Homeland Security & Critical Infrastructure Protection

SECURE
COMMUNICATION

Heterogeneous radio systems based on professional technologies (TETRA, DMR) and open to broadband evolution through LTE standard and 5G. Leonardo solutions support public safety & security organizations and are open to cooperation between different agencies through the integration platform MCS-CSP Perseus.

HOMELAND SECURITY & CRITICAL
INFRASTRUCTURES

Public safety and security solutions that integrate video surveillance, license plate readers, access control, anti-intrusion devices, cyber security and secure multi-technology communication networks for voice, video and data transmission to provide the most comprehensive operational picture.

MAJOR EVENTS PROTECTION
URBAN SECURITY

Advanced technological solutions to equip security control rooms, also integrating in-house and third-party developed subsystems, with no impact on critical requirements such as general operational efficiency and timely scheduling.

TRANSPORT &
SECURITY

Set of solutions and products to support safety and security of fleet for urban transport through vehicle localization, real-time secure communications with the mobility control center and “on board” video-surveillance to ensure maximum protection of commuters.

Mission Critical Communications

Mission critical networks → designed and implemented for the «worst case scenario»

- 1. Radio coverage:** service available on the whole territory subject to possible intervention, able to communicate even when the radio access stations remain isolated or fail
- 2. Priority and emergency management:** ability to always call also by subtracting resources to communications with lower priority
- 3. Service high availability:** redundant network elements, transport network with multiple alternative routes, immediate reaction to failures, emergency power supply systems with significant autonomies, etc.; Full operation even in situations of peak traffic (disaster scenarios) or natural disaster
- 4. High voice quality:** low latency and low distortion
- 5. Group calls:** simultaneous for all active users in the operating area (hundreds of users distributed on many radio sites or concentrated in a small space)
- 6. Immediate calls:** no perceptible delay for the establishment
- 7. Control rooms:** for the supervision and coordination of field teams
- 8. Secure and protected communications without degradation:** protection against interception and intrusion
- 9. Specialized terminals** for heavy use and in particular environments

Demand evolution

* TCCA CCBBG Broadband adoption roadmap

1. Voice “IS” the Mission Critical service

2. Narrowband data is a Mission Critical Service widely adopted for Public Safety networks: Localization, SDS/Status Messages

Current operative procedures, field proven through years of operational experience, leverage on voice service availability in every circumstances

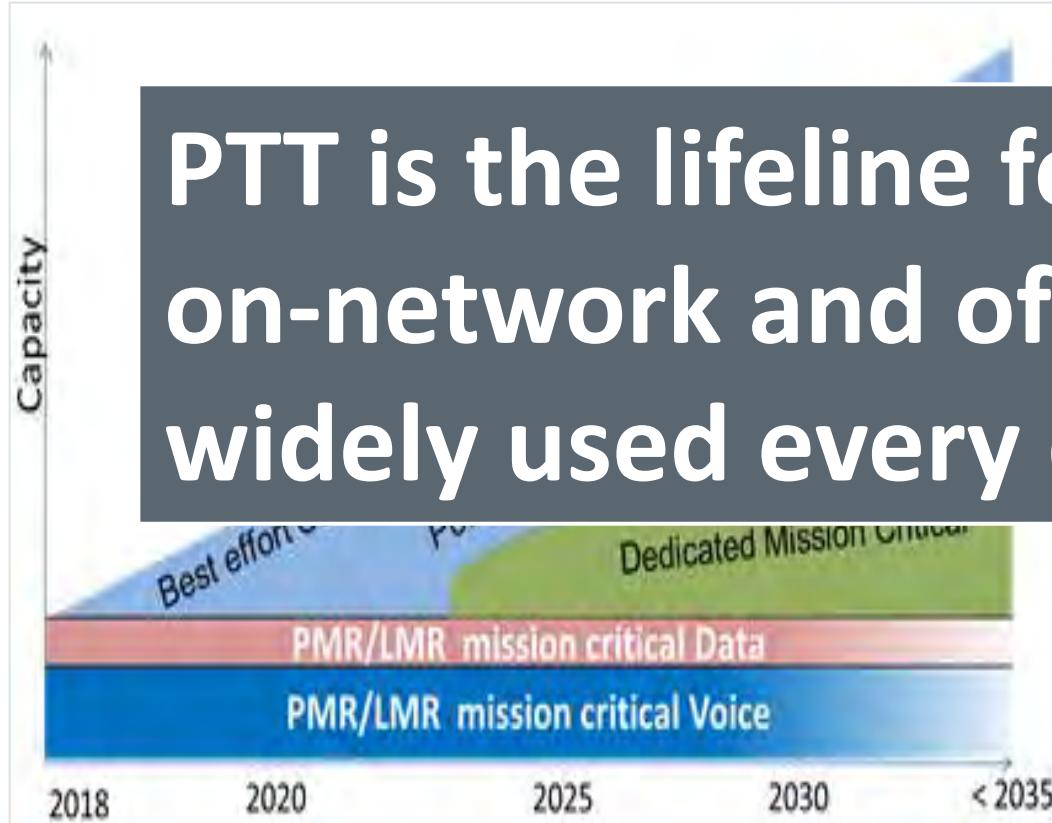

3. Use of broadband data is emerging as operational need for increased «situation awareness» in Control Room and a more effective and efficient Public Safety management → proactive policing.
4. Main services requested by end users are
 1. On the move video and image sharing
 2. On the move DB access
 3. On the move Integrated Video Analytics & AI

Definition of updated operative procedures exploiting the new capabilities enabled by broadband data is still underway; in most cases the new services are perceived as added value on top of voice and narrowband data services

Communication needs typical of PPDR (*Public Protection and Disaster Relief*) users are not technology driven as in the mass market, but defined by the service operational requirements

Demand evolution

1. Voice “IS” the Mission Critical service

2. Narrowband data is a Mission Critical Service widely adopted for Public Safety networks: Localization, SDS/Status Messages

PTT is the lifeline for first responders, on-network and off-network. It is widely used every day and it is proven

1. On the move video and image sharing
2. On the move DB access
3. On the move Integrated Video Analytics & AI

Definition of updated operative procedures exploiting the new capabilities enabled by broadband data is still underway; in most cases the new services are perceived as added value on top of voice and narrowband data services

5G: an enabler for Mission Critical Intelligence

- Broadband can provide **massive flow of data** into the Control Room
- Making those data actionable is the hallmark of the shift from **Mission Critical Comms** to **Mission Critical Intelligence**

faster response times, lower incident rates, better use of resources, proactive policing

Safer citizens

Mission Critical Comms	Mission Critical Intelligence
Connecting People Voice centric	▶ Connected Everything Voice & Data Centric
Situational awareness Command and Control	▶ Contextual awareness Intelligent edge
Physical Private resources Dedicated network computing & storage	▶ Virtual Private Resources Shared infrastructures, cloud/data
Product & Devices HW centric	▶ Intelligent Ecosystem HW & SW & Services
Critical Communications React & Respond	▶ Critical Intelligence Predict & Prevent + React & Respond

MC-PTT: Mission Critical Push To Talk

The Push To Talk standard for emergency situations

- Standards compliance is at the core of what we do
- Leonardo has a wide portfolio of standard solutions for PPDR communications: formerly DMR &, TETRA, now **MCPTT**
- Our standards-based Broad Band PTT solution is already compliant with the 3GPP MCPTT reference architecture and information flows (**Rel 14**)
- Participation to **MCS ETSI Plugtests** and **TCCA pre-certification** are proof of quality of Leonardo implementation

Mission Critical Services in 3GPP

Leonardo Safety & Security Platform (SC2)

SC2 è la piattaforma Leonardo progettata per aumentare la consapevolezza della situazione, il controllo e le capacità di coordinamento al fine di aumentare l'efficacia degli operatori della sicurezza:

- un quadro operativo comune per supportare gli operatori di sicurezza nella gestione efficiente di situazioni ordinarie e critiche
- un ambiente interoperabile avanzato che integra tutti i sistemi di sicurezza fisica e altri sistemi avanzati
- tecnologia aperta e scalabile per il centro di controllo, sala di controllo mobile, organizzazioni multi-sito

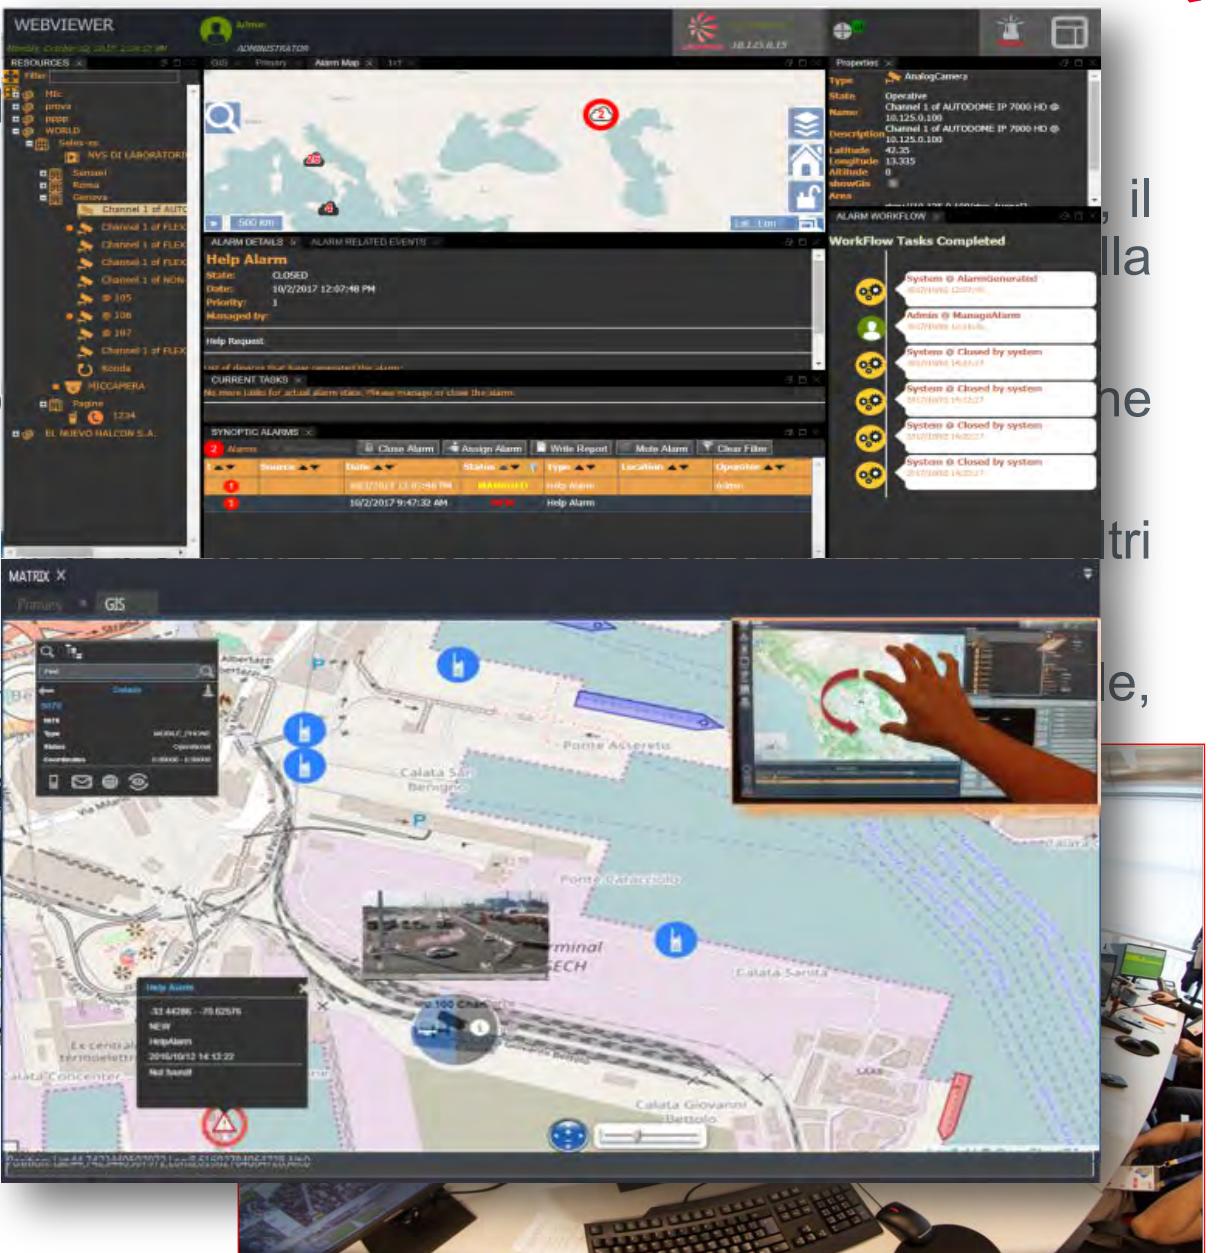

Leonardo Safety & Security

SC2 è la piattaforma Leonardo progettata per il controllo e le capacità di coordinamento al fine della sicurezza:

CYBER SECURITY DIVISION

MISE 5G Italian Trial Bari-Matera: Bari Port Security and Access Control system

Use Case description

Main functionalities and capabilities:

Video-analysis:

1. **Face Recognition** for suspect identification/access control
2. **People Counting** (people and vehicles leaving the ferry)
3. **Object Detection** (vehicles in the parking lots wrong positioning, vehicles parked in forbidden areas, suspect vehicles)

Public Forces communications:

1. Broadband communications over **5G** for field operators coordination and TETRA systems interworking

Main Objectives and use case benefits

Use of 4K cameras to improve access control and security management at port entrances and piers

To improve management and control of ferry operations at departure and arrival

To improve communication of PS forces through broadband and 5G

CYBER SECURITY DIVISION

MISE 5G Italian Trial Bari-Matera: monitoraggio e la gestione avanzata di eventi critici nell'ambito di manifestazione Matera Capitale della cultura

Use Case description

Lo scenario proposto mira a supportare la gestione della sicurezza durante eventi pubblici che si terranno a Matera nell'ambito delle iniziative di Matera Città della Cultura.

Video-analysis:

1. Face Recognition for suspect identification/access control
2. People Counting (overcrowded areas)
3. Object Detection (suspect objects in the area)

Public Forces communications:

1. Broadband communications over 5G for security personnel

Main Objectives and use case benefits

Monitoraggio real time di eventi pubblici per evitare potenziali situazioni di rischio

Migliorare le capacità di comunicazione degli addetti alla gestione della sicurezza

Migliorare gestione della sicurezza in aree critiche (es. varchi) grazie a telecamere 4K ad alta definizione

Modello Leonardo per l'Open Innovation

Le PMI come motore di innovazione e accelerazione:

1. Commercial Agreement
2. Innovative Product Procurement
3. IPR Procurement: disruptive technology licensing
4. Co-development/exploitation
5. Acquisition

For Leonardo, innovation comes in many forms. It is not purely based on the work of individuals, but also depends on the sharing of ideas and knowledge among many players, both inside and outside the company. These include universities, research centres, SMEs, start-up companies and customers.

ETSI Technology Awareness Roadshow for SMEs – Seconda Tappa

- LEONARDO – Innovation Lab
- Sede: Roma Laurentina
- Data: 26-29 Novembre (tbc)
- 5G for Mission Critical Communications and Intelligence
- Le PMI assisteranno alle demo di tecnologie 5G connesse alla realizzazione di soluzioni per la sicurezza realizzate da Leonardo in collaborazione con alcune PMI «campione». Le PMI potranno verificare i benefici degli standard per il 5G come fattore abilitante per le soluzioni di sicurezza di prossima generazione.
