1> for NB-IoT, delay the following actions defined in this sub-clause 10 seconds from the moment the *RRCConnectionRelease* message was received or optionally when lower layers indicate that the receipt of the *RRCConnectionRelease* message has been successfully acknowledged, whichever is earlier;

...

1> else:

2> if the *extendedWaitTime* is present; and

2> if the UE supports delay tolerant access or the UE is a NB-IoT UE:

3> forward the *extendedWaitTime* to upper layers;

[TS 24.301, clause 5.5.2.2.1]

The detach procedure is initiated by the UE by sending a DETACH REQUEST message (see example in figure 5.5.2.2.1.1). The Detach type IE included in the message indicates whether detach is due to a "switch off" or not. The Detach type IE also indicates whether the detach is for EPS services only, for non-EPS services only, or for both. If the UE has a mapped EPS security context as the current EPS security context, the UE shall set the type of security context flag to "mapped security context". Otherwise, the UE shall set the type of security context flag to "native security context".

If the UE has a valid GUTI, the UE shall populate the EPS mobile identity IE with the valid GUTI. If the UE does not have a valid GUTI, the UE shall populate the EPS mobile identity IE with its IMSI.

If the UE does not have a valid GUTI and it does not have a valid IMSI, then the UE shall populate the EPS mobile identity IE with its IMEI.

...

If the UE is to be switched off, the UE shall try for a period of 5 seconds to send the DETACH REQUEST message. During this period, the UE may be switched off as soon as the DETACH REQUEST message has been sent.

After the last DETACH REQUEST message is sent, the UE shall proceed as follows:

- if the current EPS security context is a native EPS security context, then the UE shall store the current EPS security context as specified in annex C and mark it as valid;

[TS 24.301, clause 5.6.2.2.2]

Paging for EPS services using IMSI is an abnormal procedure used for error recovery in the network.

...

When a UE receives a paging for EPS services using IMSI from the network before a UE initiated EMM specific procedure has been completed, then the UE shall abort the EMM specific procedure and proceed according to the description in this subclause.

Upon reception of a paging for EPS services using IMSI, the UE shall stop timer T3346, if it is running, locally deactivate any EPS bearer context(s), if any, and locally detach from EPS. Additionally the UE shall delete the following parameters: last visited registered TAI, TAI list, GUTI and KSI_{ASME}. The UE shall set the EPS update status to EU2 NOT UPDATED and change the state to EMM-DEREGISTERED. The UE shall stop all timers T3396 that are running.

...

After performing the local detach, the UE shall then perform an attach procedure as described in subclause 5.5.1.2. If the UE is operating in CS/PS mode 1 or CS/PS mode 2 of operation, then the UE shall perform a combined attach procedure as described in subclause 5.5.1.3.

NOTE 1: In some cases, user interaction can be required, thus the UE cannot activate the dedicated bearer context(s), if any, automatically.

NOTE 2: The UE does not respond to the paging except with the ATTACH REQUEST message, hence timers T3413 and T3415 in the network are not used when paging with IMSI.

22.5.4.3 Test description

22.5.4.3.1 Pre-test conditions

System Simulator:

- 2 NB-IoT cells, default system information
  - Ncell 1 "Serving cell", PLMN1, TAI-1
  - Ncell 12 "Non-Suitable cell", PLMN2, TAI-3

UE:

None.

Preamble:

- The UE is made register on NB-IoT Ncell 1 and enter State 3-NB "Registered, Idle Mode" according to TS 36.508 [18]; during the attach GUTI-1 is assigned, PLMN2 is not included in the equivalent PLMN list , nor TAI-3 in the TAI list assigned.
- After registration the UE is switched off in order to enter State 1-NB "Switched OFF" according to TS 36.508 [18].

22.5.4.3.2 Test procedure sequence

Table 22.5.4.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS configures: - Ncell 1 as a "Non-Suitable cell". - Ncell 12 as the "Serving cell".	-	-	-	-

22.5.5 NB-IoT / Attach Procedure / Success / List of equivalent PLMNs in the ATTACH ACCEPT message / Attach / Rejected / PLMN not allowed

22.5.5.1 Test Purpose (TP)

(1)

```
with { UE in EMM-REGISTERED-INITIATED state }
ensure that {
  when { the UE receives ATTACH ACCEPT message including a list of equivalent PLMNs }
   then { the UE stores correctly the list and does not consider forbidden PLMNs as equivalent PLMNs
}
}
```

(2)

```
with { UE in EMM-REGISTERED-INITIATED state }
ensure that {
  when { the UE receives ATTACH ACCEPT message without a list of equivalent PLMNs }
   then { the UE deletes the stored list and applies a normal PLMN selection process }
}
```

(3)

```
with { the UE has sent an ATTACH REQUEST message }
ensure that {
  when { the UE receives an ATTACH REJECT message with the reject cause set to "PLMN not allowed" }
```

```
    then { the UE deletes the GUTI, the last visited registered TAI, KSI, the list of equivalent
PLMNs and UE enters state EMM-DEREGISTERED.PLMN-SEARCH and UE stores the PLMN in the "forbidden PLMN
list" in the USIM }
            }
```

(4)

```
with { the UE is switched off and a PLMN is stored in the "forbidden PLMN list" in the USIM }
ensure that {
  when { the UE is switched on  }
    then { the UE doesn't  attempt to attach on this PLMN }
            }
```

(5)

```
with { the UE in EMM-DEREGISTERED.PLMN-SEARCH state and a PLMN is stored in the "forbidden PLMN
list" }
ensure that {
  when { the UE detects a cell belonging to a PLMN which is not in the "forbidden PLMN list" }
    then { the UE attaches to this PLMN }
            }
```

(6)

```
with {the  UE in EMM-DEREGISTERED.PLMN-SEARCH state and a PLMN is stored in the "forbidden PLMN
list" }
ensure that {
  when { the forbidden PLMN is selected manually }
    then { the UE attaches to the forbidden PLMN and deletes this PLMN from the USIM}
```

22.5.5.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.301, clause 5.5.1.2.4.

[TS 24.301, clause 5.5.1.2.4]

The MME may also include a list of equivalent PLMNs in the ATTACH ACCEPT message. Each entry in the list contains a PLMN code (MCC+MNC). The UE shall store the list as provided by the network, and if the attach procedure is not for emergency bearer services, the UE shall remove from the list any PLMN code that is already in the list of "forbidden PLMNs" or in the list of "forbidden PLMNs for GPRS service". In addition, the UE shall add to the stored list the PLMN code of the registered PLMN that sent the list. The UE shall replace the stored list on each receipt of the ATTACH ACCEPT message. If the ATTACH ACCEPT message does not contain a list, then the UE shall delete the stored list.

[TS 24.301, clause 5.5.1.2.2]

In state EMM-DEREGISTERED, the UE initiates the attach procedure by sending an ATTACH REQUEST message to the MME, starting timer T3410 and entering state EMM-REGISTERED-INITIATED (see example in figure 5.5.1.2.2.1). If timer T3402 is currently running, the UE shall stop timer T3402. If timer T3411 is currently running, the UE shall stop timer T3411.

If the UE supports neither A/Gb mode nor Iu mode:

- the UE shall include in the ATTACH REQUEST message a valid GUTI together with the last visited registered TAI, if available. In addition, the UE shall include Old GUTI type IE with GUTI type set to "native GUTI". If there is no valid GUTI available, the UE shall include the IMSI in the ATTACH REQUEST message.

[TS 24.301, clause 5.5.1.2.5]

If the attach request cannot be accepted by the network, the MME shall send an ATTACH REJECT message to the UE including an appropriate EMM cause value.

...

Upon receiving the ATTACH REJECT message, the UE shall stop timer T3410 and take the following actions depending on the EMM cause value received.

...

The UE shall take the following actions depending on the EMM cause value received in the ATTACH REJECT message.

...

#11 (PLMN not allowed);

The UE shall set the EPS update status to EU3 ROAMING NOT ALLOWED (and shall store it according to subclause 5.1.3.3) and shall delete any GUTI, last visited registered TAI, TAI list and eKSI. Additionally, the UE shall delete the list of equivalent PLMNs and reset the attach attempt counter.

In S1 mode, the UE shall store the PLMN identity in the "forbidden PLMN list" and enter state EMM-DEREGISTERED.PLMN-SEARCH and if the UE is configured to use timer T3245 (see 3GPP TS 24.368 [15] or 3GPP TS 31.102 [17]) then the UE shall start timer T3245 and proceed as described in subclause 5.3.7a. The UE shall perform a PLMN selection according to 3GPP TS 23.122 [6].

22.5.5.3 Test description

22.5.5.3.1 Pre-test conditions

System Simulator:

- 4 Ncells: Ncell 50 (PLMN1, HPLMN), Ncell 55 (PLMN2, visited PLMN belongs to TAI-7, MCC=001 MNC=02) and Ncell 59 (PLMN3, another visited PLMN, belongs to TAI-9, MCC = 002 MNC=101) and Ncell 60 (belongs to TAI-11, visited PLMN, MCC = 002 MNC=101) are configured according to Table 8.1.4.2-3 and Table 8.1.4.2-5 in TS 36.508 [18]. System information combination 3 as defined in TS 36.508[18] clause 8.1.4.3.1.1 is used.

- At most 3 Ncells are active simultaneously

UE:

- The UE is previously registered on Ncell 50, and when on Ncell 50, the UE is last authenticated and registered using default message contents according to TS 36.508 [18].

Preamble:

- The UE is in state Switched OFF (state 1-NB) according to TS 36.508 [18].

22.5.5.3.2 Test procedure sequence

Table: 22.5.5.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The SS configures: - Ncell 59 as the "Serving cell". - Ncell 60 as a "Suitable Neighbour cell". - Ncell 55 as a "Non-Suitable Off cell". - Ncell 50 as a "Non-Suitable Off cell". Note: Ncell 59 and Ncell 60 are in the different TAI – same PLMN.	-	-	-	-

Last visited registered TAI	TAI-1	TAI 1 is allocated on Ncell 50 according to 36.508 table 8.1.4.2-3.	

22.5.6 NB-IoT / Attach Abnormal cases / Unsuccessful attach or Repeated rejects for network failures / Change of cell into a new tracking area / EPS services not allowed / Failure due to non integrity protection /UE initiated detach USIM removed from the UE / Detach procedure collision.

22.5.6.1 Test Purpose (TP)

(1)

```
with { UE has sent an ATTACH REQUEST message and started T3410 timer}
ensure that {
  when { T3410 timer expires }
    then { the UE release NAS signalling connection locally }
            }
```

(2)

```
with { UE has sent an ATTACH REQUEST message and T3410 timer expired}
ensure that {
  when { T3411 timer expires and attach attempt counter is less than 5 }
    then { the UE restarts the attach procedure }
            }
```

(3)

```
with { UE has sent an ATTACH REQUEST message }
ensure that {
  when { Lower Layer failure (RRC Connection is released) before the ATTACH ACCEPT or ATTACH REJECT
message is received, T3411 has expired and attach attempt counter is less than 5}
    then { the UE restarts the attach procedure }
```

```
            }
```

(4)

```
with { UE having valid GUTI, has sent an ATTACH REQUEST message }
ensure that {
  when { UE receives an ATTACH REJECT message with the reject cause set to #17 and attach attempt counter is less than 5}
    then { UE starts timer T3411 and shall not delete stored GUTI }
    when { Timer T3411 expires}
    then { UE restarts attach procedure }
}
```

(5)

```
with { UE having valid GUTI, has sent an ATTACH REQUEST message }
ensure that {
  when { UE receives an ATTACH REJECT message with the reject cause set to #22 and attempt counter is less than 5}
    then { UE starts timer T3411 and shall not delete stored GUTI }
    when { Timer T3411 expires}
    then { UE restarts attach procedure }
}
```

(6)

```
with { UE having valid GUTI, has sent an ATTACH REQUEST message }
ensure that {
  when { UE receives an ATTACH REJECT message with the reject cause set to #22 and attempt counter is set to 5}
    then { the UE stops attach attempts and starts timer T3402, shall delete stored GUTI }
}
```

(7)

Void

(8)

```
with { UE has sent an ATTACH REQUEST message and received ATTACH ACCEPT message containing GUTI }
ensure that {
  when { UE reselects a cell belonging to a new tracking area }
    then { the UE restarts the attach procedure }
            }
```

(9)

```
with { UE has sent an ATTACH REQUEST message including a PDN CONNECTIVITY REQUEST message or an ESM DUMMY MESSAGE }
ensure that {
  when { UE receives an ATTACH REJECT message with the reject cause set to "EPS services not allowed" }
    then { UE deletes the GUTI and the last visited registered TAI and KSI and considers the USIM as invalid for EPS services until switching off or the UICC containing the USIM is removed and deletes the list of equivalent PLMNs and UE enters state EMM-DEREGISTERED }
```

(10)

```
with { UE having been initiated an Attach }
ensure that {
  when { UE receives an ATTACH ACCEPT messages without NAS integrity protection before NAS security mode control procedure being performed }
    then { UE discards this message }
            }
```

(11)

```
with { a valid NAS security context exists and the NAS security mode control procedure has been successfully completed in the network and the UE }
ensure that {
  when { UE receives a valid NAS signalling message without integrity protection }
    then { UE discards this NAS signalling message }
```

```
            }
```

(12)

```
with { a valid NAS security context exists and the NAS security mode control procedure has been
successfully completed in the network and the UE }
ensure that {
  when { UE receives a valid security protected NAS signalling message with the Message
 authentication code set to an incorrect value  }
    then { UE discards this NAS signalling message }
            }
```

(13)

```
with { a valid NAS security context exists and the NAS security mode control procedure has been
successfully completed in the network and the UE }
ensure that {
  when { UE receives a valid NAS signalling message with integrity protection which require a
response from the UE }
    then { UE sends the response as a security protected NAS message }
            }
```

(14)

```
with { UE in EMM-REGISTERED }
ensure that {
  when { the USIM is removed from the UE }
   then { the UE sends DETACH REQUEST message and indicates that detach is for EPS services
depending on the EPS attach type used }
}
```

(15)

```
with { UE in EMM-REGISTERED-INITIATED state a valid USIM }
ensure that {
  when { UE receives a DETACH REQUEST message and detach type indicates “re-attach not required” }
    then { the UE sends DETACH ACCEPT }
}
```

(16)

```
with { UE in EMM-REGISTERED-INITIATED  state }
ensure that {
  when { UE receives a DETACH REQUEST message and detach type  indicates “re-attach  required” }
    then { the UE continues with ATTACH procedure }
}
```

22.5.6.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: 3GPP TS 24.301 clauses 4.4.4.1, 4.4.4.2 , 5.5.2.2 , 5.5.2.2.1 ,5.5.2.2.3 ,5.5.1.2.2 ,5.5.1.2.5 ,5.5.1.2.6 , 5.5.1.3.6 ,10.2 , 9.9.3.9.

[TS 24.301, clause 5.5.1.2.6]

The following abnormal cases can be identified:

…

b) Lower layer failure or release of the NAS signalling connection without "Extended wait time" received from lower layers before the ATTACH ACCEPT or ATTACH REJECT message is received

   The attach procedure shall be aborted, and the UE shall proceed as described below.

c) T3410 timeout

   The UE shall abort the attach procedure and proceed as described below. The NAS signalling connection, if any, shall be released locally.

…

e) Change of cell into a new tracking area

If a cell change into a new tracking area occurs before the attach procedure is completed, the attach procedure shall be aborted and re-initiated immediately. If a tracking area border is crossed when the ATTACH ACCEPT message has been received but before an ATTACH COMPLETE message is sent, the attach procedure shall be re-initiated. If a GUTI was allocated during the attach procedure, this GUTI shall be used in the attach procedure.

…

g) Detach procedure collision

If the UE receives a DETACH REQUEST message from the network in state EMM-REGISTERED-INITIATED and the detach type indicates "re-attach not required" and no EMM cause IE, or "re-attach not required" and the EMM cause value is not #2 "IMSI unknown in HSS", the detach procedure shall be progressed and the attach procedure shall be aborted. Otherwise the attach procedure shall be progressed and the DETACH REQUEST message shall be ignored.

…

For the cases b, c, d, l and m:

- Timer T3410 shall be stopped if still running.
- For the cases b, c, d, and l when the "Extended wait time" is ignored, if the attach request is neither for emergency bearer services nor for initiating a PDN connection for emergency bearer services with attach type not set to "EPS emergency attach", the attach attempt counter shall be incremented, unless it was already set to 5.
- If the attach attempt counter is less than 5:
  - for the cases l and m, the attach procedure is started, if still necessary, when timer T3346 expires or is stopped;
  - for the cases b, c, d, and l when the "Extended wait time" is ignored, if the attach request is neither for emergency bearer services nor for initiating a PDN connection for emergency bearer services with attach type not set to "EPS emergency attach", timer T3411 is started and the state is changed to EMM-DEREGISTERED.ATTEMPTING-TO-ATTACH. When timer T3411 expires the attach procedure shall be restarted, if still required by ESM sublayer.
- If the attach attempt counter is equal to 5:
  - the UE shall delete any GUTI, TAI list, last visited registered TAI, list of equivalent PLMNs and KSI, shall set the update status to EU2 NOT UPDATED, and shall start timer T3402. The state is changed to EMM-DEREGISTERED.ATTEMPTING-TO-ATTACH or optionally to EMM-DEREGISTERED.PLMN-SEARCH in order to perform a PLMN selection according to 3GPP TS 23.122 [6]; and
  - if A/Gb mode or Iu mode is supported by the UE:
    - the UE shall in addition handle the GMM parameters GMM state, GPRS update status, P-TMSI, P-TMSI signature, RAI and GPRS ciphering key sequence number as specified in 3GPP TS 24.008 [13] for the abnormal case when a normal attach procedure fails and the attach attempt counter is equal to 5; and
    - the UE shall attempt to select GERAN or UTRAN radio access technology and proceed with appropriate GMM specific procedures. Additionally, the UE may disable the E-UTRA capability as specified in subclause 4.5.

[TS 24.301, clause 10.2]

Table 10.2.1: EPS mobility management timers – UE side

TIMER NUM.	TIMER VALUE	STATE	CAUSE OF START	NORMAL STOP	ON EXPIRY
T3402	Default 12 min. NOTE 1	EMM-DEREGISTERED EMM-REGISTERED	At attach failure and the attempt counter is equal to 5. At tracking area updating failure and the attempt counter is equal to 5. ATTACH ACCEPT with EMM cause #16 or #17 and the attempt counter is equal to 5 for CS/PS mode 2 UE, or ATTACH ACCEPT with EMM cause #22, as described in subclause 5.5.1.3.4.3. TRACKING AREA UPDATE ACCEPT with EMM cause #16 or #17 and the attempt counter is equal to 5 for CS/PS mode 2 UE, TRACKING AREA UPDATE ACCEPT with EMM cause #16 or #17 and the attempt counter is equal to 5 for CS/PS mode 1 UE with "IMS voice not available" and with a persistent EPS bearer context, or TRACKING AREA UPDATE ACCEPT with EMM cause #22, as described in subclause 5.5.3.3.4.3.	ATTACH REQUEST sent TRACKING AREA UPDATE REQUEST sent NAS signalling connection released	Initiation of the attach procedure, if still required or TAU procedure
…					
T3410	15s NOTE 7 NOTE 8	EMM-REGISTERED-INITIATED	ATTACH REQUEST sent	ATTACH ACCEPT received ATTACH REJECT received	Start T3411 or T3402 as described in subclause 5.5.1.2.6
T3411	10s	EMM-DEREGISTERED. ATTEMPTING-TO-ATTACH EMM-REGISTERED. ATTEMPTING-TO-UPDATE EMM-REGISTERED. NORMAL-SERVICE	At attach failure due to lower layer failure, T3410 timeout or attach rejected with other EMM cause values than those treated in subclause 5.5.1.2.5. At tracking area updating failure due to lower layer failure, T3430 timeout or TAU rejected with other EMM cause values than those treated in subclause 5.5.3.2.5.	ATTACH REQUEST sent TRACKING AREA UPDATE REQUEST sent EMM-CONNECTED mode entered (NOTE 6)	Retransmission of the ATTACH REQUEST, if still required as described in subclause 5.5.1.2.6 or retransmission of TRACKING AREA UPDATE REQUEST
…					

NOTE 1: The cases in which the default value of this timer is used are described in subclause 5.3.6.
NOTE 2: The value of this timer is provided by the network operator during the attach and tracking area updating procedures.
NOTE 3: The value of this timer may be provided by the network in the ATTACH ACCEPT message and TRACKING AREA UPDATE ACCEPT message. The default value of this timer is identical to the value of T3412.
NOTE 4: The value of this timer is provided by the network operator when a service request for CS fallback is rejected by the network with EMM cause #39 "CS service temporarily not available".
NOTE 5: The default value of this timer is used if the network does not indicate a value in the TRACKING AREA UPDATE ACCEPT message and the UE does not have a stored value for this timer.
NOTE 6: The conditions for which this applies are described in subclause 5.5.3.2.6.
NOTE 7: In NB-S1 mode, the timer value shall be calculated as described in subclause 4.7.
NOTE 8: In WB-S1 mode, if the UE supports CE mode B, then the timer value is calculated as described in subclause 4.8.

[TS 24.301, clause 5.5.1.2.5]

If the attach request cannot be accepted by the network, the MME shall send an ATTACH REJECT message to the UE including an appropriate EMM cause value.

If the attach procedure fails due to:

- a default EPS bearer setup failure;
- an ESM procedure failure; or
- operator determined barring is applied on default EPS bearer context activation during attach procedure,

the MME shall:

- combine the ATTACH REJECT message with a PDN CONNECTIVITY REJECT message contained in the ESM message container information element. In this case the EMM cause value in the ATTACH REJECT message shall be set to #19 "ESM failure"; or
- send the ATTACH REJECT message with the EMM cause set to #15 "No suitable cells in tracking area", if the PDN connectivity reject is due to ESM cause #29 subject to operator policies (see 3GPP TS 29.274 [16D] for further details). In this case, the network may additionally include the Extended EMM cause IE with value "E-UTRAN not allowed".

If the attach request is rejected due to NAS level mobility management congestion control, the network shall set the EMM cause value to #22 "congestion" and assign a back-off timer T3346.

If the attach request is rejected due to incompatibility between the CIoT EPS optimizations supported by the UE and what the network supports and the network sets the EMM cause value to #15 "no suitable cells in tracking area", the network may additionally include the Extended EMM cause IE with value "requested EPS optimization not supported".

NOTE 1: How the UE uses the Extended EMM cause IE with value "requested EPS optimization not supported" is implementation specific. The UE still behaves according to the EMM cause value #15.

Upon receiving the ATTACH REJECT message, if the message is integrity protected or contains a reject cause other than EMM cause value #25, the UE shall stop timer T3410.

If the ATTACH REJECT message with EMM cause #25 was received without integrity protection, then the UE shall discard the message.

The UE shall take the following actions depending on the EMM cause value received in the ATTACH REJECT message.

...

#7 (EPS services not allowed);

The UE shall set the EPS update status to EU3 ROAMING NOT ALLOWED (and shall store it according to subclause 5.1.3.3) and shall delete any GUTI, last visited registered TAI, TAI list and eKSI. The UE shall consider the USIM as invalid for EPS services until switching off or the UICC containing the USIM is removed or the timer T3245 expires as described in subclause 5.3.7a. Additionally, the UE shall delete the list of equivalent PLMNs and enter state EMM-DEREGISTERED.

If A/Gb mode or Iu mode is supported by the UE, the UE shall in addition handle the GMM parameters GMM state, GPRS update status, P-TMSI, P-TMSI signature, RAI and GPRS ciphering key sequence number as specified in 3GPP TS 24.008 [13] for the case when the normal attach procedure is rejected with the GMM cause with the same value.

...

Other values are considered as abnormal cases. The behaviour of the UE in those cases is specified in subclause 5.5.1.2.6.

[TS 24.301, clause 9.9.3.9]

Table 9.9.3.9.1: EMM cause information element

Cause value (octet 2)

Bits									
8	**7**	**6**	**5**	**4**	**3**	**2**	**1**		
0	0	0	1	0	0	0	1		Network failure
0	0	0	1	0	0	1	0		CS domain not available
0	0	0	1	0	0	1	1		ESM failure
0	0	0	1	0	1	0	0		MAC failure
0	0	0	1	0	1	0	1		Synch failure
0	0	0	1	0	1	1	0		Congestion
0	0	0	1	0	1	1	1		UE security capabilities mismatch
									...
Any other value received by the mobile station shall be treated as 0110 1111, "protocol error, unspecified". Any other value received by the network shall be treated as 0110 1111, "protocol error, unspecified".									

[TS 24.301, clause 5.5.1.3.6]

The UE shall proceed as follows:

...

3) otherwise, the abnormal cases specified in subclause 5.5.1.2.6 apply with the following modification.

   If the attach attempt counter is incremented according to subclause 5.5.1.2.6 the next actions depend on the value of the attach attempt counter:

   - if the attach attempt counter is less than 5, the UE shall set the update status to U2 NOT UPDATED but shall not delete any LAI, TMSI, ciphering key sequence number and list of equivalent PLMNs; or

   - if the attach attempt counter is equal to 5, then the UE shall delete any LAI, TMSI, ciphering key sequence number and list of equivalent PLMNs and set the update status to U2 NOT UPDATED. The UE shall attempt to select GERAN or UTRAN radio access technology and proceed with appropriate MM or GMM specific procedures. Additionally, the UE may disable the E-UTRA capability as specified in subclause 4.5.

...

[TS 24.301, clause 5.5.1.2.2]

In state EMM-DEREGISTERED, the UE initiates the attach procedure by sending an ATTACH REQUEST message to the MME, starting timer T3410 and entering state EMM-REGISTERED-INITIATED (see example in figure 5.5.1.2.2.1). If timer T3402 is currently running, the UE shall stop timer T3402. If timer T3411 is currently running, the UE shall stop timer T3411.

The UE shall include the IMSI in the EPS mobile identity IE in the ATTACH REQUEST message if the selected PLMN is neither the registered PLMN nor in the list of equivalent PLMNs and:

- the UE is configured for "AttachWithIMSI" as specified in 3GPP TS 24.368 [15A] or 3GPP TS 31.102 [17]; or

- the UE is in NB-S1 mode.

For all other cases, the UE shall handle the EPS mobile identity IE in the ATTACH REQUEST message as follows:

If the UE supports neither A/Gb mode nor Iu mode:

- the UE shall include in the ATTACH REQUEST message a valid GUTI together with the last visited registered TAI, if available. In addition, the UE shall include Old GUTI type IE with GUTI type set to "native GUTI". If there is no valid GUTI available, the UE shall include the IMSI in the ATTACH REQUEST message.

...

[TS 24.301, clause 4.4.4.1]

For the UE, integrity protected signalling is mandatory for the NAS messages once a valid EPS security context exists and has been taken into use. For the network, integrity protected signalling is mandatory for the NAS messages once a secure exchange of NAS messages has been established for the NAS signalling connection. Integrity protection of all NAS signalling messages is the responsibility of the NAS. It is the network which activates integrity protection.

…

[TS 24.301, clause 4.4.4.2]

Except the messages listed below, no NAS signalling messages shall be processed by the receiving EMM entity in the UE or forwarded to the ESM entity, unless the network has established secure exchange of NAS messages for the NAS signalling connection:

- EMM messages:
    - IDENTITY REQUEST (if requested identification parameter is IMSI);
    - AUTHENTICATION REQUEST;
    - AUTHENTICATION REJECT;
    - ATTACH REJECT (if the EMM cause is not #25);
    - DETACH ACCEPT (for non switch off);
    - TRACKING AREA UPDATE REJECT (if the EMM cause is not #25);
    - SERVICE REJECT (if the EMM cause is not #25).

NOTE: These messages are accepted by the UE without integrity protection, as in certain situations they are sent by the network before security can be activated.

All ESM messages are integrity protected.

Once the secure exchange of NAS messages has been established, the receiving EMM or ESM entity in the UE shall not process any NAS signalling messages unless they have been successfully integrity checked by the NAS. If NAS signalling messages, having not successfully passed the integrity check, are received, then the NAS in the UE shall discard that message. The processing of the SECURITY MODE COMMAND message that has not successfully passed the integrity check is specified in subclause 5.4.3.5. If any NAS signalling message is received as not integrity protected even though the secure exchange of NAS messages has been established by the network, then the NAS shall discard this message.

[TS 24.301, clause 5.5.2.2.1]

The detach procedure is initiated by the UE by sending a DETACH REQUEST message (see example in figure 5.5.2.2.1.1). The Detach type IE included in the message indicates whether detach is due to a "switch off" or not. The Detach type IE also indicates whether the detach is for EPS services only, for non-EPS services only, or for both. If the UE has a mapped EPS security context as the current EPS security context, the UE shall set the type of security context flag to "mapped security context". Otherwise, the UE shall set the type of security context flag to "native security context".

If the UE has a valid GUTI, the UE shall populate the EPS mobile identity IE with the valid GUTI. If the UE does not have a valid GUTI, the UE shall populate the EPS mobile identity IE with its IMSI.

If the UE does not have a valid GUTI and it does not have a valid IMSI, then the UE shall populate the EPS mobile identity IE with its IMEI.

NOTE: During the attach for emergency service when the UE (with no USIM or invalid USIM) is in EMM-REGISTERED-INITIATED STATE, the UE has neither a valid GUTI nor a valid IMSI.

If the detach is not due to switch off and the UE is in the state EMM-REGISTERED or EMM-REGISTERED-INITIATED, timer T3421 shall be started in the UE after the DETACH REQUEST message has been sent. If the detach type indicates that the detach is for non-EPS services only the UE shall enter the state EMM-REGISTERED.IMSI-DETACH-INITIATED, otherwise the UE shall enter the state EMM-DEREGISTERED-INITIATED. If the detach type indicates that the detach is for non-EPS services or both EPS and non-EPS services, the UE shall enter the state MM IMSI DETACH PENDING.

If the UE is to be switched off, the UE shall try for a period of 5 seconds to send the DETACH REQUEST message. During this period, the UE may be switched off as soon as the DETACH REQUEST message has been sent.

After the last DETACH REQUEST message is sent, the UE shall proceed as follows:

- if the current EPS security context is a native EPS security context, then the UE shall store the current EPS security context as specified in annex C and mark it as valid;
- else if the current EPS security context is a mapped EPS security context and a non-current full native EPS security context exists, then the UE shall store the non-current EPS security context as specified in annex C and mark it as valid, and finally the UE shall delete any mapped EPS security context or partial native EPS security context.

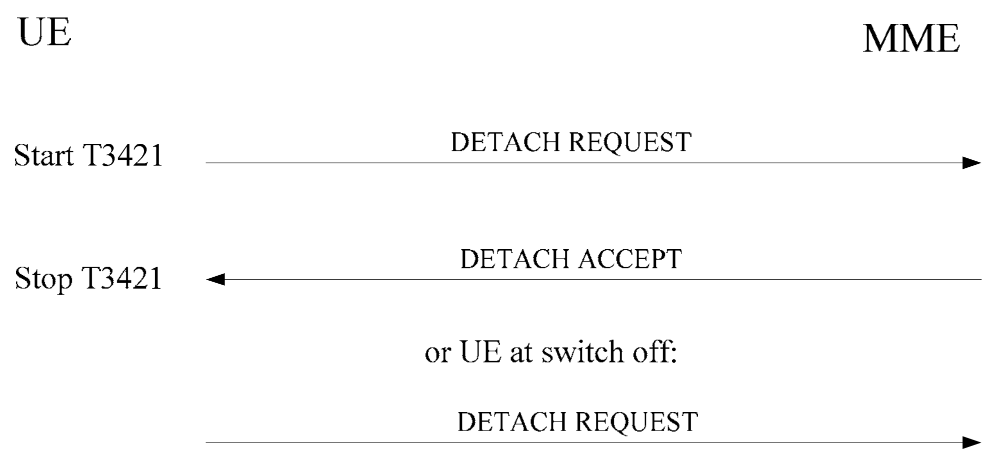

Figure 5.5.2.2.1.1: UE initiated detach procedure

[TS 24.301 clause 5.5.2.2.3]

When the DETACH REQUEST message is received by the network, a DETACH ACCEPT message shall be sent to the UE, if the Detach type IE does not indicate "switch off". Otherwise, the procedure is completed when the network receives the DETACH REQUEST message.

Depending on the value of the Detach type IE the following applies:

- combined EPS/IMSI detach:

  The network and the UE shall deactivate the EPS bearer context(s) for this UE locally without peer-to-peer signalling between the UE and the MME. The UE is marked as inactive in the network for EPS and for non-EPS services. The states EMM-DEREGISTERED and MM-NULL are entered in both the UE and the network.

- IMSI detach:

  The UE is marked as inactive in the network for non-EPS services. The states MM-NULL and EMM-REGISTERED are entered in both the UE and the network.

The UE, when receiving the DETACH ACCEPT message, shall stop timer T3421.

22.5.6.3 Test description

22.5.6.3.1 Pre-test conditions

System Simulator:

- Ncell 50, Ncell 51 are defined in clause 8.1.4.2 in TS 36.508[18]
- NB-IOT system information combination 2 as defined in TS 36.508[18] clause 8.1.4.3.1.1 is used in all cells
- If UE supports NTN only access in NB-IoT (pc_NB_ntn_only_Connectivity_EPC), System information combination 10 as defined in TS 36.508 [18] clause 8.1.4.3.1.1 is used.
- Ncell 50 and Ncell 51 belong to PLMN1.

Table 22.5.6.3-1: Time instances of cell power level and parameter changes

	Parameter	Unit	Ncell 50	Ncell 51
T1	Cell-specific NRS EPRE	dBm/ 15kHz	-85	-120
T2	Cell-specific NRS EPRE	dBm/ 15kHz	-120	-85
T3	Cell-specific NRS EPRE	dBm/ 15kHz	-85	-85
T4	Cell-specific NRS EPRE	dBm/ 15kHz	-85	-120
T5	Cell-specific NRS EPRE	dBm/ 15kHz	-85	-97
T6	Cell-specific NRS EPRE	dBm/ 15kHz	-97	-85
T7	Cell-specific NRS EPRE	dBm/ 15kHz	-85	Off

UE:

- The Test UICC shall be inserted. This shall contain a USIM application on UICC.
- the UE is previously registered on NB-IOT , and when on NB-IOT, the UE is last authenticated and registered on Ncell 50 using default message contents according to TS 36.508 [18].

Preamble:

- the UE is in state Switched OFF (State 1-NB) according to TS 36.508 [18].
- The NAS integrity algorithm shall be set to a different value than 'EPS integrity algorithm' EIA0 throughout the whole duration of the test.

22.5.6.3.2 Test procedure sequence

Table 22.5.6.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U – S	Message		
0	SS adjusts the cell power levels according to row T1 in table 22.5.6.3-1.	-	-	-	-
1	Switch-on the UE.	-	-	-	-

22.5.7a NB-IoT / Normal tracking area update List of equivalent PLMNs in the TRACKING AREA UPDATE ACCEPT message / Normal tracking area update Rejected (IMSI invalid / Illegal ME / UE identity cannot be derived by the network / UE implicitly detached / PLMN not allowed

22.5.7a.1 Test Purpose (TP)

(1)

```
with { UE in EMM-TRACKING-AREA-UPDATING-INITIATED state }
ensure that {
  when { the UE receives TRACKING AREA UPDATE ACCEPT message including a list of equivalent PLMNs }
   then { the UE stores correctly the list and considers a forbidden PLMN if the forbidden PLMN is
included in the equivalent list }
}
```

(2)

```
with { UE in EMM-TRACKING-AREA-UPDATING-INITIATED state }
ensure that {
  when { the UE receives TRACKING AREA UPDATE ACCEPT message without a list of equivalent PLMNs }
   then { the UE deletes the stored list and applies a normal PLMN selection process }
}
```

(3)

```
with { UE has sent a TRACKING AREA UPDATE REQUEST message}
ensure that {
  when { UE receives a TRACKING AREA UPDATE REJECT message with the reject cause set to "Illegal UE"
or "Illegal ME" }
    then { UE considers the USIM as invalid for EPS services and enters state EMM-DEREGISTERED }
```

(4)

```
with { The UE is in the state EMM-DEREGISTERED }
ensure that {
  when { UE is powered up }
    then { UE send ATTACH REQUEST message with Old GUTI or IMSI IE = "IMSI"}
```

(5)

```
with { UE has sent a TRACKING AREA UPDATE REQUEST message}
ensure that {
  when { UE receives a TRACKING AREA UPDATE REJECT message with the reject cause set to "UE identity
cannot be derived by the network" }
    then { UE deletes any GUTI, last visited registered TAI, TAI list and KSI and enters the state
EMM-DEREGISTERED and subsequently, UE automatically initiates the attach procedure}
```

(6)

```
with { UE has sent a TRACKING AREA UPDATE REQUEST message}
ensure that {
  when { UE receives a TRACKING AREA UPDATE REJECT message with the reject cause set to "UE
implicitly detached" }
    then { UE enters the state EMM-DEREGISTERED.NORMAL-SERVICE and sends ATTACH REQUEST message}
```

(7)

```
with { UE has sent a TRACKING AREA UPDATE REQUEST message }
ensure that {
  when { UE receives a TRACKING AREA UPDATE REJECT message with the reject cause set to "PLMN not
allowed" }
    then { UE deletes the GUTI, the last visited registered TAI and KSI and UE deletes the list of
equivalent PLMNs and UE enters state EMM-DEREGISTERED.PLMN-SEARCH and UE stores the PLMN in the
"forbidden PLMN list" }
            }
```

(8)

```
with { UE is switched off having a PLMN stored in the "forbidden PLMN list" }
ensure that {
  when { UE is powered up on this PLMN }
    then { UE doesn't perform an attach procedure }
            }
```

(9)

```
with { UE in EMM-DEREGISTERED.PLMN-SEARCH state having a PLMN stored in the "forbidden PLMN list" }
ensure that {
  when { UE enters a cell which is not in the "forbidden PLMN list" }
    then { UE initiates an attach procedure }
            }
```

(10)

```
with { UE in E-UTRA EMM-DEREGISTERED.PLMN-SEARCH state having a PLMN stored in the "forbidden PLMN
list" }
ensure that {
  when { UE is in a forbidden PLMN cells and when the PLMN is selected manually }
    then { UE initiates an attach procedure }
            }
```

22.5.7a.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: 3GPP TS 24.301 clauses 5.5.3.2.4 , 5.5.3.2.5 , 5.5.2.2.4 ,

[TS 24.301, clause 5.5.3.2.4]

The MME may also include a list of equivalent PLMNs in the TRACKING AREA UPDATE ACCEPT message. Each entry in the list contains a PLMN code (MCC+MNC). The UE shall store the list as provided by the network, and if there is no PDN connection for emergency bearer services established, the UE shall remove from the list any PLMN code that is already in the list of "forbidden PLMNs" or in the list of "forbidden PLMNs for GPRS service". If the UE is not attached for emergency bearer services and there is a PDN connection for emergency bearer services established, the UE shall remove from the list of equivalent PLMNs any PLMN code present in the list of forbidden PLMNs or in the list of "forbidden PLMNs for GPRS service" when the PDN connection for emergency bearer services is released. In addition, the UE shall add to the stored list the PLMN code of the registered PLMN that sent the list. The UE shall replace the stored list on each receipt of the TRACKING AREA UPDATE ACCEPT message. If the TRACKING AREA UPDATE ACCEPT message does not contain a list, then the UE shall delete the stored list.

[TS 36.304, clause 5.2.4.4]

If the highest ranked cell or best cell according to absolute priority reselection rules is an intra-frequency or inter-frequency cell which is not suitable due to being part of the "list of forbidden TAs for roaming" or belonging to a PLMN which is not indicated as being equivalent to the registered PLMN, the UE shall not consider this cell and other cells on the same frequency as candidates for reselection for a maximum of 300s. If the UE enters into state *any cell* *selection*, any limitation shall be removed. If the UE is redirected under E-UTRAN control to a frequency for which the timer is running, any limitation on that frequency shall be removed.

[TS 24.301 clause 5.5.3.2.5]

If the tracking area updating cannot be accepted by the network, the MME sends a TRACKING AREA UPDATE REJECT message to the UE including an appropriate EMM cause value.

If a tracking area update request from a UE with a LIPA PDN connection is not accepted due to the reasons specified in subclause 5.5.3.2.4, the MME shall send the TRACKING AREA UPDATE REJECT message with EMM cause value #10 "Implicitly detached".

If the tracking area update request is rejected due to general NAS level mobility management congestion control, the network shall set the EMM cause value to #22 "congestion" and assign a back-off timer T3346.

If the tracking area update request is rejected due to incompatibility between the CIoT EPS optimizations supported by the UE and what the network supports and the network sets the EMM cause value to #15 "no suitable cells in tracking area", the network may additionally include the Extended EMM cause IE with value "requested EPS optimization not supported".

NOTE 1: How the UE uses the Extended EMM cause IE with value "requested EPS optimization not supported" is implementation specific. The UE still behaves according to the EMM cause value #15.

Upon receiving the TRACKING AREA UPDATE REJECT message, if the message is integrity protected or contains a reject cause other than EMM cause value #25, the UE shall stop timer T3430 and stop any transmission of user data.

….

The UE shall take the following actions depending on the EMM cause value received in the TRACKING AREA UPDATE REJECT message.

#3 (Illegal UE);

#6 (Illegal ME); or

….

The UE shall set the EPS update status to EU3 ROAMING NOT ALLOWED (and shall store it according to subclause 5.1.3.3) and shall delete any GUTI, last visited registered TAI, TAI list and eKSI. The UE shall consider the USIM as invalid for EPS services until switching off or the UICC containing the USIM is removed or the timer T3245 expires as described in subclause 5.3.7a. The UE shall delete the list of equivalent PLMNs and shall enter the state EMM-DEREGISTERED.

If A/Gb mode or Iu mode is supported by the UE, the UE shall handle the GMM parameters GMM state, GPRS update status, P-TMSI, P-TMSI signature, RAI and GPRS ciphering key sequence number and the MM parameters update status, TMSI, LAI and ciphering key sequence number as specified in 3GPP TS 24.008 [13] for the case when the normal routing area updating procedure is rejected with the GMM cause with the same value. The USIM shall be considered as invalid also for non-EPS services until switching off or the UICC containing the USIM is removed or the timer T3245 expires as described in subclause 5.3.7a.

NOTE 2: The possibility to configure a UE so that the radio transceiver for a specific radio access technology is not active, although it is implemented in the UE, is out of scope of the present specification.

….

#9 (UE identity cannot be derived by the network);

The UE shall set the EPS update status to EU2 NOT UPDATED (and shall store it according to subclause 5.1.3.3) and shall delete any GUTI, last visited registered TAI, TAI list and eKSI. The UE shall enter the state EMM-DEREGISTERED.

If the rejected request was not for initiating a PDN connection for emergency bearer services, the UE shall subsequently, automatically initiate the attach procedure.

NOTE 3: User interaction is necessary in some cases when the UE cannot re-activate the EPS bearer(s) automatically.

If A/Gb mode or Iu mode is supported by the UE, the UE shall handle the GMM parameters GMM state, GPRS update status, P-TMSI, P-TMSI signature, RAI and GPRS ciphering key sequence number as specified in 3GPP TS 24.008 [13] for the case when the normal routing area updating procedure is rejected with the GMM cause with the same value.

#10 (Implicitly detached);

If the EPS update type is "periodic updating", a UE in CS/PS mode 1 or CS/PS mode 2 of operation is IMSI detached for both EPS services and non-EPS services.

The UE shall enter the state EMM-DEREGISTERED.NORMAL-SERVICE. The UE shall delete any mapped EPS security context or partial native EPS security context. If the rejected request was not for initiating a PDN connection for emergency bearer services, the UE shall then perform a new attach procedure.

NOTE 4: User interaction is necessary in some cases when the UE cannot re-activate the EPS bearer(s) automatically.

If A/Gb mode or Iu mode is supported by the UE, the UE shall handle the GMM state as specified in 3GPP TS 24.008 [13] for the case when the normal routing area updating procedure is rejected with the GMM cause with the same value.

#11 (PLMN not allowed); or

….

The UE shall set the EPS update status to EU3 ROAMING NOT ALLOWED (and shall store it according to subclause 5.1.3.3) and shall delete any GUTI, last visited registered TAI, TAI list and eKSI. The UE shall reset the tracking area updating attempt counter, delete the list of equivalent PLMNs and enter the state EMM-DEREGISTERED.PLMN-SEARCH.

The UE shall store the PLMN identity in the "forbidden PLMN list" and if the UE is configured to use timer T3245 (see 3GPP TS 24.368 [15A] or 3GPP TS 31.102 [17]) then the UE shall start timer T3245 and proceed as described in subclause 5.3.7a.

The UE shall perform a PLMN selection according to 3GPP TS 23.122 [6].

If A/Gb mode or Iu mode is supported by the UE, the UE shall handle the GMM parameters GMM state, GPRS update status, P-TMSI, P-TMSI signature, RAI, GPRS ciphering key sequence number and routing area updating attempt counter and the MM parameters update status, TMSI, LAI, ciphering key sequence number and the location update attempt counter as specified in 3GPP TS 24.008 [13] for the case when the normal routing area updating procedure is rejected with the GMM cause with the same value and no RR connection exists.

[TS 24.301 clause5.5.2.2.4]

The following abnormal cases can be identified:

…

b) Lower layer failure or release of the NAS signalling connection before reception of DETACH ACCEPT message

The detach procedure shall be aborted and the UE proceeds as follows:

- if the detach procedure was performed due to disabling of EPS services, the UE shall enter the EMM-NULL state;
- if "EPS detach" was requested for reasons other than disabling of EPS services, the UE shall enter the EMM-DEREGISTERED state;
- if "IMSI detach" was requested, the UE shall enter the EMM-REGISTERED.NORMAL-SERVICE state and the MM-NULL state; or
- if "combined EPS/IMSI detach" was requested, the UE shall enter the EMM-DEREGISTERED state and the MM-NULL state.

…

f) Change of cell into a new tracking area

If a cell change into a new tracking area that is not in the stored TAI list occurs before the UE initiated detach procedure is completed, the detach procedure shall be aborted and re-initiated after successfully performing a tracking area updating procedure. If the detach procedure was initiated due to removal of the USIM or the UE is to be switched off, the UE shall abort the detach procedure and enter the state EMM-DEREGISTERED.

22.5.7a.3 Test description

22.5.7a.3.1 Pre-test conditions

System Simulator:

- Maximum 2 Ncells are on at any given time
- Ncell 55, Ncell 56 belong to PLMN2 and Ncell 63 belongs to PLMN3
- Ncell 50, Ncell 51, Ncell 55, Ncell 56 and Ncell 63 are defined in subclause 8.1.4.2 in TS 36.508[18]
- NB-IOT system information combination 2 as defined in TS 36.508[18] clause 8.1.4.3.1.1 is used in all cells

Table 22.5.7a.3-1: Time instances of cell power level and parameter changes

	Parameter	Unit	Ncell 50	Ncell 51	Ncell 55	Ncell 56	Ncell 63
T0	Cell-specific NRS EPRE	dBm/ 15kHz	-85	Off	Off	Off	Off
T1	Cell-specific NRS EPRE	dBm/ 15kHz	Off	-85	Off	Off	Off
T2	Cell-specific NRS EPRE	dBm/ 15kHz	Off	Off	-85	Off	Off
T3	Cell-specific NRS EPRE	dBm/ 15kHz	Off	Off	Off	Off	-85
T4	Cell-specific NRS EPRE	dBm/ 15kHz	Off	-85	-120	Off	Off
T5	Cell-specific NRS EPRE	dBm/ 15kHz	-85	-120	Off	Off	Off
T6	Cell-specific NRS EPRE	dBm/ 15kHz	-120	-85	Off	Off	Off
T7	Cell-specific NRS EPRE	dBm/ 15kHz	Off	-120	-85	Off	Off
T8	Cell-specific NRS EPRE	dBm/ 15kHz	Off	-85	Off	Off	Off
T9	Cell-specific NRS EPRE	dBm/ 15kHz	-85	-120	Off	Off	Off
T10	Cell-specific NRS EPRE	dBm/ 15kHz	-120	-85	Off	Off	Off
T11	Cell-specific NRS EPRE	dBm/ 15kHz	Off	Off	-120	-85	Off
T12	Cell-specific NRS EPRE	dBm/ 15kHz	Off	Off	-85	Off	Off
T13	Cell-specific NRS EPRE	dBm/ 15kHz	Off	Off	Off	Off	-85
T14	Cell-specific NRS EPRE	dBm/ 15kHz	Off	Off	Off	-85	-120

UE:

- The Test UICC shall be inserted. This shall contain a USIM application on UICC.

Preamble:

- the UE is in state Registered, Idle mode (State 3-NB) on Ncell 50 according to TS 36.508 [18] with PLMN3 on its "forbidden PLMN list".

22.5.7a.3.2 Test procedure sequence

22.5.7a.3.2 Test procedure sequence

Table 22.5.7a.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U – S	Message		
1	SS adjusts the cell power levels according to row T1 in table 22.5.7a.3-1. All TRACKING AREA UPDATE REJECT messages below shall be sent integrity protected.	-	-	-	-
2	The UE transmits a TRACKING AREA UPDATE REQUEST message on NB-IoT Ncell 51.	-->	TRACKING AREA UPDATE REQUEST	-	-
3	SS responds with a TRACKING AREA UPDATE ACCEPT message including PLMN2 and PLMN3 in the list of equivalent PLMNs.	<--	TRACKING AREA UPDATE ACCEPT	-	-
4	The UE transmits a TRACKING AREA UPDATE COMPLETE message	-->	TRACKING AREA UPDATE COMPLETE	-	-
5	SS Releases the RRC Connection.	-	-	-	-
6	SS adjusts the cell power levels according to row T2 in table 22.5.7a.3-1.	-	-	-	-
7	Check: Does the UE transmit a TRACKING AREA UPDATE REQUEST message on Ncell 55 (PLMN2)?	-->	TRACKING AREA UPDATE REQUEST	1	P
8	The SS transmits a TRACKING AREA UPDATE ACCEPT message including PLMN1 and PLMN3 in the list of equivalent PLMNs.	<--	TRACKING AREA UPDATE ACCEPT	-	-
9	The UE transmits a TRACKING AREA UPDATE COMPLETE message.	-->	TRACKING AREA UPDATE COMPLETE	-	-
10	SS Releases the RRC Connection.	-	-	-	-
11	SS adjusts the cell power levels according to row T3 in table 22.5.7a.3-1. NOTE: Ncell 63 (PLMN3) belongs to the forbidden PLMN.	-	-	-	-
12	Check: Does the UE transmit a TRACKING AREA UPDATE REQUEST message on NB-IoT Ncell 63 (PLMN3) in next 30 seconds?	-->	TRACKING AREA UPDATE REQUEST	1	F
13	The UE is switched to manual PLMN selection mode and is made to select PLMN3 in order to remove PLMN3 in the forbidden PLMN list in the UE.	-	-	-	-
14	The UE transmits a TRACKING AREA UPDATE REQUEST message on NB-IoT Ncell 63 (PLMN3).	-->	TRACKING AREA UPDATE REQUEST	-	-
15	The SS transmits a TRACKING AREA UPDATE ACCEPT message without the list of equivalent PLMNs.	<--	TRACKING AREA UPDATE ACCEPT	-	-
16	Check: Does the UE transmit a TRACKING AREA UPDATE COMPLETE message?	-->	TRACKING AREA UPDATE COMPLETE	1	P
17	SS releases the RRC connection	-	-	-	-
18	The UE is switched back to automatic PLMN selection mode.	-	-	-	-
19	Void				
20	SS adjusts the cell power levels according to row T4 in table 22.5.7a.3-1.	-	-	-	-
21	Check: Does the UE transmit a TRACKING AREA UPDATE REQUEST message on Ncell 51 (PLMN1)?	-->	TRACKING AREA UPDATE REQUEST	2	P
22	SS responds with TRACKING AREA UPDATE ACCEPT message	<--	TRACKING AREA UPDATE ACCEPT	-	-
23	The UE transmits a TRACKING AREA UPDATE COMPLETE message	-->	TRACKING AREA UPDATE COMPLETE	-	-
23A	The SS releases the RRC connection.				

-	EXCEPTION: Steps 24 to 47 shall be repeated for (k=0,1)				
24	SS adjusts the cell power levels according to row T5 in table 22.5.7a.3-1.	-	-	-	-
25	The UE transmits a TRACKING AREA UPDATE REQUEST on Ncell 50.	-->	TRACKING AREA UPDATE REQUEST	-	-
26	The SS transmits a TRACKING AREA UPDATE REJECT message: - if k=0 with EMM cause = "Illegal UE" - if k=1 with EMM cause = "Illegal ME"	<--	TRACKING AREA UPDATE REJECT	-	-
27	The SS releases the RRC connection.	-	-	-	-
28	SS adjusts the cell power levels according to row T6 in table 22.5.7a.3-1.	-	-	-	-
29	Check: Does the UE transmit an ATTACH REQUEST message in the next 90 seconds on Ncell 51? Note: NB-IoT Ncell 51 belongs to the same PLMN where the UE was rejected but a different TAC	-->	ATTACH REQUEST	3	F
30	The user initiates an attach by MMI or by AT command.	-	-	-	-
31	Check: Does the UE transmit an ATTACH REQUEST message in the next 90 seconds on Ncell 51?	-->	ATTACH REQUEST	3	F
32a1	SS adjusts the cell power levels according to row T7 in table 22.5.7a.3-1.	-	-	-	-
32a2	Check: Does the UE transmit an ATTACH REQUEST message in the next 90 seconds on Ncell 55? Note: Ncell 55 belongs to a PLMN which is not the same like the one on which the UE was rejected.	-->	ATTACH REQUEST	3	F
32a3	The user initiates an attach by MMI or by AT command.	-	-	-	-
32a4	Check: Does the UE transmit an ATTACH REQUEST message in the next 90 seconds on Ncell 55?	-->	ATTACH REQUEST	3	F
33	Switch-off the UE	-	-	-	-
34	SS adjusts the cell power levels according to row T8 in table 22.5.7a.3-1.	-	-	-	-
35	Switch-on the UE	-	-	-	-
36	Check: Does the UE transmit an ATTACH REQUEST message with a PDN CONNECTIVITY REQUEST message to request PDN connectivity to the default PDN or ESM DUMMY MESSAGE on Ncell 51?	-->	ATTACH REQUEST	4	P
37-46b1	The procedure is completed by executing steps 5 to 14b1 of the UE registration procedure in TS 36.508 subclause 8.1.5.2.				
47	SS Releases the RRC Connection, and the UE is in state Registered, NB-IoT Idle Mode (N1) on Ncell 51	-	-	-	-
48	SS adjusts the cell power levels according to row T9 in table 22.5.7a.3-1.	-	-	-	-
49	The UE transmits a TRACKING AREA UPDATE REQUEST on Ncell 50.	-->	TRACKING AREA UPDATE REQUEST	-	-
50	The SS transmits a TRACKING AREA UPDATE REJECT message with EMM cause = " UE identity cannot be derived by the network " as specified.	<--	TRACKING AREA UPDATE REJECT	-	-
-	EXCEPTION: Steps 51-52a1 describes the behaviour that depends on UE behaviour (Note 1).	-	-	-	-
51	The SS releases the RRC connection.	-	-	-	-

-	EXCEPTION: Step 52a1 describes a behaviour which depends on the UE capability	-	-	-	-
52a1	IF NOT pc_Automatic_EPS_Re_Attach, the user initiates an attach by MMI or by AT command.	-	-	-	-
53	Check: Does the UE transmit an ATTACH REQUEST message with a PDN CONNECTIVITY REQUEST message to request PDN connectivity to the default PDN or ESM DUMMY MESSAGE message on Ncell 50?	-->	ATTACH REQUEST	5	P
54-63b1	The attach procedure is completed by executing steps 5 to 14b1 of the UE registration procedure in TS 36.508 subclause 8.1.5.2.				
64	The SS releases the RRC connection.	-	-	-	-
65	SS adjusts the cell power levels according to row T10 in table 22.5.7a.3-1.	-	-	-	-
66	The UE transmits a TRACKING AREA UPDATE REQUEST on Ncell 51.	-->	TRACKING AREA UPDATE REQUEST	-	-
67	The SS transmits a TRACKING AREA UPDATE REJECT message with EMM cause = "UE implicitly detached" as specified.	<--	TRACKING AREA UPDATE REJECT	-	-
-	EXCEPTION: Steps 68a-68a1 describes the behaviour that depends on UE behaviour (Note 1).	-	-	-	-
68a	The SS releases the RRC connection.	-	-	-	-
-	EXCEPTION: Step 68a1 describes a behaviour which depends on the UE capability	-	-	-	-
68a1	IF NOT pc_Automatic_EPS_Re_Attach THEN the user initiates an attach by MMI or by AT command.	-	-	-	-
69	Check: Does the UE transmit an ATTACH REQUEST message with a PDN CONNECTIVITY REQUEST message to request PDN connectivity to the default PDN or ESM DUMMY MESSAGE message on Ncell 51?	-->	ATTACH REQUEST	6	P
70-79b1	The attach procedure is completed by executing steps 5 to 14b1 of the UE registration procedure in TS 36.508 sub clause 8.1.5.2.				
80	The SS releases the RRC connection.	-	-	-	-
81	Void.	-	-	-	-
82-91b1	Void.				
92	SS adjusts the cell power levels according to row T11 in table 22.5.7a.3-1.				
93	The UE transmits a TRACKING AREA UPDATE REQUEST on Ncell 56.	-->	TRACKING AREA UPDATE REQUEST	-	-
94	The SS transmits a TRACKING AREA UPDATE REJECT message with EMM cause = "PLMN not allowed".	<--	TRACKING AREA UPDATE REJECT	-	-
95	The SS releases the RRC connection.	-	-	-	-
96	Check: Does the UE transmit an ATTACH REQUEST message in the next 30 seconds on Ncell 56?	-->	ATTACH REQUEST	7	F
97	If possible (see ICS) switch off is performed or the USIM is removed. Otherwise the power is removed.	-	-	-	-
98	SS adjusts the cell power levels according to row T12 in table 22.5.7a.3-1.	-	-	-	-
99	The UE is brought back to operation or the USIM is inserted.	-	-	-	-

100	Check: Does the UE transmit an ATTACH REQUEST message in the next 90 seconds on Ncell 55?	-->	ATTACH REQUEST	8	F
101	The user initiates an attach by MMI or by AT command.	-	-	-	-
102	Check: Does the UE transmit an ATTACH REQUEST message in the next 90 seconds on Ncell 55?	-->	ATTACH REQUEST	8	F
103	The following messages are sent and shall be received on Ncell 63.	-	-	-	-
104	SS adjusts the cell power levels according to row T13 in table 22.5.7a.3-1.	-	-	-	-
105	Check: Does the UE transmit ATTACH REQUEST message with a PDN CONNECTIVITY REQUEST message to request PDN connectivity to the default PDN or ESM DUMMY MESSAGE message on Ncell 63?	-->	ATTACH REQUEST	9	P
106 - 115 b1	The attach procedure is completed by executing steps 5 to 14b1 of the UE registration procedure in TS 36.508 sub clause 8.1.5.2.	-	-	-	-
116	If possible (see ICS) switch off is performed or the USIM is removed. Otherwise the power is removed.	-	-	-	-
-	EXCEPTION: Step 117a1 describes behaviour that depends on the UE capability.				
117 a1	If pc_SwitchOnOff or pc_USIM_Removal then the UE transmits a DETACH REQUEST.	-->	DETACH REQUEST	-	-
118	The following messages are sent and shall be received on NB-IoT Ncell 56.	-	-	-	-
119	SS adjusts the cell power levels according to row T14 in table 22.5.7a.3-1. NOTE: Ncell 56 belongs to the forbidden PLMN.	-	-	-	-
120	The UE is brought back to operation or the USIM is inserted.	-	-	-	-
121	The UE is switched to manual PLMN selection mode and is made to select the forbidden PLMN (PLMN2).	-	-	-	-
122	Check: Does the UE transmit ATTACH REQUEST message with a PDN CONNECTIVITY REQUEST message to request PDN connectivity to the default PDN or ESM DUMMY MESSAGE message?	-->	ATTACH REQUEST	10	P
123 - 132 b1	The attach procedure is completed by executing steps 5 to 14b1 of the UE registration procedure in TS 36.508 sub clause 8.1.5.2.	-	-	-	-
-	At the end of this test procedure sequence, the UE is in end state NB-IoT manual selection Mode (N5) according to TS 36.523-3.	-	-	-	-
133	The SS releases the RRC connection.	-	-	-	-
NOTE 1: SS waits for 1.5 second to receive the Attach Request on the existing RRC Connection. In case Attach Request is not received within 1.5 second then the existing RRC Connection is released.

22.5.7b NB-IoT / Normal tracking area update Rejected (Tracking area not allowed / No suitable cells in tracking area / Roaming not allowed in this tracking area / Congestion) / UE initiated detach Abnormal case Change of cell into a new tracking area

22.5.7b.1 Test Purpose (TP)

(1)

```
with { UE has sent a TRACKING AREA UPDATE REQUEST message}
ensure that {
  when { UE receives a TRACKING AREA UPDATE REJECT message with the reject cause set to "Tracking
area not allowed " }
    then { shall delete any GUTI, last visited registered TAI, TAI list and KSI. The UE shall reset
the tracking area updating attempt counter and shall enter the state EMM-DEREGISTERED.LIMITED-
SERVICE and store the current TAI in the list of "forbidden tracking areas for regional provision of
service" }
```

(2)

```
with { UE is in EMM-DEREGISTERED.LIMITED-SERVICE state and has a TAI in the list of "forbidden
tracking areas for regional provision of service"}
ensure that {
  when { UE is in the serving cell which the UE is rejected }
    then { UE does not attempt an attach procedure on any other cell}
            }
```

(3)

```
with { UE is in EMM-DEREGISTERED.LIMITED-SERVICE state and the current TAI in the list of "forbidden
tracking areas for regional provision of service"}
ensure that {
  when { UE enters a new cell in the same TAI it was rejected }
    then { UE does not initiate an attach procedure}
            }
```

(4)

```
with { UE is in EMM-DEREGISTERED.LIMITED-SERVICE state and the current TAI in the list of "forbidden tracking areas for regional provision of service"}
ensure that {
  when { UE enters a new cell with different TAI without in the list of "forbidden tracking areas for regional provision of service"}
    then { UE initiates attach procedure with IMSI }
            }
```

(5)

```
with { UE is switched off }
ensure that {
  when { UE is powered on and enters the cell with "forbidden tracking areas for regional provision of service" before the UE was switched off }
    then { UE initiates attach procedure on the cell }
```

(6)

```
with { the UE has sent TRACKING AREA UPDATE REQUEST message }
ensure that {
  when { the UE receives TRACKING AREA UPDATE REJECT message with the reject cause set to "roaming not allowed in this tracking area" }
    then { the UE sets the EPS update status to EU3 ROAMING NOT ALLOWED and the UE deletes the last visited registered TAI and the UE enters the state EMM-REGISTERED.PLMN-SEARCH and the UE stores the current TAI in the list of "forbidden tracking areas for roaming" }
            }
```

(7)

```
with { the UE is in EMM-REGISTERED.PLMN-SEARCH state and the current TAI in the list of "forbidden tracking areas for roaming"}
ensure that {
  when { the serving NB-IoT cell Belongs to TAI where UE was rejected }
    then { the UE does not attempt to send TRACKING AREA UPDATE REQUEST message }
            }
```

(8)

```
with { the UE is in EMM-REGISTERED.PLMN-SEARCH state and the TAI of the current NB-IoT cell Belongs to the list of "forbidden tracking areas for roaming"}
ensure that {
  when { the UE enters a NB-IoT cell Belonging to same PLMN and TAI not in the list of "forbidden tracking areas for roaming"}
    then { the UE sends TRACKING AREA UPDATE REQUEST message }
            }
```

(9)

```
with { the UE is in EMM-REGISTERED.PLMN-SEARCH state and the TAI of the current NB-IoT cell Belongs to the list of "forbidden tracking areas for roaming"}
ensure that {
  when { the UE enters a NB-IoT cell Belonging to another PLMN }
    then { the UE sends TRACKING AREA UPDATE REQUEST message }
            }
```

(10)

```
with { UE is sending a TRACKING AREA UPDATE REQUEST message}
ensure that {
  when { UE receives a TRACKING AREA UPDATE REJECT message with the EMM cause set to 'No Suitable Cells In tracking area' }
    then { UE selects a suitable cell in another tracking area in the same PLMN and performs the tracking area updating procedure and UE does not select a suitable cell in another PLMN}
            }
```

(11)

```
with { UE has sent a TRACKING AREA UPDATE REQUEST message}
```

```
ensure that {
  when { UE receives an integrity protected TRACKING AREA UPDATE REJECT message with the reject
cause set to "Congestion" and the T3346 value IE present }
    then { The UE shall abort the tracking area updating procedure, reset the tracking area updating
attempt counter and set the EPS update status to EU2 NOT UPDATED. The UE shall also start timer
T3346 with the value provided in the T3346 IE as received in the TRACKING AREA UPDATE REJECT
message, UE initiates the tracking area updating procedure when timer T3346 expires}
```

(13) Void

22.5.7b.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: 3GPP TS 24.301 clauses 5.5.3.2.4 , 5.5.3.2.5 , 5.5.2.2.4 ,

[TS 24.301, clause 5.5.3.2.4]

The MME may also include a list of equivalent PLMNs in the TRACKING AREA UPDATE ACCEPT message. Each entry in the list contains a PLMN code (MCC+MNC). The UE shall store the list as provided by the network, and if there is no PDN connection for emergency bearer services established, the UE shall remove from the list any PLMN code that is already in the list of "forbidden PLMNs" or in the list of "forbidden PLMNs for GPRS service". If the UE is not attached for emergency bearer services and there is a PDN connection for emergency bearer services established, the UE shall remove from the list of equivalent PLMNs any PLMN code present in the list of forbidden PLMNs or in the list of "forbidden PLMNs for GPRS service" when the PDN connection for emergency bearer services is released. In addition, the UE shall add to the stored list the PLMN code of the registered PLMN that sent the list. The UE shall replace the stored list on each receipt of the TRACKING AREA UPDATE ACCEPT message. If the TRACKING AREA UPDATE ACCEPT message does not contain a list, then the UE shall delete the stored list.

[TS 24.301 clause5.5.3.2.5]

If the tracking area updating cannot be accepted by the network, the MME sends a TRACKING AREA UPDATE REJECT message to the UE including an appropriate EMM cause value.

If a tracking area update request from a UE with a LIPA PDN connection is not accepted due to the reasons specified in subclause 5.5.3.2.4, the MME shall send the TRACKING AREA UPDATE REJECT message with EMM cause value #10 "Implicitly detached".

If the tracking area update request is rejected due to general NAS level mobility management congestion control, the network shall set the EMM cause value to #22 "congestion" and assign a back-off timer T3346.

If the tracking area update request is rejected due to incompatibility between the CIoT EPS optimizations supported by the UE and what the network supports and the network sets the EMM cause value to #15 "no suitable cells in tracking area", the network may additionally include the Extended EMM cause IE with value "requested EPS optimization not supported".

NOTE 1: How the UE uses the Extended EMM cause IE with value "requested EPS optimization not supported" is implementation specific. The UE still behaves according to the EMM cause value #15.

Upon receiving the TRACKING AREA UPDATE REJECT message, if the message is integrity protected or contains a reject cause other than EMM cause value #25, the UE shall stop timer T3430 and stop any transmission of user data.

….

The UE shall take the following actions depending on the EMM cause value received in the TRACKING AREA UPDATE REJECT message.

...

#12 (Tracking area not allowed);

The UE shall set the EPS update status to EU3 ROAMING NOT ALLOWED (and shall store it according to subclause 5.1.3.3) and shall delete any GUTI, last visited registered TAI, TAI list and eKSI. The UE shall reset the tracking area updating attempt counter and shall enter the state EMM-DEREGISTERED.LIMITED-SERVICE.

The UE shall store the current TAI in the list of "forbidden tracking areas for regional provision of service".

If A/Gb mode or Iu mode is supported by the UE, the UE shall handle the GMM parameters GMM state, GPRS update status, P-TMSI, P-TMSI signature, RAI, GPRS ciphering key sequence number and routing area updating attempt counter as specified in 3GPP TS 24.008 [13] for the case when the normal routing area updating procedure is rejected with the GMM cause with the same value.

#13 (Roaming not allowed in this tracking area);

The UE shall set the EPS update status to EU3 ROAMING NOT ALLOWED (and shall store it according to subclause 5.1.3.3) and shall delete the list of equivalent PLMNs. The UE shall reset the tracking area updating attempt counter and shall change to state EMM-REGISTERED.PLMN-SEARCH.

The UE shall store the current TAI in the list of "forbidden tracking areas for roaming" and shall remove the current TAI from the stored TAI list if present.

The UE shall perform a PLMN selection according to 3GPP TS 23.122 [6].

If A/Gb mode or Iu mode is supported by the UE, the UE shall handle the GMM parameters GMM state, GPRS update status and routing area updating attempt counter as specified in 3GPP TS 24.008 [13] for the case when the normal routing area updating procedure is rejected with the GMM cause with the same value.

….

#15 (No suitable cells in tracking area);

The UE shall set the EPS update status to EU3 ROAMING NOT ALLOWED (and shall store it according to subclause 5.1.3.3). The UE shall reset the tracking area updating attempt counter and shall enter the state EMM-REGISTERED.LIMITED-SERVICE.

The UE shall store the current TAI in the list of "forbidden tracking areas for roaming" and shall remove the current TAI from the stored TAI list if present.

If the Extended EMM cause IE with value "E-UTRAN not allowed" is included in the TRACKING AREA UPDATE REJECT message, the UE supports "E-UTRA Disabling for EMM cause #15", and the "E-UTRA Disabling Allowed for EMM cause #15" parameter as specified in 3GPP TS 24.368 [15A] or 3GPP TS 31.102 [17] is present and set to enabled; then the UE shall disable the E-UTRA capability as specified in subclause 4.5 and search for a suitable cell in another location area; otherwise, the UE shall search for a suitable cell in another tracking area or in another location area according to 3GPP TS 36.304 [21].

If A/Gb mode or Iu mode is supported by the UE, the UE shall handle the GMM parameters GMM state, GPRS update status and routing area updating attempt counter as specified in 3GPP TS 24.008 [13] for the case when the normal routing area updating procedure is rejected with the GMM cause with the same value.

#22 (Congestion);

If the T3346 value IE is present in the TRACKING AREA UPDATE REJECT message and the value indicates that this timer is neither zero nor deactivated, the UE shall proceed as described below, otherwise it shall be considered as an abnormal case and the behaviour of the UE for this case is specified in subclause 5.5.3.2.6.

The UE shall abort the tracking area updating procedure, reset the tracking area updating attempt counter and set the EPS update status to EU2 NOT UPDATED. If the rejected request was not for initiating a PDN connection for emergency bearer services, the UE shall change to state EMM-REGISTERED.ATTEMPTING-TO-UPDATE.

The UE shall stop timer T3346 if it is running.

If the TRACKING AREA UPDATE REJECT message is integrity protected, the UE shall start timer with the value provided in the T3346 value IE.

If the TRACKING AREA UPDATE REJECT message is not integrity protected, the UE shall start timer T3346 with a random value from the default range specified in 3GPP TS 24.008 [13].

The UE stays in the current serving NB-IoT cell And applies the normal cell reselection process. The tracking area updating procedure is started, if still necessary, when timer T3346 expires or is stopped.

If A/Gb mode or Iu mode is supported by the UE, the UE shall handle the GMM parameters GMM state, GPRS update status and routing area updating attempt counter as specified in 3GPP TS 24.008 [13] for the case when the normal routing area updating procedure is rejected with the GMM cause with the same value.

[TS 24.301 clause5.5.2.2.4]

The following abnormal cases can be identified:

…

b) Lower layer failure or release of the NAS signalling connection before reception of DETACH ACCEPT message

The detach procedure shall be aborted and the UE proceeds as follows:

- if the detach procedure was performed due to disabling of EPS services, the UE shall enter the EMM-NULL state;
- if "EPS detach" was requested for reasons other than disabling of EPS services, the UE shall enter the EMM-DEREGISTERED state;
- if "IMSI detach" was requested, the UE shall enter the EMM-REGISTERED.NORMAL-SERVICE state and the MM-NULL state; or
- if "combined EPS/IMSI detach" was requested, the UE shall enter the EMM-DEREGISTERED state and the MM-NULL state.

…

f) Change of cell into a new tracking area

If a cell change into a new tracking area that is not in the stored TAI list occurs before the UE initiated detach procedure is completed, the detach procedure shall be aborted and re-initiated after successfully performing a tracking area updating procedure. If the detach procedure was initiated due to removal of the USIM or the UE is to be switched off, the UE shall abort the detach procedure and enter the state EMM-DEREGISTERED.

22.5.7b.3 Test description

22.5.7b.3.1 Pre-test conditions

System Simulator:

- Maximum 2 Ncells are on at any given time
- Ncell 55, Ncell 56 belong to PLMN2
- Ncell 50, Ncell 51, Ncell 52, Ncell 53, Ncell 55, Ncell 56, Ncell 61 are defined in subclause 8.1.4.2 in TS 36.508[18]
- NB-IOT system information combination 2 as defined in TS 36.508[18] clause 8.1.4.3.1.1 is used in all cells

Table 22.5.7b.3-1: Time instances of cell power level and parameter changes

	Parameter	Unit	Ncell 50	Ncell 51	Ncell 52	Ncell 55	Ncell 56	Ncell 61	Ncell 53
T0	Cell-specific NRS EPRE	dBm/ 15kHz	Off	-85	Off	Off	Off	Off	Off
T1	Cell-specific NRS EPRE	dBm/ 15kHz	-85	Off	-91	Off	Off	Off	Off
T2	Cell-specific NRS EPRE	dBm/ 15kHz	-85	Off	Off	Off	Off	Off	Off
T3	Cell-specific NRS EPRE	dBm/ 15kHz	Off	Off	Off	Off	Off	-85	Off
T4	Cell-specific NRS EPRE	dBm/ 15kHz	Off	Off	-85	Off	Off	Off	Off
T5	Cell-specific NRS EPRE	dBm/ 15kHz	-85	Off	Off	Off	Off	Off	Off

T6	Cell-specific NRS EPRE	dBm/ 15kHz	-120	Off	Off	-85	Off	Off	Off
T7	Cell-specific NRS EPRE	dBm/ 15kHz	Off	Off	Off	-91	-85	Off	Off
T8	Cell-specific NRS EPRE	dBm/ 15kHz	Off	Off	Off	-85	-91	Off	Off
T9	Cell-specific NRS EPRE	dBm/ 15kHz	-85	Off	Off	Off	Off	Off	Off
T10	Cell-specific NRS EPRE	dBm/ 15kHz	Off	-85	Off	Off	Off	Off	Off
T11	Cell-specific NRS EPRE	dBm/ 15kHz	-85	-91	Off	Off	Off	Off	Off
T12	Cell-specific NRS EPRE	dBm/ 15kHz	-120	-91	Off	Off	Off	Off	-85

UE:

- The Test UICC shall be inserted. This shall contain a USIM application on UICC.

Preamble:

- the UE is in state Registered, Idle mode (State 3-NB) on Ncell 51 according to TS 36.508 [18].

22.5.7b.3.2 Test procedure sequence

Table 22.5.7b.3.2-1: Main behaviour

1	SS adjusts the cell power levels according to row T1 in table 22.5.7b.3-1.	-	-	-	-
2	The UE transmits a TRACKING AREA UPDATE REQUEST on Ncell 50.	-->	TRACKING AREA UPDATE REQUEST	-	-
3	The SS transmits a TRACKING AREA UPDATE REJECT message with EMM cause = "Tracking area not allowed" as specified.	<--	TRACKING AREA UPDATE REJECT	-	-
4	The SS releases the RRC connection.	-	-	-	-
5	Check: Does the UE transmit an ATTACH REQUEST message in the next 90 seconds on Ncell 52?	-->	ATTACH REQUEST	2	F
6	SS adjusts the cell power levels according to row T2 in table 22.5.7b.3-1.				
7	The user initiates an attach by MMI or by AT command.	-	-	-	-
8	Check: Does the UE transmit an ATTACH REQUEST message in the next 90 seconds on Ncell 50?	-->	ATTACH REQUEST	1	F
9	SS adjusts the cell power levels according to row T3 in table 22.5.7b.3-1.	-	-	-	-
10	Check: Does the UE transmit an ATTACH REQUEST message in the next 90 seconds on Ncell 61?	-->	ATTACH REQUEST	3	F
11	SS adjusts the cell power levels according to row T4 in table 22.5.7b.3-1.	-	-	-	-
12	Check: Does the UE transmit an ATTACH REQUEST including a PDN CONNECTIVITY REQUEST or ESM DUMMY MESSAGE message on Ncell 52?	-->	ATTACH REQUEST	4	P
13-24b1	The attach procedure is completed by executing steps 5 to 14b1 of the UE registration procedure in TS 36.508 sub clause 8.1.5.2.	-	-	-	-
25	If possible (see ICS) switch off is performed or the USIM is removed. Otherwise the power is removed.	-	-	-	-
-	EXCEPTION: Step 26a1 describes behaviour that depends on the UE capability.				

26a1	If pc_SwitchOnOff or pc_USIM_Removal then the UE transmits a DETACH REQUEST.	-->	DETACH REQUEST	-	-
27	The following messages are sent and shall be received on Ncell 50.	-	-	-	-
28	SS adjusts the cell power levels according to row T5 in table 22.5.7b.3-1.	-	-	-	-
29	The UE is brought back to operation or the USIM is inserted.	-	-	-	-
30	Check: Does the UE transmits ATTACH REQUEST message with a PDN CONNECTIVITY REQUEST message to request PDN connectivity to the default PDN or ESM DUMMY MESSAGE message on Ncell 50?	-->	ATTACH REQUEST	5	P
31-40b1	The attach procedure is completed executing steps 5 to 14b1 of the UE registration procedure in TS 36.508 sub clause 8.1.5.2.	-	-	-	-
41	The SS releases the RRC connection.	-	-	-	-
42	SS adjusts the cell power levels according to row T6 in table 22.5.7b.3-1.	-	-	-	-
43-48	The UE performs steps 1 to 6 of the generic procedure in TS 36.508 subclause 8.1.5A.5 to camp on Ncell 55.				
49	SS adjusts the cell power levels according to row T7 in table 22.5.7b.3-1.	-	-	-	-
50	The UE transmits TRACKING AREA UPDATE REQUEST on Ncell 56.	-->	TRACKING AREA UPDATE REQUEST	-	-
51	Void	-	-	-	-
52	The SS transmits a TRACKING AREA UPDATE REJECT message with EMM cause = '"Roaming not allowed in this tracking area"' as specified.	<--	TRACKING AREA UPDATE REJECT	-	-
53	The SS releases the RRC connection.				
53A	SS adjusts the cell power levels according to row T8 in table 22.5.7b.3-1.	-	-	-	-
54	Check: Does the UE transmit TRACKING AREA UPDATE REQUEST message on Ncell 55?	-->	TRACKING AREA UPDATE REQUEST	6, 7, 8	P
55	The SS transmits TRACKING AREA UPDATE REJECT message with EMM cause = "Roaming not allowed in this tracking area" as specified.	<--	TRACKING AREA UPDATE REJECT	-	-
56	The SS releases the RRC connection.				
57a1	SS adjusts the cell power levels according to row T9 in table 22.5.7b.3-1.	-	-	-	-
57a2	Check: Does the UE transmit TRACKING AREA REQUEST message on Ncell 50?	-->	TRACKING AREA UPDATE REQUEST	6, 9	P
57a3	The SS sends TRACKING AREA ACCEPT message.	<--	TRACKING AREA UPDATE ACCEPT	-	-
57a4	The UE transmits TRACKING AREA COMPLETE message.	-->	TRACKING AREA UPDATE COMPLETE	-	-
57a5	The SS releases the RRC connection.	-	-	-	-
58	SS adjusts the cell power levels according to row T10 in table 22.5.7b.3-1.	-	-	-	-
-	The following messages are sent and shall be received on NCell 51.	-	-	-	-
59	The UE transmits a TRACKING AREA UPDATE REQUEST message.	-->	TRACKING AREA UPDATE REQUEST	-	-
60	The SS transmits a TRACKING AREA UPDATE REJECT message with the EMM cause set to 'No Suitable Cells In tracking area'.	<--	TRACKING AREA UPDATE REJECT	-	-
60A	The SS releases the RRC connection	-	-	-	-
61	SS adjusts the cell power levels according to row T11 in table 22.5.7b.3-1.				

62	Void	-	-	-	-
-	The following messages are sent and shall be received on Ncell 50.	-	-	-	-
63	Check: Does the UE transmit a TRACKING AREA UPDATE REQUEST message?	-->	TRACKING AREA UPDATE REQUEST	10	P
64	The SS transmits a TRACKING AREA UPDATE ACCEPT message.	<--	TRACKING AREA UPDATE ACCEPT	-	-
65	The UE transmits a TRACKING AREA UPDATE COMPLETE message.	-->	TRACKING AREA UPDATE COMPLETE	-	-
65A	The SS releases the RRC connection.				
66	SS adjusts the cell power levels according to row T12 in table 22.5.7b.3-1.	-	-	-	-
67	The UE transmits a TRACKING AREA UPDATE REQUEST on Ncell 53.	-->	TRACKING AREA UPDATE REQUEST	-	-
68	The SS transmits a TRACKING AREA UPDATE REJECT message with EMM cause = "Congestion " and T3346 IE set to 5 minutes. The UE starts timer T3346.	<--	TRACKING AREA UPDATE REJECT	-	-
69	The SS releases the RRC connection.	-	-	-	-
70	Check: Does the UE transmit a TRACKING AREA UPDATE REQUEST message before timer T3346 has expired?	-	-	11	F
71	Check: Does the UE transmit a TRACKING AREA UPDATE REQUEST message after timer T3346 has expired?	-->	TRACKING AREA UPDATE REQUEST	11	P
72	The SS transmits a TRACKING AREA UPDATE ACCEPT message.	<--	TRACKING AREA UPDATE ACCEPT	-	-
73	The UE transmits a TRACKING AREA UPDATE COMPLETE message.	-->	TRACKING AREA UPDATE COMPLETE	-	-

22.5.8 NB-IoT / TRACKING AREA UPDATE REJECT / Change of cell into a new tracking area / Access barred due to access class control or NAS signalling connection establishment rejected by the network / Success or fail after several attempts due to no network response / TA belongs to TAI list and status is UPDATED / Tracking area updating and detach procedure collision.

22.5.8.1 Test Purpose (TP)

(1)

```
with { UE has sent a TRACKING AREA UPDATE REQUEST message}
ensure that {
  when { UE receives a TRACKING AREA UPDATE REJECT message with reject cause #95"semantically
incorrect message" }
    then { the UE sets the tracking area updating attempt counter to 5, starts timer T3402, and
performs tracking area updating on the expiry of timers T3402}
```

(2)

```
with { UE has sent a TRACKING AREA UPDATE REQUEST message}
ensure that {
  when { UE receives a TRACKING AREA UPDATE REJECT message with reject cause #96" invalid mandatory
information"  }
    then { the UE sets the tracking area updating attempt counter to 5, starts timer T3402, and
performs tracking area updating on the expiry of timers T3402}
```

(3)

```
with { UE has sent a TRACKING AREA UPDATE REQUEST message}
ensure that {
  when { UE receives a TRACKING AREA UPDATE REJECT message with reject cause #97"message type non-
existent or not implemented" }
    then { the UE sets the tracking area updating attempt counter to 5, starts timer T3402, and
performs tracking area updating on the expiry of timers T3402}
```

(4)

```
with { UE has sent a TRACKING AREA UPDATE REQUEST message}
ensure that {
  when { UE receives a TRACKING AREA UPDATE REJECT message with reject cause #99"information element
non-existent or not implemented" }
    then { the UE sets the tracking area updating attempt counter to 5, starts timer T3402, and
performs tracking area updating on the expiry of timers T3402}
```

(5)

```
with { UE has sent a TRACKING AREA UPDATE REQUEST message}
ensure that {
  when { UE receives a TRACKING AREA UPDATE REJECT message with reject cause #111"protocol error,
unspecified" }

            }
```

22.5.8.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: 3GPP TS 24.301 clauses 5.5.3.2.6, 5.5.3.1, 5.5.3.3.6, and TS 36.331, clause 5.3.3.12.

[TS 24.301 clause5.5.3.2.6]

The following abnormal cases can be identified:

a) Access barred because of access class barring, ACDC or NAS signalling connection establishment rejected by the network without "Extended wait time" received from lower layers

In WB-S1 mode, if the tracking area updating procedure is started in response to a paging request from the network, access class barring or ACDC is not applicable.

In NB-S1 mode, if the tracking area updating procedure is started in response to a paging request from the network, access barring is not applicable.

In WB-S1 mode, if access is barred for "originating signalling" (see 3GPP TS 36.331 [22]), the tracking area updating procedure shall not be started. The UE stays in the current serving cell and applies the normal cell reselection process. The tracking area updating procedure is started as soon as possible and if still necessary, e.g. when access for "originating signalling" is granted on the current cell or when the UE moves to a cell where access for "originating signalling" is granted.

In NB-S1 mode, if access is barred for "originating signalling" (see 3GPP TS 36.331 [22]), the tracking area updating procedure shall not be started. The UE stays in the current serving cell and applies the normal cell reselection process. Further UE behaviour is implementation specific, e.g. the tracking area updating procedure is started again after an implementation dependent time.

In NB-S1 mode, if access is barred for "originating signalling" (see 3GPP TS 36.331 [22]), a request for an exceptional event is received from the upper layers, then the tracking area updating procedure shall be started.

NOTE 1: In NB-S1 mode, the EMM layer cannot receive the access barring alleviation indication from the lower layers (see 3GPP TS 36.331 [22]).

If access is barred because of access class barring for "originating signalling" (see 3GPP TS 36.331 [22]) and if:

- one of the MO MMTEL voice call is started, MO MMTEL video call is started or MO SMSoIP is started conditions is satisfied;
- the upper layers request to send a mobile originated SMS over NAS or SMS over S102; or

- the upper layers request user plane radio resources, ACDC is applicable to the request and the UE supports ACDC.

then the tracking area updating procedure shall be started according to subclause 5.5.3.2.2. The call type used shall be per annex D of this document.

NOTE 2: If more than one of MO MMTEL voice call is started, MO MMTEL video call is started or MO SMSoIP is started conditions are satisfied, it is left to UE implementation to determine the call type based on Annex D of this document.

If access is barred for a certain ACDC category (see 3GPP TS 36.331 [22]), and if the upper layers request user plane radio resources for a higher ACDC category and the UE supports ACDC, then the tracking area updating procedure shall be started according to subclause 5.5.3.2.2.

If an access request for an uncategorized application is barred due to ACDC (see 3GPP TS 36.331 [22]), and if the upper layers request user plane radio resources for a certain ACDC category and the UE supports ACDC, then the tracking area updating procedure shall be started according to subclause 5.5.3.2.2.

If the trigger for the tracking area update procedure is the response to a paging request from the network and the NAS signalling connection establishment is rejected by the network, the tracking area update procedure shall not be started. The UE stays in the current serving cell and applies normal cell reselection process. The tracking area update procedure may be started if it is still necessary when access for "terminating calls" is granted or because of a cell change.

b) Lower layer failure or release of the NAS signalling connection without "Extended wait time" received from lower layers before the TRACKING AREA UPDATE ACCEPT or TRACKING AREA UPDATE REJECT message is received

The tracking area updating procedure shall be aborted, and the UE shall proceed as described below.

c) T3430 timeout

The UE shall abort the procedure and proceed as described below. The NAS signalling connection, if any, shall be released locally.

NOTE 3: The NAS signalling connection can also be released if the UE deems that the network has failed the authentication check as specified in subclause 5.4.2.7.

d) TRACKING AREA UPDATE REJECT, other causes than those treated in subclause 5.5.3.2.5, and cases of EMM cause values #22 and #25, if considered as abnormal cases according to subclause 5.5.3.2.5

If the tracking area updating request is not for initiating a PDN connection for emergency bearer services, upon reception of the EMM causes #95, #96, #97, #99 and #111 the UE should set the tracking area updating attempt counter to 5.

The UE shall proceed as described below.

e) Change of cell into a new tracking area

If a cell change into a new tracking area occurs before the tracking area updating procedure is completed, the tracking area updating procedure shall be aborted and re-initiated immediately. The UE shall set the EPS update status to EU2 NOT UPDATED.

The UE shall proceed as described below.

f) Tracking area updating and detach procedure collision

EPS detach containing detach type "re-attach required" or "re-attach not required":

If the UE receives a DETACH REQUEST message before the tracking area updating procedure has been completed, the tracking area updating procedure shall be aborted and the detach procedure shall be progressed. If the DETACH REQUEST message contains detach type "re-attach not required" and EMM cause #2 "IMSI unknown in HSS", the UE will follow the procedure as described below for the detach type "IMSI detach".

EPS detach containing detach type "IMSI detach":

If the UE receives a DETACH REQUEST message before the tracking area updating procedure has been completed, the DETACH REQUEST message shall be ignored and tracking area updating procedure shall be progressed.

The UE shall proceed as described below.

For the cases b, c, d, e, f with detach type "re-attach required" or "re-attach not required" with EMM cause other than #2 "IMSI unknown in HSS", and k, the UE shall stop any ongoing transmission of user data.

For the cases b, c, d, k and l, the UE shall proceed as follows:

Timer T3430 shall be stopped if still running.

For the cases b, c, d, and k when the "Extended wait time" is ignored, if the tracking area updating request is not for initiating a PDN connection for emergency bearer services, the tracking area updating attempt counter shall be incremented, unless it was already set to 5.

If the tracking area updating attempt counter is less than 5, and the TAI of the current serving cell is included in the TAI list, and the EPS update status is equal to EU1 UPDATED and the TIN does not indicate "P-TMSI":

the UE shall keep the EPS update status to EU1 UPDATED and enter state EMM-REGISTERED.NORMAL-SERVICE. The UE shall start timer T3411.

If in addition the TRACKING AREA UPDATE REQUEST indicated "periodic updating" or if tracking area updating procedure was initiated to recover NAS signalling connection due to "RRC Connection failure" from the lower layers, the timer T3411 may be stopped when the UE enters EMM-CONNECTED mode.

If timer T3411 expires the tracking area updating procedure is triggered again.

If the tracking area updating attempt counter is less than 5, and the TAI of the current serving cell is not included in the TAI list or the EPS update status is different to EU1 UPDATED or the TIN indicates "P-TMSI":

- for the cases k and l, the tracking area updating procedure is started, if still necessary, when timer T3346 expires or is stopped.

- for the cases b, c, d, and k when the "Extended wait time" is ignored, if the tracking area updating request is not for initiating a PDN connection for emergency bearer services, the UE shall start timer T3411, shall set the EPS update status to EU2 NOT UPDATED and change to state EMM-REGISTERED.ATTEMPTING-TO-UPDATE. When timer T3411 expires the tracking area updating procedure is triggered again.

  If A/Gb mode or Iu mode is supported by the UE, the UE shall in addition handle the GPRS update status as specified in 3GPP TS 24.008 [13] for the abnormal case when a normal or periodic routing area updating procedure fails and the routing area updating attempt counter is less than 5 and the GPRS update status is different from GU1 UPDATED.

[TS 24.301 clause5.5.3.3.6]

The UE shall proceed as follows:

3) otherwise, the abnormal cases specified in subclause 5.5.3.2.6 apply with the following modification.

   If the tracking area updating attempt counter is incremented according to subclause 5.5.3.2.6 the next actions depend on the value of the tracking area updating attempt counter.

   - If the tracking area updating attempt counter is less than 5, the UE shall set the update status to U2 NOT UPDATED, but shall not delete any LAI, TMSI, ciphering key sequence number and list of equivalent PLMNs; or

   - if the tracking area updating attempt counter is equal to 5, the UE shall delete any LAI, TMSI and ciphering key sequence number and set the update status to U2 NOT UPDATED.

[TS 24.301, clause 5.5.3.1]

A tracking area updating attempt counter is used to limit the number of subsequently rejected tracking area update attempts. The tracking area updating attempt counter shall be incremented as specified in subclause 5.5.3.2.6.

Depending on the value of the tracking area updating attempt counter, specific actions shall be performed. The tracking area updating attempt counter shall be reset when:

- an attach or combined attach procedure is successfully completed;
- a normal or periodic tracking area updating or a combined tracking area updating procedure is successfully completed;
- a normal or periodic tracking area updating or a combined tracking area updating procedure is rejected with EMM cause #11, #12, #13, #14, #15, #25 or #35:
- a combined attach procedure or a combined tracking area updating procedure is completed for EPS services only with cause #2 or #18;or
- a new PLMN is selected.

Additionally the tracking area updating attempt counter shall be reset when the UE is in substate EMM-REGISTERED.ATTEMPTING-TO-UPDATE or EMM-REGISTERED.ATTEMPTING-TO-UPDATE-MM, and:

- a new tracking area is entered;
- timer T3402 expires; or
- timer T3346 is started.

[TS 36.331, clause 5.3.3.12]

The UE shall:

1> if *SystemInformationBlockType14* is present and includes the *eab-Param*:

2> if the *eab-Common* is included in the *eab-Param*:

3> if the UE belongs to the category of UEs as indicated in the *eab-Category* contained in *eab-Common*; and

3> if for the Access Class of the UE, as stored on the USIM and with a value in the range 0..9, the corresponding bit in the *eab-BarringBitmap* contained in *eab-Common* is set to *one*:

4> consider access to the cell as barred;

3> else:

4> consider access to the cell as not barred due to EAB;

2> else (the *eab-PerPLMN-List* is included in the *eab-Param*):

3> select the entry in the *eab-PerPLMN-List* corresponding to the PLMN selected by upper layers (see TS 23.122 [11], TS 24.301 [35]);

3> if the *eab-Config* for that PLMN is included:

4> if the UE belongs to the category of UEs as indicated in the *eab-Category* contained in *eab-Config*; and

4> if for the Access Class of the UE, as stored on the USIM and with a value in the range 0..9, the corresponding bit in the *eab-BarringBitmap* contained in *eab-Config* is set to *one*:

5> consider access to the cell as barred;

4> else:

5> consider access to the cell as not barred due to EAB;

3> else:

4> consider access to the cell as not barred due to EAB;

1> else:

2> consider access to the cell as not barred due to EAB;

22.5.8.3 Test description

22.5.8.3.1 Pre-test conditions

System Simulator:

- 4 cells: Ncell 50, Ncell 51, Ncell 52, Ncell 53.
- NB-IoT system information combination 4 as defined in TS 36.508 [18] clause 8.1.4.3.1.1 is used in all cells.

UE:

None.

Preamble:

- the UE is in state Registered, NB-IoT Idle Mode (state 3-NB) on Ncell 50 according to TS 36.508 except for those shown in table 22.5.8.3.3-6;

22.5.8.3.2 Test procedure sequence

And sets *SystemInformationBlockType14-NB* parameters as described in table 22.5.8.3.3-18	-	-	-	-
-	The following messages are to be observed on Ncell 50 unless explicitly stated otherwise.	-	-	-	-
87	Check: for 60 seconds if UE initiates the tracking area updating procedure on Ncell 50?	-	-	8	F
88	Void	-	-	-	-
89	The SS changes *SystemInformationBlockType14-NB* parameters to parameters as described in table 22.5.8.3.3-19.	-	-	-	-
90	The UE transmits *RRC Connection Request*	-	-	-	-
91	SS responds with *RRCConnectionReject* message with IE *extendedWaitTime* set to 10 seconds (Max Value).	-	-	-	-
92	Check: for 10 seconds if UE initiates the tracking area updating procedure and hence transmits *RRC Connection Request*?	-	-	9	F
93	Check: Does the UE transmit a TRACKING AREA UPDATE REQUEST?	-->	TRACKING AREA UPDATE REQUEST	10	P
94	The SS transmits a TRACKING AREA UPDATE ACCEPT message.	<--	TRACKING AREA UPDATE ACCEPT	-	-
95	The UE sends TRACKING AREA UPDATE COMPLETE message.	-->	TRACKING AREA UPDATE COMPLETE	-	-
96	The SS releases the RRC connection.	-	-	-	-
97	The SS set *SystemInformationBlockType1-NB* and *SystemInformationBlockType14-NB* parameters as described in table 22.5.8.3.3-20 and table 22.5.8.3.3-21.	-	-	-	-
98	The SS configures: Sets the cell type of Ncell 51 to the "serving cell", Sets the cell type of Ncell 50 to “non-suitable off Cell”.				
99	Check: For 60 seconds if the UE initiates the tracking area update procedure on Ncell 51?	-	-	8	F
100	The SS configures: Sets the cell type of Ncell 51 to “Suitable neighbour intra-frequency cell”. Sets the cell type of Ncell 53 to “serving cell”.	-	-	-	-

-	The following messages are to be observed on Ncell 53 unless explicitly stated otherwise.	-	-	-	-
101	Check: Does the UE transmit a TRACKING AREA UPDATE REQUEST?	-->	TRACKING AREA UPDATE REQUEST	11	P
102	The SS transmits a TRACKING AREA UPDATE ACCEPT message.	<--	TRACKING AREA UPDATE ACCEPT	-	-
103	The UE sends TRACKING AREA UPDATE COMPLETE message.	-->	TRACKING AREA UPDATE COMPLETE	-	-
103AA	The SS releases the RRC connection.	-	-	-	-
103A	Cause switch off.				
103B	The UE transmit a DETACH REQUEST message.	-->	DETACH REQUEST	-	-
103C	The SS releases the RRC connection.	-	-	-	-
104	The SS configures: Set the cell type of Ncell 50 to the "Serving cell". Set the cell type of Ncell 51 to the "non-Suitable cell". Set the cell type of Ncell 52 to the "non-Suitable off cell". Sets the cell type of Ncell 53 to “non-Suitable off cell”.	-	-	-	-
104A	The SS changes *SystemInformationBlockType14-NB* parameters to parameters as described in table 22.5.8.3.3-31.	-	-	-	-
-	The following messages are to be observed on Ncell 50 unless explicitly stated otherwise.	-	-	-	-
105	The UE is powered on or switched on.	-	-	-	-
106	Steps 2-10a2 of the generic procedure for UE registration specified in TS 36.508 subclause 8.1.5.2 are performed	-	-	-	-
107	The SS activates UE radio bearer test mode.	-	-	-	-
108	The SS responds with an ATTACH ACCEPT message with the T3412 value indicating 6 min. The ACTIVATE DEFAULT EPS BEARER CONTEXT REQUEST or ESM DUMMY MESSAGE message is piggybacked in ATTACH ACCEPT message.	<--	ATTACH ACCEPT	-	-
109	The UE transmits an ATTACH COMPLETE message including an ACTIVATE DEFAULT EPS BEARER CONTEXT ACCEPT or ESM DUMMY MESSAGE message. NOTE: The tracking area updating attempt counter is reset.	-->	ATTACH COMPLETE	-	-
110	The SS releases the RRC connection.	-	-	-	-
110A	The SS configures: Set the cell type of Ncell 51 to the "Suitable neighbour intra-frequency cell".	-	-	-	-
111	Wait for 6 min to ensure that T3412 expires.	-	-	-	-
112	The UE transmits a TRACKING AREA UPDATE REQUEST message with the EPS update type value set to 'Periodic updating'.	-->	TRACKING AREA UPDATE REQUEST	-	-
113	The SS releases the RRC connection. NOTE: The tracking area updating attempt counter is 1.	-	-	-	-
114	Void	-	-	-	-
115	Void	-	-	-	-
116	Steps 1 - 4a1b3a2 of the generic procedure to check the UE response to paging specified in TS 36.508 [18] clause 8.1.5A.2 are performed			12	-

117	The SS transmits a SERVICE REJECT message with EMM cause set to "Congestion".	<--	SERVICE REJECT	-	-
118	The SS releases the RRC connection.	-	-	-	-
119	Wait for 10s after step 113 to ensure that T3411 expires.	-	-	-	-
-	EXCEPTION: Steps 120a1 to 120a4 describes behaviour depending on UE behaviour; the “lower case letter” identifies a step sequence that take place if the UE does not transmit any TRACKING AREA UPDATE REQUEST message	-	-	-	-
120a1	IF the UE does not transmit any TRACKING AREA UPDATE REQUEST message THEN wait for 6 min to ensure that T3412 expires.	-	-	-	-
120a2	The UE transmits a TRACKING AREA UPDATE REQUEST message with the EPS update type value set to ‘Periodic updating’.	-->	TRACKING AREA UPDATE REQUEST	-	-
120a3	The SS releases the RRC connection.	-	-	-	-
120a4	Wait for 10s after step 120a3 to ensure that T3411 expires.	-	-	-	-
121	Check: Does the UE transmit a TRACKING AREA UPDATE REQUEST message with the EPS update type value set to 'Periodic updating'?	-->	TRACKING AREA UPDATE REQUEST	13	P
122	The SS transmits a TRACKING AREA UPDATE ACCEPT message. NOTE: The tracking area updating attempt counter is reset.	<--	TRACKING AREA UPDATE ACCEPT	-	-
123	The SS transmits an ACTIVATE TEST MODE message to activate test mode G (loopback of the User data container content of any received downlink ESM DATA TRANSPORT).	<--	RRC: *DLInformationTransfer-NB* TC: ACTIVATE TEST MODE	-	-
124	The UE transmits an ACTIVATE TEST MODE COMPLETE message.	-->	RRC: *ULInformationTransfer-NB* TC: ACTIVATE TEST MODE COMPLETE	-	-
125	Generic test procedure in TS 36.508 [18] clause 8.1.5.4 is performed. NOTE: The UE enters the UE test loop mode.	-	-	-	-
126	The SS transmits one IP Packet to the UE.	<--	IP packet	-	-
127	Wait for 1s after the IP packet has been transmitted in step 126 (Note 3).	-	-	-	-
127A	The SS releases the RRC connection.	-	-	-	-
	EXCEPTION: Steps 128a to 128b describes behaviour depending on UE behaviour; the “lower case letter” identifies a step sequence that take place if the UE does not transmit PDN CONNECTIVITY REQUEST message during attach procedure at step106	-	-	-	-
128a	Steps 2 - 5 of the generic procedure to check the UE response to paging specified in TS 36.508 [18] clause 8.1.5A.2 are performed	-	-	-	-
128b	The SS releases the RRC connection.	-	-	-	-
130	The SS configures: Set the cell type of Ncell 50 to the "non-Suitable cell". Set the cell type of Ncell 51 to the "Serving cell".	-	-	-	-
-	The following messages are to be observed on Ncell 51 unless explicitly stated otherwise.	-	-	-	-

131	The UE transmits a TRACKING AREA UPDATE REQUEST message with the EPS update type value set to 'TA updating'.	-->	TRACKING AREA UPDATE REQUEST	-	-
132	Wait for 255s after step 131 to ensure that T3430 expires.	-	-	-	-
133	The SS releases the RRC connection. NOTE: The tracking area updating attempt counter is 1.	-	-	-	-
134	Check: Does the UE transmit a CONTROL PLANE SERVICE REQUEST message within 5s?	-->	CONTROL PLANE SERVICE REQUEST	14	F
135	Wait for 10s after step 133 to ensure that T3411 expires.	-	-	-	-
136	Check: Does the UE transmit a TRACKING AREA UPDATE REQUEST message with the EPS update type value set to 'TA updating'?	-->	TRACKING AREA UPDATE REQUEST	15	P
137	The SS transmits a TRACKING AREA UPDATE ACCEPT message.	<--	TRACKING AREA UPDATE ACCEPT	-	-
-	EXCEPTION: Step 138 and Step 139a1 can occur in any order.	-	-	-	-
138	The UE transmits a TRACKING AREA UPDATE COMPLETE message. NOTE: The tracking area updating attempt counter is reset.	-->	TRACKING AREA UPDATE COMPLETE	-	-
-	EXCEPTION: Step 139a1 describes behaviour that depends on UE implementation; the "lower case letter" identifies a step sequence that takes place if the UE has user data pending.	-	-	-	-
139 a1	IF the UE has user data pending THEN the UE loop backs the IP packet received in step 126 via control plane associated with the default EPS bearer context on Ncell 51 within 5s.	-	-	-	-
140	The SS releases the RRC connection.	-	-	-	-
141	Set the cell type of Ncell 50 to the "Serving cell cell". Set the cell type of Ncell 51 to the "Non-Suitable cell'.	-	-	-	-
142	The UE transmits a TRACKING AREA UPDATE REQUEST on Ncell 50 (Note 2).	-->	TRACKING AREA UPDATE REQUEST	-	-
143	SS does not send TRACKING AREA UPDATE ACCEPT to the UE.	-	-	-	-
144	The SS transmits a DETACH REQUEST message with Detach type = 're-attach not required' on Ncell 50.	<--	DETACH REQUEST	-	-
144A	UE responds with DETACH ACCEPT message	-->	DETACH ACCEPT	16	P
145	The SS releases the RRC connection.	-	-	-	-
146	SS sends a *Paging* message to the UE	<-	RRC: *Paging-NB*	-	-
147	Check: Does the UE transmit an *RRCConnectionRequest-NB* message in the next 30 seconds?	-->	RRC: *RRCConnectionRequest-NB*	16	F

NOTE 1: Upon reception of TRACKING AREA UPDATE REJECT message with EMM causes #95, #96, #97, #99 and #111, timer T3402 shall be started.
NOTE 2: Any type of tracking area update is acceptable.
NOTE 3: The 1 second delay is used to secure that the UE have received and forwarded the IP Packet transmitted by the SS in step 126 to the UE test loop function before the *RRCConnectionRelease* message is sent by the SS in step 129.
NOTE 4: Void.

```
with { UE in ECM-IDLE }
ensure that {
  when { the network initiates a paging procedure for EPS services using S-TMSI }
    then { the UE responds to the paging by establishing an RRC connection and transmitting a
SERVICE REQUEST message providing correct S-TMSI in the RRCConnectionRequest }
            }
```

(2)

```
with { UE in E-UTRA RRC_IDLE state }
ensure that {
  when { UE receives a Paging message including an ue-Identity set an unmatched S-TMSI i.e. other than the one allocated to the UE at the UE registration procedure }
    then { UE does not establish an RRC connection }
            }
```

(3)

```
with { UE having sent a CONTROL PLANE SERVICE REQUEST message }
ensure that {
  when { UE receives a SERVICE REJECT message with the EMM cause set to 'Illegal UE' }
    then { UE sets the EPS update status to EU3 ROAMING NOT ALLOWED, deletes any GUTI, last visited registered TAI, TAI list and KSI, considers the USIM as invalid for EPS services until switching off or the UICC containing the USIM is removed, enters the state EMM-DEREGISTERED }
            }
```

(4)

```
with { UE having sent a CONTROL PLANE SERVICE REQUEST message }
ensure that {
  when { UE receives a SERVICE REJECT message with the EMM cause set to 'Illegal ME' }
    then { UE sets the EPS update status to EU3 ROAMING NOT ALLOWED, deletes any GUTI, last visited registered TAI, TAI list and KSI, considers the USIM as invalid for EPS services until switching off or the UICC containing the USIM is removed, enters the state EMM-DEREGISTERED }
            }
```

(5)

```
with { UE having sent a CONTROL PLANE SERVICE REQUEST message }
ensure that {
  when { UE receives a SERVICE REJECT message with the EMM cause set to 'EPS services not allowed' }
    then { UE sets the EPS update status to EU3 ROAMING NOT ALLOWED, deletes any GUTI, last visited registered TAI, TAI list and KSI, considers the USIM as invalid for EPS services until switching off or the UICC containing the USIM is removed and enters the state EMM-DEREGISTERED }
            }
```

(6)

```
with { UE having sent a CONTROL PLANE SERVICE REQUEST message }
ensure that {
  when { UE receives a SERVICE REJECT message with the EMM cause value = 9 (UE identity cannot be derived by the network) }
    then { UE sets the EPS update status to EU2 NOT UPDATED and deletes any GUTI, last visited registered TAI, TAI list and KSI and automatically initiate the attach procedure }
            }
```

(7)

```
with { UE having sent a CONTROL PLANE SERVICE REQUEST message }
ensure that {
  when { UE receives a SERVICE REJECT message with the EMM cause set to 'Implicitly detached' }
    then { UE enters the state EMM-DEREGISTERED.NORMAL-SERVICE, delete the EPS mapped EPS security context if any and performs a new attach procedure }
            }
```

22.5.9.1.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.301, clause 5.6.1.5, 5.6.2.2.1, TS 33.401 clause 7.2.6.2, TS 36.331 clauses 5.3.2.3, 5.3.3.2, 5.3.3.3 and 5.3.3.4. [TS 24.301, clause 5.6.2.2.1]

To initiate the procedure the EMM entity in the network requests the lower layer to start paging (see 3GPP TS 36.300 [20], 3GPP TS 36.413 [23]) and shall start the timer:

- T3415 for this paging procedure, if the network accepted to use eDRX for the UE.
- Otherwise, T3413 for this paging procedure.

If the network starts timer T3415, the network shall set timer T3415 to a value smaller than the value of timer T3-RESPONSE (see 3GPP TS 29.274 [16D] for further details on timer T3-RESPONSE).

The EMM entity may provide the lower layer with a list of CSG IDs, including the CSG IDs of both the expired and the not expired subscriptions. If there is a PDN connection for emergency bearer services established, the EMM entity in the network shall not provide the list of CSG IDs to the lower layer.

Upon reception of a paging indication, if control plane CIoT EPS optimization is not used by the UE, the UE shall stop the timer T3346, if running, and shall initiate:

- a service request procedure to respond to the paging (see 3GPP TS 23.401 [10] and 3GPP TS 36.413 [23]); or
- a tracking area update procedure as specified in subclauses 5.5.3.2.2 and 5.5.3.3.2.

and additionally if the UE is in the EMM-IDLE mode with suspend indication, resume the suspended NAS signalling connection to the MME as specified in subclause 5.3.1.3.

Upon reception of a paging indication, if control plane CIoT EPS optimization is used by the UE, the UE shall stop the timer T3346, if running, and shall additionally:

- initiate a service request procedure as specified in subclause 5.6.1.2.2 if the UE is in the EMM-IDLE mode without suspend indication; or
- proceed the behaviour as specified in subclause 5.3.1.3 if the UE is in the EMM-IDLE mode with suspend indication.

NOTE 2: If the UE is in the EMM-IDLE mode without suspend indication and has an uplink user data to be sent to the network using control plane CIoT EPS optimization when receiving the paging indication, the UE can piggyback the uplink user data during the service request procedure initiated to respond to the paging, as specified in subclause 5.6.1.2.2.

If the paging for EPS services was received during an ongoing UE-initiated EMM specific procedure or service request procedure, then the UE shall ignore the paging. The network shall proceed with the EMM specific procedure or the service request procedure, and stop the timer for the paging procedure (i.e. either timer T3413 or timer T3415). If the network receives an ATTACH REQUEST message when the paging procedure is ongoing, it should be considered as an abnormal case, and the behaviour of the UE for this case is specified in subclause 5.6.2.2.1.2.

[TS 33.401 clause 7.2.6.2]

The procedure the UE uses to transit from ECM-IDLE to ECM-CONNECTED when in EMM-REGISTERED state is initiated by a NAS Service Request message from the UE to the MME. As the UE is in EMM-REGISTERED state, a EPS security context exists in the UE and the MME, and this EPS security context further contains uplink and downlink NAS COUNTs. The NAS Service Request message sent in EMM-REGISTERED shall be integrity protected and contain the uplink NAS sequence number.

[TS 36.331, clause 5.3.2.3]

Upon receiving the *Paging* message, the UE shall:

1> if in RRC_IDLE, for each of the *PagingRecord*, if any, included in the *Paging* message:

2> if the *ue-Identity* included in the *PagingRecord* matches one of the UE identities allocated by upper layers:

3> forward the *ue-Identity* and, except for NB-IoT, the *cn-Domain* to the upper layers;

[TS 36.331, clause 5.3.3.3]

The UE shall set the contents of *RRCConnectionRequest* message as follows:

1> set the *ue-Identity* as follows:

2> if upper layers provide an S-TMSI:

3> set the *ue-Identity* to the value received from upper layers;

2> else:

3> draw a random value in the range 0 .. 2^{40}-1 and set the *ue-Identity* to this value;

NOTE 1: Upper layers provide the S-TMSI if the UE is registered in the TA of the current cell.

1> if the UE supports *mo-VoiceCall* establishment cause and UE is establishing the RRC connection for mobile originating MMTEL voice and *SystemInformationBlockType2* includes *voiceServiceCauseIndication*:

2> set the *establishmentCause* to *mo-VoiceCall*;

1> else:

2> set the *establishmentCause* in accordance with the information received from upper layers;

1> if the UE is a NB-IoT UE:

2> if the UE supports multi-tone transmission, include *multiToneSupport*;

2> if the UE supports multi-carrier operation, include *multiCarrierSupport*;

The UE shall submit the *RRCConnectionRequest* message to lower layers for transmission.

The UE shall continue cell re-selection related measurements as well as cell re-selection evaluation. If the conditions for cell re-selection are fulfilled, the UE shall perform cell re-selection as specified in 5.3.3.5.

[TS 36.331, clause 5.3.3.4]

NOTE: Prior to this, lower layer signalling is used to allocate a C-RNTI. For further details see TS 36.321 [6];

The UE shall:

1> if the *RRCConnectionSetup* is received in response to an *RRCConnectionResumeRequest*:

2> discard the stored UE AS context and *resumeIdentity*;

2> indicate to upper layers that the RRC connection resume has been fallbacked;

1> perform the radio resource configuration procedure in accordance with the received *radioResourceConfigDedicated* and as specified in 5.3.10;

1> if stored, discard the cell reselection priority information provided by the *idleModeMobilityControlInfo* or inherited from another RAT;

1> stop timer T300;

1> stop timer T302, if running;

1> stop timer T303, if running;

1> stop timer T305, if running;

1> stop timer T306, if running;

1> stop timer T308, if running;

1> perform the actions as specified in 5.3.3.7;

1> stop timer T320, if running;

1> stop timer T350, if running;

1> perform the actions as specified in 5.6.12.4;

1> release *rclwi-Configuration*, if configured, as specified in 5.6.16.2;

1> stop timer T360, if running;

1> enter RRC_CONNECTED;

1> stop the cell re-selection procedure;

1> consider the current cell to be the PCell;

1> set the content of *RRCConnectionSetupComplete* message as follows:

2> if the *RRCConnectionSetup* is received in response to an *RRCConnectionResumeRequest*:

3> if upper layers provide an S-TMSI:

4> set the *s-TMSI* to the value received from upper layers;

2> set the *selectedPLMN-Identity* to the PLMN selected by upper layers (see TS 23.122 [11], TS 24.301 [35]) from the PLMN(s) included in the *plmn-IdentityList* in *SystemInformationBlockType1* (or *SystemInformationBlockType1-NB* in NB-IoT);

2> if upper layers provide the 'Registered MME', include and set the *registeredMME* as follows:

3> if the PLMN identity of the 'Registered MME' is different from the PLMN selected by the upper layers:

4> include the *plmnIdentity* in the *registeredMME* and set it to the value of the PLMN identity in the 'Registered MME' received from upper layers;

3> set the *mmegi* and the *mmec* to the value received from upper layers;

2> except for NB-IoT, if upper layers provided the 'Registered MME':

3> include and set the *gummei-Type* to the value provided by the upper layers;

2> if the UE supports CIoT EPS optimisation(s):

3> include a*ttachWithoutPDN-Connectivity* if received from upper layers;

3> include *up-CIoT-EPS-Optimisation* if received from upper layers;

3> except for NB-IoT, include *cp-CIoT-EPS-Optimisation* if received from upper layers;

2> if connecting as an RN:

3> include the *rn-SubframeConfigReq*;

2> set the *dedicatedInfoNAS* to include the information received from upper layers;

2> except for NB-IoT:

3> if the UE has radio link failure or handover failure information available in *VarRLF-Report* and if the RPLMN is included in *plmn-IdentityList* stored in *VarRLF-Report*:

4> include *rlf-InfoAvailable*;

3> if the UE has MBSFN logged measurements available for E-UTRA and if the RPLMN is included in *plmn-IdentityList* stored in *VarLogMeasReport*:

4> include *logMeasAvailableMBSFN*;

3> else if the UE has logged measurements available for E-UTRA and if the RPLMN is included in *plmn-IdentityList* stored in *VarLogMeasReport*:

4> include *logMeasAvailable*;

3> if the UE has connection establishment failure information available in *VarConnEstFailReport* and if the RPLMN is equal to *plmn-Identity* stored in *VarConnEstFailReport*:

4> include *connEstFailInfoAvailable*;

3> include the *mobilityState* and set it to the mobility state (as specified in TS 36.304 [4]) of the UE just prior to entering RRC_CONNECTED state;

3> if the UE supports storage of mobility history information and the UE has mobility history information available in *VarMobilityHistoryReport*:

4> include the *mobilityHistoryAvail*;

2> if UE needs UL gaps during continuous uplink transmission:

3> include *ue-CE-NeedULGaps*;

2> submit the *RRCConnectionSetupComplete* message to lower layers for transmission, upon which the procedure ends;

[TS 24.301, clause 5.6.1.5]

If the service request cannot be accepted, the network shall return a SERVICE REJECT message to the UE including an appropriate EMM cause value.

…

The UE shall take the following actions depending on the received EMM cause value in the SERVICE REJECT message.

#3 (Illegal UE);

#6 (Illegal ME); or

…

#7 (EPS services not allowed);

The UE shall set the EPS update status to EU3 ROAMING NOT ALLOWED (and shall store it according to subclause 5.1.3.3) and shall delete any GUTI, last visited registered TAI, TAI list and eKSI. The UE shall consider the USIM as invalid for EPS services until switching off or the UICC containing the USIM is removed or the timer T3245 expires as described in subclause 5.3.7a. The UE shall enter the state EMM-DEREGISTERED.

A UE operating in CS/PS mode 1 or CS/PS mode 2 of operation which is already IMSI attached for non-EPS services is still IMSI attached for non-EPS services.

A UE operating in CS/PS mode 1 or CS/PS mode 2 of operation shall set the update status to U2 NOT UPDATED, shall attempt to select GERAN or UTRAN radio access technology and proceed with appropriate MM specific procedure according to the MM service state. The UE shall not reselect E-UTRAN radio access technology until switching off or the UICC containing the USIM is removed.

If A/Gb mode or Iu mode is supported by the UE, the UE shall handle the GMM parameters GMM state, GPRS update status, P-TMSI, P-TMSI signature, RAI and GPRS ciphering key sequence number as specified in 3GPP TS 24.008 [13] for the case when the service request procedure is rejected with the GMM cause with the same value.

#9 (UE identity cannot be derived by the network);

The UE shall set the EPS update status to EU2 NOT UPDATED (and shall store it according to subclause 5.1.3.3) and shall delete any GUTI, last visited registered TAI, TAI list and eKSI. The UE shall enter the state EMM-DEREGISTERED.

If the service request was initiated for CS fallback and a CS fallback cancellation request was not received, the UE shall attempt to select GERAN or UTRAN radio access technology. If the UE finds a suitable GERAN or UTRAN cell, it then proceeds with the appropriate MM and CC specific procedures and the EMM sublayer shall not indicate the abort of the service request procedure to the MM sublayer. Otherwise the EMM sublayer shall indicate the abort of the service request procedure to the MM sublayer.

If the service request was initiated for 1xCS fallback, the UE shall select cdma2000® 1x radio access technology. The UE then proceeds with appropriate cdma2000® 1x CS procedures.

If the service request was initiated for 1xCS fallback and the UE has dual Rx/Tx configuration and supports enhanced 1xCS fallback, the UE shall perform a new attach procedure.

If the service request was initiated for any reason other than CS fallback, 1x CS fallback or initiating a PDN connection for emergency bearer services, the UE shall perform a new attach procedure.

NOTE 4: User interaction is necessary in some cases when the UE cannot re-activate the EPS bearer(s) automatically.

If A/Gb mode or Iu mode is supported by the UE, the UE shall handle the GMM parameters GMM state, GPRS update status, P-TMSI, P-TMSI signature, RAI and GPRS ciphering key sequence number as specified in 3GPP TS 24.008 [13] for the case when the service request procedure is rejected with the GMM cause with the same value.

A UE operating in CS/PS mode 1 or CS/PS mode 2 of operation which is already IMSI attached for non-EPS services is still IMSI attached for non-EPS services.

A UE operating in CS/PS mode 1 or CS/PS mode 2 of operation shall set the update status to U2 NOT UPDATED.

#10 (Implicitly detached);

A UE in CS/PS mode 1 or CS/PS mode 2 of operation is IMSI detached for both EPS services and non-EPS services.

The UE shall enter the state EMM-DEREGISTERED.NORMAL-SERVICE. The UE shall delete any mapped EPS security context or partial native EPS security context.

If the service request was initiated for CS fallback and a CS fallback cancellation request was not received, the UE shall attempt to select GERAN or UTRAN radio access technology. If the UE finds a suitable GERAN or UTRAN cell, it then proceeds with the appropriate MM and CC specific procedures and the EMM sublayer shall not indicate the abort of the service request procedure to the MM sublayer. Otherwise the EMM sublayer shall indicate the abort of the service request procedure to the MM sublayer.

If the service request was initiated for 1xCS fallback, the UE shall select cdma2000® 1x radio access technology. The UE then proceeds with appropriate cdma2000® 1x CS procedures.

If the service request was initiated for 1xCS fallback and the UE has dual Rx/Tx configuration and supports enhanced 1xCS fallback, the UE shall perform a new attach procedure.

If the service request was initiated for any reason other than CS fallback, 1x CS fallback or initiating a PDN connection for emergency bearer services, the UE shall perform a new attach procedure.

NOTE 5: User interaction is necessary in some cases when the UE cannot re-activate the EPS bearer(s) automatically.

If A/Gb mode or Iu mode is supported by the UE, the UE shall handle the GMM state as specified in 3GPP TS 24.008 [13] for the case when the service request procedure is rejected with the GMM cause with the same value.

A UE operating in CS/PS mode 1 or CS/PS mode 2 of operation shall set the update status to U2 NOT UPDATED.

22.5.9.1.3 Test description

22.5.9.1.3.1 Pre-test conditions

System Simulator:

- NB-IoT Ncell 1, set to "Serving cell";
- NB-IoT Ncell 2, set to Non-Suitable cell".

UE:

- none.

Preamble:

- The UE is in state Registered, Idle mode (State 3-NB) on Ncell 1, according to TS 36.508 [18] Table 8.1.5.1-1.

22.5.9.1.3.2 Test procedure sequence

Table 22.5.9.1.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
-	The following messages are to be observed on Ncell 1 unless explicitly stated otherwise.	-	-	-	-
1	The SS transmits a *Paging* message including an unmatched identity (incorrect S-TMSI).	<--	*Paging-NB*	-	-
2	Check: Does the UE transmit an *RRCConnectionRequest-NB* message within 5 s?	-->	*RRCConnectionRequest-NB*	2	F
3-6b	Check: Does the test result of generic test procedure in TS 36.508 subclause 8.1.5A.2 indicate that the UE responds to the paging message?	-	-	1	P
7	The SS transmits a SERVICE REJECT message with the EMM cause set to 'Illegal UE'.	<--	SERVICE REJECT	-	-
8	The SS releases the RRC connection.	-	-	-	-
9	Set the cell type of Ncell 1 to the "non-Suitable cell". Set the cell type of Ncell 2 to the "Serving cell".	-	-	-	-
-	The following messages are to be observed on Ncell 2 unless explicitly stated otherwise.	-	-	-	-
10	Check: Does the UE transmit an ATTACH REQUEST message in the next 30 seconds?	-->	ATTACH REQUEST	3	F
	If possible (see ICS) switch off is performed. Otherwise the power is removed, or the USIM is removed.	-	-	-	-
11	Set the cell type of the Ncell 2 to the "non-Suitable cell". Set the cell type of Ncell 1 to the "Serving cell".	-	-	-	-
-	The following messages are to be observed on Ncell 1 unless explicitly stated otherwise.	-	-	-	-
12	The UE is brought back to operation or the USIM is inserted.	-	-	-	-
13-25b1	Check: Does the UE perform the attach procedure by executing steps 2 to 14b1 of the UE registration procedure in TS 36.508 sub clause 8.1.5.2.	-	-	3	P
26	The SS releases the RRC connection	-	-	-	-
27-30b	The generic test procedure in TS 36.508 subclause 8.1.5A.2 is performed?	-	-	´-	-
31	The SS transmits a SERVICE REJECT message with the EMM cause set to 'Illegal ME'.	<--	SERVICE REJECT	-	-
32	The SS releases the RRC connection.	-	-	-	-
33	Set the cell type of Ncell 1 to the "non-Suitable cell". Set the cell type of Ncell 2 to the "Serving cell".	-	-	-	-
-	The following messages are to be observed on Ncell 2 unless explicitly stated otherwise.	-	-	-	-
34	Check: Does the UE transmit an ATTACH REQUEST message in the next 30 seconds?	-->	ATTACH REQUEST	4	F
	If possible (see ICS) switch off is performed. Otherwise the power is removed, or the USIM is removed.	-	-	-	-
35	Set the cell type of the Ncell 2 to the "non-Suitable cell". Set the cell type of Ncell 1 to the "Serving cell".	-	-	-	-
-	The following messages are to be observed on Ncell 1 unless explicitly stated otherwise.	-	-	-	-
36	The UE is brought back to operation or the USIM is inserted.	-	-	-	-

37-49b1	Check: Does the UE perform the attach procedure by executing steps 2 to 14b1 of the UE registration procedure in TS 36.508 sub clause 8.1.5.2.	-	-	4	P
50	The SS releases the RRC connection	-	-	-	-
51-54b	The generic test procedure in TS 36.508 subclause 8.1.5A.2 is performed?	-	-	´-	-
55	The SS transmits a SERVICE REJECT message with the EMM cause set to 'EPS services not allowed'.	<--	SERVICE REJECT	-	-
56	The SS releases the RRC connection.	-	-	-	-
57	Set the cell type of Ncell 1 to the "non-Suitable cell". Set the cell type of Ncell 2 to the "Serving cell".	-	-	-	-
-	The following messages are to be observed on Ncell 2 unless explicitly stated otherwise.	-	-	-	-
58	Check: Does the UE transmit an ATTACH REQUEST message in the next 30 seconds?	-->	ATTACH REQUEST	5	F
	If possible (see ICS) switch off is performed. Otherwise the power is removed, or the USIM is removed.	-	-	-	-
59	Set the cell type of the Ncell 2 to the "non-Suitable cell". Set the cell type of Ncell 1 to the "Serving cell".	-	-	-	-
-	The following messages are to be observed on Ncell 1 unless explicitly stated otherwise.	-	-	-	-
60	The UE is brought back to operation or the USIM is inserted.	-	-	-	-
61-73b1	Check: Does the UE perform the attach procedure by executing steps 2 to 14b1 of the UE registration procedure in TS 36.508 sub clause 8.1.5.2.	-	-	5	P
74	The SS releases the RRC connection	-	-	-	-
75-78b	The generic test procedure in TS 36.508 subclause 8.1.5A.2 is performed?	-	-	´-	-
79	The SS transmits a SERVICE REJECT message with the EMM cause set to 'UE identity cannot be derived by the network'.	<--	SERVICE REJECT	-	-
-	EXCEPTION: Steps 79a1-79a2 describes the behaviour that depends on UE behaviour (Note 1).	-	-	-	-
79a1	The SS releases the RRC connection.	-	-	-	-
-	EXCEPTION: Step 79a2 describes a behaviour which depends on the UE capability	-	-	-	-
79a2	IF NOT pc_Automatic_EPS_Re_Attach, the user initiates an attach by MMI or by AT command.	-	-	-	-
80-92b1	Check: Does the UE perform the attach procedure by executing steps 2 to 14b1 of the UE registration procedure in TS 36.508 sub clause 8.1.5.2.	-	-	6	P
93	The SS releases the RRC connection	-	-	-	-
94-97b	The generic test procedure in TS 36.508 subclause 8.1.5A.2 is performed?	-	-	´-	-
98	The SS transmits a SERVICE REJECT message with the EMM cause set to 'Implicitly detached'.	<--	SERVICE REJECT	-	-
-	EXCEPTION: Steps 99a1-99a2 describes the behaviour that depends on UE behaviour (Note 1).	-	-	-	-
99a1	The SS releases the RRC connection.	-	-	-	-
-	EXCEPTION: Step 99a2 describes a behaviour which depends on the UE capability	-	-	-	-
99a2	IF NOT pc_Automatic_EPS_Re_Attach, the user initiates an attach by MMI or by AT command.	-	-	-	-

100-112b1	Check: Does the UE perform the attach procedure by executing steps 2 to 14b1 of the UE registration procedure in TS 36.508 sub clause 8.1.5.2.	-	-	6	P
113	The SS releases the RRC connection	-	-	-	-
Note 1: SS waits for 1.5 second to receive the Attach Request on the existing RRC Connection. In case Attach Request is not received within 1.5 second, existing RRC Connection is released.

22.5.10 NB-IoT / EPS NAS integrity and encryption / SNOW 3G

22.5.10.1 Test Purpose (TP)

(1)

```
with { UE having successfully completed EPS authentication and key agreement (AKA) procedure }
ensure that {
  when { UE in NB-S1 modereceives an integrity protected and ciphering SECURITY MODE COMMAND message instructing to start integrity protection and ciphering algorithm with SNOW 3G }
    then { UE transmits an integrity protected with SNOW 3G and ciphering SECURITY MODE COMPLETE and starts applying the NAS Integrity protection and NAS ciphering in both UL and DL }
           }
```

22.5.10.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.301 clause 4.4.4.1, 4.4.4.2, 5.4.3.1, 5.4.3.2 and 5.4.3.3. Unless otherwise stated these are Rel-13 requirements.

[TS 24.301, clause 4.4.4.1]

For the UE, integrity protected signalling is mandatory for the NAS messages once a valid EPS security context exists and has been taken into use. For the network, integrity protected signalling is mandatory for the NAS messages once a secure exchange of NAS messages has been established for the NAS signalling connection. Integrity protection of all NAS signalling messages is the responsibility of the NAS. It is the network which activates integrity protection.

[TS 24.301, clause 4.4.4.2]

Once the secure exchange of NAS messages has been established, the receiving EMM or ESM entity in the UE shall not process any NAS signalling messages unless they have been successfully integrity checked by the NAS. If NAS signalling messages, having not successfully passed the integrity check, are received, then the NAS in the UE shall discard that message. The processing of the SECURITY MODE COMMAND message that has not successfully passed the integrity check is specified in subclause 5.4.3.5. If any NAS signalling message is received as not integrity protected even though the secure exchange of NAS messages has been established by the network, then the NAS shall discard this message.

[TS 24.301, clause 5.4.3.1]

The purpose of the NAS security mode control procedure is to take an EPS security context into use, and initialise and start NAS signalling security between the UE and the MME with the corresponding EPS NAS keys and EPS security algorithms.

[TS 24.301, clause 5.4.3.2]

The MME initiates the NAS security mode control procedure by sending a SECURITY MODE COMMAND message to the UE and starting timer T3460 (see example in figure 5.4.3.2.1).

The MME shall reset the downlink NAS COUNT counter and use it to integrity protect the initial SECURITY MODE COMMAND message if the security mode control procedure is initiated:

- to take into use the EPS security context created after a successful execution of the EPS authentication procedure;
- upon receipt of TRACKING AREA UPDATE REQUEST message including a GPRS ciphering key sequence number IE, if the MME wishes to create a mapped EPS security context (i.e. the type of security context flag is set to "mapped security context" in the NAS key set identifier IE included in the SECURITY MODE COMMAND message).

The MME shall send the SECURITY MODE COMMAND message unciphered, but shall integrity protect the message with the NAS integrity key based on K_{ASME} or mapped K'_{ASME} indicated by the eKSI included in the message. The MME shall set the security header type of the message to "integrity protected with new EPS security context".

...

The MME shall include the replayed security capabilities of the UE (including the security capabilities with regard to NAS, RRC and UP (user plane) ciphering as well as NAS and RRC integrity, and other possible target network security capabilities, i.e. UTRAN/GERAN if the UE included them in the message to network), the replayed $nonce_{UE}$ when creating a mapped EPS security context and if the UE included it in the message to the network, the selected NAS ciphering and integrity algorithms and the Key Set Identifier (eKSI).

Additionally, the MME may request the UE to include its IMEISV in the SECURITY MODE COMPLETE message.

NOTE: The AS and NAS security capabilities will be the same, i.e. if the UE supports one algorithm for NAS it is also be supported for AS.

[TS 24.301, clause 5.4.3.3]

Upon receipt of the SECURITY MODE COMMAND message, the UE shall check whether the security mode command can be accepted or not. This is done by performing the integrity check of the message and by checking that the received UE security capabilities and the received $nonce_{UE}$ have not been altered compared to what the UE provided in the initial layer 3 message that triggered this procedure.

If the type of security context flag is set to "native security context" and if the KSI matches a valid native EPS security context held in the UE while the UE has a mapped EPS security context as the current security context, the UE shall take the native EPS security context into use.

If the SECURITY MODE COMMAND message can be accepted, the UE shall take the EPS security context indicated in the message into use. The UE shall in addition reset the uplink NAS COUNT counter if:

- the SECURITY MODE COMMAND message is received in order to take an EPS security context into use created after a successful execution of the EPS authentication procedure;

- the SECURITY MODE COMMAND message received includes the type of security context flag set to "mapped security context" in the NAS key set identifier IE the eKSI does not match the current EPS security context, if it is a mapped EPS security context.

If the SECURITY MODE COMMAND message can be accepted, the UE shall send a SECURITY MODE COMPLETE message integrity protected with the selected NAS integrity algorithm and the EPS NAS integrity key based on the K_{ASME} or mapped K'_{ASME} if the type of security context flag is set to "mapped security context" indicated by the eKSI. When the SECURITY MODE COMMAND message includes the type of security context flag set to "mapped security context" in the NAS key set identifier IE, the $nonce_{MME}$ and the $nonce_{UE}$, then the UE shall either:

- generate K'_{ASME} from both the $nonce_{MME}$ and the $nonce_{UE}$ as indicated in 3GPP TS 33.401 [19];or

- check whether the SECURITY MODE COMMAND message indicates the eKSI of the current EPS security context, if it is a mapped EPS security context, in order not to re-generate the K'_{ASME}.

Furthermore, if the SECURITY MODE COMMAND message can be accepted, the UE shall cipher the SECURITY MODE COMPLETE message with the selected NAS ciphering algorithm and the EPS NAS ciphering key based on the K_{ASME} or mapped K'_{ASME} indicated by the eKSI. The UE shall set the security header type of the message to "integrity protected and ciphered with new EPS security context".

From this time onward the UE shall cipher and integrity protect all NAS signalling messages with the selected NAS ciphering and NAS integrity algorithms.

If the MME indicated in the SECURITY MODE COMMAND message that the IMEISV is requested, the UE shall include its IMEISV in the SECURITY MODE COMPLETE message.

22.5.10.3 Test description

22.5.10.3.1 Pre-test conditions

System Simulator:

- Ncell 1.

UE:

None.

Preamble:

- The UE is in state Switched OFF (state 1-NB) according to TS 36.508 [18].

```

(5)

```
with { UE has received a set of equivalent PLMNs in an ATTACH ACCEPT message }
ensure that {
  when { the UE has been switched off; then switched on; and then the UE receives an ATTACH_ACCEPT message with a new set of equivalent PLMNs}
   then { UE deletes the old equivalent PLMN list, and uses the new equivalent PLMN list}
            }
```

22.5.13.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.301, clauses 5.3.4, 5.5.1.2.2, 5.5.1.2.4, 6.5.1.2 and 9.9.3.33, and TS 36.304 clause 4.3.

[TS 24.301, clause 5.3.4]

The UE shall store a list of equivalent PLMNs. These PLMNs shall be regarded by the UE as equivalent to each other for PLMN selection and cell selection/re-selection. The same list is used by EMM, GMM and MM.

The UE shall update or delete this list at the end of each attach or combined attach or tracking area updating or combined tracking area updating procedure. The stored list consists of a list of equivalent PLMNs as downloaded by the network plus the PLMN code of the registered PLMN that downloaded the list. When the UE is switched off, it shall keep the stored list so that it can be used for PLMN selection after switch on. The UE shall delete the stored list if the USIM is removed or when the UE attached for emergency bearer services enters the state EMM-DEREGISTERED. The maximum number of possible entries in the stored list is 16.

[TS 24.301, clause 5.5.1.2.2]

In state EMM-DEREGISTERED, the UE initiates the attach procedure by sending an ATTACH REQUEST message to the MME, starting timer T3410 and entering state EMM-REGISTERED-INITIATED (see example in figure 5.5.1.2.2.1).

...

If the UE is in NB-S1 mode, then the UE shall set the control plane CIoT EPS optimization bit to "control plane CIoT EPS optimization supported" in the UE network capability IE of the ATTACH REQUEST message.

If the UE is in NB-S1 mode, supports NB-S1 mode only, and requests to attach for EPS services and "SMS only", the UE shall indicate the SMS only requested bit to "SMS only" in the additional update type IE and shall set the EPS attach type IE to "EPS attach" in the ATTACH REQUEST message.

...

If EMM-REGISTERED without PDN connection is not supported by the UE or the MME, or if the UE wants to request PDN connection with the attach procedure, the UE shall send the ATTACH REQUEST message together with a PDN CONNECTIVITY REQUEST message contained in the ESM message container IE.

If EMM-REGISTERED without PDN connection is supported by the UE and the MME, and the UE does not want to request PDN connection with the attach procedure, the UE shall send the ATTACH REQUEST message together with an ESM DUMMY MESSAGE contained in the ESM message container information element.

If a valid EPS security context exists, the UE shall integrity protect the ATTACH REQUEST message combined with the message included in the ESM message container IE. When the UE does not have a valid EPS security context, the ATTACH REQUEST message combined with the message included in the ESM message container IE is not integrity protected.

[TS 24.301, clause 5.5.1.2.4]

The MME shall assign and include the TAI list the UE is registered to in the ATTACH ACCEPT message. The UE, upon receiving an ATTACH ACCEPT message, shall delete its old TAI list and store the received TAI list.

NOTE 3: When assigning the TAI list, the MME can take into account the eNodeB's capability of support ofCIoT EPS optimization.

…

If the ATTACH ACCEPT message contains a GUTI, the UE shall use this GUTI as the new temporary identity. The UE shall delete its old GUTI and store the new assigned GUTI. If no GUTI has been included by the MME in the ATTACH ACCEPT message, the old GUTI, if any available, shall be kept.

...

The MME may also include a list of equivalent PLMNs in the ATTACH ACCEPT message. Each entry in the list contains a PLMN code (MCC+MNC). The UE shall store the list as provided by the network, and if the attach procedure is not for emergency bearer services, the UE shall remove from the list any PLMN code that is already in the list of "forbidden PLMNs" or in the list of "forbidden PLMNs for GPRS service". In addition, the UE shall add to the stored list the PLMN code of the registered PLMN that sent the list. The UE shall replace the stored list on each receipt of the ATTACH ACCEPT message. If the ATTACH ACCEPT message does not contain a list, then the UE shall delete the stored list.

[TS 24.301, clause 5.5.3.2.2, “Normal and periodic tracking area updating procedure initiation”]

The UE in state EMM-REGISTERED shall initiate the tracking area updating procedure by sending a TRACKING AREA UPDATE REQUEST message to the MME,

a) when the UE detects entering a tracking area that is not in the list of tracking areas that the UE previously registered in the MME, unless the UE is configured for "AttachWithIMSI" as specified in 3GPP TS 24.368 [15A] or 3GPP TS 31.102 [17] and is entering a tracking area in a new PLMN that is neither the registered PLMN nor in the list of equivalent PLMNs;

[TS 24.301, clause 6.5.1.2, “UE requested PDN connectivity procedure initiation”]

In order to request connectivity to a PDN using the default APN, the UE includes the access point name IE in the PDN CONNECTIVITY REQUEST message or, when applicable, in the ESM INFORMATION RESPONSE message, according to the following conditions:

- if use of a PDN using the default APN requires PAP/CHAP, then the UE should include the Access point name IE; and

- in all other conditions, the UE need not include the Access point name IE.

[TS 24.301, clause 9.9.3.33, “Tracking area identity list”]

The Tracking area identity list is a type 4 information element, with a minimum length of 8 octets and a maximum length of 98 octets. The list can contain a maximum of 16 different tracking area identities.

…

The value part of the Tracking area identity list information element consists of one or several partial tracking area identity lists. The length of each partial tracking area identity list can be determined from the 'type of list' field and the 'number of elements' field in the first octet of the partial tracking area identity list.

…

Partial tracking area identity list: Type of list (octet 1) Bits 7 6 0 0 list of TACs belonging to one PLMN, with non-consecutive TAC values 0 1 list of TACs belonging to one PLMN, with consecutive TAC values 1 0 list of TAIs belonging to different PLMNs

…

For type of list = "001" and number of elements = k: octet 2 to 4 contain the MCC+MNC, and octet 5 and 6 contain the TAC of the first TAI belonging to the partial list. The TAC values of the other k-1 TAIs are TAC+1, TAC+2, …, TAC+k-1.

…

The MNC shall consist of 2 or 3 digits.

[TS 36.304, clause 4.3]

suitable cell:

A "suitable cell" is a cell on which the UE may camp on to obtain normal service. The UE shall have a valid USIM and such a cell shall fulfil all the following requirements.

- The cell is part of either:
  - the selected PLMN, or:
  - the registered PLMN, or:
  - a PLMN of the Equivalent PLMN list
- For a CSG cell, the cell is a CSG member cell for the UE;

  According to the latest information provided by NAS:
- The cell is not barred, see subclause 5.3.1;
- The cell is part of at least one TA that is not part of the list of "forbidden tracking areas for roaming" [4], which belongs to a PLMN that fulfils the first bullet above;
- The cell selection criteria are fulfilled, see subclause 5.2.3.2;

If more than one PLMN identity is broadcast in the cell, the cell is considered to be part of all TAs with TAIs constructed from the PLMN identities and the TAC broadcast in the cell.

22.5.13.3 Test description

22.5.13.3.1 Pre-test conditions

System Simulator:

NOTE: while this test describes the uses of 8 cells, it is intended that this test only requires 2 cells to be active at any one instant.

Table 22.5.13-1: Ncell TAI values

Ncell	MCC	MNC	TAC (hex)	Remark	Freq	List of frequencies in SIB5	Remark
50	001	01	0002	2 digit MNC	f1	f2, f3	HPLMN
57	310	102	0002	3 digit MNC	f3	f1, f2	See Note 1
51	001	01	0001		f1	f2, f3	HPLMN
52	001	01	0027		f1	f2, f3	HPLMN
55	004	07	fff0		f2	f1, f3	See Note 2
56	004	07	fff9		f2	f1, f3	See Note 2
59	316	002	0003	3 digit MNC	f3	f1, f2	See Note 1
54	004	02	0003		f2	f1, f3	See Note 2
Note 1: Ncells 57 and 59 do not co-exist; the same frequency f3 is used. Note 2: Ncells 54, 55 and 56 do not co-exist; the same frequency f2 is used.							

- System information combination 3 as defined in TS 36.508[18] clause 8.1.4.3.1.1 is used in NB-IoT cells;
- with the exception of the Physical Cell Identity and the list of frequencies in SIB5, all other parameters for these Ncells are the same as defined for Ncell 1 in TS 36.508 [18];
- the power level of Ncell 50 is the Serving Cell level defined in table 8.3.2.2.1-1 of TS 36.508 [18];
- the power levels of Ncells 51 to 59 are set to the Non-suitable Off level defined in table 8.3.2.2.1-1 of TS 36.508 [18].

Table 22.5.13-2: Time instances of cell power level and parameter changes

	Parameter	Unit	Ncell 50	Ncell 57	Ncell 51	Ncell 52	Ncell 55	Ncell 56	Ncell 59	Ncell 54

    then { the UE does not attempt to attach }
            }
```

(14)

```
with { the UE is in EMM-DEREGISTERED.LIMITED-SERVICE state and the current TAI in the list of
"forbidden tracking areas for roaming" and KSI was deleted }
ensure that {
  when { in the same PLMN, the UE enters a cell which provides normal service and belongs to a
tracking area not in the list of "forbidden tracking areas for roaming" }
    then { the UE attempts to attach with IMSI }
            }
```

(15)

```
with { the UE is in EMM-DEREGISTERED.LIMITED-SERVICE state and the current TAI in the list of
"forbidden tracking areas for roaming"}
ensure that {
  when { there are cells in the same PLMN and other PLMN that provide normal service and belong to
tracking areas not in the list of "forbidden tracking areas for roaming" }
    then { UE attempts to attach to the cell in the same PLMN }
            }
```

(16)

```
with { UE is in EMM-DEREGISTERED.LIMITED-SERVICE state and the list of "forbidden tracking areas for
roaming" contains more than one TAI}
ensure that {
  when { UE re-selects a cell that belongs to one of the TAIs in the list of "forbidden tracking
areas for roaming" }
    then { UE does not attempt to attach }
            }
```

(17)

```
with { UE is switched off }
ensure that {
  when { UE is powered on in the cell belonging to the TAI which was in the list of "forbidden
tracking areas for roaming" before the UE was switched off }
    then { UE attempts to attach }
            }
```

22.5.14.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.301, clauses 5.3.2, 5.5.1.2.2, 5.5.1.2.5, 5.2.2.3.2, 5.2.4.4, Annex C and TS 36.304 clause 4.3, 5.2.4.4.

[TS 24.301, clause 5.3.2]

The UE shall store a list of "forbidden tracking areas for roaming", as well as a list of "forbidden tracking areas for regional provision of service". These lists shall be erased when the UE is switched off or when the UICC containing the USIM is removed, and periodically (with a period in the range 12 to 24 hours).

...

In S1 mode, the UE shall update the suitable list whenever an ATTACH REJECT, TRACKING AREA UPDATE REJECT, SERVICE REJECT or DETACH REQUEST message is received with the EMM cause #12 "tracking area not allowed", #13 "roaming not allowed in this tracking area", or #15 "no suitable cells in tracking area".

Each list shall accommodate 40 or more TAIs. When the list is full and a new entry has to be inserted, the oldest entry shall be deleted.

[TS 24.301, clause 5.5.1.2.2]

In state EMM-DEREGISTERED, the UE initiates the attach procedure by sending an ATTACH REQUEST message to the MME, starting timer T3410 and entering state EMM-REGISTERED-INITIATED (see example in figure 5.5.1.2.2.1). If timer T3402 is currently running, the UE shall stop timer T3402. If timer T3411 is currently running, the UE shall stop timer T3411.

The UE shall include the IMSI in the EPS mobile identity IE in the ATTACH REQUEST message if the selected PLMN is neither the registered PLMN nor in the list of equivalent PLMNs and:

- the UE is configured for "AttachWithIMSI" as specified in 3GPP TS 24.368 [15A] or 3GPP TS 31.102 [17]; or
- the UE is in NB-S1 mode....

...

If EMM-REGISTERED without PDN connection is not supported by the UE or the MME, or if the UE wants to request PDN connection with the attach procedure, the UE shall send the ATTACH REQUEST message together with a PDN CONNECTIVITY REQUEST message contained in the ESM message container IE.

If EMM-REGISTERED without PDN connection is supported by the UE and the MME, and the UE does not want to request PDN connection with the attach procedure, the UE shall send the ATTACH REQUEST message together with an ESM DUMMY MESSAGE contained in the ESM message container information element..

...

[TS 24.301, clause 5.5.1.2.5]

If the attach request cannot be accepted by the network, the MME shall send an ATTACH REJECT message to the UE including an appropriate EMM cause value.

...

Upon receiving the ATTACH REJECT message, if the message is integrity protected or contains a reject cause other than EMM cause value #25, the UE shall stop timer T3410.

...

#12 (Tracking area not allowed);

The UE shall set the EPS update status to EU3 ROAMING NOT ALLOWED (and shall store it according to subclause 5.1.3.3) and shall delete any GUTI, last visited registered TAI, TAI list and eKSI. Additionally, the UE shall reset the attach attempt counter.

In S1 mode, the UE shall store the current TAI in the list of "forbidden tracking areas for regional provision of service" and enter the state EMM-DEREGISTERED.LIMITED-SERVICE.

In S101 mode, the UE shall store the PLMN identity provided with the indication from the lower layers to prepare for an S101 mode to S1 mode handover in the list of "forbidden PLMNs for attach in S101 mode" and enter the state EMM-DEREGISTERED.NO-CELL-AVAILABLE and if the UE is configured to use timer T3245 (see 3GPP TS 24.368 [15A] or 3GPP TS 31.102 [17]) then the UE shall start timer T3245 and proceed as described in subclause 5.3.7a.

If A/Gb mode or Iu mode is supported by the UE, the UE shall in addition handle the GMM parameters GMM state, GPRS update status, P-TMSI, P-TMSI signature, RAI, GPRS ciphering key sequence number and GPRS attach attempt counter as specified in 3GPP TS 24.008 [13] for the case when the normal attach procedure is rejected with the GMM cause with the same value.

#13 (Roaming not allowed in this tracking area);

The UE shall set the EPS update status to EU3 ROAMING NOT ALLOWED (and shall store it according to subclause 5.1.3.3) and shall delete any GUTI, last visited registered TAI, TAI list and eKSI. The UE shall delete the list of equivalent PLMNs and reset the attach attempt counter.

In S1 mode, the UE shall store the current TAI in the list of "forbidden tracking areas for roaming". Additionally, the UE shall enter the state EMM-DEREGISTERED.LIMITED-SERVICE or optionally EMM-DEREGISTERED.PLMN-SEARCH. The UE shall perform a PLMN selection according to 3GPP TS 23.122 [6].

In S101 mode, the UE shall store the PLMN identity provided with the indication from the lower layers to prepare for an S101 mode to S1 mode handover in the list of "forbidden PLMNs for attach in S101 mode" and enter the state EMM-DEREGISTERED.NO-CELL-AVAILABLE and if the UE is configured to use timer T3245 (see 3GPP TS 24.368 [15A] or 3GPP TS 31.102 [17]) then the UE shall start timer T3245 and proceed as described in subclause 5.3.7a.

If A/Gb mode or Iu mode is supported by the UE, the UE shall in addition handle the GMM parameters GMM state, GPRS update status, P-TMSI, P-TMSI signature, RAI, GPRS ciphering key sequence number and GPRS attach attempt counter as specified in 3GPP TS 24.008 [13] for the case when the normal attach procedure is rejected with the GMM cause with the same value.

...

#15 (No suitable cells in tracking area);

The UE shall set the EPS update status to EU3 ROAMING NOT ALLOWED (and shall store it according to subclause 5.1.3.3) and shall delete any GUTI, last visited registered TAI, TAI list and eKSI. Additionally, the UE shall reset the attach attempt counter.

In S1 mode, the UE shall:

- store the current TAI in the list of "forbidden tracking areas for roaming" and enter the state EMM-DEREGISTERED.LIMITED-SERVICE. AND
- if the Extended EMM cause IE with value "E-UTRAN not allowed" is included in the ATTACH REJECT message, the UE supports "E-UTRA Disabling for EMM cause #15", and the "E-UTRA Disabling Allowed for EMM cause #15" parameter as specified in 3GPP TS 24.368 [15A] or 3GPP TS 31.102 [17] is present and set to enabled; then the UE shall disable the E-UTRA capability as specified in subclause 4.5 and search for a suitable cell in GERAN or UTRAN radio access technology; otherwise. the UE shall search for a suitable cell in another tracking area or in another location area according to 3GPP TS 36.304 [21].

In S101 mode, the UE shall store the PLMN identity provided with the indication from the lower layers to prepare for an S101 mode to S1 mode handover in the list of "forbidden PLMNs for attach in S101 mode" and enter the state EMM-DEREGISTERED.NO-CELL-AVAILABLE and if the UE is configured to use timer T3245 (see 3GPP TS 24.368 [15A] or 3GPP TS 31.102 [17]) then the UE shall start timer T3245 and proceed as described in subclause 5.3.7a.

If A/Gb mode or Iu mode is supported by the UE, the UE shall in addition handle the GMM parameters GMM state, GPRS update status, P-TMSI, P-TMSI signature, RAI, GPRS ciphering key sequence number and GPRS attach attempt counter as specified in 3GPP TS 24.008 [13] for the case when the normal attach procedure is rejected with the GMM cause with the same value.

...

[TS 24.301, clause 5.2.2.3.2]

The UE shall initiate an attach or combined attach procedure when entering a cell which provides normal service.

[TS 24.301, Annex C (normative)]

The following EMM parameters shall be stored on the USIM if the corresponding file is present:

- GUTI;
- last visited registered TAI;
- EPS update status;
- Allowed CSG list;
- Operator CSG list; and

- EPS security context parameters from a full native EPS security context (see 3GPP TS 33.401 [19]).

The presence and format of corresponding files on the USIM is specified in 3GPP TS 31.102 [17].

If the corresponding file is not present on the USIM, these EMM parameters except allowed CSG list are stored in a non-volatile memory in the ME together with the IMSI from the USIM. The allowed CSG list is stored in a non-volatile memory in the ME if the UE supports CSG selection. These EMM parameters can only be used if the IMSI from the USIM matches the IMSI stored in the non-volatile memory; else the UE shall delete the EMM parameters.

…

[TS 36.304, clause 4.3]

…

suitable cell:

A "suitable cell" is a cell on which the UE may camp on to obtain normal service. The UE shall have a valid USIM and such a cell shall fulfil all the following requirements.

- The cell is part of either:
  - the selected PLMN, or:
  - the registered PLMN, or:
  - a PLMN of the Equivalent PLMN list
- For a CSG cell, the cell is a CSG member cell for the UE;

  According to the latest information provided by NAS:
- The cell is not barred, see subclause 5.3.1;
- The cell is part of at least one TA that is not part of the list of "forbidden tracking areas for roaming" [4], which belongs to a PLMN that fulfils the first bullet above;
- The cell selection criteria are fulfilled, see subclause 5.2.3.2;

If more than one PLMN identity is broadcast in the cell, the cell is considered to be part of all TAs with TAIs constructed from the PLMN identities and the TAC broadcast in the cell.

[TS 36.304 subclause 5.2.4.4]

...

If the highest ranked cell or best cell according to absolute priority reselection rules is an intra-frequency or inter-frequency cell which is not suitable due to being part of the "list of forbidden TAs for roaming" or belonging to a PLMN which is not indicated as being equivalent to the registered PLMN, the UE shall not consider this cell and other cells on the same frequency, as candidates for reselection for a maximum of 300s. If the UE enters into state *any cell selection*, any limitation shall be removed. If the UE is redirected under E-UTRAN control to a frequency for which the timer is running, any limitation on that frequency shall be removed.

...

22.5.14.3 Test description

22.5.14.3.1 Pre-test conditions

System Simulator:

- a maximum of 3 cells are active at any given time. For cell setup refer to Table 8.1.4.2-3: Default NAS parameters for simulated Ncells in TS 36.508[18].
- NB-IOT system information combination 2 as defined in TS 36.508[18] clause 8.1.4.3.1.1 is used in all cells

Table 22.5.14.3-1: Time instances of cell power level and parameter changes

	Parameter	Unit	Ncell 50	Ncell 51	Ncell 55	Ncell 56	Ncell 62
T1	Cell-specific NRS EPRE	dBm/ 15kHz	-85	-97	Off	Off	Off
T2	Cell-specific NRS EPRE	dBm/ 15kHz	-97	-85	Off	Off	Off
T3	Cell-specific NRS EPRE	dBm/ 15kHz	-85	-97	Off	Off	Off
T4	Cell-specific NRS EPRE	dBm/ 15kHz	-85	-120	Off	Off	Off
T5	Cell-specific NRS EPRE	dBm/ 15kHz	Off	Off	-85	Off	Off
T6	Cell-specific NRS EPRE	dBm/ 15kHz	Off	Off	-91	-85	Off
T7	Cell-specific NRS EPRE	dBm/ 15kHz	Off	Off	-85	Off	Off
T8	Cell-specific NRS EPRE	dBm/ 15kHz	-97	Off	-85	Off	Off
T9	Cell-specific NRS EPRE	dBm/ 15kHz	Off	Off	-85	Off	Off
T10	Cell-specific NRS EPRE	dBm/ 15kHz	Off	Off	-85	Off	-91
T11	Cell-specific NRS EPRE	dBm/ 15kHz	Off	Off	-91	Off	-85
T12	Cell-specific NRS EPRE	dBm/ 15kHz	Off	Off	-85	Off	Off
T13	-	-	-	-	-	-	-
T14	Cell-specific NRS EPRE	dBm/ 15kHz	Off	Off	-91	-85	-85
T15	Cell-specific NRS EPRE	dBm/ 15kHz	Off	Off	-91	-85	Off

UE:

- the UE is configured to initiate EPS attach;

Preamble:

- the UE is in state Switched OFF (State 1-NB) according to TS 36.508 [18].

22.5.14.3.2 Test procedure sequence

Table 22.5.14.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	SS adjusts the cell power levels according to row T1 in table 22.5.14.3-1.	-	-	-	-
-	The following messages are to be observed on Ncell 50 unless explicitly stated otherwise. All ATTACH REJECT messages must be sent integrity protected.	-	-	-	-
2	The UE is switched on.	-	-	-	-
3	The UE transmits an ATTACH REQUEST message. IF AttachWithoutPDN AND UE sets “attachWithoutPDN-Connectivity” in *RRCConnectionSetupComplete-NB* THEN the ESM DUMMY MESSAGE is piggybacked in ATTACH REQUEST, OTHERWISE the PDN CONNECTIVITY REQUEST message is piggybacked in ATTACH REQUEST.	-->	ATTACH REQUEST	-	-

4	The SS transmits an ATTACH REJECT message, EMM cause = "Tracking area not allowed". (The list of "forbidden tracking areas for regional provision of service " in the UE should now contain TAI-1)	<--	ATTACH REJECT	-	-
5	The SS releases the RRC connection.	-	-	-	-

22.5.15 NB-IoT / Normal tracking area update / low priority override

22.5.15.1 Test Purpose (TP)

(1)

```
with { the UE is switched-off with a valid USIM inserted and the UE is configured to override NAS
signalling low priority  }
ensure that {
  when { UE is powered on }
    then { the UE transmits an ATTACH REQUEST message including the Device properties IE set to “MS
is not configured for NAS signalling low priority” }
}
```

(2)

```
with { UE in state EMM-REGISTERED and EMM-IDLE mode and UE configured for low priority NAS
signalling and low priority NAS signalling override }
ensure that {
  when { UE detects entering a new tracking area not included in the TAI list }
   then { UE sends TRACKING AREA UPDATE REQUEST message with the low priority indicator set to "MS
is not configured for NAS signalling low priority"}
             }
```

22.5.15.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: 3GPP TS 24.301 clauses 4.2A

[TS 24.301 clause 4.2A]

A UE configured for NAS signalling low priority (see 3GPP TS 24.368 [15A], 3GPP TS 31.102 [17]) indicates this by including the Device properties IE in the appropriate NAS message and setting the low priority indicator to "MS is configured for NAS signalling low priority", except for the following cases in which the UE shall set the low priority indicator to "MS is not configured for NAS signalling low priority":

- the UE is performing an attach for emergency bearer services;
- the UE has a PDN connection for emergency bearer services established and is performing EPS mobility management procedures, or is establishing a PDN connection for emergency bearer services;
- the UE configured for dual priority is requested by the upper layers to establish a PDN connection with the low priority indicator set to "MS is not configured for NAS signalling low priority";
- the UE configured for dual priority is performing EPS session management procedures related to the PDN connection established with low priority indicator set to "MS is not configured for NAS signalling low priority";
- the UE configured for dual priority has a PDN connection established by setting the low priority indicator to "MS is not configured for NAS signalling low priority" and is performing EPS mobility management procedures;
- the UE is performing a service request procedure for a CS fallback emergency call or 1xCS fallback emergency call;

- the UE is a UE configured to use AC11 – 15 in selected PLMN; or
- the UE is responding to paging.

The network may use the NAS signalling low priority indication for NAS level mobility management congestion control and APN based congestion control.

If the NAS signalling low priority indication is provided in a PDN CONNECTIVITY REQUEST message, the MME stores the NAS signalling low priority indication within the default EPS bearer context activated due to the PDN connectivity request procedure.

22.5.15.3 Test description

22.5.15.3.1 Pre-test conditions

System Simulator:

- Ncell 50 (belongs to TAI-1, home PLMN) is set to "Serving cell";
- Ncell 51 (belongs to TAI-2, home PLMN) is set to "Non-suitable cell";

UE:

- The UE is previously registered on E-UTRAN, and when on E-UTRAN, the UE is last authenticated and registered on the NB-IoT cell using default message contents according to TS 36.508 [18].
- The UE is configured for low priority NAS signalling
- The UE is configured for low priority NAS signalling override

The UE is equipped with a USIM containing values shown in Table 22.5.15.3.1-1.

Table 22.5.15.3.1-1: USIM Configuration

USIM field	Value
EF_{UST}	Service 96 is supported.
$EF_{NASCONFIG}$	“NAS_SignallingPriority is set to “NAS signalling low priority” as defined in TS 24.368, clause 5.3.
$EF_{NASCONFIG}$	“Override_NAS_SignallingLowPriority” is set to “UE can override the NAS signalling low priority indicator” as defined in TS 24.368, clause 5.9.
$EF_{NASCONFIG}$	“ExtendedAccessBarring is set to extended access barring is applied for the UE” as defined in TS 24.368, clause 5.8
$EF_{NASCONFIG}$	“Override_ExtendedAccessBarring is set to UE can override extended access barring” as defined in TS 24.368, clause 5.10.
EF_{ACC}	Type “B” as defined in TS 34.108 clause 8.3.2.15
Note: As per TS 23.401 [22] clause 4.3.17.4, UE’s configuration of low access priority and Extended Access Barring shall match each other and so do their corresponding override configuration.	

Preamble:

- UE is in State 1-NB switched off.

22.5.16 NB-IoT / Normal tracking area update / Rejected / EPS service not allowed /EPS services not allowed in this PLMN

22.5.16.1 Test Purpose (TP)

(1)

```
with { UE has sent a TRACKING AREA UPDATE REQUEST message}
ensure that {
  when { UE receives a TRACKING AREA UPDATE REJECT message with the reject cause set to "EPS service not allowed" }
    then { UE considers the USIM as invalid for EPS services and enters state EMM-DEREGISTERED }
```

(2)

```
with { The UE is in the state EMM-DEREGISTERED }
```

```
ensure that {
  when { UE is powered up or switched on }
    then { UE sends ATTACH REQUEST message with 'Old GUTI or IMSI IE = 'IMSI"}
```

(3)

```
with { UE has sent a TRACKING AREA UPDATE REQUEST message}
ensure that {
  when { UE receives a TRACKING AREA UPDATE REJECT message with the reject cause set to 'EPS
services not allowed in this PLMN' }
    then { UE deletes the GUTI, the last visited registered TAI and KSI and UE deletes the list of
equivalent PLMNs and UE enters state EMM-DEREGISTERED.PLMN-SEARCH and UE stores the PLMN in the
"forbidden PLMNs for GPRS service" }
```

(4)

```
with { UE in EMM-DEREGISTERED.PLMN-SEARCH state and a PLMN is stored in the "forbidden PLMNs for
GPRS service" }
ensure that {
  when { UE enters a cell which is in the "forbidden PLMNs for GPRS service" }
    then { UE doesn't perform an attach procedure }
            }
```

(5)

```
with { UE in EMM-DEREGISTERED.PLMN-SEARCH state and a PLMN is stored in the "forbidden PLMNs for
GPRS service" }
ensure that {
  when { UE enters a cell which is not in the "forbidden PLMNs for GPRS service" }
    then { UE initiates an attach procedure }
            }
```

(6)

```
with { UE is switched off and a PLMN is stored in the 'forbidden PLMNs for GPRS service' }
ensure that {
  when { UE is power ON in a cell with forbidden PLMNs for GPRS service }
    then { UE initiates an attach procedure }
```

22.5.16.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: 3GPP TS 24.301 clauses 5.5.3.2.5.

[TS 24.301 clause5.5.3.2.5]

If the tracking area updating cannot be accepted by the network, the MME sends a TRACKING AREA UPDATE REJECT message to the UE including an appropriate EMM cause value.

…

The UE shall take the following actions depending on the EMM cause value received in the TRACKING AREA UPDATE REJECT message.

…

#7 (EPS services not allowed);

The UE shall set the EPS update status to EU3 ROAMING NOT ALLOWED (and shall store it according to subclause 5.1.3.3) and shall delete any GUTI, last visited registered TAI, TAI list and eKSI. The UE shall consider the USIM as invalid for EPS services until switching off or the UICC containing the USIM is removed or the timer T3245 expires as described in subclause 5.3.7a. The UE shall delete the list of equivalent PLMNs and shall enter the state EMM-DEREGISTERED.

If the EPS update type is "periodic updating", a UE operating in CS/PS mode 1 or CS/PS mode 2 of operation, which is IMSI attached for non-EPS services, is still IMSI attached for non-EPS services. The UE operating in CS/PS mode 1 or CS/PS mode 2 of operation shall set the update status to U2 NOT UPDATED, shall attempt to select GERAN or UTRAN radio access technology and shall proceed with appropriate MM specific procedure according to the MM service state. The UE shall not reselect E-UTRAN radio access technology until switching off or the UICC containing the USIM is removed.

If A/Gb mode or Iu mode is supported by the UE, the UE shall handle the GMM parameters GMM state, GPRS update status, P-TMSI, P-TMSI signature, RAI and GPRS ciphering key sequence number as specified in 3GPP TS 24.008 [13] for the case when the normal routing area updating procedure is rejected with the GMM cause with the same value.

...

#14 (EPS services not allowed in this PLMN);

The UE shall set the EPS update status to EU3 ROAMING NOT ALLOWED (and shall store it according to subclause 5.1.3.3). Furthermore the UE shall delete any GUTI, last visited registered TAI, TAI list and eKSI. The UE shall reset the tracking area updating attempt counter and shall enter the state EMM-DEREGISTERED.PLMN-SEARCH.

The UE shall store the PLMN identity in the "forbidden PLMNs for GPRS service" list and if the UE is configured to use timer T3245 (see 3GPP TS 24.368 [15A] or 3GPP TS 31.102 [17]) then the UE shall start timer T3245 and proceed as described in subclause 5.3.7a.

If the EPS update type is "TA updating", or the EPS update type is "periodic updating" and the UE is in PS mode 1 or PS mode 2 of operation, the UE shall perform a PLMN selection according to 3GPP TS 23.122 [6]. In this case, the UE supporting S1 mode only shall delete the list of equivalent PLMNs before performing the procedure.

If the EPS update type is "periodic updating", a UE operating in CS/PS mode 1 or CS/PS mode 2 of operation, which is IMSI attached for non-EPS services, is still IMSI attached for non-EPS services and shall proceed as follows:

- a UE operating in CS/PS mode 1 or CS/PS mode 2 of operation shall set the update status to U2 NOT UPDATED;
- a UE operating in CS/PS mode 1 of operation and supporting A/Gb mode or Iu mode may select GERAN or UTRAN radio access technology and proceed with the appropriate MM specific procedure according to the MM service state. In this case, the UE shall disable the E-UTRA capability (see subclause 4.5);
- a UE operating in CS/PS mode 1 of operation and supporting A/Gb mode or Iu mode may perform a PLMN selection according to 3GPP TS 23.122 [6];
- a UE operating in CS/PS mode 1 of operation and supporting S1 mode only, or operating in CS/PS mode 2 of operation shall delete the list of equivalent PLMNs and shall perform a PLMN selection according to 3GPP TS 23.122 [6].

If A/Gb mode or Iu mode is supported by the UE, the UE shall handle the GMM parameters GMM state, GPRS update status, P-TMSI, P-TMSI signature, RAI, GPRS ciphering key sequence number and routing area updating attempt counter as specified in 3GPP TS 24.008 [13] for the case when the normal routing area updating procedure is rejected with the GMM cause with the same value.

22.5.16.3 Test description

22.5.16.3.1 Pre-test conditions

System Simulator:

- Only three Ncells are active at a time
- Three NB-IoT cells Ncell 50, Ncell 51, and Ncell 55 are active from steps 1 to 34;
- Ncell 50 (belongs to TAI-1, home PLMN) is set to "Serving cell";
- Ncell 51 (belongs to TAI-2, home PLMN) is set to "Non-suitable cell";
- Ncell 55 (belongs to TAI-7, visited PLMN) is set to "Non-suitable cell";
- Three NB-IoT cells Ncell 55, Ncell 56, and Ncell 57 are active from steps 35 to 104;

  - Ncell 55 (belongs to TAI-7, visited PLMN) is set to "Serving cell";
  - Ncell 56 (belongs to TAI-8, visited PLMN, another TAC) is set to "Non-suitable cell";
- system information combination 3 as defined in TS 36.508[18] clause 8.1.4.3.1.2 is applied in NB-IoT cells.

Table 22.5.16.3.1-1: Time instances of cell power level

being allocated by the SS during Tracking Area Update procedure }
ensure that {
  when { timer T3412 extended value expires }
   then { UE sends TRACKING AREA UPDATE REQUEST message with EPS update type = "Periodic updating" }
}
```

22.5.17.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: 3GPP TS 24.301 clauses 5.3.11, 5.5.1.2.2, 5.5.3.2.2, and 5.5.1.2.4.

[TS 24.301, clause 5.3.11]

The UE can request the use of power saving mode (PSM) during an attach or tracking area updating procedure (see 3GPP TS 23.682 [11A] and 3GPP TS 23.401 [10]). The UE shall not request the use of PSM during:

- an attach for emergency bearer services procedure;
- an attach procedure for initiating a PDN connection for emergency bearer services with attach type not set to "EPS emergency attach";
- a tracking area updating procedure for initiating a PDN connection for emergency bearer services; or
- a tracking area updating procedure when the UE has a PDN connection established for emergency bearer services.

The network accepts the use of PSM by providing a specific value for timer T3324 when accepting the attach or tracking area updating procedure. The UE may use PSM only if the network has provided the T3324 value IE during the last attach or tracking area updating procedure with a value different from "deactivated".

NOTE: Timer T3324 is specified in 3GPP TS 24.008 [13].

Upon expiry of the timer T3324 or if the T3324 value provided by the network is zero, the UE may deactivate the AS layer and activate PSM by entering the state EMM-REGISTERED.NO-CELL-AVAILABLE if:

a) the UE is not attached for emergency bearer services;

b) the UE has no PDN connection for emergency bearer services;

c) the UE is in EMM-IDLE mode; and

d) in the EMM-REGISTERED.NORMAL-SERVICE state.

If conditions a, b and c are fulfilled, but the UE is in a state other than EMM-REGISTERED.NORMAL-SERVICE when timer T3324 expires, the UE may activate PSM when the MS returns to state EMM-REGISTERED.NORMAL-SERVICE.

A UE that has already been allocated timer T3324 with a value different from "deactivated" and the timer T3324 has expired, may activate PSM if it receives an "Extended wait time" from lower layers.

If the UE is attached for emergency bearer services or has a PDN connection for emergency bearer services, the UE shall not activate PSM.

The UE may deactivate PSM at any time (e.g. for the transfer of mobile originated signalling or user data), by activating the AS layer before initiating the necessary EMM procedures. When PSM is activated all NAS timers are stopped and associated procedures aborted except for T3412, T3346 and T3396.

[TS 24.301, clause 5.5.1.2.2]

If the UE supports PSM and requests the use of PSM, then the UE shall include the T3324 value IE with a requested timer value in the ATTACH REQUEST message. When the UE includes the T3324 value IE and the UE indicates support for extended periodic timer value in the MS network feature support IE, it may also include the T3412 extended value IE to request a particular T3412 value to be allocated.

[TS 24.301, clause 5.5.3.2.2]

The UE in state EMM-REGISTERED shall initiate the tracking area updating procedure by sending a TRACKING AREA UPDATE REQUEST message to the MME,

……..

t) when the UE needs to request the use of PSM or needs to stop the use of PSM; or

u) when a change in the PSM usage conditions at the UE requires a different timer T3412 value or different timer T3324 value.

NOTE: A change in the PSM usage conditions at the UE can include e.g. a change in the UE configuration, a change in requirements from upper layers or the battery running low at the UE.

[TS 24.301 clause 5.5.1.2.4]

If the attach request is accepted by the network, the MME shall send an ATTACH ACCEPT message to the UE and start timer T3450. The MME shall send the ATTACH ACCEPT message together with an ACTIVATE DEFAULT EPS BEARER CONTEXT REQUEST message contained in the ESM message container information element to activate the default bearer (see subclause 6.4.1). The network may also initiate the activation of dedicated bearers towards the UE by invoking the dedicated EPS bearer context activation procedure (see subclause 6.4.2).

...

If the ATTACH ACCEPT message contains a T3412 extended value IE, then the UE shall use the value in T3412 extended value IE as periodic tracking area update timer (T3412). If the ATTACH ACCEPT message does not contain T3412 extended value IE, then the UE shall use the value in T3412 value IE as periodic tracking area update timer (T3412).

22.5.17.3 Test description

22.5.17.3.1 Pre-test conditions

System Simulator:

- NB-IoT Ncell 1, default parameters.

UE:

- The UE is previously registered on E-UTRAN, and when on E-UTRAN, the UE is last authenticated and registered on the NB-IoT cell using default message contents according to TS 36.508 [18].

- The UE is configured to use Power Saving Mode.

- The UE is configured to use the timer T3324 set to two minutes.

Preamble:

- UE is in State 1-NB switched off.

22.5.17.3.2 Test procedure sequence

Table 22.5.17.3.2-1: Main behaviour

  when { the UE receives a paging-nb message after T3324 timer expiry in a valid paging occasion as
per normal DRX }
    then { the UE shall not send the control plane service request message to network }
            }
```

(13)

```
with { the UE has sent an Attach Request message with “extended DRX parameters IE” and the “T3324
IE” }
ensure that {
  when { the UE receives the ATTACH ACCEPT message including the extended DRX parameters but not the
T3324 IE }
    then { the UE shall send Attach complete message to network }
            }
```

(14)

```
with { the UE has received an ATTACH ACCEPT message including extended DRX parameters IE but not the
T3324 IE }
ensure that {
  when { the UE receives a paging-nb message in a valid paging occasion in paging hyperframe as per
Idle eDRX}
    then { the UE shall send the control plane service request message to network }
            }
```

22.5.18.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: 3GPP TS 24.301 clauses 5.3.11, 5.3.12, 5.3.13, 5.5.1.2.2, 5.5.1.2.4, 5.5.3.2.2, 5.5.3.2.4 and 5.6.2.2.1.1

[TS 24.301 clause 5.3.11]

The UE can request the use of power saving mode (PSM) during an attach or tracking area updating procedure (see 3GPP TS 23.682 [11A] and 3GPP TS 23.401 [10]). The UE shall not request the use of PSM during:

- an attach for emergency bearer services procedure;
- an attach procedure for initiating a PDN connection for emergency bearer services with attach type not set to "EPS emergency attach";
- a tracking area updating procedure for initiating a PDN connection for emergency bearer services; or
- a tracking area updating procedure when the UE has a PDN connection established for emergency bearer services.

The network accepts the use of PSM by providing a specific value for timer T3324 when accepting the attach or tracking area updating procedure. The UE may use PSM only if the network has provided the T3324 value IE during the last attach or tracking area updating procedure with a value different from "deactivated".

[TS 24.301 clause 5.3.12]

The UE may request the use of extended idle-mode DRX cycle (eDRX) during an attach or tracking area updating procedure by including the extended DRX parameters IE (see 3GPP TS 23.682 [11A] and 3GPP TS 23.401 [10]). The UE shall not request the use of eDRX during:

…

The network accepts the request to use the eDRX by providing the extended DRX parameters IE when accepting the attach or the tracking area updating procedure. The UE shall use eDRX only if the network has provided the extended DRX parameters IE during the last attach or tracking area updating procedure.

NOTE: If the UE wants to keep using eDRX, the UE includes the extended DRX parameters IE in each attach or tracking area updating procedure.

[TS 24.301 clause 5.3.13]

The UE can request the use of both PSM and eDRX during an attach or tracking area update procedure but it is up to the network to decide to enable none, one of them or both (see 3GPP TS 23.682 [11A] and 3GPP TS 23.401 [10]).

If the network accepts the use of both PSM (see subclause 5.3.11) and eDRX (see subclause 5.3.12), the extended DRX parameters IE provided to the UE should allow for multiple paging occasions before the active timer expires.

[TS 24.301 clause 5.5.1.2.2]

If the UE supports eDRX and requests the use of eDRX, the UE shall include the extended DRX parameters IE in the ATTACH REQUEST message.

[TS 24.301 clause 5.5.1.2.4]

The MME shall include the extended DRX parameters IE in the ATTACH ACCEPT message only if the extended DRX parameters IE was included in the ATTACH REQUEST message, and the MME supports and accepts the use of eDRX.

[TS 24.301 clause 5.5.3.2.2]

The UE in state EMM-REGISTERED shall initiate the tracking area updating procedure by sending a TRACKING AREA UPDATE REQUEST message to the MME,

a) when the UE detects entering a tracking area that is not in the list of tracking areas that the UE previously registered in the MME;

...

u) when the UE needs to request the use of eDRX or needs to stop the use of eDRX;

v) when a change in the eDRX usage conditions at the UE requires different extended DRX parameters;

…

If the UE supports eDRX and requests the use of eDRX, the UE shall include the extended DRX parameters IE in the TRACKING AREA UPDATE REQUEST message.

[TS 24.301 clause5.5.3.2.4]

The MME shall include the extended DRX parameters IE in the TRACKING AREA UPDATE ACCEPT message only if the extended DRX parameters IE was included in the TRACKING AREA UPDATE REQUEST message, and the MME supports and accepts the use of eDRX.

[TS 24.301 clause5.6.2.2.1.1]

To initiate the procedure the EMM entity in the network requests the lower layer to start paging (see 3GPP TS 36.300 [20], 3GPP TS 36.413 [23]) and shall start the timer:

- T3415 for this paging procedure, if the network accepted to use eDRX for the UE.

22.5.18.3 Test description

22.5.18.3.1 Pre-test conditions

System Simulator:

- NB-IoT Ncell 1, set to "Serving cell";
- NB-IoT Ncell 11, set to Non-Suitable cell".
- System information combination 2 as defined in TS 36.508[18] clause 8.1.4.3.1.1 is used in NB-IoT cells.
- If UE supports NTN only access in NB-IoT (pc_NB_ntn_only_Connectivity_EPC), System information combination 10 as defined in TS 36.508 [18] clause 8.1.4.3.1.1 is used.

UE:

- The UE is previously registered on E-UTRAN, and when on E-UTRAN, the UE is last authenticated and registered on the NB-IoT cell using default message contents according to TS 36.508 [18].
- the UE is configured to request the use of eDRX (in the ATTACH REQUEST and TRACKING AREA UPDATE messages).
- The UE is configured to use Power Saving Mode.
- The UE is configured to set T3324 to two minutes.

Preamble:

- UE is in State 1-NB switched off.

22.5.18.3.2 Test procedure sequence

Table 22.5.18.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
	The following messages are sent and shall be received on Ncell 1.	-	-	-	-
1-14b1	Steps 1 – 14b1 of the generic procedure specified in TS 36.508 subclause 8.1.5.2.3 are performed	-	-	-	-
15	Check: Does the UE transmit an ATTACH COMPLETE message including an Extended DRX parameters IE?	-->	ATTACH COMPLETE	1	P
16	The SS releases the RRC connection.	-	-	-	-
17	SS transmits a *Paging* message to the UE in a valid paging occasion in paging hyperframe as per Idle eDRX	<--	*Paging-NB*	-	-
18-19	Steps 2 to 3 of the NB-IoT Control Plane CIoT MT user data transfer non-SMS transport procedure (TS 36.508 8.1.5A.2.3) are executed.	-	-	-	-
20-21	Void	-	-	-	-

21A	Check: Does the UE transmit a CONTROL PLANE SERVICE REQUEST according to step 4a1a1 or 4a1b1 in the generic procedure in TS 36.508, clause 8.1.5A.2.3?	-->	CONTROL PLANE SERVICE REQUEST	2	P
21B	Steps 4a1b1 to 5 or only step 5 of the NB-IoT Control Plane CIoT MT user data transfer non-SMS transport procedure (TS 36.508, clause 8.1.5A.2.3) are executed	-	-	-	-
22	The SS releases the RRC connection.	-	-	-	-
23	Set the cell type of Ncell 1 to the "Non-Suitable cell". Set the cell type of Ncell 11 to the " Serving cell"				
24	The UE transmits a TRACKING AREA UPDATE REQUEST message including an Extended DRX parameters IE	-->	TRACKING AREA UPDATE REQUEST	-	-
25	The SS transmits a TRACKING AREA UPDATE ACCEPT message without an Extended DRX parameters IE. GUTI-1 is included.	<--	TRACKING AREA UPDATE ACCEPT	-	-
26	Check: Does the UE transmit a TRACKING AREA UPDATE COMPLETE message without an Extended DRX parameters IE?	-->	TRACKING AREA UPDATE COMPLETE	3	P
27	The SS releases the RRC connection.	-	-	-	-
28	SS transmits a *Paging-NB* message to the UE in a valid paging occasion as per normal DRX	<--	*Paging-NB*		
29–30	Steps 2 to 3 of the NB-IoT Control Plane CIoT MT user data transfer non-SMS transport procedure (TS 36.508 8.1.5A.2.3) are executed.	-	-	-	-
31-32	Void	-	-	-	-
32A	Check: Does the UE transmit a CONTROL PLANE SERVICE REQUEST according to step 4a1a1 or 4a1b1 in the generic procedure in TS 36.508, clause 8.1.5A.2.3?	-->	CONTROL PLANE SERVICE REQUEST	4	P
32B	Steps 4a1b1 to 5 or only step 5 of the NB-IoT Control Plane CIoT MT user data transfer non-SMS transport procedure (TS 36.508, clause 8.1.5A.2.3) are executed	-	-	-	-
33	The UE is switched off, see Note 1.	-	-	-	-
34	Set the cell type of Ncell 1 to the "Serving cell". Set the cell type of Ncell 11 to the "Non-Suitable cell".	-	-	-	-
35	The UE is switched on	-	-	-	-
36–48b1	Steps 2 – 14b1 of the generic procedure specified in TS 36.508 subclause 8.1.5.2.3 are performed	-	-	-	-
49	Check: Does the UE transmit an ATTACH COMPLETE message without an Extended DRX parameters IE?	-->	ATTACH COMPLETE	5	P
50	The SS releases the RRC connection	-	-	-	-
51	SS transmits a *Paging-NB* message to the UE in a valid paging occasion as per normal DRX	<--	*Paging-NB*		
52–53	Steps 2 to 3 of the NB-IoT Control Plane CIoT MT user data transfer non-SMS transport procedure (TS 36.508 8.1.5A.2.3) are executed.	-	-	-	-

54-55	Void	-	-	-	-
55A	Check: Does the UE transmit a CONTROL PLANE SERVICE REQUEST according to step 4a1a1 or 4a1b1 in the generic procedure in TS 36.508, clause 8.1.5A.2.3?	-->	CONTROL PLANE SERVICE REQUEST	6	P
55B	Steps 4a1b1 to 5 or only step 5 of the NB-IoT Control Plane CIoT MT user data transfer non-SMS transport procedure (TS 36.508, clause 8.1.5A.2.3) are executed	-	-	-	-
55C	The SS releases the RRC connection	-	-	-	-
56	Set the cell type of Ncell 1 to the "Non-Suitable cell". Set the cell type of Ncell 11 to the " Serving cell"				
57	The UE transmits a TRACKING AREA UPDATE REQUEST message including an Extended DRX parameters IE	-->	TRACKING AREA UPDATE REQUEST	-	-
58	The SS transmits a TRACKING AREA UPDATE ACCEPT message including an Extended DRX parameters IE. GUTI-2 is included.	<--	TRACKING AREA UPDATE ACCEPT	-	-
59	The UE transmits a TRACKING AREA UPDATE COMPLETE message.	-->	TRACKING AREA UPDATE COMPLETE	7	P
60	The SS releases the RRC connection.			-	-
61	SS transmits a *Paging-NB* message to the UE in a valid paging occasion in paging hyperframe as per Idle eDRX	<--	*Paging-NB*		
62–63	Steps 2 to 3 of the NB-IoT Control Plane CIoT MT user data transfer non-SMS transport procedure (TS 36.508 8.1.5A.2.3) are executed.				
64-65	Void	-	-	-	-
65A	Check: Does the UE transmit a CONTROL PLANE SERVICE REQUEST according to step 4a1a1 or 4a1b1 in the generic procedure in TS 36.508, clause 8.1.5A.2.3?	-->	CONTROL PLANE SERVICE REQUEST	8	P
65B	Steps 4a1b1 to 5 or only step 5 of the NB-IoT Control Plane CIoT MT user data transfer non-SMS transport procedure (TS 36.508, clause 8.1.5A.2.3) are executed	-	-	-	-
66	The SS releases the RRC connection.	-	-	-	-
67	The UE is switched off, see Note 1.	-	-	-	-
68	SS sets the cell type of Ncell 1 to the "Serving cell". Set the cell type of Ncell 11 to the "Non-Suitable cell".	-	-	-	-
-	The following messages are sent and shall be received on Ncell 1.	-	-	-	-
70–83b1	Steps 1 – 14b1 of the generic procedure specified in TS 36.508 subclause 8.1.5.2.3 is performed	-	-	-	-
84	Check: Does the UE transmit an ATTACH COMPLETE message including an Extended DRX parameters IE and the T3324 IE set to two minutes?	-->	ATTACH COMPLETE	9	P
85	The SS releases the RRC connection.	-	-	-	-
86	SS transmits a *Paging* message to the UE in a valid paging occasion in paging hyperframe as per Idle eDRX	<--	*Paging-NB*	-	-
87–88	Steps 2 to 3 of the NB-IoT Control Plane CIoT MT user data transfer non-				

	SMS transport procedure (TS 36.508 8.1.5 A.2.3) are executed.				
89-90	Void	-	-	-	-
90A	Check: Does the UE transmit a CONTROL PLANE SERVICE REQUEST according to step 4a1a1 or 4a1b1 in the generic procedure in TS 36.508, clause 8.1.5A.2.3?	-->	CONTROL PLANE SERVICE REQUEST	10	P
90B	Steps 4a1b1 to 5 or only step 5 of the NB-IoT Control Plane CIoT MT user data transfer non-SMS transport procedure (TS 36.508, clause 8.1.5A.2.3) are executed	-	-	-	-
91	The SS releases the RRC connection.	-	-	-	-
92	SS sets the cell type of Ncell 1 to the "Non-Suitable cell". Set the cell type of Ncell 11 to the " Serving cell"	-	-	-	-
93	The UE transmits a TRACKING AREA UPDATE REQUEST message including an Extended DRX parameters IE and the T3324 IE set to two minutes.	-->	TRACKING AREA UPDATE REQUEST	-	-
94	The SS transmits a TRACKING AREA UPDATE ACCEPT message without an Extended DRX parameters IE but with the T3324 IE set to 2 minutes. GUTI-3 is included.	<--	TRACKING AREA UPDATE ACCEPT	-	-
95	The UE transmits a TRACKING AREA UPDATE COMPLETE message.	-->	TRACKING AREA UPDATE COMPLETE	11	P
96	The SS releases the RRC connection.	-	-	-	-
97	When the T3324 timer expires the SS sends Paging message including a matched identity in a valid paging occasion as per normal DRX	<--	*Paging-NB*	-	-
98	Check: Does the UE respond to the paging message?	-	-	12	F
98A	The SS waits 4 minutes. (Expiry of T3412 extended value)	-	-	-	-
98B	The UE transmits a TRACKING AREA UPDATE REQUEST message	-->	TRACKING AREA UPDATE REQUEST	-	-

22.5.20 NB-IoT/ UE in NB-S1 mode supporting control plane data back-off timer/ Service reject with extended wait time CP data/ Release with extended wait time CP data/ Attach accept with extended wait time CP data

22.5.20.1 Test Purpose (TP)

(1)

```
with { UE has sent a CONTROL PLANE SERVICE REQUEST message with ESM DATA TRANSPORT piggybacked }
ensure that {
  when { UE receives a SERVICE REJECT message with EMM cause value set to #22 "congestion" and a
value for control plane data back-off timer T3448}
    then { the UE starts timer T3448 with the received value and performs control plane data
transmission on the expiry of timers T3448 }
            }
```

(2)

```
with { UE has sent a TRACKING AREA UPDATE REQUEST message with indication supporting of Control
Plane data back-off timer }
ensure that {
  when { UE receives an RRC Connection Release message with extendedWaitTime-CPdata }
    then { the UE starts timer T3448 with the "Extended wait time CP data" value and performs normal
cell reselection process }
            }
```

(3)

```
with { UE has sent a TRACKING AREA UPDATE REQUEST message with indication supporting of Control
Plane data back-off timer }
ensure that {
  when { UE receives an TRACKING AREA UPDATE ACCEPT message without T3448 }
    then { the UE stops CP back-off timer and performs control plane data transmission }
            }
```

(4)

```
with { UE has received a ATTACH ACCEPT message with T3448 }
ensure that {
  when { UE receives an ESM DATA TRANSPORT message before T3448 expiry }
    then { the UE performs control plane data transmission after expiry of T3448 }
            }
```

22.5.20.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 23.401, clauses 4.3.7.4.2.7, and TS 24.301, clauses 5.5.1.2.6, 5.5.3.2.6, 5.6.1.5, and 5.6.1.6.

[TS 23.401, clause 4.3.7.4.2.7]

Under overload conditions the MME may restrict requests from UEs for data transmission via Control Plane CIoT EPS Optimisation. A Control Plane data back-off timer may be returned by the MME (e.g.in Attach/TAU/RAU Accept messages, Service Reject message or Service Accept message). While the Control Plane data back-off timer is running, the UE shall not initiate any data transfer via Control Plane CIoT EPS Optimisation, i.e. the UE shall not send any Control Plane Service Request with ESM Data Transport message as defined in TS 24.301 [46]. The MME shall store the Control Plane data back-off timer per UE and shall reject any further request (other than exception reporting and a response to paging) for data transmission via Control Plane Service Request from that UE while the Control Plane data back-off timer is still running.

NOTE 1: The Control Plane data back-off timer does not affect any other mobility management or session management procedure.

NOTE 2: The Control Plane data back-off timer does not apply to user plane data communication.

If the UE is allowed to send exception reporting, the UE may initiate Control Plane Service Request for exception reporting even if Control Plane data back-off timer is running.

The UE may respond with Control Plane Service Request without ESM Data Transport to a paging even if the Control Plane data back-off timer is running.

If the MME receives a Control Plane Service Request in response to a paging, and the MME has a Control Plane data back-off timer running for the UE, and the MME is not overloaded, and MME decides to accept the Control Plane Service Request, then the MME shall respond with Service Accept message without the Control Plane data back-off timer and stop the Control Plane data back-off timer. If the UE receives a Service Accept message without the Control Plane data back-off timer from the MME while the Control Plane data back-off timer is running, the UE shall stop the Control Plane data back-off timer. The Control Plane data back-off timer in the UE and the MME is stopped at PLMN change.

If the MME receives a Control Plane Service Request with ESM Data Transport message, and decides to send the UE a Control Plane data back-off timer, the MME may decide to process the Control Plane Service Request with ESM Data Transport message, i.e. decrypt and forward the data payload, or not based on the following:

- If the UE has additionally indicated in a Release Assistance Information in the NAS PDU that no further Uplink or Downlink Data transmissions are expected, then the MME may process (integrity check/decipher/forward) the received Control Plane data packet, and send SERVICE ACCEPT to the UE with Control Plane data back-off timer. The UE interprets this as successful transmission of the Control Plane data packet, starts the Control Plane data back-off timer and proceeds as described in clause 6.8.1.4.

- For all other cases, the MME may decide to not process the received control plane data packet and sends SERVICE REJECT to the UE with Control Plane data back-off timer. The UE interprets this indication as unsuccessful delivery of the control plane data packet, starts the Control Plane data back-off timer and proceeds as described in clause 6.8.1.4. Then MME may take into consideration whether the PDN Connection is set to Control Plane only to make the decision whether to reject the packet and send SERVICE REJECT or move the PDN connection to user plane and process the data packet.

- Alternatively, if UE has not provided in the in Control Plane service request the release assistance information, and the EPS bearer belongs to a PDN connection not set to Control Plane only, and UE supports user plane EPS CIoT optimisation (or legacy S1-U), then the MME may initiate establishment of S1-U bearer during Data Transport in Control Plane CIoT EPS optimisation (according to the procedure defined in clause 5.3.4B.4). In this case MME may also return a Control Plane data back-off timer within the NAS message.

The MME only includes the Control Plane data back-off timer if the UE has indicated support for Control Plane data back-off timer in the Attach/TAU/RAU request.

NOTE 3: If the MME is overloaded or close to overload, but the UE has not indicated support for Control Plane data back-off timer, the MME can use other overload control mechanisms, e.g. mobility management back-off timer or use user plane data communication.

[TS 24.301, clause 5.5.1.2.6]

la) "Extended wait time CP data" from the lower layers

If the UE is operating in NB-S1 mode, the UE shall start the timer T3346 with the "Extended wait time CP data" value and reset the attach attempt counter.

In other cases the UE shall ignore the "Extended wait time CP data".

The UE shall abort the attach procedure, stay in the current serving cell, change the state to EMM-DEREGISTERED.ATTEMPTING-TO-ATTACH and apply the normal cell reselection process.

The UE shall proceed as described below.

[TS 24.301, clause 5.5.3.2.6]

ka) "Extended wait time CP data" from the lower layers

If the UE is operating in NB-S1 mode and supports the timer T3448, the UE shall start the timer T3448 with the "Extended wait time CP data" value. If the UE is operating in NB-S1 mode and does not support the timer

T3448, the UE shall start the timer T3346 with the "Extended wait time CP data" value and reset the tracking area updating attempt counter.

In other cases the UE shall ignore the "Extended wait time CP data".

The UE shall abort the tracking area updating procedure, stay in the current serving cell, set the EPS update status to EU2 NOT UPDATED, change the state to EMM-REGISTERED.ATTEMPTING-TO-UPDATE and apply the normal cell reselection process.

If the UE had used eDRX before initiating tracking area updating procedure, then the UE shall continue to use the eDRX with the extended DRX parameters IE received during the last attach or tracking area updating procedure.

The UE shall proceed as described below.

l) Timer T3346 is running

The UE shall not start the tracking area updating procedure unless:

- the UE is in EMM-CONNECTED mode;
- the UE received a paging;
- the UE is a UE configured to use AC11 – 15 in selected PLMN;
- the UE has a PDN connection for emergency bearer services established or is establishing a PDN connection for emergency bearer services;
- the UE is requested by the upper layer for a CS fallback for emergency call or a 1xCS fallback for emergency call;
- the UE in NB-S1 mode is requested by the upper layer to transmit user data related to an exceptional event and
    i) the UE is allowed to use exception data reporting (see the ExceptionDataReportingAllowed leaf of the NAS configuration MO in 3GPP TS 24.368 [15A] or the USIM file $EF_{NASCONFIG}$ in 3GPP TS 31.102 [17]); and
    ii) timer T3346 was not started when NAS signalling connection was established with RRC establishment cause set to "MO exception data"; or
- the UE has a PDN connection established without the NAS signalling low priority indication or is establishing a PDN connection without the NAS signalling low priority indication, the timer T3402 and the timer T3411 are not running and the timer T3346 was started due to rejection of a NAS request message (e.g. ATTACH REQUEST, TRACKING AREA UPDATE REQUEST or EXTENDED SERVICE REQUEST) which contained the low priority indicator set to "MS is configured for NAS signalling low priority".

The UE stays in the current serving cell and applies the normal cell reselection process.

NOTE 4: It is considered an abnormal case if the UE needs to initiate a tracking area updating procedure while timer T3346 is running independent on whether timer T3346 was started due to an abnormal case or a non successful case.

If the TAI of the current serving cell is not included in the TAI list or the TIN indicates "P-TMSI", the UE shall set the EPS update status to EU2 NOT UPDATED and change to state EMM-REGISTERED.ATTEMPTING-TO-UPDATE.

The UE shall proceed as described below.

la) Timer T3448 is running

The UE shall not start the tracking area updating procedure with the "signalling active" flag unless:

- the UE is a UE configured to use AC11 – 15 in selected PLMN;
- the UE which is only using EPS services with control plane CIoT EPS optimization received a paging; or

- the UE in NB-S1 mode is requested by the upper layer to transmit user data related to an exceptional event and the UE is allowed to use exception data reporting (see the ExceptionDataReportingAllowed leaf of the NAS configuration MO in 3GPP TS 24.368 [15A] or the USIM file $EF_{NASCONFIG}$ in 3GPP TS 31.102 [17]).

The UE stays in the current serving cell and applies the normal cell reselection process.

The UE shall proceed as described below.

[TS 24.301, clause 5.6.1.5]

If the MME sends a SERVICE REJECT message upon receipt of the CONTROL PLANE SERVICE REQUEST message piggybacked with the ESM DATA TRANSPORT message:

- if the Release assistance indication IE is not set to "No further uplink or downlink data transmission subsequent to the uplink data transmission is expected" in the message;
- if the UE has indicated a support for the control plane data back-off timer; and
- if the MME decides to activate the congestion control for transport of user data via the control plane,

then the MME shall set the EMM cause value to #22 "congestion" and assign a value for control plane data back-off timer T3448.

On receipt of the SERVICE REJECT message, if the UE is in state EMM-SERVICE-REQUEST-INITIATED and the message is integrity protected or contains a reject cause other than EMM cause value #25, the UE shall reset the service request attempt counter, stop timer T3417, T3417ext or T3417ext-mt, if running.

[TS 24.301, clause 5.6.1.6]

la) "Extended wait time CP data" from the lower layers

- The UE shall abort the service request procedure for transfer of user data via the control plane, enter state EMM-REGISTERED, and stop timer T3417 if still running.
- If the UE is operating in NB-S1 mode and supports the timer T3448, the UE shall start the timer T3448 with the "Extended wait time CP data" value. If the UE is operating in NB-S1 mode and does not support the timer T3448, the UE shall start the timer T3346 with the "Extended wait time CP data" value.
- In other cases the UE shall ignore the "Extended wait time CP data".
- The UE stays in the current serving cell and applies normal cell reselection process. The service request procedure for transfer of user data via the control plane is started, if still necessary, when the timer T3448 expires or is stopped.

22.5.20.3 Test description

22.5.20.3.1 Pre-test conditions

System Simulator:

- Ncell 1, Ncell 23 are defined in clause 8.1.4.2 in TS 36.508[18].
- System information combination 3 as defined in TS 36.508[18] clause 8.1.4.3.1.1 is used in NB-IoT cells.
- If UE supports NTN only access in NB-IoT (pc_NB_ntn_only_Connectivity_EPC), System information combination 11 as defined in TS 36.508 [18] clause 8.1.4.3.1.1 is used.

UE:

- None.

Preamble:

- The UE is in state NB-IoT UE Attach, Connected Mode, UE Test Loopback mode G Activated (State 2B-NB) on Ncell 1 according to [18].

22.5.20.3.2 Test procedure sequence

Table 22.5.20.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U – S	Message		
1	The SS transmits one IP packet to the UE embedded in a ESM DATA TRANSPORT and DLInformationTransfer-NB	<--	NAS: ESM DATA TRANSPORT	-	-
2	Wait for 1 s after the IP packet has been transmitted. (Note 1)	-	-	-	-

22.5.21 NB-IoT/APN rate control for MO exception data

22.5.21.1 Test Purpose (TP)

(1)

```
with { UE supports APN rate control and indicates support of additional APN rate control for
exception data reporting }
ensure that {
  when { UE receives an ACTIVATE DEFAULT EPS BEARER CONTEXT REQUEST message with n additional APN
rate control parameters for exception data container in the protocol configuration options IE or
extended protocol configuration options IE}
    then { the UE stores the additional APN rate control parameters for exception data value and use
the stored additional APN rate control parameters for exception data value as the maximum allowed
limit of uplink exception data related to the APN indicated }
            }
```

22.5.21.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.301, clauses 6.3.9, 6.4.1.3, 6.5.1.2.

[TS 24.301, clause 6.3.9]

If the UE supports APN rate control, the UE shall provide the support indication of APN rate control and additional APN rate control for exception data reporting to the network. If the UE indicates support of additional APN rate control for exception data reporting, the network may provide the APN rate control parameters for exception data to the UE. If the UE does not indicate support of additional APN rate control for exception data reporting, the network shall not provide the APN rate control parameters for exception data to the UE.

If an allowed indication of additional exception reports is provided with the APN rate control parameters and:

- the additional APN rate control parameters for exception data is provided and the limit for additional rate for exception data reporting is not reached; or

- the additional APN rate control parameters for exception data is not provided,

the UE is allowed to send uplink exception reports even if the limit for the APN rate control has been reached.

[TS 24.301, clause 6.4.1.3]

If the UE receives an additional APN rate control parameters for exception data container in the protocol configuration options IE or extended protocol configuration options IE in the ACTIVATE DEFAULT EPS BEARER CONTEXT REQUEST message, the UE shall store the additional APN rate control parameters for exception data value and use the stored additional APN rate control parameters for exception data value as the maximum allowed limit of uplink exception data related to the APN indicated in the ACTIVATE DEFAULT EPS BEARER CONTEXT REQUEST message in accordance with 3GPP TS 23.401 [10]. If the UE has a previously stored additional APN rate control parameters for exception data value for this APN, the UE shall replace the stored additional APN rate control parameters for exception data value for this APN with the received additional APN rate control parameters for exception data value.

[TS 24.301, clause 6.5.1.2]If the UE supports APN rate control, the UE shall include an APN rate control support indicator and an additional APN rate control for exception data support indicator in the protocol configuration options IE or extended protocol configuration options IE

22.5.21.3 Test description

22.5.21.3.1 Pre-test conditions

System Simulator:

- Ncell 1 is defined in clause 8.1.4.2 in TS 36.508[18].
- System information combination 1 is defined in TS 36.508[18] clause 8.1.4.3.1.1 is used in NB-IoT cells;

UE:

The UE is equipped with a USIM containing default values (as per TS 36.508) except for those shown in Table 22.5.21.3.1-1.

Table 22.5.21.3.1-1: USIM Configuration

USIM field	Value
EF_{UST}	Service 96 is supported
EF_{ACC}	Type “A” as defined in TS 34.108 clause 8.3.2.15
EFNASCONFIG	“Exception Data Reporting Allowed is set to 01”

Preamble:

- The UE is in state Switched OFF (state 1-NB) according to TS 36.508 [18].

22.5.21.3.2 Test procedure sequence

Table 22.5.21.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U – S	Message		
1-12	Steps 1A-12 of the generic procedure for UE registration specified in TS 36.508 subclause 8.1.5.2.3 are performed.	-	-	-	-
-	EXCEPTION: Steps 13a1 to 13c1 describe behaviour that depends on UE capabilities; the "lower case letter" identifies a step sequence that take place depending on whether the UE is configured for S1_U_DataTransfer and if not then if it is configured to do Attach Without PDN or not.	-	-	-	-
13a1	IF S1_U_DataTransfer THEN the SS transmits a *RRCConnectionReconfiguration-NB* message to establish the default bearer with condition DRB(1) according to [8.1.8].	<--	RRC: *RRCConnectionReconfiguration-NB*NAS: ATTACH ACCEPT NAS: ACTIVATE DEFAULT EPS BEARER CONTEXT REQUEST	-	-

	This message includes the ATTACH ACCEPT message and the ACTIVATE DEFAULT EPS BEARER CONTEXT REQUEST message is piggybacked in the ATTACH ACCEPT. 22.5.22 NB-IoT / Tracking area update/Inter-RAT change between NB-IoT and E-UTRA

22.5.22.1 Test Purpose (TP)

(1)

```
with { UE receives an ATTACH ACCEPT message without TAI of E-UTRA cell and camps on a NB-IoT cell
successfully }
ensure that {
  when { UE enters a new E-UTRA cell with different TAI }
```

```
    then { UE requests tracking area update on the new E-UTRA cell with the last visited TAI and
GUTI allocated }
            }
```

(2)

```
with { UE receives an TRACKING AREA UPDATE ACCEPT message without TAI of NB-IoT cell and camps on a
E-UTRA cell successfully }
ensure that {
  when { UE enters a new NB-IoT cell with different TAI }
    then { UE requests tracking area update on the new NB-IoT cell with the last visited TAI and
GUTI allocated }
            }
```

22.5.22.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.301, clauses 5.5.1.2.4, 5.5.3.2.4, 5.5.3.2.5 and 5.5.3.3.5.

[TS 24.301, clause 5.5.1.2.4]

I The MME shall assign and include the TAI list the UE is registered to in the ATTACH ACCEPT message. The MME shall not assign a TAI list containing both tracking areas in NB-S1 mode and tracking areas in WB-S1 mode. The UE, upon receiving an ATTACH ACCEPT message, shall delete its old TAI list and store the received TAI list.

[TS 24.301, clause 5.5.3.2.4]

If the tracking area update request has been accepted by the network, the MME shall send a TRACKING AREA UPDATE ACCEPT message to the UE. If the MME assigns a new GUTI for the UE, a GUTI shall be included in the TRACKING AREA UPDATE ACCEPT message. In this case, the MME shall start timer T3450 and enter state EMM-COMMON-PROCEDURE-INITIATED as described in subclause 5.4.1. The MME may include a new TAI list for the UE in the TRACKING AREA UPDATE ACCEPT message. The MME shall not assign a TAI list containing both tracking areas in NB-S1 mode and tracking areas in WB-S1 mode.

22.5.22.3 Test description

22.5.22.3.1 Pre-test conditions

System Simulator:

- Ncell 50 is a NB-IOT cell belongs to HPLMN.
- Cell C is an E-UTRA cell belongs to HPLMN using different TAI and frequency.

Table 22.5.22-1: Cell TAI values

Cell	MCC	MNC	TAC (hex)	Freq	Remark
Ncell50	001	01	0001	f1	HPLMN
Cell C	001	01	0003	f2	HPLMN

- System information combination FFS;

UE:

- The UE is previously registered on NB-IoT Cell.

Preamble:

- The UE is in state Idle Mode (State 3-NB) according to TS 36.508 [18].

22.5.22.3.2 Test procedure sequence

22.5.23 NB-IoT / NTN / GNSS position reporting / reject cause #78 "PLMN not allowed to operate at the present UE location"

22.5.23.1 Test Purpose (TP)

(1)

```
with { UE has sent an ATTACH REQUEST message }
ensure that {
  when { UE receives an ATTACH REJECT message with the reject cause set to "PLMN not allowed to
operate at the present UE location" }
    then { UE sets the EPS update status to EU3 ROAMING NOT ALLOWED, UE deletes the GUTI, last
visited registered TAI, TAI list and eKSI, UE resets the registration attempt counter, UE enters the
state EMM-DEREGISTERED.PLMN-SEARCH and perform a PLMN selection }
            }
```

22.5.23.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.301 clauses 4.11.2 and 5.5.1.2.5. Unless otherwise stated these are Rel-17 requirements.

[TS 24.301, clause 4.11.2]

The UE may be rejected with EMM cause #78 in ATTACH REJECT message, TRACKING AREA UPDATE REJECT message or DETACH REQUEST message. The EMM cause #78 is applicable for the UE only when the UE is accessing a PLMN using a satellite E-UTRAN access.

For the satellite E-UTRAN access the UE shall store a list of "PLMN not allowed to operate at the present UE location". Each entry in the list consists of:

a) PLMN identity of the PLMN which sent a message including EMM cause value #78 "PLMN not allowed to operate at the present UE location" via the satellite E-UTRAN access technology;

b) geographical location, if known by the UE, where the EMM cause value #78 was received over the satellite E-UTRAN access technology; and

c) if the geographical location exists, a UE implementation specific distance value.

Before storing a new entry in the list, the UE shall delete any existing entry with the same PLMN identity. Upon storing a new entry, the UE starts a timer instance associated with the entry with an implementation specific value that shall not be set to a value smaller than the timer value indicated by the network in the Lower bound timer value IE, if any. If the Lower bound timer value IE was not provided by the network, the value of the timer shall be set based on the UE implementation

The UE is allowed to access a PLMN via the satellite E-UTRAN access technology which is part of the list of "PLMNs not allowed to operate at the present UE location" if:

a) the current UE location is known, a geographical location is stored for the entry of this PLMN, and the distance from location where EMM cause value #78 was received to the current UE location is larger than a UE implementation specific value:

b) the timer associated with the entry of this PLMN has expired; or

c) the access is for emergency services (see 3GPP TS 23.122 [5] for further details).

NOTE: When the UE is accessing network for emergency services, it is up to operator and regulatory policies whether the network needs to determine if the UE is in a location where network is not allowed to operate.

The list shall accommodate three or more entries. The maximum number of entries is an implementation decision. When the list is full and a new entry has to be inserted, the oldest entry shall be deleted.

Each entry shall be removed if for the entry:

a) the UE successfully registers via the satellite E-UTRAN access technology to the PLMN stored in the entry except when the UE is attached for emergency bearer services; or

b) the timer instance associated with the entry expires.

The UE may remove an entry in the list, if the UE's current location is known, a geographical is stored for the entry of this PLMN, and the distance from location where EMM cause value #78 was received to the current UE location is larger than the UE implementation specific value.

If the UE is in EMM-DEREGISTERED.LIMITED-SERVICE state and an entry from the list of "PLMNs not allowed to operate at the present UE location" is removed, the UE shall perform PLMN selection according to 3GPP TS 23.122 [6].

When the UE is switched off, the UE shall keep the list of "PLMNs not allowed to operate at the present UE location" in its non-volatile memory together with the SUPI from the USIM. The UE shall delete the list of "PLMNs not allowed to operate at the present UE location" if the USIM is removed.

If the UE is switched off when the timer instance associated with the entry in the list is running, the UE shall behave as follows when the UE is switched on and the USIM in the UE remains the same:

let t1 be the time remaining for timer instance associated with the entry in the list to timeout at switch off and let t be the time elapsed between switch off and switch on. If t1 is greater than t, then the timer shall be restarted with the value t1 – t. If t1 is equal to or less than t, then the timer need not be restarted and considered expired. If the UE is not capable of determining t, then the UE shall restart the timer with the value t1.

[TS 24.301, clause 5.5.1.2.5]

If the attach request cannot be accepted by the network, the MME shall send an ATTACH REJECT message to the UE including an appropriate EMM cause value.

…

In NB-S1 mode or WB-S1 mode via satellite E-UTRAN access, if the attach request is from a UE via a satellite E-UTRA cell and the network using the User Location Information provided by the eNodeB (see 3GPP TS 36.413 [23]), is able to determine that the UE is in a location where the network is not allowed to operate, the network shall set the EMM cause value in the ATTACH REJECT message to #78 "PLMN not allowed to operate at the present UE location".

…

Furthermore, the UE shall take the following actions depending on the EMM cause value received in the ATTACH REJECT message.

…

#78 (PLMN not allowed to operate at the present UE location).

This cause value received from a non-satellite E-UTRA cell is considered as an abnormal case and the behaviour of the UE is specified in clause 5.5.1.2.6.

The UE shall set the EPS update status to EU3 ROAMING NOT ALLOWED (and shall store it according to clause 5.1.3.3) and shall delete any GUTI, last visited registered TAI, TAI list and eKSI. Additionally, the UE shall reset the registration attempt counter. The UE shall store the PLMN identity and, if it is known, the current geographical location in the list of "PLMNs not allowed to operate at the present UE location", start a corresponding timer instance (see clause 4.11.2), enter state EMM-DEREGISTERED.PLMN-SEARCH and perform a PLMN selection according to 3GPP TS 23.122 [6].

If the UE is operating in single-registration mode, the UE shall in addition handle the 5GMM parameters 5GMM state, 5GS update status and registration attempt counter as specified in 3GPP TS 24.501 [54] for the case when the initial registration procedure performed over 3GPP access is rejected with the 5GMM cause with the same value.

Other values are considered as abnormal cases. The behaviour of the UE in those cases is specified in clause 5.5.1.2.6.

22.5.23.3 Test description

22.5.23.3.1 Pre-test conditions

System Simulator:

- Ncell 50 (PLMN1, HPLMN) and Ncell 62 (PLMN2, visited PLMN belongs to TAI-7, MCC=001 MNC=02) are configured according to Table 8.1.4.2-3 and Table 8.1.4.2-5 in TS 36.508 [18].
- System information combination 9 as defined in TS 36.508 [18] clause 8.1.4.3.1.1 is used for both cells.

UE:

- The UE is in Automatic PLMN selection mode.
- The UE is previously registered on Ncell 50 and the UE is last authenticated and registered using default message contents according to TS 36.508 [18].
- The preconfigured UE location is defined in TS 36.508 [18] Clause 4.13.

Preamble:

- The UE is in State 1-NB switched off according to TS 36.508 [18].

22.5.23.3.2 Test procedure sequence

Table 22.5.23.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. The configuration marked "T1" is applied at the point indicated in the Main behaviour description in Table 22.5.23.3.2-2. Cell powers are chosen for a serving cell and a non-suitable “Off” cell as defined in TS 36.508 [18].

Table 22.5.23.3.2-1: Ncell configuration changes over time

	Parameter	Unit	Ncell 50	Ncell 62	Remarks
T0	NRS EPRE	dBm/15kHz	-85	“Off”	Power level “Off” is defined in TS 36.508 Table 6.2.2.1-1
T1	NRS EPRE	dBm/15kHz	-85	-73	

Table 22.5.23.3.2-2: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
-	The following messages are to be observed on Ncell 50 unless explicitly stated otherwise.	-	-	-	-
1	The UE is switched on.	-	-	-	-

```

22.6.1.1.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 23.060, clause 15.3.2.0, TS 24.008, clause 10.5.6.12 and TS 24.301, clauses 6.4.4.2, 6.5.2.2 and 6.5.2.4.

[TS 23.060, clause 15.3.2.0]

Each valid downlink- and uplink-packet filter contains a unique identifier within a given TFT, an evaluation precedence index that is unique among all packet filters for one PDP address and APN pair, and at least one of the following attributes:

- Remote Address and Subnet Mask.
- Protocol Number (IPv4) / Next Header (IPv6).
- Local Address and Mask.
- Local Port Range.
- Remote Port Range.
- IPSec Security Parameter Index (SPI).
- Type of Service (TOS) (IPv4) / Traffic class (IPv6) and Mask.
- Flow Label (IPv6).

In the list of attributes above 'Remote' refers to the external network entity, and 'Local' to the MS.

Some of the above-listed attributes may coexist in a packet filter while others mutually exclude each other. In table 12 below, the possible combinations are shown. Only those attributes marked with an "X" may be specified for a single packet filter. All marked attributes may be specified, but at least one shall be specified.

If the parameters of the header of a received PDP PDU match all specified attribute values in a packet filter, then it is considered that a match is found for this packet filter. In this case, the evaluation procedure is aborted. Other packet filters in increasing order of their evaluation precedence index are evaluated until such match is found.

There may be potential conflicts if attribute values are combined in such a way that the defined filter can never achieve a match to a valid IP packet header. However, the determination of such conflicts is outside the scope of GPRS standardization.

Table 12: Valid Packet Filter Attribute Combinations

	Valid combination types		
Packet filter attribute	**I**	**II**	**III**
Remote Address and Subnet Mask	X	X	X
Protocol Number (IPv4) / Next Header (IPv6)	X	X	
Local Address and Mask	X	X	X
Local Port Range	X		
Remote Port Range	X		
IPSec SPI		X	
TOS (IPv4) / Traffic Class (IPv6) and Mask	X	X	X
Flow Label (IPv6)			X

[TS 24.008, clause 10.5.6.12]

The purpose of the *traffic flow template* information element is to specify the TFT parameters and operations for a PDP context. In addition, this information element may be used to transfer extra parameters to the network (e.g. the Authorization Token; see 3GPP TS 24.229 [95]). The TFT may contain packet filters for the downlink direction, the uplink direction or packet filters that are applicable to both directions. The packet filters determine the traffic mapping to PDP contexts. The downlink packet filters shall be used by the network and the uplink packet filters shall be used by the MS. A packet filter that is applicable to both directions shall be used by the network as a downlink packet filter and by the MS as an uplink packet filter.

The *traffic flow template* is a type 4 information element with a minimum length of 3 octets. The maximum length for the IE is 257 octets.

NOTE 1: The IE length restriction is due to the maximum length that can be encoded in a single length octet.

NOTE 2: A maximum size IPv4 packet filter can be 32 bytes. Therefore, 7 maximum size IPv4 type packet filters, plus the last packet filter which can contain max 30 octets can fit into one TFT IE, i.e. if needed not all packet filter components can be defined into one message. A maximum size IPv6 packet filter can be 60 bytes. Therefore, only 4 maximum size IPv6 packet filters can fit into one TFT IE. However, using "Add packet filters to existing TFT", it's possible to create a TFT data structure including 16 maximum size IPv4 or IPv6 filters.

The *traffic flow template* information element is coded as shown in figure 10.5.144/3GPP TS 24.008 and table 10.5.162/3GPP TS 24.008.

NOTE 3: The 3GPP TS 24.301 [120] reuses the *traffic flow template* information element for the purpose of the traffic aggregate description, where the use of individual TFT parameters, e.g. the packet filter identifier in the parameter list, can differ from this specification.

Figure 10.5.144c/3GPP TS 24.008: *Parameters list*

Table 10.5.162/3GPP TS 24.008: *Traffic flow template* information element

TFT operation code (octet 3) Bits 8 7 6 0 0 0 Spare 0 0 1 Create new TFT 0 1 0 Delete existing TFT 0 1 1 Add packet filters to existing TFT 1 0 0 Replace packet filters in existing TFT 1 0 1 Delete packet filters from existing TFT 1 1 0 No TFT operation 1 1 1 Reserved The TFT operation code "No TFT operation" shall be used if a *parameters list* is included but no *packet filter list* is included in the *traffic flow template* information element. E bit (bit 5 of octet 3) The *E bit* indicates if a *parameters list* is included in the TFT IE and it is encoded as follows: 0 *parameters list* is not included 1 *parameters list* is included Number of packet filters (octet 3) The *number of packet filters* contains the binary coding for the number of packet filters in the *packet filter list*. The *number of packet filters* field is encoded in bits 4 through 1 of octet 3 where bit 4 is the most significant and bit 1 is the least significant bit. For the "delete existing TFT" operation and for the "no TFT operation", the *number of packet filters* shall be coded as 0. For all other operations, the number of packet filters shall be greater than 0 and less than or equal to 15. Packet filter list (octets 4 to z) The *packet filter list* contains a variable number of packet filters. For the "delete existing TFT" operation and the "no TFT operation", the *packet filter list* shall be empty. For the "delete packet filters from existing TFT" operation, the *packet filter list* shall contain a variable number of packet filter identifiers. This number shall be derived from the coding of the *number of packet filters* field in octet 3. For the "create new TFT", "add packet filters to existing TFT" and "replace packet filters in existing TFT" operations, the *packet filter list* shall contain a variable number of packet filters. This number shall be derived from the coding of the *number of packet filters* field in octet 3. Each packet filter is of variable length and consists of - a packet filter identifier and direction (1 octet); - a packet filter evaluation precedence (1 octet); - the length of the packet filter contents (1 octet); and - the packet filter contents itself (v octets). The *packet filter identifier* field is used to identify each packet filter in a TFT. The least significant 4 bits are used. The *packet filter direction* is used to indicate, in bits 5 and 6, for what traffic direction the filter applies: 00 - pre Rel-7 TFT filter 01 - downlink only 10 - uplink only 11 - bidirectional Bits 8 through 7 are spare bits. The *packet filter evaluation precedence* field is used to specify the precedence for the packet filter among all packet filters in all TFTs associated with this PDP address. Higher the value of the *packet filter evaluation precedence* field, lower the precedence of that packet filter is. The first bit in transmission order is the most significant bit.

The *length of the packet filter contents* field contains the binary coded representation of the length of the *packet filter contents* field of a packet filter. The first bit in transmission order is the most significant bit.

The *packet filter contents* field is of variable size and contains a variable number (at least one) of *packet filter components*. Each *packet filter component* shall be encoded as a sequence of a one octet *packet filter component type identifier* and a fixed length *packet filter component value* field. The *packet filter component type identifier* shall be transmitted first.

In each packet filter, there shall not be more than one occurrence of each packet filter component type. Among the "IPv4 remote address type" and "IPv6 remote address type" packet filter components, only one shall be present in one packet filter. Among the "single local port type" and "local port range type" packet filter components, only one shall be present in one packet filter. Among the "single remote port type" and "remote port range type" packet filter components, only one shall be present in one packet filter.

The term *local* refers to the MS and the term *remote* refers to an external network entity.

Packet filter component type identifier
Bits
8 7 6 5 4 3 2 1
0 0 0 1 0 0 0 0 IPv4 remote address type
0 0 0 1 0 0 0 1 IPv4 local address type
0 0 1 0 0 0 0 0 IPv6 remote address type
0 0 1 0 0 0 0 1 IPv6 remote address/prefix length type
0 0 1 0 0 0 1 1 IPv6 local address/prefix length type
0 0 1 1 0 0 0 0 Protocol identifier/Next header type
0 1 0 0 0 0 0 0 Single local port type
0 1 0 0 0 0 0 1 Local port range type
0 1 0 1 0 0 0 0 Single remote port type
0 1 0 1 0 0 0 1 Remote port range type
0 1 1 0 0 0 0 0 Security parameter index type
0 1 1 1 0 0 0 0 Type of service/Traffic class type
1 0 0 0 0 0 0 0 Flow label type
All other values are reserved.

The description and valid combinations of packet filter component type identifiers in a packet filter are defined in 3GPP TS 23.060 [74] subclause 15.3.2.

For "IPv4 remote address type", the *packet filter component value* field shall be encoded as a sequence of a four octet *IPv4 address* field and a four octet *IPv4 address mask* field. The *IPv4 address* field shall be transmitted first.

For "IPv4 local address type", the *packet filter component value* field shall be encoded as defined for "IPv4 remote address type".
Both the MS and network indication for support of the Local address in TFTs are required to use this packet filter component.

For "IPv6 remote address type", the *packet filter component value* field shall be encoded as a sequence of a sixteen octet *IPv6 address* field and a sixteen octet *IPv6 address mask* field. The *IPv6 address* field shall be transmitted first.

For "IPv6 remote address/prefix length type", the packet filter component value field shall be encoded as a sequence of a sixteen octet IPv6 address field and one octet prefix length field. The IPv6 address field shall be transmitted first.
This parameter shall be used, instead of IPv6 remote address type, when both the MS and network indication for support of the Local address in TFT are present.

For "IPv6 local address/prefix length type", the packet filter component value field shall be encoded as defined for "IPv6 remote address /prefix length".
Both the MS and network indication for support of the Local address in TFTs are required to use this packet filter component.

NOTE: Local IP address and mask can be used when IPv6 prefix delegation is used (see 3GPP TS 23.060 [74] subclause 9.2.1.2).

For "Protocol identifier/Next header type", the *packet filter component value* field shall be encoded as one octet which specifies the IPv4 protocol identifier or IPv6 next header.

For "Single local port type" and "Single remote port type", the *packet filter component value* field shall be encoded as two octet which specifies a port number.

For "Local port range type" and "Remote port range type", the *packet filter component value* field shall be encoded as a sequence of a two octet *port range low limit* field and a two octet *port range high limit* field. The *port range low limit* field shall be transmitted first.

For "Security parameter index", the *packet filter component value* field shall be encoded as four octet which specifies the IPSec security parameter index.

For "Type of service/Traffic class type", the *packet filter component value* field shall be encoded as a sequence of a one octet *Type-of-Service/Traffic Class* field and a one octet *Type-of-Service/Traffic Class mask* field. The *Type-of-Service/Traffic Class* field shall be transmitted first.

For "Flow label type", the *packet filter component value* field shall be encoded as three octet which specifies the IPv6 flow label. The bits 8 through 5 of the first octet shall be spare whereas the remaining 20 bits shall contain the IPv6 flow label.
Parameters list (octets z+1 to v)

The *parameters list* contains a variable number of parameters that may be transferred. If the *parameters list* is included, the *E bit* is set to 1; otherwise, the *E bit* is set to 0.

Each parameter included in the *parameters list* is of variable length and consists of:
- a parameter identifier (1 octet);
- the length of the parameter contents (1 octet); and
- the parameter contents itself (v octets).

The *parameter identifier* field is used to identify each parameter included in the *parameters list* and it contains the hexadecimal coding of the parameter identifier. Bit 8 of the *parameter identifier* field contains the most significant bit and bit 1 contains the least significant bit. In this version of the protocol, the following parameter identifiers are specified:
- 01H (Authorization Token);
- 02H (Flow Identifier); and
- 03H (Packet Filter Identifier).

If the *parameters list* contains a parameter identifier that is not supported by the receiving entity the corresponding parameter shall be discarded.
The *length of parameter contents* field contains the binary coded representation of the length of the *parameter contents* field. The first bit in transmission order is the most significant bit.

When the *parameter identifier* indicates Authorization Token, the *parameter contents* field contains an authorization token, as specified in 3GPP TS 29.207 [100]. The first octet is the most significant octet of the authorization token and the last octet is the least significant octet of the authorization token.
The *parameters list* shall be coded in a way that an Authorization Token (i.e. a parameter with identifier 01H) is always followed by one or more Flow Identifiers (i.e. one or more parameters with identifier 02H).

If the *parameters list* contains two or more consecutive Authorization Tokens without any Flow Identifiers in between, the receiver shall treat this as a semantical TFT error.

When the *parameter identifier* indicates Flow Identifier, the *parameter contents* field contains the binary representation of a flow identifier. The Flow Identifier consists of four octets. Octets 1 and 2 contains the Media Component number as specified in 3GPP TS 29.207 [100]. Bit 1 of octet 2 is the least significant bit, and bit 8 of octet 1

is the most significant bit. Octets 3 and 4 contains the IP flow number as specified in 3GPP TS 29.207 [100]. Bit 1 of octet 4 is the least significant bit, and bit 8 of octet 3 is the most significant bit. When the *parameter identifier* indicates Packet Filter Identifier, the parameter contents field contains the binary representation of one or more packet filter identifiers. Each packet filter identifier is encoded in one octet, in the 4 least significant bits. This parameter is used by the MS and the network to identify one or more packet filters in a TFT when modifying the QoS of a PDP context without modifying the packet filter itself.

[TS 24.301, clause 6.5.2.2]

In order to request PDN disconnection from a PDN, the UE shall send a PDN DISCONNECT REQUEST message to the MME, start the timer T3492 and enter the state PROCEDURE TRANSACTION PENDING (see example in figure 6.5.2.2.1). The PDN DISCONNECT REQUEST message shall include the EPS bearer identity of the default bearer associated with the PDN to disconnect from as the linked EPS bearer identity in the PDN DISCONNECT REQUEST message.

[TS 24.301, clause 6.5.2.3]

...

Upon receipt of the DEACTIVATE EPS BEARER CONTEXT REQUEST message, the UE shall stop the timer T3492 and enter the state PROCEDURE TRANSACTION INACTIVE. The behaviour of the UE is described in subclause 6.4.4.

[TS 24.301, clause 6.4.4.2]

If a NAS signalling connection exists when the MME initiates the EPS bearer context deactivation procedure, the MME shall initiate the EPS bearer context deactivation procedure by sending a DEACTIVATE EPS BEARER CONTEXT REQUEST message to the UE, start the timer T3495, and enter the state BEARER CONTEXT INACTIVE PENDING (see example in figure 6.4.4.2.1). The DEACTIVATE EPS BEARER CONTEXT REQUEST message contains an ESM cause typically indicating one of the following:

#8: operator determined barring;

#26: insufficient resources;

#36: regular deactivation;

#38: network failure;

#39: reactivation requested;

#112: APN restriction value incompatible with active EPS bearer context; or

#113: Multiple accesses to a PDN connection not allowed.

If the deactivation is triggered by a UE initiated bearer resource modification procedure or UE requested PDN disconnect procedure, the DEACTIVATE EPS BEARER CONTEXT REQUEST message shall contain the procedure transaction identity (PTI) value received by the MME in the BEARER RESOURCE MODIFICATION REQUEST or PDN DISCONNECT REQUEST respectively.

…

22.6.1.1.3 Test description

22.6.1.1.3.1 Pre-test conditions

System Simulator:

- NB-IoT Ncell 1, default parameter;

UE:

- None

Preamble:

- The UE is in state Switched OFF (State 1)

22.6.1.1.3.2 Test procedure sequence

Table 22.6.1.3.2-1: Packet filters

		Packet filter components										
Packet filter ID	**UL TFT**	**Packet filter evaluation precedence**	**Protocol Number (IPv4) / Next Header (IPv6)**	**Remote address and Subnet mask**	**Single Local Port (UE)**	**Local Port Range (UE)**	**Single Remote Port (NW)**	**Remote Port Range (NW)**	**IPSec SPI range**	**Type of Service (IPv4) / Traffic Class (IPv6) and Mask**	**Flow Label (IPv6)**	**Comments**
1	DRB 1 (default bearer)	6	17 (UDP)	IPv4: 172.168.8.0 [255.255.255.0] IPv6: 2001:0ba0:: [ffff:ffff::]	60001	-	-	60350 : 60450	-	10101000, Mask=11111100	-	UDP application identified by remote address, type of service/traffic class and specific local and remote port numbers This is a valid Packet Filter Attribute Combination Type I according to TS 23.060, subclause 15.3.2.0.
2	DRB 1 (default bearer)	7	17 (UDP)	IPv4: 172.168.8.0 [255.255.255.0] IPv6: 2001:0ba0:: [ffff:ffff::]	-	60000:60100	-	60350	-	10101000, Mask=11111100	-	UDP application identified by remote address, type of service/traffic class and range of local and remote port numbers. This is

												a valid Packet Filter Attribute Combination Type I according to TS 23.060, subclause 15.3.2.0.
3	DRB 1 (default bearer)	5	50 IPSec (ESP)	IPv4: 172.168.8.0 [255.255.255.0] IPv6: 2001:0ba0:: [ffff:ffff::]	-	-	-	-	0x0F80F0000	10100000, Mask=11111100	-	IPSec session. Example from TS 23.060 clause 15.3.3.3 This is a valid Packet Filter Attribute Combination Type II according to TS 23.060, subclause 15.3.2.0.
4	DRB 1 (default bearer)	2	-	IPv6: 2001:0ba0:: [ffff:ffff::]	-	-	-	-	-	10110000, Mask=11111100	5	IPv6 Flow Label filter. This is a valid Packet Filter Attribute Combination Type III according to TS 23.060, subclause 15.3.2.0.
5	DRB 1 (default bearer)	255	-	IPv4: 172.168.8.0 [255.255.255.0] IPv6: 2001:0ba0:: [ffff:ffff::]	-	-	-	-	-	-	-	Application identified by remote address. This is a valid Packet Filter Attribute Combination Type I according to TS 23.060, subclause 15.3.2.0.

Table 22.6.1.3.2-2: Sub-test test parameters and test requirements

Sub-test Index	Test data (IP packet) Note 1	Expected DRB associated with the EPS bearer context for the matching packet filter	Packet Filter Attribute Combination under test	Packet Filter Component under test	Comment
1	IP packet#1	DRB1	Type I	Remote Address does not match	No packet filter matches. The IP packet is returned on DRB1 (default bearer) as no filters are activated.
2	IP packet#2	DRB1	Type I	Protocol identifier/Next header does not match	No packet filter matches. The IP packet is returned on DRB1 (default bearer) as no filters are activated.
3	IP packet#3	DRB1	Type I	Local port range does not match	No packet filter matches. The IP packet is returned on DRB1 (default bearer) as no filters are activated.
4	IP packet#4	None	Type I	Remote port range does not match	No packet filter matches. The IP packet is not returned ..
5	IP packet#5	DRB1	Type I	All Type I packet filter components match	The IP packet is only matching Packet Filter 1 and 2 in Table 22.6.1.3.2-1. The IP packet is returned on DRB1
6	IP packet#6	None	Type II	Remote Address does not match	No packet filter matches. The IP packet is not returned.
7	IP packet#7	None	Type II	Protocol identifier/Next header does not match	No packet filter matches. The IP packet is not returned.
8	IP packet#8	None	Type II	Security parameter index does not match	No packet filter matches. The IP packet is not returned.
9	IP packet#9	DRB1	Type II	All Type II packet filter components match	The IP packet is only matching Packet Filter 3 in Table 22.6.1.3.2-1. The IP packet is returned on DRB1.
10	IP packet#10	None	Type III	Remote Address does not match	No packet filter matches. The IP packet is not returned.
11	IP packet#11	None	Type III	Type of service/Traffic class does not match	No packet filter matches. The IP packet is not returned.
12	IP packet#12	DRB1	Type III	All Type III packet filter components match	The IP packet is only matching Packet Filter 4 in Table 22.6.1.3.2-1. The IP packet is returned on DRB1.
13	IP packet#13	DRB1	Type I	Remote Address match	IP packet is only matching Packet Filter 5 in Table 22.6.1.3.2-1. The IP packet is returned on DRB1.
14	IP packet#14	None	Type I	Remote Address does not match	No packet filter matches. The IP packet is not returned
Note 1: IP Packet details are specified in Tables 22.6.1.3.3-7 to 22.6.1.3.3-26 in clause 22.6.1.3.3. Note 2: IP packets for sub-test index 1 to 3 are sent by the SS while no TFT is assigned to the default EPS bearer (associated by DRB1). IP packets for sub-test index 4 and 14 are sent by the SS after adding a TFT to the default EPS bearer.					

The test procedure in Table 22.6.1.3.2-3, steps 1- 14 is executed once for IPv4 case (sub test 1) and once for IPv6 case (sub test 2) dependent on UE capability as specified in Table 22.6.1.3.2-3.

Table 22.6.1.3.2-3: Test executions and test parameters

Sub test	Applicability	IPtyp
1	UE supporting IPv4	'IPv4'
2	UE supporting IPv6	'IPv6'
Note 1: For UEs supporting both IPv4 and IPv6 then both test execution 1 and 2 shall be performed.

16a 15	Check: Does the UE transmit a DEACTIVATE EPS BEARER CONTEXT ACCEPT message.	-->	DEACTIVATE EPS BEARER CONTEXT ACCEPT	6	P
NOTE 1: This implies detaching of the UE, releasing of the RRC connection and resetting of the radio bearers at the SS side. NOTE 2: The request to disconnect from a PDN may be performed by MMI or AT command. NOTE 3: The request of connectivity to an additional PDN may be performed by MMI or AT command.

Procedure transaction identity	0	No procedure transaction identity assigned	

22.6.1a NB-IoT / UE routing of uplinks packets / Control Plane

22.6.1a.1.1 Test Purpose (TP)

(1)

```
with { the UE is in BEARER CONTEXT ACTIVE STATE state and in EMM-CONNECTED mode with a default EPS
bearer active }
ensure that {
  when { the UE has IP packets for transmission where each IP packet matches at least one of the
different packet filters configured in the UL TFTs for the default EPS  }
    then { the UE evaluates the packet filters in the correct evaluation order and transmits IP
packets in uplink on the default EPS bearer }
            }
```

(2)

```
with { the UE is in BEARER CONTEXT ACTIVE STATE state and in EMM-CONNECTED mode with a default EPS
bearer active }
ensure that {
  when { the UE has an IP packet for transmission where the IP header does not satisfy any of the
configured packet filters in the UL TFT configured for the default EPS bearer }
    then { the UE discards the IP packet }
            }
```

22.6.1a.1.2 Conformance requirements

The conformance requirements covered in the current TC are the same as in section 22.6.1.1.2.

22.6.1a.1.3 Test description

22.6.1a.1.3.1 Pre-test conditions

System Simulator:

- NB-IoT Ncell 1, default parameter;

UE:

- None

Preamble:

- The UE is in state Switched OFF (State 1)

22.6.1a.1.3.2 Test procedure sequence

Table 22.6.1a.3.2-1: Packet filters

		Packet filter components										
Packet filter ID	**UL TFT**	**Packet filter evaluation precedence**	**Protocol Number (IPv4) / Next Header (IPv6)**	**Remote address and Subnet mask**	**Single Local Port (UE)**	**Local Port Range (UE)**	**Single Remote Port (NW)**	**Remote Port Range (NW)**	**IPSec SPI range**	**Type of Service (IPv4) / Traffic Class (IPv6) and Mask**	**Flow Label (IPv6)**	**Comments**
1	DRB2	6	17 (UDP)	IPv4: 172.168.8.0 [255.255.255.0] IPv6: 2001:0ba0:: [ffff:ffff::]	60001	-	-	60350: 60450	-	10101000, Mask= 11111100	-	UDP application identified by remote address, type of service/traffic class and specific local and remote port numbers This is a valid Packet Filter Attribute Combination Type I according to TS 23.060, subclause 15.3.2.0.
2	DRB2	7	17 (UDP)	IPv4: 172.168.8.0 [255.255.255.0] IPv6: 2001:0ba0:: [ffff:ffff::]	-	60000:60100	-	60350	-	10101000, Mask= 11111100	-	UDP application identified by remote address, type of service/traffic class and range of local and remote port numbers. This is a valid Packet Filter Attribute Combination Type I according to TS 23.060, subclause 15.3.2.0.
3	DRB2	5	50 IPSec (ESP)	IPv4: 172.168.8.0 [255.255.255.0] IPv6: 2001:0ba0:: [ffff:ffff::]	-	-	-	-	0x0F80F0000	10100000, Mask= 11111100	-	IPSec session. Example from TS 23.060 clause 15.3.3.3 This is a valid Packet Filter Attribute Combination Type II according to TS 23.060, subclause 15.3.2.0.
4	DRB2	2	-	IPv6: 2001:0ba0:: [ffff:ffff::]	-	-	-	-	-	10110000, Mask= 11111100	5	IPv6 Flow Label filter. This is a valid Packet Filter Attribute Combination Type III according to TS 23.060, subclause 15.3.2.0.

Table 22.6.1a.3.2-2: Sub-test test parameters and test requirements

Sub-test Index	Test data (IP packet) Note	IP packet expected to be returned	Packet Filter Attribute Combination under test	Packet Filter Component under test	Comment
1	IP packet#1	Yes	Type I	All Type I packet filter components match	The IP packet is only matching Packet Filter 1 and 2 in Table 22.6.1a.3.2-1. The IP packet is returned as Packet Filter 1 is evaluated before Packet Filter 2.
2	IP packet#2	Yes	Type I	Single local port does not match	The IP packet is only matching Packet Filter 2 in Table 22.6.1a.3.2-1. The IP packet is returned.
3	IP packet#3	Yes	Type I	Single remote port does not match	IP packet is only matching Packet Filter 1 in Table 22.6.1a.3.2-1. The IP packet is returned.
4	IP packet#4	Yes	Type II	All Type II packet filter components match	The IP packet is only matching Packet Filter 3 in Table 22.6.1a.3.2-1. The IP packet is returned.
5	IP packet#5	Yes	Type III	All Type III packet filter components match	The IP packet is only matching Packet Filter 4 in Table 22.6.1a.3.2-1. The IP packet is returned.
6	IP packet#6	No	Type I	Remote Address does not match	IP packet does not match any Packet Filters.
7	IP packet#7	No	Type II	Remote Address does not match	IP packet does not match any Packet Filters.
8	IP packet#8	No	Type II	Protocol identifier/Next header does not match	IP packet does not match any Packet Filters.
9	IP packet#9	No	Type II	Security parameter index does not match	IP packet does not match any Packet Filters.
10	IP packet#10	No	Type III	Remote Address does not match	IP packet does not match any Packet Filters.
11	IP packet#11	No	Type III	Flow Label does not match	IP packet does not match any Packet Filters.
Note: IP Packet details are specified in Tables 22.6.1a.3.3-5 to 22.6.1a.3.3-16 in clause 22.6.1a.3.3.					

The test procedure in Table 22.6.1a.3.2-4, is executed once for IPv4 case (sub test 1) and once for IPv6 case (sub test 2) dependent on UE capability as specified in Table 22.6.1a.3.2-3.

Table 22.6.1a.3.2-3: Test executions and test parameters

Sub test	Applicability	IPtyp
1	UE supporting IPv4	'IPv4'
2	UE supporting IPv6	'IPv6'
Note 1: For UEs supporting both IPv4 and IPv6 then both test execution 1 and 2 shall be performed.		

Table 22.6.1a.1.3.2-4: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U – S	Message		
1	The SS performs the generic procedure in subclause 8.1.5.2A in 36.508 to get UE in the Test Mode Activated (State 2A-NB) state with test loop mode I on Ncell1 establishing a default EPS bearer.	-	-	-	-
2	The SS performs the generic procedure in subclause 8.1.5.2B in [18] to get UE in the Test Loopback Activated (State 2B-NB) with test loop mode I.	-	-	-	-
3	The SS transmits a MODIFY EPS BEARER CONTEXT REQUEST message to add TFT to the default EPS bearer. This message is included in a *DLInformationTransfer-NB* message.	<--	MODIFY EPS BEARER CONTEXT REQUEST	-	-
4	UE transmits a MODIFY EPS BEARER CONTEXT ACCEPT message. This message is included in a *DLInformationTransfer-NB* message.	-->	MODIFY EPS BEARER CONTEXT ACCEPT	-	-
-	EXCEPTION: IF IPtype='IPv4' then test steps 5 to 6 are repeated for N = 1 to 4 using the IPv4 packet filters components in Table 22.6.1a.3.2-1. IF IPtype='IPv6' then test steps 5 to 6 are repeated for N = 1 to 5 using the IPv6 packet filters components in Table 22.6.1a.3.2-1.	-	-	-	-
5	The SS transmits one IP Packet according to Table 22.6.1a.3.2-2 for Sub-test index=N	-	-	-	-
6	Check: Does the UE return the IP Packet as specified by Table 22.6.1a.3.2-2 for Sub-test index=N?	-	-	1	P

22.6.2 NB-IoT / UE requested bearer resource modification accepted by the network / Default EPS bearer context

22.6.2.1 Test Purpose (TP)

(1)

```
with { UE in PROCEDURE TRANSACTION INACTIVE state and in EMM-CONNECTED mode }
ensure that {
  when { UE is requested to modify of bearer resource corresponding to the default bearer }
    then { UE sends a BEARER RESOURCE MODIFICATION REQUEST message }
            }
```

(2)

```
with { UE having sent the BEARER RESOURCE MODIFICATION REQUEST message }
ensure that {
  when { UE receives a MODIFY EPS BEARER CONTEXT REQUEST message with the procedure transaction identity (PTI) indicated in the BEARER RESOURCE MODIFICATION REQUEST message }
    then { UE sends a MODIFY EPS BEARER CONTEXT ACCEPT message }
            }
```

22.6.2.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.301, clauses 6.4.3.3, 6.5.3.3, 6.5.4.2 and 6.5.4.3.

[TS 24.301, clause 6.4.3.3]

If the MODIFY EPS BEARER CONTEXT REQUEST message contains a PTI value other than "no procedure transaction identity assigned" and "reserved" (see 3GPP TS 24.007 [12]), the UE uses the PTI to identify the UE requested bearer resource allocation procedure or the UE requested bearer resource modification procedure to which the EPS bearer context modification is related (see subclause 6.5.3 and subclause 6.5.4).

If the MODIFY EPS BEARER CONTEXT REQUEST message contains a PTI value other than "no procedure transaction identity assigned" and "reserved" (see 3GPP TS 24.007 [12]) and the PTI is associated to a UE requested bearer resource allocation procedure or a UE requested bearer resource modification procedure, the UE shall release the traffic flow aggregate description associated to the PTI value provided.

[TS 24.301, clause 6.5.3.3]

If the MODIFY EPS BEARER CONTEXT REQUEST message is received, the UE verifies that the EPS bearer identity given in the EPS bearer identity IE is any of the active EPS bearer contexts. The UE shall then proceed as described in subclause 6.4.3.3 or subclause 6.4.3.4.

[TS 24.301, clause 6.5.4.2]

In order to request the modification of bearer resources for one traffic flow aggregate, the UE shall send a BEARER RESOURCE MODIFICATION REQUEST message to the MME, start timer T3481 and enter the state PROCEDURE TRANSACTION PENDING (see example in figure 6.5.4.2.1).

[TS 24.301, clause 6.5.4.3]

Upon receipt of the BEARER RESOURCE MODIFICATION REQUEST message, the MME checks whether the resources requested by the UE can be established, modified or released by verifying the EPS bearer identity given in the EPS bearer identity for packet filter IE.

If the bearer resource modification requested is accepted by the network, the MME shall initiate either a dedicated EPS bearer context activation procedure, an EPS bearer context modification procedure or an EPS bearer context deactivation procedure.

22.6.2.3 Test description

22.6.2.3.1 Pre-test conditions

System Simulator:

- Ncell 50

UE:

None.

Preamble:

- The UE is in Attach Connected Mode (state 2-NB) with no dedicated EPS bearers activated according to [18].
- A default EPS bearer is established between the first PDN and the UE.

22.6.2.3.2 Test procedure sequence

Table 22.6.2.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	Cause the UE to request bearer resource modification of default EPS bearer associated with first PDN connectivity.(see Note 1)	-	-	-	-
2	Check: Does the UE transmit a BEARER RESOURCE MODIFICATION REQUEST message?	-->	BEARER RESOURCE MODIFICATION REQUEST	1	P
3	The SS transmits a MODIFY EPS BEARER CONTEXT REQUEST message. This message is included in a DLInformationTransfer message.	<--	MODIFY EPS BEARER CONTEXT REQUEST	-	-
4	Check: Does the UE transmit a MODIFY EPS BEARER CONTEXT ACCEPT message?	-->	MODIFY EPS BEARER CONTEXT ACCEPT	2	P
Note 1: The request is assumed to be triggered by AT command +CGCMOD.

22.6.3 NB-IoT / UE requested bearer resource modification error handling (Resource modification not accepted by the network) / Expiry of timer T3481/ Default EPS bearer context

22.6.3.1 Test Purpose (TP)

(1)

```
with { UE has sent the BEARER RESOURCE MODIFICATION REQUEST message }
ensure that {
  when { UE receives a BEARER RESOURCE MODIFICATION REJECT message with the procedure transaction
identity (PTI) indicated in the BEARER RESOURCE MODIFICATION REQUEST message and a cause “Protocol
error, unspecified” }
    then { UE enters state PROCEDURE TRANSACTION INACTIVE }
            }
```

(2)

```
with { UE in connected mode }
ensure that {
  when { UE receives a MODIFY EPS BEARER CONTEXT REQUEST message with a non existent procedure
transaction identity (PTI) with the EPS bearer identity pointing at the default EPS bearer context }
    then { UE sends a MODIFY EPS BEARER CONTEXT REJECT message }
            }
```

(3)

```
with { UE has sent a BEARER RESOURCE MODIFICATION REQUEST message }
ensure that {
  when { UE detects less than fifth expiry of timer T3481 }
    then { UE re-sends a BEARER RESOURCE MODIFICATION REQUEST message }
            }
```

(4)

```
with { UE has sent a BEARER RESOURCE MODIFICATION REQUEST message }
ensure that {
  when { UE detects the fifth expiry of timer T3481 }
    then { UE release the PTI allocated for this action and enter the state PROCEDURE TRANSACTION
INACTIVE }
            }
```

22.6.3.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.301, clauses 6.5.4.3, 6.5.4.4, 6.5.4.5 and 7.3.1.

[TS 24.301, clause 6.5.4.3]

Upon receipt of the BEARER RESOURCE MODIFICATION REQUEST message, the MME checks whether the resources requested by the UE can be established, modified or released by verifying the EPS bearer identity given in the EPS bearer identity for packet filter IE.

If the bearer resource modification requested is accepted by the network, the MME shall initiate either a dedicated EPS bearer context activation procedure, an EPS bearer context modification procedure or an EPS bearer context deactivation procedure.

[TS 24.301, clause 6.5.4.4]

If the bearer resource modification requested cannot be accepted by the network, the MME shall send a BEARER RESOURCE MODIFICATION REJECT message to the UE. The message shall contain the PTI and an ESM cause value indicating the reason for rejecting the UE requested bearer resource modification.

The ESM cause value typically indicates one of the following:

#26: insufficient resources;

#30: request rejected by Serving GW or PDN GW;

#31: request rejected, unspecified;

#32: service option not supported;

#33: requested service option not subscribed;

#34: service option temporarily out of order;

#35: PTI already in use;

#37: EPS QoS not accepted;

#41: semantic error in the TFT operation;

#42: syntactical error in the TFT operation;

#43: invalid EPS bearer identity;

#44: semantic error(s) in packet filter(s);

#45: syntactical error(s) in packet filter(s);

#56: collision with network initiated request;

#59: unsupported QCI value;

#60: bearer handling not supported; or

#95 – 111: protocol errors.

...

Upon receipt of a BEARER RESOURCE MODIFICATION REJECT message, the UE shall stop the timer T3481, release the traffic flow aggregate description associated to the PTI value, and enter the state PROCEDURE TRANSACTION INACTIVE. If the ESM cause included in the BEARER RESOURCE MODIFICATION REJECT message is #43 "invalid EPS bearer identity", the UE locally deactivates the EPS bearer context(s) without peer-to-peer ESM signalling.

[TS 24.301, clause 6.5.4.5]

The following abnormal cases can be identified:

a) Expiry of timer T3481:

On the first expiry of the timer T3481, the UE shall resend the BEARER RESOURCE MODIFICATION REQUEST and shall reset and restart timer T3481. This retransmission is repeated four times, i.e. on the fifth expiry of timer T3481, the UE shall abort the procedure, release the PTI allocated for this activation and enter the state PROCEDURE TRANSACTION INACTIVE. In addition, if the UE had initiated resource release for all the traffic flows for the bearer, it shall deactivate the EPS bearer context locally without peer-to-peer signalling between the UE and the MME. In order to synchronize the EPS bearer context status with the MME, on indication of "back to E-UTRAN coverage" from the lower layers, the UE shall send a TRACKING AREA UPDATE REQUEST message that includes the EPS bearer context status IE to the MME.

b) Unknown EPS bearer context

Upon receipt of the BEARER RESOURCE MODIFICATION REJECT message including ESM cause #43 "invalid EPS bearer identity", the UE shall deactivate the existing EPS bearer context locally without peer-to-peer signalling between the UE and the MME.

c) Collision of a UE requested bearer resource modification procedure and an EPS bearer context deactivation procedure.

When the UE receives a DEACTIVATE EPS BEARER CONTEXT REQUEST message during the bearer resource modification procedure, and the EPS bearer identity indicated in the DEACTIVATE EPS BEARER CONTEXT REQUEST message is a EPS bearer context the UE indicated in the UE requested bearer resource modification procedure, then the UE shall abort the UE requested bearer resource modification procedure and proceed with the EPS bearer context deactivation procedure.

[TS 24.301, clause 7.3.1]

The following network procedures shall apply for handling an unknown, erroneous, or unforeseen PTI received in an ESM message:

...

j) If the UE receives a MODIFY EPS BEARER CONTEXT REQUEST message in which the PTI value is an assigned value that does not match any PTI in use, the UE shall respond with a MODIFY EPS BEARER CONTEXT REJECT message including ESM cause #47 "PTI mismatch".

22.6.3.3 Test description

22.6.3.3.1 Pre-test conditions

System Simulator:

- Ncell 50

UE:

None.

Preamble:

- The UE is in Attach Connected Mode (state 2-NB) 1 default EPS and no dedicated EPS bearers activated according to [18].

22.6.3.3.2 Test procedure sequence

Table 22.6.3.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	Cause the UE to request bearer resource modification of default EPS bearer associated with first PDN connectivity.(see Note 2)	-	-	-	-
2	The UE transmits a BEARER RESOURCE MODIFICATION REQUEST message.	-->	BEARER RESOURCE MODIFICATION REQUEST	-	-

22.6.4

22.6.5 NB-IoT / UE requested PDN connectivity procedure not accepted / UE requested PDN connectivity accepted Dual priority T3396 override UE requested PDN connectivity accepted / Dual priority / T3346 override

22.6.5.1 Test Purpose (TP)

(1)

```
with { UE has sent a PDN CONNECTIVITY REQUEST message to an additional PDN }
ensure that {
  when { UE receives an PDN CONNECTIVITY REJECT message with PTI matching the PDN CONNECTIVITY
REQUEST message and including a ESM cause value }
    then { UE enters the state PROCEDURE TRANSACTION INACTIVE }
            }
```

(2)

```
with { the UE configured for low priority NAS signalling and low priority NAS signalling override and the UE has sent a PDN CONNECTIVITY REQUEST message indicating low NAS signalling priority }
ensure that {
  when { the UE receives PDN CONNECTIVITY REJECT message with timer T3396 and ESM cause value #26 “insufficient resources” }
    then { if higher layers in the UE request the activation of such a connection/context, the UE sends a PDN CONNECTIVITY REQUEST message with the low priority indicator set to “MS is not configured for NAS signalling low priority” }
            }
```

(3)

```
with { the UE configured for dual priority NAS signalling and the UE has sent an EXTENDED SERVICE REQUEST message indicating low NAS signalling priority }
ensure that {
  when { the UE receives SERVICE REJECT message with timer T3346 and EMM cause value #22 "Congestion" }
    then { if higher layers in the UE request the activation of such a connection/context, the UE sends a PDN CONNECTIVITY REQUEST message with the low priority indicator set to "MS is not configured for NAS signalling low priority” }
            }
```

22.6.5.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.301, clauses 4.2A, 5.6.1.6, 6.2.2, 6.4.1.3, 6.4.2.3, 6.5.1.2 and 6.5.5.

[TS 24.301, clause 4.2A]

A UE configured for NAS signalling low priority (see 3GPP TS 24.368 [15A], 3GPP TS 31.102 [17]) indicates this by including the Device properties IE in the appropriate NAS message and setting the low priority indicator to "MS is configured for NAS signalling low priority", except for the following cases in which the UE shall set the low priority indicator to "MS is not configured for NAS signalling low priority":

- the UE is performing an attach for emergency bearer services;
- the UE has a PDN connection for emergency bearer services established and is performing EPS mobility management procedures, or is establishing a PDN connection for emergency bearer services;
- the UE configured for dual priority is requested by the upper layers to establish a PDN connection with the low priority indicator set to "MS is not configured for NAS signalling low priority";
- the UE configured for dual priority is performing EPS session management procedures related to the PDN connection established with low priority indicator set to "MS is not configured for NAS signalling low priority";
- the UE configured for dual priority has a PDN connection established by setting the low priority indicator to "MS is not configured for NAS signalling low priority" and is performing EPS mobility management procedures;
- the UE is performing a service request procedure for a CS fallback emergency call or 1xCS fallback emergency call;
- the UE is a UE configured to use AC11 – 15 in selected PLMN; or
- the UE is responding to paging.

The network may use the NAS signalling low priority indication for NAS level mobility management congestion control and APN based congestion control.

If the NAS signalling low priority indication is provided in a PDN CONNECTIVITY REQUEST message, the MME stores the NAS signalling low priority indication within the default EPS bearer context activated due to the PDN connectivity request procedure.

[TS 24.301, clause 5.6.1.6]

The following abnormal cases can be identified:

…

m) Timer T3346 is running

The UE shall not start the service request procedure unless:

- the UE receives a paging;
- the UE is a UE configured to use AC11 – 15 in selected PLMN;
- the UE has a PDN connection for emergency bearer services established or is establishing a PDN connection for emergency bearer services; or
- the UE is requested by the upper layer for a CS fallback for emergency call or a 1xCS fallback for emergency call; or
- the UE has a PDN connection established without the NAS signalling low priority indication or is establishing a PDN connection without the NAS signalling low priority indication and if the timer T3346 was started due to rejection of a NAS request message (e.g. ATTACH REQUEST, TRACKING AREA UPDATE REQUEST, EXTENDED SERVICE REQUEST or CONTROL PLANE SERVICE REQUEST) which contained the low priority indicator set to "MS is configured for NAS signalling low priority".

If the UE is in EMM-IDLE mode, the UE stays in the current serving cell and applies normal cell reselection process. The service request procedure is started, if still necessary, when timer T3346 expires or is stopped.

Upon upper layer's request for a mobile originated CS fallback which is not for emergency call, the UE in CS/PS mode 1 of operation shall attempt to select GERAN or UTRAN radio access technology. If the UE finds a suitable GERAN or UTRAN cell, it then proceeds with the appropriate MM and CC specific procedures and the EMM sublayer shall not indicate the abort of the service request procedure to the MM sublayer. Otherwise the EMM sublayer shall indicate the abort of the service request procedure to the MM sublayer.

NOTE 6: If the UE disables the E-UTRA capability, then subsequent mobile terminating calls could fail.

Upon upper layer's request for a CS fallback for emergency call, the UE may select GERAN or UTRAN radio access technology. It then proceeds with appropriate MM and CC specific procedures. The EMM sublayer shall not indicate the abort of the service request procedure to the MM sublayer.

Upon a request from the SMS entity to send an SMS and timer T3246 is not running, the UE, if operating in CS/PS mode 1 of operation, may select GERAN or UTRAN radio access technology. It then proceeds with the appropriate MM procedure.

NOTE 7: If the UE disables the E-UTRA capability, then subsequent mobile terminating calls could fail.

Upon upper layer's request for a mobile originated 1x CS fallback which is not for emergency call, the UE shall select cdma2000® 1x radio access technology. The UE then proceeds with appropriate cdma2000® 1x CS call procedures.

Upon upper layer's request for a 1xCS fallback for emergency call, the UE may select cdma2000® 1x radio access technology. The UE then proceeds with appropriate cdma2000® 1x CS call procedures.

[TS 24.301, clause 6.2.2]

The UE shall set the PDN type IE in the PDN CONNECTIVITY REQUEST message, based on its IP stack configuration as follows:

a) A UE, which is Ipv6 and Ipv4 capable and

- has not been allocated an IP address for this APN, shall set the PDN type IE to Ipv4v6.
- has been allocated an Ipv4 address for this APN and received the ESM cause #52 “single address bearers only allowed”, and is requesting an Ipv6 address, shall set the PDN type IE to Ipv6.
- has been allocated an Ipv6 address for this APN and received the ESM cause #52 “single address bearers only allowed”, and is requesting an Ipv4 address, shall set the PDN type IE to Ipv4.

b) A UE, which is only Ipv4 capable, shall set the PDN type IE to Ipv4.

c) A UE, which is only Ipv6 capable, shall set the PDN type IE to Ipv6.

d) When the IP version capability of the UE is unknown in the UE (as in the case when the MT and TE are separated and the capability of the TE is not known in the MT), the UE shall set the PDN type IE to Ipv4v6.

…

[TS 24.301, clause 6.5.1.2]

…

In order to request connectivity to an additional PDN using a specific APN, the UE shall include the requested APN in the PDN CONNECTIVITY REQUEST message.

In the PDN type IE the UE shall either indicate the IP version capability of the IP stack associated with the UE or non IP as specified in subclause 6.2.2.

If the PDN type value of the PDN type IE is set to Ipv4 or Ipv6 or Ipv4v6 and the UE indicates “Control plane CioT EPS optimization supported” in the UE network capability IE of the ATTACH REQUEST message, the UE may include the Header compression configuration IE in the PDN CONNECTIVITY REQUEST message.

The UE shall set the request type to “initial request” when the UE is establishing a new PDN connectivity to a PDN in an attach procedure or in a stand-alone PDN connectivity procedure. The UE shall set the request type to “emergency” when the UE is requesting a new PDN connectivity for emergency bearer services. The UE shall set the request type to “handover” when the connectivity to a PDN is established upon handover from a non-3GPP access network and the UE was connected to that PDN before the handover to the 3GPP access network, or when the UE initiates the procedure to add 3GPP access to the PDN connection which is already established over WLAN.

…

[TS 24.301, clause 6.5.1.4]

…

If connectivity with the requested PDN cannot be accepted by the network, the MME shall send a PDN CONNECTIVITY REJECT message to the UE. The message shall contain the PTI and an ESM cause value indicating the reason for rejecting the UE requested PDN connectivity.

The ESM cause IE typically indicates one of the following ESM cause values:

#8: operator determined barring;

#26: insufficient resources;

#27: missing or unknown APN;

#28: unknown PDN type;

#29: user authentication failed;

#30: request rejected by Serving GW or PDN GW;

#31: request rejected, unspecified;

#32: service option not supported;

#33: requested service option not subscribed;

#34: service option temporarily out of order;

#35: PTI already in use;

#38: network failure;

#50: PDN type Ipv4 only allowed;

#51: PDN type Ipv6 only allowed;

#53: ESM information not received;

#54: PDN connection does not exist;

#55: multiple PDN connections for a given APN not allowed;

#95 – 111: protocol errors;

#112: APN restriction value incompatible with active EPS bearer context.

#113: Multiple accesses to a PDN connection not allowed.

[TS 24.301, clause 6.5.5]

If timer T3396 is running for a specific APN, because a PDN CONNECTIVITY REQUEST, BEARER RESOURCE MODIFICATION REQUEST or BEARER RESOURCE ALLOCATION REQUEST message containing the low priority indicator set to "MS is configured for NAS signalling low priority" was rejected with a timer value for timer T3396 and ESM cause value #26 "insufficient resources", or because the UE received a DEACTIVATE EPS BEARER CONTEXT REQUEST message containing a timer value for timer T3396 and ESM cause value #26 "insufficient resources" for a PDN connection established with low priority indicator set to "MS is configured for NAS signalling low priority", upon request of the upper layers the UE can:

- send a PDN CONNECTIVITY REQUEST message to the same APN, with low priority indicator set to "MS is not configured for NAS signalling low priority"; or,

- send a BEARER RESOURCE MODIFICATION REQUEST or BEARER RESOURCE ALLOCATION REQUEST message, with low priority indicator set to "MS is not configured for NAS signalling low priority", for a PDN connection established with low priority indicator set to "MS is not configured for NAS signalling low priority" exists.

If timer T3396 is running, because any of the following messages containing the low priority indicator set to "MS is configured for NAS signalling low priority" was rejected with a timer value for timer T3396 and ESM cause value #26 "insufficient resources":

- a PDN CONNECTIVITY REQUEST without APN and with request type different from "emergency", sent together with an ATTACH REQUEST message;

- a stand-alone PDN CONNECTIVITY REQUEST message without APN and with request type different from "emergency"; or

- a BEARER RESOURCE MODIFICATION REQUEST or BEARER RESOURCE ALLOCATION REQUEST message sent for a non-emergency PDN connection established without APN provided by the UE,

or because the UE received a DEACTIVATE EPS BEARER CONTEXT REQUEST message containing a timer value for timer T3396 and ESM cause value #26 "insufficient resources" for a non-emergency PDN connection established without APN provided by the UE and established with low priority indicator set to "MS is configured for NAS signalling low priority", then upon request of the upper layers the UE can initiate a new attach procedure or stand-alone PDN CONNECTIVITY REQUEST procedure without APN and with request type different from "emergency", with low priority indicator set to "MS is not configured for NAS signalling low priority".

For requests with low priority indicator set to "MS is configured for NAS signalling low priority", the UE shall follow the procedures specified in subclause 6.5.1.4.

22.6.5.3 Test description

22.6.5.3.1 Pre-test conditions

System Simulator:

- NB-IoT Ncell 1, default parameters.

UE:

- the UE is configured for NAS behaviour low priority

- the UE is configured for NAS behaviour low priority override

The UE is equipped with a USIM containing values shown in Table 22.6.5.3.1-1.

Table 22.6.5.3.1-1: USIM Configuration

USIM field	Value
EF_{UST}	Service 96 is supported.
$EF_{NASCONFIG}$	"NAS_SignallingPriority is set to NAS behaviour low priority" 4as defined in TS 24.368, clause 5.3.
$EF_{NASCONFIG}$	"Override_NAS_SignallingLowPriority is set to UE can override the NAS 6138behaviour6138 low priority indicator" as defined in TS 24.368, clause 5.9.
$EF_{NASCONFIG}$	"ExtendedAccessBarring is set to extended access barring is applied for the UE" as defined in TS 24.368, clause 5.8
$EF_{NASCONFIG}$	"Override_ExtendedAccessBarring is set to UE can override extended access barring" as defined in TS 24.368, clause 5.10.
Note: As per TS 23.401 [22] clause 4.3.17.4, UE's configuration of low access priority and Extended Access Barring shall match each other and so do their corresponding override configuration.	

Preamble:

- The UE is in state Registered, Idle mode (state 2) according to [18] (1 default EPS bearer context is active).

22.6.5.3.2 Test procedure sequence

23 CIoT optimization for E-UTRA

23.1 CIoT Optimization / Control Plane

23.1.1 CIoT / Control Plane MO and MT IP and non-IP Data Transfer / Serving PLMN Rate Control / APN Rate Control

23.1.1.1 Test Purpose (TP)

(1)

```
with { the UE in RRC-IDLE after attaching with Control Plane CIoT EPS optimisation for EPS services
}
ensure that {
  when { UE has user data to send via the control plane }
    then { the UE initiates a Service request procedure for EPS services with Control Plane CIoT EPS
optimization by sending a CONTROL PLANE SERVICE REQUEST message (rules for ciphering of the initial
NAS message apply )
  when { UE has already a PDN established }
    then { the UE incorporates ESM DATA TRANSPORT message carrying the user data in the CONTROL
PLANE SERVICE REQUEST message (rules for ciphering of the initial NAS message apply) }
            }
```

(2)

```
with { the UE in RRC-IDLE after attaching with Control Plane CIoT EPS optimisation for EPS services
}
ensure that {
  when { UE, while in RRC-CONNECTED, has user data to send via the control plane }
    then { the UE sends one or more ESM DATA TRANSPORT message(s) including the user data to be sent
in the User data container IE }
            }
```

(3)

```
with { the UE in RRC-IDLE after attaching with Control Plane CIoT EPS optimisation for EPS services
}
ensure that {
  when { UE performs Control Plane data transfer whenever this is needed }
    then { the UE obeys the local serving PLMN rate control, and, if supported the APN Rate Control
and the maximum length of user data container that can be sent in the ESM DATA TRANSPORT message
(set by the MTU parameter) through EPS bearer context modification }
            }
```

(4)

```
with { the UE in RRC-IDLE after attaching with Control Plane CIoT EPS optimisation for EPS services
}
ensure that {
  when { the Network has user data to send via the control plane, and, has executed a Paging for EPS
services procedure }
    then { the UE successfully completes RRC connection establishment together with Service request
procedure for EPS services with Control Plane CIoT EPS optimization }
  when { UE has a PDN established }
    then { is able to receive user data sent via ESM DATA TRANSPORT message }
            }
```

23.1.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331 and TS 24.301, unless otherwise stated these are Rel-13 requirements.

[TS 36.331, clause 5.3.3]

1> set the content of *RRCConnectionSetupComplete* message as follow

...

2> if the UE supports CIoT EPS optimisation(s):

3> include a*ttachWithoutPDN-Connectivity* if received from upper layers;

3> include *up-CIoT-EPS-Optimisation* if received from upper layers;

3> except for NB-IoT, include *cp-CIoT-EPS-Optimisation* if received from upper layers;

[TS 24.301, clause 4.2]

A UE using EPS services with control plane CIoT EPS optimization can initiate transport of user data via the control plane. For this purpose a UE in EMM-IDLE mode can initiate the service request procedure and transmit the ESM DATA TRANSPORT message in an information element in the CONTROL PLANE SERVICE REQUEST message.

[TS 24.301, clause 5.3.15]

If the UE indicates support of one or more CIoT EPS optimizations and the network supports one or more CIoT EPS optimizations and decides to accept the attach or tracking area update request, the network indicates the supported CIoT EPS optimizations to the UE per TAI list when accepting the UE request. Network indication of support is interpreted by the UE as the acceptance to use the respective feature. After completion of the attach or tracking area updating procedure, the UE and the network can then use the accepted CIoT EPS optimizations for the transfer of user data (IP, non-IP and SMS).

Broadcast system information may provide information about support of CIoT EPS optimizations (see 3GPP TS 36.331 [22]). At reception of new broadcast system information, the lower layers deliver it to the EMM layer in the UE. The information provided by lower layers is per PLMN and used by the UE to determine whether certain CIoT EPS optimizations are supported in the cell.

The UE shall not attempt to use CIoT EPS optimizations which are indicated as not supported.

In WB-S1 mode, when the UE requests the lower layer to establish a RRC connection and the UE requests the use of EMM-REGISTERED without PDN connection, control plane CIoT EPS optimization or user plane CIoT EPS optimization, the UE shall pass an indication of the requested CIoT EPS optimizations to the lower layers.

[TS 24.301, clause 5.5.1]

If the UE supports NB-S1 mode or Non-IP PDN type, then the UE shall support the extended protocol configuration options IE.

If the UE supports the extended protocol configuration options IE, then the UE shall set the ePCO bit to "extended protocol configuration options supported" in the UE network capability IE of the ATTACH REQUEST message.

If the UE supports CIoT EPS optimizations, it shall indicate in the UE network capability IE of the ATTACH REQUEST message whether it supports EMM-REGISTERED without PDN connection.

If EMM-REGISTERED without PDN connection is not supported by the UE or the MME, or if the UE wants to request PDN connection with the attach procedure, the UE shall send the ATTACH REQUEST message together with a PDN CONNECTIVITY REQUEST message contained in the ESM message container IE.

[TS 24.301, clause 5.6.1.2.1]

The UE shall send a CONTROL PLANE SERVICE REQUEST message, start T3417 and enter the state EMM-SERVICE-REQUEST-INITIATED.

For case a in subclause 5.6.1.1, the Control plane service type of the CONTROL PLANE SERVICE REQUEST message shall indicate "mobile terminating request". The UE may include the ESM DATA TRANSPORT message. The UE shall not include any ESM message other than ESM DATA TRANSPORT message.

For case b in subclause 5.6.1.1,

- if the UE has pending IP or non-IP user data that is to be sent via the control plane radio bearers, the Control plane service type of the CONTROL PLANE SERVICE REQUEST message shall indicate "mobile originating request". The UE shall include an ESM DATA TRANSPORT message in the ESM message container IE.

For cases b and m in subclause 5.6.1.1,

- if the UE has pending IP or non-IP user data that is to be sent via the user plane radio bearers, the UE shall set the Control plane service type of the CONTROL PLANE SERVICE REQUEST message to "mobile originating request" and the "active" flag in the Control plane service type IE to 1. The UE shall not include any ESM message container or NAS message container IE in the CONTROL PLANE SERVICE REQUEST message.

[TS 24.301, clause 5.6.2.2.1.1]

Upon reception of a paging indication, if control plane CIoT EPS optimization is used by the UE, the UE shall stop the timer T3346, if running, and shall additionally:

- initiate a service request procedure as specified in subclause 5.6.1.2.2 if the UE is in the EMM-IDLE mode without suspend indication; or

- proceed the behaviour as specified in subclause 5.3.1.3 if the UE is in the EMM-IDLE mode with suspend indication.

NOTE 2: If the UE is in the EMM-IDLE mode without suspend indication and has an uplink user data to be sent to the network using control plane CIoT EPS optimization when receiving the paging indication, the UE can piggyback the uplink user data during the service request procedure initiated to respond to the paging, as specified in subclause 5.6.1.2.2.

[TS 24.301, clause 6.2A]

The UE and the MME may support robust header compression (ROHC) framework (see IETF RFC 4495 [37]) for IP header compression if control plane CIoT EPS optimization is supported for PDN connections of IP PDN type. If IP header compression for control plane CIoT EPS optimization is supported, the ROHC profiles defined in 3GPP TS 36.323 [38] may be supported. The ROHC configuration is negotiated and established during the UE requested PDN connectivity procedure as specified in subclause 6.5.1. Both the UE and the MME indicate whether IP header compression for control plane CIoT EPS optimization is supported during attach and tracking area updating procedures (see subclauses 5.5.1 and 5.5.3). The ROHC configuration can be re-negotiated by using the UE requested bearer resource modification procedure or the EPS bearer context modification procedure as specified in subclauses 6.4.3 and 6.5.4.

[TS 24.301, clause 6.3.8]

Serving PLMN rate control is applicable for PDN connections established for control plane CIoT EPS optimization only.

[TS 24.301, clause 6.3.9]

APN rate control controls the maximum number of uplink user data messages sent by the UE in a time interval for the APN in accordance with 3GPP TS 23.401 [10]. The UE shall limit the rate at which it generates uplink user data messages to comply with the APN rate control policy. The NAS shall provide the indicated rates to upper layers for enforcement. The indicated rate in a NAS procedure applies to the APN the NAS procedure corresponds to, and the indicated rate is valid until a new value is indicated or the last PDN connection using this APN is released.

If an indication of additional exception reports is provided with the APN rate control parameters, the UE is allowed to send uplink exception reports even if the limit for the APN rate control has been reached.

NOTE: The HPLMN can discard or delay user data that exceeds the limit provided for APN rate control.

[TS 24.301, clause 6.5.1.2]

When the PDN CONNECTIVITY REQUEST message is sent together with an ATTACH REQUEST message, the UE shall not start timer T3482 and shall not include the APN.

NOTE 1: If the UE needs to provide protocol configuration options which require ciphering or provide an APN, or both, during the attach procedure, the ESM information transfer flag is included in the PDN CONNECTIVITY REQUEST. The MME then at a later stage in the PDN connectivity procedure initiates the ESM information request procedure in which the UE can provide the MME with protocol configuration options or APN or both.

In the PDN type IE the UE shall either indicate the IP version capability of the IP stack associated with the UE or non IP as specified in subclause 6.2.2.

If the PDN type value of the PDN type IE is set to IPv4 or IPv6 or IPv4v6 and the UE indicates "Control plane CIoT EPS optimization supported" in the UE network capability IE of the ATTACH REQUEST message, the UE may include the Header compression configuration IE in the PDN CONNECTIVITY REQUEST message.

[TS 24.301, clause 6.6.4.2]

Upon receipt of a request to transfer user data via the control plane, if the UE is in EMM-CONNECTED mode, the UE initiates the procedure by sending the ESM DATA TRANSPORT message including the user data to be sent in the User data container IE. The length of the value part of the User data container IE should not exceed the link MTU size for the respective type of user data (IPv4, IPv6 or Non-IP).

NOTE: The recommended maximum size for link MTU is 1358 octets to prevent fragmentation in the backbone network (see 3GPP TS 23.060 [74]). Depending on the network configuration, setting link MTU size to a value larger than 1358 octets could lead to inefficient core network implementation due to fragmentation.

If the UE is in EMM-IDLE mode, the UE initiates the procedure by sending the ESM DATA TRANSPORT message included in a CONTROL PLANE SERVICE REQUEST message.

23.1.1.3 Test description

23.1.1.3.1 Pre-test conditions

System Simulator:

- Cell 1, default system information combination.

UE:

None.

Preamble:

- UE is in State 3A-CP, Control Plane CIoT connection request, UE Test Mode Activated (Test Loop G) according to TS 36.508 [18].

23.1.1.3.2 Test procedure sequence

Table 23.1.1.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		

0	NOTE: Settings in ACTIVATE DEFAULT EPS BEARER CONTEXT REQUEST, in preamble, to check PLMN rate control: - PLMN Rate control set to max of 10 messages per 6 minutes; - APN control not provided; - MTU parameters not provided.				
1	The SS transmits a CLOSE UE TEST LOOP message to close the UE test loop mode for user data transfer (12 transmission; 60 sec delay).	<--	RRC: *DLInformationTransfer* TC: CLOSE UE TEST LOOP	-	-
2	The UE transmits a CLOSE UE TEST LOOP COMPLETE message to confirm that loopback is activated.	-->	RRC: *ULInformationTransfer* TC: CLOSE UE TEST LOOP COMPLETE	-	-
3	SS transmits an ESM DATA TRANSPORT message containing downlink user data of 3 octets.	<--	RRC: *ULInformationTransfer* ESM DATA TRANSPORT	-	-

23.1.2 CIoT Optimization / Control Plane / MT and MO SMS Data Transfer

23.1.2.1 Test Purpose (TP)

(1)

```
with { UE with CIoT Optimization and with SMS data configured }
ensure that {
  when { when a MO SMS is triggered }
  then { performs RRC connection establishment by transmitting RRCConnectionRequest, and
RRCConnectionSetupComplete message including CONTROL PLANE SERVICE REQUEST message, with data
service type="mobile originating request" }
}
```

(2)

```
with { UE with CIoT Optimization, with SMS data configured and in RRC Connected state }
ensure that {
  when { when the network transmits SMS data in a DOWNLINK NAS TRANSPORT message }
    then { the UE receives the SMS data }
            }
```

(3)

```
with { UE with CIoT Optimization, with SMS data configured and in RRC Connected state }
ensure that {
  when { MO SMS is triggered the UE }
    then { UE transmits an UPLINK NAS TRANSPORT message containing the SMS data}
            }
```

23.1.2.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 24.301, clauses 5.3.15. [TS 24.301 5.3.15]

CIoT EPS optimizations provide improved support of small data and SMS transfer. A UE supporting CIoT EPS optimizations can indicate the CIoT network behaviour the UE can support and prefer to use during attach or tracking area updating procedure (see 3GPP TS 23.401 [10]). The UE may indicate the support for control plane CIoT EPS optimization, user plane CIoT EPS optimization, EMM-REGISTERED without PDN connection, S1-U data transfer and header compression (see subclause 9.9.3.34). The UE may also request to use SMS transfer without combined attach procedure during the attach procedure. Furthermore, the UE may, separately from the indication of support, indicate preference for control plane CIoT EPS optimization or user plane CIoT EPS optimization (see subclause 9.9.3.0B). The indication of preference is also considered as the request to use.

The UE can be in NB-S1 mode or WB-S1 mode when requesting the use of CIoT EPS optimizations during an attach or tracking area updating procedure. A UE in NB-S1 mode always indicates support for control plane CIoT EPS optimization. A UE in NB-S1 mode can also request SMS transfer without combined procedure by using the normal attach or tracking area updating procedure (see subclause 5.5.1 and 5.5.3).

In NB-S1 mode, the UE, when requesting the use of CIoT EPS optimization, does not:

- request an attach for emergency bearer services procedure;
- request an attach procedure for initiating a PDN connection for emergency bearer services with attach type not set to "EPS emergency attach"; or
- indicate voice domain preference and UE's usage setting.

The network does not indicate to the UE support of emergency bearer services when the UE is in NB-S1 mode (see subclause 5.5.1.2.4 and 5.5.3.2.4).

The control plane CIoT EPS optimization enables support of efficient transport of user data (IP, non-IP) or SMS messages over control plane via the MME without triggering data radio bearer establishment. The support of control plane CIoT EPS optimization is mandatory for the network in NB-S1 mode and optional in WB-S1 mode. Optional header compression of IP data can be applied to IP PDN type PDN connections that are configured to support header compression.

The user plane CIoT EPS optimization enables support for change from EMM-IDLE mode to EMM-CONNECTED mode without the need for using the service request procedure (see subclause 5.3.1.3).

If the UE indicates support of EMM-REGISTERED without PDN connection in the attach request, the UE may include an ESM DUMMY MESSAGE instead of a PDN CONNECTIVITY REQUEST message as part of the attach procedure. If the EMM-REGISTERED without PDN connection is supported by the network, the UE and the network can at any time release all the PDN connections and the UE still remains EPS attached.

NOTE: For both the UE and the network, the term "EMM-REGISTERED without PDN connection" is equivalent to the term "EPS attach without PDN connectivity" as specified in 3GPP TS 23.401 [10].

In NB-S1 mode, if the UE indicates "SMS only" during a normal attach or tracking area updating procedure, the MME supporting CIoT EPS optimisations provides SMS so that the UE is not required to perform a combined attach or tracking area updating procedure.

If the UE supports user plane CIoT EPS optimization, it shall also support S1-U data transfer.

If the UE indicates support of one or more CIoT EPS optimizations and the network supports one or more CIoT EPS optimizations and decides to accept the attach or tracking area update request, the network indicates the supported CIoT EPS optimizations to the UE per TAI list when accepting the UE request. Network indication of support is interpreted by the UE as the acceptance to use the respective feature. After completion of the attach or tracking area updating procedure, the UE and the network can then use the accepted CIoT EPS optimizations for the transfer of user data (IP, non-IP and SMS).

If the UE and the network support both the control plane CIoT EPS optimization and S1-U data transfer, then when receiving the UE's request for a PDN connection, the MME decides whether the PDN connection should be SCEF PDN connection or SGi PDN connection as specified in 3GPP TS 23.401 [10]:

- if SCEF PDN connection is to be established for non-IP data type, the MME shall include Control plane only indication for the requested PDN connection;
- if SGi PDN connection is to be established and existing SGi PDN connections for this UE were established with Control plane only indication, the MME shall include Control plane only indication for the newly requested SGi PDN connection;
- if SGi PDN connection is to be established and existing SGi PDN connections for this UE were established without Control plane only indication, the MME shall not include Control plane only indication for the newly requested SGi PDN connection; and
- if SGi PDN connection is to be established and no SGi PDN connection for this UE exists, the MME determine whether to include Control plane only indication for the requested SGi PDN connection based on local policies, the UE's preferred CIoT network behaviour and the supported CIoT network behaviour.

If the network supports user plane CIoT EPS optimization, it shall also support S1-U data transfer.

Broadcast system information may provide information about support of CIoT EPS optimizations (see 3GPP TS 36.331 [22]). At reception of new broadcast system information, the lower layers deliver it to the EMM layer in the UE. The information provided by lower layers is per PLMN and used by the UE to determine whether certain CIoT EPS optimizations are supported in the cell.

The UE shall not attempt to use CIoT EPS optimizations which are indicated as not supported.

In NB-S1 mode, when the UE requests the lower layer to establish a RRC connection and the UE requests the use of EMM-REGISTERED without PDN connection or user plane CIoT EPS optimization, the UE shall pass an indication of the requested CIoT EPS optimizations to the lower layers. If the UE requests the use of S1-U data transfer without user plane CIoT optimization, then the UE shall also pass an indication of user plane CIoT EPS optimization to lower layers.

In WB-S1 mode, when the UE requests the lower layer to establish a RRC connection and the UE requests the use of EMM-REGISTERED without PDN connection, control plane CIoT EPS optimization or user plane CIoT EPS optimization, the UE shall pass an indication of the requested CIoT EPS optimizations to the lower layers.

23.1.2.3 Test description

23.1.2.3.1 Pre-test conditions

System Simulator:

- Cell 1.
- System information combination 1 as defined in TS 36.508 [18] clause 4.4.3.1 is used in Cell 1;

UE:

px_SMSTransport_CP_CIoT is true.

Preamble:

- The UE shall be in Loopback Activation state 3A-CP using the UE TEST LOOP MODE H

23.1.2.3.2 Test procedure sequence

Table 23.1.2.3.2-1: Main behaviour

23.1.3 CIoT Optimization / Control Plane / EDT

23.1.3.1 Test Purpose (TP)

(1)

```
with { UE with CIoT Optimization with EDT supported in IDLE }
ensure that {
  when { when EDT data is triggered  }
  then { transmits an RRCEarlyDataRequest message, including CONTROL PLANE SERVICE REQUEST message,
with data service type="mobile originating request" and ESM DATA TRANSPORT including the data}
}
```

(2)

```
with { UE with CIoT Optimization with EDT supported and EDT initiated by transmitting an
RRCEarlyDataRequest message}
ensure that {
  when { when the network transmits RRCConnectionSetup message}
    then { the UE transmits an RRCConnectionSetupComplete with the a zero length dedicatedInfoNAS
IE}
            }
```

23.1.3.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clauses 5.3.3.1b, 5.3.3.2, 5.3.3.3b, 5.3.3.3c, 5.3.3.4 and 5.3.3.4b. TS 24.301, clauses 5.6.1.2.2].

[TS 36.331 5.3.3.1b]

A BL UE, UE in CE or NB-IoT UE can initiate EDT when all of the following conditions are fulfilled:

1> for CP-EDT, the upper layers request establishment of an RRC connection, the UE supports CP-EDT, and *SystemInformationBlockType2 (SystemInformationBlockType2-NB* in NB-IoT) includes *cp-EDT*; or

1> for UP-EDT, the upper layers request resumption of an RRC connection, the UE supports UP-EDT, *SystemInformationBlockType2 (SystemInformationBlockType2-NB* in NB-IoT) includes *up-EDT*, and the UE has a stored value of the *nextHopChainingCount* provided in the *RRCConnectionRelease* message with suspend indication during the preceding suspend procedure;

1> the establishment or resumption request is for mobile originating calls and the establishment cause is *mo-Data* or *mo-ExceptionData* or *delayTolerantAccess*;

1> the establishment or resumption request is suitable for EDT as specified in TS 36.300 [9], clause 7.3b.1;

1> *SystemInformationBlockType2 (SystemInformationBlockType2-NB* in NB-IoT) includes *edt-Parameters*;

1> the size of the resulting MAC PDU including the total UL data is expected to be smaller than or equal to the TBS signalled in *edt-TBS* as specified in TS 36.321 [6], clause 5.1.1;

1> EDT fallback indication has not been received from lower layers for this establishment or resumption procedure;

NOTE 1: Upper layers request or resume an RRC connection. The interaction with NAS is up to UE implementation.

NOTE 2: It is up to UE implementation how the UE determines whether the size of UL data is suitable for EDT.

[TS 36.331 5.3.3.2]

The UE initiates the procedure when upper layers request establishment or resume of an RRC connection while the UE is in RRC_IDLE.

Except for NB-IoT, upon initiation of the procedure, the UE shall:

…..

1> if the UE is resuming an RRC connection from a suspended RRC connection:

2> initiate transmission of the *RRCConnectionResumeRequest* message in accordance with 5.3.3.3a;

1> else if the UE is resuming an RRC connection from RRC_INACTIVE:

2> set the variable *pendingRnaUpdate* to 'FALSE';

2> initiate transmission of the *RRCConnectionResumeRequest* message in accordance with 5.3.3.3a;

1> else:

2> if stored, discard the UE AS context, UE Inactive AS context and *resumeIdentity*;

2> release *rrc-InactiveConfig*, if configured;

2> if the UE is initiating CP-EDT in accordance with conditions in 5.3.3.1b:

3> initiate transmission of the *RRCEarlyDataRequest* message in accordance with 5.3.3.3b;

2> else:

3> initiate transmission of the *RRCConnectionRequest* message in accordance with 5.3.3.3;

[TS 36.331 5.3.3.3b]

The UE shall set the contents of *RRCEarlyDataRequest* message as follows:

1> set the *s-TMSI* to the value received from upper layers;

1> set the *establishmentCause* in accordance with the information received from upper layers;

1> if the UE is a NB-IoT UE:

2> if the UE supports DL channel quality reporting and *cqi-Reporting* is present in *SystemInformationBlockType2-NB*:

3> set the *cqi-NPDCCH* to include the latest results of the downlink channel quality measurements of the serving cell as specified in TS 36.133 [16];

NOTE: The downlink channel quality measurements may use measurement period T1 or T2, as defined in TS 36.133 [16]. In case period T2 is used the RRC-MAC interactions are left to UE implementation.

1> set the *dedicatedInfoNAS* to include the information received from upper layers;

The UE shall configure the lower layers to use EDT and submit the *RRCEarlyDataRequest* message to the lower layers for transmission.

[TS 36.331 5.3.3.3c]

Upon indication from lower layers that EDT is cancelled, the UE shall:

1> start or restart timer T300;

1> if the fallback is indicated by lower layers in response to the *RRCEarlyDataRequest*:

2> initiate transmission of *RRCConnectionRequest* message in accordance with 5.3.3.3;

[TS 36.331 5.3.3.4]

The UE shall:

….

1> set the content of *RRCConnectionSetupComplete* message as follows:

…

2> if the *RRCConnectionSetup* is received in response to *RRCEarlyDataRequest*:

3> set the *dedicatedInfoNAS* to a zero-length octet string;

2> else:

3> set the *dedicatedInfoNAS* to include the information received from upper layers;

…

[TS 36.331 5.3.3.4b]

The UE shall:

1> indicate to upper layers that the RRC connection has been established;

1> if stored, discard the cell reselection priority information provided by the *idleModeMobilityControlInfo* or inherited from another RAT;

1> if stored, discard the dedicated offset provided by the *redirectedCarrierOffsetDedicated*;

1> stop timer T300;

1> stop timer T302, if running;

1> stop timer T303, if running;

1> stop timer T305, if running;

1> stop timer T306, if running;

1> stop timer T308, if running;

1> perform the actions as specified in 5.3.3.7;

1> stop timer T320, if running;

1> stop timer T322, if running;

1> forward the *dedicatedInfoNAS*, if received, to the upper layers;

1> reset MAC and release the MAC configuration;

1> if the *RRCEarlyDataComplete* message includes *redirectedCarrierInfo* indicating redirection to *geran*; and

1> if upper layers indicate that redirect to GERAN without AS security is not allowed:

2> perform the actions upon leaving RRC_CONNECTED as specified in 5.3.12, with release cause 'other', upon which the procedure ends;

1> if the *RRCEarlyDataComplete* message includes *idleModeMobilityControlInfo*:

2> store the cell reselection priority information provided by the *idleModeMobilityControlInfo*;

2> if the *t320* is included:

3> start timer T320, with the timer value set according to the value of *t320*;

1> else:

2> apply the cell reselection priority information broadcast in the system information;

1> for NB-IoT, if the *RRCEarlyDataComplete* message includes *redirectedCarrierInfo*:

2> if the *redirectedCarrierOffsetDedicated* is included in the *redirectedCarrierInfo*:

3> store the dedicated offset for the frequency in *redirectedCarrierInfo*;

3> start timer T322, with the timer value set according to the value of *T322* in *redirectedCarrierInfo*;

1> if the *extendedWaitTime* is present; and

1> if the UE supports delay tolerant access or the UE is a NB-IoT UE:

2> forward the *extendedWaitTime* to upper layers;

1> indicate the release of the RRC connection to upper layers together with the release cause 'other', upon which the procedure ends;

[TS 24.301 5.6.1.2.2]

…

For case b in subclause 5.6.1.1,

- if the UE has pending IP or non-IP user data that is to be sent via the control plane radio bearers, the Control plane service type of the CONTROL PLANE SERVICE REQUEST message shall indicate "mobile originating request". The UE shall include an ESM DATA TRANSPORT message in the ESM message container IE. If the UE supports the CP-EDT (see 3GPP TS 36.300 [20]), the UE shall provide the CONTROL PLANE SERVICE REQUEST message in the NAS request to the lower layer to establish a RRC connection as specified in subclause 5.3.1.1.

…

23.1.3.3 Test description

23.1.3.3.1 Pre-test conditions

System Simulator:

- Cell 1.
- System information combination 1 as defined in TS 36.508 [18] clause 4.4.3.1 is used in Cell 1;
- TS 36.508 [18] condition CIoT-test apply

UE:

- Control Plane Early Data Transmission is supported by the UE.

Preamble:

- The UE shall be in Registered, Idle Mode state (State 2 or 2-CE) according to TS 36.508 [18].

            }
```

23.2.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clauses 5.3.1.1, and 5.3.12.

[TS 36.331, clause 5.3.1.1]

RRC connection establishment involves the establishment of SRB1. E-UTRAN completes RRC connection establishment prior to completing the establishment of the S1 connection, i.e. prior to receiving the UE context information from the EPC. Consequently, AS security is not activated during the initial phase of the RRC connection. During this initial phase of the RRC connection, the E-UTRAN may configure the UE to perform measurement reporting, but the UE only sends the corresponding measurement reports after successful security activation. However, the UE only accepts a handover message when security has been activated.

NOTE: In case the serving frequency broadcasts multiple overlapping bands, E-UTRAN can only configure measurements after having obtained the UE capabilities, as the measurement configuration needs to be set according to the band selected by the UE.

Upon receiving the UE context from the EPC, E-UTRAN activates security (both ciphering and integrity protection) using the initial security activation procedure. The RRC messages to activate security (command and successful response) are integrity protected, while ciphering is started only after completion of the procedure. That is, the response to the message used to activate security is not ciphered, while the subsequent messages (e.g. used to establish SRB2 and DRBs) are both integrity protected and ciphered.

After having initiated the initial security activation procedure, E-UTRAN initiates the establishment of SRB2 and DRBs, i.e. E-UTRAN may do this prior to receiving the confirmation of the initial security activation from the UE. In any case, E-UTRAN will apply both ciphering and integrity protection for the RRC connection reconfiguration messages used to establish SRB2 and DRBs. E-UTRAN should release the RRC connection if the initial security activation and/ or the radio bearer establishment fails (i.e. security activation and DRB establishment are triggered by a joint S1-procedure, which does not support partial success).

For SRB2 and DRBs, security is always activated from the start, i.e. the E-UTRAN does not establish these bearers prior to activating security.

For some radio configuration fields, a critical extension has been defined. A switch from the original version of the field to the critically extended version is allowed using any connection reconfiguration. The UE reverts to the original version of some critically extended fields upon handover and re-establishment as specified elsewhere in this specification. Otherwise, switching a field from the critically extended version to the original version is only possible using the handover or re-establishment procedure with the full configuration option. This also applies for fields that are critically extended within a release (i.e. original and extended version defined in same release).

After having initiated the initial security activation procedure, E-UTRAN may configure a UE that supports CA, with one or more SCells in addition to the PCell that was initially configured during connection establishment. The PCell is used to provide the security inputs and upper layer system information (i.e. the NAS mobility information e.g. TAI). SCells are used to provide additional downlink and optionally uplink radio resources. When not configured with DC all SCells the UE is configured with, if any, are part of the MCG. When configured with DC however, some of the SCells are part of a SCG. In this case, user data carried by a DRB may either be transferred via MCG (i.e. MCG-DRB), via SCG (SCG-DRB) or via both MCG and SCG in DL while E-UTRAN configures the CG used in UL (split DRB). An RRC connection reconfiguration message may be used to change the DRB type from MCG-DRB to SCG-DRB or to split DRB, as well as from SCG-DRB or split DRB to MCG-DRB.

SCG change is a synchronous SCG reconfiguration procedure (i.e. involving RA to the PSCell) including reset/ re-establishment of layer 2 and, if SCG DRBs are configured, refresh of security. The procedure is used in a number of different scenarios e.g. SCG establishment, PSCell change, Key refresh, change of DRB type. The UE performs the SCG change related actions upon receiving an *RRCConnectionReconfiguration* message including *mobilityControlInfoSCG*, see clause 5.3.10.10.

The release of the RRC connection normally is initiated by E-UTRAN. The procedure may be used to re-direct the UE to an E-UTRA frequency or an inter-RAT carrier frequency. Only in exceptional cases, as specified within this specification, TS 36.300 [9], TS 36.304 [4] or TS 24.301 [35], may the UE abort the RRC connection, i.e. move to RRC_IDLE without notifying E-UTRAN.

The suspension of the RRC connection is initiated by E-UTRAN. When the RRC connection is suspended, the UE stores the UE AS context and the *resumeIdentity*, and transitions to RRC_IDLE state. The RRC message to suspend the RRC connection is integrity protected and ciphered. Suspension can only be performed when at least 1 DRB is successfully established.

The resumption of a suspended RRC connection is initiated by upper layers when the UE has a stored UE AS context, RRC connection resume is permitted by E-UTRAN and the UE needs to transit from RRC_IDLE state to RRC_CONNECTED state. When the RRC connection is resumed, RRC configures the UE according to the RRC connection resume procedure based on the stored UE AS context and any RRC configuration received from E-UTRAN.

The RRC connection resume procedure re-activates security and re-establishes SRB(s) and DRB(s). The request to resume the RRC connection includes the *resumeIdentity*. The request is not ciphered, but protected with a message authentication code.

In response to a request to resume the RRC connection, E-UTRAN may resume the suspended RRC connection, reject the request to resume and instruct the UE to either keep or discard the stored context, or setup a new RRC connection.

[TS 36.331, clause 5.3.3.3a]

The UE shall set the contents of *RRCConnectionResumeRequest* message as follows:

1> if the UE is a NB-IoT UE; or

1> if field *useFullResumeID* is signalled in *SystemInformationBlockType2*:

2> set the *resumeID* to the stored *resumeIdentity*;

1> else

2> set the *truncatedResumeID* to include bits in bit position 9 to 20 and 29 to 40 from the left in the stored *resumeIdentity*.

2> if the UE supports *mo-VoiceCall* establishment cause and UE is resuming the RRC connection for mobile originating MMTEL voice and *SystemInformationBlockType2* includes *voiceServiceCauseIndication*:

2> set the *resumeCause* to *mo-VoiceCall*;

1> else

2> set the *resumeCause* in accordance with the information received from upper layers;

1> set the *shortResumeMAC-I* to the 16 least significant bits of the MAC-I calculated:

2> over the ASN.1 encoded according to clause 8 (i.e., a multiple of 8 bits) *VarShortResumeMAC-Input* (or *VarShortResumeMAC-Input-NB* in NB-IoT);

2> with the K_{RRCint} key and the previously configured integrity protection algorithm; and

2> with all input bits for COUNT, BEARER and DIRECTION set to binary ones;

1> restore the RRC configuration and security context from the stored UE AS context:

1> restore the PDCP state and re-establish PDCP entities for SRB1;

1> resume SRB1;

NOTE: Until successful connection resumption, SRB1 is used only for transferring the *RRCConnectionResume* message.

The UE shall submit the *RRCConnectionResumeRequest* message to lower layers for transmission.

The UE shall continue cell re-selection related measurements as well as cell re-selection evaluation. If the conditions for cell re-selection are fulfilled, the UE shall perform cell re-selection as specified in clause 5.3.3.5.

23.2.1.3 Test description

23.2.1.3.1 Pre-test conditions

System Simulator:

- Cell 1.
- System information combination 1 as defined in TS 36.508 [18] clause 4.4.3.1 is used in Cell 1;

UE:

User Plane CIoT Optimisation is supported by UE (UE capability), pc_User_Plane_CIoT_Optimisation.

Preamble:

- The UE shall be in Loopback Activation state 4A-UP using the UE TEST LOOP MODE B and with IP_PDU_delay set to 10 seconds.

23.2.2 CIoT / RRC connection suspend-resume / Success / different cell

23.2.2.1 Test Purpose (TP)

(1)

```
with { UE in RRC_IDLE state when the RRC connection is suspended }
ensure that {
  when { UE detects the cell ranked as the best cell }
    then { UE reselects the new cell and transmits an RRCConnectionResumeRequest message }
            }
```

23.2.2.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clauses 5.3.3.2.

[TS 36.331, clause 5.3.3.2]

The UE initiates the procedure when upper layers request establishment or resume of an RRC connection while the UE is in RRC_IDLE.

Except for NB-IoT, upon initiation of the procedure, the UE shall:

...

1> if the UE is resuming an RRC connection:

2> initiate transmission of the *RRCConnectionResumeRequest* message in accordance with 5.3.3.3a;

23.2.2.3 Test description

23.2.2.3.1 Pre-test conditions

System Simulator:

- Cell 1 and Cell 2.
- System information combination 1 as defined in TS 36.508 [18] clause 4.4.3.1 is used in Cell 1;

UE:

None.

Preamble:

- UE is in State 3-UP, User Plane CIoT connection request according to TS 36.508 [18].

23.2.2.3.2 Test procedure sequence

Table 23.2.2.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. The configuration marked "T1" is applied at the point indicated in the Main behaviour description in Table 23.2.2.3.2-2.

Table 23.2.2.3.2-1: Time instances of cell power level and parameter changes

	Parameter	Unit	Cell 1	Cell 2	Remark
T1	Cell-specific RS EPRE	dBm/15kHz	-85	-79	The power level values are assigned to satisfy $R_{Cell 1} < R_{Cell 2}$.

Table 23.2.2.3.2-2: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		

1	The SS transmits an *RRCConnectionRelease* message including rrc-Suspend as releaseCause.	<--	RRC: *RRCConnectionRelease*	-	-
2	The SS changes Cell 2 level according to the row "T1" in table 23.2.2.3.2-1.	-	-	-	-

Derivation Path: 36.508, Table 4.6.1-15, condition UP-CIoT

23.2.3 CIoT / RRC connection suspend-resume / Network reject / different cell

23.2.3.1 Test Purpose (TP)

(1)

```
with { UE in RRC_IDLE state when the RRC connection is suspended }
ensure that {
  when { UE receives an RRCConnectionReject with rrc-SuspendIndication }
    then { UE restarts the ongoing NAS procedure and transmits an RRCConnectionResumeRequest message
}
            }
```

23.2.3.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clauses 5.3.3.8 and TS 24.301, clause 5.3.1.3.

[TS 36.331, clause 5.3.3.8]

1> if the *RRCConnectionReject* is received in response to an *RRCConnectionResumeRequest*:

2> *if* the *rrc-SuspendIndication* is not present:

3> discard the stored UE AS context and *resumeIdentity*;

3> inform upper layers about the failure to resume the RRC connection without suspend indication and that access barring for mobile originating calls, mobile originating signalling, mobile terminating access and except for NB-IoT for mobile originating CS fallback is applicable, upon which the procedure ends;

2> else:

3> suspend SRB1;

3> inform upper layers about the failure to resume the RRC connection with suspend indication and that access barring for mobile originating calls, mobile originating signalling, mobile terminating access and except for NB-IoT for mobile originating CS fallback is applicable, upon which the procedure ends;

[TS 24.301, clause 5.3.1.3]

Suspend of the NAS signalling connection can be initiated by the network in EMM-CONNECTED mode when user plane CIoT EPS optimization is used. Resume of the suspended NAS signalling connection is initiated by the UE.

In the UE, when user plane CIoT EPS optimization is used:

…

- Upon indication from the lower layers that the RRC connection resume has failed and indication from the lower layers that the RRC connection is suspended, the UE shall enter EMM-IDLE mode with suspend indication and restart the ongoing NAS procedure if required; and

- Upon indication from the lower layers that the RRC connection resume has failed and indication from the lower layers that the RRC connection is not suspended, the UE shall enter EMM-IDLE mode without suspend indication and restart the ongoing NAS procedure if required.

23.2.4 CIoT Optimization / User Plane / EDT

23.2.4.1 Test Purpose (TP)

(1)

```
with { UE with CIoT Optimization and with UP-EDT supported, with RRC Connection suspended }
ensure that {
  when { EDT data transfer is triggered }
    then { performs resumption of a suspended RRC connection by transmitting
RRCConnectionResumeRequest and transfer the EDT user data on DTCH multiplexed with the
RRCConnectionResumeRequest message on CCCH. }
            }
```

(2)

```
with { UE with UP-EDT supported initiated by sending RRCConnectionResumeRequest }
ensure that {
  when { UE receives the RRCConnectionResume message }
    then { performs UP-EDT fallback by sending the RRCConnectionResumeComplete message }
            }
```

23.2.4.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.300, clause 7.3b.3, TS 36.331, clause 5.3.1.1, 5.3.3.1b and 5.3.3.3a.

[TS 36.331, clause 5.3.1.1]

…

In case of CP-EDT, the data are appended in the *RRCEarlyDataRequest* and *RRCEarlyDataComplete* messages, if available, and sent over SRB0. In case of UP-EDT, security is re-activated prior to transmission of RRC message using the *nextHopChainingCount* provided in the *RRCConnectionRelease* message with suspend indication during the preceding suspend procedure and the radio bearers are re-established. The uplink data are transmitted ciphered on DTCH multiplexed with the *RRCConnectionResumeRequest* message on CCCH. In the downlink, the data, if available, are transmitted on DTCH multiplexed with the *RRCConnectionRelease* message on DCCH. In response to a request for EDT, E-UTRAN may also choose to establish or resume the RRC connection.

…

[TS 36.331, clause 5.3.3.1b]

A BL UE, UE in CE or NB-IoT UE can initiate EDT when all of the following conditions are fulfilled:

1> for CP-EDT, the upper layers request establishment of an RRC connection, the UE supports CP-EDT, and *SystemInformationBlockType2 (SystemInformationBlockType2-NB* in NB-IoT) includes *cp-EDT*; or

1> for UP-EDT, the upper layers request resumption of an RRC connection, the UE supports UP-EDT, *SystemInformationBlockType2 (SystemInformationBlockType2-NB* in NB-IoT) includes *up-EDT*, and the UE has a stored value of the *nextHopChainingCount* provided in the *RRCConnectionRelease* message with suspend indication during the preceding suspend procedure;

1> the establishment or resumption request is for mobile originating calls and the establishment cause is *mo-Data* or *mo-ExceptionData* or *delayTolerantAccess*;

1> the establishment or resumption request is suitable for EDT as specified in TS 36.300 [9], clause 7.3b.1;

1> *SystemInformationBlockType2 (SystemInformationBlockType2-NB* in NB-IoT) includes *edt-Parameters*;

1> the size of the resulting MAC PDU including the total UL data is expected to be smaller than or equal to the TBS signalled in *edt-TBS* as specified in TS 36.321 [6], clause 5.1.1;

1> EDT fallback indication has not been received from lower layers for this establishment or resumption procedure;

NOTE 1: Upper layers request or resume an RRC connection. The interaction with NAS is up to UE implementation.

NOTE 2: It is up to UE implementation how the UE determines whether the size of UL data is suitable for EDT.

[TS 36.331, clause 5.3.3.3a]

1> if the UE is initiating UP-EDT in accordance with conditions in 5.3.3.1b:

2> restore the PDCP state and re-establish PDCP entities for all SRBs and all DRBs;

2> if *drb-ContinueROHC* has been provided in immediately preceding RRC connection release message, and the UE is requesting to resume RRC connection in the same cell:

3> indicate to lower layers that stored UE AS context is used and that *drb-ContinueROHC* is configured;

3> continue the header compression protocol context for the DRBs configured with the header compression protocol;

2> else:

3> indicate to lower layers that stored UE AS context is used;

3> reset the header compression protocol context for the DRBs configured with the header compression protocol;

2> resume all SRBs and all DRBs;

2> derive the K_{eNB} key based on the K_{ASME} key to which the current K_{eNB} is associated, using the stored value of *nextHopChainingCount* received in the *RRCConnectionRelease* message in the preceding connection, as specified in TS 33.401 [32];

2> derive the K_{RRCint} key associated with the previously configured integrity algorithm, as specified in TS 33.401 [32];

2> derive the K_{RRCenc} key and the K_{UPenc} key associated with the previously configured ciphering algorithm, as specified in TS 33.401 [32];

2> configure lower layers to resume integrity protection using the previously configured algorithm and the K_{RRCint} key derived in this clause to all subsequent messages received and sent by the UE;

2> configure lower layers to resume ciphering and to apply the ciphering algorithm and the K_{RRCenc} key derived in this clause to all subsequent messages received and sent by the UE;

2> configure lower layers to resume ciphering and to apply the ciphering algorithm and the K_{UPenc} key derived in this clause immediately to the user data sent and received by the UE;

2> configure the lower layers to use EDT;

[TS 36.300, clause 7.3b.3]

EDT for User Plane CIoT EPS optimizations, as defined in TS 24.301 [20], is characterized as below:

- The UE has been provided with a *NextHopChainingCount* in the *RRCConnectionRelease* message with suspend indication;
- Uplink user data are transmitted on DTCH multiplexed with UL *RRCConnectionResumeRequest* message on CCCH;
- Downlink user data are optionally transmitted on DTCH multiplexed with DL *RRCConnectionRelease* message on DCCH;
- The short resume MAC-I is reused as the authentication token for *RRCConnectionResumeRequest* message and is calculated using the integrity key from the previous connection;
- The user data in uplink and downlink are ciphered. The keys are derived using the *NextHopChainingCount* provided in the *RRCConnectionRelease* message of the previous RRC connection;
- The *RRCConnectionRelease* message is integrity protected and ciphered using the newly derived keys;
- There is no transition to RRC CONNECTED.

The EDT procedure for User Plane CIoT EPS optimizations is illustrated in Figure 7.3b-2.

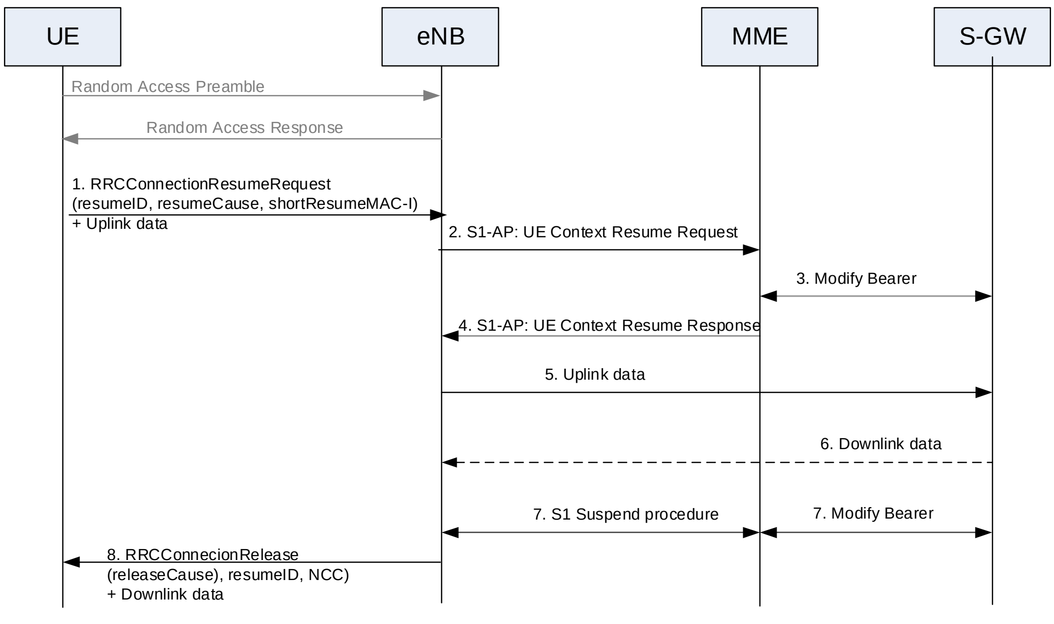

Figure 7.3b-2: EDT for User Plane CIoT EPS Optimizations

0. Upon connection resumption request for Mobile Originated data from the upper layers, the UE initiates the early data transmission procedure and selects a random access preamble configured for EDT.

1. The UE sends an *RRCConnectionResumeRequest* to the eNB, including its Resume ID, the establishment cause, and an authentication token. The UE resumes all SRBs and DRBs, derives new security keys using the *NextHopChainingCount* provided in the *RRCConnectionRelease* message of the previous connection and re-establishes the AS security. The user data are ciphered and transmitted on DTCH multiplexed with the *RRCConnectionResumeRequest* message on CCCH.

2. The eNB initiates the S1-AP Context Resume procedure to resume the S1 connection and re-activate the S1-U bearers.

3. The MME requests the S-GW to re-activate the S1-U bearers for the UE.

4. The MME confirms the UE context resumption to the eNB.

5. The uplink data are delivered to the S-GW.

6. If downlink data are available, the S-GW sends the downlink data to the eNB.

7. If no further data are expected from the S-GW, the eNB can initiate the suspension of the S1 connection and the deactivation of the S1-U bearers.

8. The eNB sends the *RRCConnectionRelease* message to keep the UE in RRC_IDLE. The message includes the *releaseCause* set to *rrc-Suspend*, the *resumeID*, the *NextHopChainingCount* and *drb-ContinueROHC* which are stored by the UE. If downlink data were received in step 6, they are sent ciphered on DTCH multiplexed with the *RRCConnectionRelease* message on DCCH.

NOTE 1: If the MME or eNB decides the UE to move in RRC_CONNECTED mode, *RRCConnectionResume* message is sent in step 7 to fall back to the RRC Connection resume procedure. In that case, the *RRCConnectionResume* message is integrity protected and ciphered with the keys derived in step 1 and the UE ignores the *NextHopChainingCount* included in the *RRCConnectionResume* message. Downlink data can be transmitted on DTCH multiplexed with the *RRCConnectionResume* message. In addition, an *RRCConnectionSetup* can also be sent in step 7 to fall back to the RRC Connection establishment procedure.

NOTE 2: If neither *RRCConnectionRelease* nor, in case of fallback, *RRCConnectionResume* is received in response to *RRCConnectionResumeRequest* for EDT, the UE considers the UL data transmission not successful.

23.2.4.3 Test description

23.2.4.3.1 Pre-test conditions

System Simulator:

- Cell 1.
- System information combination 1 as defined in TS 36.508 [18] clause 4.4.3.1 is used in Cell 1;

UE:

- User Plane CIoT Optimisation is supported by UE (UE capability), pc_User_Plane_CIoT_Optimisation.
- User Plane Early Data Transmission is supported by the UE.

Preamble:

- UE is in State 3-UP, User Plane CIoT connection request according to TS 36.508 [18].

23.2.4.3.2 Test procedure sequence

Table 23.2.4.3.2-1: Main behaviour

24 V2X

24.1 V2X Sidelink Communication

24.1.1 V2X Sidelink Communication / Pre-configured authorisation / UE in RRC_IDLE on an E-UTRAN cell operating on the anchor carrier frequency provisioned for V2X configuration / Utilisation of the resources of (serving) cells/PLMNs / Transmission

24.1.1.1 Test Purpose (TP)

(1)

```
with { UE supporting V2X sidelink communication }
ensure that {
  when { UE performs Attach procedure, or, Normal tracking area updating procedure }
    then { UE announces its V2X communication over PC5 supported capabilities }
```

}

(2)

with { UE being authorized for performing V2X sidelink Communication in PLMN1 and pre-configured with anchor carrier parameters for V2X configuration and with Radio parameters for when the UE is "not served by E-UTRAN", **and**, UE is in RRC_IDLE on Cell1/f1/PLMN1 which is operating on the anchor carrier frequency as the one pre-configured in the UE/USIM and is transmitting *SystemInformationBlockType21* which does not include either v2x-CommTxPoolNormalCommon or *v2x-CommTxPoolNormal* in v2x-InterFreqInfoList }
ensure that {
when { UE receives a request from upper layers to transmit V2X sidelink communication }
then { UE initiates an RRC connection, and, successfully completes a Sidelink UE information procedure to indicate the V2X sidelink communication transmission resources required }
}

(3)

with { UE being authorized for performing V2X sidelink Communication in PLMN1) and pre-configured with anchor carrier parameters for V2X configuration and with Radio parameters for when the UE is "not served by E-UTRAN", **and**, UE is in RRC_IDLE on Cell1/f1/PLMN1 which is operating on the anchor carrier frequency as the one pre-configured in the UE/USIM and is transmitting *SystemInformationBlockType21* which includes *v2x-CommTxPoolNormal* in v2x-InterFreqInfoList }
ensure that {
when { UE is triggered by an upper layer application to transmit V2X sidelink communication }
then { UE is able to transmit V2X sidelink communication using the configured resources in Cell1/f1/PLMN1 via *SystemInformationBlockType21* }
}

(4)

with { UE being authorized for performing V2X sidelink Communication in PLMN1 and pre-configured with anchor carrier parameters for V2X configuration and with Radio parameters for when the UE is "not served by E-UTRAN", **and**, UE is in RRC_IDLE on Cell1/f1/PLMN1 which is transmitting *SystemInformationBlockType21* }
ensure that {
when { Cell4/f1/PLMN1 which is broadcasting *SystemInformationBlockType21 providing resources for V2X sidelink communication* becomes the highest ranked cell, and, UE reselects to Cell4/f1/PLMN1 }
then { UE reselects to Cell4/f1/PLMN1, and transmits V2X sidelink communication using the configured resources in Cell4/f1/PLMN1*)* }
}

(5)

with { UE being authorized for performing V2X sidelink Communication in PLMN1 and pre-configured with anchor carrier parameters for V2X configuration and with Radio parameters for when the UE is "not served by E-UTRAN" **and** UE is in RRC_IDLE on Cell4/f1/PLMN1 which is not transmitting *SystemInformationBlockType21* }
ensure that {
when { Cell1/f1/PLMN1 which is broadcasting *SystemInformationBlockType21 providing resources for V2X sidelink communication* becomes the highest ranked cell and UE reselects to Cell1/f1/PLMN1 }
then { UE reselects to Cell1/f1/PLMN1 and transmits V2X sidelink communication using the configured resources in Cell1/f1/PLMN1*)* }
}

24.1.1.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.304 clause 11.4, TS 24.301 clause 5.5.1.2.2, TS 24.301 clause 5.5.3.2.2, TS 23.285 clauses 4.4.1.1.1, 4.4.1.1.2, 4.4.2, 4.5.1, 5.3, TS 36.331 clauses 5.2.2.4, 5.2.2.28, 5.10.1d, 5.10.2.2, 5.3.3.1a, 5.10.13.1.

[TS 36.304, clause 11.4]

If the UE has selected a cell on a non-serving frequency for sidelink communication or V2X sidelink communication or sidelink discovery announcement, it shall perform additional intra-frequency reselection process to select a better cell for sidelink operation on that frequency in accordance with section 11.4.1.

[TS 24.301, clause 5.5.1.2.2]

If the UE supports V2X communication over PC5, then the UE shall set the V2X PC5 bit to "V2X communication over PC5 supported" in the UE network capability IE of the ATTACH REQUEST message.

[TS 24.301, clause 5.5.3.2.2]

If the UE has to request resources for V2X communication over PC5 (see TS 23.285 [47]), then the UE shall set the "active" flag to 1 in the TRACKING AREA UPDATE REQUEST message.

…

For all cases except case b, if the UE supports V2X communication over PC5, then the UE shall set the V2X PC5 bit to "V2X communication over PC5 supported" in the UE network capability IE of the TRACKING AREA UPDATE REQUEST message.

[TS 23.285, clause 4.4.1.1.1]

The basic principles of service authorization for V2X communications over PC5 reference point:

- The UE gets authorization to use V2X communications over PC5 reference point on a per PLMN basis in the serving PLMN by the V2X Control Function in the HPLMN.

- The V2X Control Function in the HPLMN requests authorization information from the V2X Control Function of the serving PLMN.

- The V2X Control Function in the HPLMN merges authorization information from home and serving PLMNs and informs the UE of the final authorization information.

- The V2X Control Function in the VPLMN or HPLMN may revoke the authorization at any time. The V2X Control Function in the HPLMN shall be notified when authorization is revoked by the VPLMN.

[TS 23.285, clause 4.4.1.1.2]

The following information is provisioned to the UE for V2X communications over PC5 reference point:

1) Authorization policy:

   - When the UE is "served by E-UTRAN":

     - PLMNs in which the UE is authorized to perform V2X communications over PC5 reference point.

   - When the UE is "not served by E-UTRAN":

     - Indicates whether the UE is authorized to perform V2X communications over PC5 reference point when "not served by E-UTRAN".

2) Radio parameters for when the UE is "not served by E-UTRAN":

   - Includes the radio parameters with Geographical Area(s) that to enable the UE to perform V2X communications over PC5 reference point when "not served by E-UTRAN". These radio parameters (e.g. frequency bands) are defined in TS 36.331 [9] and contain an indication of whether they are "operator managed" or "non-operator managed". The allowed "non-operator managed" radio resources for V2X communications are defined in TS 36.101 [24]. The UE uses the radio parameters only if the UE can locate itself in the corresponding Geographical Area. Otherwise, the UE is not authorized to transmit.

3) Policy/parameters for V2X communication over PC5 reference point:

   - The mapping of Destination Layer-2 ID(s) and the V2X services, e.g. PSID or ITS-AIDs of the V2X application.

NOTE 1: PLMN operators coordinate to make sure Destination Layer-2 ID(s) for different V2X services are configured in a consistent manner.

NOTE 2: To pre-configure a UE with the provisioning parameters, at least the "not served by E-UTRAN" parameters of 1) and 2), and the parameters of 3) need to be included.

- The mapping of ProSe Per-Packet Priority and packet delay budget for V2X communication (autonomous resources selection mode).

[TS 23.285, clause 4.4.2]

PC5 reference point as defined in TS 23.303 [5] is used for the transmission and reception of V2X messages. The V2X communication over PC5 reference point supports roaming and inter-PLMN operations. V2X communication over PC5 reference point is supported when the UE is "served by E-UTRAN" and when the UE is "not served by E-UTRAN".

A UE is authorized to transmit and receive V2X messages by the V2X Control Function in its home PLMN as described in clause 5.2.

The V2X communication over PC5 reference point is a type of ProSe Direct Communication with the following characteristics:

- The V2X communication over PC5 reference point is connectionless, and there is no signalling over PC5 control plane for connection establishment.
- V2X messages are exchanged between UEs over PC5 user plane.
- Both IP based and non-IP based V2X messages are supported.
- For IP based V2X messages, only IPv6 is used. IPv4 is not supported in this release.

The identifiers used in the V2X communication over PC5 reference point are described in clause 4.5.1.

[TS 23.285, clause 4.5.1]

Each UE has a Layer-2 ID for the V2X communication over PC5 reference point, which is included in the source Layer-2 ID field of every frame that it sends on the layer-2 link. The UE self-assigns the Layer-2 ID for the V2X communication over PC5 reference point.

When IP based V2X messages are supported, the UE auto-configures a link local IPv6 address to be used as the source IP address, as defined in clause 4.5.3 of TS 23.303 [5].

In order to ensure that a source UE (e.g. vehicle) cannot be tracked or identified by any other UEs (e.g. vehicles) beyond a certain short time-period required by the application, the source Layer-2 ID must be changed over time and randomized. For IP based V2X communication over PC5 reference point, the source IP address must be also changed over time and randomized. The change of the identifiers of a source UE must be synchronized across layers used for PC5, e.g. when application layer identifier changes, the source Layer-2 ID and the source IP address need to be changed.

The UE is configured with the destination Layer-2 ID(s) to be used for V2X services. The Layer-2 ID for a V2X message is selected based on the configuration as described in clause 4.4.1.1.

[TS 23.285, clause 5.3]

To perform V2X communication over PC5 reference point, the UE is configured with the related information as described in clause 4.4.1.1.

The procedure for one-to-many ProSe Direct Communication transmission described in clause 5.4.2 of TS 23.303 [5] is applied to V2X communication over PC5 reference point with following differences:

- The source Layer-2 ID is set to the Layer-2 ID described in clause 4.5.1.
- A UE shall be configured with a set of Layer-2 ID corresponding to different type of services.

The procedure for one-to-many ProSe Direct Communication reception described in clause 5.4.3 of TS 23.303 [5] is applied to V2X communication over PC5 reference point.

[TS 36.331, clause 5.2.2.4]

1> if the UE is capable of V2X sidelink communication and is configured by upper layers to receive or transmit V2X sidelink communication on a frequency:

2> if the cell used for V2X sidelink communication meets the S-criteria as defined in TS 36.304 [4]; and

2> if *schedulingInfoList* on the concerned frequency indicates that *SystemInformationBlockType21* is present and the UE does not have stored a valid version of this system information block:

3> acquire *SystemInformationBlockType21*;

[TS 36.331, clause 5.2.2.28]

Upon receiving *SystemInformationBlockType21*, the UE shall:

1> if *SystemInformationBlockType21* message includes *sl-V2X-ConfigCommon*:

2> if configured to receive V2X sidelink communication:

3> use the resource pool indicated by *v2x-CommRxPool* in *sl-V2X-ConfigCommon* for V2X sidelink communication monitoring, as specified in 5.10.12;

2> if configured to transmit V2X sidelink communication:

3> use the resource pool indicated by *v2x-CommTxPoolNormalCommon* or by *v2x-CommTxPoolExceptional* for V2X sidelink communication transmission, as specified in 5.10.13;

[TS 36.331, clause 5.10.1d]

When it is specified that the UE shall perform V2X sidelink communication operation only if the conditions defined in this section are met, the UE shall perform V2X sidelink communication operation only if:

1> if the UE's serving cell is suitable (RRC_IDLE or RRC_CONNECTED); and if either the selected cell on the frequency used for V2X sidelink communication operation belongs to the registered or equivalent PLMN as specified in TS 24.334 [69] or the UE is out of coverage on the frequency used for V2X sidelink communication operation as defined in TS 36.304 [4, 11.4]; or

1> if the UE has no serving cell (RRC_IDLE);

[TS 36.331, clause 5.10.2.2]

NOTE 1: A UE in RRC_IDLE that is configured to transmit […] V2X sidelink communication […] while […] *SystemInformationBlockType21* including *sl-V2X-ConfigCommon* does not include the resources for transmission (in normal conditions), initiates connection establishment in accordance with clause 5.3.3.1a.

[TS 36.331, clause 5.3.3.1a]

For V2X sidelink communication an RRC connection is initiated only in the following case:

1> if configured by upper layers to transmit non-P2X related V2X sidelink communication and related data is available for transmission:

2> if *SystemInformationBlockType21* is broadcast by the cell on which the UE camps; and if the valid version of *SystemInformationBlockType21* includes *sl-V2X-ConfigCommon*; and *sl-V2X-ConfigCommon* does not include *v2x-CommTxPoolNormalCommon*;

[TS 36.331, clause 5.10.2.2]

1> if *SystemInformationBlockType21* including *sl-V2X-ConfigCommon* is broadcast by the PCell:

2> ensure having a valid version of *SystemInformationBlockType21* for the PCell;

2> if configured by upper layers to transmit V2X sidelink communication:

3> if the UE did not transmit a *SidelinkUEInformation* message since last entering RRC_CONNECTED state; or

4> initiate transmission of the *SidelinkUEInformation* message to indicate the V2X sidelink communication transmission resources required by the UE in accordance with clause 5.10.2.3;

[TS 36.331, clause 5.10.13.1]

A UE capable of V2X sidelink communication that is configured by upper layers to transmit V2X sidelink communication and has related data to be transmitted shall:

1> if the conditions for sidelink operation as defined in clause 5.10.1d are met:

2> if in coverage on the frequency used for V2X sidelink communication as defined in TS 36.304 [4, 11.4]; or

2> if the frequency used to transmit V2X sidelink communication is included in *v2x-InterFreqInfoList* in *RRCConnectionReconfiguration* or in *v2x-InterFreqInfoList* within *SystemInformationBlockType21*:

3> if the UE is in RRC_CONNECTED and uses the PCell or the frequency included in *v2x-InterFreqInfoList* in *RRCConnectionReconfiguration* for V2X sidelink communication:

4> if the UE is configured, by the current PCell with *commTxResources* set to *scheduled*:

5> if T310 or T311 is running; and if the PCell at which the UE detected physical layer problems or radio link failure broadcasts *SystemInformationBlockType21* including *v2x-CommTxPoolExceptional* in *sl-V2X-ConfigCommon*, or *v2x-CommTxPoolExceptional* is included in *v2x-InterFreqInfoList* for the concerned frequency in *SystemInformationBlockType21* or *RRCConnectionReconfiguration*; or

5> if T301 is running and the cell on which the UE initiated connection re-establishment broadcasts *SystemInformationBlockType21* including *v2x-CommTxPoolExceptional* in *sl-V2X-ConfigCommon*, or *v2x-CommTxPoolExceptional* is included in *v2x-InterFreqInfoList* for the concerned frequency in *SystemInformationBlockType21*; or

5> if T304 is running and the UE is configured with *v2x-CommTxPoolExceptional* included in *mobilityControlInfoV2X* in *RRCConnectionReconfiguration* or in *v2x-InterFreqInfoList* for the concerned frequency in *RRCConnectionReconfiguration*:

6> configure lower layers to transmit the sidelink control information and the corresponding data based on random selection using the pool of resources indicated by *v2x-CommTxPoolExceptional* as defined in TS 36.321 [6];

5> else:

6> configure lower layers to request E-UTRAN to assign transmission resources for V2X sidelink communication;

4> else if the UE is configured with *v2x-commTxPoolNormalDedicated* or *v2x-CommTxPoolNormal* in the entry of *v2x-InterFreqInfoList* for the concerned frequency in *sl-V2X-ConfigDedicated* in *RRCConnectionReconfiguration* and the UE is configured to transmit non-P2X related V2X sidelink communication:

5> if a result of sensing on the resources configured in *v2x-CommTxPoolNormalDedicated* or *v2x-CommTxPoolNormal* in the entry of *v2x-InterFreqInfoList* for the concerned frequency in *RRCConnectionReconfiguration* is not available in accordance with TS 36.213 [23]:

6> if *v2x-CommTxPoolExceptional* is included in *mobilityControlInfoV2X* in *RRCConnectionReconfiguration* (i.e., handover case); or

6> if *v2x-CommTxPoolExceptional* is included in the entry of *v2x-InterFreqInfoList* for the concerned frequency in *RRCConnectionReconfiguration*; or

6> if the PCell broadcasts *SystemInformationBlockType21* including *v2x-CommTxPoolExceptional* in *sl-V2X-ConfigCommon*:

7> configure lower layers to transmit the sidelink control information and the corresponding data based on random selection using the pool of resources indicated by *v2x-CommTxPoolExceptional* as defined in TS 36.321 [6];

5> else:

6> configure lower layers to transmit the sidelink control information and the corresponding data based on sensing (as defined in TS 36.321 [6] and TS 36.213 [23]) using one of the resource pools indicated by *v2x-commTxPoolNormalDedicated* or *v2x-CommTxPoolNormal* in the entry of *v2x-InterFreqInfoList* for the concerned frequency, which is selected according to clause 5.10.13.2;

[…]

3> else:

4> if the cell chosen for V2X sidelink communication transmission broadcasts *SystemInformationBlockType21*:

5> if the UE is configured to transmit non-P2X related V2X sidelink communication, and if *SystemInformationBlockType21* includes *v2x-CommTxPoolNormalCommon* or *v2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* for the concerned frequency in *sl-V2X-ConfigCommon* and a result of sensing on the resources configured in *v2x-CommTxPoolNormalCommon* or *v2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* for the concerned frequency is available in accordance with TS 36.213 [23]:

6> configure lower layers to transmit the sidelink control information and the corresponding data based on sensing (as defined in TS 36.321 [6] and TS 36.213 [23]) using one of the resource pools indicated by *v2x-CommTxPoolNormalCommon* or *v2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* for the concerned frequency, which is selected according to clause 5.10.13.2;

[…]

5> else if *SystemInformationBlockType21* includes *v2x-CommTxPoolExceptional* in *sl-V2X-ConfigCommon*:

6> from the moment the UE initiates connection establishment until receiving an *RRCConnectionReconfiguration* including *sl-V2X-ConfigDedicated* or *sl-P2X-ConfigDedicated*, until receiving an *RRCConnectionRelease* or an *RRCConnectionReject*, or until a result of sensing on the resources configured in *v2x-CommTxPoolNormalCommon*, if configured, becomes available in accordance with TS 36.213 [23]:

7> configure lower layers to transmit the sidelink control information and the corresponding data based on random selection (as defined in TS 36.321 [6]) using the pool of resources indicated in *v2x-CommTxPoolExceptional*;

2> else:

3> configure lower layers to transmit the sidelink control information and the corresponding data based on sensing (as defined in TS 36.321 [6] and TS 36.213 [23]) using one of the resource pools indicated by *v2x-CommTxPoolList* in *SL-V2X-Preconfiguration* in case of non-P2X related V2X sidelink communication, which is selected according to clause 5.10.13.2, […], and in accordance with the timing of the selected reference as defined in clause 5.10.8;

24.1.1.3 Test description

24.1.1.3.1 Pre-test conditions

System Simulator:

SS-NW

- Cell 1, Cell 4 and Cell 11

Table 24.1.1.3.1-1: Cell parameters values

Cell	Frequency	PLMN
1	f1	HPLMN (PLMN1)
4	f2	PLMN1
11	f1	PLMN1
Note 1: The Frequencies f1 and f2 shall be the anchor frequencies pre-configured in the UE/USIM.		

- Cell 1 and Cell 4 are in the same TA, Cell11 (is in a different TA).

- System information combination 29 as defined in TS 36.508 [18] clause 4.4.3.1 is used in all active cells.

SS-UE

- SS-UE1. As defined in TS 36.508 [18], configured for and operating as V2X Sidelink Communication receiving device on the resources which the UE is expected to use for transmission, as defined in TS 36.508 [18] clause 6.2.3.5.

UE:

- V2X sidelink related configuration
  - The UE is authorised to perform V2X Sidelink Communication
- The UE is equipped with below information in UE or in a USIM containing default values (as per TS 36.508 [18]) except for those listed in Table 24.1.1.3.1-2.

Table 24.1.1.3.1-2: UE/ USIM configuration

USIM field	Priority	Value	Access Technology Identifier
EF_{UST}		Service n°119 (V2X) supported	
EF_{VST}		As per TS 36.508 [18] clause 4.9.3.4	
EF_{V2X_CONFIG}		*SL-V2X-Preconfiguration* field as defined in Table 24.1.1.3.3-4	

Preamble:

- The UE is in State Switched OFF (state 1) according to TS 36.508 [18].

24.1.1.3.2 Test procedure sequence

Table 24.1.1.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" ... "Tn" are to be applied subsequently. The exact instants on which these values shall be applied are described elsewhere in the present clause.

Table 24.1.1.3.2-1: Time instances of cell power level and parameter changes

	Parameter	Unit	Cell 1	Cell 4	Cell 11
T0	Cell-specific RS EPRE	dBm/15 kHz	-85	"Off"	"Off"
T1	Cell-specific RS EPRE	dBm/15 kHz	-85	-79	"Off"
T2	Cell-specific RS EPRE	dBm/15 kHz	-85	"Off"	-79

Table 24.1.1.3.2-2: Main behaviour

24.1.2 V2X Sidelink Communication / Pre-configured authorisation / Utilisation of the pre-configured resources / Transmission

24.1.2.1 Test Purpose (TP)

(1)

```
with { UE being authorized for performing V2X sidelink Communication being provisioned with Radio
parameters for when the UE is "not served by E-UTRAN" associated with a geographical area, and, UE
out of coverage on the anchor carrier used for V2X configuration }
ensure that {
  when { UE wants to transmit V2X sidelink Communication, and, UE determines itself as being located
in that geographical area }
    then { UE is able to transmit V2X sidelink Communication using the preconfigured for "not served
by E-UTRAN" resources }
            }
```

(2)

```
with { UE being authorized for performing V2X sidelink Communication being provisioned with Radio
parameters for when the UE is "not served by E-UTRAN" associated with a geographical area, and, UE
out of coverage on the anchor carrier used for V2X configuration }
ensure that {
  when { UE wants to transmit V2X sidelink Communication, and, UE determines itself as being not
located in that geographical area }
    then { UE does not initiate V2X sidelink Communication }
            }
```

24.1.2.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 23.285, clauses 4.4.1.1.1, 4.4.1.1.2, 4.4.2, 4.5.1, 5.3

[TS 23.285, clause 4.4.1.1.1]

The basic principles of service authorization for V2X communications over PC5 reference point:

- The UE gets authorization to use V2X communications over PC5 reference point on a per PLMN basis in the serving PLMN by the V2X Control Function in the HPLMN.
- The V2X Control Function in the HPLMN requests authorization information from the V2X Control Function of the serving PLMN.
- The V2X Control Function in the HPLMN merges authorization information from home and serving PLMNs and informs the UE of the final authorization information.
- The V2X Control Function in the VPLMN or HPLMN may revoke the authorization at any time. The V2X Control Function in the HPLMN shall be notified when authorization is revoked by the VPLMN.

[TS 23.285, clause 4.4.1.1.2]

The following information is provisioned to the UE for V2X communications over PC5 reference point:

1) Authorization policy:
    - When the UE is "served by E-UTRAN":
        - PLMNs in which the UE is authorized to perform V2X communications over PC5 reference point.
    - When the UE is "not served by E-UTRAN":
        - Indicates whether the UE is authorized to perform V2X communications over PC5 reference point when "not served by E-UTRAN".

2) Radio parameters for when the UE is "not served by E-UTRAN":

   - Includes the radio parameters with Geographical Area(s) that need to be configured in the UE in order to be able perform V2X communications over PC5 reference point when "not served by E-UTRAN". These radio parameters (e.g. frequency bands) are defined in TS 36.331 [9]. The UE uses the radio parameters only if the UE can locate itself in the corresponding Geographical Area. Otherwise, the UE is not authorized to transmit.

3) Policy/parameters for V2X communication over PC5 reference point:

   - The mapping of Destination Layer-2 ID(s) and the V2X services, e.g. PSID or ITS-AIDs of the V2X application.

NOTE 1: PLMN operators coordinate to make sure Destination Layer-2 ID(s) for different V2X services are configured in a consistent manner.

NOTE 2: To pre-configure a UE with the provisioning parameters, at least the "not served by E-UTRAN" parameters of 1) and 2), and the parameters of 3) need to be included.

- The mapping of ProSe Per-Packet Priority and packet delay budget for V2X communication (autonomous resources selection mode).

[TS 23.285, clause 4.4.2]

PC5 reference point as defined in TS 23.303 [5] is used for the transmission and reception of V2X messages. The V2X communication over PC5 reference point supports roaming and inter-PLMN operations. V2X communication over PC5 reference point is supported when the UE is "served by E-UTRAN" and when the UE is "not served by E-UTRAN".

A UE is authorized to transmit and receive V2X messages by the V2X Control Function in its home PLMN as described in clause 5.2.

The V2X communication over PC5 reference point is a type of ProSe Direct Communication with the following characteristics:

- The V2X communication over PC5 reference point is connectionless, and there is no signalling over PC5 control plane for connection establishment.

- V2X messages are exchanged between UEs over PC5 user plane.

- Both IP based and non-IP based V2X messages are supported.

- For IP based V2X messages, only IPv6 is used. IPv4 is not supported in this release.

The identifiers used in the V2X communication over PC5 reference point are described in clause 4.5.1.

[TS 23.285, clause 4.5.1]

Each UE has a Layer-2 ID for the V2X communication over PC5 reference point, which is included in the source Layer-2 ID field of every frame that it sends on the layer-2 link. The UE self-assigns the Layer-2 ID for the V2X communication over PC5 reference point.

When IP based V2X messages are supported, the UE auto-configures a link local IPv6 address to be used as the source IP address, as defined in clause 4.5.3 of TS 23.303 [5].

In order to ensure that a source UE (e.g. vehicle) cannot be tracked or identified by any other UEs (e.g. vehicles) beyond a certain short time-period required by the application, the source Layer-2 ID must be changed over time and randomized. For IP based V2X communication over PC5 reference point, the source IP address must be also changed over time and randomized. The change of the identifiers of a source UE must be synchronized across layers used for PC5, e.g. when application layer identifier changes, the source Layer-2 ID and the source IP address need to be changed.

The UE is configured with the destination Layer-2 ID(s) to be used for V2X services. The Layer-2 ID for a V2X message is selected based on the configuration as described in clause 4.4.1.1.

[TS 23.285, clause 5.3]

To perform V2X communication over PC5 reference point, the UE is configured with the related information as described in clause 4.4.1.1.

The procedure for one-to-many ProSe Direct Communication transmission described in clause 5.4.2 of TS 23.303 [5] is applied to V2X communication over PC5 reference point with following differences:

- The source Layer-2 ID is set to the Layer-2 ID described in clause 4.5.1.
- A UE shall be configured with a set of Layer-2 ID corresponding to different type of services.

The procedure for one-to-many ProSe Direct Communication reception described in clause 5.4.3 of TS 23.303 [5] is applied to V2X communication over PC5 reference point.

24.1.2.3 Test description

24.1.2.3.1 Pre-test conditions

System Simulator:

SS-NW

- No E-UTRA cell configured
- 1 GNSS simulator

SS-UE

- SS-UE1. As defined in TS 36.508 [18], configured for and operating as V2X Sidelink Communication receiving device on the resources which the UE is expected to use for transmission, as defined in TS 36.508 [18] clause 6.2.3.5.

UE:

- V2X sidelink related configuration
- The UE is authorised to perform V2X Sidelink Communication
- The UE is equipped with below information in UE or in a USIM containing default values (as per TS 36.508 [18]).

Table 24.1.2.3.1-1: UE/ USIM configuration

USIM field	Priority	Value	Access Technology Identifier
EF_{UST}		Service n°119 (V2X) supported	
EF_{VST}		As per TS 36.508 [18] clause 4.9.3.4	
EF_{V2X_CONFIG}		*SL-V2X-Preconfiguration* field as defined in 36.508 [18], table 4.10.1.1-1 Geographical area field as defined in TS 36.508 [18] clause 4.9.3.1.	

Preamble:

- The UE is in state V2X out of coverage (State 5-V2X) according to TS 36.508 [18].

24.1.2.3.2 Test procedure sequence

Table 24.1.2.3.2-2: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	Trigger UE to activate UE test loop mode	-	-	-	-

	NOTE: The activation of UE test loop mode may be performed by MMI or AT command (+CATM).				
2	Trigger UE to close UE test loop mode E (transmission mode). NOTE: The UE test loop mode E may be closed by MMI or AT command (+CCUTLE).	-	-	-	-
2A	Trigger the UE to reset UTC time. NOTE: The UTC time reset may be performed by MMI or AT command (+CUTCR).	-	-	-	-
3	SS configures: GNSS simulator is configured for Scenario #2: move from inside Geographical area #1 to outside Geographical area #1, and starts step 1 to simulate a location in the centre of Geographical area #1 as defined in TS 36.508 [18] Table 4.11.2-2. Geographical area #1 is also pre-configured in the UE.				
4	Void	-	-	-	-
5	Check: Does the UE transmit V2X sidelink communication data over the PC5 interface in accordance with the resources pre-configured in SL-V2X-Preconfiguration-r14 -> v2x-PreconfigFreqList-r14"? Note : Although the UE is expected to transmit continuously, only this STCH PDCP SDU packet is shown explicitly in the step sequence.	-->	*STCH PDCP SDU packet*	1	P
6	SS configures: GNSS simulator is triggered to start step 2 of Scenario #2 to simulate the UE moving to a location outside Geographical area #1 as defined in TS 36.508 [18] Table 4.11.2-2. The area outside Geographical area #1 is not pre-configured in the UE.				
7	Wait for 71 sec (as detailed in TS 36.508 [18] Table 4.11.2-2) to allow the simulated location for the UE to leave Geographical area #1 and for the UE to acquire new location data.	-	-	-	-
8	Check: Does the UE transmit, in the next 10 seconds, V2X sidelink communication data over the PC5 interface in accordance with the resources pre-configured in SL-V2X-Preconfiguration-r14 -> v2x-PreconfigFreqList-r14"?	-->	*STCH PDCP SDU packet*	2	F
8A	Trigger UE to open UE test loop mode E NOTE: The UE test loop mode E may be opened by MMI or AT command (+CCUTLE).	-	-	-	-
9	Trigger UE to deactivate UE test loop mode. NOTE: The deactivation of UE test loop mode may be performed by MMI or AT command (+CATM).	-	-	-	-

24.1.2.3.3 Specific message contentsNone

24.1.3 V2X Sidelink Communication / Pre-configured authorisation / UE in RRC_IDLE on an E-UTRAN cell operating on the anchor carrier frequency provisioned for V2X configuration / Utilisation of the resources of (serving) cells/PLMNs / Reception

24.1.3.1 Test Purpose (TP)

(1)

```
with { UE being authorized for performing V2X sidelink Communication in PLMN1 and pre-configured
with anchor carrier parameters for V2X configuration and being provisioned with Radio parameters for
when the UE is "not served by E-UTRAN", and, UE in RRC_IDLE on Cell1/f1/PLMN1 which is operating on
the anchor carrier frequency as the one pre-configured in the UE/USIM and is transmitting
SystemInformationBlockType21 which does not include v2x-CommRxPool}
ensure that {
   when { UE receives a request from upper layers to receive V2X sidelink communication }
     then { UE initiates an RRC connection, and, successfully completes a Sidelink UE information
procedure to indicate the V2X sidelink communication reception resources required }
        }
```

(2)

```
with { UE being authorized for performing V2X sidelink Communication in PLMN1 and pre-configured
with anchor carrier parameters for V2X configuration and being provisioned with Radio parameters for
when the UE is "not served by E-UTRAN", and, UE in RRC_IDLE on Cell1/f1/PLMN1 which is operating on
the anchor carrier frequency as the one pre-configured in the UE/USIM and is transmitting
SystemInformationBlockType21 which does include v2x-CommRxPool in v2x-InterFreqInfoList }
ensure that {
  when { UE receives a request from upper layers to receive V2X sidelink communication }
    then { UE is able to receive V2x sidelink communication using the configured resources in
Cell1/f1/PLMN1 via SystemInformationBlockType21 }
        }
```

(3)

```
with { UE being authorized for performing V2X sidelink Communication in PLMN1 and pre-configured
with anchor carrier parameters for V2X configuration and with Radio parameters for when the UE is
"not served by E-UTRAN", and, UE is in RRC_IDLE on Cell1/f1/PLMN1 which is not transmitting
SystemInformationBlockType21 }
ensure that {
  when { Cell3/f2/PLMN1  which is broadcasting SystemInformationBlockType21 providing resources for
V2X sidelink communication becomes the highest ranked cell, and, UE reselects to Cell3/f2/PLMN1 }
    then { UE is able to receive V2X sidelink communication using the configured resources in
Cell3/f2/PLMN1 }
        }
```

24.1.3.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 23.285, clauses 4.4.1.1.1, 4.4.1.1.2, 4.4.2, 4.5.1, 5.3, TS 36.331, clauses 5.2.2.4, 5.2.2.28, 5.10.1d, 5.10.12.

[TS 23.285, clause 4.4.1.1.1]

The basic principles of service authorization for V2X communications over PC5 reference point:

- The UE gets authorization to use V2X communications over PC5 reference point on a per PLMN basis in the serving PLMN by the V2X Control Function in the HPLMN.
- The V2X Control Function in the HPLMN requests authorization information from the V2X Control Function of the serving PLMN.
- The V2X Control Function in the HPLMN merges authorization information from home and serving PLMNs and informs the UE of the final authorization information.
- The V2X Control Function in the VPLMN or HPLMN may revoke the authorization at any time. The V2X Control Function in the HPLMN shall be notified when authorization is revoked by the VPLMN.

[TS 23.285, clause 4.4.1.1.2]

The following information is provisioned to the UE for V2X communications over PC5 reference point:

1) Authorization policy:

   - When the UE is "served by E-UTRAN":

     - PLMNs in which the UE is authorized to perform V2X communications over PC5 reference point.

   - When the UE is "not served by E-UTRAN":

     - Indicates whether the UE is authorized to perform V2X communications over PC5 reference point when "not served by E-UTRAN".

2) Radio parameters for when the UE is "not served by E-UTRAN":

   - Includes the radio parameters with Geographical Area(s) that need to be configured in the UE in order to be able perform V2X communications over PC5 reference point when "not served by E-UTRAN". These radio parameters (e.g. frequency bands) are defined in TS 36.331 [9]. The UE uses the radio parameters only if the UE can locate itself in the corresponding Geographical Area. Otherwise, the UE is not authorized to transmit.

3) Policy/parameters for V2X communication over PC5 reference point:

   - The mapping of Destination Layer-2 ID(s) and the V2X services, e.g. PSID or ITS-AIDs of the V2X application.

NOTE 1: PLMN operators coordinate to make sure Destination Layer-2 ID(s) for different V2X services are configured in a consistent manner.

NOTE 2: To pre-configure a UE with the provisioning parameters, at least the "not served by E-UTRAN" parameters of 1) and 2), and the parameters of 3) need to be included.

- The mapping of ProSe Per-Packet Priority and packet delay budget for V2X communication (autonomous resources selection mode).

[TS 23.285, clause 4.4.2]

PC5 reference point as defined in TS 23.303 [5] is used for the transmission and reception of V2X messages. The V2X communication over PC5 reference point supports roaming and inter-PLMN operations. V2X communication over PC5 reference point is supported when the UE is "served by E-UTRAN" and when the UE is "not served by E-UTRAN".

A UE is authorized to transmit and receive V2X messages by the V2X Control Function in its home PLMN as described in clause 5.2.

The V2X communication over PC5 reference point is a type of ProSe Direct Communication with the following characteristics:

- The V2X communication over PC5 reference point is connectionless, and there is no signalling over PC5 control plane for connection establishment.

- V2X messages are exchanged between UEs over PC5 user plane.

- Both IP based and non-IP based V2X messages are supported.

- For IP based V2X messages, only IPv6 is used. IPv4 is not supported in this release.

The identifiers used in the V2X communication over PC5 reference point are described in clause 4.5.1.

[TS 23.285, clause 4.5.1]

Each UE has a Layer-2 ID for the V2X communication over PC5 reference point, which is included in the source Layer-2 ID field of every frame that it sends on the layer-2 link. The UE self-assigns the Layer-2 ID for the V2X communication over PC5 reference point.

When IP based V2X messages are supported, the UE auto-configures a link local IPv6 address to be used as the source IP address, as defined in clause 4.5.3 of TS 23.303 [5].

In order to ensure that a source UE (e.g. vehicle) cannot be tracked or identified by any other UEs (e.g. vehicles) beyond a certain short time-period required by the application, the source Layer-2 ID must be changed over time and randomized. For IP based V2X communication over PC5 reference point, the source IP address must be also changed over time and randomized. The change of the identifiers of a source UE must be synchronized across layers used for PC5, e.g. when application layer identifier changes, the source Layer-2 ID and the source IP address need to be changed.

The UE is configured with the destination Layer-2 ID(s) to be used for V2X services. The Layer-2 ID for a V2X message is selected based on the configuration as described in clause 4.4.1.1.

[TS 23.285, clause 5.3]

To perform V2X communication over PC5 reference point, the UE is configured with the related information as described in clause 4.4.1.1.

The procedure for one-to-many ProSe Direct Communication transmission described in clause 5.4.2 of TS 23.303 [5] is applied to V2X communication over PC5 reference point with following differences:

- The source Layer-2 ID is set to the Layer-2 ID described in clause 4.5.1.
- A UE shall be configured with a set of Layer-2 ID corresponding to different type of services.

The procedure for one-to-many ProSe Direct Communication reception described in clause 5.4.3 of TS 23.303 [5] is applied to V2X communication over PC5 reference point.

[TS 36.331, clause 5.2.2.4]

1> if the UE is capable of V2X sidelink communication and is configured by upper layers to receive or transmit V2X sidelink communication on a frequency:

2> if the cell used for V2X sidelink communication meets the S-criteria as defined in TS 36.304 [4]; and

2> if *schedulingInfoList* on the concerned frequency indicates that *SystemInformationBlockType21* is present and the UE does not have stored a valid version of this system information block:

3> acquire *SystemInformationBlockType21*;

[TS 36.331, clause 5.2.2.28]

Upon receiving *SystemInformationBlockType21*, the UE shall:

1> if *SystemInformationBlockType21* message includes *sl-V2X-ConfigCommon*:

2> if configured to receive V2X sidelink communication:

3> use the resource pool indicated by *v2x-CommRxPool* in *sl-V2X-ConfigCommon* for V2X sidelink communication monitoring, as specified in 5.10.12;

2> if configured to transmit V2X sidelink communication:

3> use the resource pool indicated by *v2x-CommTxPoolNormalCommon* or by *v2x-CommTxPoolExceptional* for V2X sidelink communication transmission, as specified in 5.10.13;

3> perform CBR measurement on the transmission resource pool(s) indicated by *v2x-CommTxPoolNormalCommon* and *v2x-CommTxPoolExceptional* for V2X sidelink communication transmission, as specified in 5.5.3;

[TS 36.331, clause 5.10.1d]

When it is specified that the UE shall perform V2X sidelink communication operation only if the conditions defined in this section are met, the UE shall perform V2X sidelink communication operation only if:

1> if the UE's serving cell is suitable (RRC_IDLE or RRC_CONNECTED); and if either the selected cell on the frequency used for V2X sidelink communication operation belongs to the registered or equivalent PLMN as specified in TS 24.334 [69] or the UE is out of coverage on the frequency used for V2X sidelink communication operation as defined in TS 36.304 [4, 11.4]; or

1> if the UE's serving cell (for RRC_IDLE or RRC_CONNECTED) fulfils the conditions to support V2X sidelink communication in limited service state as specified in TS 23.285 [78, 4.4.8]; and if either the serving cell is on the frequency used for V2X sidelink communication operation or the UE is out of coverage on the frequency used for V2X sidelink communication operation as defined in TS 36.304 [4, 11.4]; or

1> if the UE has no serving cell (RRC_IDLE);

[TS 36.331, clause 5.10.12]

A UE capable of V2X sidelink communication that is configured by upper layers to receive V2X sidelink communication shall:

1> if the conditions for sidelink operation as defined in 5.10.1d are met:

2> if in coverage on the frequency used for V2X sidelink communication, as defined in TS 36.304 [4, 11.4]:

3> if the frequency used to receive V2X sidelink communication is included in *v2x-InterFreqInfoList* within *RRCConnectionReconfiguration* or in *v2x-InterFreqInfoList* within *SystemInformationBlockType21*of the serving cell/Pcell, and *v2x-CommRxPool* is included in *SL-V2X-InterFreqUE-Config* within *v2x-UE-ConfigList*:

4> configure lower layers to monitor sidelink control information and the corresponding data using the pool of resources indicated in *v2x-CommRxPool*;

3> else:

4> if the cell chosen for V2X sidelink communication reception broadcasts *SystemInformationBlockType21* including *v2x-CommRxPool* in *sl-V2X-ConfigCommon* or,

4> if the UE is configured with v2x-CommRxPool included in mobilityControlInfoV2X in RRCConnectionReconfiguration:

5> configure lower layers to monitor sidelink control information and the corresponding data using the pool of resources indicated in *v2x-CommRxPool*;

2> else (i.e. out of coverage on the frequency used for V2X sidelink communication, as defined in TS 36.304 [4, 11.4]):

3> if the frequency used to receive V2X sidelink communication is included in *v2x-InterFreqInfoList* within *RRCConnectionReconfiguration* or in *v2x-InterFreqInfoList* within *SystemInformationBlockType21* of the serving cell/PCell, and *v2x-CommRxPool* is included in *SL-V2X-InterFreqUE-Config* within *v2x-UE-ConfigList* for the concerned frequency:

4> configure lower layers to monitor sidelink control information and the corresponding data using the pool of resources indicated in *v2x-CommRxPool*;

3> else:

4> configure lower layers to monitor sidelink control information and the corresponding data using the pool of resources that were preconfigured (i.e. *v2x-CommRxPoolList* in *SL-V2X-Preconfiguration* defined in 9.3);

24.1.3.3 Test description

24.1.3.3.1 Pre-test conditions

System Simulator:

SS-NW

- Cell 1 and Cell 3

Table 24.1.3.3.1-1: Cell parameters values

Cell	Frequency	PLMN
1	f1	HPLMN (PLMN1)
3	f2	PLMN1

Note 1:	The Frequencies f1 and f2 shall be the anchor frequencies pre-configured in the UE/USIM.

- System information combination 29 as defined in TS 36.508 [18] clause 4.4.3.1 is used in all active cells.

SS-UE

- SS-UE1. As defined in TS 36.508 [18], configured for and operating as V2X Sidelink Communication transmitting device on the resources which the UE is expected to use for reception, as defined in TS 36.508 [18] clause 6.2.3.5.

UE:

- V2X sidelink related configuration
- The UE is authorised to perform V2X Sidelink Communication
- The UE is equipped with below information in UE or in a USIM containing default values (as per TS 36.508 [18]) except for those listed in Table 24.1.3.3.1-1.

Table 24.1.3.3.1-1: UE/ USIM configuration

USIM field	Priority	Value	Access Technology Identifier
EF_{UST}		Service n°119 (V2X) supported	
EF_{VST}		As per TS 36.508 [18] clause 4.9.3.4	
EF_{V2X_CONFIG}		*SL-V2X-Preconfiguration* field as defined in Table 24.1.3.3.3-1	

Preamble:

- The UE is in State Switched OFF (state 1) according to TS 36.508 [18].

24.1.3.3.2 Test procedure sequence

Table 24.1.3.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" ... "Tn" are to be applied subsequently. The exact instants on which these values shall be applied are described elsewhere in the present clause.

Table 24.1.3.3.2-1: Time instances of cell power level and parameter changes

	Parameter	Unit	Cell 1	Cell 3
T0	Cell-specific RS EPRE	dBm/15kHz	-85	“Off”
T1	Cell-specific RS EPRE	dBm/15kHz	-85	-79

Table 24.1.3.3.2-2: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message

24.1.4 V2X Sidelink Communication / Pre-configured authorisation / Utilisation of the pre-configured resources / Reception

24.1.4.1 Test Purpose (TP)

(1)

```
with { UE being authorized for performing V2X sidelink Communication being provisioned with Radio
parameters for when the UE is "not served by E-UTRAN" associated with a geographical area, and, UE
out of coverage on the anchor carrier used for V2X configuration }
ensure that {
  when { UE wants to receive V2X sidelink Communication, and, UE determines itself as being located
in that geographical area }
    then { UE is able to receive V2X sidelink Communication using the preconfigured for "not served
by E-UTRAN" resources }
            }
```

(2)

```
with { UE being authorized for performing V2X sidelink Communication being provisioned with Radio
parameters for when the UE is "not served by E-UTRAN" associated with a geographical area, and, UE
out of coverage on the anchor carrier used for V2X configuration }
ensure that {
  when { UE wants to receive V2X sidelink Communication, and, UE determines itself as being not
located in that geographical area }
    then { UE does not initiate monitoring of V2X sidelink Communication }
            }
```

24.1.4.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 23.285, clauses 4.4.1.1.1, 4.4.1.1.2, 4.4.2, 4.5.1, 5.3.

[TS 23.285, clause 4.4.1.1.1]

The basic principles of service authorization for V2X communications over PC5 reference point:

- The UE gets authorization to use V2X communications over PC5 reference point on a per PLMN basis in the serving PLMN by the V2X Control Function in the HPLMN.
- The V2X Control Function in the HPLMN requests authorization information from the V2X Control Function of the serving PLMN.
- The V2X Control Function in the HPLMN merges authorization information from home and serving PLMNs and informs the UE of the final authorization information.
- The V2X Control Function in the VPLMN or HPLMN may revoke the authorization at any time. The V2X Control Function in the HPLMN shall be notified when authorization is revoked by the VPLMN.

[TS 23.285, clause 4.4.1.1.2]

The following information is provisioned to the UE for V2X communications over PC5 reference point:

1) Authorization policy:
    - When the UE is "served by E-UTRAN":
        - PLMNs in which the UE is authorized to perform V2X communications over PC5 reference point.
    - When the UE is "not served by E-UTRAN":
        - Indicates whether the UE is authorized to perform V2X communications over PC5 reference point when "not served by E-UTRAN".
2) Radio parameters for when the UE is "not served by E-UTRAN":
    - Includes the radio parameters with Geographical Area(s) that need to be configured in the UE in order to be able perform V2X communications over PC5 reference point when "not served by E-UTRAN". These radio

parameters (e.g. frequency bands) are defined in TS 36.331 [9]. The UE uses the radio parameters only if the UE can locate itself in the corresponding Geographical Area. Otherwise, the UE is not authorized to transmit.

3) Policy/parameters for V2X communication over PC5 reference point:

   - The mapping of Destination Layer-2 ID(s) and the V2X services, e.g. PSID or ITS-AIDs of the V2X application.

NOTE 1: PLMN operators coordinate to make sure Destination Layer-2 ID(s) for different V2X services are configured in a consistent manner.

NOTE 2: To pre-configure a UE with the provisioning parameters, at least the "not served by E-UTRAN" parameters of 1) and 2), and the parameters of 3) need to be included.

- The mapping of ProSe Per-Packet Priority and packet delay budget for V2X communication (autonomous resources selection mode).

[TS 23.285, clause 4.4.2]

PC5 reference point as defined in TS 23.303 [5] is used for the transmission and reception of V2X messages. The V2X communication over PC5 reference point supports roaming and inter-PLMN operations. V2X communication over PC5 reference point is supported when the UE is "served by E-UTRAN" and when the UE is "not served by E-UTRAN".

A UE is authorized to transmit and receive V2X messages by the V2X Control Function in its home PLMN as described in clause 5.2.

The V2X communication over PC5 reference point is a type of ProSe Direct Communication with the following characteristics:

- The V2X communication over PC5 reference point is connectionless, and there is no signalling over PC5 control plane for connection establishment.

- V2X messages are exchanged between UEs over PC5 user plane.

- Both IP based and non-IP based V2X messages are supported.

- For IP based V2X messages, only IPv6 is used. IPv4 is not supported in this release.

The identifiers used in the V2X communication over PC5 reference point are described in clause 4.5.1.

[TS 23.285, clause 4.5.1]

Each UE has a Layer-2 ID for the V2X communication over PC5 reference point, which is included in the source Layer-2 ID field of every frame that it sends on the layer-2 link. The UE self-assigns the Layer-2 ID for the V2X communication over PC5 reference point.

When IP based V2X messages are supported, the UE auto-configures a link local IPv6 address to be used as the source IP address, as defined in clause 4.5.3 of TS 23.303 [5].

In order to ensure that a source UE (e.g. vehicle) cannot be tracked or identified by any other UEs (e.g. vehicles) beyond a certain short time-period required by the application, the source Layer-2 ID must be changed over time and randomized. For IP based V2X communication over PC5 reference point, the source IP address must be also changed over time and randomized. The change of the identifiers of a source UE must be synchronized across layers used for PC5, e.g. when application layer identifier changes, the source Layer-2 ID and the source IP address need to be changed.

The UE is configured with the destination Layer-2 ID(s) to be used for V2X services. The Layer-2 ID for a V2X message is selected based on the configuration as described in clause 4.4.1.1.

[TS 23.285, clause 5.3]

To perform V2X communication over PC5 reference point, the UE is configured with the related information as described in clause 4.4.1.1.

The procedure for one-to-many ProSe Direct Communication transmission described in clause 5.4.2 of TS 23.303 [5] is applied to V2X communication over PC5 reference point with following differences:

- The source Layer-2 ID is set to the Layer-2 ID described in clause 4.5.1.
- A UE shall be configured with a set of Layer-2 ID corresponding to different type of services.

The procedure for one-to-many ProSe Direct Communication reception described in clause 5.4.3 of TS 23.303 [5] is applied to V2X communication over PC5 reference point.

24.1.4.3 Test description

24.1.4.3.1 Pre-test conditions

System Simulator:

SS-NW

- 1 GNSS simulator
- No E-UTRA cell configured

SS-UE

- SS-UE1. As defined in TS 36.508 [18], configured for and operating as V2X Sidelink Communication transmitting device on the resources which the UE is expected to use for transmission, as defined in TS 36.508 [18] clause 6.2.3.5.

UE:

- V2X sidelink related configuration
- The UE is authorised to perform V2X Sidelink Communication
- The UE is equipped with the information below (Table 24.1.4.3.1-1) in the UE or in a USIM containing default values (as per TS 36.508 [18]).

Table 24.1.4.3.1-1: UE/ USIM configuration

USIM field	Priority	Value	Access Technology Identifier
EF_{UST}		Service n°119 (V2X) supported	
EF_{VST}		As per TS 36.508 [18] clause 4.9.3.4	
EF_{V2X_CONFIG}		*SL-V2X-Preconfiguration* field as defined in 36.508 [18], table 6.8.2.1-1 Geographical area field as defined in TS 36.508 [18] clause 4.9.3.1.	

Preamble:

- The UE is in state V2X out of coverage (State 5-V2X), according to TS 36.508 [18].

24.1.4.3.2 Test procedure sequence

Table 24.1.4.3.2-2: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	Trigger the UE to activate UE test loop mode NOTE: The activation of UE test loop mode may be performed by MMI or AT command (+CATM).			-	-
2	Trigger the UE to close UE test loop mode E (reception mode).		-	-	-

	NOTE: The UE test loop mode E may be closed by MMI or AT command (+CCUTLE).				
2A	Trigger the UE to reset UTC time. NOTE: The UTC time reset may be performed by MMI or AT command (+CUTCR).	-	-	-	-
3	SS configures: GNSS simulator is configured for Scenario #2: move from inside Geographical area #1 to outside Geographical area #1, and starts step 1 to simulate a location in the centre of Geographical area #1 as defined in TS 36.508 [18] Table 4.11.2-2. Geographical area #1 is also pre-configured in the UE.				
3A	Wait for px_AquireGNSS_MaxTime for the UE to acquire location data and start receiving.				
-	EXCEPTION: Step 4 is repeated 3 times.	-	-	-	-
4	SS-UE1 sends sidelink communication over the PC5 interface NOTE: This step verifies TP1 - it is expected that the UE shall receive these packets - if they were received is checked in step 6.	<--	*STCH PDCP SDU packet*	-	-
5	Trigger UE to request the counter of successful reception of STCH packets NOTE: The ProSe packed counter may be requested by MMI or AT command (+CUSPCREQ).			-	-
6	Check: Does the UE send a response with the counter of STCH packets = 3?			1	P
7	SS configures: GNSS simulator is triggered to start step 2 of Scenario #2 to simulate the UE moving to a location outside Geographical area #1 as defined in TS 36.508 [18] Table 4.11.2-2. The area outside Geographical area #1 is not pre-configured in the UE.				
8	Wait for 71 sec (as detailed in TS 36.508 [18] Table 4.11.2-2) to allow the simulated location for the UE to leave Geographical area #1 and for the UE to acquire new location data.	-	-	-	-
-	EXCEPTION: Step 9 is repeated 3 times.	-	-	-	-
9	SS-UE1 sends sidelink communication over the PC5 interface NOTE: This step verifies TP2 - it is expected that the UE shall not receive these packets - if they were received is checked in step 11.	<--	*STCH PDCP SDU packet*	-	-
10	Trigger UE to request the counter of successful reception of STCH packets NOTE: The ProSe packed counter may be requested by MMI or AT command (+CUSPCREQ).	.	.	-	-
11	Check: Does the UE send a response with the counter of STCH packets = 3?	.	.	2	P
11A	Trigger UE to open UE test loop mode E NOTE: The UE test loop mode E may be opened by MMI or AT command (+CCUTLE).	.	.	.	.
12	Trigger UE to deactivate UE test loop mode. NOTE: The deactivation of UE test loop mode may be performed by MMI or AT command (+CATM).	-	.	-	-

24.1.4.3.3 Specific message contents

24.1.5 V2X Sidelink Communication / Pre-configured authorisation / UE in RRC_CONNECTED on an E-UTRAN cell operating on the anchor carrier frequency provisioned for V2X configuration / Utilisation of the resources of (serving) cells/PLMNs / Transmission / RRC connection re-establishment

24.1.5.1 Test Purpose (TP)

(1)

with { UE being authorized for performing V2X sidelink Communication in PLMN1 and pre-configured with anchor carrier parameters for V2X configuration and being provisioned with Radio parameters for when the UE is "not served by E-UTRAN", **and**, UE is in RRC_CONNECTED on Cell1/f1/PLMN1 which is operating on the anchor carrier frequency as the one pre-configured in the UE/USIM and is transmitting *SystemInformationBlockType21* indicating no provision of resources for V2X sidelink communication }
ensure that {
  when { UE receives a request from upper layers to transmit V2X sidelink communication }
    then { UE successfully completes a Sidelink UE information procedure to indicate the V2X sidelink communication transmission resources required, **and**, UE is able to transmit V2X sidelink communication using the configured resources in Cell1/f1/PLMN1 (V2X-*commTxResources* set to *setup* and resources provided in *V2X-commTxPoolNormalDedicated*) }
            }

(2)

with { UE being authorized for performing V2X sidelink Communication in PLMN1 and pre-configured with anchor carrier parameters for V2X configuration and being provisioned with Radio parameters for when the UE is "not served by E-UTRAN", **and**, UE is in RRC_CONNECTED on Cell1/f1/PLMN1 which is operating on the anchor carrier frequency as the one pre-configured in the UE/USIM and is transmitting *SystemInformationBlockType21* indicating no provision of resources for V2X sidelink communication, **and**, UE having successfully completed Sidelink UE information procedure to indicate the V2X sidelink communication transmission resources required and transmitting V2X sidelink communication using the configured resources in Cell1/f1/PLMN1 (*commTxResources* set to *setup* and resources provided in *commTxPoolNormalDedicated*) }
ensure that {
  when { UE receives *RRCConnectionReconfiguration* message with *V2X-commTxResources* set to *release* }
    then { UE releases the resources allocated for V2X sidelink communication transmission previously configured by commTxResources in Cell1/f1/PLMN1, **and**, UE re-starts transmission of V2X sidelink communication when resources become available (*commTxResources* set to *setup*, *scheduled* and resources provided in *v2x-commTxPoolNormalDedicated* }
            }

(3)

with { UE being authorized for performing V2X sidelink Communication in PLMN1 and pre-configured with anchor carrier parameters for V2X configuration and being provisioned with Radio parameters for when the UE is "not served by E-UTRAN", **and**, UE is in RRC_CONNECTED on Cell1/f1/PLMN1 which is operating on the anchor carrier frequency as the one pre-configured in the UE/USIM and is transmitting *SystemInformationBlockType21* indicating no provision of resources for V2X sidelink communication, **and**, UE having successfully completed Sidelink UE information procedure requesting V2X sidelink communication transmission resources and transmitting V2X sidelink communication }
ensure that {
  when { UE detects radio link failure >1 sec after the UE transmitted the *SidelinkUEInformation* message, **and**, T301 is running and the cell on which the UE initiated connection re-establishment (Cell2/f1/PLMN1) broadcasts *SystemInformationBlockType21* including v2x-*commTxPoolExceptional* }
    then { UE is able to transmit V2X sidelink communication using the resources configured by *v2x-CommTxPoolExceptional* on Cell2/f1/PLMN1, **and**, after the T301 expires UE initiates a Sidelink UE information procedure requesting V2X sidelink communication transmission resources, **and**, UE is able to transmit V2X sidelink communication using the configured resources in Cell2/f1/PLMN1 (*commTxResources* set to *setup*, *scheduled* and resources provided in *v2x-commTxPoolNormalDedicated*) }
            }

24.1.5.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 23.285, clauses 4.4.1.1.1, 4.4.1.1.2, 4.4.2, 4.5.1, 5.3, TS 36.331, clauses 5.2.2.4, 5.2.2.28, 5.3.5.3, 5.3.5.4, 5.3.7.5, 5.3.10.15a, 5.10.1d and 5.10.13.1.

[TS 23.285, clause 4.4.1.1.1]

The basic principles of service authorization for V2X communications over PC5 reference point:

- The UE gets authorization to use V2X communications over PC5 reference point on a per PLMN basis in the serving PLMN by the V2X Control Function in the HPLMN.
- The V2X Control Function in the HPLMN requests authorization information from the V2X Control Function of the serving PLMN.
- The V2X Control Function in the HPLMN merges authorization information from home and serving PLMNs and informs the UE of the final authorization information.
- The V2X Control Function in the VPLMN or HPLMN may revoke the authorization at any time. The V2X Control Function in the HPLMN shall be notified when authorization is revoked by the VPLMN.

[TS 23.285, clause 4.4.1.1.2]

The following information is provisioned to the UE for V2X communications over PC5 reference point:

1) Authorization policy:
   - When the UE is "served by E-UTRAN":
     - PLMNs in which the UE is authorized to perform V2X communications over PC5 reference point.
   - When the UE is "not served by E-UTRAN":
     - Indicates whether the UE is authorized to perform V2X communications over PC5 reference point when "not served by E-UTRAN".
2) Radio parameters for when the UE is "not served by E-UTRAN":
   - Includes the radio parameters with Geographical Area(s) that to enable the UE to perform V2X communications over PC5 reference point when "not served by E-UTRAN". These radio parameters (e.g. frequency bands) are defined in TS 36.331 [9] and contain an indication of whether they are "operator managed" or "non-operator managed". The allowed "non-operator managed" radio resources for V2X communications are defined in TS 36.101 [24]. The UE uses the radio parameters only if the UE can locate itself in the corresponding Geographical Area. Otherwise, the UE is not authorized to transmit.
3) Policy/parameters for V2X communication over PC5 reference point:
   - The mapping of Destination Layer-2 ID(s) and the V2X services, e.g. PSID or ITS-AIDs of the V2X application.

NOTE 1: PLMN operators coordinate to make sure Destination Layer-2 ID(s) for different V2X services are configured in a consistent manner.

NOTE 2: To pre-configure a UE with the provisioning parameters, at least the "not served by E-UTRAN" parameters of 1) and 2), and the parameters of 3) need to be included.

- The mapping of ProSe Per-Packet Priority and packet delay budget for V2X communication (autonomous resources selection mode).

[TS 23.285, clause 4.4.2]

PC5 reference point as defined in TS 23.303 [5] is used for the transmission and reception of V2X messages. The V2X communication over PC5 reference point supports roaming and inter-PLMN operations. V2X communication over PC5 reference point is supported when the UE is "served by E-UTRAN" and when the UE is "not served by E-UTRAN".

A UE is authorized to transmit and receive V2X messages by the V2X Control Function in its home PLMN as described in clause 5.2.

The V2X communication over PC5 reference point is a type of ProSe Direct Communication with the following characteristics:

- The V2X communication over PC5 reference point is connectionless, and there is no signalling over PC5 control plane for connection establishment.
- V2X messages are exchanged between UEs over PC5 user plane.
- Both IP based and non-IP based V2X messages are supported.
- For IP based V2X messages, only IPv6 is used. IPv4 is not supported in this release.

The identifiers used in the V2X communication over PC5 reference point are described in clause 4.5.1.

[TS 23.285, clause 4.5.1]

Each UE has a Layer-2 ID for the V2X communication over PC5 reference point, which is included in the source Layer-2 ID field of every frame that it sends on the layer-2 link. The UE self-assigns the Layer-2 ID for the V2X communication over PC5 reference point.

When IP based V2X messages are supported, the UE auto-configures a link local IPv6 address to be used as the source IP address, as defined in clause 4.5.3 of TS 23.303 [5].

In order to ensure that a source UE (e.g. vehicle) cannot be tracked or identified by any other UEs (e.g. vehicles) beyond a certain short time-period required by the application, the source Layer-2 ID must be changed over time and randomized. For IP based V2X communication over PC5 reference point, the source IP address must be also changed over time and randomized. The change of the identifiers of a source UE must be synchronized across layers used for PC5, e.g. when application layer identifier changes, the source Layer-2 ID and the source IP address need to be changed.

The UE is configured with the destination Layer-2 ID(s) to be used for V2X services. The Layer-2 ID for a V2X message is selected based on the configuration as described in clause 4.4.1.1.

[TS 23.285, clause 5.3]

To perform V2X communication over PC5 reference point, the UE is configured with the related information as described in clause 4.4.1.1.

The procedure for one-to-many ProSe Direct Communication transmission described in clause 5.4.2 of TS 23.303 [5] is applied to V2X communication over PC5 reference point with following differences:

- The source Layer-2 ID is set to the Layer-2 ID described in clause 4.5.1.
- A UE shall be configured with a set of Layer-2 ID corresponding to different type of services.

The procedure for one-to-many ProSe Direct Communication reception described in clause 5.4.3 of TS 23.303 [5] is applied to V2X communication over PC5 reference point.

[TS 36.331, clause 5.2.2.4]

1> if the UE is capable of V2X sidelink communication and is configured by upper layers to receive or transmit V2X sidelink communication on a frequency:

2> if the cell used for V2X sidelink communication meets the S-criteria as defined in TS 36.304 [4]; and

2> if *schedulingInfoList* on the concerned frequency indicates that *SystemInformationBlockType21* is present and the UE does not have stored a valid version of this system information block:

3> acquire *SystemInformationBlockType21*;

[TS 36.331, clause 5.2.2.28]

Upon receiving *SystemInformationBlockType21*, the UE shall:

1> if *SystemInformationBlockType21* message includes *sl-V2X-ConfigCommon*:

2> if configured to receive V2X sidelink communication:

3> use the resource pool indicated by *v2x-CommRxPool* in *sl-V2X-ConfigCommon* for V2X sidelink communication monitoring, as specified in 5.10.12;

2> if configured to transmit V2X sidelink communication:

3> use the resource pool indicated by *v2x-CommTxPoolNormalCommon* or by *v2x-CommTxPoolExceptional* for V2X sidelink communication transmission, as specified in 5.10.13;

[TS 36.331, clause 5.3.5.3]

If the *RRCConnectionReconfiguration* message does not include the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

…

1> if the *RRCConnectionReconfiguration* message includes the *sl-V2X-ConfigDedicated*:

2> perform the V2X sidelink communication dedicated configuration procedure as specified in 5.3.10.15a;

…

[TS 36.331, clause 5.3.5.4]

If the *RRCConnectionReconfiguration* message includes the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

…

1> if the *RRCConnectionReconfiguration* message includes the *sl-V2X-ConfigDedicated* or *mobilityControlInfoV2X*:

2> perform the V2X sidelink communication dedicated configuration procedure as specified in 5.3.10.15a;

…

[TS 36.331, clause 5.3.7.5]

The UE shall:

…

1> if *SystemInformationBlockType21* including *sl-V2X-ConfigCommon* is broadcast by the PCell; and the UE transmitted a *SidelinkUEInformation* message indicating a change of V2X sidelink communication related parameters relevant in PCell (i.e. change of *v2x-CommRxInterestedFreq* or *v2x-CommTxResourceReq*) during the last 1 second preceding detection of radio link failure:

2> initiate transmission of the *SidelinkUEInformation* message in accordance with 5.10.2.3;

…

[TS 36.331, clause 5.3.10.15a]

The UE shall:

1> if the *RRCConnectionReconfiguration* message includes the *sl-V2X-ConfigDedicated* or *sl-P2X-ConfigDedicated*:

2> if *commTxResources* is included and set to *setup*:

3> use the resources indicated by *commTxResources* for V2X sidelink communication transmission, as specified in 5.10.13;

3> perform CBR measurement on the transmission resource pool indicated in *sl-V2X-ConfigDedicated* for V2X sidelink communication transmission, as specified in 5.5.3;

2> else if *commTxResources* is included and set to *release*:

3> release the resources allocated for V2X sidelink communication transmission previously configured by *commTxResources*;

2> if *v2x-InterFreqInfoList* is included:

3> use the synchronization configuration and resource configuration parameters for V2X sidelink communication on frequencies included in *v2x-InterFreqInfoList*;

1> if the *RRCConnectionReconfiguration* message includes the *mobilityControlInfoV2X*:

2> if *v2x-CommRxPool* is included:

3> use the resources indicated by *v2x-CommRxPool* for V2X sidelink communication reception, as specified in 5.10.12;

2> if *v2x-CommTxPoolExceptional* is included:

3> use the resources indicated by *v2x-CommTxPoolExceptional* for V2X sidelink communication transmission, as specified in 5.10.13;

[TS 36.331, clause 5.10.1d]

When it is specified that the UE shall perform V2X sidelink communication operation only if the conditions defined in this section are met, the UE shall perform V2X sidelink communication operation only if:

1> if the UE's serving cell is suitable (RRC_IDLE or RRC_CONNECTED); and if either the selected cell on the frequency used for V2X sidelink communication operation belongs to the registered or equivalent PLMN as specified in TS 24.334 [69] or the UE is out of coverage on the frequency used for V2X sidelink communication operation as defined in TS 36.304 [4, 11.4]; or

1> if the UE's serving cell (for RRC_IDLE or RRC_CONNECTED) fulfils the conditions to support V2X sidelink communication in limited service state as specified in TS 23.285 [78, 4.4.8]; and if either the serving cell is on the frequency used for V2X sidelink communication operation or the UE is out of coverage on the frequency used for V2X sidelink communication operation as defined in TS 36.304 [4, 11.4]; or

1> if the UE has no serving cell (RRC_IDLE);

[TS 36.331, clause 5.10.13.1]

A UE capable of V2X sidelink communication that is configured by upper layers to transmit V2X sidelink communication and has related data to be transmitted shall:

1> if the conditions for sidelink operation as defined in 5.10.1d are met:

2> if in coverage on the frequency used for V2X sidelink communication as defined in TS 36.304 [4, 11.4]; or

2> if the frequency used to transmit V2X sidelink communication is included in *v2x-InterFreqInfoList* in *RRCConnectionReconfiguration* or in *v2x-InterFreqInfoList* within *SystemInformationBlockType21*:

3> if the UE is in RRC_CONNECTED and uses the PCell or the frequency included in *v2x-InterFreqInfoList* in *RRCConnectionReconfiguration* for V2X sidelink communication:

4> if the UE is configured, by the current PCell with *commTxResources* set to *scheduled*:

5> if T310 or T311 is running; and if the PCell at which the UE detected physical layer problems or radio link failure broadcasts *SystemInformationBlockType21* including *v2x-CommTxPoolExceptional* in *sl-V2X-ConfigCommon*, or *v2x-CommTxPoolExceptional* is included in *v2x-InterFreqInfoList* for the concerned frequency in *SystemInformationBlockType21* or *RRCConnectionReconfiguration*; or

5> if T301 is running and the cell on which the UE initiated connection re-establishment broadcasts *SystemInformationBlockType21* including *v2x-CommTxPoolExceptional* in *sl-V2X-ConfigCommon*, or *v2x-CommTxPoolExceptional* is included in *v2x-InterFreqInfoList* for the concerned frequency in *SystemInformationBlockType21*; or

5> if T304 is running and the UE is configured with *v2x-CommTxPoolExceptional* included in *mobilityControlInfoV2X* in *RRCConnectionReconfiguration* or in *v2x-InterFreqInfoList* for the concerned frequency in *RRCConnectionReconfiguration*:

6> configure lower layers to transmit the sidelink control information and the corresponding data based on random selection using the pool of resources indicated by *v2x-CommTxPoolExceptional* as defined in TS 36.321 [6];

5> else:

6> configure lower layers to request E-UTRAN to assign transmission resources for V2X sidelink communication;

4> else if the UE is configured with *v2x-commTxPoolNormalDedicated* or *v2x-CommTxPoolNormal* in the entry of *v2x-InterFreqInfoList* for the concerned frequency in *sl-V2X-ConfigDedicated* in *RRCConnectionReconfiguration* and the UE is configured to transmit non-P2X related V2X sidelink communication:

5> if a result of sensing on the resources configured in *v2x-CommTxPoolNormalDedicated* or *v2x-CommTxPoolNormal* in the entry of *v2x-InterFreqInfoList* for the concerned frequency in *RRCConnectionReconfiguration* is not available in accordance with TS 36.213 [23]:

6> if *v2x-CommTxPoolExceptional* is included in *mobilityControlInfoV2X* in *RRCConnectionReconfiguration* (i.e., handover case); or

6> if *v2x-CommTxPoolExceptional* is included in the entry of *v2x-InterFreqInfoList* for the concerned frequency in *RRCConnectionReconfiguration*; or

6> if the PCell broadcasts *SystemInformationBlockType21* including *v2x-CommTxPoolExceptional* in *sl-V2X-ConfigCommon*:

7> configure lower layers to transmit the sidelink control information and the corresponding data based on random selection using the pool of resources indicated by *v2x-CommTxPoolExceptional* as defined in TS 36.321 [6];

5> else:

6> configure lower layers to transmit the sidelink control information and the corresponding data based on sensing (as defined in TS 36.321 [6] and TS 36.213 [23]) using one of the resource pools indicated by *v2x-commTxPoolNormalDedicated* or *v2x-CommTxPoolNormal* in the entry of *v2x-InterFreqInfoList* for the concerned frequency, which is selected according to 5.10.13.2;

4> else if the UE is configured with *v2x-commTxPoolNormalDedicated* in *sl-P2X-ConfigDedicated* or *p2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* in *RRCConnectionReconfiguration* and the UE is configured to transmit P2X related V2X sidelink communication:

5> select a resource pool according to 5.10.13.2;

5> transmit P2X related V2X sidelink communication according to 5.10.13.1a;

3> else:

4> if the cell chosen for V2X sidelink communication transmission broadcasts *SystemInformationBlockType21*:

5> if the UE is configured to transmit non-P2X related V2X sidelink communication, and if *SystemInformationBlockType21* includes *v2x-CommTxPoolNormalCommon* or *v2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* for the concerned frequency in *sl-V2X-ConfigCommon* and a result of sensing on the resources configured in *v2x-CommTxPoolNormalCommon* or *v2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* for the concerned frequency is available in accordance with TS 36.213 [23]:

6> configure lower layers to transmit the sidelink control information and the corresponding data based on sensing (as defined in TS 36.321 [6] and TS 36.213 [23]) using one of the resource pools indicated by *v2x-CommTxPoolNormalCommon* or *v2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* for the concerned frequency, which is selected according to 5.10.13.2;

5> if the UE is configured to transmit P2X related V2X sidelink communication, and if *SystemInformationBlockType21* includes *p2x-CommTxPoolNormalCommon* or *p2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* for the concerned frequency in *sl-V2X-ConfigCommon*:

6> select a resource pool from *p2x-CommTxPoolNormalCommon* or *p2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* for the concerned frequency according to 5.10.13.2 by ignoring *zoneConfig* in *SystemInformationBlockType21*;

6> transmit P2X related V2X sidelink communication according to 5.10.13.1a;

5> else if *SystemInformationBlockType21* includes *v2x-CommTxPoolExceptional* in *sl-V2X-ConfigCommon*:

6> from the moment the UE initiates connection establishment until receiving an *RRCConnectionReconfiguration* including *sl-V2X-ConfigDedicated* or *sl-P2X-ConfigDedicated*, until receiving an *RRCConnectionRelease* or an *RRCConnectionReject*, or until a result of sensing on the resources configured in *v2x-CommTxPoolNormalCommon*, if configured, becomes available in accordance with TS 36.213 [23]:

7> configure lower layers to transmit the sidelink control information and the corresponding data based on random selection (as defined in TS 36.321 [6]) using the pool of resources indicated in *v2x-CommTxPoolExceptional*;

2> else:

3> configure lower layers to transmit the sidelink control information and the corresponding data based on sensing (as defined in TS 36.321 [6] and TS 36.213 [23]) using one of the resource pools indicated by *v2x-CommTxPoolList* in *SL-V2X-Preconfiguration* in case of non-P2X related V2X sidelink communication, which is selected according to 5.10.13.2, or using one of the resource pools indicated by *p2x-CommTxPoolList* in *SL-V2X-Preconfiguration* in case of P2X related V2X sidelink communication, which is selected according to 5.10.13.2, and in accordance with the timing of the selected reference as defined in 5.10.8;

The UE capable of non-P2X related V2X sidelink communication that is configured by upper layers to transmit V2X sidelink communication shall perform sensing on all pools of resources which may be used for transmission of the sidelink control information and the corresponding data. The pools of resources are indicated by *SL-V2X-Preconfiguration*, *v2x-CommTxPoolNormalCommon*, or *v2x-commTxPoolNormalDedicated* in *sl-V2X-ConfigDedicated*, as configured above.

NOTE 1: If there are multiple frequencies for which normal or exceptional pools are configured, it is up to UE implementation which frequency is selected for V2X sidelink communication transmission in normal or exceptional cases.

24.1.5.3 Test description

24.1.5.3.1 Pre-test conditions

System Simulator:

SS-NW

- Cell 1

Table 24.1.5.3.1-1: Cell parameters values

Cell	Frequency	PLMN
1	f1	HPLMN (PLMN1)
2	f1	PLMN1
Note 1: The Frequency f1 shall be the anchor frequency pre-configured in the UE/USIM.		

- System information combination 29 as defined in TS 36.508 [18] clause 4.4.3.1 is used in Cell 1 and Cell 2.

SS-UE

- SS-UE1. As defined in TS 36.508 [18], configured for and operating as V2X Sidelink Communication receiving device on the resources which the UE is expected to use for transmission, as defined in TS 36.508 [18] clause 6.2.3.5.

UE:

- V2X sidelink related configuration
  - The UE is authorised to perform V2X Sidelink Communication
- The UE is equipped with below information in UE or in a USIM containing default values (as per TS 36.508 [18]) except for those listed in Table 24.1.5.3.1-1.

Table 24.1.5.3.1-1: UE/ USIM configuration

USIM field	Priority	Value	Access Technology Identifier
EF_{UST}		Service n°119 (V2X) supported	
EF_{VST}		As per TS 36.508 [18] clause 4.9.3.4	
EF_{V2X_CONFIG}		*SL-V2X-Preconfiguration* field as defined in Table 24.1.5.3.3-1	

Preamble:

- The UE is in Generic Radio Bearer Establishment, UE Test Mode Activated (State 3A) on Cell 1 according to TS 36.508 [18].

24.1.5.3.2 Test procedure sequence

Table 24.1.5.3.2-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" ... "Tn" are to be applied subsequently. The exact instants on which these values shall be applied are described elsewhere in the present clause.

Table 24.1.5.3.2-1: Time instances of cell power level and parameter changes

	Parameter	Unit	Cell 1	Cell 2
T0	Cell-specific RS EPRE	dBm/15kHz	-79	-85
T1	Cell-specific RS EPRE	dBm/15kHz	“Off”	-85

Table 24.1.5.3.2-2: Main behaviour

24.1.6 V2X Sidelink Communication / Pre-configured authorisation / UE in RRC_CONNECTED on an E-UTRAN cell operating on the anchor carrier frequency provisioned for V2X configuration / Utilisation of the resources of (serving) cells/PLMNs / Transmission / RRC connection reconfiguration with/without *v2x-CommTxPoolExceptional* in *mobilityControlInfoV2X* / Handover

24.1.6.1 Test Purpose (TP)

(1)

```
with { UE being authorized for performing V2X sidelink Communication in PLMN1 and pre-configured
with anchor carrier parameters for V2X configuration and with Radio parameters for when the UE is
"not served by E-UTRAN", and, UE is in RRC_CONNECTED on Cell 1/f1/PLMN1 which is operating on the
anchor carrier frequency as the one pre-configured in the UE/USIM and is broadcasting
SystemInformationBlockType21, and, UE having sent a SidelinkUEInformation message requesting sidelink
communication transmission resources on Cell 1/f1/PLMN1 }
ensure that {
```

when { UE receives *RRCConnectionReconfiguration* message which includes *mobilityControlInfo* (handover) less than 1 sec after the UE transmitted the *SidelinkUEInformation* message, **and**, MAC successfully completes the random access procedure to the targeted PCell Cell 2/f1/PLMN1 }
then { UE is able to send a *SidelinkUEInformation* message requesting V2X sidelink communication transmission resources on Cell 2/f1/PLMN1 and transmit V2X sidelink communication using the configured resources in Cell 2/f1/PLMN1 (*v2x-InterFreqInfoList* is included and resources provided in *v2x-InterFreqInfoList*)}
}

(2)

with { UE being authorized for performing V2X sidelink Communication in PLMN1 and pre-configured with anchor carrier parameters for V2X configuration and with Radio parameters for when the UE is "not served by E-UTRAN", **and**, UE is in RRC_CONNECTED on Cell 1/f1/PLMN1 which is operating on the anchor carrier frequency as the one pre-configured in the UE/USIM and is broadcasting *SystemInformationBlockType21*, **and**, UE transmitting and receiving V2X sidelink communication using the configured resources in Cell 1/f1/PLMN1 }
ensure that {
when { UE receives *RRCConnectionReconfiguration* message which includes *mobilityControlInfo* (handover), **and**, *v2x-CommTxPoolExceptional* is included in *mobilityControlInfoV2X* }
then { UE is able to transmit V2X sidelink communication using the resources configured by *v2x-CommTxPoolExceptional* included in *mobilityControlInfoV2X* }

(3)

with { UE being authorized for performing V2X sidelink Communication in PLMN1 and pre-configured with anchor carrier parameters for V2X configuration and with Radio parameters for when the UE is "not served by E-UTRAN", **and**, UE is in RRC_CONNECTED on Cell 2/f1/PLMN1 which is operating on the anchor carrier frequency as the one pre-configured in the UE/USIM and is broadcasting *SystemInformationBlockType21*, **and**, UE having successfully completed V2X Sidelink UE information procedure requesting V2X sidelink communication transmission resources and transmitting V2X sidelink communication }
ensure that {
when { UE receives *RRCConnectionReconfiguration* message including *mobilityControlInfo*, **and**, *v2x-CommTxPoolExceptional* is not included in *mobilityControlInfoV2X* }
then { UE does not transmit V2X sidelink communication over the PC5 before receiving configuration from the target cell }
}

24.1.6.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.3.5.4, 5.3.10.15a, 5.10.13.1.

[TS 36.331, clause 5.3.5.4]

If the *RRCConnectionReconfiguration* message includes the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

1> stop timer T310, if running;

1> stop timer T312, if running;

1> start timer T304 with the timer value set to *t304*, as included in the *mobilityControlInfo*;

1> stop timer T370, if running;

1> if the *carrierFreq* is included:

2> consider the target PCell to be one on the frequency indicated by the *carrierFreq* with a physical cell identity indicated by the *targetPhysCellId*;

1> else:

2> consider the target PCell to be one on the frequency of the source PCell with a physical cell identity indicated by the *targetPhysCellId*;

1> start synchronising to the DL of the target PCell;

NOTE 1: The UE should perform the handover as soon as possible following the reception of the RRC message triggering the handover, which could be before confirming successful reception (HARQ and ARQ) of this message.

…

1> if the *RRCConnectionReconfiguration* message includes the *sl-V2X-ConfigDedicated* or *mobilityControlInfoV2X*:

2> perform the V2X sidelink communication dedicated configuration procedure as specified in 5.3.10.15a;

1> set the content of *RRCConnectionReconfigurationComplete* message as follows:

2> if the UE has radio link failure or handover failure information available in *VarRLF-Report* and if the RPLMN is included in *plmn-IdentityList* stored in *VarRLF-Report*:

3> include *rlf-InfoAvailable*;

…

1> submit the *RRCConnectionReconfigurationComplete* message to lower layers for transmission;

1> if MAC successfully completes the random access procedure; or

1> if MAC indicates the successful reception of a PDCCH transmission addressed to C-RNTI and if *rach-Skip* is configured:

2> stop timer T304;

2> release *ul-ConfigInfo*, if configured;

…

2> if *SystemInformationBlockType21* is broadcast by the target PCell; and the UE transmitted a *SidelinkUEInformation* message indicating a change of V2X sidelink communication related parameters relevant in target PCell (i.e. change of *v2x-CommRxInterestedFreqList* or *v2x-CommTxResourceReq*) during the last 1 second preceding reception of the *RRCConnectionReconfiguration message* including *mobilityControlInfo*:

3> initiate transmission of the *SidelinkUEInformation* message in accordance with 5.10.2.3;

2> the procedure ends;

[TS 36.331, clause 5.3.10.15a]

The UE shall:

1> if the *RRCConnectionReconfiguration* message includes the *sl-V2X-ConfigDedicated*:

2> if *commTxResources* is included and set to *setup*:

3> use the resources indicated by *commTxResources* for V2X sidelink communication transmission, as specified in 5.10.13;

3> perform CBR measurement on the transmission resource pool indicated in *commTxResources* for V2X sidelink communication transmission, as specified in 5.5.3;

2> else if *commTxResources* is included and set to *release*:

3> release the resources allocated for V2X sidelink communication transmission previously configured by *commTxResources*;

2> if *v2x-InterFreqInfoList* is included:

3> use the synchronization configuration and resource configuration parameters for V2X sidelink communication on frequencies included in *v2x-InterFreqInfoList*, as specified in 5.10.13;

3> perform CBR measurement on the transmission resource pool indicated in *v2x-InterFreqInfoList* for V2X sidelink communication transmission, as specified in 5.5.3;

1> if the *RRCConnectionReconfiguration* message includes the *mobilityControlInfoV2X*:

2> if *v2x-CommRxPool* is included:

3> use the resources indicated by *v2x-CommRxPool* for V2X sidelink communication reception, as specified in 5.10.12;

2> if *v2x-CommTxPoolExceptional* is included:

3> use the resources indicated by *v2x-CommTxPoolExceptional* for V2X sidelink communication transmission, as specified in 5.10.13;

3> perform CBR measurement on the transmission resource pool indicated by *v2x-CommTxPoolExceptional* for V2X sidelink communication transmission, as specified in 5.5.3;

[TS 36.331, clause 5.10.13.1]

A UE capable of V2X sidelink communication that is configured by upper layers to transmit V2X sidelink communication and has related data to be transmitted shall:

1> if the conditions for sidelink operation as defined in 5.10.1d are met:

2> if in coverage on the frequency used for V2X sidelink communication as defined in TS 36.304 [4, 11.4]; or

2> if the frequency used to transmit V2X sidelink communication is included in *v2x-InterFreqInfoList* in *RRCConnectionReconfiguration* or in *v2x-InterFreqInfoList* within *SystemInformationBlockType21*:

3> if the UE is in RRC_CONNECTED and uses the PCell or the frequency included in *v2x-InterFreqInfoList* in *RRCConnectionReconfiguration* for V2X sidelink communication:

4> if the UE is configured, by the current PCell with *commTxResources* set to *scheduled*:

5> if T310 or T311 is running; and if the PCell at which the UE detected physical layer problems or radio link failure broadcasts *SystemInformationBlockType21* including *v2x-CommTxPoolExceptional* in *sl-V2X-ConfigCommon*, or *v2x-CommTxPoolExceptional* is included in *v2x-InterFreqInfoList* for the concerned frequency in *SystemInformationBlockType21* or *RRCConnectionReconfiguration*; or

5> if T301 is running and the cell on which the UE initiated connection re-establishment broadcasts *SystemInformationBlockType21* including *v2x-CommTxPoolExceptional* in *sl-V2X-ConfigCommon*, or *v2x-CommTxPoolExceptional* is included in *v2x-InterFreqInfoList* for the concerned frequency in *SystemInformationBlockType21*; or

5> if T304 is running and the UE is configured with *v2x-CommTxPoolExceptional* included in *mobilityControlInfoV2X* in *RRCConnectionReconfiguration* or in *v2x-InterFreqInfoList* for the concerned frequency in *RRCConnectionReconfiguration*:

6> configure lower layers to transmit the sidelink control information and the corresponding data based on random selection using the pool of resources indicated by *v2x-CommTxPoolExceptional* as defined in TS 36.321 [6];

5> else:

6> configure lower layers to request E-UTRAN to assign transmission resources for V2X sidelink communication;

4> else if the UE is configured with *v2x-commTxPoolNormalDedicated* or *v2x-CommTxPoolNormal* in the entry of *v2x-InterFreqInfoList* for the concerned frequency in *sl-V2X-ConfigDedicated* in *RRCConnectionReconfiguration* and the UE is configured to transmit non-P2X related V2X sidelink communication:

5> if a result of sensing on the resources configured in *v2x-CommTxPoolNormalDedicated* or *v2x-CommTxPoolNormal* in the entry of *v2x-InterFreqInfoList* for the concerned frequency in *RRCConnectionReconfiguration* is not available in accordance with TS 36.213 [23]:

6> if *v2x-CommTxPoolExceptional* is included in *mobilityControlInfoV2X* in *RRCConnectionReconfiguration* (i.e., handover case); or

6> if *v2x-CommTxPoolExceptional* is included in the entry of *v2x-InterFreqInfoList* for the concerned frequency in *RRCConnectionReconfiguration*; or

6> if the PCell broadcasts *SystemInformationBlockType21* including *v2x-CommTxPoolExceptional* in *sl-V2X-ConfigCommon* or *v2x-CommTxPoolExceptional* in *v2x-InterFreqInfoList* for the concerned frequency:

7> configure lower layers to transmit the sidelink control information and the corresponding data based on random selection using the pool of resources indicated by *v2x-CommTxPoolExceptional* as defined in TS 36.321 [6];

5> else:

6> configure lower layers to transmit the sidelink control information and the corresponding data based on sensing (as defined in TS 36.321 [6] and TS 36.213 [23]) using one of the resource pools indicated by *v2x-commTxPoolNormalDedicated* or *v2x-CommTxPoolNormal* in the entry of *v2x-InterFreqInfoList* for the concerned frequency, which is selected according to 5.10.13.2;

4> else if the UE is configured with *v2x-commTxPoolNormalDedicated* in *sl-P2X-ConfigDedicated* or *p2x-CommTxPoolNormal* in the entry of *v2x-InterFreqInfoList* for the concerned frequency in *RRCConnectionReconfiguration* and the UE is configured to transmit P2X related V2X sidelink communication:

5> select a resource pool according to 5.10.13.2;

5> transmit P2X related V2X sidelink communication according to 5.10.13.1a;

3> else:

4> if the cell chosen for V2X sidelink communication transmission broadcasts *SystemInformationBlockType21*:

5> if the UE is configured to transmit non-P2X related V2X sidelink communication, and if *SystemInformationBlockType21* includes *v2x-CommTxPoolNormalCommon* or *v2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* for the concerned frequency in *sl-V2X-ConfigCommon* and a result of sensing on the resources configured in *v2x-CommTxPoolNormalCommon* or *v2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* for the concerned frequency is available in accordance with TS 36.213 [23]:

6> configure lower layers to transmit the sidelink control information and the corresponding data based on sensing (as defined in TS 36.321 [6] and TS 36.213 [23]) using one of the resource pools indicated by *v2x-CommTxPoolNormalCommon* or *v2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* for the concerned frequency, which is selected according to 5.10.13.2;

5> if the UE is configured to transmit P2X related V2X sidelink communication, and if *SystemInformationBlockType21* includes *p2x-CommTxPoolNormalCommon* or *p2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* for the concerned frequency in *sl-V2X-ConfigCommon*:

6> select a resource pool from *p2x-CommTxPoolNormalCommon* or *p2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* for the concerned frequency according to 5.10.13.2 by ignoring *zoneConfig* in *SystemInformationBlockType21*;

6> transmit P2X related V2X sidelink communication according to 5.10.13.1a;

5> else if *SystemInformationBlockType21* includes *v2x-CommTxPoolExceptional* in *sl-V2X-ConfigCommon* or *v2x-CommTxPoolExceptional* in *v2x-InterFreqInfoList* for the concerned frequency:

6> from the moment the UE initiates connection establishment until receiving an *RRCConnectionReconfiguration* including *sl-V2X-ConfigDedicated* , or until receiving an *RRCConnectionRelease* or an *RRCConnectionReject;* or

6> if the UE is in RRC_IDLE and a result of sensing on the resources configured in *v2x-CommTxPoolNormalCommon* or *v2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* for the concerned frequency in *Systeminformationblocktype21* is not available in accordance with TS 36.213 [23]:

7> configure lower layers to transmit the sidelink control information and the corresponding data based on random selection (as defined in TS 36.321 [6]) using the pool of resources indicated in *v2x-CommTxPoolExceptional*;

2> else:

3> configure lower layers to transmit the sidelink control information and the corresponding data based on sensing (as defined in TS 36.321 [6] and TS 36.213 [23]) using one of the resource pools indicated by *v2x-CommTxPoolList* in *SL-V2X-Preconfiguration* in case of non-P2X related V2X sidelink communication, which is selected according to 5.10.13.2, or using one of the resource pools indicated by *p2x-CommTxPoolList* in *SL-V2X-Preconfiguration* in case of P2X related V2X sidelink communication, which is selected according to 5.10.13.2, and in accordance with the timing of the selected reference as defined in 5.10.8;

The UE capable of non-P2X related V2X sidelink communication that is configured by upper layers to transmit V2X sidelink communication shall perform sensing on all pools of resources which may be used for transmission of the sidelink control information and the corresponding data. The pools of resources are indicated by *SL-V2X-Preconfiguration*, *v2x-CommTxPoolNormalCommon*, *v2x-CommTxPoolNormalDedicated* in *sl-V2X-ConfigDedicated*, or *v2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* for the concerned frequency, as configured above.

24.1.6.3 Test description

24.1.6.3.1 Pre-test conditions

System Simulator:

SS-NW

- 2 cells with parameters defined in Table 24.1.6.3.1-1.

NOTE: Void

Table 24.1.6.3.1-1: Cell parameters values

Cell	Frequency	PLMN
1	f1	HPLMN (PLMN1)
2	f1	PLMN1
Note 1: The frequency f1 shall be the anchor frequency pre-configured in the UE/USIM. Note 2: A single frequency has been chosen to allow the TC to be applicable even for UEs supporting a single band which comprises a single frequency.		

- System information combination 29 as defined in TS 36.508 [18] clause 4.4.3.1 is used in all active cells.

SS-UE

- SS-UE1. As defined in TS 36.508 [18], configured for and operating as V2X Sidelink Communication receiving device on the resources which the UE is expected to use for transmission, as defined in TS 36.508 [18] clause 6.2.3.5.

UE:

- V2X sidelink related configuration

- The UE is authorised to perform V2X Sidelink Communication.

- The UE is equipped with below information in UE or in a USIM containing default values (as per TS 36.508 [18]) except for those listed in Table 24.1.6.3.1-2.

Table 24.1.6.3.1-2: UE/ USIM configuration

USIM field	Priority	Value	Access Technology Identifier
EF_{UST}		Service n°119 (V2X) supported	
EF_{VST}		As per TS 36.508 [18] clause 4.9.3.4	
EF_{V2X_CONFIG}		*SL-V2X-Preconfiguration* field as defined in Table 24.1.6.3.3-4	

Preamble:

- The UE is in State Generic Radio Bearer Establishment, UE Test Mode Activated (State 3A) on Cell 1 according to TS 36.508 [18].

24.1.6.3.2 Test procedure sequence

Table 24.1.6.3.2-0 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" ... "Tn" are to be applied subsequently. The exact instants on which these values shall be applied are described elsewhere in the present clause.

Table 24.1.6.3.2-0: Time instances of cell power level and parameter changes

	Parameter	Unit	Cell 1	Cell 2
T0	Cell-specific RS EPRE	dBm/15k Hz	-79	-95
T1	Cell-specific RS EPRE	dBm/15k Hz	-85	-79
T2	Cell-specific RS EPRE	dBm/15k Hz	-79	-85

Table 24.1.6.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
0	The SS configures: SS-NW - Cell 1 transmits SystemInformationBlockType21 neither including *v2x-CommTxPoolNormalCommon* nor *v2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* (i.e. V2X sidelink communication supported by the network, no common resources provided yet).	-	-	-	-
-	EXCEPTION: The following events unless otherwise stated are to be observed in Cell 1.	-	-	-	-
1	Close UE Test Loop with bit E0 in UE test loop mode E LB setup IE set to one (transmission mode).	<--	CLOSE UE TEST LOOP	-	-
2	The UE responds with CLOSE UE TEST LOOP COMPLETE.	-->	CLOSE UE TEST LOOP COMPLETE	-	-
3	UE transmit a *SidelinkUEInformation* message requesting resources for transmission of V2X sidelink communication in RRC_CONNECTED in the next 5 sec.	-->	*SidelinkUEInformation*	-	-
4	SS-NW transmits a *RRCConnectionReconfiguration* message assigning V2X sidelink communication transmission resources for	<--	*RRCConnectionReconfiguration*	-	-

	RRC_CONNECTED (*v2x-InterFreqInfoList* is included and resources provided in *v2x-InterFreqInfoList*).				
5	The UE submits RRCConnectionReconfigurationComplete message to confirm acceptance of the new configuration.	-->	*RRCConnectionReconfigurationComplete*	-	-
6	UE transmits one STCH PDCP SDU packet of V2X sidelink communication data over the PC5 interface in accordance with the resources indicated in the *RRCConnectionReconfiguration*.	-->	*STCH PDCP SDU packet*	-	-
7	The SS configures: SS-NW Cell 1 and Cell 2 parameters according to the row "T1" in table 24.1.6.3.2-0 in order to simulate needs for handover.	-	-	-	-
8	SS-NW transmits an *RRCConnectionReconfiguration* message including *mobilityControlInfo* (handover), and *v2x-CommTxPoolExceptional* is included in *mobilityControlInfoV2X*. NOTE: To achieve the TP this message shall be sent less than 1 sec after the message in step 3.	<--	*RRCConnectionReconfiguration*	-	-
-	EXCEPTION: The following events unless otherwise stated are to be observed in Cell 2.	-	-	-	-
9	Check: Does the UE transmit in the next 60 sec one STCH PDCP SDU packet of V2X sidelink communication data over the PC5 interface in accordance with the resources indicated in *v2x-CommTxPoolExceptional* included in *mobilityControlInfoV2X* in the *RRCConnectionReconfiguration*? NOTE 1: The UE may send multiple packets. The reception of one of them is sufficient for achieving the Pass verdict. NOTE 2: The structure of the data is not checked and it is just considered as octetstrings by the SS. NOTE 3: If the UE does not send this STCH PDCP SDU packet at this moment, but send it after step 10 or step 11, it is also sufficient for achieving the Pass verdict.	-->	*STCH PDCP SDU packet*	2	P

24.1.7 V2X Sidelink Communication / Pre-configured authorisation / UE in RRC_CONNECTED on an E-UTRAN cell operating on the anchor carrier frequency provisioned for V2X configuration / Utilisation of the resources of (serving) cells/PLMNs / reception / RRC connection reconfiguration with *v2x-CommRxPool* in mobilityControlInfoV2X / handover

24.1.7.1 Test Purpose (TP)

(1)

with { UE being authorized for performing V2X sidelink Communication in PLMN1 and pre-configured with anchor carrier parameters for V2X configuration and with Radio parameters for when the UE is "not served by E-UTRAN", **and**, UE is in RRC_CONNECTED on Cell 1/f1/PLMN1 which is operating on the anchor carrier frequency as the one pre-configured in the UE/USIM and is broadcasting *SystemInformationBlockType21*}
ensure that {

```
  when { UE receives RRCConnectionReconfiguration message which includes mobilityControlInfo
(handover), and, v2x-CommRxPool is included in mobilityControlInfoV2X }
    then { UE is able to receive V2X sidelink communication using the configured resources in by
v2x-CommRxPool included in mobilityControlInfoV2X in Cell 2/f1/PLMN1}
}
```

24.1.7.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.3.5.4, 5.3.10.15a, 5.10.12, 5.10.13.1.

[TS 36.331, clause 5.3.5.4]

If the *RRCConnectionReconfiguration* message includes the *mobilityControlInfo* and the UE is able to comply with the configuration included in this message, the UE shall:

1> stop timer T310, if running;

1> stop timer T312, if running;

1> start timer T304 with the timer value set to *t304*, as included in the *mobilityControlInfo*;

1> stop timer T370, if running;

1> if the *carrierFreq* is included:

2> consider the target PCell to be one on the frequency indicated by the *carrierFreq* with a physical cell identity indicated by the *targetPhysCellId*;

1> else:

2> consider the target PCell to be one on the frequency of the source PCell with a physical cell identity indicated by the *targetPhysCellId*;

1> start synchronising to the DL of the target PCell;

NOTE 1: The UE should perform the handover as soon as possible following the reception of the RRC message triggering the handover, which could be before confirming successful reception (HARQ and ARQ) of this message.

…

1> if the *RRCConnectionReconfiguration* message includes the *sl-V2X-ConfigDedicated* or *mobilityControlInfoV2X*:

2> perform the V2X sidelink communication dedicated configuration procedure as specified in 5.3.10.15a;

1> set the content of *RRCConnectionReconfigurationComplete* message as follows:

2> if the UE has radio link failure or handover failure information available in *VarRLF-Report* and if the RPLMN is included in *plmn-IdentityList* stored in *VarRLF-Report*:

3> include *rlf-InfoAvailable*;

…

1> submit the *RRCConnectionReconfigurationComplete* message to lower layers for transmission;

1> if MAC successfully completes the random access procedure; or

1> if MAC indicates the successful reception of a PDCCH transmission addressed to C-RNTI and if *rach-Skip* is configured:

2> stop timer T304;

2> release *ul-ConfigInfo*, if configured;

…

2> if *SystemInformationBlockType21* is broadcast by the target PCell; and the UE transmitted a *SidelinkUEInformation* message indicating a change of V2X sidelink communication related parameters relevant in target PCell (i.e. change of *v2x-CommRxInterestedFreqList* or *v2x-CommTxResourceReq*) during the last 1 second preceding reception of the *RRCConnectionReconfiguration message* including *mobilityControlInfo*:

3> initiate transmission of the *SidelinkUEInformation* message in accordance with 5.10.2.3;

2> the procedure ends;

[TS 36.331, clause 5.3.10.15a]

The UE shall:

1> if the *RRCConnectionReconfiguration* message includes the *sl-V2X-ConfigDedicated*:

2> if *commTxResources* is included and set to *setup*:

3> use the resources indicated by *commTxResources* for V2X sidelink communication transmission, as specified in 5.10.13;

3> perform CBR measurement on the transmission resource pool indicated in *commTxResources* for V2X sidelink communication transmission, as specified in 5.5.3;

2> else if *commTxResources* is included and set to *release*:

3> release the resources allocated for V2X sidelink communication transmission previously configured by *commTxResources*;

2> if *v2x-InterFreqInfoList* is included:

3> use the synchronization configuration and resource configuration parameters for V2X sidelink communication on frequencies included in *v2x-InterFreqInfoList*, as specified in 5.10.13;

3> perform CBR measurement on the transmission resource pool indicated in *v2x-InterFreqInfoList* for V2X sidelink communication transmission, as specified in 5.5.3;

1> if the *RRCConnectionReconfiguration* message includes the *mobilityControlInfoV2X*:

2> if *v2x-CommRxPool* is included:

3> use the resources indicated by *v2x-CommRxPool* for V2X sidelink communication reception, as specified in 5.10.12;

2> if *v2x-CommTxPoolExceptional* is included:

3> use the resources indicated by *v2x-CommTxPoolExceptional* for V2X sidelink communication transmission, as specified in 5.10.13;

3> perform CBR measurement on the transmission resource pool indicated by *v2x-CommTxPoolExceptional* for V2X sidelink communication transmission, as specified in 5.5.3;

[TS 36.331, clause 5.10.12]

A UE capable of V2X sidelink communication that is configured by upper layers to receive V2X sidelink communication shall:

1> if the conditions for sidelink operation as defined in 5.10.1d are met:

2> if in coverage on the frequency used for V2X sidelink communication, as defined in TS 36.304 [4, 11.4]:

3> if the frequency used to receive V2X sidelink communication is included in *v2x-InterFreqInfoList* within *RRCConnectionReconfiguration* or in *v2x-InterFreqInfoList* within *SystemInformationBlockType21*of the serving cell/Pcell, and *v2x-CommRxPool* is included in *SL-V2X-InterFreqUE-Config* within *v2x-UE-ConfigList*:

4> configure lower layers to monitor sidelink control information and the corresponding data using the pool of resources indicated in *v2x-CommRxPool*;

3> else:

4> if the cell chosen for V2X sidelink communication reception broadcasts *SystemInformationBlockType21* including *v2x-CommRxPool* in *sl-V2X-ConfigCommon* or,

4> if the UE is configured with v2x-CommRxPool included in mobilityControlInfoV2X in RRCConnectionReconfiguration:

5> configure lower layers to monitor sidelink control information and the corresponding data using the pool of resources indicated in *v2x-CommRxPool*;

2> else (i.e. out of coverage on the frequency used for V2X sidelink communication, as defined in TS 36.304 [4, clause 11.4]):

3> if the frequency used to receive V2X sidelink communication is included in *v2x-InterFreqInfoList* within *RRCConnectionReconfiguration* or in *v2x-InterFreqInfoList* within *SystemInformationBlockType21* of the serving cell/PCell, and *v2x-CommRxPool* is included in *SL-V2X-InterFreqUE-Config* within *v2x-UE-ConfigList* for the concerned frequency:

4> configure lower layers to monitor sidelink control information and the corresponding data using the pool of resources indicated in *v2x-CommRxPool*;

3> else:

4> configure lower layers to monitor sidelink control information and the corresponding data using the pool of resources that were preconfigured (i.e. v2x-CommRxPoolList in SL-V2X-Preconfiguration defined in 9.3);

[TS 36.331, clause 5.10.13.1]

A UE capable of V2X sidelink communication that is configured by upper layers to transmit V2X sidelink communication and has related data to be transmitted shall:

1> if the conditions for sidelink operation as defined in 5.10.1d are met:

2> if in coverage on the frequency used for V2X sidelink communication as defined in TS 36.304 [4, 11.4]; or

2> if the frequency used to transmit V2X sidelink communication is included in *v2x-InterFreqInfoList* in *RRCConnectionReconfiguration* or in *v2x-InterFreqInfoList* within *SystemInformationBlockType21*:

3> if the UE is in RRC_CONNECTED and uses the PCell or the frequency included in *v2x-InterFreqInfoList* in *RRCConnectionReconfiguration* for V2X sidelink communication:

4> if the UE is configured, by the current PCell with *commTxResources* set to *scheduled*:

5> if T310 or T311 is running; and if the PCell at which the UE detected physical layer problems or radio link failure broadcasts *SystemInformationBlockType21* including *v2x-CommTxPoolExceptional* in *sl-V2X-ConfigCommon*, or *v2x-CommTxPoolExceptional* is included in *v2x-InterFreqInfoList* for the concerned frequency in *SystemInformationBlockType21* or *RRCConnectionReconfiguration*; or

5> if T301 is running and the cell on which the UE initiated connection re-establishment broadcasts *SystemInformationBlockType21* including *v2x-CommTxPoolExceptional* in *sl-V2X-ConfigCommon*, or *v2x-CommTxPoolExceptional* is included in *v2x-InterFreqInfoList* for the concerned frequency in *SystemInformationBlockType21*; or

5> if T304 is running and the UE is configured with *v2x-CommTxPoolExceptional* included in *mobilityControlInfoV2X* in *RRCConnectionReconfiguration* or in *v2x-InterFreqInfoList* for the concerned frequency in *RRCConnectionReconfiguration*:

6> configure lower layers to transmit the sidelink control information and the corresponding data based on random selection using the pool of resources indicated by *v2x-CommTxPoolExceptional* as defined in TS 36.321 [6];

5> else:

6> configure lower layers to request E-UTRAN to assign transmission resources for V2X sidelink communication;

4> else if the UE is configured with *v2x-commTxPoolNormalDedicated* or *v2x-CommTxPoolNormal* in the entry of *v2x-InterFreqInfoList* for the concerned frequency in *sl-V2X-ConfigDedicated* in *RRCConnectionReconfiguration* and the UE is configured to transmit non-P2X related V2X sidelink communication:

5> if a result of sensing on the resources configured in *v2x-CommTxPoolNormalDedicated* or *v2x-CommTxPoolNormal* in the entry of *v2x-InterFreqInfoList* for the concerned frequency in *RRCConnectionReconfiguration* is not available in accordance with TS 36.213 [23]:

6> if *v2x-CommTxPoolExceptional* is included in *mobilityControlInfoV2X* in *RRCConnectionReconfiguration* (i.e., handover case); or

6> if *v2x-CommTxPoolExceptional* is included in the entry of *v2x-InterFreqInfoList* for the concerned frequency in *RRCConnectionReconfiguration*; or

6> if the PCell broadcasts *SystemInformationBlockType21* including *v2x-CommTxPoolExceptional* in *sl-V2X-ConfigCommon* or *v2x-CommTxPoolExceptional* in *v2x-InterFreqInfoList* for the concerned frequency:

7> configure lower layers to transmit the sidelink control information and the corresponding data based on random selection using the pool of resources indicated by *v2x-CommTxPoolExceptional* as defined in TS 36.321 [6];

5> else:

6> configure lower layers to transmit the sidelink control information and the corresponding data based on sensing (as defined in TS 36.321 [6] and TS 36.213 [23]) using one of the resource pools indicated by *v2x-commTxPoolNormalDedicated* or *v2x-CommTxPoolNormal* in the entry of *v2x-InterFreqInfoList* for the concerned frequency, which is selected according to 5.10.13.2;

4> else if the UE is configured with *v2x-commTxPoolNormalDedicated* in *sl-P2X-ConfigDedicated* or *p2x-CommTxPoolNormal* in the entry of *v2x-InterFreqInfoList* for the concerned frequency in *RRCConnectionReconfiguration* and the UE is configured to transmit P2X related V2X sidelink communication:

5> select a resource pool according to 5.10.13.2;

5> transmit P2X related V2X sidelink communication according to 5.10.13.1a;

3> else:

4> if the cell chosen for V2X sidelink communication transmission broadcasts *SystemInformationBlockType21*:

5> if the UE is configured to transmit non-P2X related V2X sidelink communication, and if *SystemInformationBlockType21* includes *v2x-CommTxPoolNormalCommon* or *v2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* for the concerned frequency in *sl-V2X-ConfigCommon* and a result of sensing on the resources configured in *v2x-CommTxPoolNormalCommon* or *v2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* for the concerned frequency is available in accordance with TS 36.213 [23]:

6> configure lower layers to transmit the sidelink control information and the corresponding data based on sensing (as defined in TS 36.321 [6] and TS 36.213 [23]) using one of the resource pools indicated by *v2x-CommTxPoolNormalCommon* or *v2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* for the concerned frequency, which is selected according to 5.10.13.2;

5> if the UE is configured to transmit P2X related V2X sidelink communication, and if *SystemInformationBlockType21* includes *p2x-CommTxPoolNormalCommon* or *p2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* for the concerned frequency in *sl-V2X-ConfigCommon*:

6> select a resource pool from *p2x-CommTxPoolNormalCommon* or *p2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* for the concerned frequency according to 5.10.13.2 by ignoring *zoneConfig* in *SystemInformationBlockType21*;

6> transmit P2X related V2X sidelink communication according to 5.10.13.1a;

5> else if *SystemInformationBlockType21* includes *v2x-CommTxPoolExceptional* in *sl-V2X-ConfigCommon* or *v2x-CommTxPoolExceptional* in *v2x-InterFreqInfoList* for the concerned frequency:

6> from the moment the UE initiates connection establishment until receiving an *RRCConnectionReconfiguration* including *sl-V2X-ConfigDedicated* , or until receiving an *RRCConnectionRelease* or an *RRCConnectionReject;* or

6> if the UE is in RRC_IDLE and a result of sensing on the resources configured in *v2x-CommTxPoolNormalCommon* or *v2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* for the concerned frequency in *Systeminformationblocktype21* is not available in accordance with TS 36.213 [23]:

7> configure lower layers to transmit the sidelink control information and the corresponding data based on random selection (as defined in TS 36.321 [6]) using the pool of resources indicated in *v2x-CommTxPoolExceptional*;

2> else:

3> configure lower layers to transmit the sidelink control information and the corresponding data based on sensing (as defined in TS 36.321 [6] and TS 36.213 [23]) using one of the resource pools indicated by *v2x-CommTxPoolList* in *SL-V2X-Preconfiguration* in case of non-P2X related V2X sidelink communication, which is selected according to 5.10.13.2, or using one of the resource pools indicated by *p2x-CommTxPoolList* in *SL-V2X-Preconfiguration* in case of P2X related V2X sidelink communication, which is selected according to 5.10.13.2, and in accordance with the timing of the selected reference as defined in 5.10.8;

The UE capable of non-P2X related V2X sidelink communication that is configured by upper layers to transmit V2X sidelink communication shall perform sensing on all pools of resources which may be used for transmission of the sidelink control information and the corresponding data. The pools of resources are indicated by *SL-V2X-Preconfiguration*, *v2x-CommTxPoolNormalCommon*, *v2x-CommTxPoolNormalDedicated* in *sl-V2X-ConfigDedicated*, or *v2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* for the concerned frequency, as configured above.

24.1.7.3 Test description

24.1.7.3.1 Pre-test conditions

System Simulator:

SS-NW

- 2 cells with parameters defined in Table 24.1.7.3.1-1.

Table 24.1.7.3.1-1: Cell parameters values

Cell	Frequency	PLMN
1	f1	HPLMN (PLMN1)
2	f1	PLMN1
Note 1: The frequency f1 shall be the anchor frequency pre-configured in the UE/USIM. Note 2: A single frequency has been chosen to allow the TC to be applicable even for UEs supporting a single band which comprises a single frequency.		

- System information combination 29 as defined in TS 36.508 [18] clause 4.4.3.1 is used in all active cells.

- *SystemInformationBlockType21* for Cell 1 using parameters as specified in Table 24.1.7.3.3-1.

SS-UE

- SS-UE1. As defined in TS 36.508 [18], configured for and operating as V2X Sidelink Communication transmitting device on the resources which the UE is expected to use for reception, as defined in TS 36.508 [18] clause 6.2.3.5.

UE:

- V2X sidelink related configuration
  - The UE is authorised to perform V2X Sidelink Communication.
- The UE is equipped with below information in UE or in a USIM containing default values (as per TS 36.508 [18]) except for those listed in Table 24.1.7.3.1-2.

Table 24.1.7.3.1-2: UE/ USIM configuration

USIM field	Priority	Value	Access Technology Identifier
EF_{UST}		Service n°119 (V2X) supported	
EF_{VST}		As per TS 36.508 [18] clause 4.9.3.4	
EF_{V2X_CONFIG}		*SL-V2X-Preconfiguration* field as defined in Table 24.1.7.3.3-4	

Preamble:

- The UE is in State Generic Radio Bearer Establishment, UE Test Mode Activated (State 3A) on Cell 1 according to TS 36.508 [18].

24.1.7.3.2 Test procedure sequence

Table 24.1.7.3.2-0 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" ... "Tn" are to be applied subsequently. The exact instants on which these values shall be applied are described elsewhere in the present clause.

Table 24.1.7.3.2-0: Time instances of cell power level and parameter changes

	Parameter	Unit	Cell 1	Cell 2
T0	Cell-specific RS EPRE	dBm/15kHz	-85	off
T1	Cell-specific RS EPRE	dBm/15kHz	-85	-79

Table 24.1.7.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
	EXCEPTION: The following events unless otherwise stated are to be observed in Cell 1.				
1	Close UE Test Loop with bit E0 in UE test loop mode E LB setup IE set to zero (receive mode).	<--	CLOSE UE TEST LOOP	-	-
2	The UE responds with CLOSE UE TEST LOOP COMPLETE.	**-->**	CLOSE UE TEST LOOP COMPLETE	**-**	**-**
3	UE transmit a *SidelinkUEInformation* message requesting resources for monitoring of V2X sidelink communication in RRC_CONNECTED in the next 5 sec.	-->	*SidelinkUEInformation*	-	-
4	The SS configures: SS-NW Cell 1 and Cell 2 parameters according to the row "T1" in table 24.1.7.3.2-0 in order to simulate needs for handover.	-	-	-	-

5	SS-NW transmits an *RRCConnectionReconfiguration* message including *mobilityControlInfo* (handover), and *v2x-CommRxPool* is included in *mobilityControlInfoV2X*.	<--	*RRCConnectionReconfiguration*	-	-
	EXCEPTION: Step 6 is repeated 3 time and runs in parallel with behaviour in table 24.1.7.3.2-2	-	-	-	-
6	SS-UE1 transmits V2X sidelink communication over the PC5 interface in accordance with the resources indicated in the *RRCConnectionReconfiguration.* NOTE: This step verifies TP1 - it is expected that the UE shall receive these packets - if they were received is checked in step 8.	<--	*STCH PDCP SDU packet*	-	-
7	The SS-NW transmits an UE TEST LOOP PROSE PACKET COUNTER REQUEST message.	<--	UE TEST LOOP PROSE PACKET COUNTER REQUEST	-	-
8	Check: Does the UE respond with UE TEST LOOP PROSE PACKET COUNTER RESPONSE with STCH_PACKET_COUNTER=3?	-->	UE TEST LOOP PROSE PACKET COUNTER RESPONSE	1	P

24.1.8 V2X Sidelink Communication / Pre-configured authorisation / UE camped on an E-UTRAN cell operating on the anchor carrier frequency provisioned for V2X configuration / Utilisation of the resources of cells/PLMNs / Transmission based on zoning

24.1.8.1 Test Purpose (TP)

(1)

```
with { UE being authorized for performing V2X sidelink Communication in PLMN1 and pre-configured
with anchor carrier parameters for V2X configuration and with Radio parameters for when the UE is
"not served by E-UTRAN", and, UE is in RRC_IDLE on Cell1/f1/PLMN1 which is operating on the anchor
carrier frequency as the one pre-configured in the UE/USIM and is broadcasting
SystemInformationBlockType21 indicating the resource based on zoning for V2X sidelink communication}
ensure that {
  when { UE is triggered by an upper layer application to transmit V2X sidelink communication }
   then { UE transmits V2X sidelink communication using the resources in the resource pool which
configured with zoneID equal to the zone identity determined by UE geographical coordinate }
}
```

24.1.8.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.2.2.4, 5.2.2.28, 5.3.5.3, 5.3.10.15a, 5.10.1d, 5.10.2.2, 5.10.13.1, 5.10.13.2. Unless otherwise stated these are Rel-14 requirements.

[TS 36.331, clause 5.10.13.1]

A UE capable of V2X sidelink communication that is configured by upper layers to transmit V2X sidelink communication and has related data to be transmitted shall:

1> if the conditions for sidelink operation as defined in 5.10.1d are met:

2> if in coverage on the frequency used for V2X sidelink communication as defined in TS 36.304 [4, 11.4]; or

2> if the frequency used to transmit V2X sidelink communication is included in *v2x-InterFreqInfoList* in *RRCConnectionReconfiguration* or in *v2x-InterFreqInfoList* within *SystemInformationBlockType21*:

3> if the UE is in RRC_CONNECTED and uses the PCell or the frequency included in *v2x-InterFreqInfoList* in *RRCConnectionReconfiguration* for V2X sidelink communication:

…

4> else if the UE is configured with *v2x-commTxPoolNormalDedicated* or *v2x-CommTxPoolNormal* in the entry of *v2x-InterFreqInfoList* for the concerned frequency in *sl-V2X-ConfigDedicated* in *RRCConnectionReconfiguration* and the UE is configured to transmit non-P2X related V2X sidelink communication:

…

5> else:

6> configure lower layers to transmit the sidelink control information and the corresponding data based on sensing (as defined in TS 36.321 [6] and TS 36.213 [23]) using one of the resource pools indicated by *v2x-commTxPoolNormalDedicated* or *v2x-CommTxPoolNormal* in the entry of *v2x-InterFreqInfoList* for the concerned frequency, which is selected according to 5.10.13.2;

…

The UE capable of non-P2X related V2X sidelink communication that is configured by upper layers to transmit V2X sidelink communication shall perform sensing on all pools of resources which may be used for transmission of the sidelink control information and the corresponding data. The pools of resources are indicated by *SL-V2X-Preconfiguration*, *v2x-CommTxPoolNormalCommon*, or *v2x-commTxPoolNormalDedicated* in, as configured above.

[TS 36.331, clause 5.10.13.2]

For a frequency used for V2X sidelink communication, if *zoneConfig* is not ignored as specified in 5.10.13.1, the UE configured by upper layers for V2X sidelink communication shall only use the pool which corresponds to geographical coordinates of the UE, if *zoneConfig* is included in *SystemInformationBlockType21* of the serving cell (RRC_IDLE)/ PCell (RRC_CONNECTED) or in *RRCConnectionReconfiguration* for the concerned frequency, and the UE is configured to use resource pools provided by RRC signalling for the concerned frequency; or if *zoneConfig* is included in *SL-V2X-Preconfiguration* for the concerned frequency, and the UE is configured to use resource pools in *SL-V2X-Preconfiguration* for the frequency, according to 5.10.13.1. The UE shall only use the pool which is associated with the synchronization reference source selected in accordance with 5.10.8.2.

…

1> if *zoneConfig* is included in the entry of *v2x-InterFreqInfoList* for the concerned frequency and the UE is configured to transmit on *v2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* or *p2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* in *RRCConnectionReconfiguration*; or

1> if *zoneConfig* is included in *SL-V2X-Preconfiguration* for the concerned frequency and the UE is configured to transmit on *v2x-CommTxPoolList* in *SL-V2X-Preconfiguration* for the concerned frequency:

2> select the pool configured with *zoneID* equal to the zone identity determined below and associated with the synchronization reference source selected in accordance with 5.10.8.2;

The UE shall determine an identity of the zone (i.e. Zone_id) in which it is located using the following formulae, if *zoneConfig* is included in *SystemInformationBlockType21* or in *SL-V2X-Preconfiguration*:

$$x_1 = \text{Floor}(x / L) \text{ Mod } Nx;$$

$$y_1 = \text{Floor}(y / W) \text{ Mod } Ny;$$

$$\text{Zone\_id} = y_1 * Nx + x_1.$$

The parameters in the formulae are defined as follows:

L is the value of *zoneLength* included in *zoneConfig* in *SystemInformationBlockType21* or in *SL-V2X-Preconfiguration;*

W is the value of *zoneWidth* included in *zoneConfig* in *SystemInformationBlockType21* or in *SL-V2X-Preconfiguration;*

Nx is the value of *zoneIdLongiMod* included in *zoneConfig* in *SystemInformationBlockType21* or in *SL-V2X-Preconfiguration;*

Ny is the value of *zoneIdLatiMod* included in *zoneConfig* in *SystemInformationBlockType21* or in *SL-V2X-Preconfiguration;*

x is the distance in longitude between UE's current location and geographical coordinates (0, 0) and it is expressed in meters;

y is the distance in latitude between UE's current location and geographical coordinates (0, 0) and it is expressed in meters.

The UE shall select a pool of resources which includes a *zoneID* equals to the Zone_id calculated according to above mentioned formulae and indicated by *v2x-CommTxPoolNormalDedicated*, *v2x-CommTxPoolNormalCommon*, or *v2x-CommTxPoolList* according to 5.10.13.1.

NOTE 1: The UE uses its latest geographical coordinates to perform resource pool selection.

24.1.8.3 Test description

24.1.8.3.1 Pre-test conditions

System Simulator:

SS-NW

- Cell 1

- 1 GNSS simulator

Note 1: The frequency f1 shall be the anchor frequency pre-configured in the UE/USIM.

- System information combination 29 as defined in TS 36.508 [18] clause 4.4.3.1 is used in Cell 1.
- *SystemInformationBlockType21* for Cell 1 using parameters as specified in Table 24.1.8.3.3-1.

SS-UE

- SS-UE1. As defined in TS 36.508 [18], configured for and operating as V2X Sidelink Communication receiving device on the resources which the UE is expected to use for transmission, as defined in TS 36.508 [18] clause 6.2.3.5.

UE:

- V2X sidelink related configuration.
  - The UE is authorised to perform V2X Sidelink Communication.
- The UE is equipped with below information in UE or in a USIM containing default values (as per TS 36.508 [18]) except for those listed in Table 24.1.8.3.1-1.

Table 24.1.8.3.1-1: UE/ USIM configuration

24.1.9 V2X Sidelink Communication / Pre-configured authorisation / Utilisation of the pre-configured resources / Transmission based on zoning

24.1.9.1 Test Purpose (TP)

(1)

```
with { UE is authorized for performing V2X sidelink Communication, and UE is out of coverage on the
frequency used for V2X sidelink communication, and UE cannot find a cell which provides inter-
frequency V2X configuration (i.e. the frequency used to transmit V2X sidelink communication is not
included in v2x-InterFreqInfoList in RRCConnectionReconfiguration or in v2x-InterFreqInfoList within
SystemInformationBlockType21 or SystemInformationBlockType21 is not broadcasted or there is not
suitable cell) on the anchor carrier frequency as the one pre-configured in the UE/USIM and
broadcasted in SystemInformationBlockType21 }
ensure that {
  when { UE is triggered by an upper layer application to transmit V2X sidelink communication, and,
zoneConfig is included in SL-V2X-Preconfiguration }
   then { UE transmits V2X sidelink communication using the resources in the resource pool which
pre-configured with zoneID equal to the zone identity determined by UE geographical coordinate }
            }
```

24.1.9.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331 subclause 5.10.13.2.

[TS 36.331, clause 5.10.13.2]

For a frequency used for V2X sidelink communication, if *zoneConfig* is not ignored as specified in 5.10.13.1, the UE configured by upper layers for V2X sidelink communication shall only use the pool which corresponds to geographical coordinates of the UE, if *zoneConfig* is included in *SystemInformationBlockType21* of the serving cell (RRC_IDLE)/ PCell (RRC_CONNECTED) or in *RRCConnectionReconfiguration* for the concerned frequency, and the UE is configured to use resource pools provided by RRC signalling for the concerned frequency; or if *zoneConfig* is included in *SL-V2X-Preconfiguration* for the concerned frequency, and the UE is configured to use resource pools in *SL-V2X-Preconfiguration* for the frequency, according to 5.10.13.1. The UE shall only use the pool which is associated with the synchronization reference source selected in accordance with 5.10.8.2.

[…]

1> if *zoneConfig* is included in *SL-V2X-Preconfiguration* for the concerned frequency and the UE is configured to transmit on *v2x-CommTxPoolList* in *SL-V2X-Preconfiguration* for the concerned frequency:

2> select the pool configured with *zoneID* equal to the zone identity determined below and associated with the synchronization reference source selected in accordance with 5.10.8.2;

The UE shall determine an identity of the zone (i.e. Zone_id) in which it is located using the following formulae, if *zoneConfig* is included in *SystemInformationBlockType21* or in *SL-V2X-Preconfiguration*:

$$x_1 = \text{Floor}(x / L) \text{ Mod } Nx;$$

$$y_1 = \text{Floor}(y / W) \text{ Mod } Ny;$$

$$\text{Zone\_id} = y_1 * Nx + x_1.$$

The parameters in the formulae are defined as follows:

L is the value of *zoneLength* included in *zoneConfig* in *SystemInformationBlockType21* or in *SL-V2X-Preconfiguration;*

W is the value of *zoneWidth* included in *zoneConfig* in *SystemInformationBlockType21* or in *SL-V2X-Preconfiguration;*

Nx is the value of *zoneIdLongiMod* included in *zoneConfig* in *SystemInformationBlockType21* or in *SL-V2X-Preconfiguration;*

Ny is the value of *zoneIdLatiMod* included in *zoneConfig* in *SystemInformationBlockType21* or in *SL-V2X-Preconfiguration;*

x is the distance in longitude between UE's current location and geographical coordinates (0, 0) and it is expressed in meters;

y is the distance in latitude between UE's current location and geographical coordinates (0, 0) and it is expressed in meters.

The UE shall select a pool of resources which includes a *zoneID* equals to the Zone_id calculated according to above mentioned formulae and indicated by *v2x-CommTxPoolNormalDedicated*, *v2x-CommTxPoolNormalCommon*, *v2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* or *p2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* in *RRCConnectionReconfiguration*, or *v2x-CommTxPoolList* according to 5.10.13.1.

NOTE 1: The UE uses its latest geographical coordinates to perform resource pool selection.

24.1.9.3 Test description

24.1.9.3.1 Pre-test conditions

System Simulator:

SS-NW

- No E-UTRA cell configured
- 1 GNSS simulator

SS-UE

- SS-UE1: as defined in TS 36.508 [18], configured for and operating as V2X sidelink Communication Reception on the resources which the UE is expected to use for transmission, as defined in TS 36.508 [18] clause 6.2.3.5.

UE:

- V2X sidelink related configuration
  - The UE is authorised to perform V2X Sidelink Communication
- The UE is equipped with below information in UE or in a USIM containing default values (as per TS 36.508 [18]) except for those listed in Table 24.1.9.3.1-1.

Table 24.1.9.3.1-1: UE/ USIM configuration

USIM field	Priority	Value	Access Technology Identifier
EF_{UST}		Service n°119 (V2X) supported	
EF_{VST}		As per TS 36.508 [18] clause 4.9.3.4	
EF_{V2X_CONFIG}		*SL-V2X-Preconfiguration* field as defined in Table 24.1.9.3.3-1	

Preamble:

- The UE is in state V2X out of coverage (State 5-V2X) according to TS 36.508 [18] clause 4.5.7.

24.1.9.3.2 Test procedure sequence

Table 24.1.9.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	Trigger UE to activate UE test loop mode	-	-	-	-

	NOTE: The activation of UE test loop mode may be performed by MMI or AT command (+CATM).				
2	Trigger UE to close UE test loop mode E (transmission mode).	-	-	-	-

24.1.10.1 Test Purpose (TP)

(1)

with { UE being authorized for performing V2X sidelink Communication in PLMN1 and pre-configured with anchor carrier parameters for V2X configuration and with Radio parameters for when the UE is "not served by E-UTRAN" and UE is in RRC_CONNECTED on Cell1/f1/PLMN1 which is operating on the anchor carrier frequency as the one pre-configured in the UE/USIM and is transmitting SystemInformationBlockType21 which does not include neither v2x-CommTxPoolNormalCommon nor *v2x-CommTxPoolNormal* in v2x-InterFreqInfoList }
ensure that {
  when { UE successfully completes a Sidelink UE information procedure to indicate the V2X sidelink communication transmission resources required as a request from upper layers to transmit V2X sidelink communication and UE receives RRCConnectionReconfiguration message which indicates the configuration for the case E-UTRAN schedules the transmission resources based on sidelink specific BSR }
    then { UE transmits Sidelink BSR to request resources for the V2X sidelink communication transmission}
}

(2)

with { UE being authorised for performing V2X sidelink Communication in PLMN1 and pre-configured with anchor carrier parameters for V2X configuration and with Radio parameters for when the UE is "not served by E-UTRAN" and UE is in RRC_CONNECTED on Cell1/f1/PLMN1 which is operating on the

```
anchor carrier frequency as the one pre-configured in the UE/USIM and UE having successfully
completed Sidelink UE information procedure}
ensure that {
  when { UE receives a Sidelink grant on PDCCH which indicates the scheduled resources for V2X
sidelink communication }
    then { UE transmits V2X sidelink communication using the resources scheduled by E-UTRAN.}
}
```

(3)

```
with { UE being authorised for performing V2X sidelink Communication in PLMN1 and pre-configured
with anchor carrier parameters for V2X configuration and with Radio parameters for when the UE is
"not served by E-UTRAN" and UE is in RRC_CONNECTED on Cell1/f1/PLMN1 which is operating on the
anchor carrier frequency as the one pre-configured in the UE/USIM,and the latest transmission of the
SidelinkUEInformation including v2x-CommTxResourceReq }
ensure that {
  when { UE stops to transmit V2X sidelink communication }
    then { UE transmits a SidelinkUEInformation message to indicate it no longer requires V2X
sidelink communication transmission resources.}
}
```

24.1.10.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.2.2.4, 5.2.2.28, 5.3.5.3, 5.3.10.15a, 5.10.1d, 5.10.2.2, 5.10.13.1, and TS 36.321, clause 5.14.1.4 and 6.1.3.1a. Unless otherwise stated these are Rel-14 requirements.

[TS 36.331, clause 5.2.2.4]

1> if the UE is capable of V2X sidelink communication and is configured by upper layers to receive or transmit V2X sidelink communication on a frequency:

2> if the cell used for V2X sidelink communication meets the S-criteria as defined in TS 36.304 [4]; and

2> if *schedulingInfoList* on the concerned frequency indicates that *SystemInformationBlockType21* is present and the UE does not have stored a valid version of this system information block:

3> acquire *SystemInformationBlockType21*;

[TS 36.331, clause 5.2.2.28]

Upon receiving *SystemInformationBlockType21*, the UE shall:

1> if *SystemInformationBlockType21* message includes *sl-V2X-ConfigCommon*:

2> if configured to receive V2X sidelink communication:

3> use the resource pool indicated by *v2x-CommRxPool* in *sl-V2X-ConfigCommon* for V2X sidelink communication monitoring, as specified in 5.10.12;

2> if configured to transmit V2X sidelink communication:

3> use the resource pool indicated by *v2x-CommTxPoolNormalCommon* or by *v2x-CommTxPoolExceptional* for V2X sidelink communication transmission, as specified in 5.10.13;

[TS 36.331, clause 5.3.10.15a]

The UE shall:

1> if the *RRCConnectionReconfiguration* message includes the *sl-V2X-ConfigDedicated* or *sl-P2X-ConfigDedicated*:

2> if *commTxResources* is included and set to *setup*:

3> use the resources indicated by *commTxResources* for V2X sidelink communication transmission, as specified in 5.10.13;

3> perform CBR measurement on the transmission resource pool indicated in *sl-V2X-ConfigDedicated* for V2X sidelink communication transmission, as specified in 5.5.3;

2> else if *commTxResources* is included and set to *release*:

3> release the resources allocated for V2X sidelink communication transmission previously configured by *commTxResources*;

[TS 36.331, clause 5.10.1d]

When it is specified that the UE shall perform V2X sidelink communication operation only if the conditions defined in this section are met, the UE shall perform V2X sidelink communication operation only if:

1> if the UE's serving cell is suitable (RRC_IDLE or RRC_CONNECTED); and if either the selected cell on the frequency used for V2X sidelink communication operation belongs to the registered or equivalent PLMN as specified in TS 24.334 [69] or the UE is out of coverage on the frequency used for V2X sidelink communication operation as defined in TS 36.304 [4, 11.4]; or

1> if the UE's serving cell (for RRC_IDLE or RRC_CONNECTED) fulfils the conditions to support V2X sidelink communication in limited service state as specified in TS 23.285 [78, 4.4.8]; and if either the serving cell is on the frequency used for V2X sidelink communication operation or the UE is out of coverage on the frequency used for V2X sidelink communication operation as defined in TS 36.304 [4, 11.4]; or

1> if the UE has no serving cell (RRC_IDLE);

[TS 36.331, clause 5.10.2.2]

A UE capable of sidelink communication or V2X sidelink communication or sidelink discovery that is in RRC_CONNECTED may initiate the procedure to indicate it is (interested in) receiving sidelink communication or V2X sidelink communication or sidelink discovery in several cases including upon successful connection establishment, upon change of interest, upon change to a PCell broadcasting *SystemInformationBlockType18* or *SystemInformationBlockType19* or *SystemInformationBlockType21* including *sl-V2X-ConfigCommon*. A UE capable of sidelink communication or V2X sidelink communication or sidelink discovery may initiate the procedure to request assignment of dedicated resources for the concerned sidelink communication transmission or discovery announcements or V2X sidelink communication transmission or to request sidelink discovery gaps for sidelink discovery transmission or sidelink discovery reception and a UE capable of inter-frequency/PLMN sidelink discovery parameter reporting may initiate the procedure to report parameters related to sidelink discovery from system information of inter-frequency/PLMN cells.

[…]

Upon initiating the procedure, the UE shall:

[…]

1> if *SystemInformationBlockType21* including *sl-V2X-ConfigCommon* is broadcast by the PCell:

2> ensure having a valid version of *SystemInformationBlockType21* for the PCell;

[…]

2> if configured by upper layers to transmit V2X sidelink communication:

3> if the UE did not transmit a *SidelinkUEInformation* message since last entering RRC_CONNECTED state; or

3> if since the last time the UE transmitted a *SidelinkUEInformation* message the UE connected to a PCell not broadcasting *SystemInformationBlockType21* including *sl-V2X-ConfigCommon*; or

3> if the last transmission of the *SidelinkUEInformation* message did not include *v2x-CommTxResourceReq*; or if the information carried by the *v2x-CommTxResourceReq* has changed since the last transmission of the *SidelinkUEInformation* message:

4> initiate transmission of the *SidelinkUEInformation* message to indicate the V2X sidelink communication transmission resources required by the UE in accordance with 5.10.2.3;

2> else:

3> if the last transmission of the *SidelinkUEInformation* message included *v2x-CommTxResourceReq*:

4> initiate transmission of the *SidelinkUEInformation* message to indicate it no longer requires V2X sidelink communication transmission resources in accordance with 5.10.2.3;[TS 36.331, clause 5.10.13.1]

A UE capable of V2X sidelink communication that is configured by upper layers to transmit V2X sidelink communication and has related data to be transmitted shall:

1> if the conditions for sidelink operation as defined in 5.10.1d are met:

2> if in coverage on the frequency used for V2X sidelink communication as defined in TS 36.304 [4, 11.4]; or

2> if the frequency used to transmit V2X sidelink communication is included in *v2x-InterFreqInfoList* in *RRCConnectionReconfiguration* or in *v2x-InterFreqInfoList* within *SystemInformationBlockType21*:

3> if the UE is in RRC_CONNECTED and uses the PCell or the frequency included in *v2x-InterFreqInfoList* in *RRCConnectionReconfiguration* for V2X sidelink communication:

4> if the UE is configured, by the current PCell with *commTxResources* set to *scheduled*:

5> if T310 or T311 is running; and if the PCell at which the UE detected physical layer problems or radio link failure broadcasts *SystemInformationBlockType21* including *v2x-CommTxPoolExceptional* in *sl-V2X-ConfigCommon*, or *v2x-CommTxPoolExceptional* is included in *v2x-InterFreqInfoList* for the concerned frequency in *SystemInformationBlockType21* or *RRCConnectionReconfiguration*; or

5> if T301 is running and the cell on which the UE initiated connection re-establishment broadcasts *SystemInformationBlockType21* including *v2x-CommTxPoolExceptional* in *sl-V2X-ConfigCommon*, or *v2x-CommTxPoolExceptional* is included in *v2x-InterFreqInfoList* for the concerned frequency in *SystemInformationBlockType21*; or

5> if T304 is running and the UE is configured with *v2x-CommTxPoolExceptional* included in *mobilityControlInfoV2X* in *RRCConnectionReconfiguration* or in *v2x-InterFreqInfoList* for the concerned frequency in *RRCConnectionReconfiguration*:

6> configure lower layers to transmit the sidelink control information and the corresponding data based on random selection using the pool of resources indicated by *v2x-CommTxPoolExceptional* as defined in TS 36.321 [6];

5> else:

6> configure lower layers to request E-UTRAN to assign transmission resources for V2X sidelink communication;

…

The UE capable of non-P2X related V2X sidelink communication that is configured by upper layers to transmit V2X sidelink communication shall perform sensing on all pools of resources which may be used for transmission of the sidelink control information and the corresponding data. The pools of resources are indicated by *SL-V2X-Preconfiguration*, *v2x-CommTxPoolNormalCommon*, or *v2x-commTxPoolNormalDedicated* in *sl-V2X-ConfigDedicated*, as configured above.

[TS 36.321, clause 5.14.1.4]

The sidelink Buffer Status reporting procedure is used to provide the serving eNB with information about the amount of sidelink data available for transmission in the SL buffers associated with the MAC entity. RRC controls BSR reporting for the sidelink by configuring the two timers' *periodic-BSR-TimerSL* and *retx-BSR-TimerSL*. Each sidelink logical channel belongs to a ProSe Destination. Each sidelink logical channel is allocated to an LCG depending on the priority of the sidelink logical channel and the mapping between LCG ID and priority which is provided by upper layers in *logicalChGroupInfoList* [8]. LCG is defined per ProSe Destination.

A sidelink Buffer Status Report (BSR) shall be triggered if any of the following events occur:

- if the MAC entity has a configured SL-RNTI or a configured SL-V-RNTI:

  - SL data, for a sidelink logical channel of a ProSe Destination, becomes available for transmission in the RLC entity or in the PDCP entity (the definition of what data shall be considered as available for transmission is specified in [3] and [4] respectively) and either the data belongs to a sidelink logical channel with higher priority than the priorities of the sidelink logical channels which belong to any LCG belonging to the same ProSe Destination and for which data is already available for transmission, or there is currently no data available for transmission for any of the sidelink logical channels belonging to the same ProSe Destination, in which case the Sidelink BSR is referred below to as "Regular Sidelink BSR";

  - UL resources are allocated and number of padding bits remaining after a Padding BSR has been triggered is equal to or larger than the size of the Sidelink BSR MAC control element containing the buffer status for at least one LCG of a ProSe Destination plus its subheader, in which case the Sidelink BSR is referred below to as "Padding Sidelink BSR";
  - *retx-BSR-TimerSL* expires and the MAC entity has data available for transmission for any of the sidelink logical channels, in which case the Sidelink BSR is referred below to as "Regular Sidelink BSR";
  - *periodic-BSR-TimerSL* expires, in which case the Sidelink BSR is referred below to as "Periodic Sidelink BSR";
- else:
  - An SL-RNTI or an SL-V-RNTI is configured by upper layers and SL data is available for transmission in the RLC entity or in the PDCP entity (the definition of what data shall be considered as available for transmission is specified in [3] and [4] respectively), in which case the Sidelink BSR is referred below to as "Regular Sidelink BSR".

For Regular and Periodic Sidelink BSR:

- if the number of bits in the UL grant is equal to or larger than the size of a Sidelink BSR containing buffer status for all LCGs having data available for transmission plus its subheader:
  - report Sidelink BSR containing buffer status for all LCGs having data available for transmission;
- else report Truncated Sidelink BSR containing buffer status for as many LCGs having data available for transmission as possible, taking the number of bits in the UL grant into consideration.

For Padding Sidelink BSR:

- if the number of padding bits remaining after a Padding BSR has been triggered is equal to or larger than the size of a Sidelink BSR containing buffer status for all LCGs having data available for transmission plus its subheader:
  - report Sidelink BSR containing buffer status for all LCGs having data available for transmission;
- else report Truncated Sidelink BSR containing buffer status for as many LCGs having data available for transmission as possible, taking the number of bits in the UL grant into consideration.

If the Buffer Status reporting procedure determines that at least one Sidelink BSR has been triggered and not cancelled:

- if the MAC entity has UL resources allocated for new transmission for this TTI and the allocated UL resources can accommodate a Sidelink BSR MAC control element plus its subheader as a result of logical channel prioritization:
  - instruct the Multiplexing and Assembly procedure to generate the Sidelink BSR MAC control element(s);
  - start or restart *periodic-BSR-TimerSL* except when all the generated Sidelink BSRs are Truncated Sidelink BSRs;
  - start or restart *retx-BSR-TimerSL*;
- else if a Regular Sidelink BSR has been triggered:
  - if an uplink grant is not configured:
    - a Scheduling Request shall be triggered.

A MAC PDU shall contain at most one Sidelink BSR MAC control element, even when multiple events trigger a Sidelink BSR by the time a Sidelink BSR can be transmitted in which case the Regular Sidelink BSR and the Periodic Sidelink BSR shall have precedence over the padding Sidelink BSR.

The MAC entity shall restart *retx-BSR-TimerSL* upon reception of an SL grant.

All triggered regular Sidelink BSRs shall be cancelled in case the remaining configured SL grant(s) valid for this SC Period can accommodate all pending data available for transmission in sidelink communication or in case the remaining configured SL grant(s) valid can accommodate all pending data available for transmission in V2X sidelink communication. All triggered Sidelink BSRs shall be cancelled in case the MAC entity has no data available for transmission for any of the sidelink logical channels. All triggered Sidelink BSRs shall be cancelled when a Sidelink BSR (except for Truncated Sidelink BSR) is included in a MAC PDU for transmission. All triggered Sidelink BSRs shall be cancelled, and *retx-BSR-TimerSL* and *periodic-BSR-TimerSL* shall be stopped, when upper layers configure autonomous resource selection.

The MAC entity shall transmit at most one Regular/Periodic Sidelink BSR in a TTI. If the MAC entity is requested to transmit multiple MAC PDUs in a TTI, it may include a padding Sidelink BSR in any of the MAC PDUs which do not contain a Regular/Periodic Sidelink BSR.

All Sidelink BSRs transmitted in a TTI always reflect the buffer status after all MAC PDUs have been built for this TTI. Each LCG shall report at the most one buffer status value per TTI and this value shall be reported in all Sidelink BSRs reporting buffer status for this LCG.

NOTE: A Padding Sidelink BSR is not allowed to cancel a triggered Regular/Periodic Sidelink BSR. A Padding Sidelink BSR is triggered for a specific MAC PDU only and the trigger is cancelled when this MAC PDU has been built.

[TS 36.321, clause 6.1.3.1a]

Sidelink BSR and Truncated Sidelink BSR MAC control elements consist of one Destination Index field, one LCG ID field and one corresponding Buffer Size field per reported target group.

The Sidelink BSR MAC control elements are identified by MAC PDU subheaders with LCIDs as specified in table 6.2.1-2. They have variable sizes.

For each included group, the fields are defined as follows (figures 6.1.3.1a-1 and 6.1.3.1a-2):

- Destination Index: The Destination Index field identifies the ProSe Destination or the destination for V2X sidelink communication. The length of this field is 4 bits. The value is set to the index of the destination reported in *destinationInfoList* or *v2x-DestinationInfoList* and if multiple such lists are reported, the value is indexed sequentially across all the lists in the same order as specified in [8];
- LCG ID: The Logical Channel Group ID field identifies the group of logical channel(s) which buffer status is being reported. The length of the field is 2 bits;
  - Buffer Size: The Buffer Size field identifies the total amount of data available across all logical channels of a LCG of a ProSe Destination after all MAC PDUs for the TTI have been built. The amount of data is indicated in number of bytes. It shall include all data that is available for transmission in the RLC layer and in the PDCP layer; the definition of what data shall be considered as available for transmission is specified in [3] and [4] respectively. The size of the RLC and MAC headers are not considered in the buffer size computation. The length of this field is 6 bits. The values taken by the Buffer Size field are shown in Table 6.1.3.1-1.

24.1.10.3 Test description

24.1.10.3.1 Pre-test conditions

System Simulator:

SS-NW

- Cell 1.
- System information combination 29 as defined in TS 36.508 [18] clause 4.4.3.1 is used in all active cells.
- *SystemInformationBlockType21* for Cell 1 using parameters as specified in Table 24.1.10.3.3-1.

SS-UE

- SS-UE1. As defined in TS 36.508 [18], configured for and operating as V2X Sidelink Communication receiving device on the resources which the UE is expected to use for transmission, as defined in TS 36.508 [18] clause 6.2.3.5.

UE:

- V2X sidelink related configuration
  - The UE is authorised to perform V2X Sidelink Communication.
- The UE is equipped with below information in UE or in a USIM containing default values (as per TS 36.508) except for those listed in Table 24.1.10.3.1-1.

Table 24.1.10.3.1-1: UE/ USIM configuration

USIM field	Priority	Value	Access Technology Identifier
EF_{UST}		Service n°119 (V2X) supported	
EF_{VST}		As per TS 36.508 [18] clause 4.9.3.4	
EF_{V2X_CONFIG}		*SL-V2X-Preconfiguration* field as defined in Table 24.1.10.3.3-3.	

Preamble:

- The UE is in State Generic Radio Bearer Establishment, UE Test Mode Activated (State 3A) on Cell 1 according to TS 36.508 [18].

24.1.10.3.2 Test procedure sequence

Table 24.1.10.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	Close UE Test Loop with bit E0 in UE test loop mode E LB setup IE set to one (transmission mode).	<--	CLOSE UE TEST LOOP		
2	The UE responds with CLOSE UE TEST LOOP COMPLETE.	-->	CLOSE UE TEST LOOP COMPLETE		
3	UE transmit a *SidelinkUEInformation* message requesting resources for transmission of V2X sidelink communication in RRC_CONNECTED	-->	*SidelinkUEInformation*		
4	SS-NW transmits an *RRCConnectionReconfiguration* message to Indicate -UE performs V2X sidelink transmission with scheduled mode.	<--	*RRCConnectionReconfiguration*	-	-
5	The UE submits RRCConnectionReconfigurationComplete message to confirm acceptance of the new configuration.	-->	*RRCConnectionReconfigurationComplete*	-	-
6	Check: Does the UE transmit Sidelink BSR with - LCID='10111' - MAC subheader (E='0', F='0') - Destination index set to the index of the destination reported in '*v2x-DestinationInfoList*' *of SidelinkUEInformation in step 3* - LCG ID set to any value - Buffer Size set to 46 bytes?	-->	MAC PDU (Sidelink BSR)	1	P
7	The SS is configured for sidelink Grant allowing the UE to get the scheduled resources for V2X sidelink communication.	<--	PDCCH [for sidelink grant]	-	-
8	Check: Does the UE transmit one STCH PDCP SDU packet of V2X sidelink	-->	*STCH PDCP SDU packet*	2	P

	communication data over the PC5 interface in accordance with the resources scheduled by E-UTRAN?				
9	The SS transmits an OPEN UE TEST LOOP message to exit the UE test loop mode.	<--	OPEN UE TEST LOOP	-	-
10	The UE transmits an OPEN UE TEST LOOP COMPLETE message.	-->	OPEN UE TEST LOOP COMPLETE	-	-
10a	UE transmits a *SidelinkUEInformation* message to indicate no more V2X sidelink transmission.	-->	*SidelinkUEInformation*	3	P
11	The SS transmits a DEACTIVATE TEST MODE message to de-activate UE radio bearer test mode procedure.	<--	DEACTIVATE TEST MODE		
12	The UE transmits a DEACTIVATE TEST MODE COMPLETE message.	-->	DEACTIVATE TEST MODE COMPLETE	-	-

24.1.11 V2X Sidelink Communication / Pre-configured authorisation / UE in RRC_Connected on an E-UTRAN cell operating on the carrier frequency for V2X configuration/ UE measures CBR of configured Tx resource pools and report CBR results to eNB

24.1.11.1 Test Purpose (TP)

(1)

```
with { UE being authorized for performing V2X sidelink Communication in PLMN1 and pre-configured
with anchor carrier parameters for V2X configuration and with Radio parameters for when the UE is
"not served by E-UTRAN", and, UE is in RRC_CONNECTED on Cell 1/f1/PLMN1 which is operating on the
anchor carrier frequency as the one pre-configured in the UE and is transmitting
SystemInformationBlockType21  }
ensure that {
  when { measurement configured for event V1 and the CBR measurement result becomes higher than the
threshold }
    then { UE sends MeasurementReport message }
            }
```

(2)

```
with { UE being authorized for performing V2X sidelink Communication in PLMN1 and pre-configured
with anchor carrier parameters for V2X configuration and with Radio parameters for when the UE is
"not served by E-UTRAN", and, UE is in RRC_CONNECTED on Cell 1/f1/PLMN1 which is operating on the
anchor carrier frequency as the one pre-configured in the UE and is transmitting
SystemInformationBlockType21  }
ensure that {
  when { periodical measurement reporting triggered by event V1 ongoing and the CBR measurement
result becomes lower than the threshold }
    then { UE stops sending MeasurementReport message }
            }
```

(3)

```
with { UE being authorized for performing V2X sidelink Communication in PLMN1 and pre-configured
with anchor carrier parameters for V2X configuration and with Radio parameters for when the UE is
"not served by E-UTRAN", and, UE is in RRC_CONNECTED on Cell1/f1/PLMN1 which is operating on the
anchor carrier frequency as the one pre-configured in the UE and is transmitting
SystemInformationBlockType21  }
ensure that {
  when { measurement configured for event V2 and the CBR measurement result becomes lower than the
threshold }
    then { UE sends MeasurementReport message }
            }
```

(4)

```
with { UE being authorized for performing V2X sidelink Communication in PLMN1 and pre-configured
with anchor carrier parameters for V2X configuration and with Radio parameters for when the UE is
"not served by E-UTRAN", and, UE is in RRC_CONNECTED on Cell1/f1/PLMN1 which is operating on the
anchor carrier frequency as the one pre-configured in the UE and is transmitting
SystemInformationBlockType21  }
ensure that {

anchor carrier frequency as the one pre-configured in the UE and is transmitting
SystemInformationBlockType21  }
ensure that {
  when { The S-RSSI that the UE measured of a sub-channel is below the configured threshS-RSSI-CBR-
r14  }
    then { UE considers the sub-channel is free}
            }
```

24.1.11.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.5.2.5, 5.5.3.1, 5.5.4.1, 5.5.4.14, 5.5.4.15, 5.5.5.

[TS 36.331, clause 5.5.2.5]

The UE shall:

1> for each *measObjectId* included in the received *measObjectToAddModList*:

2> if an entry with the matching *measObjectId* exists in the *measObjectList* within the *VarMeasConfig*, for this entry:

3> reconfigure the entry with the value received for this *measObject*, except for the fields *cellsToAddModList*, *excludedCellsToAddModList*, *allowedCellsToAddModList, altTTT-CellsToAddModList*, *cellsToRemoveList*, *excludedCellsToRemoveList*, *allowedCellsToRemoveList*, *altTTT-CellsToRemoveList*, *measSubframePatternConfigNeigh*, *measDS-Config*, *wlan-ToAddModList*, *wlan-ToRemoveList, tx-ResourcePoolToRemoveList* and *tx-ResourcePoolToAddList*;

…

3> if the received *measObject* includes the *tx-ResourcePoolToRemoveList*:

4> for each transmission resource pool indicated in *tx-ResourcePoolToRemoveList*:

5> remove the entry with the matching identity of the transmission resource pool from the *tx-ResourcePoolToAddList*;

3> if the received *measObject* includes the *tx-ResourcePoolToAddList*:

4> for each transmission resource pool indicated in *tx-ResourcePoolToAddList*:

5> add a new entry for the received identity of the transmission resource pool to the *tx-ResourcePoolToAddList*;

2> else:

3> add a new entry for the received *measObject* to the *measObjectList* within *VarMeasConfig*;

NOTE 4: UE does not need to retain *cellForWhichToReportCGI* in the *measObject* after reporting *cgi-Info*.

[TS 36.331, clause 5.5.3.1]

The UE capable of CBR measurement when configured to transmit non-P2X related V2X sidelink communication shall:

1> if in coverage on the frequency used for V2X sidelink communication transmission as defined in TS 36.304 [4, 11.4]; or

1> if the concerned frequency is included in *v2x-InterFreqInfoList* in *RRCConnectionReconfiguration* or in *v2x-InterFreqInfoList* within *SystemInformationBlockType21*:

2> if the UE is in RRC_IDLE:

3> if the concerned frequency is the camped frequency:

4> perform CBR measurement on the pools in *v2x-CommTxPoolNormalCommon* and *v2x-CommTxPoolExceptional* if included in *SystemInformationBlockType21*;

3> else if *v2x-CommTxPoolNormal* or *v2x-CommTxPoolExceptional* is included in *v2x-InterFreqInfoList* for the concerned frequency within *SystemInformationBlockType21*:

4> perform CBR measurement on pools in *v2x-CommTxPoolNormal* and *v2x-CommTxPoolExceptional* in *v2x-InterFreqInfoList* for the concerned frequency in *SystemInformationBlockType21*;

3> else if the concerned frequency broadcasts *SystemInformationBlockType21*:

4> perform CBR measurement on pools in *v2x-CommTxPoolNormalCommon* and *v2x-CommTxPoolExceptional* if included in *SystemInformationBlockType21* broadcast on the concerned frequency;

2> if the UE is in RRC_CONNECTED:

3> if *tx-ResourcePoolToAddList* is included in *VarMeasConfig*:

4> perform CBR measurements on each resource pool indicated in *tx-ResourcePoolToAddList*;

3> if the concerned frequency is the PCell's frequency:

4> perform CBR measurement on the pools in *v2x-CommTxPoolNormalDedicated* or *v2x-SchedulingPool* if included in *RRCConnectionReconfiguration*, *v2x-CommTxPoolExceptional* if included in *SystemInformationBlockType21* for the concerned frequency and *v2x-CommTxPoolExceptional* if included in *mobilityControlInfoV2X*;

3> else if *v2x-CommTxPoolNormal*, *v2x-SchedulingPool* or *v2x-CommTxPoolExceptional* is included in *v2x-InterFreqInfoList* for the concerned frequency within *RRCConnectionReconfiguration*:

4> perform CBR measurement on pools in *v2x-CommTxPoolNormal*, *v2x-SchedulingPool*, and *v2x-CommTxPoolExceptional* if included in *v2x-InterFreqInfoList* for the concerned frequency in *RRCConnectionReconfiguration*;

3> else if the concerned frequency broadcasts *SystemInformationBlockType21*:

4> perform CBR measurement on pools in *v2x-CommTxPoolNormalCommon* and *v2x-CommTxPoolExceptional* if included in *SystemInformationBlockType21* for the concerned frequency;

1> else:

2> perform CBR measurement on pools in *v2x-CommTxPoolList* in *SL-V2X-Preconfiguration* for the concerned frequency;

NOTE 3: The *s-Measure* defines when the UE is required to perform measurements. The UE is however allowed to perform measurements also when the PCell RSRP exceeds *s-Measure*, e.g., to measure cells broadcasting a CSG identity following use of the autonomous search function as defined in TS 36.304 [4].

NOTE 4: The UE may not perform the WLAN measurements it is configured with e.g. due to connection to another WLAN based on user preferences as specified in TS 23.402 [75] or due to turning off WLAN.

[TS 36.331, clause 5.5.4.1]

If security has been activated successfully, the UE shall:

1> for each *measId* included in the *measIdList* within *VarMeasConfig*:

2> if the corresponding *reportConfig* includes a purpose set to *reportStrongestCellsForSON*:

3> consider any neighbouring cell detected on the associated frequency to be applicable;

2> else if the corresponding *reportConfig* includes a purpose set to *reportCGI*:

3> consider any neighbouring cell detected on the associated frequency/ set of frequencies (GERAN) which has a physical cell identity matching the value of the *cellForWhichToReportCGI* included in the corresponding *measObject* within the *VarMeasConfig* to be applicable;

2> else if the corresponding *reportConfig* includes a purpose set to *reportLocation*:

3> consider only the PCell to be applicable;

2> else:

3> if the corresponding *measObject* concerns E-UTRA:

…

4> else if *tx-ResourcePoolToAddList* is configured in the *measObject*:

5> consider the transmission resource pools indicated by the *tx-ResourcePoolToAddList* defined within the *VarMeasConfig* for this *measId* to be applicable;

…

2> if the *triggerType* is set to *event* and if the entry condition applicable for this event, i.e. the event corresponding with the *eventId* of the corresponding *reportConfig* within *VarMeasConfig*, is fulfilled for one or more applicable transmission resource pools not included in the *poolsTriggeredList* for all measurements taken during *timeToTrigger* defined for this event within the *VarMeasConfig* (a subsequent transmission resource pool triggers the event):

3> set the *numberOfReportsSent* defined within the *VarMeasReportList* for this *measId* to 0;

3> include the concerned transmission resource pool(s) in the *poolsTriggeredList* defined within the *VarMeasReportList* for this *measId*;

3> initiate the measurement reporting procedure, as specified in 5.5.5;

2> if the *triggerType* is set to *event* and if the leaving condition applicable for this event is fulfilled for one or more applicable transmission resource pools included in the *poolsTriggeredList* defined within the *VarMeasReportList* for this *measId* for all measurements taken during *timeToTrigger* defined within the *VarMeasConfig* for this event:

3> remove the concerned transmission resource pool(s) from the *poolsTriggeredList* defined within the *VarMeasReportList* for this *measId*;

3> if the *poolsTriggeredList* defined within the *VarMeasReportList* for this *measId* is empty:

4> remove the measurement reporting entry within the *VarMeasReportList* for this *measId*;

4> stop the periodical reporting timer for this *measId*, if running;

[TS 36.331, clause 5.5.4.14]

The UE shall:

1> consider the entering condition for this event to be satisfied when condition V1-1, as specified below, is fulfilled;

1> consider the leaving condition for this event to be satisfied when condition V1-2, as specified below, is fulfilled;

Inequality V1-1 (Entering condition)

$Ms > Thresh$

Inequality V1-2 (Leaving condition)

$Ms < Thresh$

The variables in the formula are defined as follows:

Ms is the measurement result of channel busy ratio of the transmission resource pool, not taking into account any offsets.

Thresh is the threshold parameter for this event (i.e. *v1-Threshold* as defined within *ReportConfigEUTRA*).

Ms is expressed in decimal from 0 to 1 in steps of 0.01.

Thresh is expressed in the same unit as ***Ms***.

[TS 36.331, clause 5.5.4.15]

The UE shall:

1> consider the entering condition for this event to be satisfied when condition V2-1, as specified below, is fulfilled;

1> consider the leaving condition for this event to be satisfied when condition V2-2, as specified below, is fulfilled;

Inequality V2-1 (Entering condition)

$Ms < Thresh$

Inequality V2-2 (Leaving condition)

$Ms > Thresh$

The variables in the formula are defined as follows:

Ms is the measurement result of channel busy ratio of the transmission resource pool, not taking into account any offsets.

Thresh is the threshold parameter for this event (i.e. *v2-Threshold* as defined within *ReportConfigEUTRA*).

Ms is expressed in decimal from 0 to 1 in steps of 0.01.

Thresh is expressed in the same unit as ***Ms***.

[TS 36.331, clause 5.5.5]

For the *measId* for which the measurement reporting procedure was triggered, the UE shall set the *measResults* within the *MeasurementReport* message as follows:

1> set the *measId* to the measurement identity that triggered the measurement reporting;

1> set the *measResultPCell* to include the quantities of the PCell;

1> set the *measResultServFreqList* to include for each SCell that is configured, if any, within *measResultSCell* the quantities of the concerned SCell, if available according to performance requirements in [16], except if *purpose* for the *reportConfig* associated with the *measId* that triggered the measurement reporting is set to *reportLocation*;

1> if the *reportConfig* associated with the *measId* that triggered the measurement reporting includes *reportAddNeighMeas*:

2> for each serving frequency for which *measObjectId* is referenced in the *measIdList*, other than the frequency corresponding with the *measId* that triggered the measurement reporting:

3> set the *measResultServFreqList* to include within *measResultBestNeighCell* the *physCellId* and the quantities of the best non-serving cell, based on RSRP, on the concerned serving frequency;

…

1> if there is at least one applicable neighbouring cell to report:

2> set the *measResultNeighCells* to include the best neighbouring cells up to *maxReportCells* in accordance with the following:

3> if the *triggerType* is set to *event*:

4> include the cells included in the *cellsTriggeredList* as defined within the *VarMeasReportList* for this *measId*;

3> else:

4> include the applicable cells for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

NOTE 1: The reliability of the report (i.e. the certainty it contains the strongest cells on the concerned frequency) depends on the measurement configuration i.e. the *reportInterval*. The related performance requirements are specified in TS 36.133 [16].

3> for each cell that is included in the *measResultNeighCells*, include the *physCellId*;

3> if the *triggerType* is set to *event*; or the *purpose* is set to *reportStrongestCells* or to *reportStrongestCellsForSON*:

4> for each included cell, include the layer 3 filtered measured results in accordance with the *reportConfig* for this *measId*, ordered as follows:

5> if the *measObject* associated with this *measId* concerns E-UTRA:

6> set the *measResult* to include the quantity(ies) indicated in the *reportQuantity* within the concerned *reportConfig* in order of decreasing *triggerQuantity*, i.e. the best cell is included first;

…

1> if there is at least one applicable transmission resource pool to report:

2> set the *measResultListCBR* to include the CBR measurement results in accordance with the following:

3> if the *triggerType* is set to *event*:

4> include the transmission resource pools included in the *poolsTriggeredList* as defined within the *VarMeasReportList* for this *measId*;

3> else:

4> include the applicable transmission resource pools for which the new measurement results became available since the last periodical reporting or since the measurement was initiated or reset;

3> for each transmission resource pool to be reported:

4> set the *poolIdentity* to the *poolReportId* of this transmission resource pool;

4> if *adjacencyPSCCH-PSSCH* is set to *TRUE* for this transmission resource pool:

5> set the *cbr-PSSCH* to the CBR measurement result on PSSCH and PSCCH of this transmission resource pool provided by lower layers;

4> else:

5> set the *cbr-PSSCH* to the CBR measurement result on PSSCH of this transmission resource pool provided by lower layers if available;

5> set the *cbr-PSCCH* to the CBR measurement result on PSCCH of this transmission resource pool provided by lower layers if available;

1> increment the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* by 1;

1> stop the periodical reporting timer, if running;

1> if the *numberOfReportsSent* as defined within the *VarMeasReportList* for this *measId* is less than the *reportAmount* as defined within the corresponding *reportConfig* for this *measId*:

2> start the periodical reporting timer with the value of *reportInterval* as defined within the corresponding *reportConfig* for this *measId*;

1> else:

2> if the *triggerType* is set to *periodical*:

3> remove the entry within the *VarMeasReportList* for this *measId*;

3> remove this *measId* from the *measIdList* within *VarMeasConfig*;

…

24.1.11.3 Test description

24.1.11.3.1 Pre-test conditions

System Simulator:

SS-NW

- Cell 1

Table 24.1.11.3.1-1: Cell parameters values

Cell	Frequency	PLMN
1	f1	HPLMN (PLMN1)
Note 1: The Frequency f1 shall be the anchor frequency pre-configured in the UE/USIM.		

- System information combination 29 as defined in TS 36.508 [18] clause 4.4.3.1 is used in Cell 1.

SS-UE

- SS-UE. As defined in TS 36.508 [18], configured for and operating as V2X Sidelink Communication transmitting device on the resources which the UE is expected to use for transmission (as specified in the relevant procedure steps in Table 24.1.11.3.2-2).

- Simulation of transmission on all subsequent subframes (fully occupied) in order to achieve 100% congestion. This equals one SS-UE transmitting on all subframes utilizing all RBs on all subchannels of the transmitting TTI. SS-UE transmits dummy random data on all RBs on all subchannels implying congestion on PSCCH and PSSCH.

- Simulation of transmission on 10 subframes (fully occupied) out of 100 subframes (100 ms) in order to achieve 10% congestion. This equals one SS-UE transmitting on 1 out of 10 consecutive subframes utilizing all RBs on all subchannels of the transmitting TTI, according to the transmit pattern shown in Table 24.1.11.3.1-2, and repeating continuously the same transmit pattern in subsequent frames. SS-UE transmits dummy random data on all RBs on the specified subchannels implying congestion on PSCCH and PSSCH.

Table 24.1.11.3.1-2: Transmit pattern for simulation of 10% congestion

10% Congestion									
Subframe 0	Subframe 1	Subframe 2	Subframe 3	Subframe 4	Subframe 5	Subframe 6	Subframe 7	Subframe 8	Subframe 9
SC1	SC1	SC1	SC1	SC1	SC1	SC1	SC1	SC1	SC1
SC2	SC2	SC2	SC2	SC2	SC2	SC2	SC2	SC2	SC2

UE:

- V2X sidelink related configuration.
  - The UE is authorised to perform V2X Sidelink Communication
  - The UE is equipped with below information in UE or in a USIM containing default values (as per TS 36.508) except for those listed in Table 24.1.11.3.1-4.

Table 24.1.11.3.1-4: UE/ USIM configuration

USIM field	Priority	Value	Access Technology Identifier
EF_{UST}		Service n°119 (V2X) supported	
EF_{VST}		As per TS 36.508 [18] clause 4.9.3.4	
EF_{V2X_CONFIG}		*SL-V2X-Preconfiguration* field as defined in Table 24.1.11.3.3-16	

Preamble:

- The UE is in State Generic RB Established, UE Test Mode E Activated (state 3A) on Cell 1 according to TS 36.508 [18].

24.1.11.3.2 Test procedure sequence

Table 24.1.11.3.2-1 illustrates the downlink power levels and other, if any, changing parameters to be applied for the SS-UE at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" ... "Tn" are to be applied subsequently. The exact instants on which these values shall be applied are described elsewhere in the present clause.

Table 24.1.11.3.2-1: Time instances of simulated SS-UE power level and parameter changes

	Parameter	Unit	SS-UE	Comment
T0	S-RSRP	dBm/15kHz	-89	The power level of the SS-UE is set so that upon S-RSSI measurement by the UE the result is above the value of *threshS-RSSI-CBR-r14.*
T1	S-RSRP	dBm/15kHz	-106	The power level of the SS-UE is set so that upon S-RSSI measurement by the UE the result is below the value of *threshS-RSSI-CBR-r14.*
T2	S-RSRP	dBm/15kHz	-89	The power level of the SS-UE is set so that upon S-RSSI measurement by the UE the result is above the value of *threshS-RSSI-CBR-r14.*

Table 24.1.11.3.2-2: Main behaviour

24.1.12 V2X Sidelink Communication / Pre-configured authorisation / UE in RRC_IDLE on an E-UTRAN cell operating on the anchor carrier frequency for V2X configuration/ UE transmits V2X sidelink communication using Tx parameters based on measured CBR and PPPP

24.1.12.1 Test Purpose (TP)

(1)

with { UE being authorized for performing V2X sidelink Communication in PLMN1) and pre-configured with anchor carrier parameters for V2X configuration and with Radio parameters for when the UE is "not served by E-UTRAN", **and**, UE is in RRC_IDLE on Cell1/f1/PLMN1 which is operating on the anchor carrier frequency as the one pre-configured in the UE and is transmitting *SystemInformationBlockType21* which includes *cbr-CommonTxConfigList-r14*, and *v2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* }
ensure that {
  when { UE is triggered by an upper layer application to transmit V2X sidelink communication with configured PPPP **and** CBR measurement results are available }
    then { UE is able to transmit V2X sidelink communication using the resources pool associated with the configured PPPP, **and** uses the Tx parameters based on measured CBR }
            }

24.1.12.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.321, clauses 5.14.1.1, TS 36.331, clauses 5.5.3.1, 5.10.13.1and 5.10.13.2.

[TS 36.321, clause 5.14.1.1]

Sidelink grants are selected as follows for V2X sidelink communication:

- if the MAC entity is configured to receive a sidelink grant dynamically on the PDCCH and data is available in STCH, the MAC entity shall:

[…]

- if the MAC entity is configured by upper layers to transmit using a pool of resources as indicated in subclause 5.10.13.1 of [8] based on sensing, or partial sensing, or random selection only if upper layers indicates that transmissions of multiple MAC PDUs are allowed according to subclause 5.10.13.1a of [8], and the MAC entity selects to create a configured sidelink grant corresponding to transmissions of multiple MAC PDUs, and data is available in STCH, the MAC entity shall for each Sidelink process configured for multiple transmissions:
    - if SL_RESOURCE_RESELECTION_COUNTER = 0 and when SL_RESOURCE_RESELECTION_COUNTER was equal to 1 the MAC entity randomly selected, with equal probability, a value in the interval [0, 1] which is above the probability configured by upper layers in *probResourceKeep*; or
    - if neither transmission nor retransmission has been performed by the MAC entity on any resource indicated in the configured sidelink grant during the last second; or

- if *sl-ReselectAfter* is configured and the number of consecutive unused transmission opportunities on resources indicated in the configured sidelink grant is equal to *sl-ReselectAfter*; or
- if there is no configured sidelink grant; or
- if the configured sidelink grant cannot accommodate a RLC SDU by using the maximum allowed MCS configured by upper layers in *maxMCS-PSSCH* and the MAC entity selects not to segment the RLC SDU; or

NOTE: If the configured sidelink grant cannot accommodate the RLC SDU, it is left for UE implementation whether to perform segmentation or sidelink resource reselection.

- if transmission(s) with the configured sidelink grant cannot fulfil the latency requirement of the data in a sidelink logical channel according to the associated PPPP, and the MAC entity selects not to perform transmission(s) corresponding to a single MAC PDU; or

NOTE: If the latency requirement is not met, it is left for UE implementation whether to perform transmission(s) corresponding to single MAC PDU or sidelink resource reselection.

- if a pool of resources is configured or reconfigured by upper layers:
  - clear the configured sidelink grant, if available;
  - select one of the allowed values configured by upper layers in *restrictResourceReservationPeriod* and set the resource reservation interval by multiplying 100 with the selected value;

NOTE: How the UE selects this value is up to UE implementation.

  - randomly select, with equal probability, an integer value in the interval [5, 15] for the resource reservation interval higher than or equal to 100ms, in the interval [10, 30] for the resource reservation interval equal to 50ms or in the interval [25, 75] for the resource reservation interval equal to 20ms, and set SL_RESOURCE_RESELECTION_COUNTER to the selected value;
  - select the number of HARQ retransmissions from the allowed numbers that are configured by upper layers in *allowedRetxNumberPSSCH* included in *pssch-TxConfigList* and, if configured by upper layers, overlapped in *allowedRetxNumberPSSCH* indicated in *cbr-pssch-TxConfigList* for the highest priority of the sidelink logical channel(s) and the CBR measured by lower layers according to [6] if CBR measurement results are available or the corresponding *defaultTxConfigIndex* configured by upper layers if CBR measurement results are not available;
  - select an amount of frequency resources within the range that is configured by upper layers between *minSubchannel-NumberPSSCH* and *maxSubchannel-NumberPSSCH* included in *pssch-TxConfigList* and, if configured by upper layers, overlapped between *minSubchannel-NumberPSSCH* and *maxSubchannel-NumberPSSCH* indicated in *cbr-pssch-TxConfigList* for the highest priority of the sidelink logical channel(s) and the CBR measured by lower layers according to [6] if CBR measurement results are available or the corresponding *defaultTxConfigIndex* configured by upper layers if CBR measurement results are not available;
  - if transmission based on random selection is configured by upper layers:
    - randomly select the time and frequency resources for one transmission opportunity from the resource pool, according to the amount of selected frequency resources. The random function shall be such that each of the allowed selections can be chosen with equal probability;
  - else:
    - randomly select the time and frequency resources for one transmission opportunity from the resources indicated by the physical layer according to subclause 14.1.1.6 of [2], according to the amount of selected frequency resources. The random function shall be such that each of the allowed selections can be chosen with equal probability;
  - use the randomly selected resource to select a set of periodic resources spaced by the resource reservation interval for transmission opportunities of SCI and SL-SCH corresponding to the number of transmission opportunities of MAC PDUs determined in subclause 14.1.1.4B of [2];

- if the number of HARQ retransmissions is equal to 1 and there are available resources left in the resources indicated by the physical layer that meet the conditions in subclause 14.1.1.7 of [2] for more transmission opportunities:
    - randomly select the time and frequency resources for one transmission opportunity from the available resources, according to the amount of selected frequency resources. The random function shall be such that each of the allowed selections can be chosen with equal probability;
    - use the randomly selected resource to select a set of periodic resources spaced by the resource reservation interval for the other transmission opportunities of SCI and SL-SCH corresponding to the number of retransmission opportunities of the MAC PDUs determined in subclause 14.1.1.4B of [2];
    - consider the first set of transmission opportunities as the new transmission opportunities and the other set of transmission opportunities as the retransmission opportunities;
    - consider the set of new transmission opportunities and retransmission opportunities as the selected sidelink grant.
- else:
    - consider the set as the selected sidelink grant;
- use the selected sidelink grant to determine the set of subframes in which transmissions of SCI and SL-SCH occur according to subclause 14.2.1 and 14.1.1.4B of [2];
- consider the selected sidelink grant to be a configured sidelink grant;

- else if SL_RESOURCE_RESELECTION_COUNTER = 0 and when SL_RESOURCE_RESELECTION_COUNTER was equal to 1 the MAC entity randomly selected, with equal probability, a value in the interval [0, 1] which is less than or equal to the probability configured by upper layers in *probResourceKeep*:
    - clear the configured sidelink grant, if available;
    - randomly select, with equal probability, an integer value in the interval [5, 15] for the resource reservation interval higher than or equal to 100ms, in the interval [10, 30] for the resource reservation interval equal to 50ms or in the interval [25, 75] for the resource reservation interval equal to 20ms, and set SL_RESOURCE_RESELECTION_COUNTER to the selected value;
    - use the previously selected sidelink grant for the number of transmissions of the MAC PDUs determined in subclause 14.1.1.4B of [2] with the resource reservation interval to determine the set of subframes in which transmissions of SCI and SL-SCH occur according to subclause 14.2.1 and 14.1.1.4B of [2];
    - consider the selected sidelink grant to be a configured sidelink grant;

- else, if the MAC entity is configured by upper layers to transmit using a pool of resources as indicated in subclause 5.10.13.1 of [8], the MAC entity selects to create a configured sidelink grant corresponding to transmission(s) of a single MAC PDU, and data is available in STCH, the MAC entity shall for a Sidelink process:
    - select the number of HARQ retransmissions from the allowed numbers that are configured by upper layers in *allowedRetxNumberPSSCH* included in *pssch-TxConfigList* and, if configured by upper layers, overlapped in *allowedRetxNumberPSSCH* indicated in *cbr-pssch-TxConfigList* for the highest priority of the sidelink logical channel(s) and the CBR measured by lower layers according to [6] if CBR measurement results are available or the corresponding *defaultTxConfigIndex* configured by upper layers if CBR measurement results are not available;
    - select an amount of frequency resources within the range that is configured by upper layers between *minSubchannel-NumberPSSCH* and *maxSubchannel-NumberPSSCH* included in *pssch-TxConfigList* and, if configured by upper layers, overlapped between *minSubchannel-NumberPSSCH* and *maxSubchannel-NumberPSSCH* indicated in *cbr-pssch-TxConfigList* for the highest priority of the sidelink logical channel(s) and the CBR measured by lower layers according to [6] if CBR measurement results are available or the corresponding *defaultTxConfigIndex* configured by upper layers if CBR measurement results are not available;

- if transmission based on random selection is configured by upper layers:
  - randomly select the time and frequency resources for one transmission opportunity of SCI and SL-SCH from the resource pool, according to the amount of selected frequency resources. The random function shall be such that each of the allowed selections can be chosen with equal probability;
- else:
  - randomly select the time and frequency resources for one transmission opportunity of SCI and SL-SCH from the resource pool indicated by the physical layer according to subclause 14.1.1.6 of [2] , according to the amount of selected frequency resources. The random function shall be such that each of the allowed selections can be chosen with equal probability;
- if the number of HARQ retransmissions is equal to 1:
  - if transmission based on random selection is configured by upper layers and there are available resources that meet the conditions in subcause 14.1.1.7 of [2] for one more transmission opportunity:
    - randomly select the time and frequency resources for the other transmission opportunity of SCI and SL-SCH corresponding to additional transmission of the MAC PDU from the available resources, according to the amount of selected frequency resources. The random function shall be such that each of the allowed selections can be chosen with equal probability;
  - else, if transmission based on sensing or partial sensing is configured by upper layers and there are available resources left in the resources indicated by the physical layer that meet the conditions in subcause 14.1.1.7 of [2] for one more transmission opportunity:
    - randomly select the time and frequency resources for the other transmission opportunity of SCI and SL-SCH corresponding to additional transmission of the MAC PDU from the available resources, according to the amount of selected frequency resources. The random function shall be such that each of the allowed selections can be chosen with equal probability;
  - consider a transmission opportunity which comes first in time as the new transmission opportunity and a transmission opportunity which comes later in time as the retransmission opportunity;
  - consider both of the transmission opportunities as the selected sidelink grant;
- else:
  - consider the transmission opportunity as the selected sidelink grant;
- use the selected sidelink grant to determine the subframes in which transmission(s) of SCI and SL-SCH occur according to subclause 14.2.1 and 14.1.1.4B of [2];
- consider the selected sidelink grant to be a configured sidelink grant;

NOTE: For V2X sidelink communication, the UE should ensure the randomly selected time and frequency resources fulfil the latency requirement.

NOTE: For V2X sidelink communication, when there is no overlapping between the chosen configuration(s) in *pssch-TxConfigList* and chosen configuration(s) indicated in *cbr-pssch-TxConfigList*, it is up to UE implementation whether the UE transmits and which transmitting parameters the UE uses between allowed configuration(s) indicated in *pssch-TxConfigList* and allowed configuration(s) indicated in *cbr-pssch-TxConfigList*.

The MAC entity shall for each subframe:

- if the MAC entity has a configured sidelink grant occurring in this subframe:
  - if SL_RESOURCE_RESELECTION_COUNTER = 1 and the MAC entity randomly selected, with equal probability, a value in the interval [0, 1] which is above the probability configured by upper layers in *probResourceKeep*:
    - set the resource reservation interval equal to 0;
  - if the configured sidelink grant corresponds to transmission of SCI:

- instruct the physical layer to transmit SCI corresponding to the configured sidelink grant;
- for V2X sidelink communication, deliver the configured sidelink grant, the associated HARQ information and the value of the highest priority of the sidelink logical channel(s) in the MAC PDU to the Sidelink HARQ Entity for this subframe;

- else if the configured sidelink grant corresponds to transmission of first transport block for sidelink communication:
  - deliver the configured sidelink grant and the associated HARQ information to the Sidelink HARQ Entity for this subframe.

NOTE: If the MAC entity has multiple configured grants occurring in one subframe and if not all of them can be processed due to the single-cluster SC-FDM restriction, it is left for UE implementation which one of these to process according to the procedure above.

[TS 36.331, clause 5.10.13.1]

A UE capable of V2X sidelink communication that is configured by upper layers to transmit V2X sidelink communication and has related data to be transmitted shall:

1> if the conditions for sidelink operation as defined in 5.10.1d are met:

2> if in coverage on the frequency used for V2X sidelink communication as defined in TS 36.304 [4, 11.4]; or

2> if the frequency used to transmit V2X sidelink communication is included in *v2x-InterFreqInfoList* in *RRCConnectionReconfiguration* or in *v2x-InterFreqInfoList* within *SystemInformationBlockType21*:

3> if the UE is in RRC_CONNECTED and uses the PCell or the frequency included in *v2x-InterFreqInfoList* in *RRCConnectionReconfiguration* for V2X sidelink communication:

[…]

3> else:

4> if the cell chosen for V2X sidelink communication transmission broadcasts *SystemInformationBlockType21*:

5> if the UE is configured to transmit non-P2X related V2X sidelink communication, and if *SystemInformationBlockType21* includes *v2x-CommTxPoolNormalCommon* or *v2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* for the concerned frequency in *sl-V2X-ConfigCommon* and a result of sensing on the resources configured in *v2x-CommTxPoolNormalCommon* or *v2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* for the concerned frequency is available in accordance with TS 36.213 [23]:

6> configure lower layers to transmit the sidelink control information and the corresponding data based on sensing (as defined in TS 36.321 [6] and TS 36.213 [23]) using one of the resource pools indicated by *v2x-CommTxPoolNormalCommon* or *v2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* for the concerned frequency, which is selected according to 5.10.13.2;

5> else if the UE is configured to transmit P2X related V2X sidelink communication, and if *SystemInformationBlockType21* includes *p2x-CommTxPoolNormalCommon* or *p2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* for the concerned frequency in *sl-V2X-ConfigCommon*:

6> select a resource pool from *p2x-CommTxPoolNormalCommon* or *p2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* for the concerned frequency according to 5.10.13.2, but ignoring *zoneConfig* in *SystemInformationBlockType21*;

6> transmit P2X related V2X sidelink communication according to 5.10.13.1a;

5> else if *SystemInformationBlockType21* includes *v2x-CommTxPoolExceptional* in *sl-V2X-ConfigCommon* or *v2x-CommTxPoolExceptional* in *v2x-InterFreqInfoList* for the concerned frequency:

6> from the moment the UE initiates connection establishment until receiving an *RRCConnectionReconfiguration* including *sl-V2X-ConfigDedicated*, or until receiving an *RRCConnectionRelease* or an *RRCConnectionReject;* or

6> if the UE is in RRC_IDLE and a result of sensing on the resources configured in *v2x-CommTxPoolNormalCommon* or *v2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* for the concerned frequency in *Systeminformationblocktype21* is not available in accordance with TS 36.213 [23]:

7> configure lower layers to transmit the sidelink control information and the corresponding data based on random selection (as defined in TS 36.321 [6]) using the pool of resources indicated in *v2x-CommTxPoolExceptional*;

2> else:

3> configure lower layers to transmit the sidelink control information and the corresponding data based on sensing (as defined in TS 36.321 [6] and TS 36.213 [23]) using one of the resource pools indicated by *v2x-CommTxPoolList* in *SL-V2X-Preconfiguration* in case of non-P2X related V2X sidelink communication, which is selected according to 5.10.13.2, or using one of the resource pools indicated by *p2x-CommTxPoolList* in *SL-V2X-Preconfiguration* in case of P2X related V2X sidelink communication, which is selected according to 5.10.13.2, and in accordance with the timing of the selected reference as defined in 5.10.8;

The UE capable of non-P2X related V2X sidelink communication that is configured by upper layers to transmit V2X sidelink communication shall perform sensing on all pools of resources which may be used for transmission of the sidelink control information and the corresponding data. The pools of resources are indicated by *SL-V2X-Preconfiguration*, *v2x-CommTxPoolNormalCommon*, *v2x-CommTxPoolNormalDedicated* in *sl-V2X-ConfigDedicated*, or *v2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* for the concerned frequency, as configured above.

NOTE 1: If there are multiple frequencies for which normal or exceptional pools are configured, it is up to UE implementation which frequency is selected for V2X sidelink communication transmission.

[TS 36.331, clause 5.5.3.1]

The UE capable of CBR measurement when configured to transmit non-P2X related V2X sidelink communication shall:

1> if in coverage on the frequency used for V2X sidelink communication transmission as defined in TS 36.304 [4, 11.4]; or

1> if the concerned frequency is included in *v2x-InterFreqInfoList* in *RRCConnectionReconfiguration* or in *v2x-InterFreqInfoList* within *SystemInformationBlockType21*:

2> if the UE is in RRC_IDLE:

3> if the concerned frequency is the camped frequency:

4> perform CBR measurement on the pools in *v2x-CommTxPoolNormalCommon* and *v2x-CommTxPoolExceptional* if included in *SystemInformationBlockType21*;

3> else if *v2x-CommTxPoolNormal* or *v2x-CommTxPoolExceptional* is included in *v2x-InterFreqInfoList* for the concerned frequency within *SystemInformationBlockType21*:

4> perform CBR measurement on pools in *v2x-CommTxPoolNormal* and *v2x-CommTxPoolExceptional* in *v2x-InterFreqInfoList* for the concerned frequency in *SystemInformationBlockType21*;

3> else if the concerned frequency broadcasts *SystemInformationBlockType21*:

4> perform CBR measurement on pools in *v2x-CommTxPoolNormalCommon* and *v2x-CommTxPoolExceptional* if included in *SystemInformationBlockType21* broadcast on the concerned frequency;

2> if the UE is in RRC_CONNECTED:

[…]

1> else:

2> perform CBR measurement on pools in *v2x-CommTxPoolList* in *SL-V2X-Preconfiguration* for the concerned frequency;

[TS 36.331, clause 5.10.13.2]

For a frequency used for V2X sidelink communication, if *zoneConfig* is not ignored as specified in 5.10.13.1, the UE configured by upper layers for V2X sidelink communication shall only use the pool which corresponds to geographical coordinates of the UE, if *zoneConfig* is included in *SystemInformationBlockType21* of the serving cell (RRC_IDLE)/ PCell (RRC_CONNECTED) or in *RRCConnectionReconfiguration* for the concerned frequency, and the UE is configured to use resource pools provided by RRC signalling for the concerned frequency; or if *zoneConfig* is included in *SL-V2X-Preconfiguration* for the concerned frequency, and the UE is configured to use resource pools in *SL-V2X-Preconfiguration* for the frequency, according to 5.10.13.1. The UE shall only use the pool which is associated with the synchronization reference source selected in accordance with 5.10.8.2.

1> if the UE is configured to transmit on *p2x-CommTxPoolNormalCommon* or on *p2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* in *SystemInformationBlockType21* according to 5.10.13.1; or

1> if the UE is configured to transmit on *p2x-CommTxPoolList-r14* in *SL-V2X-Preconfiguration* according to 5.10.13.1; or

1> if *zoneConfig* is not included in *SystemInformationBlockType21* and the UE is configured to transmit on *v2x-CommTxPoolNormalCommon* or *v2x-CommTxPoolNormalDedicated*; or

1> if *zoneConfig* is included in *SystemInformationBlockType21* and the UE is configured to transmit on *v2x-CommTxPoolNormalDedicated* for P2X related V2X sidelink communication and *zoneID* is not included in *v2x-CommTxPoolNormalDedicated*; or

1> if *zoneConfig* is not included in the entry of *v2x-InterFreqInfoList* for the concerned frequency and the UE is configured to transmit on *v2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* or *p2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* in *RRCConnectionReconfiguration*; or

1> if *zoneConfig* is not included in *SL-V2X-Preconfiguration* for the concerned frequency and the UE is configured to transmit on *v2x-CommTxPoolList* in *SL-V2X-Preconfiguration* for the concerned frequency:

2> select the first pool associated with the synchronization reference source selected in accordance with 5.10.8.2;

24.1.12.3 Test description

24.1.12.3.1 Pre-test conditions

System Simulator:

SS-NW

- Cell 1

Table 24.1.12.3.1-1: Cell parameters values

Cell	Frequency	PLMN
1	f1	PLMN1
Note 1: The Frequency f1 shall be the anchor frequency pre-configured in the UE/USIM.		

- System information combination 29 as defined in TS 36.508 [18] clause 4.4.3.1 is used in Cell1.

SS-UE

- SS-UE1. As defined in TS 36.508 [18], configured for and operating as V2X Sidelink Communication receiving device on the resources which the UE is expected to use for transmission, as defined in TS 36.508 [18] clause 6.2.3.5.

- SS-UE2. As defined in TS 36.508 [18], configured for and operating as V2X Sidelink Communication transmitting device on the resources which the UE is expected to use for transmission (as specified in the relevant procedure steps in Table 24.1.12.3.2-3, with transmit pattern defined in Table 24.1.12.3.2-2).

- Simulation of transmission on 50 subframes (fully occupied) out of 100 subframes (100 ms) in order to achieve 50% congestion. This equals one SS-UE transmitting on 5 (5 full subframes utilizing all RBs on all subchannels of the transmitting TTI) out of 10 consecutive subframes, according to the transmit pattern shown in Table 24.1.12.3.1-2, and repeating continuously the same transmit pattern in subsequent frames. SS-UE2 transmits dummy random data on all RBs on the specified subchannels implying congestion on PSCCH and PSSCH.

Table 24.1.12.3.1-2: Transmit pattern for simulation of 50% congestion

50% Congestion									
Subframe 0	Subframe 1	Subframe 2	Subframe 3	Subframe 4	Subframe 5	Subframe 6	Subframe 7	Subframe 8	Subframe 9
SC1	SC1	**SC1**	SC1	**SC1**	SC1	**SC1**	SC1	**SC1**	SC1

SC10	SC10	**SC10**	SC10	**SC10**	SC10	**SC10**	SC10	**SC10**	SC10
Note: SC stands for subchannel. Each column above represents one TTI of 1ms. Bold font means blocked due to transmission.									

UE:

- V2X sidelink related configuration.

  - The UE is authorised to perform V2X Sidelink Communication, with ProSe Per-Packet Priority (PPPP) set to 2 (FFS).

- The UE is equipped with below information in UE or in a USIM containing default values (as per TS 36.508 [18]) except for those listed in Table 24.1.12.3.1-3.

Table 24.1.12.3.1-3: UE/ USIM configuration

USIM field	**Priority**	**Value**	**Access Technology Identifier**
EF_{UST}		Service n°119 (V2X) supported	
EF_{VST}		As per TS 36.508 [18] clause 4.9.3.4	
EF_{V2X_CONFIG}		*SL-V2X-Preconfiguration* field as defined in Table 24.1.12.3.3-9	

Preamble:

  - The UE is in State Generic Radio Bearer Establishment, UE Test Mode E Activated (State 3A) on Cell 1 according to TS 36.508 [18].

24.1.12.3.2 Test procedure sequence

Table 24.1.12.3.2-1 illustrates the downlink power levels and other, if any, changing parameters to be applied for the SS-UE at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" ... "Tn" are to be applied subsequently. The exact instants on which these values shall be applied are described elsewhere in the present clause.

Table 24.1.12.3.2-1: Time instances of simulated SS-UE power level and parameter changes

	Parameter	Unit	SS-UE2	Comment
T0	S-RSRP	dBm/15kHz	"Off"	
T1	S-RSRP	dBm/15kHz	-76	The power level of the SS-UE2 is set so that upon S-RSSI measurement by the UE the result is above the value of *threshS-RSSI-CBR*

Table 24.1.12.3.2-2: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	Close UE Test Loop with bit E0 in UE test loop mode E LB setup IE set to one (transmission mode).	<--	CLOSE UE TEST LOOP	-	-
2	The UE responds with CLOSE UE TEST LOOP COMPLETE.	-->	CLOSE UE TEST LOOP COMPLETE	-	-
3	UE transmits a *SidelinkUEInformation* message requesting resources for transmission of V2X sidelink communication in RRC_CONNECTED in the next 5 sec.	-->	*SidelinkUEInformation*	-	-
4	SS-NW releases the connection.	<--	*RRCConnectionRelease*	-	-
5	Wait for 1100ms to allow the UE to measure the congestion.	-	-	-	-
6	Check: Does the UE transmit data on the V2X sidelink communication with Tx parameters of sl-CBR-PSSCH-TxConfig[1] specified in Table 24.1.12.3.3-2? (Note 1)(Note 2)	-->	*STCH PDCP SDU packet*	1	P
7	SS configures: SS-UE2 is reconfigured to achieve 50% congestion continuously in consecutive timeframes according to the transmission pattern shown in Table 24.1.12.3.1-2, with Tx power accordance with “T1" defined in Table 24.1.12.3.2-1.	-	-	-	-
8	Wait for 1100ms to allow the UE to measure the congestion.	-	-	-	-
9	Check: Does the UE transmit data on the V2X sidelink communication with withTx parameters of sl-CBR-PSSCH-TxConfig[2] specified in Table 24.1.12.3.3-2? (Note 1)(Note 3)	-->	*STCH PDCP SDU packet*	1	P
10	Generic procedure as specified in TS 36.508 [18] Table 4.5.3.3-1	-	-	-	-
11	The SS transmits an OPEN UE TEST LOOP message to exit the UE test loop mode.	<--	*OPEN UE TEST LOOP*	-	-
12	The UE transmits an OPEN UE TEST LOOP COMPLETE message.	-->	*OPEN UE TEST LOOP COMPLETE*	-	-
13	UE transmits a *SidelinkUEInformation* message to indicate no more V2X sidelink transmission.	-->	*SidelinkUEInformation*	-	-
14	The SS transmits a DEACTIVATE TEST MODE message to de-activate UE radio bearer test mode procedure.	<--	*DEACTIVATE TEST MODE*	-	-
15	The UE transmits a DEACTIVATE TEST MODE COMPLETE message.	-->	*DEACTIVATE TEST MODE COMPLETE*	-	-
16	SS-NW releases the connection.	<--	*RRCConnectionRelease*	-	-

Note 1: Although the UE is expected to transmit continuously, The reception of one *STCH PDCP SDU packet* is sufficient for achieving the Pass verdict.

Note 2: 316 bytes of MAC PDU (300 bytes of STCH PDCP SDU and headers) are mapped to a 325 bytes (TBS) of data, using MCS =17 and Nprb = 8 from TS 36.213 [30] Table 7.1.7.1-1 and Table 7.1.7.2.1-1 which gives TBS = 2600 bits/TTI.

Note 3: 316 bytes of MAC PDU (300 bytes of STCH PDCP SDU and headers) are mapped to a 317 bytes (TBS) of data, using MCS = 8 and Nprb = 18 from TS 36.213 [30] Table 7.1.7.1-1 and Table 7.1.7.2.1-1 which gives TBS = 2536 bits/TTI.

24.1.13 V2X Sidelink Communication / Pre-configured authorisation / UE in RRC_Connected on an E-UTRAN cell operating on the anchor carrier frequency for V2X configuration/ Utilisation of the SL SPS resources configured by eNB / Transmission

24.1.13.1 Test Purpose (TP)

(1)

```
with { UE being authorised for performing V2X sidelink Communication in PLMN1 and pre-configured
with anchor carrier parameters for V2X configuration and with Radio parameters for when the UE is
"not served by E-UTRAN" and UE is in RRC_CONNECTED on Cell1/f1/PLMN1 which is operating on the
anchor carrier frequency as the one pre-configured in the UE/USIM and UE is configured to receive a
sidelink grant on the PDCCH }
ensure that {
  when { UE receives a Sidelink grant on PDCCH addressed to its SL SPS V-RNTI }
    then { UE transmits V2X sidelink communication MAC PDU using SPS sidelink grant }
}
```

(2)

```
with { UE being authorised for performing V2X sidelink Communication in PLMN1 and pre-configured
with anchor carrier parameters for V2X configuration and with Radio parameters for when the UE is
"not served by E-UTRAN" and UE is in RRC_CONNECTED on Cell1/f1/PLMN1 which is operating on the
anchor carrier frequency as the one pre-configured in the UE/USIM, and UE is configured to receive a
sidelink grant on the PDCCH addressed to SL SPS V-RNTI and UE is transmitting V2X sidelink
communication using SPS sidelink grant }
ensure that {
  when { UE receives a Sidelink grant on PDCCH addressed to its SL SPS V-RNTI with contents indicate
SPS release }
    then { UE stops V2X sidelink communication using SPS sidelink grant }
}
```

24.1.13.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.6.10.2, 5.6.10.3, TS 36.321, clauses 5.14.1.1, TS 36.213, clauses 14.1.1.4A, 14.2.1 and 14.2.4, , TS 36.212, clauses 5.3.3.1.9A.

[TS 36.321, clause 5.14.1.1]

Sidelink grants are selected as follows for V2X sidelink communication:

- if the MAC entity is configured to receive a sidelink grant dynamically on the PDCCH and data is available in STCH, the MAC entity shall:
  - use the received sidelink grant to determine the number of HARQ retransmissions and the set of subframes in which transmission of SCI and SL-SCH occur according to subclause 14.2.1 and 14.1.1.4A of [2];
  - consider the received sidelink grant to be a configured sidelink grant;

- if the MAC entity is configured by upper layers to receive a sidelink grant on the PDCCH addressed to SL Semi-Persistent Scheduling V-RNTI, the MAC entity shall for each SL SPS configuration:
  - if PDCCH contents indicate SPS activation:
    - use the received sidelink grant to determine the number of HARQ retransmissions and the set of subframes in which transmission of SCI and SL-SCH occur according to subclause 14.2.1 and 14.1.1.4A of [2];
    - consider the received sidelink grant to be a configured sidelink grant;
  - if PDCCH contents indicate SPS release:
    - clear the corresponding configured sidelink grant;

[…]

The MAC entity shall for each subframe:

- if the MAC entity has a configured sidelink grant occurring in this subframe:
  - if SL_RESOURCE_RESELECTION_COUNTER = 1 and the MAC entity randomly selected, with equal probability, a value in the interval [0, 1] which is above the probability configured by upper layers in *probResourceKeep*:
    - set the resource reservation interval equal to 0;
  - if the configured sidelink grant corresponds to transmission of SCI:
    - instruct the physical layer to transmit SCI corresponding to the configured sidelink grant;
    - for V2X sidelink communication, deliver the configured sidelink grant, the associated HARQ information and the value of the highest priority of the sidelink logical channel(s) in the MAC PDU to the Sidelink HARQ Entity for this subframe;
  - else if the configured sidelink grant corresponds to transmission of first transport block for sidelink communication:
    - deliver the configured sidelink grant and the associated HARQ information to the Sidelink HARQ Entity for this subframe.

NOTE: If the MAC entity has multiple configured grants occurring in one subframe and if not all of them can be processed due to the single-cluster SC-FDM restriction, it is left for UE implementation which one of these to process according to the procedure above.

[TS 36.331, clause 5.6.10.2]

A UE capable of providing power preference indications in RRC_CONNECTED may initiate the procedure in several cases including upon being configured to provide power preference indications and upon change of power preference. A UE capable of providing SPS assistance information in RRC_CONNECTED may initiate the procedure in several cases including upon being configured to provide SPS assistance information and upon change of SPS assistance information.

A UE capable of providing delay budget report in RRC_CONNECTED may initiate the procedure in several cases, including upon being configured to provide delay budget report and upon change of delay budget preference.

A UE capable of CE mode and providing maximum PDSCH/PUSCH bandwidth preference in RRC_CONNECTED may initiate the procedure upon being configured to provide maximum PDSCH/PUSCH bandwidth preference and/or upon change of maximum PDSCH/PUSCH bandwidth preference.

A UE capable of providing overheating assistance information in RRC_CONNECTED may initiate the procedure if it was configured to do so, upon detecting internal overheating, or upon detecting that it is no longer experiencing an overheating condition.

Upon initiating the procedure, the UE shall:

[…]

1> if configured to provide SPS assistance information:

2> if the UE did not transmit a *UEAssistanceInformation* message with *sps-AssistanceInformation* since it was configured to provide SPS assistance information; or

2> if the current SPS assistance information is different from the one indicated in the last transmission of the *UEAssistanceInformation* message:

3> initiate transmission of the *UEAssistanceInformation* message in accordance with 5.6.10.3;

[TS 36.331, clause 5.6.10.3]

[…]

The UE shall set the contents of the *UEAssistanceInformation* message for SPS assistance information:

1> if configured to provide SPS assistance information:

2> if there is any traffic for V2X sidelink communication which needs to report SPS assistance information:

3> include *trafficPatternInfoListSL* in the *UEAssistanceInformation* message;

2> if there is any traffic for uplink communication which needs to report SPS assistance information:

3> include *trafficPatternInfoListUL* in the *UEAssistanceInformation* message;

[…]

The UE shall submit the *UEAssistanceInformation* message to lower layers for transmission.

NOTE 1: It is up to UE implementation when and how to trigger SPS assistance information.

NOTE 2: It is up to UE implementation to set the content of *trafficPatternInfoListSL* and *trafficPatternInfoListUL*.

NOTE 3: Traffic patterns for different Destination Layer 2 IDs are provided in different entries in *trafficPatternInfoListSL*.

[TS 36.213, clause 14.1.1.4A]

If the UE has a configured sidelink grant (described in [8]) in subframe t_n^{SL} with the corresponding PSCCH resource *m* (described in Subclause 14.2.4), the resource blocks and subframes of the corresponding PSSCH transmissions are determined according to 14.1.1.4C.

If the UE has a configured sidelink grant (described in [8]) for an SL SPS configuration activated by Subclause 14.2.1 and if a set of sub-channels in subframe t_m^{SL} is determined as the time and frequency resource for PSSCH transmission corresponding to the configured sidelink grant (described in [8]) of the SL SPS configuration, the same set of sub-channels in subframes $t_{m+j\times P'_{SPS}}^{SL}$ are also determined for PSSCH transmissions corresponding to the same sidelink grant where *j*=1, 2,…, $P'_{SPS} = P_{step} \times P_{SPS} / 100$, and $\left(t_0^{SL}, t_1^{SL}, t_2^{SL}, ...\right)$ is determined by Subclause 14.1.5. Here, P_{SPS} is the sidelink SPS interval of the corresponding SL SPS configuration.

[TS 36.213, clause 14.1.1.4C]

The set of subframes and resource blocks for PSSCH transmission is determined by the resource used for the PSCCH transmission containing the associated SCI format 1, and "Frequency resource location of the initial transmission and retransmission" field, "Retransmission index" field, "Time gap between initial transmission and retransmission" field of the associated SCI format 1 as described below.

"Frequency resource location of the initial transmission and retransmission" field in the SCI format 1 is equal to resource indication value (*RIV*) corresponding to a starting sub-channel index (n_{subCH}^{start}) and a length in terms of contiguously allocated sub-channels (L_{subCH}≥ 1). The resource indication value is defined by

if $(L_{subCH} - 1) \le \lfloor N_{subCH} / 2 \rfloor$ then

$$RIV = N_{subCH}\left(L_{subCH} - 1\right) + n_{subCH}^{start}$$

else

$$RIV = N_{subCH}\left(N_{subCH} - L_{subCH} + 1\right) + \left(N_{subCH} - 1 - n_{subCH}^{start}\right)$$

where N_{subCH} is the total number of sub-channels in the pool determined by higher layer parameter *numSubchannel*.

For the SCI format 1 transmitted on the PSCCH resource *m* (described in subcaluse 14.2.4) in subframe t_n^{SL}, the set of subframes and sub-channels for the corresponding PSSCH are determined as follows:

- if SF_{gap} is zero,
  - the time and frequency resources for the corresponding PSSCH is given by
    - sub-channel(s) $m, m+1, ..., m+L_{subCH}-1$ in subframe t_n^{SL}.
- else if "Retransmission index" in the SCI format 1 is zero,
  - the time and frequency resources for the corresponding PSSCH is given by
    - sub-channel(s) $m, m+1, ..., m+L_{subCH}-1$ in subframe t_n^{SL}, and
    - sub-channels $n_{subCH}^{start}, n_{subCH}^{start}+1, ..., n_{subCH}^{start}+L_{subCH}-1$ in subframe $t_{n+SF_{gap}}^{SL}$.
- else if "Retransmission index" in the SCI format 1 is one,
  - the time and frequency resources for the corresponding PSSCH is given by
    - sub-channels $n_{subCH}^{start}, n_{subCH}^{start}+1, ..., n_{subCH}^{start}+L_{subCH}-1$ in subframe $t_{n-SF_{gap}}^{SL}$, and
    - sub-channels $m, m+1, ..., m+L_{subCH}-1$ in subframe t_n^{SL}.

where SF_{gap} is the value indicated by "Time gap between initial transmission and retransmission" field the SCI format 1 and $\left(t_0^{SL}, t_1^{SL}, t_2^{SL}, ...\right)$ is determined by Subclause 14.1.5.

When sub-channel(s) $m, m+1, ..., m+L_{subCH}-1$ are determined in a subframe for the transmission of PSSCH, the set of resource blocks determined for the PSSCH transmission is given by N_{PSSCH}^{RB} contiguous resource blocks with the physical resource block number $n_{PRB} = n_{subCHRBstart} + m * n_{subCHsize} + j + \beta$ for $j = 0, ..., N_{PSSCH}^{RB} - 1$. Here, $n_{subCHRBstart}$ and $n_{subCHsize}$ are given by higher layer parameters *startRBSubchannel* and *sizeSubchannel*, respectively. The parameters N_{PSSCH}^{RB} and β are given as follows:

- if a pool is (pre)configured such that a UE always transmits PSCCH and the corresponding PSSCH in adjacent resource blocks in a subframe, $\beta = 2$ and N_{PSSCH}^{RB} is the largest integer that fulfils

$$N_{PSSCH}^{RB} = 2^{\alpha_2} \cdot 3^{\alpha_3} \cdot 5^{\alpha_5} \le L_{subCH} * n_{subCHsize} - 2$$

  where $\alpha_2, \alpha_3, \alpha_5$ is a set of non-negative integers

- if a pool is (pre)configured such that a UE may transmit PSCCH and the corresponding PSSCH in non-adjacent resource blocks in a subframe, $\beta = 0$ and N_{PSSCH}^{RB} is the largest integer that fulfils

$$N_{PSSCH}^{RB} = 2^{\alpha_2} \cdot 3^{\alpha_3} \cdot 5^{\alpha_5} \le L_{subCH} * n_{subCHsize}$$

where $\alpha_2, \alpha_3, \alpha_5$ is a set of non-negative integers.

[TS 36.213, clause 14.2.1]

[…]

For sidelink transmission mode 3,

- The UE shall determine the subframes and resource blocks for transmitting SCI format 1 as follows:
  - SCI format 1 is transmitted in two physical resource blocks per slot in each subframe where the corresponding PSSCH is transmitted.
  - If the UE receives in subframe *n* DCI format 5A with the CRC scrambled by the SL-V-RNTI, one transmission of PSCCH is in the PSCCH resource L_{Init} (described in Subclause 14.2.4) in the first subframe that is included in $\left(t_0^{SL}, t_1^{SL}, t_2^{SL}, \ldots\right)$ and that starts not earlier than $T_{\mathrm{DL}} - \frac{N_{\mathrm{TA}}}{2} \times T_{\mathrm{S}} + (4+m) \times 10^{-3}$. L_{Init} is the value indicated by "Lowest index of the sub-channel allocation to the initial transmission" associated with the configured sidelink grant (described in [8]), $\left(t_0^{SL}, t_1^{SL}, t_2^{SL}, \ldots\right)$ is determined by Subclause 14.1.5, the value *m* is indicated by 'SL index' field in the corresponding DCI format 5A according to Table 14.2.1-1 if this field is present and *m*=0 otherwise, T_{DL} is the start of the downlink subframe carrying the DCI, and N_{TA} and T_{S} are described in [3].
    - If "Time gap between initial transmission and retransmission" in the configured sidelink grant (described in [8]) is not equal to zero, another transmission of PSCCH is in the PSCCH resource $L_{\mathrm{Re}TX}$ in subframe $t_{q+SF_{gap}}^{SL}$, where SF_{gap} is the value indicated by "Time gap between initial transmission and retransmission" field in the configured sidelink grant, subframe t_q^{SL} corresponds to the subframe $n + k_{init}$. $L_{\mathrm{Re}TX}$ corresponds to the value n_{subCH}^{start} determined by the procedure in Subclause 14.1.1.4C with the RIV set to the value indicated by "Frequency resource location of the initial transmission and retransmission" field in the configured sidelink grant.
  - If the UE receives in subframe *n* DCI format 5A with the CRC scrambled by the SL-SPS-V-RNTI , the UE shall consider the received DCI information as a valid sidelink semi-persistent activation or release only for the SPS configuration indicated by the SL SPS configuration index field. If the received DCI activates an SL SPS configuration, one transmission of PSCCH is in the PSCCH resource L_{Init} (described in Subclause 14.2.4) in the first subframe that is included in $\left(t_0^{SL}, t_1^{SL}, t_2^{SL}, \ldots\right)$ and that starts not earlier than $T_{\mathrm{DL}} - \frac{N_{\mathrm{TA}}}{2} \times T_{\mathrm{S}} + (4+m) \times 10^{-3}$. L_{Init} is the value indicated by "Lowest index of the sub-channel allocation to the initial transmission" associated with the configured sidelink grant (described in [8]), $\left(t_0^{SL}, t_1^{SL}, t_2^{SL}, \ldots\right)$ is determined by Subclause 14.1.5, the value *m* is indicated by 'SL index' field in the corresponding DCI format 5A according to Table 14.2.1-1 if this field is present and *m*=0 otherwise, T_{DL} is the start of the downlink subframe carrying the DCI, and N_{TA} and T_{S} are described in [3]..
    - If "Time gap between initial transmission and retransmission" in the configured sidelink grant (described in [8]) is not equal to zero, another transmission of PSCCH is in the PSCCH resource $L_{\mathrm{Re}TX}$ in subframe $t_{q+SF_{gap}}^{SL}$, where SF_{gap} is the value indicated by "Time gap between initial transmission and retransmission" field in the configured sidelink grant, subframe t_q^{SL} corresponds to the subframe $n + k_{init}$. $L_{\mathrm{Re}TX}$ corresponds to the value n_{subCH}^{start} determined by the procedure in Subclause 14.1.1.4C with the RIV set to the value indicated by "Frequency resource location of the initial transmission and retransmission" field in the configured sidelink grant.
- The UE shall set the contents of the SCI format 1 as follows:
  - the UE shall set the Modulation and coding scheme as indicated by higher layers.

- the UE shall set the "Priority" field according to the highest priority among those priority(s) indicated by higher layers corresponding to the transport block.

- the UE shall set the Time gap between initial transmission and retransmission field, the Frequency resource location of the initial transmission and retransmission field, and the Retransmission index field such that the set of time and frequency resources determined for PSSCH according to Subclause 14.1.1.4C is in accordance with the PSSCH resource allocation indicated by the configured sidelink grant.

- the UE shall set the Resource reservation to zero.

- Each transmission of SCI format 1 is transmitted in one subframe and two physical resource blocks per slot of the subframe.

- The UE shall randomly select the cyclic shift $n_{cs,\lambda}$ among {0, 3, 6, 9} in each PSCCH transmission.

Table 14.2.1-1: Mapping of DCI format 5A offset field to indicated value *m*

SL index field in DCI format 5A	Indicated value *m*
'00'	0
'01'	1
'10'	2
'11'	3

[TS 36.213, clause 14.2.4]

The following procedure is used for sidelink transmission mode 3 and 4.

If a pool is (pre)configured such that a UE always transmits PSCCH and the corresponding PSSCH in adjacent resource blocks in a subframe, the PSCCH resource *m* is the set of two contiguous resource blocks with the physical resource block number $n_{PRB} = n_{subCHRBstart} + m * n_{subCHsize} + j$ for *j*=0 and 1 where $n_{subCHRBstart}$ and $n_{subCHsize}$ are given by higher layer parameters *startRBSubchannel* and *sizeSubchannel*, respectively.

If a pool is (pre)configured such that a UE may transmit PSCCH and the corresponding PSSCH in non-adjacent resource blocks in a subframe, the PSCCH resource *m* is the set of two contiguous resource blocks with the physical resource block number $n_{PRB} = n_{PSCCHstart} + 2 * m + j$ for *j*=0 and 1 where $n_{PSCCHstart}$ is given by higher layer parameter *startRBPSCCHPool*.

[TS 36.212, clause 5.3.3.1.9A]

DCI format 5A is used for the scheduling of PSCCH, and also contains several SCI format 1 fields used for the scheduling of PSSCH.

The following information is transmitted by means of the DCI format 5A:

- Carrier indicator –3 bits. This field is present according to the definitions in [3].

- Lowest index of the subchannel allocation to the initial transmission - $\left\lceil \log_2(N_{\text{subchannel}}^{\text{SL}}) \right\rceil$ bits as defined in section 14.1.1.4C of [3].

- SCI format 1 fields according to 5.4.3.1.2:

  - Frequency resource location of initial transmission and retransmission.

  - Time gap between initial transmission and retransmission.

- SL index – 2 bits as defined in section 14.2.1 of [3] (this field is present only for cases with TDD operation with uplink-downlink configuration 0-6).

When the format 5A CRC is scrambled with SL-SPS-V-RNTI, the following fields are present:

- SL SPS configuration index – 3 bits as defined in section 14.2.1 of [3].

- Activation/release indication – 1 bit as defined in section 14.2.1 of [3].

If the number of information bits in format 5A mapped onto a given search space is less than the payload size of format 0 mapped onto the same search space, zeros shall be appended to format 5A until the payload size equals that of format 0 including any padding bits appended to format 0.

If the format 5A CRC is scrambled by SL-V-RNTI and if the number of information bits in format 5A mapped onto a given search space is less than the payload size of format 5A with CRC scrambled by SL-SPS-V-RNTI mapped onto the same search space and format 0 is not defined on the same search space, zeros shall be appended to format 5A until the payload size equals that of format 5A with CRC scrambled by SL-SPS-V-RNTI.

24.1.13.3 Test description

24.1.13.3.1 Pre-test conditions

System Simulator:

SS-NW

- Cell 1

Table 24.1.13.3.1-1: Cell parameters values

Cell	Frequency	PLMN
1	f1	PLMN1
Note 1: The Frequency f1 shall be the anchor frequency pre-configured in the UE/USIM.		

- System information combination 29 as defined in TS 36.508 [18] clause 4.4.3.1 is used in Cell1.
- *SystemInformationBlockType21* for Cell 1 using parameters as specified in Table 24.1.13.3.3-2.

SS-UE

- SS-UE1. As defined in TS 36.508 [18], configured for and operating as V2X Sidelink Communication receiving device on the resources which the UE is expected to use for transmission, as defined in TS 36.508 [18] clause 6.2.3.5.

UE:

- V2X sidelink related configuration.
  - The UE is authorised to perform V2X Sidelink Communication.
- The UE is equipped with below information in UE or in a USIM containing default values (as per TS 36.508 [18]) except for those listed in Table 24.1.13.3.1-2.

Table 24.1.13.3.1-2: UE/ USIM configuration

USIM field	Priority	Value	Access Technology Identifier
EF_{UST}		Service n°119 (V2X) supported	
EF_{VST}		As per TS 36.508 [18] clause 4.9.3.4	
EF_{V2X_CONFIG}		*SL-V2X-Preconfiguration* field as defined in Table 24.1.13.3.3-1	

Preamble:

  - The UE is in State Generic Radio Bearer Establishment, UE Test Mode E Activated (State 3A) on Cell 1 according to TS 36.508 [18].

24.1.13.3.2 Test procedure sequence

Table 24.1.13.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	Close UE Test Loop with bit E0 in UE test loop mode E LB setup IE set to one (transmission mode).	<--	CLOSE UE TEST LOOP	-	-

ensure that {
  when { There isn't reliable GNSS in accordance with TS 36.101 and TS 36.133. UE can't detect a SLSS=0 SyncRef UE with S-RSRP exceeds the minimum requirement defined in TS 36.133 }
   then { UE select eNB as synchronization source }
            }
```

24.1.14.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331 subclause 5.10.7.1, 5.10.7.2, 5.10.7.3, 5.10.7.4 and 5.10.8.2.

[TS 36.331, clause 5.10.7.1]

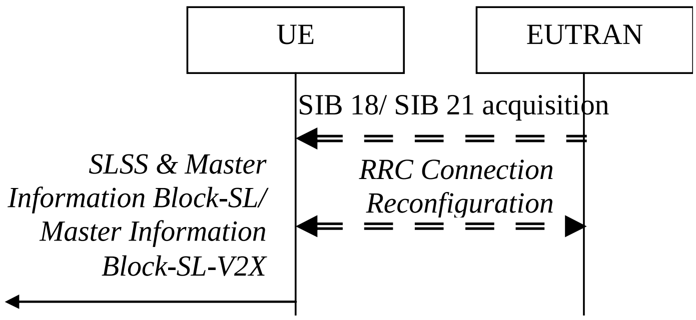

Figure 5.10.7.1-1: Synchronisation information transmission for sidelink communication or V2X sidelink communication, in (partial) coverage

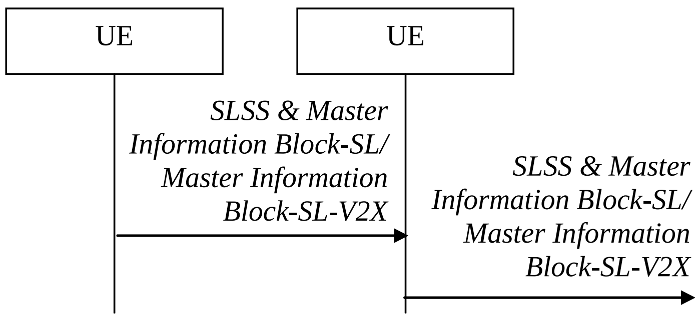

Figure 5.10.7.1-2: Synchronisation information transmission for sidelink communication or V2X sidelink communication / sidelink discovery, out of coverage

The purpose of this procedure is to provide synchronisation information to a UE. For sidelink discovery, the synchronisation information concerns a Sidelink Synchronisation Signal (SLSS) and, in case of PS related discovery, also timing information and some additional configuration parameters (i.e. the *MasterInformationBlock-SL* message), while for sidelink communication or V2X sidelink communication it concerns an SLSS and the *MasterInformationBlock-SL* or *MasterInformationBlock-SL-V2X* message. A UE transmits synchronisation information either when E-UTRAN configures it to do so by dedicated signalling (i.e. network based), or when not configured by dedicated signalling (i.e. UE based) and E-UTRAN broadcasts (in coverage) or pre-configures a threshold (out of coverage).

The synchronisation information transmitted by the UE may be derived from information/ signals received from E-UTRAN (in coverage) or received from a UE acting as synchronisation reference for the transmitting UE or received from GNSS. In the remainder, the UE acting as synchronisation reference is referred to as SyncRef UE.

[TS 36.331, clause 5.10.7.2]

A UE capable of V2X sidelink communication and SLSS/PSBCH transmission shall, when transmitting non-P2X related V2X sidelink communication in accordance with 5.10.13, and if the conditions for V2X sidelink communication operation as defined in 5.10.1d are met and when the following conditions are met:

1> if in coverage on the frequency used for V2X sidelink communication, as defined in TS 36.304 [4, 11.4]; and has selected GNSS or the cell as synchronization reference as defined in 5.10.13.3; or

1> if out of coverage on the frequency used for V2X sidelink communication, as defined in TS 36.304 [4, 11.4], and the frequency used to transmit V2X sidelink communication is included in *v2x-InterFreqInfoList* in *RRCConnectionReconfiguration* or in *v2x-InterFreqInfoList* within *SystemInformationBlockType21* of the serving cell/ PCell; and has selected GNSS or the cell as synchronization reference as defined in 5.10.13.3:

2> if in RRC_CONNECTED; and if *networkControlledSyncTx* is configured and set to *on*; or

2> if *networkControlledSyncTx* is not configured; and for the concerned frequency *syncTxThreshIC* is configured; and the RSRP measurement of the reference cell, selected as defined in 5.10.13.3, for V2X sidelink communication transmission is below the value of *syncTxThreshIC*:

3> transmit SLSS on the frequency used for V2X sidelink communication in accordance with 5.10.7.3 and TS 36.211 [21];

3> transmit the *MasterInformationBlock-SL-V2X* message on the frequency used for V2X sidelink communication, in the same subframe as SLSS, and in accordance with 5.10.7.4;

1> else:

2> for the frequency used for V2X sidelink communication, if *syncOffsetIndicators* is included in *SL-V2X-Preconfiguration*:

3> if *syncTxThreshOoC* is included in *SL-V2X-Preconfiguration*; and the UE is not directly synchronized to GNSS, and the UE has no selected SyncRef UE or the S-RSRP measurement result of the selected SyncRef UE is below the value of *syncTxThreshOoC*; or

3> if the UE selects GNSS as the synchronization reference source:

4> transmit SLSS in accordance with 5.10.7.3 and TS 36.211 [21];

4> transmit the *MasterInformationBlock-SL-V2X* message, in the same subframe as SLSS, and in accordance with 5.10.7.4;

[TS 36.331, clause 5.10.7.3]

The UE shall select the SLSSID and the subframe in which to transmit SLSS as follows:

1> if triggered by V2X sidelink communication and in coverage on the frequency used for V2X sidelink communication, as defined in TS 36.304 [4, 11.4]; or

1> if triggered by V2X sidelink communication, and out of coverage on the frequency used for V2X sidelink communication, and the concerned frequency is included in *v2x-InterFreqInfoList* in *RRCConnectionReconfiguration* or in *v2x-InterFreqInfoList* within *SystemInformationBlockType21* of the serving cell/ PCell;

2> if the UE has selected GNSS as synchronization reference in accordance with 5.10.8.2:

3> select SLSSID 0;

3> use *syncOffsetIndicator* included in the entry of *v2x-SyncConfig* corresponding to the concerned frequency in *v2x-InterFreqInfoList*, that includes *txParameters* and *gnss-Sync*;

3> select the subframe(s) indicated by *syncOffsetIndicator*;

2> if the UE has selected a cell as synchronization reference in accordance with 5.10.8.2:

3> select the SLSSID included in the entry of *v2x-SyncConfig* configured for the concerned frequency, that includes *txParameters* and does not include *gnss-Sync*;

3> use *syncOffsetIndicator* corresponding to the selected SLSSID;

3> select the subframe(s) indicated by *syncOffsetIndicator*;

1> else if triggered by V2X sidelink communication and the UE has GNSS as the synchronization reference:

2> select SLSSID 0;

2> if *syncOffsetIndicator3* is configured for the frequency used for V2X sidelink communication in *SL-V2X-Preconfiguration*:

3> select the subframe indicated by *syncOffsetIndicator3*;

2> else:

3> select the subframe indicated by *syncOffsetIndicator1*;

1> else:

2> select the synchronisation reference UE (i.e. SyncRef UE) as defined in 5.10.8;

2> if the UE has a selected SyncRef UE and *inCoverage* in the *MasterInformationBlock-SL* or *MasterInformationBlock-SL-V2X* message received from this UE is set to *TRUE*; or

2> if the UE has a selected SyncRef UE and *inCoverage* in the *MasterInformationBlock-SL* or *MasterInformationBlock-SL-V2X* message received from this UE is set to *FALSE* while the SLSS from this UE is part of the set defined for out of coverage, see TS 36.211 [21]:

3> select the same SLSSID as the SLSSID of the selected SyncRef UE;

3> select the subframe in which to transmit the SLSS according to the *syncOffsetIndicator1* or *syncOffsetIndicator2* included in the preconfigured sidelink parameters (i.e. *preconfigSync* in *SL-Preconfiguration* or *v2x-CommPreconfigSync* in *SL-V2X-Preconfiguration* defined in 9.3) corresponding to the concerned frequency, such that the subframe timing is different from the SLSS of the selected SyncRef UE;

2> else if the UE has a selected SyncRef UE and the SLSS from this UE was transmitted on the subframe indicated by *syncOffsetIndicator3* that is included in the *syncOffsetIndicators* in *SL-V2X-Preconfiguration*, and is corresponding to the frequency used for V2X sidelink communication:

3> select SLSSID 169;

3> select the subframe indicated by *syncOffsetIndicator2*;

2> else if the UE has a selected SyncRef UE:

3> select the SLSSID from the set defined for out of coverage having an index that is 168 more than the index of the SLSSID of the selected SyncRef UE, see TS 36.211 [21];

3> select the subframe in which to transmit the SLSS according to *syncOffsetIndicator1* or *syncOffsetIndicator2* included in the preconfigured sidelink parameters (i.e. *preconfigSync* in *SL-Preconfiguration* or *v2x-CommPreconfigSync* in *SL-V2X-Preconfiguration* defined in 9.3), such that the subframe timing is different from the SLSS of the selected SyncRef UE;

2> else (i.e. no SyncRef UE selected):

3> if triggered by V2X sidelink communication, randomly select, using a uniform distribution, an SLSSID from the set of sequences defined for out of coverage except SLSSID 168 and 169, see TS 36.211 [21];

3> else, randomly select, using a uniform distribution, an SLSSID from the set of sequences defined for out of coverage, see TS 36.211 [21];

3> select the subframe in which to transmit the SLSS according to the *syncOffsetIndicator1* or *syncOffsetIndicator2* (arbitrary selection between these) included in the preconfigured sidelink parameters (i.e. *preconfigSync* in *SL-Preconfiguration* or *v2x-CommPreconfigSync* in *SL-V2X-Preconfiguration* defined in 9.3);

[TS 36.331, clause 5.10.7.4]

The UE shall set the contents of the *MasterInformationBlock-SL* or *MasterInformationBlock-SL-V2X* message as follows:

1> if in coverage on the frequency used for the sidelink operation that triggered this procedure as defined in TS 36.304 [4, 11.4]:

2> set *inCoverage* to *TRUE*;

2> set *sl-Bandwidth* to the value of *ul-Bandwidth* as included in the received *SystemInformationBlockType2* of the cell chosen for the concerned sidelink operation;

2> if *tdd-Config* is included in the received *SystemInformationBlockType1*:

3> set *subframeAssignmentSL* to the value representing the same meaning as of s*ubframeAssignment* that is included in *tdd-Config* in the received *SystemInformationBlockType1*;

2> else:

3> set *subframeAssignmentSL* to *none*;

2> if triggered by sidelink communication; and if *syncInfoReserved* is included in an entry of *commSyncConfig* from the received *SystemInformationBlockType18*:

3> set *reserved* to the value of *syncInfoReserved* in the received *SystemInformationBlockType18*;

2> if triggered by sidelink discovery; and if *syncInfoReserved* is included in an entry of *discSyncConfig* from the received *SystemInformationBlockType19*:

3> set *reserved* to the value of *syncInfoReserved* in the received *SystemInformationBlockType19*;

2> if triggered by V2X sidelink communication; and if *syncInfoReserved* is included in an entry of *v2x-SyncConfig* from the received *SystemInformationBlockType21*:

3> set *reserved* to the value of *syncInfoReserved* in the received *SystemInformationBlockType21*;

2> else:

3> set all bits in *reserved* to 0;

1> else if out of coverage on the frequency used for V2X sidelink communication as defined in TS 36.304 [4, 11.4]; and the concerned frequency is included in *v2x-InterFreqInfoList* in *RRCConnectionReconfiguration* or in *v2x-InterFreqInfoList* within *SystemInformationBlockType21* of the serving cell/ PCell:

2> set *inCoverage* to *TRUE*;

2> set *sl-Bandwidth* to the value of the corresponding field included in *v2x-InterFreqInfoList*;

2> set *subframeAssignmentSL* and *reserved* to the value of the corresponding field included in the preconfigured sidelink parameters (i.e. *v2x-CommPreconfigGeneral* in *SL-V2X-Preconfiguration* defined in 9.3);

1> else if out of coverage on the frequency used for V2X sidelink communication as defined in TS 36.304 [4, 11.4]; and the UE selects GNSS timing as the synchronization reference source and *syncOffsetIndicator3* is not included in *SL-V2X-Preconfiguration*:

2> set *inCoverage* to *TRUE*;

2> set *sl-Bandwidth*, *subframeAssignmentSL* and *reserved* to the value of the corresponding field included in the preconfigured sidelink parameters (i.e. *v2x-CommPreconfigGeneral* in *SL-V2X-Preconfiguration* defined in 9.3);

1> else if the UE has a selected SyncRef UE (as defined in 5.10.8):

2> set *inCoverage* to *FALSE*;

2> set *sl-Bandwidth*, *subframeAssignmentSL* and *reserved* to the value of the corresponding field included in the received *MasterInformationBlock-SL* or *MasterInformationBlock-SL-V2X*;

1> else:

2> set *inCoverage* to *FALSE*;

2> set *sl-Bandwidth*, *subframeAssignmentSL* and *reserved* to the value of the corresponding field included in the preconfigured sidelink parameters (i.e. *preconfigGeneral* in *SL-Preconfiguration* or *v2x-CommPreconfigGeneral* in *SL-V2X-Preconfiguration* defined in 9.3);

1> set *directFrameNumber* and *directSubframeNumber* according to the subframe used to transmit the SLSS, as specified in 5.10.7.3;

1> submit the *MasterInformationBlock-SL* or *MasterInformationBlock-SL-V2X* message to lower layers for transmission upon which the procedure ends;

[TS 36.331, clause 5.10.8.2]

The UE shall:

1> if triggered by V2X sidelink communication, and in coverage on the frequency for V2X sidelink communication; or

1> if triggered by V2X sidelink communication, and out of coverage on the frequency for V2X sidelink communication, and the frequency used to transmit V2X sidelink communication is included in *v2x-InterFreqInfoList* in *RRCConnectionReconfiguration* or in *v2x-InterFreqInfoList* within *SystemInformationBlockType21* of the serving cell/ PCell:

2> if *typeTxSync* is configured for the concerned frequency and set to *enb*:

3> select a cell as the synchronization reference source as defined in 5.10.13.3;

2> else if *typeTxSync* for the concerned frequency is not configured or is set to *gnss*, and GNSS is reliable in accordance with TS 36.101 [42] and TS 36.133 [16]:

3> select GNSS as the synchronization reference source;

2> else (i.e., there is no GNSS which is reliable in accordance with TS 36.101 [42] and TS 36.133 [16]):

3> search SLSSID=0 on the concerned frequency to detect candidate SLSS, in accordance with TS 36.133 [16];

3> when evaluating the detected SLSS, apply layer 3 filtering as specified in 5.5.3.2 using the preconfigured *filterCoefficient* as defined in 9.3, before using the S-RSRP measurement results;

3> if the S-RSRP of the SyncRef UE identified by the detected SLSS exceeds the minimum requirement defined in TS 36.133 [16]:

4> select the SyncRef UE;

3> else (i.e., no SLSSID=0 detected):

4> select a cell as the synchronization reference source as defined in 5.10.13.3;

24.1.14.3 Test description

24.1.14.3.1 Pre-test conditions

System Simulator:

SS-NW

- Cell 1
- System information combination 29 as defined in TS 36.508 [18] clause 4.4.3.1 is used in E-UTRA Cell 1.
- 1 GNSS simulator

SS-UE

- SS-UE1: as defined in TS 36.508 [18], configured for and operating as V2X sidelink Communication transmitting and receiving device (as defined in TS 36.508 [18] clause 6.2.3.5), as well as, transmitting Synchronisation information on the resources which the UE is expected to use for transmission and reception.

UE:

- V2X sidelink related configuration
  - The UE is authorised to perform V2X Sidelink Communication
- The UE is equipped with below information in UE or in a USIM containing default values (as per TS 36.508 [18]).

Table 24.1.14.3.1-1: UE/ USIM configuration

USIM field	Priority	Value	Access Technology Identifier
EF_{UST}		Service n°119 (V2X) supported	
EF_{VST}		As per TS 36.508 [18] clause 4.9.3.4	
EF_{V2X_CONFIG}		*SL-V2X-Preconfiguration* field as defined in Table 24.1.14.3.3-5 Geographical area field as defined in TS 36.508 [18] clause 4.9.3.1.	

Preamble:

- The UE is registered, Idle Mode, UE Test Mode E Activated (state 2A) according to TS 36.508 [18] on Cell 1.

24.1.14.3.2 Test procedure sequence

Table 24.1.14.3.2-1 and Table 24.1.14.3.2-2 illustrate the downlink power levels and other changing parameters to be applied for the cell and SS-UE (resp.) at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" ... "Tn" are to be applied subsequently. The exact instants on which these values shall be applied are described elsewhere in the present clause.

Table 24.1.14.3.2-1: Time instances of cell power level and parameter changes

	Parameter	Unit	Cell 1
T0	Cell-specific RS EPRE	dBm/15kHz	-88
T1	Cell-specific RS EPRE	dBm/15kHz	-79
T2	Cell-specific RS EPRE	dBm/15kHz	-88

Table 24.1.14.3.2-2: Time instances of simulated SS-UE power level and parameter changes

	Parameter	Unit	SS-UE1

T0	Cell-specific RS EPRE	dBm/15k Hz	"Off"
T1	Cell-specific RS EPRE	dBm/15k Hz	-79
T2	Cell-specific RS EPRE	dBm/15k Hz	"Off"

sidelink communication }
            }
```

24.1.15.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331 subclauses 5.10.7.1, 5.10.7.2, 5.10.7.3, 5.10.7.4, 5.10.8.2, TS 24.386 subclause 6.1.2.3.

[TS 36.331, clause 5.10.7.1]

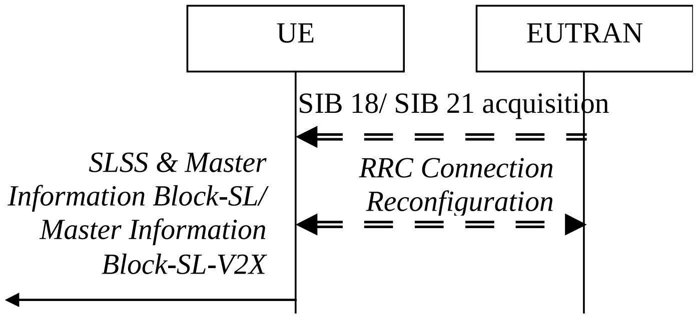

Figure 5.10.7.1-1: Synchronisation information transmission for sidelink communication or V2X sidelink communication, in (partial) coverage

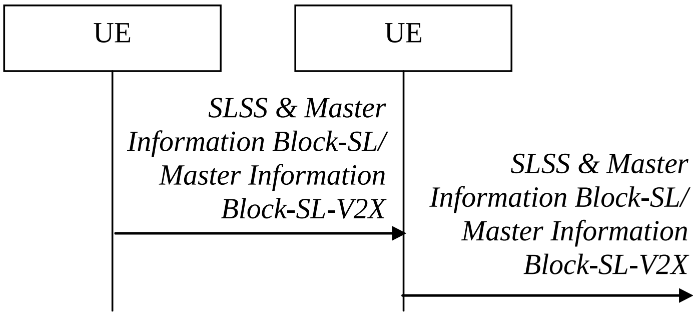

Figure 5.10.7.1-2: Synchronisation information transmission for sidelink communication or V2X sidelink communication / sidelink discovery, out of coverage

The purpose of this procedure is to provide synchronisation information to a UE. For sidelink discovery, the synchronisation information concerns a Sidelink Synchronisation Signal (SLSS) and, in case of PS related discovery, also timing information and some additional configuration parameters (i.e. the *MasterInformationBlock-SL* message), while for sidelink communication or V2X sidelink communication it concerns an SLSS and the *MasterInformationBlock-SL* or *MasterInformationBlock-SL-V2X* message. A UE transmits synchronisation information either when E-UTRAN configures it to do so by dedicated signalling (i.e. network based), or when not configured by dedicated signalling (i.e. UE based) and E-UTRAN broadcasts (in coverage) or pre-configures a threshold (out of coverage).

The synchronisation information transmitted by the UE may be derived from information/ signals received from E-UTRAN (in coverage) or received from a UE acting as synchronisation reference for the transmitting UE or received from GNSS. In the remainder, the UE acting as synchronisation reference is referred to as SyncRef UE.

[TS 36.331, clause 5.10.7.2]

A UE capable of V2X sidelink communication and SLSS/PSBCH transmission shall, when transmitting non-P2X related V2X sidelink communication in accordance with 5.10.13, and if the conditions for V2X sidelink communication operation as defined in 5.10.1d are met and when the following conditions are met:

1> if in coverage on the frequency used for V2X sidelink communication, as defined in TS 36.304 [4, 11.4]; and has selected GNSS or the cell as synchronization reference as defined in 5.10.13.3; or

1> if out of coverage on the frequency used for V2X sidelink communication, as defined in TS 36.304 [4, 11.4], and the frequency used to transmit V2X sidelink communication is included in *v2x-InterFreqInfoList* in *RRCConnectionReconfiguration* or in *v2x-InterFreqInfoList* within *SystemInformationBlockType21* of the serving cell/ PCell; and has selected GNSS or the cell as synchronization reference as defined in 5.10.13.3:

2> if in RRC_CONNECTED; and if *networkControlledSyncTx* is configured and set to *on*; or

2> if *networkControlledSyncTx* is not configured; and for the concerned frequency *syncTxThreshIC* is configured; and the RSRP measurement of the reference cell, selected as defined in 5.10.13.3, for V2X sidelink communication transmission is below the value of *syncTxThreshIC*:

3> transmit SLSS on the frequency used for V2X sidelink communication in accordance with 5.10.7.3 and TS 36.211 [21];

3> transmit the *MasterInformationBlock-SL-V2X* message on the frequency used for V2X sidelink communication, in the same subframe as SLSS, and in accordance with 5.10.7.4;

1> else:

2> for the frequency used for V2X sidelink communication, if *syncOffsetIndicators* is included in *SL-V2X-Preconfiguration*:

3> if *syncTxThreshOoC* is included in *SL-V2X-Preconfiguration*; and the UE is not directly synchronized to GNSS, and the UE has no selected SyncRef UE or the S-RSRP measurement result of the selected SyncRef UE is below the value of *syncTxThreshOoC*; or

3> if the UE selects GNSS as the synchronization reference source:

4> transmit SLSS in accordance with 5.10.7.3 and TS 36.211 [21];

4> transmit the *MasterInformationBlock-SL-V2X* message, in the same subframe as SLSS, and in accordance with 5.10.7.4;

[TS 36.331, clause 5.10.7.3]

The UE shall select the SLSSID and the subframe in which to transmit SLSS as follows:

1> if triggered by V2X sidelink communication and in coverage on the frequency used for V2X sidelink communication, as defined in TS 36.304 [4, 11.4]; or

1> if triggered by V2X sidelink communication, and out of coverage on the frequency used for V2X sidelink communication, and the concerned frequency is included in *v2x-InterFreqInfoList* in *RRCConnectionReconfiguration* or in *v2x-InterFreqInfoList* within *SystemInformationBlockType21* of the serving cell/ PCell;

2> if the UE has selected GNSS as synchronization reference in accordance with 5.10.8.2:

3> select SLSSID 0;

3> use *syncOffsetIndicator* included in the entry of *v2x-SyncConfig* corresponding to the concerned frequency in *v2x-InterFreqInfoList*, that includes *txParameters* and *gnss-Sync*;

3> select the subframe(s) indicated by *syncOffsetIndicator*;

2> if the UE has selected a cell as synchronization reference in accordance with 5.10.8.2:

3> select the SLSSID included in the entry of *v2x-SyncConfig* configured for the concerned frequency, that includes *txParameters* and does not include *gnss-Sync*;

3> use *syncOffsetIndicator* corresponding to the selected SLSSID;

3> select the subframe(s) indicated by *syncOffsetIndicator*;

1> else if triggered by V2X sidelink communication and the UE has GNSS as the synchronization reference:

2> select SLSSID 0;

2> if *syncOffsetIndicator3* is configured for the frequency used for V2X sidelink communication in *SL-V2X-Preconfiguration*:

3> select the subframe indicated by *syncOffsetIndicator3*;

2> else:

3> select the subframe indicated by *syncOffsetIndicator1*;

1> else:

2> select the synchronisation reference UE (i.e. SyncRef UE) as defined in 5.10.8;

2> if the UE has a selected SyncRef UE and *inCoverage* in the *MasterInformationBlock-SL* or *MasterInformationBlock-SL-V2X* message received from this UE is set to *TRUE*; or

2> if the UE has a selected SyncRef UE and *inCoverage* in the *MasterInformationBlock-SL* or *MasterInformationBlock-SL-V2X* message received from this UE is set to *FALSE* while the SLSS from this UE is part of the set defined for out of coverage, see TS 36.211 [21]:

3> select the same SLSSID as the SLSSID of the selected SyncRef UE;

3> select the subframe in which to transmit the SLSS according to the *syncOffsetIndicator1* or *syncOffsetIndicator2* included in the preconfigured sidelink parameters (i.e. *preconfigSync* in *SL-Preconfiguration* or *v2x-CommPreconfigSync* in *SL-V2X-Preconfiguration* defined in 9.3) corresponding to the concerned frequency, such that the subframe timing is different from the SLSS of the selected SyncRef UE;

2> else if the UE has a selected SyncRef UE and the SLSS from this UE was transmitted on the subframe indicated by *syncOffsetIndicator3* that is included in the *syncOffsetIndicators* in *SL-V2X-Preconfiguration*, and is corresponding to the frequency used for V2X sidelink communication:

3> select SLSSID 169;

3> select the subframe indicated by *syncOffsetIndicator2*;

2> else if the UE has a selected SyncRef UE:

3> select the SLSSID from the set defined for out of coverage having an index that is 168 more than the index of the SLSSID of the selected SyncRef UE, see TS 36.211 [21];

3> select the subframe in which to transmit the SLSS according to *syncOffsetIndicator1* or *syncOffsetIndicator2* included in the preconfigured sidelink parameters (i.e. *preconfigSync* in *SL-Preconfiguration* or *v2x-CommPreconfigSync* in *SL-V2X-Preconfiguration* defined in 9.3), such that the subframe timing is different from the SLSS of the selected SyncRef UE;

2> else (i.e. no SyncRef UE selected):

3> if triggered by V2X sidelink communication, randomly select, using a uniform distribution, an SLSSID from the set of sequences defined for out of coverage except SLSSID 168 and 169, see TS 36.211 [21];

3> else, randomly select, using a uniform distribution, an SLSSID from the set of sequences defined for out of coverage, see TS 36.211 [21];

3> select the subframe in which to transmit the SLSS according to the *syncOffsetIndicator1* or *syncOffsetIndicator2* (arbitrary selection between these) included in the preconfigured sidelink parameters (i.e. *preconfigSync* in *SL-Preconfiguration* or *v2x-CommPreconfigSync* in *SL-V2X-Preconfiguration* defined in 9.3);

[TS 36.331, clause 5.10.7.4]

The UE shall set the contents of the *MasterInformationBlock-SL* or *MasterInformationBlock-SL-V2X* message as follows:

1> if in coverage on the frequency used for the sidelink operation that triggered this procedure as defined in TS 36.304 [4, 11.4]:

2> set *inCoverage* to *TRUE*;

2> set *sl-Bandwidth* to the value of *ul-Bandwidth* as included in the received *SystemInformationBlockType2* of the cell chosen for the concerned sidelink operation;

2> if *tdd-Config* is included in the received *SystemInformationBlockType1*:

3> set *subframeAssignmentSL* to the value representing the same meaning as of s*ubframeAssignment* that is included in *tdd-Config* in the received *SystemInformationBlockType1*;

2> else:

3> set *subframeAssignmentSL* to *none*;

2> if triggered by sidelink communication; and if *syncInfoReserved* is included in an entry of *commSyncConfig* from the received *SystemInformationBlockType18*:

3> set *reserved* to the value of *syncInfoReserved* in the received *SystemInformationBlockType18*;

2> if triggered by sidelink discovery; and if *syncInfoReserved* is included in an entry of *discSyncConfig* from the received *SystemInformationBlockType19*:

3> set *reserved* to the value of *syncInfoReserved* in the received *SystemInformationBlockType19*;

2> if triggered by V2X sidelink communication; and if *syncInfoReserved* is included in an entry of *v2x-SyncConfig* from the received *SystemInformationBlockType21*:

3> set *reserved* to the value of *syncInfoReserved* in the received *SystemInformationBlockType21*;

2> else:

3> set all bits in *reserved* to 0;

1> else if out of coverage on the frequency used for V2X sidelink communication as defined in TS 36.304 [4, 11.4]; and the concerned frequency is included in *v2x-InterFreqInfoList* in *RRCConnectionReconfiguration* or in *v2x-InterFreqInfoList* within *SystemInformationBlockType21* of the serving cell/ PCell:

2> set *inCoverage* to *TRUE*;

2> set *sl-Bandwidth* to the value of the corresponding field included in *v2x-InterFreqInfoList*;

2> set *subframeAssignmentSL* and *reserved* to the value of the corresponding field included in the preconfigured sidelink parameters (i.e. *v2x-CommPreconfigGeneral* in *SL-V2X-Preconfiguration* defined in 9.3);

1> else if out of coverage on the frequency used for V2X sidelink communication as defined in TS 36.304 [4, 11.4]; and the UE selects GNSS timing as the synchronization reference source and *syncOffsetIndicator3* is not included in *SL-V2X-Preconfiguration*:

2> set *inCoverage* to *TRUE*;

2> set *sl-Bandwidth*, *subframeAssignmentSL* and *reserved* to the value of the corresponding field included in the preconfigured sidelink parameters (i.e. *v2x-CommPreconfigGeneral* in *SL-V2X-Preconfiguration* defined in 9.3);

1> else if the UE has a selected SyncRef UE (as defined in 5.10.8):

2> set *inCoverage* to *FALSE*;

2> set *sl-Bandwidth*, *subframeAssignmentSL* and *reserved* to the value of the corresponding field included in the received *MasterInformationBlock-SL* or *MasterInformationBlock-SL-V2X*;

1> else:

2> set *inCoverage* to *FALSE*;

2> set *sl-Bandwidth*, *subframeAssignmentSL* and *reserved* to the value of the corresponding field included in the preconfigured sidelink parameters (i.e. *preconfigGeneral* in *SL-Preconfiguration* or *v2x-CommPreconfigGeneral* in *SL-V2X-Preconfiguration* defined in 9.3);

1> set *directFrameNumber* and *directSubframeNumber* according to the subframe used to transmit the SLSS, as specified in 5.10.7.3;

1> submit the *MasterInformationBlock-SL* or *MasterInformationBlock-SL-V2X* message to lower layers for transmission upon which the procedure ends;

[TS 36.331, clause 5.10.8.2]

The UE shall:

1> if triggered by V2X sidelink communication, and in coverage on the frequency for V2X sidelink communication; or

1> if triggered by V2X sidelink communication, and out of coverage on the frequency for V2X sidelink communication, and the frequency used to transmit V2X sidelink communication is included in *v2x-InterFreqInfoList* in *RRCConnectionReconfiguration* or in *v2x-InterFreqInfoList* within *SystemInformationBlockType21* of the serving cell/ PCell:

2> if *typeTxSync* is configured for the concerned frequency and set to *enb*:

3> select a cell as the synchronization reference source as defined in 5.10.13.3;

2> else if *typeTxSync* for the concerned frequency is not configured or is set to *gnss*, and GNSS is reliable in accordance with TS 36.101 [42] and TS 36.133 [16]:

3> select GNSS as the synchronization reference source;

2> else (i.e., there is no GNSS which is reliable in accordance with TS 36.101 [42] and TS 36.133 [16]):

3> search SLSSID=0 on the concerned frequency to detect candidate SLSS, in accordance with TS 36.133 [16];

3> when evaluating the detected SLSS, apply layer 3 filtering as specified in 5.5.3.2 using the preconfigured *filterCoefficient* as defined in 9.3, before using the S-RSRP measurement results;

3> if the S-RSRP of the SyncRef UE identified by the detected SLSS exceeds the minimum requirement defined in TS 36.133 [16]:

4> select the SyncRef UE;

3> else (i.e., no SLSSID=0 detected):

4> select a cell as the synchronization reference source as defined in 5.10.13.3;

1> else, if triggered by V2X sidelink communication, and out of coverage on the frequency for V2X sidelink communication, and for the frequency used for V2X sidelink communication, if *syncPriority* in *SL-V2X-Preconfiguration* is set to *gnss* and GNSS is reliable in accordance with TS 36.101 [42] and TS 36.133 [16]:

2> select GNSS as the synchronization reference source;

1> else, for the frequency used for sidelink communication, V2X sidelink communication or sidelink discovery, if out of coverage on that frequency as defined in TS 36.304 [4, 11.4]:

2> perform a full search (i.e. covering all subframes and all possible SLSSIDs) to detect candidate SLSS, in accordance with TS 36.133 [16]

2> when evaluating the one or more detected SLSSIDs, apply layer 3 filtering as specified in 5.5.3.2 using the preconfigured *filterCoefficient* as defined in 9.3, before using the S-RSRP measurement results;

2> if the UE has selected a SyncRef UE:

3> if the S-RSRP of the strongest candidate SyncRef UE exceeds the minimum requirement TS 36.133 [16] by *syncRefMinHyst* and the strongest candidate SyncRef UE belongs to the same priority group as the current SyncRef UE and the S-RSRP of the strongest candidate SyncRef UE exceeds the S-RSRP of the current SyncRef UE by *syncRefDiffHyst*; or

3> if the S-RSRP of the candidate SyncRef UE exceeds the minimum requirement TS 36.133 [16] by *syncRefMinHyst* and the candidate SyncRef UE belongs to a higher priority group than the current SyncRef UE; or

3> if GNSS becomes reliable in accordance with TS 36.101 [42] and TS 36.133 [16], and GNSS belongs to a higher priority group than the current SyncRef UE; or

3> if the S-RSRP of the current SyncRef UE is less than the minimum requirement defined in TS 36.133 [16]:

4> consider no SyncRef UE to be selected;

2> if the UE has selected GNSS as the synchronization reference for V2X sidelink communication:

3> if the S-RSRP of the candidate SyncRef UE exceeds the minimum requirement defined in TS 36.133 [16] by *syncRefMinHyst* and the candidate SyncRef UE belongs to a higher priority group than GNSS; or

3> if GNSS becomes not reliable in accordance with TS 36.101 [42] and TS 36.133 [16]:

4> consider GNSS not to be selected;

2> if the UE has not selected a SyncRef UE and has not selected GNSS as synchronization reference source:

3> if not concerning V2X sidelink communication, and if the UE detects one or more SLSSIDs for which the S-RSRP exceeds the minimum requirement defined in TS 36.133 [16] by *syncRefMinHyst* and for which the UE received the corresponding *MasterInformationBlock-SL* message (candidate SyncRef UEs), select a SyncRef UE according to the following priority group order:

4> UEs of which *inCoverage*, included in the *MasterInformationBlock-SL* message received from this UE, is set to *TRUE*, starting with the UE with the highest S-RSRP result (priority group 1);

4> UEs of which SLSSID is part of the set defined for in coverage, starting with the UE with the highest S-RSRP result (priority group 2);

4> Other UEs, starting with the UE with the highest S-RSRP result (priority group 3);

3> for V2X sidelink communication, if the UE detects one or more SLSSIDs for which the S-RSRP exceeds the minimum requirement defined in TS 36.133 [16] by *syncRefMinHyst* and for which the UE received the corresponding *MasterInformationBlock-SL-V2X* message (candidate SyncRef UEs), or if the UE detects GNSS that is reliable in accordance with TS 36.101 [42] and TS 36.133 [16], select a synchronization reference according to the following priority group order:

4> if *syncPriority* corresponding to the concerned frequency in *SL-V2X-Preconfiguration* is set to *enb*:

5> UEs of which SLSSID is part of the set defined for in coverage, and *inCoverage*, included in the *MasterInformationBlock-SL-V2X* message received from this UE, is set to *TRUE*, starting with the UE with the highest S-RSRP result (priority group 1);

5> UE of which SLSSID is part of the set defined for in coverage, and *inCoverage*, included in the *MasterInformationBlock-SL-V2X* message received from this UE, is set to *FALSE*, starting with the UE with the highest S-RSRP result (priority group 2);

5> GNSS that is reliable in accordance with TS 36.101 [42] and TS 36.133 [16] (priority group 3);

5> UEs of which SLSSID is 0, and *inCoverage*, included in the *MasterInformationBlock-SL-V2X* message received from this UE, is set to *TRUE*, or of which SLSSID is 0 and SLSS is transmitted on subframes indicated by *syncOffsetIndicator3*, starting with the UE with the highest S-RSRP result (priority group 4);

5> UEs of which SLSSID is 0 and is not transmitted on subframes indicated by *syncOffsetIndicator3*, and *inCoverage*, included in the *MasterInformationBlock-SL-V2X* message received from this UE, is set to *FALSE*, starting with the UE with the highest S-RSRP result (priority group 5);

5> UEs of which SLSSID is 169, and *inCoverage*, included in the *MasterInformationBlock-SL-V2X* message received from this UE, is set to *FALSE*, starting with the UE with the highest S-RSRP result (priority group 5);

5> Other UEs, starting with the UE with the highest S-RSRP result (priority group 6);

4> if *syncPriority* corresponding to the concerned frequency in *SL-V2X-Preconfiguration* is set to *gnss:*

5> GNSS that is reliable in accordance with TS 36.101 [42] and TS 36.133 [16] (priority group 1);

5> UEs of which SLSSID is part of the set defined for in coverage, and *inCoverage*, included in the *MasterInformationBlock-SL-V2X* message received from this UE, is set to *TRUE*, starting with the UE with the highest S-RSRP result (priority group 2);

5> UEs of which SLSSID is 0, and *inCoverage*, included in the *MasterInformationBlock-SL-V2X* message received from this UE, is set to *TRUE*, or of which SLSSID is 0 and SLSS is transmitted on subframes indicated by *syncOffsetIndicator3*, starting with the UE with the highest S-RSRP result (priority group 2);

5> UE of which SLSSID is part of the set defined for in coverage, and *inCoverage*, included in the *MasterInformationBlock-SL-V2X* message received from this UE, is set to *FALSE*, starting with the UE with the highest S-RSRP result (priority group 3);

5> UEs of which SLSSID is 0 and is not transmitted on subframes indicated by *syncOffsetIndicator3*, and *inCoverage*, included in the *MasterInformationBlock-SL-V2X* message received from this UE, is set to *FALSE*, starting with the UE with the highest S-RSRP result (priority group 3);

5> UEs of which SLSSID is 169, and *inCoverage*, included in the *MasterInformationBlock-SL-V2X* message received from this UE, is set to *FALSE*, starting with the UE with the highest S-RSRP result (priority group 3);

5> Other UEs, starting with the UE with the highest S-RSRP result (priority group 4);

[TS 24.386, clause 6.1.2.3]

When the UE is not served by E-UTRAN for V2X communication, the UE shall select the radio parameters to be used for V2X communication over PC5 as follows:

- if the UE can determine itself located in a geographical area, and the UE is provisioned with radio parameters for the geographical area, the UE shall select the radio parameters associated with that geographical area; or

- in all other cases, the UE shall not initiate V2X communication over PC5.

It is beyond the scope of the present specification to define how the UE can locate itself in a specific geographical area. When the UE is in coverage of a 3GPP RAT it can for example use information derived from the serving PLMN. When the UE is not in coverage of a 3GPP RAT it can use other techniques, e.g. Global Navigation Satellite System (GNSS). The UE shall not consider user provided location as a valid input to locate itself in a specific geographical area.

24.1.15.3 Test description

24.1.15.3.1 Pre-test conditions

System Simulator:

SS-NW

- No E-UTRA cell configured

- 1 GNSS simulator

SS-UE

- SS-UE1: as defined in TS 36.508 [18], configured for and operating as V2X sidelink Communication transmitting and receiving device (as defined in TS 36.508 [18] clause 6.2.3.5), as well as, transmitting Synchronisation information on the resources which the UE is expected to use for transmission and reception.

- SS-UE2: as defined in TS 36.508 [18], configured for and operating as V2X sidelink Communication transmitting and receiving device (as defined in TS 36.508 [18] clause 6.2.3.5), as well as, transmitting Synchronisation information on the resources which the UE is expected to use for transmission and reception.

UE:

- V2X sidelink related configuration. The speed of the UE is 0 (i.e. the UE is not moving).
  - The UE is authorised to perform V2X Sidelink Communication.
- The UE is equipped with below information in UE or in a USIM with *SL-V2X-Preconfiguration* in UE or in a USIM (as in Table 24.1.15.3.3-1).

Table 24.1.15.3.1-1: UE/ USIM configuration

USIM field	Priority	Value	Access Technology Identifier
EF_{UST}		Service n°119 (V2X) supported	
EF_{VST}		As per TS 36.508 [18] clause 4.9.3.4	
EF_{V2X_CONFIG}		*SL-V2X-Preconfiguration* field as defined in Table 24.1.15.3.3-1 Geographical area field as defined in TS 36.508 [18] clause 4.9.3.1.	

Preamble:

- The UE is in state V2X out of coverage (State 5A-V2X) according to TS 36.508 [18] clause 4.5.7.

24.1.15.3.2 Test procedure sequence

Table 24.1.15.3.2-1 illustrates the sidelink power levels and other changing parameters to be applied for the SS-UE at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" ... "Tn" are to be applied subsequently. The exact instants on which these values shall be applied are described elsewhere in the present clause.

Table 24.1.15.3.2-1: Time instances of simulated SS-UE power level and parameter changes

	Parameter	Unit	SS-UE1	SS-UE2
T0	S-RSRP	dBm/15kHz	"Off"	"Off"
T1	S-RSRP	dBm/15kHz	-93	"Off"
T2	S-RSRP	dBm/15kHz	-93	-88
T3	S-RSRP	dBm/15kHz	-88	-93
T4	S-RSRP	dBm/15kHz	-93	-88
T5	S-RSRP	dBm/15kHz	"Off"	-88
T6	S-RSRP	dBm/15kHz	"Off"	"Off"

24.1.16 V2X Sidelink Communication / Pre-configured authorisation / Utilisation of the pre-configured resources / CBR measurement

24.1.16.1 Test Purpose (TP)

(1)

```
with { UE being authorized for performing V2X sidelink Communication being preconfigured with Radio
parameters for when the UE is "not served by E-UTRAN" }
ensure that {
  when { congestion is introduced on V2X sidelink by SS-UEs}
    then { UE is able to measure channel busy rate(CBR) on V2X Sidelink Communication correctly}
```

24.1.16.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 23.285, clauses 4.4.1.1.1, 4.4.1.1.2, 4.4.2, 4.5.1, 5.3

[TS 23.285, clause 4.4.1.1.1]

The basic principles of service authorization for V2X communications over PC5 reference point:

- The UE gets authorization to use V2X communications over PC5 reference point on a per PLMN basis in the serving PLMN by the V2X Control Function in the HPLMN.
- The V2X Control Function in the HPLMN requests authorization information from the V2X Control Function of the serving PLMN.
- The V2X Control Function in the HPLMN merges authorization information from home and serving PLMNs and informs the UE of the final authorization information.
- The V2X Control Function in the VPLMN or HPLMN may revoke the authorization at any time. The V2X Control Function in the HPLMN shall be notified when authorization is revoked by the VPLMN.

[TS 23.285, clause 4.4.1.1.2]

The following information is provisioned to the UE for V2X communications over PC5 reference point:

1) Authorization policy:

- When the UE is "served by E-UTRAN":
  - PLMNs in which the UE is authorized to perform V2X communications over PC5 reference point.
- When the UE is "not served by E-UTRAN":
  - Indicates whether the UE is authorized to perform V2X communications over PC5 reference point when "not served by E-UTRAN".

2) Radio parameters for when the UE is "not served by E-UTRAN":
   - Includes the radio parameters with Geographical Area(s) and an indication of whether they are "operator managed" or "non-operator-managed". These radio parameters (e.g. frequency bands) are defined in TS 36.331 [9]. The UE uses the radio parameters to perform V2X communications over PC5 reference point when "not served by E-UTRAN" only if the UE can reliably locate itself in the corresponding geographical area. Otherwise, the UE is not authorized to transmit.

NOTE 1: Whether a frequency band is "operator managed" or "non-operator-managed" in a given geographical area is defined by local regulations.

3) Policy/parameters:
   - The mapping of Destination Layer-2 ID(s) and the V2X services, e.g. PSID or ITS-AIDs of the V2X application.

NOTE 1: PLMN operators coordinate to make sure Destination Layer-2 ID(s) for different V2X services are configured in a consistent manner.

NOTE 2: To pre-configure a UE with the provisioning parameters, at least the "not served by E-UTRAN" parameters of 1) and 2), and the parameters of 3) need to be included.

- The mapping of ProSe Per-Packet Priority and packet delay budget for V2X communication (autonomous resources selection mode).
- The list of V2X services, e.g. PSID or ITS-AIDs of the V2X applications, with Geographical Area(s) that require privacy support.
- The mapping of service types (e.g. PSID or ITS-AIDs) to V2X frequencies (see TS 36.300 [10] for further information) with Geographical Area(s).

[TS 23.285, clause 4.4.2]

PC5 reference point as defined in TS 23.303 [5] is used for the transmission and reception of V2X messages. The V2X communication over PC5 reference point supports roaming and inter-PLMN operations. V2X communication over PC5 reference point is supported when the UE is "served by E-UTRAN" and when the UE is "not served by E-UTRAN".

A UE is authorized to transmit and receive V2X messages by the V2X Control Function in its home PLMN as described in clause 5.2.

The V2X communication over PC5 reference point is a type of ProSe Direct Communication with the following characteristics:

- The V2X communication over PC5 reference point is connectionless, and there is no signalling over PC5 control plane for connection establishment.
- V2X messages are exchanged between UEs over PC5 user plane.
- Both IP based and non-IP based V2X messages are supported.
- For IP based V2X messages, only IPv6 is used. IPv4 is not supported in this release.

The identifiers used in the V2X communication over PC5 reference point are described in clause 4.5.1.

[TS 23.285, clause 4.5.1]

Each UE has a Layer-2 ID for the V2X communication over PC5 reference point, which is included in the source Layer-2 ID field of every frame that it sends on the layer-2 link. The UE self-assigns the Layer-2 ID for the V2X communication over PC5 reference point.

When IP based V2X messages are supported, the UE auto-configures a link local IPv6 address to be used as the source IP address, as defined in clause 4.5.3 of TS 23.303 [5].

If the UE has an active V2X application that requires privacy support in the current geographical area, as identified by configuration described in clause 4.4.1.1.2, in order to ensure that a source UE (e.g. vehicle) cannot be tracked or identified by any other UEs (e.g. vehicles) beyond a certain short time-period required by the application, the source Layer-2 ID has to be changed over time and randomized. For IP based V2X communication over PC5 reference point, the source IP address has also to be changed over time and randomized. The change of the identifiers of a source UE has to be synchronized across layers used for PC5, e.g. when application layer identifier changes, the source Layer-2 ID and the source IP address need to be changed.

The UE is configured with the destination Layer-2 ID(s) to be used for V2X services. The Layer-2 ID for a V2X message is selected based on the configuration as described in clause 4.4.1.1.

[TS 23.285, clause 5.3]

To perform V2X communication over PC5 reference point, the UE is configured with the related information as described in clause 4.4.1.1.

The procedure for one-to-many ProSe Direct Communication transmission described in clause 5.4.2 of TS 23.303 [5] is applied to V2X communication over PC5 reference point with following differences:

- The source Layer-2 ID is set to the Layer-2 ID described in clause 4.5.1.
- A UE shall be configured with a set of Layer-2 ID corresponding to different type of services.

The procedure for one-to-many ProSe Direct Communication reception described in clause 5.4.3 of TS 23.303 [5] is applied to V2X communication over PC5 reference point.

[TS 36.214, clause 5.1.30]

Channel Busy Ratio (CBR)

Definition	Channel Busy Ratio (CBR) measured in subframe *n* is defined as follows: - For PSSCH, the portion of sub-channels in the resource pool whose S-RSSI measured by the UE exceed a (pre-)configured threshold sensed over subframes [*n-100, n-1*]; - For PSCCH, in a pool (pre-)configured such that PSCCH may be transmitted with its corresponding PSSCH in non-adjacent resource blocks, the portion of the resources of the PSCCH pool whose S-RSSI measured by the UE exceed a (pre-)configured threshold sensed over subframes [*n-100, n-1*], assuming that the PSCCH pool is composed of resources with a size of two consecutive PRB pairs in the frequency domain.
Applicable for	RRC_IDLE intra-frequency, RRC_IDLE inter-frequency, RRC_CONNECTED intra-frequency, RRC_CONNECTED inter-frequency

NOTE: The subframe index is based on physical subframe index

24.1.16.3 Test description

24.1.16.3.1 Pre-test conditions

System Simulator:

SS-NW

- No E-UTRA cell configured
- 1 GNSS simulator

SS-UE

- Preconfigured with V2X sidelink related parameters as per TS 36.508 [18] Table 4.10.1.1-1, the sidelink bandwidth is set to 10MHz.
- Simulation of transmission on 30 subframes (fully occupied) out of 100 subframes (100 ms) in order to achieve 30% congestion. This equals one SS-UE transmitting on 3 out of 10 consecutive subframes utilizing all RBs on all subchannels of the transmitting TTI, according to the transmit pattern shown in Table 24.1.16.3.1-1, and repeating continuously the same transmit pattern insubsequent frames . SS-UE transmits dummy random data on all RBs on the specified subchannels implying congestion on PSCCH and PSSCH.

Table 24.1.16.3.1-1: Transmit pattern for simulation of 30% congestion

30% Congestion									
Subframe 0	Subframe 1	Subframe 2	Subframe 3	Subframe 4	Subframe 5	Subframe 6	Subframe 7	Subframe 8	Subframe 9

24.1.17 V2X Sidelink Communication / Pre-configured authorisation / UE in RRC_IDLE on an E-UTRAN cell operating on the anchor carrier frequency provisioned for V2X configuration / UE uses Tx resource pool which is associated with the synchronization reference source selected

24.1.1.17 Test Purpose (TP)

(1)

```
with { UE supporting V2X sidelink communication }
ensure that {
  when { UE is triggered by an upper layer application to transmit V2X sidelink communication }
    then { UE shall only use the pool which is associated with the synchronization reference source selected }
            }
```

24.1.17.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331, clauses 5.10.13.2.

[TS 36.331, clause 5.10.13.2]

For a frequency used for V2X sidelink communication, if *zoneConfig* is not ignored as specified in 5.10.13.1, the UE configured by upper layers for V2X sidelink communication shall only use the pool which corresponds to geographical coordinates of the UE, if *zoneConfig* is included in *SystemInformationBlockType21* of the serving cell (RRC_IDLE)/ PCell (RRC_CONNECTED) or in *RRCConnectionReconfiguration* for the concerned frequency, and the UE is configured to use resource pools provided by RRC signalling for the concerned frequency; or if *zoneConfig* is included in *SL-V2X-Preconfiguration* for the concerned frequency, and the UE is configured to use resource pools in *SL-V2X-Preconfiguration* for the frequency, according to 5.10.13.1. The UE shall only use the pool which is associated with the synchronization reference source selected in accordance with 5.10.8.2.

1> if the UE is configured to transmit on *p2x-CommTxPoolNormalCommon* or on *p2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* in *SystemInformationBlockType21* according to 5.10.13.1; or

1> if the UE is configured to transmit on *p2x-CommTxPoolList-r14* in *SL-V2X-Preconfiguration* according to 5.10.13.1; or

1> if *zoneConfig* is not included in *SystemInformationBlockType21* and the UE is configured to transmit on *v2x-CommTxPoolNormalCommon* or *v2x-CommTxPoolNormalDedicated*; or

1> if *zoneConfig* is included in *SystemInformationBlockType21* and the UE is configured to transmit on *v2x-CommTxPoolNormalDedicated* for P2X related V2X sidelink communication and *zoneID* is not included in *v2x-CommTxPoolNormalDedicated*; or

1> if *zoneConfig* is not included in the entry of *v2x-InterFreqInfoList* for the concerned frequency and the UE is configured to transmit on *v2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* or *p2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* in *RRCConnectionReconfiguration*; or

1> if *zoneConfig* is not included in *SL-V2X-Preconfiguration* for the concerned frequency and the UE is configured to transmit on *v2x-CommTxPoolList* in *SL-V2X-Preconfiguration* for the concerned frequency:

2> select the first pool associated with the synchronization reference source selected in accordance with 5.10.8.2;

1> if *zoneConfig* is included in *SystemInformationBlockType21* and the UE is configured to transmit on *v2x-CommTxPoolNormalCommon* or *v2x-CommTxPoolNormalDedicated* for non-P2X related V2X sidelink communication; or

1> if *zoneConfig* is included in *SystemInformationBlockType21* and the UE is configured to transmit on *v2x-CommTxPoolNormalDedicated* for P2X related V2X sidelink communication and *zoneID* is included in *v2x-CommTxPoolNormalDedicated*; or

1> if *zoneConfig* is included in the entry of *v2x-InterFreqInfoList* for the concerned frequency and the UE is configured to transmit on *v2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* or *p2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* in *RRCConnectionReconfiguration*; or

1> if *zoneConfig* is included in *SL-V2X-Preconfiguration* for the concerned frequency and the UE is configured to transmit on *v2x-CommTxPoolList* in *SL-V2X-Preconfiguration* for the concerned frequency:

2> select the pool configured with *zoneID* equal to the zone identity determined below and associated with the synchronization reference source selected in accordance with 5.10.8.2;

```

24.1.18.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.331 subclause 5.10.7.1, 5.10.7.2, 5.10.7.3, 5.10.7.4, 5.10.8.2, TS 24.386 subclause 6.1.2.3.

[TS 36.331, clause 5.10.7.1]

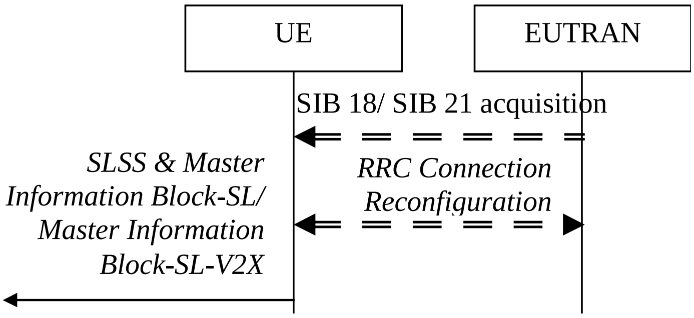

Figure 5.10.7.1-1: Synchronisation information transmission for sidelink communication or V2X sidelink communication, in (partial) coverage

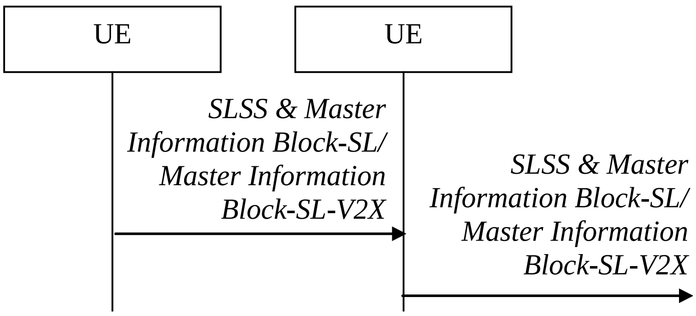

Figure 5.10.7.1-2: Synchronisation information transmission for sidelink communication or V2X sidelink communication / sidelink discovery, out of coverage

The purpose of this procedure is to provide synchronisation information to a UE. For sidelink discovery, the synchronisation information concerns a Sidelink Synchronisation Signal (SLSS) and, in case of PS related discovery, also timing information and some additional configuration parameters (i.e. the *MasterInformationBlock-SL* message), while for sidelink communication or V2X sidelink communication it concerns an SLSS and the *MasterInformationBlock-SL* or *MasterInformationBlock-SL-V2X* message. A UE transmits synchronisation information either when E-UTRAN configures it to do so by dedicated signalling (i.e. network based), or when not configured by dedicated signalling (i.e. UE based) and E-UTRAN broadcasts (in coverage) or pre-configures a threshold (out of coverage).

The synchronisation information transmitted by the UE may be derived from information/ signals received from E-UTRAN (in coverage) or received from a UE acting as synchronisation reference for the transmitting UE or received from GNSS. In the remainder, the UE acting as synchronisation reference is referred to as SyncRef UE.

[TS 36.331, clause 5.10.7.2]

A UE capable of V2X sidelink communication and SLSS/PSBCH transmission shall, when transmitting non-P2X related V2X sidelink communication in accordance with 5.10.13, and if the conditions for V2X sidelink communication operation as defined in 5.10.1d are met and when the following conditions are met:

1> if in coverage on the frequency used for V2X sidelink communication, as defined in TS 36.304 [4, 11.4]; and has selected GNSS or the cell as synchronization reference as defined in 5.10.13.3; or

1> if out of coverage on the frequency used for V2X sidelink communication, as defined in TS 36.304 [4, 11.4], and the frequency used to transmit V2X sidelink communication is included in *v2x-InterFreqInfoList* in *RRCConnectionReconfiguration* or in *v2x-InterFreqInfoList* within *SystemInformationBlockType21* of the serving cell/ PCell; and has selected GNSS or the cell as synchronization reference as defined in 5.10.13.3:

2> if in RRC_CONNECTED; and if *networkControlledSyncTx* is configured and set to *on*; or

2> if *networkControlledSyncTx* is not configured; and for the concerned frequency *syncTxThreshIC* is configured; and the RSRP measurement of the reference cell, selected as defined in 5.10.13.3, for V2X sidelink communication transmission is below the value of *syncTxThreshIC*:

3> transmit SLSS on the frequency used for V2X sidelink communication in accordance with 5.10.7.3 and TS 36.211 [21];

3> transmit the *MasterInformationBlock-SL-V2X* message on the frequency used for V2X sidelink communication, in the same subframe as SLSS, and in accordance with 5.10.7.4;

1> else:

2> for the frequency used for V2X sidelink communication, if *syncOffsetIndicators* is included in *SL-V2X-Preconfiguration*:

3> if *syncTxThreshOoC* is included in *SL-V2X-Preconfiguration*; and the UE is not directly synchronized to GNSS, and the UE has no selected SyncRef UE or the S-RSRP measurement result of the selected SyncRef UE is below the value of *syncTxThreshOoC*; or

3> if the UE selects GNSS as the synchronization reference source:

4> transmit SLSS in accordance with 5.10.7.3 and TS 36.211 [21];

4> transmit the *MasterInformationBlock-SL-V2X* message, in the same subframe as SLSS, and in accordance with 5.10.7.4;

[TS 36.331, clause 5.10.7.3]

The UE shall select the SLSSID and the subframe in which to transmit SLSS as follows:

1> if triggered by V2X sidelink communication and in coverage on the frequency used for V2X sidelink communication, as defined in TS 36.304 [4, 11.4]; or

1> if triggered by V2X sidelink communication, and out of coverage on the frequency used for V2X sidelink communication, and the concerned frequency is included in *v2x-InterFreqInfoList* in *RRCConnectionReconfiguration* or in *v2x-InterFreqInfoList* within *SystemInformationBlockType21* of the serving cell/ PCell;

2> if the UE has selected GNSS as synchronization reference in accordance with 5.10.8.2:

3> select SLSSID 0;

3> use *syncOffsetIndicator* included in the entry of *v2x-SyncConfig* corresponding to the concerned frequency in *v2x-InterFreqInfoList*, that includes *txParameters* and *gnss-Sync*;

3> select the subframe(s) indicated by *syncOffsetIndicator*;

2> if the UE has selected a cell as synchronization reference in accordance with 5.10.8.2:

3> select the SLSSID included in the entry of *v2x-SyncConfig* configured for the concerned frequency, that includes *txParameters* and does not include *gnss-Sync*;

3> use *syncOffsetIndicator* corresponding to the selected SLSSID;

3> select the subframe(s) indicated by *syncOffsetIndicator*;

1> else if triggered by V2X sidelink communication and the UE has GNSS as the synchronization reference:

2> select SLSSID 0;

2> if *syncOffsetIndicator3* is configured for the frequency used for V2X sidelink communication in *SL-V2X-Preconfiguration*:

3> select the subframe indicated by *syncOffsetIndicator3*;

2> else:

3> select the subframe indicated by *syncOffsetIndicator1*;

1> else:

2> select the synchronisation reference UE (i.e. SyncRef UE) as defined in 5.10.8;

2> if the UE has a selected SyncRef UE and *inCoverage* in the *MasterInformationBlock-SL* or *MasterInformationBlock-SL-V2X* message received from this UE is set to *TRUE*; or

2> if the UE has a selected SyncRef UE and *inCoverage* in the *MasterInformationBlock-SL* or *MasterInformationBlock-SL-V2X* message received from this UE is set to *FALSE* while the SLSS from this UE is part of the set defined for out of coverage, see TS 36.211 [21]:

3> select the same SLSSID as the SLSSID of the selected SyncRef UE;

3> select the subframe in which to transmit the SLSS according to the *syncOffsetIndicator1* or *syncOffsetIndicator2* included in the preconfigured sidelink parameters (i.e. *preconfigSync* in *SL-Preconfiguration* or *v2x-CommPreconfigSync* in *SL-V2X-Preconfiguration* defined in 9.3) corresponding to the concerned frequency, such that the subframe timing is different from the SLSS of the selected SyncRef UE;

2> else if the UE has a selected SyncRef UE and the SLSS from this UE was transmitted on the subframe indicated by *syncOffsetIndicator3* that is included in the *syncOffsetIndicators* in *SL-V2X-Preconfiguration*, and is corresponding to the frequency used for V2X sidelink communication:

3> select SLSSID 169;

3> select the subframe indicated by *syncOffsetIndicator2*;

2> else if the UE has a selected SyncRef UE:

3> select the SLSSID from the set defined for out of coverage having an index that is 168 more than the index of the SLSSID of the selected SyncRef UE, see TS 36.211 [21];

3> select the subframe in which to transmit the SLSS according to *syncOffsetIndicator1* or *syncOffsetIndicator2* included in the preconfigured sidelink parameters (i.e. *preconfigSync* in *SL-Preconfiguration* or *v2x-CommPreconfigSync* in *SL-V2X-Preconfiguration* defined in 9.3), such that the subframe timing is different from the SLSS of the selected SyncRef UE;

2> else (i.e. no SyncRef UE selected):

3> if triggered by V2X sidelink communication, randomly select, using a uniform distribution, an SLSSID from the set of sequences defined for out of coverage except SLSSID 168 and 169, see TS 36.211 [21];

3> else, randomly select, using a uniform distribution, an SLSSID from the set of sequences defined for out of coverage, see TS 36.211 [21];

3> select the subframe in which to transmit the SLSS according to the *syncOffsetIndicator1* or *syncOffsetIndicator2* (arbitrary selection between these) included in the preconfigured sidelink parameters (i.e. *preconfigSync* in *SL-Preconfiguration* or *v2x-CommPreconfigSync* in *SL-V2X-Preconfiguration* defined in 9.3);

[TS 36.331, clause 5.10.7.4]

The UE shall set the contents of the *MasterInformationBlock-SL* or *MasterInformationBlock-SL-V2X* message as follows:

1> if in coverage on the frequency used for the sidelink operation that triggered this procedure as defined in TS 36.304 [4, 11.4]:

2> set *inCoverage* to *TRUE*;

2> set *sl-Bandwidth* to the value of *ul-Bandwidth* as included in the received *SystemInformationBlockType2* of the cell chosen for the concerned sidelink operation;

2> if *tdd-Config* is included in the received *SystemInformationBlockType1*:

3> set *subframeAssignmentSL* to the value representing the same meaning as of s*ubframeAssignment* that is included in *tdd-Config* in the received *SystemInformationBlockType1*;

2> else:

3> set *subframeAssignmentSL* to *none*;

2> if triggered by sidelink communication; and if *syncInfoReserved* is included in an entry of *commSyncConfig* from the received *SystemInformationBlockType18*:

3> set *reserved* to the value of *syncInfoReserved* in the received *SystemInformationBlockType18*;

2> if triggered by sidelink discovery; and if *syncInfoReserved* is included in an entry of *discSyncConfig* from the received *SystemInformationBlockType19*:

3> set *reserved* to the value of *syncInfoReserved* in the received *SystemInformationBlockType19*;

2> if triggered by V2X sidelink communication; and if *syncInfoReserved* is included in an entry of *v2x-SyncConfig* from the received *SystemInformationBlockType21*:

3> set *reserved* to the value of *syncInfoReserved* in the received *SystemInformationBlockType21*;

2> else:

3> set all bits in *reserved* to 0;

1> else if out of coverage on the frequency used for V2X sidelink communication as defined in TS 36.304 [4, 11.4]; and the concerned frequency is included in *v2x-InterFreqInfoList* in *RRCConnectionReconfiguration* or in *v2x-InterFreqInfoList* within *SystemInformationBlockType21* of the serving cell/ PCell:

2> set *inCoverage* to *TRUE*;

2> set *sl-Bandwidth* to the value of the corresponding field included in *v2x-InterFreqInfoList*;

2> set *subframeAssignmentSL* and *reserved* to the value of the corresponding field included in the preconfigured sidelink parameters (i.e. *v2x-CommPreconfigGeneral* in *SL-V2X-Preconfiguration* defined in 9.3);

1> else if out of coverage on the frequency used for V2X sidelink communication as defined in TS 36.304 [4, 11.4]; and the UE selects GNSS timing as the synchronization reference source and *syncOffsetIndicator3* is not included in *SL-V2X-Preconfiguration*:

2> set *inCoverage* to *TRUE*;

2> set *sl-Bandwidth*, *subframeAssignmentSL* and *reserved* to the value of the corresponding field included in the preconfigured sidelink parameters (i.e. *v2x-CommPreconfigGeneral* in *SL-V2X-Preconfiguration* defined in 9.3);

1> else if the UE has a selected SyncRef UE (as defined in 5.10.8):

2> set *inCoverage* to *FALSE*;

2> set *sl-Bandwidth*, *subframeAssignmentSL* and *reserved* to the value of the corresponding field included in the received *MasterInformationBlock-SL* or *MasterInformationBlock-SL-V2X*;

1> else:

2> set *inCoverage* to *FALSE*;

2> set *sl-Bandwidth*, *subframeAssignmentSL* and *reserved* to the value of the corresponding field included in the preconfigured sidelink parameters (i.e. *preconfigGeneral* in *SL-Preconfiguration* or *v2x-CommPreconfigGeneral* in *SL-V2X-Preconfiguration* defined in 9.3);

1> set *directFrameNumber* and *directSubframeNumber* according to the subframe used to transmit the SLSS, as specified in 5.10.7.3;

1> submit the *MasterInformationBlock-SL* or *MasterInformationBlock-SL-V2X* message to lower layers for transmission upon which the procedure ends;

[TS 36.331, clause 5.10.8.2]

The UE shall:

1> if triggered by V2X sidelink communication, and in coverage on the frequency for V2X sidelink communication; or

1> if triggered by V2X sidelink communication, and out of coverage on the frequency for V2X sidelink communication, and the frequency used to transmit V2X sidelink communication is included in *v2x-InterFreqInfoList* in *RRCConnectionReconfiguration* or in *v2x-InterFreqInfoList* within *SystemInformationBlockType21* of the serving cell/ PCell:

2> if *typeTxSync* is configured for the concerned frequency and set to *enb*:

3> select a cell as the synchronization reference source as defined in 5.10.13.3;

2> else if *typeTxSync* for the concerned frequency is not configured or is set to *gnss*, and GNSS is reliable in accordance with TS 36.101 [42] and TS 36.133 [16]:

3> select GNSS as the synchronization reference source;

2> else (i.e., there is no GNSS which is reliable in accordance with TS 36.101 [42] and TS 36.133 [16]):

3> search SLSSID=0 on the concerned frequency to detect candidate SLSS, in accordance with TS 36.133 [16];

3> when evaluating the detected SLSS, apply layer 3 filtering as specified in 5.5.3.2 using the preconfigured *filterCoefficient* as defined in 9.3, before using the S-RSRP measurement results;

3> if the S-RSRP of the SyncRef UE identified by the detected SLSS exceeds the minimum requirement defined in TS 36.133 [16]:

4> select the SyncRef UE;

3> else (i.e., no SLSSID=0 detected):

4> select a cell as the synchronization reference source as defined in 5.10.13.3;

1> else, if triggered by V2X sidelink communication, and out of coverage on the frequency for V2X sidelink communication, and for the frequency used for V2X sidelink communication, if *syncPriority* in *SL-V2X-Preconfiguration* is set to *gnss* and GNSS is reliable in accordance with TS 36.101 [42] and TS 36.133 [16]:

2> select GNSS as the synchronization reference source;

1> else, for the frequency used for sidelink communication, V2X sidelink communication or sidelink discovery, if out of coverage on that frequency as defined in TS 36.304 [4, 11.4]:

2> perform a full search (i.e. covering all subframes and all possible SLSSIDs) to detect candidate SLSS, in accordance with TS 36.133 [16]

2> when evaluating the one or more detected SLSSIDs, apply layer 3 filtering as specified in 5.5.3.2 using the preconfigured *filterCoefficient* as defined in 9.3, before using the S-RSRP measurement results;

2> if the UE has selected a SyncRef UE:

3> if the S-RSRP of the strongest candidate SyncRef UE exceeds the minimum requirement TS 36.133 [16] by *syncRefMinHyst* and the strongest candidate SyncRef UE belongs to the same priority group as the current SyncRef UE and the S-RSRP of the strongest candidate SyncRef UE exceeds the S-RSRP of the current SyncRef UE by *syncRefDiffHyst*; or

3> if the S-RSRP of the candidate SyncRef UE exceeds the minimum requirement TS 36.133 [16] by *syncRefMinHyst* and the candidate SyncRef UE belongs to a higher priority group than the current SyncRef UE; or

3> if GNSS becomes reliable in accordance with TS 36.101 [42] and TS 36.133 [16], and GNSS belongs to a higher priority group than the current SyncRef UE; or

3> if the S-RSRP of the current SyncRef UE is less than the minimum requirement defined in TS 36.133 [16]:

4> consider no SyncRef UE to be selected;

2> if the UE has selected GNSS as the synchronization reference for V2X sidelink communication:

3> if the S-RSRP of the candidate SyncRef UE exceeds the minimum requirement defined in TS 36.133 [16] by *syncRefMinHyst* and the candidate SyncRef UE belongs to a higher priority group than GNSS; or

3> if GNSS becomes not reliable in accordance with TS 36.101 [42] and TS 36.133 [16]:

4> consider GNSS not to be selected;

2> if the UE has not selected a SyncRef UE and has not selected GNSS as synchronization reference source:

3> if not concerning V2X sidelink communication, and if the UE detects one or more SLSSIDs for which the S-RSRP exceeds the minimum requirement defined in TS 36.133 [16] by *syncRefMinHyst* and for which the UE received the corresponding *MasterInformationBlock-SL* message (candidate SyncRef UEs), select a SyncRef UE according to the following priority group order:

4> UEs of which *inCoverage*, included in the *MasterInformationBlock-SL* message received from this UE, is set to *TRUE*, starting with the UE with the highest S-RSRP result (priority group 1);

4> UEs of which SLSSID is part of the set defined for in coverage, starting with the UE with the highest S-RSRP result (priority group 2);

4> Other UEs, starting with the UE with the highest S-RSRP result (priority group 3);

3> for V2X sidelink communication, if the UE detects one or more SLSSIDs for which the S-RSRP exceeds the minimum requirement defined in TS 36.133 [16] by *syncRefMinHyst* and for which the UE received the corresponding *MasterInformationBlock-SL-V2X* message (candidate SyncRef UEs), or if the UE detects GNSS that is reliable in accordance with TS 36.101 [42] and TS 36.133 [16], select a synchronization reference according to the following priority group order:

4> if *syncPriority* corresponding to the concerned frequency in *SL-V2X-Preconfiguration* is set to *enb*:

5> UEs of which SLSSID is part of the set defined for in coverage, and *inCoverage*, included in the *MasterInformationBlock-SL-V2X* message received from this UE, is set to *TRUE*, starting with the UE with the highest S-RSRP result (priority group 1);

5> UE of which SLSSID is part of the set defined for in coverage, and *inCoverage*, included in the *MasterInformationBlock-SL-V2X* message received from this UE, is set to *FALSE*, starting with the UE with the highest S-RSRP result (priority group 2);

5> GNSS that is reliable in accordance with TS 36.101 [42] and TS 36.133 [16] (priority group 3);

5> UEs of which SLSSID is 0, and *inCoverage*, included in the *MasterInformationBlock-SL-V2X* message received from this UE, is set to *TRUE*, or of which SLSSID is 0 and SLSS is transmitted on subframes indicated by *syncOffsetIndicator3,* starting with the UE with the highest S-RSRP result (priority group 4);

5> UEs of which SLSSID is 0 and is not transmitted on subframes indicated by *syncOffsetIndicator3*, and *inCoverage*, included in the *MasterInformationBlock-SL-V2X* message received from this UE, is set to *FALSE*, starting with the UE with the highest S-RSRP result (priority group 5);

5> UEs of which SLSSID is 169, and *inCoverage*, included in the *MasterInformationBlock-SL-V2X* message received from this UE, is set to *FALSE*, starting with the UE with the highest S-RSRP result (priority group 5);

5> Other UEs, starting with the UE with the highest S-RSRP result (priority group 6);

4> if *syncPriority* corresponding to the concerned frequency in *SL-V2X-Preconfiguration* is set to *gnss:*

5> GNSS that is reliable in accordance with TS 36.101 [42] and TS 36.133 [16] (priority group 1);

5> UEs of which SLSSID is part of the set defined for in coverage, and *inCoverage*, included in the *MasterInformationBlock-SL-V2X* message received from this UE, is set to *TRUE*, starting with the UE with the highest S-RSRP result (priority group 2);

5> UEs of which SLSSID is 0, and *inCoverage*, included in the *MasterInformationBlock-SL-V2X* message received from this UE, is set to *TRUE*, or of which SLSSID is 0 and SLSS is transmitted on subframes indicated by *syncOffsetIndicator3,* starting with the UE with the highest S-RSRP result (priority group 2);

5> UE of which SLSSID is part of the set defined for in coverage, and *inCoverage*, included in the *MasterInformationBlock-SL-V2X* message received from this UE, is set to *FALSE*, starting with the UE with the highest S-RSRP result (priority group 3);

5> UEs of which SLSSID is 0 and is not transmitted on subframes indicated by *syncOffsetIndicator3*, and *inCoverage*, included in the *MasterInformationBlock-SL-V2X* message received from this UE, is set to *FALSE*, starting with the UE with the highest S-RSRP result (priority group 3);

5> UEs of which SLSSID is 169, and *inCoverage*, included in the *MasterInformationBlock-SL-V2X* message received from this UE, is set to *FALSE*, starting with the UE with the highest S-RSRP result (priority group 3);

5> Other UEs, starting with the UE with the highest S-RSRP result (priority group 4);

[TS 24.386, clause 6.1.2.3]

When the UE is not served by E-UTRAN for V2X communication, the UE shall select the radio parameters to be used for V2X communication over PC5 as follows:

- if the UE can determine itself located in a geographical area, and the UE is provisioned with radio parameters for the geographical area, the UE shall select the radio parameters associated with that geographical area; or

- in all other cases, the UE shall not initiate V2X communication over PC5.

It is out of scope of the present specification to define how the UE can locate itself in a specific geographical area. When the UE is in coverage of a 3GPP RAT it can for example use information derived from the serving PLMN. When the UE is not in coverage of a 3GPP RAT it can use other techniques, e.g. Global Navigation Satellite System (GNSS). The UE shall not consider user provided location as a valid input to locate itself in a specific geographical area.

24.1.18.3 Test description

24.1.18.3.1 Pre-test conditions

System Simulator:

SS-NW

- No E-UTRA cell configured

- 1 GNSS simulator

SS-UE

- SS-UE1: as defined in TS 36.508 [18], configured for and operating as V2X sidelink Communication transmitting and receiving device (as defined in TS 36.508 [18] clause 6.2.3.5), as well as, transmitting Synchronisation information on the resources which the UE is expected to use for transmission and reception.
- SS-UE2: as defined in TS 36.508 [18], configured for and operating as V2X sidelink Communication transmitting and receiving device (as defined in TS 36.508 [18] clause 6.2.3.5), as well as, transmitting Synchronisation information on the resources which the UE is expected to use for transmission and reception.

UE:

- V2X sidelink related configuration. The speed of the UE is 0 (i.e. the UE is not moving).
- The UE is authorised to perform V2X Sidelink Communication
- The UE is equipped with below information in UE or in a USIM with *SL-V2X-Preconfiguration* in UE or in a USIM (as in Table 24.1.18.3.3-1).

Table 24.1.18.3.1-1: UE/ USIM configuration

USIM field	Priority	Value	Access Technology Identifier
EF_{UST}		Service n°119 (V2X) supported	
EF_{VST}		As per TS 36.508 [18] clause 4.9.3.4	
EF_{V2X_CONFIG}		*SL-V2X-Preconfiguration* field as defined in Table 24.1.18.3.3-1 Geographical area field as defined in TS 36.508 [18] clause 4.9.3.1.	

Preamble:

- The UE is in state V2X out of coverage (State 5A-V2X) according to TS 36.508 [18] clause 4.5.7.

24.1.18.3.2 Test procedure sequence

Table 24.1.18.3.2-1 illustrates the sidelink power levels and other changing parameters to be applied for the SS-UE at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" ... "Tn" are to be applied subsequently. The exact instants on which these values shall be applied are described elsewhere in the present clause.

Table 24.1.18.3.2-1: Time instances of simulated SS-UE power level and parameter changes

	Parameter	Unit	SS-UE1	SS-UE2
T0	S-RSRP	dBm/15kHz	"Off"	"Off"
T1	S-RSRP	dBm/15kHz	-79	-79
T2	S-RSRP	dBm/15kHz	-88	-88
T3	S-RSRP	dBm/15kHz	-93	-88
T4	S-RSRP	dBm/15kHz	"Off"	-88
T5	S-RSRP	dBm/15kHz	"Off"	"Off"

Table 24.1.18.3.2-2: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
0	Void				
1	SS configures: GNSS simulator is configured for Scenario #1: Scenario #1: static in Geographical area #1, and starts step 1 to simulate a location in the centre of Geographical area #1 as defined in TS 36.508 [18] Table 4.11.2-2. Geographical area #1 is also pre-configured in the UE/USIM.			-	-

2	SS configures: SS-UE1 and SS-UE2 in accordance with "T1" defined in Table 24.1.18.3.2-1. SS-UE1 continuously transmits SLSS and *MasterInformationBlock-SL-V2X* message in the same subframe as the SLSS. SLSS-ID is set to 101, syncOffsetIndicator is set to *syncOffsetIndicator1*. *inCoverage* in the *MasterInformationBlock-SL-V2X* message set to *TRUE*. SS-UE2 continuously transmits SLSS and *MasterInformationBlock-SL-V2X* message in the same subframe as the SLSS. SLSS-ID is set to 50, syncOffsetIndicator is set to *syncOffsetIndicator2* *inCoverage* in the *MasterInformationBlock-SL-V2X* message set to *FALSE*. Note 1: The power levels of the SS-UE1 and SS-UE2 are set so that upon S-RSRP measurement by the UE the result is NOT below the value of *syncTxThreshOoC (SL-V2X-Preconfiguration*). Note 2: SS-UE1 and SS-UE2 are synchronised to UTC time from the GNSS simulator.	<--	SLSS *MasterInformationBlock-SL-V2X*	-	-
3	Check: Does the UE transmit SLSS and *MasterInformationBlock-SL-V2X* message during transmission of 10 STCH packets? NOTE: Although the UE is expected to transmit continuously, only the STCH PDCP SDU packets which need to be checked are shown explicitly in the step sequence.	-->	SLSS *MasterInformationBlock-SL-V2X*	2	F
4	SS configures: SS-UE1 and SS-UE2 in accordance with "T2" defined in Table 24.1.18.3.2-1. No changes to the SLSS and *MasterInformationBlock-SL-V2X* message Note: The power levels of the SS-UE1 and SS-UE2 are set so that upon S-RSRP measurement by the UE the result is below the value of *syncTxThreshOoC (SL-V2X-Preconfiguration*).	<--	SLSS *MasterInformationBlock-SL-V2X*	-	-
-	EXCEPTION: Steps 5 - 6 is repeated 3 times.	-	-	-	-
5	Check: Does the UE transmit SLSS? UE shall synchronise to SS-UE1 and: - select the same SLSSID of SS-UE1; - select the subframe in which to transmit the SLSS according to the *syncOffsetIndicator2* included in the preconfigured sidelink parameters (i.e. *v2x-CommPreconfigSync-r14* in *SL-V2X-Preconfiguration* defined in Table 24.1.18.3.3-1), such that the subframe timing is different from the SLSS of the selected SyncRef UE.	-->	SLSS	2	P
6	Check: Does the UE transmit *MasterInformationBlock-SL-V2X* message in the same subframe as the SLSS in step 5?	-->	*MasterInformationBlock-SL-V2X*	2	P
7	SS configures: Changes SLSSID of SS-UE1 to 0.			-	-
-	EXCEPTION: Steps 8 - 9 is repeated 3 times.	-	-	-	-
8	Check: Does the UE transmit SLSS? UE shall synchronise to SS-UE2 and:	-->	SLSS	2	P

	- select the same SLSSID of SS-UE2; - select the subframe in which to transmit the SLSS according to the *syncOffsetIndicator1* included in the preconfigured sidelink parameters (i.e. *v2x-CommPreconfigSync-r14* in *SL-V2X-Preconfiguration* defined in Table 24.1.18.3.3-1), such that the subframe timing is different from the SLSS of the selected SyncRef UE.				
9	Check: Does the UE transmit *MasterInformationBlock-SL-V2X* message in the same subframe as the SLSS in step 8?	-->	*MasterInformationBlock-SL-V2X*	3	P
10	SS configures: Changes SLSSID of SS-UE2 to 0.	<--	SLSS *MasterInformationBlock-SL-V2X*	-	-
-	EXCEPTION: Steps 11 - 12 is repeated 3 times.	-	-	-	-
11	Check: Does the UE transmit SLSS? UE shall synchronise to GNSS and: - select the SLSSID = 0; - select the subframe in which to transmit the SLSS according to the *syncOffsetIndicator3* included in the preconfigured sidelink parameters (i.e. *v2x-CommPreconfigSync-r14* in *SL-V2X-Preconfiguration* defined in Table 24.1.18.3.3-1).	-->	SLSS	1,3	P
12	Check: Does the UE transmit *MasterInformationBlock-SL-V2X* message in the same subframe as the SLSS in step 11?	-->	*MasterInformationBlock-SL-V2X*	1,3	P
13	SS-NW stops transmitting GNSS RF signals.	-	-	-	-
-	EXCEPTION: Steps 14 - 15 is repeated 3 times.	-	-	-	-
14	Check: Does the UE transmit SLSS? UE shall synchronise to SS-UE1 and: - select the SLSSID = 0; - select the subframe in which to transmit the SLSS according to the *syncOffsetIndicator2* included in the preconfigured sidelink parameters (i.e. *v2x-CommPreconfigSync-r14* in *SL-V2X-Preconfiguration* defined in Table 24.1.18.3.3-1), such that the subframe timing is different from the SLSS of the selected SyncRef UE.	-->	SLSS	3	P
15	Check: Does the UE transmit *MasterInformationBlock-SL-V2X* message in the same subframe as the SLSS in step 14?	-->	*MasterInformationBlock-SL-V2X*	3	P
16	SS configures: Changes the SLSS transmission subframes of SS-UE1 to the subframes indicated by *syncOffsetIndicator3*.	<--	SLSS *MasterInformationBlock-SL-V2X*	-	-
-	EXCEPTION: Steps 17 - 18 is repeated 3 times.	-	-	-	-
17	Check: Does the UE transmit SLSS? UE shall synchronise to SS-UE1 and: - select the SLSSID = 169; - select the subframe in which to transmit the SLSS according to the *syncOffsetIndicator2* included in the preconfigured sidelink parameters (i.e. *v2x-CommPreconfigSync-r14* in *SL-V2X-Preconfiguration* defined in Table 24.1.18.3.3-1).	-->	SLSS	3	P
18	Check: Does the UE transmit *MasterInformationBlock-SL-V2X* message in the same subframe as the SLSS in step 17?	-->	*MasterInformationBlock-SL-V2X*	3	P

19	SS configures: Changes the SLSSID of SS-UE1 to 169. Changes the SLSS transmission subframes of SS-UE1 to the subframes indicated by *syncOffsetIndicator1*. SS-UE1 and SS-UE2 in accordance with "T3" defined in Table 24.1.18.3.2-1.	<--	SLSS *MasterInformationBlock-SL-V2X*	-	-
-	EXCEPTION: Steps 20 - 21 is repeated 3 times.	-	-	-	-
20	Check: Does the UE transmit SLSS? UE shall synchronise to SS-UE2 and: - select the SLSSID = 168(SLSSID of SS-UE2 +168); - select the subframe in which to transmit the SLSS according to the *syncOffsetIndicator1* included in the preconfigured sidelink parameters (i.e. *v2x-CommPreconfigSync-r14* in *SL-V2X-Preconfiguration* defined in Table 24.1.18.3.3-1) , such that the subframe timing is different from the SLSS of the selected SyncRef UE.	-->	SLSS	3	P
21	Check: Does the UE transmit *MasterInformationBlock-SL-V2X* message in the same subframe as the SLSS in step 20?	-->	*MasterInformationBlock-SL-V2X*	3	P
22	SS configures: Changes the SLSSID of SS-UE2 to 200.	<--	SLSS *MasterInformationBlock-SL-V2X*	-	-
-	EXCEPTION: Steps 23 - 24 is repeated 3 times.	-	-	-	-
23	Check: Does the UE transmit SLSS? UE shall synchronise to SS-UE1 and: - select the SLSSID = 169(SLSSID of SS-UE1); - select the subframe in which to transmit the SLSS according to the *syncOffsetIndicator2* included in the preconfigured sidelink parameters (i.e. *v2x-CommPreconfigSync-r14* in *SL-V2X-Preconfiguration* defined in Table 24.1.18.3.3-1) , such that the subframe timing is different from the SLSS of the selected SyncRef UE.	-->	SLSS	3	P
24	Check: Does the UE transmit *MasterInformationBlock-SL-V2X* message in the same subframe as the SLSS in step 23?	-->	*MasterInformationBlock-SL-V2X*	3	P
25	SS configures: SS-UE1 and SS-UE2 in accordance with "T4" defined in Table 24.1.18.3.2-1.			-	-
-	EXCEPTION: Steps 26 - 27 is repeated 3 times.	-	-	-	-
26	Check: Does the UE transmit SLSS? UE shall synchronise to SS-UE2 and: - select the SLSSID = 200 (SLSSID of SS-UE2); - select the subframe in which to transmit the SLSS according to the *syncOffsetIndicator1* included in the preconfigured sidelink parameters (i.e. *v2x-CommPreconfigSync-r14* in *SL-V2X-Preconfiguration* defined in Table 24.1.18.3.3-1) , such that the subframe timing is different from the SLSS of the selected SyncRef UE.	-->	SLSS	3	P
27	Check: Does the UE transmit *MasterInformationBlock-SL-V2X* message in the same subframe as the SLSS in step 26?	-->	*MasterInformationBlock-SL-V2X*	3	P
28	SS configures: SS-UE1 and SS-UE2 in accordance with "T5" defined in Table 24.1.18.3.2-1.	-	-	-	-

-	EXCEPTION: Steps 29 - 30 is repeated 3 times.	-	-	-	-
29	Check: Does the UE transmit SLSS? UE shall no SyncRef UE selected: - select the SLSSID randomly in the range [170..335]; - select the subframe in which to transmit the SLSS according to the *syncOffsetIndicator1 or syncOffsetIndicator2* included in the preconfigured sidelink parameters (i.e. *v2x-CommPreconfigSync-r14* in *SL-V2X-Preconfiguration* defined in Table 24.1.18.3.3-1).	-->	SLSS	4	P

24.1.19 V2X Sidelink Communication / Pre-configured authorisation / Utilisation of the pre-configured resources / CBR measurement / Transmission based on CR limit

24.1.19.1 Test Purpose (TP)

(1)

```
with { UE being authorized for performing V2X sidelink Communication and preconfigured with Radio
parameters for when the UE is "not served by E-UTRAN" }
ensure that {
  when { congestion is introduced on V2X sidelink by SS-UEs and UE has measured CBR}
    then { UE utilizes subchannels for data transmission as per the CR limit for the measured CBR}
```

24.1.19.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 23.285, clauses 4.4.1.1.1, 4.4.1.1.2, 4.4.2, 4.5.1, 5.3

[TS 23.285, clause 4.4.1.1.1]

The basic principles of service authorization for V2X communications over PC5 reference point:

- The UE gets authorization to use V2X communications over PC5 reference point on a per PLMN basis in the serving PLMN by the V2X Control Function in the HPLMN.
- The V2X Control Function in the HPLMN requests authorization information from the V2X Control Function of the serving PLMN.
- The V2X Control Function in the HPLMN merges authorization information from home and serving PLMNs and informs the UE of the final authorization information.
- The V2X Control Function in the VPLMN or HPLMN may revoke the authorization at any time. The V2X Control Function in the HPLMN shall be notified when authorization is revoked by the VPLMN.

[TS 23.285, clause 4.4.1.1.2]

The following information is provisioned to the UE for V2X communications over PC5 reference point:

1) Authorization policy:
   - When the UE is "served by E-UTRAN":
     - PLMNs in which the UE is authorized to perform V2X communications over PC5 reference point.
   - When the UE is "not served by E-UTRAN":
     - Indicates whether the UE is authorized to perform V2X communications over PC5 reference point when "not served by E-UTRAN".
2) Radio parameters for when the UE is "not served by E-UTRAN":
   - Includes the radio parameters with Geographical Area(s) and an indication of whether they are "operator managed" or "non-operator managed. These radio parameters (e.g. frequency bands) are defined in TS 36.331 [9]. The UE uses the radio parameters to perform V2X communications over PC5 reference point when "not served by E-UTRAN" only if the UE can reliably locate itself in the corresponding Geographical Area. Otherwise, the UE is not authorized to transmit.

NOTE 1: Whether a frequency band is "operator managed" or "non-operator managed" in a given Geographical Area is defined by local regulations.

3) Policy/parameters:

- The mapping of Destination Layer-2 ID(s) and the V2X services, e.g. PSID or ITS-AIDs of the V2X application.

NOTE 1: PLMN operators coordinate to make sure Destination Layer-2 ID(s) for different V2X services are configured in a consistent manner.

NOTE 2: To pre-configure a UE with the provisioning parameters, at least the "not served by E-UTRAN" parameters of 1) and 2), and the parameters of 3) need to be included.

- The mapping of ProSe Per-Packet Priority and packet delay budget for V2X communication (autonomous resources selection mode).
- The list of V2X services, e.g. PSID or ITS-AIDs of the V2X applications, with Geographical Area(s) that require privacy support.
- The mapping of service types (e.g. PSID or ITS-AIDs) to V2X frequencies (see TS 36.300 [10] for further information) with Geographical Area(s).

[TS 23.285, clause 4.4.2]

PC5 reference point as defined in TS 23.303 [5] is used for the transmission and reception of V2X messages. The V2X communication over PC5 reference point supports roaming and inter-PLMN operations. V2X communication over PC5 reference point is supported when the UE is "served by E-UTRAN" and when the UE is "not served by E-UTRAN".

A UE is authorized to transmit and receive V2X messages by the V2X Control Function in its home PLMN as described in clause 5.2.

The V2X communication over PC5 reference point is a type of ProSe Direct Communication with the following characteristics:

- The V2X communication over PC5 reference point is connectionless, and there is no signalling over PC5 control plane for connection establishment.
- V2X messages are exchanged between UEs over PC5 user plane.
- Both IP based and non-IP based V2X messages are supported.
- For IP based V2X messages, only IPv6 is used. IPv4 is not supported in this release.

The identifiers used in the V2X communication over PC5 reference point are described in clause 4.5.1.

[TS 23.285, clause 4.5.1]

Each UE has a Layer-2 ID for the V2X communication over PC5 reference point, which is included in the source Layer-2 ID field of every frame that it sends on the layer-2 link. The UE self-assigns the Layer-2 ID for the V2X communication over PC5 reference point.

When IP based V2X messages are supported, the UE auto-configures a link local IPv6 address to be used as the source IP address, as defined in clause 4.5.3 of TS 23.303 [5].

If the UE has an active V2X application that requires privacy support in the current Geographical Area, as identified by configuration described in clause 4.4.1.1.2, in order to ensure that a source UE (e.g. vehicle) cannot be tracked or identified by any other UEs (e.g. vehicles) beyond a certain short time-period required by the application, the source Layer-2 ID must be changed over time and randomized. For IP based V2X communication over PC5 reference point, the source IP address must be also changed over time and randomized. The change of the identifiers of a source UE must be synchronized across layers used for PC5, e.g. when application layer identifier changes, the source Layer-2 ID and the source IP address need to be changed.

The UE is configured with the destination Layer-2 ID(s) to be used for V2X services. The Layer-2 ID for a V2X message is selected based on the configuration as described in clause 4.4.1.1.

[TS 23.285, clause 5.3]

To perform V2X communication over PC5 reference point, the UE is configured with the related information as described in clause 4.4.1.1.

The procedure for one-to-many ProSe Direct Communication transmission described in clause 5.4.2 of TS 23.303 [5] is applied to V2X communication over PC5 reference point with following differences:

- The source Layer-2 ID is set to the Layer-2 ID described in clause 4.5.1.
- A UE shall be configured with a set of Layer-2 ID corresponding to different type of services.

The procedure for one-to-many ProSe Direct Communication reception described in clause 5.4.3 of TS 23.303 [5] is applied to V2X communication over PC5 reference point.

[TS 36.214, clause 5.1.30]

Channel busy ratio (CBR)

Definition	Channel busy ratio (CBR) measured in subframe *n* is defined as follows: - For PSSCH, the portion of sub-channels in the resource pool whose S-RSSI measured by the UE exceed a (pre-)configured threshold sensed over subframes [*n-100, n-1*]; - For PSCCH, in a pool (pre)configured such that PSCCH may be transmitted with its corresponding PSSCH in non-adjacent resource blocks, the portion of the resources of the PSCCH pool whose S-RSSI measured by the UE exceed a (pre-)configured threshold sensed over subframes [*n-100, n-1*], assuming that the PSCCH pool is composed of resources with a size of two consecutive PRB pairs in the frequency domain.
Applicable for	RRC_IDLE intra-frequency, RRC_IDLE inter-frequency, RRC_CONNECTED intra-frequency, RRC_CONNECTED inter-frequency

NOTE: The subframe index is based on physical subframe index

[TS 36.214, clause 5.1.31]

Channel occupancy ratio (CR)

Definition	Channel occupancy ratio (CR) evaluated at subframe *n* is defined as the total number of sub-channels used for its transmissions in subframes [*n-a*, *n-1*] and granted in subframes [*n*, *n+b*] divided by the total number of configured sub-channels in the transmission pool over [*n-a*, *n+b*].
Applicable for	RRC_IDLE intra-frequency, RRC_IDLE inter-frequency, RRC_CONNECTED intra-frequency, RRC_CONNECTED inter-frequency

NOTE 1: *a* is a positive integer and *b* is 0 or a positive integer; *a* and *b* are determined by UE implementation with *a+b+1 = 1000*, a >= 500, and n+b should not exceed the last transmission opportunity of the grant for the current transmission.

NOTE 2: CR is evaluated for each (re)transmission.

NOTE 3: In evaluating CR, the UE shall assume the transmission parameter used at subframe *n* is reused according to the existing grant(s) in subframes [*n+1*, *n+b*] without packet dropping.

NOTE 4: The subframe index is based on physical subframe index.

NOTE 5: CR can be computed per priority level

[TS 36.213, clause 14.1.1.4B]

If the UE has a configured sidelink grant (described in [8]) in subframe t_n^{SL} with the corresponding PSCCH resource *m* (described in Subclause 14.2.4), the resource blocks and subframes of the corresponding PSSCH transmissions are determined according to 14.1.1.4C.

The number of subframes in one set of the time and frequency resources for transmission opportunities of PSSCH is given by C_{resel} where C_{resel} = 10*SL_RESOURCE_RESELECTION_COUNTER [8] if configured else C_{resel} is set to 1.

If a set of sub-channels in subframe t_m^{SL} is determined as the time and frequency resource for PSSCH transmission corresponding to the configured sidelink grant (described in [8]), the same set of sub-channels in subframes $t_{m+j\times P'_{rsvp\_TX}}^{SL}$ are also determined for PSSCH transmissions corresponding to the same sidelink grant where *j*=1, 2,…, $C_{resel}-1$, $P'_{rsvp\_TX}=P_{step}\times P_{rsvp\_TX}/100$, and $\left(t_0^{SL},t_1^{SL},t_2^{SL},...\right)$ is determined by Subclause 14.1.5. Here, $P_{\text{rsvp\_TX}}$ is the resource reservation interval indicated by higher layers.

If a UE is configured with high layer parameter *cr-Limit* and transmits PSSCH in subframe *n*, the UE shall ensure the following limits for any priority value k;

$$\sum_{i\geq k} CR(i) \leq CR_{Limit}(k)$$

where $CR(i)$ is the CR evaluated in subframe *n*-4 for the PSSCH transmissions with "Priority" field in the SCI set to *i*, and $CR_{Limit}(k)$ corresponds to the high layer parameter *cr-Limit* that is associated with the priority value *k* and the CBR range which includes the CBR measured in subframe *n*-4. It is up to UE implementation how to meet the above limits, including dropping the transmissions in subframe *n*.

24.1.19.3 Test description

24.1.19.3.1 Pre-test conditions

System Simulator:

SS-NW

- No E-UTRA cell configured
  - 1 GNSS simulator

SS-UE

- SS-UE1: Preconfigured with V2X sidelink related parameters as per TS 36.508 Table 4.10.1.1-1, the sidelink bandwidth is set to 10MHz and configured for and operating as V2X sidelink Communication receiving device.
- SS-UE2: Preconfigured with V2X sidelink related parameters as per TS 36.508 Table 4.10.1.1-1, the sidelink bandwidth is set to 10MHz and configured for and operating as V2X sidelink Communication transmitting device simulating the congestion.
- Simulation of transmission on 65 subframes (fully occupied) out of 100 subframes (100 ms) in order to achieve 65% congestion. This equals one SS-UE transmitting on 6.5 (6 full subframes utilizing all RBs on all subchannels of the transmitting TTI and one subframe with only 5 subchannels fully occupied) out of 10 consecutive subframes, according to the transmit pattern shown in Table 24.1.19.3.1-1, and repeating continuously the same transmit pattern in subsequent frames. SS-UE transmits dummy random data on all RBs on the specified subchannels implying congestion on PSCCH and PSSCH.

Table 24.1.19.3.1-1: Transmit pattern for simulation of 65% congestion

Note: SC stands for subchannel. Each column above represents one TTI of 1ms. Bold font means blocked due to transmission.									

UE:

- V2X sidelink related configuration
- Authorised to perform V2X Sidelink Communication
- The UE is equipped with below information in UE or in a USIM containing default values (as per TS 36.508) except for those listed in Table 24.1.19.3.1-1.

Table 24.1.19.3.1-1: UE/ USIM configuration

USIM field	Priority	Value	Access Technology Identifier
EF_{UST}		Service n°119 (V2X) supported	
EF_{VST}		As per TS 36.508 [18] clause 4.9.3.4	
EF_{V2X_CONFIG}		*SL-V2X-Preconfiguration* field as defined in Table 24.1.19.3.3-1. Geographical area field as defined in TS 36.508 [18] clause 4.9.3.1 and with the sidelink bandwidth set to 10 MHz	

Preamble:

- The UE is in state V2X out of coverage (State 5-V2X) according to TS 36.508 [18].
- V2X sidelink communication is congestion free.

24.1.19.3.2 Test procedure sequence

Table 24.1.19.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	Trigger UE to activate UE test loop mode NOTE: The activation of UE test loop mode may be performed by MMI or AT command (+CATM).	-	-	-	-
2	Void	-	-	-	-
3	Trigger the UE to reset UTC time. NOTE: The UTC time reset may be performed by MMI or AT command (+CUTCR).	-	-	-	-
4	SS configures: GNSS simulator is configured for Scenario #1: Scenario #1: static in Geographical area #1, and starts step 1 to simulate a location in the centre of Geographical area #1 as defined in TS 36.508 Table 4.11.1.2-2. Geographical area #1 is also pre-configured in the UE.	-	-	-	-
5	Trigger UE to transmit 919 bytes of data every 100ms on V2X sidelink communication.	-->	*STCH PDCP SDU packet*	-	-

	(Note 1)(Note 2)				
6	Wait for 1100ms to allow the UE to measure the congestion.	-	-	-	-
7	Check: Does the UE transmit data on the V2X sidelink communication utilizing 100 subchannels in 1 sec(10000 subchannels) as per the Tx parameters mentioned in clause 24.1.19.3.3? NOTE: STCH PDCP SDU packet are received on SS-UE1	-->	*STCH PDCP SDU packet*	1	P
8	SS triggers UE to stop data transmission on V2X sidelink communication. NOTE: UE may use AT command(+CV2XDTS) or MMI to stop data transmission	-	-	-	-
9	SS-UE2 is reconfigured to achieve 65% congestion continuously in consecutive timeframes according to the transmission pattern shown in Table 24.1.19.3.1-1.	-	-	-	-
10	Trigger UE to transmit 919 bytes of data every 100ms on V2X sidelink communication. (Note 1) (Note 2)	-	-	-	-
11	Wait for 1100ms to allow the UE to measure the congestion.	-	-	-	-
12	Check: Does the UE transmit data on the V2X sidelink communication utilizing 50 subchannels in 1 sec(10000 subchannels) as per the Tx parameters mentioned in clause 24.1.19.3.3? NOTE: STCH PDCP SDU packet are received on SS-UE1	-->	*STCH PDCP SDU packet*	1	P
13	SS triggers UE to stop data transmission on V2X sidelink communication. NOTE: UE may use AT command(+CV2XDTS) or MMI to stop data transmission	-	-	-	-
14	Trigger UE to deactivate UE test loop mode. NOTE: The deactivation of UE test loop mode may be performed by MMI or AT command (+CATM)	-	-	-	-
Note 1: 935 bytes(TBS) of data is derived by using MCS = 9 and Nprb = 48 from TS 3GPP 36.213 Table 7.1.7.1-1 and Table 7.1.7.2.1-1 which gives TBS = 7480 bits/TTI. Step 2 and Step 7 mentions 919 bytes which is excluding headers. Note 2: UE may use AT command(+CV2XDTS) or MMI to transmit data. Although the UE is expected to transmit continuously, only this STCH PDCP SDU packet is shown explicitly in the step sequence. Reception of this packet ensures that UE has acquired GNSS.

24.1.20 V2X Sidelink Communication / Pre-configured authorisation / UE in limited service state on the anchor carrier frequency provisioned for V2X configuration / Transmission

24.1.20.1 Test Purpose (TP)

(1)

```
with { UE supporting V2X sidelink communication is authorized to use V2X communication over PC5 reference point }
ensure that {
  when { UE in limited service state because of receiving a "PLMN not allowed" response to a registration request, and is triggered by an upper layer application to transmit V2X sidelink communication }
    then { UE shall only use the radio resources and procedure available in IDLE mode for V2X communication }
            }
```

(2)

```
with { UE supporting V2X sidelink communication is authorized to use V2X communication over PC5 reference point }
ensure that {
  when { UE in limited service state because of receiving a "EPS services not allowed" response to a registration request, and is triggered by an upper layer application to transmit V2X sidelink communication }
    then { UE shall only use the radio resources and procedure available in IDLE mode for V2X communication }
            }
```

24.1.20.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 23.285, clauses 4.4.8.

[TS 23.285, clause 4.4.8]

For UE in limited service state, only V2X communication over PC5 is allowed.

UEs that are authorized to use V2X communication over PC5 reference point shall be able to use V2X communication over PC5 reference point when in limited service state following the principles defined in clause 4.4.1.1.3 for V2X communication over PC5 reference point when the UE enters in limited service state:

- because it cannot find a suitable cell of the selected PLMN as described in TS 23.122 [23] or
- as the result of receiving one of the following reject reasons defined in TS 23.122 [23]:
  - a "PLMN not allowed" response to a registration request or;
  - a "GPRS not allowed" response to a registration request

A UE in limited service state shall only use the radio resources and procedure available in ECM-IDLE mode for V2X communication over PC5 reference point, for details see TS 36.300 [10].

UEs shall not use V2X communication over PC5 reference point using the "operator-managed" radio resources, as specified in clause 4.4.1.1.2, if the UE has entered in limited service state due to all other situations (e.g. no SIM in the MS, an "illegal MS" or "illegal ME" response to a registration request, or an "IMSI unknown in HLR" response to a registration request) defined in TS 23.122 [23], where the UE is unable to obtain normal service from a PLMN. The UEs may use V2X communication over PC5 reference point using the "non-operator-managed" radio resources, as specified in clause 4.4.1.1.2, according to the principles defined in clause 4.4.1.1.3.

24.1.20.3 Test description

24.1.20.3.1 Pre-test conditions

System Simulator:

SS-NW

- Cell 1

Table 24.1.20.3.1-1: Cell parameters values

Cell	Frequency	PLMN
1	f1	HPLMN (PLMN1)
Note 1: The Frequency f1 shall be the anchor frequency pre-configured in the UE.		

- System information combination 29 as defined in TS 36.508 [18] clause 4.4.3.1 is used in all active cells.

UE:

- V2X sidelink related configuration.
  - The UE is authorised to perform V2X Sidelink Communication
- The UE is equipped with below information in UE or in a USIM containing default values (as per TS 36.508 [18]) except for those listed in Table 24.1.20.3.1-2.

Table 24.1.20.3.1-2: UE/ USIM configuration

USIM field	Priority	Value	Access Technology Identifier
EF_{UST}		Service n°119 (V2X) supported	
EF_{VST}		As per TS 36.508 [18] clause 4.9.3.4

24.2 P2X Sidelink Communication

24.2.1 P2X Sidelink Communication / Pre-configured authorisation / UE in RRC_IDLE on an E-UTRAN cell operating on the anchor carrier frequency provisioned for V2X configuration / Utilisation of the resources of (serving) cells/PLMNs / Transmission / Partial sensing

24.2.1.1 Test Purpose (TP)

(1)

```
with { UE supporting V2X sidelink communication }
ensure that {
  when { UE performs Attach procedure, or, Normal tracking area updating procedure }
    then { UE announces its V2X communication over PC5 supported capabilities }
            }
```

(2)

```
with { UE supporting partial sensing and being authorized for performing V2X sidelink Communication
in PLMN1) and pre-configured with anchor carrier parameters for V2X configuration and with Radio
parameters for when the UE is "not served by E-UTRAN", and, UE is in RRC_IDLE on Cell1/f1/PLMN1
which is operating on the anchor carrier frequency as the one pre-configured in the UE/USIM and is
transmitting SystemInformationBlockType21 with partialSensing selected in resourceSelectionConfigP2X
}
ensure that {
  when { UE is triggered by an upper layer application to transmit V2X sidelink communication }
    then { UE is able to transmit V2X sidelink communication based on partial sensing  in
Cell1/f1/PLMN1 via SystemInformationBlockType21 }
            }
```

24.2.1.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.301 clause 5.5.1.2.2, TS 36.331 clauses 5.2.2.4, 5.2.2.28 and 5.10.13.1a.

[TS 24.301, clause 5.5.1.2.2]

If the UE supports V2X communication over PC5, then the UE shall set the V2X PC5 bit to "V2X communication over PC5 supported" in the UE network capability IE of the ATTACH REQUEST message.

[TS 36.331, clause 5.2.2.4]

1> if the UE is capable of V2X sidelink communication and is configured by upper layers to receive or transmit V2X sidelink communication on a frequency:

2> if *schedulingInfoList* on the serving cell/PCell indicates that *SystemInformationBlockType21* is present and the UE does not have stored a valid version of this system information block:

3> acquire *SystemInformationBlockType21* from serving cell/PCell;

[TS 36.331, clause 5.2.2.28]

Upon receiving *SystemInformationBlockType21*, the UE shall:

1> if *SystemInformationBlockType21* message includes *sl-V2X-ConfigCommon*:

2> if configured to receive V2X sidelink communication:

3> use the resource pool indicated by *v2x-CommRxPool* in *sl-V2X-ConfigCommon* for V2X sidelink communication monitoring, as specified in 5.10.12;

2> if configured to transmit V2X sidelink communication:

3> use the resource pool indicated by *v2x-CommTxPoolNormalCommon*, *p2x-CommTxPoolNormalCommon*, *v2x-CommTxPoolNormal*, *p2x-CommTxPoolNormal* or by *v2x-CommTxPoolExceptional* for V2X sidelink communication transmission, as specified in 5.10.13;

3> perform CBR measurement on the transmission resource pool(s) indicated by *v2x-CommTxPoolNormalCommon*, *v2x-CommTxPoolNormal* and *v2x-CommTxPoolExceptional* for V2X sidelink communication transmission, as specified in 5.5.3;

[TS 36.331, clause 5.10.13.1a]

A UE configured to transmit P2X related V2X sidelink communication shall:

1> if *partialSensing* is included and *randomSelection* is not included in *resourceSelectionConfigP2X* of the pool selected; or

1> if both *partialSensing* and *randomSelection* are included in *resourceSelectionConfigP2X* of the pool selected, and the UE selects to use partial sensing:

2> configure lower layers to transmit the sidelink control information and the corresponding data based on partial sensing (as defined in TS 36.321 [6] and TS 36.213 [23]) using the selected resource pool, if the UE supports partial sensing;

1> if *partialSensing* is not included and *randomSelection* is included in *resourceSelectionConfigP2X* of the pool selected.

2> configure lower layers to transmit the sidelink control information and the corresponding data based on random selection (as defined in TS 36.321 [6] and TS 36.213 [23]) using the selected resource pool;

1> if both *partialSensing* and *randomSelection* is included in *resourceSelectionConfigP2X* of the pool selected, and the UE selects to use random selection:

2> configure lower layers to transmit the sidelink control information and the corresponding data based on random selection using the selected resource pool and indicates to lower layers that transmissions of multiple MAC PDUs are allowed (as defined in TS 36.321 [6] and TS 36.213 [23]).

NOTE: If both *partialSensing* and *randomSelection* is included in *resourceSelectionConfigP2X* of the pool selected, the selection between partial sensing and random selection is left to UE implementation.

24.2.1.3 Test description

24.2.1.3.1 Pre-test conditions

System Simulator:

SS-NW

- Cell 1
- System information combination 29 as defined in TS 36.508 [18] clause 4.4.3.1 is used in Cell 1.
- SystemInformationBlockType21 for Cell 1 using parameters as specified in Table 24.2.1.3.3-2.

SS-UE

- SS-UE1. As defined in TS 36.508 [18], configured for and operating as V2X Sidelink Communication receiving device on the resources which the UE is expected to use for transmission, as defined in TS 36.508 [18] clause 6.2.3.5.

UE:

- Pedestrian UE- The UE support the partial sensing capability.
- The UE is equipped with below information in UE or in a USIM containing default values (as per TS 36.508 [18]) except for those listed in Table 24.2.1.3.1-1.

Table 24.2.1.3.1-1: UE/ USIM configuration

USIM field	Priority	Value	Access Technology Identifier
EF_{UST}		Service n°119 (V2X) supported	
EF_{VST}		As per TS 36.508 [18] clause 4.9.3.4	
EF_{V2X_CONFIG}		As per TS 36.508 [18] clause 4.9.3.4. SL-V2X-Preconfiguration field as defined in Table 24.2.1.3.3-1	

Preamble

- The UE is in State Switched OFF (state 1) according to TS 36.508 [18].

24.2.1.3.2 Test procedure sequence

Table 24.2.1.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The UE is switched on	-	-	-	-
2	Check: Does the Generic test procedure from step 1 to 18 for 'UE Registration (State 2A)' defined in TS 36.508 [18] clause 4.5.2A takes place during which the UE announces its V2X sidelink communication capabilities in the ATTACH REQUEST message?	-	-	1	P
3	Close UE Test Loop with bit E0 in UE test loop mode E LB setup IE set to one (transmission mode).	<--	CLOSE UE TEST LOOP	-	-
4	The UE responds with CLOSE UE TEST LOOP COMPLETE	-->	CLOSE UE TEST LOOP COMPLETE	-	-
5	SS-NW releases the connection	<--	*RRCConnectionRelease*	-	-
6	Check: Does the UE transmit STCH PDCP SDU packets of V2X sidelink communication data over the PC5 interface in accordance with the resources indicated in Cell 1 SystemInformationBlockType21? NOTE 1: The UE may send multiple packets. The reception of one of them is sufficient for achieving the Pass verdict. NOTE 2: The structure of the data is not checked and it is just considered as octetstrings by the SS.	-->	*STCH PDCP SDU packet*	2	P

24.2.2.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 24.301 clause 5.5.1.2.2, TS 36.331 clauses 5.2.2.4, 5.2.2.28 and 5.10.13.1a.

[TS 24.301, clause 5.5.1.2.2]

If the UE supports V2X communication over PC5, then the UE shall set the V2X PC5 bit to "V2X communication over PC5 supported" in the UE network capability IE of the ATTACH REQUEST message.

[TS 36.331, clause 5.2.2.4]

1> if the UE is capable of V2X sidelink communication and is configured by upper layers to receive or transmit V2X sidelink communication on a frequency:

2> if *schedulingInfoList* on the serving cell/PCell indicates that *SystemInformationBlockType21* is present and the UE does not have stored a valid version of this system information block:

3> acquire *SystemInformationBlockType21* from serving cell/PCell;

[TS 36.331, clause 5.2.2.28]

Upon receiving *SystemInformationBlockType21*, the UE shall:

1> if *SystemInformationBlockType21* message includes *sl-V2X-ConfigCommon*:

2> if configured to receive V2X sidelink communication:

3> use the resource pool indicated by *v2x-CommRxPool* in *sl-V2X-ConfigCommon* for V2X sidelink communication monitoring, as specified in 5.10.12;

2> if configured to transmit V2X sidelink communication:

3> use the resource pool indicated by *v2x-CommTxPoolNormalCommon*, *p2x-CommTxPoolNormalCommon*, *v2x-CommTxPoolNormal*, *p2x-CommTxPoolNormal* or by *v2x-CommTxPoolExceptional* for V2X sidelink communication transmission, as specified in 5.10.13;

3> perform CBR measurement on the transmission resource pool(s) indicated by *v2x-CommTxPoolNormalCommon*, *v2x-CommTxPoolNormal* and *v2x-CommTxPoolExceptional* for V2X sidelink communication transmission, as specified in 5.5.3;

[TS 36.331, clause 5.10.13.1a]

A UE configured to transmit P2X related V2X sidelink communication shall:

1> if *partialSensing* is included and *randomSelection* is not included in *resourceSelectionConfigP2X* of the pool selected; or

1> if both *partialSensing* and *randomSelection* are included in *resourceSelectionConfigP2X* of the pool selected, and the UE selects to use partial sensing:

2> configure lower layers to transmit the sidelink control information and the corresponding data based on partial sensing (as defined in TS 36.321 [6] and TS 36.213 [23]) using the selected resource pool, if the UE supports partial sensing;

1> if *partialSensing* is not included and *randomSelection* is included in *resourceSelectionConfigP2X* of the pool selected.

2> configure lower layers to transmit the sidelink control information and the corresponding data based on random selection (as defined in TS 36.321 [6] and TS 36.213 [23]) using the selected resource pool;

1> if both *partialSensing* and *randomSelection* is included in *resourceSelectionConfigP2X* of the pool selected, and the UE selects to use random selection:

2> configure lower layers to transmit the sidelink control information and the corresponding data based on random selection using the selected resource pool and indicates to lower layers that transmissions of multiple MAC PDUs are allowed (as defined in TS 36.321 [6] and TS 36.213 [23]).

NOTE: If both *partialSensing* and *randomSelection* is included in *resourceSelectionConfigP2X* of the pool selected, the selection between partial sensing and random selection is left to UE implementation.

24.2.2.3 Test description

24.2.2.3.1 Pre-test conditions

System Simulator:

SS-NW

- Cell 1
- System information combination 29 as defined in TS 36.508 [18] clause 4.4.3.1 is used in Cell 1.
- SystemInformationBlockType21 for Cell 1 using parameters as specified in Table 24.2.2.3.3-2, in which partialSensing is selected.

SS-UE

- SS-UE1. As defined in TS 36.508 [18], configured for and operating as V2X Sidelink Communication receiving device on the resources which the UE is expected to use for transmission, as defined in TS 36.508 [18] clause 6.2.3.5.

UE:

- Pedestrian UE
- The UE do not support the partial sensing capability.
- The UE is equipped with below information in UE or in a USIM containing default values (as per TS 36.508 [18]) except for those listed in Table 24.2.2.3.1-1.

Table 24.2.2.3.1-1: UE/ USIM configuration

USIM field	Priority	Value	Access Technology Identifier
EF_{UST}		Service n°119 (V2X) supported	
EF_{VST}		As per TS 36.508 [18] clause 4.9.3.4

24.2.3 P2X Sidelink Communication / Pre-configured authorisation / Utilisation of the pre-configured resources / Transmission

24.2.3.1 Test Purpose (TP)

(1)

```
with { UE being authorized as Pedestrian UE for performing V2X sidelink Communication being
provisioned with Radio parameters for when the UE is "not served by E-UTRAN" associated with a
geographical area, and, UE out of coverage on the anchor carrier used for V2X configuration }

ensure that {
  when { UE wants to transmit V2X sidelink Communication, and, UE determines itself as being located
in that geographical area }
```

```
    then { UE is able to transmit V2X sidelink Communication using the preconfigured for "not served
by E-UTRAN" resources }
            }
```

(2)

```
with { UE being authorized as Pedestrian UE for performing V2X sidelink Communication being
provisioned with Radio parameters for when the UE is "not served by E-UTRAN" associated with a
geographical area, and, UE out of coverage on the anchor carrier used for V2X configuration }
ensure that {
  when { UE wants to transmit V2X sidelink Communication, and, UE determines itself as being not
located in that geographical area }
    then { UE does not initiate V2X sidelink Communication }
            }
```

24.2.3.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 23.285, clauses 4.4.1.1.1, 4.4.1.1.2, 4.4.2, 4.5.1, 5.3

[TS 23.285, clause 4.4.1.1.1]

The basic principles of service authorization for V2X communications over PC5 reference point:

- The UE gets authorization to use V2X communications over PC5 reference point on a per PLMN basis in the serving PLMN by the V2X Control Function in the HPLMN.
- The V2X Control Function in the HPLMN requests authorization information from the V2X Control Function of the serving PLMN.
- The V2X Control Function in the HPLMN merges authorization information from home and serving PLMNs and informs the UE of the final authorization information.
- The V2X Control Function in the VPLMN or HPLMN may revoke the authorization at any time. The V2X Control Function in the HPLMN shall be notified when authorization is revoked by the VPLMN.

[TS 23.285, clause 4.4.1.1.2]

The following information is provisioned to the UE for V2X communications over PC5 reference point:

1) Authorization policy:
   - When the UE is "served by E-UTRAN":
   - PLMNs in which the UE is authorized to perform V2X communications over PC5 reference point.
   - When the UE is "not served by E-UTRAN":
   - Indicates whether the UE is authorized to perform V2X communications over PC5 reference point when "not served by E-UTRAN".
2) Radio parameters for when the UE is "not served by E-UTRAN":
   - Includes the radio parameters with Geographical Area(s) that need to be configured in the UE in order to be able perform V2X communications over PC5 reference point when "not served by E-UTRAN". These radio parameters (e.g. frequency bands) are defined in TS 36.331 [9]. The UE uses the radio parameters only if the UE can locate itself in the corresponding Geographical Area. Otherwise, the UE is not authorized to transmit.
3) Policy/parameters for V2X communication over PC5 reference point:
   - The mapping of Destination Layer-2 ID(s) and the V2X services, e.g. PSID or ITS-AIDs of the V2X application.

NOTE 1: PLMN operators coordinate to make sure Destination Layer-2 ID(s) for different V2X services are configured in a consistent manner.

NOTE 2: To pre-configure a UE with the provisioning parameters, at least the "not served by E-UTRAN" parameters of 1) and 2), and the parameters of 3) need to be included.

- The mapping of ProSe Per-Packet Priority and packet delay budget for V2X communication (autonomous resources selection mode).

[TS 23.285, clause 4.4.2]

PC5 reference point as defined in TS 23.303 [5] is used for the transmission and reception of V2X messages. The V2X communication over PC5 reference point supports roaming and inter-PLMN operations. V2X communication over PC5 reference point is supported when the UE is "served by E-UTRAN" and when the UE is "not served by E-UTRAN".

A UE is authorized to transmit and receive V2X messages by the V2X Control Function in its home PLMN as described in clause 5.2.

The V2X communication over PC5 reference point is a type of ProSe Direct Communication with the following characteristics:

- The V2X communication over PC5 reference point is connectionless, and there is no signalling over PC5 control plane for connection establishment.
- V2X messages are exchanged between UEs over PC5 user plane.
- Both IP based and non-IP based V2X messages are supported.
- For IP based V2X messages, only IPv6 is used. IPv4 is not supported in this release.

The identifiers used in the V2X communication over PC5 reference point are described in clause 4.5.1.

[TS 23.285, clause 4.5.1]

Each UE has a Layer-2 ID for the V2X communication over PC5 reference point, which is included in the source Layer-2 ID field of every frame that it sends on the layer-2 link. The UE self-assigns the Layer-2 ID for the V2X communication over PC5 reference point.

When IP based V2X messages are supported, the UE auto-configures a link local IPv6 address to be used as the source IP address, as defined in clause 4.5.3 of TS 23.303 [5].

In order to ensure that a source UE (e.g. vehicle) cannot be tracked or identified by any other UEs (e.g. vehicles) beyond a certain short time-period required by the application, the source Layer-2 ID must be changed over time and randomized. For IP based V2X communication over PC5 reference point, the source IP address must be also changed over time and randomized. The change of the identifiers of a source UE must be synchronized across layers used for PC5, e.g. when application layer identifier changes, the source Layer-2 ID and the source IP address need to be changed.

The UE is configured with the destination Layer-2 ID(s) to be used for V2X services. The Layer-2 ID for a V2X message is selected based on the configuration as described in clause 4.4.1.1.

[TS 23.285, clause 5.3]

To perform V2X communication over PC5 reference point, the UE is configured with the related information as described in clause 4.4.1.1.

The procedure for one-to-many ProSe Direct Communication transmission described in clause 5.4.2 of TS 23.303 [5] is applied to V2X communication over PC5 reference point with following differences:

- The source Layer-2 ID is set to the Layer-2 ID described in clause 4.5.1.
- A UE shall be configured with a set of Layer-2 ID corresponding to different type of services.

The procedure for one-to-many ProSe Direct Communication reception described in clause 5.4.3 of TS 23.303 [5] is applied to V2X communication over PC5 reference point.

24.2.3.3 Test description

24.2.3.3.1 Pre-test conditions

System Simulator:

SS-NW

- No E-UTRA cell configured
- 1 GNSS simulator

SS-UE

- SS-UE1. As defined in TS 36.508 [18], configured for and operating as V2X Sidelink Communication receiving device on the resources which the UE is expected to use for transmission, as defined in TS 36.508 [18] clause 6.2.3.5.

UE:

- Pedestrian UE
- The UE is equipped with below information in UE or in a USIM containing default values (as per TS 36.508 [18]).

Table 24.2.3.3.1-1: UE/ USIM configuration

24.2.4 P2X Sidelink Communication / Pre-configured authorisation / UE in RRC_IDLE on an E-UTRAN cell operating on the anchor carrier frequency for V2X configuration/ UE transmits V2X sidelink communication using Tx parameters based on PPPP and configured CBR

24.2.4.1 Test Purpose (TP)

(1)

```
with { UE being authorized as Pedestrian UE for performing V2X sidelink Communication in PLMN1 and
pre-configured with anchor carrier parameters for V2X configuration and with Radio parameters for
when the UE is "not served by E-UTRAN", and, UE is in RRC_IDLE on Cell1/f1/PLMN1 which is operating
on the anchor carrier frequency as the one pre-configured in the UE/USIM and is transmitting
SystemInformationBlockType21 which includes cbr-CommonTxConfigList-r14 and p2x-CommTxPoolNormal-r14
}
ensure that {
  when { UE is triggered by an upper layer application to transmit V2X sidelink communication with
configured PPPP and configured CBR are available }
    then { UE is able to transmit V2X sidelink communication using the configured resources
associated with the configured PPPP and configured CBR based on the SystemInformationBlockType21}
            }
```

24.2.4.2 Conformance requirements

References: The conformance requirements covered in the current TC are specified in: TS 36.321, clauses 5.14.1.1, TS 36.331, clauses 5.10.13.1 and clause 5.10.13.1].

[TS 36.321, clause 5.14.1.1]

Sidelink grants are selected as follows for V2X sidelink communication:

- if the MAC entity is configured to receive a sidelink grant dynamically on the PDCCH and data is available in STCH, the MAC entity shall:

[…]

- if the MAC entity is configured by upper layers to transmit using a pool of resources as indicated in subclause 5.10.13.1 of [8] based on sensing, or partial sensing, or random selection only if upper layers indicates that transmissions of multiple MAC PDUs are allowed according to subclause 5.10.13.1a of [8], and the MAC entity selects to create a configured sidelink grant corresponding to transmissions of multiple MAC PDUs, and data is available in STCH, the MAC entity shall for each Sidelink process configured for multiple transmissions:
    - if SL_RESOURCE_RESELECTION_COUNTER = 0 and when SL_RESOURCE_RESELECTION_COUNTER was equal to 1 the MAC entity randomly selected, with equal probability, a value in the interval [0, 1] which is above the probability configured by upper layers in *probResourceKeep*; or
    - if neither transmission nor retransmission has been performed by the MAC entity on any resource indicated in the configured sidelink grant during the last second; or
    - if *sl-ReselectAfter* is configured and the number of consecutive unused transmission opportunities on resources indicated in the configured sidelink grant is equal to *sl-ReselectAfter*; or
    - if there is no configured sidelink grant; or
    - if the configured sidelink grant cannot accommodate a RLC SDU by using the maximum allowed MCS configured by upper layers in *maxMCS-PSSCH* and the MAC entity selects not to segment the RLC SDU; or

NOTE: If the configured sidelink grant cannot accommodate the RLC SDU, it is left for UE implementation whether to perform segmentation or sidelink resource reselection.

- if transmission(s) with the configured sidelink grant cannot fulfil the latency requirement of the data in a sidelink logical channel according to the associated PPPP, and the MAC entity selects not to perform transmission(s) corresponding to a single MAC PDU; or

NOTE: If the latency requirement is not met, it is left for UE implementation whether to perform transmission(s) corresponding to single MAC PDU or sidelink resource reselection.

- if a pool of resources is configured or reconfigured by upper layers:
  - clear the configured sidelink grant, if available;
  - select one of the allowed values configured by upper layers in *restrictResourceReservationPeriod* and set the resource reservation interval by multiplying 100 with the selected value;

NOTE: How the UE selects this value is up to UE implementation.

  - randomly select, with equal probability, an integer value in the interval [5, 15] for the resource reservation interval higher than or equal to 100ms, in the interval [10, 30] for the resource reservation interval equal to 50ms or in the interval [25, 75] for the resource reservation interval equal to 20ms, and set SL_RESOURCE_RESELECTION_COUNTER to the selected value;
  - select the number of HARQ retransmissions from the allowed numbers that are configured by upper layers in *allowedRetxNumberPSSCH* included in *pssch-TxConfigList* and, if configured by upper layers, overlapped in *allowedRetxNumberPSSCH* indicated in *cbr-pssch-TxConfigList* for the highest priority of the sidelink logical channel(s) and the CBR measured by lower layers according to [6] if CBR measurement results are available or the corresponding *defaultTxConfigIndex* configured by upper layers if CBR measurement results are not available;
  - select an amount of frequency resources within the range that is configured by upper layers between *minSubchannel-NumberPSSCH* and *maxSubchannel-NumberPSSCH* included in *pssch-TxConfigList* and, if configured by upper layers, overlapped between *minSubchannel-NumberPSSCH* and *maxSubchannel-NumberPSSCH* indicated in *cbr-pssch-TxConfigList* for the highest priority of the sidelink logical channel(s) and the CBR measured by lower layers according to [6] if CBR measurement results are available or the corresponding *defaultTxConfigIndex* configured by upper layers if CBR measurement results are not available;
  - if transmission based on random selection is configured by upper layers:
    - randomly select the time and frequency resources for one transmission opportunity from the resource pool, according to the amount of selected frequency resources. The random function shall be such that each of the allowed selections can be chosen with equal probability;
  - else:
    - randomly select the time and frequency resources for one transmission opportunity from the resources indicated by the physical layer according to subclause 14.1.1.6 of [2], according to the amount of selected frequency resources. The random function shall be such that each of the allowed selections can be chosen with equal probability;
  - use the randomly selected resource to select a set of periodic resources spaced by the resource reservation interval for transmission opportunities of SCI and SL-SCH corresponding to the number of transmission opportunities of MAC PDUs determined in subclause 14.1.1.4B of [2];
  - if the number of HARQ retransmissions is equal to 1 and there are available resources left in the resources indicated by the physical layer that meet the conditions in subclause 14.1.1.7 of [2] for more transmission opportunities:
    - randomly select the time and frequency resources for one transmission opportunity from the available resources, according to the amount of selected frequency resources. The random function shall be such that each of the allowed selections can be chosen with equal probability;
    - use the randomly selected resource to select a set of periodic resources spaced by the resource reservation interval for the other transmission opportunities of SCI and SL-SCH corresponding to the number of retransmission opportunities of the MAC PDUs determined in subclause 14.1.1.4B of [2];
    - consider the first set of transmission opportunities as the new transmission opportunities and the other set of transmission opportunities as the retransmission opportunities;

- consider the set of new transmission opportunities and retransmission opportunities as the selected sidelink grant.

- else:

  - consider the set as the selected sidelink grant;

- use the selected sidelink grant to determine the set of subframes in which transmissions of SCI and SL-SCH occur according to subclause 14.2.1 and 14.1.1.4B of [2];

- consider the selected sidelink grant to be a configured sidelink grant;

- else if SL_RESOURCE_RESELECTION_COUNTER = 0 and when SL_RESOURCE_RESELECTION_COUNTER was equal to 1 the MAC entity randomly selected, with equal probability, a value in the interval [0, 1] which is less than or equal to the probability configured by upper layers in *probResourceKeep*:

  - clear the configured sidelink grant, if available;

  - randomly select, with equal probability, an integer value in the interval [5, 15] for the resource reservation interval higher than or equal to 100ms, in the interval [10, 30] for the resource reservation interval equal to 50ms or in the interval [25, 75] for the resource reservation interval equal to 20ms, and set SL_RESOURCE_RESELECTION_COUNTER to the selected value;

  - use the previously selected sidelink grant for the number of transmissions of the MAC PDUs determined in subclause 14.1.1.4B of [2] with the resource reservation interval to determine the set of subframes in which transmissions of SCI and SL-SCH occur according to subclause 14.2.1 and 14.1.1.4B of [2];

  - consider the selected sidelink grant to be a configured sidelink grant;

- else, if the MAC entity is configured by upper layers to transmit using a pool of resources as indicated in subclause 5.10.13.1 of [8], the MAC entity selects to create a configured sidelink grant corresponding to transmission(s) of a single MAC PDU, and data is available in STCH, the MAC entity shall for a Sidelink process:

  - select the number of HARQ retransmissions from the allowed numbers that are configured by upper layers in *allowedRetxNumberPSSCH* included in *pssch-TxConfigList* and, if configured by upper layers, overlapped in *allowedRetxNumberPSSCH* indicated in *cbr-pssch-TxConfigList* for the highest priority of the sidelink logical channel(s) and the CBR measured by lower layers according to [6] if CBR measurement results are available or the corresponding *defaultTxConfigIndex* configured by upper layers if CBR measurement results are not available;

  - select an amount of frequency resources within the range that is configured by upper layers between *minSubchannel-NumberPSSCH* and *maxSubchannel-NumberPSSCH* included in *pssch-TxConfigList* and, if configured by upper layers, overlapped between *minSubchannel-NumberPSSCH* and *maxSubchannel-NumberPSSCH* indicated in *cbr-pssch-TxConfigList* for the highest priority of the sidelink logical channel(s) and the CBR measured by lower layers according to [6] if CBR measurement results are available or the corresponding *defaultTxConfigIndex* configured by upper layers if CBR measurement results are not available;

  - if transmission based on random selection is configured by upper layers:

    - randomly select the time and frequency resources for one transmission opportunity of SCI and SL-SCH from the resource pool, according to the amount of selected frequency resources. The random function shall be such that each of the allowed selections can be chosen with equal probability;

  - else:

    - randomly select the time and frequency resources for one transmission opportunity of SCI and SL-SCH from the resource pool indicated by the physical layer according to subclause 14.1.1.6 of [2] , according to the amount of selected frequency resources. The random function shall be such that each of the allowed selections can be chosen with equal probability;

  - if the number of HARQ retransmissions is equal to 1:

    - if transmission based on random selection is configured by upper layers and there are available resources that meet the conditions in subcause 14.1.1.7 of [2] for one more transmission opportunity:
        - randomly select the time and frequency resources for the other transmission opportunity of SCI and SL-SCH corresponding to additional transmission of the MAC PDU from the available resources, according to the amount of selected frequency resources. The random function shall be such that each of the allowed selections can be chosen with equal probability;
    - else, if transmission based on sensing or partial sensing is configured by upper layers and there are available resources left in the resources indicated by the physical layer that meet the conditions in subcause 14.1.1.7 of [2] for one more transmission opportunity:
        - randomly select the time and frequency resources for the other transmission opportunity of SCI and SL-SCH corresponding to additional transmission of the MAC PDU from the available resources, according to the amount of selected frequency resources. The random function shall be such that each of the allowed selections can be chosen with equal probability;
    - consider a transmission opportunity which comes first in time as the new transmission opportunity and a transmission opportunity which comes later in time as the retransmission opportunity;
    - consider both of the transmission opportunities as the selected sidelink grant;
  - else:
    - consider the transmission opportunity as the selected sidelink grant;
  - use the selected sidelink grant to determine the subframes in which transmission(s) of SCI and SL-SCH occur according to subclause 14.2.1 and 14.1.1.4B of [2];
  - consider the selected sidelink grant to be a configured sidelink grant;

NOTE: For V2X sidelink communication, the UE should ensure the randomly selected time and frequency resources fulfil the latency requirement.

NOTE: For V2X sidelink communication, when there is no overlapping between the chosen configuration(s) in *pssch-TxConfigList* and chosen configuration(s) indicated in *cbr-pssch-TxConfigList*, it is up to UE implementation whether the UE transmits and which transmitting parameters the UE uses between allowed configuration(s) indicated in *pssch-TxConfigList* and allowed configuration(s) indicated in *cbr-pssch-TxConfigList*.

The MAC entity shall for each subframe:

- if the MAC entity has a configured sidelink grant occurring in this subframe:
  - if SL_RESOURCE_RESELECTION_COUNTER = 1 and the MAC entity randomly selected, with equal probability, a value in the interval [0, 1] which is above the probability configured by upper layers in *probResourceKeep*:
    - set the resource reservation interval equal to 0;
  - if the configured sidelink grant corresponds to transmission of SCI:
    - instruct the physical layer to transmit SCI corresponding to the configured sidelink grant;
    - for V2X sidelink communication, deliver the configured sidelink grant, the associated HARQ information and the value of the highest priority of the sidelink logical channel(s) in the MAC PDU to the Sidelink HARQ Entity for this subframe;
  - else if the configured sidelink grant corresponds to transmission of first transport block for sidelink communication:
    - deliver the configured sidelink grant and the associated HARQ information to the Sidelink HARQ Entity for this subframe.

NOTE: If the MAC entity has multiple configured grants occurring in one subframe and if not all of them can be processed due to the single-cluster SC-FDM restriction, it is left for UE implementation which one of these to process according to the procedure above.

[TS 36.331, clause 5.10.13.1]

A UE capable of V2X sidelink communication that is configured by upper layers to transmit V2X sidelink communication and has related data to be transmitted shall:

1> if the conditions for sidelink operation as defined in 5.10.1d are met:

2> if in coverage on the frequency used for V2X sidelink communication as defined in TS 36.304 [4, 11.4]; or

2> if the frequency used to transmit V2X sidelink communication is included in *v2x-InterFreqInfoList* in *RRCConnectionReconfiguration* or in *v2x-InterFreqInfoList* within *SystemInformationBlockType21*:

3> if the UE is in RRC_CONNECTED and uses the PCell or the frequency included in *v2x-InterFreqInfoList* in *RRCConnectionReconfiguration* for V2X sidelink communication:

[…]

3> else:

4> if the cell chosen for V2X sidelink communication transmission broadcasts *SystemInformationBlockType21*:

5> if the UE is configured to transmit non-P2X related V2X sidelink communication, and if *SystemInformationBlockType21* includes *v2x-CommTxPoolNormalCommon* or *v2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* for the concerned frequency in *sl-V2X-ConfigCommon* and a result of sensing on the resources configured in *v2x-CommTxPoolNormalCommon* or *v2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* for the concerned frequency is available in accordance with TS 36.213 [23]:

6> configure lower layers to transmit the sidelink control information and the corresponding data based on sensing (as defined in TS 36.321 [6] and TS 36.213 [23]) using one of the resource pools indicated by *v2x-CommTxPoolNormalCommon* or *v2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* for the concerned frequency, which is selected according to 5.10.13.2;

5> else if the UE is configured to transmit P2X related V2X sidelink communication, and if *SystemInformationBlockType21* includes *p2x-CommTxPoolNormalCommon* or *p2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* for the concerned frequency in *sl-V2X-ConfigCommon*:

6> select a resource pool from *p2x-CommTxPoolNormalCommon* or *p2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* for the concerned frequency according to 5.10.13.2, but ignoring *zoneConfig* in *SystemInformationBlockType21*;

6> transmit P2X related V2X sidelink communication according to 5.10.13.1a;

5> else if *SystemInformationBlockType21* includes *v2x-CommTxPoolExceptional* in *sl-V2X-ConfigCommon* or *v2x-CommTxPoolExceptional* in *v2x-InterFreqInfoList* for the concerned frequency:

6> from the moment the UE initiates connection establishment until receiving an *RRCConnectionReconfiguration* including *sl-V2X-ConfigDedicated*, or until receiving an *RRCConnectionRelease* or an *RRCConnectionReject;* or

6> if the UE is in RRC_IDLE and a result of sensing on the resources configured in *v2x-CommTxPoolNormalCommon* or *v2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* for the concerned frequency in *Systeminformationblocktype21* is not available in accordance with TS 36.213 [23]:

7> configure lower layers to transmit the sidelink control information and the corresponding data based on random selection (as defined in TS 36.321 [6]) using the pool of resources indicated in *v2x-CommTxPoolExceptional*;

2> else:

3> configure lower layers to transmit the sidelink control information and the corresponding data based on sensing (as defined in TS 36.321 [6] and TS 36.213 [23]) using one of the resource pools indicated by *v2x-CommTxPoolList* in *SL-V2X-Preconfiguration* in case of non-P2X related V2X sidelink communication, which is selected according to 5.10.13.2, or using one of the resource pools indicated by *p2x-CommTxPoolList* in *SL-V2X-Preconfiguration* in case of P2X related V2X sidelink communication, which is selected according to 5.10.13.2, and in accordance with the timing of the selected reference as defined in 5.10.8;

The UE capable of non-P2X related V2X sidelink communication that is configured by upper layers to transmit V2X sidelink communication shall perform sensing on all pools of resources which may be used for transmission of the sidelink control information and the corresponding data. The pools of resources are indicated by *SL-V2X-Preconfiguration*, *v2x-CommTxPoolNormalCommon*, *v2x-CommTxPoolNormalDedicated* in *sl-V2X-ConfigDedicated*, or *v2x-CommTxPoolNormal* in *v2x-InterFreqInfoList* for the concerned frequency, as configured above.

NOTE 1: If there are multiple frequencies for which normal or exceptional pools are configured, it is up to UE implementation which frequency is selected for V2X sidelink communication transmission.

24.2.4.3 Test description

24.2.4.3.1 Pre-test conditions

System Simulator:

SS-NW

- Cell 1

Table 24.2.4.3.1-1: Cell parameters values

Cell	Frequency	PLMN
1	f1	PLMN1
Note 1: The Frequency f1 shall be the anchor frequency pre-configured in the UE/USIM.		

- System information combination 29 as defined in TS 36.508 [18] clause 4.4.3.1 is used in Cell1.
- SystemInformationBlockType21 for Cell 1 using parameters as specified in Table 24.2.4.3.3-2.

SS-UE

- SS-UE1. As defined in TS 36.508 [18], configured for and operating as V2X Sidelink Communication receiving device on the resources which the UE is expected to use for transmission, as defined in TS 36.508 [18] clause 6.2.3.5.

UE:

- Pedestrian UE
- The UE is authorised to perform V2X Sidelink Communication, with ProSe Per-Packet Priority (PPPP) set to 2 (FFS).
- The UE is equipped with below information in UE or in a USIM containing default values (as per TS 36.508 [18]) except for those listed in Table 24.2.4.3.1-1.

Table 24.2.4.3.1-1: UE/ USIM configuration

USIM field	Priority	Value	Access Technology Identifier
EF_{UST}		Service n°119 (V2X) supported	
EF_{VST}		As per TS 36.508 [18] clause 4.9.3.4	
EF_{V2X_CONFIG}		*SL-V2X-Preconfiguration* field as defined in Table 24.2.4.3.3-1	

Preamble:

- The UE is in State Generic Radio Bearer Establishment, UE Test Mode E Activated (State 3A) on Cell 1 according to TS 36.508 [18].

24.2.4.3.2 Test procedure sequence

Table 24.2.4.3.2-1: Main behaviour

24.3 V2X Communication on Uu

24.3.1 V2X Uplink Communication / UE in RRC_Connected on an E-UTRAN cell / Utilisation of the UL SPS resources configured by eNB / Transmission

24.3.1.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRA RRC_CONNECTED state and configured to provide SPS assistance information }
ensure that {
  when { UE prefers a SPS configuration}
    then { the UE sends sps-AssistanceInformation in the message UEAssistanceInformation }
            }
```

(2)

```
with { UE in E-UTRAN RRC CONNECTED state on a cell }
ensure that {
  when { UE receives an RRCConnectionReconfiguration message containing sps-Config-v1430 to setup
SPS configuration}
    then { UE transmits data using the configured SPS resources }
            }
```

(3)

```
with { UE in E-UTRAN RRC CONNECTED state on a cell }
ensure that {
  when { UE receives an RRCConnectionReconfiguration message containing sps-Config-v1430 to release
SPS configuration}
    then { UE stops data transmission using the configured SPS resources }
            }
```

24.3.1.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clause 5.6.10.2 and 5.3.10.5, TS 23.285, clause 4.4.5.2.

[TS 36.331, clause 5.6.10.2]

A UE capable of providing SPS assistance information in RRC_CONNECTED may initiate the procedure in several cases including upon being configured to provide SPS assistance information and upon change of SPS assistance information.

…

Upon initiating the procedure, the UE shall:

…

1> if configured to provide SPS assistance information:

2> if the UE did not transmit a *UEAssistanceInformation* message with *sps-AssistanceInformation* since it was configured to provide SPS assistance information; or

2> if the current SPS assistance information is different from the one indicated in the last transmission of the *UEAssistanceInformation* message:

3> initiate transmission of the *UEAssistanceInformation* message in accordance with 5.6.10.3;

[TS 36.331, clause 5.3.10.5]

The UE shall:

1> reconfigure the semi-persistent scheduling in accordance with the received *sps-Config*;

[TS 23.285, clause 4.4.5.2]

The V2X messages can be delivered via Non-GBR bearer as well as GBR bearer.

The following standardized QCI values defined in TS 23.203 [12] can be used:

- QCI 3 and QCI 79 can be used for the unicast delivery of V2X messages;

24.3.1.3 Test description

24.3.1.3.1 Pre-test conditions

System Simulator:

- Cell 1

UE:

- E-UTRAN UE supporting V2X communication Via Uu.

Preamble:

- The UE is in state Loopback Activated (state 4) according to [18] using UE test loop mode A.
- The condition SRB2-DRB(1,1) is used for step 8 in 4.5.3A.3 according to [18] except for those listed in Table 24.3.1.3.3-4.
- The loop back size is set in such a way that one RLC SDU in DL shall result in 1 RLC SDU's in UL of same size.

24.3.1.3.2 Test procedure sequence

Table 24.3.1.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	Trigger the UE to send *UEAssistanceInformation* message to request UL SPS grant for V2X communication over LTE-Uu from eNB. (Note)			-	-
2	Check: Does the UE send a *UEAssistanceInformation* message within the next 20s?	-->	*UEAssistanceInformation*	1	P
3	The SS transmits an *RRCConnectionReconfiguration* message containing a sps-Config-v1430	<--	*RRCConnectionReconfiguration*	-	-

24.3.2 V2X Downlink Communication / UE in IDLE on an E-UTRAN cell / UE receives the V2X data via MBMS

24.3.2.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRAN RRC IDLE state on a cell broadcasting mcch-RepetitionPeriod-v1430, mcch-ModificationPeriod-v1430 and mch-SchedulingPeriod-v1430 }
ensure that {
```

```
  when { UE is receiving an MBMS service }
    then { UE shall start acquiring the MBSFNAreaConfiguration message that corresponds with the
service that is being received, from the beginning of each modification period }
            }
```

24.3.2.2 Conformance requirements

References: The conformance requirements covered in the present TC are specified in: TS 36.331, clause 5.8.2.2 and 5.8.2.3.

[TS 36.331, clause 5.8.2.2]

A UE interested to receive MBMS services shall apply the MCCH information acquisition procedure upon entering the corresponding MBSFN area (e.g. upon power on, following UE mobility) and upon receiving a notification that the MCCH information has changed. A UE that is receiving an MBMS service shall apply the MCCH information acquisition procedure to acquire the MCCH that corresponds with the service that is being received, at the start of each modification period.

Unless explicitly stated otherwise in the procedural specification, the MCCH information acquisition procedure overwrites any stored MCCH information, i.e. delta configuration is not applicable for MCCH information and the UE discontinues using a field if it is absent in MCCH information unless explicitly specified otherwise.

[TS 36.331, clause 5.5.2.3]

An MBMS capable UE shall:

…

1> if the UE is receiving an MBMS service:

2> start acquiring the *MBSFNAreaConfiguration* message, that corresponds with the service that is being received, from the beginning of each modification period;

24.3.2.3 Test description

24.3.2.3.1 Pre-test conditions

System Simulator:

- Cell 1
- System information combination 15 as defined in TS 36.508[18] clause 4.4.3.1 is used in E-UTRA cells
- MBSFNAreaConfiguration as defined in Table 24.3.2.3.3-3 is transmitted on MCCH

UE:

- E-UTRAN UE supporting V2X communication Via Uu and MBMS services.
- The UE is equipped with below information in UE or in a USIM with V2X management data object in UE or in a USIM (as per TS 36.508 [18]).

Table 24.3.2.3.1-1: UE/ USIM configuration

USIM field	Priority	Value	Access Technology Identifier
EF_{UST}		Service n°119 (V2X) supported	
EF_{VST}		As per TS 36.508 [18] clause 4.9.3.4	
EF_{V2X_CONFIG}		As defined in 36.508 [18], table 4.10.2	

Preamble:

- UE is in Registered, Idle mode, Test Mode Activated (State 2A) according to [18] in Cell 1(serving cell) with the UE TEST LOOP MODE C.

- The UE is made interested in receiving MBMS service in the PLMN of Cell 1 with MBMS Service ID 0.

24.3.2.3.2 Test procedure sequence

Table 24.3.2.3.2-1: Main behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	Wait for a period equal to the MCCH repetition period for the UE to receive *MBSFNAreaConfiguration* message	-	-	-	-
2	The generic procedures described in TS 36.508 subclause 4.5.3A.3 and 4.5.4.3 are performed on Cell 1 closing UE test loop Mode C	-	-	-	-
-	Exception: Step 3 is repeated 5 times	-	-	-	-
3	The SS transmits 2 MBMS Packets on the MTCH in the next MCH Scheduling Period, with MCH Scheduling Information MAC Control Element with LCID='00001', Stop MTCH= '00000000001' in the first MAC PDU of the MCH Scheduling Period. Note: The frames matching the mcch-RepetitionPeriod-r9 shall be avoided to transmit MCCH and MTCH.	-	MBMS Packets.	-	-

24.3.3 V2X Downlink Communication / UE in IDLE on an E-UTRAN cell / UE receives the V2X data via SC-PTM

24.3.3.1 Test Purpose (TP)

(1)

```
with { UE in E-UTRAN RRC IDLE state on a cell broadcasting sc-mcch-RepetitionPeriod-v1470 and sc-mcch-ModificationPeriod-v1470}
ensure that {
  when { UE is receiving an SC-PTM service }
    then { UE shall start acquiring the SCPTMConfiguration message that corresponds with the service that is being received, from the beginning of each modification period }
            }
```

24.3.3.2 Conformance requirements

Same as test case 21.1.4

24.3.3.3 Test description

24.3.3.3.1 Pre-test conditions

System Simulator:

- Cell 1.
- System information combination 25 as defined in TS 36.508[18] clause 4.4.3.1 is used in E-UTRA cell 1.
- SCPTMConfiguration as defined in TS 36.508[18] table 4.6.1-18a is transmitted on SC-MCCH.

UE:

- E-UTRAN UE supporting V2X communication Via Uu and SC-PTM services.
- The UE is equipped with below information in UE or in a USIM with V2X management data object in UE or in a USIM (as per TS 36.508 [18]).

Table 24.3.3.3.1-1: UE/ USIM configuration

USIM field	Priority	Value	Access Technology Identifier
EF_{UST}		Service n°119 (V2X) supported	
EF_{VST}		As per TS 36.508 [18] clause 4.9.3.4	
EF_{V2X_CONFIG}		As defined in 36.508 [18], table 4.10.2	

Preamble:

- UE is in Registered, Idle mode, Test Mode Activated (State 2A) according to [18] in Cell 1(serving cell) with the UE TEST LOOP MODE F.
- The UE is made interested in receiving SC-PTM service in the PLMN of Cell 1 with MBMS Service ID 1.

24.3.3.3.2 Test procedure sequence

Same as test case 21.1.4

NOTE: At step 10, the frames matching the scheduling given by the sc-mcch-ReptetitionPeriod-r13 IE should be avoided to transmit *SCPTMConfiguration* message.

24.3.3.3.3 Specific message contents

2009-05	RAN#44	R5-092539	0244	-	GCF Priority 1 - Update of RLC section	8.1.0	8.2.0
2009-05	RAN#44	R5-092567	0245	-	GCF Priority 2 - Addition of a new test case 6.2.3.5 Inter-RAT Cell Reselection / from E-UTRA RRC_IDLE to UTRA_Idle	8.1.0	8.2.0
2009-05	RAN#44	R5-092569	0246	-	GCF Priority 2: Inter-RAT cell Selection / from E-UTRA RRC_IDLE to UTRA_Idle, serving cell becomes non-suitable (SServingCell<0,barred)	8.1.0	8.2.0
2009-05	RAN#44	R5-092570	0247	-	GCF Priority 2: Inter-RAT cell Selection / from E-UTRA RRC_IDLE to GSM_Idle/GPRS Packet_idle, serving cell becomes non-suitable (SServingCell<0,barred)	8.1.0	8.2.0
2009-05	RAN#44	R5-092571	0248	-	GCF Priority 1 - New E-UTRA MAC test case - 7.1.7.1.1 DL-SCH Transport Block Size support / DCI format 1 / RA type 0	8.1.0	8.2.0
2009-05	RAN#44	R5-092575	0249	-	GCF Priority 1 - New E-UTRA MAC test case 7.1.7.1.2 - DL-SCH Transport Block Size selection / DCI format 1 / RA type 1	8.1.0	8.2.0
2009-05	RAN#44	R5-092577	0250	-	GCF Priority 1 - New E-UTRA MAC test case 7.1.7.2.1 - UL-SCH Transport Block Size selection / DCI format 0	8.1.0	8.2.0
2009-05	RAN#44	R5-092578	0251	-	GCF priority 2: New MAC test case: 7.1.6.1 DRX Operation / (short cycle not configured) /Parameters configured by RRC (radio resource configuration)	8.1.0	8.2.0
2009-05	RAN#44	R5-092579	0252	-	GCF Priority 2 - New RRC part1 TC 8.1.3.8 RRC Connection Release: redirection from E-UTRAN to GERAN	8.1.0	8.2.0
2009-05	RAN#44	R5-092580	0253	-	GCF Priority 2 - Update of test case 8.2.1.3	8.1.0	8.2.0
2009-05	RAN#44	R5-092583	0254	-	GCF Priority 2: Attach Procedure / Success (last visited TAI, TAI list and equivalent PLMN list handling) 9.2.1.1.1a	8.1.0	8.2.0
2009-05	RAN#44	R5-092584	0255	-	GCF Priority 1 - Update of test case 8.2.1.1	8.1.0	8.2.0
2009-05	RAN#44	R5-092589	0256	-	GCF Priority 2 - Addition of new EMM test case 9.3.1.7a	8.1.0	8.2.0
2009-05	RAN#44	R5-092593	0257	-	GCF priority 2 - Update of 9.2.1.1.15 Attach / rejected / roaming not allowed in this tracking area	8.1.0	8.2.0
2009-05	RAN#44	R5-092595	0258	-	GCF Priority 1:Corrections to MAC test case 7.1.1.1	8.1.0	8.2.0
2009-05	RAN#44	R5-092596	0259	-	GCF Priority 1:Corrections to MAC test case 7.1.4.12	8.1.0	8.2.0
2009-05	RAN#44	R5-092597	0260	-	GCF Priority 1 - Update to test case 8.2.4.1	8.1.0	8.2.0
2009-05	RAN#44	R5-092700	0261	-	GCF Priority 2 - Addition of new test case 8.3.2.1	8.1.0	8.2.0
2009-05	RAN#44	R5-092701	0262	-	GCF Priority-1: Correction to 9.2.3.1.1 'Normal tracking area update / accepted'	8.1.0	8.2.0
2009-05	RAN#44	R5-092702	0263	-	GCF Priority-1: Correction to 9.2.3.1.5'Periodic tracking area update / accepted'	8.1.0	8.2.0
2009-05	RAN#44	R5-092703	0264	-	GCF Priority 2 - Addition of E-UTRAN test case 6.1.2.7 for Cell reselection: Equivalent PLMN	8.1.0	8.2.0
2009-05	RAN#44	R5-092706	0265	-	GCF Priority 1 - Update to RRC test cases	8.1.0	8.2.0

2010-03	RAN#47	R5-101110	0713	-	GCF priority 2 - Correction of test case 9.2.1.2.4 for Successful combined attach procedure, EPS service only / CS domain not available	8.4.0	8.5.0
2010-03	RAN#47	R5-101113	0714	-	GCF Priority 1 - Correction to E-UTRA PDCP test case 7.3.4.1 and 7.3.4.2	8.4.0	8.5.0
2010-03	RAN#47	R5-101114	0715	-	GCF Priority 1 - Enhancement test case 8.1.2.1	8.4.0	8.5.0
2010-03	RAN#47	R5-101117	0716	-	GCF Priority 1 - Correction to EMM test cases to bring the UE to stable state at the end of expected sequence	8.4.0	8.5.0
2010-03	RAN#47	R5-101118	0717	-	GCF Priority 1 - Update of Multi-layer Procedures part TC 13.1.1 Activation and deactivation of additional data radio bearer in E-UTRA	8.4.0	8.5.0
2010-03	RAN#47	R5-101119	0718	-	GCF Priority 1 - Update of Multi-layer Procedures part TC 13.2.1 RRC Connection Reconfiguration: E-UTRA to E-UTRA	8.4.0	8.5.0
2010-03	RAN#47	R5-101120	0719	-	GCF Priority 2: Update of MAC TC 7.1.3.2	8.4.0	8.5.0
2010-03	RAN#47	R5-101121	0720	-	GCF Priority 1 - Correction to EPC test case 9.2.1.1.1	8.4.0	8.5.0
2010-03	RAN#47	R5-101122	0721	-	Priority 2 - section 9 alignment IP handling at wrong place - Missing security activation - Editorial changes	8.4.0	8.5.0
2010-03	RAN#47	R5-101125	0722	-	GCF Priority 1 - Correction to E-UTRAN RLC test case 7.2.3.15	8.4.0	8.5.0
2010-03	RAN#47	R5-101126	0723	-	GCF Priority 1 - Correction to E-UTRAN RLC test case 7.2.3.9	8.4.0	8.5.0
2010-03	RAN#47	R5-101130	0724	-	GCF Priority 1 - Correction of RRC test case 8.3.3.1	8.4.0	8.5.0
2010-03	RAN#47	R5-101131	0725	1	GCF Priority 1 - Correction to MAC test cases to bring the UE to stable state at the end of expected sequence	8.4.0	8.5.0
2010-03	RAN#47	R5-101132	0726	-	GCF Priority 1 - Correction to RRC test cases to bring the UE to stable state at the end of expected sequence	8.4.0	8.5.0
2010-03	RAN#47	R5-101133	0727	-	GCF Priority 2 - Update to test case 10.7.1	8.4.0	8.5.0
2010-03	RAN#47	R5-101134	0728	-	GCF Priority 2 - Update to test case 10.7.2	8.4.0	8.5.0
2010-03	RAN#47	R5-101135	0729	-	GCF Priority 2 - Update to test case 10.8.1	8.4.0	8.5.0
2010-03	RAN#47	R5-101141	0730	-	GCF Priority 4 - Addition of new RRC test case 8.4.7.1	8.4.0	8.5.0
2010-03	RAN#47	R5-101142	0731	-	GCF Priority 4 - Addition of new RRC test case 8.3.2.10	8.4.0	8.5.0
2010-03	RAN#47	R5-101145	0732	-	General note for test cases with statistical behaviour	8.4.0	8.5.0
2010-03	RAN#47	R5-101148	0733	-	GCF Priority 3 - Update to test case 10.7.3	8.4.0	8.5.0
2010-03	RAN#47	R5-101149	0734	-	GCF Priority 3 - Update to test case 10.7.4	8.4.0	8.5.0
2010-03	RAN#47	R5-101151	0735	-	GCF Priority 3 - Update to test case 10.8.2	8.4.0	8.5.0
2010-03	RAN#47	R5-101152	0736	-	GCF Priority 3 - Update to test case 10.8.3	8.4.0	8.5.0
2010-03	RAN#47	R5-101154	0737	-	GCF Priority 3 - Update to test case 10.8.5	8.4.0	8.5.0
2010-03	RAN#47	R5-101155	0738	-	GCF Priority 3 - Update to test case 10.8.6	8.4.0	8.5.0
2010-03	RAN#47	R5-101156	0739	-	GCF Priority 3 - Update to test case 10.8.7	8.4.0	8.5.0
2010-03	RAN#47	R5-101158	0740	-	GCF Priority 3: New PUSCH-Hopping test case 7.1.5.2:Predefined intra-TTI PUSCH hopping (N_sb=1)	8.4.0	8.5.0
2010-03	RAN#47	R5-101160	0741	-	GCF Priority 3: New PUSCH-Hopping test case 7.1.5.4: Predefined inter-TTI PUSCH hopping (N_sb=1)	8.4.0	8.5.0
2010-03	RAN#47	R5-101162	0742	1	GCF priority 3 - New test case 8.1.1.6 RRC / BCCH modification in connected mode	8.4.0	8.5.0
2010-03	RAN#47	R5-101163	0743	-	GCF Priority 3 - New TC 8.5.2.1 RRC Connection Reject: redirection from UTRAN to E-UTRAN	8.4.0	8.5.0
2010-03	RAN#47	R5-101164	0744	-	GCF Priority 3 - addition of new EMM test case 9.2.1.2.14	8.4.0	8.5.0
2010-03	RAN#47	R5-101165	0745	-	Update of test case 9.3.1.15	8.4.0	8.5.0
2010-03	RAN#47	R5-101166	0746	-	Update of test case 9.2.1.1.18	8.4.0	8.5.0
2010-03	RAN#47	R5-101167	0747	-	GCF Priority 3: Update to test case 9.2.3.1.6	8.4.0	8.5.0
2010-03	RAN#47	R5-101168	0748	-	GCF priority 3 - Correction of test case 10.5.3 for UE requested PDN connectivity procedure not accepted	8.4.0	8.5.0
2010-03	RAN#47	R5-101169	0749	-	GCF Priority 3 - Addition of new multi-layer test case 13.1.3	8.4.0	8.5.0
2010-03	RAN#47	R5-101170	0750	-	GCF Priority 3 - Addition of new test case 13.4.1.2	8.4.0	8.5.0
2010-03	RAN#47	R5-101171	0751	-	GCF Priority 3 - Update of Multi-layer Procedures part TC 13.3.1.1 Intra System Connection Reestablishment / Radio Link Recovery while T310 is running	8.4.0	8.5.0
2010-03	RAN#47	R5-101172	0752	-	GCF Priority 3 - update of test case 13.3.1.2	8.4.0	8.5.0
2010-03	RAN#47	R5-101173	0753	-	GCF Priority 2 : Correction to MAC test case 7.1.6.1	8.4.0	8.5.0
2010-03	RAN#47	R5-101174	0754	-	GCF Priority 2 : Correction to MAC test cases 7.1.6.2	8.4.0	8.5.0

Date	TSG #	TSG Doc.	CR	Rev	Subject/Comment	Version Old	Version New
2010-03	RAN#47	R5-101175	0755	2	GCF Priority 1 - Correction to E-UTRAN RLC test case 7.2.3.10	8.4.0	8.5.0
2010-03	RAN#47	R5-101177	0756	-	Update to GCF Priority 1 layer 2 UM test cases to increase the drx-Inactivity Timer to psf200	8.4.0	8.5.0
2010-03	RAN#47	R5-101179	0757	-	GCF Priority 1 - Enhancement and update to MAC test case 7.1.4.6	8.4.0	8.5.0
2010-03	RAN#47	R5-101183	0758	-	GCF Priority 1: Update of MAC TC 7.1.3.6	8.4.0	8.5.0
2010-03	RAN#47	R5-101186	0759	-	Update of test case and section titles	8.4.0	8.5.0
2010-03	RAN#47	R5-101189	0760	-	GCF Priority 2 - Update to test case 8.1.2.7	8.4.0	8.5.0
2010-03	RAN#47	R5-101190	0761	-	GCF Priority 2 - Update to test case 8.1.2.5	8.4.0	8.5.0
2010-03	RAN#47	R5-101191	0762	-	Corrections related to UE mode of operation and UE capability for CS fallback and SMS over SGs	8.4.0	8.5.0
2010-03	RAN#47	R5-101192	0763	-	GCF priority 3 - Correction of test case 10.6.2 for UE requested PDN disconnect procedure not accepted by the network	8.4.0	8.5.0
2010-03	GERAN#45	GP-100543	0605	-	Addition of new Test Case 6.2.3.22	8.4.0	8.5.0
2010-03	RAN#47	-	-	-	Moved to v9.0.0 with no change	8.5.0	9.0.0
2010-05	GERAN#46	GP-100625	0764	-	New Test case 6.2.3.28- Inter-RAT Cell Reselection from GPRS Packet_transfer to E-UTRA Cell (Network Assisted Cell Change)	9.0.0	9.1.0
2010-05	GERAN#46	GP-100626	0765	-	New Test Case 6.2.3.30 - Inter-RAT Cell Reselection failure from GPRS Packet transfer to E-UTRA (Network Assisted Cell Change)	9.0.0	9.1.0
2010-05	GERAN#46	GP-100649	0766	-	New Test Case 6.2.2.6 - Inter-RAT Cell selection / From GSM_Idle/GPRS Packet_idle to E-UTRA_RRC_IDLE / Serving cell becomes non-suitable (ServingCell<0)	9.0.0	9.1.0
2010-05	GERAN#46	GP-100650	0767	-	New Test Case 6.2.2.7 - Inter-RAT Cell selection / From GSM_Idle/GPRS Packet_idle to E-UTRA_RRC_IDLE ,when the serving cell is barred.	9.0.0	9.1.0
2010-06	RAN#48	R5-103077	0768	-	GCF Priority 2 - Correction of Minimum Cell Configuration	9.0.0	9.1.0
2010-06	RAN#48	R5-103086	0769	-	GCF Priority 3: New TC 9.3.1.5 Service request / Rejected / Illegal ME	9.0.0	9.1.0
2010-06	RAN#48	R5-103087	0770	-	GCF Priority 1 - Correction to E-UTRAN MAC test case 7.1.2.3	9.0.0	9.1.0
2010-06	RAN#48	R5-103088	0771	-	GCF Priority 1 - Correction to MAC test case 7.1.4.10	9.0.0	9.1.0
2010-06	RAN#48	R5-103089	0772	-	GCF Priority 3 - Update of TC 9.1.5.1 EMM Information Procedure	9.0.0	9.1.0
2010-06	RAN#48	R5-103090	0773	-	GCF Priority 2 - Correction to TC 9.1.2.4 Authentication not accepted by the UE / MAC code failure	9.0.0	9.1.0
2010-06	RAN#48	R5-103091	0774	-	GCF Priority 2 - Correction to TC 9.1.2.5 Authentication not accepted by the UE / SQN failure	9.0.0	9.1.0
2010-06	RAN#48	R5-103093	0775	-	GCF Priority 2 - Correction of SIB in RRC TCs 8.4.2.2 and 8.4.2.4	9.0.0	9.1.0
2010-06	RAN#48	R5-103130	0776	-	GCF Priority 2 - Update to test case 6.1.2.6	9.0.0	9.1.0
2010-06	RAN#48	R5-103131	0777	-	GCF Priority 1 - Correction to PDSCH power allocation of MAC TBS selection TCs	9.0.0	9.1.0
2010-06	RAN#48	R5-103132	0778	-	GCF Priority 3 - Correction of test case 6.2.3.13	9.0.0	9.1.0
2010-06	RAN#48	R5-103135	0779	-	GCF Priority 4 - Addition of new test case 8.3.2.2	9.0.0	9.1.0
2010-06	RAN#48	R5-103136	0780	-	GCF Priority 4 - Update test case 8.3.2.4	9.0.0	9.1.0
2010-06	RAN#48	R5-103137	0781	-	GCF Priority 4 - Addition of new test case 8.3.2.5	9.0.0	9.1.0
2010-06	RAN#48	R5-103139	0782	-	GCF Priority 3 - Correction for test case 13.4.1.2	9.0.0	9.1.0
2010-06	RAN#48	R5-103140	0783	-	GCF Priority 3 - Addition of new test case 13.4.2.1	9.0.0	9.1.0
2010-06	RAN#48	R5-103141	0784	-	GCF Priority 2 - Update test case 6.1.2.11 & 6.1.2.15	9.0.0	9.1.0
2010-06	RAN#48	R5-103144	0785	-	GCF Priority 4 Addition of new test case 14.1	9.0.0	9.1.0
2010-06	RAN#48	R5-103145	0786	-	GCF Priority 4 Addition of new test case 14.2	9.0.0	9.1.0
2010-06	RAN#48	R5-103157	0787	-	GCF Priority 4: New MAC TBS test case 7.1.7.1.6:DCI format 2A / RA type 1	9.0.0	9.1.0
2010-06	RAN#48	R5-103158	0788	-	GCF Priority 4: New MAC TBS test case 7.1.7.1.5:DCI format 2A / RA type 0	9.0.0	9.1.0
2010-06	RAN#48	R5-103159	0789	-	GCF Priority 4: Correction to E-UTRA DRB test case 12.3.1	9.0.0	9.1.0
2010-06	RAN#48	R5-103160	0790	-	GCF Priority 4: Correction to E-UTRA DRB test case 12.3.2	9.0.0	9.1.0
2010-06	RAN#48	R5-103161	0791	-	GCF Priority 4: Correction to E-UTRA DRB test case 12.3.3	9.0.0	9.1.0
2010-06	RAN#48	R5-103162	0792	-	GCF Priority 4: Correction to E-UTRA DRB test case 12.3.4	9.0.0	9.1.0
2010-06	RAN#48	R5-103163	0793	-	GCF Priority 4: Correction to generic test procedure 12.1.2 for E-UTRA DRB MIMO test cases	9.0.0	9.1.0
2010-06	RAN#48	R5-103228	0794	-	GCF Priority 4: New PUSCH-Hopping test case	9.0.0	9.1.0

Date	TSG #	TSG Doc.	CR	Rev	Subject/Comment	Version Old	Version New
					7.1.5.1: Inter-TTI PUSCH hopping by uplink grant		
2010-06	RAN#48	R5-103230	0795	-	GCF Priority 4: New PUSCH-Hopping test case 7.1.5.3: Predefined intra-TTI PUSCH hopping (N_sb=2/3/4)	9.0.0	9.1.0
2010-06	RAN#48	R5-103231	0796	-	GCF Priority 4: New PUSCH-Hopping test case 7.1.5.5: Predefined inter-TTI PUSCH hopping (N_sb=2/3/4)	9.0.0	9.1.0

2012-03	RAN#55	R5-120676	1684	-	GCF Priority X - Addition of new test case 6.2.3.x	9.7.0	9.8.0
2012-03	RAN#55	R5-120695	1685	-	Update of test case 11.2.4	9.7.0	9.8.0
2012-03	RAN#55	R5-120696	1686	-	Update of test case 11.2.5	9.7.0	9.8.0
2012-03	RAN#55	R5-120697	1687	-	GCF Priority X - Update of TC 11.2.8 to include IMS procedures	9.7.0	9.8.0
2012-03	RAN#55	R5-120698	1688	-	Update test case 11.2.2	9.7.0	9.8.0
2012-03	RAN#55	R5-120699	1689	-	GCF Priority x - Update test case 8.1.2.11	9.7.0	9.8.0
2012-03	RAN#55	R5-120700	1690	-	GCF Priority x - Update test case 8.1.2.12	9.7.0	9.8.0
2012-03	RAN#55	R5-120701	1691	-	GCF Priority x : Update of titles of test cases 8.3.1.9a and 8.3.1.11a	9.7.0	9.8.0
2012-03	RAN#55	R5-120703	1693	-	Addition of new test 11.2.10	9.7.0	9.8.0
2012-03	RAN#55	R5-120705	1694	-	GCF Priority X - Addition of new test case 8.3.2.3a	9.7.0	9.8.0
2012-03	RAN#55	R5-120707	1695	-	GCF Priority 4 (and higher) - Editorial corrections to various EMM test cases	9.7.0	9.8.0
2012-03	RAN#55	R5-120708	1696	-	Addition of new Rel-9 test case 13.4.4.1	9.7.0	9.8.0
2012-03	RAN#55	R5-120709	1697	-	Addition of new Rel-9 test case 13.4.4.2	9.7.0	9.8.0
2012-03	RAN#55	R5-120710	1698	-	GCF Priority X - update of E-UTRA Multi-Layer test case 13.1.2a	9.7.0	9.8.0
2012-03	RAN#55	R5-120711	1699	-	Modification of TC 8.4.7.1: Inter-RAT handover / SRVCC from E-UTRA to 1xRTT(CS) / Speech	9.7.0	9.8.0
2012-03	RAN#55	R5-120712	1700	-	Addition for new 13.4.4.3 LTE-CDMA2000-HRPD interworking test case	9.7.0	9.8.0
2012-03	RAN#55	R5-120713	1701	-	Addition for new 13.4.4.4 LTE-CDMA2000-HRPD interworking test case	9.7.0	9.8.0
2012-03	RAN#55	R5-120714	1702	-	8.3.1.12a Measurement configuration control and reporting / Intra E-UTRAN measurements / Two simultaneous events A3 (inter-band measurements) / Between FDD and TDD	9.7.0	9.8.0
2012-03	RAN#55	R5-120715	1703	-	8.3.1.13a Measurement configuration control and reporting / Intra E-UTRAN measurements / Periodic reporting (intra-frequency and inter-band measurements) / Between FDD and TDD	9.7.0	9.8.0
2012-03	RAN#55	R5-120741	1716	-	GCF Priority X - Addition of new test case 8.6.4.y	9.7.0	9.8.0
2012-03	RAN#55	R5-120742	1717	-	GCF Priority X - Addition of new test case 8.6.4.z	9.7.0	9.8.0
2012-03	RAN#55	R5-120743	1718	-	GCF Priority X - Addition of new test case 8.6.x.y	9.7.0	9.8.0
2012-03	RAN#55	R5-120744	1719	-	GCF Priority X - Addition of new test case 8.6.x.z	9.7.0	9.8.0
2012-03	RAN#55	R5-120751	1720	-	Addition of new Rel-9 test case 18.1.1	9.7.0	9.8.0
2012-03	RAN#55	R5-120757	1721	-	GCF Priority 2 : Introduction of new equivalent , 6.1.2.x test cases to cater for bands with single frequency operation	9.7.0	9.8.0
2012-03	RAN#55	R5-120758	1722	-	GCF Priority 2 : Introduction of new equivalent 6.1.1.x test cases to cater for bands with single frequency operation	9.7.0	9.8.0

Date	TSG #	TSG Doc.	CR	Rev	Subject/Comment	Version Old	Version New
2012-03	RAN#55	R5-120760	1723	-	GCF Priority U1 - Correction to EUTRA RRC test case 8.1.3.7	9.7.0	9.8.0
2012-03	RAN#55	R5-120764	1724	-	GCF Priority U1 - Correction to EUTRA RRC test cases 8.4.1.2 and 8.4.1.4	9.7.0	9.8.0
2012-03	RAN#55	R5-120765	1725	-	GCF Priority 2 - Correction to EMM test case 9.2.3.2.1	9.7.0	9.8.0
2012-03	RAN#55	R5-120766	1726	-	GCF Priority u1 - Update to test case 9.2.3.3.2	9.7.0	9.8.0
2012-03	RAN#55	R5-120767	1727	-	GCF Priority u1 - Update to test case 9.2.3.3.3	9.7.0	9.8.0
2012-03	RAN#55	R5-120768	1728	-	GCF Priority u1 - Update to test case 9.2.3.3.5	9.7.0	9.8.0
2012-03	RAN#55	R5-120769	1729	-	GCF Priority X - Update of test cases 6.2.2.3, 6.2.3.7, 6.2.3.7a, 6.2.3.8, 6.2.3.8a, 6.2.3.9, 6.2.3.9a, 6.2.3.10, 6.2.3.10a	9.7.0	9.8.0
2012-03	RAN#55	R5-120771	1731	-	GCF Priority 3 - Correction to Idle Mode test case 6.1.2.13	9.7.0	9.8.0
2012-03	RAN#55	R5-120776	1732	-	GCF Priority UX – Correction to EUTRA to UTRA Handover testcases	9.7.0	9.8.0
2012-03	RAN#55	R5-120631	1645	-	Addition of new MDT test case for 'Logged MDT / Intra-frequency measurement, logging and reporting / E-UTRA handover'	9.8.0	10.0.0
2012-03	RAN#55	R5-120724	1704	-	Addition of a new TC 17.3.1 for MBMS Counting / UE not receiving MBMS service	9.8.0	10.0.0
2012-03	RAN#55	R5-120727	1705	-	CA / RRC connection reconfiguration / Carrier Aggregation / SCell addition/ modification/release / Success	9.8.0	10.0.0
2012-03	RAN#55	R5-120728	1706	-	CA / RRC connection reconfiguration / Carrier Aggregation / SCell SI change / Success	9.8.0	10.0.0
2012-03	RAN#55	R5-120729	1707	-	CA / RRC connection reconfiguration / SCell addition without UL	9.8.0	10.0.0
2012-03	RAN#55	R5-120730	1708	-	CA / RRC connection reconfiguration / Handover / Success / SCell addition	9.8.0	10.0.0
2012-03	RAN#55	R5-120731	1709	-	CA / RRC connection reconfiguration / Handover / Success / SCell becomes PCell	9.8.0	10.0.0
2012-03	RAN#55	R5-120732	1710	-	CA / Measurement configuration control and reporting / Intra E-UTRAN measurements / Event A6	9.8.0	10.0.0
2012-03	RAN#55	R5-120733	1711	-	CA / Measurement configuration control and reporting / Intra E-UTRAN measurements / Additional measurement reporting	9.8.0	10.0.0
2012-03	RAN#55	R5-120734	1712	-	Addition of new Rel-10 test case 7.1.3.11 CA / Correct HARQ process handling / DCCH and DTCH / Pcell and Scell	9.8.0	10.0.0
2012-03	RAN#55	R5-120738	1713	-	Addition of new MDT test case for 'Logged MDT / Intra-frequency measurement, logging and reporting / Limiting area scope'	9.8.0	10.0.0
2012-03	RAN#55	R5-120739	1714	-	New Logged MDT test case 8.6.2.1 (Intra-frequency measurement, logging and reporting)	9.8.0	10.0.0
2012-03	RAN#55	R5-120740	1715	-	New Logged MDT test case 8.6.2.2 (Inter-frequency measurement, logging and reporting)	9.8.0	10.0.0
2012-03	RAN#55	R5-120770	1730	-	Addition of a new Rel-10 test case 17.3.2	9.8.0	10.0.0
2012-06	RAN#55	R5-120638	1650	-	GCF Priority 4 - Update to test case 14.1 and 14.2 (addition in Table 14.2.3.2-1 of forgotten Step 5 alert check and Note)	10.0.0	10.1.0
2012-06	RAN#56	R5-121080	1738	-	GCF Priority m1: Optimisation of frequency allocation	10.0.0	10.1.0

2013-06	RAN#60	R5-131376	2260	-	Update test case 13.4.3.13	11.2.0	11.3.0
2013-06	RAN#60	R5-131377	2261	-	Update test case 13.4.3.14	11.2.0	11.3.0
2013-06	RAN#60	R5-131378	2262	-	Update test case 13.4.3.16	11.2.0	11.3.0
2013-06	RAN#60	R5-131441	2263	-	Correction to test case 8.3.1.26	11.2.0	11.3.0
2013-06	RAN#60	R5-131470	2264	-	Update IMS emergency call pre-test condition	11.2.0	11.3.0
2013-06	RAN#60	R5-131480	2265	-	Adding a new TC 9.2.3.1.5a for NIMTC conformance testing	11.2.0	11.3.0
2013-06	RAN#60	R5-131485	2266	-	Splitting TC 11.2.8 in two TCs one for UTRA/GERAN and one for 1xRTT	11.2.0	11.3.0
2013-06	RAN#60	R5-131496	2367	-	Correction to generic MO CSFB procedures	11.2.0	11.3.0
2013-06	RAN#60	R5-131504	2267	-	Editorial update of test case 13.1.5	11.2.0	11.3.0
2013-06	RAN#60	R5-131557	2268	-	Update of 8.4.7.10 - Addition of C2K checking parameters	11.2.0	11.3.0
2013-06	RAN#60	R5-131626	2269	-	Addition of new test case for PLMN change in eMDT	11.2.0	11.3.0
2013-06	RAN#60	R5-131633	2270	-	Addition of new test case for EventB2 reporting in eMDT	11.2.0	11.3.0
2013-06	RAN#60	R5-131635	2271	-	Addition of new test case for RACH reporting in eMDT	11.2.0	11.3.0
2013-06	RAN#60	R5-131675	2272	-	Correction to EMM Test Case 9.2.3.1.19	11.2.0	11.3.0
2013-06	RAN#60	R5-131693	2273	-	GCF Priority 2 / 3 - Editorial corrections to EMM test cases 9.2.1.1.1a and 9.2.3.1.17	11.2.0	11.3.0
2013-06	RAN#60	R5-131708	2274	-	GCF Priority 2 - Corrections to SMS over SGs test cases	11.2.0	11.3.0
2013-06	RAN#60	R5-131713	2275	-	Editorial correction to TC 9.2.1.1.1	11.2.0	11.3.0
2013-06	RAN#60	R5-131733	2276	-	Correction to LTE-A test case 8.2.2.5.1/8.2.2.5.2	11.2.0	11.3.0
2013-06	RAN#60	R5-131810	2277	-	CSG reselection requirements correction in TC 6.3.1	11.2.0	11.3.0
2013-06	RAN#60	R5-131811	2278	-	CSG reselection requirements correction in TC 6.3.3	11.2.0	11.3.0
2013-06	RAN#60	R5-131812	2279	-	CSG reselection requirements correction in TC 6.3.4	11.2.0	11.3.0
2013-06	RAN#60	R5-131813	2280	-	CSG reselection requirements correction in TC 6.3.7	11.2.0	11.3.0
2013-06	RAN#60	R5-131814	2281	-	CSG reselection requirements correction in TC 6.3.8	11.2.0	11.3.0
2013-06	RAN#60	R5-131815	2282	-	Correction to EUTRA Idle mode Test case 6.1.2.13	11.2.0	11.3.0
2013-06	RAN#60	R5-131816	2283	-	Correction to EUTRA Idle mode test case 6.2.3.1a	11.2.0	11.3.0
2013-06	RAN#60	R5-131817	2284	-	Correction to MAC test case 7.1.1.2	11.2.0	11.3.0
2013-06	RAN#60	R5-131818	2285	-	Update of test case 8.5.4.1	11.2.0	11.3.0
2013-06	RAN#60	R5-131819	2286	-	Correction to EUTRA-1xRTT test case 8.3.2.10	11.2.0	11.3.0
2013-06	RAN#60	R5-131820	2287	-	Correction to EUTRA-HRPD test case 8.3.2.8	11.2.0	11.3.0
2013-06	RAN#60	R5-131821	2288	-	New TC 8.3.4.5 Inter-frequency E-UTRAN FDD - FDD / CSG Proximity Indication	11.2.0	11.3.0

Date	TSG #	TSG Doc.	CR	Rev	Subject/Comment	Version Old	Version New
2013-06	RAN#60	R5-131822	2289	-	Addition of new test case 8.3.1.23	11.2.0	11.3.0
2013-06	RAN#60	R5-131823	2290	-	Addition of new test case 8.3.1.27	11.2.0	11.3.0
2013-06	RAN#60	R5-131824	2291	-	GCF Priority 1 - Correction to EUTRA RRC Test Case 8.3.2.2.	11.2.0	11.3.0
2013-06	RAN#60	R5-131825	2292	-	GCF Priority x - Correction to EUTRA test case 8.3.1.13	11.2.0	11.3.0
2013-06	RAN#60	R5-131826	2293	-	Editorial Remove square bracket in TC 8.4.3.2	11.2.0	11.3.0
2013-06	RAN#60	R5-131827	2294	-	Update to test case 9.2.1.2.3 and 9.2.3.2.3	11.2.0	11.3.0
2013-06	RAN#60	R5-131828	2295	-	GCF Priority 3 - Corrections to EMM TC 9.2.1.1.12, 9.2.3.1.12, 9.2.3.1.18	11.2.0	11.3.0
2013-06	RAN#60	R5-131829	2296	-	Correction to EMM test case 9.2.3.2.1a	11.2.0	11.3.0
2013-06	RAN#60	R5-131830	2297	-	Correction to EMM test case 9.2.3.3.2	11.2.0	11.3.0
2013-06	RAN#60	R5-131831	2298	-	GCF Priority 2 - Correction to EUTRA EMM Test Case 9.2.3.2.3	11.2.0	11.3.0
2013-06	RAN#60	R5-131832	2299	-	GCF Priority 2: Extending the scope of TC 9.1.4.2 to verify IMEISV	11.2.0	11.3.0
2013-06	RAN#60	R5-131833	2300	-	GCF G2: Corrections to EMM test case 9.2.3.4.1	11.2.0	11.3.0
2013-06	RAN#60	R5-131834	2301	-	GCF Priority U1: Correction to EMM test case 9.2.3.3.4	11.2.0	11.3.0
2013-06	RAN#60	R5-131835	2302	-	9.2.3.1.8 'Load Balancing TAU' does not test the main requirement	11.2.0	11.3.0
2013-06	RAN#60	R5-131836	2303	-	Correction to EMM test case 9.1.3.3	11.2.0	11.3.0
2013-06	RAN#60	R5-131837	2304	-	Update to test case 11.2.6	11.2.0	11.3.0
2013-06	RAN#60	R5-131838	2305	-	Update test case 11.2.11	11.2.0	11.3.0
2013-06	RAN#60	R5-131839	2306	-	Update of test case 8.3.3.5	11.2.0	11.3.0
2013-06	RAN#60	R5-131840	2307	-	Correction to EUTRA Multi-layer Test Case 13.3.1.3	11.2.0	11.3.0

2016-03	RAN#71	R5-160759	3265	1	Correction to MBMS test case 17.4.3	12.8.0	12.9.0
2016-03	RAN#71	R5-160769	3312	1	Adding new test 19.1.1 for ProSe Direct Communication Transmission RRC_IDLE using resources on serving cells, with pre-configured authorisation	12.8.0	12.9.0
2016-03	RAN#71	R5-160770	3313	1	Adding new test 19.1.2 for ProSe Direct Communication Reception RRC_IDLE using the resources of the serving cell, with Pre-configured authorisation	12.8.0	12.9.0
2016-03	RAN#71	R5-160771	3334	1	Adding a new TC ProSe Direct Communication Pre-configured authorisation UE is not served by E-UTRAN selection and re/selection of SyncRef UE	12.8.0	12.9.0
2016-03	RAN#71	R5-160772	3335	1	Adding a new TC ProSe Direct Communication Pre-configured authorisation UE is communicating not on the serving cell	12.8.0	12.9.0
2016-03	RAN#71	R5-160773	3336	1	Adding a new TC ProSe Direct Communication Reception RRC_CONNECTED Pre-configured authorisation	12.8.0	12.9.0
2016-03	RAN#71	R5-160774	3337	1	Adding a new TC ProSe Direct Communication Transmission RRC_CONNECTED Pre-configured authorisation	12.8.0	12.9.0
2016-03	RAN#71	R5-160775	3338	1	Adding a new TC ProSe Direct Discovery Announcing RRC_CONNECTED Pre-configured authorisation	12.8.0	12.9.0
2016-03	RAN#71	R5-160776	3339	1	Adding a new TC ProSe Direct Discovery Announcing Pre-configured authorisation RRC_IDLE	12.8.0	12.9.0
2016-03	RAN#71	R5-160777	3340	1	Adding a new TC ProSe Direct Discovery Monitoring Pre-configured authorisation	12.8.0	12.9.0
2016-03	RAN#71	R5-160778	3341	1	Removal of RRC ProSe TCs	12.8.0	12.9.0
2016-03	RAN#71	R5-160783	3314	1	New UEPCOP test case 9.2.3.1.1a Normal tracking area update / Accepted / PSM	12.8.0	12.9.0

Date	TSG #	TSG Doc.	CR	Rev	Subject/Comment	Version Old	Version New
2016-03	RAN#71	R5-160785	3315	1	New UEPCOP test case 9.2.3.1.5b Periodic tracking area update / Accepted / PSM / T3412 Extended Value	12.8.0	12.9.0
2016-03	RAN#71	R5-160786	3266	1	Addition of new SCE-L1 TC 7.1.7.1.11 DL-SCH transport block size selection / DCI format 2A / RA type 0 / Two transport blocks enabled / Transport block to codeword swap flag value set to '0' / 256QAM	12.8.0	12.9.0
2016-03	RAN#71	R5-160787	3267	1	Addition of new SCE-L1 TC 7.1.7.1.12 DL-SCH Transport Block Size selection / DCI format 2A / RA type 1 / Two transport blocks enabled / Transport block to codeword swap flag value set to '1' / 256QAM	12.8.0	12.9.0
2016-03	RAN#71	R5-160788	3273	1	Corrections to SCE-L1 test case 7.1.7.1.9	12.8.0	12.9.0
2016-03	RAN#71	R5-160920	3295	1	Update of SSAC test case 13.5.1a and removal of test case 13.5.1b	12.8.0	12.9.0
2016-03	RAN#71	R5-160921	3296	1	Update of SSAC test case 13.5.2a and removal of test case 13.5.2b	12.8.0	12.9.0
2016-03	RAN#71	R5-160922	3289	2	Extension of EMM test cases 9.1.2.3 and 9.1.2.4 for Multi-PDN configuration	12.8.0	12.9.0
2016-03	RAN#71	R5-160924	3279	1	Correction to GCF WI-081 EUTRA MAC test case 7.1.4.7a	12.8.0	12.9.0
2016-03	RAN#71	R5-160926	3301	1	Correction to LTE IRAT CSG Test Case 6.3.4	12.8.0	12.9.0
2016-03	RAN#71	R5-160932	3288	1	Update of WLAN interworking test case 6.5.4	12.8.0	12.9.0
2016-03	RAN#71	R5-160933	3318	1	Merge of WLAN offload Idle mode test cases 6.5.1 in 6.5.6	12.8.0	12.9.0
2016-03	RAN#71	R5-160934	3330	1	Correction of parameters and message contents in test case 6.5.3	12.8.0	12.9.0
2016-03	RAN#71	R5-160935	3331	1	Correction of BackhaulRateULWAN parameters in test case 8.4.8.1	12.8.0	12.9.0
2016-03	RAN#71	R5-160936	3349	1	Correction of ChannelUtilizationWLAN parameters in test case 8.4.8.2	12.8.0	12.9.0
2016-03	RAN#71	R5-160940	3302	1	Add test case for Selection of ePDG	12.8.0	12.9.0
2016-03	RAN#71	R5-160947	3361	-	Extension of EMM test cases 9.2.1.1.19, 9.2.1.1.24, 9.2.1.1.25 and 9.2.1.1.26 for Multi-PDN configuration	12.8.0	12.9.0
2016-03	RAN#71	R5-160951	3307	1	Correction to DC PDCP test case 7.3.7.1	12.8.0	12.9.0
2016-03	RAN#71	R5-160953	3363	-	Correction to Dual Connectivity test case 8.2.2.9.5, RRC connection reconfiguration / SCG change without handover / Split DRB modification within the same PSCell	12.8.0	12.9.0
2016-03	RAN#71	R5-160954	3310	1	Addition of test case 8.5.1.8.1 Dual Connectivity Radio link failure on PSCell / UE supports SCG DRB	12.8.0	12.9.0
2016-03	RAN#71	R5-160955	3311	1	Addition of test case 8.2.4.25.3 Dual Connectivity RRC connection reconfiguration / Intra-MeNB and SeNB Handover / Split DRB to Split DRB	12.8.0	12.9.0
2016-03	RAN#71	R5-160956	3317	1	Addition of Dual Connectivity MAC test cases for Dual Connectivity Power Headroom Report	12.8.0	12.9.0
2016-03	RAN#71	R5-160957	3328	1	New Dual Connectivity test case 7.3.7.2 for PDCP Data Recovery / Reconfiguration of Split DRB	12.8.0	12.9.0
2016-03	RAN#71	R5-160958	3329	1	New Dual Connectivity test case 7.3.7.3 for PDCP Data Recovery / Reconfiguration of Split DRB to	12.8.0	12.9.0

Date	TSG #	TSG Doc.	CR	Rev	Subject/Comment	Version Old	Version New
					MCG/SCG DRBs		
2016-03	RAN#71	R5-160959	3343	1	Addition of Dual Connectivity PDCPre-establishment test cases	12.8.0	12.9.0
2016-03	RAN#71	R5-160965	3325	1	Extension of EMM test case 9.2.1.2.4a for Multi-PDN configuration	12.8.0	12.9.0
2016-03	RAN#71	R5-160966	3326	1	Extension of EMM test case 9.2.3.2.25 for Multi-PDN configuration	12.8.0	12.9.0
2016-03	RAN#71	R5-160967	3268	1	Addition of new SCE-L1 TC 8.3.1.29 Measurement configuration control and reporting / Intra E-UTRAN measurements / Event C1	12.8.0	12.9.0
2016-03	RAN#71	R5-160968	3269	1	Addition of new SCE-L1 TC 8.3.1.30 Measurement configuration control and reporting / Intra E-UTRAN measurements / Event C2	12.8.0	12.9.0
2016-03	RAN#71	R5-160969	3270	1	Addition of new SCE-L1 TC 8.3.1.31 Measurement configuration control and reporting / Intra E-UTRAN measurements / Periodic reporting / CSI-RSRP	12.8.0	12.9.0
2016-03	RAN#71	R5-160984	3346	1	Correction to EMM test case 9.2.1.1.28a	12.8.0	12.9.0
2016-03	RAN#71	R5-160991	3362	1	Handling of UTRAN Registration procedure for LTE-IRAT test cases	12.8.0	12.9.0
2016-03	RAN#71	R5-160999	3367	-	Correction to LTE-A UL CA test cases 7.1.4.20.x	12.8.0	12.9.0

2016-06	RAN#72	R5-162912	3452	1	Update of TC 19.1.3 ProSe Direct Communication Transmission RRC_CONNECTED Pre-configured authorisation	13.0.0	13.1.0
2016-06	RAN#72	R5-162913	3453	1	Update of TC 19.1.4 ProSe Direct Communication Reception RRC_CONNECTED Pre-configured authorisation	13.0.0	13.1.0
2016-06	RAN#72	R5-162914	3454	1	Update of TC 19.1.5 ProSe Direct Communication Pre-configured authorisation UE is communicating not on the serving cell	13.0.0	13.1.0
2016-06	RAN#72	R5-162915	3455	1	Update of TC 19.1.6 ProSe Direct Communication Pre-configured authorisation UE out of coverage on the frequency used for sidelink communication	13.0.0	13.1.0
2016-06	RAN#72	R5-162916	3456	1	Update of TC 19.1.7 ProSe Direct Communication Pre-configured authorisation Selection and re/selection of SyncRef UE	13.0.0	13.1.0
2016-06	RAN#72	R5-162917	3457	1	Update to TC 19.2.1 ProSe Direct Discovery Monitoring Pre-configured authorisation	13.0.0	13.1.0
2016-06	RAN#72	R5-162918	3458	1	Update of TC 19.2.2 ProSe Direct Discovery Announcing Pre-configured authorisation RRC_IDLE	13.0.0	13.1.0
2016-06	RAN#72	R5-162919	3459	1	Update of TC 19.2.3 ProSe Direct Discovery Announcing RRC_CONNECTED Pre-configured authorisation	13.0.0	13.1.0
2016-06	RAN#72	R5-162920	3488	1	Correction to D2D ProSe PDCP test cases 7.3.8.1 and 7.3.8.2	13.0.0	13.1.0
2016-06	RAN#72	R5-162921	3430	1	Correction to TC 8.3.1.29	13.0.0	13.1.0
2016-06	RAN#72	R5-162922	3431	1	Correction to TC8.3.1.30	13.0.0	13.1.0
2016-06	RAN#72	R5-162923	3433	1	Correction to TC8.3.1.31	13.0.0	13.1.0
2016-06	RAN#72	R5-163002	3403	1	New eIMTA test case for UL-SCH data transfer	13.0.0	13.1.0
2016-06	RAN#72	R5-163006	3395	1	Addition of New Test Case – 7.1.3.4a Correct HARQ process handling / DCCH and DTCH/ Enhanced Coverage	13.0.0	13.1.0
2016-06	RAN#72	R5-163007	3447	1	Addition of new eMTC test case for Correct HARQ process handling / Enhanced Coverage	13.0.0	13.1.0
2016-06	RAN#72	R5-163008	3448	1	Addition of new eMTC test case Correct HARQ process handling / Enhanced Coverage / CE Mode B	13.0.0	13.1.0
2016-06	RAN#72	R5-163026	3407	1	Correction to Dual Connectivity test case 8.5.1.8.1, Radio link failure on PSCell / UE supports SCG DRB	13.0.0	13.1.0
2016-06	RAN#72	R5-163027	3408	1	Introduction of Dual Connectivity test case 8.5.1.8.2, Radio link failure on PSCell / UE supports Split DRB	13.0.0	13.1.0
2016-06	RAN#72	R5-163028	3423	1	Add dual connectivity test case 8.2.4.25.4	13.0.0	13.1.0
2016-06	RAN#72	R5-163029	3424	1	Add dual connectivity test case 8.2.4.25.5	13.0.0	13.1.0
2016-06	RAN#72	R5-163030	3425	1	Add dual connectivity test case 8.2.4.25.6	13.0.0	13.1.0
2016-06	RAN#72	R5-163031	3426	1	Add dual connectivity test case 8.2.4.25.7	13.0.0	13.1.0
2016-06	RAN#72	R5-163032	3429	1	Addition of TC 8.2.2.9.4 RRC connection reconfiguration / SCG change without handover / Split DRB to MCG/SCG DRBs	13.0.0	13.1.0
2016-06	RAN#72	R5-163033	3494	1	Correction to Dual Connectivity PDCP Test Cases	13.0.0	13.1.0

Date	TSG #	TSG Doc.	CR	Rev	Subject/Comment	Version Old	Version New
					7.3.7.2 and 7.3.7.3		
2016-06	RAN#72	R5-163039	3441	1	Addition of a new TC for SC-MCCH information acquisition UE is receiving an SC-PTM service	13.0.0	13.1.0
2016-06	RAN#72	R5-163040	3479	1	Addition of a new TC for Cell reselection to intra-frequency cell to continue SC-PTM service reception	13.0.0	13.1.0
2016-06	RAN#72	R5-163041	3481	1	Addition of a new TC for Cell reselection to inter-frequency cell to start SC-PTM service reception	13.0.0	13.1.0
2016-06	RAN#72	R5-163051	3470	1	Correction to GCF WI-082 EUTRA EMM Testcase 9.2.1.2.3 with IMS enabled	13.0.0	13.1.0
2016-06	RAN#72	R5-163054	3404	1	Correction to LTE IRAT idle mode testcases (IMS over UTRA behaviour)	13.0.0	13.1.0
2016-06	RAN#72	R5-163056	3502	-	Addition of new test case 6.1.2.23 for MFBI enhancement	13.0.0	13.1.0
2016-06	RAN#72	R5-163057	3437	1	Updates to TCs 7.1.3.11.4 and 7.1.3.11.5	13.0.0	13.1.0
2016-06	RAN#72	R5-163058	3503	-	Correction to EMM test case 9.2.1.1.30	13.0.0	13.1.0
2016-06	RAN#72	R5-163059	3472	1	Correction to EMM test case 9.2.1.1.28	13.0.0	13.1.0
2016-06	RAN#72	R5-163060	3476	1	Correction to IMS Emergency Call test case 11.2.7	13.0.0	13.1.0
2016-06	RAN#72	R5-163062	3478	1	Correction to CMAS test case 18.1.3	13.0.0	13.1.0
2016-06	RAN#72	R5-163073	3486	1	Correction to LTE-A CA 2UL test cases 7.1.2.11.x	13.0.0	13.1.0
2016-06	RAN#72	R5-163074	3387	1	Update dual connectivity test case 8.2.2.9.1	13.0.0	13.1.0
2016-06	RAN#72	R5-163075	3388	1	Update dual connectivity test case 8.2.2.9.2	13.0.0	13.1.0
2016-06	RAN#72	R5-163076	3427	1	Addition of Dual Connectivity MAC test cases for Dual Connectivity Buffer Status Report	13.0.0	13.1.0
2016-06	RAN#72	R5-163082	3461	1	Addition of test case 8.2.2.10: eIMTA / RRC connection reconfiguration / Radio resource reconfiguration / Success	13.0.0	13.1.0
2016-06	RAN#72	R5-163083	3465	1	Addition of test case 8.2.2.26: eIMTA / RRC connection reconfiguration / Handover / Success	13.0.0	13.1.0
2016-09	RAN#73	R5-165021	3506	-	Correction to EMM test case 9.3.1.6 for Multi-PDN UEs	13.1.0	13.2.0
2016-09	RAN#73	R5-165133	3515	-	Addition of a new TC for Handover to inter-band cell to start SC-PTM service reception	13.1.0	13.2.0
2016-09	RAN#73	R5-165332	3532	-	Correction to GCF WI-177 EUTRA RRC testcase 8.6.4.3	13.1.0	13.2.0
2016-09	RAN#73	R5-165339	3538	-	Correction to LTE IRAT testcases 6.3.3 and 6.3.4 (IMS over UTRA behaviour)	13.1.0	13.2.0
2016-09	RAN#73	R5-165341	3539	-	Correction to EMM test case 9.2.1.2.4 to resolve merging conflict of RAN5#71 CR's	13.1.0	13.2.0
2016-09	RAN#73	R5-165461	3551	-	Update of test case 19.1.2 for ProSe Direct Communication Reception RRC_IDLE using the resources of the serving cell, with Pre-configured authorisation	13.1.0	13.2.0
2016-09	RAN#73	R5-165463	3553	-	Update of TC 19.1.4 ProSe Direct Communication Reception RRC_CONNECTED Pre-configured authorisation	13.1.0	13.2.0
2016-09	RAN#73	R5-165468	3558	-	Update of TC 19.2.2 ProSe Direct Discovery Announcing Pre-configured authorisation RRC_IDLE	13.1.0	13.2.0

Date	TSG #	TSG Doc.	CR	Rev	Subject/Comment	Version Old	Version New
2016-09	RAN#73	R5-165470	3560	-	Removal of D2D TC 19.1.7 and redundant titles	13.1.0	13.2.0
2016-09	RAN#73	R5-165539	3572	-	Correction to Rel-10 MDT test case 8.6.3.1	13.1.0	13.2.0
2016-09	RAN#73	R5-165556	3573	-	Correction to Rel-11 eMDT test case 8.6.9.2	13.1.0	13.2.0
2016-09	RAN#73	R5-165561	3578	-	Corrections to IMS Emergency Call test case 11.2.7	13.1.0	13.2.0
2016-09	RAN#73	R5-165727	3600	-	Update dual connectivity test case 8.2.4.25.5	13.1.0	13.2.0
2016-09	RAN#73	R5-165730	3601	-	Update dual connectivity test case 8.2.4.25.6	13.1.0	13.2.0
2016-09	RAN#73	R5-165738	3602	-	Update dual connectivity test case 8.2.4.25.7	13.1.0	13.2.0
2016-09	RAN#73	R5-165742	3604	-	Corrections to EMM test cases for Multi-PDN UEs	13.1.0	13.2.0
2016-09	RAN#73	R5-165757	3608	-	Removing EMM test case 9.2.1.1.30 from TS 36.523-1	13.1.0	13.2.0
2016-09	RAN#73	R5-165762	3609	-	Correction to EMM test cases 9.2.1.1.1a for Multi-PDN UE	13.1.0	13.2.0
2016-09	RAN#73	R5-165763	3610	-	Correction to EMM test cases 9.2.1.2.1 for Multi-PDN UE	13.1.0	13.2.0
2016-09	RAN#73	R5-165766	3611	-	Correction to EMM test cases 9.2.3.2.2 for Multi-PDN UE	13.1.0	13.2.0
2016-09	RAN#73	R5-165816	3620	-	Correction to LTE IRAT testcases 6.4.6 (IMS over UTRA behaviour)	13.1.0	13.2.0
2016-09	RAN#73	R5-165871	3622	-	Addition of New eDRX MAC test case for Long DRX cycle	13.1.0	13.2.0
2016-09	RAN#73	R5-165881	3623	-	Correction to GCF WI-082 EMM test case 9.2.1.1.11	13.1.0	13.2.0
2016-09	RAN#73	R5-165895	3548	1	Update of IDLE mode Cell selection test case 6.2.2.5	13.1.0	13.2.0
2016-09	RAN#73	R5-165896	3563	1	Correction to Idle mode test case 6.1.1.4a	13.1.0	13.2.0
2016-09	RAN#73	R5-165898	3533	1	Correction to LTE IRAT testcase 8.1.3.7 (IMS over UTRA behaviour)	13.1.0	13.2.0
2016-09	RAN#73	R5-165899	3534	1	Correction to LTE IRAT testcase 8.5.2.1 (IMS over UTRA behaviour)	13.1.0	13.2.0
2016-09	RAN#73	R5-165904	3605	1	Correction to eMDT testcase 8.6.6.5	13.1.0	13.2.0
2016-09	RAN#73	R5-165905	3535	1	Correction to LTE IRAT testcase 9.2.2.1.10 (IMS over UTRA behaviour)	13.1.0	13.2.0
2016-09	RAN#73	R5-165906	3536	1	Correction to LTE IRAT testcase 9.2.3.1.6 (IMS over UTRA behaviour)	13.1.0	13.2.0
2016-09	RAN#73	R5-165907	3537	1	Correction to LTE IRAT testcase 9.2.3.3.1(IMS over UTRA behaviour)	13.1.0	13.2.0
2016-09	RAN#73	R5-165909	3598	1	Correction to LTE<>GERAN EMM test case 9.2.3.4.1 for IMS-enabled device	13.1.0	13.2.0
2016-09	RAN#73	R5-165910	3606	1	Correction to SIMTC test case 9.2.1.1.27a	13.1.0	13.2.0
2016-09	RAN#73	R5-165911	3624	-	Adding reference to generic procedure for IMS over GERAN for Idle mode test cases	13.1.0	13.2.0
2016-09	RAN#73	R5-165912	3625	-	Correction to Rel-11 SIMTC test cases 9.2.1.1.27 and 9.2.3.1.8a to update test USIM contents	13.1.0	13.2.0

2016-09	RAN#73	R5-166217	3592	1	Addition of a new test case 21.3.6 MBMS Interest Indication retransmission after returning from cell not broadcasting SIB15	13.1.0	13.2.0
2016-09	RAN#73	R5-166222	3629	-	Addition of new LWA Test case - LWA / WLAN Release / WLAN Association / EUTRA RRC_Connected to WLAN (Event W2)	13.1.0	13.2.0
2016-09	RAN#73	R5-166223	3630	-	Addition of new LWA Test case - LWA / WLAN Release Success / EUTRA RRC_Connected from WLAN (Event W3)	13.1.0	13.2.0
2016-09	RAN#73	R5-166225	3631	-	Addition of new test case: NB-IoT / PLMN selection of RPLMN, HPLMN / EHPLMN, UPLMN and OPLMN / Automatic mode	13.1.0	13.2.0
2016-09	RAN#73	R5-166226	3632	-	Addition of new test case: NB-IoT / Cell selection / Qrxlevmin	13.1.0	13.2.0
2016-09	RAN#73	R5-166229	3633	-	Addition of reference RLC NB-IoT test case	13.1.0	13.2.0
2016-09	RAN#73	R5-166247	3526	1	Clarification for LTE-GERAN Idle Mode test case 6.2.2.2	13.1.0	13.2.0
2016-09	RAN#73	R5-166248	3544	1	Update test 6.1.2.19 for band 65 and higher	13.1.0	13.2.0
2016-09	RAN#73	R5-166250	3618	1	Update test 6.1.2.20 for band 65 and higher	13.1.0	13.2.0
2016-09	RAN#73	R5-166251	3619	1	Update test 6.1.2.21 for band 65 and higher	13.1.0	13.2.0
2016-09	RAN#73	R5-166255	3576	1	Correction to Multi-Layer test case 13.1.2a	13.1.0	13.2.0
2016-09	RAN#73	R5-166262	3523	1	Addition of New Test Case – 7.1.3.5a Correct HARQ process handling / CCCH/ Enhanced Coverage	13.1.0	13.2.0
2016-09	RAN#73	R5-166264	3634	-	Introduction of new eMTC Signalling test case 8.1.1.1a	13.1.0	13.2.0
2016-09	RAN#73	R5-166265	3545	1	Addition of New eMTC Test Case – 7.1.2.3a Correct selection of RACH parameters/ Preamble selected by MAC itself/ Contention based random access procedure/ Enhanced coverage	13.1.0	13.2.0
2016-09	RAN#73	R5-166266	3593	1	Addition of new eMTC idle test case for Cell selection / Qrxlevmin / Enhanced coverage	13.1.0	13.2.0
2016-09	RAN#73	R5-166267	3595	1	Addition of new eMTC idle test case for Cell reselection using Treselection / Enhanced coverage	13.1.0	13.2.0
2016-09	RAN#73	R5-166268	3594	1	Addition of new eMTC idle test case for Cell selection / Qqualmin / Enhanced coverage	13.1.0	13.2.0
2016-09	RAN#73	R5-166269	3607	1	Update of MAC legacy UE Cat o test cases to expand applicability to UE Cat M1	13.1.0	13.2.0
2016-09	RAN#73	R5-166270	3612	1	New eMTC test case: 7.1.7.1.13 DL-SCH transport	13.1.0	13.2.0

Date	TSG #	TSG Doc.	CR	Rev	Subject/Comment	Version Old	Version New
					block size selection / DCI format 6-1A		
2016-09	RAN#73	R5-166271	3613	1	New eMTC test case: 7.1.7.2.2 UL-SCH transport block size selection / DCI format 6-0A	13.1.0	13.2.0
2016-09	RAN#73	R5-166275	3626	1	Correction to Rel-11 SIMTC test cases 10.5.x to update test USIM contents	13.1.0	13.2.0
2016-09	RAN#73	R5-166281	3564	1	Update of CSG Testcase 8.3.4.5	13.1.0	13.2.0
2016-09	RAN#73	R5-166286	3635	1	Addition of representative MAC NB-IoT test case	13.1.0	13.2.0
2016-09	RAN#73	R5-166320	3628	2	Addition of a new test case 22.3.3.2.1 Integrity protection / Ciphering and deciphering / Correct functionality of EPS AS and UP encryption algorithms / SNOW3G	13.1.0	13.2.0
2016-09	RAN#73	R5-166321	3627	2	Corrections to eDRX TC 9.2.4.1.2 - Attach & Normal tracking area update Procedure / Success / With and without Idle eDRX and PSM parameters	13.1.0	13.2.0
2016-09	RAN#73	R5-166322	3579	2	Update of Idle Mode Testcases	13.1.0	13.2.0
2016-09	RAN#73	R5-166323	3617	2	Correction of test case 6.1.2.23 for MFBI enhancement	13.1.0	13.2.0
2016-09	RAN#73	R5-166324	3530	2	Updates to test case 8.5.4.1	13.1.0	13.2.0
2016-12	RAN#74	R5-168073	3636	-	Update of ProSe Direct Communication test case 19.1.1	13.2.0	13.3.0
2016-12	RAN#74	R5-168074	3637	-	Update of ProSe Direct Communication test case 19.1.2	13.2.0	13.3.0
2016-12	RAN#74	R5-168075	3638	-	Update of ProSe Direct Communication test case 19.1.3	13.2.0	13.3.0
2016-12	RAN#74	R5-168076	3639	-	Update of ProSe Direct Communication test case 19.1.4	13.2.0	13.3.0
2016-12	RAN#74	R5-168077	3640	-	Update of ProSe Direct Communication test case 19.1.5	13.2.0	13.3.0
2016-12	RAN#74	R5-168078	3641	-	Update of ProSe Direct Communication test case 19.1.6	13.2.0	13.3.0
2016-12	RAN#74	R5-168080	3643	-	Correction to eDRX RRC test case 8.1.1.2a	13.2.0	13.3.0
2016-12	RAN#74	R5-168081	3644	-	Correction to eDRX EMM test cases	13.2.0	13.3.0
2016-12	RAN#74	R5-168137	3648	-	Correction to Rel-11 eMDT test case 8.6.10.1	13.2.0	13.3.0
2016-12	RAN#74	R5-168140	3649	-	Correction to Rel-12 MFBI test case 6.1.2.23	13.2.0	13.3.0
2016-12	RAN#74	R5-168162	3650	-	Update the title of NB-IoT test case 22.2.1	13.2.0	13.3.0
2016-12	RAN#74	R5-168163	3651	-	Update the title of NB-IoT test case 22.2.4	13.2.0	13.3.0
2016-12	RAN#74	R5-168167	3654	-	New NB-IoT EMM-CIoT testcase: 22.5.12 - NB-IoT / EPS NAS integrity and encryption / ZUC	13.2.0	13.3.0
2016-12	RAN#74	R5-168255	3662	-	Correction to test cases 17.4.3, 17.4.4, 17.4.5 and 17.4.6	13.2.0	13.3.0
2016-12	RAN#74	R5-168298	3665	-	Introduction of new signalling EMM-CIoT test case 22.5.10 for category NB1	13.2.0	13.3.0
2016-12	RAN#74	R5-168299	3666	-	Introduction of new signalling EMM-CIoT test case 22.5.11 for category NB1	13.2.0	13.3.0
2016-12	RAN#74	R5-168320	3667	-	Correction to EUTRA<>GERAN Idle Mode test case 6.2.3.27	13.2.0	13.3.0

Date	TSG #	TSG Doc.	CR	Rev	Subject/Comment	Version Old	Version New
2016-12	RAN#74	R5-168347	3669	-	New test NB-IoT 22.5.1 Authentication failures	13.2.0	13.3.0
2016-12	RAN#74	R5-168356	3674	-	Correction to EUTRA Transport block size selection test cases 7.1.7.x.x	13.2.0	13.3.0
2016-12	RAN#74	R5-168359	3675	-	Correction to EUTRA PDCP test case 7.3.5.3	13.2.0	13.3.0
2016-12	RAN#74	R5-168361	3676	-	Correction to Rel-12 LTE Cov Enh test case 7.1.4.24	13.2.0	13.3.0
2016-12	RAN#74	R5-168364	3678	-	Correction to Rel-13 eDRX test case 9.2.4.1.2	13.2.0	13.3.0
2016-12	RAN#74	R5-168385	3680	-	Correction to UEPCOP test cases 9.2.1.1.7c, 9.2.3.1.1.a and 9.2.3.1.5b	13.2.0	13.3.0
2016-12	RAN#74	R5-168423	3683	-	Correction to Rel-11 SIMTC test case 10.8.8 to update test USIM contents	13.2.0	13.3.0
2016-12	RAN#74	R5-168434	3684	-	Correction to IMS emergency call test case 11.2.10	13.2.0	13.3.0
2016-12	RAN#74	R5-168436	3685	-	Correction to reference to generic procedure for Redirection from GERAN to E-UTRA upon release of the CS connection in test 6.2.3.19	13.2.0	13.3.0
2016-12	RAN#74	R5-168438	3686	-	Editorial update on table numbering in LTE IRAT test case 8.5.2.1	13.2.0	13.3.0
2016-12	RAN#74	R5-168440	3687	-	Editorial update on UE configurations for SIMTC test cases 9.2.1.1.27 and 9.2.3.1.8a and Extended Access Class Barring test case 9.2.3.1.8b	13.2.0	13.3.0
2016-12	RAN#74	R5-168441	3688	-	Update on UE configurations for SIMTC test cases 10.5.1a, 10.5.1b and 10.5.4	13.2.0	13.3.0
2016-12	RAN#74	R5-168479	3696	-	Update of eMTC test case 7.1.4.24b	13.2.0	13.3.0
2016-12	RAN#74	R5-168507	3702	-	Corrections to RLC NB-IoT test case 22.3.2.2	13.2.0	13.3.0
2016-12	RAN#74	R5-168520	3706	-	Correction of missing TP in TC7.1.6.1	13.2.0	13.3.0
2016-12	RAN#74	R5-168542	3713	-	Correction of test case 7.1.3.16a	13.2.0	13.3.0
2016-12	RAN#74	R5-168543	3714	-	Correction of test case 7.1.4.28a	13.2.0	13.3.0
2016-12	RAN#74	R5-168586	3722	-	Update to MAC test cases 7.1.7.1.9 and 7.1.7.1.10	13.2.0	13.3.0
2016-12	RAN#74	R5-168590	3723	-	Addition of a new test case 22.3.1.3 Correct Handling of UL MAC PDU/Assignment/HARQ process/Padding	13.2.0	13.3.0
2016-12	RAN#74	R5-168591	3724	-	Addition of a new test case 22.3.2.3 AM RLC / In sequence delivery of upper layers PDUs/ Different numbers of length indicators	13.2.0	13.3.0
2016-12	RAN#74	R5-168613	3726	-	Update test case 8.2.4.25.4	13.2.0	13.3.0
2016-12	RAN#74	R5-168617	3728	-	Update test case 8.2.4.25.6	13.2.0	13.3.0
2016-12	RAN#74	R5-168625	3729	-	Update test case 8.2.4.25.7	13.2.0	13.3.0
2016-12	RAN#74	R5-168700	3730	-	New Dual Connectivity test case for PDCP reordering of Split DRB / Maximum re-ordering delay below t-Reordering	13.2.0	13.3.0
2016-12	RAN#74	R5-168707	3734	-	Editorial correction to EMM test case 9.2.1.2.15	13.2.0	13.3.0
2016-12	RAN#74	R5-168729	3735	-	Correction to test case 6.4.6	13.2.0	13.3.0
2016-12	RAN#74	R5-168772	3742	-	Correction to MAC test case 7.1.1.1	13.2.0	13.3.0
2016-12	RAN#74	R5-168781	3743	-	Update of eMTC Test Case 7.1.2.3a	13.2.0	13.3.0
2016-12	RAN#74	R5-168786	3744	-	Addition of New NB-IoT MAC Test Case – 22.3.1.4: NB-IoT / Correct handling of MAC control information / Buffer status	13.2.0	13.3.0

Date	TSG #	TSG Doc.	CR	Rev	Subject/Comment	Version Old	Version New
2016-12	RAN#74	R5-168868	3751	-	Corrections to eMTC test case 7.1.3.4a	13.2.0	13.3.0
2016-12	RAN#74	R5-168870	3753	-	Corrections to eMTC test case 7.1.3.5a	13.2.0	13.3.0
2016-12	RAN#74	R5-168966	3769	-	Addition of New NB-IoT RRC Test Case – 22.4.7: NB-IoT / RRC connection release / Success with extendedWait / RRC connection establishment / Reject with extendedWait	13.2.0	13.3.0
2016-12	RAN#74	R5-168969	3772	-	Addition of New NB-IoT RRC Test Case – 22.4.11: NB-IoT / RRC connection release / Redirection to another NB-IoT frequency	13.2.0	13.3.0
2016-12	RAN#74	R5-168970	3773	-	Addition of New NB-IoT RRC Test Case – 22.4.12: NB-IoT / RRC connection release / Redirection to another NB-IoT band	13.2.0	13.3.0
2016-12	RAN#74	R5-169010	3653	1	New NB-IoT RRC testcase: 22.4.13 - NB-IoT / UE capability transfer / Success	13.2.0	13.3.0
2016-12	RAN#74	R5-169011	3656	1	New NB-IoT Idle testcase: 22.2.8 - NB-IoT / Cell reselection in shared network environment.	13.2.0	13.3.0
2016-12	RAN#74	R5-169015	3670	1	New test NB-IoT 22.5.2 NAS security	13.2.0	13.3.0
2016-12	RAN#74	R5-169016	3671	1	New test NB-IoT 22.5.3 Detach	13.2.0	13.3.0
2016-12	RAN#74	R5-169017	3672	1	New test NB-IoT 22.5.4 Attach/Detach	13.2.0	13.3.0
2016-12	RAN#74	R5-169020	3695	1	Addition of new NB-IoT MAC test case 22.3.1.1	13.2.0	13.3.0
2016-12	RAN#74	R5-169021	3701	1	Addition of RLC NB-IoT test case 22.3.2.4	13.2.0	13.3.0
2016-12	RAN#74	R5-169022	3718	1	Addition of RLC NB-IoT test case 22.3.2.1	13.2.0	13.3.0
2016-12	RAN#74	R5-169023	3710	1	Introduction of new signalling EMM-CIoT test case 22.5.8 for category NB1	13.2.0	13.3.0
2016-12	RAN#74	R5-169024	3719	1	Addition of new NB-IoT Test case for Paging for BCCH modification	13.2.0	13.3.0
2016-12	RAN#74	R5-169025	3720	1	Addition of new NB-IoT Test case “Paging for connection in idle mode / Multiple paging records”	13.2.0	13.3.0
2016-12	RAN#74	R5-169026	3750	1	Addition of new NB-IoT RLC test case 22.3.2.5	13.2.0	13.3.0
2016-12	RAN#74	R5-169027	3757	1	New test case 22.5.9 NB-IoT / UE in NB-S1 mode supporting CIoT Optimizations / Paging with not matching identity / Control Plane Service request Rejected (IMSI invalid / Illegal ME / EPS services not allowed / UE identity cannot be derived by the network	13.2.0	13.3.0
2016-12	RAN#74	R5-169028	3758	1	New test case 22.5.18 Attach & Normal tracking area update Procedure / Success / without Idle eDRX parameters / With Idle eDRX parameters/ With and without Idle eDRX and PSM parameters	13.2.0	13.3.0
2016-12	RAN#74	R5-169029	3768	1	New test case 22.5.14 NB-IoT / Attach / Rejected / Tracking Area not allowed/Roaming not allowed in this tracking area// No suitable cells in tracking area	13.2.0	13.3.0
2016-12	RAN#74	R5-169030	3696	1	Update of eMTC test case 7.1.4.24b	13.2.0	13.3.0
2016-12	RAN#74	R5-169031	3700	1	Addition of MAC eMTC DRX test case	13.2.0	13.3.0
2016-12	RAN#74	R5-169033	3717	1	Correction to eMTC RRC test case 8.1.1.1a	13.2.0	13.3.0
2016-12	RAN#74	R5-169036	3673	1	Adding reference to generic procedure for IMS over GERAN for Idle Mode test cases	13.2.0	13.3.0
2016-12	RAN#74	R5-169037	3739	1	Correction to EUTRA Idle Mode CSG test case 6.3.4	13.2.0	13.3.0

Date	TSG #	TSG Doc.	CR	Rev	Subject/Comment	Version Old	Version New
2016-12	RAN#74	R5-169038	3642	1	Updates to test case 8.5.4.1	13.2.0	13.3.0
2016-12	RAN#74	R5-169039	3752	1	Correction to RRC test case 8.3.1.5	13.2.0	13.3.0
2016-12	RAN#74	R5-169040	3682	1	Adding reference to generic procedure for IMS over GERAN for EMM test cases	13.2.0	13.3.0
2016-12	RAN#74	R5-169041	3645	1	Correction to test case 11.2.6	13.2.0	13.3.0
2016-12	RAN#74	R5-169042	3776	-	Update to IMS Emergency Call over EPS Test case 11.2.8	13.2.0	13.3.0

2016-12	RAN#74	R5-169048	3658	1	Corrections to several SC-PTM test cases in section 21.3	13.2.0	13.3.0
2016-12	RAN#74	R5-169051	3777	-	Correction to SCM test case 13.5.4	13.2.0	13.3.0
2016-12	RAN#74	R5-169056	3778	-	Corrections to several SC-PTM test cases	13.2.0	13.3.0
2016-12	RAN#74	R5-169075	3646	1	Update test case 20.1	13.2.0	13.3.0
2016-12	RAN#74	R5-169076	3647	1	Update test case 20.2	13.2.0	13.3.0
2016-12	RAN#74	R5-169077	3736	1	Add test case for UE initiated disconnection	13.2.0	13.3.0
2016-12	RAN#74	R5-169078	3740	1	Add test case for ePDG initiated disconnection	13.2.0	13.3.0
2016-12	RAN#74	R5-169110	3655	1	Correction of test case 8.2.4.26	13.2.0	13.3.0
2016-12	RAN#74	R5-169111	3689	1	Addition of new eMDT2 testcase: Radio Link Failure logging / Logging and reporting / Dropped QCI	13.2.0	13.3.0
2016-12	RAN#74	R5-169115	3681	1	Correction to EUTRA RRC test case 8.5.4.1	13.2.0	13.3.0
2016-12	RAN#74	R5-169117	3677	1	Correction to Rel-11 eDDA test cases 8.2.2.6.x	13.2.0	13.3.0
2016-12	RAN#74	R5-169118	3754	1	Correction to EMM test case 9.2.3.3.3	13.2.0	13.3.0
2016-12	RAN#74	R5-169119	3762	1	Correction to IMS emergency call test cases 11.2.3 and 11.2.7	13.2.0	13.3.0
2016-12	RAN#74	R5-169123	3760	1	New test case 22.5.17 Attach Success /Normal tracking area update accepted / Periodic tracking area update T3412 Extended Value / PSM	13.2.0	13.3.0
2016-12	RAN#74	R5-169131	3652	1	New NB-IoT Idle testcase: NB-IoT / 22.2.5 - Cell reselection / Qhyst, Qoffset, Treselection and Cell-specific reselection parameters	13.2.0	13.3.0
2016-12	RAN#74	R5-169132	3657	1	New NB-IoT Idle testcase: 22.2.9 - NB-IoT / Inter-frequency cell reselection	13.2.0	13.3.0
2016-12	RAN#74	R5-169134	3775	1	Addition of New NB-IoT NAS Test Case – NB-IoT / Attach Procedure / Success / Last visited TAI, TAI list and equivalent PLMN list handling	13.2.0	13.3.0
2016-12	RAN#74	R5-169135	3661	1	Addition of New NB-IoT Test Case – NB-IoT / Normal tracking area update / Rejected / EPS service not allowed /EPS services not allowed in this PLMN	13.2.0	13.3.0
2016-12	RAN#74	R5-169138	3668	1	New test 22.1.1 Control Plane CIoT EPS optimisation for EPS services	13.2.0	13.3.0
2016-12	RAN#74	R5-169139	3691	1	Addition of New NB-IoT Idle Mode Test Case - NB-IoT / Cell reselection using cell status and cell reservations / Access control class 0 to 9	13.2.0	13.3.0
2016-12	RAN#74	R5-169140	3692	1	Addition of New NB-IoT RRC Test Case - NB-IoT / RRC / Paging for notification of BCCH modification in idle mode / Direct indication for SI update	13.2.0	13.3.0

Date	TSG #	TSG Doc.	CR	Rev	Subject/Comment	Version Old	Version New
2016-12	RAN#74	R5-169141	3693	1	Addition of New NB-IoT Idle Mode Test Case – NB-IoT / Cell reselection using cell status and cell reservations / Access control class 11 to 15	13.2.0	13.3.0
2016-12	RAN#74	R5-169142	3694	1	Addition of New NB-IoT Test Case – NB-IoT / RRC connection establishment / Access Barring for UE with AC 0 to 9 / MO exception data / ab-Category a, b and c	13.2.0	13.3.0
2016-12	RAN#74	R5-169143	3774	1	Addition of New NB-IoT Test Case – NB-IoT / Attach Procedure / Success / List of equivalent PLMNs in the ATTACH ACCEPT message / Attach / Rejected / PLMN not allowed	13.2.0	13.3.0
2016-12	RAN#74	R5-169145	3781	-	Editorial CR updating test case title of NB-IoT MAC test case	13.2.0	13.3.0
2016-12	RAN#74	R5-169146	3755	1	Addition of new NB-IoT MAC test case 22.3.1.5	13.2.0	13.3.0
2016-12	RAN#74	R5-169147	3756	1	Addition of new NB-IoT MAC test case 22.3.1.6	13.2.0	13.3.0
2016-12	RAN#74	R5-169151	3761	1	Addition of new LWIP Test case - LWIP / WLAN Release / WLAN Association / EUTRA RRC_Connected to WLAN (Event W2)	13.2.0	13.3.0
2016-12	RAN#74	R5-169152	3727	1	Update test case 8.2.4.25.5	13.2.0	13.3.0
2016-12	RAN#74	R5-169156	3731	1	New Dual Connectivity test case for PDCP reordering of Split DRB / t-Reordering timer operations	13.2.0	13.3.0
2016-12	RAN#74	R5-169172	3690	1	Addition of new test case: NB-IoT / PLMN selection / Periodic reselection / MinimumPeriodicSearchTimer	13.2.0	13.3.0
2016-12	RAN#74	R5-169736	3663	2	New NB-IoT EMM-CIoT testcase: 22.5.6 – NB-IOT / Attach Abnormal cases / Unsuccessful attach or Repeated rejects for network failures / Change of cell into a new tracking area / EPS services not allowed / Failure due to non integrity protection /UE initiate	13.2.0	13.3.0
2016-12	RAN#74	R5-169737	3779	2	Adding new NB-IoT EMM-CIoT testcase 22.5.7a: NB-IoT / Periodic tracking area update Accepted / Normal tracking area update List of equivalent PLMNs in the TRACKING AREA UPDATE ACCEPT message / Normal tracking area update Rejected (IMSI invalid / Illegal M	13.2.0	13.3.0
2016-12	RAN#74	R5-169738	3780	1	Adding New NB-IoT EMM-CIoT testcase 22.5.7b: NB-IoT / Normal tracking area update Rejected (Tracking area not allowed / No suitable cells in tracking area / Roaming not allowed in this tracking area / Congestion) / UE initiated detach Abnormal case Chan	13.2.0	13.3.0
2017-03	RAN#75	R5-170565	3786	-	Corrections to GCF WI-257 MAC test case 22.3.1.1	13.3.0	13.4.0
2017-03	RAN#75	R5-170566	3787	-	Corrections to GCF WI-257 MAC test case 22.3.1.2	13.3.0	13.4.0
2017-03	RAN#75	R5-170567	3788	-	Corrections to GCF WI-257 MAC test case 22.3.1.3	13.3.0	13.4.0
2017-03	RAN#75	R5-170568	3789	-	Corrections to GCF WI-257 MAC test case 22.3.1.4	13.3.0	13.4.0
2017-03	RAN#75	R5-170569	3790	-	Corrections to GCF WI-257 MAC test case 22.3.1.5	13.3.0	13.4.0
2017-03	RAN#75	R5-170570	3791	-	Corrections to GCF WI-257 MAC test case 22.3.1.6	13.3.0	13.4.0
2017-03	RAN#75	R5-170571	3792	-	Corrections to GCF WI-257 RRC test case 22.4.6	13.3.0	13.4.0
2017-03	RAN#75	R5-170576	3793	-	Correction to GCF WI-254-A Idle test case 6.1.2.2c	13.3.0	13.4.0
2017-03	RAN#75	R5-170577	3794	-	Correction to GCF WI-254-A Idle test case 6.1.2.2d	13.3.0	13.4.0
2017-03	RAN#75	R5-170578	3795	-	Correction to GCF WI-254-A Idle test case 6.1.2.6a	13.3.0	13.4.0

Date	TSG #	TSG Doc.	CR	Rev	Subject/Comment	Version Old	Version New
2017-03	RAN#75	R5-170579	3796	-	Updates to test case 8.5.4.1	13.3.0	13.4.0
2017-03	RAN#75	R5-170582	3797	-	Update of NB-IoT RRC Test Case 22.4.11	13.3.0	13.4.0
2017-03	RAN#75	R5-170583	3798	-	Update of NB-IoT RRC Test Case 22.4.12	13.3.0	13.4.0

2019-09	RAN#85	R5-195829	4830	-	Correction to test case 7.1.3.3a for CAT-M1 UE	16.1.0	16.2.0
2019-09	RAN#85	R5-195983	4833	-	Update to WLAN measurement collection in Logged Radio Link Failure	16.1.0	16.2.0
2019-09	RAN#85	R5-195984	4834	-	Update to WLAN measurement collection in LTE Immediate MDT	16.1.0	16.2.0
2019-09	RAN#85	R5-195985	4835	-	Update to WLAN measurement collection in LTE Logged MDT	16.1.0	16.2.0
2019-09	RAN#85	R5-195992	4840	-	Correction to NB-IoT test case 22.1.1	16.1.0	16.2.0
2019-09	RAN#85	R5-196007	4844	-	Correction to NB-IoT test case 22.2.1	16.1.0	16.2.0
2019-09	RAN#85	R5-196015	4846	-	Addition of new Aerial vehicle Event A3 Inter-frequency measurement reporting TC 8.9.4a	16.1.0	16.2.0
2019-09	RAN#85	R5-196019	4848	-	Update of IMS eCall test cases 11.3.2, 11.3.3 and 11.3.6	16.1.0	16.2.0
2019-09	RAN#85	R5-196206	4854	-	Correction to NBIOT testcase 22.2.2	16.1.0	16.2.0
2019-09	RAN#85	R5-196207	4855	-	Correction to NBIOT testcase 22.2.4	16.1.0	16.2.0
2019-09	RAN#85	R5-196208	4856	-	Correction to NBIOT testcase 22.2.5	16.1.0	16.2.0
2019-09	RAN#85	R5-196209	4857	-	Correction to NBIOT testcase 22.4.5	16.1.0	16.2.0
2019-09	RAN#85	R5-196210	4858	-	Correction to NBIOT testcase 22.5.7b	16.1.0	16.2.0
2019-09	RAN#85	R5-196211	4859	-	Correction to NBIOT R14 test case 22.4.24	16.1.0	16.2.0
2019-09	RAN#85	R5-196279	4861	-	Correction to test case 8.2.2.6.2 for Cat-M1 device	16.1.0	16.2.0
2019-09	RAN#85	R5-196770	4865	-	Update of Aerial vehicle Event A4 and Event A5 measurement reporting TCs 8.9.5 and 8.9.6	16.1.0	16.2.0
2019-09	RAN#85	R5-196775	4866	-	Corrected PLMNs in IMS emergency test cases	16.1.0	16.2.0
2019-09	RAN#85	R5-196972	4841	1	Correction to CIoT test case 23.1.2	16.1.0	16.2.0
2019-09	RAN#85	R5-196973	4852	1	Removal of NB-IoT test case 22.5.19	16.1.0	16.2.0
2019-09	RAN#85	R5-196974	4860	1	Correction to NBIOT testcase 22.5.21	16.1.0	16.2.0
2019-09	RAN#85	R5-196975	4853	1	Correction to test case 10.5.1b	16.1.0	16.2.0
2019-09	RAN#85	R5-196979	4867	-	Updating 8.5.4.1 to remove transient period for FGI 103 and 104	16.1.0	16.2.0
2019-09	RAN#85	R5-197177	4832	1	Modification of simulated aerial heights for aerial testing with GNSS	16.1.0	16.2.0
2019-09	RAN#85	R5-197179	4847	1	Addition of new Aerial vehicle Event A4 Inter-frequency measurement reporting TC 8.9.5a	16.1.0	16.2.0
2019-09	RAN#85	R5-197181	4863	1	Addition of SCell in dormant state	16.1.0	16.2.0

Date	TSG #	TSG Doc.	CR	Rev	Subject/Comment	Version Old	Version New
2019-09	RAN#85	R5-197182	4864	1	Modification of SCell in dormant state	16.1.0	16.2.0
2019-09	RAN#85	R5-197239	4845	1	Correction to NB-IoT test case 22.5.17	16.1.0	16.2.0
2019-09	RAN#85	R5-197252	4836	1	Update to Bluetooth measurement collection in Logged Radio Link Failure	16.1.0	16.2.0
2019-09	RAN#85	R5-197253	4849	1	Update to Bluetooth measurement collection in LTE Immediate MDT	16.1.0	16.2.0
2019-09	RAN#85	R5-197254	4850	1	Update to Bluetooth measurement collection in LTE Logged MDT	16.1.0	16.2.0
2019-12	RAN#86	R5-197901	4872	-	Correction to ESM test case 10.8.7	16.2.0	16.3.0
2019-12	RAN#86	R5-198002	4876	-	Correction the test purpose of LTE UDC TC 7.3.10.2	16.2.0	16.3.0
2019-12	RAN#86	R5-198037	4877	-	Update to NAS test case 9.2.2.1.4	16.2.0	16.3.0
2019-12	RAN#86	R5-198065	4878	-	Addition of UTC time reset to aerial test cases	16.2.0	16.3.0
2019-12	RAN#86	R5-198068	4879	-	Correction to MDT test case 8.6.4.13	16.2.0	16.3.0
2019-12	RAN#86	R5-198069	4880	-	Correction to MDT test case 8.6.1.5	16.2.0	16.3.0
2019-12	RAN#86	R5-198070	4881	-	Correction to MDT test case 8.6.2.15	16.2.0	16.3.0
2019-12	RAN#86	R5-198246	4888	-	Correction to NBIOT testcase 22.3.1.8	16.2.0	16.3.0
2019-12	RAN#86	R5-198249	4889	-	Correction to NBIOT testcase 22.3.2.7	16.2.0	16.3.0
2019-12	RAN#86	R5-198359	4892	-	Correction to Test cases 7.2.3.21 and 7.3.5.3	16.2.0	16.3.0
2019-12	RAN#86	R5-198433	4893	-	Modification of TC 8.9.1	16.2.0	16.3.0
2019-12	RAN#86	R5-198841	4887	1	Correction to LTE testcases 6.1.2.7, 6.1.2.7a and 6.1.2.16	16.2.0	16.3.0
2019-12	RAN#86	R5-198842	4882	1	Correction of RRC testcase 8.5.4.1	16.2.0	16.3.0
2019-12	RAN#86	R5-198843	4883	1	Correction of EMM testcase 9.2.1.1.26	16.2.0	16.3.0
2019-12	RAN#86	R5-198998	4891	1	Addition of SCell in activated state.	16.2.0	16.3.0
2019-12	RAN#86	R5-199001	4874	2	Introduction of new test case 8.6.8.7 Connection Establishment Failure logging / Logging and reporting / Bluetooth measurement collection	16.2.0	16.3.0
2019-12	RAN#86	R5-199004	4869	1	Addition of 7.1.2.13 PUCCH Scell Maintenance of uplink time alignment	16.2.0	16.3.0
2019-12	RAN#86	R5-199005	4870	1	Addition of 7.1.3.17 PUCCH SCell Correct HARQ process handling	16.2.0	16.3.0
2019-12	RAN#86	R5-199006	4871	1	Addition of 7.1.9.2 PUCCH Scell Activation and Deactivation of Scells	16.2.0	16.3.0
2019-12	RAN#86	R5-199009	4894	1	Corrections to CA Band Combination Capability Signalling test cases 8.5.4.2 and 8.5.4.3	16.2.0	16.3.0
2019-12	RAN#86	R5-199010	4885	1	Update to EMM testcase 9.2.1.2.14	16.2.0	16.3.0
2019-12	RAN#86	R5-199012	4896	-	Correction to NB-IoT test case 22.5.17	16.2.0	16.3.0
2019-12	RAN#86	R5-199081	4875	4	Introduction of new test case 8.6.8.8 Connection Establishment Failure logging / Logging and reporting / WLAN measurement collection	16.2.0	16.3.0
2019-12	RAN#86	R5-199100	4884	2	Correction to NB-IoT test case 22.5.18	16.2.0	16.3.0
2020-03	RAN#87	R5-200222	4899		Correction to test case 8.2.4.3 for CAT-M1 UEs	16.3.0	16.4.0
2020-03	RAN#87	R5-200638	4902		Corrections to LTE 256 QAM MAC Test Case	16.3.0	16.4.0
2020-03	RAN#87	R5-201016	4900	1	Update to Aerial vehicle test cases	16.3.0	16.4.0
2020-03	RAN#87	R5-201099	4903	1	Update of RRC Idle mode test cases to handle IMS Re-registration	16.3.0	16.4.0
2020-03	RAN#87	R5-201111	4901	1	Update of MDT test cases to handle IMS Re-registration	16.3.0	16.4.0
2020-03	RAN#87	R5-201172	4904	1	Addition of a new test case of SIP registration via a new P-CSCF address discovery	16.3.0	16.4.0
2020-03	RAN#87	R5-201205	4898	1	Correction to NBIOT testcase 22.5.7b	16.3.0	16.4.0
2020-06	RAN#88	R5-201583	4907	-	Correction to LTE test case 9.2.1.1.7b	16.4.0	16.5.0
2020-06	RAN#88	R5-201584	4908	-	Updates to SMS over SGs test cases 11.1.5 and 11.1.6	16.4.0	16.5.0
2020-06	RAN#88	R5-201762	4909	-	Specific message content update to NB-IoT test case 22.5.17	16.4.0	16.5.0
2020-06	RAN#88	R5-202179	4924	-	Editorial update to EMM test case 9.2.1.1.1a	16.4.0	16.5.0
2020-06	RAN#88	R5-202181	4925	-	Editorial update to EMM test case 9.3.1.4	16.4.0	16.5.0
2020-06	RAN#88	R5-202182	4926	-	Editorial update to NB-IoT test case 22.3.2.4	16.4.0	16.5.0
2020-06	RAN#88	R5-202233	4927	-	Correction to NB-IoT test case 22.3.1.8	16.4.0	16.5.0
2020-06	RAN#88	R5-202234	4928	-	Correction to NB-IoT test case 22.4.14	16.4.0	16.5.0
2020-06	RAN#88	R5-203050	4914	1	Addition of 7.1.3.22 Correct DL HARQ handling with short processing time	16.4.0	16.5.0
2020-06	RAN#88	R5-203051	4915	1	Addition of 7.1.4.37 Correct UL HARQ handling with short processing time	16.4.0	16.5.0
2020-06	RAN#88	R5-203052	4917	1	Addition of 7.1.4.39 Correct UL assignment with DMRS sharing for short TTI	16.4.0	16.5.0
2020-06	RAN#88	R5-203053	4919	1	Addition of 7.1.4.41 HARQ sharing between PUSCH and sPUSCH	16.4.0	16.5.0
2020-06	RAN#88	R5-203054	4921	1	Addition of 8.2.2.12 Aperiodic SRS for short TTI	16.4.0	16.5.0
2020-06	RAN#88	R5-203058	4922	1	Addition of new TC 23.1.3 CIoT Optimization / Control Plane / EDT	16.4.0	16.5.0

Date	TSG #	TSG Doc.	CR	Rev	Subject/Comment	Version Old	Version New
2020-06	RAN#88	R5-203060	4934	1	Addition of new RRC TC for checking extended / spare field handling in SI	16.4.0	16.5.0
2020-06	RAN#88	R5-203061	4932	1	Correction to LTE test case 8.2.4.1 for CAT-M1 UEs	16.4.0	16.5.0
2020-06	RAN#88	R5-203062	4933	1	Correction to LTE test case 8.2.4.5 for Cat-M1 UEs	16.4.0	16.5.0
2020-06	RAN#88	R5-203064	4931	1	Correction to LTE test case 13.3.1.3 for CAT-M1 UEs	16.4.0	16.5.0
2020-06	RAN#88	R5-203065	4906	1	Correction to LTE Aerial UE test cases 8.9.4a and 8.9.5a	16.4.0	16.5.0
2020-06	RAN#88	R5-203066	4929	1	Correction to NB-IoT test case 22.4.5	16.4.0	16.5.0
2020-06	RAN#88	R5-203067	4935	1	Addition of new NB-IoT RRC TC for checking extended / spare field handling in SI	16.4.0	16.5.0
2020-06	RAN#88	R5-203080	4910	1	Addition of 7.1.3.18 Correct DL HARQ handling for short TTI	16.4.0	16.5.0
2020-06	RAN#88	R5-203081	4911	1	Addition of 7.1.3.19 HARQ sharing between PDSCH and sPDSCH	16.4.0	16.5.0
2020-06	RAN#88	R5-203082	4912	1	Addition of 7.1.3.20 Multiplexing of sPDCCH and sPDSCH	16.4.0	16.5.0
2020-06	RAN#88	R5-203083	4913	1	Addition of 7.1.3.21 Correct DL assignment with DMRS sharing for short TTI	16.4.0	16.5.0
2020-06	RAN#88	R5-203084	4916	1	Addition of 7.1.4.38 Correct UL HARQ handling for short TTI	16.4.0	16.5.0
2020-06	RAN#88	R5-203085	4918	1	Addition of 7.1.4.40 Scheduling requests on sPUCCH	16.4.0	16.5.0
2020-06	RAN#88	R5-203086	4920	1	Addition of 8.2.2.11 Aperiodic SRS with short processing time	16.4.0	16.5.0
2020-06	RAN#88	R5-203116	4905	2	Correction to LTE TC 8.3.3.1-LTE CGI	16.4.0	16.5.0
2020-09	RAN#89	R5-203545	4941	-	Correction to SC-PTM test case 21.2.1	16.5.0	16.6.0
2020-09	RAN#89	R5-203809	4945	-	Correction to RRC measurement testcase 8.3.1.11 for measGapConfig for CAT-M1	16.5.0	16.6.0
2020-09	RAN#89	R5-203812	4946	-	Correction RRC idle mode test cases 6.1.1.x	16.5.0	16.6.0
2020-09	RAN#89	R5-203924	4949	-	Update of message contents for UL transmission test cases for sTTI and short processing time	16.5.0	16.6.0
2020-09	RAN#89	R5-203925	4950	-	Correction to derivation path for SRS transmission test cases for sTTI and short processing time	16.5.0	16.6.0
2020-09	RAN#89	R5-204252	4955	-	Editorial update to EMM test case 9.2.1.1.7b	16.5.0	16.6.0
2020-09	RAN#89	R5-204300	4957	-	Update of MDT test cases to handle IMS Re-registration	16.5.0	16.6.0
2020-09	RAN#89	R5-204339	4958	-	Correction to MDT test case 8.6.4.13	16.5.0	16.6.0
2020-09	RAN#89	R5-204340	4959	-	Correction to MDT test case 8.6.8.8	16.5.0	16.6.0
2020-09	RAN#89	R5-204345	4960	-	Correction to 9.x test cases to handle IMS Re-registration (moving between HPLMN and VPLMN)	16.5.0	16.6.0
2020-09	RAN#89	R5-204494	4948	1	Update of test description for DL transmission test cases for sTTI and short processing time	16.5.0	16.6.0
2020-09	RAN#89	R5-204497	4951	1	Addition of NB-IoT R15 testcase 22.3.2.8 NB-IoT / UM RLC / Correct use of sequence numbering / Concatenation, segmentation and reassembly / Duplicate detection	16.5.0	16.6.0
2020-09	RAN#89	R5-204498	4952	1	Addition of NB-IoT R15 testcase 22.4.27 NB-IoT / RRC connection establishment / Access barring enhancement	16.5.0	16.6.0
2020-09	RAN#89	R5-204500	4937	1	Addition of new test case to test Paging with DRX and WUS in enhanced coverage	16.5.0	16.6.0
2020-09	RAN#89	R5-204501	4938	1	Addition of new test case to test Paging with eDRX and WUS in enhanced coverage	16.5.0	16.6.0
2020-09	RAN#89	R5-204502	4939	1	Addition of new test case to test CE-level based access barring	16.5.0	16.6.0
2020-09	RAN#89	R5-204503	4953	1	Addition of new TC 23.2.4 CIoT Optimization / User Plane / EDT	16.5.0	16.6.0
2020-09	RAN#89	R5-204522	4942	1	Update of TC 9.2.1.1.28b	16.5.0	16.6.0
2020-09	RAN#89	R5-204523	4947	1	Addition of new NAS test case to test handling of extended octets	16.5.0	16.6.0
2020-09	RAN#89	R5-204524	4956	1	Update of EMM test cases to handle IMS Re-registration	16.5.0	16.6.0
2020-09	RAN#89	R5-204525	4936	1	Correction to EPC IMS TC 13.1.19-wait for UE IMS de-register	16.5.0	16.6.0
2020-09	RAN#89	R5-204526	4943	1	Modification and editorial changes to NB-IoT TC 22.4.26	16.5.0	16.6.0
2020-09	RAN#89	R5-204527	4944	1	Correction to NB-IoT test case 22.4.5	16.5.0	16.6.0
2020-09	RAN#89	R5-204528	4954	1	Updates to legacy TCs for feMTC	16.5.0	16.6.0
2020-12	RAN#90	R5-205179	4964	-	Correction to LTE testcases 9.2.3.1.4 and 9.2.3.2.13	16.6.0	16.7.0
2020-12	RAN#90	R5-205218	4967	-	Restoration of wrongly implemented parts of T2 of Table 6.3.4.3.2-1	16.6.0	16.7.0
2020-12	RAN#90	R5-205344	4970	-	Corrections to EMM Test Cases 9.2.1.1.28b and 9.2.1.2.1d	16.6.0	16.7.0

2024-03	RAN#103	R5-241478	5284	1	Corrections to NB-IoT RLC TC 22.3.2.3	18.3.0	18.4.0
2024-03	RAN#103	R5-241563	5288	1	Correction to NTN TA report test case 22.3.1.13	18.3.0	18.4.0
2024-03	RAN#103	R5-241564	5289	1	Correction to MAC test cases for NTN UEs	18.3.0	18.4.0
2024-03	RAN#103	R5-241608	5291	1	Addition of UAS EPS test case 10.10.2	18.3.0	18.4.0
2024-03	RAN#103	R5-241609	5292	1	Addition of UAS EPS test case 10.10.4	18.3.0	18.4.0
2024-03	RAN#103	R5-241610	5293	1	Addition of EPS UAS test case 10.10.6	18.3.0	18.4.0
2024-03	RAN#103	R5-241611	5275	1	Addition of SENSE eMTC TC 6.1.1.12-PLMN selection	18.3.0	18.4.0
2024-03	RAN#103	R5-241612	5276	1	Addition of SENSE eMTC TC 6.1.1.13-PLMN selection Exception	18.3.0	18.4.0
2024-03	RAN#103	R5-241613	5277	1	Addition of SENSE eMTC TC 6.1.1.14-Periodic SENSE	18.3.0	18.4.0
2024-03	RAN#103	R5-241614	5278	1	Addition of SENSE NB-IoT TC 22.2.14-PLMN selection	18.3.0	18.4.0
2024-03	RAN#103	R5-241615	5279	1	Addition of SENSE NB-IoT TC 22.2.15-PLMN selection Exception	18.3.0	18.4.0
2024-03	RAN#103	R5-241616	5280	1	Addition of SENSE NB-IoT TC 22.2.16-Periodic SENSE	18.3.0	18.4.0
2024-03	RAN#103	R5-241624	5294	1	Addition of new test case 11.2.13	18.3.0	18.4.0
2024-03	RAN#103	R5-241626	5298	1	Correction to LTE RACS test case 8.5.5.1	18.3.0	18.4.0
2024-03	RAN#103	R5-241647	5290	1	Correction to RLC test cases for NTN UEs	18.3.0	18.4.0
2024-03	RAN#103	R5-241690	5297	2	Correction to RACS Test case 9.2.5.X	18.3.0	18.4.0
