**Table C.3.1-4: FFS**

**Table C.3.1-5: Downlink Physical Channels transmitted during a connection for NB-IoT**

| Physical Channel | EPRE Ratio | Note |
|---|---|---|
| NPBCH | NPBCH_RA = 0 dB | |
| | NPBCH_RB = 0 dB | |
| NPSS | NPSS_RA = 0 dB | |
| NSSS | NSSS_RA = 0 dB | |
| NPDCCH | NPDCCH_RA = 0 dB | |
| | NPDCCH_RB = 0 dB | |
| NPDSCH | NPDSCH_RA = 0 dB | |
| | NPDSCH_RB = 0 dB | |

**Table C.3.1-6: Power allocation for OFDM symbols and reference signals for NB-IoT**

| Parameter | Unit | Value | Note |
|---|---|---|---|
| Transmitted power spectral density $I_{or}$ | dBm/15 kHz | Test specific | 1. $I_{or}$ shall be kept constant throughout all OFDM symbols |
| Cell-specific reference signal power ratio $E_{RS} / I_{or}$ | | 0 dB | |

**Table C.3.1-7: NPDCCH Aggregation Level (in NCCE-s)**

FFS

## C.3.2 Measurement of Performance requirements

Table C.3.2-1 is applicable for measurements in which uniform RS-to-EPRE boosting for all downlink physical channels.

**Table C.3.2-1: Downlink Physical Channels transmitted during a connection (FDD and TDD and Frame structure Type 3)**

| Physical Channel | EPRE Ratio | Note |
|---|---|---|
| PBCH | PBCH_RA = $\rho_A + \sigma$ | |
| | PBCH_RB = $\rho_B + \sigma$ | |
| PSS | PSS_RA = 0 (Note 4) | |
| SSS | SSS_RA = 0 (Note 4) | |
| PCFICH | PCFICH_RB = $\rho_B + \sigma$ | |
| PDCCH | PDCCH_RA = $\rho_A + \sigma$ | |
| | PDCCH_RB = $\rho_B + \sigma$ | |
| EPDCCH | EPDCCH_RA = $\rho_A$ | |
| | EPDCCH_RB = $\rho_B$ | |
| MPDCCH | MPDCCH_RA = $\rho_A+\delta$ | Only required for UE category M1 testing |
| | MPDCCH_RB = $\rho_B+\delta$ | |
| PDSCH | PDSCH_RA = $\rho_A$ | |
| | PDSCH_RB = $\rho_B$ | |
| PMCH | PMCH_RA = $\rho_A$ | |
| | PMCH_RA = $\rho_B$ | |
| MBSFN RS | MBSFN RS_RA = $\rho_A$ | |
| | MBSFN RS_RA = $\rho_B$ | |
| PHICH | PHICH_RB = $\rho_B + \sigma$ | Note 1, Note 2 Not required for UE category M1 testing |
| OCNG | OCNG_RA = $\rho_A + \sigma$ | |
| | OCNG_RB = $\rho_B + \sigma$ | |
| Note 1: PHICH group power, i.e. the total power of all active PHICH sequences within a PHICH group.<br>Note 2: For CA tests with 1 UL, no PHICH resources are assigned to the DUT in the SCell. In such case PHICH of SCell is entirely part of OCNG pattern used. | | |

NOTE 1: $\rho_A$ denotes the ratio of PDSCH EPRE to cell-specific RS EPRE among PDSCH REs in all the OFDM symbols not containing cell-specific RS. $\rho_B$ denotes the ratio of PDSCH EPRE to cell-specific RS EPRE among PDSCH REs in all the OFDM symbols containing cell-specific RS.

NOTE 2: $\rho_A = \rho_B$ = 0 dB means no RS boosting.

NOTE 3: MBSFN RS and OCNG are not defined downlink physical channels in [8].

NOTE 4: Assuming PSS and SSS transmitted on a single antenna port.

NOTE 5: $\rho_A$, $\rho_B$, and $\sigma$ are test specific, $\sigma$ = 0 dB otherwise.

NOTE 6: For TM8, TM9 and TM10, $\rho_A$ and $\rho_B$ are used for the purpose of the test set up only.

NOTE 7: For Frame Structure Type 3, PBCH are not defined.

**Table C.3.2-2: Power allocation for OFDM symbols and reference signals**

| Parameter | Unit | Value | Note |
|---|---|---|---|
| Total transmitted power spectral density $I_{or}$ | dBm/15 kHz | Test specific | 1. $I_{or}$ shall be kept constant throughout all OFDM symbols |
| Cell-specific reference signal power ratio $E_{RS} / I_{or}$ | | Test specific | 1. Applies for antenna port *p* |
| Energy per resource element EPRE | | Test specific | 1. The complex-valued symbols $y^{(p)}(i)$ and $a_{k,l}^{(p)}$ defined in [8] shall conform to the given EPRE value.<br>2. For TM8, TM9 and TM10, the reference point for EPRE is before the precoder in Annex B.4. |

**Table C.3.2-3: PDCCH Aggregation Level (in CCE-s) for PDSCH demodulation and PMI performance tests**

| Bandwidth | DCI for DL (SI-RNTI) | DCI for DL (C-RNTI) | DCI for UL (C-RNTI) | Notes |
|---|---|---|---|---|
| 1.4 MHz | 4 | 4 | 2 | Note 1, 2 |
| 3 MHz | 4 | 4 | 2 | Note 2 |
| 5 MHz | 8 | 8 | 4 | Note 2 |

## C.3.3 Aggressor cell power allocation for Measurement of Performance Requirements when ABS is Configured

For the performance requirements and channel state information reporting when ABS is configured, the power allocation for the physical channels of the aggressor cell in non-ABS and ABS is listed in Table C.3.3-1.

**Table C.3.3-1: Downlink physical channels transmitted in aggressor cell when ABS is configured in this cell**

| Physical Channel | Parameters | Unit | EPRE Ratio | |
|---|---|---|---|---|
| | | | Non-ABS | ABS |
| PBCH | PBCH_RA | dB | $\rho_A$ | Note 1 |
| | PBCH_RB | dB | $\rho_B$ | Note 1 |
| PSS | PSS_RA | dB | $\rho_A$ | Note 1 |
| SSS | SSS_RA | dB | $\rho_A$ | Note 1 |
| PCFICH | PCFICH_RB | dB | $\rho_B$ | Note 1 |
| PHICH | PHICH_RA | dB | $\rho_A$ | Note 1 |
| | PHICH_RB | dB | $\rho_B$ | Note 1 |
| PDCCH | PDCCH_RA | dB | $\rho_A$ | Note 1 |
| | PDCCH_RB | dB | $\rho_B$ | Note 1 |
| PDSCH | PDSCH_RA | dB | N/A | Note 1 |
| | PDSCH_RB | dB | N/A | Note 1 |
| OCNG | OCNG_RA | dB | $\rho_A$ | Note 1 |
| | OCNG_RB | dB | $\rho_B$ | Note 1 |
| Note 1: -∞ dB is allocated for this channel in this test. | | | | |

**Table C.3.3-2: Downlink physical channels transmitted in aggressor cell when ABS is configured in this cell when the CRS assistance information is provided**

| Physical Channel | Parameters | Unit | EPRE Ratio | |
|---|---|---|---|---|
| | | | Non-ABS | ABS |
| PBCH | PBCH_RA | dB | $\rho_A$ | $\rho_A$ |
| | PBCH_RB | dB | $\rho_B$ | $\rho_B$ |
| PSS | PSS_RA | dB | $\rho_A$ | $\rho_A$ |
| SSS | SSS_RA | dB | $\rho_A$ | $\rho_A$ |
| PCFICH | PCFICH_RB | dB | $\rho_B$ | Note 1 |
| PHICH | PHICH_RA | dB | $\rho_A$ | Note 1 |
| | PHICH_RB | dB | $\rho_B$ | Note 1 |
| PDCCH | PDCCH_RA | dB | $\rho_A$ | Note 1 |
| | PDCCH_RB | dB | $\rho_B$ | Note 1 |
| PDSCH | PDSCH_RA | dB | N/A | Note 1 |
| | PDSCH_RB | dB | N/A | Note 1 |
| OCNG | OCNG_RA | dB | $\rho_A$ | Note 1 |
| | OCNG_RB | dB | $\rho_B$ | Note 1 |
| Note 1: -∞ dB is allocated for this channel in this test. | | | | |

## C.3.4 Power Allocation for Measurement of Performance Requirements when Quasi Co-location Type B: same Cell ID

For the performance requirements related to quasi-collocation type B behaviour when transmission points share the same Cell ID, the power allocation for the physical channels of the serving cell is listed in table C.3.4-1 and the power allocation for the physical channels of the cell transmitting PDSCH is listed in table C.3-4-2

**Table C.3.4-1: Downlink physical channels transmitted in the serving cell (TP1)**

| Physical Channel | EPRE Ratio |
|---|---|
| PBCH | PBCH_RA = $\rho_A$+ σ |
| | PBCH_RB = $\rho_B$+ σ |
| PSS | PSS_RA = 0 (Note 2) |
| SSS | SSS_RA = 0 (Note 2) |
| PDSCH | PDSCH_RA = $\rho_A$ |
| | PDSCH_RB = $\rho_B$ |
| PCFICH | PCFICH_RB = $\rho_B$+ σ |
| PDCCH | PDCCH_RA = $\rho_A$+ σ |
| | PDCCH_RB = $\rho_B$+ σ |

NOTE 1: $\rho_A$= $\rho_B$ = 0 dB means no RS boosting.

NOTE 2: Assuming PSS and SSS transmitted on a single antenna port.

NOTE 3: $\rho_A$, $\rho_B$ and σ are test specific.

**Table C.3.4-2: Downlink physical channels for the transmission point transmitting PDSCH (TP2)**

| Physical Channel | Value |
|---|---|
| PDSCH | Test Specific |

## C.3.5 Simplified CA testing method

For CA tests which require more than 16 independent faders, if a test system cannot support a throughput measurement with fading on all carriers simultaneously, the simplified CA testing method shall be used.

In the simplified CA testing method, the resulting propagation channel(s) shall be generated by considering a number of independent faders needed for one carrier and connecting them to the signal of randomly chosen carrier(s). The maximum number of channel faders on the test will be less than or equal to 16. The remaining carrier(s) shall be connected without a channel fader but with AWGN. The throughput is then collected only for the carrier(s) connected to channel faders.

In the simplified CA testing method, the test shall be repeated by choosing carrier(s) excluding already chosen carrier(s) until all the carrier(s) are tested under fading conditions. All the collected throughputs from each carrier shall be compared against the reference value of the requirements.

All supported carriers shall be configured and activated during the test.

# Annex D (normative): Characteristics of the Interfering Signal

## D.1 General

Some RF performance requirements for the E-UTRA UE receiver are defined with interfering signals present in addition to the wanted signal. When the wanted channel band width is wider than or equal to 5MHz, a modulated 5MHz full band width E-UTRA down link signal, and in some cases an additional CW signal, are used. For wanted channel band widths below 5MHz, the band width of the modulated interferer should be equal to the channel band width of the wanted signal.

## D.2 Interference signals

Table D.2-1 describes the modulated interferer for different channel band width options.

**Table D.2-1: Description of modulated E-UTRA interferer**

| | Channel bandwidth | | | | | |
|---|---|---|---|---|---|---|
| | **1.4 MHz** | **3 MHz** | **5 MHz** | **10 MHz** | **15 MHz** | **20 MHz** |

| $BW_{Interferer}$ | 200kHz |
| Modulation | GMSK |

# Annex E (normative): Global In-Channel TX-Test

Note: Clauses E.2.2 to E.5.9.3 are descriptions, which assume no power ramping adjacent to the measurement period. *Power ramping adjacent to the measurement period requires exclusion periods, described in clause E.7*

## E.1 General

The global in-channel TX test enables the measurement of all relevant parameters that describe the in-channel quality of the output signal of the TX under test in a single measurement process.

The parameters describing the in-channel quality of a transmitter, however, are not necessarily independent. The algorithm chosen for description inside this annex places particular emphasis on the exclusion of all interdependencies among the parameters.

## E.2 Signals and results

### E.2.1 Basic principle

The process is based on the comparison of the actual **output signal of the TX under test**, received by an ideal receiver, with a **reference signal**, that is generated by the measuring equipment and represents an ideal error free received signal. All signals are represented as equivalent (generally complex) baseband signals.

The description below uses numbers as examples. These numbers are taken from frame structure 1 with normal CP length and 20 MHz bandwidth. The application of the text below, however, is not restricted to this frame structure and bandwidth.

### E.2.2 Output signal of the TX under test

The output signal of the TX under test is acquired by the measuring equipment and stored for further processing. It is sampled at a sampling rate of 30.72 Msps. In the time domain it comprises at least 10 uplink subframes. The measurement period is derived by concatenating the correct number of individual uplink slots until the correct measurement period is reached. The output signal is named z(v). Each slot is modelled as a signal with the following parameters: demodulated data content, carrier frequency, amplitude and phase for each subcarrier, timing, carrier leakage.

NOTE 1: TDD

For frame structure type 2, subframes with special fields (UpPTS) do not undergo any evaluation. Since the uplink subframes are not continuous, the 20 slots should be extracted from more than 1 continuous radio frame:

Figure E.2.2-1 is an example for uplink-downlink configuration 1 (DSUUDDSUUD) as specified in TS 36.211 [8] Table 4.2-2,assuming all uplink subframes are active.

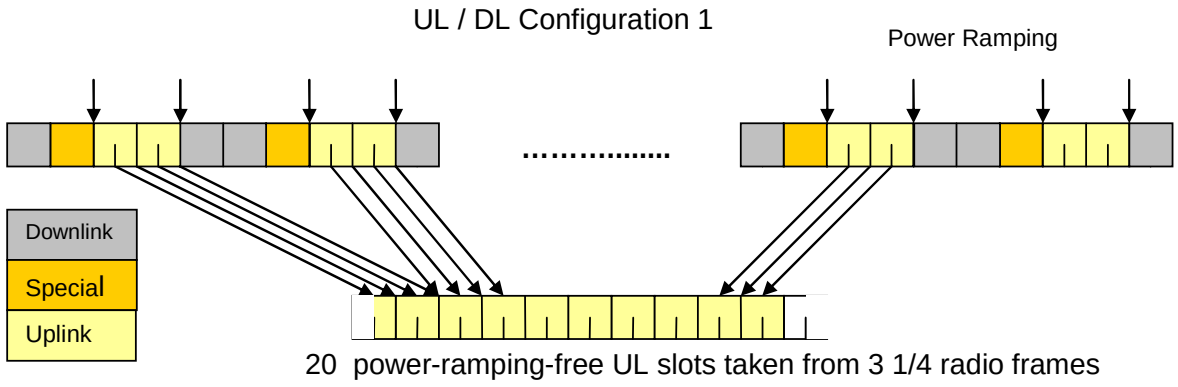

**Figure E.2.2-1: Example of uplink – downlink configuration 1**

## E.2.3 Reference signal

Two types of reference signal are defined:

The reference signal $i_1(v)$ is constructed by the measuring equipment according to the relevant TX specifications, using the following parameters: demodulated data content, nominal carrier frequency, nominal amplitude and phase for each subcarrier, nominal timing, no carrier leakage. It is represented as a sequence of samples at a sampling rate of 30.72 Msps in the time domain.

The reference signal $i_2(v)$ is constructed by the measuring equipment according to the relevant TX specifications, using the following parameters: restricted data content: nominal reference symbols, (all modulation symbols for user data symbols are set to 0V), nominal carrier frequency, nominal amplitude and phase for each applicable subcarrier, nominal timing, no carrier leakage. It is represented as a sequence of samples at a sampling rate of 30.72 Msps in the time domain.

NOTE: The PUCCH is off during the time under test.

## E.2.4 Measurement results

The measurement results, achieved by the global in channel TX test are the following:

- Carrier Frequency error
- EVM (Error Vector Magnitude)
- Carrier leakage
- Unwanted emissions, falling into non allocated resource blocks.
- EVM equalizer spectrum flatness

## E.2.5 Measurement points

The unwanted emission falling into non-allocated RB(s) is calculated directly after the FFT as described below. In contrast to this, the EVM for the allocated RB(s) is calculated after the IDFT. The samples after the TX-RX chain equalizer are used to calculate EVM equalizer spectrum flatness. Carrier frequency error and carrier leakage is calculated in the block “RF correction”.

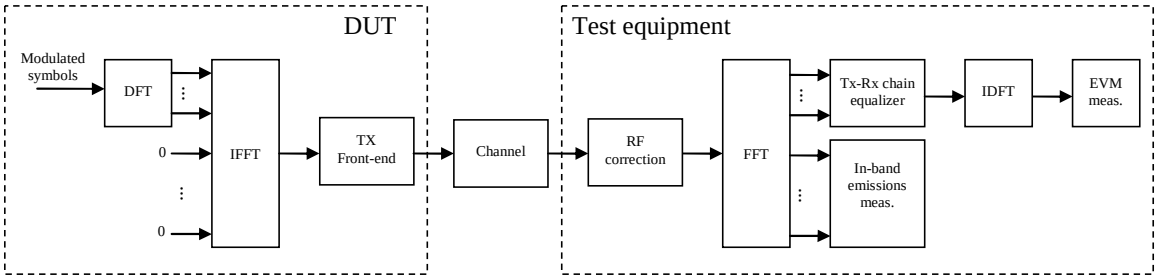

**Figure E.2.5-1: EVM measurement points**

# E.3 Signal processing

## E.3.1 Pre FFT minimization process

Before applying the pre-FFT minimization process, z(ν) and i(ν) are portioned into 20 pieces, comprising one slot each. Each slot is processed separately. Sample timing, Carrier frequency and carrier leakage in z(ν) are jointly varied in order to minimise the difference between z(ν) and i(ν). Best fit (minimum difference) is achieved when the RMS difference value between z(ν) and i(ν) is an absolute minimum.

The carrier frequency variation and the IQ variation are the measurement results: Carrier Frequency Error and Carrier leakage.

From the acquired samples 20 carrier frequencies and 20 carrier leakages can be derived.

NOTE 1: The minimisation process, to derive carrier leakage and RF error can be supported by Post FFT operations. However the minimisation process defined in the pre FFT domain comprises all acquired samples (i.e. it does not exclude the samples in between the FFT widths and it does not exclude the bandwidth outside the transmission bandwidth configuration

NOTE 2: The algorithm would allow deriving Carrier Frequency error and Sample Frequency error of the TX under test separately. However there are no requirements for Sample Frequency error. Hence the algorithm models the RF and the sample frequency commonly (not independently). It returns one error and does not distinguish between both.

After this process the samples z(ν) are called $z^0(\nu)$.

## E.3.2 Timing of the FFT window

The FFT window length is 2048 samples per OFDM symbol. 7 FFTs (14336 samples) cover less than the acquired number of samples (15360 samples) The position in time for FFT must be determined.

In an ideal signal, the FFT may start at any instant within the cyclic prefix without causing an error. The TX filter, however, reduces the window. The EVM requirements shall be met within a window W<CP. There are three different instants for FFT:

Centre of the reduced window, called $\Delta\tilde{c}$ , $\Delta\tilde{c}$ –W/2 and $\Delta\tilde{c}$ +W/2.

The timing of the measured signal is determined in the pre FFT domain as follows, using $z^0(\nu)$ and $i_2(\nu)$ :

1. The measured signal is delay spread by the TX filter. Hence the distinct boarders between the OFDM symbols and between Data and CP are also spread and the timing is not obvious.

2. In the Reference Signal $i_2(\nu)$ the timing is known.

3. Correlation between (1.) and (2.) will result in a correlation peak. The meaning of the correlation peak is approx. the “impulse response” of the TX filter. The meaning of “impulse response” assumes that the autocorrelation of

the reference signal $i_2(v)$ is a Dirac peak and that the correlation between the reference signal $i_2(v)$ and the data in the measured signal is 0. The correlation peak, (the highest, or in case of more than one, the earliest) indicates the timing in the measured signal.

From the acquired samples 20 timings can be derived.

For all calculations, except EVM, the number of samples in $z^0(v)$ is reduced to 7 blocks of samples, comprising 2048 samples (FFT width) and starting with $\Delta\tilde{c}$ in each OFDM symbol including the demodulation reference signal.

For the EVM calculation the output signal under test is reduced to 14 blocks of samples, comprising 2048 samples (FFT width) and starting with $\Delta\tilde{c}$ –W/2 and $\Delta\tilde{c}$ +W/2 in each OFDM symbol including the demodulation reference signal.

The number of samples, used for FFT is reduced compared to $z^0(v)$. This subset of samples is called z'(v).

The timing of the centre $\Delta\tilde{c}$ with respect to the different CP length in a slot is as follows: (Frame structure 1, normal CP length)

$\Delta\tilde{c}$ is on $T_f$=72 within the CP of length 144 (in OFDM symbol 1 to 6)

$\Delta\tilde{c}$ is on $T_f$=88 (=160-72) within the CP of length 160 (in OFDM symbol 0)

## E.3.3 Post FFT equalisation

Perform 7 FFTs on z'(v), one for each OFDM symbol in a slot using the timing $\Delta\tilde{c}$, including the demodulation reference symbol. The result is an array of samples, 7 in the time axis t times 2048 in the frequency axis f. The samples represent the DFT coded data symbols (in OFDM-symbol 0,1,2,4,5and 6 in each slot) and demodulation reference symbols ( OFDM symbol 3 in each slot) in the allocated RBs and inband emissions in the non allocated RBs within the transmission BW.

Only the allocated resource blocks in the frequency domain are used for equalisation.

The nominal demodulation reference symbols and nominal DFT coded data symbols are used to equalize the measured data symbols. (Location for equalization see Figure E.2.5-1)

NOTE: The nomenclature inside this note is local and not valid outside.

The nominal DFT coded data symbols are created by a demodulation process. The location to gain the demodulated data symbols is "EVM" in Figure E.2.5-1. A demodulation process as follows is recommended:

1. Equalize the measured DFT coded data symbols using the reference symbols for equalisation. Result: Equalized DFT coded data symbols
2. iDFT transform the equalized DFT coded data symbols: Result: Equalized data symbols
3. Decide for the nearest constellation point: Result: Nominal data symbols
4. DFT transform the nominal data symbols: Result: Nominal DFT coded data symbols

At this stage we have an array of Measured DFT coded data-Symbols and reference-Symbols (MS(f,t))

versus an array of Nominal DFT coded data-Symbols and reference Symbols (NS(f,t))

(complex, the arrays comprise 6 DFT coded data symbols and 1 demodulation reference symbol in the time axis and the number of allocated subcarriers in the frequency axis.)

MS(f,t) and NS(f,t) are processed with a least square (LS) estimator, to derive one equalizer coefficient per time slot and per allocated subcarrier. EC(f)

$$EC(f) = \frac{\sum_{t=0}^{6} NS(f,t)^* NS(f,t)}{\sum_{t=0}^{6} NS(f,t)^* MS(f,t)}$$

With * denoting complex conjugation.

EC(f) are used to equalize the DFT-coded data symbols. The measured DFT-coded data and the references symbols are equalized by:

$$Z'(f,t) = MS(f,t) \cdot EC(f)$$

With · denoting multiplication.

Z'(f,t), restricted to the data symbol (excluding t=3) is used to calculate EVM, as described in E.4.1.

EC(f) is used in E.4.4 to calculate EVM equalizer spectral flatness.

NOTE: although an exclusion period for EVM may be applicable in E.7, the post FFT minimisation process is done over 7 symbols (6 DFT-coded data symbols and 1 reference symbol).

The samples of the non allocated resource blocks within the transmission bandwidth configuration in the post FFT domain are called Y(f,t) (f covering the non allocated subcarriers within the transmission bandwidth configuration, t covering the OFDM symbols during 1 slot).

# E.4 Derivation of the results

## E.4.1 EVM

For EVM create two sets of Z'(f,t)., according to the timing " $\Delta\tilde{c}$ –W/2 and $\Delta\tilde{c}$ +W/2" using the equalizer coefficients from E.3.3.

Perform the iDFTs on Z'(f,t). The IDFT-decoding preserves the meaning of t but transforms the variable f (representing the allocated sub carriers) into another variable g, covering the same count and representing the demodulated symbols. The samples in the post IDFT domain are called iZ'(g, t). The equivalent ideal samples are called iI(g,t). Those samples of Z'(f,t), carrying the reference symbols (=symbol 3) are not iDFT processed.

The EVM is the difference between the ideal waveform and the measured and equalized waveform for the allocated RB(s)

$$EVM = \sqrt{\frac{\sum_{t \in T} \sum_{g \in G} \left| iZ'(g,t) - iI(g,t) \right|^2}{|G| \cdot |T| \cdot P_0}},$$

where

t covers the count of demodulated symbols with the considered modulation scheme being active within the measurement period, (i.e. symbol 0,1,2,4,5and 6 in each slot, →|T|=6 )

g covers the count of demodulated symbols with the considered modulation scheme being active within the allocated bandwidth. (|G|=12* $L_{CRBs}$ (with $L_{CRBs}$ : number of allocated resource blocks)).

$iZ'(g,t)$ are the samples of the signal evaluated for the EVM.

$iI(g,t)$ is the ideal signal reconstructed by the measurement equipment, and

$P_0$ is the average power of the ideal signal. For normalized modulation symbols $P_0$ is equal to 1.

From the acquired samples 40 EVM value can be derived, 20 values for the timing $\Delta\tilde{c}$ –W/2 and 20 values for the timing $\Delta\tilde{c}$ +W/2

## E.4.2 Averaged EVM

EVM is averaged over all basic EVM measurements.

The averaging comprises n UL slots (for frame structure 2: excluding special fields(UpPTS))

$$\overline{EVM} = \sqrt{\frac{1}{n}\sum_{t=1}^{n} EVM_t^2}$$

where n is

n = 20 for PUCCH, PUSCH, PSDCH, PSCCH, and PSSCH,

n = 48 for PBSCH.

The averaging is done separately for timing $\Delta\tilde{C}$ –W/2 and $\Delta\tilde{C}$ +W/2 leading to $\overline{\mathrm{EVM}}_{\mathrm{l}}$ and $\overline{\mathrm{EVM}}_{\mathrm{h}}$

$EVM_{\mathrm{final}} = \max(\overline{\mathrm{EVM}}_{l}, \overline{\mathrm{EVM}}_{h})$ is compared against the test requirements.

## E.4.3 In-band emissions measurement

The in-band emissions are a measure of the interference falling into the non-allocated resources blocks.

Explanatory Note:

The inband emission measurement is only meaningful with allocated RBs next to non allocated RB. The allocated RBs are necessary but not under test. The non allocated RBs are under test. The RB allocation for this test is as follows: The allocated RBs are at one end of the channel BW, leaving the other end unallocated. The number of allocated RBs is smaller than half of the number of RBs, available in the channel BW. This means that the vicinity of the carrier in the centre is unallocated.

There are 3 types of inband emissions:

1. General
2. IQ image
3. Carrier leakage

*Carrier leakage* are inband emissions next to the carrier.

*IQ image* are inband emissions symmetrically (with respect to the carrier) on the other side of the allocated RBs.

*General* are applied to all unallocated RBs.

For each evaluated RB, the minimum requirement is calculated as the higher of $P_{RB}$ - 30 dB and the power sum of all limit values (General, IQ Image or Carrier leakage) that apply.

In specific the following combinations:

- Power (General)
- Power (General + Carrier leakage)
- Power (General + IQ Image)

  1 and 2 is expressed in terms of power in one non allocated RB under test, normalized to the average power of an allocated RB (unit dB).

  3 is expressed in terms of power in one non allocated RB, normalized to the power of all allocated RBs. (unit dBc).

This is the reason for two formulas *Emissions* $_{relative}$.

Create one set of Y(t,f) per slot according to the timing " $\Delta\tilde{c}$ "

For the non-allocated RBs below the in-band emissions are calculated as follows

$$Emissions_{absolute}(\Delta_{RB}) = \begin{cases} \frac{1}{|T_s|}\sum_{t\in T_s} \sum_{\max(f_{\min},(c_l+12\cdot\Delta_{RB}*\Delta f))}^{c_l+(12\cdot\Delta_{RB}+11)*\Delta f} |Y(t,f)|^2, \Delta_{RB} < 0 \\ \frac{1}{|T_s|}\sum_{t\in T_s} \sum_{c_h+(12\cdot\Delta_{RB}-11)*\Delta f}^{\min(f_{\max},(c_h+12\cdot\Delta_{RB}*\Delta f))} |Y(t,f)|^2, \Delta_{RB} > 0 \end{cases},$$

where

the upper formula represents the in band emissions below the allocated frequency block and the lower one the in band emissions above the allocated frequency block.

$T_s$ is a set of $|T_s|$ SC-FDMA symbols with the considered modulation scheme being active within the measurement period,

$\Delta_{RB}$ is the starting frequency offset between the allocated RB and the measured non-allocated RB (e.g. $\Delta_{RB}=1$ for the first upper or $\Delta_{RB}=-1$ for the first lower adjacent RB),

$f_{\min}$ and $f_{\max}$ are the lower and upper edge of the UL transmission BW configuration,

$c_l$ and $c_h$ are the lower and upper edge of the allocated BW,

$\Delta f$ is 15kHz,and

$Y(t,f)$ is the frequency domain signal evaluated for in-band emissions as defined in the subsection E.3.3

The allocated RB power per RB and the total allocated RB power are given by:

$$P_{RB} = \frac{1}{|T_s|\cdot L_{CRBs}}\sum_{t\in T_s} \sum_{c_l}^{c_l+(12\cdot L_{CRBs}-1)*\Delta f} |\mathrm{MS}(t,f)|^2 \ [\mathrm{dBm/180\,kHz}]$$

$$P_{All-RBs} = \frac{1}{|T_s|}\sum_{t\in T_s} \sum_{c_l}^{c_l+(12\cdot L_{CRBs}-1)*\Delta f} |\mathrm{MS}(t,f)|^2 \ [\mathrm{dBm}]$$

The relative in-band emissions, applicable for General and IQ image, are given by:

$$Emissions_{relative}(\Delta_{RB}) = 10\cdot\log_{10}\left(\frac{Emissions_{absolute}(\Delta_{RB})}{\frac{1}{|T_s|\cdot L_{CRBs}}\sum_{t\in T_s}\sum_{c_l}^{c_l+(12\cdot L_{CRBs}-1)*\Delta f}|\mathrm{MS}(t,f)|^2}\right)[\mathrm{dB}]$$

$$= Emissions_{absolute}(\Delta_{RB})[\mathrm{dBm/180\,kHz}] - P_{RB}\ [\mathrm{dBm/180\,kHz}]$$

where

$L_{CRBs}$ is the number of allocated resource blocks,

and

$\mathrm{MS}(t, f)$ is the frequency domain samples for the allocated bandwidth, as defined in the subsection E.3.3.

The relative in-band emissions, applicable for carrier leakage, is given by:

$$Emissions_{relative} = 10 \cdot \log_{10}\left(\frac{Emissions_{absolute}(RBnextDC)}{\frac{1}{|T_s|}\sum_{t \in T_s}\sum_{c_1}^{c_1+(12 \cdot L_{CRBs}-1)*\Delta f}|\mathrm{MS}(t, f)|^2}\right)[\mathrm{dBc}]$$

$$= Emissions_{absolute}(RBnextDC)[\mathrm{dBm/180\,kHz}] - P_{All-RBs}[\mathrm{dBm}]$$

where RBnextDC means: Resource Block next to the carrier.

This is one RB, namely the central one in case of an odd number of RBs in the channel BW.

This is one pair of RBs, namely the immediately adjacent RBs to the carrier in case of an even number of RBs in the channel BW.

Although an exclusion period may be applicable in the time domain, when evaluating EVM (clause E.7), the inband emissions measurement interval is defined over one complete slot in the time domain.

From the acquired samples 20 functions for general in band emissions and IQ image inband emissions can be derived. 20 values or 20 pairs of carrier leakage inband emissions can be derived. They are compared against different limits.

## E.4.4 EVM equalizer spectrum flatness

For EVM equalizer spectrum flatness use EC(f) as defined in E.3.3. Note, EC(f) represents equalizer coefficient $f \in F$ , f is the allocated subcarriers within the transmission bandwidth ((|F|=12* $L_{CRBs}$ )

From the acquired samples 20 functions EC(f) can be derived.

EC(f) is broken down to 2 functions:

$$\mathrm{EC}_1(\mathrm{f}), f \in Range\ \ 1$$

$$\mathrm{EC}_2(\mathrm{f}), f \in Range\ \ 2$$

Where Range 1 and Range 2 are as defined in Table 6.5.2.4.5-1 for normal condition and Table 6.5.2.4.5-2 for extreme condition

The following peak to peak ripple is calculated:

$\mathrm{RP}_1 = 20 * \log(\max(|\mathrm{EC}_1(\mathrm{f})|) / \min(|\mathrm{EC}_1(\mathrm{f})|))$ ,which denote the maximum ripple in Range 1

$\mathrm{RP}_2 = 20 * \log(\max(|\mathrm{EC}_2(\mathrm{f})|) / \min(|\mathrm{EC}_2(\mathrm{f})|))$ ,which denote the maximum ripple in Range 2

$\mathrm{RP}_{12} = 20 * \log(\max(|\mathrm{EC}_1(\mathrm{f})|) / \min(|\mathrm{EC}_2(\mathrm{f})|))$ ,which denote the maximum ripple between the upper side of Range 1 and lower side of Range 2

$\mathrm{RP}_{21} = 20 * \log(\max(|\mathrm{EC}_2(\mathrm{f})|) / \min(|\mathrm{EC}_1(\mathrm{f})|))$ ,which denote the maximum ripple between the upper side of Range 2 and lower side of Range 1

# E.4.5 Frequency error and Carrier leakage

See E.3.1.

# E.4.6 EVM of Demodulation reference symbols ($EVM_{DMRS}$)

For the purpose of EVM $_{DMRS}$, the steps E.2.2 to E.4.2 are repeated 6 times, constituting 6 EVM $_{DMRS}$ sub-periods. The only purpose of the repetition is to cover the longer gross measurement period of EVM $_{DMRS}$ (120 time slots) and to derive the FFT window timing per sub-period.

The bigger of the EVM results in one 20 TS period corresponding to the timing $\Delta\tilde{c}$ –W/2 or $\Delta\tilde{c}$ +W/2 is compared against the limit. (Clause E.4.2) This timing is re-used for EVM $_{DMRS}$ in the equivalent EVM $_{DMRS}$ sub-period.

For EVM the demodulation reference symbols are excluded, while the data symbols are used. For $EVM_{DMRS}$ the data symbols are excluded, while the demodulation references symbols are used. This is illustrated in figure E.4.6-1

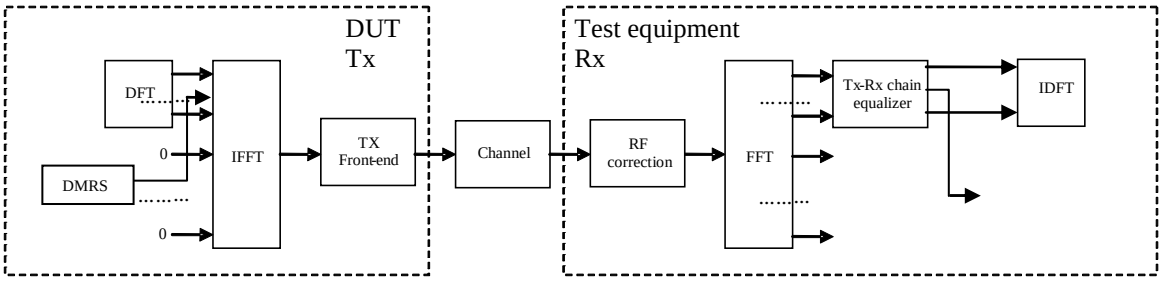

**Figure E.4.6-1: $EVM_{DMRS}$ measurement points**

Re-use the following formula from E.3.3:

$$Z'(f,t) = MS(f,t) \cdot EC(f)$$

To calculate $EVM_{DMRS}$ , the data symbol ( t=0,1,2,4,5,6) in Z'(f,t) are excluded and only the reference symbol (t=3) is used.

The EVM $_{DMRS}$ is the difference between the ideal waveform and the measured and equalized waveform for the allocated RB(s)

$$EVM_{DMRS} = \sqrt{\frac{\sum_{t\in T}\sum_{f\in F}\left|Z'(f,t) - I(f,t)\right|^2}{|T| \cdot P_0 \cdot |F|}},$$

where

t covers the count of demodulation reference symbols (i.e. only symbol 3 in each slot, so count =1)

f covers the count of demodulation reference symbols within the allocated bandwidth. (|F|=12* $L_{CRBs}$ (with $L_{CRBs}$ : number of allocated resource blocks)).

$Z'(f,t)$ are the samples of the signal evaluated for the EVM $_{DMRS}$

$I(f,t)$ is the ideal signal reconstructed by the measurement equipment, and

$P_0$ is the average power of the ideal signal. For normalized modulation symbols $P_0$ is equal to 1.

20 such results are generated per measurement sub-period.

### E.4.6.1 1st average for EVM DMRS

EVM DMRS is averaged over all basic EVM DMRS measurements in one sub-period

The averaging comprises 20 UL slots (for frame structure 2: excluding special fields(UpPTS))

$$1stEVM_{DMRS} = \sqrt{\frac{1}{20}\sum_{i=1}^{20} EVM_{DMRS_i}^2}$$

The timing is taken from the EVM for the data. 6 of those results are achieved from the samples. In general the timing is not the same for each result.

### E.4.6.2 Final average for EVM DMRS

$$finalEVM_{DMRS} = \sqrt{\frac{1}{6}\sum_{i=1}^{6} 1stEVM_{DMRS_i}^2}$$

## E.5 EVM and inband emissions for PUCCH

For the purpose of worst case testing, the PUCCH shall be located on the edges of the Transmission Bandwidth Configuration (6,15,25,50,75,100 RBs).

The EVM for PUCCH ($EVM_{PUCCH}$) is averaged over 20 slots. At least 20 TSs shall be transmitted by the UE without power change. SRS multiplexing shall be avoided during this period. The following transition periods are applicable: One OFDM symbol on each side of the slot border (instant of band edge alternation).

The description below is generic in the sense that all 6 PUCCH formats are covered. Although the number of OFDM symbols in one slot is 6 or 7 (depending on the cyclic prefix length), the text below uses 7 without excluding 6.

### E.5.1 Basic principle

The basis principle is the same as described in E.2.1

### E.5.2 Output signal of the TX under test

The output signal of the TX under test is processed same as described in E.2.2

### E.5.3 Reference signal

The reference signal is defined same as in E.2.3. Same as in E.2.3, $i_1(v)$ is the ideal reference for $EVM_{PUCCH}$ and $i_2(v)$ is used to estimate the FFT window timing.

Note PUSCH is off during the PUCCH measurement period.

### E.5.4 Measurement results

The measurement results are:

- $EVM_{PUCCH}$
- Inband emissions with the sub-results: General in-band emission, IQ image (according to: 36.101. Annex F.4, Clause starting with: “At this stage the ….”)

## E.5.5 Measurement points

The measurement points are illustrated in the figure below:

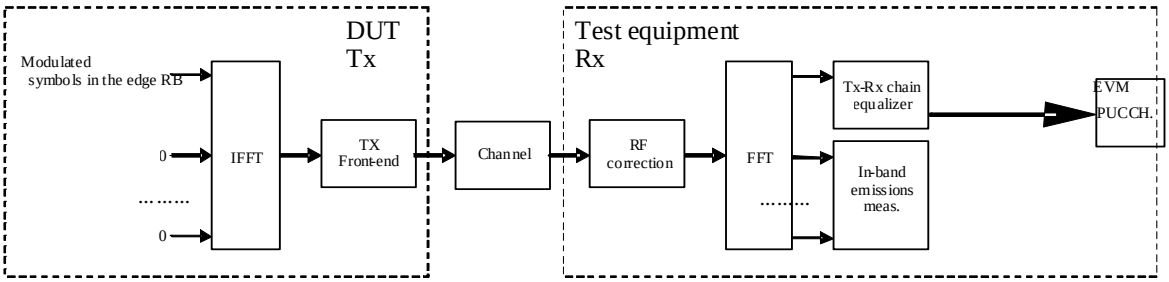

**Figure E.5.5-1**

## E.5.6 Pre FFT minimization process

The pre FFT minimisation process is the same as describes in clause E.3.1.

NOTE: although an exclusion period for $EVM_{PUCCH}$ is applicable in E.5.9.1, the pre FFT minimisation process is done over the complete slot.

RF error, and carrier leakage are necessary for best fit of the measured signal towards the ideal signal in the pre FFT domain. However they are not used to compare them against the limits.

## E.5.7 Timing of the FFT window

Timing of the FFT window is estimated with the same method as described in E.3.2.

## E.5.8 Post FFT equalisation

The post FFT equalisation is described separately without reference to E.3.3:

Perform 7 FFTs on z'(v), one for each OFDM symbol in a slot using the timing $\Delta\tilde{c}$, including the demodulation reference symbol. The result is an array of samples, 7 in the time axis t times 2048 in the frequency axis f. The samples represent the OFDM symbols (data and reference symbols) in the allocated RBs and inband emissions in the non allocated RBs within the transmission BW.

Only the allocated resource blocks in the frequency domain are used for equalisation.

The nominal reference symbols and **nominal** OFDM data symbols are used to equalize the measured data symbols.

Note: (The nomenclature inside this note is local and not valid outside)

The nominal OFDM data symbols are created by a demodulation process. A demodulation process as follows is recommended:

1. Equalize the measured OFDM data symbols using the reference symbols for equalisation. Result: Equalized OFDM data symbols
2. Decide for the nearest constellation point, however not independent for each subcarrier in the RB. 12 constellation points are decided dependent, using the applicable CAZAC sequence. Result: Nominal OFDM data symbols

At this stage we have an array of Measured data-Symbols and reference-Symbols (MS(f,t))

versus an array of Nominal data-Symbols and reference Symbols (NS(f,t))

The arrays comprise in sum 7 data and reference symbols, depending on the PUCCH format, in the time axis and the number of allocated sub-carriers in the frequency axis.

MS(f,t) and NS(f,t) are processed with a least square (LS) estimator, to derive one equalizer coefficient per time slot and per allocated subcarrier. EC(f)

$$EC(f) = \frac{\sum_{t=0}^{6} NS(f,t)^{*} NS(f,t)}{\sum_{t=0}^{6} MS(f,t)^{*} NS(f,t)}$$

With * denoting complex conjugation.

EC(f) are used to equalize the OFDM data together with the demodulation reference symbols by:

$$Z'(f,t) = MS(f,t) \cdot EC(f)$$

With · denoting multiplication.

Z'(f,t) is used to calculate $EVM_{PUCCH}$, as described in E.5.9 1

NOTE: although an exclusion period for $EVM_{PUCCH}$ is applicable in E.5.9.1, the post FFT minimisation process is done over 7 OFDM symbols.

The samples of the non allocated resource blocks within the transmission bandwidth configuration in the post FFT domain are called Y(f,t) (f covering the non allocated subcarriers within the transmission bandwidth configuration, t covering the OFDM symbols during 1 slot).

# E.5.9 Derivation of the results

## E.5.9.1 $EVM_{PUCCH}$

For $EVM_{PUCCH}$ create two sets of Z'(f,t)., according to the timing " $\Delta\tilde{c}$ –W/2 and $\Delta\tilde{c}$ +W/2" using the equalizer coefficients from E.5.8

The $EVM_{PUCCH}$ is the difference between the ideal waveform and the measured and equalized waveform for the allocated RB(s)

$$EVM_{PUCCH} = \sqrt{\frac{\sum_{t \in T} \sum_{f \in F} \left| Z'(f,t) - I(f,t) \right|^2}{|T| \cdot P_0 \cdot |F|}},$$

where

the OFDM symbols next to slot boarders (instant of band edge alternation) are excluded:

t covers less than the count of demodulated symbols in the slot (|T|= 5)

f covers the count of subcarriers within the allocated bandwidth. (|F|=12)

$Z'(f,t)$ are the samples of the signal evaluated for the $EVM_{PUCCH}$

$I(f,t)$ is the ideal signal reconstructed by the measurement equipment, and

$P_0$ is the average power of the ideal signal. For normalized modulation symbols $P_0$ is equal to 1.

From the acquired samples 40 $EVM_{PUCCH}$ value can be derived, 20 values for the timing $\Delta\tilde{c}$ –W/2 and 20 values for the timing $\Delta\tilde{c}$ +W/2

## E.5.9.2 Averaged $EVM_{PUCCH}$

$EVM_{PUCCH}$ is averaged over all basic $EVM_{PUCCH}$ measurements

The averaging comprises 20 UL slots (for frame structure 2: excluding special fields(UpPTS))

$$\overline{EVM}_{PUCCH} = \sqrt{\frac{1}{20}\sum_{i=1}^{20} EVM_{PUCCH\,i}^{2}}$$

The averaging is done separately for timing $\Delta\tilde{c}$ –W/2 and $\Delta\tilde{c}$ +W/2 leading to $\overline{EVM}_{PUCCH,low}$ and $\overline{EVM}_{PUCCH,high}$

$EVM_{PUCCH,final} = \max(\overline{EVM}_{PUCCH,low}, \overline{EVM}_{PUCCH,high})$ is compared against the test requirements.

## E.5.9.3 In-band emissions measurement

The in-band emissions are a measure of the interference falling into the non-allocated resources blocks

Create one set of Y(t,f) per slot according to the timing "$\Delta\tilde{c}$"

For the non-allocated RBs the in-band emissions are calculated as follows

$$Emissions_{absolute}(\Delta_{RB}) = \begin{cases} \frac{1}{|T_s|}\sum_{t\in T_s} \sum_{\max(f_{\min},(c_l+12\cdot\Delta_{RB}*\Delta f))}^{c_l+(12\cdot\Delta_{RB}+11)*\Delta f} |Y(t,f)|^2, \Delta_{RB} < 0 \\ \frac{1}{|T_s|}\sum_{t\in T_s} \sum_{c_h+(12\cdot\Delta_{RB}-11)*\Delta f}^{\min(f_{\max},(c_h+12\cdot\Delta_{RB}*\Delta f))} |Y(t,f)|^2, \Delta_{RB} > 0 \end{cases},$$

where

the upper formula represents the inband emissions below the allocated frequency block and the lower one the inband emissions above the allocated frequency block.

$T_s$ is a set of $|T_s|$ OFDM symbols in the measurement period,

$\Delta_{RB}$ is the starting frequency offset between the allocated RB and the measured non-allocated RB (e.g. $\Delta_{RB} = 1$ for the first upper or $\Delta_{RB} = -1$ for the first lower adjacent RB),

$f_{\min}$ and $f_{\max}$ are the lower and upper edge of the UL system BW,

$c_l$ and $c_h$ are the lower and upper edge of the allocated BW,

$\Delta f$ is 15kHz,and

$Y(t,f)$ is the frequency domain signal evaluated for in-band emissions as defined in the subsection E.5.8

The relative in-band emissions are, given by

$$Emissions_{relative}(\Delta_{RB}) = 10*\log_{10}\frac{Emissions_{absolute}(\Delta_{RB})}{\frac{1}{|T_s|\cdot L_{CRBs}}\sum_{t\in T_s}\sum_{c_l}^{c_l+(12\cdot L_{CRBs}-1)*\Delta f}|\mathrm{MS}(t,f)|^2}[dB]$$

where

$L_{CRBs}$ is the number of allocated RBs, which is always 1 in case of PUCCH

and $\mathrm{MS}(t, f)$ is the frequency domain samples for the allocated bandwidth, as defined in the subsection E.5.8

Although an exclusion period for EVM is applicable in E.5.9.1, the inband emissions measurement interval is defined over one complete slot in the time domain.

From the acquired samples 20 functions for inband emissions can be derived.

Since the PUCCH allocation is always on the upper or lower band-edge, the opposite of the allocated one represents the IQ image, and the remaining inner RBs represent the general inband emissions. They are compared against different limits.

# E.6 EVM for PRACH

The description below is generic in the sense that all 5 PRACH formats are covered. The numbers, used in the text below are taken from PRACH format#0 without excluding the other formats. The sampling rate for the PUSCH, 30.72 Msps in the time domain, is re-used for the PRACH. The carrier spacing of the PUSCH is 12 (format 0 to 3) and 2 (format 4) times of the PRACH. This results in an oversampling factor of 12 (format 0 to 3) and 2 (format 4), when acquiring the time samples for the PRACH. The pre-FFT algorithms (clauses E.6.6 and E.6.7) use all time samples, although oversampled. For the FFT the time samples are decimated by the factor of 12 (format 0 to 3) and 2 (format 4), resulting in the same FFT size as for the other transmit modulation tests (2048). Decimation requires a decision, which samples are used and which ones are rejected. The algorithm in E.6.6, Timing of the FFT window, can also be used to decide about the used samples.

## E.6.1 Basic principle

The basis principle is the same as described in E.2.1

## E.6.2 Output signal of the TX under test

The output signal of the TX under test is processed same as described in E.2.2

The measurement period is different:

- 2 PRACH preambles are recorded for format 0and 1,
- 1 PRACH preamble is recorded for format 2 and 3, each containing 1 CP and 2 preamble sequences
- 10 RPRACH preambles are recorded for format 4.

## E.6.3 Reference signal

The test description in 6.5.2.1.4.1A is based on non contention based access:

- PRACH configuration index (responsible for Preamble format, System frame number and subframe number)
- Preamble ID
- Preamble power

signalled to the UE, defines the reference signal unambiguously, such that no demodulation process is necessary to gain the reference signal.

The reference signal i(v) is constructed by the measuring equipment according to the relevant TX specifications, using the following parameters: the applicable Zadoff Chu sequence, nominal carrier frequency, nominal amplitude and phase for each subcarrier, nominal timing, no carrier leakage. It is represented as a sequence of samples at a sampling rate of 30.72 Msps in the time domain.

## E.6.4 Measurement results

The measurement result is:

- EVMPRACH

## E.6.5 Measurement points

The measurement points are illustrated in the figure below:

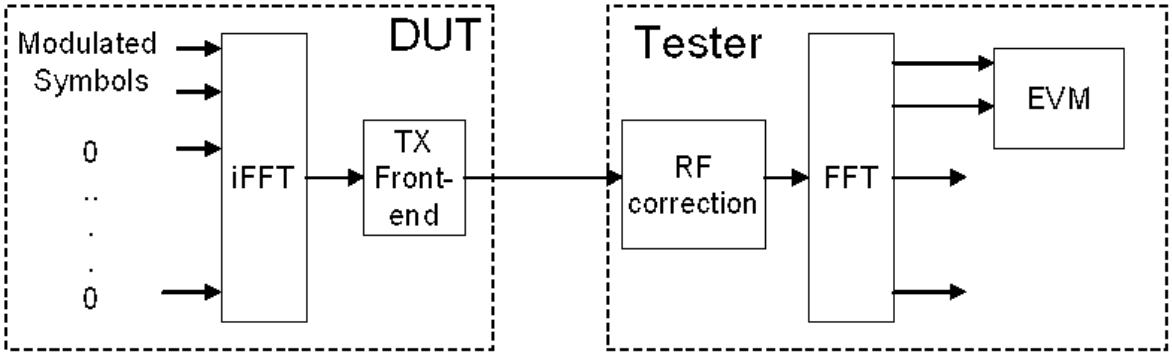

**Figure E.6.5-1**

## E.6.6 Pre FFT minimization process

The pre-FFT minimization process is applied to each PRACH preamble separately. The time period for the pre- FFT minimisation process includes the complete CP and Zadoff-Chu sequence (in other words, the power transition period is per definition outside of this time period) Sample timing, Carrier frequency and carrier leakage in z(ν) are jointly varied in order to minimise the difference between z(ν) and i(ν). Best fit (minimum difference) is achieved when the RMS difference value between z(ν) and i(ν) is an absolute minimum.

After this process the samples z(ν) are called $z^0(\nu)$.

RF error, and carrier leakage are necessary for best fit of the measured signal towards the ideal signal in the pre FFT domain. However they are not used to compare them against the limits.

## E.6.7 Timing of the FFT window

The FFT window length is 24576 samples for preamble format 0, however in the measurement period is at least 27744 samples are taken. The position in time for FFT must be determined.

In an ideal signal, the FFT may start at any instant within the cyclic prefix without causing an error. The TX filter, however, reduces the window. The EVM requirements shall be met within a window W<CP.

The reference instant for the FFT start is the centre of the reduced window, called $\Delta\tilde{c}$ ,

EVM is measured at the following two instants: $\Delta\tilde{c}$ –W/2 and $\Delta\tilde{c}$ +W/2.

The timing of the measured signal $z^0(\nu)$ with respect to the ideal signal i(ν) is determined in the pre FFT domain as follows:

Correlation between $z^0(\nu)$ and i(ν) will result in a correlation peak. The meaning of the correlation peak is approx. the “impulse response” of the TX filter. The correlation peak, (the highest, or in case of more than one, the earliest) indicates the timing in the measured signal with respect to the ideal signal.

W is different for different preamble formats and shown in TableE.6.7-1.

**Table E.6.7-1EVM window length for PRACH**

| Preamble format | Cyclic prefix length[1] $N_{cp}$ | Nominal FFT size[2] | EVM window length *W* in FFT samples | Ratio of *W* to CP[3] |
|---|---|---|---|---|
| 0 | 3168 | 24576 | 3072 | 96.7% |
| 1 | 21024 | 24576 | 20928 | 99.5% |
| 2 | 6240 | 49152 | 6144 | 98.5% |
| 3 | 21024 | 49152 | 20928 | 99.5% |
| 4 | 448 | 4096 | 432 | 96.4% |
| Note 1: The unit is number of samples, sampling rate of 30.72MHz is assumed<br>Note 2: Decimation of time samples by 12(format 0 to 3) and factor 2 (format 4) is assumed, leading to a uniform FFT size of 2048 for all formats.<br>Note 3: These percentages are informative | | | | |

The number of samples, used for FFT is reduced compared to $z^0(\nu)$. This subset of samples is called z''(ν).

The sample frequency 30.72 MHz is oversampled with respect to the PRACH-subcarrier spacing of 1.25kHz (format 0 to 3) and 7.5kHz (format 4). EVM is based on 2048 samples per PRACH preamble and requires decimation of the time samples by the factor of 12 (format 0 to 3) and factor 2 (format 4). The final number of samples per PRACH preamble, used for FFT is reduced compared to $z^{''}(\nu)$ by the factor of 12 (format 0 to 3) and factor 2 (format 4). This subset of samples is called z'(ν).

# E.6.8 Post FFT equalisation

Equalisation is not applicable for the PRACH.

# E.6.9 Derivation of the results

## E.6.9.1 $EVM_{PRACH}$

Perform FFT on z'(ν) and i(ν) using the FFT timing $\Delta\tilde{c}$ –W/2 and $\Delta\tilde{c}$ +W/2.

For format 2 and 3 the first and the repeated preamble sequence are FFT-converted separately. using the standard FFT length 0f 2048

The $EVM_{PRACH}$ is the difference between the ideal waveform and the measured and equalized waveform for the allocated RB(s).

$$EVM_{PRACH} = \sqrt{\frac{\sum_{f \in F} \left| Z'(f) - I(f) \right|^2}{N_{ZC} \cdot P_0}},$$

where

f covers the count of demodulated symbols within the allocated bandwidth.

$Z'(f)$ are the samples of the signal evaluated for the $EVM_{PRACH}$

$I(f)$ is the ideal signal reconstructed by the measurement equipment, and

$P_0$ is the average power of the ideal signal. For normalized modulation symbols $P_0$ is equal to 1.

$N_{ZC}$ is random access preamble sequence length.

From the acquired samples 4 $EVM_{PRACH}$ value can be derived, 2 values for the timing $\Delta\tilde{c}$ –W/2 and 2 values for the timing $\Delta\tilde{c}$ +W/2 (4 and 2 applies for format 0,1,2,3. 20 and 10 applies for format 4).

### E.6.9.2 Averaged $EVM_{PRACH}$

The PRACH EVM, $EVM_{PRACH}$ , is averaged over two preamble sequence measurements for preamble formats 0, 1, 2, 3, and it is averaged over 10 preamble sequence measurements for preamble format 4.

$$\overline{EVM}_{PRACH} = \sqrt{\frac{1}{2}\sum_{i=1}^{2} EVM_{PRACH\,i}^{2}} \quad \text{for preamble formats 0,1,2,3}$$

$$\overline{EVM}_{PRACH} = \sqrt{\frac{1}{10}\sum_{i=1}^{10} EVM_{PRACH\,i}^{2}} \quad \text{for preamble format 4}$$

The averaging is done separately for timing $\Delta\tilde{c}$ –W/2 and $\Delta\tilde{c}$ +W/2 leading to $\overline{EVM}_{PRACH,low}$ and $\overline{EVM}_{PRACH,high}$

$EVM_{PRACH,final} = \max(\overline{EVM}_{PRACH,low}, \overline{EVM}_{PRACH,high})$ is compared against the test requirements.

# E.7 EVM with exclusion period

## E.7.1 General

EVM with exclusion periods is defined in clause 6.5.2.1.1, third paragraph. For PUCCH entire symbols are excluded, if applicable. For PUSCH fractions of symbols are excluded, if applicable. The exclusion period for PUSCH is defined at the air interface, leading to exclusion periods in the EVM domain. The necessary mapping is described in this clause.

## E.7.2 The model

The exclusion period in the time domain has corresponding periods in the quasi time domains (Table E.7.2). The mapping of corresponding periods needs only scaling and cyclic shifting.

The algorithm below uses a sampling frequency 30.72 MHz and FFT-width 2048 for all bandwidths. Bandwidth-adapted sampling frequencies and FFT-widths are not excluded. Only normal cyclic prefix is mentioned in the model without excluding the extended CP.

**Table. E.7.2: Model for mapping exclusion period in the time domain**

| | TX | | | | Channel | EVM meter | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| Operation | | DFT | | iFFT | | | FFT | | iDFT | |
| Meaning | Modulation symbols | | Precoded symbols | | BB samples | BB samples | | Precoded symbols | | demodula-ted symbols |
| No of samples | allocated Sub Carriers | | allocated subcarriers + unallocated subcarriers = 2048 | | allocated subcarriers + unallocated subcarriers + CP samples | 2048, position depending on EVM window | | allocated subcarriers | | allocated subcarriers |
| Domain | Quasi time domain | | Frequency domain | | Time domain | Time domain | | Frequency domain | | Quasi time domain |
| text below | | 1 | 2 | 3 | 4 | 7 | 7 | 8 | 9 | 11 |

1. A sequence of complex valued modulation symbols are Transform-Precoded (DFT) according to 36.211 clause 5.3.3. The size of this transformation is the number of allocated subcarriers.

2. The outcome of (1) is supplemented by 0 for the non allocated subcarriers. In sum 2048 subcarriers.

3. The baseband time signal (without CP) is then calculated by a iFFT according to 36.211 clause 5.6

4. (3) is then supplemented by a cyclic prefix (144 or 160 samples) leading to 2192 or 2208 samples. (144 CP samples = 144 tail samples from the data field)

5. (4) is transmitted over the channel and sampled by the EVM meter.

6. In case of an exclusion period those samples of (5) are marked, where the exclusion applies. The exclusion period is an unbroken leading or lagging exclusion period next to a subframe or timeslot boarder.

7.Depending on early or late EVM-window a subset of 2048 samples (out of 2192 or 2208 samples) are the input for the subsequent FFT. These samples may or may not comprise marked samples. The result are 2048 frequency domain samples.

8. The non allocated subcarriers are removed from the 2048 samples.

9. (8) is then iDFT transformed. The result are demodulated complex valued symbols in the same domain as (1)

10. Step 7, 8 and 9 are modified by an equalizer algorithm.
For the purpose of this clause, the equalizer partly re-does step 4 (CP insertion):
The equalizer algorithm cuts that subset of CP samples, covered by the FFT, from the head and copies it to the tail of the data field.

11. The result of (10) is: complex valued symbols in the same sequence as in (1) They are compared with (1) symbol by symbol for EVM. Due to exclusion in the time domain (6) we have marked corresponding symbols, which are disregarded for EVM.

12. From step 1 to 4 the number of samples is expanded. A subset of expanded samples is marked as excluded. Form step 6 to step 9 the number of samples is compressed, leading to a non integer number of samples, marked as excluded. The number of marked samples in this domain is rounded up at the expense of the EVM samples

## E.7.3 Illustration

The figures below illustrate the cyclic shift due to the equalizer and scaling.

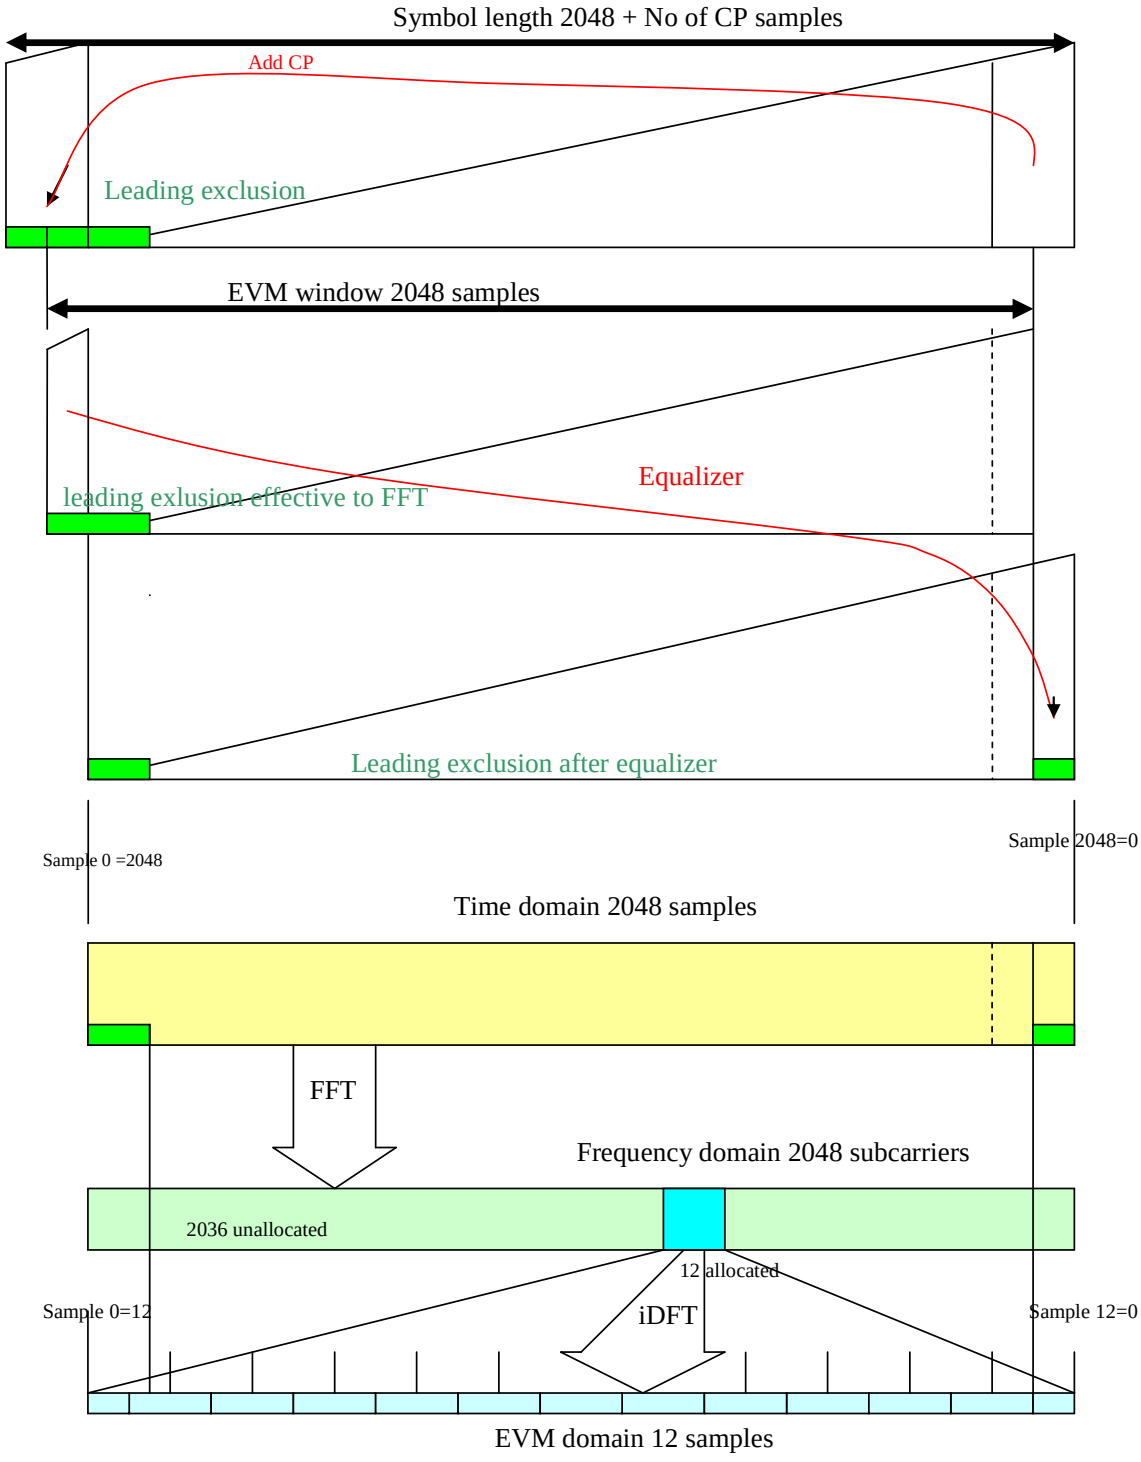

**Figure E.7.3-1: leading exclusion period (when number of RBs=1)**

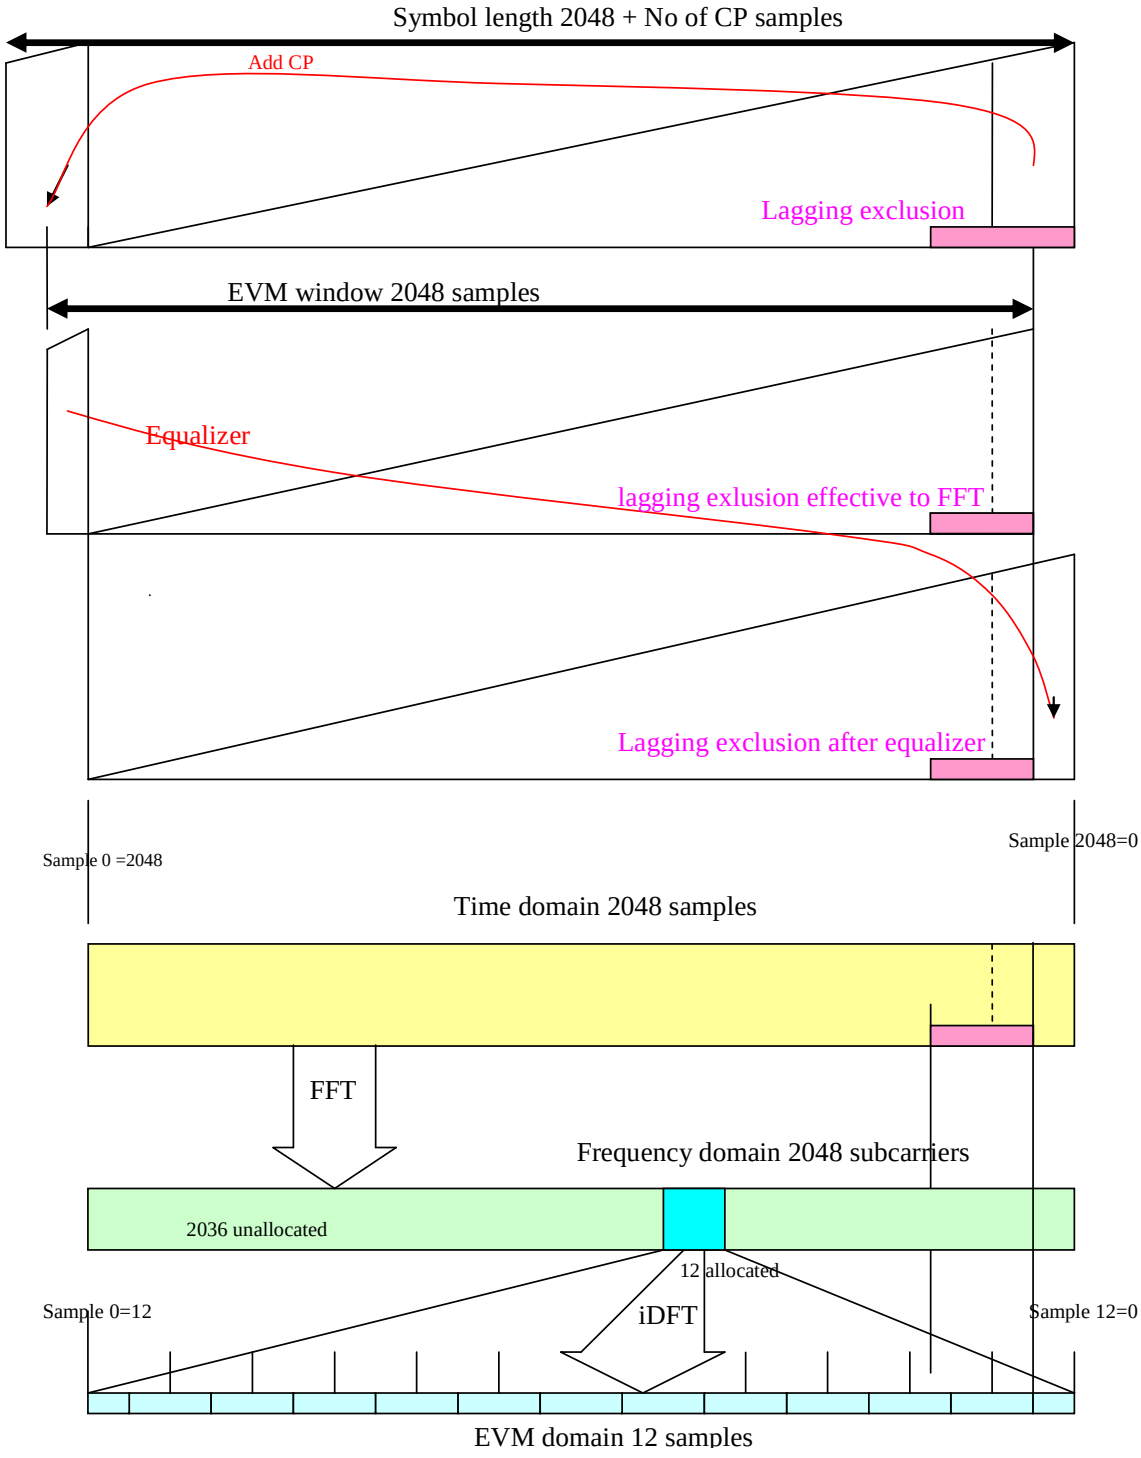

**Figure E.7.3-2: lagging exclusion period (when number of RBs=1)**

Legend to figure E.7.3-1

The figure contains 6 related subfigures.

The upper 3 triangles illustrate the cyclic shift due to EVM windowing and equalizer.

The lower 3 boxes illustrate the mapping from the time domain, where the exclusion period is defined, into the EVM domain, where EVM samples are actually excluded.

Cyclic shift

The leading exclusion period covers the entire CP and a part of the data field. The EVM window masks a part of the exclusion period. For the purpose of this annex, the equalizer re-arranges the time domain samples into the original order, splitting the exclusion period into two parts.

Mapping

The split exclusion period (after cyclic shift) is copied from above. The frequency domain is derived by Fast Fourier Transformation from the time domain and represent the frequency domain with 2048 subcarriers, 12 of them are allocated, and the rest is unallocated. The 12 allocated subcarriers are iDFT transformed into the EVM domain comprising 12 samples. Note that all 3 domains are displayed cyclically: the leftmost sample is identical to the rightmost sample.

The two transformations map the time domain into the EVM domain, carrying out a compression of samples 12/2048. In spite of the compression, there is a correspondence of ranges in the time domain and in the EVM domain. One sample in the EVM domain comprises a range, which is influenced from (and only from) the equivalent samples in the time domain vertically above. Note that this correspondence holds irrespective of the position of the 12 allocated samples in the frequency domain.

**Example leading exclusion (figure E.7.3-1)**

| Sample No in the EVM domain | Influence(exclusion) from the time domain | EVM exclusion |
|---|---|---|
| 12=0 | full | excluded |
| 1 | partly | excluded |
| 2 to 11 | none | counted |

**Example lagging exclusion example (figure E.7.3-2)**

| Sample No in the EVM domain | Influence(exclusion) from the time domain | EVM exclusion |
|---|---|---|
| 12=0 | none | counted |
| 1 to 9 | none | counted |
| 10 | partly | excluded |
| 11 | full | excluded |

## E.7.4 Formula

The exclusion period is defined in µs at the air interface.

Convert the µs's into No of samples in the time domain.

No of exclusion samples (before EVM windowing and equalizer) is calculated from:

No of exclusion sample = ceil (30.72 * Exclusion µs)

then, EVM windowing and equalizer is applied by 2048 samples based cyclic shift process.

(the upper 3 triangles illustrate in fig. E.7.3-1 and -2.)

Determine the indices **k**, to be excluded in the time domain, according to fig. E.7.3-1 and -2

(after application of EVM windowing and equaliser, original sample order,

**k** = subset from the set (0 to 2047) )

The indices **l** in the EVM domain, to be excluded, are:

**l** = [ round (**k***12* $L_{CRBs}$ / 2048)]mod(12*$L_{CRBs}$)

with $L_{CRBs}$ number of allocated resource blocks

# E.8 EVM for category NB1

## E.8.1 Averaged EVM

The general EVM for category NB1 is calculated using the procedure defined in Annex E.4 with the exception that the general EVM is averaged over basic EVM measurements for 240/$L_{Ctone}$ slots in the time domain, where $L_{Ctone}$ = {1, 3, 6, 12} is the number of subcarriers for the transmission.

## E.8.2 EVM of Demodulation reference symbols ($EVM_{DMRS}$)

The calculation of the EVM for the demodulation reference symbols for category NB1 follows the procedure defined for DMRS in Annex E.4 with the exception that the basic $EVM_{DMRS}$ measurements are first averaged over 240/ $L_{Ctone}$ slots to obtain the intermediate average EVM.

## E.8.3 EVM for NPRACH

The calculation of the NPRACH EVM for both formats follows the procedure defined for PRACH in Annex E.6 with the exception that $EVM_{PRACH}$ is averaged over 64 preamble measurements.

## E.8.4 Window length for category NB1

The EVM window length, W, for NPUSCH is set to 1 (in FFT samples where the nominal FFT size is 128 for 15 kHz sub-carrier spacing and 512 for 3.75 kHz sub-carrier spacing).
The EVM window length, W, for NPRACH is set to 110 for preamble format 0 and to 494 for preamble format 1 (both in FFT samples where the nominal FFT size is 512).

# E.9 EVM for V2X communication

## E.9.1 EVM for PSSCH and PSCCH

The calculation of the EVM for PSSCH and PSCCH follows the procedure defined in Annex E.4. The EVM is calculated separately for PSSCH and PSCCH using separate equalizer, while the in-band emission is calculated only once.
The measurement period for EVM of PSSCH and PSCCH is 15 subframes. When V2X transmissions are shortened due to transmission gap of 1 symbol at the end of the subframe, the EVM measurement interval is reduced by one symbol, accordingly.

## E.9.2 EVM for PSBCH

The calculation of the EVM for PSBCH follows the procedure defined in Annex E.4. The duration over which EVM is averaged shall be 24 subframes.

# Annex F (normative): Measurement uncertainties and Test Tolerances

## F.1 Acceptable uncertainty of Test System (normative)

The maximum acceptable uncertainty of the Test System is specified below for each test, where appropriate. The Test System shall enable the stimulus signals in the test case to be adjusted to within the specified range, and the equipment under test to be measured with an uncertainty not exceeding the specified values. All ranges and uncertainties are absolute values, and are valid for a confidence level of 95 %, unless otherwise stated.

A confidence level of 95 % is the measurement uncertainty tolerance interval for a specific measurement that contains 95 % of the performance of a population of test equipment.

For RF tests it should be noted that the uncertainties in clause F.1 apply to the Test System operating into a nominal 50 ohm load and do not include system effects due to mismatch between the DUT and the Test System.

The downlink signal uncertainties apply at each receiver antenna connector.

### F.1.1 Measurement of test environments

The measurement accuracy of the UE test environments defined in TS 36.508 subclause 4.1, Test environments shall be.

- Pressure ±5 kPa.
- Temperature ±2 degrees.
- Relative Humidity ±5 %.
- DC Voltage ±1,0 %.
- AC Voltage ±1,5 %.
- Vibration 10 %.
- Vibration frequency 0,1 Hz.

The above values shall apply unless the test environment is otherwise controlled and the specification for the control of the test environment specifies the uncertainty for the parameter.

## F.1.2 Measurement of transmitter

**Table F.1.2-1: Maximum Test System Uncertainty for transmitter tests**

| Subclause | Maximum Test System Uncertainty | Derivation of Test System Uncertainty |
|---|---|---|
| 6.2.2 UE Maximum Output Power | ±0.7 dB, f ≤ 3.0GHz<br>±1.0 dB, 3.0GHz < f ≤ 4.2GHz<br>±1.3 dB, 4.2GHz < f ≤ 6GHz | |
| 6.2.2_1 Maximum Output Power for HPUE | ±0.7 dB, f ≤ 3.0GHz | |
| 6.2.2A.1 UE Maximum Output Power for CA (intra-band contiguous DL CA and UL CA) | Same as 6.2.2 for sum of powers of all CCs | |
| 6.2.2A.2 UE Maximum Output Power for CA (inter-band DL CA and UL CA) | For $f_1$ ≤ 3.0GHz:<br>±1.0 dB, $f_2$ ≤ 3.0GHz<br>±1.3 dB, 3.0GHz < $f_2$ ≤ 4.2GHz<br>±1.5 dB, 4.2GHz < $f_2$ ≤ 6GHz<br><br>For 3.0GHz < $f_1$ ≤ 4.2GHz:<br>±1.5 dB, 3.0GHz < $f_2$ ≤ 4.2GHz<br>±1.7 dB, 4.2GHz < $f_2$ ≤ 6GHz<br><br>For 4.2GHz < $f_1$ ≤ 6GHz:<br>±1.9 dB, 4.2GHz < $f_2$ ≤ 6GHz<br><br>where $f_1$ and $f_2$ are center frequencies of 2 CCs and $f_1$ < $f_2$ | Overall system uncertainty is RSS of UL measurement uncertainity of 2 CCs. |
| 6.2.2A.4 UE Maximum Output Power for CA (3UL CA) | For UL CA_XD:<br>For $BW_{agg}$ ≤ 40MHz<br>Same as 6.2.2 for sum of powers of all CCs<br>For 40MHz < $BW_{agg}$ ≤ 60MHz<br>±1.4 dB for f ≤ 4.2GHz<br>±1.6 dB for 4.2GHz < f ≤ 6.0GHz<br><br>For UL CA_XC_YA:<br>Same as 6.2.2A.2 with $f_1$ as the lower one among center frequencies of XC or YA.<br><br>For UL CA_XA_YA_ZA:<br>FFS | Overall system uncertainty is RSS of UL measurement uncertainity of interband or non-contiguous CCs |
| 6.2.2B UE Maximum Output Power for UL-MIMO | Same as 6.2.2 for each antenna | |
| 6.2.2E UE Maximum Output Power for UE category 0 | Same as 6.2.2 | |
| 6.2.2EA UE Maximum Output Power for UE category M1 | Same as 6.2.2 | |
| 6.2.2EB UE Maximum Output Power for UE category 1bis | Same as 6.2.2 | |
| 6.2.2EC UE Maximum Output Power for UE category M2 | Same as 6.2.2 | |
| 6.2.2F UE Maximum Output Power for UE category NB1 | Same as 6.2.2_1 | |
| 6.2.2G.1 UE maximum output power for V2X Communication / Non-concurrent with E-UTRA uplink transmissions | Same as 6.2.2 | |

| | | |
|---|---|---|
| 6.2.2G.2 UE maximum output power for V2X Communication / Simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmission | Same as 6.2.2 for sum of powers of all CCs | |
| 6.2.2G.3 UE maximum output power for V2X Communication / Intra-band contiguous multi-carrier operation | Same as 6.2.2 for sum of powers of all CCs | |
| 6.2.3 Maximum Power Reduction | ±0.7 dB, f ≤ 3.0GHz<br>±1.0 dB, 3.0GHz < f ≤ 4.2GHz<br>±1.3 dB, 4.2GHz < f ≤ 6GHz | |
| 6.2.3_1 Maximum Power Reduction (MPR) for HPUE | ±0.7 dB, f ≤ 3.0GHz | |
| 6.2.3A.1 Maximum Power Reduction (MPR) for CA (intra-band contiguous DL CA and UL CA) | Same as 6.2.3 for sum of powers of all CCs | |
| 6.2.3A.1_1 Maximum Power Reduction (MPR) for CA (intra-band contiguous DL CA and UL CA) for UL 64QAM | Same as 6.2.3 for sum of powers of all CCs | |
| 6.2.3A.1_2 Maximum Power Reduction (MPR) for CA (intra-band contiguous DL CA and UL CA) for UL 256QAM | Same as 6.2.3 for sum of powers of all CCs | |
| 6.2.3A.2 Maximum Power Reduction (MPR) for CA (inter-band DL CA and UL CA) | Same as 6.2.2A.2 | |
| 6.2.3A.2_1 Maximum Power Reduction (MPR) for CA (inter-band DL CA and UL CA) for UL 64QAM | Same as 6.2.2A.2 | |
| 6.2.3A.2_2 Maximum Power Reduction (MPR) for CA (inter-band DL CA and UL CA) for UL 256QAM | Same as 6.2.3 for sum of powers of all CCs | |
| 6.2.3A.3 Maximum Power Reduction (MPR) for CA (intra-band non-contiguous DL CA and UL CA) | Same as 6.2.2A.2 | |
| 6.2.3A.3_1 Maximum Power Reduction (MPR) for CA (intra-band non-contiguous DL CA and UL CA) for UL 64QAM | Same as 6.2.2A.2 | |
| 6.2.3A.3_2 Maximum Power Reduction (MPR) for CA (intra-band non-contiguous DL CA and UL CA) for UL 256QAM | Same as 6.2.2A.2 | |
| 6.2.3B Maximum Power Reduction (MPR) for UL-MIMO | Same as 6.2.3 for each antenna | |
| 6.2.3_2 Maximum Power Reduction (MPR) for Multi-Cluster PUSCH | Same as 6.2.3 | |
| 6.2.3E Maximum Power Reduction for UE category 0 | Same as 6.2.3 | |
| 6.2.3EA Maximum Power Reduction for UE category M1 | Same as 6.2.3 | |

| | | |
|---|---|---|
| 6.2.3EB Maximum Power Reduction for UE category 1bis | Same as 6.2.3 | |
| 6.2.3_3 Maximum Power Reduction (MPR) for UL 64QAM | Same as 6.2.3 | |
| 6.2.3_4 Maximum Power Reduction (MPR) for Multi-Cluster PUSCH with UL 64QAM | Same as 6.2.3 | |
| 6.2.3G.1.1 Maximum Power Reduction (MPR) for V2X Commincation / Non-concurrent with E-UTRA uplink transmissions | Same as 6.2.3 | |
| 6.2.3G.1.2 Maximum Power Reduction (MPR) for V2X Communication / Power class 3 / Non-contiguous allocation of PSCCH and PSSCH / Non-concurrent with E-UTRA uplink transmissions | Same as 6.2.3 | |
| 6.2.3G.1.3 Maximum Power Reduction (MPR) for V2X Communication / Power class 3 / Simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmission | Same as 6.2.3 | |
| 6.2.3G.2.1 Maximum Power Reduction (MPR) for V2X Communication / Power class 2 / Contiguous allocation of PSCCH and PSSCH / Non-concurrent with E-UTRA uplink transmissions | Same as 6.2.3 | |
| 6.2.3G.2.2 Maximum Power Reduction (MPR) for V2X Communication / Power class 2 / Non-contiguous allocation of PSCCH and PSSCH / Non-concurrent with E-UTRA uplink transmissions | Same as 6.2.3 | |
| 6.2.3_5 Maximum Power Reduction (MPR) for UL 256QAM | Same as 6.2.3 | |
| 6.2.3_6 Maximum Power Reduction (MPR) for Multi-Cluster PUSCH with UL 256QAM | Same as 6.2.3 | |
| 6.2.4 UE Maximum Output Power with additional requirements | ±0.7 dB, f ≤ 3.0GHz<br>±1.0 dB, 3.0GHz < f ≤ 4.2GHz | |
| 6.2.4_1 Additional Maximum Power Reduction (A-MPR) for HPUE | ±0.7 dB, f ≤ 3.0GHz | |
| 6.2.4_2 Additional Maximum Power Reduction (A-MPR) for UL 64QAM | Same as 6.2.4 | |
| 6.2.4_3 Additional Maximum Power Reduction (A-MPR) with PUSCH frequency hopping | Same as 6.2.4 | |
| 6.2.4_4 Additional Maximum Power Reduction (A-MPR) for UL 256QAM | Same as 6.2.4 | |

| | | |
|---|---|---|
| 6.2.4A.1 Additional Maximum Power Reduction (A-MPR) for CA (intra-band contiguous DL CA and UL CA) | Same as 6.2.4 for sum of powers of all CCs | |
| 6.2.4A.1_1 Additional Maximum Power Reduction (A-MPR) for CA (intra-band contiguous DL CA and UL CA) for UL 64QAM | Same as 6.2.4 for sum of powers of all CCs | |
| 6.2.4A.1_2 Additional Maximum Power Reduction (A-MPR) for CA (intra-band contiguous DL CA and UL CA) for UL 256QAM | Same as 6.2.4 for sum of powers of all CCs | |
| 6.2.4A.2 Additional Maximum Power Reduction (A-MPR) for CA (inter-band DL CA and UL CA) | Same as 6.2.2A.2 | |

| 6.8B Time alignment error for UL-MIMO | ±25 ns | |

## F.1.3 Measurement of receiver

**Table F.1.3-1: Maximum Test System Uncertainty for receiver tests**

| Subclause | Maximum Test System Uncertainty[1] | Derivation of Test System Uncertainty |
|---|---|---|
| 7.3 Reference sensitivity power level | Downlink power ±0.7 dB, f ≤ 3.0GHz<br>±1.0 dB, 3.0GHz < f ≤ 4.2GHz | |
| 7.3_1 Reference sensitivity level with 4 Rx antenna ports | Same as 7.3 | |
| 7.3A.1 Reference sensitivity level for CA (intra-band contiguous DL CA and UL CA) | Same as 7.3 for each CC | |
| 7.3A.2 Reference sensitivity level for CA (intra-band contiguous DL CA without UL CA) | Same as 7.3A.1 | |
| 7.3A.3 Reference sensitivity level for CA (inter-band DL CA without UL CA) | Downlink power ±0.7 dB, f ≤ 3.0GHz<br>±1.0 dB, 3.0GHz < f ≤ 4.2GHz<br>±1.5 dB, 4.2GHz < f ≤ 6GHz | |
| 7.3A.4 Reference sensitivity level for CA (intra-band non-contiguous DL CA without UL CA) | Same as 7.3A.1 | |
| 7.3A.5 Reference sensitivity level for 3DL CA | Same as 7.3A.3 | |
| 7.3A.6 Reference sensitivity level for CA (inter-band DL CA and UL CA) | Same as 7.3A.1 | |
| 7.3A.7 Reference sensitivity level for CA (intra-band non-contiguous DL CA and UL CA) | Same as 7.3A.1 | |
| 7.3A.9 Reference sensitivity level for 4DL CA | Same as 7.3A.1 | |
| 7.3A.10 Reference sensitivity level for 5DL CA | Same as 7.3A.1 | |
| 7.3B Reference Sensitivity Level for UL-MIMO | Same as 7.3 | |
| 7.3D.1 Reference sensitivity level for ProSe Direct Discovery | Sidelink power ±0.7 dB, f ≤ 3.0GHz | |
| 7.3D.2 Reference sensitivity level for ProSe Direct Communication | Same as 7.3D.1 | |
| 7.3E Reference Sensitivity Level for UE category 0 | Same as 7.3 | |
| 7.3EA Reference Sensitivity Level for UE category M1 | Same as 7.3 | |
| 7.3EB Reference sensitivity level for UE category 1bis | Same as 7.3 | |
| 7.3EC Reference Sensitivity Level for UE category M2 | Same as 7.3 | |
| 7.3F.1 Reference sensitivity level without repetitions for UE category NB1 | Downlink power ±0.7 dB, f ≤ 3.0GHz | |
| 7.3F.2 Reference sensitivity level with repetitions for category NB1 | Downlink power ±0.7 dB, f ≤ 3.0GHz | |
| 7.3G.1 Reference sensitivity level for V2X Communication / Non-concurrent with E-UTRA uplink transmissions | Downlink power ±1.5 dB, 4.2GHz < f ≤ 6GHz | |

| | | |
|---|---|---|
| 7.3G.2 Reference sensitivity level for V2X Communication / Simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions | Downlink power ±1.5 dB, 4.2GHz < f ≤ 6GHz for V2X sidelink<br><br>Downlink power ±0.7 dB, f ≤ 3.0GHz<br>±1.0 dB, 3.0GHz < f ≤ 4.2GHz for E-UTRA | |
| 7.3G.3 Reference sensitivity level for V2X Communication / Intra-band contiguous multi-carrier operation | Same as 7.3G.1 | |
| 7.4 Maximum input level | Downlink power ±0.7 dB, f ≤ 3.0GHz<br>±1.0 dB, 3.0GHz < f ≤ 4.2GHz<br>Uplink power measurement ±0.7 dB, f ≤ 3.0GHz<br>±1.0 dB, 3.0GHz < f ≤ 4.2GHz | |
| 7.4_1 Maximum input level with 4 Rx antenna ports | Same as 7.4 | |
| 7.4A.1 Maximum input level for CA (intra band contiguous DL CA and UL CA) | Same as 7.4 for each CC | Uncertainties apply for each CC |
| 7.4A.1 H Maximum input level for SCE-L1 for CA (intra-band contiguous DL CA and UL CA) | Downlink power same as 7.4 for each CC<br><br>Uplink power measurement same as 7.4 | Uncertainties apply for each CC |
| 7.4A.2 Maximum input level for CA (intra band contiguous DL CA without UL CA) | Downlink power same as 7.4 for each CC<br><br>Uplink power measurement same as 7.4 | Uncertainties apply for each CC |
| 7.4A.2 H Maximum input level for SCE-L1 for CA (intra-band contiguous DL CA without UL CA) | Downlink power same as 7.4 for each CC<br><br>Uplink power measurement same as 7.4 | Uncertainties apply for each CC |
| 7.4A.3 Maximum input level for CA (inter-band DL CA without UL CA) | Downlink power ±0.7 dB, f ≤ 3.0GHz<br>±1.0 dB, 3.0GHz < f ≤ 4.2GHz<br>±1.5 dB, 4.2GHz < f ≤ 6GHz<br><br>Uplink power measurement same as 7.4 | Uncertainties apply for each CC |
| 7.4A.4 Maximum input level for CA (intra band non-contiguous DL CA without UL CA) | Downlink power same as 7.4 for each CC<br><br>Uplink power measurement same as 7.4 | Uncertainties apply for each CC |
| 7.4A.5 Maximum input level for 3DL CA | Downlink power same as 7.4A.3 for each CC<br><br>Uplink power measurement same as 7.4 | Uncertainties apply for each CC |
| 7.4A.5_H Maximum input level for SCE-L1 for 3DL CA | Downlink power same as 7.4 for each CC<br><br>Uplink power measurement same as 7.4 | Uncertainties apply for each CC |
| 7.4A.7 Maximum input level for 4DL CA | Downlink power same as 7.4 for each CC<br><br>Uplink power measurement same as 7.4 | Uncertainties apply for each CC |
| 7.4A.7_H Maximum input level for 4DL CA for 256QAM in DL | Downlink power same as 7.4 for each CC<br><br>Uplink power measurement same as 7.4 | Uncertainties apply for each CC |
| 7.4A.8_H Maximum input level for 5DL CA for 256QAM in DL | Downlink power same as 7.4 for each CC<br><br>Uplink power measurement same as 7.4 | Uncertainties apply for each CC |
| 7.4B Maximum Input Level for UL-MIMO | Downlink power same as 7.4<br><br>Uplink power measurement same as 7.4, at each antenna connector used for transmission | The overall UL power is the linear sum of the output powers over all Tx antenna connectors |
| 7.4D.1 Maximum input level for ProSe Direct Discovery | Sidelink power ±0.7 dB, f ≤ 3.0GHz | |
| 7.4D.2 Maximum input level for ProSe Direct Communication | Same as 7.4D.1 | |
| 7.4E Maximum input level for UE category 0 | Same as 7.4 | |

| | | |
|---|---|---|
| 7.4EA Maximum input level for UE category M1 | Same as 7.4 | |
| 7.4EB Maximum input level for UE Category 1bis | Same as 7.4 | |
| 7.4EC Maximum input level for UE category M2 | Same as 7.4 | |
| 7.4F Maximum input level for UE category NB1 | Downlink power ±0.7 dB, f ≤ 3.0GHz | |
| 7.4G.1 Maximum input level for V2X Communication / Non-concurrent with E-UTRA uplink transmissions | Downlink power ±1.5 dB, 4.2GHz < f ≤ 6GHz | |
| 7.4G.2 Maximum input level for V2X Communication / Simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions | Downlink power ±1.5 dB, 4.2GHz < f ≤ 6GHz for V2X sidelink<br><br>Downlink power ±0.7 dB, f ≤ 3.0GHz<br>±1.0 dB, 3.0GHz < f ≤ 4.2GHz for E-UTRA<br><br>Uplink power measurement ±0.7 dB, f ≤ 3.0GHz<br>±1.0 dB, 3.0GHz < f ≤ 4.2GHz for E-UTRA | |
| 7.4G.3 Maximum input level for V2X Communication / Intra-band contiguous multi-carrier operation | Same as 7.4G.1 | |
| 7.4_H Maximum input level for SCE-L1 | Same as 7.4 | |
| 7.5 Adjacent Channel Selectivity (ACS) | ACS value ±1.1 dB, f ≤ 3.0GHz<br>±1.5 dB, 3.0GHz < f ≤ 4.2GHz<br>Uplink power measurement ±0.7 dB, f ≤ 3.0GHz<br>±1.0 dB, 3.0GHz < f ≤ 4.2GHz | Overall ACS uncertainty comprises three quantities:<br><br>1. Wanted signal level error<br>2. Interferer signal level error<br>3. Additional impact of interferer ACLR<br><br>Items 1 and 2 are assumed to be uncorrelated so can be root sum squared to provide the ratio error of the two signals. The interferer ACLR effect is systematic, and is added arithmetically.<br><br>Test System uncertainty = [SQRT (wanted_level_error$^2$ + interferer_level_error$^2$)] + ACLR effect.<br><br>f ≤ 3.0GHz<br>Wanted signal level ± 0.7dB<br>Interferer signal level ± 0.7dB<br>3.0GHz < f ≤ 4.2GHz<br>Wanted signal level ± 1.0dB<br>Interferer signal level ± 1.0dB<br><br>f ≤ 4.2GHz<br>Impact of interferer ACLR 0.1dB |
| 7.5_1 Adjacent Channel Selectivity (ACS) with 4 Rx antenna ports | Same as 7.5 | |

| | | |
|---|---|---|
| 7.5A.1 Adjacent Channel Selectivity (ACS) for CA (intra band contiguous DL CA and UL CA) | Same as 7.5 for each CC | Same as 7.5<br>The wanted signal level uncertainty applies for each CC.<br>Overall ACS uncertainty calculation includes the uncertainty for wanted level error only once, as the uncertainty of other CCs is not expected to have any significant effect. |
| 7.5A.2 Adjacent Channel Selectivity (ACS) for CA (intra band contiguous DL CA without UL CA) | Downlink power same as 7.5<br><br>Uplink power measurement same as 7.5 | The wanted signal level uncertainty applies for each CC |
| 7.5A.3 Adjacent Channel Selectivity (ACS) for CA (inter band DL CA without UL CA) | ACS value ±1.1 dB, f ≤ 3.0GHz<br>±1.5 dB, 3.0GHz < f ≤ 4.2GHz<br>±2.2 dB, 4.2GHz < f ≤ 6GHz<br><br>Uplink power measurement ±0.7 dB, f ≤ 3.0GHz<br>±1.0 dB, 3.0GHz < f ≤ 4.2GHz | The wanted signal level uncertainty applies for each CC<br><br>Overall ACS uncertainty comprises three quantities:<br><br>1. | 7.9G.1 Spurious emissions for V2X Communication / Non-concurrent with E-UTRA uplink transmissions | 30MHz ≤ f ≤ 4.0GHz: ± 2.0 dB<br>4 GHz < f ≤ 19 GHz: ± 4.0 dB<br>19GHz < f ≤ 26 GHz: ± 6.0 dB | |
| Note 1: Unless otherwise noted, only the Test System stimulus error is considered here. The effect of errors in the throughput measurements due to finite test duration is not considered. | | |

# F.1.4 Measurement of performance requirements

**Table F.1.4-1: Maximum Test System Uncertainty for Performance Requirements**

| Subclause | Maximum Test System Uncertainty[1] | Derivation of Test System Uncertainty |
|---|---|---|
| 8.2.1.1.1 Multiple PRBs<br>- Propagation Condition EVA5<br>- Propagation Condition ETU70<br>- Propagation Condition ETU300 | ± 0.8 dB | Overall system uncertainty for fading conditions comprises three quantities:<br>1. Signal-to-noise ratio uncertainty<br>2. Fading profile power uncertainty<br>3. Effect of AWGN flatness and signal flatness<br><br>Items 1, 2 and 3 are assumed to be uncorrelated so can be root sum squared:<br>AWGN flatness and signal flatness has x 0.25 effect on the required SNR, so use sensitivity factor of x 0.25 for the uncertainty contribution.<br>Test System uncertainty = SQRT (Signal-to-noise ratio uncertainty $^2$ + Fading profile power uncertainty $^2$ + (0.25 x AWGN flatness and signal flatness) $^2$)<br>Signal-to-noise ratio uncertainty ±0.3 dB<br>Fading profile power uncertainty ±0.5 dB for single Tx<br>AWGN flatness and signal flatness ±2.0 dB |
| 8.2.1.1.1 Multiple PRBs<br>- Propagation Condition HST | ± 0.6 dB | Overall system uncertainty for HST condition comprises two quantities:<br>1. Signal-to-noise ratio uncertainty<br>2. Effect of AWGN flatness and signal flatness<br><br>Items 1 and 2 are assumed to be uncorrelated so can be root sum squared:<br>AWGN flatness and signal flatness has x 0.25 effect on the required SNR, so use sensitivity factor of x 0.25 for the uncertainty contribution.<br>Test System uncertainty = SQRT (Signal-to-noise ratio uncertainty $^2$ + (0.25 x AWGN flatness and signal flatness) $^2$)<br>Signal-to-noise ratio uncertainty ±0.3 dB<br>AWGN flatness and signal flatness ±2.0 dB |
| 8.2.1.1.1 Single PRB<br>- Propagation Condition ETU70 | ± 0.8 dB | Overall system uncertainty for fading condition comprises three quantities:<br>1. Average Signal-to-noise ratio uncertainty<br>2. Signal-to noise ratio variation for single PRB<br>3. Fading profile power uncertainty<br><br>Items 1, 2 and 3 are assumed to be uncorrelated so can be root sum squared:<br>Test System uncertainty = SQRT (Average signal-to-noise ratio uncertainty $^2$ + Signal-to-noise ratio variation$^2$ + Fading profile power uncertainty $^2$)<br>Signal-to-noise ratio uncertainty ±0.3 dB<br>Signal-to-noise ratio variation ±0.5 dB<br>Fading profile power uncertainty ±0.5 dB for single Tx |
| 8.2.1.1.1_A.1 | Same as 8.2.1.1.1 Multiple PRBs, for each CC | Same as 8.2.1.1.1 Multiple PRBs<br>Calculation applies for each CC |

Effect of AWGN flatness and signal flatness<br><br>Items 1, 2 and 3 are assumed to be uncorrelated so can be root sum squared:<br>AWGN flatness and signal flatness has x 0.25 effect on the required SNR, so use sensitivity factor of x 0.25 for the uncertainty contribution.<br>Test System uncertainty = SQRT (Signal-to-noise ratio uncertainty $^2$ + Fading profile power uncertainty $^2$ + (0.25 x AWGN flatness and signal flatness) $^2$)<br>Signal-to-noise ratio uncertainty ±0.3 dB<br>Fading profile power uncertainty ±0.5 dB for single Tx<br>AWGN flatness and signal flatness ±2.0 dB |
| 14.3 | ± 0.8 dB | Same as 14.2 |
| 14.4 | ± 0.6 dB | Overall system uncertainty for AWGN condition comprises two quantities:<br>1. Signal-to-noise ratio uncertainty<br>2. Effect of AWGN flatness and signal flatness<br><br>Items 1 and 2 are assumed to be uncorrelated so can be root sum squared:<br>AWGN flatness and signal flatness has x 0.25 effect on the required SNR, so use sensitivity factor of x 0.25 for the uncertainty contribution.<br>Test System uncertainty = SQRT (Signal-to-noise ratio uncertainty $^2$ + (0.25 x AWGN flatness and signal flatness) $^2$)<br>Signal-to-noise ratio uncertainty ±0.3 dB<br>AWGN flatness and signal flatness ±2.0 dB |
| 14.8 | Downlink absolute power uncertainty, averaged over $BW_{Config}$ ±1.0 dB<br>Downlink EVM ≤ 3% | 3% EVM is equivalent to a Test system downlink SNR of 30.5dB. The noise from the Test system is then sufficiently below that required for the UE to demodulate the signal with the required % success rate. Under these conditions the UE throughput is limited by the Reference measurement channel and the UE capability, and not by the Test system EVM. |
| [Other tests FFS] | | |
| In addition, the following Test System uncertainties and related constraints apply: | | |
| AWGN Bandwidth | | ≥ 1.08MHz, 2.7MHz, 4.5MHz, 9MHz, 13.5MHz, 18MHz;<br>$N_{RB}$ x 180kHz according to $BW_{Config}$ |

| | |
|---|---|
| AWGN absolute power uncertainty, averaged over $BW_{Config}$ Note 4 | ±3 dB |
| AWGN flatness and signal flatness, max deviation for any Resource Block, relative to average over $BW_{Config}$ | ±2 dB |
| AWGN peak to average ratio | ≥10 dB @0.001% |
| Signal-to noise ratio uncertainty, averaged over downlink transmission Bandwidth | ±0.3 dB (includes uncertainty in precoding applied by the test system, where applicable) |
| Signal-to noise ratio variation for any resource block, relative to average over downlink transmission Bandwidth | ±0.5 dB |
| $N_{oc2}$ absolute power uncertainty, averaged over $BW_{Config}$ Note 5 | ±3 dB |
| $N_{oc1}$ / $N_{oc2}$ ratio uncertainty, averaged over $BW_{Config}$ Note 5 | ±0.3 dB |
| $N_{oc3}$ / $N_{oc2}$ ratio uncertainty, averaged over $BW_{Config}$ Note 5 | ±0.3 dB |
| $E_s$ / $N_{oc2}$ ratio (SNR) uncertainty, averaged over downlink transmission Bandwidth Note 5 | ±0.3 dB (includes uncertainty in precoding applied by the test system, where applicable) |
| Fading profile power uncertainty | Test-specific |
| Fading profile delay uncertainty, relative to frame timing | ±5 ns (excludes absolute errors related to baseband timing) |
| CA, DC and LAA performance requirements only:<br>Relative frequency error between carriers | 30Hz, measured over a 1ms period, and maximum carrier spacing 80MHz |
| enhanced performance requirement Type B only:<br>Frequency error on the frequency offset to cell 1 | 30Hz, measured over a 1ms period |

Note 1: Only the overall stimulus error is considered here. The effect of errors in the throughput measurements due to finite test duration is not considered.
Note 2: The AWGN or $N_{ocx}$ parameters apply to all test cases except 8.7.1 and 8.7.2. The fading parameters apply to test cases using fading
Note 3: In CA, DC and LAA test cases using multiple component carriers (CCs), the uncertainties and related constraints apply for each CC.
Note 4: Applies for test cases which specify Noc, a single value that remains constant with time.
Note 5: Applies for test cases which specify Noc1, Noc2 and Noc3, that are symbol or subframe specific.

# F.1.5 Measurement of Channel State Information reporting

**Table F.1.5-1: Maximum Test System Uncertainty for Channel State Information reporting**

| Subclause | Maximum Test System Uncertainty[1] | Derivation of Test System Uncertainty |
|---|---|---|
| 9.2.1.1 FDD CQI Reporting under AWGN conditions – PUCCH 1-0 | ± 0.3 dB | Signal-to-noise ratio uncertainty ±0.3 dB<br><br>*AWGN flatness and signal flatness ±2.0 dB not expected to have any significant effect*<br><br>*AWGN absolute power uncertainty ±3.0 dB not expected to have any significant effect* |
| 9.2.1.2 TDD CQI Reporting under AWGN conditions – PUCCH 1-0 | ± 0.3 dB | Same as 9.2.1.1 |
| 9.2.1.3_C.1 FDD CQI Reporting under AWGN conditions – PUCCH 1-0 for eICIC (non-MBSFN ABS) | $N_{oc2}$<br>$N_{oc1}$ / $N_{oc2}$<br>$N_{oc3}$ / $N_{oc2}$<br>Cell 1 $E_s$ / $N_{oc2}$<br>Cell 2 $E_s$ / $N_{oc2}$ | $N_{oc2}$, $N_{oc}$ ratios and $E_s$ / $N_{oc2}$ ratios are generic values as specified at end of this table |
| 9.2.1.4_C.1 TDD CQI Reporting under AWGN conditions – PUCCH 1-0 for eICIC (non-MBSFN ABS) | $N_{oc2}$<br>$N_{oc1}$ / $N_{oc2}$<br>$N_{oc3}$ / $N_{oc2}$<br>Cell 1 $E_s$ / $N_{oc2}$<br>Cell 2 $E_s$ / $N_{oc2}$ | $N_{oc2}$, $N_{oc}$ ratios and $E_s$ / $N_{oc2}$ ratios are generic values as specified at end of this table |
| 9.2.1.5_E.1 FDD CQI Reporting under AWGN conditions - PUCCH 1-0 for feICIC (non-MBSFN ABS) | $N_{oc2}$<br>$N_{oc1}$ / $N_{oc2}$<br>$N_{oc3}$ / $N_{oc2}$<br>Cell 1 $E_s$ / $N_{oc2}$<br>Cell 2 $E_s$ / $N_{oc2}$<br>Cell 3 $E_s$ / $N_{oc2}$ | $N_{oc2}$, $N_{oc}$ ratios and Es / $N_{oc2}$ ratios are generic values as specified at end of this table |
| 9.2.1.6_E.1 TDD CQI Reporting under AWGN conditions - PUCCH 1-0 for feICIC (non-MBSFN ABS) | $N_{oc2}$<br>$N_{oc1}$ / $N_{oc2}$<br>$N_{oc3}$ / $N_{oc2}$<br>Cell 1 $E_s$ / $N_{oc2}$<br>Cell 2 $E_s$ / $N_{oc2}$<br>Cell 3 $E_s$ / $N_{oc2}$ | $N_{oc2}$, $N_{oc}$ ratios and Es / $N_{oc}$2 ratios are generic values as specified at end of this table |
| 9.2.1.7 FDD CQI Reporting under AWGN conditions – PUCCH 1-0 for 256QAM in DL | ± 0.3 dB | Same as 9.2.1.1 |
| 9.2.1.8 TDD CQI Reporting under AWGN conditions – PUCCH 1-0 for 256QAM in DL | ± 0.3 dB | Same as 9.2.1.1 |
| 9.2.2.1 FDD CQI Reporting under AWGN conditions – PUCCH 1-1 | ± 0.3 dB | Signal-to-noise ratio uncertainty ±0.3 dB<br><br>*AWGN flatness and signal flatness ±2.0 dB not expected to have any significant effect*<br><br>*AWGN absolute power uncertainty ±3.0 dB not expected to have any significant effect* |
| 9.2.2.2 TDD CQI Reporting under AWGN conditions – PUCCH 1-1 | ± 0.3 dB | Same as 9.2.1.1 |
| 9.2.3.1_D FDD CQI Reporting under AWGN conditions – PUCCH 1-1 for eDL-MIMO | ± 0.3 dB | Same as 9.2.2.1 |
| 9.2.3.2_D TDD CQI Reporting under AWGN conditions – PUCCH 1-1 for eDL-MIMO | ± 0.3 dB | Same as 9.2.2.1 |
| 9.2.4.1_F FDD CQI Reporting under AWGN conditions - Single CSI Process for CoMP | ± 0.3 dB | Same as 9.2.2.1 |
| 9.2.4.2_F TDD CQI Reporting under AWGN conditions - Single CSI Process for CoMP | ± 0.3 dB | Same as 9.2.2.1 |

| | | |
|---|---|---|
| 9.2.5 TDD CQI Reporting under AWGN conditions – PUCCH 1-1 (when csi-SubframeSet – r12 and EIMTA-MainConfigServCell-r12 are configured) | ± 0.3 dB | Same as 9.2.1.1 |
| 9.2.6.1 LAA CQI Reporting under AWGN Conditions with Frame Structure Type 3 with FDD as Pcell (PUSCH 3-0) | ± 0.3 dB | Same as 9.2.2.1 |
| 9.2.6.2 LAA CQI Reporting under AWGN Conditions with Frame Structure Type 3 with TDD as Pcell (PUSCH 3-0) | ± 0.3 dB | Same as 9.2.2.1 |
| 9.2.7.1 LAA CQI Reporting under AWGN Conditions with Frame Structure Type 3 with FDD as Pcell (PUSCH 3-1) | ± 0.3 dB | Same as 9.2.1.1 |
| 9.2.7.2 LAA CQI Reporting under AWGN Conditions with Frame Structure Type 3 with TDD as Pcell (PUSCH 3-1) | ± 0.3 dB | Same as 9.2.1.1 |
| 9.3.1.1.1 FDD CQI Reporting under fading conditions – PUSCH 3-0 | ± 0.6 dB | Overall system uncertainty for fading conditions comprises two quantities:<br>1. Signal-to-noise ratio uncertainty ±0.3 dB<br>2. Fading profile power uncertainty ±0.5 dB<br><br>Items 1 and 2 are assumed to be uncorrelated so can be root sum squared:<br><br>Test System uncertainty = SQRT (Signal-to-noise ratio uncertainty $^2$ + Fading profile power uncertainty $^2$)<br><br>*AWGN flatness and signal flatness ±2.0 dB not expected to have any significant effect*<br><br>*AWGN absolute power uncertainty ±3.0 dB not expected to have any significant effect* |

| | |
|---|---|
| Fading profile power uncertainty | Test-specific |
| Fading profile delay uncertainty, relative to frame timing | ±5 ns (excludes absolute errors related to baseband timing) |
| Downlink channel matrix uncertainties: | |
| Tx phase error, as shown in Figure F.1.5-1 | $\Theta_{Tx} = \begin{bmatrix} e^{j\theta_1} & 0 & \cdots & 0 \\ 0 & e^{j\theta_2} & \ddots & 0 \\ \vdots & \ddots & \ddots & \vdots \\ 0 & 0 & \cdots & e^{j\theta_{N_{Tx}}} \end{bmatrix}$<br>$\theta_n$ is defined for each Tx antenna up to $N_{Tx}$<br>$\theta_n \in (-\theta_{MAX}, \theta_{MAX})$<br>$\theta_{MAX}$ ≤10°<br>$\theta_n$ is constant for the duration of the test |
| Rx phase error, as shown in Figure F.1.5-1 | $\Theta_{Rx} = \begin{bmatrix} e^{j\theta_1} & 0 & \cdots & 0 \\ 0 & e^{j\theta_2} & \ddots & 0 \\ \vdots & \ddots & \ddots & \vdots \\ 0 & 0 & \cdots & e^{j\theta_{N_{Tx}}} \end{bmatrix}$<br>$\theta_n$ is defined for each Rx antenna up to $N_{Rx}$<br>There is no constraint on the value of $\theta_n$ except that it is constant for the duration of the test |

Note 1: Only the overall stimulus error is considered. The effect of errors in the throughput measurements due to finite test duration is not considered.
Note 2: The AWGN parameters apply to all test cases except 9.3.3.1.1 and 9.3.3.1.2. The fading parameters apply to test cases using fading
Note 3: Downlink channel matrix uncertainties apply to eDL-MIMO CSI test cases
Note 4: Applies for test cases which specify Noc, a single value that remains constant with time.
Note 5: Applies for test cases which specify Noc1, Noc2 and Noc3, that are symbol or subframe specific.

*Example for dual layer PDSCH, 4Tx antennas x 2Rx antennas, fading propagation, with correlation and AWGN*

**Figure F.1.5-1: Location of Tx Phase error and Rx Phase error for eDL-MIMO (Informative)**

# F.2 Interpretation of measurement results (normative)

The measurement results returned by the Test System are compared – without any modification – against the Test Requirements as defined by the shared risk principle.

The Shared Risk principle is defined in ETR 273-1-2 clause 6.5.

The actual measurement uncertainty of the Test System for the measurement of each parameter shall be included in the test report.

The recorded value for the Test System uncertainty shall be, for each measurement, equal to or lower than the appropriate figure in clause F.1 of the present document.

If the Test System for a test is known to have a measurement uncertainty greater than that specified in clause F.1, it is still permitted to use this apparatus provided that an adjustment is made value as follows:

Any additional uncertainty in the Test System over and above that specified in clause F.1 shall be used to tighten the Test Requirement, making the test harder to pass. For some tests, for example receiver tests, this may require modification of stimulus signals. This procedure will ensure that a Test System not compliant with clause F.1does not increase the chance of passing a device under test where that device would otherwise have failed the test if a Test System compliant with clause F.1 had been used.

# F.3 Test Tolerance and Derivation of Test Requirements (informative)

The Test Requirements in the present document have been calculated by relaxing the Minimum Requirements of the core specification using the Test Tolerances defined in this clause. When the Test Tolerance is zero, the Test Requirement will be the same as the Minimum Requirement. When the Test Tolerance is non-zero, the Test Requirements will differ from the Minimum Requirements, and the formula used for the relaxation is given in this clause.

The Test Tolerances are derived from Test System uncertainties, regulatory requirements and criticality to system performance. As a result, the Test Tolerances may sometimes be set to zero.

The test tolerances should not be modified for any reason e.g. to take account of commonly known test system errors (such as mismatch, cable loss, etc.).

The downlink Test Tolerances apply at each receiver antenna connector.

## F.3.1 Measurement of test environments

The UE test environments are set to the values defined in TS 36.508 subclause 4.1, without any relaxation. The applied Test Tolerance is therefore zero.

## F.3.2 Measurement of transmitter

**Table F.3.2-1: Derivation of Test Requirements (Transmitter tests)**

| Test | Minimum Requirement in TS 36.101 | Test Tolerance (TT) | Test Requirement in TS 36.521-1 |
|---|---|---|---|

## F.3.5 Measurement of Channel State Information reporting

**Table F.3.5-1: Derivation of Test Requirements (Channel State Information reporting tests)**

| Test | Minimum Requirement in TS 36.101 | Test Tolerance (TT) | Test Requirement in TS 36.521-1 |
|---|---|---|---|
| 9.2.1.1 FDD CQI Reporting under AWGN conditions – PUCCH 1-0 | SNRs as specified<br>Limits as in the Test Procedure | No test tolerances applied | SNR and limits unchanged |
| 9.2.1.2 TDD CQI Reporting under AWGN condit.1ions – PUCCH 1-0 | SNRs as specified<br>Limits as in the Test Procedure | No test tolerances applied | SNR and limits unchanged |
| 9.2.1.3_C.1 FDD CQI Reporting under AWGN conditions – PUCCH 1-0 for eICIC (non-MBSFN ABS) | Values as specified<br>Limits as in the Test Procedure | No test tolerances applied | The analysis is recorded in 3GPP TR 36.904 [17] |
| 9.2.1.4_C.1 TDD CQI Reporting under AWGN conditions – PUCCH 1-0 for eICIC (non-MBSFN ABS) | Values as specified<br>Limits as in the Test Procedure | No test tolerances applied | The analysis is recorded in 3GPP TR 36.904 [17] |
| 9.2.1.5_E.1 FDD CQI Reporting under AWGN conditions - PUCCH 1-0 for feICIC (non-MBSFN ABS) | Values as specified<br>Limits as in the Test Procedure | No test tolerances applied | The analysis is recorded in 3GPP TR 36.904 [17] |
| 9.2.1.6_E.1 TDD CQI Reporting under AWGN conditions - PUCCH 1-0 for feICIC (non-MBSFN ABS) | Values as specified<br>Limits as in the Test Procedure | No test tolerances applied | The analysis is recorded in 3GPP TR 36.904 [17] |
| 9.2.1.7 FDD CQI Reporting under AWGN conditions – PUCCH 1-0 for 256QAM in DL | SNRs as specified<br>Limits as in the Test Procedure | No test tolerances applied | SNR and limits unchanged |
| 9.2.1.8 TDD CQI Reporting under AWGN conditions – PUCCH 1-0 for 256QAM in DL | SNRs as specified<br>Limits as in the Test Procedure | No test tolerances applied | SNR and limits unchanged |
| 9.2.2.1 FDD CQI Reporting under AWGN conditions – PUCCH 1-1 | SNRs as specified<br>Limits as in the Test Procedure | No test tolerances applied | SNR and limits unchanged |
| 9.2.2.2 TDD CQI Reporting under AWGN conditions – PUCCH 1-1 | SNRs as specified<br>Limits as in the Test Procedure | No test tolerances applied | SNR and limits unchanged |
| 9.2.3.1_D FDD CQI Reporting under AWGN conditions – PUCCH 1-1 for eDL-MIMO | SNRs as specified<br>Limits as in the Test Procedure | No test tolerances applied | SNR and limits unchanged |
| 9.2.3.2_D TDD CQI Reporting under AWGN conditions – PUCCH 1-1 for eDL-MIMO | SNRs as specified<br>Limits as in the Test Procedure | No test tolerances applied | SNR and limits unchanged |
| 9.2.4.1_F FDD CQI Reporting under AWGN conditions - Single CSI Process for CoMP | SNRs as specified<br>Limits as in the Test Procedure | No test tolerances applied | SNR and limits unchanged |
| 9.2.4.2_F TDD CQI Reporting under AWGN conditions - Single CSI Process for CoMP | SNRs as specified<br>Limits as in the Test Procedure | No test tolerances applied | SNR and limits unchanged |

| | | | |
|---|---|---|---|
| 9.2.5 TDD CQI Reporting under AWGN conditions – PUCCH 1-1 (when csi-SubframeSet – r12 and EIMTA-MainConfigServCell-r12 are configured) | SNRs as specified<br>Limits as in the Test Procedure | No test tolerances applied | SNR and limits unchanged |
| 9.2.6.1 LAA CQI Reporting under AWGN Conditions with Frame Structure Type 3 with FDD as Pcell (PUSCH 3-0) | SNRs as specified<br>Limits as in the Test Procedure | No test tolerances applied | SNR and limits unchanged |
| 9.2.6.2 LAA CQI Reporting under AWGN Conditions with Frame Structure Type 3 with TDD as Pcell (PUSCH 3-0) | SNRs as specified<br>Limits as in the Test Procedure | No test tolerances applied | SNR and limits unchanged |
| 9.2.7.1 LAA CQI Reporting under AWGN Conditions with Frame Structure Type 3 with FDD as Pcell (PUSCH 3-1) | SNRs as specified<br>Limits as in the Test Procedure | No test tolerances applied | SNR and limits unchanged |
| 9.2.7.2 LAA CQI Reporting under AWGN Conditions with Frame Structure Type 3 with TDD as Pcell (PUSCH 3-1) | SNRs as specified<br>Limits as in the Test Procedure | No test tolerances applied | SNR and limits unchanged |

| 9.6.1.1_A.1 FDD CQI Reporting under AWGN conditions – PUCCH 1-0 for CA (2DL CA) | SNRs as specified<br>Limits as in the Test Procedure | No test tolerances applied | SNR ratios each have an uncertainty of ±0.3 dB. For uncorrelated uncertainties, the overall uncertainty in the SNR difference between any two CCs would be SQRT ($0.3^2 + 0.3^2$) = 0.42dB. This could widen the Median CQI difference, but the uncertainty is significantly less than one reported CQI step. Relaxing the allowed Median CQI difference would relax the test excessively, so in this case the Test requirement should be left unchanged. |

# Annex G (normative): Statistical Testing

## G.1 General

FFS.

## G.2 Statistical testing of receiver characteristics

### G.2.1 General

The test of receiver characteristics is two fold.

1. A signal or a combination of signals is offered to the RX port(s) of the receiver.
2. The ability of the receiver to demodulate /decode this signal is verified by measuring the throughput.

In (2) is the statistical aspect of the test and is treated here.

The minimum requirement for all receiver tests is >95% of the maximum throughput.

All receiver tests are performed in static propagation conditions. No fading conditions are applied.

### G.2.2 Mapping throughput to error ratio

a) The measured information bit throughput R is defined as the sum (in kilobits) of the information bit payloads successfully received during the test interval, divided by the duration of the test interval (in seconds).

b) In measurement practice the UE indicates successfully received information bit payload by signalling an ACK to the SS.
If payload is received, but damaged and cannot be decoded, the UE signals a NACK.

c) Only the ACK and NACK signals, not the data bits received, are accessible to the SS.
The number of bits is known in the SS from knowledge of what payload was sent.

d) For the reference measurement channel, applied for testing, the number of bits is different in different subframes, however in a radio frame it is fixed during one test.

e) The time in the measurement interval is composed of successfully received subframes (ACK), unsuccessfully received subframes (NACK) and no reception at all (DTX-subframes).

f) DTX-subframes may occur regularly according the applicable reference measurement channel (regDTX).
In real live networks this is the time when other UEs are served. In TDD these are the UL and special subframes.
regDTX vary from test to test but are fixed within the test.

g) Additional DTX-subframes occur statistically when the UE is not responding ACK or NACK where it should. (statDTX)
This may happen when the UE was not expecting data or decided that the data were not intended for it.

The pass / fail decision is done by observing the:

- number of NACKs
- number of ACKs and
- number of statDTXs (regDTX is implicitly known to the SS)

The ratio (NACK + statDTX)/(NACK+ statDTX + ACK) is the Error Ratio (ER). Taking into account the time consumed by the ACK, NACK, and DTX-TTIs (regular and statistical), ER can be mapped unambiguously to throughput for any single reference measurement channel test.

## G.2.3 Design of the test

The test is defined by the following design principles (see clause G.x, Theory….):

1. The early decision concept is applied.
2. A second limit is introduced: Bad DUT factor M>1
3. To decide the test pass:

   Supplier risk is applied based on the Bad DUT quality

   To decide the test fail

   Customer Risk is applied based on the specified DUT quality

The test is defined by the following parameters:

1. Limit ER = 0.05 (Throughput limit = 95%)
2. Bad DUT factor M=1.5 (selectivity)
3. Confidence level CL = 95% (for specified DUT and Bad DUT-quality)

## G.2.4 Numerical definition of the pass fail limits

**Table G.2.4-1: pass fail limits**

NOTE 1: The first column is the number of errors (ne = number of NACK + statDTX)

NOTE 2: The second column is the number of samples for the pass limit ($ns_p$, ns=Number of Samples= number of `NACK + statDTX + ACK`)

NOTE 3: The third column is the number of samples for the fail limit ($ns_f$)

## G.2.5 Pass fail decision rules

The pass fail decision rules apply for a single test, comprising one component in the test vector. The over all Pass /Fail conditions are defined in clause G.2.6and G.2A.6

Having observed 0 errors, pass the test at 67+ samples, otherwise continue

Having observed 1 error, pass the test at 95+ otherwise continue

Having observed 2 errors, pass the test at 119+ samples, fail the test at 2- samples, otherwise continue

Etc. etc.

Having observed 151 errors, pass the test at 2452+ samples, fail the test at 2433- samples, otherwise continue

Having observed 152 errors, pass the test at 2466+ samples, fail the test at 2451- samples.

Where x+ means: x or more, x- means x or less

NOTE 1: an ideal DUT passes after 67 samples. The maximum test time is 2466 samples.

NOTE 2: It is allowed to deviate from the early decision concept by postponing the decision (pass/fail or continue). Postponing the decision to or beyond the end of Table G.2.4-1 requires a pass fail decision against the test limit: pass the DUT for ER<0.0618, otherwise fail.

# G.2.6 Test conditions for receiver tests

**Table G.2.6-1: Test conditions for receiver tests**

| Test | Statistical independence | Number of components in the test vector, as specified in the test requirements and initial conditions of the applicable test | Over all Pass/Fail condition |
|---|---|---|---|
| 7.3 Reference sensitivity level | Yes: the inherent receiver noise is assumed to be AWGN | tbd | To pass 7.3 each component in the test vector must pass |
| 7.3F.1 Reference sensitivity level without repetitions for category NB1 | Yes: the inherent receiver noise is assumed to be AWGN | tbd | To pass 7.3F each component in the test vector must pass |
| 7.4 Maximum input level | Unclear: in case, clipping causes errors, errors are data dependent. Statistical independence is assumed. | tbd | To pass 7.4 each component in the test vector must pass |
| 7.4A.3 Maximum input level for CA (inter-band DL CA without UL CA) | Unclear: in case, clipping causes errors, errors are data dependent. Statistical independence is assumed. | tbd | To pass 7.4A.3 each component in the test vector must pass |
| 7.4F Maximum input level for category NB1 | Unclear: in case, clipping causes errors, errors are data dependent. Statistical independence is assumed. | tbd | To pass 7.4f each component in the test vector must pass |
| 7.5 Adjacent Channel Selectivity (ACS) | Unclear: errors are data dependent on the interferers data. Statistical independence is assumed. | tbd | To pass 7.5 each component in the test vector must pass |
| 7.5A.3 Adjacent Channel Selectivity (ACS) for CA (inter-band DL CA without UL CA) | Unclear: errors are data dependent on the interferers data. Statistical independence is assumed. | tbd | To pass 7.5A.3 each component in the test vector must pass |
| 7.5F Adjacent Channel Selectivity (ACS) for category NB1 | Unclear: errors are data dependent on the interferers data. Statistical independence is assumed | 8 | To pass 7.5F each component in the test vector must pass |
| 7.6.1 In-band blocking | Unclear: errors are data dependent on the interferers data. Statistical independence is assumed. | tbd | To pass 7.6.1 each component in the test vector must pass |
| 7.6.1_1 In-band blocking with 4 Rx antenna ports | Unclear: errors are data dependent on the interferers data. Statistical independence is assumed. | tbd | To pass 7.6.1_1 each component in the test vector must pass |
| 7.6.1A.3 In-band blocking for CA (inter-band DL CA without UL CA) | Unclear: errors are data dependent on the interferers data. Statistical independence is assumed. | tbd | To pass 7.6.1A.3 each component in the test vector must pass |
| 7.6.2 Out of-band blocking | yes: it is assumed that the CW interferer causes errors, which are independent and time invariant. | tbd | To pass 7.6.2, all except [tbd] components in the test vector must pass |
| 7.6.2A.3 Out-of-band blocking for CA (inter-band DL CA without UL CA) | yes: it is assumed that the CW interferer causes errors, which are independent and time invariant. | tbd | To pass 7.6.2A.3, all except [tbd] components in the test vector must pass |
| 7.6.3 Narrow band | yes: it is assumed that the CW | tbd | To pass 7.6.3 each component in |

| | | | |
|---|---|---|---|
| blocking | interferer causes errors, which are independent and time invariant. | | the test vector must pass |
| 7.6.3A.3 Narrow band blocking for CA (inter-band DL CA without UL CA) | yes: it is assumed that the CW interferer causes errors, which are independent and time invariant. | tbd | To pass 7.6.3A.3 each component in the test vector must pass |
| 7.7 Spurious response | yes: it is assumed that the CW interferer causes errors, which are independent and time invariant. | tbd | To pass 7.7 each component in the test vector must pass |
| 7.7A.3 Spurious response for CA (inter-band DL CA without UL CA) | yes: it is assumed that the CW interferer causes errors, which are independent and time invariant. | tbd | To pass 7.7A.3 each component in the test vector must pass |
| 7.7F Spurious response for category NB1 | yes: it is assumed that the CW interferer causes errors, which are independent and time invariant. | tbd | To pass 7.7F each component in the test vector must pass |
| 7.8.1 Wide band Intermodulation | Unclear: errors are dependent on the data content of the interferer. Statistical independence is assumed. | tbd | To pass 7.8.1 each component in the test vector must pass |
| 7.8.1A.3 Wide-band intermodulation for CA (inter-band DL CA without UL CA) | Unclear: errors are dependent on the data content of the interferer. Statistical independence is assumed. | tbd | To pass 7.8.1A.3 each component in the test vector must pass |
| 7.8.1F Wide band Intermodulation for category NB1 | Unclear: errors are dependent on the data content of the interferer. Statistical independence is assumed. | tbd | To pass 7.8.1F each component in the test vector must pass |

# G.2A Statistical testing of receiver characteristics with CA

## G.2A.1 General

G.2.1 applies.

## G.2A.2 Mapping throughput to error ratio

The test is defined by the following design principles (see clause G.x, Theory….):

1. The standard concept is applied. (not the early decision concept).
2. A second limit is introduced, defining the Bad DUT.
3. To decide the test pass:
   - Supplier risk is applied based on the Bad DUT quality.
   - To decide the test fail.
   - Customer Risk is applied based on the specified DUT quality.

The test is defined by the following parameters:

1) Limit Error Ratio = 0.05 (95% throughput is tested).
2) Bad DUT factor M=1.5 (selectivity).
3) Confidence level CL = 95% (for specified DUT and Bad DUT-quality).

# G.2A.3

# G.2A.4 Pass fail limits

Apply 1003 samples to the DUT per CC.

Decide pass per CC in case of $\leq$ 62 errors, otherwise fail.

NOTE 1: The pass fail decision is done individually for each CC. The pass fail decision for one component in the test vector is as follows: pass if all CCs or SCC only according to the test cases pass, otherwise fail. The overall pass fail decision is according to clause G.2A.6

NOTE 2: It is allowed to apply more samples to the DUT, common for all CCs, (e.g. up to an integer number of frames). Use the ratio (62/1003) for the pass fail decision.

NOTE 3: 62/1003 = 0.0618, the same test limit is used at the end of Table G.2.4-1

## G.2A.5 void

## G.2A.6 Test conditions for receiver tests with CA

**Table G.2A.6-1: Test conditions for receiver tests with CA**

| Test | Statistical independence | Number of components in the test vector, as specified in the test requirements and initial conditions of the applicable test Note 1 | Over all Pass/Fail condition Note 1 |
|---|---|---|---|
| 7.3A Reference sensitivity level for CA | Yes: the inherent receiver noise is assumed to be AWGN | tbd | To pass 7.3A each component in the test vector must pass |
| 7.4A Maximum input level for CA | Unclear: in case, clipping causes errors, errors are data dependent. Statistical independence is assumed. | tbd | To pass 7.4A each component in the test vector must pass |
| 7.5A Adjacent Channel Selectivity (ACS) for CA | Unclear: errors are data dependent on the interferers data. Statistical independence is assumed. | tbd | To pass 7.5A each component in the test vector must pass |
| 7.6.1A In-band blocking for CA | Unclear: errors are data dependent on the interferers data. Statistical independence is assumed. | tbd | To pass 7.6.1A each component in the test vector must pass |
| 7.6.2.A Out of-band blocking for CA | yes: it is assumed that the CW interferer causes errors, which are independent and time invariant. | tbd | To pass 7.6.2A, all except [tbd] components in the test vector must pass |
| 7.6.3A Narrow band blocking for CA | yes: it is assumed that the CW interferer causes errors, which are independent and time invariant. | tbd | To pass 7.6.3A each component in the test vector must pass |
| 7.7A Spurious response for CA | yes: it is assumed that the CW interferer causes errors, which are independent and time invariant. | tbd | To pass 7.7A each component in the test vector must pass |
| 7.8.1A Wide band Intermodulation | [place holder] | | |
| Note 1: A DUT with marginal performance on one component in the test vector passes this component with a confidence level of 95%, which is a false fail probability of 5%. All components in the test vector shall pass, to pass the test, For more than 1 component, performing marginal, there is an increased probability of a false fail for the test. | | | |

# G.3 Statistical testing of Performance Requirements with throughput

## G.3.1 General

The test of receiver performance characteristics is two fold.

1. A signal or a combination of signals is offered to the RX port(s) of the receiver.
2. The ability of the receiver to demodulate /decode this signal is verified by measuring the throughput.

In (2) is the statistical aspect of the test and is treated here.

The minimum requirement for all receiver performance tests is either 70% or 30% of the maximum throughput.

All receiver performance tests are performed in fading conditions. In addition to the statistical considerations, this requires the definition of a minimum test time.

## G.3.2 Mapping throughput to error ratio

G.2.2 applies

## G.3.3 Design of the test

The test is defined by the following design principles (see clause G.x, Theory….):

1. The standard concept is applied. (not the early decision concept)
2. A second limit is introduced: The second limit is different, whether 30% or 70% throughput is tested.
3. To decide the test pass:

   Supplier risk is applied based on the Bad DUT quality

   To decide the test fail:

   Customer Risk is applied based on the specified DUT quality

The test is defined by the following parameters:

1a) Limit Error Ratio = 0.3 (in case 70% Throughput is tested) or

1b) Limit Throughput = 0.3 (in case 30% Throughput is tested)

2a) Bad DUT factor M=1.378 (selectivity)

2b) Bad DUT factor m=0.692 (selectivity)

justification see: TS 34.121 Clause F.6.3.3

3) Confidence level CL = 95% (for specified DUT and Bad DUT-quality)

## G.3.4 Pass Fail limit

Testing Throughput = 30%, then the test limit is

Number of successes (ACK) / number of samples $\geq$ 59 / 233

Testing Throughput = 70% then the test limit is

Number of fails (NACK and statDTX) / number of samples $\leq$ 66 / 184

We have to distinguish 3 cases:

a) The duration for the number of samples (233 or 184) is greater than the minimum test time:

Then the number of samples (233 or 184) is predefined and the decision is done according to the number of events (59 successes or 66 fails)

b) Since subframe 0 and 5 contain less bits than the remaining subframes, it is allowed to predefine a number of samples contained in an integer number of frames. In this case test-limit-ratio applies.

c) The minimum test time is greater than the duration for the number of samples:

The minimum test time is predefined and the decision is done comparing the measured ratio at that instant against the test-limit-ratio.

NOTE: The test time for most of the tests is governed by the Minimum Test Time

## G.3.5 Minimum Test time

If a pass fail decision in G.3.4 can be achieved earlier than the minimum test time, then the test shall not be decided, but continued until the minimum test time is elapsed.

The tables below contain the minimum number of subframes for FDD and TDD.

By simulations the minimum number of active subframes (carrying DL payload) was derived (MNAS),

then adding inactive subframes to the active ones (e.g. subframe 5 contains no DL payload. For TDD additional subframes contain no DL payload)

then rounding up to full thousand and

then adding a bias of 1000 (BMNSF).

Simulation method to derive minimum test time:

With a level, corresponding a throughput at the test limit (here 30% or 70% of the max. throughput) the preliminary throughput versus time converges towards the final throughput. The allowance of ± 0.2 dB around the above mentioned level is predefined by RAN5 to find the minimum test time. The allowance of ±0.2 dB maps through the function “final throughput versus level” into a throughput corridor. The minimum test time is achieved when the preliminary throughput escapes the corridor the last time. The two functions “final throughput versus level” and “preliminary throughput versus time” are simulation results, which are done individual for each demodulation scenario. HST-scenarios and scenarios with MNAS ≥ 50000 are derived differently.

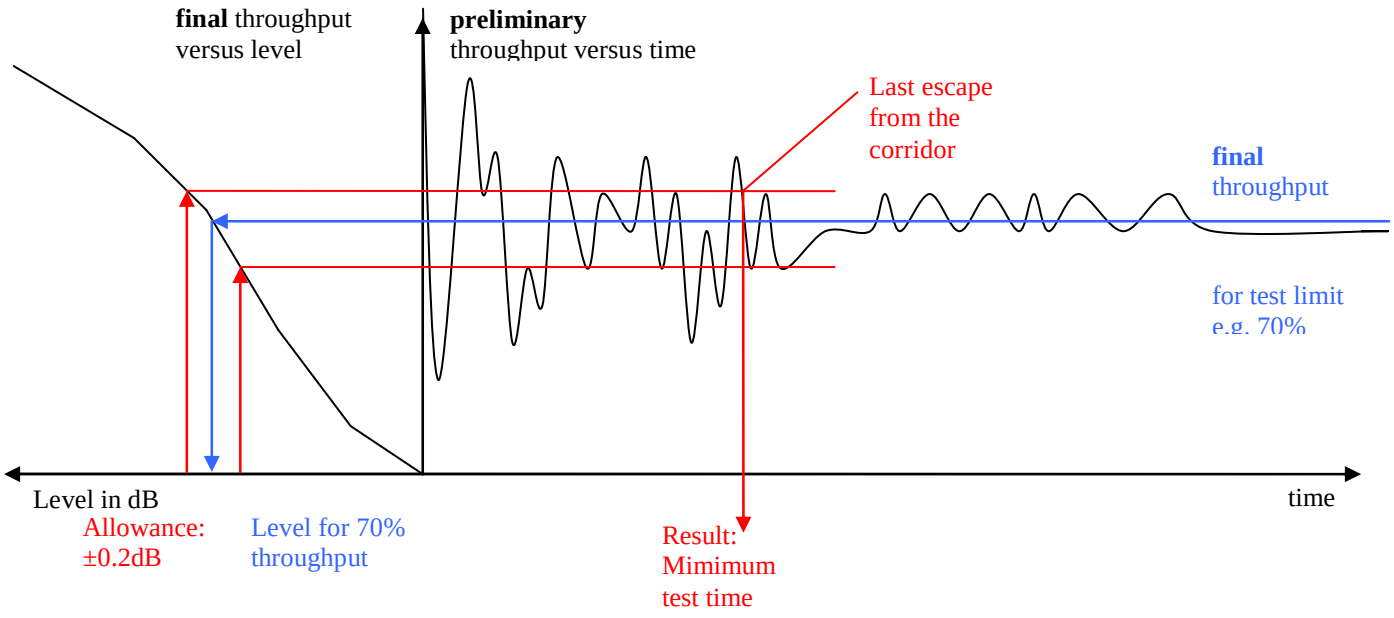

**Figure G.3.5-1: Simulation method to derive minimum test time**

# G.3A Statistical testing of Performance Requirements with throughput for CA/DC/LAA

## G.3A.1 General

The minimum requirements for performance tests in fading conditions in clause 8 with respect to CA/DC are 70% of the maximum throughput. The minimum requirements in static conditions in clause 8 with respect to CA/DC are [TBD]. Statistical tests in static propagation conditions lead to a statistically justified number of samples (testtime) and a test limit. The fading conditions require a minimum test time, overriding the statistically justified test time. It can be found in Tables G.3A.5. The statistically justified test limit is also used for the tests under fading conditions. The throughput is measured on both carriers in parallel (unless otherwise stated). The test for both carriers need the same time. The sum of the CC's throughput is compared against the limit, where the limit is the sum of the individual carrier's limit.

## G.3A.2 Mapping throughput to error ratio

G.2.2 applies separate for each CC

## G.3A.3 Design of the test

The test is defined by the following design principles (see clause G.x, Theory….):

1. The standard concept is applied (not the early decision concept).
2. A second limit is introduced, defining the Bad DUT.
3. To decide the test pass:
   - Supplier risk is applied based on the Bad DUT quality.
   - To decide the test fails.
   - Customer Risk is applied based on the specified DUT quality.

The test is defined by the following parameters:

1) Limit Error Ratio = 0.3.
(in case 70% throughput is tested , otherwise [TBD]).

2) Bad DUT factor M = 1.378 (selectivity) justification see: TS 34.121 Clause F.6.3.3.
(M = 1.378 is tied to 70% throughput, otherwise M is [TBD].)

3) Confidence level CL = 95% (for specified DUT and Bad DUT-quality).

## G.3A.4 Pass Fail limit

Testing with the parameters from G.3A.3 (70% throughput, M = 1.378, CL95%): Apply 184 samples to the DUT per CC and count the errors for each CC. The test limit to pass for one CC is $\leq$ 66 errors, however this is not individually applicable for CA/DC.

Pass fail decision for one test point in CA/DC: The sum of the CC's errors is compared against the test limit, where the test limit is the sum of the individual carrier's test limit.

It is allowed to apply more samples, in parallel for all CCs, to the DUT (e.g. up to an integer number of frames).

In fading conditions it is necessary to apply more samples, in parallel for all CCs, to the DUT, as in fading conditions the minimum test time overrides the statistically justified test time.

When more samples are applied, decide against the ratio 66/184 = 0.3587.

Testing with parameters from G.3A.3 ([TBD]% throughput, M = [TBD], CL = 95%) is [TBD].

## G.3A.5 Minimum test time

In contrast to G.3.5, where the minimum test time is derived from simulations, the test time here is selected without simulation utilising test time information from similar demodulation scenarios in non-CA test cases and while maintaining the reasonable testing time.

Note MNAS values in this clause may need to be changed in future if current MNAS values turn out to be too short for giving stable CA/DC throughput results.

# G.4 Statistical testing of Performance Requirements with probability of misdetection

## G.4.1 General

The test of receiver performance characteristics is two fold.

1. A signal or a combination of signals is offered to the RX port(s) of the receiver.
2. The ability of the receiver to demodulate /decode this signal is verified by analyzing the reaction of the UE to this signal.

In (2) is the statistical aspect of the test and is treated here.

The minimum requirement for those receiver performance tests are 1% or 0.1% misdetection probability

All receiver performance tests are performed in fading conditions. In addition to the statistical considerations, this requires the definition of a minimum test time.

NOTE: All demodulation performance tests (state from version 9.5.0) require a minimum test time, which exceeds the maximum test time in tables G.4.4. Under this circumstances only the test limit at the end of tables G.4.4.-1 resp. G.4.4.-2 is applicable.

## G.4.2 Mapping the UE reaction to error ratio

The UE can not indicate the detection or misdetection of the physical channel under test directly. Indirect methods are described in the procedure of the applicable test.

## G.4.3 Design of the test

G.2.3 applies, exception:

Limit ER = 0.01 and ER = 0.001

# G.4.4 Numerical definition of the pass fail limits

**Table G.4.4-1: pass fail limits for ER = 0.01**

NOTE 1: The first column is the number of errors (ne = number of misdetections)

NOTE 2: The second column is the number of samples for the pass limit ($ns_p$, ns=Number of Samples= number misdetections + number of detections)

NOTE 3: The third column is the number of samples for the fail limit ($ns_f$)

NOTE 4: The test limit at the end of the table is applicable, when the minimum test time in clause 3.5 governs the test. Pass the test for ER $\leq$ Test limit, otherwise fail.

## G.4.5 Pass fail decision rules

G.2.5 applies

NOTE: For ER=0.01 an ideal DUT passes after 344 samples. The maximum test time is 12913 samples. For ER=0.001 an ideal DUT passes after 3463 samples. The maximum test time is 130752 samples.

For LAA the following also apply:

The pass fail decision is done individually for each CC. The pass fail decision for one component in the test vector is as follows: pass if all CCs or SCC only according to the test cases pass, otherwise fail.

It is allowed to apply more samples to the DUT, common for all CCs, (e.g. up to an integer number of frames). Use the ratio for the pass fail decision.

## G.4.6 Minimum Test time

**Table G.4.6-1: Minimum Test time for Demodulation of PCFICH/PDCCH**

| Test No | Demod. Scenario | Demodulation scenario (info only) | MNAS (Simulation) | MNS (Calculation) | | MNSF (Min No Sub Frames, mandatory) | |
|---|---|---|---|---|---|---|---|
| | | | | FDD | TDD | FDD | TDD |

| 8.5.2.2 TDD PHICH Transmit Diversity Performance | A misdetection is an independent event | 2 | To pass 8.5.2.2 each component in the test vector must pass |

# G.5 Measuring throughput ratio

## G.5.1 General

Annex G.5 is applicable for clauses 9.3, 9.4, 9.5 and 9.7. Common to those clauses is, that a throughput ratio γ of the form $\gamma = \frac{t_{Numerator}}{t_{Denominator}}$ is measured. These clauses are tested exclusively with "slow" multipath fading profiles. Hence the test time is governed by test time due to fading, and number of samples due to statistical significance is not applicable.

The test requirement in clause 9.4 is a ratio of 2 throughput tests γ. In either numerator or denominator (depending on test case) a target throughput is desired, which is established by an approach resulting in the throughput and the reference SNR. This SNR is then reused when measuring the throughput of the other factor of the formula. The formulas for calculation of γ are defined directly under sections 9.4.

The test requirements in clauses 9.3 and 9.5 are a ratio of 2 throughput tests γ. , where numerator and denominator are ordinary throughput tests. The formulas for calculation of γ are defined in sections 9.3 and 9.5 respectively

## G.5.2 Establishing SNR

Adjust SNR such that the measured throughput is within 2% of target value (60, 70 or 90% depending on test case). The approach, leading to target throughput and reference SNR is not specified.

The resulting SNR is the reference SNR to use when measuring throughput in the other factor (numerator or denominator) of γ.

To achieve statistical significance the final throughput measurement must be done with MNS samples, given table G.5.4-1

## G.5.3 Measuring T-put

To achieve statistical significance the final throughput measurement must be done with MNS samples, given in table.G.5.4 -1. Number of samples due to statistical significance is not applicable.

For measuring $t_{subband}$, $t_{wideband}$, $t_{reported}$ and $t_{fix}$, the SS collects ACK, NACK and statDTX from the UE and records the time, elapsed from the beginning of the test. The payload size, received by the UE and acknowledged towards the SS, may vary within a test versus time (e.g. due to subband changes upon a UE report) Throughput is calculated in the SS by summing up the payload, associated to each ACK, from the start of the test and dividing the accumulated payload in kilobits by the time in seconds, elapsed from the beginning of the test. This is similar but not same as in G.2.2. (Main difference in bullet d, where the payload size is constant).

For measuring $t_{median}$, $t_{ue}$, $t_{rnd}$, $t_{ue,follow1,follow2}$ and $t_{ue,rnd1,rnd2}$, the SS collects ACK, NACK and statDTX from the UE and records the time, elapsed from the beginning of the test. The payload size, received by the UE and acknowledged towards the SS, is constant. Throughput can be calculated in the SS by multiplying the payload size with the number of ACKs and dividing the accumulated payload in kilobits by the time in seconds, elapsed from the beginning of the test, being associated to the following ratio: ACK/ (ACK+NACK + DTX).

## G.5.4 Number of samples for throughput ratios

TT for γ and MNS are based on theoretical estimations.

**Table G.5.4-1: Test time for testing throughput ratios**

| Test | Demodulation scenario: RMC (Bandwidth, allocated RBs, modulation, coding) [Antenna configuration, correlation] Propagation condition, Doppler | Γ | Minimum Number of Subframes (MNS) (MNS = active and inactive Subframes, more details in Annex G.3.5 and table G.3.5-1) | | Γ including TT | BLER |

# G.6 Statistical testing of MBMS Performance

## G.6.1 General

The system simulator sends MBMS packets to the UE under test. The number of packets, the SS sends, is predefined by the test time in G.6.4. The UE under tests demodulates the MBMS packets and counts the successfully received number of MBMS packets into the UE internal MBMS packet counter. The SS reads out the counter and issues a pass fail decision.

## G.6.2 Mapping of MBMS Packet ratio to BLER

The minimum requirements are designed in terms of BLER = 1%. 10 MBMS packets are included in one Transport block, constant throughout the test. The ratio of correct received MBMS packets ($M_{ok}$) to transmitted packets ($M_{tot}$) is assumed to be equal to the ratio of correct received transport blocks to transmitted transport blocks. This assumption ignores the unlikely case that payload and CRC for a transport block are consistent but wrong.

## G.6.3 Design of the test

The minimum requirement for all MBMS tests is BLER = 1%. All MBMS tests are performed under a fading scenario: MBSFN channel model (Table B.2.6-1). It is obvious, that this fading scenario requires a minimum test time, greater than the time, required for statistical significance. In addition the test design with the MBMS packet counter in the UE suggest a fixed test time. Without simulation the test time is set to 200 000 active subframes (Transport blocks), leading to 333 333 subframes (333sec) for FDD and 400 000 subframes (400sec) for TDD. In order to avoid the fail of a good DUT due to statistical uncertainty the minimum requirement of BLER = 1% leads to a

Test limit = 1.2352 %. (refer Table G.4.4-1)

This means a DUT actually on the limit (1%) is measured and passed with a confidence level of greater than 95%.

## G.6.4 Test time for MBMS performance tests

**Table G.6.4-1: Minimum Test time for MBMS**

| Test No | Demodulation scenario (info only) | Min No of Sub Frames | |
|---|---|---|---|
| | | FDD (6 of 10 subframes are active) | TDD (5 of 10 subframes are active) |
| 1 | R.37 (10 MHz, full, QPSK 1/3) (1x2 Low) MBSFN channel model | 333 333 | 400 000 |
| 2 | R.38 (10MHz, full, 16QAM 1/2) (1x2 Low) MBSFN channel model | 333 333 | 400 000 |
| 3 | R.39 (10 MHz, full, 64QAM 2/3) (1x2 Low) MBSFN channel model | 333 333 | 400 000 |
| 3 | R.39-1 (5 MHz, full, 64QAM 2/3) (1x2 Low) MBSFN channel model | 333 333 | 400 000 |
| 4 | R.40 (1.4 MHz, full, QPSK 1/3) (1x2 Low) MBSFN channel model | 333 333 | 400 000 |

# G.7 Theory to derive the numbers in Table G.2.4-1 (Informative)

Editor's note: This clause of the Annex G is for information only and it described the background theory and information to derive the entries in the table G.2.4-1.

## G.7.1 Error Ratio (ER)

The Error Ratio (ER) is defined as the ratio of number of errors (ne) to all results, number of samples (ns).

(1-ER is the success ratio).

## G.7.2 Test Design

A statistical test is characterised by:

Test-time, Selectivity and Confidence level.

## G.7.3 Confidence level

The outcome of a statistical test is a decision. This decision may be correct or in-correct. The Confidence Level CL describes the probability that the decision is a correct one. The complement is the wrong decision probability (risk) D = 1-CL

## G.7.4 Introduction: Supplier Risk versus Customer Risk

There are two targets of decision:

(a) A measurement on the pass-limit shows, that the DUT has the specified quality or is better with probability CL (CL e.g.95%) This shall lead to a "pass decision"

The pass-limit is on the good side of the specified DUT-quality. A more stringent CL (CL e.g.99%) shifts the pass-limit farer into the good direction. Given the quality of the DUTs is distributed, a greater CL passes less and better DUTs.

A measurement on the bad side of the pass-limit is simply “not pass” (undecided or artificial fail).

(aa) Complementary:

A measurement on the fail-limit shows, that the DUT is worse than the specified quality with probability CL.

The fail-limit is on the bad side of the specified DUT-quality. A more stringent CL shifts the fail-limit farer into the bad direction. Given the quality of the DUTs is distributed, a greater CL fails less and worse DUTs.

A measurement on the good side of the fail-limit is simply “not fail”.

(b) A DUT, known to have the specified quality, shall be measured and decided pass with probability CL. This leads to the test limit.

For CL e.g. 95%, the test limit is on the bad side of the specified DUT-quality. CL e.g.99% shifts the pass-limit farer into the bad direction. Given the DUT-quality is distributed, a greater CL passes more and worse DUTs.

(bb) A DUT, known to be an ($\varepsilon \rightarrow 0$) beyond the specified quality, shall be measured and decided fail with probability CL.

For CL e.g.95%, the test limit is on the good side of the specified DUT-quality.

NOTE 1: The different sense for CL in (a), (aa) versus (b), (bb).

NOTE 2: For constant CL in all 4 bullets (a) is equivalent to (bb) and (aa) is equivalent to (b).

## G.7.5 Supplier Risk versus Customer Risk

The table below summarizes the different targets of decision.

**Table G.X.5-1: Equivalent statements**

| | **Equivalent statements, using different cause-to-effect-directions, and assuming CL = constant >1/2** | |
|---|---|---|
| cause-to-effect-directions | Known measurement result → estimation of the DUT’s quality | Known DUT’s quality → estimation of the measurement’s outcome |
| Supplier Risk | A measurement on the pass-limit shows, that the DUT has the specified quality or is better (a) | A DUT, known to have an ($\varepsilon \rightarrow 0$) beyond the specified DUT-quality, shall be measured and decided fail (bb) |
| Customer Risk | A measurement on the fail-limit shall shows, that the DUT is worse than the specified quality (aa) | A DUT, known to have the specified quality, shall be measured and decided pass (b) |

The shaded area shown the direct interpretation of Supplier Risk and Customer Risk.

The same statements can be based on other DUT-quality-definitions.

## G.7.6 Introduction: Standard test versus early decision concept

In standard statistical tests, a certain number of results (ns) is predefined in advance to the test. After ns results the number of bad results (ne) is counted and the error ratio (ER) is calculated by ne/ns.

Applying statistical theory, a decision limit can be designed, against which the calculated ER is compared to derive the decision. Such a limit is one decision point and is characterised by:

- D: the wrong decision probability (a predefined parameter)
- ns: the number of results (a fixed predefined parameter)
- ne: the number of bad results (the limit based on just ns)

In the formula for the limit, D and ns can be understood as variable parameter and variable. However the standard test execution requires fixed ns and D. The property of such a test is: It discriminate between two states only, depending on the test design:

- pass (with CL) / undecided (undecided in the sense: finally undecided)
- fail (with CL) / undecided (undecided in the sense: finally undecided)
- pass(with CL) / fail (with CL) (however against two limits).

In contrast to the standard statistical tests, the early decision concept predefines a set of (ne,ns) co-ordinates, representing the limit-curve for decision. After each result a preliminary ER is calculated and compared against the limit-curve. After each result one may make the decision or not (undecided for later decision). The parameters and variables in the limit-curve for the early decision concept have a similar but not equal meaning:

- D: the wrong decision probability (a predefined parameter)
- ns: the number of results (a variable parameter)
- ne: the number of bad results (the limit. It varies together with ns)

To avoid a “final undecided” in the standard test, a second limit must be introduced and the single decision co-ordinate (ne,ns) needs a high ne, leading to a fixed (high) test time. In the early decision concept, having the same selectivity and the same confidence level an “undecided” need not to be avoided, as it can be decided later. A perfect DUT will hit the decision coordinate (ne,ns) with ne=0. This test time is short.

## G.7.7 Standard test versus early decision concept

For Supplier Risk:

The wrong decision probability D in the standard test is the probability, to decide a DUT in-correct in the single decision point. In the early decision concept there is a probability of in-correct decisions d at each point of the limit-curve. The sum of all those wrong decision probabilities accumulate to D. Hence $d<D$

For Customer Risk:

The correct decision probability CL in the standard test is the probability, to decide a DUT correct in the single decision point. In the early decision concept there is a probability of correct decisions cl at each point of the limit-curve. The sum of all those correct decision probabilities accumulate to CL. Hence $cl<CL$ or $d>D$

## G.7.8 Selectivity

There is no statistical test which can discriminate between a limit DUT and a DUT which is an ($\varepsilon \rightarrow 0$) apart from the limit in finite time and high confidence level CL. Either the test discriminates against one limit with the results pass

(with CL)/undecided or fail (with CL)/undecided, or the test ends in a result pass (with CL)/fail (with CL) but this requires a second limit.

For CL>1/2, a (measurement-result = specified-DUT-quality), generates undecided in test “supplier risk against pass limit” (a, from above) and also in the test “customer risk against the fail limit “ (aa)

For CL>1/2, a DUT, known to be on the limit, will be decided pass for the test “customer risk against pass limit” (b) and also “supplier risk against fail limit” (bb).

This overlap or undecided area is not a fault or a contradiction, however it can be avoided by introducing a Bad or a Good DUT quality according to:

- Bad DUT quality: specified DUT-quality * M (M>1)
- Good DUT quality: specified DUT-quality * m (m<1)

Using e.g. M>1 and CL=95% the test for different DUT qualities yield different pass probabilities:

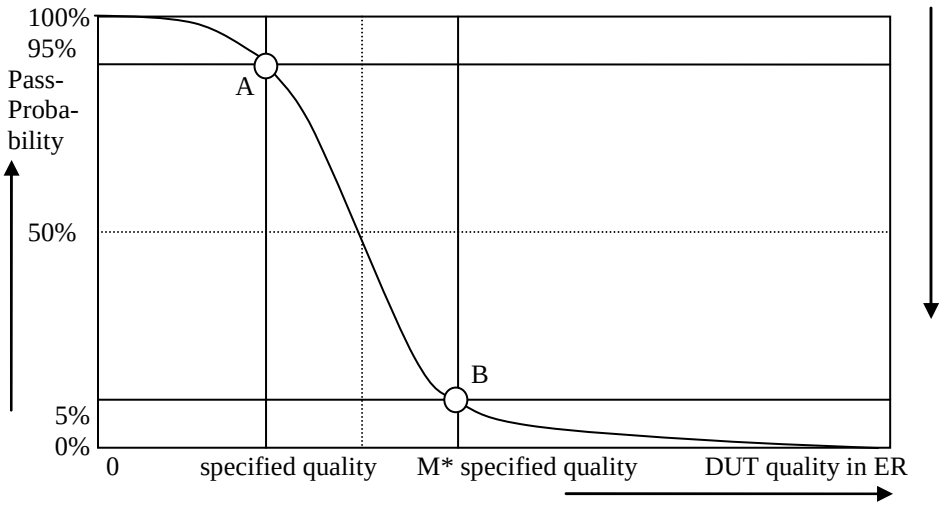

**Figure G.X.8-1: Pass probability versus DUT quality**

## G.7.9 Design of the test

The receiver characteristic test are defined by the following design principles:

1. The early decision concept is applied.
2. A second limit is introduced: Bad DUT factor M>1
3. To decide the test pass:

   Supplier risk is applied based on the Bad DUT quality

   To decide the test fail

   Customer Risk is applied based on the specified DUT quality

The receiver characteristic test are defined by the following parameters:

1. Limit ER = 0.05
2. Bad DUT factor M=1.5 (selectivity)

3. Confidence level CL = 95% (for specified DUT and Bad DUT-quality)

This has the following consequences:

1. A measurement on the fail limit is connected with 2 equivalent statements:

| | |
|---|---|
| A measurement on the fail-limit shows, that the DUT is worse than the specified DUT-quality | A DUT, known have the specified quality, shall be measured and decided pass |

2. A measurement on the pass limit is connected with the complementary statements:

| | |
|---|---|
| A measurement on the pass limit shows, that the DUT is better than the Bad DUT-quality. | A DUT, known to have the Bad DUT quality, shall be measured and decided fail |

   The left column is used to decide the measurement.

   The right column is used to verify the design of the test by simulation.

   The simulation is based on the two fulcrums A and B only in Figure G.x.8-1

3. Test time

   The minimum and maximum test time is fixed.

   The average test time is a function of the DUT's quality.

   The individual test time is not predictable.

4. The number of decision co-ordinates (ne,ns) in the early decision concept is responsible for the selectivity of the test and the maximum test time. Having fixed the number of decision co-ordinates there is still freedom to select the individual decision co-ordinates in many combinations, all leading to the same confidence level.

## G.7.10 Simulation to derive the pass fail limits in Table G.2.4-1

There is freedom to design the decision co-ordinates (ne,ns).

The binomial distribution and its inverse is used to design the pass and fail limits. Note that this method is not unique and that other methods exist.

$$fail(ne, d_f) := \frac{ne}{(ne + qnbinom(d_f, ne, ER))}$$

$$pass(ne, cl_p, M) := \frac{ne}{(ne + qnbinom(cl_p, ne, ER \cdot M))}$$

Where

- fail(..) is the error ratio for the fail limit
- pass(..) is the error ratio for the pass limit
- ER is the specified error ratio 0.05
- ne is the number of bad results. This is the variable in both equations
- M is the Bad DUT factor M=1.5
- $d_f$ is the wrong decision probability of a single (ne,ns) co-ordinate for the fail limit.
  It is found by simulation to be $d_f = 0.004$

- $cl_p$ is the confidence level of a single (ne,ns) co-ordinate for the pass limit.
  It is found by simulation to be $cl_p = 0.9975$

- qnbinom(..): The inverse cumulative function of the negative binomial distribution

The simulation works as follows:

- A large population of limit DUTs with true ER = 0.05 is decided against the pass and fail limits.

- $cl_p$ and $d_f$ are tuned such that CL (95%) of the population passes and D (5%) of the population fails.

- A population of Bad DUTs with true ER = M*0.05 is decided against the same pass and fail limits.

- $cl_p$ and $d_f$ are tuned such that CL (95%) of the population fails and D (5%) of the population passes.

- This procedure and the relationship to the measurement is justified in clause G.x.9. The number of DUTs decrease during the simulation, as the decided DUTs leave the population. That number decreases with an approximately exponential characteristics. After 169 bad results all DUTs of the population are decided.

NOTE: The exponential decrease of the population is an optimal design goal for the decision co-ordinates (ne,ns), which can be achieved with other formulas or methods as well.

# G.8 Statistical Testing of V2V and V2X Performance Requirements – Non concurrent with E-UTRA

## G.8.1 General

The system simulator (SS) sends sidelink packets to the UE under test. The number of packets sent by the SS is predefined by the test time in G.8.3 and G.8.4 for requirements with throughput and probability of miss-detection, respectively.

The UE is required to keep an updated counter of the received PSCCH and PSSCH transport blocks and to report either PSCCH, PSSCH and/or STCH PDCP SDU metrics to the SS upon demand via AT command +CUSPCREQ [7]. The SS can use the reported metrics to determine a Pass or Fail decision.

Three state variables have been defined for this purpose:

1) PSCCH_PACKET_COUNTER: to count the number of received PSCCH transport blocks

2) PSSCH_PACKET_COUNTER: to count the number of received PSSCH transport blocks

3) STCH_PACKET_COUNTER: to count the number of received STCH PDCP SDUs

The UE shall increase the respective counters upon successful reception of the corresponding transport block. To manage these counters, it is required to close the UE test loop back mode E. Such operation is performed following an AT-command based procedure to set the UE in State 5A-V2X [7]. The counters are initialized to zero upon closure of the UE test loop back mode E.

## G.8.2 Test Method for Performance Test Cases

Figure G.8.2-1 descriptively represents the course of a test based in two metrics: the noise-normalized test SNR and the performance session, represented in terms of fractional throughput. The SS shall read the sidelink packet counters twice and calculate the performance metrics based on the sample difference between both read operations. This effectively results on the discard of early sidelink counter values that might take place between their initialization at State 5A-V2X and the stabilized performance session. The test method is as follows:

1) The UE is set on State 5A-V2X, according to the procedure defined in [7]. In this process both PSCCH, PSSCH and STCH PDCP SDU counters are initialized to zero. This takes place during the initial conditions stage.

2) Once the UE is operating on State 5A-V2X, the SNR is set to the test SNR level and the scheduling of sidelink packets (PSCCH, PSSCH and/or STCH PDCP SDU) starts. This takes place during the test procedure stage.

3) Once the scheduling of sidelink packets starts, the SS shall wait for a stability window of T=10 seconds before the first PSCCH/PSSCH/STCH PDCP SDU sample counter read.

4) Upon expiration of the stability window, the SS shall perform the first PSCCH/PSSCH/STCH PDCP SDU sample counter read (Time Point A in Figure G.8.2-1) and record the retrieved values. Then the performance session starts.

5) During the performance session the SS shall record the number of transmitted sidelink packets (PSCCH, PSSCH and/or STCH PDCP SDU) starting in Time Point A and ending in Time Point B. The performance session lasts for the Test Time defined in sections G.8.3 and G.8.4 for throughput and probability of miss-detection, respectively.

6) Once the Test Time is completed the SS shall perform a second PSCCH/PSSCH/STCH PDCP SDU sample counter read (Time Point B in Figure G.8.2-1) and record the retrieved values. The SS shall use the retrieved counter values at Time Point A and Time Point B, as well as the recorded number of transmitted sidelink packets (PSCCH, PSSCH and/or STCH PDCP SDU) between Time Point A and Time Point B, to calculate the PSCCH probability of miss-detection, the PSSCH BLER and the STCH PDCP SDU loss, respectively.

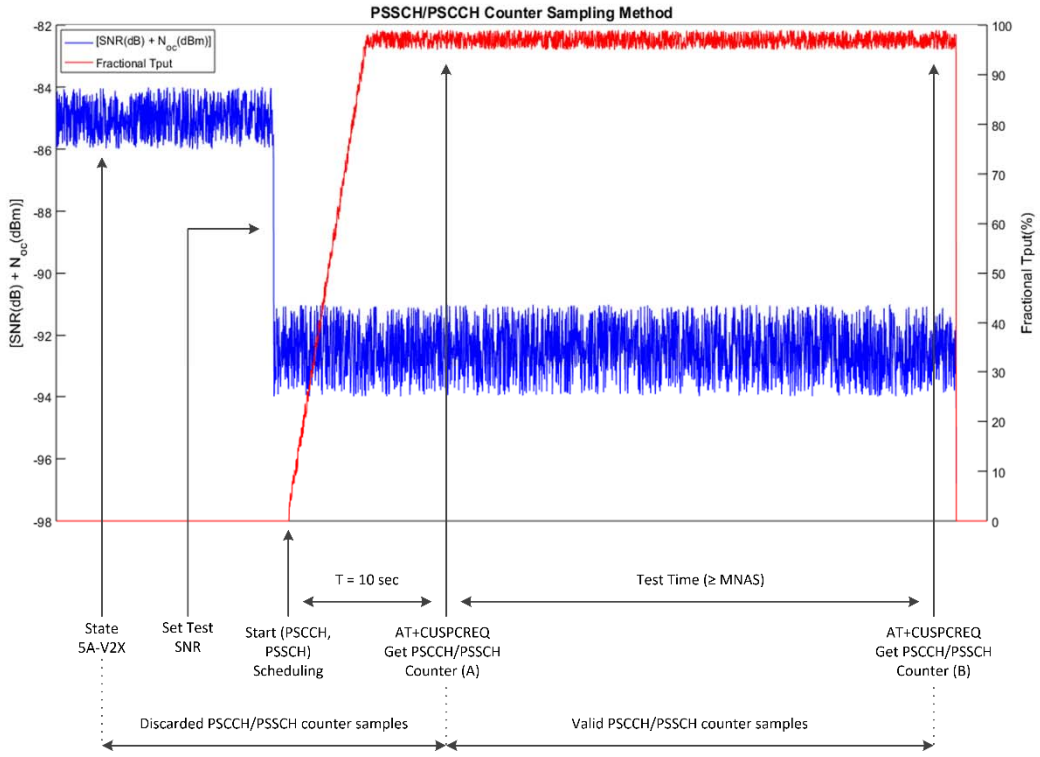

**Figure G.8.2-1: Proposed Test Method for V2V/V2X Performance Test Cases**

According to both the test method described in this section and Figure G.8.2-1 the PSCCH probability of miss-detection can be defined as follows:

$$P_{PSCCH}^{MD} = 1 - \left[\frac{PSCCH_{Counter}(B) - PSCCH_{Counter}(A)}{PSCCH_{Transmitted}}\right]$$

Similarly, we can define the PSSCH BLER as follows:

$$BLER_{PSSCH} = 1 - \left[\frac{PSSCH_{Counter}(B) - PSSCH_{Counter}(A)}{PSSCH_{Transmitted}}\right]$$

Finally, we can define the STCH PDCP SDU loss as follows:

$$Loss_{STCH_SDU} = 1 - \left[\frac{STCH_SDU_{Counter}(B) - STCH_SDU_{Counter}(A)}{STCH_SDU_{Transmitted}}\right]$$

Where:

$P^{MD}$ = Probability of Miss-Detection

BLER = Block Error Rate

$Loss_{STCH_SDU}$ = STCH PDCP SDU Loss rate

$PSCCH_{Counter}$ = PSCCH_PACKET_COUNTER

$PSSCH_{Counter}$ = PSSCH_PACKET_COUNTER

$STCH_SDU_{Counter}$ = STCH_PACKET_COUNTER

T = 10 seconds stability window

$PSCCH_{Transmitted}$ = Transmitted number of PSCCH transport blocks counted by the SS

$PSSCH_{Transmitted}$ = Transmitted number of PSSCH transport blocks counted by the SS

$STCH_SDU_{Transmitted}$ = Transmitted number of STCH PDCP SDUs counted by the SS

MNAS = Minimum Number of Active Subframes, as per Table G.8.3-1 and Table G.8.4-1 for performance tests with throughput and probability of miss-detection, respectively

## G.8.3 Test Time for V2V and V2X Performance Requirements with Throughput

The throughput requirements are tested in terms of PSSCH BLER. The maximum BLER requirement for all V2V and V2X tests is 10%. The tests are performed in a variety of AWGN and fading propagation models. For each test in Table G.8.3-1 the Test Time in Subframes is to be applied to the test method described in section G.8.2.

**Table G.8.3-1: Minimum Test Time for V2V and V2X Performance Requirements with Throughput**

| Test No | Performance Scenario | Minimum Number of Active Subframes (MNAS) | Minimum Number of Subframes (MNS)(Note 1) | Test Time in Subframes (Note 2) |
|---|---|---|---|---|
| 14.2 Test 1 | CD.8<br>(20 MHz, 8 PRB, 16QAM 1/2)<br>(1x2 Low)<br>EVA 180<br>1 PSSCH Transmission | 20 000<br>(MNAS not simulated, but conservatively estimated based on existing EVA fading scenarios with close but smaller Doppler spread) | 20 000 | 20 000 |
| 14.2 Test 2 | CD.9<br>(10 MHz, 3 PRB, QPSK 1/3)<br>(1x2 Low)<br>EVA 2700<br>2 PSSCH Transmissions | 15 000<br>(MNAS not simulated, but conservatively estimated based on existing EVA fading scenarios with close but smaller Doppler spread) | 15 000 | 30 000 |
| 14.4 Test 1 | CD.10<br>(20 MHz, 3 PRB, QPSK 3/4)<br>(1x2)<br>AWGN<br>1 PSSCH Transmission | 30 000<br>(MNAS not simulated, but conservatively estimated based on existing scenarios) | 30 000 | 30 000 |
| Note 1: The Minimum Number of Subframes is the total minimum number of subframes (active and inactive) required for this demodulation scenario and is derived from the MNAS, according to the resource pool configuration defined for each test case, [5] section 6.3.8 and to [10] section 14.1.5.<br>Note 2: The Test Time is based on the Minimum Number of Subframes (MNS) according to the formula: Test Time in Subframes = 1000*CEIL(MNS/1000). For tests with more than 1 PSSCH Transmission, the formula is: Test Time in Subframes = 1000*CEIL(MNS/1000)*Number of Transmissions. | | | | |

## G.8.4 Test Time for V2V and V2X Performance Requirements with Probability of Miss-Detection

The probability of miss-detection requirements are tested in terms of Probability of PSCCH miss-detection. The maximum Probability of PSCCH miss-detection for all V2V and V2X tests is 1%. The tests are performed in a variety of Static, AWGN and fading propagation models. For each test in Table G.8.4-1 the Test Time in Subframes is to be applied to the test method described in section G.8.2.

**Table G.8.4-1: Minimum Test Time for V2V and V2X Performance Requirements with Probability of Miss-Detection**

| Test No | Performance Scenario | Minimum Number of Active Subframes (MNAS) | Minimum Number of Subframes (MNS)(Note 1) | Test Time in Subframes (Note 2) |
|---|---|---|---|---|
| 14.3 Test 1 | CC.8<br>(10 MHz, 2 PRB, QPSK 1/3)<br>(1x2 Low)<br>EVA 1500<br>1 PSCCH Transmission | 15 000<br>(MNAS not simulated, but conservatively estimated based on existing fading scenarios with close but smaller Doppler spread) | 15 000 | 15 000 |
| 14.8 Test 1 Test 2 | CC.8<br>(20 MHz, 2 PRB, QPSK 1/3)<br>(1x2)<br>Static Channel<br>1 PSCCH Transmission | 30 000<br>(MNAS not simulated, but conservatively estimated based on existing fading scenarios) | 30 000 | 30 000 |
| Note 1: The Minimum Number of Subframes is the total minimum number of subframes (active and inactive) required for this demodulation scenario and is derived from the MNAS, according to the resource pool configuration defined for each test case, [5] section 6.3.8 and to [10] section 14.1.5.<br>Note 2: The Test Time is based on the Minimum Number of Subframes (MNS) according to the formula: Test Time in Subframes = 1000*CEIL(MNS/1000). | | | | |

# Annex H (normative): Uplink Physical Channels

## H.0 Uplink Signal Levels

Uplink signal power is a UE figure, which is configured by the Test System by means of:

RRC messages (IE-s), such as:

- UplinkPowerControlCommon (-v1020, SCell-r10),
- UplinkPowerControlDedicated (-v1020, SCell-r10),
- Other IE-s affecting directly or indirectly the uplink power,

and L1/2 Power control commands (TPC).

The uplink power settings are specified in the test case.

Otherwise, the uplink power settings result from the default RRC messages described in 3GPP TS 36.508 [7], and appropriate TPC-s, which are sent to the UE to transmit with an UL power level necessary for maintaining the call during the test.

### H.0.1 Uplink Signal Levels for NB1

Uplink signal power is a UE figure, which is configured by the Test System by means of:

RRC messages (IE-s), such as:

- NPUSCH-ConfigCommon-NB
- NPUSCH-ConfigDedicated-NB
- UplinkPowerControl-NB
- Other IE-s affecting directly or indirectly the uplink power,

The uplink power settings are specified in the test case.

Otherwise, the uplink power settings result from the default RRC messages described in 3GPP TS 36.508 [7], which are sent to the UE to transmit with an UL power level necessary for maintaining the call during the test.

## H.1 General

This annex specifies the uplink physical channels that are needed for setting a connection and channels that are needed during a connection. Table H.1-1 describes the mapping of uplink physical channels and signals to physical resources for FDD. Table H.1-2 describes the mapping of uplink physical channels and signals to physical resources for TDD.

**Table H.1-1: Mapping of uplink physical channels and signals to physical resources for FDD**

| Physical channel | Time Domain Location | Frequency Domain Location | Note |
|---|---|---|---|
| PRACH | Allowed for the parameter *prach-Configuration Index* provided by higher layers | Allowed for the parameter *prach-FrequencyOffset* provided by higher layers | Mapping rule is specified in TS 36.211 [8] Section 5.7.1 |
| DMRS | For PUCCH:<br>Symbols 2 to 4 of each slot (PUCCH format: 1, 1a, 1b)<br><br>Symbol 1 and 5 of each slot (PUCCH format: 2, 2a, 2b)<br><br>For PUSCH:<br>Symbol 3 of each slot | Uplink system bandwidth dependent. | Mapping rule of DMRS for PUCCH is specified in TS 36.211 [8] 5.5.2.2.2<br><br>Mapping rule of DMRS for PUSCH is specified in TS 36.211 [8] 5.5.2.1.2 |
| PUCCH | Slot 0 and 1 of each subframe | Each 12 subcarriers of both ends of the bandwidth | Mapping rule is specified in TS 36.211 [8] Section 5.4.3 |
| PUSCH | All remaining SC-FDMA symbols of each subframe not allocated to DMRS | RBs allocated according to Reference Measurement channel in Annex A.2 | Mapping rule is specified in TS 36.211 [8] Section 5.4.2 |
| SRS | Allowed for the cell-specific parameter *srs-BandwidthConfig* and the UE-specific parameter *srs-Bandwidth* provided by higher layers | Allowed for the cell-specific parameter *srsMaxUpPt* and the UE-specific parameter *transmissionComb* or *transmissionComb-ap* provided by higher layers | Mapping rule is specified in TS 36.211 [8] Section 5.5.3.2 |

**Table H.1-2: Mapping of uplink physical channels and signals to physical resources for TDD**

| Physical channel | Time Domain Location | Frequency Domain Location | Note |
|---|---|---|---|
| PRACH | Allowed for the parameters $(t_{RA}^0, t_{RA}^1, t_{RA}^2)$ in *prach-Configuration Index* provided by higher layers | For format 0-3, the frequency location allowed is by *prach-FrequencyOffset* and $(f_{RA})$ in *prach-Configuration Index* provided by higher layers. Preamble format 4 is mapped only on UpPTS, where the frequency location allowed is only by $(f_{RA})$ in *prach-Configuration Index* provided by higher layers. | Mapping rule is specified in TS 36.211 [8] Section 5.7.1 |
| DMRS | For PUCCH:<br>Symbols 2 to 4 of each slot (PUCCH format: 1, 1a, 1b)<br><br>Symbol 1 and 5 of each slot (PUCCH format: 2, 2a, 2b)<br><br>For PUSCH:<br>Symbol 3 of each slot | Uplink system bandwidth dependent. | Mapping rule of DMRS for PUCCH is specified in TS 36.211 [8] 5.5.2.2.2<br><br>Mapping rule of DMRS for PUSCH is specified in TS 36.211 [8] 5.5.2.1.2 |
| PUCCH | Slot 0 and 1 of each subframe | Each 12 subcarriers of both ends of the bandwidth | Mapping rule is specified in TS 36.211 [8] Section 5.4.3 |
| PUSCH | All remaining SC-FDMA symbols of each subframe not allocated to DMRS | RBs allocated according to Reference Measurement channel in Annex A.2 | Mapping rule is specified in TS 36.211 [8] Section 5.4.2 |
| SRS | Allowed for the cell-specific parameter *srs-BandwidthConfig* and the UE-specific parameter *srs-Bandwidth* provided by higher layers | Allowed for the cell-specific parameter *srsMaxUpPt* and the UE-specific parameter *transmissionComb* or *transmissionComb-ap* provided by higher layers | Mapping rule is specified in TS 36.211 [8] Section 5.5.3.2 |

NOTE: PUSCH, PUCCH, DMRS are not present in UpPTS for TDD.

### H.1.1 General for NB1

This annex specifies the uplink physical channels that are needed for setting a connection and channels that are needed during a connection. Table H.1.1-1 describes the mapping of uplink physical channels and signals to physical resources for NB1 UE.

**Table H.1.1-1: Mapping of uplink physical channels and signals to physical resources for NB1**

| Physical channel | Time Domain Location | Frequency Domain Location | Note |
|---|---|---|---|
| NPRACH | Allowed for the parameter n*prach-Configuration Index* provided by higher layers | Allowed for the parameter *nprach-SubcarrierOffset* provided by higher layers | Mapping rule is specified in TS 36.211 [8] Section 10.1.6 |
| NPUSCH | All the SC-FDMA symbols of each subframe. | RUs allocated according to Reference Measurement channel in Annex A.2 | Mapping rule is specified in TS 36.211 [8] Section 10.1.3 |

## H.2 Set-up

Table H.2-1 describes the uplink physical channels that are required for connection set up.

**Table H.2-1: Uplink Physical Channels required for connection set-up**

| Physical Channel |
|---|
| PRACH |
| DMRS |
| PUCCH |
| PUSCH |

### H.2.1 Set-up for NB1

Table H.2.1-1 describes the uplink physical channels that are required for connection set up.

**Table H.2.1-1: Uplink Physical Channels required for connection set-up**

| Physical Channel |
|---|
| NPRACH |
| NPUSCH |

## H.3 Connection

The following clauses describes the uplink physical channels that are transmitted during a connection i.e., when measurements are done.

### H.3.0 Measurement of Transmitter Characteristics

As specified in the test case. Otherwise:

- PUSCH + DMRS for PUSCH (and DMRS) measurements.
- PUCCH + DMRS for PUCCH (and DMRS) measurements.
- PRACH for PRACH measurements.

SRS for SRS measurements.

### H.3.1 Measurement of Receiver Characteristics

As specified in the test case. Otherwise:

- PUSCH + DMRS for measurements with uplink interference configured.
- PUCCH + DMRS for measurements without uplink interference configured.

### H.3.2 Measurement of Performance Requirements

As specified in the test case. Otherwise:

- PUCCH + DMRS for measurements without CSI feedback, or with CSI feedback in PUCCH mode.
- PUSCH + DMRS for measurements with CSI feedback in PUSCH mode.

## H.4 Connection for NB1

The following clauses describes the uplink physical channels that are transmitted during a connection i.e., when measurements are done.

### H.4.0 Measurement of Transmitter Characteristics

As specified in the test case. Otherwise:

- NPUSCH for measurements.
- NPRACH for PRACH measurements.

### H.4.1 Measurement of Receiver Characteristics

As specified in the test case. Otherwise:

- NPUSCH (format 2) for measurements.

### H.4.2 Measurement of Performance Requirements

As specified in the test case. Otherwise:

- NPUSCH (format 2) for measurements.

# Annex I (informative): Handling requirements and tests for different releases and UE capabilities

This annex gives guidance on how minimum requirements in different releases of 3GPP TS 36.101 [2] and different UE capabilities are handled in the specification 3GPP TS 36.521-1.

## I.1 General Considerations

Conformance tests in TS 36.521-1 are derived and specified by RAN WG5 based on minimum requirements in TS 36.101 [2] defined by RAN WG4. The actual practice of RAN WG5 is to specify conformance tests only in a single release of TS 36.521-1, capturing requirements defined by RAN WG4 in all releases of TS 36.101 [2].

1) In general the structure of TS 36.521-1 follows the structure of TS 36.101 [2].

2) In general for minimum requirements specified in a single clause in TS 36.101 [2], a corresponding conformance test is specified in a single clause in TS 36.521-1.

3) Exceptions to rule 2) occur in the following cases:

   a) Coverage of minimum requirements is too wide, in term of different test environments required for verifying all of them.

   b) Coverage of minimum requirements is too wide, in term of different features which need to be tested for verifying all of them.

   c) Coverage of minimum requirements is too wide, in term of different UE capabilities required for verifying all of them.

A set of conformance tests is generated in TS 36.521-1 based on the same clause with minimum requirements in TS 36.101 [2]. This "test group" consists in several "individual tests".

4) Exceptions to rule 2) occur also in the case when minimum requirements (including test conditions, test points etc.) are not the same in different releases of TS 36.101 [2]. More in details the differences may consist in:

   a) Different requirement values / test conditions for the same test points.

   b) Exclusion / Replacement / Addition of test points without introduction of new features

   c) Addition of test points introducing new features.

A set of conformance tests is generated in TS 36.521-1 based on the same clause with minimum requirements in TS 36.101 [2]. This set consists in one "original test" and one or several "additional tests".

5) The clause-number and the title of the "test group" / "original test" is derived based on the number and title of the corresponding minimum requirements in TS 36.101 [2], while the clause-numbers and titles of the "individual tests" / "additional tests" are derived based on those of the "test group" / "original test". In any case it should be avoided to have in TS 36.521-1 specification tests with the same title, even though they have different clause-numbers.

6) In case of high similarity between "individual tests", or between "additional tests" and "original test", in order to reduce the standardization and maintenance work the content of clauses for "individual tests" / "additional tests" may be reduced to a minimum by referencing to the analogue clauses of other "individual tests" / the "original test" and specifying the exceptions (requirement-tables, test parameter tables etc). This method should be applied very carefully considering differences in core functionalities of different E-UTRAN releases.

Details how to apply the above principles to concrete scenarios are defined in Annex I.2.

# I.2 Concrete scenarios

## I.2.1 Tests for minimum requirements varying between releases, without introduction of new features

Different minimum requirement between different releases of 3GPP TS 36.101 [2] without introduction of new features represent scenarios according to Annex I.1 bullets 4) a) and b).

In TS 36.521-1 are specified one "original test" and several "additional tests" respectively applicable to the appropriate releases. This is shown graphically in Figure I.2.1-1.

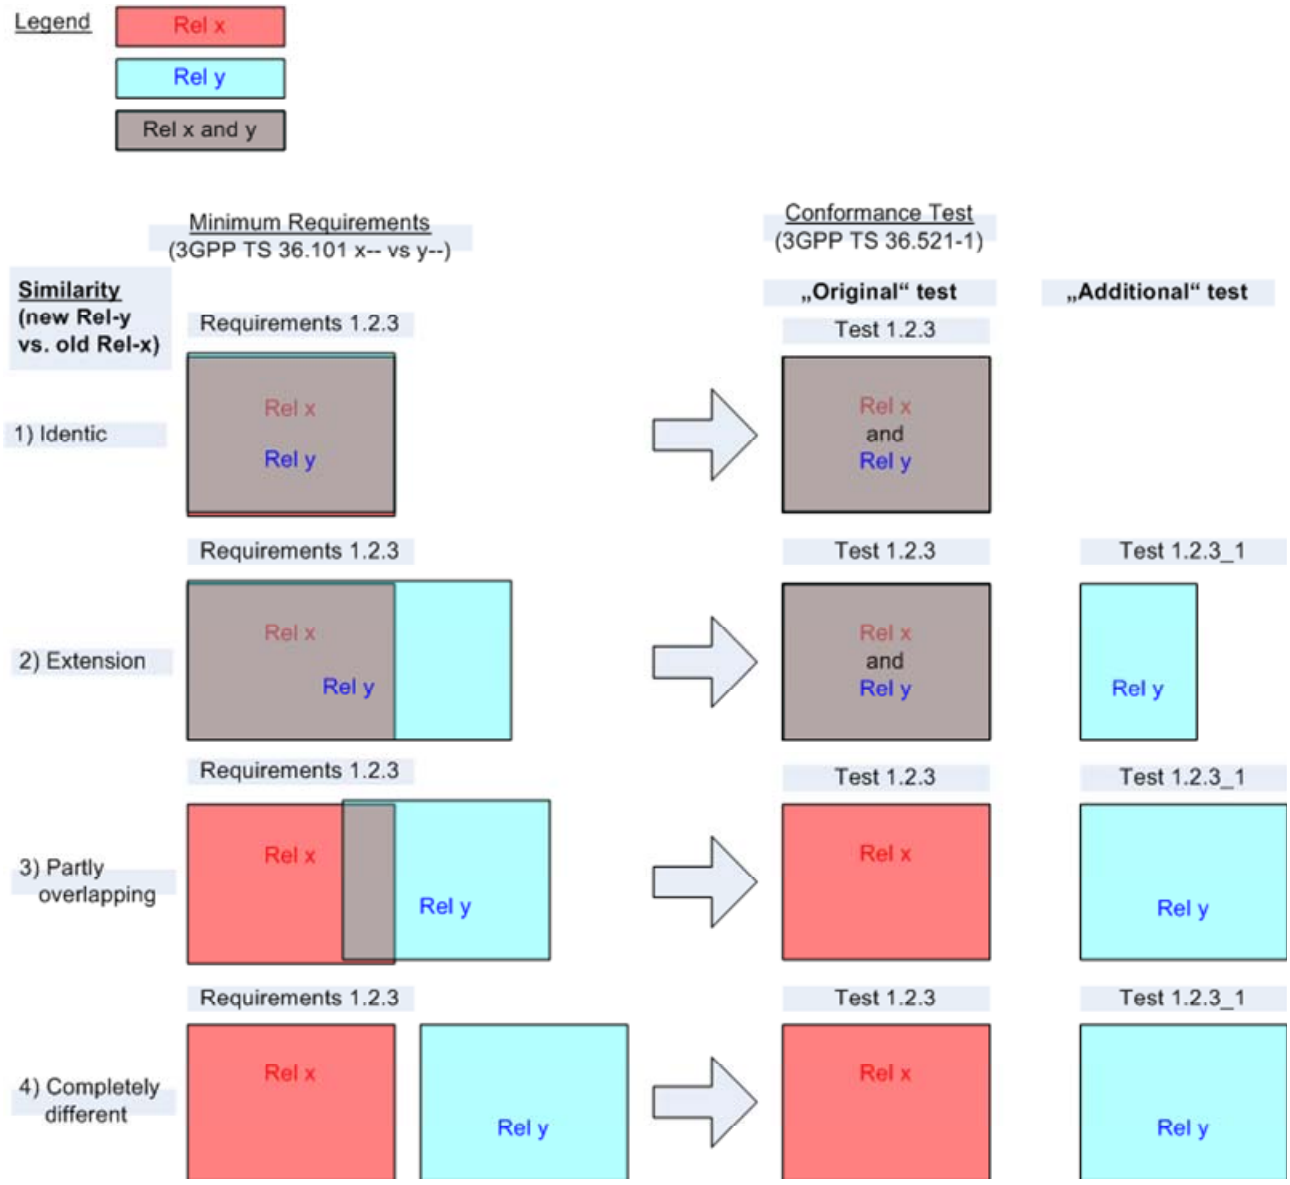

**Figure I.2.1-1: Mapping of minimum requirements to conformance tests, when minimum requirements are specified in multiple releases**

**Rule:**

Following tests and clauses are specified in TS 36.521-1:

*Original tests:*

<x.x.x> <Test>

*Additional tests:*

<x.x.x>_<y> <Test> (<Release> <UE capability>)

**where:**

<x.x.x> = number of the original test

<y> = incrementing clause number (Arabic numeral)

<Test> = title of the original test

<Release> = optional identifier showing the release applicability of the test. To be included only when there is already a test with the same title for earlier releases.

<UE capability> = optional identifier showing the UE capability, which leads to additional test. To be included only when there is already a test with the same title for the same release.

**Examples:**

1.2.3 Virtual test

1.2.3_1 Virtual test (Rel-9 and forward)

1.2.3_2 Virtual test (Rel-10 and forward)

## I.2.2 Tests for CA (Carrier aggregation)

### I.2.2.1 CA Tx tests (Chapter 6)

CA Transmitter minimum requirements in 3GPP TS 36.101 [2] are already specified in separate clauses from the legacy requirements, bearing the suffix "A" in the number and "for CA" in the title. However minimum requirements have a wide coverage in terms of Annex I.1 bullet 3).

In TS 36.521-1 are specified several separate "individual tests" for different CA scenarios and UE capabilities.

**Rule:**

Following tests and clauses are specified in TS 36.521-1:

*Test group clause:*

<x.x.x>A <Test> for CA

*Individual tests:*

<x.x.x>A.<y> <Test> for CA (<CA type> <DL/UL support> <BW Class> <Release>)

where:

<x.x.x> = number of the corresponding legacy test (if available), or number derived from TS 36.101 without potential suffix "A" (if no legacy test available)

<y> = incrementing clause number (Arabic numeral)

<Test> = title of the corresponding legacy test (if available), or title derived from TS 36.101 without potential suffix "for CA" (if no legacy test available)

<CA type> = mandatory identifier {intra-band contiguous; intra-band non-contiguous; inter-band}

<DL/UL support>= mandatory identifier {DL CA without UL CA; DL CA and UL CA}

<BW Class> = optional identifier showing UE CA Bandwidth class {Class B; Class C; Class D; Class E; Class F}. To be included only for intra-band contiguous scenarios, if there is already a test with the same title.

<Release> = optional identifier showing the release applicability of the test. To be included only when there is already a test with the same title for earlier releases.

**Examples:**

1.2.3 Virtual test

1.2.3A Virtual test for CA

1.2.3A.1 Virtual test for CA (intra-band contiguous DL CA and UL CA)

1.2.3A.2 Virtual test for CA (inter-band DL CA and UL CA)

1.2.3A.3 Virtual test for CA (intra-band non-contiguous DL CA and UL CA)

1.2.3A.4 Virtual test for CA (3UL CA)

### I.2.2.2 CA Rx tests (Chapter 7)

Same as for Transmitter tests (Chapter 6) in Annex I.2.2.1 with following exception:

**Examples:**

1.2.3 Virtual test

1.2.3A Virtual test for CA

1.2.3A.1 Virtual test for CA (intra-band contiguous DL CA and UL CA)

1.2.3A.2 Virtual test for CA (intra-band contiguous DL CA without UL CA)

1.2.3A.3 Virtual test for CA (inter-band DL CA without UL CA)

1.2.3A.4 Virtual test for CA (intra band non-contiguous DL CA without UL CA)

1.2.3A.5 Virtual test for CA (3DL CA)

1.2.3A.6 Virtual test for CA (inter-band DL CA and UL CA)

1.2.3A.7 Virtual test for CA (4DL CA)

1.2.3A.8 Virtual test for CA (5DL CA)

### I.2.2.3 CA Performance tests (Chapter 8)

CA Performance minimum requirements in 3GPP TS 36.101 [2] are specified mostly in the same clause with the legacy requirements, as additional test points marked with CA capability identifiers. CA introduces a new feature in terms of Annex I.1 bullet 4) c). Furthermore the set of CA test points has a wide coverage in terms of Annex I.1 bullet 3).

In TS 36.521-1 are specified several separate "individual tests" for different CA scenarios and UE capabilities.

**Rule:**

Following tests and clauses are specified in TS 36.521-1:

*Test group clause:*

<x.x.x>_A <Test> for CA

*Individual tests:*

<x.x.x>_A.<y> <Test> for CA (<CA type > <DL/UL support> <Release>)

where:

<x.x.x> = number of the corresponding legacy test (if available), or number derived from TS 36.101 without potential suffix "A" (if no legacy test available)

<y> = incrementing clause number (Arabic numeral)

<Test> = title of the corresponding legacy test (if available), or title derived from TS 36.101 without potential "for CA" (if no legacy test available)

<CA type> = mandatory identifier {intra-band contiguous; intra-band non-contiguous; inter-band}

<DL/UL support> = mandatory identifier {DL CA}

<Release> = optional identifier showing the release applicability of the test. To be included only when there is already a test with the same title for earlier releases.

**Examples:**

1.2.3 Virtual test

1.2.3_A Virtual test for CA

1.2.3_A.1 Virtual test for CA (2DL CA)

1.2.3_A.2 Virtual test for CA (3DL CA)

1.2.3_A.3 Virtual test for CA (4DL CA)

1.2.3_A.4 Virtual test for CA (5DL CA)

# I.2.3 Tests for UL-MIMO (Uplink Multiple Antenna Transmission)

## I.2.3.1 UL-MIMO Tx tests (Chapter 6)

UL-MIMO Transmitter minimum requirements in 3GPP TS 36.101 [2] are already specified in separate clauses from the legacy requirements, bearing the suffix "B" in the number and "for UL-MIMO" in the title.

**Rule:**

Following tests and clauses are specified in TS 36.521-1:

*Test group clause:*

<x.x.x>B <Test> for UL-MIMO

*Individual tests:*

<x.x.x>B.<y> <Test> for UL-MIMO (<Release>)

where:

<x.x.x> = number of the corresponding legacy test (if available), or number derived from TS 36.101 without potential suffix "B" (if no legacy test available)

<y> = incrementing clause number (Arabic numeral)

<Test> = title of the corresponding legacy test (if available), or title derived from TS 36.101 without potential suffix "for UL-MIMO" (if no legacy test available)

<Release> = optional identifier showing the release applicability of the test. To be included only when there is already a test with the same title for earlier releases.

**Examples:**

| | |
|---|---|
| 1.2.3 | Virtual test |
| 1.2.3B | Virtual test for UL-MIMO |

### I.2.3.2 UL-MIMO Rx tests (Chapter 7)

Same as for Transmitter tests (Chapter 6) in Annex I.2.3.1.

## I.2.4 Tests for eDL-MIMO (Enhanced Downlink Multiple Antenna Transmission)

### I.2.4.1 eDL MIMO Performance tests (Chapter 8)

eDL MIMO Performance minimum requirements in 3GPP TS 36.101 [2] are specified in separate clauses from the legacy requirements. In some cases the minimum requirements have a wide coverage in terms of Annex I.1 bullet 3) a) with respect of the presence of a simultaneous interfering transmission a) with respect of the presence of a simultaneous interfering transmission.

In TS 36.521-1 are specified several separate "individual tests" for eDL-MIMO.

**Rule:**

Following tests and clauses are specified in TS 36.521-1:

*Test group clause:*

| | |
|---|---|
| <x.x.x>_D | <Test> for eDL-MIMO |

*Individual tests:*

| | |
|---|---|
| <x.x.x>_D.<y> | <Test> for eDL-MIMO (<Release>) |

where:

| | |
|---|---|
| <x.x.x> | = number of the corresponding legacy test (if available), or number derived from TS 36.101 without potential suffix (if no legacy test available). |
| <y> | =optional incrementing clause number (Arabic numeral) (if many individual tests). |
| <Test> | = title of the corresponding legacy test (if available), or title derived from TS 36.101 without potential suffix potential suffix (if no legacy test available). |
| <Release> | = optional identifier showing the release applicability of the test. To be included only when there is already a test with the same title for earlier releases. |

**Examples:**

| | |
|---|---|
| 1.2.4 | Virtual test |
| 1.2.4_D | Virtual test for eDL-MIMO |

### I.2.4.2 eDL MIMO CSI tests (Chapter 9)

eDL MIMO CSI minimum requirements in 3GPP TS 36.101 [2] are specified in separate clauses from legacy requirements.

**Rule:**

Following tests and clauses are specified in TS 36.521-1:

*Test group clause:*

<x.x.x>_D <Test> for eDL-MIMO

*Individual tests:*

<x.x.x>_D.<y> <Test> for eDL-MIMO (<Release>)

where:

<x.x.x> = number of the corresponding legacy test (if available), or number derived from TS 36.101 without potential suffix (if no legacy test available).

<y> =optional incrementing clause number (Arabic numeral) (if many individual tests).

<Test> = title of the corresponding legacy test (if available), or title derived from TS 36.101 without potential suffix (if no legacy test available).

<Release> = optional identifier showing the release applicability of the test. To be included only when there is already a test with the same title for earlier releases.

**Examples:**

1.2.4 Virtual test

1.2.4_D Virtual test for eDL-MIMO

## I.2.5 Tests for eICIC (Enhanced Intercarrier Interference Cancellation / Coordination)

### I.2.5.1 eICIC Performance tests (Chapter 8)

eICIC Performance minimum requirements in 3GPP TS 36.101 [2] are specified in separate clauses from the legacy requirements. The set of eICIC test points have a wide coverage in terms of Annex I.1 bullet 3)a) with respect of the ABS type (Non-MBSFN / MBSFN). In TS 36.521-1 are specified several separate "individual tests" for eICIC.

**Rule:**

Following tests and clauses are specified in TS 36.521-1:

*Test group clause:*

<x.x.x>_C <Test> for eICIC

*Individual tests:*

<x.x.x>_C.<y> <Test> for eICIC (<ABS-type> <Release>)

where:

<x.x.x> = number of the corresponding legacy test (if available), or number derived from TS 36.101 without potential suffix (if no legacy test available).

<y> =optional incrementing clause number (Arabic numeral) (if many individual tests).

<Test> = title of the corresponding legacy test (if available), or title derived from TS 36.101 without potential suffix (if no legacy test available).

<ABS-Type> = mandatory identifier {non-MBSFN ABS, MBSFN ABS}

<Release> = optional identifier showing the release applicability of the test. To be included only when there is already a test with the same title for earlier releases.

**Examples:**

1.2.4 Virtual test

1.2.4_C Virtual test for eICIC

1.2.4_C.1 Virtual test for eICIC (non-MBSFN ABS)

1.2.4_C.2 Virtual test for eICIC (MBSFN ABS)

### I.2.5.2 eICIC CSI tests (Chapter 9)

Same as for Performance tests (Chapter 8) in Annex I.2.5.1.

## I.2.6 Tests for feICIC (Further Enhanced Non CA-based ICIC for LTE)

### I.2.6.1 feICIC Performance tests (Chapter 8)

feICIC Performance minimum requirements in 3GPP TS 36.101 [2] are specified in separate clauses from the legacy requirements. The set of feICIC test points have a wide coverage in terms of Annex I.1 bullet 3)a) with respect of the ABS type (Non-MBSFN / MBSFN). In TS 36.521-1 are specified several separate "individual tests" for feICIC.

Rule:

Following tests and clauses are specified in TS 36.521-1:

*Test group clause:*

<x.x.x>_E<Test> for feICIC

*Individual tests:*

<x.x.x>_E.<y> <Test> for feICIC (<ABS-type> <Release>)

where:

<x.x.x> = number of the corresponding legacy test (if available), or number derived from TS 36.101 without potential suffix (if no legacy test available).

<y> =optional incrementing clause number (Arabic numeral) (if many individual tests).

<Test> = title of the corresponding legacy test (if available), or title derived from TS 36.101 without potential suffix (if no legacy test available).

<ABS-Type> = mandatory identifier {non-MBSFN ABS, MBSFN ABS}

<Release> = optional identifier showing the release applicability of the test. To be included only when there is already a test with the same title for earlier releases.

Examples:

1.2.6 Virtual test

1.2.6_E Virtual test for feICIC

1.2.6_E.1 Virtual test for feICIC (non-MBSFN ABS)

1.2.6_E.2 Virtual test for eICIC (MBSFN ABS)

### I.2.6.2 feICIC CSI tests (Chapter 9)

Same as for Performance tests (Chapter 8) in Annex I.2.6.1.

# I.2.7 Tests for DL ComP (Downlink Coordinated Multipoint Transmission)

## I.2.7.1 CoMP Performance tests (Chapter 8)

CoMP Performance minimum requirements in 3GPP TS 36.101 [2] are specified in separate clauses from the legacy requirements. The set of CoMP test points may have a wide coverage in terms of Annex I.1 bullet 3)a) with respect of the number of CSI processes (Single / Multiple CSI process) etc. In such cases in TS 36.521-1 are specified several separate "individual tests" for CoMP.

Rule:

Following tests and clauses are specified in TS 36.521-1:

*Test (group) clause:*

<x.x.x>_F <Test> for CoMP

*Individual tests:*

<x.x.x>_F.<y> <Test> < CSI Process number > for CoMP (<Release>)

where:

| | |
|---|---|
| <x.x.x> | = number derived from TS 36.101. |
| <y> | = optional incrementing clause number (Arabic numeral) (if many individual tests). |
| <Test> | = title derived from TS 36.101. |
| <CSI Process number> | = optional identifier {with Single CSI process, with Multiple CSI processes} (if many individual tests) |
| <Release> | = optional identifier showing the release applicability of the test. To be included only when there is already a test with the same title for earlier releases. |

Examples:

| | |
|---|---|
| 1.2.3 | Virtual test |
| 1.2.3_F | Virtual test for CoMP |
| 1.2.3_F.1 | Virtual test with Single CSI process for CoMP |
| 1.2.3_F.2 | Virtual test with Multiple CSI processes for CoMP |

## I.2.7.2 CoMP CSI tests (Chapter 9)

Same as for Performance tests (Chapter 8) in Annex I.2.7.1.

# I.2.8 Tests for Further eDL-MIMO (Enhanced Downlink Multiple Antenna Transmission) Enhancement for LTE-A

## I.2.8.1 eDL MIMO Enhancement CSI tests (Chapter 9)

Further eDL MIMO Enhancement for LTE-A CSI minimum requirements in 3GPP TS 36.101 [2] are specified in separate clauses from the legacy requirements.

**Rule:**

Following tests and clauses are specified in TS 36.521-1:

<x.x.x> <Test> for eDL-MIMO Enhancement

*Individual tests:*

<x.x.x>< _y> <Test> for eDL-MIMO Enhancement (<Release>)

where:

<x.x.x> = number derived from the corresponding requirement clause in TS 36.101.

<_y> = optional incrementing clause number (Arabic numeral) with preceding underscore. To be applied only when there is already a test with the same title for earlier releases.

<Test> = title derived from the corresponding requirement clause in TS 36.101.

<Release> = optional identifier showing the release applicability of the test. To be included only when there is already a test with the same title for earlier releases.

**Examples:**

1.2.3 Virtual test for eDL-MIMO Enhancement

1.2.3_1 Virtual test for eDL-MIMO Enhancement (Rel-13 and forward)

# I.2.9 Tests for UE category 0

## I.2.9.1 UE category 0 Tx tests (Chapter 6)

UE category 0 specific Transmitter minimum requirements in 3GPP TS 36.101 [2] are specified in separate clauses from the legacy requirements, bearing the suffix "E" in the number and "for UE category 0" in the title. In other cases where no category 0 specific requirements exist, the legacy requirements apply. To maintain consistency all test cases for UE category 0 to be specified in TS 36.521-1 are handled similarly.

**Rule:**

Following tests and clauses are specified in TS 36.521-1:

<x.x.x>E <Test> for UE category 0

<x.x.x>E<_y> <Test> for UE category 0 (<Release>)

where:

<x.x.x> = number of the corresponding legacy test (if available), or number derived from TS 36.101 without potential suffix "E" (if no legacy test available)

<_y> = optional incrementing clause number (Arabic numeral) with preceding underscore. To be applied only when there is already a test with the same title for earlier releases.

<Test> = title of the corresponding legacy test (if available), or title derived from TS 36.101 without potential "for UE category 0" (if no legacy test available)

<Release> = optional identifier showing the release applicability of the test. To be included only when there is already a test with the same title for earlier releases.

**Examples:**

| | |
|---|---|
| 1.2.3 | Virtual test |
| 1.2.3E | Virtual test for UE category 0 |
| 1.2.3E_1 | Virtual test for UE category 0 (Rel-13 and forward) |

### I.2.9.2 UE category 0 Rx tests (Chapter 7)

Same as for Transmitter tests (Chapter 6) in Annex I.2.9.1.

### I.2.9.3 UE category 0 Performance tests (Chapter 8)

UE category 0 Performance minimum requirements in 3GPP TS 36.101 [2] are already specified in separate clauses from the legacy requirements.

**Rule:**

Following tests and clauses are specified in TS 36.521-1:

| | |
|---|---|
| <x.x.x> | <Test> for UE category 0 |
| <x.x.x><_y> | <Test> for UE category 0 (<Release>) |

where:

| | |
|---|---|
| <x.x.x> | = number derived from the corresponding requirement clause in TS 36.101 |
| <_y> | = optional incrementing clause number (Arabic numeral) with preceding underscore. To be applied only when there is already a test with the same title for earlier releases. |
| <Test> | = title derived from the corresponding requirement clause in TS 36.101 |
| <Release> | = optional identifier showing the release applicability of the test. To be included only when there is already a test with the same title for earlier releases. |

**Examples:**

| | |
|---|---|
| 1.2.3 | Virtual test for UE category 0 |
| 1.2.3_1 | Virtual test for UE category 0 (Rel-13 and forward) |

### I.2.9.4 UE category 0 CSI tests (Chapter 9)

Same as for Performance tests (Chapter 8) in Annex I.2.9.3.

## I.2.9A Tests for UE category M1

### I.2.9A.1 UE category M1 Tx tests (Chapter 6)

UE category M1 specific Transmitter minimum requirements in 3GPP TS 36.101 [2] are specified in separate clauses from the legacy requirements, bearing the suffix "E" in the number and "for UE category M1" in the title. Suffix “E” is also used for UE category 0. In other cases, where no category M1 specific requirements exist, the legacy requirements apply. To maintain consistency all test cases for UE category M1 to be specified in TS 36.521-1 are handled similarly, but suffix "EA" is used to distinguish from UE category 0 test cases using suffix "E".

**Rule:**

Following tests and clauses are specified in TS 36.521-1:

| | |
|---|---|
| <x.x.x>EA | <Test> for UE category M1 |

<x.x.x>EA<_y> <Test> for UE category M1 (<CEMode><Release>)

where:

<x.x.x> = number of the corresponding legacy test (if available), or number derived from TS 36.101 without potential suffix "E" (if no legacy test available)

<_y> = optional incrementing clause number (Arabic numeral) with preceding underscore. To be applied only when there is already a test for CEModeA or a test with the same title for earlier releases.

<Test> = title of the corresponding legacy test (if available), or title derived from TS 36.101 without potential "for UE category M1" (if no legacy test available)

<CEMode> = optional identifier showing the CEMode applicability of the test. Can only take value CEModeB and is applied only if a corresponding CEModeA test exists.

<Release> = optional identifier showing the release applicability of the test. To be included only when there is already a test with the same title for earlier releases.

**Examples:**

1.2.3 Virtual test

1.2.3EA Virtual test for UE category M1

1.2.3EA_1 Virtual test for UE category M1 (Rel-13 and forward)

## I.2.9A.2 UE category M1 Rx tests (Chapter 7)

Same as for Transmitter tests (Chapter 6) in Annex I.2.9A.1.

## I.2.9A.3 UE category M1 Performance tests (Chapter 8)

UE category M1 Performance minimum requirements in 3GPP TS 36.101 [2] are already specified in separate clauses from the legacy requirements.

**Rule:**

Following tests and clauses are specified in TS 36.521-1:

<x.x.x> <Test> for UE category M1

<x.x.x><_y> <Test> for UE category M1 (<CEMode><Release>)

where:

<x.x.x> = number derived from the corresponding requirement clause in TS 36.101

<_y> = optional incrementing clause number (Arabic numeral) with preceding underscore. To be applied only when there is already a test for CEModeA or a test with the same title for earlier releases.

<Test> = title derived from the corresponding requirement clause in TS 36.101

<CEMode> = optional identifier showing the CEMode applicability of the test. Can only take value CEModeB and is applied only if a corresponding CEModeA test exists.

<Release> = optional identifier showing the release applicability of the test. To be included only when there is already a test with the same title for earlier releases.

**Examples:**

1.2.3 Virtual test for UE category M1

1.2.3_1 Virtual test for UE category M1 (Rel-13 and forward)

### I.2.9A.4 UE category M1 CSI tests (Chapter 9)

Same as for Performance tests (Chapter 8) in Annex I.2.9A.3.

## I.2.9B Tests for UE category M2

### I.2.9B.1 UE category M2 Tx tests (Chapter 6)

UE category M2 specific Transmitter minimum requirements in 3GPP TS 36.101 [2] are specified in separate clauses from the legacy requirements and category M1 requirements, bearing the suffix "E" in the number and "for UE category M2" in the title. Suffix “E” is also used for UE category 0. In other cases, where no category M2 specific requirements exist, the legacy requirements apply. To maintain consistency all test cases for UE category M2 to be specified in TS 36.521-1 are handled similarly, but suffix "EC" is used to distinguish from UE category 0 test cases using suffix "E", category M1 test cases using suffix "EA" and category 1bis test cases using suffix “EB”.

**Rule:**

Following tests and clauses are specified in TS 36.521-1:

<x.x.x>EC <Test> for UE category M2

<x.x.x>EC<_y> <Test> for UE category M2 (<CEMode><Release>)

where:

<x.x.x> = number of the corresponding legacy test (if available), or number derived from TS 36.101 without potential suffix "E" (if no legacy test available)

<_y> = optional incrementing clause number (Arabic numeral) with preceding underscore. To be applied only when there is already a test for CEModeA or a test with the same title for earlier releases.

<Test> = title of the corresponding legacy test (if available), or title derived from TS 36.101 without potential "for UE category M2" (if no legacy test available)

<CEMode> = optional identifier showing the CEMode applicability of the test. Can only take value CEModeB and is applied only if a corresponding CEModeA test exists.

<Release> = optional identifier showing the release applicability of the test. To be included only when there is already a test with the same title for earlier releases.

**Examples:**

1.2.3 Virtual test

1.2.3EC Virtual test for UE category M2

1.2.3EC_1 Virtual test for UE category M2 (Rel-14 and forward)

### I.2.9B.2 UE category M2 Rx tests (Chapter 7)

Same as for Transmitter tests (Chapter 6) in Annex I.2.9B.1.

### I.2.9B.3 UE category M2 Performance tests (Chapter 8)

UE category M2 Performance minimum requirements in 3GPP TS 36.101 [2] are already specified in separate clauses from the legacy requirements.

**Rule:**

Following tests and clauses are specified in TS 36.521-1:

<x.x.x> <Test> for UE category M2

<x.x.x><_y> <Test> for UE category M2 (<CEMode><Release>)

where:

<x.x.x> = number derived from the corresponding requirement clause in TS 36.101

<_y> = optional incrementing clause number (Arabic numeral) with preceding underscore. To be applied only when there is already a test for CEModeA or a test with the same title for earlier releases.

<Test> = title derived from the corresponding requirement clause in TS 36.101

<CEMode> = optional identifier showing the CEMode applicability of the test. Can only take value CEModeB and is applied only if a corresponding CEModeA test exists.

<Release> = optional identifier showing the release applicability of the test. To be included only when there is already a test with the same title for earlier releases.

**Examples:**

1.2.3 Virtual test for UE category M2

1.2.3_1 Virtual test for UE category M2 (Rel-14 and forward)

### I.2.9B.4 UE category M2 CSI tests (Chapter 9)

Same as for Performance tests (Chapter 8) in Annex I.2.9B.3.

## I.2.10 Tests for SCE-L1 (Small Cell Enhancements-Physical layer)

### I.2.10.1 SCE-L1 Receiver tests (Chapter 7)

The set of 256QAM test points may have a wide coverage in terms of Annex I.1 bullet 3)c) with respect of the different UE capabilities (UE category 11-16), modulation mode and coding rate required and Annex I.1 bullet 4)a)etc with the addition of new requirements and new defined RMC for SCE-L1. In such cases in TS 36.521-1 are specified several separate "individual tests" for SCE-L1.

Rule:

Following tests and clauses are specified in TS 36.521-1:

*Test (group) clause:*

<x.x.x>_H <Test> for SCE-L1

*Individual tests:*

<x.x.x>_H.<y> <Test> for SCE-L1 (<Release>)

where:

<x.x.x> = number derived from TS 36.101.

<y> = optional incrementing clause number (Arabic numeral) (if many individual tests).

<Test> = title derived from TS 36.101.

<Release> = optional identifier showing the release applicability of the test. To be included only when there is already a test with the same title for earlier releases.

Examples:

| | |
|---|---|
| 1.2.3 | Virtual test |
| 1.2.3_H | Virtual test for SCE-L1 |

## I.2.10.2 SCE-L1 Performance tests (Chapter 8)

The set of 256QAM test points may have a wide coverage in terms of Annex I.1 bullet 3)c) with respect of the different UE capabilities (UE category 11-16) and demodulation mode required and Annex I.1 bullet 4)c)etc with the addition of new test points introducing new features of 256QAM for SCE-L1. In such cases in TS 36.521-1 are specified several separate "individual tests" for SCE-L1.

Rule:

Following tests and clauses are specified in TS 36.521-1:

*Test (group) clause:*

<x.x.x>_H <Test> for SCE-L1

*Individual tests:*

<x.x.x>_H.<y> <Test> for SCE-L1 (<Release>)

where:

| | |
|---|---|
| <x.x.x> | = number derived from TS 36.101. |
| <y> | = optional incrementing clause number (Arabic numeral) (if many individual tests). |
| <Test> | = title derived from TS 36.101. |
| <Release> | = optional identifier showing the release applicability of the test. To be included only when there is already a test with the same title for earlier releases. |

Examples:

| | |
|---|---|
| 1.2.3 | Virtual test |
| 1.2.3_H | Virtual test for SCE-L1 |
| 1.2.3_H.1 | Virtual test for SCE-L1(Single Carrier) |
| 1.2.3_H.2 | Virtual test for SCE-L1(2DL CA) |
| 1.2.3_H.3 | Virtual test for SCE-L1(3DL CA) |

## I.2.10.3 SCE-L1 CSI tests (Chapter 9)

SCE-L1 Performance minimum requirements in 3GPP TS 36.101 [2] are specified in separate clauses from the legacy requirements. The set of SCE-L1 test points may have a wide coverage in terms of Annex I.1 bullet 3)b) and c) etc. In such cases in TS 36.521-1 are specified several separate "individual tests" for SCE-L1.

Rule:

Following tests and clauses are specified in TS 36.521-1:

*Test (group) clause:*

<x.x.x>_H <Test> for SCE-L1

*Individual tests:*

<x.x.x>_H.<y> <Test> for SCE-L1 (<Release>)

where:

| | |
|---|---|
| <x.x.x> | = number derived from TS 36.101. |
| <y> | = optional incrementing clause number (Arabic numeral) (if many individual tests). |
| <Test> | = title derived from TS 36.101. |
| <Release> | = optional identifier showing the release applicability of the test. To be included only when there is already a test with the same title for earlier releases. |

Examples:

| | |
|---|---|
| 1.2.3 | Virtual test |
| 1.2.3_H | Virtual test for SCE-L1 |

# I.2.11 Tests for ProSe

## I.2.11.1 ProSe Tx tests (Chapter 6)

ProSe specific Transmitter minimum requirements in 3GPP TS 36.101 [2] are specified in separate clauses from the legacy requirements, bearing the suffix "D" in the number and "for ProSe" in the title. The set of ProSe test points may have a wide coverage in terms of Annex I.1 bullet 3)b) and c) with respect of type of ProSe operation and UE capability (Discovery / Communication) etc. In such cases in TS 36.521-1 are specified several separate "individual tests" for ProSe.

**Rule:**

Following tests and clauses are specified in TS 36.521-1:

<x.x.x>D <Test> for ProSe

<x.x.x>D<.y><_z> <Test> for ProSe <Mode> (<Release>)

where:

<x.x.x> = number derived from TS 36.101 without suffix "D"

<.y> = incrementing clause number (Arabic numeral).

<_z> = optional incrementing clause number (Arabic numeral) with preceding underscore. To be applied only when there is already a test with the same title for earlier releases.

<Test> = title derived from TS 36.101 without "for ProSe"

<Mode> = mandatory identifier {Direct Discovery; Direct Communication}

<Release> = optional identifier showing the release applicability of the test. To be included only when there is already a test with the same title for earlier releases.

**Examples:**

1.2.3D Virtual test for ProSe

1.2.3D.1 Virtual test for ProSe Direct Discovery

1.2.3D.2 Virtual test for ProSe Direct Communication

1.2.3D.2_1 Virtual test for ProSe Direct Communication (Release 13 and forward)

## I.2.11.2 ProSe Rx tests (Chapter 7)

Same as for Transmitter tests (Chapter 6) in Annex I.2.11.1.

## I.2.11.3 ProSe Performance tests (Chapter 8)

ProSe Performance minimum requirements in 3GPP TS 36.101 [2] are already specified in separate clauses from the legacy requirements.

**Rule:**

Following tests and clauses are specified in TS 36.521-1:

FFS

## I.2.11.4 ProSe CSI tests (Chapter 9)

Same as for Performance tests (Chapter 8) in Annex I.2.11.3.

# I.2.12 Tests for 4 Rx antenna ports

## I.2.12.1 4 Rx antenna ports Rx tests (Chapter 7)

4 Rx antenna ports minimum requirements in 3GPP TS 36.101 [2] are specified in the same clauses as the legacy requirements. The reference sensitivity requirements in section 7.3 are separate from the old test, but the rest of the Receiver tests have the same requirements as the old tests (tested at a level based on REFSENS). But since the test points are different, new variant test cases are still needed.

In TS 36.521-1 separate 2Rx and 4Rx tests are specified for Rel8 and Rel9 tests, but 4Rx is added to the existing tests starting from Rel10 test cases.

**Rule:**

Following tests and clauses are specified in TS 36.521-1:

*Test group before introducing 4Rx:*

<x.x.x> <Test> (Rel8 or Rel9)

<y.y.y> <Test> (Rel10 or later)

*Test group after introducing 4Rx:*

<x.x.x> <Test> for 2Rx

<x.x.x>_1 <Test> for 4Rx

<y.y.y> <Test> for 2Rx and 4Rx

where:

<x.x.x> = number of the corresponding legacy test.

<y> = incrementing clause number (Arabic numeral)

<Test> = title of the corresponding legacy test

(Release) = Release applicability (applicable from), which is not part of the title

**Examples:**

1.2.3 Virtual test (Rel8)

1.2.3_1 Virtual test with 4 Rx antenna ports (Rel10)

1,2,4 Virtual test (Rel10)

## I.2.12.2 4 Rx antenna ports Performance tests (Chapter 8)

4 Rx antenna ports Performance minimum requirements in 3GPP TS 36.101 [2] are specified in separate clauses from the legacy requirements. Separate test cases for 4Rx antenna ports are needed in TS 36.521-1 with test case numbering following TS 36.101[2] numbering,

## I.2.12.3 4 Rx antenna ports CSI tests (Chapter 9)

TBD

# Annex J (normative): Modified MPR behaviour

Editor's note: The *modifiedMPRbehavior* is given in the Annex H.1 of TS 36.101.

## J.1 Indication of modified MPR behaviour

This annex contains the definitions of the bits in the field *modifiedMPRbehavior* indicated in the IE UE Radio Access Capability [5] by a UE supporting an MPR or A-MPR modified in a later release of this specification.

**Table J.1-1: Definitions of the bits in the field *modifiedMPRbehavior* (Rel-10 and Rel-11)**

| Index of field (bit number) | Definition (description of the supported functionality if indicator set to one) | Notes |
|---|---|---|
| 0 (leftmost bit) | The MPR for intra-band contiguous carrier aggregation bandwidth class C with non-contiguous resource allocation specified in Clause 6.2.3A in version 12.5.0 of TS36.101[2] | This bit can be set to 1 by a UE supporting intra-band contiguous CA bandwidth class C |
| 1 | The A-MPR associated with NS_05 for Band 1 in Clause 6.2.4 in version 12.10.0 of TS36.101[2] | This bit can be set to 1 by a UE supporting A-MPR associated to NS_05 for Band 1 |

**Table J.1-2: Definitions of the bits in the field *modifiedMPRbehavior* (Rel-12 and Rel-13)**

| Index of field (bit number) | Definition (description of the supported functionality if indicator set to one) | Notes |
|---|---|---|
| 0 (leftmost bit) | The MPR for intra-band contiguous carrier aggregation bandwidth class C with non-contiguous resource allocation specified in Clause 6.2.3A in version 12.5.0 of TS36.101 [2] | This bit shall be set to 1 by a UE supporting intra-band contiguous CA bandwidth class C |
| 1 | The A-MPR associated with NS_05 for Band 1 in Clause 6.2.4 in version 12.10.0 of TS36.101[2] | This bit shall be set to 1 by a UE supporting A-MPR associated to NS_05 for Band 1 |
| 2 | The A-MPR associated with NS_04 for Band 41 in Table 6.2.4-4 in version 14.2.0 of this specification. | This bit can be set to 1 by a power class 3 UE supporting A-MPR associated to NS_04 for Band 41. |

**Table J.1-3: Definitions of the bits in the field *modifiedMPRbehavior* (Rel-14 and later)**

| Index of field (bit number) | Definition (description of the supported functionality if indicator set to one) | Notes |
|---|---|---|

| | | |
|---|---|---|
| 0 (leftmost bit) | The MPR for intra-band contiguous carrier aggregation bandwidth class C with non-contiguous resource allocation specified in Clause 6.2.3A in version 12.5.0 of TS36.101 [2] | This bit shall be set to 1 by a UE supporting intra-band contiguous CA bandwidth class C |
| 1 | The A-MPR associated with NS_05 for Band 1 in Clause 6.2.4 in version 12.10.0 of TS36.101[2] | This bit shall be set to 1 by a UE supporting A-MPR associated to NS_05 for Band 1 |
| 2 | The A-MPR associated with NS_04 for Band 41 in Table 6.2.4-4 in version 14.2.0 of this specification. | This bit shall be set to 1 by a power class 3 UE supporting A-MPR associated to NS_04 for Band 41. |

# Annex K (normative): NB-IoT Test Frequencies

## K.1 NB-IoT Test frequencies for TRx Tests

Testing frequencies for all NB-IoT TRx test cases (sections 6 and 7 in TS 36.521-1) should be selected across the bands UE supports from any of the following subclauses indicated by each test case.

For transmitter test cases (section 6 in TS 36.521-1), UL frequencies should be considered on the test frequency selection algorithm described above, while DL frequencies should be used for receiver test cases (section 7 in TS 36.521-1).

Refer to TS 36.508 [7] section 8.1.3.1 for testing frequencies associated to each frequency band and each operation mode.

### K.1.1 Test frequencies selection criteria 1

Among all frequency bands ranges below 1GHz supported by the UE, testing points are defined as:

- @ low range of the lowest supported band
- @ high range of the highest supported band

If the UE does not support any frequency band below 1GHz, these test points are not applicable.

Among all frequency bands ranges above 1GHz supported by the UE, testing points are defined as:

- @ low range of the lowest supported band
- @ high range of the highest supported band

If the UE does not support any frequency band above 1GHz, these test points are not applicable.

### K.1.2 Test frequencies selection criteria 2

Among all frequency bands ranges below 1GHz supported by the UE, testing points are defined as:

- @ low range of the lowest supported band
- @ high range of the highest supported band
- All mid range of all supported mid bands (supported bands between lowest supported band and highest supported band below 1GHz)

If the UE does not support any frequency band below 1GHz, these test points are not applicable.

Among all frequency bands ranges above 1GHz supported by the UE, testing points are defined as:

- @ low range of the lowest supported band
- @ high range of the highest supported band
- All mid range of all supported mid bands (supported bands between lowest supported band and highest supported band above 1GHz)

If the UE does not support any frequency band above 1GHz, these test points are not applicable.

### K.1.3 Test frequencies selection criteria 3

Among all frequency bands ranges supported by the UE, testing points are defined as:

- @ low range of each supported band
- @ high range of each supported band

## K.2 NB-IoT Test frequencies for Demodulation Tests

Testing frequencies for all NB-IOT demodulation (Section 8 and 9 in TS 36.521-1) should be selected across the bands UE supports from any of the following subclauses indicated by each test case.

For NB-IOT demodulation (section 8 and 9 in TS 36.521-1) DL frequencies should be used from the frequency selection algorithm described below.

Refer to section 8.1.3.1 in TS 36.508 [7] for testing frequencies associated to each frequency band and each operation mode.

### K.2.1 Test frequencies selection criteria 1

Among all frequency bands ranges supported by the UE, testing points are defined as:

- @ mid range of any one of the NB1 and NB2 UE supported band

| 2013-09 | RAN#61 | R5-133252 | 1090 | - | RF: Minor correction to test points for spurious emissions UE co-existence | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133258 | 1091 | - | Update TC 7.3A.3 Reference sensitivity level for CA_5A-12A (inter-band DL CA without UL CA) | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133261 | 1092 | - | Update the minimum requirements of TCs 7.6.3A.1, 7.7A.1 and 7.8.1A.1 for CA | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133262 | 1093 | - | Update TC 6.6.3B.2 of Spurious emission band UE co-existence for UL-MIMO | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133263 | 1094 | - | Update TCs 6.2.2B and 6.2.5B for UL-MIMO | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133265 | 1095 | - | RF: Addition of missing UL-RMC-s for Tx testing | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133266 | 1096 | - | Correction of TCs 7.3 and 7.3B Reference sensitivity level for Band 27 | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133268 | 1097 | - | CA RF: Addition of new CQI tests for CA | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133298 | 1098 | - | Correction to Spurious emission band UE co-existence | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133415 | 1099 | - | Correction to the repeat steps in 7.6.1A, 7.6.3A and 7.8.1A | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133418 | 1100 | - | Correction to CA sustained data rate performance test | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133423 | 1101 | - | Correction to eICIC Performance test cases | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133425 | 1102 | - | Correction to UE category in Tx test cases | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133426 | 1103 | - | Correction to Spurious emission band UE co-existence | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133431 | 1104 | - | Correction to MBMS Performance test cases | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133474 | 1105 | - | Update TC of 8.7.2.1_A.1 TDD sustained data rate performance for CA (intra-band contiguous DL CA) | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133517 | 1106 | - | Adding the minimum channel spacing for intra-band non-contiguous CA | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133522 | 1107 | - | Corrections to Annex F for Maintenance of Band 23 | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133523 | 1108 | - | Corrections to description for definition of MIMO Correlation Matrices using cross polarized antennas | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133524 | 1109 | - | Corrections to UE maximum output power for CA | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133525 | 1110 | - | Corrections to General Maintenance of Operating Bands and Channel Arrangements | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133532 | 1111 | - | Introduction of eICIC_enh_LTE to Annex C | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133534 | 1112 | - | Corrections to TC 6.6.2.3A.1 Adjacent Channel Leakage power Ratio for CA (intra-band contiguous DL CA and UL CA) | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133535 | 1113 | - | Corrections to TC 7.5A.1 Adjacent Channel Selectivity (ACS) for CA (intra-band contiguous DL CA and UL CA) | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133800 | 1114 | - | Correction to test frequency in Additional Spurious Emissions test cases for NS_15 | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133801 | 1115 | - | Update applicability of test cases 9.4.2.2.1 and 9.4.2.2.2 | 11.1.0 | 11.2.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2013-09 | RAN#61 | R5-133802 | 1116 | - | Correction to applicability for TDD-TM8 test cases | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133803 | 1117 | - | Editorial correction to 6.6.3.3 Additional spurious emissions | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133804 | 1118 | - | Correction the Minimum conformance requirements for test case 6.2.2B | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133805 | 1119 | - | CA RF: Adding missing DL-RMC-s | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133806 | 1120 | - | Update TC of 8.2.1.1 FDD PDSCH Single Antenna Port Performance (Cell-Specific Reference Symbols) for CA | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133807 | 1121 | - | Update TC of 8.2.1.4 FDD PDSCH Closed Loop Spatial Multiplexing Performance (Cell-Specific Reference Symbols) for CA | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133808 | 1122 | - | Addition of new TC 8.2.1.4.2_A.2 for FDD PDSCH Closed Loop Multi Layer Spatial Multiplexing 4x2 for CA (inter band DL CA) | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133811 | 1123 | - | Update of CA TC 7.3A.1 | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133812 | 1124 | - | Update of CA TC 7.4A.1 | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133819 | 1125 | - | Correction of applicability for FDD RF TCs 9.3.4.1.1, 9.3.4.2.1 & 9.4.1.2.1and TDD RF TCs 9.3.4.1.2, 9.3.4.2.2 & 9.4.1.2.2 | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133823 | 1126 | - | Introduction of eICIC_enh_LTE to Annex A to reference measurement channels for PDCCH/PCFICH | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133824 | 1127 | - | Introduction of eICIC_enh_LTE to Annex A DL reference measurement channels | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133828 | 1128 | - | Corrections to 6.2.4 A-MPR for Maintenance of Band 23 | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133829 | 1129 | - | Corrections to Transmitter Characteristics Maintenance | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133830 | 1130 | - | Alignment of test configuration tables (test frequencies) in Additional Spurious Emissions tests cases | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133831 | 1131 | - | Corrections to Receiver Characteristics Maintenance | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133832 | 1132 | - | Corrections to 6.6.2.2 Additional Spectrum Emission Mask for Maintenance of Band 23 | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133833 | 1133 | - | Updates to Chapter7 for Inter Band CA combo CA_4A-29A | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133838 | 1134 | - | Update Minimum Requirements of TCs 6.2.4 and 6.2.5 | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133845 | 1135 | - | Correction to Configured UE transmitted output power for CA | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133846 | 1136 | - | Corrections to TC 6.2.5A.2 Configured UE transmitted Power for CA (inter-band DL CA without UL CA) | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133847 | 1137 | - | Updates to Wideband intermodulation for CA test cases | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133850 | 1138 | - | Correction to measurement target of CA Rx test cases | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133851 | 1139 | - | Corrections to TC 7.5A.2 Adjacent Channel Selectivity (ACS) for CA (intra-band contiguous DL CA without UL CA) | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133852 | 1140 | - | Update TC of 8.7.1.1_A.1 FDD Sustained data rate performance for CA (intra band contiguous DL CA) | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133853 | 1141 | - | Update TC of 8.7.1.1_A.2 FDD Sustained data rate performance for CA (inter band DL CA) | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133854 | 1142 | - | Updates of Annex for CA test cases | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133863 | 1143 | - | Clarification on Bandwidth Combination Set for Carrier Aggregation Transmitter tests | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133865 | 1144 | - | Update TC 6.2.5A.1 Configured UE transmitted Output Power for CA_5A-12A (intra-band contiguous DL CA and UL CA) | 11.1.0 | 11.2.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2013-09 | RAN#61 | R5-133866 | 1145 | - | Update the minimum requirements of TCs 7.5A.1, 7.6.1A.1 and 7.6.2A.1 for CA | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133867 | 1146 | - | Update TC 7.3A.1 Reference sensitivity level for CA (intra-band contiguous DL CA and UL CA) | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133869 | 1147 | - | Addition of Refsens for intra-band non-contiguous CA | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133870 | 1148 | - | Update TC 7.3A.3 reference sensitivity level for CA_3-8 (inter-band DL CA without UL CA) | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133871 | 1149 | - | Test cases and test system uncertainty for LTE B14 public safety highpower UE | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133873 | 1150 | - | Addition of new TC 8.3.1.1.3 for FDD PDSCH Single-layer Spatial Multiplexing on antenna ports 7 or 8 with TM9 Interference Model | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133874 | 1151 | - | Addition of new TC 8.3.2.1.4 for TDD PDSCH Single-layer Spatial Multiplexing on antenna ports 7 or 8 with TM9 Interference Model | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133886 | 1152 | - | eICIC RF: Addition of new RI tests and OCNG patterns for eICIC | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133887 | 1153 | - | Update of CA TC 6.2.3A and TC 6.2.4A | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133888 | 1154 | - | CA RF: Corrections to reference sensitivity requirements for CA | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133889 | 1155 | - | Correction to Test Requirement in 7.3A.3 | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133890 | 1156 | - | Update TC of 8.2.1.3 FDD PDSCH Open Loop Spatial Multiplexing Performance (Cell-Specific Reference Symbols)for CA | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133898 | 1157 | - | Clarification on Bandwidth Combination Set for Carrier Aggregation Receiver tests | 11.1.0 | 11.2.0 |
| 2013-09 | RAN#61 | R5-133899 | 1158 | - | Addition of CA TC 6.6.2.2A | 11.1.0 | 11.2.0 |
| 2013-12 | RAN#62 | R5-134130 | 1159 | - | RF: Corrections to the notes in the band UE co-existence requirements table | 11.2.0 | 11.3.0 |
| 2013-12 | RAN#62 | R5-134131 | 1160 | - | RF: Corrections to sustained data rate test case | 11.2.0 | 11.3.0 |
| 2013-12 | RAN#62 | R5-134132 | 1161 | - | RF: Clean-up of uplink reference measurement channels | 11.2.0 | 11.3.0 |

| 2013-12 | RAN#62 | R5-134802 | 1206 | - | Corrections to eDL-MIMO Channel State Information Test | 11.2.0 | 11.3.0 |
| 2013-12 | RAN#62 | R5-134805 | 1207 | - | Update Minimum Requirements of TCs 6.6.3.2 and 6.6.3.2A Spurious emission band UE co-existence | 11.2.0 | 11.3.0 |
| 2013-12 | RAN#62 | R5-134806 | 1208 | - | Change Spurious emission UE co-existence test case for LTE CA to align with release independence rule | 11.2.0 | 11.3.0 |
| 2013-12 | RAN#62 | R5-134807 | 1209 | - | Clarification of applicability of additional relaxation RIB,c on Reference Sensitivity Test Cases | 11.2.0 | 11.3.0 |
| 2013-12 | RAN#62 | R5-134816 | 1215 | - | Addition of new Test Case PUCCH 1-1 for Interference rejection | 11.2.0 | 11.3.0 |
| 2013-12 | RAN#62 | R5-134817 | 1216 | - | Addition of interference rejection test cases TC 8.2.2.2.4 and TC 8.2.2.4.3 | 11.2.0 | 11.3.0 |
| 2013-12 | RAN#62 | R5-134828 | 1217 | - | Clarification of multi-cluster transmission terminology | 11.2.0 | 11.3.0 |
| 2013-12 | RAN#62 | R5-134829 | 1218 | - | Corrections to Pcmax | 11.2.0 | 11.3.0 |
| 2013-12 | RAN#62 | R5-134830 | 1219 | - | Corrections to test descriptions reference tables for Transmitter Characteristics test cases | 11.2.0 | 11.3.0 |
| 2013-12 | RAN#62 | R5-134832 | 1220 | - | Corrections to definition of 5+20 MHz for spectrum emission mask for CA in Annex F | 11.2.0 | 11.3.0 |
| 2013-12 | RAN#62 | R5-134857 | 1223 | - | Update TC 6.2.4 A-MPR for NS_19 | 11.2.0 | 11.3.0 |
| 2013-12 | RAN#62 | R5-134858 | 1224 | - | Update TC 6.6.3.3 Additional Spurious Emissions for NS_19 | 11.2.0 | 11.3.0 |
| 2013-12 | RAN#62 | R5-134859 | 1225 | - | Simplification of test points in Additional Spurious Emissions Coexistence test case | 11.2.0 | 11.3.0 |
| 2013-12 | RAN#62 | R5-134861 | 1227 | - | Addition of Sustained data rate test(FDD) for category 6 and 7 UEs | 11.2.0 | 11.3.0 |
| 2013-12 | RAN#62 | R5-134865 | 1228 | - | CA RF: Power alignment between uplink component carriers | 11.2.0 | 11.3.0 |
| 2013-12 | RAN#62 | R5-134866 | 1229 | - | Completion of test case 6.7A Transmit intermodulation for CA | 11.2.0 | 11.3.0 |
| 2013-12 | RAN#62 | R5-134867 | 1230 | - | Update Minimum Requirements of TCs 7.3 and 7.3.1A Reference sensitivity power level | 11.2.0 | 11.3.0 |
| 2013-12 | RAN#62 | R5-134868 | 1231 | - | Clean-up of CA Rx test cases | 11.2.0 | 11.3.0 |
| 2013-12 | RAN#62 | R5-134871 | 1232 | - | Update Minimum Requirements and TT of TC 8.2.1.3.1_A | 11.2.0 | 11.3.0 |
| 2013-12 | RAN#62 | R5-134875 | 1233 | - | Addition of Inter Band CA combo CA_3A-5A, CA_3A-20A | 11.2.0 | 11.3.0 |
| 2013-12 | RAN#62 | R5-134876 | 1234 | - | Addition of Inter Band CA combo CA_4A-7A | 11.2.0 | 11.3.0 |
| 2013-12 | RAN#62 | R5-134878 | 1235 | - | Correction and applicability clarification to multi-cluster allocations for UL CA TCs 6.2.3A, 6.2.4A, 6.6.2.1A, 6.6.2.2A, 6.6.2.3A and 6.6.3.3A | 11.2.0 | 11.3.0 |
| 2013-12 | RAN#62 | R5-134879 | 1236 | - | Clarification of CA Reference sensitivity level | 11.2.0 | 11.3.0 |
| 2013-12 | RAN#62 | R5-134880 | 1237 | - | Correction to blocking requirements and use of delta RIB | 11.2.0 | 11.3.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2013-12 | RAN#62 | R5-134881 | 1238 | - | Addition of new TC 7.4A.4 Maximum input level for CA (intra band non-contiguous DL CA without UL CA) | 11.2.0 | 11.3.0 |
| 2013-12 | RAN#62 | R5-134882 | 1239 | - | Addition of new TC 7.5A.4 Adjacent Channel Selectivity (ACS) for CA(intra band non-contiguous DL CA without UL CA) | 11.2.0 | 11.3.0 |
| 2013-12 | RAN#62 | R5-134889 | 1244 | - | Uncertainties and Test Tolerances for eICIC PDSCH demodulation tests | 11.2.0 | 11.3.0 |
| 2013-12 | RAN#62 | R5-134893 | 1247 | - | Addition of applicabilities of LTE Type A performance requirements | 11.2.0 | 11.3.0 |
| 2013-12 | RAN#62 | R5-134894 | 1248 | - | Test Procedure, uncerts and TT for Rx Test cases with intra-band contiguous UL CA | 11.2.0 | 11.3.0 |
| 2013-12 | RAN#62 | R5-134976 | 1251 | - | Update TT of TC 8.2.1.4.2_A.1 FDD PDSCH Closed Loop Multi Layer 4x2 for CA | 11.2.0 | 11.3.0 |
| 2013-12 | RAN#62 | R5-134977 | 1252 | - | Update of CA CSI tests | 11.2.0 | 11.3.0 |
| 2013-12 | RAN#62 | R5-134978 | 1253 | - | Update of eICIC Performance test cases | 11.2.0 | 11.3.0 |
| 2013-12 | RAN#62 | R5-134985 | 1254 | - | LTE Type A performance requirements - Changes to TC 9.3.5.1.1 | 11.2.0 | 11.3.0 |
| 2013-12 | RAN#62 | R5-134987 | 1255 | - | RF: Corrections to requirements for NS_15 (Band 26) | 11.2.0 | 11.3.0 |
| 2013-12 | RAN#62 | R5-134988 | 1256 | - | Corrections to Band 23 NS_11 and NS_20 Test Points | 11.2.0 | 11.3.0 |
| 2013-12 | RAN#62 | R5-134995 | 1259 | - | Update on MPR and A-MPR test requirements | 11.2.0 | 11.3.0 |
| 2013-12 | RAN#62 | R5-135012 | 1261 | - | Clarification in regard to 36.521-1 tests not included in 36.521-2 Applicability table | 11.2.0 | 11.3.0 |
| 2013-12 | RAN#62 | R5-135031 | 1222 | - | RF TC Update for 36.521-1_9.2.1.3_C1 eICIC | 11.2.0 | 11.3.0 |
| 2013-12 | RAN#62 | R5-135046 | 1226 | - | RF: Updates to the downlink reference measurement channels | 11.2.0 | 11.3.0 |
| 2013-12 | RAN#62 | R5-134277 | 1186 | - | Addition of Rel-12 CA band combinations(CA_3-19 and CA_19-21) to Chap. 5 | 11.3.0 | 12.0.0 |
| 2013-12 | RAN#62 | R5-134339 | 1188 | - | Updates to TC 6.2.2A.1 for CA_3C | 11.3.0 | 12.0.0 |
| 2013-12 | RAN#62 | R5-134540 | 1203 | - | Applicability statement of new 5MHz BB tests for Band 31 in TS 36.521-1 | 11.3.0 | 12.0.0 |
| 2013-12 | RAN#62 | R5-134808 | 1210 | - | Updates of 5.4.2A Channel bandwidth for CA_1A-18A | 11.3.0 | 12.0.0 |
| 2013-12 | RAN#62 | R5-134809 | 1211 | - | Updates of 5.2A Operating bands for CA_1A-26A | 11.3.0 | 12.0.0 |
| 2013-12 | RAN#62 | R5-134810 | 1212 | - | Updates of 5.4.2A Channel bandwidth for CA_1A-26A | 11.3.0 | 12.0.0 |
| 2013-12 | RAN#62 | R5-134811 | 1213 | - | Updates of 6.2.5A Delta TIB for CA_1A-26A | 11.3.0 | 12.0.0 |
| 2013-12 | RAN#62 | R5-134812 | 1214 | - | Updates of 7.3A Delta RIB for CA_1A-26A | 11.3.0 | 12.0.0 |
| 2013-12 | RAN#62 | R5-134833 | 1221 | - | Correction to Tx TCs for lower tolerance relaxation, removal of 6.2.5A.2 and addition of Rel-12 CA band combinations(CA_3-19 and CA_19-21) to 6.2.5 | 11.3.0 | 12.0.0 |
| 2013-12 | RAN#62 | R5-134884 | 1240 | - | Addition of Rel-12 CA band combination(CA_3-19 and CA_19-21) to Refsens | 11.3.0 | 12.0.0 |
| 2013-12 | RAN#62 | R5-134886 | 1241 | - | Updates for 5.2A operating bands and 5.4.2A channel bandwidth for CA_3C | 11.3.0 | 12.0.0 |
| 2013-12 | RAN#62 | R5-134887 | 1242 | - | Updates to TC 6.2.3A.1 for CA_3C | 11.3.0 | 12.0.0 |
| 2013-12 | RAN#62 | R5-134888 | 1243 | - | Updates to TC 6.6.2.1A.1 for CA_3C | 11.3.0 | 12.0.0 |
| 2013-12 | RAN#62 | R5-134891 | 1245 | - | Updates to FDD PDSCH Single Antenna and Transmit Diversity 2x2 performance test cases for 5MHz BW | 11.3.0 | 12.0.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2013-12 | RAN#62 | R5-134892 | 1246 | - | Updates to 8.2.1.3.1 for FDD PDSCH Open Loop Spatial Multiplexing 2x2 for 5MHz BW | 11.3.0 | 12.0.0 |
| 2013-12 | RAN#62 | R5-134896 | 1249 | - | Updates to TC 9.2.1.1 FDD CQI reporting under AWGN conditions - PUCCH 1-0 test case for 5MHz BW | 11.3.0 | 12.0.0 |
| 2013-12 | RAN#62 | R5-134897 | 1250 | - | Updates to TC 9.3.2.1.1 and 9.3.2.1.1_1 FDD CQI Reporting under fading conditions - PUCCH 1-0 test case for 5MHz BW | 11.3.0 | 12.0.0 |
| 2013-12 | RAN#62 | R5-134989 | 1257 | - | Corrections to definition of 5+20 MHz for spectrum emission mask for CA | 11.3.0 | 12.0.0 |
| 2013-12 | RAN#62 | R5-134992 | 1258 | - | Updates to 8.5.1.2 FDD PHICH Transmit Diversity Performance tests | 11.3.0 | 12.0.0 |
| 2013-12 | RAN#62 | R5-135068 | 1262 | - | Updates to 8.2.1.4 FDD PDSCH Closed Loop Single/Multiple layer Spatial Multiplexing 2x2 for 5MHz BW | 11.3.0 | 12.0.0 |
| 2014-03 | RAN#63 | R5-140228 | 1264 | - | Uncertainties for eICIC 9.x CSI Test Cases | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-140245 | 1265 | - | eDL-MIMO RF: Corrections to 8x2 MIMO tests | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-140247 | 1266 | - | CA RF: Corrections to sustained data rate tests | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-140248 | 1267 | - | RF: Corrections to OCNG pattern for PMI tests | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-140249 | 1268 | - | RF: Corrections to cross references between tests | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-140250 | 1269 | - | feICIC RF: Corrections to some subclause-titles | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-140261 | 1270 | - | CoMP RF: Introduction of CoMP section in Annex I | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-140388 | 1272 | - | LTE Type A performance requirements - Introduction of the new test case 9.3.5.1.2 | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-140444 | 1273 | - | Updates of 6.2.5 Delta TIB for CA_1A-26A | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-140446 | 1274 | - | Updates of 7.3 Delta RIB for CA_1A-26A | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-140448 | 1275 | - | Updates of 6.6.3.2 Spurious emission band UE co-existence for B41 | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-140499 | 1276 | - | Update of eICIC Performance tests | 12.0.0 | 12.1.0 |

| 2014-03 | RAN#63 | R5-140837 | 1312 | - | Additions to TC 8.4.2.2.3_E.2 TDD PCFICH/PDCCH Transmit Diversity 2x2 for feICIC (MBSFN ABS) | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-140838 | 1313 | - | Additions to TC 9.2.1.5_E.1 FDD CQI Reporting under AWGN conditions - PUCCH 1-0 for feICIC (non-MBSFN ABS) | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-140839 | 1314 | - | Additions to TC 9.2.1.6_E.1 TDD CQI Reporting under AWGN conditions - PUCCH 1-0 for feICIC (non-MBSFN ABS) | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-140840 | 1315 | - | Additions to TC 9.3.1.3.1_E.1 FDD CQI Reporting under fading conditions - PUSCH 3-0 for feICIC (non-MBSFN ABS) | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-140841 | 1316 | - | Additions to TC 9.3.1.3.2_E.1 TDD CQI Reporting under fading conditions - PUSCH 3-0 for feICIC (non-MBSFN ABS) | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-140842 | 1317 | - | Additions to TC 9.5.4.1_E FDD RI Reporting - PUCCH 1-0 for feICIC (non-MBSFN ABS) | 12.0.0 | 12.1.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2014-03 | RAN#63 | R5-140843 | 1318 | - | Additions to TC 9.5.4.2_E TDD RI Reporting - PUCCH 1-0 for feICIC (non-MBSFN ABS) | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-140844 | 1319 | - | Introduction of feICIC to Annex G | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-140845 | 1361 | - | Addition of PHICH demod requirements for fEICIC | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-140846 | 1320 | - | Addition to TC 8.2.2.3.3_E.1 TDD PDSCH Open Loop Spatial Multiplexing 2x2 for feICIC (non-MBSFN ABS) | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-140847 | 1321 | - | Corrections to test configuration notes of CA soft buffer | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-140856 | 1322 | - | Additions to TC 8.2.1.2.3_E.1 FDD PDSCH Transmit diversity 2x2 for feICIC (non-MBFSN ABS) | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-140868 | 1323 | - | Uncertainties and Test Tolerances for Interf_Rej Test case 8.2.1.2.4 | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-140877 | 1324 | - | Introduction of TC 9.5.5.1_F.1 FDD RI Reporting with Single CSI process | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-140878 | 1325 | - | Introduction of TC 9.5.5.2_F.1 TDD RI Reporting with Single CSI process | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-140881 | 1326 | - | Addition to TC 8.2.1.3.3_E.1 FDD FDD PDSCH Open Loop Spatial Multiplexing 2x2 for feICIC (non-MBSFN ABS) | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-140887 | 1327 | - | Correction to eICIC CQI Reporting tests | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-140888 | 1328 | - | eICIC RF: Corrections to requirements, procedure and UL-RMCs for CQI tests | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-140889 | 1329 | - | Addition of TC 8.7.3.1 FDD sustained data rate performance for EPDCCH scheduling | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-140890 | 1330 | - | Addition of TC 8.8.1.1.1 FDD distributed EPDCCH performance | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-140891 | 1331 | - | Addition of TC 8.7.4.1 TDD sustained data rate performance for EPDCCH scheduling | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-140892 | 1332 | - | Addition of TC 8.8.1.2.1 TDD distributed EPDCCH performance | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-140893 | 1333 | - | Addition of TC 8.8.2.1.1 FDD localized EPDCCH performance | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-140894 | 1334 | - | Addition of TC 8.8.2.1.2 FDD EPDCCH localized transmission with TM10 quasi co-location Type-B | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-140895 | 1335 | - | Addition of TC 8.8.2.2.1 TDD localized EPDCCH performance | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-140896 | 1336 | - | Addition of TC 8.8.2.2.2 TDD EPDCCH localized transmission with TM10 quasi co-location Type-B | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-140922 | 1337 | - | Modify Applicability for LTE B14 public safety high power UE test cases | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-141003 | 1338 | - | Addition of FDD CQI Reporting under AWGN conditions - Single CSI Process TC 9.2.4.1 | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-141004 | 1339 | - | Addition of TDD CQI Reporting under AWGN conditions - Single CSI Process TC 9.2.4.2 | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-141006 | 1340 | - | Addition of TC 8.2.1.7 FDD Carrier Aggregation with power imbalance | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-141007 | 1341 | - | Updates to TC 7.4A.2 for CA_3C | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-141008 | 1342 | - | Addition of TC 9.3.6.1_F FDD CQI Reporting under fading conditions multiple CSI processes for CoMP | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-141009 | 1343 | - | Addition of TC 9.3.6.2_F TDD CQI Reporting under fading conditions multiple CSI processes for CoMP | 12.0.0 | 12.1.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2014-03 | RAN#63 | R5-141011 | 1345 | - | Corrections to definition of 20 MHz and 5MHz for minimum output power for CA in 6.3.2A | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-141012 | 1346 | - | Addition of Intra NC CA to chap. 5 and related symbol to chap. 3 | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-141016 | 1347 | - | Correction and proposed resolution to TBDs UL CA TCs 6.2.4A and 6.6.3.3A | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-141017 | 1348 | - | Update for CA Rx TCs | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-141018 | 1349 | - | PCC/SCC switching in inter-band CA Rx test cases | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-141026 | 1350 | - | Introduction of new TC 8.3.1.3.2_F FDD PDSCH Performance with DCI format 2D, non Quasi Co-located Antenna Ports, Same Cell ID and multiple NZP CSI-RS resources for CoMP | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-141027 | 1351 | - | Introduction of TC 8.3.1.3.3_F FDD PDSCH Performance with DCI format 2D, non Quasi Co-located Antenna Ports, Different Cell ID, Colliding CRS and single NZP CSI-RS for CoMP | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-141028 | 1352 | - | Addition of new demod scenario for DL COMP - Same Cell ID and single NZP CSI-RS resource | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-141029 | 1353 | - | Corrections to TM9 test to verify correct SNR estimation | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-141038 | 1354 | - | Correction to sustained downlink data rate tests | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-141040 | 1355 | - | Changes to test frequencies in Tx test cases for Band 28 | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-141041 | 1356 | - | Updates of Reference sensitivity for Intra-band non-contiguous CA | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-141042 | 1357 | - | Update TC of 7.4A.4 Maximum input level for CA (intra band non-contiguous DL CA without UL CA) | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-141043 | 1358 | - | Update TC of 7.5A.4 Adjacent Channel Selectivity (ACS) for CA (intra band non-contiguous DL CA without UL CA) | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-141044 | 1359 | - | Corrections to maximum output power for multiple transmissions in a subframe | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-141045 | 1360 | - | Correction to test configuration of Maximum input for CA | 12.0.0 | 12.1.0 |
| 2014-03 | RAN#63 | R5-141047 | 1271 | - | eICIC RF: Corrections to TDD PHICH test | 12.0.0 | 12.1.0 |
| 2014-06 | RAN#64 | R5-142069 | 1362 | - | LTE Type A performance requirements - adding TC 8.2.1.4.3 into annex F and G | 12.1.0 | 12.2.0 |
| 2014-06 | RAN#64 | R5-142071 | 1363 | - | Addition of connection diagram references to LTE Type A performance tests | 12.1.0 | 12.2.0 |
| 2014-06 | RAN#64 | R5-142072 | 1364 | - | Addition of connection diagram references to LTE Type A CSI tests | 12.1.0 | 12.2.0 |
| 2014-06 | RAN#64 | R5-142111 | 1365 | - | Addition of CA 3A-28A to 36.521-1 Chapter 6 | 12.1.0 | 12.2.0 |
| 2014-06 | RAN#64 | R5-142112 | 1366 | - | Addition of CA 3A-28A to 36.521-1 Chapter 7 | 12.1.0 | 12.2.0 |
| 2014-06 | RAN#64 | R5-142172 | 1367 | - | Addition of TC 6.2.2A.1 for CA_39C | 12.1.0 | 12.2.0 |
| 2014-06 | RAN#64 | R5-142176 | 1368 | - | Corrections to configured transmitted power for CA | 12.1.0 | 12.2.0 |
| 2014-06 | RAN#64 | R5-142177 | 1369 | - | Corrections to OCNG pattern | 12.1.0 | 12.2.0 |
| 2014-06 | RAN#64 | R5-142295 | 1370 | - | Updates of 6.2.5 Delta TIB for CA_3A-26A and CA_3A-27A | 12.1.0 | 12.2.0 |
| 2014-06 | RAN#64 | R5-142296 | 1371 | - | Updates of 7.3.3 Delta RIB for CA_3A-26A and CA_3A-27A | 12.1.0 | 12.2.0 |
| 2014-06 | RAN#64 | R5-142307 | 1372 | - | RF: Corrections to spurious emission requirements with NS different than NS_01 | 12.1.0 | 12.2.0 |
| 2014-06 | RAN#64 | R5-142309 | 1373 | - | RF: Editorial corrections to the annexes | 12.1.0 | 12.2.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2014-06 | RAN#64 | R5-142312 | 1374 | - | CA RF: Several corrections to some Tx tests | 12.1.0 | 12.2.0 |
| 2014-06 | RAN#64 | R5-142317 | 1375 | - | eICIC RF: Corrections to RI performance tests | 12.1.0 | 12.2.0 |
| 2014-06 | RAN#64 | R5-142343 | 1376 | - | Addition of LTE CA_39A-41A into Table 6.2.5.3-2 | 12.1.0 | 12.2.0 |
| 2014-06 | RAN#64 | R5-142366 | 1377 | - | Update of TC 8.7.4.1 TDD sustained data rate performance for EPDCCH scheduling | 12.1.0 | 12.2.0 |
| 2014-06 | RAN#64 | R5-142372 | 1378 | - | Update of TC 8.8.2.1.2 FDD EPDCCH localized transmission with TM10 quasi co-location Type-B | 12.1.0 | 12.2.0 |
| 2014-06 | RAN#64 | R5-142376 | 1379 | - | Update of TC 8.8.2.2.2 TDD EPDCCH localized transmission with TM10 quasi co-location Type-B | 12.1.0 | 12.2.0 |
| 2014-06 | RAN#64 | R5-142384 | 1380 | - | Update of TC 9.3.6.1_F FDD CQI Reporting under fading conditions multiple CSI processes for CoMP | 12.1.0 | 12.2.0 |
| 2014-06 | RAN#64 | R5-142387 | 1381 | - | Update overview of DL reference measurement channels for EPDCCH | 12.1.0 | 12.2.0 |
| 2014-06 | RAN#64 | R5-142391 | 1382 | - | Uncertainties and Test Tolerances for Enhanced Performance Requirement Type A 9.3.5.1.1 and 9.3.5.1.2 CQI Test cases | 12.1.0 | 12.2.0 |
| 2014-06 | RAN#64 | R5-142393 | 1383 | - | Test Tolerances for eICIC 9.2.x CQI Test cases | 12.1.0 | 12.2.0 |
| 2014-06 | RAN#64 | R5-142394 | 1384 | - | Correction of the test cases 8.2.1.2.2 and 8.2.1.2.2_1 | 12.1.0 | 12.2.0 |
| 2014-06 | RAN#64 | R5-142420 | 1386 | - | Corrections to Annex G.5.4 | 12.1.0 | 12.2.0 |
| 2014-06 | RAN#64 | R5-142444 | 1387 | - | Introduction of transmission mode 10 in precoder update granularity in FDD and TDD common test parameters | 12.1.0 | 12.2.0 |
| 2014-06 | RAN#64 | R5-142446 | 1388 | - | Introduction of new TC 8.3.2.4.2_F TDD PDSCH Performance with DCI format 2D, non Quasi Co-located Antenna Ports, Same Cell ID and multiple NZP CSI-RS resources for CoMP | 12.1.0 | 12.2.0 |
| 2014-06 | RAN#64 | R5-142449 | 1389 | - | Introduction of TC 8.3.2.4.3_F TDD PDSCH Performance with DCI format 2D, non Quasi Co-located Antenna Ports, Different Cell ID, Colliding CRS and single NZP CSI-RS for CoMP | 12.1.0 | 12.2.0 |
| 2014-06 | RAN#64 | R5-142515 | 1390 | - | Corrections to MBMS performance test cases | 12.1.0 | 12.2.0 |
| 2014-06 | RAN#64 | R5-142576 | 1391 | - | Update UE Transmit OFF power for CA _39C (intra-band contiguous DL CA and UL CA) | 12.1.0 | 12.2.0 |
| 2014-06 | RAN#64 | R5-142588 | 1392 | - | Remove the square bracket in TC 8.3.1.3.2_F and TC 8.3.1.3.3_F | 12.1.0 | 12.2.0 |
| 2014-06 | RAN#64 | R5-142590 | 1393 | - | Uncertainties and Test Tolerances for eICIC PDCCH/PCFICH and PHICH demodulation tests | 12.1.0 | 12.2.0 |
| 2014-06 | RAN#64 | R5-142596 | 1394 | - | Addition of message exception for PHICH duration | 12.1.0 | 12.2.0 |
| 2014-06 | RAN#64 | R5-142597 | 1515 | - | Correction to eICIC CSI tests | 12.1.0 | 12.2.0 |
| 2014-06 | RAN#64 | R5-142601 | 1395 | - | Correction to title in feICIC PDSCH demodulation tests | 12.1.0 | 12.2.0 |
| 2014-06 | RAN#64 | R5-142605 | 1396 | - | Correction to measurement bandwidth in 6.6.2.1A.1 | 12.1.0 | 12.2.0 |
| 2014-06 | RAN#64 | R5-142616 | 1399 | - | Correction to MBMS performance | 12.1.0 | 12.2.0 |

| 2014-09 | RAN#65 | R5-144925 | 1628 | - | New TC: TDD sustained data rate performance for CA (inter-band DL CA) | 12.2.0 | 12.3.0 |
| 2014-09 | RAN#65 | R5-144926 | 1629 | - | Update Out-of-band blocking for CA (intra-band contiguous DL CA without UL CA) | 12.2.0 | 12.3.0 |
| 2014-09 | RAN#65 | R5-144928 | 1630 | - | Message contents updates for Demod feICIC test cases | 12.2.0 | 12.3.0 |
| 2014-09 | RAN#65 | R5-144930 | 1631 | - | Addition of new TC 8.2.2.3.1A_A.3 TDD Soft buffer management test for intra-band NC DL CA | 12.2.0 | 12.3.0 |
| 2014-09 | RAN#65 | R5-144931 | 1632 | - | Addition of new TC 8.2.1.4.2_A.3 FDD PDSCH Closed Loop Multi Layer Spatial Multiplexing 4x2 for CA (intra band NC DL CA) | 12.2.0 | 12.3.0 |
| 2014-09 | RAN#65 | R5-144932 | 1633 | - | Updates to TCs 8.2.1.3.1_A.1/A.2 for FDD PDSCH Open Loop Spatial Multiplexing 2x2 for CA | 12.2.0 | 12.3.0 |
| 2014-09 | RAN#65 | R5-144933 | 1634 | - | Updates to 8.7.1.1_A FDD SDR for CA related test cases | 12.2.0 | 12.3.0 |
| 2014-09 | RAN#65 | R5-144934 | 1635 | - | Addition of new TC 8.2.2.3.1A_A.2 TDD Soft buffer management test for inter-band DL CA | 12.2.0 | 12.3.0 |
| 2014-09 | RAN#65 | R5-144936 | 1636 | - | Updates of Annex F.1.4 and F.3.4 for newly added performance test cases | 12.2.0 | 12.3.0 |
| 2014-09 | RAN#65 | R5-144938 | 1637 | - | Updates to TC 8.2.2.1 TDD PDSCH Single Antenna Port Performance (Cell-Specific Reference Symbols) related test cases | 12.2.0 | 12.3.0 |
| 2014-09 | RAN#65 | R5-144939 | 1638 | - | Updates to 8.2.2.2 TDD PDSCH Transmit Diversity Performance (Cell-Specific Reference Symbols) | 12.2.0 | 12.3.0 |
| 2014-09 | RAN#65 | R5-144942 | 1640 | - | Updates to TC 9.6.1.1_A.2 FDD CQI Reporting under AWGN conditions – PUCCH 1-0 for CA (inter band DL CA) | 12.2.0 | 12.3.0 |
| 2014-12 | RAN#66 | R5-145014 | 1641 | - | Corrections to CA Blocking TCs minimum requirements | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145015 | 1642 | - | Correction to CA Spurious Response TC minimum requirements | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145125 | 1645 | - | RF: Review of definition of CSI measurement channels with dynamic coding rate | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145128 | 1646 | - | RF: Review of references to CSI measurement channels with dynamic coding rate | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145175 | 1647 | - | New CA band combination CA_1A-3A - Updates of 5.2A Operating bands | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145176 | 1648 | - | New CA band combination CA_1A-3A - Updates of 5.4.2A Channel Bandwidth | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145177 | 1649 | - | New CA band combination CA_1A-3A - Updates of 6.2.5 Delta TIB | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145178 | 1650 | - | New CA band combination CA_1A-3A - Updates of 7.3.3 Delta RIB | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145189 | 1651 | - | eICIC-RF: Corrections to PDCCH performance tests | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145196 | 1652 | - | RF: Corrections to RMC-s tables | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145210 | 1653 | - | CA-RF: Correction to OBW requirement | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145222 | 1654 | - | Introduction of UE maximum output power for CA_42C | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145223 | 1655 | - | Introduction of Spurious emission band UE co-existence for CA_42C | 12.3.0 | 12.4.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2014-12 | RAN#66 | R5-145229 | 1656 | - | Update the minimum requirement and test requirements of TC 8.8.3 localized transmission with TM10 | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145232 | 1657 | - | Existing CA band combination CA_4A-27A and new CA band combination CA_41A-42A update to 36.521-1 section 5.4.2A.1 | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145234 | 1658 | - | New CA band combination CA_41A-42A update to 36.521-1 section 5.2A | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145235 | 1659 | - | New CA band combination CA_41A-42A update to 36.521-1 section 6.2.5 | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145236 | 1660 | - | New CA band combination CA_41A-42A update to 36.521-1 section 7.3.3 | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145291 | 1661 | - | CQI reporting in AWGN and in fading: CQI indices in set | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145311 | 1662 | - | Clarification for CA ACS and Wideband Intermodulation testcases | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145374 | 1663 | - | New CA band combination CA_18A-28A - Updates of 5.2A Operating bands | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145375 | 1664 | - | New CA band combination CA_18A-28A - Updates of 5.4.2A Channel bandwidth | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145376 | 1665 | - | New CA band combination CA_18A-28A - Updates of 6.2.5.3 Delta TIB | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145377 | 1666 | - | New CA band combination CA_18A-28A - Updates of 7.3A Delta RIB | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145407 | 1667 | - | Alignment with 36.521-2 on UE categories for COMP | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145425 | 1668 | - | Removal of Non-contiguous Allocation within a Component Carrier Testpoints from UL CA MPR, Spectrum Emissions and ACLR Tests | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145431 | 1669 | - | Correction on parameters for high speed train scenario | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145436 | 1670 | - | Update TC 9.3.6 CQI Reporting under fading conditions Multiple CSI processes for CoMP | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145437 | 1671 | - | New CA band combination 1+11 and 8+11 û Introduction of 1+11 and 8+11 to 36.521-1 chapter 5 | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145438 | 1672 | - | New CA band combination 1+11 and 8+11 û Introduction of 1+11 and 8+11 to 36.521-1 chapter 6 | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145439 | 1673 | - | New CA band combination 1+11 and 8+11 û Introduction of 1+11 and 8+11 to 36.521-1 chapter 7 | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145465 | 1674 | - | Correction to TC 8.2.1.1.1_A.1 FDD PDSCH Single Antenna Port Performance for CA | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145479 | 1675 | - | Corrections to throughput calculation for feICIC demodulation minimum requirements | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145480 | 1676 | - | Test Tolerances for TC 8.5.1.2.3_E.1 FDD PHICH Transmit Diversity 2x2 for feICIC (non-MBSFN ABS) | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145481 | 1677 | - | Test Tolerances for TC 8.5.2.2.3_E.1 TDD PHICH Transmit Diversity 2x2 for feICIC (non-MBSFN ABS) | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145486 | 1678 | - | Uncertainties and Test Tolerances to Annex F for PHICH feICIC | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145487 | 1679 | - | Corrections to Annex G for minimum test time for demodulation for feICIC | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145505 | 1680 | - | Updates to TDD SDR CA test cases | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145532 | 1681 | - | Addition of missing bandwidth combination sets for inter-band CA | 12.3.0 | 12.4.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2014-12 | RAN#66 | R5-145536 | 1682 | - | Additions to CoMP Demod test cases 8.3.1.3.1_F and 8.3.2.4.1_F | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145539 | 1683 | - | Addition of Band 30 in Max output power test cases | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145540 | 1684 | - | Addition of Band 30 in Max power reduction test cases | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145543 | 1685 | - | Addition of Band 30 in Spurious emission UE co-existence test cases | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145559 | 1686 | - | Correction to 6.3.5A.1.1 | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145638 | 1687 | - | Correction to HPUE Applicability statements in TS 36.521-1 | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145800 | 1688 | - | RF: Modification of test description to refer to State 2A-RF | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145803 | 1689 | - | Removal of Non-contiguous Allocation within a Component Carrier Testpoints from UL CA A-MPR and Additional Spectrum/Spurious Emissions Tests | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145804 | 1690 | - | Addition of RF requirements in later releases | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145805 | 1691 | - | eDL-MIMO RF: Correction to TC 8.3.1.1.1_D | 12.3.0 | 12.4.0 |

| 2014-12 | RAN#66 | R5-145933 | 1740 | - | Existing CA band combination CA_39C: update annex tables for 20+15MHz | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145934 | 1741 | - | Reconstruction of FDD SDR test cases based on Release independent rule | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145935 | 1742 | - | RF: Cleanup of sustained data rate test cases | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145936 | 1743 | - | Applicability of Demodulation requirements for CA capability | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145975 | 1643 | - | CA-RF: Review of test frequencies clause 8 | 12.3.0 | 12.4.0 |
| 2014-12 | RAN#66 | R5-145976 | 1644 | - | CA-RF: Review of test frequencies clause 9 | 12.3.0 | 12.4.0 |
| 2015-03 | RAN#67 | R5-150112 | 1744 | - | Addition of CA_2-30 to Clause 5.2A of TS 36.521-1. | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150135 | 1745 | - | Addition of CA_5-30 to Clause 5.2A of TS 36.521-1. | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150136 | 1746 | - | Addition of CA_5A-30A to Clause 5.4.2A of TS 36.521-1. | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150169 | 1747 | - | Addition of CA_4A-5A-30A to Clause 5.4.2A of TS 36.521-1. | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150181 | 1748 | - | Addition of new TC 9.3.6.1_F.2 FDD CQI Reporting under fading conditions with Three CSI processes for CoMP | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150184 | 1749 | - | Addition of new TC 9.3.6.2_F.2 TDD CQI Reporting under fading conditions with Three CSI processes for CoMP | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150186 | 1840 | - | Addition of TT for new TCs 9.3.6.1_F.1, 9.3.6.1_F.2, 9.3.6.1_F.3, 9.3.6.2_F.1, 9.3.6.2_F.2 and 9.3.6.2_F.3 | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150209 | 1750 | - | Corrections to 1 PRB allocation performance in presence of MBSF | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150210 | 1751 | - | Corrections to the Common Test Parameters for User-specific Reference Symbols | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150214 | 1752 | - | Test Tolerances for 8.3.1.2.1_D_1 FDD PDSCH Dual-layer Spatial Multiplexing for eDL-MIMO Rel-11 | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150215 | 1753 | - | Test Tolerances for 8.3.2.2.1_D_1 TDD PDSCH Dual-layer Spatial Multiplexing for eDL-MIMO Rel-11 | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150216 | 1754 | - | Uncertainties and Test Tolerances to Annex F for PDSCH for eDL-MIMO Rel-11 | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150234 | 1755 | - | CA RF: Corrections to power imbalance test | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150252 | 1756 | - | Update of non-contiguous CA Rx Test Cases | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150364 | 1757 | - | ePDCCH RF: Corrections to sustained data rate test | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150373 | 1758 | - | Introduction of new CA band combinations 5+25 and 12+25 for Transmitter Characteristics | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150409 | 1759 | - | Correction in cl.3 of 36.521-1 | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150415 | 1760 | - | Correction to message exceptions for eICIC performance test cases | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150416 | 1761 | - | Clean up on Performance and CSI test cases for eICIC and feICIC | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150417 | 1762 | - | Correction to test procedure in CQI Reporting under AWGN for feICIC | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150420 | 1763 | - | Correction to minimum test time for feICIC performance tests in G.3A.5 | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150437 | 1764 | - | New CA band combination CA_1A-28A - Updates of 5.2A Operating bands | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150438 | 1765 | - | New CA band combination CA_1A-28A - Updates of 5.4.2A Channel bandwidth | 12.4.0 | 12.5.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2015-03 | RAN#67 | R5-150440 | 1766 | - | New CA band combination CA_1A-28A - Updates of 6.2.5.3 Delta TIB | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150441 | 1767 | - | New CA band combination CA_1A-28A - Updates of 7.3.3 Delta RIB | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150452 | 1768 | - | New CA band combination CA_1A-18A-28A - Updates of 5.4.2A Channel bandwidth | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150453 | 1769 | - | New CA band combinations (CA_1A-41A, CA_1A-41C) - Updates of 5.2A Operating bands | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150455 | 1770 | - | New CA band combinations (CA_26A-41A, CA_26A-41C) - Updates of 5.2A Operating bands | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150456 | 1771 | - | New CA band combination CA_1A-18A-28A - Updates of 5.2A Operating bands | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150460 | 1772 | - | Correction to the description of duplex mode related to CA_18A-28A | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150461 | 1773 | - | Correction to the test frequencies and test CC combinations for CA_18A-28A | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150472 | 1774 | - | Correction to requirements for test case 7.6.2A.1 and 7.6.2A.2 | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150476 | 1775 | - | Removal of Note 1 in requirements of TC 6.2.2A | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150478 | 1776 | - | Addition of &#916:RIB,c to requirements of blocking and spurious response test cases | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150479 | 1777 | - | Correction to PUSCH configuration details for 36.521-1 4x2 CA test cases | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150505 | 1778 | - | Added TT in annex for TDD inter band CA performance tests | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150506 | 1779 | - | Updated TT in TDD inter band CA performance tests | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150522 | 1780 | - | Addition of CA_1A-20A to TS 36.521-1 | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150543 | 1781 | - | Addition of 2A-12A and 5A-13A 2DL Interband CA to 36.521-1 | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150606 | 1782 | - | Clarification on bandwidth to be tested | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150800 | 1783 | - | Correction to 6.6.3.2 of Tx Spurious | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150801 | 1784 | - | Correction in 6.2.5A and 6.5.1A of 36.521-1 | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150802 | 1785 | - | Fixing numbering in Table 6.6.2.3A.1.4.1-1 | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150803 | 1786 | - | Change of test points for A-MPR in band 26 | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150809 | 1787 | - | Addition of BCS1 to 25A-25A CA | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150810 | 1788 | - | Introduction of CA_1A-7A to TS 36.521-1 | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150811 | 1789 | - | Correction to test points for intra-band contiguous receiver test cases | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150816 | 1790 | - | Addition of CA_2A-30A to Clause 7.3.3 of TS 36.521-1. | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150817 | 1791 | - | Addition of CA_2A-30A to Clause 6.2.5 of TS 36.521-1. | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150818 | 1792 | - | Addition of CA_2A-30A to Clause 5.4.2A of TS 36.521-1. | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150819 | 1793 | - | Addition of CA_4A-30A to Clause 7.3.3 of TS 36.521-1. | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150820 | 1794 | - | Addition of CA_4A-30A to Clause 6.2.5 of TS 36.521-1. | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150821 | 1795 | - | Addition of CA_4-30 to Clause 5.2A of TS 36.521-1. | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150822 | 1796 | - | Addition of CA_4A-30A to Clause 5.4.2A of TS 36.521-1. | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150823 | 1797 | - | Addition of CA_5A-30A to Clause 7.3.3 of TS 36.521-1. | 12.4.0 | 12.5.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2015-03 | RAN#67 | R5-150824 | 1798 | - | Addition of CA_5A-30A to Clause 6.2.5 of TS 36.521-1. | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150825 | 1799 | - | Addition of CA_4-5-30 to Clause 5.2A of TS 36.521-1. | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150826 | 1800 | - | Addition of new TC FDD PDSCH Single Antenna Port Performance for CA (3DL CA) | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150827 | 1801 | - | Addition of CA_2A-2A-13A to TS 36.521-1 | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150828 | 1802 | - | Addition of 40D,41D,41C-41A and 25A-25A BCS1 to Channel BW for CA tables | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150829 | 1803 | - | Addition of multiple interband 3DL CA Combinations to Channel BW for CA tables | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150848 | 1804 | - | Addition of new TC 9.3.6.1_F.1 FDD CQI Reporting under fading conditions with Single CSI process for CoMP | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150849 | 1805 | - | Addition of new TC 9.3.6.1_F.3 FDD CQI Reporting under fading conditions with Four CSI processes for CoMP | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150850 | 1806 | - | Addition of new TC 9.3.6.2_F.1 TDD CQI Reporting under fading conditions with Single CSI process for CoMP | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150851 | 1807 | - | Addition of new TC 9.3.6.2_F.3 TDD CQI Reporting under fading conditions with Four CSI processes for CoMP | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150860 | 1808 | - | Introduction of new CA band combinations 5+25 and 12+25 for Receiver Characteristics | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150861 | 1809 | - | Addition of CA_1A-7A-20A to TS 36.521-1 | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150862 | 1810 | - | Update of minimum requirements for TC 6.2.5 Configured UE transmitted Output Power | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150863 | 1811 | - | Updates of minimum requirement to reference sensitivity for CA | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150865 | 1812 | - | Addition of new TC TDD PDSCH Single Antenna Port Performance for CA (3DL CA) | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150866 | 1813 | - | Addition of new TC FDD Sustained data rate performance for CA (3DL CA) | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150867 | 1814 | - | Addition of new TC TDD Sustained data rate performance for CA (3DL CA) | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150869 | 1839 | - | Addition of Cell IDs for 3DL CA Rx tests | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150870 | 1815 | - | New CA band combinations (CA_1A-41A, CA_1A-41C) - Updates of 5.4.2A Channel bandwidth | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150871 | 1816 | - | New CA band combinations (CA_26A-41A, CA_26A-41C) - Updates of 5.4.2A Channel bandwidth | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150935 | 1817 | - | Change in UE co-existence 6.6.3.2 harmonic emissions exceptions | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150874 | 1818 | - | CA RF: Updates to in-band emissions requirements | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150875 | 1819 | - | Correction to test procedure of TC 7.6.1A.4 | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150880 | 1820 | - | Update of CA sustained data rate tests | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150881 | 1821 | - | Aligning Bandwidth Combination Sets with latest core specification | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150892 | 1822 | - | Update to TC 7.5A.4 Adjacent Channel Selectivity (ACS) for CA (intra-band non-contiguous DL CA without UL CA) | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150897 | 1823 | - | New CA band combination CA_1A-28A - Updates of 7.3A Refsens | 12.4.0 | 12.5.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2015-03 | RAN#67 | R5-150928 | 1824 | - | Updates to Spurious emission band UE co-existence test case 6.6.3.2 | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150906 | 1825 | - | Updates to FDD and TDD RI Reporting test cases for CoMP | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150929 | 1827 | - | Addition of CA capability in Rx tests | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150913 | 1828 | - | Addition of Multi-Cluster PUSCH with One Uplink Carrier test cases to 36.521-1 | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150915 | 1829 | - | Addition of CA capability and applicability changes to Section 8 36.521-1 FDD TM3 CA test cases | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150916 | 1830 | - | Changes to Annex F of 36.521-1 related to CA capability and applicability changes to FDD CA test cases | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150917 | 1831 | - | Correction to CA applicability and test rules | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150918 | 1832 | - | Addition of CA capability and applicability changes to 36.521-1 FDD TM1 CA test cases | 12.4.0 | 12.5.0 |
| 2015-03 | RAN#67 | R5-150919 | 1833 | - | Update to LTE CA Sustained Data rate test cases | 12.4.0 | 12.5.0 |

| 2015-12 | RAN#70 | R5-156016 | 2242 | 1 | Introduction of FDD PDSCH Closed Loop Multi-Layer Spatial Multiplexing 4x2 for Dual Connectivity | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156017 | 2243 | 1 | Introduction of TDD PDSCH Closed Loop Multi-Layer Spatial Multiplexing 4x2 for Dual Connectivity | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156018 | 2244 | 1 | Introduction of FDD sustained data rate performance for Dual Connectivity | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156019 | 2245 | 1 | Introduction of TDD sustained data rate performance for Dual Connectivity | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156020 | 2207 | 1 | Update of RB configurations for TC 7.3A.5 | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156021 | 2222 | 1 | Addition of soft-buffer test cases for FDD-TDD 2DL CA (8.2.3.2.1A, 8.2.3.2.2A) | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156022 | 2234 | 1 | Delta RIB,c updates for 3DL CA supporting UE | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156023 | 2237 | 1 | Addition of new test cases for TDD FDD CA PDSCH Closed Loop 4x2 for FDD PCell (2DL and 3DL) | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156024 | 2239 | 1 | Correction to test point selection table for TDD-FDD CA cases | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156025 | 2251 | 1 | Correction to 7.3A.5 | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156026 | 2252 | 1 | Update CA perf test cases in clause 8 | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156027 | 2271 | 1 | CA RF: Update to 3DL Refsense test configurations | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156028 | 2281 | 1 | Improvements to 3DL OOB Testcase (7.6.2A.5) | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156029 | 2295 | 1 | Updates to 8.7.5 about TDD-FDD CA SDR performance test | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156030 | 2337 | 1 | 36.521-1: CA_1A-3A-20A & CA_1A-7A-20A updates | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156031 | 2346 | 1 | Addition of 2x2 FDD-TDD CA test cases with TDD PCELL | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156035 | 2170 | 1 | New TC: 8.9.1.1.2 FDD Closed-loop spatial multiplexing performance (Cell-Specific Reference Symbols) for UE category 0 | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156036 | 2171 | 1 | New TC: 8.9.1.2.2 TDD Closed-loop spatial multiplexing performance (Cell-Specific Reference Symbols) for UE category 0 | 12.7.0 | 12.8.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2015-12 | RAN#70 | R5-156037 | 2173 | 1 | Add new LC MTC test case 8.9.1.1.3 FDD PDSCH Single-layer Spatial Multiplexing on antenna ports 7 or 8 for UE category 0 | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156038 | 2174 | 1 | Add new LC MTC test case 8.9.1.2.1 TDD PDSCH Transmit Diversity for UE category 0 | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156039 | 2175 | 1 | Add new LC MTC test case 8.9.1.2.3 TDD PDSCH Single-layer Spatial Multiplexing on antenna ports 7 or 8 for UE category 0 | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156040 | 2189 | 1 | Addition of Minimum test time for Demodulation performance for UE category 0 in Annex G | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156041 | 2191 | 1 | Introduction of new test case 8.9.2.2.1 MTC | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156042 | 2240 | 1 | Update of TC 9.7.1.2 TDD CQI reporting definition under AWGN conditions for UE category 0 | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156043 | 2315 | 1 | Update test requirement for MTC test cases: 7.6.1E, 7.6.2E and 7.6.3E | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156044 | 2316 | 1 | Addition of Maximum Test System Uncertainty and Derivation of Test Requirements in Annex F for MTC test cases | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156045 | 2317 | 1 | Additions to test case 6.2.3E - Maximum Power Reduction (MPR) for UE category 0 | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156046 | 2320 | 1 | Additions to test case 6.3.2E – Minimum Output Power for UE category 0 | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156047 | 2332 | 1 | Additions to test case 6.3.5E.3 – Aggregate power control tolerance for UE category 0 | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156048 | 2340 | 1 | Additions to test case 6.6.1E – Occupied bandwidth for UE category 0 | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156049 | 2341 | 1 | Additions to test case 6.6.2.1E – Spectrum Emission Mask for UE category 0 | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156057 | 2193 | 1 | New CA 2UL Tx test case 6.5.1A.3 Frequency Error for CA (intra-band non-contiguous DL CA and UL CA) | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156058 | 2291 | 1 | New TC of A-MPR for 2UL inter-band CA (6.2.4A.2) | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156059 | 2293 | 1 | New TC of Additional spurious emissions for intra-band non-contiguous CA 6.6.3.3A.3 | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156062 | 2166 | 1 | Addition of Minimum test time for LTE Type C performance in Annex G | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156063 | 2297 | 1 | Addition of new TC 7.4_H Maximum input level for SCE-L1 | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156064 | 2298 | 1 | Addition of new TC 7.4A.1_H Maximum input level for SCE-L1 for CA (intra-band contiguous DL CA and UL CA) | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156065 | 2299 | 1 | Addition of new TC 7.4A.2_H Maximum input level for SCE-L1for CA (intra-band contiguous DL CA without UL CA) | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156066 | 2300 | 1 | Addition of new TC 7.4A.5_H Maximum input level for SCE-L1 for CA (3DL CA without UL CA) | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156089 | 2185 | 1 | LTE Type B performance requirements - Introduction of new test cases 8.2.1.2.5 and 8.2.1.2.6 | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156090 | 2186 | 1 | LTE Type B performance requirements - Introduction of new test cases 8.2.2.2.6 and 8.2.2.2.7 | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156091 | 2187 | 1 | LTE Type B performance requirements - Introduction of new test cases 9.3.8.1.1 and 9.3.8.1.2 | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156092 | 2188 | 1 | LTE Type B performance requirements - Adding six NAICS test cases into Annex F and G | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156095 | 2155 | 1 | Update Minimum requirements for test case 6.2.3A.1 | 12.7.0 | 12.8.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2015-12 | RAN#70 | R5-156096 | 2227 | 1 | Updates of test configuration for OBW for intra-band contiguous UL CA | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156097 | 2268 | 1 | CA RF: Minor corrections to section 6.6.3.3A | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156098 | 2292 | 1 | Revise Configured UE transmitted Output Power for 2UL intra-band contiguous CA test case 6.2.5A.1 | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156100 | 2167 | 1 | Deleting redundant and outdated Demod scenario in Minimum test time | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156101 | 2258 | 1 | Clarification of DL configuration for wideband | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156102 | 2260 | 1 | Correction to Enhanced Performance Type A performance test cases | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156103 | 2277 | 1 | Correction and addition of minimum test time for several tests | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156104 | 2284 | 1 | Correction to test cases of the section of 9.5.1 | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156110 | 2190 | 1 | Introduction of new test case 8.9.2.1.1 MTC | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156113 | 2301 | 1 | Addition of new TC 8.2.1.4.1_H FDD PDSCH Closed Loop Multi Layer Spatial Multiplexing 2x2 for SCE-L1 | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156114 | 2302 | 1 | Addition of new TC 8.2.2.4.1_H TDD PDSCH Closed Loop Multi Layer Spatial Multiplexing 2x2 for SCE-L1 | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156115 | 2303 | 1 | Addition of new TC 8.3.1.1.1_H FDD PDSCH Single-layer Spatial Multiplexing on antenna ports 7 or 8 without a simultaneous transmission for SCE-L1 for eDL-MIMO | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156116 | 2304 | 1 | Addition of new TC 8.3.2.1.2_H TDD PDSCH Single-layer Spatial Multiplexing on antenna ports 7 or 8 without a simultaneous transmission for eDL-MIMO for SCE-L1 | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156117 | 2305 | 1 | Addition of new TC 8.7.1.1_H FDD sustained data rate performance for SCE-L1 | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156118 | 2306 | 1 | Addition of new TC 8.7.1.1_H.2 FDD Sustained data rate performance for CA for SCE-L1 (2DL CA) | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156119 | 2307 | 1 | Addition of new TC 8.7.1.1_H.3 FDD Sustained data rate performance for CA for SCE-L1 (3DL CA) | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156120 | 2308 | 1 | Addition of new TC 8.7.2.1_H.1 TDD sustained data rate performance for SCE-L1 (Single Carrier) | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156121 | 2309 | 1 | Addition of new TC 8.7.2.1_H.2 TDD sustained data rate performance for CA for SCE-L1 (2DL CA) | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156122 | 2310 | 1 | Addition of new TC 8.7.2.1_H.3 TDD Sustained data rate performance for CA for SCE-L1 (3DL CA) | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156124 | 2312 | 1 | Addition of new TC 8.7.5.1_H.2 TDD FDD CA Sustained data rate performance for FDD PCell for SCE-L1 (3DL CA) | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156125 | 2313 | 1 | Addition of new TC 8.7.5.2_H.1 TDD FDD CA Sustained data rate performance for TDD PCell for SCE-L1 (2DL CA) | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156126 | 2314 | 1 | Addition of new TC 8.7.5.2_H.2 TDD FDD CA Sustained data rate performance for TDD PCell for SCE-L1 (3DL CA) | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156130 | 2192 | 2 | New CA 2UL Tx test case 6.3.5A.3.3 of Aggregate Power Control Tolerance for CA (intra-band non-contiguous DL CA and UL CA) | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156131 | 2290 | 2 | New TC of Aggregate Power Control Tolerance for 2UL inter-band CA(6.3.5A.3.2) | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156133 | 2294 | 1 | Correction to the applicable test release of 1.4MHz Bandwidth MBMS test | 12.7.0 | 12.8.0 |
| 2015-12 | RAN#70 | R5-156134 | 2164 | 1 | Update to in-band Emissions Limits for less than 1GHz Carrier Frequencies | 12.7.0 | 12.8.0 |

| 2016-03 | RAN#71 | R5-160107 | 2369 | - | Removal of technical content in 36.521-1 v12.8.0 and substitution with pointer to the next Release | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160124 | 2371 | - | Correction to test case 8.7.1.1_A.1 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160125 | 2372 | - | Correction to test case 9.3.2.1.1 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160139 | 2375 | - | Test Tolerances for 9.6.1.3.1+9.6.1.3.2+9.6.1.4.1+9.6.1.4.2 2DL-3DL CA | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160141 | 2376 | - | TTs to Annex F for 2DL and 3DL CA | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160155 | 2382 | - | Test Tolerances for 9.3.7.1+9.3.7.2 eDL MIMO enhancement | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160159 | 2383 | - | Test Tolerances for 9.4.1.4.1+9.4.1.4.2+9.4.2.3.3+9.4.2.3.4 eDL MIMO enhancement | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160162 | 2385 | - | Corrections to eDL MIMO enhancements Annex B to include High XP 4x2 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160164 | 2386 | - | Corrections to EVM test case 6.5.2A.1.1 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160165 | 2387 | - | Update of uncertainty and TT references for TC 6.2.4E and 6.2.5E | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160169 | 2390 | - | Addition of 4 Rx part to Diversity characteristics | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160203 | 2391 | - | Revise Power Control Relative power tolerance for CA (intra-band contiguous DL CA and UL CA) test case 6.3.5A.2.1 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160281 | 2419 | - | Addition of delta TIB for the new CA configuration CA_3A-41A in sub-clause 6.2.5 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160334 | 2423 | - | Updates of Spurious emission band UE co-existence for CA (inter-band DL CA and UL CA) | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160337 | 2425 | - | Annex F update for frequency error for inter-band 2UL CA | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160338 | 2426 | - | Correction and updates to test requirements of Reference sensitivity for inter-band 2DL CA | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160344 | 2428 | - | Updates of some Rel-13 defined CA combinations to minimum requirements of Reference sensitivity for CA | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160345 | 2429 | - | Updates of delta TIB,c values and table references for delta TIB,c | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160377 | 2437 | - | R10 Remove editor's note for CA_39C spurious emission test | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160441 | 2439 | - | Update to MTC test case 8.9.2.1.1 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160442 | 2440 | - | Update to MTC RF test applicability for Editor’s Note | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160459 | 2443 | - | Rel-13 Test point reduction for UL 64QAM multi-cluster MPR and ACLR tests | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160461 | 2445 | - | Rel-13 Test point reduction for UL 64QAM AMPR and ASEM tests | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160462 | 2446 | - | Rel-13 Test point reduction for UL 64QAM CA MPR and ACLR tests | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160464 | 2448 | - | Rel-13 Test point reduction for UL 64QAM CA AMPR, ASEM and ASE tests | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160482 | 2451 | - | Correction to the minimum test time reference in TDD/FDD CA performance | 13.0.1 | 13.1.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2016-03 | RAN#71 | R5-160483 | 2452 | - | Correction to UL CA Tx tests | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160484 | 2453 | - | Clean up on performance test cases | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160485 | 2454 | - | Correction to 9.5.5.1_F.1 and 9.5.5.1_F.2 for RI Reporting test with CoMP | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160486 | 2455 | - | Correction to 8.2.2.2.4 and 8.2.2.4.3 for Enhanced Performance Type A | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160487 | 2456 | - | Correction to CQI reporting tests for Enhanced Performance Type A | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160488 | 2457 | - | Correction to CQI and RI reporting tests for feICIC | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160490 | 2459 | - | Correction to PCFICH/PDCCH and PHICH Tx Diversity for feICIC | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160491 | 2460 | - | Correction to G.5.4 for minimum test time | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160504 | 2462 | - | New CA band combination CA_41A_42C - Updates of 6.2.5.3 Delta TIB | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160506 | 2463 | - | New CA band combination CA_41A_42C - Updates of 7.3.3 Delta RIB | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160527 | 2468 | - | Addition of operating band and channel assignments for the new Intel assigned CA configuration | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160569 | 2477 | - | Correction to PMI Reporting for eDL-MIMO | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160578 | 2480 | - | Minor corrections to applicabilities of TCs 8.2.2.2.3_E.1 & 8.2.2.3.3_E.1 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160580 | 2482 | - | Correction to PDCP SDU size in TC 8.7.2.1 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160582 | 2484 | - | CA RF: Corrections to Notes in TC 7.3A.3 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160583 | 2485 | - | CA RF: Corrections to Notes in TC 7.3A.5 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160584 | 2486 | - | CA RF: Minor correction to Note in TC 7.3A.6 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160586 | 2488 | - | Corrections to DL 256QAM SDR Test Cases | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160587 | 2489 | - | Corrections to TDD FDD CA SDR Test Cases | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160588 | 2490 | - | Addition of Maximum Wgap definition | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160590 | 2492 | - | Corrections to TDD FDD CA Closed Loop Spatial Multiplexing TCs | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160592 | 2494 | - | Corrections to TDD FDD CA Test Applicability tables in section 8.1.2.3B | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160622 | 2497 | - | Addition of delta RIB for CA_3A-41A in TC 7.3.3 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160681 | 2516 | - | Introduction of test case 6.6.2.3A.3 - Adjacent Channel Leakage power Ratio for CA (intra-band non-contiguous DL CA and UL CA) | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160686 | 2519 | - | Add reference to TR 36.905 in 36.521-1 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160801 | 2479 | 1 | Annex F: Corrections for intra-band contiguous UL CA Test Cases | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160802 | 2483 | 1 | Minor correction to TC 6.6.3.2 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160803 | 2487 | 1 | Removal of editor's notes in TC 6.5.2A.2.1 & 6.5.2A.3.1 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160804 | 2466 | 1 | Correction to UE category information in test case 8.2.1.1.1 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160805 | 2467 | 1 | Correction to test case applicability for test case 9.2.1.3_C.1 and 9.2.1.4_C.1 | 13.0.1 | 13.1.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2016-03 | RAN#71 | R5-160811 | 2430 | 1 | Updates of delta RIB,c values and table references for delta RIB,c | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160812 | 2431 | 1 | Addition of CA_19A-28A and CA_21A-42A to refsens for inter-band 2DL CA | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160813 | 2432 | 1 | Updates of test points and test requirements of some Rel-13 defined CA combinations for Reference sensitivity for 3DL CA | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160814 | 2469 | 1 | Addition of CA configurations and bandwidth combination sets for the new CA configuration | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160815 | 2496 | 1 | Add delta TIB for the new CA_20A-67A configuration in sub-clause 6.2.5. | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160819 | 2400 | 1 | Addition of new TC 7.4A.3_H Maximum input level for CA (inter-band DL CA without UL CA) for 256QAM in DL | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160820 | 2401 | 1 | Addition of new TC 7.4A.4_H Maximum input level for CA (intra band non-contiguous DL CA without UL CA) for 256QAM in DL | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160825 | 2436 | 1 | Rel-10 Test point reduction for UL 64QAM multi-cluster MPR and ACLR tests | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160828 | 2422 | 1 | Updates to TM3 TDD-FDD Soft buffer 2DLCA test cases | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160829 | 2493 | 1 | Corrections to TDD FDD CA TCs 9.6.1.3.1 and 9.6.1.4.1 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160831 | 2520 | 1 | Test points for CA_4A-4A-13A in Reference sensitivity test case | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160835 | 2379 | 1 | Addition of UL CA capability for CA_4A-4A in Table 5.4.2A.1-3 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160836 | 2380 | 1 | Correction for table references in TC 6.6.3.2A.1 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160837 | 2381 | 1 | Renaming of Table 6.6.3.2A-3a | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160838 | 2409 | 1 | Update to Annex F for TC 6.3.5A.1.2, 6.3.5A.1.3 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160839 | 2411 | 1 | Update to TC 6.3.5A.1.2 Power Control Absolute Power Tolerance for CA (inter-band DL CA and UL CA). | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160840 | 2412 | 1 | Update to TC 6.3.5A.1.3 Power Control Absolute power tolerance for CA (intra-band non-contiguous DL CA and UL CA). | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160841 | 2416 | 1 | Correction to test case 6.2.5A.3 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160845 | 2424 | 1 | Addition of new test case for additional spurious for inter-band 2UL CA and updates for A-MPR for inter-band 2UL CA | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160846 | 2518 | 1 | Introduction of test case 7.3A.7 - Reference sensitivity level for CA (intra-band non-contiguous DL CA and UL CA) | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160849 | 2470 | 1 | New TC: FDD CQI Reporting under fading conditions - PUCCH 1-1 (CSI Reference Symbol) TM9 - Enhanced Receiver Type B | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160850 | 2471 | 1 | New TC: TDD CQI Reporting under fading conditions - PUCCH 1-1 (CSI Reference Symbol) TM9 - Enhanced Receiver Type B | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160852 | 2393 | 1 | Update to TC 8.9.1.1.3 FDD PDSCH Single-layer Spatial Multiplexing on antenna ports 7 or 8 for UE category 0 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160853 | 2394 | 1 | Update to TC 8.9.1.2.1 TDD PDSCH Transmit Diversity for UE category 0 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160854 | 2395 | 1 | Update to TC 8.9.1.2.3 TDD PDSCH Single-layer Spatial Multiplexing on antenna ports 7 or 8 for UE category 0 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160855 | 2408 | 1 | Update to TC 9.7.2.2 TDD CQI reporting definition under fading conditions for UE category 0 | 13.0.1 | 13.1.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2016-03 | RAN#71 | R5-160856 | 2420 | 1 | Update to TC 9.7.2.1 FDD and Half duplex FDD CQI reporting definition under fading conditions for UE category 0 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160858 | 2498 | 1 | Additions to test case 6.6.2.2E – Additional Spectrum Emission Mask for UE category 0 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160859 | 2500 | 1 | Additions to test case 6.6.3E.3 – Additional spurious emissions for UE category 0 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160860 | 2501 | 1 | Additions to test case 6.6.2.3E – Adjacent Channel Leakage power Ratio for UE category 0 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160861 | 2504 | 1 | Additions to test case 6.3.4E.2 – PRACH and SRS ON/OFF time mask for UE category 0 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160862 | 2506 | 1 | Additions to test case 6.7E – Transmit intermodulation for UE category 0 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160863 | 2508 | 1 | Additions to test case 6.5.2.1E.2 – PUSCH-EVM with exclusion period for UE category 0 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160864 | 2510 | 1 | Additions of overlying section 6.6.3E-Spurious emission for UE category 0 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160865 | 2511 | 1 | Additions of overlying sections 6.3.5C, 6.3.5D and 6.3.5E Power Control for UE category 0 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160866 | 2513 | 1 | Additions to test case 6.2.3E - Maximum Power Reduction (MPR) for UE category 0 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160867 | 2515 | 1 | Additions of overlying section 6.3.4E-ON/OFF time mask for UE category 0 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160868 | 2507 | 1 | Additions to test case 6.6.3E.2 –Spurious emission band UE co-existence for UE category 0 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160869 | 2505 | 1 | Additions to test case 6.6.3E.1 – Transmitter Spurious emissions for UE category 0 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160870 | 2370 | 1 | Updates and test tolerance to single antenna FDD-TDD CA test cases | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160877 | 2384 | 1 | TTs to Annex F for eDL MIMO enhancement | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-160878 | 2392 | 1 | Update to Annex F for TC 8.9.1.1.3, 8.9.1.2.1, 8.9.1.2.3, 9.7.2.1, 9.7.2.2 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161001 | 2495 | 1 | Addition of B66 in Frequency bands and channel arrangement. | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161004 | 2427 | 1 | Updates of some Rel-13 defined CA combinations to chapter 5 of TS 36.521-1 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161005 | 2449 | 1 | New ProSe test case: Demodulation of PSDCH for ProSe direct discovery | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161006 | 2450 | 1 | New ProSe test case: Maximum input level test | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161008 | 2398 | 1 | Updates to TC 8.7.1.1_A.2 FDD Sustained data rate performance for CA (3DL CA) | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161009 | 2421 | 1 | Updates to TM3 TDD-FDD with TDD Pcell 2DLCA and 3DLCA test cases | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161010 | 2491 | 1 | Corrections to TDD FDD CA Open Loop Spatial Multiplexing TCs | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161012 | 2502 | 1 | 36.521-1 Sensitivity test points revision for 3DL 1A-3A-7A | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161014 | 2503 | 1 | 36.521-1 Sensitivity test points revision for 3DL 1A-3A-20A | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161017 | 2417 | 1 | Update to TC 6.2.4A.2 A-MPR for 2UL inter-band CA | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161019 | 2356 | 1 | New CA 2UL Tx test case 6.5.2A.1.3 Error Vector Magnitude (EVM) for CA (intra-band non-contiguous DL CA and UL CA) | 13.0.1 | 13.1.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2016-03 | RAN#71 | R5-161022 | 2359 | 1 | New CA 2UL Tx test case 6.5.2A.3.2 In-band emissions for non allocated RB for CA (inter-band DL CA and UL CA) | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161023 | 2360 | 1 | New CA 2UL Tx test case 6.5.2A.3.3 In-band emissions for non allocated RB for CA (intra-band non-contiguous DL CA and UL CA) | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161024 | 2361 | 1 | New CA 2UL Tx test case 6.6.3.1A.3 Transmitter Spurious emissions for CA (intra-band non-contiguous DL CA and UL CA) | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161025 | 2377 | 1 | Addition of new LTE_CA_Rel12_2UL test case 6.6.3.2A.3 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161026 | 2378 | 1 | Completion of new LTE_CA_Rel12_2UL Test Case 6.7A.2 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161028 | 2517 | 1 | Introduction of test case 6.6.2.2A.2 - Additional Spectrum Emission Mask for CA (inter-band DL CA and UL CA) | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161029 | 2407 | 1 | Updates to Annex A for 256QAM test | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161030 | 2403 | 1 | Addition of new TC 9.2.1.7 FDD CQI Reporting under AWGN conditions – PUCCH 1-0 for 256QAM in DL | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161031 | 2404 | 1 | Addition of new TC 9.2.1.8 TDD CQI Reporting under AWGN conditions – PUCCH 1-0 for 256QAM in DL | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161032 | 2405 | 1 | Addition of new TC 9.3.1.2.3 FDD CQI Reporting under fading conditions – PUSCH 3-1 for 256QAM in DL | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161033 | 2406 | 1 | Addition of new TC 9.3.1.2.4 TDD CQI Reporting under fading conditions – PUSCH 3-1 for 256QAM in DL | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161034 | 2399 | 1 | Updates to 7.4A.1_H and 7.4A.2_H Maximum input level for intra-band contiguous CA for 256QAM in DL | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161035 | 2402 | 1 | Updates to TC 7.4A.5_H Maximum input level for CA (3DL CA without UL CA) for 256QAM in DL | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161039 | 2353 | 1 | LTE Type B performance requirements - Introduction of new test cases 8.2.1.4.4 and 8.2.2.4.5 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161040 | 2354 | 1 | LTE Type B performance requirements - Adding test cases 8.2.1.4.4 and 8.2.2.4.5 into Annex F and G | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161041 | 2433 | 1 | Test configuration correction for AMPR tests | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161042 | 2434 | 1 | Test configuration correction for ASE tests | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161043 | 2435 | 1 | Test configuration correction for ASEM tests | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161044 | 2438 | 1 | Test configuration correction for UL 64QAM AMPR tests | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161045 | 2441 | 1 | Test configuration correction for UL 64QAM ASE tests | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161046 | 2442 | 1 | Test configuration correction for UL 64QAM ASEM tests | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161047 | 2444 | 1 | Rel-8 Test point reduction for UL 64QAM AMPR, ASEM and ASE tests | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161056 | 2410 | 1 | Adding new clause 6.3.5A.1.0 and 6.3.5A.2.0 to define the minimum conformance requirements. | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161059 | 2465 | 1 | New CA band combination CA_41A-42C - Updates of 7.3A Refsens | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161061 | 2447 | 1 | Rel-10 Test point reduction for UL 64QAM CA AMPR, ASEM and ASE tests | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161062 | 2472 | 1 | Correction to the UL CA Frequency Error Testcase | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161064 | 2522 | 1 | Correction to A-MPR test with frequency hopping | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161065 | 2415 | 1 | Correction of Table number of DeltaRib reference in CA receiver RF tests | 13.0.1 | 13.1.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2016-03 | RAN#71 | R5-161073 | 2367 | 1 | Update of test applicability for eDL MIMO enhancement TCs | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161085 | 2514 | 1 | 36.521-1 Editorial corrections | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161086 | 2524 | 1 | Addition frequency bands and channel arrangement for B67 and CA_20-67 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161103 | 2355 | 2 | New CA 2UL Tx test case 6.5.2A.1.2 Error Vector Magnitude (EVM) for CA (inter-band DL CA and UL CA) | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161104 | 2357 | 2 | New CA 2UL Tx test case 6.5.2A.2.2 Carrier leakage for CA (inter-band DL CA and UL CA) | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161105 | 2358 | 2 | New CA 2UL Tx test case 6.5.2A.2.3 Carrier leakage for CA (intra-band non-contiguous DL CA and UL CA) | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161107 | 2389 | 2 | Reference sensitivity level with 4 Rx antenna ports | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161109 | 2509 | 2 | 36.521-1 Transmitter tests for Band 66 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161110 | 2512 | 1 | 36.521-1 Receiver tests for Band 66 | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161111 | 2373 | 1 | Correction to power level for dual layer TM9 demodulation tests | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161112 | 2458 | 2 | Correction to TDD CQI Reporting for feICIC | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161113 | 2461 | 2 | Correction to UL 64 QAM RMC | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161114 | 2475 | 2 | Correction to CQI reports in CoMP fading test | 13.0.1 | 13.1.0 |
| 2016-03 | RAN#71 | R5-161115 | 2476 | 2 | Correction to test system uncertainties for Rx 7.6.3 | 13.0.1 | 13.1.0 |
| 2016-06 | RAN#72 | R5-162088 | 2527 | - | Test Tolerances for FDD PDSCH Closed Loop Single Layer Spatial Multiplexing 2x2 with TM4 Interference Model– Enhanced Performance | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162090 | 2528 | - | Test Tolerances for TDD PDSCH Closed Loop Single Layer Spatial Multiplexing 2x2 with TM4 Interference Model– Enhanced Performance | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162169 | 2533 | - | Corrections to Annex F.1.2 and F.3.2 for Pcmax test case | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162189 | 2536 | - | Additions to test case 6.3.5E.3 – Aggregate power control tolerance for UE category 0 | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162191 | 2537 | - | Additions to test case 6.3.5E.2 – Power Control Relative power tolerance for UE category 0 | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162192 | 2538 | - | Editorial correction in Reference sensitivity QPSK PREFSENS four antenna ports Table number | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162195 | 2539 | - | Addition In-band blocking with 4 Rx antenna ports test case | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162210 | 2542 | - | Addition of UL CA capability for CA_4A-5A in Table 5.4.2A.1-2 | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162211 | 2543 | - | New test points for CA_4A-5A (2DL-2UL) in sec. 6.2 and sec. 6.3 | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162212 | 2544 | - | New test points for CA_4A-5A (2DL-2UL) in sec. 6.5 and sec. 6.6 | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162215 | 2545 | - | Update of requirements in TC 6.2.2A.2 for CA_4A-5A (2DL-2UL) | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162235 | 2557 | - | Introduction of ACLR for intra-band non-contiguous UL CA for UL 64QAM | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162241 | 2563 | - | New test case: Maximum sidelink processes for ProSe Direct discovery | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162247 | 2569 | - | Update of TC 7.3A.6 for CA_4A-5A (2DL-2UL) | 13.1.0 | 13.2.0 |

| | | | | | | | |

| 2016-06 | RAN#72 | R5-162568 | 2679 | - | Updates to test case 8.9.1.1.1 - FDD PDSCH Transmit Diversity 2x1 for UE category 0 | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162569 | 2680 | - | Updates to test case 9.7.1.1 - FDD and Half duplex FDD CQI reporting definition under AWGN conditions for UE category 0 | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162593 | 2688 | - | Correction to CQI tests for Enhanced Performance Type A | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162594 | 2689 | - | Correction to TDD FDD CA CQI Reporting tests | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162596 | 2691 | - | Correction to demodulation test cases for CoMP in 8.3.1.3.2_F and 8.3.2.4.2_F | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162597 | 2692 | - | Correction to PDCCH Aggregation Level for SDR test | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162605 | 2695 | - | Update of refsens test case 7.3A.3 for CA_20A-67A | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162647 | 2700 | - | Re-Addition of new LTE_CA_Rel12_2UL test case 6.6.3.2A.3 | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162661 | 2704 | - | Band 65 introduction to Chapter 7 in 36.521-1 | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162802 | 2546 | 1 | Introduction of MPR for inter-band DL CA and UL CA for UL 64QAM | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162803 | 2547 | 1 | Introduction of MPR for intra-band non-contiguous CA and UL CA for UL 64QAM | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162804 | 2553 | 1 | Rel-11 Test point reduction for intra-band non-contiguous UL CA MPR and ACLR tests | 13.1.0 | 13.2.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2016-06 | RAN#72 | R5-162805 | 2554 | 1 | Rel-11 Test point reduction for inter-band UL CA AMPR, ASEM and ASE tests | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162806 | 2555 | 1 | R8 - Modification of test bandwidths in AMPR, ASEM and ASE test | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162807 | 2556 | 1 | R13 - Modification of test bandwidths in AMPR and ASE for UL 64QAM test | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162808 | 2616 | 1 | UL CA: Corrections to TC 6.5.2A.1.1 | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162810 | 2685 | 1 | Correction to 6.2.4 A-MPR test for Band 12 | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162811 | 2535 | 1 | Corrections to CA_41A-41C and CA_41C-41A tables in clauses 7.3A.5, 7.4A.5, 7.5A.5, 7.6.1A.5, 7.6.2A.5, 7.6.3A.5 and 7.8.1A.5 | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162812 | 2665 | 1 | Correction of refsens test case 7.3A.3 for CA_20A-32A | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162813 | 2674 | 1 | New CA band combination CA_8A-40A – Updates of 7.3.3 Delta RIB | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162814 | 2684 | 1 | New CA band combination CA_8A-40A – Updates of 7.3A Refsens | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162815 | 2686 | 1 | Correction to reference sensitivity test cases | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162816 | 2687 | 1 | Clarification of interferer frequencies in ACS | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162817 | 2621 | 1 | Corrections to chapter 8 joint operation TCs | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162818 | 2670 | 1 | Correction to test case 8.2.3.2.2A | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162819 | 2690 | 1 | Additional test point for 3DL CA Performance and CQI test cases | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162820 | 2693 | 1 | Correction to TDD FDD CA performance test cases for FDD PCell(2DL and 3DL) | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162821 | 2694 | 1 | Correction to TDD FDD CA performance test cases for TDD PCell TCs(2DL) | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162832 | 2623 | 1 | Corrections to 256QAM SDR joint operation TCs | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162837 | 2559 | 1 | New test case: 2x4 PDSCH TM9 single layer TypeA | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162838 | 2530 | 1 | Addition of CA_4A-12A Bandwidth combination set5 information | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162839 | 2567 | 1 | Update of TC 6.6.3.1A.2 for CA_4A-5A (2DL-2UL) | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162840 | 2584 | 1 | Updates TC7.3 for new Rel-13 defined CA combinations to minimum requirements of Reference sensitivity | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162841 | 2585 | 1 | Updates TC7.3A for new Rel-13 defined CA combinations to minimum requirements of Reference sensitivity for CA | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162842 | 2586 | 1 | Updates of some Rel-13 defined CA combinations to operating bands of TS 36.521-1 | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162843 | 2587 | 1 | Updates TC6.2.5 for delta TIB,c values with new Rel-13 CA band combination | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162844 | 2627 | 1 | Addition of CA_4A-4A BW set 1 | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162846 | 2531 | 1 | Addition of Rel-13 CA combination CA_3A-41A to refsens for inter-band 2DL CA | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162847 | 2710 | 1 | Introduction of new TC8.2.1.4.2_A.3 4DL CA | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162848 | 2719 | 1 | Addition of definition of CA capability with 4DL & 5DL CCs | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162849 | 2720 | 1 | Addition of Operating bands for CA in clause 5.2A | 13.1.0 | 13.2.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2016-06 | RAN#72 | R5-162851 | 2560 | 1 | New test case: 4layer PDSCH CLSM | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162852 | 2561 | 1 | New test case: 4layer PDSCH TM9 SM | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162853 | 2562 | 1 | New test case: 3layer PDSCH OLSM | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162854 | 2573 | 1 | New Performance test case 8.10.4.1.1 FDD distributed EPDCCH performance 2x4 | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162855 | 2574 | 1 | New Performance test case 8.10.4.1.2 TDD distributed EPDCCH performance 2x4 | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162856 | 2575 | 1 | New Performance test case 8.10.4.2.1 FDD localized EPDCCH performance with TM9 2x4 | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162857 | 2576 | 1 | New Performance test case 8.10.4.2.2 TDD localized EPDCCH performance with TM9 2x4 | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162858 | 2602 | 1 | Introduction of FDD PCFICH/PDCCH Single-antenna Port Performance 1x4 | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162859 | 2603 | 1 | Introduction of FDD PCFICH/PDCCH Transmit Diversity 2x4 | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162860 | 2606 | 1 | Introduction of TDD PCFICH/PDCCH Transmit Diversity 2x4 | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162861 | 2607 | 1 | Introduction of TDD PCFICH/PDCCH Transmit Diversity 4x4 | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162862 | 2675 | 1 | Addition of 4Rx antenna port feature into Annex I | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162863 | 2677 | 1 | Introduction of new Rx test case Adjacent Channel Selectivity (ACS) with 4 Rx antenna ports | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162865 | 2577 | 1 | Rearrangement of TC 6.6.2.3A.1_1 and TC 6.6.2.3A.2 and corrections to TC 6.6.2.3A.2 | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162866 | 2614 | 1 | UL CA: Corrections to intra-band non-contiguous test configuration tables | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162867 | 2725 | 1 | Updates of test configuration for EVM and Carrier leakage test cases of 2UL CA | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162868 | 2643 | 1 | Addition of minimum requirement tables to clause 6.3.5A.1.0 and 6.3.5A.2.0 | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162869 | 2681 | 1 | Updates to test case 6.6.2.2A.2 - Additional Spectrum Emission Mask for CA (inter-band DL CA and UL CA) | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162870 | 2699 | 1 | Re-submission of New CA 2UL Tx test case 6.5.2A.1.3 Error Vector Magnitude (EVM) for CA (intra-band non-contiguous DL CA and UL CA) | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162872 | 2724 | 1 | Additions to test case 6.6.3.1A.2 – Transmitter Spurious emissions for CA (inter-band DL CA and UL CA) | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162875 | 2696 | 1 | Adding operating band definitions for MTC and eMTC | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162877 | 2564 | 1 | New test case: PSSCH performance for ProSe Direct communication | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162878 | 2565 | 1 | New test case: Maximum sidelink processes for ProSe Direct communication | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162879 | 2722 | 1 | New test Case: ProSe-UE Maximum Output Power | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162880 | 2723 | 1 | New test Case: ProSe-UE Maximum Power Reduction test case | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162884 | 2599 | 1 | Update to FDD PDSCH Closed Loop Multi-Layer Spatial Multiplexing 4x2 for Dual Connectivity | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162885 | 2600 | 1 | Update to TDD PDSCH Closed Loop Multi-Layer Spatial Multiplexing 4x2 for Dual Connectivity | 13.1.0 | 13.2.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2016-06 | RAN#72 | R5-162886 | 2601 | 1 | Update to sustained data rate performance for Dual Connectivity 64QAM | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162887 | 2641 | 1 | Addition of test case for FDD sustained data rate performance for Dual Connectivity 256QAM | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162888 | 2642 | 1 | Addition of test case for TDD sustained data rate performance for Dual Connectivity 256QAM | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162890 | 2728 | - | Adding Low Wgap definition to section 3 | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162952 | 2632 | 1 | Update to TC 6.3.5A.2.3 Power Control Relative power tolerance for CA (intra-band non-contiguous DL CA and UL CA) | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162953 | 2525 | 1 | CR for Clause 9.3.8.2 in 36.521-1 | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162954 | 2591 | 1 | New TC: TDD PDSCH Closed Loop Single-layer Spatial Multiplexing on antenna ports 7 or 8 with TM9 Interference Model - Enhanced Performance Requirement Type B | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162967 | 2624 | 2 | Addition CA combinations in intra-band contiguous DL CA and UL CA transmitter test cases | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162969 | 2660 | 1 | Update BW definition for band 66 in clause 5 | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162973 | 2701 | 1 | Band 65 introduction to Chapter 5 in 36.521-1 | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162974 | 2703 | 1 | Band 65 introduction to Chapter 6.6.3 in 36.521-1 | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162975 | 2636 | 1 | Addition of Band 45 in Spurious emission test cases | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162976 | 2540 | 2 | 6.3.4E.1 – General ON/OFF time mask for UE category 0 | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162977 | 2548 | 1 | Introduction of AMPR for inter-band DL CA and UL CA for UL 64QAM | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162978 | 2541 | 1 | 6.3.4.1 – General ON/OFF time mask. | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162979 | 2549 | 1 | Introduction of EVM for inter-band UL CA for UL 64QAM | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162980 | 2550 | 1 | Introduction of ASEM for inter-band DL CA and UL CA for UL 64QAM | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162981 | 2551 | 1 | Introduction of ACLR for inter-band DL CA and UL CA for UL 64QAM | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162982 | 2552 | 1 | Introduction of ASE for inter-band DL CA and UL CA for UL 64QAM | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162983 | 2657 | 1 | Updates of test point for A-Spur for UL 64QAM | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162985 | 2673 | 1 | New CA band combination CA_8A-40A – Updates of 5.4.2A Channel Bandwidth | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162987 | 2664 | 1 | Change of test case applicability for A-MPR for NS_05 | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162989 | 2566 | 1 | Update of TC 6.6.2.2A.2 for CA_4A-5A (2DL-2UL) | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162990 | 2648 | 1 | New CA band combinations CA_28A-41A and CA_28A-41C - Updates of 7.3A Refsens | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162991 | 2716 | 1 | Introduction of new TC7.7A.7 4DL CA | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162992 | 2604 | 1 | Introduction of FDD PCFICH/PDCCH Transmit Diversity 4x4 | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162993 | 2532 | 1 | Update test case 6.2.4A.2:AMPR for 2UL inter-band CA | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162995 | 2658 | 1 | Addition of a new TC for Minimum Output Power for CA (inter-band DL CA and UL CA) | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-162996 | 2659 | 1 | Addition of a new TC for Minimum Output Power for CA (intra-band non-contiguous DL CA and UL CA) | 13.1.0 | 13.2.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2016-06 | RAN#72 | R5-162997 | 2682 | 1 | Introduction of test case 6.6.2.2A.3 - Additional Spectrum Emission Mask for CA (intra-band non-contiguous DL CA and UL CA) | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-163100 | 2588 | 1 | Introduction of new eMTC RF test case 6.3.5EA.1 for category M1 | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-163101 | 2589 | 1 | Introduction of new eMTC RF test case 6.3.5EA.2 for category M1 | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-163102 | 2705 | 1 | Addition of new test case for aggregate power control tolerance for UE category M1 | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-163103 | 2706 | 1 | Addition of New test case for Maximum input level for UE category M1 | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-163104 | 2707 | 1 | Addition of New test case for Adjacent Channel Selectivity (ACS) for category M1 | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-163107 | 2568 | 1 | New D2D Tx test case 6.5.1D.1 Frequency error for ProSe Direct Discovery | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-163110 | 2558 | 1 | New 2x4 test case: PDSCH CLSM TypeA | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-163119 | 2708 | 1 | Introduction of new TC7.3A.9 4DL CA | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-163120 | 2709 | 1 | Introduction of new TC7.4A.7 4DL CA | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-163121 | 2711 | 1 | Introduction of new TC7.5A.7 4DL CA | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-163122 | 2712 | 1 | Introduction of new TC7.6.1A.7 4DL CA | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-163123 | 2713 | 1 | Introduction of new TC7.6.2A.7 4DL CA | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-163124 | 2715 | 1 | Introduction of new TC7.6.3A.7 4DL CA | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-163125 | 2717 | 1 | Introduction of new TC7.8.1A.7 4DL CA | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-163126 | 2718 | 1 | Updates of delta TIB,c values and table references for delta TIB,c for TC 6.2.5 | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-163127 | 2727 | 1 | Introduction of CA 1A-8A-11A in chapters 5, 6 and 7 | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-163129 | 2529 | 1 | Addition of new test case 7.9_1 Spurious emissions with 4 Rx antenna ports | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-163130 | 2534 | 1 | Revise Power Control Relative power tolerance for CA (intra-band contiguous DL CA and UL CA) test case 6.3.5A.2.1 | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-163132 | 2652 | 1 | New CA band combinations CA_28A-42A and CA_28A-42C - Updates of 7.3A Refsens | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-163192 | 2631 | 2 | Update to TC 6.3.5A.2.2 Power Control Relative power tolerance for CA (inter-band DL CA and UL CA) | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-163194 | 2702 | 2 | Band 65 introduction to Chapter 6.2 in 36.521-1 | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-163195 | 2663 | 2 | Change of test points and requirements for A-MPR for NS_05 | 13.1.0 | 13.2.0 |
| 2016-06 | RAN#72 | R5-163196 | 2726 | 1 | Correction to the UL CA Frequency Error Testcase | 13.1.0 | 13.2.0 |
| 2016-09 | RAN#73 | R5-165046 | 2742 | 2 | Introduction of new definitions for NB-IoT in Chapter 3 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165047 | 2744 | 2 | Introduction of general information for NB-IoT in Chapter 4 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165048 | 2745 | 2 | Introduction of operating bands for NB-IoT in Chapter 5 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165049 | 2730 | 2 | Introduce Downlink Fixed Reference Channels for UE category NB1 Receiver tests | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165050 | 2731 | 2 | Introduce GSM Interferer for UE category NB1 Adjacent channel selectivity tests | 13.2.0 | 13.3.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2016-09 | RAN#73 | R5-165051 | 2736 | 2 | New test case: 6.2.2EA UE Maximum Output Power for UE category M1 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165057 | 2759 | 2 | Addition of FDD MPDCCH demod test case for eMTC | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165058 | 2760 | 2 | Addition of TDD MPDCCH demod test case for eMTC | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165062 | 2757 | 2 | UE Maximum Output Power for UE category NB1 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165063 | 2741 | 2 | Addition of test case 6.6.2.3F for ACLR for UE category NB1 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165067 | 2749 | 2 | Addition of test case 6.7F for Transmit Intermodulation for UE category NB1 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165068 | 2750 | 2 | Addition of Occupied Bandwidth test case 6.6.1F for UE category NB1 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165069 | 2751 | 2 | Addition of Spectrum Emission Mask test case 6.6.2.1F for UE category NB1 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165070 | 2756 | 2 | Introduction of 6.5.1F Frequency Error for UE category NB1 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165071 | 2763 | 2 | Introduction of new NB-IoT RF test case 6.3.4F.1 for category NB1 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165072 | 2765 | 2 | Introduction of test case 6.2.3F - Maximum Power Reduction (MPR) for UE category NB1 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165073 | 2766 | 2 | Introduction of test case 6.6.3F.1 - Transmitter Spurious emission for UE category NB1 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165074 | 2758 | 2 | Maximum input level for UE category NB1 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165075 | 2729 | 2 | Introduce Adjacent Channel Selectivity (ACS) for UE category NB1 test case 7.5F | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165076 | 2733 | 2 | Introduce Downlink Physical Channels for UE category NB1 Receiver tests | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165077 | 2764 | 2 | Addition of the TC 6.6.2.3EA ACLR for UE category M1 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165094 | 2776 | - | New test case: 6.5.1EA Frequency Error for UE category M1 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165095 | 2777 | - | New test case: 6.5.2.1EA.1 Error Vector Magnitude for UE category M1 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165096 | 2778 | - | New test case: 6.5.2.1EA.2 PUSCH-EVM with exclusion period for UE category M1 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165097 | 2779 | - | New test case: 6.5.2.2EA Carrier leakage for UE category M1 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165098 | 2780 | - | New test case: 6.5.2.3EA In-band emissions for non allocated RB for UE category M1 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165099 | 2781 | - | New test case: 6.5.2.4EA EVM equalizer spectrum flatness for UE category M1 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165100 | 2782 | - | New test case: 6.6.2.1EA Spectrum Emission Mask for UE category M1 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165101 | 2783 | - | New test case: 6.6.2.2EA Additional Spectrum Emission Mask for UE category M1 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165117 | 2797 | - | Changes to general clauses for UE category M1 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165158 | 2800 | - | Introduction of ProSe RF TC 7.5D | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165159 | 2801 | - | Introduction of ProSe RF TC 7.6.3D | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165160 | 2802 | - | Introduction of ProSe RF TC 7.8.1D | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165210 | 2808 | - | New CA band combination CA_1A-40A and CA_3A-40A - Updates of 7.3A Refsens | 13.2.0 | 13.3.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2016-09 | RAN#73 | R5-165225 | 2809 | - | Update minimum test time into Annex G for TC 8.9.1.1.3,8.9.1.2.3 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165228 | 2810 | - | Update to TC 9.7.2.1,9.7.2.2 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165243 | 2812 | - | Addition of new 4Rx Test Cases - CQI reporting / AWGN / rank 1 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165244 | 2813 | - | Addition of new 4Rx Test Cases - CQI reporting / AWGN / rank 2 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165245 | 2814 | - | Addition of new 4Rx Test Cases - CQI reporting / AWGN / rank 4 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165247 | 2815 | - | Addition of new 4Rx Test Cases - CQI reporting / AWGN / rank 3 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165248 | 2816 | - | Uncertainties and Test Tolerances for new 4Rx Test Cases - CQI reporting / AWGN | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165250 | 2817 | - | Addition of channel matrices for 4Rx in Annex B.1 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165310 | 2822 | - | Update to FDD PCFICH/PDCCH transmit diversity 2x4 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165311 | 2823 | - | Update to FDD PCFICH/PDCCH transmit diversity 4x4 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165322 | 2833 | - | Update minimum requirement of Reference sensitivity level for all Rel-13 CA configurations | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165334 | 2834 | - | Correction of test requirements of In-band emissions for non allocated RB | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165366 | 2837 | - | Update to test case 8.10.4.1.1 FDD distributed EPDCCH performance 2x4 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165368 | 2839 | - | Update to test case 8.10.4.1.2 TDD distributed EPDCCH performance 2x4 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165369 | 2840 | - | Update to test case 8.10.4.2.1 FDD localized EPDCCH performance 2x4 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165370 | 2841 | - | Introduction of a clause for Demodulation of PBCH (enhanced coverage) | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165371 | 2842 | - | Update to test case 8.10.4.2.2 TDD localized EPDCCH performance 2x4 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165395 | 2851 | - | Correction to the test requirement for General ON/OFF time mask for UE category 0 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165413 | 2854 | - | Correction for UL 64QAM test cases to TS36.521-1 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165415 | 2856 | - | Update to eMTC RF test case 6.3.5EA.2 for category M1 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165424 | 2861 | - | Update Reference sensitivity for Band 66 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165441 | 2868 | - | Introduction of EVM test for UL 64QAM + 2UL CA (intra-band non-contiguous DL CA and UL CA) | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165443 | 2870 | - | Introduction of test requirements for AMPR inter-band UL CA + UL 64QAM | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165444 | 2871 | - | Introduction of TT in Annex F for UL 64QAM + 2UL CA | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165454 | 2872 | - | Correction to test case 7.3E Reference sensitivity level for UE category 0 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165485 | 2876 | - | Removal of SCC allocation in TCs 6.5.2A.x | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165487 | 2878 | - | Annex F: Addition of Uncertainties for chapter 7 ProSe TCs | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165489 | 2880 | - | Minor correction to TC 6.6.3.3A.2 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165496 | 2885 | - | Update to Annex C for CAT M1 testing | 13.2.0 | 13.3.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2016-09 | RAN#73 | R5-165510 | 2887 | - | UE Power Class test requirements in Multi-Cluster PUSCH TCs | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165512 | 2889 | - | Correction of Reference sensitivity test settings for CA_26A-41C | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165541 | 2890 | - | Introduction of additional 3DL tolerances in TC 6.2.2A.2 | 13.2.0 | 13.3.0 |
| 2016-09 | RAN#73 | R5-165592 | 2894 | - | Adding the Diversity characteristics requirements in chapter 7.2 for category NB1 UE. | 13.2.0 | 13.3.0 |

| 2016-12 | RAN#74 | R5-169627 | 3027 | 1 | Introduction of new 4Rx test case 9.9.2.2.1 | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169628 | 3028 | 1 | Introduction of new 4Rx test case 9.9.2.2.2 | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169629 | 3030 | 1 | Update connection diagram for PCFICH/PDCCH performance with 4Rx antenna ports | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169630 | 3031 | 1 | Update to FDD PHICH Single-antenna Port Performance 1x4 | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169631 | 3032 | 1 | Update to FDD PHICH Transmit Diversity 2x4 | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169632 | 3033 | 1 | Update to FDD PHICH Transmit Diversity 4x4 | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169633 | 3034 | 1 | Update to TDD PHICH Single-antenna Port Performance 1x4 | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169634 | 3035 | 1 | Update to TDD PHICH Transmit Diversity 2x4 | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169635 | 3036 | 1 | Update to TDD PHICH Transmit Diversity 4x4 | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169636 | 3046 | 1 | Update Reference sensitivity for additional requirement and TC7.3_1 test requirement | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169637 | 3054 | 1 | Updates to 4 Layer Spatial Multiplexing TCs | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169638 | 3110 | 1 | Correction of FDD and TDD Open-loop spatial multiplexing TCs with 3 Layer Multiplexing with 4 Tx Antenna Ports | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169639 | 3123 | 1 | Correction to 4Rx demodulation tests | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169640 | 3178 | 1 | Introduction of FDD 4Rx PDSCH demodulation test cases | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169650 | 3065 | 1 | Band 70 introduction to 36.521-1 receiver requirements | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169652 | 3156 | 1 | Introduction of Band 41 HPUE Maximum Output Power | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169653 | 3157 | 1 | Introduction of Band 41 HPUE Maximum Output Power for CA | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169654 | 3158 | 1 | Introduction of Band 41 HPUE Maximum Output Power for UL-MIMO | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169655 | 3159 | 1 | Introduction of Band 41 HPUE Maximum Power Reduction | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169656 | 3168 | 1 | Introduction of Power Class 2 in test case 6.2.5_1 Configured UE transmitted Output Power for HPUE | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169657 | 3169 | 1 | Addition of TDD RMC for UL-DL configuration 0 | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169659 | 3136 | 1 | Correction of CQI Reporting under AWGN conditions - PUCCH 1-1 (Cell-Specific Reference Symbols) TC | 14.0.0 | 14.1.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2016-12 | RAN#74 | R5-169660 | 3059 | 1 | Updates to SEM Test Case for category NB1 | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169662 | 3106 | 1 | Correction to EPDCCH SDR tests | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169665 | 3122 | 1 | Corrections to 256QAM sustained data rate performance test cases | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169666 | 3082 | 1 | Introduction of Rel-13 CA new test case “TDD Sustained data rate performance for CA (4DL CA)” | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169667 | 3114 | 1 | New CA band combinations CA_1A-18A, 1A-26A, 1A-28A, 1A-42A and 18A-28A - Updates of 6.2.4A Additional Maximum Power Reduction (A-MPR) | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169668 | 3116 | 1 | New CA band combinations CA_1A-18A, 1A-26A, 1A-28A, 1A-42A and 18A-28A - Updates of 6.6.2.2A Additional Spectrum Emission Mask | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169669 | 3119 | 1 | New CA band combinations CA_1A-18A, 1A-26A, 1A-28A, 1A-42A and 18A-28A - Updates of 6.6.3.3A Additional spurious emissions | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169671 | 3220 | 1 | Addition of CA band combinations into TC 7.3A.9 | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169672 | 3221 | 1 | Update of 4DL CA RX Test Cases | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169675 | 3203 | 1 | Addition of new case FDD RI Reporting- PUCCH 1-1 4x4 | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169676 | 3204 | 1 | Addition of new case TDD RI Reporting- PUSCH 3-1 4x4 | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169677 | 3206 | 1 | Addition of new case FDD RI Reporting- PUCCH 1-1 for eDL-MIMO 1x4 | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169678 | 3207 | 1 | Addition of new case TDD RI Reporting- PUCCH 1-1 for eDL-MIMO 1x4 | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169681 | 3160 | 1 | Update some receiver test cases to add LAA band combinations | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169682 | 3202 | 1 | Update test case 7.8.1A.3 to add LAA band combinations | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169683 | 3044 | 1 | Updated to RF test case 6.3.4F.1 for Category NB1 | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169684 | 3045 | 1 | Introduction of new NB-IoT RF test case 6.3.4F.2 for category NB1 | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169686 | 3075 | 1 | Update to test case 7.7F Spurious response for UE category NB1 | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169687 | 3088 | 1 | Updates of the TC 6.6.3F.2 Spurious emission band UE co-existence for category NB1 UE | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169688 | 3098 | 1 | Supplementation of test case 6.6.2.3F for ACLR for UE category NB1 | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169689 | 3100 | 1 | Update of test case 6.6.1F Occupied bandwidth for UE category NB1 | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169690 | 3101 | 1 | Update of test case 6.6.2.1F Spectrum Emission Mask for UE category NB1 | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169691 | 3102 | 1 | Update of test case 6.5.2.3F In-band emissions for non allocated RB for UE category NB1 | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169692 | 3124 | 1 | Update Adjacent Channel Selectivity (ACS) for UE category NB1 test case 7.5F | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169693 | 3176 | 1 | Updates in test case 6.2.3F, Maximum Power Reduction (MPR) for UE category NB1 | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169694 | 3225 | 1 | Update of Test Case 6.5.1F Frequency Error for UE category NB1 | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169696 | 3017 | 1 | 6.5.2.1F.1 Error Vector Magnitude (EVM) for NB-IoT | 14.0.0 | 14.1.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2016-12 | RAN#74 | R5-169697 | 3018 | 1 | 6.5.2.2F Carrier leakage for UE category NB1 | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169699 | 2996 | 1 | Updates to HD-FDD scheduling pattern for cat M1 RMCs in annex A | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169700 | 2998 | 1 | Update test case: 8.11.1.1.1, FDD Closed-loop spatial multiplexing performance for UE category M1 | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169701 | 2999 | 1 | New test case: 8.11.1.1.2, FDD PDSCH Single-layer Spatial Multiplexing on antenna ports 7 or 8 for UE category M1 | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169702 | 3000 | 1 | New test cases: 8.11.1.1.3, FDD PDSCH Transmit Diversity 2x1 for UE category M1 | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169703 | 3001 | 1 | New test case: 8.11.1.2.1, TDD Closed-loop spatial multiplexing performance for UE category M1 (Cell-Specific Reference Symbols) | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169704 | 3002 | 1 | New test case: 8.11.1.2.2, TDD PDSCH Single-layer Spatial Multiplexing on antenna ports 7 or 8 for UE category M1 | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169705 | 3003 | 1 | New test case: 8.11.1.2.3, TDD PDSCH Transmit Diversity for UE category M1 | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169706 | 3005 | 1 | Updating eMTC test case 9.8.1.1, FDD and Half duplex FDD CQI reporting definition under AWGN conditions for UE category M1 | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169707 | 3004 | 1 | New test case: 8.11.1.2.3_1, TDD PDSCH Transmit Diversity for UE category M1 (CEModeB) | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169713 | 3131 | 1 | Correction to PCC SCC frequency mapping for CA_66A-66A | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169715 | 3132 | 1 | Correction of UL RMC for sustained data rate CA test cases | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169716 | 3162 | 1 | Update test procedure 9.2.1.5_E.1 and 9.2.1.6_E.1 test cases to align it with minimum conformance requirements | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169719 | 3081 | 1 | Introduction of Rel-13 CA new test case “FDD Sustained data rate performance for CA (5DL CA)” | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169720 | 3083 | 1 | Introduction of Rel-13 CA new test case “FDD CQI Reporting under AWGN conditions – PUCCH 1-0 for CA (5DL CA)” | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169721 | 3104 | 1 | Introduction of new TC 8.2.2.1.1_A.3 4DL CA | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169722 | 3222 | 1 | New TC: FDD PDSCH Closed Loop Multi Layer Spatial Multiplexing 4x2 for 5DL CA | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169723 | 3223 | 1 | New TCs: TDD PDSCH Closed Loop Multi Layer Spatial Multiplexing 4x2 for 4DL CA | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169730 | 3121 | 2 | Correction to test points for test cases refer to 6.2.3A | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169732 | 3073 | 2 | Update to test case 6.3.5F.1 Power Control Absolute power tolerance for UE category NB1 | 14.0.0 | 14.1.0 |
| 2016-12 | RAN#74 | R5-169735 | 3166 | 2 | Update test requirements for test case 6.6.3.2A.1 | 14.0.0 | 14.1.0 |
| 2017-03 | RAN#75 | R5-170604 | 3238 | - | Update 4Rx test cases 9.9.4.1.1/9.9.4.1.2/9.9.4.2.1/9.9.4.2.2 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-170606 | 3239 | - | Update 4Rx test cases 9.9.4.1.1/9.9.4.1.2/9.9.4.2.1/9.9.4.2.2 information in Annex F and G. | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-170627 | 3249 | - | Resubmission of R5-170017 Update of editor's note in NB-IoT receiver RF tests related to scheduling pattern issue | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-170630 | 3250 | - | Resubmission of R5-170073 Update of editor's note in NB-IoT transmitter RF tests related to scheduling pattern issue | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-170631 | 3251 | - | Resubmission of R5-170074 Update of test parameters for NPDCCH tests | 14.1.0 | 14.2.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2017-03 | RAN#75 | R5-170632 | 3252 | - | Resubmission of R5-170328 New TC 6.3.5F.3 Aggregate power control tolerance for category NB1 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-170633 | 3253 | - | Resubmission of R5-170333 Introduction of RMCs for NB-IoT demodulation tests | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-170641 | 3258 | - | Update of TC 6.6.2.3_1 Adjacent Channel Leakage power Ratio for HPUE | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-170694 | 3269 | - | Updates of the CQI reporting TC 9.6.1.4.2 for TDD FDD CA | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-170750 | 3273 | - | Correction of typos in test cases 6.3.5.1, 6.3.5A.1.1, 6.3.5A.1.2, 6.3.5A.1.3, 6.3.5B.1, 6.3.5E.1 and 6.3.5EA.1 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-170751 | 3274 | - | Update to test cases 6.5.1D.1 and 6.5.1D.2 Frequency error for ProSe | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-170757 | 3276 | - | Uncertainties and Test Tolerances update to FDD and TDD CQI Reporting under fading conditions - PUCCH 1-0 - Enhanced Performance Requirement Type A 1x4 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-170758 | 3277 | - | Uncertainties and test tolerances update to FDD and TDD CQI Reporting under fading conditions - PUCCH 1-1 - Enhanced Performance Requirement Type A 2x4 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-170760 | 3278 | - | Update of test cases 8.7.9 and 8.7.10 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-170762 | 3279 | - | Update of test cases 8.7.1.1_A.5, 8.7.2.1_A.3 and 9.6.1.1_A.4 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-170774 | 3280 | - | Beamforming model missing in chapter 9 TM9 receiver type A tests | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-170806 | 3287 | - | Correction of number of EREGs per ECCE for special subframe mentioned in TC 8.7.4 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-170811 | 3291 | - | Correction of description of TC 8.2.2.4.2_1 FDD PDSCH Closed Loop Multi Layer Spatial Multiplexing 4x2 (Release 9 and Forward) | 14.1.0 | 14.2.0 |

| 2017-03 | RAN#75 | R5-170897 | 3307 | - | Update of requirements in TC 6.2.2A.2 for CA_2A-5A and CA_2A-12A | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-170905 | 3310 | - | Re-addition of Band 41 HPUE Maximum Output Power | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-170908 | 3312 | - | Update of TC 6.6.3.3A.2 for CA_2A-5A and CA_2A-12A | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-170909 | 3313 | - | Update of TC 6.6.2.2A.2 for CA_2A-5A and CA_2A-12A | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-170910 | 3314 | - | Update of TC 6.6.2.2A.2_1 for CA_2A-5A and CA_2A-12A | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-170911 | 3315 | - | Correction of RB allocation in TC 6.2.5A.3 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-170912 | 3316 | - | Correction of RB allocation in TC 6.6.2.1A.2 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-170914 | 3317 | - | Corrected test requirements for TC 6.2.3A.2_1 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-170915 | 3318 | - | Correction to configuration table in TC 6.7A.2 | 14.1.0 | 14.2.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2017-03 | RAN#75 | R5-170919 | 3321 | - | Update of applicability for 4Rx CQI reporting under AWGN tests | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-170949 | 3324 | - | Addition of CA_2A-66A and CA_5A-66A in TS 36.521-1 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-170957 | 3326 | - | Update to test case 7.6.1F In-band blocking for category NB1 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-170958 | 3327 | - | Update to test case 7.6.2F Out-of-band blocking for category NB1 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-170996 | 3332 | - | New CA band combinations CA_1A-18A, 1A-26A, 1A-28A, 1A-42A and 18A-28A - Updates of 7.3A.6 REFSENS | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171006 | 3334 | - | Update test configuration and requirement for CA_8B in clause 6 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171010 | 3336 | - | Update RF general section for V2X information | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171040 | 3347 | - | Update of test tolerance of 4-Rx TDD Type A demod test cases | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171085 | 3353 | - | Addition of applicability and test rules for CA UE demodulation tests with 4DL and 5DL CCs | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171092 | 3360 | - | Addition of CA configuration CA_4A-5A-29A for Refsens test | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171094 | 3362 | - | Addition of CA configuration CA_20A-31A for Refsens test | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171095 | 3363 | - | Addition of CA configuration CA_7A-42A and CA_28A-40A for Refsens test | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171097 | 3365 | - | Addition of for CA_20A-42A and CA_20A-42A-42A Refsens test | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171098 | 3366 | - | Addition of for CA_40C Set 1 Refsens test | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171153 | 3368 | - | Update receiver test cases to remove DCI format 1C | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171161 | 3369 | - | Editorial correction in reference clause numbering for TC 6.3.4A.1.1 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171162 | 3370 | - | Update test configuration table and requirement for CA_8B in clause 7 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171165 | 3371 | - | Addition of 7.4A.3_H and 7.4A.4_H to Annex F | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171167 | 3373 | - | Clean up on clause 7 256QAM test cases | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171178 | 3382 | - | Addition of Downlink Reference measurement channel for Cat-M1 TX characteristics | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171182 | 3383 | - | Clean up on Tx test cases for UE category M1 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171183 | 3384 | - | Correction to general and additional Tx spurious for UE category M1 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171184 | 3385 | - | Correction to HD-FDD PDSCH scheduling pattern for UE category M1 RMC | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171185 | 3386 | - | Correction to PUSCH-EVM with exclusion period for UE category M1 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171186 | 3387 | - | Correction to Power control test cases for UE category M1 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171187 | 3388 | - | Correction to ON/OFF time mask for UE category M1 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171188 | 3389 | - | Clarification of test requirement for test cases 6.2.2A.1, 6.2.4A.1 and 6.2.4A.1_1 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171190 | 3391 | - | Correction to additional spurious emissions test | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171191 | 3392 | - | Correction to test procedure for test case 7.9A | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171201 | 3396 | - | Editorial correction in test case 6.3.5A.2.2 | 14.1.0 | 14.2.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2017-03 | RAN#75 | R5-171202 | 3397 | - | Alignment frequency ranges in TC 6.6.3.1A.2 for CA_3A-26A and CA_5A-17A to TR 36.905 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171203 | 3398 | - | Correction in configuration IDs for NS_24 in test cases 6.2.4_2 and 6.6.3.3_1 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171226 | 3401 | - | Update of Annex C to include 4 antenna ports in UE | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171227 | 3402 | - | Adding support for 4 Rx antenna port UEs in Receiver test cases | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171234 | 3406 | - | Update of Reference Sensitivity test case for UE category M1 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171237 | 3409 | - | Correction to test case 7.3F.2, Reference sensitivity level with repetitions for category NB1 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171238 | 3410 | - | Correction to test case header in 8.11.1.1.1, 8.11.1.1.2, 8.11.1.1.3 and 8.11.1.1.3_1 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171247 | 3419 | - | Update of Frequency error test case for UE category M1 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171315 | 3435 | - | Clean up in test case 6.6.2.1A.2 to remove additional spectrum emission requirements | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171349 | 3437 | - | Correction to NS_24 and NS_25 test configurations to align use of Ful | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171514 | 3439 | - | Update TT of the TC 8.2.3.1.1.3 TDD FDD CA PDSCH Single Antenna Performance for FDD PCell(4DL CA) | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171700 | 3248 | 1 | Clean up editor's note for UL 64QAM | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171701 | 3390 | 1 | Correction to UL CA Tx tests | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171707 | 3230 | 1 | Updates of 7.3A Refsens for CA_1C-3A | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171708 | 3297 | 1 | Introduction of CA_3A-11A to section 7 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171709 | 3298 | 1 | Introduction of CA_8A-28A to section 7 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171711 | 3300 | 1 | Introduction of 3DL/1UL of CA_1A-8A-28A to section 7 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171714 | 3301 | 1 | Introduction of 3DL/1UL of CA_3A-8A-28A to section 7 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171717 | 3302 | 1 | Introduction of 3DL/1UL of CA_3A-28A-41A to section 7 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171719 | 3438 | 1 | CA_29A-66A, CA_29A-66A-66A, CA_29A-66C, CA_46A-66A Reference Sensitivity requirements | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171725 | 3330 | 1 | Updates of 6.6.3.2 Spurious emission band UE co-existence for Band 5 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171733 | 3322 | 1 | LAA: Applicability and test selection update to Section 8 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171734 | 3270 | 1 | Annexure update for LAA RF | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171735 | 3328 | 1 | Update of test case 7.6.1A.3 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171736 | 3367 | 1 | Update test case 7.5A.3 to add LAA band combinations | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171748 | 3404 | 1 | Test tolerance for NAICS demod test cases with CRS interference | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171752 | 3329 | 1 | Updates to test tolerances and test uncertainty for 4Rx TCs | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171753 | 3271 | 1 | LAA Uncertainties and Test Tolerances for Test Case 7.8.1A.3 Intermodulation for CA, inter band DL CA | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171754 | 3320 | 1 | LAA: Test case and test tolerance addition for Dual Layer DM-RS demod | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171787 | 3265 | 1 | Update to MPDCCH demod test cases in CE Mode A | 14.1.0 | 14.2.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2017-03 | RAN#75 | R5-171788 | 3289 | 1 | Correction of DCI format in MTCe2 TCs and PDSCH and MPDCCH configuration | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171790 | 3378 | 1 | Clean up on TRx TCs for UE category M1 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171791 | 3379 | 1 | Correction to Carrier leakage and In-band emissions for Cat-M1 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171792 | 3380 | 1 | Correction to Carrier leakage and In-band emissions | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171793 | 3412 | 1 | New eMTC test case 9.8.2.1, FDD and half-duplex FDD UE-selected subband CQI for UE category M1 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171794 | 3414 | 1 | New eMTC test case 9.8.2.2, TDD UE-selected subband CQI for UE category M1 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171795 | 3416 | 1 | New eMTC test case 9.8.1.2, TDD CQI reporting definition under AWGN conditions for UE category M1 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171796 | 3408 | 1 | Correction to test case 9.8.1.1, FDD and Half duplex FDD CQI reporting definition under AWGN conditions for UE category M1 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171813 | 3266 | 1 | Introduction of FDD and Half-Duplex FDD Demodulation of MPDCCH in CE Mode B Test Case | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171814 | 3267 | 1 | Introduction of TDD Demodulation of MPDCCH in CE Mode B Test Case | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171817 | 3235 | 1 | Addition of bandwidth combinations 10+5+10MHz and 20+10+5+10MHz in Chapter 8 FDD 3CA and 4CA test cases | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171818 | 3237 | 1 | Addition of bandwidth combinations 10+10+ 5MHz and 20+10+10+5MHz in TC 9.6.1.1_A.2 and 9.6.1.1_A.3 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171819 | 3240 | 1 | Addition of CA_2A-5A-12B test configuration and reference sensitivity in TC 7.3A.9. | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171821 | 3233 | 1 | Addition of CA_1A-3A-28A in 36.521-1 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171823 | 3241 | 1 | Addition of CA_2A-4A-30A test configuration and reference sensitivity in TC 7.3A.5. | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171825 | 3243 | 1 | Addition of CA_2A-4A-12A-30A test configuration and reference sensitivity in TC 7.3A.9. | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171829 | 3242 | 1 | Addition of CA_5A-12B test configuration and reference sensitivity in TC 7.3A.5. | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171832 | 3260 | 1 | Addition of CA_2A-4A-5A-12A test configuration and reference sensitivity in TC 7.3A.9 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171834 | 3261 | 1 | Addition of CA_2C-12A-30A test configuration and reference sensitivity in TC 7.3A.9 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171837 | 3263 | 1 | Addition of CA_2C-30A test configuration and reference sensitivity in TC 7.3A.5 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171838 | 3255 | 1 | Addition of CA_2A-2A-4A-5A in subclause 7.3A.9 of 36.521-1 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171839 | 3256 | 1 | Addition of CA_2A-2A-5A-12A in subclause 7.3A.9 of 36.521-1 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171840 | 3257 | 1 | Addition of CA_2A-2A-12B in subclause 7.3A.9 of 36.521-1 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171842 | 3308 | 1 | Update of TC 6.2.4A.2 for CA_2A-5A and CA_2A-12A | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171844 | 3331 | 1 | CA band combinations 1A-18A, 1A-26A, 1A-28A, 1A-42A and 18A-28A - Updates of 6.6.3.2A Spurious emission band UE co-existence | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171846 | 3309 | 1 | Update of TC 6.2.4A.2_1 for CA_2A-5A and CA_2A-12A | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171847 | 3311 | 1 | New test points in transmit modulation tests for CA_2A-5A and CA_2A-12A | 14.1.0 | 14.2.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2017-03 | RAN#75 | R5-171848 | 3426 | 1 | Update of 4DL CA Test Cases | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171851 | 3341 | 1 | Addition of the new TC 8.2.3.1.1.4 TDD FDD CA PDSCH Single Antenna Performance for FDD PCell(5DL CA) | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171852 | 3351 | 1 | Addition of the new TC 8.7.5.1_H.4 TDD FDD CA Sustained data rate performance for FDD PCell (5DL CA) for 256QAM in DL | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171853 | 3375 | 1 | Clean up on clause 7 CA test cases | 14.1.0 | 14.2.0 |

| 2017-03 | RAN#75 | R5-171861 | 3358 | 1 | Addition of CA configuration CA_3A-40C, CA_3A-41C, CA_28A-40C for Refsens test | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171862 | 3359 | 1 | Addition of CA configuration CA_4A-28A for Refsens test | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171863 | 3361 | 1 | Addition of CA configuration CA_7A-42A-42A for Refsens test | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171864 | 3342 | 1 | Addition of the new TC 8.2.3.1.2.3 TDD FDD CA PDSCH Single Antenna Performance for TDD PCell(4DL CA) | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171865 | 3343 | 1 | Addition of the new TC 8.2.3.1.2.4 TDD FDD CA PDSCH Single Antenna Performance for TDD PCell(5DL CA) | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171866 | 3344 | 1 | Addition of the new TC 8.2.2.3.1_A.3 TDD PDSCH Open Loop Spatial Multiplexing 2x2 for CA (4DL CA) | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171867 | 3354 | 1 | Addition of for FDD PDSCH Single Antenna Port Performance for CA (4DL CA) (8.2.1.1.1_A.4) | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171868 | 3355 | 1 | Addition of for FDD PDSCH Single Antenna Port Performance for CA (5DL CA) (8.2.1.1.1_A.5) | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171869 | 3356 | 1 | Addition of for FDD PDSCH Open Loop Spatial Multiplexing 2x2 for CA (4DL CA) (8.2.1.3.1_A.3) | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171870 | 3357 | 1 | Addition of for FDD PDSCH Open Loop Spatial Multiplexing 2x2 for CA (5DL CA) (8.2.1.3.1_A.4) | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171871 | 3372 | 1 | Clarification of test points for sustained data rate test | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171872 | 3400 | 1 | Introduction of new Dual Connectivity test cases - Power Control Relative power tolerance | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171875 | 3282 | 1 | Addition of Band 47 for UE maximum output power for V2X Communication | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171876 | 3284 | 1 | Introduction of UE maximum output power with additional requirements for V2X Communication | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171877 | 3285 | 1 | Introduction of 6.2.5G Configured transmitted power for V2X Communication | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171878 | 3286 | 1 | Introduction of 6.3.4G.1 General ON/OFF time mask for V2X Communication | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171879 | 3337 | 1 | Add Operating bands, channel bandwidth and RMC for V2X | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171880 | 3427 | 1 | Introduction of Reference sensitivity level for V2X | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171881 | 3428 | 1 | Introduction of Maximum input level for V2X | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171882 | 3429 | 1 | Introduction of Adjacent Channel Selectivity (ACS) for V2X | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171883 | 3430 | 1 | Introduction of In-band blocking for V2X | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171884 | 3431 | 1 | Introduction of Out-of-band blocking for V2X | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171885 | 3432 | 1 | Introduction of Spurious response for V2X | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171887 | 3288 | 1 | Correction of payload in fixed reference channel for CDM-multiplexed DM RS with four CSI-RS antenna ports | 14.1.0 | 14.2.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2017-03 | RAN#75 | R5-171888 | 3350 | 1 | Updates to legacy CSI test cases to include 4Rx UE | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171889 | 3376 | 1 | Correction to 3 or 4 layers 4Rx demodulation tests | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171890 | 3403 | 1 | Introduction of TDD 4Rx PDSCH demodulation test cases | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171896 | 3303 | 1 | Power Class 2: Update to A-MPR for NS_04 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171897 | 3268 | 1 | Updates of the SDR TC 8.7.5.2.2 and 8.7.5.2_H.2 for TDD FDD CA | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171898 | 3425 | 1 | Update of test configuration table of 4DL CA | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171916 | 3236 | 1 | TDD FDD CA Sustained data rate performance for TDD PCell (4DL CA) | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171917 | 3424 | 1 | Update of test configuration table of 3DL CA | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171918 | 3281 | 1 | Introduction to Performance test case 8.7.5.1.4 TDD FDD CA Sustained data rate performance for FDD PCell (5DL CA) | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171919 | 3345 | 1 | Introduction of LAA Closed-Loop spatial multiplexing performance test cases for 4Tx antenna ports | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171921 | 3348 | 1 | Test Tolerance updates to CQI reporting with enhanced receiver typeB test case | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171922 | 3246 | 1 | Update of NPDCCH single-antenna demodulation test | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171923 | 3247 | 1 | Update of NPDSCH demodulation test in standalone and Guard-band | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171924 | 3339 | 1 | Updates to In-band mode NPDSCH and NPDCCH Demodulation Performance tests for category NB1 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171932 | 3381 | 1 | Correction to PDSCH demodulation test cases for UE category M1 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171934 | 3299 | 1 | Introduction of CA_11A-28A to section 7 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171936 | 3283 | 1 | Introduction of UE maximum output power for modulation / channel bandwidth for V2X Communication | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171937 | 3231 | 1 | Update TS 36.521-1 with Addition of LTE Band 48 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171938 | 3399 | 1 | Addition configuration IDs to test case 6.2.3A.1_1 for CA configuration 10+20 MHz | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171940 | 3393 | 1 | Correction to TDD FDD 2CA Soft buffer test cases | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171941 | 3352 | 1 | Add minimum testing time in Annex G for SCE performance requirements | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171942 | 3349 | 1 | Updates to legacy demod test cases to include 4Rx UE | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171945 | 3440 | - | Band 41 HPUE Maximum Output Power | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171946 | 3441 | - | Adjacent Channel Leakage power Ratio for HPUE | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171949 | 3442 | 1 | Update of RMCs for NB-IoT RF tests | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171963 | 3275 | 2 | Update to test case 6.3.5F.2 Power Control Relative power tolerance for UE category NB1 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171967 | 3377 | 2 | Correction to Aggregate power control tolerance for UE category M1 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171968 | 3417 | 2 | Update of RMCs for UE category M1 in Annex A | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171969 | 3420 | 2 | Minimum requirements updates in section 8.11 test case for UE category M1 | 14.1.0 | 14.2.0 |
| 2017-03 | RAN#75 | R5-171997 | 3405 | 2 | Introduction of LAA PDCCH/PCFICH demodulation test case with FDD Pcell | 14.1.0 | 14.2.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2017-06 | RAN#76 | R5-172116 | 3447 | | NB-IoT bands 11, 25, 31, and 70 introduction to receiver requirements | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-172142 | 3450 | | Uncertainties and Test Tolerances for new LAA Test Cases - CQI reporting / PUSCH 3-1 | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-172196 | 3457 | | Correction to typos in UL-MIMO test cases 6.3.2B | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-172198 | 3458 | | Clarification to measurement of SEM in test procedure of TC 6.6.2.1A.2 | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-172199 | 3459 | | Introduction of switched case for inter-band CA transmit modulation test cases | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-172200 | 3460 | | Introduction of switched case for TC 6.5.2A.1.2_1 | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-172201 | 3461 | | Update of test requirements in TC 7.3A.3 for missing CA configurations | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-172203 | 3463 | | Update of TC 7.3_1 to align with minimum conformance requirements | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-172206 | 3464 | | Update of TC 6.6.2.2A.2 for CA_2A-5A and CA_2A-12A | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-172207 | 3465 | | Update of TC 6.6.3.3A.2 for CA_2A-5A and CA_2A-12A | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-172214 | 3467 | | Remove content of SDR test cases for 4Rx | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-172216 | 3468 | | Update of requirements in TC 6.2.2A.2 for new Rel-14 CA configurations | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-172219 | 3471 | | Update of test requirements in TC 6.6.3.1A.2 for new Rel-14 CA configurations | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-172221 | 3473 | | Update of initial conditions in TC 6.6.3.3A.2 for new Rel-14 CA configurations | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-172224 | 3476 | | Update of test requirements in TC 7.3A.6 for new Rel-14 CA configurations | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-172255 | 3477 | | Update of the TC about TDD FDD CA Sustained data rate performance | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-172260 | 3478 | | Update of the TC 7.3A.5 REFSENS for 3DL CA (CA_1A-19A-42A, 1A-21A-42A, 19A-21A-42A) | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-172307 | 3488 | | Update to the Dual Connectivity performance test cases | 14.2.0 | 14.3.0 |

| 2017-06 | RAN#76 | R5-173063 | 3595 | 1 | Correction to CSI tests for Cat-M1 | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173064 | 3596 | 1 | Correction to MPDCCH aggregation level for Cat-M1 | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173065 | 3598 | 2 | Correction to Cat-M1 demodulation test cases | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173070 | 3550 | 2 | Introduction of CA_1A-11A-28A to section 7 | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173071 | 3557 | 2 | Update of 2DL/1UL of CA_3A-3A and CA_7A-7A to section 7.3A.3 | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173072 | 3558 | 2 | Introduction of 3DL/1UL of CA_3A-3A-7A and CA_3A-7A-7A to section 7.3A.5 | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173073 | 3559 | 2 | Introduction of 4DL/1UL of CA_3A-3A-7A-7A to section 7.3A.9 | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173200 | 3523 | 1 | Updated Test Applicability for TC 6.2.3E | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173201 | 3456 | 1 | Correction to typos in Rx test cases for CA | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173202 | 3522 | 1 | Updated table references related to reference sensitivity in test description and test requirements | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173203 | 3604 | 1 | Correction to UL configuration for REFSENS test for CA_41C and CA_7C | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173204 | 3605 | 1 | Clean up on test configuration tables for intra-contiguous 2CA Rx tests | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173205 | 3493 | 1 | Update of NAICS demodulation TCs | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173206 | 3608 | 1 | Correction to Annex B.2.2 | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173209 | 3443 | 1 | Update of test points and test requirements in TC 7.3A.5 for CA_4A-12A-30A | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173210 | 3451 | 1 | New CA band combinations CA_1A-41A-42C and 1A-41C-42A - Updates of 7.3A.9 REFSENS | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173212 | 3452 | 1 | New CA band combinations CA_3C-8A - Updates of 7.3A.5 REFSENS | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173215 | 3472 | 1 | Update of TC 6.6.3.2A.2 for Rel-14 CA configuration CA_2A-7A | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173216 | 3520 | 1 | Align operating bands and Channel bandwidths in sub-clause 5.2, 5.2A, 5.4.2.1 and 5.4.2A with TS36.101 v14.3.0 | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173217 | 3527 | 1 | Addition of CA_13A-66A in TS 36.521-1 | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173220 | 3552 | 1 | Corrections on 3A-28A-41A in Test Configuration Table of section 7.3A.5.4.1 | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173221 | 3554 | 1 | Introduction of 2UL/2DL CA_41A-42A to section 7 | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173223 | 3600 | 1 | Addition of CA configuration CA_66A-66C, CA_xA-66A-66A and CA_66A-66A-xA for Refsens test | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173228 | 3624 | 1 | Test Tolerances and general updates to NB-IoT performance test cases | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173276 | 3448 | 1 | Addition of new LAA Test Case - CQI reporting / PUSCH 3-1 / FDD Pcell | 14.2.0 | 14.3.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2017-06 | RAN#76 | R5-173277 | 3449 | 1 | Addition of new LAA Test Case - CQI reporting / PUSCH 3-1 / TDD Pcell | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173278 | 3525 | 1 | Introduction of LAA Dual-Layer Spatial Multiplexing with DM-RS with TDD as Pcell Test Case | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173279 | 3542 | 1 | Update test case 7.6.2A.3 to add LAA band combinations | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173280 | 3543 | 1 | Update test case 7.7A.3 to add LAA band combinations | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173281 | 3626 | 1 | LAA: Addition of CQI Reporting with FDD as PCELL | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173288 | 3453 | 1 | Introduction to New Rx test case 7.6.3A.8 Narrow band blocking for 5DL CA | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173289 | 3454 | 1 | Introduction to New Rx test case 7.7A.8 Spurious response for 5DL CA | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173290 | 3455 | 1 | Introduction to New Rx test case 7.8.1A.8 Wideband intermodulation for 5DL CA | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173291 | 3466 | 1 | Update of test requirements in TC 7.3A.6 for new Rel-13 CA configurations | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173295 | 3535 | 1 | Introduction of 8.2.3.2.2.3 TDD FDD CA PDSCH Open Loop Spatial Multiplexing 2x2 for TDD PCell (4DL CA) | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173296 | 3536 | 1 | Introduction of 8.2.3.2.2.4 TDD FDD CA PDSCH Open Loop Spatial Multiplexing 2x2 for TDD PCell (5DL CA) | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173298 | 3560 | 1 | Correction of 3DL CA & 4DL CA RX TC | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173299 | 3561 | 1 | Introduction of New TC7.3A.10 Reference sensitivity level for 5DL CA | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173301 | 3562 | 1 | Addition of CA_8A-41C in test configuration in TC 7.3A.5 | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173302 | 3539 | 1 | Addition of G.3A for TDD FDD CA PDSCH Single Antenna and Open Loop Spatial Multiplexing 2x2 Performance Test cases (4 & 5DL CA) | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173303 | 3555 | 1 | Update of 2DL/1UL of CA_3A-42A, CA_28A-42A, CA_41A-42A and CA_42A-46A to section 7.3A.3 | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173305 | 3556 | 1 | Introduction of 3DL/1UL of CA_2A-4A-7A and CA_3A-41A-42A to section 7.3A.5 | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173306 | 3618 | 1 | Addition of test case TDD FDD CQI Reporting under AWGN conditions – PUCCH 1-0 for FDD PCell (5DL CA) (9.6.1.3.4) | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173307 | 3619 | 1 | Addition of test case TDD FDD CQI Reporting under AWGN conditions – PUCCH 1-0 for TDD PCell (5DL CA) (9.6.1.4.4) | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173316 | 3510 | 1 | Updates to eMTC test case 8.11.1.1.3, FDD and half-duplex FDD PDSCH Transmit Diversity 2x1 for UE category M1 | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173317 | 3514 | 1 | Updates to eMTC test case 8.11.1.2.3, TDD PDSCH Transmit Diversity for UE category M1 | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173318 | 3515 | 1 | Updates to eMTC test case 9.8.1.1, FDD and Half duplex FDD CQI reporting definition under AWGN conditions for UE category M1 | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173329 | 3496 | 1 | Sending of MaxLayersMimo-r10 IE for 4Rx TCs with more than 2 Layers | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173330 | 3530 | 1 | Updates to legacy FDD PDSCH demod test cases to include 4Rx UE | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173331 | 3531 | 1 | Updates to legacy TDD PDSCH demod test cases to include 4Rx UE | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173332 | 3532 | 1 | Updates to legacy TDD FDD CA PDSCH demod test cases to include 4Rx UE | 14.2.0 | 14.3.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2017-06 | RAN#76 | R5-173333 | 3533 | 1 | Updates to legacy sustained data rate test cases to include 4Rx UE | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173339 | 3612 | 1 | Addition of NS_27 for Band 48 in A-SEM test cases | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173340 | 3613 | 1 | Addition of NS_27 for Band 48 in A-Spurious test cases | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173341 | 3444 | 1 | Correction to Band 70 test frequencies to clarify the use of two duplex spacings | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173342 | 3508 | 1 | Updates to eMTC test case 8.11.1.1.1, FDD and half-duplex FDD Closed-loop spatial multiplexing performance for UE category M1 | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173343 | 3509 | 1 | Updates to eMTC test case 8.11.1.1.2, FDD and half-duplex FDD PDSCH Single-layer Spatial Multiplexing on antenna ports 7 or 8 for UE category M1 | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173344 | 3512 | 1 | Updates to eMTC test case 8.11.1.2.1, TDD Closed-loop spatial multiplexing performance for UE category M1 (Cell-Specific Reference Symbols) | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173345 | 3513 | 1 | Updates to eMTC test case 8.11.1.2.2, TDD PDSCH Single-layer Spatial Multiplexing on antenna ports 7 or 8 for UE category M1 | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173346 | 3497 | 1 | eHST RF: Practical and consistent model definition for HST-SFN scenario | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173347 | 3549 | 1 | Introduction of reference channels for enhanced high speed train test | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173348 | 3481 | 1 | Update of the TC 6.6.3F.2 Spurious emission band UE co-existence for category NB1 for Release 14 | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173349 | 3581 | 1 | NB-IoT band 70 introduction to transmitter requirements | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173351 | 3446 | 1 | CA_46A-46A-66A, CA_46C-66A Receiver requirements | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173354 | 3482 | 1 | Update to operating bands for V2X Communication | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173355 | 3483 | 1 | Introduction of 6.2.2G UE Maximum Output Power for V2X Communication | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173356 | 3484 | 1 | Update to 6.2.3G.1 Maximum Power Reduction (MPR) for V2X Communication / Power class 3 / Contiguous allocation of PSCCH and PSSCH | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173357 | 3485 | 1 | Update to 6.2.4G.1 Additional Maximum Power Reduction (A-MPR) for V2X Communication / Non-concurrent with E-UTRA uplink transmission | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173358 | 3486 | 1 | Update to TC 6.2.5G.1 Configured UE transmitted Output Power for V2X Communication / Non-concurrent with E-UTRA uplink transmission | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173359 | 3489 | 1 | Introduction of 6.2.2G.2 UE Maximum Output Power for V2X Communication / Simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmission | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173360 | 3490 | 1 | Introduction of 6.2.5G.2 Configured UE transmitted Output Power for V2X Communication / Simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmission | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173361 | 3492 | 1 | Introduction of 6.2.3G.1.3 Maximum Power Reduction (MPR) for V2X Communication / Power class 3 / Simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmission | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173370 | 3566 | 1 | Update of 7.3G.1 Reference sensitivity level for V2X Communication / Non-concurrent with E-UTRA uplink transmissions | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173372 | 3568 | 1 | Introduction of 7.3G.3 Reference sensitivity level for V2X Communication / Intra-band contiguous MCC operation | 14.2.0 | 14.3.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2017-06 | RAN#76 | R5-173373 | 3569 | 1 | Update of 7.4G.1 Maximum input level for V2X Communication / Non-concurrent with E-UTRA uplink transmissions | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173374 | 3570 | 1 | Introduction of 7.4G.2 Maximum input level for V2X Communication / Simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173375 | 3571 | 1 | Introduction of 7.4G.3 Maximum input level for V2X Communication / Intra-band contiguous MCC operation | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173376 | 3572 | 1 | Update of 7.5G.1 Adjacent channel selectivity (ACS) for V2X Communication / Non-concurrent | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173377 | 3573 | 1 | Introduction of 7.5G.2 Adjacent channel selectivity (ACS) for V2X Communication / Simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173378 | 3574 | 1 | Introduction of 7.5G.3 Adjacent channel selectivity (ACS) for V2X Communication / Intra-band contiguous MCC operation | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173379 | 3575 | 1 | Update of 7.6.1G.1 In-band blocking for V2X Communication / Non-concurrent with E-UTRA uplink transmissions | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173380 | 3576 | 1 | Introduction of 7.6.1G.2 In-band blocking for V2X Communication / Non-concurrent with E-UTRA uplink transmissions | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173381 | 3577 | 1 | Introduction of 7.6.1G.3 In-band blocking for V2X Communication / Intra-band contiguous MCC operation | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173382 | 3582 | 1 | Introduction of TC 7.8.1G Wide band Intermodulation for V2X | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173383 | 3583 | 1 | Introduction of TC7.9G Spurious emissions for V2X | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173384 | 3487 | 1 | Correction to the A-SE requirement for Band 41 | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173385 | 3469 | 1 | Update of TC 6.2.4A.2 for new Rel-14 CA configurations | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173386 | 3470 | 1 | Update of TC 6.2.4A.2_1 for new Rel-14 CA configurations | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173387 | 3474 | 1 | Update of TC 6.6.2.2A.2 for new Rel-14 CA configurations | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173388 | 3475 | 1 | Update of TC 6.6.2.2A.2_1 for new Rel-14 CA configurations | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173390 | 3553 | 1 | Introduction of 2UL/2DL CA_41A-42A to section 6 | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173395 | 3564 | 1 | Addition of CA bands in test configuration in TC 7.3A.5 | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173396 | 3565 | 1 | Addition of CA bands in test configuration in TC 7.3A.9 | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173397 | 3580 | 1 | Introduction of 3DL/1UL of CA_3A-20A-32A to section 7 | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173399 | 3563 | 1 | Addition of CA_12A-66A in test configuration in 7.3A.3 | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173400 | 3545 | 1 | Change of UE target power configuration for EVM test | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173401 | 3479 | 1 | Update of the TC 7.3A.9 REFSENS for 4DL CA (CA_1A-3A-19A-42A, 1A-19A-21A-42A, 1A-19A-42C, 1A-21A-42C, 19A-21A-42C) | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173402 | 3534 | 1 | Correction to Test configuration Tables in subclause 7.3A for 3DL CA and 4DL CA | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173403 | 3584 | 1 | Correction to 4DL CA out of band blocking interferer | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173404 | 3620 | 1 | Correction of CA configuration CA_28A-40C Refsens test | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173409 | 3591 | 1 | Clean up on Cat-M1 Rx test cases | 14.2.0 | 14.3.0 |

| 2017-06 | RAN#76 | R5-173417 | 3462 | 1 | Update of legacy Reference Sensitivity CA tests for 4Rx | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173421 | 3507 | 1 | Updates to Annex A and Annex G for eMTC test cases | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173422 | 3511 | 1 | Updates to eMTC test case 8.11.1.1.3_1, FDD PDS and half-duplex FDD CH Transmit Diversity 2x1 for UE category M1 (CEmodeB) | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173423 | 3546 | 1 | Clean up NPDCCH single-antenna performance test | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173424 | 3547 | 1 | Clean up NPDSCH demodulation test in standalone and Guard-band mode | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173427 | 3606 | 1 | Correction to 3DL CA out of band blocking interferer | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173428 | 3590 | 1 | Correction to transmit signal quality tests for category M1 | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173431 | 3502 | 1 | Updates to A-MPR, A-SEM and A-Spur TCs | 14.2.0 | 14.3.0 |
| 2017-06 | RAN#76 | R5-173436 | 3567 | 2 | Introduction of 7.3G.2 Reference sensitivity level for V2X Communication / Simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions | 14.2.0 | 14.3.0 |
| 2017-09 | RAN#77 | R5-173529 | 3630 | - | Correction of Test Settings for CA_4A-12A-30A in TC 7.3A.5 | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-173617 | 3637 | - | Addition of CA_2A-5A-66A in TS 36.521-1 | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-173619 | 3639 | - | Addition of CA_2A-13A-66A in TS 36.521-1 | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-173694 | 3645 | - | Addition of CA_XA-YC-ZA to 7.4A.7 | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-173695 | 3646 | - | Addition of CA_XA-YC-ZA to 7.5A.7 | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-173696 | 3647 | - | Addition of CA_XA-YC-ZA to 7.6.1A.7 | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-173697 | 3648 | - | Addition of CA_XA-YC-ZA to 7.6.2A.7 | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-173698 | 3649 | - | Addition of CA_XA-YC-ZA to 7.6.3A.7 | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-173699 | 3650 | - | Addition of CA_XA-YC-ZA to 7.8.1A.7 | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-173784 | 3652 | - | Editorial correction to 4Rx Applicability for CSI | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-173785 | 3653 | - | Addition of FS3 OCNG pattern to Rx tests | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-173787 | 3655 | - | Clarification on UL RMC for category NB1 | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-173797 | 3658 | - | Addition of measurement period for 9.8.2.1 in Annex G.5.4 | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-173798 | 3659 | - | Removing editor's note regarding UE's declaration on carrier center frequency for Cat M1 | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-173912 | 3667 | - | Editorial: Addition of band 40 for eMTC | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-173942 | 3674 | - | Editorial: Addition of V2V reference resource pooll configurations | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-173949 | 3676 | - | Addition of new Rel-13 CA RF test case 7.4A.8 | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-173962 | 3678 | - | Update to test requirements in TC 6.7 | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-173963 | 3679 | - | Updates to test requirements for CA tests with interferers | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-173984 | 3683 | - | Correction of test procedure and test requirement in TC 6.6.3.2A.2 (editorial change) | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-173993 | 3686 | - | eMTC correction of missing references for UL RMCs | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-173994 | 3687 | - | Correction of test requirement in TC 7.3_1 (editorial change) | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-173999 | 3690 | - | New eMTC test case, 6.3.5EA.3_1 Aggregate power control tolerance for UE category M1 (CE Mode B) | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-174006 | 3694 | - | Addition of new 4Rx SDR test cases - Annex F | 14.3.0 | 14.4.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2017-09 | RAN#77 | R5-174007 | 3695 | - | Update Annex A with RMCs for 4Rx and 5MHz (editorial change) | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-174024 | 3700 | - | Addition of new CA Configuration CA_3A-38A to TS 36.521-1 | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-174026 | 3701 | - | Editorial Change of TC 8.10.1.1.3 – Alignment to TS 36.101 | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-174027 | 3702 | - | Correction of RB allocation in TC 6.5.2.3EA | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-174029 | 3704 | - | Editorial Change of RBstart expression in category M1 TC | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-174031 | 3706 | - | Editorial Change of heading format for TC 6.3.3F | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-174090 | 3713 | - | Editorial change of CA configuration for CA_41C-42A and CA_41C-42C | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-174092 | 3714 | - | New CA band combination CA_41A-42C(2UL) and CA_41C_42A(2UL) - Updates of 7.3A.5 REFSENS | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-174096 | 3716 | - | Correction of test frequency in 6.2.4EA for NS_17 | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-174097 | 3717 | - | Correction of test frequency in 6.6.3EA.3 for NS_17 | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-174135 | 3724 | - | Editorial Change to align LAA capability definitions for demodulation test cases in sub-clause 8.1.2 with TS 36.101 v14.4.0 | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-174136 | 3725 | - | Added CA band combination to test requirement | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-174152 | 3729 | - | Addition of 1.4 and 3 MHz to Ch 5 in 36.521-1 for Band 65 | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-174153 | 3730 | - | Addition of 1.4 and 3 MHz to Ch 7 in 36.521-1 for Band 65 | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-174155 | 3731 | - | Receiver requirements for CA_29A-70A, CA_29A-46A-66A, CA_46A-66A-66A, CA_46A-66C, CA_46A-70A | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-174178 | 3732 | - | Editorial Change of tables for channel bandwidths per operating band for CA | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-174244 | 3738 | - | Introduction of the new TC7.5A.8 ACS for 5DL CA | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-174245 | 3739 | - | Introduction of the new TC7.6.1A.8 In-band blocking for 5DL CA | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-174246 | 3740 | - | Introduction of the new TC7.6.2A.8 Out-of-band blocking for 5DL CA | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-174256 | 3743 | - | FDD Enhanced Downlink Control Channel Performance Type A for PCFICH/PDCCH, 2 Tx Antenna Port under Asynchronous Network | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-174257 | 3744 | - | FDD Enhanced Downlink Control Channel Performance Type A for PCFICH/PDCCH, 2 Tx Antenna Port with Non-Colliding CRS Dominant Interferer | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-174258 | 3745 | - | Test procedure correction for CQI-RI test cases | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-174261 | 3748 | - | TDD Enhanced Downlink Control Channel Performance Type A for PCFICH/PDCCH, 2 Tx Antenna Port with Colliding CRS Dominant Interferer | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-174262 | 3749 | - | TDD Enhanced Downlink Control Channel Performance Type A for PCFICH/PDCCH, 2 Tx Antenna Port with Non-Colliding CRS Dominant Interferer | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-174264 | 3751 | - | Addition of test points in test configuration table for RX sensitivity TCs | 14.3.0 | 14.4.0 |
| 2017-09 | RAN#77 | R5-174270 | 3755 | - | TDD Enhanced Downlink Control Channel Performance Type B for PCFICH/PDCCH, 2 Tx Antenna Port with Colliding CRS Dominant Interferer | 14.3.0 | 14.4.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|

| 2018-03 | RAN#79 | R5-181621 | 4082 | 1 | Update of 5DL CA Receiver Test Cases | 15.0.0 | 15.1.0 |
| 2018-03 | RAN#79 | R5-181622 | 4117 | 1 | Addition of the information about timing difference for TDD CA (2Rx) | 15.0.0 | 15.1.0 |
| 2018-03 | RAN#79 | R5-181624 | 4022 | 1 | Introduction of TDD sustained data rate performance for CA (5DL CA) | 15.0.0 | 15.1.0 |
| 2018-03 | RAN#79 | R5-181625 | 4047 | 1 | Updated to RF section 7 test cases for Rel-14 CA combination | 15.0.0 | 15.1.0 |
| 2018-03 | RAN#79 | R5-181626 | 4079 | 1 | Introduction of TDD PDSCH Closed Loop Multi Layer Spatial Multiplexing 4x2 for CA (5DL CA) | 15.0.0 | 15.1.0 |
| 2018-03 | RAN#79 | R5-181627 | 4080 | 1 | Introduction of TDD PDSCH Open Loop Spatial Multiplexing 2x2 for CA (5DL CA) | 15.0.0 | 15.1.0 |
| 2018-03 | RAN#79 | R5-181628 | 4081 | 1 | Introduction of TDD PDSCH Single Antenna Port Performance for CA (5DL CA) | 15.0.0 | 15.1.0 |
| 2018-03 | RAN#79 | R5-181629 | 4116 | 1 | Update test cases 6.2.2A.2 and 6.2.3A.2 for 12A-66A 2ULCA | 15.0.0 | 15.1.0 |
| 2018-03 | RAN#79 | R5-181631 | 4026 | 1 | Supplement the TC In-band emissions for non-allocated RB for V2X Communication/Non-concurrent with E-UTRA uplink transmissions with PSBCH testing | 15.0.0 | 15.1.0 |
| 2018-03 | RAN#79 | R5-181632 | 4027 | 1 | Update of the V2V SEM and SE test cases | 15.0.0 | 15.1.0 |
| 2018-03 | RAN#79 | R5-181633 | 4036 | 1 | Completion of Performance Test Cases 14.2 and 14.3 for V2V Sidelink communications | 15.0.0 | 15.1.0 |
| 2018-03 | RAN#79 | R5-181634 | 4107 | 1 | Update of Spectrum Emission Mask for V2X Communication / Non-concurrent with E-UTRA uplink transmissions in 6.5.2.4G.1 | 15.0.0 | 15.1.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2018-03 | RAN#79 | R5-181636 | 4035 | 1 | Addition of IBE and EVM test requirement for Elaa | 15.0.0 | 15.1.0 |
| 2018-03 | RAN#79 | R5-181639 | 4108 | 1 | eLAA: Updates to Maximum output power | 15.0.0 | 15.1.0 |
| 2018-03 | RAN#79 | R5-181641 | 4003 | 1 | Introduction of New TC 8.13.1.3.1 FDD PDSCH Closed Loop Single Layer Spatial Multiplexing 2x4 with TM4 Interference Model – Enhanced Performance Requirement Type A (2DL CA) | 15.0.0 | 15.1.0 |
| 2018-03 | RAN#79 | R5-181642 | 4004 | 1 | Introduction of New TC 8.13.1.4.1 FDD PDSCH Single-layer Spatial Multiplexing 2x4 on antenna ports 7 or 8 with TM9 Interference Model - Enhanced Performance Requirement Type A (2DL CA) | 15.0.0 | 15.1.0 |
| 2018-03 | RAN#79 | R5-181643 | 4005 | 1 | Introduction of New TC 8.13.2.3.1 TDD PDSCH Closed Loop Single Layer Spatial Multiplexing 2x4 with TM4 Interference Model – Enhanced Performance Requirement Type A (2DL CA) | 15.0.0 | 15.1.0 |
| 2018-03 | RAN#79 | R5-181644 | 4006 | 1 | Introduction of New TC 8.13.2.4.1 TDD PDSCH Single-layer Spatial Multiplexing 2x4 on antenna ports 7 or 8 with TM9 Interference Model - Enhanced Performance Requirement Type A (2DL CA) | 15.0.0 | 15.1.0 |
| 2018-03 | RAN#79 | R5-181645 | 3970 | 1 | Update Annexes F.1.2 and F.3.2 for 4.2GHz < f <= 6GHz of 6.2.2/6.3.2/6.3.3/6.3.5.1 and V2V Sidelink test case 6.3.5G.1 | 15.0.0 | 15.1.0 |
| 2018-03 | RAN#79 | R5-181646 | 3967 | 1 | Update the message contents and test requirement for V2V Sidelink test case 6.3.5G.1 | 15.0.0 | 15.1.0 |
| 2018-03 | RAN#79 | R5-181647 | 3968 | 1 | Update the message contents and test requirement for V2X test case 6.3.5G.3 | 15.0.0 | 15.1.0 |
| 2018-03 | RAN#79 | R5-181648 | 4015 | 1 | Introduction of Maximum Power Reduction (MPR) for V2X Communication / Power class 3 / Intra-band contiguous multi-carrier operation | 15.0.0 | 15.1.0 |
| 2018-03 | RAN#79 | R5-181649 | 4058 | 1 | Update to UE Maximum Output Power for V2X Communication / Non-concurrent with E-UTRA uplink transmission | 15.0.0 | 15.1.0 |
| 2018-03 | RAN#79 | R5-181650 | 4048 | 1 | Align CA capability definitions for demodulation test cases in sub-clause 8.1.2.x with TS 36.101 v15.1.0 | 15.0.0 | 15.1.0 |
| 2018-03 | RAN#79 | R5-181651 | 4050 | 1 | Updated to RF section 7 test cases for Rel-15 CA combination | 15.0.0 | 15.1.0 |
| 2018-03 | RAN#79 | R5-181653 | 4114 | 1 | Correction to test case 6.6.3.1A.1 | 15.0.0 | 15.1.0 |
| 2018-03 | RAN#79 | R5-181654 | 4061 | 1 | Corrections for eMTC demodulation test cases | 15.0.0 | 15.1.0 |
| 2018-03 | RAN#79 | R5-181663 | 4007 | 1 | Update to Rx test cases for 5DL CA | 15.0.0 | 15.1.0 |
| 2018-03 | RAN#79 | R5-181664 | 4073 | 1 | Correction to 3DL/4DL CA Receiver Test Cases | 15.0.0 | 15.1.0 |
| 2018-03 | RAN#79 | R5-181361 | 4086 | 2 | Addition of missing CR "Updates to PDSCH scheduling for CQI reporting test cases for CA" | 15.1.0 | 15.1.1 |
| 2018-04 | RAN #79 | RP-180517 | 4145 | - | Resubmission of clause 8 part of CR: Cat1bis: Addition of new CAT1-bis SDR TCs<br>Note: This is a resubmission of CR3950r1 which was not implemented after RAN #78. | 15.1.1 | 15.1.2 |
| 2018-06 | RAN #80 | R5-182229 | 4146 | - | Editorial change – Alignment of RMCs in HST TCs | 15.1.2 | 15.2.0 |
| 2018-06 | RAN #80 | R5-182253 | 4149 | - | Addition of TT for test case 8.2.1.9 in TS 36.521-1 | 15.1.2 | 15.2.0 |
| 2018-06 | RAN #80 | R5-182254 | 4150 | - | Addition of TT for test case 8.2.2.9 in TS 36.521-1 | 15.1.2 | 15.2.0 |
| 2018-06 | RAN #80 | R5-182273 | 4155 | - | Update minimum conformance requirements for B43 in Spurious emission band UE co-existence test case (editorial) | 15.1.2 | 15.2.0 |
| 2018-06 | RAN #80 | R5-182362 | 4163 | - | eLAA: RMC Update for eLAA | 15.1.2 | 15.2.0 |
| 2018-06 | RAN #80 | R5-182366 | 4164 | - | New test case: 7.4EC Maximum input level for UE category M2 | 15.1.2 | 15.2.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2018-06 | RAN #80 | R5-182414 | 4180 | - | Updating category M2 receiver test case 7.3EC with new bands (4, 14, 71) | 15.1.2 | 15.2.0 |
| 2018-06 | RAN #80 | R5-182531 | 4186 | - | Update to Transmit OFF power for V2X Communication / Non-concurrent with E-UTRA uplink transmissions | 15.1.2 | 15.2.0 |
| 2018-06 | RAN #80 | R5-182532 | 4187 | - | Update to General ON/OFF time mask for V2X Communication / Non-concurrent with E-UTRA uplink transmissions | 15.1.2 | 15.2.0 |
| 2018-06 | RAN #80 | R5-182534 | 4189 | - | Update to PSSS/SSSS time mask for V2X Communication / Non-concurrent with E-UTRA uplink transmissions | 15.1.2 | 15.2.0 |
| 2018-06 | RAN #80 | R5-182539 | 4193 | - | Update to Maximum Power Reduction (MPR) for V2X Communication / Power class 3 / Contiguous allocation of PSCCH and PSSCH / Non-concurrent with E-UTRA uplink transmissions | 15.1.2 | 15.2.0 |
| 2018-06 | RAN #80 | R5-182590 | 4204 | - | Update to UE Maximum Output Power for V2X Communication / Non-concurrent with E-UTRA uplink transmission | 15.1.2 | 15.2.0 |
| 2018-06 | RAN #80 | R5-182591 | 4205 | - | Update to UE Maximum Output Power for V2X Communication / Simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmission | 15.1.2 | 15.2.0 |
| 2018-06 | RAN #80 | R5-182592 | 4206 | - | Update to UE Maximum Output Power for V2X Communication / Intra-band contiguous multi-carrier operation | 15.1.2 | 15.2.0 |
| 2018-06 | RAN #80 | R5-182602 | 4212 | - | Addition of Annex G for V2V/X performance requirements for Sidelink communications | 15.1.2 | 15.2.0 |
| 2018-06 | RAN #80 | R5-182606 | 4215 | - | Addition of V2V performance test 14.4 for Sidelink communications | 15.1.2 | 15.2.0 |
| 2018-06 | RAN #80 | R5-182626 | 4224 | - | Update to 6.6.1G.1 | 15.1.2 | 15.2.0 |
| 2018-06 | RAN #80 | R5-182631 | 4227 | - | New LTE 3UL CA TC 6.6.3.2A.4 | 15.1.2 | 15.2.0 |
| 2018-06 | RAN #80 | R5-182633 | 4228 | - | eLAA update to 6.3.5A.2.2 | 15.1.2 | 15.2.0 |
| 2018-06 | RAN #80 | R5-182647 | 4230 | - | Resubmit the CR of TC 9.7_1.1.2 for UE category 1bis | 15.1.2 | 15.2.0 |
| 2018-06 | RAN #80 | R5-182661 | 4231 | - | Update of test case 6.5.2.1G.1, EVM for V2X non-concurrent with E-UTRA | 15.1.2 | 15.2.0 |
| 2018-06 | RAN #80 | R5-182662 | 4232 | - | Update of test case 6.5.2.2G.1, Carrier leakage for V2X non-concurrent with E-UTRA | 15.1.2 | 15.2.0 |
| 2018-06 | RAN #80 | R5-182663 | 4233 | - | Update of Annex E to add EVM calculation method for V2X communication | 15.1.2 | 15.2.0 |
| 2018-06 | RAN #80 | R5-182667 | 4235 | - | Addition of REFSENS for CA_40E | 15.1.2 | 15.2.0 |
| 2018-06 | RAN #80 | R5-182669 | 4236 | - | Addition of REFSENS for CA_41F | 15.1.2 | 15.2.0 |
| 2018-06 | RAN #80 | R5-182672 | 4237 | - | Introduction of band 73 to TS36.521-1 clause 5 | 15.1.2 | 15.2.0 |
| 2018-06 | RAN #80 | R5-182687 | 4242 | - | Introduction of TC 6.3.5A.1.4 Power Control Absolute power tolerance for CA (3UL CA) | 15.1.2 | 15.2.0 |
| 2018-06 | RAN #80 | R5-182688 | 4243 | - | Introduction of TC 6.3.5A.2.4.1 Power Control Relative power tolerance for CA (intra-band contiguous 3DL CA and 3UL CA) | 15.1.2 | 15.2.0 |
| 2018-06 | RAN #80 | R5-182691 | 4246 | - | Introduction of TC 6.3.5A.2.4.3 Power Control Relative power tolerance for CA (intra-band non-contiguous 3DL CA and 3UL CA) | 15.1.2 | 15.2.0 |
| 2018-06 | RAN #80 | R5-182694 | 4247 | - | Introduction of TC 6.3.5A.3.4 Aggregate Power Control Tolerance for CA (3UL CA) | 15.1.2 | 15.2.0 |
| 2018-06 | RAN #80 | R5-182696 | 4249 | - | CA band combination CA_1A-18A-28A - Updates of test points for some Rx tests | 15.1.2 | 15.2.0 |
| 2018-06 | RAN #80 | R5-182699 | 4251 | - | CA band combination CA_3A-42A - Updates of 7.3A.6 REFSENS | 15.1.2 | 15.2.0 |

| 2018-09 | RAN #81 | R5-185426 | 4379 | 1 | New test case: 6.2.3A.3_2, Maximum Power Reduction (MPR) for CA (intra-band non-contiguous DL CA and UL CA) for UL 256QAM | 15.2.0 | 15.3.0 |
| 2018-09 | RAN #81 | R5-185427 | 4449 | 1 | New UL 256QAM test case: 6.6.2.2_2 Additional Spectrum Emission Mask for UL 256QAM | 15.2.0 | 15.3.0 |
| 2018-09 | RAN #81 | R5-185431 | 4351 | 1 | eLAA_correction to 6.3.5A.1.2 and 6.3.5A.2.2 | 15.2.0 | 15.3.0 |
| 2018-09 | RAN #81 | R5-185432 | 4353 | 1 | eLAA_Update to 6.6.3.1A.2 | 15.2.0 | 15.3.0 |
| 2018-09 | RAN #81 | R5-185433 | 4447 | 1 | eLAA: Updates to Adjacent Channel Leakage power Ratio for CA | 15.2.0 | 15.3.0 |
| 2018-09 | RAN #81 | R5-185434 | 4419 | 1 | Addition of new UL 256QAM test case - A-MPR for 2UL CA intra-band contiguous | 15.2.0 | 15.3.0 |
| 2018-09 | RAN #81 | R5-185435 | 4418 | 1 | Correction of test points and test requirements for TC 6.2.4A.2_1 | 15.2.0 | 15.3.0 |
| 2018-09 | RAN #81 | R5-185436 | 4417 | 1 | Correction of test points and test requirements for TC 6.2.4A.2 | 15.2.0 | 15.3.0 |
| 2018-09 | RAN #81 | R5-185438 | 4343 | 1 | Introduction of V2X TC 6.5.2.4G.3 | 15.2.0 | 15.3.0 |
| 2018-09 | RAN #81 | R5-185439 | 4344 | 1 | Updation of V2X TC 6.6.2.2G.2 | 15.2.0 | 15.3.0 |
| 2018-09 | RAN #81 | R5-185440 | 4345 | 1 | Updation of V2X TCs 6.5.2.3G.2 and 6.5.2.3G.3 | 15.2.0 | 15.3.0 |
| 2018-09 | RAN #81 | R5-185441 | 4347 | 1 | TT statements for V2X TCs | 15.2.0 | 15.3.0 |
| 2018-09 | RAN #81 | R5-185448 | 4461 | 1 | Corrections to A-MPR values for NS_27 | 15.2.0 | 15.3.0 |
| 2018-09 | RAN #81 | R5-185450 | 4358 | 1 | Correction to message exception for 8.2.1.4.2_A.4 | 15.2.0 | 15.3.0 |
| 2018-09 | RAN #81 | R5-185451 | 4362 | 1 | Editorial correction to RMC name in PHICH demodulation test | 15.2.0 | 15.3.0 |
| 2018-09 | RAN #81 | R5-185452 | 4365 | 1 | Corrections to CA Test Configuration Table in section 7 | 15.2.0 | 15.3.0 |
| 2018-09 | RAN #81 | R5-185493 | 4373 | 1 | Correction of test configuration of CA_20A-42A REFSENS | 15.2.0 | 15.3.0 |
| 2018-09 | RAN #81 | R5-185494 | 4374 | 1 | Update of 7.3A.5 REFSENS for Rel-13 CA configurations | 15.2.0 | 15.3.0 |
| 2018-09 | RAN #81 | R5-185497 | 4392 | 1 | New test case 6.3.5FA.1 Power Control Absolute power tolerance for category NB1 and NB2/Power Class 6 | 15.2.0 | 15.3.0 |
| 2018-09 | RAN #81 | R5-185498 | 4393 | 1 | New test case 6.3.5FA.2 Power Control Relative power tolerance for category NB1 and NB2/Power Class 6 | 15.2.0 | 15.3.0 |
| 2018-09 | RAN #81 | R5-185499 | 4394 | 1 | New test case 6.3.5FA.3 Aggregate power control tolerance for category NB1 and NB2/Power Class 6 | 15.2.0 | 15.3.0 |
| 2018-09 | RAN #81 | R5-185506 | 4473 | 1 | Addition of new 3CA band combination for CA REFSENS | 15.2.0 | 15.3.0 |
| 2018-09 | RAN #81 | R5-185508 | 4469 | 1 | Introduction of Additional Maximum Power Reduction (A-MPR) for CA (3UL CA) | 15.2.0 | 15.3.0 |
| 2018-09 | RAN #81 | R5-185509 | 4471 | 1 | Introduction of General ON/OFF time mask for CA (3UL CA) | 15.2.0 | 15.3.0 |
| 2018-09 | RAN #81 | R5-185514 | 4408 | 1 | Updates of receiver test cases for CA_XA-YE | 15.2.0 | 15.3.0 |
| 2018-09 | RAN #81 | R5-185515 | 4409 | 1 | Updates of receiver test cases for CA_XA-YD | 15.2.0 | 15.3.0 |
| 2018-09 | RAN #81 | R5-185517 | 4390 | 1 | Updates of Band 74 information about Tx test cases in TS 36.521-1 | 15.2.0 | 15.3.0 |
| 2018-09 | RAN #81 | R5-185522 | 4338 | 1 | Update Clause in 6.2.5EA Configured UE transmitted Power for UE category M1 | 15.2.0 | 15.3.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2018-09 | RAN #81 | R5-185530 | 4446 | 1 | Clarification on frame structure in 4Rx performance and CSI test principles sections | 15.2.0 | 15.3.0 |
| 2018-09 | RAN #81 | R5-185535 | 4443 | 1 | Update to General ON/OFF time mask for V2X Communication / Simultaneous E-UTRA V2X sidelink and E-UTRA uplink transmissions | 15.2.0 | 15.3.0 |
| 2018-09 | RAN #81 | R5-185538 | 4425 | 1 | Introduction of new test case TC 6.2.5A.4 Configured UE transmitted Output Power for CA (3UL CA) | 15.2.0 | 15.3.0 |
| 2018-09 | RAN #81 | R5-185539 | 4426 | 1 | Introduction of new test case TC 6.6.2.1A.4 Spectrum emission mask for CA (3UL CA) | 15.2.0 | 15.3.0 |
| 2018-09 | RAN #81 | R5-185540 | 4429 | 1 | Update of test case TC 6.7A.4 "Transmit intermodulation for CA (3DL CA and 3UL CA)" | 15.2.0 | 15.3.0 |
| 2018-09 | RAN #81 | R5-185542 | 4432 | 1 | CA_3A-18A - Updates of some Tx test cases | 15.2.0 | 15.3.0 |
| 2018-09 | RAN #81 | R5-185185 | 4380 | 2 | fix wrong change of R5-185185 | 15.3.0 | 15.3.1 |
| 2018-12 | RAN #82 | R5-186580 | 4528 | - | Update NB-IOT Spurious Emission UE co-existence | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-186582 | 4530 | - | Update the 6.2.3FA to reduce test points | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-186583 | 4531 | - | Update Rel-14 NB-IOT Tx test cases to support category NB2 | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-186584 | 4532 | - | Update Rel-14 NB-IOT Rx test cases to support category NB2 | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-186588 | 4533 | - | Update 8.1.2.2 Definition of CA capability for 4DL and 5DL CA | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-186589 | 4534 | - | Update 4DL and 5DL performance test cases (Editorial) | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-186590 | 4535 | - | Addition of Statistic information for 4DL and 5DL test cases | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-186693 | 4538 | - | Update of V2X EVM TCs | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187004 | 4540 | - | Update 6.2.4G.1 the V2V AMPR test case to remove brackets and add Power Class 2 | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187049 | 4541 | - | Editorial correction to 4CA and 5CA ACS test cases | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187050 | 4542 | - | Editorial correction to 5DL CA blocking tests | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187054 | 4546 | - | Editorial correction to 6.6.3.1A.2 Transmitter Spurious emissions for CA | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187056 | 4548 | - | Correction to 6.2.5A.3 Configured UE transmitted Output Power for CA | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187060 | 4550 | - | Correction to 4x4 CA demodulation tests | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187062 | 4551 | - | Correction to Minimum Test time for 8.12.1.1.2 Demodulation of NPDSCH | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187065 | 4552 | - | Removal of TC 7.3F.2 Reference sensitivity level with repetition for Category NB1 | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187066 | 4553 | - | Correction to LAA CQI tests | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187068 | 4554 | - | Correction to 6.6.3.3A.2 Additional spurious emissions for CA | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187069 | 4555 | - | Correction to 6.2.4A.2 Additional Maximum Power Reduction (A-MPR) for CA | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187072 | 4558 | - | Correction to 2x4 CA demodulation tests | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187092 | 4569 | - | Introduction of New test case 6.6.2.2A.1_2 Additional Spectrum Emission Mask for CA (intra-band contiguous DL CA and UL CA) for UL 256QAM | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187093 | 4570 | - | Introduction of New test case 6.6.2.2A.2_2 Additional Spectrum Emission Mask for CA (inter-band DL CA and UL CA) for UL 256QAM | 15.3.1 | 15.4.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2018-12 | RAN #82 | R5-187094 | 4571 | - | Update to Tx test cases for UL 256QAM | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187096 | 4572 | - | Update to 3 Tx test case for 3UL CA | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187143 | 4580 | - | Align CA information in clause 5 with TS36.101 v15.4.0 | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187145 | 4582 | - | Updated test requirement to RF clause 7 test cases for CA band | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187147 | 4584 | - | Correction to test configuration table for CA band combination | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187154 | 4585 | - | Added applicability of requirements for UEs supporting coverage enhancement | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187182 | 4586 | - | Clarification for Cat-M1 Reference Sensitivity Test Requirement | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187192 | 4590 | - | Change of test point applicability in TC 6.2.4_2 due to 256QAM support | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187193 | 4591 | - | Change of test point applicability in TC 6.6.2.2_1 due to 256QAM support | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187195 | 4592 | - | Change of test point applicability in TC 6.6.2.3_4 due to 256QAM support | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187197 | 4594 | - | Change of test point applicability in TC 6.6.3.3_1 due to 256QAM support | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187202 | 4596 | - | Addition of new UL 256QAM test case - MPR for intra-band contiguous | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187205 | 4598 | - | Addition of new UL 256QAM test case - ACLR for multi cluster | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187210 | 4600 | - | Addition of new UL 256QAM test case - ALCR for intra-band contiguous | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187212 | 4602 | - | Addition of new UL 256QAM test case - ACLR for inter-band | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187291 | 4603 | - | CA_3A-28A - Updates of some Tx test cases | 15.3.1 | 15.4.0 |

| 2018-12 | RAN #82 | R5-187951 | 4512 | 1 | Addition of new Test Configuration on TC 6.5.2A.3.2 | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187952 | 4513 | 1 | Addition of new Test Configuration on TC 6.6.1A.2 | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187953 | 4514 | 1 | Addition of new Test Configuration on TC 6.6.2.1A.2 | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187954 | 4515 | 1 | Addition of new Test Configuration on TC 6.6.2.2A.2_1 | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187955 | 4517 | 1 | Addition of new Test Configuration on TC 6.6.2.3A.2 | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187956 | 4518 | 1 | Addition of new Test Configuration on TC 6.6.2.3A.2_1 | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187957 | 4519 | 1 | Addition of new Test Configuration on TC 6.6.3.1A.2 | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187958 | 4520 | 1 | Addition of new Test Configuration on TC 6.7A.2 | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187963 | 4529 | 1 | Update the general sections for Rel-14 NB-IOT (Editorial) | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187965 | 4593 | 1 | Aligning CA delta TiB in sub-clause 6.2.5.3 with TS 36.101 v15.4.0 | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187966 | 4595 | 1 | Aligning CA delta RiB in sub-clause 7.3.3 with TS 36.101 v15.4.0 | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187967 | 4624 | 1 | Correction in TC 7.3A.3 for CA configuration CA_2A-71A | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187968 | 4625 | 1 | Correction in TC 7.3A.5 for CA configuration CA_2A-66A-71A | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187970 | 4587 | 1 | Change of applicability in UL 64QAM MPR and A-MPR tests due to UL 256QAM support | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187971 | 4588 | 1 | Change of applicability in UL 64QAM A-SEM and ACLR and Additional spurious tests due to UL 256QAM support | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187972 | 4597 | 1 | Addition of new UL 256QAM test case - MPR for inter-band | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187973 | 4612 | 1 | Addition of new UL 256QAM test case - Annex F | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187974 | 4537 | 1 | Introduction of Power Class 1 for B31 and B72 | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187977 | 4536 | 1 | Introduction of the support of ProSe for B72 | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187979 | 4521 | 1 | Correction to TC 7.7B Spurious response for UL-MIMO | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187980 | 4635 | 1 | Updating test case 6.2.4A.2 Additional Maximum Power Reduction (A-MPR) for CA (inter-band DL CA and UL CA) | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187984 | 4579 | 1 | Updated RF clause 9.8 to cover Cat-M2 requirement | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187988 | 4581 | 1 | Align CA information in clause 7.3A.0 with TS36.101 v15.4.0 | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187990 | 4610 | 1 | Update of test case 9.6.1.1_A.4 | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187991 | 4539 | 1 | Alignment of 256QAM EVM Test Tolerance between LTE and NR | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-187992 | 4634 | 1 | Updating test case 6.6.2.2 Additional spectrum emission mask and test case 6.6.3.3 Additional spurious emission | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-188040 | 4608 | 1 | Correction of RB allocation for 3DL_CA_1A-3A-41A | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-188051 | 4559 | 1 | Correction to the MU for UL CA | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-188066 | 4573 | 2 | Update TC 6.6.3G.2_1 | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-188233 | 4633 | 1 | Introduction of FD-MIMO test cases in Annexes | 15.3.1 | 15.4.0 |
| 2018-12 | RAN #82 | R5-188234 | 4574 | 1 | Maximum Output Power for CA | 15.3.1 | 15.4.0 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 2018-12 | RAN #82 | R5-188235 | 4641 | 1 | MPR for CA (intra-band contiguous DL CA and UL CA) | 15.3.1 | 15.4.0 |
